

List of Tables

Table No.	Title	Page No.
2.1	Properties of graphite fibers	17
2.2	Classification of carbon fibers as per Young's modulus	18
3.1	Properties of plies of beams	43
3.2	Stiffness (GPa) of beams obtained by CLT and MLB theories	46
3.3	Description of specimens for different tests	47
3.4	Tensile characteristics of pultruded FRP beams PULT-B and PULT-C	50
3.5	Compressive strength of the specimens	51
3.6	Flexural modulus and strength obtained from 3-point bending test of coupons	53
3.7	Interlaminar shear strength of coupons	54
3.8	Stiffness (GPa) of beams from analytical and experimental methods	59
3.9	Mechanical properties of beams and stiffening elements	61
4.1	Description of the specimens	64
6.1	Comparison of experimental failure load (kN) with analytical and numerical failure loads (kN) of beams with bearing plate	117
6.2	Comparison of experimental failure load (kN) with analytical and numerical failure loads (kN) of beams with bearing plate and stiffeners	117
6.3	Comparison of experimental failure load (kN) with numerical and analytical failure loads (kN).	121
6.4	Failure and service loads of beams stiffened with web plate having different edge distances and sizes of plate	140
6.5	Service and failure loads of the castellated beams with different sizes of openings	144
