Table of Contents

Certificate……..iii
Acknowledgements……iv
Abstract……..vi
Table of Contents……ix
List of Figures……..xiii
List of Tables……xvi
List of Symbols……xvii
Chapter 1: Introduction……1
1.1 Background……2
1.1.1 GHG emission in the world by various sectors ……4
1.1.2 Oil price and its consumption……4
1.1.3 Costs involved……5
1.1.4 Affordability……...7
1.2 Motivation and Scope of Research……..……..9
1.3 Objectives……10
1.4 Contributions of Thesis……10
1.5 Structure of Thesis……...12
Chapter 2: Literature Review……13
2.1 Introduction……14
2.1.1 Market share ……15
2.2 Architecture of HEV……..17
2.3 Bidirectional DC/AC converter……21
2.3.1 Current Source Inverter……22
2.3.2 Voltage Source Inverter……23
2.3.3 Impedance Source Inverter……..24
2.4 Hybrid energy storage system……26
2.5 Energy management strategies for HEVs ……..30
2.6 Summary……34

Chapter 3: Adaptive SoC Estimation of Lithium-ion Battery and Development of Hybrid Energy Storage System for Hybrid Vehicle Applications 35

Part-1 ……37

3.1 SoC estimation ……37

3.1.1 Introduction……..……..37

3.1.1.1 Literature review on the SoC estimation methods……...37

3.1.1.2 Fixing the number of time constants (RC-branches) ……...……..…39

3.1.2 Equivalent circuit model……...…….....39

3.1.3 Identification of battery model parameter…….……..40

3.1.3.1 State of charge estimation……....44

3.1.3.2 Simulations Results and Discussion……....46

3.1.4 The ANFIS based Optimized SoC……..……50

3.1.5 Variation of SoC and OCV with temperature…….…….....56

3.1.6. Hardware setup and Real-time results……...57

3.1.7 Summary……..…....59

Part-2……60

3.2 Sizing of Hybrid energy storage system……60

3.2.1 Introduction……60

3.2.2 Proposed Methodology……..……....63

3.2.2.1 Circuit Layout……64

3.2.2.2 Environment for software, hardware, and real-time simulations……64

3.2.2.3 Battery and capacitor specifications……...65

3.2.2.4 Linearization and sizing of the HES system……...65

3.2.2.4.1 Sizing of battery module……...67

3.2.2.4.2 Sizing of the capacitor module…….……....68

3.2.2.5 Current limiting and voltage control…….……..70

3.2.2.6 SoH comparison……..71

3.2.3. Results and Analysis……..……72

3.2.3.1 HES performance with and without regenerative braking……..…..72

3.2.3.2 Comparison of HES performance with and without using UCs…...…...75

3.2.3.3 Simulation of the proposed circuit design…….……76

3.2.3.4 Justification of using multiple converters……...…….……78

3.2.3.5 Contributions of the proposed method……..80

3.2.4 Summary……..81

Chapter 4: Fuzzy logic Tuned Energy Management Strategy to Improve Fuel Economy in an HEV 82

4.1. Introduction……83

4.2. Literature review based on fuzzy logic energy management strategy for HEVs……83

4.3. Series-Parallel configuration and its operation……..86

4.3.1 EV and regeneration mode……86

4.3.2 Normal driving mode……86

4.3.3 Battery charging mode……..…87

4.3.4 Power boost mode……...87

4.4. The vehicle dynamics, specifications and its components……87

4.4.1. Motor drive……...89

4.4.2. Generator drive……90

4.4.3. Internal combustion engine (ICE)…… ……90

4.4.4. The battery system and SoC estimation……92

4.5. Fuzzy logic-based energy management for an HEV……..92

4.5.1. Driver logic……...93

4.5.2. The energy management logic……..93

4.5.3 Constraints……94

4.5.4. The Fuzzy logic controller (FLC)… ……..95

4.6. Simulations and hardware results……..…98

4.7. Verification of proposed EMS on different other driving cycles……105

4.8. Summary……...107

Chapter 5: Elman Neural Network Tuned Energy Management Strategies to Improve the Fuel economy in an HEV 108

5.1 Introduction……109

5.1.1 Elman neural network-based energy management strategy……..109

5.2 Power-split HEV configuration and components specification……110

5.3 Elman neural network-based EMS for HEV……111

5.3.1. Energy management logic……111

5.3.2. Problem formulation and Constraints……..112
5.3.3 Mathematical interpretation of ENN based controller……..114
5.3.3.1 ENN Parameters can be selected by the following steps……..115
5.3.3.2. Estimation of Learning and Training Mechanism of ENN……..116
5.3.3.3. The formula of the adjusting weight……116
5.3.3.4. The increment weight……..116
5.4 Simulations and Hardware Results……119
5.5 Summary……126

Chapter 6 ANFIS Tuned Equivalent Consumption Minimization Strategy to Improve Fuel Economy in an HEV. 127

6.1 Introduction……128
6.2 Powertrain structure and its control……...128
6.2.1. ICE Speed Control Strategy……131
6.2.2 Torque based control……132
6.3 Proposed ANFIS based EMS……134
6.3.1 Consumption cost……136
6.4 Simulation results……..137
6.5 Real-time (CHIL-setup) implementation……...143
6.6 Summary……147

Chapter 7 Conclusion and Future Scope 149

7.1 Conclusion……150
7.2 Future Work……...151

References…..……..……..152
Appendix 1……..181
List of Publications.……182
Conferences.……183
Brief Biography of Candidate……..184
Brief Biography of Supervisor…….185
Brief Biography of Co-Supervisor……..……..186
