CHAPTER 1: INTRODUCTION **1-10**

1.1 MACHINING: ENERGY CONSUMPTION AND ENVIRONMENTAL IMPACTS 1

1.2 RESEARCH MOTIVATION 4

1.3 OBJECTIVES OF THE STUDY 7

1.4 METHODOLOGY 7

1.5 SIGNIFICANCE OF THE STUDY 8

1.6 ORGANIZATIONS OF THESIS 10

CHAPTER 2: SYSTEMATIC LITERATURE REVIEW ON MACHINING ENERGY **11-103**

2.1 INTRODUCTION 11

2.2 RESEARCH METHODOLOGY 13

2.3 DESCRIPTIVE ANALYSIS 16

2.3.1 Distribution across Journals, Conferences and Books 16

2.3.2 Distribution along the Timeline 17

2.3.3 Distribution across Geography and Authorship 19

2.4 EXISTING REVIEW STUDIES 20

2.5 MACHINING ENERGY CLASSIFICATION 24

2.6 MACHINING ENERGY MODELLING 30

2.6.1 Machine Tool Energy Models 32

2.6.2 Cutting Energy Models 37

2.6.2.1 Models based on cutting force 37

2.6.2.2 Models based on metal deformation theory 39
2.6.2.3 Models based on detailed parameters 41
2.6.2.4 Models based on tool wear 42
2.6.2.5 Models based on variable MRR 43
2.6.2.6 Others 44
2.6.3 State Based Models 45
2.6.3.1 Basic/standby state 48
2.6.3.2 Cutting state 49
2.6.3.3 Machine ready state 52
2.6.3.4 Start-up state 53
2.6.3.5 Air-cutting state 53
2.6.3.6 Spindle acceleration/deceleration state 54
2.6.3.7 Cutting tool change state 55
2.6.3.8 Additional load loss 56
2.6.3.9 Others 57
2.6.4 Component Based Models 59
2.6.4.1 Spindle energy (E_{sp}) 64
2.6.4.2 Feed axis motor energy (E_{feed}) 66
2.6.4.3 Coolant pump energy ($E_{coolant}$) 70
2.6.4.4 Automatic tool changer energy (E_{atc}) 70
2.6.4.5 Chip conveyor energy (E_{cc}) 71
2.6.4.6 Fixed energy consuming components 71
2.6.5 Therblig Based Energy Models 72
2.7 MACHINING ENERGY SAVING STRATEGIES 73
2.7.1 Design Phase 74
2.7.2 Macro Process Planning Phase 76
2.7.2.1 Machine tool selection optimization 76
2.7.2.2 Machine tool maintenance 77
2.7.2.3 Energy efficient scheduling and process planning 78
2.7.3 Micro Process Planning Phase 78
2.7.3.1 Cutting parameter optimization 78

2.7.3.2 Stand-by energy optimization 86
2.7.3.3 Reduce spindle acceleration time 87
2.7.3.4 Reactive power compensation and braking energy storage 87
2.7.3.5 Feature sequence optimization 88
2.7.3.6 Workpiece setting optimization 90
2.7.3.7 Tool path optimizations 91
2.7.3.8 Improvement in coolant conditions 93
2.8 MACHINING ENERGY EFFICIENCY EVALUATION MEASURES 94
2.8.1 Energy Utilization Ratio (U) 95
2.8.2 Real Time or Instantaneous Energy Efficiency (η_t) 96
2.8.3 Specific Energy Consumption (SEC) 96
2.8.4 Relative Energy Efficiency (EE_{rel}) 97
2.8.5 Others 98
2.9 SUMMARY 100

CHAPTER 3: EXPERIMENTAL MODELLING OF MACHINING ENERGY AND CARBON EMISSIONS 104-141

3.1 INTRODUCTION 104
3.2 EXPERIMENTAL SET UP 107
3.2.1 Machine Tool 107
3.2.2 Workpiece and Cutting Tool Material 108
3.2.3 Surface Roughness Measurement 110
3.3 MODELLING OF MACHINING ENERGY CONSUMPTION 110
3.3.1 Start-up Energy ($E_{start\text{-}up}$) 110
3.3.2 Stand-by Energy ($E_{stand\text{-}by}$) 111
3.3.3 Unloaded Spindle Energy ($E_{u\text{-}SR}$) 112
3.3.4 Feed Motion Energy (E_{feed}) 114
3.3.5 Auxiliary Components Energy 120
3.3.5.1 Automatic tool change energy (E_{ATC}) 120
3.3.5.2 Coolant pump energy ($E_{coolant}$) 121

3.3.5.3 Lubrication pump energy ($E_{lubricant}$) 121
3.3.6 Material Removal Energy ($E_{cutting}$) 122
3.3.7 Additional Energy Losses (E_{add}) 124
3.4 DEVELOPMENT OF A SMART METERING APPROACH FOR MACHINE TOOLS 125
3.4.1 Algorithm Training 126
3.4.2 Event Classification and Conditional Inference 128
3.4.3 Case Study 129
3.5 MODELLING OF CARBON EMISSIONS 133
3.5.1 Carbon Emissions due to Energy Consumption (CE_{energy}) 133
3.5.2 Carbon Emissions due to Cutting Tool (CE_{tool}) 137
3.5.3 Carbon Emissions due to Coolant ($CE_{coolant}$) 138
3.5.4 Carbon Emissions due to Raw Material Production ($CE_{material}$) 140
3.5.5 Carbon Emissions due to Chip Processing (CE_{chips}) 140
3.6 SUMMARY 141

CHAPTER 4: MULTI-OBJECTIVE OPTIMIZATION OF PROCESS PARAMETERS FOR REDUCTION OF ENERGY CONSUMPTION AND CARBON EMISSIONS **142-193**

4.1 INTRODUCTION 142
4.2 METHODOLOGY 144
4.2.1 Planning Phase 146
4.2.1.1 Selection and modelling of machining parameters 146
4.2.1.2 Design of experiments 148
4.2.2 Experimentation and Data Collection 150
4.2.3 Establishment of Predictive Models for Process Responses 150
4.2.4 Error Analysis of the Predictive Models 152
4.2.5 Multi-objective Optimization of the Process Parameters 152
4.3 PREDICTIVE MODELLING OF PROCESS RESPONSES FOR DRY CUTTING 153
4.3.1 Predictive Modelling for Specific Energy Consumption 153

4.3.2 Predictive Modelling for Surface Roughness 158
4.3.3 Predictive Modelling for Carbon Emissions 163
4.4 MULTI-OBJECTIVE OPTIMIZATION OF PROCESS PARAMETERS 167
4.4.1 Multi-objective Optimization using Desirability Approach 167
4.4.2 Multi-objective Optimization using MOGA 173
4.5 PREDICTIVE MODELLING OF PROCESS RESPONSES DURING WET CUTTING 175
4.5.1 Predictive Modelling for Specific Energy Consumption 175
4.5.2 Predictive Modelling for Surface Roughness 178
4.5.3 Predictive Modelling for Carbon Emissions 183
4.6 MULTI-OBJECTIVE OPTIMIZATION OF PROCESS PARAMETERS 187
4.6.1 Multi-objective Optimization using Desirability Approach 187
4.6.2 Multi-objective Optimization using MOGA 190
4.7 DISCUSSION 191
4.8 SUMMARY 193

CHAPTER 5: MODELLING AND REDUCTION OF NON-CUTTING ENERGY CONSUMPTION AND CARBON EMISSIONS **194-224**

5.1 INTRODUCTION 194
5.2 METHODOLOGY 197
5.2.1 Define Therbligs and Calculate the Therblig Power 198
5.2.2 Extract the Activities from the NC Program and Store the Activity Flow Information 199
5.2.3 Extract the Therbligs from Activities and Calculate Execution Time of each Therblig 199
5.2.4 Calculate Energy for each Therblig (Ej) and Activity (Ei) 200
5.2.5 Develop Current State Map (CSM) and Future State Map (FSM) 201
5.2.6 Analyze the Machining Performance for Energy Efficiency and Carbon Performance 202
5.3 CASE STUDY 204

5.3.1 Calculate the Therblig Power 206
5.3.2 Extract the Activities from the NC Program 207
5.3.3 Calculate the Energy Demand for the Machining Process 213
5.3.4 Value Stream Mapping and Result Analysis 216
5.4 DISCUSSION 221
5.5 SUMMARY 224

CHAPTER 6: DEVELOPMENT OF A MACHINING SUSTAINABILITY ASSESSMENT INDEX **226-246**
6.1 INTRODUCTION 226
6.2 SELECTION OF INDICATORS FOR SUSTAINABLE MACHINING 227
6.2.1 Economic Indicators 228
6.2.2 Environmental Indicators 231
6.2.3 Social Indicators 233
6.3 DEVELOPMENT OF A SUSTAINABILITY ASSESSMENT INDEX (SAI) 234
6.3.1 Normalization of the Indicator Data 234
6.3.2 Calculation of Indicator Weights Using Analytical Hierarchy Process 236
6.3.3 Calculation of the Sustainability Assessment Index (SAI) 239
6.4 CASE STUDY 239
6.5 SUMMARY 246

CHAPTER 7: ENVIRONMENTAL IMPACT ASSESSMENT OF MILLING PROCESS **247-261**
7.1 INTRODUCTION 247
7.2 MATERIALS AND METHOD 248
7.2.1 Goal and Scope Definition 249
7.2.2 Functional Unit and System Boundary 249
7.2.3 Reference Factory and HVAC System 250
7.2.4 Inventory Analysis 251
7.3 RESULTS AND DISCUSSION 253

7.3.1 Endpoint Assessment 254
7.3.2 Midpoint Assessment 256
7.4 PRACTICAL IMPLICATIONS AND RECOMMENDATIONS 258
7.5 SENSITIVITY ANALYSIS 261
7.6 SUMMARY 262

CHAPTER 8: CONCLUSIONS **264-270**
REFERENCES **271-303**
APPENDIX – A (Activity-Therblig relationship and Therblig power) **A1-A7**
APPENDIX – B (List of publications) **B1**
APPENDIX – C (Brief biography of candidate and supervisor) **C1**
