Towards the end of the 16th century the Portuguese power in Ceylon was at its zenith. Their powerful fortresses of Galle, Colombo and Negombo controlled the cinnamon districts on the south and west coasts. Jaffna dominated the trade with India and Mannar the pearl fishery. In addition to these, there were several minor ports of which Kahitana was the most important. The east coast alone was left unguarded owing mostly to its unproductiveness and to the belief of the Portuguese that no danger could threaten them from that side.

**1602-1630 : EARLY DUTCH SETTLEMENT. NEXT PORTUGUESE POWER THREATENED.** The position at the beginning of the 17th century was that Wimala Dharma, the Rajah of Kandy, who had overthrown the Rajah Sinha of Cotta and his other rivals had obtained the sovereignty of the interior of the island, but was hemmed in by the Portuguese who controlled all the profitable parts of the realm.

It was precisely at this period that the Dutch first sent their expeditions overseas, three ships under Joris van Spilbergh anchoring in the Bay of Batticaloa on May 31, 1602. He was not unfavourably received, but another Dutch adventurer, De Weert, who arrived 6 months later was in 1603 with many of his followers killed by the Sinhalese. By this time it was evident that something more than the good will of the natives was needed to procure for the Dutch East India Company those valuable products of the island which they required. Just then, however, the energies of the company were mainly directed towards the establishment of its influence in the Malay Archipelago, and, beyond keeping up friendly relations with the Maharajah of the island and his successors, it made no attempt to establish a settlement in Ceylon. That the Dutch had merely postponed their designs on Ceylon till they became more powerful is evident from the contracts or treaties which they made with the native rulers from time to time, these giving them considerable rights as against the Portuguese, to be used as opportunity offered.

**1630-1658 : EXTENSION OF DUTCH INFLUENCE. PORTUGUESE DRIVE OUT.** The Portuguese saw their power threatened, and by 1630 they had succeeded in encircling the whole island by a ring of seven large and a number of smaller forts and fortified places, which not only commanded the coasts, but a considerable portion of the interior of the island. The attempts of Senerat, the Maharajah at that time, to take some of these strongholds were futile, at his death, in 1632, Rajah Sinha II ascended the throne and entered into an alliance with the Dutch. In 1638 the latter

captured Batticaloa, and during the following two years the forts of Trincomalee, Negombo and Galle. Negombo was, however, retaken by the Portuguese in 1640. The alliance between Rajah Sinha and his new masters (for it quickly became evident that the Dutch were in the island not to reinstate him but to supplant the Portuguese) soon gave way to open hostility, a treaty between the two European Powers being made in 1644. War with Rajah Sinha followed, and it was not until 1650 that a rapprochement took place, war being again declared by the Dutch against the Portuguese in 1652. Colombo was the main objective of the former, but it was only in May 12, 1656, that the city finally capitulated. The Rajah's demand that both Colombo and Negombo should be handed over to him in terms of the treaty of 1638 was ignored, the former town was strongly garrisoned, and though the north of the island and the island of Manaar still remained in the hands of the Portuguese, the Dutch were now masters of practically all the richest parts of the country. Two years later Manaar and Jaffna were captured, and, in the words of the official despatch of the Dutch admiral Van Coen, "thus by God's extraordinary grace had the Company become master of the Kingdom of Jaffnapatam and lord over the precious Island of Ceylon."

**1658-1796 : DUTCH POLICY -- COMING OF THE BRITISH.** The Dutch were now masters of the island, though nominally they only held the ports they had captured in the name of the Sinhalese king. In point of fact, the Kandyan had but exchanged Portuguese for Hollander, and were still confined to their fastnesses in the central mountain zone. The Dutch, however, concentrated their energies upon securing a monopoly of trade, and for 30 years they so managed affairs that nothing was exported from the island save through their factories. At this time Holland was at war with England, which captured in 1782 the Dutch settlement at Trincomalee in the north. It was later recaptured by the French and restored to Holland, but was again captured by Colonel James Stuart in 1795 on the renewal of the war between the British and the Dutch, and in 1796 Colombo surrendered.

**1796-1815 : CEYLON BECOMES A BRITISH COLONY.** By the capitulation of the garrison at Colombo all the Dutch settlements and strongholds in Ceylon were ceded to the British, though the island was not formally annexed until the Peace Treaty of Amiens in 1802. The native sovereigns, however, continued in possession of their mountain territory until the Kandyan king, Wikrama Rajah Sinha, after perpetrating many atrocities on his own people, seized and murdered certain native merchants, British subjects, trading to Kandy. War

followed in 1815, Kandy was taken, the tyrant deposed, and his territories were annexed by treaty to the British Crown. Civil and religious liberties were guaranteed to the natives, the religion of Buddha was declared inviolable, and the laws of the country were to be preserved and administered according to established forms.

**1815-1914 : PROGRESS UNDER BRITISH RULE**—With the exception of a serious outbreak in some parts of the country in 1817, which lasted for more than a year, and of two minor attempts at rebellion easily put down, in 1843 and 1848, the political atmosphere of Ceylon has remained undisturbed. During the 19th century the colony made remarkable progress, British capital was invested profitably, the cultivation of coffee was extended, and the revenue derived from it enabled successive Governors to bridge rivers, to make roads and railways and to restore many of the ancient irrigation works. When between 1870 and 1880 the coffee estates suffered from a fungoid epidemic, the cultivation of tea was fostered, and financial equilibrium was restored.

Continuously to the end of the 19th century railway extension went on, as well as the development of agriculture, a feature of successive years being the formation of strong local planters' associations, the Planters' Association of Ceylon having been established in 1854. In 1875 the island was visited by the Prince of Wales, afterwards King Edward VII, and in 1882 his present Majesty the King paid his first visit, with

his brother the late Duke of Clarence. In 1897 the planters of Ceylon commemorated Queen Victoria's Diamond Jubilee by the completion of the handsome Victoria Buildings in Colombo.

In the South African War, Ceylon played her part by the equipment and despatch of a strong contingent of mounted infantry. In 1901 (King Edward VII having ascended the Throne a few months earlier) the Duke of York (as King George was then), with the Duchess of York, visited Colombo and Kandy, and they were received with the utmost enthusiasm and loyalty. A second contingent of troops was sent to South Africa early in 1902, a new weekly steamship service round the island being established in the same year. In 1910 the year of the Accession of King George V, the Franchise Bill became law, and a re-constitution of the Legislative Council took place, the former encountering much opposition at the time. In 1912 the Wireless Station at Colombo was installed and the first meeting of the reformed Legislative Council took place.

**1914-1925 : THE WAR AND POST WAR YEARS** The outbreak of the European War met with the response that might have been expected from so loyal a colony as Ceylon. The Ceylon Planters' Rifle Corps Contingent sailed as early as September 1914, and were at once accepted for service in Egypt, while large gifts of tea and other produce, as well as of comforts of all kinds, were made. The early activities of the German cruiser "Emden" caused

considerable excitement and some inconvenience, and an untoward incident was the occurrence of serious riots at Kandy in 1915, which spread to other provinces and caused the proclamation of martial law. Had the Army Council agreed, there can be no doubt that a complete battalion of Ceylonese could have been raised for service in Europe. Ceylon's memorial to her gallant dead has taken the form of a Victory Column and the endowment of a Seaman's Ward in the General Hospital, Colombo.

The years immediately following the War affected Ceylon less adversely than many other Eastern countries, though there was something approaching an industrial crisis in 1920. Further reforms of the Legislative Council were sanctioned in that year, and in 1922 the Prince of Wales' visit was the occasion of a loyal welcome everywhere. In 1924 the outstanding events were the successful participation of the colony in the British Empire Exhibition at Wembley, the vote of Rs 3,000,000 by the Legislative Council for the new University of Ceylon, the successful inauguration of broadcasting in the island, and the opening of the new Legislative Council. In 1925 Sir William Henry Manning's long and successful tenure of office came to an end and he was succeeded by the present Governor Sir Hugh Charles Clifford, G.C.M.G., while the Hon. Mr. Cecil Clementi, who had been Colonial Secretary since 1922, received well merited promotion on his appointment to the Governorship of Hongkong.

#### POPULATION

**T**HE total population of Ceylon at the last census of 1921 (excluding the military and shipping) was 4,498,605, or, including military and shipping, 4,504,549.

**CENSUS STATISTICS.**—The above total of 4,498,605 was distributed as follows:

PROVINCE	POPULATION
Western	1,246,847
Central	717,739
Southern	671,234
Northern	374,829
Eastern	192,821
North-Western	492,181
North-Central	96,525
Uva	233,864
Sabaragamuwa	471,814
Miscellaneous	751
Total	4,498,605

The districts with the largest population are—Colombo (exclusive of the Municipality), 678,980; Kandy (exclusive of the Municipality), 401,431; Kurunegala, 354,197; Jaffna, 330,541; and Kalutara, 323,704.

The population returns for 1921 of the principal towns were as follow—Colombo, 248,826; Jaffna, 42,511; Galle, 39,157; Kandy, 32,502; Moratuwa, 28,608; Negombo,

21,340; Matara, 16,779; Kalutara, 13,590; Panadura, 10,747; Batticaloa, 10,640; Kurunegala, 10,187.

**POPULATION BY RACES** The racial distribution of the inhabitants of Ceylon at the census of 1921 was as follows.—Sinhalese, 3,016,154; Tamils, 1,120,059; Moors, 284,964; Europeans, 8,118; Burghers and Eurasians, 29,439; Malays, 13,402; Veddas, 4,510; others, 21,959.

**POPULATION BY RELIGIONS**—In 1921 the number of Buddhists in Ceylon was 2,769,805; of Hindus, 982,073; of Muslims, 302,532; and of Christians, 443,400.

**SEX DISTRIBUTION**—Of the grand total of 4,498,605 returned by the 1921 census, 2,381,812 were males and 2,116,793 females.

**ESTIMATED POPULATION, 1924.**—The estimated population of the island on December 31, 1924, was 4,861,670.

**GROWTH OF POPULATION.**—The growth of population between 1911 and 1921 equalled about 9.6 per cent. This was considerably below the average rate of increase since 1871—the date of the first regular census—the fall being due to the incidence of the severe influenza epidemic in 1918-1919, to decreased immigration and increased emigration caused by the slump in rubber, and to the general

depression of trade resulting from the Great War. Statistics show that the highest rate of increase during the 1911-21 decade was among the low-country Sinhalese (12.2 per cent), the Burghers and Eurasians coming next with 10.4 per cent. The Veddas decreased by no less than 15.4 per cent.

**LANGUAGES.**—The language of nearly 70 per cent of the population is Sinhalese, of the remaining 30 per cent, with the exception of Europeans, the language is Tamil. A corrupt form of Portuguese is spoken by some natives of European descent. The Veddas speak a distinct language, and the Rodiyat, an outcast tribe, possess a large vocabulary of their own. The Sinhalese have several original poems of some merit and the Maha Vansa, a most interesting series of native chronicles, but their most valuable literature was written in Pali, and afterwards translated into Sinhalese.

**POPULAR OBSERVANCES.**—The Sinhalese have observances of their own, just as they have modes of dress and social customs peculiar to themselves, though western thought and culture have to a great extent banished the old and quaint observances of the people to the more remote parts. Many of the customs of the Sinhalese are largely the survivals of observances of a prehistoric time, and are frequently connected

WILD WATER BUFFALOES WALLOWING IN THE STREAM.

Fine Camera Study by Mr. F. E. Mackwood.

with the supernatural. Astrology, for instance, is still as important a branch of study and general Oriental culture as is medicine, and hardly any undertaking is set afoot without consulting the stars. A horoscope is drawn up at birth, and the child must be weaned, taught the alphabet, sent to school, put to employment, and married according as the stars dictate and at the time ordained.

On many occasions of importance propitiatory offerings are still offered to the gods, the portion set apart being ceremonially carried on the leaf of a plantain tree, made into an octagonal cake and then divided into eight parts by pressing down the diagonals of the octagon. The moon is still held to have so great an influence over birth that new rooms are continually built for the birth of an expected child when the moon is waning, such rooms being consecrated by offerings of rice, on which are written the names of the nine planets. Female children must have their ears pierced only on a Monday, Thursday or Friday, and a new born child must only see the sun for the first time after consultation of the stars and the offering of rice and coconut flowers to the deities.

Marriages are accompanied by a no less wealth of ceremonial observances, chief amongst which is the ritual of shaving his chin for the first time by the bridegroom. Burial, which is usually by cremation, is also crowded with observances, in which feasting forms a great part. These are only a few of the more intimate observances. They play no inconsiderable part in the life of the village, though in the towns and cities they are observed with much hesitation.

**RACES.**—The Sinhalese (Cingalese), the most numerous of the natives of Ceylon, are supposed to be the descendants of those colonists from the valley of the Ganges who first settled in the island in 543 B.C., and speak an Aryan language closely allied to the Pali. The dress of the men, who have delicate features and slender limbs, looks singularly effeminate, resembling very much a petticoat, their long hair, turned back from the forehead, is confined with combs, and earrings are worn

as ornaments. Polyandry still lingers in the interior of Ceylon, but this and many other customs are rapidly disappearing under the influence of education. The Kandians, or Highlanders, are a more sturdy race and maintained their independence for three centuries after the conquest of the Low Country by Europeans. The Malabars or Tamils, long contended with the Sinhalese for the sovereignty of the island. They have formed the chief population of Jaffna for fully 2,000 years, and constitutionally excel the Sinhalese and the Kandians. The Moormen, who are the most energetic and intelligent of native communities, are met with in every province as enterprising traders, and are generally believed to be of Arab descent. The "Burghers" of Ceylon are people of European descent who have become naturalised. Those of Portuguese extraction hold the lowest place, but the Dutch burghers frequently have responsible posts and are employed in the Government offices. Lastly, the Veddas who are not much removed from the wild animals of the forest, and are believed to be descended from the Yakhos, the aboriginal inhabitants of the country, occupy a district in the eastern part of the island. They have there preserved unaltered their ancient customs and manners of living for more than 2,000 years.

**RELIGIONS.**—The Census of 1921 showed the Buddhists to be more numerous in Ceylon than the followers of all the other religions put together. Buddhism in Ceylon (belonging to what is called the Southern School) was introduced by Mahinda, the Son of Asoka, King of Magadha about 250 B.C. The story goes that he brought with him (in memory, for none of the books were yet written) the collection of Buddhist "Canonical Books," known by the name of the Three Pitakas, and the Commentaries upon them, all in Pali. He translated them into Sinhalese, which is closely allied to Pali, and they are believed to have been preserved in Ceylon by oral tradition till they were committed to writing about 80 B.C. at Aluwihara, a spot on the road between Kandy and Anuradhapura. From Mahinda's time onward Buddhism may be said to have been the national religion, and

although it has since met with several vicissitudes and troublous times, it has also experienced extraordinary revivals, notably during the 19th century. Hinduism, or Brahmanism, is the religion of rather less than a million of the people of Ceylon, many of them immigrants from India. Mohammedanism was introduced by the Arabs, and the Christians are either descendants of the Portuguese or Europeans.

**VITAL STATISTICS.** The average annual birth-rate in Ceylon for all races between 1914 and 1923 was 38.9 per 1,000 of the population for Europeans 22.0, for Burghers 34.0, for Sinhalese 40.2, for Tamils 35.2, for Moors 36.9, for Malays 45.9, and for others 30.6. The average annual death-rate for all races between 1914 and 1923 was 30.0 per 1,000, for Europeans 10.9, for Burghers 21.5, for Sinhalese 28.1, for Tamils 33.7, for Moors 42.0, for Malays 34.0, and for others 37.3. The average annual infant mortality for the same decade was 193 per thousand births, as against 77 in England and Wales in 1922. The urban birth-rate in 1923 varied from 17.5 per 1,000 to 54.8, with an average of 32.2. The birth and death rates for the whole island in 1924 were 37.3 and 25.7 per 1,000 respectively.

## IMMIGRATION AND LABOUR

Ceylon is entirely dependent upon India for the supply of labour for her large tea estates, and this involves a constant immigration of unskilled Tamil coolies to the extent of about 100,000 a year. This immigration, which is assisted, is restricted under the Indian Emigration Act of 1922 and the Emigration Rules of 1923. There is also a certain amount of free immigration of those engaged in trade and other urban employment.

**ADMINISTRATION.**—In terms of the Ceylon Labour Ordinance of 1923 immigrant labour is under a Controller, who is assisted by an advisory "Board of Indian Emigrant Labour" appointed by the Governor. The Controller carries out the provisions of all ordinances relating to Indian immigrant labourers, and applies the measures adopted for the encouragement of the introduction

of such immigrants into the island. He also assesses and collects the amounts due from employers as contributions to the Immigration Fund, and he is in charge of the administration of the fund.

The supervision and control of recruiting in India are entrusted to an Immigration Commissioner appointed by the Governor, while on behalf of the Indian Government an Agent resides in Ceylon and is charged with seeing that the provisions of the Emigration Act and Rules are complied with.

**GENERAL CONDITIONS.**—During recent years considerable attention has been given to the general condition of estate labour. Estate schools are provided, and housing and sanitation are carried out according to Government regulations. Rice is supplied by the estates, usually at less than cost price, and housing accommodation and medical attendance are generally free. Labour in Ceylon is cheap: a day's field work costing somewhat less than a shilling, while skilled labour costs twice or three times as much. There is no Poor Law or Poor Rate. The Buddhists and Hindus, in accordance with

from the labourer's point of view, by the Agent of the Indian Government in Ceylon.

**IMMIGRATION FUND.** This fund was established in 1923 for the purpose of recruiting immigrant labourers and their transport from India, of paying all Indian Government fees, of the repatriation of labourers and their dependants, and of the payment of the salaries of the Immigration Commissioner and his employees. The fund is financed by an acreage tax on estates employing Indian immigrant labour, and is payable in quarterly instalments by such estates with 10 acres or more planted in tea, or with 30 acres or more planted in rubber, cacao, or cardamoms. The rate payable per quarter is fixed from time to time by the Governor in Executive Council. In 1925 the annual cess stood at Rs 6 per acre for tea, and Rs 1 8s per acre for rubber, cacao, and cardamoms. The assessment payable by each estate is made by the Controller on returns furnished by the estates and scrutinised in the Controller's office. Estates paying acreage fees are entitled to recruit under the fund without further payment. Employers who do not pay acreage

as valid for travelling anywhere within the British Empire. No further visa is required for landing in British territory, but the holders are not exempted from the immigration regulations in force in the various countries of the Empire. Special regulations are in operation affecting British subjects travelling to South Africa, and enquiry should be made at the Colonial Secretary's Office before proceeding on a journey thither. Aliens travelling from Ceylon to any part of the British Dominions, Egypt, etc. (except Canada) must have their passports vised by the Colonial Secretary, Colombo, two days' notice of this being required. Special endorsement is necessary in the case of Egypt, Palestine, and Mesopotamia for all passports.

**RECRUITING.** Licenses to recruit coolies in India are issued by the Controller in Colombo, the recruiters being known as kangamies. In India there are a number of professional recruiters, but labourers known to have been received from them are invariably rejected, as experience has proved that the ultimate result is a loss to the estate concerned. Moreover, the unscrupulous

1. KANDY PERAHERA.

2. CREMATION CEREMONY, BUDDHIST PRIEST

their religious tenets, assist their poor with food, lodging, etc., and the public feeding of the destitute is a great local feature. In towns a good deal is done for the relief of the poor by Friend-in-Need Societies and other bodies devoted to Social Service.

**EMPLOYMENT OF CHILDREN.**—The Ceylon Government has, at the request of the Government of India, been enquiring into the question of child labour on the estates. In considering this question, it must be remembered that all over the East the children of agricultural workers in their home villages habitually assist their parents. It is also obvious that light weeding and other similar tasks, performed in the open air and out of school hours, do not fall into the same category as child labour under factory conditions in large manufacturing industries. While estate employers are ready to stop the employment of children under a certain age, it is felt that such a prohibition would be very unpopular with the labourers themselves, and at present the question is being investigated, particularly

those and who wish to recruit unskilled labour in India may receive recruiting licences on depositing (or furnishing the requisite guarantee for) a sum sufficient to meet the expenses of registering and bringing over the number of labourers whom they require.

**PASSPORTS.**—Passports are required by persons entering or leaving Ceylon, the only persons excepted from this rule being British subjects travelling between India and Ceylon, and Asiatic residents of Ceylon or India travelling between the Federated Malay States or the Straits Settlements and Ceylon. Emergency certificates, valid for a single specified journey to and/or from Ceylon, may be issued in cases where the granting of a passport is deemed inadvisable. The charge for a passport from Ceylon is Rs 5. The fee chargeable for the renewal of a British passport is Rs 1, in respect of each year for which it is renewed.

British subjects travelling to any part of the British Dominions (except Canada) must be in possession of valid passports endorsed

methods to which a professional recruiter will resort are calculated to prejudice recruiting for Ceylon with the Indian authorities.

**REPATRIATION OF COOLIES.** Under the Labour Ordinance, No. 1 of 1923, any Indian immigrant labourer whose return to his home may seem desirable on account of ill-health, or inability to do his work, or ill-treatment by his employer, is to be repatriated free of cost to the place of his recruitment at the expense of the Immigration Fund. A further scheme was brought into operation in 1924, under which any labourer certified by a District Medical Officer to be permanently unfit for further work and unable to maintain himself is repatriated free of charge. Indian immigrant vagrants are collected in all towns, and on being certified as such are sent to the "House of Detention" at Colombo. Here either a suitable situation is found for them, or they are sent back to their homes in India.

**STATISTICS.**—The total number of assisted coolie estate labourers entering Ceylon during

1923 was 89,007, against 78,100 in 1922. In addition to these, 100,905 miscellaneous immigrants were registered, many of these being small traders and Urban labourers from Tinnevely, Malabar, Travancore and Cochin. During the same year 51,762 estate labourers and their dependants left Ceylon for India, out of a total of 147,800 emigrants.

**WORK AND WAGES.** - In 1923 the Department of Statistics issued an exhaustive report on work and wages on estates. This clearly indicated that the Indian coolie gets a very comfortable livelihood. The immigration figures for that year showed (as stated before) that roughly 90,000 Indian recruits came to Ceylon estates during the year, and that of this total more than 46,000, or over 50 per cent, were old immigrants returning to Ceylon for a second or subsequent period. These figures supply convincing proof that work in Ceylon, with present wages and under present conditions, is not unpopular with a large class in the agricultural districts of Southern India.

### EDUCATION

There has been a great advance in public instruction since 1875 through the multiplication of vernacular, Anglo-vernacular, and

English schools by the Government, by the different Christian missions, and by Hindus who have come forward to claim the Government grant. The Board of Education was established in 1919 and consists of not less than 10 or not more than 20 members nominated by the Governor, of whom the Director and Assistant Director are *ex-officio* members while the others hold office for three years.

**ENGLISH SCHOOLS.** In 1923 there were 301 English and Anglo-vernacular schools attended by 61,003 pupils, of whom 47,349 were boys and 13,654 girls. There is one Government secondary school in Colombo, with an average attendance of 503, and there are also 30 other secondary schools, the total average attendance at which was 14,694.

In most of the larger English schools candidates are prepared for the Senior and Junior Cambridge school certificate examinations. In 1922 out of 1,030 senior candidates presenting themselves 84 obtained honours and 257 other passes, while of the 1,285 junior candidates 110 obtained honours and 558 other passes. In 1923, also, 408 candidates from Ceylon presented themselves for the London University Matriculation examination of whom 75 passed.

SPOTTED DEER (*Axis maculata*).

Camera Studies of Wild Animals in Their Native Haunts by Mr. F. E. Mackwood.

**FREE SCHOLARSHIPS.** Five Government Scholarships are now open to scholars at the English schools one on the results of the final examination in arts of the London University and one on the result of the final examination in science. A third scholarship is awarded on the results of the final examination in science on condition that the holder studies agriculture and forestry. Two more scholarships are awarded on the results of the same examination on condition that the selected candidates pursue a course of studies in engineering. The first three scholarships are tenable for two years, and the two engineering scholarships for three years. The scholarships are of the value of £300 per annum, with free passage and outfit allowance of £50. The holders may join any British university or any recognised engineering institution in the United Kingdom.

**FINANCE.**—On a total of 4,233 schools in 1923, with approximately 144,938 scholars, the expenditure by the Government was Rs 4,782,684.

**INDUSTRIAL SCHOOLS.**—In 1923 the aided industrial schools of Ceylon, which numbered 33, received grants amounting to Rs 31,674.33. The trades taught were

carpentry, dressmaking, tailoring, lace-making, embroidery, gardening, cookery, weaving, shoemaking, and smithy work. The most important of these schools is the Muggona Certified Industrial School, which is managed by the Roman Catholic Mission and is utilised by the Government as a reformatory for youthful offenders.

**TECHNICAL EDUCATION.** This is given at the Government Technical Schools, Colombo, where full time and evening classes are held in telegraph and telephone engineering and signalling also in building construction, mechanical and electrical engineering, carpentry, typewriting, shorthand, book-keeping, wood carving etc., and at the Jaffna Technical School.

**TRAINING COLLEGE.** The Government Training College at Colombo consists of three departments: English (men and women), Sinhalese (men), and Sinhalese (women). The object is to supply trained teachers for aided English schools and Government Anglo-vernacular and vernacular schools. At the beginning of 1923 the number of students in training was on the English side 35 men and 44 women, on the Sinhalese side 43 men and 40 women. There is also a

training school for Tamil teachers at Kopay, which was opened in 1923. Fifty-three students had been admitted.

**UNIVERSITY COLLEGE.**—The University College prepares students for the B.A., B.Sc., and B.Sc. (Economics) examinations of the London University. In 1923-24 there were 234 students in attendance. In 1923 the buildings formerly occupied by the Royal College were transferred to University College, and here all lectures, save those in science, are now given. Instruction is offered in English, Pali, Sinhalese, Tamil, History, Logic, Philosophy, Geography, Economics, Pure Mathematics, Applied Mathematics, Physics, Chemistry, Botany, and Zoology. There are Honours classes in Classics, Mathematics and Chemistry. It is very satisfactory to record that the results of the Intermediate Examination received at the end of 1923 showed an increase in the percentage of passes over 1922, and compared favourably with the percentages of students for the London external examinations conducted in England.

**VERNACULAR EDUCATION.**—There were 1,039 Government vernacular schools in 1923, with an attendance of 105,916 boys and 45,299 girls. Other schools, estate and controlled by religious organisations, numbered 1,820, with an attendance of 125,930 boys and 81,152 girls. The total sum expended by Government on vernacular education in 1922-23 was Rs 2,532,787.97 of which approximately two-fifths was spent on Government schools and three-fifths on aided schools.

## SPORT

Outside the capital and one or two of the larger towns, where European games have become attractive, sport in the island lies mostly in the direction of wild game shooting or hunting.

**CRICKET.**—Cricket is a most popular ball game in Ceylon, and is played not only by the English, but by the Sinhalese, who often attain to great proficiency. The Ceylon Cricket Association controls the various cricket clubs throughout the island. Most of the prominent business houses in Colombo run their own clubs, and these compete annually for the Senior and Junior Shields offered by the Ceylon Chamber of Commerce, the contest being under the management of the Mercantile Cricket Association, which was formed in 1911.

**ELEPHANT KRAALS.** A comparatively rare sporting event in Ceylon which arouses much interest is an Elephant Kraal. Owing to the felling of the large forests the elephant is gradually disappearing from the island, though it is still fairly numerous in the Low Country. The kraals are enclosures erected by native chiefs who have obtained permission. Into these the elephants are driven, and the animals obtained in this way are divided amongst those organising the kraal, being then used for draught work or for the service of the temples. A famous kraal was that held in 1881 at Labugama, 28 miles from Colombo, when King Edward VII and his brother visited Ceylon. The last kraal was held in 1924.

**FISHING.**—Some of the inland rivers of Ceylon provide excellent trout fishing, notably the Nanu Oya, the Kotmaleganga, the Bemura-ella Oya, the Hambantota Oya (North Cove Stream), the Sita Eliya Stream and its many tributaries, the Horton Plains Stream, the Gourakelle and Rajanalee Streams, Lake Gregory, and the Hawa Eliya Lake. Many of these waters (in all some 30 stretches) are vested in the Ceylon

WILD ELEPHANTS (*Elephas maximus*) ENJOYING A DUST BATH.  
A Unique Camera Study by Mr. F. E. Mackwood.

Fishing Club, which has done so much to improve, by means of fish-hatcheries and attention to the rivers, the facilities offered to sportsmen. The open season for trout fishing on the Nana Oya, Kotmaleganga, Lake Gregory and Hawa Eliva Lake is from January 1 to October 31, on all other waters it is from May 1 to October 31.

**FOOTBALL.** Football is an exceedingly popular game with the Sinhalese youth, as well as with the British. The Association game is the favourite, the Ceylon Association Football League, the Colombo Association Football League, and the City Association Football League each having a full quota of affiliated clubs, and the matches attract good crowds. The Ceylon Rugby Football Union controls the older game which, after the inevitable post-War slump, has during the last two years greatly improved its position among the sports of the island. Colombo naturally furnishes the strongest team, though the Uva Club is always able to give it a close match. Other prominent clubs are at Dumbura, Kalutara and Dikoya.

**GOLF.** Golf flourishes at Colombo, Galle, Kandy, Nuwara Eliva, and Victoria where there are good courses.

**POLO.** Though not played so much as in India, where the military element is stronger, polo has always been a feature of Ceylon sport. The Colombo Polo Club uses the racecourse for its contests.

**TENNIS.** This game has a large number of devotees in Ceylon, numerous clubs having been formed, not only in Colombo, but in almost every town of importance.

**RACING.**—Racing in Ceylon grows in popularity every year, the Ceylon Turf Club having been quick to recognise the desirability of providing good stakes for competition. During recent years there has been a large influx of horses into the island, and the success of some of the imported animals has been remarkable. On the whole, the standard of horse racing in Ceylon has shown a steady improvement since the War, the times recorded during the past few years in comparison with those of a decade previously being alone sufficient to prove this.

The Ceylon Turf Club owns the well-appointed racecourse at Borella where the principal races, the Governor's Cup, Robert's Cup, and Colombo Cup are run. There are also excellent courses and interesting racing at Galle, Nuwara Eliva, Kelani Valley, and other centres.

**SHOOTING.** Apart from the larger wild game of the island, which are dealt with separately, the various wild fowl provide the best sport for the gun, and these are to be found in many parts. Snipe abound near Wenda, Maha Oya, Wakwella, and the Batticaloa Tanks. For miscellaneous shooting the district lying between Badulla and the Yala River offers perhaps the best opportunities. The cost of a general game licence is Rs. 5 for residents and Rs. 15 for non-residents.

**WILD GAME.** The jungles of Ceylon are famous for their wild game, elephants and deer being the best known. Elephants are no longer indiscriminately shot, a licence to kill being necessary but occasionally a "rogue elephant" as dangerous to the peace of the community as is a homicidal maniac is proscribed and sportsmen are invited to shoot him. An excellent centre for elephants, buffalo, bear and leopard shooting is Palutupana, 6 miles north of Kirinda, on the south-east coast. The sambur or elk deer often provides good sport for the hunter, as do the wild bear and the bear, which are killed mostly at waterholes during the dry season. There is no pig sticking in Ceylon, as the country does not lend itself to the sport.

A licence to shoot an elephant costs for residents Rs. 100, and for non-residents Rs. 300, to shoot a buffalo Rs. 20 for residents, and Rs. 75 for non-residents.

## PRESS

The first newspaper printed in Ceylon was the "Colombo Journal," which issued its initial number on January 1, 1832, but survived for only two years. On February 4, 1831, the "Colombo Observer" (since 1867 the "Ceylon Observer") began its successful career and it is by far the oldest existing newspaper in the colony, the "Times of Ceylon" having issued its first number (under the title of the "Ceylon Times") in 1840. These two papers, with the addition of several others, many of which had more or less brief careers, have worthily upheld the best traditions of the British press, and were for a long time the only journals of any importance in the colony, though of recent years there has been a very marked increase in the number, as well as a noticeable improvement in the tone and get up, of the vernacular press.

**DAILY PAPERS.** There are seven daily newspapers published in Ceylon, five in English and two in Sinhalese. The leading English daily, the "Times of Ceylon," is published every week-day evening. Besides

providing a fully up-to-date service of foreign and local news, the "Times" is also a great advertising medium and circulates throughout the whole of the island.

The "Ceylon Observer" was the first newspaper in Ceylon to establish a regular weekly edition (see below). The "Observer" is, like the "Times," an evening paper, has a growing circulation, and has ever been to the front in the advocacy of measures designed to benefit the colony and its inhabitants.

The three morning papers, all published in Colombo, are the "Ceylon Independent" (1888), the "Ceylon Daily News" (1918) and the "Ceylon Morning Leader" (1907). The leading Sinhalese daily paper is "Dinamina" (established 1909), a vernacular journal enjoying a status equal to that of the English journals, and controlled by the proprietors of the "Observer." The "Lakshana," another Sinhalese daily, was established in 1912 and has a large circulation.

## ENGLISH AND NATIVE WEEKLIES

The "Ceylon Observer" publishes an excellent weekly called the "Overland Weekly Observer" for both foreign and local readers. This edition was established in 1840 as the "Overland Observer" and has had continued success. A "Sunday Edition" of the "Observer" is also published. The weekly emanating from the office of the "Times of Ceylon" is the "Sunday Illustrated." From the Government printing office comes the "Government Gazette," the official organ of His Majesty's Government. The "Morning Star" is published in both English and Tamil at Jaffna. An able weekly in English is the "Searchlight" and Sinhalese weeklies with large circulations are the "Sinhala Bandhaya" and "Swadesa Mitraya."

**VARIOUS.** The Department of Agriculture publishes monthly the "Tropical Agriculturist," which contains a mass of valuable information, and the Government Press issues annually an official Handbook of Commercial and General Information. A Tamil monthly, "Kudumba Theepam" ("The Light of the Home"), has a large circulation, as has also the "Tamil Makal," the women's Tamil monthly. Mention may also be made of two excellent annual publications, invaluable to the resident or tourist in Ceylon. Ferguson's "Ceylon Directory," issued by the "Ceylon Observer," and the "Times of Ceylon Green Book." The Australian Bureau in Colombo undertakes the preparation, direction and distribution of any advertising intended for the Ceylon Press and public in any Oriental language.

# ADMINISTRATION AND COMMUNICATIONS

## CONSTITUTION AND LAW

### PUBLIC WORKS

#### CONSTITUTION

**T**HOUGH geographically a part of India, Ceylon is politically independent of it. Soon after its conquest by the British, the island was placed under the Government of Madras, but the result of the latter's attempt to govern it by Indian methods was a serious revolt. Ceylon was therefore created a Crown Colony, which status it now occupies, being generally regarded as the richest and most progressive of this class of dominion. In 1920, with a view to giving a larger measure of popular control over administration, changes in the Constitution, which had been for some time under consideration, received the approval of the King.

**ADMINISTRATION.** As a Crown Colony, Ceylon is controlled by the Crown through the Secretary of State for the Colonies, and is administered by a Governor with the aid of an Executive Council and a Legislative Council. The head of the Civil Service is the Colonial Secretary. For administrative purposes the island is divided into nine provinces, comprising 10 revenue districts; each province is under a Government Agent.

**EXECUTIVE COUNCIL.** The composition of the Executive Council has changed very little since its establishment in 1833. It now consists of seven members. Three of these are ex officio members (the Colonial Secretary, the Attorney General, and the Government Agent of the Western Province); there is one official member, and the remaining three are unofficial nominated members. This unofficial membership has for a long time consisted of a European, a Sinhalese, and a Tamil. The Executive Council is merely an advisory body to the Governor as President. Far-reaching changes in its composition, including the inclusion of an elected element, are foreshadowed.

**GOVERNOR.** The Governor is appointed by the Crown for a term of six years at a salary of £7,000 per annum, with residences in Colombo, Kandy, and Nuwara Eliya. The present Governor is Sir Hugh Clifford, G C M G, G B E, who assumed office in 1925.

**LEGISLATIVE COUNCIL.**—The Legislative Council of Ceylon, as reconstituted by the Order in Council of December 10, 1923, consists of 12 official members (of whom five are ex officio members, viz., the Senior Military Officer, the Colonial Secretary, the Attorney General, the Controller of Revenue, and the Treasurer, with 7 nominated public officers) and 37 unofficial members (3 nominated and 34 elected, including the three Mohammedan members and two Indian members directed by the Governor to be elected under powers given him). This means that the Council has an unofficial majority of 25.

The Governor is president of the Legislative Council, but the Vice-President is elected by the Council. The presiding member has an original vote and also a casting vote in case of an equal division.

## ARMY AND NAVY

### POSTS, TELEGRAPHS AND TELEPHONES

**FRANCHISE.** The franchise is confined to male British subjects of the age of not less than 21 years, able to read and write English, Sinhalese or Tamil who have during the whole of the period of 6 months immediately prior to the commencement of the preparation of the register of voters, resided in the electoral district to which the register relates and who enjoy a clear annual income of not less than Rs 600, or have other property qualifications.

**POLLERS.** Laws to be effective must be assented to by the Governor, but the Crown may disallow them even after such assent. The Governor may reserve any bill passed by the Legislative Council for the Crown to signify its pleasure thereon, and, except where power is expressly given to the Council to make provision by law, he is compelled so to reserve a bill which alters, or is inconsistent with, any provision of the Order in Council establishing the Legislative Council. The Council cannot pass nor can the Governor consent to any law, vote, or resolution imposing a tax or disposing of or charging any part of the public revenue unless proposed by the direction or with the express approval of the Governor. The Governor may, either before or after the votes of members are taken, declare any question to be of paramount importance in the public interest; in such case, if a majority of the official votes are in favour of the measure it is deemed to have been passed by the Council, the Governor having at once to report the case to the Secretary of State, with a statement of any objection made.

#### LAW

The law of Ceylon is Roman-Dutch, modified by colonial ordinances. Kandyan law is to a certain extent in force in the Kandyan provinces, and special systems of personal law are recognised for the Mohammedan community, also for the Tamils of the Jaffna district. The criminal law has been modified on the principal of the Indian Penal Code. There is a Supreme Court which decides appeals, and also tries serious crimes under its original jurisdiction on circuit. Five judges comprise the Full Court. In the island there are 30 Police Courts, 3 Municipal Courts, and 21 District Courts having criminal jurisdiction, and 41 Courts of Request concerned with civil cases only.

**APPLICATION OF ENGLISH LAW.** The tendency of legislation during the last hundred years has been slowly but surely to introduce into the island a considerable mass of English law, though judicial precedents and decisions have helped to preserve the pure Roman-Dutch law. The latter, though not so firmly established in Ceylon as it is in South Africa, appears to be in no danger of extinction, as in British Guiana. The laws of Ceylon relating to Persons, Property, Torts, and Intestate Succession are almost entirely Roman-Dutch in origin, though they have been in many cases either

modified or codified by statute. In the law of contract the exigencies of modern trade and mercantile custom have necessitated the introduction of English law, an arrangement that helps considerably to facilitate commercial relations between the Mother Country and its premier Crown Colony. (See also under "Commerce.")

#### LOCAL GOVERNMENT

Local government in Ceylon has hitherto been carried on as far as possible by means of old native machinery, each village or small tract of country being under a "headman." He became responsible to a headman of a higher grade, and the latter again to another, who became responsible directly to the Government Agent of the province, a member of the regular Civil Service. The headmen of a group of villages formed the Gonsabhlawa or village council, a body which collected funds by local taxation, and assumed responsibility for good order, for the decision of minor civil and criminal cases, and the improvement of the village. Under the Local Government Ordinance of 1920 Urban District Councils have been established at several centres, and the Ordinance is to be brought into operation throughout the island at an early date by the constitution of Urban, General, and Rural District Councils.

## ARMY AND NAVY

### ARMY

At the beginning of British occupation Ceylon was governed as a military settlement, and British regiments were for a long while stationed on the island as in India. There is now no British regiment in Ceylon. Colombo, however, still ranks as one of the defended ports of the Empire, and units of the Royal Garrison Artillery, Royal Engineers, Royal Army Service Corps, Royal Army Medical Corps, Royal Army Ordnance Corps, Royal Army Pay Corps, the Corps of Military Accountants, and the Army Educational Corps are stationed in the island.

**ADMINISTRATION.**—The administration of the military forces of Ceylon is controlled by the Officer Commanding Troops, who is an ex officio member of the Legislative Council. There is a Command Staff, with headquarters at Colombo in the cool season and Nuwara Eliya in the hot season. A small garrison is stationed at Kandy, and Diyatalawa, situated at an elevation of about 4,000 feet, is the principal training centre and the station to which troops go each year for a change of air from Colombo. At Nuwara Eliya is a military sanatorium.

**DEFENCE CORPS.**—The Ceylon Defence Corps is composed of the successors of the old Volunteer Corps of the island, of which the oldest is the Ceylon Light Infantry, dating from 1881. Compulsory service for all Europeans was introduced in 1917, during the Great War. The Prince of Wales (afterwards King Edward VII) was Monarch

Colonel of the Light Infantry till 1904 when as King-Emperor he honoured the whole Volunteer Force by becoming its Colonel-in-Chief and was succeeded by his present Majesty in 1910. The other branches of the Defence Force are the Ceylon Garrison Artillery, the Ceylon Engineers, the Ceylon Mounted Rifles, the Ceylon Planters' Rifle Corps (of which H.R.H. the Prince of Wales is Honorary Colonel), the Town Guard, the Supply and Transport Corps, the Medical Corps, and the Cadet Battalion.

**MILITARY EXPENDITURE.** The estimated military expenditure for the financial year 1924-25 was Rs 2,120,100, compared with Rs 2,247,730 in 1922-23, and was apportioned as follows: Ceylon Defence Corps Rs 800,000; Military Contribution Rs 1,207,000; special and other expenditure, Rs 22,500.

#### NAVY

Colombo is one of the ports on the East Indies Station of the Royal Navy, and all naval matters relating to the island are dealt with at H.M. Naval Office Colombo where there is a small staff. The ships on the East Indies Station in 1924 were H.M.S. "Chatham," "Colombo" and "Canoe," of the Fourth Cruiser Squadron and the four sloops H.M.S. "Triad," "Crocus," "Cyclamen," and "Lupin." H.M.S. "Chatham II" was in charge of the Matara Wireless Telegraph Station. The R.L.A. "Rapidol" oiler, was stationed at Trincomalee, where there is a Naval Yard under a Naval Store Officer and Superintendent. At Divulawa is a Royal Naval Camp for the hot season.

#### PUBLIC HEALTH

The Medical Department is concerned with the treatment and prevention of disease throughout the island. It is under the direction and control of the Principal Civil Medical Officer and Inspector General of Hospitals, assisted on the medical side by an Assistant Principal Civil Medical Officer and Inspector General of Hospitals, and on the sanitary side by a Sanitary Commissioner.

**HOSPITALS.** In 1923 there were 91 Government hospitals in the island, the largest being the General Hospital at Colombo, with 711 beds. There are also a hospital for tuberculosis equipped with modern furniture and appliances, two leper asylums, hospitals for ear and eye diseases and for women and children, and 472 central and branch dispensaries. A new lunatic asylum is being built at Angoda, 6 miles from Colombo, to replace the old asylum which does not provide sufficient accommodation. The total of admissions into all Government hospitals during 1923 was 34,522.

**INFECTIOUS DISEASES.** Malaria is the greatest curse of Ceylon as of other tropical countries, and outbreaks are often very severe. An intensive campaign against the scourge is being waged by the Government, propaganda being organised in the villages and especially among school children. Dysentery, chicken-pox, enteric fever, and measles are of frequent occurrence. Small-pox has been almost stamped out.

**MEDICAL INSTITUTIONS.** The Medical College in Colombo, founded in 1870, grants diplomas in surgery and medicine which are recognised by the General Medical Council of Great Britain, and is attended by 200 students. At Colombo the Bacteriological Institute and the Pasteur Institute are both doing much useful work.

#### PUBLIC WORKS

The Public Works Department of Ceylon has under its control the administration of the State Railways, the Posts and Telegraphs, the construction and maintenance of public buildings and roads, and irrigation works. The two first named are dealt with separately in this section.

**BUILDINGS.** Some of the more important public buildings of Colombo will be found described under that city. The department has also been responsible for the construction of such important buildings as the General Hospital, Colombo, the new Lunatic Asylum at Angoda, the Experimental Station and Agricultural School at Jaffna, and the handsome new bridges across the Mahaweli-Ganga at Gampola.

**FINANCE.** The total expenditure of the Public Works Department increased from Rs 3,437,862 in 1896 to Rs 11,380,248 in 1923, the latter figure showing an increase of Rs 1,585,683 over that of 1922. The annual expenditure during the past 28 years has been Rs 7,971,336.

**IRRIGATION WORKS.** Irrigation works are of the utmost importance in Ceylon, where the best lands yield in rice alone only half the requirements of the population. Every effort has been made in recent years to increase the acreage under paddy, the department having spent much money in the maintenance and repair of the village irrigation works, as well as on the inauguration of a vast hydro-electric project, to cost eventually over Rs 33,000,000, which is to utilise the Laxapana Waterfalls in the central mountain range. The number of Crown irrigation works in 1923 was 184, under which 145,093 acres were irrigated, an increase of 820 acres on the previous year. There were also approximately 5,250 village tanks and dams in operation, while some 1,680 more village tanks were being restored. Altogether, about 194,400 acres were cultivated under village works. Government expenditure on irrigation in 1922-23 amounted to Rs 1,205,938.

**ROADS.** The total length of roads maintained during 1923 by the Public Works Department was 4,100 miles, of which 3,871 miles were cart roads and 235 miles bridle roads. (See also under "Transport.")

#### POSTS, TELEGRAPHS AND TELEPHONES

##### POSTS

The postal service of Ceylon, under a Postmaster General and an efficient staff, is up-to-date and progressive. On December 31, 1924, there were 625 offices open for the transaction of postal business, including about 350 village receiving offices, and 179 telegraph offices. The village receiving offices were established in 1886 with the object of extending postal facilities to rural districts.

**LETTERS.** The total number of postal articles, exclusive of parcels, which passed through the post in 1924 was estimated at some 68 millions, about 7,000,000 more than in 1923. Of this total, 6,709,000 were received from and 5,905,000 were sent to the United Kingdom and other British Possessions, about 54,000,000 letters, etc., being dealt with internally. Some 719,000 were received from and 667,000 sent to foreign countries. Of the grand total of 68,000,000, roughly 46,500,000 were letters, 8,500,000 post cards, and 13,000,000 news-

papers, book packets, samples and circulars. The increase in circulation in 1924 was principally in inland correspondence, which comprised over 70½ per cent of the total. Correspondence with India formed 13 per cent, with the United Kingdom about 4½ per cent, and with other countries 3 per cent.

**MONEY ORDERS.** All post offices in the island transact money order business, the inland system having been introduced into the colony in 1877. The value of orders issued in that year amounted to Rs 500,000, compared with Rs 28,387,526 in 1923. The total value of all money orders handled in 1923 was Rs 40,507,757. Business with India, which dates from 1880, formed a large percentage of the remaining money order transactions, orders issued payable in that country totalling over Rs 9,500,000, or Rs 500,000 more than in 1922. A fair proportion of such remittances was due to savings remitted by Indian immigrant coolies.

**PARCEL POST.** The total number of parcels dealt with in 1924 was 973,061, an increase of more than 50,000 over the 1923 total. Of these, 57,984 were received from the United Kingdom and 224,104 from other countries, chiefly from India.

**PARCEL RATES.** The local parcel post rates are as follow: For parcels not exceeding 2 lb 25 cents, with 10 cents additional for every 1 lb up to 11 lb. The registration fee for parcels is 15 cents.

Parcels to the United Kingdom cost Rs 1.50 for the first 3 lb, and Rs 1.25 additional for every further 4 lb. Maximum length 3½ ft, maximum length and girth combined 6 ft.

Parcel rates to India only are 25 cents for the first lb, and 15 cents for each additional lb up to 11 lb. For a parcel between 11 and 12 lb the fee is Rs 3.25, and 25 cents additional for each further lb up to 20 lb. A fee of 6 cents is charged for acknowledgment of delivery.

All parcels sent overseas are subject to Customs Regulations, being liable to be opened for examination, and their contents are subject to duty according to the laws of the country of destination.

**POSTAL ORDERS.** Postal orders dealt with in 1924 numbered 221,018, value Rs 882,264, as against 203,414, value Rs 771,884 in 1923. British postal orders issued were 13,278 of the value of 26,709, and British orders paid, 13,681, value 210,618.

**POSTAL RATES.** The rates for overseas postage are: 10 British Possessions, 12 cents for the first oz., and 10 cents for each subsequent oz.; post-cards, 10 cents. 10 foreign countries, the corresponding rates are 20 cents, 10 cents, and 12 cents. The inland rates of postage and the rates to India are 10 cents for letters not exceeding 4 oz., 3 cents for post-cards, and 3 cents for 2 oz. of printed matter.

**REVENUE AND EXPENDITURE.** The total revenue of the Posts and Telegraph Department for the year 1924 was Rs 5,786,188, receipts from letters, parcels, etc., totalling Rs 3,405,500 and those from telegraphs and telephones Rs 1,511,208. The expenditure for the year amounted to Rs 4,802,615, of which sum Rs 4,608,939 was for salaries, wages, and the expenses of the postal service within the colony, while Rs 194,576 was expended on the conveyance of mails beyond the colony. The net revenue for the year was, therefore, Rs 983,573.

**SAVINGS BANK.**—The deposits at the 203 branches of the Post Office Savings

Bank amounted on December 31, 1924, to Rs 7,613,945, deposits during the year having exceeded withdrawals by Rs 754,392. The rate of interest is 2 40 per cent 2 cents per month for each complete Rs 10.

### TELEGRAPHS

The telegraph system of Ceylon dates back to 1857, when the Government decided to establish it, and the first line from Colombo to Galle a distance of 74 miles, was completed in 1858. In June, 1858 the telegraph line was extended from Colombo to Kandy, and in October of the same year direct communication was established with India by the construction of a line from Colombo via Kandy and Anuradhapura to Manair and Talaimannar, nearly 250 miles in length. In 1864 the telegraph wire was extended from Kandy via Dambulla to Trincomalee, but owing to frequent interruptions from herds of wild elephants, which pulled down and broke the posts, this line was dismantled in 1881, and another and better route from Anuradhapura to Trincomalee took its place. The first direct message from Europe was received in Colombo on March 2, 1865.

To-day all the important towns in Ceylon are served by the Government telegraph system, 170 postal telegraph offices being open for public business in 1924, besides several railway telegraph offices. There are two telegraph circuits between Ceylon and India, on one of which the Bandot printing

machine is employed in duplex working. The total number of telegrams handled in 1924 was a little over 2½ million, some 300,000 more than in 1923.

**CABLES.** Ceylon is connected with the West by direct cables of the Eastern Telegraph Company to Aden and the Seychelles, and to the East with Singapore. In 1923 some 80,000 private cable messages were despatched to and 88,000 received from other countries.

### RATES (TELEGRAPH AND CABLE).

Telegraph rates are as follow. Inland, 40 cents per minimum of 10 words, including address and 5 cents for every additional two words. India and Burma ordinary service. R 1 for the first 12 words, and 15 cents for each additional word. Cables to Europe, Rs 1 35 per word. New York, Rs 2 15, Australia, Rs 2 05, South Africa, Rs 1 80, and the Straits Settlements, Rs 1 80. The deferred rate to the United Kingdom is 65 cents. The charge for urgent telegrams is three times that of ordinary private telegrams.

**PRUSS MESSAGES.** Inland R 1 per 100 words, additional 50 words, 50 cents. To the United Kingdom 25 cents per word. To India and Burma, R 1 for 32 words or groups of five figures, every additional four words or groups of five figures, 10 cents. Minimum charge to India, R 1.

**WIRELESS.** The Government wireless station at Colombo, of 5 kw. power, has a normal daylight range of about 400 miles and a normal wave-length of 600 metres and is open to traffic of all kinds. During 1923 the station dealt with 8,585 messages, containing 104,008 words. The rate is 60 cents per word. Licences for wireless apparatus cost Rs 10 per annum.

### TELEPHONES

The telephone system in Colombo was taken over by the General Post Office on January 1, 1896, having been purchased from the Oriental Telephone Company at a cost of Rs 42,666 with 50 subscribers. 25 miles of posts and 151 miles of wire. In 1899 at a cost of about 700,000, earth return circuits were replaced by metallic return circuits on account of earth current and induction from the Electric Tramway system. On December 31, 1922 there were in Ceylon 3,974 miles of telephone overhead wires and 12,627 miles of underground wires, in addition to 1,770 miles of lines and 3,294 miles of wire in connection with private licensed telephone exchanges which serve the rural areas, these being linked together by Government junction and trunk lines. There were 2,301 subscribers to the Colombo exchange in 1923, 153 at Kandy, 122 at Nuwara Eliya, 70 at Galle, 57 at Kurunegala, and 15 at Negombo. Some 13,000,000 calls were dealt with throughout Ceylon during 1923.

## FINANCE AND BANKING

### FINANCE

**F**EW countries in the British Empire have been able to show financial results more continuously favourable over a number of years than those of the Crown Colony of Ceylon. Previous to 1917 (the third year of the European War) there had been a long succession of credit balances, ranging from one to eleven million rupees. The years 1917-18 to 1920-21 each, it is true, showed a deficit (in the last named period as high as Rs 21,000,000), these being due to the diversion of trade from its normal channels, the post war economic "slump" in almost every country of the world, and the extraordinary military expenditure incurred by the colony. In 1921-22, however, the tide turned with a balance of nearly Rs 2,000,000 credited to revenue over expenditure, while in 1922-23 the credit balance was one of Rs 8,000,000, and in 1923-24 of nearly Rs 2,000,000. An even better view of the sound financial position of the colony is disclosed by the statement that on September 30, 1924, her assets were estimated at Rs 62,739,335, while her total liabilities were only Rs 39,520,430. To use in substance the words of the Colonial Secretary when introducing the 1924-25 Budget, not only is the financial position thoroughly sound at present, but there is no known local reason why it should not go from strength to strength.

COPYRIGHT.—See Preface.

**BUDGET.**—The Budget for 1924-25 was introduced in the Legislative Council on October 17 of the first-named year, and provided for an estimated revenue of Rs 102,000,000, against an estimated expenditure of Rs 111,168,200. No change was made in existing taxation, the Government feeling justified, from the previous year's experience, in assuming that the amount budgeted for would be collected. It is to be noted that, of the estimated expenditure, Rs 10,029,327 was eventually to be charged to the surplus and deficit account, which totalled Rs 21,563,659. The Budget was therefore balanced.

**CURRENCY.**—The standard currency is the Indian silver rupee, which is divided, not into annas, but into 100 cents. The following fractions of the rupee are coined:—(1) silver half-rupee or 50 cents; (2) silver quarter-rupee or 25 cents; (3) silver 1/10th rupee or 10 cents, and (4) a nickel 5 cent piece. The copper coins consist of 1 cent and 1/2 cent pieces. The chief medium of exchange is the currency note, issued by the Government to the value of Rs 1,000, Rs 100, Rs 50, Rs 10, Rs 5, Rs 2, and R 1. The sovereign is not legal tender in Ceylon. There is no Mint in the island, the rupee being coined in India and the lower value coins minted in England. The average equivalent of the shilling may be said to be 75 cents, making the £ sterling equal to Rs 15, and the rupee itself the equivalent of 1s. 4d., as in India. The following Indian table is useful for reference:—

## INSURANCE

10 Annas	R 1	C 00
8 "	0	50
4 "	0	25
2 "	0	12½ (50 ras)
1 "		6¼ (25 ras)

**LOAN BOARD.**—The Loan Board is a Government Institution controlled by the Colonial Treasurer, the Postmaster-General and the Solicitor General, and exists for the purpose of making loans only on the security of household property within the Municipality of Colombo.

**NOTE ISSUE.**—The present Government note issue, representing 1, 2, 5, 10, 50, 100, and 1,000 rupees, is regulated by the Ordinance No. 32 of 1884, since amended, and is managed by a Board of Currency Commissioners consisting of the Colonial Secretary, the Treasurer, and the Controller of Revenue. The Commissioners retain a reserve in silver or gold coin of one-half of the amount of notes in circulation, the other half of the value is invested in Indian Government, United Kingdom or Colonial securities. On September 30, 1923, the value of currency notes in circulation amounted to Rs 39,704,944. The Currency Commissioners on the same date held silver rupees to the extent of Rs 15,272,715 and Rs 28,500,352 (market value) or Rs 26,238,318 (purchase price) in British, Indian, and Colonial securities. The value of the reserve at that date was thus in excess of the value of notes in circulation by Rs 4,128,123.

**PUBLIC DEBT.**—The Public Debt of the Colony on September 30, 1924, stood at £12,738,293 8s 4d, and the rupee debt at Rs 3,000,000, the total being less than two years revenue. The interest on this for 1924-25 was estimated at Rs 9,496,794, and the sinking fund at Rs 2,786,540, besides Rs 19,875 Crown Agents' charges. The following table summarises the Public Debt as on September 30, 1924, —

	£	s	d
Debentures Unredeemed	99,200	0	0
4% Inscribed Stock (Debentures Converted), 1934	1,076,100	0	0
3% Inscribed Stock, 1940	2,550,000	0	0
3½% Inscribed Stock, 1950	1,500,000	0	0
4% Inscribed Stock, 1959	1,000,000	0	0
6% Inscribed Stock, 1930-51	6,212,993	8	4
<b>Total</b>	<b>12,738,293</b>	<b>8</b>	<b>4</b>

The Rs 3,000,000 debt is in 4% Ceylon Inscribed stock, falling due in 1944.

**REVENUE AND EXPENDITURE**—The total revenue for the financial year ended September 30, 1924, amounted to Rs 102,363,116 (£6,824,207), which was Rs 10,090,515 more than the estimate and Rs 8,642,047 more than the amount collected in 1922-23. Following are details of the revenue for 1923-24 with the corresponding figures for 1922-23 —

HEADS OF REVENUE	1922-23 RS	1923-24 RS
Customs	32,322,863	36,223,135
Port, Harbour and Wharf Dues	4,421,080	5,212,042
Licences, Excise, etc	22,901,815	21,793,640
Fees	3,562,975	3,600,013
Posts and Telegraphs	1,348,594	1,471,336
Government Railways	22,361,340	24,747,571
Interest	2,747,174	3,895,810
Miscellaneous Receipts	1,830,275	2,834,007
Land Revenue	1,201,361	1,324,318
Land Sales	953,671	1,260,247
<b>Total</b>	<b>93,710,160</b>	<b>102,363,115</b>

Expenditure for 1923-24 amounted to Rs 100,695,713 (£6,713,047), and exceeded that of the previous year by Rs 15,111,804, payments being apportioned as follow —

HEADS OF EXPENDITURE	1922-23 RS	1923-24 RS
Personnel Emoluments	30,937,282	35,782,590
Other Charges	15,737,822	21,217,102
Railway Extraordinary Works	829,063	905,610
Irrigation Works	567,302	440,554
Public Works	6,962,500	9,171,680
Military Expenditure	2,247,730	2,069,751
Public Debt	7,408,103	11,125,735
Pensions	2,153,992	3,309,600
Exchange	2,352,532	—
Miscellaneous Services	16,387,583	13,073,031
<b>Total</b>	<b>85,583,900</b>	<b>100,695,713</b>

**CUSTOMS REVENUE**—The total revenue under the head of Customs for the financial year ended September 30, 1924, was Rs 36,223,135, compared with Rs 32,322,863 in 1922-23, and Rs 26,152,640 in 1921-22. (See also under "Customs.")

**RAILWAY REVENUE AND EXPENDITURE**—See article on "Railways."

**TAXATION.**—This can hardly be said to press heavily on the people of Ceylon, since there is neither income-tax nor super-tax. The principal items of revenue derived from internal sources are the various excise duties, estate duty, and stamp duties.

CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA

1. Interior View.
2. The Bank Premises.
3. Another view of the Banking Chamber.

(See letterpress, page 15)

**ESTATE DUTY**—This is levied on the value of estates of the value of Rs 1,500 and upwards, the duty ranging from Rs 1 per cent to Rs 20 per cent on estates exceeding Rs 15,000,000 in value. The rate of estate duty where the property is settled is 1 per cent. The amount received in 1923-24 was Rs 1,618,030.

**EXCISE**—The principal sources of excise revenue are arrack and toddy. A license for the distillation of arrack costs Rs 50 yearly, to deal in arrack by wholesale, Rs 100 per annum. Licenses to sell toddy by retail are auctioned. The total revenue from arrack and toddy in 1923-24 amounted to Rs 9,380,809, as against Rs 7,309,064 in 1922-23.

The Government revenue from licenses to sell foreign liquor amounted to Rs 110,071 in 1923-24.

**STAMP DUTIES**—These are many and varied, and range from the ordinary duties on agreements, banker's cheques, bills of lading, bills of sale, mortgages, transfers, promissory notes, etc., to applications to register trade marks, designs, copyrights, patents, and the fees paid on registration of business names or naturalisation. The revenue from stamp duties rose from Rs 8,029,232 in 1922-23 to Rs 8,178,619 in 1923-24.

## BANKING

Though the Government of Ceylon had previously issued notes of the old rixdollar denomination, the history of banking proper in Ceylon commences with the grant of a Royal Charter in 1840 to the Bank of Ceylon, the Western Bank of India, whose headquarters were at Bombay, commencing business at Colombo and Kandy three years later. For some time Government notes continued to circulate side by side with the notes of these two banks. In 1847 came the financial crash occasioned by the failure of coffee planting, in which the Bank of Ceylon was seriously involved, £60,000 being ultimately lost. At this juncture the Western Bank of India, later known as the Oriental Bank, came forward, and, in return for the Royal Charter of the Bank of Ceylon, took over its business and liabilities, advancing a sum of money to the shareholders in lieu of their bank's outstanding liabilities, which it undertook to realise. In 1851 the two institutions were formally amalgamated, and the Oriental Bank Corporation under a Royal Charter commenced a prosperous career in India and Ceylon, which was only closed by the disastrous crash of 1884 which affected so many Eastern banks. But for the prompt action of the Governor, Sir Arthur Gordon (afterwards Lord Stanmore), who transferred to the Colonial Exchequer the obligations of the insolvent bank in respect of its notes then in circulation in the island, the consequences to the country might have been most serious. (See below, "Note Issue.")

**EXCHANGE.**—Since 1901 the value of the English sovereign has been fixed at Rs 15, but from 1920 it ceased to be current or legal tender in Ceylon.

**LEADING BANKS.**—Following are the principal Exchange Banks in Ceylon:—The Chartered Bank of India, Australia and China, Queen Street, Colombo; The Eastern Bank Limited, Chatham Street, Colombo; The Hongkong and Shanghai Banking Corporation, Prince Street, Colombo; The Imperial Bank of India, Prince Street, Colombo; and the Mercantile Bank of India, Queen Street, Colombo, with branches at Kandy and Galle; The National Bank of

India, York Street, Colombo, with branches at Kandy and Nuwara Ehya; and the P & O Banking Corporation, Victoria Arcade, Colombo. The Bank of Ceylon, Ltd., has a branch at Badulla, and in addition are the headquarters of the Hatton Bank and Agency Company, with branches at Maskelyna, Bogawantelawa, Agras, Watawala, and Matale.

**CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA**—Founded in 1853 by Royal Charter, this institution, whose head office is at 38, Bishopsgate, London, is one of the most important of Indian Exchange Banks. Its branch at Colombo was opened in 1892. (See article following.)

**EASTERN BANK LIMITED**—This Bank, which from its branch office in Colombo does an extensive general banking and exchange business, has been established there since 1920. The London office is at Crosby Square, Bishopsgate, and there are branches at Amara, Baghdad, Basra, Bombay, Calcutta, Hilla, Karachi, Madras, Mosul and Bahrain. At the end of 1924 the authorised capital stood at £2,000,000 and the called up capital at £1,000,000.

**IMPERIAL BANK OF INDIA**—This Bank was constituted under a special Act of 1920 to take over the business of the three Presidency Banks of Bombay, Bengal and Madras. It assumed control of the branch bank at Colombo which the Bank of Madras had established in 1867, and has ever since conducted a large banking business in Ceylon. The Imperial Bank has had since February 1925 a London Advisory Committee which includes the Governor of the Bank of England, and which was formed to keep the two central banks in close touch on matters of policy.

**MERCANTILE BANK OF INDIA**—This bank was formed to acquire the business

of the old Chartered Mercantile Bank of India, London, and China. In 1916 it took over the Bank of Mauritius, and now has 21 branches in India, the Far East, and Mauritius, including the three at Colombo, Kandy and Galle respectively. (See article following.)

**NATIONAL BANK**—This Bank was established in India in 1863 and registered as a British company in 1866. On January 2, 1881, the branch at Colombo was opened, on July 11, 1892, that at Kandy, and on September 1, 1892, a branch at Nuwara Ehya. In addition to its Indian and Ceylon branches, the Bank has a number in Kenya, Uganda, and Tanganyika Territory. (See article following.)

**P & O BANKING CORPORATION**—Established under the auspices of Lloyd's, the Westminster and National Provincial Banks, and the P & O Steam Navigation Company in 1920, the P & O Banking Corporation acquired virtually the whole capital of the Allahabad Bank in the following year. It does a general banking business, but makes a speciality of letters of credit. The branch at Colombo was opened in 1922.

**SAVINGS BANK.** At the end of 1924 the Ceylon Savings Bank had a sum of Rs 5,180,737 to the credit of 44,742 depositors, an increase of Rs 186,201 during the year. The amount of the banks' invested funds was Rs 5,771,461, which included investments made from the reserve fund of Rs 743,057. Interest is allowed at the rate of 4 per cent on sums of Rs 1,000 and under, and 3 per cent on sums above Rs 1,000 up to Rs 3,000—the maximum which a depositor is allowed to have at any time as principal—the deposits in any one year being restricted to Rs 1,000, irrespective of withdrawals. The minimum deposit is 50 cents. (See also under "Posts.")

## REPRESENTATIVE BANKING INSTITUTIONS

### CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA.

**Inception.**—This bank was incorporated in England by Royal Charter in 1853, the Ceylon branch being established in Colombo on July 1, 1892.

**Capital.**—£3,000,000, in 600,000 shares of £5 each, paid up.

**Balance Sheet.**—For the year ended December 31, 1924, the net profit, after providing for all bad or doubtful debts, was £993,123 11s 8d, inclusive of £222,407 15s 6d brought forward from the previous year. An interim dividend at the rate of 14 per cent per annum was paid in September, also later a final one at the rate of 14 per cent, per annum, together with a bonus of 6s 3d per share, making 20½ per cent for the whole year free of income tax. The reserve fund was increased to £4,000,000 and a balance of £210,623 11s 8d was carried forward.

**Activities.**—The Colombo branch transacts every description of banking operations and exchange business on all countries.

**Agencies and Branches.**—Alor Star (Malay States), Amritsar, Bangkok, Batavia, Bombay, Calcutta, Canton, Cawnpore, Cebu, Colombo, Delhi, Haiphong, Hamburg, Hankow, Hongkong, Hilo, Ipoh, Karachi, Klang, Kobe, Kuala Lumpur, Kuching, Madras, Manila, Medan, New York, Peking, Penang, Puket, Rangoon, Saigon, Semarang, Seremban, Shanghai, Singapore, Sourabaya, Taping (F.M.S.), Tavoy, Tientsin, Tokyo, Yokohama, Zamboanga (Philippine Islands).

**Agents.**—In Galle Mercantile Bank of India, in Jaffna Jaffna Commercial Corporation Ltd.

**Directorate.**—Sir Montague Cornish Turner (chairman), Messrs Henry Bateson, Colin Frederick Campbell and Thomas Cuthbertson, Sir William Henry Neville Goshen, K.B.E., The Rt. Hon. Lord George Hamilton, G.C.S.I., Mr. Archibald Auldjo Jameson, The Rt. Hon. Sir John Newell Jordan, G.C.M.G., G.C.I.E., K.C.B., Messrs William Foot Mitchell, M.P., and Lewis Alexander Wallace.

Manager in Colombo, Mr. J. W. Thomson, sub-manager, Mr. A. R. Macqueen. There are 54 clerks.

**Head Office.**—38, Bishopsgate, London.

**Cables.**—“Cinchona,” Colombo only.  
(See illustration, page 13.)

### THE MERCANTILE BANK OF INDIA LTD.

**Inception.**—The Colombo branch of this bank was established in 1857, and in the same year sub-branches to Colombo were opened in Kandy and Galle.

**Capital.**—The authorised capital of the bank is £3,000,000, of which £1,800,000 has been subscribed and £1,050,000 paid up.

**Balance Sheet.**—For the year ended December 31, 1924, the reserve fund was shown as £1,300,000, the net profits for that year, including £157,811 11s 11d, brought forward from the last account, were £401,221 11s 5d, and the total dividend paid was 16 per cent.

#### THE NATIONAL BANK OF INDIA LTD.

**Inception.**—This important bank was registered in London under the Companies Act of 1862 on March 23, 1866. The Colombo branch of the institution was established in 1881, agencies being opened at Kandy and Nuwara Eliya in 1892.

**Capital.**—The subscribed capital of the bank is £4,000,000, of which £2,000,000 has been paid up, while the reserve fund stands at £2,800,000.

**Balance Sheet.**—The net profits for the year ended December 31, 1924, after providing for all bad and doubtful debts, amounted to £535,925 6s 9d, making, with the sum of £190,054 18s brought forward, a total available of £744,980 4s 9d. A dividend was paid for the year of 20 per cent free of income tax, £50,000 was added to the reserve fund, £20,000 was written off the house property account, and £40,000 transferred to the officers' pension fund, leaving a balance of £224,980 4s 9d to be carried forward.

**Activities.**—The Colombo branch, which employs a staff of 12 Europeans and about 110 clerks, transacts every kind of local banking operations and exchange business in all countries.

**Branches.**—Calcutta, Bombay, Madras, Karachi, Chittagong, Amritsar, Cawnpore, Delhi, Lahore, Tuticottin, Cochin, Rangoon, Mandalay, Colombo, Kandy, Nuwara Eliya, Aden, Steamer Point (Aden), Zanzibar, Mombasa, Nairobi, Nakuru, Kisumu, Entebbe, Kampala, Jinja, Tanga, and Dar-Es-Salaam.

**Agencies.**—Galle, Ceylon. Messrs Clark, Spence & Co., Edinburgh. Messrs Moncrieff & Horsburgh, 46 Castle Street, and Glasgow. Messrs Mackenzie, Robertson & Co., 176, St Vincent Street.

**Directorate.**—Sir Charles C McLeod, Bart (chairman), Mr J N Stuart (deputy chairman), Sir John P Hewett, G.C.S.I., K.B.E., C.I.E., Mr R Langford James, Mr Robert Miller, Mr J D Nimmo, Sir Marshall F Reid, C.I.E., and Mr J A Toomey. General manager, Mr C Nicoll. Manager in Colombo: Mr E H Lawrence.

**Cables.**—"National," Colombo  
(See illustration, page 15)

#### INSURANCE

Insurance in Ceylon, so far as fire and marine risks are concerned, is controlled by two powerful associations, the Ceylon Fire Insurance Association, which was established in 1897, and the Colombo Marine Insurance Agents' Association, established in 1917. To the former are affiliated no less than 78 separate companies, the majority of these being of British origin, and including such well-known names as the Alliance Assurance Company, the Eagle, Star and British Dominions Insurance Company, the General Accident, Fire and Life Assurance Corporation, the Lancashire Fire and Life Insurance Company, the Liverpool and London and Globe Insurance Company, the New Zealand Insurance Company, the North British and Mercantile Fire and Insurance Company, the Norwich Union Fire Insurance Society, the Hongkong Fire Insurance Company, and the Scottish Insurance Corporation. Foreign companies include the Balaise Fire Insurance Company, the Batavia Sea and Fire Insurance Company, the Home Insurance Company of New York, the Java Sea and Fire Insurance

Company, and the Tokio Marine and Fire Insurance Company.

Included in the Colombo Marine Insurance Agents' Association are some 50 companies, several of whom are mentioned above, others being the Ocean Marine Insurance Company, the Queensland Insurance Company, the Royal Exchange Assurance Corporation, the Thames and Mersey Insurance Company, and the World Marine and General Insurance Company.

Many of these companies also issue life policies.

#### THE NATIONAL MUTUAL LIFE ASSOCIATION OF AUSTRALASIA LTD.

**Inception.**—Established in 1869 at Melbourne, this association soon extended its operations to the whole of Australasia, while branches are now in existence in South Africa, Great Britain, India, Ceylon, and the Straits Settlements. Operations were commenced in Ceylon in 1905 and the business transacted at the agency led in 1912 to the acquisition of one of the finest business sites in Colombo, in which the branch now conducts its business.

THE NATIONAL MUTUAL LIFE ASSOCIATION OF AUSTRALASIA LTD.

View of the Colombo Building.

**Development.**—Since its inception the association has expanded steadily, and on September 30, 1924, the amount assured under policies current was £55,932,757 1s 1d, the assurance fund at that date being £20,365,160 3s 9d, while the income for the year 1923-24 was £3,260,737 3s 9d.

**Activities.**—The Ceylon office is a fully constituted branch of the association, and transacts all classes of life and annuity business.

**Policies.**—In the original policies of the association a condition was inserted that when default was made in payment of any premium, and the surrender value of the policy was sufficient to pay such premium, the directors should advance the amount of the premium in order to keep the policy in force for the benefit of the person insured, and so on with subsequent defaults. The premium or premiums thus paid remained

as a debt against the policy, to be repaid with interest for the time during which it or they remained a debt. The promoters, by inserting this condition in policies, introduced the non-forfeiture principle into life assurance, and this was very effective in aiding the development of the association.

**Offices.**—Ceylon branch, Corner of Chatham and Queen Streets, Colombo.

Mr. R. A. Lyons is manager for Ceylon.

## CITY AND PORT OF COLOMBO

### CITY

**C**OLOMBO, the capital of Ceylon, is the last of a long succession of cities that have borne that title having succeeded Kandy, which had been the capital for 223 years, in 1815. The city extends from the Kelani River on the north to the fourth mile of the Galle Road on the south, and has a breadth of  $3\frac{1}{2}$  miles from the sea to the east outskirts, covering an area of 8,617 acres.

In few of the world's large ports is the traveller offered so pleasant a prospect on landing. Contrary to the position in many large cities, there are no slums to be traversed before the surroundings become attractive, but the visitor immediately sees the city at its best. Colombo is prosperous as well as beautiful, its streets are broad and admirably shaded, the merchants' offices and stores are capacious and often of considerable architectural merit, and the leading hotels are surpassed by none in the East. The growing prosperity of Britain's premier Crown Colony is reflected in the sustained order and cleanliness of its capital, which at the same time gay and fascinating with the wealth of local colour.

**BAZAARS.** Visitors to Ceylon never fail to find the native bazaars of absorbing interest. The bazaar quarter is easily reached by the Borella tramway. The open character of these native shops is universal, they vary only in the class of goods offered for sale. Here there are fruits, curry stuffs, dried fish, spices, market baskets and earthenware chatties, while in another are to be seen baskets of live fowls. The tin shop, with the tin smith at work, is ubiquitous, next door, perhaps, is the stall of the astrologer who casts horoscopes at birth and on every

subsequent step of life taken by the credulous Sinhalese. The stalls of the goldsmiths and manufacturers of brassware are as bright as the varied throng of customers who pass to and fro.

**BUILDINGS.** The Queen's House, built about 1850, is the residence of the Governor-General, and is a solid structure of massive masonry shaded by beautiful trees. Near to it, the Fort is an interesting relic of the Dutch and early British settlement. Opposite the Queen's House stands the General Post Office, a building of which Colombo is justly proud. The Military Barracks, with their spacious parade ground, are a noticeable feature as the visitor drives out to Galle Face. The picturesque Mohammedan Mosque near the Circular Drive, the National Bank, and the Grand Oriental Hotel are other notable buildings.

**CHURCHES.** The Anglican Cathedral of Christ Church, known as the "Stone Church," stands in a park given by Dr. Chapman, the first bishop, but is to be replaced by a new and handsome edifice on Galle Face. Architecturally, the first building in the island is the Roman Catholic Cathedral of Santa Lucia, of greater antiquarian interest is the massive cruciform edifice known as Wolfendhal Church, built by the Dutch in 1749 on the site of an old Portuguese Church called Aqua de Lupo, and commanding a fine view of the city and harbour. Here are many monuments and hatchments recording the decease of Dutch officials. It is the most interesting, as well as the most complete, of the few remaining relics of the Dutch occupation. In the suburb of Mutwal are several large and handsome Roman Catholic Churches.

**CLIMATE.** The climate of Colombo is tempered by sea breezes, and the mean monthly temperature in the shade never exceeds 80 degrees, the average for the summer months being about 77 F. and for the winter months about 74 F. The average total rainfall per annum is 80.50 inches.

**CLUBS.** The principal European club is the Colombo Club, on the Galle Face, a fine oval building overlooking the sea. The Golf Club, 3 miles from the Fort, is a favourite resort and has a membership of over 400. The Prince's Club is a lavishly appointed European institution in the Cinnamon Gardens. The Colombo Garden Club has a large number of tennis courts and a charming pavilion in Victoria Park.

**CUSTOMS HOUSE.** In 1924 the work of erecting a new Customs House at the Passenger Jetty to meet the growing requirements of the port was commenced. The scheme provides for a much enlarged and better equipped building to take the place of the old one, and in every detail of its accommodation, construction, and design it is anticipated that the new house will be worthy of the growing port. Accommodation is to be provided for Customs officers, the police and the port surgeon, as well as means of communication for passengers passing through Colombo with the Railway, Municipal Inquiry Bureau, and Post Office Departments.

**FINE ART GALLERY.** It having been decided to erect an art gallery in Colombo, the plans for it have been prepared, the present idea being to build gradually. The complete building is to consist of three wings devoted to fine arts, applied arts, music and drama, and a library. The fine arts wing is

to contain galleries for the exhibition of paintings, sculpture, etc. and this will be the first section to be built, the estimate of the cost of each wing being about Rs 60,000 (£4,000).

**HOSPITALS.** The Colombo General Hospital is a fine building in spacious grounds near the Cinnamon Gardens. There are thoroughly well equipped wards for travellers who may arrive sick or fall ill during their stay in Ceylon. Other wards supply suitable accommodation for all classes, the fees for paying patients being moderate. In 1924 there were 626 non-paying beds and 82 paying beds, and the number of patients treated during the year was 17,171.

The Ceylon Medical College opposite is carried on in accordance with the Medical Acts of Great Britain, and its licentiates are at liberty to practise throughout the United Kingdom. The Victoria Memorial Eye Hospital is a handsome building erected by the people of Ceylon to the memory of Queen Victoria. Other hospitals and similar institutions are the Forster Robinson Memorial Free Hospital at Maradana, the Infectious Diseases Hospital in Buller Road, the King Edward VII Memorial Anti-Tuberculosis Institute at San Sebastian, the Military Hospital on Galle Face, the Royal Victoria Home for Incubables, facing Campbell's Park, the Anti-Tuberculosis Sanatorium at Kandana, and the Home for the Aged Poor (St. Mary's House) at Maradana.

**HOTELS.** The Grand Oriental Hotel (generally known as the G.O.H.) stands conveniently near to and overlooking the passenger jetty, and close by are the Bristol Hotel, "Queen's House," the Barracks, and some remains of the old Dutch Fort. About a mile away, the road passing by the Government Offices and the new General Post Office, is the Galle Face Hotel, standing in a very pleasant situation close to the sea. To this hotel a fine swimming bath is attached. The Hotel Metropole, in Queen Street, is a popular resort, and the Grand Hotel at Mount Lavinia 7 miles by rail from the city, is famous for its excellent fish tiffins on Sundays and for the sea-bathing it provides.

**INDUSTRIES.** The principal industries in Colombo are those dealing with the preparation and packing of tea, cocoa, coconut oil, plumbago, coir fibre, and cardamoms. There are also several engineering works, printing offices, and a number of hand-loom cloth factories. In 1924 a summary furnished by Ferguson's Ceylon Directory gave the total number of gas and steam engines in use as 576, and their available horsepower was returned at 20,850½. The number of persons employed in preparing and packing the commodities named above was 13,500, while the total of persons employed in all the factories and industrial concerns in Colombo and district was put at 35,000.

**LIBRARIES.** The Colombo Library in Queen Street, Fort, was established in 1874, and with it is incorporated the late United Service Library dating back to 1812. It is proposed to establish a Municipal Free Library, to be located at Edinburgh Crescent, and to be controlled by representative public men, including two municipal councillors. In this library will be merged the Colombo Pettah Library, which has long performed the function of a public library. Colombo has also a Law Library and a Medical Library, and a Literary Association, formed in 1912.

**LIGHTING.** The streets of Colombo were first lighted with gas in 1872, the Colombo Gas and Water Company, Limited, being responsible for the service. The incandescent system of lighting was first introduced in

3. PRINCE STREET, COLOMBO, showing Colombo Apothecaries Stores.

1900, and has since been greatly improved. In 1923 the company extended its plant in the south of the city by erecting a large 2-ft spiral guided gasholder, engine and governing apparatus at Havelock Town (Greenlands Road), the new depot being opened by the Mayor of Colombo on July 30 of the year named. In 1924 large alterations and extensions at the main Gas Works in the Pettah put the gas requirements of Colombo on a most satisfactory basis.

**MUNICIPALITY.** The Municipal Council which was created in 1865, consists of half elected and half nominated members, the latter being nominated by the Governor. The Chairman and Mayor, a member of the Civil Service, is also nominated by the Governor. He is the head of the Executive, and has full authority in most matters the Council having control over finance. The city is divided into ten wards, each represented by an elected councillor. There are 20 councillors in all, about six of whom are Government officials. The staff consists of some 511 pensionable officers, and the total number of employees is about 5,000.

**MUSEUM.** The Museum, a two-storeyed building of imposing appearance which stands in Victoria Park, dates from 1877, and is exclusively devoted to the exhibition of Ceylon products, antiquities and natural history. Here is preserved the famous tortoise said to have been 200 years old at its death. On the ground floor are some interesting fragments, noticeable among which are the colossal lion brought from Polonnaruwa on which the king used to sit to administer justice, one of the unique windows from the ruins of Tapahuwa, and the cast of a colossal portrait statue of King Parakrama Bahu A.D. 1153. Attached is a valuable library of zoological and archaeological literature. A statue of the Rt. Hon. Sir William Gregory, Governor from 1872 to 1877, stands in front of the museum.

**PARKS.** Colombo's principal recreation ground is the Victoria Park, which is well laid out with gardens, band stand and promenade, tennis courts, a galloping course for riders, and a circular carriage drive. The park is surrounded by many beautiful bungalows. Part of the park is known as the Cinnamon Gardens, having been in earlier times one of the chief reserves under cultivation of the precious spice. Here the beautiful traveller's tree (*Urania speciosa*) is to be seen, the purple flowered thimbalegia, and many other gorgeous tropical plants.

**POPULATION.** The population of Colombo grew from 164,296 in 1901 to 218,526 in 1911, and to 244,163 at the last census of 1921. This total is exclusive of the military and shipping, and was distributed by race as follows: Low-country Sinhalese, 110,470; Indian Tamils, 39,560; Ceylon Moors, 25,417; Burghers and Eurasians, 14,863; Ceylon Tamils, 14,593; Indian Moors, 14,275; Malays, 5,852; Kandyan Sinhalese, 4,130; Europeans, 2,830; Veddas, 1; and others, 12,166.

**PUBLIC HEALTH.** The Public Health Department consists of a higher staff of four Medical Officers of Health and a Bacteriologist, who has a laboratory equipped with all the latest instruments and appliances. There are also four dispensary doctors, while the City Analyst assists in chemical matters. The Health Department is organised on the most up-to-date lines, and the average death rate for the last five years, viz., 32.5, is one of the most satisfactory in the East. The methods of combating infectious diseases, epidemics, and the like are thorough and prompt, while the drainage

system, which is of the up-to-date water carriage type, serves about three fourths of the city and is being rapidly extended. Refuse is burnt at a large modern destructor.

**REVENUE, ETC.**—Rates are 4/- in the pound, and fees are very moderate. The revenue of the Municipality is nearly £350,000, and its debt is less than £1,000,000. The Council, which has reformed its finance completely since 1915, has now an appreciable annual surplus of revenue over recurrent expenditure, and considerable cash balances.

**SPORT.** The European population of Colombo is well catered for in the way of sport. The Sports Club cricket ground is on Galle Face, and good wickets are obtainable here on con matting. Cricket in Ceylon is played all the year round and is the national game, the Ceylonese being remarkably proficient at it. The Sports Club has also a squash racket court. The Havelock Race course at the south of Victoria Park is among the best in the East, and besides the

disappearing. In York Street are some of the Government Offices, the Bristol Hotel, and the Chamber of Commerce. Prince Street and Baillie Street are both devoted to important commercial houses and institutions.

**TRAMWAYS.** The tramway system of Colombo, which is controlled by the Electric Tramways and Lighting Company, Limited, dates from 1898. In 1902 the company named was registered, and it now operates the whole of the electrical power traction and lighting service of the city. (See article following on the company's enterprise.)

**WATER SUPPLY.** Colombo being very inadequately and precariously supplied with water from wells, a special committee was appointed by the Municipal Council in 1866 to report upon the water supply and drainage of the city. It was not, however, until 1879 that the scheme to obtain water from the Labugama Hills was finally decided on, and in 1882 the work of construction was

renewed. Its capacity is about 7½ million gallons.

(c) The Elk House Reservoir was commenced in 1903 as a consequence of the duplication of the 20-inch main pipe line between Labugama and Colombo. This reservoir, which has a length of 300 ft. and a width of 195 ft., was completed in 1905 at a total expenditure of Rs 321,441, the cost of the duplication of the main and auxiliary works being estimated at Rs 3,000,000.

At the beginning of 1908 the waterworks, which had hitherto been under Government control, were transferred to the Municipal Council, and in 1911 they were placed under a separate department. Since then, owing to the rapid increase of Colombo's population, coupled with the desire to make the water supply as pure as possible, the Council has made several extensions and improvements, notably in the laying of a 30-inch steel main and the installation of a filtration plant. The laying of this main has increased the

YORK STREET, COLOMBO, SHOWING CARGILLS STORES

Colombo Turf Club's regular meetings, gymkhanas and other sports are held on it. The Ridgeway Golf Links are extensive and well laid out, and the game is very popular in Colombo. (See also "Sporting.")

**STREETS.** A feature of the main streets of Colombo is the fine rain trees with which they are sheltered. Queen Street may be called the main thoroughfare of the capital, as it contains the Government Offices, General Post Office, and the principal banks. At its junction with Chatham Street stands the Lighthouse, which serves as a clock tower, and close to this is the fine building occupied by Messrs H. W. Cave & Co., the rendezvous of large numbers of visitors to Ceylon. Chatham Street has several interesting native jewellers' shops, though many of the older buildings are fast

commenced. By 1880 the whole of Colombo was supplied with water from this source. The main features of the scheme as then completed and afterwards added to are:

(a) The Labugama Reservoir, situated about 30 miles by road from Colombo. The catchment area is 2,500 acres in extent, surrounded by hills 500 to 1,500 ft. in height. By throwing an earthwork bund across the narrow neck of the valley between the hills an artificial lake was formed, which was completely filled in four months' time. The rainfall in this district is heavy, averaging 161 inches per annum. The greatest depth of water in the Labugama Reservoir is 59 ft., the area at top water level being 170 acres, and the total capacity of the reservoir is 1,333,000,000 gallons.

(b) The Maligakanda Service Reservoir was completed in 1885, but had later to be

delivery capacity of the mains to 12,000,000 gallons a day. In 1924 the total consumption was approximately 3,251,264,000 gallons, or roughly 9,000,000 gallons per diem.

## PORT OF COLOMBO

Colombo is one of the most important junctions of the world's shipping system. Situated in lat 6° 54' N and long 79° 55' E, on the west coast of Ceylon, it is an entirely artificial harbour, backed by the mountains and valleys of which the colony is justly proud, and of which the outstanding feature as seen from the sea is the far-famed Adam's Peak. The construction of the fine harbour was begun in the year of the late King Edward's visit to Ceylon in 1875, and has altogether cost over two and a half million pounds sterling. That the money has been well expended admits of no doubt for the harbour has been of immense value to the colony, not only in protecting from the fury of the elements the vessels that use it, but in attracting the shipping of the eastern world and of other countries by the conveniences it offers as a coaling station and entrepôt for the exchange of passengers.

The shipping trade now carried on within the port of Colombo would have been impossible in the seventies, when every vessel was compelled to anchor in the open roadstead, and to embark or disembark in a sea that was generally rough and sometimes dangerous. So difficult, indeed, was the transaction of shipping business in those days owing to the heavy surf that the P & O Company avoided Colombo altogether, and used to land both passengers and mails at Galle. There are now from 20 to 40 steamships always to be seen riding at anchor

within the harbour, and the tonnage entered and cleared in the course of the year amounts to upwards of ten millions.

**ACCOMMODATION.** - The harbour of Colombo is formed by four breakwaters, of which the S.W. breakwater was the first to be constructed, and was completed in 1885 at a cost of £705,207 or Rs 8,402,484. It is 4,212 ft long, and is formed of concrete blocks of from 18 to 33 tons each and capped by a solid concrete mass, the top of which stands 12 ft above low water level. It terminates in a circular head 62 ft in diameter, on which stands the Pilot Station and a small lighthouse showing a red light. Of the other breakwaters, the N.W. is an island one, 2,670 ft long, carrying two small lighthouses, one at each end, and was completed in 1907 at a cost of £137,092, the N.E. breakwater cost £92,665, and the last one constructed the arm running at an angle to the S.W. breakwater, was completed in 1912, having cost £338,930. The area protected by these breakwaters is 943 acres, or 1 sq m, three fourths of which has water more than 27 ft deep, and affords shelter during the S.W. monsoon for 45 ocean going steamers drawing from 27 to 39 ft, and for 30 during the N.E. monsoon drawing from 27 ft to 33 ft of water. The total warehouse area available in the port is 569,880 sq feet. The Chalmers granaries are noticeable, providing accommodation for 600,000 bags of rice stored in ten buildings of ten storeys

each. The quays and jetties have a total length of about 10,330 ft. They are mostly Government property, and only lighters and launches go alongside them, all ships of any size lying at anchor or moored to buoys, and discharging or loading with lighters.

**ADMINISTRATION.** The Port of Colombo is administered by a body designated the Colombo Port Commission, which was established in 1913, and consists of six official and six unofficial members and a secretary. Five of the unofficial members are nominated by the Ceylon Chamber of Commerce. In 1923-24 the revenue of the Port Commission (Rs 5,157,984) exceeded the expenditure (Rs 2,638,310) by Rs 2,519,674.

**APPROACH.** - The flashing light which marks the entrance to the harbour is situated on the shore near the south end, on the top of the clock tower and is visible 18 miles at sea. The entrances at the north-east and south-west ends are 700 and 800 ft wide respectively, the depths being (western) 40 ft, and (eastern) 34 ft, at low water ordinary spring tides. The channels from the entrances to the anchorage are Western, 630 ft wide, 30 ft deep, Eastern, 580 ft wide, 28½ ft deep.

**BOAT RATES.** The fare for public motor boats from the steamer to the landing jetty or vice-versa is 50 cents for each adult during the day from 6 a.m. to 7 p.m., and 75 cents from 7 p.m. to 6 a.m. Baggage

1. RECLAMATION ROAD, COLOMBO, SHOWING EXPORT WHARF.

2. PRINCE STREET, COLOMBO.

charge is 15 and 25 cents per article according to weight and quantity. The rates for jetty or row-boats are slightly less than for motor-craft. Most steamship companies have their own tenders to bring passengers ashore and return them to their own steamers free of charge, and shipping agents specify hours of arrival and departure on a notice board on the Landing Pier.

**BUNKERING.** A coaling depôt 18 acres in extent, with 18 jetties, each 190 ft long, and a large repairing basin, have been recently constructed. Coal can be discharged from steamers at the rate of 500 to 800 tons per day of 12 hours.

**OIL INSTALLATION.** The Port of Colombo is equipped with an up-to-date installation which provides for the rapid bunkering of ships using liquid fuel, the scheme having cost approximately Rs 5,251,796. A depot for storage purposes, about 92 acres in extent, is situated at Kolonnawa, about 3 miles inland from the

**DOCKS.** There is a Graving Dock opening on to the eastern shore of the harbour, capable of taking vessels up to 700 ft in length, 75 ft in breadth and 30 ft draught. This dock was constructed for the use of His Majesty's ships and for the accommodation of the numerous vessels using the port. It was opened in 1906, and cost altogether £387,592, of which £150,000 was contributed by the Admiralty. Electric light was installed in 1918 and the docking of ships can now be carried on by day or night. A patent ship for small vessels to raise 1,200 tons dead weight has been in use since 1903.

**DREDGING.** Since 1912 dredging in the port has been carried out in accordance with a scheme drawn up in that year, which provided for the deepening of the harbour to 30 ft. The new dredger, the "Sir William Matthews" capable of dredging to 15 ft, was obtained in 1921.

With regard to the further deepening of the harbour the British Imperial Shipping

area of about 10 acres of water and a beaching ground of about 60 acres have been constructed at Mutwal at a cost of nearly £20,000.

**HARBOUR DUES.** The revenue from harbour dues collected in 1924 at Colombo amounted to Rs 2,744,009, compared with Rs 2,102,626 in 1923, and Rs 1,894,811 in 1922.

**HARBOUR RAILWAY.** The harbour is now fully connected with the Main Railway Line, the connection of the existing lines in the Customs premises south of the passenger jetty with the harbour lines near the Harbour Engineer's premises having recently been completed.

**LAKE HARBOUR CANAL.** A canal connecting Colombo Lake with the harbour was completed in 1922 and affords direct water transport between the mills on the lake side and the harbour. The canal has been sufficiently dredged to admit of the navigation of fully-loaded 40-ton harbour barges.

1. MALIBAN STREET: WAREHOUSES OF THE E.P. & E. CO. LTD., 2 MAIN STREET, SHOWING THE OLD TOWN HALL, COLOMBO seen on right.

harbour front, on which the various oil companies have erected their storage and distribution tanks. Two main pipe-lines have been laid connecting the discharge berth and Kolonnawa—one for fuel oil and the other for kerosene and petrol. Branch lines have also been laid to the Measuring Tank Depôt at Bloemendahl, and thence to the bunkering berths.

The oil jetties consist of one discharge jetty and two bunkering jetties, the former normally capable of accommodating vessels up to 350 ft long and 30 ft draught, and the latter for vessels of similar length but of 28 ft draught. The discharge jetty is at present available for vessels of 25 ft draught only. Ships also use the southern side of the Graving Dock Guide Pier for discharging oil. The outer oil bunkering jetty can be used by vessels provided their draught does not exceed 27 feet after bunkering. The inner bunkering jetty is used only by barges.

Company reported in 1924 that there was no present justification for a general deepening if it should appear on the completion of the survey which was then in progress that the cost was likely to be very large. The programme at present in view is to deepen the outer areas of the harbour to 30 ft and the areas near the foreshore to 33 and 30 ft respectively. All the berths in the 36 ft area are expected to be available by about 1932, but the deepening of the northern entrance will take longer.

**EXPLOSIVES.** As the Prince of Wales' jetty, which was the authorised place for landing explosives, was found unsatisfactory, the North Pettah jetty is now used for the purpose.

**FISHERY HARBOUR.** Owing to the whole of the foreshore inside the harbour being taken up for coal storage, etc., it became necessary to provide accommodation for fishermen outside the harbour. A sheltered

**PASSENGER TRAFFIC.** The total number of passengers using the port in 1924 was 232,775, of whom 135,584 were in transit, while 48,885 disembarked and 48,336 embarked.

**PILOTAGE.** Vessels entering Colombo pay pilotage at rates which range from Rs 15 for vessels up to 499 tons gross to Rs 120 for vessels over 10,500 tons, by increases of Rs 5 for each 500 tons. A further 25 per cent must be added to these rates.

**PORT CHARGES.** Port dues range from Rs 3 on ships under 50 tons to Rs 12 on ships between 150 and 200 tons, afterwards rising to Rs 45 on vessels between 400 and 500 tons, and Rs 85 on those between 900 and 1,100 tons, after increases being roughly at the rate of Rs 19 per 200 tons up to 1,500 tons, then Rs 19 per 250 tons up to 2,500 tons, then Rs 19 per 500 tons up to 4,000

GRAND ORIENTAL HOTEL, Colombo.

1. Part of the new Public Ball Room looking through Dining Room into hotel gardens.
2. Dining Room.
3. Private Ball Room.

tons. After charges are, not exceeding 1 500 tons, Rs 319, 5,000 tons, Rs 350, 5,500 tons, Rs 387, 6,000 tons, Rs 437, 8,500 tons, Rs 750. These dues clear a vessel inwards and outwards, provided her stay in port does not exceed 96 hours. If exceeding 96 hours and not exceeding 288 hours, 50 per cent to be added. If exceeding 288 hours, the same rate to be paid outwards and inwards, and buoy rent is charged in addition.

**DISCHARGING AND LOADING DUES.** Vessels loading or discharging cargo, 10 c per ton up to 200 tons register, 32 c per ton over 200 tons register. Transshipment cargo, if landed and re-shipped after the fifth day of landing, is liable for harbour dues and rent. Vessels of 300 tons or under are allowed to land or ship 5 tons of cargo free. Petroleum, liquid fuel, and coal cargo, 25 c per ton payable inwards only. Cattle Rs 1 per head, horses, Rs 5 per head, sheep and goats, 20 c per head. Live stock re-shipped within five days of landing (the day of landing and day of re-shipment each to count as one day) to be exempt from these dues.

**WALLER.**—Rs 2 50 per ton, free on board.

**QUARANTINE.**—All live stock must be removed from the wharf to the quarantine station within 12 hours.

**REGISTRATION OF SHIPS.** At the beginning of 1925 there were 24 ships (2,501 tons) on the ship's register of the port, no vessels having been added to the register during 1924.

**SHIPPING AND TRADE.**—The net tonnage of vessels (sailing and steam) which visited Colombo in 1924 amounted to 10,013,951 tons, in addition, 58 warships and transports with a gross tonnage of 176,414 tons, and coasting vessels with a net tonnage of over 50,000 tons, entered the port. During 1923-24 there was a considerable increase in shipping visiting the port, which is rapidly reaching its pre war standard. The following are the numbers of merchant ships of all nationalities and their tonnage calling at the port during the years named—

	NUMBER OF VESSELS	NET TONNAGE
1913	2,979	9,475,893
1922	2,463	8,416,373
1923	2,563	9,006,640
1924	2,773	10,013,951

The tonnage of goods imported to Colombo, which in 1915 was 945,114 tons, rose from 923,853 tons in 1923 to 1,170,630 tons in 1924, while that of goods exported from Colombo, which was 532,567 tons in 1915, rose from 539,734 tons in 1923 to 650,793 tons in 1924. These figures are exclusive of coal imported, which in 1923 reached a total of 555,434 tons and in 1924 amounted to 646,220 tons. The total number of ships taking in fuel oil bunkers at the port during 1924 was 253, as compared with 242 in 1923. The quantity of bunkers taken was 137,597 tons, as against 125,281 tons in 1923.

**TIME SIGNAL.**—The semaphore time signal has been replaced by a time ball on the Master-attendant's office. The ball is hoisted half-way 5 minutes before and close up 2 minutes before the signal, and dropped at 1 h. 0 m. 0 s. standard time, corresponding to 19 h. 30 m. 0 s. Greenwich mean time.

GRAND ORIENTAL HOTEL: Corridor and part of Sitting Room.

## REPRESENTATIVE COMMERCIAL ENTERPRISES

### GRAND ORIENTAL HOTEL.

**Situation.** This well known hotel, generally alluded to as the G.O.H. is under the control of The Colombo Hotels Company Ltd. (1876). Overlooking the Passenger

Jetty at Colombo, it is in close proximity to the main shopping centre, near Queen's House, the Barracks and remains of the old Dutch Fort. The Post, Telegraph, and Wireless Offices are also adjacent.

**Premises.** The lofty rooms, replete with every modern feature for the comfort of visitors, bear comparison with those of any

up to date hotel in the East. The public rooms are all bright and airy, while many of the reception rooms have cool balconies. Hydraulic lifts, running day and night, are placed conveniently about the building. Telephones are installed on all floors, and they have unrestricted connection with the whole of Ceylon.

MOUNT LAVINIA GRAND HOTEL AND TERRACE.  
(See *Interpress*, page 26.)

1. BRISTOL HOTEL, COLOMBO.  
2. ANURADHAPURA HOTEL, ANURADAPURA.  
3. GRAND HOTEL, NUWARA ELIYA.  
4. ST. ANDREW'S HOTEL, NUWARA ELIYA.

**Dining Room.**—On the ground floor there is a beautifully decorated dining room with accommodation for over 300 guests. This room, of which the management are justly proud, is perfectly arranged, being free from all noise. It is lofty and cool, with an excellent balcony room at each end. Running the whole length of one side is a delightful lawn with garden. The cuisine is an outstanding feature of the hotel.

**Ball Room.**—A spacious ball room, which has recently been added to the hotel, adjoins the dining room, and a very complete installation of electric fans makes dancing, even in the hottest weather, thoroughly enjoyable. This room is used more for the larger public dances, another one of smaller proportions being utilised in its place on other occasions.

**Other Features.**—The usual reading rooms, reception halls, lounges, etc., are all spacious and equipped in a manner befitting the importance of the hotel. A very popular feature of the Grand Oriental is its splendid roof garden, from which a wonderful panoramic view may be obtained. Cinema entertainments are given on Wednesday and Sunday evenings, with the latest pictures and pleasant music. An excellent hairdressing establishment is situated in the basement of the hotel, and the billiard room has six perfect tables. On the ground floor of the establishment is a Cook's Tourist Bureau.

**Financial.**—For the financial year ended December 1924, a dividend of 8 per cent was paid by the company.

**Directorate.**—Messrs Thomas Walker (managing director and chairman), S. P. Hayley, F. H. Layard, C. E. Haslop, F. I. Wright and Colonel T. Y. Wright. Secretary, James Anderson, hotel manager Frank Winfield.

**Cables and Telegrams.**—"Grand," Colombo Code used. A B C. Telephones 1050 and 1051.

**Bankers.**—National Bank.

#### MOUNT LAVINIA GRAND HOTEL.

**Situation.**—Established in 1897, this hotel occupies one of the finest positions in Ceylon. It is built on a cliff overlooking the sea, is always cool and free from dust, and is not troubled by mosquitoes. Situated about 7 miles from Colombo, the hotel is easily reached by carriage, motor, or rail in from 15 to 30 minutes. The drive from Colombo along the Galle Face Road is one of the most picturesque and interesting in Ceylon, while the railway journey by the sea shore is equally attractive. Near the hotel, adjoining the Galle Road, there is a magnificent Buddhist Temple, which tourists in Ceylon will find well worthy of a visit. Hotel charabancs convey passengers to the "Grand."

**Premises.**—These have recently been remodelled and renovated, and everything possible has been done for the comfort and convenience of visitors. Electric light and fans are installed throughout the building, both fresh and salt water baths are provided, and billiards and tennis can be played. Particular attention is paid to the cuisine, which is of high quality, and a feature is made of special tiffins and dinners to order. The charges are moderate, special terms being quoted to families and permanent residents.

**Managing Director.**—Mr. Arthur E. Ephraums.

**Telegrams.**—"Seaside," Galkissa Telephone, No. 466.

Reinforced Concrete Contract of the Firm. The new Town Hall under construction

#### BRISTOL HOTEL, COLOMBO.

**Situation.**—Centrally situated, this hotel is about three minutes from the Passenger Jetty, and close to the leading business houses, banks, custom house, etc.

**Accommodation.**—Well furnished, with electric light and fans throughout features of the hotel are the excellent cuisine, moderate charges, and the cool lounge. The orchestra plays during lunch and dinner, there is a first class grill, and curries are a speciality.

**Telegrams.**—"Bristol," Ceylon  
**Managing Director.**—Mr Arthur E Ephraums

#### ANURADHAPURA HOTEL.

**Situation.**—This hotel is in the old Experimental Gardens Anuradhapura, the most important "buried city" in Northern

Ceylon, was for 1,200 years (437 B.C. to 769 A.D.) the capital of the ancient Sinhalese Kingdom. As the town is only 120 feet above sea level, the temperature is rather high, but the air, as a rule, is dry.

**Premises.**—There is accommodation for from 30 to 40 guests at the hotel, and the building is well equipped for the comfort of visitors. Three trains a day serve the city, morning, midday, and evening, the distance from Colombo being 126½ miles and the time taken on the journey about 6½ hours.

**Managing Director.**—Mr Arthur E Ephraums

#### ST. ANDREW'S HOTEL, NUWARA ELIYA.

**Situation.**—Nuwara Eliya, the health resort of Ceylon, lies about 6,300 feet above sea level. St Andrew's Hotel, standing in its own grounds of over six acres in extent

and adjoining the golf links, occupies one of the best positions at the Sanatorium.

**Accommodation.**—There are over 40 airy and well furnished bedrooms, a large dining room, drawing room, smoking room, billiard room, and lounge, as also roomy stables and garages, and a good tennis court. Electric light and bells are installed throughout the building, the cuisine is excellent and the service is good. The charges are moderate and Cook's hotel vouchers are accepted.

**Telegrams.**—"St Andrews," Nuwara Eliya  
**Managing Director.**—Mr Arthur E Ephraums

#### J. C. GAMMON LTD.

**Inception.**—The firm of J. C. Gammon Ltd. was registered as a private company in June 1922, the managing director, Mr J. C. Gammon, B.Sc., O.B.E., A.C.S.I., having

J. C. GAMMON LTD., Colombo.  
The new Town Hall as it will appear when completed.

previously practised from 1919 in Bombay as a reinforced concrete and consulting engineer

**Development.**—For two years the firm confined its activities to Western India, and Bombay in particular, but having clearly shown that concrete is ideal for the Tropics, providing a building material highly suitable for varying conditions, it has been able to extend its scope through public and private contracts to many other parts of India and the Malay Peninsula. The Ceylon branch was opened late in 1924.

**Activities.**—During the first two years of the company's existence it secured on account of the Bombay Port Trust the contract for the great Cotton Depot, valued at 70 lakhs of rupees. This depot provides accommodation for 2,000,000 bales of cotton and is one of the largest concrete works ever undertaken in the East, having been described by the Governor of Bombay at the opening ceremony as a triumph for concrete engineering. The work was completed in 2 years and 3 months, exactly 15 months under contract time. Other important works in Bombay include a 6,500,000 gallon reservoir at Malabar Hill, the Lady Lloyd's Pier, Karachi, Antop Model Village of 370 single storeyed units, the De Hisle Road Chawls, providing 50,000 one-room tenements, foundations for the Gateway of India, etc. Works in progress in 1925 included the Pugara Dam for H.H. the Maharajah of Gwalior, the Fuse Factory at Kirkee for H.M. Government, railway approaches and viaduct at Ahmedabad, and the Cotton Exchange, Bombay.

**Other Constructions.** In 1924 branches were opened at Calcutta and Singapore. In Calcutta, the Dum Dum Bridge is under construction, while in Rangoon important undertakings are the Municipal Reservoir and Municipal Market. In Malaya are being built the Medical School, Criminal Prison, etc. (at Singapore), the Muar Mosque, the Asahan Dam, Bukit Treh Reservoir, Kedah Bridge, Banut Wharf, etc. In Ceylon contracts in hand include oil fuel jetties and dolphins for H.M. Admiralty at Trincomalee, and the reinforced concrete construction for the new Town Hall at Colombo, as also the first of a series of European residential flats at Galle Face, a hospital for infectious diseases at Angoda, arcade and shops in the Fort, etc.

**Offices.** New Town Hall Site, Colombo Cables "Gammun," Colombo Codes Bentley's, A B C, and Private. Telephones No 1910 Post Box 475.

#### CARGILLS LIMITED.

**Inception.**—This firm was established in 1844 to carry on the business of a general store in Colombo, and it operates one of the leading establishments of the kind in the East.

**Departments.**—The house is divided into the following departments—

**DRUGS AND CHEMICALS.**—This department, which is both wholesale and retail, is under the control of qualified European chemists. All drugs are imported from British and American firms of the highest repute, and are guaranteed. Cargills are sole agents in Ceylon for the leading manufacturers of surgical instruments and appliances, and keep comprehensive stocks of the vaccines and sera in general use. Prescriptions receive the special attention of a highly competent staff. The firm is also a large importer of high class perfumery, both French and English.

**DRIPERY.** In this department the latest novelties in ladies' wear of every description may always be found, including millinery, shoes, and sunshades. There is also a dressmaking section in the hands of a capable European.

**MEN'S CLOTHING.** This department comprises a tailoring section with European cutters and a general outfitting department. Complete outfits for Europe and the Tropics are a speciality, as well as travelling kits of all kinds including suit cases, hold-alls, bags, and trunks in leather, fibre, or steel.

**WINE, SPIRITS, ETC.** This department with its subsidiary sections, confectionery, tobaccos, cigars, etc., silverware and electroplate covers a floor space of 2,500 square feet, and offers a large choice of goods, the frequent and regular arrival of which ensures absolute freshness of stocks. Cargills Ltd. hold the sole agency for many of the best known brands of wines and spirits, and buy direct from leading distillers, growers, and shippers. Their cellars cover 10,500 square feet, and hold an average stock of 40,000 gallons. The stocks of tobacco, cigars, smokers' requisites and confectionery are equally extensive.

In the silver and electroplate department there is always a large selection of articles suitable for presentations and prizes, and special quotations are made to sports' committees.

The stationery and sports section is fully equipped with every requisite, including all kinds of stationery, the latest novels, a large stock of cameras and photographic materials and a wide selection of fancy leather goods, dressing cases, handbags, and sports games.

The children's section contains a varied stock of dolls, bicycles, scooters, tricycles, and mechanical toys.

**Agencies.** Cargills Ltd. are agents for a large number of important concerns, among which are The Burmah Oil Co. Ltd., B.S.A. Ltd., Chappell Piano Co. Ltd., Kodak Ltd., Mellins Food Co. Ltd., Ronuk Ltd., Scott & Co., Somerville Bros., John Fann Ltd., Apollinars, Bouchard Pere et Fils, Courvoisier et Cie., Robert Crawford, John Dewar & Sons Ltd., Duff Gordon & Co., Gilmour Thomson & Co., Gordon's Gin Co., J. Haig & Co., Moet & Chandon, Sandeman, Sons & Co., White Horse Distilleries Ltd., Anglo-French Drug Co., Boot's Pure Drug Co., Felice Bisteri & Co., Fellows Manufacturing Co., "4711" Eau de Cologne, E. Griffiths Hughes Ltd., Foster, McLellan & Co., Lintox Distemper Cure, Pastex Dyes, Stephen Smith & Co., Hall's Wine, Veet, A. Wander Ltd., Wulfang's Albulactin, Sanatogen, Formamint, and many others.

**Offices and Branches.**—The registered office of the company is at 163, Hope Street, Glasgow, while the London office is at Balfour House, 119-125, Finsbury Pavement, E.C.2.

The Colombo offices and branches are at No. 1, Princes Street, Nos. 15 to 18, York Street, No. 10, Bailie Street, No. 6, Canal Row, Fort, also at Cinnamon Gardens and Galle Face, and there are branches at the hill stations, Kandy and Nuwara Eliya.

The Forage Mills are at Staple Street, Colombo.

**THE APOLLO MOTOR TOURING CO.**—No. 2, Canal Row, Fort, Colombo. This company is the sole agent in Ceylon for the well-known "Rollin" and "Ariel" cars. It is under European management, and keeps a large fleet of cars of all sizes for hire by the hour, day, or for longer periods. Particular attention is paid to the convenience

of travellers and tourists, and those whose stay on the island is likely to be limited can save time by sending beforehand instructions by wireless of their requirements as to tours, the number of persons in the party, etc. The cost of such wireless message is refunded on the arrival of passengers, moreover, any trip so arranged can be cancelled if, after arrival, the weather be found unfavourable, or the time at disposal does not permit the tour to be undertaken. The charges for the hire of a car range from six rupees an hour for a four-seater up to 10 rupees for an eight-seater, while the rates for trips are equally moderate. The charges for the larger tours include luncheon at a first-class hotel. Thus the trip to Kandy, which takes about 3½ hours each way and passes through some of the most interesting scenery in Ceylon, costs for four passengers 35 rupees each person, but for larger parties the individual cost is somewhat less, this includes lunch and visits to places and sights of interest in and around Kandy. Tours can also be arranged in accordance with tourists' own particular plans. In addition to this side of the business, the Apollo Company holds large stocks of motor tyres, tubes, oils, accessories, novelties, etc., for the convenience of private owners of cars. Partners Messrs. H. P. Cosmas and A. Karamahalis. Garage, Union Place Junction. Cables "Apollo," Colombo Codes A B C 5th Edition and Bentley's Bankers. Chartered Bank of India, Australia and China.

#### COLOMBO APOTHECARIES CO. LTD.

**Inception.** This company was formed in 1892 to take over the business of a private company of the same name, which carried on a trade in drugs and dispensing.

**Development.** To the original business were added drapery, stationery and hardware, and at various subsequent dates the other departments and enterprises which are now controlled by the company. In 1904 the business of Messrs. Smith-Campbell & Co. (tailoring and outfitting) and Mann & Co. (boots, saddlery, etc.) were acquired, and in 1917 the Anglo-Oriental Furnishing Co. was absorbed. The printing plant, which was established in 1901 primarily for the company's own requirements, has developed into a first-class Press, in which all classes of printing are produced.

**Premises.**—The main premises are situated at the corner of Prince and York Streets, and immediately adjoin the Grand Oriental Hotel. They thus furnish a convenient entrepôt for the traveller.

**Departments.** The firm now controls a large Stores with many departments.

In the Dispensary are prepared prescriptions under fully qualified European supervision, and it carries stocks of patent and proprietary medicines from the world's leading makers. The chief English and Paris manufacturers of toilet requisites and perfumery are also fully represented.

The Tailoring and Outfitting Section provides clothes of good quality both ready-made and made-to-measure, and complete outfits for tourists and others may be obtained.

Tobacco and cigars are stocked in all well-known brands.

In the Boots and Shoes Department a local speciality is shoes made of the skin of the Cabra Goya, a variety of lizard, hand bags and suit cases are also made of the same skin.

The Ladies Department has in stock all that the resident (temporary or permanent) may require; while an increasing trade is

done by the Furniture Section, in which both local and imported woods are used.

Other departments deal with watches and jewellery, repairs being supervised by qualified Europeans, books and magazines, stocks being replenished each week by mail, and photography, in which section a speciality is made of developing and printing.

**Directorate.**—Messrs W. Pole Fletcher, W. E. Mitchell, D. W. Watson, W. Bartlett, S. P. Hayley, and J. and S. Collett. General manager: Mr. F. Trollope.

#### **MILLER & CO. LTD.**

**Inception.**—The foundation of this company was laid in the early fifties by Mr. William Cramond Miller at Kandy, in the days when coffee was the staple industry of Ceylon. At that time the firm traded as Bell, Miller & Co.

**Development.**—After 1858 the business was carried on under the name of Findlay Miller & Co. but in 1862 the style was changed to Miller & Co. and it was so maintained until 1921, when the firm was incorporated as a private limited company.

**Expansion.**—The expansion of this old established firm has been remarkable. From the modest beginnings of 70 years ago, it has now assumed such large dimensions as importers and distributors of merchandise that the company's name has become a household word in Ceylon, and the Services civil, military and naval, Government Departments and the planting, professional, and business communities are all fully represented on Messrs Miller & Co.'s register of customers.

**Activities.**—Owing to the great growth of the company's enterprises and the variety of goods imported, the business is now divided into various departments, as follow:—

**WINE AND SPIRITS.**—Valuable agencies are held in noted brands of sparkling wines, liqueurs, whiskies, brandies, ales, cider, etc., and standard lines of port, claret, burgundy and other wines figure in the company's catalogue.

**GROCERIES.**—A feature is made of numerous high-class specialties from well-known firms in Europe, America, Australia and the East, for many of which Messrs Miller & Co. are sole agents.

**CONFECTIONERY.**—Regular consignments are received, and a large and varied stock of delicacies is always held.

**CIGARS AND TOBACCOS.**—All the well-known brands of cigars, tobaccos, cigarettes, and every kind of smoker's requisite are carried.

**MEN'S WEAR.**—Complete outfits may be obtained, and a great feature of this department is the tailoring section, where first-class European cutters are employed, and a high standard of quality and service is carefully maintained.

**LADIES' WEAR.**—New and fashionable goods are constantly imported from the best markets, the section is under expert European supervision, and the firm has its own lady buyer in London and Paris.

**SILVERWARE.**—A varied stock, imported from first-class British houses, is displayed, all specially suitable for gifts or prizes.

**DRUGS AND DISPENSING.**—Fully qualified European chemists are in charge of properly equipped dispensing departments both in Colombo and the branch establishments, the purity and freshness of drugs are ensured by the numerous important agencies which the department holds for manufacturers of world-wide repute.

MILLER & CO. LTD., Colombo.

1. Tailoring and Piece Goods Department.
2. Confectionery and Provisions.
3. Sports and Hardware Department.

**HOUSEHOLD WARE**—Particular attention is paid to the needs of persons furnishing bungalows under tropical conditions, and all kinds of household utensils and requisites are stocked.

**SPORTS GOODS**—There is a complete selection of articles for all kinds of sports and games, and provision is made for the requirements of sporting clubs.

**Deliveries.** Messrs Miller & Co have given particular thought to the requirements of tourists and ocean passengers, and make rapid delivery to all parts of any goods ordered, for which purpose they maintain a large fleet of motor delivery vans.

**Directorate.**—The Hon J. Lochon (chairman), Messrs Walter Philips (managing director), William Geddes, and H. J. Hutchings.

**Offices and Branches.**—The headquarters of the firm are at "Australia House," York Street, Colombo, and these premises represent the modern type of a fully equipped Depart-

accommodation for 100 guests, and the magnificent lounge, which is 200 feet in length, affords a grand view of the mountain scenery. Hotel runners meet all steamers and trains, and hotel motor cars await visitors at Kandy and Peradeniya. Motor trips to places of interest are arranged at moderate rates. The hotel is entirely under French management, the cuisine is first-class, and excellent wines are specially imported. Rates are moderate, and have not been raised since the extensive alterations and improvements were carried out. Cook's coupons are accepted. Of much interest for visitors are the Royal Botanical Gardens at Peradeniya, the Temple of the Tooth, Temple elephants bathing in the river at Katugastota, the Kandyan Art Museum, Lady Horton's Drive, Lady Blake's Drive, Waco Park, and tea, rubber and cocoa factories in the vicinity while there are several very old interesting temples within easy reach. F.C. Cables "Walkers," Colombo. Codes ABC 5th Edition, Bentley's, Western Union. Ceylon manager, Mr E. J. Hayward.

**THOS. COOK & SON LTD.**—Grand Oriental Building, York Street, Colombo. The offices of this famous firm of agents and bankers are within one minute's walk of the Passenger Landing Jetty, and at that address all necessary facilities and information may be easily availed of by the travelling public. Messrs Thos Cook & Son Ltd. act as railway, steamship and general passenger agents to all countries of the world, and a booklet they have published on Ceylon gives the stranger all the particulars he may require with regard to the city of Colombo, its hotels, the currency, rickshaw, carriage and taxicab fares, as also the trips which can be undertaken according to the time available at port. The head office of the firm is at Ludgate Circus, London, E.C., while the telegraphic and cable address for Colombo is "Coupon."

**N. D. H. ABDUL CAFFOOR.**

**Inception.**—This business was established in 1893 in Bristol Buildings, York Street, Colombo, by Mr N D H Abdul Caffoor, the present proprietor, who is a pearl and diamond merchant dealer in precious stones and manufacturing gold and silversmith.

**Development.** Until 1916 the business remained in York Street, but in 1914 it was decided to erect the building in which the present office and show room are situated. This is the Caffoor Building Main Street, Colombo which is one of the finest structures in the city and the property of Mr Caffoor. In 1904 the firm gained a gold medal at the St. Louis Exhibition, and at the recent Wembley Exhibition it was given the sole privilege of representing Ceylon in the gem and jewellery section, where a representative exhibit of precious stones and Kandyan antique jewellery collected during thirty years, was shown and it was patronised by Royalty besides being specially commended by the Ceylon Government.

**Activities.** The firm does an extensive wholesale business in catseves, blue sapphires, sapphires, rubies, alexandrites, star sapphires, star rubies cabashons, moonstones, etc which are exported to Europe, America and other countries, while a large stock of precious stones is always on hand in various forms and weights cut as well as in the rough. These are attractively displayed in the modern showrooms, which are thoroughly up-to-date and well arranged for the convenient inspection of stocks by customers. Everything supplied by the firm is guaranteed to be genuine. The manufacturing side of the business is equipped with all modern accessories for smiths, lapidarists and other craftsmen in the jewellery and arts trades, and all kinds of such work are undertaken, special attention being given to the rapid and efficient execution of orders. An interesting selection is always kept by this establishment of ware made by the Kandy Art Work Store, which employs only the most skilled workmen. Ceylon pearls are world-famous, and the pearl fishery off the Gulf of Mannar was held in 1925 for the first time in twenty years. A first-class collection of pearls of various sizes and colours was secured by N D H Abdul Caffoor from the 1925 undertaking.

**Agencies.** The firm has agencies and correspondents in all the principal cities of Asia, Europe, America and Australia.

**Offices.** Caffoor Buildings, Main Street, Fort, Colombo. Cables "Caffoor," Colombo. Codes used A B C (5th Edition), Bentley's and Private.

**Bankers.**—Colombo National Bank of India, Chartered Bank of India, Australia, and China, Imperial Bank of India Ltd, London. National Bank of India Ltd.

**COLOMBO ELECTRIC TRAMWAYS & LIGHTING CO. LTD. (BOUSTEAD BROS., AGENTS.)**

**Inception.**—This tramways and lighting company was established in February 1902 to acquire the electric tramways and lighting business at Colombo previously carried on by the United Planters Co of Ceylon, Ltd., the tramways having been constructed in 1898 under an exclusive concession granted by the Municipal Council of Colombo and assigned to that company. The present company now operates the whole of the electrical power traction and lighting service of the city.

**Capital.**—The authorised capital is £150,000, in 15,000 shares of £10 each, of which £130,840 has been issued. The debenture stock, 5 per cent (first mortgage), repayable at par December 31, 1940, stands at £120,000, interest being due in May and November. In 1902 a dividend of 1 per cent was paid, during 1911-19 it was 10 per cent, 20 per cent in 1920, and 15 per cent in 1921-24. The balance carried forward in 1924 was £33,039 16s 3d.

**Development.** This is shown by the dividend results and also by the following figures. Units generated, 1914 2,926,870, 1919 3,324,845, 1923 4,280,083. Passengers carried, 1914 12,087,664, 1920 13,722,301, 1923 14,670,148. Car miles run, 1922 920,000 (approx.), 1923 1,001,893. Motor omnibuses were introduced in 1922.

**Route Track.**—The tramways include seven route miles of double track, the two main routes, Grand Pass and Borella, serving the most densely populated parts of Colombo and the European business quarter. About fifty cars, including trailers, are operated and the system is cheap, efficient and safe working. Motor omnibuses are used for both public service and private hire.

**Power and Light.** The power and lighting service gives a supply to the European business quarter in the Fort area on the three-wire system at 220-440 volts, direct current, the remainder of the city being supplied with alternating current distributed at 2,200 volts, single phase, 60 cycle, and transformed down to 100 volts for consumer's premises, the area of supply covering about six square miles, and the tramways with overhead trolley, continuous current, at 550 volts. Power for both tramways and lighting is supplied from a common generating plant consisting of eight Diesel engines ranging from 250 to 600 h.p. and three steam sets.

Other details of the system are: Boilers—Babcock & Wilcox, Generators—Dick, Kerr, G.E.C., Lances—Dynamo Co., and E.C.C., total capacity, 3,040 k.w. Engines—Belliss & Morcom, M.A.N., Carels, Sulzer and Willans Diesel. Rolling stock—44 single deck open and corridor cars, G.E.C. and Dick, Kerr equipments. Brill and M. & G. trucks. Rails—95 lbs., Thermit welded. Gauge—3 ft 6 in.

**Electrical Work.**—Besides these operations, the company, by means of its installation department and sales organisation, undertakes all kinds of electrical work of any size, and carries out, in addition to a large volume of work in Colombo, power and lighting installations for out-station towns, tea estates and private houses, etc. The company's workshops are thoroughly equipped for all electrical repair and construction work, and, in addition to local repairs to all kinds of plant, a considerable amount of work is done on ships' installations, including those of H.M. Navy.

# COMMERCE

## GENERAL DATA

**C** EYLON'S general prosperity and increasing foreign trade during the years 1922-1924 were in striking contrast with the commercial depression prevalent in most of the other countries of South-eastern Asia. The total trade of the island for the year 1923 surpassed that of 1922 by more than 60 million rupees, an increase of nearly 10 per cent, reaching the grand total of Rs 638,982,720 (42,598,848) while the total value of trade for 1924, which was Rs 688,088,988 (45,872,599), showed a further increase of over 40 million rupees about 7½ per cent.

This very gratifying result is without doubt attributable mainly to the satisfactory condition of the tea industry, on which the colony so largely depends, but it is a mistake to suppose that prosperity is confined to those directly interested in tea. According to the Annual General Report issued by the Government throughout 1924 the Customs import returns indicated a wide diffusion of wealth. All classes were spending money freely on luxuries, as well as on necessities of life. Increased trade activity was reflected in the number of commercial travellers coming to the island, which rose from 121 in 1922 to 161 during 1923. Of these, 110 represented British firms. There was a further increase in 1924.

**BALANCE OF TRADE.** The following table shows the annual values of imports and exports for the years 1923 and 1924 as compared with those for 1914, excluding the value of specie and of coal and liquid fuel supplied to steamers together with the figures of the favourable trade balance—

YEAR	EXPORTS RS	IMPORTS RS	FAVOURABLE BALANCE RS
1914	172,317,549	218,363,846	46,046,297
1923	287,947,472	351,035,248	63,087,776
1924	302,734,490	385,354,418	82,619,928

**COMMERCIAL LAW.**—By Ordinance 5 of 1852, the law of England is to be observed in all matters relating to Bills of Exchange, Promissory Notes, and Cheques. Ordinance 22 of 1866 makes similar provision with regard to the law of Partnerships, Joint Stock Companies, Corporations, Banks and Banking, Principal and Agent, Carriers by Land, Life and Fire Assurance (See also under "Administration Law").

## EXPORTS AND IMPORTS

The following table shows the annual values of exports and imports from 1921 to 1924, excluding the value of specie and the value of coal and liquid fuel supplied to steamers—

YEAR	EXPORTS RS	IMPORTS RS	TOTAL RS
1921	260,897,161	256,600,413	517,497,574
1922	280,414,704	297,753,215	578,167,919
1923	287,947,472	351,035,248	638,982,720
1924	302,734,490	385,354,418	688,088,908

The total values of Ceylon trade for the same years, excluding specie, but including coal and liquid fuel supplied to steamers, were as follow:—

**COPYRIGHT.**—See Preface.

YEAR	LAKHS OF RUPEES
1921	5,481½
1922	5,982
1923	6,601
1924	7,119½

**EXPORTS.** The following table shows the quantities of the principal exports from Ceylon in 1923 and 1924.

COMMODITY	1923	1924
Tea (lb)	151,931,731	204,930,307
Coconuts fresh (No)	15,064,670	20,121,041
Tobacco (unmanuf'd) (lb)	2,951,004	4,158,880
Copra (cwt)	1,015,465	1,769,189
Citronella Oil (lb)	1,121,271	1,433,381
Coconut, desiccated (cwt)	818,793	871,341
Rubber (cwt)	748,256	719,722
Coconut Oil (cwt)	480,543	552,633
Coir Fibre (cwt)	359,082	480,192
Plumbago (cwt)	213,383	193,617
Poonac (coconut)	116,549	156,251
Areca Nuts (cwt)	166,578	130,904
Coir Yarn (cwt)	105,088	117,116
Cacao (cwt)	60,904	69,351
Cinnamon (cwt)	14,984	17,181
Skins (cwt)	8,605	10,685
Cardamoms (cwt)	2,788	2,667

The following table shows the values of the staple products exported from Ceylon in 1923 and 1924.

	1923	1924
Tea	1,857	2,150
Rubber	735	637
Copra	181	310
Coconut (desiccated)	227	226
Coconut Oil	139	158
Areca Nuts	35	33
Coir Fibre	24	29
Citronella Oil	21	29
Cinnamon	21	29
Coconuts (Fresh)	13	25
Cacao	22	25
Coir Yarn	20	21
Plumbago	15	13
Tobacco (unmanuf'd)	7	10
Poonac (coconut)	6	9
Cardamoms	6	7
Skins	7	6

The increase in the value of exports was largely attributable to the firmness of the tea market. In 1923 some 182,000,000 lb of tea were exported at an average price of Rs 1.02 per lb, whereas in 1924 some 205,000,000 lb yielded Rs 215,000,000, or an average of just under Rs 1.05 per lb. The increased production, stimulated by high prices, combined with the slight increase in selling price, resulted in a rise of the total export value by some three crores of rupees, or roughly 60 per cent of the total increase in trade for the year. Second only to the increase in tea exports, and even greater in proportion, was the increase both in volume and in value of the copra exported. From a total in 1923 of 1,015,464 cwt at an average

## COMMODITIES

price of Rs 17.82 per cwt, the export of copra rose in 1924 to 1,769,189 cwt, at an average price of Rs 17.51 per cwt, the value of exports increasing by approximately Rs 13 crores or over 25 per cent of the total increase in trade. Exports of tea and copra thus accounted together for 85 per cent of the total increase in the value of the year's trade. Rubber exports decreased slightly from 748,350 cwt to 719,722 cwt, the average price falling from 88 cents to 77 cents per lb. This fall was far more than counteracted by the "boom" prices of 1925.

**DISTRIBUTION OF EXPORTS.** Of Ceylon's exports in 1924, the United Kingdom took 45.78 per cent, as against 47.28 per cent in 1923 and 47.4 per cent in 1922. The United States took 18.68 per cent, compared with 23.30 per cent in 1923. Australia took 4.92 per cent, Germany 4.41 per cent, and Denmark 2.76 per cent.

**IMPORTS.** A feature of the continued commercial prosperity of Ceylon during the years 1923 and 1924 was the comparatively limited nature of its imports to meet the needs of some 4,500,000 people. Roughly estimated, general merchandise constitutes 38 per cent of the total imports, and consists largely of estates' implements, tools, building materials, and a limited amount of machinery. Foodstuffs make up 50 per cent and cotton goods 11 per cent of the imports. The following table shows the principal imports in the years named.

CLASS OF GOODS	1923 RS	1924 RS
Rice	83,424,898	70,749,249
Cotton (manufactured and raw)	26,954,348	27,021,596
Coal	16,844,436	19,052,471
Sugar	12,295,161	14,834,906
Metals and Metalware	9,087,050	11,876,465
Liquid Fuel	8,076,552	11,574,023
Manures	9,226,386	9,823,580
Non-Ferrous Metals	4,756,194	5,744,995
Motor Cars and Lorries	3,365,128	5,325,892
Kerosene Oil	5,309,732	4,254,985
Tea Shooks	3,570,699	4,157,805
Flour	3,370,742	3,312,873
Cement	1,232,304	1,547,184

Tobacco, Cigars and Cigarettes (lb)	350,223	431,021
Spirits (gal)	159,047	183,463

From the above table it will be noticed that the highest figures of increase are those relating to liquid fuel (about 30 per cent), coal, motor cars and lorries, metals and metalware, and sugar.

**TRADE BY COUNTRIES.**—The following table shows the comparative percentages for the years 1922-24 of the values of imports, exports, and total trade between Ceylon and the United Kingdom, British Possessions,

*For latest statistics, see "ADDENDA"*

and Foreign Countries respectively. The figures are exclusive of imported rubber, and of coal, liquid fuel, and other ships' stores —

IMPORTS	1922	1923	1924
From the United Kingdom	22 42	22 30	23 06
From British Possessions	59 63	57 80	53 76
From Foreign Countries	17 95	19 75	23 18
	100	100	100
EXPORTS	1922	1923	1924
To the United Kingdom	46 27	46 64	44 69
To British Possessions	16 30	17 01	18 26
To Foreign Countries	37 37	36 35	37 05
	100	100	100
TOTAL TRADE	1922	1923	1924
From and to United Kingdom	34 78	35 81	35 29
From and to British Possessions	37 21	35 25	33 69
From and to Foreign Countries	28 01	28 94	31 02
	100	100	100

It will be seen that the percentage of imports supplied by countries other than British rose in value from 17.95 in 1922 to 19.75 in 1923 and to 23.18 in 1924. This increase was entirely at the expense of British Possessions the percentage of goods supplied by Great Britain having slightly risen. About 68 per cent of the total imports in 1924 came from Great Britain, India and Burma, India having in 1923 replaced Burma as the chief country of supply owing to increased consignments of rice and of fish guano and manure. Australia which had advanced to fifth place in 1923 mainly owing to large imports of railway sleepers, fell to tenth place in 1924. Java, Japan, the United States and Borneo all improved their positions. The ten leading countries from which Ceylon obtained imports in 1924 with their percentages of the total value of imports, were: British India (31.09), United Kingdom (22.64), Burma (15.2), Java (3.88), United States (2.95), Borneo (2.91), Japan (2.12), Natal (1.93), Germany (1.93) and Australia (1.79).

In the export trade Great Britain has remained easily first among the colony's customers, but the percentage of exports to her fell from 46.64 in 1923 to 44.72 in 1924. The decrease in purchases by the United States was still more noticeable and was represented by the figure of 18.68 per cent of the total in 1924, as against 23.36 per cent in the previous year. Other countries which failed to maintain their percentage in 1924 — though in a much less degree — were Canada, Egypt, New Zealand, and France. On the other hand, Australia, Germany, and Denmark showed increased figures, as did Italy and Holland. The first ten countries taking Ceylon produce and manufactures (with their percentages) were: United Kingdom (44.72), United States (18.68), Australia (4.92), Germany (4.41), Denmark (2.76), Italy (2.58), Canada (2.46), British India (2.4), Egypt (1.88) and Norway (1.85).

**AUSTRALIA** — Ceylon has a large favourable balance of trade with Australia, exports in 1924 exceeding imports by no less than Rs 11,109,169. Imports from Australia fell from Rs 10,782,298 in 1923 to Rs 7,389,056 in 1924, while exports to that country rose

from Rs 12,840,661 to Rs 18,498,225 during the same period. After the United Kingdom and the United States, Australia is the largest purchaser of Ceylon tea, the amount exported there in 1924 being 15,460,636 lb, as against 10,815,635 lb in 1923, an increase of 4,645,001 lb. Imports from Australia are mainly flour and some meat products.

**BELGIUM** — Trade with Belgium, which reached a total value in 1924 of Rs 7,213,072, was made up of exports Rs 4,529,169 and imports Rs 2,683,903, the latter being largely iron and steel manufactures with some refined sugar, window glass and chemicals. Exports were principally rubber, copra and coconut oil.

**BURMA** — The value of the total trade of Ceylon with Burma in 1924 was Rs 46,156,752, as against Rs 59,372,902 in 1923 and Rs 75,717,697 in 1922. This considerable decrease was almost entirely due to the big decline in the quantities of rice imported in 1923 and 1924, imports of all kinds falling from Rs 59,288,580 in 1923 to Rs 46,028,104 in 1924, while exports during the same period increased from Rs 84,312 to Rs 128,648. The export trade with Burma is small, but varied, the largest items being gold and silver plate and foodstuffs and tobacco. Imports from Burma in addition to rice include non-ferrous metals, pig lead and jewels.

**CANADA** — Ceylon's total trade with Canada grew from Rs 10,457,182 in 1923 to Rs 10,988,678 in 1924, imports rising from Rs 1,570,457 to Rs 1,734,750, and exports from Rs 8,916,725 to Rs 9,253,922. The latter are mainly tea and rubber, the tea exported to the Dominion having been 7,903,614 lb in 1924 compared with 7,261,404 lb in the preceding year. There was a decrease in the quantity and value of motor cars imported from Canada in 1924.

**EGYPT** — Exports to Egypt were valued at Rs 7,345,534 in 1923 and Rs 7,050,737 in 1924. Tea (2,758,063 lb in 1924) and coconut oil were the chief exports. Imports from Egypt declined from Rs 249,298 to Rs 160,878.

**FRANCE** — Ceylon's trade with France reached a total value of Rs 5,470,215 in 1924, a slight increase on the figure of Rs 5,229,112 for 1923. Imports from France, largely silk manufactures, motor cars and brandy, rose from Rs 1,668,387 in 1923 to Rs 1,910,179 in 1924, while exports to France, which were Rs 5,229,112 in the former year, also rose slightly to Rs 5,470,215 in 1924. Rubber, tea and copra are the principal exports.

**GERMANY** — Trade with Germany, which declined in 1923 by over a million and a half rupees, showed a remarkable increase in 1924, the total figure being Rs 22,262,858, compared with Rs 13,259,736 in the preceding year. Both exports to and imports from Germany increased, the latter from Rs 9,307,822 to Rs 16,836,203, and the former from Rs 3,951,914 to Rs 5,426,655. Exports to Germany were tea (695,132 lb in 1924, as against 119,463 lb in 1923), desiccated coconut, coconut oil, and rubber, in which last named commodity there was a considerable decrease. Imports from Germany included (amongst others) Cement, Rs 413,665, muriate of potash, Rs 331,117, hoop iron, Rs 235,998, glass and glassware, Rs 215,700, barbed wire, Rs 208,501, haberdashery and millinery, Rs 187,770, beer and ale in bottles, Rs 186,214, cutlery and hardware, Rs 161,675, sulphate of potash, Rs 159,138, and toys, Rs 155,780.

**GREAT BRITAIN** — This country is by far the largest purchaser of Ceylon products and manufactures, and is second only to

1. MELPERI DIVERS PREPARING TO DIVE.  
2. DIVERS.  
3. A. FRANK DOLLER.  
4. STAFF ATTENDING AT BEACH.

British India as a source of imports. The following table shows the values of exports to and imports from the Mother Country in the years named —

	1923 Rs	1924 Rs
Exports to	163,705,410	172,322,283
Imports from	63,356,230	69,448,553
Total trade	227,061,640	241,770,836

There was, it will be noticed, a satisfactory growth in both the export and import trade with the United Kingdom, exports increasing by Rs 8,616,873 and imports by Rs 6,092,323, while the total increase on all trade was Rs 14,709,196. Tea is by far the most important export, and in 1924 the United Kingdom took 132,886,382 lb., as against 119,768,283 lb. in 1923, and 13,118,099 lb. in 1922. She is also the largest buyer of coconut oil, and takes 25 per cent of the rubber exported, besides large quantities of desiccated coconut, copra, and plumbago.

Imports from the United Kingdom cover a very wide range, almost every article of manufacture being included. Leading items are cotton piece goods, in which Great Britain still holds first place, other manufactures of cotton, coal, metals and metalware (76 per cent of the total), non-ferrous metals and manufactures, aluminium goods, cement, screws, nails, etc., tobacco and cigarettes, tea shooks, and tea lead. The imports from the United Kingdom in 1924 were classified according to value as follows:

	Rs
Food, drink and tobacco	6,482,733
Raw materials, and articles mainly manufactured	7,550,795
Articles wholly or mainly manufactured	54,007,568
Miscellaneous	136,250
Total merchandise	68,177,346
Bullion and specie	1,271,207
Grand Total	69,448,553

**INDIA**—Ceylon's exports to India (excluding Burma) rose in value from Rs 10,687,286 in 1923 to Rs 12,059,905 in 1924, while the value of imports from India also rose from Rs 85,581,202 to Rs 100,163,998. The value of the colony's total trade with India in 1924 was, therefore, Rs 112,223,903, compared with Rs 96,268,548 in 1923. Ceylon takes large purchases of rice, coal, raw rubber, raw cotton, fresh fruits, and vegetables, and in return exports tea, lead sheets for tea chests, and betel nuts.

**JAPAN**—Imports from Japan rose from Rs 5,447,478 in 1923 to Rs 6,425,177 in 1924, tea chests accounting for Rs 2,510,798 and cotton piece goods (various) for Rs 1,758,919. Exports also increased from Rs 1,813,060 in 1923 to Rs 1,965,846 in 1924, tea being a leading item.

**NETHERLANDS EAST INDIES**—The balance of trade as between Ceylon and the Netherlands East Indies is all in favour of the latter, imports thence in 1924 amounting to Rs 24,666,587, compared with Rs 19,772,901 in 1923, and exports to the Indies to only Rs 453,798, as against Rs 521,738 in 1923. The total trade done in 1924 was, therefore, valued at Rs 25,120,385, compared with Rs 20,294,639 in 1923. Java supplied five-sixths of all the sugar imported into Ceylon in 1924; and another large item on the import list was the liquid fuel and petrol supplied by Sumatra and Borneo.

**NEW ZEALAND**—The value of the total trade of Ceylon with New Zealand fell slightly from Rs 6,846,414 in 1923 to Rs 6,429,286 in 1924. Exports totalled Rs 6,427,916 and imports Rs 1,370 in the latter year. Of tea, by far the largest item, 5,884,136 lb. were exported.

**SIAM**—Ceylon's trade with Siam was valued at Rs 368,819 in 1924, as against Rs 283,126 in 1923, imports in 1924 being worth Rs 324,360 and exports Rs 44,459. Raw materials (largely teak) and articles mainly manufactured provided the bulk of the imports from Siam.

**SOUTH AFRICA**—The principal commodity imported from South Africa is Natal coal, increased quantities of which were received in 1924. Imports from South Africa in that year were valued at Rs 5,834,708, as against Rs 4,886,872 in 1923, while exports to the Union (principally tea) totalled Rs 7,350,447, compared with Rs 6,778,601 in 1923.

**STRAITS SETTLEMENTS**—Exports of tea to the Straits Settlements showed an increase of 79,170 lb. in 1924, the figures for that year being 970,775 lb., against 897,605 lb. in 1923. A considerable amount of sugar is imported from the Straits Settlements, the total trade in 1924 being valued at Rs 5,753,848, compared with Rs 5,625,037 in 1923.

**UNITED STATES**—Reference has been made to the decrease in Ceylon's export trade with the United States in 1924, comparisons in respect of that and the import trade with the same country being afforded by the following table:

	1923 Rs	1924 Rs
Exports to U.S.A.	82,980,163	74,867,812
Imports from U.S.A.	6,464,147	9,180,299
Total trade	89,444,310	84,048,111

In imports it will be seen that the United States have gained ground. In 1924 the following were the values of the leading imports thence: Crude petroleum, Rs 1,565,481, motor lorries, Rs 1,231,708, motor cars, Rs 1,155,644, kerosene oil, Rs 1,026,303, lubricating oil, Rs 747,577, pneumatic tyres, Rs 272,201, cotton piece goods, Rs 237,043, chemical manufactures, drugs, etc., Rs 148,128, and painters' colours, Rs 139,014. The United States was the second largest purchaser of tea in 1924, exports from the island amounting to 16,300,413 lb., compared with 15,550,436 lb. in 1923, and only 758,977 lb. in 1922.

## TRADING METHODS

**TRADE MARKS.** These are governed by the Trade Marks Ordinance of 1888. An application to register a trade mark for one or more articles, or a series of trade marks for one or more articles, included in one class costs Rs 10. A certificate of registration, for the purpose of obtaining registration abroad, costs Rs 5.

**TRADE ORGANISATIONS.** In addition to the Ceylon Chamber of Commerce, which is noticed later, there are several important organisations in the island which have for their object the promotion, fostering, and protection of the trade interests of the colony. The Ceylon Estates Proprietary Association was formed to promote the common interests of those engaged in the cultivation of tea, rubber, and agricultural products generally. Proprietors of, and agents for, estates not less than 53 acres in

extent are eligible for membership. The Ceylon Planters' Association, Kandy, is the representative body of the chief planting interests. It is open to all proprietors, firms, and individuals interested in planting, and has branches in the chief planting districts. The Low Country Products Association is open to owners of at least 25 acres cultivated with low country products: coconuts, rubber, and cinnamon, and also to mill-owners. Other important organisations are the Plumbago Merchants' Union, Colombo Tea Traders' Association, Colombo Rubber Traders' Association, and Colombo Brokers' Association.

## CEYLON CHAMBER OF COMMERCE

This Chamber was established on March 25, 1830, and was incorporated in 1895. It has consistently kept in view the improvement and development of trading facilities throughout the island and with overseas countries, and has rendered great assistance to commercial undertakings of every class and degree. The Chamber, whose premises are in Lower Chatham Street, Fort, Colombo, is administered by a chairman, a vice-chairman, a secretary and a committee of nine members. The present chairman, who is also the representative of the Chamber in the Legislative Council, is the Hon. Colonel E. J. Hayward, C.B.L., V.D.

**WEIGHTS AND MEASURES.** The ordinary English weights and measures are used in Ceylon. For gold and silver, the ounce, divided decimally, and not into grains, is the sole unit of weight. For precious stones and pearls the metric carat of 200 milligrammes is the legal standard of weight.

## ANIMAL WEIGHTS & MEASURES

The following are the Sinhalese land and dry measures:

1 Amunam	4 pelas	40 lahas or kurum,
		8 parrahs, 5 bushels, 20
		pecks, and 160 quarts or
		seers
1 Pela	10 lahas or kurum,	2
	parrahs, 1 bushel, 5 pecks	
	and 40 quarts or seers or	
	neh	
1 Laha	4 quarts or seers or neh	
1 Parrah	5 lahas or kurum, and	
	20 quarts or seers or neh	

The extent of land is generally indicated by the amount of seed necessary for sowing it, and the area surveyed is computed by the amunam and its minor divisions, the pela, the laha, and the parrah. Thus, "five amunams" of land would mean an area over which that quantity of grain might be sown. The following are the principal measures of land survey, with their equivalents in the standard table of measures:

1 Amunam's sowing extent	2½ acres
1 Pela's	2 roods and 2 perches
1 Laha's	10 perches
1 Parrah's	1 rood and 10 perches
1 Quart's	2½ perches

In the Jaffna district the usual measures of land are —

12 kulis	1 lachelam
24 lachelams	1 acre

The "fathom" of two yards is the commonest measure of distance, the "gawwa" is nearly the length of four statute miles. The "cubit" of 18 inches is used in the measure of superficial area.

## COMMODITIES

**ALUMINIUM WARE**—There was a notable increase of 300 per cent in imports of aluminium manufactures from the United Kingdom in 1924, that country, which ranked fourth in 1923, attaining first place at the expense of British India, Germany, and Switzerland.

**CARDAMOMS.**—The production of cardamoms has decreased during recent years, and exports in 1924 were only 2 667 cwt.

**CEMENT.** Imports in 1924 increased by 193,477 cwt, the figures being 714,814 cwt (Rs 1,547,184), compared with 521,337 cwt (Rs 1,232,304) in 1923. Great Britain is still the largest supplier, and imports from this source increased by 20 per cent. Supplies from Germany rose by over 100 per cent, and those from Denmark by over 20 per cent.

**CINNAMON.** The export of this spice formerly the best-known product of the island slightly increased from 44,984 cwt in 1923 to 47,484 cwt in 1924. Improved grading of

quantities of the chief palm products exported in the years named

COMMODITY	1923 CWT	1924 CWT
Copra	1 615,465	1,769,189
Coconut Oil	480,543	552,633
Desiccated Coconut	818,793	871,341
Coconuts	15 963,670	20,121,041
	Nuts	Nuts
Poonac	116,549	156,251
Coir Fibre	359,082	480,492
Coir Yarn	105,088	117,119

Exports of coconut palm products to the Netherlands, Denmark, Germany, and Italy showed increases in 1924 as compared with 1923 but decreases were recorded in exports to the United Kingdom, the United States and Sweden. Exports of desiccated coconut to the United Kingdom remained at about the 1923 figure, but Germany, the Netherlands, Italy and Australia all increased their share. Consignments to the United States declined. The chief recipients of coconuts which increased their share were Germany,

cent. Of the various sub-divisions, declines were shown in bleached, grey, and other piece goods, and in muslin. On the other hand there were increases in imports of dyed and printed piece goods. Except in the dyed goods market, where, as in 1923, India took the premier place, the United Kingdom maintained her predominance, but by a decreased majority, only in printed goods was there an increase in imports from the Mother Country. India, on the other hand, made considerable headway in every branch except muslin and "other piece goods." Imports from Holland fell off greatly all round, but Japan and Switzerland made noticeable progress in the market.

## DIAMONDS AND OTHER STONES.

The duty recovered on the import of diamonds and other precious stones during 1924 was Rs 147,919 on a value of Rs 1,470,098. Of this duty, Rs 126,230 was refunded on subsequent re-exportation, the net recoveries being thus Rs 21,689. The value of precious stones brought to Ceylon by commercial

1. COCONUTS COLLECTED AFTER BEING PICKED.

2. VANILLA PODS

3. CINNAMON BUNDLING.

quills and chips has led to an increased demand, especially on the German market. The demand for cinnamon oil has also improved, France and Germany being the chief purchasers.

**COAL.**—Imports of coal increased in quantity from 544,548 tons in 1923 to 675,136 tons in 1924, and in value from Rs 16,844,436 to Rs 19,952,471. Imports from the United Kingdom were slightly larger in quantity and about the same in total value. Both Natal and India sent increased quantities to Ceylon, Natal now being the leading source with 34 per cent of the total, Great Britain's share being 27 per cent, and India's 25 per cent. Australia and Mozambique are also sources of supply.

**COCONUT PRODUCTS.**—Exports of all the products of the coconut palm showed a large increase in 1924 over 1923, and were also in excess of 1922, which was considered a good year. The following table shows the

the United Kingdom, the Netherlands, and Egypt. Of the total exports of coconut and poonac, Belgium and Germany absorbed 131,848 cwt and 21,610 cwt respectively. Exports of coir fibre were mainly to the United Kingdom, Continental countries, Japan, and South Africa. The bulk of the coir yarn went to the United Kingdom (52,722 cwt) and to Continental countries (45,243 cwt). (See also under "Agriculture" and "Mining and other Industries.")

**COPRA.**—See "Coconut Products."

**COTTON.**—Imports of raw and manufactured cotton were valued at Rs 27,021,596 in 1924, as against Rs 26,954,348 in 1923. The imports of raw cotton, which are almost entirely from British India, declined by 15 per cent.

**COTTON PIECE GOODS.**—These form the bulk of the imports of cotton into Ceylon. There was in 1924 a decrease in quantity to the extent of about 2,000,000 yards, or 5 per

travellers amounted to Rs 1,421,619, whilst imports by local merchants were valued at Rs 57,479. (See also under "Mining and other Industries.")

**KEROSENE OIL.**—Imports of bulk oil fell off in 1924 by 18 per cent. Over three-quarters of the year's supply was received from Asiatic Russia, as against just over one-third in 1923. There were no imports from Persia, and those from the United States fell away by over 45 per cent. The latter country furnished the bulk of the case oil, though in diminished quantities. In all, 4,698,101 gallons were imported in 1924, as against 5,841,059 gallons in 1923.

**LIQUID FUEL.**—There has recently been a great increase in the demand for liquid fuel for bunkering steamers, and imports increased in 1924 by about 30 per cent., viz., from 32,179,572 gallons (Rs 8,976,522) in 1923 to 42,332,008 gallons (Rs 11,574,023). Of these total imports, more than three-quarters were

re-exported in the form of ships' stores Borneo, the largest supplier, sent twice as much as Persia, but fell short by 20 per cent of her record in 1923. Other countries furnishing considerable amounts were Sumatra and the United States.

**LIVE STOCK.** Imports of live stock from India in 1924 were: Buffaloes, 1,995; cattle, 5,734; goats, 58,251; sheep, 13,120; and horses, 27. In addition, 74 horses were imported from the United Kingdom and 2 from Natal. There were no imports from Australia.

**MANURE.** Importations of manure increased in 1924 by 10 per cent. In the case of both poonac and fish guano, the bulk of the imports were from India. Nitrate of soda, nitrohm, sulphates of ammonia and potash all showed considerable increases.

**METAL AND METALWARE.** Imports of ferrous metals and metalware rose in 1924 by 30 per cent in value and 34 per cent in quantity. Once more the United Kingdom supplied the bulk, the value of her share being 76 per cent of the total. The next largest exporters were Germany (10 per cent) and Belgium (9 per cent), both of whom considerably increased their consignments. The United States was the only other competitor who supplied as much as 2 per cent, thus representing a falling off from 1923 of 14 per cent. Government imports, reviving somewhat in value, helped to swell the total to Rs 11,876,465, representing 839,483 cwt, as compared with Rs 9,087,050 and 624,104 cwt in 1923. The largest single sub-head was 'Iron and Ironware Unenumerated,' which showed an increase of over 30 per cent. Nineteenths of the imports under this sub-head were from the United Kingdom. Other large items were iron bars and rods (60 per cent increase) and corrugated iron sheets (20 per cent increase).

**METALS (NON-FERROUS).** Imports in 1924 showed an increase over 1923 of nearly 22 per cent in value, at Rs 5,744,905, against Rs 4,750,194. Of the various importing countries two alone supply four-fifths of the total viz., the United Kingdom and Burma. In 1923 Burma had a slight preponderance, in 1924 the pendulum had swung a trifle the other way, broadly-speaking, there was an equal division between them in both years.

**MOTOR CARS AND LORRIES.** An increase of over 20 per cent in the number of cars imported took place in 1924, the rise in the total from the United Kingdom being nearly 150 per cent, and from the United States 40 per cent. Canada alone showed a considerable decline, both in quantity and value, and now ranks second to the United States in number and third in value of imports. The average value of American cars imported was Rs 2,732, of British cars Rs 3,573. There was an increase of over 150 per cent in the number of lorries imported in 1924, to 800, valued at Rs 2,168,158, as compared with 318 valued at Rs 891,689 in 1923. Imports from Canada were larger by 128 per cent, from the United States by 174 per cent, and the United Kingdom by 187 per cent.

**PETROL.** Imports of petrol have increased largely ever since 1918, when 988,427 gallons came into the island. In 1923 the amount reached 1,959,474 gallons, which was increased in 1924 to 3,749,236, nearly a 100 per cent rise. In 1924 Borneo was a strong rival to Sumatra as a supplying country, the proportion sent by the latter being roughly 53 per cent of the total imports, as against 47 per cent by the former.

**PIG LEAD.** Imports of this mostly come from Burma, and showed a 20 per cent increase in 1924.

**PLUMBAGO.** The export of plumbago, or graphite, which fell off considerably after the War, showed a welcome development in 1922, when the total reached 216,999 cwt. There was, however, a fall in 1923 to 213,383 cwt, and a further decline in 1924 to 193,017 cwt, the value of which was Rs 1,329,125. Of this, the United States took 67,685 cwt, Germany 49,256 cwt, the United Kingdom 28,248 cwt, and Japan 19,200 cwt. (See also under "Mining and other Industries.")

**POONAC.** See "Coconut Products."

**RICE.** The rice trade of the island has settled down again after the severe shortage which necessitated the imposition of food control in 1920, and competition among merchants has produced a fall in prices. India and Burma are the two countries of supply, but imports from the latter have greatly decreased to the benefit of the former. In 1924 the total value of rice imports was Rs 76,749,249 (7,510,180 cwt), against Rs 83,434,898 (7,423,933 cwt) in 1923.

**RUBBER.** The effects of restriction of output were seen in the decrease in the total exports from 104,595,278 lb in 1922 to 83,816,228 lb in 1923, and further to 82,900,851 lb in 1924. In 1924 there was also a fall in price, which led to the value of exports being only Rs 63,749,711, as against Rs 73,594,340 in 1923. The United States is by far the largest buyer, her purchases in both 1923 and 1924 being over two-thirds of the whole, while the United Kingdom takes rather less than 25 per cent. During the first nine months of 1925 no less than 70,542,478 lb of rubber were exported, the United States, United Kingdom, Germany and Australia all substantially increasing their requirements. (See also article "Rubber" following "Agriculture.")

**SPIRITS.** In 1924, 183,463 proof gallons of spirits were cleared for consumption, as against 159,047 in 1923, and 120,373 in 1922. The separate quantities in the last two years were as follow—

		PROOF GALLONS	
		1923	1924
Brandy	..	33,803	44,080
Gin	.	67,252	83,487
Whisky		57,992	55,887
Total		159,047	183,463

Whisky is obtained exclusively from the United Kingdom, brandy mainly from France, and gin principally from Holland.

**SUGAR.** There was in 1924 an increase of about 25 per cent in the imports of raw sugar, the total amount being 601,294 cwt, valued at Rs 14,834,906, compared with 553,191 cwt, valued at Rs 12,295,164, in 1923. Of the total amount imported in 1924, Java supplied five-sixths, as against four-fifths in the preceding year. Imports from Hongkong and the Straits Settlements also increased. India shipped less than in 1923, but maintained her place as a supplier of coarse sugar.

**TEA.** This is, of course, the chief source of Ceylon's commercial prosperity, and the continued improvement in both the quality and value of exports has been marked. The total exports in 1924 amounted to 204,930,307 lb, compared with 181,939,731 lb in 1923, or an increase of 22,990,576 lb. Ceylon tea finds a ready market in almost every country of the world, from Great Britain, with its purchase of 132,886,382 lb,

to Algiers, which took 1,100 lb. The following are the ten leading countries of destination, with the exports thereto in the years named:

	1923 Lb	1924 Lb
Great Britain	119,768,283	132,886,382
United States	15,550,436	16,309,113
Australia	10,815,635	15,460,636
Canada	7,201,404	7,963,614
New Zealand	6,386,188	5,884,136
Egypt	4,860,068	4,494,073
Natal	3,232,364	3,096,665
Cape Colony	2,556,170	2,058,663
South America	1,554,505	1,604,005
British India	1,854,021	1,575,906

Other countries showing increases in the quantities of tea purchased were Germany (695,132 lb in 1924, as against 119,463 lb in 1923), Turkey in Asia (770,216 lb in 1924, as against 450,152 lb in 1923), and Russia, which took (for the first time for many years) 131,183 lb. (See also special article on 'Tea'.)

**TEA CHESTS.** In 1924 there was an increase of 18 per cent in imports. Japan supplied three-quarters of the total imports, which numbered 2,328,477, valued at Rs 4,157,865, compared with 1,663,682 chests, valued at Rs 3,570,699, in 1923. Most of the rest came from the United Kingdom.

**TOBACCO, CIGARS, AND CIGARETTES.** The following were the quantities imported in the years named:

	1923 Lb	1924 Lb
Cigars	7,387	7,272
Cigarettes	327,482	403,370
Manufactured tobacco	21,354	20,379
Total	356,223	431,021

Cigarettes and tobacco are imported almost exclusively from the United Kingdom, while cigars come mainly from the Philippines, India and Holland.

**WHEAT FLOUR.** Imports increased from 240,524 cwt in 1922 to 275,405 cwt in 1923, and 320,074 cwt in 1924, the value of the last year's imports being Rs 3,312,873. Imports from Australia have increased, while those from India have declined.

**YARN.** Imports of bleached yarn fell off in 1924 by no less than 62 per cent, and the United Kingdom dropped out of the market almost entirely, supplies from British India rising from 3,000 lb to over 23,000 lb. There was a remarkable increase in price from 45 cents per lb to Rs 1.56 per lb. There was also a heavy decline in imports of dyed yarn, hardly any coming from Great Britain, while imports from India also fell off.

## CUSTOMS TARIFF

**A** NEW Customs Tariff has been in force in Ceylon since October 1, 1922. Under it all goods, wares, merchandise, and machinery not otherwise charged with duty, exempted from duty, or prohibited or restricted, are subject on first importation to a duty of Rs 10 for every Rs 100 of the value thereof, that is, 10 per cent ad valorem.

**CUSTOMS REVENUE.** The total duties collected by the Customs Department in 1924 amounted to Rs 36,859,240, exceeding the total of the previous year in itself a record.

**MACKWOODS LTD., Colombo.**

- |                                |                                  |
|--------------------------------|----------------------------------|
| 1. Tea and Rubber Godowna.     | 2. View of Tea Blending Godowna. |
| Centre. Tea Sample Room.       |                                  |
| 4. Deallocated Coconut Stores. | 5. Tea Warehouse.                |

by Rs 3,547,328, an increase of 10 per cent. The increase was divided as follows:—

	TOTAL RS	PERCENTAGE RS
Imports	2,254,001	9.1
Exports	1,278,997	14.9
Sundries	14,330	26.8

The total of Rs 36,859,240 was made up of imports duties, Rs 26,984,090, export duties, Rs 9,821,946, and sundries, Rs 53,198.

**EXPORT DUTIES.**—The following duties are levied on various products exported: Cacao, Rs 1.50 per 100 lb, chanks (live), Rs 6 per 1,000 lb, chanks (dead), Rs 3 per 1,000 lb, chanks (inferior), Rs 2 per 1,000 lb, coconut (desiccated), 84 cents per cwt, coconut (fresh), Rs 3 per 1,000, coconut oil, 75 cents per cwt, copra, 60 cents per cwt, elephants (not tuskers), royalty of Rs 200 per head, elephants (tuskers), royalty of Rs 300 per head, poonac, 35 cents per cwt, rubber (except rubber exported in the form of latex), Rs 2.50 per 100 lb, tea, Rs 3 per 100 lb.

The export duty of 3 per cent ad valorem on plumbago was removed as from October 2, 1925.

No elephants may be shipped for export without a permit from the district in which they have been captured.

**IMPORT DUTIES.**—The following are leading special import duties:—

**AGRICULTURAL IMPLEMENTS**—2½ per cent ad valorem.

**ARMS AND AMMUNITION** Guns, single-barrel, Rs 5, double-barrel, Rs 10, carbines and rifles, Rs 5 and Rs 10, revolvers, Rs 4.50, air guns, rifles and pistols, not being toys, each Rs 5, other guns, Rs 10 each, shot, 10 per cent ad valorem, percussion caps, 20 per cent ad valorem, gunpowder (fine), 30 cents per lb, coarse for blasting, 10 cents per lb.

**BEER, ALE, & L.C.**—Beer, ale, porter, and all other malt liquors in wood, 25 cents per gallon, in bottle, 30 cents per gallon.

**BENZINE**—30 cents per gallon.

**CARTRIDGES** Cartridges, fuse dynamite, detonators, and fireworks, 20 per cent ad valorem.

**CEMENT**—30 cents per cwt.

**COTTON GOODS**—Cotton piece goods, yarn and twist, 5½ per cent ad valorem.

**EXPLOSIVES**—20 per cent ad valorem.

**FISH**—Dried or salted, 75 cents per cwt, fish, Maldiva (Umbala Kada), Rs 2 per cwt, frozen fish, 2 per cent ad valorem.

**FLOUR**—Wheat flour, Rs 1 per cwt.

**HOPS**—Hops for brewing, 2½ per cent ad valorem.

**KEROSENE**—30 cents per gallon.

**MACHINERY**—Machinery and belting for machinery, 2½ per cent ad valorem.

**MATCHES.**—Boxes containing not more than 75 safety matches, 60 cents per gross, non-safety, Rs 1.

**METALS.**—Brass bars, rods, wire, tubes, sheets and plates, 7½ per cent ad valorem, brass ingots and chains, 10 per cent ad valorem; copper bars, etc., 7½ per cent ad valorem; copper ingots, 10 per cent ad valorem, iron and steel, plain or galvanised, chains, wire, rivets, screws, nails, tacks, washers, bolts and nuts, sheets, plates, joints, girders, bars, angles, bulbs, beams, shapes, sections, pillars, rods, slabs, Rs 2.50 per cent ad valorem; tin and zinc, 2½ per cent ad valorem; all other metals 10 per cent ad valorem.

**MOIOT VEHICLES**—7½ per cent ad valorem.

**NAILS**—Nails for tea boxes, 2½ per cent ad valorem.

**OIL**—Lubricating oil, other than castor oil, 20 cents per gallon.

**PADDY** Paddy rice pays a duty of 60 cents per cwt.

**PERFUMES**—All perfumed spirits, Rs 30 per gallon or 30 per cent ad valorem, whichever produces the higher duty. Perfumery, including toilet soaps, powders, and other scented preparations which do not contain spirit, 10 per cent ad valorem.

**PETROL**—30 cents per gallon.

**RICE**—Rs 1 per cwt.

**SALT**—Unrefined, Rs 3 per cwt.

**SPIRITS**—Brandy, gin, rum, whisky, and other alcoholic spirits, Rs 14.50 per gallon, cordials and liqueurs, Rs 18 per gallon.

**SUGAR**—Candy and refined, Rs 3.50 per cwt, unrefined and jagged, 75 cents per cwt.

**TEA**—25 cents per lb.

**TOBACCO**—Cigars, Rs 4 per lb, snuff, Rs 3.50 per lb, manufactured tobacco, Rs 4 per lb, unmanufactured, Rs 1.75 per lb, hookah tobacco, Rs 2 per lb, cigarettes and beedies, Rs 5 per lb.

**TYRES**—Solid, 7½ per cent ad valorem.

**WINES** Sparkling wines, Rs 5 per gallon, other wines, in bottle, Rs 3 per gallon, in wood, Rs 2.50 per gallon.

**LIST OF EXEMPTIONS.**—The following articles are duty free: Advertising matter, including trade catalogues and circulars, aeroplanes, airships and parts, apparatus, drugs and chemicals for educational or research work or for the purpose of the campaign against ankylostomiasis, artificial limbs and eyes, books, and maps, canes and rattans, coal, coconut oil, com, copra, coke and patent fuel, cotton raw, kapok and cotton seed, dogs, fresh fish and fruit and game, Government stores, gunnies and gunny cloths, instruments, scientific, surgical or mathematical, iron, hoop, scrap or pig, lead, pig or sheets, liquid fuel, metals (unwrought), natural history specimens, other than sporting trophies, naval stores, passengers' baggage as defined by Customs regulations, patent fuel, petroleum, plants, trees, and seeds intended for agricultural and horticultural purposes, precious stones the produce of Ceylon, quinine, raw rubber, raw silk and cotton, regimental clothing and necessities, saltpetre, sand, tea boxes and material for making them and tea lead, timber (not prepared), tin, trees, plants and vegetables, wool (raw), zinc.

**PROHIBITED AND RESTRICTED ARTICLES.**—The principal imports prohibited or restricted are: ammunition, arms, gunpowder, etc., for merchandise, except under licence, coin that is false or counterfeit; dangerous substances, infected cattle, opium, ganja and bhang, Japanese shaving brushes, dogs from any Eastern country except under licence. The importation of cacao plants from any part of the Dutch East Indies, of seeds or plants of any species of Hevea from the Western Hemisphere, and of pepper plants and tea seed from India is forbidden. The importation of cocaine is forbidden, except for scientific or medicinal purposes.

Prohibitions of exports refer chiefly to certain varieties of birds, or the plumage thereof, antiquities of the island, except by permission of the Governor, wheat flour, rice, lubricating oils, and sugar.

## REPRESENTATIVE COMMERCIAL ENTERPRISES

### MACKWOODS LTD.

**Inception.**—This firm of estate agents and general merchants was founded in 1844 by Messrs William Mackwood and Francis Mackwood. The mills and stores premises cover an area of 12 acres.

**Estates Department.**—This department acts as shipping and managing agents for tea, rubber, cocoa and coconut estates, the principal product handled being tea, which is shipped to all countries in various forms of packing and blending.

**Export Department.**—The firm exports copra, coconut oil, desiccated coconut, coconuts in bags, rubber, cocoa, cinnamon, citronella oil, fibres, etc. A hydraulic baling press is used in the baling for shipment of mattress and bristle fibres, cinnamon chips, etc.

**Import Department.**—Among the articles imported are textiles, in which class the principal materials handled are cotton, woollen, artificial silk and silk goods, hardware, including corrugated ironings, barbed wire, wire and rose nails, iron and steel bars, hoop iron, metal sheets, hoes, files, cart bushes, cement, and acetic acid, sundries, such as crockery, cutlery, enamel ware, Eau de Cologne, camphor, biscuits, toys and other small articles, and also rice, sugar, flour, etc.

**Agencies.**—Messrs Mackwoods Ltd represent the following insurance companies: Royal Exchange Assurance for marine, fire, life, consequential loss, motor car and all classes, The Northern Assurance Co Ltd, for burglary, all-risks, personal accident and sickness, and motor car insurance, The Law Union and Rock for fire, and the Provident Accident and Guarantee Co Ltd, fidelity guarantee.

The firm also acts as agents for the Central Province Ceylon Tea Co Ltd, Hewagama Rubber Co Ltd, The Beau Sejour (Ceylon) Tea and Rubber Co Ltd, and as agents and secretaries for The Rayigam Co Ltd, The Pine Hill Estates Co Ltd, The St James Uva Tea Co Ltd, The Uva Highlands Tea Co Ltd, The Uva Ketawella Tea Co Ltd, The Gallebadde Estates Co of Ceylon Ltd, and The Girindi Ella Tea Co Ltd.

**Directorate.**—Messrs F. M. Mackwood, F. O. Mackwood, F. E. Mackwood, E. O. Mackwood, R. F. Darby, H. F. Parfit, and J. C. Kelly Secretary. Mr K. W. Taylor, A.C.A.

**Offices.**—Gaffoor's Building, Fort, Colombo.

### CLARK YOUNG & CO.

**Inception.**—Founded in 1894 by Messrs. T. S. Clark, S. D. Young, and E. S. Clark, this firm operates as general import and export merchants, and shipping and commission agents.

**Activities.**—The company handles for export all the general products of Ceylon, but primarily plumbago, tea, and rubber; while the principal imports in which it deals are coal, teak, flour, rice, Java and China

sugar, piece goods, etc. It also does a considerable business as agents for rubber and tea estate owners, and has a special department for handling that branch of the business concerned with insurance representation.

**Agencies.** Among the firms for which Messrs Clark Young & Co. act as agents are Andrew Yule & Co., Calcutta, Carr & Co.,

Morrean Spiegelberg, James Taylor & Co. (Merchants) Ltd., The Farnham Estate Co. Ltd., and various rubber and tea estates.

The insurance companies are General Accident, Fire and Life Assurance Corporation Ltd., Eagle Star and British Dominions Insurance Co. Ltd., Yorkshire Insurance Co. Ltd., Scottish Metropolitan Assurance Co. Ltd., China Underwriters, Ltd.

CLARK YOUNG & CO., Colombo.

H. L. DE MEL & CO., Colombo.

1. Shaft No. 1, Ragedera Plumbago Mine, Kurunegala, Ceylon.
2. Coconut Estate, Kurunegala, Ceylon.

#### H. L. DE MEL & CO.

**Inception.**—This firm was established in 1870 by the late Mr Jacob De Mel, who was the pioneer of plumbago mining in the Kurunegala District, and opened the well known Ragedera Mines.

**Development.**—The firm progressed, and in 1900 Mr H. L. De Mel, who had been practising as a qualified lawyer for a considerable time, joined his father's growing business. Later, Mr H. L. De Mel succeeded entirely to the goodwill and rights of the enterprise, and it is carried on under the style of H. L. De Mel & Co., Mr De Mel's son being now a member of the firm. During the South African and the late European Wars large quantities of plumbago were won from the firm's mines in different quarters of Ceylon. Since the Armistice, Mr De Mel has studied in America, Germany, England and other countries the modern requirements in connection with Ceylon plumbago. The advantages of Ceylon flake graphite and crystalline plumbago have been well proved, and a fairly steady business has been secured.

**Activities.**—To meet the increasing demand for the products of the firm, H. L. De Mel & Co. have installed machinery for the proper manipulation and refinement of Ceylon plumbago, and, in addition to large curing establishments in Colombo, Kurunegala, Ragedera and Ruwanwella, they have a well equipped factory in Colombo, with a chemical laboratory where all grades are tested and guaranteed to contain a specified percentage of graphitic carbon, while for certain purposes guarantees are made of the minimum percentage of iron, sulphur or ash. Most of the plumbago is packed in wooden barrels, and the equipment includes barrel-making, shooks and staving departments. The experience of 55 years has secured for the firm great facility in catering for the varying needs of different countries, and to-day a very large export trade is handled, shipments being made regularly to America, London, Germany, Japan, Australia, Holland, Italy, Calcutta, Rangoon and Hongkong. The firm, as proprietors of coconut, rubber, tea and other estates, is also well placed for the export and import trade, in which it is largely interested.

**Personal.**—During the Great War, Mr De Mel's services were at the disposal of the Government in business matters, for which he was created a Commander of the Most Excellent Order of the Empire. He was also created a Chevalier de l'Ordre de la Couronne by the King of the Belgians for services rendered.

**Agencies.**—Principal agencies held are Arthur Branwell & Co Ltd, London, Geo F Pettinos, of New York and Philadelphia, Freudenberg, Boehringer & Co, of Bremen. The firm also acts as agent for the New India Assurance Co., and holds several estates agencies.

**Administration.**—Principal, The Hon. Mr H. L. De Mel, C.B.E., J.P., M.L.C., M.M.C. Manager Mr J. R. Sri Chandrasekera.

**Offices.**—Head office: De Mel Buildings, Fort, Colombo. Branch office and head works: Pollathapitiya, Kurunegala. Curing yard and factory: Model Farm Stores, Kanatte, Colombo. Cables: "Elsmere," Colombo. Codes: A.B.C. (5th and 6th Editions), Bentley's, Western Union, Shipping and Private.

**Bankers.**—The National Bank of India Ltd. and the Eastern Bank Ltd.

**THE HOLLAND-CEYLON COMMERCIAL CO.**

**Inception.**—This company was established under its present title in 1916 with a capital of 1,000,000 guilders, and is an importer of piece goods and sundries, and exporter of Ceylon produce.

**Activities.**—The firm acts for the well-known house of Jurgens Ltd in Ceylon, which is an indication of the importance of the business which it transacts. It exports all kinds of Ceylon produce, but the principal product handled is copra. In this a very extensive business is done. The company's copra store has a capacity of about twelve thousand tons. The staff consists of six Europeans and about twenty-five native clerks.

**Agencies.** Jurgens Ltd, Nymegen and London, Nederlandsche Plantenboter Fabriek, Amsterdam, Koninklijke Weefgoederen Fabriek v/h C. T. Stork & Co, Hengelo, H. P. Gelderman & Zonen Oldenzaal, P. F. Van Vliet & Co, Helmond, The Phoenix Insurance Co Ltd, Liverpool (Marine Dept), Batavia Sea and Fire

currie stuffs, flour, matches, etc. The export department is occupied chiefly with coconut oil, cinnamon oil, coconuts, tea, and citronella oil. The firm is also interested in the export of ebony (Ceylon ebony), and particularly invites enquiries from firms in other countries interested in this product. A speciality of the house is the supply of provisions of all kinds to numerous plantations and estates in the Southern Province of Ceylon. There are four separate godowns for the stocks of oil, fertilizers, timber, and rice, and there are generally about 200 tons of both rice and fertilizer on hand. There is a branch, of which Mr V. D. Palis Fernando is manager at 53, Maliban Street, Colombo, at Galle, Mr V. D. Sinnatchy Fernando represents the firm, and V. D. David Fernando is in charge of the rubber section at Galle. Cables "Samitichy," Galle (for the head office), "Palmer," Colombo (for the Colombo branch) (Code A B C (5th Edition)).

**NESTLE AND ANGLO-SWISS CONDENSED MILK CO.**—"Nestle House," Union Place, Colombo. This company opened its depôt in Colombo towards the

Malted Milk, which is also largely used in the Government hospitals, Lactogen, the famous milk food, Nestle's Milk, Nut Milk, and Plain Chocolates, Nestle's, Cailler's, and Kohler's specially selected Bonbons, Cailler's Cream Toffee, Nestle's Cream Caramels, "Nasco" Ice Cream Mixture, Cailler's Cocoa and other well-known products of the organization. The size and importance of the business done by this depôt may be gauged from the fact that the company's sales are about 90 per cent of the total annual consumption of tinned milk throughout the whole of Ceylon, which amounts to approximately one million tins. Bankers: The National Bank of India, Head office 6/8, Eastcheap, London, E.C. Cables "Nestanglo," Colombo. Codes A B C (6th Edition), Western Union, and Bentley's.

**BRITISH CEYLON CORPORATION LTD.**

—Gaffoor Buildings, Main Street, Colombo. This company took over in 1918 an old established business in Colombo. The principal operations of the firm are confined to the milling of coconut oil, desiccated coconut, and fibre for export to various parts

**Bankers.**—Chartered Bank and National Bank of India Ltd.

**V. D. S. FERNANDO.**—Established by the present proprietor, Mr V. D. S. Fernando, in 1880, the firm operates as importer and exporter, rubber dealer and grower, commission agent and general produce merchant. In imports, the principal are rice, groceries, drugs, sugar, ebony wood, roofing tiles, manure (crushed bone), potatoes, onions,

end of 1912 to further its interests in Ceylon, having been previously represented by agents. The depôt receives regular monthly shipments from the company's factories in various parts of the world, such as England, Switzerland, Norway, Holland, America, and Australia. The office at Nestle House in Colombo is the only one which the company possesses in Ceylon, and the staff at present comprises a European manager and about 30 clerks, canvassers, coolies, etc. Practically the whole of the sales business is done through nine distributing agents in Colombo itself, but by means of its staff of five canvassers every town in Ceylon is visited at least three times during the year. The principal brand which the company supplies is the well-known "Milkmaid Condensed Milk." Other brands distributed are Ideal Milk (unsweetened), which is used in all Government hospitals, Milkmaid Sterilised Milk; Nestle's Rich Cream, Nestle's Milk Food, Nestle's

of the world. Until lately the chief countries to which shipments have been made were Europe, America and Australia, but with the progressive widening of the market for these products the operations of the company are extending to many other countries which are only just beginning to require these goods, and where a large increase of trade may be anticipated. The coconut oil mills are the Hultsdorf Mills, Colombo, while the desiccating and fibre mills (desiccated coconut, coir fibre matting, etc.) are at Veyangoda, Kochchikade, and Kudawewa. The overseas representatives are The Orient Co Ltd, "Orient House," 21, Budge Row, London, E.C.4, Grace Bros, New York, U.S.A., and Gollin & Co, Bourke Street, Melbourne, Australia. The company's bankers are the Imperial Bank of India, Colombo and London. Cables "Gelatinous," Colombo. Codes. All those in general use.

THE EASTERN PRODUCE & ESTATES CO. LTD. Colombo  
Some recently completed Tea Factories built by the F. P. & E. Co. Ltd.

#### THE EASTERN PRODUCE & ESTATES CO. LTD.

**Inception.** Founded in February 1888, this company carries on business as estate proprietors and agents, and engineers.

**Activities.**—The workshops at San Sebastian Mills, Colombo, cover an area of three acres and employ a large number of hands. The company is fully equipped for the building of factories, of which many have been erected at Yullefield, Campion, Yaderiya, Hemmingford, Rangalla, Goomera, etc. for the installation and erection of all kinds of plant and machinery, and for the supply of every sort of estate requirements, including water power and hydro electric schemes. The firm makes a feature of the construction of aerial ropeways, as at Monte Cristo, Beaumont, Pita Ratmalie Hope, etc., and some 100 miles of such ropeways are now running in Ceylon. About 16 estates in all are controlled by the company, the total planted area of which is nearly 14,000 acres. The firm also acts as agent for tea and rubber companies in Ceylon.

**Staff.**—The employees (European and Native) total about 300 at the works and 6,000 at the estates.

**Directorate.**—Messrs Norman W Grieve (chairman), John Hamilton, T G Hayes, Arthur E Savill and T P Simpson. **Manager** in Ceylon: Mr R F Battams. **Manager** of works: Mr H N Atkinson.

**Offices.**—Head office: Mincing Lane House, 50, Eastcheap, London, E.C. Address in Ceylon: Prince Building, Prince Street, Fort, Colombo.

**Cables.** "Entropius," Colombo.

**Bankers.**—The National Bank.

**Agencies.** The Yaderiya Rubber & Tea Company Ltd., Castlereagh Tea Co. of Ceylon Ltd., The Atlas Assurance Co. Ltd., Scandinavia Belting Ltd., Ransome & Marles Bearings, Paterson's Clensel, Brooklands Brand Tea Lead, Craddock's Wire Ropes and Chutes.

**Estates.** Arapolakande, Doombagastalawa, Hope, Ingurugalla, Berawalla, Kirmuttia, Kumaradola, Kumbukkan, Labookelle and Condegalla, Meddecombra, Matale West Group, Norwood and Rockwood, Rothschild, Sogama, Urumutta, Vellai Oya, Wevekelle.

**BOOTY & EDWARDS.** Colombo, Singapore and Penang. This firm of architects and land surveyors has a very extensive practice in Ceylon, the Straits Settlements, and the Federated Malay States. In architectural competitions the following prizes have been won during the last three years: Colombo Town Hall and Municipal Offices—first prize, Singapore Golf Club—first and second prizes, Singapore Cricket Club—first prize, Chinese Assembly Rooms, Kuala Lumpur—second prize. Amongst the more important works recently completed or in hand are: Colombo Town Hall and Municipal Offices, Victoria Park, Colombo; Chinese Assembly Rooms, Kuala Lumpur, F.M.S.; Chartered Bank of India, Australia and China, Ipoh, Perak, F.M.S.; Grand Oriental Hotel, Colombo; Hotel Suisse, Kandy, Ceylon; Singapore Tramway Terminus and Offices, S.S.; Block of flats, Galle Face, Colombo; offices for Messrs Lee Hedges & Co., Colombo. Accompanying the

article devoted to Messrs J. C. Gammon & Sons in this section will be found a reproduction of the perspective of the new Colombo Town Hall and Municipal Offices. This building when completed, will be one of the finest of its kind in the East—it is 400 feet long, 200 feet wide, and about 175 feet high to the top of the dome. It is of a bold classic design of noble and dignified proportions. Work of a less imposing kind by the firm includes domestic and ecclesiastical buildings, shops and warehouses. For many years Messrs. Booty & Edwards have also carried out extensive land surveys in the Straits Settlements and the Federated Malay States, both jungle and rubber plantation surveys, and also surveys for the Government and Railways. The European staff consists of three qualified architects and three qualified land surveyors. The partners are Mr S. J. Edwards, M.A. (Cantab.), F.R.I.B.A., P.A.S.I., in Colombo and Mr Ralph Booty, in Singapore. Cables: "Column," Colombo. Code: A.B.C. (5th Edition).

**VOLKART BROS.**—Imperial Bank Buildings, Prince Street, Colombo. This firm was established in Switzerland and Bombay in 1851, the Colombo branch being opened in 1857. Volkart Bros. carry on a large trade as general import merchants of all kinds of British and foreign goods, and as exporters of Ceylon products, such as copra, coconut oil, rubber, tea, cinnamon, desiccated coconut, coir yarn, coir fibre, citronella oil, cinnamon bark oil, sapan wood, and sandal wood. They are also agents for Volkart's United Press Co. Ltd., India, Nichizui Trading Coy. Ltd., Osaka, Japan; "Fohka" Swiss-

Chinese Trading Coy. Ltd., Shanghai, China; The Norwegian-Africa and Australia Line, Christiania; The Swedish East Asiatic Co. Ltd., Gothenburg; The Holland British India Line, Rotterdam; The D.D.G. "Hansa" Bremen; The Hamburg Amerika Line, Hamburg; The Kerr Steamship Coy. Inc., New York; Cia. Transatlantica, Barcelona; Lloyd Sanbaudo S.A., Genoa; Società Veneziana di Navigazione a Vapore, Venice; Lloyd Triestino, Trieste; Holland Amerika Line (Java-New York Service), Rotterdam; The Stoomvaart Maatschappij "Nederland" (Java-New York Service), Amsterdam; Rotterdam Lloyd (Java-New York Service), Rotterdam; Compania General de Tabacos de Filipinas, Manila; Navigazione Generale Italiana, Genoa; The Hugo Stinnes Line; The Balesse Fire Insurance Coy., Basel; The North British and Mercantile Insurance Coy., London and Edinburgh; and The Northern Assurance Coy. Ltd. The partners in the firm are Messrs Geo. Reinhart, Werner Reinhart, and Oscar Reinhart, all of whom are in Switzerland. Mr. H. Frei is the manager in Ceylon and is also Swiss Consul. Head office: Winterthur, Switzerland. Branches: London, Bombay, Karachi, Tellicherry, Calcutta, Cochin, Tuticorin, Madras, Calcutta, Singapore, Osaka, New York, and Bremen. The stores, known as Volkart Brothers' Grandpass Stores, are at de Waas Lane, Grandpass, and there is a sub-branch, Volkart Brothers' Agency, at Galle (con. yarn press and oil yards). Cables: "Volkart," Colombo Codes. All those in use. Bankers: All Colombo banks.

#### THE DUNLOP RUBBER CO. LTD.

No. 1, Lake Road, Slave Island, Colombo. The Ceylon branch of this company, founders of the pneumatic tyre industry, is a part of the Indian organisation of the famous firm, the head office being "Dunlop House," Apollo Bunder, Bombay. As manufacturers of motor car, motor cycle, and cycle pneumatic tyres, solid tyres for commercial vehicles and accessories, the Dunlop Company is well known in all countries. It is also engaged in the production of mechanical rubber goods, golf balls, etc. Other branches of the Indian organisation are at Calcutta, Delhi, Madras, Rangoon, and Karachi. In Ceylon, the estates belonging to the company extend to about 2,300 acres, while in the Malay Peninsula nearly 70,000 acres are possessed by this organization, and factories are also situated in China, Japan, Australia, and various other countries not included in the Indian section. These vast estates enable the Dunlop company to produce a very large proportion of its total requirements in raw rubber, the firm being persuaded that, to make a really satisfactory tyre for modern motorists, raw materials of consistently fine quality are needed, and can only be obtained by careful isolation from bulk deliveries of the highest average. In pursuance of this policy the whole of the cotton material used in the manufacture of Dunlop tyres is produced by the company's mills at Rochdale, which have a floor space of 30 acres, the spinning section alone being a seven storeyed building covering 3½ acres, while the tyres themselves are made at Fort Dunlop com-

prising 48½ acres, of which 115 are devoted to the manufacturing site. The total number of employees throughout the world is approximately 28,000, of which 14,000 are in Birmingham. The company is at all times pleased to give assistance to the motorist in every way possible, and visitors to Colombo will find the Ceylon Branch ready to serve them in any way. District manager: Mr. J. W. England. Bankers: National Bank. Cables: "Dunlop."

**HENRY DON DAVIT.** This proprietary company, which until 1926 traded as M. W. Martin de Silva, is owned by Mr. A. W. P. Henry, son of the late Mr. A. W. P. Don Davit, who founded the firm in 1870 under the style Don Davit & Sons. The principal imports are rice, currie stuffs, sugar (from Java), flour (Australian), chilis, saffron, onions, pomegranate, cement, coffee, and coriander seeds. The firm acts as agent in Galle for the Standard Oil Co. of New York, and sub-agent for Jonokoping Nylans, Three Globes Matches, Sweden-Pahawan Brand, Australian Flagon, Three Gems Matches, H. Don Carols & Co., Colombo, and the Foyo Match Co. Ltd., Kobe, Japan. The godowns or warehouses, which are situated in High Street and Dangedara Street, have a storage capacity of some 5,000 bags or more. The importance of the business done by this firm may be gauged from the fact that the annual turnover is about 3 lakhs of rupees. The oil section of the business is under the management of Mr. K. H. L. de Silva. The firm has a branch establishment in Colombo at 16 Fourth Cross Street. Bankers: The Mercantile Bank of India, Galle, and the National Bank, Colombo. Head office: High Street, Galle. Cables: "Davits," Galle Codes. Bentley's, A.B.C. (4th and 5th Editions) and Private.

**CLARK, SPENCE & CO.** Ceylon Bann Street, Galle. This firm was established in Galle by Messrs Clark & Spence in 1860 to carry on business as general produce merchants, shipping agents, coal bunkering and insurance agents. There is a clerical staff of 12 and about 500 coolies are employed. The chief import of the company is coal for the purposes of its extensive coal-bunkering business. Agencies held are: Lloyds, London; National Bank of India; Royal Dutch Steamship Coy.; "Nederland" Steamship Coy., Amsterdam; Clan Line Ltd., London; Rotterdam Lloyd, Rotterdam; The British & Colonial Steam Navigation Coy. Ltd. (Bucknall Bros.); The American and Indian Line, Ilciman & Bucknall S.S. Co. Ltd.; Ceylon Steamship Co.; East Asiatic Coy. Ltd., Copenhagen; Batavia Sea and Fire Insurance Coy.; Commercial Assurance Coy. Ltd.; Queensland Insurance Co. Ltd.; Imperial Insurance Coy. Ltd.; Boston Association of Underwriters; Bombay Underwriters' Association; Salvage Association, London; Royal Insurance Company Ltd., Liverpool; Alliance Assurance Co. Ltd., London; Norwich Union Life Insurance Society (Accident Department); Commonwealth Trust Ltd., Calcutta; Gladstone, Wyllie & Co., Calcutta; The Arracan Co. Ltd., Burma; Steel Bros., Rangoon; Pierce, Leslie & Co., Cochin and Calcutta; International Credit in Handels

Vereeniging, Batavia; Ireland, Fraser & Co., Mauritius; Steel, Murray & Co., Durban and Natal Branch at Colombo. Aitken, Spence & Co. Cables: "Spence," Galle. Bankers: Mercantile Bank of India and National Bank of India.

#### WALKERS AND CLARK SPENCE.

Galle. Founded in 1920, this firm employs two European and three native fully qualified engineers. It does a very extensive business as estate, electrical and motor engineers, builders and contractors, and ship repairers. Messrs Walkers and Clark Spence are agents for Ford, Austin, Overland, Rover and Dodge cars, and also hold representations for Jackson's tea machinery, Nat. Suction gas engines, Vicker's Petter oil engines, Walker's tea and rubber machinery, and Dunlop, Michelin, Goodyear, Goodrich, and Wood. Motor tyres, cables. Spence, Galle Codes. All those in use.

**F. X. PEREIRA & SONS.** - Ridgeway Building, 1st Cross Street, Colombo. This firm carries on business as general importers, insurance agents, shipping agents, manufacturers' representatives, and commission agents. The principal imports handled are drapery, soft goods, wearing apparel, travelling goods, silver, electro-plate, etc., and the agencies held are as follow: Sindhia Steam Navigation Co. Ltd., Bombay; The Universal Fire and General Insurance Co. Ltd., Bombay; Burma Fire and Marine Insurance Co. Ltd., Rangoon; J. & N. Phillips & Co. Ltd., Manchester (soft goods); Sisson Bros. & Co. Ltd., Hull (paints and varnishes and distempers, etc.); Goodwin & Co., Birmingham (soft goods); Lewis, Binks & Co. Ltd., London (soft goods); Deutsche Linkaufs Gesellschaft M.B.H., Hanover (hazaar sundries); Luft Maack & Co., Hamburg (shawls, hosiery, etc.); Plati & Van Heusler, Amsterdam (Dutch provisions and sundries); Dodge & Seymour Ltd., New York (various); Inda & Co. Ltd., Yokohama (silks); Cornes & Co., Kobe (underwear, cotton, and silk goods); Evans & Weale Ltd., London (fancy dress goods); H. F. Travis & Co., Manchester (scores, blankets, etc.). The firm has branches at Galle, Ceylon (shipping holding representation of the Sindhia Steam Navigation Co. Ltd.); Quilon, S. India (shipping); Trevandrum, S. India (shipping); Colachel, S. India (shipping); and at Tuticorin, S. India, where it represents the Universal Fire & General Insurance Co. Ltd. and the Sindhia Steam Navigation Co. Ltd. The branch at Tuticorin has a baling press for senna leaves and bristle fibre, and does a considerable business in shipping, insurance, general engineering, export of senna and South Indian produce; it also has a clearing and forwarding department. Agents abroad: Abel & Katz Ltd., Atlantic House, 45/50, Holborn Viaduct, London, E.C. 3; John Shaw & Sons (Wolverhampton) Ltd. The present partners are The Hon. F. X. Pereira, M.L.C., and Messrs R. G. and J. E. A. Pereira, and the Colombo staff comprises 15 clerks and about 90 hands. Cables: "Perlex," Colombo Codes. A.B.C. (5th and 6th Editions) and Bentley's. Bankers: The Chartered Bank of India, Australia and China, and The National Bank of India.

GENERAL VIEW OF KANDY.

## CITY OF KANDY

**C**APITAL of the former kingdom of that name, Kandy is now the second city in importance in the island of Ceylon. It is beautifully situated in the midst of magnificent scenery, on the banks of a small artificial lake, overhung by trees. The Kandyan country is famous for its hills and valleys, which contain many scenes of almost majestic beauty, and these are easily accessible either by driving or walking.

Kandy has not the ancient history that belongs to some cities of Ceylon, having been adopted as the capital of the island in the 16th century. During the wars between the Portuguese and Dutch, Kandy was so often burned that scarcely any of the ancient buildings except the temples and the royal residence remained when the English took it in 1815. The last Kandyan King—Sri Vikrama Raja Sinha—was taken captive, and with his formal deposition, the ceremony of which was performed in the Audience Hall, the whole of Ceylon became vested in the British Crown.

**BUILDINGS.**—Besides the Temple of the Tooth and the Audience Hall, which are separately mentioned, there are many old and important buildings in Kandy. To the north of the Uda Wahalkada is the "Old Palace," now the residence of the Government Agent. This was formerly the King's Palace, or Maha Vasala. Vasala means "gate," literally, but the term was frequently used to denote a palace. The present drawing room of the Old Palace—the walls of which are decorated with representations of the sacred goose and figures—is said to have been in former times the Dakina Salwa, a reception room for chiefs, where they were received by the King on occasions less formal than the ceremonies of the Audience Hall.

To the north of the Audience Hall is the District Court, a modern building erected in

imitation of the Audience Hall, while opposite the Audience Hall is the Kachcheri, or Office of the Government Agent, a large Palladian building erected in 1890, "remarkable," it has been said, "for its striking inappropriateness to its surroundings." To the south of the Kachcheri stand the Office Assistant's bungalow and the Kandyan Art Museum, formerly known as the Meda Vahala and Palle Vahala, and used as quarters for the King's relations and the officers of the household, the latter being said also to have housed the royal harem. More modern buildings include the Post Office, the Kandy Club, the Queen's Hotel, and the offices of the Planters' Association of Ceylon.

**MUSEUM.**—The Kandyan Art Museum is open on week days from 10 to 4-30, and contains a considerable collection of antiquities, as well as a large stock of modern brass, silver, and copper work, Kandyan embroidery, ivory carving, pottery, and lacquered woodwork. The modern articles are made by Kandyan workmen both on the Museum premises and outside. The men can be seen at work, and the articles made by them can be purchased at reasonable prices, while the quality of the material can be taken as guaranteed.

**PERADENIYA.**—Three and a half miles from Kandy are the Royal Botanic Gardens of Peradeniya, said to be unrivalled in the world. In an ideally beautiful situation, on which once stood a royal residence of the Kandyan Kings, is a marvellous collection of living specimens of the flora of the whole tropical world. At the same time, these gardens serve as a great Government research department, under whose direction all agricultural possibilities are put to the test and experimental culture carried on in various parts of the country. The gardens cover 150

acres. Among the most notable specimens are the grove of Assam rubber-trees, the avenues of Talipot palms, screw pines, rattans, and rain trees, and a wonderful collection of spice trees. Near to the Gardens, which contain also an interesting Museum, are the Kandy racecourse and golf-links.

**POPULATION.**—The population of the municipality of Kandy at the last census of 1921 was 32,562, of which number 18,894 were males and 13,668 females. The District of Kandy, excluding the municipal area, had a total population of 401,431.

**STREETS, ETC.**—Ward Street is the main thoroughfare of the town, and contains the principal European stores, banks, the Queen's Hotel, the Kandy Club, and the Victoria Commemoration Buildings, which are used as the headquarters of the Planters' Association of Ceylon. Malabar Street is so named from the fact that it was at one time set apart for the dwellings of the "Malabar" or Tamil relatives of the later Kings. Many of the streets of Kandy are interesting for the glimpses they afford of native life and customs in the bazaars. In this respect, Colombo Street and Trincomalee Street are especially attractive. The part of Kandy situated near the Railway Station is known as the Vale of Bogambra, and was the scene of many a tragedy in the time of the Kandyan monarchy. The Victoria Esplanade, with its charming lawn that stretches from the Queen's Hotel to the Temple, is the public rendezvous on all occasions of festivity.

**TEMPLE OF THE TOOTH.**—Known in Sinhalese as Dala-da Maligawa, this is perhaps the most famous building in Kandy. It stands on the opposite side of the road to the United Services Library. The main entrance is to the west of the building, and, on the way

to it, the striking Pattirippuwa, or Octagon, contains a valuable Oriental library. The Octagon was built during the reign of the last King of Kandy, Sri Vikrama Raja Sinha, being possibly completed about 1810. It is said to have been erected on the site of the old temple kitchen, and to have been intended as a place from which the King could exhibit the Tooth Relic to the people, when carried round the verandah.

The main entrance to the Mahigawa has in front a typical example of a Kandyan "moon-stone" step. Here too are two handsome brass lamps given by Sir William Gregory, a former Governor. More moonstone steps

lead to the temple, and at their top is an upper verandah, the wall of which is decorated with modern frescoes representing the torments awaiting wrong-doers in a future state. Straight across the courtyard from the main entrance stands the edifice which holds the shrine (Udamale) of the Tooth Relic, the entrance to the chamber being guarded by a door inlaid with silver and ivory, while in an inner room is seen the large silver gilt outer karanduva, or casket within its cage of iron bars. Within the outer karanduva are seven minor karandus of pure gold, studded with emeralds, rubies, pearls and catseyes, the smallest of all, quite covered with rubies,

forming the sheath for the venerated Tooth of Buddha which gives the Temple its name.

The Tooth Relic is rarely exposed to public view, and, in fact, has not left the precincts of the Temple since 1828. But during the annual festival of the Perahera, which takes place every August, other relics are taken in procession with elephants and devil dancers, and with great pomp and ceremony.

Near the Temple is the Audience Hall (Magul Maduwa), a typically Kandyan structure with a double sloped roof on elaborately carved pillars. It was here that the Kandyan King had his throne and held ceremonial audiences of foreign ambassadors.

VIEW OF SEASHORE FROM RAMPARTS, GALLE

## CITY AND PORT OF GALLE

**T**HE chief town of the Southern Province of Ceylon and the seat of the Provincial Government, Galle claims considerable attention, combining as it does a wealth of historical associations with great natural advantages. The first mention of Point de Galle as a place of European settlement occurs as far back as 1512, when it was a small Spanish fortification. Towards the end of the 16th century the Portuguese held the place for a time, but gave way in 1640 to the Dutch, who greatly strengthened the fortifications and were in possession for 150 years, to lose the settlement in turn to the English. Galle has thus had an eventful history, and there still remain many interesting records in stone of the various occupations. The name Galle is popularly held to have had its origin from the Sinhalese "gala," a rock, another theory being that it comes from "gala," a cattle pen. The Portuguese and Dutch settlers, however, derived it from the Latin "gallus," a cock, and carved an image of a cock on the front of the old Government House now occupied by a European firm. The present town, which at the last census of 1921 had a population of 39,100, consists of two parts, the one situated within the belt of the old fortifications (known as the Fort), the other embracing the outer

town and populated solely by the native community.

**BUILDINGS.** Apart from the fortifications (see later), the principal public buildings of Galle are the Government House or "Residency," a handsome building standing in well kept grounds about three-quarters of a mile from the Fort, the old Dutch Church, All Saints Church, the Kachecheri, or Government Offices, the Police and District Courts, and the Railway Station.

**CHURCHES.** All Saints Church (Anglican) is about 400 yards from the port. It is a handsome stone building of pointed architecture, and can seat 500 persons. Near to it is the Dutch Church, which was commenced in 1757, and is famous for its high vaulted ceiling painted with a beautiful cerulean blue and studded with stars to represent the heavens. There is a fine organ with an elaborately carved front, also many interesting monuments. Underneath the floor is the burial vault of the church. There are also churches belonging to the Roman Catholics, the Wesleyans, and the Buddhists and Mohammedans.

**CLUBS.**—The principal clubs or associations in Galle are the Galle Association, formed in 1917, with headquarters at the New Oriental Hotel, the Galle Club, Fort, the

Galle Muslim Association, the Galle Sinhalese Young Men's Association (Pedlar Street, Fort), the Galle Y.M.C.A., Pedlar Street, the Galle Young Muslim League, and the Galle Y.W.C.A.

**FORTIFICATIONS.**—These considering that they were commenced by the Portuguese in 1580, are in good state of preservation, presenting even yet a grim and imposing appearance. They lie close to the port, the main gate of the "water-bastion" being to the west of the landing jetty. The gateway is surmounted by the arms of Great Britain and Ireland of the reign of George III, and the heavy old doors which used to close the gateway are still in a fairly sound condition. Inside and above the interior gateway is another finely executed coat of arms of the Dutch East India Company. On either side are the Kachecheri, or Government Offices, the Club, and the District Court. Where the first Portuguese "Fortaleza" used to stand, the Police Station has been erected. The remaining bastions are known as "Acker's Sloop" (now the residence of the Master Attendant of the Port), "Eolus," "Utrecht," "Triton," "Neptune," and the "Sun," "Moon," and "Star" bastions, the latter names having been given by the Dutch in 1667 in place of the old Portuguese ones of

"St. Jago," "Conceicao," and "St. Antonio."

**LIGHTING.**—An electric lighting scheme has been approved and was to be in operation about the middle of 1929.

**MUNICIPALITY.**—The Galle Municipality is composed of the Government Agent for the Southern Province (Mr. T. B. Russell), who is chairman, four nominated members, and five elected members. The Standing Committees are four viz. Law and General Subjects, Markets and Sanitation, Finance and Assessment, and Municipal Works. The area administered by the municipality is nearly 1,200 acres.

**PUBLIC SERVICES.**—Galle is on the coast line of railway running from Colombo to Matara and is 72 miles from the capital. In addition to the regular trains, there are excellent motor bus services throughout the Province including those to Colombo, Matara, Hambantota, Deniyaya, etc. These services are not used by Europeans.

**SPORT.** Galle is proud of its new race-course which was constructed from reclaimed land formerly under water outside the Port and was opened by the late Governor, Sir William Manning, on December 27, 1923. It is controlled by the Galle Gymkhana Club, formed in 1880. Sport flourishes in Galle both the Galle Cricket Club and the Galle Municipal Cricket Club having large memberships. The Galle Tennis Club dates from 1923, there is an excellent golf-course and the Galle Football Athletic Ground Association has recently been formed of representatives of the leading football, hockey and athletic clubs. Many of the principal commercial houses have their own sports clubs. Safe sea bathing can be indulged in all the year round and there is good snipe shooting during the season a short distance away.

**WATER SUPPLY.** The Port of Galle was originally supplied with water from the Bikke reservoir, situated at Kumbalwella, 1½ miles from the town. This reservoir has an area of 2½ acres and a capacity of 6,220,000 gallons, the water being derived from rainfall alone. It was completed in 1892 at a cost of Rs 73,448, defrayed out of a loan by the Government. Owing to the presence of an excessive quantity of albumenoid ammonia in the water and its inadequacy for the needs of the town, the municipality some 15 years ago decided to construct a reservoir at Hiyare, 11 miles from Galle, and this was completed in 1911 at a cost of Rs 351,000. The reservoir at Bikke being now utilised only as a subsidiary one. The site of the new storage reservoir at Hiyare, formerly in all probability a natural lake, was under paddy cultivation when it was acquired by the municipality. The area of the impounded reservoir at top-water level is 43.7 acres. It has an average depth of about 9 ft., the maximum depth near the valve well being 25 ft. The cubic content of the reservoir, when full, is calculated at 126,000,000 gallons. The catchment area serving the reservoir is 269 acres, with a forest reservation of 4,000 acres. The average yearly rainfall at Hiyare is 95 inches.

## VISITORS' GUIDE

**CLUB.**—Galle—Fort

**CONSULATE.**—Norway—Messrs E. Coates and Co. Ltd.

**HOTELS.**—New Oriental—Fort; Sydney Hotel—Havelock Place.

**SCHOOLS.**—St. Aloysius (R.C.), A. Saints (C. of E.); Richmond College (Wesleyan); Mahinda (Buddhist).

## PORT OF GALLE

For more than a thousand years before Colombo attained any degree of mercantile importance Galle was known to the Eastern world as a famous emporium and antiquarians claim that the long-sought locality of Tarshish may be found to be identical with that of Point de Galle. The most flourishing period of Galle during the British occupation was that immediately preceding the construction of the harbour at Colombo. Then Galle obtained most of the modern steamship trade of Ceylon, and it was a rare thing to see steamers lying in the Colombo roadstead. Its harbour was always regarded as dangerous owing to rocks and currents about the mouth, but it was preferred to the open roadstead of Colombo, and the P. & O. and other companies made use of it. To-day the port of Galle is comparatively small, but there is sufficient water for the largest ships though the harbour is somewhat difficult to make in rough weather. Point de Galle is situated in lat. 6° 1' N. long. 80° 13' E. its distance by sea from Liverpool being 10,168 miles, or by the Suez Canal, 6,740 miles.

**ACCOMMODATION.** The harbour can accommodate vessels drawing up to 27 ft. the entrance lying from 6 to 8 fathoms of water. Vessels are loaded and discharged by means of cargo boats for which there are three jetties, 230 ft., 250 ft., and 280 ft. long respectively, fitted with small cranes.

**ANCHORAGE.** The anchorage is in 5 to 6 fathoms, sandy bottom on the west side of the bay. Vessels calling for orders may anchor in 14 fathoms with lighthouse bearing N N E and distant from 1 to 1½ miles. Vessels making the port for cargo, coal, or stores will find good anchorage in the harbour itself, in from 5 to 6 fathoms. The area of anchorage has recently been considerably increased.

**LOADING.** Vessels coming to Point de Galle for orders should always enter it during the S.W. monsoon (that is from May to September) in preference to keeping under weigh outside, as they are liable to get to leeward, leaving their masters on shore.

**BUNKERING.** The coaling facilities here are poor, almost all bunkering being done at Colombo.

**PILOTAGE.**—All vessels entering or leaving the port pay on the following scale in rupees: of 600 tons and upwards, 30 00; 400 tons and less than 600, 22 50; 200 tons and less than 400, 15 00; 100 tons and less than 200, 11 25; under 100 tons, 7 50. Native vessels under 200 tons are free.

Vessels may enter the harbour only between the hours of 6 a.m. and 6 p.m., but they may leave at any hour if weather permits of lighting the buoys. Pilotage is compulsory.

**PORT CHARGES.** Vessels loading or discharging cargo above 10 tons or passengers, 8 cents per reg. ton, under 10 tons, free. Vessels in ballast, or calling for orders or coal, are free of port dues. In the case of mail steamers of whatsoever tonnage, the dues either inwards or outwards shall not exceed Rs 50.

**BALLAST.**—Sand, Rs 5 per ton.

**BILL OF HEALTH.** 10 Rs 50 cents.

**BOAT HIRE.**—This varies from Rs 0 62 for a boat of 2½ tons inside the harbour to Rs 5 for a boat of 10 tons outside.

**COMMISSIONS.**—On ship's disbursements, 2½ per cent.; collecting freight inward (and outward), 5 per cent.

**MOORING.**—Vessels are moored with stern hawsers supplied by the Government at Rs 5 per day. Laying down and weighing anchor, Rs 10.

**WATER.**—Fresh water at Rs 5 per ton from Messrs. Clark, Spence and Co.'s water-boat, delivered alongside vessel.

**PORT REGULATIONS.** The following are the more important regulations for the port of Point de Galle.

No vessel of above 100 tons shall enter the port or leave it, or move from one place to another within it, between sunset and sunrise without the permission of the Master Attendant. Mail steamers or other public vessels, should the public service require it, may on extraordinary occasions leave the port until midnight on application to the Master Attendant, who may give the necessary orders.

Masters of vessels shall furnish the Master Attendant and Collector of Customs with a list of all passengers arriving at, or about to embark from, the port on board such vessels.

Masters of vessels are required by law to attend the Custom House within 24 hours after their arrival and report their ships, whether bound for the port or only seeking shelter, by neglect of such requirement they subject themselves to a fine of Rs 1,000.

All vessels at anchor within the Port of Galle shall exhibit between sunset and sunrise, at a height not exceeding 20 ft. above the hull, a white light in globular lantern of 8 inches in diameter, and so constructed as to show a clear, uniform, and unbroken light visible all round the horizon for at least one mile.

No hawkers, touts, money changers, dhobies, bunboatmen, or dubashes shall be allowed on board of any vessel within the port without the consent of the commander of such vessel in writing.

No boats shall be moored to or between the jetties, or in the fairway leading to or from the jetties, except when actually engaged in loading or discharging cargo.

**TIDES.**—The rise and fall of ordinary spring tides is 2 ft.

**TRADE AND SHIPPING.**—Customs revenue collected at the Port of Galle during 1924 amounted to Rs 820,402, as against Rs 788,669 in 1923 and Rs 595,463 in 1922. Of the 1924 total, Rs 685,485 was derived from import duties on grain, which totalled 694,003 cwt. Exports of coconut oil aggregated 58,699 cwt., and of citronella oil 297,920 cwt. The number of steam vessels entered in 1924 was 85, aggregating 257,809 tons, while sailing vessels totalled 11 of 1,527 tons.

**BLACK, JOHN, & CO.**—Galle Agents for Asiatic Steam Navigation Co. Ltd. Cables: "Black," Galle Codes: A B C 5th Edition, Bentley's Bankers, Mercantile Bank, Chartered Bank, and Imperial Bank.

**COATES, E., & CO.**—Galle Export merchants, shipping, banking and insurance agents. London correspondents: J. H. Vavasour & Co. Ltd., 15, America Square, E.C.3. Cables: "Devonia," Galle Bankers, Mercantile Bank, Hongkong & Shanghai Bank, and P. & O. Banking Corporation.

**HAYLEY, CHAS. P., & CO.**—Galle Export and general produce merchants, insurance and estate agents. Cables: "Hayley," Galle Codes: A B C 6th Edition, Bentley's.

**MERCANTILE BANK OF INDIA LTD.**—Church Street, Galle. Acting agent: Mr. R. W. Stanes. Cables: "Paradise," Galle. (See also article following "Finance," in this section.)

**VOLKART BROS.**—Galle Exporters, shipping and insurance agents (Northern Insurance Coy. Ltd. and London & Lancashire Insurance Coy.). Cables: "Volkart," Galle Bankers. All Colombo banks. (See also article following "Commerce.")

## CITY OF NUWARA ELIYA

**C**EYLON'S far-famed health resort, Nuwara Eliya, is situated some 6,000 ft above sea level in the midst of a tropical and beautiful country. The plateau on which the town stands is surrounded by steep mountain ridges, in which there are four gaps—that on the north-east leading into Kotmale valley, that on the south-east to the province of Uva, that on the west to the Dimbula Valley, and that on the east to Kandapolla and Idapussellawa. The tops of these mountains are mostly covered with forest, and still provide good sport with the leopard and the elk. The Nuwara Eliya plateau is frequently referred to locally as the Sanatorium, on account of its restorative and health-giving properties. It is essentially a hot weather resort, the season lasting from January to May, February and March being the favourite months. Every variety of sport and amusement is offered to residents and visitors, and so beautifully situated is the town that the neighbourhood provides many delightful excursions either by motor-car or on foot.

**BOARD OF IMPROVEMENT.** The Local Board of Nuwara Eliya was abolished in 1895, and in its place a Board of Improvement was established consisting of the Government Agent of the Province, two official and three unofficial members appointed by the Governor with the Assistant Government Agent of the District as executive officer. Since 1924 the Board has consisted of five nominated members and five elected members, its powers and functions being much the same as those of the Local Boards. The revenue for 1924 amounted to Rs 139,407, compared with Rs 110,120 in 1923, and the expenditure to Rs 132,695, as against Rs 110,573. In 1896 the revenue and expenditure were Rs 23,533 and Rs 21,638 respectively.

**BUILDINGS.** The summer residence of the Governor is known as Queen's Cottage, and is surrounded by beautifully kept grounds. The more important public buildings are those of the Military Depot (Nuwara Eliya being the headquarters of the Command Staff during the hot season), the Kachcheri (Government Offices) and the Civil Hospital. To the north-west of the lake are the Keena Hotel and the Golf Club.

**CHURCHES.**—The Anglican Church of the Holy Trinity is the chief ecclesiastical edifice of Nuwara Eliya. It is charmingly situated not far from the railway station, is built in the late Gothic style and contains some very good stained glass. In Lady McCallum's Drive is the handsome Roman Catholic Church of St. Francis Xavier with the convent of the Good Shepherd adjoining.

**CLUBS.** The United Club admits both sexes, and is the chief social and sporting rendezvous of the town. It is well housed in a substantial building surrounded by spacious grounds, and includes a library, reading room, ball room and concert hall. In the grounds are golf links, and croquet and lawn tennis courts. The Hill Club offers comfortable accommodation for gentlemen only, and visitors are admitted as honorary members.

**FISHING.** The streams and lakes round Nuwara Eliya abound with trout (both rainbow and Loch Loven) and salmon. There is also carp fishing in Lake Gregory. A very successful fishing club attends to the requirements of visitors, having leased from the Government the rights to all waters at an elevation of over 5,000 ft above sea level.

**GOLF.** The premier attraction for visitors who are intent on playing games at Nuwara Eliya is golf. There are no less than three good courses. The Nuwara Eliya Golf Links of 18 holes provide a thoroughly sporting and really beautiful course, which is often referred to as the finest of its kind in the East, comparing favourably with many far better known links in Scotland and England. It is under the control of the Nuwara Eliya Golf Club, and has two pavilions, one for ladies and one for men. The rates of subscription are, for men, one day free thereafter, Rs 2 50 per diem, Rs 10 per week, Rs 30 per month, or Rs 50 per quarter; for ladies, Rs 1 per diem, Rs 5 per week, Rs 20 per month, or Rs 30 per quarter. The Ladies' Golf Course, though used by both sexes, is open only to members of the United Club. The Anderson Golf Course, some three miles out of town in the Moon Plains, has only recently been laid out, and promises to be one of the best in the island.

**HAKGALLA.** Six miles from Nuwara is the majestic rock of Hakgalla (so called from its resemblance to a human jaw), at whose foot nestles the Botanic Gardens, which are as beautiful in their contents as in their surroundings. Numerous experiments have been made in the acclimatisation of foreign trees and plants, and there is a unique collection of the fine native tree ferns, the favourite food of the wild elephant.

**HUNTING.** The Nuwara Eliya Hunt Club was established in 1917 and maintains a pack of hounds for hunting sambar during the open season (November 1 to May 31) and hare throughout the year, hounds meeting once a week.

**LAKE.** One of the most pleasant features of the Sanatorium is Lake Gregory, which has a surface of 142 acres, and round which is the Park laid out with beautiful avenues of cypress trees and gay flower beds.

**LIBRARY.**—There is a good subscription lending library at Platt's Bristol Studio, and libraries are also attached to the United Club and the Public Service Club.

**POPULATION.**—At the last census, taken in 1921, the total population of Nuwara Eliya was 7,525, of which 4,490 were males and 3,035 females.

**SCHOOLS AND COLLEGES.**—As befits a most popular residential centre, Nuwara Eliya has a large number of excellent and up-to-date educational institutions, foremost among which are the Nazareth School (R.C.) for boys and girls, Holy Trinity School and St. Agatha's School (C of E), St. Xavier's School (R.C.), and Haddon Hill School for European children only. This latter is preparatory for the English public schools. The Union School is undenominational, and there is a vernacular school attached to the Holy Trinity Church.

### VISITORS' GUIDE

**BANK.**—National Bank of India.

**CLUBS.**—United Club, Hill Club, Public Service Club.

**HOTELS.**—St. Andrew's, Carlton, Grand, Maryhill.

## OTHER CITIES AND PORTS

**ANURADHAPURA.** Anuradhapura, the "Buried City of Ceylon," is famous throughout the East for its ancient and most interesting ruins—the relics of a civilization which existed more than 2,000 years ago, when the city was the capital of a succession of kings. Its history is intimately connected with that of Buddha, and the building of the monuments for which it is so famous was directly due to the adoption of that cult by the Sinhalese nation in the third century B.C. The city was founded by King Pandukabhaya in 437 B.C., and called after the name of the constellation Anuradha. It became the capital of Ceylon in the fourth century B.C., and attained its highest magnificence about the commencement of the Christian era. It suffered much during the earlier Tamil invasions, and was finally deserted as a royal residence in the 9th century.

During the last 40 or 50 years Anuradhapura has developed from a small village to a

prosperous and healthy town, and it is now the centre of an important agricultural district. The population in 1921 was 7,781.

**SACRED PLACES.** There are at Anuradhapura eight Sacred Places regarded with the greatest veneration by all Buddhists. These are the Bo Tree, the Brazen Palace, and the Abhayagiriya, Jetavanarama, Lankarama, Muiswetiya, Ruanwelli, and Thuparama Dagobas, a dagoba being a bell-shaped construction, more or less magnificent, erected over some relic of Buddha or a disciple. The sacred Pipal or Bo Tree (*Ficus religiosa*) is probably the oldest historical tree in existence, though only a fragment of it now exists. It was originally brought as a branch of the bo-tree under which Buddha sat and was planted about 240 B.C., since which time it has been tended by an uninterrupted succession of guardians. The Brazen Palace is a famous nine-storeyed monastery erected by King Dutthagamani, 161 B.C., of which the most interesting

remains are the 1,000 stone pillars about 12 ft. high, and only a few feet distant from each other arranged in forty parallel rows. Of the six large dagobas mentioned, the largest is the Abhayagiriya (Mount of Safety) dating from about 300 A.D., which stands on a great paved platform eight acres in extent, and the bricks of which have been reckoned sufficient to build an English town the size of Ipswich or Coventry, or a wall 16 ft. high from London to Edinburgh. Another interesting dagoba, the Temple of the Tooth, contains a relic highly venerated, and, indeed, the monastic buildings of Anuradhapura are almost countless, as are the elaborate "pokunas" or water tanks. Eight miles east of Anuradhapura is Mihintale, an interesting centre of Buddhist pilgrimage, noted for its huge dagobas and Mahinda's Bed, the cell occupied by the apostle of Buddhism in Ceylon.

**BADULLA.** This is the capital of the Province of Uva, and one of the oldest and

most attractive towns in Ceylon. The situation is a fine one, the town lying in a hollow entirely surrounded by green paddy-fields, and in the vicinity of a river, with mountains in the background. Badulla, the population of which is over 8,000, has, besides the usual Government buildings, a handsome market, a hospital, a church erected to the memory of Major Rogers, and a pretty racecourse. The fine Dunhinde Waterfall is only a few miles away.

**BATTICALOA.**—This is a small port on the east coast, with few facilities, vessels anchoring in the roadstead and discharging by means of boats. At the time of the north-east monsoon there is good sheltered anchorage at Kalkudah, 13 miles to the north.

During 1924 there were 137 arrivals at and the same number of departures from the port, the revenues of which amounted to Rs 21,195, as against Rs 17,333 in 1923. Exports are chiefly coconuts, paddy, rice, tobacco, locally made cotton goods, ghee, grass bags and baskets and timber.

**CHILAW.**—In the North-Western Province, Chilaw has one of the largest Roman Catholic churches in Ceylon and there is an interesting Hindu temple in the neighbourhood. Population, 6,642.

**GALLE.**—See separate article.

**HAMBANTOTA.**—This small town and port is on an open bay of the south coast. Here are the headquarters of the district, the Assistant Agent's residence, the Kacheri, Court-house, etc. The port is only used by the island steamers and coasting vessels, and has no foreign export trade.

**JAFFNA.**—The port of Jaffna is on the north coast, and is connected with Ceylon by railway. The town, which is a large and flourishing one of some 42,000 inhabitants, is the seat of a Roman Catholic bishop, and also the seat of the Government Agent of the Northern Province. There is not much foreign trade, but considerable local exports of avaram bark, cuttle-fish bones, tobacco, palmyra timber, bêche-de-mer, coconuts, dried fish, honey, and salt. The old Dutch fort, of great size, is in perfect preservation, and is a splendid specimen of 17th century fortification. The Governor has a residence here, and there are some interesting Dutch buildings, as well as Hindu temples. Jaffna is noted for its mangoes, and there is a considerable fishing industry in turtles and bêche-de-mer.

**KAITS.**—This place is situated on the northern side of the island of Velanai, and is an open port throughout the year. It is especially used during the N.W. monsoon season, when there are from 30 to 40 vessels in the anchorage at one time. The quarantine station for the port is at Fort Hammonheil, and small coasting vessels can be hauled up and repaired there. Pilotage is not required. The principal exports are palmyra timber and tobacco.

**KALUTARA.**—This is an important town in the Western Province, with a population

of 13,596. The station is approached by a fine iron bridge, 1,200 ft long, over the Kalu Ganga. Kalutara is a good starting point for many excursions, and the country round is famous for its shooting. Plumbago, or graphite, is mined in the district.

**KANKESANTURAI.**—A small open roadstead, 14 miles north of Jaffna, Kankesanturai is the chief port of call for steamers during the north-west monsoon. Two stone piers, in ruins, are on the beach on the western one of which a lighthouse is built. There is a small wooden pier which can be used by boats during the S.W. monsoon. Coal is obtainable, and from 350 to 400 tons can be loaded in 24 hours.

**KURUNEGALA.**—The chief town of the North-Western Province, Kurunegala is situated at the back of a curiously shaped chain of rocks, known as Elephant Rock, Tortoise Rock, Iel Rock, etc. From Ettagala, or Elephant Rock, an enormous black boulder over 1,000 ft in height, a grand view is obtained. Twelve miles south-east of Kurunegala is the Ridi Vihare, an ancient Buddhist Monastery which contains a large and rare collection of ancient ola (palm-leaf) volumes of the Buddhist Scriptures. The population of Kurunegala at the 1921 census was 10,187.

**MATARA.**—A large and flourishing town of 17,000 inhabitants, Matara is known as the birthplace of Sir Henry Lawrence (1806) and Sir George Lawrence (1805), and is a residential centre for wealthy Sinhalese families. There is a noted Buddhist hermit age, Chula Lanka, here.

**MORATUWA.** On the main line from Colombo to Galle, this town is famous for its wood-carving, and has a population of 28,608. There is a large Sinhalese College here.

**NEGOMBO.** A thriving town of 21,349 inhabitants in the Western Province, Negombo is picturesquely and singularly situated among lagoons and canals. It was founded by the Dutch, and there still remain a Dutch gateway, dated 1672, and an old Dutch House built ten years later, which is now occupied by the Deputy Judge. The brass work of Negombo is celebrated, and the place is famous for its crabs and prawns.

**PUTTALAM.**—With a population of 7,000, Puttalam is noted for its salterns, the salt from which is conveyed by canal to Negombo and Colombo. The Court-house here was designed by Sir Arthur Gordon (Lord Stanmore), when Governor.

**RATNAPURA.**—This, the City of Gems, is the capital of the province of Sabaragamuwa, and is situated in the midst of some of the finest scenery in Ceylon, the best views of Adam's Peak being obtained from here. The population is 7,000, and the place derives its importance mainly from the industry in gems, sapphires, topazes, and cat's-eyes being those most commonly found in the neighbourhood. The Maha Saman

Dewale, one of the richest Buddhist temples in Ceylon, stands a mile or more west of Ratnapura.

**TRINCOMALEE.**—"There are," it has been said, "some five or six magnificent harbours in the world, and Trincomalee is one of them." Situated on the north-east of the island, it faces the Bay of Bengal, and overlooks the whole eastern coast of India. The entrance, which points south-east, is guarded by two projecting headlands, approaching to within about 700 yards of each other. When it is remembered that the monsoons blow from the north east and south-west, the importance of this is obvious. These two rocky headlands have a beautiful effect upon the landscape, which is made up of a placid expanse of water dotted with wooded islets which seem to float on its surface, rich tropical forest covering the hills that border its coasts, and a distant background of lofty mountains. The form of the harbour is irregular, and the numerous indentations of its coast line supply many a charming feature. Some of the islands are romantic in appearance as well as by association, notably Sober Island, once the favourite resort of the officers of the East Indies Squadron, who built a ward room, a billiard room and gun room upon it.

Trincomalee was once regarded as a very important naval station, and as such it was strongly fortified, but as a commercial port it has not developed, for the simple reason that the cinnamon trade, so attractive to the early colonists, could only be carried on at Colombo, and the importance which the latter harbour has attained as a junction and a port of call has seriously diminished that of Trincomalee. The Ceylon Steamship Co.'s vessels call here weekly.

Trincomalee was one of the earliest settlements of the Tamil race in Ceylon. Where Fort Frederick now stands they built a great temple, which was destroyed in 1622 by the Portuguese, who used the materials to build the fort. The site is still held in great veneration, and every week a Brahman priest, in the presence of a large crowd, throws offerings into the sea from a ledge near the summit of a huge precipice of black rock. The Mahaweli-ganga, the largest river in the island, taking its rise near Adam's Peak, discharges at Trincomalee. Good shooting is to be had in the neighbourhood, and at Kanniya, 6 miles away, are hot springs.

The total revenue of the port for 1924 was Rs 25,419, an increase of Rs 6,308 over the revenue of 1923. Vessels from foreign ports entering the harbour were 38 in number, with a tonnage of 48,915 tons, while vessels clearing for foreign ports numbered 34, with a tonnage of 52,482 tons.

**WEILIGAMA.**—This is a town of some 9,000 inhabitants on the coast of the Western Province, 91 miles south of Colombo. At the entrance to the town, on the right hand side of the high road from Galle, is a remarkable rock-cut colossal statue of a Sinhalese King in perfect preservation. This statue is known as the "Lepet King."

# TRANSPORT

## SHIPPING

### SHIPPING

**C**ALLE was the chief commercial port of Ceylon until the development of Colombo Harbour, which superseded the former in point of importance towards 1889. Among the other ports of the island are Lalaimanar, Trincomalee, Jaffna, Hambantota, Batticaloa, Kankasanturai, Kaits, Point Pedro, Bereuwala, and Valvedditturai. Trincomalee, which is one of the finest natural harbours in the East, and the old naval base of the East Indies Squadron, is now being linked up by railway.

**PASSENGER LINES.**—Among the better known lines which maintain a regular service with Colombo are the following—

Bibby Line, between England and Rangoon, via Colombo and vice-versa. Only saloon passengers are carried, steamers sailing from Liverpool and calling at Marseilles and Port Said.

Commonwealth Government Line of Steamers between Australia and Europe. A more regular service with Ceylon is likely to be maintained in accordance with the growth of traffic.

Messageries Maritimes Service, between France and the Far East.

Nippon Yusen Kaisha (Japan Mail Steamship Co.), between the Far East and Europe.

Orient Line of Royal Mail Steamers, between Australia and Europe.

P & O and B.I.S.N. Co. Lines, between England and Australia, China, and Japan.

**MOVEMENT OF VESSELS.**—The following table shows the total net tonnage of all classes of shipping entered at Ceylon ports during 1924.

Merchant vessels (with cargo and in ballast)	2,599	9,196,469
Merchant vessels (called to coal or oil)	365	1,195,543
Native sailing vessels	836	81,131
Warships and transports*	58	176,414

Totals . . . . . 3,858 10,649,557

\*Warships' displacement tonnage.

In 1923 the number of vessels entering was 3,677, with a tonnage of 9,602,984. Of these, 2,339 were merchant vessels (with cargo and in ballast), while 387 merchant vessels called to coal or oil. Native sailing vessels totalled 901, and warships and transports 50.

In 1924, 3,816 vessels cleared, with an aggregate tonnage of 10,599,766, as against 3,630 vessels, of 9,566,773 tons, in 1923.

The share of the United Kingdom in the shipping trade of Ceylon during the two years named is shown in the following table.

ENTERED	1923	1924
Number of vessels	258	284
Tonnage ..	1,328,563	1,498,806
CLEARED		
Number of Vessels	183	180
Tonnage ..	851,930	856,485

The number and tonnage of all steam vessels (excluding those calling to coal and oil, warships, transports, and coasting craft) which entered at Ceylon ports in 1924, according to the national flags flown, were as under:—

NATIONALITY	NUMBER	1924 TONS
British ..	1,768	5,732,009
British Colonial ..	836	81,131
Total British Vessels	2,604	5,813,140

## RAILWAYS

NATIONALITY	NUMBER	1921 TONS
American	38	197,543
Danish	19	53,721
Dutch	181	785,155
French	133	631,527
German	129	514,071
Italian	76	288,394
Japanese	170	789,885
Norwegian	51	98,854
Panamanian	1	7,990
Russian ..	1	2,953
Spanish	10	38,021
Swedish	16	56,346

Total Foreign Vessels 831 3,464,460

**SHIPPING BY PORTS.**—Following was the distribution as to ports of the steam vessels (excluding those calling to coal and oil, warships, transports, and coasting vessels) entered at the ports of Ceylon in 1924.

	No	TONNAGE
Colombo	2,123	8,788,562
Lalaimanar	374	98,165
Galle	85	257,899
Trincomalee	11	40,385
Jaffna	4	8,053
Kankasanturai	2	2,805
	2,599	9,196,469

Of sailing vessels (excluding coasters) entered at Ceylon ports in 1924, they were distributed among the various harbours as follows:—Colombo, 286; Kaits, 273; Point Pedro, 56; Kankasanturai, 46; Jaffna, 37; Lalaimanar, 35; Bereuwala, 34; Trincomalee, 26; Valvedditturai, 16; Batticaloa, 12; Galle, 11; and Mannar, 4.

## REPRESENTATIVE ENGINEERING, SHIPPING, EXPORTING AND IMPORTING FIRMS

### HOARE & CO. (ENGINEERS) LTD.

**Activities.**—This prominent firm, with engineering works and showrooms at Colombo, carries on business as marine, manufacturing and general engineers, machinists, boiler-makers, fergemasters, constructional ironworkers, barge, launch and boat builders, ship repairers, iron and brass founders, motor engineers, builders and contractors, general machinery and hardware merchants, manufacturers of Hoare's improved steam pumps, steam and hand winches, tea and rubber machinery, and woodworking machinery. Messrs Hoare & Co. are also sole manufacturers of Cameron Wilkin's (patent) latex spouts and cup-holders, and of several patented mechanical accessories for use in tea, rubber, and coconut factories. The company is on the Admiralty list for refits and repairs to H.M. ships and transports, and on Lloyd's and the War Office lists.

**Engineering Work.**—Every kind of engineering work is undertaken by the firm, and a speciality is made of repairs, estates' electrical and wiring work, building, drainage and water works contracts, hydraulic installations, marine and salvage operations, electric and oxy-acetylene welding, and all work connected with Diesel, internal combustion, gas and automobile engines, etc. Messrs Hoare & Co. are also licensed boiler inspectors, and undertake operations as distillery engineers, coppersmiths, plumbers

## ROAD AND WATER

and sheet metal workers, blacksmiths, patternmakers, millwrights and machinists, and as motor launch builders and repairers, in addition, the firm has always on hand a stock of machinery and stores suitable for ships, mills, mines, factories, estates, etc.

**Agencies.**—Messrs Hoare & Co. are agents for Crossley Bros Ltd (oil and suction gas engines and gas producers), Premier Gas Engine Co Ltd (large suction gas engine), Jno Hy Andrew & Co Ltd (steels, tools, etc.), William Briggs & Sons Ltd (roofing and bituminous paints), Shipowners' Compensation Co Ltd ("Greyhound" brand ship's anti-corrosive, anti-fouling and all ironwork paints), Sanderson Tractor & Implement Co Ltd (tractors and implements), Stanrocks Patent Bridge & Engineering Co (lift bridges for natural and forced draught), Daimler Co Ltd (cars and lorries), Crossley Motors Ltd (cars), Filling Stevens Motors Ltd (commercial motor vehicles), Mulcott Belting Co Ltd (camel hair and solid woven cotton belting), Tuck & Co Ltd (packing, jointing and rubber goods), Creswells Ltd (brake and clutch linings), Johnson Pickett Rope Co (Manila ropes), Vislok Ltd (Vislok nuts), Hoare & Sons (monumental and ecclesiastical designers and sculptors).

**Directorate and Staff.**—Permanent directors: H. J. Hoare, M.I. Mech. E., J. M. Dick, M.I. Mech. E., and H. J. Adkins.

Engineers: H. J. Hoare, M.I. Mech. E. (chief engineer), J. M. Dick (works manager), J. Sheldon, W. J. Le Petit, R. Dick, F. E. Coupland, W. P. McNicol, S. Le Fenve, G. W. Pask (harbour engineer), H. J. Adkins, Gordon Hoare, J. C. Gibson (general offices), W. Steel (stores).

**Offices and Works.**—Registered office: 70, Old Broad Street, London, E.C. 2. London Buying Office: 10, New Broad Street, E.C. 2.

In Colombo the Engineering Works are at Price Park, the Showrooms are opposite the National Bank of India Ltd, in Gaffoor Building, Fort, and the Harbour Office in Victoria Arcade.

**Cables:** "Hoare & Co." Colombo, and "Hoare & Co." London (Codes: A B C (5th and 6th Editions), Bentley's Engineering Telegraph (2nd Edition), and Private (See illustration page 56)).

### CARSON & CO. LTD.

**Inception.**—Established in 1857, this firm has many interests in Ceylon, the principal of which are its tea, rubber and coconut estates, the area under the control of the company being about 100,000 acres.

**Activities.**—Apart from their very extensive interests in tea, Messrs Carson & Co. hold important shipping agencies, representing the Bibby Line, the Nippon Yusen Kaisha (Japan Mail Line), the White Star Line, the Yamashita S.S. Co., etc. They are also largely interested in the coal bunkering trade, and represent the coaling business of Andrew Weir & Co. and Mitchell Cotts & Co. The London representatives of the firm for bunkering are Phis Van Ommeren (London), Ltd, of Baltic House, Leadenhall Street, E.C., and J. McLaren & Co., of 127, Fenchurch Street.

**Exports.**—Ceylon tea has no superior for quality, flavour and strength, and Colombo as a port is admirably situated to distribute it to the world's markets. The export

**Directorate.**—Messrs W Shakspeare, H C Bibby, Sir James Lochore, Messrs A Warden, W Coombe, R A Sharrocks, and M L Hopkins.

**Offices.**—Australia Buildings, York Street, Fort, Colombo Cables "Carsons," Colombo Codes Scott's Universal, A 1, A B C (5th and 6th Editions), Watkin's and Bentley's.

**Bankers.**—National Bank, Chartered Bank, Mercantile Bank, Hong Kong & Shanghai Bank, Eastern Bank, and Imperial Bank of India (See illustration, page 57.)

#### WALKER & GREIG LTD.

**Inception and Development.**—This firm was first established in 1857 by the late Mr John Walker, who was afterwards joined in partnership by Mr Andrew Greig. In 1910 the concern was formed into a limited liability company, with Mr John Walker's son of the same name, as managing director, and with its head office at Dikoya. In 1913 workshops and offices were acquired in Colombo, and the head office of the company was established there. Mr. John Walker (junr) acted as managing director from its inception to February 1925, when he left the Island, and Mr J S Collett acquired his interest, being appointed chairman and managing director.

**Early History.**—When the company commenced business the railway from Colombo only ran 87 miles inland. During the initial operations the firm, apart from trading as engineers, laid itself out to cater for the wants of residents isolated from main centres, but as transportation facilities increased and the railways spread further inland the general supply business was gradually dropped, and the company specialised in engineering and general constructional work.

**Activities.**—The firm acts as engineers, general importers of estate supplies and sundries, aerial ropeway specialists, importers of Dennis motor lorries, builders and contractors specialising in the building of tea and rubber factories, manufacturers of the Walker & Greig tea sifter (a patent of the company), specialists in the construction of hydraulic power schemes for driving factories, etc. The firm is also in a position to look after the mechanical needs of both tea and rubber planters, especially as it has branches located throughout the Island.

**Colombo Works.**—These cover an area of 5 acres, and employ 420 hands. They have every modern facility, including a lathe which can turn shafting up to a length of 26 feet. The works are divided into engineering, wood-working and stores departments. The latter department has everything in stock for the equipment and supply of tea and rubber estates. The wood-working department specialises in the building of lorry bodies for the Dennis motor lorry chassis which the firm imports, and the construction of tea bins and all woodwork required for the building of factories and bungalows.

**Contracts.**—Some of the more important contracts recently carried out are the construction of two hydraulic power installations

WALKER & GREIG LTD, Colombo.

1. Building new tea factory over old and obsolete plant without interfering with factory operations.
2. New tea factory from other end.

AITKEN SPENCE & CO., Colombo.

7. Preparing Opens for Export.

for driving tea factories at Cartmore Falls and Hatherleigh, also the building of numerous new tea factories over old ones. The latter contracts are a type of constructional work that the company specialises in. Firstly it builds the power house, and then commences on the far end of the new factory building, gradually enveloping the old building, everything being done without stopping work.

**Stock.**—The company carries sufficient material on hand to build and fully equip with machinery and appliances six complete factories.

**Staff.**—As well as the general staff of employees, the firm has 22 certified engineers and a number of draughtsmen, who design buildings, ropeways, turbines and peltons.

**Patent.**—The company manufactures its own tea sifter, which is supplied to estates throughout Ceylon, India, and Java.

**Colombo Address.**—Waverice House, Slave Island.

**Branches.**—These are at Badulla, Dickoya, Haputale, Lundula and Illicoultry. Each one is fully equipped, and is in a position to act as a service station for the planters in its particular district.

**Representations.**—The company is agent in Ceylon for the following firms:—Norris, Henty & Gardners Ltd, Gandy's Belting Co Ltd, J. M. Henderson & Co Ltd (aerial ropeways), Allan, Whyte & Co Ltd (wire ropes and shoots), John Yates & Co Ltd (estate tools), Carrion Ironworks, Vernoleine Paint Co Ltd, Strathclyde Paint Co Ltd, Adolphe Crosbie Ltd, W. Gunther & Sons, Martin Lark & Co Ltd (cement), Bührings Water Purifying Co Ltd (water filters), Dennis Bros Ltd, Planters Engineering Co Ltd, Darlaston Galvanising Co Ltd, Ruston & Hornsby Ltd, Lincoln and F. S. Hindley, Dorset.

**Directors.** Messrs J. S. Collett (chairman and managing director), R. Mylius, W. Benzie, W. Pole-Fletcher, S. P. Hayley.

**London Representative.**—H. Kemish, 11 Mech L., 30, Basinghall Street, E.C.

**Bankers.**—The National Bank of India Ltd.

**Cable Address:** "Reklaw," Colombo (See illustration, pages 58 and 59.)

#### AITKIN SPENCE & CO.

**Inception.**—The firm of Aitkin Spence & Co. was founded in 1870 by Messrs Edward Aitkin and P. G. Spence.

**Activities.**—Messrs Aitkin Spence & Co. are general merchants, importers, exporters, coaling, insurance, estate and steamship agents, and representatives for various other concerns, notably for Lloyd's and the Salvage Association, London.

**Exports.**—During the years in which the plumbago industry was in a prosperous state Messrs Aitkin Spence & Co. were the largest exporters of the product in Ceylon, and at the present time, in addition to that article, they export regularly to all parts of the world large quantities of tea, rubber, coconut oil, desiccated coconut, copra, fibre, coir yarn, cocoa, cinnamon, citronella and cinnamon oils.

**Imports.**—Apart from its extensive export business, the firm is also a general importer on an extensive scale.

**Agencies.**—Messrs Aitkin Spence & Co., besides being the representatives for Lloyd's and the Salvage Association, London, are also agents for a large number of important concerns as follow: Corporation of Lloyds, London; Salvage Association, London; Bombay Burmah Trading Corporation; East Asiatic Co. Ltd., Copenhagen; Hatton Bank

& Agency Co.; Shalimar Rope Works Ltd., Calcutta; Shalimar Tar Distillery & Waterproof Manufacturing Co. Ltd., Calcutta; American & Indian Line of Steamers, American & Manchurian Line, Asiatic Steam Navigation Co. Ltd., Ben Lane Steamers, "City" Line, East Asiatic Line, Ellerman & Bucknall Steamship Co., Hall Lane, Northern Steamship Co. Ltd. of Petrograd, Oceanic Steamship Co., Russische Baltische Dampf Ges., Riga, Stoomvaart Maatschappij "Nederland", Stoomvaart Maatschappij Rotterdamse Lloyd, Royal Insurance Co., Queensland Insurance Co., Yangtze Insurance Association, Eagle Star & British Dominions Insurance Co., Ceylon Consolidated Estates (1920), Ceylon Estates Investment Assn., Cranley Tea Estate, Dickwella Tea Co., Doolgalla (Ceylon) Rubber Estates, Northumberland (Ceylon) Rubber and Tea Estates, P. P. K. (Ceylon) Rubber Estates, Rubber Securities, Burton, Wyamita & Kingma Estates, Dickwella Tea & Rubber Estates.

**Agents and Secretaries.**—Besides the important representations just enumerated, Messrs Aitkin Spence & Co. also act as agents and secretaries in connection with the following: Ceylon Coconut Co. Ltd., Dependence Tea Co. Ltd., Horawala (Kahitara) Rubber Co., Kendawe Tea & Rubber Co., Kinniersley (Kahitara) Rubber Co., Lassahena Rubber Co., Mayen (Ceylon) Tea & Rubber Co., Meall Mor (Ceylon) Estates, Neuchatel Estates, Panama (Kegalle) Rubber Co., Ullswater Rubber Co. of Ceylon, Usk Valley (Kahitara) Rubber Co., Motor Launches Ltd.

**Partners.**—The partners of the firm are Messrs W. E. Moncrieff Paterson, B. W. C. Lee, Ian W. Aitkin, J. J. Dickson, R. W. Fowke and R. D. Kenyon.

**Offices.**—At Colombo, Aitkin Spence & Co., Prince Street, Fort, at Galle, Clarke Spence & Co., and in London, Spence Walls & Co., 17, Philip Lane, E.C. 3. In New York the firm is represented by Mr. L. F. Chevalier.

**Cables:** "Aitkin," Colombo.

#### HULL, BLYTH & CO. (COLOMBO) LTD.

**Inception.**—This company was established in Colombo over thirty years ago to carry on business as coal depot proprietors and steamship agents, the parent company being Hull, Blyth & Co. Ltd., 1, Lloyd's Avenue, London, E.C. 4.

**Activities.**—In addition to coal contracting, the firm acts as shipping and insurance agents, and general import and export merchants. Its principal activity, however, is coal bunkering, and it has storage accommodation for 25,000 tons, with a lighter capacity of 15,000 tons.

**Coal Constituents.**—Messrs Hull, Blyth & Co. are bunker suppliers to the following concerns: "Adria" Società Anonima di Navigazione Marittima of Finme, Albion Line, Sunderland, Annung Bros., Cardiff, Australian Commonwealth Line of Steamers, Ashburnham Steamship & Coal Co., Cardiff, Aster Shipping Co., Cardiff, Rederi A/B Aktiv and Rederi A/B Aurora of Helsingborg, James Bell & Co., Hull, A. ## RAILWAYS

**T**HE Ceylon Government Railways are State owned, as their name implies, and provide throughout an effective and even luxurious means of transport, rendering accessible not only the most beautiful scenery and strikingly interesting antiquities, but all those fields of agricultural industry—the tea, the coconut, and the rubber—that have brought about the advanced state of prosperity which the island enjoys.

**ADMINISTRATION.**—The Government Railways are administered by a special Department of the Ceylon Civil Service, the General Manager being Mr T. E. Dutton, under whom are three Deputy General Managers (Administrative, Operating, and Commercial). There are three Sub-Departments—those of the Chief Accountant, the Engineer of Ways and Works and the Locomotive Department. There is also a Railway Advisory Board, consisting of the Colonial Treasurer (as Chairman), the General Manager of the Railway, two representatives of the Ceylon Chamber of Commerce, one representative each of the Planters' Association of Ceylon, the Low Country Products Association of Ceylon, and the Ceylonese Trading Interests, and three co-opted members.

**BEGINNING OF CONSTRUCTION.**—Railway construction in Ceylon dates from February 2, 1863, when the line from Colombo to Ambepussa (34 m) was begun. It was opened on October 2, 1865, had been extended as far as Kandy by August, 1867, and to Nawalapitiya by December 1, 1874, the total cost of construction up to that date being Rs 20,053,458. On July 16, 1874, the short line from Colombo to the Fort was opened. The South Coast line from the Fort to Matara was laid between 1875 and 1894, at a cost of Rs 10,142,321, the last section being opened on June 7 of the latter year. The years between 1884 and 1894 also saw the construction of the Main Line extensions to Hatton and Baudarawela. From that time onwards railway construction in Ceylon has been steadily progressive.

**CAPITAL COST.**—The capital cost of the several lines, including additional accommodation and improvements, up to September 30, 1924, was Rs 160,369,876 (£10,691,325).

**LINE.**—The Ceylon railways have been built in sections according as the development and settlement of various parts of the island have warranted their construction. These sections are generally known as the Main, the Northern, the North Coast, the South Coast, and the Kelani Valley lines.

**KELANI VALLEY LINE.**—The Kelani Valley line (2½ ft gauge) leaves Colombo in a southerly direction, but soon turns east to Padukka, and north to Avisawella, where the line branches, one track holding northward to Dehiowita and Yatiyantota, while the other runs south to Ratnapura, Kehawatta, and Opanake. As the line—known locally as the K.V.—runs through the heart of one of the principal rubber districts of Ceylon, all the stations are more or less important centres for the requirements and produce of the numerous rubber estates. The distance covered by the line is 85 miles from Colombo to Opanake, and 11 miles from Avisawella to Yatiyantota.

**MAIN LINE.**—The main line of the Ceylon Railways is laid throughout on the

broad gauge (5½ ft), and runs from Colombo in a north-easterly direction for about 45 miles, when, after Polgahawela has been reached, it gradually returns, until at the terminus of Badulla (190 miles) it is in almost the same latitude as Colombo. This line is by far the busiest and most profitable of the railways, due to the fact that it serves the great tea districts of the mountain zone. It was the first section of the railways to be constructed, and in its later stages, after the foot hills of Rambukkana (52 m) are reached, the line shows great engineering skill, rising 1,400 ft in the 13 miles to Kadugannawa with a ruling gradient of 1 in 45. From Nawalapitiya, the principal railway centre of the hill districts (87 m) and 1,013 ft above sea level, the line rises further almost continuously with a maximum gradient of 1 in 44 till it reaches a height of 5,225 ft at Pattipola, 139 miles from Colombo, whence it falls by similar gradients to Baudarawela and thence to Badulla, passing over Rossett Viaduct, the highest in the colony.

**NORTH COAST LINE.**—The north coast line from Colombo to Negombo and Chilaw (5½ ft gauge) branches from the main line at Ragama, 9 miles from Colombo, and passes through rich coconut districts to Negombo, Marawila, and Chilaw. It has a length of 50½ miles. The line is now being extended to Puttalam, 32½ miles north of Chilaw. This extension will serve an important coconut area, and will carry large quantities of salt, which is manufactured on a fairly extensive scale at Puttalam.

**NORTHERN LINE.**—The northern railway to Jaffna and Talaimanar (for India) —5½ ft gauge—leaves the main line at Polgahawela, whence it runs north through the rubber and coconut districts of Kurunegala. Shortly after leaving this station it enters the dry zone, where the rainfall is below 75 in yearly, and cultivation, except occasional paddy, gradually disappears. About 16 miles north of Anuradhapura one branch of the line runs north-west from Madawachchi to Mannar and Talaimanar. From the latter point the steamers of the South Indian Railway convey passengers and goods a distance of 22 miles to Dhanush Kodi on the South Indian Railway. From Madawachchi the other portion of the line continues north to Kankasanturai, passing the more cultivated region of Jaffna. The length of the line from Polgahawela to Kankasanturai is 211 miles and from Madawachchi to Talaimanar Pier 66 miles.

**SOUTH COAST LINE.**—The sea-coast line to Galle and Matara (5½ ft gauge) runs in a southerly direction from Colombo for 98½ miles through an almost continuous belt of coconuts. For the first seven miles it passes through the rapidly extending suburbs of Colombo, then over what is known as the distillery area, which extends from Panadura to Matara. At Alutgama the Southern Province is entered, and the chief villages of the Galle district are passed, Galle itself being some 72 miles from Colombo. Thence the line proceeds to Matara, passing the town of Weligama. Though the railway runs almost exclusively through coconut groves, it supplies tea and rubber areas as well, in particular the important rubber districts of Kalutara and Elpitiya and the tea plantations of Deniyaya. The total length of the line is 98½ miles.

**MILEAGE.**—The total extent of the Ceylon Railways in 1924 was 742½ miles, of which 625½ were broad gauge (5 ft 6 in) and 117 narrow gauge (2 ft 6 in). In addition, the following lines were under construction: (1) a connecting line between Colombo Harbour and the main line, (2) an extension of the north coast line from Chilaw to Puttalam, (3) new lines from Maho (on the Northern line) to Batticaloa and Trincomalee respectively, in connection with the development of local food production, the Batticaloa line to be later extended 30 miles north to Nitavur, (4) a line to the Kolonnawa Oil Depot, and (5) the duplication of the main line to Rambukkana. A line to Horana and Agalawatta has been surveyed, and the Hambantota line was under survey in 1924.

**PARCEL RATES.**—The parcel rates on the Ceylon Railways vary according to the weight and distance carried. A 7 lb parcel is charged from 10 cents, a 14 lb parcel from 20 cents, and so on, according to distance, one hundredweight being charged from 80 cents upwards. Goods traffic is divided into six classes, according to the nature of the traffic, the charge for each class varying according to the section of the line, from 9½ cents per mile to 50 cents per mile. The minimum distance on which a charge is made is ten miles.

**PASSENGER FARES.**—Single fare, first class, 10½ cents per mile (16 cents Main Line above Nawalapitiya, 17 cents Uda Pusselawa line). Second class, 6½ cents per mile (10 cents Main Line above Nawalapitiya, 12 cents Uda Pusselawa line). Third class, 3½ cents per mile (2½ cents Pallar to Kankasanturai, 4 cents Uda Pusselawa line). Return tickets are issued at double the single fare, less 1 cent, except in the case of the Uda Pusselawa line, on which section double the single fare is charged. Reductions are made for children, pioneers, and coolies of any nationality, and for season tickets.

**REVENUE AND EXPENDITURE.**—The receipts for 1924 amounted to Rs 27,188,145, or an increase of Rs 2,590,555 as compared with the previous year. Items of revenue were: coaching receipts, Rs 12,203,422; goods and live stock, Rs 14,670,702; miscellaneous and motor-services, Rs 314,021. The total expenditure for 1924 amounted to Rs 17,614,067, as against Rs 16,108,248 in 1923. The net revenue of the railways amounted therefore to Rs 9,574,078 in 1924, as against Rs 8,489,342 in 1923.

**ROLLING STOCK.** The rolling stock of the railways is constructed in the workshops at Colombo, where over 1,000 workmen are employed. The older types of English built carriages are being gradually replaced by the standard type of bogie carriage, 42 ft long. These modern and handsome carriages, which are built of native teak, are not of the Indian type with longitudinal seats, but of the English. They are thoroughly well equipped with sleeping and refreshment cars and lavatory accommodation. Passengers to whom time is an object, and who wish to pay a visit to Nuwara Eliya, can leave Colombo after dinner, travel in a comfortable sleeping berth (Rs. 5 in addition to first class fare), get an early breakfast in the refreshment car before arriving at Nuwara Eliya, and be in Nuwara Eliya before 8.30 next morning. The return journey can be made in the same

The return journey can be made in the same way. In 1925 a sum of Rs 1,080,000 was included in the 1925-26 Budget to be expended on the purchase of six locomotives to replace scrapped engines and to others to meet the growing traffic requirements, and a further

sum of Rs 984,718 was to be expended on wagon under-frames.

**TRAFFIC.** - The number of passengers conveyed by the Government Railways in 1923 was 11,100,251 as against 12,189,203

in 1922 while the total tonnage of goods carried was 1,157,886 tons, or an increase of 25,760 tons over the previous year.

In 1924 the passengers carried numbered approximately 11,500,000, while the total goods tonnage carried was 1,493,777.

## ROAD AND WATER

### ROAD

**C** EYLON has on the whole good highways, the total length of main or "cart" roads being about 12,500 miles. The mileage maintained by the Public Works Department is rather more than 4,000. The metalled roads (about 4,000 miles) are kept in good order, and are passable to all kinds of traffic. Gravelled roads are admirable in dry weather but cannot be relied upon in very wet seasons. There are also some 4,800 miles of cart roads and bridle paths maintained by the Village Committees. The only direct charge made on those who travel by road is that levied for the use of ferry boats, but these ferries are fast disappearing as the result of the building of bridges. Indirect charges are made for the upkeep of roads in the form of taxes on wheeled vehicles of every kind.

**MAIN ROADS.** The principal roads in the Colombo District are those radiating from the capital, and are four in number, as follow:

1. The north-coast road to Negombo, Chilaw, and Puttalam, and thence to Anuradhapura, a total distance of 129 miles.

2. The up-country road to Kandy, via the Kaduganwa Pass, running north east from Colombo and branching at Ambanpitiya to Polgahawela and Kurunegala.

3. The Kelani Valley road to Ratnapura etc., running east from Colombo, branching at Avissawella to Yatiyantota, and thence up to the Gangathena Pass to Hatton and the up-country.

4. The south-coast road to Kalutara, Galle, Matara, and Hambantota.

All these roads carry considerable traffic to the railway and across country. In the Central Province there are many important roads east of Kandy, and serving the rich tea districts which the railway does not always reach; there are four main roads leading into the Eastern Province and serving the important ports of Trincomalee and Batticaloa, and in the North Central Province roads run almost parallel with the railway. The longest main road in Ceylon is that from Kandy to Jaffna via Dambulla and Mihintale, 199 miles.

**ROAD SERVICES.** In addition to the railways there are an ever-increasing number of motor bus services along most of the main roads of the island. What is known as the Contract Motor Service is maintained by the Railway Department in connection with the railway services, and joins up many of the smaller towns with the larger centres. There are also many excellent private motor services out of Colombo and other towns, the longest route covered being that from Batticaloa to Bandarawela, 122 miles. The

chief means of transport for goods by road are the wooden springless carts yoked to a pair of bullocks, which were formerly the only means of conveyance, and the motor lorry, the use of which has greatly increased during the last five years. There were in 1923 over 300 in use in the island, and about 30,000 single and double carts. Until recently the work of motor lorries was confined to transport between railway goods sheds and interior estates, but now collecting and distributing depots are being established in practically every important centre of the island, so that full loads may be obtained both outgoing and incoming.

### WATER

A means of transport available and much used in certain districts is afforded by the 153 miles of canals. This system, largely the work of the early Dutch settlers, is connected with Colombo, and the facilities offered have been considerably enhanced by the completion of the Lake Harbour scheme. Owing to the hilly nature of the country, the rivers of Ceylon are not navigable for commercial traffic to any extent, but are utilised on the west coast in some parts, constant communication by boat being kept up on the Kalu Ganga between Kalutara and Ratnapura.

# AGRICULTURE

## GENERAL DATA

**3**N its agriculture, as in its flora, Ceylon shows a great variety for so small an area. In early Sinhalese times the cultivation of rice, then almost the only form of agriculture, was probably carried out entirely in the "dry" northern and eastern plains. So long as dependence was placed upon the rains, there was only one crop reaped during the year, and there was a considerable element of precariousness in the situation, for the rains were liable to fail. Then came the formation of the large tanks or artificial lakes, in which the rainfall of the north-east monsoon could be stored up, and the dry zone became largely cultivated and settled. With the Tamil invasion, the irrigation works broke down and agriculture was practised without their aid, the remainder of the island being at the time of the Portuguese landing mostly forest country, throughout most of which the practice of

of the first road into the hills, when an experimental estate was opened near Peradeniya, close to Kandy, by the then Governor, Sir Richard Barnes, in 1824. From this resulted in a few years the rush to plant coffee by Europeans, which led to the destruction of much of the mountain forests. Coffee was the principal culture until about 1880, when it began to fail rapidly under the attacks of the coffee-leaf disease and was replaced by cinchona, later by tea, and last of all by rubber, during the whole of which time the planting of coconuts has never ceased, so that the area under this product is the largest of all.

**GROWTH OF CO-OPERATIVE SOCIETIES.**—At the end of 1921 there were 222 Co-operative Societies in Ceylon, as against 208 twelve months previously. The total number of members of these societies was 26,757, and amount to the value of Rs 26,422 was distributed to members during

registered gardens at the end of 1924 being 479. Seeds and implements are supplied by the Department, and prizes are offered for competition among schools in the various districts. There is a Training School at Peradeniya, where 12 teachers from vernacular schools are instructed for one year in elementary agriculture. The Farm School at Peradeniya also provides a practical training in tropical agriculture, and another is to be opened at Jaffna.

## PRODUCTS

**CACAO.**—Cacao (29,400 acres) is mostly grown between Kandy and Matale, and at Badulla, thriving best at an elevation of between 1,000 and 2,000 ft. Partly owing to the particular variety which has been much cultivated in Ceylon, but mainly to the care taken in its preparation, the prices of Ceylon cocoa are usually the highest in the market.

RUBBER TAPPING

RUBBER MEASING AND FILTERING.

chena went (and still goes) on. Chena consists in felling the smaller trees, burning off the dead wood, and cultivating a crop for two or three years on the land thus exposed. But after this period the ground becomes so weedy that it is less trouble to chena a new portion, and the old is left to its fate. In the greater part of Ceylon the old chenas simply present a sea of low scrub, which is once again chena-ed after ten to fifteen years, the time depending upon the dampness of the neighbourhood and other factors.

**EUROPEAN CULTURES.**—The change to a modern "planting" country, containing numerous "estates" of different products under European (and native) management, and exporting large quantities of produce to other countries, dates from the completion

of the year. These societies are making steady progress.

**LABOUR.**—The manual labour of most of the area devoted to export crops is performed by Tamil coolies imported from Southern India, of whom there are some 5,000 in Ceylon. The Sinhalese work but little on the European estates, devoting themselves mainly to their own rice fields and coconut gardens and to transport work. (See also special article on "Tea.")

**SCHOOLS.**—Elementary agricultural education is given in Government and assisted vernacular schools by a scheme of schools gardens which has operated for many years with great success. The work is under the supervision of the Department of Agriculture, the total number of

**CAMPHOR.**—The area under this tree in the higher planting districts (where rubber will not grow) increased some years ago, but has since declined owing to the extension of tea plantations. Only 50 acres were under cultivation in 1924.

**CARDAMOMS.**—In 1924 the area under cardamoms was 7,000 acres, and exports totalled 298,704 lb., against 312,256 lb. in 1923. The output has shown a tendency to decline in recent years. (See also under "Commerce.")

**CINNAMON.**—There were in 1924 about 25,000 acres planted with cinnamon, which is grown on the sandy soil of the south-west coast, and is prepared by peeling off the bark and rolling it up. Output in 1924 amounted to 3,141,717 lb. The growth of

this spice has been practically a monopoly of Ceylon for a very long period (See also under "Commerce")

**CITRONELLA GRASS.**—It was estimated in 1924 that 40,000 acres were planted with citronella grass and other essential oil grasses, several new areas having been cropped round Tangalla in the Southern Province. Exports and values alike showed improvement.

**COCONUTS.**—In 1924 there were about 850,000 acres devoted to coconut palms, but only a small percentage of this area is cultivated systematically. They are grown on large estates in the western and southern country from Puttalam to Tangalla, and near Jaffna and Batticaloa, while every native garden, however small, contains a few of these palms, which are used universally for food, drink (toddy and arrack), building utensils, oil, and other necessities. In 1923 the number of coconuts exported was 15,093,670, valued at Rs 1,338,533, of which nearly 90 per cent went to the United Kingdom. Copra is the principal product of the coconut for export. It is very generally prepared by contract, the contractor being paid Rs 150 per 1,000 dried nuts

yielding on a full bearing crop 25 per cent on the outlay. Cheap Tamil labour flowed in from India, and a railway was opened from Colombo to Kandy in order to aid the growing industry, which was further fostered by a great rise in the price of coffee abroad. Within ten years from 1869 ten square miles of virgin forest in the district of the Wilderness of the Peak were opened up for the cultivation of coffee, and over 4,000,000 acres of land were sold by the Government to capitalists with hope of ample profit on the investment.

All this time, however, an insidious lungoid growth (*Heimleia vastatrix*) was creeping over the coffee plant. It arose in one centre, then spread far and wide, attacking plants new and old, weak and vigorous, with equal impartiality. Estates were sold recklessly and fortunes were lost. The coffee industry in Ceylon then practically died, many thousands of acres of the old coffee shoots were grubbed out, tea was planted, new machinery introduced, and the labourers were taught a new industry. In 1924 there were only 500 acres under coffee in the whole of the island, and only 15 cwt of plantation coffee was exported.

been planted along the boundaries of gardens or estates. It is not cultivated in regular areas, but a certain amount of planting has been done recently on account of the high prices ruling for the product. The quality of Ceylon kapok is good, and it is estimated that 300 to 440 lb of the cleaned article could be secured per acre from regular plantations.

**LIVE STOCK.**—The cattle in Ceylon consist of imported animals, crossbred and country stock. Cattle are imported from Australia for dairy purposes, and from India for both milk and draught. The indigenous stock consists of a small breed of humped cattle, which is slowly being improved by the infusion of new blood. Sheep and goats are imported from India for slaughter, and pigs are reared. A large quantity of frozen meat and dairy produce from Australia is consumed in the island. Buffaloes are kept in considerable numbers, as they constitute the agricultural cattle of the paddy-growers and of many coconut estates. The figures of live stock in a recent year were as follow:—Horned cattle, 1,383,000, horses, 2,000, sheep, 50,000, swine, 50,000, goats, 158,000. (See also under "Commerce")

RUBBER ROLLERS AND FINISHING MACHINERY.

COAGULATING PANS, ETC.

supplied to him in husk. It is as a rule sorted into three grades, the usual percentages being 95 per cent. of No. 1, 4 per cent. of No. 2, and 1 per cent. of No. 3. The production and export of copra have increased considerably. A candy (5 lb) of copra yields about 3 cwt. of oil, the price of the latter being double that of copra. The poonac, or cake left after the removal of the oil from the copra, is largely used locally as a cattle food, and is also exported as manure. (See also under "Commerce," "Coconut Products," and under "Mining and other Industries.")

**COFFEE.**—Although the coffee shrub was first introduced by Arab traders, very little trade was done in connection with it by either Sinhalese, Portuguese, or Dutch, and it was not until 1825 that the first plantation was opened at Kandy. Cultivation increased rapidly, and by 1870 there was an export trade in coffee of four millions sterling. There were then 106,000 acres under cultivation.

**COTTON.**—In the earlier Sinhalese times cotton was grown in various parts of the island, and hand-woven cloths of excellent quality and great durability were made. Now only a small number of cotton plants are to be found in the villages throughout the greater part of Ceylon. At Ambalantota, on the banks of the Walawe River in the Hambantota District, the Director of Agriculture has initiated some cotton growing experiments which give promise of a successful return, the profit for the 54 acres under cultivation being reckoned in 1924-25 at Rs 237 88c per acre. Cotton is naturally suggested for the opening up of the large areas of unoccupied lands in the Dry Zone, and the new railway extensions to Trincomalee and Batticaloa are expected to give the industry a decided impetus. In all, about 1,000 acres were under cultivation in 1924. (See also under "Commerce.")

**KAPOK.**—This fibre is collected from trees which grow in village gardens or have

**RICE.**—There is a large area under rice (paddy)—between 800,000 and 900,000 acres—but it is a purely native culture, grown in little fields terraced to suit the slopes. The methods employed are primitive, and the return of the crop is poor, probably on the average not exceeding eight-fold.

**RUBBER.**—See article following.

**SUGAR.**—There were roughly 20,000 acres under sugar-cane in 1924, but this is not a European culture to any extent, and the sugar extracted is of a low grade for native consumption. (See also under "Commerce.")

**TEA.**—See special article.

**TIMBER.**—Ceylon is fortunate in its forests, which yield large quantities of valuable timber. The ships of Tarshish, of King Solomon's time, are supposed to have been the vessels that sailed from Point de Galle. Ebony, the popular timber for expensive furniture, piano keys and art ware, is the best known of Ceylon woods, and has long been an item of export. Satinwood,

ramai, milla, palu, and halmilla are all found in abundance in the dry-zone forests, and are in constant demand for Public Departments, which consume them at the rate of 250,000 cubic feet annually in logs, sawn timber, and railway sleepers. The wood known as Jak (*Artocarpus integrifolia*) is a largely-used Ceylon product, though now supplied only from private sources. With the opening of estates the forests have decreased in size, but the Forest Department is engaged in conservation and re-afforestation work which will lay the foundation of an ultimately adequate and sustained output of this and other profitable timbers. During 1923 the area of plantations was increased from 9,036 to 11,151 acres.

**RAILWAY SLEEPERS**—Between 1906 and 1924 the Forest Department supplied the Railway Department with 980,491 broad gauge and 379,060 narrow gauge sleepers at an average rate of Rs. 3.82 and Rs. 1.77, respectively. In this way a very large saving over the cost of imported sleepers has been effected, and the indigenous material

has proved more durable than imported supplies.

**ATTLE PLANTING**—Attention has recently been directed to the possibilities of planting acacias for the tanning industry, and representations have been made by interested parties from England and Australia. It is believed that, with cheap labour available, Ceylon can successfully enter this field of commercial enterprise while there are large extents of patana land in up-country districts which might be made available. Another scheme is to combine the afforestation of Crown estates having fuel bearing trees with the commercial planting of acacias.

**TOBACCO.**—The 13,000 acres devoted to tobacco culture are mostly in the neighbourhood of Jaffna, though also in the Dumbura district and in the drier country a little east of Kandy. The leaf is unfit for a European palate, it is coarse and rank, and finds a special market among the people of Travancore. The South Indian market for tobacco has in recent years been some-

what uncertain, and in consequence a series of tobacco experiments have been carried out by the Department of Agriculture in Jaffna and also in the Dumbura valley in the hope of securing a type of tobacco which will grow satisfactorily and yield a product which would be marketable in Europe. The results of these experiments have, it is claimed, shown that the White Burley type of tobacco can be grown satisfactorily, and that Ceylon grown leaf of this type commands a ready sale at remunerative prices in the United Kingdom. (See also under "Commerce.")

**VARIOUS.**—Areca nuts, Palmyra palms, and cinchona are cultivated in a casual manner and need no special mention. The marked feature of native cultivation is the casual intermixture of crops, by which some of the advantages of rotation are obtained, while at the same time capital is not required in any large amount, any tree that dies being simply replaced by another, and the jungle of cultivated plants perpetually presenting the same aspect.

## RUBBER

**T**HE rubber planting industry of Ceylon—that is, the growth of trees furnishing the indiarubber of commerce—dates from 1876, when plants were sent from Kew (England) to the Henaratgodia Gardens, where some of the trees, now 49 years of age, are to be seen. But, owing to the feverish attention given during the "eighties" to tea planting, little in the way of rubber planting was accomplished, except by a fortunate few, chiefly in the Kalutara district. When in 1899 and 1900 there was a slump in the price of tea, planters in the Kalutara and Kelani Valley districts began to plant rubber among the tea, and there was a jump from 25 acres planted in 1904 to 100,000 acres in 1906 and 180,000 acres in 1908, the productive area rising 600 per cent during that period. In 1910-11 there

was a boom in prices, and, later, the European War sent up production, exports rising to 45,000 tons in 1919. After the War, restriction of output throughout the Empire was resolved upon, and in 1925 it was still adhered to. The area under cultivation in 1924 was approximately 433,100 acres, of which 430,000 acres were productive.

**DISTRIBUTION**—The leading rubber-growing districts of Ceylon, in their order, according to acreage in rubber alone, are: Kelani Valley, Kalutara, Ratnapura, Galle, Kegalla, Kurunegala, Matale North, Matale East, Matale West, Galagedara, Haputale, Kadugannawa, Monapagala, Morawak Korale, Matale South, Badulla, Passara, Madulsima, Alagala, Nilambe, Pussellawa, Ambagamuwa, Dolosbage, Rakwana, Wattagama, and Dumbura.

**LOCAL RUBBER SALES**—Following are the quantities of rubber sold at local auctions from 1920 to 1924, with the average prices realised—

	QUANTITIES lbs.	AVERAGE Cents.
1920	39,078,693	0.80
1921	37,383,634	0.52
1922	40,202,708	0.53
1923	32,767,305	0.88
1924	35,734,720	0.75

The highest prices ever paid for Ceylon rubber in the London and Colombo markets were 12/8 (for Meegama Estate smoked sheet and/or biscuits on April 19, 1910) and Rs. 9.50 (April 14, 1910) respectively.

Towards the end of 1925 the official notification of the release of restriction in 1926 had a strong effect on prices, there

RUBBER VACUUM DRIER.

RUBBER READY FOR EXPORT.

being a keen demand at round about Rs 2 50, while the average price realised for the nine months January—September, 1925, was Rs 1 45.

**RUBBER ACREAGES AND EXPORTS**—Following are the estimated acreages in bearing and actual exports for selected years up to 1924 —

	PLANTED ACRES	BEARING ACRES	EXPORTS Tons
1904	25,000	600	35
1909	184,000	5,500	681
1914	240,500	170,000	15,800
1919	385,000	275,000	45,010
1923	411,400	400,000	37,112
1924	433,100	430,000	37,351

**RUBBER DISEASES**—*Hevea brasiliensis* is, under plantation conditions, subject to various diseases, which have been fully

and carefully investigated by the scientific offices attached to the Department of Agriculture. Root diseases occur chiefly in areas which have not been cleared of all jungle stumps, and bark diseases are not uncommon in wet seasons. The causes of the various diseases, except that known as brown-pest, are now well known, and all diseases receive appropriate treatment on properly managed estates. A special scheme for Rubber Research has recently been organised by the Government of Ceylon, the Rubber Growers' Association and Rubber Estate Proprietors. This scheme provides for investigations into the origin of and remedies for the various diseases, for chemical and botanical research in Ceylon, and for vulcanisation experiments and tests at the Imperial Institute, London. The present staff in Ceylon consists of an organising secretary,

who visits all estates which are incorporated in the scheme, a mycologist, and a physiological botanist.

**RUBBER ESTIMATES, 1925**—The production of rubber in Ceylon for 1925 was estimated at 44,000 tons, compared with 190,000 tons from Malaya and 193,000 tons from the Dutch East Indies.

**YIELD OF RUBBER**—The yield of rubber per acre varies considerably with the soil, age of trees, rainfall, planting, treatment, etc., but may be said to range from 150 to 700 lb. per acre, 400 lb. to 500 lb. per acre being considered a good all round result for an estate in full bearing. A very good tree over 12 years old will yield 10 lb. of dry rubber per annum while the average tree in full bearing may be put at 4 to 5 lb. per annum. (See also under "Commerce.")

## TEA

**TEA** as a beverage is known to the majority of the world's population. The plant from which it is prepared has been cultivated in China for over 1,000 years, both black and green tea being made from the same kind of bush, which is a tropical shrub of the order Ternstramiaceae called *Thea sinensis*. Another variety of the tea plant is indigenous to Assam, and it is this type that is cultivated in Ceylon. It is interesting to bear in mind that as far back as 1687 about 5,000 lb. of tea were imported into

England by the East India Company and that during the reign of William and Mary an import duty on the luxury was first imposed, this being at the rate of 5/- per lb., and 5 per cent ad valorem.

Towards the close of the 17th century about 20,000 lb. of tea a year were being imported. At that time and for some years after, tea was drawn mainly from China and Japan, only occasional shipments coming from Java. Cultivation in India was not established until about 1830, when experi-

ments were carried out by the East India Company in Assam from which province the first sample was despatched to London in 1836, followed by 5 lb. in the next year. In 1840 a hundred boxes were exported to England, and in that year tea cultivation in India was started as a commercial enterprise by the Assam Company. From this small beginning the tea industry in India has grown to its present position of exporting 300,000,000 lbs. of tea annually, approximately one-half of the world's net supply. With an equally

LIPTON LTD., Colombo  
Dambatenne Tea Estate: Plucking Tea.  
(See letterpress, page 81.)

small start in Ceylon some years later, when the coffee plantations were destroyed by disease, tea has now come to be by far the most important industry of the colony, the annual exports being in the neighbourhood of 200,000,000 lbs

**AREA AND PRODUCTION.**—The following table shows the total acreage planted with tea, the estimated acres in full bearing (5 years and upwards), and the production per acre (both for the whole acreage and only for mature trees) since the establishment of the tea plantation industry in 1886 —

YEAR	TOTAL ACRES PLANTED	ESTIMATED ACRES IN FULL BEARING	PRODUCTION PER ACRE
1886-87	170,000	22,000	47-531
1887-88	183,000	32,000	70-546
1888-89	200,000	70,000	120-687
1889	205,000	70,000	120-700
1890	220,000	102,000	120-750
1891	250,000	150,000	"
1892	262,000	170,000	"
1893	273,000	183,000	"
1894	280,000	205,000	"
1895	305,000	220,000	"
1896	330,000	250,000	"
1897	350,000	262,000	"
1898	364,000	288,000	"
1899	378,000	305,000	"
1900	384,000	330,000	"
1901	387,000	345,000	"
1902	383,000	360,000	"
1903	380,000	375,000	"
1904	380,000	376,000	"
1905	390,000	378,000	"
1906	386,000	379,000	"
1907	390,000	382,000	"
1908	392,000	382,000	"
1909	395,000	383,000	"
1910	385,775	385,000	"
1911	395,000	386,000	"
1912	399,500	390,000	"
1913	409,450	400,000	"
1914	409,500	401,000	"
1915	409,500	402,000	"
1916	409,500	403,000	"
1917	408,000	402,000	"
1918	400,000	401,000	"
1919	403,500	400,000	"
1920	404,500	400,000	"
1921	404,400	402,000	"
1922	405,850	403,000	"
1923	409,200	404,000	"
1924	411,500	405,000	"

The area under tea, it will be observed, has for some years remained practically stationary, but was reduced to a certain extent owing to the large interplanting of rubber in 1910. The decrease in the shipments of tea in 1918 was, as in the case of all products, due to a scarcity of tonnage. No private shipments to the United Kingdom were allowed, all tea for that country being requisitioned by the Food Controller. The decrease in the 1921 crop was due to unfavourable climatic conditions, resulting in short crops, as well as to finer plucking.

The area (411,500 acres) under crop in 1924 includes perhaps 8,000 acres in tea gardens of small estates. It also covers half the acreage (roughly 19,000 acres) of mixed tea and rubber plantations. Much of this, while the rubber is young, yields as freely as unfixed fields, while, when the rubber trees mature, it has been found that the tea is adversely affected. It is considered probable that the poorer leaf product will soon be abandoned altogether on these plantations if rubber keeps to its present price.

**BEGINNING OF INDUSTRY.**—The tea tree was first introduced into Ceylon about 1840, when some 200 plants were received from India, and later from China and Assam.

The results of the first experiments, however, were far from satisfactory, few inducements were offered to cultivate on a large scale, and progress was slow until experience was brought from India. At that time, too, the coffee industry of the island was at its zenith and, indeed, seemed likely to be a permanent source of wealth. The growing and manufacture of tea were improved but it was not until the seventies, the years of the wholesale destruction of the coffee plantations, that the cultivation of tea became really progressive, and was taken up by those planters who were fortunate enough to survive the disaster to their previous product. In 1867 there were only ten acres under tea in the whole of Ceylon, but in 1875 this had grown to 1,080 acres, in 1895 to 305,000 acres, in 1905 to 390,000 acres, in 1915 to 409,500 acres, and in 1924 to 411,500 acres, of which 405,000 were estimated to be in full bearing.

**CULTIVATION.**—The tea plant is invariably grown from seed attempts to propagate it on a large scale from cuttings or from layerings never having been very successful. It is difficult in fact to get the cuttings to strike, and the method of layering does not allow of rapid enough increase of plants to be ever used. The real reason, however, of the avoidance of these methods is the ease with which plants are grown from seed, and for the supply of seed special bushes or even special seed-gardens are reserved.

**CLEARING THE LAND.**—In order to secure a good result it is necessary to bestow much care on the preparation of land for tea. If, as is usually the case in Ceylon, it has previously been under forest, the whole of the trees must be cut down, the stumps removed as far as possible (since many of them are liable to cause root disease in the shrubs), and the land hoed carefully all over. If grass land is to be planted, the roots must be carefully removed when the land is being hoed. If hillsides are to be put out, it is advisable before planting to arrange for terraces running along the contour of the slopes. If stones exist in the soil, they must be brought to the surface and utilised in making the terraces. On level land, the lines of drainage have to be arranged, and, where necessary, narrow drains, 3 ft deep, are put in before the tea is planted out.

**NURSERIES.**—The sowing of the tea seed is now almost universally made in nurseries. The seed, sometimes previously germinated, is deposited in holes either 4 or 6 inches apart and one inch deep. A piece of particularly good land is chosen, and formed into beds from 3 to 5 ft wide. Such a nursery must be well drained and very careful attention given to the preparation of the soil, which should be raked as for a flower-bed. If previously under tea-culture, the ground must be richly manured with cattle-fertiliser. If the situation is hot and dry, the beds should be covered with grass immediately after sowing; in any case water must be accessible for the nurseries. Forty pounds of seed may be expected to give about 10,000 plants, and will put some 2 to 2½ acres of land under tea. As soon as the young plants are visible above the surface, the beds are usually shaded by raised frames covered with grass or mats, are frequently weeded, and (if the weather be dry) watered in the evenings. As a rule, the plants sown in the nurseries in November or December can be planted out in the following May or June (six months old), or, when a year old, in the following November or December.

**PLANTING OUT.**—The land having been thus carefully prepared, the process of plant-

ing commences. In order to secure regularity, lines are marked out and the seedlings are placed at definite distances apart along these lines. What these distances should be varies with the type of plant, the richness of the land, and the method of planting. Speaking generally, it is not usual to put the plants nearer than 4 ft apart in any direction, or wider than 5 ft apart. If planted in rows at right angles to one another (square planting), this means in the one case 2,722 and in the other 1,742 plants to the acre. On some estates the method known as triangular planting is followed, that is, the plants are placed in rows at an angle of 60 degrees to one another, thus making the plants equidistant from each other. When the spacing and condition have been decided upon, lines are formed, and stakes are put at definite distances on these lines to mark where holes are to be dug and the plants to be placed. Prior to planting out, a hole is dug at each of the stakes at least a foot deep and 10 inches wide. The young plants are then removed from the nursery and deposited in the prepared holes.

Planting may be done either when the seedlings are six months old or when they have been in the nursery a year. In ordinary circumstances, six-months planting is being more and more adopted. Under this system the plants are taken from the nursery when 4 to 8 inches high, and have a small ball of earth 6 to 8 inches deep attached. They are conveyed to the holes which have been made ready as above described, but if the ends of the tap-roots are seen to be protruding or bent they are either straightened or nipped off. Each ball of earth with its plant is then placed in the centre of a hole, loose earth being filled in all round, and rammed down moderately. If rain follows immediately, the only attention required afterwards will be to see that weeds are cleared from about the plants and that the surface earth is kept loose. If rain does not come at once the plants will need watering. If planting be done with older seedlings in November or December it is necessary to have a much larger block of earth (at least 12 inches deep and 6 inches in diameter) attached to the root, and correspondingly larger holes in which the seedlings are to be deposited. In this case, a considerable quantity of water needs to be given, and a mulch of dry grass placed round the plants.

**PLUCKING.**—Plucking takes place every year. When the tea bushes have been pruned new shoots begin to grow, and after two or three months attain a length of 3 inches or more. At this stage the bushes can be "tipped," that is to say, the first lot of leaf can be taken off, the object being not so much to get the leaf as to force the production of secondary shoots on the plant. After about three weeks the secondary growth is ready to pluck, the uppermost two leaves and the unopened bud only being taken, and two mature leaves left on each of the secondary shoots. This plucking brings about the growth of a third series of shoots, and on these one mature leaf is usually left behind when plucking the youngest two leaves and a bud as before. A fourth, fifth, sixth, and seventh series of shoots arise in similar manner, and are known as "flushes." Eight distinct series of shoots is usually the largest number given by bushes in one season.

Plucking, which requires practice and careful supervision, is nearly always done by the women and older children, the men doing the heavy labour, such as pruning, forking, and cutting drains.

**PRUNING.**—The pruning of tea is an extremely technical process, which is usually carried out during the non-growing period of

the plant, that is from one to 4½ years after the seedling has been planted out. The time varies according to soil and elevation. As soon as it is apparent that a field is ceasing to yield well, the bushes are pruned down to within 10 to 18 inches from the ground, and the young shoots are then given, according to elevation, 3 to 5 months to grow before the bush is again brought into the plucking round. In its natural state the tea shrub would grow to a height of from 15 to 30 ft or more, which would render the labour of gathering the leaves practically impossible, and the chief object of pruning is to fashion it into a low flat bush generally kept about three feet in height. The object of tea planting is to secure the maximum quantity of the best quality leaf and the aim of every tea planter is to produce regular, frequent and plentiful "flushes" of young tender shoots on the tops of the bushes.

soil erosion, whilst artificial manuring is employed with the object of maintaining the vigour of the bushes and of encouraging good average yields.

**SOILS.** The tea plant will grow on many kinds of soil, but those which give the best returns in quantity and quality are deep reddish-coloured sandy loams, with a free sub-soil, which allows the roots of the plant to penetrate and secure natural drainage. From this kind of soil, in which many districts of Ceylon are particularly rich, the finest quality of tea is produced. Two descriptions of soil are especially to be avoided: a stiff clay of any kind, which is impervious to rain and which cakes and hardens in the sun, and a very loose sand which generally overlies gravel. Such soils produce a stunted bush yielding little leaf.

**TEA PESTS.** The tea plant is attacked by quite a number of pests and blights, but

eradicated from isolated gardens by spraying the bushes soon after pruning with kerosene emulsion and also by putting on chickens to catch the insects throughout the year. The green fly pest chiefly attacks and stunts the second, third and fourth flushes of the season, but it is a curious fact that tea made from shoots so stunted is often of higher quality than that made from freely growing shoots.

Caterpillar pests are numerous, and the so called "red rust," a blight of vegetable origin, is widely distributed and does great harm. Its treatment consists largely in increasing the vitality of the bushes by manuring, better drainage, and improved methods of pruning and plucking. Another disease known as Thread Blight caused by a fungus on the leaves and twigs of the bushes, has often done considerable damage to individual plants, but can be got rid of by

A FIELD OF TEA PLUCKERS.

**SCIENTIFIC MANURING.**—In common with most carefully cultivated crops, manuring is necessary to maintain the yield and condition of the bushes. This is carried out in most cases scientifically and systematically, and in accordance with the advice of expert agricultural chemists. Experience has shown that quality does not deteriorate through this practice, provided the ingredients employed are not of a forcing character. The effect of scientific manuring in Ceylon has been to equalise the crops throughout the year and to enhance the general standard of quality and flavour. Green manuring is used to improve the physical conditions of the soil, and to prevent

owing to the fact that the tea crop is a continuous one for 8 or 9 months in the year, it is never wholly destroyed. In the worst cases the yield is reduced possibly by 20 or 30 per cent. The chief insect pests are the red spider pest, the mosquito blight, and the green fly. The first, which attacks young plants, is usually counteracted by means of sulphur. The mosquito blight, which in India has often caused immense damage to the crops, is really a plant bug which feeds on the leaves of the tea plant, working by puncturing the youngest leaf and sucking the juice. The leaves thus quickly become a mass of brown, dry, and withered material. The blight can be apparently combated and almost entirely

treatment with sulphide of lime (made by boiling sulphur and lime together in water). Grey blight is another serious and widely distributed leaf blight. Root Rot has often caused the death of great numbers of bushes, more particularly round the dead and unremoved stumps of certain trees.

**WEEDING.** Owing to the extremely granular nature of the soil in Ceylon, and to the fact that there is no prolonged season of drought, such as is experienced in Northern India, much less cultivation of the land by hoeing is required, and weeding is very generally done by hand. On many estates green manure plants are now cultivated between the tea rows.

**YIELD**—As previously stated, the object of the tea grower is to get the maximum number of young shoots, or "flushes," on the bushes in each year, as it is only the two, three, or at most four youngest leaves on any shoot which can be made into tea. A very small leaf crop can be obtained, under a scientific system of pruning, in the second year after planting, in the third year about 120 lb. may be secured, if in a good locality. By the sixth year the tea on the best estates is yielding a full crop, which varies, according to the soil, from 150 to 800 lb. per acre per annum. But any crop above 800 lb. is abnormal, and the average for Ceylon is not more than 500 lb. per acre.

**ESTATES.** The number of properties or estates in private hands throughout Ceylon in 1925 was returned at 2,394, having a total acreage in cultivation of 808,073 acres. Of this acreage, 394,126 acres were planted with tea alone, and 18,719 with tea and rubber. The estimated number of coolies required to work the tea plantations was put at 500,000.

**EXPORTS.**—The year 1924 constituted a record in the annals of the tea industry in Ceylon, the total exports amounting to 204,930,307 lb., being 22,900,576 lb. ahead of 1923 and well in front of previous years. (See also under "Commerce.")

**FACTORY CONDITIONS.** Very considerable improvements have been made in the tea factories of Ceylon during recent years, and many new factories equipped with the latest types of machinery have been erected. The greatest care is exercised in the manufacture

of Ceylon tea, only the most up-to-date and hygienic methods being followed in order to avoid handling, and so lessen the risk of contamination.

**LABOUR.**—The labour on the large majority of tea estates in Ceylon, and on all those up-country is provided by Tamils from Southern India. The conditions of estate life and the wages now earned offer great inducement to these South Indian peasants to leave their villages, where as a rule they are dependent on a fair season for the crops which are often their sole means of existence. In 1925 there were about 500,000 Tamils employed on tea and other estates in the island.

During recent years considerable attention has been given to the general conditions of estate labour in Ceylon. Estate Schools are provided, and housing and sanitation are carried out according to Government regulations. Many estates have established creches for the care of infants while their mothers are away in the fields. The larger properties have their own well equipped hospitals, and there is a resident dispenser on every estate qualified to treat and prescribe for minor illnesses and to carry out the instructions of the District Medical Officer who is available in serious cases. Rice is supplied by the estates usually at less than cost price and housing accommodation and medical attendance are furnished free. Gardens are also provided and the keeping of cows is encouraged.

**MANUFACTURE.** The green tea when plucked, is carried by the pluckers to the

factories in baskets, where it is weighed. On some estates the leaf is transported by means of wire shoots and travelling ropeways.

The leaf is next spread in the upper floor of the factory on shelves of tightly drawn hessian called "Tats," and allowed to wither from 16 to 24 hours, according to climatic conditions. Through this process the leaf loses a great deal of its moisture, and becoming soft and pliable is then ready to be placed in the rollers. These twist the leaf and also break the cells containing the properties which give colour, flavour, and strength to the cup of tea as drunk in the ordinary household. The process of rolling breaks up the leaf and makes it ready for fermentation. During this process of fermentation the leaf assumes a coppery colour, and in due course it is dried to arrest this fermentation, which if allowed to go too far, destroys the quality and flavour. A tea drying machine is composed of wide-bottomed trays, on which the leaf is spread and subjected to a continuous current of dry hot air from an adjoining furnace by means of a mechanically driven fan. The fermented leaf, which has previously been through the rollers for from 2½ to 3 hours, and is in a damp sticky condition when spread on the trays of the drying machine, is dried at a temperature sufficient to drive off the moisture. This process takes from 20 minutes to half-an-hour, during which the tea assumes the black appearance familiar to the public. This final process is known as "firing."

**GRADING.**—After being dried, the tea is graded. The marks known on the market are

TEA SEED BEARERS.

(See *Interpress*, page 76.)

"Orange Pekoe," "Pekoe," "Souchong," "Cougou," etc. These are old Chinese terms, but are now used somewhat loosely on the supposition that certain leaves on the shoot form the bulk of the grade named. Thus the unopened tip (bud) and the first opened leaf are generally supposed to constitute the "Orange Pekoe," the next in descent is the "Pekoe" leaf, and still lower the "Souchong" leaf. The grades, however, are now merely commercial terms which have little relationship to any particular leaves. There is a corresponding class for the fine particles, or so called "Broken" leaf of each grade, which generally gives a stronger tea than the grade itself, and is consequently higher in price. Generally speaking, estates in Ceylon confine their grading to the following:

- 1 Broken Orange Pekoe the small leaf containing tips
- 2 Broken Pekoe the rather larger leaf than the Broken Orange Pekoe, without tips
- 3 Orange Pekoe the twisted, long, thin, wiry leaf
- 4 Pekoe the large twisted black leaf
- 5 Pekoe Souchong the very bold, black leaf
- 6 Fannings the grainy very small leaf
- 7 Dust practically tea in powder form

Though the above grades are usually adopted, it depends on the estate as to whether certain of these are eliminated and only two or three grades manufactured. Some estates even make fancy teas such as Golden Tips, Flowery Orange Pekoe and Flowery Pekoe but these are not in such general use as the recognised standard grades.

These various grades are obtained from the tea just after it has been fired, and by systematic sowing through sieves of various sizes, generally machine driven, coupled with the passage of the tea through "breakers" or "equalisers," in which the coarser leaf is broken down to a uniform length.

The percentage of the various grades in relation to the aggregate of leaf plucked depends on the method of plucking and manufacture, but the following table will indicate the proportion turned out by the average estate —

	PER CENT
Broken Orange Pekoe ..	30
Broken Pekoe ..	40
Orange Pekoe, and Pekoe	20
Dust ..	3
Wastage ..	1

In the course of manufacture the green leaf loses weight to the extent of 75 per cent., so that one pound of green leaf gives only a quarter of a pound of finished tea. From this ratio can be estimated the enormous amount of work entailed in handling Ceylon's yearly green leaf crop of roughly 700 to 750 million pounds, which goes to make the annual export.

**GRINDING** — Green tea of which only a small quantity is manufactured in Ceylon consists of the freshly plucked green leaf which has been softened and made ready for rolling by a steaming process. A rotating cylinder is used for this. The steaming must be very short or the leaf gets a boiled cabbage appearance, and is then useless and yet it must be treated long enough to ensure the destruction of the ferment (enzyme). About  $1\frac{1}{2}$  to 2 minutes under a steam pressure of 20 lb. to the square inch is generally sufficient.

After steaming the excess of water is usually got rid of in a centrifugal machine, though much juice is lost at the same time. The leaf is then dried off as quickly as possible by methods and appliances similar to those used in the manufacture of black tea. The comparatively small quantity of green tea made in Ceylon (1,742,388 lb. were exported in 1924) finds its way mostly to America, but formerly to Russia where it is usually drunk plain and with a slice of lemon. It is graded as "Young Hyson," "Hyson No. 1," "Hyson No. 2" and "Gimpowder."

**PACKING.** After the tea has been graded, each grade is packed separately in wooden boxes lined with sheet lead. Almost all the woods found in the tea districts of India and Ceylon have been used at one time or another for making tea boxes, or tea shooks as they are called, the tendency of later years having been to employ cheaper and inferior woods. Steel chests were tried, but were abandoned. It may be mentioned that the wood of which

the chest is made is by no means a matter of indifference. Some timbers have the reputation of tainting the tea placed in them, giving it a sort of "cheesy" flavour, and quite a large number of timbers can only be used after long seasoning under water.

Chests are now always lined with thin sheet-lead, carefully soldered. It is of the utmost importance that the package should be as airtight as possible, since tea is exceedingly quick in absorbing moisture from the air (up to the amount of 16 to 17 per cent.), and then becomes rapidly mouldy and useless. Before packing, each grade of tea is always refined at a temperature of 180° to 200° Fahr., and packed while still just warm. As put in the boxes, it commonly contains from 2 to 3 per cent. of moisture.

#### IMPROVED METHODS OF PACKING

Owing to complaints made by the Institute of London Underwriters and the Government of Australia, the Ceylon Planters' Association has instructed planters always to pack tea in lead, as thin aluminium sheets and aluminium foil made partly of paper easily get damaged if touched by sea water, and to use Ceylon made tea chests only if they are double hooped and made of certain specified woods, as otherwise they get damaged badly in transshipment at Port Said. The packing conditions detailed above, the growing scarcity of good-class wood within easy reach, and the marketing at very favourable rates of the fairly well made Japanese *momi* chest have hit the Ceylon tea chest industry very much of late. Although the price of the patent chest is higher than that of the Ceylon chest, its greater durability and good appearance are so generally recognized that about 500,000 patent chests are now imported yearly, and there is room for further expansion.

**RESEARCH INSTITUTE.** — Ceylon planters have for some time past realised the need for a Tea Research Institute, and strong representations have been made to the Government to establish a research scheme on the lines of the rubber research scheme already working. It was pointed out in 1925 that, with fair support, a levy of 1-12th of a cent. on the

COLOMBO COMMERCIAL CO. LTD., Colombo.

Tea Tasting.

(See Letterpress, page 78)

pound of tea would provide sufficient funds to build and equip an up-to-date laboratory and to support a staff of six technical experts. The work of such a Research Institute would be very largely concerned with the scientific and economic use of manures, which are at present only imperfectly understood.

**TEA BLENDING AND TASTING.** While Ceylon tea is usually exported as received from the estates, it is rarely available to the consumer in its pure state, being usually blended at destination with teas from other countries in order to meet the demands of a large section of tea buyers.

Prior to the weekly auction the Colombo Brokers send samples of the teas in their catalogues to the local export houses. Both brokers and exporters have expert tea tasters on their staffs who have usually received their training with one of the large tea dealers in London. The exporter having bought the requirements of his firm at the auction, examines these purchases and allocates the various teas suitable to the requirements of his customers, who may be situated in many parts of the world. Here the expert must have information as to the properties of the water in the various centres, as soft or hard water and other variations will entirely alter the character of the liquor of the same tea. It is therefore necessary to be acquainted with the existing conditions in order to supply customers with teas suitable to their locality.

The accurate tasting of teas demands many years of experience, and the best judges are those who are naturally favoured with a sensitive palate. A tea taster in Ceylon has to taste anything from 1,000 to 1,200 teas a week, and this is repeated throughout the year, except during the holiday periods. The Colombo tea experts must also have a knowledge of the scientific side of the manufacture, in order to be able to report on the samples sent to Colombo for advice by the estates. In the tasting of tea, a weight of tea equal to a sixpenny piece is dropped into a small pot and about an eighth of a pint of boiling water is poured thereon. The lid is then placed on the top of the pot, and after standing from five to six minutes all the liquid is poured into a small china bowl of suitable size. The infused leaf (tea leaves) is tapped from the pot on to the lid, which is inverted for this purpose. The taster then starts his examination, testing the tea firstly by the liquor, secondly by the scent or brightness of the infused leaf, and thirdly by the appearance of the dry leaf of the sample. The combination of the points noticed enables the taster to form his opinion. Generally speaking, a tea may be judged by the brightness of the infused leaf, a dark or black infusion denotes a tea of pure quality, and irregular infusion shows defective manufacture, while a fine quality is indicated by a bright coppery colour.

**VARIATIONS IN FLAVOUR.** Ceylon tea varies considerably in flavour, according to the elevation and district in which the estate is situated, teas from the estates in the low-country have practically no distinctive flavour, while a choice flavour is produced by estates of medium elevation, and a very choice lemon flavour is characteristic of tea grown in certain areas and in districts over 6,000 ft. above sea-level.

**TEA CONSUMPTION.**—In 1921 the yearly consumption of tea in Australia was 8 lb. per person, then the highest in the world, and this was nearly equalled in 1923 by New Zealand with 7½ lb. According to recent statistics, however, the yearly consumption of tea in the United Kingdom has lately reached the record figure of 9 lb. per capita of population.

**TEA PRICES.** In 1886-87 the average price of Ceylon tea on the London market was 1 1½ per lb., from which date there was a gradual fall in price until 1905 when the lowest recorded average of 7d. per lb. was reached. During the War the price reached 1 ½ per lb., and after the Armistice soared to over 2 ½ per lb. the highest level being reached towards the end of 1924, when the price recorded was 2 1½ and the average touched 1 8½, the average for North Indian tea at the same time being over 2 ½. The duty on tea in Great Britain was reduced by 4d. a lb. in April 1924, but by the end of the year the advance in prices had exceeded the amount of the reduction in the duty.

**TEA SALES.** The public auctions of Ceylon tea both in London and Colombo are held on Tuesdays, and on an average between 1½ to 2 million pounds are listed at these sales. The greater portion of the tea shipped to London is sold in Mincing Lane to distributors who either re-pack the tea into small packets or send it to the provinces in bulk to be packaged there. A comparatively small quantity of Ceylon tea shipped to London is eventually re-exported to America or the Continent. The following table shows the export distribution of black and green teas from Ceylon in 1913, 1923 and 1924. It will be observed that while some countries have decreased their purchases (China is a notable instance) and Russia (which was a very large purchaser in 1913) only came into the market again in 1924 to a very small extent, the United States' share of exports has very nearly doubled itself.

	1913 lb.	1923 lb.	1924 lb.
United Kingdom	112,120,807	110,768,284	132,886,382
United States	8,841,880	15,550,430	16,309,413
Australia	21,203,148	10,515,635	15,460,636
Canada & Newfoundland	7,902,834	7,010,020	8,603,614
New Zealand	5,999,810	6,386,188	5,884,136
Russia	10,829,876		131,183
Continent of Europe	2,352,840	2,128,942	2,952,095
China (including Hongkong)	8,444,721	317,715	376,103
Other Countries	6,040,238	10,062,512	22,266,745

Total 192,176,160 181,929,731 204,930,307

**CONTROL OF INFERIOR TEAS.**—The Government of Ceylon recently appointed a Committee to frame rules and regulations with a view to controlling the export of inferior teas and their sale in Ceylon, a series of experiments being carried out by the Government Analyst to facilitate the work of the Committee. Strong efforts have been made by the Committee and various Planters' Associations to induce tea estate proprietors to instruct their employees to discontinue the sale of factory sweepings and the manufacture of inferior teas blended with other leaves and colouring matter, the police also having been instructed to prevent, as far as possible, the sale of rubbishy tea to passengers at Colombo harbour. The control measures will include the licensing of petty shopkeepers, who are the main consumers in Ceylon of factory sweepings.

**TEA TRADERS' ASSOCIATION.**—This important and flourishing organisation comprises all the well known business houses associated with the tea industry. The chairman or vice-chairman of the Ceylon Chamber of Commerce is the ex-officio Chairman of the Committee of the Association.

**WORLD PRODUCTION AND CONSUMPTION.**—The following table is of interest as showing the position which Ceylon occupies with regard to the other tea-producing countries of the world. The figures are those for 1923.

PRODUCTION	lb.
India	345,000,000
Ceylon	205,000,000
Netherlands East Indies	123,000,000
China (Exports)	70,000,000
Japan	23,000,000
Formosa	12,000,000
French Indo China	4,000,000
CONSUMPTION	lb.
United Kingdom	450,000,000
United States	95,000,000
Australia	52,000,000
Canada	40,000,000
India	37,000,000
Africa	32,000,000
European Continent	30,000,000
South America	10,000,000

**WORLD'S TEA EXPORTS.** Shipments from the chief tea-producing countries in 1923 and 1924 were as follow:

	1923 lb.	1924 lb.
India	345,170,000	343,700,000
Ceylon	182,000,000	205,000,000
Netherlands East Indies	100,620,000	122,870,000
China	82,120,000	68,320,000
Japan	25,500,000	22,268,000
Formosa		12,000,000

## REPRESENTATIVE TEA COMPANIES

### DODWELL & CO. LTD.

**Inception.**—Mr. George B. Dodwell, founder of the business of Dodwell & Co. Ltd., was for many years in Hongkong and Shanghai with the firm of Messrs. Adamson, Bell & Co. When that concern went out of business in 1891 Mr. Dodwell with Mr. Carhill, formed a partnership styled Dodwell, Carhill & Co., taking over the business interests of Messrs. Adamson, Bell & Co. and securing the services of many of that firm's employees.

**Development.** The new organisation was immediately successful, and in 1899 it became Dodwell & Co. Ltd. The history of the company is one of rapid growth and development, with the result that the firm is now directly represented in about fourteen commercial centres, while in many others it is served by agents. With a capital to day of £300,000, the company's ramifications extend throughout the Far East, and embrace practically every branch of trade and commerce.

**Activities.**—Messrs. Dodwell & Co. Ltd. are not only merchants, importers and exporters, but they are actively engaged in shipping, chartering, in all branches of insurance, in general agency business, in engineering and contracting, in the coal business, and many other departments of industry and trade.

**Colombo Business.**—The Colombo branch of the firm is one of the largest operators in the export of tea, desiccated coconut, coconut oil, mattress and bristle fibres, cocoa, cinnamon, cardamoms, papaine, and various other lines of produce to all parts of the world, while it acts as agents for

estate and milling interests established in the island, and holds a number of insurance agencies

**Produce Interests.**—For the rapid handling of produce of such a diversified nature as is dealt with by the Ceylon branch of the firm, extensive store space is an imperative necessity, and in the Point Stores property situated in Glenne Street Slave Island, this requirement is fully met. The main store is a two-storeyed building, providing 35 720 superficial feet, standing on the lake-side and in direct communication by both road and water with the harbour and railway. The advantages of such a geographical position in connection with the expeditious despatch of orders are very material. In addition to the main store, there are other commodious stores and godowns standing on the property to facilitate operations which are under the personal supervision of a resident European storekeeper, assisted by a separate clerical staff. In connection with their importing interests Messrs. Dodwell & Co. Ltd. have the sole selling agencies for such popular lines as Gerrard wire, largely used in the strengthening of packages for shipment and "carbo lastic," an asbestos liquid roofing which is filling a long-felt want in Ceylon.

**Estate and Milling Interests.** Messrs. Dodwell & Co. Ltd. act as agents and secretaries for the Ceylon Coconut Oil & Desiccating Co. Ltd., which owns the Hunupitiya Mills, Negombo. Andambalama Coconut Mills, Minuwangoda, Kelanganga Mills, Colombo. Ellundale Tea Estate, Maskeliya. Rambodde Tea Estate Ramboda and Nelella Coconut Estate, Kutangala. The firm also acts in the same capacity for the Karandipona Estates Company Ltd., producers of tea and rubber and in addition is selling agent for many well-known estate teas, including Ottery, Blair Athol, St. Leys, Epalawa, Handrookande, etc.

**Insurance and Shipping.**—The insurance agencies held by Messrs. Dodwell & Co. Ltd. are those of the Union Insurance Company of Canton Ltd. (marine and fire) and the Union Assurance Society Ltd. (fire), while the local agency of the Dodwell Line of steamers from the Far East to America is naturally with the Colombo Branch of the firm under notice.

**Branches.**—The company has branches at the following centres: Hongkong, Canton, Foochow, Shanghai and Hankow, in China; Kobe and Tokio, in Japan; New York, San Francisco, and Seattle, in the United States; Vancouver, in British Columbia; and Antwerp, in Belgium. Messrs. Barry & Dodwell Ltd. are the representatives at Chungking, in China.

**Management.**—At the Colombo branch, Messrs. Percy Ball and Henry Herbert Dulling are joint managers, while Mr. Robert Shaw is head of the Tea Department. Mr. George B. Dodwell, founder of the business, is chairman of directors in London.

**Offices.**—Head Office: Exchange Chambers, 24, St. Mary Axe, London, E.C. 3. Colombo Branch Offices: National Bank of India Building, York Street, Fort Stores, Glenne Street, Slave Island.

**Cables.**—"Dodwell," Colombo. Codes: A.B.C. (5th and 6th Editions), A 1 Code 1888 Edition, Lieber's, Bentley's, Standard Shipping, Scott's 10th Edition, Western Union and Private.

(See illustrations, pages 73, 74.)

COLOMBO COMMERCIAL CO. LTD., Colombo.

Packing.

(See letterpress page 78.)

**COLOMBO COMMERCIAL CO. LTD.**

**Inception.**—The Colombo Commercial Co Ltd was founded in London in 1876 to acquire estates in Ceylon for the purpose of cultivating, curing, and exporting coffee.

**Development.**—In the year 1875 the export of coffee from Ceylon reached its greatest volume, but in the succeeding years there was a decline in this former staple industry owing to the spread of the coffee-leaf disease. As a consequence the Colombo Commercial Co turned its attention to the growing of tea for export, with the result that it now ranks among the largest and most important concerns so engaged in the colony.

**Capital.**—The capital of the company is £500,000.

**Activities.**—The Colombo Commercial Company is not only concerned with the cultivation of tea, but it deals also in rubber and various other products of the island. In addition, it acts as agent for a number of owners of estates, and purchases largely for export from the teas offered in the local market. It also carries on a very large engineering business in the manufacture of machinery for the complete equipment of tea and rubber factories, both on its own estates and on other properties.

**Fertilizing Department.**—This department supplies large quantities of fertilizer of all kinds which are used in the cultivation of tea, rubber, coconuts, etc., in Ceylon. Of these fertilizers, many are imported from Europe, while others are obtained locally and mixed to meet the various requirements of the estates.

**Tea Buying Department.**—This is an important branch of the company's business, four expert tea-tasters being engaged in the work of selecting teas from those put up for sale at the weekly auctions in Colombo. These teas are then blended, packed, and exported by the company to all parts of the world. The volume of trade controlled by this purchasing department is now very considerable and steadily increasing, orders

being received from Australia, America, South Africa, the United Kingdom and Europe, and this steady expansion of the business done by the department, which is quite distinct from the estate agency section, is ample evidence that the company is in a position to carry out its important operation satisfactorily. On adjoining premises, the Colombo Lead Mills roll imported pig lead into sheets, from which the linings of the tea chests are cut, and there is therefore no delay in the packing and shipment of all orders received.

**Agencies.**—The company acts as agents in Colombo and London for Colombo Lead Mills Ltd, Ellawatte Ceylon Tea Estates Ltd, Hunasgeria Tea Co Ltd, Mayheld (Dimbula) Tea Co of Ceylon Ltd, Moolova Estates Ltd, Ouvah Ceylon Estates Ltd, Rani Travancore Rubber Co Ltd, Spring Valley Ceylon Estates Ltd, Agra Tea Co of Ceylon Ltd, Baddegama Estate Co of Ceylon Ltd, Bank of Uva Ltd, Cullen Estates Ltd, Kalkudah Coconut Estate Co Ltd, Pitakande Tea Co of Ceylon Ltd, Rye Estates Co of Ceylon Ltd, London and Lancashire Insurance Co Ltd, London and Liverpool, Thames and Mersey Marine Insurance Co Ltd, London.

The Colombo Commercial Co is sole agent for Birkmyre Bros, Calcutta (hessians and gunnies), "Carrimore" Trailers, C C C Tea Rollers (rollbreakers and desiccators), David Bridge & Co (rubber machinery), "Day Elder" lorries, Gillingham "Red Hand" cement, INI pruning knives, Leyland Motors Ltd, Savage's tea cutters, Solignum wood preservative, Southwark cotton belting, Tangyes Ltd (oil and suction gas engines), Venesta Ltd, "Vulcan" disinfectant, W Gunther & Sons' turbine pelton wheels.

**Directorate.**—Messrs Alfred Brown (chairman), A Young (managing director), J G Wardrop, W Shakspeare, and A A Prideaux, Secretary F A Kup.

**Bankers.**—Bank of Scotland, 30, Bishopsgate, E C 2.

**Offices.**—Union Place, Slave Island, Imperial Bank Building, Fort London office, Thames House, Queen Street Place, E C.

**Branches.**—At Bandarawela, Badulla, and Kandapola. The fertilizer works are at Hunupitiya.

(See illustration, page 77.)

**BOSANQUET & CO. LTD.**

**Inception.**—This firm, which is one of the oldest in Ceylon, was founded some 75 years ago by the late Mr Geo Wall.

**Tea Industry.**—The company has always been closely identified with the planting industries of the island, being at first concerned with the cultivation of coffee and cinchona. In the late seventies, when the coffee industry failed owing to leaf disease, the firm took up tea-planting with such success that it now owns and controls some of the finest tea estates in Ceylon, and in addition possesses large acreages under rubber and coconuts.

The company is also actively engaged in the purchase of tea at the weekly auctions for shipments to all parts of the world. This class of business was, in fact, being conducted in 1881, the company having been one of the first shippers of Ceylon tea to Australia. Orders are also executed for rubber, cocoa, and products of the coconut for shipment abroad.

**Import Interests.**—In addition to their export business, Messrs Bosanquet & Co Ltd have large import interests, especially in piece goods, these interests dating back to the days before the opening of the Suez Canal, and when consignments used to be brought to the island in sailing ships. Imports are also made of high explosives, of which large quantities are required in the plumbago mining industry, and "Dicks" balata belting.

**Other Interests.**—In their capacity as private bankers, Messrs Bosanquet & Co Ltd act for absent proprietors and administrators of deceased estates.

BOSANQUET & CO., Colombo.

1. Tea Sample Room.

2. Preparing Shipments for all parts of the world.

**Agencies and Correspondents.**—The company is agent for Messrs Nobel's Ltd. (high explosives), "Dicks" balata belting, and amongst the firm's correspondents are Messrs Bosanquet Traill & Co., Antony Gibbs & Sons, Matheson & Co., London, Glazebrook Steel & Co. Ltd., Thos. G. Hill & Co. Ltd., Ashton Hoare & Co. Ltd., Manchester, Gibbs Bright & Co., Australasia, Gibbs & Co., South America, Jardine Matheson & Co., New York and Shanghai, D. & S. S. Rejwan, Bagdad, The World Marine Insurance Co. Ltd., British Traders Insurance Coy. Ltd., Northern Assurance Co. Ltd.

**Directorate.**—Messrs D. W. Watson, G. B. Traill, W. R. Mathew, H. J. Bromley, and G. O. Hunt Secretary Mr L. P. Lerway Day

**Offices.**—National Mutual Building, Fort, Colombo Cables "Bosanquet," Colombo Codes A.B.C. and Bentley's

**London Office.**—Bosanquet Traill & Co., 4, Market Buildings, 29, Mincing Lane, E.C.

**Bankers.**—Mercantile Bank of India Ltd

#### LEE, HEDGES & CO. LTD.

**Inception.**—Founded in 1858 as Lee, Hedges and Co., this firm was incorporated as Lee, Hedges & Co. Ltd in 1917

**Capital.**—The authorised capital of the company is Rs 1,500,000 the paid up capital being Rs 1,100,000, and the general reserve, Rs 100,000

**Activities.**—Messrs Lee, Hedges & Co. are managing agents of tea, rubber, cacao, and coconut estates, steamship and insurance agents, tea merchants, exporters and importers, and attorneys for absentee proprietors

**Export Trade.**—The firm is one of the oldest of the larger European houses in Ceylon, and does a very extensive business in tea, it is also particularly well placed to handle orders for cinnamon and rubber. Other exports are plumbago, fibres, and coconut products

**Import Trade.**—Messrs Lee, Hedges & Co. carry on a large import trade, principally in timber, teak, powellized karri and jarrah, steel joists, galvanized iron, cement, hoop iron and estate requisites, asbestos cement roofing and pipes, "Gripoly" belting, "Atlas" preservatives and paints, explosives and cartridges

**Tea and Rubber Agencies.**—As managing agents and secretaries, Messrs Lee, Hedges & Co. Ltd represent the following important tea and rubber companies: The Vogan Tea Co. of Ceylon Ltd., the Hatton Tea Co. Ltd.; the Kanapediwattie Tea Co. Ltd., the Pelmadulla Valley Tea and Rubber Co. Ltd., the Honiton Rubber Co. Ltd., the Lanka Rubber Co. Ltd., the Marishena (Kalutara) Rubber Co. Ltd.; and the Kandy Rubber and Tea Estates Ltd

**Insurance Agencies.**—The company is also agent for The Commercial Union Assurance Co. Ltd.; the Union Assurance Society of Canton Ltd., Underwriters at Lloyd's; the Imperial Live Stock and General Insurance Co. Ltd.; the Standard Steamship Owners' Protection and Indemnity Association; the Standard Steamship Owners' Mutual Freight, Dead Freight, Demurrage and Defence Association Ltd.; the Standard Steamship Owners' Mutual War Risks Association Ltd

**Shipping Agencies.**—The company is agent for the Pacific Mail S.S. Co.; Societa Nazionale di Navigazione; Dollar Steamship

**Other Agencies.**—Among other companies represented by the firm are The State Saw Mills Dept., Government of Western Australia, the Morgan Crucible Co. Ltd., Bells United Asbestos (India) Ltd., Curtis's & Harvey Ltd., Atlas Preservative Co. Ltd., Gripoly Belting Co., etc.

**Directors.**—Messrs C S Burns, A S Berwick, A P Woldock, J M Pittendigh and Major J W Oldfield, O B E., M C Secretary Mr J C Robinson

**Offices.**—Head Office "Hedges Buildings," 74, 75, and 76 Colpetty Road, Colombo where are also situated the company's Colpetty mills, tea, etc., factories and warehouses, covering over 5 acres. It is anticipated that in the near future Colpetty Road will be widened to the same extent as Colpetty between the Galle Face and Turret Road. When this takes place it will give the firm a fine roadway on which it will have a considerable frontage. The shipping and insurance business of the company is transacted at the city branch 12 Queen Street, Fort, Colombo.

The London representatives of the firm are Messrs Grace Bros & Co. Ltd. bankers, 144, Leadenhall Street, London, E C 3, and The British & Foreign Machinery Co. Ltd., Friars House, 30-41, New Broad Street E C 2, and there are agents and correspondents in all the principal cities abroad.

**Cables:** "Hedges," Colombo. Codes Bentley's Complete Phrase A 1 A B C 4th Edition, Lieber's, Western Union, Marconi International, McNichol's and Private.

**Bankers:** National Bank of India Ltd.

#### LIPTON LTD.

**Activities.**—By actively associating himself many years ago with the tea industry of Ceylon Sir Thomas Lipton gave practical force to the principle on which the tea business of that very important firm is conducted—that of furnishing the consumer with the leaf direct from the estate. As an outcome of that far-sighted enterprise one property has been added to another until the company possesses a very considerable extent of tea land in the island.

The fine advertisement Messrs Lipton Limited have given to the Ceylon leaf is largely responsible for the present flourishing condition of the trade. No other undertaking has done more to popularise the tea of the island, or has won for it a higher reputation in the world's markets.

**Capital.**—The capital of the company is £1,250,000, in ordinary shares.

**Estates.**—The land, as is necessary for the best tea production, is situated at a high elevation, the principal estates being in the Haputale district, in the province of Uva, an upland country with a dry invigorating air, exceptionally favourable for the planting of tea of the highest quality. In this region is the famous Dambatenne group of estates, consisting of Dambatenne, Maha Dambatenne, Bandara Eliya, and Sunn Peak, the total acreage being 1,535, of which 1,251 acres are under cultivation. Another and even more extensive property in Haputale is the Monerakande group, comprising Leymasotte, Nhakettia, and Upper Lyegrove. Here the acreage is 1,808, and of this area 1,432 acres are under cultivation. There are also in the Haputale district the Keenipitiya

HENDERSON & CO., Colombo.

1. Tea Sample Room.
2. Showing Tea ready for Shipment.

estates, with a total acreage of 634, of which 352 acres are under tea, and the Oakfield estate with an area of 1,060, 430 acres of which are under tea.

Among other estates owned by the company are the Pooprassie group, in Pusellawa, with an acreage of 1,365, of which 1,120 are under cultivation, the Karadagalla estate in Dumbura, of 160 acres, and the Panilkande estate in the Morawak Korale, with an area of 852 acres, of which 750 acres are under cultivation.

**Cultivation.**—All the estates are under the supervision of experienced planters, and cultivation is conducted on thoroughly approved scientific lines, the equipment being of the most up-to-date kind.

**Other Estates.** In addition to their very extensive tea estates, Messrs Lipton Ltd are largely interested in rubber and cocoa, and also conduct a considerable business as general produce merchants and importers of Monu tea boxes and all estate goods.

**Agencies.**—Among the companies for which Messrs Lipton Ltd act as agents are Lipton Ltd, London, etc (high class provisions), the Manufacturers' Life Insurance Co., Western Assurance Co. (marine), Guardian Assurance Co. Ltd., Ocean Accident and Guarantee Corporation Ltd., Charles Macintosh & Co (N.A.P. tyres), R & J Hill (tobacco and cigarettes), and Quirk Barton's tea lead.

**Directorate.**—Sir Thomas J. Lipton, Bart., K.C.V.O. (chairman), Messrs Alfred Bowker, C.P. Tomlin (managing director), and H.A. Snelling Secretary. Mr S.B. Sledmere.

**Offices.**—Maddema Mills, Cinnamon Gardens, Colombo. Cables "Lipton," Colombo.

#### HENDERSON & CO.

**Inception.**—This firm of export merchants and estate agents was founded by Mr J.A. Henderson, who has been in business in Ceylon for over thirty years.

**Activities.**—Messrs Henderson & Co were amongst the pioneers of the tea trade with Australia, and have done much to popularise Ceylon tea in that market. They have also taken an active part in the opening up of lands in connection with rubber, tea, and coconuts. The cocoa crop produced in Ceylon, though not large, is of good quality, and is extensively handled by this firm; while its operations are fairly large in spices, such as cinnamon and cardamoms. Other exports of the company are copra, desiccated coconut, coconut oil, essential oils, etc., and the firm has agents or correspondents in all the principal business centres of the world.

**Agencies.**—Messrs Henderson & Co. act as agents for the following produce companies. The Dalkeith (Ceylon) Rubber Estates Ltd., Pindemoya Rubber & Tea Estates Ltd., Allerton Estates (Ceylon) Ltd., Kudaganga Rubber Co. (of Ceylon) Ltd.; Trafford Hill Rubber Estates Ltd.; Walagama Rubber Co. Ltd.; Balahela Rubber Co. Ltd.; Richlands Ceylon Tea Estates Ltd.; Hangranoya Tea Estates Ltd.; Tilton (Ceylon) Tea Estates Ltd.; Kirivaula Coconut Plantation Co. Ltd.; Danzil Estates Co. Ltd.

The firm is also agent in Ceylon for marine and fire insurance offices, such as the Union Marine Insurance Co. Ltd.; State Assurance Co. Ltd.; Queensland Insurance Co. Ltd.; Western Insurance Co., and others.

**Partners.**—Messrs J A Henderson, H J Hanscomb, and O K Logan

**Offices.**—Chartered Bank Building, Colombo Tea packing and packeting factory Nilwatte Mills, Colombo

**London Correspondents.**—Messrs J A Henderson & Co Ltd, "Ocean House," 24-25, Great Tower Street, E.C.3

**Cables:** "Quality," Colombo

**Bankers:** The Chartered Bank of India, Australia and China, and the National Bank of India Ltd, Colombo

#### HEATH & CO.

**Inception.**—The business of Messrs Heath & Co was founded in China in the year 1862 by Mr Rodewald, who was subsequently joined by Mr A H Heath, the firm then being for many years styled Rodewald & Heath

**Development.**—With the extension of the tea trade in Ceylon and India the firm opened branches in those countries, the Colombo branch being established in 1896, and that at Calcutta in 1904, while an office was also established in Batavia in 1920. In 1900 Mr Rodewald retired, and the business was then transferred to Messrs A H and A R A Heath, since which date it has been carried on under the name of Heath & Co

**Activities.**—The company is wholly concerned with the export of tea, and the expansion of its business now involves the despatch of orders to almost all the countries of the world

**Partners.**—Messrs A R A Heath, G L Lyon, and C H Griggs

**Offices.**—Colombo branch No 9 Park Street

**Bankers.**—Chartered Bank and National Bank

**Cables.**—"Heather," Colombo Codes Bentley's, A B C 4th, 5th, and 6th Editions

**MACY, COCQ & MENNELL LTD.**—Established as a buying office in Colombo by an amalgamation of the interests of three overseas organisations, this firm commenced operations in 1923. Although the chief interests of the company are in the purchase of tea for export to all markets of the world, it also does a certain amount of buying in other Ceylon primary products, the most important of which are rubber, desiccated coconut, cinnamon, citronella oil, cocoa and cardamoms. The firm acts in Ceylon for and exports on behalf of the following well-known organisations, with all of which it has been intimately connected since its inception: Oliver C Macy Inc, 98, Wall Street, New York, U.S.A.—one of the largest tea importers in the United States; R O Mennell & Co, St Dunstan's Buildings, St Dunstan's Hill, London, E.C.3—a firm whose name has long been connected with the tea business in Great Britain, and which is well-known both as an importer and exporter of the product; C H R Cocq, P.O. Box 140, Batavia, Java, Dutch East Indies—an important firm of general merchants handling for export most Java products, its principal operations being in tea and rubber. The company's bankers are The Mercantile Bank of India Ltd; the cable address is "Macycocq," Colombo, and the codes used are Commercial, Bentley's, A.B.C. 6th Edition, Voller's 12 Figure System, and Private.

JAMES FINLAY &amp; COMPANY LTD

1. General view of Godowns
2. View of Tea Godowns

**JAMES FINLAY & CO. LTD.**

**Inception.**—Founded by Mr James Finlay in Glasgow about the year 1750, it was not until 1876 that the firm turned its attention to India, being one of the first houses in Scotland to open up direct connection with that country, which has since become its great trading centre.

**Development.**—After Mr John Muir joined the firm, it was known in the East under the style of Finlay Muir & Co., retaining in Europe the name of James Finlay & Co. In 1907, however, the concern was formed into a private limited company, and the style James Finlay & Co Ltd became general.

**Agencies.**—The following agencies are held by the firm in Ceylon:

**TEA AND RUBBER LSTATLS.** Consolidated Tea & Lands Co Ltd, Amalgamated Tea Estates Co Ltd, Kanan Devan Hills Produce Co Ltd, Anglo-American Direct Tea Trading Co Ltd, Pelmadulla Rubber Co Ltd, Mahawale Rubber Co Ltd, Wellandura Tea & Rubber Co Ltd, and Ceylon Land Development Co Ltd. These Companies represent a total area of 34,564 acres, of which 25,872 acres are under cultivation.

**SHIPPING.** Clan Line Steamers Ltd, Osaka Shosen Kaisha Ltd, Houston Line of Steamers, and the Scottish Shire Line of Steamers.

**INSURANCE.** South British Insurance Co Ltd, National Insurance Co of Great Britain Ltd, Glasgow, United Insurance Co Ltd, Sydney, Australia, Ulster Marine Insurance Co Ltd, Osaka Marine & Fire Insurance Co Ltd, Automobile Insurance Co Ltd, Insurance Co of North America, Samarang Sea & Fire Insurance Co Ltd.

The firm also acts as agents for Messrs Morrison, Pollexfen & Blair Ltd.

**Management.**—The manager in Ceylon is Mr George Turnbull, while the staff comprises nine Europeans and 150 native clerks, and there are 200 at the mills.

**Branches.**—London, Liverpool, Bombay, Karachi, Colombo and Chittagong. Head office in the East: Calcutta.

**Offices.**—Head office: Glasgow. Colombo office: Queen Street. Fort Cables: "Mercator," Colombo. Codes: Scott's, A 1, A B C (5th and 6th Editions), Western Union, Broomhall's Rubber, Marconi, Bentley's, Watkins.

## MINING AND OTHER INDUSTRIES

**C** EYLON has no very great mineral wealth, and tea production overshadows its many industries. The only serious mining in the country is for plumbago, or graphite, mica, and gems. Though other minerals, some of them valuable, are known to exist, no real export trade in such has yet been developed. Between two and three hundred graphite mines are in active operation. Mica occurs in veins near the crystalline limestone, and good sheet mica is valuable, being used for insulation and other purposes. Monazite, ilmenite (titaniferous iron-ore) and zircon, which contain the rare metal thorium, used in the manufacture of gas mantles, are known to exist in some quantities, but only monazite has as yet been exported.

**FISHING INDUSTRY.** The marine fisheries of Ceylon are carried on entirely by local fishermen in their catamarans and outrigger canoes. As a rule, the appliances used are primitive, the most effective of them being the long lines. In the inshore waters nets of various kinds are utilised, but in the open sea line fishing only is practised with any success. Properly exploited, the fishing industry of Ceylon offers great possibilities. About half of the 7,000 square miles which the fisheries cover is within reach of the railway, and here the fish are put on ice and sent to the big centres of population. The fish caught in the other half are either consumed locally or are dried for sale in other parts of the island. (See also "Pearl Fisheries.")

**MANUFACTURING INDUSTRIES.**—Industrial and manufacturing interest in Ceylon are connected in the main, with the production of tea, copra, coconut oil, rubber, and cocoa. In addition, there are a few engineering works in the island engaged in the manufacture of estate machinery on a small scale, and in repair work for the shipping. Rolling mills also prepare lead for tea chests, while the low price of rubber prior to 1925 directed attention to the manufacture and supply of rubber soles for boots and shoes. In 1924 the first sisal hemp factory to be established in Ceylon was opened by Sir William Manning, the Governor, at Maha Illupalama; it is equipped with machinery capable of treating 2½ tons of raw hemp leaves per day. This is the

outcome of a sisal growing venture which controls an area of 2,040 acres, and it seems probable that more land in the neighbourhood may soon be bought for the same purpose. Among thriving indigenous trades are the carpentry, cabinet work and wood carving of Moratuwa, the basket and hat industry of Kalutara, the brass and silver work of Kandy, the rattan (cane) work, in the hands chiefly of the Malays of Colombo, the tortoise-shell ware of Galle and Cotta, the pottery of Kelaniya, and the gold filigree work of Jaffna.

In 1924 there were 1,412 factories of all kinds in Ceylon, an increase of 43 on the number recorded in 1923. In the fifteen years preceding 1923 there was an increase of 344, or 33.50 per cent. Steam power is extensively used.

#### DESICCATED COCONUT INDUSTRY

—The desiccated coconut industry was started in the colony in the early eighties. Originally it was in the hands of a few European firms, to whom orders came from Europe and America, but gradually the Sinhalese took to its manufacture, and mills are now scattered over the Western and North-Western Provinces, and, to some extent, the Southern Province. The manufacture of "D.C." as it is called for short, needs specially selected and well-matured nuts, and those which yield over 350 lb. of desiccated coconut per 1,000 are much sought after. The shelling of the nuts is largely done by hand with a light hatchet, though in some mills the circular saw is employed to do the work. Sinhalese shellers are very expert in the use of the hatchet and are able to shell 2,000 nuts a day.

**OIL AND FIBRE.**—The expression of coconut oil by means of the "chekku," or bullock mill, has been carried on in Ceylon from comparatively remote times. The chekku deals with a load of about 30 to 40 lb. of copra, a day's work of six full charges resulting in about 1½ cwt. of oil, the residue being called poonac, and sold for manure. These crude mills are now being superseded by up-to-date oil extracting machines, though in many parts the chekku is still at work. In modern oil factories there is first a macerating process, and then the expression of the oil by powerful presses. Sometimes there is first cold pressure for the best quality of oil, and afterwards pressure with heat. The oil is thereafter left standing to clear by sedimentation, or is clarified by means of pressure fillers.

From the husks of the coconut a growing industry has been developed in the making of coir fibre, and of recent years a number of fibre mills have been set up in the coconut growing districts, chiefly round about Colombo, Negombo, and Kurunegala.

**PEARL FISHERIES.**—The Pearl Banks of Ceylon are situated in the Gulf of Manaar, between Manaar and Puttalam, and they appear to be worked under much the same conditions as they were 2,000 to 3,000 years ago. A notable feature of these fisheries is their uncertainty and their intermittent periods of activity, a number of blank years succeeding the prosperous ones. The record year was 1905, when 81,580,716 oysters were fished, giving an actual Government revenue, apart from the divers' share, of Rs 2,510,727 (1167/381). From 1908 to 1921 there was no fishing, but a new series was expected to begin with 1925.

Edible oysters, bêche-de-mer and chank (the shells of which are used in the manufacture of cheap bracelets) are also fished for, but their value as commercial products has declined of recent years.

**PLUMBAGO.**—Known elsewhere as "graphite" and "black lead," this mineral was first described as existing in Ceylon by Robert Knox, the historian, in 1681. Ceylon plumbago consists mostly of carbon, the proportion of impurity being very small. The graphite occurs as a true vein mineral, the veins generally following natural planes of division in the country rock quartz, gneiss, or diabase. The plumbago veins in Ceylon on the surface are very uncertain and rarely run for a great distance, but pinch out. It followed, they may again widen, while sometimes small veins lead to a pocket of pure plumbago.

**DISTRIBUTION.**—The occurrence of plumbago in Ceylon is almost invariably associated with quartz, mica, and pyrites of various descriptions, though large and continuous veins have been discovered in the low country in the crystalline limestone. The oldest regular working mines in the island were in the Pasdum and Raigam Korles of the Kalutara District, and some in the Kelani Valley of the Western Province. Important discoveries were made about 50 years ago at Ragedera, Maduragoda, Pitakande, and Meepitakande, in the Kurunegala District, less valuable mines being worked with varying success in several other districts in the Western, Southern, and Sabaragamuwa Provinces.

**METHOD OF MINING.**—In several mines up-to-date machinery has been established, though the method of mining adopted is one peculiar to Ceylon. In deep mines (800 ft.) artificial ventilation has been installed, while "adits" and tunnels from the base of a mining hill have been successfully opened to draw off the water from troublesome mines and run trolleys for the transport of rubble and mineral. The labour employed in the mines is Sinhalese throughout, the

skilled labour always commanding a high wage, and the work of timbering, mechanical hauling, and running the pumping plant is all controlled by Sinhalese capable workers. The output of the mines is transported to Colombo by rail, paddle boat (flat-bottomed river boats) or bullock cart for the purpose of curing or rendering it fit for exportation. Very few mines cure thoroughly to standard market grades at the pit head.

**OUTPUT.**—In the year 1901 the world's output of graphite was nearly 77,100 tons, valued at about 1785,000. Of this Ceylon supplied 29 per cent in quantity and 80 per cent of the value, clearly indicating the superior value of the Ceylon commodity and its use for the best purposes. The high water mark of production was reached during the Great War, in 1916, when 668,216 cwt. were exported from the colony, valued at Rs 22,494,999. Since then, production and exportation have declined, the new deposits discovered in Madagascar having made that island a serious rival to Ceylon in the world's markets. In 1924 the export was 193,017 cwt. valued at Rs 1,329,125 as against 213,384 cwt. valued at Rs 1,518,877 in 1923.

**STANDARD GRADES.**—Plumbago has been standardised into well-known qualities and grades. Large lumps, ordinary lumps, chips, dust, and flying dust are the recognised grades, while X, XB, B, BB, and P are the established qualities.

**PRECIOUS STONES.**—The gems of Ceylon have become proverbial. Though no diamonds have been found, the country near Ratnapura, the City of Gems, is rich in sapphires, beryls, rubies, garnets, cat's eyes and moonstones. The largest find of sapphires ever made in Ceylon was recorded from Palamadulla in 1924, some of the gems weighing as much as half a pound. Generally speaking, all these gems are found in old beds of rivers or in existing rivers, and mining takes the form of sinking pits and washing the "illam," or gem-bearing gravel. In the rivers dredging by hand is the usual process. The Sinhalese take up gemming only at certain seasons, usually from about November to May or June. The cutting is nearly all done by Moors, who use the same primitive apparatus as their ancestors did 60 years ago.

**SALT.**—The local production of salt in Ceylon is considerable, the principal centres of distribution being Hambantota, Puttalam, Trincomalee and Elephant Pass. The total yield for the island in 1923 was 565,576 cwt., against 779,943 cwt. in 1922. The Government saltworks are at Elephant Pass (Jaffna District) and Palayi (Puttalam District), where the method of manufacture is similar to that employed in the large saltworks in the south of France.

#### PHYSICAL GEOGRAPHY

EGYPT, the land of the Pharaohs and the cradle of one of the oldest civilisations in the world, lies in the north-east corner of the Continent of Africa. It is bounded by the Mediterranean Sea on the north, by the Sudan on the south, by the Red Sea on the east, and by Cyrenaica and the Libyan Desert on the west. By far the greater part of political Egypt is desert, the inhabited and cultivated portion being confined to the Valley of the Nile and the fan-shaped Delta in the extreme north. Gradually, however, by reason of the improved means of irrigation, the desert area is being put

under cultivation. In form Egypt (that is, the Nile Valley) somewhat resembles a lotus, the Nile from Cairo to Assuan representing the stem and the Delta the flower.

**AREA.**—The total area of Egypt is roughly between 350,000 and 400,000 square miles, its length being about 620 miles and its breadth 600 miles. The greater part of this large area, however, is sandy desert, the cultivated and settled portion (that is, the Nile Valley and Delta) covering only some 12,000 square miles, or about one third of the extent of Ireland.

**COAST.**—The coast line of Egypt, which is about 1,300 miles in length, is washed on the north by the Mediterranean and on the east by the Gulf of Suez and the Red Sea. The coast of the Delta is very flat and sandy, no rocks being found until the district to the west of Alexandria is reached. In the

Gulf of Suez and the Gulf of Abakah, which bound the Sinai Peninsula, the sea in many places washes the feet of the mountains that stand on their shores. Along the Red Sea coast the shore is usually sandy. Alexandria, Port Said and Suez are the chief ports, on the Mediterranean coast are Sollûm and Matrûh, on the Red Sea, Kuser, Safrâgh, and others, and in the Gulf of Suez the small harbours of Tor, Abu Zanimah, Ganusah, Burgadah, etc.

**DESERTS.**—On each side of the Nile Valley, Egypt consists solely of the two great deserts known as the Eastern Desert and the Libyan Desert, the latter being one of the most trackless and inhospitable regions of the world. Except in the oases, nothing grows there. The Arabian or Eastern Desert contains several high mountains, notably Gabaî Shayib (7,200 ft.), Gabaî

Hamata (6,500 ft.), and Gabal Shandib (6,300 ft.). Here wells and springs are found in many places, also patches of stunted shrubs which are nourished by subterranean springs.

There are few parts of the world more savage and cruel in aspect than the northern desert of the Sudan—the flank, as it were, of the Great Sahara. Here are to be seen nothing but vast stretches of sand and ranges of barren rocky hills, waterless and utterly devoid of any sign of life. Only at evening, as the sun sets behind the gaunt hills that border the Nile valley far to the westward, the marvellous colouring of a desert sunset makes an unforgettable picture. If the traveller be fortunate enough to see this dead land by moonlight he will realise to the full the awe and mystery of the great desert.

**DIVISIONS.** In ancient, as in modern times, Egypt was always divided into the Upper and the Lower, or the Southern and the Northern country. A third great division the Heptanomis, was introduced at the time of the geographer Ptolemy. It is now known as Middle Egypt, or Wustân. From the earliest times Egypt was also divided into a number of *nomes*, or departments, varying in different ages from four to fifty, the usual number being 42. The present division of the country is into fourteen *mudriyehs*, or provinces, each province being sub-divided into districts. (See also under "Administration.")

**ISLANDS.** There are a number of islands in the Gulf of Suez and the Red Sea of which the principal are Jubal Shadwan, Kafatin and Zeberged, or St. John's Island. On some of them are lighthouses with their keepers, but there is no other permanent population. Borings for petroleum have been undertaken on the islands of Gaysuni, Mulhaimet and Jubal, near the south end of the Gulf of Suez, but without success. On Zeberged, or St. John's Island situated in the Red Sea, peridots have been successfully mined during recent years.

**LAKES.**—The lagoons or lakes of the Delta, going from west to east, are Mareotis (Marut), Edku, Burlus, Abukir, and Menzala. The land separating them from the Mediterranean is nowhere more than 10 miles wide, and in some places not more than 200 yards. All these lakes are shallow and the water in them is salt or brackish. Lake Mareotis, which bounds Alexandria on the south side, varies considerably in area according to the rise or fall of the Nile, when at its highest, the lake covers about 100 square miles. In ancient times Mareotis was navigable and was joined by various canals to the Nile. The country around was cultivated and produced the famous Mareotic wine. Like all the Delta lakes, Mareotis abounds in wild fowl. Lake Menzala covers over 750 square miles, and is by far the largest of the Delta lakes.

A chain of natron lakes (seven in number) lie in a valley in the western desert, 70 to 90 miles west of Cairo. From these lakes are obtained carbonate and muriate of soda. In the Fayyûm Province further south is the Birket el-Kerun, a lake lying below the level of the Nile, some 30 miles long and five miles at its broadest part. Kerun is all that is left of the Lake of Moeris, an ancient artificial sheet of water which played an important part in the irrigation schemes of the Pharaohs.

**NILE (THE).**—The Nile, the longest river in Africa and, in some respects, the most wonderful river in the world, is intimately associated with the ancient and modern history of Egypt, which country for all

practical purposes is confined to the valley watered by the great stream. Rising in the Tanganyika Territory as the Kagera, it is known under different names until it flows through Southern Sudan as the Bahr-el-Jabel and takes the name of the White Nile between Lake Nô and the town of Khartoum, having been joined by the Bahr-el-Ghazal and Sobat Rivers. At Khartoum the Blue Nile, the river 660 miles in length which rises in the mountains of Abyssinia, joins the White Nile, which from that point onwards to the sea becomes the Nile. About 200 miles north of Khartoum the Atbara flows into the Nile after a course of about 790 miles. North of the Atbara junction the Nile receives no other tributaries, but flows northward to the sea in a solitary stream and enters the Mediterranean by two mouths the Rosetta and Damietta. The other five months which existed in antiquity have long ago silted up, and the triangular-shaped area enclosed by the two streams forms the Delta, the most fertile part of North Africa. The total length of the Nile is 3,600 miles; it is navigable throughout except at the six cataracts between Khartoum and Assuan, and after leaving the Albert Nyanza.

**CATARACTS.** These cataracts vary in length from the one mile of the Sixth Cataract to the 125 miles of the Second Cataract, whilst the drop of the river ranges from 20 feet at the Sixth to 213 at the Second. Near the Second Cataract, at Samnah, are the rocks upon which Lepsius discovered the Nile gauges cut by order of the kings of the XVIIIth dynasty, about 2,300 B.C. and these show that the Nile flood there recorded was 26 feet higher than any flood of to-day.

**INUNDATION.** The chief physical peculiarity of Egypt is the fact that the whole agricultural watershed depends upon the Nile and its annual inundations, not upon rain. The regular increase of the Nile every year is a phenomenon which has excited the wonder of all writers upon Egypt from the earliest times. This rise is due to the rainfall in Abyssinia, which causes the Blue Nile and the Atbara to come down in flood. In the dry season the Blue Nile is only a small stream and the Atbara is reduced to a chain of pools, the White Nile, being fed from the great Victoria Nyanza, still retains sufficient volume to fill the river bed. The current of the White Nile, when the river is at its lowest, is sluggish, and the slow current, combined with the hot sun, favours the growth of organisms in the water, these produce the phenomenon known as "green water," which has a putrid taste and smell.

The heavy rainfall of Abyssinia causes the Blue Nile to rise at the end of June, bringing down in suspension a heavy load of red soil from the mountains. This is the "red water" which, flowing more rapidly than the green water, carries it quickly down to the sea. The Atbara also plays its part in the inundation, but not to so great an extent as the Blue Nile. The actual rise of the Nile is about 23 feet; the amount of water discharged by the river at Assuan is from 17,000 cubic feet per second at its lowest to 323,000 cubic feet per second at the height of the flood. The waters of the inundation, spreading over the country on each side of the river, deposit their loads of silt, the fertilising properties of which are due to the presence of phosphoric acid, potash and nitrogen. The perennial irrigation now practised causes less soil to be deposited, the surplus being swept out to sea, where it is dispersed, forming wide shoals to the east.

By the end of November the Nile subsides within its banks, and the irrigated land, over which the water has been carefully equalised by means of drains and embankments, is sown; soon it is covered with green crops, which are reaped by March. (See article "Control of the Nile" in this Section.)

**OASES.** In the western desert lie the five large oases of Egypt, namely, Siwa, Baharia, Farafra, Dakhla, and Kharga, or Great Oasis, occupying depressions in the plateau, or, in the case of the last three, large indentations in the face of the limestone escarpments. The fertility of these oases is due to a plentiful supply of water furnished by a sandstone bed 300 to 500 ft. below the surface, whence the water rises through natural fissures or artificial bore holes to the ground level and sometimes to several feet above it. These oases were known and occupied by the Egyptians as early as 1000 B.C. and Kharga rose to special importance at the time of the Persian occupation. Here, near the town of Kharga, the ancient Heb is a temple of Ammon built by Darius I., and in the same oases are other ruins of the period of the Ptolemies and Caesars. The oasis of Siwa (Jupiter Ammon) is about six miles long and from a quarter of a mile to four or five miles wide; it is situated about 150 miles south of the Mediterranean and about 300 miles west of the Nile. The other oases lie parallel to and distant 100 to 150 miles from the Nile, Baharia being the most northerly and Kharga the most southerly.

Besides the oases, the desert is remarkable for two other valleys. The first is that of the natron lakes, already mentioned, the other is known as the Bahr-bela-Ma, or "river without water."

**RIVERS.** See "NILE."

**SINAI PENINSULA.** The triangular Sinai Peninsula, which is geographically part of Arabia, but politically belongs to Egypt, has its base on the Mediterranean, the northern part being an arid plateau, the desert of Tib. The apex is occupied by a mass of crystalline rocks, the principal peaks of which rise to heights of over 8,500 ft. These hills support hardly any vegetation and no population, except a few wandering Arabs. There is no town of any size, the principal settlements being at El Arish, Neki and Tîr. The last named is chiefly of importance as a quarantine station.

**SUEZ CANAL.**—The Continents of Africa and Asia are joined together by a relatively very narrow strip of land, the Isthmus of Suez. This isthmus, consisting largely of swamp and sand, was for thousands of years a serious obstacle to communication by ship between Europe and the East. Though it was canalised by the ancient Egyptians as long ago as 600 B.C., and by Darius and Ptolemy II. some 300 years later, the canal later became blocked and useless for navigation. The present Canal is due to French initiative and engineering between 1849 and 1869, the prime mover and constructor being M. Ferdinand de Lesseps. Its original cost was £20,000,000, and enlargements since have been responsible for many millions more.

The Canal is about 100 miles long, and cuts right across the Isthmus, running through Lakes Menzala, Balah, Timsah and the Bitter Lakes. The width of the Canal at the Suez end is about 300 yards in the widest part, between banks it varies from 480 to 525 feet, the depth being between 36 and 40 feet. The time occupied in navigating it is from 16 to 24 hours. (See article, "Suez Canal.")

## CLIMATE

The geographical situation of the country accounts for the marked difference in the climate of Upper Egypt as compared with that of the Delta. The cities of Cairo and Alexandria and the smaller towns of the Delta have what may be termed a South European seaside climate, with a considerable drop in temperature at night and a good deal of humidity in the air; in Upper Egypt, which lies between two great deserts, the climate is exceedingly dry and (an added attraction) remarkably uniform. Indeed, for recuperative qualities the climate of Upper Egypt in the winter is unexcelled.

**DEGREES OF TEMPERATURE.**—The temperature at Cairo ranges usually from 53° to 83° Fahr. though it occasionally reaches 95° in the summer or even 115° during the khamisin. In March and April it is about 85°, a little later it rises by an extent of 10° to 15° degrees, and in winter it averages about 60°. At Assuan the temperature varies from 60° in the winter to 93° in the summer. Here the greatest difference in the temperature during the day takes place, this sometimes being as much as 30 degrees.

**RAIN.** As is well known, Egypt is one of the driest countries in the world, and even though rain now falls oftener in Cairo and Alexandria than formerly, the total annual amount in the first named city only averages two inches. At Alexandria it rains much more often, the mean fall there being about 5.57 inches. In recent years some heavy rains have descended in Upper Egypt during the winter but speaking generally very little falls at Luxor or Assuan, and at the latter place there is practically no dew.

**WINDS.** The prevailing winds in Egypt are northerly from May to October and north-westerly for the remainder of the year, with the khamisin at irregular intervals during March, April and May. The khamisin (meaning "fifty," the usual duration in days of its occurrence) is a hot southerly wind blowing chiefly during the months of March and April. Sometimes it is of terrific violence, and brings with it a mass of sand which has been picked up in the deserts crossed. The simoon is a violent sand-wind commoner in the desert than in the valley, but rare anywhere.

## GEOLOGY

The principal feature of Egyptian geology is the vast extent of the sedimentary deposits of Cretaceous and Tertiary ages covering the crystalline rocks of which a great part of the country is composed. The depth of this deposit nowhere exceeds 110 feet, but is rarely more than 50 feet.

**NILE VALLEY.**—Just as the Nile Valley forms the chief geographical feature of Egypt, so the geology of the country is intimately related to it. The whole valley is said to be due in the first instance to extensive fracturing of the Earth's crust in Miocene times, followed by thick deposits of sand and gravel and masses of broken stony matter from the limestone plateaux which formed along the margins of the valley. Thereafter the deposit of Nile mud began, and has continued ever since.

The oldest rocks, consisting of crystalline schists, with numerous intrusions of granite, porphyry and diorite, occupy the eastern portion of the country between the Nile south of Assuan and the Red Sea. From near Assuan came the red granite of Syene (syenite), of which were built the ancient monuments. From Assuan to Asna the walls of the Nile Valley are composed of

sandstone of Cretaceous age, commonly known as Nubian sandstone, which extends westward from the river to the edge of the great Libyan Desert, where it forms the bed rock. The age of this sandstone has given rise to much dispute. The upper part certainly belongs to the Cretaceous formation, the lower part has been considered to be of Karoo age by some geologists, while others regard the whole formation as Cretaceous.

Below Asna the sandstone is covered by a limestone belonging to the upper chalk series, and in this series between Asna and Cairo are interesting fluviomarine deposits containing mammalian fauna, including fossils of the oldest known elephants. In the southern parts of the limestone region the magnificent cliffs and wild valleys provide most striking scenery, frequent tablelands occur on one of which are built the pyramids of Giza, the material employed being the predominant limestone, while steep sand dunes are met with in parts of the desert. Most of the area outside the valley is hard rock, covered with scanty marl and gravels, in the flat lands bordering the Nile the rock is coated to a depth of about 30 ft. with the alluvium brought down by its waters. The increase of this deposit is estimated at about 4½ inches in a century.

**ROCKS.** The rocks of Egypt furnish the stones used in its edifices and sculptures, granite and syenite (from Assuan), basalt (from Abu Zabel), breccia (from the limestone caves), diorite, verde antique and porphyry (from the mountains of the Arabian desert) sandstone and limestone (from the hills bordering the north), and alabaster (from Fel el Amarna). Emeralds, gold, silver and copper were formerly found near the Red Sea, and salt, natron and sulphur are still among the mineral products.

## FAUNA

The lack of forest or jungle of any kind accounts for the comparative poverty of the Egyptian fauna, few if any of the wild animals common to most parts of Africa being met with, the chief quadrupeds being of the domestic kind.

**ANIMALS.**—The principal domestic animals are the ass, camel, horse, mule, buffalo, ox, pig, sheep and goat. Of these, the camel and the ass are the commonest, the latter being indigenous. It is uncertain when the camel, which is of the one-humped variety, was introduced. Buffaloes and sheep are common, the horses are of an indifferent breed. Dogs are used mostly as scavengers and for watching purposes, the cat has flourished from the very earliest times. The only wild animals in any number are the hyacna, jackal and fox, but the boar is found in the Delta. Wolves are rare, but gazelles abound in the desert and are much hunted. The ibex is found in the Sinaitic peninsula, and the mouflon, or maned sheep, is occasionally seen in the same region. Bats are very numerous. The hippopotamus, in ancient days a frequent inhabitant of the Nile, is no longer found in Egypt.

**BIRDS.**—Many species of birds have existed, and still exist in Egypt, waterfowl being the most numerous, the small gallinaceous poultry, now plentiful, are probably not of older date than the Persian invasion. Pigeons have always been abundant. There are three or four varieties of vultures, and eagles, falcons, hawks, kites, owls, hoopoes, swallows, wagtails, larks, sparrows, plover and quail are common, many of them figuring in the hieroglyphics. The ibis, conjecturally identified with the sacred ibis of which many fables are told, is not uncommon.

**FISHES.**—The Nile is full of fish, generally of rather poor flavour, the best known varieties are the bummy (a species of barbel), the hully, the latius (one of the perch family), and the bayad or silurus. In the lakes of the Delta the dolphin is not uncommon.

**INSECTS.** The sacred beetle (*Scarabæus sacer*) is one of the most remarkable insects, and has always occupied a prominent position in the mythology and religion of the country. The sting of the scorpion is sometimes fatal, and spiders, flies, fleas and mosquitoes abound as they did in the time of the Ten Plagues.

**REPTILES.** Of reptiles, lizards, frogs and toads abound, also chameleons. Snakes are numerous, both poisonous and non-poisonous, among the former are the horned snake, Cerastes, the deadly cobra, and the mianis or rovel serpent of the ancient Egyptians. The trionyx, or soft tortoise, is plentiful in the Nile, the ordinary tortoise is found in the Delta only.

## FLORA

In the absence of woods or undergrowth in Egypt, and in view of the fact that practically the whole of the land which will support vegetation is devoted to agriculture, the flora of the country is limited.

**FLOWERS.**—Of Egyptian flowers the celebrated white and blue lotus lily in ancient times supplied many ideas to Egyptian architects. Though common in older periods, it is now seen only occasionally in neglected canals of the Delta owing to the systematic drainage of marshes and swamps, for the same reason the famous papyrus reed has also disappeared from the country. Among the usually cultivated flowers are the rose, jessamine, narcissus, lily, oleander, chrysanthemum, geranium, dahlia, basil, the henna plant, helianthus, and violet. Wild flowers are rare, the most common being yellow daisies, poppies, ruses, asphodels, and ranunculuses.

**FRUITS.** Among fruit trees, the date palm is found everywhere, and its fruit is naturally one of the commonest articles of food. The lower branches being regularly cut, the tree grows high and assumes a much more elegant form than in its native state. The blossoms appear in March and April, and the fruit is ripe at the end of August or early in September. Some 70 species are said to exist, and in many villages it is possible to find 20 or 30 kinds of date on the market. Among the species grown in Nubia and the Eastern Sudan the *ibrami* and the *sultani* are the most prized. The vine has always flourished in Egypt and in ancient days large quantities of wine were made, the grapes ripen in July. The fig, pomegranate, orange, and lemon abound in special localities, apricots, peaches, and plums are only of poor flavour. Indian figs (prickly pears) and bananas have been naturalised, and watermelons are at once the meat and drink of the people in the hot days.

**TREES.** Timber has always been exceedingly scarce in Egypt, even clumps of trees (except palms) being of rare occurrence, though at one time, until a disease destroyed them, there were shady avenues of labbakh trees which had been planted in the neighbourhood of Cairo. The dôm-palm is, after the date palm, the commonest tree, its trunk, leaves and fibre all being valuable, the *sunt* or acacia, sycamore, and tamarisk are less frequently met with, the myrtle, elm, and cypress are rare, and the mulberry is found only in Lower Egypt.

# HISTORY

**S**OME idea of the antiquity of Egypt may be gathered from the fact that, at the period (B.C. 754) at which legend fixes the foundation of Rome, the country under review already possessed a history dating back for more than forty centuries, and was actually under the twenty-second dynasty of its Pharaohs. The Xerxes who invaded Attica, laid Athens in waste, and annihilated the Greeks at Salamis (B.C. 480) was the nephew of that Cambyses who half a century previously had conquered the last of the Pharaohs and had crushed for centuries to come Egyptian independence. It is obviously impossible to deal more than very cursorily with a history which goes back so deeply into the mists of antiquity, and which has in addition in all its phases been bound up so closely with that of other great Empires and Powers. The earlier periods of Egyptian history and those more immediately preceding the successive Turkish, French and British dominations can, therefore, only be summarised very briefly within the limits of this section.

What is known as the Pre-Dynastic history of Egypt tells of a primitive people who lived chiefly by pastoral pursuits, fishing, hunting, etc., who were grouped in a number of independent states governed by hereditary princes. These kings had their territories between Behn or Wadi Halfa and the Mediterranean Sea, the districts between Behn and the bifurcation of the Nile being regarded as one country and the Delta as another. Gradually there came to be an over-lord or king of each division or country, and these in turn overthrew one another, each aspiring to be master of the whole of Egypt and to unite the lands of the White Crown and the Red Crown, these being the royal insignia of Upper and Lower Egypt respectively. When the first "uniter of the two lands" ascended the throne of Egypt the Pre-Dynastic period ended.

**B.C. 5004-B.C. 332. - THE PHARAOHS.**—All Egyptian chronology prior to B.C. 1500 is necessarily conjectural, and the date selected (B.C. 5004) is that suggested after much patient investigation by the famous French Egyptologist, Mariette, the founder of the Museum of Egyptian Antiquities at Cairo. The First Dynasty of the long line of Pharaohs was inaugurated by Menes, a warrior prince of Thinis, who overthrew the power of the priests and founded the city of Memphis (His tomb was opened in 1897). Under the Second Dynasty the Pharaohs declared themselves to be gods, and took the title of "Son of the Sun." The earlier kings of the Third Dynasty built tombs, and one of them, Seneferu, conquered Sinai, worked its copper mines and built two pyramids. To the Fourth Dynasty belong some of the most famous Egyptian works of art, Cheops having built the Great Pyramid and Chafra the second pyramid at Giza. The Sphinx was probably modelled about this time and the Book of the Dead painted. With the end of the Eighth Dynasty what is known as the Old Kingdom of Egypt came to an end, to be succeeded by the Middle Kingdom, magnificent remains of whose rulers still exist at Thebes and elsewhere. Under the Hyksos or Shepherd

Kings of Lower Egypt, Joseph the son of Jacob is thought to have become chief minister of the Pharaoh of that time.

The new Empire (dynasties XVIII to XX) was founded by kings from Upper Egypt, who overthrew the Shepherd Kings and lasted from B.C. 1703 to B.C. 1110. This was the period of Egypt's greatest power, its dominion extending to the Euphrates, and to it belong the most beautiful buildings now remaining, such as the temples of Luxor and Karnak. Thothmes I transformed Egypt into an empire, and Amenhotep IV. endeavoured to establish the religion of one god. Tutankhamen, the discovery of whose tomb and mummy recently astonished the world, was one of the kings of the XVIIIth Dynasty, while the XIXth and XXth Dynasties were those of the renowned Ramesides, and almost equalled in architectural splendour the age of the Pyramids. Under the last of the race, Rameses XII, Upper Egypt asserted its independence, and after his death the Empire broke up.

The succeeding period of about five hundred years is sometimes known as that of the Egyptian Renaissance. It was at the same time one of constant warfare with the Babylonian and Assyrian Empires, and finally with the Persians, whose King, Cambyses, overthrew Psammetichus III in B.C. 625, their rule lasting for two hundred years.

**B.C. 332-B.C. 31. - ALEXANDER THE GREAT AND THE PTOLEMIES.** The Persian domination in Egypt extended over four dynasties (XXVII to XXX), but its fate was decided by the battle of Issus, which made the conqueror of the Persians, Alexander the Great, also the master of Egypt. On his death in B.C. 323 the Kingdom of Egypt fell to the share of Ptolemy, who, putting an end to the disorder which had reigned for two centuries, was hailed as the founder of a new dynasty and the saviour (*soter*) of the country. Under his wise administration Egypt once more prospered. The new city of Alexandria was his capital, where the body of the great Macedonian was preserved for ages, and under him and the second and third Ptolemies learning and the arts flourished. Some of the most gigantic edifices of the Pharaohs were emulated in Dendera, Edfu, Edna and Philae, while the inner shrines of Karnak and Luxor attest their devotion to the Egyptian gods. Unfortunately, the splendour of the first century of the Ptolemaic rule was succeeded by a gradual decadence of two hundred years. Family strife and a relaxation of national customs and habits slowly reduced the Kingdom to a state of subjection to Rome, whose star was then in the ascendant. Shortly before the dawn of the Christian era, Augustus put the last of the family, Caesarion, the son of Cleopatra and Julius Cæsar, to death, and annexed Egypt to the Roman Empire.

**B.C. 30-A.D. 640. - EGYPT UNDER THE ROMANS.**—Under Rome, Egypt was for a time well governed and prosperous, but its importance in the history of early Christianity gives it an interest beyond that derived from its actual condition. Though losing its independence, the country gained a new political and economic importance;

it was known as the granary of Rome, it was the natural entrepot of trade with the Indies, and it was the starting point of the expedition of Titus which ended in the destruction of Jerusalem. The Egyptian gods became entitled to a place in the Roman Olympus, and in A.D. 212 the Egyptians themselves were granted the title of "Cives Romani." The old religion had, however, suffered severely from the incision of Antinous, the Emperor Hadrian's favourite, amongst its deities, and from the rapid spread of Christianity, the latter gaining strength from the persecution of Diocletian. Alexandria became a nursery of rival sects, whose quarrels seem to-day curiously unedifying, but to whom the modern world owes the collection and preservation of the books of the New Testament. Zenobia, Queen of Palmyra, annexed Egypt to her short-lived realm (A.D. 270), but at her defeat Rome was again supreme. Though Constantine made Christianity the established religion of his empire, heathenism, especially under a modified Gnostic form, still lingered in Egypt until the edict of Theodosius (A.D. 379) made it unlawful. Yet proofs exist that in the sacred isle of Philae and other places the altars of Osiris and Isis were not wholly destroyed until nearly a century later. The period of Egyptian decline culminated under the feeble rule of Byzantine emperors, a succession of famines followed an era of misadministration, and though another Asiatic invasion under Chosroes the Persian gave the country comparative rest for ten years (A.D. 610-629), its resources, like its ancient civilisation, were wholly exhausted, and it fell an easy prey to the Mohammedan or Arab invasion.

**640-1517. - THE RULE OF THE KHALIFES.** The first three centuries of this period were years of acute suffering for Egypt. In many parts of the country the conquering hordes of 'Amr ibn al-'As almost exterminated the old inhabitants. For fourteen months Alexandria resisted the Mussulman investment, and after the destruction of its famous library gradually declined in importance, Cairo slowly rising to the position which it has ever since maintained. The Abbasid Khalifs, indeed, promoted learning and architecture, El-Mamun, a son of the celebrated Harun-el-Rashid, directed the translation of Greek mathematical and astronomical works, and his nephew, El-Mutawakkil, established the Nilometer at Roda. On the accession of the Tulunid Kings (A.D. 868-906) Egypt became really independent of the Khalif, who latterly resided, as a kind of Pope, in semi-obscurity under their protection. Ahmed ibn-Tulun built the great mosque which bears his name within the walls of Fostat, and the first of the Fatemides to reign in Egypt, Abu Tammam (or El-Muizz), laid out the city which he called Al-Kahurah, or "the victorious." The great mosque of El-Hakim was built in A.D. 1003.

In 1176 the Frank Crusaders attacked and partly burned Cairo, but Yusuf, called Saladin, erected the fortifications which still remain and left marks of his munificence and taste in many places. The Bahr Yusuf, a canal which he made or restored, runs

for nearly 400 miles parallel to the Nile, and irrigates vast tracts. In 1249 the French king Louis IX. was taken prisoner in Egypt, about the same time that the dynasty of Saladin came to an end. The Biharide Mameluke Sultans, however, continued the great public works which he had commenced, and the mosques of Sultan Kalaun and Sultan Hasan are so fine as almost to make amends for the destruction of the ancient monuments from whose materials they were built. The government during the succeeding years of this period passed from sultan to sultan and from family to family with a frequency which is bewildering. The mosque of Barkuk, the first of the Circassian Mamelukes, dates from before 1399, that of Kart Bay from a century later. This was the period of the growth of the Ottoman Empire. In 1501 the Khalif El-Ghuri was defeated at Aleppo by the Turks, his nephew, Tuman Bey, was hanged in 1517, when the conquerors were already in possession of Cairo, and in 1538, the last Abbasid Khalif having bequeathed his title and rights to the Sultan of Turkey, Egypt became a province of the Turkish Empire.

**1518-1797. TURKISH RULE IN EGYPT**—Not content with having made Egypt an Ottoman province, the Sultan Selim, as already stated, obtained the title of Khalif or Vicar of the Prophet and from then onwards the Khalifate was hereditary in the Dynasty of the Sultans of Turkey. Egypt became what was known as a pashalik, power being exercised through twenty-four Mameluke Beys, or Emirs, who governed that number of provinces, into which the country was divided, and paid to the Pasha of Cairo a tribute, which was remitted to Constantinople. This system lasted for nearly two centuries, but the desire of each Bey to become the Pasha provoked much intrigue and many murders, though gradually as the Beys increased their power that of the Pasha declined. In 1768, when Turkey was at war with Russia, Ali Bey, with the support of a strong army, ejected the Pasha and declared himself ruler of Egypt, he conquered a part of Arabia and of Syria, but was murdered in 1772. In 1773 Ismail, Ibrahim, Murad and other Mamelukes contended for the mastery of Egypt, and in 1790 a Turkish army, invading the country, seized Cairo.

**1798-1805. NAPOLEON IN EGYPT -- BATTLE OF ABOUKIR BAY**—In 1798 Napoleon Bonaparte, whose aim at that time was to destroy England's trade in the Mediterranean and to strike a blow at its growing power in the Indies, decided on the expedition to Egypt which was to prove so costly a failure. On July 1 he landed near Alexandria with an army of 36,000 men and stormed the city on July 5. The Battle of the Pyramids, in which the flower of the Mameluke army was destroyed, was fought on July 21, and the French Consul entered Cairo in triumph. Of greater ultimate importance to history than were his victories was the impetus which Napoleon gave to the scientific exploration of the country of the Pharaohs. As a result of the destruction of the French fleet at Aboukir Bay and the need for his presence in Europe, Napoleon returned to France, leaving behind General Kleber, who in 1800 routed a Turkish army at Matarieh. On March 21, 1801, Sir Ralph Abercrombie defeated the French at the Battle of Alexandria, and after capitulating at Cairo the latter evacuated the country in the same year. In 1805 England restored Egypt to the Turks.

1. The Second Pyramid of Giza, showing alabaster top, taken from the summit of the Great Pyramid.
2. An Angle of the Great Pyramid, giving some idea of its immensity.
3. The Sphinx under repair, with the Great Pyramid of Giza in the background.

**1805-1882. - EGYPT AS A VASSAL OF TURKEY - MOHAMMED ALI AND KHEDIVE ISMAIL.** We hear now for the first time of Mohammed (Mehemet) Ali, whose long reign was to prove so beneficial to the country. Born in 1769 at Kavala, in Rumelia, he had served in the Turkish army and had married the daughter of the Governor of his native town. In 1805, yielding to the prayers of the people of Cairo, he proclaimed himself Pasha of Egypt, a title which was confirmed by the Sublime Porte. His reign was to a great extent tarnished by his treacherous slaughter of the Mameluke Beys and their followers in the Citadel of Cairo (1811), but under his wise and progressive rule Egypt gradually rose in importance; in 1831 he declared war against the Sultan with the view of obtaining complete independence. His efforts would probably have been successful but for the intervention of the European Powers, who obliged him to evacuate Syria, which had been wrested from the Turks by his son Ibrahim, and to acknowledge the Sultan as his sovereign. On receiving his submission in 1841, the Sultan Abdul Medjid made the vicereignty hereditary in his family. During his long reign Mohammed Ali sought in many ways to improve the material and moral condition of the country. Schools were founded, Europeans were encouraged to settle in Egypt, and were even appointed to public offices; canals and embankments were restored, and the cultivation of the cotton plant was introduced.

In the reign of Said Pasha, Mohammed Ali's third son, Egypt progressed still farther along the path of reform, though unfortunately the finances of the country were unequal to the many demands made on them and recourse was had to extensive loans, with many to follow. Railways were begun in this reign; the scheme for cutting through the Isthmus of Suez assumed a definite shape, and an actual commencement of the Canal was made. The first steps were also taken towards making the study and preservation of the ancient monuments a national care.

**INAUGURATION OF THE SUEZ CANAL.** - At the death of Said in 1863, Ismail Pasha, the second son of Ibrahim Pasha, a nephew of Said, succeeded to the vicereignty. Able and energetic in a remarkable degree, he endeavoured to carry out all his grandfather's schemes for the introduction of European civilisation, and indeed went far beyond them. He continued the support which Said Pasha had first accorded to Ferdinand de Lesseps, and it was during his reign that the Suez Canal was opened in 1869. In order the better to succeed in his plans he aimed at securing virtual, if not actual, independence of the Porte. By the firman of 1866 giving him the title of Khedive, and making the succession direct from father to son, instead of its descending according to Turkish law to the eldest heir, also by a subsequent firman of 1873 giving him the power to make treaties and otherwise act independently, his object was nearly attained.

The reforms accomplished during Ismail's reign were many and important, and numerous public works to-day bear witness to his zeal. But these costly undertakings necessitated much borrowing, and a huge public debt and the impoverishment of the peasantry were two of the causes of his deposition at the dictation of the European Powers in 1879. At the end of 1875 his liabilities amounted to nearly seventy-eight millions sterling, and he was forced in that year to sell to the British Government 176,000 Suez Canal shares for £3,976,582. These shares are now worth more than £25,000,000.

**1882-1884 : BRITISH INTERVENTION -- BOMBARDMENT OF ALEXANDRIA AND BATTLE OF TEL EL-KEBIR** - A Law of Liquidations for regulating the conditions of the Public Debt had been passed at the instance of five European Powers in 1880. The next year saw the military revolt of Arabi Pasha, the leader of a large following bent on freeing Egypt from foreign interference and control. He became practically a military dictator, and in 1882 British and French warships were despatched to Alexandria to overawe the rebels, their appearance being immediately followed by serious rioting and murders of Europeans in the streets. This was on June 11. Meanwhile Arabi was strengthening the fortifications and his power was increasing. The British admiral, Sir Beauchamp Seymour, afterwards Lord Alcester, demanded that the work should be discontinued. Arabi persisted, the French ships, owing to the refusal of a vote of credit by the Chamber of Deputies, sailed away, and the British fleet bombarded Alexandria on July 11, 1882. The Egyptian troops were suddenly withdrawn, whereupon the city was plundered and partly burned by Egyptian rioters, the British admiral being apparently unable to land a force to restore order until the third day, when he occupied the place until the arrival of troops under Sir Archibald Alison, who kept Arabi in check behind his lines at Kahi Dewar.

**BATTLE OF TEL EL-KEBIR** - Meanwhile Sir Garnet (afterwards Viscount) Wolseley hurried out with more troops from England and other regiments were despatched from India, the point of embarkation being Ismailia on the Suez Canal. In twenty-five days the British forces had traversed the desert, utterly defeated the main body of Arabi's army at Tel el-Kebir (September 13), and occupied Cairo. Arabi was tried, pleaded guilty and was banished to Ceylon, where he remained till 1901, dying in obscurity in Egypt in 1911. The authority of the Khedive being thus restored, most of the British troops were withdrawn and measures taken for the reorganisation of the country. Lord Dufferin went to Cairo and drew up a Constitution which remained largely illusory, and Sir Edward Baring (afterwards Lord Cromer and one of the modern makers of Egypt) continued the task of reorganisation. But the attempt to persuade the Khedive's Government to rule according to British ideas, and to get British officials and their Egyptian colleagues to work smoothly together, led to repeated crises and changes of plan. A conference of the Great Powers in 1884 and a subsequent negotiation with Turkey did not relieve Britain of her exclusive responsibility, and though at that time there was no general desire in England for a permanent, or even for a long temporary, occupation, British statesmen saw themselves confronted with the plain duty to remain in Egypt until "the elements of order and progress should be established."

**1884-1898 : LOSS AND RE-CONQUEST OF THE SUDAN - THE MAHDI, GORDON AND KITCHENER** - It becomes necessary at this point to mention that vast territory lying to the south of Upper Egypt, known formerly as Nubia and now as the Anglo-Egyptian Sudan. It had been invaded and conquered in 1820 by Mohammed Ali, partly to obtain possession of the mines of gold and precious stones which it was believed then to contain, and partly to recapture its valuable caravan trade which had recently been diverted from the Nile to Red Sea ports. As a matter of fact, the Sudan was always a drain on

the Egyptian exchequer, although Baker, by extending its frontiers to the shores of the Victoria Nyanza, and Gordon, by his suppression of several revolts, had both done much to consolidate Egyptian rule. At the moment when the British Government intervened in the affairs of Egypt the whole country was in a state of rebellion, stirred up by a religious fanatic who proclaimed himself the Mahdi ("Guided by God"). The Mahdist movement, which was to overthrow Egyptian rule, derived its strength from two different causes: the oppression under which the Sud. nese suffered and the measures taken by Gordon and others to prevent the Baggara (cattle-owning Arabs) from trading in slaves.

**EL-OBEDI** The British Government, which had at first declared its intention of excluding the Sudan from the problem of reorganisation, soon found such a position quite untenable. In 1883 Hicks Pasha, a retired Indian officer, was appointed head of the army in the Sudan, the recapture of El-Obedi being his main objective. Lack of water and guides who misled him ended in the annihilation of the force and the death of its leader, the battle being fought near El-Obedi on November 5, 1883. This victory and others gained at El Fih and Tokar made the Mahdi master of the greater part of the Sudan.

**GENERAL GORDON - FALL OF KHARTOUM** - On hearing of the disaster to Hicks' army, the British Government insisted that the Egyptian Government should evacuate such parts of the Sudan as they still held, and General Gordon was despatched with Sir Herbert Stewart to Khartoum to arrange the withdrawal of the Egyptian civil and military population. Gordon's instructions, based largely on his own suggestions, were not wholly consistent; they seem to have contemplated vaguely the establishment of some form of stable government on the surrender of Egyptian authority, and among the documents with which he was furnished was a fuman creating him Governor-General of the Sudan. Gordon reached Khartoum on February 18, 1884, and at first his mission, which had aroused great enthusiasm in Egypt, promised success. He soon found, however, that he had attempted an impossible task; he could not leave the garrison to fall into the hands of the Mahdi, and the British Government refused or delayed to send him the reinforcements he requested.

Meanwhile the Mahdist movement swept northward; Berber was captured by the dervishes and Khartoum was isolated in May, 1884. Too late, in October of the same year, a British expedition under Lord Wolseley was despatched, and selected the difficult and tedious route up the Nile, instead of making a rapid dash from Suakin to Berber. The pitched battle of Abu Klea (January 17, 1885) resulted in a British victory, but also in the loss of Sir Herbert Stewart and General Burnaby. When Sir Charles Wilson's relief party eventually reached Khartoum, it was to learn that it had fallen and that Gordon had been killed on January 26. The relief party was forced to retreat, the whole British army was hurriedly withdrawn, and the Sudan was left to its fate.

**KITCHENER AND THE EGYPTIAN ARMY - RECONQUEST OF THE SUDAN.** - For eleven years the Sudan was abandoned to an appalling reign of terror, which left it desolate, devastated, depopulated and paralysed with dread. The Sudanese had but exchanged the whips of Egyptian misgovernment for the scor-

pions of the Mahdi's savage rule. Though the latter died in 1885, his successor, 'Abdallah, was even a worse despot. Reconquest was of course inevitable, for the Sudan commanded the water and hence the wealth of the Nile, and added to the necessity for securing control over the same was the natural desire of the Egyptian Government to recover lost territory and also that of Great Britain to avenge the death of Gordon.

It took, however, many years to organise an Egyptian army that could be trusted, and for four of these (1885-1889) all that could be done was to hold the frontier at Wadi Halfa and keep the dervishes out of Egypt proper. General Grenfell's victory with Egyptian troops over the dervishes at Toki on August 3, 1889, showed that the persistent weak of British administration in Egypt had at length produced an efficient native force, and this was confirmed by the defeat of Osman Digna at Toki in 1891, which freed the Red Sea littoral. In 1892 Sir Herbert (Earl) Kitchener became Sudan of the Egyptian army, and after ten years of steady preparation he made a move to the south. The victory over the dervishes at Fuka on June 7, 1896, was followed by the capture of Dongola in September. A railway was thrown across the desert to Abu Hamed, the dervishes retreated from Beber, and on April 7, 1898, they were driven out of their encampments on the Atbara by a combined British and Egyptian army. On September 2, 1898, Kitchener, ably supported by Macdonald, Hunter and others, won his crowning victory at Omdurman over 40,000 of the enemy. Khartoum was taken, the Khalid escaped, but was run to earth and died fighting in the following year.

The victory of Omdurman and the re-occupation of Khartoum were followed by the so-called Fashoda incident, which might have led to trouble with France, but was diplomatically settled by Kitchener. From that time onward the condominium or combined British and Egyptian rule over the Sudan was inaugurated, Lord Kitchener being the first Governor-General.

**1899-1914. PERIOD OF PROGRESS -- LORD CROMER. ANGLO-FRENCH AGREEMENT - IRRIGATION WORKS.** - Meanwhile Egypt, relieved from the apprehension of the Mahdi, was gradually recovering from the state of anarchy and debt into which the extravagances of Ismail had plunged her. This restoration to order and solvency was mainly the work of one man, Earl Cromer, who has been justly called "the maker of modern Egypt." A financier by birth, he had early perceived that the key to the whole difficulty lay in the financial mudslide. It was for many years a fight with bankruptcy, and this was the explanation of the abandonment of the Sudan in 1883. Money was wanted for irrigation, the prime necessity of Egypt, as well as for every kind of reform. The great schemes of irrigation, which commenced with the repair of the Nile Barrage in 1890 and included the construction of the great dams at Assuan and Assuit, were put in hand, and these, spread over a period of twenty years or more, added, it is estimated, at least £3,500,000 a year to the value of the country's productiveness. Taxes, no longer collected under the whip, were in great measure remitted, the amount spent on education was quadrupled, and the iniquitous corvée was gradually abolished.

Such was the triumph of Lord Cromer's unremitting toil for nearly a quarter of a century. He found Egypt ruined, outraged and miserable; he left it prosperous, wealthy

and one of the most highly taxed countries in the civilised world. His work was accomplished in the face of strenuous opposition from the Powers, the Sultan and the native press, and international restrictions hampered him at every turn.

**ANGLO-FRENCH AGREEMENT.** The Anglo-French Agreement of 1904, which at last removed all causes of friction between English and French interests in Egypt, together with most of the financial restrictions which had impeded progress, was not the least of Lord Cromer's conspicuous successes. This agreement virtually recognised the dominant positions of France in Morocco and Great Britain in Egypt. The British Government declared that it had no intention of altering the political status of Egypt, and on her side France undertook not to obstruct the action of Great Britain in that country by asking for a time limit to be fixed for the British occupation, or in any other manner. In effect, this was European recognition of Great Britain as the dominant power in Egypt. Further, by a Khedivial decree, which came into force at the same time, Egypt obtained practically financial independence, being free henceforth to control her own revenue and to take advantage of the financial prosperity of the country.

**FURTHER PROGRESS AND REFORMS.** It was perhaps fortunate that the recognition and consolidation of Great Britain's influence occurred when it did. Nationalist propaganda, intrigues and risings were frequent during the early years of the present century and British garrisons had to be strengthened. Lord Cromer resigned in 1907 and was succeeded by Sir Eldon Gorst, who had long served under him. In that year Provincial Councils were established. Sir Eldon Gorst died in 1911, and Lord Kitchener, who enjoyed remarkable prestige in Egypt, followed him as British Agent and Minister-Plenipotentiary. The salient features of his administration were the revision of the Organic Law of 1883 and the institution of a Legislative Assembly on a broad electoral basis. Roads were made everywhere, and the Five Feddan Law did immense service to the fellah by protecting him against expropriation of his land, house and utensils for debt. The inauguration of the new Legislative Assembly in 1913 brought first into public notice the ex-Premier and present leader of the opposition, Saïd Zaghlul Pasha, who, as the champion of Egyptian Nationalism, was elected Vice-President.

**1914-1919. EGYPT DURING THE WAR.** - When the European War broke out in 1914 martial law was at once declared, and there was no disturbance either in Egypt or the Sudan. On account of his amercement to the King's enemies, the Khedive Abbas Hilmi, who was at the time in Constantinople, was deposed, a British Protectorate over Egypt was proclaimed, and the Turkish suzerainty was terminated. Prince Hussein Kamel, uncle of the deposed Khedive, was also proclaimed Sultan of Egypt. The arbitrary and corrupt methods of Abbas II had rendered him generally unpopular with the Egyptians, who had also little reason to regret the severance of the last link with the Turks.

Lord Kitchener having accepted office as British Minister of War, Sir Henry MacMahon was appointed first High Commissioner of the new Protectorate. Egyptian feeling was far from being unanimously favourable to the British occupation, and several attempts were made on the Sultan's life. Nationalist propaganda became increasingly active, and the mahenable sympathy of

the Moslem with Turkey was a factor always to be reckoned with. A Turkish attack on the Suez Canal early in 1915 was signally defeated, as was an attack by the Senussi on the Egyptian forces at the end of the same year. On August 4, 1916, a great battle was fought between the Turks and the British in the Peninsula of Sinai, in which the Turkish army of 18,000 was utterly defeated. In December of the same year Sir Reginald Wingate succeeded Sir Henry MacMahon as High Commissioner.

The years 1917 and 1918 brought great prosperity to Egypt. Enemy attacks had weakened and Allenby's successful campaign in Palestine relieved the country from all fear of further trouble from outside. The Sultan died on October 9, 1918, and was succeeded by his brother, the present King Fuad I. Towards the close of the War the principles formulated by President Wilson had a far-reaching and even decisive effect on educated opinion in Egypt. The long-voiced aspirations of the Nationalists to govern themselves were considered to have received international sanction, and it was further urged that the attitude adopted by England during the War and the very real sacrifices made by the people of Egypt justified a claim for special consideration, in short, that the time had now come to reconsider the relations between that country and Great Britain. Furthermore, an independent Kingdom had already been established in Arabia, and Egyptians were not slow to insist that they were at least as able to manage their own affairs.

**1918-1922. STEADY GROWTH OF NATIONALISM - THE MILNER COMMISSION.** Towards the end of 1918 the spirit of discontent and unrest pervaded all classes, and it was as strong among the fellahs as with the "Effendi" classes. A powerful Nationalist committee was appointed under the chairmanship of Zaghlul Pasha, who now became definitely the leader of the party. A request that he and others should proceed to London to discuss the affairs of Egypt was refused, on the ground that the forthcoming Peace Conference demanded the full time and attention of the British Foreign Secretary and other Ministers. The immediate result was the presentation of a petition to the Sultan disavowing the Protectorate and clearly assigned to intimidate His Highness. Vigorous action was taken by the British Authorities, and on March 8, 1919, serious rioting in many parts having ensued, Zaghlul Pasha and three of his adherents were arrested, being deported the following day to Malta.

During the absence of Sir Reginald Wingate in 1919, Lord Allenby, the Commander-in-Chief of the British forces, returned to Cairo as High Commissioner. He was able quickly to get the situation in hand, and his proclamation of November 15 of that year did a lot to allay the agitation, which was as much the result of economic as of political causes. His policy was in the main one of conciliation, and, as a result of the removal of the embargo on the free movement of Egyptians, Zaghlul Pasha and his associates were liberated, proceeding to Paris, where their efforts to obtain a hearing at the Peace Conference were disappointed.

**THE MILNER COMMISSION.** The British Government in December 1919 sent to Egypt a special mission to enquire into the causes of the recent disorders, also to report on the existing situation of the country and the form of the Constitution which, under the protectorate, would be best calculated to promote its peace and

prosperity, the progressive development of self-governing institutions, and the protection of foreign interests." The Milner Commission got quickly to work, but during both 1920 and 1921, though it was known that the British Government were in sympathy with some of the demands of the Nationalists, the extremists continued to stir up riots in Alexandria, Cairo and other towns, and there was much damage to property, with some loss of life. Gradually, however, the best Egyptian opinion came over to the side of Adly Pasha, who was the protagonist of a modified system of independence and to whom Zaghlul Pasha was unalterably opposed. Lord Allenby's policy of conciliation was beginning to bear fruit, the report of the Milner Commission recommended an autonomous Constitution, in which, however, Great Britain should have a controlling influence upon foreign affairs and should maintain a military force of occupation, and in the summer of 1921 Adly Pasha with a number of his supporters visited London to discuss with the British Government exactly what measure of independence should be granted to the Egyptians. In December negotiations were somewhat abruptly broken off and the delegation returned to Egypt. Zaghlul Pasha and four of his colleagues, who had refused to obey a military order to absent themselves from public life, were exiled to the Seychelles, and the year closed on a note of strong anxiety as to the future.

**1922-1924.—EGYPT PROCLAIMED AN INDEPENDENT KINGDOM.** INAUGURATION OF THE EGYPTIAN PARLIAMENT. **MURDER OF THE SIRDAR**—The year 1922 will ever be memorable in the history of Egypt, it was that of the transformation of the country into a sovereign and independent State, and of the formation of the present Constitution. The declaration of the British Authorities terminating the Protectorate and declaring the independence of Egypt was promulgated on February 28, the following matters being reserved entirely to the discretion of

His Majesty's Government: (a) the security of the British Empire's communications in Egypt, (b) the defence of the country, (c) the protection of foreign interests and of minorities, and (d) the administration of the Sudan. In 1923 an Act of Indemnity was passed, and resulted in the return of a large number of persons who had been exiled for political offences. The elections to the first Parliament which followed towards the close of the year were marked by strong partisan feeling, and ended in the return of Zaghlul Pasha and his party.

**MURDER OF THE SIRDAR**—The first Egyptian Parliament met on March 15, 1924. The new Premier, who arrogated all the powers of a dictator, claimed from the beginning that the Sudan belonged to Egypt, and demanded from Great Britain its immediate incorporation in the Egyptian Empire. The British Government refused absolutely to admit his claims, serious anti-British disturbances broke out at Khartoum, a large part of the Sudan revolted, and on November 19, 1924, Sir Lee Stack, Sirdar and Governor-General of the Sudan, was assassinated in a street at Cairo by a gang of Egyptian extremists. A British ultimatum was the immediate result, the demands presented by Viscount Allenby being: (a) an immediate apology, (b) the punishment of the criminals, (c) the suppression of popular demonstrations, (d) the payment of a fine of £500,000, (e) the withdrawal of Egyptian officers and units in the Sudan, (f) withdrawal of all opposition concerning the protection of foreign interests in Egypt. Zaghlul Pasha accepted four of the demands only, and found it necessary with his Cabinet, to resign. His successor, SE Ziwari Pasha, accepted the remainder. Six of Sir Lee Stack's murderers were hanged in August 1925.

**1925-1926.—MATERIAL PROGRESS AND POLITICAL UNREST**—Economically, Egypt has made decided progress during the last few years. The development of its resources and of its trade was very evident in 1925, in spite of the general

political unrest which marked that year. Ziwari Pasha had persuaded the King to exercise his constitutional prerogative and to dissolve Parliament, elections were held in March, and Ziwari's Government was returned to power as a Coalition Government. But Zaghlul Pasha was, immediately upon the re-assembling of Parliament, elected President of the Chamber and the Cabinet accordingly advised the King to dissolve it again. The life of this Parliament had lasted exactly fourteen hours, and for a time Egypt was without Parliamentary Government. A new Electoral Law was drawn up, under which the general election fixed for May 1926 was to be held. Lord Allenby left Egypt towards the end of 1925, and was succeeded as High Commissioner by Lord Lloyd of Dolobran, who had for five years held the important post of Governor of Bombay.

The year 1925 was also notable as marking real progress in the realm of scientific research, thanks largely to the foundation of the Egyptian University, the chairs in which are occupied by European professors of repute, as well as in the extension of elementary education. In 1926 the new High Commissioner opened, with great éclat, the new Makwat Dam, near Semna, in the Sudan, which, though primarily intended to benefit the Sudan, will necessarily largely aid Egyptian agricultural development.

The General Election of 1926 resulted in the complete success of the Zaghlulist or Nationalist faction, Zaghlul Pasha himself accepting the Presidency of the Chamber, while the Premiership fell to Adly Pasha Yedim, who selected a Cabinet which, while it was partly composed of members of the Wafd, conformed, in regard to its more important posts, to the wishes of the British Government. The admittedly difficult political situation in June 1926 was further complicated by the resignation of Judge J. F. Kershaw, the President of the Assize Court, in consequence of the acquittal (contrary to the weight of evidence) of four Egyptians accused of political murders.

#### POPULATION

**I**N a country like Egypt, which contains so many people who only live therein for a part of each year, it has always proved difficult to obtain an accurate statement of the exact population. Under the Romans it was estimated that the inhabitants (exclusive of slaves) numbered 8,000,000. In 1800 the population was said to be about 2,500,000 only, and some fifty or sixty years later to have declined by a million. Since then the figures have shown a consistently rising tendency, and at the last census, taken in March 1917, the total was returned at a little over 12,700,000, an increase of 1,400,000 above that recorded ten years previously. Thanks to the ever growing

prosperity of the country, the population continues to expand, and was estimated to have done so by over a million between 1917 and 1924, the figure then being put at 13,885,000. This population, it may be added, is spread over 18,141 different localities, comprising 3,692 cities and towns, 14,061 villages, hamlets or farms, and 433 Bedouin encampments.

**DENSITY**.—If the cultivated portion of Egypt only be taken into account, consisting of some 12,000 square miles, the density of its population will be found to exceed that of any European country, being 1,061 to the square mile, compared with Belgium's 636 3. If the whole of Egypt be considered, the figure of density falls to about 35 per square mile.

**DISTRIBUTION**.—At the last census the population of the country was thus distributed:—

GOVERNORATES	TOTAL POPULATION	POPULATION PER SQ. MILE
Cairo	740,939	18,832
Alexandria	444,617	23,401
Damietta	30,984	2,817
Canal (Port Said and Ismailia)	91,090	30,363
Suez	30,996	10,332
Frontier Districts	80,504	—
<b>MUDIRIYAS. Lower Egypt</b>		
Beheira	892,246	517
Daqahliya	986,643	981
Gharbiya	1,659,313	655
Menufiya	1,072,636	1,770
Qalyubiya	528,581	1,476
Sharqiya	955,497	723

	TOTAL POPULA- TION	POPULA- TION PER SQ. MILE
MUDIRIYAS Upper Egypt		
Assiut	981,107	1,278
Assuan	253,340	1,508
Bent-Suef	452,893	1,107
Fayyum	507,617	759
Girga	863,234	1,499
Giza	524,352	1,317
Minya	763,922	1,173
Qena	840,317	1,114
Total	12,750,918	1,061

#### DISTRIBUTION BY NATIONALITIES.—

The census of 1917 returned the following figures of nationalities in Egypt: Egyptians, 12,404,042; Bedouins, 32,663; Sudanese and Berbers, 107,364; Greeks, 56,731; Turks, 30,797; Italians, 40,198; British, 24,354; French, 21,270; Austrians, 2,789; Russians, 4,225; Persians, 1,496; Germans, 157; other nationalities, 25,932.

**DISTRIBUTION BY RELIGIONS.** At the last census there were 11,624,753 Mohammedans, 1,026,107 Christians (844,474 of these being Coptic Christians), 50,581 Jews, and 8,814 other religions.

**GROWTH OF POPULATION.** The following table shows the increase in the population of Egypt during the last century and to the date of the last census:—

YEAR	POPULATION
1800	2,400,200
1821	2,536,400
1846	1,476,440
1882	6,831,131
1897	9,734,405
1907	11,287,359
1917	12,750,918

The estimated population in 1924 was 13,885,000.

**LANGUAGE.** The present day language of Egypt is Arabic, the older form of characters in which the Arabic language was written is called Kufic. Inscriptions in this character were frequently used as architectural ornamentation. Egyptian Arabic is very different from the classical Arabic, and also differs considerably from the dialects spoken in Syria and Algeria.

It should be noticed that the particle "el" (the) changes the pronunciation of the final consonant before the consonants t, d, g, j, dh, z, r, s, sh, l and n. Hence in phonetic transliteration it is usual to find such phrases as "en-nil," "esh Sherkeess," as they are pronounced, instead of the more correct "el nil," "el Sherkeess." Coptic is practically a dead language, though it is used in a part of the Church service. It is the direct descendant of the ancient Egyptian language and is written in the Greek character, supplemented by five or six characters borrowed from the Demotic.

**RACES.**—The various elements of the motley population of Egypt may be divided into Egyptians, who may again be subdivided into the Fellaheen (country population), the inhabitants of the towns (Oulâ el-Arab) and the Bedouin or wandering tribes, Nubians, Abyssinians and Negroes, Turks, Levantines, Armenians, Jews, and Europeans.

**ABYSSINIANS AND NEGROES.**—There are still a considerable number of these in Egypt, most of whom were formerly slaves. The negroes come chiefly from the Sudan and Darfur. Negresses are frequently employed as domestic servants. Though slavery is officially forbidden in Egypt, there can be little doubt that many negroes are still held in a form of servitude.

**ARMENIANS.**—The Armenians form a small but important community. They are chiefly engaged in commerce and trade, especially as goldsmiths and jewellers, but many of them hold important posts in government offices.

**BLDOUIN.**—These are the wandering Arabs living in the desert on either side of the Nile, and in the Sinaitic Peninsula. The total number dwelling upon Egyptian territory does not now exceed 50,000. They were formerly divided into 75 tribes, mostly speaking Arabic. The Ababda Bisharin and Hadandwa tribes, who live in the most southern part of Upper Egypt and Nubia, speak a different language, which is known as Bedy or Tu-Badhawiya. It has been observed that when the Bedouins settle down to village or town life they appear to lose all the bravery and fine qualities of independent manhood which characterise them when they live in their home, the desert.

**COPTS.**—The Copts are the direct descendants of the ancient Egyptians who early in our era embraced Christianity; they number to-day probably not more than 500,000, and live chiefly in the cities of Upper Egypt, where most of them are engaged in the trades of goldsmiths, cloth-workers, etc., while a large number of the clerks in the postal telegraph and other government offices in Egypt are drawn from their community. Their religion is known as the Monophysite variant of Christianity, and because of their adherence to the heretical doctrine of the one nature of Christ they formerly suffered much persecution. Their churches, festivals and lasts are extremely interesting to the archaeologist and ecclesiologist, and the true Copt considers a visit to Jerusalem once in his life to be obligatory.

**EUROPEANS.**—The Europeans are a most important section of the population of Egypt, especially in Cairo, Alexandria, and the towns of the Delta. Greeks, Italians, English and French formed the majority of the 174,000 inhabitants coming under this head at the last census. The greater part of the business of Alexandria is in the hands of Greek merchants, many of whom are famous for their wealth. The French, British, Austrian and German nations are also represented there by several important business houses. In addition to this, the part that British administrators have played (with the help of the French) in the pacification and re-organization of the country and its finances have made the position of these two nationalities a most important one in the political and commercial life of Egypt.

**FELLAHEEN.** The Fellaheen (Ibn el-Arab) are the most numerous and most important element of Egypt's population, and it is said that about 90 per cent of the native inhabitants belong to this class. They are descended from the Arab tribes which settled in Egypt soon after the Mohammedan conquest of the country. When these tribes left the desert and began to live a non-nomadic life, they married among the indigenous people, and their offspring, most of whom embraced Islam, resembled in many respects the ancient Egyptian people. The fellah is the agriculturist of Egypt, and probably the hardest working agriculturist in the world. He lives on and by the earth, and his house is a little conical mud hut, his only clothes are a strip of blue cloth, his wants are incredibly few and all supplied from his immediate surroundings. Many fellaheen become very rich and owners of large estates, without, however, abandoning the simplicity of their ordinary life.

**JEWS.**—The Jews of Egypt are remarkable for their fair hair, blue eyes and white skin. The street moneychangers (seraf) in the towns are Jews, and there are many wealthy merchants and shopkeepers, though the Jewish quarters are generally poor and miserable-looking. The race is not subject to persecution, and labours under no civil disabilities.

**LEVANTINES.** The Levantines may be described as Arabic-speaking Christians of European and Syrian origin. There are few of them who, in addition to their mother tongue, have not an acquaintance with several other languages. They are chiefly engaged in commerce, many of them being very wealthy.

**NUBIANS.** The Nubians may be considered as the inhabitants of the country between the First Cataract and Khartoum; by the Arabs they are called Berberi. They speak a language which is allied to some of the North African tongues, but often use Arabic well. The Nubians found in Egypt are usually doorkeepers and domestic servants, who can as a rule be depended upon for their honesty and obedience.

**OULÂ.**—The Oulâ, or Egyptian inhabitants of the towns, differ in many respects from the peasantry, though the distinction is chiefly noticeable as regards the Cairenes, who consider themselves and with some justice, the superiors, mentally and physically, of the Fellaheen. No doubt they are a more mixed race, showing signs both of European and African descent, and the colour of their skin varies from a dark brick red to nearly white.

**TURKS.**—The Turks now form a comparatively small portion of the population of Egypt, and the day has gone when they occupied most of the important civil and military posts. Many of them are the children of Circassian slaves, while others are the descendants of Turks born in Egypt and of very mixed origin. Turkish merchants are famous for their civility to foreigners and their keen eye to business.

#### IMMIGRATION AND LABOUR

Of immigration in the generally accepted sense of the word, there is none in Egypt. That is to say, the labour of the fellaheen, Egypt's peasantry, is amply sufficient for the sowing and harvesting of the cotton and other crops, and imported labour under Government supervision is unknown. Within the region of the Delta, however, there has been throughout modern Egyptian history always a stream of indefinite and uncontrolled immigration from what is known as the Levant, the new arrivals (mostly of Syrian or Greek extraction) taking up mercantile pursuits and becoming absorbed in the very mixed population of Alexandria, Cairo and the larger towns. Since the middle of the 19th century, too, there has been a certain amount of what may be called official immigration from England and European countries, since the establishment of autonomous government this has sensibly decreased.

**LABOUR.**—In April 1924 the Labour Conciliation Board, which had been established under the British Administration, was abolished, and its place was taken by Conciliation Commissions set up in the capitals of the Governorates and Provinces, being composed of the Governor or Mudir, as the case may be, as president, a notable of the district, and the employers. In spite of the ubiquitousness of these Conciliation Commissions, as against the limitation of the original Commission to headquarters at Alexandria, with temporary transfers to

Cairo, there was an almost unbroken succession of strikes in the two chief cities and the Canal Zone during 1924 and 1925, the delay in dealing with which was often very pronounced. Many of these so-called labour disputes had little or no economic *raison d'être*, but were either the work of political agitators or trials of strength with the employers.

An attempt made to unite all labour syndicates in one General Egyptian Workers' Federation began very promisingly, but had to be abandoned owing to disputes between its president and the delegates of the various syndicates, who, amongst other things, objected to the former's proposal that 25 per cent of their receipts should be at the disposal of the Federation.

## EDUCATION

Writing in 1901 the late Lord Cromer was able to say: "A very great impulse has been given to education in all its branches the schoolmaster is abroad." In 1907 the sum of £13,371,000 was expended upon education, then an unprecedented amount; in 1923-24 the total so disbursed out of the Public Treasury was £11,272,000. These facts will serve to show how the extension of educational facilities throughout Egypt has definitely, if somewhat slowly, progressed. Especially since 1922 when Egypt became an independent Power, there has been a marked increase in the number of schools of all categories as the movement for education has spread throughout the country. Indeed, quantity is perhaps being secured somewhat at the expense of quality, though it is hoped that this is only a temporary defect. Trained teachers for the primary and secondary schools do not yet exist in adequate numbers, but efforts are being made to increase training colleges for teachers of all kinds, and in a few years the supply of qualified instructors may be expected to equal the demand.

### ELEMENTARY EDUCATION.

Elementary education in Egypt was formerly in the hands of private individuals or of the mosques, the schools attached to the latter and those endowed by the Ministry of Wakfs (Pious Foundations) teaching little but the A B C of grammar and calligraphy and the recitation of the Koran. These elementary schools are, therefore, little more than vernacular institutions for the masses, but the recent development of the Government's educational policy has transferred many of them to the control of the Ministry of Education, which has also created new ones since 1924 to the number of 127. There are also over 700 Provincial Council schools and 2,801 elementary schools receiving the Government grant-in-aid, which is dependent on Government inspection and the inclusion of physical training, civics, general information, and (for girls) needlework and drawing in the syllabus of instruction. In 1925 there were (excluding the men's and women's elementary Training Colleges) 4,567 elementary schools in Egypt, with a total roll of 413,110 pupils.

**PRIMARY SCHOOLS.**—The primary schools may be termed the preparatory schools in the European system of education that Egypt established more than sixty years ago. They correspond to preparatory schools and grammar schools in England, just as the secondary schools in Egypt correspond to the Public Schools in England, with the study of English and French taking the place of that of Latin and Greek. The new scheme of work for boys' primary schools includes the following subjects: Arabic, English or French, arithmetic, physical

training, Arabic penmanship, religion and morals, handwork or school gardening, drawing, geography, English or French penmanship, history, object lessons and elementary science, hygiene and elementary physiology, geometry and civics. The time-table comprises four lessons each morning of 50 minutes each, and three lessons each afternoon of 45 minutes each. Thursday afternoon and the whole of Friday are holidays. From 1902 until 1925 the only European language studied in primary schools was English. With the new syllabus French has been re-introduced as an alternative language in certain schools where its study is deemed advantageous to the pupils. Handwork is now being taught for the first time in boys' primary schools, and a carpenter's workshop is to be installed in every school for light wood-work and metal work. School gardening has been started in five provincial schools where the necessary land is obtainable, and it is hoped to extend this subject to other schools year by year.

The statistics of boys' primary schools for the school-year 1924-25 were as follow:

No.	CONTROLLING AUTHORITY	NUMBER OF SCHOOLS	PUPILS IN ATTENDANCE
1	Ministry of Education	40	14,851
2	Provincial Councils	76	12,078
3	Societies or individual Proprietors	85	17,437
Total		201	45,266

For the 30 Government Schools there was a staff of 702, comprising headmasters and teachers, of whom 480 were in possession of teachers' certificates.

### PRIMARY SCHOOLS FOR GIRLS.

Including eight higher elementary schools, there were 73 primary schools for girls established in Egypt by 1925, with a total attendance roll of 18,740, of these, 52 were under the inspection of the Ministry. During recent years the general standard of education in all girls' schools has been raised, and new syllabuses of instruction have been so framed as to ensure the moral, intellectual and physical education of Egyptian girls, to enable them to acquire knowledge by exercising their powers of observation, reflection and reasoning, and not as in the past by memorising alone.

**PRIVATE SCHOOLS.** In addition to the Government schools, there are a number belonging to public bodies and private individuals. Thus the Provincial Councils maintain elementary, primary and technical schools, religious institutions and societies are responsible for primary and secondary schools, and many private individuals have opened schools of their own. The Orthodox Coptic community maintains 196 schools, containing 18,987 boys and 5,080 girl pupils. The Greek, Syrian, Jewish, and every other foreign community has each its fine schools, well housed and liberally supplied with European teachers, and many of the most distinguished men in the country have been educated at the Jesuit and other foreign schools.

**SECONDARY EDUCATION.**—Secondary education in Egypt is provided partly by Government schools directed by the Ministry of Education, and partly by schools under private management, which are inspected by the inspectors of the Ministry and are in receipt of grants-in-aid from the Government. The number of Government schools in 1925 was 15 and of inspected schools 35, with a total attendance of 12,914 pupils. Five of the Government schools are in Cairo and others are at Alexandria, Tanta, Zagazig, Mansurah, Beni-Suef, Assiut, Dar-el-Ulum

(preparatory to the Training College there), and Hilmya (for girls). The course of study extends over five years. For the first three years a general course is followed, and in the fourth year pupils branch off, according to their choice, into two sections, literary and scientific, in which they receive more specialised instruction fitting them to proceed to the Faculties of Arts, Law or Medicine in the Egyptian State University. At the end of their third year pupils have to pass the Secondary Education Certificate Examination Part I, and at the end of their fifth year Secondary Education Certificate Examination Part II.

The possession of the latter certificate is a necessary condition for admission to the University or any Higher College and it also renders the holder eligible for employment in minor clerical posts in Government Offices. Important secondary schools which are inspected by the Ministry and receive grants in aid are: the Coptic College, Cairo, El Ihania School, Cairo, El Idaria Cairo, Tewfik Coptic School, Cairo, the Royal Awqaf School, Cairo, El Masari-el-Maskura School, Shubra el Khayma, the Coptic El Morcosia School, Alexandria, the Coptic School, Hisset Birma, the Al Raschad Secondary School, Cairo, and the Al Hayatem Secondary School, Cairo.

### TECHNICAL AND COMMERCIAL EDUCATION.

—The Department of Technical, Industrial and Commercial Education controls a number of schools and institutions, the largest of which are the Bulak Technical School with 870 students and the School of Egyptian Arts and Crafts, with 357. The Mansurah Trades School, the Cairo Model Workshops, the Assiut Model Workshops, and the Port Said Government Trades School give practical instruction in various trades. The length of the course is five years. There is no fee, and pupils after the first year receive small wages. The numbers of apprentices in these schools in 1925 were: 462 at the Mansurah Trades School, 115 at the Port Said Trades School, and 316 and 303 at the Cairo and Assiut Workshops respectively. There are also the Schools of Accountancy and Commerce in Cairo with 525 students, evening classes in connection with such schools being held at Alexandria and other centres, the School of Housewifery for women and girls at Kubba, and the Ecole des Beaux Arts at Cairo, founded in 1908 by H.H. Prince Yussuf Kamal Pasha.

**UNIVERSITY EDUCATION.**—The great Egyptian University of El Azhar, which occupies the famous mosque of that name erected in the time of the Fatimite Khalifs (970-972 A.D.), is probably the largest institution of its kind in existence, and is known all over the Mohammedan world. There are commonly not less than 20,000 students at El Azhar, but the education given is confined to commenting the Koran and the Sheri, or Sacred Law. The Egyptian University, comprising faculties of Literature, Criminal Science and Law, was founded by Said Pasha Zaghlul in 1908. One of the most important and flourishing of colleges in Cairo is the School of Medicine and Pharmacy, which admits students between the ages of 16 and 25 who hold the Secondary Education Certificate (scientific side). The number of students in 1924 was 497. The School of Engineering, Gizeh, has accomplished much useful work, especially in the direction of irrigation and civil engineering; in 1925 it had a roll of 581. The Higher Training College, Cairo, with 663 day students, provides a four years' course, based upon the Secondary Education Certificate for teachers

of mathematics, science and literary subjects free education is given to students who undertake to follow the profession of teaching for at least five years after having obtained the diploma. The Dar el Uhm provides a four years' course for Sheikhs, and the Sana Training College a similar course for women teachers, education being free.

### SPORT

Sport in Egypt may be said to have been introduced by Europeans resident in the country. It was until comparatively recently it was wholly maintained. Prior to the Great War the playing of games was also in the main confined to British residents and the Army of Occupation. Since 1914, however, sport has gained a considerable hold on the affections and interests of Egyptians. Football is now the national winter game, and tennis enthusiasts are limited only by the extent of playing facilities. Boxing, too, is becoming increasingly popular. Opportunities for indulging in the sports of big game shooting and hunting are, of course, restricted, Egypt being a country of either irrigated lands or sandy deserts.

**FOOTBALL.**—Rugby football has no attraction for the Egyptians but is played to some extent by units of the British Army and Air Force and an occasional side from the Gezira Sporting Club. The Association code, on the other hand, has become very popular with all classes of Egyptians, and many of the large business houses in Cairo and Alexandria have encouraged the formation among their employees of football clubs and competitions.

**GOLF.**—There are eleven golf courses in Egypt, six of these being situated in and around Cairo, and one each at Alexandria, Port Said, Suez, Ismailia and Assuan. Six of the eleven are 18 hole courses, the others having nine holes only. Two of the former and one of the latter have grass fairways, the rest of the fairways and all the greens are of sand. The all-sand fairway in Egypt, thanks to constant rolling and watering, provides a very good surface, and sand greens, constantly watered and brushed, are very much truer than the European golfer might be led to suppose.

**POLO.**—There are three polo grounds at the Gezira Sporting Club, Cairo, and matches are held every week. This game was introduced, and is still mostly played, by the officers of the British Army and Air Force.

**RACING.**—Racing in Egypt is controlled by the Jockey Club of Egypt, whose headquarters are in Cairo. Meetings are held twice weekly at that city, the course at Helopolis being conveniently and beautifully situated, with admirable arrangements for owners, trainers and the general public. Both horse races and camel races are held here, the horses varying in character from third class Arabs to English thoroughbreds and providing very good sport.

**SHOOTING.**—While Egypt cannot compete with the Sudan and other parts of Africa as a big game country, the opportunities it offers to the gunner are by no means few, quail, duck, snipe, and pigeon shooting being obtainable throughout the country. The months of March and April see the arrival of the quail, and every patch of corn near Cairo holds scores of these little birds, which, if they do not afford the most sporting of shots, make up for this deficiency by their numbers and their succulence on the table. The sand grouse, which abounds in all the desert areas, provides most excellent sport when coming down to water at dawn or in the evening.

Duck shooting is popular because of the large number of varieties that the gunner may find in his bag at the end of the day. At least fourteen species may be met with, the commonest being the teal, pintail, shoveller, pochard, white eye pochard, gadwall, mallard and widgeon. Duck are mostly met with during December and January, and are to be found on every stretch of water or marshland from Alexandria to Luxor. Probably the best part of Egypt for free duck shooting is the Fayyum, as here there are thousands of square miles of water, of which very little is preserved. The best snipe shooting is obtained in the Delta proper and in the vicinity of El el Kebir. Pigeons are found everywhere, and, as they do great damage to crops, permission to shoot (which must always be asked for) is as a rule obtained.

**SHOOTING IN THE DAKHLA OASIS.** One of the most sporting places in Egypt for all-round shooting is the Oasis of Dakhla, which can be reached by rail and car. The scenery of the region is extraordinarily beautiful and it is probably the most charming spot in Egypt. The Dorcas gazelle and another gazelle very similar, but of a distinct species that has not been named, exist in considerable numbers. Snipe, duck and pigeon are found all over the oasis, and as they are not worried by local sportsmen are more abundant than the birds round Cairo. The sand grouse shooting, when one has discovered their feeding and watering haunts, is as good as any in the world. For this trip it is necessary to take tents and mosquito nets, but no great store of supplies, as, with the exception of tea and groceries, all foodstuffs can be bought locally at far lower prices than obtain in the Nile Valley.

### PRESS

The problem of newspaper production in Egypt is necessarily a complicated one, due to the exceedingly cosmopolitan character of its population. On the one hand, Arabic is the *lingua franca* of the country, on the other, French is the language customarily used in all commercial dealings between the nationals of twenty or more different countries, as well as being the medium for diplomatic and official communications, while English is the tongue of the many British officials who have governed Egypt for nearly half a century besides being that of the majority of tourists who flock to the land of the Pharaohs during the winter season. It is not surprising, therefore, to find a Press which is as cosmopolitan as that of any country in the world, a fact to which the existence of important daily newspapers in the Arabic, French, Greek, Italian and English languages offers a sufficient testimony.

**ARABIC PRESS.**—Concurrently with the growth of nationalism as a feature of Egyptian political and social life and with the development of education throughout the country, there is noticeable a distinct tendency towards a rise in importance of the Arabic newspapers. Many of these are admirably managed and edited, present both foreign and local news in the best manner, and are rapidly growing in importance as advertising media. The popularity of the Arabic newspapers cannot be fairly judged by their sales' circulations. The public reader is an age-long institution in Egypt, and in the smaller towns and villages especially the better educated men of the locality will read through the whole of a paper to an appreciative audience in the café or other public rendezvous.

The leading Arabic daily is "Al Ahram," a paper which is published in Cairo and has had an eventful career of nearly 50 years. It has a special news service and correspondents in every European capital. Next in importance are "Al Mokattam," "Al Siassa" and "Al Wadimil" (Alexandria), all first-class newspapers adhering to the best traditions of the native press. There are also a number of other daily sheets of considerably less importance which are used for propaganda purposes, not always of the wisest kind. Of illustrated weeklies, "Al Ihtilal" is at once the oldest and best, it has, however, a strong competitor in "Al Mussawar," a more recent arrival, but a paper that is making marked headway. In the department of magazine literature, "Al Hilla," which has been called the Egyptian "Blackwoods," deserves mention, it is essentially a high class magazine and is deservedly popular.

**BRITISH PRESS.** The two daily newspapers appearing in English are the "Egyptian Gazette," published in Alexandria and the "Egyptian Mail," issued from Cairo. The "Egyptian Gazette" has had a long and honourable career, having been founded in 1880, and it has a deservedly high reputation, not only in Egypt but everywhere Egyptian affairs are studied. The "Mail," which circulates very largely among tourists and the Army of Occupation, has always devoted its columns more to financial and sporting matters than to political or local news, though these latter are by no means disregarded. The "Sphinx" is a high-class English social weekly well written and illustrated, and has attained a very large circulation.

**FRENCH PRESS.** Fully equal to the Arabic in importance are the many admirable newspapers in French that emanate from Cairo and Alexandria. French is the international tongue of the country, all educated Egyptians speak, read and write it, and though the actual French community of Egypt is only small the general acquaintance with the language justifies the existence of a number of really excellent papers. The chief of these are the long-established "La Bourse" of Cairo and "La Bourse" of Alexandria, which rank among Egypt's most informative and respected daily papers. "Le Journal du Caire" and "La Réforme" are also well established dailies, and they may be called the organs of the French colony in Cairo and Alexandria respectively. A French publication that has attained great popularity of recent years is "Le Magazine Egyptien," a weekly which is sold at the low price of 1 P.T. per copy.

**GREEK PRESS.** The Greek daily newspapers, of which there are several, have the reputation of being exceedingly well served and edited. The leading paper from a literary point of view is the "Ephemeris," of Alexandria, from a strictly commercial point of view, the principal is the "Tachydromos," also published in Alexandria. The "Phos" and "Cairon" are likewise daily papers with a large circulation.

**ITALIAN PRESS.**—The leading Italian daily paper is the "Messaggero Egiziano," Alexandria, which has always been famous for the attention it devotes to municipal and Egyptian affairs, in this respect contrasting favourably with most of the journals in European languages which are concerned primarily with foreign news and with the affairs of their own particular colony. Another influential Italian paper is "L'Imparziale," published in Cairo.

# EGYPTIAN SCULPTURE

Chiefly Prior to the XIXth Dynasty

By MAURICE NAHMAN, Cairo

**E**GYPTIAN plastic art is variable in many respects either from a chronological or from a geographical point of view. There are several periods and schools, as for instance the periods of the Pyramids of the Old and Middle Empires, of the twelfth and eighteenth Dynasties, of the Ramesses and the Ramessides and of the Saite Kings, while among the most important schools may be mentioned those of Memphis, Hieropolis and Thebes. In all these, however, as in other local schools, the fundamental principles of Egyptian plastic art are changeless. Where they differ is in technique and composition, in their relation to nature and in the material in which they worked.

**ANCIENT ART (DEVELOPMENT OF).**—Like everything else in the Nile Valley, where natural causes enforce a strict centralisation, the local schools could be developed only when they were brought into contact with political life. It was so with the Memphitic art in the Old Kingdom and with the Theban sculpture of the Empire. But sometimes Egyptian art derived its energy from quite a different cause—the fall of the central power and the aggrandisement of local princes. Often a provincial school owed its development to the King's protection. The school of El Amarna, for instance, was called to life by Amenhotep IV, its fundamental features having been worked out during the preceding period. From the first this school showed a tendency to extreme exaggeration, a tendency seen in the statues of Amenhotep IV recently discovered at Karnak, and now in Cairo. Later on, the school was transferred with the court to the Amarna Valley. There it followed different impulses, either becoming ugly or striving after beautiful and ideal forms. An instance of this groping after a simple naturalism and truth is to be found in the Intankhamen collection.

The Theban reaction which followed and the return to canonical art did not destroy the reformer's achievements. In the Abydos reliefs of the time of Seti I and in the sculptures of Ramesses II and III, typical Amarna features can be distinguished. The last period of independent sculpture in the sixth century B.C. is distinguished by the remarkable school of Saïs, to which we owe some perfect works in greenish and black basalt. (See photos.)

**CANONS OF EGYPTIAN ART.**—In ancient Egypt the sculptor was called "se-ankh," or "reviver." He gave life to anamorphous material—stone, metal, ivory or wood. The divine spirit was supposed to enter the dwelling thus prepared for it. Statues had two characteristics. They were outer forms of the deity when they stood at the holy of holies of a temple, or the doubles of men when they were hidden in the depths of a tomb. Besides these two fundamental types there were other intermediary types, such as the statues of kings which adorned the temple courts and those of noblemen deified during their lifetime, placed before the pylons of a temple. The first received prayers for the benefit of those "Sons of the Sun" whose images they were, the others accepted the

prayers of the people entering the temple in order to transmit them to the gods. Such are the statues of the wise Amenhotep, son of Hâpu, vizier of Amenhotep III and those of Pa-Ramessu, who became later King Ramesses I.

Statues, as well as reliefs, had to follow very strict rules, for their inventors were held to be the gods themselves. Every defection from the canon, which thousands of years had sanctified, was condemned by the orthodox as heretical. The restless search for new forms of art of our time was unknown in ancient Egypt.

The solidity of the materials in which these old sculptors worked—granite, diorite, basalt and sandstone—must be remembered if the statues appear to modern eyes to be lifeless and motionless, as must also the fact they they formed part of an architectural design from which it was never intended they should be separated. Looked at in the strong light of a modern museum, they appear exaggerated, in the twilight of tombs and temples they display a perfect architectural harmony.

**CONVENTIONAL POSITIONS.**—The principal positions of Egyptian statues are confined to four or five fundamental types, viz., (1) statues in a standing position, (2) statues seated on a throne or on a cubical seat, (3) statues kneeling, (4) statues seated with crossed legs, and (5) statues seated on their heels.

Only seldom did the sculptor show a tension of muscles, and even more seldom do the faces express feeling or thought. In general, the impassive features are slightly revived by a mysterious looking smile round the lips. The eyes are fixed looking to the front, but not on empty space as is sometimes thought. The head is on broad massive shoulders. The arms are closely pressed to the body, hanging down or lying on the knees. The statues look very calm inwardly and very balanced and compact outwardly, symmetry reigns everywhere. The fundamental rule is the identity of the right and left halves of a statue—the so-called "frontal law." Movement is absent, even when the statue is represented in motion. The leg moved forward—with rare exceptions (in one case only in the Cairo Museum) always the left—conveys no impression of steps being taken, being purely a conventional gesture. Even primitive Greek sculpture imitated this feature of Egyptian art, but a comparison with the works of Polyclethus and Phidias shows how, later, the Greek sculptors completely rejected this conventional art, and represented continuity of motion, walking, running or flying.

**FAMOUS STATUES OF EARLY DYNASTIES.**—Some heads of the IVth dynasty, and of the Vth and VIth in particular, as well as the reliefs of the IIIrd dynasty from Meidum and Sakkara, show the incomparable skill of the sculptors of those periods and their ability to apprehend and represent individuality of feature. Not to speak of such well-known examples as the Scribe in the Musée du Louvre, the "Sheikh-el-beled," the Cairo Cephren, etc., mention may be made of the head of the

young Shepseskaf and of his father Mycerinus in Boston. How wonderfully are conveyed the child's undeveloped features and the family likeness to his father! A later example is the red painted limestone head of one of the princes of Cheops found by Reisner at Giza.

Among the accompanying photographs are two of the well-known Scribe in red granite which was sold to the Berlin Museum, and one of an Egyptian clad as a Libyan warrior, in diorite found at Giza in Upper Egypt and sold to Mr. Levi de Benzon. These excellent examples of the sculptor's art may be referred to the Vth-VIth dynasty and to the IVth (or even to the IIIrd) dynasty respectively.

**MIDDLE KINGDOM (ART OF).** With the rise of the Middle Kingdom and the appearance of the energetic Amenemhats and Senuserts, Egyptian art which had become decadent and provincial during the transitory period was once more appreciated and favoured in the palace. Some official works of this period are not only superior to the best patterns of the Old Kingdom, but even surpass them in workmanship and expression. Good examples are the relief of Senusert I from Coptos and the obsidian head of Amenemhat III in MacGregor's collection. Very neat to it is a royal head (presumably of the same king) in black stone, now in Berlin, which is shown in the accompanying photo. A good illustration of the sculpture of Senusert III is the accompanying reproduction of his sphinx in diorite, found at Giza. This was sold to the Metropolitan Museum of Fine Arts at New York. These two sculptures can be compared instructively. The Berlin head is imbued with an expression of deep melancholy, while the New York sphinx still wears the external sublimity of the Pyramidal epoch. Admirable also is the stately modelling of the woman's bust in green basalt, presumably that of a queen of the XIIIth dynasty (possibly the queen of Senusert II, named Nefret), which is closely related to those found in Tanis and now in the Cairo Museum. The statues of private persons are in general less perfect, though they show sometimes a high workmanship. The statuette of a king's courtier in red quartz in the British Museum may be mentioned, as also some other statuettes of servants in painted wood, which used to be placed in the tombs.

**CHARACTERISTICS.**—Thus, in mere workmanship, the art of the Middle Kingdom can be compared favourably with that of the period of the Pyramids. From a psychological point of view there is an essential difference, brought about by the general conditions of the time. The decline of the central power at the end of the VIth dynasty and the decay of the state which ensued, as well as foreign invasions, had ruined many great architectural monuments and cast a gloomy shadow on the general outlook of the people. Monuments "of millions of years" created "for eternity and everlastingness" were lying in ruins, the power of the "Son of the Sun," the Pharaoh, was hardly recognised; chaos prevailed,

and nobody could be sure of the safety of his life or property. Doubts as to the value of life and its result created a pessimistic tendency in literature and art, and in the portrait sculpture of the Middle Kingdom the disappearance of internal balance is noticeable. A marked love of exaggerated motion is evident in the reliefs on the tombs of Beni-Hasan, El Bersheh, and especially of Meir, and in the last named even a painful tendency towards ugliness. Still, however, the bodies preserve their old immobility, only the hands begin to lose their age-old numbness. A kind of gesture begins to appear, though a very mannered and conditional one as yet.

The hanging hand was a very common Amarna gesture and it was favoured until the XXth dynasty. But on the stela of King Amenhotep III three middle fingers are seen between the two extreme ones. This is one of the earliest known instances of Egyptian sculptors breaking away from established routine.

**FOREIGN INFLUENCES**—Generally speaking the sculpture of the XVIIIth dynasty reflects many foreign influences. Syrian, Nubian, Semitic and Asiatic, to name only a few. Whether this was the cause or only a consequence of an individualistic tendency which at that time asserted itself is uncertain. An example of this tendency to represent individual features

and even a spiritual expression is seen in the photo. of the remarkable statuette of Queen Ti in ebony, now in Berlin, reproduced on page 13.

**MONUMENTAL SCULPTURE OF XVIIIth DYNASTY.** The sense of triumph and power produced by the victories and treasures gained from foreign countries created a strong impulse towards the creation of great and enduring monuments, to which the Egyptian genius has always felt itself specially called. New architectural creations at Thebes and elsewhere, erected on a gigantic scale, brought also a fresh triumph to the sculptor. Here we see how brilliantly was solved the problem of colored relief on huge walls. A most striking composition, which will never die, is undoubtedly the representation of a Pharaoh driving a chariot with horses "madly devouring space". The Egyptian gave here, as elsewhere, only a conditional gesture, but it is a typical and original one. Created at the time of the XVIIIth dynasty, it was repeated often during the XIXth and later dynasties.

The enormous statues for which Egypt is famous reached their apogee during the XVIIIth dynasty in the two Colossi of Amenhotep III in the Theban Valley. These are the so called "Colossi of Memnon". The XIXth dynasty produced the Colossi of Rameses II in the Nubian rock temple of Abu-Simbal.

The Amarna sculptures are the highest expression of the art of the XVIIIth dynasty. Amarna art preached the study of nature, the king himself teaching his masters to seek truth in their compositions. But even during his lifetime the art of the sculptor became more conventional, strength giving way to an elegant weakness. Instead of simple and noble forms, the wavy, baroque line appeared.

**TUTANKHAMEN.** The age of Tutankhamen marks the limit of the prevailing art. No further way was open. As in politics, a reaction in art was inevitable.

It may, nevertheless, be urged in conclusion that this later art is more familiar to us than the severe art of the Old Kingdom. It is nearer to our own age and our own intuitions. Those fragile alabaster vases discovered by Mr. Carter we wish to hold in our hands, we long to sit in those elegant armchairs, we are touched by the images of the young king and queen, who lived their intimate life in dreams, while Horemheb, the general, and the Theban priests took the power into their hands and prepared the end of a famous dynasty. The golden mask of Tutankhamen is full of life and of a touching spirituality. If we compare the young fragile face with the imposing diorite Chefred in Cairo we shall understand how far from each other are these two poles of the plastic art and psychology of old Egypt.

### POSTS, TELEGRAPHS AND TELEPHONES

#### CONSTITUTION

**P**RIOR to the Great War, Egypt was a tributary State of the Ottoman Empire, and was ruled by a hereditary prince with the title of Khedive, a Persian appellation regarded as the equal of King. From 1879 to 1883 both France and England exercised considerable powers in the direction of affairs, but in the latter year the joint control was abolished by a Khedivial decree, and an English Financial Adviser was appointed, without whose concurrence no financial decision could be effective. Much of this restrictive power was removed by decree in 1904, but in actual fact no important decision, either in finance or as to internal administration, was ever valid without the concurrence of the British Minister Plenipotentiary.

With the entry of Turkey into the War of 1914-18 as an enemy of Great Britain a curious and intolerable situation was brought about, Egypt was at the same time nominally subject to Turkey and controlled to a large extent by Great Britain. The question of suzerainty might have been determined by annexation, but it was decided by His Majesty's Government to proceed along existing lines and to place Egypt under British protection. On December 18, 1914, the country was made a British Protectorate, the ruling Khedive, Abbas Hilmi, was deposed, and the succession of his uncle, Prince Hussein Kamel, with the title of

Sultan of Egypt, was proclaimed. For nearly nine years Egypt remained under this status, until on April 20, 1923, the present Constitution making the country a free and independent State was promulgated.

**FORM OF GOVERNMENT.** Egypt is a sovereign State, with a hereditary monarchy and a representative Government. All Egyptians have equal legal, civil and political rights, irrespective of race, language or religion. Liberty of the individual and of religious belief is guaranteed, and compulsory elementary education is established for both sexes in free schools. All powers emanate from the nation, the King exercising legislative authority concurrently with the Senate and Chamber of Deputies.

**LEGISLATURE.**—The Egyptian Parliament consists of two chambers, the Senate and the Chamber of Deputies. Two-fifths of the members of the Senate are nominated by the King, the others being elected on the basis of one senator for every 180,000 inhabitants. The members of the Chamber of Deputies are elected on the basis of one deputy for every 60,000 inhabitants and serve for five years. Ordinary sessions of Parliament last six months, and its sittings are public. No new law can be applied to foreigners until it has received the sanction of the Court of Mixed Appeals.

**MINISTERS (COUNCIL OF).**—The Executive Power in Egypt belongs entirely to the King, who governs with his Ministers. The

Council of Ministers corresponds to the Cabinets of other countries, and on June 6, 1926, following a General Election, was constituted as follows: Prime Minister and Minister of the Interior—Adly Pasha Yeghen; Minister of Foreign Affairs—Abdel Khalek Sarwat Pasha; Minister of Justice—Zaki Pasha Abul Send; Minister of Agriculture—Fathallah Pasha Barakat; Minister of Finance—Morcos Pasha Hanna; Minister of Wakfs (Pious Foundations)—Negib Pasha Gharabli; Minister of Education—Aly Bey Shamsy; Minister of Public Works—Osman Bey Moharram; Minister of War—Ahmed Khashbaba Bey; Minister of Communications—Mohamed Pasha Mahmud.

**LOCAL GOVERNMENT.**—The Executive Power is administered throughout the country by Governors (Muhafiz) in the principal cities and by Mudirs, who control respectively the five governorates and fourteen mudiriyas (provinces) into which Egypt is divided. The mudiriyas are sub-divided into markazes, or districts, each under a mamur, who controls the headman (omda) of each village in his district. A Provisional Council operates in each mudiriya, and consists of the mudir as president and of two representatives of each markaz elected by the electors-delegate.

**MONARCHY.**—Under the Constitution of 1923, the ruler of Egypt is designated King, his present Majesty, King Fuad I, being the first to hold that title, though actually the

month of his dynasty, which was founded by Mohammed Ali in 1805. The throne is hereditary in the family of Mohammed Ali, succession being in the male line according to primogeniture. The ex-Khedive, Abbas II, is expressly excluded from the succession, but not his direct and lawful male descendants. The powers of the King are as follow. He can dissolve the Chamber of Deputies, can create and confer decorations, is Commander-in-Chief of the Army and Navy, can alone appoint and dismiss Ministers, nominates two-fifths of the Senate and the President thereof, and can deprive of the rights of succession any prince who marries without his consent, or who is declared unfit to belong to his family.

diction of ecclesiastical courts. Generally speaking, the modifications effected in the Code Napoleon as interpreted in Egypt appear to suit the country, and the administration of justice, while perhaps not up to the best European standards, on the whole works smoothly and well.

**CONSULAR COURTS.**—The Consular Courts try civil and commercial cases between persons of the same nationality, provided such cases are not in reference to landed property in Egypt, criminal cases, where the accused is a subject of the Government concerned, except when the Mixed Courts have jurisdiction and cases touching the personal status of subjects of their own Governments.

It was with the ready consent of the foreign communities that the Egyptian Government put forward a proposal for the creation of a system of international law courts which would command the confidences of Europe and be empowered to try civil and commercial suits between Europeans of different nationalities, and between Europeans and Egyptians or the Egyptian Government. The signatory Powers to the institution of these courts were Austria-Hungary, Belgium, Denmark, France, Germany, Great Britain, Greece, Holland, Italy, Norway, Portugal, Russia, Spain, Sweden and the United States. Germany and Austria having since lost their rights, their judgeships have been divided between England, France and Italy. The

ASPECTS OF HIS MAJESTY KING FUAD'S THRONE ROOM AT RAS EL TIN PALACE, ALEXANDRIA.

**NATIONAL FLAG.** The Egyptian flag consists of a white crescent and three stars on a green ground, the horns of the crescent being directed away from the flagstaff. Flags for all branches of the Army are green bunting with a white crescent and three stars in the centre and white crossed swords in the top left-hand corner.

### LAW

Owing to the presence of large numbers of subjects of Foreign Powers in Egypt, and to the dominant position occupied successively by France and Great Britain in regard to administration, the legal and judicial systems of Egypt have become somewhat complicated. It may be said briefly that Egyptians are in all cases subject to their native court except when concerned in civil litigation with foreigners, but the latter are never subject to the jurisdiction of native courts. Matters of personal status in the case of Moslem and non-Moslem Egyptians are left to the juris-

**COURTS OF PERSONAL STATUTE.**—These comprise the Moslem Religious Courts, the Courts of the different non-Moslem religious communities, and the Maglis Hashi (Courts of Wards), which are especially concerned with the appointment of tutors and guardians.

**MIXED TRIBUNALS.**—These Courts, the jubilee of whose foundation was celebrated with considerable ceremony on February 27, 1926, were founded in 1876, their creation being due to the very unsatisfactory condition of things that prevailed before then in Egypt in regard to the administration of justice. The European communities had difficulty in obtaining justice owing to the conflicting jurisdictions and the diplomatic intrigues that were so prevalent. The Egyptian Government, because of the inefficiency of the Courts, was entirely at the mercy of shady financiers, for whom Egypt had become a happy hunting-ground.

Chambers in the Appeal Courts consist of three foreign and two Egyptian judges, in the lower Courts of two foreigners and one Egyptian judge. The law applied by the Mixed Courts is that contained in the Mixed Codes, and in those permanent police regulations which have been promulgated with the approval of the General Assembly of the Judges of the Mixed Court of Appeal.

The Mixed Tribunals have become an important source of revenue to the Egyptian Government, for a considerable sum accrues from land registration, no transfer or encumbrance, even where the parties are Egyptian, is valid unless it is registered in the Courts. The routine legislation affecting foreigners cannot be changed without the approval of the Mixed Courts sitting as a plenary body. That the tribunals are an effective part of the Egyptian State organisation is evident, since they deliver their judgments in the name of the King of Egypt, and the Egyptian Government lends its

assistance in the execution of its judgments. As an illustration of the independence of the Courts, the Judges, unlike other Egyptian Civil servants, are not allowed by the Constitution to accept decorations from the Sovereign of Egypt.

During the 50 years that the "Tribunaux de la Réforme" have functioned they have more than realized the hopes that were reposed in them when they were created. They have, in fact, established so high a reputation for integrity, impartiality and justice that Egyptians often agree by mutual consent to have their differences settled by the Mixed in preference to the Native Courts.

**NATIVE COURTS.** These courts were first instituted in 1883, but their constitution has since been modified by a number of laws and decrees. They try all civil and commercial cases, other than cases of personal statute, arising between persons who are not accorded treatment as laid down by the Capitulations, and all penal cases where the accused is not a subject of one of the Powers enjoying the Capitulations. The Native Courts consist of the Court of Appeal, in which cases are heard by three judges, the Court of Cassation, a bench of five judges of the Court of Appeal, Assize Courts, Central Tribunals, Summary Tribunals, and Mirkaz and Cantonal Tribunals. Mirkaz Tribunals now exist only in the Governates of Cairo, Alexandria, Port Said, Suez and Ismailia.

### ARMY, NAVY AND AIR FORCE

The defence of Egypt is reserved by the Constitution, and remains under British control. Though this is a sore subject with the more ambitious of the Egyptian Nationalists, there can be little doubt that the presence of a British Army of Occupation and of British officers in the Egyptian regiments is necessary to the well-being of Egypt, and is moreover approved by a large and influential body of the people.

**ARMY OF OCCUPATION.** The strength of the Army of Occupation (which is under the command of a British General Officer) has constantly varied according to the needs of the moment. In 1925 the normal British garrison consisted of three regiments of Cavalry, three batteries of the Royal Horse Artillery, three pack batteries, two companies of Royal Engineers, seven battalions of Infantry and one armoured car company, the total strength of the establishment being 11,414.

**EGYPTIAN ARMY.**—The Egyptian Army consists of about 22,000 men, and is recruited from Egyptian subjects between 19 and 27 years of age who are liable to military service (unless exempt for any of the reasons recognised by decree), Sudanese and Arabs. As by no means all who are liable are required, recruits are chosen by ballot. Exemption may be purchased by any person—by payment of £E 20 before the ballot, or of £E 100 between medical examination and enlistment. Service is for five years, but in the Sudanese battalions service is voluntary and extended. In 1925 the Egyptian Army consisted of two squadrons of cavalry, a camel corps, four batteries and two garrison companies of artillery, eleven battalions of infantry (of which six were Sudanese and one a special "Equatorial" battalion), a railway battalion and various departments. Most of the higher posts are held by British officers.

Much of the work of the Egyptian Army is concerned with the administration of the Frontier Districts, which is controlled by

the Ministry of War, these districts being the Western Desert Province, the Sinai Province (which includes the Kharga and Dakhla Oases), and the Red Sea District. For this work a Camel Corps of three companies and three Light Car Patrols are used.

**NAVY.**—There is no Egyptian Navy in the proper sense of the term, but the Government maintains a sloop of 1,310 tons (used mainly for Customs and lighthouse inspection purposes) and a fleet of twelve stern-wheel gunboats on the Nile.

**ROYAL AIR FORCE.**—Egypt is the headquarters of the British Middle East Air Command, and included in the Army of Occupation are four squadrons of aeroplanes with a number of air depôts. The Royal Air Force in Egypt has been closely identified with the many steps which have been taken during recent years in the development of strategical and commercial services in the Middle and Far East. Towards the end of 1925 three D.H.9 A biplanes made an adventurous and successful trans-continental flight from Cairo to Kano, Nigeria, while in 1926 one of the most memorable flights in the history of the force was accomplished when on June 21 four Fairey III D military two-seater biplanes landed at Leon-Solent after flying from Cairo to Capetown and back, and then continuing the flight to England as seaplanes, over 14,000 miles having been covered without trouble.

### PUBLIC HEALTH

The Public Health Administration of the Ministry of the Interior is housed in the Gardens of the Ministry of Public Works at Cairo. The group of buildings comprises the Central Administration, the Public Health Laboratories, the Vaccine Institute, the Antirabic Institute, the Inspectorate of Pharmacies and the Central Stores. Both during the period of British occupation and since the inauguration of the present régime much has been done to safeguard and improve the public health. Hospitals have been opened and extended, medical dispensaries have been established throughout the country, and in Cairo, Alexandria and Port Said excellent sanitary systems and water supplies are now in working order.

**DRUG TRAFFIC.**—The sale of poisons in Egypt, whether wholesale or retail, is prohibited except to persons duly authorised. The traffic in drugs became so intense and reached such alarming proportions in 1924, in spite of the Royal Decree of 1922 prohibiting import and export of opium, morphine, heroin, cocaine and hashish without the special authorisation of the Minister of the Interior, that another Royal Decree was promulgated on March 21, 1925, applicable to Europeans through the medium of the Mixed Courts, as well as to Egyptian and local subjects, making unauthorised traffic in drugs an offence punishable with a fine or imprisonment, and regulating the conditions under which chemists are allowed to buy and sell them. Further legislation affecting such control by the supervision of chemists' shops, the prevention of unauthorised importation, and the Government monopoly of sale and distribution of drugs was enacted in 1925.

**HOSPITALS.**—The latest statistics available show that there are thirty general, infectious and lock hospitals in Egypt, with a total number of 4,300 beds, treating yearly some 66,000 in-patients and 290,000 out-patients. The largest of these are the Kasr-el-Aini (Cairo) and Alexandria General Hospitals, with 663 and 401 beds respectively,

and the Abbasiya Fever Hospital, which has 900 beds. Other large general hospitals are at Port Said, Suez, Tantah, Kalyub, Damietta, Mensurah, Assuit and Beni Suef. In the larger hospitals Europeans are usually admitted to the first or second class wards according to their means, the scale of fees varying in these from 40 PT to 80 PT per day. Third-class patients are treated at reduced rates.

**INFECTIOUS DISEASES.**—The notification of the following infectious diseases is obligatory for doctors, tenants, proprietors of houses and directors of schools, and must be made within 24 hours of the occurrence of the case: Typhus fever, small pox, anthrax, relapsing fever, typhoid fever, encephalitis lethargica, acute polio encephalitis, acute polio myelitis, cerebro-spinal fever, influenza, diphtheria, measles, whooping cough, mumps, scarlet fever, Mediterranean fever, bilious fever, leprosy, glanders, rabies, tetanus, pulmonary tuberculosis, chicken-pox, and paratyphoid fever.

The Government Fever Hospital for the isolation of infectious diseases is situated at Abbasiya. There is a resident medical staff, and the nursing is controlled by an English matron, assisted by English nursing sisters.

**OPHTHALMIA.**—Ophthalmia has always been common in Egypt, a fact which is proved by the large numbers of natives who are deprived of the sight of one or both eyes. It is due to many causes, and is seriously aggravated by dust, flies and dirt of every kind, also by the glare of the sun. When remedies are quickly applied this disease is not alarming in its progress. Permanent ophthalmic hospitals are now maintained by the Public Health Administration in the cities and chief provincial towns, and ophthalmic treatment is also carried out at all provincial primary schools in the towns where there are permanent ophthalmic hospitals.

**VACCINATION.**—Vaccination is compulsory for both Europeans and natives, and must be carried out before the child attains the age of three months. The operation is effected free of charge in Cairo and all provincial towns. The Vaccine Institute prepares fresh calf-lymph in 5-dose tubes, which are obtainable by any medical practitioner, and even free of charge if circumstances warrant it.

### POSTS, TELEGRAPHS AND TELEPHONES

Egypt is included in the Universal Postal Union, and its post and telegraph administrations are most ably worked by departments of the Ministry of Communications, the control of posts forming a separate department under a Director-General and telegraphs and telephones being administered in conjunction with the railways.

#### POSTS

There is no trace of any attempt at a postal system in Egypt until the reign of the great Viceroy, Mohammed Ali, who established one for official correspondence only. Transport was then effected by runners, and was at first limited to Egypt only, being extended to the Sudan in 1821. The first regular postal service between Cairo and Alexandria was established in 1843, and was for a long time in the hands of private concessionaires. In 1864 the Government purchased all rights in it, and created a public service, which has, year by year, been extended

and improved. In the last year for which statistics are available the department was responsible for 2,524 post-offices in the country, while the total postal matter handled was 123,542,000 items, of these 85,730,000 were internal, 18,255,000 were received from abroad, and 19,557,000 were despatched to foreign countries. Ordinary letters received and forwarded numbered 66,020,000, postcards 7,380,000, registered packages 6,870,000, printed matter, etc., 34,444,000, and State correspondence 8,828,000 items.

**GENERAL POSTAL RATES.**—The following are the inland and foreign postal charges.

For the Interior of Egypt and Sudan—  
Letters—5 milhemes for each unit of 30 grammes or fraction, post cards  $3\frac{1}{2}$  milhemes, post cards (reply paid) 7 milhemes, newspapers and periodicals 1 milheme per number or copy, non-periodicals and printed matter and newspapers and periodical printed matter originating from abroad and posted in Egypt, visiting cards and commercial papers 2 milhemes for each 50 grammes or fraction up to 2,000 grammes (for commercial papers the minimum charge is 2 milhemes), samples 2 milhemes for each 50 grammes or fraction up to 500 grammes (minimum charge 2 milhemes).

For Countries in Postal Union. Letters—15 milhemes for first 20 grammes and 10 milhemes for each succeeding 20 grammes or fraction, post cards—10 milhemes, post cards (reply paid) 20 milhemes, printed matter and commercial papers—minimum charge 15 milhemes, samples 4 milhemes for each 50 grammes or fraction up to 500 grammes, with a minimum charge of 8 milhemes.

Letter postage to Great Britain and her Colonies is 10 milhemes for every 20 grammes or fraction thereof, while 8 milhemes is charged for each postcard. The charge for registration is 10 milhemes for Egypt and the Sudan, and 15 milhemes for countries in the Postal Union.

#### MONEY ORDERS AND POSTAL ORDERS.

The number of internal postal and money orders dealt within a recent year by the Egyptian post offices was 1,306,624, their total value amounting to £F 9,555,145. Orders emanating from or payable abroad numbered 34,754, valued at £E 303,880. Inland money orders are obtainable up to a maximum of £E 100. The maximum amount for foreign money orders varies according to the country to which they are addressed. Telegraphic money orders can be sent up to £E 40. Egyptian postal orders are obtainable at all post offices admitted to the money order service, the values ranging from P.T. 5 to £E 1. British postal orders are issued from 6d to 21s.

**DEPOSIT ACCOUNT SERVICE.**—This service facilitates the postal transactions of banks, commercial houses and individuals by enabling them to maintain a current cash account at a Post Office (or Offices), to which sums due from the depositor to the post office, or from the post office to the depositor, may be debited or credited as the case may be by means of correspondence, thus avoiding loss of time in calling personally at the post office or sending a messenger for the purpose; by its use, the considerable risk attendant upon the transport of funds by hand is entirely eliminated.

There is no limit to the amount which a depositor may place to his credit, but a minimum credit balance of £E.2 must be maintained on each deposit account. This service is at present confined to the Alexandria and Cairo Central Post Offices and Ghûriya (Cairo).

**PARCEL POST TARIFF.**—Inland. Not exceeding one kilo, 30 mill, 3 kilos, 40 mill, 5 kilos, 50 mill. For Dakhla Oasis. Not exceeding one kilo, 40 mill, 3 kilos, 50 mill. For the Sudan. Not exceeding one kilo, 65 mill, 3 kilos, 95 mill, 5 kilos, 125 mill. For Great Britain (via Port Said and Gibraltar). Not exceeding one kilo, 110 mill, 3 kilos, 150 mill, 5 kilos, 185 mill.

**PARCEL SERVICE. C.O.D.** The Cash on Delivery (*contre remboursement*) Parcel Service exists both in the inland service and between Egypt and most European countries, Egypt and Great Britain, and Egypt and the Sudan.

By this means the value of a parcel is collected from the addresser and remitted by the post office to the sender, less the usual commission on a money order if the parcel is for the interior, less the fixed charge (10 mill) and the usual commission on a money order if it is for or from the Sudan.

**SAVINGS BANK.**—The Egyptian Government controls through the Post Office a very efficient and flourishing savings bank system, and all the principal post offices transact savings bank business. The initial deposit must not be less than 50 milhemes (1s), the difference between the deposits and the withdrawals effected by a depositor must not exceed £E 50 in any one year, and in any number of years the total balance to the credit of a depositor must not exceed £E 200, exclusive of interest. The State guarantees deposits and also the repayment of capital and interest, the latter being limited to 3 per cent per annum.

**RURAL SERVICE.** A rural Savings Bank service was inaugurated in 1912. This service now extends to all the country districts in Upper and Lower Egypt, and is carried out by the tax-collectors (*sarrafs*) of the Direct Taxes Department, who act as agents of the Post Office. The number of these rural agencies in 1925 was 1,623, dealing with 3,412 villages. The minimum deposit is 10 milhemes.

In addition to these *sarrafiya* banks, as they are called, there is during the cotton season a rural Savings Bank agent in every Government cotton market (*halaqa*). The latter accepts deposits only, and is not authorised to effect withdrawals. In 1925 the number of these *halaqas* was 94.

**SUDAN AND UPPER NILE MAILS.**—Mails are made up every day at the Central Post Office, Cairo, and sent to Shellâl, where they await the departure of the Sudan Government mail steamers, which as a rule sail twice a week.

#### TELEGRAPHS

Egypt possesses a telegraphic system 7,455 kilometres in extent, which connects the principal towns. It is worked by Egyptian officials for the Egyptian Government, and telegrams may be sent in any European language, except from small local stations, where they must be written in Arabic. The charges for inland telegrams are 20 milhemes for the first six words and 5 milhemes for each additional word, with a minimum charge of 20 milhemes, urgent telegrams being at triple rates. Rates for telegrams to the Sudan are 10 milhemes per word (minimum 60 mill), 30 milhemes per word for urgent messages. The tariff for Palestine is 60 milhemes for the first six words, and 10 milhemes for each additional word. The growth of the telegraphic service in Egypt may be estimated from the fact that in 1877 there were only 151 telegraph offices in Egypt and the Sudan, in 1924 there were 442 in Egypt alone, while 19,451 km. of telegraph wire were laid.

In all, 4,699,054 telegrams were despatched and received during 1924, of which 1,937,556 were internal, 364,244 international, and 2,397,254 service and Government messages.

**CABLES.** Telegrams from Lower Egypt to Europe and other places abroad are despatched via the Eastern Telegraph Company, whose cable offices are at Alexandria, Cairo, Port Said, and Suez. On messages from Lower Egypt to Europe a uniform rate of 48 milhemes per word is charged. The rates to other countries are: Turkey in Asia, 48 milhemes, South Africa, 144 milhemes, China, 163 to 201 milhemes, India, 92 milhemes, Japan, 224 milhemes, Australasia, 163 to 196 milhemes, North America, 87 to 171 milhemes, and South America, 125 to 526 milhemes per word. From Lower Egypt, 5 milhemes per word and from the Sudan 15 milhemes per word additional are charged in all cases. In 1924 the Eastern Telegraph Company received and despatched 469,091 cablegrams.

**DEFERRED CABLEGRAMS.** These are received at half the ordinary charge for all countries which accept such telegrams, on condition that they are written solely in English or French, or in the language of the country of destination, and that they are transmitted only after telegrams charged for at full rate.

**WIRELESS.**—Wireless stations have been erected at Alexandria and Port Sudan and communication from these is with ships within a distance of about 450 miles from Alexandria and within 250 miles from Port Sudan. Radio telegrams written in European languages are accepted at sender's risk at State telegraph offices for transmission to Alexandria or Port Sudan. The words "Alexandria Radio" or "Port Sudan Radio" must be included in the address. About 18,000 radiograms are received and despatched yearly from Alexandria.

**WIRELESS RATES.** Wireless telegrams to England and the Continent can be handed in at any Egyptian telegraph office from which telegrams in European languages are sent. Such messages should be clearly marked with the words "By Wireless". The rate per word to England is—

From Lower Egypt, ordinary, 37 milhemes, deferred, 19 milhemes, from Upper Egypt, ordinary, 41 mill, deferred, 21 mill.

The rate per word to the Continent is—  
From Lower Egypt, ordinary, 48 milhemes, deferred 24 milhemes, from Upper Egypt, ordinary, 53 mill, deferred, 27 mill.

#### TELEPHONES

The telephone system of Egypt was acquired by the State as from January 1, 1918, and there is now communication between Cairo, Alexandria and the principal towns, as well as with many smaller towns and villages. In 1925 no less than 101 towns and villages possessed a telephone equipment. For the convenience of the general public there are about 180 telephone cabinets installed throughout the country, where, by payment of the established fee, communication can be obtained, either local or long distance. A system of private branch exchanges also exists throughout the provinces, connecting up the principal villages and all police outposts with their markaz and the mudiriya.

In the last year for which statistics are available receipts from telephones amounted to £E 402,024 and expenditure upon the service to £E 248,265. There were 1,675 operators and other employees, 179,525 km. of telephone wire were in use, the number of telephone offices was 8,475, and private installations totalled 21,527.

GENERAL VIEW OF ASSUAN

## PUBLIC

### DEPARTMENTS

**T**HE Ministry of Public Works, which occupies a handsome building in the Sharia Kasr-el-Aini, controls the following divisions in Egypt: Antiquities Department, Cairo Tanzim Department, Electrical Service, Irrigation Service, Main Drainage Department, Mechanical Department, Opera House, Physical Service, Scavenging and Watering Service, State Buildings Department, Zoological Service. It is, it will be seen, a Ministry of many and varied activities, all of which are of the greatest benefit to the development and progress of the country.

**ANTIQUITIES DEPARTMENT.**—This department is charged with the custody of the temples, tombs and the town sites which have survived from pre-Islamic times. The cemeteries and town mounds throughout the country are very numerous, and the constant repairs which are necessitated by the crumbling away of some of the older monuments involve much work and a regular expenditure of money. On the other hand, the Department obtains a handsome revenue from the sale of tickets to view the monuments and tombs under its care.

It is to be noted that the entrance and ascent of the Giza Pyramids are not controlled by the Antiquities Department. Special tickets for this purpose are issued

by the Giza Mudiriya, and are obtainable at the Mudiriya or near the Pyramids.

**CAIRO TANZIM DEPARTMENT.**—What would be called elsewhere the municipal control of the city is in Cairo exercised by the Tanzim Department of the Ministry of Public Works, which is responsible for the maintenance and construction of roads and public gardens, the maintenance and control of the Nile banks, the administration of the water and electricity supplies and of the scavenging services, and the care of the Giza Zoological Gardens and Aquarium. (See also article on "Cairo.")

**ELECTRICAL SERVICE.**—Among other duties, this Service is charged with the technical control (as regards electricity) of public companies holding Government concessions, such as tramways, electricity supply, etc. The Service also gives technical advice in electrical matters to other Government Departments.

**IRRIGATION SERVICE.**—The cultivable area of Egypt is approximately 6,500,000 feddans, not including the lakes (660,000 feddans), which may eventually be reclaimed. The area actually under cultivation is approximately 5,500,000 feddans, of which some 4,000,000 are perennially irrigated, and the remainder receives flood or basin irriga-

tion, or one flooding per year and one crop, whereas the 4,000,000 feddans which are watered throughout the year raise two or three crops annually. The Nile supply is controlled by the Assuan Dam, the Esna, Assiut, Delta and Zifta Barrages, and (during summer) by two earthen sads or dams in the Rosetta and Damietta branches of the Nile near the sea. Independent of the Esna and Assiut Barrages are many large feeder canals, which take direct from the river and feed the basin systems dependent on them east and west of the river. Thousands of pumps and saqas on the Nile and canals also raise the water to the land surface, and irrigate those areas which cannot obtain free flow or gravitation from the canals.

The main canals are the Raiyah Beheira, serving the province of that name and part of Giza, the Raiyah Minufiya and Gharbiya, and the Raiyah Taufiqi, serving part of Qalyubiya, Sharqiya, and Daqahliya. Three other canals (nearer Cairo), the Ismailia, Sharqawiya, and Bassusiya, serve Qalyubiya and part of Sharqiya; branches of the Ismailia Canal extend to Port Said and Suez. From these main canals, which are divided into suitable lengths by regulators, ramifications of smaller canals carry the water to all parts of the irrigated area. Extensive drainage operations in the Delta

DAM, ON THE RIVER NILE.

## WORKS

### CONTROL OF THE NILE

and other areas have been carried out, largely by pumping operations, and it is by this means that the reclamation of the lakes and the drainage of the low-lying area adjacent will eventually be undertaken. All those different works are controlled by the Irrigation Service, the administration being divided into two Inspectorates-General of Upper and Lower Egypt, which are again subdivided into Inspectorates and Directorates, five in Lower Egypt and six in Upper Egypt. These inspectorates and directorates are located as under:

CIRCLE	LOWER EGYPT PROVINCE	HEADQUARTERS
First	Qalyubiya, Sharqiya and Mit Ghamer	Cairo
Second	Minufiya and part of Gharbiya	Tanta
Third	Behera and northern part of Giza	Alexandria
Zifta	Daqahliya and part of Gharbiya	El Mansura
Delta Barrage		Delta Barrage
UPPER EGYPT		
El Giza and El Fayyum	Giza and part of Beni Suef	El Fayyum
Fourth	Part of Beni Suef and Minya	Beni Suef and part of Assiut
Assiut Barrage	Part of Minya and part of Assiut	Assiut
Girga	Part of Assiut and Girga	Assiut
Fifth	Qena and Assuan	Qena
And the Assuan Reservoir	Directorate, Assuan.	

**FILLING THE CANALS.** During January practically all the canals are closed, and where necessary cleared of silt. Those in which navigation has to be maintained are dredged. During spring, summer and flood, rotations of varying intensity are imposed on the canals, those in spring and summer being necessitated by the paucity of supply and the need of economising to the utmost the water derived from the dam and river. The average form of these rotations is six days' irrigation in every eighteen days. In flood-time the canals are given a full supply each alternate week, this is sufficient for the needs of irrigation and proves a healthy measure against the waterlogging of the land.

As the flood rises in August the basin canals of Upper Egypt are opened and the basins flooded, being kept under water till October or November, when they are drained off into the falling river. In the summer-time roughly half the total cultivable area remains fallow for lack of water and to conform with the rotation of crops. If the supply of water is good the cultivation of rice is sanctioned in zones fixed by the Ministry.

**NILE DISCHARGES.**—When the Nile flood fails to water any of the basin area, such land is known as *sharâqi* and is exempt

from taxation. The basin land thus produces one crop annually, though a large proportion of the area is now watered in summer from artesian wells and pumps, thus greatly increasing its productivity. The Nile in summer, when below the normal, discharges only thirty to forty million cubic metres of water per day. This is augmented over a period varying from 90 to 130 days by additional volumes released from the Assuan Reservoir. At high flood the Nile discharges as much as 1,000 million cubic metres or tons per day at Assuan. (See also special articles on "The Control of the Nile" and "Cotton".)

**MECHANICAL DEPARTMENT.**—This department of the Ministry of Public Works is principally concerned with the control of the Government Pumping Stations for drainage and irrigation purposes, and with the preparation of plans and specifications required in connection with new pumping installations. The department also functions through a Steam Engine Service controlling the erection and working of all engines, the Government Workshops for steamer and motor services, the maintenance of machinery in hospitals, etc., and the manufacture of various essentials for the Irrigation Service.

**OPERA HOUSE.**—The Royal Opera House at Cairo was founded in 1869 by the Viceroy, Ismail Pasha, on the occasion of the opening of the Suez Canal and is Government-owned and controlled. The performances given every year consist of (1) a series of seventy-five French or Italian operas, as may be stipulated in the agreement with the lessee; (2) performances organised by benevolent societies recognised by the Government; and (3) a series of Arabic performances usually following the opera season. Costumes, scenery and stage properties are supplied to the lessee by the Government from the Opera House Stores. The building contains a Musical Library comprising 700 volumes of opera, operetta and ballet scores, also a library of works relating to the history and the art of the theatre. The Archives contain, besides the ordinary accounts, administrative papers, etc., duplicates of a plentiful correspondence from the Administration of the Opera House under the reign of Ismail Pasha of considerable historical importance.

**PHYSICAL SERVICE.** This department of Public Works is an important one, and includes the Hydrological Service, which receives and registers Nile gauge readings from 82 stations on the river, also the rainfall from 242 stations in Egypt and adjacent countries. Weights and measures and the standards of length for the use of surveyors

are regulated by this department, under whose control is the Observatory at Helwan.

The work of the Hydrological Service is of special importance to Egypt, since by it a general supervision is exercised over the measurement of river discharges. The current-metres employed are rated regularly, and the results of discharge measurements are computed and discussed by the Service. Computations are carried out of the amounts of water available for the various irrigation projects which have been proposed, and of the effect on the river in Egypt of such projects. These computations include the calculation of the contents of the various reservoirs and of the losses which occur in them.

At the beginning of January, and monthly until the beginning of June, a forecast of the discharge of the river until the end of June is made in order to enable a programme of cultivation and irrigation to be arranged. After the beginning of June much more frequent forecasts are made in order that the whole of the water remaining in Assuan Reservoir may be used to the best advantage.

#### STATE BUILDINGS DEPARTMENT.

The erection and upkeep of Government buildings throughout the country are in charge of this Department, which for purposes of administration is divided into an Architectural Office and four Divisions, each under an Inspector.

Architectural Office (headquarters Cairo), in charge of the preparation of designs for new buildings.

Cairo Division (headquarters Cairo), comprising Cairo City and suburbs.

West Division (headquarters Alexandria), comprising Alexandria city and the Mudiriyas of Belbeis, Gharbiya, and Minudhiya.

East Division (headquarters Cairo), comprising the Governorates of the Canal (Port Said, Ismailia, and Suez), Damietta, the Mudiriyas of Sharqiya, Daqahliya, Giza (North), and Qalyubiya, and the district of El Fai.

Upper Egypt Division (headquarters Assuit), comprising the Mudiriyas of Giza (South), Beni Suef, Fayyum, Minya, Assuit, Guga, Qena, and Assuan.

The Director-General's Office, the Architectural Section, the Cairo Division, the East Division and the Upper Egypt Division are housed in the same building as the Ministry of Communications, which is situated in the Ministry of Public Works Garden.

Heads of Administrations are obliged to consult the State Buildings Department before leasing or purchasing buildings to be occupied by Government Services, and no repairs or alterations may be carried out in Government buildings which are in charge of the State Buildings Department except by the said Department.

## THE CONTROL OF THE NILE

By J. B. BARRON

THE importance of the River Nile to Egypt may be summed up in the phrase, which has been passed down to us from Herodotus and other classical authors, "The Nile is Egypt." Without this great waterway the country would be one vast waste of sand, a continuation in fact of the desert within its western frontiers, stretching to the Red Sea and the Sinai Peninsula, with here and there a small oasis to relieve the monotony of the landscape and to provide well-water to passing caravans.

With the exception of the Delta, the cultivable extent of the land is limited by the valley through which the river runs from Khartoum in the Sudan to Cairo at the apex of the Delta. The rising ground that borders the valley on either side marks the limit of expansion. In this narrow area and in the Delta is crowded together a population of over 14 millions, having a density per square mile second only to that of Belgium.

Throughout the whole of its course in Egypt the Nile flows on the eastern side of its valley. The mean slope from Wadi Halfa to Assuan is 1 in 12,500, and from Assuan to Cairo 1 in 13,000.

**CONSERVATION PROBLEM.**—Water is the first and last consideration in a rainless land—it is the life of the people, and thus Egypt has witnessed a continuous struggle to utilise to the fullest extent the water with which nature has provided her. To the Pharaohs of antiquity the problem was no different from that of to-day. During the flood months of late July, August, September and October the problem has always been to conserve and to utilise on

the land the waters pouring into the Mediterranean Sea and in the months of the low river to harness the sluggish, turbid stream to the needs of man. The lowest level at Assuan is reached at the end of May, and at Cairo about the middle of June. This is followed by a slow rise in July and a fairly rapid one in August, the highest point being reached about the beginning of October.

The difficulties to be overcome are increased by the fact that the Nile possesses characteristics which are common to few great rivers. In the first place, most of the water that comes from its tributaries enters the main stream 1,000 miles from its mouth, at or above Khartoum. Other great rivers increase their discharge as they approach their outlets, but the Nile wanders through its narrow valley gradually decreasing in volume through wastage and evaporation. Secondly, it brings down in the period of flood a vast mass of silt, which has been swept into its course from the highlands of Abyssinia. The Blue Nile supplies quantities of water to the parent stream, and most of the silt which is deposited on the land forms the life and wealth of Egypt. In June the water is clear and carries practically no suspended matter, but by August it is full of a dark brown sediment. Thirdly, its second great tributary, the White Nile, stores in its upper reaches great quantities of water whose progress towards the Nile is retarded by masses of vegetation known as "sudd" in the marshy region round Lake No. The water thus held back pours down stream when the waters of the first tributary, the Blue Nile, are receding, thus enabling Egypt to enjoy a longer period of flood.

#### IRRIGATION BY ANCIENT EGYPTIANS.

—Irrigation was first practised where the need for it was compelling, and artificial irrigation from the Nile is perhaps the oldest system of land inundation in the world. The Pharaohs introduced a system which was hardly improved upon until the early years of the nineteenth century. From the river banks were cut channels along which the water flowed during the season of the flood inland to the foot-hills. Across the valley dykes were then built to retain the precious fluid, while other channels were cut to drain off the water to lands lying on a lower level down-stream. By this means a series of basins were formed that allowed the silt to rest on the soil, and at the same time permitted the surplus water either to flow on to other lands or to regain the river. In the Delta the process of flooding was easier, as the low level of the surrounding land made inundation a comparatively simple matter. It was, however, more difficult to relieve the sodden soil of its water-logged condition, for the change in level was insufficient to provide a natural flow. In some parts the river rose above the surface of the surrounding country requiring the construction of embankments to contain the swollen stream until such time as the waters fell to a lower level. Even at this period the importance of drainage was understood, and channels were cut to draw off the water from the flooded land back to the river, or by means of deep cuts to salt lakes and to the sea. For seven thousand years the basin system introduced by the Pharaoh Menes remained in use.

**IRRIGATION SYSTEM OF MOHAMMED ALI.** From this period until the beginning of the nineteenth century cultivation had remained chiefly a one-crop system. The peasant scattered his seed to the wind over an alluvial soil often two feet in depth and reaped a rich harvest, but the changing economic conditions of succeeding centuries altered Egypt's position in the world as the granary of the West. She disappeared from history as a factor of commercial importance until the rise of Mohammed Ali to power in 1811. This able man in casting about for new sources of wealth, conceived the idea of changing the entire system of irrigation in order to cultivate more valuable crops such as cotton, sugar and rice, which require constant watering and scientific methods of cultivation. It became then, necessary to irrigate the land at the period of low water, i.e. during the dry season, and

The use of water on the land continuously during high and low seasons of flood was a reversal of nature's methods, and carried in its train grave disadvantages. It was not only necessary to provide a constant supply during the season of low water, but also to prevent the complete swamping of the land during the season of high water. It was possible to overflow the soil and render it totally unfit for cultivation. Thus it became necessary to construct a scientific and costly system of drainage. Further, by regulating the waters during flood, the land was robbed of much of its rejuvenating silt, which was deposited on the beds of the canals. These became choked and were blocked for miles of their length, great efforts being required annually to keep the water-ways open. More serious even was the decrease in the quantity of silt, as the productivity of the land was diminished

declared that a sufficiency of water for the Delta could only be obtained during the low season by raising the level of the Nile by four metres at its apex near Cairo. To do this it was necessary to construct an immense barrage across both the Damietta and the Rosetta Branches of the river. During the season of flood the sluices would be partially closed and regulated until the required height of water had been obtained. This mass of extra water would then be held behind the barrage and utilised to feed the summer canals whose entrances would be constructed up stream in the high water area. By this means it was hoped that through gravitation the silt would be carried along the canals on to the land, and the necessity for excavating deep cuttings, which required continuous cleaning would also be obviated. It was an immense conception and work was commenced in

ASSUAN DAM, LOOKING WEST

to control the quantity of water flooding the land at high water. To provide summer water he introduced the perennial system of irrigation by constructing a number of deep canals, known as "sefi" or summer canals, to inundate the land at low flood. Miles of these canals were dug throughout the Delta, carrying water for long distances in deep cuttings, from which it was drawn by means of water-wheels or slung up in buckets attached to poles. To control the water at the entrances, locks and regulators were constructed. These changes immediately resulted in a great accession of wealth and prosperity. They lifted Egypt from a backward Oriental state into a country cultivating crops of value capable of exportation to the markets of Europe and America.

through lack of new soil. Added to these difficulties was the ignorance of the peasantry in matters concerning irrigation. Dams were utilised to admit water, canals were stopped to heighten the water level to the detriment of the cultivation down-stream, and confusion reigned owing to the non-existence of a properly qualified irrigation staff to control inundation or to enforce an impartial system of distribution.

**CAIRO BARRAGE**—It was early realised by Mohammed Ali that the new system called for expert assistance. He accordingly invited Mongel Bey, a famous French irrigation engineer, to prepare a project for overcoming the difficulties that were springing up on every side. Besides introducing numerous reforms, Mongel Bey

1842. By 1863 the barrage was in partial use. A series of engineering difficulties and the waning enthusiasm of the authorities held back its completion, while defective construction and bad material also seriously affected its utility. The one branch of the barrage in use proved, however, that, if properly constructed, it would be of untold benefit to the Delta. Difficulties accumulated, and finally the Egyptian Government abandoned the scheme in favour of the costly and extravagant method of lifting water by a series of pumps placed at the heads of the canals.

**INTRODUCTION OF BRITISH ENGINEERS**—The almost complete breakdown of the summer canals and the failure of the Barrage at last compelled the Egyptian

Government to take drastic measures. In 1883 the irrigation services were placed in the hands of a selected band of British engineers from India. It is not possible to enumerate the changes they introduced, beyond stating that they completely overhauled, organised and enlarged the perennial system of irrigation in the Delta. In Upper Egypt, where basin irrigation had continued, a gradual substitution by the perennial system has taken place, bringing much new land under cultivation. But these reforms took many years of patient work, and involved a constant struggle against the ignorant, bigoted and improvident methods of the cultivator. As late as 1922 the Annual Report of the Egyptian Government stated, "Difficulties of distribution are accentuated by theft of water by cultivators out of turn, especially in July, and once again it is seen how defective are the arrangements

**ZIFTAH BARRAGE**—As a supplement to the Delta Barrage, in order to ensure better control of the water released during the low season a smaller barrage has also been constructed at Ziftah on the Damietta Branch. A larger area of the Delta has thus been supplied with summer water, and this has further been increased by blocking the mouths of the Damietta and Rosetta branches of the river during the season of low water. Huge embankments are thrown across the river mouths, ponding up the waters behind them and closing one of the longest rivers in the world from all outlet to the sea from March until August. When the flood arrives the embankments are opened and are gradually swept away into the Mediterranean.

These works regulate the water supply of an area of 2,500,000 feddans (a feddan is 1/3 of an acre), having a population of

**ASSUAN DAM**—By far the most important of these schemes is that of the great dam at Assuan, some 680 miles from the mouth of the Nile. The purpose of the dam is to store up sufficient water during the period following the flood months, to regulate the supply proceeding down stream, and to increase the quantity available during the months of low water. It serves the dual function of preventing over-flooding and of providing against a scarcity. Owing to its position, the dam controls the water supply of the entire river northwards. A number of sites were examined, but Assuan was finally decided upon. The granite bed of the river at this point was capable of bearing the great weight of the structure, and the convenient width of the river allowed for the provision of sufficient sluices through which to pass the overflow. There was also no likelihood of infiltration affecting

OBLIQUE AERIAL PHOTOGRAPH OF THE DELTA BARRAGE, showing the two Branches of the Nile, the Canals and Cultivated Fields

for prompt trial of offenders, and how inadequate are the penalties laid down by law."

Not less important was the reparation of the Great Barrage. At the season of low water, for two or three succeeding years, first one section of the Nile and then another was blanketed off by thick walls of soil. The enclosed space was then pumped dry and the work of reconstruction commenced. The foundations were strengthened, the main structure thickened and tons of cement forced into enormous cracks which had formed under the arches. Eventually the Barrage was restored, and when the work was finished it was found that a greater quantity of water was capable of storage than was at first contemplated.

7,000,000 (excluding Cairo). Most of the inhabitants are cultivators growing cotton and rice. In the Delta there are 5,655 miles of canals, large and small, including 807 miles which are navigable water-ways. The drainage system embraces cuttings having a total length of 2,361 miles. Powerful pumps and dredgers are also utilised to assist drainage.

**MODERN IRRIGATION SCHEMES**—The works constructed in the Delta form only a part of a series of great irrigation projects, completed during the present century by British engineers, which are designed to make the agricultural position of Egypt secure during the months of low water and even during an abnormally dry year.

areas in the vicinity by gradually forming saline deposits. Finally, the engineering problem was also made easier by the convenient depth of the river.

From December to March the sluices are closed, and the waters held until its maximum capacity of  $2\frac{1}{2}$  milliards of cubic metres is attained. Behind the dam for over 200 miles the river is converted into a long narrow lake. Palm trees and ancient monuments disappear beneath its rising waters, whilst villages have long since been moved to higher ground. From March onwards until the floods arrive in July the waters are released as the requirements of irrigation demand. Its effect on the Cairo Barrage is to provide an additional volume of water at a time when the Delta demands are

reducing the water level at the Barrage. Timely and equal distribution of water has thus been made possible to a far greater extent than ever before.

The requirements of crop fertilisation through Egypt are approximately 35,000 millions of cubic metres of water annually. In 1913-1914, a year of exceptionally low flood, about 41,000 million cubic metres passed Assuan between July 1913 and June 1914. It will be seen that this volume of water, which was the lowest ever recorded, was more than ample to meet all present agricultural requirements had it been possible to distribute its volume to meet the needs of the cultivator as they arose. The presence of the dam, which was completed in 1902 and heightened in 1912 undoubtedly saved Egypt from the possibility of a famine in 1913. It regulated distribution to a degree never hitherto attainable and, even so,

runs the famous Ibrahimieh Canal which supplies Middle Egypt and the Fayyum, and permits large areas to be cultivated on the perennial or two crop system. Some million feddans are reached by the irrigation system of the two barrages, much of which was hitherto uncultivable land or soil cultivated under the wasteful system of basin irrigation.

In addition to the water supplied from the barrages to canals, large quantities are also pumped from the river during the summer months in Upper Egypt. Many sugar plantations are supplied in that way. This method of providing summer water has only recently been allowed on a large scale and dates from the heightening of the Assuan Dam on the strength of the increased storage thereby supplied.

In Middle and Upper Egypt some 5,317 miles of canalisation exist, of which 230

cultural expansion. On the Blue Nile the Sudan Government has recently completed (1925) a large dam at Senaar, near the village of Makwar some 170 miles south of Khartoum. The structure contains 450,000 cubic yards of masonry, and raises the water level of the river 50 feet to enable it to flow into a main canal capable of irrigating 300,000 acres of the Gezira Plain. Up stream a reservoir is formed extending 50 miles and storing some 600 million cubic metres of water. From the Dam the main canal runs for 35 miles parallel to the Blue Nile, and then divides into a system of smaller canals about 600 miles in length. This system of irrigation allows of 100,000 acres of the best cotton to be planted every year in rotation.

When the project was first considered fears were expressed that the Dam would result in the supply of silt, flowing onwards to Egypt, being interrupted. The storage

ANOTHER OBLIQUE AERIAL PHOTOGRAPH OF THE DELTA BARRAGE, showing the two Branches of the Nile, the Canals and Cultivated Fields

much water passed uncontrolled to the sea, allowing serious shortages to occur on the land. As it was, there was practically a complete suppression of the rice crop, the area being reduced from 300,000 feddans to 25,000. Cotton also was seriously affected, the loss being aggravated by insect pests that attacked the weak plants. Other crops such as sugar, wheat and maize were saved.

**ESNA AND ASSIUT BARRAGES**—Between Cairo and Assuan are the subsidiary barrages or weirs of Esna and Assiut. They retain water released from Assuan, and, by increasing the river level, allow it to enter the canals along which gravitation carries the water to distant areas. From Assiut

miles are navigable waterways. In addition, there are 1,865 miles of drains. The total length of the system throughout Egypt is, then, 10,972 miles, with drainage channels of 4,226 miles.

**SENAAR DAM**—The river boundary between Egypt and the Sudan is at Wadi Halfa, from where the Sudan Railways run south to Khartoum and beyond. Between Wadi Halfa and the capital the river runs between cliffs bordered by a limitless desert. Little irrigation is possible in this region until Khartoum is reached, standing at the junction of the two great tributaries, the Blue Nile and the White Nile.

The flat delta formed by these two tributaries presents possibilities of great agri-

of water, however, is commenced after the silt-bearing floods have been allowed to pass through the open sluices of the dam. The quantity of water contained in the reservoir is also water upon which Egypt's irrigation is not dependent, water in fact which would otherwise be carried to sea as an overflow.

#### **PRESENT AREA OF CULTIVATION.**

The political area of Egypt is roughly 214 million feddans, but this includes a vast extent of desert. The total possible agricultural area outside the Nile banks and above high flood level within the banks is approximately 8,200,000 feddans. Of this area, Lower Egypt has 5,350,000 feddans and Upper Egypt 2,750,000. This total includes land still capable of reclamation or conver-

sion to perennial irrigation amounting to 2½ million feddans. With a rapidly increasing population economic pressure will ensure the ultimate conversion of all unreclaimed or improperly irrigated land, but placing larger areas under cultivation will also necessitate an increase in the volume of water available for irrigation. These facts lead to important considerations which embrace the Sudan.

#### PROJECTED IRRIGATION SCHEMES.—

There are two ways in which the volume of water may be increased —

(1) To hold back discharge at selected localities during periods when there is an excess of water for use during critical periods.

(2) To reduce wastage of water.

**GEBEL AUJLI DAM** These problems have occupied the attention of irrigation experts for many years, and the Egyptian Government has now decided to construct another large dam at Gebel Aulia, a few miles south of Khartoum, on the White Nile. Across the river a great wall of masonry will bank up the waters to the extent of 3½ milliards of cubic metres. Evaporation and wastage may reduce it to 2½ or 3 milliards, this quantity being available for Egypt as a supply additional to that at the Assuan Dam. It may be mentioned that the extra volume at present passes through Egypt unused to the sea, since the storage areas at Assuan are insufficient to retain it. The cost of construction will be approximately £3,000,000. The benefit to be derived from the Gebel Aulia Dam was impressed on the Egyptian Government during the seasons of 1922, 1923 and 1924, when the water supply was low, the cultivation of rice being restricted and cotton rotations severely controlled. It is estimated that its cost might be recouped in five or six years through an assured rice crop, easier rotations and an increase in the cultivable area generally. The work should be completed in three or four years.

**NAG HAMADI BARRAGE**—Another barrage is in course of erection at Nag Hamadi in Upper Egypt of the same type as the Esna and Assut works. Parts of the country south of Cairo still suffer by remaining unwatered in low floods, as these do not rise high enough to fill the basins completely. This additional storage area will enable the irrigation system to be placed on a perennial basis. The soil is fertile, the population dense, and there seems no reason why the new barrage should not command an area of 500,000 feddans. The approximate cost is £2,000,000. Nearly a quarter of a million feddans of Upper Egyptian land went without water in 1924 owing to the low level of the river, and in addition to the loss incurred by landowners there was the loss of revenue to the State, which does not levy land tax on the unirrigated lands at high flood. The Nag Hamadi Barrage will, then, confer a double benefit—on the land holders and on the Government. The barrage is expected to take about three years to complete.

The scheme for constructing the new barrage has always been associated with the project for the Gebel Aulia Dam, as it will be required in order to enable a portion of the storage water provided by the dam to be used on the fields of Upper Egypt. It is also urged that the barrage and the dam must be built at the same time, because, by the withdrawal of water from the river in flood annually required to fill the reservoir, the levels of the river at that time would be lowered, and that this lowering would, if the flood were not a good one, adversely affect the flood crops in the Upper Egypt basins. These considerations have decided the Egyptian Government to proceed with both schemes concurrently in spite of the heavy outlay required.

**LAKE TSANA SCHEME**—To provide for the ultimate necessities of the Sudan and to further conserve Egypt's supplies in years

of a low-level Nile, a scheme has been put forward of forming Lake Tsana in the Abyssinian highlands into a reservoir. It is from this lake that the Blue Nile, known in its upper course as the Abba, issues. The project has been brought within the range of practical politics by the publication of a report (1926) by an Egyptian Commission which has studied the question on the spot. The annual discharge of Lake Tsana during normal years is estimated at 3,500 million cubic metres. But the Commission recommends the excavation of the rock sill at the head of the lake to enable water to be run off below the ordinary flood level. This would increase the storage capacity to 8,000 millions, which would be sufficient to meet the deficiencies of two seasons of low water in succession. The total cost of the works is estimated at £12,500,000, a sum well within the capacity of Egypt to find. It would in fact guarantee, together with the Gebel Aulia project, a sufficiency of water for both Egypt and the Sudan for many years to come. But since the Lake is situated within the Abyssinian frontier, a necessary preliminary to the beginning of any works would be an agreement with Abyssinia. The Egyptian and Sudanese Governments have already commenced negotiations to this end.

**WHITE NILE PROJECT** Of other plans connected with Egypt's supply, experts are studying the possibility of utilising Lake Albert in Uganda as a vast reservoir. The project, however, will entail the clearance of the White Nile and its tributaries of vegetation.

At no very distant date this scheme, or one having similar advantages, will be adopted, since the problem of finding water and land becomes each year more pressing in order to satisfy the requirements of a rapidly increasing population, whose peculiarity is that it refuses to emigrate and remains attached to the soil.

# FINANCE AND BANKING

## FINANCE

THE financial history of Egypt is, in the main, one of progressive development since the administration of the country's finances was taken over by Europeans. To this result the striking acumen and unwearying labours of the late Earl Cromer very largely contributed.

In 1875 the condition of the Egyptian finances appeared to be almost hopelessly involved, and various eminent financiers were sent from England to attempt to arrange a solvent system. After many inquiries and several failures, a dual English and French control was established and the finances were placed entirely under European management. For many years, however, successive expert advisers had to wage war against bankruptcy and Lord Milner's great ability was taxed to the full to effect a recovery from the economic crisis of 1907—a crisis due to over speculation and extravagance following a short period of illusive prosperity. By 1911 the State finances had to a large extent recovered, though at the end of 1913 the liabilities left over from 1907 still weighed heavily on private finance.

The outbreak of the World War in August, 1914, just when the cotton crop was about to be harvested, threatened once more to place Egypt in economic difficulties. The price of cotton fell by one third, and a panic was averted only by the drastic measures taken by the Government. As part of these measures a general moratorium was proclaimed, and an emergency currency obtained by making the notes of the National Bank of Egypt legal tender and inconvertible. By the end of 1915, cotton, stimulated by war demands, had again risen to pre-war prices, and this, together with forced economy and the large sums spent by the armies stationed in the country, restored the situation. A new period of prosperity set in, chiefly due to the soaring price of cotton—which in February, 1920, touched 95d per lb., or nearly ten times its value in 1913. At the same time Egypt (apart from the Public Debt) was still a debtor to foreign countries for a very large sum, chiefly loans on mortgage and capital invested in industrial, transport and other companies. The sudden wave of prosperity—dependent almost entirely on the inflated price of cotton—was not wholly good for Egypt, there was much real distress among the fellahen, and the cost of living in the towns was very high.

The great drop in the price of cotton during the last half of 1920 naturally affected the country, and 1921 was a time of considerable stringency, the financial year 1920-21 closing with a deficit of £12,900,000, which was met by a draft on the reserve, reducing the latter to some £3,000,000, to face a deficit on the 1921-22 Budget. Fortunately it was not needed, the succeeding years have been those of steady recovery and development, the excess of revenue over expenditure varying from £E.400,000 in 1921-22 to nearly £E.8,000,000 in 1924-25.

**MONEY AND COINAGE.**—The Egyptian pound (£E.) contains 100 piastres, and each piastre 10 millimes; the former is worth 20s. 6d., or nearly 26 francs at par

value. The pound being divided into 100 piastres, each piastre, which is called a piastre tarik (P.T.), is worth 2½d., and a millime is therefore of the value of ¼d. The English pound is worth 97½ P.T., the Napoleon, or French franc at normal value, 97 3/20 P.T., and the Turkish pound, 87½ P.T.

Silver coins are the *nyâl*, or dollar, which is worth 20 piastres, the half and quarter *nyâl*, of the value of 10 and 5 piastres respectively, and the 2-piastre and 1-piastre pieces. There are nickel coins worth one piastre, and 1, 2, and 3 millimes respectively. In the old system of coinage a piastre was worth 40 paras and 2-para and 1-para pieces are still struck. These are, however, chiefly used for scattering amongst children as *baksheesh*. The following are the values in English money of the silver and nickel coins in general use:

20 piastre piece	4 1½d
10 " "	2 0½d
5 " "	1 0½d
2 " "	5d
1 " "	2½d
1 " " (nickel)	2½d
½ " " ("little piastre")	1½d
or 5 millimes)	1½d
2 millime-piece	¾d
1 " "	¾d

**PUBLIC DEBT.** The *Caisse de la Dette Publique*, a body representing the creditors of the Egyptian Treasury, has considerable powers and special privileges. It was first appointed in 1880, during a period of national bankruptcy, and for more than twenty years it justified its existence for the purpose of protecting the interests of the bondholders. Then, as Egypt became solvent and prosperous, the stringent regulations which had been necessary in the beginning were found to prevent the proper development of the country out of surplus revenue, a large part of which was held in suspense as contingent security for the service of the debt. These regulations were gradually relaxed, and now, although the *Caisse* still exists, its duties are limited to receiving the revenues necessary for the interest and for the payment of the coupons as they became due, while it also holds a considerable reserve fund, the interest on which reduces the amount of the Treasury contribution. The Commission of the Public Debt is composed of three foreign commissioners representing Great Britain, France and Italy respectively.

At the end of the financial year 1924-25 the situation of the Public Debt was as under—

	DEBT £	CHARGE £E
Guaranteed Loan,		
3 per cent ..	5,072,300	307,125
Privileged Debt,		
3½ per cent ..	31,127,780	1,062,235
Unifed Debt,		
4 per cent ..	55,971,960	2,182,906
Totals ..	£92,172,040	£E 3,552,266

The charges on account of debts of all kinds (including tribute), as shown in the estimates for 1925-26, amounted to £E.4,914,694.

**RESERVE FUND.**—In 1888 and 1890 reserve funds were established, the balances

# INSURANCE

of which, in virtue of the Anglo-French Convention of April 4, 1904, were placed at the disposal of the Egyptian Government in 1905 less certain sums remaining in the hands of the *Caisse de la Dette Publique* for the service of the debt. The amount received by the Egyptian Government was carried to a General Reserve Fund which on March 31, 1925, showed a balance of £E 25,557,175, having risen to this figure from £E 5,570,000 in 1921 and £E 18,000,000 in 1924. About half this sum is invested in Egyptian Government Debt and foreign securities, some £E 10,000,000 being deposited in various banks, while a small amount remains invested in local industrials and Turkish loans.

**REVENUE AND EXPENDITURE.** The progress made in the economic development of Egypt may be judged from the following table, which shows the revenue and expenditure of the country since 1917-18.

YEAR	REVENUE £	EXPENDITURE £
1917-18	23,166,074	22,496,948
1918-19	27,001,280	23,384,320
1919-20	33,077,101	28,001,934
1920-21	40,446,021	62,051,182
1921-22	41,803,166	37,747,112
1922-23	35,703,744	28,247,171
1923-24	30,254,947	31,466,480
1924-25	37,608,601	29,076,185
1925-26	30,870,000	36,288,266

The years 1920-21 and, in a lesser degree, 1921-22 were "boom" periods, and should be so considered in estimating the general rise in revenue.

In 1925-26 the estimated excess of receipts over expenditure was only £E 581,734, compared with credit balances of £E 7,722,470 in 1924-25 and £E 4,788,407 in 1923-24. The extraordinary expenditure on new works in 1925-26 was almost entirely responsible for the lessened excess figure in the year named.

**EXPENDITURE 1925-26.** The largest item in the outcast in total expenditure by £E 6,312,081 to £E 30,288,266 was that on new works (£E 4,394,121). Administrative expenses increased from £E 13,784,428 to £E 15,406,433, railways from £E 3,434,701 to £E 5,073,554, post office from £E 538,874 to £E 618,748, telephones from £E 243,760 to £E 340,270, army from £E 1,036,059 to £E 1,680,062, tribute from £E 152,302 to £E 604,826, and debt payments from £E 3,808,047 to £E 4,207,138.

**REVENUE 1925-26.**—Revenue in 1925-26 was £E 820,000 less than in 1924-25 if the reserve relating to the capital account of the Egyptian State Railways, Telegraphs and Telephones (£E 1,037,800) be included. The total ordinary revenue for the year was £E 35,489,140, compared with £E 37,204,520 in 1924-25. Direct taxes, etc., rose from £E 5,718,125 to £E 5,720,000, excise from £E 241,201 to £E 260,000, post office receipts from £E 643,366 to £E 650,000, telephones from £E 422,291 to £E 515,000, and judicial and registration fees from £E 1,877,566 to £E 1,951,000. On the other hand, Customs declined from £E 6,044,132 to £E 5,110,000, tobacco from £E 5,858,760 to £E 5,700,000, miscellaneous taxes from

£E 474,507 to £E 435,000, railways from £E 7,105,753 to £E 7,000,000, telegraphs from £E 304,853 to £E 205,000; ports and lighthouses from £E 351,659 to £E 320,000, and miscellaneous revenue from £E 8,162,280 to £E 7,623,140.

**TAXATION.**—The reform of Egyptian taxation, the inequality and uncertainty attaching to which were largely responsible for the bad state of the country's finances prior to the period of British control, dates from 1880, and has continued ever since. One peculiar form of "inequality," to which

in the same manner as local subjects, but if a new tax is imposed the consent of all the Powers is necessary before a foreigner is obliged to pay. In regard to Egyptian subjects, the Organic Law of 1924 declares that no new direct tax, whether land or personal, may be imposed without the approval of the Legislative Assembly. The land tax, house tax and cotton tax are the principal sources of revenue, the amount received from direct taxation in 1925-26 being £E 15,406,433 as against £E 13,784,428 in the preceding year.

the annual rental value of the premises, except in the case of Cairo, where it is 10 per cent. In Alexandria, municipal taxes on house property are levied in addition to the above.

**LAND TAX.**—The land-tax is one of the principal sources of Egyptian revenue and is payable at the rate of 28 64 per cent of the rental value of fully developed lands. A super-tax of P.T. 50 per feddan on lands irrigated by flood from the Assuan Reservoir and its subsidiary works and P.T. 30 per feddan for lands watered by lifting machines is also imposed.

### BANKING

Egypt owes its excellent banking system entirely to foreign interests, almost all the European Powers being represented by their leading banking institutions. The principal banks operating in the country had satisfactory years in 1924 and 1925, and in some cases were able to increase their dividends.

**BANKS.**—The following is a complete list of the banks operating in Egypt, with the locations of their head offices: Agricultural Bank of Egypt, Cairo; Alexandria Banking and Trading Company, Ltd., Alexandria; American Express Company, Inc., New York; Banca Commerciale Italiana per l'Egitto, Alexandria; Banco Italo Egiziano, Alexandria; Bank of Abyssinia, Addis Ababa; Bank of Athens, Athens; Banque Belge pour l'Etranger, Brussels; Banque Misr, Cairo; Banque d'Orient, Athens; Barclays Bank (Dominion, Colonial and Overseas), London; Caisse Hypothécaire d'Egypte, Brussels; Cassa di Sconto e di Risparmio, Alexandria; Commercial Bank of Egypt, Alexandria; Commercial Bank of Greece, Athens; Commercial Bank of the Near East, London; Comptoir Financier et Commercial d'Egypte, Alexandria; Comptoir National d'Escompte de Paris, Paris; Crédit Foncier Egyptien, Cairo; Crédit Foncier de l'Orient, Paris; Crédit Lyonnais, Lyons; Ioman Bank, Ltd., London; Land Bank of Egypt, Alexandria; Lloyds Bank, Ltd., London; Mortgage Company of Egypt, Ltd., Cairo; National Bank of Egypt, Cairo; Ottoman Bank, London, Paris and Constantinople; Société Cooperative Commerciale de Crédit, Cairo.

**BANCO ITALO EGIZIANO.** This is an Italian banking company of considerable importance, having at its head the President of the Banco di Roma. It operates not only in Alexandria and Cairo, but by means of agencies established throughout the provinces and especially in the cotton districts. (See also text following this article.)

**BANK OF ATHENS.**—This bank, whose headquarters are at Athens, provides exceptional facilities for the export and import trade between Great Britain and the Near East generally. The principal Egyptian branch is at Alexandria. (See also text following this article.)

**BANQUE BELGE POUR L'ETRANGER.**—This important Belgian bank, which was founded in 1902, transacts every variety of banking business from its head office in Brussels and in such diverse centres as London, Paris, Cologne, Bucharest, New York, Peking and Tientsin. The Director-General of the bank's operations in Egypt is in charge of the Egyptian main branch in Cairo, and other branches are at Alexandria, Tanta, Zagazig and Beni-Suef. (See also text following this article.)

**BARCLAYS OVERSEAS BANK.**—One of the outstanding features of Egyptian banking in 1925 was the amalgamation of the various institutions which Barclays

OTTOMAN BANK.  
Banking Premises, Alexandria.  
(See letterpress, page 27)

native opinion has always been hostile, was that foreigners in Egypt were for a long time exempt from taxation to which the inhabitants were subject. In consequence of the Capitulations (see under "Administration"), no foreign resident could be taxed by the Egyptian Government unless the Governments of all the Powers consented to the imposition of the tax. It was not until 1884 that house-tax was paid by foreign residents. Generally speaking, it may be said that foreign residents now pay all taxes

**COTTON TAX.**—By decree of April 18, 1920, a tax of P.T. 35 per kantar was established on ginned cotton. In 1922 this tax was reduced to P.T. 25 per kantar. The revenue raised in 1924-25 was estimated at £E 1,250,000.

**HOUSE TAX.**—The house-tax is levied only in those towns where it is considered that the amount collected will justify or exceed the cost of collection. The amount of the tax is 8½ per cent, or one-twelfth of

Bank has welded into a great overseas subsidiary. The Anglo-Egyptian Bank itself (now absorbed into Barclays Bank, Dominion, Colonial and Overseas) has been established in Egypt since 1864, and has always played a prominent part in the financial and commercial development of the country. From details given in the extended notice of Barclays activities which follows in this section it will be seen that the composition of the new central board of management and of the administration generally augurs well for the development of the bank's widespread business.

**CREDIT FONCIER EGYPTIEN**—This, one of the older banking institutions of Egypt, was founded in 1880, with headquarters at Cairo, and now has extensions throughout the country. It conducts a large volume of business. (See also text following in this section.)

## REPRESENTATIVE BANKING ENTERPRISES

### NATIONAL BANK OF EGYPT.

**Inception.** The history of this National Bank is intimately connected with the financial development of modern Egypt. When towards the end of the nineteenth century the State finances had been put on a sound basis, the Government expressed a desire to see established in Egypt a Bank with which it could deposit its funds and which at the same time would be the Bank of Issue of the country. The result was the foundation of the National Bank of Egypt under the authority of a Khedivial Decree dated June 25, 1898, as an Egyptian company with its head office in Cairo.

The promoters were the late Sir Ernest Cassel and the local firms of Messrs. C. M. Salvago & Co. and Messrs. Suarès Frères & Co. The first Governor was the late Sir Elwin Palmer, K.C.B., K.C.M.G., who previously held the appointment of Financial Adviser to the Egyptian Government.

**Activities.**—One of the first of the activities of the Bank was the granting of loans to the fellahs, who were up to that time in the hands of the usurers. This branch of the Bank's business soon grew to such large proportions that it had to be handed over in 1902 to a separate company specially formed for the purpose, the Agricultural Bank of Egypt, in which the National Bank retains a controlling interest.

Before the foundation of the institution under notice there were few banks established in Egypt, and the number of their branches in the Provinces was extremely small. The National Bank of Egypt immediately opened several branches, and subsequently the number was increased so as to include all Mudirah towns, in which places the Bank effects encashments and payments for the Government. The establishment of these branches conferred on the country a more widely spread banking system than it had been accustomed to.

**National Services.**—From its foundation to the present day the development of the National Bank of Egypt has been continuous. Being in touch with the Government on the one hand and the commercial community on the other, and possessing an organisation prepared for the widest activities in emergency, the Bank and its connected concerns have rendered signal services to the country.

During the various crises that have swept over the State, and in particular

**IMPERIAL OTTOMAN BANK**—Founded in 1863, this well-known bank has established highly successful branches at Alexandria, Cairo, Port Said, Ismailia, Mansurah and Minya. The widespread activities in all countries of the Near and Middle East render its position in Egypt one of increasing value. (See also text following in this section.)

**LAND BANK OF EGYPT**—This bank was established under French auspices in 1905, and operates from its head office in Alexandria. (See also text following in this section.)

**LLOYDS BANK, LTD**—This well-known institution has long since acquired an international reputation. It is now firmly established in both Alexandria and Cairo, with a dozen agencies in other important centres. (See also text following in this section.)

at the outbreak of War in 1914, no efforts were spared by the Bank to meet the situation. It is therefore no matter for surprise that the confidence which was placed in the institution at its foundation has gone on increasing, and that in times of trouble the country has always looked to it for that assistance which has been meted out readily and loyally.

The outbreak of War came at a particularly critical moment for Egypt, as the cotton crop was just due on the market and with the impossibility of importing into the country the usual quantities of gold required to finance that crop, the position was serious. Thanks to the Bank's prompt action in collaboration with the Government, that position was eased, the Government decreed the "cours forcé" for the notes of the Bank, and it was thus possible to expand the issue, providing the necessary currency for the cotton to be moved from the interior down to Alexandria for export. Moreover, the measures taken by the institution at the outbreak of War undoubtedly minimised the panic that ensued on the local market and helped to bring an early return of confidence.

**Financial.**—In the course of its existence of 27 years the National Bank of Egypt has paid an average dividend of 9.46 per cent. The dividend paid for the year 1925 was 17 per cent, whilst 15 per cent was distributed each year during the period 1920-1924.

Substantial sums have been added to the reserves, which now figure at £2,550,000 against a capital of £3,000,000. The nominal value of the share is £10. On March 1, 1926, it was quoted on the Stock Exchange at £36.

**Operations in Egypt.**—Apart from its special functions as the Issuing Bank of the country and Government bankers, the National Bank of Egypt transacts the usual banking operations. It has agencies in Egypt at Cairo, Alexandria, Assuan, Assiut, Benha, Beni-Suef, Chebin-el-Kom, Damanhour, Fayyum, Helopolis, Keneh, Luxor, Mansurah, Mchalla-Kebir, Minieh, Port Said, Sohag, Suez, Tantah (with a sub-agency at Kafr-el-Zayat) and Zagazig.

**Operations in the Sudan.**—The National Bank of Egypt also holds an important position in the economic life of the Sudan, whither it came as pioneers in 1901. It acts as bankers to the Government of that region, and has agencies at Khartoum, Port Sudan, El-Obeid, Wad Medani, and sub-agencies at Omdurman, Kassala and Tokar.

**NATIONAL BANK OF EGYPT**—The National Bank of Egypt, established under Egyptian law in 1898, is the sole bank of issue in Egypt. The course of its note issue during 1925 was unusual in that the outstanding amount on the first day of the year—£41,900,000 proved to be the maximum point of the 12 months. At the end of the year the total was £F 35,500,000, a reduction of £E 6,400,000 compared with the end of 1924, the usual expansion in the note circulation of the late autumn having been curtailed owing to the fall in the price of cotton and the slowness with which the crop was marketed. The results disclosed by the bank for 1925 were the best ever shown by this institution, a noticeable feature being the large increase in the Egyptian Government's deposits, which rose from £E 18,944,217 in 1924 to £E 25,400,562 in 1925. (See also text following this article.)

**Directorate.** The Bank is administered by a Board of Directors in Cairo, presided over by the Governor. The present Governor is Sir Bertram Hornsby, C.B.E. who was appointed to the post in 1921, in succession to Sir Frederick Rowlatt.

The Board of Directors is composed of the following gentlemen, of whom the last four form a London Committee: Sir Bertram Hornsby, C.B.E. (president); H.E. Ahmed Ziwer Pacha, Mr H.E. Barker, H.E. V. Harari Pacha, C.M.G., Mr John Home, Mr Robert Rolo, C.B.E., Sir Frederick Rowlatt, K.B.E., Mr Michel Salvago, Mr Leon Suarès, Col the Hon Sidney Peel, D.S.O., Lord Cullen of Ashbourne, K.B.E., Mr E.W.P. Foster, C.M.G., and Major General Sir John Davidson, K.C.M.G., C.B., D.S.O., M.P.

(See illustration facing page 25.)

### OTTOMAN BANK.

**Inception.**—After the termination of the Crimean War a British Bank, with a paid up capital of £500,000, was established in Constantinople as the Ottoman Bank. Such was the genesis of the present institution, which, with the participation of French capital, was established as a State Bank, under the title of the Imperial Ottoman Bank, by virtue of a firman of the Sultan of Turkey dated February 4, 1863. It received a concession from the Turkish Government for a period of thirty years, namely, up to 1893. The concession, renewed from time to time, is now current for ten years from August, 1925.

**Capital.** The capital of the Bank is £10,000,000, of which one-half is paid up, the reserve funds amounting to £1,250,000. The shares are all in the form of bonds to bearer.

**Activities.**—At the head office in Constantinople the Bank's activities are directed by a Council of Administration under the control of a Committee, half of which sits in Paris and half in London. The country in whose capital the enterprise was first started has derived immense advantages from an organization so deeply interested in the development of its natural resources and the well-being of its inhabitants.

**Operations.**--The Bank's system enables it to undertake all kinds of banking business on behalf of clients through the medium of its own branches and of correspondents in all parts of the globe. Operations cover advances on merchandise, approved bills and securities, opening of mercantile credits, and issuing of drafts, cheques, telegraphic transfers and letters of credit on the principal towns of the world. The safe custody of securities, valuables, etc., collection of coupons and bills, and purchase and sale of stocks and shares are also undertaken.

**Family Savings Banks.** Apart from the extension of banking facilities which have proved so valuable a power for national development, the institution of Family Savings Banks in 1861 deserves special notice. Under that scheme the Bank receives at all its agencies deposits on drawing account, upon which it allows 2 per cent. interest on sums up to a limit of £100 Turkish, a facility of which the small depositor has not been slow to avail himself.

**Branches.**--The intimate relations maintained between the Ottoman Bank and the Government have not prevented due regard being given to the commercial requirements of the country, which have been supplied by the creation of branches. In 1863 there were only four, in 1883 fourteen. During the ensuing ten years that number was doubled. By 1908 fifty-four were in being, and to-day the Bank possesses more than eighty branches and sub-offices in the Near East. The following are the Egyptian branches: Alexandria (5, Mohd. Aly Square), Cairo (10, Shari el Manakh Mousky), Port Said, Mansurah, Minieh, Abou-Koukas, Mellawi and Ismailia. Each of these agencies

has a Savings Bank Department. Important branches are situated also in Cyprus, Iraq, Palestine, Greece, Persia and Tunisia.

#### LLOYDS BANK LIMITED.

**Inception and Development.** Facing the origin and progress of an institution playing so fundamentally important a part in British and overseas financial operations as does Lloyds Bank is tantamount to outlining a history of banking itself. The inception of the establishment in its present form was the direct outcome of the passing of the Limited Liability Act of 1862, the Bank being inaugurated as a joint stock concern three years later, with the late Rt. Hon. Joseph Chamberlain among its original directors. A nucleus had been provided in the former private banking house of Lloyds & Co. (Birmingham Old Bank), founded exactly a century earlier, and which, under the provisions of the new Act, was now amalgamated with the Birmingham firm of Mollet & Sons.

The process of absorption having commenced, eight other companies had been acquired when, in 1884, the taking in of Messrs. Barnett's Hoares & Co. and Bosanquet, Salt & Co. furnished Lloyds Bank with London offices. There now ensued an interval of four years, during which the relative control of town and country business was stabilised, then

amalgamation was recommenced, and year by year famous and long-founded private and joint stock concerns fell to the nod of this gigantic corporation. Particularly significant was the year 1918, during which the absorption of the Capital and Counties Bank gave Lloyds Bank 473 new branches, and a union of interests with the National Bank of Scotland and the London and River Plate Bank (since 1923 known as the Bank of London and South America, Ltd.) was sealed. Throughout the two generations that have elapsed since its foundation as a joint stock concern, 53 businesses have been incorporated with Lloyds the last two Messrs. Cox & Co., the Army Agents, and Henry S. King & Co., yielding up their individuality in 1923.

**Expansion Statistics.**--An index to the extraordinary development of Lloyds Bank Ltd. during the first sixty years of existence obtains in a comparison of the institution's resources at its foundation and at December 31, 1925. In 1865 the Bank's capital paid up totalled £143,415, in 1925, £14,372,956. The reserve fund in 1865 was £18,115, in 1925 £10,000,000. Deposit and current accounts, which in 1865 rested at £1,066,100, in 1925 figured at £37,178,515.

**Capital.** The authorised capital of the Bank on December 31, 1925, was £72,500,000 (consisting of 14,500,000 shares of £5 each), of which £14,372,956 was paid up. At an extraordinary general meeting held on February 24, 1926, it was decided to increase the capital to £74,000,000 by the creation of 1,500,000 new shares of £1 each, with 1,437,296 of such shares paid up in full.

**Operations.** Every branch of banking transaction is brought into operation by this

OTTOMAN BANK.  
The Office at Cairo.

world-wide organization. Current accounts are opened, deposits received at interest, and savings bank departments are available for small deposits. Securities are accepted for safe custody, coupons, dividends and pay warrants collected, foreign moneys exchanged, and periodical payments made. Purchases and sales of stocks and shares are effected, approved bills purchased, and circular notes, foreign currency drafts, telegraphic transfers and letter payments obtainable at the principal branches. The Bank has correspondents and agents throughout the world, and undertakes the agency of colonial and foreign banks, overseas business of all kinds, including the collection of foreign bills and cheques, and the issuing of world letters of credit. The institution is also prepared to act as executor and trustee of wills, trustee of settlements and of debenture stock issues, etc.

**Egyptian Activities.**—The business now conducted by Lloyds Bank in Egypt was commenced by Messrs Cox & Co., whose interests were subsequently merged into the institution now under notice, as has been indicated above. The first branch was opened at Alexandria in the autumn of 1910, to be followed a few months later by the establishment of a branch in Cairo, the rapid increase of business also making imperative the installing of several agencies in the provinces.

Branches are now in operation at Alexandria, Cairo (four offices), Ianta, Damahour, Mansurah, Mehalla Kehir, Fayyum, Wasta, Beni Suef, Lashu, Maghagha, Beni Mazat, Samahut, Minieh, Menut, Benha and Zagazig. In June 1925 business was still further extended by the fusion of the Egyptian branches of the Bank of British West Africa Ltd. with Lloyds Bank.

The Bank's chief establishment in Egypt is at Alexandria, employing a staff of 140 under the direction of Messrs T. R. Cole and F. Willing as joint managers.

**Directorate.**—J. W. Beaumont Pease (chairman), Sir Austin E. Harris, K.B.E. (deputy chairman), J. H. L. Baldwin, C. F. Barnett, Henry Bell, the Hon. Robert H. Brand, C.M.G., F. R. Debenham, W. S. de Winton, J. H. Fox, Maj. J. W. Garton, R. C. Chapple Gull, G. V. Harvey, Sir Henry H. A. Hoare, Bt., the Rt. Hon. Sir Robert S. Horne, G.B.E., M.P., the Rt. Hon. Lord Inverforth, P.C., H. J. W. Jervis, Charles Ker, Sir H. Seymour King, K.C.I.L., C. F. Lloyd, M.P., Lt. Col. R. K. Morcom, C.B.E., P. E. Noble, W. W. Paine, Alwyn Parker, C.B., C.M.G., A. E. Pattinson, Sir Arthur F. Pease, Bt., D.L., Samuel Samuel, D.L., M.P., Oswald Sanderson, D.L., the Rt. Hon. the Earl of Selborne, K.G., P.C., G.C.M.G., H. B. Sim, Sir Edwin F. Stockton, E. D. Vaisey, Col. the Hon. F. Vernon Willey, C.M.G., C.B.E., M.V.O., Evan Williams, D.L., and the Rt. Hon. Viscount Younger.

	£ 383,730,738 8 4

\*Note.—There is a contingent liability for uncalled capital in respect of a portion of these investments

**Dividend.**—For the half year ended June 30, 1925, a dividend of 1s 8d per share, being at the rate of 10 2/3 per cent. per annum on the paid-up capital of the company, was declared. A sum of £250,000 was placed to the bank premises account, and one of £400,000 to the staff superannuation fund. Out of the balance of £1,492,492 it was decided to pay a final dividend, of the same amount as that just mentioned, for the half year ended December 31.

In terms of a resolution at the annual meeting on February 5, 1926, the issued capital was raised to £15,810,252 by the addition of £1,437,296

(See also illustration, page 29.)

**BANQUE BELGE POUR L'ETRANGER.**

**Inception.**—This Bank was registered in 1902 under Belgian Laws as the Sino-Belgian Bank, but on January 1, 1913, the name was changed to the present form. Affiliated with the Société Générale de Belgique it has its head office at 66, Rue des Colonies, Brussels.

**Capital.**—The capital of the institution is now Fr 100,000,000, and is fully subscribed. The reserve funds amount to Fr 32,000,000.

**Financial.**—The shares issued by the company stand normally at Fr 500, the shareholders' liability being limited to the amount subscribed. The Bank makes returns to the Commissioners of Inland Revenue as London bankers. The general balance sheet furnished on June 30, 1925, showing a highly satisfactory position, is given below.

Particulars of dividends disbursed over the last fourteen years are as follow: For the two years to 1912-13 a dividend of 5 per cent per annum was paid, for the five years to June 30, 1918, 14 per cent (actual), 1918-19, 7 per cent., 1919-20 and 1920-21, 9 per cent., 1921-22, 7 per cent. (less tax), 1922-23, 7 per cent. (tax free), 1923-24 and 1924-25, 8 per cent. (tax free).

**Operations.**—Every description of banking business comes under the purview of this important concern, which has correspondents in all parts of the world. In the United Kingdom it operates as agents for the Belgian Postal Cheque Service.

**Allied Banks.**—With this Bank the following institutions are allied: Wiener Bank-Verein, with branches in Austria, Hungary, Italy (Tyrol), Rumania and Yugo-Slavia; Allgemeiner Boehmscher Bank-Verein, Prague, with branches in Czecho-Slovakia; Société Générale de Banque en Pologne, Warsaw, with branches in Poland; Banco Internacional de Industria y Comercio, Madrid, with branches in Spain and Morocco; Banque Franco-Belge de Bulgarie, Soc. An., Sofia and Roustchouk, with affiliations in Plovdiv (Philippopolis) and Bourgas; Banque du Pays de Bosnie-Herzegovine, Sarajevo, with branches in Yugo-Slavia.

**Branches.**—The institution has established branches at London, Paris, New York, Braila, Bucharest, Constantinople, Hankow, Peking, Shanghai, and Tientsin, with the follow-

ing in Egypt: Cairo (45, Rue Kasr el Nil), and Alexandria (10, Rue Stamboul).

**Directorate.** Jean Jadot (chairman), Chevalier de Wouters (vice-chairman and managing director), Alexis van Damme, and Paul Ramlot (managing directors), Josse Allard, Edouard de Brabander, Hector Carlier, Baron F. Carton de Wiart, H. Dewez, A. Francois, E. Francqui, Baron Guffinet, Jules Jadot, H. le Bocuf and Paul Mayer.

#### BARCLAYS BANK (DOMINION, COLONIAL AND OVERSEAS).

**History of Parent Bank.**— The inception of Barclays Bank Ltd., which constitutes the parent concern to that now under notice, may be traced back prior to 1729, in which year one Joseph Freame established a banking business at the corner of George Yard, Lombard Street, under the sign of the Spread Black Eagle. Seven years after this foundation the Barclay name became associated with the enterprise, when James, son of David Barclay, a Cheapside linen-merchant, entered into partnership with Mr Freame. The progressive qualities and acumen of the new comer were reflected in those of his kin who succeeded him, until, at the retirement of the last member of the Freame family from participation, the Barclays were in control of an organisation most soundly based and efficiently operated. In the Georgian era the attachment of Sylvanus Bevan and John Henton Tritton as partners gave the firm the style of Barclay, Bevan, Tritton & Co., subsequently to be modified to the present designation.

**Absorption.** After the Limited Liability Act of 1862, the process of absorbing other private or joint-stock banks, destined steadily to raise Barclays Bank Ltd. to its present proud eminence among the all-powerful financial strongholds of the country, soon developed. Prominent milestones on the path of amalgamation were the taking over of Spooner, Attwood & Co. in 1866, the Norwich house of Gurney & Co. about a generation later, and in 1911 the Stamford, Spalding and Boston Banking Co. The merging into Barclays Bank Ltd. of the Union Counties Bank in 1916 was followed two years later by the incorporation of the London, Provincial and South Western Bank. In November 1919 a union of interests was effected with the British Linen Bank and the Union Bank of Manchester, Ltd. Such are typical successive strokes in a boldly-conceived policy which gives this immense organisation a record of nearly two centuries of continuous development. At the present day the Bank has an authorised capital of £20,000,000, the issued and paid-up totalling £15,592,372, while the reserve fund stands at £6,250,000. Current, deposit and other accounts amounted on December 31, 1925, to £306,259,810. Among assets, cash in hand and with the Bank of England at that date reached a total of £45,672,882, bills discounted £32,028,847, investments £59,596,214, and advances to customers and other accounts, £153,028,485.

**Inception of Present Concern.**— The inception of the banking business now under consideration marks a stage in the amalgamating process just described. During 1925 the Colonial Bank, in which Barclays Bank Ltd. held a controlling interest, was re-incorporated by Act of Parliament, and thereunder changed its name to Barclays Bank (Dominion, Colonial and Overseas). The Colonial Bank originally had been incorporated by Royal Charter in 1836, and for many years confined its services to the West Indies. In 1916 and 1917 it obtained Acts of Parliament which enabled it to carry on business in any part of the world, in pursuance of which authorisation it extended its sphere of operations to British West Africa.

In November 1925 The Anglo-Egyptian Bank Ltd., which had been founded in 1864, was amalgamated with Barclays Bank (Dominion, Colonial and Overseas), and at the end of February 1926 the incorporation of The National Bank of South Africa Ltd., founded in 1891, was also completed.

**Capital.**—The authorised capital of the combined institution is £10,000,000, of which £6,975,500 is issued and subscribed, £4,975,500 being paid up, while the reserve fund now stands at £1,000,000. In addition to this reserve, there is an uncalled liability of £2,000,000 in respect of the 500,000 "B" shares of £5 each (£1 paid) held by Barclays Bank Ltd.

**Spheres of Operation.**—Barclays Bank (Dominion, Colonial and Overseas) operates in the West Indies and British Guiana, British West Africa, Egypt and the Sudan, the Transvaal, Rhodesia, Cape Province, Natal, Orange Free State, Swaziland Portuguese East Africa, South West Africa, Tan-

banking in Egypt and along the Mediterranean littoral. Owing to the polyglot nature of transactions in the big towns, all members of the staff speak several languages, those most in use being English, French, Greek, Italian and Arabic.

**Directorate.**—The chairman of the amalgamated bank is Mr Frederick Craufurd Goodenough, chairman of Barclays Bank Ltd, the deputy chairman being Sir Herbert Hambling, Bt, who holds a similar position in the parent institution. The following are directors of the bank: The Rt Hon. Earl Buxton, G.C.M.G., George Cyril Cassels, John Caulcutt, Raoul Hector Foà, Arthur Bevington Gillett, James Rankine Lusk,

**NATIONAL BANK OF SOUTH AFRICA LOCAL BOARD** James Rankine Lusk, C.M.G. (chairman and managing director in South Africa), John Emrys Evans, C.M.G. (vice-chairman), Alexander Arken, Sir Francis Drummond Percy Chaplin, G.B.E., K.C.M.G., M.L.A., Leonard Lme, Charles Maggs, James Benjamin Taylor, Henry O'Kelly Webber, and Walter Solomon Webber.

**ANGLO-EGYPTIAN BANK LOCAL BOARD** Raoul Hector Foà (chairman), John Edward Mounsey (deputy-chairman), William Nelson Bicket, Lt-Col G. Clifford M. Hall, C.M.G., C.B.E., D.S.O., Maj-Gen Sir A. W. Money, K.C.B., K.B.E., C.B., C.S.I., and Emil Pusch.

BARCLAYS BANK LTD. (DOMINION, COLONIAL AND OVERSEAS), Alexandria.

2. View of the First Floor

(See letterpress, page 31.)

ganyika, Nyasaland, Kenya Colony, Malta, Gibraltar, Palestine and Mauritius.

**Egyptian Activities.**—Barclays Bank (Dominion, Colonial and Overseas), as was the case with the Anglo-Egyptian Bank for years past, acts as bankers for the British Army and Navy at those branches where such services are required. The utmost facilities are provided for all commercial transactions, the financing of the cotton crop in particular having been brought to a fine art. The Bank possesses two of the best-situated warehouses in Minet-el-Bassal, the cotton centre of Alexandria, and handles about one-third of the Egyptian crop in a normal season. In a word, Barclays Bank (Dominion, Colonial and Overseas) stands for efficient dealing in all departments of

C.M.G., John Edward Mounsey, Sir William Edgar Nicholls, Edmund Henry Parker, LL.D., Emil Pusch, Sir Harold Edward Snagge, K.B.E., Herbert Leslie Melville Tritton, James Tuke, and Charles Frederick Wood.

**Local Boards.**—**COLONIAL BANK LOCAL BOARD** Charles Frederick Wood (chairman), Sir Robert Rutherford (deputy chairman), Ernest Hyslop Bell, George Cyril Cassels, Sir Edward Davson, Thomas Du Buisson, Sir Herbert Hambling, Bt, Charles Henry Hewett, Oliver Vaughan Gurney Hoare, the Rt. Hon. Sir Fredk. John Dealtry Lugard, G.C.M.G., C.B., D.S.O., Herbert Leslie Melville Tritton, the Rt. Hon. Lord Wargrave, and Col. Charles William Sofer Whitburn.

**NATIONAL BANK OF SOUTH AFRICA LONDON COMMITTEE** Charles Frederick Wood (chairman), A. C. Duff, Arthur Bevington Gillett, and James Tuke.

**Head Office.**—54, Lombard Street, London, E.C.3. Cables: "Barcladom—Stock," London.

Four additional offices have also been established in London, viz., 37-39 King William Street, E.C.4, Circus Place, London Wall, E.C.2, 29 Gracechurch Street, E.C.3, and 111 St. Martin's Lane, Trafalgar Square, W.C.2.

**Other Offices.**—Liverpool: 25 Castle Street; Manchester: 21 York Street; Hamburg: Adolphsplatz 4; New York agency: 44 Beaver Street.

**BANCO ITALO EGIZIANO.**

**Inception.**—This Bank was constituted as a "Société Anonyme Egyptienne" in June, 1922, in order to absorb the Egyptian group of the Banco di Roma. The title borne at its inception was the "Banco di Roma per l'Egitto e il Levante," but when, after two years had elapsed, important interests in the institution were acquired by the "Credito Italiano" and the "Banca Nazionale di Credito," the name was changed to its present form. The Bank now under notice is thus actually the product of three great Italian corporations, the "Credito Italiano," the "Banca Nazionale di Credito" and the "Banco di Roma" and the resources so placed at its command enable the institution, in developing the advantages offered to clients, effectively to further the consolidation of Egyptian financial and economic affairs.

**Capital.** The capital of the institution is £F 975,000, with reserves totalling £F 10,000.

**Operations.** All classes of banking business are transacted by the Banco Italo Egiziano, which is prepared to open current accounts, make advances on goods (especially cotton), approved bills and securities, and issue letters of credit. The collection of coupons and bills, purchase and sale of stocks and shares, and safe custody of valuables are among other services available to clients.

**Head Office.**—The head office, which constitutes the centre of control, is situated at Alexandria.

**Branches.**—The business handled by the Bank has necessitated the creation of agencies throughout the country. The principal branch is in Cairo, and other agencies are now in operation at Benha, Beni-Mazar, Beni Suef, Fayyumi, Mansurah, Minieh, Mit-Ghaur and Tanta.

**Directorate.**—The Board is composed of the following prominent men, most of whom occupy positions on the directorates of the three Italian corporations participating in the institution now under review. Gr. Off. Carlo Feltrinelli (administrator of the Credito Italiano), president, Hon. Francesco Boncompagni Ludovisi, Prince de Bombino (president of the Banco di Roma), vice-president, Gr. Off. Domenico Giloni (president of the Banca Nazionale di Credito), vice-president, H. E. Mohamed Pacha Chaheek, Gr. Off. Carlo Orsi (managing director of the Credito Italiano), Comm. Dr. Osvaldo Riso (director of the Banco di Roma [France]), Comm. Mario Solza (managing director of the Banca Nazionale di Credito), Comm. Arrigo Stoffel (central manager of the Credito Italiano), Gr. Off. Avv. Vittorio Carlo Vitali (managing director of the Banco di Roma), Comm. Emilio Wirz (managing director of the Banque Italo-Française de Crédit).

**General Management.**—The general manager is Comm. Grisante Vannucci, with Dr. Chev. Off. Enrico Biagi as co-general manager.

**Auditors.**—Mr. Harold Bridson, Dr. Cesare Quario and Dr. Giulio Carmignato.

**Cables.**—"Italegi," for all branches.

**Balance Sheet.**—The balance sheet, showing the position of the Bank's affairs at December 31, 1925, was as follows:

	LIABILITIES	£F.
Capital	.. .. .	975,000 000
Reserve fund	.. .. .	10,000 000

**BANQUE D'ATHÈNES.**

**Inception.**—This Bank, which was established as a limited company in 1893, speedily won an important position as a financial institution throughout the mainland and the isles of Greece. The head office is at Athens.

**Capital.**—The capital now stands at Drs 72,000,000, fully paid, with reserves totalling Drs 34,000,000.

**Operations.**—All departments of banking business are conducted by the Banque d'Athènes with efficiency and despatch. Bills are discounted and collections made in Greece and abroad, foreign currencies purchased and sold, letters of credit issued, and transfers arranged by post or cable. The Bank also opens documentary credits, accepts stock as deposit, buys or collects coupons and gathers the values matured, executes Stock Exchange commissions, receives without charge subscriptions, and effects any transaction in stock. Advances are made on goods and bills of lading, also on shares, bonds and securities, current

BANQUE D'ATHÈNES.

2. Branch at Cairo.

accounts are opened and deposits received at sight or at term in drachmas or foreign currencies. A system of safes offering secure custody is at the disposal of clients. The Bank has correspondents throughout the world.

**Branches.** — The institution possesses branches in the country of its origin at the Piræus, Patras, Volo, Salonica, Cavalla, Janina, Calamata, Isle of Crete (Candia, Canca, Rétimo), Corfu, Chios, Lemnos, Mityleni, Syra, Samos (Vathy and Carlovassili), and at 45 other towns in Continental Greece and the Isles.

Overseas branches are established at London, New York and Boston, in Cyprus at Limassol and Nicosia, and in Egypt at Alexandria (now in existence for just thirty years, address, 25, Rue Cherif Pacha), Cairo and Port Said. For these Egyptian agencies, M. Marius Lascaris has been appointed delegate-director.

**Directorate.** J. Comidounotis (president), L. Gouffray and G. Aycroff (vice-presidents), J. Bonnier (delegate-director), M. Lascaris, I. Eugendi, I. Zarihi, P. Carapiano, G. Nicolaïdis, Baron A. De Neutze, J. Politis, E. Rodocanachi, and C. R. Wehrung General Manager, John C. Phasco.

#### CREDIT FONCIER EGYPTIEN.

**Inception.** — This company, founded on January 1, 1880, was authorised as a "société anonyme égyptienne" by décret issued on February 15 of the same year, with the right to operate for a period of 90 years.

**Capital.** The authorised capital of the company is Fr 200,000,000, equivalent to £7,715,000, of which one-half is paid up. This capital is divided into 400,000 shares of Fr 500, made out to bearer, in respect of each of which Fr 250 have been paid. The company's obligatory capital on October 31, 1925, reached £23,320,838 (equivalent to Fr 604,558,336 at tariff), to be divided in the following manner:

181,850 3 per cent lottery bonds (1880 issue) to bearer at Fr 250 (drawings monthly), redeemable at par until 1936, these bonds to carry interest at Fr 7 50, payable in May.

326,273 3 per cent lottery bonds (1903 issue) to bearer at Fr 250 (drawings monthly), redeemable at par until 1953, these bonds to carry interest at Fr 7 50, payable in May.

185,521 3 per cent lottery bonds (1911 issue) to bearer at Fr 250 (drawings monthly), redeemable at par until 1961, these bonds to carry interest at Fr 7 50, payable in February.

358,207 3 per cent bonds, without lottery, to bearer at Fr 500, redeemable at Fr 500 by drawings in May and November each year until 1978, these bonds to carry interest at Fr 15, payable in January and July.

411,201 3½ per cent bonds, without lottery, to bearer at Fr 500, redeemable at Fr 515

by drawings in February and August each year until 1978, these bonds to carry interest at Fr 17 50, payable in April and October.

282,490 4 per cent bonds, without lottery, to bearer at Fr 500, redeemable at Fr 500 by drawings in April and October each year until 1978, these bonds to carry interest at Fr 20, payable in June and December.

**Operations.** The essential purpose for which the company was created was the advancing of loans on mortgage to city or country landowners in Egypt. It is also empowered to grant loans in Egypt to provinces, municipalities, syndicates depending on the Government and possessing special authorisation similarly to syndicates independent of Government control, as well as to hospitals, public establishments and companies holding concessions for public services. In all these cases the loan may be with or without mortgage. The company is authorised to acquire mortgage debts to open current accounts on mortgage or on security, and to discount values guaranteed by securities. The Board is composed of from twelve to nineteen members, each to possess 100 non transferable shares. The ordinary general meeting, held at Cairo in January, can only be attended by holders of not less than 50 shares or their representatives. The general inventory is made out on October 31 of each year.

**Financial.** — The company's reserves amounted on October 31, 1925, to Fr 4,004,620. At that date mortgage loans (capital still due) reached a total of

1. Head Office Cairo.

CREDIT FONCIER EGYPTIEN.

2. Entrance Hall.

£E.16,855,369, with the portfolio figuring at £E 14,537,201

From the net profit was deducted 6 per cent interest in respect of share capital. The balance was then disposed of as follows: 10 per cent. to constitute a reserve fund equal to half the capital of the Company, 5 per cent to the Board, 15 per cent to the 2,000 founders' shares, and the remaining 70 per cent to shareholders' dividend. The general meeting was given the power to deduct from this 70 per cent, if thought necessary, a sum to constitute an extraordinary reserve.

**Loans.**—From the date of its creation until October 31, 1925, the Crédit Foncier Egyptien negotiated 20,840 loans for a total amount of £E 82,997,456. On this capital the company recovered by way of regular redemption of loans and by anticipated repayments, since the beginning of its operations, a sum of £E 66,142,087. The balance of capital remaining due on October 31, 1925, was therefore £E 16,855,369, which it was permissible to divide into the following categories:—

Country loans	..	£E 14,064,225
City	"	1,748,162
Mixed	"	1,022,992

£E 16,855,369

These loans could be further grouped according to their duration as follows:

Under 10 years	..	£E 221,228
From 10 to 20 years	..	7,277,616
" 21 " 30 "	..	4,879,660
" 31 " 50 "	..	4,476,865

£E 16,855,369

The following were the receipts, together with the balances of profit (shown in parentheses), for the ten years from 1916 to 1925:

1916	£E 1,695,192,143	(£E 432,542,929)
1917	£E 1,810,540,399	(£E 538,626,922)
1918	£E 1,976,302,161	(£E 702,529,346)
1919	£E 2,018,763,843	(£E 723,174,885)
1920	£E 1,999,952,615	(£E 724,074,025)
1921	£E 2,049,293,696	(£E 690,095,669)
1922	£E 2,034,313,973	(£E 678,180,522)
1923	£E 2,029,203,964	(£E 699,971,404)
1924	£E 2,032,295,632	(£E 700,637,568)
1925	£E 2,022,808,018	(£E 700,690,139)

The dividends disbursed over the same period were as follow:—

1916	PT 92	1917	PT 110	1918	PT 120
1919	PT 130	1920	PT 130	1921	PT 136
1922	PT 136	1923	PT 140	1924	PT 140
1925	PT 140				

**Directorate.**—F. Miriel (president), R. Rolo, B. Boyer, Comte Ch. de Sénonne, M. Lascaris, G. Griolet, H. Naus Bey, H. E. Adly Pacha Yeghen, Baron G. Buncard, Sir Bertram Hornsby, C. H. E. Talaat Harb Bey, J. Simon, and M. Vincent (general manager). Secrétaire général, E. Mmost, sous-directeur, Y. Roche. Auditors nominated by the shareholders, F. Papasian and H. Bonnet.

(See also illustration, page 35.)

#### THE LAND BANK OF EGYPT.

**Inception.**—The foundation of this Bank as a limited liability company was authorised by Khedivial decree of January 10, 1905, with the right to operate for a period of 99 years. The head office is at Alexandria.

**Capital.**—The capital of the institution is £1,000,000 sterling, of which £975,000 is represented by 195,000 ordinary shares of £5 each, and £25,000 by deferred shares of the same value. The reserve fund totals £392,843.

**Operations.**—The essential object for which the Bank was promoted was the granting

of loans on mortgage, repayable either at long or short terms and with optional redemption, to owners of estates in Egypt. It is authorised also to purchase mortgage debts, and to open current account credits on mortgages. To meet the annual requirements of cultivators and landowners the institution is prepared to advance cash on a non-mortgage basis, within the value of the profits yielded by the land, likewise to cash their bills to order against endorsement. It also receives deposits at or without interest.

**Loans.**—According to the annual report presented by the directors on December 1, 1925, the Bank had negotiated, since its foundation up to the end of the financial year then concluded, 3,769 redeemable loans and 561 sales of real estate, also redeemable, amounting to £E 12,275,229 with anticipated redemptions totalling £E 5,313,354. The sum of loans and redeemable sales was, on September 30, 1925, £E 3,636,501, and the total amount of mortgage loans granted up to the same date £E 3,685,416. The number of current accounts on mortgage opened by the Bank since its inception was 62, involving a capital of £E 627,422, and the entire mortgage transactions during that period reached the total of £E 3,787,514.

**Directorate.**—Richard Abdy (president), Péricles Zarif (vice-president), le Comte Charles de Lasteyrie, Edouard Cazalet, René Julien Labruyère, René Ismaïlun, Michel Salvago, S. Wellhoff, and Edouard Bouire (manager). Four of the directors, the vice-president, the Comte Charles de Lasteyrie, and MM. Cazalet and Labruyère, form a Paris committee. General secretary, A. Delprat, assistant manager, Farid Bichara, auditors, H. Pougny, J. Sôho and Ch. Mazet.

Haniam Pasha, C.M.G., T. S. Richmond, and Capt. R. G. Westropp (managing director). London committee: Col. the Hon. S. Peel, D.S.O. (chairman), F. W. P. Foster, C.M.G., Sir J. L. P. Horner, K.C.V.O., A. G. M. Dickson. Cables "Zetel" Cairo.

**COMMERCIAL BANK OF EGYPT.** Head office: 10 rue Fouad Ier. Created by decree of the Sultan, founded in 1920. Capital £150,000 fully paid. Reserves £83,000. Directorate: Alfred J. Suarès (chairman), G. Verdy-Delisle (vice-chairman), Jacques Suarès, Vicomte G. de Breteuil, Cecil M. Higgins, Richard Thalmann, René Thery, and S.F. Joseph. Cattam Pacha. Branches: Paris, 48 rue des Petits Champs; Cairo, 33 rue Kasr-el-Nil. There is also a sub-agency at Tantah.

## INSURANCE

Insurance business in Egypt is very largely in the hands of British companies. Many important kindred institutions of other nationalities are, however, eager to obtain a substantial share of the lucrative transactions associated with the cotton industry, and are accordingly fittingly represented in the kingdom.

The Union de Paris, working in conjunction with its subsidiary, the Nationale d'Egypte, a local company, has obtained a solid footing in the territory, not so much directly as owing to the financial interests represented on the board of that particular company. Here, no doubt, familiarity with French methods induces a considerable volume of business among the Gallicised Levantines. Competition in insurance circles in Egypt is on the whole very acute, as shown by the presence in this field of over one hundred fire, marine and life companies from all over the world, a fact which attests in a noteworthy degree how desirable the business is considered by those engaged in it.

**MARINE AND FIRE INSURANCE.**—The principal interest involved in this respect is cotton, and Alexandria is probably alone in confining the marketing and storage of the commodity to one clearly defined area adjoining the port—Minet el Bassal—where the chounahs (cotton warehouses) and steam presses are situated.

For general merchandise there was a pronounced decline in rates during the years 1924-26. Thus those for imported cotton goods, w.p.a. theft and non-delivery, dropped from 20s in 1924 to 10s. in 1926, and f.p.a. excluding theft from 10s. to 6s. Exports to the Levant ports followed suit, the rates w.p.a. having decreased from 10s. to 8s. 6d. and f.p.a. from 6s. 6d. to 4s.

Rates for fire within the port enclosure are controlled, as elsewhere, by the Syndicat Internationale des Cies. d'Assurance operating in Egypt.

2. Sharia Kasr-el-Nil

3. Sharia El Mousky

CAIRO, A CITY OF INTERESTING CONTRASTS

## CITY OF CAIRO

**M**ASR EL-KÂHIRA, called by the Egyptians Masr and by the Europeans Cairo, is situated a little distance from the right or east bank of the Nile, on the sloping plain lying between that river and a projecting angle of the Mohattam hills. Old Cairo as it exists to-day dates from A.D. 969, and was called El-Kâhira, "the victorious," after the planet Mars, which was then in the ascendant. The former Mohammedan city had been successively known as El Fustat and El Askar ("the Cantonments"), which in their turn had succeeded the old Roman settlement of Babylon. Gradually El-Kâhira became joined on to such older quarters as had survived, and so the modern Cairo, much added to and improved since the British occupation, has come about. Ever since 1517, when Egypt became a province of the Turkish Empire, Cairo has been its capital and has steadily grown in importance, not only as a capital city and a great centre of commerce, but, especially during the present century, as a tourist and health resort in the winter months. Within its walls and at a short distance from its gates are gathered many of the most remarkable monuments of antiquity, the City of the Caliphs makes an insistent appeal to all who wish themselves back, if only for a few hours, in the Middle Ages; and the

kaleidoscopic social life of a pleasure loving city draws those to whom the present is more than the past, and the sunshine of modern Cairo a greater attraction than the mists of antiquity.

**ADMINISTRATION.**—Cairo, like Alexandria, forms a government distinct from the province in which it is situated. It has its own Governor, who is assisted by a Deputy. The city is divided into 13 kisms or quarters, which at one time were separated from each other by gates. These gates were closed at night and guarded by watchmen, who allowed no one to pass without examination, but few of such gates now remain. What would be called elsewhere the municipal control of the city is exercised in Cairo by the Tanzim Department of the Ministry of Public Works, which is responsible for the maintenance and construction of roads and public gardens, the maintenance and control of the Nile banks, the administration of the water and electricity supplies and of the scavenging services.

**AQUARIUM.**—The Aquarium was established at Gezira in 1902 at a cost of £E.1,150, and placed under the control of the English Director of the Zoological Gardens. It contains a number of varieties of Nile fish which have never before been kept in captivity. The gardens are beautiful, and are well worth visiting.

**BARRAGES.** The famous Barrage, designed by Mohammed Ali in 1835, which lies only about half an hour's journey by train from the capital, is in reality a series of four barrages, of which the first holds up the water in the Tewfik Canal, and is the smallest of the number. The second is built across the Damietta arm of the Nile, and is about one-third of a mile in length. The third is constructed across the Rosetta arm of the Nile, and is nearly as long as the second barrage, while the fourth is built across the Mahmudia Canal. The Barrage Gardens are beautifully laid out and contain a number of rare plants, trees, etc. In the Barrage Museum are many large scale models of dams, barrages, etc., one of them which illustrates the dredging of the Nile being workable by electricity.

**BAZARS.**—At places in Cairo where goods are sold or exchanged, and to markets in general, the name "bazar" has been commonly given by Europeans, but among Egyptians the word "suk" or "sok" is employed, thus originally indicating a portion of a street, or a whole street, appropriated to one particular trade. Thus the market of the coppersmiths and workers in brass is called "Suk An-Nahhasin," the market of the jewellers is "Suk Al-Gawharigin," etc. Wholesale dealers usually congregate in a building called a "wakkalah,"

the word signifying a place where a merchant can store his wares in safety. The wakkalah is a rectangular courtyard, on each side of which are built vaulted chambers opening on to it, above which are small living rooms. The wakkalah has only one entrance, and the door, which is always shut at night, is kept by a porter. In Lane's time there were over 200 wakkalahs in Cairo. The shops in a bazar, or suk, are usually small apartments, a few feet square, in which the shopkeeper sits, but in the modern portions of the bazars more room for customers is now provided, and dealers in Indian stuffs and wares have counters and chairs for their clients. In the old shops, however, the Muslim expects his customer to sit on the same level with himself, and to remove his shoes if he sits cross-legged. Bargaining is often a matter of an hour or more, and to good customers coffee is generally offered.

The best way to reach the bazars of Cairo is via the Muski, a street which leads directly into one of the oldest parts of the town, and whose character has greatly changed from the days when it was filled with picturesque native shops.

General, the Palace of Ibrahim Pasha, the Palace of the Queen Mother, the Medical School and the Government Hospital. Further removed from the river are the Ministries of Public Works and of War—a handsome building surrounded by gardens—and of Justice and Finance. On the east side of Abdin Square is the Abdin Palace, a comparatively unpretentious building used for official receptions, and adjoining it are barracks. North-east of Abdin Square, in the Sharia Mohammed Ali is the Museum of Arab Art and the Sultanyeh Library. Near this building are the Courts of the Native Tribunals. In the Kasr el-Dubara quarter are many imposing private residences.

**CHURCHES.** The church buildings of most interest in Cairo (apart from the mosques) are those of the Coptic Christians. The largest one, the Cathedral dedicated to St Mark, is situated in the Coptic quarter, to the north of the Esbekiya. It is a large modern basilica, consisting of a nave and two aisles, separated by lofty pillars supporting pointed arches. Internal features are the thrones of the late and present Patriarchs,

**CITADEL.**—To the south of the Muski quarter rises the Citadel, built by Saladin at the end of the 12th century and for long considered a practically impregnable fortress. It is now used as a detention prison for political offenders. The most important building is the Mohammed Ali Mosque, which is notable for its two wonderfully slim and beautiful minarets piercing the sky and visible for miles in every direction. The Sultan Hasan Mosque adjoins it, a fortress-like building, reminiscent of some of the larger cathedrals of Spain. There is an ancient well in the citadel known as Joseph's Well which Jewish opinion has always associated with the son of Jacob.

**CLIMATE.**—The climate of Cairo is dry and salubrious in winter but in summer somewhat hot and stifling. The city is now known as one of the winter health resorts of the world. By a thorough system of drainage and cleansing much has been done to improve it for residents and tourists. It is said that the winter temperature is colder than it used to be, and indeed fires are often necessary at night. At Mena House, about eight miles from Cairo, the air is generally clearer, fresher and drier than in the city,

SHARIA NUBAR PACHA, Cairo.

The "Shell" Pumps provide excellent service throughout the City

**BUILDINGS.**—The Government Offices and other modern public buildings of Cairo are nearly all in the western half of the city. On the south side of the Esbekiya are the Post Office, the Courts of the Mixed Tribunals, the offices of the Public Debt and the Opera House. On the east side are the Bourse and the Crédit Lyonnais, and on the north the headquarters of the American Mission, the institution which has done so much since 1854 to promote the physical, mental and spiritual well-being of the Egyptian people. On or near the west side of the Gardens are most of the luxurious hotels which cater for the needs of European and American visitors—Shepherd's, the Continental and the Hotel de l'Angleterre, to mention three of the largest. Facing the river, immediately north of the Great Nile Bridge, are the large barracks called Kasr el-Nil and the Museum of Egyptian Antiquities. South of the bridge are the Ismailia Palace, the British Consulate

and a handsome reading desk of inlaid work. In old Cairo the finest of the Coptic churches is that of Abu Sarga, which possesses some magnificent carvings. The church of Mar Mena dates from the fourth century, that of Abu Sephin, a fine and interesting building, from the tenth century. The old church of El Adra or Sitt Miriam, commonly known as El-Moallaka, or "the suspended," is of especial interest from the fact that it is suspended between two bastions and must be entered by a staircase.

Non-Coptic churches are those of St Mary's (Kasr el-Dubara) of the Church of England, the Roman Catholic Church of the Assumption, in Sharia el-Banadkia, St. Andrew's Church (Presbyterian), on the Ab'ul Elah Bridge, and the French Protestant Church in Sharia Abbas. The old parish church of the British community, All Saints, had recently to be destroyed, and steps are in hand to erect a new Anglican Cathedral as a war memorial.

and the weather almost perfect during March and April.

**DRAINAGE.**—The sewerage system of Cairo dates from 1915, and is now working satisfactorily. The method of pumping sewage by means of compressed air has been adopted, the city being divided into sixty-three areas, in each of which there is an underground ejector station from which the sewage is forced through iron pipes to Port Ghamra, whence it flows by gravitation to Kafr el-Gamús, a distance of thirteen and a half kilometres. The suburbs are entirely drained by gravitation sewers. At Kafr el-Gamús the sewage is pumped through iron pipes a further distance of eleven and a half kilometres to Gebel el-Asfar, situated about three kilometres east of El Khanka village, where it is treated in tanks and filters and afterward discharged on to the surrounding desert. Twelve hundred acres have been laid out and established as a farm, cereals and fruits being cultivated.

2. Midan Suarez. Messrs. Roberts, Hughes and Co.'s Store behind the Palm Trees.
3. Sharia Bouleac.

**GARDENS AND SQUARES.**—The Esbekiya is the largest and best known public garden in Cairo. Before Mohammed Ali's time it used to be one large sheet of water during the inundation. He cut a canal round the space and laid it out as a garden, with trees planted on the canal bank. Ismail Pasha began transforming it into its present state. The trees were cut down and the whole of the area filled to the level of the surrounding ground, a part was then divided into building plots, and the remainder eventually laid out as a public garden, with cafés, al fresco theatres, grottoes, ornamental water, etc. The gardens are well kept, there is plenty of shade, and the Esbekiya has become a favourite place of resort, especially when a band plays in the evening.

The Abdin Square, in front of the King's Palace, is about half a mile from the Esbekiya. Military reviews sometimes take place there. Other fine open spaces are the Rumela, at the foot of the Citadel, and the Menshiya Gedida, from which the annual pilgrimage to Mecca always starts.

**HELIOPOLIS.** In the place of the ancient city of Heliopolis which the Egyptians dedicated to the Sun has sprung up an important residential suburb, to which has been given the name of Masr el-Gedida (New Cairo), though to Europeans it is always known by its old designation. Heliopolis is only twelve minutes' distant by rail or tram from Cairo, and on this favoured plateau is one of the largest and most luxurious hotels in the world, also the most delightful villa residences, not only artistically conceived, but replete with every comfort. At Heliopolis is the fine racecourse controlled by the Heliopolis Racing Club, and under His Majesty's patronage. The town is brilliantly lit and assured of an ample supply of water and it is the boast of the Oasis Company, which has carried out all municipal works, that no city in Egypt possesses a better drainage system.

Of ancient Heliopolis nothing remains to-day save some of the city wall and a single obelisk. The latter is the most ancient in Egypt. What is known as Moses' Well, the Petrified Forest and the Tombs of the Caliphs (see later) are all in the immediate neighbourhood.

**HELWAN.**—Helwan (Helwán), though situated 14 miles distant from Cairo, may be described as a suburb, and was indeed at one time a kism or quarter of the capital. The little town, which is surrounded by desert on all sides and stands 150 feet above the Nile Valley, owes its fame and prosperity entirely to its salt and sulphur springs, it is frequented by Europeans and Egyptians who are suffering from any kind of rheumatic and gouty ailment. Helwan has also become something of a residential place, and has much pleasant social life. A good and direct road from Cairo was made under the auspices of Lord Kitchener, and is much used by motorists. In the neighbourhood are the famous quarries of Ma'sarah and Turah.

**INDUSTRIES.**—The commerce of Cairo is of considerable extent and variety, and consists mainly in the transit of goods. Gum, ivory, hides and ostrich feathers from the Sudan, cotton and sugar from Upper Egypt, indigo and shawls from India and Persia, sheep and tobacco from Asiatic Turkey, and all kinds of European manufactures pass through in a constant stream. Several important industries have been, however, developed during the last fifty years, many of these having received a decided impetus from the Great War. As far back as the reign of Mohammed Ali several factories were founded in Bulak for spinning, weaving and printing cotton, the Government Printing Press at Bulak is one of the largest in

the country, and there has been a great increase in the number of engineering and small repairs factories. Cement manufacture, cigarette making, paper milling, sugar refining, rug making, and soap making are other important industries.

**LIBRARY.**—The Sultanyeh Library, which is housed in the Museum of Arab Art, was founded by Ismail Pasha, has cost altogether upwards of £E 66,000, and contains over 100,000 volumes, including some 50,000 manuscripts and books in Arabic, Persian, Turkish and Oriental languages. The Library is open daily, Fridays and holidays excepted, and admission to the Reading Room and Exhibition Room is free.

**MOSQUES.**—It is from the mosques and tombs of Cairo and other cities that our

It was formerly called the "Mosque of Conquests" or "Crown of Mosques," and is still held in the highest veneration by Mohammedans, who believe that prayers made within it are specially answered. The next great mosque of Cairo is Al-Azhar, which was begun in A.D. 969 and finished three years later, since 988 it has been the leading university of the Muslim world. This mosque has six gates, but is usually entered through the "Gate of the Barbers." The Mosque of Sultan Hasan is one of the most remarkable buildings of its kind in the world, having a simple grandeur univalled elsewhere. The Mosque of Barkuk is famous for its light and elegant pointed arches and the Mosque of Al-Mu'ayyad for its columns. On the Island of Roda the Mosque of Kart Bey, built in 1475, is considered to be one of the finest architectural works in Cairo,

tion, but produced the well-known "Guide to the Cairo Museum," which is indispensable to the interested visitor. Successive keepers have made valuable additions to the Museum, among the most recent of which are the many treasures discovered in the tomb of Tutankhamen in 1923 and 1924. Up to the latter year the total cost of the Museum was £E 251,000, while nearly £E 50,000 has been spent on the catalogue.

In the Museum of Arab Art close to the Mosque of Al-Hakim are collections which illustrate the development of Arab art and comprise many beautiful riches and treasures. The lower portion of this building houses the Sultanyeh Library.

In 1926 Mr. John D. Rockefeller, junior, of the United States, offered \$10,000,000 (£2,000,000) to King Fuad and the Egyptian people for the purpose of building and

3 Sharia El-Maghrabi

knowledge of Arab architecture and art is principally derived. Considerations of space forbid any lengthy description of these, but it may be stated briefly that the mosques of Egypt are largely Byzantine in origin, one most important characteristic, that of the arcade on pillars, being entirely due to Byzantine influence, and that the very beautiful designs of fruit, plants and flowers, as well as the intricate leaf compositions and geometrical patterns which are so universally admired, are due to the fact that the religion of the Arabs prevented them from employing figures of men and women in their architectural works.

The principal mosques of Cairo are thirteen in number, the oldest being that of 'Amr, built A.D. 643, but since frequently restored.

the carving being unusually delicate and the minaret a most beautiful example of Saracenic art.

**MUSEUMS.**—Cairo possesses in the Museum of Egyptian Antiquities, which is situated at Kasr el-Nil, the most remarkable collection of Egyptian antiquities in the world, covering as it does all periods from about 4,400 B.C. to the end of Roman rule in Egypt. Originally formed about the middle of the last century by M. Mariette, a distinguished French scholar and archaeologist, the collection was first housed in the present beautiful building in 1902, Mariette having been succeeded as keeper by the famous French savant, Professor Gaston Maspero, who not only added largely to the collec-

maintaining a new museum in Cairo, and establishing in conjunction with it an archaeological institute in a separate building. This munificent offer was afterwards withdrawn, the conditions attached to the bequest not being acceptable to the Egyptian Government.

**NILOMETER.**—Opposite Old Cairo lies the Island of Roda, where, according to Arab tradition, Pharaoh's daughter found Moses in the bulrushes. Two bridges connect the old city with Roda, and a third bridge joins Roda to Giza on the west bank of the river. Roda island contains the Mosque built by Kart Bey (see "Mosques"), and at its southern extremity is the Nilometer, by which the Cairenes

2. Sharia Emad el Dine.

3. Sharia Mazloum Pacha.

have for over a thousand years measured the rise of the river. It is a square well, with an octagonal pillar marked by cubits in the centre.

**POPULATION.**--The population of the Governorate of Cairo at the last census was 790,939, making it the largest and most populous city in Africa. These figures showed a growth of 130,493 inhabitants during the previous ten years. About 63,000 are resident Europeans. The bona-fide inhabitant of Cairo is very proud of the appellation of "Masri" or Cairene, by which he is always distinguished among his fellows, and considers himself immensely superior to his brethren of the Delta and Said. There are marked mental and physical differences between them; the town-bred Cairene is much quicker and more

intelligent than his country cousin, and he may generally be distinguished by certain outward signs, such as a peculiar tint of tawny complexion, large mouth, with thick well-formed lips, broad nose, enormous legs, and a general look of sturdiness.

**PYRAMIDS.**--Formerly named one of the Seven Wonders of the World, the Pyramids of Egypt are about seventy-five in number, of different sizes, and are masses of stone (or early brick) with square bases and triangular sides. They were originally the tombs of those Pharaohs who flourished from the First to the Twelfth Dynasty, and they are best described as monuments built over the sepulchral chambers of Kings. Sir Wallis Budge is of the opinion that before the actual building of a pyramid was begun, a suitable rocky site was chosen and cleared,

a mass of rock if possible being left in the middle of the area to form the core of the building. The chambers and galleries leading to them were next planned and excavated. Around the core a truncated pyramidal building was made, the angles of which were built up with blocks of stone. Layer after layer of stone was then placed around the work, which grew larger and larger until it was finished. One conjecture is that when a king ascended the throne he built for himself a small but complete tomb-pyramid, and that a fresh coating of stone was built around it every year that he reigned; that when he died the sides of the pyramids were like long flights of steps, which his successor filled up with right-angled triangular blocks of stone. The door of the pyramid was walled up after the body of its

MEDAN SOLIMAN PACHA, CAIRO, showing the New Groppi Restaurant in the centre.

builder had been laid in it, and thus resulted a finished tomb.

The most famous of the pyramids are those situated on the rocky plateau of Giza, formerly one of the cemeteries of ancient Memphis (Giza is within easy reach of Cairo by train or motor car). These pyramids were opened by Persians during the fifth and fourth centuries before Christ, it is probable that they were also entered by the Romans. Once opened, it was soon seen what splendid quarries the pyramids formed, and for some centuries after the conquest of Egypt by the Arabs they were laid under contribution for stone to build mosques, etc., in Cairo. Mohammed Ali ordered the Barrage to be built with stones from the Great Pyramid, and was only persuaded to give up the plan because it was cheaper to get stones from the quarries.

**GREAT PYRAMID**—The first or Great Pyramid, the largest of all, was built by Chufu (Cheops), the second king of the Fourth Dynasty. Its height was originally 481 feet and its base 774 feet square, it has,

**THIRD PYRAMID**—The Third Pyramid is much smaller than the other two, being only 215 ft high by 350 ft at the base. It was built by Menkaura or Mycerinus, who succeeded Chefred. It has three chambers, the lowest of which, granite cased, formerly held a stone sarcophagus and a wooden coffin. The body found within and fragments of the coffin were removed to the British Museum, but the stone sarcophagus was lost off Carthage by the sinking of the vessel in which it was being transported to England. The masonry of this pyramid (sometimes called the Red Pyramid) is very fine, and it was once cased half way up with granite, the remains of which are still visible. The Third Pyramid (according to some, the tomb of a favourite courtesan) is regarded with superstitious dread by many Egyptians on account of a ghost which is said to haunt it.

At Giza are six pyramids of inferior height and interest, others are situated at Abu Roash, six miles to the north-west, and at Saqqara and Abusu, these, however,

naturalistic colouring. Its body is 150 ft long, the head 30 ft long, and the front paws 50 ft long. Its face is 14 ft wide, and the distance from the crown of the head to the base of the figure is 70 ft. In course of time the plaster sizing, with which the original sculptor had covered it, became destroyed by wind and rain, and the sand blown from the surrounding desert began to eat into the hard strata of stone of which it was composed. Being situated in a hollow, the Sphinx gradually became covered up with sand, so that the upper part of the body and the neck and head alone were exposed. Time after time the area immediately in front of the monument was cleared of sand, but it again silted up, and in addition pieces of the head began to drop off (the beard had long ago disappeared), while there appeared to be a danger that the whole of the head might collapse.

During the year 1925-26 important excavation and repair works were carried out, and these have not only uncovered again the altar between the paws of the sun-god which

1. Boulevard Ismail

HELIOPOLIS, CAIRO.

2. Avenue du Caire.

however, been much despoiled and stripped of its exterior blocks. According to Herodotus, 100,000 men were employed on its construction, which was completed in 30 years. The stone used was brought from Turah and Mokattam, and the contents amount to 85,000,000 cubic feet. The flat space at the top of the pyramid is about 30 ft square, and the view from it is very fine. Inside are the Queen's Chamber and the King's Chamber, in the latter lying the empty, coverless and broken red granite sarcophagus of Cheops.

**SECOND PYRAMID**—The Second Pyramid, built by Chafra, or Chefred, the third king of the Fourth Dynasty, is hardly inferior in size to the Great Pyramid, while, owing to the fact that it stands on higher ground, it actually appears to be larger. Its original height was 472 ft, it occupies an area of 55,419 square yards, and has two sepulchral chambers. The masonry is inferior to that of the First Pyramid, but it was formerly cased below with polished stones, some of which remain, while the top still retains its original casing.

failing to compete in any respect with the three already described.

**SPHINX**.—About a quarter of a mile to the south-east of the Great Pyramid lies the Sphinx, the most remarkable object, next to the Pyramids, existing on the Giza plateau. The exact age of this wonderful monument is unknown, but it is certain that it was the work of the third or fourth century before Christ. The Sphinx, which was intended as an image of Harmachis, the sun-god, lying always "in the shadow of the sun" and facing the eastern sky, and consequently of his human representative on earth, the king of Egypt who had it made, is the figure of a lion with the divine head on the body of the animal. Many sphinxes have been found in Egypt, but the Sphinx of Giza stands out amongst them all by reason of its great bulk and surroundings. It is hewn out of the living rock, a monument to the genius of the king who conceived it and of the workmen who carried out the gigantic work.

The body of this great image was painted red, its head dress white, and its eyes had a

the Romans used in their sacrifices, and which Caveghia had discovered in 1817, but also a second stairway leading down to the Sphinx, a tablet bearing a figure of the Sphinx with a short inscription, and a couple of small bronze sphinxes. The face has been left untouched, but the head has been skilfully treated, and fallen stones have been replaced. Artistically, perhaps, the uncovering and clearance of the Sphinx have resulted in revealing a figure which is neither so picturesque nor so mystical in appearance as before. On the other hand, the results gained are of incalculable value to the student of Egyptian archaeology.

**STREETS**.—In all the quarters of the interior of Cairo the streets are very narrow. As a result of the Cairene method of building houses, each storey projecting beyond that immediately below it, two persons may almost shake hands across the thoroughfares from the upper windows. The names of most of the streets are now put up at the corners in English and Arabic, the Egyptian terms "sharia" (street), "darb" (a narrower street), "medan" (place), and "haret"

#### HELIPOLIS, CAIRO.

2. Avenue de Mosquée.
3. Boulevard Abbas.

The Buildings seen in these views and numerous others were constructed by Leon Rolin & Co.

(quarter) being used. Before the accession of the Khedive Ismail, the only tolerably broad street in Cairo was the Muski, running from the south-east corner of the Esbekiya to the street leading from the Ghuriyah (the cotton and silk stuffs bazar) to the Khan el-Khahli, or great market for dresses, embroidered stuffs and carpets. Many of the largest European shops are in the Muski.

Cairo now possesses several wide and well-constructed thoroughfares which would do credit to any western city. The best of these, the Sharia Mohammed Ali, contains many handsome buildings and residences. In the Ismailia Quarter are some of the best streets in Cairo—Sharia Kasr el-Nil, Sharia el-Kubri, and Sharia el-Maghrabi, this being the region of the principal hotels and clubs.

**TOMBS OF THE CALIPHS.**—Beyond the eastern wall of the city are the splendid mausolea erroneously known to Europeans as the Tombs of the Caliphs, they are in reality tombs of the Circassian or Burgi Mamelukes, a race extinguished by Mohammed Ali. Their lofty gilt domes and fanciful network of arabesque tracery are partly in ruins, and the mosques attached to them are also a good deal delapidated. The chief tomb mosques are those of Sultan Barkuk, with two domes and two minarets, completed in A.D. 1410, and Kait Bey (A.D. 1475), which has a slender minaret 135 ft high. This mosque was carefully restored in 1898. South of the Citadel is another group of tomb mosques known as the Tombs of the Mamelukes, but of less interest architecturally than those of the Caliphs. South-west of the Mameluke tombs is the much venerated tomb-mosque of the Imanesh-Shafih, founder of one of the four orthodox sects of Islam. Near it is a family burial place built by Mohammed Ali.

**TRAMWAYS.**—The traveller in Cairo will find the tramways very convenient, for by means of them many of the outlying parts of the city can be visited quickly and cheaply. The cars have been greatly improved in recent years, and on the newer lines, e.g. that to the suburb of Helipolis, a considerable speed is attained. Carefully fitting windows exclude the dust, and in the matter of blinds and seats the cars leave little to be desired. The tramway centre is 'Atabah-al-Khadrah, and trams run at frequent intervals to Shubrah, Rod-al-Farag, 'Abbasiyah, Bülak, Zabtlyah, Sayyidah Zénâb, the Citadel, Old Cairo, Roda Island, Giza and Helipolis. A tram line connects Kasr el-Nil Bridge with the Pyramids, and there is a half-hourly service. About the time of full moon for three nights each month the service to and from Giza is extended one hour.

**WATER SUPPLY.**—Cairo obtains its supply of water through the Cairo Water Company, founded in 1865, with headquarters in the City, and subject to Egyptian legislation. The present concession from the Government comes to an end in 1969. The company supplies about 30,000,000 cubic metres of water annually to the city. At Giza and Helwan are waterworks owned by the Government.

**ZOOLOGICAL GARDENS.**—These beautiful gardens, which are situated at Giza, were established in 1891, and enlarged in 1898 and 1903; they cost £E.7,400, and their upkeep totals about £E.4,000 a year. The area of the gardens, which are open daily, is about 52 acres, and they contain a remarkably good collection of the birds and animals of North-East Africa.

## MAURICE NAHMAN.

**Inception.**—Since 1890, the date of their  
opening, the Galleries of Mr. Maurice Nahman  
at Cairo have attracted not only connoisseurs  
and collectors, but, in ever-increasing numbers,  
visitors to that city who find interest and  
charm in the artistic products of antiquity.  
Mr. Nahman, who contributes elsewhere in  
these pages an article on Ancient Egyptian  
Art, holds the official licence of the Egyptian  
Government and the Egyptian Museum.

**Showrooms.**—In his finely-appointed show-  
rooms, situated opposite the French Resi-  
dency, Mr. Nahman displays antiques and  
*objets d'art* which include Egyptian, Roman,  
Greek and Byzantine sculpture and curios,  
Greek, Roman and Arabic coins, ancient  
jewels, gems, scarabs, embroideries and  
brasswork. There may also be viewed  
Coptic, Arabic and Greek papyri and manu-  
scripts of extreme interest to the student  
and the historian, while the catholic taste  
of the general collector will be satisfied by  
the fine show of alabaster vases, ushabties,  
amulets, necklaces, bronzes, iridescent glass,  
porcelain and faience. Every one of these  
numerous pieces is guaranteed absolutely  
genuine.

**Collections.**—Mr. Nahman undertakes the  
expert cataloguing of items gathered for  
public sale, and is himself prepared to buy  
collections.

**Museums.**—Business dealings are con-  
ducted with National and University Mu-  
seums throughout Europe and the United  
States, including such institutions as the  
British Museum, the Musée du Louvre, and  
the Museums of Berlin, Munich, Hanover  
and of Denmark.

**Address.**—27 Rue el-Madabegh, Cairo  
(telephone : Ataba 4399).

3. D. Roff & Sons' Premises, Cairo.

#### LÉON ROLIN & CO.

**Inception.**—In 1897 M. Léon Rohn, who had formerly held the position of engineer in connection with the construction of the Salonica-Dedeagatchi Railway, founded, in association with M. M. Padova, a firm at Cairo, with a branch house at Alexandria. The company's original style was M. Padova, Léon Rohn & Co., but at the expiration of the partnership term of ten years the firm was transformed into a limited liability company under the name of Léon Rohn & Co. Subsequently, in 1922, came its final reconstitution as a joint-stock company with the denomination "Société Anonyme des Anciennes Entreprises L. Rohn & Co."

**Development.**—The original firm of M. Padova, Léon Rohn & Co. specialised at the outset in metallic construction particularly of bridges and the framework of buildings, among their notable achievements being a group of steel warehouses for the Alexandria Custom House and various railway bridges. Then they commenced operations in reinforced concrete, employing the Hennebique system, and so became the prime cause of the widespread favour which that method of construction has attained in Egypt. The firm was equally responsible for the introduction into this country of the laying of foundations by mechanical soil-compression and of the Frankignoul pile-system, which now assume vast scope and importance.

**Wartime Activities.** During the War the firm of Léon Rohn & Co. (then a limited liability company) executed for the British Army numerous outstanding works, especially in the Suez Canal region and in the desert between Kantarah and Gaza. Notable among these commissions were roads, railways, canal works, reservoirs and water filters, river and railway bridges, wharves, and works for the Nile Cold Storage, Port Said. At that port the company also carried out, using not only steel but reinforced concrete, the repairing of vessels damaged by torpedo.

**Buildings and Other Works.**—Among buildings erected and other works executed by the firm the following are important achievements:—

**PUBLIC BUILDINGS AND HOSPITALS**—Ministry of Communications, Cairo; Egyptian Parliament Building, Cairo; Egyptian Senate House, Cairo; extension of Kasr el Eini Hospital, Cairo; Benha Hospital; Mohamed Aly Theatre, Alexandria; foundations of the Mortgage Office, Cairo; foundations of the Law Courts, Assiut; foundations of the Moliarem Boy Schools, Alexandria; and foundations of the Alexandria Hospital.

**SACRED BUILDINGS**—Evangelical Church, Cairo; Armenian Catholic Church, Cairo; and Rifai Mosque, Cairo.

**CONVENTS AND CONVENT SCHOOLS**—Convent of the Sacred Heart, at Gamrah and Heliopolis; Convent School of the Sœurs de la Délivrande, Heliopolis; Convent School of the Franciscan Sisters at Saptieh, Cairo; and Convent School of the Sisters of St. Vincent de Paul at Abbassieh, Cairo.

**BANK BUILDINGS**—For the Crédit Foncier Egyptien at Cairo; for the Banco di Roma (Italo Egiziano) at Cairo; for the Anglo-Egyptian Bank (Mousky agency and foundations of the head office) at Cairo; for the National Bank of Egypt at Assuan; for the Caisse Hypothécaire d'Egypte at Cairo; for the Banque d'Orient at Cairo; for Cox's Bank at Alexandria; and for the Banque Misr at Cairo.

**OFFICES AND COMMERCIAL BUILDINGS** For the Huileries de Nouzha at Alexandria, for the Centrale Electrique de Choubrah at Cairo, for the Compagnie Frigorifique d'Egypte at Cairo, for the Société des Sucreries et Raffinerie d'Egypte at Cairo, various alterations and extensions to the Raffinerie de Hawamdieh at Hawamdieh, Nag-Hamadi, Kom-Ombo, Erment and elsewhere, pumping stations at Choubrah, Kom-Ombo and Abon-Honiar, similar works for the Water Company at Cairo, and for the Imprimerie Misr at Cairo.

**PROPERTY FOR RENTAL**—For the Société Belge Egyptienne de l'Ezbekieh at Cairo, for the Société des Biens fonds at Cairo, for the Société d'Héliopolis at Heliopolis, for the Centrale Immobilière at Cairo, for the Soliman Building Company at Cairo, for the Gresham Life Company at Cairo, for the Société des Immeubles d'Alexandrie, and for the following firms at Cairo: MM D. Rofé & Sons, Sursok, Choukiy Pacha, Muscat Bey, Tobia Pacha, Parvis, and Chelmis.

**HOTELS**—Hotel Semiramis, Cairo, extension and alterations to Continental Hotel, Cairo, Heliopolis Palace Hotel, Heliopolis, and Heliopolis House, Heliopolis.

**SHOPS AND STORES**—Orosdi-Back premises, Cairo, Cicurel premises, Tiring premises, Cairo, stores for the Bonded Warehouses Company at Cairo and Alexandria, and storehouses for the following companies: the Société de Pressages, Banco di Roma Commercial Bank, the Sucreries, and MM. Goar, Rolo and Cordahi.

**REINFORCED CONCRETE RESERVOIRS** For the Cairo Water Company, for the Alexandria Water Company, for the sugar-factories at Hawamdieh, Nag-Hamadi, Kom-Ombo, Mataana and elsewhere, for the Suez Canal Company at Ismailia, for the Heliopolis Company at Heliopolis, at the Koubbeh and Zaafatan Palaces, Cairo, and 20 large reservoirs for the British Army in the Suez Canal zone.

**REINFORCED CONCRETE BRIDGES** For the Gaza, Abon-Eng and Abou-Choucha railways and the lower Embabeh route, for roads and tramways at Heliopolis, Tolombat, Maadieh and other towns, foundations on reinforced concrete piles for the Suez Canal bridge at Kantarah and for the Hamoul and Chouth bridges.

**CONSTRUCTIONS IN METAL**—Railway bridges for the Barranis, Guirgeh to Nag-Hamadi, Nag-Hamadi to Keneh, Rassou, Mariout and Choubra lines, bridges on the Almieh, Mehig and Zulhicar roads and at the Alexandria dam, framework for the Salt & Soda Company, Cotton Mills, Tramways at Cairo and Alexandria, and warehouses for the Custom House at Alexandria and Port Said, barrage gates at Ziftah, ropeway for the Sinai Mining Company at Abou-Zenma, and overhead tanks at Suez, Port Tewfik and Port Said.

**Cables**—"Rolin," Cairo Codes. A B C 5th Edition and Lieber's.

**SOCIÉTÉ ANONYME EGYPTIENNE D'AMEUBLEMENTS "KRIEGER."**—34 rue Kasr el-Nil, Cairo. Egyptian branch of the Maison Krieger of Paris. Established in 1923. Engaged in furnishing, decorations, tapestries, etc. Head office. Cairo; branch. 35 rue Fouad 1er, Alexandria. Capital. £40,000 in shares of £10 each, fully paid. Administration: Léon Colin, Paul Colin, Albert Colin. Delegate director, Albert Colin. Manager, Léon Lucien Arnaud.

LÉON ROLIN & CO., Cairo.  
Contracts undertaken by the Firm.

1. Convent of The Sacred Heart.
2. Heliopolis Palace Hotel, under construction.
3. A modern Family Residence, Heliopolis.
4. Mosque Rifai, in course of construction.

ROBERTS, HUGHES &amp; CO.

A Section of the Cairo Store.

**ROBERTS, HUGHES & CO.**

**Activities.**—It is always a source of satisfaction to travellers abroad to find their needs supplied by a well-appointed English store specialising in the class of merchandise to be found in the modern London store. They but follow the wise example of residents of all nationalities in dealing with such a firm as Messrs Roberts, Hughes & Co., of Cairo and Alexandria, which purveys goods not only specially adaptable to local climatic conditions and usage, but, as in the case of sporting outfits, bearing the British mark of recognised superiority. At both centres just mentioned Messrs Roberts, Hughes & Co have important establishments carrying practically identical lines.

**Departments.**—The departments specialise as follow —

Sports and games requisites of all kinds, sports' clothing, featuring plus-four suits (3 or 4 piece) and riding breeches, London cut and make.

High grade boots and shoes for gentlemen and ladies, day and evening wear. Riding and mosquito boots are stocked.

The men's outfitting department provides all the newest ideas in day and evening wear.

The traveller is exceptionally well catered for, the travel goods department being well stocked with all kinds and sizes of suit cases, cabin trunks, and travelling rugs in the best English makes.

A well organized mail order department is maintained which deals promptly with every demand, large or small.

**Repair Workshops.**—There is a staff of expert workmen on the premises for repairs to travel goods, footwear and tennis rackets, in fact for repairs and renovations of every kind.

**Store.**—The firm's store at Cairo covers approximately 500 square metres, and employs only assistants specially trained in their respective departments. At the Cairo and Alexandria establishments one of the principals constantly looks after the interests of clients.

**Address.**—Sharia Kasr-el-Nil, Cairo Cables "Sport," Cairo

**ANGLO-AMERICAN NILE AND TOURIST CO.**—8 rue Manakh, Cairo. Established in 1899. Runs tourist boat services on the Nile, builds ships and small craft, undertakes various mechanical constructions and develops Nile traffic. Capital £T. 108,205 500, in 27,745 shares of £4 each, fully paid. Administration: Astley P Friend (president), Capt P W Stout, DSO, OBE, and Robert S Rolo, CBE. Delegate director, Robert O Diacono, works manager, Leo W Cole, tourist manager, Hector V Diacono.

**MORTGAGE COMPANY OF EGYPT LTD.**—15 rue Ennad El Dine, Cairo. Established under English law in 1908, with head office in London and a capital of £1,250,000 in 200,000 ordinary shares of £5 each, £250,000 having been called up and paid. In 1900 £1,000,000 5 per cent preference shares were issued. Subsequently 4½ per cent debentures were issued for a total of £1,750,000; of these £904,460 are outstanding to-day, the remainder having been purchased by the company and cancelled. The object of this enterprise was to lend money in Egypt on first mortgages secured by real property in the country, which is distributed over all the provinces of Egypt and the cities of Cairo and Alexandria. A dividend of 12 per cent was paid on ordinary shares for the years 1921-1925, with a bonus of 2 per cent. for the year last named. Cables: "Egyptcase," Cairo.

**D. LIMONGELLI.**

**Inception.**—This leading firm of engineers and public works contractors, which takes its designation from the name of its founder, has just celebrated its coming-of-age, having been established in 1905. Mr D Limongelli brought to that enterprise qualifications of the highest order as a recipient of the Diploma of Engineering and Construction from the Engineering School at Lausanne University and as the holder of the appointment of consulting structural engineer and expert before the Mixed Courts.

**Activities.** To this firm is due the notable invention of the Delta system of reinforced concrete, and it holds also sole concession for the Strauss system of differential piles for foundations. It specialises in the speedy and economical reinforcement of inadequate or defective foundations by the application of differential cement piles. In addition to these particular operations, for which it has achieved a special reputation, the concern undertakes the construction of every form of private or public building.

**Buildings and Other Works.** Among the most outstanding of the buildings erected and other structures carried out by D Limongelli are the following —

**CHURCHES**—Franciscan Church at Suez and at Ibrahimieh (Alexandria)

**SCHOOLS**—School of the Sisters of the Legion d'Honneur (Mère de Dieu), at the Garden City, Ghezireh (Cairo), Ecole des Frères des Écoles Chrétiennes, at Ichopolis, Petit Collège des Jésuites, at Cairo, and Greek Community School at Cairo and at Mansurah.

**BANKS**—Establishments for the Monts de Piété Egyptiens, and for the Anglo-Egyptian Bank at Mansurah.

**HOTELS**—Regina Palace Hotel, Alexandria, and Hotel du Nord, Cairo.

**PRIVATE DWELLINGS**—No less than 150 buildings for lease as flats or villas.

**COMMERCIAL BUILDINGS**—Pelote Basque building, at Cairo, and a special concrete structure for the gypsum factory, Plâtreries de Ballah, at Cairo.

**BRIDGES**—Fourteen bascule bridges for carrying railways and roads over irrigation canals in the province of Giza, etc.

**Address.**—13, Sharia El Nimr, Cairo Cables "Limongelli," Cairo. Code Lieber's.

**GENERAL ACCIDENT, FIRE AND LIFE ASSURANCE CORPORATION LTD.**—19 Sharia Kasr El Nil, Cairo. Head office Perth, Scotland. Established 1885. At its inception operations were confined to accident business in central and northern counties of Scotland, a staff of only ten persons being maintained, quartered in three rooms. To-day the corporation's employees number nearly three thousand, there being also over forty thousand agents working on commission terms all over the world. Policies are printed in eleven different languages. In a recent year its income was nearly £6,000,000, and assets exceed £10,000,000. Since its formation the corporation has paid out £25,000,000 in claims. General manager: F. Norie-Miller, J.P. Chief London office: General Buildings, Aldwych, W.C.2. Telegrams: "Gafiac, Estrand," London.

D. LEMONGELLI, INGENIEUR, E.I.L., Cairo.

Various Types of Buildings and other Works constructed by the Firm.

1. Rapport Building, Cairo.

2. Apostolic Delegation Building.

3. Kotiaoui Bridge.

4. Group of Villas and Coptic Church at Zeitun.

5. Catholic Cemetery Chapel, Old Cairo.

6. Kotiaoui Bridge, another view.

7. Kafr Amar Bridge.

J. GROPPi, Cairo.

1. Ball Room Scene at Groppi's Dance, one of the attractions of the Season at Cairo.
2. The new "Groppi" Building, with Ball Room and Confectionery Department on Ground Floor.
3. The Confectionery Department of the new Restaurant.

#### J. GROPPi.

**Inception.**—What a famous catering establishment is to London, Groppi's, as it is familiarly known, is to Cairo, with the difference that it caters for a somewhat more exclusive clientèle. This enterprising firm, conducted in a manner worthy of the best traditions of London or Paris, was founded in 1890 by Mr J. Groppi, who still manages the business with the assistance of his son, Mr A. Groppi.

**Activities.**—One of the titles to fame of Groppi's is the excellence of its cuisine and service, which makes luncheon or dinner in the handsomely-appointed New Restaurant a pleasure often sought by the resident in Cairo and as often recommended to the traveller. Another esteemed branch of the establishment is the provision store, providing practically everything edible from fruit to daintily prepared meals, and constituting a modern delicatessen store, the last word in appointment as in the display of appetising foodstuffs. In the confectionery department a feature is made of French pastry, sold in many tempting varieties.

Nor are the activities of Groppi's confined within the limits of its own splendid premises. The advantages of its cuisine and service have been extended to undertake outside catering, and the firm is constantly favoured with contracts for private parties, balls and receptions, enjoying a well earned reputation in this connection.

**Building.** Cairo may well be proud of Groppi's café, a building executed according to the latest Western plans and most luxuriously appointed. In the general interior colour-scheme rich browns and gold predominate, relieved by blues and greens in the mosaics and painted linings. Panels of yellow marble, dark amber curtains and bronze columns complete the strikingly harmonious effect.

**Rotunda.**—The most beautiful part of the interior is the Rotunda, a hall that architect and decorator have made a masterpiece. This hall, reserved for tea and supper dances, has a specially sprung dancing floor, which covers the central area. Four days a week the Rotunda is filled with a truly cosmopolitan crowd.

**Ballroom.**—Some idea of the spacious ballroom in marble and gold may be obtained from the accompanying illustration. Thrice weekly, or more often during the season, the thing is to dine and dance at Groppi's, with full enjoyment of good food and wine, excellent music, and the general atmosphere of true gaiety.

**Café.**—Beside the New Restaurant and the ballroom there is the added attraction of the café, a popular rendezvous for morning coffee and afternoon tea. These refreshments are served in the café itself, or in a pleasant courtyard under the trees, to the strains of a good orchestra.

**COMPAGNIE FRIGORIFIQUE D'EGYPTE.**—Rue Foum el-Teraa el-Boula-kieh, Cairo. Established in 1904. Manufacturers of ice, and general refrigeration contractors. Install, acquire and operate cold storage plant, etc. Capital £E 180,000, in 45,000 shares of £E 4 each. Financial year ends December 31. Administration: J. B. Piot Bey (president), S. E. Jos A. Cattani Pacha, Arakel Nubar Bey, E. Monnérat General manager, V. J. Kerihuel; sub-manager, F. Brouard.

**E. di A. DE FARRO & COMPANY.**

**Inception.** When Mr E di A De Farro decided thirty years ago to create a firm that should play an active part in Egyptian building and contracting operations, he brought to the undertaking practical experience and expert knowledge of the highest order. In the capacity of engineer to John Aird & Co he helped to construct the Assuan Dam, and in a similar appointment to Sir William Aird & Co was prominently engaged in bridge building and steel construction.

**Development.** The firm of E di A De Farro & Co, so auspiciously founded, set itself to the assimilation of each successive improvement in building and engineering processes with particular regard to ferro-concrete work and foundations. Concession-

**SACRED BUILDINGS.**—Church of the Sœurs Franciscaines d'Afrique at Fayyum, Missions Franciscaines Church, Daher, Roman Catholic Churches at Kantarah and Port Said, Armenian Church of St Gregoire l'Illuminateur, Cairo.

**MISSION AND OTHER SCHOOLS.**—Schools of the Sœurs Franciscaines at Cairo (Sharia Kasr el Nil), Ismailia, Fayyum and Port Said, American mission schools at Assiut, Tanta and Fayyum, St Charles School, Bab el Louk, Municipal Secondary School Minieh, and School of Drainage Instruction, Zeitoun.

**BANK BUILDINGS.**—For the Anglo-Egyptian Bank at Port Said, National Bank of Egypt at Kenh, Port Said and Fayyum, Crédit Foncier Egyptien at Cairo.

In addition, Messrs E di A De Farro & Co have successfully fulfilled contracts for large numbers of private villas and for warehouses, drainage works, laboratories, reinforced concrete reservoirs, etc.

**WAR MEMORIALS.**—At the behest of the Imperial War Graves Commission they have carried out many noble memorials to the fallen, among the most striking being the beautiful chapel (designed by Sir John Burnet, R A, R S A) in the War Cemetery overlooking Jerusalem, and the austere obelisk memorial at Port Tewfik.

**Engineering Department.**—The firm's engineering department at Cairo specialises in reinforced concrete and in steel construction.

**Offices.**—Head office: St David's Buildings, 16 Sharia el Maghraby, Cairo. Cables

E. di A. DE FARRO & CO, Cairo

1. The "Davies Bryan" Buildings, constructed by the Company. 2. The Sednaoui, also constructed by the Firm.

aire for the "Compressol" system, it has also adopted the mechanical soil-compression method of foundation-laying.

**Operations.** Every conceivable kind of modern building and engineering construction, from Royal palaces to aeroplane hangars, comes within the province of this enterprise. Contracts executed have included those for churches, hospitals, barracks for the British and Egyptian armies, aerodromes and roads.

**Buildings.**—Among the most important building achievements of the company are the following—

**GOVERNMENT BUILDINGS.**—British Consulate, Port Said, Italian Consulate and School, Port Said, for the Egyptian Government, Judges' Rest House and local Tribunals, Assiut; and new works for the daïra of H M the King of Egypt at Cairo.

Agricultural Bank of Egypt at Maghagha, Abou-Kourkas, Bem-Mazar, Mansurah, Chebin-el-Kom, Dessouk, Choubrahit, Zifteh, Kous and Gurgeh.

**OFFICES AND COMMERCIAL BUILDINGS.**—For the Société Agricole & Industrielle d'Egypte at Cairo, Vacuum Oil Co at Cairo and Port Said, Tramways Co at Cairo, Egyptian State Railways at Cairo, British & Foreign Bible Society at Port Said, Davies, Bryan & Co. at Cairo, Telephone Company of Egypt House at Port Said, Marconi Co at Abou Zaabal and Abou Sucri; all concert halls, cinemas and cafés for the Y M C A at Polygon Camp, Moascar, Suez, Ismailia, Port Said, Kantarah and elsewhere; E Casdagli & Sons, Hotel Majestic at Alexandria; and Ismailia wireless station.

"Defarro" London office 12, Charterhouse Square, E C 1.

**Branches.**—27, Rue Attarine, Alexandria, and at Jerusalem.

**Partners.**—Engr Ernesto di A. De Farro, Mme Emma De Farro, Engr Carlo Fiori, Engr Rinaldo Mazzola, Engr Samuel Curiel, and Charles Hara.

**COMPAGNIE CENTRALE D'ÉCLAIRAGE ET DE CHAUFFAGE PAR LE GAZ, LEBON & CIE.**—Head office 26 rue de Londres, Paris. Cairo works Ave Foadier (manager, Maurice Déjardin), Alexandria works rue Sidi el-Metwalli (manager, Jean Paul de Susini, sub-manager, Charles Lams); Port Said works, rue Constantinieh (manager, F. Julien).

Copyright, see Preface.

MORING & CO., Cairo.  
1 and 2. Showrooms at Medan Suarez

#### MORING & CO.

**Inception.**—Mr. A. Moring, the sole proprietor, established the firm now known as Moring & Co. in 1894, and over thirty years of operations as the representatives of automobiles, motor cycles, bicycles and accessories of every description have gained for the company a unique position in the Egyptian mechanical transport world.

**Showrooms.**—The extensive showrooms and offices are conveniently located at Midan Suarez, the centre of the banking and commercial section at Cairo. Major Court Treatt's recent Cape to Cairo trek finished at Moring's premises, and the Crossley cars used were on display there.

**Representations.**—The company holds agencies for Morris Cowley and Morris Oxford cars, Triumph, Raleigh, Harley-Davidson and Sunbeam motor cycles, Armstrong, New Hudson, Raleigh, Sunbeam and Triumph bicycles, and the Lucas service accessory charging plant, which has an English expert in control.

**Departments.**—An important department, also in charge of an English mechanic, is that for repairs. Mention should be made of the prominent side-line of surgical instruments, in which Moring's have long done considerable business.

**Staff.**—This numbers 18.

**Addresses.**—P.O. Box 747, Medan Suarez, Cairo. Cables: "Cycles," Cairo. Code: A.B.C. 5th Edition.

#### OTHER COMMERCIAL ENTERPRISES

**BRITISH THOMSON - HOUSTON CO. LTD.**—46 rue Madabegh, imm. Rosé, Cairo. Electrical engineers and manufacturers. Egyptian branch office established in 1906. Showrooms, Cairo, Ave. Fouad Ier, Alexandria, 33 rue Fouad Ier. Head office and works, Rugby, England. Sole representatives in Egypt, Sudan, Palestine, Syria and Cyprus for the following associated companies: International General Electric Co. Inc., of New York; Compagnie Française Thomson-Houston, of Paris; Compagnia Generale di Eletticità, of Milan; Société d'Electricité et de Mécanique, of Brussels. Manager, Egyptian branch, B. W. Leak, A.M.I.E.E.

**CAIRO SAND BRICKS COMPANY (S.A.E.)**—Rue Sekket el-Baida, Abbassieh. Established in 1910. Head office, Cairo. Manufacturers of bricks of various kinds. Capital £48,764, in £4 shares. Administration: Dr. E. Hahnloser (president), E. Trembley (delegate director), J. Jacot Descombes, E. Naef and A. Reinhart. Manager, Pierre Luce. Auditors, Russell & Co.

**CALLENDER'S EGYPTIAN DAMP PROOF CO. LTD.**—89 rue Gheziret Badran, Choubrah, Cairo. Head office: 25, Victoria Street, Westminster, London, S.W.1. Managing director: A. H. Warner.

**EGYPTIAN ENTERPRISE & DEVELOPMENT CO.**—29 rue el-Maghrabi, Cairo. Established in 1904. All land, agricultural and industrial operations. Capital £E 275,000, in 27,500 shares of £E 10 and 16,000 preference shares. Financial year ends December 31. Administration: M. N. Shakour Pacha (president), G. A. Eid, J. B. Piot Bey, Léon Rohin, F. Romi Abdel Hamud Bey Suhi. General manager, M. N. Shakour Pacha. Manager, Selim Schemel Bey. Commissioners: J. C. Sidley, Guido Levi.

**FAYOUM LIGHT RAILWAYS CO.**—Central office at Fayoum. Cairo office, Savoy Chambers, rue el-Borsa el-Guedida. Administration: Francis Fitzgerald, C.B.E. (president), 8, Crosby Square, London, E.C. 3 (telegraphic address: "Fayouman Stock," London), Charles Thonet, Brussels (telegraphic address: "Engetrane," Brussels), Gaëtan Carlier, Liège. Managing director, Charles Duquenne, chief of administrative staff, Louis Naudi, Fayoum, chief of technical staff, Paul Bussy, Fayoum. Secretary (Cairo office), Jules Arnaud. Auditors: Price, Waterhouse, Peat & Co. and Geo. B. Abdalmezzih.

**MENZALEH CANAL & NAVIGATION CO.**—Gresham House, 20 rue Soliman Pacha, Cairo. General shipping, export, import, landing, clearing, and forwarding agents. Conduct towage and lighterage, Port Said, and inland water transport. Daily steam whetler services on Lake Menzaleh for passengers and goods. Bi-monthly cargo service Port Said (Cairo and vice versa). Administration: H. B. Greville (chairman), Astley P. Friend, G. Levi and F. Murrell-Wright, Port Said (director and general manager).

**PLATRIERES DE BALLAH (S.A.E.)**—7 rue Gamch Charkass, Cairo. Manufactures and sells all qualities of plaster. Head office at Cairo, works at Ballah and Cairo. Capital £E 24,000, composed of 6,000 shares of £E 4 each. Administration: A. Jarroson (president), A. Mathon (delegate director), N. Georgiades Bey, G. Guieu, H. Payen, P. Terrail, M. L. Zarmati.

**SOCIETE ANONYME DES DROGUERIES D'EGYPTE**—22 rue Imad el-Dine, Cairo. Established in 1914. Druggists, chemists, and purveyors of medical specialties, mineral waters, etc. Capital £E 100,000 fully paid, in 25,000 shares of £E 4 each. Financial year ends March 31. Administration: E. Del Mar (president), I. Benarou (delegate director), A. Del Mai, Max Fischer, B. Grunberg.

**SOCIETE ANONYME DES EAUX DU CAIRE**—Rue Foum el-Teraa el-Boulakich, Cairo. Established in 1865. Capital Frs 8,500,000 in 68,000 shares of frs 125, fully paid, of which 12,524 shares have been redeemed. Financial year ends December 31. Administration: S. E. Sir Hussein Ruchdy Pacha (president), J. B. Piot Bey (vice-president), S. E. Boghos Nubar Pacha, E. Mirel, S. E. Joseph Aslan Cattani Pacha, H. Naus Bey, Arakel Nubar Bey, E. Monnerat, S. E. Mahmoud Fakhri Pacha, and a Government delegate. General manager, V. J. Kerihuel, sub-manager, F. Brouard. Legal adviser, Me César Adda. Auditors, César Caprara and Edgar Papasian.

**SOCIETE ANONYME D'IRRIGATION DE BALIANA**—12 rue Cheikh Aboul-Sebaa, Cairo. Irrigation experts. Capital £40,000 in 10,000 shares, fully paid. Administration: N. Naus Bey (president and managing director), S. E. J. Cattani Pacha (delegate director), C. Deleuze, E. Mosses, G. Schirmann, M. Ismailun. Secretary, H. Boinet.

# INDUSTRIES

 WING to its lack of iron-ore, coal, and water-power, Egypt can never hope to be an industrial country on a very large scale. Nevertheless, there have always been a limited number of local industries, of more or less importance, and these have been encouraged by the cheapness of labour. The long duration of the World War, too, gave a decided impetus to many industries not previously identified with Egypt, and since that war the Government has taken up very seriously the question of the development of those industries already in existence, as also the encouragement of new ones. This is done through the medium of the Department of Commerce and Industry, which has established at its headquarters in Cairo a permanent exhibition of Egyptian crafts and industries. The inspectors of the Department travel throughout the country, inspecting the various industries. They encourage industrialists, guide them to the latest methods of manufacture and marketing, help them to get in direct touch with foreign manufacturers and merchants from whom they can obtain their raw materials, and, indeed, spare no pains to foster the development of every kind of industry.

## PRODUCTS

**BUILDING MATERIAL, ETC.** Building material has always been abundant throughout the country, which has in all ages been famous for the variety and beauty of its granite, basalt, limestone, sandstone, alabaster, marble, diorite, quartzite, porphyry, breccia, and veined and variegated stones of many kinds. Limestone is quarried in large quantities along the Nile Valley from Cairo to Assuan, at Mex (Dikhila), Suez, and Ismailia for building, irrigation training works, and other purposes. The stone necessary for the Port Said jetty and break-water and for the new Suez harbour works was obtained from the important Attaqua quarries near Suez. Basalt is produced at Abu Za'bal for kerbstones, paving stones, road metal, and railway ballast. Red bricks and tiles are made from the clay of El Wadi, south of Helwan, while Assuan clay, the only refractory clay found in Egypt, is utilised in the manufacture of fire bricks, glazed pipes, etc., of good quality. A special kind of clay found at Qena is employed in the production of very large quantities of porous native pottery ("goulas," "zeers," etc.) for water cooling.

**CEMENT.**—The cement industry in Egypt is a promising business, some 70,000 tons being made locally. The largest cement producing company is the Société Anonyme des Ciments d'Égypte at Ma'sara, a suburb of Cairo. At present about 80,000 tons are imported annually, but it is hoped that the local output will gradually be increased to an extent which will enable the whole of the requirements of the country to be met.

**CIGARETTES.**—The manufacture of cigarettes is Egypt's leading industry, and the product is world-famed. Tobacco is not grown in Egypt, but is imported from the Black Sea littoral and the adjacent countries, the best Macedonian tobacco coming from Cavalia. During the year 1924 there were imported 6,899,500 kilos. of tobacco to the value of £E.1,499,546, as against 6,667,698 kilos. valued at £E.1,268,119 in the previous

year. During the same two years Egypt exported 171,910 kilos of cigarettes valued at £E.332,041, as against 187,914 kilos valued at £E.366,948. The amount of tobacco consumed locally is very large, but the exports of cigarettes show a distinctly declining tendency, due to reduced buying by many of the foreign purchasing markets.

**COTTON SPINNING.**—The cotton grown in Egypt is mainly for export. Considering the wealth of raw material at its command, the country has not yet developed the manufacture of the product to the extent that might have been expected. At the present time there is only one factory for the spinning of cotton yarns, that of the Filature Nationale d'Égypte at Alexandria, which was established in 1896. This factory consumes annually some 60,000 kantars (approximately 2,500,000 kilos) of low grade cotton. In addition to the spinning of cotton yarns, brown cloth (sheet and damur) is manufactured, much of which is exported to the Sudan and Palestine. There are no factories for spinning other kinds of yarn, but all over the country the villagers occupy themselves during their leisure time in spinning quantities of woollen and linen yarns, employing hand spindles. The yarns spun in this way are generally rough and uneven, and are used in weaving coarse fabrics.

**ENGINEERING.**—Engineering works developed largely during the War, and are to be found chiefly in Cairo, Alexandria, Mansurah and Port Said. Spare parts of machinery similar to those imported from abroad can now be manufactured in the country. Motor car repair shops exist all over Egypt owing to the large number of motor cars now in use.

**FISHING.** Fish is an important article of food in Egypt, and the fish caught in the lakes of Menzala, Burullus, Idku, Maryut and Karun average 30,000,000 kilos a year. The fisheries are under the supervision of a Government Department. That Department has suggested to the Belchra Provincial Council that sardine-tinning might with profit be taught to the townsmen of Rosetta, an important fishing centre.

**LEATHER WORK.**—This industry made great strides during the War, when the importation of all varieties of leather ceased. The main centres are Cairo, Alexandria, and Damietta. It is expected that the prospects of the industry will improve owing to the abundance of its raw materials and cheap labour, especially when tanning is carried on more in accordance with modern methods and up-to-date machinery is installed. (See also under "Commerce.")

**MINING.**—The mining industry of Egypt is unimportant. Gold has been mined during recent years at various scattered localities in the Nubian desert, but operations are at present at a standstill owing to the high cost of production. Coal has been found in small seams, but until further investigations have been made it is impossible to say whether they are worth working. Copper and manganiferous iron ores are found in the Sinai Peninsula, and the output of the latter, which has steadily increased since 1918, is exported principally to Europe for use in the manufacture of basic "pig iron." Petroleum is extracted at Gemsa and Hurgada on the coast of the Gulf of

Suez, and drilling for oil is now proceeding in several other areas. There are large soda lakes at Wadi Natron, where there is a factory for the production of caustic soda.

**OIL MAKING.**—There are several oil mills for the extraction of oil in both Upper and Lower Egypt. In the Sharkieh Province about 10,000 feddans of the best land are cultivated with sesame. The area under cultivation is gradually decreasing owing to the greater demand for cotton. In Upper Egypt, lettuce and sesame oils are produced, while in Lower Egypt, linseed and cotton oils are extracted. The chief centres for sesame oil production are Bulbis and the Eastern regions of the Delta. The total production of sesame oil is approximately 1,000,000 kilos yearly. In Lower Egypt there are seven factories for the extraction of cotton seed oil, situated at Alexandria, Cairo, Kafr el Zayat and Mit-Ghamr.

**PRINTING.**—Printing in Egypt has greatly improved. There are a large number of presses owned and run by individuals. Printing can now be done in the several languages which are required in the larger cities. The Government Press at Bulaq is one of the largest in the country, is equipped with the most up-to-date machinery, and employs 500 hands. Besides Arabic type for printing books, etc., there are English, French, German, Dutch, Turkish, Greek, Russian, and Rumanian types for printing in those languages. Some of the dies are cast in Egypt, but the greater number are imported from abroad.

**QUARRYING.**—See "Building Material."

**RICE-HULLING.**—This industry is carried on in most of the towns of the Northern Delta, such as Rosetta, Damietta, Burullus, Iqwa, Mansurah, and Menzala. The leading hulling mill in Egypt is that of the Rosetta and Alexandria Rice Mills Company, situated on the Mahmoudieh Canal, near Alexandria. This mill hulls nearly half of the Egyptian crops, and is well equipped with the latest types of machinery.

**RUBBER MANUFACTURE.**—This is undertaken by one company in Egypt, the Société des Industries Égyptiennes, of Cairo, which has been in existence for 15 years. All kinds of rubber articles are manufactured, the production being almost entirely for local consumption, the total annual sales amounting to about £E.18,000 or £E.20,000, one quarter of which is made through adjudications for Egyptian Government enterprises.

**RUG-MAKING.**—Rugs of kleems are manufactured in a considerable number of villages. The most important industry is that of the Bedouins, whose women weave large quantities of rugs of most attractive design. The wool is bought locally and only vegetable dyes are used. Large numbers of kleems are woven at Beni Adi (Asiut Province). Other rug-weaving centres are Cairo, Beni Suef, Būsh, Minya, Asiut, Fūwa, Nag'Hamādi, and El Kharga Oasis.

**SOAP MANUFACTURE.**—Large quantities of ordinary household washing soap are manufactured, Cairo, Alexandria, Tanta, and Zagazig being the chief centres. Egyptian soap is principally made from cotton-seed oil mixed with caustic soda. In some cases olive oil and coconut oil imported from Greece, Syria and Palestine are used.

2. Bulk Tobacco Warehouse.

3. Fleet of Delivery Trucks.

4. Picking Leaf.

5, 6 & 7. Interesting Aspects of the Packaging Department.

**SUGAR REFINING.**—Sugar refining can be considered as next in importance to cigarette manufacturing. The sugar industry is the monopoly of one large company called the "Société Générale des Sucreries et de la Raffinerie d'Égypte," founded in 1897 with a capital of 114,000,000 francs, and operating several factories. During the War this concern made very large profits owing to the scarcity of sugar from other parts of the world. The company can produce 100,000 tons of sugar annually. It employs over 20,000 Egyptian workmen, besides European experts. Egyptian sugar is famed for its whiteness and sweetness. (See text concerning this company, following "Agriculture.")

**TANNING.**—This industry is carried on extensively in Egypt, and in almost every town there are two or more tanneries. The main centres are Cairo and Alexandria where there are 40 tanneries out of 200 such enterprises in the country. With the exception of a few establishments where machinery of the latest type is used, and where tanning is conducted according to scientific and practical methods, almost all the work is done in the old way. The leather at present produced lacks finish, but the larger tanneries are gradually improving the grade of their output. Big quantities of skins and hides are imported yearly.

**WEAVING INDUSTRY.** Weaving workshops are scattered throughout the country, but the greater number of them are small, employing antiquated simple hand-loom and making only slight profits. Very few workshops employ as many as 50 hands, the majority affording employment to from five to ten weavers. The only weaving workshops in Egypt that are furnished with up-to-date machinery are the silk factory at Damietta the Filature Nationale d'Égypte at Alexandria and the Michalla Weaving School. The last named is an institution established for training students in the art of weaving. There are about 10,000 cotton looms altogether, with an annual output of 15,000,000 metres, 9,000,000 of which are woven by the Filature Nationale, and 2,000 silk looms, with an annual output of 3,000,000 metres. The industry at the last census provided employment for 72,818 hands.

## REPRESENTATIVE INDUSTRIAL ENTERPRISES

### MASPERO FRÈRES, LTD.

**Inception.**—Of the industries in Egypt, cigarette-making ranks second only to cotton, and the importance of the former can be gauged from the fact that during the year ended March 1925 the Egyptian Government receipts from import duty on tobacco amounted to £E 5,875,000 or £6,021,875 sterling. Maspero Frères Ltd., who control one of the largest cigarette and tobacco manufacturing organisations in the country, and who therefore contribute very liberally to the State revenue, commenced operations in Cairo in 1906.

**Machine-made Cigarettes.**—At the inception of the firm cigarette-making machinery was not used in Egypt, all cigarettes being rolled by hand. Consequently the ready-made cigarette, owing to its comparatively high cost of production, was denied to the poorer classes, who were accustomed to making their own cigarettes from cut tobacco in packets. Maspero Frères Ltd., by introducing into Egypt the manufacture of cigarettes by machinery, revolutionised these conditions. Where once 90 per cent. of the local consumers relied on cut tobacco and only 10 per cent. on ready made cigarettes,

the local consumption to-day comprises quite 70 per cent machine-made cigarettes and 30 per cent those rolled from cut tobacco. The innovation has greatly added to the prosperity of the country. The number of workpeople in the various factories has been steadily augmented, and box-making and printing factories have been started in large numbers to supply the elaborate cigarette packings which have supplanted the former plain tobacco wrapper.

**Organisation.**—Since the growing of tobacco in Egypt was totally prohibited by decree dated June 25, 1890, all the leaf required for this flourishing industry has to be imported. Maspero Frères Ltd retain a thoroughly trained staff of leaf tobacco buyers in the various Near East markets, ensuring perfect selection in the purchase of material. In their factories the firm has always maintained a very high standard of cleanliness and hygiene, thereby setting an example not without its effect on the general condition of the workpeople during the last twenty years.

**Export Trade.**—Egyptian cigarettes, by the superior quality of their material and manufacture, are popular among smokers throughout the world. The Egyptian Government issues to manufacturers a mauve coloured guarantee stamp, which is affixed to all packings of Egyptian cigarettes exported from Egypt, as an assurance to consumers of the origin of their purchases. Maspero Frères Ltd, in addition to their wide local business, participate extensively in the high-class export trade, and their well-known cigarettes can be obtained in most parts of the world. The exported brands are, to a very great degree, hand-made.

**Factory and Depots.**—The firm's main factory is situated in Cairo (P.O. Box No. 1064), with a sales department in Sharia-el-Maghaby. Other selling depots are established in Alexandria, Port Said, Ismailia, Suez, Tantah, Zagazig, Kafi-el-Zayat, Fayyum, Beni-Suef (Egypt), Khartoum, Atbara, Omdurman and Wad Medani (Sudan). In all the remaining towns and principal villages in Egypt and the Sudan selling agents have been appointed.

**Cables.**— "Orepsam," Cairo. Codes A B C 4th and 5th editions, Bentley's and Broomhall.

### TABACS & CIGARETTES MATOSSIAN, SOC. ANON.

**Egyptian Cigarettes.**—It is affirmed that a Havana cigar must not only be made of the famous Vuelta Abajo leaf, but, if perfection is desired, it must be manufactured and smoked on the island of Cuba. Whether such restrictions should without exception be imposed on the smoker of the Egyptian cigarette may be disputed, but there is substantial foundation for the claim that an Egyptian cigarette must be made in Egypt. The leaf should be selected by the descendants of the men who made such cigarettes renowned, and blended by others also possessed of inherited aptitude. Such qualifications of the highest order combine to produce the world-famed brands of the House of Matossian.

**Inception.**—The present business was founded by Mr Ohannes Matossian about 50 years ago, and constituted as a limited company by Khedivial decree in 1899.

**Development.**—During its existence of over a quarter of a century the firm has maintained a record of continual expansion. To-day it controls the largest cigarette factory in the world manufacturing solely Egyptian or Turkish cigarettes. The hands employed number 4,000, the weight of finest Oriental leaf consumed daily is 10,000 kilos, over 2,000,000,000 cigarettes are

manufactured every year, and no less than £2,000,000 is paid annually as duty to the Egyptian Customs.

**Factory.**—Inspection of the factory, which is under the administration of Mr J Matossian, makes clear how so enormous an output is achieved. A detailed enumeration of the plant would be tedious, as it is understood that capacity to produce six to seven million cigarettes per day implies complete installation of "up-to-the-minute" equipment for the various processes of drying and fermenting, cutting and cleaning, paper cutting, cigarette making, packet making and labelling. There are few machines more interesting to watch in operation than that which makes cigarettes. The slightest possible mechanical inexactitude would cause the breaking of the delicate slip of tissue wrapper and the stoppage of the machine, but such a mishap rarely occurs to interrupt its unending stream of about 200,000 cigarettes daily. The cigarette-making room at the Matossian factory, installed with 40 such machines, is an exceptionally interesting department. Elsewhere on the same premises is executed all printing required, from that of the ordinary wrappers for loose tobacco to the beautifully-finished packet labels and wrappers of the finest brands. The motive power for the factory is supplied by two 150 h.p. Diesel engines and a Franco-Loire of 80 h.p., operated on the individual motor system under the supervision of four electricians.

**Hand Packing.**—Some of the expert operatives who pack by hand the more expensive among the thirty brands of Matossian cigarettes display a remarkable dexterity. The present writer watched one such expert snatch handful after handful of cigarettes, place them deftly in a box with tissue and silver-paper wrappings, and with two or three light pats complete the packing process. The amazing thing was that the packer grasped exactly ten cigarettes every time, neither more nor less. The record for one man in an eight-hour day is 40,000 cigarettes, which is its own testimony to this lightning dexterity.

**Export.**—The Matossian company exports annually over 500,000,000 cigarettes, or one-quarter of its total output, a fact which supports the view that the discriminating smoker throughout the world demands a brand which he knows to have been manufactured in Egypt.

**Concessionaire.**—Messrs Spalding & Hodge Ltd, of Drury House, Russell Street, London, W.C., have been appointed sole concessionaire for the export of Matossian products to Australia, New Zealand, South Africa, Canada, India, China, British East Africa, Ceylon, Straits Settlements, Malay States and Java. They have a head office in Egypt at 19-21, Kasr-el-Nil, Cairo (cables "Old-vury," Cairo), and a branch at Alexandria.

**Cables.**—For Tabacs & Cigarettes Matossian, "Matossian," Cairo and Alexandria.

**W. ABLITT.**

**Inception.**—The story, constantly recurring in the varied annals of commerce, of the progress of some captain of industry from an apprentice to be proprietor of the firm finds again its application in the case of Mr. Walter Ablitt, who joined the old Cairo firm of R. Kuster & Co., specialists in hardware and builders' supplies, as articulated

a local tile industry soon became apparent to Mr. Ablitt, and in 1918 he established the present factory under the business style of W. Ablitt.

**Development.**—At the commencement the undertaking employed 20 hands, and produced daily some 120 square metres of tiles. To-day both staff and output have been more than trebled, and after supplying

system. The power is supplied by a gas-motor and hydraulic pressure.

**Demand.**—The firm has contracts with practically all modern Egyptian Government buildings, schools, American missions, Suez Canal buildings, and hotels.

**Future Expansion.**—Having seen his tile-manufacturing project established with conspicuous success, Mr. Walter Ablitt, sole

2. Polishing Machine.  
4. The finished Product ready for Despatch.

employee in 1882. He took over the management some years prior to becoming senior partner in 1914, when the title of the business was changed to W. & H. Ablitt.

**Activities.**—One of the chief interests embraced by the firm was the representation of many well-known British manufacturers of cement tiles, structure steel and other builders' requisites. The potentialities of

the ever-increasing demand there is seldom in stock less than 10,000 square metres of the highly-finished product. Tiles are manufactured in more than 200 designs, all of which are cast in Italy and imported therefrom.

**Plant.**—The plant includes ten modern tile presses, polishing machines, extensive soaking tanks, and a light rail transport

proprietor of the firm, intends to develop in conjunction therewith departments handling those builders' supplies in which he traded prior to 1918.

**Branch.**—A branch is established at Alexandria.

**Address.**—64, Avenue Fouad Ier, Cairo. Cables: "Waltabli."

## THE PETROLEUM INDUSTRY OF EGYPT

**W**HAT is now known as "petroleum" was without doubt found and employed in Egypt many thousands of years ago. Numbers of the oldest buildings in the country were built with the aid of a matter which was composed wholly or partly of some bituminous substances, in those ancient times, boats on the Nile were coated with the same material.

The only region in this vast country where oil is found is on the coast of the Red Sea, 200 miles south of Suez, and the deposits now being exploited were undoubtedly also known in ancient times. One land mark in

Of these, several have exhausted their capital in unproductive work, though others, such as the Anglo-Egyptian Oilfields, Ltd., the Vacuum Oil Company, the Egyptian Central Oilfields and the Egyptian Oil Syndicate, have met with a considerable measure of success and still continue drilling, the first-named of these companies being the one to whose enterprise the commercial development of Egypt's petroleum resources has been largely due.

The Anglo-Egyptian Oilfields Ltd. is an English concern partly financed by the "Shell" group, but in which also the

When the supplies at Gensah were beginning to fail, oil was, in 1914, fortunately discovered at Hurghada, and this has been Egypt's main source of petroleum ever since. The oil at Hurghada is a mixture of paraffin base and asphaltic base petroleum rich in sulphur, and therefore very difficult to refine fully.

Following is the production in English tons—

	GEMSAH	HURGHADA	TOTAL
1911	1,200		1,200
1912	27,450		27,450
1913	12,000		12,000

ASIATIC PETROLEUM CO. (EGYPT) LTD., Cairo.  
The Anglo-Egyptian Oilfield Refinery at Suez

this territory is known as Gebel el Zeit, Zeit being an old Arabic word for oil, and the ancient Roman name for the same place was Mons Petroleus.

**DEVELOPMENT.**—Although oil was first discovered in Egypt in the year 1865 by a company searching at Gensah for sulphur, it was not until 1885 that any expenditure on exploration was made. Oil was also found at that time, but not in commercial quantities. Since that date the history of the product in Egypt has been one of difficult finance in the face of enormous odds. Before the War half a dozen companies surveyed large tracts of land, and some of them spent considerable sums of money on drilling. After the War the number of companies operating, which, without exception, were financed by British capital, was about 20.

Egyptian Government participates as a large shareholder. The company commenced operations in 1911 with a capital of £676,000, to which in 1912 £549,000 was added, further increases of £350,000 in 1913 and £233,000 in 1920 brought the total capital to its present figure of £1,808,000.

### DISTRIBUTION AND PRODUCTION.

The only areas which have shown promise of oil have been those of Hurghada and Gensah, explored by the Egyptian Oilfields Ltd., and those of Abu Shaar and Abu Durba, explored by the Egyptian Government.

In 1911 the Anglo-Egyptian Oilfields Ltd. commenced exploring and building at Gensah, on the Red Sea. Work here has continued to the present day, about two dozen wells having been drilled. The production of oil has, however, been intermittent, it has, in fact, practically ceased.

	GEMSAH	HURGHADA	TOTAL
1914	90,200	11,500	101,700
1915	13,700	10,200	32,900
1916	12,600	36,700	49,300
1917	6,500	125,200	131,700
1918	5,500	268,000	273,500
1919	4,100	234,000	238,100
1920	2,800	145,600	148,400
1921	4,300	176,900	181,200
1922	3,000	166,000	169,000
1923	700	150,000	150,700

The Vacuum Oil Company, which is purely an importing company operating from New York and with ramifications that circle the globe, has established an up-to-date installation at Gabbary (Alexandria), whence many millions of gallons of petroleum and benzine are despatched yearly throughout Egypt, Palestine and Syria. The Egyptian Oil Syndicate works the Abu Durba area, where some 520 metric tons were produced in

1924 In that year also a new British company was licensed to commence drilling operations on Towila Island, in the Red Sea

**OILFIELDS AND REFINERY.**—On the producing field of the Anglo-Egyptian Oilfields are employed about 700 men, of whom 90 per cent are Egyptians. The field is up-to-date, it has a hospital, a cinema, a club, and many comforts which are not usually associated with desert life. Houses are provided for all employees and meals served from central kitchens.

Storage tanks with a capacity of about 100,000 tons have been erected by the company at Gensah, Huihuda and Suez. The crude oil produced by the Anglo-Egyptian Oilfields Ltd is transported in oil tankers to Suez. In the company's refinery there, which is capable of dealing with about 1,500

**RESERVES (GOVERNMENT).**—These are situated at Abu Shaar and Abu Durba.

**ABU SHILAR.**—Under license to a Cairo syndicate in 1907 this area was declared a Government reserve in 1920. Three years later, after an outlay of about £200,000 by the Government, all work ceased, the plant being dismantled. This resulted in the Government Refinery at Suez having to close down for several months, and the only oil dealt with there now is the royalty oil received by the Government from the Anglo-Egyptian Oilfields Ltd.

**ABU DURBA.** This was declared a Government Reserve in 1918, and shallow boring was commenced by the Department of Mines. The quantities of oil produced, however, have been very small, and this field has now been sold to an Egyptian Syndicate.

placing the long-existent sakich, and economising substantially in time and labour, these appliances at the same time introduce the most modern ways and means of cultivation. The tallow candle, the vegetable-oil hand lamp and the torch have disappeared from even the poorest houses, to be supplanted by the cheaper, brighter and safer kerosene lamp. Even the long familiar donkey-cart is fast vanishing from the country roads, being gradually superseded by motor cars and omnibuses as a means of transport and locomotion. Egypt, deprived by nature of wood and coal, has for the development of her agriculture had to rely to a considerable extent on oil, and one of the main factors in the country's prosperity and development has been the wonderfully efficient distribution system organised by the great oil companies.

ASIATIC PETROLEUM CO (EGYPT) LTD, Cairo.  
Another View of the Anglo-Egyptian Oilfield Refinery at

### THE ASIATIC PETROLEUM CO. (EGYPT) LTD.

tons a day, the Egyptian crude oil is treated, and the resultant products include benzene, kerosene, gas oil, fuel oil, and asphalt. In addition to the indigenous production, large quantities of crude oils are imported from other countries and treated for consumption in Egypt and for export.

**TRANSPORT.**—The whole of the products manufactured at the Suez refinery are handled by its associated company, the Asiatic Petroleum Company (Egypt) Ltd, which has a filling station adjoining the refinery. (See letterpress following.) There are no big pipelines in the country, and all railway transport is a Government monopoly in the hands of the Egyptian State Railways, which own oil tank-wagons up to about 30,000 kgs. capacity. There is a certain amount of river and canal transport in barges of 150 to 180 tons capacity.

**Oil Distribution in Egypt.** The part played by great oil-distributing organisations such as The Asiatic Petroleum Co (Egypt) Ltd in the commercial and economic development of Egypt during the past forty years is one of extreme importance. It is nothing short of remarkable how the Oriental, despite his traditional conservatism, has adapted oil in all its multiplicity of varieties to the performance of his daily labour. Only a few decades ago hand-labour and the corvée were mainly responsible for a great deal of the work now being performed by oil. Today the position is entirely changed, oil and Diesel engines, together with pumping and other mechanism, all driven by petroleum or its derivatives, having been and still are being installed all over the country. Re-

**Wartime Services.**—The War period found The Asiatic Petroleum Co (Egypt) Ltd singularly fortunate in being the only firm able to meet Egyptian needs in benzene, kerosene and fuel oil, and it deserves great credit for the efficient manner in which the requirements of the Allied Forces and of the civilian population were supplied.

**Activities.**—The products dealt in by the company are benzene, kerosene, fuel oil, Diesel fuel, asphalt, candles, wax, lubricating oils and greases, supplied throughout Egypt and to the adjacent countries of Palestine, Syria, Cyprus, the Sudan and Cilicia.

**Distributing Centres.**—CAIRO—The main distributing installation is at Ghamrah, with a subsidiary depot at Madabegh on the other side of the city. From these depôts an excellent motor transport service

delivers benzine, kerosene and liquid fuel direct to the numerous consumers in various parts of Cairo. The company was the pioneer of the supply to motorists of benzine from the now familiar kerbside pumps, which, numbering nearly 50, have been erected at all important points in the City and on the Cairo-Heliopolis, Cairo-Heliopolis and Cairo-Pyramids roads.

**ALEXANDRIA**—An ocean depot for the storage of fuel oil and kerosene imported from the West is established at Alexandria, whence distribution is made to the smaller depôts up-country. This port is the source of supply for Palestine, Syria and Cyprus, besides a bunkering station for tourist and other steamers. At the company's oil jetty situated in the outer harbour about two miles south of the commercial harbour vessels of any dimensions with a maximum draught of 30 feet may be bunkered. Lighters and tugs are always available.

**PORT SAID**—Here are situated an ocean depot for storing fuel oil from the West, and a bunkering station for steamers traversing the Suez Canal, providing eight berths (four on the African, four on the Asiatic side), at which vessels up to 755 feet in length can be bunkered. Lighters and tugs are ever ready for service. The company's agents at Port Said are Messrs. Worms & Co.

**SUEZ**—The company maintains at Suez a large refinery for dealing with crude oil imported from the East, as well as that produced at Hurgada on the Red Sea. The port supplies the Sudan and the countries

round the Red Sea, besides distributing to up-country depôts. Bunkering of steamers passing through the Canal is also undertaken.

At Suez it is the general practice for bunkers to be delivered to ships in the roads by means of lighters, thereby avoiding dues payable on ships mooring alongside the depôt.

**Up-Country Agencies.**—**EGYPT**—In every village of importance in the country agencies have been established, the number now reaching about 100, including some 35 bulk installations.

**PALESTINE**—To meet the increasing demands for oil of all varieties due to the various post-war projects for the development of Palestine, the company has established agencies at Jaffa, Jerusalem, Haifa, Gaza, Nazareth, Amman, Nablus, and some 25 other towns and villages.

**SYRIA**—Recent troubles have hindered Syrian trade, but the country is now settling down to more normal conditions. Work done on the roads, encouraging the development of motor traffic, is responsible for an increased consumption of benzine. The company's head office in Syria is at Beirut, and its agencies are at Damascus, Deraa, Alexandretta, Aleppo, Homs, Hama, Zahleh, Baalbek, Lattakieh, Tripoli, Saida and Sour.

**CYPRUS**—Trade in Cyprus does not flourish greatly, but owing to the increased number of motor cars running since the War, consumption of benzine has slightly improved. Agents, the Eastern & Colonial Association Ltd., head office, Nicosia,

agencies, Larnaca, Famagusta, Kyrenia and Paphos.

**THE SUDAN**—Due to the great development in irrigation and road-construction, trade in benzine and kerosene in the Sudan constantly increases. At Port Sudan the company has a bunkering station for steamers, allowing vessels up to 28 feet in draught to be supplied alongside the ordinary steamer berths. Messrs. Gellatly, Hankey & Co. (Sudan) Ltd. act as its agents, with head offices at Khartoum and agencies at Port Sudan, Wadi Halfa, Atbara, Shendi, Wad Medani, El Obaid, Sennar, Suakin, Kassala, Kerenia and Omdurman.

**ADEN**—At Aden, the supply centre for the whole of the Red Sea, A. Besser acts as the company's agent. Sub-agencies controlled therethrough are at Mogadiscio (Italian Somaliland), Berbera (British Somaliland), Djibouti (French Somaliland), Massowah (Eritrea), Hodeidah (The Yemen), Adis Ababa (Abyssinia), Makallah (The Hadramout).

**ARABIA**—Agents, Messrs. Gellatly, Hankey & Co. (Sudan) Ltd., head office, Jeddah, sub-agencies, Yembo and Medina.

**LIBYIA**—Resulting from extensions in the cotton industry of Libya, there is a progressive trade in oil. Agents, Messrs. Joseph Catoni & Co., head office, Misrata, sub-agencies, Tarsus and Adana.

**Head Office.**—30 Rue Madabagh, Cairo, Cables "Apogyp," Cairo.

**Bankers** Barclays Bank (Dominion, Colonial and Overseas).

# COMMERCE

## EXPORTS AND IMPORTS

### GENERAL DATA

**E**GYPT being primarily an agricultural country and, with the exception of the cigarette industry, having few manufactures for export purposes, provides an especially good market for foreign manufactured goods. The various statistics of the export and import trade of the country which follow show how important are the commercial relations between Egypt and Great Britain, which country in 1925 purchased more than three times as much as its nearest competitor of Egypt's cotton and other exports, and supplied over 25 per cent of all the goods imported. There are, however, certain disquieting features in the present position of Great Britain's trade with Egypt, competition in several lines, notably textiles and machinery with Italy, France, the United States and Germany being acute.

**BALANCE OF TRADE.**—The following table shows the favourable trade balances for the years named:—

	1921 £L	1925 £L
Exports	65,733,935	59,198,662
Re-exports	1,470,143	1,270,174
Total	67,204,078	60,468,836
Imports	50,736,918	58,224,895
Trade Balance	16,467,160	2,243,941

Total for foreign trade 117,940,006 118,793,731  
Note:—The above figures exclude spirits.

In 1923 the total foreign trade was valued at £E 105,130,136, exports and re-exports being £E 59,853,173 and imports £E 45,276,963, the trade balance thus being £E 14,576,210.

### EXPORTS AND IMPORTS

**EXPORT TRADE.**—Exports from Egypt, which increased by £E 7,346,608 in 1924 over the figure for 1923 (the gain being almost entirely due to a rise in the price of cotton), fell again by £E 6,535,273 in 1925. The principal decreases in the last named years were in cotton (£E 4,894,693), cotton seed (£E 1,079,338) and cotton seed oil (£E 154,933). There was also a further decline in exports of cigarettes, sugar and hides. Substantial increases in value and quantity occurred in onions, wool, cheese and some classes of cotton piece goods which go to Greece, Syria and Turkey. The following table summarises the export trade of Egypt by categories for the years named:—

	1924 £E	1925 £E
Animals and animal food products	618,847	526,926
Hides, skins and leather goods	307,982	247,768
Other animal products	85,791	68,116
Cereals, flour, and agricultural produce	5,760,758	4,795,344
Colonial produce and general grocery	543,205	204,129

	1924 £L	1925 £L
Spirits, beverages and oils	479,116	394,175
Paper and printed matter	70,951	74,054
Wood and coal	25,188	21,054
Stone earthenware and glassware	5,144	5,945
Dyestuffs, tanstuffs and colours	26,483	18,274
Chemical and medicinal products and perfumery	216,862	154,093
Yarns and textiles*	56,864,736	52,024,761
Metals and metalware	333,934	221,785
Miscellaneous	62,862	51,505

Total of merchandise exported	65,401,894	58,815,429
Cigarettes	332,041	383,233

Total of exports 65,733,935 59,198,662

\*Mostly raw cotton

**IMPORT TRADE.**—The import trade of Egypt, which in 1923 was valued at £E 45,276,963, rose in 1924 to £E 50,736,918, and in 1925 to £E 58,224,895, an increase in the last named year of £E 7,487,977. There was a general rise in 1925 in the value of commodities imported, but noticeably so in the cases of cereals, flour and agricultural products, which showed a gain of £E 2,564,553, and of metals and metalware, which rose from £E 6,741,411 to £E 8,472,477. Only in dyestuffs, tanstuffs, etc., and in tobacco were decreases recorded. The following table shows the values of imports into Egypt in 1924 and 1925, classified by categories:

	1924 £L	1925 £L
Animals and animal food products	1,822,800	1,867,752
Hides, skins and leather goods	565,010	662,895
Other animal products	65,777	66,102
Cereals, flour and agricultural produce	4,536,725	7,101,278
Colonial produce and general grocery	2,040,820	3,108,274
Spirits, beverages and oils	3,271,309	3,558,357
Paper and printed matter	910,846	1,031,621
Wood and coal	4,174,094	4,840,035
Stone, earthenware and glassware	1,454,093	1,037,928
Dyestuffs, tanstuffs and colours	466,926	397,536
Chemical and medicinal products and perfumery	3,411,701	4,204,739
Yarns and textiles	17,118,397	17,965,629
Metals and metalware	6,741,411	8,472,477
Miscellaneous	1,474,974	1,777,266

Total of merchandise imported	48,954,799	59,751,880
Tobacco	1,782,119	1,473,000
Total of imports	50,736,918	58,224,895

### COMMODITIES

**RE-EXPORTS.** The re-export trade of Egypt amounted in 1925 to £E 1,270,174, compared with £E 1,470,143 in 1924, a decrease of £E 199,969.

**TRADE BY COUNTRIES.**—The following tables show the positions occupied by the twelve leading countries in the import and export trade of Egypt in the years named:

	1924 £L	1925 £L
<b>Imports</b>		
Great Britain	13,993,584	14,660,664
Italy	5,240,772	6,120,939
France	4,688,718	5,399,682
Germany	2,946,759	3,348,143
British India	1,781,785	2,979,730
Australasia	1,642,156	2,440,328
Belgium	1,898,354	2,124,403
United States	1,798,542	2,116,238
Chile	1,389,609	1,850,889
Czecho-Slovakia	900,678	1,224,117
Japan	973,325	1,105,168
Switzerland	638,299	630,363

	1924 £L	1925 £L
<b>Exports</b>		
Great Britain	31,955,625	29,167,972
United States	7,085,911	8,411,246
France	8,614,073	7,461,040
Italy	1,000,082	1,613,795
Germany	3,907,296	3,540,073
Switzerland	2,299,474	2,263,956
Japan	1,509,486	2,166,288
Spain	1,481,312	1,177,821
Czecho-Slovakia	1,119,604	1,057,207
Palestine	376,491	375,180
Holland	333,204	341,163
Syria	332,702	285,796

**FRANCE.** In 1925, as in 1924, this country came third in the list of principal supplying countries, but lost second place as a buying country to the United States. Her exports to Egypt rose by no less than £E 1,152,133 in 1925 compared with the 1924 increase of some £E 865,000 over 1923. The most important items in the list of imports from France are silk cloths and mixed silk textiles, woollen textiles, hosiery, iron and steel goods, medicinal specialties, motor vehicles and ready-made cotton and silk clothing.

**GERMANY.** Imports from Germany rose from £E 2,652,720 in 1923 to £E 2,946,739 in 1924 and £E 3,348,143 in 1925, iron and steel goods, hosiery, machinery, locks and door and window fittings, dyes, woollen textiles, and wrapping paper and cardboard being the principal commodities.

**GR. BRITAIN.** Imports from Great Britain declined from £E 14,771,677 in 1923 to £E 13,993,584 in 1924, but rose again to £E 14,660,664 in 1925. Exports from Egypt to the United Kingdom rose from £E 28,354,293 in 1923 to £E 31,955,625 in 1924, but declined to £E 29,167,972 in 1925.

At the annual meeting of the British Chamber of Commerce in Egypt in 1926 the President drew the attention of exporters to the present condition of British trade with Egypt. Pointing to its general decline, he said that "at no time in the last forty

years has the United Kingdom's share in the trade been so small as during the period under review. There is no reluctance here to buy British goods, which everyone admits are as good as they ever were, but unfortunately they are dearer than they should be." "At the same time," he went on, "the manufacturer cannot be entirely exonerated from sharing in the causes which have produced this diminution in his business. He takes too little interest in this market, ignores its possibilities, and is not sufficiently enterprising to ascertain how he might adapt himself to its requirements."

In comparison with past years the percentage of Egyptian trade with the United Kingdom works out as follows —

	IMPORTS PER CENT	EXPORTS PER CENT
1922	34	47.3
1923	32.6	48.6
1924	27.6	48.6
1925	25.3	44 (11 months)

**Decreases.**—The following figures refer to some of the markets in which imports from Great Britain show a definite decline. The figures are for 1925, as compared with 1924.

Metals and metal-ware imported show an increase of £E 985,060, yet purchases in the United Kingdom decreased by £E 253,758.

Cement was imported to the extent of £E 373,509, against £E 221,179. The United Kingdom supplied £E 27,852 as against £E 33,313.

Motor tyres imported amounted to £E 140,692, against £E 86,036. Of this, £E 16,340 came into Great Britain, as against £E 22,627. France took the largest share at £E 67,184, as against £E 39,406.

The importation of fertilisers shows a big increase at £E 2,261,454 against £E 475,730. The greater portion on this trade is with Chile for nitrate of soda.

Out of a total of 2,120 typewriters, valued at £E 26,403, England supplied only 92, at a cost of £E 1,200, and America 1,557 for £E 20,403.

**Increase in Machinery Exports.**—In the machinery market England continues to maintain a satisfactory position. Her proportion of machinery supplied was 41.45 per cent in 1923, 43.37 per cent in 1924, and 42.28 per cent in 1925. The increases are mostly in those kinds of machinery used for irrigation and agricultural purposes. In the agricultural tractor market, however, Great Britain has steadily lost ground to the United States.

**ITALY.** Italy's exports to Egypt, which consist principally of cotton piece goods, silk and woollen textiles, yarns, silk shawls, hosiery, motor vehicles and rail locomotives, increased by £E 963,000 in 1924 and by £E 899,000 in 1925. Exports to Italy, which are mainly cotton, cotton seed and cotton seed oil, and onions, declined from £E 4,069,082 in 1924 to £E 3,613,795 in 1925.

**UNITED STATES.**—The United States increased her exports to Egypt by only 5.6 per cent in 1924, but by 12.1 per cent in 1925, the total for the latter year being £E 2,116,238, compared with £E 1,798,542 in 1924 and £E 1,702,765 in 1923. Exports to the United States declined from £E 7,246,787 in 1923 to £E 7,085,911 in 1924 and rose to £E 8,411,246 in 1925, cotton and cotton seed being the main items of trade. Wheat flour, kerosene, agricultural machinery, and mineral lubricating oils are the principal commodities imported from the United States.

**TRADING ASSOCIATIONS.**—The Department of Agriculture has for some years carried on an extensive propaganda with a view to impressing merchants and industrialists with the benefits of co-operation and instructing them how to form trade societies. These are novel ideas in Egypt, and it cannot be said that as yet the country has realised the needs of co-operation. There are, however, several flourishing Chambers of Commerce, the oldest-established being those of Cairo, Alexandria and Zifta. Chambers have recently been created at Mt Ghamr, El Mansorah, Port Said, Benha, Dammanhur, El Ghiza, Assuan and Fayyum, bringing the total up to eleven. The British Chamber of Commerce in Egypt with headquarters at Alexandria, continues to do much useful work.

**TRADING METHODS.** The bulk of the import trade of Egypt is done through local agents working in conjunction with representatives or travellers from the home firms, and only in this way can a satisfactory business be built up. The need of having a local agent is due, not to the backward state of commerce in Egypt but to (a) the number of different nationalities with which one has to deal, and the need of an extensive knowledge of languages, (b) the necessity of having somebody on the spot to deal with and settle the endless disputes which arise to curtail delays in taking up shipping documents, and to press for payment of bills which only too often are not met on due dates, (c) the distrust existing on both sides, that is between the local buyer and foreign suppliers, and (d) most important of all, the local knowledge of the agent, this being the first essential to satisfactory business.

**APPOINTMENT OF AGENTS.** The greatest care is necessary in the appointment of an agent, many of the so-called commission agents in Egypt being individuals of very slight if any financial standing. References should be carefully scrutinised and in this connection membership of the British Chamber of Commerce is helpful.

Makers should assure themselves that the prospective agent has some address besides a post office box number, and that business can be run on straight commercial lines, backed by a proper staff. Not only is it necessary to assure oneself of the qualifications of an agent, but once he is appointed it is most important (a) To keep him "au courant" of any fluctuations in prices and even to repeat prices periodically, though they may not have been altered, and to supply him liberally with samples and catalogues, etc. (b) To back him up by regular visits of a traveller or other representative of the firm. This is most essential, as it not only keeps the agent keen and interested, but also inspires confidence in the buyers and establishes the personal relationship so valuable between buyer and seller.

**TENDERS FOR CONTRACTS.**—It is becoming increasingly difficult to find suitable agents for British manufacturers of machinery, heavy electrical and engineering goods and constructional work who are not prepared to go to the expense of establishing a branch in Egypt. All but one or two of the reliable firms in Egypt which can handle heavy and technical goods of this nature, and who are properly qualified either to tender on behalf of or to explain technical details arising out of tenders submitted by their United Kingdom principals, are already so fully engaged with these lines that they cannot consider fresh connections.

In view of the increasing tendency on the part of the Egyptian Government to

widen the range of open tenders at the expense of "limited" tenders, the need to appoint a resident agent in Egypt in order to conform to the conditions governing Egyptian Government contracts for which open tenders are invited is becoming more and more general. Consequently, British manufacturers, desirous of tendering for such contracts, but who are not already represented in Egypt, will find it difficult to arrange for suitable representation in the lines referred to in the preceding paragraph unless they adopt one of the four following methods, viz: (a) Set up a branch in Egypt, (b) Form an Egyptian company with offices in the United Kingdom, (c) Amalgamate with other non-competitive United Kingdom firms for the appointment of a joint representative firm or individual, the latter to be paid on the basis of a fixed salary and a commission, (d) Consider the appointment on say six months' or a year's probation in the interests of both parties, of retired Anglo-Egyptian officials who were appointed on the ground of technical qualifications to Egyptian Government Departments such as the Ministry of Public Works, which includes Irrigation, the Ministry of Communications, which includes the Railways, Telegraphs and Telephones, as well as Ports and Lights, and the Roads and Bridges Department, the section of the Ministry of the Interior which controls power, light and water installations in the provincial towns, the technical Industrial School section of the Ministry of Education, the Survey Department, and others.

Anglo-Egyptian officials, who have several years' experience of the provinces in Egypt, not only speak Arabic fluently, but also know how to handle the native, and in many cases have won the respect and confidence of the fellahs and landowners who are the largest buyers of machinery for agricultural purposes, particularly pumps of various kinds.

**WEIGHTS AND MEASURES.**—The most important weights and measures used in Egypt are —

1 Ardeb	198 litres	43.58 gall.	1
		(5.45 bushels)	
27 kantars	(of cotton seed)		
1 Feddan	4,200.8 sq. metres	1.038 acres	
		= .42 hectares	
1 Kasabah	3.55 metres	3.88 yds.	
1 Oke	25 kilos	2.75 lbs. (English)	
1 Kantar	{ 100 rotls }	44.93 kilos.	
	{ 36 okes }	99.05 lbs. (English)	
1 Acre	for all practical purposes	= 1 feddan	
	the exact equivalents are	963 feddan or	
		40467 hectares	

## COMMODITIES

Following are the principal of the leading articles of Egypt's export and import trade:—

**BICYCLES.**—Egypt imported 2,061 bicycles (£E 9,294) in 1925, against 3,697 (£E 17,761) in 1924, the United Kingdom's share of this trade falling from £E 6,340 to £E 2,927.

**BOOTS AND SHOES.**—In 1925 Egypt imported 158,263 pairs of boots and shoes, valued at £E 36,491, against 128,680 pairs, valued at £E 33,593, in 1924. Of this trade the United Kingdom's share was 26,200 pairs (£E 5,742) in 1925, compared with 18,837 pairs (£E 4,713) in 1924. Germany increased her trade from 56,356 pairs (£E 14,308) in 1924 to 80,901 pairs (£E 18,016) in 1925.

**CAMELS.**—In 1925 the number of camels exported was 2,177, valued at £E 15,844, compared with 1,612 valued at £E 13,118 in 1924.

**CHEESE.**—Exports of cheese increased substantially from 27,461 kg (£E 2,088) in 1924 to 46,227 kg (£E 3,402) in 1925.

**CIGARETTE PAPER.** Cigarette manufacturing is one of Egypt's very important and most highly developed industries. There is no manufacture of cigarette paper, the local industry being entirely dependent upon foreign sources of supply. Imports of this commodity amounted to 560,887 kg, valued at £E 65,724, in 1924, and to 504,202 kg, valued at £E 51,933, in 1925. Italy supplies the preponderance of cigarette paper used by the Egyptian manufacturers, its share amounting to 83 per cent in 1925. France is the only other important source of supply, its share, however, having fallen to 14 per cent. A high-class paper is required, the prime requisites of which are that it must be strong, uniform in quality, and very white and flammable. Local cigarette manufacturers are said to pay more attention to quality than to price in making their commitments.

**CIGARETTES.**—There was a noticeable decline in the export of Egyptian cigarettes from 1923 to 1924, in which latter year exports amounted to 179,473 kg, valued at £E 329,708. The figures for 1925 show a small recovery, having risen to 197,251 kg and £E 382,570. The values taken by the principal purchasing countries in 1925 were as follow: Netherlands Indies, £E 104,823; Palestine, £E 70,301; Holland, £E 32,024; United Kingdom, £E 28,311; Straits Settlements, £E 27,586; Italy, £E 15,080; and British India, £E 8,593.

Imports of cigarettes (almost exclusively from the United Kingdom) were valued at £E 90,175, against £E 129,370 in 1924.

**COAL.**—Coal imported into Egypt rose from 962,797 tons (£E 1,627,028) in 1924 to 1,234,882 tons (£E 1,840,108) in 1925, Great Britain was practically the only source of supply, her exports being 952,832 tons (£E 1,600,005) in 1924 and 1,175,640 tons (£E 1,747,428) in 1925.

**COFFEE.** Imports of coffee declined from 11,050,204 kg (£E 913,941) in 1924 to 7,804,919 kg (£E 782,961) in 1925, Brazil and Abyssinia being the leading countries of origin.

**COTTON (RAW).**—Raw cotton is, needless to say, the mainstay of Egypt's export trade, and the total exports of this commodity in the calendar year 1925 were returned at 6,423,939 kantars, valued at £E 51,659,806, compared with 7,253,008 kantars, valued at £E 56,554,499, in 1924, or a drop of nearly £E 5,000,000 in value. The following table gives the principal recipient countries in the years named—

	1924 £E.	1925 £E.
United Kingdom	27,043,072	22,191,594
Czechoslovakia	1,116,999	1,056,064
France	8,249,256	7,122,643
Germany	3,041,718	3,119,769
Italy	3,737,618	3,272,651
Japan	1,477,941	2,143,967
Spain	1,410,810	1,113,937
Switzerland	2,278,767	2,243,488
United States of America	6,950,018	8,122,918

Total (including other countries) 56,554,499 51,659,806  
(See also article on "Cotton.")

**COTTON PIECE GOODS.**—See "Textiles."

**COTTON SEED.**—Exports of cotton seed, which in 1924 totalled 2,700,073 ardebs, of a value of £E 3,598,407, declined in 1925 to 2,079,252 ardebs, valued at £E 2,510,069. The United Kingdom took cotton seed to the value of £E 2,261,687 in 1925, compared with £E 2,949,602 in 1924.

**COTTON SEED OIL.**—Exports of this commodity declined heavily from 7,226,948 kg (£E 297,050) in 1924 to 3,604,842 kg (£E 142,717) in 1925, Palestine and the United Kingdom being the largest purchasers.

**CUTLERY.** Imports of cutlery and tableware increased from £E 60,486 in 1924 to £E 105,255 in 1925, Germany and France being the leading countries of origin, with £E 45,060 and £E 23,062 respectively in the last named year. Great Britain's share of the trade in that period was £E 13,914, compared with £E 13,158 in 1924.

**EGGS.**—Exports of eggs from Egypt were valued at £E 491,658 in 1925, against £E 566,613 in 1924, almost all going to the United Kingdom.

**HATS.** Egyptian imports of felt and straw hats amount to about 60,000 dozen (valued at almost £100,000) per annum. Some two-thirds of the total are felt either trimmed or untrimmed. France furnishes women's hats almost entirely and accounts for 50 per cent of the total felt imports, Italy sending 25 per cent. Approximately three-fifths of the straw hats imported come from Italy, which meets the greater part of the demand for men's wear. France supplies almost all of the straw hats imported for women.

**HIDES.**—Exports of untanned bullock hides in 1925 amounted to £E 27,534, of buffalo hides to £E 80,200, and of camel hides to £E 219. Corresponding figures for 1924 were £E 49,935, £E 75,215 and £E 1,173 respectively.

**HOSIERY.** Imports of cotton, silk and artificial silk hosiery in 1925 were valued at £E 725,772, compared with £E 764,214 in 1924. Imports from Germany totalled £E 187,100, from Japan, £E 167,087, and from France, £E 84,035.

**MACHINERY (AGRICULTURAL).** Although for several years to 1924 the value of Egypt's imports of agricultural machinery, implements and parts, excluding threshing machines, tractors, engines and pumps, ranged only between £E 400,000 and £E 500,000 it is significant that in 1925 the value of these items exceeded £E 900,000. The most consistent growth was in the importation of agricultural implements from the United States. Though the United Kingdom leads in Egypt's imports of agricultural machinery, implements and parts, purchases from the United States more than doubled in value in 1925 as compared with 1924, and now approximate to 60 per cent of the value of trade credited to the United Kingdom.

The following table shows the values of the principal imports of agricultural machinery and implements coming into Egypt in 1924 and 1925:—

	1924 £E.	1925 £E.
Tractors	37,272	80,913
Hand pumps	12,107	19,101
Power pumps	59,495	111,136
Stationary internal combustion engines	399,718	649,675
Portable steam engines	9,334	19,177
Threshing machines	2,653	5,772
Agricultural machinery, implements and parts, unenumerated	20,029	44,413

During the first nine months of 1925 the United Kingdom's share of this import trade was over £E 300,000, as against £E 286,000 in 1924, while the United States increased its trade from £E 90,000 to £E 180,000. There is a growing market in Egypt for all agricultural machinery, the field for which warrants the specialised attention of British manufacturers.

**COTTON GINS.**—Egypt, naturally, is a good market for seed separators of various types and especially for cotton gins. A certain kind of inexpensive British cotton gin has been thoroughly entrenched in the market for years, and now completely monopolises the field. There is also a limited importation of corn-shellers and other seed-operating machines of small inexpensive types, most of which come from the United Kingdom.

**MOTOR PLOUGHS.**—The United Kingdom's biggest trade in strictly agricultural implements is in large motor ploughs or ploughing windlasses, operated according to a patent (Fowler) system, which has been in use in Egypt for some 50 years. Imports of steel ploughs from the United Kingdom in 1925 were valued at about £E 80,000, as against £E 77,000 in 1924.

**THRASHING MACHINES.** Egypt imported in 1923 14 threshing machines valued at £E 4,099, in 1924 the total had shrunk to 8, valued at but £E 2,053, but in 1925 15 threshing machines were brought in valued at £E 5,772. The United Kingdom and Germany share the Egyptian threshing machine market, the British machines being larger and much more expensive than those offered by Germany. There is a very small business in ensilage and field cutters.

**TRACTORS.** Perhaps one of the most outstanding features of the machinery trade during 1924 and 1925 was the extraordinary increase in the imports of tractors from the United States, more than 1,000 small machines having entered the country. It is reliably estimated that in 1925 at least £E 13,000 worth of American tractor attachments, ploughs, and cultivators were imported by Egypt, approximately 80 per cent being plough attachments, and the remaining 20 per cent mostly cultivators.

**MACHINE TOOLS.**—The United Kingdom still holds a predominant position in the Egyptian market for machine tools and only the American share, which is small, shows any particular increase. The total trade in 1925 was valued at £E 35,761 (the United Kingdom's share being over £E 12,000), as compared with £E 32,010 in 1924.

**MOTOR CARS, ETC.**—Imports of motor vehicles and chassis show the United States to be by far the leading country of origin, its share of the total value of £E 481,404 recorded in 1924 being £E 191,412. Great Britain's portion of the trade in that year was £E 31,217. Imports during 1925 totalled £E 764,423 in value, both the United States and the United Kingdom increasing their trade to £E 209,744 for 3,464 vehicles and chassis and £E 73,618 for 302 respectively. France raised her exports to 648 items, value £E 154,171. The inauguration of motor-buses on new and important routes in the Delta affords an encouraging outlook for manufacturers. Freight haulage at Alexandria also offers an interesting and immediate field for specially adapted vehicles.

**MOTOR CYCLES.**—In 1925 imports of motor cycles from the United Kingdom aggregated 159, of a total value of £E 8,042,

compared with 179 at £E 11,263 in 1924, the trade for those two years being £E 12,814, compared with £E 15,483

**NITRATE.**—The importation of nitrate into Egypt for fertilising purposes is on a large scale. Practically all comes from Chile, which country supplied 167,196 tons in 1925, valued at £E 1,850,880, out of a total of 173,764 tons imported

**OILS (MINERAL AND LUBRICATING).**—The total of all imports of mineral and lubricating oils and greases in 1925 was 16,035,835 kg., valued at £E 288,431, compared with 11,805,598 kg., valued at £E 232,542, in 1924. Imports from the United States increased from £E 173,174 to £E 176,824, and from the United Kingdom from £E 20,539 to £E 25,141

**ONIONS.**—The export trade in onions, which are extensively grown in Egypt, has steadily risen since the War, and reached the value of £E 913,333 in 1925, compared with £E 651,911 in 1924 and £E 358,040 in 1923. The values taken by the leading countries of destination in 1925 were: Great Britain, £E 336,010; Italy, £E 206,151; United States, £E 125,322; and Germany £E 118,994.

**PETROLEUM, ETC.** The rapid advance in Egyptian motor vehicle imports and registrations has been accompanied by a large increase in the country's mineral lubricating oil imports, approximately 40 per cent, from 11,806 metric tons valued at £E 232,542 in 1924 to £E 16,036 tons valued at £E 288,431 in 1925. Gasoline delivered from the Suez refinery, the principal source of motor-fuel supply, and imported from abroad increased nearly 50 per cent, or from 20,789 tons valued at £E 253,175 in 1924 to 30,208 tons valued at £E 370,997 in 1925. Kerosene importation in 1925, 228,563 tons and 9,061 cases, valued at £E 1,050,320, exceeded that of 1924 of 191,280 tons and 38,850 cases, valued at £E 1,035,269, by about 15 per cent.

In lubricating oils and greases the United States continues to have the greater part of the business, although unusually large gains are recorded in imports of these items from the Straits Settlements, British Borneo and Germany. Russia accounts for at least 60 per cent of Egypt's kerosene imports, while Rumania furnishes nearly one-half the benzine. American interests, however, supply a large share of the refined petroleum receipts from these countries. Egypt's imports of fuel oil (mazout) actually declined about 8 per cent in 1925: from the 1924 total of 107,856 tons valued at £E 374,613 to 99,223 tons valued at £E 345,055

**QUAILS.**—The number of quails exported to European countries fell from 772,473 in 1924 to 450,445 in 1925, and the value from £E 12,111 to £E 6,633

**RICE.**—Exports of rice declined from 32,265,687 kg. (£E 528,010) in 1924 to 27,716,623 kg. (£E 479,190) in 1925. Most of the product exported goes to Syria

In the same two years imports of rice (almost entirely from British India and Siam) rose from 18,136,758 kg. valued at £E 278,780 to 44,413,587 kg. valued at £E 653,147

**SUGAR.**—All the raw sugar imported into Egypt comes from the Netherlands Indies, and amounted in 1925 to 21,259,512 kg. (£E 270,333), against 28,860,638 kg. (£E 354,161) in 1924. There were increased imports of beet-root sugar in 1925, mainly from Czecho-Slovakia. Exports of sugar fell from £E 461,482 in 1924 to £E 143,038 in 1925, the bulk going to Mesopotamia and Palestine.

**TEA.**—Imports of tea, mainly from Ceylon and British India, rose from 3,740,581 kg., valued at £E 413,250, in 1924, to 4,415,570 kg., valued at £E 488,826, in 1925

**TEXTILES.**—The aggregate value of Egypt's imports of yarns and textiles reached £E 17,965,629 in 1925, compared with £E 17,118,307 in 1924, and comprised 31 per cent of the country's total imports of all classes of merchandise in 1925 as against 34 per cent in 1924. Cotton piece goods constituted slightly over 50 per cent of the total value of the group "yarns and textiles" in both years. The balance in 1925 included other cotton manufactures, £E 2,072,861; wool manufactures, £E 2,388,969; silk and artificial silk manufactures, £E 1,870,068; linen products, £E 230,930. With the exception of silk and artificial silk manufactures, which declined by 5 per cent, the total of each of these sub-groups represents a slight improvement over the 1924 figures.

Egypt's imports of the five principal classes of cotton piece goods increased from a total of 107,971,809 square metres (a square metre = 1.196 square yds.) valued at £E 7,790,732, in 1924, to 233,293,530 square metres, valued at £E 8,204,200, in 1925, a gain of almost 18 per cent in quantity. The imports by value of the principal classes of cotton manufactures into Egypt in the years named are shown in the following table:—

	1924 £	1925 £
Cotton yarn	499,119	497,427
Cotton piece goods		
Grey		
Light	127,951	517,888
Heavy	496,873	590,205

Heavy	1,399,097	1,449,083
Piece-dyed		
Light	528,541	416,120
Heavy	1,209,906	1,395,919
Yarn-dyed		
Light	47,614	60,878
Heavy	1,244,211	1,486,674
Other	1,004,933	963,000
Cotton hosiery	711,067	674,720
Mixed textiles, mainly of cotton	308,471	510,716
Other cotton manufactures	1,228,471	1,289,980
Total	£ 11,547,793	£ 12,230,070

**COUNTRIES OF ORIGIN.** Of the total quantity of cotton-piece goods imported into Egypt, the United Kingdom supplied approximately 72 per cent in 1925, and Italy ranked second with 18 per cent. Comparative figures for 1924 were: United Kingdom, 77½ per cent.; Italy, 15 per cent. Italy's special strength is in heavy fancy yarn-dyed goods, in which it increased its shipments to Egypt from 14,351,000 square metres in 1924 to 19,246,000 in 1925. It also made substantial gains in its export of heavy piece-dyed goods in 1925 as compared with 1924. Imports of Japanese heavy grey goods into Egypt rose from 7,867,000 square metres in 1924 to 13,282,000 in 1925. The trade in light grey goods continues to be almost a British monopoly, Egyptian purchases of such British cloth mounting from 25,960,000 square metres in 1924 to 35,280,000 in 1925. Imports of cotton cloth from the United States declined from 361,000 square metres in 1924 to 121,000 in 1925. The trade in American voiles suffered a

serious setback as a result of the prevailing market slackness, decreasing popularity, and the carry over of unsold goods from the previous season. The value of the imports of fents and remnants from the United States, however, increased from £E 4,015 in 1924 to £E 13,903 in 1925.

The following table shows the value of the imports of cotton piece goods from the principal sources of supply:—

	1924 £	1925 £
Belgium	123,433	212,250
Czecho-Slovakia	3,916	20,034
France	103,039	81,594
Germany	7,797	20,778
Italy	1,612,218	1,961,630
Netherlands	14,551	50,312
United Kingdom	5,570,395	5,103,301
United States	18,019	4,952
Japan	264,822	418,567
Other countries	78,542	120,782
Total	7,790,732	8,204,200

**TRADE IN 1925.** The Egyptian cotton piece-goods market was very quiet at the opening of 1925 and business throughout the year was rather unsatisfactory. Trade was unusually slack during the summer months, with buying from hand to mouth and payments poor. Despite reduced quotations by manufacturers in the early autumn and later, local importers endeavoured to maintain price levels on account of the heavy stocks of goods on hand. With favourable reports of the 1925-26 Egyptian cotton crop, importers booked large forward orders in the late fall in anticipation of a revival in business, which, however, failed to materialise. Failures among wholesalers and retail merchants were unusually numerous in the early summer and again in the last quarter of 1925.

**TIMBER.** The total value of all imports of timber in 1925 was £E 1,933,305 compared with £E 1,762,469 in 1924. Rumania and Poland are the largest supplying countries.

**TOBACCO.**—For the manufacture of the famous Egyptian cigarettes, Egypt imports all the tobacco needed, but with the decline in the cigarette trade imports of leaf tobacco likewise fell, and totalled 7,058,047 kg. in 1925 of the value of £E 1,271,325. The leading countries of origin in that year were: Turkey, £E 473,473; China, £E 339,340; Greece, £E 285,657; Japan, £E 154,515; and Russia, £E 135,286. (See also "Cigarettes.")

**WATCHES.**—Imports of watches, principally from Switzerland, declined from £E 17,287 in 1924 to £E 43,955 in 1925.

**WHEAT.**—Though a wheat-producing country, Egypt does not yet grow enough for its requirements, and in 1925 imported no less than 53,814,861 kg. (£E 734,274), compared with 4,799,804 kg. (£E 47,463) in 1924.

**WHEAT FLOUR.**—Imports of wheat flour, valued at £E 2,395,654 in 1924, rose to £E 3,435,346 in 1925, Australia being the leading source of supply, with the United States second.

**WINE.**—Wine in casks was imported to the value of £E 198,206 in 1924, rising to £E 220,549 in 1925, Greece, Cyprus and Italy being the main sources of supply. Wine in bottles, mainly from France, remained practically stationary at £E 27,707 in 1925.

**WOOL.**—Raw wool exported from Egypt in 1925 totalled 1,898,572 kg. valued at £E 136,483, compared with 2,003,117 kg. at £E 114,661 in the preceding year, the United States being the largest recipient.

## CUSTOMS TARIFF

The headquarters of the Customs Administration of Egypt are at Alexandria, there being Customs Houses at that city, Cairo, Port Said, Suez, Damietta, and Koseir. Customs posts are established at Kantara, Ismailia, Rosetta, Wadi Halfa, Gemisa, Safaga, El 'Arish, and Sollûm.

**EXCISE DUTIES.**—Excise duties on goods produced in Egypt are as follow: (1) 15 per cent ad valorem on benzine and lubricating oils, (2) 4 per cent ad valorem on mazout and other products of petroleum, except kerosene, which is not subject to excise duty, (3) 195 millimes per litre of pure alcohol in liquors and liquids distilled in the country (the collection of this is entrusted to the Direct Taxes Department), (4) A "Droit de consommation" of 2 per cent ad valorem is collected on certain liquids, provisions, and building materials when imported, and an equivalent excise duty is imposed on the same articles if produced or manufactured in Egypt.

**EXPORT DUTIES.**—The duty is one per cent ad valorem on all products of Egypt and the Sudan. At Alexandria, Port Said and Suez a charge of 12 per mille on export is levied on all goods for quay dues. In addition, paving dues of a half per mille are payable at Alexandria, 2 per mille at Damietta, and one per mille (optionally) at Port Said. No export duty is levied on foreign goods re-exported, and a refund of the difference between the import duty and the export duty is made in the case of certain goods re-exported within six months, provided that they can be identified. The exportation of antiquities, fossil remains, animals, and gold and silver coins and articles is only allowed under special conditions.

**IMPORT DUTIES.** A duty of 8 per cent ad valorem is charged on all general merchandise the importation of which is not prohibited, with the following exceptions: Firewood and kerosene, on which 1 per cent is charged; refined sugar and wood other than firewood, on which 10 per cent is charged; benzine and lubricating mineral oils, on which 15 per cent is charged; alcoholic liquors and liquids (see later), and tobacco (see later).

Ad valorem for imports means the value of the article in the country where it was purchased at the date of its clearance for consumption in Egypt, plus all freights, insurance, packing, etc., to the Egyptian port of landing. The values of certain articles are by agreement between the Customs Administration and importers, fixed for a period not exceeding one year, and the ad valorem duties are collected on these values, which are regularly published in the "Journal Officiel."

**ALCOHOLIC LIQUORS.**—The import duties on alcoholic liquors and liquids are as follow: 200 millimes per litre of pure alcohol, in addition to an 8½ per cent. ad valorem duty on the value of the alcoholic liquors after deducting the cost of alcohol, 2 millimes per kilo on denatured alcohol, beer and wines containing not more than 23 per cent. of pure alcohol pay 8 per cent ad valorem only.

No refund is granted on alcohol and alcoholic liquors when re-exported.

**CONSUMPTION DUTY.**—A consumption duty of 2 per cent. ad valorem is imposed on the following articles in addition to the import duty:—

(a) Building Materials.—Sheet-zinc, sheet-lead, lead piping, bituminised or tarred felt or paper, marble, window and plate glass, pitch, asphalt, steel and iron angles and bars, iron and steel girders, iron and steel plates and sheets, steel and iron tubes, iron and steel galvanised sheets and cast-iron pipes.

(b) Foodstuffs.—Coconut oil, preserved meat and fish (tinned and potted), condensed milk, gelatine, dried figs, dried plums, dried apricots and apricot paste (Qamar el din), walnuts, hazelnuts, almonds, coconuts, chestnuts, locust beans, pistachio nuts, tea, coffee, cocoa, pepper, cinnamon and cloves.

(c) Liquids.—Beer, cider, castor oil, turpentine, mineral lubricating oils, colza oil, hydrochloric acid, nitric acid, sulphuric acid and ammonia.

**EXEMPTIONS.**—Personal effects of visitors to Egypt are not dutiable unless new, except guns, bicycles, motor cars, saddles, etc. Persons settling in Egypt for the first time are entitled to import their personal effects and furniture free of duty, provided that such articles have been previously in the use of the person importing them. A certificate stating that the person has arrived in Egypt for the first time must be obtained from his or her Consul. Other goods not subject to import duty are samples of wine, books and printed matter of all kinds, gold ingots, bars, sheets and wire, silver bars, sheets and wire, and gold coins of legal tender in their respective countries.

**PROHIBITED IMPORTS.** The importation of the following articles is strictly prohibited: Military arms and ammunition, explosives, hashish, adulterated tobacco, Sudanese tobacco, tobacco seed, seed of *cannabis indica* (hashish), foreign coins of silver, nickel, bronze or brass of legal tender in their respective countries, obscene pictures, printed matter, etc., cotton and cotton seed, irue leaves, live insects, bacteria and fungi injurious to plants, lime and other glutinous substances employed for catching birds, shaving brushes of Japanese origin.

The importation of the undermentioned articles is subject to special conditions: Arms and ammunition other than military, fireworks, poisons, stupefying drugs, shaving brushes, gold and silver objects, live plants, silk worms and bees, fresh fruits, chemical manures, cotton piece goods.

**QUAY DUES.**—Quay dues on all goods imported at Alexandria and Suez are 4½ per mille and at Port Said 7 per mille. A further half per mille is charged for municipal duties at Alexandria and 2 per mille at Damietta. At Port Said the payment of municipal dues is optional, and is reckoned at the rate of one per mille.

**TOBACCO (DUTIES ON).**—On March 7, 1920, the Egyptian Government promulgated a decree raising the duties on tobacco imported from countries with which Egypt has no commercial agreement. These now stand at P.T.100 per kg on leaf tobacco, P.T.110 per kg on stripped tobacco, P.T.120 per kg on cut tobacco and cigarettes, as compared with P.T.82, P.T.92 and P.T.102 per kg formerly. The duty on cigars remains at P.T.100 per kg. The Egyptian conventional rates remain at P.T.80, P.T.90 and P.T.100 per kg respectively. (P.T.97½=£1)

## REPRESENTATIVE COMMERCIAL ENTERPRISES

### ASSOCIATED BRITISH MANUFACTURERS (EGYPT), LTD.

**Inception.**—The present Association was formed as a result of the not altogether satisfactory practice of carrying on manufacturers' business abroad by the employment of agents. Combining the foreign sales organisations of the British manufacturers who form the Association, it constitutes a branch office in the territory covered, and not an agency, of those manufacturers. The concern under notice is the Egypt company, covering Egypt, the Sudan, Palestine, Syria and Cyprus, and similar companies of the Association represent the same manufacturers' operations in other parts of the world.

**Associated Shareholders.**—The following are firms holding shares and associated in the enterprise:—The Birmingham Small Arms Co. Ltd., manufacturing service and sporting rifles, motor cars, motor cycles, bicycles, John Brown & Co. Ltd., manufacturing carbon and alloy steel bars, castings, railway tyres and axles, Callender's Cable & Construction Co. Ltd., producing insulated wires, cables and accessories in connection with the distribution of electricity, The English Electric Co. Ltd., comprising Dick, Kerr & Co. Ltd., Siemens Bros. Dynamo Works, Ltd., Willans & Robinson, Ltd., Coventry Ordnance Works, Ltd., Phoenix Dynamo Mfrg. Co. Ltd., and the United Electric Car Co. Ltd., supplying electric machinery and apparatus, land steam turbines and Diesel engines, Dorman, Long & Co. Ltd., makers of structural steel work, bridge spans, steel rails, etc., Thomas Firth & Sons, Ltd., manufacturing high speed, carbon and running steel, files, drills and saws, Glenfield & Kennedy, Ltd., makers of sluice valves for water, steam, oil or gas, hydraulic and pumping machinery, sluice gates for dams, Gwynnes, Ltd., manufacturers of centrifugal pumping machinery and fire engines, J. & E. Hall, Ltd., supplying refrigerating machinery, "Hallford" motor vehicles, R. & W. Hawthorn Leslie & Co., Ltd., specialising in railway locomotives, marine engines, ships' boilers and floating docks, Hughes & Lancaster, Ltd., drainage systems and air compressors, Petters, Ltd., and Vickers-Petters, Ltd., manufacturing semi-Diesel crude oil engines for industrial, agricultural and marine purposes, and aeroplanes.

**Other Associated Firms.**—With the shareholding firms listed above are associated:—Bon Accord Engineering Co., Ltd., making thrashers, gram winnowers and broadcast sowing machines; Davey, Paxman & Co., Ltd., Expanded Metal Co., supplying all types of expanded metal for reinforced concrete and plaster work, The Patent Lighting Co., Ltd., specialising in the lighting of railway vehicles, lighthouses, etc., The Paterson Engineering Co., Ltd., manufacturing water purification plant, Siemens Bros. & Co., Ltd., telephones, etc., Small & Parkes, Ltd., patentees of the "Roko" hair belt and belt paste, C. C. Wakefield & Co., Ltd., producing machine lubricating oils and the patent "Castrol" motor oil.

**Capital.**—The capital of the company stands at £100,000.

**Operations.**—The various associates of the group are capable of supplying a complete range of finished work and material suited to the requirements of the country. Efficiently controlled, and holding a qualified, expert staff at the service of customers throughout the territory, the Associated

THE ASSOCIATED BRITISH MANUFACTURERS (EGYPT) LTD., Cairo.

1. Section of Showrooms.
2. Offices and Showrooms.
3. Pumping Station from Nile into Mahmoudieh Canal ; four Willans Diesel Engines, each 335 B.H.P., coupled to Gwynnes Centrifugal Pumps, each capable of discharging 6.4 cubic metres of water per second.

(See letterpress, page 65.)

British Manufacturers (Egypt), Ltd, maintains a sound reputation for high-class machinery and apparatus.

**Recent Contracts.**—Among recent contracts secured by that reputation are four for the Egyptian Government for the Public Works Ministry, the Aif pumping station, involving a sum of £E 82,000, for the Coastguard Service, an armoured sea-going vessel (£E 64,000), for the State Railways, the Dessouk railway bridge (£E 140,000), and for the Government Municipalities, the Mehalla el Kebir Waterworks (£E 8,000). The company was recently entrusted by the Sudan Government Public Utility Services with contracts for a lighting and power stations' electric tramway service, waterworks and the Khartoum to Omdurman bridge across the Nile, at a total cost of £E 800,000.

**Offices.**—Head office Block "B," Khedivial Buildings, Sharia Emad-el-Din, Cairo, Sudan office Khartoum, London office 8, The Sanctuary, Westminster, S.W. 1 (secretary, Mr W. Ender) Cables "Rebirtman," at each address.

**Directorate.**—Sir T. O. Callender, Col. Byrne, C.M.G., Mr H. T. Rice, Mr F. C. Fairholme and Mr F. G. Moore. General manager, Lt.-Col. V. B. Gray.

#### THE EGYPTIAN ENGINEERING STORES.

**Policy.**—The development of countries such as Egypt, practically without any natural resources apart from agriculture, is attributable in a considerable degree to the enterprise of reputable machinery agents, constantly seeking opportunities to introduce improved methods of agricultural procedure. To overcome the inherent conservatism of

the farmer has been difficult, but to-day irrigation by means of centrifugal pumps driven by steam or oil engines is almost universal. On most of the large cultivated properties may also be found steam-power thrashing machines and cultivators, their employment being due largely to the example of the State Domains Administration and the late Prince Hussein Kamel Pacha, who became Sultan of Egypt, and their availability to such progressive businesses as The Egyptian Engineering Stores.

**Inception.**—The firm under notice was founded in 1887 by the late Henri Steinemann, a Swiss citizen, and the late Aziz Mabardi, of Syrian origin. After the death of Mr. Mabardi in 1905 the business was carried on by Mr. Steinemann until 1910, when it was constituted as a limited liability company, with a paid-up capital (subscribed principally in London) of £F 30,000. In 1914 the stock and premises of The Egyptian Engineering Co., Ltd., in Cairo were purchased.

**Development.**—The company's policy in acting only for manufacturers of world-wide repute finds convincing justification in the continual development of the firm, whose accumulated reserves now total £E 60,000.

**Representations.**—Clayton & Shuttleworth, Ltd., of Lincoln (oil engines and thrashing machines), Aveling & Porter, Ltd., of Rochester (road rollers and steam ploughing tackle), Barford & Perkins, Ltd., of Peterborough (motor road rollers), Galloways, Ltd., of Manchester (hoilers), Dennis Bros., Ltd., of Guildford (motor fire engines), The Foamite Fuel-oil Co., Ltd., of London

(fire-extinguishing plant), the Swiss Locomotive & Engine Works, of Winterthur (Diesel and crude oil engines), and L. Duimont, of Paris (centrifugal pumps).

**Head Office.**—42-44, Rue Sidi-el-Metwalli, Alexandria Cables "Aziz," Alexandria Codes A B C 5th Edition and Bentley's.

**Branches.**—Sharia Emad-el-Din, Cairo, and at Assiut and Jaffa. London agents M. Samuel & Co., Ltd.

#### SENDER & CO.

**Inception.**—Prosperity attending the establishment overseas of a British firm, with an organisation on British principles and adapted to meet local conditions, finds another exemplification in the fortunes of this company. It was founded in 1908 by Mr. Clarence Sender under the title of Sender & Co., with offices in Sharia Emad-el-Din, Cairo.

**Development.**—Operating originally as insurance agents and manufacturers' representatives, from 1910 onwards the firm devoted its principal activities to the wine, spirit and cigar trade, in which its senior had been engaged in Egypt since 1897 as a manager of the formerly pre-eminent concern, Walker, Meimarachi & Co. Always in the forefront of progressive firms, Messrs. Sender & Co., requiring larger offices, in 1911 removed to 18, Sharia Madabegh, Cairo. Eight years later a commercial side to the business was developed, and following continued prosperity the company ranks to-day as one of the largest wine, spirit and general merchants in Egypt, the Sudan and Palestine. The firm's unvarying policy is to accept no

THE EGYPTIAN ENGINEERING STORES, Alexandria.

2. Non-compressor 60 horse power Diesel Motor.
3. Compound Portable Engine, Condensing Type.
4. Thrashing Machine, with movable Winnowers.

agencies other than those capable of being worked side by side with existing representations, a list of which appears below

**Organisation.**—All the company's branch managers are also travellers, trained in its selling methods, and while good personal representation is regarded as constituting the first line of attack in such a business, the firm does not consider that its functions as agent begin and end with the introduction and sale of represented lines, but that they should embrace the role of propagandist for forming public opinion, and thereby the creation of demand, or where demand already exists, its development. In addition to the traveller-managers, further representatives are engaged in canvassing towns in the interior. The whole of Egypt, the Sudan, Palestine and Syria is so covered.

**Representations.**—John Dewar & Sons, Perth, St Marceaux, Rennes, Apollinaris Co, London, Ardath Tobacco Co, London, J C Eno, Ltd, London, Glaxo, London, Castle Brewery, Amersfoort, Holland, Gordon's Dry Gin Co, London, Thos Hine & Co, Jarnac, Cognac, International Chemical Co, London, W E Johnson & Co, Liverpool, Justerini & Brooks, London, Schroder & Schyler & Cie, Bordeaux, W A Ross & Sons, Belfast, Warre & Co, Oporto, Williams, Humbert & Co, Jerez, Justus Van Maurik, Amsterdam and London, Jules Regnier & Co, Dijon, Lever Bros, Ltd, Port Sunlight, Benjamin Brooke & Co, Ltd, Liverpool, Blondeau & Cie, Liverpool, Hodgson & Simpson, Liverpool, R S Hudson, Ltd, Liverpool, Sautas Co, London, Vinolia Co, Liverpool, Woodward, Ltd, London.

**Offices.**—Head offices and warehouses, 154, Sharia Madabegh, Cairo. Branch offices and warehouses, 10, Rue General Earle, Alexandria, Rue Tantai, Port Said, Rue Colmar, Suez, Sirdar Avenue, Khartoum, King George Avenue, Jaffa.

**Bankers.** Egypt Barclays Bank (Dominion, Colonial & Overseas), Kasr-el-Nil, Cairo, and branches, London. Barclays Bank (Dominion, Colonial & Overseas), 37-9, King William Street, E.C. 4, Paris. Comptoir National d'Escompte de Paris, Rue Bergère.

#### HICKSON & THOMAS, LTD.

**Inception.**—About 20 years have elapsed since the establishment of the firm of Hickson & Thomas, Ltd, which claims a recognised place among the leading commission agents, general importers and exporters of Egypt and the Near East.

**Activities.**—The enterprise under notice represents the eminent European firms mentioned below. Its head office in Egypt is situated at Cairo with an important branch at Alexandria, while there are agencies at Port Said, Khartoum and in Palestine. The whole of the territory so served is covered by an efficient staff of travellers under the direction of Mr L H Mills Thomas. The managing director, Mr D Mills Thomas, supervises the similar covering of Gibraltar, Malta and the Canary Islands.

**Representations.** T H Downing & Co, Ltd, Leicester (Alpha and Sensola underwear, knitted goods, hosiery). Lloyd, Attree & Smith, London and Belfast (shirts, ties, etc.). Innes, Henderson & Co, Ltd, Hawick (Henda underwear). Gaunt & Hudson, Ltd, London (hats, waterproofs, etc.). Sambrook,

Witting & Co, Ltd, London (ties). W. Wood & Son, Ltd, London (trunks and leather goods). Church & Co, Northampton (boots and shoes). Phipps & Son, Ltd, Northampton (shoe manufacturers' supplies). #### THE MINERAL WATERS AND WINES AND SPIRITS CO. (N. SPATHIS).

**Inception.**—In the Near East climatic conditions create a natural demand for good mineral waters, and for over forty years the company now under notice has been supplying this desideratum. Originally established in 1884 as N Spathis & Co, the whole business was taken over three years later by its founder, Mr N Spathis, who in 1920 transformed it into the present concern.

**Capital.**—The capital of the firm is £E 60,000, in £E 4 shares.

(See letterpress, page 67.)

SENDER & CO., Cairo.

HICKSON AND THOMAS, LTD., Cairo  
A view in the Showrooms.

**Development.** Steadily progressing from the outset, the business has been for many years the leading mineral waters and syrup manufactory in the Near East, with a large branch in Alexandria and agencies in the principal towns of Egypt. Over 150 persons are employed in the manufacture and distribution of its products throughout Egypt and the Sudan.

**Products.** The company produces 20 kinds of syrup and 16 brands of aerated waters, such as lemonade, orangeade, ginger beer, ginger ale and soda water. Only purest ingredients are used, and the greatest care is exercised in the cleansing of bottles, etc., the water first passing through Chamberlain filters (Pasteur system). The best brands of wines, spirits, bottled beers and teas are always stocked in the company's stores.

**Patronage.**—In Cairo and Alexandria the firm is patronised by H.M. the King of Egypt, the Residency, and practically every mess of the British Army, together with leading clubs, hotels, hospitals, etc.

**Offices.**—Head office: 15, Nubar Pasha, Cairo. Alexandria office: Averoff Street. Cables: "Spathis" Code: A B C, 5th Edition.

**UNITED DRUG STORES OF EGYPT.**—26 rue Manakh, Cairo. Established in 1926. Druggists and dealers in chemical and pharmaceutical supplies. Capital £100,000. Financial year ends March 31. Managers: Elias Gannagé and Jack Goldstein. Administration: N. Gannagé (president), W. Perkins, F. J. Denham, Ch. Goding, Choulal.

**UNITED EGYPTIAN SALT, LTD.**—5 rue Adib, Alexandria. Established in 1907. Engaged in the sale of salt in Egypt. Capital, £300,000 in £1 shares, fully paid. Administration: E. Vermond, S. Wellhoff, A. J. Lowe, P. Fabri, A. Baerlocher, A. Hasda. Alexandria management: A. J. Lowe (delegate director) and P. H. du Boulay (sub-manager).

NAG-HAMADI SUGAR ESTATE. NEWLY PLANTED FIELD.

## AGRICULTURE

### GENERAL DATA

**E**GYPT holds a unique position in the agricultural world by reason of the great fertility of its soil and the fact that its agricultural prosperity is wholly dependent upon artificial irrigation, which is only made practicable by means of barrages on the River Nile itself, supplying in some parts a system of canals and in others flood basins. These different methods are described later. It is due to them that Egypt has not only been able to cultivate cotton, but also to evolve special kinds which have the advantage of giving a large yield combined with a fibre of exceptional quality.

Cotton in normal years occupies about 32 per cent of the cultivated area of Egypt, producing an annual crop of some six million kantars. In addition, nearly enough cereals are grown to meet local requirements, as well as fodder crops for the upkeep of a large number of cattle.

**ADMINISTRATION.**—The Ministry of Agriculture, whose headquarters are in the Sharia el-Falaki, Cairo, is one of the most important and busiest of Egyptian Government Departments. Its work is carried out by means of an Administrative Service, Statistical Office, Entomological, Agronomic, Horticultural and Seed and Manure Sections, a Co-operative Section, a Veterinary Service,

a Chemical Laboratory, at present situated in the Higher School of Agriculture, and a Botanical and Plant-breeding Section.

The provincial staff of the Ministry consists of an Inspector of Agriculture and one or more veterinary inspectors in each province. The former is assisted by one or more sub-inspectors. In the majority of markazes an agricultural engineer or a moawen of agriculture is permanently attached to the markaz. Members of the provincial staff follow up and present monthly reports on the progress of the various crops and on the condition of live-stock; they administer the laws and regulations dealing with the control of agricultural pests, particularly the cotton worm and boll worm, and assist in carrying out the Ministry's experimental programme in the provinces, as also in the supervision of cotton seed farms.

**AGRICULTURAL SCHOOLS.**—Though all agricultural and veterinary schools in Egypt have been since 1923 under the control of the Ministry of Education, mention may be made here more fittingly of a few of the most important. The Agricultural College at Giza is a Higher School, to which students are admitted who hold the Secondary Education Certificate Part II. The course of study extends over four years,

the school diploma being awarded after one year's satisfactory work subsequent to graduation. The School of Veterinary Medicine, also at Giza, was opened in 1916, and offers a course of study extending over four years, at the end of which period successful candidates are granted a diploma authorising them to practise as veterinary surgeons in Egypt. The Mushtuhur School of Agriculture is an intermediate one, at which all the pupils are sons of landowners. There is another intermediate School of Agriculture at Shibin, working under the same conditions as that at Mushtubur. Under the Provincial Councils are many admirably conducted intermediate and farm schools.

**BOTANICAL LABORATORY AND EXPERIMENTAL FARM.**—The Botanical Laboratory and Experimental Farm are situated at Giza, having for their main object the improvement of cotton, wheat and other crops grown in the country, by breeding better and purer types on the basis of field selection, combined with self-fertilisation and hybridisation. Arrangements are made with the State Domain Administration and with certain selected private cultivators for the propagation in bulk of the improved strains which result. In addition, a considerable

amount of purely experimental work is carried out, largely with the object of throwing light on the various environmental factors which affect, either favourably or adversely, the growth of the individual plant and the ultimate character of the crop as a whole. In particular, the relation between the development of the plant in its early stages and the final yield is closely studied.

The fungus and bacterial diseases of Egyptian crops in general, and of cotton in particular, are investigated and means for controlling them are devised and tested. Specimens of diseased plants are analysed and preventive action suggested where this is considered necessary. Reports are made on any samples of cotton, wheat, etc., that may be sent in for examination, and information is supplied as to the quality, purity and germination capacity of agricultural seeds.

**COTTON RESEARCH BOARD.** See article on "Cotton" following.

**ENTOMOLOGICAL SECTION.**—The Entomological Section gives advice and information to correspondents about insect pests and methods for their control. For this purpose the pests of economic plants are being bred and studied. Experiments are made with a view to obtaining non dangerous and at the same time efficient remedies for the principal crop pests.

In order to prevent the introduction of plant diseases into Egypt from abroad the Ministry of Agriculture prohibits the landing of cotton plants, seeds of cotton, cotton ginned or unginned, vine leaves, living insects, their eggs, larvæ and pupæ, bacteria and fungi harmful to plants. The importation of date palm trees, bananas (*Musaceæ*), sugar canes, green olives and olive trees, silkworm eggs, and honey bees is permitted only by authorisation of the Ministry of Agriculture.

**STATE DOMAINS.**—During the period of Egypt's financial stress in the 'seventies the Egyptian Government raised a loan of £1,850,000 on the security of a part of its more valuable domains. In 1878 an international Board of three Commissioners, one Egyptian, one French and one English, was instituted for the management of these domains. During the process of the liquidation of the debt these properties were reduced by successive sales from 425,720 feddans to 151,475 feddans, which was the area handed over by the Commissioners to the Government in April 1913, after the extinction of the debt.

Under the existing Administration the estates comprising the Private Domains are managed by local agents appointed for the purpose and acting directly under the orders of the Administration, or through the intermediary of Mudiryas and Governorates.

The area of the estates within the surveyed zones under the management of the State Domains Administration on March 31, 1924, was 1,488,800 feddans. This area does not include (1) the unsurveyed desert land lying within the limits of the Egyptian territory, (2) island lands, i.e. lands situated between the banks of the Nile or on islands in the river, which are the property of the Egyptian Government and are subject to erosion and displacement forming the object of special legislation, the administration of which is entrusted to the Direct Taxes Department, Ministry of Finance; (3) quarries, mines and underground rights, the administration of which is entrusted to the Mines and Quarries Department; and (4) lakes used as fishing ponds, as well as lands allotted to public utility.

1. IRRIGATING COTTON.
2. PICKING.
3. BRINGING IN THE NEWLY-PICKED COTTON.

1. LEVELLING THE SOIL.

2. SOWING RICE

The Administration, in addition, manages 40,308,000 square metres of urban property, of which 10,883,500 square metres are situated in Cairo, 7,913,000 in Alexandria, and the remaining 15,510,900 in other towns.

The before-mentioned 1,488,800 feddans of rural property is composed of the following categories:—

	FEDDANS
Land cultivated direct by the Administration or occupied in small holdings by farm labourers or by farm buildings	30,100
Estates leased	307,776
Waste land, including small areas cultivated from time to time on annual lease	1,141,834
	<hr/>
	1,488,800

In maintaining these farms the Administration aims specially at producing and distributing a high-grade cotton seed from carefully selected plants grown under the best possible field conditions. The cotton

grown on the estates is ginned at the Administration's own factory at Sakha. The cotton is sent to Alexandria and sold by public auction. The subsidiary crops from the Administration's estates are either sold or supplied to other Departments of State.

### PRODUCTS

The total area under the various crops cultivated in Egypt, according to the latest statistics available, was 6,152,739 feddans, the extent of the principal crops being approximately as follows: Cotton, 1,788,000 feddans; maize, 1,707,000 feddans; wheat, 1,304,000 feddans; rice, 222,000 feddans; sorghum (millet), 140,000 feddans; barley, 358,000 feddans; sugar-cane 51,000 feddans; onions, 40,000 feddans.

**BEANS.**—These are grown in the basin and canal lands, being harvested in March and April. In 1923-24 some 435,000 feddans were under cultivation, yielding a crop of 2,085,762 ardebs.

**BERSEEM.**—The name "Berseem" covers the various kinds of clover grown in Egypt under the general name of Egyptian clover (*Trifolium alexandrinum*). This is the principal fodder crop of the country, and, directly and indirectly it is second in importance only to the cotton crop itself. It is grown among the crops in the Nile Valley, and during six months of the year the dairy stock and working animals take it fresh from the fields, where the practice is to tether the beasts in the growing crop. When half-dry it is baled and known as "dries," serving in that form to carry the stock through the warmer months. Berseem is also of great value to the cotton crop, for it enriches the soil with its manurial properties, having also the power of extracting the nitrogen from the air and converting it into plant food.

There are four principal varieties of berseem grown in the Nile Valley, that known as "Miskawi" being by far the most important. It is raised largely under perennial

1. MAIZE.

2. THRESHING GRAIN WITH MODERN EQUIPMENT

irrigation, is tall and luxuriant in growth, and yields an extraordinary amount of green food. The "Fahl," "Saidi" and "Khadrawi" varieties are grown mostly in basin lands and need little water. Berseem is sown in October-November by broadcasting it on the water; it sinks into the soil and very quickly takes root. Three waterings are needed before the first cutting is taken towards the end of December. The crop is watered after each cutting, the yields recurring at intervals of five or six weeks. The seed is harvested in June and July.

**COTTON.** See article following.

**FLAX.**—In dynastic times flax was cultivated with great diligence in Egypt, and the weavers of linen must have formed a considerable and wealthy section of the community. The importance of the flax crop was great, and in the Bible it is coupled with barley. In modern times the cultivation of flax has decreased as that of cotton has increased, but it is still grown in Lower Egypt and the north basins, the seed being sown in November and the crop gathered in May and June.

**FRUIT AND VEGETABLES.** There would appear to be a prospect in the future for a trade in fruit and vegetables, which are capable of being grown in Egypt under the most favourable conditions for marketing. Among the most important fruits and vegetables at present cultivated are dates, oranges, bananas, limes, grapes, mangoes, guavas, apricots, figs, melons, tomatoes, aubergines, cabbages, cauliflowers, lettuces, eschalots and artichokes. (See also "Onions.")

**LIVE STOCK.**—Though not essentially a stock-raising country, Egypt possesses many flocks of sheep and herds of cattle. Oxen, buffaloes and camels are utilised extensively for ploughing and draught purposes, and the ass is in many parts more generally used as a beast of burden than the horse. The last agricultural census showed the numbers of live stock in Egypt to be as under: Horses, 37,421; mules, 22,410; asses, 715,255; sheep, 1,084,703; goats, 451,640; camels, 151,197; cattle, 689,237; buffaloes, 727,027; pigs, 13,053.

**MAIZE.**—Latest statistics show that the area under maize in Egypt—which includes the canal lands generally—is about 1,797,000 feddans. Production amounts to roughly 12,000,000 ardebs, which is rather more than is required for local consumption, between 4,000 and 5,000 tons being exported annually.

**MINOR CROPS.**—These are many and varied. Lentils are grown in the basin lands, earth nuts in the sandy soil of Lower Egypt, sorghum on all basin lands and in limited areas in Lower Egypt, barley on the perennially irrigated lands, salt lands and poor basin lands, and henna in Lower Egypt, especially Shargiya.

**ONIONS.**—Onions have of recent years become one of Egypt's most profitable agricultural crops; they are grown extensively in Upper Egypt and to a less extent in Lower Egypt, the total area under cultivation exceeding 40,000 feddans, from which nearly 6,000,000 kantars of onions are obtained. (See also under "Commerce.")

**RICE.**—Rice is a most important Egyptian crop, being a staple food of the fellahen, but not sufficient is grown for the requirements of the country, imports being considerable. The area of cultivation is confined to the North Delta and the Fayyum, August being the month of harvest in Lower and August to September in Upper Egypt. In 1923-24 some 222,000 feddans were under

2. Transporting Cane from the Estate.
3. The Factory at Hawamdiéh

cultivation, the production of non-decorticated rice being about 770 000 ardebs. (See also under "Commerce.")

**SUGAR.**—Sugar, like cotton, is now a staple product of Egypt. The cane is largely cultivated in the northern part of the country for the purpose of making sugar. An inferior variety, which is eaten raw and was introduced from India in the time of the Khalfis, is grown by the fellahs in every part of Egypt. At one time sugar factories were a monopoly of the Khedive, and mills were erected in rapid succession principally in the district of Minya. The lofty chimneys and corrugated iron roofs of these factories impart a very modern industrial appearance to the country, while at night their flaming furnaces light up the Nile and its surroundings with a weird effect.

Though the area under sugar cane (51,501 faddans in 1923-24) is somewhat less than formerly the quality of the sugar produced is much superior. Production in that year totalled 90,007 tons of sugar and 54,373 tons of molasses. (See also under "Commerce.")

**WHEAT.**—Wheat ranks third amongst Egypt's crops, the total area cultivated in the last year for which statistics are available being 1,364,949 faddans which produced 7,376,133 ardebs of grain. Wheat is grown as a winter crop in Egypt in all canal and basin lands, the harvest taking place between April and June. (See also under "Commerce.")

#### REPRESENTATIVE AGRICULTURAL ENTERPRISES

##### SOCIÉTÉ GÉNÉRALE DES SUCRERIES ET DE LA RAFFINERIE D'ÉGYPTE.

**Capital.**—This prominent Egyptian limited company which is actively engaged in that important constituent of the country's commerce, sugar refining, possesses a capital of Fr 34,777,300, and has its head office at Cairo.

**Factories and Refinery.**—Five factories established by the company in Upper Egypt deal yearly with about 900,000 tons of sugar cane, while the refinery at Hawamdiéh refines a million sacks of raw sugar each year. A view of the refinery at Hawamdiéh, another of the factory situated at Nag Hamadi, and a third showing the transportation of sugar cane from the Nag Hamadi estate are reproduced herewith.

**Supply of Cane.**—The supply of cane is maintained from the company's own plantations, which yield very fine crops, and by purchases from private planters, the further requirements of the refinery being completed by the acquisition of raw sugar from Java or elsewhere.

**Output.**—The company produces annually to the extent of 90,000 tons of the purest sugar, the refinery absorbing yearly about 100,000 tons converted into several forms of the pure article, such as loaves, lumps, granulated and powdered sugar. These products supply the consumption of Egypt and the Sudan, and in addition are exported to many other countries.

**Personnel.**—The company employs a permanent staff of some 700 on a monthly basis and more than 20,000 workmen.

**Transport.**—Over 400 kilometres of narrow-gauge railway are operated by this important corporation, which possesses also an imposing fleet on the Nile.

**Directorate.**—The board of directors is constituted as follows: S.E. V. Harari Pacha, C.M.G. (president); H. Naus Bey (general managing director), S.E. J. Cattani Pacha, and MM. G. Lemarquis, L. Lhomme, E. Miriel, A. Pezas and S. Weillhoff.

**SOCIÉTÉ ANONYME DE WADI KOM-OMBO.**

**Inception.**—Projected for the purpose of wresting from the desert the agricultural results characteristic of more kindly soil, this enterprising company was authorised by Khedivial decree of April 14, 1904.

**Capital.**—The authorised capital of the concern is £1,200,000, comprising 300,000 shares, all fully paid, of £4 each. There are also issued 15,000 founders' shares without nominal value. The company possesses no debentures or mortgage debts.

**Activities.** In accordance with the object of its inception, the Society devotes itself to the development, cultivation and subsequent sale of some 70,000 acres of desert land which it owns at Wadi Kom-Ombo, Mudriya (province) of Assuan, roughly 500 miles south of Cairo. The main settlement established by the enterprise has now become the headquarters of a provincial district.

**Communications.**—The State Railway line from Cairo to Shellal runs through the estate, on which are situated two stations, Kom-Ombo and Gabal Silsila, while the Nile adjoins the western boundary of the territory, affording river communication. A comprehensive network of light railway track, 70 miles in length, ensures easy and swift access to all parts of the estate, and to facilitate verbal communication, all villages are connected by telephone with the main settlement, which in turn is provided with a telegraphic office and a trunk call telephone exchange.

**Irrigation.** The irrigation of the estate is entrusted to four pumps having a total horsepower of 6,500. All the year round water is pumped from the Nile into the main irrigation canal, itself the source of supply of feeder canals. The pumping lift is 16 metres at high Nile, and 23 metres at low Nile.

**Crops.**—The area of the property now under cultivation is 24,000 feddans (1 feddan equalling 1.038 acres), and fresh land is in process of reclamation. The main crops raised are sugar cane, cotton, wheat, maize, barley and beans.

**Sale of Produce.**—Arrangements for the disposal of the crops so raised on the Wadi Kom-Ombo estate are complete and efficient. The sugar cane yield is sold to the Société Générale des Sucreries et de la Raffinerie d'Egypte (whose activities are described on the opposite page), and is crushed by that company in its factory specially erected in the Kom-Ombo district to absorb the output of local plantations. About 210,000 tons of cane are thus dealt with annually. The cotton crop, averaging some 10,000 kantars (1 kantar equalling 99.0492 lbs), is sold in Alexandria through the offices of one of the leading firms of cotton brokers. The remaining staple crops, wheat, maize, barley and beans, usually reaching a total weight of 4,000 to 5,000 tons, are disposed of locally or on the Cairo market. An additional commodity annually sold is tannin, or wheat straw, of which about 10,000 tons are gathered for pressing into bales.

**Plant and Fuel.**—Ploughing and threshing operations on the estate are carried out by steam. The light railway engines used for transport over the company's tract burn coal, while the pumps employed in irrigation consume fuel oil and vegetable waste matter. All mechanical repairs are executed locally in the company's own workshop.

**Population.**—The present population of Wadi Kom-Ombo tract is estimated at some 30,000. Every attention is given to the welfare of this community, education and medical attendance being provided by the company for the children of its staff and tenants.

**SOCIÉTÉ ANONYME DE WADI KOM-OMBO, Cairo.**

1. Cotton Field on Company's Estates.
2. Principal Street at Kom-Ombo.
3. Sugar Cane Field on the Estates.
4. Power Pumps.

**Visitors.**—For the convenience of visitors to the estate the company runs a small hotel, offering accommodation throughout the year. In addition to the varied interest of the agricultural processes employed in the immediate neighbourhood, there are the attractions for tourists of an adjacent Ptolemaic temple on the Nile and traces of prehistoric civilisation in the adjoining hills.

**Directorate.** The board of directors is composed of the following, all most actively

**Bankers.**—The National Bank of Egypt

#### THE BRITISH SULPHATE OF AMMONIA FEDERATION, LTD.

**Activities.** The extent and importance of the sulphate of ammonia industry need no further emphasis when it is recalled that during 1925 the world's consumption of this chemical for agricultural purposes amounted

a large proportion of the Canadian, Indian and South African output

The activities of the Federation extend practically to every country in the world, covering in particular Spain, Italy, Egypt, the Sudan, Palestine, China, Japan, India, Java, Sumatra, Malay Peninsula, Kenya Colony, Uganda, Sierra Leone, Trinidad and Canada.

**Egyptian Office.**—The Federation's office was established in Alexandria in

THE BRITISH SULPHATE OF AMMONIA FEDERATION LTD., Alexandria

(1) & (3) Unloading (2) the Product ready for transportation by (4) Rail and (5) Canal to (6) the Company's Customers through (7) Sales Depôts located throughout Egypt.

concerned with the development of Egyptian resources. H. E. V. Harari Pacha, C.M.G. (chairman), H. E. J. Cattani Pacha Aslan (vice-chairman), Mr. R. A. Harari (managing director), Mr. Elie N. Mosséri, Mr. Victor Mosséri, Mr. Robert S. Rolo, C.B.E., Mr. Alfred Suarès, Mr. Leon Suarès, and S.E. Mohammed Bey Talaat Harb.

**Auditors.**—Messrs. Russell & Co.

**Solicitors.**—Messrs. Cesar Adda.

to 2,725,471 tons, of an approximate value of £40,000,000. Nor is it necessary to stress the vital part played by The British Sulphate of Ammonia Federation Ltd. in that distribution, other than to state that it represents 90 per cent. of the total annual output in Great Britain and Ireland of this nitrogenous fertiliser (21 per cent. nitrogen), having on June 1, 1925, 428 members in the United Kingdom, and that it also handles

1915, with Mr. M. C. Georgiou, C.D.A. (Edin.), as manager. The activities of this office have made sulphate of ammonia widely known and greatly appreciated by cultivators in Egypt, from the powerful Dairas who possess thousands of acres to the small fellah who farms but a few foddans.

**Benefit to Crops.**—The fact that the Ministry of Agriculture, recognizing the special merits of sulphate of ammonia, supplies farmers

with this fertiliser by a most beneficial credit system is sufficient proof of its effectiveness for Egyptian crops. One of its oldest users in Egypt is the Société Générale des Sucreries, and the general managing director, H. Naus Bey, referred to by Sir W. Wilcocks in his standard work "Egyptian Irrigation," as the real sugar-cane expert of Upper Egypt, writes as follows: "Sulphate of ammonia forms an excellent manure for sugar-cane. We have been using it for the last twenty years, and do not hesitate to recommend it strongly to planters." Apart from that crop, sulphate of ammonia is specially suitable for the manuring of wheat, barley, cotton, maize and rice.

**Increase in Yield.**—The present cost of manuring one acre with this fertiliser varies, according to the crop, from £E 1 to £E 3. The resulting increase in yield is valued at from £E 5 to £E 25, whence it is evident that the wealth of Egypt, which depends entirely on the produce of the soil, will be considerably augmented when the use of sulphate of ammonia becomes even more popular. It is of interest to note that recent extensive fertilising experiments of

#### THE EGYPTIAN MARKETS LTD.

**Old and New-Style Markets.** To the student of humanity, with particular application to the present-day descendants of the most ancient civilisation of the known world, the operations of The Egyptian Markets, Ltd., have a distinct interest. In the old days the town and village traders used to congregate in markets even as they do to-day, but with the prime difference that to the village headman (Omdah) the market was a very lucrative source of revenue, and one which he seldom failed to abuse. Whatever was received was clear profit, for little if anything was ever spent to provide facilities of any description.

To-day the whole conduct of the market is revolutionised. Gone are the extortion and general lack of organisation, the filth and disease-breeding stagnant pools. Well-kept enclosures are now the rule, with substantially constructed sheds, tanks of fresh water, and guards to maintain order. With regard to the actual buying and selling, forms of contract are supplied which when signed by contracting parties are filed with the company, providing a permanent record

free admission. If his reasoning is sound he will prevail, otherwise he must pay the entrance fee levied on animals and vehicles. The fee itself, one piastre (about 2½d), does not matter much to anyone, but to outwit the guardian of the gate is a point worthy the contesting.

**Live Stock.**—Inside the market the traders gather in decorous groups, peacefully discussing and bargaining, or sitting in stolid patience beside their animals, awaiting a purchaser. The camels stand feeding in long lines, the pack animals outnumbering the finer racing or trotting beasts and the young camels destined for the butcher. Practically every kind of domestic animal is on sale, cattle, sheep, goats, horses, donkeys, mules being each a detail in a scene crammed with extraordinary interest.

**Merchandise.**—Yet another enclosure serves for the sale of merchandise, cheap Manchester goods, crockery, tools, boots and shoes, and foodstuffs of every description. Here is a liberal education in values for there would appear to be nothing so dilapidated in the way of old pots, pans, sacks, rope-ends, broken tools, etc., that has not a possible buyer.

THE EGYPTIAN MARKETS LTD., Cairo.  
Directors and General Manager inspecting one of the Company's 120 markets.

two varieties of cotton, Sakellandes and Ashmouni, carried out in different parts of Egypt by the well-known agricultural expert, Dr. Elhe Agluon, manager of the estates of Baron Menasse and Messrs. Sursock and Agluon, have demonstrated clearly that sulphate of ammonia, supplemented by superphosphate, forms by far the best manure for cotton. This mixture produced an average increase in yield of no less than 32½ per cent.

**Distribution.** Sulphate of ammonia is now stocked in over 300 stores situated in all parts of Egypt from Alexandria to Assuan by the Ministry of Agriculture, the Royal Agricultural Society, the Egyptian Markets, Ltd., and other distributors. Supplies of sulphate of ammonia of uniform quality are obtainable in bags of 70 kilos each and at fixed prices. The product of The British Sulphate of Ammonia Federation, Ltd., is of guaranteed purity, strength and efficacy.

**Offices.**—London (head office), 28 Grosvenor Gardens, SW 1, Alexandria: St. David's Buildings, 9 Rue Cherif Pacha. Cables: "Ammonia," Alexandria.

**Bankers.**—Bank of Scotland.

of any transaction for reference in the event of dispute.

**Types of Trader.** Though conditions have undergone so radical a change, the traders remain ever the same. To the market they throng in their thousands, people of every type and every shade from coal-black to light olive and almost pure white. The Mongolian strain is discernible here and there, moving among the pure-bred Arabs, Numidians, and descendants of a thousand races. Make room, there! for a huge water-buffalo driven by a bright-eyed mite who has not yet seen four summers, intent upon his task and capable. Here a string of camels and their driver, a copper-skinned youth in dirty, ragged shorts, followed by the owner, a patriarch, beturbaned and dignified, there mules laden with newly-cut grass, from each of which a widow filches, or takes toll of, a few wisps to provide in the aggregate food for the goat that is one of her chief possessions. At the gate a loud clamour proclaims the arrival of a wily native with a cart, who with fierce gesticulation and specious arguments demands

**Company's Inception.**—In November 1898 the Egyptian Government granted a concession for 30 years (a period subsequently extended to 40 years) to certain parties, who later transferred their rights to The Egyptian Markets, Ltd., to create cattle markets at 120 centres throughout Upper and Lower Egypt, and to build in connection with them general markets for public use.

**Sites and Construction.** In every case the locality, site, construction and general arrangement of these markets were approved and sanctioned by the Government before being opened. They were fixed at a convenient distance outside the towns and villages, with the object of avoiding the streets and consequent crowding, dirt and insanitary conditions. The land required was purchased by the company, except at places under Government tenure, where plots of land were leased at a nominal annual rental from the Government. The fees authorised to be charged at both cattle and general markets were fixed by the Government at a reasonable figure. Where possible,

water is provided free of charge for the use of the large public frequenting these commodious and well-kept markets

**Vendors.**—On a general average, about 5,000 vendors daily display their wares in the company's markets

**Commercial Department.**—The company has no less than 200 distributing centres throughout Egypt. These depots are in

Egyptian Salt & Soda Co and the United Egyptian Salt Co., besides acting as sales' agents for oil, soap, soda, Cerebos salt, etc.. Owing to the ready acceptance by the cultivators of modern Western agricultural aids, the company stocks water pumps, windmills and other similar products in popular demand, and which can be handled advantageously by its organisation

**Services.**—The company's sales organisation is therefore of extreme interest to all manufacturers who are catering for such an essentially agricultural Oriental population. The object of the institution is to serve the people and cater for their needs in every way, as is shown by the fact that it

sells even pilgrims' tickets to the Moslem Holy Places. It has certainly gained the respect and goodwill of cultivators throughout the country of its operations

**Head Office.**—210-216, Gresham House, Old Broad Street, London, E.C. 2. Cables "Ocellated," London

**Egyptian Head Office.**—Rue Emad el Dine, Cairo

charge of trusty salesmen, many of whom have been in the firm's service for years. As far as possible the sales organisation is based on cash sales. Fertilisers of every kind suitable for the country's crops, such as nitrate of soda, super-phosphate, sulphate of ammonia and cyanamide, along with sacking of all kinds, cotton bags, wheat, rice, flour, sugar and veterinary medicines, are on sale in the company's stores at the cheapest possible prices. The trade-mark of The Egyptian Markets Ltd is accepted by cultivators as a warranty of quality. The company also distributes all the salt requirements of the country, amounting annually to over 160,000 tons, as agents for the

2. READY FOR GINNING

## COTTON

**T**HE history of cotton growing in Egypt reads like a romance, and testifies to the fact that the planting of new agricultural industries in countries may be productive of truly marvellous consequences. From time immemorial cotton has existed in Egypt, but the Egyptian cotton known to commerce was introduced sometime prior to 1820 by Maho Bey from the Isle de Bourbon, where also it was not indigenous, but an immigrant from the Barbados. Its cultivation in Egypt was fostered by Mohammed Ali Jemel, an enterprising Frenchman, who had noticed the cotton growing in Maho Bey's garden and had created a plantation of his own, was placed in control of the great Viceroy's cotton fields. Foreign seed was imported, chiefly of the Sea Island and

Brazilian varieties, and the new husbandry quickly prospered beyond the dreams of its originators. In 1864 the Civil War in America first established the importance of Egyptian cotton as part of the world's supply, and prices rose to an unprecedented height, just as they did fifty years later during the Great European War. But, apart from this latter event, the improvement in the production of cotton fabrics and the increased demand throughout the world for the finer cotton goods have long since given a particular value to Egyptian cotton, a special impetus to the demand having been lent by the introduction of the process of mercerising, to which the Egyptian type of cotton specially lends itself. To-day the Egyptian crop is enormous and is highly prized, its value as the chief product of the

country can only be estimated by a consideration of the huge sums which successive Governments have spent in increasing the irrigation facilities so necessary to its development.

**AREA.**—The area under cotton throughout Egypt has not varied greatly in extent during the present century. In 1904-05 it stood at 1,566,602 feddans, and in 1913-14 at 1,755,270 feddans. There was a drop to 1,386,004 feddans in the following year, but in 1920-21 an increased total (1,283,805 feddans) was reached. In 1924-25 the area cultivated amounted to 1,924,382 feddans, as against 1,787,843 feddans in 1923-24. (A feddan about 1.038 of an acre.)

**COTTON EXPORTS.**—See under "Commerce."

BRINGING COTTON TO THE GINS.

PREPARATION OF COTTON.

1. "Farfara."  
2 & 3. Ginning.

**COTTON RESEARCH BOARD.**—The Cotton Research Board was created in May 1919. Its function may be briefly dealt with under two heads. In the first place, it brings together the chiefs of all technical departments interested in cotton, and ensures that all cotton problems are dealt with as adequately as circumstances permit. In the second place, it provides the scientists engaged in research on cotton with a properly equipped laboratory and library, and with a secretarial staff which acts as a liaison agent internally between the various parts of the Board and externally between the Board and the outside world. The scientists actually carrying out research on cotton are attached to the various technical sections of the Ministry of Agriculture. The laboratories are situated at Giza, and the library, which contains a comprehensive collection of publications relating to cotton research, is open to the public.

**CULTIVATION (METHODS OF).** The cultivation of cotton in Egypt is practically in the hands of the fellahen, who comprise the small peasant-proprietors and those peasant agriculturists who work for the pasha-proprietors of large estates. Work begins in January and February, when the fellah is busily employed in ploughing, cross ploughing, ridging, and generally getting his plot of land, or that of his master, ready for the seed. March is occupied in sowing, May, June and July in weeding and irrigating, also in seeking and destroying myriads of little white eggs which are found beneath the leaves of the plants, and, if left to mature, will produce the worms which damage those plants. From September to November, as the bolls burst and the cotton comes forth, the fellah and his family are busily engaged in picking, sacking and loading it for transport to the ginning factory. It will be seen then that practically the whole year is taken up by the cultivation and production of Egypt's staple commodity.

**EGYPTIAN METHOD OF PLOUGHING.**—On all large estates steam ploughs are used, but the small cultivator prepares the ground during the winter by means of the primitive Egyptian plough drawn by a pair of oxen. This plough is made almost entirely of wood, only the front part of the beam which enters the soil is shod with iron. The plough does not cut deep into the soil, but simply scratches it, and the fellah generally ploughs his field four times, sometimes oftener, each ploughing being done at right angles to the previous one. When making ridges for cotton, the beam edge of the plough which goes into the ground has to be covered with sacking, etc., as the ordinary plough does not throw up the soil.

After the ridges have been made in this primitive manner, a number of men shape them properly by means of a "fass," an instrument of the shape of a Dutch hoe; these men also attend to the breaking up of the clods. The native plough does not enter the soil deeper than 5 to 6 inches, and cotton which has a deep tap-root, two yards or even more in length, requires the soil to be well loosened. It is generally considered advisable to let the land lie fallow for about one month after ploughing, and the soil before planting cotton should be quite dry, although a watering is given directly afterwards.

**PLANTING.**—Close sowing is generally the rule in Upper Egypt, from 10 to 15 inches being the usual distance between the plants and 25 to 30 between ridges. The number of cotton-seed holes per feddan is estimated at about 13,000. In each hole

1. WEIGHING NEWLY PICKED COTTON.  
2. LIFTING TO THE GINS.  
3 & 4. BALING GINNED COTTON.

from 10 to 20 seeds are put, and as the soil is often not fine, but in clods, the fellahs sometimes put a bean along with the cotton seed. The bean, being of stronger growth, removes any clod which may be resting over the cotton-seed. These seed-holes are made, not on the top of the ridge, but about three inches from the top on the sunny side of that ridge. Two plants are always grown in each hole in Egypt, therefore the number of plants is about 20,000 per feddan; in India and America only one plant is left.

The time of planting is generally March, in the north even April. Egypt has no killing frosts, but there is frequently cold, windy weather in early spring. The Department of Agriculture and all agricultural organisations make strong propaganda for early planting, as then the cotton does not suffer so much from the ravages of insects, which come in large numbers, generally in August, when early planted cotton is almost ripe.

**PLUCKING** --During the latter part of August the plucking or picking of the cotton commences so far as Upper Egypt is concerned, where the variety grown is chiefly Ashmouni. In September the first picking begins in the Delta, that is, in Lower Egypt.

The picking is carried out by children, boys and girls, and also old people, who put the cotton gathered into the folds of their loose smock. These children carefully separate fibres from leaves, etc., where the latter will not readily become detached and fall off, they frequently put the cotton into their mouth and blow the leaf or part of stalk away, a process which they perform very quickly. To every lot of 10 or 12 children there is an overseer. The average quantity picked per day by one child is about 30 lbs., picking cannot be carried on in the morning owing to heavy dews, and work lasts only till 5 p.m.

The cotton from each picking is kept carefully apart. There are generally two pickings, but in some places in Upper Egypt three and even four. After each picking, the field is watered. The first picking is of the best quality, and generally begins in September. The second takes place in October, and the last may be as late as December. The seed for sowing purposes is taken from the first picking only.

**DIFFERENT VARIETIES OF COTTON.**—Egyptian cotton (*gizun*) is usually regarded as being derived from the Sea Island variety known as *Gossypium barbadense*. This variety has always been cultivated successfully in the Sea Islands and the coastal districts of South Carolina, Georgia and Florida. It yields the most valuable of all cottons, the hairs being long, fine and silky, and ranging in length up to 2½ inches. Modern Egyptian cotton in length of staple is intermediate between average Sea Island and average Upland. It has, however, certain characteristics which cause it to be in demand even in the United States, where Egyptian cotton has for many years comprised about 80 per cent of all the foreign cottons imported. These special qualities are its fineness, strength, elasticity and great natural twist, which combined enable it to make very fine, strong yarns suited to the manufacture of the better qualities of hosiery, for mixing with silk and wool, and for making lace, etc. It also mercerises very well. The principal varieties of Egyptian cotton are —

**ASHMOUNI**—This has been for very many years the principal cotton of Upper Egypt. The staple is short and the lint light brown.

**ASSILI** --A brown cotton selected from Ahf, which it replaced

**MAARAD** --A variety bred by the Royal Agricultural Society from Pima cotton introduced from America. It is still in the trial stages, but is longer than Sakel and appears likely to be an important variety in the future

**NAHDA** --A much improved cotton of Assili type selected by the Ministry of Agriculture, and so superior to the old Assili as to constitute a new variety

**PILION** --The most important of a number of white varieties grown in the Delta. These are all of poorer quality than Sakel, but higher yielding. Casuli is one of the best of the number

**SAKELI ARIDIS** --The main long staple cotton of Lower Egypt. It grows best in the North of the Delta, where the soils contain a small proportion of salt

**ZAGORA** --Now tending to replace the Ashmoun in Upper Egypt. It was selected from Ashmoun about 1917, and is very similar to it in general characteristics and yield, but is of slightly better quality. It is also grown on poor soils in Lower Egypt

**ZIO** --A long staple cotton bred by Dr. Laurence Balls about 1910. It is now very similar to Sakel, but stronger

**GINNING.** --From the fields the cotton is carried in sacks either on the light railways or on the backs of camels to the ginneries, of which there are about 120 working in Egypt, 90 in Lower and 30 in Upper Egypt. About one-third of these are owned by the Associated Cotton Ginneries of Egypt. The shareholders of the ginneries are in most cases the large exporting firms in Alexandria

The ginning factory stands in a large yard, often from six to ten acres in size, during the months of November and December these yards are filled with cotton bales, which lie unprotected and exposed to the weather, but, as rain seldom falls, this is not a great disadvantage, although there is frequently a heavy dew, the sun soon dries it up. The *shoumah*, or store proper, is in many cases some thirty yards away from the ginnery. There the long bales as they come from the cultivator are opened and roughly examined, only one class of cotton is kept in the store room at a time. After examination, the cotton is put on a long canvas sheet, and a man, taking the four corners in his hands, carries it across on his back. In some cases the cotton bales are brought direct into the ginnery, these weigh up to 400 lbs, but the weight-carrying ability of the Egyptian porter is phenomenal. The gin mostly in use is the MacCarthy roller gin, of British manufacture, and behind each gin there is a box for the seed cotton from which the gin is supplied by hand, or by automatic feeders. From the gin the ginned cotton is taken in box carts running on wheels to the press, where it is well shaken and watered. It is then baled and subsequently hydraulically or steam pressed into bales varying in weight from 700 to 800 lbs. The system of piston pressing is now largely in use, though in the smaller ginneries the cotton is still pressed down by the feet of the men

The fellah rarely gets his cotton ginned on his own account. It is customary for the ginner, who is nearly always synonymous with the Alexandria shipper, to buy the cotton. He has agents in all the districts, and at the beginning of the season small lots of cotton are bought from each district to ascertain the quality and the ginning output. Classifications are made, and the agents are instructed to buy accordingly.

These agents are responsible as to damage or loss resulting from damp, false packing, or difference in quality.

**GINNING OUT-TURN.**—A kantar of seed cotton is equal to 315 lbs., this weight was taken as a basis because 315 rolls, used to give 100 lbs. of ginned cotton. All ginning out-turns of Egyptian cotton are, therefore, on the basis of 315 lbs. seed cotton. If one speaks of a certain quality giving 96 as the ginning out-turn, it means 96 lbs. of lint for every 315 lbs. of seed cotton. The ginning out-turn is, it need hardly be said, of the greatest importance to the farmer, as it largely influences the price at which he can sell his cotton.

**INSECT PESTS.**—The three principal insects which do damage to the cotton crop of Egypt are the Cotton Worm, the Pink Boll Worm and the Common Boll Worm. All leaves on which eggs of the Cotton Worm

**BOLL WORM (PINK)**—By far the worst enemy of the cotton crop is the Pink Boll Worm (often confused with the Boll Weevil, which insect does not exist in Egypt). The Pink Boll Worm (*Gelechia gossypiella*) was introduced into Egypt from India about 1906, and now infests the whole country. The damage it does is not less than £1,500,000 per annum, and may be much more. The moths hatch out in early spring and throughout the summer, laying eggs on the young bolls. At the end of July about 10 per cent of the green bolls of the crop is attacked by worms (caterpillars of the moth). By the end of August over 50 per cent is attacked, and in October it is difficult to find a boll uninfested.

There are several overlapping generations during the summer, and the full grown larvæ pass through the winter in a resting stage, usually spun between two cotton

bolls attacked by either of the boll worms are liable to be shed at an early stage, to fail to open, or to open only to produce low grade, dirty and irregular lint.

**LAND VALUES.**—In the early part of the present century there was an enormous wave of speculation in land, which came to a head in the financial crisis of 1907. In 1898 certain estates were valued officially at £402,000, one year later at £625,000, and in 1905 at £1,300,000. Good cotton land in Lower Egypt, which 25 years ago might have been valued at £80, costs to-day over £240. The price of land in Upper Egypt has risen from £1.50 to more than £2.20. The causes for these stupendous increases are mainly to be found in the improvement actually caused or anticipated through irrigation and drainage works, and the high price of cotton and other products of the soil.

(See Letterpress, page 85)

(*Prodenia litura*) are found must, by law, be at once picked and burnt, and children and men from 9 to 25 years of age may be requisitioned for this purpose. The Cotton Worm does the largest amount of damage during June, July and August, when at least three generations are hatched. One moth will lay about 200 eggs on the back of the leaf, and in from two to five days the worm is hatched; it feeds on the bottom segment of the leaf, and as the upper tissue soon dries up and turns brown, the infested leaf can easily be discovered. As the hatching of the eggs is quick, it is very necessary that immediate and energetic steps be taken for their destruction. It has been estimated that in some years the damage done by the Cotton Worm has amounted to a million pounds sterling.

seeds. On account of this habit all the cotton seed in Egypt must be heated in special machines as soon as ginned to kill the worms.

**COMMON BOLL WORM.**—This (*Earias insulana*) is of much less importance than the Pink Boll Worm, but still an important pest, the annual damage perhaps reaching £1,000,000. Unlike the Pink Boll Worm, this insect is active throughout the winter, and also damages the growing parts and shoots as well as the bolls. Bolls infested with this pest can be distinguished from those attacked by the Pink Boll Worm by the presence of holes on the surface of the boll, through which dark excretory matter is extruded.

**MARKETS.**—The cotton-market proper of Alexandria is situated in the Minet-el-Bassal quarter of Alexandria. Each exporter has a small office there, and from 10 a.m. to 1.30 p.m. the courtyard of the market is filled with men in a wonderful variety of dresses and colours. Very little English is spoken; French and Italian are the predominant languages, and German is also heard. People of widely different races throng this courtyard, and strange Oriental tongues are heard. Odd lots of cotton are offered for sale on samples in the small offices of the export houses. The expert valuer is separated by a rail from the farmers or brokers who bring the samples. The banks also sell to the shippers the cotton

on which they have made advances. The State Domains sell their cotton in Alexandria by auction sales. In the cotton market of Alexandria other kinds of produce are also sold, especially cotton seed, in which a large business is done.

**HALAQAS**—Cotton *halagas*, or markets, have been instituted in various parts of Egypt in order to protect the small landholder from fraud when selling his cotton, the commonest form of such fraud occurring when the cotton is being weighed in the village just before its sale. The *halagas* are enclosed places situated in the most suitable positions for access to the big agricultural roads and means of transport, they are under the direct control of the Maghs Mudiriya, Maghs Baladi, or Maghs Malhalli. The tariff on cotton brought into a *halaga* is generally 5 millimes for a small sack and 15 millimes for a large sack.

There is a reis in charge of each *halaga*, who acts also as official weigher in the smaller *halagas*. In the larger ones there is an official weigher appointed, also door-keeper, ghafis, etc. Every morning a telegram is received from Alexandria by the reis, which gives the opening price of cotton on the Bourse, a notice of this price is at once posted up in a conspicuous position. Should there be a rise or fall in price of more than five piastres (1s) at any time during the day (10 a.m. to 1-30 p.m.) another telegram is sent and the difference posted up. A daily circular is also received from the National Bank in Alexandria giving the prices of all grades of cotton, cotton seed, and contracts at Minet-el-Bassal. This is also posted in the *halaga*. Inside is an official weighing machine, on which cotton may be weighed without any further charge, each sack being numbered and a written slip given to the owner with the official weight marked on it. *Halagas* are also used as the means of distributing cotton seed to the small farmers on behalf of the Ministry of Agriculture. They likewise act as agents for the Agricultural Society for the sale of chemical manure of guaranteed quality and weight.

**PRODUCTION**.—The total commercial crop of Egyptian cotton amounted in 1923-24 to 6,531,457 kantars, but (with that held

over from the previous year) 7,021,543 kantars were exported. In 1924-25 the commercial crop totalled 7,273,974 kantars, of which 7,086,874 kantars were exported. The estimated stock in Alexandria for carry-over purposes on August 31, 1925, was 393,000 kantars. The 1925-26 crop was estimated to aggregate (in ginned cotton) roughly 7,900,000 kantars, of which 3,500,000 kantars were sakellaridis and 4,400,000 kantars other varieties. In regard to both quality and ginning the output of the 1925 crops was superior to that for 1924.

**STATISTICS**.—Following were the principal exporters of cotton from Alexandria for the seasons 1923-24 and 1924-25 —

## REPRESENTATIVE COTTON ENTERPRISES

### PEEL & CO. LTD.

**Inception.**—It is claimed that this Alexandria firm of world-wide reputation is the oldest British enterprise established in Egypt its inception being ascribed to the year 1825. Owing, however, to the destruction by fire during the bombardment of Alexandria (1882) of many records, books and documents relating to the company's early days the exact date is obscure. In 1908 the institution was formed into a limited liability company, with offices in Manchester and Alexandria, the chairman being Mr. John Peel, a well-known business figure in Manchester and vice chairman of the Fine Cotton Spinners.

**Development.**—Though now one of the leading firms of cotton exporters the concern under notice was founded many years before cotton was first planted in Egypt, its earliest activities being in the direction of general trade in that country and the Sudan, especially in connection with the collection and export of ivory, gum and cereals, later of cottonseed, and the import of Manchester goods. Subsequently it achieved the distinction of having exported some of the very first cotton grown in Egypt, and, as the cultivation of that product moved forward to its ultimate supreme importance, concentrated more and more on the export of this article. From 1900 Messrs Peel & Co., Ltd. have dealt exclusively in cotton. The development of the firm on its present lines may be ascribed mainly to the work of the late Mr. William Felton Peel in Alexandria and the late Mr. Gerald Peel in Manchester during the years prior to its formation as a limited liability company. Touching the eminence so attained, it is interesting to note that during the last thirty years the firm has exported approximately 4,500,000 bales of cotton, of which nearly 2,000,000 represent exports to England, and that for the past four years it has headed the list of cotton exporters from Egypt.

**Activities.**—Cotton for export is bought principally in Alexandria on the spot market, where Messrs Peel & Co., Ltd., are among the largest "spot" buyers. Incidentally, they also buy and import from the interior a larger quantity annually than any other export firm, their organisation covering practically all districts producing the best cotton. Among their several agencies and branches is an office at Mehalla Kebir, now perhaps the most important cotton centre in the country. They maintain an extensive buying organisation, established more than 45 years, in Upper Egypt, with three ginning factories, where the cotton is expertly classified "in the seed" and ginned under European supervision. Direct personal contact is also established with all cultivators.

**General Selling Agents.**—In England the cotton is sold by the firm's representatives in conjunction with Messrs C. Tattersall & Co., the well-known cotton brokers. Outside Great Britain the company's general agents for the sale of cotton are: For all European countries, Messrs Benedetto Pototschik & Figlio, Trieste; for the United States, Messrs. Cooper & Brush, Boston; for Japan, Messrs. Nichizui Trading Company, Ltd., Osaka. Sub-agents are established in all cotton centres, and work in conjunction with the general agents.

**Insurance Agencies.**—The firm also acts as insurance agents, representing for marine insurance business The British & Foreign Marine Insurance Co., Ltd., of Liverpool; The Alliance Assurance Co., Ltd., of London; and the Ocean Marine Insurance Co., Ltd.,

of London. For fire insurance, it has represented since 1861 The Liverpool & London & Globe Insurance Co. Ltd., of Liverpool.

**Directorate.**—Messrs. John Peel (chairman), W. E. Peel, E. I. Peel, H. G. Peel, and K. P. Buley. All these directors have been associated with the management of the business for more than twenty years.

**Address.**—P.O. Box 331, Alexandria (See also illustration, page 84.)

### CARVER BROTHERS & CO. LTD.

**Inception.**—The original enterprise, to whose activities was due the basis of the present flourishing business, operated in Manchester goods between Manchester, Gibraltar and Morocco. In 1860, however, following the arrival of one of the partners in Egypt, the exportation of cotton was undertaken. In 1900 the concern became a limited liability company, with head office in Manchester.

**Development.**—The high prices for cotton resulting from the American Civil War gave a great impetus to cotton-growing in Egypt. The firm accordingly extended its activities by building ginning factories in villages in order to co-operate with cultivators and

ensure the proper grading of cotton before ginning. In 1906 its two factories in the Delta were taken over by a combine of leading ginning factory owners, but it still possesses three big structures in Upper Egypt, south of Cairo. The extension of cotton-growing in the Sudan induced the company recently to develop its operations there, becoming last year one of the principal exporters from that country.

The firm has paid, since becoming a limited liability institution, full English taxes on all profits.

**Steampresses.**—Messrs. Carver Brothers & Co. Ltd. were among the first to erect steampresses in Alexandria for pressing cotton into hard bales before shipment.

**Alexandria Office.**—17, Rue Stamboul Cables "Carver," Alexandria.

**Bankers.**—National Bank of Egypt, Lloyds Bank Ltd., Barclays Bank (D.C. & O.), etc.

### ALEXANDRIA COMMERCIAL CO.

**Activities.**—Amongst the foremost of the many companies and firms handling and marketing the fine, long staple cotton of

ALEXANDRIA COMMERCIAL CO., Alexandria.  
1. Cleaning Cotton prior to steam pressing for Export.  
2. Hydraulic and Steam pressed Bales.

which Egypt practically monopolises the production is the private concern known as the Alexandria Commercial Company.

**Capital.**—The nominal paid-up capital of the company totals £E 672,000. This figure does not, however, represent the sum of its resources, reserve funds and the deposits of the partners bringing them to a very much larger figure.

**Operations.**—Some idea of the magnitude of the company's operations may be obtained from the fact that, out of a total crop of kantars 7,000,000, it ships over kantars 500,000, though but one of about 60 enterprises engaged in shipping cotton. The firm exports to all parts of the world where raw cotton is required, and large as is its share of the total export, the bulk handled shows every year an increase. Through subsidiary organisations it owns and culti-

whole life in the cotton trade and is an acknowledged authority on the article. The other members of the board, all actively engaged in the business, are Messrs B G Dellaporta, Henry Clark, H E Finney, S Lagonico, R Stapleton-Cotton and R E Williams.

**Address.**—9, Rue Stamboul, Alexandria, and P O Box No 623, Alexandria.

**Telegraphic Address.**—“Commodate,” Alexandria.

**Export Mark.**—“Alexcom” in green (See also illustration, page 85).

#### REINHART & CO.

**Inception.**—This progressive firm, whose operations extend to all the principal spinning centres of the world where Egyptian cotton is used, was established in 1907 by its present sole proprietor, Mr Alfred Reinhart.

Brothers, whose East Indian business in all branches, including cotton, is widely renowned, spring from another line of the Reinhart family, and through their Bombay office and an affiliated company in China represent the firm under notice in the sale of Egyptian cotton to Indian and Chinese mills.

Mr Alfred Reinhart, formerly a partner in the now extinct firm of F C Baines & Co., has been elected chairman of the National Ginning Company of Egypt, president of the Société de la Bourse de Minet-el-Bassal (spot exchange), member of the committee of the Alexandria General Produce Association and of the Bourse des Marchandises d'Alexandrie (futures exchange), and a director of the Société Générale de Pressage et de Dépôts.

**Development.**—The development of the company is best indicated by the following

REINHART & CO., Alexandria.

1. General View of the “Vitodura” Factory.

2. Another View.

3, 4 & 5. Handling, Sampling and Weighing Seed Cotton arriving at Factory.

vates cotton lands in the Delta, and has recently taken considerable interest in the propagation of new varieties. Being also, through its members, largely interested in cotton pressing concerns operating in Alexandria, the company is in effect actively in touch with Egyptian cotton from the time of sowing until the fibre enters the spinning mill.

**Branches.**—The Alexandria Commercial Co. has established branches at many interior points of Egypt, and owns and works ginning factories at Mehalla Kebir and Zifta, both important cotton centres.

**Directorate.**—The managing director is Mr. Oswald J. Finney, who has spent his

**Personal.**—The founder, who first arrived in Egypt in 1896, descends from a family long connected with that country's cotton trade. His grandfather during the 'forties, and his father in 1857, both came to Egypt to establish connections for their firm in Winterthur (Switzerland), Paul Reinhart & Cie, which, with Mr Alfred Reinhart's brother as senior partner, acts as general agents for Reinhart & Co. in Switzerland and Germany. Similar representation over areas of France and Belgium is effected by another branch of the family, established in Havre under the style of Société d'Importation et de Commission ancienne maison Louis Reinhart. The present partners in Volkart

figures showing the export of bales per season: 1907-8, 300 bales; 1908-9, 8,955; 1909-10, 13,704; 1910-11, 22,605; 1911-12, 30,661; 1912-13, 36,485; 1913-14, 46,896; 1914-15, 62,823; 1915-16, 33,217; 1916-17, 27,926; 1917-18, 26,210; 1918-19, 33,297; 1919-20; 28,458; 1920-21, 31,127; 1921-22, 35,288; 1922-23, 39,651; 1923-24, 38,748; 1924-25, 39,785.

**Activities.**—Messrs. Reinhart & Co. buy cotton partly on the Alexandria spot market and partly from up-country farmers. Their interior buying organisation is concentrated at Zifta (Gharbiéh) on the Damietta Nile, whence are controlled some 15 sub-agencies distributed through the best cotton-pro-

ducing territories. All the cotton bought by the firm up country is ginned at the "Vito-dura" ginning factory at Zifta, which is operated by Sulzer-Diesel engines and fitted with 64 Platt gins and all recent appliances. One of the first ginning factories in the country installing modern self-feeders for the gins, it maintains an annual output of 90,000 to 100,000 kantars. The factory is owned by the National Ginning Company of Egypt, all shares in which concern are held by Mr. Alfred Reinhart or members of his staff.

**Insurance.**—In 1911 the company was accredited with a general agency for the London Assurance Corporation. Since that year its insurance department has greatly developed, involving the representation also of several American and Swiss insurance companies. It acts as surveyors and claim-adjusters for a large number of marine insurance corporations.

**Employees.** The permanent staff of Reinhart & Co., with branches and affiliated concerns numbers 108, while the total of hands employed at the ginning factory and presses in the interior and at Alexandria is about 200.

**Branches.** In 1908 Mr. Reinhart opened an office in Manchester (Reinhart & Co., Ltd.), and one in Boston (Reinhart & Co., Ltd.) in 1921.

**Head Office.** 7, Rue Adib, Alexandria Cables "Reinhart," Alexandria.

**Bankers.** Alexandria: National Bank of Egypt, and Credit Lyonnais; Winterthur Union Bank of Switzerland; London: Swiss Bank Corporation; Manchester: Westminster Bank; Boston, Mass., U.S.A.: Lee, Higginson & Co.; Paris: Crédit Commercial de France.

#### **EASTERN EXPORT COMPANY (SOC. ANON.)**

**Inception.**—Among enterprises representative of the cotton export trade of Egypt is that of the very progressive *société anonyme* known as the Eastern Export Company. The business was established in 1860 by Vittorio Adda, whose son and grandson are the present partners, under the title of the founder. In 1871 the name was changed to Vittorio Adda & Figli, a style retained until 1892, when the partnership was severed. Mr. Abram Adda then acquired the interests, to control which he formed in 1920 a limited liability company.

**Capital.**—The original capital of the concern was £150,000. The shares are held principally by Mr. Adda, his three sons, Victor, Joseph and Fernand, and a few associates of the House.

**Activities.**—The firm's interests are centred in cotton, in the export of which it figures among the big shippers. Its agencies entrusted with the purchase of the crop are maintained in the interior at Mehalla-Kebir and Zifta. The partners enjoy the ownership of extensive cotton lands, as of city properties covering not less than 15,000 square metres and including eight large buildings.

**Staff.**—The Alexandria staff numbers 25 clerks employed at the office and 35 at the Cotton Exchange.

**Premises.**—The new office premises of the company, recently completed, cover an area of 1,300 square metres. The six-storeyed, reinforced-concrete structure is on the most up-to-date plan, and is one of the finest business buildings in the city. Interior appointments are of fitting luxuriance, the partners' offices being panelled in oak.

**EASTERN EXPORT COMPANY (Soc. Anon.), Alexandria.**

2. General View of the Company's Warehouses.
3. Bale Skid connecting floors at the Press.

**Directorate.**—Mr. Abiam Adda (as chairman) and his three sons form the board of directors. Mr. Adda is also chairman of the Soc Anon des Immeubles de l'Est, member of the Alexandria General Produce Association and director of the Société Générale de Pressage et de Dépôts, also the Soc Anon des Tramways d'Alexandrie. Messrs Victor, Joseph and Fernand Adda are on the board of the last-mentioned company, while Mr. Victor Adda is also a director of the Société Immobilière d'Alexandrie, and M. Joseph A. Adda a director of the Garbich Lands Cy, the Egyptian Enterprise & Development Cy, and the Koubbah Gardens.

**Offices.**—Cité Adda—Rue Fouad rrr Cables, "Matba," Alexandria.

**Bankers.** National Bank of Egypt (See also illustration, page 87.)

#### SOCIETE GENERALE DE PRESSAGE ET DE DEPOTS.

**Inception.**—Prior to 1889 the pressing or baling of cotton was a business competed for by a number of important companies which were interested, together with the banks, in the general business of cotton export. Amongst these were the following pioneer enterprises: Alexandria Pressing Co. Ltd., Anglo-Egyptian Bank Ltd., Egyptian Pressing Co. Ltd., English Pressing Co. Ltd., Imperial Ottoman Bank, Rodocanachi's Press, and T. Muller & Co.'s Press. The pressing and warehousing interests of these concerns were combined to form the Société Générale de Pressage et de Dépôts.

**Development.**—The Pressage, as it is familiarly known, has from its inception handled the greater part of the Egyptian cotton crop, and recently purchased the entire properties, including warehouses and plant, of the Egyptian Pressing Co. for the sum of £240,000, probably the biggest transaction of the kind witnessed in Egypt to date. About seven-eighths of the shares of the Egyptian Pressing Co. were held by the Pressage prior to the purchase of the property.

**Operations.**—The operations of the Pressage include storage, provision of space for sorting, cleaning and ginning of cotton, pressing, despatching, and insurance against fire. In the latter connection they are the sole agents for various important companies, including the Manchester Assurance Co. (incorporated in the Atlas Assurance Co. Ltd.), the Royal Exchange Assurance, the Norwich Union Fire Insurance Soc. Ltd. and the State Assurance Co. Ltd.

**Plant and Baling Statistics.**—It is unnecessary to dwell upon the importance of a company the name of which is familiar in every household throughout Egypt, but its statistics are at least illuminating. The five pressing factories and various warehouses have a total floor space of about 213,000 square metres, or 2,300,000 square feet. Fourteen 200 h.p. presses are in operation, most of which are capable of pressing a bale one-third of a ton in weight per minute. The cotton baled by the Pressage in the season 1922-3 was 788,000 bales, while the operations of the company for the seasons named were as follow:—

SEASON	BALES PRESSED
1923-24	728,000
1924-25	721,000

Calculating three bales to the ton, these figures show an average movement of roughly 250,000 tons of cotton handled per annum, or, in other words, between 75 and 80 per cent. of the entire Egyptian crop.

**Employees.**—About 75 Europeans are employed in clerical and supervising capacities, in addition to some thousands of natives, the number of the latter varying according to the season.

**Steel Consumption.**—That the fluctuations of the steel market can be of great importance to a cotton pressing company is evident when it is known that the quantity of steel bands actually consumed by the concern under notice is between 5,000 and 6,000 tons annually.

**Directorate.**—The board of directors is made up of the following, all well known figures in the Egyptian banking and cotton trades. Messrs K P Birley (president), I. A. F. Critchley (vice president), A. Adon, J. Adone, F. Allemann, H. B. Carver, A. C. Hann, H. Lindemann, S. Pinto, A. Reinhardt, R. Rubmeyer, C. Y. Watson. Mr A. F. Mills has been the General Manager for the last fifteen years.

**Address.**—6, Rue de l'Ancienne Bourse, Alexandria Cables "Pressage," Alexandria Code ABC 5th Edition.

#### THE ASSOCIATED COTTON GINNERS OF EGYPT LTD.

**Inception.**—This powerful organisation, playing so important a part in operations connected with the ginning and pressing of cotton in Egypt, and thereby directly influencing the industrial and economic welfare of the country, recently attained its majority, having been registered as a limited company on May 17, 1905. The objects of its establishment were to amalgamate, continue and develop the cotton ginning factories, presses, accessories and businesses connected therewith owned in Lower Egypt by Messrs Chertou Benachin & Co., Messrs C. M. Salvago & Co., Messrs C. G. Zevindachi & Sons, Messrs J. Planta & Co., Messrs Carver Bros & Co., Ltd., Messrs V & C Bacos, and La Société d'Egrenage de Zagazig, with a view to entering into an agreement with the Egyptian Investment and Agency Ltd., as promoters.

**Founders.** Associated in the original foundation of the company were the following: Messrs F. D. Carver, R. C. Abdy, W. C. Mackenzie, W. Leigh Hunt, B. F. Trone, John M. Farrington, W. G. Hatchett, and H. O. King, who under the Articles of Association was appointed first secretary of the institution.

**Capital.**—The original capital of the company was £300,000, divided into 300,000 ordinary shares of £1 each. In 1920, however, the capital was reduced to £270,000 by returning 5% per share to holders, and comprised thenceforth 360,000 shares of 15s each, fully paid up.

**Constitution.**—The corporations fused and developed by The Associated Cotton Ginnery of Egypt Ltd. are to day the same as at the company's formation, with the exception of Messrs V & C Bacos and La Société d'Egrenage de Zagazig, and the addition of Messrs G. N. Demetriadis and Messrs A. & J. Sakelariadis & Co.

**Activities.**—The firm concerns itself with the business of ginning and pressing cotton and all operations accessory thereto, the general purchase or sale of cotton or cottonseed being expressly dissociated from the objects of its inception.

**Statistics.**—The table on the succeeding page shows the quantities of cotton ginned and steam pressed at the company's factories, also the annual dividend paid since the firm's inception.

**Bankers.**—Lloyds Bank Ltd and Barclays Bank.

#### PINTO & CO.

**Inception.**—With the object of participating actively in the Egyptian cotton export trade, this firm was established at Alexandria in 1911.

**Personal.**—The company is composed of the four brothers, Messrs Silvio Pinto, Attilio Pinto, Fazio Pinto and Edgardo Pinto, with as a "sleeping partner" their father, Mr. I. O. Pinto, who, the oldest cotton dealer in Egypt, arrived in this country 62 years ago. The senior partner, Mr. Silvio Pinto, is a member of the committee of the Alexandria General Produce Association, a councillor of the Alexandria Cotton Futures Exchange Commission, and a director of the Société Egyptienne de la Bourse Commerciale de Minet-El-Bassal, which owns and administers the sole exchange where spot business is conducted.

**Capital.**—The capital of the company is £E.200,000.

**Activities.**—In the exporting of cotton to almost every consuming country Messrs

PINTO & CO., Alexandria  
1. Cotton Sorting Department.  
2. Pressed Bales.

Pinto & Co. have won high esteem and importance, particularly with Italy and also with Great Britain and the United States. The firm has established agencies up-country in Egypt. Among other activities, it represents for fire and marine business The North

British & Mercantile Insurance Company Ltd.

**Bankers.** National Bank of Egypt, Alexandria.

# CITY OF ALEXANDRIA

**A**LEXANDRIA, the city and port founded by Alexander the Great, the celebrated Prince of Macedon, stands as an enduring monument to the brilliant genius of that youth, who, when twenty two years of age, entered and overran Egypt without opposition. His name, indeed, became one to conjure with, the conquered Egyptians claimed him as a true descendant of one of their own dynasties, and the city that took his name grew gradually into the intellectual and commercial centre of the Eastern world. After his death, the ultimate grandeur and importance attained by Alexandria were largely due to the first two Ptolemies, one of whom founded the famous Alexandrian Library, while the other carried out the wise policy of his father. For centuries Alexandria was known all over the world as the greatest of all centres of learning, such famed teachers as Hipparchus, Archimedes, Euclid and Strabo all having sent the fruits of their learning abroad from there.

Little if anything, of the Alexandria of those days remains, though the present Rue de Rosette is said to follow closely the line of one of the main arteries of the period of the Ptolemies. After the Roman occupation both city and port rapidly declined, the former became the battle ground of various contending Christian sects, while its importance as a commercial centre practically vanished when the sea route to India, as also to the Cape, and the discovery of America came about. Mohammed (Mehemet) Ali, who was elected Pasha of Egypt in 1805, did something towards restoring the port and constructing great inland canals, and to-day the city is the centre of the great cotton trade of Egypt, from which it has derived much pecuniary advantage. Modern Alexandria is distinctively Continental in appearance, many of the streets bearing French names. It is the gateway by which thousands of tourists enter Egypt every year, and to those who do not leave it at once for Cairo and Upper Egypt presents many features of interest in connection with its past history.

**BUILDINGS.**—Ancient Alexandria contained many famous buildings, the most celebrated of which were the white marble Pharos, or lighthouse, one of the Seven Wonders of the World, the Library and the Serapeum, or Museum. The Caesarian Library probably perished in 366 A.D., and the Serapeum was, with many other buildings and temples, destroyed by fanatical Christians during the fourth and fifth centuries. Other ancient buildings were the Theatre, the Sôma, or Mausoleum, which contained the bodies of Alexander the Great and the Ptolemies, the Gymnasium; and the Caesarian, or Palace of Cæsar.

Of modern buildings, Alexandria possesses several of architectural merit and imposing proportions. Apart from the various mosques and churches, Government House, which faces the East Harbour, the Courts of Justice, the Post Office, the Alhambra Theatre, and the leading hotels are the most prominent.

ALEXANDRIA.

1. Cherif Pacha, showing Barclays Bank in right foreground.
2. Same thoroughfare, with Banco Italo Egiziano in right foreground.

ALEXANDRIA.

1. Place Mehmet Ali. Royal Exchange in left background, Ottoman Bank in immediate right foreground.
2. Rue Gare de Ramlah.
3. Rue Sidi-El-Metwalli, Egyptian Engineering Co.'s Premises in left foreground.

**CATACOMBS.**—The catacombs of Alexandria lie to the west of the city, and contain many interesting tombs of the Ptolemaic period. The most interesting is the rock-cut Egyptian tomb which belonged to an Egyptian nobleman and his wife, and which was conceived and executed on a most elaborate plan, with corridors and galleries still showing fragments of Egyptian and Greek decoration. It is lighted throughout by electricity.

**CHURCHES.**—The principal foreign churches in Alexandria are those of St Mark's (Anglican), in Place Mehmet Ali, All Saints' (Anglican), at Bulkeley, St Catherine's (Roman Catholic), in Rue Ste Catherine, and St Andrew's (Presbyterian), close to the Post Office. The American Mission's Church is in Rue Sidi el Metwalli, and the Wesleyan Church close to the Egyptian Post Office. The principal mosques are those of Abd el-Latif, el-Wassiti, Sidi Amr, and el-Fasham. There are a large Jewish Synagogue, an Armenian Church, and several Coptic churches.

**CLIMATE.** Alexandria possesses a healthy sea-shore climate, which is on the whole drier and less enervating than that of Cairo. The mean rainfall is about 8.57 inches, and the mean temperature 69° Fahr, equal to 20.5° Cent; the mean winter temperature is 60° Fahr. Generally speaking, Alexandria is warmer by night than Cairo. The prevailing wind blows from the north in summer, and from the north-west in winter. Close to Alexandria is Ramlah, which is much frequented by tourists and residents who wish to live close to the sea.

**LIGHTING.**—In 1865 the Egyptian Government granted to Messrs Charles Lebon and Company the concession for the lighting by gas of the city of Alexandria and its surroundings. By subsequent contracts, in 1893 and 1909, the area of the concession was determined, and a further concession given to the company for electric lighting. There are nearly 7,000 gas-lamps, mostly of the single-burner type, in the city and suburbs. Electric lighting is very little used for public purposes, but is extensively employed for private use.

**MUNICIPALITY.**—Alexandria has been a municipality since 1890. The Council consists of twenty-eight members, six are ex-officio members, eight are nominated by the Egyptian Government, and fourteen are elected by different electoral bodies in the city. Not more than three members of any one nationality can be elected. The Council exercises, subject to the supervision of the central authority, all the rights of an ordinary municipal body.

**MUSEUM.**—The Museum of Græco-Roman Antiquities was founded by the Egyptian Government at a cost of £E 10,000, and is maintained by the Municipality at an annual expenditure of £E 1,200. Here are exhibited in more than twenty rooms a large and most interesting collection of the antiquities that have been discovered in Alexandria and the neighbourhood, as well as a vast number of smaller objects which illustrate the art, architecture, sculpture and burial customs of the Egyptians during the Ptolemaic period and the early centuries of the Christian era. All these objects, of great importance to a proper understanding of the religion of the period, are admirably arranged and catalogued. An archaeological library has also been formed, and now contains several thousand volumes.

**POMPEY'S PILLAR.**—This is the sole surviving monument of ancient Alexandria, having been erected in 302 by a Prefect of Egypt named Pompey. The old assumption that it was set up in honour of Pompey the Great no longer obtains, the general view being that the pillar (nearly 90 ft high and built of fluted granite) was the outcome of the gratitude of the Alexandrians to the Emperor Diocletian, who decreed that a portion of the tribute of corn which was sent from Egypt to Rome should be devoted to their needs.

**POPULATION.**—The present population of the Governorate of Alexandria is estimated at about 480,000, having increased by some 30,000 since the last census of 1917.

**ROSETTA STONE.**—This famous stone, which is now in the British Museum and from which was obtained the correct clue to the proper deciphering of the Egyptian hieroglyphics, was found at Rosetta, some 30 miles from Alexandria, by M. Boussard, a French Engineer officer, in 1799. Rosetta (now Rashid) was a very ancient city near the mouth of the main western branch of the Nile, and here the Turks signally repulsed the British forces on April 22, 1807.

**TRAMWAYS.**—There is an efficient system of electric trams, which, starting from the Place Mehmet Ali, run to different parts of the city and environs. The service commences at 5.15 a.m. and finishes at 10 p.m., except on special occasions, when it continues until midnight. (See article "Tramways d'Alexandrie" following.)

**WATER SUPPLY.**—The water supply of Alexandria is controlled by the Alexandria Water Company Limited, which purchased the waterworks of the city from the Egyptian Government in 1870. In the following year the company secured the waterworks of the suburb of Ramleh and made an additional contract with the Government. The water is obtained from the Mahmudieh Canal. (See article "Alexandria Water Co. Ltd." following.)

## REPRESENTATIVE COMMERCIAL ENTERPRISES

### ALEXANDRIA WATER CO. LTD.

**Inception.**—In 1860 water was supplied to the city of Alexandria by a French company under concession from the Egyptian Government. In 1867 the Government itself took over the concern, but sold it after twelve years to the Alexandria Water Co. Ltd., an English limited liability company formed for the purpose of acquiring the concession, the purchase being negotiated by Mr. Edward Easton. By deed of sale dated March 29, 1879, for the sum of £300,000 the waterworks, dependencies and the monopoly of supplying the city with water by means of pipes were made over to the newly-constituted company, whose capital was £350,000, the Government reserving the right of repurchase after 20 years. In the following year the company, releasing the Egyptian Government from part of its obligations under the deed of sale and on payment of a further sum of £17,000, acquired this concession in perpetuity.

**Ramleh Water Supply.**—At the same time as this acquisition the Government also ratified the deed of sale of the water supply system in the village of Ramleh, which the company had bought for £37,000 the previous year from Mr. C. Zervudachi, and extended the concession in perpetuity to this service. Mr. Zervudachi had acquired the concern in 1876 through the failure of the Societe Hydronomique de Ramle four years after it had started the system.

**Supply.**—The source of supply is the Mahmudieh Canal, which, constructed in about 1810, takes off from the Nile at Atf, near Rosetta, and is used not only for irrigation, but also for navigation between Alexandria and the interior of Egypt. The water is unfit for human consumption without purification.

**Purification.**—At the intake from the Mahmudieh Canal, about  $\frac{3}{4}$  mile from the main pumping station, the water is raised by a small pumping station into the company's private channel, the Farkha Canal, which flows into collecting wells. Low service pumps again raise the water to six settling basins, designed to hold about a million gallons each, where it remains for at least eight hours under the influence of a coagulant, sulphate of alumina. By force of gravitation the water flows to an American Jewell system of filters after this preliminary sedimentation. These Jewell rapid gravity filters are 38 in number, 24 being of 17 feet diameter and 14 of 21 feet diameter, and have a total daily capacity of over 20,000,000 gallons. Five covered fresh water reservoirs, nearly 5,000,000 gallons in capacity, next receive the supply, which is finally pumped by high service pumps partly into the Kom El-Dik service reservoir (accommodating 3,300,000 gallons), and partly direct into the city mains.

**Services.**—In addition to the supply to Alexandria, filtered water is also delivered to shipping by hydrant and hose to ships alongside the quay and by the company's barges to vessels anchored in the harbour.

One of the Steam Pumping Engines.

ALEXANDRIA WATER CO. LTD.

1. View of Diesel Engine House.
2. General View of Works, showing Settling Basins.
3. No. 1 Filter House.

The water supply to the suburbs of Ramleh was originally ensured by the Ramleh pumping station, which the company acquired in 1880, but the water was not purified in any way. In 1907 mains were laid from the chief pumping station to Ramleh in order to provide filtered water to that district, the growth of which has since been extremely rapid. The Ramleh pumping station is still maintained for the purpose of supplying unfiltered water to gardens.

**Fire Service.**—In 1912 the Alexandria Water Co. Ltd. opened at Minet-El-Bassal a new pumping station to afford a special high pressure fire service in that industrial district. The mains, entirely separate from those of the potable supply, serve the automatic sprinklers and fire hydrants with which the majority of the cotton presses and stores are fitted. The fire insurance companies, which prior to the provision of these facilities had had a most unhappy experience in the Minet-El-Bassal district, have since reduced their premiums by over 50 per cent on risks in which the above appliances are installed.

**Mains.**—The total length of filtered water mains in service at the end of 1925 was approximately 230 miles, of high pressure service mains 14 miles, and of unfiltered water mains in Ramleh 20 miles. The mains vary in size from 30 inches downwards.

**Consumption.**—The consumption of filtered water in the city of Alexandria varies at present from about 11,000,000 gallons per day in winter to 17,000,000 gallons in summer. The quantity of such water pumped during 1925 was 4 778,000,000 gallons, and of unfiltered water 1,151,000,000 gallons.

**Development.**—The development of the concern since its acquisition in 1880 may be gauged from the following statistics. In 1880 the number of services stood at 2,565, at the end of 1925 at 57,629, the revenue of the company, £40,721 in 1880, reached £272,683 in 1925, and its capital, £350,000 in 1880, is now double that figure.

**Division of Profits.**—Under its contracts with the Egyptian Government and the Alexandria Municipality, the company pays to the latter one-half of the surplus net profits available after payment of a dividend of 10 per cent to the shareholders. The last dividend in respect of the year 1925 was at the rate of 14½ per cent per annum, while £33,250 was disbursed to the Municipality.

**Directorate.**—The control of the organisation from its inception until 1890 was vested in a Board of Directors, sitting in London under the chairmanship of His Grace the Duke of Sutherland, K.G., from that year the administration has devolved upon a Board in Alexandria. That Board now consists of MM. Michel C. Salvago (chairman), H. E. Barker, R. C. Abdy, J. G. Jacot Descombes, M. Lascaris, and H. E. the Governor of Alexandria, Hussein Sabry Pacha, President of the Municipality, as official director.

**Management.**—The first manager of the company, Mr. J. E. Cornish, occupied that position from 1879 to 1906, when he became managing director and was elected chairman in 1907, a post which he held until his death in 1912. For valuable services during the bombardment of the city in 1882 he was awarded the C.M.G. His successor, Mr. H. R. C. Blagden, M.Inst.C.E., M.I.Mech.E., retired in 1920, to be followed by the present manager, Mr. K. B. Woodd Smith.

### THE ALEXANDRIA & RAMLEH RAILWAY CO. LTD.

**Inception.**—Under contract dated August 6, 1890, Mr Edward St John Larman, British merchant, obtained authorisation from the Egyptian Government to build a railway between Alexandria and the suburb of Ramleh. The authorisation in question was subsequently transferred to an English company which on June 27, 1883, was constituted under the present title as a limited capital corporation.

**Capital.** The capital of the company was originally fixed at £12,000, in shares of £10 each. On July 2, 1863, the sum was increased to £20,000, and on January 25, 1864, to £34,000. Subsequent augmentations brought the capital successively to £75,000 on November 26, 1887, £78,500 on November 30, 1889, and £83,500 on December 13, 1890. On April 23, 1902, the company's shares of £10 each were subdivided into 11 shares, and the capital raised to £110,000. Finally, in 1912, the capital was increased to £187,500 by 77,500 new £1 shares, created to enable the company to acquire the personnel and landed property of the Alexandria Tramways

**System.** Construction of the railway was commenced immediately after the securing of the original authorisation, the system on completion totalling 12,839 metres in length. The track throughout is a double one, built of Vignole 35-kilograms rails on wooden sleepers. Steam locomotion was employed until January 1904, when electric power was adopted.

The main line runs from Alexandria to Bulkley, thence by two diverging routes (one running by the sea) to San Stefano, beyond this junction trains run to Victoria College, adjacent to this station on the Rosetta Aboukir line of the Egyptian State Railway. In 1891, following the acquisition of running rights over the State Railway line Sidh Gaber-Ramleh-Aboukir, the direct route connecting Alexandria with Moustafa Pacha was altered, proceeding via Sporting Club-Cleopatra-Sidh-Gaber to Moustafa Pacha, where it rejoined the main track. The running rights mentioned were relinquished in 1912, but the deviation has remained.

**Power Stations.**—Two power stations are installed, one at Chatby-les Bains and one at Karmous. The former produces power in the form of continuous current of 500-550 v. from 5 Diesel-Sulzer motor groups coupled direct with generators, the Karmous station furnishes a three-phase current of 6,000 v., converted by 3 Brown-Boveri condensers at the Bulkley sub-station into a continuous current of 500-550 v. The current is transmitted to the system by means of feeders, and in some districts overhead trolley wires.

**Depôt.**—The depôt is established at Moustafa Pacha, having an adjoining workshop where running repairs are effected.

**Rolling Stock.**—The company's rolling stock comprises 44 large-type bogie carriages, of which 8 are covered, and 48 small-type parallel-axle carriages, 22 being covered. Most of the carriages are coupled in reversible trains of 2 units, each carriage being equipped with a motor.

**Development Statistics.**—The construction of this railway has been the prime factor in a suburban development unprecedented in Egypt. The number of passengers carried in 1878 was 457,000, increased by 1890 to 1,200,548, by 1900 to 2,705,000, and by 1910 to 10,394,000. The table furnished below shows corresponding totals for the decade 1915-1925, together with train kilometres run, receipts, expenses, and dividends disbursed on the £1 share.

YEARS	PASSENGERS CARRIED	TRAIN KM RUN
1915-1916	17,567,719	2,494,248

### TRAMWAYS D'ALEXANDRIE.

**Inception.** On January 15, 1890, M E Canderay, public works contractor, obtained from the Alexandria Municipal Commission a concession, operative for 50 years, to provide tramways serving certain districts of the city. By contract signed in Paris, May 15, 1890, and taking effect from January 1 of that year, M Canderay appointed M S Tivoli, resident in Alexandria, general works manager of the project. M Canderay contracted with the Compagnie Générale de TrACTION for the construction of the system, a power station and a depot, and on December 4, 1897, MM Canderay and Tivoli, in conjunction with the firm just mentioned, formed a registered company known as the Tramways d'Alexandrie. The chief object of this company, the head office of which was situated in Brussels, was the carrying on of the contract granted to M. Canderay by the Alexandria Municipality.

**Transference of Control.**—In February, 1899, it was decided to participate in the working of the Alexandria & Ramleh Railway Co Ltd, and to aid financially the electrification of that system. In 1902, however, circumstances caused the transference of the working of the Tramways d'Alexandrie to the Alexandria & Ramleh Railway Co. Ltd. Ten years later the entire rights of the

company under notice were acquired by the Alexandria & Ramleh Railway Co. Ltd, in consideration of which transfer the Tramways received 77,500 shares of £1 each from the controlling institution.

**Capital.**—The company's original capital was 3,000,000 Belgian francs in preference shares of 100 frs each. The sum was raised on May 17, 1898, to 6,000,000 frs, on February 25, 1899, to 8,000,000 frs, and on April 7, 1908, to 10,266,000 frs, comprising 102,660 preference shares of 100 frs each. Of the 1898 and 1899 issues 40,000 preference shares were offered at 135 frs each for public subscription in Egypt. In May, 1922, ten years after the transference of control, it was proposed to redeem part of the preference shares, and in June of the following year to redeem by ballot 8,000 such shares payable at 100 frs. These shares were transformed into dividend shares. The share capital was now reduced to 9,255,700 frs in preference shares of 100 frs each, with 33,300 dividend shares in addition. On September 15, 1925, the obligatory capital was raised to 4,367,500 frs in 8,735 4 per cent debentures of 500 frs each.

**Development.**—The first sections of the line to be completed (Ste Catherine-Abattoirs and Ste Catherine-Karmous) were opened to traffic on September 19, 1897. By the middle of 1901 it may be said that the main system was completed, particulars of working during the first five years being as follow:—

YEARS	RECEIPTS (Belgian francs)	EXPENDITURE (Belgian francs)	PASSENGERS CARRIED
1898	295,728	190,846	1,941,900
1899	511,136	165,179	4,080,112
1900	937,569	830,395	6,771,128
1901	1,067,219	808,251	7,863,852
1902	1,174,673	731,679	8,879,387

New lines were inaugurated in 1909, 1910 and 1917. The system to-day comprises 20.413 km of double track and 7.110 km of single track, divided into 8 routes. The following table provides financial and other statistics of the working of the Tramways d'Alexandrie during the years 1920-1925:—

YEARS	PASSENGERS CARRIED	TRAIN KM RUN	RECEIPTS £	EXPENDI- TURE £
1920-21	24,994,371	4,077,047	232,971	190,381
1921-22	32,826,220	5,553,499	247,934	197,763
1922-23	35,533,820	5,661,547	230,324	194,228
1923-24	42,894,397	6,141,317	239,424	203,019
1924-25	47,107,396	6,698,294	252,788	207,055

**Power Stations and Depôts.**—The two adjacent power stations of Karmous and Baldauff supply motive force in the form of a continuous current of 500-550 v conveyed direct to the system. Two depôts are installed, one at Karmous, the other at Moharem Bey.

**Rolling Stock.**—Forming the rolling stock are 103 self-driving cars, 98 motorless cars, and 7 cars employed in various auxiliary services. The hauling cars are each fitted with 2 motors of 35 c.v., manufactured by Dick, Kerr and the General Electric Co.

**ROBERTS, HUGHES & CO.**

**Inception.** As at Cairo, and established in the same year, 1903, Messrs Roberts, Hughes & Co's business at Alexandria offers to resident and traveller alike a selection and a service comparable to those obtaining in the modern London store.

**Departments.**—The chief departments, constantly re-stocked, cover sports requisites, travel necessities, haberdashery, silver and electro-plate, smokers' requisites, and footwear. The sole agency in Egypt is undertaken for "Sorosis" shoes for ladies and "Saxone" boots for men.

**Sports Gear.**—The firm is best known as purveyors of equipment for polo, football, cricket, lawn tennis, golf, and every other sport, maintaining a special department for all repairs to polo and tennis kit. It has done much to encourage Egyptian sport by presenting trophies for competitions.

**Mail Orders.** An efficient mail order department keeps pace with an increasing number of orders daily from all over Egypt, the Sudan, Palestine, Syria, Cyprus, and Persia, even from Athens.

**Offices.** Alexandria, Rue Sesostus, Cairo, Sharia Kasr-el Nil, also at Mansurah. Cables: "Sport," Alexandria.

**E. A. S. T. CO. (Eastern Automobile Supplies & Transport Co.)**

**Inception.** Under the provisions of the Egyptian Company Law, the organisation more familiarly known as the E. A. S. T. Company was formed in 1918, establishing its head office in Alexandria.

**Activities.** Acting as wholesale importers, engineers and contractors, the concern deals principally in Ford cars, Fordson tractors, general motor supplies and farming implements. Branches are controlled throughout Egypt and Palestine. In the last-named country the E. A. S. T. Co. is distributor for the Ruston Hornsby Oil Engine, a first favourite for well and pump operating owing to its simplicity, soundness and reliability.

**Factory and Sale Rooms.**—In the company's Alexandria factory, covering nearly 3 acres, the various machines are assembled and tested, special bodies built and main stock housed, while sales are effected from sale rooms located in all the large towns of Egypt and Palestine.

**ROBERTS, HUGHES & CO., Alexandria. Athletic and Sports Department**

**Administration.** T. S. Richmond (chairman), Alfred Flower (vice chairman), and E. W. Flower (managing director).

**Offices.**—Alexandria: 131 rue du Canal, Mahmoudieh, 20 rue Bonadier, 1 rue Adib, Cairo: 5 rue Soliman Pacha, London: 121, Victoria Street, Westminster, S.W. 1 (cables: "Flowerwheel" London). Codes: A B C 5th edition and Bentley's.

**M. E. T. S. CO. (Motor Equipment & Tractor Supplies Co.)**

**Inception.** Under the same administration as the E. A. S. T. Co. (Eastern Automobile Supplies & Transport Co.), this enterprise was inaugurated in 1925 to act as depositaries of the Dunlop Rubber Co. Ltd., distributing throughout Egypt the world famous Dunlop tyre and accessories.

**Dunlop Tyres.** An immense industry has been built upon Mr. J. B. Dunlop's invention in 1888 of the pneumatic tyre. At Fort Dunlop, Birmingham, millions of tyres for all types of vehicles are manufactured annually by the 12,000 operatives of the Dunlop Company, which employs throughout the world over 30,000 persons.

**Egyptian Activities.** In Egypt, as elsewhere, the Dunlop tyre is ubiquitous, being very largely supplied for desert cars, in which connection quality is of first importance. The manufacture of the Dunlop tyre has been of immense financial value to the country by introducing a new demand for cotton.

**Offices.**—24, rue Saleh el-Dine, Alexandria, 25, Sharia Mazloom Pacha, Cairo. (See also illustration page 98.)

### ALEXANDRIA ENGINEERING WORKS.

—Rue Bab el-Karasta, Alexandria. Managing director James Miller, M I N A, M I E S Manager J. E. Spurgeon, M I M E Secretary John Gadsby

**BARKER & CO.** — 11 rue Sesostri, Alexandria. Shipping agents, cotton exporters, and general merchants. Established 1850 by Mr. Frederick Barker, father of the present principal, Mr. Henry Barker. Represent, among other companies, Ellerman Wilson Line, Papayanni Line, Glover Bros., Hall Bros of Newcastle, Canadian Pacific Railway and Steamships, and are interested in further representations. Property includes wharves and warehouses. Office staff numbers 12. Mr. Henry Barker is chairman of the British Chamber of Commerce at Alexandria, chairman of the New Egyptian Company Ltd., and a director of the National Bank of Egypt, the Alexandria Water Co Ltd, the Filature Nationale d'Egypte, the Société Belge-Egyptienne de l'Ezbekieh, The National Insurance Co of Egypt, and various other commercial enterprises.

**BINNEY, BORG & CO.** Central Buildings, Rue Centrale, Alexandria. British firm, trading as general merchants, steamship, insurance and manufacturers' agents. Associated in the firm are Major A. T. Binney, O B E, Col W. E. Donohue, C B E, M Inst C E, M Inst M E, M Inst A E, M Inst T, and Mr. Alex. P. Borg. Major Binney, an expert engineer, has had wide technical and commercial experience in Egypt, being in 1915 appointed controller of mechanical transport in that country, and subsequently Palestine and Syria until 1920, when he became Assistant Commissioner to the Disposals Board (Egypt). Col. Donohue has had 35 years' experience in engineering appointments. Among important duties undertaken by him during the War were those as Inspector of expeditionary forces for transport services throughout the Eastern theatres of war, which explains the prominent transport representations held by the firm. Mr. Borg's general business experience covers practically the whole of the Near East, which he has travelled as special representative of firms of world-wide repute. Representations include Crossley and Leyland motors, Trojan and Portable fire pumps, Shelboke & Drewry "S D" freighter.

**BRANDT & CO. LTD.**—Rue Emad el-Dine, Cairo, and 5 rue Adib, Alexandria, also Copenhagen. Delegate director in Egypt, E. Brandt. Attorney at Alexandria, E. Abela.

**CHOREMI BENACHI & CO.**—13a rue Fouad rer, Alexandria. Established 1860. Among the largest firms interested in cotton export trade of Egypt. Agencies established throughout that country, also large factories at Kafr-Zayat, Barrage and Beni-Suef. The firm is well represented in Europe by Mr. Arist. D. Choremi, whose office is at 43, Peter Marianstrasse, Basel, Switzerland. British correspondents are Davies Benachi & Co., Orleans House, Edmund Street, Liverpool, and in America the firm is represented by Choremi Benachi & Co., 80, Federal Street, Boston, Mass. The present partners of Messrs Choremi Benachi & Co., Egypt, are: Const. J. Choremi, Ant. L. Benachi, Alex. L. Benachi, J. E. Lloyd, and Aug. Th. Sinadino.

Agents for the Peninsular and Oriental Steam Navigation Co and the British India Steam Navigation Co Ltd. Managers for the Mediterranean Transport Company, now the premier water supply concern in Port Said and Suez. Telegraphic address "Indemnity," Alexandria.

**EGYPTIAN SALT & SODA CO. LTD.**—Gabbary, Alexandria. Established in 1899. Engaged in the pressing and trituration of oleaginous seeds, oil refining, soap manufacture, working of natural soda works at Wadi-Natron and salt works at Mex. Capital: £500,000 in 500,000 shares, all fully paid. Administration: C. Choremi (president), A. Hasda, Ed. Karam, A. J. Lowe, M. Salvago, D. Klat Bey. Central management:

General manager, A. Baerlocher, sub manager, G. Psacharopoulos, attorney, H. Chevalier. Works at Gabbary and Kafr-Zayat. Manager, G. Schneider. Works at Wadi-Natron. Manager, W. C. Hewgill. Works at Mex. Manager, Mohamed Ibrahim. Pulverising department. Managing director, A. J. Lowe.

**EGYPTIAN & SUDAN COTTON TRADING CO.**—Head office: 6 rue Eglise Debbané, Alexandria. Cotton merchants, dealing in all kinds of Egyptian and Sudanese cotton. Capital: £E 50,000. Branches: Kafr-el-Zayat, Kafr-el-Cheikh, Minet-el-Gamh, Mehalla-el-Kebir, Soneita, Tantah, Guizah, Embabeh, Beni Suef, Minieh, Babel, Beleda, Beni-Mazar, Wasta, Khartoum, Tokar. Chairman of the board, Maurice Viterbo. Managing director, Adrien Engel. Bankers: The National Bank of Egypt.

**ELECTRICITY & ICE SUPPLY CO. (S.A.).**—Head office: 8 rue Nabi Daniel, Alexandria. Headquarters of working. Ismailia. Established in 1906 as a reconstruction of the Société Electrique d'Ismailia. Capital: £E 35,200, comprising 17,600 ordinary shares of £E 2 each. Administration: Dr. Emile Hahnloser, A. Reinhart, J. G. Jacot Descombes, René Delaquis, Frédéric Alleman. Manager, S. Ambache.

**FILATURE NATIONALE D'EGYPTE (S.A.E.).**—Canal Mahmoudieh, Karmous. Established in 1899 under the style of the Anglo-Egyptian Spinning & Weaving Co. Ltd., adopting the present title in 1912. Head office: rue Port-Est, imm. Rofé,

Alexandria Capital £150,000, made up of 37,500 shares of £4 each, all fully paid. Financial year ends September 30. Administration M C Salvago (president), H Barker, A J Lowe, Ibrahim Rolo, Oswald J Finney, and L. Gasche (managing director).

**KAFR EL-ZAYAT COTTON COMPANY LTD.** Karmous, near Alexandria. Engaged in the working of grain mills at Kafr el Zayat, oil mills at Alexandria and Kafr el-Zayat, soap factories at Alexandria and Kafr el-Zayat, also dealing in and exporting cotton. Capital £120,000, divided into shares of £5, fully paid. Administrative Council: H Swinglehurst (president), C Watson (vice-president), A Padoa, A Bimsenstein and Vladimir Sursock. Managing director, Jean P Zerbin.

**NATIONAL INSURANCE COMPANY OF EGYPT.**—19 rue Nébi Daniel, Alexandria. Founded in 1900. Manager, A Sevastopulo.

**NEW EGYPTIAN COMPANY LTD.**—Head office 4 rue Adib, Alexandria. London office Pinner's Hall, Austin Friars, E.C. Capital £375,000 in 500,000 shares of 15s each. Chief operations the reclamation of agricultural estates in Egypt, which are purchased in a semi-reclaimed state and, when fully reclaimed, are sold to the fellahs in small plots, generally from 2 to 20 acres each. Land purchasers usually pay 50 per cent of the sale in cash and the balance in ten annuities with 7 per cent interest. The company has estates in both Upper and Lower Egypt, generally of about 2,500 acres each. Directorate: H E Barker (chairman), S Bonan (managing director), V F Naggiar, Edward Nathan. Manager, E J Perkins, secretary, Alfred Beinau. Cables, "Obchisk," Alexandria, and "Octuplette," London.

**PORT SAID SALT ASSOCIATION LTD.**—5 rue Toussoun Pacha, Alexandria. Engaged in the production and sale of salt. Capital £100,000, of which £80,000 is issued in 10s shares. Administration S Wellhoff (president), E Vermond, G Savon, P Fabri, S Tivoli. Manager, J A Bortolotti.

**SALONICA CIGARETTE COMPANY.**—18 rue Rassafah, Moharrem Bey, Alexandria. Founded in 1903. Capital £63,084. Administration G Grassi (president and delegate-director), Isaac Errera and S Pinto.

**SOCIETE ANONYME DU BEHERA.**—27 rue Chérif Pacha, Alexandria. Established in 1881, reconstituted in 1894. Engaged in agricultural and irrigation works, and all similar enterprises. Capital £1250,500, made up of 50,000 ordinary shares of £25 each, with 100,000 preference shares of £5 each, redeemable. Financial year ends January 31. Administration, M C Salvago (president), Ed Bourre, F S Richmond, F W P Foster, C M G, E Monnerat, O J Finney, R Ismaili, S Lagomco and H A Finney. Manager, G C Foster, managing director (territorial section), R W Andrews, manager (industrial section), F D Scott. Secretary and chief accountant, E Mordo. Bankers, National Bank of Egypt. Auditors, Russell & Co.

**SOCIETE ANONYME DES BIERES BOMONTI ET PYRAMIDES (S.A.E.).**—7 rue Averoff, Alexandria. Established in 1922 as successors to the Société Anon des Brasseries d'Egypte, the latter being established in 1909. Engaged in brewing beer, ice manufacturing, and decorticating rice. Capital Frs 4,000,000 at par, divided into 40,000 shares normally frs 100 each. Administration Jacques Ruch, Zurich (president), Rod Jost, Alexandria (delegate director), Curt Bomonti, Alexandria, Michel A Ralli, Alexandria, Jean Simmen, Alexandria. Alexandria offices, Usine Karmous and 7 rue Averoff, Cairo offices, Usine Gizeh and rue Elmad el Dine, imm Khedivial C.

**SOCIETE ANONYME "CROWN BREWERY."** Alexandria. Established in 1897. Brewers, ice and mineral water manufacturers. Plants at Ibrahimieh, Alexandria. Ice factory at Choubrah, Cairo. Head office Brussels. Capital Frs 2,701,000, comprising 27,010 shares of frs 1,000 each. Administration Ed Crewe (president), M Raybaud (delegate director), A Roland, A Bolonachi, F Rom, and Ch Cantoni (managing director).

**SOCIÉTÉ COMMERCIALE D'EGYPTE.**—8 rue Chérif Pacha, Alexandria. President, John Sinadino. Directors, S Sinadino and Ed Camilleri.

**SOCIÉTÉ DES ETABLISSEMENTS GAUMONT.**—2 rue Sidi Mehrez, Alexandria. Head office 57 rue St Roch, Paris. Works 28 rue des Alouettes and 35 rue du Plateau, Paris XIXe. [Capital Frs 10,000,000. Manager for Egypt, Syria and Palestine, René Labouret. Cables Cineloka.]

**SOCIETA EGIZIANA PER L'ESTRAZIONE ED IL COMMERCIO DEL FOSFATI.** Imm Banco Italo-Egiziano, Alexandria. Founded in 1912. Controls mines at Kosseir (Red Sea) and Sebarch (on the Nile, Upper Egypt). Administration Comm Grisante Vannucci (president), Cav Ing Emilio Bossa, Ing M Ismaili, Ing Luigi G. Maggioni, Ing Camillo Marchese, and Comm Av O Spigarelli.

**SOCIÉTÉ ELECTRIQUE DE LA BASSE-EGYPTE.**—rue Sidi Metwalli, Bur de la Cie du Gaz, Alexandria. President, Pierre Lebon (Paris), delegate director, J P de Suziri (Alexandria), manager, R M Manzoni (Iantah).

**SOCIÉTÉ GÉNÉRALE D'ELECTRICITÉ ET DE MÉCANIQUE.**—(Anciens Etabl Ing Nahman & Co and Ing Guido Maroni) 7 rue Gare du Caire, Alexandria, also at Cairo. Delegate-director, Benvenuto Campos, manager, Jacques J Bensussan.

**SOCIÉTÉ ORIENTALE DE PUBLICITÉ.**—28 rue Chérif Pacha, Alexandria. Founded in 1906. Branches at Cairo, Paris and London. Capital £40,000, comprising 10,000 ordinary shares of £4 each, 2,500 founders' shares without stated value are also issued. Financial year closes March 31.

**UNION COTTON COMPANY OF ALEXANDRIA.**—(Late V Toriel & Fils) 5 rue de la Gare du Caire, Alexandria. Delegate-director, Raphael Toriel.

GENERAL VIEW OF

## PORT OF

**A**LEXANDRIA was founded by Alexander the Great in 331 B.C. with the object of establishing a central port for the Levant and Middle East trade. This characteristic it maintained until the rise of Constantinople in the fifth century A.D., and now, after a long period of decline, the port has again taken its place in the Mediterranean as the leading entrepot of the Levant. Its early glory was long unaffected, as the Ptolemies, and afterwards the early Roman Emperors, made Alexandria the emporium of the world's commerce. The fleets of Rome carried back the silks, perfumes and precious stones of India and Persia to the Imperial City, while Egypt provided wheat and was the granary from which the turbulent populace of Rome drew its supplies.

The original harbour, of which the remains may still be traced under water, was divided by a mole, at the end of which stood the famous lighthouse, or Pharos. In the Middle Ages the port sank into comparative insignificance, being superseded by Damietta. The modern harbour dates from the reign of Mohammed Ali, whose genius transformed Egypt from a backward Oriental State into a wealthy agricultural country. Cotton, sugar and rice were first scientifically cultivated under his direction, and, as a natural complement to the creation of a transport trade, he realised the need of an adequately equipped port.

The Bassin de l'Arsenal was completed in 1837, and from that date onwards the construction of quays and breakwaters proceeded apace. By 1870 traffic had grown to such proportions that Khedive Ismail decided on new works. A number of quays, Customs sheds, and also the coaling quay, to which was added a protecting breakwater, were constructed at a cost of over £3,000,000 and were completed in 1880. They were, however, insufficient to meet the growing needs of the port, and extensive additions were found necessary. In 1890 the rocks around the entrance were removed to free the passage for ships of a deeper draught. A second channel was cut in 1907 to a depth of 34 feet. The largest liner can now enter, though it is not yet possible to berth it alongside the quays.

Later periods of construction were those dating from 1908 and 1913 respectively, when three projecting jetties were opened, the coaling quays were extended, the old breakwater was enlarged and a new one constructed, finally the two fine moles, E and K, with their warehouse accommodation, were built. Since 1870 the sum of approximately £5,500,000 has been spent on harbour works.

**ACCOMMODATION.**—The harbour of Alexandria is divided into an inner and an outer one, the former having an area of 466 acres, with a maximum depth of 40 feet. The outer harbour is 1,400 acres in extent, and has a maximum depth of 60 feet. The total linear quay space amounts to rather more than 12,000 metres, with depths alongside carrying from 12 to 30 feet.

The port is protected on the west by an exterior breakwater 7,856 feet in length, and on the south by a breakwater which also includes the quarantine landing stage. This quay to the Quai aux Charbons forms the Outer Harbour. In the area are the veterinary quarantine station, wharves for discharging nitrates, timber quays and the section known as Gabbari, at which is landed dangerous and inflammable merchandise. These last have special warehouses, in which matches, oils, acids and other inflammable articles are stored. In the same locality are petroleum tanks for the storage of oil in bulk.

The Inner Harbour, which is separated from the Outer Harbour by the coaling quay, is well protected against storms and has sufficient room for manœuvring. Next to the Quai aux Charbons is the Quai de Mahmoudieh (Mole E), which has an average depth of 22 feet (30 feet at berths Nos 34 to 41). It is a spacious and well-equipped mole, and was built to relieve the congestion at the Quai Central, Nouveau Quai and Quai de l'Arsenal. These three quays form the central and the busiest portion of the port. The passenger ships of the Messageries Maritimes, Societa Italiana de Servizi Marittimi (Sirmar), Lloyd Triestino and Fabre Lines, which have regular sailings to and from Europe, utilise these quays, and

in addition the cargo vessels of the Prince, Fillerman, Hall, Papayanni, Bruce, Moss and other Lines. The headquarters of the Customs Administration are in this section, and also the large bonded warehouses belonging to the Egyptian Bonded Warehouses Company, Limited. Vessels of 10,000 net registered tonnage may come alongside, the average depth of water being 22 feet. Adjoining the Quai de l'Arsenal is a landing and mooring stage (Bassin de l'Arénage) for small steamers and sailing vessels. This area, together with the wharf of the Khedivial Mail Steamship Company and the Bassin de l'Arsenal, was the old port of Mohammed Ali.

**WAREHOUSE ACCOMMODATION.**—The Customs Administration possesses a number of stores in all sections of the port, and in addition the warehouses of the Egyptian Bonded Warehouses Company Limited provide 53,000 square metres of accommodation in buildings fitted with electrical hoists and overhead cranes. By the Law of October 4, 1885, Alexandria was made a warehousing port, and consequently was rendered free for all nations to deposit and re-export merchandise without paying export duties. The effect of this law was soon felt, and a steady development has since taken place in outward transit to the Levant ports. The Egyptian Customs Administration does not publish statistics of goods arriving in bond and subsequently re-shipped in transit, but the following figures for 1925 are supplied by the Egyptian Bonded Warehouses Company, Limited: Rice, 31,532 metric tons, valued at £E.591,231; coffee, 1,541 metric tons, valued at £E.205,578; sugar, 22,294 metric tons, valued at £E.410,212; flour, 51,442 metric tons, valued at £E.1,028,855; cereals, 45,936 metric tons, valued at £E.57,788. In addition to the above, the Customs give the value of all re-exports as £E.1,040,000 for 1924.

The Customs Administration has a special warehouse in which all imported tobacco is stored.

**ANCHORAGE.**—The anchorage is good in both the inner and outer harbours, and there are no tides.

ALEXANDRIA HARBOUR.

## ALEXANDRIA

**BUNKERING.**—The coaling quays separate the Outer from the Inner Harbour. They possess 2,613 linear metres of quay line, and have berths for 12 colliers. The average depth is 20 to 30 feet. They are fitted with five overhead electrical cranes, which have a discharging capacity of 1½ tons per hoist. In nine working hours 350 tons may be handled. Bunkering is conducted day and night, and local labour is available. There are sufficient railway sidings, with a shunting and marshalling yard.

For bunkering oil-driven vessels there are pipe lines running out to a small jetty. No special oiling basin to accommodate tankers exists, but vessels stand off the Gabbari wharves or moor alongside the jetty if of light draught. Twenty tanks, having a capacity of 90,000 tons, are within convenient distance of the quay. Oil is obtained from the Red Sea oil fields, Rumania, Persia, and elsewhere.

**CARGO HANDLING.**—The shipping companies using the port land or ship their own merchandise. For heavy weights the port authorities possess floating sheers with lifts of 40, 20 and 8 tons respectively. The Khedivial Mail Steamship and Graving Dock Company, Limited, has a floating crane lifting 5 tons, and Messrs E. Barber & Sons have one of 20 tons. The Customs authorities, or the Egyptian Bonded Warehouses Company in the case of merchandise received direct from the quays into bond, transport all goods from the wharfside to the Customs sheds. The present charges of the Customs authorities range from 80 milhemes per metric ton to 160 milhemes, according to the kind of article.

**COMMERCIAL IMPORTANCE.**—The enlargement of the port undertaken by Khedive Ismail between 1870 and 1880 was the result of the steady growth in Egypt's prosperity brought about by the large increase in the area of cultivable land and the greater value of the crops produced. The far-sighted schemes of Mohammed Ali, which involved the introduction of improved methods of irrigation, were now bearing fruit, and to these must be added the vast sums expended upon public works by the Government and also by the Khedive, which

were contributory causes of the increase in trade reflected in the import and export returns of that period. Alexandria by reason of its position became the distributing centre for Egypt, and though at the time Ismail's ambitions of port construction were regarded as too imposing and costly, they proved within the short space of ten years inadequate to meet the growing demands of commerce.

The average number of steamers entering the port for the years 1880-83 was 1,054, of a net registered tonnage of 1,096,000. By 1913 these figures had risen to 1,932 vessels of 3,719,000 tonnage. For 1924 the returns showed a slight decrease in the number of entries—1,881—but the tonnage, 4,206,760, had increased. Of these, 501 vessels were British, of a total net tonnage of 1,433,951. The quantity of merchandise entering amounted to 2,688,182 tons, and that shipped to 1,306,813 tons. From these figures it will be seen that Alexandria takes rank as the third Mediterranean port, following Marseilles and Genoa.

**IMPORTS AND EXPORTS.**—The value of imports through the port of Alexandria for the year 1924 was £E 37,500,447, of which tobacco was valued at £E 940,885. Exports amounted to £E 64,003,175, cotton and cotton-seed being the main items. For the season 1923-24 (September to August) 7,021,543 kantars of cotton, valued at £E 54,307,184, were shipped (a kantar = 99 lbs.), and 2,464,205 ardebs of cotton-seed valued at £E 2,974,574 (an ardeb = 267 lbs.). Shipments of cotton during the year ended August 31, 1925, totalled 7,086,874 kantars. The average of the exports of these two commodities for the five years 1920-1924 was Cotton, 5,947,684 kantars, valued at £E 52,204,920, cotton-seed, 2,304,873 ardebs, valued at £E 3,005,704. Through the port of Alexandria pass 74 per cent of Egypt's imports and 97 per cent of her exports.

**COMPETING LINES.**—London, Liverpool and Hull are in constant touch with Alexandria, the "Prince Combine," which includes a number of British lines, maintaining regular services. German and Dutch competition lies between four companies, of

which the Deutsche Orient Line is the most important. Antwerp is served by the Compagnie d'Entreprises Commerciales. A certain volume of trade is now being carried on by these vessels from Hull and other British ports. The Fabre, Dollar and Sitmar lines maintain regular sailings to and from the United States, and in addition there are frequent calls by American ships carrying petroleum products and general merchandise, of which motor cars form an important item. The large Mediterranean companies, French and Italian, run finely equipped passenger vessels and cargo steamers to and from European ports, and the Messageries Maritimes to Marseilles, the Societa Italiana di Servizi Marittimi (Sitmar) to Naples and Genoa and the Lloyd Triestino to Venice and Trieste. Subsidiary routes served by the Sitmar, Lloyd Mediterraneo and other Italian lines embrace the principal and many of the smaller ports of the Levant, while the Messageries steamers also run to Palestine, Syria and Greece. The Khedivial Mail Steamship and Graving Dock Company, a British concern, maintains a regular service to Cyprus, Constantinople and Asia Minor ports, as well as to the Red Sea. The steamers of the Royal Rumanian State Line call at Constanza and Black Sea ports. There is one company flying the Egyptian flag. During the tourist season the Cunard, White Star and other Atlantic liners call with passengers. The importance of Alexandria as a passenger port is shown by the number of persons disembarking during 1924, when the total reached was 49,774, and of those embarking 51,712.

**DRY DOCK.**—In 1903 the Egyptian Government purchased a dry dock, completed the previous year, from the Khedivial Mail Steamship Company. Its length is 520 feet and breadth at entrance 64 feet, while the depth of water at the sill is 23 feet. Three patent slips also exist in the Government Arsenal, available for small vessels up to 400, 200 and 90 tons dead weight respectively. For its volume of trade the port is poorly served in this connection, the nearest dry docks of importance being at Genoa and Naples. Minor ship repairs can be carried out locally.

PORT OF ALEXANDRIA.

1. Arsenal Basin.
2. New Sheds with Electric Cranes on Mole E.
3. Timber Sheds.
4. Ras-el-Tin Lighthouse.

**HARBOUR IMPROVEMENTS.**—In 1925 the Egyptian Government invited three marine engineers of international reputation to study and report upon a project involving the expenditure of £E 3,000,000 upon the port of Alexandria. The need has been long felt of measures which will relieve the present congestion of shipping in the Inner Harbour, and will allow the larger passenger and cargo vessels to berth alongside the wharves, while the present rapid expansion in the trade of the port and the increase in the volume of imports have also rendered improvements a matter of economic necessity. Early in 1926 the Commission submitted a scheme providing for improvement works estimated to cost about £E 5,000,000, spread over a period of 15 years. Work was expected to start on the construction of a new quay in April 1926. The harbour is to be deepened from 30 to 37 feet, quays are to be constructed in the Outer Harbour for the discharge of oil, the coal wharves are to be lengthened, and additional warehouses are to be erected on Moles E and K. Proposals are also being examined with a view to improving Damietta Harbour at a cost of £E 1,500,000, and providing shelter for shipping at Marsa, Matruh and Kossir. It should be mentioned here that European vessels do not at present trade at Damietta on account of the shallowness of water.

**MAHMOUDIEH CANAL.**—The Mahmoudieh Canal enters the inner harbour at the base of the Quai de Mahmoudieh. This waterway, along which there is a considerable goods traffic to Cairo, particularly in coal and building material, connects Alexandria with the River Nile and provides a cheap method of transport by sailing and steam barges, the time taken being usually three to four days. Some 220,000 tons of merchandise passed through the locks inwards during 1924, and 16,500 tons outwards to the port.

**PILOTAGE.**—Pilotage is not compulsory. Dues are: On entry and departure, £E 1,600 millimes for vessels of 25 feet in length, and £E 2,400 millimes for those over 20 feet in length. For mail and coastal steamers the dues are reduced one-sixth and 50 per cent respectively.

**PORT CHARGES.**—Light dues at all Egyptian ports are 5 millimes per ton up to and including 800 tons, and 2½ millimes per ton over 800 tons. For mail and coastal steamers a reduction of 50 per cent and 25 per cent respectively is made.

**BERTHAGE DUES** 20 millimes per linear metre and per day.

**COAL STORAGE**—For storage of coal on quays 7 millimes per square metre and per week.

**PAVING DUES** — ½ per mille ad valorem for all merchandise imported or exported.

**QUARANTINE DUES** — Navigation tax per ship, £E 1, passenger tax per head arriving in or departing from Egypt, 150 millimes, night service of any kind, £E 1. Mooring boat, 450 millimes.

**QUAY DUES** — 4½ per mille ad valorem for general merchandise imported, and 12 per mille ad valorem for general merchandise exported.

**TONNAGE DUES** — Those dues levied per ton on entering and leaving are: for mail steamers, 12½ millimes; coastal steamers, 7½ millimes; other steamers, 15 millimes; sailing vessels, 3½ millimes. Barges and lighters pay a fee of 35 millimes per ton and per year. Vessels in ballast are allowed a reduction of 50 per cent.

**WATER.**—Water is supplied at buoys or to vessels anchored in harbour at 12 P.T. per ton.

**RAILWAY FACILITIES.**—Alexandria being the principal distributing centre for Egypt, it follows that the system of rail communication should be extensive and modern. A goods station at Gabbari serves the port, and on all wharves railway sidings are laid, but hitherto the lack of wagons has restricted their full use. The Railway Administration has recently placed large orders for rolling stock and locomotives, which are badly needed to replace the worn-out wagons of the War period.

A new central station in the city is in course of construction, and plans are projected for the erection of a small station and yard from which goods loaded in the Customs enclosure may be laded, in place of being shunted as at present to different parts of the port.

**TIME SIGNALS.**—A black ball is hoisted at the Signal Station, Fort Napoleon, and dropped at noon Egyptian railway time, equal to 22h 0m 0s Greenwich mean time and 23h 50m 33s local mean time. A gun is also fired from Fort Caffarelli at the same time. A second signal is made at 1 p.m. Alexandria mean time is equal to 23h 0m 27s Greenwich mean time. (See also article "Shipping.")

## REPRESENTATIVE OIL, SHIPPING AND OTHER ENTERPRISES

### VACUUM OIL COMPANY.

**Inception.** The present proud position of the Vacuum Oil Company in the industrial world is the accumulated result of over sixty years' manufacturing experience, the foundation dating back to October 6, 1866.

**Development.**—The life of the company covers practically the entire history of the mineral oil industry, and the story of its world-wide growth is one of the romances of modern business. Even in these days of gigantic enterprises, comparatively few other companies can boast of an organisation reaching from China to America and from Scandinavia to the Cape of Good Hope.

**Establishment in Egypt.**—In pursuance of its policy of world-wide distribution, the company turned its attention to Egypt many years ago, and soon the Mediterranean, Suez Canal and Red Sea ports on the main maritime traffic route of the Old World were components in a globe-encircling chain of service. In those early days the celebrated lubricants of the company were handled by a commission agency at Port Said. Consequent upon the inevitable expansion of trade this service was deemed inadequate, and a branch of the parent concern, the Vacuum Oil Company of New York, was established at Cairo.

**Progress.**—During the ensuing ten years this rapidly flourishing branch took under its dispensation the neighbouring countries, Palestine, Syria and the island of Cyprus, the central organisation developing accordingly. Such expansion continued unchecked, save when bulk supplies of petroleum and benzine were interrupted in transit by the War and by 1917 were unobtainable. Then, apart from business in lubricating oils, the activities of the branch were practically at a standstill, until the arrival at the end of April 1919 of one of the company's own fleet of tankers, the "Paulsboro." Since that date progress has been steadily continuous, the Sudan, Turkey and Greece having been

4. Coal Quays.

VACUUM OIL COMPANY, Cairo  
The Head Office of the Vacuum Oil Company adorns the chief thoroughfare  
(See *Interpress*, page 103)

included in the area controlled from the Cairo headquarters. In the two last-named countries only lubricants are dealt with.

**Staff.**—The original staff at the Cairo branch comprised the general manager and eleven others. At the present stage of its development the Egyptian branch, with headquarters in that city, has over 700 employees in the countries under its charge, and is recognised as one of the most important industrial and commercial establishments in this part of the world.

**Lubricating Oils.**—The Vacuum Oil Company's lubricating oils are imported in original packages from the company's refineries at Rochester and Olean (New York), Bayonne and Paulsboro (New Jersey), to be marketed throughout the Near East under the familiar "Gargoyle" trade mark. The company's automotive lubricants, bearing the pro-

prietary brand-name of "Gargoyle Mobiloil," are obtainable in every city or village of the Near East where motor cars are driven.

**Benzine.**—The name of one of the country's most famous antiquities has been adopted to distinguish the company's brand of benzine, and reproductions of the "Sphinx" on benzine containers, tank waggons or wall signs, with inscriptions in English and Arabic, are to be encountered in every village throughout Upper and Lower Egypt, the Sudan, Palestine and Syria.

**Petroleum.**—In Egypt the "Elephant" is the identification mark of the petroleum distributed by the company while in Palestine, the Sudan and Syria the "Sunflower" brand of petroleum enjoys a firm reputation for high burning qualities.

**Storage and Distribution.** A modern petroleum installation has been developed

in recent years at Gabbary (Alexandria), with facilities for storing over 1,000,000 gallons of benzine and almost 7,000,000 gallons of petroleum. From this point supplies are sent in bulk and in tins to the company's depots and agents throughout the territory under the control of the Egyptian branch. These depôts in turn supply the whole of the interior regions, so that the service has become an integral part of the industrial resources of the area administered.

**Offices.**—New York (general offices) 61 Broadway, Cairo 6, Sharia Nubar Pasha, Alexandria, 3, Place Mohamed Aly, and Port Said. Cabiles "Vacuum," New York, Cairo, Alexandria, or Port Said.

**Bankers.**—Barclays Bank, Egypt, Anglo-Palestine Bank, Syria and Palestine, Bank of Athens, Greece, Ottoman Bank, Turkey, Ionian Bank, Ltd, Cyprus.

#### R. J. MOSS & CO.

**Inception.**—One of the oldest shipping firms in Alexandria and actively engaged in other branches of commerce, this well-known company has a record closely interwoven with the history of Egyptian trade for over 65 years. It was founded in 1861 by R. J. Moss and W. B. Moss, sons of William Miles Moss, senior partner in the firm of James Moss & Co., of Liverpool. The latter enterprise controlled a fleet of steamers inaugurating in 1850 the direct line from Liverpool to Alexandria and the coast of Syria. Formed into a private limited liability concern under the name of The Moss Steamship Co., Ltd., in 1873, with James Moss & Co. as managers, it is now owned and controlled by the large shipping group of which Lord Kylsant is Chairman.

**Shipping Activities.**—Since 1864 Messrs. R. J. Moss & Co. have been agents for the Moss Steamship Co. Ltd., which, as a signatory to the Alexandria Cotton Freight Agreement, carries its proportion of cotton to Liverpool, Manchester and the United States. They represent, in addition, Messrs. Bibby Bros. & Co., The Blue Funnel Line, the Orient Line, Messrs. Dims & Jas. Harrison, Messrs. H. E. Moss & Co., Messrs. Leopold Walford (London) Ltd., and others. They are also important charterers of steamers, principally employed in the carriage of cotton-seed and cake, eggs, onions and general cargo, from Alexandria to United Kingdom and other ports.

**Shipment of Cotton and Cotton-seed.**—In 1863 the young company undertook an experimental shipment of cotton-seed to Marseilles, and two years later shipped

the first cargo of that commodity reaching London. In the early days cotton itself was consigned in cumbersome, handpressed bales bulking from 65 to 85 cubic feet and weighing 500 to 650 pounds. In 1863 Messrs. R. J. Moss & Co. decided to employ steampresses, the first introduced into Egypt, and were speedily turning out compact bales occupying but 30 to 32 cubic feet.

**Coal.**—The firm entered the coal trade in 1864 and is the oldest enterprise in Alexandria so engaged at the present day. Bunkering contractors on many occasions to the British Navy and large shipping firms, it does a considerable trade with the interior, and has agents in the most important towns.

**Insurance.**—The company acts as marine agents for the Standard Marine Insurance Co. Ltd., the Norwich Union Fire Insurance

2. Moss Line Steamer discharging at the Company's Coal Quay.

Society Ltd, the Eagle Star & British Dominions Insurance Co Ltd, Elders Insurance Co. Ltd. and as fire agents for the Pearl Assurance Co Ltd

**Merchants.**—Messrs R J Moss & Co are always willing to advise merchants wishing to establish a business connection in Egypt

**Address.**—6 Boulevard Ramleh, Alexandria Cables "Moss," Alexandria Codes Scott's, Bentley's, Watkin's, A.B.C. 5th and 6th Editions

**Bankers.**—Anglo-Egyptian Bank (See also illustration page 105)

# EGYPTIAN BONDED WAREHOUSES CO., LTD.

**Inception.**—Authorised by Khedivial decree of May 25, 1888, as the Alexandria Bonded Warehouses Co. Ltd, this Egyptian company adopted its present style in 1907. Under the terms of a concession granted by the Egyptian Government, originally operative for a period of 25 years terminating in 1913, subsequently prolonged to 1942 and since extended to December 31, 1965, the company receives into its warehouses general merchandise deposited in bond

**Capital.**—The capital of the company, of which the first issue was £25,000, stands to-day at £230,395, divided into 40,000 ordinary shares of £4 each and 9,279 preference shares of £5 each. This capital is invested chiefly in buildings owned by the firm in Alexandria, Cairo, Port Said and Suez

**Activities.**—Operations in bond are carried out under the direct supervision of the Egyptian Customs Administration, the tariffs of the company being approved by the Director-General of Customs. In addition to warehousing goods in bond or after the payment of duty or for export, the company issues warrants which are negotiable documents transferable by endorsement. It undertakes also the handling of all classes of merchandise, the loading and unloading of goods on and from ships and railways, clearing and all customs formalities, forwarding, sales by public auction, and acts in addition as insurance agents

**Warehousing of Imports.**—Full cargoes are received into the company's stores on discharge from steamers. Special arrangements are made for the storage of flour, wheat, barley, coffee, rice, sugar, potatoes and other articles shipped in large quantities,

which are received direct from the quays into warehouses, the extra charges for transport into the Customs stores being thus avoided. A period of free storage is allowed. Practically the entire importation into Egypt of the commodities named is received into the bonded warehouses at Alexandria or Port Said. At present importers of cotton goods and other articles are accorded the advantage of storing bales at a fixed rate on a tonnage basis for a period of twelve months under contract arrangements.

**Alexandria Warehouses.** In Alexandria, the centre of Egypt's foreign trade, there is within the Customs enclosure warehousing accommodation amounting to 53,000 square metres, and outside that area a building for receiving duty-paid goods. In addition to these warehouses, the company's property, some 15,000 square metres of covered space were leased from the Customs Administration in 1925. The warehouses are fitted with sprinklers and drenchers, affording adequate protection against fire. The system, installed at a cost of £21,000, enables depositors to enjoy a minimum rate of insurance against fire risks. Electrical lifting apparatus, overhead cranes and other appliances ensure rapid handling.

The total entries in bond for Alexandria were 522,863 tons in 1925, as against 403,793 for the previous year. The former total included 182,000 tons of flour, 103,000 tons of cereals, 61,000 tons of sugar, 81,000 tons of rice, and 13,800 tons of cotton goods. For the same period the principal figures for exportation from bond were 54,000 tons of flour, 32,000 tons of rice and 25,000 tons of sugar.

**Cairo Warehouses.** In Cairo the company acts on behalf of the Customs Administration for warehousing all goods in bond forwarded from Alexandria and other Egyptian ports. The accommodation for tobacco (of which during 1925 some 98,000 bales were received) and general merchandise amounts to 9,000 square metres, and the railway track alongside the warehouses enables off-loading direct under Customs supervision into the stores. On the banks of the Nile at Boulac (Cairo) another property is equipped with hangars for the reception of duty-paid goods dispatched by river.

**Port Said.** Special conditions arise at this port owing to the existence of a free zone within the precincts of the Suez Canal. In this area goods are relieved from the obligation of Customs supervision as well as the payment of duty, and as the Customs section adjoins the free zone, goods may conveniently be transferred from one area to the other. The company provides four warehouses for the reception of goods in the free zone, while maintaining within the Customs enclosure other warehouses for storing goods in bond. Special hangars are furnished for inflammable or dangerous articles. Such adequate provision for the reception and storage of goods has raised the degree of disposability of merchandise to a maximum for transit, transhipment, and also for importation.

During 1925, 129,000 tons of merchandise were received. Of this quantity, 60,000 tons were entered as transit and transhipment goods.

**Suez.**—This port is utilised chiefly as the entrepôt for gunny bags employed in packing agricultural produce, 7,200 bales being the complete importation during 1925.

**Total Entries.**—The entries for all the company's warehouses in Egypt totalled 720,395 tons in 1925, compared with 577,917 tons in 1924 and 543,996 tons in 1923.

EGYPTIAN BONDED WAREHOUSES CO. LTD., Alexandria.  
1. Looking towards "D" Block, the most recent addition to the Company's Warehouses.  
2. From the roof of "D" Block, looking towards "A," "B" and "C" Blocks.

**Staff.**—The company employs, in addition to clerical personnel, a large staff of competent warehousemen. 283 persons are on the pay-roll, excluding the many dockers and casual labourers.

**Subsidiary Companies.** On behalf of an affiliated company, The Egyptian Petroleum Storage Co., the parent concern undertakes the warehousing of inflammable and dangerous goods landed at Alexandria. The Levant Bonded Warehouses Co., Ltd., in which the controlling interest is held by the Egyptian Bonded Warehouses Co., Ltd., has branches at Jaffa and Haifa.

**Directorate.**—Messrs. S. Wellhoff (president), R. Ismailun (vice-president), Robert S. Rolo, Michel Ayoub Pacha, Baron F. de Menasse, S. R. P. Carver, and E. Pegna (general manager). Messrs. J. S. Mizrahi and J. B. Barron are sub-general managers. Auditors, Messrs. Russell & Co.

**Head Office.**—Bah-El-Karasta, Alexandria. Cables: "Bonded," Alexandria.

#### **NILE COLD STORAGE AND ICE COMPANY.**

**Inception.**—The operations for the hygienic conservation of all kinds of foodstuffs which climatic conditions make indispensable to the welfare of the country and of sea-borne traffic calling at its ports were commenced by this enterprise in 1904, the year of its establishment as an English company working in Egypt. Three years later it was incorporated as an Egyptian company.

**Development.** In 1904 the concern erected at Port Said cold-storage works having a capacity of 70,000 cubic feet, the refrigerating plant being supplied by the Haslam Foundry & Engineering Co., Ltd., of Derby. Subsidiary cold-stores were started at Cairo in the following year. In 1911 a similar establishment was inaugurated at Alexandria and in 1923 another at Suez. The close of the European War was followed by a considerable enlargement of the Port Said depot, new machinery, consisting of a Diesel oil engine driving a direct-coupled Sulzer ammonia compressor, being installed. Additions were made at the same time to the ice-making plant.

**Activities.**—The company handles all kinds of refrigerated goods, obtaining from Australia meat, butter, milk, poultry, etc., from England, game, fish, poultry and other comestibles, and from Canada, cheese, salmon, turbot and other fresh fish. These articles are supplied in turn to the various shipping lines passing through the Suez Canal, and to the luxurious tourist steamers visiting places of interest on the Nile. Hotels and European residents in Cairo, Alexandria and Suez are also catered for, while recent years have seen the gradual development of a trade with the native population of Egypt and Palestine.

**Ice-making.**—Ice-making plants are situated at Port Said and Suez, where ice is supplied to ships, as well as to general customers.

**Branches.**—The chief entrepôt for the goods handled by the Nile Cold Storage and Ice Company is at Port Said, that being a principal port of call for refrigerator and other vessels passing between Great Britain and the Far East. Branches flourish also at Cairo, Alexandria, Suez (Port Tewfik) and Ismailia, in which cities the company also has retail shops.

**Administration.**—The company is entirely under British control, Mr. W. H. Perkins being the general manager. The managers of the different branches are likewise British.

**Head Office.**—19 Sharia Fuad El Awal, Cairo. Cables: "Coldstores," for Cairo and all branches. Codes: A.B.C. 5th and 6th Editions, Western Union, Bentley's.

**Bankers.**—National Bank of Egypt.

## AIR, RIVER AND ROAD

### SHIPPING

**T**HE administration of all Egyptian ports and lighthouses is controlled by a department of the Ministry of Communications. Alexandria, Port Said and Suez are the three principal ports, smaller harbours for coastal trade existing at Damietta, Rosetta, Marsa Matrûh, and Sollûm. The direction of shipping facilities and of the various docks and harbour works is also under the Department of Ports and Lighthouses, which is represented in each port by highly-skilled marine and technical officers.

**LIGHTHOUSES.**—Along the Mediterranean and Red Sea littorals there are respectively eleven and nine lighthouses, twenty in all. Of these, seven guard the approaches to the port of Alexandria, and important lights are those outside Damietta and Port Said harbours. The Red Sea coast is well protected throughout with a series of lighthouses, of which the two known as "The Brothers" and "Sanganib Reef" respectively are the most important.

**MERCANTILE MARINE.**—A very definite step towards the provision of an Egyptian commercial fleet was taken early in 1926, when the Council of Ministers was asked to sanction the allotment of £1,720,000 in the 1926-27 budget of the Ministry of Communications to go towards the purchase of two steamers. It is proposed that these two steamers shall form the nucleus of a fleet of six or eight vessels, to be engaged mainly in the transport from British and Continental ports to Egypt of heavy bulk cargoes, such as coal, iron, and steel, etc., on behalf of the State Railways and other Government Departments. Cotton, cotton-seed, onions and other Egyptian cargoes will be carried in these Government bottoms to the United Kingdom and the Continent. Another field of use suggested is the transport from Suez to Jeddah of Moslem pilgrims for Mecca and their return.

**SHIPPING COMPETITION.**—During the years 1924 and 1925 there was no fresh feature of great interest in the shipping world as regards Egyptian ports. In spite of competition from State-owned and State-subsidised tonnage, the British shipowner continued to hold his own in much of the trade in and out of Alexandria and Port Said. (See also article "Port of Alexandria.")

**TRADE WITH ENGLAND, THE FAR EAST AND DOMINIONS.**—The shipment of cotton from Alexandria to England and the import of cotton goods from England are entirely in the hands of British liners, as is practically the whole of the import of machinery and general goods from the United Kingdom. The transport of coal from England, and the shipment to England of cotton-seed, oilcake, eggs and onions is open to competition from ships flying all flags, which naturally has the effect of keeping freights at a low level, and often at a very unprofitable one, but, in spite of this, British tonnage predominates.

Imports of flour from Australia and rice from Burma are usually carried in British bottoms, the bulk of the ships conveying the former being owned by the Australian Commonwealth Government.

**TRADE WITH EUROPE.**—The regular Mediterranean liners of France and Italy are heavily subsidised by the respective Governments of the countries named, and control the entire maritime trade between Egypt and the French and Italian ports. With Germany, nearly all the trade is done by German boats. With Greece and the Near East, a proportion of the traffic is catered for by one British steamship company whose activities are confined to the Levant and the Red Sea, but a large share of it goes to French, Italian and Greek boats. The French and the three Italian lines trading in the Eastern Mediterranean are

able to compete keenly with the British steamship company in question because, although their ships, which are maintained in a high state of efficiency are understood to run at a heavy loss, they receive considerable subsidies from their respective Governments. This, however, is not all, as competition in the Eastern Mediterranean is further increased by the fact that many small boats of Greek, Italian and other nationalities, owing to their condition and the meagre crews with which they are manned, are able to quote freights considerably below those of the British steamship line. Since 1924 German lines have come into active competition with those under British and Dutch flags.

**TRADE WITH THE UNITED STATES.**—Since the War the British shipowner has been almost entirely driven out of this trade, in so far as imports are concerned, by American owned boats, the losses on which are understood to be high. As regards exports from Egypt to the United States, principally cotton, these are carried in the main by British and American ships in about equal proportions in accordance with the arrangements which exist between the United States Shipping Board and the English Shipping Companies.

**SHIPPING STATISTICS.**—The following table shows the number and tonnage of the total arrivals at and departures from all Egyptian ports during the years named.

ARRIVALS	1924	1925
No. of vessels	3,010	3,337
Net reg. tonnage	5,020,132	6,746,376
Tons of cargo landed	3,569,944	4,196,178
DEPARTURES		
No. of vessels	3,037	3,341
Net reg. tonnage	5,987,901	6,757,785
Tons of cargo shipped	1,543,826	1,424,843

1. GABBARI DRY DOCK, ALEXANDRIA.

2. PORTS AND LIGHTS ADMINISTRATION OFFICES, ALEXANDRIA.

**PASSENGER TRAFFIC**—In 1925 the total number of passengers landed at Egyptian ports, including Suez Canal traffic, was 74,372, compared with 80,742 in 1924.

**SHIPPING BY FLAGS**—A glance at the figures relating to the nationalities of vessels using Egyptian ports evidences at once the commanding position occupied by British shipping. The following table shows the nationalities of vessels arriving in all Egyptian ports during the year named—

NATIONALITY OF VESSELS	1925	
	No. OF VESSELS	NET REGISTERED TONNAGE
Egyptian	271	151,357
British	1,331	2,786,457
American	77	321,486
Belgian	44	86,471
Dutch	50	128,307
French	230	944,453
German	146	264,235
Greek	338	295,114
Italian	617	1,333,278
Norwegian	30	50,795
Others	107	384,423
Total	3,337	6,746,376

For 1924 the figures were: Egyptian vessels, 173, tonnage 79,315; British, 1,227 (2,334,188 tons); American, 77 (313,019 tons); Belgian, 44 (83,480); Dutch, 70 (175,856 tons); French, 217 (868,005); German, 154 (219,580 tons); Greek, 277 (246,232 tons); Italian, 614 (1,306,351 tons); Norwegian, 21 (43,619 tons); Others, 142 (259,178 tons), a grand total of 3,016 vessels and 5,029,132 tons.

**SHIPPING BY PORTS**—The following table shows the number of vessels arriving, their tonnage, and the amount of merchandise entering and shipped from the principal Egyptian ports during the years named—

ALEXANDRIA	1924		1925	
	No. of vessels entering	Net reg. tonnage	No. of vessels entering	Net reg. tonnage
	1,881	4,206,769	2,102	4,781,305
		2,688,182		3,410,248
		1,306,813		1,141,517
PORT SAID	1924		1925	
	No. of vessels entering	Net reg. tonnage	No. of vessels entering	Net reg. tonnage
	5,580	20,946,473	5,880	22,382,888
		148,798		583,962
		104,833		89,520
SUZ	1924		1925	
	No. of vessels entering	Net reg. tonnage	No. of vessels entering	Net reg. tonnage
	400	417,176	370	436,927
		432,064		501,968
		132,180		103,806

Of the vessels and tonnage entering Port Said in 1924, 5,021 ships of 19,800,823 net tonnage were in transit; in 1925 the number of such vessels was 5,237, while the net tonnage was 21,051,866.

**STEAMER LINES.**—The following is a list of shipping companies trading with Egypt, classified according to nationality, their services being indicated—

#### BRITISH

Anchor Line, from Liverpool, via Gibraltar, to Port Said  
 Australian Commonwealth Line, London to Port Said  
 Bibby Line, from Liverpool, via Marseilles, to Port Said  
 Blue Funnel Line, Liverpool to Port Said  
 British India Line, from London direct, or via Marseilles, to Port Said  
 Ellerman & Bucknall S.S. Company, from Southampton, via Marseilles, to Port Said  
 Ellerman & Papayanni Lines, from Liverpool to Alexandria  
 Ellerman's City and Hall Lines, from Liverpool (occasionally from Marseilles or Naples) to Port Said.

Glen Line, from London to Port Said  
 Henderson Line, from Liverpool to Port Said

Moss Line from Liverpool, via Malta, to Alexandria

Orient Line, from London, via Gibraltar, London and Naples, to Port Said

P & O Navigation Company, from London, via Gibraltar and Marseilles or direct to Port Said

Union Castle Line, London to Port Said

#### DUTCH

Nederland Royal Mail Line from Amsterdam, via Southampton, Algiers and Genoa, to Port Said

Rotterdam Lloyd Line, from Rotterdam, via Southampton, Langier and Marseilles, to Port Said

#### EGYPTIAN

Khedivial Mail Line from Constantinople via Piraeus, to Alexandria

#### FRENCH

Fabre Line, Marseilles to Alexandria  
 Messageries Maritimes Line, Marseilles to Alexandria or Port Said

#### GERMAN

Hamburg-Amerika Line, from Hamburg, via Genoa, to Port Said

Holland Afrika Line, from Hamburg, via Amsterdam and Antwerp, to Port Said

Norddeutscher Lloyd Line, from Hamburg, via Rotterdam, Antwerp and Genoa, to Port Said

#### ITALIAN

Lloyd Triestino Express Services, from Trieste, via Brindisi, to Alexandria, main lines from Trieste and Venice, via Brindisi,

to Port Said, also intermediate (Syrian) services from Trieste Venice and Brindisi, via Greece, to Alexandria

Marittima Italiana from Genoa, via Naples, to Port Said

"Sitimar" (Societa Italiana di Servizi Marittimi) from Genoa and Naples, Syracuse, or Catania, to Alexandria Express service per S.S. "Esperia" also the "Linea Celere" at lower fares

#### JAPAN

Nippon Yusen Kaisha (Japan Mail Line), from London, via Gibraltar, Marseilles and Naples, to Port Said

#### RUMANIAN

Rumanian S.S. Company, from Constanza via Constantinople and Smyrna to Alexandria

#### RUSSIAN

Russian Line, from Odessa, via Constantinople, Smyrna and the Piraeus, to Alexandria

#### UNITED STATES

Cunard Line Sailings during winter season from New York, via Madeira, Gibraltar, Algiers, Villefranche or Naples, to Alexandria

Red Star Line Sailings during the winter season from New York, via Madeira, Gibraltar, Algiers, Monaco, Naples, Athens, Constantinople, and Haifa to Alexandria

White Star Line Sailings during the winter season from New York, via Madeira, Gibraltar, Algiers, Monaco, Naples, Athens, Constantinople and Haifa, to Alexandria

THE EGYPTIAN STATE  
The Capital's

## RAIL THE EGYPTIAN

THE EGYPTIAN STATE RAILWAYS.  
Head Quarters Engineering Department, Cairo.

**R**AILWAY construction in Egypt has always been a comparatively simple task, there being no mountain ranges to tunnel or stiff gradients to climb. In consequence of these advantages and the small amount that has had to be spent on engineering works the capital outlay for line building has been kept at a low figure per mile compared with many other systems. Maintenance and haulage costs can also be kept at a moderate level, and as the passenger and goods traffic on the Egyptian railways is fairly heavy the Administration is able to devote a large part of its revenues to maintaining the very high standard of efficiency for which its system has been noted. Whereas formerly the Nile was the great highway of Egypt, the railways can now claim to be the swiftest and cheapest means of visiting the wonderful tombs, the ruined cities and temples of the Pharaohs. The famous expresses-de-luxe which run between Cairo and Upper Egypt can vie with any in the world, the accommodation is not only luxurious, but (compared with England) inexpensive, and all visitors to Egypt will be quick to acknowledge the ready courtesy and attention to their comfort which is everywhere given by the railway personnel of all grades.

**ADMINISTRATION.**—The administration of the State Railways (which includes that of the State Telegraphs and Telephones) is controlled by the Ministry of Communications, and is in the hands of a General Manager, aided by a Deputy General Manager and an Assistant General Manager, with head offices at Cairo Central Station. For administrative purposes the system consists of the Cairo, Lower Egypt, Gabbary and Upper Egypt Divisions, also the Port Said-Suez and Luxor-Assuan Lines. In the administrative, accountants', ways and locomotive services alike many leading positions are occupied by British officials and engineers.

RAILWAYS. Cairo  
Fine Station

## WAYS

### STATE SYSTEM

The present General Manager of the E. S. R. is H. E. Abdul-Hamid Sulman Pasha, the first Egyptian to occupy the post in which, it is generally agreed, he is fully maintaining the high standard of efficiency set by his predecessors.

**EARLY HISTORY.**—The first line of railway to be constructed in Egypt dates from the year 1852, when, under the reign of the Viceroy Abbas Pasha, the famous British engineer, Robert Stephenson, was commissioned to build a line from Gabbary (Alexandria) to Cairo. The laying of the track was commenced simultaneously from Cairo northwards, as well as from Benha to Cairo. Pending the construction of an iron bridge at Kafr el-Zayat, a steam ferry was used there. The line was opened in 1856. Two years later, to complete the overland route to India, a track was laid from Cairo to Suez. In those days the overland traffic between Alexandria to Suez was an important item, bringing in a revenue of three-quarters of a million sterling annually, and the new "Desert Line" proved to be a brilliant financial success. All the earth-works and buildings of this railway were carried out by means of the "corvée" (i.e. forced labour), long since abolished. The land was taken without payment. In 1868 a line was laid from Suez to Ismailia, half way to Port Said on the newly-constructed Suez Canal. The opening of the latter in the following year put an end to the overland traffic between Alexandria and Suez, and the line from Cairo to Suez was taken up. A year previously (1867) the construction of a railway from Boulac Dacrou to Minia was commenced. The junction line from Cairo to Boulac Dacrou was not then in existence, and passengers had to find their own way to the last-named place until as late as 1891, when the Embabeh bridge over the Nile near Cairo was opened to traffic.

THE EGYPTIAN STATE RAILWAYS.  
Main Station in Cairo.

On November 18, 1876, a Khedivial decree was issued placing the control of the railways under a mixed administration composed of a President and two Directors, but on November 20, 1905, the International Board ceased to exist, and its members were replaced by a General Manager.

In 1801 the construction of the following new lines was commenced: Chebin el-Kom to Achemonn, Damanhour to Rahmanieh, Cherbine to Kafr el-Chikh, Fayyum to Sannoures, and the Upper Egypt line was extended from Assuit to Luxor also afterwards to Assuan. By an arrangement with the Suez Canal Company dated February, 1902, the Administration built a new standard gauge line from Ismailia to Port Said to replace the narrow-gauge steam tramway belonging to the Canal Company. The doubling of the line from Cairo to Mima was carried out in six years (1903-1908) over a distance of 247 kilometres.

**EMPLOYEES.** The total number of persons employed on the State Railways in 1925 exceeded 30,000.

**GAUGE.**—In April 1925 the length of line on the Egyptian State Railway system was 2,230 kilometres of standard gauge and 210 kilometres of 3 ft 6 in track, this latter being the Luxor-Assuan stretch, which, however, before the end of 1926 had been converted to the first-named gauge in time for the winter season.

**LINES (STATE).** The principal lines owned by the Egyptian Government are usually known as the Main Lines, Auxiliary Lines and the Oasis Line. In Lower Egypt the chief lines are the three radiating from Cairo to the coast, Cairo-Alexandria, Benha-Suez-Port Said, and Tanta-Damietta. Two transverse lines unite these main lines, viz. that from Zagazig to Mensurah via Abu-Kebir, which joins the Suez line to that from Damietta, and the line from Cherbine to Damanhour, via Belbeis, which unites the Damietta and Alexandria lines. Branch lines run from Gahoub to Zagazig, from Mehallet Roh to Kalline and from Cairo to Teli-el-Baroud.

The Upper Egypt system is distinguished by the main line which follows the course of the Nile as far as Luxor. From that point a narrow-gauge line ascends the river

as far as Shellal on the Sudan frontier. This system also includes the Fayyum lines which serve Medinet-el-Fayyum, Aboukhah and Sannoures, joining the main Cairo-Assuan line at Wasta.

In addition to the Egyptian State Railways proper, there are 515 kilometres of standard gauge auxiliary lines known as the Auxiliary Railways of Upper Egypt, the headquarters of which are in Mima, and 227 kilometres of narrow gauge track from Khargeh Junction (about 540 kilometres south of Cairo), connecting the Nile Valley with the oases of Khargeh.

**PASSENGERS.**—The total number of passengers carried by the Egyptian State Railways in 1924-25 was 28,975,818, made up of 916,091 first class, 3,207,513 second class and 24,852,214 third class. These figures show an increase in passenger traffic over the previous year, when 27,585,256 passengers in all were carried. The coaching train kilometrage in 1924-25 amounted to 10,175,087.

**REVENUE AND EXPENDITURE.** The earnings of the Egyptian State Railways, not including the Auxiliary Railways, for the year ending March 31, 1925, were £E 7,044,000, compared with £E 7,148,161 in 1923-24 (£E 1 approximately /10s 6d sterling). Receipts for 1924-25 were derived from coaching traffic, £E 3,131,251, goods, minerals and live stock £E 3,809,770, sundry earnings made up from rents, profits on sales, interest, advertising receipts, etc. £E 103,645. Receipts from passenger traffic amounted to 308 millions per coaching train kilometre.

**EXPENDITURE.**—The expenditure in 1924-25 totalled £E 3,091,007, as against £E 5,337,074 in 1923-24. This showed a credit balance of £E 3,053,059 compared with one of £E 1,810,487. The following table gives the main items of revenue and expenditure for the years named.

	1923-4	1924-5
REVENUE	£E	£E
Passenger traffic	3,065,632	3,131,251
Goods traffic	3,966,738	3,809,770
Various	115,791	103,645
Total	7,148,161	7,044,666

	1923-4	1924-5
EXPENDITURE	£E	£E
Ways and Works	810,498	714,860
Locomotive service	2,904,982	1,705,262
Rolling stock	409,275	302,071
Expenses of movement	794,800	774,919
General expenses	270,532	259,779
Special expenses	141,587	154,707
Total	5,337,674	3,091,697

**ROLLING STOCK.**—The rolling stock of the Egyptian State Railways consisted in 1925 of 684 engines, 1,541 passenger carriages, 13,844 wagons and 330 service and miscellaneous vehicles.

The coaching stock is thoroughly up-to-date, and is lighted either by electricity or gas, the standard first-class being bogie corridor coaches fitted with lavatories and clerestory roofs. The interior fittings throughout are consistent with the necessities of a hot climate, and photographic views of places of various interest adorn either side of each compartment. The branch line traffic and local trains consist mostly of the six-wheel corridor stock of varnished teak, which rendered excellent service on the main lines prior to the introduction of bogie stock, and which is still eminently suitable for local work. The first-class coaches are fitted with lavatories. The third-class coaches are open from end to end, and contain seats in rows down each side. The standard bogie third class carriages have this same arrangement, but are fitted with lavatories. The standard brake throughout is the vacuum automatic.

**GOODS STOCK.** The goods stock comprises bogie 30 ton steel box and open trucks (the latter for coal and similar traffic) and a large quantity of four wheel 10 ton open trucks, fitted in most cases with high ends for timber traffic, but equally useful for the large cotton and onion traffic. Ten ton steel or wooden box trucks are also largely used and special low sided steel 30 ton bogie trucks are provided for ballast work and transport of rails, etc. for the Permanent Way Department. Each locomotive depot of importance is furnished with a travelling steam crane, with the usual complete breakdown train containing all necessary appliances, acetylene flare lamps, etc.

THE EGYPTIAN STATE RAILWAYS

1 Type of New British Express Engine recently put into service.

2 Dining Car

**NARROW GAUGE STOCK**—On the line from Luxor to Assuan the coaching stock is of the bogie corridor type, with lavatories and smoked glass windows as a protection against the glare of the sun, and the interiors are fitted in a similar manner to the broad gauge stock. Dining cars are run on the important trains, i.e., those running in connection with the standard gauge trains to and from Cairo.

**SAFETY FOR TRAVELLERS.**—The guiding principle of the Egyptian State Railways is "Safety First." Compared with America and some European countries, the speed, even of the express trains between Cairo and Alexandria, where the 130 miles is covered in three and a half hours, is not great. The longest through run from Luxor to Cairo (424 miles), which is done by the nightly train-de-luxe of the winter season, occupies eleven hours. But the policy of

the E.S.R. finds its justification in the comparatively low cost of running, which mounts up disproportionately if the speed be increased beyond a certain point, while a further vindication of the management's motto lies in the fact that the Egyptian Railways enjoy an immunity from serious accidents which is probably unrivalled by any system in the world. In 1923 only 12 persons were killed on the State railways, two of whom were passengers. As regards punctuality, too, the E.S.R. may justifiably feel proud, for schedule timings are very closely adhered to.

**SIGNALLING.**—The system of inter-locked signalling has made rapid progress in recent years on the Egyptian State Railways. The whole of the main line Alexandria-Cairo, Port Said-Cairo and Cairo-Luxor is already thus equipped, and branch and goods yards are now being signalled. At Cairo itself

the station and yard are power-worked, the Westinghouse electro-pneumatic system having been adopted.

**SUBURBAN SERVICE (CAIRO).**—Special attention is given to the excellent suburban services between Cairo and the outlying residential districts (Pont-Imam Station for northern suburbs, and Bab el-Lark Station for Maadi and Helwan) inhabited largely by Cairo business men and Government officials.

**SWING BRIDGES.**—There are about 250 bridges on the system, eight of which span the Nile, the remainder crossing broad navigable canals. A large number of these are provided with swing spans to allow of the passage of the heavy boat traffic. There exist in addition a number of subways and over-crossings. The swing bridges are opened and closed to boat traffic at fixed hours, the times being established with due

STATE RAILWAYS.  
Alexandria.

THE EGYPTIAN STATE RAILWAYS.  
New Station at Alexandria.

regard to the comparative interests of the boat and rail traffic. The average number of daily openings is three per swing bridge, each opening lasting from 40 to 60 minutes.

**TOURIST TRAFFIC.**—Much of the super-excellence of the Egyptian railway system and the high standard of comfort offered to travellers is undoubtedly due to the large amount of tourist traffic for which the Administration caters every year. The country of the Pharaohs now attracts many thousands of tourists each winter, and these are almost entirely drawn from a class which expects and is prepared to pay for the highest class of accommodation. Naturally, the State Railways have always made special provision for this tourist traffic, and it may be added that their efforts in that direction have been ably seconded by the International Sleeping Car Company, which, in addition to providing and managing the luxurious sleeping cars attached to the night

express trains between Cairo and Alexandria, Cairo and Port Said and Cairo and Luxor, furnishes and controls the restaurant cars and also the buffets which are provided at the main stations. The trains-de-luxe, consisting entirely of sleeping cars and a dining car, run three times weekly in each direction during the winter between Cairo and Luxor. The International Sleeping Car Company recently resolved to introduce a novelty in the shape of Pullman cars, the first four of which were to be put into commission during 1926.

**TRAFFIC FIGURES.** In 1924-25 the total tonnage of public goods carried on the State Railways was 4,003,253, as against 4,300,000 tons in 1923-24. In the last-named year 599,000 animals were also carried. The cotton transported, ginned and unginned, in 1924-25 amounted to 300,675 tons and 137,715 tons respectively, the receipts for the same totalling £E 414,355 and £E 55,023.

Sugar and molasses produced £E 152,380, and the quantity transported amounted to 186,638 tons.

The goods earnings furnished 54.08 per cent of the gross earnings, and, based on the total goods kilometrage of 6,080,750, produced 626 millimes per goods train kilometre.

**WORKSHOPS.**—The principal shops for the repair of rolling stock are situated at Cairo, and comprise a locomotive shop, carriage shop, foundry and running and steam sheds, covering an area of over 30 acres. The locomotive works include machine and erecting shops, smithy, boiler and paint shops. Electric overhead cranes are used, also electric traversers. The works are equipped with up to date machinery, and compare generally very favourably with similar shops in Europe. The carriage works are also well equipped for repairs to coaching and wagon stock, the greater

1. Type of Wayside Station.

THE EGYPTIAN STATE RAILWAYS.

2. Pant-Limoun Station, Mataria, Suburban Line.

part of the latter, however, is dealt with at Gabbary, Alexandria where large wagon shops have been built.

The foundry is at Cano. The outdoor department is operated in divisions, having headquarters at Alexandria (where locomotive repair shops are situated), Cairo, Tanta and Minia where running sheds and (in the case of the latter, too) small repair shops with a few machines are provided. These divisions are again subdivided into districts having headquarters at Zagazig, Ismaïha, Port Said, Suéz, Boulac, Dairout, Wasta and Sobag. The narrow gauge stock is kept in repair by the Luxor shops.

#### THE LIGHT RAILWAYS OF EGYPT.

In addition to the State Railways of Egypt which have just been described and which include the auxiliary Railways of Upper Egypt and the Western Oases Railway, the country possesses three important systems of light railways. These are the Delta Light Railways, the Basse Egypte Light Railways, and the Fayyum Light Railways.

The Egyptian Delta Light Railways Company obtained a concession in March 1907 for 70 years, and has constructed some miles of line of the 2 ft. 6 in. gauge (75 metre). The Fayyum Light Railways have a similar gauge and concession while the Basse Egypte Company owns a metre gauge system and has only a 50 years' concession. (See article following.)

Altogether the working of these three lines forms an interesting experiment in the development of the country generally, and an object lesson as to the way in which light railways can be used with advantage to main line railways.

#### EGYPTIAN DELTA LIGHT RAILWAYS, LTD.

**Inception.** To this British registered company a concession was granted by the Egyptian Government in 1894 to construct agricultural railways in the Nile Delta provinces of Behera, Gharbieh, Dakahlieh, Charkieh and Caloubeh.

**Capital.** - The authorised capital of the company stands at £2,255,300 and the paid up capital at £1,926,039 10s. These sums are composed respectively as follows:-

AUTHORISED CAPITAL		
125,000 preference shares		
5½% cumulative of £10 each	£1,250,000	0 0
11,000 deferred shares of £10 each	£110,000	0 0

**Activities.**—The system constructed is intended to serve the needs of the dense agricultural population of the Delta and to provide feeders to the Egyptian State Railways system. It consists of a network of lines totalling in length about 1,000 kilometres, irrespective of sidings serving most of the principal towns and villages in the Lower Delta.

**Coaching Traffic.**—Of the total revenue, about 65 per cent is derived from the passenger traffic. The numbers of passengers carried yearly during the five years ending March 31, 1925, were as follows:

Year ending March 31	1921	7,389,149
" "	1922	5,500,001
" "	1923	4,790,814
" "	1924	5,135,454
" "	1925	6,679,666

Two classes of accommodation, first and third, are provided. The existing coaching stock comprises 180 bogie vehicles and 45 four-wheeled vehicles.

**Goods Traffic.** The most important operation of the goods traffic is the conveying of unginned cotton from the villages to the markets or ginning factories in the large towns. During the year ending March 1925 the approximate tonnage of various classes of goods carried was as follows: Unginned cotton, 140,000 tons; manure, 51,000 tons; cereals, 45,000 tons; stone, 65,000 tons; fruits and vegetables, 25,000 tons; building materials, 60,000 tons; various, 130,000 tons. These commodities give an aggregate tonnage of 522,000 for the year 1925.

The goods stock at present employed in this traffic consists of 725 bogie wagons (each of ten tons carrying capacity), 17 bogie animal trucks, 548 four-wheeled trucks (with a carrying capacity of five tons), 25 four-wheeled cattle trucks and 40 brake vans of various types.

**Locomotives.**—The company owns 98 locomotives, which may be classified in three categories: (1) Heavy locomotives designed to haul mixed and goods trains consisting of up to 25 bogie vehicles of a total carrying capacity of 250 tons; (2) light locomotives for use with passenger or light mixed trains; (3) Sentinel tractors for drawing light passenger trains. Owing to the very low running expenses of the last named, recently introduced by the company, they are suitable for service on sections where traffic is light.

**Financial.**—Particulars furnished in July, 1926, of the working of the system during the past year included the following: The gross receipts for the year amounted to £369,335, while working expenses totalled £249,401. To the general reserve was carried £10,000 for capital expenditure. A dividend of 4½ per cent on preference shares was paid, leaving £40,420 to be brought forward.

**Administration.**—The affairs of the company are administered by a board of directors in London, with an agent and general manager in Egypt.

**Directorate.**—Sir Montagu Sharpe, K.C. (president), W. Home, C.I.E., Field Marshal The Right Hon. The Viscount Allenby, G.C.B., G.C.M.G., Hon. W.B.E. Barrington, E.W.P. Foster, C.M.G., and F.G. Bonham-Carter, Secretary, F.J. Horne.

**Agent and General Manager in Egypt.**—Lieut. Col. J. R. Marryat, D.S.O., M.C., R.E.

**London Offices.**—211, Gresham House, Old Broad Street, E.C.

**Administration Offices in Egypt.**—15 Rue de la Gare du Caire, Alexandria. Cables: "Deltalight," Alexandria.

**Bankers.**—Bank of England (London), National Bank of Egypt (London and Egypt).

## AIR, RIVER AND ROAD

### AIR

**T**HE important position which Egypt occupies as regards aerial communications between Europe and both India and South Africa has led during the past year or two to a considerable amount of experimental work in connection with both military and commercial aviation. The great interest excited by Mr. Alan Cobham's flight from London to Capetown and back was nowhere more evident than at Cairo and other places in Egypt and the Sudan where the intrepid aviator alighted for repairs or supplies. Early in 1926 it was officially stated that an agreement had been made with the British Air Ministry for Imperial Airways, Limited, to maintain an air service between Egypt and India, the terminus proposed being at or near Cairo and at Karachi, in India. The distance between these two points is approximately 2,500 miles, and the saving of time will be increased by days, not hours. By this service India will be brought nearer to England by five days, with a possible saving of ten days in the time taken by a return letter. It was confidently expected that the first aeroplane would leave Cairo for India not later than the beginning of January, 1927. It is also considered possible to establish extensions later on to Bombay, Calcutta, Rangoon and Singapore, while an air connection between Cairo and Basle may still further increase the saving of time between London and Karachi.

### RIVER

The possible routes of travel through Egypt and the Sudan are simplified in a manner denied to any other country. From the Delta to more than 1,000 miles within the confines of the Sudan the Nile has been from time immemorial the great highway of the country, and though the excellent railways which follow its course have to some extent reduced the volume of traffic upon its waters, the ancient river is still busy, not only with commercial freightage but with the ever-growing tourist traffic which is attracted during the winter season.

**CANALS.**—Something has been said of the canals of Egypt in the section of this volume devoted to Public Works. All the large canals of Lower Egypt are navigable throughout the year, except during the period of winter closure, which begins about the middle of December and continues till the end of January. The most important are the Ismailia, Tewfikia, Bahr-el-Saghir, Bahr-el-Moes, Minufiya, Bagurivah, Shihin, Bahr Tirah and Mahmudiya canals. In Upper Egypt, the Ibrahimiya canal is closed from Dairût northwards for about a month in the winter, and no boat can pass Dairût during flood. The Bahr el-Yussuf is closed during January.

**FERRIES.**—All ferries on the Nile, some 250 in number, are controlled by the Inland Navigation Department of the Ministry of Communications, and are let out to concessionaires, who are subject to strict regulations. Ferry boats ply at all times between sunrise and sunset and as often as may be necessary by the reasonable requirements of traffic.

**STEAMERS ON THE NILE.**—It is possible to travel by boat from Ismailia or from Alexandria to Rejaf, 1,100 miles above

Khartoum, and, making allowances for curves, the prevailing wind over the whole distance blows up-stream. The portion, however, from just below the Second Cataract, that is to say from Wadi Halfa round the Dar Dongola bend to Abn Hamid, which lies a little above the Fourth Cataract, and from Abn Hamid past the Fifth and Sixth Cataracts to Khartoum, is only navigable throughout flood water. Even at that time some of the passages are likely to make tow and stay ropes necessary.

From Cairo to Assuan from November to the middle of March, the journey can be made, either up or down, by the tourist steamers of Messrs. Thomas Cook and Son Ltd., or by those of the Anglo American Nile and Tourist Company. The journey up takes fourteen days, down six days. Stoppages are made at all the principal towns and temples. The steamers of both these companies are famous for the comfortable, and even luxurious, accommodation which they offer. From Shellal a steamboat station just above the First Cataract and the Great Assuan Dam, the Sudan Government Express steamers also run bi-weekly to Halfa, the time taken being two and a half days either way. It should be remembered that there is no service of steamers from Halfa to Khartoum, but railway communication only.

**PRIVATE STEAMERS.**—A feature of great interest on the Nile during the winter season is the large number of private steamers and of dhabeahs, or "houseboats" in which the wealthy Egyptians and tourists take their pleasure on Egypt's ancient waterway. Many of these are most sumptuously fitted up, and houseboats of varying capacity can be hired from the principal tourist companies.

### ROAD

The Egyptian Government has during recent years paid considerable attention to the development of good roads. Eventually, through the combined efforts of the Land Department of the principal municipalities and the Department of Main Roads and Bridges of the Ministry of Communications, a net-work of first-class roads is planned to connect all the important cities of the Delta and extend along both sides of the Nile from Cairo to the villages of Upper Egypt, and Westward to Fayyum. Road transport is, of course, no novelty in Egypt, although the Nile and its canals have always been, and must ever be, the more natural and less costly means of communication in a country everywhere intersected by waterways. But the land transport methods of the past, and still in a great degree of the present, the donkey and the camel, require, not hard metalled roads, but the less smooth surface of the desert track. So, though Egypt has roads in plenty, not all of them are practicable for motoring, and none is to be compared with the main roads of England or the long straight highways of France. Wheeled transport on Egyptian roads is an innovation of the last twenty years, and it is surprising that tracks made for and by the camel's padded hoof prove so suited as they do for the modern motor car.

**MAIN ROADS.**—The most famous, and, eighty years ago, the busiest main road in Egypt, the overland Indian mail route from

Cairo to Suez, has now fallen into disuse, killed by the Canal. Motorists still make the trip, attracted partly by the fifteen Napoleonic watch-towers and the three or four ruined castles by which the road passes, but the journey is regarded as somewhat of an adventure. Most used of all Egyptian main roads is that between Cairo and Alexandria, 150 miles, though only a short stretch of this is metalled, the surface, however being good for nearly the whole distance. Other good roads are those radiating from the capital, to Ismailia and thence by the wartime military road along the Suez Canal to Port Said, to Assiut and Minia in Upper Egypt and to the Fayyum, a lovely district with picturesque scenery not found elsewhere in Egypt.

### METHODS OF CONSTRUCTION.

The macadam roads improved during recent years are surfaced with local bitumen, a mineral oil similar to the road preservatives and surface preparations used in the United States. The bitumen is hauled to the scene of the work in steel drums and applied after heating. The native road workers are paid about 25 cents a day. The newly surfaced roads are some 18 feet wide, with a very slight crown. The dry climate and almost uniformly level topography offer little difficulty in the way of grades and drainage. The nature of the traffic is not such as to damage a well macadamized road, as camels and donkeys carry the bulk of the load, and few vehicles except automobiles are in use. The narrow-tired heavy carts used in Southern European countries, which are so destructive to roads, are not found in Egypt.

**MOTORING IN EGYPT.**—The Royal Automobile Club of Egypt, which was founded in 1924 under the patronage of His Majesty King Fuad I and under the presidency of His Highness Prince Djemil Tousseum, has done much by its activities to facilitate motor touring in Egypt, not only by route making and mapping, but by the erection of guide posts on roads and the provision of stations for the supply of accessories on the different routes, in towns and villages alike.

In addition to the Royal Automobile Club d'Egypte, there are three other motoring organisations in Egypt, the Egyptian Motorists' Association, an Alexandrian body, which has done much good work for motoring, especially in inducing the police to enforce a standard system of signals, both for traffic control and by motorists themselves, but which has no social side and has never extended its activities much beyond Alexandria; the Cairo Motor Cycle Club, which caters for owners of two and three wheeled vehicles, and the Desert Touring Club. The latter body probably has no counterpart in any other country. It consists of a little group of enthusiasts who regularly throughout the winter go off on long week-end expeditions into the sandy wastes on each side of the Delta. Trips have been made to the oasis of Siwa, a fascinating spot, two hundred miles from anywhere, in the midst of the Libyan Desert, to Sollûm on the Tripolitan frontier, to the Fayyum by desert, and to other spots where motor cars seldom go. For membership of the Desert Touring Club an essential qualification, in addition to an adventurous spirit, is the possession of a car with a high ground clearance and the ability to stand up to prolonged arduous conditions.

PANORAMA OF PORT SAID.

## THE SUEZ

By GEORGES DOUIN

**T**HE Suez Canal is little more than half a century old, and, constructed at a period when industry could not boast such mechanical contrivances as it can to-day, gives to the world a lesson in energy as well as a fine example of the unselfish character of the man who designed it. It is a work of the greatest importance, and one which is bound to develop year by year so as to meet ever-growing commercial needs and to provide a passage for ships of continuously increasing dimensions.

Cut through the open desert, the Canal has fertilised it and given it fresh life. A new town, Port Said, was built on the Mediterranean, and numbers to-day nearly 80,000 inhabitants. In the middle of the Isthmus is the important Ismailian group, where the Canal Company has its chief centre. On the Red Sea, the piercing of the Isthmus has given new strength to the port of Suez, which formerly had gradually fallen in the main to the level of a miserable village.

By the bringing closer together of East and West the Suez Canal has helped to secure more quickly the exchange of ideas and riches between the different peoples of the old world, and has thereby exercised in marked degree a noteworthy influence on economic life and on contemporary civilisation.

### DE LESSEPS AND THE CONCESSION.—

The Suez Canal is the work of Ferdinand de Lesseps. Inspired by the ideas of the

experts who had accompanied Bonaparte to Egypt and by the work of Saint-Simonians, Ferdinand de Lesseps also knew how to utilise to the best advantage for the ultimate success of his project the many important friendships which he had formed during a period spent in the Consular Service in Egypt. On November 30, 1854, he succeeded in obtaining from the Viceroy, Mohammed Said Pasha, a provisional concession for the Canal which, having been subjected to careful investigation and study, was completed and confirmed on January 5, 1856.

The concession thus granted by the Egyptian Government in exchange for a return of 15 per cent of the company's net profits gave M de Lesseps the exclusive privilege of constituting a company with a view to opening up the Isthmus of Suez on a contract of 99 years' duration, at the expiration of which the rights of the company would again revert in full to the Egyptian Government, the company to build a canal suitable to the requirements of heavy shipping, and a shipping tax to be charged not exceeding the sum of 10 francs per ton net capacity, with 10 francs per passenger. Finally, a special article stipulated that the naval canal and the dependent port would be "always open as a neutral passage to commercial ships without any preference whatsoever, either to individuals or nationalities."

**COMPANY FORMED.**—No useful purpose can be served by recalling here the hostility shown by the British Government

towards M de Lesseps' plan, the indefatigable patience and activity of the latter, and the public help which he so ably succeeded in obtaining even in England by convincing the people of the importance of the work in hand. Overcoming all obstacles which were raised, M de Lesseps formed the Universal Company of the Suez Canal with a capital of 200,000,000 francs, divided into 400,000 shares of 500 francs each. The French public subscribed for more than half of the shares, England, Austria, Russia and the United States withholding subscriptions, and the Viceroy of Egypt subscribing for the remainder.

### CONSTRUCTION OF THE CANAL.—

Actual operations for the digging of the Canal were begun on April 25, 1859, at Port Said. The work lasted ten years. It was at first undertaken by native workers, who knew only how to use pick and shovel, and those workers had to be replaced by machinery when the Ottoman Government in 1863 ordered the suppression of the "sweated labour" of native workers. Messrs Borel & Lavalley introduced the use of dredgers provided with strainers to divert waste soil on to the banks, and thereby completed the work more rapidly.

The Canal was inaugurated on November 17, 1869. Its measurements were: 164 kilometres in length, 8 metres in depth, and 22 metres in width. The amount excavated totalled 74 million cubic metres, and the expenditure incurred was 287 million francs.

SHOWING ENTRANCE TO THE SUEZ CANAL.

## CANAL

### (Controller of Navigation)

**FINANCIAL CRISIS** - After the opening of the Canal to universal navigation, the company was confronted with further difficulties financial and political. The financial crisis was caused by insufficient income during the first few years of the company's activities. In 1871 the shares decreased in value to 167.50 francs. To meet its engagements the company decided to bring into operation the tax on transit to which, in accordance with the original concession, it was entitled not only on net tonnage but also on gross weight. This decision having provoked loud protest from shipowners, an international meeting was held at Constantinople in 1873, when it was decided that the conditions in the concession applied only to *net* tonnage, and gauging rules, which are still in force, were laid down, the company, in order to meet its liabilities, being permitted to levy taxes which with the increase of income should gradually disappear. From January 1875 the shares again reached par. The last tax was suppressed on January 1, 1884.

#### **POLITICAL CRISIS FORMATION OF COUNCIL OF ADMINISTRATION**

The political crisis was the result of the British military occupation of Egypt in 1882, which event was not foreseen by the company. The purchase by the British Government in November 1875 of 176,002 shares belonging to the Khedive Ismail constituted England the company's principal shareholder as well as its chief client. Three Crown delegates were appointed at this

time to the Administrative Council of the Canal. But in 1883, following on the occupation of Egypt, a serious agitation arose in English commercial shipping centres, the British Government being urged to press its claim to a share in the administration of the Canal proportionate to its holdings in the company, and to insist on numerous and important improvements under threat, in the case of refusal, of demanding from the Khedive the right to build a second canal. To end these disputes F. de Lesseps and his eldest son, Charles de Lesseps, went to London, and, after negotiations with British shipping authorities, a programme was drawn up which comprised the addition of seven English shipowners to the Council of Administration, the establishment in London of an agency for the purpose of furnishing necessary information, the progressive reduction of taxes, and the working out of a programme for the improvement of the Canal. This agency is at present established at 6, Bishopsgate, E.C.

From that time onwards the company has worked amicably with its principal client. Its Council of Administration is formed of 32 members: 21 French, 10 English and 1 Dutch. An important central office in Paris—1, rue d'Astorg—controls the general affairs of the company.

**DESCRIPTION OF THE CANAL.**—Being required to connect two seas of equal level and to pass between altitudes which do not exceed 25 metres, the Suez Canal was constructed without locks. Enlargements

both of width and depth are therefore always possible for the ever increasing requirements of ocean traffic. The actual extent of the Canal is now 168 kilometres, the original length of 164 kilometres having been increased by four kilometres out to sea so as to permit steamers to gain easy access to the waterway. Of this length, 147 kilometres run in a straight direction while the remaining 21 kilometres are of a curved nature. The minimum radius of these curves is 3,000 metres, but this does not materially affect navigation.

The actual depth of the Naval Canal reaches 38 feet, and it is proposed to increase this to 41 feet by means of dredging. The surface of the Canal has a consistent width of 15 metres. This width has already been extended to 60 metres south of the Bitter Lakes, and work is at present being carried out to bring about a width of the same dimensions between the Mediterranean and these lakes. The surface measurements differ according to the ground through which the Canal flows, the incline of the banks varying from 1 in 4 on shaly ground to 1 in 2 on firm ground. The width of the Canal at water level varies in consequence.

**LAKE TIMSAH AND THE BITTER LAKES**—A ship entering the Canal at Port Said traverses in succession the regions of the Lakes Menzaleh and Timsah and the Bitter Lakes, keeping at first a straight course for nearly 50 km. It passes in succession the naval stations of Raz-el-Ech, Tineh, and Le Cap, which are placed at

## SUEZ CANAL.

1. The "Belgenland," 27,500 tons, near Toussoum.
2. A Canal Station.
3. View near Port Said.
4. Canal Entrance to the Large Bitter Lakes.

distances of 10 km for surveillance purposes. It then reaches the station of Kantara, which has become since the War the chief station of the Palestine Railway. After a succession of bends the Canal reaches Lake Timsah, a natural basin on the shores of which stands the town of Ismailia. Formerly the bottom of this lake was about six metres below the level of the Mediterranean. In 1866 sixty-seven million cubic metres of water were run into it, while in its centre a large basin of 700 metres has been sunk so as to permit ships coming from north to south to pass one another.

After passing Toussoum the Canal crosses the cutting of Serapeum, which separates Lake Timsah from the larger of the Bitter Lakes, passes the station of Déversoir and enters the Great Bitter Lake, the immense basin of which, completely dry at the time of the work on the Canal, was filled up in 1869 by water flowing from the Mediterranean and the Red Sea. It is estimated that about one milliard and a half cubic metres of water were required. The bottom of this basin, which was eight metres below the level of the sea, was covered with a thick layer of salt, the continuous dissolving of which suffices to keep the depth of the lake at the required level without the need for dredging. Where it enters the Great Bitter Lake the Canal has been enlarged to 100 metres to facilitate navigation. When passing Kabret station the width remains the same. The ship now crosses the smaller of the Bitter Lakes and enters the last section, where the Canal has a surface width of 60 metres, and continuing its course passes Genéfié, Chalouf and Port Tewfik, till it enters the Suez roadstead.

**DREDGING.**—Since 1874 it has been necessary to dredge 200 million cubic metres, in order to keep the Canal in the condition above described. This work has involved an expenditure of about 845,000,000 francs.

**EXPLOITATION.**—The Canal which has just been described may be used by all vessels irrespective of width, length, or height of masts, providing they do not draw more than 32 feet of water. The authorized draught of ships may by successive stages reach 35 feet, but 32 feet is the limit laid down by the company in its list of rules recently and finally embodied in its "programme d'améliorations."

Any ship that has complied with the laws of tonnage duty at the offices of the company is allowed to enter the Canal. These duties are levied at the rate of Frs 7.25 per net ton, a reduction of Frs 2.50 being allowed to vessels in ballast.

**PILOTAGE.**—All vessels of over 300 tons are required to engage a pilot, who is relieved half-way, i.e. at Lake Timsah. The pilot does not take control of the ship, but is there to give the benefit of his knowledge and experience and to provide advice and assistance should they be needed. The captain alone is in charge, and on him rests the responsibility for any wreckage, accident or damage caused to any third party or to any property owned by the company.

Ships sail through the Canal day and night. At night they carry on the bow a projecting light, which must be of such power that embankments or other obstacles may be seen from a distance of 1,200 metres. The Canal is illuminated by flares and revolving lights to enable ships to sail in safety.

**SHIPS' MOVEMENTS (REGULATION OF).**—Movements of ships in the Canal are regulated so as to ensure security as far as possible to all vessels, and to enable postal steamers to proceed rapidly and

safely. No ship is allowed to overtake another except in Lake Timsah and the Great Bitter Lake, elsewhere, should one ship be obliged to pass in front of another, one of the vessels must cast anchor. In these cases instructions are given from the stations.

Enlargements bringing the surface measurements to 60 metres in width have been effected to the right of the stations so as to allow the largest ships to cross in front of each other. When the Canal has been enlarged throughout to that width all ships at any point will be able to cross. This smooth system of working has resulted in reducing to a minimum the time lost in waiting by ships, either in the ports of access or at the stations. During the first seven months of 1925 no ship was held up for longer than 15 hrs. 20 mins.

**STRANDING (ACCIDENTS FROM).**—For the safe navigation of the Canal a captain must have iron nerves and be an able judge of distances. The man at the helm must have a clear outlook, the pilot needs smooth working machinery, the rudder must work freely, and in case of necessity a spare one should be in readiness.

In the event of accident or grounding in the Canal the company has in readiness powerful tug-boats which are sent to relieve the ship in distress. Accidents, however, are rare. In the first seven months of 1925, though 3,126 journeys were made, only 10 vessels were stranded (i.e. 3 per 1,000), of which four were relieved in less than six hours and the remaining six in a slightly longer time. It should be pointed out that in these cases little damage was done owing to the softness of the mud-banks.

**TOWNS AND PORTS.**—The Suez Canal is linked up with the interior of Egypt by a railway which runs between Ismailia and Cairo and by the Ismailia Canal, through which the Nile water flows, running into the Isthmus. A railway runs through the whole length of the Isthmus, joining Port Said at Suez and branching off at Ismailia on the line to Cairo. The Ismailia Canal has two extensions, one towards Port Said, the other in the direction of Suez and supplying water to those two towns. The distance from Ismailia to Cairo is 160 kilometres, the railway journey taking 2½ hours.

**PORT SAID.**—Of the towns and ports on the Suez Canal, Port Said is by far the most important. Built and directed entirely by the Company, it serves as a transit port for the importation and exportation of goods destined for Egypt and coming therefrom. Every year more than 5,000 steamers call at the port for a short stay to coal, take in water, etc., while transit steamers here are provided with projectors and anchoring appliances necessary for the passage through the Canal. These materials are furnished by private companies. There are also privately owned repairing shops, apart from those of the Company, and a petrol depot for ships using benzine. (See also article on "Port Said.")

**PORT TEWFIK (SUEZ).**—At Port Tewfik, ships having goods to unload may anchor at buoys, which are placed in front of the open spaces belonging to the Suez Canal, or they may enter Port Ibrahim, belonging to the Egyptian Government, which has recently been built in the roadstead of Suez as a port designed especially for the commerce of petrol. Finally, the Khedivial Mail Co. works a repairing dock at Suez capable of holding steamers 400 feet in length by 80 feet wide, with a draught of 25½ feet.

**TRAFFIC STATISTICS.**—Traffic in the Canal showed the most remarkable results in 1925, the net tonnage exceeding by 6.6 per cent that of 1924—the previous highest record—and registering an improvement of 33.5 per cent. over 1913. The following table shows the figures for 1913 and for all post-war years to 1925 —

YEAR	NO OF VESSELS	NET TONNAGE TONS
1913	5,085	20,034,000
1919	3,986	16,014,000
1920	4,009	17,575,000
1921	3,975	18,119,000
1922	4,345	20,743,000
1923	4,621	22,730,000
1924	5,122	25,110,000
1925	5,337	26,762,000

The average tonnage of ships passing through was higher in 1925 than in any other year, amounting to a gross total of 6,916 tons, as against 6,765 tons in 1924, net tonnage, 5,014, against 4,902 in 1924. Ships of gross tonnage higher than 10,000 made in the year 1925 seventy journeys as against fifty-one in 1924. The most important voyage in this category was that of the S.S. "Belgenland," measuring 211.68 metres in length, gross tonnage 27,807, net tonnage 18,347, this was the largest ship that had ever passed through the canal.

Of 1,854 ships which made 5,337 journeys in the year 1925, 273 (15 per cent of the whole) passed through for the first time. In the list is the "Empress of Scotland" (18,330 tons), "l'Oronsay" (13,772 tons), the "l'Artagnan" (11,317 tons), the "Ranchi" (10,526 tons), the "Ranpura" (10,577 tons), and the "Rawalpindi" (10,452 tons).

The number of journeys made by motor vessels should be noted—330 as against 233 in 1924. The figures for 1925 show 6.2 per cent of the total of journeys, as against that of 4.5 per cent in 1924.

**INCREASE OR DECREASE OF TONNAGE.** The following table shows the increase or decrease in tonnage of the various shipping lines using the canal —

LINES	NET TONNAGE 1925 TONS	DIFFERENCE COMPARED WITH 1924 TONS
P & O and allied companies	2,998,000	+ 275,000
British Tanker	2,004,000	+ 160,000
Ellerman Lines	1,833,000	+ 100,000
Alfred Holt & Co	1,599,000	— 9,000
Messageries Maritimes	970,000	— 7,000
Netherland Line	941,000	+ 14,000
Rotterdamsche Lloyd	849,000	— 80,000

The tonnage belonging to the British Government comes next—831,000 tons, showing an increase of 94,000 tons. This includes the services of the Australian Commonwealth Line, which is responsible for almost the whole of the increase.

**MERCHANDISE (MOVEMENT OF).**—In 1924 merchandise traffic through the Canal almost equalled the previous highest total of 1913. In 1925 this was exceeded by 802,000 tons, the total being 26,578,000 tons. The following table shows the movement of merchandise in thousands of tons for 1913 and all post-war years to 1925. —

YEAR	OUTWARD	HOMEWARD	TOTAL
1913	11,320	14,456	25,776
1919	3,762	10,211	13,973
1920	6,318	10,729	17,047
1921	6,576	10,933	17,509
1922	8,192	13,168	21,360
1923	7,704	15,073	22,777
1924	8,818	16,711	25,529
1925	8,802	17,776	26,578

From 1913 progress was made in spite of a very marked decrease in out-bound traffic, less in 1925 by 2,518,000 tons. This decrease specially related to coal (minus 512,000 tons), wrought metals (minus 397,000 tons) and petrol (minus 188,000 tons), land fertilising materials, however, showed an increase of 250,000 tons. Home-bound traffic, on the other hand, showed an increase of 3,320,000 tons, that is, 23 per cent over that of 1913. It is noticeable that more than a third of this increase is due to mineral oils. Rice and grain from the Far East showed decreases. A remarkable feature of the total increase of 802,000 tons which 1925 showed over 1913 is that the traffic between the United States and countries beyond the Canal was responsible for 634,000 tons, or 79 per cent.

**SHIPPING BY FLAGS.**—In 1924 and 1925 the distribution of tonnage passing through the Canal by flags was as under —

NATIONALITY	1924	1925
British	14,995,000	16,016,000
Dutch	2,488,000	2,699,000
German	1,647,000	1,791,000
French	1,497,000	1,628,000
Italian	1,483,000	1,416,000
Japanese	872,000	1,007,000

The British proportion of the total tonnage was 59.9 per cent in 1925, as compared with 59.7 per cent in 1924. The tonnages earned under British, Dutch and French flags respectively in 1925 established records.

**TRAFFIC IN BALLAST.**—As regards navigation in ballast, the tonnage of tank steamers alone showed an increase —

	1924 TONS	1925 TONS
Tank steamers	1,327,000	1,648,000
Other vessels	980,000	934,000
Totals	2,307,000	2,582,000

Both loaded and in ballast, tank steamers in 1925 totalled 3,422,000 tons (12.8 per cent of the entire tonnage using the Canal), against 2,832,000 tons (11.3 per cent) in 1924.

**TRAFFIC (REGIONAL DISTRIBUTION OF).**—Of the net tonnage carried between the two great regions linked by the Canal, British India ranked first in 1925 with 9,070,000 tons, or 33.9 per cent of the whole. The second in importance was Eastern Asia, including China and Japan, with 5,709,000 tons or 21.3 per cent, and this in spite of the troubled state of China. In the third place came Australia and New Zealand—3,388,000 tons or 12.6 per cent. The Persian Gulf was fourth with 2,960,000 tons—11.1 per cent. In 1924 India showed a slight falling off, but Oriental Asia has hardly varied. Australia and the Persian Gulf region have, on the other hand, increased their traffic through the Canal.

As to the total exchange of traffic between Europe and beyond the Suez, the increase over 1913 was, on the contrary, weak, showing the small amount of 168,000 tons. The net difference was apportioned as follows —

DIRECTION	1913	1925	DIFFERENCE
North-South	10,461	8,227	— 2,234
South-North	13,561	15,963	+ 2,402
	24,022	24,190	+ 168

From these figures it will be seen how restricted exports from Europe to countries beyond the Canal have become, while the imports from the latter have only increased by some 18 per cent.

GENERAL VIEW OF PORT SAID, SHOWING STATUE OF DE LESSEPS

## PORT SAID

### CITY

**P**ORT SAID, a fine city of nearly 70,000 inhabitants of whom about 20,000 are Europeans is noteworthy for its shipping, also for its commercial and industrial life. The picturesque and well kept streets, the splendid stretch of sandy beach with excellent bathing facilities, and the invigorating atmosphere make it one of the most attractive resorts of health and pleasure in Egypt. The old Port Said of insatiable and evil repute has, indeed, almost disappeared, its place having been taken by a well-drained, well-watered and attractive town. The city is of quite recent growth, and, as does the port, owes its existence entirely to the Suez Canal.

**BUILDINGS, ETC.** The most important structures in Port Said are the Egyptian Government Buildings, the British Hospital, and the massive offices of the Suez Canal Company, which latter occupy an enclosure between the Bassin du Commerce and the Bassin de l'Arsenal, facing on to the fairway leading into the Canal (Bassin d'Ismail). Their polished domes, glittering in the sun, are visible for some distance. The large Mussulman School is also a finely constructed edifice, and mention may be made here of the noble statue of Ferdinand de Lesseps, which stands near the Mole, having been erected in 1899. The monument is 22½ and the pedestal 34½ ft high.

**CHURCHES.**—There are Anglican, Roman Catholic and Greek Churches in Port Said, also several mosques.

**EXCHANGE.**—The City is probably the most cosmopolitan place in the world so far as money is concerned. English, French, Egyptian, Greek, Indian or any other coins seem to be accepted, at least by the shopkeepers, but the official coinage is, of course, Egyptian.

**HOSPITALS.**—These include a large General (Government) Hospital, a British Hospital, and an Egyptian Government Fever Hospital, all of which have done good work.

**HOTELS.**—Port Said can boast of many excellent hotels, three of these, the Eastern Exchange, the Bristol and the Casino Palace, being in the front rank.

**SPORT AND RECREATION.**—For European residents and visitors there are good tennis and golf clubs, the golf course near the Manzala Canal has recently been made into one of 18-holes. An interesting steamer trip can be taken on Lake Manzala, while good shooting and fishing are at command for those who desire them. There is a splendid stretch of sandy beach for children, and bathers are perfectly safe, as they can walk practically until they are tired without getting out of their depth. Surf-bathing is also a popular pastime.

**STREETS AND GARDENS.**—During the British occupation and since the installation of Egyptian administration, clean, regular streets have been laid out in the European style and planted with shade trees. The Rue du Nil and the Rue de Commerce are really fine thoroughfares, possessing many

handsome buildings and attractive shops. As might be expected, the town which has become par excellence the gateway of two hemispheres would be lacking in enterprise did it not offer to the traveller the wares of the two worlds it divides. Here one can purchase Egyptian antiquities, Indian, Chinese and Japanese goods of every conceivable variety.

Fine gardens have been laid out and are under the care of the Municipality.

### PORT

The harbour was commenced in 1859, and was originally intended to serve as an entrance basin. Its development as a great coaling station was not at first foreseen, but at a later period coaling wharves for lighters with a depth of 10 ft were constructed on the Asiatic side of the Canal. Between 1884 and 1893 the Bassin du Commerce was built on the African or western bank, as well as an isolated basin for discharging petroleum products in bulk.

As a result of an agreement between the Egyptian Government and the Canal Company, the extension of coaling wharves was pushed forward rapidly. Work was continuous between 1903 and 1912, some 19,000,000 francs being spent. Landing stages and quays now line the western bank, at which lighters and small vessels can berth. Ordinary-sized craft are moored stern-on to the quays, to which merchandise is transferred by barges and lighters. The area of the port is at present 650 acres, of which 410 are in deep water. The average depth of the Canal is 34 feet, and the breadth is about 160 feet.

**APPROACH.**—The coast in the neighbourhood of Port Said is unusually low, the lighthouse tower and the shipping being the only objects seen from the offing. At six miles to the west the coast is marked by Fort Chemil, a low square building standing by itself, but to the east of the port there is nothing to indicate the low shore. The current is uncertain, depending on the wind, the general direction is to the east, at from  $\frac{1}{2}$  to  $1\frac{1}{2}$  knots per hour. Owing to the current and low shore, more than usual caution is necessary in approaching the harbour. There is a good straight channel 50 yards wide at the narrowest point that leads up to the harbour, with a general depth of water of 34 feet.

**CARGO HANDLING.** A very complete equipment is maintained by the Canal Company. Three floating cranes of 60, 40 and 12 tons respectively are available, and also a number of powerful tugs. Ship repairs of a minor character can be carried out notably at the works of Messrs Savon and Company. The Floating Dock, owned by the Canal Company, is 295 ft in length and 61 ft at the entrance. The depth of water at the sill is 18 feet. There are three patent ships having a lifting power of 1,000, 400 and 200 tons respectively.

**COAL AND OIL BUNKERING.** Some 1,700,000 tons of coal are received annually, of which 200,000 tons are for home consumption, the balance being used on vessels in transit. The coaling depots are on the eastern bank, and the trade is almost exclusively in British hands. Operations are carried on by local labour, the coaling gangs being famous for the rapidity with which they supply the ships.

A number of oil tanks have been erected, their storage capacity amounting to 82,000 tons. The port is a convenient station for ships designed to convert their fuel system from coal to oil, but in this respect Aden has hitherto taken first place in the Far East trade.

**COMMUNICATIONS.** Water communication between the Suez Canal and the Nile by way of Menzala was established in 1913. This waterway thus connects the harbour with the interior of Egypt, enabling goods to be transported via Damietta and Mansurah. Transport facilities are controlled by the Menzala Canal and Navigation Company. There is good railway communication with Cairo, the comfortable trains of the Egyptian State Railways taking about 4½ hours to complete the journey.

**NEW WORKS.**—The Suez Canal Company is excavating and enlarging the Bassin de l'Arsenal for use as an import centre. New Customs buildings are to be erected between this basin and the Cherif Basin. In addition, quays are projected for the landing of inflammable and dangerous merchandise, the present site at Rassouah being only a temporary landing stage.

More important still is the work now going forward of carrying the minimum depth of the Canal to 40 feet and its width to 200 feet. The company has also recently completed its scheme of moving the workshops and the living quarters of a very considerable staff from Port Said to a site on the eastern bank, known as Port Fuad.

**PILOTAGE.**—This is compulsory. Pilotage dues are levied on entering and leaving the port on all ships over 100 tons gross. Steamers pay 25 francs per diem and sailing vessels 10 francs. The tariff for night work is doubled.

Whatever length of time ships may stay in the harbour of Port Said, and whatever

1. SULTAN HUSSEIN, RUNNING PARALLEL TO THE CANAL. Offices of The Port Said and Suez Coal Co. on right.
2. SHARIA FOUAD I.
3. SHARIA PRINCE FAROUK. The Shopping Centre for Tourists.

commercial operations they may transact there, total remission will be made of the pilotage charges for day-time entrance, or remission of half the charge for night-time entrance, if they decide to go through the Canal. The signal for a pilot for a vessel in the roads is lights exhibited at the fore-masthead, followed either by rockets or blue lights.

**PORT AND CANAL DUES.**—Light dues are collected by the Egyptian Government on the same basis as at Alexandria.

**ANCHORAGE DUES.**—These are fixed on a basis of two centimes per ton and per day, excluding the first 24 hours.

**QUARANTINE DUES.**—These are as at Alexandria.

**QUAY DUES.**—On all imported merchandise, 7 per mille ad valorem, and 12 per mille on exports.

**TOW AGE.**—In or out of port, 20 cents per ton. Tug, 1st class, 650 francs per hour, 2nd class, 140 francs. Hulks, 80 to 100 francs for first hour, half after. Coolie labour, 15 piastres per man per day.

**WATER.**—5d per ton.

**STORAGE FACILITIES.**—The special facilities for the storage of merchandise that exist at Port Said are due to the fact that the Canal Company has control over all traffic entering the Canal. The port is a dependency of the Canal, though the sovereign rights of Egypt are recognised and respected. Goods for purposes of importation are landed on wharves controlled by the Customs, but outside this area is the free zone, in which the Customs authorities exercise no control over goods. Port Said in this respect enjoys a privileged position. In the free zone are the warehouses, leased from the Canal Company, of the Egyptian Bonded Warehouses Company, Limited, and on the opposite side of the Cherif Basin are the Customs and other warehouses. Merchandise destined for transit may therefore be landed in the free zone, transferred to the import zone or reshipped. Other stores, the property of the principal shipping companies, for the warehousing of goods to be reshipped exist on the eastern bank.

**TIME SIGNALS.** A black ball, hoisted on an iron latticework mast 5 minutes before the signal is made, is dropped at 8 a.m., noon and 4 p.m. Egyptian standard mean time, equal to 18h, 22h, and 2h Greenwich mean time, and 20h, 9m, 15s, 0h, 9m, 15s, and 4h, 9m, 15s local mean time. The Radio-telegraph Station at Navy House, Cherif Basin, is worked by Lloyds, the call sign being "S 11 13".

**TRADE AND SHIPPING.**—In 1870 the gross tonnage of shipping entering Port Said was 986,963 tons, of which 654,914 passed in transit. By 1890, thirty years after the opening of the Canal, the gross tonnage had risen to 15,884,000 tons, of which 13,739,258 tons were in transit. In 1925 these figures were considerably increased, the returns for that year being as follow:—

	No OF SHIPS	NET REG TONNAGE.
In transit ..	5,237	21,051,866
Non-transit ..	643	1,331,022
Totals ..	5,880	22,382,888

In the same year 583,962 tons of cargo were discharged and 193,806 tons shipped. Imports in the preceding year were valued at £E 5,364,234, exports at £E 263,572 and re-exports at £E 239,461.

THE PORT SAID AND SUEZ COAL CO. (Lambert Bros. Ltd.), Port Said.

3. View from the Background.

## PORT SAID AND SUEZ COAL COMPANY (LAMBERT BROTHERS, LTD.).

**Inception.** The business of Lambert Brothers has been in existence since the days of sailing ships. As times changed, its successive controllers, adapting themselves to the altered conditions, increased and extended its operations, so that in the course of half a century it has become one of the big concerns engaged in the international coal trade of the world. The firm is, in fact, interested in coaling depôts in nearly every maritime country, and among coaling stations exclusively its own are those of the Port Said & Suez Coal Company, situated at both ends of the Suez Canal.

**Capital.** Converted into a limited liability company in 1902, the enterprise has a paid up capital of £1,000,000, which amount alone was covered in 1925 by British Government securities as investments.

**Personal.**—When the Suez Canal was opened in 1869, the original Lambert Brothers persuaded Mr. George Royle to look after their interests and open their depôts on the Canal. Mr. Royle was a remarkable character. Starting in the Merchant Service, where he received his Master's ticket, he transferred to and was commissioned in the Royal Navy, taking an active part in the Chinese War (1860). He was also in India during the Mutiny. Leaving the Navy, he took up law, and was called to the Bar at Lincoln's Inn in 1870. Shortly afterwards Mr. Royle went to Port Said, at that time considered one of the worst places in the world. Bearing a striking resemblance to the late King Edward, whose host he was privileged to be on more than one occasion, Mr. Royle was one of the outstanding British personalities in Egypt during the late Victorian and Edwardian eras. His influence in Port Said was a powerful lever in ridding it of undesirables, and converting it into one of the safest and cleanest ports in the East.

Upon his death in 1912 he was succeeded by his immediate assistant, Mr. A. J. Tweedie, upon whom fell the heavy task of directing the company's affairs in Egypt throughout the War. Handling, as the Admiralty Contractors, millions of tons of coal for H.M. ships on active service, the firm's organisation under Mr. Tweedie's direction proved so equal to the crucial test as to be mentioned in despatches, while the commendation received from the Local Naval and Military authorities was most flattering.

In 1922 Mr. Tweedie retired after 40 years' service with the company. To meet the changed post-war conditions, Messrs. Lambert Brothers Ltd. promoted Mr. H. E. Newbould and Mr. W. T. Bond, the seniors of the technical and executive branches of the company's business in Port Said, to be joint managers, thus enabling the directors always to have one administrator in residence during the absence of the other.

**Equipment.**—The company has its own offices, coal yards, lighters, tugs, launches, etc., at both Port Said and Suez. In addition, at the former port are maintained small, model workshops for executing all the firm's repairs. A visit to the coal yard will show how clean such a place can be kept. The proper stacking of coal on concrete floors which can be swept and hosed when empty practically eradicates the danger of spontaneous combustion.

**Coaling Rapidity.**—Port Said still claims to be one of the fastest coaling ports in the world, coolie labour being the agency employed. As an illustration, a troopship in

1921 took five days to coal at a port of the United Kingdom, while the same large quantity of coal was put and trimmed into her bunkers in ten hours by the Port Said & Suez Coal Co. at Port Said incidentally to the disgust of certain passenger officers on board who anticipated at least three days' leave in Cairo before continuing the voyage to India.

**Other Services.**—Electric searchlights to enable vessels to traverse the Suez Canal at night, fresh water barges, cargo and cattle lighters, etc., are included in the company's plant, and necessitate skilled workmen being kept on the pay roll.

**Offices.** In passing through the Canal one is certain to notice the offices of the company, prominently situated on the quays at Port Said and Port Tewfik. The visitors' book kept on the premises shows the signatures of many distinguished and inter-

esting personages who have transited the Canal. The offices are open day and night and are fully staffed for all branches of shipping work.

**Bankers.**—National Bank of Egypt, at Port Said and Suez.  
(See illustration, page 124.)

#### THE BRITISH COALING DEPÔTS LTD.

**Inception.**—This company commenced operations at Port Said and Suez in 1909 as steamship agents and coal suppliers.

**Development.** The business has steadily increased, and they are now one of the most important concerns on the Suez Canal.

**Activities.** The firm acts as agents for many leading shipping lines and also represents The Anglo-Persian Oil Co. Ltd.

**Address.** P.O. Box 328, Port Said (cables "Albion," Port Said and Suez).

**Head Office.**—117-121, Leadenhall Street, London, E.C.3.

**Bankers.**—Barclays Bank (Dominion, Colonial and Overseas).

#### ANGLO-PERSIAN OIL CO. LTD.

**Installations.**—Figuring among the world's most prominent oil-producing corporations, this company has an oil fuel installation at Rasswa, Port Said, consisting of tank storage for Diesel and furnace grade oils, with powerful pumping machinery capable of discharging at the rate of about 350 tons per hour if required. Barges of 500 tons' capacity each are also available, each capable of discharging at the rate of 250 tons per hour.

Another fuel oil installation is erected at Suez, and will be operated as soon as the New Harbour Works are completed.

**Supply to Ships.** Supplies of Diesel and furnace oil are effected to motor and steam driven vessels by direct pipeline or by barges, there being four deep-water berths adjacent to the Canal fairway necessitating the minimum possible deviation only.

**Land Supplies.** The Egyptian Government and various important public utility companies all over Egypt are also large consumers of Anglo-Persian oils for both Diesel engine and boiler work, despatched to them in tank-wagons from the company's railway siding.

**Agents.**—Agents in Egypt are the British Coaling Depôts Ltd., Port Said and Port Tewfik, Suez.

#### EASTERN TELEGRAPH COMPANY LTD.

—Opposite P & O Anchorage, Port Said. Other Egyptian stations at Rue du Telegraphe Anglais, Alexandria, Rue Emad El-Dine, Cairo, Suez Town and Port Tewfik Docks. Telegrams by direct cable routes to all parts of the world. The Company's method of automatic working throughout ensures speed and accuracy, and its extensive system of duplexed cables reduces delay to a minimum. Telegrams for the Company's cables are accepted at all Egyptian State telegraph offices, but should be marked "Via Eastern." No charge is made for this indication. Time is saved and greater accuracy secured, however, by the handing in of telegrams at the stations mentioned above, where books of telegram forms, tariffs, etc., can be obtained on application. Head office: Electra House, Moorgate, London, E.C.2.

OIL CO. LTD.

2. Oil Bunkering with pipe line at Rasswa.

**WM. STAPLEDON & SONS.**

**Inception.** This well-known firm was established shortly after the opening of the Suez Canal, and forms the only purely steamship agency in that important zone not being concerned with the supply of coal or other fuel.

**Development.**—Beginning with the Blue Funnel Line, whose vessels now transit the Canal to the number of about five weekly, the company's business has gradually expanded until it handles to-day some 800 steamers yearly.

**Steamship Agencies.**—Among prominent passenger steamship organisations for which Messrs. Wm. Stapledon & Sons are agents are the Orient Line, with three 20,000-ton palatial steamers (shortly to be increased to four) maintaining communication between England and Australia, the Bibby Line, to

Rangoon, the Union Castle Line, to the East Coast of Africa, and the Hall and Ellerman-Bucknall Lines, to India and the Far East. In connection with the "round the world" cruises now an established feature of ocean travel, this organisation acts as agents for the Cunard, White Star and Red Star Lines, whose vessels are the largest and fastest to visit Egypt. Among liners recently transiting the Canal are the Cunarders "Carinthia" and "Laconia" while the "Belgenland" (Red Star Line), with a tonnage of 27,200, is the largest commercial steamer that has yet made the passage.

The company specialises in clearing and forwarding cargo to all parts of Egypt, Palestine, the Levant, etc. Among the purely cargo lines it handles are the Anchor-Brookbank, the old-established service of vessels to Calcutta, the Shaw Savill &

Albion and the Atlantic Transport Co., from New Zealand and Australia.

**Offices.** The new offices of this organisation at Port Said were completed in 1924. The building, in the Egyptian style, is particularly adapted to both climatic conditions and modern business requirements. Many competent judges consider these offices among the best designed in the country. At Port Tewfik, Messrs. Stapledon & Sons have a large and important office controlled by the Port Said management.

**Addresses.** 30 rue Waghorn and 1 rue Constantinich, Port Said; 2 Port Tewfik, Suez. Cables: "Stapledon" Port Said, and "Stapledon," Suez. Codes: Scott's 10th edition, Standard Bentley's Phrase ABC 5th and 6th Editions. A 1.

**Bankers.** National Provincial Bank, Ltd. and Messrs. Worms & Co.

WM. STAPLEDON & SONS, Port Said.  
The Firm's New Offices in that City

## SUEZ

### CITY AND PORT

**T**HE city and port of Suez, which lie at the northern extremity of the Gulf of Suez and at the termination of the Canal, date only from 1860, when the works were begun, though there previously existed a large but unimportant village, whose inhabitants lived by fishing and by work on the big steamers which then embarked and disembarked passengers by the overland route. To-day the town, which has been provided with a good water supply, has a population of some 28,000, but its growth has hardly kept pace with the development of other Egyptian cities, and it possesses few features of interest. A statue to Thomas Waghorn, who organised the overland service from Cairo to Suez for passengers to India, stands on the island which was formed by De Lesseps from the dredgings of the canal. Seven miles distant from Suez is a small oasis, where tradition states there formerly existed seven gardens or groves and twelve fountains of salt water. It is known as the Well or Fountain of Moses, and has been variously identified with the point from which the Israelites crossed the Red Sea and with Marah, whose waters Moses made sweet.

**PORT.**—The port of Suez is also known as Port Tewhik. From 1860 its creation was continued intermittently until 1873, by which time the sum of £E 1,500,000 had been spent upon it. Nothing further was attempted until 1906, when works which consisted mainly of dredging went on until 1910. The main channel and entrances were deepened, and a new quay added. Important additions to the port have been carried out since 1918, and are still in progress, the close proximity of Suez to the Egyptian oilfields necessitating the construction of an oil-basin, together with a mole, which will berth seven tankers at once. The waterway is also being dredged to a depth of 38 feet. These improvements, which are an economic necessity to the petroleum industry, should considerably assist in reviving the trade of the port.

**ACCOMMODATION**—The harbour of Suez includes the north and south basins of Port Ibrahim, with two outer quays and one inner, having connecting wharves. There is in all 4,878 ft of quayage, also one jetty 1,830 ft long. The water area is 99 acres, and the average depth 26 ft at low water. Large vessels being unable to enter, they discharge their cargoes outside. Coaling and cargo operations are sometimes rendered difficult in winter, as the roads are only slightly sheltered.

**ANCHORAGE**—The bay is open to the south, but well protected to the east, north and north-west. The best anchorage for large vessels is in 5 to 5½ fathoms with Kalah-Kobireh lighthouse bearing SW., and the outer end of the Canal breakwater E½S.; bottom stiff clay.

**BUNKERING**—The extraction of crude petroleum and its products to the south of Suez is of considerable economic importance to Egypt. At present the supply is far from adequate to the needs of the country. There are two refineries, of which the larger, owned by the Anglo-Egyptian Oilfields Company, is capable of refining about 1,000 tons per

diem. The company possesses two small steamers for supplying vessels in the roads with oil fuel, and also two large barges for the same purpose. A pipe line runs along the causeway to the port. The storage capacity provided by tanks and the two refineries are sufficient for the present day needs of shipping. A stock of coal is kept, vessels coaling from the wharf or from lighters.

**COMMUNICATIONS**—Originally the port was constructed to provide an entrepôt at the northern end of the Red Sea for the importation of Eastern produce and its distribution to Cairo and Upper Egypt. A railway line was built communicating directly with Cairo, but this was afterwards demolished, the Suez-Ismaïlia branch now connecting the town with the main State railway system.

**DRY DOCK**—The dry dock is the property of the Khedivial Mail Steamship and Graving Dock Company. It has a length of 406 ft., and a breadth at entrance of 73 ft. The depth of sill at high water is 23 feet.

**PILOTAGE**—Compulsory. Dues are £E 2 per vessel on entrance and £E 1 on leaving.

**PORT CHARGES**—Vessels entering the basins pay anchorage dues (droits de bassin) based upon tonnage, the scale of charges varying from £E 1 for vessels of 1,001 to 1,500 tons to £E 4 for vessels of 4,001 tons and over. Mail and coastal steamers enjoy a reduction of 5 per cent and 50 per cent respectively.

**Light Dues**—10 millemes per ton up to and including 800 tons, 5 millemes per ton over 800 tons.

**Quarantine Dues and Quay Dues**—The same as at Alexandria.

**TRADE AND SHIPPING**—Competition with Alexandria, and to a lesser degree with Port Said, has damaged much of the trade of Suez in general merchandise. The port, however, still retains its lead in gunny bags, the importation of which it shares with Port Said. In 1924 the imports of cotton, onion, sugar and cereal sacks were valued at £E 411,920, weighing 9,400 metric tons. A considerable trade was at one time also carried on with the small ports of the Red Sea, and this Suez now shares with Port Said.

The number of vessels entering in 1925 was 370, having a net registered tonnage of 436,927. Of these vessels, 297 were British. The quantity of merchandise landed was 501,968 tons, and of that shipped 193,806 tons. Imports in the preceding year were valued at £E 2,042,684, and exports at £E 791,988.

**Canal Traffic**—During the first six months of 1926 the total of cargo passing through the Canal showed a decrease of 1,000,000 deadweight tons, as compared with the corresponding period of 1925, the figures being 12,935,000 tons, of which 7,768,000 were north-bound and 5,167,000 south-bound, as against 14,082,000 tons in the first half of 1925, of which 9,865,000 were north-bound and 4,217,000 south-bound. This decrease was due chiefly to the fact that exports from both Australia and British India were considerably lighter than the exceptionally heavy exports during 1925, the north-bound traffic therefore suffering considerable loss. The increase in south-bound traffic, however, made up for almost 50 per cent of this loss. Mail services through the Canal between January and June 1926 exceeded 4,000,000 tons for the first time in a six-months period.

## OTHER CITIES AND PORTS

### ABYDOS

Abydos was formerly one of the largest and most important cities in Upper Egypt, and was famous as the burial-place of Osiris, to whose worship the temple was dedicated. The remains of Abydos comprise the Temple of Seti I., better known as the Memnium, famous for its sculptures, the Tablet of Abydos which gives the names of 76 Kings of Egypt, beginning with Menes and ending with Seti I., and the temple of Rameses II., dedicated to the god Osiris. Modern Abydos, which lives largely by visitors who come to view the ruins, has a population of 10,004.

### ASSIÛT

Situated 250 miles from Cairo, Assiût is the capital of the province of the same name, and is the largest and best built town of Upper Egypt. At the last census it had a population of 51,431, its position on one of the leading caravan routes from the Sudan having always given it a certain commercial importance. There has been a city here ever since ancient Egyptian times, and the Greeks knew it as Lycopolis or "wolf city," probably because the jackal-headed Anubis was worshipped there. The present city has spacious bazars and fine mosques, one of which is remarkable for its lofty minaret. The American Mission has a large establishment at Assiût, and the education of the natives is undertaken on an extensive scale. The city is also famous for its red pottery, carved ivory figures and sticks, inlaid tables and boxes, shawls worked in gold and silver and beautiful round ivory beads, also for its market, to which wares from Arabia and Upper Egypt are brought.

**ASSIÛT BARRAGE.** The chief importance of the Assiût district lies in the fact that it is the starting point of the great Ibrahimiyah Canal, which is nearly 200 ft. wide and some 200 miles long, it supplies Middle Egypt and the Fayyûm with water. This canal carries enough water in flood-time for all purposes, but when the Nile is low its supply is insufficient for the irrigation of the lands on its banks. When the great reservoir at Assuan was decided upon, it was felt that a barrage at Assiût must form part of the scheme, and a site was chosen about a mile from the town, where the river is nearly 3,000 ft. wide. The barrage is an arched viaduct, somewhat similar to that near Cairo, the width of the roadway over it is 183 ft., and provision is made for wheeled traffic. It contains 111 openings, and has two sluice gates 8 ft. 2 in. high, the total length of the barrage between the abutment faces is 2,691 feet. The waterway between the piers is 1,821 ft. wide, and the superficial area of flood waterway is 63,924 sq. feet. The precise sum paid for the Assuan Dam and the Assiût Barrage was £E 3,439,684, but before the certificates are fully redeemed in 1933 the Egyptian Government will have disbursed altogether £E 4,598,880. (See also special article on "The Control of the Nile.")

### ASSUAN

Assuan (Aswân), situated in the southern limit of Egypt proper at the foot of the First Cataract, has of late years become the permanent winter home of many English and American visitors, who find it an admirable centre for both sightseeing and social enjoyment. The modern town, which has a

population of about 15,000, is the successor of more than one ancient city, the Greek town of Syene having stood on the slope of a hill to the south west of the present place. The original frontier town was situated on the Island of Elephantine, and occupied an important position as the starting-point of all expeditions into the Sudan. In Ptolemaic times Assuan was famous for its wines. During the British occupation of Egypt, the town acquired distinction from being the site of the greatest engineering enterprise ever undertaken in Egypt—the Assuan Dam. Apart from the famous Temples of Philae and other historical remains, the native bazars, with their Sudanese wares and Dervish arms and armour, are always interesting to visitors.

**ASSUAN DAM.**—The wonder of Assuan is its dam across the Nile at the head of the First Cataract. Begun in 1898, it was completed in 1902, in 1907 it was raised and made as it now stands. It is a triumph of engineering skill for which British engineers and contractors are alone responsible, and will rank for many years to come as the most magnificent reservoir in the world. Sir William Willcocks, Sir William Gairdner and Sir Benjamin Baker as engineers, and Sir Ernest Cassel as financier, will long be remembered in connection with the stupendous work, which, at a total cost of £4,000,000, has increased Egypt's productivity a hundred fold by turning the Nile between Korosko and the First Cataract into an immense reservoir when water is plentiful in the winter, and allowing it to escape when the cotton fields of Egypt are thirsting. The Assuan Dam has already worked wonders. (See also article on "The Control of the Nile.")

**FIRST CATARACT.**—Assuan lies at the foot of the First Cataract, where the scenery (for Egypt) is peculiarly beautiful and wild. The Cataract can be reached easily from the dam, along the top of which runs a tramway from one bank to the other. As the big Nile steamers cannot pass the Cataract the service is here interrupted, starting again six miles up at Shellal, whence the boats proceed to Wadi Halfa. On the other hand Shellal is the terminus of the Egyptian Railway System, beyond there is no railway communication until the Wadi Halfa terminus of the Sudan Railways is reached.

**ISLAND OF ELEPHANTINE.**—This island lies a little to the north of the First Cataract, just opposite Assuan, and has been famous in all ages as the key of Egypt from the south. The famous Nilometer described by Strabo stood here, a single stairway of 52 steps being all that is now left. The ruins on the island are of great interest, comprising several rock hewn tombs dating from the earlier dynasties and from the Roman occupation.

**PHILAE.**—Philae was the name given by the Greeks and Romans to the two islands which are situated at the head of the First Cataract, about six miles south of Assuan. The larger island is called Bigah, the Senemet of the Egyptian texts, and the name Philae now generally refers to the smaller island, on which stands the group of ancient temples of the Ptolemaic and Roman periods. Herein were offered, of old, sacrifices to the gods Isis and Osiris, and beautiful indeed must have been some of the temples. The remains of these buildings rise above the water under which the island is now submerged for six months every year, and the great temple of Isis, the picturesque and unfinished Kiosk, and the Temple of Hathor are only the chief of the many architectural glories of the island.

The neighbouring quarries are of great interest, and mark the source from which were formerly obtained the huge blocks of red porphyry used for the construction of obelisks and sarcophagi. How these were transported is still a mystery.

### BENI SUEF

A large and important town, the capital of the province of that name. Beni Suef is three hours up the Nile from Cairo. The population numbers about 11,000. The chief industries there are in connection with the manufacture of woollen carpets and coarse linen stuffs for the fellahen, it is also a centre of the flax industry, with a large weekly market. From Beni Suef extends one of the principal routes to the Fayûm.

### DAMIETTA

This is one of the largest towns in Lower Egypt, having a population at the last census of 30,084. It was once famous (under its old names of Thamiates and Damiyat) as the principal emporium on the east side of the Delta, a great trade having been done in the Middle Ages in a kind of linen stuff called, from the name of the place "dumity," oil cloth, dates, fish, etc. The old Damietta of that time was destroyed by the Crusaders in 1249, after Louis IX. of France had been held to ransom by the Arabs, and the new town was built further inland. The commercial importance of Damietta has much declined since those days, and though the harbor is still crowded with all kinds of sailing craft, only a limited trade is done with Syria and Greece. Vessels of a deeper draught than six feet cannot enter the port, which is almost entirely closed by a triple line of dangerous breakers formed by sand banks.

### GIRGÂ

A town of 21,652 inhabitants, on the west bank of the Nile a few miles south of Men-shiya. Girga has a large Coptic population, and is said to occupy the site of the ancient This, whence sprang the first dynasty of historical Egyptian Kings. Several interesting tombs lie a few miles to the west, and the oldest Roman Catholic Monastery in Egypt is situated here.

### ISMAILIA

The town of Ismailia, situated about 94 miles north-east of Cairo, has a population of between fifteen and sixteen thousand. It is a modern place, dating only from 1862, after the work of constructing the Suez Canal was commenced. At one time it had an invariable name for malaria, the Suez Canal Company having spent some £30,000 on sanitary works and medicine alone up to the end of 1897. In 1902 the methods of Sir Ronald Ross in dealing with the anopheles mosquito were adopted, and since then the cases of fever have dropped from 2,200 to under 200 a year. The town is well laid out, and contains many handsome villas with gardens, two or three good squares, and streets and roads planted with labbaik trees.

### LUXOR

Luxor, in Arabic El-Aqsar, or El-Qusur, "the Castles," which occupies part of the site of ancient Thebes, is situated on the east bank of the Nile, some 450 miles from Cairo, and may be said to owe its present prosperity largely to the enterprise of the well-known firm of Thomas Cook and Son in attracting tourists to visit the famous ruins in the vicinity. As recently as 1885

Luxor was no more than a straggling and untidy Egyptian village. To-day it is a well-built town of about 10,000 inhabitants, its roads being some of the best in Egypt, the sanitary conditions are good and the water supply is excellent. A handsome Mosque was built in 1906 to which almshouses are attached, and there is also a boarding school for girls maintained by the American Mission.

During the last thirty years Luxor has become the most popular health resort in Upper Egypt, and the large hotels which have sprung up to accommodate visitors from all parts of the world provide for their guests every form of social entertainment. Certainly there is nowhere in the Nile Valley a more convenient centre for sight-seeing, and no better place in which to acquire a knowledge of Egypt's historic past. Here are the famed ruins of Karnak and Thebes, the valley of the Kings with the recently opened tomb of Tutankhamen as its principal attraction, the temples of Edfu and Medinet Habu, and the Temple of Ammon. The Temple of Luxor is in the town itself, the group of temples known as Karnak can be reached by car, carriage or donkey-rick, the tombs on the west bank involve a longer journey, but one which at any time may be delightful, and the hotels and tourist agencies make all the necessary arrangements for trips and expeditions to the more distant remains of Thebes.

**ANCIENT THEBES.** The name Thebes probably comes from Apt given by the old Egyptians to that quarter of the city in which the temple of Karnak stood. Called Iâpé by the Copts and pronounced in dialect Thaba, the Greek designation of Theba or Thebes was a perfectly natural one. In Greek times Thebes was called Diospolis Magna, which answers to Hat-Amen, "the Abode of Amen." The city stood partly on the east and partly on the west bank of the Nile. The western division had the distinctive appellation of Pathyris (Pa-Hathor), being under the peculiar protection of Hathor, who is called the "President of the West," for though Amen (or Amen-Ra) was the chief deity worshipped there, Hathor had a peculiar claim over the necropolis beneath the western mountain, where she was fabulously reported to receive the setting sun into her arms.

The period of the foundation of Thebes is still uncertain, but it is now known that it did not become a city of the first importance until after the decay of Memphis. The fame of its greatness had reached the Greeks of Homer's age for its "hundred gates" and 20,000 war chariots are mentioned in the Iliad, and as, during the reign of the XVIIIth and XIXth dynasties over Egypt, the local god Amen-Ra became the great god of all Egypt, so his dwelling-place Thebes gained in importance and splendour. The decline of Thebes set in immediately after the death of Rameses III., B.C. 1200, when the priests usurped the power of the weak kings of the XXth dynasty. After a three years' siege it was destroyed by one of the Ptolemies, and became henceforward no longer a capital, but simply "the villages."

**RUINS OF THEBES.** The most famous remains of the ancient city of Thebes are the two gigantic statues known as the Colossi, the Ramesseum, or mortuary temple of Rameses II., the Dêr el-Medina, formerly a temple erected to Ptolemy Philopator I., the ruins at Medinet Habu, of which the chief is the great Temple and Palace of Rameses III., the Temple of Queen Hatshepsut, the tombs of the Queens,

and the tombs of the Kings, amongst the latter being the tomb of King Tutankhamen, the discovery and opening of which attained world-wide publicity only a few years ago. This is actually the first tomb in what is known as the Valley of the Kings, and its position probably accounts for its late discovery. After the opening of the tomb, which, it will be remembered, was the result of unwearied exertions on the part of the late Lord Carnarvon and Mr Howard Carter, the golden coffin containing the mask which covered the head and shoulders of the boy king's mummy were despatched to the Egyptian Museum at Cairo (see "City of Cairo"), together with a number of the valuable and beautiful objects found in the tomb. Many glories of antique art, however, still remain in the tomb, the total contents of which have been valued at £500,000.

The exploration for three more tombs is still progressing in the Valley of the Kings, and many archaeologists think that the burial place of Joseph, the son of Jacob, will be discovered here. It is held that his position with the Pharaoh was such that his sepulchre is likely to equal in magnificence and possibly even to surpass, those of many of the Kings.

**KARNAK.**—The Karnak ruins occupy an area nearly two miles in circumference, and from the top of the great propylon, about one hundred feet in height, an extensive view of the plan of the city can be obtained. The temples of Karnak and Luxor were formerly united by an avenue over a mile in length and eighty feet wide, lined by great stone sphinxes, only a few of which, however, now remain, and these are greatly mutilated. The great Temple of Amen is, on the whole, regarded as the most wonderful of any in Egypt. It was nearly 3,000 years in building, having been begun by Osirtasen I, B.C. 3000, and greatly added to by Thothmes III, B.C. 1600, also by succeeding Kings to about 100 B.C. These Kings vied with one another in increasing its great and many attractions, the chief of which are the famous "Hall of Columns" (124 in number), the great gateway or propylon, and a much mutilated red granite statue of Rameses II. There are also subsidiary temples of Khonsu, Mentu,

Ptah and Mut. The collection of statues and inscriptions is of the greatest interest, historically and archaeologically.

**TEMPLE OF LUXOR.**—Compared with Karnak, the temple of Ammon in Luxor itself is not of the greatest importance, it dates from the XVIIIth and XIXth dynasties. The Obelisk in the Place de la Concorde, Paris, originally stood here, its companion still stands where it was erected. Much excavation work has been accomplished and a lot still remains to be done. The sculptures on the walls of the Court of Rameses II are interesting.

### MANSURAH

Mansurah, the "City of Victory," is the capital of the province of Dakaliya, and stands about 95 miles from Cairo on the east bank of the Damietta branch of the Nile. The place is not older than the time of the Crusades, and it was to this spot that the Egyptians fled when Louis IX of France seized Damietta. The name given to the city was from the crushing defeat which the Mamelukes inflicted on the French king and his three armies in 1250, it was at Mansurah (then in the building) that Louis was imprisoned. To-day the town, which has a population of 49,238, is concerned principally with the cotton trade and there are several large ginneries and oil-pressing factories at work. The streets are wide and the houses large, being well built according to the French pattern. The Mosque is worth a visit, and an interesting excursion from the town is that down the Canal of Menzala to the Lake of the same name, the journey occupying about three days.

### MENSHIYA

Menshiya (Al-Manshiyah), on the west bank of the Nile, 328 miles from Cairo, stands on the site of a city which is said to have been the capital of an ancient nome, its Coptic name was Psou. Founded probably by Ptolemy I, it has always been famous for its large cattle and corn market. In the quarries of Gabal Tûkh, close by, are many ancient inscriptions. The population numbers 21,652.

### MINIYA

This is a large and important town on the west bank of the Nile, 153 miles south of Cairo. It is the capital of the province of Miniya, and the residence of the Mudir, or Governor, overlooks the river. The first sugar factory established in Egypt was built here and still exists, greatly enlarged and improved. During the cane-harvest, and when the mills are in full activity, the town, which has a population of 39,495, presents a busy and animated appearance. There is always a large and interesting weekly market.

### QINÂ

Qinâ (Ginâ), capital of the province of Qina, is famous for its dates and its trade in Konlas, or porous drinking bottles, and has a population of some 23,000 inhabitants. It is the usual starting point for visiting the famous Temple of Dendera, which dates possibly from the time of the later Ptolemies. It is a monument of imposing appearance and of considerable interest to archaeologists.

### SUHÂK

Capital of the province of Garga, Suhâk is a well-built and important town of over 20,000 inhabitants. Near it are the famous White and Red Monasteries, built by the Empress Helena in the ancient Egyptian style. Suhâk has also given its name to the Suhakiyah Canal, which takes the water of the Nile into the interior during the inundation, and is similar in size to the Bahr Yusuf, near Tanuf. There are also other smaller canals near Suhâk, and in the winter good duck shooting may be found on them.

### TAHTA

A large town in Upper Egypt of 20,658 inhabitants, Tahta is distinguished from afar by its extensive mounds, which probably mark the site of the ancient Hesopis. Tahta has several fine mosques and a Christian Church. There are many Copts here, and the town is one of the neatest and cleanest on the Nile.

# PALESTINE

By J. B. BARRON, O.B.E., M.C.

**T**HE marine frontier of Palestine begins on the south at Rafah and extends northward to the Ladder of Tyre. Its greatest length is approximately 265 miles. On the east the frontier follows the line of the River Jordan and the Dead Sea. The northern and southern frontiers are determined less by geographical features than by political necessities, the former following roughly the northern limits of the old Turkish kazas of Acre and Safad, and the latter the old Ottoman boundary running from Rafah south-east to the Gulf of Akaba.

Small in area—comparable in size to Belgium or Wales—its geographical position rendered Palestine in ancient times a centre of importance to the commercial traffic of the larger territories surrounding it. Palestine was the bridgehead between Asia and the Mediterranean countries. Its modern character is based upon religious and racial considerations as the home of three great religions—Christianity, Judaism and Mohammedanism—and as a country suitable for intensive immigration.

The main portion of the territory lies between 30° and 33° N latitude, but within the limits of a small province it offers the varieties of soil and climate of a continent. It is a country of plain, of desert and deep valleys, of lake and seaboard, of barren land and of broad stretches of fruitful soil. These differences in climate and soil have influenced, and are influencing, its progress to a marked degree by providing means of sustenance to European settlers and a favourable condition in which pioneer work, mainly agricultural—may be carried on. The population, according to the official census taken in 1922, was 757,182, of whom 78 per cent were Moslems, 11 per cent Jews and 9.6 per cent Christians. Since that date there has been a large influx of Jews, which has increased the total numbers to probably 820,000. The rainfall of Jerusalem equals that of London, but it descends between the months of November and April inclusive.

**ADMINISTRATION.** Following the occupation of Palestine by the military forces of Great Britain during the War, a Civil Government was formed in July, 1920. A British Mandate was approved by the Council of the League of Nations in 1922, and subsequently the Palestine Order-in-Council, promulgated on August 10, 1922, prescribed the form of government. The Administration has so far been essentially British in character and in personnel, and has followed the lines of the ordinary government of a Crown Colony. No Legislative Council, however, exists, though there are twenty-two municipalities and a number of local councils which have certain powers in rural districts or over groups of villages. The tendency has thus been to create local centres of self-government responsible to the Administration.

**AGRICULTURE.**—The economic rehabilitation of Palestine depends largely upon the fullest possible development of its agricultural resources. It has no established local supplies of raw material, and possesses no fuel supplies that have yet been developed. Petroleum has been tapped around the Dead Sea basin, but there is no assurance that this valuable product is present in quantities sufficient to form a commercial

asset. Industrial development along purely manufacturing lines is not yet feasible, and the principal industries depend therefore upon agriculture.

Excluding the uninhabited waterless desert south of Lat 31° N., the territory embraces not more than four and a half million acres (1,820,000 hectares) of exploitable land surface. A large proportion, amounting to 700,000 hectares, is uncultivable in its present condition. This area includes several distinct physical formations such as the desert in the south, portions of the rocky plateau of Judea, and alternatively swamps and sand dunes along the coast. Dry farming and afforestation, dairy and sheep husbandry, drainage and irrigation are all measures of reclamation and are being applied with success. In this connection the work of the Jewish agricultural settlements is noteworthy. There are some 70 of these colonies, large and small, with a population of approximately 22,000. They practise all processes of agriculture, and are a force of great economic importance to Palestine. The Arabs form the majority of the agricultural population, but, though diligent and thrifty, they are severely handicapped through lack of knowledge and by utilising antiquated methods.

Of administrative measures through which progress may be registered that of the settlement of land titles should be mentioned. These are often in a chaotic condition, a legacy of the Turkish regime, but Government action is steadily removing this evil. A land survey has been commenced, an effective method of ownership enforced and an onerous title levied on the total produce grown reduced from 12½ per cent to 10 per cent. The Administration is also considering the possibility of an entire change in the system of land taxation, including the tithe, that should be of great benefit to agriculture.

The coastal plain and the Plain of Esdraelon are the most extensively cultivated areas, while the Jordan Valley is suitable to the growth of tropical products and fruits.

**CEREALS.**—The two former areas possess rich soil producing barley (Gaza District) and wheat, which form the staple crops of the territory. The barley crop was exported before the War in large quantities to Great Britain, and is now in great demand throughout the Levant. Crops vary much from year to year, being dependent upon the rainfall, but the current production of wheat may be estimated at 120,000 metric tons per annum and that of barley at 65,000 metric tons. Indian millet is exported to Egypt. Several leguminous crops are grown, such as beans, peas, lentils, and kersennah, and are consumed locally.

**FRUITS.**—The oranges grown near Jaffa are justly renowned for their excellence. They form the leading item of the export trade, and as a commercial crop have been developed during the past 30 years, mainly through the efforts of Jewish and German settlers. Modern methods of cultivation are employed, the gardens being tended and the fruit marketed in accordance with the requirements of European markets. Before the War the export crop was 1,000,000 cases, and this figure has since been much exceeded. Exports of oranges amounted to 1,868,291 cases in 1925, as compared with 1,880,783

cases in 1924. Great Britain and Egypt are the chief consumers.

Large quantities of grapes are grown throughout the territory, American vines being introduced some 40 years ago. The soil is particularly adaptable to their cultivation, the best varieties being produced in the Jewish colonies of the Jaffa Plain. The native grape of Hebron is also famous from Biblical times.

Although oranges and grapes are of first economic importance, other fruits are worthy of mention. Lemons, figs, watermelons and olives are all produced in large quantities, and there can be no doubt that fruit growing will assume considerable proportions in the near future. Upon it are dependent a number of local industries which are increasing in economic importance, and which are establishing markets in Egypt, Syria and Asia Minor.

**TOBACCO.**—Under the Turks all tobacco grown or sold within the Ottoman Empire was a monopoly of the Public Debt Commission, which, in turn, farmed out its rights to a foreign company. The monopoly was abolished by the British authorities in 1921, and since that date tobacco may be raised under license, and foreign cigarettes and manufactured tobacco imported on payment of special import duties. With the introduction of up-to-date methods of curing, there is no reason why the varied soils and climates of Palestine should not prove capable of producing tobacco equal to the most favoured products. Some 3,000 acres were planted with tobacco and tombac during 1925, and about 40 per cent of the tobacco grown is utilised locally. Seven tobacco and cigarette factories and seven tombac factories are in operation.

**VARIOUS INDUSTRIES.**—First in importance may be mentioned the wine industry. At Richon-le-Zion, a Jewish colony near Jaffa, the wine cellars have a storage capacity of 1,540,000 gallons and are said to be the largest single installation in the world. Of the total production, 80 per cent is of the dry red wine of a claret type for table use. The industry has, however, suffered a set back since the War owing to high European import duties and the difficulty of finding markets further afield. Soap is manufactured at Nablus and Jaffa from the native olive, and is exported to Egypt and Syria. It is an industry that has been developed by the Arab section of the population, and though the methods of production are not up-to-date, the article holds a high place on the markets of the Levant. Other by-products from fruits are also manufactured, such as refined olive oil at Haifa. The scope for this class of article appears to be promising, but the territory suffered during the War through numbers of olive and almond trees being cut down for firewood. Smaller industries exist, having arisen mainly through the demands of immigrants or to satisfy the needs of tourists. Efforts are being made by Jewish colonists to make Palestine as self-supporting as its lack of the essential raw materials will allow. Thus cement works and flour mills at Haifa, brick and tile factories at Tel Aviv, and numerous other small factories are producing articles of first necessity. The tourist is supplied with articles of olive-wood and mother-of-pearl work made in Bethlehem.

**COMMERCE.**—The total value of imports for the year 1925 amounted to £E 7,603,923, as compared with £E 5,589,679 for the previous year. This large increase is due to the steady recovery from the trade depression of 1923, assisted by the stimulus of new settlers furnished with capital. The export trade, however, has not recovered in the same degree, the value of exports in 1925 being £E 1,588,157, compared with £E 2,120,931 in 1924. It is difficult to arrive at a true calculation of exports since there is a large traffic by way of the innumerable country tracts over the land frontiers into Arabia and Syria for which no customs' records are established. In considering the balance of trade it should be remembered that there is a big investment of money in Palestine from outside sources, such as contributions to different religious bodies and subscriptions from all parts of the world to the many Zionist activities. The trade balance is also favourably influenced by the numbers of tourists—13,000 in 1925—who visit Palestine every year.

Great Britain and Syria claim the largest share (each 14.5 per cent.) of the import trade, followed by France and U.S.A. Exports go to Egypt (44 per cent.) and Great Britain (34 per cent.), with small quantities to Syria. The total number of steam vessels entered in 1925 was 754, with a net registered tonnage of 1,831,619, which is an increase of 149 vessels as compared with 1924.

**CUSTOMS TARIFF.**—The Customs Tariff varies from an ad valorem system to a number of specific duties. Local trade with Syria is free of duties, and for foreign articles exported from or imported into Palestine a system of exchange duties with the Syrian Customs authorities enables a transit and re-exportation trade to be carried on with a minimum of restriction and customs formalities. No duties are payable between Palestine and Transjordan or the Arabian States by way of the land frontiers. Goods entering Palestine by railway from Egypt are sent forward in sealed trucks to the larger centres where customs duties are payable. Internal taxation, in so far as the trader is concerned, is light. The immovable property tax paid by the proprietor and the municipal rate, which averages about 6 per cent. of the rental value payable by occupiers, are the principal imposts. Licensing regulations for dangerous or unhealthy trades exist, while the production and sale of salt constitute a Government monopoly.

Chambers of Commerce exist at Jerusalem, Jaffa and Haifa, with trading associations at Nablus and Hebron.

**FINANCE AND BANKING.**—Palestine has as yet no currency of its own, but uses the Egyptian pound of 100 piastres. The pound

sterling is worth the fixed value of 97½ Egyptian piastres. It is probable that in the near future the basis of the currency will be changed to a Palestine pound containing one thousand millimes of equal value to that of the English gold sovereign.

The Jerusalem branch of Barclays Bank (Anglo-Egyptian) is the principal bank in the country, and also serves as the Government bank. Other banks are The Anglo Palestine Company, Ottoman Bank, Banco di Roma and Credit Lyonnais. These institutions have agencies or connections in Jaffa and Haifa as well as in Jerusalem.

Restricted credit facilities are available, as the banks confine their business almost exclusively to receiving money for deposit and to paying cheques, to buying and selling gilt-edged negotiable paper and to making short-term loans against adequate security. The average bank rate of discount, or of interest, is from 8 to 9 per cent.

**HYDRO-ELECTRIC AND IRRIGATION DEVELOPMENT.**—The primary needs of the territory are water for irrigation purposes and cheap energy for industrial development. At Jaffa and Haifa the works of Mr. P. Rutenberg, whose company holds an important concession, are in operation, and electrical energy is now supplied. By far the most important project is that of the utilization of the waters of the Sea of Galilee and of the River Jordan. It is proposed to erect a barrage at the southern end of the Sea of Galilee which will act as a reservoir for a main power-house to be built a few miles south on the Jordan. Other power-houses are to be constructed at intervals down the river valley. For irrigation purposes the project contemplates the construction of a canalisation system for supplying the slopes between the foothills and the river. When realised, there can be no doubt that these schemes will materially improve the economic conditions of the territory and advance its prosperity to a marked degree. Of other works of a public character now in course of construction, mention should be made of the Jerusalem water supply. Hitherto the city has depended upon the rainfall stored in cisterns and on an inadequate supply installed by the British Military authorities. A number of springs to the south of Jerusalem are now being harnessed to provide a continuous supply with reservoir accommodation.

**RAILWAYS.**—The railways are administered by the Government, and are divided into two groups in accordance with the gauge. The standard gauge extends from Kantarah on the Suez Canal across the Sinai Peninsula to the Egyptian boundary at Rafah and on to Haifa. From Ludd Junction a branch line connects Jerusalem and Jaffa with the main system.

The narrow gauge lines consist of those portions of the Hedjaz Railway lying within Palestine and the Tulkarem-Nablus-Afulah line. The Haifa-Damascus sector of the Hedjaz Railway passes under the control of the French authorities at El Hamma (just beyond Semakh on the Sea of Galilee).

Cairo is within 12 hours of Jerusalem, but under the present time-table the journey takes longer owing to a wait at Kantarah, where passengers cross the Canal by a boat service. Trucks are ferried across.

The railway service is exceptionally good for so small a territory. Dining and sleeping cars are attached to the principal passenger trains. The standard gauge line is 918 and the narrow gauge 539 kilometres in length.

The main roads are metalled and are maintained in good condition. Considerable goods traffic by lorry service passes between Jaffa and Jerusalem.

**SHIPPING FACILITIES.**—There are no ports properly speaking, but Haifa possesses a protected bay in which steamers may land goods into lighters without interruption, excepting in very heavy weather. The largest quantity of goods is discharged at Jaffa, which is an open roadstead subject to dangerous swells and storms. Customs accommodation is inadequate and landing charges are heavy.

A project is under consideration by the Administration to build a port at Haifa. It possesses natural advantages for the construction of a harbour at reasonable cost. The port is expected to become the export centre for the large quantities of wheat grown in the Hauran and in Transjordan. Being in direct railway communication with Damascus in the north-east and Cairo in the south it is probable that there will be a considerable development of trade in the near future. Schemes are also on foot to make Haifa the outlet for the Mesopotamian oilfields by laying a pipe-line across the Arabian desert.

**TRANSJORDAN.**—The district to the east of the River Jordan, known as Transjordan, has its own administration responsible to his Majesty's Government through the High Commissioner for Palestine. The head of the local government is the Emir Abdallah, who is advised by a British Resident. The territory is entirely inhabited by Bedouin tribes and a few settled inhabitants at Es-Salt and Amman, numbering in all about 250,000. Wheat is the principal crop, and is renowned for its quality. The country is very rich in agricultural possibilities and possesses a more assured rainfall than Palestine. The mineral wealth is unexplored. The Hedjaz Railway from Deraa Junction skirts the desert boundary to Maan and southwards to Medina. The territory extends to the Gulf of Akaba.

# THE SUDAN

**3** It is only a little more than twenty-five years since the genius of Kitchener brought to an end the chaos and strife which had so long been the normal condition of the Sudan Province. Thus not alone freed Egypt from constant menace, but began in the regions of the Upper Nile an era of progress almost unparalleled in history when there are borne in mind the tremendous forces of nature against which the battle had to be waged. With money poured out freely, a substantial return has already been received, the development of the region thus far being truly amazing when it is remembered that the Sudan was once regarded as a desert, incapable of yielding anything of benefit to mankind.

The Anglo-Egyptian Sudan extends from Halfa in the north to Gondokoro in the south, about 1,300 miles. It has a small sea-board on the Red Sea with the ports of Suakim and Port Sudan. On this eastern side the country is mountainous, and there are also hilly tracts in the western Province of Kordofan but the most important and valuable territory is that which lies within the basin of the Nile and its tributaries, especially that immediately to the south of Khartoum, a great triangle formed by the junction of the Blue Nile from Abyssinia and the White Nile which oozes out of the vast swamps of the Congo region.

Much of the scenery of the Sudan is magnificent, even the desert being famous for its wonderful colouring. The climate during the winter months can hardly be excelled anywhere in the world, the nights being rarely more than pleasantly cool.

**ADMINISTRATION.**—By an agreement signed in 1899 after the overthrow of the Khalifa (see "Egypt" and "History"), the Sudan is under the joint management of Great Britain and Egypt, the Governor-General being appointed by Egypt with the assent of Great Britain. The British and Egyptian flags are used together, laws are made by proclamation, no duties may be levied on imports from Egypt, while duties on imports from other countries, via the Red Sea, may not exceed those levied in Egypt, and the import and export of slaves are forbidden. Each of the fifteen provinces into which the country is divided has its own resident Mudir, or governor, administration being carried out through British District Commissioners in charge of districts. An increasing number of Sudanese are being employed in administrative posts. The Governor-General's Council assists in the discharge of executive and legislative powers.

The successive Governors-General, invariably a British General, have been Lord Kitchener, who may be regarded as the creator of the modern Sudan, Sir Reginald Wingate, Bart., the late Sir Lee O. Stack, who was assassinated in Cairo in November, 1924, and Sir Geoffrey Archer, KCMG, who, after a lifetime spent in the service of his country, was unfortunately compelled in 1926, for reasons of health, to tender his resignation. In October of the same year Sir John Loader Maffey, KCVO, CSI, CIE, was appointed to the Governor-Generalship.

**LAW AND ORDER.**—Civil justice is administered by a Chief Justice and four Puisne Judges, one of whom is also Registrar-General of Lands. There is no general code of civil and commercial law such as is in

force in Egypt and many Continental countries, and in many cases the religious law of Islam is the determining factor. The Sudan is garrisoned by native troops, forming the Sudan Defence Force, from which, since the unrest which culminated in the murder of the Sudar in 1924, Egyptian officers have been excluded. A small British garrison is quartered at Khartoum.

**CITY OF KHARTOUM.**—Khartoum, the capital of the Sudan, stands at the junction of the Blue and White Niles. For nearly a century the old native town served as the great emporium for the ivory and gum of the Sudan, and until the British occupation it was a great slave market. The modern city (the town having been almost altogether rebuilt) is spacious, beautiful and well-ordered, indeed the visitor finds it hard to realise that this handsome city is the place where Gordon fought and died, the town upon which the hand of the Mahdi fell so heavily in bygone years.

**BUILDINGS.**—The principal buildings are the palace of the Governor-General with magnificent gardens laid out by Lord Kitchener, the Anglican Cathedral, the Gordon Memorial College and the new and handsome Mohammedan Mosque. The population of the city at the last census was 33,513. Opposite Khartoum, on the Blue Nile, is Khartoum North with 19,121 inhabitants, and on the White Nile a few miles distant, is Omdurman (population, 81,776), the city where first the Mahdi and subsequently the Khalifa gathered all the warriors of the Sudan with their harems in order that protectors might be always at hand.

**SPORT AND RECREATION.**—Khartoum is a recognised centre for some of the best wild-game shooting in the world, and the town also possesses a first class English Club, likewise a racecourse for the holding of meetings during the season. There is excellent hotel accommodation, and at the Grand Hotel weekly dances are arranged. Polo, tennis and golf are all played.

A variety of game is plentiful along the river banks, and elephants, lions, leopards, buffaloes, the wild boar of the country and innumerable species of antelopes can be found without great difficulty. There is also excellent fishing in the territory of the Nuer and the Dinkas.

**COMMERCE.**—The principal exports from the Sudan are gum arabic, ivory and cotton, and there is also a growing export trade in cattle and sheep, Egypt having depended for many years on the Sudan for her meat supply. Considerable quantities of salt are exported annually to Abyssinia. The value of Sudanese exports rose from £1,185,186 in 1913 to £4,000,000 in 1925, while that of imports, mainly cotton goods, machinery and unmanufactured goods, increased during the same period from £2,109,776 to £6,000,000.

**COMMUNICATIONS.**—In 1925 there were 1,800 miles of railways open to traffic. Since the opening of the Eastern Railway the Red Sea ports of Port Sudan and Suakim have received much of the trade which formerly passed northwards. The new railway to Kassala, 215 miles in length, connects with the Red Sea line at Hara Junction, 126 miles west of Port Sudan. South of Khartoum communication is established by steamers and boats on the Blue and White Niles, Sobat, and Bahr-el-Ghazal, and inland

chiefly by camels and donkeys. All the principal towns are in telegraphic communication with Khartoum, the total mileage of lines exceeding 4,500. There is also telegraphic communication with Egypt, Ethiopia and Abyssinia.

**FINANCE.**—The revenue and expenditure of the Sudan according to the budget estimates of 1925, balanced at £3,688,000, compared with a revenue in 1924 of £4,298,856 and an expenditure of £3,453,273. The main sources of revenue are land tax, animal tax, royalties, customs, railways and steamers, and posts and telegraphs.

**HISTORY.**—See "History," in the "Egypt" Section of this book.

**IRRIGATION.**—This has been dealt with in the special article on "The Control of the Nile," to be found in the "Egypt" Section of the volume. It may here be recalled that the great Semar Dam, one of the biggest engineering works in the world was completed in the autumn of 1925 and was opened in January 1926 by the High Commissioner for Egypt and the Sudan, Lord Lloyd of Dolobran.

**PEOPLES.**—Twenty-five years ago the province of the Sudan was utterly desolate, and its few inhabitants could scarcely keep body and soul together. In 1909 after ten years of British administration the population had grown to about two millions. In 1925 it was estimated at five and a half millions of whom roughly 3,500 are Europeans, the remainder being made up of Egyptians, Abyssinians, Indians and the various negro tribes which constitute the Sudanese population. These are generally classed as Berbers or Nubians, Arabs, and pure black and negroid tribes from whom in former times the enormous traffic in slaves was obtained. The greater number of the inhabitants are Mohammedans, the religion of Mohammed having come into the Sudan from Egypt by way of Nubia, from Arabia by way of Suakim and Massowah, and from North Africa by way of the desert road from Tunis to Dufur and Kordofan. The negro tribes are heathen, and in some places worship many strange objects. Amongst them a belief in witchcraft and fetishes is universal. There are many Christian missions working in the country, but very few converts are made, the great obstacle to the spread of Christianity being the insistence by the missionaries on monogamy. Arabic is the language usually spoken, and there are four or five local dialects of a so-called Nubian language.

**PRODUCTION.**—The Sudan is the chief source of the world's supply of gum arabic and ivory. Egyptian cotton has been successfully established, and increasing quantities, which compare favourably with corresponding varieties grown in Egypt, are being produced annually. Other products include sesame, senna leaves and pods, groundnuts, dates, hides and skins, salt and gold. The principal grain crops are dura (great millet), the staple food of the people in the Sudan and used as cattle and poultry food outside the Sudan, and dukhu (bulrush millet). In the last year for which statistics are available there were in the Sudan 174,374 horses, 536,268 asses, 66,035 mules, 1,840,209 cattle, 8,214,585 sheep, 2,646,005 goats, 55,681 pigs, and 113,693 camels.

*COTTON GROWING.*—There can be little doubt that in the future prosperity of the Sudan cotton is destined to play an enormous, if not a dominating, part. The main regions where cotton is at present cultivated are the deltas of the Baraka and Gash rivers in the Eastern Sudan, along the Nile northwards from Khartoum, south of Khartoum in the Gezira, and a small area in the heavy rainfall region to the extreme south. As a result of the irrigation work being carried out in the Gash delta area by the well-known Kassala Cotton Company, something like 100,000 feddans (of which 15,000 were sown in 1926) will eventually be put under flood irrigation and be made to produce Sakellaris cotton. It may be added that a more recent inspection of the region lying between Gedaref and the Blue

Nile has shown that it comprises a vast area eminently suitable for rain-grown cotton, which can be developed as soon as the railway is extended from Kassala westwards or from Makwar eastwards.

The strong position as regards cotton production in which the Sudan now finds itself is due in great measure to the fact that steps were taken at a sufficiently early stage by the agricultural authorities to ensure control of ginneries, seed, and pests. In this respect the Sudan is far in advance of any country, and a practical example of what control in the Sudan can achieve is afforded by the Tokar crop, the quality and yield of which have been improved out of all knowledge in the space of relatively a few years. If finally the project for pro-

hibiting the export of "Baladi" (local) cotton is put into effect, all fear of the quality of cotton produced either under the irrigation or rain system being diminished by the admixture of the very inferior local variety will be eliminated, and cotton cultivation in the Sudan, whether American or Egyptian, should have a very promising future.

*FORESTS.*—The forests which line the Blue Nile banks, rich in fibres and tanning materials, extend to the frontier of Abyssinia. On the White Nile they contain valuable trees—the ebony, gum acacia, bamboo and rubber creeper, whilst the Sudd area in the upper reaches is composed of an inexhaustible quantity of papyrus. The finest gum forests are in Kordofan, and the best rubber is in the Bahr-el-Ghazal.

## SOUTH AFRICA

### PHYSICAL GEOGRAPHY

#### CLIMATE

#### GEOLOGY

#### FAUNA

#### FLORA

#### PHYSICAL GEOGRAPHY

**G**EOGRAPHICALLY, South Africa comprises all the country south of the Zambesi River. The total area of the Union is 472,347 square miles, but if Southern Rhodesia, South-West Africa (over which the Union holds a mandate) and the Bechuanaland Protectorate be included, the entire area of South Africa south of the Zambesi exceeds 1,200,000 square miles, and is roughly equivalent to that of British India or the Argentine Republic. It is in general a high lying, plateau-like country, 40 per cent of it being 4,000 ft above sea-level, with only a narrow strip along the coast less than

1,000 ft above sea-level. The western side of the peninsula differs from the eastern in that it contains fewer high mountains and rivers, as also in having a lower average level and a larger extent of desert.

The Cape Province has a long seaboard and a great extent of coast country, but it also extends far into the inland plateau, and therefore contains within its borders nearly all the geographical conditions which are to be found in South Africa generally.

Natal, on the eastern slope of the continent, comprises coast land and ascending terraces. It reaches the crest of the dividing range, but does not cross it into the high veld.

Zululand (part of Natal) is in the main a coast country, while Basutoland, which is often called the Switzerland of South Africa, is an entirely inland country among the mountain heights whence flow the Orange and Caledon Rivers.

The Orange Free State, the Transvaal, the Bechuanaland Protectorate, South-West Africa, and Southern Rhodesia form part of the great plateau of the African Continent, with the ground beyond the basin of the Limpopo rising towards the north-east, so that Lake Ngami, in the Kalahari Desert, is at a much lower level than Fort Salisbury in Southern Rhodesia.

Portuguese East Africa (Mozambique) is a vast territory, consisting largely of flat and swampy coast lands, with an interior of rich agricultural possibilities and extensive forest resources. It is watered by the Zambesi, Limpopo and other navigable rivers.

Southern Rhodesia, together with the greater part of the Bechuanaland Protectorate, is within the tropics.

North of the Zambesi is the territory of Northern Rhodesia, including on the west the great plain of Barotseland, and on the

east the extensive plateau bounded on the north by Lake Tanganyika

**AREA.**—The total area of South Africa comprised in the Union (472,347 square miles) is distributed by provinces as follows—Cape of Good Hope, 276,966 sq m, Natal, 35,284 sq m, Transvaal, 110,450 sq m, Orange Free State, 49,647 sq m. The area in question is equivalent to rather more than five times that of Great Britain, or 2½ times that of Germany. Outside the Union proper, the areas of the mandated territory, native protectorates, and Rhodesia are as follow—South-West Africa, 312,194 sq m, Bechuanaland, 275,000 sq m (estimated), Basutoland, 11,710 sq m, Swaziland, 6,678 sq m, Southern Rhodesia, 150,344 sq m, Northern Rhodesia, 291,000 sq m. The area of Portuguese East Africa is roughly 293,400 square miles.

**COAST LINE.**—The main feature of the coast line of South Africa is its extraordinary regularity, and the absence of islands such

leading to a vast table-land covering about 9,000 square miles, with a mean elevation of 4,000 ft, the highest part of the plateau—the High Veld of the Transvaal—being fully 6,000 ft above the sea. The huge mass of Table Mountain, which rises like a wall to guard Capetown, is the best known peak, the whole escarpment which separates the plateau from the coast region is known successively as the Drakensberg of the Transvaal, the Drakensberg or Quathlamba of Natal, the Stormberg of the North-Eastern Cape Province, and the Suenwberg, Nieuweveld, Komsberg, Roggeveld, Bokkeberg, and Kannesberg further south and west. The highest peaks of the Drakensberg, Gaunt's Castle, Cathkin Peak, and Mont aux Sources, are all in Natal.

**PANS.**—A characteristic feature of certain parts of the country, usually where the horizontally-lying Karoo rocks are being stripped from the older formation by denudation, are shallow depressions called "pans." These become filled with water during the

is for the most part arranged in long dunes. Grass is the principal vegetation, and there is good grazing in parts. The High Veld is the most distinctive as well as the most agricultural area in South Africa, and where the land can be put under water it becomes extremely fertile. It also contains the famous ridges of the Witwatersrand ("ridge of white waters"), Gats Rand and Zinkerbosch Rand. The Bushveld is an undulating sandy country covered with grass and bush, lying between 3,300 and 4,000 ft above sea-level in the middle of the Transvaal. It has not been settled so extensively as has the High Veld.

The Upper Karoo, geologically the most interesting of the South African formations, consists of characteristic plains from which rise flat-topped hills. Droughts are frequent here, and farming is practically confined to the more favoured areas to the south and east. The Karoo is also interesting historically as having been the scene of some of South Africa's greatest battles, the names of Talana, Elandslaagter, Colenso, Spion Kop,

UMZIM KULU RIVER, PORT SHEPSTONE, SOUTHERN NATAL.

KOWIE RIVER, PORT ALFRID, CAPE COLONY

as occur so frequently around Europe and Asia. From the neighbourhood of the Equator on the West Coast to the Mozambique Channel on the East Coast, a distance of over 4,000 miles, there is not a single island of importance. This absence of islands and navigable rivers is held to be largely responsible for the slow development of the country by the native population before the European occupation. Owing to the regularity of its coast line South Africa has few good natural harbours, all but Durban and Simonstown being either open roadsteads or artificially protected.

**MOUNTAINS.**—The dominating physical feature of South Africa is the rampart of hills which rises behind the low-lying coast lands, these latter extending in general from 50 to 250 miles inland. Sometimes the mountains, which run in lines parallel to the coast, approach close to the ocean, as at Table Bay. In the south-east, in the Drakensberg, they attain heights of 10,000 to 11,000 ft; elsewhere the highest points are between 8,000 and 9,000 ft. They form in reality a series of terrace-like steps,

rainy season, and in winter are either wholly or partially dry. Most of them are saline and, on drying up, the floor of the pan is covered with dazzling incrustations of salt, in some cases commercially exploited. They owe their existence to numerous circumstances, but Dr A. W. Rogers, the Director of Geological Survey, considers that the action of the wind under favourable conditions of rock-structure and weathering is the most potent factor in their production. The pans vary considerably in extent, the largest being up to 100 square miles.

**PLATEAUX.**—The great interior table-land forming the larger part of the Union of South Africa contains several regions differing more or less from each other. These plateaux are the Kalahari and Bushmanland, the Kaap Plateau, the Limpopo Highlands, the Bushveld, the Highveld of the Transvaal, the Basuto Highlands, the Upper Karoo, the Middle Veld, and the Namaqua Highlands. Of the number, the Kalahari and Bushmanland approximate most nearly to desert, their chief characteristic being the almost universal covering of reddish sand, which

Magersfontein, Modder River, and Mafeking being inseparably connected with memories of the Anglo-Boer War. The Namaqua Highlands contain the copper mines of the Union, but afford little scope for agriculture. In the Middle Veld are the diamondiferous regions, and iron ore abounds.

**RIVERS.**—South Africa has always suffered from an almost complete absence of navigable waterways, and, in addition, its rivers are not of much value as yet for irrigation purposes. Generally speaking, they are very rapid when constant, while the streams of the plateau are dry during a great part of the year.

In Cape Province the greatest waterway system is that of the Orange River, which rises in the highest part of the Drakensberg and flows for over 1,000 miles to the Western Sea, draining with its tributaries (of which the Caledon and the Vaal are the chief) an estimated area of 300,000 square miles.

On the west coast are the Olifants and Berg Rivers, on the south coast the Breede, Gauritz, Knysna, Gamtoos, and Sunday Rivers; and on the south-east coast the

Great Fish River, also the Keiskamma, Buffalo, Kei, Bashee, Umtata, and Umzimvubu Rivers.

The Province of Natal is well watered, but its rivers are of little use for navigation. The largest is the Tugela (200 miles), which divides Natal from Zululand and drains half the province. It begins with a waterfall and ends with a bar, and for many miles of its course is a strong stream flowing through rocky ravines. Among its feeders are the Buffalo, the Klip River, the Umgeni, and the Bushman and Mooi Rivers. In Zululand are many rivers, the Amatikulu, the Dimalazi, the Umfolosi, the Mkusi, and the Pongola. Apart from the Orange River, already mentioned, the leading rivers of the Orange River Colony and the Transvaal are the Vaal, which separates them, and the Limpopo, which describes a semicircle of nearly 1,000 miles between its source south-west of Pretoria and its mouth to the north-east of Delagoa Bay, and serves as the boundary between the Transvaal and Southern Rhodesia.

of frequent thunderstorms, and in winter, although frosts occur with fair regularity between the months of May and September, when temperatures as low as 6° Fahr have been recorded, the days are clear and sunny. In the coastal regions, where conditions are more humid, frosts are rare, even in winter.

The mean daily range of temperature generally increases from the coast landwards, averaging about 12° F. on the south coast and 28° F. or more on the high veld. Extreme shade temperatures of 125° F. and 6° F. have been recorded, but these are exceptional. There is, indeed, a remarkable uniformity of mean annual temperature over the greater part of the Union. Thus Cape Agulhas, the most southerly point of Cape Province, has a mean yearly temperature of 61° 5" F., whilst Johannesburg, in the Transvaal High Veld, has one of 60° 6" F., a difference of only 0° 9" F. Of the two capitals, nearly 1,000 miles distant, Capetown has an average of 62° 6" F., whilst Pretoria has a mean temperature of 63° 5" F. These temperatures are practically the same as

growing a very precarious pursuit in the south-east of the Transvaal and in Kafraria, in parts of the last area it is usual to protect windows of houses from destruction by means of wire netting.

**RAINFALL.**—The average rainfall varies enormously over the country, ranging from over 200 inches in the mountainous district of the south-west of Cape Province (Wemmer's Hoek and Berg River areas) to 2.5 inches at Port Nolloth, and 0.3 inches at Walvis Bay. Over the Transvaal the amounts vary between 82 inches at Woodbush Forest in the Zoutpansberg District to 18.5 inches at Christiana in the extreme south-west of the Province. Over the Orange Free State it is much more uniform, varying from 35 inches in the eastern portion to 18 inches at Jacobsdal in the west, over Rhodesia, from 65 inches at Helvetia in the east to 14 inches at Juli in the Limpopo Valley. In Natal (including Zululand) it ranges from 53 inches at Eshowe and 51 inches at Qudeni to 25.5 inches at Weenen. It is therefore obvious that these widely varying quantities, com-

## CLIMATE

Owing to the position of the Union between the fairly low latitudes of 22° S. and 35° S., a variety of climates is encountered, but generally speaking the climate is temperate and cooler than that met with in similar latitudes in the Northern Hemisphere. This is the result of the configuration of the country, which consists of a series of huge elevated plains or plateaux, and of the comparatively small land area and large extent of coast line, which admit of the winds from the vast surrounding oceans exercising a moderating influence over the territory.

**AVERAGE TEMPERATURE.**—The climate of South Africa is on the whole equable and pleasant, extremes of heat or cold being uncommon. Much of the interior high veld region has a bracing climate, to which the white man has readily adapted himself, while invalids, especially those who suffer from pulmonary diseases, have found the clear dry air of the Karoo extremely beneficial. The summer heat of the interior plateau is largely counteracted by the cooling effects

the summer temperatures of England, and about the same as many of the best known health resorts of the Mediterranean.

The warmest place in the Union is Koomati Poort, in the Transvaal, on the border of Portuguese East Africa, where the mean annual temperature is 73° 1" F. The coldest station is Dusa Head, on Table Mountain, in Cape Peninsula, where the yearly mean is only 54° 7" F. Thus the difference between the warmest and coldest parts of the Union is only 18° 4" F.

**DUSTSTORMS.** The most disagreeable feature of the South African climate is undoubtedly to be found in the frequent duststorms which are met with all over the country from about the end of winter, when the anticyclone is beginning to break up, to the beginning of autumn. Fortunately they do not last long, and are usually succeeded—over the higher plateaux at least—by rain, mostly from thunderstorms.

**HAILSTORMS.**—Destructive hailstorms are of most frequent occurrence in the middle districts of Natal, while they render fruit-

bined with the variations in temperature, must cause a considerable diversity of climate over the different parts of the country. Generally speaking, the mean annual rainfall decreases from east to west and from south to north, the wettest portions being Cape Peninsula, with an average of about 38 inches, and the south-west, which includes the mountainous regions of the Berg River and Wemmer's Hoek. The driest part of the country is that part of Cape Province west of the Karree and Kamies Bergen between the Olifants and Orange Rivers, including Great Bushmanland, to the east of the Namaqualand Plateau, where the annual rainfall is less than 5 inches.

**SNOW.**—Snow is liable to occur three or four times in the course of a year at places exceeding 3,000 feet, although it is much more frequently seen on the mountains. Only on rare occasions is snow to be met with on the flats along the coast, but the coastal mountain ranges are very often covered during winter. It may, however, be noted that in only eleven years in fifty

seven has snow been registered in the Transvaal, whilst only on seven occasions in forty-three years has snow been seen on the face of Table Mountain in Cape Peninsula.

**SUNSHINE.**—South Africa is rightly called "Sunny," the percentage of possible hours of sunshine being 66 at Capetown, 78 at Kimberley, and 73 at Johannesburg, as compared with 26 at London and 56 at New York.

**WINDS.**—The direction of the chief rain-bearing winds varies, in the west it is from the north-west, at Port Elizabeth, from the south-west, at East London, from north-east and south-west, but chiefly the latter, as is also the case at Durban. The area of "constant rains" along the south coast is watered chiefly by south-westerly winds, while the greater part of the interior area of "summer rains" owes its rainfall principally to the north-easterly and easterly winds, which, coming from the warm moist latitudes of the Indian Ocean and passing to higher and cooler latitudes, are able to carry their moisture further south and more inland than the south-westerly winds. Gales are by no means uncommon along the coasts. Table Bay having long been known for its north-westerly visitations.

**HOT WINDS.**—A disagreeable feature of the coastal districts and of the area inland near the foot of the plateau is the occurrence of hot, dry winds, known as "Beig Winds." These winds, which may blow only for a few hours or for as long as two or three days, sometimes cause a practical inversion of the seasons, the maximum temperature recorded during the winter months being frequently 15 to 25 degrees higher than in summer. They produce a feeling of great oppression, when the wind changes its direction, it brings cool, cloudy weather and occasionally rain with a welcome feeling of relief. During a hot wind in January 1923 a maximum temperature of 117° 5" was recorded at Litenhage and 118° at Dunbrody both in the south of Cape Province, and as a result of the intense heat meads and other crops were destroyed, whilst cattle, ostriches, a large number of fowls, small birds, and bees died.

## GEOLOGY

The geological record of South Africa is obscured by the fact that no fossils are known to exist earlier than those of the Devonian age, with the result that the important Cambrian and Paleozoic systems are not clearly recognisable. The older rocks have, therefore, received of necessity a purely South African nomenclature, the most notable of these being the Cape, Karoo, Transvaal, Ventersdorp, Witwatersrand, and Swaziland systems. Speaking generally, the surface configuration of the whole of South Africa has been largely determined by the enormous period during which it has been exposed to atmospheric influences. From the Cape ranges northwards to Central Africa the country has probably been subject to the air since Triassic times, and for a further period stretching back to Devonian times the sea is not known to have encroached upon it. Hence the marine deposits are confined to the coastal regions and are of minor importance, whereas sedimentary deposits under fresh water are evident over wide areas of the Karoo, Transkei, Free State, Natal, and Southern Transvaal.

**CAPE SYSTEM.**—The Cape system is developed in the south and west of Cape Province, it appears again on the south-east coast near Port St Johns, and continues

through the coast belt to Natal. It contains the Table Mountain series of sandstones and shales, and the Bokkeveld group of shales and sandstones, in the lower part of which marine fossils are found.

**KAROO SYSTEM.**—The Karoo system occupies the whole of the central part of Cape Province, almost the whole of the Orange Free State, the western side of Natal, and a large area in the South-Eastern Transvaal. The presence throughout this system of a hard boulder-clay or tillite has been taken as a proof of glacial origin, and of the theory that an Arctic region prevailed over a great area in the Southern Hemisphere at the remote period when the coal measures of the northern hemisphere were being formed, or soon afterwards. The various groups of the Karoo series are known as the Dwyka, the Ecca, the Beaufort, and the Stormberg series. In the Ecca series are the coal beds of Natal and the Transvaal.

**SWAZILAND SYSTEM.**—The Swaziland system comprises all sedimentary and volcanic rocks older than (or supposed to be older than) the Witwatersrand beds. Until more satisfactory evidence of their age is found, the Swaziland system is simply a class into which the very old strata of South Africa can be conveniently placed. These older strata are found in the Pongola, Kwaupan, Barberton, and Pietersburg districts and in Namaqualand.

**TRANSSVAAL SYSTEM.**—This is the most widely distributed of the pre-Karoo sedimentary rocks in the Union, and it also forms very large areas in South West Africa. At its base is the Black Reef series, a group of quartzites and conglomerates with intercalations of shales. The Black Reef series forms the great escarpment of the Eastern Transvaal, where it is thicker than elsewhere, giving rise to some of the finest scenery in the province. It received its name from the occurrence of black carbonaceous matter in the conglomerates mined for their gold content in the Southern Transvaal. The Transvaal system contains, besides, the Dolomite series, the only water-bearing formation on a large scale in South Africa, the Vaalburg series of crystalline limestones, and the Pretoria series, in which are valuable deposits of iron ore.

**VENTERSDORP SYSTEM.**—The Ventersdorp system is mainly a volcanic group, and contains three sub-divisions, the Zoethef, Kuip, and Pniel series.

**WITWATERSRAND SYSTEM.**—This system is found in the Southern Transvaal and the adjoining part of the Orange Free State, and it is probably represented by certain beds in Natal, though the question is at present unsettled.

What is known as the Upper Witwatersrand group contains the most important beds from an economic point of view, because they yield the gold won on the Witwatersrand goldfield. In the Central Rand there are three reefs of banket—the local name for a gold-bearing conglomerate of quartz pebbles set in a matrix of pyritic quartzite. These are known as the Main Reef, Main Reef Leader, and South Reef. The Main and South Reefs thin out eastwards, leaving the Main Reef Leader as the productive reef there, and the latter disappears westwards.

## FAUNA

A wealth of wild animal life was until comparatively recent times a feature of South Africa, old travellers and hunters, who penetrated the country in search of adventure deeming it a hunter's paradise.

With the advance of European settlement all this has been changed, large numbers of game and other fauna having been ruthlessly destroyed, and some species even threatened with extinction. What is left of the rich indigenous fauna is now to be found chiefly on the various Government or privately-owned reserves and in the remote regions of Bechuanaland, Zululand, and the Transvaal. In some of these areas, with certain restrictions imposed by the Government, good big game shooting is still possible, and affords excellent winter pastime for many sportsmen both from the Union and overseas.

**ANIMALS.**—Africa is without doubt the chief home of the larger forms of animal life, no other continent possessing such an assemblage of the bigger herbivores as is formed by the elephant, rhinoceros, giraffe, buffalo, hippopotamus, and the various genera of the larger antelopes. Of these there are still in Cape Province two herds of wild elephants, one in the Knysna forest, the other in the Addo Bush near Port Elizabeth, whilst there are also a fair number to be found in the wilder parts of Rhodesia. Two species of rhinoceros still survive, but are both scarce, the buffalo, the giraffe, and the hippopotamus are to be met with in the remote parts of South Africa, and are more numerous in the neighbourhood of the Victoria Falls.

About 35 different kinds of antelopes have been found in South Africa, but the lion is now only in the remoter districts of Rhodesia and the Transvaal. The leopard, called tiger by the Boers, is more plentiful, and of the smaller carnivora wild cats, cheetah, hyenas, civets and others abound. The scarcity of forest country in South Africa accounts for the comparative absence of monkeys, baboons, however, are common, as are also several species of lemurs.

**BIRDS.**—No less than 420 species of birds are said to occur in Africa south of the Zambesi, among those peculiar to South Africa being the long tailed sugar birds, the plantain eaters, the bush shrikes and the colies. The one representative of the Ratite or wingless birds, is the ostrich (*Struthio australis*), which has now become a domesticated bird throughout the greater part of Cape Province and is bred and kept for the sake of its plumes. Among migratory birds are the common barn swallow, the lesser grey shrike, the stork, and the cuckoo. A remarkable bird is the great-tail widow bird, commonly called the sekabuli by South Africans. It lives on the open grassy plains, and in spring each male, accompanied by ten or twelve females, selects a suitable spot for nesting in the long grass. Here each hen builds a separate nest, while the cock watches the proceedings from some vantage spot ready to warn the hens of approaching danger and to drive off intruders.

**FISHES.**—Fresh-water fishes in temperate South Africa are not numerous, owing largely to the scarcity of permanent rivers and lakes. The carp family is most largely represented, the majority of the species being of the genus *Barbus*. Cat-fishes are also numerous. During the last 30 years the acclimatisation of British trout in various rivers, streams, and reservoirs has been successfully carried out. In Rhodesian rivers the best sport is provided by the tiger fish, which is handsome and a fierce fighter, readily distinguished by its brilliant colouring and sharp interlocking teeth. Off the coasts various species of whales are found, as well as the Cape sea-lion, or fur seal, while it is probable that great possibilities for deep-sea fishing exist over the whole of the Agulhas Bank. The snoek (the barracouta of Australia), silverfish,

NATIVE ANIMALS OF THE GAME COUNTRY.

hottentots, pangas, geelbek (or Cape salmon), mackerel, anchovy, crawfish, rock-cod, red and grey mullet, sea pike, shad, and tasselfish are among the many varieties of marine fish found in the Cape and Natal waters.

**INSECTS.**—There are said to be about 40,000 different species of insects in South Africa alone, of which the Coleoptera have more than 15,000 representatives. The white ants, or termites, abound everywhere, and their huge smooth mounds of earth are a feature of the landscape in the warmer parts. One of the most dreaded of insects is the tsetse, which is the carrier of the blood parasite trypanosome from wild to domestic animals, and causes the fatal "nagana" disease, making it impossible to use horses and cattle in the "fly country." Many beautiful species of butterfly are found.

**REPTILES.**—The crocodile of the Nile and other parts of tropical Africa is found only in some of the South African rivers flowing into the Indian Ocean. Land tortoises and lizards are numerous, and there are nearly 100 species of snakes, of which 22 are reported to be poisonous. The dreaded mamba (*Dendraspis*) is only found in Natal and the low country of the east. It is more of a tree snake than the others, and sometimes reaches a length of ten feet. Among the smaller snakes the puff-adder, an ugly reptile of yellowish and orange brown, is the most dangerous. In the various strata of Karoo formation many remains of extinct reptiles of great interest have been found.

## FLORA

Since the character of the natural vegetation of any country is largely conditioned by rainfall, it follows that in South Africa, where such fall is often intercepted by the high mountains which fringe the central tableland, and where, owing to periodic droughts, plant life frequently has to contend with a scarcity of water, the vegetation is seldom luxuriant and often possesses marked peculiarities, some of which are in the direction of both obtaining and retaining a water supply. In other words, there is a predominance in many parts of succulent plants and shrubs. Generally speaking, the vegetation of South Africa is of a dull colour rather than of a vivid green, and only in a few favoured spots is there any approach to a luxurious forest growth. The absence of trees is, indeed, a feature of the greater part of the Veld and the Karoo.

**BUSH.**—Characteristic of the whole of Cape Province, except the eastern coast region, is the number of low-growing scattered shrubs of a dark or blueish-green hue. This is the "bush" country, and vast tracts of Cape Province are called the "Boschjesveld" (bush country) from the uniformity of its appearance. The chief bush is the Rhenosterbush (*Elytropappus rhinocerotis*); but it is intermingled with many others. All have usually very small leaves of a greyish or blueish-green colour. On the coast the bushes are larger, ranging from 4 to 8 ft., pelargoniums, brunias, stavias, tetragonias, asters, lobostemons, leucadendrons, and myrcias being most common. Interspersed among these are numerous plants of the orders orchidaceæ, iridaceæ, amaryllidaceæ, lilaceæ, with scattered tufts of restiaceæ, sedges and grasses. The bush of the Karoo consists largely of the acacia *horrida* (doornbloom).

**FLOWERS.**—The flowering plants of South Africa are numerous, and especially so in Cape Province, where the indigenous flora is very remarkable for an extraordinary variety of heaths and heathers. Of the

1. VICTORIA FALLS ORCHID.  
2. PROTEA (SUGAR BUSH), CAPE COLONY.  
3. CAPE HEATH.  
4. CHINCHERICHSEE.

beautiful heaths, with one mass of purple and pink blossom, which clothe the mountain sides there are said to be over 350 varieties. Among the rich flora of Cape Peninsula is the *Disa grandiflora*, the most beautiful of South African orchids, and many others of the same family, of which *Satyrium cornifolium* (a brilliant orange) and *Disa longicornis* (a lovely blue) may be mentioned. The beautiful arum lily (*Richardia africana*) is so common as to be almost a weed. Oxalises, with white, red and yellow flowers, stud the fields in early spring, and the white everlasting flower grows abundantly. On the high veld and Karoo the flowering plants are less numerous in variety than in the south, but are often extremely beautiful, especially after the heavy winter rains.

The multiplicity of plants of the Karoo are remarkable both for their beauty and singularity. After a time of copious rains the land that was a desolate and mournful desert puts forth sheets of vivid colour. There are many beautiful species of heliophila, of *cadaba juncea*, with its dark crimson flowers, and of the wigat boom which yields a bird not unlike the European caper. The speck boom or lit tree, has handsome pink flowers and is a favourite feed of cattle. There are also beautiful hibisci, melianthi, orchids, and acacias. The predominating feature of the Karoo region is the peculiar adaptation of its plant life to meet the severe conditions of the dry and hot climate and soil. Most of the plants are more or less succulent, and many have thorns.

**FORESTS.**—The Union of South Africa is comparatively a poorly timbered country. In the scrub forests, the trees are of small size only, and many of these have been ruthlessly cleared for agricultural purposes. The timber forests are found only on the seaward slopes of the mountain ranges within 100 miles or so of the coast, and at widely scattered intervals from Cape Peninsula in the south west to Zoutpansberg Mountain in the north-east. The Knysna, Tzitzikamma and Transkeian forests are the chief of these. Along the east coast from East London to Delagoa Bay and onwards there is a narrow strip of forest almost tropical in nature.

**TREES.**—The principal indigenous trees of the South African forests are the two species of yellow wood—*Outeiqua* yellow wood (*Podocarpus elongata*) and the upright yellow wood (*Podocarpus latifolia*)—which produce a hard and durable timber. Other native trees are the stinkwood or laurelwood (*Ocotea bullata*), known as the South African oak, sneezewood, which is somewhat like the Australian jarrah, the assegai and white pear waggon woods, cedars, ebony, ironwood, and the curious silvertree, peculiar to the slopes of Table Mountain. In the semi-tropical regions south-east of the Drakensberg—that is, the coastlands of Natal and Portuguese East Africa, where vegetation is abundant—mangroves, palms, baobab and bombax trees flourish. Of naturalised trees, the oak grows freely throughout the country, but reaches its best development only in the west, where the winter rains produce a climate similar to that of Southern Europe. The tree, which in South Africa yields an acorn twice as large as its northern brother, grows to perfection in Cape Peninsula, where it has been naturalised for more than 200 years. Other naturalised trees are the cluster pine, to be found on many parts of Table Mountain, the stone pine, the blue gum, and the poplar. Various kinds of acacia—the wattle bark—are being grown for industrial purposes.

# HISTORY

**T**HE history of South Africa differs in a most important particular from that of any other British Dominion.

In so far as it is from the outset a story of discovery and conquest, it resembles in broad outline the history of most parts of the Empire. In South Africa, however, a dual discovery and settlement by rival European Powers never ended with the total suppression or gradual absorption of one by the other. Side by side, and in bitter rivalry Dutch and British settlers conquered and made their own the great stretches of country which were peopled by wild and savage tribes. Each sought to gain power and wealth at the expense of the other, and within the last half century two wars left legacies of bitterness which it almost seemed beyond the power of time to eradicate. Then the genius of statesmanship Boer as much as British accomplished in only a few years the seemingly impossible task of uniting two races which had been at variance for centuries, and of consolidating in one Commonwealth those once irreconcilable peoples, the Boer and the Briton who, a few years later in a common cause, were to fight shoulder to shoulder in the jungles of East Africa, the deserts of Palestine and the trenches of Picardy.

**1487-1652 : DISCOVERY AND EARLY SETTLEMENT**—It is undisputed that the discovery of the Cape of Good Hope was made in 1487 by Bartholomew Diaz, the Portuguese navigator, and that ten years later Vasco da Gama landed at Mossel Bay, giving the name of Natal to the coast which he passed on Christmas Day. The sea-route to India was now in Portuguese hands, and in 1503 Antonio de Saldanha sailed into what was later named Table Bay. Here in 1510, Francisco de Almeida, the first Viceroy of the new Portuguese possessions in the East, fell, together with many officers and men, in a skirmish with the Hottentots on what are now known as the Woodstock beaches. Later, in 1580, our own Sir Francis Drake sailed round the Cape, saying of it: "This Cape is a most stately thing, and the fairest cape that we saw in the whole circumference of the earth." From then onwards, the English East India Company having been established in 1600, English ships called yearly at Table Bay for water and cattle.

Meanwhile, in 1602, the Dutch East India Company, for long the greatest of all companies which traded with the East, had been formed, and, as the result of one of its ships, the *Haarlem*, being wrecked in Table Bay and the crew stranded for five months on shore, representations were made to it to establish a fort at the Cape of Good Hope. The Company sent out John Van Riebeeck in 1652, from which year dates the first European settlement of South Africa, the place chosen for the Fort Good Hope being the present Parade Ground in the rear of the Post Office at Capetown, while the first garden laid out was on the site now occupied by the Dutch Reformed Church in Adderley Street.

**1652-1779 : EXPANSION OF DUTCH SETTLEMENT—HUGUENOT SETTLERS—THE FIRST TREKS**—The history of the next century is one of a period of steady development, first of the old Capetown and the immediate district, then of the new settlement of Stellenbosch, which was founded by that great Commander,

Simon Van der Stel. The Massacre of St Bartholomew in Paris in 1572 led to the emigration of a large number of Huguenots to the Cape, these being gradually, by the repression of their language, absorbed into a Dutch settlement. It was an era of prosperity and of ease, for all work was done by slaves, who were brought from Madagascar, Ceylon, and the Indies. Certain ambitions of the younger Van der Stel (who had succeeded his father as Governor) to extend the settlement and its industries clashed with the Company's idea of the Cape as no more than an outpost for the benefit of passing ships, and resulted in a decree that no Company's officer might own land there. The result of such an order, though not at once apparent, was that a number of the burghers began to break away from the narrow confines of the settlements and to make their way eastwards. The trek-fever began to make itself felt—that *wanderlust* which was in years to come to make a nation. With their flocks and herds and slaves these grave and silent farmers took their bibles and psalm books, gradually, from the need for presenting a united front to the attacks of the natives, the commando system developed itself. Swellendam was founded, the remote district of the Boschberg was penetrated, the little colony was extended, to the Great Fish River, and a stone which stands to this day was set up at Knysna to mark the adventurous journey of the Governor, Van Plettenberg. This was in 1778.

**1779-1789 : KAFFIR WARS—DECLINE OF THE LAST INDIA COMPANY**—The expansion of the Dutch settlements was not accomplished without opposition. On the north the frontier farmers found themselves harassed by the Bushmen, on the east by the warlike Kaffir tribes. In 1779 a commando under Van Jaarsveld fought and drove out the Kaffirs from the present districts of Somerset East and Albany, in 1789 the second Kaffir War, as it is called, ended less satisfactorily in the cession to the Kosa tribes of the district between the Fish and Boshman Rivers. The border farmers found themselves, not for the first time, in serious conflict with the central government (the Council of Policy) as to the methods to be used with the natives, added to which fact was the more serious one of the growing unpopularity of the East India Company. Dutch trade, owing to the war with England, was at a disastrously low ebb, the Council of Policy found itself in financial difficulties, being either unable or unwilling to help the frontier districts in their difficulties, and the spirit of dissatisfaction grew.

**1789-1815 : DUTCH REVOLT—ENGLISH CONQUESTS**—As far back as 1620 two sea captains, Andrew Shilling and Humphrey Fitzherbert, had formally taken possession of Table Bay and the continent adjoining in the name of King James I. Their action, however, had not been supported by the Government, and the Dutch settlement had not been interfered with. But the long war between England and the Batavian Republic towards the close of the 18th century provided the necessary pretext, and on July 14, 1795, Admiral Elphinstone effected a landing at Simon's Town. The Dutch Governor capitulated on September 15, and the English forces took possession. The two districts of Swellendam and Graaf

Reinet, which had just previously revolted from the government of the Dutch East India Company both submitted to English rule, but in February, 1803, in accordance with the provisions of the Treaty of Amiens, the country was restored to the Batavian Republic being now made a direct dependency. When war broke out again, a fleet under Sir Home Popham disembarked a force of over 4,000 men under Sir David Baird, which forced Capetown to surrender on January 10, 1806 after the defeat of a very inferior Dutch force two days earlier at the battle of Blueberg. The Colony was finally ceded to Great Britain by a Convention dated August 13, 1814, which was ratified by the Congress of Vienna in 1815.

**1815-1835 : SLACHTER'S NEK—ABOLITION OF SLAVERY—FOUNDATION OF DURBAN**—In 1814 the white population of Cape Colony numbered 26,000, and there were reckoned to be nearly two millions of free natives. During the first years the administration was entirely autocratic, it was not until 1825 that an Executive Council was established to share responsibility with the Governor. The problem of government was to a certain extent similar to that experienced in Canada after 1763, the control of alien colonists by British military officials. But in South Africa the existence of slavery and of a large native population were factors which complicated the situation, and invited the interference of the new missionary movement which exercised so powerful an influence in English life during the early 19th century. That the missionaries often did good is not disputed, but that they at times stirred up racial animosity between British and Dutch is equally certain. Bitterness between the two peoples had long been apparent, and the incident of Slachter's Nek brought it to a head. In 1815 a Dutchman at a frontier station resisted arrest on a charge of ill-treating a native, he fired on his pursuers and was shot dead. His brothers and others rose in revolt. They were surrounded and captured at Slachter's Nek, and five were tried and hanged for rebellion. Lord Charles Somerset, the Governor, refusing to mitigate the sentence. For nearly a century Slachter's Nek became a byword of British tyranny, and its consequences were immeasurable.

The year 1828 was memorable for the accession of Dingaan as chief of the Zulu tribes, for the establishment of a Supreme Court with English as the official language, and for the grant of legal equality with white men to all free natives. The emancipation of the slaves, in a manner, unfortunately, which provoked the cry of unfair treatment from the Boer farmers, was carried out in 1834, the year in which King William's Town was founded, and a new governor, Sir Benjamin D'Urban, found himself compelled to put down a serious Kaffir invasion of the Eastern Province. This successfully accomplished, a new province was formed and named Queen Adelaide Province, but it was abandoned in 1835 the year of the foundation of Durban.

**1835-1848 : THE GREAT TREK—DINGAAN'S DAY—NATAL MADE A BRITISH COLONY**—The causes of Boer discontent, which each year saw intensified, were manifold in detail, but all leading to one conclusion—hatred not so much of their British fellow-colonists as of

British methods of government. Racial feeling, religion, the favoured treatment accorded to the natives, emancipation, missionary activities, and the policy of limiting expansion in a boundless country, all contributed to produce the Great Trek, which was essentially an attempt to throw off British citizenship at the cost of much hardship and personal sacrifice. The first small parties set out from Cape Colony in 1836, and in the next few years some 10,000 Boers followed their example. The pioneers crossed the Orange River into what is now the Orange Free State. There they took different courses, some settling down around Winburg, others pushing northwards over the Vaal into the unknown country beyond, and still more crossing the Drakensberg range eastwards into Natal. Here were the bloodthirsty Zulus, who had exterminated or absorbed all the other tribes, while their kinsmen, the Matabele, lived across the Vaal. The first permanent Boer settlement on the further side of the Vaal was founded at Potchefstroom.

Meanwhile the main stream of Boers entered Natal under Pieter Retief in 1837-38. The leader and sixty followers were massacred by Dingaan at his kraal, and a few days later five hundred men, women and children of the emigrants were killed at the spot which is now called Weenen, the place of weeping. Boers and British under Andries Pretorius marched upon Ugingungkhlovo and on December 15, 1838, was fought the famous Blood River Battle, in which over 3,000 Zulus perished. The little church of the Voortrekkers was built three months later in pursuance of a vow made on the eve of battle, and round it grew the town which to-day bears the name of the two pioneers, Piet Retief and Gerrit Maritz. Pietermaritzburg, Dingaan was then assassinated by his own people, and his successor withdrew across the Tugela into Zululand proper, leaving Natal to the victors. Pretorius set up a republic, and for a time it seemed likely that the other republics which had been founded at Winburg and Potchefstroom might coalesce with it to form a single Dutch State. England, however, refused to acknowledge the republic which Pretorius had proclaimed, and in 1842 a detachment of troops was despatched to Durban, whence, after its reverse by the Boers, Dick King accomplished his historic ride of 400 miles to Grahamstown to obtain relief. In 1843 Natal was proclaimed a British Colony, and the majority of the emigrant Boers retired across the Drakensberg.

**1848-1860 : BOER REPUBLICS - SIR GEORGE GREY AND FEDERATION**—Alarmed by the continued trekking by Boers into the lands between the Orange and Vaal Rivers, Sir Harry Smith, the newly appointed Governor of the Cape, annexed the territory in question in 1848 under the name of the Orange River Sovereignty, British Kaffraria having been annexed as a British dependency in 1847. Pretorius and his friends took up arms, and were defeated at Boomplaat in August, 1848, the leaders escaping into the wild country beyond the Vaal and founding the Transvaal Republic.

This was the first Boer community to be recognised as independent, the Sand River Convention being signed on January 16, 1852, by which the emigrants beyond the Vaal obtained the right to govern themselves as an independent State on condition that there was to be no slavery within their jurisdiction. Of that jurisdiction the Vaal formed the southern frontier, but in other directions the borders were left vague, to provide a fruitful crop of disputes in the

future. Meanwhile the settlement of Europeans in the Orange River sovereignty had broken the missionary system of a belt of protected native tribes. There were hence and constant wars with the Kaffirs, Basutos and Hottentots, of which the Home Government began to weary, and a decision was reached to repudiate all responsibilities beyond the Orange River. Accordingly in February, 1854, by the Convention of Bloemfontein Great Britain granted independence to the Orange Province, henceforward known as the Orange Free State, on the same terms as those secured by the Transvaal.

It was in this year that Sir George Grey came to Capetown. His previous experience in New Zealand had convinced him that federation was the true policy for European colonies to pursue in a land where economic conditions were uniform and the native races strong. The Home Government was favourable to a joint control of the Cape, Natal, and British Kaffraria. But Grey went further, planning the inclusion of the two Boer States. The project was by no means impossible for the republics were in chronic trouble with the natives and a prey to internal dissensions. The Free State of its own motion made an offer to discuss the matter. Grey accepted it eagerly and laid it before the Cape Government. But Imperial statesmen took fright at the resumption of responsibilities beyond the Orange River. The proposal was vetoed, and Grey's governorship came to an end in 1859 with nothing accomplished.

**1860-1875 : ERA OF EXPANSION AND DEVELOPMENT DISCOVERY OF MINERAL WEALTH** At this point in her history the political future of South Africa might have seemed to be clearly defined. Two British colonies occupied the coast line and two Boer republics the interior. The latter surrounded in addition by a ring of Basutos, Zulus, Matabele, Bechnanas and Griquas. A period of comparative stability now set in, of which the internal progress of the several States forms the chief feature of interest. Basutoland was annexed in 1871, Cape Colony received responsible government in 1872, Griqualand West was established as a Crown Colony in 1873, and in 1875 Portugal made good her ownership of Delagoa Bay. The Orange Free State, under the able guidance of President afterwards Sir John Brand, was becoming more settled, but the Transvaal—now known as the South African Republic—was less happy and there were constant border troubles with Cetewayo and other native chiefs. In 1867 the discovery of diamonds near Kimberley marked the passing of the old order of things in South Africa. A sharp dispute as to the ownership of the Diamond Fields followed, ending only by the surrender of the Griqua chief's sovereignty to the British Crown, and the annexation of the territory under the title of Griqualand West, the Orange Free State accepting £90,000 to withdraw its claim.

**1875-1882 : BRITISH OPERATIONS AGAINST ZULUS—FIRST BOER WAR**—The unsettled condition of the Transvaal has already been mentioned. In 1876 events were drawing to a crisis. A Zulu invasion was feared, and this would probably have been the signal for a rising of black against white throughout South Africa. The British Government, under Lord Beaconsfield, thought it time to intervene, and Sir Theophilus Shepstone, an official of great experience in native affairs, was commissioned to visit the Transvaal, investigate its troubles, and proclaim a British annexation if he should be satisfied

that a majority of the inhabitants desired that step. He was cordially received at Pretoria, and convinced himself and his superiors that a majority in the country would welcome British sovereignty. Accordingly, in April, 1877, he hoisted the British flag and announced that the Transvaal was annexed. No one made any forcible resistance, though the President, T. F. Burgers, formally protested. Later events proved Shepstone to have been mistaken, for there was among the Boers a very passionate love of independence. Of this sentiment Paul Kruger, a candidate for the presidency, was a leading exponent.

**BRITISH-ZULU WAR**—For two-and-a-half years a military administrator governed at Pretoria amid the increasing discontent of the Boers. Meanwhile Sir Bartle Frere, the Governor and High Commissioner at the Cape, dealt with the boundary dispute between the Zulus and the Transvaal. His award at the end of 1878 gave a large recognition to the Zulu claims, but at the same time he sent to Cetewayo a demand for the disbandment of his army and the reception of a British Resident in his country. Civilisation could no longer tolerate the existence in South Africa of a military force trained in ideals of conquest and massacre and for ever chafing to exercise its prowess. The Zulus determined to fight for their traditions, and the campaign occupied the first half of 1879. Lord Chelmsford invaded Zululand at three different points. Of his own column, temporarily divided for the purpose of a reconnaissance, half was surrounded and massacred in its camp at Isandhlwana. Light hundred white troops fell together with 500 native allies, and a panic broke out in Natal. The heroic defence of Rorke's Drift and its relief by Chelmsford saved the colony. With the advent of reinforcements Lord Chelmsford was able to finish the war, the Zulus being finally defeated at Ulundi on July 4, 1879. Zululand became a protectorate and was annexed in 1887.

**FIRST BOER WAR**—The reaction in England against the strong imperialist policy of Beaconsfield, voiced by his successor Gladstone, excited the Boers to a still stronger agitation for the restoration of their independence. In December 1880 Kruger and other leaders proclaimed the republic re-established, though the Liberal Government in England had refused to restore it. They attacked the small British detachments in the country and gathered their main force on the Natal frontier to resist a column which Sir George Colley was leading to a re-conquest. In January and February 1881 Colley, with forces too small for his task, was foiled at Laing's Nek and Ingogo, and heavily defeated at Majuba Hill with the loss of his own life. Large reinforcements were seen to be necessary for the invasion of the Transvaal, and whilst they were yet on their way to the Cape the Government decided to yield to the Boers. The dilemma was a difficult one, to give way seemed like being intimidated by a military defeat; to persist entailed the subjection of a people who were averse from British rule and claimed the right to independence. It was apparent when too late that the course taken with humiliation in 1881 could have been followed with honour a year earlier. The Pretoria Convention of 1881 nominally yielded to the Boers something between complete independence and the status of a self governing colony. They were to elect their President and their Raad, and to make their own laws unhindered, but their foreign affairs were to be subject to British control and the ill-

defined "suzerainty" of the Queen was asserted. A further convention of 1884 definitely accorded to the Transvaal the title of the South African Republic.

**1882-1895 : FURTHER EXPANSION - GOLD DISCOVERY RHODES AND KRUGER**—With the close of the war a new period of European expansion through out South Africa began. German traders and missionaries had long been operating in Damara and Namaqualand, and in 1884 the Government declared this region a protectorate under the name of German South West Africa. A single harbour on this coast, Walvisch (now Walvis) Bay, remained in British occupation, having been annexed in 1878. The Transvaal was still inclined to extend its borders at the expense of the natives, and 1883-84 bands of Boers trekked westwards into Bechuanaland and sought to establish republics. The natives appealed to Great Britain, and the new settlers were turned back by force in 1884. Then followed the proclamation of a British protectorate over Bechuanaland, the southern part of which was converted into a crown colony in 1885 and annexed to the Cape ten years later. The annexation of Zululand in 1887 has already been recorded.

The next move began in 1888 in the shape of a British extension into the vast region north of the Transvaal. At this time Paul Kruger was firmly established in the presidency which he was to hold for nearly 20 years. He was an old man, one of the trekkers of 1836, patriotic but narrow and prejudiced, with no desire for the industrial development of his country though ready enough to profit by its results.

At the head of the movement to extend British colonisation stood Cecil Rhodes, who had entered South African politics in 1884 and had done much to eradicate from the Afrikaner Bond, or Nationalist Party, some of its anti-British sentiment. His ambition was to colonise the area now known as Rhodesia. In 1889 a charter was granted to the British South African Company, which lost no time in establishing trading forts at Salisbury, Victoria and other places. An agreement with Portugal in 1891 defined its frontier with Portuguese East Africa, and a Boer attempt to trek northwards over the Limpopo was repulsed. The Matabele, who declared war in 1893, were reduced to submission, a further rising in 1896 being also suppressed. In a few years Southern Rhodesia became an ordered territory, the immediate political importance of Rhodes' work being that it encircled the Transvaal on the north with British territory, an encirclement which the extension of Zululand and the protection of Tongaland in 1895 completed on the East.

The other important event marking this period was the great discovery of gold on the Witwatersrand, south-west of Pretoria, which occurred in 1886. The Boers were mostly incapable of developing mineral wealth, and thousands of outsiders (Uitlanders), chiefly British subjects, crowded in to work the mines. The new city of Johannesburg became in a short time the richest and most populous in South Africa, and with the growth of this alien and enormously rich population new and grave political questions were raised. Broadly, the struggle was between the unthinking conservatism of the Boer, as typified by President Kruger, and the Imperialist ideals of the Uitlander, translated into action by Rhodes and Milner. It was the clash of two incompatible social systems; the refusal of the old order to give way to the new.

**1895-1899 : QUESTION OF CITIZENSHIP - JAMESON RAID AND ITS RESULTS**—Although the new comers to the Transvaal actually out-numbered the Boer citizens of the Republic and between them contributed more than nine-tenths of its revenues, paying all ordinary taxation and being mulcted in addition in special mining duties, they enjoyed no political privileges. They had no representation in the Volksraad and no right to education for their children. Under the Pretoria Convention it had been agreed that all "actual

**JAMESON RAID**—It is here necessary to recall that in 1884 the concession of all rights to make railways had been acquired by a number of German and Hollander capitalists and the Netherlands Railway Company formed, much of the gold exported being carried by this company shute to Delagoa Bay for shipment. President Kruger refused to enter a Custom Union with Natal, the Cape Colony, and the Orange Free State, seeking in this way to make the Transvaal independent as regards its sea-borne traffic, of the ports and railways of the British

THE LATE RIGHT HON. CECIL JOHN RHODES.

and potential residents in the Transvaal should be entitled to the rights of citizenship after a residence of two years." In 1882 the Transvaal Government had raised the necessary period of residence to five years, and in 1890 had enacted that the qualifications for full franchise should be extended to ten years. Then in 1884 a law was passed by which no newcomer could obtain the franchise until he had been fourteen years in the country.

colonies. A prohibitive tariff was imposed on all goods coming across the Vaal River, while railway rates were raised enormously. When the Johannesburg merchants installed a service of ox wagons to transport goods at low rates, the President retaliated by closing the drifts. This action, though under pressure from the Imperial Government the drifts were afterwards reopened, the refusal of the franchise, and the important part which German intrigue was felt to be

playing irritated the Uitlanders to a point at which peaceful agitation gave way to revolutionary endeavour. A conspiracy was hatched by the Uitlanders and leading Rand capitalists, as also prominent politicians. The plan was for the Uitlanders to rise in revolt, seize the arms at the Pretoria arsenal, and retire to hold Johannesburg in anticipation of British mediation. At the same time an irregular force under Dr Jameson, the administrator of Rhodesia, was to collect upon the frontier in readiness to co-operate if required. At the last moment a difference of opinion arose as to the flag to be hoisted, Rhodes' desire to see the Transvaal federated with the rest of South Africa under the British flag not being acceptable to some of the Reformers. Whilst the matter was being debated, Jameson precipitated events by crossing the frontier on his own responsibility. He rode to within a few miles of Johannesburg, and was surrounded and captured at Doornkop by a Boer Commando under Piet Cronje on January 2, 1896.

Apart from all questions of morality, the Raid was a bad blunder, for it played right into the hands of the reactionary party, and aroused almost world-wide sympathy for them and denunciation of Great Britain. Rhodes was driven from office, many of the Reform Committee were fined or imprisoned, and Dr Jameson and his men were sentenced by a British Court to various terms of imprisonment. Kruger could afford to act with apparent generosity, for the Transvaal and the Orange Free State were now united as they had never been before.

**RESULTS OF THE RAID**—From this moment the Boers rapidly armed for war, whilst the British Government, as the only hope of peace, pressed reform upon them, and three years of sterile negotiations ensued. Sir Alfred (afterwards Lord) Milner, who was now High Commissioner at the Cape, did his best to secure a grant of the Transvaal franchise to immigrants after five years' residence, but in the spring of 1899 he warned Mr Chamberlain, the Colonial Secretary, that the position was becoming intolerable. In May of that year he met Kruger at Bloemfontein, but could come to no agreement, and throughout the summer the haggling continued, each side acting as if it thought the other would yield in the end without resorting to force. Towards the end of August the President offered substantial concessions to the Uitlanders on condition that the British would refrain from active interference, drop the claim to suzerainty, and submit disputes to arbitration. But even this offer was withdrawn almost at once in default of literal acceptance, and by September war was seen to be imminent. Many causes reaching far back into the past had contributed to it, the most contributory one, perhaps, being the attitude shown throughout by President Kruger, who, with all the large and fine qualities of mind that might have made him a great leader of men, was constitutionally unable to look beyond the limits of his own State.

**1899-1902: SOUTH AFRICAN WAR—BRITISH OFFENSIVE—FORMAL ANNEXATION**—On October 11, 1899, an ultimatum having been presented forty-eight hours previously by the Transvaal Government, war was declared between the two Boer Republics and Her Majesty's Government, and on the following day the first shot was fired, the Boer forces attacking an armoured train at Kraaipan, a station in Cape Colony south of Mafeking. At this time, so little bent on war was the British Government, there were just, and only just, enough Imperial troops in South Africa to

hold the Orange River on the south of the Republics and the Natal border on the east, to prevent the Boer forces from sweeping down on Capetown or Durban before reinforcements could arrive from England. The British force at the commencement of hostilities numbered only 22,000 men.

Kimberley was quickly cut off, and Mafeking invested. The first British victory at Talana Hill was a barren one, for General Penn Symons was killed and the British force had to retire on Ladysmith, which was closely besieged. To its relief the army corps under General Sir Redvers Buller, which landed on November 9, was at once sent. There was rebellion to be quelled in Cape Colony, and the British organisation was already severely tested when hard on each other came the defeats at Modder River, Stormberg, Magersfontein, and Colenso. The year closed on a note of gloom, and it was realised at last that the magnificent fighting qualities of the Boers had been altogether underestimated. The names of Joubert, Louis Botha, de la Rey, Piet Cronje, Smuts, and Christian de Wet are alone sufficient to recall their splendid leadership.

**BRITISH OFFENSIVE**—With the year 1900 came the great British offensive, the sharing of the burden by every unit of the Empire, and the arrival at Capetown of the two great British Generals of the day—Lord Roberts and Lord Kitchener of Khartoum. Meanwhile the beleaguered garrisons of Ladysmith, Mafeking and Kimberley held their own, two strong Boer attempts to take Ladysmith being foiled at Caesar's Camp and Wagon Hill. On January 10, 1900 Lord Roberts arrived, and on the 24th Buller met with a severe repulse at Spion Kop, losing 1,700 men, but on February 28 the garrison of Ladysmith, under General White, was relieved after suffering acute hardships. The Boer invaders fell back to the north of Natal, Kimberley was relieved on February 15 and on February 29 was fought the battle of Paardeberg, which resulted in the surrender of General Cronje with 4,000 Boers.

**FORMAL ANNEXATION**—Bloemfontein, the capital of the Orange Free State, was taken on March 13, and the country was formally annexed on May 24, Johannesburg being occupied on May 27, and the British flag hoisted over the Raadsaal at Pretoria on June 5. It should be mentioned that Boer leadership had suffered a great loss in the death of their gallant and chivalrous Commandant-General, Joubert, in March. Mafeking was relieved on May 17, after a siege of seven months, the Transvaal was annexed on September 1, President Kruger having made good his escape to Lourenço Marques and thence to Europe. It seemed as though the war were over, and Lord Roberts left for England, the duties of Commander-in-Chief devolving upon Lord Kitchener.

Eighteen months of guerilla warfare followed before peace negotiations were opened in April, 1902, but on May 19 a Special Commission delegated from Vereeniging met Lord Milner and Lord Kitchener at Pretoria, the final articles of peace being signed on May 31, 1902.

**1902-1909: PEACE AND RECONSTRUCTION—CONSTITUTION**—June 1, 1902, is a day memorable in the history of South Africa. Peace then dawned for the first time for many years, and it was a peace with honour to both sides. By the terms of the Vereeniging Agreement representative institutions were to be set up in the two provinces—described as the Transvaal and Orange River Colony—as

soon as possible, to be followed in due course by responsible government, the British Government was to make a free grant of £3,000,000 for the resettlement of the Boers upon their farms, supplemented by loans for the same purpose upon very easy terms, the Dutch language was to be safeguarded, and the large questions of native policy were to be reserved until the establishment of self-government. The equality of the two dominant white races in South Africa was now secured. In 1907 both the Transvaal and the Orange River Colony obtained full responsible government. The first elections gave the Dutch element a majority in each, and at the same time the Bond party returned to power in Cape Colony.

Cecil Rhodes had died in 1902, soon after the declaration of peace, his old adversary, Kruger, dying in exile two years later. Lord Milner had been succeeded as High Commissioner by Lord Selborne, whose weighty memorandum was to bring the question of Union into practical politics. The need of a central South African Government was being increasingly felt, the chief problems in question were those of the natives, the customs, and the railways.

The natives outnumbered the whites by five to one, and were increasing at a more rapid rate. The customs question was pregnant with trouble owing to the fact that two provinces had no outlet to the sea save through the territory of the others or through that of Portugal. The coast provinces in the main favoured protection and the Transvaal free trade. Lord Milner in 1903 had induced the four South African units to agree to a customs union and a uniform tariff, but on attaining responsible government the Transvaal threatened to secede from the arrangement. Railways constituted a similarly difficult question, the railway focus of South Africa was the Rand, where three systems converged from the Cape, Natal, and Delagoa Bay, the railways were State-owned, and each province drew much of its revenue from this source, there was thus an ever present danger of an economic war in default of some regulation by a central authority.

**CONSTITUTION**—The remedy for these troubles was plain, yet by no means easy of accomplishment, for co-operation meant individual sacrifice. In October, 1908, a convention of delegates from the four Parliaments met at Durban and completed its work at Capetown in the following year. Its draft of a Constitution, largely due to the statesmanship of the Transvaal members, prominent among whom was General G. C. Smuts, then went to the several Parliaments for approval. The Transvaal accepted it entire, the Cape and the Orange River Colony (henceforward to resume its ancient name) demanded amendments. The Natal Legislature was hostile to the whole scheme, but a referendum of the people showed a majority in favour. The amendments entailed the abandonment of proportional representation of minorities in the Lower House, but the principle was retained for the Senate. On these terms the four provinces accepted the Constitution, and thus, to use the words of a British statesman (Lord Balfour), was achieved in a few months "a work which is without parallel in history," the union under one flag of two peoples who for years had been in constant and often bitter enmity.

**1909-1914: THE UNION AND ITS RESULTS**—On September 20, 1909, the South Africa Act passed through the Imperial Parliament and received the Royal Assent, May 31, 1910, being fixed as the date of the actual establishment of the Union. The Premier chosen by the first Governor-

General, Lord Gladstone, was General Louis Botha, one of the most prominent of the Boer Generals in the war of ten years previously, who was to be called upon later to display, in the service of the Empire, all those qualities of leadership and statesmanship which he possessed in so high a degree. It was perhaps, inevitable that racial hatred and suspicion should die hard even under the altered conditions. The Nationalist, or Separatist, Party was strong, especially in the Orange Free State and parts of the Transvaal, but General Botha refused to countenance the movement, and from the first set himself to the task of blending the two races to the formation of one free nation. The Union Government began to put its house in order, and it was well it did so. Questions of defence invited early consideration. Sir Ian Hamilton, the Inspector-General of Overseas Forces, having paid a visit to South Africa in 1911. In 1912 the wonderful memorial to Cecil Rhodes was unveiled on the Groote-Schuur Estate, and General Botha formed his second Ministry. The year 1913 was remarkable for serious miners' strikes and riots on the Witwatersrand, also for Indian riots and disturbances in Natal. These industrial and racial conflicts continued into 1914, right up to the time when the shadow of the coming War was being felt the world over. South Africa found herself suddenly confronted, not only with the question of her response to the Empire's call for united action, but with rebellion within her own borders.

**1914-1918 : UNION IN GREAT BRITAIN—REBELLION—CAMPAIGN IN SOUTH-WEST AFRICA—EXPEDITIONARY FORCE ON EUROPEAN FRONT—OPERATIONS IN EAST AFRICA.** The outbreak of the European War on August 4, 1914, affected South Africa more immediately than any other Dominion. Twelve years only had passed since the Boers had been in arms against Great Britain, and there were long and bitter memories still at work, nor were there existent the ties of kinship, affection, and a common tongue and heritage which bound the other Dominions to the Mother Country. There was still a strong spirit of racialism, which during the preceding years had been sedulously fostered by German intrigue, large numbers of the Dutch were led to believe that the War was no concern of theirs and that South Africa should remain neutral. Undoubtedly the German Government had counted on this, unfortunately for their plans, the attitude of General Botha and his colleagues was never in doubt, and the latter were soon called upon to show their patriotism.

Early in August the Union Government was asked if it would send an expedition against German South-West Africa, the former having already intimated that it would undertake its own defence. In September, Botha announced that the Government would do so, a step that was followed by the resignation by General Beyers of his post as Commander-General of the Union Forces. A concerted movement for rebellion was planned, with Beyers, Lieut-Colonel Maritz, Generals Christian de Wet and De La Rey, and Major J. Kemp as leaders, Maritz being the Commander of the Union forces on the German frontier. The situation was serious, and might easily have become very dangerous. De La Rey was shot by police, and Maritz was defeated in October, being forced to take refuge over the border. The ex-President of the Orange Free State, Steyn, after a long delay, did something to bring the rebels to reason, but by November Botha was forced to take the

field against his old colleagues, De Wet and Beyers. De Wet surrendered after a defeat near Winburg, and Beyers was drowned when in flight. The last of the rebel commanders, Fourie, was defeated in December, he alone suffered the death penalty, having deserted while on active service. De Wet was sentenced to 6 years' imprisonment, but was released after a few months. Altogether, about 10,000 men had been in armed rebellion. On the Government side 132 were killed and 277 wounded, of the rebels over 5,700 were either captured or surrendered.

**CAMPAIGN IN SOUTH-WEST AFRICA.**—The campaign in South-West Africa which had been held up by the rebellion, occupied the greater part of 1915. The country was attacked by sea and land, the expeditionary forces consisting of 3,516 officers and 63,721 men. Many and great natural obstacles had to be overcome, but the enemy's resistance was speedily broken by the determination and fighting qualities of the Union troops. Windhoek was occupied on May 12, and on July 9, 1915 the German forces surrendered at Korab, from thence onward until 1920 the country was occupied by the Union Forces as a conquered territory.

**EXPEDITIONARY FORCE ON EUROPEAN FRONT.**—Immediately after this campaign vigorous steps were taken to organise forces for overseas service. Recruiting was general throughout the Union, and an expeditionary force, consisting of a Heavy Artillery Brigade, an Infantry Brigade, Medical Units, and a Signalling Unit, was organised, trained, and despatched to Europe. This force was maintained throughout the War on the European front, was repeatedly in action and earned undying fame by the heroic sacrifices it made at the battle of Delville Wood in July 1916. No less than 471 officers and 30,248 other ranks (Europeans) served on the Western Front, to which must be added 131 nurses, a Coloured Labour Battalion numbering 1,925, and the Native Labour Contingents, which totalled 25,111. On this front (including the casualties incurred in Egypt and Palestine) the total deaths were 4,454, while 10,325 officers and men were wounded and 1,437 were taken prisoners of war, the total casualties being 14,779.

**OPERATIONS IN EAST AFRICA.**—At the close of 1915 General Botha agreed to provide a force for service in East Africa. He relied entirely on volunteers, the response to his appeal being excellent. The 2nd South African Infantry Brigade, which had been destined for service in Europe, was sent to East Africa, under the command of General P. S. Beves. A mounted brigade under Brigadier-General J. P. Van Deventer and a brigade consisting of 5 batteries of South African Field Artillery, with all the necessary administrative and other units, were also formed, so that the South African Contingent was complete and self-contained. Later this contingent was increased by another infantry brigade, a second mounted brigade, and the Cape Boys' Battalion. This was the largest body of white troops that had ever taken the field in tropical Africa. At its head the Imperial Government placed General Smuts, at that time Minister of Defence. He reached Mombasa on February 19, 1916, the South African Contingent having a week previously suffered heavy losses at Salaita. General Smuts' first endeavour was to occupy the whole Kilimanjaro area and to encircle the German commander, Von Lettow. In this he was only partially successful, but the operations in the early months of 1916 opened the door into German East Africa, while the four months' march on Tanga showed alike General Smuts' qualities as an

organiser and leader, and the wonderful qualities of endurance possessed by his men. By the end of that year the back of the enemy's resistance was broken, though Von Lettow kept up a guerilla warfare until the end of the war. In January, 1917, General Smuts gave up the command to go to England as a member of the War Cabinet. In March, 1917, the 10th South African Horse carried out perhaps the most remarkable raid of the whole campaign, when they trekked down a large German force. In October and November 1917, there was occasional severe fighting, and, as stated, Von Lettow, with the remnant of his forces, did not surrender until he was notified of the Armistice. In all, 43,477 white troops took part in the East African campaign, in addition to a Native Labour Contingent of 16,845. The total casualties were 2,762, of whom 1,611 were killed in action or died from wounds or disease, the latter taking heavy toll.

It only remains to mention that the South African Field Artillery and the Cape Corps (composed of coloured persons recruited mainly in Cape Province) did good service in Egypt and Palestine after serving in the East African Campaign. From first to last the Union (apart from forces used in suppressing the rebellion) raised 145,515 white men and 84,694 natives and coloured men. In all campaigns there were killed in action (or died from wounds) 4,632, while 1,914 died of accident and disease, 12,036 were wounded, and 2,400 were taken prisoners of war, the total casualties being 18,042.

The cost of the German South-West African campaign was £12,000,000, and of the Rebellion £5,000,000; in addition, Union funds bore an expenditure of £9,575,000 for excess pay (Union rates over Imperial rates) of members of the Union contingents and other war expenditure. The total war expenditure of the Union was £26,675,000.

**1918-1925 : THE UNION AFTER THE WAR—DEATH OF GENERAL BOTHA—INDUSTRIAL STRUGGLES—LAST OF THE PRINCE OF WALES.**

—The end of the Great War coincided with a most disastrous epidemic of influenza, almost world-wide in extent and particularly deadly in South Africa, where 11,726 whites and 127,745 of the coloured population died from it. The Prime Minister, General Botha, proceeded to Europe to participate in the Peace Conference, and he and General Smuts were signatories to the Treaty of Versailles on June 28, 1919. Under the Treaty, the Union accepted a mandate over South West Africa. On August 27 of the same year Louis Botha died, leaving to his country and the world a record of patriotism and statesmanship that can rarely have been equalled. His successor in the Premiership was General the Rt. Hon. J. C. Smuts. The elections in 1920 gave the Nationalists 45 seats, the South African Party 40, the Unionists 25, Labour 21 (a significant increase), and there were three Independents. General Smuts, whose political position was one of difficulty, decided to carry on with the help of the Unionists, and in November 1920 there was a formal fusion of the Unionist and South African Parties, followed by another General Election in 1921, which was definitely fought on the Republican issue and resulted in a triumph for Smuts and the enlarged South African Party, though, it is to be noticed, only at the expense of the Labour Party. The year 1921 was notable for a serious outbreak by a native religious sect ("the Israelites") at Bullhoek Location, near Queenstown, culminating in an armed conflict with the police, in which nearly 200 natives were killed. In 1921 also the defence of South Africa was taken over by the Union

Government, Capetown Castle was handed to the South African nation, and the Imperial troops were withdrawn.

About this time there commenced a period of severe economic depression, the worst feature of which was a succession of long and bitter strikes in the diamond, gold, and coal mining industries. In 1922 in different parts of the Reef area there were violent outbreaks, which culminated in the declaration of a general strike by the South African Industrial Federation and a widespread revolutionary movement in the mining districts, to suppress which martial law and the mobilisation of the Union forces became necessary. Other incidents of a memorable year were the inauguration of the Witwatersrand University and the agreement made with the English Marconi Company to erect a high-power wireless station for direct communication with Great Britain.

During 1923 economic and industrial conditions became more normal, and trade generally improved. H. R. H. Prince Arthur of Connaught, who had ably filled the office of Governor-General during trying times, was succeeded by the Earl of Athlone, who assumed office on January 21, 1924. On May 9 the House of Assembly was dissolved, and a general election resulted in the return of the Nationalist Party to power, General Hertzog becoming Premier.

The year 1925 will be for long memorable in South African history by reason of the visit of H. R. H. the Prince of Wales, who made an exhaustive tour of the Union and Rhodesia, and was everywhere received with a whole-hearted enthusiasm which, in some quarters, had hardly been anticipated. The latter half of the year was unfortunately marred by a disastrous strike in the ports of the Union, it adversely affected trade

and caused much bitter feeling, but finally collapsed in October.

An important step taken in 1925 was the passing of the Act naturalising as British subjects the German settlers in South-West Africa, and the granting of a modified form of home rule to the Territory. The question of native policy also received much attention, and in this connection full discussion of the matter was postponed to 1926, when the Prime Minister promised to table proposals. In that year, which opened with every prospect of continued prosperity, the difficult and long-debated question of the Indians in South Africa was referred to a Round-table Conference, all proposed legislation bearing on the matter being meanwhile suspended. A somewhat serious native outbreak in Bechuanaland which at one time threatened civil war was quickly suppressed and order restored.

## THE PRINCE OF WALES' VISIT

**T**HE long anticipated journey of H. R. H. the Prince of Wales to the British Possessions in West and South Africa (a tour which was afterwards extended to South America) took place in 1925, having been postponed from the previous year on account of the incidence of a General Election in the Union of South Africa. Before giving a necessarily brief account of the main features of the tour, it may be stated that, rich as it was in varied incident, spectacle and historical associations, it was successful even beyond anticipation, in the enthusiasm which it everywhere aroused and the impression which it consistently left of the happiest accord between the Royal visitor and those diverse peoples over whom he is, in the natural order of things, destined one day to rule.

It was on March 28, 1925, that the battle-cruiser "Repulse," carrying the Prince and his suite, left Portsmouth Harbour. The first portion of the Prince's itinerary took in the old-established and historic colonies of Gambia, Sierra Leone, the Gold Coast and Nigeria. Here were visited the harbours and towns of Bathurst, Freetown, Sekondi, Accra, Kano and Lagos. The "Grand Palavers" held at Kumasi and Accra were notable for the number of chiefs who attended and the almost delirious excitement of the native crowds which witnessed them. In Nigeria the Prince held a *darbar* on the great Kano plain, where the cavalcade of 20,000 riders under the Moslem chieftains of the Northern Territories and the long and gorgeous procession of all the Emirs and Chiefs must have left ineffaceable memories. On April 22, 1925, the foundation stone of the Cathedral of Lagos was laid, and on the 23rd the "Repulse" crossed the line on her journey south to the youngest Dominion of the Empire.

**CAPE PROVINCE.**—On May 1, 1925, the Prince landed at Capetown, the gateway of the country in which he was to spend exactly two months. Welcomed by his kinsman, the Earl of Athlone, the Governor-General of the Union, by General Hertzog, the Premier, and his Cabinet, and by General Smuts and Sir Thomas Smartt, representatives of an older regime, the Prince was plunged at once into a rapturous crowd whose enthusiastic welcome almost defies description. A State Ball at Government House was followed by the investiture of the Prince

as Chancellor of the new University of Capetown, by visits to Groot Constantia, Groote Schuur (where His Royal Highness laid the foundation stone of the new University), Simon's Town and Koenigsberg, and by the memorable banquet at Parliament House, which the Prince attended as the guest of the Union Senate and Assembly.

There followed a Royal trek through the Western Divisions of the Province. In turn, Steinkubosch, Mossel Bay, Knysna, Oudtshoorn and the Cango Caves, Worcester, Litenhage, Graaf Reinet, Colesberg, Cradock and Port Elizabeth were visited. From Addo the Sunday's River Settlement received the Prince, and Grahamstown (most English-looking of towns) gave him a students' welcome. The return journey took in such widely different places of interest as Kowie, West Bathurst, Bedford, Fort Beaufort, King William's Town (where a Bantu *Indaba* was held), East London, the Transkei, Queenstown, Molteno and Burgersdorp. Already (May 22) the Royal visitor had journeyed 2,000 miles since leaving Capetown.

**FREE STATE PROVINCE (THE).** The outstanding features of the crowded week which the Prince spent in the Orange Free State and Basutoland were the public reception given to his Royal Highness at Bloemfontein, the official banquet and ball offered by the Mayor and the Administration of the Province, necessarily brief visits to the centres of Winburg, Kroonstad, Ladybrand and Harrismith, and last, but not least, the greatest native *Pitso* (*darbar*) that Basutoland had ever known, which was held on the flats above Maseru. As he left the Free State Province at Harrismith, the Prince could say, in all sincerity, "Your welcome has been so spontaneous, so real and unaffected that if it lies with me in the future I shall do my best to come and see you again," and it is probable that by this short visit the Prince did a service to the cause of Empire which only a future generation will be able to estimate at its true value.

**NATAL PROVINCE.**—From the giant range of the Drakensberg the royal train descended some 2,300 feet in twenty-five miles, and the Prince made his first acquaintance with Natal. It was inevitable that the famous battlefields of 1899 and 1900 should be visited, and from Ladysmith, with the memories of its siege, excursions were made to all the principal points of interest. Durban

welcomed the Prince with the happy title of "Edward the Conqueror," and nearly 100,000 spectators were estimated to occupy the great square in front of the Town Hall, where in 1908 the Union Constitution was framed and where now the official reception took place. A race meeting, a Rugby football match, dancing, polo, and the opening of the Prince of Wales' Graving Dock preceded his departure from Natal's great commercial centre for the capital, Pietermaritzburg, where an equally warm welcome awaited him. Estcourt, Newcastle, Dundee and Veyheid were in turn visited, and on June 5 the Royal coaches crossed the Tugela into Zululand, where a visit, historic in every respect, was rendered especially notable by the great *Indaba* and subsequent native dance ceremonies at Eshowe, which were probably the last function of their kind and magnitude which will ever be organised.

**TRANSVAAL PROVINCE.**—The High Veld welcomed the Prince at Ermelo, where a commando of 400 Afrikaner horsemen rode out to meet him. Here and at various stages His Royal Highness met veterans of the first and second Boer campaigns, who could now almost fight again to be the first to shake hands with "ons Prinze." At Embabagan, in Swaziland, the chiefs and peoples of the Swazi nation gathered on June 15 to acclaim and entertain the Royal visitor, who returned to fulfil a round of visits to the scattered towns and dorps of the Transvaal. Barberton, Koomatipoort, the Zoutpansberg goldfields and Pietersburg in turn preceded a triumphal entry into Pretoria, where, in the amphitheatre of the great Union Government Building, the Senior Predikant offered a prayer of thanksgiving and the "Old Hundredth" was sung in Afrikaans. The four days which the Prince spent at Government House were amongst the busiest of his tour. Included in the functions arranged and duly carried out were the parade of 13,000 school children at the eastern sports ground, the meeting with 20,000 natives, the Administrator's banquet, and the church parade of ex-service men, the latter immediately preceding the Prince's happy visit to lay a wreath on the grave of President Kruger.

The reception accorded to the "Ambassador of Empire" at Johannesburg may be said to have been the culminating feature of the tour. Here the Prince celebrated his thirty-

first birthday, probably the busiest he will ever spend, a golden casket to which every mine on the Rand had contributed one ounce of pure gold, the gift of the Chamber of Mines and the Municipality, being one of the many presents he received. During his stay the Prince visited the important mining centres of Springs, Brakpan, Benoni, Boksburg and Germiston, and later at Milner Park opened the new building of the Witwatersrand University, where he was duly "capped". Then, after the memorable Civic Banquet on June 24, the West Rand was traversed and the Paardekraal Monument was visited. The tour of the West Rand culminated in an exhaustive survey of the Crown Gold Mine, in the various workings of which the Prince showed the liveliest interest

and their attendant warriors, many of whom had taken part in the war of 1893. On July 1 the Bulawayo War Memorial was unveiled and an agricultural show opened, on the 2nd the Prince visited the tomb of Rhodes in the Matopos. The Zimbabwe Ruins, a shooting trip in the heart of the "Central Estates" and a Royal Indaba at Range provided a welcome change from the round of civic receptions, a war memorial in the shape of a swimming bath was visited at Gwelo, and then came the official reception and fêting at Salisbury, the capital, where the Prince held an investiture of a number of Rhodesians to whom honours had been granted, and also an Indaba of Mashona chiefs and natives. Gatooma and Que Que were the last places at which the Prince had engagements in Southern Rhodesia. His

put into operation a few weeks earlier and which represent the fulfilment of a marvellous harnessing scheme.

Broken Hill was the peak and turning point of the Prince of Wales' long pilgrimage in South Africa. From its "farthest north" he turned to face the long journey of over 2,000 miles back to the Cape, in the course of which Kimberley and the diamond mines were visited, as well as De Aar, Hutchinson and Beaufort West. In all, the Prince had travelled 9,680 miles by train and 3,400 miles by road in fulfilment of his mission. On the evening of July 29, 1925, he sailed from Simon's Town in the "Repulse," laying emphasis in his last message to its people that he was leaving South Africa with regret and with the hope of a future visit ever present in his mind. The regrets

H.R.H. The Prince of Wales addressing 30,000 natives at the Pitso in Basutoland by means of the Western Electric Address System.

**VICTORIA FALLS AND RHODESIA.**—On the last day of June, 1925, the Prince of Wales arrived in Rhodesia, and was met at Bulawayo by the Governor, Sir John Chancellor and the Prime Minister, Sir Charles Coghlan. On the "Kings' Ground" was held a meeting with the native chiefs

visit to the countries of Cecil John Rhodes were to conclude fitly with one to Livingstone, the capital and administrative headquarters of Northern Rhodesia, to the Victoria Falls, in the neighbourhood of which he spent an entire day, and to the Mulungushi Dam and Power Works, which had been

of South Africans of all races, parties and classes were not less real. The Prince's visit, as to the wisdom of which some doubts had been expressed in 1924, had proved the greatest of successes, and it is certain that he left behind him a lasting place in the affections of all South Africans.

## POPULATION

**P**RIOR to the incorporation of the four Colonies in the Union, each conducted a census of its population at varying periods, that taken in 1904 in the divisions in question being the first simultaneous census in South Africa. In the year 1911 the first Union census was taken, in 1918 a census of the European population was to a certain extent unsatisfactory, owing to the large number of South Africans who were absent on active service or for other purposes connected with the War, and in 1921 the last census of the whole population was undertaken. The following table summarises the results of these four censuses—

	European	Non-European	All Races
1904	1,116,806	4,050,018	5,175,824
1911	1,276,242	4,097,152	5,973,394
1918	1,421,781	—	—
1921	1,519,488	5,409,092	6,928,580

In 1921 the total population of the whole of British South Africa was 8,814,231, distributed as follows—

	European	Non-European	Total
Union of South Africa	1,519,488	5,409,092	6,928,580
South-West Africa	19,432	208,307	227,739
Basutoland	1,603	497,178	498,781
Bechuanaland	1,743	151,240	152,983
Swaziland	2,205	104,756	106,961
Southern Rhodesia	33,620	865,567	899,187
	1,578,091	7,236,140	8,814,231

## DISTRIBUTION OF POPULATION.—

The distribution of the population of the larger area of British South Africa has already been shown. That of the Union by provinces, and distinguishing between European and non-European, was as follows at the last two censuses—

	1911	1921
CAPE OF GOOD HOPE		
European	582,377	650,609
Non-European	1,982,588	2,132,110
All Races	2,564,965	2,782,719
NATAL		
European	98,114	136,838
Non-European	1,095,929	1,292,560
All Races	1,194,043	1,429,398

	1911	1921
TRANSVAAL		
European	420,562	543,485
Non-European	1,265,650	1,544,151
All Races	1,686,212	2,087,636
ORANGE FREE STATE		
European	175,180	188,550
Non-European	352,985	440,271
All Races	528,174	628,827
Grand Total	5,973,394	6,928,580

**DENSITY.** The total area of the Union is 472,347 square miles, divided between the Provinces as follows—

PROVINCE	Area in Sq. Miles	Proportion per cent. of Total Area of Union	Proportion per cent. of Total Population, 1921
Cape Province	276,066	58.64	40.16
Natal	35,284	7.47	20.63
Transvaal	110,450	23.38	30.13
Orange Free State	49,647	10.51	9.08

The Cape, though the largest, was in 1921 the most thinly populated Province, while Natal, with the smallest area, had the largest number of persons to the square mile, there being one individual to 15.80 acres, compared with one to 63.68 in Cape Province, 51.28 in the Orange Free State, and 33.86 in the Transvaal. The number of persons to the square mile in the Union was 14.64, of whom 3.21 were of European race and 11.41 of other races. The density of the population in each of the four Provinces and in the Union in the years named was as follows—

	1911	1921
Cape	9.26	10.05
Natal	33.83	40.51
Transvaal	15.27	18.90
Orange Free State	10.64	12.67
Union	12.64	14.67

**RACIAL DISTRIBUTION.**—The racial distribution of the total population of the Union at the census of 1921 and the proportions of each race to the total, shown in brackets, were as follow—European, 1,519,488 (21.9); Native, 4,699,433 (67.8); Asiatic, 163,896 (2.4); Mixed and other, 545,548 (7.9); the Non-Europeans totalling 5,409,092 (78.1).

**URBAN AND RURAL DISTRIBUTIONS.**—Details of the proportions of the four main race divisions of the population in the urban and rural areas of the Union

will be found in the two following tables—  
(A)—Proportion per cent. of each race

	Urban	Rural	Total
European	48.83	12.94	21.93
Bantu	33.82	79.16	67.80
Asiatic	2.95	2.21	2.39
Mixed and other	14.40	5.69	7.88
Total	100.00	100.00	100.00

(B)—Percentage Distribution of Races

	Urban	Rural	Total
European	55.78	44.22	100
Bantu	12.50	87.50	100
Asiatic	30.90	69.10	100
Mixed and other	45.82	54.18	100
Total	25.05	74.95	100

The percentage of the urban European population varied from 46.50 in the Transvaal to 52.71 in the Orange Free State. The percentage of the rural European population presented marked contrasts, the Cape and Transvaal Provinces being almost on a level with 14.05 and 15.37 per cent. respectively, while Natal had only 4.42 per cent. and the Orange Free State 23.37 per cent.

**EUROPEANS.**—Since the establishment of the Union the census returns have discriminated only between Europeans and others, not between British and Boer. Theoretically there is no longer any distinction of nationality, for all save some 24,000 foreign subjects are British. Some guide to the relative proportions of English and Boers (adopting the old nomenclature) may be gathered from the information collected at the census of 1921 in regard to the number of Europeans speaking either or both of the official languages of the country. Of the whole European population of the Union aged 7 years and over, 50.71 per cent. were bi-lingual, while 25.16 per cent. and 23.79 per cent. spoke only English and Dutch respectively.

As will have been seen from a table already given, the total European population of British South Africa in 1921 was 1,578,091, the increase in numbers since 1911 being 274,072. In the Union itself the Europeans numbered 1,519,488, compared with 1,276,242 in 1911. Of the former total, 1,463,601 were returned as British by birth, 30,900 as British naturalised, and 24,987 as foreign subjects. Of these latter, Russians numbered 6,705; Germans, 4,194; Dutch (Netherlands), 2,505; and Scandinavians, 1,960.

**NON-EUROPEANS.**—These may be classified as Bantu, or pure native, Asiatic, and Mixed or other. There are other aboriginal peoples scattered about the Union and the native territories, but separate returns of the numbers of these are not available. The following table shows the numbers of the Non-European population of the Union at the censuses of 1904, 1911 and 1921 (for purposes of comparison the European population is also given) —

	1904	1911	1921
European	1,116,806	1,276,242	1,519,488
Bantu	3,491,056	4,019,006	4,697,813
Asiatic	122,734	152,309	165,731
Mixed and other	445,228	525,837	545,548

Total Non-European population 4,059,018 4,697,152 5,409,092

**ABORIGINAL RACES** — Since (in 1652) Table Bay was made a port of call by the Dutch East India Company, the aboriginal races with which the European settlers have come in contact have been (1) the various branches of the Bantu race, who are dark-skinned, and (2) the yellow-skinned Bushmen and Hottentots. The latter constituted the "Native" population of Cape Colony up to the regime of the Dutch East India Company in 1795, but to-day they have become practically extinct as separate races, although the Hottentot stock has contributed largely to the population of mixed European and African blood known officially as "Coloured persons." The former, with the expansion of the area of European occupation, after more than a century of costly and sometimes desperate wars, have been brought with varying degrees of completeness under the control of European officials and, having benefited physically by a modified introduction of European methods of government, now show a rate of increase slightly higher than that of the European population of the Union.

**ASIATIC POPULATION** — In Natal, the geographical position of Durban in relation to India led in the past to the introduction on a large scale, mainly under the indenture system, of cheap coolie labour from the last named country for the sugar plantations and other works. A certain number of these passed into the Transvaal and other provinces, but their total outside Natal is not considerable. The presence of these Indians has long been a source of embarrassment, and has led to difficulties not yet overcome with the Government of India. It is probable that what has been called the "Asiatic menace" has been exaggerated, and public opinion in both South Africa and India welcomed the announcement made in April 1926 that the Union Government had decided upon a round-table conference to consider the position of Indians in South Africa.

The number of Asiatics in the Union increased from 152,203 in 1911 to 165,731 in 1921, but the increase was almost entirely one of females, 12,327 as against 1,201 males. Of this total, 161,339 were returned as Indians, 102,323 of whom had been born in South Africa. Under the Immigration Act, 1913, Asiatics, with the exception of wives and children of domiciled relatives, are prohibited from entering the Union. (See under "Immigration.")

**BANTU RACE** — The Bantu of South Africa are a virile and prolific race, the word itself, derived from "Aba-ntu," being the plural of "Um-ntu," which, in the dialects of the principal east coast tribes, means a "human being." The actual birth-place

1. MAKALANGA NATIVES, RHODESIA.  
2. ZULU CHIEF.  
3. ZULU NATIVE WOMEN HAIRDRESSING.

of the race has not been determined, but all the signs point to a migration from Central Africa and to an early intermarriage with the Phœnicians, Arabs and Indians who from some time immemorial had their settlements on the east coast of Africa. The determining characteristics of the Bantu are (1) a tribal organisation under paramount and lesser chiefs, with a system of communal land-tenure and communal or collective responsibility for crime, maintained by a body of customary law, (2) a knowledge of agriculture, especially of stock, and of some of the useful arts, (3) the institution of polygamy, and the passing of cattle from the intending husband to the father of the bride, which, with the consent of the latter, constitutes a contract of marriage under the native custom, (4) a natural instinct for war and a special aptitude for military discipline. This last characteristic is so pronounced as to have been the means of a great part of the Bantu race having secured possession of the most fertile and well-watered regions of South Africa notably in the Transvaal, Natal and the old Transkeian territories which now form the North Eastern portion of Cape Province, as also to have occasioned the savage wars waged by the Zulus, Matabeles, Herreros, and other tribes against Dutch, English, and German supremacy.

**BUSHMEN** The Bushman is a very ancient representative of South Africa, though there are traces of an earlier Rhodesian race. Certain of the Bushman peoples, such as the Koranas, present anatomical features of a low forehead, beetling eyebrows, and a small brain capacity, which link them to very primitive peoples such as the modern Australian aboriginal and to pre-historic types of being like the Neanderthal man. To-day the Bushmen are reduced to living in the most unfavourable areas. Little bands of them dwell in the extreme north of the South West Protectorate, while all the others in the Union are in the Kalahari desert. They are divided into small hunting bands, each of which owns a definite hunting territory over which it wanders, and out of which it is dangerous to go except with the permission of the neighbouring band. The cave paintings which have always been the chief object of interest in connection with these people belong to the realm of archaeology, for no living people have been found to interpret them, and they may be said to remain only as a very valuable record of a lost art.

**HOTTENTOTS** — These are one of the two purely pastoral peoples of South Africa, the other being the Herreros of Bantu origin. The Hottentots are a dwindling race, whose culture is in the last stages of decay, they are nomadic, and as many as four Hottentot languages have been differentiated. Generally speaking, they are of a higher degree of intelligence than the Bushmen, but are inferior to the Bantu peoples.

**MIXED POPULATION** — The mixed population of Cape Province is an outcome of various conditions which have not obtained in other parts of South Africa, and especially of the former slave population. In 1834, when slavery was abolished, the slaves numbered nearly 40,000 and included a large proportion of imported Malays. Pure-bred Malays still exist in the neighbourhood of Capetown in quarters of their own, but the union of Malays, Hottentots, Bushmen, and Kaffirs, with an admixture of European blood, has produced a nondescript mixed race, the male members of which are generally referred to all over South Africa as "Cape Boys." In other provinces of the Union their number is generally insignificant.

**NATIVE POPULATION (DISTRIBUTION).**

—At the census of 1921 the number of natives in the Union, exclusive of mixed and other coloured population was 4,690,433, compared with 4,019,000 ten years previously. The former total was distributed as follows: Cape Province, 1,640,102; Natal, 1,139,804; Transvaal, 1,495,869; Orange Free State, 421,978. In the Territory of South West Africa the native population was estimated at 195,440; in Basutoland at 497,178; in Bechuanaland at 150,185; and in Swaziland at 110,295.

In the Union the bulk of the Bantu population is distributed in pretty clearly defined areas. In Cape Province it is centred in the Native Territories and a number of Eastern districts, with King William's Town as the area with the densest native population. In Natal about one quarter of the Bantu population is found in Zululand, the rest being distributed throughout the province. In the Transvaal the bulk of the native population is contained in the Witwatersrand area and in the northern portion of the Province, while in the Orange Free State the natives are principally located in the central and eastern districts adjoining the Basutoland border.

**OFFICIAL LANGUAGES.** The languages spoken in South Africa by the inhabitants of European descent are English and Dutch, the latter chiefly in the form of a patois colloquially known as the Taal and officially as Afrikaans. Portuguese is, of course, spoken in Portuguese East Africa, but a knowledge of English or Dutch is also frequent there. The history of the Dutch language in South Africa is intimately bound up with the history of the South African Dutch people. The basis of the language as spoken to-day is the 17th century Dutch of Holland which the first settlers brought into the country, and the Cape Dutch of to-day is far nearer to the Dutch which was common in the 17th century than it is to the language now spoken in Holland. Cape Dutch has a very limited vocabulary, due to the facts that the early settlers were drawn chiefly from the peasant class and that they had to make their language intelligible to the natives by whom they were surrounded. There thus grew up an ungrammatical dialect of Dutch suited only to the most ordinary requirements of the everyday life of a rural population. In short, it became a language with neither a syntax nor a literature. But side by side with this language of everyday life a purer form of Dutch has continued to exist and be used under certain conditions. This is the pure Dutch of the Bible and Catechism, which are known to every Boer. The services of the Reformed Church, too, are conducted not in the Taal, but in grammatical Dutch, and the consequence of this is that the Boer has little difficulty in reading and understanding pure Dutch. Under the influence of Afrikaner nationalism strenuous efforts have been made to teach the language in the schools throughout the greater part of South Africa. In the Transvaal and Orange Free State education was for long imparted almost entirely in Dutch. Since the formation of the Union both languages are now on a footing of equality.

**PUBLIC HOLIDAYS.**—The following are the statutory public holidays of the Union: New Year's Day, Good Friday, Easter Monday, and Ascension Day, Victoria Day (May 24), Union Day (May 31), King's Birthday (first Monday in August), the first Monday in October, Dingaan's Day (December 16), Christmas Day, and Boxing Day.

**IMMIGRATION**

Immigration, which in the case of most of the British Dominions is closely bound up with the question of labour, has little or no connection with it in South Africa, where there is an enormous coloured population. It has not, therefore, acquired the importance or exercised the influence within the Union that it has in Australia or New Zealand. Yet there has always been a steady stream of immigration, the volume of which has at times been abnormally increased or decreased at certain periods by important events such as the discovery of diamonds and gold and the duration and aftermath of the South African War of 1899-1902 and the European War (1914-18).

Apart from these periodic influxes of mine-workers or ex-service men the great majority of emigrants to South Africa from Great Britain have been men with small capital which they were able to invest advantageously in the purchase of land for stock raising, mixed farming, or fruit farming, the latter industry having attracted a good number of settlers during recent years.

**GOVERNMENT ASSISTANCE AND REGULATION.** There is no system of State-aided immigration as in other Dominions, the conditions of labour in South Africa being altogether different. At various times the Government has granted passages from England but this assistance has been limited almost entirely to female domestic servants and the wives and families of Europeans settled in the country. On the other hand, no obstacle is placed in the way of the admission of white immigrants provided that they are of good health and character, and are able themselves, or through their friends or employers, to show that they have means of support. The sum of £20 is the usual amount required to be in possession of an immigrant on landing, but this may be considerably lowered in certain cases, and in others raised.

The policy of the present Union Government, as announced by the Prime Minister on April 20, 1926, is to oppose any scheme of State-aided immigration until all the whites already in South Africa are assured of a livelihood.

**NATIONALITIES OF IMMIGRANTS.**—In 1923 the total number of new arrivals in the Union was 12,604. Of these, 12,027 were Europeans and 577 non-Europeans, 326 of the latter coming from the United States. British-born immigrants totalled 9,573 and British-naturalized 139, alien immigrants thus aggregating 2,829. The leading nationalities of the alien immigrants were: Belgian, 900; German, 315; Norwegian, 193; Lithuanian, 190; Dutch, 174; Italian, 139; and Russian, 86.

In 1925 emigrants (persons relinquishing domicile within the Union) exceeded immigrants by 7 but European immigrants totalled 5,428, against 4,483 emigrants, a net gain of 945 persons. Non-Europeans emigrating numbered 1,558, against 696 assuming domicile, a loss of 952. British Indians emigrating showed an excess of 971 over immigrants, and Chinese a net increase of 32. Of Europeans, British-born emigrants totalled 3,918, and those assuming domicile 3,245, a loss of 593 persons.

**NATURALIZATION.**—The Naturalization of Aliens Act, 1910, was one of the first laws to be passed by the Union Parliament. Briefly, to be eligible for naturalization an alien (a) must have attained the age of 21 years; (b) must have resided in the Union for a period of not less than two years within the five years immediately preceding the date of his application; (c) must be of good

character and repute, and (d) must intend, if naturalized, to reside in the Union, or to serve under the Crown in the Union. The alien's intention to apply for naturalization must be published in the "Union Gazette" (cost, 5s. 6d.). The price of the certificate is £5, the total expenses, including revenue stamps, amounting to £6 7s. 6d.

It is important to note that a person naturalized in the Union is only while in the Union entitled to the privileges and subject to the obligations of a British subject, and that he cannot claim the rights of a British subject in the United Kingdom or in any British Dominion or Colony other than the Union of South Africa.

In 1923 the number of aliens naturalized was 331, of whom 166 were Rumanians and 56 Germans.

**OCCUPATIONS OF IMMIGRANTS.**—Of the 12,604 immigrants arriving in 1923, no less than 4,282 were classified as independent or indefinite, 3,901 as dependents of persons already resident in the Union, 1,152 as professional, 864 as commercial, 742 as industrial, 349 as agricultural, 251 as domestic, 171 as engaged on transport and communications, 31 as miners, and 861 as unspecified.

**PASSPORTS.**—These are required by all intending settlers, or by tourists visiting South Africa. British passports, with a few exceptions, are valid for travel throughout the Empire, consequently the holder of a British passport may travel from one part of the Empire to another without a fresh endorsement at the commencement of each journey, providing the validity of the passport has not expired. Passports are issued to persons in the Union who are natural born British subjects, to their wives (and widows), and to persons who have been naturalized in the United Kingdom or in the Union. These passports are available for two years. The fee for a passport is £1, and a fee of 2s. is charged for each renewal of visa.

**PERMISSION TO LAND.**—Persons are not allowed to land in the Union of South Africa unless they satisfy the requirements of the Union Immigration Regulation Act. These requirements may be generally stated as follows: That the person has visible means of subsistence for a period of at least 12 months, and is not likely to become a pauper or a public charge; That he is of good character, mentally sound, and free from any loathsome or dangerous contagious disease; and that he is able to write out and sign in one of the European languages an application to the satisfaction of the authorities. In the very large majority of cases immigrants have no difficulty whatever in meeting these requirements.

**PERMITS.**—Under the Immigrants Regulation Act provision is made for the issue by an immigration officer of a permit, described as a certificate of identity, to any person proving lawful residence in the Union who desires to leave the country and return to it within a specified time. The fee charged is 2s. 6d. Holders of these certificates who do not return to the Union within the period named on them may be required to undergo the tests imposed by law; and may ordinarily be taken to have abandoned any domicile they may previously have acquired in the Union. The permits to travel to Portuguese East Africa are valid for any number of journeys between the Union and that territory during a period of one year from the date of issue.

**PROHIBITED IMMIGRANTS.**—These include persons convicted of serious crime; insane or diseased persons, including those suffering from tuberculosis; those likely to

become a public charge, and any persons, or classes of persons, whose presence for economic or other reasons is considered undesirable. It is under this latter clause that the immigration of Asiatics is prohibited.

**SETTLERS' ASSOCIATIONS.**—The 1820 Memorial Settlers' Association, whose headquarters are at 175, Piccadilly, London, W. 1, accepts and assists approved applicants wishing to settle in South Africa. Such applicants, if single, must possess at least £1,500; if married, at least £2,000. A rebate of 15 per cent. is secured on the passage out, assistance is given on arrival in South Africa, and eventually facilities for the study of farming, etc., are arranged. The association is recognised by and receives help from the Rhodes Trust. The acquisition of small holdings in irrigated areas is particularly encouraged. In one year recently the Association introduced into South Africa 652 adult settlers with 370 of their wives and children and a combined capital of £1,727,000, and found work for many who must otherwise have left the country. The

Orange Free State and the Transvaal to the white worker, more especially to the miner, and the colour of his skin really determines whether a man may receive 25s. a shift or 2s. and his food. These restrictions have during recent years provoked much irritation north of the Orange River, and as recently as 1925 when an attempt was made by means of the Mines and Factory Bill (popularly known as the Colour Bar Bill) to extend them to the Cape Province and so reserve its traditional native policy, the existence of very strong feeling on the matter was made evident. The Colour Bar Bill though it passed the Lower House, was thrown out by the Senate.

At present, therefore, all unskilled labour in the mines, on the land, and in industry is performed by the coloured population, the Bantu race being the main source of supply. At the census of 1921 the Bantus numbered about 5,000,000, all other coloured races, including half-caste and about 200,000 Asiatics, being under 700,000. As a worker the Bantu is not of the highest class. He

**GOVERNMENT LABOUR DEPARTMENT.**—All questions relating to industry and labour, and to employment and unemployment are dealt with by the Department of Mines and Industries, which has established a network of Employment Exchanges under the Labour Department. In 1923 the number of persons provided with employment through the exchanges was 4,176, compared with 4,626 in 1922 and 12,711 in 1921. In addition 8,714 men were sent to relief works.

**HOURS OF LABOUR (EUROPEAN EMPLOYEES).**—The hours of labour worked by Europeans in the various occupations and branches of industry in the Union have of recent years tended towards greater uniformity. Except in a few instances, the terms of the 48 hour week recommended by the International Labour Conference at Washington apply throughout South Africa.

**HOURS OF LABOUR (NON-EUROPEAN).**—The hours of labour worked by coloured persons and natives in the Union approxi-

NATIVE KRAAL, NATAL

MAKALANGA NATIVE GIRLS, RHODESIA

Overseas Settlement Office, 3 and 4, Clement's Inn, Strand, London, W.C. 2, also exists for the purpose of advising intending settlers.

## LABOUR

The question of labour in South Africa is one with that of colour. The existence of native, Asiatic, and other coloured workers far outnumbering the white workers of the country has influenced the development of South Africa from the earliest days, when the farmers were able to command slave labour. The freeing of the slaves in 1834 had consequences in the Boer treks which have vitally affected all South African history, while the "apprenticeship" system which was allowed in the South African Republic by the Convention of 1852 has resulted in a categorical denial of equality between black and white north of the Orange and Vaal Rivers, and in the "colour bar" which to-day furnishes the focal points of unrest among the natives.

**COLOURED LABOUR.**—The "colour bar" reserves all remunerative labour in Natal,

has neither the patient application nor the manual dexterity of the Oriental, and he is naturally indolent. His best work is done in pastoral farming.

In Natal a great deal of very valuable labour has been furnished by Indian field-labourers, especially on the sugar, tea, cotton and other plantations requiring careful tillage. But the immigration of Asiatics is now prohibited. Other experiments in the way of regulating the supply of labour have been those of importing natives from the Portuguese territory south of lat. 22° and the temporary introduction of Chinese into the gold and diamond mines which led to tremendous agitation and was soon abandoned.

**DOMESTIC LABOUR.**—Serious difficulty in the way of white settlement in South Africa arises from the question of domestic servants. In the Cape Province the majority are coloured women, but in the rest of the Union the house servant is usually a native "boy," a state of affairs which is admittedly unsatisfactory, which has often been condemned, and which various efforts have been made to mitigate.

mate to those worked by Europeans in many fields of employment. Non-European workers in the engineering and building trades, whether skilled artisans or semi-skilled workers in the coastal Provinces, or labourers in the inland Provinces, work the same hours as Europeans. A variety of hours, ranging from 44 to 60, is worked by coloured and native workers in manufacturing, industry and trading.

**INDUSTRIAL DISPUTES.**—The constant rise in the cost of living during the later years of the War and those subsequent to the establishment of peace caused an increasing amount of industrial unrest. In 1915 only two industrial disputes occurred, in 1916 the number rose to 10, in 1917 and 1918 to 22 and 23 respectively, in 1919 to 47, and in 1920 to 60. A notable feature of the unrest during 1919 was the number of disputes which involved native and coloured workers exclusively. Many of these strikes were connected with mining, and a number were speedily settled. In 1921 only 25 industrial disputes took place, but these affected 10,000 workers, of whom more than

half were European miners on the Witwatersrand. In the early part of 1922 a very serious industrial situation arose on the Rand, the whole mining industry and various other important undertakings being involved. The dispute ended in a general strike being declared on March 7, and the proclamation of martial law two days later. Armed conflict occurred between the strikers and the Government forces, but on March 18 the strike ended, the trouble having lasted, from start to finish, two and a half months.

**INDUSTRIAL LEGISLATION.**—The leading industrial legislation which has come into operation in South Africa since the establishment of the Union includes the Workmen's Wages Protection Act, 1914, the Workmen's Compensation Act, 1914, the Regulation of Wages, Improvers and Apprentices Act, 1918, the Juveniles Act, 1921, the Apprenticeship Act, 1922, the Industrial Conciliation Act, 1924, and the Wage Act 1925.

The Workmen's Wages Protection Act was passed "to make better provision for securing the payment of workmen's wages" providing generally that wages shall form a first charge upon money payable to a contractor by his principal, and giving workmen whose wages are in arrear the right to serve a notice of attachment. The Workmen's Compensation Act extended in various directions the law providing for compensation for injuries suffered by workmen in the course of their employment or for death resulting from such injuries. The Regulation of Wages, Apprentices and Improvers Act provides for the establishment of Wages Boards and the regulation of the wages of women and young persons in certain trades and occupations. The Juveniles Act makes provision for the establishment of boards to deal with matters affecting the employment, training, welfare, and supervision of boys and girls under 18 years of age.

**INDUSTRIAL CONCILIATION ACT, 1924**—The primary purpose of this Act is "to make provision for the prevention and settlement of disputes between employers and employees by conciliation, and for the registration and regulation of trade unions and private registry offices." It applies to every industry, trade, and occupation, except, with certain exceptions, Government employment. All industrial councils must consist of an equal number of employers and employees, and must be registered. In areas where there are no industrial councils, conciliation boards may be formed. Where both parties to any dispute under consideration by an industrial council or a conciliation board apply to the Minister for the appointment of a mediator, or where the Minister thinks that settlement of the dispute would be assisted thereby, he may appoint such mediator. Where two arbitrators fail to agree an umpire may be appointed, awards made by either being binding. It is unlawful to strike or lock-out when agreement has been arrived at as the result of the appointment of an arbitrator or umpire, or during the period of operation of any award made as the outcome of such appointment. Lastly, it is unlawful for any employer, employers' association, trade union, or other person to declare any strike or lock-out until the matter at issue has been investigated by an industrial council or conciliation board.

**WAGE ACT, 1925**—In July 1925 the South African Senate passed, without substantial amendment of any kind, the third reading of the Wage Bill, the two leading provisions of which establish the machinery for fixing (1) a minimum, or subsistence, wage for semi-skilled industries, and (2) a fair wage for industries coming under the

Conciliation Act, that is to say, industries in which both employers and employees are organised. The Wage Act provides that when all the machinery of joint councils appointed *ad hoc* in any industrial dispute has failed to settle that dispute, the Minister may intervene and refer the matter to the Wage Board appointed under the Act, and that the Board may then make a "determination" as to the wages to be paid, which determination the Minister may either enforce or ignore, but may not vary.

A strong economic Wage Commission to carry out the duties imposed by the Act was immediately appointed by the Union Government, the chairman being Mr. Stephen Mills, C.M.G., who was Deputy-Commissioner of the Australian Inter State Commission in 1917.

In 1926 majority and minority reports were issued. The main points of the majority report are: (1) the lowest level of wages must be raised, (2) the Wage Act must not be used as an alternative and competitor of the Industrial Conciliation Act, (3) Native employment on a large scale must be maintained, and the substitution of Europeans for natives on unskilled labour is condemned. The minority report advocates the stoppage of the importation of native labourers, and is in this respect opposed to the majority report.

**INDUSTRIAL ORGANISATION.**—Trades Unionism has only figured prominently in South African life and conditions since 1911, when the Transvaal Federation of Trades was established, to become later the South African Industrial Federation. Since 1915 the Federation has occupied an important place in the workers' organisations throughout the Union, and in 1917 it organised the first Trade Union Congress in South Africa at Johannesburg. Under its guidance many unorganised classes of workers in various parts of the country have been induced to organise and have linked up with the Federation under the designation of the South African Federation Industrial Union. In September, 1923, there were 93 separate trade unions in the Union, with a total membership of 89,865. This would include a certain number of craftsmen who were members of more than one union.

**LABOUR COLONIES.**—It was announced in August, 1925, that the Union Government was drafting a Labour Colony Bill for the 1926 session, to give power to place the work-shy in special settlements to be managed on similar lines to those established some years ago in various parts of Europe. The basic principle of the new policy is that no more able-bodied whites are to be employed on purely relief works. The growth of a section of the South African community known as "poor whites" has long constituted a social and economic problem of great gravity, aggravated moreover by the fact that the Rand mining area can no longer absorb the unemployed.

**LABOUR IN MINES.**—See special articles on "Diamond Mining" and "Gold Mining."

**SKILLED TRADES.**—The white labour problem is further complicated by the fact that in skilled trades, where the Kaffir as yet plays an insignificant part, there are other and more serious competitors. Large numbers of Malays and other Asiatics in all parts of the country compete with whites as skilled mechanics on lower wages. At Capetown the shoemaking and tailoring trades are largely in the hands of Malays and other Asiatics. Many blacksmiths in all parts of the Union are coloured men, as are also large numbers of stone cutters, bricklayers, plasterers, gardeners, coachmen, upholsterers, harness makers, etc. Endeavours to introduce white labour on a

big scale have not in the past been altogether successful, an experiment by Lord Milner in the importation of a large number of Englishmen for railway construction proving economically unsound.

**UNEMPLOYMENT.**—In normal times unemployment was never acute in the Union, but the problem assumed serious proportions during the years immediately following the War. Various measures of relief works, many of which are of a permanent character (e.g., afforestation settlements), have been devised. Unemployment was intensified by the industrial disturbances on the Witwatersrand in 1922, and in August of that year 7,920 men were engaged on relief works. In May 1923 the number had dropped to 4,284, but had risen to 6,344 by February 1924.

**WAGES OF NON-EUROPEAN WORKERS.**—The ratio of coloured to European labour varies largely in different industries and fields of employment in the Union, but in occupations as a whole the non-European element preponderates to a considerable extent. In the gold mining industry there were in December 1923 approximately 180,000 native workers to 18,000 Europeans. In coal mining and in the manufacturing industry the coloured and native elements in employment are very much greater than the European. The bulk of general labouring work in agricultural and pastoral occupations is non-European, while in municipal service at the principal industrial centres approximately five coloured and native persons are employed to every two Europeans. These and similar circumstances in relation to employment and its distribution in the Union must be remembered when wage statistics are examined. The average rate of wages of coloured persons, other than native labourers, employed on the Witwatersrand gold mines in certain defined occupations underground is approximately one fifth of the amount earned by Europeans. The average earnings per shift of all native labourers, surface and underground, in September 1923 were 2s 2½d plus food. In unskilled occupations connected with the trade the average weekly rates of wage paid to coloured and native male workers ranged from 14s 5d at Bloemfontein to 17s 1d at Pretoria, 18s at Durban, Kimberley, and East London, 19s 11d on the Rand, 20s 6d at Port Elizabeth, and 27s 11d in Cape Peninsula.

**WEEKLY WAGES (EUROPEAN).**—The following tables show (a) the average nominal weekly wage rates for European adult workers in ten groups of occupation in the whole Union, and (b) the average nominal weekly wage received in nine industrial areas of the Union during the period 1921-23.

(A) AVERAGE WEEKLY WAGES IN LEADING OCCUPATIONS				
Occupation	1921 s d	1922 s d	1923 s d	
Mining ..	189	11	136	0

## EDUCATION

Within the limits of the Union the control of education, other than higher or University education, is granted to the four Provincial Administrations, each Province having an Education Department which exercises the direction of all public instruction.

Many things have combined to hinder and check the growth of education in South Africa. There is, to begin with, the existence of a country of about 473,000 square miles, with a total population—both white and coloured—the latter including Natives, Asiatics, and the Cape coloured—of seven millions, scattered over that vast area in rather small communities. About half the white population is in rural areas—in farms or in very small villages. Further, the incidence of two wars, during the latter of which the educational organisations of the Transvaal and the Orange Free State were practically destroyed, and the continued existence of two main language divisions—English and Afrikaans—have proved great obstacles in the way of extending educational facilities. But that they have been extended is indisputable. To day South Africa offers educational opportunities which compare favourably with those provided by any country in the world. The progress made in recent years may be gauged from the fact that between 1902 (the close of the Anglo-Boer War) and 1922 the number of white pupils in the State Schools rose from 82,000 to 331,000 and the cost of lower education from £2,300,000 in 1914 to nearly £7,000,000 in 1922, this being quite apart from native and coloured education which accounts for a further annual expenditure of £600,000. University education costs about £400,000 annually.

**CLASSIFICATION OF SCHOOLS.**—European schools are usually classified as primary schools, secondary or high schools, farm schools, special schools, training colleges, and vocational or technical schools. Generally speaking, no native, Indian or coloured children are allowed in schools other than those set apart for them. These, and the instruction therein, are usually provided by the various religious missions.

**FARM SCHOOLS.**—These schools, of which there are over 350 in Cape Province alone, provide instruction on the lines of the primary course at centres where it is not possible to secure a regular attendance of at least ten pupils, the minimum requirement for primary schools.

**NON-EUROPEAN EDUCATION.**—In 1922 there were 189,059 native boys and girls and 62,813 Asiatics and other coloured scholars, or a total of 251,872 non-Europeans, receiving education in State and State-aided schools in the Union. These latter comprised 3,260 primary and secondary schools, 26 training schools, and 8 special schools. There were 6,615 teachers employed, of whom 4,584 were certificated and 2,031 uncertificated.

**PRIMARY SCHOOLS.**—Each Province administers its own educational system, and there are therefore points of detail in the

regulation of primary schools which differ in broad outline, however, they agree throughout the Union. Primary education is compulsory from the end of its seventh year for every white child until the completion of its sixteenth year or the passing of Standard VI. The curriculum closely follows that of Great Britain (except that Afrikaans (the Taal) is a second language in the English speaking schools and English in the Afrikaans schools). The primary schools of the Union in 1922 numbered 4,524, with a total attendance for the last quarter of that year of 251,257 pupils, and an average attendance for the whole year of 232,906, the distribution by provinces being as follows—

	*No. of SCHOOLS	AVERAGE ATTENDANCE
Cape Province	2,284	72,098
Natal	339	18,168
Transvaal	1,068	101,554
Orange Free State	803	41,086
Total Union	4,524	232,906

\*Including farm schools.

**PRIVATE SCHOOLS.** There is little Government regulation of the activities of private schools in the Union. In Natal the Education Department may make grants-in-aid to such schools, and the Transvaal Education Department reserves a limited inspectorial power over like schools, which if attended by ten or more pupils, are required to register and supply returns. All private schools in the Orange Free State must also furnish returns to the Department. In 1923 there were 560 schools classified as private in the Union, of which 254 were for Europeans and 306 for non-Europeans. These schools, a large number of which are denominational, had a total roll of 35,877 pupils.

**SECONDARY SCHOOLS.** State-aided secondary, or high schools, in the Union numbered 309 in 1922, the average attendance for the year being 62,859 pupils. Cape Province led with 182 schools and an average attendance of 51,096.

**SPECIAL SCHOOLS.**—These numbered 61 in 1922 and of the total 45 were in Cape Province. These special schools are largely part-time and evening schools, and they include (in Cape Province) three art schools, three schools for deaf mutes, one school for the blind, two domestic science schools, twelve industrial schools for boys and five industrial schools for girls. In Natal amongst special schools are the Government School of Art Pietermaritzburg, the Technical Institute at the same city, and the Natal Technical College at Durban.

In the Transvaal there is a technical high school at Johannesburg, and there are three technical or trade schools maintained by the Government. In the Orange Free State there are several Trade and Industrial Schools, including schools of agriculture and housewifery, and continuation classes are also conducted in different centres of the Province.

**STATE EXPENDITURE ON EDUCATION.**—Few countries relatively spend as much on education as South Africa. Its expenditure per head of the population in 1921 was £3 19s. 9d, compared with the £1 5s. 9d of Australia and the £2 6s. 1d of New Zealand. In 1922-23 the total cost to the public of the education (other than higher education) of Europeans in each Province was as under—

	£
Cape Province	2,211,844
Natal	488,336
Transvaal	2,513,075
Orange Free State	822,293
Total	£6,035,548

Taking the Union as a whole, the cost of general administration and inspection was £164,960, or 10s. per scholar; salaries of teachers totalled £4 164,790 or £12 11s. 7d. per scholar, and the total cost of education (£6,035,548) worked out at £18 1s. 7d. per scholar, or £3 17s. 7d. per head of European population.

The State expenditure on the education of non-European scholars amounted in 1922-23 to £552,242, or £2 3s. 10d. per scholar.

**TEACHING.** Until recently the country's supply of teachers was largely obtained from Great Britain. There are now, however, numerous training colleges preparing students for the profession, while the Universities are training many more teachers for the high schools. The teaching conditions are more favourable in South Africa than in any other country of the Empire and as a result there has been a steady increase in the number of young men entering the profession. Hitherto each Province has had its own scale of salaries, but negotiations are in progress for the establishment of a national scale. At December 31, 1922, there were 14,214 teachers certificated and 2,777 uncertificated. Of the total of 26,035 548 expended by the four Provincial Administrations on education in 1922-23, no less than £4 186,168 was under the head of teachers' salaries.

**TRAINING COLLEGES.**—In 1922 there were 21 training colleges and schools in the Union, 13 being in Cape Province and five in the Transvaal. In these, which are apart from the Universities, there were nearly 3,000 students and over 200 teachers.

**UNIVERSITY EDUCATION.**—A striking advance has been made in recent years in the provision of higher or University training in South Africa, the first beginnings of which date from 1829, when the South African College at Capetown was established. In 1873 the University of the Cape of Good Hope was founded, but in 1915 it was dissolved and succeeded by the University of South Africa. There are now three separate Universities in the Union (Capetown, Stellenbosch, and Witwatersrand) and a Federal University—the above mentioned University of South Africa with six affiliated institutions. Each of the first three Universities has a large student roll, that of the Witwatersrand, although the youngest, has one of over 1,000. The total number of University students in South Africa at the end of 1923 was 4,717. All the colleges do good work, and the general level of university instruction is high. Stellenbosch and Pretoria specialise in agriculture, while Pretoria also does veterinary work in conjunction with the well equipped Government Veterinary Department at Onderstepoort. Capetown and Johannesburg Universities have each a strong medical school, and with the latter is associated the South African Institute for Medical Research, which has a fine record of achievements.

The fees at the various colleges are very low, and the manner of bursaries available is most liberal. Besides the munificent Rhodes scholarships, many other scholarships are offered to South Africans who wish to proceed to Europe for further education.

The following is a list of the Universities and affiliated colleges of the Union, with the numbers of students and teaching staff, and the expenditure for the year 1923—

	No. of Teaching Expenditure Students Staff 1923	
University of Capetown	1,534	156
University of Stellenbosch	644	65
		70,550

	No. of Teaching Expenditure Students Staff 1923		
University of Witwatersrand	1,008	96	102,685
University of South Africa	—	—	—
CONSTITUENT COLLEGES			
Grey University College, Bloemfontein	233	21	19,660
Huguenot University College, Wellington	82	15	9,805
Rhodes University College, Grahamstown	244	36	30,430
Transvaal University College, Pretoria	640	73	54,835
Natal University College, Pietermaritzburg	218	17	17,855
Potchefstroom University College	114	17	10,545
Totals	4,717	496	1430,885

The number of students in attendance at universities and university colleges in the Union during the half year ended December 31, 1925, was 5,570 (3,705 men and 1,865 women). The University of Capetown came first with 1,504 students, the Witwatersrand and Stellenbosch Universities having 1,250 and 860 respectively.

### SPORT

In common with the people of every part of the British wide-flung Empire, South Africans have always been noted for their love of sport, the two favourite ball-games of the Old Country—cricket and football

having, as is natural, obtained a pre-eminent place in the affections of the youth of the Union. But whereas cricket has ever appealed more to the South African of purely British stock, football (especially under the Rugby code) has drawn many of its most prominent exponents from the ranks of the Dutch-speaking settlers. Sport, however, in the Union is far from being confined to these games. Horse-racing has an immense hold in Johannesburg, Capetown and Durban, as well as in other centres of population, lawn-tennis grows in popularity every year, the golf course is a feature of most towns, whilst fishing, boating, swimming, and the pursuit of every kind of game have their enthusiastic adherents from Table Bay to the Matopos.

**ATHLETICS.**—Athletic contests—running, jumping, etc.—are more particularly confined to the public schools and universities, though the larger cities have their running tracks and yearly contests, in which athletes from all over the Union take part. In the Olympic Games of 1908 at London a notable victory was that obtained by the South African, R. E. Walker, in the 100 yards open to the athletes of the world.

**CRICKET.** Cricket, like many other British sports, found a footing in Cape Colony and Natal in the early days of settlement chiefly through the activities of the military and civil officials. The game was first played in Cape Colony in 1860, and the Port Elizabeth Club is the oldest in South Africa. A foretaste of the international rivalries to come was furnished when in 1862 the South Africans challenged the Home-born cricketers and from that day to this the "Home-born V. Colonials" has been a standing institution in the cricket fixtures of the Province.

The enthusiasm of Kimberley kept the game alive from 1870 to 1876. Mr. J. J. Sewell, a South African sportsman of deserved repute, largely contributing to its support. Port Elizabeth, Grahamstown, King Williams-town and Uitenhage have always been great cricketing centres, and among famous South African cricketers who have won laurels, not only on the home fields but in England and Australia, have been such well-known exponents of the game as A. B. Tancred, who was called the "Grace of South Africa," J. H. Smclair, Aubrey Faulkner (one of the greatest all-round players of his day), R. O. Schwartz, and the fast bowler Kotze. Since 1864 English teams have periodically visited South Africa, return visits to the Home country being made by representative South African teams, whose members, it may be mentioned, have always been handicapped to a considerable extent by having to play on turf instead of on the matting wickets to which they are accustomed.

**FISHING.** Probably the best fishing in South Africa is furnished by the many smaller and mountain-borne rivers in different parts of Cape Province and Natal, and to a lesser extent in the Transvaal. Both the rainbow and the brown trout are established in South African waters, the rainbow variety being the better suited to most of the rivers. October and November and March and April are the best months for indulging in this sport. The best trout fishing streams are considered to be the Eerste and Lourens, near Stellenbosch and Somerset West respectively; the Smalle blaar, Hollesluis and Jan du Toit, near Worcester; the Wildebeeste and its tributaries, which can be fished from Ugie, Maclear, or Psolo; the Little Pot, Big Pot, Moor, and

TWIFONTEIN RACECOURSE, JOHANNESBURG.

Tsitsa, all of which can be reached from Maclear, the Moor and Bushman's River in Natal, and Helpmakaar and Broederstroom, near Haenertsburg in the Transvaal. A great deal of the best fishing water is privately owned, but permission to fish most stretches free of charge can usually be obtained. Licences to fish can be secured from the Magistrate of any of the Districts where fishing is obtainable at a cost, in Cape Province, of £1, and in Natal, of 5s. (See also "Sea Fishing.")

**FOOTBALL.** South Africa did not come into the front rank of Association football-playing countries until recently, this game never having been so popular in the Union as the Rugby variety, though there are actually more Association than Rugby Clubs registered. The visit, however, of a strong English professional XI in 1924, following previous visits by the famous Corinthians team, has done much to increase the status of the game, while in 1924-25 a South African Association XI visited England and gave an exceedingly good account of itself against many of the best amateur and professional teams.

Rugby football has always occupied the premier position in the affections of South Africans. Previous to 1883 the game as played in the chief centres of the Union was a mixture of Association and Rugby, under what were known as the Winchester rules. The first club under real Rugby rules, unconnected with the universities, was the Hamilton (now Hamilton Sea Point) Rugby Football Club, and the Villagers' Club, which followed, continued during its first years many names now honoured in the history of the country. In 1900 the first "Springbok" team toured Great Britain, their magnificent playing being in the nature of a revelation to British footballers. The combination won 25 out of 28 matches played, losing only 2 and drawing one. The 1910 "Springbok" team won two out of the three best matches played, and later visiting teams have been almost equally successful, such giants of the game as A. J. Marsburg, Paul Roos, W. A. Millar, H. W. Carolin, and F. J. Dobbin having left indelible marks.

**GOLF.** The ancient and as it is popularly called the "Royal" game of golf has so many enthusiastic devotees in all parts of the world that it cannot be a matter of surprise that South Africa, with its natural sporting instincts, should long ago have fallen into line with other countries in establishing the recreation on a sound footing. The first course was planned and opened in 1885 on a site near Wynberg Camp, but was afterwards moved to Rondebosch Camp ground, where an excellent 9-hole course was provided. This, however, was found to be insufficient for the ever-increasing membership, and in 1906 it was decided to return to Wynberg, where a fine 18-hole course has been prepared. Apart from the golfing attractions of the links at Wynberg, the locality is famous for the magnificent panoramic views of the surrounding mountains and the exhilarating air which, during the summer months, sweeps along the links from over the waters of False Bay.

Since the establishment of the Wynberg links, golf courses have multiplied throughout the Union, and first class links, many of them of a most sporting nature, are to be found at all the large centres, the larger and more accessible ones taking their turns in staging the annual Open Championships meeting of South Africa, which is an event of great importance in the sporting world.

**MOUNTAINEERING.** Mountaineering in South Africa, if it does not present all the difficulties and excitements that are associated with the mountains of Switzerland, India or Japan, is fascinating enough to have taken hold of quite a big section of sport-loving residents, whose interests are well looked after by the Mountain Club of South Africa. Throughout the Drakensberg, parts of which still remain almost untouched, the best of rock-climbing can be had, and there is one district, which has Cathkin Peak as its centre and the Mont-aux-Sources and Gaunt's Castle at either extremity, where fifty or a hundred peaks offer most interesting ascents to the climber. In the Western Province, Table Mountain, with its wonderful crags, has over a hundred different routes laid down for its ascent, 30 of which are classified as exceptionally difficult. In the Klein Zwartbergen Range, near Ladismith (Cape), rises Toverkop, a remarkable split dome of some 300 ft., with uniformly precipitous sides, perched on the converging mass of the bulk of the mountain some 7,000 ft. high. This difficult ascent has only been made three times, the last in 1911.

**RACING.** There are no records of the earliest racing in South Africa, but it may be taken for granted that the sport was indulged in at Cape Peninsula some years before the South African Jockey Club was founded, about 1880. At that time Port Elizabeth was the most flourishing racing centre, and here it was that the club was founded which controlled racing until 1904. In that year the headquarters of racing were transferred to Johannesburg, and the South African Turf Club was established. To-day the chief centres of the sport are Johannesburg, Durban, Kimberley, and Capetown, and their racing clubs, together with those at Barkly West, Bethlehem, Bloemfontein, Maritzburg, Douglas, Benoni, Germiston, Grahamstown, King Williamstown, Kokstad, Milnerton, Port Elizabeth, Pretoria, Umtali, and Krugersdorp, operate under the aegis of the S.A.T.C. In Cape Province, Natal, and the Transvaal the Provincial Administration taxes both bets made with bookmakers and investments on the totalisator.

**SEA FISHING.**—Sea angling, or fishing for sport, in the waters of South Africa is carried on in either summer or winter, summer fishing being mostly for the larger fish, such as Cape Salmon or geelbek, albacore or yellow tail, kabeljauw and steenbras, while in winter the red stumpnose, biskop, wildepaand, and galjeon are the varieties fished for. The finest kinds of the big fish are caught off Cape Point, the albacore in particular being known for its fighting qualities, while the steenbras often run 20 or 30 lbs. in weight. The biskop is the king of the smaller winter fish, while the red stumpnose always provides good sport. In the Natal waters there is much good sea-fishing, as well as in the Zululand lagoons. These lagoons are open to the sea all the year round, and contain almost every variety of fish, from a 50 lb. salmon bass down to smelts.

**TENNIS.**—No sport has acquired greater popularity during recent years than lawn tennis, due in great measure to the excellent showing made by many representatives of South Africa at the Wimbledon and other international tournaments. In 1925-26 a team from England toured the Union, winning the first test match, drawing the second, and losing the third and last decisively to South Africa.

**WILD GAME SHOOTING.**—Wild game shooting is carefully restricted in the Union, Swaziland and Rhodesia. The term "royal game" is used to differentiate

between the larger and rarer game animals and the smaller and more common varieties. The term royal game embraces the following: elephant, rhinoceros, hippopotamus, giraffe, buffalo, eland, koodoo, hartbeest, bontebok, blesbok, gemsbok, etc. A royal game licence costs £3 to persons domiciled within, and £25 to persons domiciled without, the Union (£20 in the South-West Protectorate). Ordinary game licences cost £1. In the Bechuanaland Protectorate the elephant, rhinoceros, giraffe and eland are absolutely protected under penalty of £150 or 12 months' imprisonment, and within the Union, Swaziland and Rhodesia game reserves of large extent have been established, the penalties for killing game within which are very severe. A permit to kill royal game can only be obtained from the Administrator of the Province or Territory.

The Orange Free State, the Transvaal, Zululand and Swaziland provide the best opportunities for many varieties of wild game, notably stembok, hartbeest, wildebeeste, springbok, partridges, guinea fowl, and waterfowl in the two last-named provinces, and in Zululand and Swaziland the bigger varieties, such as the lion, buffalo, rhinoceros, hippopotamus, and myala. But the larger game of Africa—notably the lion, elephant and hippopotamus—are rarely if ever found south of Zululand, and exist in large numbers only in parts of Portuguese Africa and the vast jungles of Rhodesia, where excellent big game shooting is to be had. "On Safari" (in Rhodesia "ulendo") is the favourite method of carrying out a shooting expedition on a large scale. This lengthy and costly method of hunting is in use only in the more remote and wilder parts, within the Union many of the best shooting grounds can be reached by motor.

**YACHTING.**—Yachting along the South African coast has always been a favourite pastime of those who can afford it. The oldest yachting club is the Royal Natal Club, founded in 1858. The class of racing chiefly indulged in is carried on in sloop-rigged centre-board boats of the "scow" class, and with their highly skilled crews, composed of members of the Royal Natal, Point, and Canguilla Clubs, some very exciting contests may be witnessed during the Bay races. Other leading clubs are at Capetown, Simonstown, Port Elizabeth, and East London.

## PRESS

It is essential that the manufacturer seeking to enter the South African market should have some special knowledge of the Press of the country, as it is not merely an advertising medium, but in a business sense a reflex of the character of the market. In South Africa the advertiser is first faced with the language difficulty. While English is used in the big centres, a knowledge of Afrikaans is an asset. In most of the smaller towns the papers are bilingual, or are printed in the Taal, or Afrikaans, the latter a simplified form of Dutch. Another serious problem is the tremendous area of the country, 473,000 square miles prohibits any daily paper from enjoying a national circulation, and consequently the people in the smaller centres and country districts rely upon their local newspaper. There is throughout South Africa an extraordinary multiplicity of small papers with a limited circulation. Their value, nevertheless, is by no means negligible, they are often admirably conducted, and the whole of the Union may be said to be well served by newspapers and periodicals, some of which attain to a high standard.

### COMMENCEMENT OF NEWSPAPER ENTERPRISE.

The earliest record of newspaper enterprise in South Africa occurs in July 1823, when a Mr George Greig presented a memorial to His Excellency the Governor Lord Charles Somerset, "praying his approbation in attempting to commence in the Colony a periodical publication embracing the ordinary topics of a magazine." His petition was curtly refused. A little later, having discovered that there was no law to bar his projected publication, Greig resolved to proceed with the scheme, but in order to avoid danger as far as possible he decided to commence with a comparatively innocuous "Commercial Advertiser," the first number of which was issued in Capetown on January 7, 1824. Greig himself being the printer and John Fairbairn and Thomas Pringle, the poet, the editors. Within six months a censorship of the paper was ordered, and it ceased publication. Twice afterwards publication was resumed, to be followed by immediate suppression, but in October 1828 the embargo was removed, and the "Commercial Advertiser" enjoyed a considerable measure of success until newer and more enterprising publications ousted it from the field.

The year 1831 saw the first issue of two newspapers, one Dutch—"De Zuid Afrikaan," the forerunner of "Ons Land"—the other English. The latter was the "Grahamstown Journal," which, however, ceased publication in 1920. Following upon the inception of these journals the press became a powerful agent in the life of South Africa, being characterised by public spirit and literary ability. With the foundation of Natal as a separate colony came the issue of more newspapers, "Die Natalier," a Dutch journal of high rank, having been started in Pietermaritzburg by Cornelius Moll in 1843. It was two years before the first British newspaper made its appearance in Natal, this being the "Natal Witness," established in 1845 and still in vigorous existence.

### DAILY PAPERS:

**CAPETOWN.**—The leading daily papers in Capetown are "The Cape Argus" (evening) and the "Cape Times" (morning). The "Cape Argus" was first issued in 1857, when it consisted of an eight-page sheet published every morning. For a long time it has been the only daily afternoon and evening paper in Capetown. It has always been noted for its vigorous defence of Imperialist ideas. A special feature is the Saturday evening edition, devoted almost wholly to the sport of the week. The weekly edition has a wide circulation all over South Africa. The "Cape Times" first appeared on March 12, 1876, as a daily, and passed through varied experiences before attaining its present eminent position, which is largely due to the excellence of its exclusive and telegraphic news. It was the first newspaper in South Africa to print a picture paper by the intaglio process. These picture pages in tint appear on Tuesdays and Fridays, and add greatly to the journal's popularity. "Die Burger" is an Afrikaans daily of great ability.

The provincial papers of Cape Province are numerous, such as the "Diamond Fields

Advertiser" (Kimberley), the "East London Daily Despatch," the "Midland News and Karoo Farmer" (Cradock), the "Cape Mercury" (King Williamstown), the "Eastern Province Herald" (Port Elizabeth), the "Grahamstown Daily Mail," and the "Queenstown Reporter and Free Press," being in all respects equal to the daily newspapers of many large cities.

**NATAL.**—This Province is well served by two excellent morning and two evening papers. The "Natal Mercury" and the "Natal Witness" are published each morning, at Durban and Pietermaritzburg respectively, and the "Natal Advertiser" (Durban) and the "Times of Natal" (Pietermaritzburg) every evening. The "Witness" was established in 1845. The "Times" followed in 1851, the "Mercury" in 1880. The only Dutch language paper in the Province is "Die Afrikaner," published bi-weekly.

**ORANGI FREE STATE.**—One daily paper is published in Bloemfontein—"The Friend" which circulates throughout the Province.

**SOUTHERN RHODESIA.**—The oldest daily paper circulating in Southern Rhodesia is the "Rhodesia Herald," founded in 1891 as the "Mashonaland Herald" by Mr W. F. Fairbridge, who became later the first Mayor of Salisbury. The "Bulawayo Chronicle" was founded in 1894, and enjoys a large circulation.

**TRANSVAAL.**—The leading evening daily paper of the Transvaal—the "Johannesburg Star"—occupies an unique place among the newspapers of the Union. Founded in 1888, soon after the discovery of the Witwatersrand, it has now by far the largest circulation of any South African daily, and is noted for the excellence of its news and the advantages it enjoys as an advertising medium. The Johannesburg morning paper is the "Rand Daily Mail," founded after the Anglo-Boer War by Edgar Wallace, the noted war correspondent and novelist, and it has a large circulation along the Reef and in the country generally. In the capital, the "Pretoria News" serves English readers, while "Die Volkstem," which up to a few years ago was bi-weekly and is now a daily high-class newspaper, principally meets the requirements of the Dutch-speaking population.

### TRADE AND TECHNICAL JOURNALS.

—In a land so sparsely populated as South Africa it has not always been found easy to run such journals, and many praiseworthy attempts have ended in failure. To-day, however, with improved means of communication circulation is easier, and, taking everything into consideration, the Union has reason to be proud of its trade and technical press. The most important are those connected with the farming and mining industries. The "Farmers' Weekly," published at Bloemfontein, is devoted to the interests of South African agriculture and has a national circulation. From Bloemfontein also come the "South African Farmers' Advocate" (monthly) and the "South African Poultry Magazine," while the "South African Fruit Grower" is issued monthly from Capetown and the "South African Dairyman" from Durban.

The leading papers devoted exclusively to mining are the "South African Mining and Engineering Journal" and the "South African Mining Review," both published monthly at Johannesburg. A very useful and informative monthly paper is the "South African Journal of Industries" (Johannesburg), while the "South African Trades Journal and Shipping Gazette" (Capetown, 1882) is the official organ of the Cape manufacturers and is devoted to overseas trade interests as well as to local trade and industries, its circulation being very large. Other noteworthy trade and technical journals are the "Architect, Builder and Engineer" (Capetown), the "South African Builder" (Johannesburg), "South African Engineering" (Johannesburg), "Insurance" (Capetown), "Motor Weekly" (Bloemfontein), "Natal Motorist" (Durban), and the "South African Railways and Harbours Magazine."

**WEEKLIES.**—Foremost among the many excellent and well got-up publications of South Africa are the weekly editions of the leading daily newspapers—the "Johannesburg Sunday Times," the "Week-end Argus," and the "Week-end Natal Advertiser," which cater for a great number of readers in town and country, and offer them an almost endless variety of news, stories, critical and literary essays, sporting intelligence, and pictorial attractions. Of these, the "Johannesburg Weekly Times" is the only Sunday newspaper published in the Union.

The "South African World" has a universal reputation. It was founded in 1902 by Mr Leo Weinthal, a South African born at Graaf Reinet, who wished to establish a journal which should embody in its scope and sphere of operations the whole of the African continent. There is hardly a weekly journal more often quoted, for its mining news cables sent every week from Johannesburg and Bulawayo set the markets going in the leading capitals of Europe and America. The "World" has also a large circulation throughout East and West Africa, the Sudan and Egypt. "South Africa" is an influential weekly devoted particularly to mining, the "South African Lady's Pictorial" is issued from the office of the "Cape Times," the "South African Review" is noted for its progressive imperialism and is sometimes called the South African "Truth," the "South African News" is a Liberal-Nationalist weekly of high standard, and "Ons Land" (Capetown) is an old-established weekly published in Afrikaans. Almost every town and "dorp" throughout the Union has its weekly, which is generally up-to-date and interesting, and in this connection the "Barkly East Reporter," "Beaufort West Courier," "Graaf Reinet Advertiser," "George and Knysna Herald," "Mossel Bay Advertiser," "Uitenhage Times," "Newcastle Advertiser," "Vryheid District Mail," "Benoni Herald," "Boksburg East Rand Express," "Heidelberg News," "Krugersdorp Standard," "Ons Vaderland," "Die Veldslad," the "Kroonstad Times," "Ladybrand Courant" may be especially noted.

The official publication, the "Union of South Africa Government Gazette," is published weekly at Pretoria.

## TOURIST RESORTS

**S**OUTH AFRICA is now one of the recognised places of sojourn for those residents of the Northern Hemisphere who winter abroad. It provides a change from Southern Europe, and is at its best when such change is most needed, October to March being the spring and summer months. The climate is sunny, enjoyable and invigorating, the scenery is varied, and in many parts extremely beautiful. Furthermore, throughout the Union and Southern Rhodesia, with the principal resorts of which countries this section briefly treats, travel facilities are certainly up-to-date. The hotels in the larger towns are luxurious, the railway trains (with restaurant cars attached for all long journeys) are as well appointed as those in Great Britain, and in most villages and every town there are garages, as also motor cars for hire. The sea voyage of 17 days from England is usually smooth and the principal liners are large and luxurious. Reduced fares are granted by the South African Railways and Harbours Administration to bona-fide tourists from overseas, either for circular tours exceeding 300 miles or for journeys between any of the ports of Capetown, Durban, Lourenço Marques and Beira, while for other journeys excursion fares are often available.

**CAPE PENINSULA.**—Not only is Cape Province the birthplace of South African history, but it is also the most favoured in the way of natural beauties and of an unvalued sea-front containing many charming and health giving resorts. Few countries, for instance, can show a finer summer seaside resort than Muizenberg, often called the "Bather's Paradise." Here the beach is magnificent, the long stretch of fine white sand is lapped by water so clear that one can see bottom at a depth of 20 feet, and nowhere else can more delightful bathing be enjoyed. There are no heights or billows on the shore, and no currents, and even a small child can paddle in perfect safety. False Bay, which belies its name, is as tranquil as it is blue, with no treacherous point of hidden dangers, a locality made by Nature for family holidays. Add to this that Muizenberg has a very mild climate (thanks to the warm Mozambique current and to the shelter of the mountains behind), also that it is less than an hour's run from Capetown, and it is not surprising that the place claims to be the most popular seaside resort in South Africa. Muizenberg, however, does not stand alone. Almost the same may be said of the beautiful districts of St. James, Kalk Bay, Sea Point and Camps Bay. The delights of the pine woods, the sea-bathing and the rock pools of Camps Bay have been written and re-written about times without number, and the excursion from Capetown and back through the mountain kloof has been called the most famous train ride in the world.

**CALEDON.**—Inland, from the district just described lies Caledon, one of the most picturesquely situated towns in the Union, with a surrounding country that reminds the visitor of the Scottish lowlands. For nearly 200 years the fame of the mineral water springs and the Caledon Baths has drawn visitors from countries far remote from South Africa, and their medicinal and health-giving properties have restored to active life many of the country's leading

men. For those who need no cure there are many interesting and lovely walks and drives, notably to the Bridal Veil Waterfall, and good shooting is to be had, snipe, duck, quail, partridge, hares and buck being numerous. A 20-miles motor run takes the visitor to Cape Agulhas, the dividing point between the Atlantic and Indian Oceans, and the most southerly spot on the South African coast. On its rocks the troopship "Bykenhead" foundered in February, 1852, when 357 men, heroes every one, stood to attention in ordered ranks, watching the only two boats available leave with the women and children, and then went down, leaving an imperishable example of death met with dignity. Another interesting trip from Caledon is that to Genadendal (valley of mercy), the place where in 1737 the first mission station was established in South Africa. To-day it affords an interesting example of what Moravian methods can accomplish. Some 3,500 coloured people live at the station. Extensive plantations of oaks and pines have been established, the water supplies have been utilised methodically, and over 1,000 plots of ground are irrigated and cultivated. Among the mission buildings are several creditable structures, some of considerable age. Set in a grove of majestic oaks is the little graveyard reserved by the brethren in the early days wherein to bury their dead. Some of the stones date back to 1801, and furnish silent testimony to the hardships endured at that period.

**DRAKENSBURG.**—The almost untouched range of the Drakensberg is within easy reach of all parts of South Africa and off is a splendid field to the tourist. Until comparatively recently it was almost a terra incognita, but the progressive changes which have taken place are so complete that there are few portions of the range which are not approachable on fairly good roads. In the Drakensberg visitors can obtain wonderful rock-climbing and many other delights, without the intense cold when traversing the snow and ice which is a feature of European peaks. For those, however, who enjoy wintry conditions, ice and snow may be found on these heights during a portion of the year, but at all seasons, however brown the veld may be, a few thousand feet below, there are green slopes and bushy dells and wonderful crags that delight the eye and test the skill of all mountaineers.

**NATIONAL PARK.**—Very nearly all of the Drakensberg is Crown land, with an occasional farm here and there, acquired in the early days when these holdings were to be obtained cheaply. The region of the finest mountain peaks, those gathered about that portion known as the Mont-aux-Sources group, has been divided off from the rest and entailed to the South African people in perpetuity, being known as the National Park. It is under the guardianship of the Natal Government. The area thus dealt with comprises some most superb mountain scenery, and included in it are caves containing the celebrated Bushman paintings. At the source of the River Tugela is a probably unique natural phenomenon in the shape of a water-cut tunnel, through which the stream flows from the loftiest single fall known in South Africa, actually measuring over 2,000 feet.

The summit of the Mont-aux-Sources, some 9,500 feet above sea-level, is best reached via the Orange Free State. Leaving Johannesburg, Pretoria, Bloemfontein, Durban or Pietermaritzburg by the evening trains, or joining these trains at any intermediate station, the tourist finds himself at Aberfeldy Station—on the Kroonstad-Ladysmith line—the following morning or afternoon, according to the direction from which he is travelling. Here, by giving previous information to the proprietor, he is met and driven to Rydal Mount Hostel, a distance of 24 miles, and situated on the slopes of the mountain from which it takes its name. The next morning an early start is made for Mont-aux-Sources to cover the eighteen miles to the Cave, which constitutes the first stop of the journey. Visitors can be fully fitted out at Rydal Mount for the trip, and the proprietor of the Hostel sees that travellers have nothing to worry about. Preparations are made for a stay of two nights in this cave, the climb from which to the summit is undertaken on the second day and is performed with a minimum of effort on active sure-footed Basuto ponies. Those who do not care to tackle the climb to the summit will be well repaid by a trip to the cave.

**GEORGE, KNYSNA AND THE WILDERNESS.**—The district which includes the charming old-world town of George, the restful haven of The Wilderness and the seaside resort of Knysna, is situated at the foot of the Outeniqua Mountains in south-eastern Cape Province. George is 32 miles from Mossel Bay, and Knysna is 53 miles by motor-car from George. Much of the scenery is reminiscent of Ireland, while the contour of the mountains recalls to some the Highlands of Scotland. George is a great centre for tourists, being the jumping off place for The Wilderness and Knysna, for the Plettenberg River and for the Keurbooms River. The roads are excellent for motoring, and the 14 mile journey to the Wilderness winds through the heart of the mountains. The Wilderness itself is as yet quite unspoiled, a little group of hotels and boarding houses set in a scene of forest clad hills and mountains, with the finest sea and river bathing and fishing close at hand. Knysna is also noted for its boating, bathing and fishing.

**MATOPH HILLS.** The Matopo Hills, on one comparatively low hill of which the remains of the late Hon. C. J. Rhodes are interred, is a collection of broken masses of granite interspersed with grassy valleys stretching for some 50 miles north-east and south-west, and within easy reach of Bulawayo, Southern Rhodesia, by motor-car or bicycle. They are also connected by railway. Many of these hills are associated with the traditions of the Karanga race, some being "venerated hills," and others "rain dance hills," whereon, about October in each year, nude Karanga maidens still dance and make offerings to the spirits of the departed, so as to ensure timely and favourable rains.

It was among the Matopos that Cecil Rhodes held the indaba which secured peace with the Matabele, and since his burial the Rhodes Estate and the vast Native Reserve beyond have become a great place of pilgrimage for both Rhodesians and other visitors. To meet the convenience

of visitors Mr Rhodes, during his lifetime, arranged for the establishment of two hotels, the one at the Matopos Dam, the other at the terminus of the branch railway, and these offer excellent accommodation.

**NORTHERN TRANSVAAL.**—The whole of the Northern Transvaal is a country of beautiful scenery and of vast landscapes planned on a large scale. The towns of Pietersburg, Potgietersrust and Louis Trichardt, reached easily from Pretoria and Johannesburg, are the best centres from which to explore the beauties of the Pietersburg and Zoutpansberg districts. These include the lovely waterfalls of Agatha and Vagobas Kloof, the interesting village of Leydsdorp, the scene of South Africa's first gold mine, the Sabie Game Reserve, with its abundance of lions, leopards and other carnivora. Wyllie's Poort, noted for its kloof and stream scenery and a favourite picnic resort, and the trout fishing and hunting resorts of Haenertsburg and Woodlush. Periodically during the winter special combined railway and motor excursions, including catering and sleeping accommodation, are arranged from Johannesburg and Pretoria to the principal places in the Northern and Eastern Transvaal. At Potgietersrust, Pietersburg and Louis Trichardt there are garages where touring motor-cars may be hired. The best months for touring are from May to August inclusive.

**VICTORIA FALLS.**—Over 70 years have passed since David Livingstone startled the world with the graphic story of his discovery of the Victoria Falls. At that time and for many years afterwards a journey to view them was attended with hardship, if not with danger. To-day the tourist can travel in comfort by train from Capetown or any Union centre on the most luxuriously-appointed trains, these connecting with the fine trains of the Rhodesian Railways, which also provide comfortable dining and sleeping accommodation.

These falls far surpass Niagara in size, grandeur and impressiveness, and one can quite understand the awe with which Livingstone and other travellers after him have gazed upon them. Although the great missionary under-estimated the

width of the cataract and the depth of the gorge into which the river plunges, he made it clear that they were the greatest in the world. The nature of the extraordinary volcanic fissure that created them can be easily realised without reference to a map, but at the point under consideration the mighty Zambezi flows roughly from north to south. About half a mile above the falls the river is a mile and a half in breadth, then it contracts, and the breadth at the falls themselves is 1,936 yards. Here, to the view of anyone looking over the edge of the falls, the great river seems suddenly to come to an end, no continuation of its channel being visible. For the entire extent of its breadth the Zambezi thunders down precipitously into a narrow, deep trench or cañon, which extends at right angles to the river's course from shore to shore. Beyond the falls one is faced by the perpendicular wall of the cañon. Below, the madly-whirling spray obscures the view of the bottom of the cañon, and it seems as if the whole mighty flood were falling into the centre of the earth through this awful chasm. From the cañon—called the Boiling Pot—the river rushes with unbridled fury for over 40 miles along a narrow and deep gorge of basaltic cliffs.

Some idea of the vastness of the Victoria Falls may be gained when it is stated that their height (420 ft.) is slightly greater than that of the cross surmounting St Paul's Cathedral, while their width is about equal to the distance of the British Museum from the Marble Arch (that is, twice the width of the Niagara Falls). The noise of the falling water is deafening anywhere in the vicinity, but in flood time it can be heard ten miles away. From the chasm rise immense and dense clouds of spray, which hang over the falls as a vapour. In the flood season this spray can be seen 70 miles distant.

**HOTEL ACCOMMODATION.**—The best months for visiting the falls are July and August, when, being the winter season, the days are cooler and the nights more bracing. From January to May the river is in flood, it is at its lowest from October to December. The greatest volume of water falls in April, but the spray then hides some of the beauties of the cataract from the tourist's view.

On arrival at the falls the visitor will find a modern, palatial hotel, replete with electric lighting, perfect sanitation and possessing an unrivalled cuisine. It is within 10 minutes' walk of the falls, to which a light trolley line runs for the convenience of the hotel guests. The entire building is under the direct control of the Rhodesia Railways, which provide, on the broad Zambezi River, a splendid boating service, consisting of motor launches and Canadian canoes, to be hired at moderate charges.

**RAILWAY BRIDGE.**—The railway bridge over the Zambezi is the highest in the world. It spans the first arm of the Gorge at 200 yards below the Boiling Pot, is in one arched span of 500 ft., is 650 ft. long and 400 ft. above low-water level. Trains cross at five miles an hour, and in flood time the spray from the falls frequently washes the carriage windows. It was Mr Rhodes' desire that the bridge should be erected at a point which would permit of such a thing happening. Foot passengers use the bridge, the board walks provided being well clear of the rails. From the bridge magnificent views of the falls and gorge are obtained.

**ZIMBABWE RUINS.** The ruins known far and wide as Great Zimbabwe are only about 16 miles from Fort Victoria, Southern Rhodesia. There is railway connection with Gwelo on the main line of the Rhodesian railway, and from Victoria the ruins can be reached by motor car. Hotel accommodation is close at hand.

The ruins are all that is left of a vast stronghold, probably used in the late Middle Ages to over-awe the surrounding countryside, the overlordship of the African Chiefs Paramount, who bore the hereditary title of Monomotapa, extending through vast tracts to the south of the River Zambezi. They may be roughly divided into the "Temple," containing the royal apartments and hall of ceremonies, the "Acropolis," an ingeniously defended fortress, and the "Valley Ruins," which were probably the dwellings of the chief persons of the tribe. The whole Zimbabwe Valley abounds in ruins of all types and ages, and, even for the casual tourist, is well worth a visit.

### CONSTITUTION

**T**HE foundation and development of the different colonies forming British South Africa prior to the South African War and the years immediately succeeding it have been dealt with in the section of this volume devoted to "History." On May 31, 1910, the four self-governing territories of the Cape of Good Hope, Natal, Transvaal and Orange River Colony were united in a Legislative Union styled the Union of South Africa, and these colonies became original provinces of the Union under the titles of the Cape of Good Hope, Natal, the Transvaal and the Orange Free State respectively. The Government of the Union controls all property belonging to the State, Railways, Harbours and Customs being under the administration of Union Commissioners for the Consolidated Revenue Fund, the former debts of the various provinces having been taken over as a first charge upon Union funds.

**EXECUTIVE.**—In the Act promulgating the Constitution of the Union, Executive Power takes precedence over the Legislative Power. British precedent is followed throughout the Supreme Executive authority being vested in the King and administered by the Governor-General as his representative. The latter is also Commander-in-Chief of the Naval and Military Forces within the Union, and receives a salary of £10,000. The present Governor-General is Major General the Right Hon. the Lord of Athlone, G.C.B., G.C.M.G., G.C.V.O., D.S.O. who assumed office on January 21, 1924.

**EXECUTIVE COUNCIL.**—Nominally, this is a body of not more than ten officials appointed by the Governor-General to administer the Departments of State. These must all be members of either the Senate or House of Assembly, in fact, they compose the Ministry or Cabinet of the day, and are selected by the Prime Minister for the time being from among the members of the party or parties supporting him and having a majority in Parliament.

The Departments of State and their Ministers comprising General Hertzog's Cabinet, which assumed office on June 30, 1924, are as follow:—Prime Minister and Native Affairs—General the Hon. J. B. M. Hertzog, Justice—Hon. T. J. Roos, K.C., Interior, Public Health, and Education—Hon. Dr. D. F. Malan, Defence—Colonel the Hon. F. H. P. Cresswell, Finance—Hon. N. C. Havenga, Mines and Industries—Hon. F. W. Beyers, K.C., Railways and Harbours—Hon. C. W. Malan, Lands—Hon. P. G. W. Grobler, Agriculture—General the Hon. J. C. G. Kemp, Posts and Telegraphs and Public Works—Hon. T. H. Boydell.

In 1925 an eleventh Minister of the Cabinet, without portfolio, was appointed in order to give Labour a larger share in the Government.

**FINANCIAL RELATIONS.**—See general article on "Finance."

**LANGUAGES.**—Both the English and Dutch languages are official languages in the Union, are treated on a footing of equality, and enjoy equal freedom, rights, and privileges. All records, proceedings, and journals

of Parliament are kept in both languages, and all Bills, Acts, and Public Notices of the Union must be in both languages.

**LEGISLATURE.**—The Legislative Power of the Union is vested in the King, represented by the Governor-General, a Senate and a House of Assembly, the first Parliament having been opened by His Royal Highness the Duke of Connaught and Strathearn on November 4, 1910. The seat of the Legislature is at Capetown. (See below "Seats of Government.")

**HOUSE OF ASSEMBLY.**—The House of Assembly, or Lower House, now consists of 134 members, the number having been gradually raised from the 121 of which it was composed in the first Parliament. The constitution of the Assembly was at the outset framed on a provincial rather than on a national basis, a number of members being allocated to each Province on the basis of the total of European residents therein. No province was to have its representation reduced until the number of members reached 150, or until the expiration of ten years after the establishment of the Union, whichever was the longer. Up to the present both the Cape and the Transvaal have taken a smaller representation than they are strictly entitled to in order to allow a larger representation to the two smaller provinces of Natal and the Orange Free State. Of the members for the first Parliament (121), they were distributed as follows:—Cape Province, 51, Natal, 17, Transvaal, 36, and Orange Free State, 17. The quota of the Transvaal has been raised successively to 45 and 49, that of each other province remains the same.

**METHOD OF ELECTION.**—Members of the House of Assembly represent electoral divisions, one to each, and a re-division of the constituencies by a commission of three judges takes place after each quinquennial census. The principle of "equal rights" (that is, of equal voting power) for all sections of the community obtains, the idea of proportional representation as a method of election having been abandoned. There is not, however, a uniform franchise throughout the Union, the franchise laws of the different colonies prior to the formation of the Union having been preserved. In Cape Province no distinction was made between European and native, and large numbers of the latter have qualified in respect of property or salary, or educationally. In Natal, natives are only entitled to become parliamentary voters with the specific authority of the Governor-General, and the number so authorised is very small. In the Transvaal and Orange Free State manhood suffrage is the right of all persons of European descent, but there is no provision for the direct representation of natives.

**NATIVE FRANCHISE.**—An essential feature of the native policy of General Hertzog, the present (1926) Prime Minister, is an alteration of the franchise laws of the Union. It is proposed that the right to the Parliamentary vote now possessed by the natives in Cape Province, and the special provisions which enable natives in certain cases to obtain the vote in Natal, should be withdrawn. In its place it is proposed that

the natives of all the four Provinces of the Union shall elect Europeans to represent them in Parliament. This proposal is linked with other suggestions notably the creation of native councils, from which a native Parliament shall ultimately emerge. General Hertzog's scheme is based on the expressed belief that if the present system be allowed to continue the growth of the native vote will become a menace to white civilisation in South Africa. The problem is admittedly a difficult one and its attempted solution on these lines has provoked much bitter discussion.

**POWERS OF PARLIAMENT.**—Apart from being subject ultimately to the British Parliament, the Union Parliament is a sovereign body, the Provinces, unlike the States of Australia having no original authority and possessing only such powers as are delegated to them by the Parliament. Both Houses have authority to make rules of procedure, their powers and privileges being generally similar to those of the Imperial Parliament. In certain cases the Governor-General must reserve the Royal Assent to bills, e.g. to any bill abolishing the coloured vote in Cape Province. The King is given the power to disallow any law within a year of it having received the assent of the Governor-General.

**QUALIFICATIONS OF MEMBERS.**—Both Houses elect their presiding officer, a President in the case of the Senate, a Speaker for the Assembly, these officers have only a casting vote in case of equality of votes. The quorum for the Upper House is fixed at 12, for the Lower at 30. A member of either House cannot be a member of the other, and there are in both cases the usual disqualifications on conviction for certain crimes, bankruptcy, insolvency, and the tenure of office under the Crown other than Ministerial office, or the receipt of a pension, or the holding of certain military and naval offices. Members of both Houses receive pay at the rate of £400 a year, with a deduction of £3 for each day's absence. Since 1920 certain special temporary allowances have been voted.

**RELATIONS OF HOUSES.**—The relations of the two Houses are defined in the Constitution. The Senate cannot deal with any taxation or appropriation bill which has not originated in the Lower House, nor may it amend any bill which imposes taxation or appropriates revenue for the services of the Government, nor may it amend any bill so as to increase any proposed charge or burden on the people. On the other hand, the Assembly may not insert in the bill for the appropriation of monies for the ordinary annual services of the Government any other provision, disagreements continued for two sessions may be solved by the calling by the Governor-General in the second session of a joint sitting of the two Houses, when a majority of those present decides the fate of the measure. In the case of the rejection of a bill dealing with the appropriation of monies for the Public Service, the joint sitting can be summoned in the same session as that in which the rejection took place.

**SENATE.** The Senate, or Upper House, consists of 40 members. Of these, eight senators are nominated by the Governor-General in Council, four of them being selected on the strength of "their thorough acquaintance with the reasonable wants and wishes of the coloured races in South Africa." The remaining 32 senators are selected, eight by each Province, on the system of proportional representation with the single transferable vote. Unless dissolved simultaneously with the House of Assembly, the life of the Senate is for ten years, and

in such manner that a period of twelve months shall not elapse between the end of one session and the beginning of another. The Governor-General may prorogue Parliament, or may dissolve the House of Assembly alone or both Houses simultaneously.

**LOCAL GOVERNMENT.**—Local government in South Africa is administered primarily by municipal councils, divisional councils (in Cape Province) local boards, town councils (Transvaal), and village management boards, all these bodies being under the legislative control of the Provincial

and local policy, and also keeping the Government and its officials in touch with native feeling. These district councils (in the Transkei and Pondoland) are the executive organs of a General Council which distributes among them the duties of road maintenance, dipping operations, and supervision of common lands, remaining financially responsible for their actions.

**PROVINCIAL ADMINISTRATION.**—In each of the four Provinces there is a chief executive officer who is appointed by the Governor-General in Council, and is styled the Administrator of the Province. He is assisted in the discharge of his executive duties by an Executive Committee of four, chosen by each Provincial Council from amongst its members or otherwise. The function of Executive Committees is to carry on the administration of provincial affairs on behalf of the Provincial Council. The principal matters in which the Provincial Administration is concerned are the control of primary and secondary education, of hospitals and charitable institutions, of municipal and other local governing bodies, and of roads and bridges.

**PROVINCIAL COUNCILS.**—The Provincial Council of each Province consists of the same number of elected members as there are electoral divisions of the House of Assembly, unless that number is under 25, as is the case in Natal and the Orange Free State, when the number of members of the Provincial Council is fixed at 25. Each Council has a duration of three years and cannot be dissolved before that period has elapsed, the times for sessions and their prorogation being fixed by the Administrator. Members of the Provincial Councils receive £120 a year, subject to deductions for absences.

**PUBLIC SERVICE.**—The organisation and discipline of the Public Service of the Union are provided for by the Public Service and Pensions Act of 1923. The Service consists of five classes—Administrative, Clerical, Professional, General, and the Services. A permanent Public Service Commission of three members has been appointed, as well as an Advisory Council of eight members nominated by the various Public Service Associations from among their members. The total strength of the Staff employed in the Government Service in 1923 was 34,899, of these, 29,569 were permanent and 5,330 temporary. The Executive Staff of the Defence Service (2,398) is excluded.

**SEATS OF GOVERNMENT.**—It is an outstanding feature of the Constitution of the Union as formulated in the South Africa Act of 1909 that a definite predominance is more than once given to the Executive over the Legislative Government. Particularly is this shown in section 18, where Pretoria is named as the Seat of Government of the Union, this being justified in section 23, which nominates Capetown as the seat of the Legislature. The choice of a Capital was as much a difficulty as had been the case ten years earlier in Australia, though there were no two cities with such age-long rivalries to be adjusted as those of Sydney and Melbourne. From the point of view of sentiment, historic associations, and beauty of situation, Capetown had an almost prescriptive right. From that of central and easily accessible position, as of proximity to the great industrial centre of the Rand, the claim of Pretoria carried even greater weight. Compromise was seen to be necessary, and so the somewhat curious arrangement was made by which the Executive Government functions in Pretoria, while Parliament sits in Capetown a thousand miles away—an arrangement, it may be added, which seems

**PROVINCIAL ADMINISTRATORS.**

1. The Hon. Jan H. Hofmeyr, Transvaal.
2. The Hon. A. P. J. Fourie, Cape Province.
3. The Hon. Sir G. T. Plowman, K.C.M.G., Natal.
4. The Hon. E. R. Grobler, Orange Free State.

nominated senators are irremovable for that period. Senators must be not less than 30 years of age, and must own unencumbered immovable property within the Union of not less value than £500. The legislative powers of the Senate are co-ordinate with those of the House of Assembly, except in regard to the origination and amendment of certain monetary provisions in bills.

**SESSIONS.**—A session of Parliament must be held once at least in every year, and

Councils. Native district councils, consisting of a Resident Magistrate and six members, administer the local government of the Transkeian Territories, Pondoland, and Glen Grey. The councils are advisory to the Native Administration, associating the people with the control of local funds, giving them a voice in the disposal of affairs intimately affecting their own interest, training them in constitutional methods of expressing their opinions in regard to general

to have presented no insuperable difficulties to the conduct of efficient government up to the present

**WOMEN'S FRANCHISE.**—The movement in South Africa for the political emancipation of women dates back to 1912, when a bill dealing with the question was defeated by 70 votes to 30. In May, 1920 the extension of the franchise to women was adopted by the Union House of Assembly by 64 votes to 39, but got no further. A similar bill was rejected in March, 1922, by 55 votes to 51 on the second reading, which was reached for the first time. The National party were nearly solid against the bill.

### LAW

The basis of the Common Law of South Africa is the Roman-Dutch law as it existed in Holland at the end of the 18th century. It was in part closely akin to the modern Roman law which is practised widely over the Continent of Europe, and even in Scotland, to the present day. Since the establishment of British rule at the Cape the law has been considerably modified and altered, both by legislation and by judicial decisions, so that to-day there exists hardly any material difference in principle over the greater part of the field of jurisprudence between the law of England and that of South Africa. The law of contracts, the law of torts, the mercantile law, the law relating to shipping and insurance, not to mention other subjects, are practically identical with those of England, and even the criminal law is virtually the same. Particularly in commercial law has the influence of English statutes and case law been very great.

### COMMERCIAL LAW:

**(COPYRIGHT.)**—The British Copyright Act, 1911, has effect in the Union subject to certain modifications, the Governor-General exercising the powers of the Board of Trade and any other reference to the Board of Trade is construed as a reference to the Minister. The Governor-General may by proclamation direct the extension of the British Copyright Act and the Union Act to literary, musical, dramatic, and artistic works first produced or published in any part of the British Dominions to which the British Act does not extend in like manner as if such works had first been produced or published in the Union. Copyrights are registered by the Registrar.

**INSOLVENCY.**—A serious exposure of insolvency scandals in 1924 led to a strong agitation to strengthen the law relating to insolvencies. Though, broadly speaking, the insolvency laws of the Union are framed on similar lines to those of England, there are important differences in procedure. The duties which devolve upon the English Official Receivers are performed in South Africa by the Masters of the Supreme Court and by the various magistrates who preside over the Insolvency Courts. The examination of the debtor by the Official Receiver, which is an important feature in England, is practically absent from the South African procedure. It was announced in 1925 that an amending Bill would be introduced in 1926 at the same time as a Bill to create the office of Public Trustee. Important features of the new Bill are: the power given to the Trustees to demand each month a statement, verified by affidavits, of all the debtor's assets and expenditure, the compulsory evidence which can be enforced from the debtor; the heavy penalties imposed for concealment of liabilities and for neglect to keep proper records of his transactions by an insolvent, or for the contraction of

debts without reasonable expectation of being able to discharge them.

**PATENTS.**—All patents, designs, trade marks, and copyrights are governed by Act 9 of 1916, which consolidated all previous Acts. The Administration of the Act is vested in the Minister of Justice and the Patent Office at Pretoria is under a Registrar. The following persons, whether British subjects or not, may apply for a patent: (1) the inventor, either alone or jointly with one or more other persons, or (2) the inventor jointly with the assignee of a part interest in the invention, or (3) the assignee of the inventor, either alone or jointly with one or more other persons. An application for a patent must be made in a prescribed form, and must contain a declaration as to the facts relied on to support the application. A provisional or complete specification in quadruplicate must be supplied. The fees payable are: On filing application for a patent, £1, on filing complete specification, £3, on sealing patent, £1. Fees of £4, £6 and £10 are payable on renewal before the expiration of the third, seventh and tenth years respectively from the date of the patent.

**TRADE MARKS.**—Registration of a trade mark in the Union is for 14 years, but may be renewed from time to time upon payment of the prescribed fee. A registrable trade mark must contain or consist of at least one of the following essential particulars:

- (a) The name of a company, individual or firm represented in a special or particular manner, or
- (b) the signature of the applicant for registration or of some predecessor in his business, or
- (c) an invented word or invented words, or
- (d) a distinctive word or words not reasonably required for use in the trade, or
- (e) any other distinctive mark.

The Registrar may refuse to register a trade mark which contains:

- (a) a representation of the King, the Queen, or any member of the Royal Family, or of the Royal Crown, or
- (b) the word "Royal" or any word, letter, or device indicating Royal or Government patronage, or
- (c) a representation of the Royal Arms, or of a national flag of the United Kingdom, or of the national arms of the United Kingdom, or of the Arms or Seal of the Union, or
- (d) a representation of any living person without his written consent.

**COURTS.**—The constitution of the Courts is based on the example of the English judiciary, and the rules of evidence and procedure are practically the same in both criminal and civil cases as in England. All serious cases of crime are tried before a judge and jury, with the same formalities and safeguards as in England, while minor offences are dealt with by stipendiary magistrates possessing a limited statutory jurisdiction. In criminal cases the jury must find a unanimous verdict. In civil cases either party may demand a jury, a privilege which is seldom exercised, but the verdict of the majority prevails.

**JUDICATURE.**—The supreme court of the Union is styled "The Supreme Court of South Africa," and consists of a Chief Justice, four Judges of Appeal, and the judges of the provincial and local divisions, which are 24 in number, as well as the Judge-President and three Judges of the Native High Court, Natal. The provincial divisions

include what were, before the establishment of the Union, the several supreme courts of the colonies, while the local divisions include the Court of the Eastern Districts, established in Grahamstown, the High Court of Witwatersrand, and the several circuit courts. The provincial and local divisions of the Supreme Court have all the original jurisdiction exercised by them prior to the establishment of the Union, and in addition thereto have jurisdiction on all matters in which the Government of the Union or a person suing or being sued on behalf of such Government is a party, and in which the validity of any provincial ordinance is challenged.

**Appellate Division.**—The Appellate Division of the Supreme Court consists of a Chief Justice, two ordinary Judges of Appeal and two additional Judges who are assigned by the Governor-General in Council to that division from any of the provincial or local divisions of the Supreme Court, but who perform their duties as judges of their respective divisions when their attendance is not required in the Appellate Division. The Appellate Division sits in Bloemfontein, the capital of the Orange Free State, but if it is considered that exceptional circumstances exist which make it more convenient to sittings than an appeal to it should be held at some other place, it may sit there for that purpose.

### ARMY, NAVY AND AIR FORCE

The defence of the Union and its vast dependent territories was severely tested during the Great War, in which South Africa was so conspicuously involved. Since 1921, when the last units of the former Imperial Military Command in South Africa left the country, the responsibility for the coast defences of Cape Province and Natal have been assumed by the Union Government. The defence system of the Union is laid down in the Defence Act of 1912 (amended 1922).

#### ARMY

**ADMINISTRATION.**—The administration of the military forces of the Union is in the hands of a Council of Defence, a Headquarters Staff and instructional and administrative staffs for the 15 military districts into which the Union has been divided. These in then order of enumeration, have their headquarters at Capetown, Port Elizabeth, East London, Pietermaritzburg, Durban, Standerton, Potchefstroom, Johannesburg, Pretoria, Kroonstad, Bloemfontein, Calcutta, Kimberley, Worcester, and Graaf Remet.

**CADET FORCE.**—In addition to the Permanent Citizen and Coast Defence Forces, boys between the ages of 13 and 17 in all parts of the Union where facilities for proper training can be arranged are required, unless then parents or guardians object, to become cadets. A cadet who has served efficiently for three years is entitled to a certificate which has the effect of securing a diminution of the subsequent training in the Citizen Force. All areas and equipment for cadet training are issued and the cost of training is provided at the public expense. On June 30, 1923, the total strength of the Cadet Force was 1,036 officers and 39,120 cadets. The following table shows the number in each of the four provinces:—

PROVINCE	OFFICERS	CADETS
Cape	472	17,671
Transvaal	418	14,401
Natal	70	4,055
Orange Free State	76	2,903
	1,036	39,120

**CITIZEN FORCE.**—This force consists of all persons liable to render personal service in time of war, other than members of the Permanent Force and the South African Naval Service. It comprises three divisions, viz., the Active Citizen Force, the Citizen Force Reserve, and the National Reserve.

**ACTIVE CITIZEN FORCE.**—This force consists of men who undergo peace training for four years between their 17th and 25th years. All youths between 17 and 21 may volunteer for peace training, but if sufficient volunteers are not forthcoming recourse may be had to the ballot to make up the required numbers. This has not so far been found necessary.

**CITIZEN FORCE RESERVE.** This force is divided into two classes. Class A consists of men who have undergone peace training in the Coast Garrison or Active Citizen Forces and are not over 45 years of age. Class B comprises members or past members of Defence Rifle Associations.

**NATIONAL RESERVE.**—All citizens between the ages of 19 and 60 years who are not serving otherwise are included in this force. After the whole of the Active Citizen Force and the Citizen Force Reserve have been mobilised in time of war, the National Reserve may be called out in three classes according to age.

**COAST GARRISON FORCES.**—This force consists of the South African Garrison Artillery and Coast Defence Corps. Divisions of the Garrison Artillery are established at Capetown and Durban; men below the age of 30 are eligible for enrolment, and receive liberal payment for attending drills. Citizens liable for peace training may serve their time in this force. The Coast Defence Corps consists of men specially trained in harbour work, engineering, signalling, and telegraphy.

**MILITARY COLLEGE.**—The South African Military College, established in 1912 for the training and instruction of officers and other ranks of the Permanent Force, Citizen Force, and Cadets, was originally stationed at Tempe, but has since been transferred to Roberts' Heights. It consists of three branches—General, Musketry, and Signalling.

**PERMANENT FORCE.**—The South African Permanent Force consists of: (1) The South African Staff Corps, (2) The South African Instructional Corps, (3) The South African Naval Service, (4) The South African Field Artillery, (5) The 1st Regiment, South African Mounted Riflemen, (6) The South African Permanent Garrison Artillery, (7) The South African Engineer Corps, (8) The South African Air Force, (9) The South African Service Corps, (10) The South African Medical Corps, (11) The South African Ordnance Corps, (12) The South African Veterinary Corps, (13) The South African Administrative, Pay, and Clerical Corps. Including the Naval Service and Air Force, which are described below, the above provide a small standing army, which, it may be noted, is specifically relieved of all police duties in time of peace.

**RIFLE ASSOCIATIONS.**—A feature of the defence system of the Union is the rifle or defence associations which are scattered throughout the four provinces. In 1922-23 there were 1,087 such associations, 433 in Cape Province, 61 in Natal, 362 in the Transvaal, and 231 in the Orange Free State, the total membership being 2,527 officers and 133,872 other ranks. Enrolment in a rifle association is compulsory for all citizens who are required to register but who do not undergo peace training, every such citizen being enrolled as a member on July 1 in his

21st year. Any other citizen liable to render personal service in time of war, not being a member of the Permanent Force, the Coast Garrison Force, or the Active Citizen Force, may become a member on prescribed conditions, also boys between the ages of 13 and 17 residing in areas where no facilities for cadet training exist.

#### NAVY

The South African coast defence is primarily undertaken by the Royal Navy, which maintains an African Command. The British Admiralty also controls the naval dockyard at Simonstown. The Union's part in the naval defence of her territories is at present confined to the maintenance of the South African Division of the Royal Naval Volunteer Reserve, in which those citizens serve who are liable for peace training and who elect to perform naval service. Companies are established as follows: A and B Companies based at Capetown (headquarters, The Castle), C Company at Durban (headquarters, Esplanade), D Company at Port Elizabeth, and E Company at East London. There are in commission two minesweeping trawlers, "Sonneblom" and "Immortelle," and one surveying sloop, "Protea." The headquarters of the South African Division are at Simonstown, the Commander acting under the orders of the Commander-in-Chief on the Africa Station.

#### AIR FORCE

The South African Air Force is a part of the South African Permanent Force, and is administered by the Air Services Section of Defence Headquarters. The Director of Air Services is also the executive commander of the Air Force. The organisation of the Force consists of: (1) headquarters, (2) aircraft depot, including stores section, workshops, and reserve aeroplane park, (3) flying training school, capable of training 15 to 20 pupils at the same time, (4) service squadrons, of which only one squadron is as yet fully established, (5) special reserve of pilot officers on a numerical establishment of 24 officers to each active aeroplane flight, and (6) general reserve of officers.

**DISTRIBUTION.**—The whole of the Permanent Air Force is concentrated at Pretoria, where accommodation is provided in the shape of steel hangars for approximately 80 aeroplanes. Nearly one hundred landing grounds have been prepared throughout South Africa, and any point in the Union can be reached by air from Pretoria within twenty-four hours.

Under the new scheme of national defence outlined by the Minister of Defence early in 1926, it is proposed to create an air force which shall be able to strike practically anywhere at any enemy gathering or force within the Union.

#### PUBLIC HEALTH

The Department of Public Health of the Government of the Union was created in 1919 under the Public Health Act of that year. In accordance with the provisions of the measure an Advisory Council of Public Health was also established, consisting of the Minister as Chairman, the Chief Health Officer ex-officio, four medical practitioners (of whom two must have special knowledge or experience of public health or medical research), and three non-medical members.

**DISEASES.**—Serious outbreaks of disease may be said to be rare in South Africa, though until a few years ago enteric or typhoid fever was very prevalent. The serious epidemic of influenza in 1918 was due to exceptional causes, and in less than three months a total of 2,616,803 cases

(454,053 European and 2,162,752 coloured and native) was reported, with 139,471 deaths (11,726 European and 127,745 coloured and native). Tuberculosis is prevalent amongst the coloured and native population, especially in Cape Peninsula and the South-western districts of Cape Province, also in the other coastal towns of the Union. Generally speaking, it is not common in places over 3,000 ft above sea-level. Outbreaks of a low fever commonly known as "Cape typhus" occur in parts of Cape Province and Transkei but are practically confined to the native population. Smallpox is rare, and yellow fever is unknown.

In 1923 there were notified by medical practitioners throughout the Union 13,401 cases of infectious disease, 8,254 being native or coloured. Of these 4,290 were of enteric or typhoid fever, 3,697 of tuberculosis, 1,787 of typhus, 1,036 of scarlatina or scarlet fever, and 946 of diphtheria.

**LEPROSY.**—Before the arrival of Europeans this disease is known to have existed among the Hottentots of the Cape and the Bantu tribes. The earliest leper hospital was established by the Cape Government at Hemelen-Aarde, in the Caledon District, in 1818 but this was closed in 1845 and the lepers were transferred to Robben Island, where an asylum for all races was established and has been maintained ever since. There is a large asylum for all races at Pretoria, and asylums for natives only at Umjanyana, Mkanibati (Pondoland), Amatukulu (Zululand), and Bochum. After 1913 the number of European lepers gradually decreased from 190 to 143 in 1923. The number of non-European lepers remained at about the same figure—roughly 2,200. Lepers are compulsorily segregated in every Province, all cases being reported to the Government. There is as yet however no uniform legislation on the subject for the Union.

**MALARIA.**—The incidence of malaria is far smaller throughout the Union than it used to be, though it is still endemic in the river valleys and coastal belt of Zululand, also in the river valleys and low veld of the northern and eastern Transvaal. Occasionally, owing to exceptionally heavy rainfall, malaria becomes epidemic over wider areas, involving the whole coastal belt of Natal, or the greater part of the Transvaal (the high veld always excepted), or the river valleys of the northern part of Cape Province. Increased settlement by Europeans and the extension of cultivation and drainage are doing much to reduce the areas in which this disease is endemic. Deaths from malaria among Europeans numbered 41 in 1922, as against 84 in 1921. This was the lowest total recorded.

**PLAGUE.**—Plague was unknown in South Africa prior to 1899, when infection was introduced from India. The Anglo-Boer War was responsible for several introductions of the disease. In 1917 there were 37 deaths (all coloured), in 1921 the number fell to 20 (four of these being whites), and in 1922 to 18 (ten whites), but in 1923 the total rose to 21, of which two were whites. At all the ports of the Union and in the larger centres rodents are systematically trapped and poisoned, and specimens are submitted each week for bacteriological examination.

**DISTRICT SURGEONS.**—For the carrying out of the health and medical work devolving on the Government in the various districts of the Union, medical officers known as district surgeons are employed, a few in large centres devoting the whole of their time to the task, but the large majority undertake the Government work concurrently with their private practice. At

the end of June, 1923, there were in all 278 district surgeons, of whom 6 were whole-time officers, 5 were whole-time but employed jointly with local authorities or public bodies, and 267 were part-time.

#### FOOD AND DRUGS ADULTERATION.

—Matters relating to diseased or unsonnd food are dealt with by the local authorities. Adulteration of food and drugs is handled by the Government Health Department in the Cape, Natal, and Orange Free State, and in the Transvaal by the municipalities. At the ports the adulteration laws are enforced by the Health Department, acting in co-operation with the Department of Customs and Excise. Many of the present laws are unsatisfactory and inadequate, and a consolidating and amending Food Drugs, and Disinfectants Bill has been prepared for submission to Parliament.

#### HEALTH ORGANIZATION AND INTELLIGENCE.

—The Union of South Africa is a party to the International Health Convention of Rome signed in 1912, and is represented on the committee of that organization by one of the health officers of the Ministry of Health who has had extensive experience of public health work in South Africa. That office has recently been linked up with the health organization established at Geneva under the League of Nations. Periodical reports and bulletins on matters of international health concern are furnished to the Health Department by these two organizations. Health cablegrams are exchanged fortnightly between the Health Department and the British Ministry of Health, and there is a reciprocal arrangement between the Union and Australia, New Zealand and India under which health information of urgent importance is cabled as occasion requires. By arrangement with the Imperial Government, British consuls in foreign countries cable the Union Government at its cost information regarding outbreaks of formidable epidemic disease, or other matters likely to be of use to South Africa.

Weekly bulletins, stating the incidence of formidable epidemic disease and particulars as to any undue prevalence of other infectious disease in the Union, together with the latest available data as to the occurrence or prevalence of formidable epidemic diseases in other countries, are published by the Health Department and widely distributed. Weekly abstracts of returns of notifications of infectious diseases throughout the Union are also distributed by the Department to the Medical Officers of Health of the larger municipalities in the Union and to others specially concerned.

**HOSPITALS.**—Such institutions are either wholly controlled as to establishment, maintenance, and management by the Provincial Administrations, being known as General Hospitals, or receive financial assistance from Provincial funds, but are controlled by other than Government authority. These are usually sanatoriums, memorial hospitals, maternity homes, convalescent homes for children, some native hospitals, and cottage hospitals. The above are exclusive of mental hospitals and institutions, also of hospitals for leprosy and venereal diseases. In Cape Province grants-in-aid of the various hospitals amounted in 1922-23 to £184,078, in Natal to £13,290, in the Transvaal to £9,351, and in the Orange Free State to £19,815. Some particulars of the General Hospitals in Capetown, Pretoria, Johannesburg, Pietermaritzburg and Durban will be found in the sections devoted to these cities. Government or municipal hospitals are provided in most of the larger towns, and

there are also a large number of hospitals and institutions established by religious organisations, mainly supported by voluntary contributions. Patients are almost invariably received free of expense if they cannot afford to pay, but should they have the means they are charged in accordance with their resources, the tariff being usually more or less that charged by hotels in the same town.

**MENTAL INSTITUTIONS.** There are eight mental hospitals in the Union, five in Cape Province, and one each in Natal, the Transvaal, and the Orange Free State. Those at Port Alfred and Port Beaufort are for coloured races only. There are also two institutions for feeble-minded persons at Capetown and Potchefstroom. On December 31, 1923, there was a total of 7,468 patients in these hospitals, for whom there was available a medical and nursing staff of 1,517 persons. The largest hospitals are those at Pretoria (1,734 patients), Valkenberg (1,399), and Bloemfontein (1,026).

**LEGISLATION.** The law in the Province of the Union affecting the registration of medical practitioners, dentists, nurses, and chemists has not yet been made uniform, and registration in each Province is effected under the measures in force prior to the constitution of the Union. A Medical Council exists in each Province concerned with the work of registering doctors, dentists, midwives and nurses, and Pharmacy Councils control the registration of chemists.

**PORT HEALTH WORK.**—At every port a port health officer is appointed to carry out the usual inspection and control of vessels arriving at and leaving the Union. These officers act in an advisory capacity with the immigration officers in determining the physical fitness of immigrants. (See also under "Immigration.")

**PUBLIC HEALTH AND SANITATION.** Of recent years much increased attention has been paid to matters of public health and sanitation throughout South Africa, especially in the cities and larger towns. All of these, practically the whole of smaller towns, and many villages, now have gravitation water supplies, purification works being provided where the supply is taken from streams or rivers liable to pollution. The majority of the large urban centres have water-carried sewerage systems, public slaughter-houses, isolation hospitals, and other essential requirements of up-to-date towns. An increasing amount of interest is being taken in infant and maternity welfare and in town planning.

**REGISTRATIONS.**—In 1923 there were registered in the Union 2,587 medical practitioners, 676 dentists, 1,348 chemists and druggists, 3,290 nurses, 2,477 midwives, and 198 nurses of the insane. Some of these are registered in more than one Province.

**VACCINATION.**—This is not compulsory throughout the Union, but is fairly general amongst the European population, and outbreaks of small-pox are now rare. There were no deaths in 1922 from this cause, and only two in 1921.

#### PUBLIC WORKS

The Department of Public Works is associated with that of Posts and Telegraphs under a Minister of the Union. The matters dealt with by the Department are the design, erection, and maintenance of public buildings for Union and Provincial purposes (exclusive of school buildings in Cape Province) and of provincial and inter-provincial bridges, the provision of accommodation and services in connection therewith (including the hiring

of all property required) for Union Government purposes, the letting of Government buildings, the provision and maintenance of mechanical and electrical equipment, and the miscellaneous agency and consulting services for Provincial Administrations and University authorities.

Under the Minister for Posts and Telegraphs (see separate article) and Public Works are a Secretary and Under-Secretary for Public Works, an Inspecting Engineer, an Architect, eight District Engineers, and an Electrical Engineer.

**ELECTRICITY SUPPLY.** The development of electric power in South Africa received its first great impetus in 1907, when the Victoria Falls and Transvaal Power Company and the Rand Mines Power Supply Company established their system to supply power to the gold mines of the Witwatersrand. But, generally speaking, electricity is not used for production purposes in South Africa as widely as it might be. A great step towards its increase and development was, however, taken in 1922 when, under the Electricity Act 42 of that year, a controlling body was established known as the Electricity Control Board with power to grant licences for the generation and supply of electricity, and to control such supply, both as regards prices and otherwise. An Electricity Supply Commission has since been established with very comprehensive powers. Though the Commissioners are appointed by the Union Government, the Commission itself is not a State Department, but may be best described as a public utility corporation with Government backing.

The Electricity Commission has been in existence since March 1923, its chief function being to deal with applications by urban local authorities to establish electricity undertakings. Whenever such an authority intends to establish an electricity installation or to enlarge its undertakings, it must apply to the Administrator of the Province for his approval and submit a report by its engineer on its technical and general proposals. Before giving his approval the Administrator must call upon the Commission to examine the application and advise him on what is considered by the Commission, in the interests of the ratepayers and consumers, to be the best course for the local authority to adopt. Up to 1924 only those applications had been considered which had a district connection with the possible establishment of regional systems of power supply, these being in relation to the industrial areas of Natal, Cape Peninsula, the Witwatersrand and Witbank districts and the Sabie gold mining area in the Eastern Transvaal.

**NEW STATIONS.**—In Natal, in which province there are immense industrial potentialities, electric power is gradually becoming available through the electrification of the railways, the first section of over 170 miles of which was completed in 1924. (See article on "Railways.") The power station on the Tugela River at Colenso, erected for this purpose, has a capacity of 60,000 kilowatts. A super-power station is to be erected by the Commission at Durban, which will be linked up with the Colenso Station, 180 miles away. Cape Peninsula, a region of tremendous industrial possibilities, is also to have its electricity supply developed by the erection of a super-power station, of which the estimated cost is £977,500, including £204,190 for sub-stations and £89,890 for the transmission system. The generating station will be situated near the mouth of the Salt River, and its close proximity to the sea will admit of unlimited quantities of water being available for the circulating

water system. The station will be linked to the municipal generating station at Capetown.

**RAND-WITBANK ARI 1.**—By far the most important power supply system in South Africa is that of the Victoria Falls and Transvaal Power Company and the Rand Mines Power Company, generally known as the "VFP". The system originated in 1906 with the idea of developing the water-power of the Victoria Falls in Rhodesia for supplying power to the gold mines on the Rand. This meant transmission over a distance of about 700 miles, and the plan was subsequently modified. All the power supplied from this system is generated in coal-fired stations. The power supplied by the VFP is generated at four stations, a significant feature of the system being that it supplies not only electrical energy, but also compressed air from three central stations through a system of underground pipes. The capacity of these compressors is 70,000 h.p. The total system, electricity and air, is capable of developing something like 350,000 h.p., and the energy sold in 1923 was 132,000,000 units—more than the whole of Sheffield consumed, and only a little less than Birmingham's supply. The capacity of the stations is as follows:—

STATION	ELECTRIC GENERATORS TOTAL	COMPRESSORS TOTAL
Rosherville	60,000 k.v.a.	50,000 h.p.
Vereeniging	60,000 k.v.a.	—
Simmer Pan	54,000 k.v.a.	—
Brakpan	44,000 k.v.a.	9,000 h.p.
Robinson	—	20,000 h.p. (Electrically driven)

The new scheme of the Electricity Commission is to erect a power station on the Witbank coal fields, 5½ miles from Olifants River, where a gravity dam is being built across the stream to impound a maximum of 211,000,000 cubic feet. From this station, which is to have an initial capacity of about 60,000 k.w., power will be supplied to the Victoria Falls and Transvaal Power Company for distribution in its area of supply and direct to consumers outside such area. It is expected that when this station is completed power will be available at exceptionally low rates in the Witbank area, low enough, in fact, to act as an inducement for the establishment of electro-chemical industries under favourable conditions. It is intended to burn "duff" coal from the collieries, which now goes to waste.

**EXPENDITURE.**—The following table gives particulars of the expenditure by the Union Government on Public Works for the two financial years named:—

SERVICE	1921-22 £	1922-23 £
Salaries, Wages, etc.	225,346	178,913
Transport	22,548	17,737
Plant and Stores	6,152	4,757
Rent, Rates, Insurance, etc.	270,424	270,829
New Works and Buildings	87,299	67,051
Maintenance of Works and Buildings	202,077	217,218
Bridges — Maintenance, etc.	350	482
Incidental	5,546	5,156
	£819,742	£762,137

These are principally under the control of the Provincial Administrations.

The following table gives some details of the Provincial ordinary expenditure on public works, roads and bridges for 1922-23.

PROVINCE	PUBLIC WORKS £	ROADS AND BRIDGES £	MISCELLANEOUS £	TOTAL £
Cape of Good Hope	2,800	35,684	242,548	281,032
Natal	5,811	161,404	25,064	192,312
Transvaal	1,360	132,507	67,088	200,955
Orange Free State	—	67,116	39,566	107,402
	£10,001	£397,111	£374,266	£781,701

**IRRIGATION WORKS.**—See general article on "Agriculture."

**ROADS AND BRIDGES.**—The control and maintenance of roads in the Union are in the hands of the Provincial Administrations. In Cape Province main roads are constructed out of Provincial revenue, but divisional roads are made by divisional councils. In Natal the maintenance of Government roads is under the control of an Engineer Superintendent and the system is purely departmental. Since the establishment of the Union some 800 miles of Government roads have been constructed, the total mileage in 1924 amounting to 6,200. The number of bridges erected on main roads in the Province was 237, of which 141 were built between the establishment of the Union and March, 1924, at an approximate cost of £532,000. In the Transvaal, owing to the large sum of money that would be necessary to undertake a comprehensive programme of road construction in the true sense of the word, it has not been possible to do much more than maintain existing roads in the veld. The various municipal authorities have control of their own roads, but the Provincial Administration is wholly responsible for the construction and maintenance of the Main Reef Road. The approximate mileage of main and branch roads in the Province in 1924 was 18,600. In the Orange Free State there were, at the same date, 4,300 miles of main roads and 6,000 miles of district roads. The following table shows the mileage of roads and the number of bridges in the Union under the control of the Provincial Administrations together with the expenditure on both in 1922-23:—

	ROADS MILES	BRIDGES No.	EXPEN- DITURE £
Cape Province	32,501	263	206,665
Natal	6,165	217	243,406
Transvaal	18,060	127	247,250
Orange Free State	9,502	55	189,031
Total Union	66,228	662	976,361

These figures exclude those for roads and bridges under the control of municipalities and village management boards. The total mileage of these roads in the Union in 1922-23 was 6,075, the number of bridges 483, and the expenditure on them £738,273.

## POSTS, TELEGRAPHS AND TELEPHONES POSTS

In the early days of the 17th century, when the adventurers of more than one nation were trying the newly-discovered route to the East, the masters of ships calling at Table Bay for water and provisions used to leave their letters under large boulders on the shore, to be in turn collected and conveyed to their destinations by vessels passing in the opposite direction. This was the origin of South Africa's present postal service, the real commencement of which as a Government institution dates from 1806, in which year the postal revenue amounted to 191 rix-dollars, or £38 4s od in modern currency. Penny postage was started at Capetown in 1860, being a year later extended to Port Elizabeth. In 1871 the first mail to the newly-discovered Diamond

Fields was despatched from Capetown, and the foundation of the South African Postal Union was laid in 1883 by means of separate conventions entered into between several of the South African Governments. During the same year travelling post offices were first attached to railway trains and the telegraphic money order system was adopted. In 1893 the administration of the Bechuanaland post and telegraph services was placed in the hands of the Postmaster General of Cape Colony, which province entered the Universal Postal Union in 1895. The first South African Postal Union Convention came into force in 1898. This secured uniformity of practice and rates of postage between the Cape, Natal, the Transvaal and the Orange Free State. The Portuguese Province of Mozambique became a party to the Union at a later date. In September 1899 the Imperial Penny Postage (introduced in 1898) was adopted by Cape Colony, and by the Union in 1911. Its rescission in 1917 was one of the results of the European War.

To-day South Africa offers every variety of postal facilities, mails being conveyed by rail, motor car, veld post cart, and, in the native territories, by aboriginal runners. Between the constitution of the Union and the end of the financial year 1924-25 the revenue earned by the Posts and Telegraphs Department increased from £1,109,000 to £3,420,000, and the total amount of money handled from 19½ millions to 26 millions per annum. Four hundred and eighty new post offices were opened during that period, 115 additional post-cart routes were established, and the number of mail articles handled rose from 191,000,000 to 287,000,000 per annum.

**ADMINISTRATION.** The Department of Posts and Telegraphs was created on May 31, 1910, when the Union was constituted, and on September 1, 1911, it took over the administration and control of the postal and telegraphic services of the whole country, such control being vested in the Postmaster-General, acting under the Minister of Posts and Telegraphs. The headquarters of the Department are at Pretoria.

**EMPLOYEES.**—In the year ended March 31, 1925, the total number of persons employed by the Department of Posts, Telegraphs, and Telephones was 11,200, as against 10,800 in the preceding year. Of these, 3,700 were in the Administrative and Clerical Division, 4,250 in the General Division, 50 were learners in training, and 3,200 were local officials and railway officials performing post office work.

**FACILITIES.**—There were 2,947 post offices open in the Union in 1925, the number of posting receptacles in use (excluding those at post offices) being 1,200, and the number of private bags 3,600. There was one post office to every 2,500 inhabitants. The private boxes installed at 384 post offices numbered 40,613, distributed as follows: Cape Province, 11,500; Natal, 4,656; Transvaal, 19,630; Orange Free State, 4,767.

Other facilities than the transmission of postal matter, etc., which the Post Office affords to the public are the issue of licences of all kinds, the payment of pension warrants, the collection of poll tax, the sale of patent medicine, cigarette, and entertainment tax labels, the sale of revenue stamps, and the collection of customs dues.

**EXPERIMENTAL AIR SERVICE.**—On the recommendation of the Civil Air Board, the Government inaugurated an experimental Air Mail Service between Capetown and Durban, which operated for three months in 1925, but was discontinued chiefly owing to the unsuitability for com-

mercial work of the military machines used, and to the fact that the pilots were being deprived of their military training. During the three months the service was in operation a grand total of 91,250 miles was flown, the total weight of mail matter carried being 3,456 lbs. The whole question of the encouragement and development of civil aviation is receiving the closest attention of the Posts and Telegraphs Department, and it is hoped that in the near future it may be possible to establish, by means of a Government subsidy, an up-to-date passenger and air-mail service in the Union.

**FINANCIAL.**—The following table shows the financial aspect of the working of the Department during the years named

	1922-23	1923-24
Cash receipts	2,997,973	3,179,410
Value of Govt traffic	281,056	268,372
Cash payments	2,785,701	2,730,804
Value of free services rendered	113,553	106,702
Total amount of money dealt with	25,757,000	26,000,000
Revenue collected for other depts	1,291,854	1,426,506

compared with 239,000,000 in 1923-24 and 175,456,000 in 1912. Of this total, some 128,000,000 were letters, 25,000,000 were newspapers, 720,000 were agricultural parcels, and there were 4,842,000 other parcels.

**PENNY POSTAGE.**—The Chambers of Commerce throughout the Union had long been insistent in their demand for the reintroduction of penny postage, which existed prior to the War. On January 1, 1926, it was announced that the return to it would be made, and that the new rates would come into force at once. (See "Postal Rates.")

**POSTAL RATES.**—The following are the principal postal charges:—

For the Union of South Africa, Bechuanaland Protectorate, South-West Africa, Rhodesia, and Province of Mozambique: Letters, 1d per 2 oz; postcards, ½d single; 1d reply paid; newspapers, ½d per 8 oz for those printed and published in the Union, ½d per 4 oz for others; printed papers, accounts and receipts, ½d per 2 oz.

For the United Kingdom, Egypt and British Possessions: Letters, 1d per 2 oz; postcards ½d and 1d; newspapers 2d per 8 oz or 1 oz (as above); printed papers, sample packets, etc., ½d per 2 oz.

being issued for payment within the Union.

In 1924-25, money orders to the value of £2,399,000 were issued and £2,119,000 paid.

**CABLE MONEY ORDERS.**—A service exists between the Union of South Africa on the one hand and the United Kingdom and Mauritius on the other by which remittances may be cabled to or from money order offices in those countries. The maximum amount of a cable money order is £40 and the charges in the Union are:—

(a) The money order commission at overseas rates viz., 1s for every £4 or part thereof, and

(b) The cost of the telegram of advice at deferred rates (unless the remitter prefers to telegraph at full rates) for telegrams addressed to the country of destination.

**OCEAN MAILS.**—The first ocean mail contract entered into in 1870 provided for a regular weekly mail service between the United Kingdom and Capetown, the passage to be completed in 20 days. To-day the duration of the voyage is 16 days 15 hours in each direction, and for the maintenance of this service by the Union-Castle Mail Steamship Company a subsidy of £225,000 is paid, of which £27,000 is in consideration of the mail steamers commencing and terminating

POSTS AND TELEGRAPHS DEPARTMENT.  
1. Post Office Building, Pretoria. 2. Central Telephone Exchange Building, Johannesburg.

From postal services alone there was in 1923-24 a cash revenue of £1,853,078, compared with £1,741,370 in 1922-23.

Total expenditure in 1923-24 amounted to £2,734,621, a fall of £51,170 on the previous year, the surplus to the credit of the Department being £444,789, compared with one of £212,182 in 1922-23 and a deficit of £308,828 in 1921-22.

**COST OF MAIL CONVEYANCE.**—Excluding the ocean mail service the cost of the conveyance of mails to the Union Government increased from £183,774 in 1912 to £245,552 in 1923-24. The latter total was distributed as follows:—Main and branch posts, £104,125; conveyance over Union railways, £136,787; conveyance over private railways, £3,311; landing and shipping mails, £1,349.

**LETTERS, ETC.**—The total number of mail matter items posted in the Union (and Basutoland) in 1924-25 was 287,000,000,

for Foreign Countries, 3d first oz, each additional oz 1½d; postcards, ½d and 3d; newspapers, ½d per 2 oz, with a minimum charge of 3d for commercial papers. (See also under "Parcel Post.")

**MONEY ORDERS.**—Money order conventions are in force between the Union of South Africa and the Commonwealth of Australia, Dominion of Canada, Ceylon, Hongkong, India, Kenya Colony, Mauritius, Mozambique, New Zealand, Norway, Nyassaland Protectorate, Rhodesia, St. Helena, United States of America, and Zanzibar. There is also a direct money order exchange with the United Kingdom. In 1923-24 there were 419,006 money orders issued of a total value of £2,411,167, while 366,177, value £2,085,273, were paid. The commission collected from these amounted to £20,402. Of the 419,006 orders issued, 80,390 were for payment in other countries (United Kingdom, 58,627; India, 10,425; U.S.A., 7,447; and Australia, 5,301), 332,616

their voyages at Durban instead of at Cape town. The contracting parties on the basis of user are Great Britain, the Union, Southern Rhodesia, and the Bechuanaland Protectorate. In 1924 and 1925 protracted negotiations for a reduction of the subsidy took place between the Union Government and the Union-Castle Company, but broke down. Postal communication between South Africa and Australia, India, and the Far East is maintained by means of private ships as opportunity offers.

In 1923-24 the fastest voyage on record to South Africa from Southampton was accomplished, its duration being 16 days 3 hours 26 minutes. From South Africa to England the quickest passage on record (15 days 12 hours 37 minutes) was accomplished in 1921-22. During 1923-24 matter conveyed by ocean mail to South Africa totalled 110,312 bags, as against 105,271 in 1921-22, while mail bags conveyed from South Africa totalled 32,630, compared with

29,515 This was in addition to 5,739 bags of mail conveyed to South Africa by private ships, and 4,545 bags sent from South Africa by the same means

**PARCEL POST.**—A noticeable feature of the postal service of the Union is the provision of an agricultural parcel post, of the privileges of which very full advantage is taken. It is a cheap facility of especial benefit to the scattered communities of an extensive country, enabling parcels of South African produce, such as tea, sugar, flour, mealies, fruit, vegetables, plants, poultry, and foodstuffs to be transmitted between any points within the Union at reduced rates. A parcel of vegetables, for example, weighing 10 lb is charged only 1s, although it may travel not less than 1,200 miles by rail, postcart, and native runner. In 1924-25 the number of parcels posted in the Union for delivery thereon was 5,508,000, of which roughly 720,000 were agricultural packets.

**COD PARCEL POST.**—On June 1, 1925, a cash-on-delivery parcel post came into operation. Upon payment of the ordinary parcel post charges, plus the cash-on-delivery fee, the post office accepts parcels for delivery within the Union of South Africa, and undertakes to collect from the addressee the amount specified by the sender. Ordinarily, the value of any one parcel may not exceed £10 in the case of silver and gold articles, jewellery, and ostrich feathers, and £40 in all other cases. If these values are exceeded the parcel is accepted subject to the payment of the specified fees, but in the case of loss compensation is paid only on the £10 and £40 basis. The special fee for cash-on-delivery parcels is 1s for amounts up to and including £1, and 3d for every additional £1 or fraction thereof. The fee covers insurance against loss.

**PARCEL RATES.**—Agricultural parcels addressed to any place within the Union, up to 1½ lb, 3d; over 1½ lb but not exceeding 3 lb, 6d; over 3 lb but not exceeding 6 lb, 8d; over 6 lb but not exceeding 9 lb, 1s; over 9 lb but not exceeding 11 lb, 1s.

Ordinary parcels for places within the Union and for Mozambique and South-West Africa, not exceeding 4 oz, 2d; not exceeding 8 oz, 4d; not exceeding 1 lb, 6d; for every additional 1 lb, or portion thereof, 6d. For Bechuanaland Protectorate, 1s per lb; for Rhodesia (Southern), 1s 1d per lb; for Rhodesia (Northern), 1s 3d per lb; for United Kingdom, 9d per lb. For British Possessions and foreign countries, special rates have been fixed on an average traffic basis.

**POSTAL DRAFTS.**—These are really demand notes issued through the post office. Any member of the public can draw upon another at any point of the Union where there is a money order office for a sum up to £10. A demand, which has full legal force, is made by the postmaster on a date specified by the drawer of the draft to the person from whom the money is to be collected. If paid, the postmaster issues a receipt and remits the amount collected to the drawer by money order. The Department's fee is 6d for one demand and 9d for two. In 1923-24 the sum of £3,944 was collected by means of 3,134 postal drafts, the total number of demands made being 16,525.

**POSTAL ORDERS.**—British postal orders of all denominations from 6d to 21s are issued and paid throughout the Union. In 1923-24 postal orders issued totalled 3,032,674, value £1,635,796, while 2,611,703 were paid,

value £1,342,053. The sum of £19,493 accrued to the Department on the sale of these orders.

The value of postal orders issued during 1924-25 was £1,818,000, and of orders paid, £1,496,000.

**SAVINGS BANK.**—The Department of Posts and Telegraphs conducts savings banks in all the larger towns of the Union, and deposits can be made at any money order office from 1s up to £200 in one year, or £1,000 in all, excluding interest. Interest at the rate of 3½ per cent per annum is allowed. Any depositor may, in addition, invest in Savings Bank Certificates of £100 each up to £1,000. Interest on certificates at 4 per cent per annum is credited to the depositor's ordinary account.

During 1924-25 a net profit of £2,773 was earned by the Post Office Savings Bank, which increased its reserve to £146,672. This reserve is held against investments which cost £6,172,282 or £817,132 in excess of the market value at the end of the year. The Savings Bank balances are held by the Public Debt Commissioners for investment in Government securities. Owing to the depression that occurred during the War all over the world, the market value of these securities has depreciated, but they still earn enough interest to cover the cost of the administration of the Savings Bank.

At the end of 1925 the number of Savings Bank depositors totalled 304,000, the balances standing to their credit amounting to £5,320,000.

### TELEGRAPHS

Telegraph construction in South Africa dates from 1800, when the Cape of Good Hope Telegraphic Company (Ltd.) opened a line between Capetown and Simonstown. Four years later the line from Capetown to Grahamstown was completed. In 1873 the Government of the Cape took over the lines of the above company, and in 1876 the line north of the capital was extended to Kimberley, Natal and Cape Colony being connected telegraphically in 1870, in which year telegraph offices were first opened in the Transvaal, at Pretoria and Standerton. Communication between Durban and Pietermaritzburg had previously been established. In 1885 an office was established at Barberton in the Transvaal, and in 1886 and 1887 offices were opened all along the Witwatersrand.

The Union has now an extensive and comprehensive telegraph system the lines covering all but the most remote parts of the Provinces and extending northwards as far as the Belgian Congo, Uganda, and Kenya, westwards to South-West Africa, and eastwards to Mozambique.

The following table gives particulars regarding the mileage, number of offices, and number of telegrams dealt with in the Union during the years named—

	1922-23	1923-24
Mileage of line ..	9,335	9,347
Mileage of wire ..	41,932	40,696
Number of offices ..	1,931	2,103
Telegrams—		
Number dealt with ..	5,520,000	5,381,000
Revenue from telegrams ..	£457,007	£433,101
Value of Govt. traffic ..	£37,451	£39,141
Capital expenditure to end of year ..	£1,382,131	£1,448,763

The following were the rates in 1925 for the transmission of telegrams:—

For the Union of South Africa, South-West Africa, and the district of Lourenço Marques, 1s 3d for the first 12 words or portion thereof and 1d for every additional word.

For Bechuanaland and S. Rhodesia, 2s 3d for 12 words, 2d for every additional word.

For transmission from Capetown, Durban, and Port Elizabeth by wireless telegraphy to ships at sea, 11d per word.

The rate for night letter telegrams in the Union is 1s 3d for 24 words and 3d for each additional six words or portion thereof.

**CABLES.**—The cables connecting South Africa with Great Britain, Australia, South America, India, and the Far East are owned by the Eastern Telegraph and its Associated Companies. There are five principal routes, as follow: (1) To the United Kingdom via St. Helena and St. Vincent; (2) To Australia and the Far East via Cocos; (3) To the United Kingdom via the West Coast station serving the Gold Coast etc.; (4) To the United Kingdom and India via East Coast stations; (5) To South America via Ascension and St. Vincent.

A new agreement with the Eastern Telegraph Company to run for a period of 25 years from January 1, 1920, was recently completed. Cablegrams sent from the Union increased from 100,000 in 1918 to 207,000 in 1923-24.

**CABLE RATES.** To all parts of Europe, 2s per word, to the United States and Canada, 3s to 3s 6d per word. Deferred cablegrams addressed to the United Kingdom, British Possessions, and foreign countries are charged for at half rates.

**WIRELESS.**—The Department of Posts and Telegraphs has always been fully alive to the many advantages of wireless telegraphy and radio stations have been established at Capetown (Slangkop), Port Elizabeth, East London, Durban, Port Nolloth, and Walvis Bay. The normal range of the Durban station is 300 miles by day and 1,000 miles by night, whilst the higher power installation at Slangkop has a range of 450 miles by day and 1,500 miles by night. These are the guaranteed ranges, which are greatly exceeded at night by both stations. Continuous attendance is provided at the telegraph offices at Capetown and King Williamstown, and arrangements have been made at the principal ports for summoning an official in case of emergency. Meteorological reports, time signals, and weather forecasts are now broadcast through these stations, thus enabling vessels over a wide area to take timely protective measures. In 1923-24 the total number of wireless messages handled by the Union Stations was 14,103, of which 5,366 were outward messages and 8,737 inward, the value accruing to the Union Government therefrom being £4,146. Arrangements were in hand in 1925 for a wireless telegraph service between Pretoria and Bloemfontein. The service will be auxiliary to that provided by the ordinary telegraph lines, and will form an important link for emergency communications in the Union. Details of a wireless service between Pretoria and Salisbury, Southern Rhodesia, have been decided upon, but further action is dependent upon the decision of the Rhodesian Government.

**BROADCASTING.**—Broadcasting in South Africa is as yet in the early stages of development, but public interest in radio-transmission was greatly stimulated by the Prince of Wales' visit in 1925 and the broadcasting of his Capetown reception throughout the Union. There were in that year three stations operating, at Johannesburg, Capetown, and Durban, and the installation of a

fourth station is contemplated. The two last-named stations were installed by the Marconi Company, that at Johannesburg by the Western Electric Company.

**FEEES** -At present the fees for listening-in are high. Private installations pay 5s licence fee to the Postmaster-General and £2 to the Cape Peninsula Broadcasting Association, while receiving installations for public entertainment pay from £2 to £6. A payment by instalment system has been arranged, the user of a receiving set paying 15s as a first instalment, and providing the balance in three instalments of 10s a month. In 1925 over 12,000 wireless licences were issued. (See also under "Durban" and "Johannesburg").

**NEW HIGH-POWER STATION** - In September 1922 the Union Government entered into an agreement with the Marconi's Wireless Telegraph Company Limited (England) for the erection of a high-power wireless station capable of direct communication with the United Kingdom. The agreement was ratified by Parliament in 1923. The station since erected at Capetown is now (1926) being operated by the Wireless Telegraph Company of South Africa, and is connected with the station built by the Marconi Company at Bridgewater (England), the transmitting station to South Africa being at Bodmin. These two stations commenced testing in the early part of 1926 and are now in working order. It is planned to instal direct service as soon as possible with Australia and other British dominions.

### TELEPHONES

The first telephone exchange in South Africa was opened at Port Elizabeth in 1882, and was followed in 1884 by the inception of one at Capetown. Since the formation of the Union there has been a great extension of telephone facilities throughout South Africa, especially in the country districts. Telephone subscribers have increased by over 40,000 and calls from 24,000,000 to over 113,000,000 per annum. The trunk telephone has been largely extended, Capetown, Beaufort West, De Aar, Bloemfontein, and Kimberley having been linked up, while practically the whole of the Transvaal is in direct communication with the greater part of Natal and the Orange Free State. Until recently 500 miles was the limit up to which long distance communication had been established, "repeaters" having been introduced in order to render intercommunication possible over the whole of the Union, but on April 12, 1926, the first telephone conversation between Capetown and Johannesburg was held, the distance of 908 miles being the longest over which a telephonic message had ever been transmitted in the Southern Hemisphere.

The largest exchange system is situated in Johannesburg, where 10,691 subscribers' lines and 453 public call offices were in use in 1924. The first automatic exchange of any considerable size was established at Overport (Durban) in 1923.

**FARM TELEPHONE LINES.**—Farmers in South Africa have come to recognise the advantages of the telephone in rural areas, and in 1922 a scheme was adopted whereby they are enabled to have lines erected at their own expense, either by themselves with the assistance of departmental technical officers, or by the Department at cost price. The active co-operation of many farmers has led to substantial reduction in rental charges, and a sum of £300,000 was allotted by the Government for expenditure in farm

POSTS AND TELEGRAPHS DEPARTMENT.

2. Automatic Telephone Exchange, Port Elizabeth.  
3. Capetown Telephone Exchange.

line development during 1924-25 and 1925-26. In the year 1923-24 no less than 116 new farm lines, totalling 818 miles in length, were provided for 677 farmers.

**SERVICES.**—On March 31, 1924, there were 207,538 miles of telephone wire in the

Union, the total number of exchanges being 787 and of public call offices 3,462. The number of instruments in use was 60,187. Subscribers totalled 44,682, and the calls during the preceding twelve months numbered 113,342,000, of which 6,595,000 were

trunk calls. The cash revenue for the year 1923-24 amounted to £893,231, the value of Government traffic being £68,042. The total capital expenditure on telephones up to March 31, 1924, was £4,422,080.

AN ATTRACTIVE MOUNTAIN AND RIVER SCENE IN SOUTH AFRICA

# FINANCE AND BANKING TRUSTEESHIP

## INSURANCE

### FINANCE

THE public finances of South Africa are in many respects better than those of the other self governing Dominions, partly because the Union's expenditure on the Great War was relatively small—£26,675,000—as against Australia's disbursement of £439,334,000 and New Zealand's £80,500,000. Without doubt the Public Debt has risen, and is still rising at a rate that may be considered excessive, having grown from 117 millions in 1912 to 199 millions in 1923 and to 208 millions in 1924, while the population grew from just under six millions in 1911 to only 7,150,000 in 1921. The four years immediately succeeding the conclusion of hostilities in Europe were undoubtedly trying for all who were concerned with the economic destinies of the Union, and a certain amount of political and industrial unrest no doubt had something to do with the slight mistrust with which South African credit was regarded. During the years 1923 and 1924 however the four Provinces of the Union made great strides in shaking off the ill effects of the War, a devastating drought and a succession of locust visitations. There were no far reaching financial departures with the change of Government in the last named year, but the altered trend of the Union's finances was clearly shown by the surplus of £225,000 achieved in 1924 for the first time in several years, this being followed twelve months later by a surplus of approximately £800,000.

Further proof of the improved position of South African finance is afforded by the fact that the accumulated deficit which had grown to over three millions had been reduced on March 31, 1925, to £1,918,000. It may be confidently asserted that at the beginning of 1926 South African credit stood as high as that of any other self governing Dominion. At the end of 1925 the Union placed in London a loan of £4,000,000 at 5 per cent and it met with a ready response.

**CONSOLIDATED REVENUE FUND.**—All revenues of the Union, except those of the Railway and Harbour Administration, are carried to the Consolidated Revenue Fund. This fund comprises the Revenue Account and the Loan Account, the former being credited with all sums received from revenue proper, the latter with moneys derived from the raising of loans, or from the alienation of fixed property and such other moneys as Parliament may direct to be paid to that account. Withdrawals from the Consolidated Fund are only possible under the annual Appropriation Acts, subject to the proviso that unforeseen and necessary expenditure may be met by a withdrawal under special warrants of the Governor-General up to an amount not exceeding in all £300,000.

**FINANCIAL RELATIONS OF PROVINCES.**—Under the South Africa Act and the Financial Relations Act of 1913, each Province receives from the Union funds a subsidy, which until 1922-23 was one-half of the ordinary annual expenditure of the

Province, but was then slightly reduced. All revenues derived from transfer duties, liquor licences and (in the Transvaal labour districts) native pass fees are assigned to the Province, as also are trading and professional licences, education fees, and hospital fees in regard to which the Provinces have power of legislation. A special subsidy of £100,000 per annum is paid to the Orange Free State and Natal (See "Provincial Revenue and Expenditure" following).

**PUBLIC DEBT.** During the year 1924-25 the Public Debt increased by loan flotations on a very favourable basis to the Union both in London and on the local market. It stood on March 31, 1925, at approximately £215,000,000—by no means an excessive burden when it is remembered that this sum includes the capital cost of the railways, which are reproductive in the best sense, as well as of telephones, telegraphs, irrigation works, and other public undertakings which are directly or indirectly reproductive. The following table gives particulars of the gross Public Debt of the Union, the amount of the sinking fund, and the net Public Debt at the end of each financial year (March 31) from 1911 to 1925.

YEAR	GROSS DEBT £	SINKING FUNDS £	NET DEBT £
1911	114,236,969	5,054,620	109,182,349
1912	117,260,534	5,780,246	111,480,288
1913	117,828,994	6,269,104	111,559,890
1914	126,296,250	6,930,611	119,365,639
1915	138,210,778	7,382,961	130,827,817
1916	150,832,734	7,981,861	142,850,873
1917	154,582,673	8,588,213	145,994,460
1918	160,436,840	9,322,065	151,114,775
1919	166,367,869	9,144,935	157,222,934
1920	173,904,818	9,850,106	164,054,712
1921	178,607,939	11,153,198	167,454,741
1922	191,784,936	11,575,502	180,209,434
1923	199,685,868	12,505,627	187,180,241
1924	208,232,528	11,389,624	196,842,904
1925	214,332,683	12,445,076	191,887,607

In 1924 the gross public indebtedness per head of the mean population amounted to £28 13s 3d.

**ANNUAL DEBT CHARGE.**—The annual debt charge of the Union stood at £8,529,930 in 1923-24, compared with £8,456,010 in 1922-23, and £7,786,542 in 1921-22. The charge includes interest payments, cost of administration, and contributions to the sinking fund. The charge per head of mean total population worked out at £1 3s 6d in 1923-24.

**EXTERNAL AND INTERNAL DEBT.**—The following table gives particulars of the external and internal debt of the Union during the years 1923-24.

	1923	1924
EXTERNAL DEBT—		
Amount	£131,650,404	£133,363,220
Per cent of total debt	65.93	64.05
INTERNAL DEBT—		
Amount	£68,029,464	£74,869,299
Per cent of total debt	34.07	35.95
Total debt	£199,685,868	£208,232,528

**REVENUE AND EXPENDITURE.**—The following table shows the ordinary Revenue and Expenditure of the Union (exclusive of Railway and Harbour Administration) for the five years 1920-1925 and (estimated) for 1925-26 and 1926-1927.

YEAR	REVENUE £	EXPENDITURE £
1920-21	29,676,186	25,597,718
1921-22	28,884,270	25,409,025
1922-23	27,234,515	24,065,556
1923-24	24,252,888	24,020,903
1924-25	25,335,543	24,522,753
1925-26	26,092,000	26,547,000
1926-27	26,862,000	27,000,000

The following tables show the principal heads of revenue and expenditure for the years 1922-24.

REVENUE	1922-23 £	1923-24 £
Customs and Excise	7,544,967	8,610,595
Posts, Telegraphs, etc.	2,997,974	3,179,410
Inland Revenue*	16,691,574	12,456,883
	£27,234,515	£24,252,888

\*Including Mining Revenue—£1,473,858 and £2,109,725 respectively.

For the year 1924-25 revenue exceeded that of the previous year by £1,082,655, being £25,335,543.

Of the estimated revenue of £26,092,000 for 1925-26, no less than £19,110,000 was derivable from taxation.

When presenting the 1926-27 Budget to Parliament, the Minister of Finance (Mr. Havenga) was able to announce that, thanks to a bumper mealie crop and a good wool and fruit season, the estimated deficit of £455,000 in the 1925-26 estimates had been turned into a surplus of £500,000. But for the seamen's strike of 1925 the surplus would have been still greater. The chief increases in the actual over the estimated revenue for 1925-26 were in the departments of customs, excise, posts, telegraphs and telephones, and in the diamond tax and stamp duties. For the year 1926-27 a small deficit of £138,000 was budgeted for.

EXPENDITURE	1922-23 £	1923-24 £
General Government	3,024,618	3,952,638
Law, Order and Protection	5,357,880	5,232,231
Higher Education	344,442	328,102
Public Health	760,686	785,932
Lands and Agriculture	1,548,794	1,649,017
Mines and Industries	317,187	371,280
Public Works	762,137	775,474
Posts, Telegraphs, etc.	2,786,758	2,734,621
Native Affairs	415,754	350,483
Miscellaneous	291,290	442,235
Public Debt	8,456,010	7,404,890
	£24,065,556	£24,020,903

In 1924-25 expenditure totalled £24,522,753, and in 1925-26 approximately £24,530,000.

It is to be noted that the figures in the preceding table cover only the audited ordinary expenditure for the two years, and are exclusive of provincial subsidies. Expenditure from loans amounted to £10,617,205 in 1923-24 as against £7,798,225 in 1922-23, railways and harbours being responsible for £5,294,015, local works and school loans for £1,349,621, and irrigation for £906,180.

**PROVINCIAL REVENUE AND EXPENDITURE**—The total provincial revenues from taxation and Union Government subsidies amounted in 1922-23 to £7,728,709 and in 1923-24 to £8,297,051, the subsidies totalling £4,167,266 and £4,378,638 respectively. During the same two years the total provincial expenditure aggregated £8,506,312 and £9,174,606 respectively. On each of these two years' working of the provincial administrations, therefore, there was a deficit. On March 31, 1924, the total indebtedness of the Provinces to the Union Government amounted to £1,064,570, which was increased by March 31, 1925, to £2,178,000, these sums being independent of their indebtedness on account of capital expenditure which on the last-named date reached the approximate figure of £7,500,000. The subsidies given by the Union Government are shortly to be put on a new basis, and in consideration of this the Provinces will surrender certain taxes. Under the new scheme they will be enabled to avoid recurring deficits.

**ROYAL MINT.**—The Pretoria Branch of the Royal Mint was established on January 1, 1923, and exists for the purpose of the manufacture of the British sovereign and half-sovereign. These bear a mint mark "SA" on the reverse. Union silver and bronze coins are also coined. During the year ended March 31, 1924 there were coined at the Mint gold to the value of £1,187 10s 0d, silver, £434,455 10s 0d, and bronze, £1,011 19s 11½d, or £436,554 10s 11½d in all.

**TAXATION.**—In the Union, taxation is chiefly carried out through the impost levied on all incomes exceeding £300 and the duties levied on estates of deceased persons. The native hut and poll taxes yield a yearly revenue of nearly £1,000,000. The following were the revenues by taxation in 1923-24: Income tax, £5,408,555; Excess Profits tax, £27,317; Death and Succession Duties, £441,618; Native taxes, £898,035.

The net total of inland revenue collected during 1924-25 was £12,714,357, of which £6,190,910 (48.7 per cent) was income tax, and £1,811,066 (10.6 per cent) mining.

**DEATH AND SUCCESSION DUTIES**—Since 1922 all estates of deceased persons have been liable to a duty ranging from ½ per cent on estates up to £2,000 to 17 per cent on estates of £1,000,000 and over. Act No. 29 of 1922 also provides for the levy, in the case of any person becoming entitled to property, of a succession duty ranging from 2 per cent on the dutiable amount in the case of a direct descendant or ascendant to 10 per cent in the case of a cousin or more distant relative, or of a stranger in blood or of an institution. Widows, charitable or educational institutions, institutions for the advancement of science or art, and provincial administrations and municipalities are exempt.

**INCOME TAX**—In the Union of South Africa the principle of a general income tax was adopted in 1914. At that time mining profits were separately taxed. Both methods were, however, merged under the Income

Tax (Consolidation) Act No. 41 of 1917, amended by Act 39 of 1919, Act 45 of 1920, and Act 29 of 1921. The tax is chargeable on income of married couples over £400 at the rate of 1s in the £, plus 1d for every £ in excess of £400. For example, an income of £1,750 is liable to tax on £1,350 (£400 allowed free) at the rate of 1s 11½d in the £. On those unmarried, the £300 abatement is reduced by £1 for every £1 the income exceeds £300, so that at £600 no abatement may be claimed.

**Abatements**—These are allowed for insurance premiums up to £50, for each child (½50) under 18, and for each dependant (£30), and for friendly or benefit society subscriptions up to £10, but these abatements are reduced by a sliding scale when the income exceeds £600.

**Companies**—Public companies pay 1s 6d in the £ on the taxable amount of their incomes. Private companies pay the same as individuals. No abatement is allowed in respect of companies. Companies do not pay super-tax.

**DIVIDEND TAX**—All dividends distributed by companies (other than private ones) operating in South Africa are taxed at the source. The tax payable by companies on dividends distributed is Gold or diamond mining—1s 6d for every £ of dividend, other companies—1s for every £ of dividend.

**EXCESS PROFITS DUTY**—This was formerly levied, but lapsed on June 30, 1920.

**LAND RENT**—The land revenue system varies in each Province, quit-rent being paid in Cape Province, Natal, and the Orange Free State, a direct land tax being levied on all farms (according to extent) in the Transvaal. The total amount collected in land revenue in 1924 was £173,578, as against £158,671 in 1923, and was derived as follows: Cape Province, £134,361; Natal, £2,900; Transvaal, £18,086; and Orange Free State, £17,271.

**MINING TAXES**—The gross amount of taxes collected from the gold mines in the year 1924-25 was £1,811,066. The total profit of the mines in which the Union Government has a share was £18,321,257, of which the State received £6,986,370. The export tax collected on diamonds was £727,954.

**NATIVE TAXES**—Hut tax is levied on natives in Cape Province at 10s per hut, in Natal at 14s per hut, and in a small area of the Orange Free State at £1 per hut. In the Transvaal there is a poll tax of £2 levied annually on each adult male native, with a further tax of £2 per wife on every native with more than one wife. Native farm labourers and natives in municipal locations are allowed a reduction of £1 each in respect of their tax liability. In the Orange Free State there is a poll tax of £1 levied annually on each adult coloured person. In a recent year hut taxes yielded £333,987 and poll taxes £524,832.

**SUPER-TAX**—In addition to the normal income tax, a super-tax is payable on incomes up to £5,000, but this abatement is diminished by £1 for every £ by which the income exceeds £2,500. Thus an income of £4,000 pays, in addition to income tax, super-tax on £3,000, and incomes of £5,000 and upwards pay super-tax on the whole amount at the following rates: On incomes not exceeding £24,000—for every £, one shilling, and as many five hundredths of a penny as there are pounds in the amount. On all incomes in excess of £24,000—five shillings for every £ of such incomes.

## BANKING

The history of banking in South Africa is one of a number of small private and district banks operating within limited spheres until the foundation of the London and South African Bank in 1861 and of the Standard Bank of South Africa in 1862 started a period during which the larger corporations gradually absorbed the small institutions. The year 1891 was marked by the passage of the Cape Bank Act which gave the Government of the Colony a greater control over banks, especially in regard to their note issue and the publication of returns. At different times the financial condition of the colonies was variously affected by speculative booms followed by severe crises, the most serious of these occurring in 1886-1890 (following the proclamation of the Witwatersrand goldfield and the foundation of Johannesburg) and later from 1902 to 1907, when a long period of acute depression succeeded the Anglo-Boer War and the collapse of the diamond market. After 1907 a rapid recovery occurred, and the Union was inaugurated. Later the European War led to an unprecedented inflation of credit and currency, the effects of which were felt in the country long after the restoration of peace.

Generally speaking, the outlook for the banks working in South Africa was brighter at the end of 1925 than for many years past, an event of far-reaching importance during that year having been the return to the gold standard and the disappearance of the premium on gold. This has brought about a complete alteration from the exchange conditions which prevailed in previous years, and one much to the advantage of both South African exporters and the banks. The former will no longer be faced with a substantial premium on South African pounds when remitting home the proceeds of their overseas sales, whilst excessive London bank balances should become a thing of the past. Further, the ability of South Africa to return to a complete gold standard makes for confidence in the country's economic stability, and will, it is hoped, encourage the investment of capital in its commercial development.

**BANKS ACT.**—Under the Banks Act of 1917 all banks are required to render to the Union Treasury detailed returns of their assets and liabilities within and without the Union as at March 31, June 30, September 30, and December 31 in each year, and such further returns as the Treasury may require to satisfy itself that the laws relating to bank note issues are being complied with. The position in regard to the bank note circulation in the Union is, accordingly, continuously under scrutiny by the Treasury.

**CURRENCY.**—The coinage in use throughout South Africa is the same as in Great Britain, except in the Portuguese Possessions. Two local terms are to be noted: a "tikkie," which represents 3d, and a "dollar," which is the equivalent of 1s 6d. Union Government notes for £1 have been on issue since 1915, and notes of authorised South African banks for 10s, £1, £5, £10, £20, and £50, issued to the Banks by the Government against the deposit of an equivalent amount in Government Stock, were for many years legal tender. Since 1922 these have been superseded by the issue of Reserve Bank Notes. The restriction on the exportation of gold was removed in 1922, but the currency from £1 upwards remained on a paper basis until July 1, 1925, when the Union returned to the gold standard, all notes henceforth being convertible.

(See letterpress, page 40)

**DISCOUNT RATES.**—The South African Reserve Bank under the Currency and Banking Act is obliged to "fix and publish from time to time the rates at which it will discount the various classes of bills." The first announcement made on December 29, 1922, fixed the following rates—

6 per cent for first class commercial bills of not more than 90 days' currency.

6½ per cent for first class agricultural bills with a maturity exceeding 90 days but not exceeding six months.

These rates were lowered by ½ per cent in each case from November 21, 1924.

**EXCHANGE RATES.**—The premium on the South African pound virtually disappeared with the return to the gold standard in 1925. For some time previously it had been unprofitable to ship the gold of the Transvaal mines to London and India for sale, though the South African banks had reduced their charges from 3½ to 2 per cent. With the return to the gold standard a rapid adjustment of the exchange position resulted, the rate falling first to par and then to ¼ per cent discount in terms of sterling for cable transfers on the principal centres. In May 1925 the buying rate on London was 1½ per cent, as against 2½ per cent in May 1924, the selling rate on London being ¾ per cent compared with 1½ per cent.

Towards the end of 1925 an interesting situation arose in connection with the South Africa London exchange rates. Up to November 30 the Reserve Bank and the commercial banks voted the same rates for telegraphic transfers (T.T.), but on that date the commercial banks lowered their rate by ½th to ¼th per cent discount, whereas the Reserve Bank remained stationary at par. As the last-named bank time rates were already based on a lower interest rate than those of the other banks, this meant that an exporter discounting, for instance, a 90 days' bill with the Reserve Bank would receive ¼ per cent more than he would have obtained from the other banks. But on December 31, 1925, the commercial banks adopted the same rates as the Reserve Bank, both for T.T.'s and time bills.

It has been inferred from this that the Reserve Bank now exercises a predominant influence over the movement of the overseas exchange rate, and that its avowed policy of reducing the interest rates in South Africa is gradually becoming effective.

**LEADING BANKS.**—There are six joint stock banks trading in the Union. Of these, the Standard Bank of South Africa, Limited, has its head office in London, the National Bank of South Africa, Limited, in Pretoria, the Netherlands Bank of South Africa and the Transvaal Commercial Bank in Amsterdam, Holland, the Stellenbosch District Bank, Limited, in Stellenbosch, in the Cape Province, and the Colonial Banking and Trust Company, Limited, in Johannesburg. The first two banks carry on business in all the Provinces of the Union, the Netherlands Bank of South Africa confines its operations to the Cape of Good Hope, Transvaal, and Orange Free State, the Transvaal Commercial Bank has branches in Johannesburg and Capetown, the Stellenbosch District Bank is a purely local concern, having no branches, and the Colonial Banking and Trust Company has branches in Capetown, Pretoria, Durban, and East London. On November 30, 1925, the total liabilities to the public of all banks in the Union (including the South African Reserve Bank) were £67,363,903, cash reserves in the Union amounting to £10,955,745. The percentage of cash reserves to liabilities was 16.3 and of cash reserves to

demand liabilities 22.6. Advances and discount amounted to £45,481,930, and the percentage of these to liabilities to the public was 67.5 per cent.

**LAND BANK.**—See under "Agriculture."

**NATIONAL BANK OF SOUTH AFRICA, LIMITED.**—Established in 1891 after passing through a period of severe financial stress succeeding the War, the National Bank now shares with the Standard Bank the greater part of the commercial business of the Union, and possesses over 300 branches and sub-branches in South and East Africa. Towards the end of 1925 considerable interest was aroused by the announcement that the National Bank (together with the Anglo-Egyptian Bank) would shortly be acquired by the Colonial Bank, which in turn was to be known henceforth as Barclays Bank (Dominion Colonial and Overseas). (See also article following.)

**NETHERLANDS BANK OF SOUTH AFRICA.**—Having its origin in South Africa in 1891, this old-established Dutch bank, with headquarters at Amsterdam, has confined its operations to the Cape, Transvaal, and Orange Free State provinces, and in 1925 amalgamated with the Transvaal Commercial Bank (Transvaal Handelsbank), which is also controlled from Amsterdam, having two offices in South Africa to the Netherlands Bank's eighteen. The combined balance sheet presented in June 1925 showed that the new arrangement increased the total of the balance sheet of the Netherlands Bank by about £1,000,000 to £3,045,000.

**RESERVE BANK.**—The South African Reserve Bank was established by the Currency and Banking Act of 1920 to secure and organise the credit of the State. The head office is at Pretoria. The bank management consists of a board of eleven directors, of whom three are nominated by the stock-holding banks, three are elected by stockholders other than banks (one actively engaged in commerce, one in agriculture, and one in some other industry), three are Government representatives, while the Government also appoints the Governor and Deputy Governor of the bank. All the directors must be British subjects and must reside in the Union. The Reserve Bank has the sole right to issue notes, regulate discount rates and provide for the expansion or contraction of the currency as required. Private Joint Stock Banks must retain credit balances with the Reserve Bank equal to 10 per cent of their floating deposits and 5 per cent of their time liabilities. The Bank is debarred from engaging in trade, accepting money on fixed deposit or advancing money on mortgage. The capital is £1,000,000. With the establishment of the Reserve Bank the right of private banks to issue notes terminated as on June 30, 1922.

The following table shows the liabilities and assets of the Reserve Bank as at January 9, 1926—

LIABILITIES	£

<b>Total .. .. .</b>	<b>17,300,463</b>

**STANDARD BANK OF SOUTH AFRICA, LIMITED.**—This institution, the largest and most influential of the joint stock banks operating in the Union, dates its establishment from 1862 when it was known as the Standard Bank of British South Africa, Limited, its capital then standing at £1,000,000, from which it has gradually risen to the present figure of £10,000,000. The bank which affords every facility for the development of trade with all parts of South and East Africa, the United States of America, and the Continent of Europe acts as bankers to the Government of the Union, to the Imperial Government in South Africa, and to the Governments of Northern and Southern Rhodesia, the Nyassaland Protectorate and the Tanganyika Territory. The head offices are situated at 10, Clements Lane, Lombard Street, and 77, King William Street, London, and there were in 1925 over 320 branches, sub-branches, and agencies in South and East Africa also agencies at New York and Hamburg. (See article following.)

**TRANSVAAL COMMERCIAL BANK.**—See "Netherlands Bank of South Africa."

**SAVINGS BANK.**—In addition to the Post Office Savings Bank (see under "Posts, Telegraphs, and Telephones"), there were eight Savings Banks operating in the Union during 1924 exclusive of the Savings Bank departments of the joint-stock banks and building societies. In these eight savings banks 2,119 accounts were opened during the year, as against 1,378 accounts closed, there being at the end of December 17,340 current accounts open and 271 fixed deposit accounts, while the deposits totalled £1,182,629 current and £23,629 fixed.

**BUILDING SOCIETIES.**—The first building society in the Union was established in the Eastern Province in 1864, and in 1922-23 there were 54 such societies. These societies had a total of 28,965 shareholders, possessing 139,035 shares of the value of £3,835,286. During the year 1922-23 loans (5,485) to the amount of £2,582,134 were granted, and £1,798,166 was received in loan redemption. Loans outstanding at the end of the year amounted to £5,952,173, excluding unpaid interest. The savings banks accounts of these societies had total deposits to the value of £2,378,923, a sum of £3,037,029 having been deposited during the year.

**LOAN CERTIFICATES.**—Since 1919 the Union Government has raised money by means of Union Loan Certificates, which offer a suitable investment for small sums in a Government security bearing a high rate of interest, free of Union income and super tax. The currency of these certificates, which are of the nominal value of £1, £10, and £25, has been extended to 10 years from the date of purchase. The purchase price of a single certificate (originally 15s. 6d.) was raised to 10s. on April 8, 1923, and after the

expiration of 12 months from the date of issue the value thereof increases at the rate of one penny per month, with a bonus of 3d. and 6d. added at the end of the eighth, ninth, and tenth years respectively, so that at the end of five years the value is 20s. and at the end of 10 years, 26s.

The total number of individual holders of single and multiple certificates was estimated at November 30, 1925, at between 80,000 and 90,000. Up to that date 8,414,000 certificates (value £6,576,000) had been issued of which 3,046,000 (£2,370,000) were repaid, leaving a balance of 5,368,000 certificates, value £4,206,000.

**SAVINGS CLUBS.**—The Savings Clubs Scheme is a development of the certificate issue its object being to encourage co-operative saving among groups of employees and others. Savings clubs can be formed by any one group of from five persons upwards, the necessary books being supplied free of charge. Each club appoints its own treasurer, who accepts deposits from club members in the smallest amounts. The collective club savings are invested, as they come in, by the club treasurer in Union Loan Certificates, which are subsequently distributed among the members. The movement was launched experimentally in Capetown in March 1920, and since that date 930 Savings Clubs have been formed, the number on the register on March 31, 1924, being 913, of which 244 were school clubs. The certificates purchased amounted to 21,539 units, school clubs being responsible for 10,381. The repayments totalled 14,114 units.

## REPRESENTATIVE BANKING ENTERPRISES

### THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

**Inception.** For some time prior to the actual formation of this Bank there had been general agreement with, and support for, the project among a group of Port Elizabeth merchants, the most prominent of whom was Mr. John Paterson, the first chairman of the institution, and this feeling was reflected generally in the country, as also among South African merchants in London. In the year 1862 the English Companies Act was passed, and a great impetus was given to the formation of corporations under its provisions. At that time Cape Colony possessed some thirty banks, all operating on the joint-stock principle. The Standard Bank was among the earliest institutions to register with limited liability under the new Imperial Act, and it was duly incorporated in 1862 with the title of "The Standard Bank of British South Africa, Limited."

**Development.**—Numerous articles had appeared in the Press of the day expressing doubts as to the advisability of extending the privilege of limitation of liability to banking institutions, and it is obvious that the promoters of the new Bank were to some extent influenced by such warnings, for the prospectus provided that, on the first issue of shares, which was limited to 5,000 (or half the total number), a deposit of £1 per share should be made on application and £1 on allotment, with further calls not exceeding £5 each at intervals of not less than three months, until £25 per share had been paid. This provision was clearly a compromise between the conflicting opinions then current concerning the principle of limited liability as distinguished from unlimited liability. The success of the issue

was never in doubt, and long before the share lists closed applications had been received for 43,000 shares. They were even bought on the Stock Exchange itself before allotment, at premiums ranging from 30s. to 40s. per share. In January 1863, only a few months later, the Bank commenced operations through its agents at Port Elizabeth, and shortly afterwards the Commercial Bank of Port Elizabeth amalgamated with it, while the Colesberg Bank and the British Kaffrarian Bank were taken over in the same year.

**Increased Capital.**—The absorption of these colonial banks necessitated the issue of further shares, and by July 1863 the capital had reached £2,000,000, which was the maximum permitted by the Articles of Association. A special general meeting was called for April 1864, and this meeting authorised the increase of the nominal capital to £3,000,000, thus making the total paid-up £750,000.

**Dividends.**—Dividends of 11 per cent., 8 per cent., and 2½ per cent. were paid for the years 1863, 1864, and 1865 respectively. The period following (up to 1871) was essentially one of lean years, distributions at the rate of 4 per cent. were, however, made and a few thousands added to Reserve, until in 1868 the amalgamation account was wiped out by the appropriation of the balance of the Reserve Fund. One result was that, for the first and only time, the balance sheet of June 1868 showed nothing standing to that account.

In 1872 the dividend was raised to 6½ per cent., and thereafter a steady increase was recorded until 1902, when 18 per cent. was paid, and this high level has been maintained since that date.

**Bank Premises.**—In 1867 the Bank acquired its own London premises in Clements Lane, and these have been several times enlarged, now extending back into Nicholas Lane. In Capetown during 1870 the institution purchased the premises it had been leasing since 1861 in Adderley Street, and continued to occupy these until 12 years later it moved into its present building on the opposite side of the street.

**Progress.**—The next decade opened with symptoms of improvement, and a tremendous stimulant was given to trade and business of all kinds by the discovery of the Diamond fields. At the close of 1875 the Standard Bank was appointed sole banker to the Government of Cape Colony under arrangements which were formally sanctioned by the Cape Parliament. It held this position until the incorporation of the colony into the Union of South Africa in 1910, when it became the Bank of the Union Government in Cape Province.

Several of the local banks were absorbed about this period, but the most important consolidation of banking interests occurred in 1877, when the assets and liabilities of the London and South African Bank were taken over by the Standard Bank. Early in the same year the Transvaal was annexed to Great Britain and branches of the Bank were at once opened in that Province. Business expanded rapidly, and the banking account of the new Government was entrusted to the Standard Bank, which played an important part in the development of the country, making large cash advances to the Imperial authorities. This was a prosperous period for trade, and by 1879 the Bank had forty-three branches open, besides holding about two-thirds of the specie of Cape Colony in its coffers. In 1880 the paid-up capital of the institution was increased to £1,000,000.

**Another Crisis.**—Following the war in 1880, however, as the result of which the Transvaal was restored to the Boers, speculation in diamond shares, overtrading, diminished production, and political unrest were responsible for another crisis, and the measure of the inflation may be judged from the fact that imports, which in 1882 reached the high level of £1,372,000, had contracted by 1886 to £3,800,000 while wool exports receded in the five years ending 1885 from £2,881,000 to £1,420,000. A great number of commercial failures resulted, and by the middle of 1883 the Standard Bank held overdue paper amounting to £350,000, equivalent to 5 per cent. of the total bills in its hands, while apart from direct appropriations from profits it was compelled to take £130,000 from its Reserve Fund to provide for heavy losses all round. Other banks, however, were in a worse position, having overdue bills equal to 15 per cent. of their total holdings. In 1883 the name of the Standard Bank was altered to its present title.

**Trade Revival.**—In 1884 the completion of railway communication between the Eastern and Western Provinces had an important bearing in one or two directions. The Cape Government concentrated its Departments, including the railway management at Capetown, and it was finally decided to transfer the whole of the Bank's headquarters' staff from Port Elizabeth to that city, the Cape Government being at that time the Bank's largest customer, such removal being made on December 31, 1885. Another result of distinct advantage to the Bank's internal organisation was the restriction of note issue to three or four of the larger centres of business, instead of allowing every branch to issue its own notes. At the close of this decade, which was marked by a great improvement in the prospects of South African trade, due partly to the discovery of the goldfields in the Transvaal, the position of the Standard Bank was as follows: Paid-up capital £1,000,000, Reserve Fund, £530,000, total deposits, £9,014,000, total advances, £7,353,000.

**South African War Period.**—The Bank maintained a strong position during the years from 1890 till the outbreak of the South African War, although during 1896-97 the country passed through a period of great anxiety owing to the revolt in Matabeleland and Mashonaland, combined with drought and milderpest in many districts. The outbreak of war in 1899 naturally brought about the complete disorganisation of ordinary business, and many of the Bank's branches were at first isolated. In spite, however, of the general situation an agreement was arrived at between the Chief Paymaster and the Standard Bank by which all Imperial Army Bills on London were to be purchased at a uniform rate of 1 per cent. discount, and twelve months later the Lords of the Treasury expressed themselves satisfied as to its terms, "more especially in view of the admirable manner in which the business had been conducted, of which they took the opportunity of placing on record their appreciation." It was only the Bank's widely extended branch system that enabled it to provide funds where needed and at short notice for the whole field of operations in South Africa. Immediately after the war, trade was greatly overdone, and the general inflation which culminated in 1903 was followed by a severe depression lasting for a number of years. The Standard Bank throughout that time maintained its sound position, and in 1910 extended its branch system to British East Africa. The development of the institution during that period

is shown by the following figures. Branches and agencies in 1898, 93, in 1909, 153, in 1913, 215, while the extension of business was on a scale never previously witnessed in its history. The paid-up capital in 1913 had reached the figure of £2,000,000.

The following year witnessed the outbreak of the Great War, in the course of which over 800 members of the staff of the Bank served with H.M. Forces, and 104 gave their lives. The strain on the staff in South Africa was aggravated owing to the anxieties caused by the rebellion in that country in 1915. Although certain towns where the Bank has branches were for a time in the possession of the rebels no loss of assets occurred, and the rebellion was speedily crushed.

On the completion of the conquest of German South West Africa and the German territories of East Africa branches of the Bank were established in those regions. In 1920 the African Banking Corporation was absorbed by the Standard Bank, and an interest acquired in the Bank of British West Africa.

**Balance Sheet.** As was inevitable, the War was followed by financial stress and stagnant trade, with the result that, in common with other countries, South Africa experienced a period of acute industrial unrest. Notwithstanding these adverse circumstances, the Bank continued to progress, and it has reached the favourable financial position disclosed by the following balance sheet, published on March 31, 1925—

LIABILITIES	£	s	d.	£	s	d.
Authorised capital	10,000,000	0	0			
Capital subscribed, 445,833 shares of £20 each	8,916,660	0	0			
Called up £5 per share		2,229,165	0	0

A dividend of 7s per share on 445,833 shares (being at the rate of 14 per cent per annum) was paid absorbing £312,083 2s, leaving to be carried forward to next account the sum of 100,149 11s 4d.

At September 30, 1925, on the liability side of the issued statement of accounts for the half year the notes in circulation were placed at £505,765, deposit, current and other accounts, including profit and loss and provision for contingencies, £49,202,053, drafts outstanding and acceptances under credits, £2,068,344, and customers' bills for collection, £7,600,346. On the assets side, cash in hand and with bankers (including deposit of £2,457,908 with the South African Reserve Bank) was given as £6,982,463, cash at call and short notice, £3,105,000, native gold in hand and transit, £227,372, investments, £5,106,204, bills of exchange, £6,518,709, bills discounted, advances and other accounts, £31,598,109, remittances in transit, £2,010,300, customers' bills for collection, £7,600,346, bank property and premises, £1,314,795, stamps, stationery and open policies, £29,580. An interim dividend was declared of 7s per share (being at the rate of 14 per cent per annum), subject to income tax, out of the profits for the half year.

**Activities.** Every description of banking business is undertaken by the Standard Bank, including negotiation and collection of bills, foreign exchange drafts and letters of credit, purchase and sale of stocks, trustee and executor business, etc., while strongrooms are provided for the use of customers, and special departments undertake the assay and realisation of gold and all mineral ores.

**Branches and Agencies.**—The Bank has to-day more than 300 branches and agencies in Cape Province, Natal, Orange Free State, Transvaal, Basutoland, Rhodesia, South West Africa, Portuguese East Africa, Belgian Congo, Nyassaland, Kenya Colony, Tanganyika Territory, Uganda and Zanzibar, with agents and correspondents in all the principal cities of the world.

**Directorate.**—Mr William Reiersen Arbuthnot, Sir David Miller Barbour, K.C.S.I., K.C.M.G., Mr Edward Clifton Brown, Mr Stanley Christopherson, Mr Robert Edmund Dickinson, Mr James Fairbairn Finlay, C.S.I., Mr Solomon Barnato Joel, J.P., Mr Horace Peel, The Right Honourable the Earl of Selborne, K.G., G.C.M.G., Mr William Smart, and the Right Honourable Lord Sydenham, G.C.S.I., G.C.M.G., G.C.I.E., G.B.E., F.R.S.

**Offices.**—Head office 10, Clements Lane, Lombard Street, E.C. in South Africa. Adderley Street, Capetown.

**Cables.**—Capetown, Johannesburg, Durban and Mombasa—"Derby"  
(See illustration following page 34.)

## THE NATIONAL BANK OF SOUTH AFRICA, LTD.

**Inception.**—This important institution was established in the year 1890 as "The National Bank of the South African Republic," but in 1902 it was incorporated by Order in Council under its present title.

**Activities.**—Banking business of every description is transacted at all branches, and the institution acts as bankers to the Government of the Union of South Africa in the Transvaal, Orange Free State, and Natal.

**Development.**—The growth of the Bank has been aided by the absorption of other institutions, including in 1910 the National Bank of the Orange River Colony, in 1912 the Bank of Africa, and in 1915 the Natal Bank. Several branches were opened at this period, but were later abandoned, having proved unprofitable. The conditions resulting from the world wide trade depression subsequently caused many failures in South Africa, and reacted unfavourably on the volume of business done by the institution under notice. In spite of this, however, and notwithstanding the restricting influence of the War, the progress of the Bank has been steady. A scheme for the reduction of capital was put into effect in 1923, and the directors adopted a policy of caution. Bad and doubtful debts having been provided for, a reserve created and ample provision made for property depreciation, the Bank is now in a stronger position than ever. On December 25, 1925, the institution entered into an amalgamation agreement with Barclay's Bank Ltd., The Colonial Bank Ltd., and the Anglo-Egyptian Bank Ltd., thereby still further assuring its status.

**Financial Position.** Authorised capital, £2,800,000 (400,000 shares of £7 each, fully paid), subscribed capital, £2,075,500 (296,500 shares of £7 each fully paid). The Bank has purchased and holds 645 ex-empire shares. For the year ending March 31, 1925, the profits, including £28,127 10s, brought forward from last year, amounted to £244,411 0s 8d, after deducting bad and doubtful debts, and allowing for property depreciation. The directors, however, did not consider that it was yet advisable to modify their declared policy of establishing adequate reserves before resuming dividend distributions, and accordingly no dividend was paid for the year, the profits being allocated as follows: To Reserve Fund (raising it to £300,000) £150,000, to Pension Fund, £50,000, to balance to be carried forward, £44,411 0s 8d, total, £244,411 0s 8d.

**Directorate.**—Messrs James R. Leisk, C.M.G. (chairman and managing director), J. Emrys Evans, C.M.G. (vice-chairman), Alexander Aiken, Sir Drummond Chaplin, B.G.E., K.C.M.G., M.I.A., Mr Charles Maggs, Sir Ernest Oppenheimer, M.I.A., Messrs James B. Taylor, Henry O.K. Webber, Walter S. Webber, William Dunlop and Leonard Line, J.P.

**Head Office, Pretoria.**—General Manager, Mr George R. Paterson, assistant general managers, Messrs Harry Judson, Ernest L. Jackson, Alexander Sutherland, (Witwatersrand), and John H. Pagan (Natal) Secretary, Mr C. P. Mathews.

**London Committee of Management.**—Messrs Herman B. Sim (chairman), Arthur B. Gillett, George H. Raw, Richard B. Edwards and Morgan W. J. Bull.

**London Offices.**—Circus Place, London Wall, E.C.2, and 111, St. Martin's Lane, Trafalgar Square, W.C.2.

**New York Agency.**—44, Beaver Street, Wall Street District.

**Branches.** There are now over 350 branches, sub-branches and agencies in South Africa, and offices in London, New York, Antwerp, Bombay, and Mauritius, with agents and correspondents in all parts of the world.

(See illustration, page 37.)

### INSURANCE

The Insurance Act of 1923 placed all insurance matters in the Union on a common basis, and repealed the old colonial laws either wholly or in part. Its provisions had been previously discussed with insurance companies and others concerned. At the end of 1925 the returns which have to be made under this Act had not yet been circulated, those up to December 31, 1923, published by the Union Treasury Department, being of the Life Assurance Companies transacting business in Cape Province in accordance with the provisions of the Life Assurance Act, 1891 (Cape of Good Hope). The various figures quoted below are, consequently, in respect of life assurance only, having no bearing upon the large volume of accident, fire, motor car, workmen's compensation, burglary, plate glass, sickness, employers' liability, marine, livestock, and fidelity guarantee insurance business carried on by the leading general insurance companies, which operate either from their own offices in the principal cities or through agencies.

**COMPANIES.**—Following are the South African Assurance Companies which made returns for 1923 under the Cape of Good Hope Act, 1891: African Homes Trust, Ltd.; African Motherhood Endowment; Southern Life Association of Africa (see article, page 42); South African Mutual Life Assurance Society; South African National Life Assurance Company, Ltd.; Federal Assurance Society; United Provident Assurance Society; South African Liberal Life Insurance Company, Limited.

Among other life companies with offices in the Union are: The African Life Assurance Society, Ltd.; National Mutual Life Association of Australasia, Ltd.; Colonial Mutual Life Assurance Society; Norwich Union Mutual Life Office; Sun Life Assurance Company of Canada; Law Union and Rock Insurance Company, Ltd.

**OTHER COMPANIES.** In addition to the above-mentioned companies, the following important institutions do a large general business within their several spheres: African Guarantee and Indemnity Company, Limited; Alliance Assurance Company, Limited (London); Atlas Assurance Company, Limited (London) (see article and illustration, page 43); Board of Executors (Capetown); Caledonian Insurance Company (Edinburgh); Central Insurance Company, Limited (Capetown); Commercial Union Assurance Company, Limited (London); Employers' Liability Assurance Corporation, Limited (London); General Accident, Fire and Life Assurance Corporation, Limited (London); Gresham Life Assurance Society, Limited (London); Guardian Assurance Company, Limited (London); Liverpool and London and Globe Insurance Company, Limited (London); London and Lancashire Insurance Company, Ltd.; London Assurance, London and Scottish Assurance Corporation, Limited (London); Maritime Insurance Company, Limited (Liverpool); Merchants' Marine Insurance Company, Limited (Capetown); Netherlands Insurance Company of 1845, Limited (Amsterdam) (see article, page 45 and illustration, page 46); New Zealand

SOUTHERN LIFE ASSOCIATION, Capetown

(See letterpress, page 42.)

Insurance Company, Limited (Wellington, N.Z.) (see article and illustration, page 44), North British and Mercantile Insurance Company, Limited (London), Northern Assurance Company, Limited, Ocean Accident and Guarantee Corporation, Limited (London), Railway Passengers' Assurance Company (London), Royal Exchange Assurance Corporation (London), Scottish Union and National Insurance Company (Edinburgh), South African National Trust and Assurance Company, Limited (Capetown), Southern Cross Assurance Company, Limited (Melbourne), Standard Life Assurance Company (Edinburgh), Triton Insurance Company, Limited (Calcutta), Union and National and General Assurance Company of South Africa, Limited (Capetown), Union Insurance Society of Canton, Limited (Canton), Yorkshire Insurance Company, Limited (York) (see article following)

**GROWTH OF LIFE ASSURANCE BUSINESS.**—The progress of life assurance business in Cape Province may be observed from the following figures showing the policies in force and the sums assured in five year periods 1908, 78,606 and £21,050,312, 1913, 139,101 and £28,001,711, 1918, 232,387 and £36,091,380, 1923, 281,183 and £48,761,611. The average sum assured in the last-named year was approximately £75 per head of the European population, and of all races in Cape Province £18 per head.

**INSURANCE ACT, 1923.**—The Act applies to all persons or bodies of persons (other than local authorities, friendly societies, burial societies, and trade unions) carrying on insurance business in the Union. Provision is made for the registration of

insurance companies and for the lodging of security, which may in certain circumstances be increased or decreased, with the Treasury. Every company registered must have a chief office and a principal officer in the Union, and is required to render to the Treasury annually a duly certified revenue account, profit and loss account, and balance sheet. The classes of business subject to the provisions of the Act are accident, bond, investment, burglary, employers' liability, fire, industrial, life, livestock, marine, motor, and plate glass insurance. An actuarial investigation into the financial position of life insurance companies at intervals is provided for. Minors of eighteen years and over may insure their lives. Persons insured may, without consent of the insurance companies involved, engage in military or naval service in defence of the Union. Certain protection against life insurance policies being taken in execution by creditors of the insured is given. The contingency of life insurance companies amalgamating or life insurance business being transferred from one company to another is regarded. Companies having their head offices in the Union may be wound up under specific conditions in the event of their being proved insolvent. Certain requirements must be complied with by persons initiating insurance business in the Union or dealing with insurance in various other ways. There are penalties for infringements of the Act.

**POLICIES AND SUMS ASSURED.**—According to the returns for the year ended December 31, 1923 under the Act of 1891, the number of policies held by foreign companies was 94,699, as against 95,105 in 1922, and the sums assured totalled £18,547,890 in 1923, compared with

£17,790,189 in the previous year. The eight South African companies held 186,484 policies in 1923, compared with 190,047 in 1922, the total amount of sums assured being £30,213,715, compared with £30,171,967. The grand totals for 1923 were, therefore, 281,183 policies and £48,761,611 assured, the latter figure being £793,455 over the total recorded for 1922.

**TOTAL ASSETS.**—The total assets of South African and foreign insurance companies making returns for that year stood at December 31, 1923, at £14,062,690, compared with £13,260,446 on the corresponding date of 1922.

## REPRESENTATIVE INSURANCE COMPANIES

### THE SOUTHERN LIFE ASSOCIATION.

**Inception.**—This Association was founded in January 1891 by the late Mr William Elliott, who was its first manager, the original chairman of the board having been the late Dr Thomas Douglas, of Capetown.

**Development.**—Started as a Mutual Association without share capital or other financial backing, from the commencement its policy has been one of cautious and steady progress. In its first year a life assurance fund of £2,020, after debiting all expenses and revenue accounts for that year, was accumulated, and this amount was reserved out of a premium revenue of £4,363. By the end of its third year it had total funds (life and accident) amounting to £10,000 odd, and at the end of 1900 this had increased to £145,487. The first million was reached in 1913, just 22 years after the inception of the Association, the second in 1919 and the third in 1923. The valuation

YORKSHIRE INSURANCE CO. LTD., Capetown.

1 Head Office, Capetown.

ATLAS ASSURANCE CO. LTD

2. Branch at Johannesburg.

basis and the distribution of bonus have shown similar consistent progress. At almost every valuation the basis has been strengthened and the bonus increased. Throughout its existence the institution has never looked back, but has annually shown continuous expansion.

**Statistical.**—The last valuation was made on a  $\frac{3}{4}$  per cent net basis, the rate of interest being  $\frac{1}{2}$  per cent less than that for the previous valuation, by which alteration the basis of reserves was strengthened by £64,831. The result was that a compound reversionary bonus of 32s per cent per annum was declared. The rates of premium are remarkably low, and the chairman in his speech at the annual meeting in March 1924 stated that on a comparison with 77 offices the bonus, allowing for the lower premiums of the "Southern," was equivalent to a simple reversionary bonus of 45s per cent per annum on the basis of the average premiums of the said offices. Other figures for 1924 are: Total life policies in force, 20,909; total life sums assured, £12,535,989; total annual income, £632,634; total claims paid, £1,930,000; total funds, £3,396,600. At the time of writing (1925) the total funds amount to over £3,500,000, with a similar increase in all departments.

**London Branch.**—Bush House, Aldwych  
**Offices.**—Southern Life Buildings, St George's Street, Capetown  
(See illustration, page 41.)

#### THE YORKSHIRE INSURANCE CO. LTD.

**Inception.**—This company, established at York, England, in 1824, commenced operations in South Africa in 1905 under the control of Mr. Don McPhail, who two years

later resigned his position for health reasons. The Transvaal branch, under the management of Messrs Hemphill, Russell & Co (now Hemphill, Quinton & Co), and the Natal branch in charge of Messrs Champion & Co Ltd, were established shortly after the office at Capetown.

**Development.**—The growth of the company's business in South Africa has been most satisfactory, while the efficiency of its office staff and outside service give every reason to expect continued expansion in the future. In 1924 a new building was erected for the company in Capetown, while a site for a building has recently been purchased at the corner of Smith and Field Streets in Durban.

**Financial Position.**—The directors' report for the year ended December 31, 1924 showed that in the life department the number of policies issued was 1,878, against 1,980 in 1923. The gross new sums assured totalled £1,254,130, and reinsurance with other companies £86,432, leaving the net new sums assured at £1,167,698, additional single payments amounting to £20,406 net. The total net premium income of the department was £445,779. Claims by death and maturity, including bonuses, were £185,151, consideration received for annuities was £89,710, and the life and annuity fund was increased by £343,381 to £4,609,981.

The net premium income of the fire department amounted to £881,124 as against £872,957 in the previous year, and the losses were £439,812, a ratio of 49.9 as against 53.0 for 1923. From the balance, £95,000 was carried to profit and loss, the reserve for unexpired risks was increased to £352,450

and the balance carried forward, making the total fire funds £628,585.

In the accident and general account the net premiums amounted to £922,815, as against £866,740 for the previous year, the claims being £460,864. A sum of £80,000 was transferred to profit and loss, the reserve was increased to £377,883, while the amount of total accident and general funds stood at £572,714.

In the marine department premiums amounted to £491,823, compared with £442,905 in 1923, £15,000 was carried to profit and loss, and the fund brought forward was increased to £542,049.

**Capital.**—Authorized capital of the Company stands at £1,000,000, of which £132,410 is paid up, and the assets amount to £8,040,462.

**Head Office.**—St Helen's Square, York  
London office, Bank Buildings, Princes Street, E.C.2  
South African office, 40, St George's Street, Capetown

**Cables.** "Yorkshire," Capetown

#### ATLAS ASSURANCE CO. LTD.

**Inception.**—The Atlas, one of the leading assurance companies in the British Isles for 117 years, decided in 1885 to widen its activities by transacting business in overseas fields, and a few years later it commenced operations in South Africa by appointing an agent in Port Elizabeth.

**Development.**—In 1895 the institution purchased the fire branch of the Aegis Assurance and Trust Co of Port Elizabeth, under which company agencies were established in the principal towns of Cape Colony, Transvaal and the Orange Free State. In 1902 an independent branch was opened in

Capetown, and in 1905 the South African organisations of the Atlas and the Manchester Fire Office were amalgamated, the latter having already absorbed the business of the Commercial Assurance Co Ltd, of Capetown. In 1913 an accident department was opened, and in 1921 marine business was commenced. In 1918 the site and building now occupied by the company in Capetown were purchased, and shortly afterwards the ground in Johannesburg was acquired on which has been erected the fine offices of the branch in that city. From the first the Atlas has placed the security of policy holders before the distribution of dividends, with the result that the total security now exceeds £9,000,000, while the total annual income approaches the sum of £4,000,000.

**Activities.** The company in South Africa transacts a "composite" business, including

#### NEW ZEALAND INSURANCE COMPANY LTD.

**Inception.**—This important and progressive insurance company started South African operations in 1879 with an agency at Capetown conducted by the South African Loan Mortgage and Mercantile Co (since liquidated), the offices being in St George's Street, on the site of what is now the Southern Life Buildings.

**Development.**—Mr Malcolm Smith was the first manager in South Africa. He resigned in 1900, and was succeeded by Mr Frank W Wilson, who four years later returned to Australia. Mr Eric P Hudson followed, and retained the post until 1910, when he was appointed manager of the London branch. His successor was the present occupant of the position, Mr Sydney Smith Bell. Mr Bell came from the East

head office—55, St George's Street, Capetown.

**Branches.** There are branches in Johannesburg and Durban, which are managed by Mr B H Impey and Mr R B Somerset respectively.

Agencies have been established in all important towns throughout the country.

#### MESSRS. JOSEPH LIDDLE.

**Inception.**—This business was established by Mr Joseph Liddle in 1890 four years after the discovery of the goldfields, when he became chief agent for the Norwich Union Fire Insurance Society Ltd. In 1894 he was also appointed chief agent for the Employers' Liability Assurance Corporation. The enterprise has since that date rapidly progressed and to day ranks as one of the largest concerns in the country, transacting

#### NEW ZEALAND INSURANCE CO. LTD.

Company's South African Head Office Premises, St. George's Street, Capetown.

Head Office in Queen Street, Auckland, New Zealand.

fire, accident and marine insurance, and its activities extend over the whole of the southern portion of the continent.

**Branches.**—There are branches at Port Elizabeth, Johannesburg, Durban, Bloemfontein, and agents in East and West Africa, as well as in all the principal towns in the various territories controlled by the branches.

**Administration.**—Local board in Capetown Messrs J D Cartwright, M P C (chairman), J W Herbert, J P, W J Thorne and Sir Frederick Smith. Manager for South Africa: Mr Percy Wenban.

**Offices.**—Head office in South Africa: Atlas Building, corner of St George's and Castle Streets, Capetown. Other offices: Port Elizabeth, Main street, Johannesburg, 102 Commissioner Street, Durban, 21, Club Arcade, Bloemfontein, Baumann Square.

London branch, and is a well known and popular figure in Capetown insurance circles.

**Activities.**—The company undertakes all classes of fire, marine and accident insurance, and the sound conservative lines upon which its affairs are conducted are reflected in its continued and steady expansion.

**Financial.**—The strength of the institution's position may be gauged by its balance sheet as at May 31, 1925. The subscribed capital was £1,500,000, of which £900,000 was paid up, reserve fund, £525,000, and reserve for unexpired risks, £513,000. Investments stood at £2,185,838 2s 8d.; and cash in banks and in hand, £184,110 12s 7d. The balance sheet showed a profit on the year of £187,085 5s. 2d.

**Offices.**—The head office of the company is in Auckland, New Zealand. South African

every class of business and having branch offices in Capetown and Durban.

**Development.**—Realising the advantages of centralised control in South Africa, the Norwich Union in 1918 appointed the firm as general managers for the whole territory south of the Equator. Some time after the commencement of business Mr Horace Liddle became associated as a partner, and in 1908 Mr A H Liddle also joined the firm. Mr Horace Liddle retired in 1913, and in 1916 Mr Joseph Liddle ceased to take an active interest in the business. Since that date the entire management has devolved on Mr A. H. Liddle.

**Progress.**—The great advancement in insurance during the last 30 years is reflected in the progress of the firm, not only in fire, but also in accident business. This increasing

volume of operations was due to the enactment of the various Workmen's Compensation Acts, and was further augmented by the advent of the motor car.

**Policies.**—Where legislative and industrial changes have taken place the firm has always been prepared with policies suited to the altered requirements and conditions. It was the first to issue policies insuring motor cars in South Africa, and since then the companies represented by it have been appointed official insurers for that class of business to the Union Government of South Africa, as well as to many of the large mining groups. Naturally in South Africa mining insurance is one of the most important branches of business, and its varied requirements are capably handled by the firm.

**Agencies.** Messrs. Liddle are agents for the Union Marine Insurance Company Ltd. and the Merchants Marine Insurance Co. Ltd., and are also agents for brokers at Lloyds.

**Head Office.**—Corner House, Johannesburg, where practically the whole ground floor is occupied by a large staff.

#### THE NETHERLANDS INSURANCE COMPANY OF 1845 LTD.

**Inception.**—This company, which was established in the Netherlands in 1845, found it necessary to embody the year of establishment in its name as many smaller offices use the word "Netherlands" in their respective titles. In Holland the institution is known generally as the "45." Long represented in the Far East and the Americas, it has only recently opened branches in Cape Colony and Natal, though an agency in Johannesburg was started many years ago by Mr. P. C. BaerVELDT, the Netherlands Consul and still operates. The Capetown office (the headquarters of the company in South Africa) is under the management of Mr. G. A. Leyds, while Mr. A. C. van Massdyk is in charge in Natal.

**Financial Status.** The company is one whose financial soundness has always attracted foreign insurances and re-insurances. It was in the field of re-insurance that the institution first achieved an international reputation, and many foreign companies have utilised the re-insurance assistance of the company for the last forty or fifty years.

**Operations.**—In South Africa the company transacts every type of insurance, such as fire, burglary, automobile, third party, fidelity, workmen's compensation, sickness, etc.

**Financial.**—The total assets of the company amount to nearly £1,700,000. Fire and burglary premium income in 1924 was £493,353 (of which losses took £237,077), while expenses absorbed £206,724. Slight increases were shown in all departments over those for 1923. The expenses in the accident department gave the remarkably low figure of 24 per cent. A dividend of 22 per cent on the paid-up capital was declared, and assets were increased to £1,095,667.

**Head Office.**—The Hague, Holland.

Branches are maintained at Rotterdam, Amsterdam, Chicago and Batavia, while representatives are to be found throughout the world.

**Head Office in South Africa.**—South West House, Greenmarket Square, Capetown (See illustration, page 46.)

#### THE ROYAL EXCHANGE ASSURANCE.

**Inception.**—This well-known corporation was granted a Royal Charter on June 10, 1720, and started operations with marine assurance business at the Royal Exchange, London. In the following year fire and life risks were undertaken, the corporation thus being the oldest life office in the world.

The South African branch commenced operations in the Transvaal some 28 years ago.

**Development.**—Many South African insurance offices have been absorbed since the corporation commenced activities, its history has been one of steady progress, and it is to-day among the premier companies in the Union, owning buildings and property in all the principal towns of South Africa.

**Activities.**—Every type of insurance is undertaken by the corporation, including fire, life, sea, accident, plate glass, burglary, employers' liability, fidelity guarantees, motor car, annuities, third party, live stock, lift, boiler, and machinery, while it also acts as trustee and executor. Operations extend from Capetown to the Belgian Congo and Northern Rhodesia. The corporation has built up its assets to over £13,000,000 by sound judgment and care and the avoidance of all hazardous forms of speculation and investments.

**Directors.**—The directors of the South African branch are Messrs. George W. Beckett and Meyrick Bennett, the general manager being Mr. F. R. Clayton, who joined the company in July 1924.

**Offices and Branches.**—Head office, Royal Exchange, London, E.C. 3. Head office in South Africa, Royal Exchange Buildings, 68, Market Street, Johannesburg. (This building was formerly the home of the Transvaal Chamber of Mines, and the interior of the main office was formerly the Board Room.) The corporation also has branches at Durban, Royal Exchange Building, Smith Street, Capetown, Royal Exchange Building, 6, George's Street, Port Elizabeth, Lombard Chambers, Main Street, Bulawayo, Exchange Buildings, Selborne Avenue, and Nairobi, Ciccha Buildings, Government Road.

**Cables.**—"Foxhound."

**Bankers.**—The National Bank of South Africa, Ltd.

#### TRUSTEESHIP

A matter which, during 1925, excited general interest throughout South African commercial circles was the projected creation of the office of Public Trustee, a Bill concerning which was to be introduced during the 1926 session of Parliament by the Minister of Justice. As outlined, this office will not be a department of the Public Service, as in England, Australia or New Zealand, but any person from the public service appointed to the office is to retain his rights. It is laid down that the Public Trustee shall be a body corporate, and may, in his official name, sue and be sued, and hold and transfer property, movable and immovable. The general powers, duties, and functions of the trustee are to be specifically provided for in the Insolvency Act (see under "Commerce") or assigned by the Minister.

**ADMINISTRATION.**—At present there are a number of trust funds which are administered by the Public Debt Commissioners (e.g., the Post Office Savings Bank, Pension Funds, Sinking Funds, etc.), such funds having a total amount standing to their credit at March 31, 1924, of £40,484,625.

#### ROYAL EXCHANGE ASSURANCE.

1. Fine Premises at Durban.
2. Head Office Premises for South Africa in Johannesburg.
3. Spacious General Office at Johannesburg.

Further, the administration of the estates of deceased persons is vested in the Masters of the Supreme Court at Capetown, Pietermaritzburg, Pretoria, and Bloemfontein, having jurisdiction within the several provinces, and the Assistant Master at Kimberley, who has jurisdiction in the Griqualand Local Division of the Supreme Court.

**COMPANIES.**—For general trust purposes there are many companies and corporations carrying on business in the Union, and they undertake the administration of estates and properties either as executors or administrators in the case of absentee owners. While some of these companies act as real estate concerns only, others have acquired far-reaching powers to advance and borrow money, to liquidate joint stock companies and firms, and to act as trustees of insolvent estates. In general it may be said that the standing of these companies is a high one as indeed is essential in a country where long distances and imperfect communications entail very often the entrusting of important business affairs to other hands. Furthermore many estates and properties in South Africa are of so vast and complicated a nature that as in the well-known case of the late C. J. Rhodes, carefully formed Trust companies with wide powers are found to be necessary to deal with their administration.

#### REPRESENTATIVE TRUST COMPANIES

##### SYFRET'S TRUST COMPANY LTD.

**Inception.**—This enterprise was originally established by Mr. F. J. M. Syfret about 1850 and was continued by Mr. F. R. Syfret and Messrs. F. R. Syfret & Co. The present company was incorporated early in 1919 to take over the trust and agency business with the object of ensuring continuity.

**Capital.**—The subscribed capital is £100,000, in 1,000 shares of £100 each, of which £50 has been paid up on each share leaving uncalled capital of £50,000 as security for clients. In the six years following its formation the company established reserve funds to the extent of £53,000, in addition to which it carried forward to profit and loss account over £5,000 from its 1924 accounts. The company has lately had new offices built to its requirements in Capetown, and its importance is shown by the fact that it now administers, on behalf of clients, funds amounting to over £2,300,000.

**Activities.**—The company undertakes the investment of capital on mortgage or otherwise, executorships in deceased estates, administration of properties for residents and absentees, trusteeships of insolvent estates, liquidatorships of mercantile and other businesses, purchase and sale of landed property, and agency work of every description. It has a large connection, and amongst other important interests it acts for the trustees of the estate of the late Cecil John Rhodes.

**Directors.**—Messrs. Edward Ridge Syfret (chairman), G. L. D. Orpen (managing director), C. L. Short and H. A. Jesse (directors and joint secretaries). Mr. Syfret is the chairman of "The Cape Times" Ltd. and of the Local Board of the Capetown Tramways, also a director of the Rhodes Fruit Farms, Ltd., and the South African Mutual Life Assurance Society.

**Offices.**—Syfret's Trust Co. Ltd., corner of Wale and Burg Streets, Capetown (See illustration, page 48.)

**THE GRIQUALAND WEST BOARD OF EXECUTORS TRUST & AGENCY CO. LTD.**

**Inception.**—This board, established in 1876, was founded in the early days of the diamond fields, when diggers required an institution in which they could place absolute

trust for the conduct of their affairs, the supervision of their interests and the management of their estates, including very often the guardianship of their children under age.

**Development.** Business growing rapidly, it was found necessary in 1902 to extend operations in order that the investment of

clients' funds should be absolutely assured. The Johannesburg office was therefore opened.

**Activities.** — The board undertakes executorship and guardianship, managership of estates, liquidation of companies, collection of rents and dividends, purchase and sale of

GRIQUALAND WEST BOARD OF EXECUTORS TRUST & AGENCY CO. LTD.  
Head Office of the Company, Kimberley.

properties investment of funds on mortgage, fire, life and accident insurance, shipping agency, advances to clients, keeping clients' accounts, compilation of income tax returns, secretarial duties, and management of companies

**Capital.**—Nominal, £50,000, subscribed, £10,000, reserve fund, £11,000. Trust monies held by the board for clients' account amount to over £300,000

**Directorate.**—Messrs Louis F. Lezard chairman (alternate, Arthur Pett), James T. Vigne (alternate, H. L. du Toit), James Moir (alternate, W. H. Adams), Alpheus F. Williams, and W. H. Carter (alternate, M. E. Doherty). Secretary Mr J. J. T. King, J.P.

**Offices.**—Head office—Main & Stockdale Streets, Kimberley. Johannesburg office—95/100, Exploration Buildings, P.O. Box 334. Cables—"Executors" Kimberley.

**Bankers.**—The Standard Bank of South Africa, Ltd.

#### THE COLONIAL ORPHAN CHAMBER AND TRUST CO.

**Inception.**—This company was established in 1856, nearly 24 years after the abolition of the old State Orphan Chamber by Royal Charter in 1832.

**Development.**—The company is a private partnership constituted under deed of settlement and during 60 years has grown steadily both in extent and in the confidence of the public until to-day it is one of the largest of its kind in the Union of South Africa or Rhodesia.

**Capital.**—The capital of the company is £10,000, and the reserve funds now stand at £370,000, while the total amount of funds at present under its administration and control inclusive of landed property exceeds £4,500,000, a notable index of the success which has attended its operations.

**Activities.**—The company undertakes the administration of estates and properties as executors, administrators, tutors, curators, trustees of insolvent estates and under ante-nuptial contracts, inspectors, assignees, receivers, agents for residents and absentees, and liquidators of joint stock companies and firms. It also advances money on first mortgage of landed property and pledge of mortgage bonds, invests capital, buys and sells landed and other property and collects house rents, interest on bonds and other securities, besides transacting every description of trust and agency business. In addition, the company has a Fidelity Guarantee Branch, which issues policies as securities for the honesty, integrity and fidelity of all classes of officials and employees on advantageous terms. These policies are accepted by the Imperial and Union Governments and by all employers throughout the country.

**Fund Investments.**—No element of speculation is allowed to enter into the management of the company's affairs or of those of its clients, and the investment of funds is effected only after receiving the careful consideration of the directors, who have all had practical experience in financial, commercial and legal circles.

**Administration.**—The company is under the management of its secretary, supervised by a Board of Directors, constituted as follows: Messrs. C. Christian Silberbauer (chairman), H. J. Dempers (deputy chairman), H. R. Arderne, W. Runciman, C. Marais, R. H. Parker and Dr. A. Marius Wilson.

**Offices.**—4, Church Square, Capetown. Cables—"Fidelity."

**Bankers.**—The Standard Bank of South Africa, Ltd.

#### THE BOARD OF EXECUTORS.

**Inception.**—This Board was established as the result of a meeting of citizens of Capetown held on August 22, 1838, and the first

the estates of deceased persons can be expeditiously administered in accordance with the wishes of the deceased and the laws of the country, to act as guardians for minors, to administer trust funds, to act as agents for individuals, and to enable the public to invest money on deposit at the highest current rate of interest consistent with absolute security.

THE COLONIAL ORPHAN CHAMBER & TRUST CO., Capetown  
View of Head Office.

public business was transacted on September 4 of the same year, while an Act of Parliament for the regulation of its affairs was published in the Government Gazette of July 12, 1859.

**Objects.**—The chief objects of the organisation are to provide a means whereby

**Other Activities.**—The Board acts for purchasers and sellers in buying farms etc., and emphasises the necessity of consultations regarding their requirements before actual dealings take place. It is also chief agent for the Law Union & Rock Insurance Company in the Western Province.

BOARD OF EXECUTORS: Fine Premises, Capetown.

**Capital and Funds.**—The original capital of the Board of Executors was £27,000 and the reserve fund amounts to £170,000, while funds under administration exceed £3,000,000. The shares, with an original face value of £30, now stand at £337, an indication of the confidence which the public places in the soundness and efficiency of the Board's management.

**Directors.**—Dr A. H. Petersen, chairman; Messrs. Frank Molteno, J. J. Michau, Dr G. B. S. Darter and Mr J. B. Kayser, Secretary, Mr H. W. Baumgarten.

**Offices.**—Corner of Adderley and Wake Streets, Capetown. Cables: "Board," Capetown.

#### THE BLOEMFONTEIN BOARD OF EXECUTORS & TRUST CO. LTD.

**Inception.**—This Board was established at Bloemfontein in 1868. South Africans having long since recognised the advantages of appointing old established boards of directors and trust companies as executors and administrators of their estates, the company under notice has enjoyed the confidence of the public for over half a century.

**Activities.**—The business of the institution embraces the liquidation and administration of estates of deceased persons, trusteeships and guardianships, trusteeships in insolvent and assigned estates, liquidation of companies, land and house agency, sale and purchase of landed property, auditing, accountancy, fire insurance, workmen's compensation insurance, fidelity guarantee, income tax returns, investment of capital, savings bank, fixed deposits, special investments, and loans.

**Financial.**—Authorised Capital—£10,250; uncalled capital, £7,175; reserve fund, £17,000.

BLOEMFONTEIN BOARD OF EXECUTORS & TRUST CO. LTD.  
Attractive Premises, Bloemfontein.

Net profit for year 1924, £6,006 3s 11d. Special investments for clients, trusts and estates amounted to £790,172 12s 11d.

**Branch.**—One has recently been opened at Maseru.

**Directorate.**—Messrs. Ivan H. Haarburger (chairman), A. G. Barlow, M.L.A., John Reid, and C. A. Beck (adv.) Secretary, Mr H. Scrivenor.

Maseru Branch, Advisory Board Mr G. R. Hobson, local secretary, Mr C. P. Heney.

**AFRICAN BOARD OF EXECUTORS AND TRUST COMPANY LIMITED.** Head office, Law Chambers, Church Square, Pretoria. Founded in 1893. Paid-up capital, £10,000; uncalled capital, £40,000. Funds administered in 1925 were: negotiable securities, £800,000; landed properties, £200,000. Business: administration of estates, investment of capital and general estate operations. Bankers: Standard Bank of South Africa, National Bank of South Africa and Netherlands Bank of South Africa. Cables: "Board," both for Pretoria and Johannesburg.

**BOURKE TRUST AND ESTATE COMPANY LIMITED.** Bourke Trust Buildings, St. Andries Street. Undertakes management, liquidation, and administration of estates, the raising of loans, the collection of rents and insurance and other general agency business. Bankers: Standard Bank of South Africa Limited. Telephone No. 67. P.O. Box 321, Pretoria. Cables: "Finance". Codes: A.B.C. 6th Edition Broomhall, and Western Union Telegraphic.

UNION BUILDINGS, PRETORIA.

## PROVINCE OF THE TRANSVAAL

**T**HE boundaries of the Transvaal, which is one of the two inland provinces of the Union, are in the main those of the old South African Republic, as settled by a series of conventions between the British Crown and the Boers of the Transvaal. They differ however, in that the two districts of Utrecht and Vryheid were transferred to Natal after the war of 1899-1902. The area of the Province is 110,450 square miles, or rather less than that of the United Kingdom. Geographically a sub-tropical country, it has, in fact, a continental temperate climate owing to its high level above the sea. On the elevated veld the winters are very cold and dry, the average rainfall being about 21 inches. Only parts of the bush or lower veld are unsuitable for Europeans. The principal ranges are the Lebombo Mountains, which border Zululand and Portuguese East Africa, and the continuation of the great Drakensberg Range, which culminates in the Mauchberg (near Lydenburg), the highest point in the Province. The chief rivers are the Limpopo and the Vaal, separating the Transvaal from Southern Rhodesia and the Orange Free State respectively.

**ADMINISTRATION.**—The Provincial Council of the Transvaal, which sits at Pretoria, consists of 25 members, one for each of the electoral divisions into which the Province is divided. The electorate includes all adult males, native born or naturalised British subjects, who have resided six months

in the Province, there being neither property nor education qualification. The Transvaal has always set its face resolutely against granting a coloured franchise. As in the other provinces of the Union, the law in force is Roman Dutch, with later modifications. Justice is administered by the Provincial Division of the Supreme Court of the Union, consisting of a Judge President and six judges, and there is a Local Divisional Court for the Witwatersrand consisting of a Judge of the Supreme Court. That court has unlimited criminal jurisdiction and a wide civil jurisdiction within the Witwatersrand area, appeals from it lie in most cases to the Appellate Division.

The present Administrator of the Province is the Hon. Jan H. Hofmeier, M.A.

**DISTRICTS.**—For purposes of administration the Transvaal is divided into 23 districts, the most important of which are Johannesburg, Germiston, Boksburg, and Krugersdorp, making up the Rand. "The Rand" is a narrow strip extending for about 40 miles from Krugersdorp in the west to Springs in the east, Johannesburg being in the centre. It is situated on nearly the highest elevation in South Africa, and the whole strip is covered with mining towns and villages. The 19 country districts, starting from the south and from east to west, are Wolmaransstad, Lichtenburg, Bloemhof, Potchefstroom, Heidelberg, Standerton, Wakkerstroom, Piet Retief, Ermelo, Bethal, Marico, Rustenburg, Pretoria,

Middelburg, Barberton, Carolina, Lydenburg, Waterberg and Zoutpansberg.

**LOCAL GOVERNMENT.**—Municipal government in the Transvaal hardly existed before the war of 1899-1902, but has since been definitely established. In 1923 there were 22 town councils, the municipal franchise for which lies in the ownership of rateable property of the assessed value of £300, or residence for a period of 12 months, but that franchise is like the parliamentary franchise, restricted to white adults, being denied both to aliens and to coloured British subjects. There were also 30 village boards.

**AGRICULTURE.**—The Transvaal is one of the greatest, if not the greatest of all mining centres, but rich as it is in minerals, it is even richer in farming resources. The enormous wealth which in little more than a generation has been taken from the mines constitutes a toll few countries have yielded in a century, yet it is less than what the farms may be made to furnish. In fact, the Transvaal is essentially a farming country, though a large number of its population is not a farming one, the agricultural industry having to a great extent fallen into dis-favour with the extraordinary development of the mineral riches of the Province.

In an area containing such varieties of altitude, soil, and climate, and on the whole such a sufficiency of water, production is naturally good. Practically every agricultural product of South Africa can be grown in the Transvaal, from cereals to the

coffee, sugar, and even rubber of the Tropics. To begin with, the Transvaal is one of the great maize-growing districts of the Union, the average production of the province being approximately 3,620,000 bags per annum. In the warmer valleys apples, peaches, and oranges flourish, gardens produce luxuriantly, sisal hemp grows well, maple peas yield heavily in winter and can be grown as a rotation crop between plantings of maize, wheat is raised successfully on the irrigable lands north of the Magaliesberg, linseed thrives on the high veld. In particular, the Transvaal is the natural home of two of the great industries from the development of which the Union expects so much—tobacco and cotton. The figures of production of the leading crops cultivated in the year ended August 31, 1924, were as follow—

Maize	639,453,000
Kaffir Corn	27,719,000
Wheat	33,405,000
Oats	4,980,000
Barley	1,683,000
Rye	585,000
Potatoes	78,230,000
Ground Nuts	8,308,000
Cotton	3,897,000
Tobacco	5,609,000

The total area under cultivation as at August 31, 1924, was 1,442,874 morgen (about 21 acres).

(See also general article on "Agriculture," and special articles on "Cotton," "Maize," "Tobacco" etc.)

**COMMERCE.**—See general article

**FINANCE.**—The ordinary revenue of the Transvaal Province for a recent year was £1,523,167 (compared with £1,873,625 in 1921-22), to which must be added the Union Government subsidy of £1,456,936, making a total revenue of £2,980,103. The leading items of revenue were Poll tax £304,840, native pass fees, £338,660, licences, £232,491, and employers' tax, £172,185. The total ordinary expenditure amounted to £3,272,862, as against £3,430,638 in 1921-22, the principal items being, Education, £2,598,663, hospitals and poor relief, £366,968, and roads, bridges and works, £200,955.

**INDUSTRIAL PRODUCTION.**—The number of factories in the Transvaal increased from 1,157 in 1915-16 to 2,475 in 1923-24, of which the gross output in the last named 12 months was valued at £28,793,210. Of the total, over £25,000,000 was the value of the output of factories in the Witwatersrand area. In this comparatively restricted area industries of all kinds have sprung up to meet the requirements of a large population, the chief class of industry being that connected with engineering (including cement works), but generally speaking there are factories and workshops dealing with every kind of product. The last industrial census showed that there were on the Witwatersrand 179 establishments for the manufacture of vehicles against 76 in Capetown, and 310 connected with food and drink against 253 in Cape Province and 65 in Durban. The growing of "Transvaal tobacco" has resulted in the erection of many extensive factories, at which large numbers of workers are employed. Coincident with the development of the cotton industry, cotton "gins" have been erected in various parts of the district, and a large factory is successfully operating in the making of starch and other maize products.

**MINERAL PRODUCTION.** The mineral production of the Transvaal in 1925 was valued at some £50,000,000 out of an aggregate for the Union of £60,000,000. This output compares with a total of £48,000,000 for 1924. Of the 1925 figure the gold output alone was placed at £40,767,982, the total value of this product from the earliest dates of existing records up to December 31, 1925 being the enormous one of £845,000,000. Apart from gold, the Transvaal in 1925 produced 7,399,378 tons of coal, valued at £1,863,382, and diamonds to the value of £2,214,122. The 1925 output of the Transvaal gold mines was the highest yet recorded 9,599,702 fine oz., against 9,574,918 oz. in 1924. (See also general articles on "Mining and Minerals," "Diamonds," and "Gold.")

**PASTORAL INDUSTRY.**—Some of the best ranching areas of the Union are situated

in the Northern Transvaal, particularly in the districts of Waterberg, Zoutpansberg, Pietersburg, and Lydenburg, and near Rustenburg, Marico, and Barberton. In 1924 there were 2,111,837 cattle in the Province out of a total of 9,906,274 for the Union. The breeds most favoured are the Afrikaner and the Friesland Sheep in 1924 numbered 3,473,394, and the production of wool therefrom was 15,888,992 lb. Goats totalled 456,311, pigs 163,972, and ostriches 850. The last poultry census in 1922 returned 2,649,654 fowls, 124,516 ducks, 52,250 geese, and 71,223 turkeys.

**POPULATION.**—The population of the Transvaal at the census of 1921 was 2,087,636 of all races, 1,159,430 of these being males and 928,206 females. The racial proportions were 543,485 Europeans and 1,544,151 non-Europeans, the latter being sub-divided as follows: Bantu, 1,495,869, Asiatic, 15,991, Mixed and other, 32,291. The European population of the Province rose from 113,713 in 1890 to 297,277 in 1904, to 420,562 in 1911, and to 543,485 in 1921. The Witwatersrand gold mining area, comprising the Districts of Springs, Benoni, Boksburg, Germiston, Johannesburg, and Krugersdorp, contains approximately one-sixth of the total population of the Union, and nearly one-half of the European population of the Transvaal Province.

**VITAL STATISTICS.**—In 1923 there were 15,539 European births registered in the Transvaal, compared with 16,370 in 1922, and 5,128 non-European, compared with 5,073 in 1922. The figures of non-European births are however, only partial. For Europeans the birth-rate has shown a declining tendency, being 27.26 in 1923, as against 29.27 in 1922 and 30.43 in 1921. The European death-rate for 1923 was 10.12, the number of deaths registered being 5,771, compared with 5,164 in 1922. Deaths of non-Europeans totalled 9,682. The infant mortality rate for Europeans was 85.14 compared with one of 82.11 for the whole Union.

**RAILWAYS.**—(See general article on "Railways.")

CHURCH SQUARE, PRETORIA.

## CITY OF PRETORIA

**P**RETORIA, the Administrative Capital of the Union of South Africa and the headquarters of the Provincial Administration of the Transvaal, was founded in 1855 and named after Andries Pretorius, the last of the famous leaders of the Great Trek, whose son, M. W. Pretorius, was the first President of the Republic. It was the younger Pretorius who bought from two farmers a piece of land which lay near the foot of the Magaliesberg, on the banks of a small stream called the Aapies, or "river of little apes." When, in 1860, union with the Republic of Lydenburg was established, Pretoria became the seat of Government, and such, with varying fortunes, it has since remained. Years of peaceful progress were followed by the gold discoveries on the Witwatersrand, which brought an alien population in their train, grievances, and the War of 1899-1902. Of that war, the circle of forts, built at intervals on the hills round the city, is an interesting relic. Since becoming the Administrative Capital of the Union, Pretoria has been architecturally embellished and the city has grown most appreciably. To-day, with a population of nearly 75,000, it is perhaps the most beautiful inland city in South Africa, being admirably planted and laid out with trees and gardens, and boasting a pleasant climate.

**BACTERIOLOGICAL STATION.**—A few miles outside Pretoria is situated the world-famed institution for the study of animal diseases—the South African Bacteriological Station. It is a branch of the Union Agricultural Department, and was erected at a cost of £60,000, which, in an extensive stock-breeding country, where without adequate protection the ravages from disease might entail the loss of millions of pounds, is probably one of the best investments ever made. The station is the headquarters for continuously investigating and administering measures to check stock diseases of all

kinds, and under the care of some of the most accomplished veterinarians of the age has done most useful work.

**BUILDINGS.**—Among Pretoria's many handsome public structures, the Union Building, the headquarters of the Administrative Government, ranks first, being perhaps one of the finest architectural conceptions south of the Equator. It consists of three main sections grouped together, the eastern and western rectangular portions being connected by a large semi-circular colonnade block, while from the points of contact rise two dome-capped towers, each surmounted by a figure of Atlas. The design throughout is marked by extreme simplicity. The building is of South African freestone, obtained from the Orange Free State and Transvaal, set on a base of rough Transvaal granite. As far as possible only materials in South Africa were used in the construction, Rhodesian and South African hardwoods having been utilised for most of the interior fittings and furniture.

Overlooking Church Square, in the centre of the city, is the simple yet dignified Palace of Justice, the corner stone of which, as also that of the Provincial Council Offices opposite (formerly the South African Republic Government Buildings), was laid by President Kruger. The Provincial Government building occupies one of the finest sites in Pretoria, and the figure of Liberty upon its central turret is a conspicuous landmark.

The Railway Station is another of Pretoria's imposing buildings, with a most attractive approach. The Municipal Offices are at present inconveniently housed in Pretorius Street, but a new and artistic Town Hall is already planned, to cost about a quarter of a million. Other fine buildings are those of the General Post Office, the new Geological Museum, and the University.

**CHURCHES.**—Pretoria is a cathedral city and the seat of a bishop, the fine Angli-

can Cathedral dedicated to St. Alban being in Schoeman Street. The Roman Catholic Church, with extensive school and convent buildings attached, stands in spacious grounds in Koch Street (South). Other edifices are the Dutch Reformed Church in Koch Street (North), off Church Street West, the Gereformeerde Kerk and Hervormde Kerk in Church Street, the Presbyterian Church in St. Andries Street, the Lutheran Church in Skinner Street, the Christian Science Church in Schoeman Street, and many suburban and native churches of various denominations. The Jewish Synagogue, in Market Street (North), was built in 1898 at a cost of about £6,000.

**CLIMATE.**—Pretoria lies in latitude 25° 45' south and longitude 28° 12' east, at an altitude of 4,471 feet. It occupies a long, narrow, shallow valley situated between two low ranges of hills, which run roughly from east to west, and thus protect it from the prevailing winds. Taken all the year round, the climate is almost perfect, being apart from a few hot days in the middle of summer, mild and equable. The mean temperature for the year is 62.5 F., ranging from 71.8 F. in January to 51.7 in July. The average annual rainfall is 29 inches, occurring on about 90 days.

**EDUCATIONAL FACILITIES.**—Apart from the Transvaal University (see "University"), Pretoria offers very many educational facilities. The two institutions making special provision for secondary education are the High School for Boys and the High School for Girls. The former is beautifully situated on the side of the Kopje to the south-west of the town, it is fully equipped and staffed for educational purposes, and has accommodation for about 250 pupils. The Girl's High School, between Visagie and Skinner Streets, has an average enrolment of 320 pupils. The Normal College in Rissik Street, is the principal training

1. CHURCH STREET, PRETORIA, looking towards the Square.
2. CHURCH STREET, PRETORIA, looking East, Henwood's Fine Store on Right.
3. MARKET STREET, PRETORIA, looking towards the Railway Station.

college of the Transvaal. Another leading educational institution is the Pretoria Trades School and Polytechnic, whose evening classes are very popular.

**FIRE BRIGADE.** The Fire Department of the city is housed in a fine building at the corner of Koch and Minaar Streets, and cost £30,000 to erect. The brigade was established in 1902, and the fire losses in that year amounted to £30,843. They have steadily decreased year by year, and now total a comparatively low figure. There is an efficient Ambulance Department under the control of the brigade, and about 400 cases are attended to annually.

**HOSPITALS.** The fine Public Hospital, erected close to the old Republican Hospital, stands about a mile from the city. It is supported by the Provincial Government. To the west of the town, beyond the Cemetery and Racecourse, is the Pretoria Mental Hospital, the largest in South Africa. There is a Leprosy Hospital some seven miles west of the town.

**KRUGER MEMORIAL.** On Oct. 10, 1925, the statue of President Kruger, which formerly stood unfinished in Prince's Park but had been removed for completion to Station Square, was unveiled by Mrs. Steyn, widow of President Steyn of the old Orange Free State, in the presence of the Earl of Athlone, Governor-General, the Prime Minister, General Hertzog, and the Ministry. The statue, which is by Anton Van Wouw, South Africa's leading sculptor, represents the President in the conventional frock-coat and top hat in which he always dressed. The four massive supporting figures, which were, during the Anglo-Boer War, stranded at Delagoa Bay and then conveyed to England by order of Lord Kitchener, were in 1923 restored to the Union as the result of a direct appeal to His Majesty the King by General Smuts. Near the memorial the President's old house, with its famous stoep, is to be converted into a museum.

**LIBRARIES.**—The State Library in Market Street is the old "Staats Bibliotheek" of the Transvaal Republic, and very successfully fulfils its functions. It is also a depository for official publications, and contains among the 60,000 odd books and documents many valuable collections dealing with the history of South Africa, and particularly of the Transvaal, from the earliest times. Leading departmental libraries are those of the Agricultural Department, the Supreme Court, and the Legislative Council.

**MINT.**—Since January 1, 1923, the Pretoria Mint (formerly, under the South African Republic, the Transvaal Mint) has been a branch of the Royal Mint, for the purpose of the manufacture of the British sovereign and half-sovereign. The new Mint stands on the site of the old gaol in Visagie Street, and its erection cost about £200,000.

**MUNICIPAL HISTORY.**—Responsible municipal government in Pretoria was first contemplated in 1880, when a municipal election was actually held and a Dorp Raad was formed. The first Transvaal War, however, stopped any further activities, and from then onwards the municipal affairs of the town were controlled chiefly by the Landdrost, or Magistrate, assisted by Commissioners, until in 1897 the late President Kruger appointed a temporary Town Council. The outbreak of the Second Transvaal War and its result brought a Military Government into the city, but in 1902 a nominated Town Council was created, and in 1903 a Municipal Elections Ordinance conferred responsible municipal government upon Pretoria. Until 1912 the municipality re-

mained without the powers possessed by every other municipality in the Transvaal because of its refusal to come under a new ordinance which automatically repealed the old *Stads Regulations*. By these (which still remain in force) the use of the foot-paths is forbidden to natives and coloured persons. In spite, however, of these earlier disabilities the city progressed rapidly, and the Council has ever been active in devoting itself to the needs of a growing population.

**MUSEUMS.**—The Transvaal Museum occupies a site in the grounds of the Zoological Gardens, and is noted for its many collections of South African curios and relics, the historic memorials of the South African Republic being especially interesting. Native relics include many remnants of prehistoric man, Bantu assegais, and medicine-man charms, and there is a good collection of stuffed animals and birds.

The new Geological Museum is housed in the fine granite building facing westward which stands on the right side of the road leading from the Station to Church Square. The geological and other exhibits are extremely interesting and instructive. There is also the nucleus of an Art Gallery in this building which will no doubt soon be considerably developed.

**PARKS AND GARDENS.** The principal parks of Pretoria are Burger's Park and Prince's Park. Burger's Park, near the Railway Station, is only small, but is delightfully laid out, having been originally planned in 1880 as a botanical garden. Prince's Park, which was named by Princess Christian in memory of her son who fell in the Anglo-Boer War of 1899, lies to the west of Church Square and adjoins the tramway. Part of it is used by the Agricultural Show authorities, and it also contains football grounds, tennis courts, and a bowling green. The Berea Park belongs to the Railway. Three miles from Church Square lies Fountains, whence the city obtains its supply of water, and which the municipality is gradually converting into a very beautiful and extensive natural park. The scheme includes the erection of a number of small bungalows, which are to be let to those who wish for a healthful and quiet holiday not too far removed from the Capital.

**POPULATION.**—The population of Pretoria was returned at 74,052 by the census of 1921. Of this number, 45,361 were Europeans, 24,794 Natives, 1,757 Asiatics, and 12,643 mixed and coloured. In point of population Pretoria is now the fourth city of the Union.

**SPORTS AND AMUSEMENTS.**—From racing to croquet, every kind of sport is patronised in Pretoria. The Racecourse adjoins the Prince's Park. In the winter Rugby football, and in the summer cricket, are the favourite games, and votaries of these are amply catered for on the Eastern sports-ground. Here are four large Rugby grounds, which have been planted with kikuyu grass from East Africa in order to give a satisfactory turf. Here also are decided the South African tennis championships. The Berea, Caledonian, and other parks provide generous facilities for cricket, Rugby football, tennis, bowls, and Association football. Three miles west of the city is the Municipal Golf Course, one of the best in the Union, where a fine club house makes provision for the needs and pleasure of its members.

**STREETS.**—Most of the streets of Pretoria are laid out in regular parallelograms, and many of them have been planted with fine

avenues of oaks, willows, jacarandas, palm and plane trees. Consequently the city thoroughfares are in summer always cool and shady.

From the Railway Station the broad Market Street leads directly to Church Square, which is the heart of Pretoria. Here it is crossed at right angles by Church Street, which, running east and west, is the main thoroughfare of the city and contains most of the leading business houses and shops. In Church Street West is the house of the late President Kruger and also the Dopper Kerk where he used to preach, and in sight of which his body was laid to rest after being brought from Holland.

**TRAMWAYS.** Established in 1910, the Pretoria electric tramways are owned and controlled by the Municipality. There are 15.75 miles of track, and the total capital

The College Buildings, surrounded by ample recreation fields, are situated near Rissik Station. They consist of two detached blocks, which, however, are only a portion of a larger design to be completed when the growth of the University warrants it. The front block is Byzantine in style—two storeys in height, and contains classrooms, biological and geological laboratories, lecture rooms, library, a large lecture hall, professors' rooms, and offices. The back block is a single storey building, and is occupied by the departments of chemistry and physics; it contains also two lecture rooms. The institution is an autonomous body, with an independent council and constitution. The staff consists of professors in Latin, Greek, English, Dutch, philosophy, economics, history, mathematics, physics, and chemistry, and a competent body of lecturers in other subjects.

F. DEY, Pretoria  
A recent Contract. (Southern Life and Bourke Trust Buildings.)  
(See *letterpress*, page 56)

expenditure to a recent year was £209,263. The number of passengers carried was 6,882,662, but there was a deficit on that year's working of £2,000, revenue amounting to £87,565 and expenditure to £90,174.

**UNIVERSITY.**—This institution is the chief centre of higher education in the Transvaal, and is fully equipped to prepare pupils for all university examinations above the matriculation, and up to and including the degree of Master of Arts. Although the University was only founded in 1908, many of its students have won their way (largely by means of the Rhodes Scholarships) to Oxford and the principal Universities of Europe and America.

**VALUES.**—The valuation of property within municipal limits in 1924 was about £11,000,000. The number of properties was 7,950, and the municipal revenue was £523,000. The assessment rates on land and buildings amounted to £136,000.

**WATER SUPPLY.**—The water supply of Pretoria is derived from a series of dolomite springs having their outlet on the portion of the farm Groenkloof locally known as the "Fountains Valley," at an altitude of some 150 ft. above Church Square, and three miles distant. At present the approximate discharge of the combined fountains is 6,000,000 gallons per diem. During the period covered from August to December

POLLEY'S TRANSVAAL HOTEL, Pretoria.

2. Beautifully appointed Lounge.
3. New Dining Room recently completed.

the daily consumption of the community is roughly 4,000,000 to 5,000,000 gallons. There is practically no restriction placed upon the domestic consumption of water by the inhabitants of Pretoria. Meters are only used on government institutions, hotels and large business premises. Before any meter charge is made against the Government such users are entitled to 100,000 gallons of water per diem free of charge. The South African Railways are permitted to draw 600,000 gallons of water per day free of charge, but their consumption at present is far below this figure. Water is now delivered to the city by means of three mains, varying in diameter from 18 inches to 30 inches, but the total flow of the springs will at an early date be delivered by means of a 3-foot diameter reinforced concrete aqueduct, and the water will be stored in a service reservoir having a capacity of 6,000,000 gallons. From this point water will be distributed throughout the whole municipal estate by means of steel and cast iron pipes to reservoirs in Arcadia, Sunnyside, and the western town lands. Pumping is necessary to the higher areas of Arcadia and Sunnyside, particularly to that occupied by the Union Government Buildings. The water is perfectly clear and absolutely pure, no filtering having at any time been found necessary.

**ZOOLOGICAL GARDENS.**—The National Zoological Gardens of South Africa were established in 1899 under the Government of the then South African Republic, and are controlled by a Director, who is responsible to a Committee of Management. The collection of animals is the best of its kind in South Africa, and the gardens rank with some of the oldest in the world for beauty, size, and general arrangement. During a recent year there were 108,592 visitors to the Gardens, the expenditure on which amounted to £11,975, while receipts (including the Government grant of £6,000) totalled £11,978.

#### VISITORS' GUIDE

**CLUBS.**—County—Waterkloof, National—238, Vermeulen Street, Pretoria—Church Square.

**CONSULATES.**—Belgium—211, Pretorius Street, Germany—337, Van der Walt Street, Netherlands—396, De Kock Street, Norway—79, Railway Street, Spain—211, Pretorius Street.

**HOTELS.**—Grand—Church Square, Imperial—Pretorius Street, Langham—Pretorius Street, Nigel House—Market Square, Polley's Transvaal—Pretorius Street.

**THEATRES.**—Grand—corner of St Andrew's and Pretorius Streets, His Majesty's—Church Square, Opera House—Pretorius Street. The A B C Cinema and Maxim's Bioscope are in Church Street.

#### REPRESENTATIVE COMMERCIAL ENTERPRISES

##### F. DEY.

**Early Activities.**—Although Mr Dey arrived in South Africa from Banffshire, Scotland, in July 1903, he did not commence business on his own account as a builder and contractor until 1915, having spent the intervening period as a carpenter and joiner, mostly on Government work. Whilst employed as a foreman he superintended the building of the Government Bacteriological Laboratory, Pietersburg School, the Normal College, University College, South African Mutual Buildings, and the erection of the Land and Agricultural Bank of South Africa.

**Development.**—Mr Dey has carried out some very important contracts, both for the Transvaal Provincial Council and the Union Government, amongst which were the Dutch Medium High School and a number of other school buildings, a furniture contract for the Provincial Council, and the Southern Life and Bourke Trust Buildings. An illustration of this building on page 55 shows the type of concrete construction in which Mr Dey has specially interested himself. All these contracts have been in connection with undertakings in the vicinity of Pretoria, and the material and workmanship are of the highest standard.

**Employees.**—These average approximately 40 whites and 60 natives.

**Partners.**—Messrs F. Dey and D. McD. Dey.

**Pretoria Address.**—123 Schoeman Street.

**London Agents.**—Julian Stephens, Limited, 19a, Coleman Street E.C. 2.

**Bankers.**—The National Bank of South Africa, Limited.

(See illustration, page 55.)

#### **POLLEY'S TRANSVAAL HOTEL.**

**Situation.**—This hotel has many advantages as to position, for, being in Pretorius Street, it is in close proximity to the banks, public buildings, and main business centres of the city generally, yet is free from the noise of the trams and heavy traffic.

**Premises.**—The construction of the premises is such as to ensure that visitors will find therein every possible comfort and convenience. A new dining room has recently been added, and this bright and airy room, with its excellent dance floor, is much patronised for cabaret shows, dinner-dances, etc. The beautifully appointed lounge, with the cool restfulness of its centre fountain, is a welcome addition to the many amenities of the hotel.

**Accommodation.**—This consists of 127 bedrooms and 12 private suites, each replete with every comfort, and maintaining the general high standard of excellence visible throughout the hotel. The usual writing-rooms, sitting-rooms, billiard-room and drawing-room are also available for the convenience of visitors.

**General.**—The hotel is the meeting place for the Pretoria Rotary Club, the Hollanders' Society, the British Empire Service League, and of the Tennis, Football, Hockey, and Referees' Clubs, also other societies and institutions.

The hotel bus and porters meet all trains.

**Management.**—The "Transvaal" is under the management of Mr A. E. Polley, late of Bloemfontein, who is well known for his great experience and excellence in handling hotels in general. His aim has always been to make the hotel so attractive to its patrons that they will become its advertisers, and recommend it to their friends.

**Telegraphic Address.**—"Polleys," Pretoria.

#### **WM. MILLAR & COMPANY.**

**Inception.**—This old established business was founded at the beginning of 1887 by Mr Wm. Millar, who retired in 1921, when the present company took over the enterprise.

**Business.**—The firm, which is noted throughout South Africa for the high quality of its goods, has the largest drapery establishment in Pretoria, stocks being always such as to meet the most modern requirements. There is a large mail order department, which is under a separate manager, whose long experience in this class of work has had much to do with the success the depart-

**WM. MILLAR & CO., Pretoria.**  
Company's Fine Premises in Church Street.

ment has attained. It is among the largest of its kind in the Transvaal.

**Resident Partners.**—Messrs. Hatton Duff, A. Lane and A. F. Reich.

**London Representatives.**—Messrs. Hollingsworth & Matthews, 8/9 Barbican,

E.C. 1, who also act as general buyers and shippers.

**Bankers.**—The Standard Bank of South Africa, Ltd.

**Cables.**—"Wilmill," Pretoria.

**JOHNSTONS LTD., Pretoria.**  
Firm's Premises in Church Street.  
(See *Illustration*, page 58.)

**JOHNSTONS LIMITED.**

**Inception.**—This firm was founded in 1887 by Mr Andrew Johnston, and occupied a building on the same site as the present company's own premises at 261/5, Church Street. In 1913 the concern was converted into a limited company, Mr Johnston becoming the Managing Director, a position he held until his death in 1919.

**Development.**—Commencing as a general store, the business has gradually expanded until to-day Johnstons Limited controls one of the leading departmental stores in the city, with connections covering practically the whole of South Africa.

**Business.**—This is confined to that of general retail merchants, with the following departments: groceries and provisions, drapery ladies', gentlemen's and juvenile outfitters, footwear, hardware, crockery, stationery and sporting requisites.

**Directors.**—Messrs E H Johnston, P V Pocock, J A Morgan, N F Johnston.

**London Representatives.**—Messrs Stuttafords Ltd., 11, New Union Street, E.C. 2, who act as buyers and answer all enquiries.

**Bankers.**—The Standard Bank of South Africa, Ltd.

**Cables.**—"Ajay."

(See also illustration, page 57.)

**ANDERSEN & COMPANY LIMITED**—Corner St Andries and Schoeman Streets. Established Bloemfontein 1902, removed to Pretoria 1915. Sole director, A Andersen. Builders and contractors, hot and cold water engineers, plumbers, zinc and iron workers. Shippers. Keep Bios, Birmingham. Bankers: National Bank. P.O. Box 837.

**DE VOLKSTEM.**—Pretoria.—This news paper was established in 1873. Produces, besides "De Volkstem" (daily edition), circulating in the Reef towns in general, "The Farmers' Gazette," the only bi-lingual agricultural publication in South Africa. Also publishes a bi-weekly edition of "De Volkstem" on Tuesdays and Fridays. This issue of 16 pages circulates all over South Africa, Rhodesia, and Belgian Congo.

**GRAND HOTEL**—Pretoria. Situated in the centre of the town, overlooking lawns

and fountains of Church Square. Equipped with every modern comfort, including hot and cold baths, and has perfect sanitation. Possesses the usual public rooms, which are finely decorated throughout. Terms range from 17s 6d per day to £5 5s per week, inclusive. Baggage master and uniformed porters meet all trains. Free motor-car conveyance to and from railway station is provided. Telegrams: "Grand Hotel." Pretoria. Telephone Nos. 0016 and 81. Manager, Mr Wm E Pritchard.

**GUNDELFINGER, B.**—Pretoria. Established 1887. Wholesale merchant, dealing in groceries, roughs, storekeepers' and hardware sundries. Bond stores. Durban and Delagoa Bay. London office: 49, London Wall, E.C. 2. Bankers: National Bank of South Africa, Ltd.

**HOCHSTETTER, H.**—Pretoria.—Established 1898. Agent for the German-African line, also financial, estate, insurance, house, and general agent. Telephone No. 98. P.O. Box No. 1042.

**HUPP GARAGE.**—236 242. Pretorius Street, Pretoria. Conducted by Mr Gerard H. Braak. Supplies a day and night service, is a direct importer of motor cycles, cycles, cars and accessories, undertakes repairs, painting, and vulcanising. P.O. Box, 604, telephone No. 765.

**NETHERLANDS BANK OF SOUTH AFRICA** (*Nederlandsche Bank voor Zuid-Afrika*). Established in 1888, has authorised capital of £750,000, with subscribed and paid up capital of £240,000. Head offices are at Keizersgracht 389, Amsterdam. London Agency is at Salisbury House, Finsbury Circus E.C. 2, the London bankers being the National Provincial Bank, Limited, and Messrs B W Blydenstein and Company. Has branches throughout the Union of South Africa, at Bethlehem, Bloemfontein, Britz, Bronkhorstspuit, Capetown, Dullstroom, Durban, East London, Ermelo, Hartbeestfontein, Johannesburg, Pietersburg, Port Elizabeth, Potchefstroom, Premier Mine, Pretoria and at Witbank. Bank acts as South African agent for the Pretoria Hypotheek Maatschappij (the Pretoria Mortgage Company). Is prepared to issue drafts and letters of credit, and also

to make telegraphic transfers upon its branches and agencies in Cape Province, Natal, Orange Free State, and the Transvaal. It negotiates and collects bills, and transacts every description of banking business in connection with South Africa. Current accounts are kept, and deposits are received for fixed periods. In addition to the London office, the bank maintains a branch at Hamburg (Schauenburgerstrasse, 14). Head offices in South Africa are at Pretoria, the General Manager for the Union being Mr Johannes Postmus. Board of Directors: Messrs C E Ter Muelen (chairman), A G A Van Eelde, W J Leyds, J Ier Muelen, A Roelvink, L C J Nieuwenhuys, and D P Scheurleer, with Messrs J D Pruisen and P Auyk as managing directors. Bank absorbed the Transvaal Commercial Bank in May, 1925, the combined balance sheet for that year showing reserve funds at £146,833 6s 8d, current accounts, deposits, and other liabilities £1,712,839 1s 9d, and, on the credit side, cash in hand and at bankers at £419,137 14s 1d, bills discounted, £1,131,803 10s 10d, and loans and advances to customers £911,118 1s 0d, leaving a balance to be carried forward of £617 5s 2d.

**PRETORIA MASTER BUILDERS' AND ALLIED TRADES ASSOCIATION.**—Fransrus Buildings, Pretoria. Established 1903. Chief objects are to make equitable arrangements between workmen and employees and to obtain recognition by architects and others of an equitable form of contract between builders and owners. Affiliated with the National Federation of Building Trade Employers. Secretary, G M Shiels.

**PRETORIA WEST FLOUR MILLING COMPANY, LIMITED.**—Founded in 1908. Is a buyer of wheat and mealies, and a manufacturer of the Acto and other brands of flour. Telephones, 465, 190, P.O. Box 348, Cables "Harvest."

**UNITED AFRICAN DIAMONDS LTD.**—Queen's Buildings, 280, Vermeulen Street, Pretoria. Capital authorised, £20,000, paid up £15,000. Diamond merchants, sawyers, cutters, and polishers. Exporters of polished diamonds to U.S.A., India and Japan. P.O. Box 861, telephones, 1593/4. Cables "Pyramids."

WITWATERSRAND UNIVERSITY, JOHANNESBURG

## CITY OF JOHANNESBURG

**J**OHANNESBURG, though the youngest of South Africa's leading cities, is the largest from the point of view of population, and is by far the most important industrial centre in the Union. Its rise to the position it now occupies has been phenomenal, and is almost entirely due to the gold mining industry of which it is the focus. It was on September 8, 1886, that the President of the South African Republic, S. P. J. Kruger, proclaimed as a public digging portions of farms on which the city of Johannesburg has since been established. At that time there were only a few tents and wattle and daub huts on the open veldt, but in December, 1886, the place was proclaimed a township and was given its present name by the surveyor, Johann Kiskik, out of compliment to President Kruger and General Joubert, both of whom bore the name Johannes. When the township was proclaimed the population numbered only 80, but it increased to 3,000 within twelve months, and after that its progress was rapid. The Stadsraad, or Town Council, was constituted in 1897, but soon afterwards the Anglo-Boer War intervened, and on May 31, 1900, British troops entered the city, the military and civil administration of the town being placed under a military Governor. The present Municipality dates from 1903.

Although Johannesburg owes its original and rapid development to gold mining its sole dependence upon that industry no longer exists. Concurrently with mining and in response to its needs and demands, there has been a great development in agricultural and pastoral pursuits throughout the surrounding district. Large tracts of land have been taken up in the northern areas of the Transvaal, and ranching and general agriculture have made rapid strides. Northward, within one hundred miles, an extensive coal-field provides cheap fuel for the needs of the people and non and steel works are being developed. Progress has been so rapid that Johannesburg now covers an area of 82 square miles, and has taken its place among the great cities of the world. In a word, it is the business centre of South Africa.

**ART GALLERY.**—The Municipal Art Gallery, established in 1910, is situated in Joubert Park, and the value of its pictures and other contents is estimated at about £100,000. This superb collection of works of art is very largely due to the efforts of Lady Lionel Phillips and the liberality of prominent South Africans in London.

**BATHS.**—The Municipal Council controls three sets of baths, the largest of which is the Ellis Park Open Air Swimming Bath,

conveniently placed in the centre of some of the most extensively populated districts of the town, and situated in the Ellis Park Sports Ground. The bath is 150 ft. in length and 100 ft. wide, its depth being from 3 ft. 4 in. to 7 ft. 4 in. It is brilliantly lit at night by 100,000 candle power electric lights. Covered seating accommodation is provided for 3,000 persons, and galas are held periodically. The Wenmer Park Bath in Pioneer Park is also open air, 100 ft. by 75 ft., and mixed bathing is allowed at all times. A third up to date swimming bath has been erected in the Show Ground at Milner Park.

**BROADCASTING.**—The first broadcasting station to be established in South Africa was opened in Johannesburg in 1924. A Western Electric Company's 500-watt equipment is installed in one of the largest department stores of the city, and broadcast programmes have been heard as far as a thousand miles away.

An interesting experiment was carried out by some wireless enthusiasts who took an ordinary 4-valve receiving set down a gold mine nine miles distant from the broadcasting station. It was found that in the upper levels of the mine the transmission was fairly successful, despite the interference caused by metal structures and electric cables.

**BUILDINGS.**—See article following

**CHARITABLE INSTITUTIONS.**—There are 19 charitable institutions in Johannesburg, seven of these being orphanages, two children's houses, two rescue homes, two homes for aged persons, and the remaining six of a miscellaneous character. A recent return gave the total number of inmates as 1,933, the revenue of all for the year amounting to £107,277 and the expenditure to £114,858.

**CHURCHES.** The churches of Johannesburg, numbering over 100, are in the main without remarkable architectural features. The Jewish Synagogue, with its striking dome, is the most prominent in size. St. Mary's Hall is the Anglican Church, and seats about 1,400 persons. Johannesburg

cloudless skies, and a moderate temperature, the mean for the year being 59.6 and the mean maximum in January (the hottest month) only 76.4 Fahr. The average rainfall is 30.65 inches, and the annual sunshine 74 per cent of the total possible hours of sunshine, in London the figure is 20 per cent. Subject to the qualification that the altitude is not suitable for people with weak hearts, the climate of Johannesburg may be said to rank with the best in the world.

**CLUBS.** The premier club of Johannesburg is the Rand Club, whose luxurious premises, built at a cost of £112,000, occupy a fine site at the corner of Commissioner and Loveday Streets. The New Club, in Loveday Street, is a favourite resort of business men. The South African Party Club is housed in magnificent new premises

**EDUCATIONAL FACILITIES.**—Johannesburg is a well-recognised educational centre. The schools of the Witwatersrand range from the 87 primary and intermediate schools to the University. Notable free institutions providing education to matriculation standard are the King Edward VII. School for boys, the Johannesburg Girls' High School, and the Jeppe High School with departments for both boys and girls. The Government Commercial High School averages about 300 pupils. A very valuable Trades School has been in existence since 1912. The excellent private schools with which Johannesburg is so well supplied include St. John's School, the Roedean High School, St. Andrew's School, the School of the Marist Brothers, and several Convent Schools. (See also "University.")

1. Commissioner Street and 2 Fox Street, Johannesburg, showing offices of three great enterprises. Left (Corner House): Rand Mines Ltd. Centre. Johannesburg Consolidated Investment Co. Ltd. Right. Branch of Standard Bank of South Africa, Ltd.

is now the cathedral city for the southern portion of the old Pretoria Diocese, which has been divided, and a Cathedral, Romanesque in style, is building close to the present church. Of this, only the Lady Chapel has been commenced. There is a large Roman Catholic Church in Kerk Street, the Presbyterian Church stands at the corner of Noord and Claim Streets, and the Congregational Church is in Bree Street. A new Wesleyan Church was completed in 1919 at the corner of Pritchard and Kruis Streets.

**CLIMATE.**—The city of Johannesburg lies 5,735 feet above sea-level at the Railway Station, and the main features of its climate are a pure and exhilarating air, almost

on the corner of Eloff and de Villiers Streets. This club, the Union Club in Bree Street, and the United Party Club in Noord Street, near the Railway Station, have all large membership rolls. The National Party Club will shortly be accommodated in new buildings in Bree Street. At Killarney are the house and grounds of the Transvaal Automobile Club, and the Country Club is situated near Auckland Park, where the club-house, with its surrounding gardens and plantations, its 18-hole golf course, tennis courts, and swimming pool, is a most attractive centre. The French Club, the rendezvous of the French colony on the Rand, has attractive premises in King George Street.

#### **ELECTRIC LIGHT AND POWER.**—

The principal electrical supply is that furnished by the Municipal Electric Light and Power Station, which was established in 1889, being the first undertaking of its kind in South Africa. It has also by far the largest plant in South Africa, the total capacity being 22,300 kilowatts. An additional 10 kilowatt set was installed in 1926.

A second source of electrical supply is provided through the great generating stations of the Victoria Falls and Transvaal Power Company, Limited, whose power lines radiate all over the Reef. Direct supplies from this company can only be obtained outside the municipal area.

**FINANCES.** According to the abstract of accounts for the year ended June 30, 1925, published by the Johannesburg Municipality, the total loan debt of the city was £8,195,000, against which the redemption funds amounted to £4,057,679. It is anticipated that, of the debt, £6,667,000 will be repaid by 1934. The reserve funds totalled £822,641, which sum was made up from the following: Renewals fund, £766,851, tramways special reserve fund, £27,120, employees' accident insurance fund, £27,118, and abattoir and livestock indemnity fund, £1,501. The balance to the credit of the renewals fund was £802,400. The withdrawals for the year amounted to £117,546, while the revenue was £81,067.

The total net expenditure for 1924-25 was £714,152, against £600,048 in 1923-24 and £580,081 in 1922-23. The receipts from the assessment rate brought in £481,794, a sum practically the same as the receipts for the two previous years. The deficit for the year 1924-25 on general ex-

penditure was £232,358, while the deficit for the year 1923-24 was £134,040, and for 1922-23 £158,287.

**HOSPITALS.**—The Johannesburg Hospital is one of the largest institutions of its kind within the British Empire. It stands in extensive and well cared for grounds to the north-west of Jonbert Park, and has grown to its present importance from a very small beginning, having been at the first (1888) under the charge of a Rev. Mother Superior and three nursing sisters belonging to the Order of the Holy Family. To-day it is controlled by a Medical Superintendent, a chief executive officer, a large medical staff, and over 350 nurses. There are 930 beds, of which over 150 are for the use of Asiatics and Natives. The theatres are finely equipped, and the X-ray department possesses the most improved scientific apparatus. The annual cost of maintenance is about £200,000, most of which is provided by the Provincial Government. About £40,000 is contributed in fees. In-patients for the year ended March 31, 1925, numbered

works of reference. There is a special African collection of over 3,500 volumes. Formed in 1900, in memory of the late Major Louis Irving Seymour, who raised the Pioneer Regiment and was killed at Sand River, Orange Free State, in the Anglo-Boer War, the Seymour Memorial Library consists of a valuable collection of technical and scientific works, which is continually being added to. The Library is housed in University College Buildings, 11011 Street.

**MARKETS.** Johannesburg has long been established as the centre of the South African live stock and meat trade. Working in close co-operation with the South African Railway Administration, the Municipal Council has erected the largest live-stock market in Africa, where annually a million and a quarter animals are handled, aggregating in value to 16,000,000. As many as 350 truck loads of live stock are dealt with daily in these yards, which are constructed on scientific lines, so that they are always clean and stock may be handled with the

SOUTH AFRICAN PARTY CLUB, JOHANNESBURG

penditure was £69,514, a considerable sum when contrasted with the surplus of £6,003 in 1923-24 and £52,192 in 1922-23. This deficit is, however, to some extent accounted for by the large sum of £26,235 paid out in white labour relief contributions and the cost of the Prince of Wales' visit, which amounted to £13,383. The net profit on the Council's trading departments for 1924-25 was £91,114.

**RATEABLE VALUE.**—The rateable value of the city of Johannesburg (municipal area) at the end of 1925 was £50,840,595, of which £17,475,116 was on land and £33,371,479 on buildings.

(See article following on "Architecture and Building Development in Johannesburg.")

**FIRE PREVENTION.**—The Municipal Fire Department consisted in 1924 of 77 officers and men, distributed at five stations. The area coming under the protection of the Department covers about 82 square miles, and includes all townships within a radius of nearly six miles from the Central Fire Station. The annual maintenance charges exceed £50,000. Eleven engines

15,186 and out patients 42,068, while 6,423 operations were performed. The hospital is now an integral part of the Medical School of the University of the Witwatersrand.

The Transvaal Memorial Hospital for Children was recently erected at a cost of £113,000, the site in Milner Park having being given by the Municipality. The King Edward VII Convalescent Home was inaugurated in 1903. Other institutions are the Queen Victoria Maternity Home, the Fever Hospital, which overlooks Milner Park, the Alexandra Convalescent Home, and the Hope Home for Children.

**INDUSTRIES.**—See article following.

**LIBRARY.**—The Public Library, under the control of the Municipality in Kerk Street, has lending and reference departments, subscribers' and free reading rooms, and a children's department which contains a special lending library with accommodation for reading and reference. The number of registered readers now exceeds 5,500, of whom a good proportion are juveniles, and over 400,000 volumes are issued annually. The total stock of the library consists of over 65,000 volumes, of which 12,000 are

at most convenience and dispatch. The municipal abattoir for the slaughter of animals averaging over 500,000 annually, adjoins the stock market. It is equipped throughout with the latest type of apparatus, labour and time saving devices, which permit of the expeditious handling of any quantity of carcasses, while the arrangements with regard to meat inspection are also most efficient. At the abattoir are the municipal cold storage chambers, among the most extensive and modern in South Africa. Large quantities of meat and other perishables may be stored here at low cost for an indefinite period and at any required temperature, and consignments of meat can be sent in refrigerating vans by rail to the coast for exportation overseas.

Near the abattoir, and connected by rail with the goods yards of the South African Railways, is the Johannesburg wholesale and retail produce market, covering an area of approximately eleven acres. The value of produce sold here in a year exceeds £1,000,000.

**MUNICIPALITY.**—Johannesburg first acquired full municipal rights in 1897 by the

2. Main Street, Johannesburg. Showing premises of Stewart & Lloyd (S.A.) Ltd. on left and Hansford & Hansford on right.
3. Loveday Street, Johannesburg. Showing Hubert Davies & Co.'s premises on right.

foundation, under a law enacted in that year of a Stadsraad of 12 members with a Burgomaster appointed by the Government. This body virtually ceased to exist on the outbreak of war in 1899 but was reconstructed as a Nominated Council after the occupation of the town by the British. An ordinance passed two years later gave authority for the election of a Town Council, which met for the first time in 1903. Since that date the progress recorded in all directions, particularly in the development of municipal enterprises, has been very great. The area controlled by the municipality covers 82 square miles with about 800 miles of streets and roads, and includes 118 townships.

**OBSERVATORY.**—The Observatory of the Union of South Africa, situated on the north eastern border of Johannesburg was instituted in 1903, when, as the result of a petition presented by the South African Association for the Advancement of Science, the Governor of the Transvaal decided to form a Meteorological Department for that colony. The Transvaal Observatory, as it then was, was officially opened in 1905 by Lord Milner and became the Union Observatory, with a strongly developed astronomical side, in 1911. It still, however, maintains its own meteorological observations, and as such it is the only official meteorological station of the first order in the Union.

The Observatory is open to visitors, who must obtain a card of admission from the Union Astronomer. On Wednesday afternoons the instrumental equipment is exhibited and on Wednesday evenings an astronomer shows visitors a few wonders of the heavens through one of the large telescopes. The astronomical equipment consists of several fully fitted visual and photographic telescopes, and a 26 inch visual telescope, now in course of erection, will be the largest of its class in the Southern Hemisphere.

**PARKS AND GARDENS.**—The largest open space in Johannesburg is Joubert Park, which is not far from the centre of the city, and is very tastefully laid out with gorgeous flower-beds, a large conservatory of exotic plants and a picturesque lily pond. At the south end of the park is the Art Gallery, and at the opposite end a tea-kiosk. Just beyond Joubert Park are the Hospital Gardens. Eckstein Park, presented to the city by Messrs Wernher, Beit and Company in memory of the late Mr Herman Eckstein, contains the Zoological Gardens. Pioneer Park, dedicated in 1924 by His Excellency the Earl of Athlone to the memory of the Rand Pioneers, is planted with trees named after individuals associated with the early days. Parks have also been laid out in Doornfontein (Ellis Park, the centre of South African Tennis), Jeppe's Town, Kensington, Turfontein, and La Rochelle.

**POPULATION.**—Few cities in the British Empire can boast of a more rapid expansion than the Golden City. Johannesburg was proclaimed a township in 1886, when it had an estimated population of fifty whites. In 1889 the total had increased to 3,000, and in 1911 to 237,000, while in 1924 there was an estimated population of 160,000 Europeans and 130,612 non-Europeans, making a total of 290,612.

**RACING.**—Racing, which is exceedingly popular in Johannesburg, takes place within the Rand-Pretoria area twice a week—on Wednesdays and Saturdays,—in addition to public holidays. There are two courses at Johannesburg, the leading one being that of the Johannesburg Turf Club at

Turffontein, and the other at Auckland Park. The Turffontein course is used by the Johannesburg Pony and Galloway Club, and is one of the best appointed in South Africa. Big meetings are held by the Turf Club every quarter.

**SPORT AND RECREATION.**—Every kind of sport has its votaries in Johannesburg, where numerous facilities are offered. The admirable racecourses have already been mentioned. The Rand Hunt Club holds runs on Sunday mornings. Owing to the absence of foxes and the prevalence of wire, hounds follow a drag. Horsemen can be assured of a good gallop over fences, and strangers are always welcome to attend the runs.

The largest and most popular sporting grounds in Johannesburg are the Wanderers, near the Railway Station, and here are played many of the big cricket and football matches for which the city is famous. Golf has taken a firm hold upon the residents of the Rand, and in or near Johannesburg itself are three 18-hole courses: those of the Johannesburg Golf Club beyond Orange Grove, the Turffontein Golf Club on the Eloff Street extension, and the Parkview Golf Club on the way to Rosebank, and one 9-hole course that of the Kensington Golf Club. Lawn Tennis is played largely on the Wanderers' Club grounds, and those of the Berea and Yeoville Clubs. Yacht sailing and racing take place on the Pan, the large sheet of water south of the town.

**STREETS.** Johannesburg is laid out to a strictly rectangular design, the two main arteries which bisect the city from east to west and south to north respectively being Market Street and Eloff Street. Adjoining the former are the fine buildings of the Town Hall and the Post Office, and this is practically the centre of the city, the bulk of the business and shopping facilities being confined within a quarter of a mile radius of this point. Eloff Street and Pritchard Street are the principal shopping centres. Commissioner Street, one of the first to be laid down, contains some of the finest buildings in the city, notably the palatial Rand Club, His Majesty's Theatre, the Carlton Hotel, the Palladium, the Empire Palace of Varieties, and Messrs H. Eckstein and Co's Corner House. (See also article following.)

**THEATRES.**—Johannesburg is particularly well catered for in connection with theatrical entertainments, the leading "legitimate" theatre, at which the best English companies play, being His Majesty's in Commissioner Street. The Standard, in Market Place, the Palladium, in Simmonds Street, and the Empire Theatre of Varieties in Commissioner Street, are also fine theatres. Actually the largest house of entertainment is the Orpheum in Jeppe Street, a bio-vaudeville house with prices ranging from 6d to 2s 6d. The new Bijou, also in Jeppe Street, is noted for its music as well as for its pictures. Other Cinema theatres are the Carlton, in Market Street, the Ivoli, in President Street, the Lyric, at Braamfontein, the Jeppes at Jeppetown, and the Alhambra, at Doornfontein.

**TOWN HALL.**—The Johannesburg Town Hall occupies a central position, on what was formerly an open market place, but is now the junction of President, Rissik, Market and Harrison Streets. The structure, which consists of two buildings, covers an area of over 82,500 square feet and cost (exclusive of site) £400,000. It was opened in 1915 by the then Governor-General, Earl Buxton. The main hall, which contains a magnificent grand organ, the particular pride of Johannesburg, has seating accom-

modation for about 3,500, and the smaller Selborne Hall for 950 persons. The organ itself cost £13,154, and is used for recitals on Sunday evenings and for the famous lunch-hour recitals which are so popular.

**TRAMWAYS.**—The very efficient electric tramway system of Johannesburg dates from 1906, the Municipal Council having in 1904 taken over the working of the old private tramways company, which had been in existence since 1891. By 1923 the system covered 73 miles of track, and carried 54,032,459 passengers. The total capital expenditure then amounted to £1,120,222, and the revenue for the preceding 12 months to £528,684, against an expenditure of £551,510. There were 718 employees, all Europeans.

**UNIVERSITY.**—The incorporation of the University of Witwatersrand developed out of the Transvaal Technical Institute, which afterwards became the South African School of Mines and Technology, and was accomplished in 1922. His Royal Highness Prince Arthur of Connaught having been elected the first Chancellor. Largely owing to the generous support of the Municipality, which gave the site in Milner Park, and to that of the public the University Buildings are remarkable for their beauty and efficiency, being situated on one of the most attractive sites in the midst of impressive scenery. The University has faculties of arts, science, medicine (including dentistry), commerce, engineering (including mining and metallurgy, mechanical and electrical engineering, civil engineering, chemical technology, and architecture), and law. There are also departments of education, veterinary science, music and Bantu Studies.

By means of its evening classes and the close co-operation kept up with Rand workers' educational organisations, the University of the Witwatersrand, if the youngest of South African Universities, has quickly become the second largest with a very wide-spreading sphere of influence. The medical faculty of the University is housed in new and modern buildings, situated between the Institute of Medical Research and the General Hospital. The number of students enrolled at the end of 1923 was 1,008.

**WATER SUPPLY.**—This is controlled by the Rand Water Board, which was constituted in 1903 to carry out a scheme for the adequate supply of water to the local authorities and mines on the Witwatersrand. The limits of supply include the magisterial districts of Johannesburg, Boksburg, Germiston, Krugersdorp, Benoni, and Springs. The Board consists of 26 members, including the chairman, who is appointed by the Union Government, the Johannesburg Municipality being represented by 5 members. Most of the supply is drawn from boreholes and shafts sunk on the farm Zuurbeekom, about 17 miles south of Johannesburg. This source of supply was purchased by the Board from the Johannesburg Waterworks Estate and Exploration Company Limited. The cost of installation of the Johannesburg Waterworks totalled £544,948 in 1923, the annual consumption being 1,658,834 gallons.

**ZOOLOGICAL GARDENS.**—These are situated at less than half an hour's run by tram from the Town Hall, and cover 200 acres of fine park, lake and forest land. They were opened in 1905, and more than 200,000 visitors annually pass through the gates. A large natural den for some of the lions has been carefully constructed, and there is also a rocky retreat for the use of the Barbary goats. The aviary, full of beautiful African birds of gorgeous plumage, the bear den, and the cages of the leopard and other wild animals are other leading features.

MARKET STREET, JOHANNESBURG.

### REPRESENTATIVE COMMERCIAL ENTERPRISES

#### STUCKE & HARRISON.

**Inception.**—This firm of architects was founded in Johannesburg by Mr W H Stucke, who arrived in South Africa in the year 1889

**Development.**—In 1896 Mr Stucke was joined by Mr J E Harrison, who took over the Orange Free State section of the business, five years later Mr W E Bannister entered the firm and assisted Mr Stucke in the Transvaal until he left in 1908. Mr Harrison became associated with the firm in the Transvaal as a full partner in 1911

**Activities.**—Some of the principal contracts which have been carried out by the firm are W. M. Cuthbert & Co Ltd, two buildings

one in Von Brandis Square and the other at the corner of Eloff and Pritchard Streets, Johannesburg, new warehouse for J. Nunnerley & Co Ltd, Standard and National Bank Buildings in Commissioner Street, Johannesburg, buildings for the South African Mutual Life Assurance Society at Johannesburg, Capetown, Durban, Port Elizabeth, Bloemfontein and Grahamstown, the Board of Executors' Building at Bloemfontein, Permanent Buildings, Johannesburg, Luthje's Langham Hotel, Beumer & Co's warehouse, Johannesburg, Steytler's Buildings, Johannesburg, two new wings to the General Hospital, Johannesburg, Presbyterian Church, Yeoville, Original Grey College, Bloemfontein, Prehardt Library, Bloemfontein, Girl's Collegiate School, Port Elizabeth, Bloemfontein Club, etc. At Johannesburg a particularly comprehensive idea of the work of these architects can be seen at the corner of Commissioner and Harrison Streets, all the four buildings on this site having been erected by Mr Stucke. One of the more recent contracts which is of particular note is the South African Mutual Building at Port Elizabeth, which has a marble staircase 250 feet long, 50 feet high and 25 feet wide

**Partners.**—Mr W H Stucke, F.R.I.B.A., P.A.S.I., M.S.I. and Mr J E Harrison, J.A.R.I.B.A.

**Offices.**—31, S.A. Mutual Buildings, Harrison Street, Johannesburg.

**Cables.**—“Arch,” Johannesburg.  
(See illustrations, page 66)

#### THE CARLTON HOTEL (SOUTH AFRICA) LTD.

**Situation.**—This hotel, which occupies an excellent site in the best part of Johannesburg, fronts four streets—Commissioner, Eloff, Market, and Joubert Streets—and is thus in the centre of the shopping district, being also very convenient for the theatres, garages and principal clubs. It was erected at a cost of £750,000, and in design, construction, and equipment is as perfect as the most up-to-date London, Paris, or New York hotel.

**Premises.**—The building is six storeys high, besides having two mezzanines, and two sub-floors below the street level. The main entrance is Jacobean in style, and the internal decorations strike a note of correct and harmonious beauty which is characteristic of the whole structure.

**Offices.**—The reception office, cashier's office, enquiry office, luggage, parcels, and telephone exchange, call offices are on the ground floor, where also a post office has been provided for the convenience of visitors. The theatre ticket booking office will be found in the vestibule of the Commissioner Street entrance.

**Public Rooms.**—There is a spacious billiard room on the first sub-floor, with six tables by Burroughes and Watts. On the first floor there is a Louis XVI Palm Court, a very cool and restful place, which is the centre of the social life of the hotel, as also of the City. From this court are reached the ball-room, banquetting room, drawing, reading, and

writing rooms, and the Adams' restaurant. The comfort and refinement of these rooms will be readily apparent by a glance at the illustrations on page 67.

**Upper Floors.**—These are reserved for sleeping apartments, and although they mostly consist of single rooms, yet there are many suites, with bathrooms attached. On each floor there are sixty bedrooms, which will give some idea of the accommodation the hotel can offer. Telephones are installed in every room.

**Other Features.**—The hotel possesses excellent Turkish and electric baths. These are situated on the first sub-floor, quite close to the billiard room, and are under the supervision of Professor Carey. The lighting of the hotel leaves nothing to be desired, and it is throughout decorated in a quiet and harmonious style. The furniture and fittings are of a suitably artistic character.

**Ventilation.**—The Plenum system, which extracts the vitiated and supplies fresh air, is in use, thus ensuring the thorough ventilation of all rooms.

**Water Supply and Laundry.**—The hotel has its own artesian well-water supply, as also a special laundry and cleaning establishment.

**Wine Cellars.**—These, the finest in South Africa, contain a variety of rare and costly vintages, valued at over £25,000.

THE SOUTH AFRICAN & GENERAL INVESTMENT & TRUST CO. LTD., Johannesburg.

1. Trust Buildings, Johannesburg, the Company's Head Office for Africa.
2. The Durban Office.
3. Portion of the General Office at Johannesburg.

**Management.**—The management is in the hands of Mr H Gauthier, who has had wide experience in London and on the Continent, while Mr Jansonius is the assistant-manager.

**Staff.**—The members of the large and efficient staff, many of whom have been engaged from leading European hotels, are extremely well trained, and are conversant with all modern languages.

#### THE SOUTH AFRICAN AND GENERAL INVESTMENT AND TRUST CO. LTD.

**Inception.**—This company was formed in 1895 by Mr H B Marshall, the founder of "Marshall's Township," situated in the heart of Johannesburg, in the centre of the Witwatersrand, which extends about thirty miles east and west of the city, and is noteworthy as being the source of the world's production of gold.

**Development.**—In 1912 business was extended to Natal and to Rhodesia, where connections have been established among the farmers and planters of those regions, and further expansion is expected in the near future.

**Capital.**—The original capital of the company was only £30,000, but it has increased proportionately to the development of the Union of South Africa and the expansion of Rhodesia. In September, 1925, the issued capital was £680,000, equally divided into fully-paid shares and five per cent debenture stock. Arrangements were being made to issue the balance of the authorised capital, and so bring the resources of the company up to £1,000,000.

**Financial Operations.** In so far as the investment of its own funds is concerned, the company chiefly advances monies by way of first mortgage on town and suburban properties and farms. It has a large connection in Johannesburg and on the Witwatersrand, and has actively developed its interests in Natal and Rhodesia, more particularly with the sugar and cotton planters in Natal and Zululand, and with the maize, tobacco, and cotton growers in Southern Rhodesia.

**Other Activities.**—One of the principal activities of the company is the conduct of trusteeships and executorships, and the investment and administration of funds on behalf of resident or absentee clients, the monies so administered now amounting to nearly £1,000,000.

**Secretariats and Administrations.**—The company's various branches also undertake the duties of secretary for a number of mining, land, industrial, and agricultural concerns. At Johannesburg the institution administers the Clydesdale (Transvaal) Collieries, Ltd., operating two pits, one in the Witbank district of the Transvaal and the other in the Orange Free State. The output from these mines exceeds half a million tons per annum, the principal customers being the mines, railways, and local industries, while export and bunkering at Delagoa Bay and Capetown also take their quota. Another local industry administered by the company is the Brick and Potteries Company Ltd., whose yard is centrally situated in Johannesburg. This concern has an output of twelve to fifteen million bricks a year, besides various other special lines.

On the Far East Rand the South African and General Investment and Trust Company controls the Witbok Proprietary Company Ltd., whose property adjoins many of the modern deep-level gold mines, and offers agricultural holdings in areas to suit individual buyers. These plots are much sought after by mine employees and miners who have become incapacitated for their ordinary

employment through contracting miner's pthisis, and also by small farmers looking for farms in close proximity to markets. The management of an alluvial diamond digging on the Vaal River, the administration of "Marshall's Township," where the premises of the company are situated, and the collection of ground rents are also in the hands of the S A & G I & T C.

**Representations.**—The company represents the London and Lancashire Insurance Company and the Aberdeen and White Star Steamship Companies, which convey freight and passengers between South Africa and the United Kingdom, and South Africa and Australia.

**Head Office.** The company's head office, at Pinners Hall, Austin Friars, London, E C 2, is in close touch with the Overseas Settlement Board, and administers the Heibert Amsworth Settlers' Bequest.

**Branches.**—Johannesburg Trust Buildings, corner of Fox and Loveday Streets. P.O. Box 155. Cables, "Sphinx." Durban Club Arcade, Smith Street. Rhodesia Union Buildings, Manica Road, Salisbury.

**Directorate.**—Messrs James W. Bowhill (chairman), John Abernethy (deputy-chairman), Henry B. Marshall, J. P., D. L., Clement Davies, F. J. Carlyle Gifford, and James Russik Marshall.

**Management.**—Managing-director Mr. Clement Davies. General manager in South Africa Mr. Raymond des Claves.  
(See also Shipping Section)

#### BLINMAN, HOLWILL & ISLIP.

**Inception.**—This extensive business had its origin in Johannesburg about the year 1902. At that period there were only two assistants, while to-day the staff numbers over 150, and the buildings of the firm are amongst the most palatial of their kind in the city. The fittings throughout the various departments are all of oak, and these considerably add to the attractions of the interior.

**Activities.**—The name "Blinman" is a household word in South Africa, every requirement connected with ladies' apparel being procurable at this well known emporium, where the display and quality of goods are the equal of any of the famous houses of Paris, London and New York. Not only are adults catered for, but children's needs are equally well provided for. The firm's activities extend from Capetown to Tanganyika, and its rapid progress may be attributed to the use of modern methods, combined with a desire to satisfy all.

**Departments.**—These comprise the following: costumes, evening and dinner frocks, cloaks and wraps, knitted goods, jumpers, blouses, millinery, corsets, underwear, boots and shoes, dress goods and silks, umbrellas and sunshades, gloves, trimmings, hosiery, haberdashery and laces, flowers, handbags and fancy novelties, dyeing and cleaning, house linen and soft furnishings, knitting wools, and art needlework.

Special attention is directed to the "ready-to-wear" department, which is replete with a large stock of goods to meet all requirements. The millinery section is also a prominent feature of the establishment, as is that for footwear, these departments being maintained thoroughly up-to-date with fresh supplies by every mail. All other departments keep abreast with the trend of fashion, and any novelty placed on the market is quickly available at this progressive store.

**Mail Orders.**—To meet the wants of country residents there is a mail order department, second to none in South Africa, and it deals promptly with all post orders and letters.

BLINMAN, HOLWILL & ISLIP, Johannesburg.  
Three of the Firm's many Departments.

MAPPIN & WEBB LTD., Johannesburg.  
1 and 2. Views of the Attractive Showrooms.  
Centre. The Company's Premises, Johannesburg

**London Agents.**—Cleghorn & Harris Ltd., 12, Bunhill Row, E.C. 1. The firm has also buying agents in Paris and New York.

**Address.**—Eloff and Kerk Streets, P.O. Box 3204, Johannesburg. Telephone No. 1 Cables "Blimmans," Johannesburg.

**Bankers.**—The Standard Bank of South Africa, Ltd.

#### MAPPIN & WEBB LTD.

**Inception and Development.**—These world-renowned jewellers and silversmiths conduct the largest and oldest retail establishment of its kind in the world. Founded at Sheffield in England a hundred and sixteen years ago, with a small metal chasing workshop the business has grown until to-day the firm has manufactories in Sheffield, London, Paris and Johannesburg, all models of up-to-date equipment and efficiency. That at Sheffield is considered the finest and most modern plate and cutlery factory in the British Empire.

The Johannesburg house was started over 30 years ago, and is conducted on the lines of all the company's other branches, the same high standard of quality being maintained. Messrs Mappin & Webb Ltd. are warrant holders by appointment to H.M. the King, H.R.H. The Prince of Wales, and the Union of South Africa.

**Departments.** Among the perfectly appointed departments of the establishment are the following—

**Jewellery.**—This section contains a wonderful selection of gems, gold and platinum articles, rings, pendants, brooches, bangles, pearls, watches, necklaces and other motifs designed and set in the latest manner, and representing the finest British craftsmanship.

**Silverware.**—In this department is to be seen a splendid array of plate and fancy articles, cups for sports competitions, toilet services, and a multiplicity of other objects. Princes Plate, of which the firm is so justly proud, here displays its many uses.

**Leather Goods.**—A fine assortment of ladies' and gentlemen's travelling cases, fitted suit cases, wallets and cigar cases, made in the firm's workshops, are to be seen in this department.

**Glass and Chinaware.**—Choice varieties of tea, dinner and coffee services, glassware of every description, porcelain vases and bowls, some splendid specimens of crystal ware, and many novelties are here displayed in profusion.

**Branches and Agencies.**—The branch in Johannesburg was the first opened by Messrs Mappin & Webb, being followed by others at Buenos Aires, Mar del Plata, Paris, Rome, Salsomaggiore, Nice, Monte Carlo, Lausanne, Stockholm, Rio de Janeiro, Sao Paulo, Montreal and Copenhagen, while there are also agencies at Bergen, Madrid, Hongkong, Shanghai, and in Iceland.

**Head Office.**—London, 158-162 Oxford Street, W.1.

**Johannesburg Address.**—Mappin House, 27, Plein Street. P.O. Box 3055. Telephone 796.

**Cables.**—"Mappins," Johannesburg.

#### P. HENWOOD SON, SOUTTER & CO.

**Inception.**—The Johannesburg branch is the youngest of the several establishments of this firm as it is constituted to-day, having been founded in 1887 by Mr. Paul Henwood, ten years after the creation of the neighbouring branch at Pretoria.

**Development.**—The original premises of the firm were a double-storey building, which was enlarged to its present size in the year

1892 At the time of this re-construction the town of Johannesburg was very much smaller than it is to-day, and the foresight of the firm in anticipating its rapid growth was not appreciated by the inhabitants, who gave the building the name of "Henwood's Folly." An interesting photograph of this ambitious place in course of construction will be found in the article devoted to architecture in Johannesburg on page 76, where it is shown with Market Square and the gold reef in the background.

These premises are on Pritchard and President Streets, Henwood's Arcade and Kerk Street, and both externally and internally are well designed for the display of goods and the convenience of customers.

**Activities.**—The opening up of the country and the consequent expansion of trade have fully justified the firm's enterprise. The business is now divided into several departments, which include builders' hardware, stoves and sanitary ware, household and fancy ware, pottery and glass, furniture, dairy and agricultural machinery. The company holds numerous agencies in connection with the articles dealt in by these various sections, and imports directly much of its stock.

**Agencies.**—Among the representations held are the following: Sherwin-Williams paints, Engman-Matthews' Range Eternal, Copelands blue Italian ware, Bamford's mills and chaff cutters, Barford & Perkins' cream can sterilisers, Topliss Brothers (New Zealand) dairy machinery, etc.

The buying office in London is that of Messrs P. Henwood Son & Soutter, 65, London Wall, E.C. 2, and in New York, Messrs Smith & Kirkpatrick, 115, Broad Street.

**Directorate.** Messrs Lynton, Norman and Howard Henwood. All three are active partners in the firm and grandsons of the original founder of the business, Mr Paul Henwood.

**Branches.**—At Pictoria (Transvaal) and Durban and Maritzburg (Natal).

**Offices.**—Pritchard and President Streets, Johannesburg, P.O. Box 74 Cables "Heterodox," Johannesburg.

**Bankers.**—Standard Bank of South Africa, Ltd.

(See also this company's notice in Durban section).

#### **SHEPHERD & BARKER, LIMITED.**

**Inception.**—This firm was founded in 1900 by Messrs W. H. Shepherd and W. P. Barker, the present managing directors, who had been connected with the furniture and decorative business in London and the provinces before their arrival in South Africa.

**Development.**—The enterprise was started in a small shop in Eloff Street, but, with the growth of business, the firm found it necessary to move into larger premises in 1915. The new building is one of the most attractive in the city of Johannesburg.

**Premises.**—These have a frontage and depth of 100 feet each, the area of the showrooms being about 15,000 square feet. The very attractively decorated display windows in Jeppe Street are quite a feature of the city. The showrooms are arranged so as to give the best display for the various lines of goods marketed by the firm.

**Departments.**—These are divided into English and Oriental carpets, furnishing fabrics, cabinets and upholstery, crockery and glassware, and fancy and Oriental goods.

P. HENWOOD SON, SOUTTER & CO., Johannesburg.

SHEPHERD AND BARKER, LTD., Johannesburg.  
1 and 3. Two of the Firm's many Departments.  
Centre. View of the Premises.  
(See letterpress, page 71.)

**Factories.** Three factories are maintained, one for upholstery work and the manufacture of loose covers, and the other two for cabinet work. The firm makes a specialty of manufacturing goods designed by itself, and also of carrying out customers' own ideas.

**Imports.**—The company buys goods in China, India, Egypt, England, Europe and America, a member of the firm visiting the different markets every year in order to keep in touch with the latest developments and prices.

**Representations.** The firm is the special representative of Messrs. Liberty & Company, of Regent Street, London, and of Nesta Spring Mattresses, of London.

**London Agents.**—Messrs. Mackinlay & Company, 21, Chiswell Street, E.C.

**Offices.** 173-175, Jeppe Street, Johannesburg. Cables "Fabrics," Johannesburg.

**Bankers.**—The National Bank of South Africa, Limited.

#### CURTIS & COMPANY LTD.

**Inception.**—Established in the year 1886, this firm conducts one of the oldest men's outfitting houses on the Rand. The business was converted into a limited liability company in February 1925, with Mr. C. G. Curtis as managing director.

**Activities.**—As hosiers, hatters and general outfitters, Messrs. Curtis & Co. Ltd. stock only the best class of merchandise, and are agents for several English houses of the highest repute in their particular line of goods. The firm's clientele now extend all over the country, from the Cape to Central Africa, and the name is widely known as a guarantee of quality and excellence.

**Agencies.**—Messrs. Curtis & Co. are the original agents in South Africa for the famous Burberry raincoats; they are also agents for Innes Henderson & Co. Ltd.'s underwear, and for Messrs. Lincoln Bennett & Co. of Sackville Street, London, the well-known hat manufacturers.

**Directorate.** Mr. C. G. Curtis (life managing director), Mr. J. D. Corlyon (director and manager) and Mr. B. Richards.

**Offices.** London Office: 22 Basinghall Street, E.C.2. Office in South Africa: corner of Eloff and Kerk Streets, P.O. Box 96, Johannesburg.

#### HARPER'S COMMERCIAL GARAGE.

**Inception.**—Founded in April 1924 by Messrs. S. F. J., H. F., and J. W. Harper, the sole members, this firm, though comparatively a new one, is building up a first-class business based on good service.

**Activities.**—The building, of which an illustration is given on the succeeding page, has a very large floor area, regularly garaging about 100 cars. It also has a workshop, in which repairs and overhauling of every description are undertaken, a vulcanizing plant being attached. In addition, there are the usual stores and office accommodation. The business has already grown to such an extent that more room is required, and a new building, 200 ft. by 70 ft., is now under construction.

**Cars and Lorries.**—The firm acts as distributors in the Transvaal for "Paige" and "Jewett" cars, manufactured by the Paige-Detroit Motor Car Co. of Detroit, U.S.A., as also for "F.W.D." lorries in the same province, but besides the sale of spare parts and accessories the sales interests of the enterprise under notice are concentrated on the lines named.

**Offices.**—Corner of Rissik and Marshall Streets, Johannesburg. P.O. Box 2154. Cables and telegrams "Harcog," Johannesburg. Code used Bentley's.

**Bankers.**—The Standard Bank of South Africa, Ltd.

#### CONNOCK'S (S.A.) MOTOR CO. LTD.

**Inception.** This firm was established in the year 1896 as a partnership concern under the style of Keith, Cullum & Connock, Mr Connock, the head of the present limited liability company, then being the junior partner.

**Development.** The firm originally engaged in the cycle trade, Mr Connock being an ardent cyclist, and the winner of many cycling trophies. In 1902 Mr Connock took over the interests of the other two partners, and, recognising the future for motor cars in South Africa, began to develop this trade, moving into larger premises. At this period the name of the enterprise was altered to Connock's South African Garage and Engineering Works.

It now became necessary to decide whether the cycle and motor-cycle business should be developed in conjunction with the motor-car, or whether one of those interests should be discarded. Automobiles were then sold on indent, sales being few, but the cycle trade was well established. However, Mr Connock wisely decided in favour of the motor-car, and abandoned the cycle business completely.

**Activities.**—In 1912 the South African agency for the Dennis Commercial vehicle was obtained, and large numbers of these lorries are now in use in the country. In this year also the firm erected one of the largest garages in South Africa, at the corner of Loveday, Harrison and Marshall Streets.

**Premises.** These have entrances at each end, large enough for two cars to pass one another. An underground petrol system and modern air-compressor have also been installed. In addition the workshops of the Rand Garage, in Marshall Street, have been purchased. In this block is a large overhead crane for lifting and placing cars where required; it also contains lathes, drilling machines, grinders, hardening furnace, and

CURTIS & CO LTD., Johannesburg  
Premises at the Corner of Eloff and Kerk Streets.

the complete equipment of a modern motor car repair workshop.

**Agencies.**—The company handles the Buick and Cadillac cars and Dennis Commercial vehicles.

**Address.**—Corner of Harrison, Loveday, and Marshall Streets. P.O. Box No. 2767. Cables, "Rover," Johannesburg.  
(See illustration page 74.)

CONNOCK'S (S.A.) MOTOR CO. LTD., Johannesburg.

(See letterpress, page 73)

**COLONIAL MOTORS, LTD.**

**Inception.**—This private limited liability company was incorporated in the Transvaal in 1922, having been previously a partnership concern, controlled by Messrs Stanley Anderson and C. H. Hoare. Mr. Anderson is now the managing director of the company,

while Mr. Hoare is joint managing director of the Colonial Motors (Natal) Ltd.

**Activities.**—Prior to incorporation, the firm handled "Scripps-Booth" and "Ariel Johnston" cars, but these agencies were relinquished in 1923. Colonial Motors Ltd. now holds the sole representation of the

Austin Motor Company Ltd., of Birmingham, England, for the Transvaal and Natal. Since the agency for the Austin cars was undertaken, over 200 have been placed in the Transvaal territory, and to-day the make is one of the best British sellers in South Africa.

1. FOX STREET, JOHANNESBURG. BOUSTRED'S SHOWROOMS AND OFFICES ON LEFT

2. LOVEDAY STREET, JOHANNESBURG. CONNOCK'S (S.A.) MOTOR CO. LTD., ON LEFT.

**Premises.**—The Johannesburg premises, which consist of a two-storey building, are situated in the centre of the motor industry of the city. The offices, showrooms, and storage accommodation for about forty-five cars are on the ground floor, and the workshops, stores and paintshops on the first floor. The firm keeps a complete range of spare parts for Austin cars in stock, and undertakes all kinds of repairs, overhauling, and painting.

**Staff.**—The employees number 19 Europeans and 18 natives.

**Agents Abroad.**—Messrs. Lozer, Kemsley & Millbourn, Ltd., of London and Messrs. Kemsley, Millbourn & Company, Inc. of New York, conduct all the shipping for the Transvaal house, and also for the Natal company, which however has now a separate identity.

**Bankers.** The Standard Bank of South Africa, Limited.

**Offices.**—These are situated at the corner of Marshall and Eloff streets, Johannesburg P.O. Box No. 169.

#### **WILLIAMS, HUNT & CO. LTD.**

**Inception.**—Established in 1903 as Williams, Hunt & Co. by Messrs. B. Hunt, E. H. Hunt, P. E. Hunt and B. R. Hunt, this firm started in Johannesburg with a small bicycle shop. To-day it controls one of the largest motor houses in South Africa.

**Development.**—In 1911 the 'Indian' Motor Cycle Agency for the Transvaal was secured, the agencies for the Orange Free State and Natal were added in 1915, while in 1917 the representation of the entire South African territory was granted. The Chevrolet Car agency for Cape Province and the Orange Free State was obtained in 1918, the general

agency for the Union of South Africa being granted in 1921, but in 1924 the Orange Free State and the Cape Province territory north of the Orange River was relinquished.

**Capital.**—The nominal capital of the parent company is now £100,000.

**Activities.**—The business is divided into six departments: accessories, sales, coach-building, painting, assembly and spare parts. The main building, the property of the company, covers a floor space of 37,500 square feet, while the annex, with an approximate area of 5,000 square feet, is devoted to the assembly of motor cars and cycles. There is an extensive body building plant engaged in the production of commercial bodies only, also a painting and upholstery section with modern electrically driven machinery, the painting being done by the "Devilbiss" process of spraying. All motor car and cycle accessory lines are handled, and an average stock to the value of £80,000, comprising cars, cycles, spare parts, etc., is carried. The staff numbers about 146, and the monthly turnover reaches a total of £50,000.

**Agencies.**—"Indian" motor cycles, Chevrolet cars, Gilbert & Barker petrol pumps, and "Alomite" lubrication.

**Subsidiary Companies.** Williams, Hunt & Brook, Ltd., Port Elizabeth; Williams, Hunt & Johnston Ltd., Capetown; Williams, Hunt & Co. Ltd., Benoni.

**Directors.** Messrs. H. E. H., P. E. and B. R. Hunt, A. G. Brook and C. S. Johnston.

**Offices.** 45, Eloff Street, Johannesburg.

**Bankers.** The National Bank of South Africa, Ltd.

(See also illustration, page 76.)

#### **HORTORS LIMITED.**

**Inception.**—This firm of printers, publishers and manufacturing stationers has been established many years in Johannesburg.

**Activities.**—Hortors Limited specialise in commercial, mining, and legal requirements, in high class letterpress, and in lithographic printing, die sinking and engraving, embossing, photo engraving and bookbinding.

They are the publishers of "Hortors' Diary and Law List", the "Leader" commercial diary, and many legal, mining, accounting and other publications.

**Office Specialities.**—The firm acts as sole distributors in South Africa for the following office specialties: the Underwood typewriter, Kalamazoo loose leaf books, Globe Wernicke elastic bookcases, office furniture and filing systems, Monroe calculating machine, Smead-Strand adding and listing machine and the Original-Oldner calculating machine.

**Addresses.**—These are as follow:  
*Johannesburg* Registered office and works, Leader Building, Harrison Street, Box 1020, branch offices: Rand Club Building, Commissioner Street; Aegis Building, Loveday Street; Wemmer House, Loveday Street Extension, Pretoria 257, Market Street. *Durban* Hortors (Natal) Ltd., 55, Field Street. *Capetown* Hortors (Cape) Ltd., 130/134, St. George's Street, (works at 78, Brice Street). *Port Elizabeth* Hortors (Cape) Ltd., Mutual Buildings, Main Street.

**Secretary.** J. S. I. Berrell, D.S.O., Cables "Leader," Johannesburg.

**London Agents.**—Dunant, Radford & Co. Ltd., Billiter Buildings, Billiter Street, E.C.3.

**New York Agents.** Thomsen & Co., 90/96, Wall Street.

## ARCHITECTURE AND GROWTH OF JOHANNESBURG

Johannesburg came into being as a huddled conglomeration of tin shanties and nondescript wooden buildings. The site chosen for the future city was on the southern slope of the Witwatersrand Range, one of the bleakest and most elevated spots in the Transvaal, where land for agricultural purposes was of so little value that a few years before farms had changed hands for a team of oxen. In January 1895 two stands in Commissioner Street sold for £22,000, in 1897 one stand in Pritchard Street fetched 140,000, and in 1902 the Standard Bank of South Africa purchased four stands for £145,000. In 1917 a corner site, 50 feet by 50 feet, on Pritchard and Joubert Streets, sold for £25,000. Finally, in 1925 Bussey's Buildings, Commissioner Street, standing on a site which cost £60 thirty-seven years before, were sold to the African City Properties Trust Limited for £38,000, probably one of the most remarkable instances of unearned increment in the history of modern cities.

**ARCHITECTURAL FEATURES.**—Facts such as those instanced above show that the Johannesburg of the early days is little more than a memory, in appearance at any rate. Nearly all the old landmarks have disappeared, and the tin shanty which followed the tented wagon and canvas shack has been replaced by palatial buildings and handsome residences. Many of these are as fine as those to be found in any city of the old world. In the centre of the place, on a site which for many years was used as an open-air market, are the Town Hall Buildings, a noble pile designed by South

**HORTORS LIMITED, Johannesburg**  
Premises, Harrison Street.

(See letterpress, page 75.)

African architects and erected at a cost of over £450,000. These buildings were formally opened by Lord Buxton on April 7, 1915. The Town Hall seats 3,000 people, and its organ is considered to be one of the finest and largest in the world.

Among other important structures those of the Witwatersrand University will, when completed be a great addition to the architectural beauty of the city. The Johannesburg Hospital to the north west of Joubert Park, the General Post Office in Rissik Street, the Public Library in Keir Street, the Law Courts, Telephone Exchange, and Fire Station, all on Von Brandis Square, the fine new buildings of the Chamber of Mines and of the Stock Exchange, in Marshall Square, the Standard Bank Building, in Commissioner Street, the headquarters of the National Bank of South Africa, the Johannesburg Consolidated Investment Company's offices at the corner of Fox and Harrison Streets, and, last but not least, since it is the tallest building in the city, the Corner House at Commissioner and Simmonds Streets—these are the foremost of the structures devoted to public and private business, and will rank with those of any city overseas.

**BUILDING DEVELOPMENT.** The above are some of what may be termed legitimately the older buildings of Johannesburg. Since the War, and especially during the years 1924 and 1925, the builder has been very busy, especially so far as expensive structures in the centre of the city are concerned.

During the years 1912-25 over £11,000,000 was expended in the erection of new buildings,

entailing the completion of 8,000 of all kinds, 6,000 being dwelling houses. In the 12 months ended June 30, 1925, buildings estimated to cost £2,300,000 were put up, compared with only half a million as the cost of such operations in 1915. Recent additions to the architectural attractiveness of the city include Whitehead Court, Kil-larney (£60,000), Clarendon Buildings, Eloff Street (£50,000), Hendersons' Buildings, President Street (£50,000), the South African Party Club, Eloff Street (£32,000), the National Party Club (£35,000), and the Netherlands Bank Buildings (£30,000). On the site of the old Goldfields Hotel, associated with so much of the romance of the Rand a magnificent new building is being erected which will serve the needs of the ever expanding motor trade. Furthermore, estimates and plans are now being considered for the construction of a new railway station at a cost of a million and a quarter, and new Magistrates' Courts are also projected.

**INCREASE IN VALUES.**—In view of these facts and figures it is not surprising to find that there has been a marked increase in the rateable values of the city during the present century, and especially since the previous triennial survey in 1922. In 1902 the value of the buildings in the city was assessed at £6,875,755. By 1905 the figures had more than doubled, being £14,105,172, but during the next five years development was slow, the rateable value in 1910 showing only £1,523,795 increase. Progress was recorded in 1910, when the total valuation was placed at £33,808,207, of which amount £17,615,455 represented buildings, while,

in 1920 the rateable value was fixed at no less than £22,341,791, and in 1922 at over £26,000,000. In 1925 the assessment for buildings alone had risen to £33,371,479.

## REPRESENTATIVE PROPERTY OWNERS, ARCHITECTS, CONTRACTORS, SHOPFITTERS, ETC.

### THE AFRICAN CITY PROPERTIES TRUST, LIMITED.

**Inception.** This prominent and progressive company was formed in October 1889, with the object of investing in real estate in Johannesburg, Pretoria, and other South African towns.

**Development.**—The original purpose of the company has been followed consistently, its investments being now principally concentrated in Johannesburg, the largest city in the Union of South Africa. Here it has from time to time acquired sites in good positions. These sites have been developed by the erection of large blocks of shops, flats and offices. The firm has been mainly instrumental in improving the north side of Eloff Street, to-day without question, the big shopping street of Johannesburg.

**Constructions.**—The company's first large building was erected in 1897, since when it has put up six extensive blocks in Eloff Street and other neighbouring thoroughfares, as well as numbers of buildings in different parts of Johannesburg. It is interesting to recall that while six of the company's large buildings now stand there used to be tin shanties and small one storey structures. The buildings erected by the firm compare favourably with any in the Southern Hemisphere.

**Other Activities.**—The company owns the residential suburb of Bellside, to the north-east of Johannesburg, where it has freehold stands to offer for sale from £75 upwards. It has recently purchased a block of three stands in the business centre of the "city" part of Johannesburg, on which it has arranged to erect a building of five storeys. This block is to have shops on the ground floor, and the upper floors will be occupied by offices. In addition to its usual business, the company acts as agent for buying and selling on commission, for the letting of properties, the collection of rents, and other business connected with real estate in Johannesburg and the neighbourhood.

**Capital.** The authorised capital of the company is £375,000 divided into 250,000 ordinary and 125,000 preference shares of £1 each. The preference shares carry interest at the rate of 6 per cent per annum. Of this authorised capital, £20,334 ordinary and all the preference shares have been issued. In addition, £200,000 worth of debenture stock has been authorised and issued. The total cash resources of the company thus stand at £545,334.

**Directorate.**—Sir Arthur Bell (chairman), Mr. Sidney St. J. Steadman, (deputy-chairman), Major Sir George E. J. Manners, D.L., J.P., and Mr. Alan J. Davidson. There is an advisory board in Johannesburg, of which Sir William van Hulse is chairman and Mr. S. J. Hunter is manager. Secretary, Mr. Charles Forbes.

**Agencies.** The company is the Johannesburg agent for the Union Assurance Society, Limited.

**Offices.**—The head office is at 6, Old Jewry, London, E.C.2. The South African office is at 76, Market Street, Johannesburg.

**Cable Address.**—"Lagostoma," both for London and Johannesburg.

(See also illustration, page 78.)

HARRIS AND HITTINGER, Johannesburg.

An interesting exhibit at the Wembley Exhibition of the kind of work done by Harris and Hittinger throughout Africa.

#### HARRIS & HITTINGER.

**Inception.**—Established for over 19 years in Johannesburg, this firm of shop, bank and office fitters has designed and manufactured the appointments for many of the leading stores in the Union of South Africa.

**Activities.**—Messrs Harris & Hittinger specialise in the manufacture of "Kwisa" unit fittings and glass counters, wood or metal shop fronts, show cases, signs and bank and office fittings. They also specialise in the manufacture of show models for the display of ladies' dresses and men's suits, etc., and their productions compare very favourably with the imported article. In connection with this department, competent wax modellers are employed for the repair and renovation of wax display figures. The experience gained from its long association with the needs of South African merchants enables this firm to plan and design

fittings suitable for all trades in an expert manner.

**Exhibits.**—In 1924 Messrs Harris & Hittinger were awarded a gold medal for a shop-fitting exhibit at the Witwatersrand Agricultural Show, and the standing of the firm in the Union of South Africa is shown by the fact that it was entrusted with the making of the South African Building Industry Exhibit for the British Empire Exhibition at Wembley. This exhibit in the firm's workshops at Johannesburg (see accompanying photograph) was constructed in polished South African woods, and received the highest commendation.

**Offices.** Corner of Kerk and Loveday Streets, P.O. Box 1379, Johannesburg, where in addition to examples of fittings, there is kept a large stock of brass, nickel-plated and oak window display fittings.

**Cables.**—"Signboards," Johannesburg.

#### WALTER AND CYRIL REID.

**Inception.** This firm of architects was established in Johannesburg in 1887, the partnership then consisting of Messrs Walter and Arthur Reid. It may be noted that Mr W. H. Reid, F.R.I.B.A., father of these partners, and grandfather of Mr Cyril Reid, commenced practice in Capetown in the same year.

**Activities.**—The firm has won many open competitions, including that for the design of the Polana Hotel, constructed for the Delagoa Bay Land Syndicate at a cost of £210,000, the Germiston Town Hall, and the Medical School, University of Witwatersrand, now in course of erection, at a cost of about £100,000. Other buildings designed and erected by the firm are the Palladium Theatre, Johannesburg, on which £40,000 was expended, the Moseley Buildings Company Limited, at a similar outlay, the offices of

WALTER &amp; CYRIL REID, Johannesburg.

The Polana Hotel, Lourenço Marques, designed by the firm.

W. B. Pickles & Son Ltd, the National Bank Buildings in Pritchard Street, also many other business premises and private residences in the Union and Rhodesia. The firm is now engaged on the construction of many buildings, including those for Messrs Fatti & Co Ltd (£21,000) and Messrs Petersen, Ltd.

**Partners.**—Mr Walter Reid, F.R.I.B.A., Member S.A. Institute of Valuers, M. Assoc. Transvaal Architects, and Mr Cyril Reid, A.T.A.

**Offices.**—22-24, Aegis Buildings, Johannesburg P.O. Box 746

#### JAMES THOMPSON.

**Inception.**—Mr James Thompson commenced business as a builder and contractor shortly after his arrival in Johannesburg in 1887.

**Development.**—At first operations were conducted in a small way at a building in Kessik Street, Johannesburg at that time being little more than a mining camp. Business soon progressed, however, and more

commodious premises were secured at the present site in Krus Street (south).

**Activities.**—The firm conducts every branch of business connected with the building trade, for, although it undertakes big contracts, it still caters for small jobbing, even to fitting a key or repairing a tap.

**Buildings.** The firm has been responsible for many of the most notable buildings in the country, from Government offices to private dwellings, the following list giving some idea as to the scope of activities.

*In Johannesburg*—Government schools, new Law Courts, Central Police Barracks, Mannors Mansions, Atlas Insurance Co's Building, Norwich Union Life Building, Union Castle Co's Building, Dutch Reformed Church, General Hospital, British Imperial Oil Co's warehouse, Sir Abe Bailey's racing stables, Union Club, Railway War Memorial, residences for Sir Lionel Phillips (now a Jewish orphanage) Sir Percy Fitzpatrick, and many others.

*In Bloemfontein*—Grey's College, Mental Hospital, Standard Bank of South Africa

building, Municipal Market buildings, Railway War Memorial.

*In Pretoria*—Railway Institute, Railway Memorial and Boys' and Girls' School.

*In East London*—Police Barracks, Selborne College, Railway Goods offices.

The firm has indeed erected buildings in practically every town throughout the Union.

**Personal.**—Mr James Thompson (formerly Mayor of Johannesburg) is Deputy Grand Master of Freemasons (Scottish Constitution) in the Transvaal, Past Chief of the Caledonian Society, Past President of the Witwatersrand Master Builders, Past President of the National Federation of Master Builders of South Africa, Past President of the Transvaal Municipal Association, a member of the Rand Club and a foundation member of the New Club, Johannesburg.

**Head Office.**—Krus Street, P.O. Box 312, Johannesburg. Telephones 6209 & 6210 Central.

**Cables.**—"Crick."

JAMES THOMPSON, Contractor & Builder, Johannesburg.

Three interesting recent contracts.

1. The Law Courts, Johannesburg.
2. Standard Bank of South Africa, Ltd., Bloemfontein Branch.
3. New Water Cooling Towers, Power Station, Johannesburg.

JOHN BARROW, Constructor, Johannesburg. One of the Firm's Present Contracts.

#### JOHN BARROW.

**Inception.**—This firm of builders and contractors was established in the year 1896 by Mr John Barrow (snr) in partnership with his two sons, John and Albert Barrow, the former losing his life in the Boer War.

**Activities.**—Among the structures for which the firm has been responsible are St John's College, the S.A. Medical Research Building, the N.W.C.A. Buildings, Medical School, University Buildings, Witwatersrand, and the premises of Messrs Mackay Bros. In Natal, the Michaelhouse School Memorial Hall is a noteworthy example of the firm's work, while in Kroonstad it constructed the Standard Bank Building etc. Of recent years the firm has specialised in cast concrete, the University and Mackay Buildings being examples of such work, all the castings for these and similar constructions having been carried out at the firm's own works.

**Contract Values.**—The contracts which the firm of John Barrow has undertaken now reach a total value of about £750,000.

**Offices.** Miller Street, Doornfontein, Johannesburg P.O. Box 3007.

#### SAGE & CO. LTD.

**Inception.**—This firm, which has been established for over a century in South Africa, is a branch of the well known shopfittings specialists, Messrs Frederick Sage & Company Limited, of London.

**Productions.**—Messrs Sage & Co Ltd manufacture all kinds of fittings, both for interior and exterior shop decoration and use, the scope of their activities including everything in wood, glass, or metal that the storekeeper may require. They have established a solid connection with leading firms of architects, and this association has produced such striking features as the frontages of Pollock Mansions, at Johannesburg, and of the premises of Messrs Stuttford & Co Ltd at Durban and Capetown, as also many others in different towns.

**Installations.**—Among a number, the firm has installed the shopfronts and fittings of the premises of Messrs Harvey Greenacre, at Durban, of Messrs Ireland & Co, Pietermaritzburg, of Messrs Rautenbach & Co, Kroonstad, of Messrs Champion's, Bloemfontein, and of Messrs Haddon & Sny, Bulawayo.

SAGE & CO. LTD., Johannesburg. Handsome Fittings Installed by the Firm.

W. R. BOUSTRED & CO. LTD., Johannesburg.  
Three Interesting Aspects of the Firm's Fine Showrooms.

**Workshops.** Fully equipped workshops are maintained at 145, President Street, Johannesburg. The most modern machinery has been installed, and a highly trained staff of specialists and designers is employed. The standardisation of the processes used has enabled the cost of production to be considerably lowered, permitting high-grade articles to be offered at prices at which single special units could not be produced.

**Showroom.**—Associated with the workshops is a showroom for the display of sundry fittings of all descriptions, and here samples of unit fittings, special counters and show cases can be inspected.

**Parent Company.** Messrs Frederick Sage & Company Limited, whose head office is at 58/62, Gray's Inn Road, London, W C 1, has branches all over the world, including Paris, Brussels, Buenos Aires, and Valparaiso.

**Local Offices.** 145, President Street, Johannesburg. P O Box No 777.

**Manager.**—The management of the South African business has been in the hands of Mr R Innes Abraham for the past sixteen years.

**Telegrams and Cables.**—“Sages,” Johannesburg. Code, Bentley's.

#### W. R. BOUSTRED & CO. LTD.

**Inception.**—This firm commenced operations with a retail and general hardware store in 1896.

**Development.**—Owing to the success which attended its early efforts, the company in 1898 moved into new premises in Fox Street, which were extended twelve years later, still further extensions being made in 1915. In 1911 the business was converted into a limited liability company.

**Capital.**—The original capital of the company was £20,000, but in 1923 it was increased to £30,000, while in 1924 it was raised to £40,000.

**Activities.**—The firm chiefly deals in general builders' requisites, of which large stocks are held. It also maintains a varied assortment of special goods required for Government buildings and other similar undertakings. The field of operations extends over the whole of the Transvaal, Rhodesia, and part of the Orange Free State.

**Factory.**—In 1907 the firm opened a factory for the manufacture of steel ceilings. This side of the business gradually developed, until to-day there are some twenty white and approximately thirty native employees. The firm undertakes the fixing of the ceilings which it produces.

**Distribution.**—Wholesale and retail distribution is catered for, and particular attention is paid to the wholesale country trade.

**Director.**—Mr W F Boustred.

**Overseas Representatives.**—Messrs Findlay, Durham & Brodie, of 4, Devonshire Square, Bishopsgate, London, E C 2.

**Bankers.**—The National Bank of South Africa, Limited, Natal Bank Branch.

**Cables.**—“Boustre,” Johannesburg.

#### HERBERT EVANS & CO.

**Inception.**—Mr Herbert Evans, the present principal, established this firm in 1889, contracts being secured for painting many of the large buildings then being constructed.

**Development.**—The business grew rapidly, and kept step with the development of the city of Johannesburg. After a few years the firm became an importer of paints and wallpaper, and other lines were added in the course of time. Now, after thirty-six years of activity, an extensive trade is carried on in all kinds of paints, brushware, plate glass, sheet glass, and art wallpaper. From the

foundation of the business to the present time it has been the firm's practice to give customers only the best of quality and service, the extensive development of the establishment proving the wisdom of such policy. The business is now one of the largest of its kind in South Africa, and has far-reaching connections throughout the Union and Rhodesia.

**Activities.**—The commercial side of operations is carried on in a handsome building containing several departments, including artists' materials, picture-framing, glass beveling and silvering, leaded-light making, steel ceilings, and signwriting. An attractive feature of the premises is the picture gallery on the first floor, where a well-stocked department caters for all amateur and professional requirements.

**Stocks.**—Large stocks of all kinds of paints, enamels and varnishes are kept, and a special room is devoted to the display of the latest designs and patterns in wallpapers.

**Factory.**—A paint and polish factory, equipped with the most modern machinery, has recently been established at Upper Railway Road, Doornfontein.

**Branch.** There is a branch at 203 Pretorius Street, Pretoria.

**Overseas Agents.** Messrs. Keop Bros. Ltd., of London and Birmingham, act in this capacity.

**Offices.**—The Paint House, 88, Pritchard Street, Von Brandis Square, Johannesburg. Cables "Anaglypta," Johannesburg, code, Bentley's.

**Bankers.**—The National Bank of South Africa, Limited.

## THE TRADE AND INDUSTRIES OF JOHANNESBURG

Manufacturers overseas who contemplate establishing branches in South Africa will look naturally for that centre which offers the most attractive point of contact between raw materials and the users of finished products. It is at such a place that manufacturing operations can be conducted progressively, and capital may be utilised in the best manner possible. Johannesburg, which ranks as the business and financial capital of the famous Witwatersrand area and the chief commercial centre of the Union, enjoys valuable advantages in the supply of raw materials, fuel, power, labour, manufacturing sites, markets, commercial distributing channels, and transportation. Moreover it offers the largest urban consuming market in South Africa, through its population, including that of the Reef, of over 6,000,000. Hundreds of thousands of consumers can be reached in the agricultural areas of the high and low veld, the coastal markets are within easy distance, the great hinterland of the Rhodesias, the Congo, and Central Africa lie to the north, and the export trade now being opened up to East Africa, Madagascar, Mauritius, Australia, and the East, as well as to adjacent territories, can be handled without difficulty. All factors, indeed, combine to make Johannesburg the logical centre for manufacture and distribution and for inland demand. Rainfall, temperature, and sunshine unite to provide almost ideal conditions. These features, together with the long hours of daylight, give admirable working and living conditions.

**DEVELOPMENT.**—The development of industrial Johannesburg, which, it must be remembered, came into being with extraordinary suddenness as a purely mining community, has been strictly progressive,

HERBERT EVANS & CO., Johannesburg.

2. Wallpaper Department.
3. Paint Department.

and is based upon the natural advantages afforded by its location. In the Witwatersrand area, which includes Johannesburg, the growth since 1915 is exemplified by the following official figures of the industrial position at recent date. In 1915 the number of factories in the Witwatersrand area was 862, out of a total of 1,157 for the whole Transvaal Province, the latest available figures placed the number at 1,815 out of a total of 2,420, while the value of land and buildings had grown from £4,162,500 to £7,500,000, and of machinery and plant from £7,115,000 to £13,200,000. The total number of industrial employees in the Witwatersrand area increased from 29,050 in 1915 to over 58,000, while the gross value of output, which amounted to nearly £13,000,000 in the former year, had (as shown by latest returns) nearly trebled itself to over

cides, leather bags, trunks, and boxes, lime products; lithography and printing, macaroni, pickles, and meat pastes, maize products, mineral waters and citrus juices, nails, paints, and polishes, paper, perfumery, pottery, bricks, and earthenware, saddlery and harness, scientific instruments, soaps—toilet and washing, tiles—mosaic and other, tobacco, vinegar and condiments, vehicles, wire ropes, wood-working and joinery.

Of the above, the constructional foundry, machinery, and engineering industry has developed amazingly during the past five years in consequence of the enormous strides that have been made in the production of South African steel. The growing of what is termed "Transvaal tobacco" has resulted in the erection of many important factories, at which large numbers of workers are employed. Cotton "guns" have been

both in America and Europe. The Mines Inspector reports that he has received a great many inquiries regarding the Union's capability to send constant supplies, and that he is getting in touch with producers. These investigations, which especially concern the export and wholesale trade of Johannesburg, following as they do the report of the committee recently appointed by the Government to investigate the development of the Union's mineral resources, which report urged in emphatic terms the need and justification for State assistance for the encouragement of the mineral industries, is considered as particularly timely and significant, and some practical expression of the Government's sympathy was hoped for during the 1926 session of Parliament.

**TRANSPORTATION FACILITIES.**—The aim of the Government Railway Adminis-

JUNCTION OF COMMISSIONER AND HARRISON STREETS, JOHANNESBURG.  
The four corner buildings were designed by Messrs. Stucke & Harrison, Architects.

£36,000,000, this last figure being the Witwatersrand's share of a total of £40,000,000 for the whole Transvaal.

**LEADING INDUSTRIES.**—The following list includes the main existing industries of Johannesburg. Agricultural implements, ales, beers, and wines; asbestos sheeting and other products, bacon and similar food products, bags—linen and calico; baking powders and biscuits, boots and shoes, brushes and brooms; candles, cement, and charcoal, chemicals—hydrogen, oxygen, and carbide, cigarettes, clothing; concrete pipes, constructional foundry, machinery, and engineering work, cords, twine, and string; diamond cutting, disinfectants, electro-plating, films, flour; furniture; grocers' sundries, hats and caps; insecti-

established in various parts of the district, and a fairly large export trade with Europe is now in operation.

**OVERSEAS MARKETS.**—While the British Empire Exhibition was in progress at Wembley an exhaustive tour of Great Britain and the Continent was made by the Pretoria Mines Inspector in charge of the South African mineral exhibits in order to ascertain the prospects for selling South African minerals overseas. Opportunities in the overseas markets for these would appear to be highly promising. Asbestos, chrome, corundum, mica, and talc are minerals which South Africa, and especially the Rand, can supply in abundant quantities of the necessary high grade, for all these there would appear to be an assured market

tration of the Union has always been to provide a method of transport which will offset the advantages possessed by other countries in the form of canals and navigable rivers. The Administration has initiated a system of "Distribution Centres and Rates," which enables manufactured products to be conveyed to the chief points in each consuming area under the most favourable conditions. This assists Johannesburg manufacturers in competing upon equal terms with the products of other industrial centres, and with imported commodities, in the important zones of distribution.

Thanks to the fact that Johannesburg is to-day the centre upon which all railway development has converged, while at the same time the extensive regions to the

(See *Interpress*, page 86.)

north have been gradually opened up, the Golden City need no longer fear any possible wasting of her gold industry, since she has in her midst and in her surroundings all the facilities of an extensive system of commerce. The importance of this may be gauged by railway statistics. Taking at random a month's return of the tonnage railed from the ports of Capetown, Port Elizabeth, East London, Durban, and Lourenço Marques to the principal inland stations, it has been found that 54 per cent was forwarded to Johannesburg and the Reef, being 3,700 tons more than the combined tonnage to all other principal inland centres.

## REPRESENTATIVE WHOLESALE AND OTHER ENTERPRISES

### J. NUNNERLEY & COMPANY LTD.

**Inception.**—The rapid expansion of this firm of wholesale merchants, which started operations only a few years ago in Johannesburg, is directly attributable to its managing director, Mr. John Nunnerley, whose wide and expert knowledge of the needs and requirements of the country extending over a period of 25 years has enabled the organisation to build up one of the foremost wholesale businesses in South Africa.

**Development.**—Not content with working from Johannesburg, Messrs. Nunnerley have now built large premises in Durban, at the corner of Albert and Victoria Streets, and have also purchased a warehouse at Capetown in Buitenkant Street. From these three centres their ramifications extend to every part of the country from the Belgian Congo to the Cape Lach territory is worked systematically by their representatives, who travel by motor cars to every corner of their respective districts.

**Activities.**—Messrs. Nunnerley & Co. are specialists in Manchester piece goods and dress materials of every description, and are one of the foremost firms in South Africa dealing in piece goods. They also cater extensively for household linens, silks, soft furnishings, clothing (men's, youths' and boys'), rugs, shawls, blankets, stationery, hardware, haberdashery, ribbons, laces, hosiery, outfitting, mufflers, handkerchiefs, felt hats, buckskins and liessian. The scope of the departments is gradually increasing, and the firm feels confident that ultimately every requirement of the country will be catered for.

**Addresses.** 107-109 Market Street, P.O. Box 6327, Johannesburg, corner of Albert and Victoria Streets, P.O. Box 2159 Durban, Buitenkant Street, P.O. Box 2401, Capetown.

**Offices.**—The company has offices at 53, Finsbury Court, Finsbury Pavement, London, E.C.2., and also in Manchester (P.O. B. 107).

**Bankers.**—The National Bank of South Africa, Ltd.

**Cables.**—"Nunnerco," Johannesburg, Capetown, and Durban, Code: Bentley's (See also illustration, page 85).

### H. BEEMER & COMPANY.

**Inception.**—This exclusively wholesale business was started in a very modest way in August, 1920, and at first dealt exclusively in ladies' showroom goods.

**Premises.**—Originally the floor space was only 750 square feet, but in the course of a few months this was found to be quite inadequate, and larger premises, with a floor space of 3,000 square feet, were acquired in Market Street, now recognised as the wholesale distributing centre for South Africa. At that date a millinery and ladies' under-

wear department was added. At the expiration of another twelve months business had increased to such an extent that new premises had to be secured, and the present site, also in Market Street, was obtained. The building erected is of brick and concrete, with excellent lighting arrangements and an electric lift to all floors. In this structure the floor space is 25,000 square feet.

**Activities.** The firm has always confined its activities to wholesale business, and it supplies retail traders throughout the whole of the Transvaal, Orange Free State, Natal, Rhodesia, South West Africa and Cape Province. The goods carried are in the main of British origin, but purchases are also made in Germany, France, Italy, Switzerland, Czechoslovakia, Austria, Belgium, Holland, America, Japan, India and China. The articles stocked are of the medium to better class types, a special feature being made of all kinds of novelties. Fourteen travellers cover the Union, mostly by Dodge lorry. Goods are sent as far distant as Broken Hill, in Northern Rhodesia, Indersbucht and Swakopmund in South West Africa, Durban in Natal, Port Elizabeth and East London in Cape Province, and the Belgian Congo.

**Lines Carried.**—The firm specialises in millinery, costumes, robes, blouses, jumpers, underclothing, corsets, and hat boxes for ladies, also in baby linen, underclothes, hosiery, haberdashery, gloves, handkerchiefs, umbrellas, laces, ribbons, veils, embroideries, Manchester goods, silk, wool and cotton dress goods, dress trimmings, fancy linens, soft furnishings, blankets, calicoes, shirts, collars, ties, hats, caps, mufflers, shawls, fibre suit cases, attaché cases, and cabin trunks.

**Partners.**—Messrs. H. Beemer and J. Finn.

**Offices.**—The head office is at 154, Market Street, corner of Von Weilligh Street, Johannesburg. Telephone No. 6614 (3 lines). Post Office Box No. 4753. The London office is C/o Messrs. Landau Bros., 41, Moorfields, E.C.2. The Manchester office, C/o Messrs. Landau Bros., 74, Princess Street. The Paris office, C/o Mr. J. P. Walker, 25, Rue d'Enghien, and the Hamburg office, C/o Mr. R. Lippmann, Königstrasse 11/13.

**Cables.**—"Beemerco," Johannesburg. Codes: Bentley's, A.B.C., and Western Union.

**Bankers.**—The Standard Bank of South Africa, Limited, Bloff Street branch.

**Shipping Marks.**—"HBC" "JHB"

**SELIGSON & CLARE, LTD.**—Head S. African office, 169, Main Street, Johannesburg. Commenced business in 1919. Sole concessionaires and stockists of certain mechanical machinery, suppliers to printing and paper trades, manufacturers and millrepresentatives, large stocks held at Capetown, Port Elizabeth, Durban, Lourenço Marques and Johannesburg warehouses of productions of Karl Krause, Gebrüder Brehmer, Koenig & Bauer, F. T. Wimble & Co. Ltd., Springer & Moeller, Heidelberg Automatic Machinery, Schelter & Giesecke. Sole agents for "Pyrex" Ware (originally made by Corning Glass Works, U.S.A., now made under licence by Wear Flint Glass Works, James A. Jobling & Co. Ltd., Sunderland, England), C. & J. Robertson, Lamm Bros., James Ltd., Chapman & Co. (Ballam) Ltd. Directors: Capt. H. L. Seligson, M.C. (managing-director), Mr. A. Ward Clare, Mr. C. L. van Hasselt. Box 4416, Johannesburg Cables, "Strenuous," Johannesburg. (All codes and private). Bankers: National Bank of South Africa, Ltd., Head Office, Johannesburg, also at Circus Place, London Wall, London, E.C., and 44, Beaver Street, New York. Besides

being contractors to the South African Government, Seligson & Clare, Ltd., have the distinction of having supplied the longest newspaper rotary press (nearly 70 ft.) south of the Equator. This is installed in the works of the "Bloemfontein Friend," and was built by Koenig & Bauer Associate Companies. Seligson & Clare (Australia) Ltd., Head Office, Kembla Buildings, 58 & 60, Margaret Street, Sydney, and Seligson & Clare (New Zealand) Ltd., Head Office, 28, Fort Street, Auckland. Capital, £15,000 issued and fully paid.

### W. B. PICKLES & SONS.

**Inception.**—This firm originally commenced business in 1902 as Pickles & White, but the partnership was dissolved five years later, when Mr. W. B. Pickles started on his own account, having been during the last few years ably assisted by his two sons, Mr. Rowland and Mr. Chas. Pickles.

**Development.** Commencing in a small way at Johannesburg, the firm gradually grew in importance until to-day it has its own large premises in that city, and also at Durban, both being known as "Textile House." There is a branch office, as also a warehouse, in Capetown, while Messrs. Twan & Stevens represent the firm at Bulawayo and at Salisbury.

**Activities.**—The activities of Messrs. Pickles & Sons are mainly directed to the wholesale distribution of tailor's trimmings, woollen suitings, and ladies' dress materials, of which goods they carry one of the largest stocks in South Africa. The sales organisation consists of travellers, who cover Africa from the Cape to the Congo, and at regular intervals are in touch with all the retail merchants dealing in their particular lines.

**Premises.**—The main offices in Johannesburg and Durban have been designed with a special lighting system suitable for the woollen trade, and cover a floor area of 10,000 and 5,000 square feet respectively. The floor space occupied by Messrs. W. B. Pickles & Sons in Remington Buildings, Capetown, is of 3,000 square feet.

**London Offices.** The firm has its own representative in the offices of Messrs. W. G. Bonecock & Co., Finsbury Court, Finsbury Pavement, E.C.2, and Mr. W. B. Pickles himself spends eight months of every year in England in order to supervise the buying arrangements.

**Personal.**—Mr. W. B. Pickles is a native of Parsley, Yorkshire, where his family has been intimately connected with the wool spinning industry. He had his early training at the spinning mills of Messrs. Reuben Gaunt & Sons, where his uncle, the late Benjamin Pickles, had been manager for sixty years.

**Staff.**—This consists of 42 Europeans and 14 natives. The general manager is Mr. W. S. McFarlane. The manager for Johannesburg is Mr. G. L. Dickie, and for Durban, Mr. W. B. Kelly. Mr. H. E. Lovegrove attends to the firm's requirements in Capetown.

**Head Office.**—Textile House, Von Brandis Street, P.O. Box 279, Johannesburg. Cables, "Vicuna."

**Bankers.**—The National Bank of South Africa, Ltd. (See illustration, page 88).

**WM. H. MÜLLER & CO. (TRANSVAAL), LTD.**—Ocean Building, Simmonds Street, Johannesburg. Phones 2320/1; telegraphic address, "Ferrostaal." Also at The Hague, London, New York, etc. Local directors and managers, Messrs. G. Borcharding and Carl Rosenberg. Importers of iron and steel manufactures, such as steel plates, steel piping (welded and solid drawn) and cast iron piping, drill steel, shovels, shafting, hex bolts

and nuts, washers, rivets, railway track and trucks, including light and heavy rails, wrenches, spanners, vices, saws, hammers, hoop iron, charcoal iron, wire nails, bar and plain wire, wire netting, fencing standards and droppers. Large stocks kept in own stores. Eloff Street Extension Contractors to the Government, Railways, Municipalities, etc.

#### THE NORTHERN LIME CO. LTD.

**Inception.**—This company was established in 1907 by Messrs Z Davidson and W W Men to work the deposits at Uthloop, near Potgietersrust. Since the acquisition of the Taungs works it has become one of the largest concerns of its kind in the Union.

**Works.**—These are situated some nine miles west of Taungs, and are fully developed, being equipped on the most up-to-date lines, modern electrically-driven machinery having been installed throughout.

**Production.**—The production of burnt lime is between five and six thousand tons per month, the employees numbering forty whites and six hundred natives. Almost the whole of this output is consumed by concerns in the Union and Rhodesia. It is used in gold mines for neutralising acids in the water, in sugar factories in the process of refining, and in carbide works for the manufacture of this product. In addition, the company's properties produce all classes of limestone for fluxing agricultural, and other purposes.

**Qualities and Area.** The deposit covers an area of about 640 acres, and analysis has proved it to be one of the finest in South Africa. The workings are connected to the South African Railways main line by the company's own private railway. The qualities produced are limestone 98% CaCO<sub>3</sub>, burnt lime 90% CaO, and slaked air separated 70% CaO.

**Administration.**—The managing director is Mr J E Orr, and the general manager is Mr A F Campbell.

**Offices.**—These are at 68/72, National Bank Buildings, Simmonds Street Johannesburg. Post Office Box No 4610. Cables "Northern," Johannesburg.

**London Buyers.**—Messrs A Moor & Company, 1, London Wall Buildings, E C.

**Bankers.**—The National Bank of South Africa, Limited.

**THE NETHERLANDS INSURANCE COMPANY, Est. 1845.**—36-38, Stella Buildings, corner Kissik and Marshall Streets, Johannesburg. Founded in 1845 at Zutphen, Holland, as The Netherlands Fire Insurance Company, to transact fire insurance only, with a capital of £500,000, which is now £6,000,000 (£500,000). Company underwrites (besides fire insurance) life, burglary, plate glass, accident, motor car, fidelity and workmen's compensation insurance. Head office since 1897 at The Hague, Holland, while branch offices are at Amsterdam, Rotterdam, Breda, Alkmaar, Zutphen, Nijmegen, Groningen, Zwolle in the Netherlands, and at Batavia, Java (Netherlands East Indies), also recently at Capetown. Agencies are established all over Holland, at Hamburg and Bremen (Germany), Copenhagen (Denmark), in the United States of America, Union of South Africa, South West Africa, and Portuguese East Africa. Principal office for the Union of South Africa is at Johannesburg, where Mr. P. C. Baerveldt is the chief representative and inspector, having represented the company in the Transvaal since 1890. Branch office at Capetown controls the Cape Province and Natal. Financial position of the company is very sound, the balance sheet as at December 31,

Ltd, and agents for Callenders Cable & Construction Co., Simplex Conduits Ltd, etc Branch: Capetown Cables "Wilsherd." Codes Bentley's, Schofield's and Private.

## VEREENIGING

**V**EREENIGING is situated on the Transvaal side of the Vaal River in the Heidelberg district, some 45 miles from Johannesburg and 77 from Pretoria. It is served by two separate lines of railway, and there are two stations on the Vereeniging Estates. The town came into being as the result of the discovery of rich coal deposits, later it acquired fame as the meeting place of the British and Boer plenipotentiaries who made peace in 1902. Vereeniging is 1,751 ft above sea level, being about 1,000 ft lower than Johannesburg, and within a few feet of the level of Pretoria, but, unlike the latter, it is not surrounded by hills, and is therefore considerably cooler in the summer months, the river also contributes towards this condition. The climate is similar to that of the Rand and the rainy season occurs during the summer months.

**BUILDINGS.**—The largest buildings in Vereeniging are those devoted to commerce

and the scholars number 500. There are parallel classes with English and Afrikaans as the media up to Standard IV, above that English is the medium. The school curriculum is in accordance with the code of the Transvaal Education Department. There are also several good private schools in the town and a dancing class for children.

**FORESTS AND ORCHARDS.**—Not only is Vereeniging a great industrial centre, but it is also an agricultural pivot of growing importance. The beautiful and valuable Maccauvlei Forest covers an area of approximately 4,000 acres and contains four and a quarter million trees, most of them com-fers, but many of valuable hardwood timber. The apple orchards of the district are famous, and a large portion of the Vereeniging Estates has been cut up into small farms which are fenced and provided with houses, boreholes and windmills. The best type of settlers has been attracted and mealies, tef, barley, oats, rye, and lucerne

output to 60,000 sales tons per month, and employs 130 white employees in addition to 1,800 natives. The Vereeniging Brick and Tile Company, Limited, which manufactures a wide range of products from the clays found upon the property of the Vereeniging Estates, possesses over 20 kilns with an output capacity of 700,000 bricks per month, and the works of the Vereeniging Milling Company, erected at a cost of about £85,000, are equipped with grain elevators, the first to be erected in the Transvaal, and with a capacity of 12,000 bags per diem.

The growth of so many distinct industrial activities in so short a time would seem fully to justify the statement made by the Government Mining Engineer in 1919 that the site at Vereeniging is, if not the finest, one of the finest in South Africa for industrial purposes, largely on account of the combination of water with coal, and in further combination with a healthy climate on the high veld. The three form an

Transvaal.

2. THE LATE SENATOR SAMUEL MARKS,  
one of the founders of the Lewis and Marks  
Group, and a great South African Pioneer

3. MR. THEODORE MARKS,  
a director of Messrs. Lewis and Marks Ltd.

cial, industrial and financial activities, prominent among these being the Vereeniging branch of the Standard Bank of South Africa, a handsome structure recently erected in the town and built throughout of local bricks and tiles. Vereeniging House, a picturesque place in the colonial style, is built on the banks of the Vaal River, and has a magnificent view of the Maccauvlei Forest and the country beyond. The most important public buildings are those of the Town Hall and the Law Courts and Post Office, which adjoin, whilst of the town's other structures the Grand Hotel, the Royal Hotel, and the Masonic Lodge should be mentioned.

**EDUCATIONAL FACILITIES.**—Vereeniging has an elementary Government school, with Form II as the nucleus of a secondary establishment. It is intended to add Form III, if sufficient pupils offer. The headmaster has a staff of fourteen assistants,

are all grown. Cattle and sheep do particularly well in the district, and the farms have the advantage of proximity to the big markets of the Witwatersrand.

**INDUSTRIAL DEVELOPMENT.**—During recent years the industrial growth of Vereeniging has been very marked, and the place bids fair to become one of the most prominent industrial centres in the Union. The town possesses the first steel works to be established in South Africa those of the Union Steel Corporation, which occupy some 50 acres on the bank of the Vaal River, with business extending over the whole of South Africa, and also Rhodesia and the Belgian Congo. The growth in the steel trade of Vereeniging may be gauged from the fact that whereas in 1913-14 the average monthly output did not exceed 325 tons, that for 1924 was between 1,500 and 2,000 tons. The well-known Cornelia Colliery has increased its

admirable combination for the establishment of industries in the neighbourhood of Vereeniging."

**POPULATION.**—The population of Vereeniging at the census of 1921 was 5,433, which number has since considerably increased.

**POWER SUPPLY.**—The important power station of the Victoria Falls and Transvaal Power Company was established at Vereeniging in 1911 for the purpose of generating electric power for transmission to the gold mines on the Rand, 45 miles away. The plant consists of four turbine generators of 43,200 kilowatts (58,000 h.p.), while 20 Babcock & Wilcox marine type boilers are also installed, fitted with chain grate stokers. The three-phase alternating current is generated at 5,000 volts, and stepped up to 85,000 volts for transmission to the Witwatersrand Goldfields, whence it is conveyed by overhead transmission cables,

and there stepped down to 40,000 and 20,000 volts for distribution to the gold mines and other consumers. The whole of the coal burnt at this station is supplied from the Cornelia Colliery of the Vereeniging Estates, Ltd. On an average workday as much as 1,400 tons of coal are burnt, about 480,000 tons of Cornelia coal being consumed annually.

In December 1925 occurred a serious, but fortunately only a temporary, breakdown at the Vereeniging Power Station. Owing to the great increase in the requirements of the mines and other industries, this station had been working at its maximum capacity - and frequently under a heavy overload - for some considerable time past, and there had been no opportunity for necessary overhauling and repairs. One of the 12,000 kilowatt turbo-generators burst, and masses

**SPORT AND RECREATION.**—As an inland watering-place Vereeniging is becoming increasingly popular, a reason for which is found in the variety of sport and amusement offered to residents and visitors. These include boating, bathing and fishing in the waters of the Vaal the area available for boating and yachting being about 10 miles. In President Park there is a fine sports ground, where Rugby and Association football, hockey, and lawn tennis have full sway. On the townlands is a 9-hole golf course open to the public while on the Free State side of the river is the 18-hole links of the Vereeniging Estates, with a magnificent club house.

**VAAL BARRAGE.** Vereeniging is an important centre in the remarkable Vaal

#### LEWIS & MARKS LTD.

**Inception.**—The firm of Lewis & Marks Ltd (incorporated in England) was established in South Africa about 1868 by Mr. Samuel Marks and Mr. Isaac Lewis, who were among the first to proceed to Kimberley on the discovery of the Diamond Fields.

**Activities.**—Originally the firm's activities were confined to general trading, including diamonds, gold, and land, the manufacture of spirits, leather, and jam, plantations and orchards, fruit cultivation on a scientific scale, and the establishment of an iron and steel industry, the manufacture of bottles, bricks and tiles, and the opening up of coal mines. It was also largely instrumental in the establishment of railway communication with the Transvaal.

A Bird's Eye View of Vereeniging.

of the machine weighing something like 45 tons were projected through the roof, some portions being hurled across the Vaal into the Orange Free State. Since the Vereeniging plant supplies nine or ten mines on the Rand, at these mines milling operations had to cease, representing a daily loss of revenue of not less than £30,000. The supply of the mines being at a different voltage from that given by the other power stations, there was some delay in effecting a complete linking up with these, though in less than 40 hours a normal supply was available, except for the periods of peak load. The power service of the Vereeniging Station was partially restored almost immediately, two of the machines being restarted.

River Scheme, whose chief object is the provision of a permanent and reliable water supply to Johannesburg. The great Barrage, which conserves the flood waters of the Vaal River, is 25 miles down stream from Vereeniging. It took six years to complete, and was finished in July, 1923, being opened by the then Governor-General, H. R. H. Prince Arthur of Connaught. By this spectacular piece of engineering the flood waters of the Vaal are checked, thus creating a lake 50 miles in length, with a surface area of 6½ square miles, and containing 13,500,000 gallons. There are 35 piers and two abutments, thus giving 36 openings, which are closed by the same number of gates.

**Organization.**—The ramifications of the group are known in every important part of the world. It is particularly interested in the buying and selling of diamonds, business in this respect extending to Great Britain, America, Holland, Belgium, etc., London being the headquarters for this branch of its operations.

**Finance and Commerce.**—The group's activities are centred in over 40 companies with an aggregate issued capital of about £25,000,000 sterling, its commercial interests are varied, and embrace shipping forwarding business at Delagoa Bay; the manufacture of mineral waters and cement; the milling of grain and the production of salt, etc.

6. The Vereeniging Milling Company Ltd : Grain Elevators and Works.
7. The Vereeniging Estates Ltd. : Portion of Maccauvel Forest.
8. The Vereeniging Estates Ltd. : Stud Rams.

**Interests.**—The chief interests of the company are financial, mining and farming, etc. The general interests in South Africa and Rhodesia are centred in land, both agricultural and town properties, gold, coal, bricks, electric power, water, iron, steel, diamonds, platinum, salt, breweries, mineral waters, plantations, cattle, wool, grain, apples, lucerne, shipping, transport, concessions, railways, cold storage, etc.

**Agriculture.**—The area of freehold land directly under the firm's control extends to over 2,000,000 acres in all parts of the Transvaal, Orange Free State, Southern Rhodesia, British Bechuanaland and elsewhere. The land is highly suitable for both agriculture and stock-raising.

**Manufactures.**—Besides the manufacture of other industrial commodities, the group controls the principal iron and steel works in South Africa, and is now erecting a blast furnace for the production of pig-iron in Newcastle; it owns large collieries at Vereeniging, Witbank and Springs, which yield a combined saleable output of 2,000,000 tons per annum and controls brick and tile works.

**Principal Assets.**—Among its many interests, the more important ventures controlled by the group consist of the Vereeniging Estates, Ltd., African and European Investment Co., Ltd., and the Union Steel Corporation (of S.A.) Ltd.

**VEREENIGING ESTATES, LTD.**—The issued capital of this company is £1,150,100 in

shares and £350,000 in debentures, and its properties are situated in the Transvaal and Orange Free State. The town of Vereeniging, on the banks of the Vaal River, is considered to be one of the finest in South Africa for industrial purposes. Cheap electric power is generated at the Electric Power Station. The agricultural operations of the company cover an area of 200 square miles, and the properties comprise over 600 stands in the township and 127,277 acres of land. The population of the district is 2,500 Europeans and 5,000 natives, both of which numbers are rapidly increasing. Coal extends over an area of 151 square miles, the computed output being 1,000 tons per day for a period of 1,000 years. The output of steel is over 2,000 tons of finished products per month, and the milling works have a capacity of 12,000 bags of grain per day. The brick and tile industry turns out all kinds of products, with an output of 750,000 bricks alone per month. The Estates support some thousands of head of cattle, breeding from pedigree stock being another thriving enterprise. The area of irrigable land is 800 acres, and the barrage on the Vaal River is capable of supplying 20,000,000 gallons of water per day.

**AFRICAN & EUROPEAN INVESTMENT CO. LTD.**—The issued capital is £1,297,220 in shares and £746,000 in debentures. The company controls over 1,500,000 acres of freehold land in all parts of the country, and has also large mining and industrial interests.

**UNION STEEL CORPORATION (OF S.A.) LTD.**—This corporation has a capital of £607,215, with a debenture issue of £300,000. Besides other interests, it manufactures steel and bar iron, etc., to British standard sections, and produces fishplates and tube mill bars in high carbon steel. The blast furnace which is now being erected by this company at Newcastle, Natal, will be capable of a capacity of 5,000 tons per month, so that the Vereeniging works will be assured of an adequate supply of pig-iron, besides meeting the rapidly expanding demands for pig-iron of the numerous foundries in the Union.

**Directorate.**—Mr Isaac Lewis (permanent chairman), Mr Barnett Lewis and Mr Louis Marks (permanent directors), Messrs Theodore Marks, Henry D. Lewis, C. F. Rowsell, G. Roy Lewis and Julius Weil.

**Offices.** The headquarters of the group in South Africa are at Lewis & Marks Building, Johannesburg. The resident director is Mr T. Marks, and the secretary is Mr I. First. The London headquarters are at Stafford House, King William Street, F.C., the resident director being Mr C. F. Rowsell, and the secretary Mr A. Hird.

**Branches.**—There are branches of the group at Pretoria, Capetown, Kimberley and Vereeniging.

**Cables.**—"Anecdote," Johannesburg and London.

(See illustrations, pages 92 and 93.)

## OTHER CITIES

### BARBERTON

A town of some 3,500 inhabitants, Barberton is a centre of the De Kaap Goldfields, to which place the gold rush of 1880 is still remembered. Cotton is being extensively grown in the neighbourhood, which has rich agricultural possibilities. The town is lighted by electricity, and the water supply is excellent. A Municipal Hall to seat 300 people was erected in 1910, and there is a large park with recreation ground, also an excellent nine-hole golf course.

### BENONI

The third largest town in the Transvaal, Benoni has a population of 50,000. Only 20 years ago the main street of this flourishing place was bare veld. It owes its phenomenal rise to the development of the Witwatersrand gold mines, and since 1897, when the municipality was formed, has become one of the most important industrial centres in the Union. Here are the famous Dunswart Iron and Steel Works, the East Reef Foundries and Manufacturers' and the Premier Steel Castings Company's plants, as well as welding and cutting, engineering, sawmill, and brass enterprises. The municipality controls the electric power and light supply, water supply, public library, motor transport service, and abattoir. The Municipal Offices and Library form a handsome block of buildings in Market Avenue, where are also the National Bank, Hotel Cecil, and Criterion Theatre. The town has a beautiful and spacious garden in Curtis Park, and the educational facilities are of the best.

### BOKSBURG

Fourteen miles from Johannesburg, Boksburg is an instance of a rapidly-developed mining town that has now become a

favourite residential centre. In 20 years its population has grown to 40,000. The Boksburg lake is the centre of attraction, having been made by the progressive Municipal Council "the holiday and pleasure resort" of the Rand. There is a large Government Hospital here, an ample public library, and a handsome and spacious Town Hall.

### BRAKPAN

This is the youngest of the Witwatersrand municipalities, having been constituted as such in 1910. The census figures of 1921 returned a population of 24,664, of whom 7,108 were Europeans. Brakpan is the geographical centre of the Far East Rand, and among others has within its borders the famous Government Areas and the Brakpan Mines. Industrially the town is progressing fast, many depots, foundries, engineering shops, and branch houses of large Johannesburg firms having been established. Market gardening is extensively carried out. The new Town Hall on Market Square is a striking addition to the architecture of the town.

### ERMELO

A progressive town of 4,555 inhabitants, situated in pastoral country, Ermelo is the centre of a prominent mineral district containing deposits of both gold and coal. The Government Experimental Farm adjoins the Town Lands.

### GERMISTON

The fourth largest town in the Transvaal, Germiston is the greatest railway junction in the Union, lying 9 miles east of Johannesburg and 965 miles north of Capetown. The town and suburbs cover an area of 22½ square miles, and had a population in 1923 of 49,364, of whom 20,344 were whites.

The place possesses two fine business thoroughfares in Knox and President Streets, and many progressive municipal institutions, which include a new market hall, modern abattoirs, fire brigade, sewage farm and a cottage hospital. Primarily a mining town, Germiston is, nevertheless, prettily laid out, with most attractive residential suburbs, which are connected with the centre of the town by motor bus or train. The Victoria Lake and Park, ten miles away, is one of the most popular holiday resorts in South Africa, containing a racecourse, golf course, bowling green, and cricket and football grounds.

In 1917 the municipality laid out an extensive area for industrial sites, with railway sidings, etc., adjoining the Victoria Falls and Transvaal Power Company's Station. These sites were so readily taken up that a second area has been proclaimed, and several factories have been established on the location. Local manufactures include the Government Gold Refineries, in connection with the Mint, electro-furnace products, sawdust for explosives, bolts, nuts, etc., concrete pipes, heavy chemicals and agricultural implements, starch, glucose, and other cereal products, meat canning, etc. Electric power and water are supplied on advantageous terms.

### HEIDELBERG

Noted for its particularly healthy climate, the town of Heidelberg is prettily situated at the foot of a long range of hills on the banks of the Blesbok Spruit, in which there is good fishing. It is a great educational centre, possessing a Normal College, two Public Schools, a High School, and two Primary Schools. In 1921 the population was 3,410.

**KLERKSDORP**

The old village of Klerksdorp was the first Boer settlement to be established in the Transvaal in 1838. It is connected by a bridge with the new town, which dates from 1888 and has a population of 5,700. The agricultural industry of the district is considerable, and Klerksdorp is the most important cattle centre in the Western Transvaal, with cold storage for meat. There is also a grain elevator for maize. On the Schoonspruit, 4 miles from the town, an irrigation reservoir covering 600 acres, with a capacity of 200,000,000 cubic feet, has been completed. Klerksdorp is well laid out and planted with trees, and contains several fine buildings, notably the Hospital, Market, Municipal Offices, and the Government Buildings.

**KOOMATIPOORT**

This place lies on the Transvaal side of the Koomati River, the dividing line between the Union and Portuguese Territory. It is little more than a railway junction and an important point of entry for imports and exports, the population hardly exceeding 300.

**KRUGERSDORP**

This, the principal town of the Western Witwatersrand, was founded in 1887, and had a population at the last census of 42,510. It was to Krugersdorp that the late Sir Stair (then Dr) Jameson, the leader of the historical raid on the Transvaal at the close of 1895, was brought a prisoner after being captured at Doonkop, a little to the south of the town, and a monument marks the spot where his force was defeated by the burghers of the Transvaal Republic. To the north, in the foothills of the Magaliesberg Range, is the well-known Nootgedacht battlefield. Krugersdorp boasts the largest municipal area (90 sq. m.) in the Transvaal, and contains many attractive buildings, prominent among these being the Town Hall with its handsome clock, the Great War Memorial opposite, the Carnegie Free Library, the Krugersdorp Hospital overlooking the Park, and the Old Court House which faces Market Square, the first stone of which was

laid by President Kruger in 1887. There is also a handsome library, besides several churches. The Coronation Park is one of the finest in South Africa. Perhaps the most striking feature of Krugersdorp is the famous Paardekraal Monument erected to commemorate the Voortrekkers' victory over the Zulu chief Dingaan in 1838. Every five years a solemn commemoration of the Dingaan battle is attended here by a great number of South Africans.

**MIDDELBURG**

The centre of one of the best coal districts in the Province, some twenty collieries being at work. Middelburg has a population of about 5,100. It was formerly one of the four British Military stations in the Transvaal.

**PIETERSBURG**

The principal town of the Northern Transvaal. Pietersburg had a population at the last census of 6,063, of which 2,452 were Europeans. It is the busy centre of a district rich in minerals and agricultural products, the country being well watered by the Lavuhn and Letaba Rivers. The town has electric light and power works, and an improved water supply has been completed.

**POTCHEFSTROOM**

This is the oldest town in the Transvaal, having been founded in 1839. It is rich in historical associations, not the least interesting of which is the old fort, occupying a site near the railway station and overlooking the town. It was here that Colonel Winslow and his garrison made a gallant stand in the War of 1881. At one time the capital of the Republic, it is now content to be the educational centre of the Western Transvaal, its school of agriculture and experimental farm being the finest in the country. Other well-known scholastic institutions are the Boys' and Girls' High Schools, the Africaans High School, founded in 1923, the University College, the Normal College, the Convent of the Sacred Heart, and the School of Industries. The very beautiful Park contains the tomb of Pretorius, the first President of the Transvaal.

**ROODEPOORT-MARAISBURG**

This municipality consists really of two townships, with a total population of 25,000. They are within easy reach of Johannesburg, and are near the beautiful Florida Lake, a grand sheet of water some 90 acres in area. Roodepoort has extensive and valuable gold mines, and the town is developing rapidly.

**SPRINGS**

An active mining township on the Far East Rand, Springs is 30 miles from Johannesburg. It is also the centre for the rich agricultural districts of the Eastern Transvaal, and has an assured future of greater importance when the Government gold mining leases are further developed.

**STANDERTON**

The principal town of the Eastern Transvaal, Standerton is situated on the Vaal River, which is here crossed by a fine road bridge and by two weirs, one of which holds back the water for five miles and gives facilities for boating and fishing. Standerton is the centre of a considerable pastoral country. The population in 1921 numbered 3,999.

**VOLKSRUST**

This town (with a population of 3,500) is a growing centre in one of the best pastoral districts of the Transvaal. It possesses the usual Government buildings and schools, Dutch, Anglican, and Wesleyan Churches, a swimming bath and public library, and a good water supply. Eight miles from the village, lower down the Buffalo River, are the Falls and Cascade of the Slang River.

**ZEERUST**

The administrative centre of the Marico District of the Transvaal, and one of the oldest towns in the Province, Zeerust, an abbreviation of the original name "Coetzee," which commemorated Coetzee, the owner of the farm on which the town was built, is picturesquely situated, and is moreover the distributing point for enormous ranching and cotton producing districts.

# MINES AND MINERALS

## THE WITWATERSRAND GOLDFIELD

### DIAMOND, COAL AND OTHER FIELDS

**T**HE prosperity which South Africa enjoys to-day and its importance, politically and in other respects, are very largely attributable to its mining industry, without the development of which the country would be occupying a position of comparative obscurity. In this respect she differs from most other countries in so far as the prosperity of the latter lies in the tillage of the soil. Despite the fact that South Africa is a continent of vast potentialities, its mining industry dwarfs all others, and though it has attained huge dimensions, there is nothing to indicate the probable limit of future production. One thing is certain, however, namely, that the country does, and will for many years to come offer an extraordinarily attractive field for the investor, especially in assured mining propositions such as it can boast in plenty.

**EARLY HISTORY OF THE RAND.**—There is much that is fascinating in the story of the goldfields of South Africa and the part their discovery has played in the history of the country. The earliest reference to the existence of gold in the Union appears to have been about 1850, when the Colonial Geologist of the period was instructed to

investigate the reported discovery of the precious metal in quartz formation in the Orange Free State, while in the Transvaal the first traces of gold were evidently discovered by Kail Mauch in 1868 on the north side of the Olifants River near the Murchison Range. In 1871 auriferous quartz and alluvial deposits were found at Fersteling and early in the following year alluvial gold was discovered in the Lydenburg district, the locality being proclaimed as a goldfield by the Transvaal Government in May of the same year. In 1882 an Australian digger found gold on the Kantoorn Plateau in the Kaap Valley, the result of which was the establishment of the mining town of Baberton.

Then followed the location of the Witwatersrand (or white-waters-ridge) the richest gold mineralized area in the world. The principal credit for the discovery of which must undoubtedly be attributed to Mr. Fred Struben, who in 1883 was prospecting in the Witwatersrand district. This pioneer's story is a romantic one. He, together with other members of a syndicate, purchased two farms lying towards the West end of the range near Krugersdorp, and in January 1884 began operations.

Almost immediately he discovered a vein carrying gold, some of which assayed over 2 oz. to the ton. Here was the first proof that the Rand was gold bearing. Quickly ensued the discovery of the first conglomerate bed on the Rand, and samples from it showed it to be gold bearing. On being opened up to about 6 feet it revealed a bed of ore of some 2 ft 6 ins. to 3 ft, panning from 3 to 4 dwts. per ton.

Subsequently Mr. Struben discovered a lode which gave assay values of approximately 1,200 oz. to the ton, so marvellously rich and so finely disseminated through the rock that the rich part showed a gram of gold to a gram of quartz almost. He cut a trench across this reef, and found it to be a bed of ore between 2 and 3 feet deep with this remarkable vein of gold all through. The reef, however, proved to be a pocket and panned out, but Mr. Walker, an employee of Mr. Struben, enjoyed far greater success, and there is not the slightest doubt that he brought about the working of the Main Reef. In July 1886 the first sample of the banket formation was panned in Kimberley, and the showing was so remarkable that Mr. (now Sir Joseph) Robinson backed by Mr. Alfred Beit, who saw the panning, started for Johannesburg, and within a few days of his arrival bought the Langlaagte farm for £7,000. Messrs. Cecil Rhodes, Beit, Barnato and other enterprising Kimberley men soon followed, and the whole of the central section of the Rand was speedily taken up. After the first successes, results proved disappointing, owing to the pyritic nature of the ore, which resisted the simple processes of amalgamation. Fortunately for the Rand, the cyanide method had been discovered, and it overcame the difficulty. Prior to this, however, in almost every instance where shafts were sunk the values declined with depth, though the reefs maintained their size and leading characteristics. The early mines working the rich outcrop soon carried their operations below the oxidised zone, and this led to trouble, which, however, ceased on the installation of the cyanide treatment, with its introduction the industry developed rapidly.

**FIELDS.**—At this stage a brief description of the Rand Goldfields is opportune.

**FORMATION.**—The fields are located on an elevated plateau, nearly 6,000 feet above the sea. The Witwatersrand projects somewhat above the plateau, and the outcrop on the conglomerate beds can thus in a measure be said to be the dividing watershed between the Atlantic and the Indian Oceans, the tributaries of the Vaal River draining into the Atlantic, and those of the Limpopo or Crocodile River to the Indian Ocean. The conglomerate beds are composed of quartz pebbles, bound together by a siliceous cement containing iron pyrites. The name "banket" has been given to the conglomerate from its general resemblance to

TRANSVAAL CHAMBER OF MINES, Johannesburg.

to an almond sweetmeat with this Dutch name, it, however, refers specially to the ore taken from the oxidised zone which was "free-milling," and was found to extend only to a limited depth. The gold contained in the conglomerate is not often visible to the naked eye, occurring almost invariably in the matrix, its existence in the pebbles having been recognised only in rare instances. The gold is for the most part in very fine particles, and when examined under the microscope shows sharp crystalline structure, giving no evidence of being rounded and moulded by attrition, as is observable on examination of gold found in alluvial deposits. There are several series of these conglomerate beds in places more or less parallel to each other. Gold is found as an essential constituent feature in all the blanket beds.

The subject of the genesis of the conglomerate and gold contained therein is controversial. The most generally accepted theories are that the conglomerate beds and enclosing sandstone and quartzites were seashore deposits formed during subsidence of a coast line, that after their deposition and consolidation the blanket-bearing strata were folded into anticlines and synclines. North of Johannesburg subsequent erosion removed the anticline. The deposition and erosion in connection with the syncline have been such that a statement of a basin-shaped deposit has much justification. The beds have been subjected to fault and dyke action. These in a nutshell are the theories generally accepted. The Witwatersrand Goldfield has been generally likened to a saucer, of which the Northern rim outcrops. This rim is known as the Central Rand, and extends about 26 miles from West to East. At either side there is an extensive break in the formation.

**MAIN REEF SERIES.**—The Main Reef series on the Central Rand consists of the Main Reef Leader, the mainstay of the mines, the Main Reef, usually of no great value, and the South Reef, which is as a rule narrow but rich. At either end the South Reef disappears. At both ends, on the other side of the break in the continuity referred to, the formation turns southward. On the western side there appear to be two reefs, but on the eastern side the formation apparently narrows down to one, the Main Reef Leader. While on the Central Section the formation dips at a rather acute angle, on the eastern side there is a flattening at depth, so that properties are being successfully worked at a distance of about seven miles from the sub-outcrop. The eastern mines are characterised by poor and rich zones, but on the whole are much richer than the central mines.

**SUCCESS IN WORKING.**—Improved mechanical methods and labour organisation have gradually brought all the chief gold mines (mention of which will be made later) to a similar basis as regards both mining and metallurgy, and a very satisfactory extraction is obtained throughout the whole blanket series of reefs. The success in working these large bodies of comparatively low grade ore may be assigned to the following causes:—

- (a) the adaptability of the cyanide process to the Witwatersrand ores,
- (b) the uniformity and character of the gold bearing deposit,
- (c) cheap unskilled labour,
- (d) the proximity of coal deposits,
- (e) absence of heavy pumping charges,
- (f) good water supply.

Actual mining on the main gold-bearing area is greatly assisted by a very strong roof, which supports all excavations made

within reason and which requires a minimum of timbering and other supports. This excellent roof or hanging-wall has its limits, however, and the enormous amount of ore extracted during the past thirty years is beginning to have effect over large worked-out areas, causing extensive falls, earth tremors, and subsidences, necessitating much sand-filling and other precautions to save existing workings and communication ways.

**GOLD PRODUCTION.**—The enormous growth of the mining industry since its inception up to the present day will be appreciated from the following figures relating to production between the years 1884 and 1925.

Year	Tons Gold OZS	Value at £4 14/7 1/2 per fine oz L	
1884	2 370	10 000	
1885	1,414	6,010	
1886	8 171	34,710	
1887	30,880	69,401	
1888	227,719	967,410	
1889	350,009	1,400,508	
1890	440 152	1,860,645	
1891	688,439	2,924 395	
1892	1,060,058	4,541 071	
1893	1,290,218	5,480,498	
1894	1,805,000	7,667,152	
1895	2,017,413	8,560,555	
1896	2,025,510	8,063,821	
1897	2 743,518	11 653,725	
1898	3,823,307	16,240,030	
1899	3,637,713	15 452,025	
1900	348,701	1,481,442	South African War Period
1901	258,032	1,096,051	
1902	1,718,921	7,301,501	
1903	2,072,897	12,628,057	
1904	3,773,517	16,028,883	
1905	4,900,541	20,854,440	
1906	5,792,823	24,606,336	
1907	6,450,740	27,400,992	
1908	7,056,266	29,073,115	
1909	7,205,108	30,987,050	
1910	7,527,108	31,073,123	
1911	8,249,401	35,041,485	
1912	9,107,512	38,086,250	
1913	8,798,336	37,372,949	
1914	8,394,322	35 056 814	
1915	9,093,902	38,628,437	
1916	9,296,618	39,489,522	
1917	9,018,084	38,306,381	
1918	8,418,292	35,758 636	
1919	8,331,294	35,389,091	
1920	8,158,226	34,653,947	
1921	8 128,681	34,528,443	
1922	7,009,767	29,775,598	
1923	9,148,771	38,861,511	
1924	9,574,918	40,671,667	
1925	9,599,702	40,339,585	
Totals 198,602,617	843,172,524		

**A RECORD YEAR.**—From these statistics it will be seen that the output for 1924 established new records, both as regards weight and value, in the history of the mining industry, while another record in actual output was made in the following year, detailed figures in connection with which are given in the "Supplementary Data" following this article under the sub-heading of "Gold Production in 1925." The total for 1924 exceeded the previous best figures (those for 1916) by 301,303 ozs in weight and £3,550,599 in value, and the output for 1923 by no less than 449,803 ozs in weight and £4,177,394 in value. The tonnage milled amounted to 28,581,930 tons, compared with 26,883,344 tons in 1923. The profit per ton milled in 1924 averaged 10s 3d, the then best since 1910, when it was 10s 6d per ton. In 1923 the amount was 9s 5d per ton. Working costs, which were the lowest since 1917, were reduced

in 1924 to an average of 19s 9d per ton for the whole of the Transvaal Gold Mines, and to 19s 7d per ton for the Witwatersrand mines, as compared with 20s 2d for the Transvaal and 20s for the Witwatersrand in 1923. This lessened expenditure in working costs is an extremely satisfactory augury for the future of the industry, certainly more so than any currency premium obtained on the gold output.

The reason is not far to seek. The resumption of operations on the Rand, after the labour troubles of the Spring of 1922, was taken advantage of to rearrange underground work, particularly as regards earlier inspection of working levels, and the introduction of improvements in plant and tools used in breaking down rock, as well as in the subsequent extraction of the gold contents of the ore. The marked increase in the use of wet jack-hammers which was evident in 1922, and which resulted in a saving of labour and mining at narrower widths, continued in 1923, and striking improvements in rock-breaking efficiency have been obtained. Closer attention has also been given to the quality of drill steel, the wider use of hollow steel, and greater accuracy in providing smaller and more finely gauged bits for the drillers. Government mining regulations have facilitated the efforts to secure a longer drilling time per shift, and the corresponding lengthier period during which the drills are actually penetrating the face has shown that, with jack-hammers, more than double the footage per shift is obtainable to-day over previous performances. On the surface there have been notable advances in metallurgical practice, and altogether the mining industry is on a sounder economic basis than at any previous period in its history. This improved efficiency in working and drastic reduction in costs have also resulted in increased dividends, which in 1924 reached the record total of £9,850,923, or £500,000 more than the previous best, which was in 1909, and an increase of a million and a half compared with 1923.

**LESSER GOLDFIELDS.**—There are in the Transvaal a number of other fields, though in comparison with the Witwatersrand they are of practically negligible importance. These include the Barberton Goldfields, the Pietersburg and Murchison Range, and Lydenburg and Pilgrim's Rest. The first named date from 1885, when the phenomenally rich Sheba Mine was discovered. The field consists of a number of quartz mining propositions, situated in an ancient schist formation and intersected by numerous dykes and intrusions of trap rock. The pay ore runs in clintes and in lenticular segregations often extremely rich at surface, but becoming poorer in depth and frequently cut off by igneous intrusions or dying away in the country rock.

For a few years Barberton and the surrounding district produced a considerable amount of gold, but in late years it has taken a relatively small place in the gold production of the Union, the quartz mines being worked on a comparatively small scale by tributors, private owners and small capitalists. In the Kaapschehoop and Jamestown districts a small amount of alluvial gold continues to be found, but at the present time the alluvial digger has ceased to exist in these districts.

Similarly with the quartz mines in the Pietersburg district, which date from 1870, the ore bodies here proved patchy and irregular. An output of gold has been maintained for many years, but all the enterprises where any substantial capital was employed were failures, and mining

2. "C" Plant, Crown Mines.
3. Mortar Box Floor, Crown Mines.

(See *Interpress*, page 114.)

to-day is practically entirely in the hands of private individuals.

To Pilgrim's Rest, which forty-five years ago was an important alluvial field, belongs the distinction of being the only part of South Africa that ever gave good results as an alluvial digging. Later the alluvial gold became worked out, and prospecting began on the mineralized bedded veins in the dolomites, quartzites, and shales found in this area. The field attracted men with capital from the early days, with the result that the bulk of the present day output is obtained from the larger companies.

Before passing from the subject of alluvial gold, it may be mentioned that at the present date it cannot be said there are any alluvial diggings in South Africa. In 1920 the total output was only 1 130 fine ozs. from all the Transvaal districts. Alluvial gold recovered in the Transvaal from the date of the British occupation up to the end of 1923 amounted to 32,078,308 ounces of fine gold.

**MINING CAPITAL.**—The amount of capital represented in the mining industry is, of course, colossal, and the task of making an estimate of the return to investors in gold mining enterprises is by no means an easy one. The usual practice with limited liability companies of quoting the percentage that the amount of dividends in any one year bears to the amount of capital issued is generally considered to be open to objection in the case of mining companies, as such capital does not usually represent the actual amount of money invested in the concern. The Actuary of the Transvaal Chamber of Mines by evidence furnished to the Mining Industry Board in 1922 took the figure of the total capital of the Witwatersrand Gold Mines, admitted as amortizable by the Inland Revenue Department as at December 31, 1921, and, using the amount of dividends for the year 1921 less the amount of amortization allowed for that year, arrived at a return of 4½ per cent. He, however, contended that as the amount of amortizable capital did not include capital issued for vendor's interest, this figure would probably have to be doubled, thus reducing the rate of interest to 2½ per cent.

Professor Lehfeldt, a recognised economic authority, made a calculation based on the assumption that an imaginary investor had bought up the whole of the Witwatersrand Gold Mines in 1907 at market price, had supplied all the money required in the period for further capital, debentures, loans, etc., and had disposed of his investment at market price at the end of 1921. He deduced that over this period of 14½ years the investor had received 6.2 per cent on the sums invested in the beginning, and from time to time.

#### INDEBTEDNESS OF MINES --

Taking the actual indebtedness of Witwatersrand Gold Mines, which includes issued capital, debentures, premiums, loans, and advances, amounting at December 31, 1922, to £69,499,090, according to the statistics of the Government Mining Engineer, and comparing this with the dividends paid, amounting to £5,627,458, a return of 8.1 per cent is obtained for the year 1922. Similar figures for 1923 are—total indebtedness £68,137,988 and dividends £8,460,343, giving a return of 12.4 per cent. Any amounts appropriated from profits for working capital are not included in the "total indebtedness" figures quoted, as such amounts are not strictly funds received for which the industry is responsible to make some return, but may be deemed to be included in costs. If for the two years mentioned

the amounts of dividends are compared with the issued capital only, then the returns show 10.4 per cent and 16 per cent respectively. Again, if one considers only the mines which paid dividends, it is found that 23 companies in 1922 paid an average of 28.8 per cent on issued capital and 20 producing mines paid no dividend, while in 1923 an average of 34.7 per cent was paid by 31 companies, 14 producing mines returning nothing.

**MINING METHODS.** There are numerous methods of mining. These, of course, have been greatly extended and improved upon in recent years, chiefly in the direction of mechanical and metallurgical efficiency. In the early days the outcrop was developed by sinking shafts on the lowest reef. At distances apart of about 100 feet, stations were cut and development drives driven in the reef east and west, while cross-cuts to the south exposed the other reefs which were similarly developed. The areas between deep levels were cut up into suitable blocks by winzes and raises, these, when holed, became faces from which to start stoping. When it was eventually realized that the dip at depth became flatter, and that values were more or less maintained, deep level shafts were sunk. These shafts were vertical, and usually struck the reef somewhere about 1,000 feet, when they were turned south and followed the bed of the lowest lying reef.

**DEEP-DEEP LEVEL SHAFTS.**—Yet further south in time deep-deep level shafts were sunk. These struck the reef at about 3,000 feet. South of these shafts the reefs were developed from auxiliary underground incline shafts, provided with their own winding engines and equipment. The mode of development and stoping from deep or deep-deep shafts remained very similar to that obtaining in the old outcrop mines, except that the distances between levels increased to about 300 feet on the incline. Practically all development on the Rand is done by machines, but stoping is carried out both by hand and by machines, all machines being air driven. Many mines obtain their air power from a large central compressor station run by a power company, others from their own plant. Most manual work is performed by natives under white supervision, the proportion being about 9 to 1.

**ORE (REMOVAL OF).**—For the most part the ore is trammed in one-ton trucks from loading boxes to ore bins at shaft stations. There it is raised to the surface in skips drawn by engines, which are for the most part propelled by electric power, which has greatly displaced steam. The electric power is developed by four central stations, three on the Rand and one at Vereeniging, 40 miles south of Johannesburg. Most of the mines drain to the deepest levels, the water being thrown to the surface by powerful electric pumps. Mining operations are controlled by very stringent regulations for the safety and health of workers.

**UNDERGROUND MINING PRACTICE.**—To sum up, during the first period of development the fields may be said to have been opened up on Cornish mining lines. Later, a larger and rather improved method of American mining was adopted, and latterly there has been a strong tendency to utilize coal mining practice in the exploitation of the mines at depth. In the early days nearly everything was sacrificed to the first extraction of payable rock. The lay-out underground was cramped and badly designed, important shaft pillars were robbed, artificial ventilation was non-existent, and the mortality among under-

ground workers became so great that a compulsory scheme of compensation had to be passed by the Government, which has cost the country and the mine-owners huge sums up-to-date in direct money payment, without taking into consideration the large expenditure upon improved ventilation and dust-allaying appliances. During the past few years conditions underground have greatly improved, dangerous work is not allowed to be rushed as it used to be, working hours are compulsorily shorter, and a strict code of safety regulations is provided for all classes of mining.

**MINING RIGHTS AND LEASING.**—When mining on the Rand became a deep-level proposition, the rights of the general public to peg out claims on proclaimed ground became an embarrassment to the authorities and to the Mining Industry. It was an economic impossibility to sink the costly shafts needed to develop such areas unless

richness, or supposed richness, of the ore, and are calculated by means of formulae which differ for each lease. These variations have arisen owing to such areas having been submitted to public tender, those offering the highest percentage of profits to the Government having been generally, though not invariably, accepted.

The Union Government in settling the terms under which State property became exploitable by private undertakings, recognised that mines were wasting assets, and that the capital expended in bringing such properties to a producing stage should receive compensation by an annual allowance—amortisement before division of profits, so calculated that by the time the mines should become exhausted working capitals would be returned to the companies. This allowance, being estimated over the presumed life of the mine, may vary from year to year, as the technical position of the property

BARS OF GOLD, CROWN MINES, JOHANNESBURG.

a substantial number of claims were held, and the pegging of single claims by individuals meant that the possessors, unable to work such small areas, held them only as a speculation, hoping that their interests would be bought out in some combination of ground. The continuance of public pegging over deep-level ground would therefore have resulted in the tying up of such areas and the suspension of mining development. The Union Government accordingly took over on behalf of the State the mining rights on all deep-level ground not accruing to owners of farms under *mynpacht* rights, and leased the areas most favourable for immediate exploitation on terms under which the profits were divided between the mining companies operating on such leased areas and the authorities. Mere divisions of earnings vary in accordance with the

may change, and therefore no hard and fast rules can be given as to the probable amount of amortisement allowed. This allowance for amortisement is treated as part of working costs—an arrangement which decreases the ratio of profits to recovery values, thus reducing the percentage of profits going to the Union Government. As some misconception exists with regard to the Government's interest in profits on leased areas, it may be pointed out that such properties have been handed over to the operating companies free of any purchasing consideration, except the percentage in results. It is therefore, reasonable to assume that, had such areas been bought from private owners, the cost expressed in the increased capitals necessary would have reduced the profits per share quite as much as the present arrangement.

New State Areas  
(See letter)

**PLANT FOR REFINING.**—Though the idea of establishing a refinery and mint for refining and coining the gold produced had been mooted for a considerable time, it was not till 1919 that the proposal took a concrete form, when the Government decided to establish a branch of the Royal Mint at Pretoria if the mining industry undertook to erect a gold refinery on the Witwatersrand. A private company styled the Rand Refinery Ltd was registered in 1920, the shareholding being limited to gold-mining companies, members of the Transvaal Chamber of Mines. A site near Germiston was selected, and a refinery was erected there in 1921. The capacity of the refinery is sufficient to deal with the whole of the gold produced in South Africa, the plant being the largest and most complete of its kind and containing the most modern apparatus. The operations during 1925 proved successful in every direction. The gross weight of the bullion received amounted to 10,468,571 ounces, a decrease of 244,768 ounces over the receipts during 1924.

The year 1924 was remarkable on account of the large quantities of refined gold sent to the East. No less than 35 per cent of the production of the Witwatersrand fields was shipped direct to the purchasers in India after refining. In addition, approximately 744,000 ounces of fine silver extracted from the bullion were sent to Bombay. The advantage of making direct shipments such as these is that the producers do not have to pay freight.

**PRICES OF GOLD.**—The currency price of gold has undergone many fluctuations, due to the chaotic conditions created during the War. In 1914 it was deemed inadvisable

to make weekly shipments of gold to Europe, but it was necessary to make arrangements whereby the mining companies could obtain currency for the payment of wages in the Union and supplies, etc., in London. An agreement was therefore made early in the year named under which South African gold was purchased by the Bank of England at the standard rate as soon as it was deposited in the South African Banks in the name of the South Africa Minister of Finance. The producers could then draw on local banks and Bank of England advances up to 97 per cent. All charges for refining, insurance, freight, etc., had to be borne by the producers, which meant, during the War increased realization charges of approximately £400,000 per annum. The charge for insurance and freight was fixed at 25 per cent. This agreement was terminated in July 1919, from which date it was arranged that all gold deposited with South African banks, with the exception of a small quantity required for local currency, would be shipped to England by the producers, consigned to the Bank of England, but sold by the producers' agents on their behalf in the best available market. Before that date 50,000 ozs of gold were released by the Bank of England for the purpose of a test or trial sale and realized 85s 6d per standard ounce, or 93s 5d per fine ounce, an increase of almost 10 per cent.

This arrangement was the beginning of what is generally known as the gold premium. Since then the price of gold has fluctuated greatly, reaching a maximum of 127s 4d. per fine oz in February 1920. As the currency of the United States of America remained on the gold basis, there is a close

correspondence between the London-New York Exchange and the price of gold. The 1919 agreement was amended in 1923, when a new agreement came into effect whereby producers were enabled to ship gold, including coin, to destinations other than the United Kingdom. As a consequence of this an appreciable amount of gold has been shipped direct to India and New York. It is worthy of note that though now deprived of the "gold premium," the Mines have proved their ability to earn substantial profits, details of which have already been given.

**PRINCIPAL MINES.**—On the Witwatersrand there are approximately 36 producing mines, 22 being in the Central and Western Rand Section and 14 in the Eastern Section. In the former category, the principal properties are City Deep, Crown Mines, the Langlaagtes, Village Deep, Randfontein and West Rand Consols. In the Eastern Section are Brakpan, Geduld, Modder B, Government Mining Areas, Modder Deep, New State Areas, Springs and West Springs.

The principal controlling groups are the Rand Mines Ltd, New Consolidated Goldfields, Johannesburg Consolidated Investment, General Mining & Finance, Anglo-American Corporation and Union Corporation.

**PROCESS OF PRODUCTION.**—The process of extracting the metal from the ore is briefly as follows. Firstly, the valueless rock is picked out on picking belts or tables. The gold-bearing rock is then reduced to smaller size in jaw or gyratory stone breakers, crushed finer in stamp mills and still finer in tube mills. Formerly the coarser free gold was recovered from the finely crushed ore by the usual process of amalgamation on plates. In

INVESTMENT CO. LTD., Johannesburg  
New All Slitting Process.  
(press page 118)

that method the ore from the stamp or tube mills was carried in a stream of water over mercury-coated copper plates, where the gold was caught as amalgam by the mercury. The amalgam scraped from the plates was "retorted," the mercury being distilled off and the gold "sponge" remaining in the retort subsequently melted down into bars. In 1923, however, the process of amalgamation on plates was practically abandoned. The plates now are covered by strips of corduroy cloth, the pile on which catches some of the particles of gold and other heavy minerals. The strips of cloth are removed at intervals and washed in tanks of water, from which the "blanket concentrates" or "black sands" are subsequently taken and passed over a concentrating table. The richer and heavier portion separated on that table goes to an amalgamation barrel.

The sludge from the tables is then classified, the finer particles going to vats, where the remaining gold is dissolved by cyanide solution, the coarser particles being returned to the tube mills for further grinding. After being agitated in the cyanide vats, the solution is drained away, the gold contained being precipitated by means of zinc shavings or powder, while the slimes are passed through filters which squeeze out any cyanide solution not removed by the draining.

#### PROSPECTS OF THE INDUSTRY.—

The total amount of gold to be ultimately produced by the Witwatersrand has frequently been the subject of investigation and speculation, and expert estimates of future production vary considerably. In 1914 the Union Government Mining Engineer, in his evidence before the Dominions Royal

Commission, estimated the tonnage to be crushed for the mines producing at that time as 587,000,000, and from mines and areas not then producing as at least the same quantity. The Transvaal Chamber of Mines stated in evidence before an Economic Commission that from 42 of the 51 gold mines producing in 1913 there would be worked from a depth of 7,500 feet 550,000,000 tons of ore, which would yield in gold more than the cost of working, which would be £500,000,000 approximately. Before the Dominions Royal Commission the Chamber made a similar estimate.

**RAND CONTINUITY.**—The continuity of the Rand as a gold producer depends on the practicability of mining at great depth and on the extension of the reef in the Eastern area, where great possibilities exist favorable to a large gold production. It should, in fact, be possible to mine at greater depths than have been attained hitherto in any part of the world on account of the great strength of the formation and the low rate of increase of temperature with depth. The limits of deep mining are governed by many causes, and have been variously estimated at from 6,000 to 10,000 feet, but it appears reasonably certain that mining can be carried on to a depth of at least 7,000 feet, where the grade of ore mined is sufficiently good to cover the high cost which is unavoidable at such a depth. Already the City Deep, Crown Mines and Village Deep are being mined at between 6,000 and 7,000 feet, a depth which surpasses that of the St. John del Rey, in Brazil, hitherto the deepest mine in the world. But remarkable, in fact unique, as are the resources of the

Witwatersrand (it can only be regarded as being on the average a low grade gold-field and with only a few shillings per ton profit to work upon), the question as to what companies can profitably continue to mine at greater depths is inextricably bound up with that of working costs, which is again largely dependent on the supply and cost of labour.

A progressive output of gold may certainly be looked for from what is known as the Far East Rand, which contains the Main Reef series over about 247 sq. miles, and for 203 sq. miles of this area the reef lies at a depth of less than 5,000 feet. The Far East Rand has assumed very great importance in recent years, and from here it is anticipated the output will take the place of the exhausted properties of the Central Rand and that of the large group of mines which are showing a serious falling off in values at depth.

A number of producing companies are at work in this Eastern area, and given an average life of 21 years may be expected to contribute a large amount of gold to the Union output. Apart from these promising ventures, the State owns a considerable number of undeveloped claims which are leased from time to time to companies capable of finding the enormous sums of money required to bring these deep level mines to the producing stage. The Government itself works no mines. Mining and boring operations have shown that over almost the whole area only one reef series has been or is likely to be continuously worked, and the average estimated stopping width is about 5 feet. In most of the mines in this area there exist non-productive

zones in which no payable ore is obtained, the percentage of such zones varying from 15 to 50 per cent in different mines on the basis of the existing relations between recovery and costs, and in estimating the possibilities of the ground still to be worked 60 per cent of the area is assumed as non-productive. Recent calculations show that if only one half of the State-owned claims in the Far East Rand not held by producing companies, and containing reef at a depth of less than 5,000 feet, prove remunerative, after a deduction of non-payable zones a yield of gold to the approximate value of £450,000,000 may be obtained.

It is interesting to study the face forecast offered by the Government Mining Engineer two years ago, as an indication of the probable extent of the gold mining industry during the next ten years.

DATE	No. of MINES CRUSHING	TONNAGE MILLED PER ANNUM	VALUE OF GOLD WON PER ANNUM £	PROPORTION AS COMPARED WITH PRESENT CONDITIONS	
				TONNAGE MILLED PER ANNUM	VALUE OF GOLD WON PER ANNUM
1922	40	25,750,000	17,500,000	100	100
At end of 1927	44	20,000,000	31,000,000	78	83
At end of 1932	21	19,000,000	29,000,000	71	77

(Small mines crushing less than 20,000 tons per annum are not included in the above table)

The forecast takes no account of possible new producers, other than New State Areas and West Springs, and, like all estimates of a similar character, must necessarily be found to be increasingly inaccurate as the period gets more remote.

**RAND TOWNS.** The development of the goldfields naturally brought into being towns of no mean size and importance, a description which is particularly applicable to Johannesburg, the hub of the Witwatersrand. In 1886 it consisted of a few straggling shanties, to-day it is the largest city in Africa south of Cairo, with a white population bordering on 200,000. When it was founded, the existence of the Reef at this point was not suspected, but when the fact became known immediate steps were taken to secure a more suitable locality, and the nucleus of the present town was laid out in December 1886. The site chosen was on the southern slope of the Witwatersrand range, one of the bleakest and most elevated spots in the Transvaal, where land for agricultural or pastoral purposes was of so little value that a few years before farms had changed hands for the value of a team of oxen. In January 1885 two stands in Commissioner Street (one of the chief thoroughfares of the city) sold for £22,000. In 1897 a stand in Pritchard Street (another of the principal roadways) fetched £40,000, and in 1902 the Standard Bank purchased four stands for £145,000. In 1917 a corner site, 50 ft by 50 ft on Pritchard and Joubert Streets, sold for £25,000. The rateable value of Johannesburg for 1923-24 was £50,698,026, including £16,096,823 land value, the rate being 7d in the £ on site values only. The municipal area extends over 8½ sq miles and includes 118 townships. Enormous sums of money have been expended on buildings, and the town has about it an air of prosperity and enterprise comparable with many of the biggest cities in England.

Krugersdorp, named after President Kruger, is the largest town on the West Rand, though in no sense to be compared with Johannesburg, which is 20 miles away. It has a white population of about 15,000.

On the East Rand, Germiston holds pride of place, being the fourth largest town in the Transvaal. It is only 9 miles from Johannesburg, and is an extremely important railway junction.

Benoni is one of the youngest and most progressive municipalities on the Rand. Within its area of 43 sq miles are some of the richest mines of the world, including the celebrated Modderfonteins, the Van Ryns and others. A few miles further east are Brakpan and Springs. The latter was formerly a large coal-producing area, but most of the coal seams first opened up are now worked out, though others are being developed. The township promises to become populous and important when the Government gold mining leases to the East and South are in full work.

**RATES OF PAY AND LABOUR SUPPLY.** In 1925 the number of white employees on the Witwatersrand Mines (producing and non-producing) was 19,156 and of coloured 170,793. The ratio of coloured to white employed was therefore 8.9 to 1. In 1924 it was 9.7 to 1. An amount of £7,250,500 for salaries and wages was disbursed to whites, while native and coloured labour accounted for £5,810,400. The rates of pay are on a generous scale. Shift bosses receive 30s 6d per shift, timbermen, 22s 6d, pipemen, 20s 10d, fitters, 23s 5d, platelayers, 20s 10d, shiftmen, 17s 3d, trammers, 17s 9d, pumpmen, 20s, machine stoppers, 20s 6d, hand stoppers, 20s 10d, machine developing, 38s 11d, shaft sinking, 50s 8d, reclaiming, 23s 1d, engine drivers (winding), 24s 2d, and winch drivers, 24s 2d. The figures relating to machine stoppers and the ensuing occupations mentioned are the contract payments. The average rates of wages of coloured persons other than native labourers, employed on the mines on any of the above classes of labour underground is approximately one-fourth of the amount shown for white men. The average earning of native labourers is 2s 3d per shift, and in addition they are provided with free quarters and food estimated to cost 11d per shift worked. The mines also expended in 1924 a sum of £13,250,185 on stores, £8,317,162 of which was absorbed by South African produce or manufactures.

**NATIVE LABOUR.** There is no factor in the industrial fabric of the mines of greater importance than the native labour supply. No fewer than 210,000 natives are employed by the mines of the Transvaal. A considerable percentage of this labour is imported from Portuguese East Africa, the Gold Mines actually employing 72,000 natives from there, or in other words 42 per cent of the total native labour strength. The East Coast "boy" works on an average 18 months before returning home, whereas the Union native works on an average only 9 months at a stretch. Consequently, to maintain 100,000 East Coast natives in the Union, 66,000 per annum must be obtained, while to maintain the same number of British South African natives at least 132,000 recruits per annum would be required. When it is remembered that the mining industry, in spite of every effort, can obtain only about 150,000 British South African natives per annum, and that practically every industry in the Union is short of labour—if not permanently, then at very frequent intervals—the impossibility of replacing the East Coast native by the British South African native is obvious. It should also be remembered that the Portuguese native spends on the Witwatersrand £4 out of every £5 of his earnings, whereas in the

case of other natives the position is reversed—only £1 out of every £5 is spent on the Rand, the remainder being taken to the native territories, including areas outside of the Union, such as Basutoland, Swaziland and Bechuanaland.

**LABOUR PARTY'S AIM.** When all these facts are considered the anxiety felt by the mining industry at the aim of the Labour Party (which with the Nationalist Party forms the Coalition now governing South Africa) to stop the importation of labour for the mines can readily be appreciated. The adoption of such a policy would compel the industry to resort to every means to obtain further native labour from the Union. But since all Union natives available for work are, at most times, fully employed, the mines can only fulfil their requirements at the expense of other industries, including agriculture. Even when this resource was exhausted, there would, it is pointed out, still remain a large shortage and the richer mines would be compelled to outbid the poorer ones for the labour available; the latter would be unable to continue operations, and would have to close down; a part of the industry would survive, but the community not only of the Rand but of the Union, would suffer.

**PROGRAMME OF NATIONALIST PARTY.** The Nationalist Party is committed to a policy of segregation, which is equally unacceptable to the mining industry. The Bill which General Hertzog, the South African Prime Minister, introduced into Parliament in 1926 aims at the gradual withdrawal of natives from mines and other industries, the prevention of natives from carrying out any skilled work in European areas, and the cessation of recruitment of natives in the areas to be set apart for the natives for employment in European areas. Such a scheme also of necessity implies the prohibition of the employment of Portuguese natives on the mines, and would naturally have an effect in restricting the number of natives available similar to the Labour Party's proposal. It would appear that both schemes have in view the substitution of natives by Europeans on unskilled work. This is a revival of the old theory that it is possible to work the mines solely by European labour, and that by keeping them short of native labour more Europeans would be employed. This point was investigated and most conclusively rejected by the Low Grades Mine Commission, the Unemployment Commission, the Mining Industry Board, and various other independent investigations, which all came to the conclusion that the restriction of the native labour supply, far from increasing the scope for European employment, reduces it by curtailing the operations of the mines. Actual experience shows that shortage of native labour is followed by the retrenchment of Europeans. Figures showing the course of European and native employment on the mines during 1923 disclosed the fact that when in February 185,109 natives were working, 17,773 Europeans were employed, whereas in August when 109,620 natives were employed the number of Europeans dropped to 17,376.

The idea that because in Canada and Australia gold mines are worked by Europeans only they can be similarly worked on the Witwatersrand appears to be at the bottom of the contention. It is seemingly forgotten that in those countries the ores worked are generally of a higher grade than the Witwatersrand ores, and, further, that

while the Witwatersrand industry is maintaining its position, gold mining in Australia is declining, the number of Europeans employed having fallen from 70,972 in 1901 to 11,218 at the present time, largely through the heavy cost of labour. The Witwatersrand gold mining industry has been made possible by the low cost of native labour, and its existence on a large scale depends on obtaining an adequate supply of that labour.

**PROGRAMME OF OPPOSITION PARTY.** As regards the South African Party, which was deposed from office in 1923, nothing is contained in its programme directly affecting the native labour supply of the industry. But the Party's attitude while in power was to compel the industry to employ all suitable Union natives offering themselves for work, only thereafter to employ Portuguese natives, and those in inadequate numbers. This is claimed to be to the industry's detriment, inasmuch as it entails the replacement of a stable, efficient supply by one unstable and less efficient. The industry has frequently objected to this policy, which compels it to employ Union natives whenever the other industries

Under the Wage Act, for example, the Minister of Labour is authorised to prescribe the rate of wage and all other conditions of employment for any employee in any business, except farming and domestic service. The Minister may consider but need not necessarily take the advice of a Wage Board to be set up. There is also provision for the appointment of an arbitrator, who will be a Government nominee and whose recommendations will not be binding.

An Emergency Powers Bill is contemplated which provides, inter alia, that in the event of employees going on strike, no one may be engaged to take their places, and that strikers may not threaten violence to person or property. These provisions are no doubt designed to be impartial as between strikers and employers.

The financial position created by miners' phthisis legislation has also given rise to concern on the part of those responsible for carrying on the gold mining industry. One important provision in the Amending Act, which was recently passed, is that the outstanding liabilities of the Compensation Fund have been apportioned among the contributors to the fund. The position

capitalised value of the outstanding liabilities of the Fund will be increased by at least £2,000,000. The gross outstanding liability under the Miners' Phthisis Acts, payable over a number of years, will then amount to over £11,000,000.

#### TRANSVAAL CHAMBER OF MINES

The Witwatersrand Gold Mining Industry is represented in any movement, political or legislative, by the Transvaal Chamber of Mines, membership of which embraces every mine on the Reef. Its chief objects are to advance, promote and protect the mining interests of the Transvaal by the consideration and discussion of all questions connected therewith, to promote any legislative measures, or petition the Union Government, or any other legislative or provincial body, on any matters directly affecting the mining industry's interests, to grant subsidies to any associations or institutions connected with the Mining Industry, and to act as arbitrators in the settlement of any dispute arising out of mining.

The following were the officers and officials of the Chamber of Mines and of

1. ELECTRIC TRAM, CROWN MINES, JOHANNESBURG.

GOLD MINE UNDERGROUND 2,000 FEET, CROWN MINES, JOHANNESBURG.

by which they are habitually employed do not for the time being require them.

The failure to establish another Mozambique Convention also raises the question of recruitment of native labour from Portuguese territory. In consequence of this, the Union Government will only allow the replacement of East Coast natives as the periods of employment of those already engaged in the industry expire.

**SOUTH AFRICAN LEGISLATION.**—The mining industry, it is contended, is also being made the subject of legislation of a character not calculated to relieve the financial burden of the producers. A number of Bills have been gazetted, and if all these go through it is feared that much of the control of industrial and commercial undertakings may be taken out of the hands of those who have devoted their lives to the study of the different problems arising in each, and will devolve upon those who cannot be expected to have full knowledge of such problems.

had hitherto been unsatisfactory, because though there was a large outstanding liability, the amount of which was unknown, there was no means of apportioning this liability among the various mines, which were, therefore, not aware of their individual liability. This has now been rectified. The capitalised outstanding liability of the fund as at July 31, 1924, was £5,780,112, less an amount of £1,372,240 which the Phthisis Board had in hand. Compensation is provided on a scale which is unsurpassed in any country. The mines since August 1919 have been contributing £800,000 per annum to the Compensation Fund, and are still contributing this amount. This is equivalent to over 6s. per shift for each underground white shift worker. The Government have now introduced a Consolidated Miners' Phthisis Bill, which, if it becomes law, means that an additional initial sum of £800,000 will be required to meet immediate claims arising out of the legislation, and it is estimated that the

the Gold Producers' Committee for the year 1925-26 —

Roberts, Legal Adviser: E. L. R. Kelsey.

## SUPPLEMENTARY MINING DATA

It is sometimes said that the Union of South Africa has reached the peak of development of its great mineral resources, and that the Union's future expansion must come from agriculture and industry. Only in the sense that both agriculture and the manufacturing industries are capable of tremendous development is this true. Some five years ago it was declared before a select Committee on the Gold Mining Industry that the gold mines contributed 30 per cent of the total Government revenue and other mines 11 per cent, whilst agriculture and other industries contributed each 25 per cent. The marked difference between these relative values will no doubt be greatly lessened in the future, but there is every reason to believe that the total mineral output of the Union

**BEWAARPLAATZEN.**—These (the Dutch word means depositories or store-houses) are areas secured by various mining companies in the early days of the Rand for the purpose of dumping tailings, etc. but carrying with the surface rights no claim to under-lying minerals. At the time they were considered to be of no importance, but have since proved to be of great value, and their ownership became a subject of keen controversy. The Government finally decided to allocate nineteen-fortieths of moneys received for mineral rights before July 2, 1917 and eighteen-fortieths of amounts received subsequently to the owners of the freehold, the Government retaining the remainder. Some 300 claims were involved.

	1914	1924	1925

2. Government Areas: Portion of Reducing Plant.

(See letterpress, page 118)

is capable of considerable increase. Up to the present only gold, diamonds, coal, cement minerals, and copper have been extensively exploited, some of the valuable metals and minerals which are known to exist in large quantities have hardly been mined at all, and are only awaiting improved means of communication hand-somely to repay exploitation. It is for instance, impossible to foretell what may be the results of the dramatic platinum discoveries of 1924 and 1925.

**ACCIDENTS.**—The total accident rate for 1923 on the Rand was 2.59 per thousand, due mainly to three disasters wherein 47 persons lost their lives, in 1924, the rate was 2.63, also largely the result of the shaft accident at Randfontein in December of that year, in which 31 persons were killed. In the last named year there were 520 deaths and 3,246 cases of injury. For the first six months of 1925 deaths totalled 236 and injuries 1,885.

**DEPARTMENT OF MINES.**—The Mines Department is a separate division of the Department of Mines and Industries, which controls all mining and industrial matters within the Union, including labour problems. The organisation of the Mines Division has been built up from that of the old Department of Mines of the Transvaal Republic, which was taken over by the Colonial Government at the end of the South African War. When the Union was constituted the various Mines Administrations of the other colonies were absorbed so as to form one Mines Administration for the Union. Formerly situated at Johannesburg, the Head Office of the Administration is now at Pretoria, with district offices in all the principal mining centres.

**FINANCIAL RESULTS.**—The financial results for 1924 and 1925 of the Transvaal Gold Mines are given in the table following. For the purposes of comparison the figures for 1914 are also added:—

indicates 2,000 lbs., and the term "fine oz" one ounce troy of pure gold.

(Further financial results for 1925 will be found under "Working Profits".)

**DIVIDENDS, 1924-25.**—The dividend record of the Rand gold mines for 1925 was hardly so satisfactory as that for 1924, which represented an increase of £1,133,000 over 1923, and beat the previous record of £9,310,750 in 1910 by nearly a quarter of a million. Profits for the year 1925 were estimated at about £12,450,000, in contrast with £14,505,000 in 1924.

The estimated tonnage crushed of 28,300,000 was about 150,000 tons in excess of that for the previous year, but the profit per ton was only about 8s 9d, as against 10s 3d. Recovery was, if anything, a trifle better, at 6.50 dwt per ton, as against 6.55, but instead of the revenue being 29s 10d, it was only 27s 11d. per ton. Against this drop of virtually 2s. per ton, there was an economy of about 5d. a ton.

in working costs, which average 19s 2d. The reason for this fall in profits was the disappearance of the currency premium on gold, estimated by Sir Ernest Oppenheimer, M.L.A., at £2 386,500.

The actual dividend aggregate fell by less than £1,500,000, a decrease smaller than might have been expected in view of the shrinkage in profits. Dividends for 1925 totalled, in respect of the Rand, £8,164,150, representing a decrease of £1,380,306, the aggregate being slightly larger than that for 1923. Very few companies (all situated on the far East Rand) were able to pay larger dividends than they did in 1924, the most conspicuous improvement being that made by the Modderfontein, which paid 15 per cent more, representing no less than £210,000. Brakpan and Geduld showed improvements of 2½ and 1½ per cent, representing £25,000 and £16,000 respectively.

**GOLD PRODUCTION, 1925.**—According to the figures issued by the Transvaal Chamber of Mines, the grand total of gold yielded by all mines in the Transvaal in 1925 was 9,599,702 fine oz., compared with 9,514,918 oz. in 1924, the declared value being £40,339,585, compared with £40,671,667 in the previous year. Having regard to the disappearance of the gold premium, which in 1924 represented a revenue for the gold-mining industry of the Province of no less than £1,000,000, these returns for 1925 may be fairly considered those of a record production. It is noticeable that while the total of working costs declined from £28,214,509 in 1924 to £27,068,373 in 1925, and the average from 19s 9d to 19s 4d for the whole of the Transvaal and from 19s 7d to 19s 2d for the Witwatersrand mines, the declared estimated working profit also declined from £11,505,000 to £12,410,700 for the Witwatersrand, and the average profit per ton milled from 10s 3d to 8s 9d.

**IN VESTIS OF PRODUCTION BY MINES.** The following figures of production of individual companies are those published for the month of December 1925:

NAME OF COMPANY	TOTAL MILLED FINE OZ.	TOTAL REVENUE £	TOTAL WORKING COSTS £	ESTIMATED WORKING PROFIT		ON A CAPITAL OF £	RATE PER CENT	TOTAL DECLARED DIVIDEND FOR YEAR 1925 TO DATE £

**CENTRAL MINING—RAND MINES GROUP.**—The operations of the City Deep, Cons. Main Reef, Crown Mines, New Modderfontein and Nourse Mines were interfered with by a stoppage of power due to an accident in the Vereeniging Station of The Victoria Falls and Transvaal Power Co. Ltd. The E.R.P.M., Nourse Mines and Village Deep still suffer acutely from the continued shortage of native labour.

Dividends of companies in the Group (except Modderfontein B and New Modderfontein) are calculated on issued capital less ex-enemy shareholdings.

#### GOVERNMENT REVENUE FROM MINES.

For the financial year ended March 31, 1925, the estimated revenue of the Union Government from the gold mines totalled £3,431,930 and from the diamond mining industry £1,363,032. Adding the revenues from coal and base metal mining the total enrichment of the State Treasury as the result of the country's mining industry for 1924-25 was estimated at £5,174,200, compared with £4,576,117 in the previous financial year. Of this total, Union taxation amounts to almost exactly half (£2,580,711), and share of profits £2,155,385, licences and minepacht dues reached £200,500 and provincial taxes £162,700.

#### MILEAGE (UNDERGROUND).

The approximate mileage of underground excavation, that is to say, main shaft sinking, main drives, crosscuts and other developments, achieved on the Rand since production commenced in 1887 up to the end of 1924 was 3,250 miles, which would suffice to drive a tunnel from Glasgow to Quebec, or from Capetown to Khartoum. These figures give some idea of the vast amount of developing operations that have been carried out.

**MINES.** There were thirty-six mining companies producing gold in the Transvaal during 1925. The mines owned by these companies are comprised in six principal groups, a summary of whose activities follows:

#### ANGLO-AMERICAN CORPORATION.

This important corporation, which is

interested in the Consolidated Diamond Mines of South West Africa, Springs Mines, Ltd., West Springs, Ltd., Brakpan Mines, Ltd., Daggafontein Mines, Ltd., and other mining properties, declared a profit for the year ended December 31, 1924, of £550,604, making with £589,600 brought forward, a sum of £1,140,203 in all. Under the chairmanship of Sir Ernest Oppenheimer, M.L.A., the Corporation has a record of regular dividends since its inception and a future of considerable promise. (See article later on this corporation.)

#### ANGLO-FRENCH EXPLORATION

**COMPANY.** This well-known Corporation, which is now in the thirty-sixth year of its existence, has always been substantially interested in South Africa, where a good percentage of its money is invested in holdings in front-rank gold mines, such as City Deep, Crown Mines, Government Areas, New Kleinfontein, New Modders, and Rand Mines. It also has a two-thirds holding in the Anglo-French Matabeleland Company, as well as interests in Canada and Trinidad. For the year 1924 profits totalled £10,225, as against £57,275 in 1923 and a loss of £10,401 in 1922. (See article later on this company.)

#### CENTRAL MINING-RAND MINES

**GROUP.** The importance of this colossal mining control can be measured by the fact that nearly a score of gold mining companies are included, some of which have been producing and earning profits for 30 years. Amongst them are such famous concerns as the Robinson, Modderfontein and Crown Mines. The record of the group as a whole from the date of mining to the end of December 1924, and/or the end of June, 1925, is shown in the following table:

Tons milled	159,661,467
Gold won	60,055,176
Revenue	264,050,520
Expenditure	108,248,633
Working Profit	95,801,886
Net Profit	96,178,056
Dividends	71,235,319

The profit earned by the companies amounted to £5,760,313 in 1924, as against £5,533,171 in 1923. The loss of the premium adversely affected the returns for 1925, the profits of the Group declining by roughly £1,000,000.

The year 1924 was distinguished not only by greater efficiency in the mechanical department of mining on the Group's properties (see separate article on "Mining Machinery"), but also by remarkable progress on the metallurgical side, the residue of gold unrecovered in its metallurgical plants having decreased from 0.329 dwts. per ton in 1923 to 0.311 dwts. per ton in 1924. In addition, a further reduction of approximately 2d per ton was effected in reduction costs, mainly due to the decrease in labour and maintenance costs following the substitution of corduroy concentration for plate amalgamation. The former process is now in use throughout the Group's reduction works. Its adoption has induced a steady improvement in the recovery of the valuable metals of the platinum group, the mines' total for 1924 amounting to 2,468 oz. of osmium concentrate, worth approximately £60,000, an increase of 895 oz. in weight and of £20,000 in value as compared with 1923.

Of the many mines controlled by the Rand Mines Group the well-known Robinson, dating from 1888, has been described as "the world's greatest gold mine," and after a wonderful record of accomplishment closed down in 1926. Two of the oldest

and most profitable mines are the Ferreira Deep and Geldenhuys Deep, while the Village Deep Mine has the distinction of being the deepest gold mine working on a large scale of operations anywhere in the world, the Reef there having been followed down to a vertical depth of 6,200 ft., or a mile and a quarter from the surface (See article later on Rand Mines Ltd.)

**JOHANNESBURG CONSOLIDATED INVESTMENT GROUP**—This is the enterprise which goes forward under the Barnato auspices, and includes as its six subsidiary companies the Government Areas, to-day the greatest gold-mine in the world, Randfontein Estates, which is steadily advancing in its scale of production and becoming one of the great mines of the fields, Van Ryn Deep, which is earning big profits and paying big dividends, Langlaagte Estate, which may lengthen its life and very creditable record by the acquisition of new grounds and New State Areas, which declared its first dividend in 1925. The Johannesburg Consolidated has also large interests in the diamond industry in Rand real estate, and in coal. (See article later on this company.)

**NEW CONSOLIDATED GOLD-FIELDS**—This company took over in 1919 the assets, liabilities, and interests of the Consolidated Gold Fields and besides administering the affairs of many other companies in the Transvaal and Rhodesia, owns the three important gold mines known as Simmer and Jack, Robinson Deep, and Sub Nigel. For the year ended June 30, 1925, the total profits realised by these three mines were £153,465, £52,244, and £94,133 respectively. (See article later on this company.)

**UNION CORPORATION**—Like other important finance houses originally founded for the purpose of facilitating the development of the Transvaal mining industry, the Union Corporation, Ltd., no longer confines its activities to South Africa. Its more important mining interests are still centred on the Rand, but for a considerable time it has been associated with profitable mining enterprises so far afield as Mexico, notably the San Francisco Mines of Mexico. The Corporation is also interested in the Premier Cotton Estates of South Africa, Ltd., owning a large concession in Mozambique. From the early days of the Rand it has played a prominent part in the development of the mining industry of that famous goldfield, and the principal mines there under its control now are the Geduld Proprietary Mines, Ltd., and the Modderfontein Deep Levels, Ltd., both of which are highly prosperous and paying very substantial dividends to their shareholders. (See article later on this corporation.)

**MINING LAW.**—The mining laws of the Union have not yet been consolidated, and the measures passed by the various Colonial Governments prior to the constitution of the Union are still in force in the different Provinces, with the exception of the "Union Mines and Works Act" of 1911, which deals with the actual working and inspection of mines, works, and machinery throughout the Union. By this Act, the supervision of all mines, works, and machinery is placed under the Government Mining Engineer and the Inspectors of Mines, Inspectors of Machinery, and Inspectors of Explosives, responsible to the Government Mining Engineer. The Act lays down the hours for underground labour, and provides for the trial of breaches of regulations or rules and for inquiries by

Inspectors of Mines into accidents. The regulations deal in detail with all the various questions appertaining to the safety of persons employed on mines and works. (See also under "Labour" and "Gold Mining.")

**MINING MACHINERY.**—See special article following.

**RAND PROFITS IN 1925.** The profits of the six big mining groups of the Rand for the year 1925 totalled £12,400,000, over £2,000,000 below the aggregate for 1924. The profits of the Central Mining Group were down £1,000,000 the Barnato Group, £800,000, Union Corporation Group, £82,000, Gold Fields Group, £196,000, and General Mining Group, £80,000, while the Anglo-American Group's profits were up by £162,000. It was generally considered that, having regard to the disappearance of the gold premium, the shortage of native labour, and the concessions made in wages, these results were satisfactory, and constituted a tribute to the increasing efficiency of the industry.

#### VALUE OF MINES TO UNION.

From time to time various Commissions have thoroughly investigated the operations of the Gold Mines and the general relationship existing between the mines and the country as a whole. In every instance the reports of such Commissions have established the bona fides of the mine managements and the importance of the gold mining industry to South Africa. Thus the Low Grade Mines Commission of 1919 found

"That the Witwatersrand Gold Mines were the sole support of at least a quarter of a million whites and two million natives, that in every part of the Union there were people who were more or less dependent for their living on the spending power of the money put into circulation by the mines of the Rand, and

"That of the total Union Revenue General and Railway nearly one-half was traceable to the mines of the Witwatersrand."

It may be added that since 1910 (the year of Union) the Government had derived up to the end of 1923 a sum of £23,550,869 in direct revenue from the gold mines, in addition to some £3,500,000 in licences and minepacht dues, which are nearly all paid by the gold mines.

**VALUE OF OUTPUT.**—The values of the mineral output for the Union for the years 1923 and 1924 were as follow—

	1923	1924
Gold (value at £4 24773 per fine oz)	38,861,511	40,671,667
Silver	197,054	212,602
Diamonds	6,038,207	8,033,406
Coal	3,713,706	3,830,163
Copper	404,511	511,844
Tin	170,337	304,108
Arsenic	290	4,260
Iron Ore	230	—
Lead	133,373	140,194
Manganese	1,584	1,300
Asbestos	121,483	110,075
Corundum	22,543	13,284
Graphite	1,837	1,597
Iron Pyrite	4,906	3,109
Magnesite	2,943	4,159
Mica	1,038	2,296
Mineral Paints	468	634
Soda	1,013	9,844
Talc	1,065	1,592

The total value of metals and minerals produced in the Union during 1925 was £54,251,976, compared with £53,958,306 for 1924. The principal totals for 1925 were:

Gold, £40,767,982, silver, £166,842, osmium, £170,095, diamonds, £8,198,368, coal, £3,880,442, copper, £495,797, and tin, £298,773.

**WAGES.**—The salaries and wages earned by European and other employees of mining during 1924 amounted to some £17,000,000, of which approximately £13,500,000 were paid out in the Transvaal gold mines. Wages in the diamond and coal mining industries totalled about £1,300,000 and £1,650,000 respectively.

**WORKING COSTS.**—Working costs on the mines of the Witwatersrand showed in 1925 a tendency to rise, and if legislation of various kinds in respect of wages and in regard to tariff increases for essential supplies and requirements of the mines becomes operative there can be little doubt that in the future there will be further increases in working expenditure.

In 1925 the payable ore reserves of the Witwatersrand gold mines were approximately 92,000,000 tons. This is the stock-in-trade of the industry, representing the accumulated tonnages of conglomerate blocked out and ready for excavation, containing a gold content which will pay for working, with gold at standard price and working expenses at the present level. In 1925, also, the mines were directly employing between 10,000 and 20,000 Europeans, or, roughly, one for each 5,000 tons of ore in reserve. In addition, mine others are indirectly employed, the result being that each 5,000 tons of ore affords employment for ten Europeans in connection with its mining, in the recovery of its gold content, and in the replacement of the tonnages exhausted. The margin of profit on the Rand ores, which are of comparatively low-grade nature, is small. For the whole industry, that is for rich and poor mines alike, the average is only 8s 9d per ton, and that is not all distributable profit, since taxation, etc., have still to be deducted. For the first six months of 1925 the distributed profit was only 5s 10d per ton. A great deal of this ore has a value of under 7 dwts per ton, the last available calculations showing that in 21 out of the 36 productive mines of the Rand the value of the ore reserve was below 7 dwts per ton, and in 12 out of those 21 the average value was under 6 dwts per ton. It is obvious that any material increase in working expenses must result in the lower-grade blocks of ore being rendered unprofitable to work, and, in the case of mines without any higher-grade blocks, in a contraction ultimately leading to complete cessation of operations.

**WORKING PROFITS.**—The following table shows in detail the working profits of the Transvaal gold mines for 1924 and 1925.—

	1924	1925
Tons crushed	28,209,073	28,682,238
Total ore recovered	9,352,396	9,599,702
Dwt. per ton	6.55	6.56
Revenue—	£	£
Total	42,865,345	40,339,585
Per ton	29/10	27/11
Working Costs—	£	£
Total	28,214,509	27,668,373
Per ton	19/7	19/4
Estimated Profit—	£	£
Total	14,505,000	12,450,000
Per ton	10/3	8/9

**WORLD'S OUTPUT.**—The estimate of the world's output of gold from 1883 to 1887 was about £18,000,000 per annum, the United States coming first, Australia second, and Russia third. In 1896 it had risen to £40,600,100, America being first, Australia second, South Africa third, and

Russia fourth. In 1898, South Africa came first, with an estimated output of 28 per cent of the total world's production, the world's output for that year being 13,805,497 fine oz. In 1906 the figures were: South Africa, £24,579,987; United States, £19,431,040; Australia, £16,570,312; Russia, £4,300,000; Mexico, £3,086,000.

Canada, £2,400,000; Rhodesia, £1,971,259; total, £82,230,000.

In 1916 the Transvaal produced 9,296,331 oz. valued at £39,188,306, or 41.26 of the world's output, which was £95,700,000. The United States produced 19.89 per cent, and Australia 9.21 per cent. In 1923 the Transvaal's percentage of the world's output

of £73,900,000 was 52.6, the highest yet recorded. In 1924 the percentage fell to 51.6 per cent, the world's output aggregating £79,000,000, taking gold at 84s. 11d. per fine oz.

In 1925 the total world output was valued at £81,000,000, the Transvaal's share at nearly £10,800,000 being 53.6, a new record.

## DIAMOND MINING

**3**N all the history of the development of South Africa there is perhaps no chapter more full of romance than that which describes the discovery of the Diamond Fields of Kimberley. It was a discovery which has since added more than £250,000,000 to the wealth of the country and though the industry was hit very severely by the European War, as also by the economic depression which followed, there are signs that it is on its return to normal. South Africa is, however, no longer in the happy position it was some years ago of having practically a world monopoly of the supply of diamonds, as the production of other parts of the universe has risen until that of the Union is now about one-quarter of the total.

### DISCOVERY AND EARLY HISTORY.

It was a farmer's child who, whilst at play in 1867 on the bank of the Orange River, picked up the first diamond to be marketed in South Africa. A general examination of the district where now stands the town of Barkly West followed, leading to the discovery of other stones, and in the same year a Griqua shepherd found the superb white diamond weighing 83.5 carats (the "Star of South Africa") which was afterwards purchased by the Earl of Dudley for £25,000. The discovery of this gem caused a rush to the Vaal River, prospectors of every rank and type coming from all parts of the country, and even from overseas.

As yet no geological characteristics guided the search, which was haphazard and capricious. The Vaal River diggings proved mostly disappointing and in 1870 the collapse of the industry appeared imminent. Then, in the August of that year, one De Klerk, overseer of the farm of Jagersfontein near Laursmith, about 100 miles south-east of Klip Drift noticed that many small garnets mixed with pebbles of agate were sprinkled upon the dry bed of a little stream that ran through the valley. De Klerk began prospecting, and quickly found a diamond of 50 carats.

Hardly had the news of this discovery circulated when, in September 1870, at Du Toits Pan, about 20 miles south-east of Klip Drift, another and a more remarkable discovery of diamonds was made, the "Blink Klippe," as the Boers called them, being found in abundance and with but little trouble both there and on the adjoining Bultfontein and Vooruitzicht farms. The last named, owned by two brothers, D.A. and J.N. De Beer, was at first called the New Rush, or Colesberg Kopje, and became famous in history as the Kimberley Mine.

Klip Drift was deserted, and the rush concentrated on these new fields. A town sprang up like magic, with churches, hospitals, and theatres. By the end of 1871 there were 50,000 whites and blacks working on the fields. The diggings were at first only a jumble of hills, pits, and burrows, with no attempt to secure any system or union in mining. No one at that time foresaw

THE BIG HOLE, PREMIER DIAMOND MINE.

the developments that lay ahead. Then it was found that not only the upper "yellow ground," but also the underlying "blue ground," the depths of which have not yet been plumbed, were rich with diamonds. It was then that the feverish competition began which was later to bring about amalgamation.

In 1875 the first steam winding engine was employed at the Kimberley Mine, and from that moment dates the application of

modern mining methods to the South African diamond fields. At this period the question of the falling in of the reef was causing serious alarm. By 1883 even the central claims were being overwhelmed, and it was realised that the only possible remedy lay in the general introduction of a system of underground mining. It was a succession of disasters and this realisation of the need of expensive construction work that led to the amalgamation of the competing

claim owners and to the consolidation of interests from which the great De Beers Company was formed, the moving spirits being the late Barney Barnato and Cecil John Rhodes. Between the interests dominated by those rival personalities commenced a struggle the character of which was always more than merely financial. It ended in the triumph of Rhodes, when at last in 1887 the De Beers Mine acquired the other three mines at a cost of 14½ millions sterling. Since that date the great corporation known as the De Beers Consolidated Mines, Limited, has conducted a single, broad, and comprehen-

**FAMOUS STONES.**—The Porter-Rhodes diamond, a white octahedron, weighing 152 carats and valued at £60,000, was found in 1880 near the centre of the Kimberley Mine. In 1917 a diamond of 442 carats, said to be the largest stone ever found in the Kimberley mines, was obtained from the Du Toits Pan. The biggest stone from the De Beers was an imperfect one of 503 carats found in June, 1896, but the best specimen from that mine weighed 428½ carats, was cut down to 228½ carats, and sold for £13,000. Even larger stones have been found in the Jagersfontein and Premier Mines, the most famous of all being the

satisfy the market for the next hundred years. New mines will almost certainly be found, and the present difficulty of restraining the output will remain, even if it does not become accentuated. New discoveries, therefore, however welcome to the discoverer, will not increase the immediate wealth of the country.

**I.D.B.**—The facility with which diamonds could be stolen and the profits attached to systematic methods of thieving, naturally attracted to Kimberley in the early days many criminals from all parts of the world, who found ready tools in the natives employed in the mines. This illicit traffic ("I.D.B."—Illicit Diamond Buying) attained enormous proportions, and it is supposed that at one time not half the diamonds found reached their legitimate owners. In 1882 and 1883 stringent regulations were enacted with regard to the possession of rough diamonds, and an extensive detective department was inaugurated, the trapping and spying system which was developed being defended on the ground of the great difficulty involved in obtaining a conviction against illicit diamond buyers by the ordinary means of justice. In 1904 some of the most drastic clauses of the I.D.B. Act were rescinded, but it is still a punishable offence to buy a diamond from any but a licensed dealer.

**JOINT PRODUCTION.** The diamond is almost entirely an article of luxury, for which the market must always be a limited one, unable to absorb anything like the output of which the South African mines are capable. It became necessary, therefore, some years ago to restrict output by arrangement between the four chief producers in South Africa, viz., the De Beers, South West Africa, Premier, and Jagersfontein Mines. Until recently there was an understanding between them and the London Diamond Syndicate, which purchased from them at agreed-upon prices diamonds to a certain total value, and these were supplied by the four producing mines in agreed-upon proportions. In 1925 the Union Government passed the Diamond Control Bill, which placed the control of the diamond output, except from alluvial diggings, in the hands of a board of three persons appointed by the Government. The passing of the Control Bill was followed by an arrangement made by the diamond producers with a new syndicate controlled by the owners of South-African diamonds, of which Sir Ernest Oppenheimer is the head. This syndicate made an offer for the sale of diamonds for five years (the London Syndicate having disappeared), to which proposal the Union Government agreed. It is stated that as a result of this arrangement both the prices and production of diamonds have advanced. Further, the control of the sale of diamonds will now be in South Africa, and the head office will be situated at Kimberley.

**MINES (LEADING).**—The Koffiefontein mine having of recent years come under the control of De Beers Consolidated Company, and the small mines of the Boshof district being of comparatively little account, the great producing mines of the Union may be considered as consisting only of De Beers Consolidated, the Premier, and Jagersfontein. These great corporations have all been eminently successful financially, and, in view of their enormous reserves of ground, have long lives in front of them.

**DE BEERS CONSOLIDATED MINES LIMITED.**—The production of diamonds from mines within Cape Province is practically limited to the De Beers Company, whose properties are known as the Kimberley, De Beers, Dutoitspan, Wesseltown, and Bult-

SORTING TABLE, PREMIER DIAMOND MINE.

sive plan for the disposal of the total product of the mines to the best advantage.

**DISTRIBUTION.**—The areas in which kimberlite (the general term by which the rock of the diamond mines is now generally known) occurs are spread over a great part of the Union, the chief centres being Barkly West and Kimberley in the Cape Province, Boshof, Koffiefontein, Jagersfontein, Kroonstad, and Theunissen in the Orange Free State, and the Premier Mine in the Transvaal.

**EXPORT TRADE.**—See under "Commerce."

celebrated "Cullinan" diamond, discovered in the Premier on January 26, 1905. This stone weighed 3,024½ carats, about 1½ lbs. It was purchased by the Transvaal Government for £150,000 and presented to King Edward VII. While undergoing cutting in Amsterdam a flaw was discovered, and the diamond was divided into a number of gems, including the two largest brilliants in existence, viz 516 and 309 carats.

**FUTURE OF INDUSTRY.**—It is authoritatively stated that there are enough diamonds in the mines working at present to

fontein The Kimberley Mine is the parent of all South African mines, having been first pegged out in 1871. Mining here has been carried on to a depth of over 3,600 feet. The De Beers Mine lies a mile to the east of the Kimberley Mine, and is somewhat larger in extent. The Bultfontein Mine produces a small diamond, but of an exceptionally pure colour. Very valuable stones have come from the Du Toits Pan Mine, which has an open area of over 45 acres. (See also under "Discovery.")

The authorised capital of the De Beers Consolidated is £1,750,000. Besides its properties in Cape Province, the company controls the Koffiefontein and Voorspoed Mines in the Union, and holds the pre-emptive right to any diamond mines discovered in Southern Rhodesia and South-West Africa.

**JAGERSFONTEIN MINE**—This is the most important mine in the Orange Free State, and was discovered in 1878, being worked for a long time on the open system. Since 1910 it has been operated on the underground system as at Kimberley. Stones of very fine quality are produced by the Jagersfontein Mine, one especially, a flawless white stone of 634 carats, found in 1895 being considered the most perfect diamond ever discovered. The mine is controlled by the New Jagersfontein Mining and Exploration Company, Limited, which, with an authorised capital of £1,000,000, produced diamonds to the value of £502,631 in 1923-24, sales totalling £495,958.

**PREMIER MINE**—The Premier Mine, situated 25 miles east of Pretoria, is the largest of all diamond mines. Its discovery in 1902 was the most important event in the history of the diamond industry of the Union since 1870. The pipe is roughly an oval, 2,900 ft long by 1,500 ft across, giving an area of nearly 80 acres, or 3,570 claims. The enormous surface extension thus represented as compared with other pipes, will be realised when it is stated that it amounts to only a few hundred claims less than that of the three largest mines of the Kimberley group put together. Down to the present depth of working (over 300 ft) the walls are practically perpendicular, and have shown no disposition to cave. In normal times before the War the mine employed some 900 white men and 14,000 natives, and the rate of working amounted to 33,000 loads of 16 cubic feet daily, or over 10,000,000 loads per annum. Since the War, however, the scale of work has been reduced considerably, employees in April, 1924 totalling only 4,438, while the number of loads washed during the year named was 3,544,576, this being an increase of 1,311,552 loads on the figure for 1923, while the output of diamonds (694,880 carats, value £1,027,110) was greater by 217,821 carats than in 1923. The Premier Mine is so large that at the present rate of working the average depth only increases 8½ ft a year, the present method of working being likely to continue for many years to come.

The Government of the Union holds a six-tenths interest in the Premier Mine, which is otherwise controlled by the Premier (Transvaal) Mining Company Limited, with a capital of £80,000. The accounts for the year ended October 31, 1924, showed a profit of £557,779, of which the sum of £339,066 was due to the Union Government. The sum of £372,500 was paid in dividends, at the rate of 250 per cent cumulative dividend on the preference shares of 5s and 700 per cent. on the deferred shares of 2s 6d.

**MINING (ALLUVIAL)**—The principal alluvial diggings are in and near the bed of the Vaal River. For many years the river diggings were confined to the neighbourhood of the confluence of the Vaal with the Orange River in Cape Colony, Barkly West being the centre of operations. Since 1900, however, the South-West Transvaal has been the centre of considerable activity and alluvial diamonds are being worked over an area of 4,000 square miles extending north to Schweizer Reineke and Lichtenburg, and nearly as far east as Vereeniging, while new diggings are being proclaimed every year. In 1925 some 6,400 Europeans and 22,600 non-Europeans were engaged in alluvial operations, in comparison with 4,600 Europeans and 16,000 non-Europeans in 1913. The diamonds won in 1925 amounted to 239,257 metric carats, valued at £1,906,618, giving an annual value per carat of 159s 5d. Though the alluvial production was the lowest for three years, the average price realised was the highest recorded since 1919, and showed an increase of nearly 10s per carat as compared with the 1924 value.

**MINING LICENCES**—All diamonds in the Union are subject to export tax, but, apart from this, the only obligation required of the digger by Government is payment of his claim licence. In the Transvaal, claims measure 45 ft square, and are subject to a monthly tax of 5s. In Cape Province the standard claim is 30 ft square, but this has been increased by proclamation to 30 ft by 60 ft in Griqualand West. The latter is subject to a licence costing 5s monthly. In the Orange Free State £1 is charged on the full claim of 90 ft square.

**MINING METHODS**—The most important source of production of South African diamonds is the pipes or dykes of "kimberlite," which near the surface is a soft yellowish clayey rock, and from below 140 ft a harder rock, known from its peculiar greenish or greyish-blue colour, as "blue ground." This "blue-ground" is mined to a great depth by elaborate methods of open-cast and underground mining, successful operations having been conducted at Kimberley to a depth of 3,500 ft. The methods of winning the marketable diamonds from the mass of conglomerates in which they are embedded have changed very much since the days of the early diggers, who were content to make use of rude machinery and a series of laborious washings and pickings by hand. Then came the discovery that a greased surface allowed the concentrates to slip off while the rough diamonds remained, and upon this was built up the principle of the "pulsator," which has practically eliminated hand washing. To-day the recovery of the diamond from the hard "blue-ground" in which it is embedded involves several complex processes and machinery which are the outcome of 50 years of practical trial and experience.

**BLUE GROUND TREATMENT**—This is in effect pulverisation by natural or mechanical means. Until recent years the "blue-ground" was brought by hoists and skips to large "distributing floors," on which it was spread and exposed to sun and rain until it crumbled and disintegrated, the process often occupying as long as 18 months. As the Kimberley mines became deeper and deeper, the "blue ground" became less and less amenable to treatment by flooring, with the result that the period required for its complete disintegration became excessive, and too large a capital was locked up in the deposited "blue ground." For this and other reasons it was resolved

in 1920 to abandon flooring at Kimberley in favour of mechanical crushing and harrowing, or direct treatment, as it is popularly termed. At the Premier Mine direct treatment was adopted at the outset, flooring on a large scale being now only carried out at certain mines in the Orange Free State.

**CONCENTRATION**—The preliminary concentration of the crushed or disintegrated "blue-ground" is carried out in rotary washing pans or jigs. These are shallow cylindrical troughs containing muddy water, in which the diamonds and other heavy materials (concentrates) are swept to the rim by revolving toothed arms, while the lighter stuff escapes to the centre of the pan. Further concentration is carried out in jigs or tube mills, from which the lighter material passes to the "pulsators." These are sloping tables greased with petroleum jelly, from which the particles of garnet, pebbles, cyanite, mica, ilmenite, chromite, magnetite and other minerals slip away, while the valuable diamond remains, the shaking taking place under a stream of water. Thus the final concentration of the diamond is effected. In all these processes the valueless matrix, representing about 90.99 per cent of the rock mined, is progressively eliminated, actually less than 0.1 per cent representing the diamonds recovered, which are then cleaned with petrol and hydrofluoric acid, and afterwards classified according to size, crystallisation, purity, and colour. As many as 1,000 grades are discriminated in the larger mines.

**DIAMOND-CUTTING**—Diamond-cutting a highly specialised art, is carried on chiefly at Amsterdam and Antwerp. Some small diamond-cutting establishments have been in operation at Johannesburg and Pretoria, but the output hitherto has been negligible. The value of diamonds cut and polished in South Africa in a recent year amounted to only £26,853.

**OUTPUT**—Very satisfactory progress was shown in the statistics relating to the diamond output of the Union for 1925. The total production, both for mines and alluvials, for that year amounted to 2,443,380 carats, valued at £8,198,368, as compared with 2,440,397 carats, valued at £8,033,406, in 1924. Thirteen mines contributed to this output, with a production in the aggregate of 2,104,013 carats, valued at £6,201,750, while the alluvial production reached the figure of 239,257 carats, valued at £1,906,618. In 1924 the alluvial production achieved the record of 287,555 carats, valued at £2,150,373.

The total production of diamonds in the Union of South Africa since the establishment of the Union is as follows—

YEAR	CARATS	ESTIMATED VALUE
1911	5,021,734	8,746,724
1912	5,206,388	10,061,480
1913	5,300,483	11,389,807
1914	2,875,200	5,487,194
1915	106,127	390,810
1916	2,408,554	5,728,391
1917	2,979,388	7,713,810
1918	2,604,650	7,114,867
1919	2,656,651	11,734,495
1920	2,612,511	14,762,890
1921	828,035	3,103,448
1922	669,559	2,266,631
1923	2,053,004	6,038,207
1924	2,440,397	8,033,406
1925	2,443,380	8,198,368

The 1925 figure of value was the highest recorded since 1920. For the first quarter of 1926 the output was valued at £2,203,400.

**PRICES.**—For the three last full years previous to the European War, viz 1911, 1912, and 1913, the average prices for mine stones, as produced in the Union, were respectively 32s 9d, 36s 2d and 40s 4d per metric carat of 200 milligrams. During the War, as a result of the control of prices by agreement, improved values were obtained and continued up to the close of 1920, the Union average price for mine stones in that year being 103s 4d. At the end of 1920, however, there was a complete collapse of the diamond market owing to the world-wide financial depression, in which the diamond trade suffered in common with other luxury trades, and as a result of a large number of diamonds being placed on the European market by the Soviet Government and various persons. Prices dropped to 79s 5d, in 1921, and to 61s 2d and 59s 10d

in 1922 and 1923 respectively. In 1924 there was a distinct improvement, the average price rising to 66s 2d. It must be remembered that the average prices given above are lowered considerably by the inclusion of the Transvaal production, which is of comparatively poor quality. Thus for the year 1920 Cape stones realised 127s 5d, Orange Free State 110s 8d and Transvaal stones only 50s 6d. In 1925 the difference in the prices obtained by those areas was not so marked the average realised in that year being Cape, 57s 8d, Orange Free State, 73s 9d, and Transvaal 31s 4d.

In the case of alluvial stones, which on the average are much more valuable than mine stones of equal weight, prices generally follow the fluctuations of the market for mine stones. In 1913 the average price realised was 105s 9d per metric carat, the price rising till 1919, when 251s 9d was obtained. With the general slump, prices dropped to 118s 1d in 1921, recovering

again to an average of 135s 8d per metric carat for the year 1923, 151s 1d for 1924 and 159s 5d for 1925.

**SOUTH AFRICAN DIAMONDS (CHARACTERISTICS).**—The South African fields produce diamonds of every conceivable hue, but true blue-white or super-white stones are comparatively rare. The Premier Mine yields a very hard diamond whilst South-West African stones are the softest and most easily cut. The "Kimberlite" pipes produce the largest and most valuable diamonds, the comparatively low average value of their output (106s 3d as against 220s 6d for alluvial fields) being due to the fact that they yield a large proportion of stones of very inferior quality. This is particularly the case with the Premier pipe, the greatest known repository of precious stones, which produces an unrivalled variety of diamonds, ranging from exquisite blue-whites and fancy stones on the one hand to unsightly rubbish on the other.

## COAL MINING

**ANYTHING** like an accurate knowledge of the various coalfields of South Africa and of their vast potentialities is unobtainable as yet. The various coal bearing areas have still to be properly mapped and their economic importance determined before more than a comparatively rough estimate can be formed of the total quantity of coal available in the Union. The exploitation

of the product is of comparatively recent growth, not extending further back than a generation, and the annual output of the mineral is thus far insignificant compared to the total resources of the country. During the years following the War, however, the industry has made perceptible strides, and must have a great future. With the increase of railway communication and the opening up of the numerous industries for

which South Africa has the means and facilities a large demand for coal must follow, to say nothing of the increasing requirements of shipping at the Union ports.

**BY-PRODUCTS.**—The manufacture of coke is at present confined to the Province of Natal, which supplies all that is used in South Africa, and also exports a considerable quantity. Natal coke is of excellent quality, especially for foundry work, being

THE TRANSVAAL COAL OWNERS' ASSOCIATION (1923) LTD., Johannesburg.  
Some of its Output Awaiting Shipment at Lourenço Marques.  
(See letterpress and illustration, page 123.)

very dense and hard. Other by-products of Natal coal are tar, sulphate of ammonia, light creosote oil, naphtha salts, and solvent naphtha. Much of the sulphate of ammonia goes to Mauritius, and the other products find a ready market in South Africa.

**DISTRIBUTION.**—Above a certain altitude coal has been found over nearly the whole of the Union, the area where it is known to exist exceeding 56,000 square miles.

**CAPE PROVINCE.**—The workable seams of coal are confined to the Molteno beds of the Stormberg Series, and are found at three well defined horizons, known as the Indwe, Guba, and Molteno seams. Practically the whole output, however, has been obtained hitherto from the Indwe and Molteno mines. Cape coal has only a low calorific value and cannot compete, except for purely local purposes, with the higher grade coals of Natal and the Transvaal.

**NATAL.** The coalfields of Natal are situated in the districts of Klip River, Newcastle, Utrecht, and Vryheid, practically 50 per cent of the output coming from the last named district. Much coal is known to exist also in Zululand, but so far little prospecting has taken place. With the extension of the railways, however, the Zululand coalfields may become highly important. The Natal coal is of first-class quality and is being increasingly used for shipping purposes. In 1924 there were 31 producing collieries in the Province, and the number is being added to.

**ORANGE FREE STATE.**—The coal-mines of the Orange Free State are situated towards the northern boundary of the Heilbron District and in the northern and north-western portions of the Kroonstad District. The coal is of second-grade quality, but is considered generally a useful steam article and excellent for domestic purposes.

**TRANSVAAL.** In the Transvaal the District of Middelburg is the principal coal area. There are, however, important mines to the east of the Witwatersrand and in the Ermelo District. Coal is also found to the north of Zoutpansberg, but the mines here have not been worked since 1918, and in the Pilgrims' Rest District, where one small mine is working. The Transvaal coals are generally of good quality, and some are much better for cooking requirements than any yet found elsewhere in the country.

In 1925 the coal output of the Transvaal increased by 608,689 tons and the value by

£140,654, as compared with 1924, there being 31 collieries at work on the last day of the year.

**EMPLOYMENT AND WAGES.**—On December 31, 1925, there were 30,129 persons employed in coal mining in the Union, of whom 1704 were Europeans. In the collieries the white miner is in the position of a supervisor, having usually from 50 to 100 natives under him. He does little manual work, beyond conducting blasting operations and examining the places before the natives enter and start duty. Natives do all harder work, such as hewing, filling, and trimming. In Natal, Indians are largely employed.

White miners' wages vary from 24s. to 30s. a day, a fifty-one hour week being the rule except in the Witbank area, where a forty-eight hour week is worked. Natives draw from 40s. to 60s. a month, with free quarters, rations, and medical attendance.

**OVERSEA MARKETS.** With several collieries in Natal turning out coal up to 40,000 tons and more per month, the problem of sales and markets becomes of very serious importance. Railways and other inland markets absorb most of the output in "smalls," and the coal from the smaller collieries. For the shipping trade the great market place is in London, and influential London agents are of the utmost value for the sale of Natal shipping coal. The bulk of the trade is now in the hands of some five or six large firms closely associated with shipping, who have connections in various parts of the world. The export trade in Natal coal has developed greatly during the last few years, and for its further extension a big efficient organisation is necessary in order to secure business that otherwise may go to England, India, or Australia. Natal coal now holds its own throughout the Indian Ocean littoral, and goes to Port Sudan, Aden, Karachi, Bombay, Madras, Colombo, Singapore, Sabang, and Hongkong. Occasional cargoes are sent to Buenos Aires and Iquique in South America and to Suez in North Africa. A great field for future expansion undoubtedly lies in South America, which, except for some inferior coal in Chile, has comparatively little of its own. Unfortunately, the question of return cargo is always a big difficulty.

**PRODUCTION.**—The annual output of marketable coal for the whole Union, with the value thereof, for the years 1920-25 was as follows:—

YEAR	TOTAL OUTPUT TONS	VALUE £
1920	11,473,464	4,510,605
1921	11,396,905	5,072,401
1922	9,734,313	3,305,170
1923	11,917,036	3,713,706
1924	12,490,493	3,830,689
1925	13,007,141	3,880,442

The production by provinces in 1923 and 1924 was:—

	1923 TONS	1924 TONS
Cape	6,359	5,329
Natal	1,392,892	1,711,004
Transvaal	6,742,280	6,790,689
Orange Free State	865,400	983,471
Totals	11,917,036	12,490,493

**SALES AND PRICES.**—Following are the figures of sales and values for each province in 1924:

PROVINCE	VALUE AT PER TON £	VALUE PER TON S. D.
Cape	3.783	14 2
Natal	1.831.997	7 9
Transvaal	1.721.098	5 1
Orange Free State	273 345	5 7
Totals	£3,830,103	8 14

It will be noticed that the price of coal varies very much in the different Provinces, the reason being largely due to the situation of the collieries. Cape Province coal fetches the highest price because the mineral from the other Provinces has to be transported long distances by rail. Natal coal, which is the best in the Union, commands a comparatively high price because of the very large bunker and export trade done at the port of Durban. The Transvaal and Orange Free State coal is mostly consumed in those Provinces, and as the demand is no greater than the supply there has been little opportunity for prices to increase.

**COMPARISON OF PRICES.** Apart from the price of Cape coal, which is relatively high on account of the scarcity of the product in that Province, the cost in the Union compares very favourably with the figures in other parts of the world.

(See also special articles later on Transvaal Coal Owners' Association, Natal Navigation Collieries, and Estate Company, and Natal Steam Coal Company.)

## OTHER MINERALS

**A** PART from gold, coal and diamonds, few of the many minerals which are known to exist throughout South Africa are at present of outstanding importance. Many of them, however, are capable of great development. The known metals and minerals include the following:

**ANTIMONY.** This metal occurs as antimonite in the gold reefs of the northern line of the Murchison Range in the Zoutpansberg District of the Transvaal, the ore containing from 6 per cent to 60 per cent antimonite and from 3 dwts to 1 oz of gold to the ton. A considerable amount of hand-picked antimonite was exported during the European War, and a certain quantity of fused antimonite was also produced. Since the war, however, there has been no production.

**ARSENIC.**—This mineral occurs as arsenical pyrites in certain gold and tin ores, but

only three mines, the Consort and Maid of de Kaap gold mines, near Barberton, and the Stavoren tin mine in the Waterberg district have produced arsenic. In 1924 some 100 tons of white arsenic were obtained the value of which was £1200.

**ASBESTOS.**—Blue asbestos of excellent quality has been mined in the Prieska and Hay districts of Cape Province for many years, and it is also mined in the Transvaal, in the north Lydenburg District. The total output increased from 4,389 tons (£81,230) in 1922 to 8,303 tons (£121,453) in 1923, but fell to 7,240 tons (£110,075) in 1924, rising to 10,167 tons, valued at £115,000 in 1925.

**BARIUM.**—The existence of barytes has been noted in the Transvaal at several points in the bushveld area, and also at Saltpetre Kop and Spiegel River in Cape Province, but no attempt has been made to exploit the mineral.

**BISMUTH.**—Bismuth is said to occur in some of the gold ores in the Sabi district and in the Stavoren tin mine, but the mineral is not yet of commercial importance.

**CHROMIUM.**—Chromite ore occurs in quantities in the Transvaal and some of it has been assayed. In the Lydenburg District a rich ore exists, only awaiting development when the district is opened up. Production in 1924 amounted to 2,055 tons of chrome ore, valued at £2,446, the figures for 1925—12,473 tons (£20,760)—easily constituting a record.

**CLAYS.** The materials for pottery obtainable in the Union are ball-clay, china-clay, fireclay, quartz, and various red and other common clays and shales.

**CHINA CLAY.** China-clay, or kaolin, is found in various parts of South Africa, usually impregnated with a large percentage of iron, though sometimes quite pure.

Specimens of absolutely pure kaolin have been taken from the Upper Witsberg rocks near Grahamstown. A deposit of pure kaolin also occurs at White River, Transvaal. Kaolin of good quality is found near Steinkopf, in Little Namaqualand, but the deposit is at present too inaccessible to allow the material to be utilised.

**FIRECLAYS.**—These are associated with the coal measures of the country, and many are of excellent quality. Good firebricks and crucibles are being manufactured from such clays near Boksburg and Vereeniging.

**QUARTZ.**—Quartz, very white and free from iron, is obtained from a huge vein of pure quartz in the grounds of the Modderfontein Dynamite Factory and similar deposits are frequent in all granite areas. This excellent material has been used with success in bodies and glazes for tiles and earthenware, and also for silica bricks. Accessible deposits of quartz occur in many parts of the Transvaal.

**RED AND YELLOW CLAYS.**—Excellent common red and yellow clays are widely distributed over the country but, generally speaking, little has been done with them up to the present, and their properties are not very well known. Fine grades of clay have been obtained in the Somerset West District, in the Maritzburg Valley, and in the region between Algoa Bay and the mountains near Uitenhage. (See also under "Industries.")

**COBALT.**—This was one of the first minerals to be worked in the Transvaal, an extremely complex ore, which fetched several hundred pounds per ton, being exported from the Krui River Farm in the North Middelburg District in the early 'eighties. The mine, however, soon closed down, and has not been re-opened. Several other cobalt deposits were opened in 1906 near the railway at Balmoral, and, though hitherto they have not been carried to the producing stage, it is probable that they will become productive in the near future.

**COPPER.**—The greater portion of the copper in South Africa comes from the well-known mines in Namaqualand, Cape Province, where it was discovered as long ago as 1685. The mines have been worked for more than 60 years by the Cape Copper Company and by the Namaqua Copper Company, and during that time the former company has paid nearly £5,000,000 sterling in dividends. In the Transvaal the Messina mine is the only one of importance. The output of copper in 1925 was 9,972 tons, value £495,797, compared with 9,953 tons, valued at £511,844, in the preceding year.

**CORUNDUM.**—The existence of this valuable mineral in the Zoutpansberg and Barberton areas of the Transvaal was known many years before the demand created by the European War brought it into prominence. Corundum occurs in the form of broken crystals in the surface detritus derived from certain belts in the gneiss, being won by screening and washing the gravel in rotary pans. The Zoutspanberg Grain Corundum Company's five-stamp battery and dressing plant at Bantolierkop now produces about three tons a day crushed and graded corundum, for which there is a ready market. Steps are being taken to ensure more correct grading, and the future of the industry appears to be secured. The output decreased from 2,815 tons in 1923, valued at £22,543, to 1,867 tons (£13,284) in 1924.

**GRAPHITE.**—This is known to exist in both the Transvaal and Cape Province, but so far has only been worked in one

place—in the Zoutpansberg District where a small mine turns out about six tons per month, the total output for 1924 being valued at £1,597, as against £1,837 in 1923.

**GYPSUM.** Gypsum, for the manufacture of plaster of paris, is mined in the valley of the Ingela, Natal, near Kimberley and in the Boshof District of the Orange Free State, where the largest deposit at present worked is situated. It also occurs frequently in pans in Griqualand West. In 1923 the output (the first recorded since 1918) amounted to 6,410 tons.

**IRON.**—Valuable deposits of iron ore exist in the neighbourhood of Pretoria and Vereeniging in the Transvaal and of Newcastle in Natal. The Pretoria iron mines have been extensively developed and the smelting works attached are steadily producing a high class cast iron which is in good demand. In 1923 the three concerns at Pretoria, Vereeniging and Newcastle were amalgamated, and the immediate programme of development includes the production of pig iron at Newcastle and the extension of the Vereeniging works. If further expansion is justified at a later date it is intended to establish additional smelting works at Pretoria. The total output of iron pyrites for 1924 was valued at £3,109, compared with £5,130 in 1923.

**KAOLIN.**—See "Clays" ("China-Clay").

**KIESELGUHR.**—Kieselguhr, or diatomaceous earth, occurs in the Amsterdam District of the Eastern Transvaal, also near Krugersdorp, and in Griqualand West and Gordonia. It is found as a deposit in the beds of certain small fresh-water marshes, but has hitherto only been worked to a little extent, mainly for use in boiler-lining materials.

**LEAD.**—Lead ore to the value of £140,194 was produced by South African mines in 1924, an increase on the figures of £133,573 for 1923 and £94,720 for 1922. Galena is found in several places, the largest supply of lead being extracted near the Marico in the Transvaal. It is also produced at Edendale and Kookkrantz near Pretoria.

**LIME.**—Three forms of limestone—magnesian, white and desert—are known and worked, the magnesian limestone, or common dolomite, covering vast areas in the Transvaal and Cape Provinces, the white variety coming from Potgietersrust in the Transvaal and Tanning in Bechuanaland, and the desert limestone, while occurring in all the provinces, being principally worked near Pretoria, Mafeking, and in the Orange Free State. The output of lime in the Union in a recent year was—Cape of Good Hope, 37,391 tons, valued at £79,915; Natal, 4,824 tons, valued at £6,437; Transvaal, 71,221 tons, valued at £147,411; Orange Free State, 1,169 tons, valued at £6,229, or a grand total of 114,605 tons, worth £239,992.

**MAGNESITE.**—This in workable quantities occurs in several places in the Transvaal, notably at Kaapmuiden, where a railway traverses the deposits. In 1918 the output reached an average of nearly 70 tons a month, and this has gradually increased to the 1,367 tons yielded in 1923, and 2,012 tons (£4,159) in 1924. In 1925 the output was 2,050 tons.

**MANGANESE.**—This is found almost entirely in the Transvaal, where, in the Krugersdorp district, there are large lateroidal deposits which can easily be worked. No export trade has as yet developed, but the amount mined in 1924 (584 tons) was the largest output since 1918.

**MICA.**—Excellent mica occurs in the Transvaal along the Olifants River, below the Berg in the Leydsdorp division of the Pietersburg District. It has first-class electrical resisting properties, but, owing to the distance of the fields from the railway and difficulties in marketing the produce, all attempts to work it have hitherto proved unremunerative. With the advent of the railway it is hoped that the industry may become profitable. The output of the Union was valued at £1,038 in 1923 and £2,290 in 1924. The 1925 production of 1,453 tons represented a considerable increase.

**NITRATES.**—It was announced at the end of 1925 that an important discovery of nitrates had been made in the Matzap brine, in the Hay District of Cape Province. At the present time South Africa imports large quantities of nitrates, and the value of this discovery, should its commercial possibilities be found satisfactory, would be of immense importance.

**OIL SHALES.**—Beds of oil shale, up to 4 ft in thickness, associated with the coal measures, occur in the Transvaal, Natal, and Cape Provinces. A company has been formed to exploit the shales lying in the Wakkerstroom District of the Transvaal, where at least 7,000,000 tons of the mineral in a continuous seam are estimated to exist, and some of the shales in the Ermelo District are reported to be extremely rich, being likely to yield an average of 40 gallons to the ton. The Union Government has been asked to offer a bounty on production by way of stimulating an industry which must have to face severe competition from overseas.

**OSMIRIDIUM.**—This very precious metal is contained in the auriferous conglomerates of the Rand, and is recovered by some gold mines on the Witwatersrand at the rate of about 150 oz. per month, valued at from £25 to £30 per oz. There has been a considerable expansion in production in recent years, the output having risen from 510 fine oz. (£6,801) in 1921 to 4,107 fine oz. (£102,886) in 1924 and 6,955 oz. (£170,995) in 1925.

**PLATINUM.** A mineral development which has aroused world-wide interest, and which may ultimately prove the most important in South African history since the opening of the Rand, was the discovery of workable deposits of platinum in the Waterberg district of the Transvaal in 1923, followed in 1924 by discoveries of still greater importance in the Lydenburg district, North-eastern Transvaal. This discovery of pure platinum (which is five times more valuable than gold) was followed by an inspection and report upon the locality by Dr. Hans Merensky, a prominent Rand geologist and mining engineer. According to him, the platinum deposits are situated in a belt of country nearly 60 miles long. For the greater part of its length the belt has a north and south trend, but at its northern end it swings to the north-west in conformity with the strike of the rocks of the norite zone. The manner of occurrence of the metal in the two districts is totally different. In the Waterberg district it is found in a quartz lode, whereas in the Lydenburg fields it occurs on a primary constituent of ultra basic and basic belonging to the norite zone, and in alluvial deposits derived from the disintegration of these rocks, the conditions under which it is found being very similar to those in the Ural Mountains and British Columbia.

Following a most encouraging report, early in 1925, by the Government Geologist, the new Lydenburg platinum fields were invaded by a frenzied rush for platinum.

holdings, and new companies sprang up like mushrooms. Fortunes were made in a few days. Later came a reaction. It became obvious that much time must elapse before any reliable estimates could be made as to a new mining industry being established on any considerable scale. The metallurgical difficulties to be overcome are known to be many and great, and it is significant that not a single ounce of the metal has as yet (1926) figured on the returns of the mineral production of the Union. There is, however, good reason to suppose that these difficulties will be overcome, the acute question of restriction and pooling be settled, and a new and valuable industry be set on its feet before very many months have passed.

**SALT.**—No deposits of rock salt are known to occur in South Africa, but in the Cape, the Orange Free State, and the Transvaal Provinces a very large quantity of rough salt is made from the liquor of salt pans, the evaporation being done by solar heat. The largest salt pan in Cape Colony is that near Uitenhage, where as many as 100,000 bushels have been procured in a year. The production is entirely for domestic consumption, and in a recent year totalled 68,531 tons valued at £114,225.

**SILVER.**—The greater part of the silver won in South Africa hitherto has been that contained in the gold bullion of which it forms about 10 per cent by weight. The opening of the lead mines near Argent, which are known as the Transvaal Silver Mines, has added considerably to silver production, which increased from 830,329 oz. in 1921 to 1,115,676 oz. in 1922, to 1,373,930 oz. in 1923, and to 1,399,625 oz. in 1924, the value of the last year's output being £212,602. A lessened output of 1,160,069 oz., valued at £106,842, was recorded in 1925.

**SODA.** Soda is only known to occur once in any quantity in the Union, at the Pretoria saltpan, a crater-like depression some 200 feet below the surrounding country and about 28 acres in extent. It contains three valuable ingredients, viz., saline mud, which is said to go at least 200 feet deep, layers of trona or crystallised carbonate of soda, and saline liquor containing approximately 10 per cent soda and 15 per cent common salt. For some years the deposits were worked by the South African Alkali Company, but owing to the excessive price of production and marketing operations had temporarily to be suspended in 1923. In 1924 the output for the Union was valued at £9,844.

**SULPHUR.**—Deposits of sulphur have been found at Malmesbury, Fouw's River (Cape Province), Nylstroom, Amsterdam (Transvaal), and in Danaraland.

**TALC (STEALITE).**—Stealite of excellent quality occurs in the Barberton District, and has been noted in other areas. The output increased in value from £1,005 in 1923 to £1,592 in 1924, and a development of the export trade is confidently expected.

**THORIUM.**—Monazite occurs in many places in the Transvaal, as do other various rare minerals, but no attention has so far been paid to these, though the monazite is reported to have distinct radio active qualities. The mineral is also found along with cassiterite in the alluvial workings of Swaziland.

**TIN.**—Tin has been discovered in payable quantities in Swaziland, 60 miles east of Lake Chrissie. Traces have also been found near Grahamstown and in Table Mountain. In the Transvaal a large alluvial deposit has been discovered at Zwaartkloof, about

eight miles from Warmbaths. Production increased from 1,424 tons (£170,337) in 1923 to 2,049 tons (£304,108) in 1924, falling slightly to 1,937 tons (£298,073) in 1925.

**VANADIUM.** This mineral has been found associated with the lead ores of the Marico district in considerable quantities. In a recent period of two months there was a production of 54 tons of concentrates, containing about 7 per cent of vanadium.

**ZINC.**—Zinc, like lead, occurs in irregular deposits throughout the dolomite area of the Transvaal, but with the exception of one mine at Witkop, no attention has been paid to its occurrence. The last recorded output was in 1921, when 1,210 tons were extracted, valued at £8,410.

### REPRESENTATIVE MINING ENTERPRISES

#### RAND MINES LIMITED.

**Inception.** This very important mining organisation, controlling a number of prominent subsidiary companies, was incorporated in the Transvaal.

**Capital.**—The original capital was £400,000, divided into £1 shares, of which 332,708 were issued and fully paid. In 1889 the capital was increased to £400,000, and in 1901 the £1 shares were sub-divided into 5s shares. In 1911, in order to acquire additional share interests from Wernher, Beit & Company and others, the capital was further increased to £550,000 in 5s shares, of which £531,498 15s 0d has been issued and fully paid.

**Group.** The Central Mining Rand Mines Group is composed of the following companies: Ceylon Lydenburg, Ltd (issued capital, £22,000), City Deep, Ltd (issued capital, £1,205,000), Consolidated Main Reef Mines and Estate, Ltd (issued capital, £1,247,002), Crown Mines, Ltd (issued capital, £940,106), Durban Roodepoort Deep, Ltd (issued capital, £440,070), East Rand Proprietary Mines, Ltd (issued capital, £2,445,897), Ferreira Deep, Ltd (issued capital, £980,000), Geldenhuys Deep, Ltd (issued capital, £585,753), Glynn's Lydenburg, Ltd (issued capital, £170,000), Modderfontein B Gold Mines, Ltd (issued capital, £700,000), Modderfontein East, Ltd (issued capital, £465,485), New Modderfontein Gold Mining Company, Ltd (issued capital, £1,400,000), Nourse Mines, Ltd (issued capital, £827,821), Robinson Gold Mining Company, Ltd (issued capital, £2,750,000), Rose Deep, Ltd (issued capital, £700,000), Transvaal Gold Mining Estates, Limited (issued capital, £604,225), Transvaal Platinum, Ltd (issued capital, £27,044), The Wolluter Gold Mines, Ltd (issued capital, £860,000), Village Deep, Ltd (issued capital, £1,060,071), and Witbank Colliery, Ltd (issued capital, £350,000).

**Operations.**—The results of the gold mining operations for the year 1924 were as follow: Tons mined, 14,223,677, percentage of waste sorted, 10.7, tons milled, 12,745,300, gold produced, 4,108,868 fine ounces. The working revenue amounted to £18,692,516, the working profit being £5,769,313, and the dividends distributed to shareholders, £4,249,000. Working costs came to £12,923,203, made up as follow: white wages, £3,138,680, coloured wages, £2,530,278, stores and materials, £4,515,832, general costs (which include claim licences, power purchased, miners' phthisis contributions, native recruiting, repatriation and passport fees, native hospital, insurance premiums, holidays and sick leave, assessment rates, Rand Water Board fixed charges,

sundry expenditure, and head and London office expenses) came to £2,738,413. The price actually realised for the gold was an average of 91s per fine ounce in 1924, an increase of 2s 11d on the average of 88s 1d for the previous year. A dividend of 12s per share and a bonus of 8s per share, amounting together to £425,000, were paid by the Central Mining Investment Corporation Limited, and £613,545 6s 0d or 120%, by the Rand Mines Limited.

**Labour and Hygiene.**—The average labour force for 1924 consisted of 9,264 white and 79,751 coloured employees. Health conditions continue to receive every possible attention, and the accident death rate of the native labour force on the mines of the group was 3.11 per 1,000, while the mortality rate from disease was 10.80 per 1,000.

**Further Interests.** During 1924 the company took full advantage of any opportunity of acquiring further interests in new enterprises, as has always been its policy. It is interested in conjunction with the Central Mining and Investment Corporation, Limited, and the Transvaal Consolidated Land and Exploration Company, Limited, in the recent platinum discoveries in the Lydenburg and Rustenburg areas, and prospecting operations are in full progress, with gratifying results in the former district. It is also interested, through the Anglo-Spanish Construction Company, Limited, in financing the construction and equipment of approximately 260 miles of broad gauge railway under the terms of a concession granted by the Spanish Government in north-eastern Spain. Among the assets of the company are its reservoirs and pumping plants, and the supply of water from this source constituted a fresh record during 1924, amounting to 923,641,000 gallons. At Booyens pumping station the installation of electric power has been completed, and is giving satisfactory results.

**Accounts.** The accounts of the company for the year ended December 31, 1924, submitted in Johannesburg June 4, 1925, showed a profit for the year of £822,842, an increase of £143,826 making, with the £1,147,746 brought in a balance available of £1,970,578, as against £1,805,893 at December, 1923, when a sum of £154,752, being net amount received from investments, was included.

Two dividends totalling 120% were declared as in 1923, taxation absorbed £51,201 and forfeited dividends refunded £1,381. The sum of £321,622 was added to reserve, being net amount spent on investments, while £24,413 was deducted from reserve for writing down investments. After providing for the dividends, £613,545, the balance unappropriated, represented by cash and cash assets, less liabilities, was £982,828.

Appended are the results for the years named —

#### ANGLO-AMERICAN CORPORATION OF SOUTH AFRICA, LTD.

**Status.**—This company, which is in a very strong financial position, controls a number of important mining concerns in South Africa

**Capital.**—The authorised capital is £4,000,000, of which £3,720,000 has been registered, and £3,664,856 issued. This latter amount is reduced from £3,718,453 by the purchase of 53,597 ex-enemy shares from the Custodian of Enemy Property. The revenue for the year 1923 amounted to £527,475, compared with £335,073 for the previous year. A reserve fund of £200,000 was established to form the nucleus of a sum to meet whatever

depreciation may occur in the gold mining interests of the company through gradual exhaustion of the mines. The cash assets amounted in all to £3,162,884, which figure exceeded the cash liabilities of the same date by over £800,000

**Properties.**—The mines in which the company is interested are the Prakpan Mines; West Springs, Ltd., the Rand Selection Corporation, Springs Mines, Daggafontein Mines, Ltd., New Era Consolidated, Ltd., and the Transvaal Coal Corporation

**BRACKPAN MINES**—Capital, £1,020,000, in £1 shares, all issued and fully paid. Property 3,387 claims, of which 1,811 are leased from the Government. The dividends paid to 1923 amounted to £4,192,972, making 477.5 per cent. In the year named, following the satisfactory development results which had taken place, the nominal capacity of the reduction plant was increased from 70,000 tons to 80,000 tons monthly. It was also decided to re-model certain old sections of the plant so as to increase the output still further to a nominal

OF SOUTH AFRICA LTD., Johannesburg.  
West Springs.

capacity of 85,000 tons per month, and the chairman at the annual meeting stated that if favourable conditions prevailed there was no reason why this nominal capacity should not be exceeded. At December 31, 1924, the ore reserve was 2,848,540 tons, value 7.55 dwts., over an average stopping width of 69.59 inches.

**WEST SPRINGS, LIMITED**—Capital, £1,575,000 in £1 shares, of which 1,573,190 are issued and fully paid. Debentures outstanding amount to £331,620. Property: 2,236 claims, leased from the Government. The plant of novel design, had a nominal capacity of 40,000 tons monthly, but was expected to be increased to 50,000 tons by experiments which were conducted in 1923. On December 31 of that year the payable ore reserve was estimated at 2,099,484 tons, of an average value of 7.49 dwts. over 63.14 inches. Production commenced July 1, 1924.

**RAND SELECTION CORPORATION**.—Capital, £600,000 in £1 shares, all issued and fully paid. Property: freehold of the farms

Weltevreden and Kietfontein, on which are situated Brakpan Mines, Springs Mines, and West Springs, also the Brakpan township, and two extensions to the Springs township as well as large blocks of shares in the three mines. There are extensive tree plantations on the farms, and these are approaching maturity. The dividends paid to December 31, 1924, amounted to £2,639,760, making 478.15 per cent.

**SPRINGS MINES**—Capital £1,500,000, in £1 shares, of which 1,491,157 are issued and fully paid. Debentures outstanding amount to £31,550. Property: 3,568 claims, of which 2,235 are leased from the Government. Here also the capacity of the reduction plant was considerably increased in 1923, and at December 31, 1924, the ore reserve was 3,272,756 tons, value 8.64 dwts., over an average stopping width of 58.47 inches. The dividends paid to December 31, 1924, amounted to £2,006,079, or 135 per cent.

**DAGGAFONTEIN MINES, LIMITED**.—Capital, £1,017,075 in £1 shares, all issued and fully paid. Property: 2,058 claims, of

which 449 are leased from the Government. All operations on this mine were suspended pending the raising of further capital.

**NFB LRA CONSOLIDATED, LTD.**—Capital, £100,000 in 5/- shares, all issued and fully paid. This is a financial company, which holds large share interests in mines of the Far East Rand. The dividends earned to December 31, 1924, amounted to £222,837, making 224.75 per cent.

**TRANSVAAL COAL CORPORATION**.—Capital, £250,000 in £1 shares, all issued and fully paid. Property: the corporation has purchased the coal rights over an area of 11,045 morgen, and holds long-period options on a further area of 2,665 morgen.

**GENERAL REVIEW.**—The following is a summary of the chairman's review of the corporation's various activities at the 1924 annual meeting.

**GOLD MINING**—There has been general improvement in the gold-mining industry of the Witwatersrand, attributable to the improvement in the native labour

supply and the continuation of excellent relations with the European employees, with consequent freedom from industrial troubles. These conditions have afforded opportunities to all concerned in the industry to investigate methods systematically, and to improve efficiency. Of late years attention has been directed particularly to economies in rock-breaking, and the use of a heavier type of rock-drill has been extended, both in the Leyner type of drill and in jack-hammers. Experiments have also been made with the heat treatment of drill steel, and the use of high-grade alloy steels to form bits. Practical success has been achieved in this direction with the installation of electrical butt-welding machines at Springs mines and Brakpan mines, where also electrical heating furnaces have given good preliminary results. In metallurgical practice similar advances have taken place, and a new era of progress is developing on the Rand for all the companies concerned.

**DIAMOND MINING.** The corporation acts as secretaries and consulting engineers in Johannesburg to the Consolidated Diamond Mines of South West Africa, Limited. In spite of the fluctuations in the diamond

the beginning of 1924 was estimated at 7,567,000 tons, averaging 3.9 per cent of copper down to the 350 ft level.

**Administration.**—Chairman of Directors Sir Ernest Oppenheimer, M.L.A. Deputy-chairman Mr F. R. Lynch. Consulting Engineer Mr Carl R. Davis. Managers Messrs A. F. Lyall, and L. A. Pollak. Secretary Mr J. H. Groatton, F.C.I.S.

**Offices.**—Head Office: Amnicosa House, Holland Street, Johannesburg, P.O. Box No. 4587. Cables: "Amnicosa." Johannesburg. London Office: 5, London Wall Buildings, E.C.2. New York Office: 14 Wall Street, N.Y.C.

(See illustrations, pages 115, 116 and 117.)

#### JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY LTD.

**Inception.**—This important company was formed and registered in 1889 to carry on a financial and general agency and investment business, also to deal in land and mining properties.

**Development.**—In 1895 the company purchased the interests of the South African Trust and Finance Company Limited also

£350,000, and later in the same year to £650,000. In the following year it was brought up to £800,000 in order to acquire the undertakings of the South African Trust and Finance Company. In 1896 it was again increased to £850,000, and later in the same year to £2,750,000 to purchase the Barnato Bank and other undertakings. In 1905 the capital was raised to the present amount, 1,200,000 fully paid shares being issued in payment for the Barnato Consolidated undertaking.

**Company Interests.**—Following are particulars in brief of the principal mining interests of the Johannesburg Consolidated Investment Company Limited to the end of June 1925:—

**GOLD MINING.** **GOLD MINING ARTISTS (MODDERBONTEIN) CONSOLIDATED LIMITED.**—A record working profit of £2,309,740 was obtained by this company, of which the sum of £1,311,289 accrued to the Union Government under its agreement with the Company, the total sum paid to the Union Government on this account amounting to £6,113,412. The tonnage

JOHANNESBURG CONSOLIDATED INVESTMENT CO. LTD., Johannesburg

2. Randfontein Estates: Crusher House

market, owing to the unsettled conditions of trade and other contributory causes, the position of the diamond trade remains intrinsically sound. With every sign of improvement in financial and industrial conditions, there is an increased demand for diamonds, but the trade reacts to each change, whether for better or worse. Real prosperity for the producing companies can only come with the re-establishment of trade generally on a firm basis, and the Consolidated Company has, therefore, pursued of late a policy of caution and the husbanding of resources.

**COPPER MINING.**—The corporation is the local representative and consulting engineers for the Bwana M'Kubwa Copper Mining Company Limited. In 1924 this mine was still in the development stage, but the future of the Northern Rhodesia copper fields is promising, and the district may eventually develop into one of the great copper-producing areas of the world. The ore reserve of the Bwana M'Kubwa mine at

the agency business of Barnato Bros. In the following year the Barnato Bank Mining and Estate Corporation, Limited and the Houghton Estate and Gold Mining Company Limited, were acquired, while in the same year the estate portion of the property of the Johannesburg Waterworks Company and the Yeoville estate of the Johannesburg Building & Estate Syndicate, Limited, were purchased. In 1902 the Troye Exploration Company Limited, was bought, and in 1905 it was resolved to purchase the undertaking of the Barnato Consolidated Mines Limited, for 1,200,000 fully-paid shares. The company has large holdings of shares in mining and other concerns, also estate property in Johannesburg and London, mining properties in the Transvaal, and interests in Delagoa Bay. It erected the Carlton Hotel in Johannesburg, together with new office buildings.

**Capital.**—Of the authorised capital of £4,500,000 in £1 shares, 3,950,000 are issued and fully paid. The capital, which originally was £175,000, was increased in 1894 to

treated was 1,874,000 tons, and on December 31 ore reserves were estimated at 10,970,000 tons, of an average value of 9.1 dwts. over a stopping width of 72 inches. Dividends for the twelve months to June 30 totalled 65 per cent, which constituted a record in the annals of the company.

**FAN RYN DELP, LIMITED.**—This company's working profit during the year amounted to £887,998, and the tonnage treated was 790,000 tons. The ore reserves stood at 3,055,000 tons of an average value of 7.5 dwts. over a stopping width of 76 inches. Dividends for the year amounted to 60 per cent.

**LANGLAAGTE ESTATE AND GOLD MINING COMPANY LIMITED.**—During the year a total of 1,147,900 tons was treated by this company at a working profit of £310,378. The ore reserves were estimated at 1,693,700 tons of an average value of 6.4 dwts. over a stopping width of 53 inches. The dividends for the year amounted to 7½ per cent.

**NEW STATE AREAS, LIMITED**—This company has now entered the list of dividend payers, an initial distribution of 7½ per cent having been made, and a long and successful life seems assured. The ore reserves were estimated at 2,582,400 tons of an average value of 8.8 dwts. over a stoping width of 60 inches.

**RANDFONTEIN ESTATES GOLD MINING COMPANY, WITWATERSRAND, LIMITED**—A record tonnage of 2,432,000 tons was treated, resulting in a working profit of £701,077. The ore reserves at the end of 1924 were estimated at 5,085,700 tons, of an average value of 6.14 dwts. over a stoping width of 44 inches. A dividend of 5 per cent was declared in December and in June.

**GLNLRIL**—The value of the gold produced by the company's mines for the twelve months ended June 30, 1925, was approximately £11,320,000. The coal concerns in which the company is interested show improving results, and its holdings in the leading diamond mines remain unchanged. A powerful syndicate has concluded an

now stands at £550,000. A dividend of 15 per cent, free of income tax, was paid for the year.

**Staff.**—The numbers of Europeans and natives employed by the Barnato Group of companies during July, 1925, were as follow:

	EUROPEANS	NATIVES
Govt. Gold Mining Areas (M)

#### NEW CONSOLIDATED GOLD FIELDS, LTD.

**Inception.**—This company originated in London in 1887 under the name of the Gold Fields of South Africa, Limited, with a capital of £250,000, its founders being the late Rt. Hon. C. J. Rhodes and the late Mr. C. D. Rudd.

**Capital.**—As the company's interests extended on the Witwatersrand and elsewhere, fresh capital was raised from time to time to deal with new openings for investment and for the absorption of other concerns carrying on business with similar objects. In 1892 the title of the company was altered to The Consolidated Gold Fields of South Africa, Ltd., the capital being increased to £1,250,000, while in 1894 an issue of £600,000 5½% debentures was made, all of which have since been paid off. In 1898, by which date the total capital of the company had increased to £3,250,000 the Gold Fields Deep was absorbed, this company having been formed in 1893 to take over deep level properties. Finally, in 1911, a new issue of £1,250,000 in 11.6% second preference shares was made, the bulk of which was invested in America, while a portion was utilised for expanding business.

agreement with the South African diamond mining companies under which the latter will sell their production to this combine for a number of years. The Johannesburg Consolidated Investment Company has secured participation in this contract, and is confident it will prove beneficial. The sales of building sites on the company's townships have been satisfactory, and the development of the lower Houghton estate has made good progress. Every encouragement is given in this direction, especially by the establishment of necessary services, such as light and water.

**Balance Sheet.**—The company's balance sheet for the financial year ended June 30, 1925, shows the following: After making provision for English and Colonial income-tax and depreciation, and placing £150,000 to reserve, the profit for the year amounted to £594,671 3s. 3d. This sum, together with £175,000 5s. 5d. carried forward from the previous year, brought the aggregate profit to £770,661 8s. 8d. The reserve fund

**Directorate.**—Mr. S. B. Joel, J.P. (permanent chairman). The Right Honourable Sir Arthur S. F. Griffith-Boscawen, P.C., Messrs. J. Emrys Evans, C.M.G., J. Friedlander, G. Imroth, J. B. Joel, J.P., Professor J. G. Lawn, C.B.E., Messrs. Isaac Lewis, John Munro, A. R. Stephenson, Walter S. Webber, and Sir Willem van Hulstyn.

**Managers.**—General manager in South Africa: Mr. J. H. Crosby, assistant general manager in South Africa: Mr. R. L. Innes. London manager: Mr. W. J. Benson, C.B.E.

**Secretaries.** In Johannesburg: Mr. M. N. Nicolson. In London: Mr. Thomas Honey.

**Consulting Engineers.** In South Africa: Mr. G. H. Beatty. In England: Professor J. G. Lawn, C.B.E.

in Rhodesia. The total issued capital of the company at March 1911 was, therefore, £1,500,000, made up as follows: £200,000 in 11 ordinary shares, £1,250,000 in 11.6% first cumulative preference shares, and £1,250,000 in 11.6% second cumulative preference shares. In August 1919 a new company was registered in London under the name of the "New Consolidated Gold Fields, Limited," and took over all the assets and liabilities of the old company excepting the profits up to the date of completion of purchase and the balance to credit of the profit and loss account. The new company has a similar capital to that of the old company, £4,500,000, the shares all being held by the latter. The total dividends declared on the ordinary and preference shares, including cash bonuses, up to 1925 amount to £11,770,000.

**Properties.**—In the Transvaal the crushing gold mining companies of the Group are Simmer and Jack Mines, Ltd., Robinson Deep, Ltd. and Sub Nigel, Ltd.

NEW CONSOLIDATED  
Simmer &

**SIMMER & JACK.** Of these, Simmer & Jack Mines, Ltd., was registered in March 1924, to take over the undertaking of the Simmer and Jack Proprietary Mines, Ltd. as a going concern with all its assets and liabilities, as at January 1, 1924, the latter having been originally formed in 1887 as the Simmer & Jack Gold Mining Co. Ltd., with a capital of £73,000. The capital of the present company is £625,000 in 5,000,000 shares of 2/6d each. The battery of the mine has been increased from 25 stamps in 1888 to its present capacity of 320 stamps and 7 tube mills. The tonnage crushed to December 31, 1924, amounted to 17,450,186, the production of gold to the same date being 5,225,619 fine ounces, while the total dividends, including bonuses, were equivalent to £6,438,000. The total profit during the twelve months ending June 30, 1925, was £153,465, average working costs being 15/9 3/4d per ton, a reduction of 6 3/2d per ton as compared with the previous year.

**ROBINSON DEEP LTD.** Robinson Deep Ltd. was incorporated on December 31, 1915, being a reconstruction of the Robinson Deep Gold Mining Co. Ltd., itself a reconstruction of the original company formed in 1894. The present capital consists of 500,000 "A" shares of 1/- each and 881,807 "B" shares of 1/- each. Milling was commenced on April 6, 1898, since when, up to December 31, 1924, 12,976,798 tons were crushed, producing a total of 4,752,655 fine ounces of gold. Total dividends up to June 30, 1925, amounted to £5,247,912. Gross profit for the year ended June 30, 1925, was £526,244, compared with £514,608 for the previous year, working costs averaging 17/1 4d per ton, a reduction of 10.17d per ton on the previous twelve months.

**SUB NIGEL.** Sub Nigel Ltd. has a total issued capital of £605,000 in shares of 1/- each, and is a reconstruction of the company registered in August 1895. The property at the present time comprises 2,622 mining claims, as well as farm and water rights. The plant consists of 30 stamps and two tube mills, the tonnage crushed up to December 31, 1924, being 1,605,554 producing 878,203 ounces of fine gold. The total dividends distributed up to June 30, 1925, amounted to £722,032.

**Other Interests.**—In addition to these mines, the company administers the affairs of the African Land and Investment Co. Ltd., Albany Brick Tile & Potteries Ltd., Consolidated East Coast Engineers Ltd., East Rietfontein Syndicate, Ltd., Elandsfontein Estate Co. Ltd., Germiston Laboratory & Industrial Company, La Rochelle Syndicate Ltd., Lydenburg Platinum Areas Ltd., Middlevel Estate & Gold Mining Co. Ltd., Reuxville Diamonds Ltd., and S.O.S. Boots, Ltd. It has also large interests in other concerns in the Transvaal, as well as in Rhodesia, America and other parts of the world.

**Financial.**—The realised profit of the company on the operations for the year ended June 30, 1925, amounting to £316,845 7s 8d, was derived almost entirely from the dividends on the shares of the New Consolidated Gold Fields Ltd. Adding to this the balance brought forward from the previous year of £42,261 1s 7d, and deducting the dividends on the first and second preference shares for the year amounting to £117,187 10s, there remained a balance of £241,918 19s. 3d available for dividend, which was declared at 12 1/2 per cent. less income tax on the 200,000 ordinary shares, amounting to

£195,312 10s, leaving £46,606 9s 3d to be carried forward.

**Directorate.** Lord Harris (chairman), Messrs J. A. Agnew, E. Birkenruth, Lord Brabourne, Messrs S. Christopherson, D. Christopherson, C. B. E. (resident director in Johannesburg), Count L. A. G. Dru, Messrs D. O. Malcolm, H. C. Porter and J. C. Prinsep.

**Offices.** London Office: 8, Old Jewry, E.C. 2. Office in South Africa: 29, Simmonds Street, Johannesburg. Cables: "Giovano," Johannesburg.

#### UNION CORPORATION LIMITED.

**Inception.**—This company was formed to acquire the assets and liabilities of Ad Goertz & Co., which in itself was the outcome of a syndicate constituted in 1889 to develop, finance and operate gold mines. The consideration was £640,000 in fully paid ordinary shares. Registration of the corporation was effected in 1897.

**Capital.**—The authorised capital of the company is £875,000, in 1,400,000 shares of 12/6 each, all of which are issued and fully paid.

**Development.**—It was agreed in 1906 to extend the company's operations to countries other than South Africa.

**Properties.**—The principal interests are largely centred in the following companies: Modderfontein Deep Levels, Geduld Proprietary Mines, La Fe Mining Company Ltd., San Francisco Mines of Mexico Ltd., (Mexico), Compania Internacional Minera (S.A.), and Burma Corporation.

**Geduld Mines.**—At the annual general meeting of the Geduld Proprietary Mines, Ltd., on May 16, 1924, the chairman stated that the year 1923 had been the most grati-

**GOLD FIELDS LTD**  
Jack Mines. (See *Littlerpress*, page 119.)

lying in the history of the company. This was attributable directly to the successful operation of the increased reduction plant, which came into commission on April 24, and the more satisfactory labour conditions since the termination of the 1922 strike. The tonnage milled was 722,500, as against 460,700 in 1922, while during the first four months of 1924, 275,700 tons were milled, showing a further increase on the figures of 1923. Working expenses also indicated a steady decrease, the total profit for the four months of 1924 being at the rate of about £9,000 more per month than the average for 1923. At the end of 1923 the recalculated ore reserves amounted to a total of 5,750,000 tons of an average assay value of 7.1 dwts over an estimated stoping width of 63 inches. The year's operations showed a profit of £469,319, which was £108,376 more than that for the previous year, while sundry revenue derived from sales of water, interest, rentals, etc., amounted to £16,883, raising the gross profit to £486,201.

**Modder Deep Levels.**—During 1923 the reduction works of the Modder Deep Levels, Ltd., were run at full capacity, resulting in 525,000 tons being crushed, which was a record for the mine up to that date. Working costs averaged 17/5d per ton, a reduction of 1/7d compared with the previous year. This decrease was due largely to improved conditions of labour, as in the Geduld Proprietary Mines. The developed ore reserves, as measured and valued at December 31, 1923, amounted to 4,800,000 tons, of an average assay value of 9.3 dwts over an estimated stoping width of 79 inches. During the first four months of 1924, 174,900 tons were milled, the gross profit being £298,000, representing an increased rate of about £5,500

per month, compared with the average for the previous year, while working costs showed a further reduction.

**San Francisco Mines of Mexico.** The mill of these mines was increased in 1923 to meet current and future requirements, and is now capable of dealing with 180,000 tons of ore per annum, while other equipment has been or is to be overhauled and enlarged. Two adjoining properties have also been acquired of which one at least contains the extension of the San Francisco main vein, to which operations are at present directed. Shortage of labour, however, due to the rebellion in Mexico at that time had reduced the scale of working.

**Financial.** The accounts for the year ended December 31, 1924, showed a net realized profit for the 12 months, after deducting all outgoings, of £348,802, making with £81,295 brought forward, a total of £430,097, the reserve account, by the addition of £30,000 and the transference of the £10,000 hitherto standing to the credit of the exploration reserve account, was raised to £462,376, dividends absorbed £315,000, leaving £147,376 to be carried forward.

**Administration.**—Directors: Sir Henry Strakosch, K.B.E., chairman and managing director (alternate, Mr P. M. Anderson), The Rt. Hon. Earl Buxton, G.C.M.G., The Rt. Hon. Sir Robert Horne, G.B.E., P.C., K.C., M.P., Mr Joseph Kitchin (alternate, Mr Paul Strakosch), and Mr Joseph Temperley, (alternate, Mr H. R. Hill). Manager in Johannesburg, Mr P. M. Anderson.

**Offices.**—94, Main Street, Johannesburg Cables "Unicorpora," Johannesburg (See also illustration, page 122.)

#### THE ANGLO-FRENCH EXPLORATION CO. LTD.

**Inception.** This company was registered in England in 1889.

**Capital.**—Authorised, £500,000, in ordinary shares of £1 each, all issued and fully paid. Debentures £165,000, carrying interest at 4½ per cent per annum.

**Holdings.**—Following are the companies in which the Anglo-French Exploration Co. Ltd. has its principal holdings: Brakpan Mines Ltd., Daggafontein G.M. Co. Ltd., Kleinfontein Estates & Township Ltd., Modderfontein B.G.M. Ltd., Modderfontein East Ltd., Springs Mines Ltd., West Springs Ltd., City Deep Ltd., Crown Mines Ltd., Meyer & Charlton Ltd., Village Deep Ltd., The Anglo-French Matabeleland Co. Ltd., Hollinger Consolidated G.M. Ltd. (Canada), Magadi Soda Co. Ltd. (East Africa), East Pool & Agar Ltd. (Cornwall), Apex Trinidad Oilfields Ltd. (Trinidad).

**Agencies.** The company also acts as London agents for Anglo-French Land, Apex, New Boksburg Gold Mines, Afrikander Proprietary, Kleinfontein Estates & Township, New Kleinfontein & Rooiberg Minerals Development.

**Financial.**—For the year ending December 31, 1924, a net realised profit of £40,226 was shown, making, with £16,410 brought forward, a total of £56,636. A dividend of 6 per cent was paid.

**Directorate.** Messrs. F. A. Robinson (chairman), W. Frécheville, L. C. Mocetta, Louis Ochs, F. W. F. Shipton, W. T. Anderson, C.B.E., G. R. Airth (managing director in London), Sir William Dalrymple, K.B.E. (managing director in South Africa).

#### THE TRANSVAAL COAL OWNERS' ASSOCIATION (1923) LTD.

**Inception.**—This Association, the largest coal contractor in South Africa, was incorporated in the Transvaal

**Activities.** The principal colliery companies operating in the Transvaal and the Orange Free State are members of or in agreement with, the Association, and it has at command the resources of ten collieries in the Witbank district producing a uniformly high grade of coal (Government grade "A"), thus placing it in a favourable position to deal with and fulfil large orders for export cargoes and for bunkering requirements at the shortest notice. Stocks of this coal are always on hand at Lourenço Marques, Capetown and Walvis Bay. The Association's coals are regularly supplied to the British Admiralty, the Portuguese Government steamers and the shipping companies, to practically all gold,

diamond, and base metal mining companies of note, and also to power companies, municipalities, and industrial concerns throughout South Africa

**Consumers.**—The capacity of the collieries amounts to 750,000 tons of coal per month, with one-shift working, and the following are among the largest consumers of the output. The South African Railways and Harbours (about 1,000,000 tons annually), the Portuguese Railway and the Victoria Falls and Transvaal Power Company Limited, which regularly uses in its power stations on the Reef over 30,000 tons per month. The company has also entered into a long-period contract for the supply of coal requirements of the new power station in course of erection at Witbank

Best Witbank district coal is also supplied under contract to the undermentioned shipping companies. The Union Castle, Shaw Savill and Albion, Osaka Shosen Kaisha, Nourse, Nippon Yusen Kaisha, New Zealand Shipping, Messageries Maritimes, Italian Navigation, Houston Harrison, Hain, Federal, Ellerman and Bucknall, Elder Dempster, Cia Nacional, and British India Steam Navigation Companies, and to the White Star, Aberdeen, Clan, Ellerman Hall and City, Ellerman's Wilson, Indian-African Natal District, Norwegian-African, Prince, Rio-Cape, Scandinavian East Africa and Swedish South Africa Lines

**Quality.** The coal produced by the Association, especially in the Witbank district, is of a uniform standard of good quality, has high steaming efficiency, low sulphur content, and is sufficiently hard to withstand the effects of transportation and handling at the ports. There has never been a case of spontaneous combustion in a cargo

of this coal, due to the fact that the chemical composition is such that danger under this head is entirely negligible. The company readily sends particulars of analysis, etc., to municipal engineers on receipt of request

**General.** The Association retains the services of a fully qualified analytical chemist at Lourenço Marques, and all coal arriving at that port is carefully sampled in accordance with the procedure adopted by the British Engineering Standards Committee (South Africa Section), and tested for its calorific value. The company is equipped with the latest and most up-to-date plant for the handling of coal. Labour conditions in the coal mining districts of South Africa are more stable than in most other parts of the world, consequently the risk of the detention of vessels in port is greatly minimised. Prompt loading and despatch at Delagoa Bay and Capetown can be relied upon, and at Delagoa Bay the coaling appliances are capable of handling 700 tons per hour

**Selling Agents.** For export and bunkers, Mann George & Company (Delagoa) Limited, Lourenço Marques. Mann George and Company (South Africa) Limited, Capetown, and Mann George and Company Limited, Cory Buildings, Fenchurch Street, London, E C 3

**Head Office.** General Mining Buildings, Johannesburg, Transvaal

**Management.** Chairman and managing director Mr John Roy Secretary Mr J P Cowan

#### THE NATAL NAVIGATION COLLIERIES AND ESTATE CO. LTD.

**Inception.**— This company which was registered in 1902, is a reconstruction of the Natal Navigation Collieries, which was incorporated in 1897.

**Group.**— The group consists of the following: The Natal Navigation Collieries and Estate Company Limited (originally formed in 1897), the Vryheid (Natal) Railway Coal and Iron Company Limited (formed in 1909) and the Northern Natal Navigation Collieries Limited, (formed in 1917). These produce about one-third of the Natal coal output and of its shipment coal, and are the largest exporters of coal from South Africa. The group is the biggest supplier of coal in Natal for the use of the

Natal Government Railways, and most of the municipal power contracts are held by it.

**Capital.** The capital of the company is £725,000 in £1 shares, of which 668,307 are issued and fully paid. Originally the capital was £425,000, it being increased to £525,000 in June 1921, while in September 1922 it was further raised to the present amount to enable the company to obtain a controlling interest in the Vryheid (Natal) Railway Coal and Iron Company Limited.

**Financial.** The accounts for the year ended June 30, 1924, showed a profit of £112,632, to which was added the balance brought forward, making a total of £146,866. Of this amount, dividends absorbed £100,225, de-

preciation £25,804 and tax £2,941, leaving £17,896 to be carried forward. The cash assets in excess of liabilities were £96,654, while investments and Government bonds stood at £346,982. The companies of the group are regular dividend payers, and the financial position is exceptionally strong.

**Output.**— The progress of the company is well illustrated by the following figures, which show the yearly increase in the output of the group's collieries: Output in 1919, 780,629 tons; in 1920, 850,446 tons; in 1921, 960,964 tons; in 1922, 1,045,366 tons; in 1923, 1,116,549 tons; and in 1924, 1,271,436 tons.

To the end of 1924 the group had exported 16,000,000 tons, and the present rate of

**EXPLORATION CO LTD., Johannesburg.**  
**Mine, Benoni.**  
*(press, page 1-1)*

output is about 120,000 tons a month, of which seventy to eighty thousand tons are shipped for bunkering steamers and for supplying cargoes for overseas destinations.

**Policy.**—The company is continually prospecting for coal, and its policy has always been to abandon rights as soon as drilling has failed to disclose the existence of a good mineral, and take up rights in other directions. Its collieries are equipped with all modern appliances for placing the coal on the market under the most favourable conditions, especially in regard to screening, picking and washing plants.

**Quality.** The main features of the coal are the low ash percentage, the low sulphur content, and, owing to its chemical constituents, freedom from any chance of spontaneous

combustion. The ash is of a non-clinkering character. These qualities are well-known to users of the coal throughout South Africa, and account in great degree for its increasing popularity and success.

**Management.** Messrs Dundas Simpson (chairman), Leonard Tine, J.P., Sir W. D. Mitchell Cotts, Bt. (alternate, Mr J. Dick, J.P.), W. Yuill (alternate, Frank C. Horner) and J. Townley Williams (acting chairman and managing director). London Committee, Captain B. Mansford, C.B. (chairman), Major G. H. Peake, Messrs J. C. Owen, A. Scott and F. J. Dundas. Secretary, Mr J. T. Jones. London Secretary, Mr A. Hamilton. Mine manager, Mr Robert Campbell.

**London Agents**—Mitchell Cotts and Co., 3, St. Helen's Place, E.C.

**South African Agencies.** For Capetown, Port Elizabeth and East London, Mitchell Cotts and Company (S.A.) Limited. For Durban, William Cotts and Company Limited.

**Offices.** Head Office, 28, Natal Bank Chambers, (P.O. Box 993) Durban. London Office, 3, St. Helen's Place, E.C. 3.

#### **TRANSVAAL AND DELAGOA BAY INVESTMENT COMPANY LTD.**

**Inception.**—This company, incorporated in the Transvaal, was registered in 1895.

**Capital.** The capital of the company is £300,000 in £1 shares, of which 270,500 are issued and 22,500 held in reserve.

**TRANSVAAL AND DELAGOA BAY INVESTMENT COMPANY LTD., Johannesburg.**  
**The Douglas Colliery; Sorting and Screening Plant.**

TRANSVAAL AND DELAGOA BAY INVESTMENT COMPANY LTD., Johannesburg.  
1 and 3. No. 2 Shaft: Conveyor Belt, Sorting and Screening Plant, etc.  
2. No. 1 Shaft and Plant.

(See letterpress, page 125.)

**Properties.**—The company owns the collieries known as the Transvaal and Delagoa Bay Collieries, situated on the farm Driefontein No 309, District Middelburg, Transvaal, in extent 7,230 acres freehold, and the Douglas Colliery, situated on the farm Leeupoort No 206, District Middelburg, Transvaal, 4,147 acres freehold. Valuable freehold properties are also held in Delagoa Bay.

In addition to house property in Johannesburg and mining claims, the company's holdings in Transvaal farms embrace freehold, full interest 113,651 acres, freehold, undivided half interest 96,012 acres, mineral rights only, full interest, 30,975 acres, and mineral rights only, undivided half interest, 21,873 acres. Included in the holdings are a large number of valuable coal bearing farms.

**Platinum.**—On the farm "Der Brochen," Lydenburg District, held jointly with the Transvaal Consolidated Land & Exploration Co. Ltd., in extent 7,145 acres, the norite reef carrying platinum has been traced throughout the length of the property and the prospects are very encouraging.

**Coal Output.** The output of the collieries for the years named has been as follows:  
1921-22 660,200 tons 1922-23 688,402 tons 1923-24 820,300 tons 1924-25 833,407 tons. The excellent quality and thickness of the seams in both the old and new portions of the property have been maintained. The Transvaal Coalowners' Association Ltd. handles the company's coal, enabling it to export the same to all seaports in Africa and to the Far East.

**Financial.** For the year ended August 31, 1925, the accounts showed a nett profit of £78,076, after providing for depreciation and Union taxes. A dividend of 22½% was paid for the year and a balance of £74,280 carried forward. The reserve fund remained at £140,000, whilst cash and equivalent assets amounted to £228,152. The company held £110,000, Union Loan Stock, £72,000 Union Treasury Bills and £20,188 cash.

**Dividends.** Dividends have been well maintained by the company, 432½ per cent. having been paid since 1902, ranging from 10% to 25% per annum. In 1920 there was also a bonus distribution of one new share for every two old shares held.

**Directorate.** Messrs W. Dereham, chairman and life director (alternate, J. M. Buckland), J. Berlein, life director (alternate, W. M. Berlein), S. C. Blick, acting chairman and managing director, and Comte F. de Fernieres.

**London Committee.** W. Dereham, C. M. S. Shore and F. Smith.

**Offices.** Transvaal Gold Fields Building, 6, Fraser Street, Johannesburg. Secretary and business manager, Mr. B. Moses.

**Acting London Secretary and Offices.**—Mr. A. R. Atkinson, 533 & 536 Salisbury House, London Wall, E.C. 2.

Henderson, M.L.A. and David Citroen (London) Manager and secretary at Durban, Mr Edmund H. Tonison Mine manager at Wessels Nek, Frank S. Hatton. The colliery was founded 30 years ago, the present title being adopted in 1916. Colliery output is 100,000 tons per annum. Dividends paid have averaged 9 per cent since 1911. Bankers: The National Bank of South Africa, Limited. Telegraphic Address: "Steam."

#### **SOUTH AFRICAN TOWNSHIPS, MINING AND FINANCE CORPORATION, LTD.**

**Inception.**—This corporation was registered in the Transvaal in 1896.

**Interests.**—The company's very extensive interests embrace large areas of land, a number of townships and farms, houses and buildings, also mining and other ventures in the Union of South Africa and in Rhodesia.

**Freehold Farms.** The corporation holds nearly a million acres in the Transvaal, and over half a million in Rhodesia. In addition to these freehold areas, which include the mineral rights, the company owns the mineral rights only over about 800,000 acres, mostly in the Transvaal. The corporation has with others, purchased the total land holdings of the Oceana Consolidated Company Limited, comprising about 205,000 acres in freehold, and about a million acres of mineral rights only; it has also farms available for settlement suitable for ranching, cotton, tobacco, and general farming in all parts of the Union. These are sold on easy terms over a long period of years.

**Townships.** The corporation owns the following townships about Johannesburg and Pretoria, i.e. Jeppestown, Belgravia, Jeppestown South, Malvern, Fordsburg, Bellevue, half interest in Bellevue East, North Doornfontein, Auckland Park, Rossmore, Kew and Ferndale in Johannesburg and Waterkloof at Pretoria, also numerouserven in Muckleneuk, Brooklyn, Sunnyside, Arcadia, and in Pretoria itself. These townships and town properties stand in the books at £285,753.

**Mining Properties.** The company is largely interested in many coal, gold, tin, diamond and platinum companies, among which are the following together with brief reference to actual operations, etc.—

**Hendie's Lydenburg Platinum, Limited.**—Prospecting and development are being actively carried on here. Six inclines have been sunk, and all show good values.

**Kerstegeluk Platinum Mines Limited.**—Values up to 7 dwts. are shown in the latest developments, the length of the outcrop already exposed being over 3,000 feet.

**Polgietersrust Platinum Limited.** Active development is proceeding, the reef being wide and giving good values.

**South African Coal Estates (Witbank) Limited.**—This company owns three large and well-equipped pits in the Witbank area, two of which are being worked, and are producing 105,000 tons monthly.

**Leeuwpoot (African Farms) Tin Mines Limited.**—This property is 3,962 morgen 255 sq. roods in extent, the company also owns the mineral rights of the whole of the adjoining farm, forming a compact block of highly mineralised ground covering 9,010 morgen.

**West End Diamonds Limited.**—This company owns an up-to-date plant capable of dealing with 2,000 loads a day. Large stones are found, and a satisfactory monthly profit is made.

**Laure Proprietary Mines Limited.**—This company owns over 5,000 morgen in the Heidelberg and Pretoria districts, and the

(See letterpress, page 127)

mineral rights of Spaarwater, covering 5,718 morgen. It also possesses cash assets of about £150,000.

**Welgeducht Exploration Company Limited**—Owns 1,240 claims, portions of which have been leased by the Government to Modderfontein East, Ltd. The remainder of the farm is utilised for agricultural and tree planting purposes. The company's cash assets amount to about £78,000.

**McGreedy's Tins (Swaziland) Limited**—Owns land and mineral concessions covering 100,626 acres, which are being worked for alluvial tin. Profit for the year ending June 30, 1924 was £3,574. There has been a temporary stoppage but the plant is in good condition, and normal returns are anticipated at an early date.

**South African Alkali Limited**—This company owns a long lease of the Soda pan on the Government farm Zoutpan, where it produces carbonate of soda of the finest commercial quality. It is also intended to instal plant for the production of salt. The company is in a position to produce sufficient carbonate of soda to supply the requirements of the whole Union.

**Diepkloof Mynpacht Claim and Estate Company Limited**—Owns a quarter of the farm of Diepkloof, and a quarter of the mynpacht on the same farm. At present only agricultural and tree planting operations are being carried on.

**Finance.** The capital of the corporation is £988 053, divided into shares of ten shillings each. The accounts at December 31, 1924, showed total assets value £1,765,113, but this valuation is considerably below the present day market prices.

**Directors.** Sir Julius Jeppe, (C.B.E., chairman (alternate, A. A. Barker), Sir Abe Bailey, Bt. K.C.M.G., M.L.A. (alternate, W. Nelson), Sir William Van Hulsteyn

(alternate, R. F. Ford), J. Emrys Evans, C.M.G. (alternate, J. Emrys Evans, jr.), L. M. Hind, B. Southwell (alternate, G. B. Pascoe), and W. J. Gau (alternate, H. L. L. Feltham). Secretary: W. E. Drummond.

**London Committee.**—Lord Lurgan, Lord Rossmore, and Messrs. L. E. B. Homan and G. Seymour Fort.

**London Offices.** Robert R. Meldrum (transfer secretary), Palmerston House, Old Broad Street, London, E.C.2.

**Bankers.** The Standard Bank of South Africa, Limited.

## MINING MACHINERY

During 1924 the South African mining industry purchased £16,097,000 worth of stores and machinery. Of this total £6,128,000 or 40 per cent. represented the value of goods obtained abroad. That this percentage will in a short time be decreased seems likely, in view of the enormous strides that have recently been made in the production of South African steel. As a consequence of the largely increased equipment at the two great steel plants of the Union and at the various engineering works on the Rand, the mines are now able not only to place a far larger proportion of their machinery requirements locally, but also to get very much bigger jobs carried through than would have been entered upon a few years ago. During 1924 and 1925 there were several instances on record of the manufacture and replacement of intricate machinery by Union firms which a few years previously would have meant going overseas and consequent delays of six months or more. In many smaller lines, too, in which there is a good deal of repetition work, South African firms have, to a considerable extent, wrested the trade from overseas, and, at prices that compare favourably

with those of the imported article, machine moulding operations have been very largely increased.

**GENERAL MACHINERY.**—Of the stores purchased by the mining industry, machinery forms a very large item, imports of mining machinery in 1924 being valued at £974,512. What may be termed the ordinary mining machinery and implements vary little from year to year. It is in what is known as metallurgical machinery that the greatest improvements have been made of recent years. While the main principles remain substantially unchanged, alterations and improvements in detail are always being considered and tested, with a view especially to that reduction in working costs at which all mine managements aim. Some of the recent improvements in the methods and machinery of metallurgy are described below, mainly on the authority of the well known Rand metallurgist, Mr. H. A. White.

**GRIZZLIES AND TROMMELS.** These are part of the crusher house and sorting plant. Though trommels are able to give a more complete separation of coarse and fine ore, and enable washing to be more thoroughly performed by turning over the particles under the water jets, the costs of operation and maintenance are much greater than with the simple grizzly, and the capital cost is also much heavier, so that the older method still holds its position. A mechanically-driven instrument of this type but with square holes formed by rotatable wheel members, is now being tried and it offers the advantage of requiring less head room.

**JACKHAMMERS.** The recent economies in working in the gold mines of the Rand have been largely assisted by means of the jackhammer, which is coming into general use for breaking up fathomage. The year 1924, in particular, was remarkable for a continued increase in mechanical efficiency, leading to greatly improved working results.

STEWARTS AND LLOYDS (SOUTH AFRICA) LTD., Johannesburg.

2. Some of the Company's Stocks of Tubes at Johannesburg.
3. The Warehouse at Durban.

(See *Interpress*, page 131)

especially in connection with this type of machine. Wherever jackhammers have been introduced, whether on the flatter measures of the Far Eastern Rand or in the steeper inclines of the Central and Western Mines, a marked and immediate increase in efficiency per machine shift and a corresponding decrease in breaking costs have followed. In addition, there has been in all cases a material narrowing of stoping widths, resulting in either a better grade of ore being sent to the mill or in the crushing of ore which under other conditions would have been below the pay limit.

The report of Crown Mines for 1925 states that the company's total working costs per ton milled fell from 22s. 5d in 1922 to 18s. 9d in that year, while the City Deep Company also attributes to the use of the jackhammer its reduction in the cost per fathom mined from 40s. 3d in 1923 to 32s. 7d in 1925.

**ROCK-BREAKERS.**—Especially where ore tends to break into slabs and splinters, it is found that crushers of the revolving cone type are the most efficient for this work. Where it is desired to have the crusher-product as fine as practicable a system of choke-feeding is applied by providing bin capacity immediately in front of the crushers, which are then quite full when running. It is to be noted that the capacity of rock-breakers is seriously diminished, and cost increased, when fine-crushing is demanded from them.

**SCREENS.**—On the Rand it is now quite common to use screening, having apertures up to one inch square and it is found that tube mills of 5 ft. 6 in. diameter are just able to deal with this product when suitable rock for pebbles is supplied up to 6 in. in diameter. Ease of operation sets the usual aperture at  $\frac{1}{2}$  in. aperture, and the wear on pumps and launders is much reduced at that size. Where very coarse material has to be water borne the wear upon launders is very severe and liners of 1 in. white cast iron are usually employed, while successful experiments have been made with iron concrete created with battery "chips" and local cement. Rubber in various forms is also used with advantage.

**STAMPS.**—Stamps weighing more than 2,000 lbs. are in use in recent installations on the Rand, or in some cases Nissen stamps of even greater weight, and no difficulty is now experienced in their successful operation, though it is possible that this portion of the reduction works will not be required in future plant, its place being likely to be taken by an extension of tube mills or of the preliminary breaking-plant or both.

The biggest stamp battery on the Rand is that of the Randfontein Central Gold Mining Company. It contains 600 stamps, and is the largest mill under one roof in the world. The total length of the mill is 630 ft., or much the same as that of the Union Castle liners, "Windsor Castle" and "Arundel Castle."

**TUBE-MILLS.**—As far back as 1914, the stamp mill, so long the standard gold-milling appliance, had been relegated to the role of secondary crusher, merely preparing the ore for the tube-mill, in which the grinding is now carried to such a degree of fineness that all the ore is treatable as slime, and the separate treatment of sand is thus eliminated. This has brought about a considerable simplification of plant, which is a factor in materially reducing operating costs.

## REPRESENTATIVE HARDWARE AND OTHER ENTERPRISES

### STEWARTS & LLOYDS (SOUTH AFRICA), LTD.

**Inception.**—When this firm of irrigation engineers, whose activities now extend throughout the Union, established its first warehouses in South Africa in the early 'nineties it derived initial advantage from the prestige attaching to the parent concern, Messrs. Stewarts & Lloyds, Ltd., of Glasgow, Birmingham, London and elsewhere.

**Parent Company.**—The manufactures of the parent company are regarded with world-wide esteem. This great enterprise, with collieries, blast furnaces, steel foundries, steel works, tool works and pipe tube works in various localities of Great Britain, has an annual capacity of 407,000 tons of tube (butt-welded, lap-welded, hydraulically welded and weldless hot rolled), 600,000 tons of steel and 540,000 tons of pig iron. These figures merely relate to the firm's principal products.

By the installation of a new "Universal" mill with a capacity of 5,000 tons of "Universal" steel plates per week, in widths up to 48 inches, the erection of new and improved tube mills, and the purchase of collieries, blast furnaces, etc., the company has placed itself in a very strong position, increased its productive capacity and obtained control of one of the most up-to-date tube making organisations in the industry.

**Development.**—The original reputation which Messrs. Stewarts & Lloyds (South Africa), Ltd., achieved for high grade British goods, for efficient service and for strict business integrity has been maintained and enhanced throughout the difficult times always encountered in the making of a new country. Continuing a progressive policy, the firm has kept pace with South Africa's development in general and irrigation requirements in particular. From solely representing the manufactures of its parent company, it has extended its operations to larger fields in which other products usually associated with tubes are employed.

**Contracts.** Advancing steadily with faith in the future of South Africa and in the supremacy of British goods, the firm has secured large and important contracts for mines, municipalities, water boards, railways and Government departments, recent examples being the Shongweni-Durban water scheme and the Bulawayo waterworks. Moreover, due to a long and intimate connection with the irrigation problems of South Africa, the company is frequently called upon to provide numerous power plants and pumping installations.

**Representations.**—The most prominent agencies secured by the company and held for a number of years to the entire satisfaction of all principals are: Glenfield & Kennedy Ltd (valves, meters, etc.), National Gas Engine Co. Ltd (gas, oil and petrol engines), Thomas & Son (Worcester) Ltd (Chmax oil bath windmills and pumps), John Blake Ltd (hydraulic rams), J. Hopkinson & Co. Ltd (steam valves and boiler mountings), Gilbert Gilkes & Co. Ltd (water wheels, turbines and centrifugal pumps), Murrells, Bickerton & Day Ltd (crude oil and Diesel engines), Bells Bros (Manchester), Ltd (mechanical filtration plants).

**Workshops.**—All the warehouses are equipped with up-to-date workshops capable of turning out high-class tubular construction and other similar work connected with irrigation plants.

2. Electrical Fittings and Wireless Department.
3. Two Units for Salisbury, Rhodesia, and one for Pietersburg, Transvaal, supplied and erected by Hubert Davies & Co. Ltd.

**Staff.**—The South African staff numbers over 150 white employees.

**Branches.**—The company owns warehouses holding extensive stocks at the following towns in South Africa: Johannesburg, Pretoria, Durban, Maritzburg, Capetown, Port Elizabeth, East London, Bloemfontein, Kimberley, Windhoek, Salisbury and Bulawayo.

**Offices and Stores.**—Corner Main and Moor Streets, Johannesburg. Cables "Tubes," Johannesburg.

**Birmingham Office.**—Broad Street Chambers.

**Glasgow Office.**—41, Oswald Street.  
(See also illustrations, pages 129, 130.)

#### REID BROTHERS (SOUTH AFRICA) LTD.

**Inception.**—This company, an offshoot of Reid Brothers (Glasgow) Ltd. (which was established by the late Joseph Reid in 1858), started operations in Johannesburg towards the end of 1887 as engineers and importers of mining materials and machinery.

**Development.** Johannesburg, at the time of the firm's inception, was practically a mining camp. The company's growth has kept pace with the development of the city, and it is now the oldest established concern of the kind on the Witwatersrand. Towards the end of last century the business was converted into a private limited company, trading under the name of Reid Brothers (Johannesburg) Ltd., but the title was subsequently altered to Reid Brothers (South Africa) Ltd., when a branch was opened at Durban.

**Activities.**—The main activities of the firm are connected with the mining and allied industries, and its ramifications extend over the whole Union, as well as to Rhodesia, Portuguese East Africa and the Congo. The Durban branch devotes its energies primarily to sugar mills, estates and collieries, etc., but has also worked up a large connection with other industries.

**New Departments.**—A mechanical engineering department has recently been inaugurated, and has developed most satisfactorily. Another department was also formed to develop the machine tools and woodworking machinery side of the business. This has proved a very successful departure, the firm being fortunate enough to secure the representation of several leading British houses.

**Premises.**—The head office is situated at the corner of Main and Harrison Streets, and the building in which it is located (the firm's property) is considered to be one of the most handsome edifices in South Africa. The company's stores, a three storeyed building, are situated in Commissioner Street.

**Branch.**—Durban—Southern Life Buildings, Smith Street.

**Agencies.**—Peter Brotherhood Ltd., Carton Co., Blantyre Engineering Co., Anderson Boyes & Co., Hardy Patent Pick Co., Newman Hender & Co., Small & Parkes Ltd., Sturtevant Engineering Co., Siebe Gorman & Co., Perry & Hope, Denham's Engineering Co., Swift & Sons, Omeroids Tool Co., Smith Barker & Willson, Smith & Mills, Cushman Chuck Co., Haighs (Oldham) Ltd., Quasi-Arc Co. Ltd., Acetylene Corp. of Great Britain Ltd., J. Beardshaw & Son Ltd., Graphite Products Ltd., R. & J. Dempster, Durvite Ltd., Ronald Trist & Co., Liverpool Borax Co. Ltd., Weldless Chains Ltd.

**Cables.**—Johannesburg—"Reef." Durban—"Supplies." Codes. Western Union, Bentley's, A.B.C. 6th Ed.

(See illustration, page 131.)

**HUBERT DAVIES & CO. LTD.**

**Inception.**—This enterprising firm of mechanical and electrical engineers, which was founded by the late Mr J. Hubert Davies in Johannesburg in the year 1880, was converted into a private limited liability company in 1917.

**Activities.** The company specialises in providing complete equipment for all kinds of power and lighting installations to municipalities, mines and factories, and does a large business as importers of machinery and general engineering supplies, as well as being contractors for tramway, pumping, hoisting and irrigation and hydro electric plants, air compressors, ventilating fans, cranes, lighting appliances, wire ropes, gas, oil and steam engines, turbines, etc.

**Municipalities.**—Plant and equipment have been supplied by the company to the following municipalities: Johannesburg, Durban, Pretoria, Ladysmith, Klerksdorp, Cradock, Potchefstroom, Kroonstad, Wellington, Heilbron, Worcester, Paarl, Benta, Salisbury, Heidelberg, Standerton, Senekal, Parys, Winburg, Pietersburg, Somerset West, Springs, Roodepoort, Vereeniging, Oudtshoorn, Umtali, Ermelo, Bethlehem, Middelburg (Transvaal), Somersetstrand, Vrede, Estcourt, Rietz, Frankfort, Malmesbury and Mozambique.

The company has received repeat orders from the municipality of Kroonstad for a complete new power station, and from the Salisbury municipality for two large 300 k w vertical gas engines, together with the necessary gas producing plant, and an extension to the lighting and power plant of the Potchefstroom municipality. These repeat orders indicate the confidence that is reposed in the firm.

**Recent Contracts.**—The company has recently erected about 275 miles of 88,000 volt 3 phase transmission lines for the electrification of a section of the Natal line of the South African Railways and Harbours. The cost of these lines was over half a million, and was the largest electrical contract ever handled by a purely South African firm. The rapidity with which the work was carried out probably constitutes a world's record. The accompanying illustration gives some idea of the hilly and broken nature of the country over which the lines run.

Complete water works and electric lighting and power plant have also been installed for the Ixkusburg municipality, and distribution systems for Riversdale, Mafeking and Humansdorp, while contracts are in hand for the electric lighting of Walmer, the transmission of electric power from Pretoria to Roberts Heights, and the extension of power station equipment for the municipality of Vrede.

**Turbine Plants.**—A steam turbine plant has been supplied to the East Rand Proprietary Mines of 16,000 h.p., a water turbine-driven plant of 1,700 h.p. to the Rezende Mines (Rhodesia), and a steam turbine plant of 2,200 h.p. to the Railways at Durban, also other large water power plants for Piggs Peak Dev Co., Worcester G. M. & Exploration Co., French Bobs Mine, and the Parys municipality, steam plant for the Messina Copper Mines, re-equipment of the power plant for the B.S.A. Explosives Co. at Modderfontein, Tweefontein Collieries, Ltd., etc., besides trams and tramways for Johannesburg, Durban, East London, and several mining companies.

**Pumping Plants.**—Among the many pumping plants that have been supplied are eight sets of turbo-pumps, 350 h.p., each

HUBERT DAVIES & CO. LTD., Johannesburg.

1. Six Ton Cableway and Concrete Chuting Plant with 240 ft. Tower on a South African Dam.
2. 88,000 Volt Outdoor Station Steelwork, supplied and erected by Hubert Davies & Co. Ltd. for the South African Railways Electrification; also showing one of the Towers, of which about 2,300 were supplied and erected.
3. Section of 88,000 Volt Transmission Lines near Pietermaritzburg.

STANDARD TELEPHONES & CABLES LTD. (formerly The Western Electric Co. Ltd.), Johannesburg.

2. Automatic Telephone Exchange for Offices, Works, etc.
3. Stamford Hill Automatic Telephone Exchange for Durban Corporation. Rear View Miscellaneous Bay Registers and Group Selectors.

delivering 60,000 gallons of water per hour against 1,150 ft. head, 32 sets reciprocating pumps each delivering 10,000 gallons per hour against 1,100 ft. head, 20 large bore hole pumps for the Rand Water Board, numerous plants for delivery from 500 to 30,000 gallons per hour, and many irrigation plants, etc., while the company has recently completed for the Rand Water Board a 1,750 b.h.p. steam turbine, driving through special gearing a turbine pump capable of delivering 5,500,000 gallons of water per day against a head of 1,100 ft.

**Construction Plant.**—Construction plant for building dams and irrigation works has been widely catered for by the company, and the largest concrete chuting plant installed in the country has been erected at Van Rynveld's Pass. The steel tower of this plant is 240 feet high, and designed to handle a ton of concrete per minute. The largest aerial cableway in the country was erected by the company at Lake Arthur Irrigation Works. This had a clear span of 1,000 feet, and handles sixteen loads. Cableways of the same load capacity but shorter span have also been erected at other irrigation works.

**Other Works.** The company has undertaken work in connection with sugar cotton and sisal machinery, and has installed plant for a fertilizer factory at the Cape, in fact, erection work of every description is undertaken, a world's record having been recently established by the erection of a 32-page Goss printing machine for the Rand Daily Mail and Sunday Times Syndicate of Johannesburg, the machine being completely set up in 12 days from the time the first case was opened, against a previous record of 21 days.

**Workshops and Stores.**—The company owns large stores and workshops, with storage accommodation covering 2½ acres, in the centre of Johannesburg. It has also new workshops and stores in Cato Street, Durban, and its own premises in Capetown. Large stocks of all mechanical and electrical goods are held in the various depots of the company.

**Directorate.**—E. W. D. Davies, B.Sc., AMICE, AM (S.A.), I.E.E., chairman, and managing director, F. Maigrie, AMIEE, J. H. Dryburgh, R.P.A. (Transvaal), S. F. Harvey, A (S.A.), I.E.E., R. Paget, AMIMECH, AMNCC, R. F. Botting, AMIEE, M (S.A.), I.E.E., Secretary C. Percy A.C.I.S.

#### STANDARD TELEPHONES & CABLES, LTD. (formerly The Western Electric Co. Ltd.)

**Inception.**—This very important enterprise, formerly known as the Western Electric Company Ltd., was incorporated in England, and, with its associated companies, is the premier telephone manufacturing organisation throughout the world.

**Activities.**—The company has devoted great attention to the development of automatic telephone equipment, such as central and private manual and automatic exchanges, railway traffic control systems, telephone and power cables, telephone repeaters, broadcasting stations, point to

point wireless transmitting equipments, wireless receiving sets, and parts, public address systems and electrical domestic appliances. In the field of world communication, both in development and improvement, the company's achievements are unique, while its representatives are to be found in every part of the world.

**Systems.**—Among the various systems the company manufactures are the following:

**Rotary Automatic Telephone Exchange.**—This is power driven, a small electric motor being sufficient to keep a large exchange in operation and permitting switches of more robust construction to be used. This type of apparatus is installed at Toll Gate, Stamford Hill, and Overport, Durban, also at Christania, Copenhagen, The Hague, Brussels, and Zurich.

**The Strowger Automatic Telephone Exchange.**—This system has been successfully installed in many parts of the world, a notable example being the Buenos Aires equipment, erected early in 1923, where four automatic exchanges, serving 7,500 lines, are now successfully operating over a large area. The ultimate size of the network will be 30 exchanges, controlling 30,000 lines.

**Private Automatic Telephone Exchanges.**—Large business houses and institutions have been quick to realise that prompt service and absolute security may be secured by the introduction of a private automatic exchange, and the company supplies equipments from 20 lines upward.

**Traffic Control System.**—This system is used in the control of traffic, particularly on railways, where apart from the regular signalling arrangements there is much to be done in the marshalling of goods and in the collection of reports from clearing yards. It is now in use on the majority of large railways throughout the world.

**The Multiplex Printing Telegraph System.**—Modern telegraphy like most other scientific branches of industry, has been revolutionised by new methods, and the company's system is well in advance of the times. It is in use on most of the telegraph lines in South Africa and elsewhere.

**Simultaneous Telephony and Telegraphy.**—This is one of the most interesting developments which has been effected in the art of communication. The company's "Composite" system is being used by the South African Government and other Administrations.

**Telephone Cable Developments.**—In the development of the underground telephone cable the company claims to have made gigantic strides toward perfection, chiefly due to the invention and introduction of a new type of dielectric.

**Power Cable Developments.**—In the development of these cables the company has played an important part.

**The Thermionic Valve.**—This vacuum tube, known more familiarly as the "valve," one of the most remarkable scientific discoveries of modern electrical research, has revolutionised the field of wired and wireless telephony and telegraphy. The valve manufactured by the company is distinguished by its uniformity of performance, obtained by robust construction, and it is actually possible to change one of the tubes for another without making any alterations in the voltage supplied to the tube terminal. There is no difference between the operating characteristics of any two tubes, the "Wecovalve" operates on a filament current of one dry cell, or a little over 1 volt.

STANDARD TELEPHONES & CABLES LTD.  
(formerly The Western Electric Co. Ltd.), Johannesburg.  
1. Magneto Table Telephone.  
2. Magneto Wall Telephone.  
3. Automatic Table Telephone.  
4. Automatic Wall Telephone.

**Repeaters and Repeater Stations.**—The repeaters as designed and manufactured by this company, which are based on the principle of the thermionic valve, are nearly perfect in operation, but so unobtrusive in use that their existence is not much known to the general public, although they have been the means of making telephone speech possible between Johannesburg and Capetown, a distance of 1,000 miles.

**Wireless Transmitting Equipments.**—The company manufactures transmitting sets of all sorts, and has supplied the equipment of 102 broadcasting stations in other parts of the world.

**The Public Address System.**—This is a device which effectively overcomes the natural limitations of the power of the human voice, and enables a speaker to address an audience of several thousand people. It is worthy of note that the company's system was used by H.R.H. The Prince of Wales throughout his tour of South Africa.

**Address.**—Cam Buildings, Simmonds Street South, Johannesburg.

**Resident Director.**—Lieut. Colonel N. Harrison, C.M.G., D.S.O., M.I.E.E. (late Under Secretary and Engineer-in-Chief Dept. of Posts and Telegraphs, South Africa). Manager, J.D. Carpenter, M.I.E.E. (S.A.).

**Registered Office.**—Connaught House, Alwaych, London, W.C.2.

**Cables.**—"Microphone" Codes: Lieber's and 10 Letter, Bentley's 5 Letter.

#### DOWSON AND DOBSON, LIMITED.

**Inception.**—This firm was established about 18 years ago under the name of R.M. Dowson, Limited, but it has been operating under its present title since 1919.

**Capital.**—The capital of the company is £25,000, all the shares being held by the two directors.

**Activities.**—As engineering agents, merchants and contractors, the company represents many leading British firms in South Africa, among the number being that of Vickers Limited and its associated companies, Stothert and Pitt, Limited, of Bath, The Glasgow Steel Roofing Company, North Western Works (Ponsonby) and R. Hood Haggie and Son, Limited, of Newcastle-on-Tyne.

**Contracts.**—The many contracts carried out, or in hand, include the complete boiler equipment (with Illinois mechanical stokers from Vickers-Spearing Boiler Company, Limited), new main haulage plant, and power units, also machine shops and machine tools equipment for the Koffyfontein Diamond Mines, 50 ton Titan and Gohath cranes for Capetown, Durban, Port Elizabeth, East London, and other centres, and a number of smaller cranes for shipping at these ports.

Messrs. Dowson and Dobson Limited are also erecting the largest underground electric 3-phase winder in the world, the mechanical portions of which are being supplied by Vickers at Barrow, another very large winder for the Crown mines is also on order. In addition, the firm equipped the whole of the buildings of the Bwana M'Kubwa Copper Company in Rhodesia, amounting to some 3,000 tons, a complete range of buildings for the Sena Sugar Estates in Portuguese East Africa, a range of buildings comprising compressor house, condenser

house, boiler house, induced draught house, and the coal handling plant for the central compressor station, East Rand Proprietary Mines Group

**Cold Storage.**—Dowson and Dobson Limited also specialise in cold storage equipment, having supplied a large part of the Johannesburg Abattoir installation, likewise the whole of the installation for the cold storage in Capetown Docks for the fruit export trade, and they have furnished many ice-making and refrigerating plants throughout the Union

**Storage.**—The company owns extensive storage accommodation at Johannesburg, Capetown and Durban, and manages the South African Oxygen Works in Johannesburg for the Hydrogen, Oxygen and Plant Company, Limited, of England. Attached to these are the Park Road Engineering Works, where general engineering and welding are carried on

**Directors.**—Messrs Robert Manning Dowson, A.M.I.M.E., and Joseph Henry Dobson, D.S.O., M.Sc. (Vict.), M.Eng., Liverpool, M.I.C.E., M.I.M.E.

#### HYDROGEN, OXYGEN & PLANT CO. LTD.

**Inception.**—This is an English company, with works at Newcastle-on-Tyne and Cardiff. A branch was established at Newtown, Johannesburg, in 1920 under the management of Messrs Dowson & Dobson Ltd., who continue to control the company's operations in South Africa

**Activities.**—The company manufactures oxygen for industrial and medical purposes by the Claude system from the atmosphere. Branch factories have been established at Durban and Capetown, and depôts throughout the Union, Rhodesia and Portuguese East Africa. Up-to-date engineering workshops, known as the Park Road Engineering Works, have been created close to the oxygen works at Newtown, and these works specialise in electrical welding, having carried out several important contracts

**Contracts.**—The firm recently secured the contracts for the 42" pipe line for the Government's Sabie Gorge Hydro-Electric Scheme, the manufacture of gas generators for the South African Railways, furnace water jackets for the Transvaal Silver & Base Metal Co., and special vacuum tanks for Messrs Fraser & Chalmers, agents for the Merrill Shmes Precipitation Process.

**Control.**—The whole business is under the direct control of Mr. C. N. Dutton, M.(S.A.)I.E.E., A.M.(S.A.)I.E.E., of Messrs. Dowson & Dobson's staff.

**Works.**—99, Park Road, Newtown, Johannesburg.

**Cables.**—"Hopco," Johannesburg.

**BRITISH AGENCIES LTD.**

**Inception.**—This company of mechanical and electrical engineers and merchants was founded by Mr A J Paddon in the year 1914.

**Activities.**—The firm caters chiefly for the mines, municipalities and power stations, and always has on hand large stocks of machine tools, woodworking machinery, water meters, motors, insulated wires, electrical meters and general accessories. It has representatives in all the principal centres of the Union of South Africa, as well as in the South West Protectorate and Rhodesia.

**Agencies.** British Agencies Ltd holds the sole agencies for the following overseas manufacturers: Evershed & Vignoles Ltd, electrical instruments, Landis & Gyr Ltd, electricity meters, time switches, etc.; Greenwich Cable Works, waterproof wires; Pulsometer Eng Co Ltd, filtration plants; R S Clare & Co, Talco; Sherwin Williams Co, insulating varnishes; Tinsley & Co, scientific instruments; Buffalo Meter Co, water meters and Gisholt Machine Co, turret lathes, etc.

**Address.**—70, Main Street, Johannesburg.

**Cables.** "Arms" Codes ABC 5th Edition and Western Union Universal Ed.

**J. & R. NIVEN LTD.**

**Inception.**—This firm of engineers, iron and steel merchants and contractors was established by Mr Robert Niven in 1895.

**Activities.** The most active interests of the company are concerned with colliery equipment. In the earlier days of coal mining in South Africa the methods employed in cleaning and handling the coal were very primitive, but as the industry was extended more modern appliances were introduced, until at the present day the plants at the larger collieries are equal to the best in use in any part of the world.

Messrs J & R Niven Ltd specialise in this direction, and have perfected methods for both screening and cleaning, also in the washing of small coal. South African coal is, for the most part, of a very friable nature, and must therefore be handled in bulk, with great care. The company introduced certain mining methods adopted in other countries,

but modified them to meet the special needs of South Africa. That the firm's endeavours have met with every success is shown by the fact that a large number of the collieries in the country are equipped with its plants.

**Personal.** The founder of the firm, Mr Robert Niven, is still its active head. He is one of the electricity commissioners of the Union, has on different occasions been chairman of the Johannesburg Chamber

#### THE SKEFKO (SOUTH AFRICA) BALL BEARING CO. LTD.

**Inception.**—This is an affiliated company of the Aktiebolaget Svenska Kullagerfabriken S K F, Gothenburg, which was founded in 1907.

**Activities.**—The principal products manufactured by the S K F are self-aligning double-row ball and roller bearings, single-row roller bearings, tapered roller bearings, single-row ball bearings without filling slots, thrust bearings, pulleys and other transmitting appliances, and ball bearing hubs and axles for horse drawn vehicles. These S K F products cover the complete field of bearing requirements, and are used by the railways, the municipalities, the mines, factories, engineering works, garages and agriculturalists throughout South Africa.

**Staff.**—In addition to the supply of these products, the company maintains an efficient staff of technical engineers and draughtsmen to give advice as to the correct application and mounting of bearings. In this connection the engineers have the world-wide experience of the S K F organisation to draw upon.

**Steel Works.**—The company has its own steel works at Hofors Bruk, Sweden, where

the special chrome steel used in the S.K.F. bearings is manufactured, and as the iron used in the production of this steel comes from the mines near by, also owned by the firm, it is able to supervise the manufacture of its wares from the mining of ore to the labelling of the finished article. These steel works also produce hollow drill steel, and the S.K.F. Hofors drill steel is now in great demand on the mines of the Witwatersrand.

**Factories and Offices.**—The main ball bearing factory is in Gothenburg, Sweden, and that for the manufacture of housings and pulleys in Katrineholm, Sweden. The English company, The Skefko Ball Bearing Co. Ltd., has its factory at Luton, Bedfordshire, and there is one factory in France, also three in the U.S.A., one in Germany, one in Russia, and iron mines and steel works in Hofors, Sweden. In addition to these, the company has 123 offices in different parts of the world.

**Agents.** The sole agents for the S.K.F. Hofors steel in South Africa are Messrs. Reunert & Lenz, Ltd., Johannesburg, for the Transvaal, Orange Free State and Rhodesia; Messrs. Rogers-Jenkins & Co., Durban for Natal, and Messrs. Rogers-Jenkins & Co., Capetown and Port Elizabeth, for the Cape Province, while there are sub-agents in all towns of importance in the Union of South Africa and in Rhodesia.

**Head Office.** 57-59, Exploration Buildings, Commissioner Street, Johannesburg. Cables: "Skefko," Johannesburg.

#### D. DRURY & CO. LTD.

**Inception.**—This private limited liability company was registered in 1915, and took over the business of mining material merchants and importers which had been founded in Johannesburg many years previously by Mr. Denis Drury.

**Activities.**—The company has always specialised in machine tools, and is one of the chief machine tool houses in South Africa, representing the principal manufacturers in the United Kingdom and America. In 1919 it extended its activities to mechanical and electrical engineering, and since that date has successfully undertaken several engineering contracts in South Africa.

**Premises.** In 1919 the firm moved into its present building, where it has one of the largest showrooms in the city, some 5,500 square feet of floor space providing ample room for the display of machine tools, general engineering plant and equipment.

**Representations.**—Among the numerous sole agencies held by the firm are the following:

**British.** Aster Engineering Co. Ltd., F. W. Brackett & Co., Clifton & Waddell, Drummond Bros. Ltd., Wm. Muir & Co. Ltd., Wm. Park & Co., Smith & Coventry, Ltd., Thwaites Bros. Ltd., Webster & Bennett Ltd., and many others.

**American.** Ajax Mfg. Co., American Tool Works Co., Blanchard Machine Co., Diamond Machine Tool Co., France Packing Co., Hendey Machine Co., National Acme Co., Rice Mfg. Co., H. D. Wallace & Co., Yale & Towne Mfg. Co., etc.

**Continental.** Alfred Eriksen, Germany, Franco Tosi, Italy, etc.

In 1923 the company was appointed sole agent in South Africa for Ransome & Marles' ball and roller bearings and plummer blocks, this agency being run as a separate department under the supervision of a technical salesman from the principals' factory in England.

THE SKEFKO (South Africa) BALL BEARING CO. LTD., Johannesburg.

1. The Skefko Ball Bearing Co. Ltd., Luton, Bedfordshire, England.
2. A Crushing Plant in Johannesburg, fitted with Skefko Ball Bearing Plummer Blocks.
3. Skefko Steel Works, S.K.F., Hofors Bruk, Sweden.

**Agents.**—The company is represented in Natal by Webb, Wraith & Co Ltd, and in Cape Province by Rutherford Ltd.

**Buyers.**—London Durant Radford & Co Ltd, Gillespie Bros & Co New York Gillespie & Co Inc.

**Directorate.** Messrs H B Waite (chairman), J T Goldsbury, and A G Brown.

**Offices.** Western House, corner of Marshall and Saut Streets, Johannesburg Cables "Drumco," Johannesburg.

**Bankers.** National Bank of South Africa.

#### EDWARD L. BATEMAN.

**Inception.**—The machinery business of this firm, one of the oldest established on the Witwatersrand, dates from 1892, when it was founded in Johannesburg by the late Mr Herbert Ainsworth, who died in 1920,

magnetic clutches, continuous vacuum filtration, etc. It is thus in a position to furnish complete equipments for mining, industrial and power plants. Cement making machinery is one of the firm's specialties, and practically the complete equipment for the Pretoria Portland Cement Company's plant at Pretoria and Slurry, and that for the Cape Portland Cement Company Ltd, in Cape Province, were supplied by it.

**Agencies.**—These include Allis Chalmers Mfg Co, Blaw Knox Co, Bull & Bull Mfg Co, Canada Carbide Co Ltd, Conveying Weigher Co, Deister Concentrator Co, Dings Magnetic Separator Co, The Dorr Co, Duro Metal Products Co, Fuller Lehigh Co, Green Engineering Co, Igramic Electric Co, Husley Manufacturing Co, Kidwell Boiler and Engineering Co, Lenher Engin-

Improved, Western Union, Universal and Five Letter.

**Bankers.**—The National Bank of South Africa, Ltd.

#### G. H. LAngLER & CO. LTD.

**Inception.**—This firm, which was established in April 1918, was later converted into a limited company. Mr G H LAngler, the founder, prior to commencing on his own, was for eleven years connected with both Siemens Ltd and the British Westinghouse Electrical and Manufacturing Co in South Africa.

**Activities.**—These, which extend throughout the Union, Rhodesia and the Belgian Congo, embrace the supplying, installing and erecting of electrical plant of all descriptions, mechanical plant, mine ore hand-

2. Filter with open Drum Heads and Paddle Agitator.

4. The Dorr Bowl Classifier.

5. Allis-Chalmers Rock and Ore Crusher.

in which year Mr Edward L. Bateman purchased a controlling interest in the enterprise. He came to Johannesburg in 1902 as South African manager for the Allis Chalmers Company, of Milwaukee, Wis., U.S.A., whose products were then handled by Mr Ainsworth, joining the latter in 1907 as engineer and manager of the business.

**Activities.**—The firm has been connected with the development of mining in the Transvaal since the earliest days of the industry, and has been responsible for the introduction of many improvements in machinery and methods, in which connection it introduced to South Africa steel cyanide tanks, gyratory ore crushers, Stirling water-tube boilers, tube mills, ball granulators,

cing Co, Link Belt Co, Manhattan Rubber Mfg Co, N V International Cement-Gun Co, Oliver Continuous Filter Co, Osgood Company, Power Specialty Co, T. L. Smith Co (Richards & Hirschfeld), and the Stromberg-Carlson Telephone Mfg Co.

All agencies held are covered for the whole of the Union of South Africa and Northern and Southern Rhodesia, while there are also sub-agents of standing in Capetown, East London, Durban, Beira, Salisbury and Bulawayo, in order to keep in touch with local requirements.

**Head Office.**—Corner House, Commissioner and Simmonds Street, Johannesburg. Cables: "Founders", Codes: Allis Chalmers, A.B.C. 5th Improved, Bentley's

ling and grading plant, also all classes of coal grading and handling plant.

**Installations.**—Among the principal installations carried out are complete battery of 250 b.h.p. electric motors to the Geduld Proprietary Mines (manufacturers "Heemaf," Holland) (see illustration, page 141), 1,300 b.h.p. squirrel cage motors for driving high lift pumps to the Crown Mines and New Modderfontein Mine, 1,200 k.w. turbines for the Cape electrification by the South African Railways (manufacturers, James Howden & Co, Glasgow); a large battery of Hummer electrically vibrated screens for the Union Minier du Hout Katanga, Belgian Congo (manufacturers, W. S. Tyler & Co., Cleveland, U.S.A.);

big battery of tube mill motors, 200 h.p. each, as well as crusher motors and pump motors for the Modderfontein East Gold Mining Co. (manufacturers, "Heemaf," Holland).

**Representations.**—S. H. Tyler & Co., Cleveland, U.S.A.; Jas. Howden & Co., Glasgow; "Heemaf," Hengelo, Holland; Rowson, Drew & Clydesdale, Ltd., London; Thos. Broadbent & Sons, Huddersfield, England; Everlasting Valve Co., New Jersey, U.S.A.; Guthridge & Co., Sydney, Australia; H. H. Roberts & Co., Ellesmere Port, England; Howden Ljungström Preheaters (Land) Ltd., Glasgow.

**Stocks.**—The amount carried by the company is valued at approximately £30,000, and comprises all electrical machinery, Hammer grading equipments, screen testing equipments, screening, ore concentrators, Everlasting valves, etc.

**Warehouse.**—This is one mile from the head office, and comprises a fine brick building with concrete floor, a 10-ton travelling crane and a floor space of roughly 18,000 square feet.

**Distribution.**—Handled by six travellers with motor cars, who keep in continuous touch with clients.

**Branch.**—G. H. Langley & Co. (Natal) Ltd., Club Arcade, Durban. This branch does an extensive business in sugar and coal mining machinery. The company also has a representative in Capetown.

**Head Office.**—Consolidated Buildings, corner Fox and Harrison Streets, Johannesburg. Managing Director, Mr. G. H. Langley.

**Bankers.**—Standard Bank of South Africa, Ltd.

**Cables.**—"Temps," Johannesburg.

#### **BARTLE & COMPANY LIMITED.**

**Inception.**—This company was founded by Mr. J. O. Bartle at Johannesburg in 1903.

**Development.**—The offices, showroom and stockroom at the outset occupied but two small rooms in the New Club Buildings, Mr. Bartle being his own manager, salesman and office boy, but in 1906 he was joined by Mr. A. R. Callow, now managing director of the firm. Business progressed rapidly and many valuable agencies were acquired, while extensive yards and storerooms were secured, enabling the firm to carry larger stocks than had hitherto been possible. The present offices of the company were purchased in 1910, and in the following year the business was converted into a limited company under the present title, with Mr. Bartle and Mr. Callow as directors. Mr. J. M. Jackson, who had represented the firm for many years on the Reef, was elected a director at a later date.

**Activities.**—These embrace mechanical and electrical engineering, mining and railway supplies, woodworking and metal machinery, tools and hardware, and motor engineering.

**Motor Organization.**—Soon after the formation of the company it interested itself in the motoring business, and secured some important agencies in this connection. It was soon found necessary, however, to control these undertakings as a distinct side of the business, and within a few years direct branch establishments for the handling of motor and allied lines were successfully launched in the leading centres of the country. The companies which comprise the Bartle Motor Organization are: In Johannesburg, Consolidated Motors, Ltd.; in Capetown, Southern Motor & Supplies, Ltd.; in Durban, African Motors, Ltd.; in Bloemfontein, The Younger Motor Co. Ltd.;

G. H. LANGLEY & CO., LTD., Johannesburg

1. An installation made by the firm at The Geduld Proprietary Mines—Complete Battery of 250 h.p. Electric Motors
2. The Tube Mill Driven by the Motors.

in Kimberley, Bartle & Co. (Kimberley) Ltd.; in Maritzburg, African Motors, Ltd.; in Port Elizabeth, Southern Motors & Supplies, Ltd.; and in East London, Southern Motors & Supplies (East London) Ltd.

**General Agencies.**—Amongst many others, these include Sanderson Bros. & Newbould Ltd., F. Reddaway & Co. Ltd., Johnson & Phillips Ltd., John Birch & Co. Ltd., Muntz Metal Co., J. W. Roberts Ltd., Gimson & Co. Ltd., Western Electrical Instrument Co., S. Smith & Sons, Oster Manfg. Co., Sebastian Lathe Co., Skinner Chuck Co., United Incandescent Lamps & Electrical Co. Ltd., and L. M. Ericsson & Co.

**Motor Agencies.**—Hudson Motor Co., Fodens Ltd., Karrier Motors, Highway Trailer Co., The Prest-O-Lite Co. Inc., Matthew Wells & Co. Ltd., Fanbanks Co., Harley Davidson Motor Co. and Wayne Tank & Pump Co.

**Stores and Yards.**—These are situated at Marshall, Mooi and Polly Streets, Johannes-

burg, and the value of stocks carried runs to hundreds of thousands of pounds. Large stocks are also held at the Kimberley and Durban branches.

**Head Office.**—Loveday House, corner of Loveday and Marshall Streets, Johannesburg.

**Branches.**—Durban, Kimberley, Pretoria, etc.

**Cables.**—"Faggot."

(See also illustration, page 142.)

#### **W. H. ALLEN, SONS & COMPANY LTD.**

**Inception.**—This firm, of Queen's Engineering Works, Bedford, England, opened its own offices in South Africa in February 1922. Previously the company had been represented by agents, its connection with the South African market dating back to 1903.

**Activities.**—Messrs. Allen Sons & Co. are manufacturers of high speed, totally enclosed, forced lubrication engines, vertical crude oil

engines of the 2 stroke type, condensing plants, steam turbines, centrifugal pumps, Diesel oil engines, continuous current dynamos and motors, fans, etc

**Installations.** Important installations have been supplied to the leading mines and municipalities and other bodies throughout South Africa, among which are High speed engines—Nourse Mines, Wolhuter G M Co., Village Main Reef, etc., and various municipalities. Condensing plants—Van Ryn Deep G.M. Co., Premier Diamond Mining Co., Rand Water Board, Consolidated Goldfields of S.A. Ltd., etc. Steam turbines—Bloemfontein Municipality, Rand Water Board and the Victoria Falls & Transvaal Power Co. Ltd. Centrifugal pumps—Simmer & Jack Prop Mines, City & Suburban G.M. Co., Randfontein Ests., Transvaal G.M. Ests., and others. Centrifugal sand pumps—

Over 300 pumps of varying sizes have been supplied to the mines on the Rand and in Rhodesia. Crude oil engines—New Amantshu Mine, Shongweni Dam, several municipalities, etc.

**Pumping and Condensing Machinery.** Many important pumping installations have been supplied to various water boards throughout South Africa, and two of the largest high lift centrifugal sets have been furnished to the Simmer & Jack Prop Mines, each of which is capable of delivering 100,000 galls per hour against a 2,000 feet head. Two 3,000 k.w. sets, comprising the firm's turbines with condensing plants, are on order by the Bloemfontein Corpn., and the Johannesburg municipality is being supplied with a condensing plant for working in conjunction with a 10,000 k.w. turbo generating set. The company's centrifugal

sand pumps are in use on many gold mines, and are looked upon as most efficient and reliable.

**Representative for South Africa.**—Mr A Cyril Webber

**Address.**—Oceana Buildings, Simmonds Street, Johannesburg. Cables "Pump," Johannesburg.

(See illustration, page 143.)

#### C. KELLY & PARTNERS.

**Activities.**—This firm of mechanical and electrical engineers represents in South Africa a number of important English and American factories, and has branches and representatives in all the important centres of the Union. The company sells largely to Government Departments, municipalities and the bigger gold mining companies, from whom it has secured extensive contracts covering the installations of entire systems, and has

been instrumental on many occasions in introducing entirely new types of machinery to South Africa.

**Agencies.** C. Kelly & Partners are South African representatives for the following British manufacturers: F. & A. Parkinson, Ltd., George Ellison, Yarrow & Co. (1922) Ltd., The British Electric Plant Co. Ltd., The British Sangamo Co. Ltd., The British Steel Piling Co. Ltd., Joseph Booth & Bros. Ltd., Macintosh Cable Co. Ltd., and Alexander Jack & Co. Ltd. They also represent the following American manufacturers: Packard Electric Co., Electric Power Equipment Corporation, Electric Service Supplies Co. Ltd., American Road

**Cables.**—“Yellek,” Johannesburg.

**Bankers.** Standard Bank of South Africa, Ltd., London and Johannesburg (See also illustration, page 144.)

#### INGERSOLL-RAND COMPANY (SOUTH AFRICA) LTD.

**Inception.**—Although, from the earliest days of the Rand, Ingersoll-Rand air compressors and rock-drills have operated continuously, it was not until December 1922 that it became advisable to form the Ingersoll-Rand Company (South Africa) Ltd. and it was incorporated to keep in touch with and supply the ever increasing demand for the up-to-date plant of this very important organisation.

metal propositions throughout the Continent, also to the great sugar enterprises in Mauritius, its chief products embracing the following: All types of pneumatic mining and industrial machinery, air compressors of every style, type and size, air receivers, intercoolers and aftercoolers, condensing plants, vacuum (ameron) centrifugal and direct acting pumps, rock drills of every description, drill sharpening machines, portable hoists, stone channellers, and stone carving tools. The company also supplies the Ingersoll “Sandvikens” Swedish drill steel made up in all sections.

Apart from the comprehensive production of machinery directed purely to mining operations, a very important feature of the

W. H. ALLEN, SONS & CO. LTD., Johannesburg.

1. 35,000 Square Feet Surface Condenser
2. High Pressure Direct Coupled Turbo-Alternator, 2,500 k.w.
3. Typical Geared Turbo Generator for Out-Puts from 100 k.w. to 150 k.w.
4. Four Series High-Lift Pumps, 1,980 ft. Head, 350 h.p. (Supplied to a Mine)
5. One of three Engines and Pumps, each of 1,000 h.p., constructed for Irrigation Scheme.

(See *Litterpress*, page 141.)

Machinery Co., Ideal Concrete Machinery Co., Charles Hvass & Co., and Charter Gas Engine and Werf Conrad of Haarlem, Holland.

**Correspondence.**—Messrs. Kelly & Partners invite correspondence from manufacturers of electrical or mechanical machinery not covered by the above mentioned factories.

**Partners.**—Messrs. Cedric Kelly (managing partner at the head office in Johannesburg), William Kelly (London partner), and F. B. Grinham.

**Head Office.**—137, Collman Building, Johannesburg. Mr. Harold E. Bell is a departmental manager particularly interested in the American side of the business.

**Development.**—The company has materially assisted in developing the enormous mineral wealth of the country, indeed the profitable working of the great mining concerns has been made possible largely by means of its efficient plant, and it may be said that there is scarcely a mining property of any importance that does not rely, to some extent at least, on Ingersoll-Rand drills or other machinery of the great enterprise under notice, whose well-known “Jackhammers” have revolutionised the standard of drilling efficiency in the South African fields.

**Activities.**—To-day the company's activities extend to diamond and gold mines and base

firm's manufacture is its range of modern air tools, such as riveters, chipping hammers, metal and wood boreis, grinders and saws, which to-day are to be found constantly employed in railway workshops, irrigation schemes and industrial plants throughout the country.

**Area of Operations.**—Besides their widespread adoption in Rhodesia proper and in Mauritius, the manufactures of the Ingersoll-Rand Company (South Africa) Ltd. have found particular favour throughout the Belgian Congo, Portuguese East and West Africa, and the South West Protectorate.

**Installations.**—A large electrically driven compressor has recently been supplied to the

New Modderfontein Gold Mining Co., and Ingersoll-Rand compressors of various types have been installed also in the Modderfontein B, Geduld, and Modderfontein Deep, to mention some among the deep levels of the Far East Rand. The plant at the Durban Graving Dock has been augmented by an electrically-operated compressor, which is again proving the reliability and efficiency of this firm's products.

**Service.**—A staff of expert technical men, engineers and demonstrators is maintained,

**Directorate.** R W Rusterholz (managing director and chairman), C H Davis, H F MacNay, the entire management of the company's South African affairs being in the hands of the first-named.

**Agents.** Messrs. Rogers-Jenkins & Co., in Capetown and Port Elizabeth, Messrs. Johnson & Fletcher, in Bulawayo, Salisbury and Gatooma.

**Head Office.**—Exploration Buildings, Commissioner Street, Johannesburg Branch Office, 45 and 70, Anglo-African House, Durban.

#### RICE & DIETHELM LTD.

**Inception.**—This company was founded in 1922 by the late Mr. Frank Peabody Rice and Mr. Charles Diethelm, the leading business connections both in Africa and Overseas having been already established for many years.

**Activities.** The principal activities of Rice & Diethelm Ltd. are the representation of the overseas manufacturing firms named subsequently and the supply and delivery of their products. The company is also

#### DELFO LTD.

**Inception.**—This firm of manufacturing engineers, which conducts one of the oldest industrial enterprises in South Africa, was founded before the Boer War by Mr C. F. Delfos, who holds the position of chairman of the company.

**Development.** Originally the firm specialised in electrical work, but in order to keep the gold mines operating during the War, it went in for the manufacture of rock-drill spurs, which were then practically unobtainable. It also experimented with a view to the manufacture of complete rock-drills in South Africa, with the result that rock-drills now form a considerable bulk of the company's business.

RICE & DIETHELM LTD., Johannesburg

1. Three Vertical Sulzer Centrifugal Pumps, Borehole Type, Rand Mines Pumping Station, Roeherville Dam, near Johannesburg. Total capacity about 5 Million Imperial Gallons per 24 hours, 350 ft. Head, 200 h.p. Motors, 1,500 r.p.m.
2. Central Mine Drainage Plant, Randfontein Central Gold Mining Co. Ltd. (Witwatersrand) Four Sulzer High-Lift Centrifugal Pumps; total capacity, 8 Million Imperial Gallons per 24 hours, 2,600 ft. Manometric Head; Electric Motors 1,750 h.p. each, 1,500 r.p.m.

(See letterpress, page 144)

**Plant.**—The factory is well equipped with first-class machinery, including automatic machinery, and its products compete very successfully with goods imported from the leading overseas manufacturers. The floor space of the different shops approximates to 20,000 square feet. The various departments of the factory comprise the blacksmith's shop, machine shops, grinding shop, hardening shop, motor and compressor room, tool and general store, gauging room, etc.

**Laboratories.**—The experimental and testing departments of the company include mechanical, metallurgical and chemical laboratories, and these are quite up to any European or American standards, the firm being the first in South Africa to realise the importance of scientific research in connection with steel treatment.

**Directorate.**—Mr C F Delfos, Pretoria, chairman, Mr Jack Reunert, Johannesburg, vice-chairman, Mr Charles Maggs, Pretoria, Mr G Bergstrom, Johannesburg, managing director, Mr J Postmus, general manager, Netherlands Bank, Pretoria (alternate for Mr Delfos)

**SANDYCROFT LTD.** Reid Brothers' Building (third floor), corner Main and Harrison Streets, Johannesburg. Mining, mechanical and electrical engineers. Telephone 2794. Cables and telegrams: "Sancroft," Johannesburg.

**SCHNEIER AND LONDON LTD.** 103, Bice Street, Newtown, Johannesburg. Capital £50,000. Timber, iron and mining material merchants. Directors: Samuel Schneier and Solomon London. Telephones 5130 and 5311. Cables and telegrams: "Nodnolsh," Johannesburg.

**SOUTH AFRICAN RUBBER MANUFACTURING CO. LTD.**—8, Winchester House, Main Street, Johannesburg. Associated with Spencer, Moulton & Co. Ltd and Wood Milne Ltd. Capital, £150,000. Manufacturers of rubber goods of all descriptions. Works: Induna Mills, Howick, Natal. Cables: "Sarmcol," Johannesburg.

# PROVINCE OF THE CAPE OF GOOD HOPE

**T**HE Province of the Cape of Good Hope the first British colony to be established in South Africa, forms the extreme south of the African Continent. It is by far the largest Province of the Union, having an area of 276,966 square miles, which is more than twice the size of the United Kingdom, but not quite so large as the State of New South Wales. The greatest breadth of the territory in a straight line east and west is about 750 miles, and its greatest length some 600 miles. On the north west the province is bounded by South-West Africa, while its northern boundary touches those of the three sister provinces and Basutoland, its coastline, facing west, south, and east, extends for about 1,300 miles, much of this being curiously inaccessible and devoid of natural harbours. Inland, the most noticeable feature of the Province is the series of mountains which under the names of Kamiesbergen, Langebergen, Kamiskow, Bokkeveld, Roggeveld, Nieuwveld, Sneeuwbergen, and Stormberg respectively eventually become the Quathlamba or Drakensberg Mountains, the best defined range in South Africa, whose course is due north-east, strictly parallel to the coast, and which forms the inner boundary of the easternmost districts of Cape Province and of Natal, and the outer boundary of Basutoland and the Orange Free State. The greatest river system in Cape Province is that of the Orange River, which with its tributaries drains an estimated area of 300,000 square miles, the other rivers are of small importance. The climate varies, but is in many parts, and notably in Capetown, of a mild English character, on the Karoo the typical South African climate is experienced very dry and bracing, and with a far greater difference of temperature between day and night than is the case on the lower levels.

**ADMINISTRATION.**—The functions of the Colonial Parliament which prior to the Union legislated for the Cape are now divided in practical working between the Parliament of the Union and the Provincial Council of the Cape. This latter body, within the sphere marked out for it by the South Africa Act, is practically allowed considerable freedom from interference either by the over-riding power of the Parliament or the refusal of assent to legislation. The Provincial Council numbers 51 members, each elected for one constituency, on a male adult franchise, and there is no disqualification for colour, except that the holding of land by a mere tribal or communal tenure does not constitute a qualification within the property clause of the tenure. Furthermore, men of colour can sit on the Provincial Council, though excluded by the requirement of European descent from the Parliament of the Union. The administration of provincial services is entrusted to an Executive Committee of four members elected by the Council and an Administrator appointed by the Union Government. The present Administrator is the Hon A. P. J. Fourie.

**LAW AND JUSTICE.**—The law of the Province is Roman-Dutch, modified by Acts

passed by the Colonial Legislature and, since 1910, by Ordinances of the Provincial Council and Acts of the Union. In the districts to the east of the Kei River a special Native Territories Penal Code is in force. These territories are grouped under one Chief Native Commissioner with headquarters at Umtata, under whom there are 27 magistrates who are officers of the Native Affairs Department. In British Bechuanaland native law is administered by native chiefs, subject to appeal to the ordinary courts. The Provincial Division of the Supreme Court consists of a Judge President and eight Puisne Judges. Minor cases are brought before the courts of the Resident Magistrates and of paid Justices of the Peace, from whose decisions appeals lie to the Supreme Court.

**LOCAL GOVERNMENT.**—The province is divided into 119 magisterial districts, and the colony proper, including British Bechuanaland, but exclusive of the Transkei territories, into 86 fiscal divisions. In each division there is a Civil Commissioner, who is, in all cases where the fiscal and magisterial areas coincide, also the Resident Magistrate. Each division has a Council of at least six members, elected triennially by the owners or occupiers of immovable property. These councils look after roads, boundaries and beacons, return three members to the Licensing Court, and perform other local duties. In 1923 there were 129 municipalities.

**AGRICULTURE.** Early in the development of Cape Colony the south-western coastal districts became recognised as the granary of South Africa because of their climate. At the present time they produce 30 per cent of the wheat crop and larger proportions of other cereals. Maize and Kaffir corn are extensively grown, especially in the Transkei, potatoes are a most important crop, being raised especially at Humansdorp and Stellenbosch, and the Province is second only to the Transvaal as a tobacco-growing country. At one time wine was the best-known product of the Cape, and the vineyards of Constantia, Stellenbosch, Paarl, Malmesbury, Worcester, and Robertson have always been famous. Fruit of every kind grows well, the principal varieties exported from the province being peaches, pears, plums, apricots, nectarines, oranges, naartjes, pineapples, melons, and grapes. In the George, Knysna, and Humansdorp divisions there is a valuable forest region.

The following table gives in detail the production of the leading crops of the Province in 1923-24.—Wheat, 1,525,281 bags, oats, 1,346,745 bags, barley, 320,351 bags, rye 176,369 bags; maize, 538,080 bags, potatoes, 387,741 bags, Turkish tobacco, 816,099 lb, other tobacco, 3,426,716 lb; cotton, 260,169 lb. (See also general articles on "Agriculture," "Cotton," "Maize," and "Tobacco.")

**COMMERCE.**—See general article elsewhere.

**FINANCE.**—The total revenue of Cape Province, exclusive of the Union Government

subsidy of £1,560,800, amounted in the last year for which figures are available to £1,121,638. The main sources of revenue were General licences, £519,460, transfer duty, £224,701, Provincial property tax, £202,378, and departmental receipts, £140,692. Expenditure totalled £3,260,923, distributed as follows: Education, £2,514,412, roads, bridges, and works, £281,032, hospitals and poor relief, £252,804, and general administration, £212,675. Capital expenditure from loans amounted to £160,222, of which £104,993 was spent on school buildings.

**INDUSTRIAL PRODUCTION.**—In 1923-24 there were 3,017 factories in Cape Province, a slight increase on the figure of 2,975 for the preceding year. Of these, 916 were connected with food and drink, 382 with clothing and textiles, 339 with vehicles, 297 with metals and engineering, 294 with building and contracting, and 137 with leather and leatherware. The gross value of the production of these factories amounted in 1923-24 to £29,126,311, compared with £26,562,111 in 1922-23.

**LIVE STOCK.**—The plains of the Karoo contain enormous pastoral possibilities, and the Cape has always led in the production of wool, the Fraserburg, Beaufort West, and Victoria divisions being typical sheep-farming districts. The sheep are mainly of the merino breed, more valuable as wool producers than the old type of Cape sheep, which is dying out, except among the natives. Cattle are extensively reared, and dairy farming is being extended. Ostrich farming is a speciality of the Province, though the number of birds has steadily declined since the war-slump in feathers.

Following are the figures of live stock of the province for 1923-24: Sheep, 17,428,545, cattle, 2,744,950, goats, 4,284,297, horses, 346,048, and ostriches, 204,388. The production of wool in the same year amounted to 67,095,122 lb, compared with 72,045,812 lb in 1922-23. The production of other pastoral products was as follows: Butter, 4,835,272 lb, cheese, 232,553 lb, bacon and ham, 824,561 lb, mohair, 7,558,759 lb; ostrich feathers, 201,900 lb.

**MINERAL PRODUCTION.**—Of the minerals found within the range of Cape Province, the diamonds of Kimberley district take first place, the total production in the province up to December 31, 1925, being valued at nearly £214,000,000. Copper, which is peculiar to Namaqualand, takes second place, coal is found and mined to the north of Queenstown in the north-eastern districts, at Indwe, Guba, and Miltene. A little gold has been won in the Knysna division on the southern coast. The total value of the mineral production of Cape Province in 1924 was over £6,000,000, of which diamonds accounted for nearly £5,500,000, copper for £183,000, asbestos for £50,000, lime for £90,000, and salt for £60,000. (See also articles on "Mining and Minerals" and "Diamonds.")

**TRANSPORT.**—See general articles on "Shipping," "Railways," and "Port of Capetown."

GENERAL VIEW OF CAPETOWN.

The Picturesque Factory Buildings of the United Tobacco Companies (South) Ltd. can be seen in centre of the illustration.

## CITY AND PORT OF CAPETOWN

### CITY

**T**HE story of South Africa was for nearly two hundred years the history of Cape Colony, and for a great part of that time the latter was but an extension of Capetown, the original settlement planted in 1652 by Jan Van Riebeeck. From the town into which the settlement developed, comprised as it was in the early days within the area between the face of Table Mountain and the sea, has expanded the present city, occupying not only some miles of the ocean-front, but broadening out across the Cape Flats and extending along the further slopes of the mountain through Wynberg to the suburbs of Muizenberg and St James on the shores of False Bay.

From Capetown went those adventurous settlers who, by the end of the 18th century, had spread themselves throughout the colony, and from and through Capetown, in the century which followed, passed the greater number of those who in the other states and territories have played their part in the building up of South Africa. Capetown saw the first efforts towards an educational system in that country, was the seat of the first Parliament, became the first organised Municipality, and was therefore justly selected as the Legislative Capital of the Union in 1909. The oldest, it is, next to Johannesburg, the largest city in the Union, its position being due not only to almost unique natural advantages, but to its position as a port and the very considerable extent of its industries and trade.

**ART.**—The South African Art Gallery is at present housed in an annexe of the

Museum, and contains many good examples of modern painting and sculpture. It is intended to erect the new National Art Gallery of South Africa on a site near the foot of the Avenue. A small but charming collection of Flemish and Dutch paintings, the Max Michaelis Collection, is to be found in the Old Town House on the southern side of the Square, itself one of the finest examples of early colonial architecture.

**BATHS.**—The Municipal Baths are situated in Overbeck Square, at the top of Long Street. They were opened in 1908, and consist of a swimming pond, 100 ft by 45 ft, with a depth of from 3 ft 6 in. to 7 ft 6 in., in addition to hot and cold private baths and showers. The gallery to the swimming bath, with accommodation for 800 spectators, provides an excellent view of the whole water-level, and galas and water-polo contests are a great attraction during the summer season. There is also an open-air swimming bath in Hanover Street.

**BUILDINGS.**—First in importance, but by no means in appearance, is Government House, the town residence of the Governor-General. The oldest part of the building, which adjoins the Houses of Parliament on the left-hand side of Government Avenue, dates from 1740, but constant additions have been made since without any regard to architectural fitness or beauty. The result is a rather heavy mass of incongruous buildings, which, however, are surrounded by most beautiful trees and gardens. There is a scheme to erect a new Government House, probably at or near Rondebosch.

The former Houses of Parliament, now used by the Provincial Council, were completed in 1886, being built of red brick upon Paarl granite. In 1910 a new wing was added for the use of the Union Parliament. The Municipal Buildings, facing the Parade ground, are built in the Italian Renaissance style and have a clock tower and belfry 200 feet in height. The grand City Hall contains a large organ and can seat 2,000 people, or accommodate up to 6,000 for mass meetings. The building is in three storeys, the portion facing on Darling Street rising to a height of over 80 feet. Besides the usual Municipal Offices, there are a large Council Chamber, Councillors' Library, Banqueting Hall, etc. Opposite the main portico a statue of King Edward VII, by Sir W. Goscombe John, has been erected.

Other noteworthy public buildings include the Opera House in Darling Street, the Public Library with a fine Grecian façade, the handsome head office of the Standard Bank of South Africa, and the General Post and Telegraph Offices in Adderley Street, a symmetrical pile of buildings faced with stone brought from Saldanha Bay. It is in front of the Post Office that the attractive Flower Market is held on Wednesdays and Saturdays.

**CASTLE.**—The Castle of Capetown was built in 1666 by the Dutch East India Company, and is still in a state of perfect preservation. It stands at the lower end of Darling Street, at the far side of the Parade. The castle is a strong stone fortress with five massive bastions in the form of a pentagon, and was designed after the systems

of Vauban and Coehorn, the most eminent authorities on fortifications of that age. It possesses many features of great antiquarian interest and is a relic of the historic past of which the city is justly proud and careful.

**CHURCHES.**—Capetown has two cathedrals and a number of fine churches. St George's, the Anglican Cathedral, with a striking Grecian front and a memorial cross to the memory of Bishop Gray, stands at the upper end of St George's Street, but this will before long be superseded by the new Cathedral, the foundation stone of which was laid by the present King, when Duke of Cornwall, on August 22, 1901. The cost is expected to exceed £200,000. At present only the Sanctuary and Chancel, the Sacristy, the Centre of the Transepts, and part of the Nave are completed. The Roman Catholic Cathedral is dedicated to St Mary, and from its elevated position near Government House is a conspicuous object in any view of the city. Another handsome church is the Metropolitan Wesleyan Church, of Gothic style, whose graceful spire is a

country, and to the attractions of an almost perfect climate are added the great natural beauties of the Peninsula and its neighbourhood.

**CLUBS.**—The leading clubs in Capetown are the Capetown, the City, and the Civil Service, all of which have very comfortable and extensive accommodation and a large membership. There are also the Alexandria Club, for ladies, the Owl, the Jewish, and many clubs connected with the sporting activities of the city.

**EDUCATIONAL FACILITIES.**—Capetown may be justly called the leading educational centre in South Africa. With an old and well equipped University, its teaching and training colleges, its schools of art and music, its technical and vocational institutes and its excellent primary and secondary schools for boys and girls, it offers educational facilities of the highest order in all branches of learning and research. The University is specially dealt with later, of the remaining educational institutions it may suffice to make mention of the South African

embracing rare exotic as well as indigenous examples. Here, for instance, may be seen the oak, maple, lime, elm and pine of England growing side by side with the graceful deodar of the Himalayas, the camphor tree of Sumatra, or the towering araucaria of Norfolk Island. English fruit trees are present, olives and mulberries from the Mediterranean, mangos and alligator pears from the West Indies, while under the sunny sky of the Cape bloom the flowers of Europe and Africa alike. In these gardens stands a marble statue of Sir George Grey, a former Governor.

The National Botanical Gardens at Kirstenbosch, a part of the Groote Schuur Estate, were established in 1913, and are controlled by a Board of Trustees acting through a Director, who is one of the two Professors of Botany in the University of Capetown. These gardens, which occupy a site of exceptional beauty, are intended primarily for the cultivation and scientific study of South African flora, a large part being treated as a Nature Reserve.

1. VAN RIEBEECK'S STATUE, Capetown, looking towards Table Mountain.

2. "GROOTE SCHUUR," Capetown. The Home of the late Right Hon. Cecil John Rhodes, and left by him to the People of South Africa.

prominent feature. The Dutch Reformed Church, in Adderley Street, with its vane-topped Flemish spire, is noticeable for its lack of any external embellishment, but its interior is remarkable for the immense span of roof (80 ft. wide), unsupported by prop or pillar, and also for its wood-carved pulpit, the work of a German artist. The Congregational, Presbyterian, Lutheran, Free Protestant, Seventh Day Adventist Churches, and the Jewish Synagogue are among the other sacred edifices of the city.

**CLIMATE.**—Capetown is highly favoured in regard to climate, having an average of nearly 3,000 hours of bright sunshine per year, and the temperature is very equable, there being no great extremes of heat or cold. The Cape Peninsula is in the area of winter rainfall, but occasional showers occur throughout the year. The humidity is only moderate. The mean yearly temperature is 62.6 deg. Fahr., and the average rainfall 25.64 inches. The parts of the municipality on the seaboard are much frequented by holiday-makers from other portions of the

College, which was established in 1829 and is the oldest University College in South Africa, St George's Grammar School, the Normal College, the Training College, the Good Hope Seminary for Girls; and the Dominican Convent High School.

**GARDENS.**—The Government Gardens form perhaps the most striking ornament of Capetown. They are a legacy from olden times, for which the city may thank the Dutch East India Company. Originally planted more for use than ornament—to shelter the vegetables and fruits grown for the purpose of supplying passing ships—they now afford a grateful shade and pleasant place of resort for the inhabitants, and are especially appreciated by visitors. The central walk extends for nearly three-quarters of a mile through an avenue of old oaks, with the grounds of Government House on one side and the Botanic Gardens on the other. The latter, now under the care of the City Council, are laid out with grass plots, shrubberies, and conservatories, and contain a variety of trees and plants

**GROOTE SCHUUR.**—Groote Schuur ("Great Barn"), the official residence of the Premier of the Union of South Africa, occupies a beautiful site at Rondebosch. It was originally the residence of the late Right Hon Cecil J. Rhodes, Premier of Cape Colony and founder of Rhodesia, the handsome modern building having been built on the foundations of Van Riebeeck's great grain barn. By his will Rhodes left the entire property to the Premier of a united South Africa, when the consummation to which he had devoted his greatest energies should come to pass. Part of the beautiful grounds has been converted into a Zoo, where wild animals from lions downwards are housed, and from near the lion houses a road leads in about 20 minutes to the Rhodes Memorial, of which the mounted figure in the foreground, with its face turned towards the Matopo Hills in Southern Rhodesia, where the great Empire Builder's body rests, is a reproduction of the famous "Physical Energy" by Watts. An inscription reads: "To the Spirit and Life-work of Cecil John

Rhodes, who loved and served South Africa " The lower slopes of the Groote Schuur estate have been set apart for the New University, which is now in process of construction. (See later " University ")

**INDUSTRIES.**—See article following

**INFORMATION BUREAU.**—All visitors to Capetown should call at the Information Bureau, to be found in Adderley Street, below Strand Street. The Visitors' Bureau, which is another name for the same institution, is conducted by the Cape Peninsula Publicity Association for the convenience of visitors and tourists. Here reliable information of a varied order may be obtained: the programme of the season's attractions, etc.—and everything is done by the secretary and staff to facilitate the movements of visitors in the Peninsula.

**LIBRARIES.**—The South African Public Library, in the Avenue, is a national institution, and is the oldest and largest library in the Union, having been founded in 1818. It contains the Dessimian, Grey, Hofmeyr, and Wessels Collections, being especially rich in literature relating to South Africa and in sets of scientific serial publications. The library now has about 150,000 volumes of every variety of literature, and the average monthly circulation of books exceeds 10,000.

**MUSEUMS.**—The South African Museum, near the Municipal Botanical Gardens, was erected at a cost of £10,000 and opened in 1897. A handsome building, there is within it a varied and valuable assortment of historical and ethnographical relics and curios of the country. At the entrance is arranged a series of " Post Office " Stones, beneath which captains of ships touching at the Cape used to place their letters when outward bound for conveyance home by returning vessels. These stones date back to 1614. The anthropological and ethnographical room contains a unique collection of South African stone age implements, rock paintings, incisions, etc. Two other rooms hold interesting collections of South African birds, reptiles, fishes, and mammals.

In Strand Street a South African National Museum, illustrating the conditions of life of the early Dutch settlers in South Africa, is housed in the Koopmans de Wet House, one of the few very old Dutch buildings now standing. This house is the property of the nation, and admission to it is free.

**MUSIC.**—In addition to the organ recitals which are given at regular intervals in the City Hall, the City Council maintains an orchestra of over 30 performers, which gives performances on the Pier, in the City Hall, and elsewhere.

**OBSERVATORY.**—The Royal Observatory is the oldest in South Africa, having been instituted by an Order in Council in 1820. It is under the control of the Admiralty, and is housed in a group of buildings erected on grounds covering 27 acres. The Cape Observatory has been famous in astronomical circles ever since, in 1882, the idea of employing the telescope for the determination of actual star positions by means of stellar photography took practical shape there. The development of this resulted in (1) the Cape Photographic Durchmusterung, a photographic catalogue of nearly 400,000 stars, and (2) the international survey of the heavens, in which many of the principal observatories of the world are co-operating.

**POPULATION.**—The population of Capetown at the last census of 1921 was returned at 207,404. Of this number, 113,303 were Europeans, 4,680 natives, 2,435 Asiatics, and 86,986 mixed and various. It will be

1. CORNER OF STRAND AND LONG STREET, Capetown. Note the evidence of an excellent tram service.
2. WALE STREET, looking towards Adderley Street Junction, Capetown, with Syfret's Trust Building in centre.
3. PLEIN STREET, Capetown. Note again the evidence of the excellent tram service.

1. EXCHANGE PLACE, Capetown. Messrs. Garlick & Co.'s fine Store in the left foreground.
2. JUNCTION OF ST. GEORGE'S STREET & STRAND ROAD, Capetown. The Yorkshire Insurance Company's Building in left foreground.
3. GREENMARKET SQUARE, Capetown. J. H. Stark & Co.'s Building on left.

seen that the two white races predominate, and that the non-European class consists principally of what are termed "coloured people." The Asiatic population is composed largely of Malays, who are Mohammedans, and whose quarter is situated at the extreme end of the mountain-side of the city. The native population, who are employed mostly as dock labourers and on road construction work, are housed in a special municipal location some miles outside the city.

**PUBLIC HEALTH.**—From the point of view of public health, Capetown definitely belongs to the temperate zone, and tropical diseases are conspicuously absent. The state of health and the mortality statistics of the European part of the population are much the same as in a healthy European town. The non-Europeans constitute 43 per cent of the population, and present much less favourable health statistics than the Europeans. The birth rate in 1923-24 was for Europeans 21.92, for non-Europeans 52.66, and for all classes 35.21 per 1,000; the death rate for the same period was for Europeans 17.21, for non-Europeans 31.09, and for all classes 20.07 per 1,000.

**SEWERAGE.** Capetown was the first city in South Africa to be provided with a complete water carriage system of sewage disposal, which justifies its claim to be as well equipped from a sanitary standpoint as any city in the world. This system is supplemented by a separate one of storm-water sewers. The sewage outlet is in the tidal way beyond Green Point Light. The length of sewers in 1924 was 86½ miles, of storm water sewers, 45½ miles. Additional drainage works are under construction.

**SPORT.** Capetown and indeed the whole Cape Peninsula offers to the resident and tourist alike every variety of sport and recreation. At the capital, the Kenilworth and Milnerton jaccouses have meetings almost every week under the auspices of the South African Turf Club, while during the winter months weekly meetings of the Cape Hunt Club are held. In the way of games, the matches of the Senior Rugby Football League on the famous playing fields of Newlands are the favourite attraction for Cape sportsmen, Capetown and the Western Province having always been the nursery grounds of this national game. Association football is also keenly followed, the headquarters of this game being at Hantleyvale. In the summer, cricket has its votaries, the Newlands grounds being the headquarters of the Senior Cricket League of the Western Province. At Wynberg, Mowbray, Green Point, Rapenburg and Clovelly are excellent golf-courses.

Surfing is just as popular at Muizenberg as at the more famous Manly Beach, in Australia, and all along False Bay the sport of sea-fishing is widely practised. Lastly, the Cape Mountain Club has an ever growing membership of enthusiastic climbers, to whom Table Mountain offers endless opportunities to test their skill before proceeding to try the more hazardous ascents which lie further afield.

**STREETS.**—The streets of Capetown present to the stranger a wonderful blend of the old and the new, though the former is, of course, rapidly giving way to the latter. Adderley Street, the main thoroughfare and heart of the city, has no great length, but a very spacious breadth, and within its confines most of the finest buildings and shops are to be found. In Dutch times it was known as "The Herengracht." It is a great contrast to pass from the turmoil of the traffic of Adderley Street into the cool shade and restfulness of the Van der Stels Avenue,

which leads up to the region of the Gardens and Orangezicht under Table Mountain. The Avenue has already been mentioned as the site of many Government Buildings and the beautiful Botanical Gardens. Plein Street, Long Street, and Loop Street are also busy business areas, while St. George's Street, which is the headquarters of the two principal Capetown newspapers, is likewise an important business thoroughfare.

**SUBURBS.**—The suburbs of Capetown extend many miles eastward and westward. The western suburbs have a free and open outlook on to the ocean, and they enjoy the sunniest weather experienced in any part of the Peninsula. Many of the most charming modern residences in South Africa are to be found at Green Point, Three Anchor Bay, Sea Point, Clifton-on-Sea, and Camps Bay. The last named bears a strong resemblance to Biarritz, and is remarkable for the range of mountains immediately behind it, which is known as the Twelve Apostles. The suburbs to the east of the city and behind Table Mountain extend from Woodstock to Lakeside, a distance of about 12 miles. Generally, their climate is rather less bracing than that of the western suburbs, and they are more heavily wooded and vegetated. Woodstock is now an important commercial and industrial centre. The pretty suburbs of Mowbray, Rosebank and Rondebosch, with no visible line of division between them, are set under the fireclad heights of the rugged Devil's Peak.

Groote Schuur has already been described. The suburbs of Newlands, Claremont, Kenilworth and Wynberg, continuous areas of settlement, follow in succession after Rondebosch, and contain some of the oldest and most beautiful homesteads and estates in Cape Province. Near Kenilworth and Wynberg stations is the beautifully situated racecourse of the South African Turf Club. Beyond Wynberg, the eastern suburbs extend a further distance of seven or eight miles in the direction of False Bay, the order of position being Plumstead, Diep River, Heathfield, Retreat, and Lakeside. This area is rapidly becoming settled, the whole district being well watered and suited to market gardening and farming on a small scale.

**TABLE MOUNTAIN.**—The unique feature of the scenery of Capetown and the city's great charm, entitling it to rank with Naples, Rio de Janeiro, and San Francisco as one of the most beautifully situated sea-ports of the world, is the magnificent mountain which rises behind it in a sheer precipice to the height of 3,582 feet. Two deep gorges cleave the mountain from summit to base, one of these, the Platteklip Gorge, providing the favourite means of ascent. On either side and rather in advance of Table Mountain are two lesser peaks, forming the horse-shoe valley in which Capetown lies. On the left the Devil's Peak rises to a height of 3,300 ft., while the mountain on the right is known as the Lion's Head (1,800 ft.). Both of these hills command extensive views, but they are not to be compared with the magnificent panorama which lies open before the visitor who ascends to the summit of Table Mountain, below which the city lies embroidered in green, with the blue waters of the bay and the fertile plains of the Koeberg district beyond it. Southwards, the view embraces the whole of Cape Peninsula as far as the Hottentots-Holland range of mountains. The slopes of the mountain, clothed with beautiful foliage and flowers, are broken by charming glens, valleys, and streams. The attractive Table Mountain orchid and the graceful silver trees are here found in profusion.

**TRAMWAYS.**—The public tramways of Capetown are not controlled by the municipality, but are owned by the Cape Electric Tramways Company Limited, and date from 1896. They are constructed to a gauge of 4 ft 8½ in., and in 1925 had a route length of 23.24 miles, the total extent of track being 27½ miles. During the year just named the number of passengers carried was 26,527,185, and the total of car miles run, 2,302,600. Revenue amounted to £323,108, and expenditure to £237,880. (See also Company's article following)

up-to-date educational institution in the country, and will have cost about one and a half millions sterling. The new University will provide for the training of nearly a thousand students. It confers degrees in the faculties of arts, science, engineering, law, commerce, music, and medicine, and diplomas and certificates in teaching, music, commerce and public health. The degrees and diplomas of the Medical School are recognised for purposes of registration throughout the Union and Southern Rhodesia, and the degrees in law are accepted for admission

ADDERLEY STREET, CAPETOWN. GENERAL POST OFFICE, with latest type of Double-Decker Tram Car in foreground.

**UNIVERSITY.**—The University of Capetown dates from 1916, when an Act of Parliament provided for the incorporation of the South African College (which had been founded in 1829) as a University on April 2, 1918. The imposing pile of buildings which are nearing completion stand on the lower slopes of the Groote Schuur Estate, and commemorate one of the many ambitions of Cecil John Rhodes. When finished, they will house what is intended to be the most

to the Bar. There is also attached to the University a school of African life and languages for the special study of native languages and customs.

**WATER SUPPLY.**—Prior to 1913, the year in which the City of Capetown Unification Ordinance was promulgated, the waterworks system of the Peninsula consisted of six reservoirs which supplied the city, the Hely Hutchinson and Molteno Reservoirs being the largest, a reservoir at Newlands

and the Albion and Kommetje Springs, which supplied the Southern suburbs; and a reservoir at Kalk Bay. It had long been apparent that a considerable increase of the water supply was needed, and in 1915 a Board of Engineers was appointed to examine and report upon the extent to which the present and other sources of supply within the Cape Peninsula could be developed, also upon certain sources of water supply outside the Peninsula. The Board came to the conclusion that it would be necessary for Capetown to go outside the limits of the Peninsula for an adequate supply of water, and recommended that the Steenbras Scheme should be carried out as quickly as possible. This scheme was accordingly adopted by the City Council in 1917, a loan of £850,000 being authorised. The first part of the scheme was completed and officially inaugurated by H. R. H. Prince Arthur of Connaught in 1921.

The Steenbras Valley is situated in the Caledon Division, 40 miles from Capetown. The whole of the catchment area, 23½ square miles, together with the land on either side of the river to the sea, is owned either by the Government or the Council. The works consist of (1) a wall built above the entrance to the gorge, to impound the waters of the two rivers Kogel Berg and Steenbras, which unite a few hundred yards above the site of the dam, (2) a tunnel, 2,700 ft in length, through the Hottentots-Holland range of mountains, and (3) a cast iron pipe to Capetown, 40 miles in length. The present reservoir is designed to hold 600,000,000 gallons of water, sufficient to distribute 5,000,000 gallons per day, but the Steenbras Valley is capable of providing up to a daily supply of 20,000,000 gallons of water when required.

In 1923 the Council decided to proceed with the enlargement of the Steenbras scheme, the additional works now in course of construction being (1) the extension of the existing dam by widening and raising it 40 ft, so as to impound 6,000,000,000 gallons—the maximum depth of the water will then be 90 ft, and when the reservoir is full the surface area will be about 827 acres, (2) the construction of a new outlet tower, and (3) the provision of a 33 inch cement lined steel wrapped pipe line to Newlands Reservoir, having a capacity of 10,000,000 gallons per day. The estimated cost of these works is £1,000,000, and it is expected that the additional supply will be available for the summer season of 1927-28.

## PORT OF CAPETOWN

The Port of Capetown, known generally as Table Bay Harbour, is situated at the south-west extremity of the African Continent in latitude 33° 54' S, longitude 18° 26' E. No port in the Empire has a finer position, the large expanse of Table Bay being backed by the noble mass of Table Mountain, which, ever since the days of the early Spanish and Portuguese navigators, has been one of the principal signposts on a great highway of trade. It was from the first settlement at Table Bay, then only a place of temporary anchorage for ships using the "Grand Trade Route," that the colonisation and development of South Africa proceeded, it was as a

register can enter the docks and berth at the quays.

Running parallel with the breakwater is a quay wall, with projecting jetties, and the East Pier, 786 ft in length, is at right angles to the breakwater. The Victoria Basin has about 3,200 ft of quayage and jetty space. No. 1 Quay, South Pier, is 1,970 ft long with 27 to 30 ft depth, and No. 3 Pier, Elbow (outer berth), 700 ft, with 32 ft depth of water.

The total length of berthage is about 2½ miles, and the docks have a water area of 76 acres.

point out. All expenses connected therewith are borne by the vessel, and ballast landed becomes the property of the Board. (See also under "Port Charges.")

**BUNKERING.**—The port has a rapidly increasing bunkering trade, and, by means of ample coal storage accommodation and modern fast-working appliances for both shore and waterside operations, can give vessels expeditious despatch. The coal storage capacity at the port is over 100,000 tons. There is also a complete oil fuel storage service of 30,000 tons capacity, fitted with pumping plant and service pipes to quays. Loading and trimming are per-

1. VIEW OF CAPETOWN HARBOUR, Messrs. Gearing's Works are seen in convenient location for Shipping Repairs.

2. LOOP STREET, Capetown, with Messrs. Rutherford's Building in right foreground.

port that Capetown first became known, and to-day the name once given to it—the "Tavern of the Seas"—is more applicable than ever, the number of vessels entered having increased from 989 in 1910 to 1,769 in 1925, and the tonnage from 2,910,625 to 6,916,697 tons.

**ACCOMMODATION.**—The Table Bay Docks, sheltered by a massive breakwater (4,700 ft long), provide deep-water quays fitted with every modern facility for the rapid handling of passenger and cargo traffic, as well as for coal and oil bunkering, for the largest vessels voyaging in the Southern Hemisphere. Ships of 20,000 tons gross

**ANCHORAGE.**—The outer anchorage at Table Bay is safe, when the wind is blowing from the south vessels arriving at night may with advantage, anchor north of the breakwater in from 9 to 10 fathoms, where they will be in a good position for dropping into the inner anchorage on the wind falling.

**APPROACH.**—The entrance to the harbour is 250 ft wide, between two piers, and access is easy. The depth at entrance is 40 ft at low water ordinary spring tides.

**BALLAST.**—No ballast may be landed or shipped at the docks or basins except by permission of the Secretary of the Harbour Board, and only at such places as he may

formed by the Administration, the charges being 1s 6d per ton in dock (2s 6d per ton overtime), and the same in the Bay, plus 1s 3d per ton lighterage.

**CARGO HANDLING.**—The quays at Capetown are equipped with cargo sheds having a total floor area of 446,883 square feet and a capacity of 4,515,837 cubic feet. They are served by extensive railway sidings directly connected with the main and branch line railway service throughout South and South-West Africa, Rhodesia, and the Congo. A large number of electric cranes of from 1½ to 15 tons' lifting capacity facilitate the rapid discharge and loading of cargo. Thus

the direct loading of goods into railway trucks for transit to any part of the railway system can be effected at the ship's side.

**CHILLING CHAMBERS.**—A feature of the shed and storage accommodation at Capetown Harbour is the 12 chilling chambers equalling 73,900 cubic feet capacity, which provide accommodation for over 900 tons of fruit pre-cooling at one time.

**DOCKING FACILITIES.**—A modern graving dock affords first-class facilities for repairs of the heaviest nature, and can be emptied in three hours. Its dimensions are: Length on keel blocks, 500 ft., depth on sill at high water, 25 ft., width at coping, 90 ft., at entrance top, 68 ft., at bottom keel block height, 50 ft. 6 in. The lifting power of the dock is 500 tons. There is also (a patent ship with cradle for craft up to 500

the following. Ships of war and steamers under 2,500 tons gross reg. £2, of 2,500 tons and over, £3. 7s. 6d. Sailing ships under 500 tons, £1, of 500 and under 1,000 tons, £1 10s., of 1,000 and under 2,000 tons, £2; of 2,000 tons and over, £3. For shifting in either dock or bay the same amount is again payable. For pilotage in and out of the port, if from within the limits of the jurisdiction of the Administration, to a safe anchorage, or, vice versa, the charge is the same as for docking or undocking, for every mile beyond the above limits, 10s. per mile, with special rates for special services.

**PORT CHARGES.**—Following are the principal dues and charges payable at the port of Capetown, many of these being common to all Union ports.—

**BALLAST.**—Ballast is supplied by the Administration during working hours at the

being allowed for the second and following hoists, provided that the heaviest weight shall be considered as the first hoist for the purpose of the tariff. Double rates are charged for Sundays and public holidays, and after ordinary working hours.

**HARBOUR DUES.**—These are uniform for all Union ports. Vessels which enter an inner harbour, dock, or river, or come alongside a wharf, jetty, or quay, are charged dues as follow. For each registered ton net up to 3,000 tons, 8d., over 3,000 tons, 3d. For each day after ten days in the case of steamers, and 21 days in the case of sailing ships, one-tenth of the above. Reductions up to 60 per cent are made in the case of vessels leaving within 60 hours of their entrance, as well as for vessels re-entering within 21 days (after having visited another port).

1. ADDERLEY STREET, Capetown. Premises of Messrs. L. Pinn & Co. (representing Mappin & Webb) in right foreground.

2. ST. GEORGE'S STREET, Capetown. Showing location of handsome Southern Life Buildings.

tons, and with accommodation for two vessels at a time.

**GRAIN ELEVATOR.**—In 1924 a large elevator of the latest type was completed in time for the handling of a portion of that year's maize crop. The elevator includes silo storage and quay galleries, and has a storage capacity of 30,000 tons.

**LIGHTERAGE.**—Lighters are used for coaling. Before any cargo is lightered, permission must be obtained from the Secretary to the Harbour Board, from whom lighters may be hired at rates to be agreed upon.

**PILOTAGE.**—This is compulsory. The charges for pilotage in or out of the docks or basins, or to the anchorage, must not exceed

following rates. Alongside ship at wharf, jetty, or quay, 4s. per ton; on board ship at wharf, jetty, or quay, 5s. per ton; alongside ship in roadstead, 7s. per ton.

**CRANE HIRE.**—At those quays where electric cranes are installed, the masters or agents of all vessels desiring to discharge or ship cargo must, if required by the Dock Traffic Manager, use these cranes exclusively for loading or unloading their vessels. For the use of each crane or transporter the charge is 9s. per hour during ordinary working hours and 12s. per hour otherwise, the minimum charge being £1. For the use of heavy lifts the charge ranges from 5s. to 15s. per ton, a reduction of 25 per cent.

The harbour dues for vessels calling for the sole purpose of taking bunker or cargo coal are 8d. per ton on the actual quantity of coal taken up to 1,000 tons and 4d. for each ton over. Minimum charge, £20, unless the full ordinary port dues amount to less, and the maximum charge not to exceed one half the ordinary port dues, calculated at full tariff rates.

Vessels calling for orders only, or for medical assistance, or for the sole purpose of dry docking for examination, cleaning or painting, are charged one half the ordinary port dues, with a maximum charge of £20.

**LIGHT DUES.**—These are payable at the first port of call for each voyage for the

whole coast of the Union of South Africa, a voyage being reckoned from the first port of call to destination and back, provided, however, that the ship does not proceed beyond the limits of the Union or more than once in each direction. For each net register ton, 2d.

Vessels calling for bunker or cargo coal, 1d per registered ton, for orders, or medical assistance, exempt.

**RINT AND STORAGE**—After 72 hours, for 7 days, 3d per ton per day, afterwards, 1s. On open spaces, one-half, on cargo transhipped—first 14 days, 3d per ton in store, one-half in open.

**SORTING**—Deals and galvanized iron, 1s 6d per ton, boards, 3s 6d to 5s per ton, other cargo, 2s 6d per ton.

**TOWAGE**—In or out of the harbour within a radius of three miles from the entrance or anchorage, including mooring and unmooring at anchorage and at jetty, wharf, or quay—

	£	s	d

\*Net register.

Assistance to vessels under their own steam in or out of the harbour as above, for each tug employed, £6 15s 0d, attendance in or out of the harbour, £3 7s 6d.

All steamers exceeding 500 tons net register are subject to a charge for assistance or attendance as above, provided, however, that the charge shall only apply to steamers entering or leaving the inner harbour, dock, or river, or mooring at a jetty, wharf, quay, or buoy.

**TRANSHIPPING**—Direct ship to ship, 5s per ton, when landed and stored before transshipment, 7s per ton, bullion and specie, 1s per box (without responsibility).

**WAREHOUSING**—Cargo not exceeding 2 tons per package, 5s per ton, 2 to 5 tons, 6s 6d per ton.

**WATER**—Supplied direct to boats at the quay from mains, 7s 6d per 1,000 gallons. To vessels in the bay by tugs or water boats, 35s per 1,000 gallons. Minimum, 37s 6d.

**QUARANTINE**—If a vessel has a clean bill of health, the port captain gives pratique. If from an infected port, or having infectious or contagious disease on board, the Medical Officer makes examination, and his instructions must be obeyed under heavy penalty. In case of quarantine, passengers are landed and the ship disinfected. The master must furnish declaration of health on arrival.

**SHIPPING AND TRADE**—Under all the headings in the official "Comparative statement of vessels arriving and of goods landed, shipped, and transhipped at Table Bay Harbour" there was a substantial increase in the figures for 1925 over those for 1924, which was, for normal times, a record year. In 1924, British and foreign steamers arriving "with and for cargo or for bunkers only" numbered 1,551, with a gross tonnage of 6,474,398, the total including motor boats of all nationalities. In 1925, steamers arriving numbered 1,750, with a gross tonnage of 6,831,053, and motor vessels 19, of 85,644 tons gross, a total of 1,769 vessels of 6,916,697 tons, making an increase in favour of 1925 of 218 vessels and 442,299 tons gross.

The value of imports through the port rose from £12,400,000 in 1922 to £12,600,000 in 1923 and over £13,500,000 in 1924. In

(See letterpress, page 159)

CAPE ELECTRIC TRAMWAYS LIMITED, Capetown.  
View of the Company's Property at Principal Car Depot.

the last named year the imports trade of the port was about 22 per cent and the export trade 63 per cent of the total trade of the Union. Apart from bunker coal, the largest trade is done in maize and citrus fruits. In 1924-25 Capetown handled 394,179 tons of coal, of which 309,340 tons were for bunkers, 24,175 tons were coastal, and 604 tons were

export coal. The total quantity of goods handled during the year was 1,791,635 tons, an increase of 505,767 tons over 1924.

**TIME SIGNALS.**—A ball is dropped at noon, Cape Colony mean time, at Alford Docks, equal to 22 h 0 m 0 s Greenwich mean time, and 23 h 13 m 41 s local mean

time. A gun is also fired on Imhoff battery at the same time, equal to 23 h 13 m 0 s local mean time.

**TUGS.**—The port is equipped with three powerful tugs and two smaller craft. The three large tugs are fitted with modern salvage and fire appliances.

## REPRESENTATIVE COMMERCIAL ENTERPRISES

### CAPE ELECTRIC TRAMWAYS, LIMITED.

**Inception.**—This company, which was registered in London on October 29, 1897, was established to carry into effect an agreement with Wernher Beit & Co., and to construct, lease, equip and work tramways or light railways in Cape Colony or elsewhere in South Africa.

**Capital.**—The authorised capital of the company is £500,000 in £1 shares, of which 491,222 have been issued (400,000 as paid). Debentures issued are 6 per cent (registered), repayable 1902-1925 (24 yearly drawings), at 6 per cent premium (less redeemed), £44,900, 5 per cent (registered), repayable at par on July 1, 1925, or at £100 before that date in circumstances specified in the Trust Deed, £140,000.

**Concessions.**—The company acquired the whole of the shares of the following undertakings: The City Tramways Co. of Capetown (concession to 1920), Metropolitan Tramways of Capetown (concession to 1920), Southern Suburbs of Capetown Tramways Co. (concession to 1926), and the whole of the share capital of the Port Elizabeth Tramways Co., whose line was first opened to traffic in 1897 (concession to 1925). In the two first named undertakings expropriation rights were not exercised by the Council, the concessions therefore ran on for periods of 5 years. The company also acquired the Suburban Railway (called the Sea Point Railway), subsequently expropriated by the Sea Point Municipality, which paid £41,200 in compensation. The purchase money for the above amounted to £830,000.

**Track.**—There are 27½ miles of single track in Capetown, the route length being 23.24 miles. In Port Elizabeth the single track measures 10.71 miles. The gauge throughout is 4 ft 8½ ins. Girder rails are 81 and 83 lbs and 85 and 95 lbs. The maximum gradient is 1 in 8, and the minimum curve 65 feet (Port Elizabeth), with 20 ft radius in Capetown. The overhead trolley system is adopted with overhead feeder cables. The voltage is 550 direct current.

**Power Houses.**—The Capetown power house consists of the following units: One Yates & Thoni 820 horse power engine, one Macintosh & Seymour 850 h.p. engine, three engines by the Philadelphia Engine Company of 370 h.p., coupled to one Dick Kerr 500 k.w., one 550 General Electric Company's, and three 200 k.w. Westinghouse generators respectively. Steam is supplied by four Babcock & Wilcox 250 h.p. boilers, and 4 Heine boilers of 300 h.p.

The Port Elizabeth power house contains: Two Belliss engines of 750 h.p., two Dick Kerr generators of 500 k.w. each, four Macintosh & Seymour engines, coupled to four 110 k.w. General Electric Company's dynamos, and six Babcock & Wilcox boilers fitted with Green's economisers. Worthington and Belliss condensers are installed. The company is now concluding an agreement to obtain all its power requirements from the Municipality power station.

**Rolling Stock.**—The Capetown rolling stock consists of 88 double and 20 single deck cars, of which 61 are with bogie trucks and 47 with single trucks. Equipments are by Dick Kerr, The General Electric Company and J. G. Brill. In Port Elizabeth the rolling stock comprises 15 double and 21 single deck cars and 1 trailer, all with hand, slipper and emergency brakes.

GARLICK LIMITED, Capetown.

1. Extensive Window Displays, Exchange Place.
2. Import Department.
3. Extensive Window Displays, Adderley Street.

**Financial.**—At June 30, 1925, the gross profits, plus sundry receipts, amounted to £110,598. After paying administration and general expenses, taxes, debenture interest, and making provision for debenture redemption, the net profits were £51,856, which sum, added to the balance from last account of £12,482, left a total of £64,338, which was appropriated as follows: special reserve, £20,000; 6 per cent dividend on shares (tax free), £29,473, leaving £14,865 to be carried forward.

**Dividends.**—These have ranged from 2½ per cent, which was paid in 1910-11 and 1914, to 15 per cent, which was disbursed in 1902-1903.

**Statistical.**—The following figures show the number of passengers carried, the car mileage run, receipts, costs, and average per car mile in pence for the years named.

	CAPETOWN		
Year ending, June 30	1919	1924	1925
Passengers carried	23,101,039	26,778,917	26,527,185

(See also illustrations, pages 157, 158.)

#### QUEEN'S HOTEL.

**Situation.**—Ideally situated at the foot of Lion's Head, commanding unique views of both mountain and marine scenery, this hotel, standing in spacious grounds extending to the sea, is within three and a half miles by rail or tram of Capetown.

**Premises.**—The hotel has been recently rebuilt and modernised, with the result that the lounges, writing and sitting rooms are all spacious, and represent the last word in decoration and comfort. The dining room is very pleasing in design and well adapted to climatic conditions, while the cuisine leaves nothing to be desired.

**Accommodation.**—Beside the ample bedroom accommodation, a large proportion of the rooms having private bathrooms attached, there are many elegantly furnished suites, from all of which beautiful views are obtainable. Telephones are installed in every room, and nothing that can contribute to the comfort and well-being of the visitor, be he tourist or health seeker, has been overlooked.

**Palm Court.**—The illustration on page 159 of the open air dancing court, with its graceful palms—a special feature of the Queen's—will indicate under what charming and comfortable conditions the hotel dances are conducted, the dinner dance being held every Friday evening.

**Management.**—The management of the hotel is in the hands of Mr. Alexander, whose long and varied experience in hotel management is a guarantee that visitors will receive every attention and comfort at the Queen's, which justly ranks as one of the premier hotels in South Africa.

**Telegrams.**—For the hotel "Royalist, Sea Point." For visitors "Queen's, Sea Point." Telephones Central 5141 to 5150 (10 lines).  
(See illustration, page 159.)

#### GARLICK LIMITED.

**Inception.**—The founder of this business, Mr. John Garlick, was born in Lincolnshire, England, in 1852. He arrived in South Africa in 1872, and commenced business at the corner of Strand and Bree Streets in the year 1875.

**Location.**—As the visitor enters Table Bay he sees before him the large block of buildings in which the drapery and soft goods business of Garlick's has recently celebrated its jubilee. Established a little over fifty years ago, the name Garlick has become a household word throughout the Union of South Africa, the ramifications of the business extending to all the principal towns throughout the country, as also to Southern Rhodesia and beyond. With the headquarters of this immense business concern at Capetown are associated Garlick's Store and Garlick's Wholesale.

**Premises.**—Garlick's Store occupies an imposing building with a large frontage on Adderley Street, and also extends along the entire length of Exchange Place. It is essentially a retail drapery establishment, but in common with all modern emporiums of the kind it is an enterprise which meets the needs of every shopper, there being obtainable within its very substantial walls anything from a needle to a motor-car. In the accompanying illustrations several of the excellently appointed departments are portrayed, a capital view is also given of the spacious showroom, in which in appropriate season are displayed the latest feminine creations of the highest class, drawn from the principal markets of the world.

**Wholesale Block.**—Adjoining the retail premises is the huge towering building, consisting of no less than ten floors (including basement), which is given over entirely to the wholesale side of the business. This block is being extended to nearly double its present size, and it is anticipated that the work will be completed in 1927-1928.

**Head Offices.**—Exchange Place, Adderley Street, Capetown.

**Addresses.**—Retail Section, P.O. Box 63; Wholesale Department, P.O. Box 694. Garlick Ltd., P.O. Box 60. Telephone No. 214.

**Cables.**—"Garlim," Capetown.

**London Offices.**—These are at 8/9 Barbican, London, E.C. 1, and are periodically visited, in common with the principal Continental and American markets, by one or other of the principals of the firm.

#### L. PINN & CO.

**Inception.**—This firm of gold and silver-smiths, expert watchmakers and jewellers was established in Capetown in 1893.

**Activities.**—Messrs. L. Pinn & Co., who are sole agents for the world renowned house of Mappin & Webb, are noted in South Africa for their extensive and high-class stocks of jewellery and other artistic articles usually associated with the trade.

**Departments.**—For the effective display of the firm's extensive stock, and to meet the

(See letterpress, page 161)

convenience of its large body of customers, the establishment has its several departments, which are as follow.

**JEWELLERY**—In this department, one of the most attractive in the shop, are displayed beautiful rings set with diamonds and other precious stones, brooches, pendants, etc. Real pearls are also a feature of the section, and these are in profusion.

**WATCHES**—Messrs. L. Pinn & Co. are the sole proprietors of the famous "Good Hope Lever" watches, and they carry with them a twenty years' guarantee. These time keepers are famous throughout South Africa; they are noted for durability and accuracy, and can be obtained in gold, silver, and gold-filled cases. In this category are 9 carat, 14 carat and 18 carat gentlemen's pocket and presentation watches, ladies' wristlets in all the latest fancy straps, also platinum and diamonds.

**LOCKS**—In this department there is a fine display of Westminster chimes and gong clocks, in Grandfather's, wall and pieces for mantels. These clocks are a feature of the establishment, and are to be found in a special showroom.

**SILVERWARE**—Here are to be seen all the articles usually associated with such a department, and being in great variety they make an attractive show.

**ELECTROPLATE**—The chief feature of this section is Mappin & Webb's Prince's Plate, which is guaranteed to wear a life-time.

**CUTLERY**—In the cutlery department the productions of Messrs. Mappin & Webb are also prominent, there being handsonely fitted canterers and ware in the house.

**CUT GLASS**—In this division of the house is stocked Bohemian, English and American cut glass, the display being of wide range and of the highest quality.

**EARTHENWARE**—In the earthenware department are English Crown Ducal pots, rose bowls, vases (flower and other), etc.

**LEATHER GOODS**—The section given over to leather goods carries English, Austrian and Parisian hand bags, evening bags and

dance bags, moire silk and enamelled fronts. The latest French models in evening bags are received by the firm by every mail.

**Offices**—The offices and showrooms of Messrs. L. Pinn & Co. are at 43 & 45, Adderley Street, Capetown.

**Cables**—"L. Pinn," Capetown  
(See also illustration, page 162)

#### CLEGHORN AND HARRIS LTD.

**Inception.** This important firm was founded over 50 years ago by the late partners, Mr. John Cleghorn and Mr. John Harris, for the retailing of ladies' and men's wear and general household requirements.

**Capital.** After many years of successful trading, the organisation was converted into a limited liability company in 1903, with a capital of £400,000.

**Activities.** In addition to its extensive establishment in Capetown, the firm has other stores and large interests throughout Africa, as also its own buying office in London, which acts as buying agents to wholesalers and retailers throughout South Africa, Kenya Colony, Australia, New Zealand, etc. The London office is staffed with experienced buyers, all specialists in their respective departments, and the organisation throughout ensures to customers a complete service, including packing, shipping and insurance. Colonial and foreign houses requiring the company's services as buying agents should communicate with the office in Capetown, or at the London address. The company will only act as buying agents for one business of the same style in each town.

**Location.** Cleghorn's Departmental Store is one of five floors, and is conveniently situated in Adderley Street. It occupies a most valuable site, with an imposing frontage immediately opposite the Railway Station. There are also entrances on three other streets—Strand, Castle and St. George's.

**Departments.** The ground floor and the two first floors of this fine building are utilised for the business, and have accommodation for 50 separate departments, featuring every requirement for personal wear and

household use. The remaining floors are divided into suites of offices for commercial purposes.

**GROUND FLOOR**—The ground floor, with its main entrance in Adderley Street and a corner entrance at the junction with Castle Street, is very spacious and finely equipped with all modern show cases and shop fittings, giving an unobstructed view of the whole area. Within this space are the following departments displaying quality merchandise from all parts of the world, including ladies' and children's shoes, laces, ribbons, flowers, neckwear, gloves and hosiery, handkerchiefs and scarves, haberdashery, trimmings, art needlework and wools, foreign fancy goods, bags and trunks, perfumery and stationery, with a cosy corner for a confectionery and cake department. This floor also accommodates the silk, umbrella and sunshade department, the sections for cotton and woollen dress fabrics, and the linen and Manchester department.

**Extension**—There is an open extension through to St. George's Street on this floor, which provides for a large department containing the soft furnishing bureau and carpet sections. Leading off from this part a large space is devoted entirely to the gentlemen's outfitting and footwear department, which has its main entrance in Strand Street.

**FIRST FLOOR**—This is reached by a wide staircase or high speed elevator, has an area of approximately 12,000 square feet, and finds room for all the showroom departments, including ladies' and children's model and ready-to-wear millinery, ladies' coats, costumes and gowns, maids' and children's section, ladies' corset and lingerie department, with fitting rooms for each.

**Cafe**—On the last named floor is also a high class restaurant and cafe with every modern equipment. It has openings on to a wide covered balcony running the full length of the Adderley Street frontage, and is a popular rendezvous. The main entrance to the cafe is in Castle Street, and is served by a wide

marble staircase and high speed elevator which reaches all floors

Adjoining the cafe and also conveniently placed near the showroom are ladies' toilet and rest rooms, perfectly fitted. A private telephone is also installed.

**Extension.**—An open extension on this floor, with its windows overlooking St. George's Street, contains the crockery and glassware, household ironmongery, electro-plate and ready-for-service electrical goods. These departments are fully equipped to meet all requirements.

**SECOND FLOOR.**—The second floor accommodates the mail order and advertising service, millinery and dressmaking work-rooms, reserve stockrooms and office accommodation.

**Elevators and Telephones.**—All floors are served by high speed elevators, and each department has its own automatic telephone installation.

**Window Display.**—A feature of the store frontage is the fine unbroken line of large display windows, having a running length of 200 feet on Adderley and Castle Streets. The first floor balcony is also supplied with show windows.

**General.**—The store generally offers a wonderful assortment of high quality merchandise at popular prices, and, apart from being most conveniently situated in the shopping centre, affords accommodation and service second to none in the Union of South Africa.

**Addresses.**—Registered office—Adderley Street, Capetown. London buying office—12 Bunhill Row, E.C. 1.

**Directorate.** Messrs W. R. Cleghorn, chairman and managing director in London, W. D. Harris, vice-chairman and managing director in Capetown, S. A. Harvey and J. Walker (Capetown), and R. Islip (Johannesburg). Mr. A. A. Cook, secretary.

**Cables.** "Nachtmal" London, "Cleghorn's," Capetown. Codes A B C 5th Edition and Bentley's complete phrase. (See illustration, page 163.)

#### REGENT FUR COMPANY.

**Inception.** As ostrich feather and fur merchants this firm was established in Capetown by Mr. A. Sieradzki in the year 1889, the present proprietor being Mr. S. K. Sieradzki.

**Activities.** The company operates as dealers, retailers, manufacturers and exporters of both ostrich feathers and furs. It specialises in ostrich feather fans, of which specimens have been supplied to Royalty, and wraps of various kinds. Stoles and plumes are also prepared in large numbers. Of late years ostrich feathers have not been so sought after as was the case at one period, but they are now coming into favour again.

**Furs.**—Of the South African furs dealt in by the firm, small furs, fur coats and sets are made, as well as rugs; these are kept in stock in great variety and are also made to order, while the company undertakes, in addition, the remodelling and renovation of old sets. The Regent Fur Co. has won two gold medals, one at Johannesburg in 1897 and the other at Rosebank in 1913.

**Markets.**—The principal countries to which the products of the firm are exported are the United States of America, Australia and New Zealand, but the company is prepared to supply markets in any part of the world.

**Offices.**—Corner of Strand and St. George's Streets, Capetown. Cables "Furrierder," Capetown.

#### JOHNSON MOTOR CO. LTD.

**Inception.** The oldest distributor in South Africa for the General Motors Corporation of New York, this firm has held that position for no less than 14 years, as also the representation of Buick cars and G.M.C. trucks for a like period, namely since 1912.

**Premises.**—The company has spacious showrooms and offices in Strand Street for the display of Buick cars of different models, accessories, tyres, oils, etc., and a garage, workshop and service station at the corner of Dock Road and Long Street, with a spare

and back axles and re-hung clutches and brakes. A special plant is also installed for over-hauling and repairing Delco starting and lighting units.

**Staff.**—The showroom staff, including demonstrators, salesmen and clerks, numbers 14, and mechanics, testers, etc., at the garage total 31. All the staff is specially trained, and the garage is equipped for Buick repairs only.

The territory held for representation comprises the whole of Cape Colony, except the East London district.

JOHNSON MOTOR CO. LTD., Capetown.  
Three Views of the Company's Fine Showrooms.

parts department attached, where spares are stocked for all Buick models from 1913 onwards.

**Operations.**—Painting and stove-enamelling, also upholstery work, such as the making of seat covers and hood tops, are done on the premises. There are plants, large and small, for the charging of electric vehicles and batteries, while the workshops are fully equipped for the building up of gears by electric welding, re-setting of springs and spring blades, together with up-to-date machines for quickly overhauling engines.

**Branches.**—There is a branch, with showroom and service station, at 22 Main Street, Port Elizabeth, and dealers are appointed in all the principal towns, equipped mainly for Buick service. Sales organisers, each operating in his own area from Capetown and Port Elizabeth, travel periodically through the country districts and keep in close touch with dealers.

**Offices.**—Head office: 48 Strand Street, Capetown. Cables "Jomoco," Capetown. Codes, Western Union, A B C 5th Edition and Bentley's.

**LEYLAND MOTORS (S.A.) LTD.**

**Inception.**—This company is a direct branch of the old established firm of Leyland Motors Ltd, which can be fairly described as a pioneer house, as it was established in the village of Leyland, Lancashire, Eng., in 1895, in which year it secured the first public award of any consequence offered by the Royal Agricultural Society. Awarded the silver medal for self-moving vehicles, the following year it secured a prize of £100 as a result of the famous trials held by the Liverpool Self-propelled Traffic Association. This success was followed by other awards, and the company's progress has since been continuous. In 1912 the Leyland motor was the first machine to be subsidised by the War Office as a result of some very severe tests, and the company has the distinction as motor lorry manufacturers of holding the Royal Warrant of Appointment to the King.

**Capetown Branch.**—The local company in Capetown not only has always in stock a complete range of chassis from two to six tons,

but also a comprehensive supply of spare parts. The latest product of the firm is the Trojan car and van, many of which are now to be seen in the town and country districts, being particularly suitable for use on bad roads. These vehicles have been designed solely with a view to utility, and with the object of doing away with those component parts so likely to give trouble. They can be used either with solid or pneumatic tyres, at the owner's choice, and the price has been kept as low as possible consistent with high-grade quality and production. The list of users of Leyland and Trojan cars includes the Union Government, municipalities in various centres, the railways, tramways and a large number of the more important industrial concerns in South Africa.

**Offices and Works.**—Head office and works: Leyland, Lancs. England. Trojan works: Kingston-on-Thames, London. office: 17, New Kent Road, S.E. 1. South African office: 72-74 Strand Street, Capetown.

**Cables.**—"Leymotors," Capetown.

**WILLIAMS, HUNT & JOHNSTON LTD.**

**Inception.**—Originally founded in the year 1921 as Williams, Hunt & Co., this firm, which is now a limited liability company, assumed its present title in 1925.

**Activities.**—The company imports motor cars and accessories, and possesses workshops equipped with up-to-date machinery for all kinds of repairs and service under the supervision of skilled mechanics. These workshops are housed, with the showrooms and offices, in a two-storeyed building covering an area of 12,000 sq. feet and cost £20,000. The workshops will shortly be equipped with special machinery by General Motors Inc.

**Departments.**—These are as follows: spare parts, carrying stock to the value of £5,500, assembly plant, and showrooms for automobiles and motor cycles, also for second-hand cars.

**Financial.**—This limited liability company, with a capital of £20,000, disposes of 40 automobiles a month, and has a monthly turnover of £17,000.

**Agencies.**—Chevrolet motor cars, Indian and Matchless motor cycles, Alenute lubricants and accessories, and Gilbert & Barker petrol pumps.

**Administration.**—Managing director: Mr C. S. Johnston, A.M.I.A.E.E.

**Agents and Shippers.**—Lozer, Kemsley & Millbourn Ltd., London and New York.

**Bankers.**—National Bank of South Africa, Ltd.

**Address.**—77, Strand Street, Capetown. Cables: "Powerplus," Codes: Bentley's and A.B.C. 5th Edition.

**GUY MOTORS (S.A.) LTD.**

**Inception.**—This company, whose organisation covers the whole of the South African territory, was founded in 1919.

**Activities.**—A service station is maintained with a complete range of spare parts to the value of £3,000, and agents for the Guy Motors lorries, so well and favourably known, have been appointed throughout South Africa. Amongst those who have purchased these British-made automobiles are the Johannesburg Municipality, Benoni Municipality, Natal Provincial Council (12 lorries during recent years), Capetown Municipality, and the Divisional Council, etc.

**Administration.**—Manager: Mr C. S. Johnston, A.M.I.A.E.E.

**Address.**—77, Strand Street, Capetown. Cables: "Gnymo."

**GRAND HOTEL (THE SOUTH AFRICAN HOTELS LTD.).**

**Situation.**—The Grand Hotel, which was established in the year 1893, is in a particularly convenient position for travellers, being in the centre of the town and just opposite the Railway Station in Adderley Street, the principal thoroughfare of the city. It is therefore near all the most important offices and buildings, and at the same time is but a short distance away from the Docks, so that its position could scarcely be bettered.

**Premises.**—The accommodation, which comprises the usual public rooms, includes a dining room having a seating capacity for 140 persons, 75 bedrooms and 12 bathrooms, all floors being served by an electric lift. The building itself is large and well designed, with a spacious verandah on the first floor running the whole length of the structure. The hotel is fully licensed, and the charges are moderate, ranging from 16s 6d to 18s a day, including early morning and afternoon tea as well as the usual meals and attendance.

**Management.**—The manager is Mr Chas. Finch, who has had 27 years' experience in

the hotel and catering business in Natal, while the cuisine is under the direction of a French chef. The hotel makes a speciality of catering for overseas guests and those travelling on business, while uniformed porters meet all trains and vessels.

**Address.**—Strand Street, Capetown  
Cables "Grand," Capetown

**J. SOLOMON & SON.**—41, St George Street, Capetown. Founded over 37 years ago by Mr J. Solomon, who was at one time chairman of the British Manufacturers' Representatives Association. Since 1915 the firm of Messrs J. Solomon & Son, who are general manufacturers' representatives, has been under the management of Mr R. Solomon. Travellers call upon retailers throughout the country to ensure that they are well served and to give assistance where required as to the display of goods. Messrs J. Solomon & Son also employ travellers to call upon all wholesalers in large centres and the surrounding districts, such as Transkei, Durban, Port Elizabeth, Johannesburg, East London, Mossel Bay and Bulawayo. The staff employed numbers 20. Representations held are as follow: Tate & Lyle Ltd, London; Norton, Megaw & Co Ltd, Rio; John Mackintosh & Sons Ltd, Halifax; The Salt Union, Liverpool; United Glass Bottle Manufacturers Ltd, Liverpool; Duckworth & Co, London; Kraft, McLaren Cheese Co, Canada; A & R. Scott, Ltd., Colinton, Scotland. Yearly turnover, £230,000. Branches: Mossel Bay, Port Elizabeth, East London, Durban, Johannesburg, Bulawayo and Kimberley. Bankers: Standard Bank of South Africa, Ltd. Cables "Eatable," Capetown. Codes: A.B.C. 5th Edition, Bentley's, Western Union, etc.

View of the Building.

MAJESTIC HOTEL (KALK BAY HOTELS CO. LTD.), Capetown.

1. Imposing View of the Building.
2. The Verandah.

#### MAJESTIC HOTEL (KALK BAY HOTELS CO. LTD.).

**Situation.**—This hotel is situated in the finest position on the False Bay coast, about 17 miles from Capetown, and is so located as to be absolutely free from troublesome winds. There is a splendid service of trains from Capetown, also an excellent motor road; while private lock-up garages are provided for the convenience of guests.

**Premises.**—The hotel contains 57 bedrooms and 6 suites, comprising sitting, bed, dressing and bath rooms, with hot and cold running water; in all, there are 21 bathrooms in the building. The handsome dining hall has seating capacity for 200 guests, while the lounges, writing room and billiard room are all decorated with taste and arranged with a due regard to the comfort of patrons. An electric lift serves all floors.

**Other Features.**—One of the most notable features of the hotel is the "steep," which runs the whole length of the building, the restfulness of which is enhanced by the hotel gardens surrounding the entire premises. The cuisine, which leaves nothing to be desired, is under the supervision of a Continental chef. Dances are held periodically, and excellent fishing and bathing are to be enjoyed in the immediate vicinity.

**Tariff.**—This is moderate, ranging from 18s 6d per week. Monthly terms may be arranged, and these vary from £14 14s in the winter to £22 10s during the summer months.

**Staff.**—This numbers 50.

**Proprietors.** The Kalk Bay Hotels Co. Ltd.

**Cables.**—"Majestic."

#### HILDASIME HOTELS LTD.

**Situation.** The residential hotel of this company, standing in its own grounds of 2½ acres, on Beach Road, Sea Point, commands fine views of both land and sea, and is adjacent to the electric car service to Capetown, which is only twenty minutes distant.

**Premises.**—These contain 130 bedrooms, a handsome reception lounge, drawing room, library, smoking room, and a large and lofty dining room.

**Recreation.**—The hotel caters largely for those interested in sport, and has on its grounds two tennis courts, a croquet lawn, putting green and a quail terrace. For indoor amusement, there is an excellent billiard room. The hotel has recently been appointed as R.A.C. headquarters for Sea Point.

For those seeking relaxation, or for invalids recuperating their strength, the air of Sea Point is world famous, the mean average temperature being about 63 degrees F.

**Management.**—This is under the direction of Mr W. E. Hopwood, the managing director, who has had over 25 years' experience of hotel management. The staff numbers 40.

**Terms.**—These range from 12s 6d per day, single room; 10s each person double. Special terms are quoted for the early and late seasons.

**Addresses.**—Telegrams "Hopwood," Sea Point, Capetown. Cables, "Hokshoren" (Reuter). Telephones, 30 and 34 Sea Point.

#### J. H. STURK & CO.

**Inception.**—Established in the year 1793, this firm conducts the oldest wholesale tobacco business in South Africa.

**Development.**—In 1876 the enterprise was acquired by the family of the present owners, Messrs. H. A. C. and T. O. W. Becker. For a long time the interests of the firm were confined to the importation of all the well-

HILDASIME HOTELS LTD., Seapoint, Capetown.  
The Hotel from the Bowling Green.

known brands of cigars, tobaccos, cigarettes and pipes, but with the opening up of the country other lines were added, and to-day it deals in many kinds of goods, including household hardware, aluminum ware, enamel ware, crockery, glass, toys and stationery. The staff now numbers 52.

**Financial.** The company carries stocks to the value of £40,000 and the annual turnover is between £150,000 and £160,000.

**Premises.**—The premises, which are the property of the firm, include the office, a four-storey building 150 ft. by 100 ft., and two warehouses, one of two-storeys measuring 48 by 100 ft., and the other of three-storeys 150 by 100 ft.

**Activities.** The firm is the sole distributor of "Pin Head" cigarettes, and manufacturer of the "City Mixture," pipe tobacco of S. A.

leaf also of Sturk's snuffs. In addition to the importation of tobacco, it is also engaged in the exportation of South African leaf tobacco, and acts as agent for Schussler's Tissue Remedies (Margaraf's) and Versfeld's roll tobacco.

**Buyers.** In London, Messrs J. W. Anderson & Co., 94 St. Mary Axe, E.C. 3, in New York, American Trading Co. Inc., 25 Broad Street.

**Shippers & Agents.**—Hamburg G. Vogtmann & Co., 16 Glockengiesserwall.

**Offices.**—52, Shortmarket Street, Capetown. Cables "Sturks," Capetown. Code A B C 5th Edition.

**Manager.**—Mr. A. Wakelin.

**Bankers.**—Standard Bank of South Africa Ltd. Long Street branch.

## THE GROWTH OF CAPETOWN

Recent developments at the port of Capetown and the almost yearly extension of the shipping facilities afforded have been to some considerable extent brought about by a remarkable increase in the city's industrial productivity and trade since the beginning of the present century. There is no doubt that industrially Capetown has a great future, and the steady increase in factories during recent years shows that business men have not been slow to appreciate the fact.

There are at present within Greater Capetown boot and shoe factories, breweries, clothing factories, butter and cheese factories, coach and wagon works, cement and lime works, grain mills, jam and fruit preserving factories, sawmills, tanneries, tobacco

1. General Office.

J. H. STURK & CO., Capetown.

2. Corner of Sample Room.

MURRAY AND STEWART, Capetown.

Some of the Firm's Important Contracts: See particulars page 171.

factories, soap factories, sweet factories, wool washeries, brush and broom factories, biscuit factories, etc.

The growth of Capetown, however, has not been confined to its industrial side. The excellence of the railway service to and from the suburbs makes it convenient for the business men of the city to live much further out than would otherwise be possible, and so the attractive residential suburbs stretch as far as Mmzenberg, which is 15 miles distant from the centre of the town and can be reached in 27 minutes, or to Lakeside, which is 14 miles distant and a mile only from the False Bay coast.

**BUILDING BOOM.**—Some striking figures reflecting the building boom which took place within the Capetown municipality during 1925 are furnished by the City Engineer's Department. In the ten months ended October 31, 1925, no fewer than 756 plans of new buildings were passed, representing a total estimated value of £1,204,935, while in regard to alterations to existing structures during the same period 1,097 plans were approved, representing £325,535. So far as completed buildings were concerned, in the 11 months ended November 30, 1925, the total number of dwelling-houses completed was 279, representing a total estimated value of £293,350, as against 328 and 1,354,170 for the whole of 1924 and 396 and £420,550 for 1923. Other buildings completed during the same period of 1925 totalled 339, representing £140,420. The corresponding totals for 1924 were 398 and £186,405.

### REPRESENTATIVE BUILDERS AND CONTRACTORS, ETC.

#### MURRAY & STEWART.

**Inception.**—As engineers and public works contractors, this firm was founded in February 1902 by Messrs J. G. Murray (the senior partner) and J. Dempster Stewart, both of whom were trained in Scotland, passing from there to the City Engineer's Department at Capetown.

**Activities.**—Commencing on a modest scale, amongst the earlier works of the firm were some drainage contracts for the City of Capetown, and subsequently street construction for the same corporation. Other drainage contracts followed, Sans Souci new road and bridge being built in 1904, while Mr. J. D. Stewart carried out two terra-cotta constructions in East London, "Lloyds Buildings" (costing £10,000), and the "Bank of Africa" (now the National Bank), costing £20,000. Owing to illness, Mr. Stewart retired from the firm in 1908, and since that date the business has been carried on solely by Mr. J. G. Murray.

**Later Constructions.**—In 1908 the Kloof Wek Reservoir, one of the first reinforced concrete constructions in the country, was completed, and in 1909 the last railway built for the old Cape Government, a section of the Natal Cape Line, was undertaken by the firm. In the ensuing years many large bridges were erected, and the Caledon-Sandfontein section of the South African Railways was built, as also the Sea Point Pavilion and Sea Wall, while in 1918 the firm commenced operations in Port Elizabeth with the construction of the main intercepting sewer for the new drainage scheme. Thereafter many municipal contracts were carried out in that town.

**Present Day Operations.**—At the present time the firm is completing the last section of the Humewood promenade and the new

reinforced concrete Wool Market for the Port Elizabeth Council, while other contracts in hand are a new mill and grain silos for the South African Milling Co., with railway sidings, etc., at Salt River, silos for Messrs. Pyott Ltd., at Woodstock, the firm being responsible for the whole design and construction, a reservoir for Stellenbosch Municipality at Jonkers Hock, and a sewage disposal scheme and complete town drainage system for the same municipality, at a cost of £70,000. Altogether the firm now has on hand work to the value of about £250,000.

**Contracts Illustrated.**—Among the contracts carried out by Messrs. Murray & Stewart, and portrayed in the accompanying illustrations, are the reinforced concrete road bridge at Cradock, built on rock foundations in 1912-13 for double traffic, reinforced concrete bridge for double traffic over the Great Fish River at Cradock, built to the order of the Union Government in 1912-13, at a cost of £20,000, completed piers and staging for concrete spans of 50 feet each for De Jagers Drift bridge over the Buffalo River, built in 1920-21, costing £150,000, reinforced concrete mill and construction of silo at Salt River, near Capetown, for the S.A. Milling Co. Ltd., to store 11,000 tons, Wilge River bridge, near Frankfort, built in 1920-21 for the Union Public Works Department, one of the four filter beds at the Stellenbosch sewage disposal works, the whole scheme costing £70,000, South African road bridge, built in 1919-20 over the Buffalo River, early construction stages of the concrete grain silo and Mill for the S.A. Milling Co. Ltd. at Salt River, costing £125,000, and reinforced concrete reservoir for Stellenbosch Municipality in Jonkers Hock Valley.

**Offices and Branches.** Head office, 142 Longmarket Street, Capetown. Branches at Port Elizabeth, Salt River, Stellenbosch and other towns throughout the Union. Cables: "Must," Capetown, Port Elizabeth and Salt River.

#### A. B. REID & CO.

**Inception.** This private company was founded in 1890 at Capetown by Mr. A. B. Reid, who still controls the business.

**Activities.**—Besides being builders and contractors, the firm manufactures all kinds of joinery, cabinet work and furniture, and imports every description of building materials, mostly from the United Kingdom.

**Constructions.**—Messrs. A. B. Reid & Co. have always been associated with Mr. Herbert Baker, the well known South African architect, whose work has attained an international reputation. Among the many famous edifices in the country for which the firm has been responsible may be mentioned Groot-Schuur, the residence of the late Mr. Cecil Rhodes, which was bequeathed to the nation (the company also manufacturing at its works the bulk of the furniture which adorns that building), the new Cathedral at Capetown, the South African Association's Building in Church Square; the University Buildings, the additions to the Mount Nelson Hotel, (which cost £100,000), the Majestic Hotel at Kalk Bay, and many private residences, notably those of Messrs. J. W. Jagger and W. A. Webster.

**Reconstruction, Etc.**—The reconstruction of "The Old Town House," now Michaelis Art Gallery, was undertaken by Messrs. Reid & Co., who were also responsible for the fine panelling and fittings therein. This work was of peculiar interest as the building is reputed to be the oldest in Capetown, and is rich in historical associations. The firm fitted out the Royal suite used by the present
