## PREFACE

THE extremely favourable reception accorded to previous publications on China, Japan, other Eastern Countries, and South America has encouraged the compilers to enter upon the production of a number of volumes under the title of "Ports and Cities of the World," the fourth of which, embracing Africa, Egypt, India and Ceylon, is now on issue. Although bearing a title dissimilar to that of earlier works, the present one (while giving marked prominence to ports and cities) has all the best characteristics of those publications, and forms another of the series of this company's "Commercial Encyclopedias," which, by virtue of their many practical features, represent a unique departure in commercial literature.

With the growth of competition in international commerce the necessity for a closer acquaintance with the history, peoples, climatic conditions, administrative details and commercial requirements of countries in other parts of the world has become obvious to all whose outlook and business are other than merely local.

An intimate knowledge of the world's markets and lengthy contact with the opinions of merchants abroad, especially with regard to their difficulty in securing effective co-operation from connections overseas, have long made clear to the compilers of this publication the great disadvantages under which the manufacturer, without the opportunities of travel, must of necessity labour. The aim of this work is, therefore, to maintain a medium for the interpretation of existing conditions in distant countries, for the needs of which the manufacturer is called upon to provide.

Brevity and facile reference being first essentials, the information is here presented under logical sections, which are again divided into sub-sections and brief paragraphs, the latter in alphabetical order. This arrangement is assisted by a summary of contents introductory to each section and a complete index at the end of the book, whilst the cover provides the key to a thumb index scheme which carries a differently colored set of tabs for each country. Finally, a brief but reliable business directory is included in each section, thus particulars of Shipping, Railway and other Transport Companies accompany the general information on "Transport"; other appropriate business enterprises follow either "Commerce," "Industries, or the leading Cities" and so on in like manner, serving the dual purpose of defining the commercial status of the countries, which is best gauged by the number and importance of the business institutions, and introducing firms of good standing with whom business connections can be made with confidence.

The inclusion of illustrated descriptions of selected enterprises, certainly the most representative ever published in connection with the commerce of the countries covered on the present occasion, is, as in the previous publications, a feature of this volume, as evidence of the great part played by individual organisations in the development of Africa, Egypt, India, and Ceylon, not only in foreign trade, but in the promotion of numerous agricultural, pastoral, mining and other industrial enterprises, in the improvement of ports and cities, and indeed in every field of activity.

The life of the compendium justifies its production in this elaborate form, inasmuch as ninety per cent. of the information is of a basic character, as applicable to the position five years hence as to that of to-day. The comparative statistics, covering representative periods and illustrating the financial positions, foreign trade, production quantities and values, the ratio of progress in land and sea transport, and the consequent development of natural resources, have a vital bearing on the next five years, and are of as much importance to the business man as a knowledge of political history is to the politician.

Failing an actual visit, the illustration is the best means by which an impression of conditions can be obtained. The pictures here reproduced are for the most part only such as present aspects of commercial significance, and show the various patterns in the business fabric of the different countries.

Observation has shown that these volumes, placed in any reading room, either general or strictly commercial, attract the immediate attention of nine out of ten visitors. This, of course, has an important bearing on the publicity value of the Series. In this connection stress must be

laid on the distinction between nominal and "reader" circulation, since in virtue of the long period of usefulness and special character of these publications the effectiveness of the distribution cannot be calculated in relation to the number published. The circulation of a trade or technical journal as a parallel example--may be much lower than that of a popular paper, but its publicity appeal, confined to members of particular trades or professions for whom the information has special significance, is necessarily higher. The circulation of a valuable medium like "Ports and Cities of the World," produced at great cost, is obtained by personal canvass of merchants of standing who are interested in the countries under review, while there is a further and wide distribution among commercial institutions, steamers, hotels, clubs, etc., where an important reading public is formed.

The information is presented as far as possible without comment. Comparative statistics and other data clearly indicate to what extent the countries treated of in this publication are markets of immediate and prospective importance. That they are rich in fertile soil, have boundless

---

### IMPORTANT NOTICE

*It has come to our knowledge that certain individuals are utilising volumes of the Commercial Encyclopedia Series for canvassing purposes in connection with a compilation which they promise will conform in all respects to the sample shown. They either expressly represent that the books have been produced by them, or, by silence on the point, leave this to be assumed. In so far as they may be successful in this practice they are obtaining money under false pretences. While we are always ready to encounter the genuine competition of firms canvassing on books produced by themselves independently, notice is given that any person or persons making piratical use of our publications or any part thereof will be prosecuted.*

*Business men are accordingly recommended to demand from all persons approaching them as our representatives documentary proof of their bona fides.*

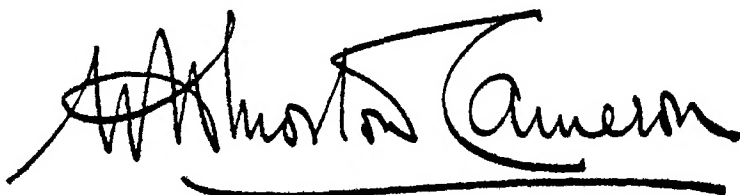

*The task of producing books of this character is one of exceptional difficulty, and, therefore, the most acceptable evidence of capacity to compile and deliver a volume lies in the examples of past work. Good intentions alone are not sufficient, unless, indeed, it is made clear to those who are invited to become subscribers that these are all the prospective publishers have to offer as guarantee of their ability to fulfil the contract.*

---

productive capacity, and industries of almost unlimited expansion are plain statements of fact, yet it must be borne in mind that many of their resources remain in large measure undeveloped, still awaiting the constructive forces that only labour and capital can supply.

In conclusion, it may be remarked that the book represents a lengthy period of conscientious endeavour, and, notwithstanding inevitable sins of omission and commission, the publishers feel it not immodest to claim that no other work offers at once so extensive and so intensive a survey of life and commerce in the countries under review.

For the Globe Encyclopedia Company :

A handwritten signature in dark ink, reading "Arthur Cameron". The signature is written in a cursive style with a large, sweeping initial "A" and a long, horizontal flourish extending to the right.

#### PHYSICAL GEOGRAPHY

INDIA (whose name is derived from the Sanskrit term for the River Indus—'Singhar') lies in the central peninsula of Southern Asia and is, after China, the most populous country in the world. It has for its natural boundaries the range of the Himalaya mountains on the north, which separates it from Tartary, China and Tibet; the Suliman mountains on the west, which divide it from Afghanistan; and on the east the hill ranges which border upon Burma and the Bay of Bengal. From the mouth of the Brahmaputra on the eastern side and of the Indus on the western side the two coasts, east and west, incline towards the same point and meet at Cape Comorin, thus producing the form of an inverted triangle.

The outstanding feature of this vast region is its diversified surface and scenery. India has, indeed, been styled 'an epitome of the whole earth'—consisting as it does of mountains far above the level of perpetual snow, broad and fertile plains bathed in intense sunshine, and wastes and impenetrable forests. Its natural geographical divisions are the Himalayas, the sub-Himalayan ranges, the plains of the Ganges and the Brahmaputra, the basin of the Indus, the highlands of Hindustan, the Vindhya and Satpura ranges, and the peninsula south of those ranges. These divisions may also be more conveniently grouped under the four main headings of the region of mountains, the region of plains, the region of table lands and the coast strips.

**AREA.**—The area of India is 1,805,332 square miles, made up of 1,094,300 square miles of territory in the British provinces and 711,032 square miles belonging to the Indian States. British India is thus distributed—

Province	Area in Square Miles
Ajmer-Merwara	2,711
Andamans and Nicobars	3,113
Assam	53,015
Baluchistan	51,228
Bengal	70,843
Bihar and Orissa	53,101
Bombay	123,621
Burma	233,797
Central Provinces and Berar	99,876
Coorg	1,582
Madras	142,260
North-West Provinces	13,419
Punjab and Delhi	100,430
United Provinces	166,295
<b>Total</b>	<b>1,094,300</b>

The largest of the Native States and Agencies are, in square miles, Rajputana (128,987), Kashmir (84,258), Hyderabad (82,608), Baluchistan States (80,410), and Central India and Gwalior (77,888).

**COAST LINE.**—There are two marked differences between the coast line of India and that of any other country. The first is that it is broken by very few inlets of the sea, and the second that it has only a small number of islands along it. The sea washing the coasts of India is very shallow, and the shores are usually flat and sandy. As a result, such inlets and straits as exist are of very little consequence. The most important of the inlets are the Ranns of Cutch, the Gulf of Cutch, the Gulf of Bombay, the Backwaters of Cochin and Malabar, the Palk Strait, the Gulf of Manaar, the Pulicat, Kolar and Chikla lakes on the east coast, and the inlets of the mouths of the Ganges.

**ISLANDS.**—The chief islands geographically connected with India are Ceylon, the Andaman, Nicobar, Laccadive and Maldiva Islands, but neither Ceylon nor the Maldivas have any political connection with India. The islands of Bombay and Salsette, which form Bombay harbour, are small but important, as they protect the shipping of this port from the storms and monsoons of the Arabian Sea.

**MOUNTAINS.**—The mountain ranges of India may be divided into four great groups—that is to say, the Himalayas, the Trans-Himalayas, the Western Offshoots, and the Eastern Offshoots. Of these, the Himalayas are made up of three roughly parallel ranges. The inner one, sometimes called the Zaskar Range, begins at the peak of Nanga Parbat, and runs in a great sword-like curve to the north-east corner of Assam. It lies in the embrace of two rivers, the Indus and the Brahmaputra. The main, or outer range, runs south of and roughly parallel to the inner range. At their western end these two ranges open out and enclose the valley of Kashmir and the Wular lake. The outermost or sub-Himalayan range is not high, and is in some places separated from the outer range by wide valleys. The Himalayas, with an average height of 10,000 feet, form the loftiest range in the world and they contain the tallest measured peak, Mount Everest, which is  $5\frac{1}{2}$  miles high. All the rain that falls on the Himalayas, whether on their northern or southern slopes, is carried by rivers into India. The Trans-Himalayan ranges consist of the great Hindu-Kush range, striking south-west into Northern Afghanistan, and three minor ranges, all on the west. On the east there are the eastern half of the Hindu-Kush and the great Kwen-lun range, forming the northern limits of Kashmir; the great Karakoram or Mustagh range, sloping more to the southwards, and the Kailas or Gangri mountains, running south-east across the middle of Kashmir, to the north of the Indus. On the north the Himalayas and the Trans-Himalayas form the edge of the great table-land of Tibet, on the west they send offshoots southwards, separating India from the great Iranian table-land (Afghanistan, Baluchistan, and Persia). These offshoots are the Safed-Koh range, south of the Kabul River, the Suliman ranges running nearly north and south, and the Kirthar mountains, stretching in parallel ranges almost down to the sea near Cape Monze. At their easternmost point the Himalayas suddenly fold round and turn south in parallel ranges.

**PLAINS.**—Thus is the region of the great Indo-Gangetic plain, or simply the "Plains," which lies at the foot of the Himalayas and their western and eastern offshoots. It includes the valleys of the Indus and its tributaries, of the Ganges and its tributaries, and of the Brahmaputra. At its western end it rests on the Arabian Sea in the Indus Delta, and at its eastern end on the Bay of Bengal in the Ganges Delta. The whole of

this plain region is alluvial—that is, its soil consists of fine mud and sand washed down by the three great rivers and their tributaries, and spread on the low-lying land. It is very fertile and very deep, extending downwards from 500 to 1,000 feet. The region is also extremely flat, which makes the rivers flow slowly, thus fertilising the country thoroughly and affording easy waterways and irrigation channels. It contains more than one-third of the land area of India proper, and nearly two-thirds of the population.

**RIVERS.** The river system of India may be briefly summarised as follows. The Indus in the north-west with a course of 900 miles, after issuing from the Himalayas, drains with its four famous affluents the Sutlej, the Ravi, the Chenab and the Jhelum about 300,000 square miles, and empties into the Arabian Sea. In the north-east the Ganges, with the Jumna and other tributaries, and the Brahmaputra and Meghna—all of which join in the Delta—drain about 500,000 square miles. Owing to their virtual amalgamation in Bengal it is difficult to assign a length to the courses of these rivers, which empty into the Bay of Bengal. The Satpura (about 100,000 sq. m.) is drained by the Nerbudda and the Tapti, the former having a course of 500 miles, the latter of 400 miles, and both flowing west into the Gulf of Cambay, a branch of the Arabian Sea. The remaining area (600,000 sq. m. out of a total of 1,500,000) consists of the Deccan and the Peninsula. It is drained by the following rivers: Mahanadi, with a course of 520 m.; Godavari, 808 m.; Kistna, 800 m.; Tungabhadra, 400 m.; Pennar, 350 m.; and Kaveri, 470 m. There are many other rivers which cannot be particularised here. Among them may be mentioned the Hooghly and the Gumti, Calcutta being situated on the former and Lucknow on the latter, both belong to the Gangetic system.

## CLIMATE

In a country extending over 26 degrees of latitude, one extremity of which runs far into the torrid zone and the other terminates in a range of mountains rising high above the line of perpetual snow—a country embracing lowland plains, elevated plateaus and Alpine regions—the climate must needs be extremely varied. India, indeed, may be said to have a different one in different places, and in each of these places it changes at certain periods. The whole country has three well-marked seasons: the cold, the hot and the rainy. This characteristic applies without distinction to all parts, even to the Himalaya region, which has otherwise a climate like that of the European Riviera.

**COLD SEASON.**—The cool months in India are November, December, January and a part of February. During this period the mean temperature averages about 30° lower in the Punjab than in Southern India. In the Punjab, the United Provinces and Northern India generally the climate resembles that of the European Riviera, with a brilliant cloudless sky and cool dry weather. This is the time for the tourist to visit the country. In South India it is warmer on the west coast than on the east, and the maximum temperature is found round the headwaters of the Kistna. Calcutta, Bombay and Madras all possess the more equable climate that is induced by proximity to the sea, but the first-named enjoys a cooler season than that which is found in the other presidency towns, while its hot season is more endurable.

**HOT SEASON.**—The hot season begins officially in the Punjab on March 15, and from that date there is a steady rise in the temperature, induced by the fiery rays of the sun upon the baking earth, until the break of

the rains in June. During this season the interior of the peninsula and northern India are excessively hot, the contrast of temperature is not between northern and southern India, but between the interior and the coast districts and adjacent seas. The greater part of the Deccan and the Central Provinces are included within the hottest area, though in May the highest temperatures are found in Upper Sind, north-west Rajasthan and south-west Punjab. At Jacobabad, on the Baluchistan frontier, the thermometer sometimes rises to 125° in the shade.

**MONSOON SEASON.**—The south-west monsoon currents usually set in during the first fortnight of June on the Bombay and Bengal coasts, and give more or less general rain in every part of India for the next three months. But this distribution of rainfall is very uneven. On the face of the Western Ghats and on the Khasi Hills overlooking the Bay of Bengal, where the mountains catch the mass of vapour as it rises off the sea, the rainfall is enormous. At Cherapungji, in the Khasi Hills, it averages upwards of 500 inches in a year, and generally on the seaward face of the Ghats it is over 100 inches. A few miles inland, however, it falls to about 25, and some parts of Sind receive only 3 inches of rain in the year. Altogether, about 90 per cent. of the rain of India falls in the summer monsoon, and on it the prosperity of five-sixths of the country depends. In September its force begins rapidly to decline, and in its place springs up a gentle, steady north-east wind which gradually extends over the Bay of Bengal and is known as the north-east monsoon. The months of October and November form a transition period between the monsoon and the cold season. The most unhealthy period of the year follows immediately after the rains, when malaria is prevalent especially in northern India.

**STORMS.** During the monsoons there are heavy cyclonic storms, which are particularly fierce on the west coast. Owing to these the few harbours have to be closed except the protected port of Bombay. In March, April and May small rainstorms occur in Bengal, known as "north-westers."

**TEMPERATURE.** The following are the annual mean temperatures at a few of the coast, hill, plains and plateau stations of India. The figures in parentheses are those of the elevation in feet—

**COAST STATIONS.** Karachi (19), 77.6; Bombay (37), 79.3; Madras (22) 81.8.

**HILL STATIONS.** Darjeeling (7,376), 52.7; Simla (7,224), 55.1; Murree (6,333), 58.0; Ootacamund (7,327) 57.3; Srinagar (5,204), 53.3.

**PLAINS STATIONS.**—Calcutta (21), 77.9; Patna (183), 77.1; Allahabad (309), 77.3; Lucknow (368), 76.6; Meerut (738), 74.4; Delli (718), 77.1; Lahore (702), 74.7; Hyderabad (Sind), (96), 70.9; Amudabad (163), 82.1.

**PLATEAU STATIONS.** Nagpore (1,025), 79.6; Poona (1,840), 75.9; Hyderabad (Deccan), (1,690), 78.5; Bangalore (3,021), 72.8.

## GEOLOGY

The most striking feature of the geology of India, which has been exhaustively investigated, is the difference between the rocks of the Peninsula proper and those of the countries lying beyond the great Indo-Gangetic alluvial plain. Research has proved that, at a period geologically recent, the present peninsula of India was a triangular island, bounded on each side by the eastern and western Ghats and converging to Cape Comorin, while the base of the triangle was formed by the Vindhya mountain range,

from which an irregular spur, forming the Aravalli mountains, extended northwards, between the northern shore of this island and a hilly country, which is now the Himalaya mountains, ran a narrow ocean strait. The bed of this strait became covered with debris from the adjacent Himalayas on its northern shore, and with this debris there were entombed and preserved many and various animal remains. The present condition of the country in Northern India has been produced by a subsequent upheaval of the land, so that what was once the ocean strait forms now the northern plains of India, the long, nearly level, valley in which flow the Ganges and the Indus. Besides this, a great upheavement along the line of the Himalayas has elevated a narrow belt of the plains into the Siwalik Hills (determined to be of Tertiary age) and has added many thousand feet to the height of the Himalayas. Facts, indeed, tend to the conclusion that India had one long geological term and one protracted fauna, which lived through a period corresponding to several of the tertiary periods of Europe.

**CHIEF SYSTEMS**—The principal geological formations in India are known as the Bundelkhand System, the Vindhayan System, the Gondwana System and the Dekhan Trap.

**BUNDEKHAND SYSTEM**—The oldest rock known to exist in India is the Bundelkhand gneiss. It is exposed over a roughly triangular area lying between Kueer, Gwahar and the southern part of the Lalitpur district. Two other areas of gneiss occur in the peninsula, but they are supposed to be of an age posterior to the gneiss of Bundelkhand. This is of a remarkably simple and uniform composition, while that of the south and east of the peninsula is much more complex, and contains many extraneous minerals, among which are the gold of the Wynaad and the immense depths of magnetic iron ore that occur in many parts of the country.

**DEKHAND TRAP**—The great horizontal sheets of what is known as the Dekhan Trap, which overlie the cretaceous rocks of Bagh and are overlaid in turn by the Eocene beds of Gujarat, form the largest accumulation of volcanic rock known in the world. The trap extends in the north and south direction from Belgam to Nannuch, and spreads from Kathiwar on the west to Amarakantak on the east, covering every kind of rock from the Bundelkhand gneiss to the most recent cretaceous formations, and in parts of the Western Ghats it is more than 4,000 feet thick. Many casts of marine shells, zoophytes and other minerals have been discovered in various parts of the trap.

**GONDWANA SYSTEM**—Resting in hollows of the ancient gneiss or the Vindhayan rocks are found the first fossiliferous strata of the Indian peninsula—those of the Gondwana system, or the Indian coal measures. These rocks extend in patches from West Bengal through South Bihar and the Nerbudda Valley to Cutch; they are also found in the valley of Godavari and as far south as Madras. A small outlier of the same series has also been discovered at the base of the Himalayas, near Darjeeling, almost the only instance of a peninsula rock occurring in the extra-peninsula area. In the Gondwana system are the coal-bearing strata of Karharbari and Damuda. These are economically the most important of the Indian strata, though they cover a very small area compared with that occupied by the Vindhayan rocks or the Bundelkhand gneiss.

These coal-bearing strata contain numerous plant remains and a few skeletons of terrestrial animals belonging to the amphibia,

but no trace of any marine fossils has yet been discovered in them.

**VINDHAYAN SYSTEM**—The most widely distributed series of stratified rock found in India is known as the Vindhayan system, and extends from Sassceran and Rotasgarh on the Son to the border of Mewar and from Agra to the Nerbudda valley, with several outlying patches in Southern India. All the diamonds found in India seem to be derived from a pebble bed at the bottom of the Vindhayan series, but these diamonds occur simply as water worn pebbles, so that their original matrix is still unknown. A strange feature of the Vindhayan rocks is that they are totally devoid of fossils; this is accounted for either by the fact that the rocks named were deposited before the beginning of life on the globe, or that there was something inimical to life in the composition of the water in which these rocks were formed.

## FAUNA

India provides the zoologist with a wide and very diversified range of fauna—wild tame and domestic. Certain of the wild animals, when tamed, become extremely useful for domestic purposes, and others, though properly speaking never tamed, are trained for use in hunting.

**ANIMALS**—Of the animals wild in their natural state, the elephant is perhaps entitled to first place. It differs widely from the African branch of the family, the most noticeable outward variation being the smallness of its ears. It is, however, far more docile, intelligent, and useful to man. Easily tamed, it is just as easily trained, and is frequently used for transport and other work. In the colour and quality of its mane, and in its size and strength, the Indian lion compares unfavourably with the African. It also lacks the dark line down its spine, and other trivial differences serve to emphasize the distinction between the two varieties. It is very rarely found now, and the shooting of one in 1926 attracted public attention.

In the tiger India possesses the most powerful of all carnivora. Brave to a degree, it is far more dangerous when attacked than any lion, and is responsible for an enormous amount of damage yearly, both to human beings and to cattle and other stock. Tiger hunting, usually carried out from the howdahs of trained elephants, is one of the royal sports of India. In the leopard—especially the larger, yellower race of leopards in the hills—this country has the advantage over Africa, where the animal is comparatively small and dark. Even finer in appearance than the leopard of the hills, owing to its dense, pale fur, but not really quite so large, the snow leopard or ounce is much less often brought to bag, for it seldom ranges far below the Himalayan snow-line, where it preys upon the wild mountain sheep. India possesses two types of rhinoceros, the greater and the less, but it would appear that both types are doomed to extinction, except where rigorously preserved as interesting survivals of the past. The wild boar provides hunting that is always exciting and often dangerous, while more European in conception is the deer-stalking of such grand stags as the barasingha of Kashmir, the still larger sambur of central and southern India, and, in diminishing series, the swamp, spotted, barking, hog, musk and mouse deer—the last a tiny animal, standing scarcely a foot high. Besides the deer there are five antelopes, one gazelle—the dainty chikara—and a number of fine wild goats, sheep, and cattle. Herds of gigantic wild cattle, with almost the bulk of elephants, the gaur and the gayal, roam

at large in the eastern forests, while the wild buffalo, differing little from the domestic variety, and often interbreeding with it, ponderously brings up the rear of India's wonderful procession of big game. Of the smaller mammals, the squirrel, which feeds in the roads regardless of traffic as ubiquitously and impudently as the London sparrow, is most noticed by Europeans. Muskrats, with their unpleasant odour, monkeys and mongooses all go to swell the heterogeneous collection, not forgetting the jackal, the most universally hated beast in India.

**BIRDS**—That the birds of India attract more attention than the mammals is not surprising, seeing that they consist of over 1,700 kinds, the majority not being rare and the commonest conspicuous for large size, beautiful colouring, striking habits, or strange voices. Most interesting, perhaps, are some of the common birds, such as the vultures waiting in silent, ghoulish rings about the Towers of Silence in Bombay, and the ubiquitous flocks of pariah kites which are for ever wheeling and screaming in the air. High above the kites float the sovereign eagles, and, ennobled by distance, the wide-winged vultures. There are thirty kinds of tits, forty varieties of laughing thrushes, ninety different babblers, fifty variations of bulbuls, one hundred and ten warblers, fifty types of flycatchers, twelve nuthatches, and thirteen swallows. Still there are some that stand out from the multitude, such as the familiar green parrot, the red shouldered parakeet of the hills and the myna. For sheer beauty the blue jay is certainly pre-eminent, and another feathered jewel is the common small bee-eater, with the sun bird next in order. India has an immense list of game birds, including peafowl, sand grouse, pheasants, quail and partridges. Besides the water fowl, there are six kinds of bustards, as many of snipe and twenty of plovers, also a large variety of pigeons, making a list of almost infinite variety.

**FISHES**—No less than 351 genera and 1,418 species of fishes inhabiting Indian waters have been enumerated. About 300 of these species are fresh water kinds, living in rivers, brooks, ponds, tanks or marshes. Another large group of fishes inhabits the brackish waters of estuaries, creeks and lagoons, and some are migratory, like the salmon and the common cod in Europe, passing part of their existence in the sea and part in fresh water. All the common tropical sharks and rays are found on the Indian coasts, the former including the ferocious hammer-headed sharks (*Zygæna*), with their extraordinary T-shaped heads, and the saw fishes, which attain a length of 10 feet or more. The great eagle rays, or 'devil fish,' said to reach a breadth of 18 feet and other smaller rays are occasionally captured off the coast. Eels and cat fishes are common, and the carps are numerous and generally edible. The herring family is well represented in the Indian seas, and the hilsa is especially fine flavoured. Several species of anchovy also occur on the coasts and in the estuaries. Red mullet, bream, tunny and a sort of smelt are numerous. Several kinds of perch and eels inhabit the rivers and ponds, and mention must be made of the ophichthidæ (called murrel in Northern India), the travelling fish of India, which, possessing an amphibious respiration, is able to move from one pond to another as necessity or fancy dictates. Jugglers carry them about in order to assist in their performances, while so great is their vitality that the saleswomen cut portions off them while still alive for disposal to purchasers, who will give only a decreased price when life has ceased to exist.

**INSECTS.**—Insects are very numerous throughout India, the genera being largely those of tropical climates. Beetles are common everywhere, as are ants and ichneumons. Many are industrially and commercially useful, as galls, which are employed in dyeing and tanning, and the cochineal insect. There are many varieties of silkworm and interesting insects are the mantidæ, or praying insects, and the scavenger beetle. Others, as locusts, stag-beetles, field and house bugs, the coffee-bug, the bakoh and many weevils, are injurious to crops.

**REPTILES.**—In reptiles India is rather unpleasantly rich, there being at least three kinds of venomous snakes which are justly dreaded, the slender krait, the hooded cobra, and the desert saw-viper (*Echis carinata*). A bite from any one of these means almost certain death. Others are equally deadly but seldom encountered, such as the aggressive king cobra or hamadryad and a black and yellow banded sea snake. Compared with these, the python or rock snake, even when thirty feet long is harmless, although very alarming when disturbed by accident. In addition, there are the harmless rat-snake and the green tree-snake. Even more frightful than the venomous snakes are the huge estuarine crocodiles of eastern India. These monsters, often thirty feet in length, never hesitate to attack a human being. There are also the more common short and long-nosed crocodiles, the former, although dangerous, usually feeding on the smaller animals, and the latter exclusively on fish. Lizards, monitors (miscalled "iguanas" by the natives), and frogs are multitudinous in variety and in number.

## FLORA

Unlike many other large geographical areas, India is remarkable for having no distinctive botanical features peculiar to itself. It differs conspicuously in this respect from such countries as South Africa and Australia. Nearly half the country is tropical, though none of it is equatorial, and a part is not only temperate, but cold, accordingly the vegetation varies greatly.

Where moisture is plentiful, as in the valley of the Ganges, it is superabundant. The delta of the Ganges, called the Sunderbans, is covered with dense jungle, full of the largest wild animals and the excessive vegetation renders most of the mouths unnavigable. There are many similar tracts of extensive forest and jungle. On the Coromandel coast, on the other hand, the heat, which reaches 100° or 120° F., destroys vegetation, and the delta of the Indus, from the south east of the Punjab to the Rann or great salt marsh of Cutch, forms a huge sandy desert, continuous over the river with the desert of Baluchistan and with a wide band stretching across the whole continent of Asia to Central Africa.

In the various altitudes of the Himalayas the forms of vegetable life belonging to all the different climates from tropical to polar are to be found. These heights, as well as the Western Ghats, are magnificently wooded, and the forest and jungle flora of India may indeed be said to be the most noteworthy feature of its vegetable growth.

**FLOWERING PLANTS.** India is by no means a country of flowers, and is said to be singular in that there is an almost complete absence of local plants. There are few other countries in which the vegetation of the more accessible parts presents so little floral beauty or such short seasons of bloom. A great number of British flowering plants have become acclimatised and many North African, Arabian and even Australian forms occur. The most conspicuous flowers in the plains and on the lower slopes are those of the *cyperaceæ*, *labiata*, *amaranthaceæ*, *convolvulaceæ* and *acanthaceæ*. The mountainous regions of the Himalayas contain an immense number of European and Persian plants, and here the *rhododendron*, *monotropa*, *pedicularis*, *corydalis*, *nicotia*, *carex*, *lonicea*, *primula*, *cerasus*, *spiræa* and *violinum* attain their maximum degree of development. Many species of beautiful orchids and flowering ferns are abundant in the tropical forests and the curious pitcher plants are also a noticeable feature.

**FORESTS.** These are described in considerable detail in the section devoted to

"Agriculture." The principal forests are on the western coast of the Peninsula, in the country above the Ghats in Kanara, the Annamallay and Pulney Hills, the country to the east of the Salwin River in Martaban, Pegu and Tenasserim, British Sikkim, Oudh and the Punjab. The chief species of forest trees are the conifers (cedar, pine and fir), the oak, elm, maple, plane, ash, ebony, teak, banyan, sandalwood, mango, bamboo, sal, sissu and palms, the latter including the date, palmyra, betel-nut and other varieties. The deodar, which is indigenous to the mountains of Afghanistan and the north-west Himalayas, is nearly allied to the Atlantic cedar and to the cedar of Lebanon. The *ficus elastica*, yielding rubber is found along the foot of the Himalayas from Sikkim to Assam and more sparingly at the foot of the Khastia and Cachar hills. The teak, pine and evergreen forests of Burma are commercially very valuable.

**FRUITS.** European fruits abound in India, and among the indigenous may be mentioned the mango, plantain, pomegranate, citron, date, almond, grape, pineapple and tamarind. The Khasmuri valley is famous for European fruits such as apples, peaches and grapes. Mulberry trees are grown, on the leaves of which silkworms are fed.

**INDUSTRIAL PLANTS.** Though India is not specially noted for its purely decorative plants, its supply of plants and trees which have been and can be turned to valuable use for industrial purposes is surpassed by few countries in the world. Of tropical products, tobacco, sugar, cinchona, pepper, coffee and spice-trees of all kinds abound. Rice has from time immemorial been the staple food of the country. Jute is one of India's most valuable commercial products, and indigo, oilseeds, and poppies are other industrial plants of great importance. Upon the Indian tea-plant has been built up an enormous industry, and the gardens of Assam and the lower slopes of the Himalayas are one of the features of the country. The plants belonging to the more temperate zones, such as wheat, maize, barley, millets, pulses and vegetables, are also successfully cultivated.

# HISTORY

THE orthodox Hindu begins the history of India more than 3,000 years before the birth of Christ with the war waged on the banks of the Jumna between the sons of Kurn and the sons of Pandu, but the modern commentator prefers to omit many of these remote centuries and to take B.C. 600, or thereabouts, as his starting point. At that time much of the country was covered with forest, but the Aryan races, who entered India from the north, had established in parts a form of civilisation far superior to that of the aboriginal savages, and to this day there survive cities, like Benares, founded by those invaders. In like manner, the Dravidian invaders from an unknown land, who overran the Deccan and the southern part of the Peninsula, crushed the aborigines, and at a much later period were themselves subdued by the Aryans. Of these two civilising forces, the Aryan is the better known, and of the Aryan kingdoms the first of which there is authentic record is that of Magadha, or Bihar, on the Ganges. It was in or near this powerful kingdom that Jainism and Buddhism had their origin, the fifth King of Magadha, Bimbisara by name, being the friend and patron of Gautama Buddha. This king was a contemporary of Darius, King of Persia (B.C. 521 to 485), who

annexed the Indus valley and formed from his conquest an Indian Satrapy which paid as tribute the equivalent of about a million sterling. Detailed history, however, does not become possible until the invasion by Alexander in B.C. 326.

## B.C. 326-A.D. 1000 : INDIA BEFORE THE MOHAMMEDAN INVASION.—BUDDHISM AND BRAHMANISM

Alexander the Great, the "Conqueror of the World," having invaded India from the north-west corner in B.C. 326, crossed the Indus, defeated Porus at the battle of Hydaspes, and subdued the whole basin of the Indus and its tributaries—that is to say, the modern provinces of the Punjab and Sind. Beyond this his influence was not felt in the main portion of the country. He stayed 19 months in India, but his early death in B.C. 323 was the signal for a revolt against his officers, the leader of which was Chandragupta, an illegitimate member of the royal family of Magadha, whose memorable reign ended in B.C. 297. After him, Asoka, the founder of Buddhism as a national religion, is a prominent figure in Indian history. He was himself a convert to Buddhism and the greatest sovereign that ever propagated that faith. This notability established something approaching an empire,

his original kingdom being in the lower valley of the Ganges. There followed invasions by the Bactrians and Scythians, but for some centuries before Christ Buddhism in faith and civil government prevailed over India. Meanwhile it had spread to the neighbouring regions—Ceylon, Burma, Tibet, China, and even Afghanistan. But while the faith endured in those territories, in India it gradually yielded to the old Hinduism, which should now be called Brahmanism. Before it fell, Buddhism raised many architectural monuments in various provinces which still attest its greatness and culture. Simplicity and purity of faith were its original characteristics, and were probably maintained throughout its Indian career, however much they may have become overlaid by superstition elsewhere.

The modern Hindu era dates from the reign of the Brahmanist King Vikramaditya, in the sixth century A.D. This is the period which has in western phrase been called the Renaissance of Hinduism. The Sanskrit language was revived for both the drama and descriptive poetry, and there were laudable strivings after knowledge in astronomy, medicine and other sciences. For four full centuries (politically a period of chaotic anarchy) the Brahman caste held its own, and the Brahmanic system was established

all over India. The end of this period is marked by the splendours of the rule of the Rajputs, one of whom could boast that he had conquered all the country from the Vindhayas to the Himalayas including Delhi, already a fortress one hundred years old.

**A.D.1000-A.D.1756: THE MOHAMMEDAN CONQUEST—RISE AND FALL OF THE MOGUL EMPIRE.**—The wave of Mohammedan invaders that eventually swept over the country first touched India, in Sind, less than a hundred years after the death of the Prophet in A.D.632. But the first real contact was when, in 1001, Mahmud of Ghazni entered through the passes of the Suliman Mountains, capturing places so far apart as Multan, Kanauj, Gwahar and Somnath in the Punjab. From this time onward the history of India can be fully understood from abundant materials, though the details are intricate. Several Mohammedan dynasties in succession established themselves at Delhi, others at Mandhu in the Vindhayas, at Ahmedabad on the west coast, and at five places in the Deccan, of which the two most famous are Golconda and Bijapur. Thus almost all India fell under Mohammedan dominion.

About the year 1200 the Mongol, Genghis Khan, devastated the north western part of the country. Succeeding Mongol invasions were repelled by the Indian Mohammedans, but in 1397 the Tatar Timur, or Tamerlane, advanced to Delhi and proclaimed himself Emperor of India. This title lapsed for a while, till in 1525 his descendant Babur revived it and became the first to bear the title of the Great Mogul. His descendants subdued one by one most of the Mohammedan States in the upper half of India, and became emperors in reality, but the southern States preserved a semi-independence. Babur's grandson, Akbar the Great, made this empire effective with the aid of a Hindu minister, Todur Mal. He was, perhaps, the greatest sovereign that India has ever seen, for, by introducing religious toleration, he succeeded in consolidating into one empire no less than fifteen separate kingdoms. It was his grandson Shah Jahan, who built the most famous and beautiful of all tombs, the Taj Mahal, as well as the fort, palace and Jumna Masjid at Delhi. In the cataclysm which followed the death of Aurangzebe, Shah Jahan's successor, and the setting up of the Mahrattas four fresh Mohammedan empires came into existence—those of the Nawab Wazir of Oudh, of the Nizam of Hyderabad in the Deccan, of the Nawab of the Carnatic, and of Hyder Ali and Tippoo at Seringapatam in Mysore, all of which were later to acquire a sinister prominence. After the fall of the Mogul empire, about the middle of the 18th century, the Mahrattas ruled over the greater part of the country. It appeared for a time as if they might once more establish a Hindu empire, but the year 1761 witnessed the complete overthrow of their power in the battle of Panipat.

**THE EUROPEAN SETTLEMENTS.**—It is necessary at this point to go back a little, in order to mention the voyage of the Portuguese navigator, Vasco da Gama, to India in 1498 and the consequent European settlement which occurred in several parts of the country. The Portuguese for a long period controlled practically the whole of the west coast except Bombay, then only a small place. Their headquarters were at Goa, on the coast south of Bombay, which became a town and a harbour of the first rank in the 18th century, and which still remains a Portuguese possession. For more than sixty years they carried on a lucrative trade with no considerable rivals. In 1580,

however, the union of Portugal with Spain under Philip II decided the fall of their commercial power in the East, the Dutch capturing one by one the best of their possessions in the outlying Indies while in India proper their power declined to a minimum. Here, for many years, the rival claims of France and England were to make history and eventually to determine the future of an empire.

English and French settlements had followed in the wake of the Portuguese, the English East India Company having been formed in 1600. It acquired valuable property at Surat, Ahmedabad, Agra and Patna, and by the end of the 17th century its activities had developed to an amazing extent at Bombay and Calcutta. The French East India Company operated from Pondicherry

by his capture and subsequent defence of Arcot. The third war, known as the Seven Years' War (1756-63), was marked by the surrender of Pondicherry and resulted in the defeat of French ambitions in Southern India.

**1756-1856: THE CONSOLIDATION OF BRITISH RULE CIVIL AND WARREN HASTINGS SOCIAL REFORM—AFGHAN, SIKH AND BURMESE WARS.** About this time important events took place in Bengal. Siraj-ud-Dowlah Nawab of Bengal in 1756 besieged Calcutta with a large army, when it was evacuated so suddenly by the English that a considerable part of the garrison was left behind. There was no alternative but to surrender, and 146 prisoners were thrust into the common prison of the garrison, a room 18 ft. square with two small windows

THE GATEWAY TO INDIA AT BOMBAY.

having secured a strong position in Southern India, which had become independent of Delhi and was divided into three large States—Hyderabad, Tanjore and Mysore—and a number of petty States under local chieftains. In 1742 the Governor of the French settlement was Duplex. Soon after his arrival England and France went to war in Europe, the contest being extended to their settlements in India. Pondicherry was attacked and Madras was captured by the French, but was immediately claimed by the Nawab of the Carnatic, whose army was defeated by the French at San Thomé. The treaty of Aix-la-Chapelle (1748) restored Madras to the British. The fighting had shown the Indian powers the value of European troops, and this was again demonstrated in the next French war (1750-54), when Robert Clive achieved enduring fame

by his capture and subsequent defence of Arcot. The third war, known as the Seven Years' War (1756-63), was marked by the surrender of Pondicherry and resulted in the defeat of French ambitions in Southern India. **1756-1856: THE CONSOLIDATION OF BRITISH RULE CIVIL AND WARREN HASTINGS SOCIAL REFORM—AFGHAN, SIKH AND BURMESE WARS.** About this time important events took place in Bengal. Siraj-ud-Dowlah Nawab of Bengal in 1756 besieged Calcutta with a large army, when it was evacuated so suddenly by the English that a considerable part of the garrison was left behind. There was no alternative but to surrender, and 146 prisoners were thrust into the common prison of the garrison, a room 18 ft. square with two small windows

censured him, though admitting that he did render "great and meritorious services to his country."

**WARREN HASTINGS AND HIS SUCCESSORS**—The victory of Plassey gave to England the dominion of Bengal and Bihar, the two most populous provinces in the whole country. Within sixty years, that is by 1818, the East India Company became the master of India as far as the Indus basin, but not in the Punjab or in Sind. It had thus acquired the whole basin of the Ganges and the coast districts on both sides of the peninsula, and there was no longer fear of any European rival. The Great Mogul, now powerless, was under its charge at Delhi. The States of Mysore, Oudh and Hyderabad (Deccan) were its dependent allies. These were the years of the extension and consolidation of what was to become known as the British Raj.

The administration of Warren Hastings, Clive's immediate successor as Governor and later the first Governor-General of Bengal, was marked by a thorough reorganisation of the Civil Service and by attempts at financial reform, in carrying out which he incurred the odium of exacting forced contributions and of receiving bribes, being finally acquitted on all the charges brought against him after a seven years' trial before the House of Lords. His successors, Cornwallis, Wellesley (during whose administration the battles of Assaye, Algaum, Algaud and Laswari were fought), and the Marquis of Hastings, each in his own way added to the tale of British dominion, notably by the acquisition, after the death of Tipponu Iib, of what is now virtually the whole of the Madras Presidency and the bringing under British rule of the Native States of Poona, Baroda, Gwalior, Indore and Nagpur. By 1828 there was a Pax Britannica throughout India, after centuries of internal war and revolution, and even Nepal, the one Himalayan State which had been capable of waging a sustained war against British forces, was at peace with England.

**WARS (BURMESE, AFGHAN AND SIKH)**—The rule of Lord Amherst, who succeeded Lord Hastings, was made memorable by the first Burmese war, ending in an acquisition of territory which was the beginning of a new dominion across the waters of the Bay of Bengal. There was then an important development of social reform under Lord William Bentinck until 1835, but in 1838 it was decided to set up a native sovereign in Afghanistan under British protection as a means of guarding the north-west frontier. This led to the first Afghan war, after which the British evacuated that territory, the first check in a victorious career of eighty years since Plassey. There remained still unconquered the basin of the Indus—i.e. Sind and the Punjab, the former was won under Lord Ellenborough, the latter under Hardinge and Dalhousie after severe fighting in two wars, in which the Sikhs were the aggressors. Then at length it was said that not a shot could be fired in anger throughout India without the consent of the British Government. Under Lord Dalhousie also a second war broke out with the Burmese, the result of which extended British dominion over the delta of the Irrawaddy. That administrator accomplished many great reforms and left his mark on India, founding the Public Works Department, initiating the railways and postal and telegraphic system, and completing the great Ganges Canal. It has been said that his passion for change carried him too far, and critics of his policy have sometimes attributed to it not a few of the causes of the Mutiny.

#### 1856-1862: THE MUTINY—END OF EAST INDIA COMPANY'S RULE

Lord Canning, the son of Canning, the great English statesman, became Governor-General in 1856 on the retirement of Lord Dalhousie. He was destined to watch over India during a great crisis that threatened to overthrow British government, to render Lord Dalhousie's fine work fruitless, and at one blow to send the country back into the state of anarchy from which it had so recently emerged. In 1857 the sepoys of the Bengal army mutinied and all the valley of the Ganges from Delhi to Patna rose in rebellion.

**CAUSES OF THE MUTINY**—Many causes have been assigned by historians for the mutiny. Probably the immediate provocation was the greased cartridges that were served out with the new rifle issued to the Bengal troops. But behind that were the facts that the failure of the Afghan campaign had destroyed the legend of British invincibility, that certain chiefs near the scene of the first outbreak were labouring under a sense of wrong (real or supposed), that the annexation of Oudh by Dalhousie was very unpopular among the Mohammedans, that the Brahmans were too numerous in the ranks, and (perhaps the prime fundamental cause) that the native forces were much too large relatively to the European. There was at the outbreak only one European soldier to six sepoys, the British troops having recently been reduced in number.

**DELHI (SIEGE OF)**—It was on May 10, 1857, that the native portion of the garrison at Meerut near Delhi, rose in mutiny, cut down a few Europeans, and marched straight way to Delhi, where it was joined by the native troops there and the city mob. The rebels set up as Emperor the titular Great Mogul, Bahadur Shah, who dwelt in the ancestral palace under British protection and proclaimed the restoration of the Mogul Empire. This event was rapidly followed by the revolt of almost the whole native army of the Bengal Presidency (160,000 strong), the armies of the Bombay and Madras Presidencies were but slightly affected. Of the Bengal army only seven battalions of regular troops remained loyal, but a large part of the irregular troops was staunch to the British Raj. Not only Hindus but Mohammedans also, were in active revolt, and the mutiny quickly spread through the North-West Provinces and Oudh into Lower Bengal. Risings in the Punjab were put down by Sir John Lawrence and his subordinates, who armed the Sikhs and with their help reduced the sepoys, while Lawrence was subsequently able to send a strong force of Sikhs to aid in the siege of Delhi.

This siege began on June 8, when Sir Henry Barnard occupied the Ridge outside the town. It dragged on until in August Sir John Nicholson (Lord Roberts' "*beau ideal* of a soldier and a gentleman") arrived with reinforcements from the Punjab. In the meantime the rebel force in the city was constantly increased by the addition of fresh bodies of mutineers, attacks were frequent and the losses heavy, cholera and sunstroke took a big toll on the Ridge, and when the final attack was made in September the besieging army could only parade 4,720 infantry, of whom 1,960 were Europeans. The arrival of siege guns made it possible to advance the batteries on September 8, and by the 13th a breach was made. On the following day, over the ruins of the Kashmir Gate blown in by Horne and Salkeld, the city was entered and Nicholson formed up his troops within the walls, but by nightfall the British, with a loss of 1,200

killed and wounded, had only secured a foothold. Six days' street fighting followed, and Delhi was won, but the gallant Nicholson was killed at the head of a storming party. Bahadur Shah was taken prisoner, and his two sons were shot by Captain Hodson.

**MASSACRE OF CANNOR**  
**SIEGE OF LUCKNOW**—At Cawnpore the Europeans were besieged by Nana Sahib of infamous memory, the adopted son of the late Peshwa. Their position being open and almost indefensible after holding out for twenty-two days the garrison surrendered only on a guarantee that the women and children should have a safe conduct as far as Allahabad. As soon as the surrender had taken place Nana Sahib gave the order to fire, and every man, woman and child was murdered. Their bodies were thrown down a well just before Sir Henry Havelock arrived with the relief force. He defeated the Cawnpore mutineers and then marched to relieve Lucknow, which had held out since July 2 against tremendous odds. Havelock's force was too small to raise the siege and was itself invested, Lucknow not being finally delivered until Sir Colin Campbell arrived in November. The relief of Lucknow broke the back of the rebellion, British columns being now able to march across the plains and stamp out the remainder of the mutiny. Oudh was reduced and in Central India Sir Hugh Rose waged a brilliant campaign against the disinherited Rance of Jhansi, who died at the head of her troops, while Tantia Topi was finally crushed by another British General Lord Napier, between Agra and Gwalior. In 1859 the Oudh mutineers were swept over the frontier into Nepal and the mutiny was at an end.

**TRANSFERS OF INDIA TO THE CROWN**—The terrible events of 1857 had aroused the British nation to a full sense of the responsibility of governing India. Up to this time the Government of India, carried on by the East India Company, was subject to two controlling bodies in England. These were first the old Court of Directors, and second the Board of Control, a body established by Pitt's Act of 1784 further to control the Company. The rule was that the Court of Directors submitted despatches and instructions to the Board of Control, which altered them if it was not in agreement. This arrangement was the cause of many delays and frequent irritation, from which the Government of India suffered. In 1858 an Act was passed in the British Parliament which transferred the governments, territories and revenues of the East India Company to the Crown. By that Act India was to be governed by, and in the name of, the Sovereign through a Secretary of State, assisted by a Council of fifteen members. At the same time the Governor-General received the title of Viceroy. The European troops of the Company, numbering about 24,000 officers and men, were amalgamated with the British Army and the Indian Navy was abolished. Peace was proclaimed in July 1859, and the concluding years of Lord Canning's Viceroyalty were marked by many important reforms. From this time also date the customs system, income tax, licence duty and State paper currency of India. Canning died in 1862, immediately after he had relinquished the Viceroyalty to Lord Elgin, who lived only a few months after his arrival in the country.

**1862-1878: RECONSTRUCTION PERIOD**—Elgin was succeeded as Viceroy in 1862 by Sir John Lawrence (afterwards Lord Lawrence), the "Saviour of the Punjab," who before he retired had passed

through every grade in the Service, from an Assistant Magistracy to the Viceroyalty. Lawrence reorganised the Indian military system, reconstructed the Indian Army and created the Irrigation Department. During his Viceroyalty two severe famines occurred, and a serious commercial crisis threatened the tea industry of Bengal. Lord Mayo, who succeeded Lawrence, created an Agricultural Department and introduced the system of Provincial Finance, thus fostering the impulse to local self-government. He was murdered by a convict in the Andaman Islands in 1872. During Lord Lytton's tenure of office (1877-80) the visit of the Prince of Wales (King Edward VII) aroused unprecedented enthusiasm for and loyalty to the British Raj and further encouragement was given to the growth of this spirit when, at a durbar of great magnificence held on January 1, 1877, Queen Victoria was proclaimed Empress of India. The worst famine that India had ever known occurred in 1877-78, no less than eight crores of rupees having to be spent in importing grain. The loss of life was estimated at 5½ millions.

**1878-1894 : SECOND UGHIAN WAR - THE RUSSIAN MENACE - LEGISLATION** - It was about this time that the affairs of Afghanistan and the growing influence of Russia in that country became prominent. The Amir Sher Ali, was found to be intriguing with the latter country and that fact, coupled with his repulse of a British mission, led to the second Afghan war. British armies advanced up the Khyber Pass, the Kurram Valley and the Bolan Pass, and gained all the important vantage points of Eastern Afghanistan. The murder of the British Resident, Sir Louis Cavagnari, at Cabul in 1879 necessitated the occupation of that city and Kandahar by British forces, a campaign made memorable by Sir Frederick (afterwards Earl) Roberts' famous march. Lord Ripon became Viceroy of India in 1880, while in the following year the Self-Government Act was passed and the Vernacular Press Act repealed. During Lord Dufferin's Viceroyalty (1884-88) Upper Burma was annexed and Kashmir became a protected State of the Indian Empire. Over the Peshawar incident (a collision between Russian and Afghan troops) in 1885 war between Great Britain and Russia was narrowly averted, but the incident drew attention to a menace that was to be felt for nearly a generation more; it also served to win from the Princes of India a unanimous offer of troops and money in case of need. That offer bore fruit under the next Viceroy, Lord Lansdowne, when the present system of Imperial Service troops was organised. In 1891 a rising took place in the State of Manipur, whose Rajah was dethroned in consequence, and in 1892 the passing of Lord Cross's Act increased the size of the Legislative Councils as well as the number of non-official members thereof. Other useful legislation concerned social and domestic reform among the Hindus, the closing of the Indian Mints to the free coinage of silver, and large schemes for the construction of railways, roads and irrigation works.

**1895-1899 : CHITRAL AND TIRAH CAMPAIGNS** - From 1885 onwards the attention of the Indian Government had been devoted increasingly to the north-west frontier. In 1893 the frontiers of Afghanistan and British India were defined by a joint agreement between the two Governments, known as the Durand Agreement. This brought Chitral under British influence, and in 1895 an expedition was necessary in order to eject hostile chiefs in favour of candidates amenable to British influence. Two years

later the Waziris, Swatis and Mohmands attacked the British positions in Malakand, and the Afghans closed the Khyber Pass, leading to the military operations known as the Tirah Campaign, in which 10,000 troops were employed and over 1,000 officers and men were lost. This was a heavy burden on the finances of India which was increased by the serious and widespread famine of 1896-97 and by the appearance in the country of bubonic plague. The methods taken to prevent the spread of that disease led to rioting in Bombay, and elsewhere to the appearance in the vernacular press of seditious articles which made it necessary to tighten the law dealing with such matters.

**1899-1905 : LORD CURZON'S VICEROYALTY** - When Lord Curzon became Viceroy in 1898 he reversed the policy of his predecessors on the north-west frontier which had given rise to the Tirah Campaign, withdrew outlying garrisons in the tribal country, substituted for them tribal militia and created a new North-west Frontier Province for the purpose of introducing consistency of policy and firmness of control upon that disturbed border. In many other respects, too, his Viceroyalty was one of the most memorable in the history of India, as he brought to his work an increasing energy and a personal example of strenuous activity. In the first year of office he passed the Act which in accordance with the recommendations of the Fowler Commission practically fixed the value of the rupee at 1s. 4d. while in 1900 a Gold Reserve Fund was created. Further, he reformed the systems of education and police, laid down a comprehensive scheme of irrigation, improved the leave rules and the excessive report-writing of the Civil Service, established agricultural banks and emphasised the position of the Feudatory Chiefs by founding the Imperial Cadet Corps to give a military education to the sons of ruling and aristocratic families. In 1903 the accession of King Edward VII was proclaimed in a splendid Durbar, while in the same year Lord Curzon was re-appointed to a second term of office, and in the following year the expedition to Lhasa first involved the Forbidden City to European gaze. The chief act of Lord Curzon's second tenure of power was the partition of Bengal and the creation of the new province of Eastern Bengal and Assam - a reform which was designed to remove the systematic neglect of the trans-Gangetic areas of Bengal, but which provoked bitter and prolonged criticism. In 1905 a controversy with Lord Kitchener, the Commander-in-Chief, as to the position of the Military Member of the Council, led to the Viceroy's resignation and he was succeeded by Lord Minto.

**1905-1914 : UNREST IN BENGAL - NORTH-EAST FRONTIER - VISIT OF THE KING-EMPEROR** - The new Viceroy quickly found himself face to face with the most serious troubles that British rule had encountered in India since the Mutiny. For many years the educated class among the natives had been clamouring for itself a larger share in the administration and had organised a political party which, under the name of the National Congress, held annual meetings at Christmas in one or other of the large cities of the Peninsula. This class also exercised a wide influence through the press, vernacular and English, especially among young students. There is no doubt, too, that the adoption of western civilisation by the Japanese and their victorious war with Russia had set in motion a current of thought through all the peoples of the East. Though not the cause of the trouble which

arose, the partition of Bengal, which was resented by Bengali agitators as an insult to their country, was utilised to foment disaffection. Outside the Presidency attempts to quell that disaffection by the ordinary law were fairly successful, but in Bengal a 'Swadeshi' movement sought to boycott British goods, while the accompanying of assassination and bomb-throwing necessitated the passing of special Acts to meet the situation, viz. an Explosives Act, a Prevention of Seditious Meetings Act and a Criminal Law Amendment Act.

Legislation, however, was not only repressive large steps being taken to extend representative institutions. In 1907 a Hindu and a Mohammedan were appointed to the Secretary of State's Council and in 1909 a Hindu was appointed for the first time to the Viceroy's Council. The Indian Councils Act of 1909 carried this policy farther by reconstituting the Legislative Councils and conferring upon them wider powers of discussion. Lord Minto's viceroyalty was further distinguished by the conclusion between Great Britain and Russia of a far-reaching agreement on questions relating to Persia, Afghanistan and Tibet and also for punitive expeditions against the Lakka Khels and the Mohmands on the North-west Frontier.

**VISIT OF THE KING-EMPEROR** - Sir Charles (afterwards Lord) Hardinge was appointed to succeed Lord Minto in 1910. In November 1911 the King Emperor and the Queen visited India and held the Coronation Durbar at Delhi on December 12. At the close of the Durbar His Majesty announced the transfer of the Seat of Government from Calcutta to Delhi and the creation of a Governorship of Bengal, as well as of a new Lieutenant-Governorship of Bihar and Orissa. This latter announcement involved the reversal of the partition of Bengal and the disappearance of Eastern Bengal and Assam as a separate province. On December 23, as he was making his ceremonial entry into Delhi as the new capital, Lord Hardinge was severely wounded by a bomb. There was serious rioting at Cawnpore in 1913, and further trouble in the following year with a number of Sikh emigrants who had returned from Canada. The sequel, revealed in the two conspiracy trials at Lahore, showed that the 'Ghadr' conspiracy (or mutiny) was widespread and had been consistently encouraged by Germany.

**1914-1918 : INDIA AND THE WORLD WAR - MESOPOTAMIAN CAMPAIGN - THE MONTEAGUE REPORT** - The magnificent response made by India to the needs of the Empire during the Great War is a matter of world history. 'Nothing has pleased me more,' ran the King Emperor's message read by the Viceroy (Lord Hardinge) to the Legislative Council on September 8, 1914, 'than the passionate devotion to my Throne expressed both by my Indian and English subjects and by feudatory princes and chiefs of India, and their prodigal offers of their lives and their resources in the cause of the Realm.' On the motion of an Indian member, the Council unanimously affirmed its unswerving loyalty, promised unflinching support to the British Government, and offered on behalf of the people of India to share in the cost of the War. The Council reflected the attitude of the country; controversy was suspended, the martial classes eagerly responded to the call to arms, and lavish offers of help poured in from the rulers of native States.

So satisfactory was the general situation in India at that time that the Indian Government was able to release most of the British

troops, the flower of the Indian army, the best of the artillery, and large quantities of ammunition. In September 1914 a force of 70,000 men was sent to France. By the end of 1915 India's contribution amounted to nearly 80,000 British and 210,000 Indian officers and men. The expeditionary forces sent from India to France, Gallipoli, Egypt and East Africa passed on arrival to the control of the Home Government, and the responsibility of the Indian Government for them was thereafter confined to replacing losses by fresh drafts and providing supplies.

**MESOPOTAMIAN CAMPAIGN** — It was otherwise with the expedition sent to Mesopotamia, the control and management of which until 1916 were left to the Government of India. In the judgment of the Mesopotamia Commission which afterwards investigated the conduct of the expedition this delegation of responsibility was unfortunate. The expedition had at first a very limited objective, being sent to occupy Basra in the event of Turkey declaring war. Its scope was gradually enlarged until by September 1915 a series of successes brought it within striking distance of Bagdad. Then followed the advance on that city, the failure of the attack on the Turkish position at Ctesiphon, the disastrous retreat on Kut el Amara, and the capitulation of the besieged British force under General Townshend on April 29, 1916. That the expedition was badly managed there can be little doubt, but its earlier defects were afterwards repaired by a series of defeats inflicted on the Turks and the capture of Bagdad by Sir Stanley Maude.

In all the theatres of war the total casualties sustained by Indian troops were 61,308 dead and 79,850 wounded.

**MONTAGU REPORT (IHL)** — In 1917 Mr. Montagu, who had succeeded Mr. (afterwards Sir) Ansten Chamberlain as Secretary of State, carried out the latter's intention of visiting India. Lord Chelmsford was then Viceroy, and the result of that visit and of the exhaustive inquiries and conferences that were held was shown in the following year, when a report was issued containing what is known as the joint scheme of reform evolved by the Secretary of State and the Viceroy (See later under 'Administration'). In 1917 also compulsory military service for British subjects of European origin, including Anglo-Indians, was instituted, and commissions in the Indian Army were granted to Indians for the first time.

**1919-1920: THE ROWLATT ACT — ECONOMIC AND POLITICAL UNREST — AFGHAN WAR — GOVERNMENT OF INDIA ACT** — Shortly after the issue of the Montagu Report, another report, which was to have a great bearing upon future events, was issued by the Special Committee of Inquiry, over which Mr. Justice Rowlatt presided, into seditious crime in India. That report and the legislation which followed in consequence of it, together with the announcement of the proposed reform scheme, led to a renewal of political discussion and agitation, which had to a great extent been in abeyance during the early days of the War. Prolonged strikes occurred in Bombay and elsewhere, the gravity of the industrial and economic problem which, like all other countries, India had to face after the War having been increased by the ravages of an influenza epidemic, which is supposed to have caused 6,000,000 deaths during the winter months of 1918-1919. In spite of the storm aroused by the nationalist press and politicians, the Government proceeded with its Bill, which, however, was passed only by the official majority. Mr. M. K.

Gandhi, a well-known social and religious reformer, revered throughout the Bombay Presidency as an ascetic and holy man, initiated a *Sataggraha* or passive resistance movement which his followers quickly developed into open sedition. On March 30, 1919, the mob came into collision with the police at Delhi, and on April 13 the tragedy of Amritsar occurred.

**AMRITSAR** — In Amritsar (Punjab) banks and other buildings had been pillaged and burnt, while Europeans were murdered. The civil officers, finding themselves powerless to cope with the mobs in possession of the city, called upon the military to restore order. General Dyer, the officer commanding, deemed it necessary in the course of his operations to disperse forcibly an unlawful assembly held in the Jallianwala Bagh. Nearly 400 persons were killed by the fire of the troops, and probably three that number wounded. His action aroused intense indignation among Indians of all shades of political opinion and became the subject of most bitter controversy. Other incidents, such as injudicious orders and degrading punishments awarded by officers administering martial law, the general severity with which the latter were inflicted and the heavy sentences passed, together formed material for an impassioned attack by the Nationalist Party on the policy and conduct of the Punjab Government. Nor was this bitter feeling allayed by the appointment of the Hunter Committee to inquire into the disturbances connected with the Rowlatt legislation.

**AFGHAN WAR** — Exaggerated reports of the Amritsar and other riots and of the effect of the Rowlatt Act found their way into Afghanistan leading the new Amir, Amanullah, to the mistaken conclusion that an invasion of India might prove a solution of his domestic troubles. That it failed was due largely to the prompt mobilisation of Indian troops, the passage of the Khyber Pass, the occupation of Dacca and the bombing by aeroplanes of Kabul and Jalalabad. In June 1919 the Amir reluctantly accepted the conditions of armistice offered by the Indian Government and on August 8 a treaty of peace was signed. In 1919-20 a punitive expedition into Waziristan entailed severe fighting both the Wazirs and Mahsuds holding out with great obstinacy and skill.

**GOVERNMENT OF INDIA ACT** — In December 1919 the scheme of constitutional reform became law by the passing of the Government of India (Amendment) Act. Its importance was signalled by the King Emperor's proclamation of December 23, which dealt in eloquent and arresting language upon the political advancement conferred on the Indian peoples, authorised the Viceroy to extend the royal clemency to political offenders in the fullest measure compatible with public safety, and announced that the Prince of Wales would visit India to inaugurate the new Constitutions. Unfortunately racial feeling and excitement still continued to manifest itself. The publication of the Hunter Report and of the correspondence between the Government of India and the Secretary of State regarding its findings, as well as the subsequent debates in the British Parliament, renewed the bitterness and indignation which the Amritsar proceedings had aroused throughout India. Mr. Gandhi, who had associated himself with the grievances of the Indian Mohammedan community with regard to the terms imposed upon Turkey by the Allies and the question of the Kalifat, proclaimed in 1920 a new policy of non-co-operation, which, while it failed to attract definitely the middle and upper

classes, certainly relaxed the sense of law and order among the masses.

Owing to reasons of health the Prince of Wales' visit was postponed from 1920 to 1921, and H. R. H. the Duke of Connaught came out to inaugurate the Council of State and Legislative Assembly at Delhi. At the end of 1920 Lord Chelmsford's arduous but successful tenure of office came to an end and he handed over the Viceroyalty to Lord Reading.

**1921-1926 LORD READING'S VICEROYALTY — GENERAL IMPROVEMENT** — A remarkable chapter in the history of Viceroys and Governor Generals of India opened in April 1921 with the accession of Lord Reading to office and closed early in 1926 with his departure from Bombay. The former Lord Chief Justice of England, who in his boyhood had run away to sea and worked his passage to India before the mast found himself faced by a disquieting outlook and a formidable task. The great experiment of the Reforms had to be carried out with the help of the educated classes of India, a work requiring mutual confidence and good will; the shadow of Amritsar clouded the relations between the Government and its subjects at every turn, while Mr. Gandhi's agitation in favour of passive resistance was accompanied by outbreaks of riotous violence and there was a dangerous recrudescence of communal feeling among Mohammedans and Hindus. Despite these obstacles Lord Reading's viceroyalty proved to be one of steady improvement. At the end of his term of office the policy of non-co-operation adopted by the Swarajist Party was on its last legs, the Reforms were working smoothly in all but two provinces (Central Provinces and Bengal), the Sikh problem which had threatened to be an acute one, was honourably solved, the Budget showed a surplus in spite of the abolition of the vexatious cotton excise, and the Indianization of the essential services was proceeding satisfactorily.

**LEADING EVENTS** — Briefly summarised, the leading events of Lord Reading's viceroyalty were the visit of the Prince of Wales to India in the autumn of 1921, when attempts to boycott celebrations in his honour signally failed, the arrest and imprisonment of Mr. Gandhi in 1922, the adoption of a definite policy of protection by the formation of the Tariff Board in the same year, the elevation of Burma to the dignity of a Governor's Province in 1923, the elections for the Legislative Assembly and the Provincial Councils in 1924, in which the Swarajists increased their representation everywhere, as a result of which they were able to frustrate the working of Dyarchy in Bengal and the Central Provinces, the death of Mr. C. R. Das, the Swarajist leader in 1925, and the gradual collapse of the non-co-operative movement. In the last-named year the first railway electrification scheme in India was inaugurated in Bombay, and in Madras the Mettur-Cauvery irrigation project, by which 300,000 acres will be brought under cultivation, was commenced. In 1926 the cotton excise duty was repealed, and the Khyber Pass Railway was opened. Viscount Reading (created Earl of Reading on his return to England) left India in April 1926, and was succeeded in the viceroyalty by Lord Irwin of Kirby Underdale, who had previously held a post in the Home Government as Minister of Agriculture. His tenure of office was early marked by bitter conflicts between Hindu and Mohammedan communities in many cities, but, on the whole, general conditions in the summer of 1926 showed a distinct tendency towards improvement.

# PEOPLES

## POPULATION

### POPULATION

THE last census of the population of India was taken on March 18, 1921 the figure returned for the whole of the Empire being 318,942,480 as against 315,156,396 at the census of 1911. The population of British India was 247,003,293 or 77 per cent., and that of the Federative States and Agencies 71,939,187 or 23 per cent of the total. This number is spread over 1,805,332 square miles so that India with an area about half that of the United States has a population almost three times as large.

The following table shows the distribution of population by Provinces and States at the two last censuses.

Province, State or Agency	1911	1921
Ajmer-Merwara	501,305	195,271
Andamans and Nicobars	20,450	27,086
Assam	6,714,200	7,606,230
Baluchistan	114,112	420,618
Bengal	45,182,005	10,605,536
Bihar and Orissa	34,480,511	31,002,180
Bombay (Presidency)	10,600,266	10,348,210
Bombay	16,130,666	16,012,342
Sind	3,513,135	3,279,377
Aden	46,105	56,500
Bruma	12,115,217	13,212,192
Central Provinces and Berar	13,916,158	13,912,700
Coorg	174,970	163,838
Delhi	413,347	488,188
Madras	41,405,401	42,318,985
North West Frontier Province	2,196,933	2,251,310
Punjab	10,578,573	20,685,024
United Provinces of Agra and Oudh	46,807,490	15,375,787
Total Provinces	243,933,178	247,003,293
Assam State (Manipur)	346,222	381,016
Baluchistan States	420,291	378,877
Baroda State	2,032,798	2,126,522
Bengal States	822,565	896,926
Bihar and Orissa States	3,945,209	3,959,560
Bombay States	7,388,051	7,409,120
Central India (Agency)	6,129,019	5,097,023
Central Provinces States	2,117,152	2,066,900
Gwalior State	3,227,961	3,186,075
Hyderabad State	13,374,676	12,471,770
Kashmir State	3,158,126	3,320,518
Madras States	4,811,841	5,460,312
Mysore State	5,806,193	5,978,892
North-West Frontier Province (Agencies and Tribal Areas)	1,622,094	2,825,136
Punjab States	4,212,794	4,416,036
Rajputana (Agency)	10,530,432	9,844,384
Sikkim	87,920	81,721
United Provinces States	1,189,874	1,134,881
Total, States and Agencies	71,223,218	71,939,187
Total, India	315,156,396	318,942,480

## EMIGRATION SPORT

**CASTE SYSTEM.** The caste system (*castus*—purity of breed), which is a potent factor in the national life of India, does not appear to have been a part of the Aryan religion originally. It arose subsequently with a religious sanction which is still maintained, and it is noteworthy that its operation has held sway through all the religious, social and political changes of 3000 years.

The term "caste" is applied to the separate sections of the Hindu races who themselves usually employ the word *jati* or *jat* meaning birth or descent. Caste is the first institution of Hindu society which forces itself upon the attention of the stranger; all a man's actions from the cradle to the grave are regulated by it, and so widespread is its influence that, though originally a purely Hindu institution it has come to exercise a considerable influence over Mohammedans as well.

In ancient Hindu writings four great divisions were recognised—the Brahman, or learned, the Kshatriya, or warrior, the Vaisya, or merchant, and the Sudra, or labourer (all others being *Mlecha* (pariah)). But in practice at the present day the minute differences of race of native country, of avocation and of religion are sufficient to form differences of caste in most of which no man may lawfully eat with any individual of any other caste, or partake of food cooked by him, or marry into another caste family, but he may be his friend, his master, his servant or his partner.

### CEREMONIAL OBSTACLES

The caste ideas of ceremonial uncleanness are very peculiar. A Hindu visitor to a European house changes all his clothes and uses the secretions of the cow on his return home from the visit, or on being visited by a European has the floor spread with fresh cow-droppings. Every workman is clean in his own trade, but no Hindu will use any article of earthenware which a *Mlecha* has "polluted" by his touch; all earthen vessels are immediately broken, and brass or copper utensils are scourged with sand to free them from impurity. There are places where water is given to the natives as they walk along the road. Small brass pots are kept for the caste people, but there is no pot kept for the pariah, who must catch water in his mouth from a long hollow bamboo.

If a *Jam* come into contact with an out-caste, he, like the Hindu, touches fire or water to purify himself. If a Sudra Hindu ask a drink of a Brahman, it will be given in a brass vessel but from a distance, the Brahman stretching forward and placing the pot between them. It is similarly returned, but before receiving it back water is poured over to purify it. Not one of the helot races may enter the house of a Hindu, but he will stand at a distance and shout out his message.

**DENSITY OF POPULATION.** Over the whole of India the population per square mile averages 177, the mean density in the British Provinces being 226 and in the States 101. If the districts (and small States) are taken as a unit and the cities are excluded, the mean density ranges between a minimum of 1 and a maximum of 1,882 per square mile. The largest figures of density are Delhi (873), Cochin (720), Aden (706), Bengal (592), Bihar (566),

## LABOUR PRESS

Travancore (526), Oudh (507), and United Provinces (438). The lowest figures are returned by Baluchistan States (4), Andamans and Nicobars (8), Baluchistan (8), and Kashmir State (40).

**FOREIGN POPULATION.** The number of persons resident in India who were born outside the Indian Empire was 603,526 at the last census. Of these 274,000 were born in Nepal, 116,000 in the British Isles, 108,000 in China, and 48,000 in Afghanistan.

**GROWTH OF POPULATION.** The following table shows how the total population of India grew between the census of 1872 and that taken in 1921.

YEAR	POPULATION	VARIATION PER CENT SINCE PREVIOUS CENSUS
1872	206,192,360	
1881	253,896,330	23.2
1891	287,314,671	13.2
1901	294,361,056	2.5
1911	315,156,396	7.1
1921	318,942,180	1.2

The real increase in the population since 1872 that is during 49 years is estimated at about fifty-four millions, or 26.1 per cent., the figures for the first census having been not nearly so accurate as those of the later enumerations. The decade 1881-1891 which was free from any exceptional calamity is usually considered to have been a period of fairly normal progress. Every other decade has witnessed some special disaster, for instance, a severe famine in Southern India checked the increase in the decade 1872-1881 while the decennium 1891-1901 was dominated by the great famines of the closing years. Growth in Northern and Western India was checked in the succeeding decade by plague and in 1918 the total mortality from the influenza epidemic was certainly not less and was probably more than twelve and a half millions.

**LANGUAGES.** India has no less than 222 vernacular languages of extraordinary variety. The languages spoken by 316,056,000 persons at the last census are grouped in seven families. The principal are Western Hindi (spoken by 96,714,000 persons), Bengali (40,205,000), Telugu (23,601,000), Marathi (18,798,000), Tamil (18,780,000), Punjabi (16,231,000), Rajasthani (12,681,000) after which come Oriya, Kanarese, Gujarati, Burmese, and Malayalam. Hindustani, a dialect of Hindi, has become the literary language of Hindustan, and is the *lingua franca* of India. English is understood by many.

**OCCUPATIONS.** Occupation was recorded for 316,055,231 persons in 1921. India is essentially an agricultural country, agriculture proper supporting 224 millions out of the first named total, or 71 per cent of the population of the Empire. If to this be added the pastoral and hunting occupations, the percentage is raised to 73. Industries support 10 per cent of the population, but the bulk of these are engaged in unorganised industries connected with the supply of personal and household necessities and the simple implements of work. Organised industries occupy only 1 per cent of the population. In trade and transport, on which not more than 6 per cent and 2 per cent respectively depend, a not inconsiderable number are connected with the disposal of the various kinds of agricultural products.

The administration and protection of the country engage only 4,825,470 persons, or 1½ per cent of the population, and the remainder are supported by domestic miscellaneous and unproductive occupations. The following are the figures for the different means of livelihood:—

Pasture and Agriculture	229,045,019
Fishing and Hunting	1,607,331
Mines, Quarries, Salt, etc.	542,053
Industry	33,167,018
Transport (including postal telegraph and telephone services)	4,331,054
Trade	18,114,022
Army and Navy, Air Force and Police	2,181,597
Public Administration	2,643,882
Professions and Liberal Arts	5,020,571
Domestic Service	4,570,151
All others	14,831,933
<b>Total</b>	<b>316,055,231</b>

**RACES.** When the census of 1901 was taken an exhaustive and painstaking report was drawn up on the racial divisions of the Empire. The whole population of India is therein considered to be divided into seven distinct racial types: the Turco-Iranian type, represented by the Baluch, Brahmin and Afghans of the Baluchistan Agency and the North-West Frontier Province; the Indo-Aryan type occupying the Punjab, Rajputana and Kashmir, and having as its characteristic members the Rajputs, Khatri, and Jats; the Scytho-Dravidian type of Western India, comprising the Malirattas, the Kunbis and the Coorgs; and the Aryo-Dravidian type found in the United Provinces, in parts of Rajputana and in Bihar, represented in its upper strata by the Hindustani Brahmin and in its lower by the Chamar. The fifth type is the Mongolo-Dravidian of Bengal and Orissa, comprising the Bengal Brahmins, the Kavastis, the Mohammedans of Eastern Bengal, and other groups peculiar to this part of India. The sixth type is the Mongoloid of the Himalayas, Nepal, Assam and Burma, represented by the Kanets of Lahoul and Kulu, the Lepchas of Darjeeling, the Limbus, Munims and Gurungs of Nepal, the Bodo of Assam, and the Burmese. Seventh and last comes the Dravidian type, extending from Ceylon to the valley of the Ganges and pervading the whole of Madras and Mysore and most of Hyderabad, the Central Provinces, Central India and Chota Nagpur. Its most characteristic representatives are the Paniyas of the Southern Indian hills and the Santals of Chota Nagpur. This is probably the original type of the population of India, now modified to a varying extent by the admixture of Aryan, Scythian and Mongoloid elements.

**RELIGIONS.**—Hinduism, or Brahmanism, is the religion of the great majority of the people, and Mohammedanism comes next. Of the 318,942,480 inhabitants of India, British and Feudatory, at the census of 1921, 216,734,586 were Hindus, 68,735,233 Mohammedans, 9,774,611 Aboriginal Pagans, 11,571,268 Buddhists (almost all in Burma), 1,178,596 Jains, 101,778 Parsees (chiefly in Bombay), and 21,778 Jews. Excluding Indian States, there were in Bengal 25,210,802 Mohammedans to 20,206,859 Hindus, in the Punjab 11,444,321 Mohammedans to 6,579,260 Hindus and 2,294,207 Sikhs, and in Bihar and Orissa 3,690,182 Mohammedans to 28,166,459 Hindus. The Christians in British India numbered 3,027,881, those in Indian States and Agencies 1,726,183. Buddhism at one time prevailed very generally throughout India, it is now confined to Bengal, Sikkim and Burma.

**SEX DISTRIBUTION.** In the whole of India there is an excess of males over females, the figures being respectively 163,905,554, and 154,946,926, or 945 females to every 1,000 males.

Marriage in India is almost universal owing to religious obligations. The movement against infant marriage and enforced widowhood is gaining ground. There were in 1921 over 26,834,000 widows in India.

**SOCIAL CUSTOMS.** Four-fifths of the population of India are affected largely by the caste-system already described as being partly at least connected with the popular religion. A religious sanction in some degree attaches to infant marriage or child marriage, with all classes, also to the seclusion of women and to the prohibition of the remarriage of widows in the upper and middle classes. In practice the women of the masses are not secluded, but, on the contrary, appear everywhere and work out of doors; they re-marry too, if in widowhood. The burning of widows (suttee or sati) on the funeral pyres of their husbands has long been suppressed by the criminal law under British rule. Polyandry is found only among a few of the aboriginal tribes. Polygamy is sanctioned but not enjoined; it is, of course, confined to those who can afford to maintain more than one wife. In practice, the masses of the people are monogamist. In all classes the marriage expenses, arising chiefly from the offerings made to the priesthood, are so expensive as frequently to cause embarrassment to families. Many of the social customs above indicated are regretted and deprecated by modern reformers as being injurious to the national progress, and efforts for reformation are constantly being made. The laws of inheritance, dower and divorce, women's property, adoption, partition, and other social matters are held to have a quasi-religious sanction, and are generally observed in the courts of justice under British rule, both for Hindus and Mohammedans. Three criminal practices have been severely dealt with by the British Government—female infanticide, arising from the presumed exigencies of caste; the murderous and treacherous Thuggee connected with the Goddess of destruction; and the Meriah or human sacrifices by some of the hill-tribes.

**URBAN POPULATION.**—The total urban population of India in 1921 was 32,418,776, or 10.2 per cent of the total. It was distributed among 2,313 places, of which 35 have populations of 100,000 and over, 54 populations between 50,000 and 100,000, and 199 populations of from 20,000 to 50,000. A study of the statistics of population for India reveals the fact that the medium-sized country towns are gradually decreasing in extent, while there is a general growth of the larger cities under the influence of commercial and industrial development.

Following are the figures of population for the most important cities and towns:—

TOWNS	POPULATION	TOWNS	POPULATION
Calcutta (with suburbs)	1,327,547	Allahabad	157,220
Bombay	1,175,914	Mandalay	148,917
Madras	526,911	Nagpur	145,193
Hyderabad	404,187	Srinagar	141,735
Rangoon	341,902	Madura	138,894
Delhi	304,420	Bareilly	129,459
Lahore	281,781	Meerut	122,609
Ahmedabad	274,007	Trichinopoly	120,422
Lucknow	240,566	Jaipur	120,207
Bangalore	237,496	Patna	119,976
Karachi	216,883	Sholapur	119,581
Cawnpore	216,436	Dacca	119,450
Poona	214,796	Surat	117,434
Benares	198,447	Ajmer	113,512
Agra	185,532	Jubbulpore	108,793
Amritsar	160,218	Peshawar	104,452
		Rawalpindi	101,142

**VILLAGE SYSTEM.**—This is an important factor in the rural life of the Hindus, and from them has been adopted by the Mohammedans. A village does not merely mean a collection of houses, but corresponds to a township or a parish. It is an area of some hundreds or thousands of acres according to circumstances, and is under the administration of hereditary functionaries, the principal of whom is the *patel* (head-inhabitant), a small local magistrate who superintends the affairs of the community, settles disputes and attends to the rural police and the collection of taxes. Among the other functionaries may be mentioned the accountant and notary (*khannum* or *patwari*) who keeps a register of the produce and the names of proprietors, draws up all deeds of sale, transfers, etc.; the Brahmin, or village priest, the schoolmaster, and the watchman. Besides these almost every village has its astrologer, smith, carpenter, potter, barber, and bard, all of whom are rewarded out of the produce of the village-lands. Under this simple form of municipal government the inhabitants of the country have lived from time immemorial. The boundaries of the village have been but seldom altered, and though the villages themselves have been sometimes changed, and even desolated by war, famine and disease, the same name, the same limits and families have continued for ages.

## EMIGRATION

The total number of Indians resident overseas, according to the latest available returns, is nearly two and a quarter millions. Of these, the largest number (750,000) are emigrants to Ceylon, nearly 500,000 of whom are employed on the tea and other estates. In the Federated Malay States there are 305,000, in Mauritius 265,000, in the Union of South Africa 162,000, in British Guiana 125,000, in Trinidad 122,000, and in the Straits Settlements 105,000. British Malaya has about 62,000, Mozambique 35,000, and Kenya Colony 25,000.

Emigration for the purposes of labour dates from the beginning of the 19th century. From 1800 onwards Indians crossed the Bay to the Straits Settlements to work on the sugar, spice, tapioca and coconut plantations of Penang, and this intercourse was allowed to continue for many years without regulation. The abolition of slavery in British colonies in 1834 gave the first great impetus to the movement, the sugar planters of Mauritius at once turning to India as their best recruiting ground, and between 1834 and 1837 at least 7,000 recruits were obtained from Calcutta. The first Emigration Act was passed in 1837, under which emigration was allowed to Mauritius, British Guiana and Australia, but this was suspended in the following year, and subsequent Acts tightened the control under which emigration was permitted to Mauritius, Jamaica, Trinidad, British Guiana, the French Colonies, Ceylon, the Straits Settlements, and South Africa. The indentured system, into which many abuses had crept, was abolished in 1919, emigration to certain French colonies and to Natal having previously been discontinued.

Indian emigration questions have, during the last few years, come very largely into public notice, the status of Indians in the Empire generally being one in which the Indian public now takes a keen interest. It is no longer possible to deal with the treatment of Indian labour apart from other classes of Indian emigrants and travellers. In several colonies and dominions considerable Indian communities have sprung up, which, although composed largely of the descendants of indentured labourers, are

themselves free and lawfully domiciled citizens of the countries in which they are settled, but have not yet been placed on a footing of legal, social, political and economic equality with the rest of the population. The issues round which public interest mainly centres are (a) the control of emigration, (b) the rights of Indians to admission to other parts of the Empire, and (c) the rights and disabilities of Indians domiciled overseas.

**CONTROL OF EMIGRATION.**—So far as unskilled labour is concerned, the Government of India has assumed absolute powers of control. Emigration is only allowed to Ceylon, Malaya and Mauritius under specified terms and conditions, which, after approval by each Chamber of the Legislature are notified by the Governor-General in Council. Recruitment must be by licenced persons under the control of their respective Governments and full facilities are given to emigrants to return to their homes on account of ill health, unsuitable work or unjust treatment. The position now is that the Government of India has vested the Chambers of the Legislature with complete power to decide to what countries emigration shall be permitted and to decide its conditions, and has bound itself to be guided in its policy by Indian public opinion. Skilled labour is of course more able to take care of itself, and, subject to certain necessary safeguards, is at liberty to emigrate to any country in the world which does not restrict such immigration.

**INDIANS OVERSEAS (POSITION OF).**—The policy accepted by the self-governing dominions of the British Empire has been stated as follows:

"(1) It is an inherent function of the Governments of the several communities of the British Commonwealth, including India, that each should enjoy complete control of the composition of its own population by means of restriction on immigration from any of the other communities.

"(2) British citizens domiciled in any British country, including India, should be admitted into any other British country for visits, for the purpose of pleasure or commerce, including temporary residence for the purpose of education, such right shall not extend to a visit or temporary residence for labour purposes or to permanent settlement.

"(3) Indians already permanently domiciled in the other British countries should be allowed to bring in their wives and minor children on condition (a) That not more than one wife and her children shall be admitted for each such Indian, and (b) that each individual so admitted shall be certified by the Government of India as being the lawful wife or child of such Indian."

The first paragraph of the above resolution has regularised the various restrictions on immigration which the self-governing Dominions have, from time to time, adopted, and which, without expressly differentiating against Indians, are in practice used in order to check Indian immigration, the objections to which are stated to be not racial or political but economic. Indian public opinion is at present mainly concerned with the question as it affects the Crown Colony of Kenya and the Union of South Africa.

**KENYA COLONY (INDIANS IN).**—Further immigration of Indians is much restricted, in spite of strong protests from the Government of India that there is no case for such restriction. The Governments of Kenya and Uganda have been invited to submit joint

proposals for legislation. Adult suffrage upon communal lines has been conferred on Indians domiciled in the colony, and an Indian has been appointed to the Governor's Executive Council. A proposed policy of segregation has been abandoned.

**SOUTH AFRICA (INDIANS IN).**—Emigration to Natal was discontinued from July 1, 1911, and under the Immigration Act of 1913 Asiatics with the exception of wives and children of domiciled persons, are prohibited from entering the Union. Voluntary repatriation of Indians has been encouraged, with the result that some 7,500 have returned to India from South Africa since 1921, of whom probably a large proportion has abandoned its South African domicile and accepted repatriation under the official scheme. There is a strong anti-Asiatic party in the Union and many of the former rights of Indians have been curtailed. Only in the Cape Province do Indians enjoy both the political and municipal franchise and the municipal franchise only in Natal. They are subjected to differential treatment in the matter of trading licences, especially in the Transvaal and severe penalties exist on inter-provincial migration. In the Transvaal they are not allowed to acquire immovable property outside locations, and on the Witwatersrand they are subject to the restrictions of the Gold Law. Compulsory segregation, which would inevitably have resulted in the economic ruin of a large number of Indian traders, was proposed under a Bill introduced in the Union Assembly in 1924 and 1925. As a result of strong representations made by the Government of India, a Round Table Conference was to be held between representatives of India and of the Union to consider the whole question of the status of Indians in South Africa.

## LABOUR

Judged only by the test of the number of workers India, with about 100 millions of occupied males, holds a commanding position among the countries of the world. Though many of her industries are still undeveloped, some have made enormous progress during the present century, especially since the War, with the result that the problem of labour and the relations between capital and labour in India has become an acute one.

While it is often said that the demand of labour in India exceeds the supply, the statement is perhaps too sweeping to be strictly accurate. India has an immense mass of potential labour, and the supply is probably more elastic than in countries in a more advanced state of industrial development. But none of the great industrial centres has access to a satisfactory labour supply in its immediate neighbourhood. The cotton operatives of Bombay are drawn for the most part from agricultural districts over a hundred miles away, and since the Bengal has a strong dislike to manual labour, Calcutta must get its supply of labour from Bihar, the United Provinces and Orissa. In consequence, the Indian factory hand, like the Indian country labourer, is characterised by a very small output, largely on account of his migratory character, and in most industries throughout India no real industrial community has yet established itself. Coming from long distances, as the workers frequently do, they are prone to throw up one job for another on slight provocation, and even when they remain in the employ of one concern, they often spend a substantial portion of the year cultivating land in their own villages. In some industrial centres it has been computed that the entire labour force changes every 18 months.

**HOURS OF WORK.** The latest available statistics of the hours of work in India show that while the majority of factories probably work up to the maximum of 60 hours allowed by law, a considerable proportion work appreciably shorter hours. The percentage of factories maintaining a week of 48 hours or less for men was 27, in 13 per cent the men employed worked 54 hours or less. The proportion of factories working in excess of 54 hours was 60 per cent. For women, the corresponding percentages were 31, 14 and 55. The movement towards shorter hours is most marked in Bengal and Assam, in both of which provinces the hours of work for women are 48 or less in the majority of factories. In Bombay a greater proportion of factories work up to the limits permissible under the Act of 1922 both for men and women. The maximum weekly hours for children are 30, and 43 per cent of the factories employing children limit their work to 30 hours or less.

**INDUSTRIAL DISPUTES.** Complete statistics in connection with industrial disputes are not available for the whole of India. The increasing importance that is being attached to the weapon of strike by the workmen of India may, however, be gathered from the figures given for industrial disputes in the Bombay Presidency during the year ended March 31, 1924. This was the worst year in the history of industrial relations in the Presidency. Although the number of disputes in cotton, spinning and weaving mills only amounted to 64, the number of factories and industrial establishments affected was 100, the approximate total of workpeople involved was 261,923, and the number of working days lost was 10,237,823. Two general strikes of great magnitude in that year were the strike in Ahmedabad, which affected 50 out of 61 cotton mills in that locality and lasted for two months, and the general strike in the cotton mills in Bombay city, which took three months to settle and affected some 213,000 operatives and others. During the greater part of 1925 there was a further strike in the Bombay cotton mills, which so spread that towards the end of the year 79 mills were closed and only three continued to operate. No less than 145,000 workers were then idle.

**LEGISLATION.**—The Indian and Provincial Governments have, during the present century, conducted many important investigations into the conditions of labour, and have initiated much useful legislation. In 1924 a technical enquiry was concluded into the methods of humidification and ventilation employed in cotton mills and their effect upon labour conditions. As a result of the draft convention adopted by the International Labour Conference regarding the employment of women before and after child-birth, careful investigations have been instituted into the condition of women workers by several local Governments. Legislation, too, has been important. In 1922 the whole law relating to factories was revised, and the new Factories Act provided, among a number of other reforms, for the introduction of a 60-hour week, the raising of the minimum age of children from 9 to 12, a large extension of the definition of "Factory," and a complete prohibition of night work for women. In 1923 the Workmen's Compensation Act was passed and came into force in 1924. The scales for compensation under the Act are generous. Legislation contemplated includes a Bill relating to the investigation and settlement of trade disputes, one for maternity benefit, and a Weekly Payments Bill.

**TRADE UNIONS.**—The employers in the leading industries have been organised into associations for many years, but the great majority of Labour Unions in India date from the last decade. In the course of the year 1921 Labour Unions came prominently before the notice of the general public on account of the magnitude and frequency of the strikes which took place, and from time to time since, especially in the Bombay Presidency there have been periods of great Trade Union activity. It is often said that in India the strike comes first and that the Union is formed afterwards. Many of the Unions would appear to have little activity except during strikes, and in numbers of instances to be but little more than the formal statement of a vague sense of solidarity.

In 1926 the Legislative Assembly passed a Bill providing for the registration of Trade Unions and defining the law in relation to them. In 1925 the number of Unions in the Bombay Presidency was stated to be 19, with a membership of 41,646.

**WAGES.**—Whether wages in India generally have kept pace with the cost of living is a disputed question, conditions varying so greatly between province and province that exact figures are difficult to obtain. In the cotton industry the average daily earning of men in Bombay city in 1924 was Rs 1 7a 2p, of women 12a 5p, and of big lads and children 12a 3p. In other towns of the Presidency the standards were somewhat lower. Taking all workpeople together and counting two half-timers as one full-timer, the average for Bombay city worked out at Rs 1 4a 2p (equal to 1s 11d), while for the whole Presidency it was Rs 1 3a (equal to 1s 9½d). These were the actual earnings, including monthly bonus and special allowances which are regarded in India as of the nature of wages, but excluding overtime pay, the annual bonus (if paid), and all remuneration in the form of grain or clothing or accommodation at rates below market prices or rentals.

**WELFARE WORK.**—Continuous efforts are now being made both by private enterprise and by the State to improve the housing and general conditions of labour. In cities where Improvement Trusts exist considerable attention is being paid to the provision of homes for the workers. Private employers are also realising the economic advantage of undertaking housing schemes for their labourers. In several of the large commercial centres European and Indian firms have set an honourable example in the care devoted to the conditions under which their workpeople live. There is a growing interest on the part of the general public in all large industrial centres in the health of the operatives, and organisations such as the Poona Seva Sadan Society and the Servants of India are performing a very valuable function in focussing public attention upon housing, food supply, indebtedness, medical aid, educational facilities and the like where ameliorative measures are urgently required.

## EDUCATION

Of the many problems, social and political, which the diverse peoples of India present, there is hardly one which is not traceable, directly or indirectly, to the lack of education. According to the census figures of 1921, out of the 247 million inhabitants of British India less than 9 millions were being educated. In other words, considerably less than 4 per cent of this vast population is under the influence of instruction. Statistics also show the number of literates in India to be 22,600,000, only 122 per thousand of men and 18 per thousand of women being

able to read and write. It is also a fact that while the middle and upper classes of India are educated in a proportion equal to that of many European countries, the poorer classes are predominantly illiterate, a state of things largely due to the poverty of the masses, the inadequate condition of communications, the persistence of certain traditional ideals at present regulating human intercourse throughout the country, the conflict of communal interests, and the chasm between rural and urban life.

Despite all these disadvantages, the last five years have witnessed considerable progress in almost every province in India. In one year Madras increased its pupils by 150,000, Bengal by 100,000, the United Provinces by 60,000, and the Punjab by 61,000. In other parts the advance has been less marked, but is of a substantial character almost everywhere.

**ADMINISTRATION.**—Under the Reforms Act of 1919 education is now a "transferred" subject in the Governors' provinces, and is in each such province under the charge of a Minister. There are, however, some exceptions to this order of things. The education of Europeans is a "Provincial reserved" subject—that is, it is not within the charge of the Minister of Education, and to the Government of India are still reserved matters relating to Universities like Aligarh, Benares and Delhi, also all such new universities as may be declared by the Governor-General in Council to be central subjects. The Government of India is also in charge of the Chiefs' Colleges and of all institutions maintained by the Governor-General in Council for the benefit of members of His Majesty's Forces or of other public servants, or of the children of such members or servants.

**CHIEFS' COLLEGES.**—For the education of the sons and relatives of the Chiefs and Princes of India, whose families rule over one-third of the country, five Chiefs' Colleges are maintained, viz. Mayo College, Ajmer, for Rajputana Chiefs; Daul College, Indore, for Central India Chiefs; Aitchison College, Lahore, for Punjab Chiefs; Rajkumar College, Rajkote, for Kathiawar Chiefs, and Rajkumar College, Raipur, for Central Provinces and Bihar and Orissa Chiefs.

In point of buildings, staffs and organisation these institutions approximate to English Public Schools. Students are prepared for a diploma examination conducted by the Government of India. The diploma is regarded as equivalent to the matriculation certificate of an Indian University. A further course of University standard, called the Higher Diploma, is conducted at the Mayo College. The examination for this diploma is also held by the Government of India. Its standard is roughly equivalent to that of the B.A. diploma of an Indian University.

**FEMALE EDUCATION.**—The last available information shows that there are 24,777 institutions (of which 23,583 were recognised) for the education of Indian women and girls, containing 906,289 scholars. It must be remembered that all the many influences which operate in India against the spread of education among boys are reinforced in the case of women by the *pardah* system and the custom of early marriage. Arts colleges, medical colleges, and the like admit students of both sexes, but only a few girls attend them. The Lady Hardinge Medical College for Women at Delhi gives a full medical course for students. The Shreemati Nathubai Damodhar Thackersey Indian Women's University was started in 1916 by Professor Karve. It is a private institution, doing good work.

**INDIGENOUS EDUCATION.**—Of the 8,791,000 scholars being educated in India, 612,115 are classed as attending "private" or "un-recognised" institutions. Some of these institutions are of importance. The Gurukula, near Hardwar, and Sir Rabindra Nath Tagore's school at Bolpur have attained some fame, Mr Gandhi's school at Ahmedabad has attracted attention, and the numerous monastery-schools of Burma are well-known. Connected with every big mosque in Northern India there is some educational organisation, and the schools attached to the Fathpur and Golden Mosques at Delhi and the Dar ul-Ulm, Deoband, are notable. These institutions generally have a religious or "national" atmosphere, and are possibly destined to play an important part in the future of India.

**PRIMARY EDUCATION.**—The primary schools of India are mainly under the direction of the local boards and municipalities. For financial reasons compulsory primary education has not yet been adopted by the Indian Government, but in recent years seven provincial legislatures have passed Primary Education Acts authorising its introduction by local option. In 1925 there were 168,013 primary schools in British India, containing 6,956,634 scholars (The latter figure does not include scholars reading in the primary classes of secondary schools). The total direct expenditure on primary schools during 1924-1925 amounted to Rs 5,65,44,830.

**SECONDARY EDUCATION.**—The policy of the Government is to maintain a small number of high schools (roughly one for each revenue district), which are to be regarded as models for private enterprise, and to aid private institutions. In 1911-12 there were 1,219 high schools for boys in India, by 1924-25 the number had risen to 2,487, the total of scholars in the former year being 300,881, and in the latter 687,934.

In recent years provincial authorities have recognised that secondary education is often of poor standard and badly regulated, and have taken steps to effect an improvement. It is now generally admitted that the system in India needs to be radically remodelled in order to bring it more closely into contact with the needs and aspirations of the country. Already a considerable step forward has been taken by the establishment of Intermediate Colleges under the control of a Board of Secondary and Intermediate Education.

**TECHNICAL EDUCATION.**—There are increasing signs in India of a demand for technical and industrial education, but for the most part the success of training of this description is intimately bound up with the existence of avenues leading to lucrative employment. At present, owing to the industrial condition of the country, these avenues are in large measure lacking. In 1925 there were 35 Medical Colleges and Schools with some 9,000 students, 13 Law Colleges and schools with 7,400 students, and more than 20 Agricultural Colleges and Schools containing upwards of 1,000 students. There are 22 training colleges for secondary teachers in various parts of India with 1,187 scholars, and normal schools for the training of vernacular teachers. Of commercial colleges and schools there are 144, with nearly 10,000 pupils. The most important is the Sydenham College of Commerce in Bombay. Industrial institutions are dotted about the country, some maintained by Government, others by municipalities or local boards, and some by private bodies. The Indian Institute of Science at Bangalore, the product of generous donations by the Tata family, has accomplished much useful work. In addition to a number of engineering schools, there are Engineering Colleges at

Roorkee, Sibpur, Poona, Madras and Benares, each of which, except that at Roorkee, is affiliated to a University.

**UNIVERSITY EDUCATION.**—The general control of the university system, with the exception of certain All-India sectarian institutions and the Delhi University, has been placed within the province of the Local Governments. The Government of India, however, still retains certain functions in connection with university matters, particularly in the sphere of legislation. Of late, university education has undergone a striking change as a result of the lead supplied by the recommendations of the Calcutta University Commission. Up to the year 1921 the typical Indian university consisted of scattered colleges, one frequently separated from another by many miles. These colleges, often inadequately staffed and inconsiderably equipped, attempted to convey instruction far more elaborate than lay within their competence, whilst the University itself pursued a phantom existence as an examining body. In substitution for this system the Calcutta University Commission recommended the creation of centralised unitary universities as residential and teaching bodies, in which all instruction was to be given by university officers under the direct control of the university authorities. This change was to be accompanied by the removal from the university stage of all tuition which did not strictly belong to it and the creation of new institutions to be called intermediate colleges, which should provide a logical culmination to the secondary school course. But as India was studded with isolated colleges before the new idea took shape, the reorganisation of universities of the old affiliating type may be expected to proceed hand in hand with the multiplication of the new unitary universities.

**LINEs OF DEVELOPMENT.**—The task of giving effect to such recommendations of the Calcutta University Commission as seemed to harmonise with local conditions has fallen to the reformed Provincial Governments. A lead was taken by the United Provinces where new universities have lately been opened at Aligarh and at Lucknow, while the original university at Allahabad has been reconstructed in an attempt to follow the general lines recommended by the Commission. Allahabad University now contains both an internal and an external side, the internal side following the lines of a unitary and residential university, the external side carrying on the old work of affiliation for the benefit of outlying colleges. The operation of this dual system has been attended by certain disadvantages, and a movement is now on foot to start an affiliating university at Agra to which the outside colleges can be attached. In Rajputana there is a movement also for the creation of a separate university. In Bengal, the University of Calcutta is being reorganised. The University of Decca, which was constituted strictly on the lines recommended by the Commission, continues to function usefully. The Universities of the Punjab and of Bombay have developed new honours courses and added university teachers, and the Madras University has been remodelled upon sound lines.

## SPORT

It is not, perhaps, always recognised how important a part sports and pastimes play in the social life of India. Polo and cricket, to mention only two of the games played, have done much to excite healthy emulation between Europeans and Indians, and the

mixed teams that are constantly competing make for camaraderie and good feeling. As regards the more adventurous kinds of sport, such as big game shooting and pig-sticking, India may be called the sportsman's paradise.

**CRICKET.**—Cricket, which was for a long time the favourite game of the British in India, has somewhat declined in favour as polo has spread from the great cantonments to the Native States, though it is still played in the Army and at all schools and colleges, both European and Native. English professionals come out to India every winter to coach the players whom this or that Indian ruler wishes to put into the field, the example of H.H. the Jam Sahib of Nawanagar (better known to all English cricketers as Prince Ranjitsinhji) in fostering the game in his State having been widely followed. Many Indians show not only fondness for the game, but skill in it, and interesting matches are played annually between Europeans, Mohammedans, Hindus and Parsees. In 1926 an English team visited India and played a series of matches.

**FOOTBALL.**—This game in India owes its popularity to the late Sir Mortimer Durand, who started tournament play (Association) at Simla in the "eighties," and it has served a more than useful purpose in bringing Europeans and Natives together in friendly rivalry. The games on the Calcutta Maidan are watched by enormous crowds, and the rough and tumble of the Rugby scrums, mostly between Army teams, are also thoroughly enjoyed.

**GOLF.** Golf has for many years been very popular, but is practically confined to the Anglo-Indian community, though some of the Native Princes are taking to, and proving adepts at, the royal game. Links have been made in scores of stations, and Calcutta is naturally more than well supplied. Here is held the annual tournament for the championship of India, and the links on the Maidan, at Tollygunge and in Barrackpore Park give splendid opportunities to players of every grade. In Simla golfers have to engage in their game sixteen miles away, but there are week-ends to be enjoyed on the hillside at Naldera, even though the greens are on precipitous slopes. In far away Gulmarg, visitors to Kashmir play golf the whole summer through amid beautiful surroundings.

Most of the Indian courses may seem rough to those accustomed to the smooth links of England, but they afford good games nevertheless. The course on the Bombay Maidan dates back to the "forties," and it is traditionally asserted that a match was played on the very day that certain mutineers were blown from the guns on the Maidan. The Bombay course is as flat as a billiard table, and bunkers are furnished by canvas screens. Good grass greens are found in some of the hill stations.

**POLO.**—India owns the oldest European polo club in the world, the Calcutta Polo Club. Climatic conditions make polo a far faster game in India than in England, and the general tactics of the pastime all conduce to pace. There are no boarded grounds, and it is a centre-line game all the way. Polo in India is universal, from the championship in Calcutta down to the humble station game it claims innumerable devotees. The principal tournaments are at Calcutta, where also the Indian Polo Association Championship is played. The Indian Regimental Championship takes place at Meerut, and there is a tournament at Lucknow, besides the various hill station tournaments, among which may be mentioned that at Annandale (Simla) for the Beresford Cup.

**RACING.**—The class of horseracing in India is now equal to the best to be seen anywhere in the Eastern Hemisphere. Calcutta, Bombay, Poona, Lucknow, Meerut, Bangalore, and Rawalpindi are all centres at which meetings under particularly excellent conditions can be patronised. Calcutta may be called the Newmarket of India, and its principal race that for the Viceroy's Cup, dates back to 1856. In Poona there is an excellent flat and steeplechase course, as also in Lucknow. Further north, at Pindi and Lahore it is usually found that ponies, and not horses, predominate at meetings.

**SHOOTING.** In connection with big game, tiger shooting is the pre-eminent branch. There are three recognised methods of pursuing this sport: the first to attack the animal on foot, this is highly dangerous and is seldom attempted; the second, to lay in wait for him from a machan, or sort of platform in a tree; and the third, to drive with beaters and elephants. The record tiger is stated to have been eleven feet before skinning and twelve feet ten inches after dressing. In addition, rhino, buffalo, sambar, black buck, *oris ammon*, pheasant (*monard*), partridge and sand-grouse, snipe and teal all offer opportunities for excellent sport.

**TENNIS.** This has probably gained in popularity more than any other game, and India has sent out of the country several players in the very front rank to compete at Wimbledon and elsewhere. Tournaments, in which more than local interest is taken, are those for the Western India Championship at Bombay, the Bengal Championship at Calcutta, the Southern India Amateur Championship at Madras, the Karachi and Simla Championships, and the All India Tournament at Bangalore.

**YACHTING.** Yachting and sailing of all descriptions are indulged in either privately or by local clubs at most of the ports and sea-coast towns of importance.

## PRESS

The Newspaper Press in India is of British origin and was introduced soon after the task of organising the Administration was seriously taken in hand by the English in Bengal. The first paper, called the "Bengal Gazette" but better known from the name of its founder as "Hicky's Gazette" or Journal, saw the light in 1780 and disappeared from public view two years later. Several journals rapidly followed Hicky's, though fortunately they did not copy his bad example of disseminating gross scandal. The "Indian Gazette" had a career of over half a century, but in 1833 it was merged into the "Bengal Harkara," which came into existence a little later than the former, and both are now represented by the "Indian Daily News," with which they were amalgamated in 1860. In 1784 the "Calcutta Gazette" was started under the avowed patronage of the Government, and flourishes still as the official organ of the Bengal Administration. In 1789 the first Bombay newspaper appeared, the "Bombay Herald," followed next year by the "Bombay Courier," a paper now represented by the "Times of India," with which it was amalgamated in 1861. The forerunner of the "Times of India" was the "Bombay Times," which was started in 1838 by the leading merchants of the city named, but changed its title in 1861.

**EARLY GROWTH.**—In the early days of the British settlements newspapers in India had to submit to a rigorous and often irritating press censorship. The Marquis of

Hastings did something to relax this drawback, but the real emancipator of the press in India was Lord William Bentinck, and the year 1835 has often been cited as the beginning of a new era in its history. A great improvement began to be apparent in the tone and status of the Anglo-Indian press, and a native or Indian press came into being. The first newspaper in any Indian language was the "Samachar Darpan," started by the famous Serampore Missionaries, Ward, Carey and Marshman, in 1818 in Bengal, and it received encouragement from Hastings, who allowed it to circulate through the post office at one fourth the usual rates. This was followed in 1822 by a purely native paper in Bombay called the "Bombay Samachar," which still exists, and thus was laid the foundation of the Native Indian press, which is now by far the largest part of the press in India, numbering over 650 papers.

From the year 1835 to the Mutiny the press spread to other cities like Delhi, Agra, Cawnpore, and even Lahore, whereas formerly it was chiefly confined to the Presidency towns. During the Mutiny its freedom had to be temporarily controlled by the Gagging Act which Canning passed in 1857, but a year later the press was once more free. At the end of 1858 there were 19 Anglo-Indian papers and 25 Native papers, and the circulation of all was very small. The number of the former did not show a great increase in the next generation, but the rise in influence and also in circulation was very marked. Famous journalists like Robert Knight, James Maclean and Hurris Mookerji flourished about this time. The "Civil and Military Gazette" was originally published in Simla as a weekly paper, the first issue being dated June 22, 1872. Prior to and in the days of the Mutiny the most famous journal in Northern India was the "Mofussilite," originally published at Meerut, but afterwards at Agra and then at Ambala. After a lively existence for a few years in Simla the "Civil and Military Gazette" acquired and incorporated the "Mofussilite," and in 1876 the office of the paper was transferred from Simla to Lahore, the "Gazette" then becoming a daily.

**ENGLISH PAPERS.**—Something has already been said concerning the origin and growth of English journals in India. The latest available returns show a total of about 150 English papers and periodicals published throughout British India, a large proportion of which are of the highest standard and comparable to any Western publications.

**DAILY PAPERS.**—The "Times of India" dates from 1838, when it was known as the "Bombay Times." Lord Curzon once referred to it as "the ablest newspaper of Asia," and it is the boast of the proprietors that it circulates from Aden to Mandalay and from Cape Comorin to Kashgar. A daily paper strongly Imperial in outlook and with the full confidence of responsible Englishmen and moderate Indians throughout the East, it is particularly noted for its well served literary department. The illustrated weekly edition has by far the largest circulation of any illustrated paper in the East. From its palatial offices in Bombay also issues the "Evening News of India," which deals with all matters of Indian and world interest in an entertaining manner. The "Indian Daily Mail," the youngest of Bombay dailies, having been founded in 1923, claims to have the largest net sales of any daily journal in Northern, Southern, Central and Western India. The "Bombay Chronicle" is an old established Nationalist English daily.

Calcutta, for so long the administrative capital of the Empire, has, as may be

supposed, no lack of influential newspapers. The "Statesman" was established in 1873 on popular lines, and has gained for itself a foremost position. It is a recognised authority in the discussion of political, financial and economic questions, and is well supplied with news from all parts, including special cable services from London. Five editions are published daily, and a weekly overland edition (which has recently been enlarged and improved) is also issued. The "Englishman" is an older paper, dating from 1821 when it was published under the name of "John Bull in the East." Its present title dates to 1833. The organ is largely supported by the official commercial and planting classes, and is an excellent and up-to-date publication, running to 28 and sometimes to 32 pages. The only English evening paper in Calcutta is the "New Empire."

The "Madras Mail" with which is incorporated the "Madras Times" is a high-class evening daily paper, which has the distinction of having been the first evening journal to be issued in India. It circulates all over Southern India, and issues a very readable and well illustrated weekly supplement.

English and Anglo-Indian papers of the highest class are, of course, not confined to the three Presidency cities. Were this the case, one of India's oldest and best known daily journals would have to be excluded. This is the "Pioneer," first published in Allahabad in 1865 and now possessing a circulation which testifies to its popularity as an established newspaper which is read by the most influential classes of the community. Other first class English dailies are the "Daily Post" of Bangalore, the "Advocate of India" of Bijapur, the "Cawnpore Journal," the "Daily Gazette" and "New Times" of Karachi, the "Indian Daily Telegraph," published in Lucknow, the "South of India Observer and Nilgiri News" of Ootacamund, the "Deccan Herald" of Poona, the "Baluchistan Gazette" of Quetta, and the "Hyderabad Bulletin" of Secunderabad.

#### WEEKLY AND MONTHLY PAPERS.

Apart from the special weekly editions of the leading daily papers, English weeklies published in India are generally connected with economic, agricultural or industrial subjects. Such are "Indian Engineering," the "Planters' Journal and Agriculturist," "Capital" and "Commerce," all published weekly from Calcutta, the "Railway Times" of Bombay, the "Law Times" of Madras, the "Servant of India" of Poona, the "Star of India" of Karachi, and last, but not least, the "Indian Trade Journal," published by the Department of Commercial Intelligence and Statistics, Bombay. Important monthly publications are the "Bombay Law Journal," "Indian Industries and Power," "Indian Textile Journal," "Indian Medical Journal" and "Railway Times," all published in Bombay, "Business," the "Calcutta Medical Journal," the "Indian Agriculturist," the "Indian World," and the "Commercial News" of Calcutta, and the "Anglo-Indian" and the "Indian Railway Journal" of Madras.

**INDIAN PRESS.**—Having been pioneered by the missionaries, for many years the native press preserved the marks of its origin, and was limited almost exclusively to theological controversy, the missionaries being met with their own weapons by the theistic sect of the Brahmo Samaj, also by the orthodox Hindus. As late as 1850 most of the vernacular newspapers were still

religious and sectarian rather than political. But during the latter half of the 19th century the character of the press underwent a great change, and the majority of the newspapers owned by Indians have long ago discarded religious debate for current topics and political discussion. With the growth of nationalism there has naturally been a great development in the political activities of many of the native journals, and occasions have not been wanting when stern repression has been necessary. It is, however, a great mistake to suppose that all organs published in the vernacular are either hostile in tone or opposed to the present system of Government. Many are both moderately and capably written, and do excellent service by their restrained discussion of public events. The great circulations of England and America are unattainable in India, partly owing to the enormous distances covered. On the other hand, circulation in India must not be judged by English standards. Newspapers are passed from hand to hand and among Indians in particular a single copy may have a score or more of readers.

**LEADING INDIAN PAPERS.** In Bombay the leading daily papers in Gujarati are the "Akhlbar-i-Islam," which has an enormous Moslem circulation, and the "Bombay Samachar," which as a commercial daily newspaper has no rival in Western India. The "Lokmanya" and "Nawakal" are Marathi dailies, the "Independent Daily Organ," "Praja Mitra" and "Satya Mitra" are Anglo-Gujarati papers which circulate widely among the educated Indians and the mercantile public, and the "Gujarati" is an influential weekly. The "Hindi Punch" is Bombay's "Punch," and is published weekly in English and Gujarati. In Calcutta the "Ananda Bazar Politika" known as one of the foremost Bengali papers, is published daily and weekly; it is an excellent advertising medium. The "Calcutta Samachar" is published in Hindi. Karachi has its "Praja Mitra," or "People's Friend," a bi-weekly in Gujarati, Madras the excellent "Andhra Patnika" in Telugu and the Tamil daily paper, the "Janavarthamani," Lahore the "Akhlbar-i-Islam," the oldest journal in that city, and Lucknow the "Oudh Akhlbar," an Urdu daily which circulates extensively in the Native States. This, of course, is but a very limited selection, since all the larger towns have one or more daily or bi-weekly papers and there are in addition a number of well-written weekly and monthly reviews dealing with political, social, and industrial matters.

**PRESS LAW.**—In 1922 both the Newspapers' Incitements to Offences Act, 1908, and the Indian Press Act, 1910, which dealt with newspaper incitements to murder and acts of violence and with certain other specified classes of published matter, were repealed. The present law as to the press in India may be summarised as follows: (a) The name of the editor must be inscribed on every issue of a newspaper, and the editor is subject to the same liabilities as the printer and publisher as regards civil and criminal responsibilities, (b) any person registering under the Press and Registration of Books Act must be a major as defined by the Indian Majority Act, (c) local Governments have the power to confiscate openly seditious leaflets, subject to the owner of the press or any other person aggrieved being able to protest before a court and challenge the seizure of such documents, in which case the local Government ordering the confiscation is called upon to prove the seditious character of the documents.

## TOURIST ATTRACTIONS

**3**NDIA has abundance to offer in the way of attractions to the tourist. Years can be spent in travelling over the territory and volumes would be needed to describe its myriad features of interest. All that can be done here is to indicate a few of the most important tourist resorts which draw the resident in or visitor to India by reason of their historic associations or their natural beauties. Nowhere in the world is there a region so full of vivid colour, of populous cities, of stately or curious edifices, of diverse races, and of absorbing objects for observation and study in regard to manners, customs, religions, philosophy and art. To the true lover of nature India can offer every charm of sea-coast, mountain, forest, valley, cultivated plain and wild waste. To the sportsman it can furnish some of the best shooting grounds in the world while for the naturalist and botanist the jungles and maddans, nullahs and tanks, even the gardens round every bungalow provide a scientific paradise.

**AGRA.**—Standing on the right bank of the Jumna Agra is the third largest city of the United Provinces, and is easily reached from either Calcutta or Bombay, from which it is distant 700 miles and 835 miles respectively. This ancient place famed amongst other things as having been the residence and death place of the great Akbar, possesses many features of interest, such as the Great Fort of red sandstone and the tomb of Akbar which took half a lifetime to complete and occupied 3,000 people daily during that time.

Above all, however, Agra is famous for its possession of the most exquisite Indian sarcophagus in existence, the world-renowned Taj Mahal. This wonderful monument, a perfect conception of the perpetuation of the love of a husband for his wife, was commenced in A.D. 1630 by the Emperor Shah Jehan as a tomb for his Queen, Mumtaz-i-Mahal, the "elect of the palace," whence the name Taj Mahal is derived. The Queen died in childbirth at Burhanpur in 1629, and her body was brought to Agra, where it lay in the garden where the Taj now stands until the mausoleum was built. Tavernier, who saw the commencement and completion of the monument, records that it took twenty-five years to build. There were originally two silver doors at the entrance, but these were taken away and melted by Suraj Mal and his Jats. The approach to the Taj is by the Taj Ganj gate, which opens into an outer court, 880 ft. long and 440 ft. wide. On the left is the great gateway of the garden court, a superb edifice of red sandstone, inlaid with ornamentations and inscriptions from the Koran in white marble, and surrounded by twenty-six white marble cupolas. Inside is the beautiful Taj garden. The principal vista is along a red sandstone water-course, set between two rows of dark green cypress and interrupted in the middle by a marble platform. At the end the Taj rises in all its peerless beauty, mirrored in the water below, and through the trees are seen striking views of the marble dome, walls and minarets. To see the Taj at its best the tourist should visit it immediately after sunset or by moonlight. No mere description can do justice to this beautiful monument, which is

ranked first in the world among the purely decorative forms of architectural design.

Under the centre of the dome are the tombs of Mumtaz-i-Mahal, the beautiful, and her husband, Shah Jehan, but these, as is usual in Indian tombs, are not the real sepulchres—the bodies resting, side by side in a vault, level with the surface of the ground, and placed exactly below the tombs in the hall above.

**AHMEDABAD.** However cordially Jahangir, the son of Akbar, may have disliked Ahmedabad, or the City of Dust (Gardabad), as he was wont to refer to it, the tourist of Western India cannot help admiring it, for not only does it contain some of the most perfect specimens of Mohammedan architecture in India, but it is the first city after leaving Bombay which in any way approaches the preconceived notions of temples and wonderful stone carvings. In Ahmedabad there is a blending between East and West which is almost unique. On the one hand is the influence of the Western world typified by the tall chimneys of the cotton mills, but, unlike Bombay, the remainder of the city is lost in the labyrinth of the East which surrounds it. At least two days can be spent here with enjoyment for it has been said that Ahmedabad from the point of view of antiquarian and architectural riches, is surpassed in India only by Delhi and Agra.

The Jama Masjid is rightly held to be one of the most beautiful mosques in India. Completed about 1424 under the rule of Sultan Ahmad I, it stands out as the central feature of a city which still carries the marks of the Mohammedan occupation. Near by is the famous Tin Darwaza (Three Gates), which are handsomely carved in stone and are one of the features of the place. The finest stone tracery work, however, is to be seen in the celebrated windows of Sidi Sayyid's mosque, which are hardly equalled anywhere in the world.

There are many other sights of interest in Ahmedabad and its immediate neighbourhood, of these mention must be made of the beautiful Ram Sipri's mosque and tomb perhaps the most beautiful monuments in all Ahmedabad.

**AJANTA.** The famous Caves of Ajanta are situated near the village of that name on the edge of the Deccan plateau, in Hyderabad State. Here are India's unique and oldest art treasures.

**BUDDHA (STORY OF).**—Some three centuries after the Buddha had, about B.C. 525, discovered the way to escape the suffering to which human flesh is heir, monks belonging to his faith selected this spot for their cloister. For a thousand years pious hands, driven by fanatic zeal, chipped with chisel and mallet the living rock spreading horse-shoe fashion round the basin of a mountain torrent, fashioning lofty, well-lit shrines and monasteries and opening out verandahs. To support the roof they left masses of rock, which they carved into pillars harmonious in size and varied in form. In the early days of Buddhism a convention prevailed that the Buddha's figure was too sacred to be copied, and attempts at decoration had to be confined to carving the various symbols which tradition prescribed to repre-

sent the events in his last life and in his previous incarnations, for he is believed to have been born in every conceivable form as god, man, and even animal before his final birth in which he attained enlightenment. A hemispherical dome, the *stupa*—, for instance, indicated the passing away of the Teacher, for such memorial mounds were raised at eight places to enshrine his relics—the pieces of bone found in the ashes after he was cremated, and even the ashes themselves. As time, however, robbed that convention of its binding character and the art impulse asserted itself, outstanding episodes from the Buddha's life were carved in the living rock, and scenes of allegorical character, but incidentally depicting the life of the period, were painted upon the walls of the shrines and monasteries.

Not until the visitor has ascended the steps carved in the mountain side and begun to examine one chamber after another does he realise the magnitude of the toil involved in creating them. Only hands inspired by a faith which refused to be daunted by the gigantic nature of the self-imposed task could have chiselled away hundreds of thousands of tons of rock in the days before explosives were invented.

To-day the effect is that of a series of vast cathedrals, many of great size and all of extreme beauty. Interesting are the small cells in which the monks slept, each with stone bed and pillow. These chambers, however, are in no sense "dungeons," having been so constructed that a flood of light pours into them, more abundantly at some hours of the day than at others. Except for examining carvings and paintings towards the backs of the chambers, it is not necessary to have artificial light, and photographs can even be taken without the aid of flash-lights.

### CARVINGS AND PAINTINGS.

The carving, which is such a feature of the Ajanta Caves, was done by a master-craftsman who could pourtray human emotion with great power and remarkable economy of line. He had an eye for feature and form, and the technique faithfully yet imaginatively to represent it. There are other figures which display a vigorous style of carving, aiming at much more than the reproduction of mere externals. They must have been executed at a time when the art of sculpture had been practised in India sufficiently long to enable the artists to become experts.

The paintings are characterised by boldness of outline and broad sweep of brush. Emotions are pourtrayed with faithfulness, as if life were reflected in a mirror—sadness, pain, death throes, love, sensuality, envy, fear, malice, avance, mischief, joy and sorrow all being shown with a realism which powerfully moves the spectator. So great is the variety of subjects treated that it is almost impossible to conceive of a phase of life which has been overlooked.

The carvings and paintings possess great historical and sociological value. They pourtray almost every aspect of human activity, and therefore constitute a record of nearly every phase of life for a period of about a thousand years. One knows, after looking at some of them, how men and women who lived in ancient and mediæval

India dressed and adorned themselves and arranged their hair, what sort of houses they dwelt in and how they were furnished, the vessels in which they cooked, their method of cooking, and the dishes from which they ate, the flowers and fruit placed before them, the way in which they travelled by land and sea, the animals and birds they kept as pets, the amusements they enjoyed, the games they played, and the sports in jungle and field in which they engaged.

**AJMER.**—Surrounded on all sides by high hills, and with the fortress of Taragarh commanding it from a height of 800 ft., Ajmer holds the distinction of being the most important city of Rajputana. That the title is an appropriate one will be conceded

**MAYO COLLEGE.**—In addition to the usual quaint mixture of native hovels and magnificent buildings, of which the Arhai-din-ka Jhonpra is probably one of the finest, there is the Mayo College on the other side of the town, an institution founded by Lord Mayo in 1870 for the education of the sons of Rajput Chiefs. That it has become the recognised site of learning for Indian princes speaks highly for those under whose charge the university has been placed. Within half a mile of the College will be seen the locomotive and carriage shops of the B B & C I Railway, where every modern mechanical device has been introduced on a scale only equal to that of European or American enterprise, and certainly unsur-

passed by any similar works of the kind in India to-day. has been ruled by Moslem women, either as regent or queen, the last of these, the Nawab Shah Jehan Begum, having abdicated in 1926. Bhopal, however, has other claims to the admiration of the tourist, it is a city of the middle ages passing through the process of modernisation. In the old bazar, where business is still conducted in small shops looking for all the world as if verandahs had been turned into booths, the motor car is seen side by side with the cow and buffalo. The old wall which, in days gone by, encircled the city is still intact in many places, a mute reminder of the time when wars raged and might was right. Now that peace prevails unbroken, there is no apparent necessity to keep it in repair. The gates, indeed, stand ever open, and the sentries stationed at them.

1. North Front of "Lingara," or the Great Temple at Bhuvaneswar.

2. The small carving depicts the story of the "Ramayana" or War of Rama, aided by Hanuman and his Monkeys.

by the visitor at first sight. Bishop Heber, in his writings, refers to the fortress of Taragarh, suggesting that with very little improvement from European skill it might become a second Gibraltar.

**ANA SAGAR LAKE.**—To the majority of visitors the Ana Sagar lake at Ajmer has an allurements which even the most material mind will find it difficult to resist. True, it is an artificial tank, but having regard to its picturesque surroundings and the striking contrast with the industrial portion of the city, it is quite worthy of the Great Shah Jehan who built it. Behind the main bund is the Daulat Bagh or the Garden of Splendour. Thanks to the efforts of Lord Curzon, who had the original bund repaired during his term of office as Viceroy, it is now one gleaming mass of the purest white marble. To see the lake and garden in their full beauty, a visit should be made to them about an hour before sunset.

passed by any similar works of the kind in India to-day.

**BHOPAL.**—Half-hidden among mountains ablaze with "flame in the forest" in the early spring and summer, and resplendent with rich-hued foliage in the autumn and winter, the city of Bhopal has provided an appropriate setting for the veiled queens whose residence it has so long been. The city is spread out over a series of hills connected by well-paved roads. The lakes on three different levels, and the general character of the country round about, suggest the rugged surroundings amidst which Dost Mohammed Khan—the great ancestor of the late Begum and the present Nawab of Bhopal—pitched his tent, and with his sword carved in the heart of India a kingdom over 7,000 square miles in area.

No doubt much of the charm of Bhopal lies in the fact that for four generations it

picturesque relics of a by-gone age, direct traffic by blowing shrill whistles to prevent slow-moving vehicles and people on foot from being run into or over by motor cars.

**CAUVERY FALLS.**—These are situated in Mysore, and can be reached by motor car from Mysore or Bangalore or by rail to Sivasamudram, 3 miles distant. The two falls, which are known as the Bar Chukki and the Gagana Chukki, have a sheer height of 320 ft., though hardly any of the many shoots into which they are divided has a clear leap of anything like that distance. Both falls are exceedingly beautiful when a large mass of water is going over them, and it is difficult to say which excels in picturesque quality. The foot of the Bar Chukki Fall can be reached by a long flight of slippery stone steps, the descent to the Gagana Chukki is possible on the west bank only. On the east bank, in front of it, are some

**Mohammedan shrines.** A cloud of spray constantly rises from the pool below them, and at a distance may be observed overhanging the head of the falls. The ordinary monsoon discharge is 18,000 cubic feet per second, but the discharge of a high flood has been known to be 200,000 cubic feet. The power of the falls is being utilised in a great irrigational and hydro-electric scheme, one of the most remarkable of modern developments in India. (See article on "Irrigation.")

**GULMARG.**—Fifteen miles west of Srinagar, Gulmarg is the summer resort of the European community of Kashmir, in recent years "huts" have been built in order to accommodate visitors. It is a lovely, if at times somewhat rainy, spot, situated at an elevation of 8,500 ft. Golf, etc. may be indulged in, and there are many beautiful walks through the forest glades. Above Gulmarg is the ridge of the Pirozpur Pass and the Apharwat Mountain, 14,500 ft. high. The fine snowy peak of Nanga Parbat, 26,600 ft., is seen from here dominating the valley.

**KASHMIR.**—"Beautiful Kashmir" is reached from south and central India by the well-appointed express trains of the Great Indian Peninsula Railway to Rawalpindi, and thence by luxurious motor cars. The Bombay Punjab mail train of the G.I.P. Railway provides a daily service of first class equipment comprising carriages of latest construction, fitted with electric lights and fans (in the hot season special coolers are placed in the first class compartments), restaurant cars are attached for meals all the year round. This "through" train makes the run of 1,447 miles between Nombat and Rawalpindi in about 52 hours. On arrival at the latter city the journey is continued by motor car to Srinagar, a distance of 160 miles, covered in about 33 hours, the night being spent at one of the dak bungalows. The run down the Jhelum Valley is one of continuous pleasure. Halts are made at Murree, the famous hill resort, just within the British border, Kohalla, Garhi, Uri (with its quaint old fort), and Rampur. The Wular Lake (the largest in India) is passed, also Mount Haramoukh, 16,000 ft. high, with its summit in perpetual snow. Finally the journey ends with the famous avenue of poplars, which extends 35 miles from Baramulla to Srinagar.

**MUSSOORIE.**—The hill-station of Mussoorie is situated on one of the outer ranges of the Himalayas, which lie to the north of Dehra Dun. The hill on which the station is built rises from the plains in the form of a horse-shoe, gradually ascending to the centre and enclosing in the hollow a number of ridges, which lose themselves in the mass above. Ridges also run down from the back of a hill to a valley in which flows a tributary of the Jumna; between the ridges north and south are deep wooded gorges. The view from Mussoorie over the valley of the Dun and across the Siwalik Hills to the plains is very beautiful, as is also that towards the north, which is bounded by the peaks of the snowy range. The climate of Mussoorie is delightful, and the station offers many attractions to the visitor.

**NAINI TAL.**—This is a favourite sanatorium of the United Provinces, the summer residence of the Governor, and the headquarters of the General Officer holding the Eastern Command. It is extremely picturesque, the lake forming a most striking feature, with its sulphur springs at one end. Polo, cricket and hockey are extensively played, there are all the usual amenities of

SCENES ON THE G.I.P. RAILWAY.

1. Indra-Sabha, at Ellora Caves.
2. Representing the marriage of the Hindu God "Sita," Ellora Caves.
3. Hindu God "Siva," dancing the "Tandava," Ellora Caves.

a European hill-station, and excursions can be made to such well-known camping and fishing-grounds as Bhim Tal, Naukuchia Tal and Malwa Tal.

**OOTACAMUND.**—One of the most beautiful hill-stations in India, Ootacamund is situated in the Madras Presidency on the Nilgiri Hills. As a health resort during the hot weather it is deservedly popular. From the top of the ridge a most superb view of hills, lake and the Moyar Valley is obtained, while on the north-west of the beautiful lake the Wenlock Downs provide the many hunting attractions for which Ootacamund is famous. Recently trout fishing has been started in the more important streams and rivers, and good sport is obtained. There is a well laid-out golf course, and the Botanical Gardens are charmingly situated and beautifully planted. Ootacamund is the centre of the Indian Government's quinine industry.

**SRINAGAR.**—Capital of the State of Kashmir, Srinagar is beautifully situated in the centre of the Happy Valley, being divided into two parts by the River Jhelum. The city, traversed by canals, was built in the sixth century and consists chiefly of wooden houses. Srinagar is also a place of houseboats and river launches, besides being of great interest to the tourist because of its native shops and curios. The Dal Lake lies to the north-east of the city, and is one of the most beautiful spots in the world. From the Dal Darwaza, shikaras or light skiffs take tourists through the channels passing under Akbar's Bridge at Kraliyar, or past floating gardens in the direction of the Nishat Bargh, one of the many delightful Mogul pleasure grounds.

**EXCURSIONS.**—Srinagar is a centre for many interesting excursions. That to the Sind Valley is especially recommended; it is more rugged than the Lidar Valley and full of charm. Shadipur, at the confluence of the Jhelum and Sind rivers, has an excellent camping ground, and from these places lighter dingies make their way up to Ganderbal (14 miles) at the mouth of the Sind Valley, where a lovely stretch of water is found and good fishing is obtainable.

A return to Srinagar is necessary in order to proceed to the Lidar Valley via Islamabad. The ruins of Martand occupy the visitor's attention as being the most celebrated of the Kashmirian temples. Situated on high ground amidst ideal surroundings, this temple was dedicated to the worship of the sun.

The Lidar Valley is very pretty and mild in comparison with the Sind. More adventurous tourists will probably attempt to mount Kolahoi, a sharp granite point jutting into the sky with its treacherous glacier at the foot, which should be carefully avoided. Avantipur and Achibal may be taken on the return journey, as they are interesting.

**UDAIPUR.**—Lying 2,034 ft. above sea-level, Udaipur is the picturesque capital of the State of Mewar in Rajputana. Neither its history nor its buildings are ancient, its charm for the tourist lying in the unspeakable beauty of its glistening lakes and fairy-like palaces. With the exception of Kashmir, there is nothing in the whole of India to be compared with Udaipur for delightful scenery and beautiful surroundings, and the very appropriate name of the "City of Sunrise" has been given to it. A drive through the narrow streets of the bazar to the palace of the Maharana, and thence along the side of the lake to the Slave Girl's Garden, is an experience which no visitor can forget. Another delightful excursion is by way of a boat to the different water palaces.

# ADMINISTRATION AND COMMUNICATIONS

## CONSTITUTION AND LAW

## PUBLIC WORKS

## ARMY, NAVY AND AIR FORCE

## POSTS, TELEGRAPHS AND TELEPHONES

## PUBLIC HEALTH

**T**HE present Indian Constitution has no parallel either in terms of English politics or in terms of Federal Governments. It is the result of a gradual evolution, and in its present form is a witness to the growth of national consciousness among the heterogeneous peoples of a vast Empire under the rule of an alien but benevolent Power.

The old East India Company, which was of course purely a trading concern at first, found it necessary to assume governing powers as far back as the 17th century and early in the 18th century to become a political and administrative body holding its territories in trust for the Crown. The Charter Act of 1833 vested the direction of the entire civil and military administration and the sole power of legislation in the Governor-General in Council, and defined the nature and extent of the control to be extended over the subordinate Governments. The Act of 1858 transferring the government of India from the Company to the Crown changed the administration in little but name, and the greater part of the Victorian era was notable rather for the increase in prestige of the British Raj than for any strong development of democratic institutions.

With the accession of the first King-Emperor (Edward VII) and the general renaissance of the Eastern peoples came the movement in India for constitutional reform. Representative institutions were gradually extended; in 1907 a Hindu and a Mohammedan were appointed to the Secretary of State's Council, and in 1909 a Hindu was appointed for the first time to the Viceroy's Council. But the will of the Executive still remained supreme, even so good a Liberal as Viscount Morley expressly repudiated the idea of setting up anything approximating to parliamentary institutions, and it was not until 1916 that the then Secretary of State, Mr. (now Sir) Austen Chamberlain, refused to consider any scheme of reform which did not confer the element of responsibility.

On August 20, 1917, the British Government announced in Parliament that its policy was that of the increasing association of Indians in every branch of the administration and the gradual development of self-governing institutions with a view to the progressive realisation of responsible government in India as an integral part of the British Empire. Mr. Montagu, the Secretary of State, visited India in the ensuing winter, and, in conjunction with the Viceroy, Lord Chelmsford, made an exhaustive investigation as to the reforms necessary to give effect to this policy. It was clear that the highly centralised system, however well it had worked in the past, could no longer be maintained if the aspirations of the Indian people and the promises of the British Government were to be fulfilled; the Montagu-Chelmsford Report announced a break with the past and a new departure. Important changes were made by a Select Committee of both Houses of Parliament, and a Bill received the Royal Assent on December 23, 1919, to be known henceforward as the "Government of India Act, 1919."

Copyright, see Preface.

**ADMINISTRATION.**—The administration of India in England is exercised by the Sovereign through a Secretary of State, who inherits all the powers formerly belonging to the Court of Directors and the Board of Control of the East India Company, and who, as a member of the Cabinet is responsible to Parliament. In administrative affairs he is assisted by the Council of India, an advisory body with special control over finance. This Council consists of not more than twelve and not less than eight members, appointed for five years by the Secretary of State. At least one-half of the members must be persons who have served or resided ten years in India, and have not left India more than five years previous to their appointment. A great many of the former functions of the India Office have been taken over by the Office of the High Commissioner for India, which was created in 1920. The present Secretary of State for India is the Right Hon. the Earl of Birkenhead, K.C. The High Commissioner for India is Sir A. C. Chatterjee, K.C.I.E., I.C.S.

The administration of government in India is divided between the Central Government of India and the Provincial Governments, the powers of the latter having been greatly extended under the Act of 1919 (see later).

**ADMINISTRATIVE FUNCTIONS.** The functions of the Government in India are perhaps the most extensive of any great administration in the world. It claims a share in the produce of the land, and in the Punjab and Bombay it has restricted the alienation of land from agriculturists to non-agriculturists; it undertakes the management of landed estates where the proprietor is disqualified; in times of famine it controls relief work and other remedial measures on a large scale; it manages a vast forest property and is the principal manufacturer of salt and opium; it owns the bulk of the railways of the country and directly manages a considerable portion of them; it has constructed and maintains most of the important irrigation works; it owns and manages the post and telegraph systems; it has the monopoly of the note issue, and alone can set the Mints in motion; it lends money to municipalities, district boards and agriculturists, and occasionally to owners of historic estates; it controls the sale of liquor and intoxicating drugs, and has direct responsibilities in regard to police, education, medical and sanitary operations and ordinary public works of the most intimate character. The Government has also close relations with the Indian States, which collectively cover more than one-third of the total area of India and comprise more than one-fifth of its population. The distribution of these great functions between the Government of India and the provincial administrations has fluctuated, but was definitely regulated by the Reform Act of 1919.

**CAPITAL.**—Since 1911 Delhi has been the capital of the Indian Empire and the Seat of Government, Calcutta having previously held that position. The administrative province of Delhi, under a Chief Commissioner, was proclaimed in 1912. This

enclave was entirely taken from the Delhi district of the Punjab, and in 1921 had a total population of 486,741, spread over an area of 573 square miles. The summer headquarters of the Government are at Simla.

**CENTRAL GOVERNMENT.**—The Central Government of His Imperial Majesty King George V is the Supreme Government of the Indian Empire, at whose head is the Viceroy, who is assisted by a Council composed of high officials, each of whom is responsible for a special department of the Administration. The most important subjects reserved to the Government of India, as apart from those vested in the Provincial Governments, are the defence of India and all matters connected with His Majesty's Forces in India, foreign affairs and relations with Indian States, railways and waterways, shipping and navigation, customs and excise, posts, telegraphs and telephones, currency, coinage, the public debt and savings banks, commerce including banking and insurance, civil law, the control of opium production and manufacture, emigration and immigration, control of petroleum and explosives, and criminal law.

**EXECUTIVE.** The supreme executive authority in India is vested in the Governor-General in Council, often styled the Government of India. The Governor-General, or Viceroy, is appointed by the Crown and custom has fixed his tenure of office at five years. During his term of office the Viceroy is subject only to the Secretary of State's direction, and is, within his sphere of authority, invested with full regal powers. He can, in special cases, overrule a majority opinion of his Council.

India has had a very notable list of Governor-Generals and Viceroys (the latter title was first used in 1858), among whom may be specially mentioned Lord Lawrence, the Marquis of Ripon, the Marquis of Dufferin, Marquis Curzon, Lord Hardinge of Penshurst, and the Marquis of Reading. The present Viceroy is His Excellency the Right Honourable Lord Irwin of Kirby Underdale, P.C., who assumed office on April 2, 1926.

**EXECUTIVE COUNCIL.**—The Governor-General's Executive Council consists of seven members (including the Commander-in-Chief), three of whom must have served ten years in India as well as himself. The six executive members hold respectively the portfolios of Education, Health and Lands, Home, Finance, Commerce, Industries and Labour, and Law. The Viceroy acts as his own member in charge of Foreign Affairs. Railways are administered by a Chief Commissioner, with the assistance of a Railway Board, and are for administrative purposes grouped under the Department of Commerce. The Commander-in-Chief may be, and in practice always is, an "extraordinary" member of the Council, and administers the Army. The Governors of Madras, Bombay and Bengal become "extraordinary" members if the Council meets within their Presidencies. The Council may assemble at any place in India which the Governor-General appoints; in practice it meets only at Delhi and Simla.

In 1926 the Executive Council was composed as follows: Field-Marshal Sir William R. Birdwood, Bart., G.C.B., G.C.M.G., K.C.S.I., C.I.E., D.S.O.—Commander-in-chief; Sir A. Muddiman C.S.I., C.I.E.—Home Department; Khan Bahadur Sir Muhammad Habibullah, Sahib Bahadur, K.C.S.I.—Education, Health and Lands; Sir C. A. Innes, K.C.S.I., C.I.E.—Commerce; Sir Basil P. Blackett, K.C.B.—Finance; Sir Bhupendra Nath Mitra, K.C.I.E., C.B.E.—Industries and Labour; Satish Ranjan Das—Law.

**INDIAN LEGISLATURE.**—The Indian Legislature as remodelled by the Act of 1919, consists of two Chambers. The Upper Chamber or Council of State consists of 60 members of whom 34 are elected and 26 nominated. Not more than 20 of the nominated members may be officials. The Legislative Assembly consists of 144 members, of whom 104 are elected (including as in the case of the Council of State, one Bera member, who though actually elected, is technically a nominee). Of the 40 nominated members, 26 are officials. The Executive Government is, therefore, not assured of a majority in either Chamber but safeguards have been provided to enable it to pass essential legislation and to obtain supplies. The Governor-General is not a member of, but may address either Chamber. The members of his Executive Council are appointed members of one or other Chamber as the Governor-General sees fit, but may speak in either Chamber. The normal lifetime of the Council of State is five years and that of the Legislative Assembly three years but either Chamber, or both simultaneously, may be dissolved at any time by the Governor-General.

**Method of Election.**—The apportionment of seats in both Chambers is arranged with regard to the relative size and importance of the several provinces. In Bengal are allotted 17 seats in the Legislative Assembly and 6 seats in the Council of State. Smaller provinces have a lesser representation. The Punjab and Assam, for instance, are given 12 and 5 seats respectively in the Legislative Assembly and 3 and 2 seats in the Council of State. The method of election to both Chambers is direct, the constituencies having been formed on the communal and special interests' lines adopted in creating electorates for the Provincial Legislative Councils (see later), though they are necessarily larger in area and the property qualification of voters is substantially higher.

**INDIAN CIVIL SERVICE.** The administration of India is carried out by members of the Indian Civil Service, the Provincial Civil Service being recruited from the successful candidates at competitive examinations held in London and (since 1922) in India, but a few vacancies are filled by nomination of natives of India and Burma by the Government of India. The Service is at present predominantly European, but in accordance with the present policy of the Government the proportion of Indians is to be increased until the Service consists of almost equal numbers of Europeans and Indians. Most of the higher administrative posts are secured to the Indian Civil Service by Act of Parliament, but members of the Provincial Civil Services may be promoted to offices reserved for the Indian Civil Service. These Provincial Services, appointments to which are made by the authorities in India, are composed of natives of India, including also domiciled Europeans. Some other Europeans are appointed in England, especially those who belong to scientific

departments and the Indian Education Service.

**LOCAL GOVERNMENT.**—The larger units of the local government are the districts (generally called collectorships in English and *zillahs* in the vernacular), of which there are in British India about 270. Each district is under a Collector-Magistrate or a Deputy-Commissioner, as the case may be. The head of a district has most multifarious and responsible duties; he is the fiscal officer, charged with collecting the revenue as well as magistrate, and also superintends the police, gaols, education, sanitation and roads; in some parts he is also the civil judge. The subordinate officers are known as Deputy Collectors and Assistant-Magistrates. The district may be compared to an English county or French department, and varies in size from an area containing 3,000,000 inhabitants to one having only 50,000. Within the district the lowest unit is the village or parish (*moorzah*), which is administered under the village system (see under "Peoples"). There are about 550,000 such villages or parishes in the British territories. In all the divisions of the Empire, except Madras, the districts are formed into groups, several to each group under a Commissioner, of these there are more than 50.

**DISTRICT BOARDS.** The duties and functions assigned to municipalities in urban areas are in rural areas entrusted to district and local boards of which throughout India there were in 1925 some 219 district boards, with 543 sub-district boards and more than 800 Union Committees. These boards deal *inter alia* with education, roads and bridges and medical relief.

**MUNICIPALITIES.**—There were in 1925 some 750 municipalities in British India with something over 18,000,000 people resident within their limits. Of these municipalities, roughly 683 have a population of less than 50,000 persons, and the remainder a population of 50,000 and over. As compared with the total population of particular provinces the proportion resident within municipal limits is largest in Bombay, where it amounts to 20 per cent, and is smallest in Assam, where it is only 2 per cent. The functions of Indian municipalities are classed under the heads of Public Safety, Health, Convenience and Instruction. More than half the total members of the municipalities are now elected, and there is a steady tendency to increase this proportion.

**PROVINCIAL GOVERNMENT.**—The fundamental principle of the Act of 1919 was that the first substantial steps towards the development of a system of responsible government must be taken in the provinces, which were accordingly given a large measure of independence of the Supreme Government. Apart from the matters reserved to the Central Government, the Provincial Governments have responsibility with certain limitations for a large number of subjects, and through the provincial legislatures the people of India have now a very considerable control over the affairs that most directly concern them.

**DIVISIONS.**—British India for administrative purposes is divided into 15 provinces, each with its separate Local Government or Administration. In nine of the provinces—the three Presidencies of Madras, Bombay and Bengal, the United Provinces of Agra and Oudh, the Punjab, Bihar and Orissa, the Central Provinces, Burma, and Assam—the Local Government consists of a Governor, an Executive Council of not more than four members, and two or

more Ministers. The remaining six provinces—the North-West Frontier Province, Ajmer Merwara, Coorg, Baluchistan, Delhi, and the Andaman and Nicobar Islands—are directly administered by Chief Commissioners, who are technically mere agents of the Central Government of India. No change was made by the Act of 1919 in the system of administration in these six minor provinces.

**DYARCHY.** In the nine provinces just mentioned the functions of government are divided into halves, one still amenable to the British Parliament the other amenable to the Indian electorate. One half of the provincial executive consists of the Governor and his executive council, all of whom are appointed by the King. They administer those subjects which are "reserved," and are responsible to the Government of India and ultimately to the British Parliament. The other half is constituted by the Governor working with Ministers whom he selects from elected members of the provincial legislature; to these is entrusted the administration of subjects known as "transferred," among which are education, industrial development, local self government, medical administration and public health, excise, agriculture, fisheries, co-operation and many other subjects.

This plan of dividing the provincial executives into halves (known as "Dyarchy") was adopted because, in the circumstances of India at the time of the reforms, those in control found it difficult to devise any alternative method of combining stability with progress. From the standpoint of constitutional theory the scheme has been much criticised, mainly on the ground of the deadlock which was likely to occur as the result of a virtually irremovable executive being confronted by an irresponsible and hostile legislature. To obviate this risk the provincial Governors are given a reserve of authority which enables them to carry on the essential work of the administration irrespective of the policy of the legislature. It can only be said here that the scheme is necessarily transitional and experimental; that it has been subjected to a severe test by the Swarajist policy of non-co-operation, but that, on the whole, it may be said to have definitely served the purposes of bringing about much useful legislation, and of giving the elected members a valuable insight into the practical aspects of administration.

**LEGISLATIVE COUNCILS.**—The Legislative Council of each of the nine major provinces contains not more than 20 per cent of official members and at least 70 per cent of elected members, and, in addition to its legislative functions (which, as stated, are exercised in respect only of "transferred" subjects), votes all expenditure, subject to certain specified exceptions and to the power of the Local Government to incur expenditure on reserved subjects without the Council's assent if the Governor certifies such expenditure to be necessary. The normal duration of the Legislative Council is three years, but it may be dissolved sooner by the Governor, or its term specially extended for one year. The Governor may not be a member of the Legislative Council, but may address it.

**Electorate.**—The electorates in all provinces are arranged for the most part on a basis which is designed to give separate representation to the various races, communities and special interests into which the diverse elements of the Indian population naturally range themselves. In Bengal, for instance, there are 42 non-Mohammedan electorates

returning 46 members, 34 Mohammedan returning 39 members, 3 European returning 5 members, one Anglo-Indian returning 2 members, 5 landholders returning 5 members, 1 University returning 1 member, and 8 commerce and industry electorates returning 15 members.

Males over 21 years of age (18 in the case of Burma) possessing certain qualifications as to residence within the constituency, having property, and paying revenue or municipal rates are eligible for the franchise, while in all provinces retired, pensioned or discharged officers and men of the regular army are entitled to the vote irrespective of the amount of their income or property.

**Powers.**—The most important of the powers of the Legislative Councils are (1) the power to vote (and consequently to withhold) supplies, (2) a greatly enhanced freedom of initiation in the matter of legislation, (3) the power to frame their own rules of procedure in matters of detail, subject to the Governor's concurrence, and

the judicial system, but on the whole it commands popular confidence, as is proved by the extent to which it is brought into use.

**INDIAN LAW.**—The law in force in British India may be conveniently divided under five heads, viz (1) the law expressly made for British India by the British Parliament or by the Sovereign, (2) English law in force in India, though not expressly made for India, (3) the law made by bodies or persons having legislative authority in India, (4) Hindu law, and (5) Mohammedan law. The first three of these are frequently described as Anglo-Indian law. They are, with rare exceptions territorial, that is, they apply generally either to the whole of India or to a given area and to all persons within those limits. The last two are personal, that is, they apply only to persons who answer to a given description. Hindu law is founded upon the Shastras, which are revered as being of divine origin, Mohammedan law is founded upon the Koran, and is concerned chiefly with intestate

and the Government of India hopes that the committee will take its place as a permanent feature of the legislative machinery of the country.

**JUDICATURE (HIGH COURTS OF).**—The highest legal tribunals in India are the High Courts of Judicature. They were constituted by the Indian High Courts Act of 1861 for Bengal, Bombay and Madras, and later for the United Provinces and the Punjab, superseding the old Supreme and Sudder Courts. The judges are appointed by the Crown, they hold office during the pleasure of the Sovereign, at least one-third of their number is composed of barristers, one-third is recruited from the judicial branch of the Indian Civil Service, the remaining places being filled by the appointment of Indian lawyers. Trial by jury is the rule in original criminal cases before the High Courts, but juries are never employed in civil suits in India.

For other parts of India, High Courts have been formed under different names. In Burma there is a Chief Court, with three

VICEREGAL LODGE, SIMLA.

(4) the right to elect their own President. The last-named of these powers was withheld until four years after the first election of the Councils.

## LAW

The fundamental institutions of the Indian Empire have been established by Parliament in a series of statutes consolidated in 1915 into one Act entitled the "Government of India Act". The regulations of the East India Company provided for civil procedure, leaving the native laws to be observed in social affairs and British justice to be followed in other affairs. But the law was then in a state of confusion, to rectify which Lord Macaulay's and subsequent commissions prepared both a penal code and a code of criminal procedure, which became law in 1860 and 1861. The Code of Civil procedure was remodelled in 1908 and that of Criminal procedure in 1898, these codes are now in force.

In such a society as that of India there must needs be defects and shortcomings in

and testamentary succession, also with marriage and divorce.

**STATUTE LAW REVISION.**—In October 1921 a committee was appointed under the presidency of the Hon. Mr. A. P. Muddiman, I.C.S., to deal with the question of statute law revision. The functions of the committee are to prepare for the consideration of Government such measures of consolidation and clarification as may be necessary to secure the highest attainable standard of formal perfection in the statute law of India. In several branches of the law consolidation has long been overdue, and it is suggested that the preparation of a Bill consolidating the existing law relating to merchant shipping, with such amendments therein as are necessitated or rendered desirable by the enactment of the English statutes since 1894 on the same subject, should form the first duty undertaken by the committee. Under the conditions resulting from the establishment of the reformed Constitution increasing importance will attach hereafter to the periodical examination and revision of the Statute Book,

or more judges, in the other provinces the chief appellate authority is an officer called the Judicial Commissioner. In Sind the Judicial Commissioner is termed Judge of the Sudder Court and has two colleagues.

**LOWER COURTS.**—Inferior courts are styled courts of session and courts of magistrates. Every province, outside the Presidency towns, is divided into sessions divisions consisting of one or more districts, and every sessions division has a court of sessions and a sessions judge, with assistance if need be. These statutory sessions courts take the place of English Assizes, and are competent to try all accused persons duly committed, and to inflict any punishment authorised by law, but sentences of death are subject to confirmation by the highest court of criminal appeal in the province. Magistrates' Courts are of three classes, with descending powers. Provision is made and largely utilised in the towns for the appointment of unpaid magistrates, in the Presidency towns Presidency magistrates deal with magisterial cases, and benches of Justices of the Peace or honorary magistrates

dispose of the less important cases. In jury trials the opinion of the majority prevails if accepted by the presiding judge.

**POLICE AND PRISONS.**—The regular police of India comprises a force of about 205,000. The constabulary is a native force, the principal officers for the most part being European. It is subject in all respects, except internal discipline, to the magistracy, and in each province is under an Inspector-General. There is one regular constable to 6 square miles and 1,500 inhabitants, which indicates the peaceful habits of the people. Besides the regular police there are village watchmen. Great care has been taken in the scientific construction and supervision of the prison in almost every district. There are upwards of 750 gaols, with usually about 115,000 prisoners, exclusive of 11,000 transported to the convict settlement in the Andaman Islands.

## ARMY, NAVY & AIR FORCE

The problem of the defence of India is obviously one which concerns the British Empire as a whole, and the retention of India is an essential part of Great Britain's strategic scheme of Empire. The Power that holds India maintains the balance of dominion in Southern Asia, and though its possession imposes a severe strain upon the Mother Country's resources, and though the task of holding it is the primary preoccupation of the British Army, yet its value for purposes of Imperial defence fully counterbalances the price to be paid.

During the year 1920 the question of India's defences received rather more attention than usual owing to the avowed campaign of the Soviet Government against British rule in India and to the fact that the Army in India had been reduced, owing to financial stringency, to a minimum. In that year there were about 70,000 British regular troops in India and about 170,000 Indian regular troops. In addition, there are the various State forces, the Auxiliary Force, recruited from persons of British descent, and the Indian Territorial Force, with native personnel. The Royal Indian Marine is to be reorganised as a fighting service under the name of the Royal Indian Navy, with native personnel as far as possible.

### ARMY

India has always been a theatre of wars, the country having from the earliest days of its history been liable to invasion by land and also to internal disorder. Consequently a large part of the populace of India is composed of what are known as the fighting races, and from these the great Sepoy army which the French and English in turn used to defend their possessions and wage war on their adversaries was drawn. The Great Mutiny of 1857 will be found described in the historical part of this volume, since then the Indian Army, which consists of a judicious admixture of British and Indian elements, has been several times reorganised, the system now ruling being in the main that which was instituted by Lord Kitchener in 1904.

**ADMINISTRATION.**—The superintendence, direction and control of the civil and military government of India are vested in the Governor-General in Council, who is required to pay due obedience to all such orders as he may receive from the Secretary of State. The Viceroy's Executive Council

exercises in respect of Army administration the same authority and functions as it exercises in respect of other departments of the Government, under the Montagu-Chelmsford Reforms Scheme, Army expenditure and the direction of military policy are excluded from the control of the Legislature.

The Secretary of State has for his principal adviser on Indian military affairs the Secretary in the Military Department of the India Office. This post is filled by an officer of the Indian Army of high rank, he is usually a General, with recent Indian experience. The Military Secretary is assisted by one first grade staff officer, selected from the Indian Army. In order that he may keep in touch with current Indian affairs, the Military Secretary is expected to visit India during the tenure of his office. In addition, by a practice which has obtained for many years, a retired Indian Army officer of high rank has a seat upon the Secretary of State's Council.

**COMMANDER-IN-CHIEF.**—His Excellency the Commander-in-Chief in India, who is by custom also the Army Member of the Viceroy's Executive Council, is a member of the Council of State, and is the authority in whom is vested all the work connected with the administration of the Army, the formation and execution of the military policy of the Government, the responsibility for maintaining every branch of the Army, combatant and non-combatant, in a state of efficiency, and the supreme direction of any military operations based upon India. In addition, the Commander-in-Chief administers the Royal Indian Marine and the Royal Air Force in India. The present Commander-in-Chief is Field-Marshal Sir William R. Birdwood, Bt., G.C.B., G.C.M.G., K.C.S.I., C.I.E., D.S.O.

**DEPARTMENT (ARMY).**—The staff of the Army Department consists of a Secretary, who, like the secretaries in the civil departments, is a Secretary to the Government of India as a whole, possessing the constitutional right of access to the Viceroy, a Deputy-Secretary, an Establishment Officer, and two Assistant Secretaries.

The Army Department deals with all army services proper, also the administration of the Royal Indian Marine and the Royal Air Force in India in so far as questions requiring the orders of the Government of India are concerned. The Army administration is represented in the Legislature by the Army Member in the Council of State, and by the Army Secretary in the Legislative Assembly.

**MILITARY COUNCIL.**—This is composed of the Commander-in-Chief as President and the following members: the Chief of the General Staff, the Adjutant-General, the Quartermaster-General, the Master-General of Supply, the Secretary to the Government of India in the Army Department, and the Financial Adviser, Military Finance, representing the Finance Department of the Government of India. It is mainly an advisory body, constituted for the purpose of assisting the Commander-in-Chief in the performance of his administrative duties, and has no collective responsibility. It meets when convened by the Commander-in-Chief for the consideration of cases of sufficient importance and difficulty to require examination in Conference. The heads of the minor independent branches of Army Headquarters and the directors of technical services attend when required.

**AUXILIARY FORCE.**—The Auxiliary Force, organised in 1920 when the War had shown the necessity of some form of universal military training, is confined to persons of British extraction. This body can only be called out for service locally, being intended primarily for those who can undergo training in their spare time and are unable to afford the longer periodical training obligatory in the Territorial Force. Enrolment is voluntary but entails training extending to 64 hours annually for infantry and 80 hours for other arms. The strength of the Auxiliary Force in 1925 was 20,000.

**BRITISH REGULAR FORCES.**—The British cavalry and British infantry forces in India are units of the British service, no individual British service unit being located permanently in India. Units of the British army are detailed for a turn of foreign service, of which the major part is as a rule spent in India. The British regular forces serving in India are paid by the Indian Exchequer, and are organised in brigades and divisions with the Indian Army, the normal proportion being one British battalion to three Indian. In 1925 there were 45 British infantry battalions in India, each with an establishment of 28 officers and 882 other ranks, five British cavalry regiments, each with an establishment of 27 officers and 571 other ranks, four Royal Horse Artillery batteries, six pack batteries, and six armoured car companies of the Royal Tank Corps. There are also a number of British commissioned and non-commissioned Royal Engineer officers with the Corps of Sappers and Miners and the Pioneer Corps.

In 1925 the total number of effectives of the British regular forces in India was as follows:—

	OFFICERS	OTHER RANKS
Combatant Services	4,400	59,450
Departmental and Administrative Services	2,090	2,375
Other Services	400	994
Totals	6,890	62,819

**INDIAN ARMY (REGULAR).** The Indian Army consists of 21 regiments of cavalry, 20 regiments of infantry (206 battalions), two pioneer regiments (12 battalions), one independent pioneer battalion, 10 Gurkha regiments (20 battalions), four corps of sappers and miners, signal, ordnance, medical, veterinary and remount services, and the Indian Army Service Corps and Mechanical Transport Service. The peace establishment of an Indian cavalry regiment comprises 14 British officers, 19 Indian officers, 512 Indian non-commissioned officers and men, and of an active infantry battalion, 12 British and 20 Indian officers and 742 Indian other ranks.

**INDIAN FIGHTING RACES.**—The Indian troops are largely Mohammedans drawn from both the north and the south of India, as well as from beyond the frontier. They are all excellent fighting men, hardy and warlike, who have furnished soldiers to the great powers of India for hundreds of years. As cavalry the Mohammedans are perhaps unequalled by any other race in the East. Sikhs from the Punjab and Gurkhas from Nepal are unsurpassed as fighters in the hills, even by the Pathans of the North-West Frontier. Many splendid battalions are furnished by the Rajput caste of Rajputana and the United Provinces. Their high caste and consequent prejudices in no way interfere with their martial instincts and efficiency in war. The Garwhalis are Hill Rajputs, who established an imperishable

record in the Great War both in Europe and the East. A fine and warlike race of Hindus—the Jats—from the Delhi and Rohtak districts have proved themselves good soldiers on every battlefield, and the Dogras from the hilly districts of the Punjab fought especially well in Flanders and Mesopotamia.

**OFFICERS**—There are two main categories of officers in the Indian Army, those holding the King's Commission and those holding the Viceroy's Commission. The latter are all Indians (apart from the Gurkha officers of Gurkha battalions), and have a limited status and power of command, both of which are regulated by the Indian Army Act and the rules made thereunder. Until recent years Indians were not eligible for King's Commissions. King's Commissioned officers (European) for the Indian Army are obtained from two sources—from among the cadets who pass through the Royal Military College, Sandhurst, and by the transfer to the Indian Army of officers belonging to British units. The former is the principal channel of recruitment, the latter being only resorted to when, owing to abnormal wastage or for some other special reason, requirements cannot be supplied by recruitment from Sandhurst.

**Indian Officers**—A momentous decision of the Great War, so far as the Indian Army was concerned, was that which rendered Indians eligible to hold a King's Commission in the Army. Commissions are now obtainable by Indian gentlemen, either by qualifying as a cadet through the Royal Military College, Sandhurst, or by the bestowal of an honorary commission as a reward for distinguished service. Ten vacancies at Sandhurst are reserved annually for Indian cadets, and the establishment of the Prince of Wales' Royal Indian Military College at Ichra Dun has rendered it possible to fill from there these ten vacancies.

In addition to providing the means by which a satisfactory stream of candidates for Sandhurst may be maintained, the Government of India in 1923 made provision for the complete Indianization of eight units of the Indian Army. To these units, which include two from cavalry, five from infantry, and one pioneer battalion, Indian officers holding commissions in the Indian Army are gradually being transferred and posted to fill appointments for which they are qualified by their rank and length of service. The completion of this noteworthy experiment is expected to take about 22 years.

**RESERVE**—There are two classes in the reserve, Class A and Class B. A reservist is eligible to serve in Class A up to 8 years' combined army and reserve service, and in Class B up to 15 years' combined service. Service in the reserve is compulsory, and while not under training (during which he receives the full pay of a serving soldier) the reservist receives pay as follows: Class A, Rs 7 per mensem; Class B, Rs 4 per mensem. The establishment of reservists in 1925 was fixed at 27,641.

**SERVICE (TERMS OF)**—Terms of service in the Indian Army are four years for cavalry, artillery, sappers and miners and signal corps; for infantry and pioneers (except Gurkha groups, the 4th Hazara Pioneers and trans-frontier personnel of the infantry), five years in the army and ten years in the reserve, and for the Gurkha groups, 4th Hazara Pioneers and trans-frontier personnel of the infantry, four years. The period laid down for service in the regular army may be extended.

**STRENGTH**—The following table shows the effective strength of Indian officers and other ranks in 1925—

Combatant Services	130,722
Departmental and Administrative Services	14,980
Other Services	17,373
	172,075

Many of these are distributed among the British forces serving in India, the average effective strength of the Indian troops, including those on duty in China and Nepal and other stations outside India, but excluding those on Field Service, in 1924 was 134,742.

**STATE FORCES.**—The Indian State Forces formerly designated "Imperial Service Troops," consist of the military forces raised and maintained by the Rulers of Indian States at their own expense and for State service. It has been the custom in emergency for State troops to be lent to the Government of India, and the latter has on many occasions received military assistance of great value from this source. But the rendering of such aid is entirely at the discretion of Ruling Princes and Chiefs. The Government, on the other hand, provides permanently a staff of British officers, termed "Military Advisers and Assistant Military Advisers," to assist and advise the Ruling Princes in organising and training the troops of their States.

After the termination of the Great War the Indian States, like the Government of India, undertook a military reorganisation, which in a number of cases has been completed. Indian State Forces are now in general composed of three categories of troops: Class A, which is organised on the present-day Indian Army system and establishments, and Classes B and C, which retain generally the system of pre-war formations and of militia formations. On October 31, 1925, the actual strength of the Indian State Forces amounted to 31,241, of whom 19,362 were infantry, 8,207 cavalry, and 1,562 transport corps.

**TERRITORIAL FORCE.**—This Force is one of the several aspects of the Indianization of the military services. It is intended to cater, amongst other things, for the military aspirations of those classes of the population with whom military service has not hitherto been an hereditary profession. It is intended, at the same time, to be a second line to and a source of reinforcement for the regular Indian Army. Membership of the force for this latter reason carries with it a liability for something more than purely local service or home defence. It may in certain circumstances involve service overseas. The force is the direct descendant of the Indian section of the Indian Defence Force created during the War. It has been modelled on the old militia in England, and consists at present of two main categories, provincial battalions and the university training corps battalions, the latter being recruited from the staff and students of Indian universities.

In the case of the university training corps battalions, whose members are automatically discharged on the completion of their university training, the purpose of enrolment is entirely educative and disciplinary, and the liability to render actual military service is not enforced. Members, however, of the provincial battalions accept the full liability for service which has been mentioned and serve for six years, the period being reduced to four years in certain cases. During his first year every man does 28 days' preliminary

training, and during every year he receives 28 days' periodical training. Considerable progress has been made in the constitution of the territorial force. Twenty provincial battalions were in existence in 1925, the enrolled strength being over 12,000. The six battalions of the University Training Corps are located at Bombay, Calcutta, Allahabad, Lahore, Madras and Rangoon, and two separate companies have been constituted at Patna and Delhi.

## NAVY

India's naval history goes back to Elizabethan days, when "John Company" purchased armed vessels for the protection of its settlements and seaborne commerce. Two ships, the "Dragon" and the "Osander," formed the nucleus of what came to be known as the Bombay Marine, with headquarters at Surat. Having proved their mettle against the pirates who infested the Bombay coast, they soon met sterner adversaries in the men-of-war of Portugal and the Netherlands, from that time onward the Bombay Marine bore an honourable part in every Eastern campaign. Its ships helped to capture Chandernagore, Trincomali, Pondicherry and Mauritius. During the nineteenth century the thunder of their broadsides was heard in Burma and China, and even as far afield as New Zealand. As units of what had meanwhile become the Royal Indian Marine, the Great War found them active in many waters. Two ships, the "Hardinge" and "Dufferin," assisted in the defence of the Suez Canal, where the first-named was heavily engaged with the Turkish artillery. Others rendered priceless service in the Mesopotamian campaign.

To these inspiring traditions the new Royal Indian Navy, the establishment of which was announced by the late Viceroy (Earl of Reading) on February 9, 1920, is heir. The Royal Indian Marine is to be reconstructed as a combatant force to enable India to enter upon the first steps of her naval development, and ultimately to undertake her own naval defence. Subject to His Majesty's approval, the service will be known as the Royal Indian Navy and will fly the White Ensign.

**ESTABLISHMENT.**—The fleet of the Royal Indian Navy will consist in its first stage of development of four sloops, two patrol craft vessels, four trawlers, and two survey ships, together with one depot ship. In course of time, however, it is hoped to see cruisers of the most powerful class embodied in the Royal Indian Navy. The inauguration of the Navy will be entrusted to the personnel of the existing Service, subject to any necessary readjustment of cadres. Indians will be eligible for commissioned rank, and the changes which this policy involves will be carried out as soon as agreement has been reached in consultation with the Admiralty on the details of administration, organisation and finance.

**FINANCE.**—The Committee which recommended the reorganisation of the Royal Indian Marine estimated that the net annual cost of maintaining a Royal Indian Navy would amount at first approximately to Rs.63 lakhs. The average annual cost of the Royal Indian Marine is put at Rs.51,62,000, the excess of the annual cost of the Indian Navy being expected to be reduced to a considerable extent by the leasing of dockyards, and still further if, as is contemplated, the Government of India institutes a system for the levy of fees for lighting on shipping companies.

**FUNCTIONS.**—The functions of the Royal Indian Navy in peace time will be as follow: (a) The training of personnel for service in war, (b) The services required by the Indian Government in the Indian Ocean and Persian Gulf, (c) The organisation of the naval defences at ports which are under the control of the Indian Government, (d) Survey work in the Indian Ocean, (e) Marine transport work for the Government of India.

In case of war the ships would pass under the control of the British Admiralty, just as the other Dominion fleets did in 1914.

**INDIA'S MARINE EXPENDITURE.**—Since 1869 India has paid a contribution of varying amounts to the Imperial Government in consideration of services performed by the Royal Navy. Under existing arrangements, which date from 1869, a subsidy of £100,000 a year is paid for the upkeep of certain ships of the East India Squadron, which may not be employed beyond prescribed limits except with the consent of the Government of India. The expenditure amounts to nearly £400,000 annually.

**ROYAL INDIAN MARINE.**—In 1925 the Royal Indian Marine comprised the following vessels: "Clive" (station ship), 8,200 tons, stationed at Burma and the Andamans, "Cornwallis" (sloop), 1,200 tons, at Aden, "Lawrence" (despatch vessel), 1,250 tons, in the Persian Gulf, "Investigator" and "Palinurus" (surveying ships), "Dalhousie" (receiving ship), 2,195 tons, at Bombay, "Lathan" and "Baluchi" (patrol ships). In addition to the foregoing, there were 38 vessels composed of steam trawlers, service launches, target towing tugs, powder boats and military service launches, distributed at Bombay, Calcutta, Aden, Rangoon and Karachi.

## AIR FORCE

The Royal Air Force in India is controlled by the Commander-in-Chief as part of the defence services of the Indian Empire, and the Air Force budget is incorporated in the Army estimates. The Commander of the Air Force, the Air Officer Commanding in India, is an Air Vice Marshal, whose rank corresponds to that of a Major-General in the Army.

**ADMINISTRATION.**—The headquarters of the Air Force is closely associated with Army Headquarters, and is located with the latter at the seat of the Government of India. The Air Officer Commanding has a headquarters staff constituted in four branches, namely, air staff, personnel, technical and stores and medical. The system of staff organisation is similar to the staff system obtaining in the Army. Broadly speaking, the duties assigned to the four divisions mentioned are those which are performed by the General Staff Branch, the Adjutant-General's and Military Secretary's branches, the Quartermaster-General's branch, and the Medical branch respectively of Army headquarters. The formations subordinate to Royal Air Force headquarters are: (1) the Wing Commands, which, in their turn, control the squadrons of aeroplanes, (2) the Aircraft Depot, (3) the Aircraft Park.

**AIRCRAFT DEPOT.**—This may be conveniently described as the wholesale store and provision department of the Royal Air Force. Technical stores from the United Kingdom are received and held in the depot, which is also the main workshop and repair shop of the Force where all engine repairs, mechanical transport repairs, and aircraft repairs of any magnitude are carried out. The depot is located at Karachi, the chief

reason for the selection of this place being, first, that the climate of Karachi permits of European artificers working efficiently for the greater part of the year, and, secondly, that the Cairo-Bagdad-India air-route enters India at Karachi.

**AIRCRAFT PARK.**—This Park, which is situated in peace time at Lahore, acts as the distributing centre between the Aircraft Depot and the squadrons. In the event of war it is a mobile formation. New aeroplanes, received in parts from the United Kingdom, are assembled there, but no major repairs are undertaken.

**COMMANDS.**—There are three Wing Commands in India, namely at Peshawar, Risalpur and Quetta. The Wing Commander is an officer with Air Force rank corresponding to that of Lieutenant-Colonel in the Army. He is equipped with a staff organised on the same system as the headquarters staff of the Air Force. The Wing Headquarters establishment consists, approximately, of six officers and fourteen other ranks.

**SQUADRONS.**—The Royal Air Force in India consists of six squadrons of which five are extended along the North West Frontier from Quetta to Risalpur and one is stationed at Ambala. The squadron is the primary air force unit, and it consists normally of a headquarters and three flights of aeroplanes. A flight can be detached temporarily, but not permanently, from its squadron, as repair facilities, workshops and stores cannot economically be organised on anything lower than a squadron basis. The squadron headquarters comprises the officers and other ranks required for the command and administration of the squadron as a whole, it includes the workshop and repair units, the armours and equipment stores of the squadron. The number of aeroplanes in a squadron varies with the type of aeroplane of which the squadron is composed, but, speaking generally, all squadrons on a peace basis have twelve aeroplanes—that is, four in each of the three flights.

Of the six squadrons in being in 1925, two were equipped with De Havilland 9A aeroplanes and were allotted to distant reconnaissance and bombardment duties, the remaining four, which are allocated to army co-operation duties, have Bristol Fighter aeroplanes. The establishment of officers in a squadron consists of six officers at headquarters and fifteen officers allotted to flying duties. This allows a reserve of one officer for each of the operative flights.

**ESTABLISHMENT.**—The personnel of the Royal Air Force in India comprises officers, non-commissioned officers and airmen of the Royal Air Force of the United Kingdom and Indian artificers and mechanics belonging to the Indian technical section. The officers are employed on administrative, flying and technical duties, but all are required to be capable of flying an aeroplane. A proposal to employ non-commissioned officers as pilots was agreed to by the Government of India in 1923, and there were six of these in India in 1925. Other airmen are employed solely on technical work. The only flying personnel who are not officers are those mentioned above and a few aerial gunners who are airmen from various troops. The non-commissioned officers and airmen are employed both with squadrons and at the Aircraft Depot and Park. The personnel of the Indian section is employed entirely at the Depot and Park on technical trades, and consists of carpenters, fitters, fabric workers, instrument repairers, machinists, etc.

The total establishment of the Air Force in 1925 consisted of 218 officers, 1,757 British non-commissioned officers and airmen, and 138 Indians.

## PUBLIC HEALTH

The history of the sanitary departments in India goes back about 50 years, during which period great improvements have been effected in the health conditions of the towns. Much, however, remains to be done, for before the public health of the country can be brought up to anything like the standard attained in the West a radical change must take place in the ideas of the Indian people concerning hygiene. This change is rendered more difficult by the fact that the ideas alluded to are intimately connected with religious and social customs. India can never be safeguarded from a heavy death-rate, punctuated by disastrous epidemics, until her peoples can be weaned from their tenacious adherence to social observances which are as diametrically opposed to public health as they are to economic prosperity. With an increase in the receptivity of the educated classes to new ideas, and with the slow amelioration of the social and economic status of the masses, it will be possible eventually to remedy India's backwardness in sanitary matters, but so revolutionary a progress cannot be effected quickly. Diseases are still generally attributed to the wrath of Heaven, when sickness occurs the Indian's first impulse is to propitiate offended deities rather than to disinfect his water supply and prevent the contamination of his food. Throughout town and country alike even elementary sanitary science is conspicuous by its absence, therefore until the value of fresh air, pure water and wholesome food is appreciated by the Indian people no real progress can be hoped for.

**BIRTH AND DEATH RATES.**—Owing to the casual manner in which birth and death registration is carried out in other than the main centres of population, statistical figures can at best be only approximate. The following table gives the birth rates and death rates per thousand for a recent year.

PROVINCE	BIRTH RATE PER 1000	DEATH RATE PER 1000
Delhi	42.07	37.90
Bengal	29.90	25.50
Bihar and Orissa	37.00	25.00
Assam	28.82	23.54
United Provinces	30.04	23.37
Punjab	43.20	30.09
N-W Frontier Province	27.60	23.74
Central Provinces and Berar	45.63	30.53
Madras	33.10	22.20
Coorg	25.62	29.14
Bombay	35.58	25.09
Burma	29.51	20.87
Ajmer-Merwara	32.56	25.62
Average, all Provinces	35.06	25.00

**DISEASES.**—In India there are three main classes of fatal disease—specific fevers, diseases affecting the abdominal organs, and respiratory diseases. Intestinal and skin diseases of parasitic origin, ulcers and scurvy widely prevail. Much has been done by the wholesale extermination of rats to reduce the ravages of plague, though this disease, cholera, small pox and malaria are still prevalent. Malaria is perhaps the greatest scourge, and it has been authoritatively stated that in Bengal alone there are every year 28,300,000 cases of malaria requiring treatment. If this estimate be applied to India, the number of cases requiring treatment throughout the land would be about 100,000,000.

**DRINK AND DRUGS.**—Drink, as understood in Europe, is almost unknown in India, except in those places where there are large industrial communities. This fact is explained by the general reprobation in which indulgence in strong drink—as distinguished from indulgence in drugs—is held among the Indian people. The *per capita* figure of consumption for drugs as well as for liquor is very low. There is, nevertheless, a considerable amount of illicit distillation of inferior spirit (toddy), the consumption of which in some centres has proved very injurious.

As regards drugs, the eating of opium is fairly common in India, but not the smoking, which is regarded as disreputable. There are no "dope fiends" in India as understood in the West. The soil of most parts of the country produces the opium poppy, and long before the arrival of the British the people had habituated themselves to the consumption of the drug in small quantities. Various medicinal qualities are ascribed to it, it is used on ceremonial occasions and as a refreshment. As in the case of drink, the general policy of the Government is to control the trade in such a way as to ensure its most effective regulation, and to prevent it from passing into the hands of undesirables. All statistics go to show that the abuse of opium eating in India is on the decline.

**HOSPITALS.**—According to the last report published, there are in India 3,634 State-public, local fund and private aided civil hospitals and dispensaries, the number of patients treated annually being some 38,000,000. In Calcutta alone there are 26 hospitals, ten of which are supported by the Government and 410,019 persons were treated at these institutions in 1925, of whom 40,755 were in-patients. Three large hospitals are maintained by the Government in Bombay, and there are in addition in most of the Presidency cities and other large towns well-equipped and up-to-date hospitals for Indians of both sexes, many of which owe their existence to private or communal generosity.

**INFANTILE MORTALITY.**—Among the most pressing problems of India's public health is the mortality among infants. It has been calculated that every year some two million Indian babies die. Birth registration is still too casual to afford precise data, but it may be stated with confidence that one in six, or perhaps even one in five, of the infants born in India perish within the first year of life. In crowded industrial cities the rate is even more lamentable, and it is believed that in certain localities the death-rate varies from over 200 to 600 per 1,000.

Of late much attention has been devoted to remedial measures. Lady Chelmsford initiated an All-India Maternity and Infant Welfare League, and the National Baby Week initiated by Lady Reading has caught the imagination of large sections of the people all over India, while the exhibitions, lectures and baby shows which annually take place in all the important centres have aroused public interest in an unprecedented degree. Various benevolent institutions, such as the Poona Seva Sadan Society, the Social Service Leagues and the Servants of India Society, have thrown themselves with enthusiasm into the task of furthering the campaign. The Poona Seva Sadan Society has seven Infant Welfare centres and ante-natal clinics working in conjunction with the two maternity hospitals it conducts.

**LEPROSY.**—It is difficult to give anything approaching an accurate estimate of the number of lepers in the Indian Empire

to-day. The last census figures place the total at 102,513, as against 109,904 ten years previously. It is, however, doubtful if this figure represents anything more than the more advanced cases, and possibly the majority of these are the begging and pauper lepers who are seen all over the country. A leading authority has suggested that the number of lepers in India may be put down at over half a million. Compulsory segregation and the establishment of special leper clinics are advocated.

**LUNATIC ASYLUMS.** The treatment of lunatics in asylums is on a very small scale, there being only 25 asylums in the whole of India, having in all about 10,000 patients. In the Native States the condition of affairs as regards the provision of institutions for the care and treatment of the insane is still worse, as no asylums exist at all.

**MEDICAL COLLEGES.** There are seven Medical Colleges (Bombay, Madras, Calcutta, Belgaum, Lahore, Delhi and Lucknow). There are also 18 medical schools, and there is an X-ray institution at Dehra-Dun.

**MEDICAL RESEARCH.**—Of immediate bearing upon the progress of sanitation in India is the advance of medical research. In this field financial stringency has of late hindered development, but in the 1925-26 Budget provision was once more made for a subvention to the Indian Research Fund Association whose activities had suffered temporarily from retrenchment. This body conducts important investigations into the epidemics with which India is afflicted. In this direction much valuable work has been done.

**MORTALITY FROM WILD ANIMALS.**—The total number of persons killed by wild animals in British India during 1924 amounted to 2,587, as against 3,605 in the previous year. Tigers were responsible for 1,174 deaths, leopards for 406, wolves for 119, bears for 82, elephants for 41 and hyenas for 19. Deaths were highest from tigers and leopards in Madras, from wolves in the United Provinces, from bears in Bihar and Orissa, and from elephants in Assam. Of the 446 deaths from "other animals," about 53 were assigned to wild pigs, and 213 to crocodiles and alligators.

**SNAKE BITE.**—Deaths from snake bite fell from 19,990 in 1923 to 19,867 in 1924. This is a very frequent cause of death in almost every province. Rewards are paid for the destruction of venomous snakes.

**NURSING ASSOCIATIONS.**—State registration of nurses for all India is very much required, but at present Government action in the matter has not gone further than the recommendation of provincial registers. In the three Presidencies there has been a remarkable development of skilled nursing during recent years, such associations as the Bombay Presidency Nursing Association, the Calcutta Hospital Nurses' Institution, Lady Minto's Indian Nursing Association, the Lady Amphilh Nurses' Institute and South Indian Nursing Association, and the Trained Nurses' Association of India having done much to raise the general standard of nursing. Most of the larger Government Hospitals also act as training institutions, and turn out a yearly supply of fully trained nurses, both to meet their own demands and those of outside institutions and private agencies. In this way the supply of trained nurses, English, Anglo-Indian and Indian, is being steadily increased.

## PUBLIC WORKS

The Public Works Department has always been an important feature of British administration in India. Its history dates from 1854, when it first came to be organised on a definite basis in succession to the old Military Boards, constituted mainly for the carrying out of military works. Under the Reforms Act of 1919 public works are a "transferred" subject, control being vested in the Provincial Governments, each of which has its own Department of Public Works, dealing principally with buildings, roads and irrigation.

**BENGAL.**—In the Bengal Presidency the Public Works Department is under the charge of a Chief Engineer, who is also the Secretary to Government in the Public Works and Railway Departments. The Public Works Department deals with questions regarding the construction of buildings and roads, the Railway Department with questions bearing upon the acquisition of lands required by the several railways, the alignment of new lines of railway and with tramway projects, and the Irrigation Department with irrigation, navigation and flood protection by means of embankments and drainage.

**BOMBAY.**—The Public Works Department of the Bombay Presidency is under the control of two Chief Engineers, who act as Secretaries to the Government—one for General Works and the other for Irrigation. Under them are Superintending Engineers in charge of divisions and Executive Engineers in charge of districts, with the Consulting Architect. The chief irrigation works are in Sind, and consist of a chain of canals fed by the annual inundations from the Indus and one perennial canal, the Jamrao. In the Presidency proper the principal protective works are the Nera Canal, Gokak Canal, Mutha Canal, and the Godavari Canal Scheme. In addition, there is under construction a chain of protective irrigation works originating in reservoirs in the Ghat regions. The Godavari canals were completed during the year 1917-18, the Pravara canals are approaching completion, and the works in connection with the Nira Right Bank Canal and the Pravara River Works system, which have been under construction since 1912 and 1911 respectively, are nearing completion. These projects will irrigate certain tracts most liable to famine. (See also special article on "Irrigation").

Among public buildings recently erected by the Bombay Public Works Department are the Pavilion at the Apollo Bunder, Bombay (see under "City of Bombay"), and the Historical Museum and Library at Satara. During the year 1924-25 the Roads and Buildings Branch executed works the total expenditure on which was Rs. 2 crores 17½ lakhs. The expenditure on buildings connected with Imperial Services amounted to over Rs. 13½ lakhs, which included Rs. 2½ lakhs on salt, Rs. 3½ lakhs on post and telegraph offices, and Rs. 4 lakhs on military works.

**CENTRAL PROVINCES.**—The Public Works Department is controlled by two Chief Engineers, who are also Secretaries to the Government. There are two Superintending Engineers for Roads and Buildings and three for Irrigation. In 1892 a separate division of the Public Works Department was formed for the construction of roads and buildings in the Feudatory States, but it has since been abolished. The expansion of the department and its work has been one of the most remarkable features of the administration in the past decade and a half, largely owing to the demands of a progressive

1. New Simla Water Works. General view of Coagulating Tanks (Paterson System).
3. Poona Cantonment Water Works: Interior of Filter House (Paterson System).

2. Lucknow Water Works. Filter Units and Operating Platform (Paterson System).
4. Delhi Water Works, Showing Filter Units.

age in regard to communications and new buildings. The Irrigation Branch represents a completely new departure. It was formerly the accepted view that the irregular surface of the country would make irrigation canals impossible, and that the south-west monsoon was so regular that it would pay better to relieve famine than to prevent it. Both conclusions have been reversed. Picked officers investigated projects for irrigation when the Irrigation Commission was appointed (1901), and canal and storage works have since been advanced with vigour. The Tandula, Wainganga, Mahanadi, Kharang and Manari projects are amongst the more important schemes, while an extensive network of minor protective works is being constructed throughout the Province.

**MADRAS.**—The work of the Madras

Public Works Department is very largely connected with irrigation, the area already irrigated in the Presidency being over 7,000,000 acres, to which the Cauvery Reservoir Project is expected to add another 300,000. The budget estimates for 1925-26 allotted 50 lakhs of rupees to expenditure on irrigation, apart from expenditure from capital accounts not charged to revenue (See also special article on "Irrigation").

**UNITED PROVINCES.**—The Public Works Department is divided into the Roads and Buildings branch and the Irrigation branch, each of which is administered by a Chief Engineer, who is also a Secretary to the Government. The Provinces are divided into circles and divisions, both for roads and buildings and for irrigation purposes. Each circle is in charge of a Superintending Engineer, and

each division is directed by an Executive Engineer. The whole of the irrigation works constructed or maintained by Government is in charge of the Irrigation Department, while nearly all metalled roads and bridges on second-class roads, as also generally all works costing more than Rs 1,000, except in municipalities, are controlled by the Buildings and Roads Department. Under Public Works there is now a separate Sarda canal branch of the Irrigation Department directed by a Chief Engineer with a full staff distinct from that of the running canals. The Sarda canal is a project of first rate importance and is under construction. It will introduce irrigation into most of the districts of Oudh (See also special article on "Irrigation").

## POSTS, TELEGRAPHS AND TELEPHONES

In the large and complicated system of Indian communications the Posts and Telegraphs Department performs functions of the highest importance, since, in addition to providing the Indian public with easy and rapid means of intercourse, it is called upon to act as the agent of the Government in carrying out many other essential services not directly connected with its basic activities. It acts as the banker and agent of the people, enabling them to do their shopping from all distances, collects customs charges on dutiable articles coming to India by post, insures the lives of Government employees, pays the pensions of retired officials of the Indian Army, is the custodian of postal and telegraphic stores held in reserve for purposes of military organisation, and, finally, among a host of miscellaneous activities, it sells quinine. The extent to which these useful functions are carried on may be estimated from the figures given below

### POSTS

For postal purposes the Indian Empire is divided into nine circles as shown hereafter, each of the first eight being in charge of a Postmaster-General, while the Sind and Baluchistan circle is controlled by a Deputy Postmaster-General. Bengal and Assam, Bihar and Orissa, Bombay, Burma, Central, Madras, Punjab and North-West Frontier, United Provinces, and Sind and Baluchistan. The Central circle comprises roughly the Central Provinces and the Central India and Rajputana Agencies.

**GROWTH OF POST OFFICE.**—At the end of 1897-98 the total number of post offices in India was 11,742 and the length of mail lines 126,351 miles. At the close of 1924-25 there were 105,800 postal officials, 19,652 post offices and 156,117 miles of mail lines. During the year 1897-98 the total number of letters, postcards, packets and newspapers given out for delivery was 460,899,344, while for the year 1924-25 the number was 1,195,760,042. Parcel mail articles despatched for delivery in the former year totalled 4,119,781, as compared with 13,566,890 in the latter year. The number and value of money orders issued increased from 11,795,041 and Rs 24,79,45,455 in 1897-98 to 34,977,329 and Rs 87,72,33,404 respectively in 1924-25.

**LETTERS, ETC.**—The mail matter dealt with in 1924-25 (exclusive of parcels) reached a total of 1,229,943,101 articles, an increase of 34,185,059 over the figure for 1923-24. This total was distributed as follows: Paid unregistered letters, 478,328,996, unpaid letters, 21,084,513, registered letters and packets, 34,136,780, postcards, 542,365,050, registered newspapers, 74,378,525, ordinary unregistered packets, 79,651,237. The number of unpaid letters, which are a feature of Indian postal correspondence, showed a decrease of 710,706, all other items showed large increases.

**LETTER RATES.**—The inland tariff for letters, etc (which is applicable to Portuguese India and Ceylon, except in respect of insurance fees), is as under—

*Letters.*—When the postage is prepaid: Not exceeding two and a half tolas, 1 anna; every additional two and a half tolas or part of that weight, 1 anna.

*Book and pattern packets.*—Every 5 tolas or part of that weight,  $\frac{1}{2}$  anna.

*Postcards.*—Single,  $\frac{1}{2}$  anna, reply, 1 anna. (The postage on cards of private manufacture must be prepaid in full.)

When the postage is wholly unpaid on the above letters, etc double the prepaid rate (chargeable on delivery).

*Registration Fee.*—For each article, 2 annas.

(1 tola (rupee-weight)=180 grains, or rather less than half an ounce.)

*Foreign Tariff.*—The foreign tariff for letters, etc., is as follows—

*Letters.*—To the United Kingdom, other British Possessions and Egypt, including the Sudan, 2 annas for the first ounce and  $\frac{1}{2}$  annas for each additional ounce or part of that weight, to other countries, colonies or places 3 annas for the first ounce and  $\frac{1}{2}$  annas for every additional ounce or part of that weight.

*Postcards.*—Single,  $1\frac{1}{2}$  annas, reply, 3 annas.

*Business Papers.*—For a packet not exceeding 10 ounces in weight, 3 annas, for every additional 2 ounces or part of that weight,  $\frac{1}{2}$  anna.

*Printed Papers.*— $\frac{1}{2}$  anna for every 2 ounces or part of that weight.

*Samples.*— $\frac{1}{2}$  anna for every 2 ounces or part of that weight, subject to a minimum charge of 1 anna for each packet.

The rates shown are those chargeable when the postage is prepaid.

**MONEY ORDERS.**—Money orders are issued for amounts ranging from one to 600 rupees. In 1924-25 the total number of such orders of all kinds issued, inland and foreign, exceeded 34 millions, of the aggregate value of 87 crores of rupees, as compared with 33 millions, value Rs 84 crores, in 1923-24. Inland orders issued realised Rs 82½ crores, and foreign orders (issued and paid) Rs 4½ crores.

*Telegraphic Money Orders.*—The total number of telegraphic money orders issued rose from 847,914 in 1923-24 to 904,836 in 1924-25, and their value from 79½ crores to 81½ crores of rupees.

**P. AND O. CONTRACT.**—All mails for Great Britain and most of those for European countries are carried by the P and O S N Company. During 1924-25 over 50 steamers left London with mails for India, and the same number left Bombay with the Indian mails. The average time occupied in the transit of these mails by the overland route (London—Marseilles) is 14 days 15 hours from London to Bombay and 14 days 9 hours in the reverse direction.

**PARCEL POST.**—Statistics relating to parcels show that the total number handled by the Post Office in 1924-25 was 14,480,134, against 13,566,890 in 1923-24, an increase of 6.73 per cent. The total number of parcels despatched by the foreign post from India was 638,117, compared with 617,236 during the preceding year, and the number received was 702,648, against 669,500. In 1924-25 the number of parcels sent to and received from Great Britain and Northern Ireland alone was 503,892.

**PARCEL POST RATES.**—Following are the rates for inland parcel post: (a) Parcels not exceeding 440 tolas in weight: Not exceeding 20 tolas, 2 annas; exceeding 20 tolas but not exceeding 40 tolas, 3 annas; for every additional 40 tolas or part of that weight, 3 annas; (b) Parcels exceeding 440 tolas in weight: exceeding 440 tolas but not exceeding 480 tolas, Rs 3, with 4 annas for every additional 40 tolas or fraction thereof up to 800 tolas. Registration is

compulsory in the case of parcels weighing over 440 tolas. These rates are not applicable to parcels for Portuguese India. In the case of parcels for Ceylon a registration fee of 2 annas is chargeable on each parcel in addition to the rates shown above.

The foreign tariff for parcels is as follows:

(a) Parcels not exceeding 11 lbs in weight are forwarded as mails to the British Post Office, the rates of postage being Rs 1 8 annas for 3 lbs and under, Rs 2 12 annas from 3 to 7 lbs, Rs 3 15 annas from 7 to 11 lbs. (b) Parcels which exceed 11 lbs, but which do not exceed 50 lbs (the maximum allowed) in weight, are forwarded from India through the medium of the P & O S N Co, and are delivered at destination under arrangements made by that Company. The postage charge applicable to such parcels is 12 annas for each lb or fraction of a lb. The parcels are delivered free of charge within a radius of one mile from the Company's head office in London, if addressed to any places beyond that radius, carrier's charges are collected from the addressees on delivery.

**VALUE-PAYABLE ("C O D") PARCELS.** India has a very efficient system of C O D parcel-post, of which great use is made, the number of parcels under this head dealt with having risen from 5,742,742 in 1923-24 to 6,061,534 in 1924-25. During the latter year no less than Rs 266,000,000 were collected from tradesmen and others on value-payable articles.

**POSTAL COMMUNICATIONS.**—The total distance over which mails were conveyed during the year 1924-25 by agencies employed by the Department was 156,117 miles, an increase of 962 miles as compared with the previous year. Sixty-eight new motor lines were introduced, which replaced existing services worked by other means. The total distance over which mails were conveyed by rail was 36,569 miles and by steamer 18,485 miles.

**SAVINGS BANK.**—The number of active accounts in the Post Office Savings Bank of India on March 31, 1925, was 2,104,473, representing an increase of 3.59 per cent. over 1923-24. The total balance standing to the credit of depositors rose from 24½ crores to 25½ crores of rupees, and the average balance to the credit of a depositor was Rs 118 45, compared with Rs 118 64 in the preceding year.

### TELEGRAPHS

Up to 1912 the telegraph system in India was administered as a separate department by an officer designated the Director-General of Telegraphs. After tentative experiments had been made, a complete amalgamation of the Posts and Telegraphs Departments was effected in 1914, the fundamental principles of working closely following the systems in force in the United Kingdom and some European countries.

**GROWTH OF TELEGRAPHS.**—At the end of 1897-98 there were 50,305 miles of line and 155,088 miles of wire and cable, as compared with 94,037 line (including cable) miles and 477,839 wire (including cable) miles respectively on March 31, 1925. The number of departmental telegraph offices declined from 257 to 165, while the number of telegraph offices worked by the Post Office rose from 1,634 to 3,507. The total number of telegrams dealt with grew from 5,754,415 to 19,842,000.

The outturn of the telegraph workshops during 1924-25 represented a total value of Rs 16,80,444, compared with Rs 16,60,258 in the preceding 12 months, and at the end of the year the total staff numbered over 14,000. There was an increase of 4 per cent.

in the number and nearly 2 per cent in the value of inland telegrams dealt with during 1924-25 as compared with the traffic of the preceding year. State telegrams decreased by 10 per cent in number and by about 16 per cent in value. Raj (or Indian State) telegrams increased by about 40 per cent in number and by about 59 per cent in value. Private telegrams increased by 3 per cent in number and by 7 per cent in value. The total inland traffic was 16,957,818 messages and the value Rs 1,95,49,917, as compared with 16,259,737 and Rs 1,91,09,152 in 1923-24. The total number of foreign telegrams was nearly three millions, daily letter telegrams showing the remarkable increase of 224 per cent.

**TELEGRAPH RATES.**—Telegrams sent to or received from places in India or Ceylon are classed as inland telegrams. The tariff for inland telegrams is as follows:—

*For Delivery in India (Private and State)*  
—Minimum charge. Express, Rs 1 8a, ordinary, 12a, each additional word over 12. Express, 2a, ordinary, 1a.

*For Delivery in Ceylon (Private and State)*  
—Minimum charge. Express, Rs 2, ordinary, Rs 1, each additional word over 12. Express, 3a, ordinary, 2a.

The address is charged for.

**Additional charges.**—Minimum for reply-paid telegram, also acknowledgment of receipt. Minimum charge for an ordinary telegram. Multiple telegrams, each 100 words or less 4 annas. Collation. One quarter of charge for telegram.

**FOREIGN TARIFF.**—The charges for foreign telegrams vary with the countries to which they are addressed. The rates per word for private and State telegrams to countries in Europe are as follow:—

All countries in Europe (except Russia and Turkey). Via Eastern—Urgent, Rs 3 12a, ordinary, Rs 1 4a, deferred, 10a, State (British Govt.), 10a. Via Indo—Urgent, Rs 3 12a, ordinary, Rs 1 4a, deferred, 10a.

**LETTER-TELEGRAM SERVICE.**—During the year 1924-25 a daily letter telegram service at quarter rates, subject to a minimum of 20 words, which had been

introduced as an experimental measure between India and Great Britain in 1923, was extended to all British possessions and the United States of America.

**RADIO TELEGRAMS.**—For radio-telegrams addressed to ships at sea and transmitted via the coast stations at Bombay, Calcutta, Diamond Island, Karachi, Madras, Port Blair, Rangoon or Victoria Point the charge is eleven annas per word in nearly all cases. The number of radio telegrams exchanged with ships at sea by coast stations in India and Burma during 1924-25 was 19,551, as compared with 18,845 in 1923-24 and 16,278 in 1922-23.

**WIRELESS.**—Progress in the development of wireless telegraphy has been seriously affected by the financial stringency. At the suggestion of Lord Inchcape's Retrenchment Committee almost all development in the wireless branch was postponed and many of the Indian stations were put under care of maintenance parties. On the other hand, the new high-speed continuous wave stations at Rangoon and Madras have been completed, and a great deal of commercial traffic is now carried direct, to the relief of congestion on the long land line round the north of the Bay of Bengal. Press messages from England are received daily. Progress is now (1926) being made towards completion of the Indian portion of the Imperial Wireless Scheme, negotiations having been concluded with the Indian Radio Telegraph Company for communication with the United Kingdom by means of the mammoth Marconi Beam Station at Kirkee, 65 miles inland from Bombay. Each of the five masts of this station is 227 ft high and weighs 50 tons, and the line of them points directly toward the beam station at Skegness station on the Lincolnshire coast. Before long it is hoped to establish wireless communication with Tokyo, Rio de Janeiro and South Africa.

**BROADCASTING.**—As compared with other countries, broadcasting in India is comparatively undeveloped. But there are now three Radio Clubs situated in Bombay, Calcutta and Madras respectively, which are likely to form the nucleus for expansion in the next few years. These possess licences enabling them to broadcast regular pro-

grammes. Draft conditions have also been formulated for the establishment of commercial broadcasting and throughout the country public interest in wireless seems to be increasing. The number of wireless licences issued for receiving sets showed a substantial increase in 1924-25.

## TELEPHONES

The telephone systems of India differ from those of the posts and telegraphs in that they are not all controlled by the Government there being a number of companies which are licensed to construct and operate lines. Unquestionably, the use of the telephone is increasing in India, the trunk lines are becoming very popular, and it can only be a matter of a few years before a general demand for the extension of existing facilities makes itself manifest with greater force.

**RECENT EXTENSIONS.** In addition to many of the existing telephone installations being extended, obsolete plant is being replaced by modern apparatus. Advantage has been taken of the recent improvements in automatic telephone apparatus, and the Department now has 14 exchanges equipped with such plant while several more are in process of installation. Good progress has been made in the extension of the trunk line system. The Punjab and the United Provinces have been linked up telephonically and through communication is possible between the larger towns. In June 1925 the trunk line from Delhi to Bombay was thrown open to the public, and it is hoped that the long-talked-of service between Calcutta and Bombay will not be further delayed.

**STATISTICS.**—On March 31, 1925, the number of exchanges owned and maintained by the Government of India was 252, with 13,031 straight line connections and 1,754 extension telephones, of which 158 exchanges with 1,450 straight line connections and 386 extension telephones were not operated by the Department. There were also 290 independent non-exchange systems with 930 telephones. The number of exchanges owned by the licensed Telephone Companies was 14, with 20,455 connections.

VIEW OF DELHI, SHOWING THE JAMA MUSJID, BUILT IN 1644-1658.

## CITY OF DELHI

**D**ELHI, the old Moghul capital and now by Imperial proclamation again the capital of All India, is unique among the great cities of the world in respect not only of its varied history, but of its architectural glories. It extends for over two miles along the west bank of the River Jumna, and on the other three sides is enclosed by a lofty stone wall,  $3\frac{1}{2}$  miles in length, built by Shah Jahan. Once it was entered by fourteen gates, eight on the land side and six leading to the river, but most of these have been removed, and of those still existing only the Kashmir Gate on the north, the Farash Khana and Ajmer Gates on the west, and the Delhi Gate on the south are specially noteworthy.

Delhi is a modern city, having been built in the 17th century, but the plain on which it stands is covered with the dust of dead empires. Though the first authentic record of a city dates no further back than the 11th century, it is probable that far older ones lie buried beneath the soil. No fewer than six cities are known to have been constructed south of the present Delhi, and as the visitor leaves the Ajmer Gate he wanders over ground where dynasty after dynasty has risen, fought, built, ruled and died. The Kutb Minar, justly called the most beautiful tower in the world, is an abiding monument of the Moslem conquest of India. Beyond it, and far too rarely seen by travellers, is the city of Tughlakabad, the projected capital which was never occupied.

The whole future of India's rule has been decided again and again within a day's ride of the mouldering ruins of the older Delhis. Thrice on the field of Parnap, north of the city, conflicts were fought which are counted among the decisive battles of the world. The famous Ridge beyond the northern walls is sacred ground, for there the fate of

British rule in India hung trembling in the balance for long weeks in 1857. The northern walls of the city still bear the marks of the siege, the breaches can be traced, the Kashmir Gate is scarred and battered, the narrow lane where John Nicholson fell is almost unaltered, and his modest tomb is in the cemetery near by. Truly, if Delhi is full of memories of the older rulers of India, it is sacred soil for the British also. Lake rode in triumph through its streets in 1803, at its gates the destiny of the British in India was decided, its walls echoed the salute proclaiming the assumption of the Imperial title by Queen Victoria, it heard the guns commemorate the accession of the first British Emperor of India, and all the princes of India gathered within its precincts to render fealty to the first British Monarch who had ever gone in person to his Asiatic dominion.

**BUILDINGS, ETC.**—The Fort and Palace and the principal mosques and tombs are described later. Of the architectural glories of Delhi it need only be said that they are famous alike in Indian and European literature, but more than a brief mention of the more important is impossible in a work of this description. Visitors entering Delhi from the north will notice on the face of the Kashmir Gate a memorial tablet to the explosion party, and just inside the outlines of the Quarter Guard, in which so many European officers were murdered on May 11, 1857. St James' Church, built at a cost of £10,000 by Colonel Skinner, stands in front of the Gate, and near by are the buildings of the Residency, now used as a Government High School, the Cambridge Mission College, the Post Office, and the gateways of the Old Magazine. Near the Jama Masjid, on the

north-west side, is a beautiful Jain Temple approached by narrow streets, the Kotwali, where many massacres took place after September 1857, lies near the Queen's Gardens, and close to it is the Sonreh Masjed of Roshan-ud daula, on the platform of which Nadir Shah sat in stony silence while the inhabitants of Delhi were being massacred by his troops. Opposite the Kotwali, in the centre of the square, and erected on the site of famous Karawan Sarai, rises the Northbrook Clock Tower, and behind the Municipal Buildings are the Begam's or Queen's Gardens, beautifully laid out and maintained, in which is situated the fine Public Library erected to commemorate the Viceroyalty of Lord Hardinge. The statue of General Nicholson, close to the cemetery where the body lies, is outside the Kashmir Gate, while here and all along and around the Ridge are ruins and memorials which speak of the Mutiny. The Mutiny Memorial, near Hindu Rao's House and the Lat of Asoka, is a somewhat heavy piece of sculpture, though of great historic and military interest.

To the south of the city the most conspicuous and noteworthy buildings are Delhi Gate, the ruins of Firozabad, the Mosque of Sher Shah (which is one of the handsomest and most picturesque structures in Delhi), the tomb and mosque of Isa Khan, the mausoleum of Nawab Safdar Jang, the Begampur Mosque, the Tomb of the Emperor Firoz Shah and the Kutb Minar and Mosque of Kutb-ul-Islam.

The palaces of the nobles which once gave an air of grandeur to the city have for the most part disappeared. Their sites are occupied by buildings of less pretensions, but still with some elegance of architectural design. In the native city the buildings are chiefly of brick, and are well built and substantial.

**FORT AND PALACE.**—The pride of Delhi, the structure which invests it with visible grandeur, is the vast Fort, whose rose-pink battlemented walls confront across a tree-clad pleasure the mighty Jama Musjid, the Cathedral Mosque of India. The Fort was the Imperial Palace of Shah Jahan, and is a great enclosure containing gardens and several beautiful buildings. No Imperial residence in the world possesses a more majestic portal, and the lofty gateway leads into an entrance hall like the nave of a cathedral. The courtyard beyond is said to be as spacious as a London square. Within the Fort there still remain gems of architecture which are almost unspoilt. The Diwan-i-Am, or Hall of Public Audience, 100 ft. by 60 ft., is a huge arched hall with red stone pillars and engrafted arches, where the Emperors showed themselves to their followers. In a high marbled recess, whose sides are now robbed of their original incrustation of precious stones, stood the famous Peacock Throne, which Nadir Shah carried off to Persia when he left Delhi shattered and desolate.

mounted by a capital composed of a series of bevelled rims. The shaft displays an inscription, as sharply defined and legible as on the day it was first cut, to the effect that "the pillar is the arm of fame of Raja Dhava, who obtained, with his own arm, an undivided sovereignty of the earth for a long period." Who Raja Dhava was is only conjectural, he is believed to have reigned at Delhi in the third or fourth century A.D.

**KUTB MINAR.** Described as the seventh wonder of India, the famous Kutb Minar towers 11 miles south-west of Moghul Delhi. The tower looks what it was intended to be—that of victory raised to celebrate the Moslem conquest of Delhi and the surrounding country. Built and re-built in the 13th and 14th centuries, it is 238 ft. high and consists of five graduated storeys, each emphasised by a balcony composed of richly carved projecting pendentives in the style characteristic of the first Pathan period. Owing to the extreme durability of the red sandstone of which it is constructed, the Minar presents a deceptive modern appearance, while the excellence and curious beauty

**MODERN INDUSTRIES.** Modern mill and factory industries have, during the present century, made great progress in Delhi. The Delhi Cloth and General Mills, the Birla Cotton Spinning and Weaving Mills, the Goenka Cotton Spinning and Weaving Mills and the Ghanesh Flour Mills are amongst the best known of their kind in India. There are also a number of sugar cane pressing factories and cotton-ginning factories. Minor industries include printing, biscuit making, malting and iron and brass work.

**MOSQUES AND TOMBS.** At first glance the Jama Musjid or Great Mosque of Shah Jahan, is by far the most striking building in Delhi, owing much of its imposing effect to its position on a rocky eminence commanding the Palace and city. It was begun in 1644 and finished in 1658. Built of red sandstone and marble, the sanctuary faces a spacious quadrangle enclosed by sandstone walls. Its three noble gateways are approached by grand flights of steps, unrivalled elsewhere except at Latchpur Sikri. As of old the great doors of the main (East) gateway

1. Kutb Minar pillar, 238 ft. 11 in. high, 47 ft. 3 in. diameter, and an upper diameter of 9 ft. (A.D. 1200-1220).

2. Lahore Gate of the Fort. Archway and apartments where the Officers of the Palace Guard were massacred in the Mutiny.

3. Celebrated Persian inscription on the cornice of the Diwan-i-Khas. "If a Paradise be on the face of the earth, it is this, it is this, it is this."

The greatest architectural marvel of the Fort is the Diwan-i-Khas, or Hall of Private Audience, a pavilion with an open portico, surmounted at the corners by domes on slender pillars. It is built throughout of white marble, and presents a vision of arches and pillars adorned with gold and inlay work, of delicate pierced tracery, of cool shady retreats. The jewels have been torn from its walls, but the impression it leaves is abiding. Its essential beauty is unspoilt, and no one who has seen it marvels at the spirit of ecstasy in which its creator inscribed upon it the words "If a Paradise be on the face of the earth, it is this, it is this, it is this."

**IRON PILLAR.**—This is one of the most curious monuments in India. It stands within the precincts of the Mosque of Kutb-ud-Din, where its presence has in turn excited wonder, curiosity and superstitious awe. According to an old belief, it was held that so long as the pillar of Raja Dhava should stand Hindu rule would endure at Delhi. The Pillar consists of a solid shaft of wrought iron 23 ft. 8 in. in length, sur-

mounted by a capital composed of a series of bevelled rims. The shaft displays an inscription, as sharply defined and legible as on the day it was first cut, to the effect that "the pillar is the arm of fame of Raja Dhava, who obtained, with his own arm, an undivided sovereignty of the earth for a long period."

**MANUFACTURES AND INDUSTRIES.**—From time immemorial Delhi has been famous for the art of its gold and silversmiths. They are particularly skilful in engraving gems, and make a speciality of jade ornaments veined with gold and set with precious stones in bird and flower designs. Whereas modern jewellery of this description is by no means unduly expensive, old Delhi work, in cut and gem-encrusted jade, is described as priceless. Delhi goldsmiths also excel in devising beautiful mounts for the world-famous miniatures commonly called Delhi paintings, in the style which was long ago introduced from Persia. The miniatures are exquisitely painted on ivory and, when converted into jewellery, are usually set in locketts, brooches and bracelets. Another speciality of the capital is carving on wood or ivory, while Delhi embroideries are known the world over. Lac ornaments are also extensively produced, and glazed pottery has always been a noted Delhi industry.

were opened only for the Moghul Emperor, so now they are opened only for the Viceroy of India and the Head of the Local Administration. Cloisters run round three sides of the vast triangle, in the centre of which are a marble basin and fountain.

Three other mosques deserve special notice—the Kali Musjid, or "Black Mosque," so called from the dark colour given to it by time, and supposed to have been built by one of the early Afghan sovereigns, the Moti Musjid, or "Pearl Mosque," which is now only a beautiful case robbed of those gems that were once its glory, and the Sher Musjid, which stands as perhaps the finest architectural example of the third Pathan period.

The Tombs of the Imperial family lie outside the walls to the south and south-west of the city proper. That of Humayun is a noble building of red sandstone, with a dome of marble. It stands about 3½ miles from the Delhi gate in a large garden of terraces, the whole surrounded by an embattled wall, with towers and four gateways. The tomb of

Adham Khan, near the Minar, now used as a rest house, is an imposing mausoleum.

**NEW DELHI.**—At the Coronation Durbar of 1911 the King Emperor, George V, restored Delhi to its former high estate as capital of India. The proclamation announcing this was followed by the decree that a new city should be erected more in keeping with modern requirements.

Absolute freedom of choice was allowed the Committee appointed to decide upon the site of New Delhi. Beyond the proviso that the projected metropolis must be in close physical and general association with the existing capital founded by Shah Jahan and with the Delhi of the past the Committee was left an open field from which to make selection. Naturally this was governed by certain important considerations such as water supply, health, sanitation, space for expansion and the provision of parks and recreation grounds.

After a prolonged study of the neighbourhood and a careful weighing of the pros and cons of the various localities the site finally

Other projected features of New Delhi are a spacious forecourt east of and below the forum, which will be defined by trees and linked on to the great main avenue or park way which leads to Morapat. Across this main axis will run an avenue to the railway station. Other roads go in different directions from the entrance to the forum. The axis running north-east towards the Jama Masjid will form the principal business approach to the present city. At the railway station a place will be laid out around which will be grouped the administrative and municipal offices, the banks, the shops and the hotels. The main roads or avenues range from 76 feet to 150 feet in width with the exception of the main avenue east of the Secretariat Buildings, where a park way width of 175 feet has been allowed. The principal features in addition to the main avenues are those running at right angles to the main east to west axis.

**ESTIMATED COST.** It was at first tentatively announced that the cost of the new capital would be four millions sterling

purpose, and will when completed bear the names of Indian regiments only.

**POPULATION.**—The total population of Delhi as recorded at the last census was 304,420, the large increase since 1901, when the figure was 208,575, being greatly due to the development of milling industries.

**SANITATION.**—The city is well supplied with water and of late years much attention has been paid to cleanliness and sanitary requirements generally.

**STREETS.**—The smaller streets of Delhi are narrow and tortuous and in many cases end in cul-de-sacs. On the other hand no city in India has finer streets than the main thoroughfares in the Capital, ten in number, thoroughly drained, metalled and lighted. The principal thoroughfare, the Chandni Chalk or Silver Street, leads eastwards from the Fort to the Lahore Gate and is  $\frac{1}{2}$  of a mile long by 74 ft. broad. Throughout the greater part of its length a double row of trees runs down its centre on both sides of a raised path which has taken the place of the masonry aqueduct that in former days

THE NEW IMPERIAL SECRETARIAT IN COURSE OF CONSTRUCTION AT DELHI.

selected was that on the eastern slopes of the hills to the south of Delhi and on the fringe of the tract occupied by the Delhi of the past. This site was chosen largely because of its freedom from liability to flood, its good natural drainage, its comparative freedom from monuments and tombs needing reverential treatment, and its close proximity to the present centre of Delhi. Some ten square miles were apportioned for the new city and fifteen square miles for cantonments on the Naraina Plain.

#### ARCHITECTURAL FEATURES—

The task of planning the new city was assigned to the eminent English architect, Sir Edward Lutyens, who is also the architect of the new Government House, the central point of interest in the lay-out of the city. The two large blocks of buildings known as the Secretariats are the work of Mr. Edward Baker. The former building will, it is estimated, cost approximately Rs 140 lakhs and the latter groups some Rs 124 lakhs.

Government House was expected to be ready for occupation in 1927. The Secretariats, which give accommodation to all the administrative departments, were first used in October 1926, when the new capital was inaugurated by the Viceroy as the winter seat of Government. In January 1927 the Assembly and Council of State met for the first time in the Legislative Building.

and that sum was given in the original despatch of the Government of India on the subject. Various factors have since increased the cost and the total final outlay is now estimated to be not less than Rs 1,292 lakhs (£8,612,500).

**UNIVERSITY OF DELHI.**—In 1922 an Act was passed establishing a unitary teaching and residential University of Delhi, the buildings for which will be erected in the new capital. It is intended to provide a local university on the model recommended for Dacca by the Calcutta University Commission.

**WAR MEMORIAL.**—The All-India War Memorial stands at the southern end of the Central Vista, in the centre of the circular Princes' Park. It is in the form of a triumphal arch spanning Kingsway, the avenue running down the centre of the Vista. Generally similar to the Arc de Triomphe in Paris, it is yet simpler in a way that increases its grandeur and dignity. Over the arch, which is 160 feet high, on both fronts is the single word "India," and above the arch is a circular stone bowl 11 ft. in diameter, which will be filled with oil on great anniversaries and other occasions, so that there will be a shining fire by night and a column of smoke by day. The memorial is solely Indian in

conducted water from the canal to the Palace. In the Chandni Chalk are many of the best modern buildings of Delhi and it has long been the centre of the gold and silver work for which the city is famous.

**WATER SUPPLY.**—The source of the Imperial Delhi Water Supply is the River Jumna and after natural settlement the water is purified by the Paterson system.

The new purification works were, at the instance of Government engineering and medical authorities, installed at Chandrawal in 1920, and are designed for a maximum duty of 15,000,000 gallons per day.

#### VISITORS' GUIDE.

**CLUBS.**—Chelmsford Delhi—Civil Lines, Imperial Delhi—Gymkhana—Kingsway, Union—Queen's Garden.

**HOTELS.**—Apollo—Nicholson Road, Kashmir Gate, Civil and Military—Underhill Road, Civil Lines, Hotel Cecil, Maiden's Hotel—Alipore Road.

**MAIDEN'S HOTEL.**—Delhi. One of the most sumptuous hotels in the East, accommodating over 200 guests, with magnificent public rooms which have been the scene of many notable functions. Cables "Maidens," Delhi Controlled by The Associated Hotels of India, Ltd. (See notice following "Simla," p. 74).

# FINANCE, BANKING, and INSURANCE

## FINANCE

**3** INDIA, in common with other countries, suffered derangement in her economy from the aftermaths of the War, a fact which was reflected in a period of five years of unbalanced Budgets. Since then, however, financial equilibrium has been restored, a steady revival in trade has taken place, and her prospects of commercial and industrial expansion are now extremely favourable.

Before proceeding further, certain general conditions which regulate the finances of the country require a short explanation. India has large commitments in London which require annual payments of from £25,000,000 to £30,000,000. The major portion of this sum represents the interest on capital which India has borrowed for the purpose of internal developments, whence she derives great profit. A second item is payment for Government stores which cannot be obtained in India. This head is destined gradually to disappear as the new policy of purchase in India gains ground. Third come the payments made to England for the leave allowances of Government servants and for their pensions after they have retired, while the fourth is the cost of maintaining the High Commissioner for India, who discharges functions in England similar to those of High Commissioners representing the self-governing Dominions. Occasionally these commitments in London are swollen by special items. For example, the estimates for the year 1924-25 provided for a total disbursement by the Secretary of State and the High Commissioner for India of a sum of £50 millions. Of this amount, £18½ millions represented the Last Indian Railway Debentures taken over by the Secretary of State on the termination of the Company's contract. Other items were £7½ millions on account of railway capital outlay, £2½ millions representing expenditure on behalf of Provincial Governments, and £2 millions for the discharge of debentures and issues under deposits and advances. The net expenditure of the Government of India in England in excess of revenue there received accounted in 1924-25 for £25½ millions and in 1925-26 for nearly £25 millions.

From the internal aspect, also, India's financial system presents certain peculiarities. Direct taxation, in the ordinary sense of the word, bulks far less largely in her Budget than in the revenues of many other countries. For example, out of the total estimated revenue for 1925-26 of Rs 130.6 crores, only Rs 17.34 crores is derived from the direct taxation of income. Government incomings are drawn principally from such indirect means as Customs, Salt, Railways, Currency and Mint profits and Irrigation. Further, since India is still predominantly agricultural, the revenue of the country is largely influenced by the character of the season, although, in this connection, the separation of the railway finance from the general finance of the country will probably reduce

in some degree the element of uncertainty which previously characterised financial predictions. As time goes on it may be hoped that the Indian Budget will cease to merit the cynical description of it as "a gamble in rain", but so long as three out of every four persons gain their living directly from the soil, the influence exerted from year to year upon the prosperity of the country by the nature of the monsoon must continue to remain a financial factor of no ordinary importance.

**BUDGETS.**—The deficits in connection with the first five Budgets following the conclusion of the World War ranged from Rs 5.73 lakhs to Rs 27.05 lakhs in amount. The last of these Budgets was that for the financial year ending March 31, 1923, when the deficit amounted to Rs 15,01,76,000. During the period of economic depression the Incheape Retrenchment Committee had sat and issued its report which not only recommended reductions in expenditure amounting in the aggregate to Rs 18 crores, but also advised the doubling of the Salt Tax, which has always been unpopular in India. The political effects of the Viceroy's "certification" of the higher Salt Duty do not come within the province of this article, it is here sufficient to say that after twelve months it was reduced to its former level. Fortunately, too, at this point in India's history financial equilibrium was established, and a surplus of Rs 2.39 crores realised on the Budget of 1923-24. In the following year this marked improvement in the financial position was maintained, there was a steady revival of trade, the surplus reaching the total of Rs 3.09 crores. Great economy in expenditure had been exercised, particularly in respect of military expenditure, and there were notable increases in Customs receipts, as also in the contribution from Railways to general revenues.

For the year 1925-26 the Budget closed, in spite of a less favourable monsoon, with a realised surplus of Rs 130 lakhs (£975,000), after appropriating two crores to the relief of the provincial contributions.

A noteworthy feature of the 1926-27 Budget was the abolition of the cotton excise duty, which it is estimated will cost the Government 175 lakhs. For the year named the estimated revenue was Rs 133.43 crores (£100,072,500) and expenditure Rs 130.38 crores (£97,785,000), leaving a surplus of Rs 305 lakhs (£2,287,500). A further relief of provincial contributions to the extent of Rs 125 lakhs was also announced.

**CENTRAL AND PROVINCIAL FINANCE.**—As between the Central and Provincial Governments the financial arrangements were, until recently, somewhat complex. Formerly, all revenues went into the coffers of the Government of India, whose sanction was requisite for any considerable expenditure. This system developed into the plan of "divided heads." The Budget of the Government of India still included the transactions of the local Governments, but

the revenues enjoyed by the latter were mainly derived from sources of income which they shared with the Central Government. The reformed Constitution has introduced a complete separation between the finances of the Central and Provincial Administrations. Land revenue, Irrigation, Excise and Stamps have become provincial sources of revenue, the Government of India still retaining such important heads as Customs and Taxes on Income and Salt as well as the profits derived from Railways, Irrigation, Currency and Mint Charges, Posts and Telegraphs and other Central Services.

**CONTRIBUTIONS (PROVINCIAL).**—When the division of the sources of revenue was made between the Central and Provincial Governments, it was realised that the Central Government would be left insufficiently provided. It was therefore arranged that an annual contribution should be made by eight of the local Governments to the Central Government. The annual contributions fixed at the outset aggregated 9.83 crores of rupees. They were not, except in cases of emergency and with the sanction of the Secretary of State, to be subject to increase, and, should reduction of the aggregate be found possible, reductions were to be made in fixed proportions from the quotas of the several Provinces. The general policy which it is intended to pursue in the matter is a progressive reduction of provincial contributions with a view to their ultimate cessation. As special measures, the annual contribution of Rs 0.3 lakhs by the Province of Bengal has been remitted for a total period of six years with effect from 1922-23, and for 1925-26 a reduction of Rs 50 lakhs in the aggregate was made in favour of certain provinces.

**CURRENCY AND EXCHANGE.**—The principal coin in use in India is the silver rupee containing 165 grains of fine silver and 15 grains of alloy, the weight in all being 180 grains troy. Up to 1893 the Indian Mints were open by law for the unrestricted coinage of silver into rupees. Owing, however, to the almost continuous fall in the value of the rupee from 1871 to 1893, legislation in the latter year closed the Mints to the public with a view to eventually fixing the exchange. For a time the rupee continued to fall, but subsequently it rose, and between 1898 and 1910 was practically stable at 15.4d. The Act of 1899 made the British sovereign legal tender in India at the ratio of 15 rupees to the sovereign, the rupee, however, remaining also legal tender to any amount, but the ratio was altered to 10 rupees in 1920. In 1907 it was decided that half the profit on silver coinage should be applied to capital expenditure on railways, the other half of the profit and the whole of the interest being added to the Gold Standard Reserve. In June 1912 it was decided that no portion of the profit was to be used for railway purposes until the total sterling assets of the Gold Standard Reserve amounted to £25,000,000. Since April 1, 1921, the

interest on investments in the Gold Standard Reserve, when that reserve reaches £40,000,000, has been appropriated in reduction of rupee securities created for the special purpose of the Currency Reserve. The total receipts from profit on coinage, interest and discount, also profit by exchange up to March 31, 1925, amounted to £48,513,000. Of this sum, £1,123,055 has been used for capital expenditure on railways, the remainder has been paid to the Gold Standard Reserve for the purpose of maintaining the rate of exchange between England and India. On March 31, 1925, the investments of this fund in sterling securities amounted to £39,996,814 (estimated value), while £3,186 was held in cash in India.

**PAPER CURRENCY.**—India has a paper currency. The 1, 2½, 5, 10, 50 and 100 rupee notes are legal tender everywhere in India, but other notes only within their circles of issue.

**TABLE OF CURRENCY.**—In addition to the silver rupee, copper, bronze, and nickel coins are also in circulation. The table of coinage is as under:—

The pie = one-third of a pice or one twelfth of an anna.  
The half-pice = one-eighth of an anna.  
The pice (3 pie) = a quarter-anna.  
The double pice = a half-anna (4 pice, or 12 pie = 1 anna and 16 annas = 1 rupee).

#### CURRENCY COMMISSION (REPORT OF).

During the last thirty-five years no fewer than five formal inquiries have been held by expert bodies into the question of Indian currency. More than one of these commissions suggested the establishment of a Gold Standard, but the recommendation of the Committee presided over by the late Sir Henry Babington-Smith in 1919 that the gold value of the rupee should be fixed at 2s proved to be so impracticable that the attempt to carry it out was abandoned in 1921. Between August of that year and September 1924 the rupee fluctuated between 11½d and 1s 3½d gold, yet the Government maintained its determination to establish a higher rate than 1s 4d gold. From October 1924 the rupee exchange was maintained at 1s 6d sterling (which was less than 1s 6d gold), and it was not until the middle of 1925 that the rupee was worth 1s 6d in gold. The Babington-Smith Committee in 1919 had made the mistake of basing its recommendations on the assumption that the high level of prices then current might last. Within a few months of the issue of its report prices had collapsed all over the world, and their tendency still remains downward.

The failure of the 1920 inquiry rendered a fresh attempt inevitable as soon as economic conditions had become stabilised. Commander Hilton Young was accordingly appointed Chairman of another Commission, with Sir Henry Strakosch as the chief gold expert, and the terms of reference were comprehensive. The Report of this Commission, which was issued in August 1926, makes an exhaustive survey of the Indian currency system, and contains recommendations of singular importance. Its outstanding features are the advocacy of a gold standard for India and the creation of a distinct Central Reserve Bank and Bank of Issue.

**GOLD STANDARD.**—The Commission's recommendation of a gold standard is in the following terms:—

"We have already arrived at the conclusion that, in order to secure public confidence in India, the currency of the country

must be linked with gold in a manner that is real and conspicuously visible, or, in other words, that it is necessary to establish a true gold standard. It should be understood that this does not necessarily imply a gold currency. It is possible to have a true gold standard under which the currency is based on gold both in reality and in a manner that is conspicuously visible without putting gold into circulation. Having stated our reasons for rejecting the principal proposal for a gold standard with a gold currency that has been suggested to us, we proceed to deal with the method of the establishment of the gold standard which is recommended for adoption. The essence of the proposal which we proceed to develop is that the ordinary medium of circulation in India should remain as at present the currency note and the silver rupee, and that the stability of the currency in terms of gold should be secured by making the currency directly convertible into gold for all purposes but that gold should not circulate as money. It must not circulate at first, and it need not circulate ever."

**POSITION OF SILVER.**—The Commission declares itself "wholly opposed to any such alteration in the legal tender character of the silver rupee" as was involved in the scheme suggested by the Finance Department of the Government of India, basing its objection on the following grounds:—

"The people of India have from time immemorial placed their trust in silver as the medium of exchange and as their store of value. They are deeply interested in the value of silver bullion, and it is contrary to their interests to depreciate it. The present proposals would inflict heavy losses on the poorer classes, who have put their savings into silver ornaments and who would find their stores of value depreciated by perhaps 50 per cent by the action of Government. It might well happen that, when it was seen that the price of silver was doomed to fall, there would be a tendency to change over from silver to gold in all parts of the world where silver is still held in large quantities as a store of value. It is proposed in the scheme to protect the value of the Indian holdings of silver against this inevitable depreciation by an import duty. Quite possibly if it were a very heavy duty it might protect them to some extent. If it did it would put the Government of India under a moral obligation to maintain the price of silver for practically all time, for at the completion of the plan it would have sold nearly 700 million ounces of silver to the people at a price that was possibly double the world price. In our opinion, however, the effort to maintain the domestic price of silver irrespective of world price would probably fail."

The Commission proposes to make rupees and other coin freely available to the public in such quantities as may be required for circulation. It further proposes that the present silver reserves be reduced to 25 crores, which would mean a disposition in some ways of approximately 250,000,000 ounces, but recommends that this reduction be spread over ten years. It says that a sufficient amount of coin must be kept in reserve to provide for the ebb and flow of rupees in circulation, but adds: "Our recommendation implies that the coinage of silver rupees should be stopped for a long time to come, until the amount of silver rupees in circulation is reduced to the amount required for small change."

To sum up, the Report seems to look forward to the gradual reduction of the rupee

to small change, with paper notes, redeemable in gold, to constitute the body of the currency. The immediate effect upon the silver market may be lessened by the slow process of the Commission's scheme, but the policy clearly looks to a diminishing use of silver in the monetary system of India.

**RESERVE BANK.** The Report recommends the establishment of a Reserve Bank to serve as a central institution of re-discount for the other banks, and to issue and redeem the paper currency, serve as banker to the Government and perform the usual functions of a banking institution. It shall do no business with the public, thus being the principal reason for not adopting the proposal to develop the Imperial Bank of India as the central institution. The latter has a very large and profitable commercial business, and its shareholders will probably prefer that it shall continue as it is.

**STABILISATION OF THE RUPEE.**—The Report recommends the stabilisation of the rupee currency at 1 shilling 6 pence, on the ground that this rate has been practically maintained for such a length of time that internal prices are generally adjusted to it. The employing industries urged a lower rate (1 shilling 4 pence) on the ground that it would aid them in their competition with imported goods.

There has already been manifested a sharp division of opinion in India upon this point. The higher rate for the rupee naturally will be to the advantage, at least temporarily, of those having payments to make abroad, either upon indebtedness or for imported goods, while the low rate is generally favoured by manufacturers competing with imported goods.

Immediately following the publication of the Report the India Office announced that it would lay proposals before the Legislature concerning the stabilisation of the rupee and the arrangements to be adopted during the period which must elapse before the central bank can be brought into being. Meanwhile, in order to remove any uncertainty, the Government of India announced that it would take such steps as might be necessary to prevent any undue fluctuation in the exchange value of the rupee, in order to confine the movements of the exchange within the approximate upper and lower gold points as calculated on the basis of a 1s 6d gold rupee—viz., 1s 6½d and 1s 5½d respectively.

**LOANS.**—A feature of the Budget statement of 1926 was the announcement that no India loan would be necessary in Great Britain in that year. This made the third year in which India had abstained from borrowing in the Home market. In one sense this may be taken as an indication of the growing financial power of the country. In the financial year ended March 31, 1926, instead of borrowing over seven crores of rupees net in India, as was anticipated in the Budget statement, she discharged two crores net of the market debt in India and paid off 5·7 crores of debt in England. In addition, 30 crores of new capital expenditure were financed and a conversion loan was successfully floated. The capital programme for 1926-27 provided for the redemption of 24 crores of maturing debt and 35½ crores of new capital outlays. In May 1926 a new loan of 25 crores was issued in India, and was immediately over-subscribed.

**PUBLIC DEBT.**—The table at the head of the succeeding page shows the actual debt position of India on March 31 of the years named respectively (figures in crores of rupees):—

IN INDIA —	1924	1924	1925
Loans	145 69	158 81	370 18
Treasury bills in hands of public	—	2 12	—
Treasury bills in paper currency reserve	—	49 65	49 65
Other obligations	34 10	72 41	82 10
Total in India	179 79	482 99	501 93
IN ENGLAND (at Rs 15 to £) —			
Loans	265 60	366 80	395 33
War contribution	—	28 90	28 20
Capital value of liabilities undergoing redemption by way of terminable railway annuities	105 90	90 14	88 25
	( 170,000,893)	( - 60,095,487)	( - 58,836,487)
Total in England	371 50	485 84	511 78
Total debt	551 29	968 83	1,013 71

These figures include the debt due by the Provincial Governments to the Government of India, amounting to Rs 106.95 crores on March 31, 1925. The productive debt on the same date was Rs 725.15 crores, the unproductive debt Rs 288.56 crores, the increase in the productive debt during the financial year 1924-25 was Rs 42.17 crores, almost entirely accounted for by railway development. Unproductive debt increased by Rs 6.08 crores, but the real figure was still larger by Rs 1½ crores through conversion. The increase in the external debt was purely nominal, because the figure included the sum of 118½ millions of East India Railway Company's debentures, which were not a real increase in debt, but necessitated by the acquisition of the property of the East India Railway on buying out the old company's share. Apart from nominal changes, the external debt was reduced during 1924-25 by nearly 2½ millions.

**REVENUE AND EXPENDITURE.**—The following table shows the items of revenue and expenditure of the Central Government in India and England for 1925-26 as compared with 1924-25 —

REVENUE	1924 25 Rs	1925 26 Rs
Principal Heads of Revenue		
Customs	44,70,44,000	46,35,00,000
Taxes on income	16,47,26,000	17,34,87,000
Salt	7,73,78,000	6,95,00,000
Opium	3,68,30,000	3,55,85,000
Other heads	2,08,21,000	2,23,14,000
Total principal heads	74,73,99,000	76,43,86,000
Railways Net receipts	34,19,37,000	33,89,44,000
Irrigation Net receipts	8,91,000	10,42,000
Posts and Telegraphs Net receipts	91,14,000	68,11,000
Interest receipts	3,79,59,000	3,60,44,000
Civil Administration	70,70,000	72,60,000
Currency, Mint and Exchange	3,94,93,000	4,08,07,000
Civil Works	12,12,000	10,18,000
Miscellaneous	33,50,000	43,21,000
Military receipts	4,16,96,000	4,01,17,000
Provincial contributions and miscellaneous adjustments between Central and Provincial Governments	9,25,16,000	6,22,14,000
Extraordinary items	2,55,89,000	38,33,000
Total revenue	1,34,82,26,000	1,30,67,97,000

EXPENDITURE	1924 25 Rs	1925 26 Rs
Direct demands of the revenue	5,66,73,000	5,61,84,000
Railways Interest and miscellaneous charges	28,55,02,000	28,65,58,000
Irrigation	21,91,000	17,79,000
Posts and telegraphs	— 62,000	— 28,17,000
Debt services	17,92,04,000	18,18,06,000
Civil administration	10,26,87,000	10,97,98,000
Currency Mint and Exchange	73,20,000	73,47,000
Civil Works	1,93,27,000	1,68,47,000
Miscellaneous	4,47,95,000	4,01,91,000
Military services	60,49,96,000	60,26,17,000
Miscellaneous adjustments between the Central and Provincial Governments	56,32,000	15,74,000
Extraordinary items	—	25,00,000
Total expenditure charged to revenue	1,30,82,68,000	1,30,43,84,000
Surplus	3,99,58,000	24,13,000
Total	1,34,82,26,000	1,30,67,97,000

**REVENUE AND EXPENDITURE (PROVINCIAL GOVERNMENTS).**—The following tables show (a) the items of revenue and expenditure of the ten Provincial Governments for 1925-26 (Budget estimates), and (b) the Budget estimates of each Government for the same year —

(A) REVENUE AND EXPENDITURE OF PROVINCIAL GOVERNMENTS 1925 26	Rs
REVENUE	
Land revenue	36,38,85,000
Stamps	12,97,71,000
Excise	19,86,19,000
Taxes on income	23,50,000
Forests	5,58,87,000
Registration	1,28,74,000
Scheduled taxes	31,50,000
Interest	2,18,10,000
Receipts by Civil Debt	3,37,75,000
Miscellaneous	1,83,59,000
Railways	2,44,000
Irrigation	6,09,99,000
Civil Works	65,10,000
Assignments and contributions	21,08,000
Extraordinary items	69,21,000
Total	91,72,71,000

EXPENDITURE	Rs
Land revenue	4,13,08,000
Stamps	34,27,000
Excise	2,49,94,000
Forests	3,54,90,000
Registration	69,12,000
Scheduled taxes	36,000
Assignments and contributions	6,51,10,000
Interest	3,46,99,000
Salaries, etc	49,75,10,000
Miscellaneous	7,37,38,000
Railways	1,68,000
Irrigation	5,19,42,000
Civil Works	9,73,98,000
Extraordinary items	1,00,000
Total	93,28,32,000

(B) BUDGET ESTIMATE OF PROVINCIAL GOVERNMENTS, 1925 26	In Lakhs of Rupees	Surplus or Deficit
Madras	1,652	1,622 + 30
Bombay	1,610	1,706 - 96
Bengal	1,045	1,067 - 22
United Provinces	1,282	1,232 + 50
Punjab	1,140	1,081 + 59
Bihar and Orissa	544	579 - 35
Burma	1,040	1,166 - 126
Central Provinces and Berar	557	550 + 7
Assam	244	241 + 3
Coorg	14 5	15 - 5
Total	9,128 5	9,250 - 131 5
Less contributions to Central Government	620	620 —
	8,508 5	8,630 - 130 5

**EXPENDITURE (CAPITAL).**—The estimated capital expenditure of the Central Government on State railways in 1925-26 was Rs 26,43,33,000 and the initial expenditure on New Delhi Rs 1,55,00,000.

The capital expenditure of the Provincial Governments during the same year totalled Rs 11,82,90,000.

**REVENUE (DETAILS OF).**—The following table shows the receipts of both the Central and Provincial Governments from the most important sources of revenue —

	1924 25 Rs	1925 26 Rs
Land (1)	36,28,20,000	36,77,20,000
Opium	3,68,30,000	3,55,80,000
Salt	7,73,80,000	6,95,00,000
Stamps	13,10,00,000	13,24,90,000
Excise (2)	19,22,40,000	20,30,40,000
Customs (3)	44,76,50,000	46,35,00,000
Taxes on income	16,68,60,000	17,58,40,000
Railways (net receipts)	34,22,20,000	33,91,80,000
Irrigation	5,78,00,000	6,20,50,000
(1) — Exclusive of portion of Land Revenue due to irrigation		
(2) — The Excise revenue is derived from intoxicating liquors, hemp drugs, and opium consumed in the country. The bulk of the revenue comes from spirits. The excise system and rates of duty vary from province to province.		
(3) — Liquors, petroleum, sugar, tobacco, cotton manufactures, metals and manufactured articles are the chief items from which customs revenue is derived. Under this head are also included the proceeds of export duties on rice, jute, tea and hides, and of excise duties on motor spirit and kerosene.		

**TAXATION.**—If taxation proper be divided among the population of British India, without allowing for certain portions of Salt, Excise and Customs duties which fall on persons in the Indian States, the burden in a recent year was estimated at Rs 4 per head, or, if land revenue (which is akin to rent) be added, Rs 5 4 per head. The excess profits duty of 50 per cent imposed in 1919-20 was discontinued in the following year, at the same time that the super-tax law was amended. Taxation proper is now confined to income tax (and super tax), land revenue and the taxes on opium and salt.

**INCOME TAX.**—The income tax was first imposed in India in 1860, in order to meet the financial dislocation caused by the Mutiny. It was levied at the rate of 4 per cent, or a little more than 9½d in the pound on all incomes of Rs 500 and upwards. Many changes have from time to time been made in the system, and since the War the process of revising and raising the schedule has been almost continuous. The present scale is as follows—

(a) In the case of every individual, every unregistered firm and every undivided Hindu family—

- (1) When the total income is less than Rs 2,000—Nil
- (2) When the total income is Rs 2,000 or upwards, but is less than Rs 5,000—Five pies in the rupee
- (3) When the total income is Rs 5,000 or upwards, but is less than Rs 10,000—Six pies in the rupee
- (4) When the total income is Rs 10,000 or upwards, but is less than Rs 20,000—Nine pies in the rupee
- (5) When the total income is Rs 20,000 or upwards, but is less than Rs 30,000—One anna in the rupee
- (6) When the total income is Rs 30,000 or upwards, but is less than Rs 40,000—One anna and three pies in the rupee
- (7) When the total income is Rs 40,000 or upwards—One anna and six pies in the rupee

In the case of every company, and every registered firm whatever its total income—One anna and six pies in the rupee

Super-tax is leviable in addition to ordinary income-tax on incomes of individuals and registered firms above Rs 50,000, also of Hindu undivided families above Rs 75,000, at 1 to 6 annas in the rupee, and on the taxable incomes of companies at a flat rate of 1 anna in the rupee

The head of the Income Tax Department of a province is the Commissioner of Income Tax, who is appointed by the Governor-General in Council

The estimated yield of income tax in 1925-26 was Rs 17,34,87,000, compared with Rs 16,47,26,000 in 1924-25

**LAND REVENUE.**—Land revenue, which is derived from the permanent or temporary settlement of land, of which the Government is the supreme landlord, is now a provincial head of revenue and is not shown in the All-India accounts. It may be taken to yield roughly £28,000,000 per annum

**OPIUM TAX.**—Opium is largely consumed in India, mostly in the form of pills, and opium smoking also prevails in the city of Bombay and other large towns. The general practice is to sell opium from the Government Treasury, or a central warehouse, to licensed vendors. The right of retail to the public is sold by annual auction to one or several sanctioned shops. The estimated opium revenue in 1925-26 was Rs 3,55,85,000, but the Government is now initiating steps which will ultimately lead to the disappearance of Rs 200 lakhs per annum of this revenue through the progres-

sive reduction and eventual extinction of exports (See also under "Agriculture" and "Commerce")

**SALT TAX.**—See under "Customs"

**TAXATION INQUIRY COMMITTEE.**—In 1924 a strong Committee was appointed by the Government of India to inquire generally into the system of Indian taxation, to report on the suitability of alternative schemes of taxation, and to advise as to the machinery required for the imposition, assessment and collection of taxes, old and new. In March 1926 the Committee issued a unanimous report, the main features of which are as follow—

The proposal to levy an export duty on raw cotton is condemned as unsound, on the ground that the proper way to protect the mill industry is to increase the import duty on manufactured cotton goods. Increases in the export duty on rice and jute are not favoured, and the removal of the export duty on hides is recommended. A tax on patent medicines is proposed, and, generally speaking, the report concerns itself largely with the increasing or decreasing of duties on imported articles

## BANKING

India, with an area two-thirds that of the United States, with a population three times as large, and with a volume of foreign trade which places it in rank just below the first half dozen countries of the world, has only 936 officially recognised banks, including branches, compared with about 30,000 in the United States. This elementary banking development is partly the cause and partly the effect of the prevalence of hoarding in India. Although during the ten years 1915 to 1924 inclusive bank deposits more than doubled, and although the number of institutions nearly trebled, progress in the development of banking facilities is still very slow; indeed, the slight progress achieved recently has been owing almost entirely to the activity of the Imperial Bank of India and to the growing popularity of co-operative banking

**BANK RATE.**—Formerly each Presidency Bank fixed its own bank rate, and the rates were not uniform. Now the Imperial Bank fixes the rate for the whole of India. The rate fixed represents that charged by the Banks on demand loans against Government securities only, and advances on other securities or discounts are granted as a rule at a slightly higher rate. Ordinarily such advances or discounts are allowed at from one-half to one per cent over the official rate, but this does not always apply, and in the monsoon months, when the Bank rate is sometimes nominal, it often happens that such accommodation is granted at the official rate or even less

Since the Imperial Bank was constituted the average Bank rate ranged from 6.038 in 1921 to 7.419 in the early part of 1923, dropping to 4.5 in the same year and rising again to 8.05 in 1924. In 1925 there was a reduction from 6 per cent to 5 per cent, and in May 1926 the rate was still further reduced to 4 per cent

**CLEARING HOUSES.**—The principal clearing houses in India are those of Calcutta, Bombay, Madras, Rangoon, Colombo (Ceylon) and Karachi, and of these the first two are by far the most important. The members of these places consist of the Imperial Bank, most of the Exchange Banks and English Banking Agency firms; also a few of the better known of the local Joint Stock Banks. No Bank is entitled to claim to be a member as of right, and any application for admission to a Clearing House must be proposed and seconded by two members and be subject thereafter to ballot by the existing members.

The duties of a settling bank are undertaken by the Imperial Bank at each of the places mentioned, and a representative of each member attends at the office of that Bank on each business day at the time fixed to deliver all cheques he may have negotiated on other members and to receive in exchange all cheques drawn on him negotiated by the latter. Debtor and creditor balances are thereafter settled by means of cheques drawn on or by the settling bank

**CO-OPERATIVE BANKS.**—Co-operative banking in India, which had its inception in 1904, when the Co-operative Credit Societies Act of that year was passed, has since grown to such an extent that central and provincial co-operative banks at the beginning of 1926 numbered 530. The growth of the system was slow at first, there being only 17 banks in operation in 1912, but subsequent modifications of the law acted as a stimulus to the movement, with the result that two years later, in 1914, there were 194 in operation. About that time the MacLagan Committee was organised, which, after thorough investigation, made a report recommending certain changes in the operations of the societies. Most of the Provinces adopted these recommendations and from that time the growth of the co-operative movement has been very rapid. The total capital of the 530 central and provincial banks amounted, on January 1, 1926, to over Rs 50,00,00,000

The cost of administration of these banks and societies is very low—one per cent of the working capital for the provincial banks in the Bombay Presidency, two thirds per cent for all the other provincial banks, and a little under one per cent for the central banks. The institutions obtain their funds at rates varying from 5 to 8 per cent, and re-issue them to the affiliated societies at rates varying from 7 to 12½ per cent. Dividends range from 5 to 9 per cent

**LAND-MORTGAGE CREDITS.** The co-operative banks of India are at present studying the question of land-mortgage credits. The principle of the system has been accepted, but the details of its operation have not yet been worked out. Particular problems demanding solution are those of determining the agency through which the loans should be advanced, the area to be served by each bank, whether the debentures issued should be marketed by the small local banks or through the existing provincial banks, and the method of issuing and marketing mortgage bonds

**EXCHANGE BANKS.**—The banks carrying on exchange business in India (at present 18 in number) are merely branch agencies of banks having their head offices in London, on the Continent or in the Far East and the United States. Originally their business was confined almost exclusively to the financing of the external trade of India, but in recent years most of them, while continuing to finance this part of India's trade, have taken an active part in the financing of the internal portion also at the places where their branches are situated. The following are the leading exchange banks doing business in India—

**BANCO NACIONAL ULTRAMARINO.**—This is the State Bank of the Portuguese Colonies, operating from Lisbon with a paid up capital of Esc 30,000,000 and reserves amounting to Esc 40,000,000. The Indian branches are at Bombay, Mormugao and Novo-Goa. (See also text of bank following in this section)

**BANK OF TAIWAN.**—The Bank of Taiwan was granted a special charter by the Japanese Government in 1899, with authority to issue its own notes in Formosa. It is well represented in India, and has also

branches in London and New York. A reconstruction scheme was authorised in 1925 (See p. 54.)

**CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA**—This well-known banking corporation, which is represented in every important city in the Far East, has its headquarters in London, with branch offices in Calcutta, Bombay, Madras and the great industrial centres of India. Founded in 1853 by Royal Charter, the bank has a capital of £3,000,000 and a reserve fund of £4,000,000. (See also text of bank following in this section.)

**EASTERN BANK, LIMITED**—Established in 1909, the Eastern Bank has eleven branches in India, Mesopotamia and Ceylon. Its principal business is in bills and exchange. The authorised capital is £2,000,000, paid up capital, £1,000,000, reserve fund, £360,000, reserve liability of shareholders, £1,000,000. The head office is in Crosby Sq., Bishopsgate, London. (See p. 54.)

**HONGKONG AND SHANGHAI BANKING CORPORATION**—The Hongkong and Shanghai Banking Corporation was established in 1867. It has in all 39 branches and agencies, most of which are in the Far East, but in addition to London it maintains offices at New York, San Francisco, and Lyons. (See also text of bank following in this section.)

**IMPERIAL BANK OF PERSIA**—Incorporated by Royal Charter in 1889 this important bank, whose head office is at 33-36 King William Street, London, operates principally in Persia and Mesopotamia, with a branch at Bombay, where banking business of every kind is carried on. (See also text of bank following in this section.)

**INTERNATIONAL BANKING CORPORATION, LIMITED**—Owned by the National City Bank of New York this Corporation does a large banking and exchange business in Bombay, Calcutta and Rangoon. (See p. 54.)

**LOYDS BANK LIMITED**—An interesting event in Indian banking history is the recent entry into the field of one of the English "Big Five," brought about by the acquisition of the old-established business of Cox and Co. by Lloyds Bank, whose authorised capital is £74,000,000. Besides the large banking premises in Bombay and Calcutta, the institution has important branches at Karachi, Rangoon, Rawalpindi, Delhi, Simla, Srinagar, etc. (See also notice of bank following in this section.)

**MERCANTILE BANK OF INDIA, LIMITED**—This bank was formed in 1892 to acquire the business of the old Chartered Mercantile Bank of India, London, and China, whose charter was granted in 1858. In 1916 it took over the Bank of Mauritius. Head office, 15, Gracechurch Street, London. (See text of bank following in this section.)

**NATIONAL BANK OF INDIA, LIMITED**—The National Bank, established in India in 1863, was registered as a British company in 1866. In addition to its Indian offices it has a number of branches in Kenya, Uganda, and Tanganyika Territory. The subscribed capital is £4,000,000, paid-up capital £2,000,000, and reserve fund £2,850,000. (See also text of bank following in this section.)

**NETHERLANDS TRADING SOCIETY**—This well-known Dutch bank, which has a fully paid-up capital of Fl. 80,000,000 and a statutory reserve fund of Fl. 21,117,340, has its headquarters in Amsterdam and its Eastern head agency at Batavia. The Indian branches of the bank are at Calcutta, Bombay and Rangoon. (See also text of bank following in this section.)

**P & O BANKING CORPORATION, LIMITED**—Established under the auspices of Lloyd's, the Westminster and the National Provincial Banks and the P & O Steam Navigation Company in 1920, the P & O Banking Corporation acquired virtually the whole capital of the Allahabad Bank in the following year. It does a general banking business, but makes a speciality of letters of credit. (See also text of bank following in this section.)

**YOKOHAMA SPECIE BANK, LIMITED**—This Bank, established in 1880 in Japan, has now 39 branches spread over the world. In London it acts as the agent of the Bank of Japan. No person not a Japanese can hold shares in the company. The subscribed and fully paid up capital is Yen 100,000,000, and the Reserve Fund Yen 80,500,000. London office, 7 Bishopsgate. (See also text of the bank following in this section.)

**IMPERIAL BANK OF INDIA**—The Imperial Bank was constituted under a special Act of 1920 to take over the business of the three Presidency banks of Bombay, Bengal and Madras. It keeps the Government accounts and in general acts for the Government both in India and in London. (See also text of bank following in this section.)

**JOINT-STOCK BANKING**. The development of joint-stock banking for the most part locally financed is comparatively recent. Although this type of bank was known in India as early as 1840, the greatest development dates from 1906, when the Indian Specie Bank (which has since gone into liquidation) was established. A period of rapid expansion followed, during which several institutions were organised with insufficient reserves and inexperienced management, in consequence of which a reaction set in and there were a large number of failures, no less than 34 per cent. of the total paid-up capital of these banks being lost through liquidation and failure between 1913 and 1917, while in three years 85 banks suspended operations. The total number, however, has continued to increase, and of the 69 banks in operation in 1925 with 500 branches, 28 were organised after 1913.

Of total deposits in all India in a recent year 40 per cent. were held by the Imperial Bank, 34 per cent. by the exchange banks, and only 26 per cent. by the joint-stock banks. This small share of business done by the strictly native institutions under private control and the steady decline in their operations in comparison with the other banks have aroused general anxiety.

**JOINT-STOCK BANKS**.—The following are the names of the better-known joint-stock banks in India—

**ALLAHABAD BANK, LIMITED**—This prominent banking institution, which is affiliated with the P & O Banking Corporation, Limited, was established in 1865 and operates from a head office in Calcutta, with numerous branches and sub-agencies. (See also text of bank following in this section.)

**BANK OF BARODA, LIMITED**—This bank, whose head office is at Sarkarwada, Baroda, acts as bankers to the Government of Baroda, and has established branches at Bombay, Ahmedabad, Surat, Bhavnagar and other centres. The subscribed capital is 60 lakhs of rupees, and the paid-up capital 30 lakhs. (See p. 54.)

**BANK OF INDIA, LIMITED**—With head office in Bombay, this bank has a subscribed capital of Rs 2,00,00,000, a paid-up capital of Rs 1,00,00,000, and a

reserve fund of Rs 76,00,000. There are branches of the bank at Calcutta and Ahmedabad. (See p. 54.)

**CINIRAL BANK OF INDIA, LIMITED**—This bank operates chiefly in the Presidencies of Bombay and Bengal, the United Provinces and the Punjab. The head office is in Bombay. The subscribed capital is Rs 3,36,00,000 and the paid up capital Rs 1,68,00,000, the reserve fund amounting to Rs 1,00,00,000. (See also text of bank following in this section.)

**KARACHI BANK, LIMITED**—Operating in the city of Karachi and vicinity, this banking institution has an authorised capital of Rs 5,00,000, subscribed capital, Rs 5,00,000, and paid-up capital Rs 2,50,000. (See p. 54.)

**PUNJAB NATIONAL BANK LIMITED**—The headquarters of this bank are at Lahore, and it has an authorised capital of Rs 1,00,00,000, subscribed capital, Rs 50,00,000, capital issued, Rs 50,00,000, capital paid up, Rs 30,84,370, reserve fund, Rs 25,50,000. (See also text of bank following in this section.)

**UNION BANK OF INDIA, LIMITED**—The head office of this bank is in Bombay, in which city there is a sub-branch. (See also page 39.)

**MOFUSSIL BANKS**.—Banking facilities in the provinces and back country are still inadequate, in spite of the great expansion in the activities of the Imperial Bank. Banking is concentrated in a few large cities, and great sections of the provinces are altogether without banks. It was recently stated that there were some 450 towns of over 10,000 population with no banking service available other than that provided by the local bannias, while over 70,000 villages are entirely out of touch with any financial institution.

In solving this problem two opinions are current—one favouring the establishment of big joint-stock banks with branches throughout the country, and the other favouring local independent banks organised and managed by native business men of the village or town. Because of the cost of management, the absence of liquid securities against which advances can be made, and the inability to modify banking practice to conform with local custom, the large institutions have shown little inclination towards expansion into country areas, while the ignorance of banking practice in the country and the difficulty of securing efficient management have prevented any great development of an individual banking system.

**PRIVATE BANKERS**.—Indian private bankers and shroffs flourished in India long before joint stock banks were thought of, and it is probable that they will continue to thrive for some considerable time. The "shroff" is in fact a kind of middleman between the banks and the small trading community, and in this capacity he brings a very considerable volume of business within the scope of the Presidency Banks Act, enabling the banks to give accommodation which, without his assistance, they would not be allowed to furnish. These shroffs are almost invariably men of high financial integrity and standing, their association with numberless small traders is a very close one, and it is said that the class of business they are concerned with is one of the safest in which the banks can engage.

To what extent native bankers and shroffs receive deposits and engage in exchange business throughout India is difficult to estimate, but there is no doubt that the system is very considerably practised.

## REPRESENTATIVE BANKING INSTITUTIONS.

### IMPERIAL BANK OF INDIA.

**Inception.**—The idea of a central banking establishment for British India, though mooted and discussed on many previous occasions, did not reach fruition until 1921, when (January 27) the Imperial Bank of India was constituted by the amalgamation of the three Presidency Banks of Bengal, Bombay and Madras. This event, of paramount importance in the history of Indian banking, was the outcome of a *rapprochement* of these institutions, desirous of consolidating and extending the system of banking in India.

**Control.** In accordance with the Imperial Bank of India Act (1920), the control of the concern is vested in a Central Board of Governors, with local boards at Calcutta, Madras, Bombay, and other places selected by the Central Board and sanctioned by the Governor-General. The latter authority is entitled to direct the procedure of the Bank regarding any matter which affects his financial policy or the stability of the Government balances. Since February 1925 the organisation has had a London Advisory Committee, upon which is represented the Governor of the Bank of England, and which was constituted to preserve close touch between the two great banks on matters of policy.

**Capital.**—The capital of the three Presidency Banks amounted to 3½ crores of rupees in shares of Rs 500 each, fully subscribed. The authorised additional capital was 7½ crores in shares of Rs 500, on each of which Rs 125 has been paid. The present capital of the Imperial Bank is therefore 11½ crores (Rs 11,25,00,000), of which, as on December 31, 1925, Rs 5,62,50,000 had been paid up. The reserve fund on the same date stood at Rs 4,82,50,000, and the reserve liability of shareholders at Rs 5,62,50,000.

**Official Operations.**—The Imperial Bank of India Act expressly defined the character of

the business in which the institution must engage. It provided that all the general banking transactions of the Government of India should be carried out by the Bank, which must hold all the Treasury balances at headquarters and at its branches. Within five years of its incorporation the concern undertook to open 100 new branches, the Government determining the location of one in every four. The management of the Public Debt was also entrusted to the Bank for specified remuneration.

**General Business.**—Among the general business transacted are the opening of current accounts free of charge, the receipt of fixed deposits and of savings bank deposits at interest. Government and other securities are received for safe custody, purchases and sales effected, interest and dividends collected and credited to account or remitted. Loans and cash credits are also granted, and approved mercantile bills discounted.

**Branches.** The local head offices of the Imperial Bank are situated at Calcutta, Bombay and Madras, and it maintains in addition, according to latest available information, 166 branches, 7 sub-agencies and 6 pay offices in India and Ceylon.

**Financial.**—**GOVERNMENT DEPOSITS.** The following shows in round figures the annual totals of Government deposits with the Imperial Bank since its inception: June 30, 1921, 22.20 lakhs of rupees; June 30, 1922, 16.72; June 30, 1923, 12.56; June 30, 1924, 22.08; June 30, 1925, 22.52.

**RECENT PROGRESS.** The statement below indicates in rough figures the progress made by the Bank during five years (the numbers signify lakhs of rupees):—

JUNE 30	CAPITAL	RESERVE	GOVERNMENT DEPOSITS	OTHER DEPOSITS	CASH	INVESTMENTS	DIVIDEND FOR YEAR
1921	547	371	22.20	70.16	34.34	16.52	16 per cent
1922	562	411	16.72	63.36	33.95	900	16 " "
1923	562	435	12.56	70.47	29.13	925	16 " "
1924	562	457	22.08	76.62	21.95	11.75	16 " "
1925	562	477	22.52	75.88	35.82	14.14	16 " "

**Calcutta Office.**—3, Strand Road, South (cables "Thistle," Calcutta).

**Balance Sheet.**—The following was the balance sheet of the Imperial Bank of India at June 30, 1925:—

EXPENDITURE	Rs	a	p
Subscribed capital	11,25,00,000	0	0
Capital paid up	5,62,50,000	0	0
Reserve	4,77,50,000	0	0
Public deposits	22,52,81,052	8	5
Other deposits	75,88,03,099	0	3

2. JAMA MASJID, DELHI.

CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA  
The Bombay Premises.

#### CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA.

**Inception.**—This far-reaching institution now has to its credit nearly three-quarters of a century of progressive achievement. Its "enabling bill" was a Royal Charter granted in 1853 and subsequently renewed on different occasions, the last (1909) providing for an extension of 30 years. Under the terms of its original prospectus, the Bank was established chiefly to furnish legitimate banking facilities for the rapidly expanding trade between the Australian colonies, British East India, China and different parts of the Eastern Archipelago—a field hitherto untouched by any similar enterprise. At the same time it was resolved to extend banking accommodation to the direct trade of British India, China and Australia with the United Kingdom.

**Capital.**—The capital of the Bank stands at £3,000,000 in £5 shares, with a reserve fund totalling £4,000,000.

**Development.**—The objects governing the inception of this institution have been amply

fulfilled, with the sole exception that so far no office has been established in Australia. Elsewhere, however, the Bank's influence has penetrated to a much greater degree than was originally intended, business being conducted, in addition to India and China, in Japan, Netherlands East Indies, the United States, the Straits Settlements and Siam. Although chartered in 1853, the organisation did not commence operations until four years later, branches being opened at Bombay, Calcutta and Shanghai. Thenceforward activities have been extended constantly throughout the Far East, until to-day the name of the Chartered Bank is a household word.

**Activities.**—Among the chief operations of the Corporation are the granting of drafts payable at all its agencies and branches, the buying and collecting of bills of exchange, issuing of letters of credit, and transacting general banking business connected with the East. Deposits of money are received on terms which may be ascertained on application; interest is payable half-yearly, on

June 30 and December 31. On current accounts interest is allowed at 2 per cent per annum on the minimum monthly balances provided they do not fall below £200. The Bank is also prepared to undertake Trusteeships and Executorships.

**Indian Operations.**—The chief branch of the institution in India was established at Bombay in 1857, tenanted small offices at the corner of Ash Lane. In 1901 part of the building now occupied was completed, while considerable extensions thereto were finished in 1924. The whole of the Bombay Presidency, with the exception of Sind, is controlled from this office, the staff of which comprises 12 Europeans and 192 Indians. The branch at Calcutta occupies one of the most imposing office buildings in that city. Additional agencies and branches are in operation at Amritsar, Cawnpore, Delhi, Karachi, Madras and Peshawar.

**Directorate.**—Sir Montagu Cornish Turner (chairman), Henry Bateson, Colin Frederick Campbell, Sir William Henry Neville Goschen, K.B.E., Archibald Auldjo Jamieson, Edward

## HONGKONG & SHANGHAI BANKING CORPORATION.

**Inception.**—Throughout two generations of continual change in the constitutional and social history of the countries of its adoption the Hongkong & Shanghai Banking Corporation has pursued a course of unchecked development and eminently serviceable participation in the financial operations of the Orient. The institution was incorporated by special ordinance of the Legislative Council of Hongkong on July 20 1867 duly confirmed by the British Government.

**Capital.**—The authorised capital of the Corporation (originally \$2,500,000) is \$50,000,000 which taking sterling exchange at 25 4/11d represents £5,011,458 0s 8d. Of this amount a sum of \$20,000,000 is issued and fully paid up. Reserve funds comprise a sterling reserve of £4,500,000 and one of \$27,000,000 in silver while the reserve liability of proprietors amounts to \$20,000,000.

**Development.**—An index to the continuous and rapid expansion of the business of the Bank and to the great degree of public confidence enjoyed by it is forthcoming in comparing deposit and current account figures at successive stages of development. In 1880 deposit and current accounts totalled \$24,198,572 at the end of 1916 \$303,067,500 and on December 31 1925 \$550,680,802.

The institution to day has in all 39 branches and agencies situated chiefly in the Far East but including important offices at London New York San Francisco and Lyons.

**Activities.**—The Bank grants drafts upon and negotiates or collects bills at any of its branches or agencies while it issues for travellers use letters of credit and circular notes negotiable in the principal cities of Europe Asia Africa Australia and America. The Corporation is prepared to receive for safe custody Indian and other Government securities interest and dividends on which are collected as they fall due. Credits are granted on all approved securities and every other description of banking and exchange business is transacted.

**Indian Branches.**—The business of the Bank in India is conducted from branches at Calcutta and Bombay, housed in finely-appointed and commodious office buildings.

**Court of Directors.**—The Court of Directors at Hongkong is composed as follows: D. G. M. Bernard (chairman), Hon. Mr. A. O. Lang (deputy chairman), W. H. Bell, A. H. Compton, Hon. Mr. P. H. Holyoak, W. L. Pattenden, J. A. Plummer, T. G. Weall, H. P. White and G. M. Young, Chief manager, A. H. Barlow.

**Committee in London.**—Sir Charles Addis, K.C.M.G. (chairman), Hon. Cecil Baring, C. A. Campbell, David Landale, Sir George Macdonogh, G.B.E., K.C.B., K.C.M.G., Sir George Sutherland, A. M. Townsend and C. F. Whigham, Managers in London, Sir Newton J. Stabb and H. D. C. Jones.

**Offices.**—Hongkong (head office), London 9, Gracechurch Street, E.C.3; Calcutta 31, Dalhousie Square, South (cables "Mandarin," Calcutta); Bombay 49, Church Gate Street, Fort (cables "Cassandra," Bombay). Codes: A.B.C. 5th Edition, Bentley's, Western Union, Lieber's and Private.

**London Bankers.**—Westminster Bank Ltd.

## LLOYDS BANK LIMITED

2. Banking Hall, Calcutta Office.

**LLOYDS BANK LIMITED.**

**Inception.**—The inception of Lloyds Bank Ltd, that colossus among the gigantic banking corporations so comparatively recent a feature of British financial history, was a direct derivative of the Limited Liability Act of 1862 and the outcome of the fusion authorised by that measure of two old-established private concerns. The houses of Lloyds & Co (Birmingham Old Bank), founded in 1705, and Molliet & Sons, of Birmingham, were so amalgamated in 1865 the resulting joint stock institution forming a sound basis for the successive developments of the future policy.

**Development by Absorption.**—That policy soon resolved itself into one of expansion by the process of absorbing private or joint stock banking businesses. The assimilation of eight other companies had been completed

when, during 1884, Messrs. Barnetts, Hoares & Co. and Bosanquet, Salt & Co. were absorbed, to furnish Lloyds Bank with office premises in London. Until 1888 operations were confined in the main to consolidation and to organising a system of control for the network of town and country branches. Thenceforward the amalgamating process continued, scarcely a year passing without the addition of at least one London or provincial old-established concern to the list. Altogether 53 companies have been absorbed by Lloyds Bank Ltd during the 60 years of its career as a joint stock corporation. In 1918 not only was the Capital and Counties Bank Ltd, with its 473 offices, taken over, but Lloyds Bank also became closely associated with the National Bank of Scotland Ltd and the Bank of London & South America Ltd (then known as the London & River

Plate Bank). The two banks so far the last to be merged in the institution under notice were Messrs. Cox & Co., the famous Army Bankers, and Henry S. King & Co., bankers and agents, both absorbed in 1923.

**Capital.**—The authorised capital of the Bank is £74,000,000, consisting of 14,500,000 "A" shares of £5 each and 1,500,000 "B" shares (a recent creation) of £1 each. Of this capital, £73,302,070 is subscribed, while the paid-up capital totals £15,810,252. The reserve fund stands at £10,000,000.

In this connection it may be interesting to note, as bearing upon the expansion of the Bank over the two generations of its existence, that in 1865 its paid up capital amounted to £143,415, the reserve fund then stood at £18,415; while deposits at June 30, 1920, reaching £336,631,359, totalled at its foundation but £1,166,160.

CHANDNI CHAUK, the principal business thoroughfare of Delhi.

**Operations.** Every description of banking and exchange business is transacted by Lloyds Bank Ltd. By reason of its extensive organisation and its vast number of branches and agencies, it is in a position to offer the public the most exhaustive facilities available in any part of the world, including the financing of commercial bills covering imports and exports. Of special convenience is the issue of world letters of credit against which funds can be drawn at any of the 1,700 offices of the Bank in England and Wales, at its branches in India and Burma or from its numerous agents throughout the world, a list of whom is supplied with every letter of credit issued. The agency of foreign and colonial banks and overseas business of all kinds are undertaken.

**Departments.**—A Trustee Department has been organised in London to which all matters relating to trusteeships and executorships may be referred for advice, either direct or through branches of the Bank. The office of trustee or executor on behalf of clients is undertaken by the institution. Lloyds Bank Ltd. has also an Income Tax Department offering expert advice on all relevant affairs which is at the disposal of overseas residents.

**Indian Activities.**—The business of Lloyds Bank Ltd. in India and Burma comprises the old established firms of Cox & Co. and Henry S. King & Co. whose branches, as has already been mentioned, were taken over by the absorbing concern in 1923.

Branches are in operation at Bombay, Calcutta (two offices), Delhi, Karachi, Murree, Rawalpindi, Simla, at Srinagar and Gulmarg in Kashmir, and at Rangoon in Burma.

A large and efficient European and local staff is employed in India and Burma, prepared to deal with any matters brought before it and it is the special desire of the Bank that their customers and others shall at all times feel free to avail themselves of those services in the fullest possible manner.

**Associated Banks.**—Lloyds Bank Ltd. is closely associated not only with the National Bank of Scotland Ltd. and the Bank of London & South America Ltd., but also with Lloyds & National Provincial Foreign Bank Ltd., the National Bank of New Zealand Ltd., the Bank of British West Africa Ltd., and the British Italian Banking Corporation Ltd.

#### NATIONAL BANK OF INDIA LTD.

**Inception.**—To Calcutta belongs the credit of providing the first domicile for this institution, which influences with increasing importance the financial transactions of two continents. The National Bank of India was established in that Presidency city on September 29, 1863, to be registered in London under the Companies Act of 1862 on March 23, 1866.

**Capital.**—The subscribed capital of the Bank is £4,000,000, while the paid-up capital totals £2,000,000. The present number of shareholders is 2,504.

**Reserve Fund.**—The reserve fund, £1,175,000 in 1915, £2,000,000 in 1920, and £2,750,000 at the close of 1924, has been raised by recent considerable additions to £2,850,000.

**Development.**—The Bank considered as a whole has a splendid record of reliability and progress. It possesses to-day 19 branches in India, Further India and Ceylon, viz., Aden, Aden Point, Amritsar, Bombay, Calcutta, Cochin (S. India), Colombo, Delhi, Chittagong, Kandy, Karachi, Lahore, Madras, Cawnpore, Mandalay, Nuwara Ehiya, Rangoon, Tuticorin, and Zanzibar, five in Kenya Colony, at Kisumu, Mombasa, Nairobi, Nakuru and Eldoret, three in Uganda, at Entebbe, Jinja and Kampala; and two in Tanganyika Territory, at Dar-es-Salaam and Tanga. In Kenya Colony and Uganda the institution has been appointed bankers to the Government. Agencies and correspondents are maintained in all important cities throughout the world.

**Activities.**—The National Bank of India Ltd. grants drafts and telegraphic transfers on all places where it is represented; negotiates and collects bills of exchange; collects pay and pensions, and generally

transacts every form of Eastern banking business. Deposits are received for fixed periods not exceeding one year, at rates to be obtained on application. The Bank opens current accounts, and, provided they do not fall below £200, allows 2 per cent. per annum interest on the minimum monthly balances.

**Current and Other Accounts.**—The respective totals of current, fixed deposit and other accounts at the beginning of the years named were as follow: 1915, £16,392,710; 1920, £45,200,202; 1925, £32,548,163; 1926, £33,168,283.

**Dividends.**—For a number of years past the Bank has paid a dividend of 20 per cent. free of income tax.

**Bombay Branch.**—The Bombay establishment of the institution under notice, opened soon after the foundation of the Bank, was originally housed in Hornby Road, but in 1868 entered the present building. At that time part of the premises was let out as offices, but subsequently the entire structure was occupied by the Bank. Considerable alterations and extensions are now being carried out in order to provide adequate accommodation for dealing with the large volume of business devolving upon the branch, including as it does the buying and selling of sterling exchange and of bullion, for which the market in Bombay is a very large one.

The staff of the branch at Bombay consists of 21 European officers and 265 native shroffs and clerks, under the direction of the manager, Mr. David Kydd.

**Directorate.**—Sir Charles C. McLeod Bart (chairman), J. N. Stuart (deputy chairman), Hon. F. Julia Hawke, Sir John P. Hewett, G. C. S. I., K. B. E., C. I. E., R. Langford James, Robert Miller, C. Nicoll (general manager) and J. A. Toomey.

**London Manager.**—J. Y. Munro

**Offices.**—London (head office) 26, Bishopsgate, E. C. 2 (cables "Minerva," London), Bombay Esplanade Road (cables "National," Bombay) Calcutta 104, Clive Street (cables "National" Calcutta).

#### NETHERLANDS TRADING SOCIETY.

**Inception.**—The Netherlands Trading Society, which celebrated in a recent year the completion of a century of remarkable achievement in many spheres of commerce and finance, was established at The Hague by Royal Charter, March 29, 1824. King William I not only furnished with Fl 4,000,000 part of the capital (originally fixed at Fl 37,000,000, though subscriptions had been received for Fl 70,000,000), but also personally guaranteed a dividend of 4 per cent. The chief object of the Society's inception was to relieve the existing economic depression by fostering Dutch trade generally, but particularly that of shipping, shipbuilding, fishing, agriculture and industries. The original articles of association, however, prohibited banking business and dealing in stocks and exchange.

**Development.**—The Royal Charter granted the Society extensive monopolies, enabling it to secure virtual control of all sailing vessels trading to the Indies. The bulk of outward cargoes consisted of cotton manufactured in mills mainly under its control, returning ships brought colonial products against which, by agreement with the Government under the "Culture System" introduced in 1830, the Company made advances. In 1831 the enterprise was reconstructed, the capital reduced to Fl 23,500,000, and the headquarters were transferred to Amsterdam.

With the gradual abandonment of the "Culture System" the Society commenced its own export business made advances to planters, interested itself in plantations, and was so enabled considerably to promote colonial development.

**Banking Participation.**—In 1874 the articles of association were amended to permit of banking and exchange business, and nine years later such transactions were initiated on an important scale. From that beginning the Society has pursued a policy of successive development and consolidation, to become the leading banking institution in the Netherlands and the colonies thereof, and a power in international finance. In Holland it has interested itself in the Geldersche Credietvereeniging, in other provincial banks, and in South America in the Netherlands Bank for South America.

NETHERLANDS TRADING SOCIETY Branch at Bombay.

(See *the press* page 43)

**Capital.**—The authorised capital of the Netherlands Trading Society was raised in 1901 to Fl 45,000,000, and in 1913 to Fl 75,000,000. The paid-up capital by 1914 was Fl 50,000,000, by 1916 Fl 60,000,000, by 1918 Fl 70,000,000 and by 1919 Fl 80,000,000 (£6,666,666), at which figure it now stands. The statutory reserve fund amounts to Fl 21,117,340 (£1,759,778), and the extraordinary reserve fund to Fl 22,660,000 (£1,888,333).

**Activities.**—The Society grants drafts and issues letters of credit on all its branches and correspondents in the East, on the Continent, in Great Britain, Africa, America and Australia, and transacts every description of banking business. Special facilities are offered for financing shipping documents to the Far East.

**Branches.**—Subsidiary to the head office at Amsterdam, the Society has established branches in Holland at The Hague and Rotterdam. In the Netherlands Indies branches exist at Batavia, Sourabaya, Semarang, Medan and further principal ports. Important agencies also function at Singapore, Penang, Rangoon, Hongkong and Shanghai, while the latest Eastern development of the concern, necessitated by the ever-expanding volume of business, was the opening (1920-21) of branches at Kobe, Calcutta and Bombay. Further, a branch has recently been opened at Jeddah (Hedjaz).

**Bombay Premises.**—The original quarters in Hornby Road of the Bombay establishment soon proved inadequate in accommodation, and the present premises, although still to be considered temporary, were acquired as

offering more scope for the efficient performance of the Society's manifold services to clients.

**Administration.**—President of the Board of Commissaries S. P. Van Eeghen, President of the Board of Directors C. J. K. Van Aalst, K. B. E., directors J. Bierens de Haan, F. P. J. Vester, J. C. A. Everwijn, D. Crena de Jongh; secretary F. H. Abbing.

**London Correspondents.**—The National Provincial Bank Ltd.

**Addresses.**—Amsterdam (head office) (cables "Trading," Amsterdam), Batavia (Eastern head agency) (cables "Factorij," Batavia); Bombay 82, Esplanade Road (cables "Traderbank," Bombay), Calcutta 8, Royal Exchange Place (cables "Traderbank," Calcutta). Codes used by Bombay branch Bentley's Complete Phrase, Peterson International 2nd ed., A B C 5th and 6th eds and Laeber's.

THE P &amp; O BANKING CORPORATION LTD General View of the new Banking Hall, Calcutta

### THE P. & O. BANKING CORPORATION LTD.

**Inception.**—Registered in London on May 3, 1920, this important banking corporation was founded in June of that year, having as chairman the Rt Hon The Viscount Inchcape, GCSI, GCMG, KCIH. Lord Inchcape is also chairman of the P & O Steam Navigation Co., with which, as its name suggests, the Bank is closely associated.

**Affiliation.**—In December 1920, in order to acquire a solid footing in the interior of India, the Corporation offered to buy the fully paid ordinary shares of the Allahabad Bank Ltd. More than 90 per cent of the shareholders of the latter institution accepted the offer, and the option given to exchange their holdings to P & O Banking Corporation shares in lieu of receiving cash was exercised to the extent of 9,416 shares of that Corporation. The issue of this number brought the paid up capital of the Bank under notice from £2,500,000 to £2,594,160.

**Capital.**—The authorised capital of the Bank is £5,000,000 in shares of £10 each, while the reserve fund has recently been augmented to £180,000.

**Operations.**—The Corporation transacts general banking and exchange business of every description, and has branches and agents throughout the world.

**Branches.**—The P. & O. Banking Corporation Ltd. has its head office and a subsidiary agency in London, with branches at Bombay, Calcutta, Karachi, Madras, Colombo, Canton, Hongkong, Shanghai and Singapore. Business is also transacted on behalf of its constituents at all centres where branches and agencies (some 35 in number) of the Allahabad Bank are established.

**Dividends.**—The dividends disbursed by the Bank since its inception are as follow: 5 per cent per annum to March 31, 1921, 5½ per cent p.a. for the three years 1921-22, 1922-1923, 1923-1924, and 5 per cent p.a. for 1924-1925 and 1925-1926. In recommending a reduction of ½ per cent in the dividend for 1924-1925 and increasing the amount carried to reserve, the directors were influenced by the uncertain condition of affairs in the Far East.

**Directorate.**—The Rt Hon The Viscount Inchcape, GCSI, GCMG, KCIH (chairman), Alastair Cameron (deputy chairman), the Rt Hon The Earl of Selborne, KG, GCMG, Sir Frederick Eley, Bart, Sir Montagu Cornish Turner, Francis Alexander Johnston, Alexander Kemp Wright, CBE, DL, Walter Osborn Grazebrook and The Hon Alexander Shaw. General manager, M. M. S. Gubbay, CSE, CIE, assistant general managers, C. E. Malkinson and R. Nicholson, secretary, Chas Selbie.

**Offices.**—London (head office) 117-122, Leadenhall Street, EC3. (cables "Penorbanca," London). Calcutta 1, Fairlie Place.

**London Bankers.**—Bank of England, National Provincial Bank Ltd, Westminster Bank Ltd., Lloyds Bank Ltd, Royal Bank of Scotland.

**Balance Sheet.**—The following balance sheet and profit and loss appropriation account were submitted for the year ended March 31, 1926:—

LIABILITIES.		£	s	d

# ALLAHABAD BANK LTD.

1. The Allahabad Branch.
3. Exterior of Head Office.
5. Branch at Cawnpore,

2. Head Office at Calcutta.
4. New Bombay Office.
6. Banking Hall, Bombay.

**ALLAHABAD BANK LIMITED.**

**Inception.**—Claiming at the present day to be the oldest indigenous bank in India, the Allahabad Bank Ltd was established in 1865 and registered under Acts XIX of 1857 and VII of 1860

**Development.**—Starting with but one office, the institution gradually extended, confining its operations chiefly to the United Provinces, where in course of time it opened branches in most of the important towns and many smaller districts. A number of offices were established at places then unapproached by other corporations, and in subsequent years the Allahabad Bank continued to play a pioneer part in the provision of banking facilities. The system of branches was later extended to the chief centres of the Punjab, Central Provinces and Behar, while offices were also opened in Bombay and Rangoon

**Affiliation.**—The most notable recent development in the history of the Bank was its affiliation in 1921 with the P & O Banking Corporation Ltd. That arrangement provides the latter concern with a large and influential connection in the interior of India, while giving the customers of the Allahabad Bank Ltd the benefit of the international banking service furnished by the larger institution

**Capital.**—The subscribed capital of the Allahabad Bank Ltd stands at Rs 40,00,000, while that paid up totals Rs 35,50,000. The reserve fund now reaches Rs 44,50,000 invested in Government paper

**Operations.**—Every description of banking and exchange business comes under the purview of the Bank, which opens current accounts free of charge and receives fixed deposits for long or short periods on terms ascertainable by application. Currency notes of any circle, cheques and hundis are received for credit in fixed deposit accounts without charge. Government paper and other securities are purchased, sold, or received for safe custody, and interest and dividends realised. Loans and cash credits also are granted by the Bank. Passenger letters of credit are issued, available for use on board the P & O, British India Steam Navigation Company (Home Line) and Orient Steamers at ports of call, at the offices of agents of the P & O Steam Navigation Company and British India Steam Navigation Company, and at any branch of the P & O Banking Corporation Ltd

**Branches.**—The head office of the Allahabad Bank Ltd is situated at Calcutta, and its branches and sub agencies are at Allahabad, Allahabad City, Amritsar, Bareilly, Benares, Bombay, Cawnpore, Cawnpore City, Chandauli, Dehra Dun, Delhi, Etawah, Fyzabad, Gorakhpur, Hapur, Hathras, Jhansi, Jubbulpore, Lahore, Lucknow, Lucknow (Aminabad Park), Lucknow City, Jyallpur, Moradabad, Mussoorie, Meerut, Muttra, Nagpur, Naini Tal, Patna, Rae Bareilly, Raipur, Rangoon, Shahjahanpur and Sitapur

The Bank has correspondents in all principal towns throughout India

**Financial.**—The latest balance sheet of the Allahabad Bank Ltd shows a position of unquestioned stability. Surplus profits carried forward to next account amount to Rs 3,47,827-9-6. Liabilities to the public on current, fixed deposit and savings bank account total Rs 9,35,44,000, while liquid resources, consisting of cash, Government of India securities and short term deposits with other banks, amount to Rs 4,42,10,100, representing 47.2 per cent. of these liabilities. Additional assets in the shape of credits extended by the Bank on loan, cash credit, overdraft, etc., total Rs 5,46,56,000. Bad

debts are nil. The balance sheet (see later) is a typical example of the working of the Allahabad Bank Ltd, the conservative nature of whose policy throughout has been directed towards the provision of the maximum security possible to depositors

**Dividend.**—The Bank pays a dividend of 18 per cent on ordinary and 6 per cent on preference shares, rates which have been maintained for the last 19 years

**Directorate.**—Hon Mr J W A Bell (Mackinnon Mackenzie & Co) (chairman), Raja Sir Rampal Singh, K C I E, J H Fyfe (Mackinnon Mackenzie & Co), C F Cockell (Allen Bros & Co (India) Ltd), and H B Whutby (Kilburn & Co) Alex Bowie (general manager)

**Office.**—6, Royal Exchange Place, Calcutta (cables "Allah," Calcutta) Codes Bentley's and ABC 5th Edition

**London Bankers.**—P & O Banking Corporation Ltd and National Provincial Bank Ltd

**Balance Sheet.**—The balance sheet and profit and loss account for the twelve months ended March 31, 1920, were as follow —

**Profit (Ensuing half-year).**—Transactions for the following half-year (ending June 30, 1926) yielded a profit of Rs 3,40,203-8-4 which, with the addition of Rs 56,591-8-7, made Rs 3,96,795-0-11 available for appropriation, as follows — An ad-interim dividend at 15 per cent per annum for the half-year under report free of Income Tax, absorbing Rs 2,28,485-3-5, a sum of Rs 1,25,440-2-11 to be credited to Contingent Fund, which would then stand at Rs 5 lakhs, and the balance Rs 42,869-10-7, to be carried forward (See illustration page 47)

### THE IMPERIAL BANK OF PERSIA.

**Inception.**—Incorporated in 1889 by Royal Charter under an exclusive concession granted by the Shah of Persia for sixty years, the Imperial Bank of Persia is a purely British institution registered in London. In terms of that concession, the Persian Government is entitled to 6 per cent. of the net profits

**Capital.**—The fully paid up capital of the Bank, which it is empowered to increase to £4,000,000, stands at £650,000. The reserve account has now been raised to £470,000, while the reserve liability of proprietors, under the provisions of the Charter, amounts to £1,000,000.

**Activities.**—The Bank is prepared to transact banking business of every description in and connected with Persia and Iraq, also with Bombay, Calcutta and Karachi. Clean and documentary credits are arranged, documentary bills negotiated, clean and documentary bills collected, and letters of credit, drafts and telegraphic transfers issued. The institution is served by correspondents in all important centres abroad.

**Branches.**—The chief office in Persia is situated at Teheran, while branches of the

Bank are established in that country at Abadan, Ahwaz, Baku, Barmah, Bander Abbas, Burujird, Bushire, Duzdab, Hamadan, Isfahan, Kazvin, Kerman, Kermanshah, Masjed-i Suleiman, Meshed, Mohammerah, Nasratabad (Seistan), Resht, Shiraz, Sultanabad, Tabriz and Yezd. Branches in Iraq are at Bagdad, Basra, Hinaidi and Kirkuk

The Bank's branch in India is situated at Bombay occupying commodious and well appointed premises which were reopened after reconstruction in June, 1910

**Dividend.** On December 22, 1925, was paid an interim dividend of 4s per share, free of income tax, and at the general meeting held on June 30, 1926, it was proposed to pay a final dividend of 6s per share, free of tax, making 10s for the year. That sum free of tax at 4s in the £ is equivalent to 12s 6d per share gross or 0.61 per cent per annum

**London Bankers.** Messrs Glyn Mills & Co., Westminster Bank Ltd, Lloyds Bank Ltd

**Directorate.** Sir Hugh S. Barnes, K.C.S.I., K.C.V.O. (chairman), W. A. Buchanan, F. A. Chettle, D. Gubbay, V. A. Cesar Hawkins, and Col. Sir A. Henry McMahon, G.C.M.G., G.C.V.O., K.C.I.T. Manager and secretary, Sydney Rogers, sub-manager, E. M. Eldrid

**THE CENTRAL BANK OF INDIA LTD.**

**Inception.**—The origin of this Bank was the outcome of the ambition of Mr S N Pochkhanawala (its present managing director) to establish an institution entirely under Indian control with himself as manager. His project secured the invaluable support of the late Sir Phirozeshah M Mehta K C I E, under whose chairmanship The Central Bank of India was founded, being registered in Bombay on December 21, 1911. Operations were commenced early in the next year.

**Development.**—The institution had made rapid progress when, within two years of its foundation, a great financial crisis over-whelmed the Indian-managed banks in the country causing the failure of no less than sixty three. The concern now dealt with not only succeeded in riding the storm of 1913-1914, but has always emerged with enhanced credit from subsequent crucial periods, restoring public confidence in banks under Indian control. In August 1923 the Fata Industrial Bank was amalgamated with The Central Bank of India Ltd augmenting considerably both the capital and reserve of the latter, which now claims a recognised place among the leading financial corporations of the country of its origin.

**Capital.** At its inception the Bank had a subscribed capital of but 20 lakhs, of which half the amount was paid up. To-day the subscribed capital reaches Rs 3,30,00,000, the sum of Rs 1,68,00,000 being paid up, while the reserve fund comprises one crore of rupees.

**Operations.** The policy of the Bank is directed towards no particular branch of business but embraces all classes of operations. The prompt collection of cheques, bills and drafts is undertaken, and enquiries from foreign banks and firms are welcomed. The institution encourages the public to invest in Government and gilt-edged securities by advantageous schemes of payment by instalment, while for the small depositor a Home Savings Department on unprecedentedly beneficial lines is provided. The Bank is the first joint stock concern in the country to publish a statement of liabilities and assets every fortnight, on similar lines to the weekly statements of the Imperial Bank of India.

**Safe Deposit Vault.**—On March 1, 1920, Sir Leslie Wilson, Governor of Bombay, formally opened the safe deposit vault of The Central Bank of India Ltd. The vault is constructed on the latest principles, and is the largest and strongest of its kind in the country.

**Branches.**—The Bank possesses four establishments in Bombay, including the head office, at which a staff of 500 persons is employed. Other branches are situated at Calcutta, Madras, Karachi, Lahore, Lyallpur, Cawnpore, Lucknow, Amritsar, Jharia, Asansol, Chandansi, Hapur, Delhi, Kasur, Hyderabad, Secunderabad, Ahmedabad, and Rangoon.

**Financial.**—The expansion of the business of this organisation may be gauged from the steady augmentation of its deposits, the quinquennial growth of which was as follows. In 1915 total deposits were Rs 50,30,000, in 1920, Rs 10,93,12,000, and in 1925, Rs 14,15,67,000. The latest available estimate of deposits places them at Rs 15,93,33,000.

Since the inception of the Bank it has disbursed to shareholders dividends amounting to Rs 78,00,000.

## THE YOKOHAMA SPECIE BANK LTD.

**Inception.**—Known officially in Japan as the Yokohama Shokun Ginko, and universally as one of the most powerful of the Far East corporations, The Yokohama Specie Bank Ltd was registered in Japan and founded in 1880 for the purpose of providing financial facilities for the Empire's foreign trade

**Development.**—The institution was originally operated in conformance with the National Banking Law until in 1887 a special Imperial Ordinance "The Yokohama Specie Bank Regulations," enjoined a system of strict Government supervision, which is still in force By 1889 the corporation had become independent of State aid, and thence forward it has pursued a course of continuous expansion

**Capital.** The capital of the Bank, originally Yen 3,000,000 is now Yen 100,000,000, fully paid, while the reserve fund attains the substantial figure of Yen 80,500,000

**Operations.** The daily operations of the Bank cover foreign and inland exchange, the issue of loans, the acceptance of deposits and the safe custody of valuables, the discount and collection of bills of exchange, promissory notes and other securities The institution may also buy and sell public bonds gold and silver bullion, or foreign specie

**Branches.**—The Bank's head office is at Yokohama, while its other establishments in Japan are at Kobe Nagasaki Nagoya Osaka, Shimonoseki and Tokyo Branches in China are situated at Canton Changchun, Dairen Fengtien, Hankow, Harbin, Kai-Yuan Newchwang, Peking Shanghai, Tientsin, Tsinan and Tsingtau European offices operate at London, Lyons and Hamburg, and there are also important branches at New York, San Francisco, Seattle, Los

THE YOKOHAMA SPECIE BANK LTD. Calcutta Office.

Angeles, Buenos Aires, Rio de Janeiro, Honolulu, Manila, Hongkong, Singapore, Saigon, Sourabaya, Batavia, Semarang, and Sydney. The Vladivostok branch is temporarily closed.

In India the Bank maintains branches at Calcutta, Bombay and Karachi, and in Burma at Rangoon.

**Directorate.** Kenji Kodama (president), Reitaro Ichinomiya (vice-president), Masnoske Odagiri, Baron Kovata Iwasaki, Konojo Tatsumi, Fukusabaro Watanabe, Prince Iwao Matsukata, Baron Katsaku Morimura, Kiapen Takenchi, Taro Hodsuni, Kunizo Mogami, Naoto Igarashi, Toshikata Okubo and Yakichi Smitzu.

**Profit (Ensuing Half-year).**—For the half-year to June 30, 1926, the directors announced a net profit of Yen 14,962,168 08 inclusive of Yen 5,805,990 91 brought forward from last account. It was proposed to add Yen 3,000,000 to the reserve fund, to pay a dividend at the rate of 12 per cent per annum (absorbing Yen 6,000,000), and to carry forward to next account the balance of Yen 5,962,168 08.

### BANCO NACIONAL ULTRAMARINO.

**Inception.**—As is suggested by its name, as also by its device showing a steamship under way, the Banco Nacional Ultramarino has as its prime constitutional objects the promotion of the colonial welfare and the consolidation of the overseas trade of the country of its origin. Designed to be the State bank for the Portuguese colonies, it was established at Lisbon in 1864.

**Capital.**—The original authorised capital of the institution was Esc 12,000,000 of which Esc 4,000,000 only were subscribed for and fully paid up at the time. At various stages the authorised and the paid up capital have been increased until they stand today respectively at Esc 48,000,000 and Esc 30,000,000. The reserve funds amount to Esc 10,000,000.

**Activities.** The appointment of the corporation as State bank for the Portuguese colonies, in all of which it enjoys the monopoly of issuing notes, has greatly furthered its development. It forms to-day the intermediary for the negotiation of three-quarters of the total export trade of Portugal, and has agents and correspondents in all parts of the world.

**Operations.**—The Banco Nacional Ultramarino transacts general commercial banking

YEAR	TOTAL TURNOVER (Rupces)	FIXED AND CURRENT DEPOSITS (Rupces)	OTHER BANKS DEPOSITS (Rupces)
1921	76,70,82,125	1,02,82,074	13,16,57,243
1922	76,17,16,579	1,08,69,330	14,33,74,114
1923	42,66,17,141	1,62,04,867	6,08,02,207
1924	81,01,29,717	2,21,41,135	12,80,88,226
1925	104,48,53,137	2,20,55,705	16,11,09,259

business of every description, specialising in that concerning Portuguese interests. Among its services are the purchase and sale of foreign exchanges for spot and future delivery, and the opening of accounts in foreign currencies. Clean and documentary drafts on Portugal and its colonies, Brazil and any other countries are collected, while the Bank makes advances on or negotiates approved foreign bills, and finances exports and imports by means of clean and documentary reimbursement credits.

**Branches.**—The Bank has 76 branches in Portugal, Portuguese East and West Africa, India, China, Timor, Madeira, Azores, Belgian Congo, and Brazil, as well as at London, Paris and New York.

**Indian Activities.**—The Banco Nacional Ultramarino is the only bank having branches in Portuguese India. The first of these was opened in 1868 at Margao, Salcete, Goa, whence it was transferred to Nova Goa, the capital of Portuguese India, in 1877. On May 15, 1916, an agency was opened at Mormugao, and on April 1, 1922, a sub-agency at Margao. About 93 per cent of the import and 91 per cent of the export trade of Goa—excluding imports from and exports to British India—are effected through the intermediary of this Bank, which also negotiates and finances a considerable portion of the transit trade (in particular that in manganese ore) carried on through Mormugao Port.

**Bombay Branch.**—In conformity with the agreement with the Portuguese Government, the Bank opened a branch in Bombay on January 3, 1921. On the same day the inaugural Session of the new Bombay Legislative Council, constituted under the

Indian Reforms Act (1919), was opened by H R H the Duke of Connaught at the Town Hall, a few paces from the original site of the branch. This has now been transferred to Esplanade Road, the heart of the banking locality. The Bank's chief object in opening a Bombay establishment was to furnish for its other branches an intermediary for their exchange transactions in India. To what extent the object in view has been attained is evident from the following figures, which represent the turnover of exchange with the London branch alone during the years 1921-1925—

YEAR	TURNOVER
1921	19,001,027
1922	9,431,508
1923	4,034,375
1924	8,706,574
1925	13,261,034

Among the facilities afforded by the Bombay office to its constituents are the following: Transferences to Goa payable at the Nova Goa, Mormugao, Margao and Mapuca agencies are effected free of charge; drafts payable at those places are also issued *financo de commissao*, while transferences are effected and drafts issued on any foreign country free of charge at the best ruling rate of the day.

**Turnover.**—The progress of the Bombay branch may best be judged from the following details of its turnover for the five years 1921-1925.

YEAR	BRANCHES ACCOUNTS (Rupces)	STANDARD ACCOUNTS (Rupces)	CASH (Rupces)
1921	22,07,01,031	13,44,32,503	25,89,15,697
1922	15,83,72,008	15,63,30,404	9,27,04,332
1923	10,13,28,238	9,15,70,004	15,35,52,735
1924	19,86,59,779	16,90,13,023	29,19,26,684
1925	28,11,95,821	21,26,77,945	36,49,62,705

**Staff.**—Apart from a change in the managership, the present staff of the Bombay agency remains the same as at its inauguration. Mr. Eduardo P. de Medeiros was manager until May 1922, when Mr. C. de Seabra took over the direction.

**Colonial Note Issue.**—In Portuguese India the notes of the Bank are in rupees, and are at par with British India rupees. In Macao (China) they are in patacas, and are at par with Hongkong dollars. In Portuguese and West Africa the issue is in escudos, with a small circulation in pounds, and in Timor (Oceania) in patacas.

**Turnover and Dividends.** The figures furnished below represent the annual turnover of the Banco Nacional Ultramarino during the five years 1921-1925, together with the dividends disbursed—

YEAR	TURNOVER	DIVIDENDS
1921	Esc 35,246,400,000	20%
1922	42,764,898,412	30%
1923	56,704,698,383	30%
1924	66,430,331,831	30%
1925	56,554,767,215	30%

**Administration.**—Governor João Henrique Ulrich Vice-governors Arthur Porto de Mello e Faro (Conde de Monte Real), José da Cunha Rolla Pereira, Julio Schmidt, Francisco Pinto Fernandes, Ernesto Jardim de Vilhena and Dr. Francisco Machado.

### NETHERLANDS INDIA COMMERCIAL BANK (Nederlandsch Indische Handelsbank).

—Established at Amsterdam in 1863, when there was a prevailing demand for credit, particularly on behalf of the many agricultural enterprises in Netherlands East Indies, this bank may be regarded as an offshoot of the Algemeene Maatschappij voor Handel en Nijverheid, founded at Amsterdam in the same year. The latter had for its object, in addition to banking, the financing of commercial, shipping and agricultural undertakings, in which it would figure as a sleeping partner. The Nederlandsch Indische Handelsbank was therefore projected as a means by which the Algemeene Maatschappij could specialise in this form of business in the Netherlands East Indies. The Batavia office (head office for the Far East) was opened in March 1864. The original capital was Fl 12,000,000, of which Fl 6,000,000 was issued. Certain initial opposition was soon overcome, branches being opened at Sourabaya and at Semarang in 1870, since which date the development of the bank's operations has been continuous. From 1883 to 1885 the institution, having financed many sugar and other enterprises in Java, encountered the difficulties of the prevailing commercial depression in that island, and to meet the situation a new company, the Nederlandsch Indische Landbouw Maatschappij, was formed which later took over from the bank all its interests in agricultural estates. Henceforward the Handelsbank confined its activities to the development of a general banking business, which has since pursued a steadily progressive course. Every description of banking operations is transacted. The authorised capital is now Fl 60,000,000. Branches are established at Calcutta (26-27 Dalhousie Square, West), cables "Handel bank," Calcutta) and Bombay at all important centres of the Netherlands East Indies, and at Singapore, Amoy, Hongkong, Shanghai, Swatow and Kobe. The bank also has correspondents in the chief cities of Europe, America, Africa and Australia. London representative, 27, Old Broad Street, E.C. 2. Codes: Bentley's, Peterson's, Lieber's, Mercator and Private.

**AGRICULTURAL IMPROVEMENT & BANKING TRUST LTD.**—8, Cannon Street, Calcutta. Capital Rs 500,000 in 100,000 shares of Rs 5 each. Managing agents: Chatterjee, Gangulee & Co. Ltd.

# INSURANCE

## Notes by G. F. ROSS

Manager South British Insurance Company in India

**T**HE history of insurance in India is the history of British initiative and progress in the commercial development of the country. In the old days, when first commercial enterprise necessitated the insurance of merchandise on land and by sea, various commercial houses represented certain insurance companies as agents, probably doing but little business other than the insurance of their own stocks and shipments. As business grew, several enterprising insurance companies sent their own special representatives to India, those having a technical knowledge of their business, and gradually branch offices of some of the leading companies were established, the business generally being placed on a sound footing. The natives of the country began to see the advantages of insurance, and even Mohammedan traders commenced to realise the value of being protected against loss, even though such loss might be occasioned by "the Act of God"! To-day there are few Indian shippers who would revert to the old custom of risking loss by accidents which could be insured against.

**EARLY OPERATIONS.** In the early days, when first Indian shippers began to appreciate the advantages of marine insurance, much difficulty was experienced in explaining the differences between the various methods of insuring—Fire of Particular Average and With Average Insurance, etc. Very naturally they preferred to pay the cheaper rate for F.P.A. insurance, and when a loss occurred recoverable only under the W.A. form of insurance, they pleaded ignorance of the fact, using the wiles of the diplomat. Last to induce companies to meet their claims! To-day, however, these points are more clearly understood, and little difficulty arises in such matters. On the whole, Indian shippers have, rightly, great faith in the bona fides of the leading offices, and are prepared to accept the dictum of managers of companies well known to them for straightforward dealing.

**EXPANSION OF BUSINESS.**—Those enterprising companies which opened branch offices in India long before the field was

recognised as capable of great expansion have, of course, reaped the benefit of their enterprise and longsightedness. But success brings competition. Thirty years ago the branch offices in Bombay and Calcutta could be counted on the fingers of one hand, whereas to-day in Calcutta alone more than two hands would be required to count such offices, most of them transacting fire, marine, accident and workmen's compensation insurance.

**INSURANCE ASSOCIATIONS.** As business grew, the representatives of offices formed themselves into Insurance Associations for the protection of their interests, and this led in time to the formation of tariffs and agreements for the maintenance of rates. There are associations for each class of insurance—fire, marine, accident, etc., and much excellent work has been done by the committees of these bodies. Calcutta is perhaps fortunate in having several leading insurance men who have devoted time and care to the improvement of conditions in that field, with the result that the Associations in the District are looked upon by the Home insurance authorities as something approaching the models of what Insurance Associations should be.

**NEW FLOTATIONS.**—The wave of "national" feeling which spread over India on the advent of the so-called reform in Government very naturally led to the flotation of many Indian companies. Several of these concerns were floated without adequate backing, and now find themselves making but slow progress. On the other hand, there are a few well managed concerns, conducted by European officers, which will in days to come be a credit to their founders and justify their long-sighted policy of leaving the conduct of such a technical business to the expert European managers employed.

**PROTECTION AGAINST FIRE.**—Calcutta may not perhaps, be celebrated for really big conflagrations, but nevertheless the fire waste in the aggregate is considerable, and this is not entirely to be wondered at when we remember the inflammable nature of one of Bengal's principal commodities—jute. This interest is perhaps responsible for

what fraudulent claims arise, for there are, unfortunately, many petty dealers who seek to make profits by "selling" their jute to the insurance companies. In the Marine Department also there have been in the past many doubtful claims on jute despatched by country (native) boat from the jute districts to Calcutta. However, Calcutta is now in possession of a really efficient up-to-date Fire Brigade, commanded by a very experienced Superintendent, and this alone is a preventive of fire of a certain class. Better police control of the rivers in Bengal has also led to improved conditions.

**RECREATION.** In Calcutta, especially, very good feeling exists between the representatives of offices and their various assistants. This has led to the formation of an Insurance Games Association, and under its auspices tennis tournaments and golf competitions are held yearly. The final of these tennis tournaments is usually held at the residence of one of the leading insurance men. The games promote and encourage a spirit of friendly rivalry and good fellowship much to the advantage of all concerned.

**REGULATIONS (GOVERNMENT).**—The Government of India has recently decided to introduce new insurance legislation, governing not only life, as was the case with the previous Act, but fire, marine, workmen's compensation and other forms of insurance as well. The Government's measure will probably come before the Legislature in the near future. It is expected that all offices will be required to make a deposit of Indian Government securities and conform to regulations very similar to the Home Acts. It is felt that such demands are not unreasonable, provided regulations are framed upon the Home Act and not upon the somewhat drastic provisions of the American States.

**STRUCTURES.**—Some of the leading offices have erected their own buildings in places like Calcutta and Bombay. Many of these structures are very handsome and well arranged, providing a good indication of the view taken of the future of India's commercial possibilities.

G. F. ROSS

## SUPPLEMENTARY DATA

The first of the Indian life assurance companies was established in Madras about 90 years ago. Bombay has none older than the Bombay Mutual, the Oriental and the Bombay Widows' Pension Fund, which came into being some 50 years past. Life assurance does not seem to have been started in Bengal until much later, and it was not before 1906 that many companies were established in that Presidency or elsewhere in India. The year

1919 marked the formation of several such institutions, more particularly in Bombay.

**ACTUARIAL VALUATIONS.**—Of the 53 existing Indian companies, 38 have submitted the results of actuarial valuation of their assets and liabilities. The majority have undergone valuation more than once, and altogether 81 valuation reports have been furnished by the existing companies. The latest valuations disclosed a surplus in

the case of 28 companies and a deficit in nine. In four instances the deficit was covered by the paid-up capital, thus proving solvency but precluding the payment of either bonus or dividend. In the remaining five cases it became necessary either to call up more capital or to alter the policy contracts. Thus, only 15 companies out of a total of 53 have not undergone any actuarial valuation. Four of these transact business

which is not readily susceptible of actuarial valuation, and the remaining 11 have not yet reached the stage of having a valuation.

**ANNUAL PREMIUM.**—The average rate of annual premium payable under the policies issued by Indian companies is nearly 5½ per cent of the sum assured. The corresponding rate deduced from the returns to the British Board of Trade is lower, the difference being partly due to the fact that endowment assurances constitute a larger proportion of the policies issued by Indian than by British companies.

**CAPITAL.**—Dealing with 1924, the Actuary to the Government of India stated that the total amount of paid-up capital of the Indian life assurance companies was increased by over 1½ lakhs during that year and was in 1925 a little over 53 lakhs, more than 17 lakhs of which had already been expended in preliminary and organisation expenses, etc., while six lakhs of the balance had been earmarked to meet deficits disclosed at the time of the actual valuations of assets and liabilities.

The total sums assured remaining in force at the end of 1924 under ordinary life assurance policies issued by Indian companies was Rs 42 crores. The new sums assured during that year were over 6½ crores. That new business was greater than in any previous year, and was nearly four times as large as in 1916.

**EXPENSES.**—An outstanding defect in the working of Indian companies comes to light when the ratio of expenses is examined. According to the official analysis although the expense ratio of the companies as a whole shows a slight improvement, yet there are unfortunately many companies which still conduct their business on very extravagant lines. Of the companies established in the past 20 years more than half are spending over 45 per cent of their premium income. It is noticeable, as the Actuary observes, how a high lapse ratio generally coincides with a high expense ratio. This is to be expected. If the expense ratio is high policyholders are apt to become dissatisfied and to let their policies lapse. This again tends to keep up the high expense ratio owing to the heavy expenditure involved in securing new policy holders to fill the gaps.

**FIRE INSURANCE, ETC.**—All the British life assurance companies listed below, with the exception of the Gresham and Norwich Union Companies, transact fire insurance business, as does also the Chinese Underwriters' Company. Marine insurance is undertaken by the Alliance, Commercial Union, Liverpool and London and Globe, London Assurance, Phoenix, Royal, Royal Exchange, Scottish Union and National and Yorkshire Companies, and also by the China Underwriters' Company of Hongkong. Without exception, the 17 British life assurance companies and also the Sun Life of Canada do capital redemption business, while Fidelity Guarantee and Sickness and Accident business is undertaken by the majority of the British companies.

**LIFE ASSURANCE COMPANIES (INDIAN).**—The following is a list of the Indian companies in existence in the several provinces, with the date of foundation of each—

**BENGAL PRESIDENCY.**—Hindu Mutual (started in Simla in 1891); National Indian (1906); National (1906); Hindustan Co-operative (1907); Indian Equitable (1908); Bengal Mercantile (1910); Unique (1912); Light of Asia (1913); Himalaya (1919);

Bengal Insurance and Real Property (1920); Calcutta Insurance (1924).

**BOMBAY PRESIDENCY.**—Bombay Mutual (1871); Oriental (1874); Bombay Widows (1876); Goan Mutual (1885); B B and C I Zoron (1889); Bombay Zoron (1889); Gujarat Zoron (1891); Indian Life (1892); Sind Hindu (1894); Empire of India (1896); Bombay Life (1908); Asian (1912); Industrial and Prudential Western India (1913); East and West (1913); Zenith (1919); New Era (1919); Crescent (1919); Rising Star (1924).

**MADRAS PRESIDENCY.**—Madras Widows (1833); Finnevelly (1840); Indian Christian (1884); Mangalore R C (1888); United India (1906); All India and Burma (1910); South India Wesleyan (1911); Asiatic (1913).

**PUNJAB.**—Christian Mutual (started in Central Provinces in 1847); Punjab Mutual (1893); Bharat (1896); Simla Mutual (1901); Co-operative (1906); Hindustan Death Benefit (1908); British India (1914).

**UNITED PROVINCES AND DELHI.**—Rechabites (1843); General (1908); Aryya (1910); Nagpur Pioneer (1921); All-India Insurance and Pension (1921).

**LIFE COMPANIES (BRITISH AND COLONIAL).** In 1925 there were 22 British and Colonial life offices having places of business in India. Of these 17 are constituted in Britain two in Canada one in Australia, one in the Straits Settlements and one in Hongkong. Nearly all are partially exempt from the operation of the Indian Life Assurance Companies Act of 1912 on the ground that when it came into force they were carrying on business in the United Kingdom in conformity with the provisions of the British Assurance Companies Act of 1909. The principal effect of the exemptions allowed to these British and Colonial companies has so far been that they have been freed from the necessity either of making a deposit with the Controller of Currency or of making separate statements respecting their Indian business. Those granted exemptions are allowed to submit their accounts in the form prescribed by the British Assurance Companies Act of 1909. The Indian Life Act has to a great extent been enacted on the lines of the British Act. Under the provisions of the new Bill introduced in 1926, British, as well as other companies, will be required to pay deposits. The 17 British companies transacting life assurance business in India, with the locations of their head offices and dates of constitution, are as follow: Alliance (London, 1884); Atlas (London, 1808); Commercial Union (London, 1861); Gresham (London, 1848); Law Union and Rock (London, 1806); Liverpool and London and Globe (London, 1836); London Assurance Corporation (London, 1720); North British and Mercantile (Edinburgh, 1823); Northern (Aberdeen, 1830); Norwich Union (Norwich, 1797); Phoenix (London, 1782); Royal Exchange (London, 1720); Royal London Assurance (now merged in the Royal London Mutual Insurance Society, London, 1910); Scottish Union and National (Edinburgh, 1824); Standard (Edinburgh, 1825); Yorkshire (York, 1824).

The Colonial companies are: The Manu facturers' (1887) and Sun of Canada (1865); the National Mutual of Australasia (1869); the Great Eastern (1908); and the China Underwriters' (1924).

**AMALGAMATIONS.**—The New York Life Insurance Company of America, which formerly transacted business in India, has

transferred its Indian and British policies to the Sun Life Assurance Company of Canada. The life assurance business of the China Mutual Insurance Company and the Shanghai Insurance Company, both of Shanghai, was also transferred to the Sun Life Assurance Company of Canada in 1923.

**NEW INDIAN INSURANCE BILL.**—In 1925 there were published in the Gazette of India the terms of a new Bill to regulate the operations of assurance companies which was to be introduced in the Indian Legislature in 1926. The bill seeks to substitute for an old Act regulating life offices new regulations covering all forms of insurance. It introduces the principle of deposits for all classes of insurance. Companies doing a life business are to deposit 200,000 rupees with the Government; marine, fire, workmen's compensation and accident business is to be covered by another deposit of 100,000 rupees, and a further 100,000 rupees is to be required for the practice of any other form of insurance. These deposits are to be held, of course, purely in protection of the public interest as profit-earning assets. In addition, companies will be required to submit periodic accounts to the Government with fairly stringent regulations for life offices.

**RATES OF MORTALITY.** Up till 1920 there had not been any united effort on the part of the Indian life insurance companies to prepare a table of mortality applicable to the Indian lives assured in general. In the population of India it is generally found that Parsis and Burmans experience a very light rate of mortality. In Madras it is lighter than in the Punjab which again exhibits a lower rate than either Bengal, Bombay or the United Provinces. For Hindus the rate is lighter than for Mohammedans in Bengal and about equal in Madras, but heavier in Bombay the United Provinces and in the Punjab. For females the rate of mortality is less than for males in Madras and amongst Hindus in Bengal, Bombay and the United Provinces. In the Punjab and among Mohammedans in Bengal, Bombay and the United Provinces the female mortality is the heavier.

## REPRESENTATIVE INSURANCE COMPANIES.

### THE SOUTH BRITISH INSURANCE COMPANY LTD.

**Inception.**—Despite the title under which this prominent and progressive institution has built up its world-wide organisation, it is to the Southern Hemisphere that one must turn in tracing its origin. The company was established at Auckland, New Zealand, in August 1872, with a nominal capital of £500,000.

**Development.**—The business conducted at the outset was confined to fire and marine insurance, but with the steady growth of the concern its operations were extended to embrace all classes of accident insurance, and at the present time a flourishing general business is carried on. In the record of progress the absorption by The South British Company of various important insurance houses has been a dominant factor, among those whose shares have so been acquired being the Commercial Marine Insurance Co. Ltd. of South Australia, the Adelaide Marine and Fire Assurance Co. of South Australia, the Mutual Union Insurance Co. Ltd. of Tasmania, the Straits Marine Insurance Co. of Singapore, the Eastern United Assurance Corporation of Singapore, and the Equitable

Marine and Fire Insurance Co. of Capetown. To-day the parent company claims a very enviable reputation for integrity and stability.

**Capital.**—Considerable additions to the Company's capital have been made from time to time, and the present figure is £1,000,000, of which the sum of £1,031,640 is subscribed, and £773,730 paid up. The general reserve fund is £175,000, with an additional reserve of £493,000 for unexpired risks and one of £170,230 for losses outstanding.

**Branches.**—Through its branches, agencies and representatives The South British Insurance Company Ltd. operates throughout New Zealand, Australia, Great Britain, America, South and East Africa, Egypt, India, China, Japan, the Straits Settlements, and elsewhere in the Far East.

**Indian Activities.**—Notwithstanding the increasing competition among insurance offices the world over, the Company has continued to make steady progress, as in its other spheres of operation in India and the Far East since its establishment in Calcutta in 1885, and it has there preserved its high reputation for promptness and liberality in dealing with claims. Forty years ago one small room and two Europeans, assisted by a few Indian clerks, sufficed for the conduct of the business, whereas to-day the Company has its own palatial premises in the heart of the commercial centre of Calcutta, within a stone's throw of the principal banks and mercantile houses. In Bombay the institution has a branch office, while in Madras, Colombo, Rangoon, Karachi and Cochin it is represented by old established, reputable firms.

Mr G. F. Ross, the present manager in Calcutta, has had a lifelong experience of insurance matters, and has been associated with the Company for very many years, of which 32 have been spent in its Eastern service. Mr. Ross has long been connected with the Calcutta Marine Insurance Agents' Association, of which he has been chairman for the past seven years.

**Financial Position.** The statement of accounts for the year ended August 31, 1926, showed that the net premium revenue amounted to £930,533 and the interest and rents received and accrued after payment of Income Tax on same to £117,497, making a total of £1,057,923. The payment of a dividend of 1s. 1d. per share, additional to the interim dividend of 1s. 1d. per share disbursed in April 1926, was recommended. A sum of £167,735 was carried to the new account.

**Directorate.**—W. R. Wilson (chairman), Sir George Elliot, J. H. Upton, V. J. Larner, E. R. N. Russell, A. B. Robertson and Sir James H. B. Coates, General manager, P. H. Upton, secretary, J. M. Stokes, F.A.I.S.

**Offices.**—Auckland (head office), 86, 88, 90, 92 Queen Street (cables "British," Auckland), Calcutta, South British Insurance Buildings, 3-5, Chive Street (cables "British," Calcutta), Bombay, Canada Building, Hornby Road (cables "British," Bombay), London, Jerusalem Chambers, 2, Cowper's Court, Cornhill, F.C. 3. Codes A.B.C. 6th Edition, Insurance and Maritime (Murray's), Bentley's.

**Bankers.**—Bank of New Zealand, Bank of England.

UNION INSURANCE SOCIETY OF CANTON LTD., Calcutta.  
 1. Head Office at Hongkong.  
 3. Singapore Premises.

2. Offices at Shanghai,  
 4. The London Office.

#### UNION INSURANCE SOCIETY OF CANTON LTD.

**Inception.**—At an early date in the history of sea-borne commerce the favourable geographical situation of Canton made it the first Chinese port to be engaged in trade with Western countries. Thither, succeeding the Portuguese and the Dutch respectively, British merchants began to direct their cargoes towards the close of the seventeenth century, and the profitable relations so established were continued for nearly 150 years by the agents of the East India Company. The Cantonese operations of "John Company," begun in about 1684, were conducted until 1834, when its monopoly terminated, and in the next year the Union Insurance Society of Canton Ltd was founded by a group of pioneer British merchants under the guidance of the old firm of Dent & Co.

**Development.**—The enterprise early achieved a remarkable degree of success. Under the original scheme of a triennial

division of profits, first, second and third dividends of \$600 are recorded as having been paid on each share of \$5,000. The cession of Hongkong to the British Crown in 1841 was followed by the transference of the Society to the security of the new colony. Since that date its continuous progress has been synonymous with the expansion of Hongkong. Upon the collapse of Dent & Co during the financial upheaval of 1864, the Society, unaffected, became a separate organisation, controlled by a committee of management comprising representatives of prominent British firms established in the colony. In 1871 Mr Nathaniel J. Ede (uncle of the general manager, Mr C. Montague Ede) was appointed secretary, and under his dispensation the system of a triennial distribution of profits was changed to one providing for a reserve against contingencies and future expansion. The wisdom of the new policy is borne out by the sound position held to-day by the Society.

**Amalgamations.**—In 1906 an amalgamation with the China Traders' Insurance Co Ltd (now the British Traders' Insurance Co Ltd) was effected, and in 1915 one with the China Fire Insurance Co Ltd, with gratifying results to all concerned. During 1919 a fusion of interest took place with the North China Insurance Co Ltd (incorporated in Great Britain), this corporation continuing to maintain its head office at Shanghai. The Yangtze Insurance Association Ltd and the Far Eastern Insurance Co Ltd are also affiliated to the organisation under notice.

**Capital.**—The capital of this concern (originally \$1,250,000 in 250 shares of \$5,000 each, with \$1,000 per share paid up) is now £2,000,000, the paid-up capital being £540,000. Assets exceed £6,000,000.

**Activities.**—All classes of insurance, with the exception of life business, are transacted. The Society, the aims of which are "Service and Satisfaction," is continually concerned with future development, as is evidenced by

the fact that it was the first company to open a special office for aviation insurance.

**Branches.** Branches of the Society, controlled from the head office at Hongkong, are established at Adelaide, Auckland, Batavia, Bombay, Brisbane, Buenos Aires, Calcutta, Cairo, Christchurch, Dunedin, Hankow, Johannesburg, Kobe, London, Manila, Melbourne, Perth, Shanghai, Singapore, Sourabaya, Sydney, Toronto, Tokyo, Tientsin, Vancouver, Wellington, San Francisco and Yokohama. Operations have also been opened in 15 States of America, and agencies secured throughout the world.

**Indian Branches.** The Calcutta branch opened in 1906 is the controlling office for India, Burma and Ceylon. The Bombay branch commenced activities in 1920.

**Offices.** Calcutta: 8, Chive Street, P.O. Box 266 (cables "Unionist," Calcutta). Bombay: Esplanade Road Fort, P.O. Box 407 (cables "Unionist" Bombay). Codes: Bentley's, Private.

**Bankers.** Hongkong and Shanghai Banking Corporation, Mercantile Bank of India, Ltd.

#### THE STANDARD LIFE ASSURANCE COMPANY.

**Inception.**—The decision to establish The Standard Life Assurance Company was made at a meeting, held on March 23, 1825, of the partners of The Insurance Company of Scotland. The latter corporation had been established at Edinburgh in May 1821 for insurance against fire, but 'aware of the advantages resulting from Life Insurance had it from the commencement in contemplation to extend the object and business of the Company to Insurance on Lives.' That ambition was duly realised in 1825 by the foundation of The Life Insurance Company of Scotland, which changed its name pursuant to an Act of Parliament obtained in 1832, to the present form.

**Development.**—In 1846 the directors of The Standard Life Assurance Company, impressed with the conviction that life business in India and the Colonies might be undertaken at rates commensurate with the risk, turned their attention to those quarters, and after long and careful enquiry resolved to establish a new company having for its particular object colonial and foreign transactions. The Colonial Life Assurance Company was thus founded in October 1846 "for the purpose of extending to the Colonies of Great Britain and to India the full benefit of Life Assurance and for the purpose of giving increased facilities to persons visiting or residing in foreign countries." For twenty years the operations of this concern in India and the Colonies were conducted with results satisfactory in every respect, realising large profits in which the policyholders participated, and securing a wide and influential connection. In 1865 the directors of The Standard Life Assurance Company and the directors of The Colonial Life Assurance Company considered it in the interests of all concerned, seeing that the direction and management of both corporations were practically identical in composition, to amalgamate the two. The juncture was accordingly completed on March 19, 1866.

**Absorption.**—The fusion just described was the sole amalgamation to which The Standard Life Company was a party, but in the process of absorbing other businesses it had by no means been idle. The York & London Company was acquired in 1844, the Commercial Assurance, a Glasgow company, in 1846, the Colonial & General in the next year, The Experience Company of Edinburgh in 1850, the East of Scotland in 1852, the Minerva, a London corporation, in 1864, and

THE STANDARD LIFE ASSURANCE CO., Calcutta.

1 & 2. The Building and Offices.

the Victoria, similarly of London, in 1865. The Victoria Company itself had previously acquired the London & Provincial and the Legal & General Companies successively.

**Reincorporation.**—The Standard Life Assurance Company's Act (1925), reincorporating the Company and providing for its control and management as a Mutual Company, received the Royal Assent on July 31 of the year named. Under its provisions the said control is vested entirely in the policy-holders.

**Branches.**—The Company's branch offices and chief agencies abroad are established in Canada, India, Ceylon, Mauritius, China, Straits Settlements, South Africa, Egypt, West Indies and South America.

**Indian Operations.** The activities of the institution in India commenced, as has been indicated above, with the foundation of The Colonial Life Assurance Company in 1846, agencies in banks and well known firms in the principal cities of India being speedily established. Progress and prosperity, despite such set-backs as the Mutiny and recurrent outbreaks of cholera, were well maintained. In 1878, 12 years after the amalgamation of the Colonial Life and the Standard Life Companies, the business of the Indian Life Assurance Company was taken over. The last-named concern, founded in 1871 with its head office at Meerut, had undertaken "the usual description of risk contingent on human life." The greatest care has always been exercised in the selection of lives, and owing to the length of time the Company has transacted business in India it has been enabled to compile very reliable mortality statistics, and consequently to revise and reduce from time to time its various premium rates.

The whole of the Company's business in India, Burma, Ceylon and Mauritius is controlled by the office in Calcutta under the dispensation of a Local Board of Directors composed of leading members of the mercantile and banking professions. The present secretary for India is Mr. F. Loch Trevor.

**Financial Position.**—The following are the principal results of the operations of this institution during the year ended November 15, 1925—

The amount of life assurances proposed during the year was £2,226,413, the net amount of new life assurances effected £1,978,767. The corresponding net amount of premiums on new policies was £158,868. The total of claims during the year under life policies reached £868,294, while the purchase price of annuities granted was £395,428. The amount of capital redemption assurances effected was £54,804, and the corresponding premium revenue £3,564. The revenue for the year totalled £2,158,715, of which the sum of £1,395,951 was derived from premiums and consideration for annuities granted and £763,664 from interest on investments. The total assets, as shown in the balance sheet, amounted to £16,230,707. Deducting current liabilities (£276,353), the total available funds reach the figure of £15,954,354. The total of claims paid to date was £43,016,000.

The results of a valuation of liabilities and assets made as at November 15, 1925, were so satisfactory that it was decided to increase the rate of intermediate bonus to 40s per cent per annum.

**Directorate.**—Sir Ralph W. Anstruther, of Balcaskie, Bart (chairman), Field-Marshal Earl Haig, K.T., O.M., James C. Campbell, Alexander Wallace, W.S., George Wm. Blackwood, E. M. Beilby, C.A., James Ivory,

C.A., J. H. Millar, Advocate, LL.D., R. O. Pitman, W.S., Commander Hon. A. D. Cochrane, D.S.O., and H. A. Jamieson, W.S. Manager and actuary, Steuart Macnaghten, F.F.A., F.I.A., A.C.A., agency manager, L. T. J. Blount, F.F.A., A.I.A., secretary and assistant actuary, A. E. King, F.F.A., F.I.A.

**Offices.** Edinburgh (head office) 3, George Street. Calcutta Standard Buildings 32, Dalhousie Square South (ables "Standard," Calcutta) Code A.B.C. 5th Edition.

**Bankers.** Bank of Scotland, The Imperial Bank of India, The Chartered Bank of India, Australia and China, National Bank of India Ltd.

**SUN INSURANCE OFFICE, LTD. (Incorporated in England).**

**Inception.** To whatever extent that ubiquitous institution the Sun Insurance Office Ltd. may recognise the competition of its present contemporaries, it yields to none in the matter of seniority, enjoying the distinction of being the oldest insurance company in the world. In 1700 Charles Povey founded the Exchange House Fire Office for the purpose of insuring goods in the City of London, to be joined four years later by 23 men of like enterprise in establishing the Sun Fire Office and extending the existing operations to the provincial towns of England. Paul's Coffee House was appointed the meeting-place of the Company, each of the members of which, under the terms of the partnership deed, paid in the sum of £40 for the better maintaining and carrying on and establishing the office on a lasting and sure foundation. The total amount so contributed, £960, seems to have been the initial working capital of the venture.

**Development.**—From time to time losses and extraordinary disbursements necessitated the demand for additional funds, but it was not until 1728 that a substantial capital, fixed at £48,000, was created. By 1720, however, the business conducted by the Company had involved the surprising figure of £10,000,000, which after a record of progressive development, was raised to £100,000,000 in 1810.

**Capital.**—The present capital of the Sun Insurance Office Ltd. is £2,400,000 in shares of £10 each, 12 per share being paid. Of these 240,000 shares, 1,000 are held by the Office but are not included among the investments. The general reserve fund totals £650,000.

**Overseas Business.**—In 1830 the Company established contact with America by accepting the first insurance in the United States. By 1851 agents secured for it a sound footing throughout the West Indies, and in the next year firms of high standing undertook its representation in India and China. Transactions were opened in South Africa in 1853, extended to Chile in 1857, and inaugurated in Japan and the Philippines in 1865, such overseas business having since been expanded until the name and the device of the institution are encountered in every quarter of the globe.

**Indian Operations.**—The first branch of the Sun Insurance Office Ltd. in India was opened in 1808 at Calcutta by Mr. W. R. Rae, who controlled from that city the whole of the Office's operations in India until his retirement. Owing to expansion of the business, it was desirable that the Bombay Presidency

area should be controlled direct from Bombay, and a branch was opened there for that purpose in 1922, with Mr. J. A. Cochrane as branch manager.

In 1923 Mr. W. R. Rae retired from India and Mr. P. H. Price was appointed as branch manager at Calcutta, controlling Northern India, the Madras Presidency and Burma.

Mr. P. H. Price was later succeeded by Mr. W. G. Smith, who is now the Calcutta branch manager. With regard to representation, Messrs. Parry and Co. (established in 1788) have been the Company's agents in Madras since 1852 while Messrs. Ellerman's Asiatic Rice and Trading Co. Ltd. (formerly The Asiatic Co.) have performed a like service in Burma since 1885. Messrs. Balmer, Lawrie & Co. Ltd. and Messrs. Charn & Co. Ltd. are the Calcutta agents. At Bombay Messrs. Currimbhoy, Ebrahim & Co. are the representatives of the Office, and at Karachi Messrs. Kahn & Kahn and Couper & Young are the agents.

**BUSINESS UNDERTAKEN.** The following classes of insurance are undertaken by the Company in India: Fire, marine, motor cars and vehicles, burglary and house-breaking accidents and specified diseases, fidelity guarantee for Government and commercial appointments, third party (including lifts and drivers), plate glass and workmen's compensation.

**Financial Position.** The company's report and accounts for the year 1925 furnished the following particulars. The balance brought forward from 1924 amounted to £684,177, reduced after paying dividends less tax, to £498,177. This sum by the operations of 1925, was increased to £602,412, out of which there was carried to pension fund £50,000 and to general reserve fund £229,474 leaving a balance of £682,939. An interim dividend of 10s per share less income tax was paid in January 1926, and a further dividend (the 40th since the foundation of the Office) of the same amount was disbursed on July 1. This payment required a sum of £95,250, leaving unappropriated £492,439.

At the submission of the report on May 17, 1926, the total funds of the Office stood at £5,274,911.

**Directorate.**—The Hon. Sir William H. Goschen, K.B.E. (chairman), Frank Chaplin (deputy chairman), W. M. Pryor, D.S.O. (vice-chairman), Edward Dent, Alfred Bagnall, Edward Charles Grenfell, M.P., Sir Robert Arundell Hudson, G.B.E., Gen. The Hon. Sir H. A. Lawrence, G.C.B., Ronald C. Scott Murray, Lord Henry G. R. Nevill, F. R. Peacock, The Hon. Charles Arthur Urian Rhyss, M.C., M.P., Charles V. Sale. The Hon. Charles L. Slater Booth, Lord Herbert Scott, C.M.G., D.S.O., Charles W. Tomkinson and W. K. Whigham. General manager and secretary, W. W. Otter-Barry, sub-managers, H. S. Whiting and H. R. Hobson, D.S.O.

PHOENIX ASSURANCE COMPANY, Calcutta.  
General Office.

#### PHOENIX ASSURANCE COMPANY.

**Inception.**—During the last quarter of the eighteenth century the influential body of London merchants engaged in sugar-refining, dissatisfied with the terms demanded by existing fire offices for insuring their particular trade, decided to formulate a plan of inter-insurance among themselves. In November 1781 the project was given close consideration, and under the guidance of Nathaniel Jarman was speedily put into practice. The trade committee proposed "a capital deposited of not less than £15,000 sterling, and subject to a call of £15,000 more if necessary," the shares to be 300 in number, of £50 each. The actual number of shares issued in the following January was, however, 325. At the general meeting of subscribers held in the same month, five trustees and ten directors were appointed to manage the society's affairs for one year. The name temporarily adopted was "The New Fire Office Company," and the first policy was issued on January 17, 1782. In the Deed of Settlement executed in August 1783 the name was altered to "The New Fire Office, or Phoenix Society," ultimately to be changed (1785) to "The Phoenix Assurance Company, or New Fire Office in London."

The first fire insurance company, granted a Royal charter in 1688 and conducting business until 1760 from an office behind the Royal Exchange, had also adopted the name of "Phoenix," but little definite connection can be traced between that institution and the one now under notice.

In 1785 a proposal to undertake life assurance was mooted, but it was not until 1797 that a sister company, known as the Pelican Life Office, was established on a separate foundation. It was decided that

eight of the Phoenix Company directors with seven others chosen from the new shareholders should compose the board of the junior concern.

**Development.**—The Phoenix Assurance Company from the first pursued a policy of steady extension and consolidation, securing for its administrators and representatives men and firms of the soundest reputation. Up till the twentieth century the institution had concerned itself little with the absorption of other companies, and had confined its transactions to fire insurance only. The Phoenix Assurance Company's Act (1895), however, had authorised it to conduct both life and accident business. On January 1, 1908, it was fused into one organisation with the Pelican Life Office, which had itself absorbed the Manchester Life Office in 1846 and the British Empire Mutual in 1903.

The acquisition of the Law Life Assurance Society in 1909 further augmented the life business of the Company, while marine insurance was first undertaken following the absorption of the Union Marine Company in 1911. Accident underwriting had been commenced in 1907, and the purchase fifteen years later of the London Guarantee and Accident Company's shares greatly increased the volume of accident and casualty insurance transacted. In 1920 the Phoenix Company had acquired the shares of the Norwich Union Fire Office, but these were relinquished in 1925.

**Capital.**—The fully subscribed capital of the Company is £3,792,795, of which £1,005,000 is paid up. Debenture stocks, comprising 4 per cent. (Law Life), 4 per cent. (1911) and 5 per cent. (Registered, 1922), amount to £2,249,583. Reserve funds in-

clude a general reserve of £2,500,000, an additional reserve of £1,000,000, and a contingencies reserve of £617,272.

**Advantages.**—Since the Phoenix Assurance Company was the direct creation of a body of would-be policy holders, its original conditions and benefits were naturally as advantageous as possible to those insured. The Company has never departed from that tradition, and to this day combines with complete security the widest range of service.

**Financial Position.**—The following figures represent the total assets of the Company on December 31, 1925:—

Life Assurance funds	£13,705,893
Fire Insurance funds	1,250,000
Marine Insurance funds	681,888
Personal Accident Insurance funds	101,000
Employers' Liability Insurance funds	165,000
General Insurance funds	1,449,000
Sinking Fund and Capital Redemption funds	564,256
General reserve	2,500,000
Additional reserve	1,000,000
Contingencies reserve	617,272
Profit and Loss account	1,580,518
Capital paid up	1,005,000
Debenture Stock funds	2,249,583
	£26,878,410
Reserve for dividends payable in 1926	518,517
Reserves for outstanding claims	2,838,349
Provision for outstanding accounts, etc.	1,605,751
Total assets as in balance sheet	£31,841,02

**Profit and Loss Account.**—Profits of £401,383 were transferred to this account from the underwriting accounts. Interest amounted to £554,786. The sum of £500,000 was applied in increasing the general reserve and £518,517 was set aside as a reserve for the dividends payable in 1926. The balance of profit and loss account carried forward was £1,580,518.

At the Ordinary General Meeting (April 27, 1926) the directors declared a dividend of 13s. per share to be paid in two instalments of 6s. 6d. each, subject to deduction of income tax.

**Agencies in India.** Another tradition preserved by the institution is that of entrusting with its representation throughout the world only those firms of the highest standing as is the case in India, where it has been represented for very many years, and where it possesses an imposing office at Calcutta. Amongst the many well-known firms representing the Company in various towns and cities of India will be found Messrs. James Finlay & Co. Ltd., Gill & Co., Balmer, Lawrie & Co. Ltd., Shaw, Wallace & Co., Rath Bros., Finlay, Fleming & Co., Binny & Co. (Madras) Ltd., Carson & Co. Ltd., Galloways, Arbuthnot & Co., Ellerman's African Rice & Trading Co. Ltd., Forbes, Forbes, Campbell & Co. Ltd., A. Scott & Co., Hayley & Kenny, Gladstone Wylie & Co., Walker & Co. Ltd., and B. P. Pochaj & Sons.

**Directorate.**—Sir Gerald H. Ryan, Bart. (chairman), Rt. Hon. Lord George Hamilton, P.C., G.C.S.I. and Edward Garney Buxton (deputy chairman), Henry Bell, Lt. Col. Hon. Stuart P. Bouvier, D.S.O., Bristow Boxall, Rt. Hon. Viscount Dillon, C.H., D.C.L., William F. Fladgate, M.V.O., Robert Grant, Sir Clarendon G. Hyde, Hon. Edwin Ponsonby, Sir Thomas Royden, Bart., C.H., John Tryon, Arthur M. Walters and Brig.-Gen. J. E. Wigan, C.B., C.M.G., D.S.O. General manager, R. Y. Sketch, F.C.I., Manager for India, J. W. Webber.

**Offices.** London (head office) Phoenix House, King William Street, E.C. 4, Calcutta 28, Dalhousie Square (cables "Phoenix" Calcutta) Codes Bentley's and Pyro.

#### THE MOTOR UNION INSURANCE COMPANY LTD.

**Development.**—Incorporated in England this progressive office speedily gained a wide reputation as a pioneer of motor vehicle insurance, becoming particularly esteemed for its prompt and generous settlement of claims. The activities of the corporation were subsequently extended to include the following classes of business: Fire, marine, workmen's compensation, loss of profits, burglary, plate glass, personal accident and sickness, and administration bonds.

**Capital.** The capital of the company is £400,000 (400,000 shares of £1 each), of which £374,543 is paid up.

**Alliance with the A.A.**—The concern under notice is closely allied to the vast organisation of the Automobile Association of Great Britain, being the official insurance company to that body.

**Indian Activities.**—The rise and growth of the enterprise in India are typical of the history of its world-wide ramifications. The Company started its career in that country as an agency in Bombay in 1909, occupying a small office situated in Elphinstone Circle. Motor vehicle insurance, as in the case of the Home policy, was the first undertaking, to be followed shortly by fire and marine underwriting. Gratifying expansion of business

THE MOTOR UNION INSURANCE CO. LTD., Bombay  
Building in which the Company's Head Office for India is situated.

led the directors to open a branch office in Bombay in January 1920, Mr. W. Bulmer Perry being in charge until his death in the middle of the next year. Mr. J. R. C. Badham was then appointed branch manager at Bombay. A few months later Mr. Badham opened a branch office at Calcutta, being subsequently created manager for the whole of India.

From the new and commodious head offices in Bombay, commandingly situated in the busiest part of the city, Mr. Badham controls the whole of the Company's business in India, administering the two branches at Bombay and Calcutta (with a joint personnel of seven Europeans and 64 Indians), also 85 agencies and sub-agencies. The interests of Automobile Association members in India are cared for officially by The Motor Union Insurance Co. Ltd., Mr. Badham being the representative of the A.A. in that country. He is also an active committee member of the Western India Automobile Association, and has recently been elected to a seat on the Bombay Municipal Corporation.

The business of the institution in India continues to grow, and now embraces all those categories enumerated above.

**Financial.**—The company's report for the year ended December 24, 1925, showed that the premium income in all departments was £1,954,906. Sums credited to profit and loss account in respect of the year's underwriting amounted to £84,303, to which were added interest, dividends, etc., £54,029, and the

amount brought forward from last account of £99,853, making a total of £238,184. The sum of £45,000 taxation reserve not required for that purpose increased that total to £283,184. From this amount were deducted the following: Loss on exchange £7,576, transfer to fire insurance account to meet special losses £43,148, transfer to marine insurance account £115,000, amounting in all to £165,723. The balance resulting to the credit of profit and loss account was £117,460. Out of this sum the year's dividend on 5½ per cent cumulative preference shares (less tax), amounting to £7,020, and an interim dividend of 4s. per share (less tax) on the ordinary shares, totalling £31,750, have been paid. The balance of £78,090 was applied to paying a final dividend of 6s. (less tax) on the ordinary shares, amounting to £47,625, and a grant of £1,500 to the staff pension fund, leaving £28,965 to be carried forward to the next account.

**Directorate.** C. H. Dodd (chairman), S. D. Hollingsworth, J. E. Hodgkin, W. Rees Jeffreys, W. B. Jessopp. General manager and secretary, H. F. Baker.

#### NEW ZEALAND INSURANCE COMPANY LTD.

**Inception.**—To the New Zealand Insurance Co. Ltd. attaches the distinction of being the oldest insurance institution in the Dominion, with a record approaching three-score and ten years in duration of consistently valuable service. The concern was incorporated in the country and established at Auckland in 1850.

**Development.** Early activities were restricted to fire and marine insurance, a sound business being built up in these departments. In December 1905, however, the New Zealand Accident Insurance Company was taken over, and the articles of association of the absorbing Company were extended to accommodate all classes of business, with the exception of life policies. In whatever category its transactions may be, the Company has won a reputation for prompt recognition of obligations and settlement of liabilities.

**Capital.**—The original nominal capital of the institution was £100,000, of which £52,000 was at once subscribed, some £5,000 being paid up. The first policy was issued on June 4, 1850. The subscribed capital stands to-day at £1,500,000 and the paid up capital at £1,050,000, while the reserve funds total £1,130,207.

**Trustee, Executor and Agency Department.**—In 1910, actuated by the growing demand in New Zealand for corporate trustees, the Company, obtaining statutory powers for conducting trustee, executor and agency business, opened a special department for the performance of such operations. The guarantee of safety offered by an organisation of such stability as the New Zealand Insurance Co. Ltd. renders this feature extremely attractive to those clients requiring services in any fiduciary capacity.

**Branches.**—Branches of the Company are established throughout the Dominion of its origin, and in Australia, India, Burma, the Far East, the United States, South America and the United Kingdom, some 600 employees being engaged in its world-wide transactions.

**Indian Operations.** By the opening of a branch at Calcutta in 1882, the Company enrolled itself among the pioneer insurance institutions in the Province of Bengal. The activities of that office have now been extended to the United Provinces of Agra and Oudh, Punjab, Delhi, North West Frontier, Kashmir, Baluchistan, Bihar and Orissa, Assam, Burma and Ceylon. The principal forms of insurance now conducted in India are fire, marine, comprehensive motor car and motor cycle, loss of profits, fidelity guarantee, combined fire and burglary, and workmen's compensation. Underwriting is conducted in Departments, each being under the supervision of European assistants. The Indian staff, numbering some 50 clerks, shares in the Company's Provident Fund on an equal basis with the European staff.

The principal agents for the Company in the city of Calcutta are Messrs. Bird & Co. and Messrs. Andrew Yule & Co., Ltd.

**Burma Branch.**—The New Zealand Insurance Co. Ltd. was first represented in Burma by agents in 1900. The steady growth of its marine and fire business in that country at length necessitated the opening of a sub-branch in Rangoon in 1911. Since its inception that office, which reports to Calcutta, has made uninterrupted progress.

**Financial.**—The Company's report for the year ended May 31, 1926, showed the net revenue from fire, marine and accident premiums to amount to £1,066,012. The surplus on the year's operations, after making

full provision for losses, depreciation of investments and appropriation for taxation, totalled £80,158, and the net income from interest and rents £117,240. It was proposed to supplement an interim dividend of 10d per share, paid in the preceding February, by another dividend of like amount. The sum of £75,000 having been transferred to the reserve fund, a balance of £121,983 remained to be carried forward. Among the Company's assets, the investment total of £2,250,518 comprised Mortgages, £34,717, shares

insurance business is transacted, was incorporated in Great Britain in 1845.

**Development.**—From its inception the "Royal" showed unmistakable signs of becoming a company of world-wide reputation—a promise which has been amply fulfilled during over 80 years of continuous expansion. To take but one branch of its operations, the concern to-day, with its allied institutions, transacts the largest fire insurance business of any company in the world.

**Capital.**—The shareholders' capital is

**Indian Operations.**—The Company has had a long association with India, having opened within a few months of its formation agencies in Calcutta and Bombay. The high reputation of the Home office facilitated the rapid expansion of its business to all the leading centres of commerce and industry in the Peninsula, Burma and Ceylon.

For many years the "Royal" was represented in India by the sole medium of influential agency firms, but in 1891, on the acquisition of the Queen Insurance Co. (which had established branches in Bombay and Calcutta as far back as 1875), it was

ROYAL EXCHANGE ASSURANCE CORPORATION.

decided to conduct the business of both Companies from these offices, thus providing for the centralisation of the Company's Indian operations, and at the same time ensuring that expert advice would always be readily available for the assistance of its agents. The Company subsequently acquired more prominent sites for its offices in Calcutta and Bombay, and these headquarters are now well-known features in the commercial centres of those cities.

A branch of the institution was also opened in Rangoon in 1909 to facilitate its extensive operations in the thriving province of Burma.

The Royal Insurance Co Ltd is prepared to issue policies in India against all contingencies usually provided for by insurance.

**Financial.**—The amount at the credit of the profit and loss account for 1924, after payment of the final dividend, was £851,436. Following the operations of 1925, and after provision for interest on debenture stock and for dividends, the balance of profit and loss account for the year last-named was £958,185. An interim dividend of 13s. per share, less income tax, was paid on November 15, 1925, and a final dividend of 14s. per share, less tax, subsequently provided for.

At December 31, 1925, the total funds of the Company had reached £33,924,004, and the annual income £10,571,000.

**Directorate.**—W. R. Glazebrook (chairman), A. Allan Paton, C.B. (deputy chairman), A. K. Barnes, Frederick A. Bates, Sir Edmund F. Bushby, George Chappell, W. S. Crichton, J. Cyril Cunningham, P. #### ROYAL EXCHANGE ASSURANCE CORPORATION.

**Inception.** The troublous period of the South Sea Bubble saw the origin of this powerful corporation. A Mr. Case Billingsley, member of the Mercers' Company, proposed a scheme for a marine insurance institution under the name of the Public Assurance Office, and opened a list at the Mercers' Hall on August 12, 1717. The subscription asked for was £1,250,000, of which £1,100,000 was to be paid up. While the list was open a rival concern was amalgamated with Billingsley's project. Though in the first instance the Government refused a charter, the founder was equal to the occasion, buying for a song an old Elizabethan charter which had nothing whatever to do with insurance, but which he adapted to the purpose in hand. The Billingsley Assurance Company was formed to transact marine business, it soon progressed and paid a dividend in 1719. During the next year a Royal Charter was granted in return for a promise of a considerable sum to help the King's Civil List. Billingsley's original company now took the title of the Royal Exchange Assurance Corporation, which it has ever since retained.

**Development.**—Life and fire insurance were added to the existing activities in 1721, and since that year the history of the Corporation has been one of sound business and consequent prosperity. Its first agent was appointed in 1721 (in Berkshire), and a year later it became the first Office to extend its work to Ireland. In 1904 it established a Trustee Branch, being the first English insurance concern to do so.

**Capital and Funds.**—The proprietors' capital paid up on December 31, 1925, was £789,149. The various funds of the Corporation attained the following totals: Life assurance, £6,005,289, annuity, £858,044, capital redemption, £215,594, fire insurance, £871,600, marine insurance, £788,024, general accident insurance, £626,219. Special reserve funds amounted to £149,062, and profit and loss account (general reserve fund) to £1,247,873. Total assets at the date named were £13,039,554 9s. 5d.

**Operations.**—The following are the Royal Exchange Assurance's departments of business. Fire, life, sea, accident, annuities, motor car, plate glass, burglary, employers' liability, fidelity guarantees, third party, live stock, lift, boiler, machinery, trustee and executor,

**Indian Activities.**—The representation of the Corporation in India dates from the early 'sixties, and branches are now established at Calcutta and Bombay, the former under the management of Mr d'A H Kilgour and the latter under the Indian Cotton Company, Ltd.

The principal agents of the Corporation in India are as follow —

#### **JAVA SEA & FIRE INSURANCE CO. LTD.**

**Inception.**—During the present century insurance methods in the Netherlands East Indies have been increasingly assimilated to those obtaining in Europe, replacing the former unsatisfactory conditions resulting from defective system and administration underwriting, instead of being as formerly in the hands of small, unstable concerns, is to-day controlled by soundly-established and reputable institutions such as that now dealt with. The Java Sea & Fire Insurance Co Ltd, established in Batavia in 1861, forms one of four companies operating in a combine. The associated concerns are the

**Branches.**—The Company has branches situated in Netherlands India, India, Burma, Ceylon, China, Australia and Europe.

**Indian Operations.**—In common with its sister company the Batavia Sea & Fire Insurance Co Ltd, the institution under notice has been operating in British India for over forty years through the medium of agencies in Calcutta, Bombay and Rangoon. In 1920 it opened its own branch offices in Calcutta and Rangoon, followed in 1923 by a branch in Bombay. The establishment of these branches gave many facilities to the existing agencies, and numerous new agencies were opened on behalf of the four companies throughout British India, Burma and Ceylon. A considerable and consistent increase of

### COMMERCIAL UNION ASSURANCE COMPANY LIMITED.

**Inception.**—Eminent among the world's leading organisations underwriting all classes of insurance business, this Company was incorporated by deed of settlement (with articles of association annexed) dated September 28, 1861, annexed articles being adopted by special resolution passed on May 6, 1891. On August 8, 1885, the concern had been registered as a limited company, it is now regulated by the Commercial Union Assurance Co. Ltd. Act of 1908, which substituted new articles for the deed of settlement and previous articles of association.

**Capital.**—The capital of the Company (£2,500,000 in 50,000 shares of £50 each at the outset) is now £2,950,000 in 1,180,000 shares of £2 10s each, £1,770,000 (£1 10s. per share) being paid up. The general and investment reserve fund stands at £692,846.

**Activities.**—The Company commenced fire business on October 1, 1861, life assurance on May 1, 1862, marine underwriting on January 1 of the following year, and accident business, covering all classes of casualty insurance, on the acquisition of the Palatine Company in August 1900.

**Indian Branches.**—The first branch office in India was opened at Calcutta in 1871, and at later dates branches were also established in Bombay and Madras. The Company is further represented by influential agents in all the principal cities and towns throughout India and Burma.

**Calcutta Local Board.** There is a local board of directors in Calcutta, composed of the following: Sir Alexander Murray (of Messrs Jardine, Skinner & Co.), J. F. Barton (Hoare, Miller & Co.), I. A. Clark (Anderson, Wright & Co.) and J. E. Vallance (Grindlay & Co.).

**Financial.**—**Fire Department:** Net premiums for 1925 amounted to £8,080,541, being an increase of £357,874 as compared with the previous year. Claims paid and outstanding totalled £4,457,661. From this department's profits the sum of £250,000 has been carried to profit and loss, leaving the fire insurance fund at £8,283,677.

**Marine Department:** Net premiums for 1925 amounted to £496,881, an increase of £55,891 over 1924, claims paid and outstanding were £288,113, and £100,000 was carried to profit and loss, leaving the department's fund at £1,092,437.

**Accident Department:** Net premiums for 1925, £8,307,162, an increase of £675,759 compared with 1924, claims paid and outstanding, £4,638,579, £100,000 carried to profit and loss, leaving the accident insurance fund at £5,406,111.

**Life Department:** The new business for 1925 consisted of 6,134 policies for £4,161,523. As a result of the year's transactions the life assurance fund was increased by £1,294,595 to £12,990,794.

**Dividend:** From the profit and loss balance amounting to £1,056,288 it was proposed to pay a final dividend of 8s 3d per share, making with the interim dividend a total disbursement of 15s 6d per share, free of income tax, for 1925.

A GENERAL VIEW OF SIMLA

## CITY OF SIMLA

By E. J. BUCK, C.B.E., Author of "Simla Past and Present."

**T**HERE is only one correct answer to the question "What is Simla famous for?" and that is, "It is the summer headquarters of the Government of India." It is true that the Governor of the Punjab, with his Secretariat and satellites, resides in Simla in the summer months, and also that the Commander-in-Chief and Army Headquarters form no small portion of the population from year to year but these administrations sink into insignificance by the side of the Imperial Government.

Had it not been for official patronage Simla would never have come into being. She owes, as will be shown, her very existence to officialdom, and her character as an official centre is her main trait to-day. Thus it comes that the city has been constantly described as the "Home of the heaven born" (the covenanted civilians), "The abode of the little tin gods," "The Capua of India," "Olympus," and at other times by titles scarcely as complimentary. To be caught up to the Supreme Secretariat has long been, and still is, the ambition of many a budding civilian, and countless have been the reputations made and blasted, numberless the hopes and fears, the joys and disappointments that have centred round these famous Himalayan hills.

Simla is situated on several small spurs of the Lower Himalayas in Northern India, at a mean elevation of 7,100 feet above sea level. Its distance from the plains below is about 60 miles, and a wonderful little hill railway, which cost over £1,300,000 and which

possesses 107 tunnels aggregating five miles in length, with innumerable viaducts, cuttings and stone walls, carries the passenger from Kalka at the foot of the hills to the capital. The railway is a triumph of engineering skill and the journey up in the rail motor car an experience well worth making. According to "Simla Past and Present" Simla derives its name from "Shimla," as pronounced by the hill people, and was first discovered by a British officer who when moving Gurkha troops through the hills in 1816, was struck by the cool temperature of the place. The first Governor-General to visit Simla was the Earl of Amherst in 1827, and he resided with Major Kennedy, then Political Officer of the district at "Kennedy House" believed to be the first residence erected in the station but now the site of Government offices. It was Lord Amherst, by the way, who said "The Emperor of China and I govern half the human race, and yet we find time to breakfast."

Since his day no less than 25 Governors-General and Viceroys have resided for various terms of office in Simla, and the place has grown from an obscure village into a flourishing town of some 50,000 inhabitants. The fact that Lord Auckland in 1842 owned his own residence as well as the house which accommodated his staff, and sold them both on relinquishing the Vice-royalty for Rs.16,000 (then about £2,000), while the Lodge in which the present Viceroy (Lord Irwin) lives has cost 38 lakhs (some £300,000), is a striking indication of the station's growth.

The Commander-in-Chief (Field Marshal Sir William Birdwood Bart.) has a fine residence at "Snowdon" originally the property of Earl Roberts, and later on vastly improved by Lord Kitchener, and the Governor of the Punjab (Sir Malcolm Hailey) resides at "Barnes Court," a delightfully situated and picturesque house. The three big officials mentioned alone have the privilege of using motor cars in the station.

### ADMINISTRATION, BUILDINGS, ETC. -

Simla is under Municipal rule, the President is the Deputy Commissioner of the district, and nine official and non-official members assist him. The place boasts of good roads, excellent electric light and water schemes which have cost about £550,000, several churches of various denominations, a well-run United Service Club and several less important institutions, a moderately good little theatre where the Amateur Dramatic Club since the eighties has produced many remarkably successful plays, and numerous delightful private estates, including those of the Maharajas of Bharatpur, Patiala, Faridkot and Sirmoor. The main Government offices are imposing, the Cecil Hotel is the finest hotel in the Himalayas, and the municipal offices are neat buildings, but the remains of a dilapidated town-hall have long been a disgrace to the Summer Capital. The European shops in the upper bazar are distinctly good, if somewhat expensive, there are half a dozen well-known banks, and the big Indian bazar on the southern slope of the town, usually thronged by Tibetans and

by hill people from villages beyond the Sutlej, is wonderfully constructed, and is an interesting spot to visit.

The neighbouring suburb of Mashobra, where the Viceroy's beautiful "Retreat" stands in a magnificent forest carpeted with maidenhair and other ferns, and the Mahasu Ridge, which boasts of several beautifully situated villas, are popular week-end resorts. In May the Sipi Fair at Mashobra, in the Rana of Kotli's State is attended by hundreds of hill men and women in gay and picturesque costumes, and throughout the year the lovely woods are constantly resorted to by Simla residents. Simla, despite all opinions to the contrary, is a very beautiful spot and the Earl of Lytton, who recently officiated as Viceroy, has rightly described it as "a place of remarkable historical interest." It has been the birthplace of a Governor-General and of a Commander-in-Chief and the temporary residence of the greatest Generals of the British Army, also of many brilliant civilians. Despite the croakings in certain interested quarters to the effect that New Delhi will be the permanent headquarters in future for the Government of India both in summer and winter, there is overwhelming evidence from Viceroys downwards that Simla is the fitting place for India to be ruled from in the scorching days of the Indian hot weather, and there is really little reason to fear that the Queen of Hill Stations will be deprived of her present dignity and prestige for many a day to come.

**CLIMATE.**—The climate of Simla may be divided into four seasons of about three months each. The first quarter, beginning with January is rough, snowy stormy, and raw, the second is dry and sunny, with gradually increasing dust and heat, the third is rainy, damp, and relaxing, the fourth is bright, clear and bracing.

In May and June the mean maximum temperature is about 73 degrees, in January and February the mean minimum temperature is about 36 degrees. The average number of rainy days in a year is 87, during which 64 inches of rain are received. In no country perhaps are the seasons' periods of such rapidly changing extremes. The most trying is the rainy season, but "it is doubtful whether in the whole world there is a more magnificent landscape than the cloud scenery which spreads over the deep valleys and the mountain ranges that beyond Simla ascend in huge waves to the summits of Tibet. During breaks in the rains cloud masses form over them in giant steps and tiers which are lit up, as the day proceeds, by tints and colourings that are at once the delight and despair of the artist, and which mount in a Titan ladder to the everlasting snows. Well can one believe in the Olympian mansions of the gods when gazing on the glorious cloud-cities which surround the dazzling pinnacles of those snow-clad ranges that seem to end the world."

Towards the conclusion of September commences the period of the most delightful climate in the world. In October and November clear, bracing, exhilarating air invigorates the body and makes the soul rejoice. The sportsman carries his gun over mountain ranges that would have appalled him a few weeks earlier, and cavalcades of men, women, children stream out along the road on ponies, on foot, or in rickshaws and dandies to the glorious woods of Mathiana and Huttoo, some forty miles distant on the Hindustan-Tibet high road. Life is no longer existence, it is life.

**GOVERNMENT OF INDIA.**—To those who would read what is probably the best account of the Government of India in the eighties, General Sir George Chesney's "Indian

Polity" can be confidently recommended. The origin of this august body which permanently located itself in Simla for the months during Sir John Lawrence's rule in 1865, and has since continued to recess in the Himalayas in the scorching heat of the Indian summer may be briefly described as follows. "In the early days of 'John Company Bahadur' the settlements at Madras and Bombay and in Bengal were governed by Councils of the principal merchants, the senior being the President of the Council (hence the term Presidency). Each settlement was independent of the others, and transacted trade and administrative business directly with the Court of Directors in London. When worthy Job Charnock founded the City of Calcutta the Bengal settlement was a very small concern and it was not until Clive's jagir endowed it with the fertile provinces of Bengal, Bihar and Orissa that it became the most important of the Company's possessions. In 1773 the 'Regulating Act' of that year appointed a Governor-General and four Counsellors for the Government of Bengal and declared the supremacy of the Bengal Presidency over those of Madras and Bombay. As the possessions of the Company became gradually welded into a dominion, the control exercised by the Governor-General of Bengal in Council increased and at last he was declared by an Act of the year 1833 to be the Governor-General of India. He still continued to rule Bengal until a Lieutenant-Governor was appointed to that province in the year 1853." The Governor-General in Council now became the general controlling authority over the various provinces of India and the circumstances which led him to establish his summer capital at Simla have been set forth by the writer. As Sir George Chesney has explained, "the decision was arrived at rather as a gradual outcome of circumstances than of deliberate purpose from the first, and it is probably far from being the best possible arrangement."

**COUNCIL OF STATE.** At first the Council of the Governor-General was a purely consultative body, every case was circulated to each member of the Council, and after the several opinions had been recorded the decision was given by the Governor-General. Business, however, soon increased to a point at which this arrangement threw an impossible amount of work on the Governor-General, and after Lord Dalhousie had recorded a strong opinion on the subject, Lord Canning introduced the present system under which each member of the Supreme Council holds charge of one or other of the principal departments of business. To day the Viceroy is in charge of the Foreign Office, the Commander-in-Chief controls the Army branch, and the other departments are Finance, Industries and Labour, Legislative, Commerce, Education, Health, Lands and Home.

**LEGISLATURE.**—As everyone knows, the question of Indian Reforms has been a burning one for many years past. In the history of the country nothing is more striking than the rapid advance made in this direction in recent years. In the nineties the supreme Legislative Assembly consisted of some 16 members, who met in the chamber at Viceregal Lodge, now used as a billiard room by the aides-de-camp to the Viceroy. In Lord Minto's time the Imperial Legislative Council sprang from 16 members to 60. When Lord Chelmsford ruled India the Montagu-Chelmsford reforms resulted in a Council of State (53 elected and 27 nominated members) and a Legislative Assembly (104 elected and 41 nominated). Handsome buildings have been erected to house the Legislature in Simla, and the Viceroy fre-

quently exercises his prerogative of summoning one or both Chambers for the purpose of addressing them, either at the prorogation or opening of a new Assembly. When this happens the occasion is always fully state and brilliant.

#### **SIMLA SOCIETY AND SOCIAL LIFE.**—

Simla for many years undoubtedly had a reputation which she has not deserved. She has been generally termed wicked and frivolous, and her population has been accused of indulging in one long term of gaiety, flirting, gambling, and enjoyment. On this subject many writers and visitors from 1840 to the present day have written and expressed their opinions, among these having been Colonel S. Dewe White, of the Bengal Staff Corps. Dr. W. I. H. Russell, the famous "Times" correspondent (1858), Mr. John Lang, the "Nathaniel Gubbins" of the "Sporting Times", General Francis Rawson Chesney, R.A., the explorer of the Rupirates, Mr. Andrew Wilson, author of the "Abode of Snow", Mr. Val C. Prinsep, the well known artist, and in later years Mr. Rudyard Kipling who resided in Simla for a couple of summers in the eighties. I am inclined to think that Kipling's "Plain Tales from the Hills"—brilliantly clever as these short stories are—did much to lead the outside world to look on Simla as a centre of frivolity, jealousy and intrigue, and to induce many to believe that it was only peopled by "Mrs. Hawksheds" by frivolous grass-widows, idle hill captains, and the genus known as "bow-wows". The fact is that there have always been two distinct sides to Simla life, viz. the official and the social. There are to-day two communities, the bees and the butterflies. The former are the working classes, the men who conduct the work of Empire, the latter are those who come up from the plains for a holiday with the express intention of getting as much enjoyment as possible out of that holiday.

In a considerable measure too, the Anglo-Indian journals have been much to blame in that Simla has attained a reputation for frivolity, for a few years ago they devoted columns each week to social gatherings which in any other capital would pass unnoticed.

Simla, of course, is more or less deserted in the winter time, when the Government moves down to Delhi from November to the end of March.

**FESTIVITIES.** The principal summer festivities may be said to consist of balls at Viceregal Lodge and at the residences of the Governor of the Punjab and Commander-in-Chief, some eight or nine plays by the Amateur Dramatic Club, tennis and polo tournaments, weekly gymkhanas at Annandale, and constant tennis, dinner, bridge and evening parties. Dances at the Cecil Hotel, the Masonic Hall and at Messrs. Davicos' ballroom, and meetings of the rifle, polo, cricket and football clubs are naturally of frequent occurrence. The dances of the season, however, are those which are given by the most "Hospitable Order of the Black Heart." This Order, established by the late Colonel Newnham Davis (The Dwarf of Blood of "Sporting Times" fame), consists of a Grand Master, Prelate, and a limited number of Knights. Then fancy dress dances are most brilliant affairs, maidens take precedence of matrons in the State Lancers, and the Viceroy of the day always selects one of the youngest damsels for his partner. The knights wear a picturesque uniform, and the absence of formality is one of the reasons why their dinners and dances are so successful, and invitations to them so eagerly sought after.

There is a delightfully picturesque golf course of nine holes on the Naldera spur,

some twelve miles from Simla where enthusiasts camp out in May and June, and there are a couple of good cinemas in the station. Add to these an official garden party or two, a few concerts, picnics for which the surroundings are particularly well adapted, an occasional bazaar or fete for charitable purposes, and there is little more to mention.

**SOCIAL CHANGES.**—There is no doubt, however, that conditions regarding society have changed greatly in the last twenty years. The strict orders regarding official precedence, so marked a feature to visitors from foreign countries, continue to be observed but society as a whole has become less "chiquey" it is larger and more tolerant. Indian ladies and gentlemen now join far more freely with their European friends in games and in social entertainments. Many Indian ladies have emerged from the "purdah", some have taken to bridge and others to joining in dances.

In conclusion, Simla society is by no means so black as it has been painted. The wives of the Viceroy, for at any rate the last fifty years, have set examples which have excited the admiration of all who have known them. The great benevolent works for Indian women and children accomplished by Lady Dufferin, Lady Curzon, Lady Minto, Lady Hardinge of Penshurst, Lady Chelmsford, and last, though by no means least, by Lady Reading, are all duly recorded in the history of India.

**LORD ROY'S VERDICT.**—In his rare well-spoken at the United Service Club at Simla in October 1915 Lord Hardinge of Penshurst said: "When I read, as I have sometimes read, in the English Press that English women in India are frivolous and think only of amusement I grow fairly indignant for though it may have been the fashion in the past for certain journals to write of Simla as an abode of frivolity and the home of scandal, I can honestly say that during the five summers I have spent here I have never seen or heard of any but the most harmless and healthy amusement, nor has the breath of scandal ever reached my ears." Let Simla be content with this verdict.

**SPORT.**—Shooting in the vicinity of Simla is chiefly confined nowadays to "Kalege" pheasants, a few chukor (hill partridge) and an occasional black partridge. Now and then a Himalayan black bear or leopard is despatched, or a "guriel" (chamois) or "Karkar" (barking deer) is added to the bag. If the sportsman wanders out to more distant hills he may secure a "koklass," "chir," or monal pheasant, but these three latter birds are only rarely added to the local bag, the red argus has practically disappeared. There are several reasons why game is scarce and shooting difficult to obtain, firstly, many of the jungles have been shot out by shikaris or poachers for the Simla market or neighbouring rest bungalows, secondly, several of the best known jungles near Simla are now preserved by the local hill Rajas for their own shooting, or are kept for the entertainment of high officials or their personal friends, thirdly, the cost of shooting is now high, distances are great, and necessitate the expense of camping out. Thirty or forty years ago reliable beaters with dogs could be readily obtained at eight annas a man, now it is difficult to get an experienced shikarry for Rs 1/8/- a day. The dogs, I may say, form as a rule a wonderfully nondescript pack, and unless a bird is picked up immediately it is shot, it at once disappears, feathers and all, down the throats of "Tippoo," "Ruby," "Whiskey," "Tiger" and Company.

#### PHASANTS IN THE HIMALAYS.

In Dharm State, about twelve miles from Simla, there is a beautiful reserved forest in which the Viceroy usually shoots for a couple of days in the autumn. But even here with six or seven guns and possibly a thousand beaters the bag is not over 60 or 70 head in two days. It is true that the lovely surroundings and glorious weather in October compensate to a great extent for the lack of sport. Walking of course is hard work and at times difficult if not dangerous, and a hill pony is essential if shooting is to be indulged in in comfort. And here let me say that in the opinion of men who have shot all over the world there is no more difficult bird to bring down than the Himalayan pheasant. An old cock "kalege" with flexed wings whizzing down a precipitous slope will tax the skill of any gunner, however good he may be. To the keen sportsman there is no shooting to compare with it. The best snipe and pigeon shots in India have often cut a poor figure at pheasants on the hills slopes round Simla. Lords Minto and Kitchener some twenty years ago endeavoured to rear "kalege" pheasants in a forest adjoining the station and the place was strictly preserved. The aid of forest officials was enlisted, neighbouring hill chiefs were asked to assist by sending in pheasant eggs, special hens to sit on the nests were purchased, and Gurkhas were engaged to guard the preserves. But, alas! many of the lot of five hundred eggs which arrived were "addled" and less than thirty young pheasants made their appearance. Most of these on being turned out apparently became victims to the foxes, jackals, pneumartens and other enemies which appreciate unsophisticated youthful pheasants. At any rate when the big shoot came off the bag was only 14 pheasants and a barking deer, and each bird must have cost well over a hundred rupees. The attempt to raise more pheasants was then abandoned.

As mentioned previously, the Viceroy of the day has his own preserve, and no keener Governor-General ever shot there than Lord Reading, who has just left India. Although he only began to use a gun when nearly sixty years of age, he became as keen a sportsman as the Simla hills have ever witnessed, and more than once stated that he enjoyed his informal outings in the neighbouring valleys more than any of the big organised battues in the plains.

**SEASON.**—The shooting season runs from September 15 to March 10 for all animals scheduled. Bear and leopard, however, can be shot at any time. The shooting of muskdeer and peafowl is prohibited throughout the year. Permits to shoot in the various forests are issued through the Superintendent of Hill States.

**WATER SUPPLY.**—The Simla water supply is derived from five sources, viz. the Upper Gravitation Pipe Line, the Cherut Nullah, the Lower Gravitation Pipe Line, the Chair Nullah, and the Guma Scheme. The last named takes its water from the River Nauti where five million gallons are available per day. The water is passed to large natural sedimentation tanks then treated with alum and sent through coagulating tanks to the Paterson rapid gravity filters. It is next pumped by special pumping machinery operating under a total head of over 4,000 feet, this is believed to be the highest single-lift pumping operation in the world. At the top of the hill the water is finally chlorinated by the Paterson system and allowed to flow on to the town of Simla.

#### SUPPLEMENTARY DATA

**DISTRICT OF SIMLA.** The district of Simla covers an area of 104 square miles, and is characterised by hills clothed with forests of deodar, also rhododendrons up to the perpetual snow limit. South and east of Simla the ranges between the Rivers Sutlej and Tons centre in Chor Mountain 11,982 ft. above sea level. The chief rivers watering the Simla district are the Sutlej, Pabai, Gari, Gambhari and Sarsa.

**HILL STATES.** The cession by the British Government of the territory forming the district of Simla dates from the close of the Gurkha War (1815-16), whereby a tract of country between the Gogra and Sutlej Rivers was secured. Kumaon and Dehra Dun were added to the British possessions, but most of the remaining territory was given or restored to the Rajas from whom it had been seized by the Gurkhas. Garwhal State was attached to the North-West Provinces, the other principalities, 28 in number, are classed as Punjab dependencies, being known as the Simla Hill States. Chief among them are Baghal, Bishahr, Bilaspur, Hindur, Jubbal and Keonthal.

**INSTITUTIONS.**—Among the numerous libraries and institutes with which Simla is furnished the chief is the United Service Institution which enjoys a Government subsidy. The Walker Hospital, founded by Sir James Walker, C.B., and the Ripon Hospital are the principal medical institutions. Educational foundations include Bishop Cotton's school for boys, the Mayo industrial orphanage for girls, certain aided schools for Europeans, and two Anglo-vernacular schools for natives.

**MINOR SANATORIA.** To the south of Simla lie the minor sanatoria of Dagshai, Kasauli, Sabathu and Solon.

**KASULI.** Fine views may be obtained from this station, situated as it is 6,322 feet above sea-level and overlooking the Kalka Valley. Here are located the principal Pastern Institute of India, the Central Research Institute of the country, and the Kasauli Club. Three miles distant is Sanawar, the site of the Lawrence Royal Military School.

**POPULATION.**—A midsummer census of Simla in 1921 recorded a population of 43,997, in midwinter the population is estimated at about 26,430.

**SURROUNDINGS.**—To the north of Jakko is a picturesque wooded spin known as Elysium Hill on which Lord Auckland and his sisters had their residence. On the south side of Jakko is the long slope of Chota Simla, on which Barnes Court, occupied by the Governor of the Punjab, is situated. The western part of Simla is Boileauganj.

Some three miles west of Simla is the cantonment of Jutogh, with a station on the Kalka-Simla line. Sometimes designated the "playground" of Simla, owing to its provision for the enjoyment of sport in various forms, Annandale is a plain located to the north-west of the station, lying in the valley some 1,200 feet below the Ridge. Among its distinctive features are the fine Gardens, the cricket ground and the racecourse which surrounds it. Westward of Annandale is the beautiful woodland valley known as the Glen. Mashobra, five miles from Simla, is the site of a summer retreat of the Viceroy, some eight miles distant is the forest of deodars known as Nakdera.

# THE ASSOCIATED HOTELS OF INDIA, LIMITED.

**Activities.** This enterprising company, of which Chevalier Faletti M.V.O., is managing director, owns some of the best-known and most popular hotels in India. These establishments, situated at Simla, Delhi, Lahore, Rawalpindi and Murree, are respectively dealt with below.

**CECIL HOTEL, SIMLA.—SITUATION.** This hotel, which stands at an elevation of about 7,500 feet above sea level, has been described by many visitors to the summer capital of the Government of India as the hotel *par excellence* of the East. Like many other famous institutions it had a modest beginning, the original property changing hands 25 years ago for the comparatively small equivalent of £3,000 sterling. To day the grounds and buildings on the estate are valued at something like £150,000 sterling, a result mainly due to the efforts of Chevalier Faletti.

**ACCOMMODATION.** The Cecil accommodates nearly 200 guests, and, being within a few minutes of the railway station, Viceregal Lodge and Government Offices, and but 12 to 15 minutes' journey from Annandale, the famous playground of the station is used largely by the official classes. It is fitted with all the latest conveniences, including the most modern sanitary arrangements. There is a first-class orchestra, also a splendid dining and ball room and the weekly dances are among the chief events of the Simla season.

**CUISINE.** This is excellent, and all the important official and non-official banquets given during the Simla season are held at the Cecil.

**CORSTORPHAN'S HOTEL, SIMLA.—SITUATION.** Few hotels can boast of a more glorious view of the everlasting snows than Corstorphane's, which, perched on the side of Jakko, the famous Simla mountain immortalised in several of Kipling's "Plain Tales from the Hills," looks out over Snowden, the residence of the Commander-in-Chief of India, to the great snowy range of the Himalayas, where scores of snow-peaked summits, ranging from 17,000 to 23,000 feet, are visible on a sunny day.

**ACCOMMODATION.** The hotel is comfortably furnished, and possesses the latest improvements and modern sanitary arrangements. There are bedrooms to accommodate 100 guests, and the usual public rooms. Corstorphane's has always enjoyed a great reputation as a first-class family hotel, and

its patrons are loud in praise of the homely comforts, excellent cuisine and general arrangements.

**MAIDEN'S HOTEL, DELHI.—**Within recent years The Associated Hotels of India Ltd., have spent large sums of money on improvements to this renowned hotel, which is now one of the most sumptuous in the East, being often described by visitors as the "Shepherd's" of India.

**ACCOMMODATION.** This provides for over 200 guests, the hotel being the recognised rendezvous of the elite of Delhi and patronised by visitors from all parts of the world, among whom it is highly esteemed for its cuisine, comforts, amenities and charming surroundings. In the winter, during the Legislative Session of the Supreme Government, it is the meeting place of the Indian political world.

**Facilities.** Special arrangements are made by the management for guests to visit the historical places of Old Delhi, such as the famous Ridge where continuous fighting raged during the Mutiny in 1857, the wonderful Kutub Minar, many historic buildings and the famous Chandni Chalk, the richest street in Asia.

**Functions.** Maiden's Hotel possesses an excellent ball room and orchestra, and the Imperial Horse Show Ball held yearly in February is attended by people from all parts of the country. Many notable and historic functions have been held in the magnificent public rooms of the hotel, the chief being the banquet given by the Ruling Princes to H.R.H. the Prince of Wales on his visit to Delhi in 1922.

**Cables.** "Maidens" Delhi.

**NEW DELHI.** Raising, the new Imperial city is being raised on the desert plains six miles from Old Delhi, but the ancient city and Maiden's Hotel will ever remain the centre of attraction to visitors to the capital.

**FALETTI'S HOTEL, LAHORE.—**This, another of the company's celebrated establishments, is named after Chevalier Faletti, the managing director who reconstructed it in 1912. If it lacks in a measure the magnificent luxury of Maiden's Hotel, Delhi and the Cecil Hotel, Simla, it can boast of an advantage that neither of these possesses. Delightfully picturesque, with charming grounds and gardens, it contains semi-detached blocks of residential rooms which are extremely comfortable and much sought after.

**SITUATION.** The hotel is conveniently situated in Lahore, the capital of the Punjab and one of the most advanced cities in India,

being blessed with ample canal irrigation and cleverly laid out, while its wonderful gardens are well worth seeing.

**ACCOMMODATION.** The building can accommodate about 100 guests, but during Christmas Week, when Lahore is *en fete*, the number is increased to 180, the extra visitors being lodged in tents, thus forming a delightful camp and enjoyable dances are then held in the spacious ball room.

**Cables.** "Faletti's" Lahore.

**FLASHMAN'S HOTEL, RAWALPINDI.—**This hotel is named after the founder, who established it on a very small scale in the 'nineties. It has been taken over by the company under notice who have improved it beyond recognition. Now what may be termed an excellent and popular residential hotel, it is very largely patronised by military officers and their families.

**SITUATION.** Rawalpindi, well termed the Aldershot of India, lies on a plateau at the foot of the Himalayas and is one of the big bases for military frontier operations.

**ACCOMMODATION.** The hotel, which can accommodate 100 guests, is fitted with the latest improvements and has a most excellent cuisine. It is the main halting-place for travellers to and from Kashmir.

**Cables.** "Flashman's" Rawalpindi.

**CECIL HOTEL, MURREE.** This first-class hotel is the latest addition to the undertakings of The Associated Hotels of India, Ltd.

**SITUATION.** The Cecil Hotel at Murree stands in a superb position overlooking the plains of India, and is close to the famous Kashmir mountain ranges. Murree, which is on the road to Kashmir, is nearly 8,000 feet above sea-level, it is most picturesque, and from it can be made many charming excursions to the surrounding hills. It is the summer headquarters of the Northern Command of the Indian Army, and, being only 30 miles from Rawalpindi by an excellent motor road, it is a very popular centre for week-end visitors from that military station and the neighbouring gullies.

**ACCOMMODATION.** Although smaller than the other establishments owned by The Associated Hotels, the Cecil at Murree provides the same excellent cuisine and an equally high standard of comfort.

**Cables.** "Cecil," Murree.

## RAILWAYS

### RAILWAYS

**B**Y far the most important of all the means of communication in India is the railway system, which although it may at first sight appear gigantic and has beyond doubt expanded enormously during the half century since 1872, is yet far from adequate to the needs of the country. Of the progress made the statistical information which follows will give some idea, but it may here be recalled that in the year just named the total mileage of the Indian Railways amounted to only 5,300, whereas by the end of 1925 the figure was approximately 38,500 miles. But this mileage, large as it seems, has, it must be remembered to serve the needs of nearly 320 million people. England so small by comparison both in population and area, has 50,000 miles, and the United States 250,000 miles. It is obvious then that there is great need for expansion of the Indian railway system.

The two years 1923-24 and 1924-25 witnessed solid progress by all classes of the Indian Railways towards recovery from the effects of the War period and the post-war financial difficulties. The Central Administration has been completely reorganised, railway finances have been separated from the general finances of the country, and railway property has been gradually rehabilitated and improved. It is difficult to foresee the full results of the measure of independence afforded to the Railway Board and Railway Administrations in the management of their affairs on commercial lines and by methods which look first and last to the transportation needs of the country.

**ABSTRACT OF HISTORY.**—The history of the Indian Railways very closely reflects the financial vicissitudes of the country. Not until a considerable time after the first English railway was an accomplished fact was the laying of lines in India even thought of, the earliest proposals for the construction of a railway being put forward in 1843-44. The first line was opened on April 18, 1853, and ran for 21 miles from Victoria Terminus, Bombay, to Thana. During the next two years it was extended to Kalyan and Vasind, making a total length of about 50 miles. The first railway out of Calcutta, a length of 23 miles from Howrah to Hooghly, was opened on August 15, 1854, and was extended within the next two years to Raniganj, a total distance of about 120 miles, in the Madras Presidency the first railway was opened in 1856. By the end of 1859 contracts had been entered into for the construction of 5,000 miles of line, at a capital expenditure of some 52 millions sterling. This scheme laid the foundation of the Indian Railway system as it exists to-day.

**GUARANTEED COMPANIES.**—Until 1869 railway construction in India was carried on by guaranteed companies with headquarters in London. India needed railways, but could not find the money with which to build them, and the raising of the necessary funds was left to companies who were guaranteed certain minimum dividends by the State. From 1869 the formation of

## AIR, RIVER AND ROAD

guaranteed companies ceased and except in a few cases, such new lines as were built during the next ten years were constructed by the Government, being operated and managed directly by it. The contracts with the original guaranteed companies ran for 50 or 60 years, but in every case the Government reserved powers to terminate the contract and buy out the companies at some intermediate date. These powers have been in each instance exercised by the Government. The form in which the purchase-price has been paid has varied, in some cases it has been in cash, sometimes in stock, at other times in terminable annuities.

### OWNERSHIP AND MANAGEMENT

Although the Government of India acquired a preponderating share of the ownership of railways, it retained direct management of few, in fact, until it took over the management of the East Indian and Great Indian Peninsula lines in 1925, the only State managed lines were the North-Western, Oudh and Rohilkand and Eastern Bengal railways. The position in March 31, 1926, was that out of a total mileage of 38,552, 27,430 miles or 71 per cent were owned by

## SHIPPING

the State, while the mileage directly worked by the State stood at the figure of 15,504 or 40 per cent of the total extent. The purchase of the Delhi Amballa-Kalka Railway, with effect from April 1, 1926, increased the mileage of State-owned lines by a further 210.

### PROGRESS OF CONSTRUCTION

The following table shows the growth of the mileage of Indian railways and the capital outlay to the end of March 1925.

YEAR	MILES OPENED FOR TRAFFIC	CAPITAL EXPENDITURE (IN LAKHS OF RUPEES)
1850-60	838	20,00,00
1861-70	3,033	63,34,50
1871-80	4,225	38,50,41
1881-90	7,408	85,10,13
1891-1900	8,348	1,15,86,30
1901-10	7,347	1,09,51,39
1911-20	4,630	1,27,33,04
1921-25	1,535	1,74,30,04
Total	38,270	Rs 7,40,68,41

It will be seen that the average number of miles constructed per year during the first decade was less than one hundred. In

TAJ-MAHAL, at Agra. (E.I. and B.E. & C.I. Railways).

## RAILWAY SYSTEM OF INDIA.

Diagram Showing 70 Years of Progress, giving

(1) Total Capital Outlay on all Lines (2) Total Gross Earnings of all Lines (3) Total Miles Open (4) Total Working Expenses of all Lines.

the fifth decade (1891-1900), which marks the greatest progress in the construction of railways in India, the average number of miles constructed per year rose to 800

The length of new lines opened in 1925-26 was 264 miles, compared with 233 miles in the preceding year; in 1926-27 it was expected to be 239 miles.

**ADMINISTRATION.**—See text of "Railway Board" following in this section  
**ADVISORY COUNCILS.**—See text of "Railway Board" following in this section.

**CLEARING HOUSE.**—Proposals have several times been made for the establishment of a Clearing House, but it is considered that the distances are too great. The work which

would ordinarily be done by the Clearing House is carried out by the Audit Office of each railway.

**COAL SUPPLY.**—In 1925 the coal mined in British India amounted to 19,969,041 tons, against 20,256,034 tons in 1924, or a decrease of 286,993 tons.

The total quantity of Indian coal consumed on the Indian Railways during the three years ending March 1925 and the quantities obtained from railway owned collieries were as follow -

YEAR	COAL CONSUMED TONS	QUANTITY OBTAINED TONS
1922-23	5,476,041	1,628,034
1923-24	6,060,693	1,602,876
1924-25	6,594,875	2,033,468

**ELECTRIFICATION.** See later "Traffic (Facilities for Handling)"

**ENGINEERING WORKS (SOME NOTABLE).** There are many engineering works on the Indian Railways which rank with some of the greatest railway engineering feats in the world. These may be classified as Bridges, Mountain Railways and Tunnels, and the more important are briefly summarised as follow

**BRIDGES.**—The largest Indian railway bridge is the Godavari, on the Madras and Southern Mahratta Railway. It has a total length of 9,000 ft. and consists of 56 spans of 150 ft. and also one span of 40 ft., the gauge being 5 ft. 6 in., single line. The Mahanadi Bridge, on the Eastern Bengal Railway, has a total length of 6,912 ft. (64 spans of 100 ft.), and the Pamban Viaduct, on the South Indian Railway, one of 6,739 ft. (141 spans of 40 ft., one of 38 ft. and one of 200 ft.). The Harding Bridge, on the North Western Railway (5 ft. 6 in. gauge, double line), over the Ganges, has a total length of 5,894 ft. and consists of 15 spans of 345 ft., six spans of 75 ft., and two spans of 12 ft. The 16 main piers are carried on wells sunk by open dredging to a depth of 150-160 ft. below the lowest water level. These are believed to be the deepest foundations of their kind in the world.

The Goteik Viaduct, on the Burma Railways (3 ft. 3 in. gauge, single line) has a total length of 2,260 ft., consisting of seven 60 ft. spans, ten 120 ft. spans and sixteen 40 ft. spans. The viaduct is erected on steel trestles and the height of the highest trestle is 320 ft. For 281 ft. at one end and 341 ft. at the other this viaduct is on a curve of 800 ft. radius. Although only a single line is laid at present, the trestles have been built to accommodate a double one.

**MOUNTAIN RAILWAYS.**—The three most notable mountain railway engineering feats are the following:—

**Darjeeling-Himalaya Railway.**—The Darjeeling-Himalaya Railway, 2 ft. gauge, is 51 miles long, and rises to a maximum height of 7,000 ft. in the first 4½ miles. The steepest grades are 1 in 24 and 1 in 23 uncompensated, with short lengths of 1 in 20, and the sharpest curve is 60 ft. radius. There are 5 loops and 4 reversing stations on this line, which runs through country unsurpassable in its beauty of scenery and in the magnificent views of some of the highest peaks in the Himalayas, including Mount Everest. Darjeeling is the summer seat of the Bengal Government and the great health resort of Calcutta in the hot weather. It is about 7,000 ft. above sea level.

**Kalka-Simla Railway.**—See text of "North Western Railway" following in this section.

**Nilgiri Railway.**—The Nilgiri Railway, 3 ft. 3 in. gauge and 28.96 miles long, of which the last 12 miles is a rack railway, leads up to a superb natural plateau of some 900 square miles, standing about 7,500 ft. above sea level. The principal town is Ootacamund, the summer headquarters of the Madras Government. The steepest gradient on the "adhesion" section is 1 in 25, and on the "rack" section 1 in 12.5.

SASARAM TOMB (East Indian Railway)

The sharpest curve is 318 ft. radius, and the total rise is about 4,550 ft.

**TUNNELS.** The longest tunnel on any Indian railway is the Khojak, in Baluchistan, on the North-Western line, 12,800 ft. in length. The Pannu and Nishpa Tunnels, which are similar to the Khojak in that the track is of 5 ft. 6 in. gauge, double line are also in Baluchistan; they are 3,218 ft. and 2,680 ft. long respectively. On the Kalka-Simla Railway the Barog Tunnel has a length of 3,752 ft. Two tunnels on the Great Indian Peninsula Railway, the Parsik and the Hull Ghat No. 2 are 4,322 ft. and 1,525 ft. long respectively.

**FATALITIES AND ACCIDENTS.**—During 1924-25 there were increases of 127 in the number of persons killed and 211 in the total of persons injured on all the Indian railways as compared with the figures for 1923-24, the details being as follow:—

	1923-24	1924-25
PASSENGERS		
Killed	372	418
Injured	1,272	1,312
RAILWAY SERVANTS		
Killed	417	460
Injured	1,420	1,489
OTHER PERSONS		
Killed	2,029	2,061
Injured	755	857
Totals	6,265	6,603

Out of the total of 2,945 persons killed in 1924-25 on the railways, 1,665 were trespassers and 262 committed suicide.

**FINANCES.**—In the year 1924-25 the Railway Budget was for the first time separated from the General Budget. The results of that separate Budget were described by the late Viceroy, Lord Reading, in his speech of January 20, 1926, in which he pointed out that the railways had been able satisfactorily to consolidate their finan-

cial position and that they were now in a position to make a beginning in the direction of reducing fares, concrete proposals for which were under consideration. His Excellency also stated that it was the Government's intention to set up a Rates Advisory Committee, which would adjudicate between the railways and the public on disputed questions of the rates and fares levied. The Railway Budget for 1926-27 was presented in the Legislative Assembly on February 18, 1926, by Sir Charles Innes, the Railway Member. This showed that the financial results of 1924-25 were better than had been expected, and represented a return of 5.85 per cent. Thus the net contribution made by the railways was 678 lakhs of rupees instead of 564 lakhs, and 638 lakhs were carried to the Railway Reserve, instead of 410 lakhs as on the previous occasion. The revised estimates were not quite so satisfactory: the drop in earning had been entirely on goods traffic, mainly in respect of wheat and coal. The gross receipts were 99.81 crores of rupees, or 153 lakhs less than the Budget estimate, while the gross revenue-expenditure was 89.36 crores, or 118 lakhs less. The falling off in the net profits was only 35 lakhs, but the revised estimates included 37 lakhs in respect of concessions to railway company officials. The railways contribution for 1925-26 was 532 lakhs net, and 345 lakhs was to be added to the Railway Reserve. The announcement in December 1925 of the suspension of the cotton excise duty was greatly facilitated by the stabilisation of the railway contribution resulting from the separation of the Railway Budget. The Budget estimate for 1926-27 was 102.58 crores gross receipts and 92.13 crores gross expenditure. The loss on strategical lines was 173 lakhs, and the contribution to the

general exchequer was 601 lakhs, the transfer to the Railway Reserve being 270 lakhs. The reduction in fares would mean the loss of 160 lakhs, the greater part of which was in lower-class traffic, while a reduction of approximately 10 per cent in freight charges for long distance (400 miles) coal traffic would mean a loss of 38 lakhs.

the purchase of the Delhi-Amballa Kalka Railway Rs 15.44 crores for open works, and Rs 6.56 crores for new construction.

**FINANCIAL POSITION, 1925-26.**—The following table summarises the financial position of the railways with which the Central Government is directly concerned in the years named—

constituted, consisting of one nominated official member of the Legislative Assembly who should be Chairman and eleven members elected by the Legislative Assembly from its body. This Committee was duly elected and held its first meeting in January 1925. All important estimates of railway expenditure are placed before the Committee for

ISLAND TEMPLE OF GAIBINATH, ON THE GANGES RIVER (East Indian Railway)

**CAPITAL EXPENDITURE.**—The total capital at charge on all railways, including those under construction up to the end of March 1925 amounted to Rs 740.08 crores, of which Rs 655.21 crores represented the capital at charge on the State-owned railways inclusive of premiums paid in the purchase of companies' lines, the balance having been provided by Indian States, Companies and District Boards.

The capital at charge in regard to State-owned railways for which the Government is responsible is made up as follows:

	£
Liability and debt incurred in purchase of railways	150,109,209
Less liability and debt cancelled by the operation of Annuities and Sinking Funds	29,223,926
Net amount outstanding	120,885,373
	Rs in 1,000's
Converted at Rs 15 = 1	1,81,32,81
Direct expenditure by Government	4,73,88,32
Total	6,55,21,13

Of this amount, Rs 6,07,85,90 is Government capital and Rs 47,35,23 the capital of the companies.

The total capital outlay on all railways during 1924-25 was Rs 15.50 crores, of which Rs 15.47 crores were spent on State-owned lines. This compared with a total of Rs 19.71 crores expended in 1923-24 and Rs 19.03 crores in 1922-23. Expenditure in 1925-26 rose to Rs 21.25 crores, the figure being exceeded by that of Rs 26 crores which was budgeted for capital expenditure during 1926-27, the latter including Rs 4 crores for

	IN LAKHS OF RUPEE	1924-25	1925-26
		Rs	Rs
Traffic receipts from Government railways		1,01,01,56	
Interest on depreciation and reserve fund balances		21,22	
Government share of surplus profits from subsidised Companies' railways		30,16	
Total		1,01,55,94	99,81,00
Working expenses including depreciation		62,99,78	
Surplus profits paid to Companies		1,42,28	
Interest on Government debt		21,27,30	
Sinking fund			
Interest on capital contributed by Companies		2,07,17	
Land and subsidy to Companies		1,00	
Miscellaneous		13,22	
Total charges		88,43,84	89,36,00
Net gain		13,12,10	10,45,00
Contribution from Railway to general revenues		6,76,97	5,32,00
Railway reserve		6,35,13	3,45,00

After meeting all interest charges, the Government therefore received in 1925-26 a net profit of Rs 10.45 crores, as against profits of Rs 13.12 crores in 1924-25 and Rs 6.47 crores in 1923-24. On the capital at charge of the State lines the net receipts, that is the gross receipts minus the working expenses, have in recent years given the following return—

	PER CENT
1913-14	5.01
1921-22	2.64
1922-23	4.38
1923-24	5.24
1924-25	5.85
1925-26	5.23

**STANDING FINANCE COMMITTEE.**—When it was decided in 1924 to separate the railway finances from the general finances of the country, it was settled that a Standing Finance Committee for Railways should be

approval and the whole of the demands for grants for the ensuing year are examined by that body prior to their discussion in the Legislative Assembly.

**GAUGES.**—The standard gauge for India is 5 ft. 6 in. When construction was started the broad gauge was thought advisable in order to minimise the danger of cyclonic damage, but in 1870 when the State system was adopted, it was decided to find a more economical gauge. After much deliberation, the metre gauge of 3 ft. 3½ in. was approved, this decision being mainly influenced by the impression that the metric system was going to be adopted for India. The intention was to make the metre gauge lines experimental and they were built light so that they could easily be converted into broad gauge if necessary. But the surprising rapidity of the traffic expansion upset these calculations, and it was found cheaper to improve the carrying power of the metre gauge lines, rather than to convert them into broad gauge. Consequently, except in the Indus valley, where strategic considerations demanded a uniform gauge, these lines were improved, and they became a permanent feature of the railway system. At the present time there is a great metre gauge system north of the Ganges connected with the Rajputana lines and Kathiawar. Another system in Southern India, embracing the Southern Mahratta and the South Indian systems, is also metre gauge. Since the opening of the Barai line, illustrating the capacity of the 2 ft. 6 in. gauge, a tendency has developed to construct feeder railways on this rather than on the metre gauge.

**INDIANIZATION.**—As in every other department of the Administration, the question of the Indianization of the superior staff of the railways has attracted much interest and given rise to endless discussion. The progress that has been made in meeting

the aspirations of the Indian peoples may be gauged from the following figures. In 1913-14 the total number of Indian employees on all railways was 614,882, this figure being increased to 727,003 in 1923-24 and 740,854 in 1924-25. During the year 1924-25 the number of Indians (including Anglo Indians) in the higher subordinate grades increased from 4,586 in 1924 to 5,030 in 1925, while on State Railways the number of Indians rose from 1,180 to 1,283.

The Government of India has throughout maintained the attitude that every reasonable means should be adopted to increase the number of Indians in the higher grades of

**BENGAL AND NORTH-WESTERN RAILWAY** — This railway was constructed on the metre gauge principle by a company without any Government assistance other than free land and was opened to traffic in 1885. The system was begun in 1871 as the Tooty State Railway. In 1890 this line was leased by the Government to the Bengal and North Western Railway, and since then extensive additions have been made in both sections. It is connected with the Rajputana metre gauge system at Cawnpore, with the Eastern Bengal State Railway at Khulna and the Oudh and Rohilkhand Railway at Benares. The total

railways of India, had 3,836.97 miles of line open on March 31, 1925. It provides communication between Bombay, Surat, the important cotton centre of Ahmedabad, Baroda and the Central Indian and Rajputana States, working, in addition to its own valuable property, certain smaller lines owned by separate companies and Indian States. (See also text concerning the company following in this section.)

**BURMA RAILWAYS** — The railways of the Province of Burma are worked by the Burma Railways Company, Ltd., which was registered in 1896 and acquired under a guarantee the system which had previously been owned and operated by the Government. At present the system is an isolated one, and although various routes have been surveyed there is little prospect of its being connected with the railway system of India for some years to come. Generally speaking, the system runs north and south connecting the two largest cities of Rangoon and Mandalay with Myitkyna in the extreme north, lateral spurs tapping the rich districts of the Irrawaddy, the Salween, the Chindwin and the

the service in so far as such increase is consistent with efficiency and economy. The Government has accepted the recommendation of the Lee Commission that 'the extension of the existing training facilities in India should be pressed forward as expeditiously as possible in order that the recruitment of Indians may be advanced as soon as practicable up to 75 per cent. of the total number of vacancies in the Railway Department as a whole, the remaining 25 per cent. being recruited in England'.

**MAIN LINES.** — The following are the chief railway systems in India, the total number of separate railways, several often being

#### GREAT INDIAN PENINSULA RAILWAY

1. Kalpi Viaduct.
2. Ehagaon Viaduct
3. Banda Bridge.

(See letterpress page 103)

grouped under one management, amounting to no less than 170.

**ASSAM-BENGAL RAILWAY** — This railway, construction of which as a State line was commenced in 1891, consists of a main track running from Chittagong to Tinsukia, a distance of 573.79 miles, with about 300 miles of branch lines. Other lines which have been amalgamated with the ABR and now form part of the system bring the total open mileage up to 1,049. The Assam-Bengal Railway Company was formed in England in 1892, and took over the works commenced by the State.

On March 31, 1925, the total capital outlay on the Assam-Bengal Railway amounted to Rs 20,32,81,000, the net earnings for the preceding 12 months being Rs 1,64,02,000. The head offices of the company are at Bishopsgate House, London, E.C.

mileage open at the end of the year 1924-25 was 2,065, the capital at charge being Rs 19,60,04,000. Net earnings for the year were Rs 1,83,27,000. The offices of the company are at 237, Gresham House, Old Broad Street, London, E.C.

**BENGAL-NAGPUR RAILWAY** — The Bengal-Nagpur Line and the Northern section of the East Coast Railway, which make up the Bengal-Nagpur Railway system, are of 5 ft 6 in gauge, and had in 1925 a total open mileage of 2,954.45. The line serves the important industrial centres of Howrah, Cuttack and Katni and the coal fields of Bihar and Orissa, and connects with the East Indian Railway at Hariharpur. (See also text concerning the company following in this section.)

**BOMBAY-BARODA RAILWAY** — This Railway, one of the original guaranteed

Shan Plateau. In 1925 there were 1,705 miles open to traffic, the capital at charge of the Company being Rs 27,14,33,000, and the net earnings for 1924-25 Rs 1,76,48,000.

**EASTERN BENGAL RAILWAY** — The various lines owned by the late Eastern Bengal Guaranteed Railway Company were acquired by the State in 1884, the Northern Bengal State and Calcutta and South Eastern Railways being amalgamated for working by the Government under the name of the Eastern Bengal Railway. The railway serves the whole of the eastern portion of Bengal, runs to the foot of the Himalayas and connects with the Assam-Bengal Railway and Bengal-Dooars Railway. The total mileage open in 1925 was 1,721, the net earnings for 1924-25 amounting to Rs 1,81 lakhs, compared with Rs 1,51 lakhs in 1923-24. (See also text concerning the company following in this section.)

**EAST INDIAN RAILWAY** — This old and important railway gives the only direct access from Northern India to the Port of Calcutta, and is consequently fed by all the railway systems connected with it. Since 1925 the management has been in the hands of the Government. The railway had in 1925 a total mileage of 2,707, and its net earnings in 1924-25 reached the sum of Rs 7.11 lakhs, as against Rs 6.57 lakhs in the preceding year. (See also text concerning the line following in this section.)

**GAEKWAR'S BARODA STATE RAILWAYS**—These lines, with a total open mileage in 1925 of 339, are the property of His Highness the Maharaja Gackwar of Baroda, being maintained and worked by the Baroda and Chhota-Udaipur Durbars. The net earnings of the State Railways proper in 1924-25 were Rs 7,15,523 and of the Chhota Udaipur Railway Rs 31,900.

**GONDAL RAILWAY**—The three lines of this system, aggregating 189 miles in 1925, are owned and worked by the State of Gondal, for which they were constructed by Government agency.

**GREAT INDIAN PENINSULA RAILWAY**—This is India's premier line in point both of age and importance. It was begun in 1853 and was the first part of the railway system connecting Bombay with the eastern ports. At Raichur and Jubbulpur respectively the Great Indian Peninsula connects with the Madras and East Indian Railways. The feature of this line is the passage of the Western Ghats, these sections being 15½ miles on the Bhore Ghat and 9½ miles on the Thull Ghat which rise 1,131 and 972 ft. The Government of India took over the working of the line in 1925, the mileage open being 3,446 and the capital at charge Rs 1,04,87,08,000. Net earnings for 1924-25 were Rs 6,39 lakhs compared with Rs 4,99 lakhs in 1923-24. (See also text concerning the line following in this section.)

**JODHPUR RAILWAY**—This system is made up of the Jodhpur Railway of 3 ft 3½ in gauge (which, running from Kichaman Road through Jodhpur to the Marwar Frontier, has with numerous branch lines a mileage of 687.09) and the Jodhpur Hyderabad Railway the British section of which extends over 123.98 miles, together with three smaller lines, the total mileage of the system in use in 1925 being 858.42. The railways are worked under an agreement between the Government of India and His Highness the Maharaja of Jodhpur, the Jodhpur Railway being his exclusive property.

**MADRAS RAILWAY**—The Madras Railway, which in 1925 had a total open mileage of 3,041, was the third of the original railways constructed as experimental lines under the old form of guarantee. It was projected to run in a north-westerly direction in connection with the Great Indian Peninsula Railway and in a south-westerly direction to Calcutt. On the expiry of the contract in 1907 the line was amalgamated with the Southern Mahratta Railway, a system on the metre gauge built to meet the famine conditions in the Southern Mahratta country, and was re-leased to a large company called Madras and Southern Mahratta Railway Co., by whom the above two and other associated lines are now worked. The latter include the Kolar Goldfields, Tenali-Repalle, Bangalore Harihar, Bezwada-Masulipatam, Dhone-Kurnool, Hindupur, Kolhapur State, Sangli State and West of India Portuguese Railways. The total mileage is 3,041 and the net earnings for 1924-25 were Rs 3,74 lakhs, compared with Rs 3,28 in 1923-24.

**MYSORE RAILWAYS**—These lines, which in 1925 had a total mileage of 317.52, are the property of His Highness the Maharaja of Mysore. They are of metre gauge and are worked by the Mysore Government, and in 1924-25 returned net earnings at Rs 2,73,977.

**NIZAM'S RAILWAYS**—(See page 108).

**NORTH-WESTERN RAILWAY**—This was originally known as the Sind-Punjab-Delhi Railway, which in 1886 was acquired by the State and amalgamated with the Indus Valley State and Punjab Northern State Railways under the present title of the North-Western State Railway.

It is the longest railway in India under one administration, having a total mileage in 1925 of 5,827. Starting from the port of Karachi, it serves the greater part of Sind and the rich province of the Punjab, connecting with the imperial capital of Delhi Meerut Lahore, Amritsar, Malakwal, Peshawar, and through British Baluchistan with Quetta. In 1925 the capital at charge stood at Rs 1,22,16,38,000, and the net earnings increased from Rs 5,07 lakhs in 1923-24 to Rs 6,77 lakhs in 1924-25.

**Khyber Pass Railway**—This new line, though technically a branch of the North Western Railway deserves special notice. It was opened to traffic on November 3, 1925, marking an interesting stage in the development of India's great railway system. Previously the railway stopped short at Jamrud, a few miles from Peshawar on the Indian side of the Khyber Pass. This pass has been the main trade route to India from the north from the earliest days, and most of the trade with far distant Central Asia still follows this route in picturesque caravans.

The total length of the line, which is a single broad gauge track is 277¼ miles from Jamrud to the Afghanistan frontier. The level at Jamrud is 1,496 ft., at Landi Kotal, the summit, 3,495 ft., and at Landi Khana 2,622 ft. The ruling gradient from Jamrud to Landi Kotal is 3 per cent., and to Landi Khana 4 per cent. for a 7 deg curve. The line is the first on the 5 ft 6 in gauge to be constructed to the new Indian standard dimensions, and allows for a maximum running width of 12 ft with a height of 15 ft 6 in, instead of 10 ft and 13 ft 6 in respectively as hitherto. All the bridges are built to the latest Indian standard, that is for axle loads of 24 tons.

The line passes through no fewer than 32 tunnels, with a total length of over 2½ miles. While most of them are short, some are of substantial length, the Kator Tangi tunnel, for example, being 1,335 ft long and the Gorse Hill tunnel, No 3, 1,004 ft. Rather more than half the total length of the line is on curves. New and extremely powerful engines are provided, and the safety devices include catch points to stop runaway trains. Crossing numerous high bridges over deep gorges, the line rises continually from Jamrud to Shahgar, an ascent of 1,000 ft in five miles as the crow flies. From that station it plunges into the gorge of Ali Masjid, of which the traveller will see very little save tunnels. The last part of the climb to the head of the pass at Landi Kotal is eight miles in length, and at intervals there are impressive views of barren sun-scorched hills, with huts and towers perched like eagles' nests high above the track. From Landi Kotal the railway drops steadily through its last five or six miles to Landi Khana. Between these two points a series of rough ridges has to be surmounted, and this the line does in a great sweeping zigzag. (See also text concerning the company following in this section.)

**ODISH AND ROHILKHAND RAILWAY**—This railway is another of the lines constructed under the original form of guarantee. It began from the north bank of the Ganges, running through Rohilkhand as far as Saharanpur, where it joins the North-Western State Railway. It was not until 1887 that the bridge over the Ganges was completed and the line connected with the East Indian Railway. To effect a connection between the metre gauge systems to the north and those to the south of the Ganges, a third rail was laid between Bhuriwal and Cawnporc. The Company's contract expired in 1889, when the railway was purchased by the State and has since been worked as a State Railway. As from

July 1, 1925, the working of this railway was amalgamated with that of the East Indian Railway. The total mileage of open line in 1925 was 1,620.56, and net earnings for 1924-25 amounted to Rs 97,40,783.

**ROHILKHAND AND KUMAON RAILWAY**—This system, of 3 ft 3½ in gauge throughout consists of the Rohilkhand and Kumaon line (259 m) and the Lucknow-Bareilly line (312 m). The Company, which originated in 1882, has expended a capital sum of Rs 1,84,92,954 and Rs 2,34,77,911 respectively on its two railways the net earnings of which for 1924-25 totalled Rs 33,35,106. The head offices of the Company are at 237 Gresham House, Old Broad Street, London, E.C.

**SOUTH INDIAN RAILWAY**—The lines formerly owned and worked by the Great Southern India and the Carnatic Railway Companies were amalgamated in 1871 under the title of the South Indian Railway, which on January 1, 1891 was purchased by the State and handed over, together with the Villupuram-Cumtaka State Railway, for working as one undertaking to a new company the existing South Indian Railway Company, with offices at 91, Petty France, Westminster London, S.W. The system is at present made up of the South Indian Railway, which runs on a 5 ft 6 in gauge from Jalapet to Mangalore and on a metre gauge from Madras to Dhanushkodi, Tuticorin and Tutuvelly and several subsidiary lines, of which the Tanjore District Board, the Travancore, the Morapur Hosur, and the Shoranur-Cochin are the most important. The total mileage open for traffic in 1925 was 1,870.19, some 226 miles being also under construction or sanctioned. The net earnings for 1924-25 were over Rs 2,48,07,000 the capital at charge amounting to Rs 28,43,16,000.

**MILEAGE.** The total route mileage of the Indian Railways at the end of March 1926 was 38,552, consisting of

Broad gauge (5 ft 6 in)	18,957
Metre gauge (3 ft 3½ in)	15,880
Narrow gauge (2 ft and 2 ft 6 in)	3,715

During the year 1925-26, 282 miles of new lines were opened for public traffic and at the end of March 1926 some 1,800 miles were under construction.

In addition to the lines owned and worked by the Government or Companies, some 4,933 miles are owned by Indian States, of which 3,092 miles are worked by the States themselves and 1,841 miles by the adjoining main line administrations. In addition, there is a small miscellaneous mileage of 271, consisting mainly of District Board lines.

**NEW CONSTRUCTION (PROGRAMME OF).**—The separation of the railway finances from the general finances of the country has given an impulse to a large programme of new construction. The policy has been to examine the country in different areas roughly corresponding to the areas served by the various railway administrations, and continuous projects of survey and construction are being prepared, these being subject to revision each year in the light of the needs of the Local Governments and the recommendations of the Railway Administration. The total length of projects which had either been sanctioned or were being investigated by the end of March 1926 amounted to between 6,000 and 7,000 miles, and it is hoped that, when all arrangements in this direction are in full swing, the yearly addition to the extent of Indian railways will be in the neighbourhood of a thousand miles.

The areas which are recognised to be among those requiring the most urgent

development by means of railway extensions are Burma, South India and the coalfields area in Bihar and Central Orissa. In Burma which is clamouring for improved communications several lines are under construction or in the programme.

**IGRA-BAH**—This line will open out an irrigated tract of the Agra District situated at the head of the Jumna Chambal Doab, at present devoid of railway communication.

**CALCUTTA CHORD RAILWAY**—This line starts from a point near Dankari Station on the Budwan-Howrah chord of the East Indian Railway, and joins the Eastern Bengal Railway near Dum Dum Station. It is about eight miles in length and includes a bridge over the Hooghly River at Bally. This connection is primarily intended for the export of coal from the East Indian Railway but it is likely in the near future also to be used for coal from the Bengal Nagpur Railway fields. With the developments anticipated in the terminal arrangements at Calcutta and the electrification of the lower portion of the Eastern Bengal Railway a large proportion of the suburban passenger traffic will eventually pass over it.

**COALFIELDS DEVELOPMENT**—An extensive gap of undeveloped country will be traversed by what is known as the Central Coalfields Railway. Investigation has shown that good coal in large quantities is available in the area lying between the East Indian and Bengal Nagpur Railways running westward from the Jheria coalfields as far as Katni in the Central Provinces. The proposal set out in the annual report of the Railway Board is to provide lines to serve as outlets toward the north and west of India. The railway will run from Daltonganj to Hutur, a distance of 17 miles, and there will bifurcate: one line going to Mesla, 103 miles, and the other to Anuppur, 18 miles. Besides giving an estimated return of nearly 7 per cent on the capital outlay, these lines will reduce the cost of transporting coal to the west of India, with corresponding benefit to industrial undertakings in the Bombay Presidency and to the working expenses of the railways serving Bombay.

**KANGRA VALLEY RAILWAY**—This 2 ft 6 in gauge line, taking off at Pathankot and running through the Kangra Valley to Shanan, a distance of 100 miles, will open up the rich Kangra Valley and at the same time make the Kulu Valley more accessible. Shanan, the terminus, is the site of the power station for the Mandi Hydro-Electric Power Scheme, and the railway is the joint enterprise of the Government of India and the Provincial Government.

**MADRAS (NEW CONSTRUCTION IN)**—The long-standing complaint of Madras that she has been starved of railway development is being met by the Railway Board taking up four projects in the south of the Presidency covering some 300 miles. The Villupuram-Trichinopoly chord will form an alternative route between Madras and Trichinopoly, and afford such relief to the existing line as will defer the necessity of doubling it for many years. The chord, which will be 100 miles in length, will open up and develop new and populous country. The Virudunagar-Tenkasi Railway, 76 miles in length, will also open up new country and help to relieve main line congestion. The list of accepted projects further includes lines from Dindigul to Pollachi and from Trichinopoly to Karaikudi. A very important undertaking will be the extension of the standard gauge from Shoranur to Nilambur, 41 miles.

MUSSOORIE, 6,653 feet above sea level, reached via Dehra Dun (E I Railway)

**VIDALHOLE NARSIPUR AND GUDILADI BHIMMIRAH RAILWAYS**—These lines, which branch off the Madras and Southern Mahratta Railway System, will provide railway communication with the densely populated portions of the Krishna and Godavari deltas where, owing to the number of canals existing communications are inconvenient. It is anticipated that both lines will be opened for traffic in 1928.

**NORTH-WEST INDIAN RAILWAY**—The construction of a 2½ ft gauge railway has been authorised to extend from Hindubagh to Kila Saifulla in the Zhob district of British Baluchistan, a distance of about 30 miles along the right bank of the Zhob River. This line is to furnish transportation for the coal mines at Hindubagh.

**PUNJAB RAILWAYS**—Three construction projects in the Punjab have been recommended. The Lyallpur-Jaranwalla Railway, 21½ miles long, at a cost of Rs 1,405,000, which is expected to yield a return of 5.48 per cent and will serve an irrigated area of about 84,000 acres; the Rohtak-Gohana-Pampat Railway, 45 miles in length, costing about Rs 2,800,000, which will tap a rich and fertile area, thickly populated and irrigated, and from which a return of 64 per cent is expected; the Jassar-Shakargarh-Chak-Amru Railway, 26 miles long, costing approximately Rs 1,500,000, which will serve a thickly populated area and from which a return of 6 per cent is anticipated.

**RAIPUR-VIZIANAGRAM RAILWAY**—A most important project in hand is the completion of the Raipur-Vizianagram line, 260 miles in length, with which is intimately connected the construction of a new harbour at Vizagapatam. Work on the port has already commenced, and has been placed under the control of the Railway Board.

**Vizagapatam Harbour**—The first section of the development of Vizagapatam as a

major harbour is estimated to cost Rs 193 lakhs and includes a wharf 1,500 ft long capable of taking three or four steamers, moorings for two vessels in the harbour and accommodation at the oil jetty for oil tankers or oil burning steamers. The wharf will be constructed so as to give a depth of 30 ft below low water, and a channel dredged to the same depth will connect up the harbour to the sea. The wharf will be provided with the necessary cranes and railway sidings. A Dharmisala waiting room and customs examination sheds will also be established for dealing with passenger traffic. Orders have been placed for a large suction dredger, also a rock breaker and dipper dredger. In the meanwhile a grab dredger has been working continuously since December 1925 with the object of providing a berth for the suction dredger. A hydrographical survey of the bar and creek has been carried out, considerable work has also been done in the way of constructing bunds and providing temporary arrangements for carrying on the trade of the port during its development.

**ROLLING STOCK (STANDARDISATION OF)**—The Locomotive Standards Committee appointed by the Railway Board submitted in 1925 a modification of their previous report on the Standardisation of Locomotives. As a result of their discussion in March 1926 with the Consulting Engineers (Rendel, Palmer and Tritton), detailed drawings of the standard locomotives are being prepared by the Consulting Engineers, and locomotives of the following types have been ordered for trial—

	2-6-2			2-8-2		
	BRANCH LIGHT			HEAVY LIGHT HEAVY		
Broad Gauge	6	28	12	13	14	—
Metre Gauge	—	4	5	11	—	—

All questions regarding standardisation and improvements and alterations to standard types of locomotives are referred to the Locomotive Standards Committee.

There is a similar expert Committee to deal with standardisation and improvements to carriages and wagons. This Committee which is known as the Carriage and Wagon Standard Committee, is at present engaged in revising the existing standard designs, and it has also prepared standard designs of any other types for which there might be a demand.

**AUTOMATIC COUPLERS** — As a result of further investigations of this difficult problem, it has been considered advisable to ask the Consulting Engineers to prepare detailed drawings and estimates of alterations required to be carried out to each of the various types of broad gauge stock now in existence in order to obtain a more reliable estimate of the cost of this project before embarking on it. In the meantime railways are continuing to experiment with various types of automatic couplers and transition devices. On receipt of the report of the Consulting Engineers revised estimates of the entire cost of the conversion will be prepared.

**STAFF.** — The total number of railway employees at the end of the financial year 1924-25 was 740,854, as compared with 720,754 in the previous year. This is an increase of 20,100 as compared with 1923-24, but a decrease of 8,826 compared with 1922-23 in spite of an increase in mileage of over 650 during the two years 1923-25. On March 31, 1925, the number of European employees was 6,299, of Anglo-Indian 11,965, and of Indian 722,590, compared with 6,565, 11,500 and 702,089 respectively twelve months previously. The cost of the staff employed on Class 1 railways (excluding the Jodhpur Railway) during 1924-1925 was Rs 32,64,70,254, compared with Rs 31,41,64,008 in 1923-24. In the year ended March 31, 1925, the number of Indians in superior appointments rose from 378 to 415.

**STAFF (TRAINING OF).** — The marked development in the science of transportation, together with the increase in operating expenses with which railways throughout the world have been faced since the War, have emphasised the necessity for increased efficiency in working. It follows that not only must the material be of the best, but that a higher standard must be obtained from the staff. To meet this problem the Railway Board has devised a system of Transportation Schools, which it is hoped will give the staff much fuller instructions in transportation duties than anything that has been attempted hitherto. The scheme is being applied first of all to the State Railways, but it is hoped that company-worked Administrations will see the advantages it offers and will start similar schools of their own.

The State Railways are to be divided into Areas conforming more or less to the existing Divisions between the different lines, and for each Area there will be a school, such schools to have two distinct functions —

- (1) the training of probationers who have not yet commenced their railway service, and
- (2) the provision of periodical "Refresher" courses for those already in the railway service.

As regards the training of probationers, for the present men for the transportation and commercial sides only are taken. These fall into three groups:—

- (1) the Station-masters' group, comprising telegraph signallers, assistant station-masters and station-masters,
- (2) the Commercial group, comprising coaching and goods clerks, and

- (3) the Train Staff group, comprising guards.

**"REFRESHER" COURSES** — The second function of the school — the provision of "Refresher" courses — is intended to provide courses of training at intervals of say, five years for men already in the service. At present the largest school is situated at Chandanui, and the accommodation for instruction consists of

- (1) The Transportation School of which the most important feature is a complete 2½ in gauge model railway operated by electrically-driven locomotives controlled by signals, with ten stations of different types complete with double and single line block instruments, interlocked lever frames, signals, points, etc.
- (2) The Locomotive and Carriage School, with apparatus for demonstrating the working of the vacuum brake, sectioned locomotive fittings, valve gear models and train lighting apparatus.
- (3) The Commercial School, and
- (4) The Telegraph School, complete with the necessary instruments, batteries, etc.

The school has its own electricity supply, an excellent water supply and a well-thought out scheme of sanitation. The grounds cover nearly a hundred acres, where tennis, cricket, football and hockey are provided. There is a school dispensary and a Sub-Medical Officer, who is under the supervision of the Civil Surgeon of Moradabad.

While it is realised that the theoretical education provided at Chandanui can never be sufficient in itself to take the place of practical experience, it is confidently hoped that as a supplement to such practical experience it may prove of very real value, enabling the Indian Railway man to attain to that high standard of efficiency which is so vitally necessary to the successful working of railways under modern conditions.

**STATE RAILWAY WORKSHOPS.** — In view of the continued increase in rolling stock and the consequent importance of arranging for an increase in the outturn of workshops in the most economic and efficient manner, a Committee of experts under the Chairmanship of Sir Vincent Raven, KBE, formerly Chief Mechanical Engineer of the North Eastern Railway (England) and President of the Institution of Mechanical Engineers, was appointed by the Railway Board to examine the question and submit a report. The Committee held its enquiry from January to March 1926, and its report, which has since been published, is expected to lead to great improvements in the matter of outturn of work from the State Railway Workshops within the next few years.

**STATISTICS.** — The following table shows the main results of the working of all the Indian Railways treated as one system for the two years named —

PARTICULARS	1923-24	1924-25
Mileage open ..	38,039	38,270
Total capital outlay (in thousands of Rupees) ..	Rs 7,17,03,02	7,33,37,38
Gross earnings (ditto) ..	1,07,79,66	1,14,75,20
Gross earnings per mile open ..	28,350	29,765
Gross earnings per train mile ..	6.78	7.01
Total working expenses (in thousands of Rupees) ..	68,44,77	69,36,68
Working expenses per mile open ..	17,992	17,992
Working expenses per train mile ..	4.31	4.24
Percentage of working expenses to gross earnings ..	Per cent. 63.50	60.45
Net earnings (in thousands of Rupees) ..	Rs 39,34,89	45,38,52
Net earnings per mile open ..	10,348	11,780
Net earnings per train mile ..	2.48	2.77

PARTICULARS (cont.)	1923-24	1924-25
Percentage of net earnings on total capital outlay ..	Per cent. 5.48	6.19
Coaching train miles (in thousands) ..	Miles 64,184	68,964
Goods train miles (ditto) ..	57,538	59,993
Mixed train miles (ditto) ..	99,221	99,643
Total, including miscellaneous train mile (ditto) ..	158,943	163,619
Unit mileage of passengers (in thousands) ..	19,105,879	19,010,350
Freight ton mileage of goods (in thousands) ..	18,827,873	21,268,691
Number of passengers carried ..	596,277,000	605,998,000
Earnings from passengers (in thousands of Rupees) ..	Rs 38,07,82	38,75,31
Tonnage of goods carried (in millions of tons) ..	Tons 72.54	84.02
Earnings from goods traffic (in crores) ..	Rs 55.47	64.92

**STORES.** The Railway Administration has steadily adhered to the policy of purchasing railway stores in India wherever possible, but at present the supply of suitable material is not equal to the demand. During 1924-25, out of a total purchase of stores to the value of Rs 20.83 crores (against Rs 27.66 crores in 1923-24), the value of imported material was Rs 12.46 crores, compared with Rs 18.70 crores in the preceding year. In 1924-25 for instance the value of rolling stock purchased in India was only Rs 0.37 crores, against Rs 5.75 crores paid for imported material while electric plant imported was valued at Rs 1.10 crores against Rs 0.01 crores paid for indigenous material. On the other hand material for permanent way and tools and stores were largely purchased in India. No locomotives are manufactured in the country though with the aid of State subsidies the wagon industry is making fair progress. This industry is equivalent to about 150,000 a year.

**TRAFFIC (FACILITIES FOR HANDLING).** — A large portion of the capital expenditure on improvements is directed towards facilities for the better and more efficient handling of the present traffic on railways, also to meet the natural expansion and further to stimulate that growth of traffic. This applies particularly to the problem of suburban traffic in and around the three Presidency towns of Bombay, Calcutta and Madras.

**ELECTRIFICATION** — The introduction in 1924-25 of electrified services on the Harbour Branch of Bombay, which have since been extended to Pandra, forms only the first step in the general scheme at present in hand for the electrification of the suburban and main line of the railways centring on Bombay. This scheme includes the suburban section from Victoria Terminus to Kalyan and Church Gate to Borivli and the main lines from Victoria Terminus to Igatpuri and Poona.

The electrification of these sections will enable the provision of a faster and more frequent suburban service than is possible with steam working, and this will undoubtedly help towards a better distribution of the dense population of Bombay.

The Madras suburban problem is being dealt with by the provision of additional tracks on the Madras-Tambaram metre gauge section of the S I Railway, and several important schemes for improving the broad gauge M & S M Railway terminal facilities have been taken in hand.

The question of the electrification of the Madras-Tambaram section and of other portions of the South Indian Railway is being investigated, but it is dependent to some extent on the prospects of a hydro-electric supply.

The Calcutta suburban traffic problem is receiving attention, and a scheme for the electrification of the suburban lines and improved terminal facilities is being drawn up.

**STATION IMPROVEMENTS**—Apart from the foregoing, the various through routes in India are not being neglected. Most of the important junctions whose limited capacity has been a severe handicap to traffic are being remodelled, the chief remodelling schemes being at Ahmedabad, Lucknow and Trichinopoly.

The outlay on improved facilities for the comfort of lower-class passengers forms an appreciable share of the expenditure on the general improvements of stations.

The Bombay-Poona section of the Great Indian Peninsula Railway is to be improved by eliminating the reversing station at Bhore Ghat, the doubling of the Grand Chord of the East Indian Railway is approaching completion, the Bombay Baroda and Central India line into Bombay is being quadrupled, and the Ishirdi-Gopalpur section of the Eastern Bengal Railway is being doubled.

**TRAFFIC (GOODS).** The total earnings from all goods traffic carried on the Indian Railways during 1924-25 were Rs 66.83 crores or 58.24 per cent of the total earnings of the lines as compared with Rs 60.64 crores or 56.25 per cent, in the preceding year. On Class I railways the number of tons of freight originating rose from 72,540,000 to 84,020,000, the largest increases in earnings being those from wheat and coal and coke.

There was a very satisfactory increase of nearly 2,000,000 tons in freight traffic in 1925-26, but in spite of it earnings from this source decreased by approximately Rs 20,000,000. The drop was occasioned by a decrease from 273 to 250 miles in the average distance over which consignments were carried, chiefly, no doubt, because there was little export of wheat from the Karachi district.

**TRAFFIC (PASSENGER).** Of the total earnings of Rs 114.75 crores in 1921-25, Rs 38.76 crores or 33.78 per cent, were derived from passenger traffic, as compared with Rs 38.99 crores in 1923-24, the total number of passengers carried (including holders of season and vendors' tickets) being 576,315,400, as against 507,322,800, an increase of 9,922,600. In 1925-26 some 599,000,000 passengers were carried on all railways, an increase of 23,000,000 over the figures for 1924-25, as a result, passenger earnings increased by Rs 7,000,000. Third-class passenger traffic has for many years shown increases both in numbers and earnings, but the railways are carefully watching this traffic and wherever necessary are introducing concessions or reduced fares. Upon the introduction of the 1926-27 Railway Budget it was announced that 31 lakhs of rupees were to be spent on amenities for lower-class passengers.

**TRAFFIC (TOURIST).**—The total number of tourists coming to India from overseas during 1925 represented a 75 per cent increase on those who came in 1922, when the tourist traffic was about equal to that of the last pre-War year. This remarkable growth of traffic is partly due to the energy with which the Great Indian Railways have sought to attract visitors. They have, during the last few years, carried on active propaganda in the United States, Canada, South Africa and Australasia, and a cinematograph film which has been shown all over the American Continent illustrating the more famous places reached by the Great Indian Peninsula Railway and the Bombay, Baroda and Central India Railway has no doubt made many of those who saw it eager to see something of the East. Moreover, the Indian Railways treat the visitor well; they provide exceedingly comfortable tourist cars and

The Kutb Minar Mosque, at Delhi (N.W.R.), converted from an ancient Hindu Temple.  
(See letterpress, p. 86.)

special trains, for example from Bombay to Delhi via Jaipur and Sewai Madhopur, or from Bombay to Delhi, Agra, Benares and back, with accommodation for 60 or 80 passengers. One railway alone received orders from various travel agencies for eight special trains during the 1926-27 cold season. All of the lines report a marked increase in this kind of traffic, expedited no doubt by the recent reduction of railway fares. (See special article on "Tourist Resorts.")

**VARIOUS ACTIVITIES.**—Besides providing transport facilities, the railways of India have from time to time taken up other subsidiary functions, either in order to transport product cheaply or to facilitate its sale. Such are the acquiring of railway-owned collieries, the purchase and manufacture of sleepers, ticket printing, catering, and the provision of steamer services.

**CATERING**—Railway catering is a matter in which the travelling public is greatly interested. The needs of the higher-class passengers who partake of food and refreshments prepared in European style are attended to in refreshment rooms situated at the more important stations and junctions, also *en route* in the dining cars attached to most of the mail and long distance trains. These arrangements have, for a considerable time, been worked on the contract system, the responsibility of the railways having been limited to the provision of accommodation and other facilities, also to seeing that fair rates are charged. In 1914-15 the Bengal-Nagpur Railway took the catering business into its own hands, and the change is admitted to have been a success. Other

railways have followed in the footsteps of the Bengal-Nagpur, and the greater satisfaction of the travelling public seems to be assured at no higher expense. The Bengal-Nagpur Railway also runs a hotel at Ranchi, an attractive health resort 2,000 feet above sea level and the summer headquarters of the Bihar and Orissa Government, as also one at Puri, a seaside sanatorium much frequented during week-ends.

**COLLIERIES**—For the running of locomotives the quantity of coal required is enormous, and for this the railways have for a long time depended on private collieries, though the East Indian Railway has worked a colliery of its own for over 40 years. Early in the present century the Great Indian Peninsula Railway acquired a colliery, and shortly before the War the East Indian and the Bengal-Nagpur Railways jointly procured another, from which coal began to be raised in 1910-17. The Great Indian Peninsula Railway commenced working a second colliery in 1917-18.

Railway administrations have thus long been alive to the fact that it is neither safe nor economical to depend entirely upon private supplies of coal, and this has been emphasised of recent years. Moreover, the prices charged have gone up considerably and contract supplies are not always sure, owing to recurring labour troubles in the coalfields. Certain Railway Administrations have, therefore, arranged within the last few years to lease some coal areas situated in Bihar and Orissa, and to work them for themselves. It is proposed to introduce electric working in connection with several

of them. In 1923-24, out of 6,060,693 tons used by the Indian Railways, some 1,692,876 tons were raised in railway collieries (See previously, "Coal Supply").

**PRINTING.**—Besides the four State-managed railways, viz., the North-Western, the Oudh and Rohilkhand, the East Indian and the Eastern Bengal Railways, some of the company-worked railways have their own presses, where the bulk of their printing is carried out. Others are contemplating the acquisition of presses for all of their work.

**SLEEPERS.**—As may be easily imagined, the demand for sleepers is enormous, some four millions per annum having been purchased by the Indian Railways during the last ten years. In the near future the demand is expected to be considerably greater. Most of the sleepers acquired are of wood, Indian timber such as deodar, sal and pyinkado forming the bulk of the supply. Foreign wooden sleepers of creosoted pine, Australian jarrah and karri and fir are imported only to a small extent. Iron and steel sleepers are also used, and the manufacture of these has been taken up by some of the principal railway administrations. Reinforced concrete sleepers are likewise being manufactured in India, and some railways are laying them as an experimental measure. An investigation has recently been in progress in regard to the possibility of opening out new forest areas, of substituting new varieties of indigenous timbers (suitably treated if necessary) for the sal, deodar and other sleepers that have been used in the past, and of utilising more largely steel, cast-iron and ferro-concrete sleepers in place of timber, for the treatment of which it has been decided to erect certain installations.

**STEAMER SERVICES.**—For several years the Eastern Bengal Railway ran its own service of steamers in competition with the Indian General Steam Navigation Company between Goalundo and Narainganj and Goalundo and Cachar. Later on, an agreement having been arrived at between the two as regards their respective shares in the traffic offering, the railway discontinued this steamer service. For many years the South Indian Railway has, in connection with the through Indo-Ceylon service, maintained a service of steamers between the railheads of Dhanushkodi and Talaimannar.

Some of the railways also maintain ferry services, a notable instance being the service across the Indus between Mari Indus and Kalaibagh maintained by the North-Western Railway. The Eastern Bengal Railway system is cut up in many places by the Ganges, with the result that several pairs of stations are connected by ferries only. The Bengal-Nagpur Railway has a wagon-ferry service across the Ganges from Shalamar to Kidderpore Docks.

## THE RAILWAY BOARD.

**Origin.**—The evolution of satisfactory administrative machinery for the railways of India has been a long and difficult undertaking. In the early years of railway construction by the agency of companies, control was vested in the Public Works Department of the Government of India. When in 1869 the Secretary of State agreed with the Government as to the advisability of railway construction by State agency, and a vigorous programme of construction was commenced, it became necessary to constitute a new Railway Branch of the Public Works Department to deal with railway matters, and this was done in 1870. In the following year a Consulting Engineer for State Railways was appointed and a Director for State Railways

in 1874, the latter appointment being in 1879 converted into that of Director-General of Railways, the Director-General being ex-officio Deputy Secretary to the Government of India in the Railway Branch of the Public Works Department. In 1897 the appointment of the Director-General was merged into that of a Secretary, and this system of control continued until 1907, in which year, following the report of the late Mr. Thomas Robertson, the appointment of a Railway Board, which should assume full control and management of the railway system in India, was decided upon.

**Early History.**—The first Board consisted of three persons—a chairman and two members. In the Chairman was vested the control of all questions submitted to the Board and the power to act on his own responsibility subject to the confirmation of the Board. The old system of control over the proceedings of railway companies was to some extent abolished, but Government Inspectors were appointed and a certain measure of control was maintained in order adequately to protect Government interests. In 1920-21 the Ackworth Committee criticised adversely the working of the Railway Board as then constituted, considering that the proper function of that Board was not to carry out routine duties, but to shape policy, to watch, to think and to plan, and as a result of its deliberations important changes were introduced into the system.

**Functions.**—The Government of India has varied functions to perform in respect to railways as (a) the directly controlling authority of the State-worked lines, aggregating over 15,000 miles, (b) the representative of the predominant owning partner in systems aggregating over 27,000 miles, (c) the guarantor of many of the smaller companies, and (d) the statutory authority over all railways in India. These functions are exercised by the Railway Board as a Department of the Government of India.

**Organisation.**—The Railway Board as reorganised consists of a Chief Commissioner, a Financial Commissioner and two Members, the Chief Commissioner being the head of the Board with the rank of Secretary to the Government. In him is vested the power of over-ruling the other members of the Board. The work of the Railway Department is divided between the Financial Commissioner, who is the representative of the Finance Department of the Government of India, and the two Members of the Board on the basis of financial, technical and general. The Board is assisted by five Directors for Civil Engineering, Mechanical Engineering, Traffic, Establishment and Finance, each Director being responsible for one or more of the several branches of the office. These Directors are executive officers, and have the power to decide questions which do not affect the policy of the Board.

**Personnel.**—The present personnel of the Board is as follows: Chief Commissioner—Sir Clement Hindley, Kt.; Financial Commissioner—Mr. G. G. Sim, C.I.E., I.C.S.; members—Messrs. P. C. Sheridan, C.M.G., and F. A. Hadow, C.V.O. The member representing Railways on the Council of the Governor-General is Sir Charles Innes, K.C.S.I., C.I.E., I.C.S.

**Branch Organisation.**—Working under the Directors are Deputy Directors of Traffic, Stores, Projects, Ways and Works and Establishment, and an Assistant Director, Technical, in charge of the Drawing Branch. In addition, a Deputy Director in charge of Statistics has been appointed.

The Deputy Directors are immediately in charge of branches dealing with definite phases of the working. The Traffic Branch

handles both the operating and commercial sides of traffic working, in the Project Branch are considered all questions of new construction and developments, and the Ways and Works Branch deals with all works on the open line.

**Railway Administration.**—The General Managers, as they would be called in other countries, of the various railway administrations in India are almost invariably styled Agents. Until recently all the Railway Administrations were organised on the departmental basis, but India has lately followed the example of other countries and introduced on several lines the divisional system of organisation. Under this system the entire administrative responsibility for the movement and handling of traffic, including the direction of engine power and running powers of engines and vehicles, also for co-ordinating these factors with the upkeep and movement of ways and works, is vested in the Chief Operating Superintendent. At the same time, the responsibility for executive work is placed on a single authority in each locality termed the Divisional Superintendent.

**Accounts.**—The question of transferring the supervision of accounts on State Railways from the Finance Department of the Government of India to the Railway Board has been under consideration for some time, and in accordance with a resolution adopted by the Legislative Assembly in 1925 a start has been made with the transfer of the supervision of railway accounts on the East Indian Railway. At the same time a separate Audit Staff has been appointed, which reports direct to the Auditor-General. If the revised procedure proves successful, it will be gradually transferred to other railways.

**Advisory Councils.**As a result of the report of the Committee appointed by the Secretary of State for India to enquire into the administration and working of the Indian Railways (1921), Advisory Councils were formed at the headquarters of the Government of India and at the headquarters and principal centres on the railways. The Central Advisory Council is composed of 26 members. These include the Chief Commissioner of Railways and the Honourable Member in charge of the Railway Department, who is the Chairman of the Council. The remaining 24 comprise the 12 members of the Standing Finance Committee for Railways, which consists of one nominated official as its chairman and 11 members elected from amongst the Legislative Assembly, together with six nominated members representing the Council of State and six the Legislative Assembly. The Council meets four times a year and discusses subjects of general railway interest. The local Advisory Committee generally meets once a month under the Chairmanship of the Agent of the Railway concerned. The number of members varies from six to 12, and is composed of representatives of the Local Government in whose jurisdiction the headquarters of the railway in question is situated, the Legislative Council of the Province concerned (these members represent rural interests and the travelling public), the local Municipality or Corporation, and representatives of industries, commerce and trade.

The functions of these committees are purely advisory, the subjects discussed by them principally relating to (a) alterations in time-tables and passenger services; (b) alterations of rates and fares and changes of goods classifications; (c) proposals in regard to new projects and extensions; (d) proposals in regard to new rolling stock; (e) any matters affecting the general public interest or convenience. Questions of personnel, discipline and appointments are not brought before the Committee.

Jamrud Fort at the foot of the Khyber Pass; a trade route into India of great antiquity.

#### NORTH WESTERN RAILWAY.

**Extent of System.**—The North Western Railway, the longest system in India under one administrative control, serves five of the most important provinces in that country. First comes the Punjab with its wide irrigated plains, dotted with important towns and large cantonments, then the Province of Sind, where extensive irrigation projects are now in hand. On the frontier, the North-West Frontier Province is served by a number of broad and narrow gauge lines, while Baluchistan is traversed by a strategic track over the Bolan Pass, with a lengthy extension to the Persian frontier. Lastly, in the United Provinces, the North Western Railway links up with the East Indian Railway at Saharanpur, Meerut City and Ghaziabad, with the Great Indian Peninsula Railway near Delhi, with the Bombay, Baroda and Central India Railway at Delhi, Hissar and Bhatinda, and with the Bikanir and Jodhpur Railways (both metre gauge) at Bhatinda and Hyderabad respectively.

**Origin.**—The beginning of the North Western Railway dates back to 1855 (two years before the Mutiny), when a company was registered under the title of the Sind, Punjab and Delhi Guaranteed Railway Company to improve the communications between Karachi and the Punjab, the only adequate means of transport at that time being the river Indus and its tributaries. In 1861 the section between Karachi and Kotri was opened, and soon afterwards a short length connecting Lahore and Amritsar, the principal commercial centres of the Punjab. In this connection it is interesting to note that the importance of these small original sections has never declined, and that to-day they carry the heaviest traffic on the system.

**Extension and Amalgamation.**—Year by year new sections were opened to traffic, either through the medium of private enterprise or by State agency, and by 1880 there was direct rail communication between Lahore and Karachi, with the exception of the Indus crossing at Rohri, which was not bridged until some nine years later. In 1886 the five separate Administrations which had been developing their respective areas—the Sind,

Punjab and Delhi Guaranteed Railway, the Punjab Northern, the Indus Valley, the Eastern Section Sind-Sagar and the Southern Section Sind-Pishin Railways—were amalgamated under State ownership and control, with the present title of North Western Railway.

**Strategic Lines.**—About this time the situation on the North-West Frontier demanded comprehensive improvements in the means of communication for that area, and the next fifteen years (1886-1901) saw the rapid growth of strategic lines, which to-day total no less than 1,680 miles. The most noteworthy of these was the line which threads the Bolan Pass to a height of 6,000 feet above sea-level, penetrates a further mountain barrier by means of the Khojak Tunnel (12,860 ft long), and reaches the Afghan frontier at Chaman. This development of military lines has gone on steadily to the present day, and now includes the frontier railheads at Durgai, Thal, Bannu, Manzar and Chaman, and also the important broad gauge line which traverses the Khyber Pass and ends at Landi Khana, while a 400-mile extension connects Quetta with the Persian border. This military section of the North Western system is for the most part unremunerative owing to the lightness of traffic.

**Hill Station Branches.**—At the same time that the strategic railheads were being pushed further to the North-West, branch lines to serve the hill stations along the slopes of the Himalayas were being developed. Many of these sanatoria can now be reached direct, as in the case of Simla, or from termini at the foot of the hills, as in the case of Abbottabad and Dalhousie. Again, the branch lines leading to Jammu and Havelian bring travellers to the frontier of Kashmir, while Rawalpindi is only some 32 miles from the hill station of Murree, which is the usual jumping-off place for Kashmir, the capital, Srinagar, being 200 miles distant by the road, over which there is an extensive service of motor cars and other transport.

**Main Lines.**—The main lines of the system extend from Delhi, the winter capital of the Government of India, to the Afghan frontier

beyond the Khyber Pass, and from Simla, the summer capital, through the fertile plains of the Punjab to the port of Karachi, the third in importance in India. Some 4,500 miles of the line are owned by the State, while 1,400 miles are owned by various private companies, but are worked by the State as part of a single system. The same applies to some 250 miles which are the property of Native States.

**Kalka-Simla Railway.**—This railway (2 ft 6 in. gauge) was originally constructed by, and at the cost of, the Delhi Umballa-Kalka Railway Company, and was purchased by the State in 1906, being made over to the North Western Railway administration with effect from January 1, 1907. The line has a mileage of 59.92, the steepest gradient being 1 in 33 uncompensated, and the sharpest curve having a radius of 120 ft. There are 103 tunnels on this track, the length of the longest, the Barog Tunnel, being 3,752 ft. This mountain railway connects the plains of Upper India with Simla, the famous summer capital of the Viceroy, the Government of India, Army Headquarters, and the Punjab Government. Simla is situated among the hills of the Lower Himalayas at an average height of 7,220 ft above sea level, and commands magnificent views of mountain ranges and snows. From Simla there starts the well-known Hindustan-Thibet road.

**Khyber Pass Railway.**—The building of this Railway through the famous Khyber Pass at the extreme North-West frontier of India was sanctioned in July, 1920, and in November of that year, after various preliminary difficulties had been overcome, the work of construction actually commenced. Owing to the peculiar and arduous conditions under which construction had to be carried out, five years elapsed before the section from Jamrud to Landikotal, a length of about 21 miles, was completed and opened for public traffic on November 3, 1925. The remaining portion of seven miles from Landikotal to Landikhana was opened on April 3, 1926.

This is the first 5 ft. 6 in. gauge line which has been built to the new standard dimensions, and allows for a maximum running

3. Simla Railway Station.

width of 12 ft and running height of 15 ft 6 in. The great engineering difficulties which have had to be overcome and the standard to which the railway has been built render it a technical achievement ranking with the greatest engineering works carried out by railway engineers.

The line is situated entirely outside the administrative border of British India in the strip of tribal territory which separates it from Afghanistan. The trade that passes through the Khyber Pass is already considerable and it is hoped that the railway will still further increase its volume thereby bringing profit and employment to many who in the past have subsisted with difficulty on the meagre agricultural and other resources of the country which it traverses.

**Mileage.** The present route mileage of the whole system is slightly over 6,300 while the track mileage including sidings exceeds 9,000 miles. In respect of length of track therefore the North Western can bear comparison with the greatest systems in the world.

**Gauges.** Of the total length of 6,300 miles 5,800 are of the Indian broad gauge (5 ft 6 in) the remainder being of either 2 ft 6 in or 2 ft gauge. Several lengths of line which were at first constructed to the metre or to a 2 ft 6 in gauge have since been converted to the broad gauge.

**Permanent Way.** The permanent way is of various types. On the single line of iron rails there are 60 lb flat footed of steel rails there are 60 lb, 60½ lb, 61 lb, 62 lb, 75 lb, 8 lb and 90 lb flat footed, 64 lb, 68 lb and 75 lb double headed, 68 lb, 73 lb, 77½ lb, 84 lb and 85 lb bull headed and 60 lb, 75 lb and 90 lb British standard section. On the double line the steel rails are 68 lb, 73 lb, 77½ lb and 85 lb bull headed and 75 lb, 87 lb, 90 lb and 100 lb flat footed. The present extensive re-laying programme provides for a 90 lb track on all main lines with 75 lb rails on all branch lines. The sleepers are chiefly of wood but cast iron plates (oval or round), cast iron pots, fowler box and Denham Olpherts plate, ferro concrete and steel transverse sleepers are also used. The line is ballasted throughout with sand, bricks, broken stone and shingle.

**Gradients.**—The ruling gradient of the greater part of the railway is about 1 in 350, with the following important exceptions: Between Karachi and Kotri 1 in 190, between Luki and Schwan 1 in 150, between Lalamsa and Peshawar 1 in 100, beyond Sibi 1 in 40 with 1 in 25 banking sections between Jullundur and Hoshiarpur, 1 in 200, between Sialkot and Jammu 1 in 150, between Gurdaspur and Pathankote 1 in 170, between Taxila and Haripur 1 in 100, between Haripur and Havelian, 1 in 50, between Daudkhel and Campbellpur 1 in 83, between Rawalpindi and Kohat, 1 in 70 except between Khushalgarh and Jand which is 1 in 50, and between Peshawar and Jamrud 1 in 50. The sharpest curve is of 455 ft radius.

**Rolling Stock.**—On March 31, 1925, the broad gauge rolling stock of the North Western Railway consisted of 1,607 locomotives, possessing a total tractive power of 33,027,196 lbs, 24 rail motors, 3,697 coaching vehicles of various grades, and 30,037 goods vehicles.

**Stores.**—In 1924-25 the value of stores (excluding coal, coke and ballast) purchased by the North Western Railway aggregated Rs 2,85,76,000. Of this total, Rs 73,84,000 represented stores imported direct, Rs 30,97,000 stores purchased in India, and Rs 1,80,95,000 stores of Indian manufacture or indigenous origin.

NORTH WESTERN RAILWAY (Kalka-Simla Line).  
En route for Simla.

**New Construction Programme.**—It might be thought that, with the growth of transport facilities described already, the requirements of the different areas served would be fully met. This, however, is not the case. The vast irrigation schemes undertaken by the Government of the Punjab, which have done so much to increase the fertility of the Province, and the inception of similar schemes in Sind have created a demand for a network of feeder lines. This demand is being met by a heavy construction programme, which is expected to add over 1,000 route miles to the North Western Railway during the next five years, while at the same time comprehensive improvements in track, bridges and station yards are being carried out on the open line to meet the requirements of the ever-increasing traffic.

**Passenger Traffic.**—Passenger traffic is

lucrative, notwithstanding the low fares charged, which bear comparison with any in the world, as may be gathered from the fact that a third-class journey of 100 miles costs the equivalent of under half a crown. During 1925-26 over 87,500,000 passengers were carried, as against 78,000,000 in 1924-25. Of the latter total, nearly 73,000,000 were conveyed over the commercial lines. The earnings from passenger traffic amounted in 1925-26 to nearly eight crores of rupees, compared with Rs 7.3 crores in the preceding year.

**Goods Traffic.**—The total tonnage of goods carried over the broad gauge sections of the North Western system rose from 12,651,000 tons in 1923-24 to 13,778,000 tons in 1924-25, the revenue therefrom also increasing from Rs 9,13,70,000 to Rs 11,14,01,000. The in-

creased exports of wheat from India in 1924-25 had a marked effect on the earnings of the North Western Railway.

**Staff.**—The wide-flung system of the North Western Railway is divided into seven divisions, each with a Divisional Superintendent, and has a staff of over 116,000 British and Indian employees.

**Working Costs.**—With regard to working costs in general, the great distance of the line from the sources of fuel supply must be borne in mind. Coal, which is used on a great part of the line, has to be hauled from the Bengal coal-fields, while oil, which is employed in the Karachi Division, comes from the head of the Persian Gulf. These facts need to be taken into consideration when comparing the operating and financial results with those of other lines.

**Financial Results.** The following table shows the financial results of the working of the North Western Railway for the two years named —

	1923-24 (Rs 1,000)	1924-25 (Rs 1,000)
Total Capital Outlay	1,21,03,76	1,22,16,38
Gross Earnings	17,14,01	19,31,39
Working Expenses	12,06,62	12,54,10
Net Earnings	5,07,99	6,77,23
Percentage of Net Earnings on Total Capital Outlay	4.19	5.54
Government Share of Surplus Profits (less payments made on account of rebate to worked lines)	20,76	24,01
Total Income	5,28,75	7,01,24
Percentage of Total Income on Total Capital Outlay	1.36	5.74
Interest	3,73,98	3,09,24
Amorty and Sinking Fund	70,89	19,32
Gain or Loss to the State	17,68	1,73,93

**Gross Earnings.** The total gross earnings of the railway increased from Rs 17,14,010 in 1923-24 to Rs 19,31,390 in 1924-25, the receipts from various sources being as under —

	1923-24 (Rs 1,000)	1924-25 (Rs 1,000)
Passengers carried	6,10,89	6,36,56
Other Coaching Earnings	93,16	95,46
Total Coaching Earnings	7,13,95	7,31,92
Total Goods Earnings	9,51,46	11,54,84
Electric Telegraph Earnings	2,06	2,26
Steamboat Earnings	2,81	2,59
Sundry Earnings	42,23	39,78
Total Gross Earnings	17,14,01	19,31,39

**Weekly Earnings.** The following table shows the earnings per mile per week during 1923-24 and 1924-25 on the commercial and military sections respectively and on the entire North Western Railway, excluding the worked lines —

	1923-24 Rs	1924-25 Rs
Commercial Section — Earnings per mile per week	912	1,080
Proportion of Expenses to Earnings	68.15	60.95
Military Section — Earnings per mile per week	204	186
Proportion of Expenses to Earnings	110.83	122.45
Entire Line — Earnings per mile per week	654	744
Proportion of Expenses to Earnings	73.00	66.70

**Working Expenses.** — The totals of Rs 12,06,62,000 and Rs 12,54,10,000 working expenses for the years 1923-24 and 1924-25 respectively were thus apportioned —

	1923-24 (Rs 1,000)	1924-25 (Rs 1,000)
Maintenance of Structural Works	2,84,02	2,75,56
Maintenance and Supply of Locomotive Power	4,81,34	4,79,15
Maintenance of Carriage and Wagon Stock	1,20,52	1,86,29
Maintenance and Working of Ferry Steamers, etc.	1,36	96
Expenses of Traffic Department	1,93,77	1,81,92
Expenses of General Departments	77,65	72,56
Miscellaneous Expenses	44,96	57,72
Total Working Expenses	12,06,62	12,54,10

EAST INDIAN RAILWAY  
Howrah Station, Calcutta.

#### EAST INDIAN RAILWAY.

**Inception and Development.** The original East Indian Railway Company was formed in or about the year 1845, surveys being at once made for the construction of the main line to Delhi and other important centres. It is worthy of note that one of the earliest portions to be built was a section from Howrah (Calcutta) to the coal-bearing district which is now so widely known as the Ranee-gunge Fields. The first section to be opened for traffic on August 15, 1854 (30 years after the construction of the first railroad in England and nearly three years before the Mutiny), was that running from Howrah to Hooghly, a total length of 23 miles. The initial objective of the new company was Delhi, the line being intended to pass through Patna, Benares, Mirzapur, Allahabad and Agra in order that the trade carried on by boats on the River Ganges between these and other places might be captured.

Notwithstanding the difficulties and delays caused by the Mutiny in 1857, a through train service between Howrah and Delhi was established in 1867, direct communication with the city and port of Calcutta being thus secured. Although the natural terminus of the East Indian Railway is at Howrah, situated on the west bank of the river Hooghly, through the exercise of running powers the East Indian Railway has direct access to the Docks of Calcutta, situated on the East Bank, and to Budge Budge, the centre of the kerosene oil trade. This direct access is obtained by crossing the Hooghly at Bandel over the Jubilee Bridge opened in 1887 and thence via Naihati over the Eastern Bengal Railway system. To-day this important transportation system extends over 3,928 route miles and serves an area with an estimated popula-

tion of 32 millions, in which are situated some of the most important industrial enterprises of the country.

**Transfer to State.** The property owned by the old East Indian Guaranteed Railway Company, which was purchased by the State in 1879, was worked by a reconstituted company to the end of 1924, when all the contracts then subsisting between the Secretary of State and the company were determined and the line was brought under direct State management with effect from January 1, 1925. The arrangements which had been previously made for the transfer of the staff to the Government Service enabled that transfer to be made smoothly and without any change in the services rendered to the public. The Agent of the Railway (Mr G. L. Colvin, C.B., C.M.G., D.S.O.) has been invested with the powers of an Agent of a State Railway, and such of the functions of the Home Board of the company as have come under the direction of the Government of India have been assigned to the High Commissioner for India.

**Amalgamation.** An important administrative change which was sanctioned in 1924 was the amalgamation of the East Indian and Oudh and Rohilkhand Railways, which was effected from July 1, 1925. From every point of view this was a desirable measure. The economy which must follow the abolition of a separate central administration requires no special proof, and in respect of efficiency the advantages of the unified control of the alternative routes traversing the Gangetic Valley are almost equally obvious. Apart from this, the pooling of rolling stock and repair facilities and stocks of reserve material will provide means both for actual economy and for more efficient working.

**Reorganisation.** The East Indian and Oudh and Rohilkhand Railways have lately been reorganised and the divisional system of administration introduced, with effect from February 20, 1925, the East Indian Section being divided into four divisions with headquarters at Howrah, Asansol, Dinapore and Allahabad, and the Oudh and Rohilkhand Section into two divisions with headquarters at Lucknow and Moradabad.

As a sequel to the acquisition of the East Indian Railway by the State and its reorganisation and with a view to securing the operative, administrative and economic advantages which accrue from assigning clearly defined zones to different railway administrations, it was decided that after April 1, 1925, the Delhi-Ghaziabad Section and the working agency of the Delhi-Umballa-Kalka Railway should be transferred to the North Western Railway, the Naini-Jubbulpore Section being handed over to the Great Indian Peninsula Railway as from October 1, 1925.

**Geographical Position.** The East Indian line passes in a north-westerly direction from the Port of Calcutta through the Provinces of Bengal, Bihar and Orissa, and the United Provinces of Agra and Oudh, i.e., it serves the entire Gangetic Valley of India, and the country lying between the Jumna and Ganges Rivers. Through its junctions with the North Western Railway with the Great Indian Peninsula Railway with the Bombay Baroda and Central India Railway, with the Rohilkhand and Kumaon Railway with the Bengal and North Western Railway, with the Bengal Nagpur Railway and the Eastern Bengal Railway, the East Indian Railway also affords direct access to all parts of India.

**Permanent Way.**—The line was originally laid with 75 lbs rails. To meet present-day needs, rails of 85, 88½, 90 and 100 lbs are either already laid or being laid according to requirements. In certain portions it is proposed to lay rail sections up to 115 lbs per yard. The track is ballasted throughout with stone.

**Workshops.**—The workshops of the carriage and wagon sections of the Mechanical Department of the railway are at Ferozshah, about three miles distant from Haridwar, and at Alambagh, Lucknow, where the locomotive works are at Jansingh in the district of Meerut, in the province of Bihar and Orissa, and at Chhatrapati Sagar and NO.

The Lilloah shops and employments for about 15,000 men and the Malabar shops for about 3,000 men in the construction, maintenance and repair of every class of rolling-stock. The Lilloah shops cover an area of over 100 acres, which has been laid out as a garden town, planned and owned by the

company, and containing a club, an institute for railway employees, golf links, bowling green, fishing tank and other recreation grounds. The locomotive shops at Jansingh have been frequently enlarged since they were constructed in 1862, and now cover an area of considerably over 100 acres. About 12,000 hands are also employed here. The most complete equipment of modern machinery and plant is being installed for the repairing of locomotives, also a large section of the works is for the manufacture of iron sleepers and other permanent-way fittings, points,

(continued over)

# TRANSPORT RAILWAYS

crossings, signalling, interlocking and other appliances, and the supply of locomotive and carriage and wagon details to the other workshops on the railway. The locomotive repair shops at Charbagh, Lucknow, now in process of rebuilding on the most up-to-date lines, employ about 2,500 men.

**Rolling Stock.**—The passenger coaches are of the most modern type, and every advantage has been taken of the generous scope afforded by the 5 ft 6 in. gauge to provide ample accommodation with well-fitted interiors, including electric lights and fans and separate lavatories to each compartment.

Restaurant cars are run on all the principal trains, and are fully equipped on up-to-date lines. Tourists' saloons, luxuriously appointed, are available at all times for touring and other purposes. A touring cinema car is another example of the up-to-date stock of the East Indian Railway. This car, which allows accommodation for a

complete cinema plant, films, a cinema operator and mechanic, tours the entire system and free open-air displays are given at most of the stations where the visits of the car form the only break in the monotony of the lives of the inhabitants. Railway propaganda is also worked into these displays.

A carriage of the following dimensions is also being fitted up as a Pullman Demonstration Car, and will tour the line:

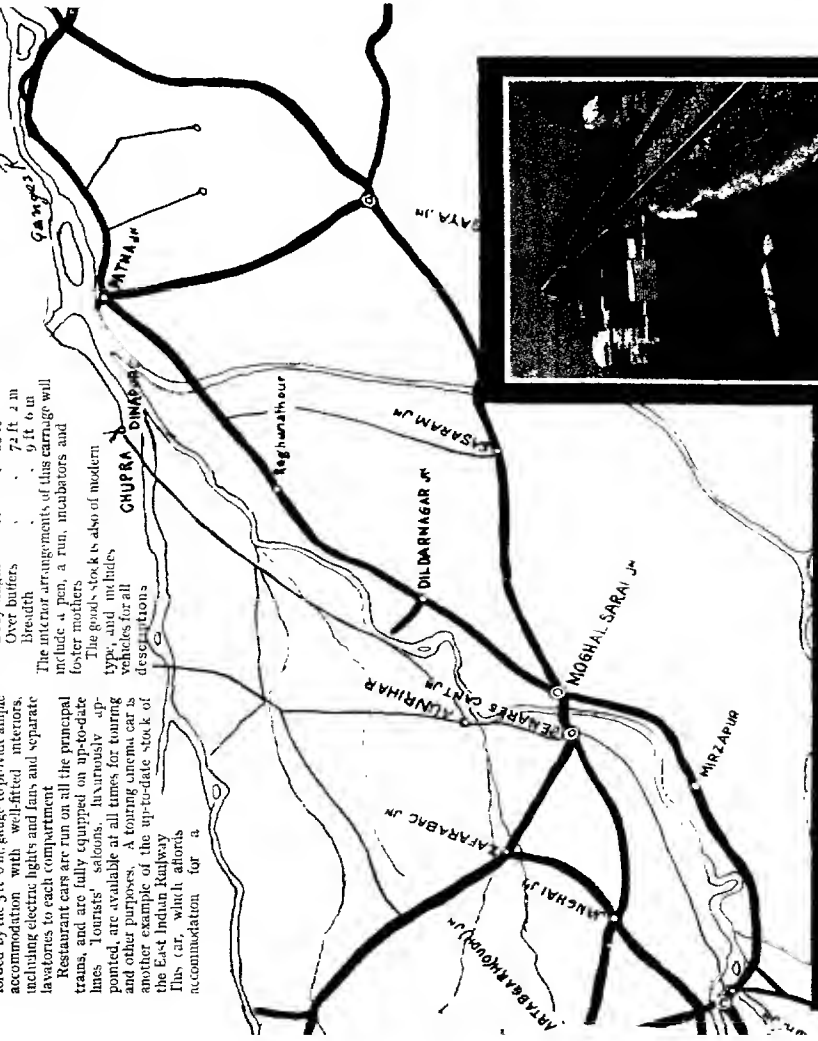

Body length	108 ft
Over breadth	73 ft 2 in
Breadth	9 ft 6 in

The interior arrangements of this carriage will include a bar, a bar, incubators and lavatories for mothers.

The goods stock is also of modern type, and includes vans for all descriptions of goods.

of traffic requirements. Special locking devices and other safeguards against pilferage are regularly maintained in connection with this part of the service.

**Stations.**—About 700 railway stations lie along the East Indian Railway route, and are all connected by telegraph and telephone. The stations are largely provided with raised platforms, reaching to the floor level

1. Upper Son Bridge.  
2. Bombay Mail crossing Allahabad Bridge.

# TRANSPORT RAILWAYS

with the Bengal Nagpur Railway of the Bokaro, Sising and Kailash collieries situated in the Bokaro-Bansbari Coal fields. The average annual output of these collieries already exceeds 200,000 tons.

**Staff.**—The total number of the staff employed on the East Indian Railway on March 31, 1926, was 17,570, of which 1,092 were Europeans, 2,581 Anglo-Indians, and 14,897 Indians.

**Revenue and Expenditure.**—During the financial year April 1, 1925, to March 31, 1926, the gross revenue of the Railway from all sources was approximately Rs 20 crores (215 millions), whilst the expenditure, which amounted to Rs 12 crores, represented 60.55 per cent of the total revenue. The net

of the carriages, waiting-rooms or sheds for passengers, and sites suitable for the display of advertisements. At the more important stations, refreshment rooms, fruit stalls, book-stalls, and stalls for the sale of the miscellaneous indigenous products of local crafts and artisans serve to satisfy more completely the needs of the traveller or the acquisitive visitor to India. The peripatetic vendor of the cheaper brands of cigarettes, of Indian confectionery, of tea, aerated waters, etc., and the fruits of the season is also to be encountered at most stations.

**Collieries.**—The East Indian Railway owns the Kailash coal fields near Giridih, the terminus of a branch from the main line at

Madanpuri, near Bihar and Orissa, and the average annual output of the mines now amounts to approximately 200,000 tons. A special feature of these collieries is that they are worked upon thoroughly modern principles, and that certain valuable commodities are being manufactured from the by-products, thus adding greatly to the value of the property. For instance, there was for many years an unsatisfied demand for coke in all parts of India, but some years ago the East Indian Railway not only introduced a modern oven plant for the burning of it, but further utilised the gas produced for driving engines and for providing electricity for pumping and lighting purposes in the mines. The East Indian Railway is also a joint owner

of the chief commodities transported as goods, in the order of the volume of each carried, were Coal and coke, railway stores, grain and pulses, marble and stone, rice, oil seeds, wheat, salt, and iron and steel.

**MAIL AND OTHER TRAINS.**—The East Indian Railway maintains fast daily through mail train services between Howrah and Bombay in connection with the Great

earnings were, therefore, about Rs 8 crores (80 millions).

**Traffic.**—During the financial year 1925-26 the Railway carried 72 million passengers, 13 million tons of coal, 8 million tons of general merchandise, and in addition a heavy traffic in parcels and live stock.

The chief commodities transported as goods, in the order of the volume of each carried, were Coal and coke, railway stores, grain and pulses, marble and stone, rice, oil seeds, wheat, salt, and iron and steel.

**MAIL AND OTHER TRAINS.**—The East Indian Railway maintains fast daily through mail train services between Howrah and Bombay in connection with the Great

Howrah Bridge from the Calcutta side. The station is seen in the distance.

Indian Peninsula Railway, and between Howrah and Simla and Peshawar in conjunction with the North Western Railway. For the carriage of the Home Mails and of first-class overseas passengers by the Royal Mail Boats a special boat train, known as the "Imperial Indian Mail," is run weekly between Calcutta and Bombay, directly from and to the Mole at the latter port. This train, the most luxurious in the East, reproduces the chief features of the Continental boat trains in the matter of comfort and conveniences.

**TOURIST ATTRACTIONS**—Probably no other country offers more varied attractions to the traveller than India, and much that is of historical, geographical and archaeological interest is situated along the route of the railway under notice. Some of the chief places in this connection are

**Calcutta**—formerly the capital of India, but still "the second city of the British Empire" known in history and tale as "the City of Palaces" on account of the general magnificence of its buildings. It is intimately associated with the Mutiny and is the main terminus and headquarters of the East Indian Railway. The station at Howrah on the right bank of the Hooghly, opposite Calcutta, is an imposing building having been greatly enlarged in recent years.

**Gaya**—the holy city of the Hindus, second only to Benares in sanctity, about 12 miles from which are the Barabar caves, dating back to B.C. 250. About 300,000 pilgrims annually make the journey to Gaya.

**Buddh Gaya**—famous down the avenue of time by its mythological, spiritual and archaeological significance, contains the great temple of Buddha, reputed to be over 1000 years old. An officer is detailed by the Public Works Department to conduct visitors round the temple.

**Monghyr**—a landmark in the history of British supremacy in India. In the neighbourhood is the reputed hermitage of Buddha, with numerous rock-cut remains and traces of the Saint. Situated 5½ miles from Jamalpur junction, Monghyr provides much attractive river scenery.

**Patna**—the ancient Pataliputra, capital of India in 321 B.C. and the scene of the coronation of the great Asoka in 269 B.C.

**Benares**—the holiest of the many holy cities of India and one of the oldest cities in the world, being mentioned in the very ancient Hindu Shastras, became the headquarters of Buddha in the 6th century B.C. Near by, an ancient tower marks the spot where Buddha first preached the doctrine of Nirvana. The great northern centre of the worship of Siva, Benares is visited yearly by at least a million pilgrims.

**Lucknow**—"The City of Gardens," contains perhaps the finest specimens of the magnificence and grandeur of Mohammedan architecture. It was the scene of many famous incidents during the great Indian Mutiny, chief among them being the defence of the Residency.

**Cawnpore**—the Manchester of India, and full of memorials of the great Indian Mutiny.

**Agra**—possesses one of the world's greatest wonders in the famous "Taj Mahal," the well-known "Dream in Marble," also many other mausoleums and monuments of the renowned Akbar, including his great Fort.

**Fatehpur Sikri**—25 miles from Agra, is likewise intimately associated with Akbar, by whom it was founded.

NAINI TAL, 6,400 feet above sea level, reached via Bareilly (E I Railway) and Kathgodam (Rohilkhand and Kumaon Railway)

*Delhi*—the present Capital of India and a very ancient city, being mentioned in Hindu Chronicles as far back as B.C. 1400. It is full of buildings and monuments of the greatest historical and archaeological interest.

**HILL RESORTS.**—A number of popular hill resorts situated in the mighty Himalaya Mountains are directly served by the East Indian Railway, e.g. —

- Simla —elevation above sea level, 7,116 ft
- Mussoorie —elevation above sea level, 6,053 ft
- Naini Tal—elevation above sea level, 6,400 ft
- Almora— elevation above sea level, 5,494 ft
- Ranikhet—elevation above sea level, 5,836 ft.

**Industries.**—The East Indian Railway serves rich and important rice, gram, pulses, oil seeds (including linseed), sugar cane and wheat producing tracts of country, principally along the Gangetic Valley.

Starting from Calcutta, the headquarters of the jute, gunnies and hides industries, where there are also numerous flour and oil mills, shipbuilding yards and engineering works, the line passes by Bally with its bone mills, the Naihati Paper Mills, Konnagore with its chemical works, the cotton mills of Serampore, and also Durgapur and Ranee-gunge with their pottery works and paper mills. Beyond lies Asansol, which, besides being the headquarters of the Ranee-gunge coal fields, is the site of the Indian Iron and Steel and Indian Standard Wagon Works. On the loop line, in the vicinity of Tinpahar, Rajmehar and Pakur, are extensive stone quarries and rich deposits of china clay. At Monghyr an important cigarette factory is established.

The Bengal Iron Co., Kulti, the Kumard-hubi Engineering Works and other important firebrick and engineering concerns are situated on the Grand Chord line. On the same section are Dhanbad, the centre of the Jherriah Coal fields, the largest in India, and Kodarma, known for its mica mines. Coal fields, lime quarries and cement factories along the Daltonganj branch of the Grand Chord line bear eloquent witness to the mineral wealth of the district. A sugar refinery is located at Arrah on the Main Chord line, while Mirzapore, in addition to being the home of the carpet industry, boasts a cotton mill and an important lac industry.

On entering the United Provinces of Agra and Oudh, the line passes through the districts where cloth weaving (as around Shah-ganj), glass works, flour and cotton mills, and sugar works (as at Allahabad), flom and paper mills (as at Lucknow) contribute their share to the industrial effort of the country. At Cawnpore are numerous cotton and woollen textile works, oil and flour mills, sugar refineries and perhaps the largest factory in India for the manufacture of footwear and other leather goods.

**New Projects.** That the growth and development of the East Indian Railway have not ceased is evidenced by the fact that it has at present under construction or examination no fewer than 30 projects for extension of the System involving about 1,300 miles of new line. The chief of these projects is the Central India Coalfields Railway which is intended principally to link up and open out extensive coal bearing tracts lying in the Hutar and Karanpura Coal Fields Areas.

5. Double-headed Coal Train.

**BENGAL-NAGPUR RAILWAY COMPANY.**

**Origin.** The Bengal Nagpur Railway which serves Bengal Bihar and Orissa, the Central Provinces and the northern portion of the Madras Presidency, has developed from very small beginnings into one of the most important lines in India serving as it does rich coal and mineral districts, the industrial centres of Janshedpur and Burnpur, the temple towns of Bhuvaneswar and Jagannath Puri, the beautiful inland sea of Chilka Lake and the important port of Vizagapatam. The construction of the line dates from 1887 when the newly formed Bengal Nagpur Railway Company took over the Nagpur-Chattisgarh State Railway and the Bilaspur-Etawah State Railway.

**Gauge and Mileage.** The total mileage of open lines on the system is 3,163 11/16, 2,221 9/16 miles of which are broad gauge and 941 1/2 miles narrow gauge.

**Works under Construction.** The works at present (1926) in hand are the South Karanpura Railway (29 miles), the conversion into broad gauge of the Jansar-Jerodi line, the Talchur Coalfield Railway (61 miles), the Hesia (handil) line (70 miles), the Rapur-Vizianagram (260 5/8 miles), and the construction of the harbour at Vizagapatam.

**Services.** The Company runs two mail services, one across India via Nagpur from Calcutta to Bombay in conjunction with the Great Indian Peninsula Railway, and one from Calcutta skirting the East Coast to Madras in conjunction with the Madras and Southern Mahratta Railway. The latter route is the main one to Colombo.

**Tourist Services.** Travel over the Bengal Nagpur Railway is *de luxe* and yet not expensive. A large party can book a coach fitted to serve as a drawing room by day and convertible into bedrooms at night, provided with facilities for catering for reasonable wants at a cost working out slightly above the ordinary fare. Two tourist cars for parties desiring to travel independently of hotel accommodation have recently been built and these are much in demand among wealthy tourists and Indian nobles.

**Haulage.**—On the level portions of the Bengal Nagpur Railway the mail trains are hauled by 4-cylinder compound Atlantic De Glehn engines. To deal with these heavy trains on the hill sections a new class of 4-6-0 type engine has been introduced which gives entire satisfaction. To handle the heavy mineral traffic from the Jhermah Coalfields a new 2-8-0 engine known as H.S. is in use. Actually 145 of these engines have been put into service and they are capable of hauling 2,200 tons on the level.

**Rolling Stock.** The rolling stock of the company comprises 761 locomotives, 2,268 coaching vehicles, 22,589 broad gauge wagons and 2,189 narrow gauge wagons.

**Repair and Maintenance.**—In order to keep the greatly increased number of locomotives in repair, considerable extensions have been made in the railway shops at Khargpur, a definite programme having been laid down for dealing with each locomotive and its component parts during the 12 weeks allowed for a general repair. Recent additions to carriage stock include seven mail rakes, each consisting of six bogie carriages and a dining car, four for the Madras-Calcutta service and three for the Bombay-Calcutta service.

**Wagon Shops.**—Repairs to broad-gauge wagons are chiefly carried out at Khargpur, where the wagon shop, which started full working in 1917, consists of reception sidings, light and heavy repair shops, and a lifting shop, all served from the reception sidings by a traverser capable of handling three four-wheelers or one bogie wagon. There is a fourth large shop, with a smith bay, machine

bay, vacuum fitters' and carpenters' bay, and store bay. New wagons manufactured in England are sent out as components and are erected in the shops, where a yard, specially planned and equipped with pneumatic plant, is able to deal with 1,500 four-wheelers per year.

The lifting shop has a capacity of 48 four-wheeled wagons and is served by two 15-ton overhead electric cranes. Three wheel lathes and one journal lathe at the end of the shop enable wheels for tyre turning to be dealt with at a minimum of handling. Air compressors for light and heavy repair shops are on order, and extended use is to be made of pneumatic drills and rivetting hammers, also of rivet cutting machines.

**New Wagon Shop.**—A new wagon shop has been built at Adra, the gateway to the coal-fields. The shop is a double bay 315 ft long with one 60 ft and one 40 ft bay, saw-tooth roofs and north lighting. A 15-ton electric overhead travelling crane runs the full length of the shop, with weigh bridge and store yard at the west end. Machinery and smiths' fires are provided for the repair of parts, no production work being undertaken.

**Surveys.**—During the last weeks of 1926 it was announced that the Railway Board had sanctioned the carrying out by the Bengal-Nagpur Railway of several surveys. Two detailed surveys were so authorised: one of a line from Titlagarh to Sonapur, a distance of about 68 miles, on the 5 ft 6 in gauge; the other of a line from Dhanitani to Kanker, about 43 miles, on the 2 ft 6 in gauge. Further surveys sanctioned comprised the following: a line from Berhampore to Ruseikonda of some 50 miles; Bhadrak to Chandbali about 30 miles; Contai Road to Contai, 34 miles; Jagatpur to Kendrapara, 33 miles; Jajpur Road to Jajpur, 15 miles; and Bilaspur to Kawarda, 65 miles. The surveys will be known by the respective names given to them above.

**Vizagapatam Harbour Construction.** At a meeting of the Vizagapatam Harbour Advisory Committee held at the close of 1926, the Engineer-in-Chief reported considerable progress on the construction of the quay wall. The Committee decided that a ferry for carrying both passengers and lorries or carts should replace the existing ferry across the creek. It was proposed to erect two storage sheds as well as the two transit sheds already projected, and to construct a canal along the front of the storage sheds, providing access by water in addition to the rail facilities.

**Traffic Figures.**—The ton mileage of goods transported over the Bengal-Nagpur system in 1925-26 amounted to 2,392,854,000; passengers carried to 24,640,000, and gross earnings to Rs 8,42,54,000.

The principal traffic items are coal and coke, iron ore, manganese, salt, rice, paddy and oilseeds.

**Administration.**—The Board of Directors is composed as follows: R. Miller (chairman), Sir Ernest Bell, Kt., C.I.E. (Government director), G. A. Anderson, A. Brereton, C.S.I., Sir C. S. Wilson, K.C.I.E., and F. Schooling. Auditors—W. B. Peat & Co. and Gerard van der Linde & Son.

**Bankers.**—Lloyds Bank, Ltd.

**Agent.**—J. Greenham.

**Offices.**—The head office of the Company is 131 Gresham House, Old Broad Street, London, E.C.2. The Indian Headquarters are at 12 Garden Reach Road, Calcutta.

#### EASTERN BENGAL RAILWAY.

**Inception and Development.**—The Eastern Bengal Railway system originated with the lines owned by the late Eastern Bengal Guaranteed Railway Company, the first of which was opened in 1862. These lines were acquired by the State in 1884 and in 1887 other lines were amalgamated with them the whole being worked by the State as one undertaking under the name of the Eastern Bengal State Railway. In 1915 the word "State" was omitted from the title of the Railway to bring it into conformity with the practice in regard to Government-owned lines in India.

**Administration.**—The railway is administered on the departmental system under an Agent, who constitutes the Local Government under the control of the Railway Board, Government of India. The present Agent is Mr. N. Pearce, while the Traffic Manager is Mr. G. S. Bocquet, C.I.E.

**Area Served.**—The railway traverses low-lying country, which is for the most part subject to floods from the many rivers intersecting it, being in consequence very rich and

fertile. The chief products of this area are jute, tea, rice and paddy. As Bengal is renowned for its jute, so is Calcutta famous for its jute mills, and jute is the staple commodity transported by the Railway.

The line provides communication between Calcutta and North and East Bengal, also with Lower Assam and Eastern Bihar, in addition, three short suburban branches run southwards to Diamond Harbour, Canning and Budge Budge.

**River Difficulties.**—The railway system is intersected by the two great rivers of Eastern India, the Ganges and the Brahmaputra. In the early days the passage of the rivers in the lower reaches marked the termination of the broad gauge on the south and the commencement of the metre gauge on the north. Various methods have been adopted to overcome the transport of passenger and goods traffic across these rivers. Formerly the crossing of the Ganges at Sara was effected in the case of passengers by specially designed steamers, and in that of goods traffic by a combination of wagon ferries and high

capacity barges. The construction of the fine Hardinge Bridge at Sara and the extension of the broad gauge to the northern bank have done much to accelerate traffic at this point. At other crossings wagon ferries form part of the railway system, between Goalundo and Naravanganj and between Sirajganj and Jagannathganj connections are maintained by Inland Steamer Companies, passenger traffic being transported by steamers and goods traffic by steamers and high capacity barges. The Hardinge Bridge ranks as one of the finest achievements of railway engineering in view of the difficulties that had to be surmounted owing to the shifting nature of the river bed, the strong current and the enormous volume of water carried by the river. Its 16 main piers supporting 15 spans each of 350 ft. are carried on wells sunk to a depth of 160 ft. below lowest water level. These are the deepest foundations of their kind in the world.

**Mileage.**—The total open mileage of the system in 1926 was 1,709.48, of which 676.58 miles were broad gauge, 987.90 metre gauge, and 45.0 miles narrow gauge.

**EASTERN BENGAL RAILWAY**  
Loading Jute into Flats at Japannathganj.

**Receipts and Expenditure.**—The gross railway earnings for year ended March 31, 1926, were Rs 6,40,55,000, working expenses Rs 4,70,90,000, net earnings, Rs 1,78,65,000.

**Traffic.**—Passengers carried by the railway in 1925-26 numbered 46,527,000, compared with 43,514,000 in the preceding year, receipts from coaching traffic totalling Rs 2,66,63,000, as against Rs 2,75,18,000. Goods carried aggregated 6,868,000 tons (Rs 3,36,08,000), compared with 5,837,000 tons (Rs 3,22,00,000).

**Hill Stations.**—No account of the Eastern Bengal Railway would be complete without a reference to the hill stations it serves; these are Darjeeling and Kurseong in the Himalayas and Shillong on the Khasi Hills in Assam. The extension of the broad gauge to Siliguri has resulted in a considerable saving of time on the journey to Darjeeling and Kurseong, one change only at Siliguri to the narrow gauge hill railway is now necessary, the journey taking about 18 hours.

The first part of the journey to Shillong is by broad gauge to Santahar. This occupies about five hours, and well-appointed corridor stock is provided. Then follow a night journey to Amingaon, a short river crossing to Pandu, and an enjoyable motor-car drive to Shillong, the whole journey occupying about 26 hours. On account of the relatively short time taken by the journey, these beautiful hill stations attract large numbers of visitors from the plains during the hot weather.

**Welfare.**—The Eastern Bengal Railway has always shown great interest in the well-being of its staff, for most of whom quarters are provided, generally rent free, a matter of great importance at the smaller stations, where usually it is impossible to rent outside

accommodation. At all the larger stations separate institutes have been formed for the European and Indian members of the staff, all kinds of social and athletic facilities being provided. The eight-hour day has been generally adopted, at the smaller stations, where the work is intermittent and not continuous, the eight hours of duty are spread over a period not exceeding 12 hours.

An important development in recent years has been the constitution of district welfare meetings, at which the District Traffic Superintendent meets a committee elected by and representative of the principal categories of the staff to discuss matters of mutual interest. These meetings are held to be of great value, particularly in regard to matters which, but for such discussion, might crystallise into grievances, on the other hand, they provide a means of ascertaining the views of the staff on such questions as improved methods of working, new types of quarters, etc.

**Educational Facilities.**—For many years the railway has maintained Training Schools—one in Calcutta and one in Saidpur in Northern Bengal, in which members of the staff are trained in the duties attached to the more responsible posts of the Traffic Department. It is hoped that the formation in 1925 of a Selection Committee by which all applicants for employment must be approved before appointment, combined with the educational facilities provided, will result in the attainment of a definitely higher standard of intelligence and personality among employees, and that the measures adopted in regard to welfare generally will tighten the bonds of loyal co-operation which have at all times existed between the staff and management.

## **BOMBAY, BARODA AND CENTRAL INDIA RAILWAY COMPANY.**

**Origin.**—The first Bombay, Baroda and Central India Guaranteed Railway Company was registered in 1855. The original contract ran to 1880, but was extended to December 31, 1905, on which date it was renewed under revised conditions. The purchase price of the old railway was fixed at the sum of £11,685,581, and the Secretary of State agreed to create and issue to the company India 3 per cent stock to the amount of £10,089,146 in satisfaction of £9,685,581, part of the purchase price, the company raising a new stock capital of £2,000,000, being the unpaid balance of the purchase money.

**Lines.**—In addition to its own property (the B B and C I Railway proper), the company works certain other lines owned by separate companies and States, the more important being Gackwar's Mchvana Railway (230 miles), Jaipur State Railway (170 miles), Tapti Valley Railway (156 miles), Ahmedabad-Parantij Railway (89 miles), and Dhrangadra Railway (54 miles).

The B B and C I Railway itself is divided into two sections—the one of 5 ft 6 in gauge running from Bombay to Baroda, north-westward as far as Kharaghoda and north-eastward via Rutlam and Nagda to Agra and Mithra, and the other of metre gauge running from Ahmedabad in a north-easterly direction to Delhi. In 1925 there were 1,008 miles of broad gauge open and 1,884 miles of metre gauge on the B B and C I line proper.

**Territory.**—The B B and C I Railway traverses Central India and that extensive territory Rajputana, and forms the quickest route to those places of interest which have such a wide appeal to the tourist—Agra, Delhi, Fatehpur Sikri, Jaipur and Amber, Ajmer, Mount Abu, Udaipur, Chitorgarh, Ahmedabad and Baroda.

**Rolling Stock.**—In 1925-26 the number of locomotives used on the broad-gauge lines was 447, with a tractive effort of 9,505,435 lbs. On the metre-gauge lines 521 locomotives were in use, with a tractive effort of 5,743,226 lbs. Covered and open wagons totalled 10,519 (205,000 tons capacity) broad-gauge, and 9,395 (110,130 tons capacity) metre gauge.

**Passenger Traffic.**—The total number of passengers carried over the system in 1925-26 was 66,829,511, earnings aggregating Rs 4,21,19,425.

**Goods Traffic.**—During the year ended March 31, 1926, goods to the amount of 5,905,460 tons were carried by the B B and C I Railway, as against 6,011,967 tons in 1924-25. Earnings from all goods traffic amounted to Rs 6,88,96,613, compared with Rs 6,96,71,009.

**Financial Results.**—The general results of working for the year 1925-26 of the B B and C I Railway (exclusive of the subsidiary lines) were as follow (1924-25 figures in brackets)—Gross earnings, Rs 12,25,14,963 (Rs 12,32,28,850), working expenses, Rs 7,54,39,392 (Rs 7,09,34,425), net earnings, Rs 4,70,75,571 (Rs 5,22,94,425). Company's share of surplus profits, Rs 10,01,906 (Rs 13,72,683).

**Board of Directors.**—Major A. D. G. Shelley, R.E. (chairman); Sir E. K. C. Olivant, K.C.I.E. (deputy chairman), W. Stantall, C.I.E. (Government director), A. R. Barrand, Sir Henry P. Burt, K.C.I.E., C.B.E., Colonel W. V. Constable, R.E. J. S. Wardlaw Milne, M.P. Bankers—The National Provincial Bank Ltd. Secretary—Mr. S. G. S. Young.

**Offices.**—The head offices of the company are at White Mansion, 91 Petty France, Westminster, S.W.1. The Indian Establishment Office is opposite Church Gate Station, Bombay. Agent—Sir Ernest Jackson, Kt., C.I.E. Telegraphic address—"Bombarda." (See illustration p. 102.)

GREAT INDIAN PENINSULA RAILWAY  
Victoria Terminus, Bombay

#### GREAT INDIAN PENINSULA RAILWAY.

**A Pioneer Railway.** The Great Indian Peninsula Railway, whose motto is "Arte non ense" has the distinction of being pre-eminently the pioneer line of India. It has also the great distinction of having surmounted what to many must have seemed at the time almost insuperable constructional difficulties. The gigantic engineering problem of the Ghats confronted the first engineers of the line, for the formidable geological barrier of these hills not only blocked access to the port of Bombay, but also obstructed the exit from the city and island to the vast areas beyond the hills. Regarded from any point of view, the rail conquest of the Ghats was a big undertaking, and when at length the mighty task was completed and the first trains had traversed the Bhor and Thull passes, the event might be claimed to have heralded the dawn of the railway era in India.

**Extent of System.**—In all other respects the G.I.P. may be regarded as a typical Indian railway—typical of the country and, for the most part, typical of the entire Indian railway system generally. Its lines, broad and narrow gauge, traverse territory that is, more or less, characteristic of the whole country. From the great terminal and the directing centre at Bombay it has thrown out lines into the central, north-eastern, and south-eastern regions of India. It crosses the great central plain to Nagpur and Jabalpur, it extends south-eastward towards Madras into the heart of the Deccan, while in another direction it traverses Rajputana and the Central Indian Agency States to Cawnpore, Jhansi, and further north to the historic cities of Delhi and Agra.

It is a system with a variety of gradients, in one section passing for miles over a steep range of trap rock hills with summit altitudes of 2,000 feet, and with a ruling track gradient of 1 in 37. Beyond the Ghats, however, there is a general reversal of conditions, the various lines passing for hundreds of miles over the easy terrain of peninsular India and along great areas of the familiar "black cotton soil." Its railways extend into the most sequestered districts, through the most thinly, and also the most densely, populated zones; through highly cultivated and pro-

ductive agricultural regions, as well as through poor and arid tracts. And, throughout, the name posts on its five hundred odd stations are instructive indices to the traveller, revealing the principal languages of the territory traversed by the system: the chief vernaculars of the country—Hindi, Urdu, Marathi and Gujarati.

**Origin.**—In connection with the general schemes for railway construction in India which were formulated in 1843, plans were prepared for a line from Kurla to Thana, to be called the "Bombay Great Eastern Railway." In April, 1845 the scheme with some modifications, was approved by the citizens of Bombay, and an "Inland Railway Association" was formed "for the purpose of promoting enquiries into the applicability of railway communication on this side of India."

Meanwhile a company of English capitalists was formed for the same purpose in London under the title of the "Great Indian Peninsula Company," with the famous Robert Stephenson as consulting engineer, shortly after an influential committee was formed in Bombay to work in conjunction with the London Committee, and in August, 1845, Mr. John Chapman, to whose endeavours the formation of the company was largely due, was sent to Bombay to make enquiries on the spot.

**Birth of "G.I.P."**—After the country up to and including the Ghats had been thoroughly examined, the Great Indian Peninsula Railway Company was incorporated by an Act of August 1, 1849, the contract between the Directors of the East India Company and the Company under notice being made on August 17 of the same year.

**First Construction.**—The year 1850 was occupied with a survey of the projected line to Thana and thence to Kalyan together with a short branch to the "Fort of Mahim," and early in 1851 a contract was made with an English firm for the construction of the first 21 miles of rail from Bombay to Thana, these being opened for traffic on April 16, 1853. The day was kept as a public holiday, and the Commander-in-Chief placed the garrison band at the disposal of the Company and arranged for the firing of salutes. This year also witnessed the registration of a second contract, providing (*inter alia*) for the

construction of a line from Kalyan to Shapur (now Asangaon) 54 miles from Bombay. On May 1, 1854 the extension to Kalyan was opened. New Year's Day, 1862, witnessed the opening of a line to Kasara at the foot of the Thull Ghats, and the Bhor Ghat incline was opened on April 21, 1863, amid great rejoicing. The Thull and Bhor Ghat routes were respectively completed in 1865 and 1863, but the laying out of the permanent way in districts beyond these altitudes had meanwhile been proceeding apace with the result that by the end of 1861 the line had been completed as far as Shegaon on the north and Sholapur on the south. The three termini at Nagpur (519 miles from Bombay), Raichur (442 miles) and Jabalpur (615 miles) were respectively reached on February 10, 1867, May 1, 1871, and March 7, 1870.

**Difficulties of Construction.** Great difficulties confronted the engineers during the construction of the Jabalpur section. These were particularly serious between Bhilsawal and Jabalpur (339 miles), where work had to be performed among the deadly jungles of Nimari and Asseer and where the many tributaries of the Nerbudda had to be crossed. In bridge-building it was found that beneath the surface rich soil sand and water extended to a great depth, and that the interlying layers of conglomerate offered great obstacles to the progress of the work. Further, cholera, smallpox, and other diseases prevalent in the Nerbudda valley caused a very heavy mortality among the labour force.

**Later Progress.**—As stated above, the last section of the important Nagpur Branch was completed in 1867. From the other side, however, the Bengal-Nagpur Railway did not effect a broad gauge connection until the 'eighties, thus opening a direct through route between Calcutta and Bombay. On the Midland section main line, including the Scindia State Railway, the Bhopal-Jhansi line was opened in 1889, Dholpur to Agra Cantonment in 1878, Jhansi to Chaurah in 1888, Chaurah to Cawnpore in 1886, and the junction with the Agra-Dellu Chord railway at Agra to the terminal point at Belanganj Depot in 1906.

**Victoria Terminus.** Any account of the G.I.P. system would be incomplete without at least a reference to its magnificent headquarters, Victoria Terminus, Bombay, which

GREAT INDIAN  
Poona Mail Train about to

has been described as "the finest modern building in India" and as a terminus which is "unsurpassed throughout the whole world in point of beauty." The construction of these offices was commenced in 1878 under the control of the architect, Mr. F. W. Stevens, and the cost amounted to Rs 16,35,562, while the amount expended on the station, excluding the track, was Rs 10,40,428, this important work having been carried out under the supervision of Mr. F. W. Pearson, District Engineer. The formal opening of the building, which was named "Victoria Terminus," in honour of

Her Majesty the late Queen-Empress took place on June 21, 1887.

**Lines.** The Great Indian Peninsula Railway of the present day comprises the line formerly owned by the old Guaranteed Company of that name (now the Great Indian Peninsula Railway proper) in amalgamation with that of the late Indian Midland Railway Company (now known as the Midland Section). The Guaranteed Company's Railway was purchased by the State in 1900 when all the contracts then subsisting between the Secretary of State and that Com-

pany were determined, and a new Great Indian Peninsula Railway Company was constituted. The transfer of the line from Company to State management took place in July, 1925.

The following lines, with their gauges and mileages, are included in the system: Great Indian Peninsula Railway (5 ft 6 in. gauge), 2,672.35 miles; Agra-Delhi Chord (5 ft 6 in.), 125.88 miles; Baran-Kotah (5 ft 6 in.), 40.29 miles; Bhopal-Harsi (5 ft 6 in.), 57.22 miles; Bhopal-Ujjain (5 ft 6 in.), 113.28 miles; Bina-Guna-Baran (5 ft 6 in.), 147.07 miles; Cawnpore-Banda (5 ft 6 in.), 76.21 miles; Dhond-Baramati (2 ft 6 in.), 27.26 miles; Ellichpur-Yeotmal (2 ft 6 in.), 117.66 miles; Pachora-Jamner (2 ft 6 in.), 34.62 miles; Pulgaon-Arvi (2 ft 6 in.), 21.83 miles; Matheran Light Railway (2 ft), 12.61 miles.

**Mileage, etc.**—The open mileage of the G.I.P. system in 1925 was 3,446.28. The number of stations was 526; the steepest gradient was 1 in 34.

**Employees.** At the close of the year 1924-25 the total number of employees of the G.I.P. Railway (open lines only) was 85,268.

**Electrification.** On February 3, 1925, the Governor of Bombay declared open the first electric railway in India, the section being known as the Harbour Branch Extension of the G.I.P. Railway, from Victoria Terminus to Kurla, a distance of nine miles of double track. The G.I.P. has thus the special distinction of inaugurating railway electrification in India.

The electrification of the Harbour Branch Extension, however, forms only part of the various schemes at present in progress for the electrification of the Suburban and Main line services in Bombay, which on the G.I.P. system will eventually extend across the Ghats to Poona on the one side, and to Igat-puri in the other direction. On the local section, in addition to the Bombay-Kurla service, there has recently been an extension of electrification to Bandra via the Mahim Chord, thus connecting with the B.B. and C.I. Railway's local service.

It is anticipated that the introduction of electrification will result in a general acceleration of passenger traffic over each of the difficult Ghat sections of the G.I.P., in a considerable saving of time in the working of goods

GREAT INDIAN PENINSULA RAILWAY.  
Passenger Car.

INDIA. RAILWAY.

Victoria Terminus, Bombay.

trains, and, as the ruling gradient is 1 in 37, in a reduction of working expenses the present cost of working traffic being very high. The acceleration of passenger services between Bombay and Poona will undoubtedly help considerably in the expansion of the latter town, as there will be a saving in time of about one and a half hours for mail trains.

**Freight Train Braking.** The problem of devising such effective braking contrivances as would permit the movement of intact or undivided freight trains down the steep Ghat inclines has always been a pressing problem with the G.I.P. Automatic continuous braking has been the rule now for some years, and since 1922 there has been a complete vacuum-testing and repair installation in operation at Igatpuri and Lonavla to get the trains into effective condition to work over the Ghat inclines. The success of the working of the G.I.P.'s braking system, apart from the economic gain is proved by the uninterrupted movement of 1,450-ton intact freight trains down the Thull and Bhore Ghats.

**Permanent Way.** On the Great Indian Peninsula Railway proper the main line is laid with 100 lb bull-headed, 90 lb flat-footed, 82 lb bull-headed, and 69 lb double-headed steel rails. The sleepers originally laid were chiefly wooden but these have now to a large extent been replaced by iron pots. The whole of the south-east line except the Ghat sections, is laid with iron pot sleepers. On the Midland section the whole of the main line, the Mankpur branch, the Cawnpore branch from Jhansi to mile 326.04 and the line from Bina to Katni are laid with 80 lb flat-footed steel rails on cast-iron pot sleepers, several of the branches are laid with 75 lb rails on steel sleepers. The main line between Bombay and Bhusawal, and Kalyan and Lonavla (except Victoria Terminus yard) has been re-laid with 100 lb bull-headed rails on wooden sleepers, while considerable lengths of the Bhusawal-Itarsi Sections have been re-laid with 90 lb flat-footed rails on steel sleepers.

The line is ballasted almost entirely with hard trap rock. With the exception of the Mohpani, Chalisgaon-Dhulia, Jalgaon-Amalner, and Warora-Baliarshah branches the G.I.P. railway proper is fully fenced. On the Midland section the main line is fenced throughout, and the branches are partially fenced.

**Curves and Gradients.** The sharpest curve has a radius of 600 ft. on the Bhore Ghat between miles 75 and 76. The next sharpest curve has a radius of 1,050 ft. on the Thull Ghat, between miles 78 and 79. On the G.I.P. Railway proper the ruling gradients on ordinary sections of the main line vary from 1 in 100 to 1 in 200, with 1 in 100 banking sections near Vasind and Asvali. The ruling gradient on the Ghat sections is 1 in 37. On the Midland section the ruling gradient between Bhopal and Jhansi is 1 in 200, between Jhansi and Agra 1 in 150, and between Jhansi and Mankpur 1 in 125. The Jhansi-Cawnpore

branch is practically level except at bridge approaches, where the gradients are 1 in 270 and 1 in 300, and between Jhansi and Gharman, where it is 1 in 200.

**Rolling Stock.** On March 31, 1925, the G.I.P. was equipped with a total of 1,313 steam locomotives, this representing a total tractive effort of 20,764,982 lbs. Coaching vehicles on the same date numbered 2,461 on the 5 ft. 6 in. gauge and 46 on the 2 ft. 6 in. gauge. The total number of goods vehicles on the broad gauge system amounted to 19,845 and to 153 on the narrow gauge.

GREAT INDIAN PENINSULA RAILWAY.

GREAT INDIAN PENINSULA RAILWAY

1. First-Class Carriage, Electric Service.
2. First-Class Sleeper.
3. Reserved Saloon.

**Workshops.** The main locomotive workshops of the G. I. P. Railway are situated at Parel, about five miles north of Victoria Terminus. These works embrace a total area of 43 acres, of which 17½ acres are covered. The main carriage and wagon shops are situated two miles farther north, at Matunga; these shops occupy an area of approximately 80 acres, of which 17½ acres are covered.

A further large workshop exists at Jhansi, in which both locomotive and rolling stock repairs are carried out. These shops formerly dealt with the rolling stock of the Indian Midland Railway and are now being considerably extended to meet the increased requirements of the present day.

**Reorganisation.** In common with the other Indian Railways, the G. I. P. was adversely affected by the Great War, and by the year 1922 it had become clear that the line was not paying its way. With a view to economy and greater efficiency, the management planned an important scheme of reorganisation which came into operation in November 1922. The objects sought in this scheme have been substantially attained, and by the time (1925) that the system passed under State control the G. I. P. had opportunely put its house in order. There was thus a clear field for the introduction of the new regime.

Briefly the scheme involved the re-grouping of work in a manner somewhat similar to the reorganisation of American railways. It also resembled the system of working adopted by the Midland Railway in England when that line's financial results were poor and it had to make the necessary drastic changes. Up to November, 1922, there had been two departments of the G. I. P. Railway dealing with operation or transportation, traffic and locomotive. These have now been replaced by three departments: Transportation, Commercial and Mechanical.

**Transportation Department.**—The Transportation Department is responsible for the running of trains, their maintenance and upkeep after they leave the workshops, and the carriage of traffic of all kinds, and has under its control engines of all types, except those undergoing heavy repairs. The head of the department is designated Chief Transportation Superintendent, and he has under him five Divisional Transportation Superintendents.

**Commercial Department.**—This department is responsible for the securing, charging for, loading, despatching, unloading and delivering of goods and parcels. The head of the department is entitled Chief Traffic Manager, and he has under him six Divisional Traffic Managers.

**Mechanical Department.** The Mechanical Department is responsible for the design, specification, provision and heavy repair of all mechanical plant in use on the Railway, excluding certain plant in the Colliery and the Signalling Branches. In addition, this department is responsible for the supply and heavy repair of all electrical generating, distributing, traction and workshop equipment, also for the design and maintenance of the lighting and power installations in offices and staff quarters throughout the line. The Head of this department is designated the Chief Mechanical Engineer, and he is assisted by three Deputy Chief Mechanical Engineers and an Electrical Engineer.

**Results of Reorganisation : A Test Year.**—The year ending March 31, 1924, may be regarded as an important test year in the history of the G. I. P., since the results of that year's working are also those of the reorganised system which has just been described.

Thus, for the year 1923-24 the gross earnings of the line amounted to Rs 14,84,41,758, the net expenditure was Rs 9,94,58,187, and the net earnings were Rs 4,89,83,571, the expenditure being equal to 67 per cent of the gross earnings.

Trains of all descriptions run over the G.I.P. (excluding those run by the B.B. and C.I. Railway over the A.D.C. Railway) totalled 221,466, with the average mileage of 86. The average cost per train mile, passengers and goods, was Rs 4-11-5.

As in the case of other Indian railways, the immense preponderance of third class passenger traffic is a striking feature of the returns. For single journeys the percentage of third-class passengers amounted to 93.62. On the percentage proportion the contributions from the various classes were as follow: First, Rs 5.76; second, Rs 5.96; intermediate, Rs 1.84; third by mail, Rs 13.69; third by other trains, Rs 72.73.

During the year there were carried over the system 956,307 tons of coal and coke, 430,030 tons of cotton, 305,407 tons of wheat, 995,547 tons of other food grains, 600,332 tons of oilseeds, 3,407,888 tons of stores for revenue and construction—a total of 9,604,445 tons.

The earnings from this freight were returned as follow: Coal and coke, Rs 49,68,452; cotton, Rs 1,58,94,557; wheat, Rs 42,44,408; other food grains, Rs 1,30,01,848; oilseeds, Rs 80,59,807; other merchandise, Rs 3,87,82,691; stores, Rs 54,00,747; live-stock and miscellaneous receipts, Rs 7,96,207; a grand total of Rs 9,12,44,720.

Finally, during the year ended March 31, 1924, the G.I.P. Railway conveyed 50.99 per cent of all the cotton carried into Bombay.

**Passenger Traffic.**—Tables giving the average number of passengers conveyed to and from Bombay City from 1870 onwards show that the number rose from 1,507,421 in that year to 15,479,854 in 1908, and to 56,370,380 in 1924-25, the earnings from this traffic in the last-named year amounting to Rs 4,52,84,000.

**Goods Traffic.** The tonnage of all goods carried over the G.I.P. system in 1924-25 amounted to 10,143,000, as compared with 9,624,000 tons in the preceding year, and the earnings from all goods traffic to Rs 9,74,64,000, compared with Rs 9,07,98,000.

**Earnings.**—The G.I.P. is a capital instance of a great concern that has grown enormously from a very small beginning. How small this was in a financial sense is shown by the fact that in the first year, 1854, the total receipts of the Company amounted to Rs 2,28,000 and the net earnings to Rs 1,03,000. By the year 1869, however, the total receipts had expanded to Rs 1,58,01,000, while the net earnings stood at Rs 52,97,000. In 1884 the total receipts amounted to Rs 3,36,56,000 and the net earnings to Rs 1,60,42,000. These were increased respectively to Rs 4,68,32,971 and Rs 1,76,86,213 in 1908, to Rs 14,84,41,758 and Rs 4,89,83,571 in 1924, and to Rs 15,09,28,000 and Rs 6,27,70,000 in 1925.

**Publicity.**—An important adjunct to the general organisation of the G.I.P., and one which for years has been steadily extending its usefulness, is the Publicity Branch of the Commercial Department at Victoria Terminus. From a small beginning some years ago its work has expanded in various directions. In the diffusion of useful information, in popularising places on the line and attracting tourists, this department has already rendered service of the highest value.

**RAILWAYS IN H.E.H. THE NIZAM'S DOMINIONS.**

The first railway constructed in these dominions was between Sholapur and Thungabadra, 177 miles long, opened in 1871. It was built by the G I P railway to complete the direct connection between Bombay and Madras and not primarily to develop the country through which it passed. The subsequent development of railways within the Nizam's dominions proceeded as follows: Wadi to Secunderabad (121 miles) in 1874; Secunderabad to Warangal (87 miles) in 1886; Warangal to Bezwada (122 miles) in 1889; Secunderabad to Manmad (386 miles) in 1900; British Frontier to Latni (36 miles) in 1911; Purna to Hingoli (50 miles) in 1912; Secunderabad to Mahbubnagar (71 miles) in 1916; Mahbubnagar to Wanaparti Road (34 miles) in 1917; Wanaparti Road to Gadwal (13 miles) in 1922; and Kazipet to Ramagundam (58 miles) in 1924. The ownership of lines open for traffic and under construction in H E H the Nizam's Dominions is as follows:

H E H Government	OPEN FOR UNDER CON		TOTAL
	TRAFFIC	STRUCTION	
Miles	Miles	Miles	Miles
Lines	214	157	371
N G S Railway Co	719	—	719
Foreign Railways	21	—	21

A large area near the north-east part of the dominions is not served by any railway. This region is bounded by the Nizam's Guaranteed State Railway on the south by the G I P and B N Railways on the north, the B N and M & S M Railways on the east, and the Secunderabad-Manmad line on the west. The traffic between the Madras Presidency and Northern India at present has to pass via Bombay or Calcutta, and to provide a more direct north and south route the Nizam's Government is constructing a broad gauge line between Kazipet and Belharshah, 150 miles long, the railway to be the property of the Nizam's Government. Construction was commenced in 1920, and the first section of the line was opened for traffic in 1923; the northern section will open up the Adilabad district which at present is very inaccessible. The following figures give details of the commercial traffic carried by the existing railways: Coal, 441,667 tons; grain, 264,200 tons; oil seeds, 222,805 tons; stone, 122,704 tons; cotton, 93,478 tons; salt, 56,908 tons; provisions, 36,456 tons; other imports for local consumption, 317,782 tons, making a grand total of 1,556,000 tons.

The financial results of the Nizam's Guaranteed State Railway system for 1923-24 were: Capital expenditure, Rs 1,398 lakhs, against Rs 1,372 lakhs in 1922-23; gross earnings, Rs 187 lakhs, against Rs 197 lakhs; working expenses, Rs 93 lakhs, against Rs 80 lakhs; net earnings, Rs 94 lakhs, against Rs 117 lakhs. In addition to the working expenses, certain amounts have been set aside as a reserve for renewing the permanent way and rolling stock, making the total working expenses Rs 80 lakhs in 1922-23 and Rs 93 lakhs in 1923-24. After deducting these working expenses from the gross earnings, the net earnings amounted to Rs 117 lakhs and Rs 94 lakhs respectively. The net earnings are utilized to pay interest on the share and debenture capital of the company and to provide a sinking fund for redeeming the capital. Out of the net earnings, Rs 26 lakhs were paid to Government in 1922-23 and Rs 21 lakhs in 1923-24; these amounts representing the profit on working Government lines and the surplus profits on working the Company's lines after having made the necessary provision for interest and sinking fund on the company's capital.

#### **SOUTH INDIAN RAILWAY COMPANY, LIMITED.**

**Inception.** This Railway Company (incorporated in England) was formed in 1890, and on January 1, 1891, took over (on purchase by the State) the lines formerly owned and worked by the Great Southern India and the Carnatic Railway Companies, which since 1874 had been amalgamated under the title of the South Indian Railway.

**System.**—The system is a single track one serving the country south of Madras (see general map). It consists of a main line running from Madras to Dhanushkodi Pier (450.26 miles) and 21 branch lines, the longest of which are those from Madras to Trivandrum (243.67 miles), Mayavaram to Arantam (99.46 miles) and Villupuram to Katpadi (98.5 miles).

**Mileage, etc.** The system extends over 1,876.18 miles of track, of which 449.8 miles are of 5 ft. 6 in. gauge, 98.68 miles of 2 ft. 6 in. gauge, and 1,327.70 miles of 3 ft. 3½ in. gauge.

**Running Powers.** The company has also running powers over 219 miles of the Madras and Southern Mahratta Railway, from Madras Central Station to Jalapet and Bangalore, but exercises the powers over 132 miles only, as far as Jalapet.

**Main Line.** The main line from Madras to Dhanushkodi Pier is of 3 ft. 3½ in. gauge, and the company's steamer service connects India and Ceylon, the distance being 22 miles.

**Nilgiri Railway.** This important mountain railway, 28.66 miles in length, was purchased by the Government in 1903 and forms part of the South Indian system. It serves the important hill station and military cantonment of Ootacamund and Wellington and passes through very beautiful scenery. The ruling gradient on this line between Mettupalayam and Coonoor is 1 in 12 on the Ghat, where there is a rack railway. The distance from Coonoor to Ootacamund (11.97 miles) is covered by an ordinary adhesion line.

**Contract.** Though the South Indian Railway system is the property of the Government, it is maintained and worked by that company under a contract which may be terminated on December 31, 1915, or at the end of any succeeding fifth year by giving the company in England not less than 12 months' previous notice.

**Capital.** The capital of the company's undertaking is made up of its contribution of £1,000,000 (or Rs 1,50,00,000), irredeemable debenture stock of £425,000, Pamban debentures of £56,500 and registered debenture stock of £2,318,248 (on date), and the advances of the Secretary of State made from time to time for meeting capital expenditure on the line.

The Secretary of State's capital as on December 31, 1910, has been taken as £13,000,000 for the participation in surplus profits, while the advances made by him after this date also participate in such profits. The total advances made by the Secretary of State up to March 31, 1926, inclusive of the assumed capital of £13,000,000 (or Rs 19,50,00,000), was Rs 24,96,39,192.

The debentures and debenture stock do not participate in the surplus profits.

**Dividend.**—The annual dividend paid to the shareholders for the five years ending 1925 was 8 per cent.

**Construction.**—Great activity is now being shown in the development of South India by the extension of railway communications. In all, some 373 miles of new lines are under construction, while no less than 546 miles are scheduled for construction during the years 1926-1931. The metre gauge line between Madras and Tambaram (18 miles) is being doubled to cope with the ever-increasing suburban traffic, and at Golden Rock,

## SOUTH INDIAN RAILWAY

1. Locomotive Workshops and Railway Colony under construction
2. Mail Train Engine - Metre Gauge

13 miles from Trichinopoly, a combined metre and broad gauge locomotive and carriage workshop is being constructed at a cost of approximately Rs 3,15,00,000. This is expected to reach completion in 1928. Important harbour works are also in progress at Cochin and Tuticorin, which should greatly assist in the development of Southern India.

**Passenger Traffic.** During the year 1925-26 the South Indian Railway carried 49,507,675 passengers, an increase of 2,449,897 on the previous year's figure.

**Goods Traffic.** In the same year 4,890,861 tons of goods traffic were conveyed over the system, the chief commodities carried being cotton, coal, oil cake, for fodder, fruits and vegetables, paddy and rice, oil seeds, salt, sugar, jaggery, etc., and unwrought timber.

**Agricultural Products.** The vegetation and trees to be seen by passengers when travelling by the South Indian Railway indicate the varieties of country traversed. In the plains wet cultivation is the prevailing feature, paddy fields predominating. Betel leaf (in Tamil *thalai*) is a creeper grown on sticks about 10 ft. in height, the leaf of which is chewed by Indians; there are also sugar cane and plantain plantations. The dry crops are cotton, grains of various kinds, gram, tobacco and ground nuts. From the Nilgiri Railway are seen the tea, rubber, coffee and potato estates. The principal trees are jungle, teak and casuarina wood (used for firewood), coconut, palmyra (jaggery and toddy) and areca nut trees.

**Revenue and Expenditure.** The gross earnings of the company in 1925-26 were Rs 5,84,98,000, made up of Coaching traffic, Rs 298,47,000; goods traffic, Rs 263,58,000; and miscellaneous, Rs 22,93,000. The working costs amounted to 58.5 per cent. of these figures.

**Rolling Stock.** The whole of the rolling stock of the company is kept up to a high state of efficiency. First and second class carriages are equipped with electric lights and fans, and all the conveniences which make travel in the tropics comfortable are provided.

With a view to meeting the growing demand for a special kind of carriage for the exclusive use of tourists, Rajahs and high Government

## SOUTH INDIAN RAILWAY.

1. Refreshment Room, Egmore.
2. Restaurant Car.

officials such a type has been built, and several were placed on the line in 1925.

In designing these carriages the comfort of the occupants has been carefully considered. There are three compartments, the larger one being fitted with an upholstered seat, Chesterfield couch and a folding bunk, and providing accommodation for three passengers by day or night. The other two compartments are each furnished with an upholstered seat and a chair to accommodate one passenger. Adjoining these is a bathroom equipped with up-to-date fittings and a lavatory. Provision is made for servants, luggage and kitchen. Electric lights and fans are suitably arranged. The panelling of the main compartment is of white cedar inlaid with rosewood.

**Tourist Attractions.**—In Southern India there are many interesting places which are noted for their historical or religious associations, or for their scenic beauty. The scenery, especially on the west, or Malabar coast and on the Nilgiri Hills is magnificent and unrivalled in India, the temples and shrines, the people and their customs are entirely different from those of other parts of the country. South India was also the scene of the earliest struggles between the English and the French for supremacy in India.

**Places of Interest.**—No traveller should leave India without visiting some of the ancient and historic temples of Southern India, of which those at Rameswaram (half an hour distant from Dhanushkodi and near to Mandapam, a seaside resort, where there is good accommodation and bathing), Madura, whose temple is the finest in India, and Srirangam, near Trichinopoly, are the most notable. Trichinopoly itself, 96 miles from Madura, has

a famous Rock and Temple, and is also the headquarters of the South Indian Railway. It is noteworthy for its cigars, which are both good and cheap. Dindigul is also famous for its cigar factories, and the old Fort, built on a rock 280 ft. above sea-level, has been the scene of many sieges. Thirty-one miles north-east of Trichinopoly is Tanjore, an ancient town dating back to the second century A.D., and containing the palace of the Marhatta Rajahs, the ruins of an old fort, the great temple known as Brahadeswaraswami Koil and the huge bull (Nandi) fashioned out of black granite. Kumbakonam, 24 miles from Tanjore, is the centre of Brahminical religion and literature, and possesses 16 temples, 12 dedicated to Siva and four to Vishnu.

**Hill Stations.**—Many of the most popular hill stations and sanatoria of India are served by the South Indian Railway, the chief of these being Ootacamund, Coonoor, Wellington, Kotagiri in the Nilgiri Hills, Kodaikanal in the Pulney range and Yercaud in the Shevaroy Hills. The climate of these stations is superior to that of the best English summer, while the scenery is often unique and the shooting, golf, hunting and racing always excellent.

**Guide.** The South Indian Railway 'Illustrated Guide' which gives descriptive accounts of all places of any importance on the company's system, and the Time Table can be obtained at any of the principal stations at a reasonable price.

**Catering, etc.**—At all the places mentioned previously, and also at others (except at Rameswaram, the station for which is Mandapam), there are sleeping rooms and restaurants, while guides can be obtained to all the places of interest. Excellent food, prob-

ably superior to that provided on any other railway in India, is served on the restaurant cars and in the refreshment rooms. Such cars are run on the metre gauge mail trains. The contractors for catering are Messrs Spencer & Co., Madras.

**Touring Season.**—The period from November to February is the best time for a tour of Southern India, this being the coolest and most pleasant time of the year when the temperature varies from 60 to 70 degrees in the shade.

**Clothing.** The temperature just quoted will give a rough idea of the clothing that should be worn by tourists. It is very necessary to wear sun hats between 9 a.m. and 5 p.m., and travellers should take bedding everywhere. A waterproof valise containing a blanket, padded quilt, a pair of sheets and two pillows is all that one requires.

**Special Trains.** If sufficient notice is given, special trains or tourist cars can be provided by the company. All inquiries should be addressed to the Chief Commercial Superintendent, South Indian Railway, Trichinopoly.

**Coupon and Enquiry Agents.** The following companies issue first and second class coupons for travel in India and can supply information in regard to fares and times of trains: Messrs Thomas Cook & Son (who have branch offices at Colombo and Madras), Grindlay, Groom & Co., Cox & King's Shipping Agency, Ltd., Balmer, Lawrie & Co., The American Express Co., and the Canadian Pacific Steamships, Ltd.

**Head Office.**—91, Petty France, London, S.W. Managing director Mr. A. Murrehead, C.I.E.

**Agent in India.**—Mr. P. Rothera, O.B.E., Trichinopoly.

(See also illustration, p. 109.)

## AIR, RIVER AND ROAD

### AIR

**3**N the year 1924 India welcomed an unprecedented number of long-distance flyers from overseas among whom was the intrepid airman Mr. Alan Cobham, who in 1925 was to accomplish the journey to the Cape and back and in 1926 the round trip from England to Australia, via Karachi. That city has been selected as the eastern terminus of the new dirigible service between England and India, its topographical situation and climate alike making it superior to Bombay as an aerial port, while the fact that the military aircraft depot is already located there has doubtless weighed with the selectors.

**EGYPT-INDIA SERVICE.**—An important step was taken by the British Government in 1925 to develop aerial communication between the West and India when it decided to institute a regular civil air service between Egypt and India, the fortnightly service which existed between Kantara and Bagdad being extended to Karachi. At the time of writing only mails were being carried from Bagdad to Karachi, and a saving of from four to five days in the passage of letters from Great Britain to India was thus effected. It was hoped later to extend the service to Burma and Singapore, in order to link up with services from other parts of the Empire and with an airship service between England and India and Australia.

The Imperial Airways plane which opened

the new service from Egypt to India left London on January 1, 1927, with Sir Samuel Hoar, Bart., C.M.G., the Secretary of State for Air, and Lady Hoar as passengers. The service from Cairo to Karachi was inaugurated by a flight over the desert to Bagdad and across the Persian Gulf to Karachi. Machines were scheduled to leave Cairo for Basra at fortnightly intervals until April 6, 1927, on which date experience in operating the route having been gained, the last section from Basra to Karachi was to be opened commercially.

**FARES.**—The fare from Cairo to Karachi was to be £72, from Cairo to Bagdad, £41, from Cairo to Basra, £51, from Bagdad to Karachi, £37, from Basra to Karachi, £30 and from Bagdad to Basra, £9. The fare includes not only transport, but quarters at night and meals throughout the journey.

**NEW TYPE OF AIRCRAFT.**—The five large passenger aircraft to be used over this route have been supplied by the De Havilland Aircraft Company. The type is known as D.66 to the makers, and as the Hercules type to Imperial Airways. The planes are fitted with three Bristol Jupiter radial air-cooled engines, have a total weight of 14,800 pounds, and are designed to fly with full load on two engines. They will take 12 passengers with baggage and a certain amount of mail matter and will carry one pilot, a mechanic-pilot, and a wireless operator. From Basra to Karachi the passenger load will be reduced to eight, and, as the landing places on this stretch will not have a full ground staff,

the machine will carry a second pilot and two mechanics in addition to the wireless operator.

**INTERNAL AIR SERVICES.**—Several experiments in long-distance internal flights have been made by the Royal Air Force, but at present there is little or no encouragement for civil aviation. It is generally held that much more knowledge of the effect of the Indian climate on flying is needed before there can be any expectation of a network of air lines over so enormous a country. Thus far, night flying is not practicable, and until it has become so the long cross-country routes in India cannot be satisfactorily tackled from the air. The shorter routes, such as those from Calcutta to Rangoon, Karachi to Bombay, Karachi to Lahore and Delhi and Lahore to Kashmir are being tentatively explored.

### RIVER

The Brahmaputra, Ganges, Indus, and Irrawaddy, with their many tributaries, are the chief means of inland navigation in India. Being snow-fed, they remain full during the hot weather, whereas other of the larger rivers, such as the Nerbudda and the Tapti, are, by reason of their rocky beds and swift floods, practically useless for navigation except at their mouths. The Indus, the Ganges and the Brahmaputra are navigable by steamers all the year round, or for the

greater part of the year, for hundreds of miles above their mouths, or above the heads of the navigable canals traversing their deltas.

**BRAHMAPUTRA.**—The Brahmaputra, with its tributary, the Surma, conveys the traffic of Eastern Bengal and of Assam to Calcutta. It is the great natural highway to the north-east, and is navigable for steamers as far as Dibrugarh, 800 miles from the sea. Steamers go up the Surma to Sylhet.

**GANGES.** The Ganges and its tributaries carry a large amount of cheap and bulky goods up and down the Great Plain, but the many railways have robbed them of much of their steamer traffic. The Ganges, with its tributaries, still, however, has more boat traffic than any other river in the world except the Yangtse-Kiang. River steamers ascend as far as Cawnpore and the Gogra along to Fyzabad. The Nadia rivers, which comprise the upper waters of the Hooghly, are navigable by steamers during the rainy season.

**INDUS.** The Indus carries goods from the Southern Punjab and Sind, Karachi being its port. The river is constantly changing its bed, and is therefore not easy to navigate. The railway along the Indus Valley has taken away all the steamboat traffic.

**IRRAWADDY.** This river brings down teak and timber, rice and oil to Rangoon. It is navigable as far as Bhamo, and there is an excellent service of steamers on the waterway, as also on the Chindwin.

**NAVIGABLE CANALS.** The most important canals in India are intended for irrigation purposes, but some have been specially designed for navigation by small boats, while several of the large irrigation works are also used in this way. The largest irrigation canals which are also important navigable systems are the Godavari and Kistna in the Madras Presidency. The total length of the main canals and branches of these systems is 506 and 372 miles respectively, of which 493 and 352 miles are navigable. During many months of the year these canals carry away all or nearly all the river supply, and so cut off the upper waters of the rivers from the seaboard. They traverse flat and fully populated deltas, in which there are no great falls to be overcome, and which are poorly provided with roads and other means of communication, while the people on the coast are accustomed to the use of boats. Something like 80,000 boats are estimated to enter the two systems annually, with a tonnage varying from 700,000 to 800,000, and there is also a small amount of raft traffic. In Bengal the Orissa and Midnapore canals are both used for navigation, and there is a good deal of raft traffic on the Western Jumna Canal in the Punjab. Other smaller canals in India are used for navigation purposes, but speaking generally it may be said that, outside the deltaic tracts in Bengal, Orissa, Madras and Sind, navigable canals will never be of much use or value as a means of inland communication.

## ROAD

The total extent of metalled and unmetalled roads now existing in India is fairly large (about 220,000 miles), though the country is still insufficiently provided with communications that are efficient in the rainy season. As the need for substantial roadways was not severely felt in the earlier past, their provision only began to be seriously undertaken about 1850, and as since then the work has been greatly handicapped by political disturbance and financial stringency, it is permissible for Indians to regard the present state of affairs with some degree of satisfaction.

**ANCIENT ROADS.**—The oldest roads in India were those trade routes which existed from almost immemorial times. Among these were the important roads from Mirzapur to the South (known as the Great Deccan Road) from Agra to Ajmer, and from Allahabad to Jubbulpore, which were kept open by the British until after the Mutiny. There were also two or three established trade routes from Delhi, one passing through Muttra to Agra and thence, via Etawah, to Allahabad, another running via Garhmuktesar, Moradabad, Bareilly, Sandi and Rae Bareilly to Benares and on to Patna, and a third following the alignment of the present Grand Trunk Road from Delhi to Aligarh.

**CLASSIFICATION.**—All roads in India are now classed as follows:

Class I—Metalled (a) With bridges and ferries and drained throughout, (b) Partially bridged and drained.

Class II—Unmetalled (a) With bridges and ferries and drained throughout, (b) Partially bridged and drained.

Class III—Banked and surfaced, but not drained.

Class IV—Banked, but not surfaced, partially bridged and drained.

Class V—Cleared, partially bridged and drained.

Class VI—Cleared only.

Most of the Class I (a) roads and some of the others have avenues of trees planted along them, and although it is no longer necessary to build *chaudikari* huts on the main routes, it is usual to provide rest-houses and *sarais* for travellers upon all roads on which the amount of traffic justifies the expenditure.

**GRAND TRUNK ROAD.** This road runs from Calcutta to Peshawar, passing through the important cities and trade centres of Allahabad, Cawnpore, Aligarh and Delhi. It was first taken in hand about 1840, and up to April 30, 1848, nearly 49 lakhs of rupees had been expended on its construction. The original road was extended to Meerut, then later to Aligarh and further north in consequence of military operations in the Punjab and the North-West Province.

**MAINTENANCE, COST, ETC.**—Most Indian roads are metalled with broken brick (*khoa*) or with *kankar* (nodular limestone) in the absence of stone and gravel, which over vast areas are not procurable. The expense of maintenance is somewhat high, and is greatly increased by the inferior character of the wheels of native conveyances.

The cost of building roads depends largely on the nature of the country through which they pass, and varies so greatly in different parts of India that to quote average figures would be misleading. Thus the roads are rendered expensive in Bengal by the necessary embankments, the large amount of drainage to be crossed, and the inferior nature of the metalling, in parts of Bombay and Madras by the hilly character of the country. The cost of maintenance varies from similar causes, and also, in the case of roads maintained by local bodies, with the amounts these can afford to allot.

In former times the roads were, in certain instances, built and maintained by forced labour, but this is no longer the case. It used also to be customary to levy tolls at all ferries and large bridges, likewise at many other intermediate spots. The number of places at which tolls for the use of roads are now levied is (except in Madras) comparatively small, and these are chiefly at ferries, where the toll is in the nature of payment for service rendered, and on hill-roads whose upkeep is exceptionally expensive.

**METHODS OF TRANSPORT.**—Roads and railways together have revolutionised the methods of transport, causing pack animals

to be almost entirely displaced by wheeled vehicles throughout the greater part of the country. In olden times "hackeries" hardly existed outside the large towns, and although Tavernier relates that heavy wagons drawn by five or six pairs of oxen were used in the plateaux and central tracts of Central and Southern India, these had to be steadied with cords at the river banks and other bad places, where too they often had to be unloaded. Light springless carts drawn by a pair of oxen could carry travellers 30 or 35 miles a day under favourable circumstances. The commerce of the country was, however, chiefly dependent on pack animals for transport, and enormous caravans of these used to traverse the Peninsula, carrying merchandise from one point to another. At the present time it is only where railways have not yet penetrated that pack transport has preserved any important share of long distance traffic, though in sandy or hilly tracts a considerable amount of local traffic is still dependent on this means of conveyance.

**MOTORING.**—The roads near all the large cities and the main roads connecting them are ordinarily good for motoring, and indeed have been greatly improved to meet the demands of motorists, who are now an influential section of the populace. The 1,400 to 1,500 miles tour from Bombay to Calcutta, to mention the chief route, gives opportunity for visiting many famous temples and shrines. The journey can be lengthened or shortened indefinitely to suit the time available, or the individual taste of the tourist. Another journey strongly recommended is from Delhi to Rawalpindi, and from thence into "the lovely vale" of Kashmir. Expeditions to places of interest, such as the rock-cut caves of Ajanta, which previously could only be made from some distant railway station by tediously slow country conveyances, can now be carried through easily and rapidly by motor-car. Many places of interest can be visited in a day trip from good centres such as Madras, Bangalore, Poona, or Benares.

**TOURING CONDITIONS.**—An import duty is payable on the tourist's car, but a refund of seven-eighths of the amount deposited is returnable on the re-export of the car within two years of entry. In addition to fees for registration and driving, payable at the chief police station of the port of arrival, a local tax has to be paid before the car can be used. For landing and getting ready for the road the cost at Bombay and also at Calcutta will not be less than Rs 100 (£7 10s). But the cold-weather visitor has many compensations for these and other expenses. Petrol is available in the large ports and at all the principal towns up-country. Such towns, however, are infrequent, and the traveller must not expect the facilities for repair and replenishment available in Western Europe. He should purchase the motor guides published in the Presidency towns, and carefully note the location of garages and petrol stores.

He should also bear in mind that, outside the Presidency towns, the chief hill stations and certain exceptional places, there are hardly any hotels in India up to the European standard of excellence. On occasion he must fall back on the rather comfortless dak bungalows established by the Government, where accommodation cannot be secured beforehand. The first comer has the preference, but after occupying the room for 24 hours the traveller must, if required, give place to a new comer. The tourist wishing to map out his itinerary so as to avoid risks of being stranded can obtain advice and assistance. There are a number of automobile associations, and at the principal centres both the R.A.C. and the A.A. are represented.

**STATISTICS.**—The collection of statistics regarding roads in India has never received much attention, for their classification, the circumstances under which they are constructed, the demands which they meet, and the funds available for their up-keep vary so greatly in different parts of the country that there appears to be no common object to be

served by their compilation. The following figures will, however, give a fair idea of the road mileage of British India in 1925. Total length of metalled roads about 67,000 miles, the up-keep of which is divided fairly equally between Government and local authorities; total length of unmetalled roads about

153,000 miles, of which about five-sevenths are maintained by local authorities. There are also a number of roads which are repaired or reconstructed at irregular intervals—e.g., during famines, and others which are maintained by the Forest Department or by the owners of large private estates.

## SHIPPING

**BEFORE** the opening of the Suez Canal foreign trade with India was conducted almost exclusively in sailing craft. Since that event the importance of steam-driven vessels has, needless to say, increased continuously, as shown by the following figures, which relate to vessels entered and cleared at ports in British India in the years named.

Sailing Ships	1884-85	1901-05	1921-25
No. of vessels	7,354	3,412	1,484
Tonnage	2,317,589	1,143,333	152,459
Steamships			
No. of vessels	2,084	4,372	5,152
Tonnage	4,332,181	6,812,489	7,624,473
TOTAL			
No. of vessels	10,338	10,577	6,636
Tonnage	6,649,770	8,255,822	7,776,932

While the number of sailing ships trading with India has thus largely decreased (by nearly 6,000 in 40 years), their size has also diminished: the tonnage recorded in 1924-25 being over 2,000,000 less than in 1884-85. A few ocean-going sailing vessels still visit Calcutta, but the sailing ships entering other ports are now almost entirely native craft engaged in trade with East Africa, Arabia, Persia and Southern Asia. In 1904-05 the tonnage of steamers was 82.5 per cent of the total, in 1924-25 the percentage was 98.03.

About 75 per cent of the trade of India is carried under the British flag, 60 per cent of the tonnage being included in entries from and clearances to the United Kingdom and British Possessions. Vessels belonging to foreign countries have, however, during the last 25 years obtained an increasing proportion of the carrying trade. Japan has now the second largest share, followed by the United States, Holland and Germany.

**COASTING TRADE.** The following table shows the tonnage of vessels, distinguishing their nationality, employed in the coasting trade of British India which entered and cleared with cargoes in the year 1925, compared with the years 1923 and 1924—

ENTERED	1923 Tons	1924 Tons	1925 Tons
British	11,102,040	11,062,788	10,836,282
Indian	1,731,934	2,121,286	2,234,353
Foreign	1,860,186	2,092,065	2,107,097
Native Craft	1,537,976	1,589,900	1,414,505
Total	16,232,136	16,866,039	16,592,237
CLEARED			
British	11,018,809	11,204,515	10,988,108
Indian	1,549,463	1,951,432	2,006,125
Foreign	1,816,292	2,111,012	2,147,780
Native Craft	1,503,028	1,577,706	1,484,713
Totals	15,887,592	16,844,665	16,626,726

**FOREIGN SHIPPING.**—The total number of vessels of all nationalities that entered and cleared from Indian ports including repeated

voyages) during 1925 compared with 1924, was as follows:

	No. of Ships	Tonnage
ENTERED		
1924	3,070	6,886,595
1925	3,043	7,026,798
CLEARED		
1924	3,747	8,399,205
1925	3,693	8,412,525

Taking the entrances for the years 1924 and 1925, the shipping was disposed by nationalities as follows:

	1924 VESSELS	1924 TONNAGE	1925 VESSELS	1925 TONNAGE
United Kingdom	1,085	3,762,014	1,046	3,847,272
Japan	191	697,473	211	740,129
Arabia	154	66,687	129	22,853
Germany	103	388,963	97	362,006
United States	90	408,445	100	423,001
Java	97	325,577	110	381,320
Italy	76	266,205	84	302,620
Persia	95	177,781	87	167,913
China	55	266,007	56	182,160
Egypt	15	90,004	10	30,956
Portuguese				
E. Africa	35	43,101	31	65,586
Belgium	10	73,887	43	152,572
France	8	33,569	7	30,919
Other countries	138	346,822	142	308,401

Totals 3,070 6,886,595 3,043 7,026,798

**STEAMSHIP SERVICES.**—The following are the principal steamship services to and from Indian ports or serving India indirectly—

**ANCHOR LINE.**—Monthly sailings from Liverpool to Bombay and Karachi. This line also maintains an Indian service to Calcutta, Madras and Colombo.

**BIBBY LINE.**—From Liverpool to Colombo and Calcutta via Marseilles and Suez Canal every fortnight.

**BOMBAY STEAM NAVIGATION CO., LTD.**—This line, operating from Bombay, runs a number of services to Karachi and the smaller ports of Mangalore, Gulf of Cutch, Bhavnagar, Dharamtar, Vizianag, Goa, etc.

**BRITISH INDIA STEAM NAVIGATION CO., LTD.**—Regular sailings from London to Bombay, Calcutta, Madras and Colombo. Services between Bombay and Karachi and all Indian ports. The company owns a fleet of 125 steamers (See also later "P. & O. S. N. CO.")

**ELLERMAN AND BUCKNALL S. S. CO., LTD.**—Regular sailings from Liverpool to Colombo and Calcutta, and also to Bombay and Karachi.

**ELLERMAN CITY AND HALL LINES.**—Regular sailings from Glasgow and Liverpool, via Suez Canal, to Calcutta and back to London, or Liverpool via Malta and Suez, also from Glasgow and Liverpool to Bombay and Karachi, and back to Marseilles, London and Liverpool.

**HENDERSON LINE.**—The 'Anchor-Brocklebank' fleet of steamers run from Glasgow and Liverpool to Madras and Calcutta.

**INDIAN CO-OPERATIVE NAVIGATION AND TRADING CO., LTD.**—This company's fleet of six steamers operates between Bombay, Dabhol, Malwan and Panjim (Goa) calling at intermediate ports.

**INDO-CHINA STEAM NAVIGATION CO., LTD.**—Regular direct service from Calcutta to the Straits, Hongkong, Shanghai and Japan.

**LLOYD TRIESTE S. N. CO.**—The steamers of this well-known Italian line leave Bombay regularly on the 1st of each month for Brindisi, Venice and Trieste, and on the 15th for Naples and Genoa.

**MARITIME ITALIANA S. N. CO.**—Service alternating with preceding line.

**MESSAGERIES MARITIMES.**—Fortnightly services to Bombay, Calcutta, Pondicherry, Colombo and the Far East.

**MOGUL LINE (BOMBAY AND PERSIA STEAM NAVIGATION CO., LTD.)**—Regular service from Bombay and Karachi to the Red Sea, Persian Gulf and Mauritius, also from Calcutta to Red Sea ports. A special pilgrim service is arranged from Bombay and Karachi to Jeddah during the Haj season.

**NEDERLAND ROYAL MAIL LINE.**—The well-appointed steamers of this line run fortnightly from Rotterdam, Antwerp and Southampton to Colombo, Java and Sumatra ports, passengers transshipping to Indian ports.

**NIPPON YUSEN KAISHA (JAPAN MAIL STEAMSHIP CO., LTD.)**—Services from Indian ports to Colombo, Singapore, Hongkong, Shanghai, Kobe and Yokohama.

**ORIENT LINE.**—The steamers of this line do not actually touch at Indian ports, but tranship passengers at Colombo.

**OSAKA SHOSHEN KAISHA.**—This important Japanese company maintains service between Bombay, Madras and Calcutta and Japanese ports.

**PENINSULAR AND ORIENTAL STEAM NAVIGATION CO.**—The services usually maintained by this company are those running from London via Suez to Bombay, Colombo, Calcutta, Singapore, the Far East, and Australia. P & O and British India tickets are interchangeable on routes common to the two companies.

**ROTTERDAM-LLOYD STEAMSHIP CO.**—Regular services from Rotterdam, Antwerp and Southampton to Colombo (transshipment to India ports) and Netherlands East India ports.

**SCINDIA STEAM NAVIGATION CO.**—This company, operating from Bombay, controls a fleet of seven well-equipped steamers serving all Indian and Burmese coast ports.

(See also "Ports" article following Calcutta, Bombay, Madras, and Karachi respectively.)

PLUCKING TEA.

## AGRICULTURE

### GENERAL DATA

**T**HOUGH much has been done during recent years to develop Indian industries, it seems plain that for a lengthy period agriculture must remain the main occupation of the people. It, indeed, supports 224,000,000 persons, or 71 per cent. of the total population, while almost the whole of the inhabitants of the Empire are dependent upon the success of indigenous food crops. In the development of Indian agriculture, therefore, lies perhaps the readiest method of advancing the prosperity of the country as a whole. While it must be difficult to estimate the extent to which the Central and Provincial Agricultural Departments have added to the wealth of India, it is indisputable that much yet remains to be done, notably in the development of better varieties of existing crops, which are many and varied. Of food crops, rice is the most important, followed by the different classes of millet and by wheat. Of high commercial value also are the cotton, jute, linseed, sesamum and tobacco crops, and the tea industry has become one of the greatest assets of the country.

**CAPITAL AND EQUIPMENT.**—India is a country of small holdings, and the vast majority of the people cultivate patches varying in size from one to eight acres. Large holdings are in the main unknown, and are principally confined to the planting

industries. Farming throughout the country is carried on with a minimum of capital, there being practically no outlay on fencing, buildings or implements. The accumulation of capital is prevented by the occurrence of famines, the high rate of interest and extravagance of expenditure in marriage celebrations. The organisation of co-operative credit, which has proved so successful in many provinces, must undoubtedly lead to an increase in agricultural capital.

**EQUIPMENT.**—For power the ryot depends chiefly on cattle, which, as a rule, are light and active, but possess little hauling capacity. The necessary tilth for crops is brought about by frequency of ploughings, but the soil is seldom tilled as it should be. This is due not so much to want of knowledge on the part of the people as to lack of proper equipment. The Indian agriculturist, as a rule, possesses an intimate if limited knowledge of the essentials of his own business, and fails generally through lack of ways and means.

**IMPLEMENTS.**—Agricultural implements in India are generally made of wood, although ploughs are usually tipped with iron points, and there is a great similarity in their shape and general design. The introduction of iron ploughs has made much progress in the last few years, and many hundred thousands are now in use. The levelling beam is utilised throughout the

greater part of the country in preference to the harrow and roller, and in Northern India the plough and the levelling beam are the only implements possessed by the ordinary cultivator.

In the heavier soils of the Deccan a cultivating implement consisting of a single blade resembling in shape a Dutch hoe, is much used. Seed drills and seed hoes are in use in some parts of Bombay and Madras, but throughout the greater part of the country the seed is either broadcasted or ploughed in. Hand implements consist of various kinds of hoes, the best known of which are the *kodal*, or spade, with a blade set at an angle towards the labourer, who does not use his feet in digging, and the *khurpi* or small hand-hoe. Of harvesting machinery there is practically none, grain being separated either by treading out with oxen or beating out by hand, while winnowing is effected by the action of the wind.

**CO-OPERATIVE MOVEMENT.**—There were in 1925 more than 50,000 co-operative credit societies in India engaged not only in financing the farmer, but also in raising the general standard of farming methods and of his well-being generally. First established in India in the early 'nineties, the co-operative credit society has proved the best medium for the extension of credit to the Indian farmer. Capital is provided by central societies and individuals,

as well as by the members' own deposits. The operations of these societies differ in various provinces, but, in general, they function on the lines of the Raffles system, which has been so successful in Central Europe. Many of these societies are exceedingly progressive, especially those in the Bombay, Madras and Bengal Presidencies, the Punjab, the State of Mysore and Burma.

**CULTIVATION.**—Cultivation at its best is distinctly good, but in most of India there is still great room for improvement, agriculture generally suffering through a lack of organisation and equipment. Owing to the necessity of protection against thieves, the people in most parts live in villages, many of them at considerable distances from their land. Again, holdings, though they are small, have become sub-divided without any regard to convenience. Preparatory tillage generally consists of repeated ploughings, followed as seed time approaches by harrowings with the levelling beam. The *rabi* crops generally receive a more thorough cultivation than the *kharif*, a finer seed bed being necessary owing to the dryness of the growing season. Manure is generally applied to the maximum extent available, both to *kharif* and *rabi* crops. Seeding is either done broadcast or by drilling behind a wooden plough or drill. Thinning and spacing are not nearly so well applied as they might be, and intercultivation is generally too superficial. Harvesting is done by sickle where the crops are cut whole, and there is little waste involved. In the main, the methods of the ryot, if carried out thoroughly, would be quite satisfactory, but it is doubtful if this can ever be done with the limited number of cattle at his disposal.

**EDUCATION AND RESEARCH.**—In 1925 there were twenty agricultural colleges and schools open in India, containing 999 students. The Pusa Institute is the principal seat of agricultural research, and has cost nearly £150,000, including equipment. A part of the outlay was met from a sum of £30,000 placed at the late Lord Curzon's disposal by Mr. Plunpp, an American visitor to India. This example of munificence was followed by Sir Sassoon J. David, who gave the sum of £53,300 to the Government of Bombay for the establishment of vernacular agricultural schools and the improvement of agricultural methods in commemoration of the visit of King George and Queen Mary to India. At the Pusa Institute post-graduate courses in agriculture and the allied sciences have been introduced, with the object of qualifying those who pursue them for responsible positions in the Agricultural Department.

**IRRIGATION.**—Owing to insufficient rainfall and the vagaries of the monsoon, irrigation is necessary over a large part of India in order to grow full crops on the land. In some parts of the country the rainfall of every season is insufficient to bring the crops to maturity, while in other divisions it is liable to uneven distribution, or to such deficiency as to render the tract concerned famine-stricken in the absence of artificial aid. It has been estimated that between the area in which the annual rainfall is invariably sufficient and that in which it is so scanty that no agriculture at all is possible without an irrigation system there lies a tract of nearly a million square miles which without the aid of irrigation is exposed to the uncertainty of the seasons and to the scourge of famine.

**CLASSES OF WORKS.**—The Government irrigation works of India may be divided into two main classes, those provided with artificial storage, and those dependent throughout the year on the natural supplies

of the rivers from which they have their origin. In actual fact, practically every irrigation work depends upon storage of one kind or another, but in many cases this is provided by Nature without man's assistance. In Northern India, upon the Himalayan rivers, and in Madras, where the cool weather rains are even heavier than those of the South-west monsoon, the principal non-storage systems are found.

The canals which rely solely upon the natural flow of the rivers for their supplies are known as perennial canals and inundation canals. The former are provided with head-works, which enable water to be drawn from a river irrespective of its natural level, some obstruction being placed in the bed so that the water may reach the height required to secure admission to the canal. Within this class fall the great perennial systems of the Punjab and the United Provinces. Inundation canals have no such means of control, and water only finds its way into them when the natural level of the river reaches the necessary height. The most important inundation canals in India are those of Sind, but they also exist in the Punjab.

The expedient of storing water in the monsoon for utilisation during the subsequent dry weather has been practised in India from time immemorial. In their simplest form such storage works consist of an earthen embankment constructed across a valley or depression, behind which the water collects, and those under Government control range from small tanks irrigating only a few acres each to the huge reservoirs in the Deccan, capable of storing over 20,000 million cubic feet of water. The projected Cauvery Reservoir in Madras will be equal to impounding 90,000 million cubic feet of water.

**GROWTH OF IRRIGATION.**—There has been during the last forty-five years a steady growth in the area irrigated by Government irrigation works. From 10½ million acres in 1878-79 the extent annually irrigated rose to 19½ million acres in 1900-01 and to 28½ million acres (a record) in 1922-23. During the year 1923-24 the figure fell to some 26½ million acres. In 1900-01 about 30,000 miles of Government channels were in operation, by 1923-24 the total length of main and branch canals and distributaries amounted to about 67,000 miles, while the estimated value of the crops supplied with water from Government works was Rs 147½ crores. The area irrigated was largest in the Punjab, where about 10·2 million acres were served during the year. In addition, 573,000 acres were irrigated from channels which, although drawing their supplies from British canals, lie wholly within the Indian States. Next among the provinces came the Madras Presidency, with an area of nearly 7 million acres, followed by Sind with 3·4 million acres and the United Provinces with nearly 2 million acres. The total capital outlay on irrigation and navigation works, including works under construction, amounted at the end of 1923-24 to Rs 89·34 crores. The gross revenue was Rs 10·65 crores, and the working expenses Rs 3·77 crores, the net return on capital was 7·70 per cent.

**METHODS OF IRRIGATION.**—There are various methods by which irrigation is accomplished in India. A very large area is watered without assistance from Government by the cultivators themselves, the principal means employed being wells, tanks, and temporary obstructions to divert water from the streams on to the fields. Well irrigation is particularly important in India, and although exact figures regarding the number

of wells and the area irrigated from them are not available, it is known that twenty years ago there were approximately two and a half million wells irrigating some twelve and a quarter million acres. The capital invested in this form of irrigation is probably now not less than Rs 100 crores. Almost every known system of raising water is simultaneously practised in India, ranging from the primitive plan of hand-lifting to the modern device of power pumping, which, thanks to the efforts of Government engineers, is gradually growing more common. But the means principally employed is cattle power, and experiments made before the War show that in certain districts, where the wells average from 35 to 40 feet in depth, the cost of irrigation with such power was Rs 70 per acre at the prices which then prevailed, per annum. The field for the introduction of small power pumps of a standardised pattern is thus very great for it is estimated that land now producing crops worth Rs 15 to Rs 30 per acre can easily be made to yield produce of much greater value when more efficient methods of water raising are available.

**PROJECTED WORKS.**—The principal irrigation works either in course of construction or projected in the near future are the Cauvery Reservoir, the Lloyd (Sukkur) Barrage, the Mysore Irrigation Projects, the Nira Valley Development Project, the Sarda Canal and the Sutlej Valley Canals.

**Cauvery Reservoir.**—The Madras Presidency stands second only to the Punjab in the vastness of the area of cultivation brought within the scope of irrigation work. The Northern Province has some 10,500,000 acres of land under irrigation each year, and the Southern Province about 7,000,000 acres, while the remaining provinces put together have less than 10,000,000 acres. But while the area irrigated in the Punjab represents 38·2 per cent of total cultivation, the proportion in Madras is under 10 per cent.

Many important irrigation works were completed during 1921-24, and other substantial schemes were in progress in 1926. These, however, are of minor consequence in comparison with the Cauvery Reservoir project, which was sanctioned in March 1925, and the estimated cost of which amounts to Rs 612 lakhs (£4,590,000). The project has been framed with two main objects in view, the first is to improve the existing fluctuating water supplies for the Cauvery delta irrigation of over a million acres, the second is to extend irrigation to a new area of 301,000 acres, which will, it is estimated, add 150,000 tons of rice to the food supply of the country. The scheme provides for a large dam at Metur on the Cauvery to store 90,000 cubic feet of water, and for a canal nearly 88 miles long with a connected distribution system. It is expected to yield a net revenue of £300,000, which represents a return of 7·6 per cent on the estimated capital cost.

**Lloyd Barrage.**—The Lloyd (Sukkur) Barrage project in Sind, which is the greatest irrigation scheme now under construction, was finally sanctioned by the Secretary of State in 1923. Its object is to give an assured supply to and extend the irrigation now effected by the numerous inundation canals in Sind, which draw their water from the Indus. This will be achieved by the construction of a barrage, nearly a mile long between abutments, across the Indus, destined to be by far the biggest work of its kind yet built. From above the barrage seven canals will take off, irrigating about 6,000,000 acres, of which 2 million comprise existing inundation irrigation, to which an assured supply will be given, while

the remainder is at present entirely uncultivated. The cost of the scheme will be about £12,000,000, of which sum the barrage will cost over £3,500,000, or £1,000,000 more than the Assuan Dam. It will carry two bridges across the Indus, each of them nearly a mile long, or more than five times the length of London Bridge. Three of the seven canals will be wider than the Suez Canal, the Rohri Canal is to be over 205 miles long, with 2,300 miles of branches and tributaries, while the Central Rice Canal will have a discharge equal to that of the Thames. The excavation work to be done will be equivalent to four Suez Canals, and the irrigated lands will produce an estimated crop of 2,000,000 tons of gram and cotton.

**Mysore Irrigation Projects.**—At the end of 1925 the Government of Madras had under consideration two alternative irrigation projects for the native State of Mysore, about 50 miles east of Ootacamund, one consisting of a reservoir in the upper Bhavani and the other of a reservoir in the lower Bhavani. The former project, intended to irrigate dry crops over a large region at a total cost of Rs 48,700,000, would command an area of 1,203,000 acres, of which it is estimated that one-third or 420,000 acres, will require water in any one year. The lower Bhavani project for irrigating wet crops provides for a reservoir on the Bhavani River 10 miles above Satyanagaram, commanding a total area of 270,000 acres, of which about 40 per cent would be irrigated. The estimated cost of this project is Rs 20,700,000.

**Nira Valley Project.** The irrigation works in the Nira Valley in the Bombay Presidency consist of two canals, the water required for which is obtained from the great reservoir formed by the Lloyd Dam at Bhatghar on one of the upper reaches of the river. These works do not, however, exhaust the possibilities of irrigation in the valley. On both the canals there are extensive areas which would readily take water if available, and with the object of bringing these areas within the scope of the system an estimate amounting to £4,600,000 for the complete Nira Valley Development Project was sanctioned by the Secretary of State in November 1924. The new works proposed will bring under irrigation an additional area of 35,500 acres in a very precarious tract.

**Sarda Canal.**—This important irrigation work in the United Provinces, one of the largest in India, consists of a main canal from the Sarda River 17½ miles in length, diverging into three branches. The project comprises 478 miles of main canal and branches, 3,370 miles of distributaries, and 100 miles of escapes. The canal will irrigate 1,368,000 acres, and is expected to yield a return of 7½ cent on the estimated capital outlay of Rs 750 lakhs. Considerable progress has been made, and in May 1926 over 150 out of the 200 bridges needed had been completed, as well as the earthworks for 27 miles.

**Sutlej Valley Canals.**—The Sutlej Valley project consists of four weirs, three on the Sutlej and one on the Panjnad, as the Chenab is called below its junction with the Sutlej, with twelve canals taking off from above them. The total area to be irrigated from the project is 5,108,000 acres, or nearly 8,000 square miles. Of this, 2,075,000 acres will be perennial and 3,033,000 acres non-perennial irrigation, 1,942,000 acres will be in British territory, 2,825,000 acres in Bahawalpur and 341,000 acres in Bikaner. The total cost of the project is estimated at R.1,460 lakhs. The real value

of it will be appreciated from the statement that as a result, 3½ million acres of desert waste will become available for cultivation. This scheme, which was sanctioned in 1921, is nearing completion, the first section having been ceremonially opened on April 12, 1926.

**LIVE STOCK.**—Live stock in India consists mainly of cattle, buffaloes and goats, horses not being used for agricultural purposes. Sheep are of secondary importance. For draught purposes cattle are in more general use than buffaloes, especially in the drier parts of the country, but the latter are very largely utilised in the low lying rice tracts. For dairying buffaloes are generally more profitable than cows, as they give richer milk and more of it, but they require extra feeding. The poorer people depend largely on the milk of goats, of which there is an enormous number throughout India. Cattle-breeding is carried on mainly in the non-cultivated tracts in Central and Southern India, Southern Punjab and Rajputana, where distinct breeds with definite characters have been preserved. The best known draught breeds are Hansi, Nellore, Annamalai, Gujrat and Malvi and the finest milch cows are the Samwal (Punjab), Gir (Kathawar) and Sind. Owing however to the encroachment of cultivation on the grazing areas well bred cattle are becoming scarce, and some of the breeds are threatened with extinction. Efforts to improve the quality of the cattle of India are largely frustrated by the veneration which the cow commands among the Hindu masses, rendering the elimination of unfit and wasteful beasts impossible.

**DAIRYING.** Though little noticed, dairying forms a very large indigenous industry throughout India. The best known products are native butter (ghu) and cheese (dahi). During recent years a considerable trade in tinned butter has sprung up in Gujrat (Bombay Presidency). While pure ghu and milk can be procured in the villages, it is difficult in the towns to buy dairy products unadulterated.

An interesting experiment has been recently undertaken with a view to demonstrating the possibility of sterilising and transporting milk from rural areas, where it is relatively cheap, to urban centres, where it is dear. An up-to-date sterilising plant has been set up on the Karnal (Punjab) farm, and milk is now being successfully despatched to Calcutta, a thousand miles away. Should this experiment develop it will open a vista of great possibilities for the Indian dairying industry.

**PESTS.** The study of pests, both vegetable and animal, is a matter of great moment to India. The damage annually done to such crops as rice, sugar-cane and cotton is very serious. It has been estimated by the Imperial Entomologist that the depredations of insects alone cost the country Rs 200 crores (£133,000,000) each year. The main difficulty encountered by the Agricultural Departments is in persuading the cultivator that it is possible to control these outbreaks, which are endured in many cases with apathy as a visitation from the higher powers. Some idea of the loss suffered annually from animal pests may be gathered by taking the specific instance of the rat. In addition to spreading plague, this rodent constitutes no inconsiderable burden upon the food supply. It has been calculated that an adult rat consumes nearly an ounce of grain each day. Since, at a moderate computation, the rat population of India must be at least 800,000,000, the loss caused to the country by the grain which these animals eat must be nearly £15,000,000 per annum.

The Agricultural and Public Health Departments are closely co-operating in facing the problem of rat elimination. Methods of storing grain in such a manner as to protect it from damage, the construction of rat-proof dwellings and similar measures are being carefully investigated.

**ROYAL COMMISSION.**—In 1926 a Royal Commission was appointed in India to investigate the conditions of agriculture, with special reference to the necessity of increased productivity, better marketing facilities and the provision of subsidiary industries. The Chairman of the Commission is Lord Linlithgow. The first meeting was held at Simla in October 1926.

**STATISTICS.**—The following tables show (a) the area under cultivation and (b) the yield of crops in India during recent years.

A - Area under cultivation (in acres)

CROP	AVERAGE FOR FIVE YEARS 1919-20 TO 1923-24		YEAR 1924-25	
	1919-20	1920-21	1924-25	
Rice	80,311,000		81,338,000	
Wheat	29,194,600		31,788,000	
Sugar cane	2,663,000		2,530,000	
Tea	704,860		710,200	
Cotton	21,722,000		26,465,000	
Jute	2,290,780		2,770,000	
Linseed	3,097,800		3,605,000	
Rape and mustard	5,029,800		6,376,000	
Sesamum	4,913,800		5,167,000	
Groundnut	2,258,200		2,838,000	
Indigo	258,620		111,900	
Coffee	124,760		135,600	
Rubber	124,260		120,500	

B - Yield of crops

CROP	AVERAGE FOR FIVE YEARS 1919-20 TO 1923-24		YEAR 1924-25	
	1919-20	1920-21	1924-25	
Rice	tons	50,944,800	31,007,000	
Wheat	"	9,258,400	8,702,000	
Sugar cane	"	2,907,400	2,537,000	
Tea	lbs	336,730,120	375,255,000	
Cotton	bales	4,823,600	6,070,000	
Jute	"	6,438,000	8,062,000	
Linseed	tons	424,200	541,000	
Rape and mustard	"	1,087,600	1,172,000	
Sesamum	"	354,000	504,000	
Groundnut	"	1,024,600	1,450,000	
Indigo	cwt	48,240	21,700	
Coffee	lbs	22,688,500	20,318,000	
Rubber	"	12,567,120	15,601,300	

## PRODUCTS

**AJWAN SEED.**—Ajwan seed, the source of the valuable antiseptic thymol, is obtained from *carum copticum*, a herbaceous plant cultivated all over India as a spring crop. No statistics of production are available, but the internal consumption is known to be large, and there is a growing export trade.

**BAJRA.**—See "Millets."

**BARLEY.**—This is chiefly grown in the United Provinces, Bihar and the Punjab, these being responsible for about 6,500,000 acres out of the total of 6,970,000 under cultivation in British India in 1924-25. In addition there were some 300,000 acres in the Indian States, chiefly Jaipur, Alwar, Bharatpur and Gwalior. Barley is a *rabi* crop sown in October or November, and reaped in March or April. Exports are comparatively inconsiderable.

**BETEL NUTS.** The betel nut, which is the fruit of the areca palm, forms, in conjunction with the leaf of the betel vine and a little lime and clove or nutmeg, the common masticatory of the East, known all over India as *pan supari*. The areca palm is confined almost entirely to the moist tropical tracts that fringe the coast line, it is seldom found more than 200 miles from the sea. In Southern India a full-grown tree is calculated to yield 250 to 300 nuts annually, but else-

1 and 2. AGAVE SISALANA SISAL (Fraserpet Estate).  
(See letterpress, page 122)

where the output is much lower (See also under "Commerce")

**CARDAMOMS.**—The cardamom plant is indigenous to the humid forests of Western and Southern India, where it is extensively grown at elevations from 500 to 5,000 feet. There are about 20,000 acres under cultivation in the Madras Presidency (chiefly the Malabar and Madura districts), Mysore, Coorg and Travancore, and 5,000 acres in Bombay (principally in the Kanara district). Cardamoms are mainly used for medicinal purposes, for flavouring cakes and liquors, and as an ingredient in German sausages. (See also under "Commerce")

**CASTOR SEED.**—The castor oil plant has long been cultivated in India, and in 1925 returns were furnished of some 1,400,000 acres under crop, with a yield of 124,000 tons. These figures are exclusive of the area and yield in either Assam or Kashmir, and are for unmixed crops only. The plant is principally grown in Madras (particularly in the Ceded Districts, Hyderabad State, Bombay and the Central Provinces) (See also under "Commerce")

**CINCHONA.**—All the varieties of cinchona from which the commercial barks of to-day

are obtained are represented in India, and the Government owns extensive plantations in the Darjeeling district, other large plantations in the Nilgiri Hills, Coimbatore and Tinnevely in the Madras Presidency being in private ownership. The bark is either exported or bought by the Government, which has established two factories (one at Neduvattam, near Ootacamund in the Nilgiris, and one at Mungpoo in the Darjeeling district) for the manufacture of sulphate of quinine and cinchona febrifuge. These factories meet to some extent the large internal demand for quinine from malarial areas in India, and the Government-manufactured sulphate of quinine is on sale at post offices all over the country.

An extension of the area under cinchona is advocated in order to make the British Empire independent of Java and other foreign sources of supply.

**CINNAMON.**—This is grown largely upon the Western Ghats in Southern India at altitudes up to 6,000 feet. There is a small export trade from Tellicherry, on the West Coast. No statistics of area or production of cinnamon are issued, but the yield per acre is said to be about 150 lbs.

**CLOVES.**—These are cultivated in different parts of India, but chiefly on the foothills of the Western Ghats, in the Madras Presidency. A valuable essential oil is obtained from the dry buds, and is largely employed in perfumery. There are no statistics of acreage or yield.

**COCONUTS.**—No more than a rough estimate can be attempted of the acreage under coconuts in India, but it must be very considerable. The area cultivated in the Madras Presidency has been reckoned at 800,000 acres (of which more than half is assigned to Malabar alone), with a total annual yield of at least two millions of nuts. There are no large plantations in India under one management, the industry being chiefly in the hands of small cultivators. The produce of the Coromandel Coast, as of Bombay and Bengal, largely disappears in local consumption. The total consumption of coconuts in India has been estimated at 400 million nuts a year, but it is probably much higher.

It is considered that the value of the products of the coconut in the world's markets in the year before the Great War exceeded £70,000,000, or nearly double the value of the world's output of rubber. Of these products copra is the most important, this being the dried kernel of the nut. India no longer exports copra to such an extent as before the War, but Malabar copra has for many years commanded a higher price than any other in the foreign markets, because it is wholly sun-dried. Coconut oil, the resultant product of copra, is in great demand for the manufacture of edible oils and fats, and here too the best quality comes from the Malabar Coast, the bulk of the trade being from Cochin. Another product is poonac, valuable both as a food stuff for cattle and as a manure. Coir fibre is exported to a considerable extent, either in the raw or in the form of yarn rope. (See also under "Commerce" and "Industries")

**COFFEE.**—The systematic cultivation of coffee in India dates from 1830, and from then until 1865, when the coffee leaf blight made its appearance, the industry flourished in Southern India. This was the same disease which ruined the coffee estates of Ceylon, and between 1877 and 1887 no less than 263 plantations in the Wynnaad were abandoned, while those in South Travancore were practically wiped out. The industry is to-day largely confined to Southern India, the best estates being situated in Mysore, Coorg and the Madras Presidency. The total area under coffee has declined to some 91,000 acres. Most of that grown is prepared for export at Mangalore, Tellicherry, Calicut and Coimbatore, where there are large curing works. (See also under "Commerce")

**CORIANDER.**—This is cultivated all over India on account of its fruit and leaves, the former of which yields a spice and a volatile oil, while the leaves are eaten as a vegetable and form a valuable ingredient in curries.

**COTTON.**—See special article following

**CUMMIN SEED.**—True cummin is grown chiefly in the United Provinces and the Punjab, but is found in almost every province, the principal trade centres being Jubbulpore, Gujarat and Rutlam. Black cummin is also largely cultivated, and both are much used in the preparation of curries and confectionery. There is an export trade with Ceylon, the Straits Settlements and the Arabian and East African Coasts.

**FODDER CROPS.**—Crops grown purely for fodder form a very small proportion of the cattle food of the country, and for this reason have not in the past been subjected by the Agricultural Department to the same systematic treatment as staple crops. But the fodder question is now assuming increasing importance on account of the restriction of grazing areas through the rapid extension of arable cultivation, combined with a stricter conservation of jungles as forest reserve. More and more attention is being devoted directly to the problem of fodder raising and storing, and work of great value is being performed in demonstrating the possibility of new sources of supply. In Bombay improved methods have been introduced in the preparation of prickly pear as emergency fodder. In the United Provinces, also, it has been discovered that a troublesome weed known as *baisurai*, which seriously affects the yield of un-irrigated crops on account of its deep roots, can be advantageously utilised as cattle food. It is estimated that through the employment of this weed a saving of 220,000 tons of other fodder can be effected in the United Provinces. Since this quantity considerably exceeds the total amount imported into the Provinces during the severest fodder famines of recent years, the value of the discovery is unquestionable. As a result of large scale trials of berseem (*Egyptian clover*) at Pusa, this fodder is beginning to displace local varieties of fodder crops in certain localities.

**FORESTS.**—See article following.

**FRUIT.**—At present the fruit growing industry of India is in its infancy. Endeavours are being made by the Agricultural Department to popularise better varieties of fruit and to introduce improved methods of cultivation. The importance of careful selection of trees and proper tillage of soil has been amply demonstrated, and in several places special agricultural stations have been opened, where improved types of fruit trees are on sale. The future of the fruit growing industry seems promising, for a certain proportion of the educated classes, who do not take kindly to other branches of husbandry, are quite willing to adopt it as a calling.

**GINGER.**—This has been cultivated in India for centuries, the principal centre of cultivation being the Malabar Coast. It is also grown in the Surat and Thana districts of the Bombay Presidency, the Rangpur district in Bengal and the Kumaon district of the United Provinces. The sale of ginger in the bazars and its consumption for curries and medicinal purposes are considerable, while the export trade is valuable. (See also under "Commerce.")

**GRAM.**—This is one of the most important of the pulses grown in India, over 16,500,000 acres being cultivated in 1924-25. Of the total, the United Provinces accounted for 6,817,000 acres and the Punjab for 5,696,000 acres. Bihar and Orissa and the Central Provinces have also large acreages. The new crop comes on the market generally in April, and the bulk of the business is put through before the rains, the local consumption being very large. Exports are comparatively limited.

**GROUNDNUTS.**—The groundnut (*arachis hypogaea*), also known as peanut, earthnut and monkey nut, has been long cultivated in India, and is now one of the most important of the country's crops. The total area returned for the 1925-26 season was 3,886,000 acres, compared with 2,885,000 acres in 1924-25, or an increase of 35 per cent. The total yield for the same year was estimated at 1,908,000 tons of nuts in shell, as against 1,485,000 tons of nuts in 1924-25, or an increase of 28 per cent.

These figures represent the output of the provinces of Madras, Bombay and Burma and of the State of Hyderabad only, which provide nearly 95 per cent of the entire groundnut crop of India. In 1925-26 Madras had 2,548,000 acres under cultivation, Bombay, 649,000, Burma, 490,000, and Hyderabad, 190,000 acres. A large portion of the nuts produced in the country is consumed locally, but there is a considerable export trade, as also in groundnut oil. (See under "Commerce.")

**HEMP.**—The three leading varieties of hemp which India produces are known as *sann*, *sisal* and *Indian*, the last-named being cultivated not so much for its fibre as for the narcotic in the form of *bhang*, *charas* or *ganja* derived from it. As a source of hemp fibre it is now chiefly grown in two localities, the North-West Himalayas and (to a much smaller extent) Sind. *Sisal* hemp is obtained from the spiny leaves of *agave sisalana*, which is commonly grown as a hedge in many parts of India, particularly on railway lines. *Sann* hemp is now widely raised in Bombay, Bengal, the United Provinces and Madras being exported in the form of raw fibre. (See also under "Commerce.")

**INDIGO.** Indigo was used in both India and Egypt long before the Christian era, and at one time the industry was a highly important one. The manufacture of synthetic indigo has, however, hit it hard, and the total production is now less than a third of what it was thirty years ago. About 107,000 acres are cultivated with indigo, principally in Madras, but the total yield does not exceed 50,000 cwt.

**JOWAR.** See "Millets."

**KARDI (SAFFLOWER).**—The safflower plant grown extensively in Bombay, the Central Provinces and Madras, furnishes not only a useful dye, but also the valuable trade oil known as *kusum* or *carthamus*. Safflower is generally raised as a subsidiary to some other crop.

**LEMONGRASS.**—From this grass is extracted an essential oil of commercial importance. The cultivation of lemongrass may be described as a monopoly of the West Coast of the Madras Presidency, the main producing areas being the Indian States of Travancore and Cochin and the southern portion of the Malabar district. The grass is both wild and cultivated. The hillsides on which it flourishes are fired in January, and the first crop is ready to be harvested in July, the season of distillation extending to October.

**LINSEED.**—In India linseed is cultivated entirely for seed, and not for fibre. It requires a deep and moist soil, and is thus grown chiefly in Bengal, Bihar, the United Provinces and the Central Provinces. More than 2,500,000 acres were sown in 1924-25, but the yield is variable, ranging from practically nothing up to 500 or 600 lbs of seed per acre. The yield for 1924-25 totalled 541,000 tons. The seed is mainly exported, but a certain amount of oil pressing is done in the country. (See also under "Commerce.")

**MAIZE.**—The systematic cultivation of maize in India is confined to the United Provinces, Bihar and Orissa, the Punjab, Bombay and the Central Provinces, though small plots or patches are found practically everywhere. The area under tillage has shown a tendency to decrease slightly since the War, the return for 1924-25 being 5,347,964 acres, of which 1,593,800 acres were in Bihar and Orissa and 1,553,699 acres in the United Provinces. No figures of production are available, but the annual yield probably averages about 2,000,000 tons. The greater part of the crop is consumed locally.

**MILLETS.**—These constitute one of the most important group of crops in the country, supplying food for the poorer classes and fodder for the cattle. The varieties vary greatly in quality, height and suitability to different soil and climatic conditions. The two best known are *jowar* (*Sorghum vulgare*), a tall growing millet with large open head, and *bajra*, which has a close rat-tail head and thin stem. Bombay, Madras, the Central Provinces and Berar, the United Provinces and the Punjab have the largest areas of cultivation, the total acreage for British India in 1924-25 being 22,470,373 acres for *jowar*, 11,965,420 acres for *bajra*, and 3,980,093 acres for *ragi* or *niarna*, an ordinary millet. None of these is extensively exported.

**MOWRA SEED.** *Mowra* (*mahua*) seed, which contains a large amount of edible oil extensively used as a substitute or adulterant, is the product of a deciduous tree which grows widely in the Central Provinces, Chota Nagpur and Western India. The flowers of the *mowra* are a favourite article of food in the Central Provinces and a country spirit is also distilled from them.

**MUSTARD.** See "Rapeseed."

**NIGER SEED.**—Sometimes called black sesame, the African plant from which niger seed is obtained is a spring crop, largely sown mixed, the chief producing areas being Chota Nagpur, the Central Provinces, the Deccan and north-eastern Madras. No statistics of area or production are available. The seed is locally crushed and used for cooking, anointing the body and mixing with sesame and other more valuable oils.

**NUX VOMICA.**—*Nux vomica*, which is commercially important as the source of the alkaloids strychnine and brucine, is the name given to the seeds of a deciduous tree widely distributed over India. The fruits are collected between November and January, when the seeds are taken out and dried in the sun, the busy season for export on the West Coast running from February to the middle of May.

**OATS.**—The cultivation of oats in India is confined mainly to the Delhi and Hissar districts of the Punjab and the Meerut district of the United Provinces, where the cereal is grown as a spring crop, but it is raised also to a limited extent in the Poona, Ahmednagar, Satara and Ahmedabad districts of the Bombay Presidency. Elsewhere it is more frequently cut green for cattle fodder. There is only a small export trade.

**OIL SEEDS.**—See "Castor seed," "Groundnuts," "Linseed," "Mowra seed," "Niger seed," "Rapeseed," and "Sesame."

**OPIUM.**—Indian opium is derived from the opium-yielding poppy (*papaver somniferum*), which grows in certain districts of the United Provinces and the Central Indian States. The capsules or seed pods from which the drug is obtained are, while still green, carefully scarified with a four-bladed instrument, which causes them to exude a gummy sap, and this operation is repeated three or four times at intervals of two or three days until the discharge is exhausted. The juice is scraped off and when coagulated forms crude opium, for which the flower petals, carefully collected and steamed, are used as packing.

In Central India the opium collected (known as *malwa*) used to be sold by the cultivator to middlemen, from whom the large dealers obtained their supplies. Now that the export trade to China has ceased, practically the only purchaser of *malwa* opium is the Government.

Buyers of The Imperial Tobacco Company purchasing Bales of Leaf  
(See letterpress, p. 171)

In British India cultivation is permitted only under licence granted to cultivators, who obtain advances from Government free of interest to meet the cost of production on the understanding that the whole of their crop is sold to the Government factory at Ghazipur. In both British India and in the Central States the area under opium has been much reduced since the arrangement made with China in 1907 to curtail the opium traffic. In 1924-25 the total area under cultivation in the United Provinces was 125,875 acres.

**PEA NUTS.**—See "Groundnuts."

**PEPPER.**—This is the berry of a vine-like climbing plant which grows wild in the forests of Malabar and Travancore, and is extensively cultivated by Europeans and Indians in and below the Western Ghats from Karwar to Cape Comorin. It thrives in a hot, moist climate with an abundant rainfall. In Bengal pepper is grown to a limited extent only in the northern parts of Jessore, while in Assam, except in Sylhet and on the southern slopes of the Khasia Hills, very little is produced. In Bombay the Kanara gardens are well known,

and in Madras the principal producing areas are Malabar, Cochin and Travancore. Coorg and South Kanara also furnish a little. The vines are usually propagated from cuttings, and the first crop is obtained in the third year, the berries ripening in March. A vine in full bearing in a good year will carry about 1,000 clusters of fruit, yielding 4 lbs. of dried pepper. (See also under "Commerce.")

**PULSES.**—Under this heading may be grouped a large number of food grains, the most important being *arhar*, lentils, dhal, beans and peas. *Arhar*, or pigeon pea, is grown as a mixed crop in rotation with cereals. Lentils are raised as a winter crop all over India, especially in the Central Provinces, Madras and the United Provinces. Dhal is a common term applied to the split grain of a large variety of pulses. Of peas and beans, the Burma white bean is the most important. Statistics of the acreage and production of these crops are not available, but their aggregate yield is known to be very large, and the export trade is also considerable. (See "Gram," and also under "Commerce.")

**RAPESEED.**—India is the chief source of rapeseed, and in 1925 her crop totalled 1,137,000 tons. The bulk is crushed locally, the oil being used as an illuminant, also for edible and lubricating purposes. During recent years rapeseed oil has been used in the manufacture of margarine. Rapeseed cake and meal are good feed-stuffs and have a ready outlet as fertilisers, especially for highly cultivated crops, such as hops, rice, etc. In Upper India rapeseed and mustard are usually grown together, the average acreage under the two crops being over 6,000,000.

**RICE.**—See article following.

**RUBBER.** There are a large number of rubber-yielding trees indigenous to Indian forests, but the product is not sufficient to justify exploitation on a large scale. Excepting on the Tenasserim Coast of Burma and in Travancore cultivation has never proceeded much beyond the experimental stage. The area under rubber does not exceed 200,000 acres, of which nearly 50 per cent. is in Burma and about 35 per cent in Travancore. (See also under "Commerce.")

**SAFFLOWER.**—See "Kardh."

**SENNA.**—This plant is cultivated chiefly in the Tinnevely district of the Madras Presidency being grown on special plots of land, from which from 700 to 1,400 lbs. of leaves per acre can be obtained. Indian senna has a good reputation for quality and price.

**SESAME.**—The seed of *sesamum indicum*, an annual plant thriving in the tropical and sub-tropical parts of the world, and variously known to the trade as til, teel, gingelly or sesame, yields a valuable oil, which is used in India for cooking purposes, as an illuminant, or for anointing the body. The seed is generally grown in India, except in the United Provinces, as a pure crop, and a fair average yield is about 300 lbs. to the acre, in Southern India it is probably higher. Cultivation extends to almost all the provinces, but the crop is raised most extensively in Bombay, Burma, Madras and in the Central Provinces. The area under cultivation in 1924-25 totalled some 5,293,000 acres, and the yield was estimated at 513,000 tons, of which 436,000 tons were unmixd. The average yield of the preceding five years was 488,000 tons.

**SUGAR.**—India was probably the original home of the sugar cane, and the area under it is actually larger than in any other country, being returned for 1925-26 at 2,648,000 acres, against 2,532,000 acres in 1924-25. These totals are exclusive of a further figure of about 158,000 acres, which represents the area in Burma and certain native States. The yield, however, in India is very low, amounting in 1925-26 to 2,923,000 tons of raw sugar, against 2,548,000 tons in the preceding year, this total comparing unfavourably with the 5,374,000 tons furnished by Cuba and the 2,279,000 tons by Java from much smaller acreages. Actually the sugar yield per acre in India is only one-third of that obtained in Cuba, one-sixth of that in Java and one-seventh of that in Hawaii. In consequence of her own low crops India is obliged to spend about 20 crores of rupees a year on foreign sugar.

Of the total crop in 1925-26, the United Provinces furnished 1,403,000 tons (47.9 per cent), Bihar and Orissa 318,000 tons (10.8 per cent), and Madras 308,000 tons (10.5 per cent). The output of the United Provinces showed an increase of 31.5 per cent over 1924-25, and that of Bihar and Orissa one of 26.2 per cent.

**TEA.**—See special article following.

**TOBACCO.**—The tobacco plant is believed to have been introduced into India by the

Portuguese at the beginning of the 17th century. The only two species now cultivated are *nicotiana tabacum* in the Peninsula and the yellow-flowered *nicotiana rustiana* in Northern India. In Lower Burma and Arakan there is a considerable quantity of tobacco grown from imported Havana seed. The Government has made repeated efforts to improve the indigenous methods of curing and manufacturing, also to produce a better quality of leaf. The tobacco industry is now identified with three principal centres, viz (1) Eastern and Northern Bengal and Bihar, with headquarters at Rangpur and Monghyr, (2) Southern India, particularly the districts of Coimbatore, Salem, Trichinopoly, Madurai, Kistna, Godavari and Guntur, with Madras, Trichinopoly, Dindigul, Palghat and Coimada as the chief manufacturing and trading centres, and (3) Lower Burma, with Rangoon, Moulmein and Akyah as the principal centres.

It is generally raised after a summer fallow, and, except in irrigated tracts, depends largely on the conservation of the soil moisture from the previous monsoon. On irrigated lands two to four waterings are generally given. The crop is usually harvested in March and April, the threshing and winnowing going on to the end of May. In good years the surplus crop is bought up at once by the exporters, and no time is lost in putting it on the European market, as other supplies are then scarce. In years of famine the local price is generally sufficiently high to restrict exports.

**PRODUCTION** — India ranks third among the wheat producing countries of the world being led only by the United States and Russia. The estimated total world production in 1925 was 525,000,000 quarters, of which India's share was roughly 40,000,000 (a quarter 480 lbs.). The fol-

**YIELD PER ACRE** — On land liberally manured and irrigated yields of from 1,500 to 1,600 lbs. per acre have been obtained, but the crop is liable to damage by rust if there is rain or cloudy weather in February. On dry (i.e. un-irrigated) lands 800 lbs. is a good crop. The yield for all India in 1924-25 was 608 lbs. per acre, Delhi leading with an average of 1,007 lbs., followed by Bihar and Orissa with 936 lbs. and Baroda with 733 lbs. Hyderabad was lowest—187 lbs. per acre.

### REPRESENTATIVE AGRICULTURAL ENTERPRISES. THE JALLO TURPENTINE AND ROSIN FACTORY.

**Foundation.** One of two such manufacturing set up by the Government for the distillation of crude resin and its conversion into products of high commercial importance, the Jallo Turpentine and Rosin Factory is held

Bales of Tobacco in Transit from fields to Imperial Tobacco Company's Leaf Purchasing Depot

(See letterpress, page 171)

The Indian tobacco crop is suited only to small holdings, as it requires considerable attention and liberal manuring. The area under tillage now exceeds 1,000,000 acres, and the yield varies, according to the attention given to the crop, from 200 to as much as 3,000 lbs. of cured leaf per acre. Though harvesting goes on in some localities as late as June, the bulk of the product is gathered between February and April. The leaves are dried, sorted, then stacked and allowed to ferment, different qualities of tobacco being produced by varying the degree of fermentation allowed. (See also under "Commerce" and "Industries")

**WHEAT.**—This is the third largest of India's crops, being exceeded only by rice and millet. Unfortunately, Indian wheat is generally of low quality, and therefore does not command high prices in the foreign market. Much is being done by the Government's agricultural experts to encourage the introduction of strains possessing high yielding and rust resisting powers, improved length of straw, good milling and baking qualities. Wheat is grown widely throughout Northern India as a winter crop, the United Provinces and the Punjab supplying about two-thirds of the total area and probably about three-quarters of the out-turn in India.

lowing tables give (a) the figures of area and production for all India in 1923-24, 1924-25 and 1925-26 (estimated) and (b) those of production by provinces for 1924-25 and 1925-26 (estimated) —

(A) WHEAT PRODUCTION IN INDIA			
	Acres in Area	Yield in Tons	
1923-24	31,178,000	9,754,000	
1924-25	31,794,000	8,624,000	
1925-26	20,809,000	8,577,000	
(B) WHEAT PRODUCTION BY PROVINCES			
Provinces	Final Figures	1924-25	Estimated 1925-26
	(1,000 tons)	(1,000 tons)	(1,000 tons)
Punjab	2,927	2,808	
United Provinces	2,239	2,606	
Central Provinces and Berar	1,066	996	
Bombay	452	312	
Bihar and Orissa	491	441	
N W Frontier Province	234	259	
Bengal	30	28	
Delhi	20	17	
Ajmer-Merwara	4	2

Gwalior	413	357	
Rajputana	262	182	
Hyderabad	63	71	
Baroda	18	18	
Mysore	1	1	
Totals	8,624	8,577	

in joint proprietorship by the Secretary of State in Council for India and Raja Sir Daya Krishan Kaul, I.C.S.

**Development.** — The first serious attempt at the commercial utilisation of the immense pine forests of the Himalayas for the production of rosin and turpentine dates back only ten years. In this brief space of time the industry has been firmly established and the distilleries equipped with the latest plant. In 1914 India's production amounted to 20,000 cwt. of rosin and 60,000 gallons of turpentine, in 1925 the respective totals were 110,000 cwt. and 350,000 gallons. Of these amounts the Jallo Factory produced one-half. Following further development an annual production of 600,000 cwt. and 2,000,000 gallons respectively, the greater part available for export, will be obtained.

**Process.** — The trees are tapped for the crude resin, which is treated to remove impurities before being distilled by steam, or *in vacuo*, to separate the turpentine from the rosin. The turpentine spirits and steam are condensed and separated by gravity. The molten rosin is further heated until thoroughly dry and free from oil, carefully strained and finally poured into casks, in which, after

(See letterpress, page 121)

solidifying and grading, it is shipped to market. Unlike American turpentine, the Indian variety requires redistilling to remove the high boiling terpenes it contains. After this process it is equal to American standards and has the additional advantages of being always absolutely uniform (an important consideration for paint and varnish manufacturers) and possessing a more pleasant odour.

**Packing.**—Indian turpentine is packed for export in welded galvanised steel drums holding from 5 gallons upwards, and the rosin in casks each containing 4 cwt net.

**Markets.**—Most of the turpentine produced by this concern is consumed in the British Empire, while Jallo rosin is supplied regularly to manufacturers in India, England, Australia, Italy, Holland and China. The Factory is anxious to develop its connections in China, and will welcome enquiries through its agents.

**Agents.**—Messrs Volkart Bros (Karachi) for India, the United Kingdom and Europe, Messrs. Wilkinson, Heywood & Clark (Sprott Road, Bombay) for India, and (at Shanghai) for China; and The Bombay Co (Madras) for India.

**Office.**—Lahore, Punjab (cables: "Resin," Lahore). Code: Bentley's.

#### FRASERPET FIBRE COMPANY, LTD.

**Inception.**—This company, for which Messrs Holmes Wilson & Co Ltd., Calcutta, are managing agents (see also page 270 in the Calcutta section of this volume), was floated in 1919 to acquire estates for the cultivation and manufacture of sisal fibre.

**Estate.**—The estate lies on the border of Coorg State, about 3,000 feet above sea level, and already some 600 acres have been cleared and planted, the work having been considerably delayed through damage done by wild animals, elephants and pigs being the worst offenders. The surrounding country abounds in big game, and it was necessary to protect the planted area with heavy and secure fencing. The estate is planted with *Agave sisalana*, the original stock being grown from bulbs imported from Mexico. This plant has a heavier and pulpier leaf than other species of *Agave*, and grows more rapidly. It was formerly supposed that sisal would only thrive in bare rocky soil, but recent experiments have disproved this theory. It has been found that the more the land is cultivated the better is the growth of the crop.

**Process.**—The fibre is obtained from the leaf of the plant by decortication, a simple process. The leaf is fed into the decorticating machine, which automatically grips it near the centre, and alternately each end is decorticated. Having passed through the machine, the fibre is washed and thoroughly

rinsed in order to extract the green colouring matter, which is fermentable and would not only detract from the selling value of such fibre, but would reduce its strength in subsequent use. The question of washing is, therefore, of great importance, and a plentiful supply of water is essential if the best quality of white fibre is to be produced. The fibre is next dried in the sun and then subjected to a brushing process, which not only removes the loose dirt and short lengths, but polishes and straightens the product.

**Use.**—The principal use of sisal fibre throughout the world is for making twine for reapers and self-binders.

**Output.**—It is anticipated that when the present estate of 1,000 acres is fully developed the output per annum of fibre will be 500 tons. Further concessions of land which adjoins the present estate, and which is equally suitable for the cultivation of *Agave*, can be obtained from the Government, and by this means the maximum output of the company can be appreciably increased. The total supply from the estate is shipped to and sold in London.

**Offices.**—Holmes, Wilson & Co., Ltd., Norton Buildings, Old Court House Corner, Calcutta (cables: "Benelliott," Calcutta). Codes: A.B.C. 5th Edition, Bentley's and private.

4. The Farm at Simla, 7,000 feet above sea level.  
6. The famous "Sahiwal" cows at the Simla Farm.

#### EDWARD KEVENTER, LTD.

**Inception.**—Under the name of Edward Keventer this firm was founded in Aligarh during 1894, and was formed into the present limited liability company in 1922, with an authorised capital of Rs 15,00,000 and a paid up capital of Rs 861,850.

**Activities.**—The company specialises in all machinery and appliances essential to the milk and dairy-produce industry, and runs its own dairy farms for the production of certified milk, sterilized milk in hermetically sealed glass bottles, butter and cheese. There are five such farms, the largest at Aligarh producing approximately 500,000 lbs of butter annually, the others are at Calcutta, Darjeeling, Delhi and Simla, where the chief product is certified milk for immediate consumption. The farms are run on strictly commercial lines and are made to serve as demonstration centres for the dairy machinery and appliances for which the company holds the sole Indian agencies. Prospective buyers find it very instructive to watch these practical demonstrations, which

are undoubtedly of immense advantage to purchasers and sellers alike.

**Exhibition Awards.**—The firm spares neither expense nor labour when an opportunity offers to exhibit and demonstrate its dairy plant at Industrial Exhibitions and Shows, and the many awards conferred on it testify to the appreciation its enterprise has met with at the hands of the organisers. At the great Allahabad Exhibition in 1910-1911 the company won two gold and three silver medals for machinery, and a first prize and bronze medal for butter, at the Darjeeling Cattle Show (1913) three silver medals for dairy plant; first prize and silver medal for dairy products at the Food Products Exhibition, Calcutta (1918); and in 1923 at the Industrial Exhibition, Calcutta, the company was awarded a gold medal for butter and milk and one for the "Alfa-Laval" milking machine.

**Imports.**—Among the extensive imports of the organisation are the "Alfa-Laval" cream separators and milk clarifiers; the "Alfa-Laval" milking machines; the "Alfa" one-

piece steel milk cans, the "Astra" churns, butter workers and milk coolers, the "Barnekow's" dairy preparations, the Dr N. Gerber's milk testing apparatus, and the Loudon cow shed equipments.

**Depôts.**—These have been established at Bombay, Calcutta, Darjeeling, Delhi, Karachi, Lahore, Rangoon, Ranchi and Simla, together with agencies all over India, the company employing 12 Europeans and a very large staff of Indians.

**Appointments.**—The firm has been appointed purveyors to H M the King Emperor, the Earl of Reading, Lord Chelmsford, the Earl of Minto, Lord Hardinge of Penshurst, Lord Curzon of Kedleston, and others.

**Management.**—The affairs of the company are under the direction of Mr. Edward Keventer, the pioneer of modern dairying in India, assisted by his nephew, Mr. W. Keventer (officiating managing director) and Mr. C. G. Mortenson.

**Offices.**—Aligarh, United Provinces (cables: "Keventer," Aligarh). Code A.B.C. 5th edition.

TEA AUCTION SALESROOM AT CALCUTTA

## THE INDIAN TEA INDUSTRY

By T. C. CRAWFORD, Chairman (1926) of the General Committee of the Indian Tea Association.

THE question of the cultivation of tea in India is referred to as early as 1788, when it was considered that the world should not be solely dependent on China for its tea requirements. The East India Company did not in those early days encourage an investigation into the possibilities of tea in India, and it was not until about 1834, when it lost its monopoly of China tea, that action was taken by Lord William Cavendish Bentinck. Government then directed its attention towards investigating whether tea could be introduced as a commercial proposition, and a small official committee was set up, which was subsequently known as the Tea Committee, consisting of the following members—Messrs. J. S. Pattle, J. W. Grant, R. D. Mangles, J. R. Colvin, C. E. Trevelyan, C. K. Robinson, Rob. Wilkinson, Sir R. D. Colquhoun, Bart., N. Wallich, Radhakunt Deb and Ram Comul Sen. In addition, Messrs C. Macsween and G. J. Gordon were named as members.

**1. EARLY CULTIVATION.**—It is apparent that before this date (i.e. about 1824) tea was found to be indigenous in certain parts of India. On the other hand, it is interesting to note that the first definite steps to investigate its cultivation were taken by Government, and not as is customary, by private enterprise. The Committee arranged that one of its members (Mr G. J. Gordon) should proceed to China, and he brought back with him some tea seed which was distributed in Assam, Kumaon and the Madras Presidency. While he was absent in China definite proof was forthcoming that the tea plant was already existent in Upper Assam, and further investigations indicated that the region was suited to its cultivation. A deputation, at the instance of the Government, proceeded in 1835 to Sadiya in Upper Assam and visited the districts where the plant was indigenous. Following on this deputation, Mr C. A. Bruce, who was associated with the earlier private investigations into tea, was in April 1836 appointed Superintendent of tea culture by the Government, and was actively identified with the

earlier efforts to propagate the tea plant in Upper Assam. He is said to have been the first to obtain proof of the existing indigenous tea plant of Assam, but Capt. Andrew Charlton was awarded a medal as he was the first to establish to the satisfaction of the Committee the existence of the tea plant.

**2. FIRST TEA PRUNING.**—The following extract relating to the earliest tea pruning is taken from "An account of the manufacture of the black tea as now practised at Suddeva in Upper Assam by the Chinamen sent thither for that purpose, with some observations on the culture of the plant in China and its growth in Assam," by C. A. Bruce, Superintendent of Tea Culture (Printed at Calcutta by G. H. Huttman, Bengal Military Orphan Press, 1838).

### "TEA PRUNING.

"Last year the Government sent a deputation of three scientific gentlemen to examine the Assam tea plant, Dr. Wallich, Mr Griffith and Mr McClelland—the two former Botanists, the latter a Geologist. Dr

Wallich, who conducted the deputation, requested me to accompany them, being the only European who had ever visited the tea tracts, as the different localities are called. One day after having seen some tea in company with these gentlemen, and as we were returning, I was informed by some natives of another patch or tract of tea that had been cut down. We went and examined it, and found the plants just coming up, about 6 inches high. On enquiry we were told that the villagers took the tea plant to be so much jungle, and therefore nearly cut all of it down close to the ground, set fire to the whole, and then planted paddy or rice on the spot. The crop of paddy had just been cut and brought in, when we saw the plants the shoots were coming up from the roots and old stumps,

This would seem to be the earliest reference to pruning in India.

**3. FIRST TEA COMPANY (FORMATION OF).—**The first commercial flotation for the cultivation of tea was that of the Assam Company, which was formed about 1839 and is still existent. This company acquired two thirds of the Government's establishment, but the latter did not dispose of the remaining third until 1849. The Assam Company in the earlier days of its career was a commercial failure, and in 1846-47 its shares, on each of which £20 had been paid, were unsaleable. Subsequently, however, the management of the company was taken over by a Mr H B Young and a Mr S Murray, or Mornv, and it was under their direction that the company was converted into a payable proposition

of recent years that Indians have identified themselves with the tea industry, but there are now a good number of Indian-controlled concerns in existence.

#### 5. CAPITAL OF TEA COMPANIES.—

The capital of the joint stock companies at present engaged in the Indian tea industry is over £30,000,000, the greater part of which was raised in Great Britain only companies capitalised to the extent of about £6,000,000 having been floated in India. There are in addition a large number of private concerns particulars in respect to the capital of which are not available. The industry is one which from its inauguration has gone through many vicissitudes as owing to over-production, etc., the operating companies

CALCUTTA TEA MEN ABOUT 1883.

Back Row: Mr. Consolo, H. R. McInnes, Thos. Watson, W. S. Cresswell, John Davenport, Mr. Carter, Thos. Traill, J. G. McLaren, Luther Harp.  
Front Row: C. J. Sharp, W. L. Thomas, C. F. Inskip, Mr. Watson, Jr., Wilfred Oldham, Geo. Cheetham, John Carritt, Mr. Browning.

thick and numerous. Some tea plants I noticed had only been cut a foot, and some two to four feet from the ground, all these threw out numerous shoots and leaves an inch or two below where they had been cut. I afterwards converted this piece of ground into a tea garden on account of the Government, and now it is one of the finest I have, where there was formerly one tea plant, there are now upwards of a dozen, the new shoots from the old cuttings forming a fine bush, and showing a great contrast to some of the original trees, which I have permitted to stand, with slender trunks and a few branches only at the top. This tract or garden has yielded more tea this season than twelve times the same space of ground in the jungles would have done. I found that as the plants that had been cut down grew up again, the leaves acquired a yellowish tinge from their exposure to the sun, and were much thicker than those in the jungles, but this yellow tinge has worn off, and the leaves are now as green as those in the shade. As this tract answered so well by being cut down and set fire to, I tried the same experiment upon another tract close by, and it has come up to what I expected of it, eight to twelve new shoots having risen from the old stumps in the place of one. It is now a very fine tea tract."

In 1853 Mr George Williamson, joint founder of one of the premier tea agencies in India, Messrs Williamson, Magor & Co., took charge of affairs, and he was very closely identified with the commercial development of the tea industry in India.

**4. FIRST SALE.**—The first consignment of Indian tea appears to have been offered for sale in London in 1838, the amount involved being 280 lbs., which realised prices of from 16s to 34s per lb. The first public tea sale held in India took place in Calcutta on December 27, 1861. There is no record of the quantity involved, but it is reported that Flowery Pekoe realised Rs 2 2/- per lb., Pekoe Rs 1 4/- to Rs 1 5/-, Souchong 14 annas to Rs 1 4/- per lb., and Congous 10 annas to Rs 1 1/- per lb.

While investigations were being carried on in North India efforts were being made to grow tea in South India, and, as far back as 1842, there are references to Chinese workers having been brought in to train local labour. The Jorhat Company was the next sterling company to be floated in 1859, and during the years 1871-80 nine more were added to the list. In 1881-90 a further twenty-two companies were floated, while the period 1891-1900 saw a boom in the formation of these, no less than 103 having been launched during that period. It is only

frequently worked at a loss. It is noteworthy, however, that such slumps more particularly affected the estates producing the commoner types of tea, the Lebong Tea Company (Darjeeling district) has, since its foundation in 1862, declared unbroken dividends annually. There are also other concerns producing better class teas which have not missed dividend declarations over a considerable number of years. As recently as 1920-21 the industry was faced with a crisis following over-production, and many companies were forced into liquidation, while during the period 1900-01 to, say, 1906-07 the enterprise met with a series of set-backs. With increasing consumption, however, conditions have been more favourable of late years.

**6. AREA AND PRODUCTION.**—The area under tea in India, according to latest statistics, is 716,221 acres, as compared with the average for the five years 1885/89 of 310,595 acres. The average crop during the latter period was only 90½ million lbs., whereas during 1924 the total crop amounted to 375½ million lbs. The following statement, showing the progress of the area under tea

and production, is of interest. —

	AREA UNDER TEA (in acres)	PRODUCTION (in lbs.)
Average 1885 '1889	310,595	90,602,205
" 1890/1894	375,700	124,805,152
" 1895 '1899	467,201	158,371,806
" 1900 1904	524,720	201,385,969
" 1905/1909	540,299	242,386,233
" 1910/1914	592,913	290,000,243
" 1915/1919	664,272	374,265,437
1920	704,059	445,339,570
1921	709,006	271,263,771
1922	708,199	311,638,910
1923	711,209	375,355,689
1924	711,710	375,555,874
1925	725,812	463,506,571

The total area of land taken up by the tea industry in 1924 was 2,334,295 acres, i.e., 716,221 acres under tea and 1,618,074 acres of forest, jungle, dhan khēt, etc.

Indigenous, (3) Manipuri, (4) Naga, (5) Lushai or Cachai Indigenous, and all these belong to one species. The difference is usually distinguished by the method of growth and the number of veins in the leaves, while the leaf of the China plant is smaller than that of the indigenous or Manipuri. The tea leaf itself is green, concave on the upper surface, and very much elongated at its apex. The tea bush perpetuates its species by the usual method of reproduction obtaining amongst the higher flowering plants, and the fertilised cell takes about eight months to develop into the mature seed. Heavy cropping hardy species are carefully selected for seed bearing bushes, the general preference now being for a

is no doubt that labour is one of the most important, as, unless it can be obtained at low rates, the production costs would be such as ruled out tea cultivation on profitable lines. There are still many operations connected with the cultivation and manufacture of tea for which hand labour is required, for instance hoeing, pruning and plucking are three works which would be prohibitive in cost if carried out by labour paid according to Western standards. An additional factor is climate, a liberal rainfall being a necessity to free growth, and the minimum temperatures must not be too low in fact Dr H. H. Mann considers the temperatures (maximum and minimum) in the Darjeeling district the lowest at which successful tea culture is possible. The third

(See *Literpress*, page 134.)

**7. DISTRIBUTION BY DISTRICTS.** The Indian tea industry is divided into the following districts —

	ACREAGE (1924)	PRODUCTION (lbs.) (1924)	ACREAGE PERCENTAGE
ASSAM—			
Assam (Brahma putra Valley)	268,105	165,781,842	37 4/10
Sylhet	86,998	44,039,249	12 1/10
Cachar	57,756	27,332,019	8 1/10
Darjeeling	58,747	18,869,046	8 2/10
Doon and Terai	117,576	66,576,143	16 4/10
BENGAL—			
Chittagong	5,422	1,659,616	8%
Chittagong Hill Tracts	88	16,400	0%
Tripura	4,793	338,272	7%
SOUTH INDIA—			
Travancore	50,166	27,055,339	7 0/10
Madras	48,647	19,696,357	6 8/10
Other Provinces	17,923	3,891,591	2 5/10
Total	716,221	375,255,874	100 0/10

Burma produces a considerable quantity of letpet (wet pickled tea), which is eaten as a condiment and is therefore not included in the above figures. About 8,000,000 lbs of tea (black) imported into Burma from the Shan States is also excluded from the above figures.

**8. DIFFERENT TYPES OF TEA.**—There are five distinct types of the tea plant recognisable, namely (1) China, (2) Assam

Manipuri type of plant, and these bushes are allowed to grow in the thinly-branched conical shape of nature, often attaining a height of 40 m. Insects and fungi parasites have to be guarded against in the production of healthy seed-bearing bushes. The seed bush fruits annually on one year old twigs, the fruits being 1, 2, 3 or 4 seeded and the size of a marble. The setting free of the seeds takes place by the drying and splitting of the fruit, and it may be mentioned that the seed is never handpicked or shaken from the parent plant, but allowed to drop. Tea seed is not collected on all estates, but only on a small percentage, and of recent years there has been a profitable business done in the product.

#### 9. ESSENTIALS OF CULTIVATION.—

The selected seed is now planted in previously prepared nursery beds, 6 m by 6 m apart, and, in the plains, is left to develop from six months to a year before the young shoot is planted out in the estate. The time is considerably extended in the case of estates situated at a high elevation.

While it has been found that the tea plant will grow and even flourish under widely varying conditions, experience has shown that there are certain factors which must obtain before it can be grown as a commercial proposition. Of these factors there

important factor is soil condition, as there must be certain special characteristics. This question is, however, too involved and controversial to analyse in an article of this nature.

**10. PLANTING (METHODS OF).**—A tea estate may be planted out in either of the three methods enumerated.

- (1) Seed at stake: i.e. the area to be planted is cleared, drained, hoed and staked, say 5 ft by 5 ft triangular or 5 ft by 5 ft square, the seed dibbled in, carefully shaded and kept clean and free from weeds. This method is seldom practised nowadays.
- (2) Carrot planting: i.e. the pruning of the 1, 2 or 3 year old nursery seedling, both root and stem, and the dibbling in of the plant in the tea-bearing area. This method is wrong and is seldom practised, although it saves labour.
- (3) The most successful method on "plains" estates is the planting of year-old seedlings in the cold weather, with a ball of earth round the plant and with the tap root uncut. Planting out tea in the rains is not advisable.

There is considerable diversity of opinion with regard to the later treatment of the young plant, but the ultimate aim is to change the natural shape of the bush from

1. A Tea Garden Belle.

2. Hoeling; a seed garden is visible in the distance.

conical to square, and to bring it as quickly as possible to its full bearing capacity, having in mind the necessity of cultivating a deep rooted, broad and healthy bush. This is done by careful pruning. The bush generally takes seven years or so before it reaches its full bearing capacity. This period is lengthened in cases where soil, climate, elevation, etc. are unfavourable. The height of the bush must be kept down, otherwise the pluckers experience difficulty in taking off the leaf. With careful pruning on good soils, the tea bush is capable of bearing remunerative crops for over 50 years.

#### 11. CULTIVATION (METHODS OF).—

The system of tea cultivation differs on "hills" and "plains" estates, as on the former care must be taken not to over-cultivate, since this invites "wash" during the heavy rains. The principal objects of cultivation generally are to break or open up the soil and so invite aeration and to remove weeds which, if unchecked, would interfere with the growth of the tea plant.

On plains estates a deep hoeing to the depth of 8 in. or so is undertaken in the cold weather, and later on several rounds of light hoeing, the latter to a depth of 3 in. or 4 in., the number of rounds being regulated by the labour available. Trenching, i.e., narrow trenches 18 in. or so deep between alternate lines of tea, is greatly favoured, as this breaks up the pan formation, and, when the trenches are filled with green material such as boga, medeloa, etc., adds useful organic material to the soil. Draining is another important operation on a well managed plains garden, and narrow drains to a depth of 3 in. or so are laid throughout the tea, leading into larger drains. Estates on the hills are differently worked, a deep fork being substituted for a deep hoe, and cultivation in the rains is limited to prevent loss of surface soil. In South India weeding is substituted for hoeing, but some estates carry out a light forking. The growth of certain types of weeds is favoured on estates in the higher elevations in South India or on slopes, as these prevent loss of surface soil by wash. Terracing of slopes is carried out on steep estates so that wash may be prevented.

**12. MANURING.**—When the fertility of the soil is becoming exhausted, manuring is resorted to. There is considerable divergence of opinion in regard to the system of manuring to be followed, but much depends on the soil conditions, the state of the plant, etc. There is increasing support for artificial or inorganic manures, but until recent years estates in North India more or less depended on local material, such as cattle manure, castor cake, sterilised animal meal, etc. The Scientific Department, to which reference is made hereafter, is now available to advise managers in regard to the system of manuring best suited to their particular estates, and the literature issued by that Department has greatly added to the general knowledge of this important question. Castor meal is still extensively used by many managers, as it is procurable locally, while there is also a large importation into the tea districts of sterilised animal meal. The labour shortage does not permit of intensive top dressing being done with fresh soil where suitable soil is available, but cattle manure, which is readily obtainable on the large majority of estates, is used to the fullest extent possible. It is impracticable to deal with artificial or inorganic manures in detail, as conditions vary so much on different estates, and managers who favour this form of manuring are advised by experts as to the class of manure most suited to conditions in their

district. Sulphate of ammonia, nitrate of potash, nitrate of soda, sulphate of potash, lime (slaked or burnt) and superphosphates are a few of the manures imported into the tea districts, and there are indications that the use of this form of manuring is markedly on the increase.

**13. GREEN MANURING.**—Green manuring, in the form of annual leguminous green crops, which are hoed in, or biennial shrub shade the loppings of which are buried, is becoming increasingly popular. It is found that during growth these crops or shrubs improve the tilth by their root action, and the addition of the buried material increases the organic matter in the soil, apart from the fact that the shrubs provide light shade for the tea bush. It is also part of the policy on all estates to plant nitro-

of the many pests against which the planter has to be on guard. The use of various forms of spraying mixtures against these pests and blights is becoming more extended, and most estates now aim at spraying a large area annually.

**15. PLUCKING.**—The plucking of the young plant generally commences on the plains at three years from planting, and the tea planter has to exercise every care in the earlier treatment of the bush so that its outward spread is encouraged. Plucking consists of taking the youngest two leaves and a bud on each shoot, and the rate at which these develop is principally determined by climatic conditions. The leaf grows rapidly in moist warm weather, the heaviest yielding months in North India being July, August and September. The plucking season

the leaf is in the desired condition, it is transferred to the rollers which burst the cells of the leaf so that oxidation of the cell sap by bacterial action may develop. Rolling also gives "twist," adding to the attractive appearance of the tea. The time taken for rolling varies, but the general practice is two periods of 25 minutes each at this stage, so that the leaf does not get hot, causing too rapid fermentation. The leaf is thereafter passed through rough sifters or breakers, and the fine leaf separated from the rough, the latter is usually given another roll of 15 minutes or so after fermentation, but the fine leaf is not fermented quite so long.

**17. FERMENTATION.** The next process is fermentation, when the rolled leaf is placed in a darkened house where the temperature is maintained at about 78 F

HARRISONS AND CROSFIELD LIMITED, Calcutta Tea Tasting Room  
(See letterpress, page 131)

genous shade trees throughout the tea, say 40 in by 40 in apart, as experience shows that light diffused shade has useful effect on the tea, while the root action of such trees has a most beneficial effect on soil conditions.

**14. PESTS AND BLIGHTS.**—It is only necessary to make a passing reference to the pests and blights which affect the tea plant. These are numerous, and many still form the subject of scientific research. The most important of all, so far as North India is concerned, is mosquito blight, which is very common in some districts and shows signs of spreading in time to districts not at present affected. This blight has a very serious effect on production, for, when the garden is severely attacked, little leaf is obtainable. Research has not so far found any method by which this blight can be controlled or eradicated. Thrips, red spider, green fly, termites, various types of caterpillars, grubs, borers and crickets are a few

in North India extends from April to November, whereas in South India and Ceylon plucking goes on throughout the whole year, although certain months give a heavier flush than others. The plucked leaf is conveyed to the factory with as little delay as possible, and the process of converting it into black tea is somewhat as under —

**16. WITHERING.**—The leaf is first spread thinly on wire or hessian cloth racks in withering houses and allowed to wither for a period varying from 16 to 22 hours, depending on atmospheric conditions. On a large number of estates at high elevations artificial withering is resorted to during cold wet weather, hot air being led from the driers or special stoves, into the withering houses.

The object of withering is (1) to bring the leaf into the physical condition required to secure a good twist on the rolled leaf, (2) to allow enzymes (unorganised ferments secreted by the cell sap) to develop. When

to 82°F. This process introduces chemical action, which changes the colour of the rolled leaf from green to the bright coppery colour which is seen in the tea pot after infusion of the black tea. Fermentation takes two or three hours, much depending on the temperature of the fermenting house and the condition of the leaf, also whether flavour or deep liquoring teas are required. The fermented leaf, having reached the required stage of oxidation, is transferred to patent driers which are worked up to a temperature of 200° to 220°. The first firing (75 per cent) is usually done at a very high temperature so that the process of fermentation is stopped, otherwise the quality of the finished product is affected, but the second or final firing is usually at a temperature not exceeding 200°—more generally 180°. It requires about 40 minutes or so to thoroughly remove all water from the leaf. In the manufacture of green tea the process

is somewhat different, as fermentation must not be permitted. Consequently the leaf is placed in steamers immediately it arrives at the factory, after this process, which only extends to a few minutes, the leaf is spread out and allowed to cool. Thereafter the leaf is placed in the rollers, and the subsequent manufacturing processes are much the same as in the case of black tea. There is only a limited demand for green tea, the principal buyers being in America and the Frontier States of India. At one time polished green teas were greatly in request for America, but the importation of this class of tea is not now allowed. The Indian Frontier States still prefer polished tea. The liquors of green tea when infused should be of a pale lemon colour, if they show an orange tint, it is evident that fermentation has set in at some time during manufacture.

was imported from America, but this trade now appears to have ceased. There is a large mill in Assam which manufactures plywood from timber obtained locally, but fittings for these chests are imported. The chests are always lined with lead aluminium or some such material, as tea is very susceptible to taint. The weight of a chest of tea varies from 110 to 130 lbs., as a larger quantity of the broken grades such as fannings, can be packed in a chest than is possible in the case of leaf teas. There are also several sizes of chests, the largest being 24 in. by 10 in. by 19 in. and the smallest about 18 in. by 17 in. by 17 in., the latter being chiefly used for packing dusts. After packing, the tea is despatched from the factory to the port of shipment, or Indian auction. Of recent years communications in the tea districts have been greatly improved and

indolent and lacking in enterprise. It was necessary therefore to go further afield for labour, this has been recruited from the aboriginal tribes in Chota Nagpur and the agricultural castes in Madras, Central Provinces, United Provinces, Bihar and Orissa. Recruiting has recently extended to the Bombay Presidency. It was early recognised that following on abuses, legal powers were required to supervise the recruitment of labour for Assam. Accordingly an Act was passed in 1863 for the regulation of the transport of native labourers emigrating to Assam and Cachar. There have been certain amendments and or new enactments since that date and the recruitment of labour for the tea gardens in the Province of Assam is still protected by legislation. This legislation does not apply to the Dooars, where recruiting is free or to Darjeeling district which obtains

HEATH & CO. (CALCUTTA) LTD.,  
Tea Tasting Room at Calcutta.  
(See letterpress, p. 134.)

**18. GRADING AND PACKING.**—The grading of the tea is the next process. It consists of cutting and sifting the fired tea through patent cutters and different sized meshes of rotary or other sifters until the grades, in the case of black tea of Orange Pekoe, Pekoe, Broken Pekoe, Broken Orange Pekoe, Broken Pekoe Souchong, etc., are secured. The grades in green tea are known as Hyson, Young Hyson, Fine Young Hyson, Twankay, etc. The tea is thereafter packed, and of recent years the packages have principally been made up from three ply wood. These chests are manufactured in Great Britain, although the plywood in some cases is prepared in Finland. Where the veneers are made up in Great Britain the timber is usually imported from Northern Europe. During the late War some plywood

many estates have laid down tram lines from their factories to connect up with the railway transport, but a large number of estates still depend on the bullock-drawn carts. The estates in Assam, sending their teas to Calcutta, use the Brahmaputra River extensively, and there is a regular service of inland steamers and towing flats maintained for the purpose of water transport.

**19. LABOUR.**—An article on the Indian tea industry would not be complete without reference to labour. The industry has developed enormous strips of forest and/or jungle which, in the majority of cases, were previously uninhabited, unless possibly by nomadic tribes. In the case of Assam it was found that the aboriginal or hill tribes in the Province were not attracted by tea garden life, while the Assamese themselves were too

its labour locally, i.e., from hill tribes in Nepal, etc. In South India also there are no restrictions on the recruitment of labour. The method of recruitment in North India is to send a labourer, known as a recruiter, to his district to recruit his own relatives or people of his own caste. The operations of such recruiters are supervised by the Tea Districts Labour Association, a body representing the tea interests in Assam and 88 per cent or so of those in the Dooars. It is interesting to note that in 1879 Messrs Williamson, Magor & Co., Messrs Begg Dunlop & Co. and Messrs Macneill & Co. formed a small association to recruit labour for their own interests from the plateau of Chota Nagpur, and this was the origin of the Association. The second named firm still retains the Secretaryship of the enlarged

organisation. The Assam Labour Board was constituted some years ago to control recruiting for the Province of Assam. This Board has a Government official "ex officio" as chairman, and the members are representatives of the Assam tea industry. The length of this article will not permit of a detailed analysis of the castes or types of labour employed on tea gardens generally, but it will suffice to say that the tea industry concentrates on the recruitment of the agricultural class, with a view to their settling with their families in the tea districts. Everything is done on the estates to ensure that the new emigrants are comfortably settled, and house accommodation is provided free, while they are also given a small piece of land on which to cultivate dhian (rice).

United Planters' Association of Southern India.

**20. NUMBER OF HANDS.**—The latest Government census records that there were 724,332 unskilled workmen actually employed on tea plantations in India, but this figure does not include dependents and non-workers. The last report on immigrant labour in the Province of Assam places the total number of working and non-working (i.e. dependents) labourers and children living in tea garden lines and on garden land at 991,820, which does not include the large number of people settled on adjacent land who find occasional employment on the estates. The area of Government land settled in Assam alone on ex-tea garden coolies amounts to over 325,000 acres.

**23. MARKETS (LEADING).**—As regards markets for Indian teas, in 1867-68 tea was only shipped to Great Britain and the Continent, the quantity exported being 7,811,429 lbs., and it was not until 1880-81 that any appreciable quantities were exported to outside markets. Australia then became a large consumer of Indian tea, commencing with 807,608 lbs. in 1880-81 and reaching a maximum of 10,090,005 lbs. in 1914-15. Unfortunately of recent years Java and Ceylon have been active competitors with Indian tea in the Australian market, and being more favourably situated geographically, have displaced the latter to a considerable extent. Russia was also a large buyer of Indian tea, and the direct shipments to Russian ports reached 33,398,209 lbs. during

A. W. FIGGIS & CO., Calcutta. Tea Tasting Room

(See letterpress, p. 135)

or vegetables in their spare time. Further, special attention is directed to the provision of ample supplies of pure water, medical conveniences, etc., and each estate has a dispensary or hospital with an Indian doctor in charge. In addition, each group of estates employs an European Medical Officer, who supervises the work of the Indian doctors and advises on all matters in connection with the health and welfare of the labourer. Special care is also directed to infant welfare, and maternity allowances are paid by the majority of estates, if not all. The tea industry has taken a large part in developing the Province of Assam and the Dooars district, as an enormous number of ex-garden coolies have left the estates on the expiry of their period of service to occupy and cultivate Government land.

The method of recruitment in South India differs slightly from that of North India, as in the former the kangany (head man) makes arrangements for new coolies. Recruiting is supervised by the Labour Department of the

**21. QUALITIES (BEST).**—The best quality teas are produced in the Darjeeling district on the Himalayan mountains, where tea is grown up to an elevation of about 6,000 feet. The estates in the higher elevations of Travancore and Madras, and also in certain districts of Assam, produce high quality teas, and Dooars teas frequently have certain characteristics which make them greatly in demand. Speaking generally, India produces teas suited to all markets.

**22. RELATIVE VALUES.**—So that the relative values of the teas produced in the respective districts may be appreciated, the following averages obtained in the London auctions are recorded—

	1924 Per lb	1925 Per lb	1926 Per lb
Assam	18.11d	17.93d	21.05d
Cachar and Sylhet	16.42d	14.52d	18.62d
Darjeeling	20.69d	19.02d	22.36d
Dooars	17.52d	16.11d	19.87d
Southern India including Travancore	18.15d	17.80d	20.18d

It will be noted that Darjeeling heads the averages.

1913-14, quite apart from the shipments via London. After 1917-18 the shipments to Russia ceased, but during the last year or so trade has re-opened, although only on a limited scale. A portion of the North India crop is sold in Calcutta auctions, and during 1924-25 about 80,000,000 lbs. were so disposed of.

**24. EXPORTS.**—The following table gives particulars of the shipments to the principal consumers of Indian tea during the three years ended March 31, 1926—

	1923-24 lbs	1924-25 lbs	1925-26 lbs
United Kingdom	296,287,665	299,722,216	280,572,693
Russia	-	1,388,207	2,060,928
Europe (excluding U.K. and Russia)	1,883,514	1,335,760	1,540,444
Africa	3,678,638	4,880,103	6,086,958
Canada	12,177,980	8,890,260	7,951,242
United States	5,860,215	6,209,245	4,902,025
Other ports of America	1,751,919	1,120,331	1,740,005
Asia (excluding Ceylon)	9,389,031	8,252,298	11,149,602
Australia, New Zealand and Fiji Islands	4,772,039	5,105,514	6,301,970

The preceding figures do not include trade in tea done by land with such Indian Frontier States as Tirah, Waziristan, Tibet, Nepal, etc.

The following particulars indicate the quantity of Indian tea re-exported from the United Kingdom to certain foreign countries

	1923	1924	1925
Irish Free State	14,416,914	20,386,793	18,050,510
Russia	457,734	1,670,646	6,491,716
Continent of Europe (excluding Russia and Turkey)	5,896,430	9,604,321	9,191,759
Turkey	410,738	Not available	Not available
United States	2,767,957	3,886,702	7,549,508
Canada and New foundland	2,585,902	2,118,796	4,558,015
South Africa	464,066	Not available	Not available
Chile and Argentina	1,158,833		
Other countries	2,396,505	2,943,229	3,448,163

tea industry. The membership of the United Planters' Association of Southern India is not limited to tea, as coffee, rubber, cinchona and cardamom concerns are admitted as members. The members of the Indian Tea Association, Calcutta, represent an area of 517,510 acres. There is an Indian Planters' Association in the Dooars, which represents Indian planters in that district, but there are a good number of Indian-controlled concerns—those not controlled or managed by Europeans—who are members of the Indian Tea Association Calcutta. The headquarters of the latter association are the Royal Exchange, 2, Clive Street, Calcutta, the secretary and assistant secretary of the Bengal Chamber of Commerce acting ex-officio as secretary and assistant secretary. The United Planters' Association of Southern

who collaborate with the department in North India

**28. TEA CESS ACT.**—In 1903 the Indian Tea Cess Act IX was passed at the request of the Indian Tea Trade. Under this Act a duty, not exceeding  $\frac{1}{4}$  pie per lb., became leviable on all Indian teas exported, the proceeds of which were to be utilised for promoting the sale and increasing the consumption of Indian tea. In 1921 the Indian Tea Cess Amendment Act (No. 1 of 1921) was passed increasing the maximum amount of the cess from  $\frac{1}{4}$  pie per lb. to eight annas per 100 lbs., and cess is at present levied at the rate of six annas per 100 lbs.

**29. TEA CESS FUND.**—The cess is collected by the Customs authorities and

BARRY & CO.  
Tea Room at Calcutta Office  
(See letterpress, p. 134)

**25. SHIPMENTS BY PORTS.**—The principal ports from which Indian tea is shipped are Calcutta, Chittagong, Madras, Tuticorin, Cochin and Calcut, while a re-export trade to the Persian Gulf, etc., is done at Bombay and Karachi. Calcutta and Chittagong are the chief tea shipping centres, being the ports for the North India tea districts. The following figures show their relative output—

From --	1923-24 (lbs.)	1924-25 (lbs.)	1925-26 (lbs.)
Calcutta	225,358,772	220,000,121	207,672,918
Chittagong	71,410,746	79,656,604	72,351,597
South Indian ports includ- ing Travancore	39,102,231	38,514,720	43,944,793
Bombay and Karachi	3,411,939	2,637,372	2,571,831
Burma Ports	5,181	5,232	3,917

**26. REPRESENTATIVE ASSOCIATIONS.**—As regards organisations connected with the Indian tea industry, the Indian Tea Association, Calcutta, which was formed in 1881, represents concerns in North India, and the United Planters' Association of Southern India those in South India. The former is connected with the Indian Tea Association, London, and the latter with the South Indian Planters' Association, London. There are district branches or associations in North and South India to look after local affairs and generally to co-operate with the head associations in promoting the interests of the

India headquarters were recently transferred to Madras, and are now located in the Chamber of Commerce there.

**27. SCIENTIFIC INVESTIGATION.**—The Indian Tea Association, Calcutta, has maintained since 1900 a Scientific Department, which investigate the many and varied problems which confront the industry, and has published numerous pamphlets and articles dealing with same. The European staff consists of a chief scientific officer, a mycologist, three chemists, an entomologist and a bacteriologist, apart from an experienced staff of Indian subordinates. The Scientific Station is at Tocklai in Assam, and is equipped with up-to-date laboratories and a small garden where experiments in connection with tea cultivation are carried out. The cost of the Department is met by the Indian Tea Association, Calcutta, with certain grants from the branches, or affiliated associations, and the Government of Assam contributes Rs 10,000 (£666 13s 4d) annually, the Government of Bengal providing Rs 4,000 (£266 13s 4d). The Government of India also furnished support at one time, but its contributions have ceased. The Tocklai Station is considered to be one of the best equipped of its kind. The United Planters' Association of Southern India has also recently opened a scientific department with two European specialists on the staff,

paid into the Tea Cess Fund, which is placed at the disposal of a committee of twenty members, appointed by the Governor-General in Council on the recommendation of the following bodies and authorities: Bengal Chamber of Commerce (3), Madras Chamber of Commerce (1), Indian Tea Association, Calcutta (7), Assam Branch, Indian Tea Association (2), Surma Valley Branch, Indian Tea Association (2), Darjeeling Planters' Association and Terai Planters' Association jointly (1), Dooars Planters' Association (2), Dehra Dun Planters' Association (1), United Planters' Association of Southern India (1).

The total collections to March 31, 1926, amounted to Rs 120,00,000 odd (approximately £800,000), the funds having been expended as follows: United Kingdom, Rs 8,35,576/-; Continental Europe, Rs 18,00,574/-; Bonus on Green Tea Exported, Rs 3,91,120/-; America, Rs 39,68,110/-; India, Rs 41,94,818/-; Miscellaneous (South Africa, Tibet, Persia, etc.), Rs 17,504/-; Total, Rs 112,16,702; to which has to be added establishment and incidental expenses.

During the year April 1, 1926, to March 31, 1927, allotments were made as follows: India, Rs 4,50,000/- (£30,000/-); France, £10,000; America, £41,000; Sesquicentennial Exhibition at Philadelphia, £7,500.

In America during the post war campaign the expenditure to date has been on advertisements in newspapers, magazines and trade journals only. The Committee may shortly appoint a special Commissioner, as it is considered necessary in certain quarters to have an executive officer to keep in close touch with the American Tea Trade, also to keep the Committees in Calcutta and London advised of all matters concerning their interests.

In France the funds are expended mainly on demonstration work, advertising by distribution of posters and handbills, and to a small extent by newspaper advertising.

In India the funds are expended on organising and supervising arrangements for supplies of tea on railways, demonstration work in towns served by the railways and arrangements for supplies of tea in such towns, also advertising by distribution of posters and handbills.

T. C. CRAWFORD

### SUPPLEMENTARY DATA

**AREA.**—The total area under tea in India in 1925 was 728,812 acres, which was nearly 2 per cent larger than in the preceding twelve months. The area abandoned in that year was 5,400 acres, while the new extensions (including replanting in areas abandoned in previous years) amounted to 19,500 acres. Thus there was a net increase of 14,100 acres during the period. Including estimates for non-reporting gardens, the total area under tea in 1925 was distributed among the different provinces as shown below, with the percentage increase or decrease as compared with 1924.

	AREA (acres)	INCREASE (+) OR DECREASE (-) Percent	NUMBER OF PLANTATIONS
Assam	416,500	+ 0.8	930
Bengal	193,100	+ 3.5	364
Southern India	101,200	+ 4.3	316
Northern India	16,100	+ 1.3	2,707
Bihar and Orissa	1,900		21

**LABOUR.**—The total number of persons employed in the tea industry in 1925 was returned at 825,200, of whom 758,900 were permanently employed and 66,300 were temporarily employed. Compared with 1924, there was an increase of 17,700 permanent employees and a decrease of 4,000 temporary hands.

**PLANTATIONS.**—The total number of plantations was 4,338 in 1925, as against 4,300 in the preceding year. The plantations vary greatly in size in the different provinces. In Assam 930 plantations were reported to have a total area of 416,500 acres under tea in 1925—that is, an average of 448 acres per plantation. In Bengal the average size of 364 plantations is 530 acres, and in Travancore the average area of 105 plantations is 486 acres. In Madras, the United Provinces, and Bihar and Orissa the average is much smaller, being about 237, 169, and 89 acres respectively. In the Punjab, where tea cultivation is conducted on a small scale, the average area is about 4 acres. These figures, which refer to the year 1925, relate only to tea-bearing areas; they do not include the area in the occupation of planters, but not under tea cultivation.

**PRODUCTION.**—The total production of both black and green tea in 1925 was reported to be 363,507,000 lbs. (of which black tea represented 358,864,000 lbs.), divided between

J. THOMAS & CO., Calcutta.

1. Tea Tasting Room.
2. The Calcutta Offices.

3. Partial view of Tea and Shellac Compound.
4. Turning over Shellac.

(See letterpress, p. 134)

the different parts of India as shown below —

	1924 1,000 lbs	1925 1,000 lbs
Assam	237,153	225,185
Bengal	87,459	85,279
Southern India	46,752	49,305
Northern India	3,678	3,500
Bihar and Orissa	214	238
Total	375,256	363,507

The average production in the whole of India was 520 lbs per acre plucked, as against 551 lbs in 1924.

**SHARES AND DIVIDENDS.** In 1925 there were 140 tea companies incorporated in India, having an aggregate paid-up capital of Rs 4.94 lakhs. Of these, 113 companies declared dividends for 1924 amounting to 46.7 per cent on their aggregate capital of Rs 4.12 lakhs. Up to November 1926 104 companies only had declared dividends for 1925, amounting to 28 per cent on their aggregate capital of Rs 3.96 lakhs. The value in March 1926 per Rs 100 of joint stock capital as calculated on the prices of shares quoted in the Calcutta share market was Rs 260 in 1924 for 123 companies, Rs 322 in 1925 for 128 companies, and Rs 286 in 1926 for 132 companies.

## SOME REPRESENTATIVE TEA COMPANIES

### J. THOMAS & CO.

**Inception.**—Mr Robert Thomas, founder of the old-established firm of produce brokers now under notice, went out to India between 1835 and 1840 to join an indigo company, Hickie, Barby & Co. He had previously been connected with a similar concern in London. The earliest records now available are of the firm of Thomas, Marten & Co in 1851, of which Mr Robert Thomas appears to have been senior partner. On the retirement of Mr Charles Marten (April, 1854) the company became R Thomas & Co, subsequently, after Mr Thomas's death in October, 1865, to be known as Thomas & Co. In June, 1866, owing to the collapse of the Agra & Masterman's Bank, the name was again changed, becoming J Thomas & Co.

**Early Activities.**—In the earliest days business was carried on in indigo, sugar, saltpetre, silk piece goods and raw silk. The indigo interest is the only one continuing to the present day, sugar having dropped out in April, 1863, saltpetre early in 1867, silk piece goods about 1869, and raw silk about the middle of 1885. The firm was also temporarily concerned with cotton broking, holding in November, 1861, what appear to be the first two public sales of cotton held in Calcutta, about 1,700 bales were then auctioned, realising Rs 16 to Rs 17 per maund. In 1873, however, dealing in that commodity was discontinued.

**Present Business.**—The present activities of Messrs J Thomas & Co cover tea, shellac, indigo, jute and gunnies, the tea department being considerably the largest. From the original foundation the firm has confined itself entirely to broking operations, and does not deal on its own account or carry on any shipping business.

**Trading Annals.**—The company still possesses all the fortnightly and monthly market reports issued from 1851 onwards, which make interesting reading.

On December 27, 1861, the first tea sale ever held in India took place, to be followed by another on February 19, 1862, at which 227 chests were sold. Sales took place at frequent though irregular intervals from then onwards, but until the late seventies the

volume of tea sold in Calcutta was small. In April, 1862, an invoice of tea from the East India Tea Co is mentioned, the Pekoe having fetched Rs 1.4 per lb.

Shipment figures of shellac and lac dye appear in those circulars from 1851 onwards, but the firm apparently did not do business in shellac until the end of 1871. Lac dye dropped out about a decade later, but the shellac transactions still continue.

The indigo business already mentioned formed by far the largest part of the firm's operations for many years but in 1896 the influence of synthetic dyes caused the manufacture of natural indigo to decline. To-day the total annual outturn is only from 500 to 1,000 chests.

In June 1873, dealing in jute was begun, but was discontinued in 1876 and does not appear to have been recommenced until 1903. In jute fabrics the firm commenced to do business in 1902.

**Premises.**—The building in which the company still operates was originally the residence of Gen. Sir John Clavering, a member of the Council of Warren Hastings. The main portion of the premises appears to have been very little altered since it was first built. The office of Messrs Hickie, Barby & Co was situated in this building, which in those days was only of very small extent. In March, 1854 the property was leased jointly to Messrs Robinson, Balfour & Co and Thomas, Marten & Co, but the business had probably been carried on at the same place for some years previously. The present site, including grounds, covers between six and seven bighas.

**Correspondents in Europe.**—Messrs Thomas Chamberledge & Moss.

**Office.**—8 Mission Row, Calcutta (P.O. Box No. 60) Cables: Nilhat, Calcutta Codes: A B C 5th Edition and Bentley's.

**Bankers.**—The Mercantile Bank of India, Ltd., Lloyds Bank, Ltd.  
(See illustrations pp 127 and 133)

### HARRISONS & CROSFIELD, LIMITED.

**Inception.**—A branch of the well-known English firm of the same name, whose business is mainly connected with tea, rubber, and other tropical produce, this organisation was opened in Calcutta in 1900 under the style of Lampard, Clark & Co., changed to the present title in 1908.

**Head Office.**—The firm was established about a century ago in Liverpool by Mr Daniel Harrison, at first alone and later in partnership with Messrs Joseph Crosfield & Smith Harrison. In 1840 the company opened in London at 3 Great Tower Street, where it has since remained, having twice built new premises on that site to suit the continual expansion of business.

**Capital and Board.**—In 1908 the firm was turned into a limited liability company with a capital of £307,500, its first directors being J B Crosfield, Charles Harrison, G T Crosfield, C Heath Clark, C A Lampard, G Croll and H E Miller. To-day the nominal capital is £2,525,000 and the working capital £1,877,180. Of the 1908 directors only Mr H Eric Miller, the present chairman, is left.

**Activities.**—The main interests of the Calcutta house lie in tea, of which it is a large buyer at the local auctions, and which is shipped to all parts of the world to be disposed of through the firm's numerous agencies. During the last seven years these shipments amounted to over 84 million pounds, representing about 17 per cent of the total quantity sold in the Calcutta auctions.

**Exports.**—Though shipping tea in all directions, the firm is intimately connected with the American and Canadian markets, in the

former through the associated company of Messrs Irwin-Harrisons-Whitney Incorporated (New York, Philadelphia, Chicago and San Francisco), and in Canada through its own branch in Montreal and agents in all other large centres. Exports from Calcutta to Australia are handled by Harrisons & Eastern Export, Ltd., an affiliated company which ships in addition to tea, oils, seeds, gunnies and other tropical products.

**Premises.**—The Calcutta warehouse, recently erected, contains about 28,000 square feet of space, providing storage for some 4,000 chests of tea in addition to ample room for bulking and packing. The illustration on page 129 shows the tea-room at 6 Church Lane, where all the tea is tasted and valued.

**Management.**—The manager at Calcutta is Mr Carl Reid, while Mr H L Puttock is in charge of the tea department and Mr J W McDonald controller of Messrs Harrisons & Eastern Export, Ltd.'s produce department.

**Offices.**—6 Church Lane, Calcutta.

**Cables.**—Harrisons & Crosfield, Ltd. Crosfields, Calcutta, Harrisons & Eastern Export, Ltd. "Yasmar" Calcutta. Codes: A B C, Western Union, Bentley's and Private.

**Bankers.**—Chartered Bank of India, Australia and China.

(See illustration, p 129)

### HEATH & CO. (CALCUTTA), LIMITED.

**Inception.**—This important tea buying firm was established in Calcutta a quarter of a century ago being a development of the original business of Heath & Co established in China in 1802. For upwards of twenty years the concern was styled Heath & Co., being a private partnership concern but in 1924 it was formed into a limited liability company, with large and influential London financial interests behind it. This development marked a new era in the history of the important business, the firm of Heath & Co (Calcutta), Ltd., now being one of the foremost tea buying concerns in the East.

**Activities.**—The company acts as special buying agents for tea importers practically the world over. It numbers among its clients some of the largest importers of tea in the United Kingdom, Australia, North and South America, Canada, South Africa, and the Continent. As one country seldom uses the same type of tea as another, it can be readily understood what a highly expert knowledge of the article is required to maintain and expand this world-wide connection.

**Staff and Godowns.**—The native Indian staff employed numbers about one hundred, and the firm's two largest godowns at the docks for warehousing, preparing the tea for shipment, etc., are among the best equipped of their kind in Calcutta.

**Directors.**—The Board consists of the following Messrs A R A Heath, C J Lyst, W J Gibson, H H Bentley, and R Cook.

**Offices.**—The Registered Office of the Company is at Grosvenor House, 21, Old Court House Street, Calcutta, and there is also a branch office at 11, British Indian Street, Calcutta.

**Cables.**—"Heathbird," Calcutta.

**Codes Used.**—Bentley's, A B C 5th and 6th Editions, Lieber's and Private.

**Bankers.**—The Chartered Bank of India, Australia and China.

(See illustration, p 130).

### BARRY & CO.

**Inception.**—This is one of the associated firms known as the Inchcape Group, and was established in 1872 at 5, Lyons Range, Calcutta, in premises which it occupied until 1923, when a move was made to the present quarters.

**Activities.**—Operating as general merchants and agents, Messrs Barry & Co are largely interested in the jute, oil seed and tea industries, insurance and the manufacture of paints and metal containers.

**Agencies.** The firm acts as secretaries and agents for Jute Mills. The Gourapore Co., Ltd. 1,354 looms, and Jansed Oil Mill. As managing agents for Jute Mills. The Nuddea Mills Co., Ltd., 1,008 looms, Paint Works, Jensen & Nicholson (India), Ltd. Drum and Keg Works. The Electric Welding and Manufacturing Co. (India) Ltd. Tea Gardens. Bhooteaching Tea Co., Ltd., Silombari Tea Co., Ltd. As agents for Insurance London & Lancashire Insurance Co., Ltd. and for Tea Gardens. Chandpore Tea Co. Ltd., Cheerie Valley Tea Co., Ltd., Craigpark Tea Co., Ltd., Eastern Assam Tea Co., Ltd., Khomkor Tea Estate, Moklabari Tea Co., Ltd., Sylhet Tea Co., Ltd., and Titachmoro Tea Estate.

**Tea Department.**—The company has its own tea blending and tasting departments, and exports tea to all parts of the world.

**Offices.**—2 Park Place, Calcutta (cables "Barrycoy," Calcutta) Codes A B C 4th and 5th Editions, Bentley's and private.

**Bankers.**—Imperial Bank of India, P & O Banking Corporation, Ltd., Chartered Bank of India, Australia and China, National Bank of India, Ltd.  
(See illustration p 132)

**A. W. FIGGIS & CO.**

**Inception.**—This well-known firm of tea-brokers was established 37 years ago by the present principal, Mr. A. W. Figgis, who came out to India some time prior to that period. After working with another enterprise for several years he decided to set up business on his own account, and the extent of his success is best gauged by the amount of tea now sold yearly by the firm.

**Activities.**—The nature of the company's activities is purely that of tea broking—in

other words, the selling of that commodity by public auction on behalf of the garden agencies to the tea buyers.

**Premises.**—The offices of Messrs Figgis are situated in the top floor of Clive Buildings, whence they command a fine view over Northern Calcutta. They are light, airy and spacious—three important attributes which greatly assist in the expeditious handling of tea. For accurate tasting and valuing a north light is essential, and in this respect it can fairly be said that the company's tasting room possesses a light that is second to none in Calcutta.

**Partners.**—The present partners in the business are Messrs A. W. Figgis, L. G. Notley and L. Squit.

**Offices.**—D " Block, Clive Buildings, Calcutta (cables "Fimaro," Calcutta), Code Bentley's.

**Bankers.**—P & O Banking Corporation Ltd.  
(see illustration, p 131)

## RICE

 If all the great crops in India rice is first in importance, its yield being a vital factor in the country's prosperity. That Empire's share of the world's total of some 90,000,000 tons of cleaned rice approximates to 32,000,000 tons and though the average exports seldom exceed 5 per cent of her estimated production, she is nevertheless the largest exporter of rice among the nations.

**ACREAGE AND PRODUCTION.** The total area for British India reported as under cultivation for 1925-26 was 81,461,000 acres, compared with 81,466,000 acres in the previous year. The yield was estimated at 30,357,000 tons of cleaned rice, as against 31,082,000 tons in 1924-25, or a decrease of 2 per cent. In addition to the areas included in this return, particulars of which are given below, rice is grown in other parts of India, e.g. in the Punjab, Ajmer-Merwara, North-West Frontier Province, Delhi, Manipur Pargana, and certain other Indian States, their total average acreage being about 3,700,000 with a yield of some 990,000 tons.

The following table gives returns by provinces of India's estimated rice crop for 1925-26, as compared with 1924-25—

**YIELD PER ACRE**—The average yield per acre for all India (excluding certain Federated States previously mentioned) worked out to 835 lbs. in 1925-26, as against 855 lbs. in 1924-25, 708 lbs. in 1923-24, 916 lbs. in 1922-23 and 909 lbs. in 1921-22. In Japan and Egypt the average yield per acre is considerably over 2,000 lbs.

The following table shows the yield per acre for the various Provinces and States in the years named—

PROVINCES AND STATES	YIELD PER ACRE IN LBS.	
	1924-25	1925-26
Bengal	829	872
Bihar and Orissa	921	767
Madras	1,011	1,050

(a) Excluding certain Federated States  
(b) Includes Indian States.  
(c) Includes Sind and Indian States.

**CLASSIFICATION.** Rice in the husk before hulling is known as paddy, after hulling it becomes rough rice, and after pearlying it is cleaned or white rice. The broken grains of rice are separated and sold as coodie or khood, while the higher grades are subjected to a further process of polishing on sheepskins with the object of removing any rice meal which may adhere to the grain. No chemicals whatever are used in this polishing process or in any other process connected with the milling of rice. Cargo rice contains from 5 to 20 per cent of unhusked rice, i.e. paddy, and if exported in this form to Europe is subjected to further milling on arrival there. The ratio of paddy to rice by weight depends entirely on the quality of rice produced. In the case of specials it may be taken as one of 85, but the ratio for better qualities is lower.

For boiled rice there is no market in Europe, but there is a considerable demand for the grain in this form in India, also in countries where Indian labour is employed, such as the Federated Malay States and Ceylon. The process may be roughly described as follows. The paddy is soaked in water for 40 to 80 hours according to grain and season, then boiled for 20 to 40 minutes and dried before husking. This business is largely in the hands of small millers in out of the way places where there is plenty of room to spread the rice after steaming to dry in the sun, though artificial drying is not unknown. This parboiled rice has a higher nutrient value owing to its lighter milling, and though when husked it has a yellow tinge, it becomes white when cooked and keeps better afterwards, which is a great asset when rice is prepared overnight to be eaten the following day.

For statistical purposes, exports of rice are divided into two heads—rice in the husk (paddy) and rice not in the husk (rice), the volume of the former seldom exceeding 50,000 tons in any year, the chief destination being Ceylon. Rice in the husk includes boiled rice.

**BENGAL RICE.**—The chief varieties of Bengal rice on the market are known as "Table or white Patna," "Broken table rice" or "Khood," "Patna," "Old Hard" and "Chinsukur," while among boiled or brown rice may be mentioned "Boiled Patna," "Dowdkhani," "Ballam" and "Raree." The principal variety of rice

exported is "Kazla," which goes to Ceylon. The chief market for white "Patna" before the War was Hamburg, but considerable quantities went also to Liverpool and Bremen, for "Old Hard," which is grown chiefly in the neighbourhood of Calcutta (the designation "Patna" having reference to the boldness of the grain and not implying locality of origin), Cuban ports, and for "hoiled Patna" and "Ballam," Trinidad, Martinique and the Persian Gulf. For "Karee" there is a considerable demand in Mauritius.

**BURMA RICE.**—Of Burma rice, the main variety, named generically "Rangoon," produces a well-shaped oval grain, white and free from yellow stains. Graded and highly finished in Western mills, its good colour and attractive price enable it to compete with all rivals. "Bassein," with practically identical characteristics, gives even superior milling results. "Moulmein," a large, soft opaque grain, is prized in many parts of the Continent, but is too "mushy" to be popular in the British Isles.

**CULTIVATION (METHOD OF).** Rice requires for its maturing a moist climate with a well-assured rainfall. The better qualities of the cereal are sown in seed-beds and transplanted in the monsoon. Broadcast rice is grown generally in low-lying areas and is sown before the monsoon, as it must make a good start before the floods arrive. Deep-water rice grows quickly and to a great height, and are as a rule able to keep pace with the rise in water-level.

For transplanted rice the soil is generally prepared after the arrival of the monsoon and is worked in a puddle before the seedlings are transplanted. The land is laid out in small areas, with raised partitions to regulate the distribution of the water supply. The seedlings are planted in small bunches containing from 4 to 6 plants each, and are simply dibbled into the mud at distances of 6 to 12 inches apart. Where available, irrigation water is given at frequent intervals, and the fields are kept more or less under water until the crop begins to show signs of ripening.

**EXPORTS.**—See under "Commerce."

**MARKETING.**—As a rule the paddy is taken over from the cultivator on the threshing floor either by middlemen acting on behalf of the mills, by speculators, or by local traders known as jungle brokers. The beginning of the paddy season corresponds

pretty closely to that of the calendar year, as harvesting commences generally towards the end of November and the crop comes commercially into sight in January. The crop is all hand-reaped (in Burma chiefly by coolies from Madras and Bengal, mechanical aids being unknown). The mills which own their own boats advance money to their paddy buyers on the security of the latter's land or other property. In some cases the paddy buyers mortgage their boats against the moneys received. In Burma a boat may do three or four trips per month according to the position of the paddy, but in bringing the product from the more distant and outlying districts a full month may be occupied in making one trip. As soon as the buyer obtains a boat he proceeds to the district, buys grain and brings it to the mill for measurement. Measuring is done fairly rapidly, and in very few cases occupies more than one day. When a boat of paddy is discharged a certain number of baskets are weighed and the average weight arrived at therefrom is taken as representing the weight of the whole consignment, credit being given to the seller for any excess over 16 lbs. and deductions made if the average weight is found to be less than 46 lbs. Storing facilities in the district, which were formerly limited, are now considerable, and at a rough estimate almost half the exportable surplus can be distributed in godowns up-country.

The barometer of the Rangoon rice market is the price of Big Mills special rice, which again depends upon and bears a definite relation to the current price of paddy. The unit of shipment in Rangoon is the bag which varies in weight from 168 to 225 lbs. net.

The unit of sale in Calcutta is the bazar maund, and shipment is made in bags of 164 or 224 lbs. net, while sterling quotations are based on the cwt. c.i.f. In Madras the unit of sale and shipment is the bag of 104 lbs. net. In Bombay, the bag of 168 lbs. gross, and in Karachi the kandy of 156 lbs.

**SEASON.** The usual busy season for paddy commences about January 15 and lasts till somewhere about April 15. By the latter date it is normally reckoned that half the exportable surplus has been marketed. The remainder of the crop is marketed throughout the year, and under normal conditions is delivered at the port of export by the middle of December. There has been a growing tendency of recent years to store rice so as to distribute the business more evenly during the 12 months. Co-operative

credit societies have enabled cultivators to hold up part of the harvest instead of rushing it down during the first three months of the season and glutting the market, with disastrous results to themselves.

**MILLING.**—In the cargo rice mill the paddy is put over shakers and sieves in order to remove extraneous matter, such as stones, dirt and straw, and is winnowed. It is then hulled, i.e. passed between the grindstones which remove the husk and winnowed again. It then becomes what is known as *loonzain*. "Five parts cargo rice" consists of 80 per cent *loonzain* and 20 per cent paddy. In white rice mills the *loonzain* rice is again milled by cones or pearlers, which remove the outer cuticle. The rice then goes through a further process of sieving, the sieves being so arranged and graded that the percentage of broken rice, which it is desired to remove from the whole rice, can be bagged off separately. It is then re-winnowed and bagged. In the higher qualities of rice, usually shipped to Europe, there is a further polishing in cylinders made of wood and wire gauze in which revolve rollers covered with sheepskin. This takes place after the rice has left the cones or pearlers, but before the final sieving process. Formerly the bulk of rice shipped was cargo rice, but now the proportion of white rice to cargo rice is practically the inverse of what it was twenty-five years ago.

**RICE MILLS.**—No exact figures are available as to the number of rice mills in Burma and their milling capacity, but there are over 300 employing twenty hands or more, and on a conservative estimate the output may be put at about 6,000,000 tons of "five parts cargo rice" per annum. In Burma, as in other parts of India, the capacity of mills is considerably in excess of the quantity of grain available for milling. The milling strength of a typical Rangoon mill may be put at about 30,000 baskets of 46 lbs. of paddy per day of 12 hours. The largest mill at Pazundaung is capable of turning out 700 tons of cargo rice a day. Mills generally run night and day for about three months in the year, and paddy husk is the only fuel used. The quantity of husk produced is always in excess of the fuel required, and until a few years ago the surplus used to be discharged into the creeks and rivers. Now, however, when fuel is expensive, many other industries are glad to purchase the available surplus.

## FORESTRY

**I**N every land which freely possesses them, forests constitute an important national asset; to a country like India, where an overwhelming proportion of the population is directly dependent upon agriculture, the part which they play in the economic condition of the people can hardly be exaggerated. Among the Indian peasant's greatest needs are firewood to replace manure, small timber for houses, wood for implements, and grazing and fodder for his cattle; all these the forests supply. Nor is it only in the direction of supplementing natural resources that forests can play so great a part; they have, in addition, a marked

effect on climate and on the maintenance of water-supply. They hold together the fertile surface soil, they store water and dole it out gradually, thus preventing disastrous floods and the formation of ravines, and by checking erosion they prevent good soil from being washed into the rivers and carried away to waste. Forests also directly increase the fertility of the land, being capable of forming rich vegetable mould even from mineral soils. Finally, in India, forests are a valuable asset in time of famine; for they yield vast quantities of fodder—though much of it is of poor quality—and provide edible fruits and roots, of which the poor readily avail themselves.

**ADMINISTRATION.**—The forest business of the Government of India is carried out by the Department of Education, Health and Lands. The Inspector-General of Forests is the head of the Forest Department, and is the technical adviser to the Government of India in forest matters.

**FOREST SERVICE.**—The forest service of India comprises three branches, viz., (1) The Indian (Imperial) Service, with a total personnel of 340 officers, including an Inspector-General of Forests, Chief Conservators, Deputy and Assistant Conservators. Most of these officers are recruited by direct appointment in the United Kingdom and India; about 40 are promoted from the

Provincial Service, (2) The Indian Forest Engineering Service (see later), and (3) The Provincial Service, which consists of Extra Assistant Conservators, Forest Rangers, Deputy Rangers, Foresters and Forest Guards. These officers are recruited and trained in India, their recruitment being a matter for the local Governments. The process of Indianization is proceeding steadily.

**TERRITORIAL CHARGES**—The various provinces are divided into one or more Forest Circles, each in charge of a Conservator of Forests, provinces containing three or more circles also have a Chief Conservator, who is the head of the Department for his province. Circles are divided into a number of Forest Divisions, in charge of members of the Imperial or Provincial Forest Service, each division contains a number of Ranges, in charge of junior members of the Provincial Service, or of Forest Rangers or Deputy Rangers. The Ranges are further sub-divided into a number of beats or protective charges held by Forest Guards, in some cases by Foresters.

**CONSERVATION OF FORESTS**.—The neglect of her forests in times past has exposed India to many penalties. The forests in the plains which once provided a hunting ground for the Mogul emperors have mostly disappeared, the land they once occupied has either come under cultivation, or now stands as a deserted tract with ever increasing ravines. On the hill sides the blind destruction of forests which continued for many centuries has also brought serious consequences in its train. Fortunately the danger was perceived before it was too late, and forest conservation has now been applied systematically for more than half a century. The reservation of large areas, the restriction of grazing rights, the embargo upon the felling of trees and lighting of fires have never been popular and have often been bitterly resented. But that they have checked the gradual process of deforestation there can be no doubt, and wherever possible the rigour of forest restrictions is relaxed in such manner as to meet the requirements of villagers without prejudice to future interests.

**FINANCIAL RESULTS**.—Despite the difficulty of securing the cordial co-operation of the general public, and the additional disadvantages of restricted staff and financial stringency, the Indian forests yield a considerable revenue to the State. In the first financial year of the present century the grand total of the forest revenue amounted in round figures to Rs 196.6 lakhs and the expenditure to Rs 112.7 lakhs, leaving a credit balance of Rs 83.9 lakhs. Since then there has been a progressive upward tendency, and the latest figures returned show a gross revenue of Rs 552.1 lakhs and an expenditure of Rs 395.7 lakhs, or a surplus of Rs 156.4 lakhs, the proportion of surplus to gross revenue being about 28 per cent.

**FOREST POLICY**.—The general policy of the Government of India in relation to forests was definitely laid down some 20 years ago by the classification of the areas under the control of the Department into four broad classes, namely:—

(a) Forests the preservation of which is essential on climatic or physical grounds. These are usually situated in hilly country, where the retention of forest growth is of vital importance on account of its influence on the storage of the rainfall and its prevention of erosion and sudden floods.

(b) Forests which afford a supply of valuable timbers for commercial purposes, such as the teak forests of Burma, the sal

forests of Northern, Central and North-Eastern India, and the deodar and pine forests of the North-Western Himalayas.

(c) Minor forests, containing somewhat inferior kinds of timber, and managed for the production of wood, fodder, grazing and other produce for local consumption, these forests are of great importance in agricultural districts.

(d) Pasture lands, which, though not forests in the generally accepted sense of the term, but grazing grounds, are managed by the Department as a matter of convenience.

These four classes of forest are not always sharply divided from each other, and one and the same tract may to a certain extent be managed with more than one object.

**FOREST RESEARCH**.—At the Forest Research Institute at Dehra Dun a great deal of valuable research and experimental work is carried out, and it is proposed shortly to open a new School of Tropical Forestry there. Specialists in wood technology, timber seasoning and testing, wood-making and pulp and paper-making are employed by the Government, and it was announced early in 1926 that the Standing Finance Committee had sanctioned the ultimate expenditure of £833,000 on the Institute. Hitherto the expenses of European training have placed Indian aspirants to the higher posts of the Forest Department at a disadvantage. It is hoped that the Institute will quickly be brought up to date to enable Indians to qualify direct for the gazetted grades.

**FORESTS (TYPES OF)**.—More than one-fifth of the total area of British India (including the Shan States) is under the control of the Forest Department. These areas are classified as reserved, protected, or unclassified State forests. In the reserved forests the rights of user in favour of individuals and the public are carefully recorded and limited, the boundaries being defined and demarcated, in the protected forests the record of rights is not so complete, the accrual of rights after settlement not being prohibited, and the boundaries not always demarcated, while in the unclassified forests no systematic management is attempted, and as a rule the control amounts to nothing more than the collection of revenue until the areas are taken up for cultivation or are converted into reserved or protected forests. The total forest area approximates to 250,000 square miles, of which about 100,000 square miles are reserved forests and some 8,000 square miles protected.

Throughout this vast forest area, extending from the Himalayan snows to Cape Comorin and from the arid juniper tracts of Baluchistan to the eastern limits of the Shan States, there is, as may be imagined, an infinite variety in the types of forest vegetation, depending on variations of climate, on soil and on other local factors. Broadly speaking, the following main types of forest may be distinguished:—

**ARID-COUNTRY FORESTS**.—These extend over Sind, a considerable part of Rajputana, part of Baluchistan and the south of the Punjab, in dry tracts where the rainfall is less than 20 inches. The number of species is few, the most important tree being the babul or kikar (*acacia arabica*), which, however, in the driest regions exists only by the aid of river inundations.

**DECIDUOUS FORESTS**.—In these forests most of the trees are leafless for a portion of the year. They extend over large areas in the sub-Himalayan tract, the Peninsula and Burma, and are important as comprising the greater part of the teak and sal forests.

**EVERGREEN FORESTS**.—These occur in regions of very heavy rainfall, such as the

west coast of the Peninsula, the eastern sub-Himalayan tract, and the moister parts of Burma. They are characterised by the great variety and luxuriance of their vegetation.

**HILL FORESTS**.—The hill forests of the Eastern Himalayas, Assam and Burma are famous for their various oaks, magnolias and laurels, while in Assam and Burma the khasia pine (*pinus khasya*) grows gregariously at elevations of 3,000 to 7,000 feet. In the North-Western Himalayas the chief timber tree is the deodar (*cedrus deodara*), which occurs most commonly at elevations of 6,000 to 8,000 feet, and in association with oaks and blue pine (*pinus excelsa*), towards its upper limit the deodar merges into very large areas of spruce and silver fir, while below it are found extensive areas of the long-needled pine (*pinus longyfolia*), which is tapped for resin.

**LITTORAL FORESTS**.—These occur on the sea coast and along tidal creeks. The most characteristic trees belong to the mangrove family. Behind the mangrove belt is an important type of forest occasionally inundated by high tides, in which the most valuable species is the sundri.

**INDUSTRIES**.—The important role which the forests of a country play in its general commercial welfare and in providing employment for its population is not always fully recognised. Quite apart from the jungle population of the country, which is directly dependent upon the forests and the large number of wood cutters, sawyers, carters, carriers, raftmen and others working in and near them, employment on an extensive scale is provided for persons engaged in working up the raw products. Among these latter may be mentioned carpenters, wheelwrights, coopers, boat-builders, tanners, rope-makers, lac-manufacturers, basket-makers, and many other classes of skilled labourers, whose total numbers probably aggregate not less than two million and a half.

**OUTPUT**.—The average volume of timber and fuel and the value of minor products removed from State forests during the last year for which figures are available are shown in the following tables.

(A) MAJOR PRODUCE		
AGENCY OF EXPLOITATION	TIMBER IN CUBIC FEET	FUEL
By Government	14,974,903	19,778,094
By Purchasers	86,531,547	140,514,225
By Free granters	2,116,348	10,524,440
By Right-holders	4,017,237	71,849,120
Totals	107,640,095	242,665,879
(B) MINOR PRODUCE (VALUE)		
	Rs	
Bamboos	17,71,140	
Grazing and fodder grass	74,21,104	
Other minor produce	53,83,397	
Total	1,45,75,701	

**PRODUCTS (FOREST)**.—Forest produce is divided into two main heads—(a) Major produce, that is, timber and firewood, and (b) Minor produce, comprising all other products, such as bamboos, leaves, fruits, grass, gums, resins, barks, animal and mineral products, etc.

**PRODUCTS (MINOR)**.—The minor forest products of India are of growing importance. Lac, tanning materials, essential oils, turpentine, and resin have established themselves firmly in the markets of the world. The following are the most important:—

**BAMBOOS**.—An avenue of great possibilities has been opened up by the discovery that bamboos can be utilised for the manufacture of paper pulp. It is confidently

hoped that the extensive forest areas of bamboo and savannah will be before long utilised for the local manufacture of a large proportion of the paper now annually imported to the value of between Rs 2 and Rs 3 crores per annum. Private concerns in India are interesting themselves more and more in forest exploitation, and are undertaking the extraction of timber, the manufacture of ply-wood and the production of pulp (See also under "Industries").

**CUTCH** - Cutch is the product of the khair tree (*acacia catechu*), which is one of the commonest and most widespread trees in India and Burma. It is a preservative and khaki-coloured dye, extensively used for fishing nets, for dyeing brown sails, mail canvas, and occasionally for textiles. The export trade is valuable (See also under "Commerce").

**DRUGS, ETC** Indian forests are rich in herbs, shrubs and fruits which have an actual or potential value for medicinal purposes. The most important are nuxvomica (see under "Agriculture"), podophyllum, artemesia martima, which yields the drug santonin, and taraktogenos urzin, which gives chulmugea oil.

**KATHA** - Katha (*catechin*) is also a product of the khair tree, but is consumed almost entirely in the country, being mixed with betel and lime to form pan, the favourite masticatory of India. The total consumption of katha is estimated to run into several thousands of tons yearly. The retail value of katha is about one rupee per pound, or nearly £150 per ton.

**LAC** - See special article "Shellac."

**MYRABOLAMS** - The myrabolam is the fruit of the forest tree *terminalia chebula*, and is the most valuable and important tan stuff of India. It is usually collected while still green on the tree, and promptly dried in the sun. The ordinary commercial product "jungle hurra," of the central parts of India, averages about 28 per cent of tannin. Myrabolams are largely used in both India and Europe in mixture tannages, and in Bombay are also used for the production of yellowish-buff shades on cotton and in the manufacture of inks. The greater part of the myrabolam crop comes from privately-owned forests, and little has been done as yet in India generally to increase the supply of hurra trees.

**RESIN AND TURPENTINE** - Crude resin and turpentine are derived from the *pinus longifolia*, which abounds in the Himalayas, and occupies more than 400,000 acres of Government-owned forests, while the acreage under Indian States can hardly be less. French methods of tapping the trees and also of distillation have been very generally adopted, and India has now the distinction of being the one and only country in the British Empire that is producing these two important materials on a large scale (See page 121, "The Jallo Turpentine & Rosin Factory").

**SANDALWOOD OIL** - The oil distilled from the sandalwood tree has valuable medicinal properties, and considerable use is also made of it in perfumery and in the manufacture of toilet soaps. The extraction of this oil by crude methods is one of the oldest indigenous industries in India, the principal centre being Kanauj in the United

Provinces, where, by primitive and wasteful processes, costly attars and perfumes are still produced. Under State management a large factory operates at Bangalore.

**TIMBERS** - It is impossible within the limits allowed to describe any but a few of the more important of the timber-producing trees of India. Of the evergreen trees it may be said that the conifers and acacias are economically the most important, while of the deciduous trees the teak stands supreme.

**BAUL (KIKAR)** - This is the *acacia arabica*, a tree whose timber is hard and excellent for a large variety of purposes, and whose bark provides one of the principal tanning materials in India. It grows extensively in the Himalayas and the Upper Gangetic plain, as also in Madras and Southern India, and its conspicuous and beautiful yellow flowers are a feature of the forests in which it thrives.

**BLUE PINE** (*Pinus excelsa*) - The blue pine belongs to the forests of the Himalayas. The timber is good and finds increasing favour in the trade, now fetching a far higher price than deodar. For furniture and other interior work it is unrivalled among Indian woods.

**CHIR** (*pinus longifolia*) - This is the pine from which the valuable resin which yields turpentine is obtained (see "Minor Products"). The largest pine belts occur along the foothills and lower slopes of the Himalayas. The timber is rough and coarse and not durable, but being available in large quantities is much used.

**DEODAR** - From the timber production point of view, the most important forests of the Punjab, Rajputana and the frontier tracts are the coniferous ones of the Himalayas, of which the most striking example is the deodar (*cedrus deodara*). The timber of the deodar, the sacred tree of the Himalayas, is better than that of any other conifer and is very durable. The heart-wood is not usually eaten by white ants, but the sap-wood is readily attacked. The principal use is for railway sleepers, which last about 12 years on the average. From the wood an oil is extracted by destructive distillation and is used for preserving the inflated skins used on the main Punjab rivers.

**KHAIR** (*acacia catechu*) - This tree, which grows everywhere in India, is notable principally for providing the cutch of commerce. It attains its full height of about 50 ft in as many years, and the timber is used for the posts and uprights of houses, ploughs, machinery, etc.

**PYINKADO** - This is an important hardwood timber tree which occurs extensively in the forests of Burma.

**SAL** - The sal ranks next to the teak as a timber tree, but can flourish with less rain. It grows chiefly in the Eastern Himalayas, on the hills of Central India and on the Eastern Ghats. Its durability, strength, freedom from white ant attack and easy seasoning cause it to be extensively exploited throughout the whole range of its habitat. On the adequate supplies of sal timber depend to an enormous extent the upkeep and expansion of railways, the construction of buildings in cities and villages, and in brief the continued economic prosperity of the immense population of the Gangetic plain.

**SANDALWOOD** - Indian sandalwood is the heartwood of *santalum album*, an evergreen tree whose occurrence is practically limited to a restricted area in Southern India, chiefly in Mysore and Coorg and the Coimbatore and Salem districts of the Madras Presidency, also to a more limited extent in Travancore and Sandur States. Long before the exploitation of the East by European traders sandalwood was a principal article of commerce. The heart-wood (equivalent to about one third of the felled tree by weight) is employed in the manufacture of small caskets and picture frames, also for carved work in general. Considerable quantities are in addition utilised for religious rites and ceremonies.

In Mysore and Coorg all the trees are State property, and in Madras, though private ownership is recognised, production is almost a monopoly of the Government forest reserves.

**SILVER FIR** (*Abies pindrow*) - The timber of the silver fir, which is a Himalaya tree, is very similar to that of the spruce, but on the whole is not quite so good, and large trees are usually hollow. A height of 200 ft and girth of 20 ft have been measured.

**SISSU** (*Dalbergia sissoo*) - Sissu trees, which yield an essential timber for the furniture industry, grow chiefly in the forests of the Upper and Lower Gangetic plains, that is to say, in the United Provinces, Nepal, Assam and Bengal.

**SPRUCE** - The spruce tree grows to an enormous size in the Himalayas, frequently reaching 150 ft in height and 10 ft in girth, while one of 215 ft height and 23 ft girth has been measured. The wood is white, soft and even-grained, with no heart-wood. White ants eat it. The brown timber is said not to float.

**SUNDRI** (*Heritiera fomes*) - The sundri is the most important species found in the famous Sunderbans tract of Bengal, which is one of the most valuable forest estates in India. It supplies the large surrounding district and also the city of Calcutta with something like ten million cubic feet of timber and fuel per annum, the wood being used in general for building and other purposes.

**TEAK** (*Tectonia grandis*) - This is the "king of Indian forest trees," and flourishes best where there is a heavy rainfall. It is therefore found principally in the Western Ghats, Assam and Burma, the teak forests of Pegu and Amherst in the last-named province being very extensive. The tree grows to a great size, attaining maturity in about 80 years, and is the best wood in India for ships' timber, house building and any other work where strong and durable wood is required. The sap-wood is light and small; the heart-wood when cut green has a pleasant and strong aromatic fragrance and a beautiful dark golden-yellow colour, but, on seasoning, soon darkens into brown mottled with darker streaks. It does not suffer in contact with iron, and is rarely, if ever, attacked by white ants.

In Burma, where there is a large export trade in teak, the logs are floated down the rivers to the coast, it is a peculiarity of teak wood that it will not float in water till it has been dead two years. (See also under "Commerce.")

1 Grinding Sticklac.

2 Manufacturing Shellac

3 Stretching Shellac

## SHELLAC

By P. S. SPARLING

**L**AC, of which shellac is the chief commercial product is to all intents and purposes a gum the product of an insect (*Tachardia lac a*) which in large numbers frequents particular trees. This insect manufactures the gum by inserting its proboscis in the bark of the tree and sucking out the juice, finally exuding the same, which, on contact with the air, solidifies and forms an incrustation over the female insect itself, thus acting as a protection against its natural enemies. That incrustation is the basis of lac. After fertilisation the females proceed to breed inside the incrustation, following which they die off. The young insects gradually emerge when the crop is considered to be ready for gathering and commence infecting fresh branches.

The introduction of the present lac industry dates back very many years, and its origin may be traced to the time when the lac-dyeing industry was superseded by synthetic substitutes. For many centuries the dye obtained from lac was very popular owing to its vivid crimson colour, a reminder of which is found to-day in the term "crimson lake," but eventually, like most other dyes, it had to give way to chemical substitutes.

In the early 'eighties, when the exports of lac dye had almost ceased and the product was threatened with extermination, the value of the actual substance of lac was discovered, and since then more and more uses have been found for it, there being many articles of commerce which could hardly be produced at all without its aid.

**AREA AND OCCURRENCE.**—An extraordinary feature of the lac industry is that the growing and production of lac are almost peculiar to India. A small quantity is raised in Indo-China and Siam, but the quality produced in those countries is very inferior to that grown in India. Another feature is

the fact that the big lac-growing districts are all found on the eastern side of India, in an area round Bengal, Bihar and Orissa, etc., whereas it has been ascertained that lac does not grow successfully on the Bombay side. This is probably because of unsuitable climatic and soil conditions.

**BIHAR AND ORISSA**—In the main area the principal district is Manbhum, in Bihar and Orissa, which of all districts produces the largest quantity and best quality of lac. This district contains the important markets of Jhalda, Balarampur and Manbazar, the first named market supplying a larger amount of shellac than any other and the whole of the district is admirably served by railways for transportation purposes. Next in order come the districts of Palamau, Pakur (which produces a distinctive quality of lac), Ranchi, Singhbhum, and Gaya, each with important markets and a large production.

**CENTRAL PROVINCES**—The one big district in the Central Provinces is Bhandara, whence comes a large quantity of lac, whilst in the same area is the Raipur district, with the markets of Rajm and Dhamtari, which deal with the finest qualities of the product suitable for the best grades of superfines.

**UNITED PROVINCES**—The district of Mirzapur, which has become a household word in the shellac trade, is properly speaking not a producing district at all, but is nevertheless one of the largest markets for lac in India. Mirzapur lies just outside the area of lac growing districts, but is conveniently situated on the main line of the East Indian Railway, which no doubt accounts for its popularity as a market and a manufacturing centre for shellac.

**VARIOUS.**—Other districts which may be mentioned are those of Hazaribagh, Bilaspur, Jubbulpore and the Rewah State,

but these are all inferior in productive facilities to the principal districts enumerated previously, except perhaps the Rewah State, an enterprising Native State which produces a very fine quality of lac.

**EFFECTS OF WEATHER.**—It is well known to science that numbers of insects are considerably affected by climatic conditions, and that while under certain of them they thrive under others they become unhealthy and die off. To this rule the lac insect is no exception. In some areas it thrives excellently even without the aid of cultivation, on other areas, subject to entirely different climatic conditions, no amount of cultivation will stimulate the growth of healthy lac. There are also abnormal climatic variations, occurring in the best lac growing areas, which affect the growth of lac for good or evil as the case may be, one instance of these being occasional showers of rain at other times than during the monsoon season, which, provided they are not too heavy, prove very beneficial. The greatest danger to the crops arises either from late frosts or from heavy hailstorms, which occur at the important periods of larval and male emergence. Other disturbing factors are hot winds and heavy rains at unnatural times of the year, whilst sandstorms are also detrimental because the particles of sand adhere to the lac whilst it is somewhat moist and cause difficulties during manufacture.

**HOST TREES.**—Lac will not grow successfully on all trees, and the Research Institute of the Indian Lac Association at Nankum in the Ranchi district is doing a great deal to find out which are the most suitable trees to act as "lac hosts," also the reason why they are the best suited for this purpose.

Considerable difference of opinion has been expressed at various times as to why lac is

present on trees at all, whether it is there in the form of a pest or whether the action of the lac insect on the tree is a beneficial one. In view of the facts that trees infected with lac are much less healthy and virile than uninfected trees in the same district, and that trees when heavily infected with lac die off altogether, the generally accepted opinion is that lac is present on the trees as a pest. This being so, it is obvious that in the cultivation of lac it is essential to know which trees are least affected by the action of the pest, since these trees should undoubtedly prove to be the best to act as hosts for the lac insect.

So far as present knowledge goes the trees which are most suitable for the cultivation of lac are palas, which is found all over the plains of India, kusum, found principally in the Central Provinces, Chota Nagpur, Bihar and Orissa and Burma, and producing the very fine quality of lac known as the "kusumi crop", ber, the wild Indian plum tree, which is specially cultivated as a lac host, ghont, a similar tree to ber, growing mostly in the Central Provinces and in parts

**CROP FIGURES**—It is a well-known fact that it is most difficult to estimate the size of any kind of crop, and it is even more difficult in the case of a shellac crop owing to the wide expanse over which lac is grown, the climatic conditions existing at the time of the growing of the crop and the various economic conditions prevailing. It is only possible to estimate the normal or average size of each crop from the figures of lac arriving in Calcutta, also those of exports from India generally. The following may be taken as a fairly accurate estimate of the various crops, the figures representing packages containing 2 maunds or 1½ cwt net—

Bysacki	crop	180,000
Rangeen	"	50,000
Jethwi	"	15,000
Kusmi	"	75,000
Assam, etc	"	20,000

Total 340,000 pkges per annum

From the above it will be seen that by far the largest crop is the Bysacki, the Kusmi being the next in importance. The yield

**MANUFACTURE OF SEEDLAC.**—Following the gathering of the lac, which is usually done by stripping the trees, the product is sold in the "hats" (local markets) in the different districts to the various manufacturers.

The lac, which at this stage is known as sticklac, then passes through the various stages of manufacture into shellac, etc. First, it is ground in an ordinary corn-grinding machine together with bark branches, dirt, dust, etc., just as it was picked, after which it is carefully sifted in small wicker trays, during which time it passes through the hands of several native women thoroughly experienced in this form of sifting, until practically all foreign matters have been eliminated, even down to the sand which during sandstorms adheres to the lac while still on the trees. The next process is a thorough washing, which is accomplished with the aid of several re-fills of clean water in large earthenware receptacles until the purple lac dye is eliminated. After several such washings the lac becomes yellowish in colour, and at this stage is known as "seedlac."

1. Sifting Sticklac.

2. Drying Seedlac.

of Central India, pipal, the sacred tree of India, and therefore not popular amongst Indians as a host tree, babul, like pipal, a gum-bearing tree, and arhar, a field crop which is suitable for lac bearing only in Assam.

**MAIN CROPS.**—The shellac trade generally recognises four main crops of lac per year—the Bysacki, Rangeen (or Kutki), Jethwi and Kusmi, but, strictly speaking, there are two crops only, those of summer and winter. There are two broods of lac every year, the Jethwi and the Kusmi being the summer and winter broods respectively from the kusum tree, and the Bysacki and Rangeen the summer and winter crops from all other trees except the kusum, but the trade prefers to consider the four crops separately and to deal with the output of lac from each crop on its own. Of late years a further crop has been mentioned separately by the trade, viz. the "Assam." This again is not a separate crop, but includes the output of lac from the Assam and surrounding districts, together with that obtained from outside places, such as Rangoon, Siam, etc.

from the Kusmi crop is, however, very much finer in quality than that from the Bysacki, and is used almost exclusively for the manufacture of the finest grades of shellac. The smallest of the four main crops is the Jethwi, and actually this crop may be almost ignored, since the greater part of it is used as seedling for the following Kusmi crop.

The Bysacki crop matures in March and April and is marketed from May onwards. The Jethwi crop comes next in July. The Rangeen (Kutki) matures in September—October for marketing at the beginning of winter and the Kusmi during November—December.

The total of 340,000 packages per annum represents the normal or average output of shellac from all sources, but it is very seldom indeed that the yield from all the crops in one year is normal, proof being afforded by the fact that only once during the past 15 years (1911 to 1925 inclusive) have the exports of lac exceeded 300,000 packages, that being in 1923, when there was an enormous Bysacki crop, the other crops of that year being slightly below average.

**MANUFACTURE OF SHELLAC.**—After being thoroughly dried by exposure to the sun, the seedlac is placed in long cylindrical double bags of coarse cotton, and these by a simple contrivance are twisted in front of fires till the lac melts and is squeezed out through the texture of the bags on to a concrete platform, which is kept constantly wet with water to prevent the lac sticking to it. The liquid lac is then picked up with a spoon-shaped piece of metal by the native manufacturer and spread out on hot porcelain jars until it assumes the form of thin sheets. These sheets are then taken up by skilled operators, who stretch them by holding a corner in each hand and the bottom corners with the toes of each foot, gradually extending their limbs to the full extent. These sheets, thin as paper, form the "shellac" of commerce, and after being dried become brittle, when they are easily broken up into small flakes. Instead of being made into sheets, the molten lac may be dropped in "pats" on to smooth surfaces, the result being "button lac."

**MACHINE-MADE SHELLAC.**—It should be stated here that certain grades of

the finished article are manufactured entirely by machinery, thus cutting out native labour altogether. This is rather a complicated method of manufacture, the seedlac being dissolved with the aid of alcohol and heat, the alcohol being drawn off by an evaporator and the melted shellac made up into sheets over heated rollers. Though it might be imagined that this would be a far more effective method of manufacture than the primitive native process, it has been proved that it eliminates some of the properties of the lac which are most essential to certain consumers. Thus the native method still remains the largest form of manufacture.

**PESTS.** The question and study of the parasites, etc., which affect and injure the lac insect are of the utmost importance, but up to a short time ago this biological problem had not received the attention it deserved. Now, however, under the auspices of the Indian Lac Association's Institute at Nankum, thorough enquiries are being made and experiments carried out under the expert supervision of a distinguished entomologist in order to find out which parasites are injurious to the lac insect.

Of these, the most destructive are the caterpillars of several species of small moths of the genera *Eublemma*, *Hypatima* and *Holococera* and a few small Hymenopterous (Chalcid) parasites. It is believed that the Chalcid larvae consume the bodies of the lac insect when still alive, while the caterpillars of the moths devour both the lac and the insect. The worst of the latter are the *Eublemma* which absolutely riddle the lac. As regards the Chalcid, some of these may be "hyper parasites" of the caterpillars, and therefore in a way beneficial. Ants are another form of pest, and are believed to do a certain amount of damage to the lac crops, but this is probably exaggerated.

So far, no fungus or bacterial disease affecting lac has been found, which leads to the belief that when lac is extensively cultivated under much more complete domestic conditions exceptional risk or difficulties will not be experienced.

**RESEARCH.** A few years ago, realising that the shellac trade in general had very little knowledge of the lac insect and its habits, a few enterprising members of the trade decided that some kind of Association was necessary to carry out research work in this connection, and with that end in view the Indian Lac Association was formed. The Government of India agreed to levy a cess of 4 annas per maund on all shellac, etc., exported and 2 annas per maund on Keerie lac (refuse), the funds thus obtained being handed over to the Association, which is administered by a Committee elected annually by the trade and thoroughly representative of all branches.

An Institute has been built and equipped at Nankum in the Ranchi district, associated with an estate on which are grown and cultivated various lac producing trees. This Institute is in charge of a fully qualified resident bio-chemist, who also acts as director. A large and comprehensive staff has been gradually gathered together, fully capable of carrying out all manner of experiments and observations with regard to the cultivation of lac.

Outstanding results have not yet been obtained, but this is only natural considering that the Institute is still in its infancy, but the work is proceeding on the right lines, and great hopes are entertained that the outcome in the near future will do much to enlighten shellac cultivators and merchants regarding the problems with which they are confronted and to improve the methods of lac production.

LYALL, MARSHALL & CO.  
1. Offices and Compound, Calcutta.  
2. Filling Sacks with Shellac.  
3. Preparing a Shipment.  
(See letterpress, p. 142)

**STATE ASSISTANCE.**—With the large forests which it has at its disposal the Government of India is able to do much towards improving the production of lac by educating the overseers of the Forestry staff as to what is required in order to advance cultivation. In some areas, notably those of the Central Provinces, the forest staff is in close touch with the cultivators, and considerable assistance is being given.

In view of the low prices which are now ruling it is difficult to say how far the

Government will carry on cultivation in its forests, but it has been stated that it may start lac brood farms in the lac growing districts. These farms would give demonstrations of the latest and best methods of lac production and would sell brood lac to the cultivator in times of need. It is obvious that all aims should be directed towards getting the maximum of output from the minimum of area rather than towards merely increasing the area of production.

4. Despatching Shellac under a well-known mark (A S O.)

**STATISTICS.** The largest market for shellac at the present time is America, which country consumes at least half the annual shipments from India. Next in importance come the United Kingdom and the Continent.

Herewith are given figures showing the shipments during five years to these countries separately in packages of 1½ cwt net —

	1921	1922	1923	1924	1925
U.S.A.	159,605	157,831	189,946	128,378	136,657
U.K.	46,076	48,893	69,132	47,770	64,746
Continent	15,285	25,492	29,722	39,045	28,390

The above figures do not represent the total shipments of lac for the years mentioned, as other countries take smaller quantities, the principal amongst which are probably Australia and the Far East, which are consuming a fair quantity of lac already and are increasing their consumption considerably as time goes on. The demand for the various qualities of lac varies, but that usually in principal request is Orange shellac, next coming Garnet lac (Messrs. Angelo Bros' manufacture), and after that Button lac. Following are given figures showing shipments of the various qualities over five years, the figures, as in the previous table, representing packages weighing 1½ cwt net. —

	1921	1922	1923	1924	1925
Orange shellac	221,614	227,456	280,242	211,530	250,073
Garnet lac	6,676	11,755	14,587	15,013	13,905
Button lac	3,994	8,905	9,090	10,152	11,055

As Calcutta is practically the only port in the world from whence shellac is shipped, the principal shippers of shellac are naturally all located there, and the following table shows the total quantities despatched during the period 1921-25 by those shippers:—

	1921	1922	1923	1924	1925
Ralli Bros.	53,343	53,502	74,100	52,368	60,445
P. S. Sparling & Co.	1,880	19,516	38,254	46,992	46,522
Rogers Pyatt	81,674	52,275	62,094	29,375	25,408
Shellac Co.	1,720	5,769	10,658	16,109	27,132
A. M. Arathoon	16,106	29,871	30,402	25,857	22,029
Lyall Marshall	3,273	5,793	12,687	8,070	19,583
J. D. Sassoon	3,265	13,745	16,617	14,808	15,614
Turner Morrison (Angelo Bros.)					

**USES (INDUSTRIAL).** The first and foremost use to which lac is put is undoubtedly the manufacture of gramophone records, some authorities stating that over half the annual output is used by the gramophone companies. Between 30 and 40 per cent of a gramophone record is pure lac, so that it is easy to understand the large quantity of lac consumed in their manufacture.

The very finest superfine shellac is used as a thin coating for the best quality of chocolates to prevent any moisture getting to the contents. The manufacture of hats depends almost solely upon lac, with which all hats are stiffened, and this is where the imperviousness of lac to water is of such great value, no other gum possessing the same quality. The Great War proved the value of shellac for munition purposes, and enormous quantities were used by the various Governments in this way, as well as in the manufacture of aeroplanes, etc.

Varnishes and furniture polishes are made exclusively of shellac and boot polish manufacturers also take large quantities. The electrical trade makes great use of it, principally for insulation purposes, and in other manufactures, such as emery wheels, photographic supplies, brushes and brooms, sealing wax, musical instruments, oil cloth, paint, watches, pencils, mirrors and all forms of lacquer work lac is used extensively.

## PROMINENT SHELLAC EXPORTERS.

### LYALL MARSHALL & CO.

**Inception.**—Founded at Dacca, Bengal, in 1783, this well-known firm, which remains a private concern, transferred its head office to Calcutta in the early part of the nineteenth century.

**Personnel.**—At the beginning the business was known as Lyall Matheson & Co., a title subsequently changed to Lyall Rennie & Co. When Mr. Rennie's interest ceased, Mr. E. J. Marshall was admitted a partner in 1886 and the firm became Lyall Marshall & Co. Mr. R. A. Lyall, who arrived in India in 1860, retired in 1896, while Mr. E. J. Marshall followed suit in 1913, leaving the business to his nephew, Mr. J. D. Marshall, and his son, Mr. E. H. Marshall, the present partners.

**Activities.**—The firm has been intimately connected with the Indian export trade for many years, an interesting event being the taking over of the Gonatea Raw Silk Factory from its Dutch owners. Its principal interest is shellac, in which the firm has had a long and extensive experience, ranking among the four largest exporters in Calcutta. It also exports jute, tea, indigo and other East Indian produce.

**Agencies.**—Messrs. Lyall Marshall & Co. are managing agents for Carew & Co., Ltd., a firm which their predecessors, Lyall Rennie & Co., floated in 1875, and which had previously existed as a private concern, receiving large grants of land in the United Provinces from the East India Company for services rendered during the Mutiny. Messrs. Carew & Co., Ltd., manufacture sugar and spirits, potable and commercial, their XXX

rum being the oldest known mark in India. They have a sugar plant and distillery at Rosa in the United Provinces and distilleries at Asansol, Bengal, and Katni in the Central Provinces.

Messrs. Lyall Marshall & Co are also managing agents for the Seeterampore Coal Co., Ltd., in the Raneeegunge district and the Mornai Tea Estate in Assam, besides being agents for a number of tea gardens in the Dehra Dun district.

**Representatives.**—Lyall, Anderson & Co., 16, Philpot Lane, London, E.C. For jute and shellac. Hodgson & Co., 21, Mincing Lane, London, E.C., and Messrs. Mac Lach Co., 11, Cliff Street, New York, U.S.A.

**Head Offices and Warehouse.**—25, Mangoe Lane, Calcutta (cables "Ghat," Calcutta).

**Bankers.**—Chartered Bank of India, Australia and China; National Bank of India (See illustration, page 141).

#### P. S. SPARLING & CO.

**Inception.**—Although this firm has only been in existence since the Great War, having been founded by the present head, Mr. P. S. Sparling, its rise has been so rapid that to-day it occupies the position of one of the largest shippers of shellac in the world, besides having interests in various other lines of exports, also in imports. Mr. Sparling, who is now a member of the committee of the Indian Shellac Association, has been connected with the shellac trade for many years, and before founding the present company, was in charge of the shellac department of a well known firm in Calcutta.

**Development.** From a modest beginning the firm has steadily progressed by sound business methods, coupled with the enterprise of its energetic chief, until to-day there scarcely remains a port in the world to which the well-known "S" mark of shellac is not shipped. Although its principal market is in the United Kingdom and the Continent, where the firm practically holds a monopoly of the shellac trade, its business is being rapidly extended in the important markets of North and South America.

**Activities.**—The main interests of Messrs. P. S. Sparling undoubtedly lie in the shipping of lac in all its forms, but they also deal

largely in cotton, and are managing agents for the Calcutta Cotton Factory, whilst recently they have commenced to export Indian tobacco. On the import side, motor cars are a principal line, the company acting as sole agents in India for the well-known Eric Campbell light cars.

**Representatives.**—Messrs. Sparling & Co. are represented in the United Kingdom and on the Continent by Mr. J. George Sigg, well-known on the London and European markets as a shellac expert, and it is largely due to his efforts that they occupy their present commanding position. Their American representatives are the old-established firm of Messrs. A. Helmuth Inc., of New York, whilst their agents are to be found in most of the principal commercial cities of the world.

**Premises.**—These are situated in Chive Row, in the heart of the business quarter of the city, and contain, in addition to the necessary offices for transacting business, over 10,000 square feet of godown accommodation, which is ample for handling any quantity of shellac at short notice.

**Cotton Factory.**—The cotton ginning factory is at Cossipore, a few miles out of Calcutta, amidst several other factories of the same type, and, being surrounded by plenty of unoccupied space, is capable of considerable enlargement when business increases.

**Directorate.**—Mr. P. S. Sparling is the proprietor and director of the business, and Mr. A. Forbes the general manager.

**Offices.**—9, Chive Row, Calcutta (cables "Sparlac," Calcutta). Codes A B C 6th Edition, Schofield's, Bentley's and private.

**Bankers.**—Chartered Bank of India, Australia and China; National Bank of India Ltd.; Mercantile Bank of India Ltd.; Eastern Bank Ltd.; Loyds Bank Ltd.

(See also illustration, page 143).

#### A. M. ARATHOON.

**Inception.**—Commencing as an assistant in a shellac factory in Mirzapore in 1894, Mr. A. M. Arathoon became a manufacturer of the commodity named four years later. He had gone to Jhalda to purchase lac and

was struck with its possibilities as a shellac centre, despite its being 30 miles from the railhead at Purulia. Accordingly in 1898 he opened a factory at Jhalda, the premises being a small hut with a thatched roof, and became the pioneer of the shellac trade in the Manbhoom district.

**Development.**—Considerable difficulties had to be overcome at the outset, everything, labour included, being imported from Mirzapore. Gradually proper buildings were erected and machinery introduced. Labour became scarce and expensive, but Mr. Arathoon's was the first factory, with the exception of the Calcutta Garnet factories, to be installed with a shellac washing machine which, increasing the output, compensated for the scarcity of workers and enabled the large yearly shipments of seedlac to America to be continued. In 1922 factories were opened at Murhu and Ranchi in the Ranchi district.

**Activities.** The manufacture and export of shellac, buttonlac, seedlac and sticklac constitute the firm's business. Its marks, ASO Superfine Shellac and Arathoon Pure Buttonlac, are both well-known in European and American markets.

**Exports.**—The firm went into the export trade after consolidating the manufacturing side, and in 1925 stood fourth in the list of exporters with a total of 26,440 packages of shellac. Shipments are mostly to America, the United Kingdom, the Continent, Australia, New Zealand and Japan, in which countries the organisation has its own agents.

**Factories.** That at Jhalda is the largest, employing over 500 labourers daily; next comes Murhu with 250 and then Ranchi with 100 workers. All three are worked by mechanical power for crushing and washing the lac, but the manufacturing is done by hand.

**Offices.**—3, Rawdon Street, Calcutta.

**Cables.**—"Arathoon," Calcutta and "Arathoon," Jhalda. Codes A B C 5th Edition and Bentley's.

**Bankers.**—Imperial Bank of India, Mercantile Bank of India Ltd. (See illustration, page 142).

# JUTE

By J. M. P. ANNAN

**J**UTE, one of the most important crops in Bengal, is a very valuable asset to India and the British Empire. In appearance the plant resembles in some ways a large hollyhock, and usually grows to a height of from 10 to 12 feet, occasionally higher. Someone has described jute as "the Wrapper of the World", it carries the world's grain crops, and there are few articles packed for transport that are not finally wrapped in hessian or sacking cloth, it has proved itself a necessary article in war, in the shape of sand bags, horse covers, etc., it is the basis of floorcloth and linoleum, and even carpets of quite good quality, cheap canvas, rope-soled shoes, etc. These are only a few of the common necessities made from this fibre, its uses being varied and world wide.

Jute has probably been used in Bengal for centuries, but only early in the nineteenth century does it seem to have become known by its present native designation of "Pat", previously, all fibres were dealt in as hemp fibre. In Sir George Watt's "Dictionary of the Economic Products of India" he mentions that not more than 50 years ago the poorer people were largely clad in jute cloth of home manufacture. The importation of cheap cotton piece goods, however, checked this industry. With the extension of trading there sprang up a demand for grain bags, and the rough gunnies, woven on the hand looms of Bengal, became a recognised industry.

The first commercial mention of jute is found in the Calcutta Customs' Reports of 1828, when some 18 tons were sent to Europe. About 1820-30 jute was successfully woven into cloth by steam looms in Dundee, Scotland, and from about 1837 the Dundee manufactured article began to affect the hand loom product of Bengal. In 1850-51 the value of gunnies exported from India was £215,978 and that of raw jute £107,071. There had been no extension of the hand-loom trade for twenty years, and the Bengal peasant gradually turned his attention from the weaving to the growing of the fibre. In 1854 the first power-loom mill in India for the manufacture of jute, the Rishra Yarn Mills Company, was established at Rishra, near Serampore, by Mr. George Ackland, a coffee plantation owner in Ceylon. This mill is now known as the Wellington Jute Mills.

In 1857 were founded the Barnagore Jute Mills at Barnagore, about seven miles north of Calcutta, followed in 1863-64 by the Gourepore Jute Factory, and from this date onwards factories sprang up rapidly in every direction around the Bengal capital. In the trade returns of 1869-70 the exportation of manufactured jute was 6,441,863 gunny bags, manufactured by power and hand-looms and brought into competition with the Dundee manufactures. This trade in 1879-80 had increased to 35,908,000, bags, practically all the product of power looms, the hand-loom

production then almost disappearing. Today the consumption of raw jute by the Bengal Mills is nearly two-thirds of the whole production of jute fibre, the other third, which is exported, represents the world's jute manufactures outside India.

**AREAS (MAIN JUTE).—**Scientifically the jute areas are divided into two great divisions, according to the courses of the two large rivers, Brahmaputra and Ganges. The waters of the old Brahmaputra and Megna are clear, the lands are higher, the fibre is clean, and of a good colour and lustre. This tract, from Bahadurabad down to Chandpur, includes Nisralbad, Mymensingh, Juganathgunge, Dacca, Naranganj, etc. The Ganges waters are muddy, the areas are lower and subject to annual floods, the quality of the fibre is inferior in colour, shorter and less glossy, barky, and liable to lose colour if stored for any length of time. It is not equal in strength and spinning properties to the Jat jutes of the Brahmaputra areas.

**CLASSES OF JUTE.**—Jute is an annual herbaceous plant of the natural order "Liliaceæ". It grows all over Bengal except in the laterite tracts of western and northern Bengal. In Bihar and Orissa, cultivation is confined to Purnea, North Behar and Orissa. It is extending in Assam and in the plains of Nepal towards Purnea. There are two cultivated species of jute, viz., *Corchorus capsularis* and *Corchorus olitorius*. The seed of the former is a rounded capsule, while that of the latter has a long cylindrical pod. The species of *Corchorus capsularis* are more numerous than those of the *Corchorus olitorius*. The first named is also a stronger plant and more capable of withstanding climatic conditions such as drought, high temperature or excessive rain. In colour and fineness the fibre is superior, but it is usually shorter. Once the plant is five feet high it will stand submersion up to its middle. Generally speaking, in the trade the various classes of this jute are known as white jute. The *Corchorus olitorius* is silky, yellowish in colour, more brittle and inferior in strength to the *Corchorus capsularis*. In Roxburgh's tests of fibres in India, he states that a "dry line" of *Corchorus capsularis* broke with a weight of 164 lbs and a "wet line" at the same weight. The *Corchorus olitorius* gave way at 113 and 125 lbs, the wet line gaining 12 lbs. This is the plant giving the Tosa and Daisee jutes.

In Bengal a plant known as "Mesta" is grown, and this same plant, known as "Bimbi," is raised in the Madras Presidency. Really a species of sun hemp, and more useful in rope making than as a spinning fibre, it is often found mixed with the jute imports. From China a fibre known as China jute is exported to Europe; this also is closely related to the Mesta plant, and has not the spinning quality of jute.

**CROPS (ROTATION OF).—**In many districts jute is grown on the same land year after year but unless the land is well manured or receives silt deposit, the fibre deteriorates. In the principal districts where jute is cultivated on high lands, paddy (rice) is transplanted immediately after the jute is cut, thus providing two crops yearly. The plant however grows best if the land is sown with paddy, rape, or mustard one year, and with jute the following year.

**CULTIVATION (METHODS OF).—**Practically the whole of Bengal is cultivated under conditions that would be described in England as small holdings, the land having come down from father to son. The whole family usually assists in the work in some way, and this accounts in the main for the cheapness of the labour expended on the jute crop. There may be a few large farms and economically these possibly pay better, under the control of the zemindar, or land-owner. The small holder however, represents practically the whole crop. He gets cash payment for his jute, and unless perhaps his tobacco field yields him a little, this is probably the only hard cash that comes his way. His rice crop is stored for the food of the whole family and his grain and straw crops serve to feed his cattle.

**HARROWING AND PLOUGHING.**—Deep ploughing being essential for the jute crop ploughing is started as early as possible. As soon as the first rain has fallen, usually about the middle of February to March, the preparation of the ground goes on. The land is ploughed from four to eight times, clods are broken either with a "kodalhi," or wooden mallet, and the soil is pulverised into a fine tilth. On heavy clay soil as many as ten ploughings may be necessary. The so-called harrowing process consists in drawing a crude form of harrow, or a heavy wooden log, over the ploughed land, this levels the ground, and the soil is now ready for sowing.

**MANURING.**—The ryot does not undertake seriously any manuring of the land, the low lands receive silt every year from floods, and he considers this is quite ample. Experiments on the Government experimental farms show that cow droppings are the best manure for jute, followed by castor oil cake. The ryot, however, uses cow droppings for fuel and for manuring his tobacco field, so the jute land has to depend on flooding and decayed vegetable matter. Jute is not an exhaustive crop, however, and appears to take very little from the land, as, even when sown yearly, quite reasonable crops are grown, though of course the better practice is to raise a gram or pulse crop one year, followed the next by jute.

**SEED.**—Very little attention is paid by the cultivators to the selection and preservation of jute seed. The Government experimental farms, however, give great con-

1 & 2. Harvesting Jute.  
3. Soaking and stripping Jute.

sideration to this matter, and the quality of the jute, as well as the conditions of the ryot, have been much improved by the valuable assistance received from this source.

**SOWING** --- The season extends from the end of February to early May. On the low lands liable to floods it is well that sowing be finished by the middle of March. The seed is broadcasted and covered by drawing a ladder, or light log, over the ground. The amount of seed necessary is 10 lbs. of *Corchorus capsularis* or 8 lbs. of *Corchorus olitorius* to the acre. To ensure even distribution, the sowing is carried out crosswise, i.e. once from north to south, and once from east to west. Under normal conditions, germination takes place within three or four days.

**WEEDING** - When the plants are about six inches high, a "bida," or rake, is drawn over the ground two or three times at short intervals till such plants are about one foot high. The crop is then twice weeded and thinned. The plants should be so thinned as to leave about six inches between those of the "*Corchorus capsularis*" and 8 inches between those of the "*Corchorus olitorius*." If given too much space the plants will branch too far, while, if crowded they will grow too thin to give a good fibre outturn. Just before the monsoon rains break, about the middle of June, the thin and weak plants are weeded out. These weedings are not wasted, but are usually retted and sold as weedings.

**HARVESTING ("CUTTING")** Cutting begins in July and goes on to October. The best quality of fibre is obtained if cut when the plant is in flower. Jute cut late for seeding will give a larger outturn of fibre, but the quality is coarse in texture and usually discoloured. Plants are cut with a sickle close to the ground, those growing in deep water are pulled up. They are then tied in bundles ready for steeping or retting.

**AVERAGE OUTTURN** --- The official estimate of the average normal outturn of jute fibre is 10 maunds per acre (about 1,315 lbs.). This could doubtless be increased on well cultivated and manured lands, but the Bengal cultivator is not very progressive. The by-product is the stalk after the fibre is removed. Some of this is used as a form of fencing by the poorer agriculturists, and also as a fuel, the bulk, however, is waste.

**RETTING** - In its natural state jute fibre is associated with a kind of gum, which is first softened by fermentation and then removed by washing. As the fibre is only 4½ per cent of the green weight, 10 maunds of fibre produced per acre would be 355 maunds green weight, or 29,000 lbs. This will give some idea of the labour alone entailed in the process. The bundles are carried to the nearest pool, immersed and covered with straw, or palmyra leaves, and weighted to keep the bundles under water. The cleaner the water, the better coloured will be the fibre. The plants take ten to sixteen days to rett. The temperature of the water should be about 80° Fahr. If under-retted, a certain amount of grain remains, and the fibres stick together. If over-retted, the fibre will be weak and will lack lustre.

When the stems are ready for stripping the cultivator stands by the heap and takes a handful of the plants, which are beaten at the bottom with a wooden hand and broken at a distance of a foot from the extremity. The broken pieces of bark are then thrown away. The "retter" takes the separated fibres in both hands and jerks the stems forward and backward on the surface of the water until the fibre is clear of the stalks. A good workman can strip about 20 seers

(41 lbs) in six hours by this means. There are slight variations of method in different districts, but all yield similar results. After separation the fibre is washed, if possible in clean water, it is then dried in the sun over bamboo poles for two or three days and finally made up in heads ready for sale.

**INSECT PESTS.**—There are several pests which cause damage to the plants when young, the worst are caterpillars, which are of three varieties, viz (1) The Ludgo Caterpillar (*Haphygma evigra*)—This insect feeds on the young leaves, in bad cases leaving only the bare stems. It appears generally in a dry season. (2) The Jute Semi-looper (*Cosmophila sabulifera*), which feeds on the apical buds and top shoots. It does great damage until the plants are in flower, i.e., from June to August, and flourishes also under dry conditions. (3) The Hairy Caterpillar (*Diacrisia Obliqua*), which feeds on the leaves of jute, sun hemp and other crops. In bad attacks the whole crop may be defoliated. It flourishes under conditions of continued rain. Plants affected by any of these insects become branchy, and the fibre turns out specky and harsh.

Kerosene emulsion applied with a vaporiser or fine syringe is the best remedy mixed in the proportion of two gallons of kerosene to one gallon of water and one quart of soft soap.

**OTHER DANGERS.**—Continued drought is detrimental to jute, as is also heavy rain, or rain accompanied by hail just after sowing, when the plants are still young. Stagnant water at this period is likewise a danger to the crop. Floods, which occur later, about June to July, when the *Corchorus capsularis* plants are in flower, will not do much harm, but will tend to cause heavy root. The *tosa* plants, being usually on higher land, are seldom badly flooded.

**MARKETING METHODS.**—The jute crop is made up by the cultivator into heads, or "petis," weighing about 5 seers (10 lbs), and is bought by middlemen, known as beparias, or farias. Weights are settled, and the jute is then brought to the "mahajan," the local baler or mill agent, who has previously advanced the money to the "faria" for purchase. The "mahajan" has the jute made up in drums, or half bales, and if he does not sell in the local "hat" or bazar, will send it to an "aratdar" (dealer) in Calcutta, for disposal in the Jute Bazar. If the jute is bought by balers or jute mill agents, it is taken into their godowns and there assorted.

**ASSORTING.**—The jute arriving at the local "hats" is bought by the up-country agents of mills, by independent jute balers, and by balers and shippers, and this jute, as also that bought by their own "beparias," is carefully selected and classified. It is then packed into kutchu bales, usually of  $3\frac{1}{2}$  maunds (about 288 lbs.). Up to this point the jute has not been cut in any way, and the hard bark part of the fibre at the root is still on it. The Calcutta mills attend to this on their own premises. The bales are sent either by rail, rail and river, or by flats all the way to Calcutta by water, where they are delivered either to mills, the local bazar, or balers.

**BALING FOR EXPORT.**—For the export trade, jute is usually sold without roots. The balers have large sorting sheds, and in these the article is re-selected into the required grades, the roots are cut, and all harsh fibre is extracted under expert supervision. After final inspection the jute is packed by hydraulic presses into bales of

1. Drying Jute.  
2. Selecting Raw Jute.  
3. Storing Jute.

400 lbs each, and is then ready for shipment. Each bale has the distinctive mark of its grade and the name of the baler on a cloth ticket under the rope lashings. The rejected jute, harsh fibre, runners, etc. are baled separately under the name of "rejections," and the cuttings, after the dust has been shaken out, are packed in the same way under the designation of "cuttings."

**PROCESS OF MANUFACTURE.**—The process of the manufacture of jute is a simple one compared with that of other textiles, such as linen, cotton, etc. The jute is run through a series of spiral rollers called a "softener," during which process it is sprinkled with a mixture of water and oil, left in this condition for a day or two, and then put through a carding machine, this is a series of rollers covered with sharp pins, which reduce the fibre to a fine sliver. After this the spinning process begins, first as a form of rove and then on to the finer spin for yarns, the best twists do not usually exceed more than 4 to 4½ twists to the inch. The warp yarn is put through a starching process, wound on to a beam, and placed at the back of the loom. The jute-loom is simple, closely resembling the old hand-loom, there being no intricate designs in jute weaving, such as are required for the jacquard or dhobi-loom used in linen and cotton.

**FINISHING**—The finishing process in jute is much the same as in other textiles, the standard width being 40 inches, but any width can be woven and finished. In the case of hosiery cloth, up to 150 inches wide can be woven, but this trade is practically a monopoly of the European mills, the widest Indian looms are not more than 80 inches. Calendering, or chesting is the general finish, but finer cloths are nungled to a heavier finish.

**PACKING**—Bales of 40 inch cloth (the standard) are packed by hydraulic presses into bales of 2,000 yards each, and are bound by steel hoops. Gunny bags and sacking are packed in various quantities, according to the weight of the bags or cloth. The bales are loaded at the mill jetties into cargo boats and conveyed alongside the export steamers.

**STATISTICS.**—The following tables will convey to the reader some idea of the rise and steady development of the jute industry and of its enormous value to India. The first of these shows the values of the raw jute and jute manufactures exported from India during the 21 years 1904-05 to 1924-25—

YEAR	VALUE OF JUTE (Rupees)	VALUE OF MANUFACTURES (Rupees)
1904-5	11,96,56,000	9,93,88,576
1905-6	17,12,57,000	12,44,79,544
1906-7	26,83,87,000	15,71,62,303
1907-8	17,97,28,000	18,20,76,445
1908-9	19,83,45,000	15,71,54,931
1909-10	15,08,81,000	17,09,66,496
1910-11	15,40,00,000	16,99,48,702
1911-12	22,55,66,000	16,00,82,760
1912-13	27,05,07,000	22,87,17,755
1913-14	30,82,64,000	28,27,47,042
1914-15	12,01,02,000	25,82,03,189
1915-16	15,64,20,000	37,07,85,050
1916-17	16,28,81,000	41,07,23,712
1917-18	6,15,38,000	2,84,31,000
1918-19	12,72,01,000	52,65,23,000
1919-20	21,69,05,000	50,01,55,000
1920-21	16,16,09,000	52,99,47,000
1921-22	14,94,02,000	29,99,57,000
1922-23	22,51,85,000	40,49,42,000
1923-24	20,00,06,000	42,28,16,000
1924-25	20,00,10,000	51,76,66,000

The steady increase of the manufacture of jute in India is indicated by the following table—

YEAR	MILLS	CAPITAL EMPLOYED	LOOMS SPINDLES	EMPLOYED PERSONS
1884-85	24	Rs 1,29,00,000	6,926	131,740
		£1,407,000		51,902
1889-90	26	Rs 1,26,45,000	7,704	156,806
		£1,757,000		50,541
1894-95	28	Rs 4,47,07,50	9,614	199,757
		£1,197,572		74,357
1899-1900	34	Rs 3,58,00,000	14,119	295,302
		£1,501,358		102,449
1904-5	38	Rs 4,66,80,000	19,991	409,170
		£2,253,358		133,162
1909-10	60	Rs 7,14,05,000	31,418	645,802
		£2,913,358		204,104
1914-15	70	Rs 7,93,95,000	38,379	795,528
		£1,50,700		238,274
1919-20	76	Rs 11,15,80,000	41,045	856,307
		£2,32,200		280,431
1923-24	89	Rs 17,94,87,938	49,038	1,043,417
		£2,725,000		335,408
		\$17,000,000		

The figures given under the heading of "Capital Employed" are those of the various Indian and British companies for all the periods named and of the American companies also for 1923-24.

The following table shows the consumption of raw jute in bales, as given in the annual reports of the Indian Jute Mills Association.

Year	Quantity Bought	Actual Indian Mill Consumption	Exported Consumption	Total World's consumption including 500,000 bales as estimated Indian Domestic
1900-01	—	2,415,000	3,542,000	6,457,000
1904-05	2,886,000	3,077,000	3,525,000	6,011,000
1909-10	4,260,000	4,359,000	4,009,000	8,777,000
1912-13	4,741,000	4,435,000	4,942,000	10,113,000
1913-14	4,395,000	4,374,000	4,192,000	9,087,000
1914-15	6,010,000	4,805,000	2,907,000	9,477,000
1915-16	5,128,000	5,000,000	3,106,000	8,934,000
1916-17	5,350,000	5,520,000	2,810,000	8,663,000
1917-18	6,112,000	5,296,000	1,726,000	8,368,000
1918-19	4,913,000	5,000,000	2,200,000	8,700,000
1919-20	6,089,000	5,082,000	1,358,000	9,947,000
1920-21	5,015,000	5,407,000	2,343,000	7,888,000
1921-22	4,454,000	4,236,000	2,968,000	7,922,000
1922-23	2,987,000	4,015,000	2,902,000	6,384,000
1923-24	5,110,000	5,004,000	3,771,000	9,387,000
1924-25	4,741,000	5,463,000	3,822,000	9,841,000

The following table shows the estimated area and yield of jute in Bengal, Assam, Bihar and Orissa, Cooch Bihar, Nepal, etc., since 1880.

Year	Area of Jute in Acres	Yield in bales of 400 lbs. each
1886-87	1,284,000	38,52,000
Average 1892-5	2,207,100	56,21,100
" 1895-1900	2,035,000	57,71,000
" 1900-1905	2,335,000	70,30,000
" 1905-1910	3,204,000	81,30,000
" 1910-1911	2,937,800	79,12,000
1911-1912	3,106,400	82,34,700
1912-1913	2,970,500	98,12,800
1913-1914	2,911,000	88,93,900
1914-1915	3,158,700	104,43,900
1915-1916	2,375,400	73,40,900
1916-1917	2,702,700	83,05,000
1917-1918	2,736,000	88,64,600
1918-1919	2,500,400	69,55,600
1919-1920	2,848,900	91,28,000
1920-1921	2,509,000	84,59,000
1921-1922	1,518,000	39,85,000
1922-1923	1,800,000	54,05,000
1923-1924	2,788,000	81,59,000
1924-1925	2,733,000	80,56,000
1925-1926	—	*1,10,00,000

#### REPRESENTATIVE ASSOCIATIONS.—

The following Associations protect the various interests in connection with the jute trade. The Indian Jute Mill Association, The Jute Dealers' Association, The Calcutta Baled Jute Association and The Calcutta Baled Jute Shippers' Association. Meetings are held in the rooms of the Bengal Chamber of Commerce, Clive Street, Calcutta.

# INDUSTRIES

## GENERAL DATA

**T**HOUGH India is pre-eminently an agricultural country, the advance of other industries may be inferred from the fact that for many years the returns of foreign trade have shown a steady expansion in the export of manufactured goods and in the import of raw materials. The Empire is every year working up more and more of her own raw materials, and is finding an expanding export market for manufactures. At the same time she requires a larger amount of raw products from outside sources to feed her mills, factories and workshops. If the development of Indian industries has been tardy, the demand for their further extension has, especially since the Reforms, become a national one, its principal objectives being the broadening of the sources of state wealth and the amelioration of the poverty of the people.

**AREAS (INDUSTRIAL).**—India may be divided into five great industrial areas, which are enumerated later, together with the more important commercial and artistic manufactures of each.

**BENGAL AND ASSAM.**—The commercial industries are india-rubber, oilseeds and oil, lac, indigo, jute, paper, hides and skins, silk, opium, tobacco, tea, sugar, rice, gram, coal, iron, saltpetre, mica and pottery. The artistic and minor industries comprise ivory-carving, umbrella-making, Dacca muslins, embroidery and mat-making.

**BURMA.**—India-rubber, varnish and lacquer, cutch, cigars, rice, teakwood, petroleum, tin and rubies are the leading industries. Artistic and minor industries are wrought iron, niello-ware, gold and silver plate, copper and brass moulding and ware and glass mosaic.

**NORTHERN INDIA.**—This area comprises the United and Central Provinces, Rajputana and Central India, the Punjab and North-West Frontier Province and Kashmir. The more important commercial industries are resin, lac, oilseeds, perfumery, soap and candles, cutch, myrobalams, cotton, silk, wool, leather, carpets and mats, wheat, flour, biscuits, opium, tea, sugar, beer and spirits, timber, borax, lead, copper, salt and saltpetre. Minor and artistic industries are those of tinsel-ware, lac-coloured metal ware, enamels, gold and silver plate, damascened ware, copper and brass ware, stone carving, and lapidary work, pottery, wood-carving, and inlaid wood-work, ivory carving, leather and skin work, lac-ware, dyeing and calico printing, cotton manufactures, muslins, silk manufactures, woollen goods and shawls, embroidery and carpets.

**SOUTHERN INDIA** (Madras Presidency, Hyderabad, Mysore and Coorg).—Among the chief industries are oilseeds, ghee and tallow, indigo, cotton, coir, ivory, skins, tea, coffee, cigars, cardamoms and pepper, sugar, rice, sandalwood, pearls, gold, manganese, plumbago and cement. The artistic and minor industries comprise gold and silver plate, encrusted ware, copper and brass ware, stone carving, inlaid wood, sandalwood carving, ivory carving and staining, silk manufactures and carpets and mats.

**WESTERN INDIA** (Bombay Presidency, Berar and Baluchistan).—The leading in-

dustries are cotton, gums, oilseeds, wool hides and skins, drugs, wheat and salt. Artistic and minor industries comprise gold and silver plate, wood carving, marquetry, leather and skin work, cotton goods, silk manufactures and embroidery.

The large number of commercial products and the comparative poverty of artistic manufactures in Bengal, the small number of important and characteristic materials and crafts in Western India, and the comparative abundance of these in Southern India are significant features of the above enumeration. In Burma the artistic crafts are more numerous and in some respects more important than the commercial products. In Northern India, too, where external commerce is of less consequence than in the maritime provinces, there may be said to be almost a superabundance of artistic industries.

**CLASSIFICATION OF INDUSTRIES.**—The arts and manufactures of India are more easily separable into sections, corresponding with hand-labour and steam-power, than are those of most countries, for handicrafts, in spite of the marvellous mechanical developments of the last hundred years, are still very important to the Indian people. The carpenter, the potter, the blacksmith, the stonemason, the weaver, the dyer, the tailor, the shoemaker, the drug-seller and the sweetmeat-maker are recognised members of most village communities. The higher crafts—those of artistic workers in wood, clay, stone, metals and textiles—are carried on in special localities and in direct relationship to physical and administrative conditions. When, for instance, hand labour industries are practised on a large scale they tend to become centralised in important towns. Steam-power manufactures are not in any way indigenous industries, but have been originated and are controlled by the supply of raw material and fuel, by the facilities of transport, and by the degree of association with European enterprise.

The industries of India may be roughly classified as follow:—

- (1) Rural industries, directly associated with agriculture or agricultural produce
- (2) Manufacturing and urban occupations—the textile industries proper
- (3) Sylvan occupations—the collection and utilisation of natural and wild products
- (4) Occupations connected with mines and metals

**DEPARTMENT OF INDUSTRIES AND LABOUR.**—It was not until February, 1921, that the Secretary of State sanctioned the creation of a central Department of Industries as a permanent branch of the Government of India. Its scope, as modified by the re-grouping of subjects advocated by the Incharge Retirement Committee, now includes industries and industrial intelligence, central institutions for industrial training, geology and minerals, together with the Geological Survey of India, the administration of the Indian Mines Act, the Indian Explosives Act and the Indian Petroleum Act. The Indian Factories Act and other labour legislation also fall within its sphere. Industrial development is a provincial transferred subject, and the policy to be pursued in granting assistance to industries, the development of

## PRODUCTS

industrial and technical education, and to a large extent the research work necessary to establish the value of raw materials are all controlled by Indian Ministers in charge of the Provincial Departments of Industries. The Constitution, however, permits the Central Government to exercise supervision over industrial subjects when such a course is considered expedient.

### INDUSTRIAL EXPANSION, 1925-26.

That the prospects of industrial enterprise are improving in India is indicated by the steadily growing number of companies registered and the increasing amount of capital invested therein. In 1925-26 the companies registered numbered 473, with an authorised capital of Rs 30 crores, against 411 companies with an authorised capital of Rs 21 crores in 1924-25. Another test of improvement is the decrease in the number of companies that went into liquidation. In 1924-25 such companies numbered 502 with an authorised capital of Rs 59 crores, whereas in 1925-26 the total was 473 with an authorised capital of Rs 35 crores. Even in the cotton industry, which is admittedly in a depressed condition, 13 new mills were erected during the year.

In joint stock enterprise Bengal far outstripped Bombay during the twelve months. The authorised capital of the companies registered in Bengal in 1924-25 was a little less than Rs 5 crores, while that of Bombay was Rs 8½ crores. But in 1925-26 the Bengal figures advanced to Rs 16 crores, while Bombay's remained practically the same. This is evidently due to the planting enterprise which received an extraordinary impetus during the period.

It will be remembered that Indian joint stock activities enjoyed a boom in the years 1919-21, and then came the crash. A noticeable feature in connection with the improvement now recorded is the low amount of average capital of each company. In the pre-war year the average amount of such capital of each concern registered was about Rs 19 lakhs. This rose to Rs. 29 lakhs in 1919-20, but in succeeding years began to go down until in 1924-25 it was only Rs 5 lakhs. In 1925-26 this average increased to about Rs 6½ lakhs.

## PRODUCTS

**BOOTS AND SHOES.**—The local manufacture of boots and shoes is still very important, though imports from Europe tend to increase. Every village and town has its shoemakers, in the cities whole streets are occupied by them, and one of the most striking features of the trade in some places is the large number of Chinese engaged in it. The towns most famed for artistic shoe and leather-work generally are Cuttack and Patna (Bengal), Rampur, Lucknow, Agra and Jhansi (United Provinces); Peshawar and Kohat (Frontier Province), Chandra (Central Provinces), Jaipur and Bikaner (Rajputana), Surat, Ahmedabad, Poona, Ratnagiri and Hyderabad (Bombay), and Raichur, Salem, Trichinopoly, Madras and Mysore (Southern India). These are the chief centres of the native trade. Cawnpore is the commercial centre of the modern trade in boots and shoes of European style, saddlery, military equipment, trunks, etc.

**BREWING.**—Brewing was first attempted in India in 1825, but did not become a success till about 1870. It has now developed into one of the largest of minor industries. The production of some 20 breweries is extensively purchased by the Army Commissariat Department. Many of the breweries are located on the outer ranges of the Himalayas, and produce a good light beer better suited to the Indian climate than some of the imported ales.

**CEMENT.**—This is one of the industries which applied for protection under the Tariff Act (the application, though recommended by the Tariff Board, was refused by the Central Government) on the grounds of under-selling by imported Portland cement. The prestige which British cement enjoys has handicapped many of the cement factories in India, the maximum capacity of which is 600,000 tons yearly. With an importation of some 120,000 tons yearly, their annual output does not at present exceed 250,000 tons.

**COPPER AND BRASS WARE.**—Indian craftsmen show large aptitude in the utilisation of copper and brass and their alloys. In Burma, for example, images of stupendous size are cast in brass by a small band of operators, whose appliances would seem

Ujain and Indore in Rajputana and Central India, Poona, Bombay, Nasik, Bijapur, Baroda and Kathiawar in the Bombay Presidency, and Mysore, Madras, Madurai and Vellore in Southern India. The brass-work of Jaipur, which is essentially artistic, takes the form of miniature and charmingly natural reproductions of bullocks, carts and scenes from country life generally. The gongs and images of Burma are also well known.

**COTTON.** Indian cotton mill production during the year 1924-25 showed considerable advance over the previous 12 months. The total output of cloth in the whole of India, including the Native States, amounted to 1,970 million yards, an increase of 15 per cent. Yarn production showed about the same percentage of increase, from 617 million pounds to 719 million pounds.

Of the total cloth production, coloured piece goods accounted for 118 million yards, an increase of 17 million yards over the previous year. Under the head of grey and bleached goods, the principal varieties were shirting and long-cloth (485 million yards), dhootis (128 million yards), domestics and sheetings (72 million yards), drills and jeans (65 million yards), chadars (56 million yards), and printers (23 million yards). The total value of goods woven, as far as reported, was

or net with a different colour on each surface. This art is practised in Alwar and Kotah, and to some extent at Acola and Nasik. In Madras, the *chay* root has taken the place of the *al* dye, and gives the splendid deep rich reds once so famous in the silk handkerchiefs of that Presidency, where, indeed, the calicoes and chintzes produced are always highly coloured and very distinctive.

**TIE-DYEING.**—The art of tie-dyeing, peculiar to India, is exemplified best in the famous Bandana handkerchiefs of Northern India. The process is simple in theory, but so laborious in practice that it could only have been invented or pursued in a country where human labour was valued at an abnormally low figure. Portions of a fabric are tied up by thread and soaked in some resistant material in elaboration of the design. The fabric is then dyed its lightest colour, and the threads are unwound, or further points are tied up, and the fabric once more dyed. This is repeated until the design is completed, when the threads are all unwound and points of various shades are revealed, usually on a dark brown or black ground. This art is practised throughout Rajputana, Central India and Gujarat. It is occasionally seen in Berar and Madras, also in the Meerut and Muttra districts of the United Provinces.

MARTIN & CO, Calcutta. Managing Agents for The Bengal Iron Company, Ltd.

(See letterpress page 162)

absolutely inadequate judged by European standards. In many parts of India again, as in Rajputana, chain bangles are moulded and sold for a few annas a pair, which in Europe and America could not be produced at several times the prices charged. Between these extremes in magnitude and intricacy lies the range of domestic and sacred utensils, for the production of which every village possesses its skilled coppersmiths. Ordinary domestic utensils are rarely ornamented, but their shapes are often exceedingly graceful. Some of the most beautiful and interesting copper and brass wares of India are those directly required for ceremonial purposes, or which have been derived from the implements used at the temples. The following are the principal centres of ornamental copper and brass-work: Kashmir, Nepal and Sikkim, Amritsar and Lahore in the Punjab, Lucknow (copper) and Benares (brass) in the United Provinces; Jaipur, Bikaner, Dholpur,

Rs 59½ crores, against Rs 53 crores in the previous year. (See also article on "Cotton.")

**DYEING.**—The art of the Indian dyer, known and appreciated since the earliest times, has been of late years seriously affected by the introduction of modern mineral dyes, especially aniline and alizarine. Indigo, lac-dye *al*, turmeric, safflower, and myrobalam are the substances most employed in the industry, which is practised all over India. Every province—indeed, very nearly every large town or centre of enterprise—has something peculiar and characteristic in its dyes or methods of dyeing, or in the designs employed by its calico printers. In the Punjab, as in Kashmir, the most striking feature is the skill attained in dyeing the floss silk used in *phulkari* embroidery into deep rich shades of old gold, magenta and purple. The Central Provinces reveal the rich dark red of the *al* dye; Rajputana and Central India show the charming art of dyeing the thinnest muslin

**EMBROIDERIES.**—The term embroidery includes all forms of needlework, but excludes ornamentation applied on the loom, such as is seen in the manufacture of kincobs, jamdanis, tapestries, carpets and the like. Embroidery attains its highest development in Northern and North-Western India, and is more frequently found among the inhabitants of the hills than with those of the plains. Much of it is exceedingly beautiful, and a peculiarity of all Indian needlework may here be noticed—viz., that the needle is pulled away from, not drawn towards, the operator. *Phulkari*, or "flowered" work, is especially characteristic of the Jat population of the Punjab. Rohtak is its home, and the art is also found in its best form in the districts of Hissar, Gurgaon and Delhi. The silk embroideries of Delhi and Agra, the *chokhas* of Kathiawar, the *kasida* work of Dacca, and the *chikan* work of Lucknow also deserve mention.

**FISHERIES.**—The fisheries of India are potentially rich, but as yet yield only a fraction of what they might were they adequately exploited. The fishing industry, particularly the marine section, has certainly expanded considerably within the last 50 years concurrently with improvements in the methods of transport and the increased demand for fish, cured as well as fresh, from the growing populations of the great cities within reach of the seaboard. The caste system, however, exerts a blighting influence on progress; fishing and the fish trade are universally relegated to low caste men, who alike from their want of education, the isolation caused by their work and caste, and their extreme conservatism are among the most ignorant, suspicious and prejudiced of the population, extremely averse from amending the methods of their forefathers and almost universally without the financial resources requisite to the adoption of new methods, even when convinced of their value. Higher class capitalists have hitherto fought shy of association with the low caste fishermen, and, except in the case of joint stock companies

fresh-water fisherman the Bengali is most ingenious, his traps and other devices being exceedingly clever and effective—in many cases too effective—so eager is he for immediate profit, however meagre this may be. The greatest inland fishery is that of the hilsa, which annually migrates from the sea in innumerable multitudes to seek spawning grounds far up the branches of the Ganges and the other great rivers. Other valued fishes are the rohu and the katla prawns, which abound everywhere. Of important fishes taken in the lower reaches of the rivers and in the great network of creeks spread throughout the Sunderbans, the Lekti and the mullets are the most esteemed, apart from these estuarine fish the more valuable sea-fishes are the mango fishes, pomfrets and soles. The sea fisheries are as yet little expanded, the fishermen of Orissa, where alone coastal fishing is of any local importance, having no sea-craft save catamarans of inferior design and construction.

**BOMBAY.**—These sea-fisheries are of great importance, pomfrets, soles, sea perches

**MADRAS.** From the long Madras coast come sardines, mackerel, catfish and jew-fish (kora or gol). The catches of sardines are so largely in excess of food requirements that every year big quantities are turned into oil and manure. Fishing outside the 5-fathom line is mostly carried on by Bombay boats (Ratnagiri), which engage in drift netting for bonito, seer and other medium-sized fishes. Fish curing is extensively practised everywhere on the Madras coasts, at the 100 vairs or bonded enclosures scattered along the coast salt is issued free of duty, and over 55,000 tons of wet fish are annually cured in them.

**GLASS.**—Glass has been manufactured in India from the very earliest times, and an established industry producing mainly bangles and small bottles has existed since the 16th century. Manufacture of glass on modern European lines dates only from the end of the last century, since when a number of concerns have been started which devote themselves mainly to the production of bangles and lampware, side by side with

WORKS OF THE SONE VALLEY PORTLAND CEMENT CO. Ltd., on the banks of the River Sone.  
Managing Agents: Martin & Co., Calcutta.  
*See letterpress p. 162*

formed to engage in large operations on new lines, these capitalists cannot be counted upon to assist in the development of Indian fisheries. As in Japan, it appears that the general conditions of the industry are such that the initiative must necessarily be taken by Government in the uplift and education of the fishing community, also in the introduction and testing of new and improved apparatus and methods.

**BENGAL.**—The fishing value of the extensive deltaic region comprised in the Presidency of Bengal and the Province of Bihar and Orissa lies primarily in the enormous area occupied by inland waters, rivers, creeks,heels and swamps, to say nothing of paddy fields and tanks. These swarm with fish, and as the Hindu population is free to a large extent from the aversion to a fish diet which is widely prevalent among the better castes in the south, the demand for fish is enormous. About 1.6 per cent. of the population of the two Provinces is engaged in fishing and its connected trades, a percentage that rises to 2.6 per cent. in the Presidency alone. As a

and jew-fishes providing the largest catches. The finest of Bombay fishing boats hail from the coast between Bassem and Surat, they are beautifully constructed, attain a considerable size, and are capable of keeping the sea for weeks together. In the season the occupants fish principally off the Kutch and Kathiawar coasts and in the mouth of the Gulf of Cambay. Their main method of fishing is by means of huge anchored stow nets, which are left down for several hours and hauled at the turn of the tide. The chief catches are bombil (Bombay ducks), pomfrets and jew-fishes. The first named are dried in the sun after being strung through the mouth upon lines stretched between upright posts. South of Bombay the fishermen of Ratnagiri and Rajpur make use of another and lighter class of fishing boat specially designed for use in drift-net fishing. Fine hauls of bonito, seer (a large form of mackerel) and allied fishes are often made during the season from September to January and later of shark and rayfish. For the latter specially large and powerful nets are employed.

bottle-making on a small scale. The industry received a great impetus during the War, and there are now prosperous factories at Bombay, Jubbulpore, Allahabad, Rijnol, Ambala, Nami, Lahore and Calcutta. The native cottage industry of cheap glass bangle making has its chief centres in the Ferozabad District of the United Provinces and the Belgaum District in the south. This industry, though facing strong competition from Japan, is in a flourishing condition and supplies nearly one-third of the Indian demand for bangles.

**GOLD AND SILVER PLATE.**—From the earliest times gold and silver have been imported into India far in excess of the quantities required for the maintenance of the currency, and mainly for use as ornament or in various crafts. Gold plate is now little manufactured, but the characteristic silver plate of Southern India is still produced in Bangalore, Mysore, Travancore, Madras City, Trichinopoly and the Godavari district. The Bombay Presidency has two well-marked styles of silver plate—the Poona and the Cutch. In the former a bold repoussé work

prevails, in the latter a graceful and intricate floral design in shallow repoussé is practised. Bijapur, Sholapur, Ahmedabad and Baroda also provide good examples of Bombay silver work. Bengal has four great centres of the industry—Calcutta, Cuttack, Dacca and Monghyr. Cuttack has for many years been famous for filigree work, which has also attained a footing in other places, among which Trichinopoly, Dacca, Rangoon and Jhansi may be mentioned.

**HIDES AND SKINS.** The term hides in general parlance denotes the raw, dressed or tanned skins of bullocks, cows, buffaloes, horses, camels, etc., while the term skins is restricted to those of calves, sheep, goats, deer and other wild animals. Statistically and commercially, however, all skins are treated as hides. It has been calculated that in India there are about 180 million head of cattle and 87 million sheep and goats. The internal trade in hides is greatly affected by the seasons, and, when there is any shortage of fodder or general scarcity, the market is unusually brisk.

The trade in raw hides is centred in the big markets of Calcutta, Lahore and Cawnpore, the export trade, which is considerable, being mostly from Calcutta and Karachi. Half-tanned or "crust" tanned hides, known in the trade as East India "kips," are the product for the most part of tanneries in Bombay and Madras, the existence of the bark of *cassia auriculata* (known as *avaram* in the Madras Presidency) having created a very important industry in tanned sheep and goat skins in Madras. The finest qualities of Madras tanned skins are specially suitable for the production of light weight leathers finished in light colours. Exports of tanned hides and skins from Madras have of recent years shown large increases. One of the biggest exporting firms connected with this industry, the South Indian Export Company, Ltd. (see article following in this section), exported during 1925 hides and skins to the value of roughly a million sterling. Madras has now something over 80 per cent. of the total export trade of this valuable industry. (See also under "Commerce.")

**IRON AND STEEL.**—Though more richly endowed with iron ore than almost any other country in the world, it is only lately that India has possessed in a modern commercial sense an iron industry. The ancient iron industry, it is true, was known abroad, the skill of Indian artificers in wrought iron (of which the famous Iron Pillar is an example) being renowned. The development of the import trade, however, gradually stamped out the old native iron-smelting industry, except in the more remote districts, and of the modern industry the old East India Iron Company, at Arcot and on the Malabar Coast, and the Barakar Iron Works Company (later taken over by the Bengal Iron and Steel Company, Ltd.) may be said to be the pioneers. The business and undertakings of the latter were in 1919 acquired by the newly-formed Bengal Iron Company, Ltd. (see article following in this section), which has during the last five years attained a position of security and eminence in the industry. The story of the rapid rise to world-fame of the iron and steel industry of Jamshedpur, created by the late J. N. Tata, founder of the house of Tata, Sons and Company, is one of the most romantic in modern Indian history. It is virtually the only steel-producing concern in India to-day, its present steel capacity being about 250,000 tons annually. (See article following in this section.)

**PRODUCTION.**—According to the latest statistics available, the production of iron-ore increased by 76 per cent. from 821,053 tons

TATA HYDRO-ELECTRIC POWER SUPPLY CO.

in 1923 to 1,445,313 tons in 1924. That recorded for the Mayurbhanj State represents the production by the Tata Iron and Steel Company, Ltd., whilst of that recorded against Singhbhum, 138,939 tons were produced by the Indian Iron and Steel Company and the balance by the Bengal Iron Company. The quantity and value of the iron ore produced during 1924 were as follow—

	QUANTITY TONS	RS	VALUE £
Bihar and Orissa—			
Mayurbhanj	996,920	24,92,300	179,302
Sambalpur	654	4,578	330
Singhbhum	305,238	7,39,619	53,210
Burma—			
Mandalay	328	1,312	94
Northern Shan States	58,666	2,34,744	16,888
Central Provinces	68,361	3,73,702	26,885
Mysore	14,958	39,324	2,829
Other Provinces and States	168	1,001	72
Total	1,445,313	38,86,580	279,610

Exports of pig-iron from India in 1924-25 totalled 341,326 tons, as against 183,195 tons in 1923-24, the respective values of these amounts being Rs 2,16,81,694 and Rs 1,27,83,462. Japan and the United States are by far the largest purchasers.

**PROTECTIVE MEASURES.**—In spite of the increased production of iron and steel in India, the years 1923 and 1924 were not prosperous ones for the industry owing to a world-wide slump in the iron and steel trade. For this reason the conditions of the industry were investigated by the Indian Tariff Board and a measure of protection was introduced for steel in 1924. The pig-iron section of the industry had found an outlet for increased production in enlarged exports. In 1926 the Tata Company asked for a 10 years' extension of the protective duties as from March, 1927, and also for additional bounties on various classes of steel. The Tariff Board's decision was expected to have been given towards the end of 1926. (See also under "Commerce" and "Mining and Minerals.")

**IVORY.**—India is very largely dependent upon foreign countries for its supply of ivory, all the finer and more expensive ivory carvings are, as a rule, done on African ivory. Five localities are specially noted for their artistic ivories—Delhi, Murshidabad, Mysore, Travancore and Moulmein. The ivory carving now practised at Delhi is modern, and mainly Hindu in character, the articles produced are richly designed and carefully finished—caskets, glove-boxes, tabu ornaments, paper cutters, card-cases, chessmen and the like. The Bengal ivory workers, like those of Delhi, produce a large quantity of little ornaments for the European market. The ivory carvings of Mysore and Travancore are the finest in India, their decorative designs being drawn from very early Jain sources.

Ivory carving is as a rule hereditary, but there is no special caste identified with the craft. Ivory turning is widespread, the best specimens coming from Agra, Alwar, Jodhpur, Amritsar, Patiala and Tirupati. With the Sikh the use of the comb is almost a religious observance, and in Amritsar and other towns of the Punjab ivory combs of great beauty are made.

**JUTE.**—The value of the exports of Indian jute manufactures in 1925 exceeded Rs. 58 crores, and some 75 mills were at work, with over 41,000 looms and 863,000 spindles. The number of persons employed was nearly 300,000. (See special article on "Jute.")

**BIRKENMYRE BROTHERS, Calcutta.**

  2. (Centre). General view of Mill on the banks of the Hooghly River.
  - 3, 4, & 5. Three interior views of the Mill.
- (See letterpress, page 167).

**INDIAN JUTE MILLS ASSOCIATION.**—This association, now one of the most important, if not the most important, of the bodies affiliated to the Bengal Chamber of Commerce, was started under the following circumstances. In 1886 the existing mills, finding that, in spite of the constant opening up of new markets, working results were not favourable, came to an agreement with the late S. E. J. Clarke, Secretary to the Chamber of Commerce, as trustee, to work short time. The only mills which stood out of this arrangement were the Hooghly and Serajgunge. The first agreement, for six months dating from February 15, 1886, was subsequently renewed at intervals without a break for five years up to February 15, 1891. The state of the market at the time of the renewals dictated the extent of the short time, which varied throughout the five years between four days a week, nine days a fortnight and five days a week. Besides short time, 10 per cent of the sacking looms were shut down for a short period in 1890. An important feature of this agreement was a mutual undertaking by the parties not to increase their spinning power during the currency of the agreement, only a few exceptions being made in the case of certain incomplete new mills.

**LEATHER.**—India's local manufactures of skins and leather have steadily increased in recent years. The trade in hides and skins and the craft in leather manufacture are in the hands either of Mohammedans or of low caste Hindus, and are on that account participated in by a comparatively small community. The leather produced by some Indian tanneries, especially those under European management, is in certain respects quite equal to the best imported articles. Progress has been steady since the War, and considerable quantities of special forms of chrome leather, for which Indian hides are particularly suitable, now find a ready market in London.

India possesses a large selection of excellent tanning materials such as acacia pods and bark, Indian sumach, tanner's cassia, mangroves and myrobalam. By these and similar materials, also by various methods and contrivances, hides and skins are extensively cured and tanned, the leather being worked up in response to an immense local demand.

**LINSEED OIL.**—Linseed, extensively grown in India, supplies a valuable oil, the extraction of which is generally carried out in country mills by primitive methods, though several factories are working near Calcutta on modern lines. Production and exports showed considerable increase in 1925.

**MATCHES.**—Since the imposition of a high specific duty on matches from Japan and Sweden, India's match industry has developed. There are many match woods of fairly good quality in Bengal, and there are indications that the expert advice engaged a few years ago by more than one provincial Government is resulting in improved methods in selecting sites and carrying on the industry.

**MINOR INDUSTRIES.**—Among the minor crafts and industries of India, many of which are locally important, but which from reasons of space cannot be dealt with separately, are the sword slings and belts of Peshawar, Kohat and Quetta, the artistic water-bottles manufactured in Madras, the beautiful enamel work of Jaipur, Delhi, Bahawalpur and Multan, the stone carving of Peshawar, Delhi, Agra, Muttra, Udaipur, Jaipur, Ajmer and Gwalior, the turquoise jewellery of Kashmir, the garnet trade of Jaipur, the wine industry and papier-mache work of Kashmir, the tinsel printing of Lahore, and the marquetry work of Bombay City, Baroda and Ahmedabad.

**OIL MILLING.**—More than a million and a quarter tons of oil seeds of various kinds (linseed, groundnuts, cotton, rapeseed, etc.) were exported from India in 1924-25. It has been pointed out by the Commercial Intelligence Department that it is both economically and industrially unsound for India to export her oil seeds instead of manufacturing the oils and oil cake in the country. It allows other countries to reap the manufacturer's profits, and at the same time deprives Indian agriculture of the great potential wealth, as cattle food and manure, contained in the oil cakes.

As a matter of fact, an immense quantity of oil is already manufactured in India, but by more or less crude processes. Village oil mills worked by bullocks and presses by hand exist everywhere and supply most of the local demand for oil. There has also been a great increase of recent years in the number of oil mills worked by steam or other mechanical power. These crush all the commoner oil seeds and development has been especially marked in the case of mustard oil, castor oil, and groundnut oil. In spite of all this, there has been a perceptible diminution in the exports of oil from India particularly of coconut oil and linseed oil, and an increase in the exports of oil seeds, which is particularly marked in the case of copra and groundnuts. At present high protective tariffs in European countries and the greater expense involved in transporting oil or oil cake seem to militate against any immediately great development in the oil milling industry.

**PAPER.** The total area of India is approximately 1,805,332 square miles, of which about 294,000 square miles is forest land. The conditions necessary for the manufacture of paper are fulfilled by only a few native timbers, and these are not available for pulp making as they are required for other purposes. For the industry as it at present exists elephant grass and bamboo supply most of the raw material. Suitable coniferous woods exist in considerable quantities in the Himalayan foothills, but lack of transportation facilities is a bar to their use for pulping.

Work with bamboo has been carried on since 1875, and there are at present about a dozen mills operating with that plant sabai, or bhaib grass and a few other species of giant grasses. There are five large paper mills in the country working on up-to-date Western lines—viz., at Titagarh, Kankmara and Ranigange in Bengal, the Upper India Couper Mills at Lucknow, and the Reay Paper Mills at Poona. Their output is not enough to meet Indian needs, total production being in the neighbourhood of 35,000 short tons. A local native hand industry is that of *badami*, a light coarse paper used for both writing and wrapping. A high grade *badami* is also utilised to some extent in Government offices.

**PERFUMERY.**—This is one of the most ancient and honourable of Indian crafts, it attains its greatest importance in Northern India. Jaunpur, Kanauj and Ghazipur may be described as the chief manufacturing localities, Delhi, Amritsar and Lahore as the distributing centres, and Bombay as the emporium of foreign transactions. The more important ingredients used in Indian perfumery are lemon and geranium grass oils, spikenard, rose leaves, *hul*, musk, *galangai*, Himalayan *dhup*, patchouli, *ylang-ylang* and *keora*. The use of sandalwood oil as the basis of many products is repellent to some European tastes.

**POTTERY.**—The absence from India of a good and abundant kaolin has greatly retarded the higher developments of the potter's

craft, but perhaps less severely than have the social and religious customs of the people. According to Hindu observance, pottery is easily dehled and must be broken whenever polluted. The artistic skill of the Hindu potter has in consequence been developed in the manufacture of jars in which to store grain, spices and pickles rather than in the production of eating or drinking vessels. With the Mohammedans it may be safely inferred that the glazing of pottery originated with the production of tiles used in the ornamentation of tombs and mosques. In Southern India terra-cotta assumes a greater importance than in the north, and pottery of high quality and in style quite unlike that of Northern India is produced at various centres.

Potters, whether Hindu or Mohammedan, may be placed under two classes—the kumhar, or village potter who as a rule turns out non-glazed pottery and the artistic potter (*kuzagar*) who manufactures coloured glazed ware. With the solitary exception of the pottery of Vellore, all the present-day glazed pottery of India is essentially of Mohammedan origin.

Unglazed pottery is met with all over India. In some cases it is made so thin that it has been called *kaghuz* (paper pottery), of this nature is the terra-cotta of Gujranwala, Bahawalpur and Alwar. Sometimes a design is moulded on the surface by the fingers prior to firing, the best example of this is the Aligarh pottery. The coating of pottery with coloured lac and other substances is practised in Rajputana and Southern India.

The most reputed centres for painted pottery are Peshawar, Jullundur, Gujranwala, Rawalpindi, Bahawalpur, Lahore, Lucknow, Sitapur, Kotah and Salem. The colour is given after the pottery has been fired. This art is intimately connected with the production of idols and other sacred objects, and with the frescoing of the walls of temples and houses. The largest potteries in India are situated at Aligarh, Ranganj, Jubbulpore, Ferokeh, Calcutta and Bombay.

**SANDALWOOD OIL.**—The extraction of sandalwood oil by crude methods is one of the oldest indigenous industries in India, the principal centres being Kanauj in the United Provinces and the State of Mysore, where factory distillation has been carried on successfully since the World War sent up the price of oil. Indeed, the two State-managed factories in Mysore City and Bangalore are said to be capable together of meeting the world's demand for sandalwood oil, which is extensively used for perfumery, medicine and the manufacture of soaps.

**SALTPETRE.**—Saltpetre (potassium nitrate) is in considerable demand for industrial purposes. Its production in India is practically confined to the areas covered by the three provinces of Bihar, the United Provinces and the Punjab, in all of which places the manufacture is controlled under a system of licences by the Northern India Salt Revenue Department. Farrukhabad, in the United Provinces, is the main centre of manufacture, though the refined saltpetre produced in the Punjab excels that of any other province.

**SHELL INDUSTRIES.**—Pearl and chank fisheries are important in the extreme south of India, and to some extent in Burma also. The conch shell is cut into bracelets, armlets, charms, brooches and the like. In Eastern Bengal, and especially in Dacca, the *sankhar*, or shell-carver, is by no means an insignificant member of the artistic community. Shell-bracelets, etc., after being carved, are coloured by lac melted into the sunken portions of the design. This industry is practically confined to Bengal. Mother-of-pearl is procured at

the Indian fisheries, and is used by both stone and wood mlaylers, more especially in Northern India

**SILK.**—There are three tracts in India where sericulture is still a cottage industry of some importance—the southern portion of the Mysore plateau and a part of the Coimbatore district of the Madras Presidency, the Murshidabad, Malda, Rajshahi and Birbhum districts of Bengal, and Kashmir and Jammu, with the neighbouring sub mountain districts of the Punjab and North-West Frontier Province, in all of which the mulberry-feeding silkworm is cultivated. There is also a considerable cultivation in Chota Nagpur and Orissa and parts of the Central Provinces of the *tasar* silkworm, and in Assam of the *muga* and *eri* silkworms. All these are purely indigenous. The *tasar* is a wild silkworm never successfully domesticated, the *muga* is a semi-domesticated silkworm feeding in the open, chiefly on two particular species of laurel, while the *eri* is a domesticated silkworm feeding on castor, the silk from which cannot be reeled, but has to be carded and spun. Both in Bengal and Southern India the silk is the produce of a multivoltine worm fed on the leaves of the shrub mulberry. The Mysore industry, supposed to have been started by Tipu Sultan with seed received from China, with that in the adjoining district of Coimbatore, is now responsible for two-thirds of the total output of silk in India. A good deal of experimental work has been done in Bengal and Mysore in recent years under the direction of French and Japanese experts, and the area of land under mulberry cultivation in Bengal has been found to have increased by 33 per cent since 1913. In Kashmir, where mulberry trees are abundant and the historical records of the industry go back to the sixteenth century, only univoltine worms chiefly from seed imported every year from France and Italy are now raised. The industry is a State monopoly, and the only limit to its expansion is the amount of food available for the worms. The output of silk in Kashmir is, on a conservative estimate, 200,000 lbs. of reeled silk annually, the whole of which is exported. In the Murshidabad district are several filatures under European control, but there are in India actually only two filatures working on European lines, one in Bangalore and one in Srinagar. Of the filatures in which indigenous methods are employed, there are five establishments in Murshidabad district employing a hundred or more operatives, and one in Jammu.

**SILK MANUFACTURES.**—There was in 1925 a slight increase in the exports of silk manufactures from India and in the number of persons employed in silk-mills, though the industry has visibly declined since the War. Factory production is mainly in piece goods, sewing thread, and goods made of silk mixed with other materials. It is, however, for her hand-woven silk piecegoods that India has long been known. Most elaborate patterns are worked out with the aid of dhobies and jacquard harness, and the beautiful silk brocades (known as *kincobs*) liberally interspersed with metallic threads, for which Benares and Madras are famous, command appreciation everywhere.

**TANNING.**—See "Leather."

**TOBACCO.**—Imports of manufactured tobacco into India have always exceeded exports in value, and the difference has in recent years been accentuated by the increasing demand for cigarettes on the part of all classes of the community, who are no longer content to smoke the indigenous *biri*. The demand has at the same time encouraged the opening of a number of industries for

FAMOUS MARBLE ROCKS ON THE RIVER NEAR BUDA, NEAR JUBELIFORE.

the manufacture of cigarettes in India, of which the Peninsular Tobacco Company's concern at Moughyr is by far the largest. There are also considerable imports into Bombay and Calcutta of cigars from the Philippines and Havana. There was formerly a good market for "Burma" and "Trichy" cheroots in the Far East, but in recent years a marked preference has been shown in that market for Manilas. A limited quantity finds a sale in the United Kingdom. Indian leaf tobacco makes an excellent filler, but is generally unsuitable for wrappers, and to meet this deficiency there is a considerable import of leaf from Sumatra and Java. When the import duty

on foreign leaf was increased a few years ago the principal factory producing "Trichy" cigars for export was temporarily transferred to Pondicherry, but they are now manufactured at Dindigul in bond under Customs supervision. The Government of Bengal has recently opened a factory at Rangpur to pioneer the production of cigars in that province. Much of the tobacco grown in the east coast districts of Madras is shipped to Rangoon for conversion into Burma cheroots, though there is a good deal manufactured in Cochin for export as well as local consumption. Indian-made cigarettes are exported to a considerable extent to the Persian Gulf and to Zanzibar and Kenya.

JARDINE, SKINNER & CO., Calcutta.  
Four views of the Kankarrah Jute Mills, near Calcutta.

**WAX.**—Bee-culture is not an important industry in India, though it might easily and advantageously be made so. In consequence, the collection of honey and wax is usually one of the minor forest occupations farmed out to jungle and hill tribes. Wax is produced on a fairly large scale in certain districts of Southern India and the Central Provinces, also to a smaller extent in Bombay and Bengal. Wax is used locally in many industries, principally in processes of dyeing.

**WOOD CARVING.**—This is one of the oldest crafts of India. Most of the people regard the possession of a *charpoy* (bedstead) as indispensable, and in some parts of the country low settees or reed stools are in demand, but tables, chairs and sofas are of modern introduction and are found only in the houses of the well-to-do. It is in the production of richly carved doors, windows and balconies that the Indian carpenter has always excelled, deodar being the wood most used. Sandalwood carving for small objects is chiefly carried on in Mysore, Travancore, Trichinopoly, Tirupati, Madura and Coimbatore, in Madras, and in Kanara, Surat, Ahmedabad and Bombay in the West. Burma is also famous for its woodwork.

**WOOL.**—The annual production of wool in India is estimated at 60 million lbs., the average yield per sheep being a very low one only 2 lbs. All Indian wools are classed in the grade of "carpet wools," most of the breeds of sheep found on the Indian plains yielding a kind of hair rather than of wool. According to the last industrial census there were 30 establishments turning out woollen manufactures and employing about 12,000 people. Of these establishments, 13 were woollen mills (ten in British India and three in the Mysore State). Three of the mills in British India manufacture all classes of woollen and worsted goods, and the remainder blankets only. The market for their manufactures is almost entirely in India itself, and during the World War they were all employed to their fullest capacity in meeting the Government's war requirements. There are also in India not inconsiderable quantities of hand manufactures of felt and blankets, as well as of *putton* and *pashmina* in Kashmir and the North-West Frontier Province. Handloom weaving is generally done with handspun yarn, though yarn spun in Indian mills is to some extent used in the manufacture of the better classes of carpets.

**CARPET MANUFACTURES.**—The Empire Exhibition at Wembley made many people acquainted for the first time with Indian pile carpets. These carpets, which are for the most part hand knotted in the Punjab and the United Provinces, are generally composed of a woollen pile on a cotton warp, though woollen warps with a silk pile are occasionally made to special order. The chief centre of the industry is Amritsar, where there are about two hundred looms at work. The wool used, which comes chiefly from Bikaner or from Kerman in Persia via Nushki, is locally spun and dyed with vegetable colours. Other centres outside the Kashmir State are Mooltan in the Punjab, Jaipur and Bikaner in Rajputana, Agra and Mirzapur in Rajputana, in the United Provinces, and Ellore in the Madras Presidency. Carpet manufacture is also a feature of a number of jails, as for example Lahore, Agra, Yeraoda (near Poona) and Vellore. In Northern India the weavers are for the most part Kashmiri Mohammedans. Rugs and carpets from beyond the frontier have for many years found their way into Northern India, and the two most important trade centres for these imports, which come chiefly from Persia, Russia and Turkestan, are Peshawar, the capital of the North-West Frontier Province, and Quetta.

## PROMINENT INDUSTRIAL ENTERPRISES

### JARDINE, SKINNER AND COMPANY.

**Inception.**—The well-known firm of Jardine, Skinner and Company, Managing Agents, owes its inception to the enterprise of the late Mr David Jardine, who commenced trading as a general merchant and commission agent in 1842 at a small office in Strand Road, Calcutta. In 1845 Mr Charles Binny Skinner was admitted to partnership, and the concern has since been known by the title then assumed of Jardine, Skinner & Co.

**Personal.**—The firm, in the course of becoming one of the largest Managing Agencies in the Far East, has had several eminent and distinguished members who have done good public work. Probably the best remembered of them is Mr J J Keswick, who led the European community in Calcutta at the time of the bitter antagonism, during Lord Ripon's Viceroyalty in 1884, to what was known as the Ilbert Bill, as the outcome of which the European Association was formed, with Mr Keswick as first President.

**Activities.**—The industries in which the firm of Jardine, Skinner & Co is interested are as wide and varied in character as the wide spread area which they occupy. Amongst the foremost businesses controlled are Jute Mills, Tea Estates, Limber Forests and Coal Mines, whilst the firm is also interested in the importation of Manchester piece goods and the exportation of gummies and tea, as well as in the agencies of Insurance and Shipping Companies. A short description of some of the more important of the Companies of which Messrs Jardine, Skinner & Co are Managing Agents provides interesting figures.

**Jute Companies.**—Commencing with jute, which is the special product of the Bengal Presidency, it may be stated at once that the firm controls four jute mills in Calcutta having a total capital of Rs 1,60,00,000 and working 5,918 looms, this latter figure representing 11.9 per cent of the total looms of all the Calcutta jute mills.

**KAMARHATTY CO.**—The Kamarhatty Company was registered in Calcutta in 1877, after the great slump in the jute industry due to excess of factory production. It started with a capital of Rs 8,00,000, which has since been increased to Rs 40,00,000. The original mill at Kamarhatty, on the Hooghly River, had 320 looms, which 20 years later had been increased to 500. In 1904 a new mill was erected with 300 looms, the two factories now contain 1,710 looms, with 34,272 spindles.

**KANKNARRAH CO.**—The Kanknarrah Company was started in 1882 with a mill at Bhatpara, in the district of the Twenty-four Pergannas near Calcutta, with 250 looms. The capital of the concern at that time was Rs 14,00,000, which has gradually been increased to Rs 40,00,000. A second mill has been erected necessitating additional looms, now increased to 1,521, with 28,366 spindles.

Both the Kamarhatty and Kanknarrah Companies have also jute-buying and baling agencies at Naraingunge and Chandpur, working in connection with the mills.

**HOWRAH MILLS CO., LTD.**—This Company, whose mills are situated at Ramkrishnapore, Howrah, the managing agency of which has recently been taken over by the firm, has a capital of Rs 52,50,000. The mills have 1,663 looms and 34,768 spindles.

**RELIANCE JUTE MILLS CO., LTD.**—This Company's mills are at Kanknarrah, Twenty-four Pergannas, and have a total of 1,000 looms running and 20,000 spindles. The capital is Rs 36,50,000.

**Tea Companies.**—Messrs. Jardine, Skinner and Company are also Managing Agents of

JARDINE, SKINNER & CO., Calcutta

Reliance Jute Mills.

JARDINE, SKINNER & CO., Calcutta. Pithead Gear, Kendwadih Colliery

nine Tea Companies, of which two are registered in England and the remainder in India

**BENGAL UNITED TEA CO., LTD.** — This Company was registered in London in 1897, and has a capital of £300,000, of which £210,000 has been paid up. It owns tea estates near Darjeeling and in Cachar, as well as in Assam, with a total area of 24,560 acres, of which 6,163 acres are under cultivation

**CACHAR AND DOOARS TEA CO. LTD.**

Registered in London in 1895 with a capital of £200,000, of which £153,000 has been paid up, the Company owns estates in Cachar, the Dooars and Assam aggregating 21,542 acres, of which 4,661 acres are under cultivation

**KURSUNG AND DARJEELING TEA CO., LTD.** — Formed in 1892, this Company

has a capital of Rs 1,40,200, and owns an estate of 1,510 acres, of which 405 acres are cultivated

**CENTRAL CACHAR TEA CO., LTD.**

The Central Cachar Tea Company was established in 1863, with a capital of Rs 10,00,000, for the purpose of taking over the tea estates of Burne Braes, Mohumport, Sengapore and Rattakandi, comprising now 8,241 acres, of which 1,499 acres are under cultivation

JARDINE, SKINNER & CO., Calcutta  
Pit head, Bullaree Colliery

**CHINDYPORE TEA CO., LTD.**—This Company was registered in Calcutta in 1870 with a capital of Rs 250,000, and was the result of the amalgamation of the gardens known as Chandypon, Bulkyuly, and Ferdinanly in Cutch. The Company owns 8,000 acres, 794 of these being cultivated.

**KILLINUGGER AND KHOREELTA CO., LTD.**—Registered in 1885, this Com-

pany has a capital of Rs 3,00,000, and owns gardens at Killinugger, Khoreel, Missempon, and Kuni Tullah in Cutch, totalling 2,542 acres, of which 599 acres are under tea.

**BARADIGHI TEA CO., LTD.**—The property of this Company consists of a tea garden in the Dooars of about 1,977 acres, of which 1,075 acres are under cultivation. The capital of the Company,

which was registered in 1893 is Rs 3,00,000.

**BALLACHERRA TEA CO., LTD.**—This Company was registered in 1910, and has a capital of Rs 2,00,000, of which Rs 1,20,000 has been paid up. It owns gardens at Ballacherra, Heroncherra and Panchoira, in the Sumt Valley district of Cutch, of a total acreage of 7,522 of which 947 acres are at present under tea.

Kendwadih Colliery.

**RYDAK TEA SYNDICATE, LTD.**—The Rydak Tea Syndicate was registered in 1898, having acquired two gardens, Rydak and Kartik, in the Dooars, in the preceding year. It has a capital of Rs 4,00,000, of which Rs 2,48,800 has been paid up. The property of the Company now comprises 6,863 acres, 1,440 of which are cultivated.

**Coal and Coke Companies.**—The coal-mining industry has for a number of years claimed the attention of Messrs. Jardine, Skinner and Company, as well as the manufacture of coke and its by-products, and the firm acts as Managing Agents for five important coal companies.

**BARRIE COKE CO., LTD.**—This Company was registered in 1918 with a capital of Rs 12,00,000, all of which has been paid up. The plant consists of a battery of 35 waste heat ovens by Simon Carves, and is capable of manufacturing from 50,000 to 60,000 tons of first-class hard coke per annum. The manufacture of coke was started in 1921, and since then the plant has been continuously at work. The Company has also erected a sulphuric acid plant, and provides its own requirements in the process of manufacturing sulphate of ammonia, of which it turns out a considerable quantity.

An up-to-date plant for the recovery of benzol has also been provided, and, in spite of the adverse climatic conditions obtaining in India, very good results have been secured. A large quantity of benzol of excellent quality is now being manufactured. This benzol plant is the only one in India, and the Company is entitled to regard with some degree of satisfaction the fact that this pioneer plant has successfully been put to work in spite of the numerous difficulties against which it has had to contend, also bearing in mind the difficult nature of the process of benzol manufacture, even in those countries where climatic and labour conditions are far more favourable.

A Tar Distillation Plant is also in operation at the Barnee Coke Company's works, and large quantities of prepared road tars of different specifications, creosote oils, carbolic oils, pitch, disinfectant fluids and varnishes, etc., are manufactured.

**EAST INDIAN COAL CO., LTD.**—The East Indian Coal Company was registered in England in 1893, and has a capital of £120,000, all of which is paid up. The concern owns collieries in the famous Jherria coalfields in the district of Manbhum in the Province of Bihar and Orissa, which include those known as Kendwadih, Khovia, Dheria-joba, Kurkend, Brahmanbararee, Bhulanbararee, Jealgorah, South Bulharee and Pandra. The output of the collieries is about 40,000 tons a month, but they are equipped to raise a maximum of about 75,000 tons per month.

**SUTIKDIH COAL CO., LTD.**—This Company owns mines of first-class coal in the Jherria fields, which have an annual output of from 50,000 to 60,000 tons. It was registered in Calcutta in 1908, and has a capital of Rs 6,00,000.

**BANSDEOPUR COAL CO., LTD.**—Registered in Calcutta in 1917 with a capital of Rs 6,00,000, this Company owns a colliery situated in Jherria, which raises about 100,000 tons of steam coal annually.

**MARINE COAL CO., LTD.**—The Marine Coal Company, Ltd., was registered in Calcutta in 1901 with a capital of Rs 2,50,000, in 25,000 shares of Rs 10 each, fully paid up. Its colliery is situated in Jherria and its raisings approximate 30,000 tons annually.

**Various Agencies.**—Messrs. Jardine, Skinner and Company have always been, as the foregoing particulars show, primarily interested in the jute, tea and coal-mining industries,

but the agencies which have been described are far from exhausting the activities of the firm, which acts also as agents for timber trading, shipping and insurance concerns.

**BENGAL TIMBER TRADING CO., LTD.**—The Bengal Timber Trading Company, for which Messrs. Jardine, Skinner and Company act as Managing Agents, was registered in 1897, and has a capital of Rs 6,00,000. The Company early acquired the undertakings of the old Bengal Timber Trading Company, Ltd., and the Nagra Timber Company, Ltd., and now owns large forest concessions over an extensive area stretching in a northerly direction from near Panposh in Gangpur, one of the Feudatory States, in Northern Orissa, to and along the terai of the Ranchi plateau, their rights including the extraction of sal for the manufacture of railway sleepers. In addition to working the forest concessions, the Company deals largely in imported timbers, such as teak, Oregon pine, padauk and others.

**SHIPPING AGENCIES.**—For a number of years Messrs. Jardine, Skinner, and Company have been agents in Calcutta for a regular service of ships to China, their records in this branch of business going back as far as the year 1869; this line is now known as the Indo-China Steam Navigation Company, Ltd. A joint mail service is worked with the Apcar Line, whose steamers were formerly owned by Messrs. Apcar and Company, but now belong to the British India Steam Navigation Company, Ltd. This service was a few years ago extended to Japanese ports.

Agencies are also held for the Pacific service of the America Australia Orient Line, the Royal S. M. Co., and the "Glen" Line, and the firm in addition acts as Secretaries in Calcutta to the Calcutta Trans-Pacific Conference.

**INSURANCE AGENCIES.**—The firm is largely interested in Fire and Marine Insurance, being Managing Agents for the Triton Insurance Company, Ltd., a company which was registered in 1887 with a capital of Rs 23,00,000, of which Rs 5,75,000 has been paid up, and which resulted from the amalgamation in 1905 of the Triton Insurance Company and the Eastern Insurance Company, Ltd. Messrs. Jardine, Skinner and Company are also agents for the Manchester Assurance Company, Ltd. (incorporated with the Atlas Insurance Company, Ltd.), the Canton Insurance Office, Ltd., the Hong-kong Fire Insurance Company, Ltd., and the South British Insurance Company, Ltd.

**Import Business.**—Messrs. Jardine, Skinner and Company are importers on an extensive scale of Manchester piece goods, in connection with which branch of business they have lately taken over the Managing Agency of the old-established firm of Ewing and Company, Ltd., who have long been prominently identified with the piece goods trade, as well as being largely interested in Oregon pine sleepers and fertilizers of all descriptions.

**Exports.**—Indian produce, chiefly gunny bags.

**Partners.**—The present partners of the firm are Messrs. F. G. Stewart, R. Jardine Paterson and Sir P. W. Newson, Bart., who reside in Great Britain, and Sir A. R. Murray, C.B.E., and Messrs. J. Mein Austin and W. T. Hunter, resident in Calcutta.

**Office.**—The early premises of the firm in Strand Road have already been mentioned. In 1869 these were given up for larger and more commodious premises at No. 4 Clive Row, Calcutta, which have been occupied continuously ever since.

**London Agents.**—Messrs. Matheson and Company, Ltd., 3 Lombard Street, E.C.

**China Agents.**—Jardine, Matheson and Co.

**Singapore Agents.**—Messrs. Boustead & Co.

**Cables.**—"Jardines," Calcutta.

**Bankers.**—Imperial Bank of India.

MARTIN & CO., Calcutta.

Head Office, designed and built by the Company's own Contracting Department.

#### MARTIN AND COMPANY.

**Inception.** - The history of this well-known company begins with the arrival in India in 1874 of the late Sir Acquin Martin (then Mr T. A. Martin), who formed at Calcutta a branch of Messrs Walsh, Lovett & Co., a firm of merchants with large interests in South America and headquarters at Birmingham and London.

**Early History.** - Early in 1875 an office was opened in Chive Ghat Street, when the business of general stores and metal merchants, the home firm's chief interests, was started. In the late 'eighties a large contract for the building of an aqueduct in the Bombay district was secured, Mr W. R. Flavin, civil engineer being brought out to superintend the work, and shortly after Mr A. Kimber, son of Mr James Kimber, chief engineer to the Calcutta Corporation, joined the staff. At that time large waterwork developments in Northern India and local drainage schemes were being placed by Government, and Sir Acquin Martin became associated with Sir Rajendra Mookerjee, then Mr R. N. Mookerjee, in securing these contracts.

The development of this side of the business did not appeal to Messrs Walsh, Lovett & Co., who looked on the Indian branch as primarily an outlet for home manufactures, and they withdrew from the Indian trade.

**Formation of Present Company.** - In 1892 Sir Acquin Martin was joined by Sir Rajendra Mookerjee in partnership when the firm under its present designation was constituted, with headquarters in India and a branch in London in charge of Mr I. Freer. At the same time Mr C. W. Walsh and Mr Harold Martin were admitted as partners, the interest of Messrs Walsh, Lovett & Co. being transferred to the newly constituted firm.

**Development.** - From this date the development of the new company's business was rapid. Beginning with the Howrah-Arma and the Howrah-Sheakhala lines, the first feeder railways in India were constructed (the capital for these being found in India), to be followed quickly by the Bukhtiarpur-Bihar, Baraset-Basirhat and Shahdhar-Saharanpur Railways. Various important agencies were also secured, including that of the Bengal Iron and Steel Company (formed in 1889), and the early years of the present century were marked by the flotation and development of collieries, docks and engineering works, manganese mines, tea, timber, electric supply, cement and allied undertakings, all following a clear and well-defined policy of developing the resources of India, chiefly so far as they related to engineering in all its branches.

On the contract and building side of the business the development of the company's activities has been very marked, large contracts for waterworks and jute mills having been successfully carried out, while the name which Calcutta still bears as a City of Palaces is due in no small measure to the many handsome buildings designed and erected by the organisation. It will ever be remembered that the many difficulties associated with the planning and construction of the All India Victoria Memorial in Calcutta were successfully overcome by the firm, to whom was entrusted the whole of the work until its completion.

**Present Activities.**—Messrs. Martin & Co. are primarily architects, builders, engineers and contractors, and their activities in these branches extend all over India and are increasing each year. They are also the

managing agents for several important engineering and other companies, railways, mines and tea estates, each of which will be found enumerated below. At the same time the original side of the firm's business, which has ever remained an important section—that is, the trade in metal and engineering stores—has grown with the general progress of the company, until there is to-day hardly a town or district in the East and North-East of India in which Martin & Co's stores machinery or metals are not found.

The activities of the various departments constituting the business are summarised below.

**Building and Contracting Departments.**—With these departments are connected perhaps the best-known of Messrs Martin & Co's many activities, a large proportion of the most prominent public and private buildings in Calcutta having been constructed—and in many cases designed—by them.

**BUILDINGS**—First in importance of these buildings is the All India Queen Victoria Memorial in Calcutta, the total cost of which was Rs 76,00,000 and which occupied 19 years in construction (see also the special article on "Calcutta"). Others in Calcutta are The Royal Insurance Buildings, Central Bank of India, Chartered Bank of India, Australia and China Alliance Bank of Simla, Mercantile Buildings, Shaw Wallace & Co's offices, Diocesan College, Calcutta Club, Masonic Hall, Church of St. Mary, the Imambarah, Mysore Memorial, Elphinstone Bioscope, Madan's Theatre, Bengal Nagpur Railway offices, Grosvenor House, and numerous private residences.

For the Bihar and Orissa Government Messrs Martin & Co. carried out the buildings for the new capital, Patna, the value of contracts for which was Rs 80,00,000. Bhagalpur College, Cuttack College and Dhanbad School of Mines. For the United Provinces Government the Council Chamber, Lucknow, was constructed at a cost of Rs 20,00,000, and for the Eastern Bengal and Assam Government the Dacca Government Buildings, which cost Rs 15,00,000.

**CONTRACTS**—These have been many and varied, the number of jute and cotton mills, tannery tobacco and other factories constructed being very large. Of these, the Auckland, Barnagore East, Dalhousie, Kamarhatti, Kilm, Northbrook and Standard jute mills, the Bowreah and Dunbar cotton mills and the Monghyr Tobacco Factory may be specially mentioned.

The firm also does a large business in contracting for water and drainage works, reinforced concrete construction, etc., among the many water works carried out by it being those of Allahabad, Agia Cantonment, Benares, Calcutta, Cawnpore, Delhi Durbar Supply, Dum-Dum, Lucknow, Meerut, Monghyr, Naini Tal, Srinagar and Serampore.

**Structural Steel Department.**—This department of Messrs Martin & Co is concerned with the erection of steel frame buildings, factories, warehouses, steel roof principals, works extensions, pithead frames, steel bridges, steel coolie huts, steel domes, godowns, etc. Designs and prices for lattice, plate and composite girders, and for steel columns to suit any span and load are supplied. Works: Berapukur Iron Works, Kidderpore.

**Metal and Stores.**—The company's store yards are at Kidderpore, where comprehensive stocks are held of all sections of British and Indian iron and steel fittings, rolled to British standard tests. These include

joists, channels, tees, angles, bars, girders, plates, galvanised and corrugated iron sheets, cast iron rain-water pipes and connections, mining and railway requisites, kodallies, sluice valves, fire hydrants, etc.

In this connection Martin & Co. are sole agents for the following British firms: The Monkbridge Iron and Steel Co., Ltd. (Yorkshire iron), R. A. Skelton & Co. (broad flange beams), Tuck & Co., Ltd. (engine packings, etc.), and W. & F. Walker, Ltd. (disinfectants).

**Timber Department.**—The development of the magnificent forests of the Andamans has recently received the attention of the Government of India. For the sale of timber so produced Messrs. Martin & Co. have been appointed agents. Many of the hardwood timbers have a deservedly high reputation both for constructional and cabinet-making purposes. The firm holds large stocks of the famous padauk, pyrimma, gurjan, badam, koko, white chuglam and other woods, purchasers being offered the most suitable material for all classes of constructional and decorative purposes at prices which compare favourably with those of the various imported timbers of a similar class. Samples of padauk, the beautiful deep-red and ornamental cabinet wood, which is well known in the markets of Europe and America, will be sent by the firm on request. Stocks of excellent packing timbers, such as dhup, papita and didu, are also held in large quantities.

**Woodworking Department.**—This is an important branch of the company's business. Here have been made the doors, windows, partitions, staircases, carved work and all interior fittings of the many public and private buildings erected by the firm, which employs a specially trained staff of carpenters and joiners, maintains an up-to-date saw-mill in Calcutta, and can quote for every class of woodwork for public and private buildings, factories, etc.

**Railway Department.** Messrs. Martin & Co. are managing agents for the following Light Railway companies, all of whose lines were surveyed, constructed and equipped by them:

**CHAPARMUKH SINGHAT RAILWAY CO., LTD.**—Part of Bengal Assam Railway

system. Opened 1920. Length, 50.81 miles. Gauge, 3 ft 3½ in. Total capital outlay (to 31/3/25), Rs 30,62,372.

**FUTWAH-ISMAMPUR LIGHT RAILWAY CO., LTD.**—Opened in 1920, and runs from Futwah to Islampur in Bihar and Orissa. Length, 27 miles. Gauge, 2 ft 6 in. Total capital cost (to 31/3/25), Rs 15,52,573.

**SHAHIDAR-I-SHAHARPUR LIGHT RAILWAY CO., LTD.**—Company registered 1905. Works 92½ miles of line in United Provinces. Gauge, 2 ft 6 in. Opened 1907 and cost Rs 47,62,496 to March 31, 1925.

**ARRAH-SASARIM LIGHT RAILWAY CO., LTD.**—Total length, 65.16 miles, of which 60.50 miles in Bengal were opened in 1911, the extension to Tarachundi Hill in Bihar and Orissa being completed in 1914. Gauge, 2 ft 6 in. Total capital outlay (to 31/3/25), Rs 23,41,015.

**HOWRAH-AMTA LIGHT RAILWAY CO., LTD.**—Owns 43.87 miles of line between Howrah and Amta, with three branch lines. Gauge, 2 ft. Total capital outlay (to 31/3/25), Rs 27,96,446.

**HOWRAH-SHEAKHILA LIGHT RAILWAY CO., LTD.**—Registered 1865. Length 7.38 miles of main line, 2.37 miles of branch line. Gauge, 2 ft. Total capital cost (to 31/3/25), Rs 7,87,327.

**BUKHTIARPUR - BIHAR LIGHT RAILWAY CO., LTD.**—Owns 33 miles of light railway in Patna district. First section opened 1903. Gauge, 2 ft 6 in. Total capital outlay (to 31/3/25), Rs 14,60,821.

**BARASET-BASIRHAT LIGHT RAILWAY CO., LTD.**—Registered 1902. Main line commenced 1904, completed 1909. Total length, 52.24 miles. Gauge, 2 ft 6 in. Total capital outlay (to 31/3/25), Rs 24,23,763.

**DELHI-AMBALLA KALKA RAILWAY CO., LTD.**—Registered 1889. Main line opened 1891, and with branches now forms part of East Indian Railway system. Total mileage, 206.51 miles. Total capital outlay (to 31/3/25), Rs 2,00,92,038. Head office of company, 237 Gresham House, Old Broad Street, London, E.C.2.

**Mining and Mineralogical Department.**—This department undertakes the examination of and reporting on coal-lands, manganese,

chromite, iron ore, limestone, galena, ochres and other mineral properties.

**Marble and Stone Department.** The well-known Kutia stone and marble works of Messrs. Martin & Co. are located at 5 Kutia Road, Kidderpore, Calcutta, where the largest stock in India of white and coloured marbles is held. The whole of the marble and stone for the Victoria Memorial was quarried and worked by the firm, which was also responsible for the stone and marble work of many other buildings and memorials, among which may be mentioned the Hongkong Bank the Cenotaph, the Ronaldshay Memorial, the ICS Memorial in Calcutta, the Council Chamber at Lucknow, the Gurkha Memorial at Lansdowne and St. Ignatius Church Altar at Kidderpore.

**Brickfield Department.** The company owns extensive brickfields at Topsy, Bally and Panchpara, where the bricks used in building operations are made. These brickfields are fitted with up-to-date plant for the manufacture of the highest quality of bricks, tiles, stonkey, etc.

**Coal Department.** Martin & Co. are managing agents for the following collieries—

**KUSUNDI AND NYIDEH, LTD.** Situated in Jherria, these collieries work 10, 11 and 12 seams (Grade II) with an output of about 15,000 tons a month.

**SAIPUKURIA AND ASANSOL, LTD.**—Near Asansol Old Station. Output, 4,000 tons a month of Ghusick Seam Coal (Grade I).

**SAMLA AND KENDRA, LTD., SAMLA-MANDARBONI LTD., SAMLA-GOVINDPUR, LTD.; SAMLA-RAMNAGAR, LTD.**—The Samla group of collieries near Pandaveswar is working Samla Seam (Grade I). Samla-Mandarmoni Siding is not yet constructed, but the output of the other three collieries amounts to about 25,000 tons a month.

**RATIBATY, LTD.**—This colliery, near Kalpahari, is working Nega Seam (Grade I). The colliery siding has only recently been completed, and an output of 5,000 tons a month is expected.

**TRANS-ADJAI, LTD., PORIAPUR, LTD.**—The Poriapur and Trans-Adjai Collieries work the Kasta Seam (Grade I). The present output is about 20,000 tons.

**MOIRA, LTD.**--This colliery is closed pending the completion of a siding.

**Tea Department.** The tea gardens under Martin & Co's managing agency are as follow

**DOOARS DISTRICT** Attabari, Chamurchi, Dhowlaphora, Debpata, Dheklapara, Gurjaman, Gazalduba, Kohmoor, Katalguri, Kolabari, Ringati, Mathura, Makrapara, Mijnai, Nuntjhora, Nedun, Pastkapara and Ranghora Estates.

**ASSAM DISTRICT** Menoka, Sonapuri, Shyamguri and Tezapore Estates.

**TERAI DISTRICT** Manjha and Kamala Estates.

**SYLHET DISTRICT** Bulvanagar Estate.

**Bengal Iron Company, Ltd.** The firm acts as managing agents for this well known company, which was incorporated in England, with a capital of £3,075,000. Its works, situated at Kulti on the East Indian Railway, were originally established in 1875 and comprise blast furnaces, foundries, engineering shops, coke ovens, a by-product plant, three collieries and iron ore mines. The foundries are the largest and most up-to-date in the East and can manufacture castings up to 50 tons in weight. The annual capacity exceeds 100,000 tons. The pipe foundries make vertical cast pipes to British standard specification, and have a capacity of 50,000 tons of all sizes a year. The sleeper foundries for the manufacture of cast iron railway sleepers are capable of an output of 1,000,000 sleepers per annum. The Indian office of the company is at 6 and 7 Chive Street, Calcutta, and the London house at 10 Princes Street, S.W. 1.

**Bengal Fire Brick Company.** Martin & Co. are the managing agents for this company, which at its works at Kulti manufactures fire bricks of all kinds, boiler linings, blue bricks for flooring, vitrified bricks, ground fireclay, earthenware pipes and roofing tiles. Branch offices at Bombay, Madras and Lahore.

**Eastern Light Castings Company, Ltd.** Incorporated in Scotland, this company, for whom Martin & Co. are managing agents, owns extensive and up-to-date works at Barakar, F.I.R., where all kinds of water-pipes, soil pipes, gutters and fittings are manufactured. Head office 142, St. Vincent Street, Glasgow. Agencies in Bombay, Madras, Karachi and Lahore.

**Robert Hudson (India), Ltd.** This firm was formed about ten years ago by the parent company of Robert Hudson, Ltd., of Leeds, to take over the activities of the branch of the latter which had been established for some ten years previously.

The firm specialises mainly in light railway material, and the works are to-day the largest in the East exclusively occupied with the manufacture of light railway plant. They have equipped, during the last 20 years, practically every large irrigation works with a portion of its light railway plant, among such being the Upper Swat Canal, Abbazi Weir project, Upper Jhelum Canal, Sutlej Valley project, Lloyd Barrage and Canals project, Lloyd Dam, Nira Right Bank Canal, Sarda Canal project, Krishnarajah Sagara project, Siddapuram project, Moosy River project, Mirzapore Canal, Bhimgoda Weir, Tendula Canal, Mahanaddi Canal, etc. A good deal of business has also been done by Robert Hudson (India), Ltd., in the coalfields area of Bengal.

In addition to the head office in Calcutta, the company has branches at Karachi and Bombay and a storeyard at the former place. In Calcutta it possesses well-equipped, up-to-date workshops served by two main line sidings, and the works have an output capa-

city of 500 tipping wagons a month. Address: 6 and 7 Clive Street, Calcutta (cables: "Ralettrux," Calcutta). Managing agents: Martin & Co., Ltd.

**Improved Anchor Company, Ltd.** Martin & Co. are managing agents for this company, which manufactures the improved rail anchor for the prevention of rail creep, thousands of which are in use in various parts of the world. Address: 6 and 7 Clive Street, Calcutta (cables: "Ralettrux," Calcutta).

**Hooghly Docking and Engineering Company, Ltd.**—Shipbuilding, ship repairing and engineering in all branches are the business of this company, whose large works at Sulkea are fitted up with modern electrically driven machinery, with which all kinds of engineering work and boiler repairs can be carried out on the most modern lines. The shipyard has been laid out on up-to-date plans and is equipped to execute the building of all classes of steam and motor vessels, cargo boats and flats up to any capacity. The foundry is capable of manufacturing castings up to 15 tons and also heavy castings in brass and gun metal. Castings for jute mills are specially catered for.

In the engineering line the company has executed heavy repairs to ships belonging to nearly every shipping company, and lately supplied and fitted the biggest cast iron propeller ever made in India to *S.S. Cape Recife*. It has done practically every repair required for any Diesel-driven ship visiting this port. Head office: 6 and 7 Clive Road, Calcutta. Workshops and dock: 6 Howrah Road, Sulkea (cables: "Hooghly Dock," Sulkea). Managing agents: Martin & Co.

**Sone Valley Portland Cement Company, Ltd.**—This company was incorporated in 1922 with an authorised capital of Rs 1,00,00,000 upon the advice and with the technical assistance of the Associated Portland Cement Manufacturers, Ltd., London, whose brands of cement are so well known and highly esteemed all over the world.

The company's works are situated on the banks of the River Sone at Japla in the Province of Bihar and Orissa, about 370 miles from Calcutta. Limestone and gypsum are the raw materials used, and the plant, of the very latest design and electrically driven, is capable of producing about 60,000 tons of cement per annum.

The brand under which the company sells its cement is the well-known "Rohtas," which is used extensively by many Government departments, including the Calcutta Port Commissioners, the Calcutta Corporation, the East Indian Railway, the Assam-Bengal Railway, the Central Indian Coalfields Railway, the North Western Railway, the Public Works Department, and by all the leading engineers and contractors. Managing agents: Martin & Co.

**Kalyanpur Lime Works, Ltd.**—Martin & Co. have been managing agents for this company since 1917. It manufactures a very fine quality of lime at its works at Dehri-on-Sone, which have an output of some 150,000 maunds per month.

**Crompton & Company, Ltd.**—Manufacturers of complete electrical equipment for all industrial requirements, including alternators, arc lamps, boosters, ceiling fans, cinema generators, colliery equipment, hydro-electric equipment, laboratory apparatus, etc. The Crompton Auto-Synchronous Motor for power factor improvement, from 5 to 5,000 h.p., is a speciality of the firm, this being suitable for heavy direct coupled slow speed drives in jute and cotton mills. Managing agents: Martin & Co. Offices: 6 and 7 Clive Street, Calcutta (cables: "Cromptonco," Calcutta). Branch offices: Bombay (cables: "Firmament," Bombay);

**RUSTON & HORNSBY LTD** Managing Agents, Martin & Co., Calcutta.

Dragline at Work on new Dock Excavation, Calcutta

Madras (cables "Cromptonco," Madras) and Rangoon (cables "Clobberfeld," Rangoon)

**Hadfields (India), Ltd.**—This company, a development of Hadfields (Merton), Ltd. was formed in 1924 for the manufacture in India of high class enamel paints, varnishes, distempers, etc. The highest standard of manufacture has been aimed at throughout, and orders for 1926 included contracts from several of the railways and Government Departments. The firm also manufactures electrically welded drums, buckets and other leak-proof containers. Managing agents, Martin & Co. Offices, 6 and 7 Chive Street, Calcutta (cables "Martin," Calcutta). Agencies at Madras, Kanachi, Lahore, Cochin, Colachel, Tuticorm and Cochin.

**Howrah Engineering Company, Ltd.**—Martin & Co. are the managing agents for this firm of engineers and iron founders, whose specialities include the "Cascade" fire hand pump, castings, mill gearing, mill columns, plummer blocks, railings, gates, etc.

**Indian Manganese Company, Ltd.**—This company owns and works the Kutchee Kodagaon, Netra, Langer, Budkum and Wadhona mines in the Central Provinces, the total output of which averages 50,000 tons yearly of first grade ore and 10,000 tons yearly of second grade ore. Managing agents, Martin & Co. Head office, Dixon House, Lloyd's Avenue, London, E.C. 3.

**National Indian Life Insurance Company, Ltd.**—This company, established under the firm's managing agency in 1907, with a capital of Rs 10,00,000, carries on an extensive business all over India, Burma and Ceylon through an organisation of branch offices and agencies. Head office, 6 and 7 Chive Street, Calcutta. Resident manager's office, 2 Lyon's Range (cables "Nile," Calcutta).

**National Tannery Company, Ltd.**—This well-known tannery, which has taken a leading part in the introduction of modern tanning methods into India, was established by Dr. Sir Nilratan Sircar in 1905, and was converted into a limited liability company in 1919, with a capital of Rs 3,00,000, Martin & Co. being entrusted with its management. The company specialises in the manufacture of chrome shoe upper leathers, chrome splits, upholstery and mill leathers, chrome buffalo hides, tanned lizard skins and shikar trophies. It

also undertakes the rolling and embossing of leathers for the trade. Offices, 6 and 7 Chive Street, Calcutta (cables "Crompton," Calcutta).

**United Provinces Electric Supply Company, Ltd.**—Martin & Co. are the managing agents for this company, which has carried out important electrification works at Allahabad, Lucknow and Agra. Offices, 6 and 7 Chive Street, Calcutta (cables "Martin," Calcutta).

**Engineering Department.** This department of Martin & Co. handles various agencies, including the following: Messrs. Ruston & Hornsby's excavators, steam and oil engines, road rollers, Lancashire and vertical boilers, etc.; J. & E. Hall's refrigerating and ice making machinery; Edgar Allen's stone crushing plant; Alley & MacLellan's air compressors, etc.; John & Edwin Wright, Ltd.'s wire ropes; The Skoda Works, Ltd., Prague.

Since 1922 Ruston excavators to the number of 25 have been supplied for various schemes in India. The Lloyd Barrage and Canals Construction are using many machines, both of the steam and oil engine driven types, and the air compressors used on this project are of Alley & MacLellan's manufacture, being supplied by this department. Most Indian tea gardens use Ruston's famous cold-starting crude oil engines, and on the roads of every municipality their steam road rollers are to be seen working. The Hardy Patent Pick Co., Ltd., rock drill agency held by the firm continues to make progress, the new Argada Colliery of the Bengal-Nagpur Railway having lately been supplied with a complete drilling equipment, and the Coimbatore Waterworks with a full tunnelling plant. Among other orders, air compressors and rock drills have been supplied to the Sone Valley Portland Cement Company and the Indian Manganese Company.

The department furnishes machinery for schemes in connection with mining, quarrying and excavation of any description. Large stocks are kept in India, and expert service relating thereto is maintained by the department.

**Personnel.**—On Sir Acquin Martin's death in 1906, Sir Rajendra Nath Mookerjee became and still is the senior partner of the firm, Mr. Ernest Martin being admitted a partner.

The latter was obliged to leave India in 1912 through ill-health, and was succeeded by Mr. Oswald Martin. In 1920 Mr. Leslie Martin took the place of Mr. Harold Martin, who retired to the London office, where he had been preceded by Mr. C. W. Walsh in 1917.

**Head Office.**—6 and 7 Chive Street, Calcutta (cables "Martin," Calcutta).

**Bombay Branch.**—Sassoon Building, Ballard Estate (cables "Cotnamar," Bombay).

**London Branch.**—1 A Martin & Co. Vestry House, Laurence Pountney Hill, Cannon Street, E.C.

**Codes.**—Bentley's Complete Phrase, A B C, Lieber's Strand, A 1, Western Union, Scott's and private.

(See also illustrations, pp 150, 151.)

#### **BIRKMYRE BROTHERS.**

**Inception.** The Hastings Jute Mills, situated at Rishra, near Calcutta, of which Messrs. Birkmyre Brothers are the proprietors, were established in 1871 by William and Adam Birkmyre. The brothers had originally owned a small jute works, the Greenock Sacking Company, in Lynedoch Street, Greenock, driven by a water turbine, but, foreseeing the development and future importance of the jute manufacturing industry in Bengal, they decided to dismantle the works and transfer their entire machinery to Calcutta for re-erection on the banks of the Hooghly.

**Site.**—The site fixed upon for the mill was part of the populous district of Rishra, and situated on the western bank of the Hooghly two miles below Serampore. There was installed the machinery of the Greenock Sacking Company, the new works being named the Hastings Jute Mills from the circumstance of the lands having formerly belonged to Warren Hastings, as evidenced by two leases among the title deeds which bear his signature and seal. Those perfectly-preserved documents are now in the possession of the firm. On the south bank of the Champa khal stood Rishra House, where Warren Hastings and his wife were accustomed to stay. It was surrounded by a brick wall, the western portion of which was lined with a row of mango trees said to have been planted by Mrs. Hastings. When Hastings retired he sold the house and adjoining land (130 bighas), receiving twice as much as he paid

2 Manufacturing line and conveying them automatically to—

THE ASIATIC PETROLEUM  
1. Bird's eye view of Works at Budge Budge, Calcutta, where 1,200  
3. Filling Department

for them. The lodge now forms part of the Hastings Mill, a portion of the original building being used as the manager's office.

**Personal.**—Messrs William and Adam Birkmyre associated with them in the new undertaking their brothers Henry and John, founding in Calcutta, simultaneously with the starting of the jute mills, the now well-known firm of Birkmyre Brothers. That constitution of the concern remained unchanged until 1890, when Messrs William, John, James and Archy Birkmyre, sons of Mr Henry Birkmyre, senior, and Mr John Finlay were admitted as partners. Messrs Henry and William died in 1900, Mr. Adam in 1906, and Mr John in 1910. After the death of Mr. William, junior, in 1921, the partnership was reconstituted in the following year, the new (and present) partners being Sir Archy Birkmyre, Bt., CBE (senior and managing partner), Mr. John Birkmyre, Mr. J. Finlay, Mr Henry Birkmyre (son of Sir Archy) and Mr Henry Birkmyre (son of John Birkmyre).

**Development.**—The Hastings Jute Mills prospered from the start. In 1893 the plant had been increased to over 300 looms, with

other machinery in proportion. Electric lighting, the first to be installed in an Indian jute mill, was introduced in that year. From 1894 to 1904 the works were run at night by artificial light, a practice eventually discontinued through labour difficulties. The proprietors proceeded further to enlarge the mill and factory, discarding the old steam-power engines in favour of electric generators driven by steam turbines, producing about 4,000 h.p. To-day a perfectly equipped factory of 1,077 looms has been arrived at, with the relative preparing, spinning and finishing machinery all electrically operated.

**Buying Agencies.**—Messrs Birkmyre Bros have established jute-buying agencies in Naraingunge, Northern Bengal, and Jessore for the purchase of raw material for consumption by their mills.

**"Hastings Belting."**—The manufacture of the firm's celebrated "Hastings" belting dates back to the year 1882, when the first belting looms were erected at the Rushra Mills. The result of over 40 years' manufacturing experience, this product in both hair and cotton forms now enjoys widespread

popularity, used as it is by all the leading railways of India, the Calcutta jute mills, the Bombay cotton mills, tea gardens, and most of the largest industrial concerns in the Peninsula. New looms, embodying all the latest improvements in belting machinery, have been imported from time to time as the demand for "Hastings" belting increased.

**MANUFACTURE.**—The belting is made and tested under the actual conditions for which it is required, purely Indian labour being employed under expert European supervision. The yarns used are the finest available from home, guaranteeing a product equal in all respects, if not superior, to any imported belt of similar class. Special attention should be drawn to "Hastings" cushion surface belting, which has excellent gripping qualities recommending its use for difficult problems in belt transmission.

**EXPORT.**—"Hastings" belting is exported to Singapore, Buenos Aires, South Africa and elsewhere, its world-wide acceptability and rapid increase in sales proving its favourable comparison in quality and price with rival manufactures.

4 A Machine shop and

5 Commodious Storage Facilities at Budge Budge

**Paulin Department.** About 35 years ago The Gourock Ropework Company, Port Glasgow, Scotland, for whom Messrs. Birkmyre Bros are sole agents in India, Burma, and Ceylon, introduced a patent waterproof canvas now well known as Birkmyre's Waterproof Cloth. This innovation was designed to show that the existing crude oil tarpaulin is unwieldy in use compared with an impregnated canvas covering, which when folded does not crack or leak, and, retaining all the elasticity of the canvas, is easily handled. The cloth has an extensive sale in all tropical countries, as the heat of the sun does not affect it, whereas the surface-dressed cloth becomes useless after short exposure. The process is applied to both flax and cotton canvas. Large stocks of both dressed and undressed cloth are kept at Messrs. Birkmyre's Hastings Mill.

**ADAPTABILITY.** — The Birkmyre Motor Hood Canvas is but one example of the fabric's adaptability to every kind of waterproof covering. It is employed in the manufacture of tarpaulins, ground sheets, bulking sheets, kit-bags, golf-bags, holdalls, bearers'

valises, canvas bags of all descriptions, tea-chest covers, awnings, water-troughs, diggies and other articles.

**Orders.**—Contracts of considerable size have been executed by the firm for the Indian Stores Department, the leading railways, Government Departments, jute mills and prominent industrial concerns.

**Offices.**—6 Clive Row, Calcutta (cables "Birkmyres," Calcutta) Codes: Western Union, Bentley's, A.B.C., 5th Edition and Private.

**Bankers.** The National Bank of India, Ltd.

(See illustration, page 153.)

#### THE ASIATIC PETROLEUM COMPANY (INDIA), LIMITED.

**Oil Industry.** Nothing in the trade of the East is more remarkable than the rapid growth of the petroleum industry in India during the last 25 years. The Empire was essentially a consumer of vegetable oils, and accordingly the task of converting the people to the use of kerosene as an illuminant was not an easy one in its early stages. The present-day results have, however, amply

justified the foresight of Lord Bearsted (formerly Sir Marcus Samuel, chairman of the Shell Transport and Trading Company, Ltd.) who was the pioneer of the carriage of petroleum in bulk in tank steamers.

**Inception of Company.** The Asiatic Petroleum Company (India) Ltd. was formed in the year 1911, having been incorporated in England to operate as importers and distributors of petroleum products.

**Activities.** The marketing company in India of the Shell-Royal Dutch Combine, as such it controls one of the largest organisations of the kind in the East, and has provided the country with a network of agencies, mainly in the hands of Indian traders, which distribute kerosene to the consumer in the most distant hamlets. The four-gallon kerosene tin is one of the most common articles in use throughout the land, for though its primary use is for the carriage of oil, it is subsequently put to such varied duties as the carrying of water, the boiling of rice, the roofing of houses and the transport from the interior to the main ports of ghee, vegetable oils, tobacco and molasses.

THE ASIATIC PETROLEUM CO. (INDIA) LTD.

1. Automatic Conveyor loading Kerosene at Calcutta.
2. Type of City Motor Transport in use.
3. Company's Private Jetty at Budge Budge.
4. S.S. "Sclaria" discharging Oil.

**Products.**—The products distributed by the company include kerosene, "Shell" petrol and motor oils, lubricating oils, liquid fuel and solar oil, batching oil, "Shell" mineral turpentine, and asphalt for road construction, waterproofing and other purposes.

**PETROL AND MOTOR OILS.**—The Asiatic Petroleum Company (India), Ltd., includes among its foremost activities the marketing of the famous "Shell" petrol and motor oils. "Shell" has become almost a household word, and the rapid headway made in motoring and the use of petrol in India is evidenced by the fact that, whereas 12 years ago little more than 1,000,000 gallons of petrol of the brand named were sold in India, its sales are now over 10,000,000 gallons per year.

**LUBRICATING OILS.**—These are used for lubricating machinery of all kinds, and are distributed in tank wagons, barrels or tins.

**FUEL OIL.**—Liquid fuel and solar oil for steam raising and use in internal combustion engines are in great demand. The ports of Calcutta, Bombay, Madras and Karachi are important links in the chain of bunkering stations round the world provided by the company under review. At each of these ports large stocks of fuel oil are kept, so that an oil-burning ship can proceed to any port secure in the knowledge that supplies of fuel oil bunkers will be obtainable.

**ROAD MATERIALS.**—The company is also doing much to assist in the provision of modern bituminous roads for India, and with its famous brands of "Mexphalte" and "Spranex" it is already one of the most important factors in Indian road making.

**Organisation.**—The organisation of the company's activities in India has been brought to a high pitch of perfection, so that practically no quarter of the vast sub-continent remains outside its sphere. The country is divided roughly into four parts, viz.,

1. **CALCUTTA**—Area 425,000 square miles, carrying 264 kerosene agents and 71 "Shell" petrol agents.

2. **BOMBAY**—Area 275,000 square miles, with 162 kerosene agents and 60 "Shell" petrol agents.

3. **KARACHI**—Area 350,000 square miles, carrying 90 kerosene agents and 38 "Shell" petrol agents.

4. **MADRAS**—Area 200,000 square miles, with 133 kerosene agents and 117 "Shell" petrol agents.

**Ocean Installations.**—These have been established at Calcutta, Bombay, Karachi, Madras, Mormugao, Cocanada and Ernakulam.

**Tin Factories.**—The company's tin-making factories are located at Calcutta, Bombay, Karachi, Madras, Cocanada and Ernakulam, and are capable of an output of 65,000 tins a day. The annual production of kerosene tins, if put in a line, would stretch for a distance of 1,800 miles—say, from Peshawar to Tuticorin. The annual consumption of tinplate is 12,000 tons.

**Head Office.**—St. Helen's Court, Great St. Helen's, London, E.C. 3.

**Office of General Manager in India.**—6 Lyon's Range, Calcutta (telegrams: "Keropet," Calcutta).

#### THE IMPERIAL TOBACCO COMPANY OF INDIA, LIMITED.

**Organisation.**—Although due recognition is forthcoming of the efficiency and scope of this great organisation for placing on the entire Indian market esteemed brands of cigarettes and tobaccos, the part it plays in the encouragement and fostering of the increasingly important native tobacco-growing industry may not always be fully realised. This valuable service is rendered by the Company (registered under the Indian Companies Acts) in its capacity of sole selling agent in India and Burma for the varieties of tobacco and cigarettes manufactured by the Peninsular Tobacco Company, Ltd., which in turn purchases the bulk of the leaf it consumes from the Indian Leaf Tobacco Development Company, Ltd.

**Indian Leaf Tobacco Development Company, Ltd.**—This very important corporation, also registered in India under the Indian Companies Acts, is actively engaged in developing the tobacco industry of the country

by educating the cultivators to improve the quality and yield of their leaf

**Centres.**—Establishments are maintained at Dalsing Serai, Shahpur Patory and Khajauli, in Bihar, and at Chirala, Chilakalurpet, Guntur, Nambur, Parchoor and Kantaru in Southern India, on the East Coast

At all these centres there are one or more experts in the cultivation of tobacco leaf, whose knowledge is placed without reserve at the disposal of the ryots, and there is no doubt that, as a result of the company's operations, the quality of the leaf produced in the centres in which its representatives work has much improved

**Government Co-operation.**—Besides teaching the ryots the best methods of improving their crops, the company's experts are in close touch with the Government Agricultural College at Pusa, and mutual help towards increasing the value of the crop passes between the organisation and the Government agricultural experts

**Maturing Facilities.**—At some of the company's buying centres re-drying machines have been installed, through which the tobacco is put immediately it is purchased, and it is then in a fit state to keep for several years, it being recognised that nearly all tobaccos have better smoking qualities after maturing for three years or so than they have when used straight from the field

**Protected Drying Racks.**—One important change in the method of production of tobacco leaf for the market has been introduced by the Indian Leaf Tobacco Development Company, Ltd.—the drying of the leaf on racks which are protected from rain. Up to now the tobacco has been cured in the open, and if the weather proves unpropitious great loss is incurred. The company has

demonstrated to the ryots that the use of protected racks is not only a safeguard against rain ruining the cut tobacco, but the finished article is of much better value. Slowly but surely the ryots are beginning to recognise this, and year by year their own protected racks are increasing in number

**National Benefit.**—The company pays the highest prices for good tobaccos, and as it employs throughout the year thousands of hands in various capacities, it will be appreciated that the work of such an organisation must be beneficial to the country

**Peninsular Tobacco Company, Ltd.**—Most of the productions of the Indian Leaf Tobacco Development Co. Ltd. as has been mentioned before, are used in the manufacture of tobacco and cigarettes by the Peninsular Tobacco Company, Ltd., another local concern, having factories in Bihar, Bangalore and the United Provinces. It employs continually labour by the thousand, and is responsible for the prosperity of many homes

**Selling Agents.**—Finally, there is the Imperial Tobacco Company of India, Ltd., engaged in placing on the market the brands manufactured by the Peninsular Tobacco Company, Ltd., in addition to marketing many well-known imported varieties of cigarettes and tobaccos

**Offices.** **THE IMPERIAL TOBACCO COMPANY OF INDIA, LTD.** National Bank Buildings, Calcutta (cables "Powhattan," Calcutta). Codes Pantelegraphy-Tylo, Bentley's and A B C, 6th edition

#### THE IMPERIAL TOBACCO COMPANY OF INDIA, LIMITED.

#### KILBURN AND COMPANY.

**Inception.**—This prominent firm of general merchants and agents was founded in the year 1842 by Mr C E Schoene, who opened offices at 4 Garstin Place, Calcutta, business premises at 4 Fairlie Place, and godowns at the latter address and in Clive Street. Mr Edward Dunbar Kilburn, who had commenced his business career in London with his uncle, trading in silk and silk piece goods, arrived in India in 1847 and at once entered into commercial relations with Mr Schoene. The founder admitted him as a partner on May 1, 1849, the style of the new-formed company being Schoene, Kilburn & Co., and its initial business comprised commission agencies, orders for produce and sales of imported goods.

**Early History.**—The following account, culled from an old record, makes interesting allusion to the firm's original premises and to the first partner of the Kilburn name.

"The premises at 4 Fairlie Place, Calcutta, occupied by Messrs Kilburn & Co., general merchants and agents, were in existence when Calcutta was in the making, when the mud-stained waters of the Hooghly were free from intrusions by ocean-going cargo or passenger steamers, and when the pioneers of industrial enterprise in Bengal were few in number. The very walls must be saturated with history, and if it were possible to glean secrets from them there would be revealed many stories of mercantile enterprise and of vicissitudes in commercial life, but as far as Messrs Kilburn & Co.'s property is concerned there can be no more soul-stirring episode than that which occurred during the Mutiny, when a meeting of merchants was held in the old drawing-room to consider the question of defence, with the result that Mr. Edward Dunbar Kilburn was instrumental in en-

rolling the Calcutta Volunteer Cavalry for service in case of necessity."

Mr Kilburn lavishly spent both time and money in assisting the Government to suppress disloyalty, and those services were so highly appreciated by the Viceroy that the latter decided to recommend that gentleman for the honour of a Companionship of the Bath. Lord Canning, however, died before effect could be given to the desire, and thus a patriotic servant of the Crown was denied that richly-deserved official recognition of services.

**Original Operations.**—Among the initial activities of the organisation were the following:—Silk and silk piece goods were purchased respectively in France and England, cotton was shipped against orders from Liverpool, and rice was sent to Melbourne and to Colombo. Orders for jute were obtained by an agent in Dundee under cover of credit with London bankers, shellac, lac-dye, safflower, and other produce were shipped in small quantities, hides were consigned to London and the continent of Europe, and opium was sent upon instructions from firms of merchants in Shanghai.

The goods imported and sold on commission about this time included cotton and yarns, French wines and brandies in large quantities, occasional copper consignments from Melbourne, and silk filatures from Messrs. Springfield Son & Nephew, London.

**Indigo.**—In the year 1865 Messrs. Schoene, Kilburn & Co shipped from Calcutta a greater quantity of indigo than any other firm. They employed an expert who, during the summer months, visited Continental merchants dealing in this commodity in order to ascertain their probable requirements, which were met in due course by the firm purchasing the necessary quantity at the Calcutta autumn sales.

Indigo planters were at this time making huge annual profits, and many of them, confident in the security of their invested capital, resided in England, leaving the supervision of their concerns to managers whose names are still held in the highest esteem, especially in Bihar and Orissa. Parenthetically, it should be mentioned that this prosperity continued with few interruptions until the year 1899, when the discovery of synthetic dye checked the cultivation of indigo and caused planters to resort gradually to the manufacture of sugar. The export of this dye continued to be one of the most important branches of the firm's business, although consignments of general produce, including Bengal silk, cotton, hides and tobacco, were sent more frequently and in larger quantities to Europe.

**Development.**—The business of the firm expanded very rapidly during the first 20 years of the partnership. It was also in or about the year 1865 that a branch establishment was opened at Manchester under the management of Mr Tolpitt, who had been connected with the Calcutta House for a number of years, and this step had a very far-reaching effect upon the turn-over of the firm. Advance in one direction led to a corresponding movement in another, as the firm opened up a trade in the Mofussil which has in its growth exceeded all expectations.

**Shipping Agencies.**—In the earlier years of the company's existence shipping matters as a rule played an important part in general commercial enterprise, and Messrs Schoene, Kilburn & Co. became representatives of the then famous East Indianmen frigate-built ships, among which were the *Hoispur* and *St Lawrence* (commanded respectively by those well-known mariners, Captain Henry and Joseph Toynbee), the *Lord Warden* (Captain Smith), the *Superb* (Captain Jones),

**KILBURN & CO., Calcutta.**

the *Winchester, Essex*, and many others. Further, the firm had the honour of receiving in Calcutta waters in the year 1870, the first steamers of the Blue Cross Line, which made the voyage to India by way of the Suez Canal.

**Managing Agencies, etc.** The earliest direct agencies undertaken by the firm were those of the Durring Tea Co., Ltd. (of which they are now secretaries), in the year 1865 and the Assam Company in 1867, while now they are managing agents for the India General Navigation and Railway Co., Ltd., which issues bookings on steamships and railways between Calcutta and Eastern Bengal, Assam, Cachar, and the Ganges, Raneegunge Coal Association, Ltd., Bansia Coal Co., Ltd., Parasea Collieries, Ltd., Tata Iron and Steel Co., Ltd., Collieries, Darjeeling Tea & Cinchona Association, Ltd., Kornafuh Association, Ltd., Kodala, Ltd., New Terai

the above-mentioned Assam Company, Ltd., a sterling corporation, and the managing agency of ten rupee companies. The Assam Company, Ltd., was formed under a deed of settlement in 1840 obtaining from the local authorities the Government experimental plantations in Assam, thus being the first company to be formed for the production of tea in India. In 1855 an Act of Incorporation was obtained for 20 years from the Indian Government, but owing to a desire for securing English domicile this privilege was surrendered and a special Bill incorporating the company was passed through Parliament in 1865. It was not until 1923 that the Assam Company, Ltd., became a limited liability company under the Companies Acts, when its capital was increased from £200,000 to £1,000,000. The company holding has grown during this period from the small Government

The company started operations with one steamer and one flat. In conjunction with the River Steam Navigation Co., Ltd., it now maintains mails, passenger and goods services on all the important rivers of Bengal, Assam, Bihar and Orissa, the fleet consisting of over 600 steamers and cargo flats, tugs, launches and barges. The steamers run a daily service of over 1,100 miles to and from Calcutta.

**Collieries.** Messrs. Kilburn & Co. act as managing agents for the Raneegunge Coal Association, Ltd., whose principal mine is the Kustore Colliery. Another important mine in operation in the Jherria coalfield is the Jamadoba colliery belonging to the Tata Iron and Steel Co., Ltd., and for this a similar agency is retained. The two mines named have equipment of the most modern pattern.

**Russa Engineering Works Ltd.** This enterprise (managing agents, Kilburn & Co.)

Davidson & Co., and Crushed Limestone Syndicate, while they are general agents and supervising engineers of the Cawnpore Electric Supply Corporation, Ltd.

**Tea Companies.** The activities of Messrs. Kilburn & Co. in tea include the agency of

experimental plantations transferred to its care in 1840 to its present acreage of 12,506 acres under tea, divided into 14 estates.

The rupee companies under the control of Messrs. Kilburn & Co. have a total acreage of 6,848 under tea, and are situated in Darjeeling, Assam, Terai, Sylhet and Chittagong. The combined capitals of these companies total Rs 26,26,000, and dividends paid on the workings of season 1924 amounted to Rs 6,43,097, a return of over 24 per cent.

**India General Navigation and Railway Co., Ltd.**—This prominent organisation, of which the firm under notice also holds the managing agency, was established in 1844 for the purpose of plying between Calcutta and Allahabad on the River Ganges, which was then the highway from Bengal to the interior of Northern India.

was registered and incorporated in 1906 to meet the great need for an engineering workshop specially equipped for the maintenance of motor vehicles and the manufacture of accurate machined parts, jute mill spares, high-class engineering and electrical work. Rapid expansion soon followed the establishment of the company, which almost immediately on the outbreak of war was entrusted by the Government with the out-turn of the finest class of gun mechanism, etc.

The fully-equipped stores contain stocks of spare parts for all the agencies controlled by the company. The electrical department at Hesham Road is one of the oldest in India, having been started in 1896 by Kilburn & Co., since when it has developed into a large constructional centre. Sole sales concessions are held for Verity's, Phillip's lamps, A & P. Steven's lifts, Deka cables, and Foster Engineering Co.'s electrical switchgear. For

dealing with electrical construction work in the Punjab branches have been established in Lahore and Delhi.

**Ford Motors (Calcutta), Ltd.**—The Russa Engineering Works Ltd. were originally appointed sole distributors for Ford products for Bengal, Assam, Bihar and Orissa, and the United Provinces. By 1920 this business had grown to such dimensions that it was found necessary to create a separate company dealing solely with those products, called Ford Motors (Calcutta), Ltd. For this concern, of which the Russa Engineering Works own all the shares, Messrs. Kilburn & Co. act as managing agents. It continues to import and distribute through its dealer organisation over 100 cars per month.

**Partnership Succession.** The following record of changes in the partnership personnel of Kilburn & Co. has been obtained from private documents. Mr. Edward Dunbar Kilburn retired in 1900, Messrs. George Adie and R. L. Eghinton joined the firm after the retirement of Mr. F. A. Jung in 1863, Mr. Robert Brown Mackay and Henry Tolpitt were given shares in the business in 1865, Mr. Henry Francis Brown held interests from May, 1866, until his retirement in 1911, Messrs. W. R. Brown and Charles Kilburn were admitted in 1873, Messrs. John Macfarlaiden and Alfred Simson followed in 1883, Mr. William Henry Chettham in 1889, Messrs. W. D. Kilburn and Charles Comming Kilburn in May, 1893, Sir Ralph P. Ashton in 1900, Messrs. Charles John Elton and Seton George Legge Eustace in 1911, Mr. F. P. J. de B. Oakley in 1916, Mr. H. B. Whitby in 1918, while the partners at the present time are Messrs. C. C. Kilburn, C. J. Elton, F. P. J. de B. Oakley, S. G. L. Eustace, and H. B. Whitby (Calcutta).

**New Premises.**—The new premises at 4 Park Place, Calcutta, three floors of which are occupied by the company, were recently erected on the site of the old building, and constitute an office worthy of the name. The foundation stone was laid on February 1, 1924, by Mrs. E. J. Oakley, wife of the then senior partner in India, the firm occupying the building on May 1, 1925.

**Cables.** "Telecomum," Calcutta. Codes A B C 5th edition, Bentley's and Private.

**Bankers.**—The National Bank of India.

#### BRITANNIA BISCUIT COMPANY, LTD.

**Inception.**—The business of this company was originally founded in the year 1807 by two Bengali gentlemen interested in the development of Indian industries. A small factory was started on the site of the present works at Dum Dum, and there for some time biscuit-making by hand was carried on.

**Early History.**—From these small beginnings, which met with considerable success, the original founders of the firm were encouraged a few years later to proceed to the purchase of modern biscuit-making machinery and considerably to enlarge their factory. The business continued to prosper until the outbreak of the Great War, when the proprietors placed the whole of the resources of the factory at the disposal of Government for the manufacture of standard Army ration biscuits for British and Indian troops in Mesopotamia, India and elsewhere, the production of sweet and fancy biscuits being virtually discontinued during the war period.

**Formation of Company.**—In order to meet Government demand, the proprietors were obliged to increase their machinery and oven capacity, and to obtain the necessary capital the private concern was converted into a limited company, with a capital of Rs. 6,00,000. On the conclusion of the war, the manufacture of sweet and fancy biscuits

BRITANNIA BISCUIT CO. LTD., Calcutta

1. Group of Work People outside the Factory at Dum Dum.
2. Packing Department.
3. Gas-fired ovens (delivery end)

was again taken up, and considerable headway was quickly made by means of the new machinery and up-to-date ovens installed.

**Development.**—In 1924 the company had again to increase its capital from 6 to 20 lakhs in order to cope with the new business which was coming in. Its products were by that time selling throughout India, though naturally the bulk of its trade was confined to Bengal and the surrounding districts. An entirely new factory was built at Bombay for the purpose of supplying that Presidency, Southern India, and the Karachi and Sind markets.

**Increase in Output.**—Some idea of the growth of the company's business may be gathered from the fact that its output of sweet and fancy biscuits increased in value from about Rs 1,25,000 in 1918 to over Rs 11,00,000 in 1926. An interesting feature of this development has been the large increase in trade in the cheaper varieties of biscuits sold in 30-lb to 40-lb tins. The company having arranged to credit wholesale dealers with the value of such tins on their return, consumers are thus enabled to buy biscuits by the pound without having to bear the cost of an expensive and useless tin. The effect of this policy has been to put on the market first-class nutritious biscuits at an extremely low price, well within the purchasing power of thousands who had previously been unable to afford the higher cost.

**Indian Policy.**—Although working with imported machinery and ovens, the Britannia Biscuit Company, Ltd., is virtually an entirely Indian concern, nearly all the ingredients used in manufacture are purchased in the country, the labour employed is Indian, and more than half the shareholders registered in the company's books are Indian. The policy of the management is to pay special attention to Indian requirements, especially as regards the materials used, and great care is taken that nothing is employed in its factories which can in any way offend caste or religious susceptibilities.

**Factories.** These are situated at Dum Dum, Calcutta and Kasara Pier Road, Mazagon, Bombay. That at Calcutta is a complete three-unit factory, equipped with modern machinery and gas-fired ovens. The Bombay factory is a two-unit factory, laid out on similar lines to that in Calcutta.

**Staff.**—Each factory has a European manager and European foremen, as well as the usual complement of Indian office staff and workpeople. Calcutta employs throughout the year an average of 350 workmen, and Bombay about 200.

**Directorate.**—The board of directors is composed of the following: T. Law (chairman), R. Bazley and C. H. Holmes. Managing director, J. Ware, secretary, N. C. Gupta.

**Head Office.**—The registered office of the company is at Norton Buildings, Old Court House Corner, Calcutta.

**Cables.**—"Benellott," Calcutta. Code Bentley's.

**Bankers.**—Mercantile Bank of India, Ltd. (See illustration, page 176.)

#### JESSOP AND COMPANY, LIMITED.

**Inception.**—Incorporated in the United Kingdom and a member of the Indian Engineering Association, this prominent firm of engineers was established in 1799, and, throughout a long career, has been actively interested in the industrial development of India.

**Development.**—The history of the firm shows a steady expansion, accelerated during the years of the Great War and more recently when the increased pressure of work necessi-

tated the enlargement of the workshops at Howrah and Garden Reach, and the opening of new structural works at Jamshedpur.

**Activities.**—Messrs Jessop & Co., Ltd., undertake all classes of structural, mechanical, electrical, rolling stock and filter plant work and handle an extensive merchant business, carrying large and varied stocks of the manufactures of the best British and American makers whom they represent in India. They publish price lists, section catalogues and descriptive bulletins, besides being distributors of makers' handbooks and descriptive leaflets, in this way keeping in close contact with their clients throughout the East.

**Structural Section.**—The structural workshops are at Howrah and Jamshedpur, and their capacity extends from the smallest roofs, tanks, sheds, bridges, etc., to some of the heaviest steel structures ever fabricated in India. Main line or road bridges up to 250 feet span are designed, manufactured and erected, but in all other classes of structural work the capacity is unlimited. Among contracts carried out by this section the following may be mentioned: The main line bridge over Tolly's Nullah for the Eastern Bengal Railway, with spans measuring over 118 ft. 4 inches; the Barakar Road Bridge, with 105 ft. spans; the Gamat Suspension Bridge, steelwork for the Calcutta office of the Imperial Bank of India; carriage and wagon shop, Lilloah, East Indian Railway; and a steel tank (approximate capacity 4,000,000 gallons) for the Cawnpore Water Works, etc.

**Mechanical Section.** Situated at Howrah, the mechanical workshops have the most up-to-date facilities for the economical handling of mechanical engineering work, and can undertake the manufacture of all classes of machinery, including hydraulic pumps and presses, cranes, colliery winding engines, haulage gear, textile machinery, mill gearing, and castings up to 20 tons. A speciality is made of engineering repairs. These workshops supplied the electric conveyor for the Kamarhatti Jute Works, with a daily capacity of 28,000 maunds of baled jute; four 8-ton Beckett's Hydraulic Cranes for the Kidderpore Docks; six 30-cwt hydraulic cranes for the Calcutta Port Commissioners; a heavy lift electric pump, capable of pumping 12,000 gallons per hour at a head of 1,600 ft., for a firm of Calcutta coalowners; textile machinery of all kinds for cotton and jute mills; grinding mills; heavy castings for the Tata Iron and Steel Co., etc.

**Rolling Stock Section.**—Established more than 20 years, the railway rolling stock works at Garden Reach turn out 20 to 30 wagons per week, and new works have been erected at Dum Dum, a suburb of Calcutta. A most capable labour force is maintained, supervised by expert European constructors. Practically every railway in India has some of Messrs Jessop & Co.'s stock in commission.

**Water Purification Section.**—For the past 15 years this company has specialised in the design, manufacture and erection of a large number of filter plants throughout India, varying in capacity from 20,000 to 10,000,000 gallons per 24 hours. The company has at its command a staff of experts for this highly technical branch of engineering, and possesses an efficient laboratory at the Calcutta offices for the routine chemical and bacteriological analyses of water and for any special tests that may be necessary. At first the firm manufactured under licence from patentees, but it now has its own designs and patents. The Hyderabad water purification plant, with a capacity of 12,000,000 gallons per 24 hours, was erected in 1921-22, has given the authorities every satisfaction and fulfilled all guarantees, so also have the Victoria Jute Mill filter house and coagulation

tanks which were supplied and erected by Messrs Jessop & Co.

**Departments and Agencies.**—The merchant side of the business is subdivided into the following departments, which stock the products of the manufacturers named:—

**METALS.**—All structural steel sections, etc., of British and Tata Iron & Steel Co. Ltd., manufacture, galvanised corrugated sheets, ridgings, guttering, etc., expanded metal sheets, "Invicta" brand Portland cement by the West Kent Portland Cement Co., Ltd.; Gnest Lenox pressed steel tanks by Brown Lenox & Co. (London), Ltd.; stantomite by the Stanton Ironworks Co., Ltd.

**MACHINERY.** Crude oil engines, gas engines, and suction gas producers and pumps by Tangyos, Ltd., Birmingham; mechanical coolers by Heenan & Froude; boilers by Cochran & Co. (Aman), Ltd.; and other makers, steam wagons by Fodens, Ltd.; agricultural machinery by Ransomes, Sims & Jefferies, Ltd.; machine tools by Smith, Barker & Willson, Ltd., F. Town & Sons, Midgley & Sutcliffe, Ltd., Linton Tool Co., and other makers, compressors and coal cutters, rock drills, etc., by the Sullivan Machinery Co.; pneumatic tools by the Independent Pneumatic Tool Co.; disintegrators by Christy & Norris; ice and refrigerating machinery by L. Sterne & Co. Ltd.

**HARDWARE.**—The products of the under-named well-known manufacturers: Edgar Allen & Co. Ltd., Glacier Antifiction Metal Co. Ltd., Joseph Robson & Sons, Nicholson File Co., Mulcott Belting Co. Ltd., Alexander Fergusson & Co. Ltd., Diamond Lubricating Co. Ltd., The Chas. A. Schieren Co., D. Anderson & Son, Ltd., Hangar Watson & Harris, Ltd., Hoffmann Manufacturing Co. Ltd., Canada Carbide Co. Ltd., Steel Peel & Lozer, Ltd., British Abrasive Wheel Co. Ltd., Morgan Crucible Co. Ltd., Glabholm & Robson, Ltd., Scottish Tube Co. Ltd., as well as large stocks of engineers' tools and appliances and general hardware such as screws, pins, nails, lifting tackle, wire, trucks, barrows, etc.

**ELECTRICAL.**—Turbo alternators and generators, A.C. & D.C. motors, rotary converters, balancers and planer equipments by The Lancashire Dynamo & Motor Co. Ltd.; rotary transformers, and rectifiers for battery charging, by The Crypto Electrical Co. Ltd.; electric passenger and goods lifts by Smith, Major & Stevens, Ltd.; transformers by The Hackbridge Transformer Co. Ltd.; A.C. switchgear starting equipment and switchboards by Erskine Heap & Co. Ltd.; D.C. switchgear and starting equipment, also A.C. and D.C. measuring meters by The Electrical Apparatus Co. Ltd.; Simplex steel conduits, Duxex wiring system, electric signs, industrial, colliery, and railway fittings by The Simplex Conduits, Ltd.; carbon brushes and blocks by Le Carbone, Ltd.; tumbler switches and electrical accessories by J. H. Tucker & Co. Ltd.; "India" fans by The India Electric Works; electric vehicles, trucks and trolley buses by Ransomes, Sims & Jefferies, Ltd.

**Registered Office.**—42, Gresham House, Old Broad Street, London, E.C. 2.

**TATA SONS, LIMITED.**

**Personal.**—The rise of the house of Tata, the founder of which was the late Mr. J. N. Tata, reads like a romance in the world of industry. His was the fertile brain that conceived such gigantic industrial projects as the establishment of the iron and steel industry in India and the harnessing of the potential hydro-electric power of the huge rainfall in the Western Ghats. Mr. Tata also played an important part in the development of trade and commerce between India and Japan, and rendered great assistance to the Nippon Yusen Kaisha in their efforts to build up business with India. He was a great protagonist of Swadeshim long before the word Swadeshi became familiar to Western ears, and it is

is but still in the initial stages of industrial development. The combined capital of these undertakings is nearly £50,000,000, and they provide maintenance for an industrial community of nearly a quarter of a million people.

**Tata Iron and Steel Co., Ltd.**—See separate article following.

**Tata Hydro-Electric Power Co., Ltd.**—See separate article following.

**Cotton Mills.**—Messrs. Tata Sons, Ltd., are agents for the following important cotton mills:—

**CENTRAL INDIA SPINNING, WEAVING AND MANUFACTURING CO., LTD.**—This concern, the first industrial venture of the late Mr. J. N. Tata, was started in 1874, and the Mill at Nagpur began working from January 1, 1877. It rapidly became

**TATA MILLS, LTD.**—The Company was started in 1913 with an issued and subscribed capital of Rs. 64,85,000. The Mills commenced working in 1917. Looms, 1,800; spindles, 62,348. Annual output, 5,430,300 lbs. of yarn and 5,622,000 lbs. of cloth. The Bombay United Mill, which was purchased in 1920, was sold off in 1925.

**STANDARD MILLS, LTD.**—Started in 1892, with a capital of Rs. 12,00,000. Annual output, 3,927,132 lbs. of yarn and 3,964,720 lbs. of cloth from 1,179 looms and 44,536 spindles.

**Cement Companies.** The works of the Indian Cement Co. Ltd. (capital, Rs. 36,77,150) at Porebunder have a capacity of 30,000 tons of Portland cement per annum.

THE TATA IRON & STEEL CO. LTD., Bombay.

Lower: Wilputte Coke Ovens from the North-East.

Upper: Panorama of West

due to his great personality, untiring energy, keen powers of observation, shrewd business acumen and truly patriotic spirit that the house of Tata has played a leading part in the industrial development of India.

**Activities.**—The companies founded by or associated with the firm of Tata Sons, Ltd., are many and diverse. In magnitude and variety of interests there is perhaps no other concern, at least in the British Empire, that embraces activities so widespread as this Indian House. Iron and steel and their associated manufactures, hydro-electric power, cotton mills, cement factories, construction and building companies, banking and insurance, an engineering company and an oil mill, hotels, and trading companies are amongst its undertakings in a country which

one of the most successful cotton mills in India. Capital, Rs. 96,87,500. Looms, 2,220; spindles, 100,352. Annual output, 17,164,300 lbs. of yarn and 7,531,000 lbs. of cloth.

**SWADESHI MILLS CO., LTD.**—This mill was started in 1887 with a capital of Rs. 10,00,000. The present capital is Rs. 20,00,000. Looms, 1,542; spindles, 60,208. The Company purchased another mill in 1925 with 43,920 spindles and 1,187 looms. Combined output, 7,923,906 lbs. of cloth and 9,611,264 lbs. of yarn.

**AHMEDABAD ADVANCE MILLS, LTD.**—Operations were commenced in 1903. Present output: 2,813,042 lbs. of yarn and 2,397,746 lbs. of cloth, from 600 looms and 30,612 spindles. Capital: Rs. 10,00,000.

The Shahabad Cement Company's works in H.F.H. the Nizam's Dominions have a capacity of 40,000 tons per annum.

**Indian Hotels, Ltd.**—This company, which has a capital of Rs. 30,00,000, owns one of the finest hotels in India—the Taj Mahal in Bombay, with 350 rooms. It also owns Green's Restaurant and Wellington Mews. (See also notice following "City of Bombay".)

**Tata Oil Mills Co., Ltd.**—Capital, Rs. 97,62,000. The works are situated at Tata-puram (Cochin State), produce coconut oil and cake, groundnut oil and cake and cocogem, and have a maximum crushing capacity of 225 tons daily.

**Associated Building Co., Ltd.**—The boom of 1919-20 and the great rise in value of office

space in the business quarter of Bombay indicated the necessity of the various concerns under the agencies of Messrs. Tata Sons, Ltd., providing themselves with their own premises. A scheme was accordingly prepared for capital to be furnished by each company according to its means and requirements, and a very central plot of land was acquired on which a palatial building known now as Bombay House has been erected. A limited company was formed for this purpose by capital provided by the various concerns, and is known as the Associated Building Company, Ltd. It has a capital of Rs. 55 lakhs.

**R. D. Tata & Co., Ltd.**—Until June, 1919, the firm of Tata Sons, Ltd., was also doing a very large export and import business with branches in China, Japan and elsewhere.

**Cables.**—"Tatasons" Codes: A 1, A B C, McNeill's Mining, Western Union, Bentley's.

### TATA IRON AND STEEL COMPANY, LIMITED

**Inception.**—This company was formed in 1907, being registered in Bombay on August 26 of that year. The actual construction of the plant at Sakchi (now Jamshedpur) was begun in the autumn of 1908.

**History.** The idea of utilising upon the largest possible scale the iron deposits of India had for over 20 years been active in the brain of the late Jamsetjee Tata (see preceding article), and, in spite of many obstacles, he never abandoned the hope of developing the mineral resources of his country. In 1902 he obtained advice and assistance from the

50,000 to 60,000 tons per month. The steel making plant originally consisted of one 300-ton mixer and four 40-ton basic open hearth furnaces. The capacity of these four furnaces has been increased to 50 tons, and three more furnaces of 60 tons capacity have been added. This output is being further increased by the addition of two 200-ton open hearth tilting furnaces, while one 1,300-ton mixer and two 25-ton Bessemer converters have been installed to work in conjunction with these two furnaces. The estimated total steel output production is 570,000 tons a year.

The original capacity of the coke plant was 180,000 tons per annum, this has been developed to no less than 820,000 tons. Large additions have been made to the rolling mill

and East Plants.

This part of the business was handed over to a new limited concern known as R. D. Tata & Co., and this company is now carrying on the trading activities of Tata Sons, Ltd., having branches to-day in Osaka, Shanghai, Rangoon, Liverpool and New York. It has a capital of 15 million rupees, and is mainly interested in cotton yarns, rice, metals, sugar, etc.

**Directors of Tata Sons, Ltd.**—Sir D. J. Tata, Kt. (chairman), Lady Ratan Tata, N. B. Saklatvala, C.I.E., J. D. Ghandy, F. M. Kanga, B. J. Padshah, H. P. Gibbs, J. C. K. Paterson, C.I.E., J. R. D. Tata.

**Address.**—Bombay House, 24 Bruce Road, Fort, Bombay.

**Corresponding Firms.**—Tata Ltd., London; Tata Sons, Ltd., Calcutta.

Lower: Blast Furnace from the South-East.

United States, and in 1905 his prospector, Mr. C. M. Weld, succeeded in locating one of the richest iron-ore deposits in the world, with a metal content of 66 per cent., in the Rajara hills in the Central Provinces and in the Dhulera hill near by. The discovery, however, of the Gurumaishumi deposits in the State of Mourbhanj provided more favourable opportunities for immediate operations on account of the proximity of the Jherria coal fields. These were leased on favourable terms from the Maharajah, and two years later the Tata Iron and Steel Company was in existence.

**Development.**—The first blast furnace was blown in 1911. Since that time four more furnaces have been put into blast, the output from the five furnaces being estimated at

Upper: Panorama of West and East Plants.

plant, the total output of which is now 1,150 tons per day, and in every direction the main works of the company, the various subsidiary interests, and last, but not least, the remarkable activities in connection with the health and well-being of the town of Jamshedpur and its population have been extended to a point of efficiency which is the admiration of every visitor.

**Capital.**—The original capital of the company was Rs. 2,31,75,000 (£1,545,000), which has been increased to Rs. 10,52,12,500, made up of 350,000 ordinary shares of Rs. 75 each; 50,000 preference 6 per cent. cumulative shares of Rs. 150 each; 48,750 deferred shares of Rs. 30 each; and 700,000 second preference 7½ per cent. cumulative shares of Rs. 100 each.

**Net Profits.**—The net profits of the company for the year ending March 31, 1926, amounted to Rs 95,72,685, while Rs 3,06,947 was brought forward. A sum of Rs 60,00,000 was appropriated for depreciation, leaving Rs 35,72,685 to represent net earnings, as against only Rs 3,71,013 in 1924-25.

**Works.**—The Tata Iron and Steel Company's works are situated at Jamshedpur in the Singhbhum District, Bihar and Orissa, and are connected by a three-mile branch line owned by the company with the Bengal Nagpur Railway main line running from Bombay to Calcutta at Tatanagar Station.

When the project of erecting these works was taken in hand in 1907 the site was a typical Indian jungle. After the arduous labour of clearing the ground was ended

ances, the whole output is used at the blast furnaces. Sulphate of ammonia and sulphuric acid are by-products of the coke ovens.

**PIG IRON.**—This is manufactured from five blast furnaces, three of these being of 300 tons capacity and two of 500 tons each. These latter are equipped with electrically driven skip hoists, gas washers and modern improvements. Part of the iron produced is transferred to the steel furnaces direct in a molten state for the making of steel, part is cast in sand on the furnace beds into pig iron, and a portion is cast into pigs in a pig-casting machine. The company's output of pig iron in 1925-26 was 573,000 tons, an increase of 20,000 tons on the preceding year.

**STEEL.**—Steel is manufactured from

activities also exceeds that amount. The drainage schemes have been much extended and developed. The municipal upkeep of the town of Jamshedpur costs about £50,000 per annum, exclusive of interest and sinking fund charges, the chief item being medical relief. The company's hospital has a staff of 20 doctors, with accommodation for 72 in-patients, and free treatment is given to all. Educational facilities of the best kind are provided for the employees, and there are a high school for boys, a middle school for girls, 14 primary schools, a primary English school, and various technical and other evening classes.

No taxes have hitherto been raised to cover the cost of the upkeep of the town, the company having been responsible. A Municipal Committee, consisting of representatives of

Lower : Blast Furnace from the South-West.

construction commenced, and by 1911 a complete iron and steel making plant was in being. The company's own and other important coalfields lie to the north, while its iron mines are situated from 40 to 50 miles to the south. Dolomite is obtained from the company's properties at Panposh and "K" Lease in Gangpur State, while limestone is drawn from the Sakti State and the adjoining Bilaspur District. Manganese is supplied from the Central Provinces, chromite from Chaibasa in the Singhbhum District, and magnesite from Koda Kola in Mysore State.

**Products.**—The products of the company's works are as follow :—

**COKE.**—Produced from 380 different ovens equipped with up-to-date labour-saving appli-

Upper : Panorama of West and East Plants.

seven open hearth furnaces of from 50 to 65 tons capacity, the molten iron being stored in a mixer of 300 tons capacity. Rails, structural material, merchant steel, low carbon steel for rivets, bars and bolts, plates and sheets are all turned out in various grades. In 1925-26 the output of steel ingots was 470,000 tons and of finished steel 320,000 tons, as against 370,000 tons and 248,000 tons respectively in 1924-25.

**Housing and Welfare Work.**—Only a few aspects of the many-sided activities of the company with regard to the health and comfort of its employees can be touched upon here. It is sufficient to state that up to the present its expenditure on housing alone exceeds £500,000, while that on roads, sanitation, waterworks, lighting and other municipal

Lower : Power House No.

the Steel Company and its associated companies, administers the area. Finally, the company has not been neglectful of the organisation of recreation, having provided a band, playgrounds and a racecourse, as well as two institutes which are now financially prosperous.

**Directors.**—Sir D. J. Tata, Kt. (Messrs Tata Sons, Ltd.), special director and chairman, Sir Cowasji Jehangir, Bart., Sir Fazulbhai Currimbhoy, Kt., C.B.E.; Narottam Morarji, Sir Lalubhai Samaldas, Kt., C.I.E.; F. E. Dinshaw, special director, the Hon. Sir Phiroze C. Sethna, Kt., O.B.E.; Sir Purshotamdas Thakurdas, Kt., C.I.E., M.B.E.; Sir Prabhasanker D. Pattani, K.C.I.E.; N. B. Saklatvala, C.I.E.; Sir Ibrahim Rahimutullah, K.C.S.I., C.I.E.

**Agents.**—Messrs. Tata Sons, Ltd.

**Head Office.** Bombay House, 24 Bruce Road, Fort, Bombay

**Codes Used.**—A B C 5th and 6th Editions and Bentley's

**Bankers.**—Imperial Bank of India, National Bank of India, Ltd.

# **TATA HYDRO-ELECTRIC POWER SUPPLY.**

**Inception.**—This, one of the most important of the many Tata companies, was the outcome of years of work and propaganda by the late Mr. David Gostling of Bombay, who devised a scheme to conserve the heavy rainfall of the Western Ghats and to utilise it for the supply of power to the City of Bombay. The scheme was taken up by the late Mr. J. N.

**Power House.**—At full load the power house is capable of generating 50,000 h.p. The water, after it has exhausted its energy in turning the water-wheels, is released into what is called a tail-race, which flows into a neighbouring stream. The amount of water going into this stream when all five generators are working would equal two-thirds of the volume of the River Thames.

**Transmission to Bombay.**—The power house being 43 miles from Bombay, this current, which is produced at 5,000 volts, is transformed to 100,000 volts to economise the cost of its transmission to Bombay. It is conveyed along two transmission lines of three copper cables, each supported on specially designed steel towers. In Bombay

Andhra Valley and Nila Mula, each larger than the preceding one, have been undertaken. Of these the former is completed and supplying power since 1922, and the latter will be completed by the end of 1927.

**Andhra Valley Scheme.**—The holding up of the waters in the Andhra Valley by a dam 105 ft. high will make another 60,000 h.p. available for the electrification of about 35 more factories in Bombay. The power house, electrical equipment and receiving station are furnished with the most up-to-date plant, an interesting feature of the latter being the two 12,500 KVA 22,000 volt rotary condensers which are used only for improving the power factor of the system.

2 Interior

Tata, afterwards by his sons, and the company was formed about 1910, the present hydro-electric works being opened in 1915.

**Hydraulic Works.**—Three lakes are formed by constructing dams across valleys at Lonavla, Walwhan and Shirwata. Lonavla lake is intended for use during monsoon, the other two lakes, together holding about 9,500,000,000 cubic feet, for use during the rest of the year. Shirwata and Walwhan are connected by a tunnel, 5,000 feet long, through the intervening hills. From Walwhan and Lonavla water is conveyed by nearly 5 miles of open ducts to the forebay and thence through large steel pipes laid along the slopes of the Ghats to the power house at Khopoli, 1,725 feet in the plains below.

Lower : Plate Mill—96"

it is again reduced to a lower voltage at the Parel Receiving Station for distribution to the various consumers of the company, and the energy thus available helps to run 44 of the largest cotton mills and factories of the city and also contributes towards its lighting and tram traction.

**Distribution.**—The whole of the distribution in the city is done by underground cables at 6,600 volts. Each consumer has a small station, where the current is again reduced to 2,200 volts for working the motors that drive the machinery in the factory. The power thus delivered costs the consumers very much less than that available for coal, and the success of the scheme has been demonstrated so completely that two other schemes, the

THE TATA IRON & STEEL CO. LTD., Bombay.

**Nila Mula Scheme.**—The other scheme in the neighbouring valley of the Nila Mula River will produce another 150,000 h.p. The dam required for this will probably be the largest in the world as regards the quantity of masonry needed for its construction, and the power available will be sufficient to electrify all the remaining factories in the city of Bombay, to take over the whole of the tramways and lighting load of that city, and to run railways along each of the two main trunk lines, both ways, for about 100 miles out of Bombay.

BURN & CO  
Panorama of Principal

#### BURN AND COMPANY, LIMITED.

**Inception.**—This company owes its origin in 1781 to one Colonel Swinton, who then started a small building and contracting enterprise. Subsequently he made over his business to his assistant, James Rolt, who was succeeded by Alexander Burn as head of the firm. From early in the nineteenth century to 1895 the concern was known as Burn & Co.

**Railway Contracts.**—The success of the new firm was later connected with the laying of the East India Railway, Messrs. Burn & Co. securing several contracts for the construction of sections of that line. In spite of interruption caused by the Mutiny, these were all carried to a successful conclusion, the company being the only one, out of many, which was able to satisfactorily fulfil its contracts.

**Development.**—This period of the company's greatest development was marked by the establishment in 1852 of the Howrah Iron Works, now the largest engineering works in India, and in 1870 of the Raneegeunge Pottery Works, which, with its subsidiary works and those at Jubbulpore (C.P.), now forms the largest group of clay working factories under one control in India.

2. Steamer built at the Howrah Shipyard by the Firm.
3. Kidderpore Bridge, representing 945 tons of Iron and Steel, designed and constructed by the Company.

LTD., Calcutta  
Machine Bays.

**Building Operations.**—Before dealing with later developments, reference must be made to the indelible mark left on Calcutta by the building and civil engineering departments of the company, most of the older public buildings and other constructions of the city having been erected by it. Among these are the Ochterlony Monument, St. Andrew's Church, St. Thomas's Church, Bishops' Col-

lege at Sibpur, Metcalfe Hall, the Great Eastern Hotel, and the Municipal Market in Lindsay Street. A large portion of the drainage system of Calcutta, the first tramway system, the Howrah waterworks and several of the jetties and mills were constructed by the company. In addition, the firm designed and erected such well known buildings as the Medical College Hospital, the

Madrasah and the Bethune Institution.

**Present Company Formed.**—In 1895, owing to the rapid development of its business, the firm of Messrs. Burn & Co. was formed into a limited company under the name of Burn & Co., Ltd., additional capital being obtained. The partners in the original firm retained a large stake in the new company,

and continued to guide its fortunes, as they do still, in their capacity as managing agents.

**Activities.**—Messrs Burn & Co., Ltd., are engineers and shipbuilders, and the proprietors of the Howrah Iron Works, the Raneegeunge and Jubbulpore Potteries, the Gulfarbari Firebrick Works, the Lalkoti Silica Brick Works, the Doorgapore Tile Works, the Nangi Brickfield, and the Sunkerpore Colliery.

**Iron Works.**—The Howrah Iron Works of Messrs Burn & Co., Ltd., are the largest of their kind in India, covering 50 acres of ground. They comprise a shipbuilding yard, railway carriage and wagon department, bridge and structural shops; mechanical engineering department and metal and stores department. These departments jointly employ a staff of over 5,000 workers.

The illustrations accompanying this article show (a) T.S.S. *Bhadra*, (b) railway wagon and underframe, and (c) the Kidderpore

bridge, which are excellent examples of the work carried out in the shipyard, carriage and wagon and structural departments respectively. Irrigation and milling machinery and colliery equipment are specialties of the engineering department, which also turns out castings up to 25 tons in weight.

**Potteries.**—The principal potteries owned by the company are situated in the coalfields of Bengal, Bihar and Orissa. The Raneegeunge Works were opened in 1870 and formed the nucleus of the enterprise, but in the course of some 50 years the original one factory has grown into eight, and these, with their attendant collieries and clay-fields, now extend over 50 miles of country. The two large works at Raneegeunge are devoted entirely to the production of stoneware pipes and specials, with sanitary fittings suitable for use in India. These works turn out hundreds of miles of pipes per annum, all of which are used in India and adjacent countries. The

pipes are made by the most up-to-date plant to British standard specification, and are tested and accepted as such by the largest engineering undertakings in India, comparing favourably in every respect with imported products.

**Fireclay and Other Products.**—Two of the company's works are devoted entirely to the manufacture of fireclay, silica and high refractory bricks and blocks, which are in constant demand all over India, and two more to the production of roofing and other tiles and similar articles. Two smaller factories are engaged in the manufacture of glowing lime, a natural hydraulic cement which holds its own for certain classes of work with the best Portland cement. The Jubbulpore works turn out pipes, firebricks and tiles. All these works are fitted with the very latest plant and are staffed by experts in the trade. Every factory has its own power plant, and in most cases the machines are operated by electric drive.

### THE INDIAN IRON AND STEEL COMPANY, LIMITED.

**Activities.**—Messrs Burn & Co., Ltd., of Calcutta, are managing agents for this prominent organisation, which manufactures pig-iron by-product coke, coal-tar products, sulphate of ammonia, sulphuric acid, castings, etc

**Capital.**—The capital of the company is Rs 1,50,00,000

**Mines.**—The Indian Iron and Steel Co., Ltd., possesses its own iron ore, coal and limestone mines within easy reach of the works. The iron ore deposits leased from the Government occupy nearly 10 square miles in the new iron ore field in the Singhbhum district of the Chota Nagpur Division, Bihar and Orissa, and are connected by a broad gauge railway with the main line of the Bengal-Nagpur Railway. The company's limestone property covers an area of 581 acres at Guttitangar in the Gangpur State adjoining the Singhbhum district. The coal properties are situated in the Jherria coalfield, Bihar and Orissa, and contain large reserves of coal in an area of 900 acres

**Works.**—These are situated at Burnpur on the Bengal-Nagpur Railway, and near Asansol (Bengal) on the East India Railway. They are connected with both these main lines by broad gauge sidings and extensive traffic exchange yards—thus, an unique position, provides special facilities for handling large quantities of material to and from the works

**Plant.**—The whole plant of the Burnpur works has been arranged and designed to deal expeditiously with very large quantities of material, and this is accomplished by having all raw material and finished products handled solely by mechanical means. The two blast furnaces already built are of the most modern design, each having a capacity of 450 tons daily, with provision to increase to 600 tons if required. The lay-out of the completed plant provides for the ultimate installation of these furnaces, with sufficient by-product coke plant capacity to furnish fuel for them. At present, two batteries, each of 80 Simon Carves horizontal flue waste heat ovens, capable of producing 1,000 tons of coke per day, provide all the coke necessary for the first two blast furnaces. The electric power plant has two 3,000 k.w. Turbo Alternator Sets in operation, with an auxiliary D.C. lighting set of 150 k.w. Other plant includes a large up-to-date machine shop, foundry and blacksmith's shop

**Managing Agents.**—Messrs. Burn & Co., Hongkong House, Calcutta.

**Agents in United Kingdom.**—Messrs Burn, Craddock & Co., Ltd., Blackfriars House, New Bridge Street, London, E.C. 4.

3. Front view of 6,600 volt, 3 phase, 50 cycle, Class "BI" direct operated, duplicate Busbar, Metal-clad Drawout Switchboard.

**Cables.**—"Burn," Burnpur, "Inisco," Calcutta Codes A B C, 5th and 6th Editions, Bentley's and Western Union (5 letter)

**Bankers.**—National Bank of India  
(See illustration, page 187)

### A. REYROLLE AND COMPANY, LIMITED.

**Inception.**—The firm of A Reyrolle & Co., Ltd., electrical engineers and manufacturers (for whom Messrs Burn & Co., Ltd., act as sole agents in India), was established in 1886

**Activities.**—The company is well known in the electrical world as the pioneer builders of metal-clad switchgear, and their productions have proved that the metal-clad feature in which all live conductors are enclosed in earthed metal casing with compound as an

insulating medium is the only method of obtaining safety and reliability in switchgear operation. The gear is very robust, all framework is at earth potential and complete interlocks are incorporated. These advantages, combined with the compound filled feature preventing operators from coming in contact with live conductors, make the gear well adapted for the particularly difficult operating and severe climatic conditions in India.

**Installations.**—Reyrolle gear has long been established in India, but it is only recently that the company have had active representation. Their gear is rapidly gaining popularity with engineers in India, who are gradually turning their attention to it as being ideal for their purpose and as a solution of their operating difficulties.

#### C. A. PARSONS & COMPANY, LTD

Managing Agents, Messrs Burn & Co Ltd., Calcutta

1. Works at Newcastle-on-Tyne, England
2. A typical Electric Power Station in India for lighting and power purposes in a Jute Mill.
3. 550 K W Parsons' 3 phase Turbo Alternator, installed in the Budge Budge Jute Mills, 1910

The chief Power Stations Installations are at Madras, Delhi, Hyderabad and the Bengal Coal Fields, while orders are in hand for a large Power Station and high tension gear in Bombay

**Industrial Uses.**—The application of metal-clad switchgear to industrial work has had unqualified success, and in India Reyrolle productions have, during the last few years, been installed in Jute Mills, Woollen Mills, Steel Works, Cotton Mills, Cement Works, Railways and Pumping Stations.

Messrs Reyrolle & Co. Ltd. have devoted particular attention to developing a special type of gear for the Indian industrial market, so that small firms may be able to obtain the best modern practice in a form which eliminates all unnecessary features but still retains the main principles. It is anticipated that at no distant date the Reyrolle metal-clad switchgear will be as popular in India as it is in Great Britain and other parts of the world

**Head Office and Works.**—Hebburn-on-Tyne, England.

**Cables.**—"Burn," Calcutta. Codes Marconi International, New Business, Bentley's and Western Union (5 letter).

**Bankers.**—National Bank of India.

#### C. A. PARSONS AND COMPANY, LIMITED.

**Inception.**—Well known as manufacturers of Reaction Turbines, the firm under notice was originally represented in India in 1910, the first turbo dynamo of its manufacture having been installed in that country five years previously

**Development.**—Pioneer work in India was both slow and trying, as factory owners who had become used to the huge slow-moving engine did not take kindly to the newer type of prime mover, although it showed great promise in the direction of economy. However, before the War there were ten Parsons' turbines at work in various parts of India and Burma. After the War the reliability of the high-speed turbine with reduction gearing having been well proved, the Parsons' Geared Turbine became universally popular in textile and other industrial factories

**Installations.**—At the present time the total horse-power installed in India amounts to over 160,000, of which 75,000 is running in textile mills.

**Water Works Plant.**—Among the more recent of the larger contracts carried out by Messrs C A Parsons & Co Ltd, through Messrs Burn & Co Ltd, acting as sole agents in India, is the complete installation, including boilers, turbines, pumps and lighting equipment, of the two new pumping stations for the Calcutta Corporation Water Works. The plant, which is built on the unit system,

comprises seven Parsons Pure Reaction Turbines driving through Parsons' gearing centrifugal pumps, capable of delivering 1,500,000 to 1,750,000 gallons of water per hour to 130 ft head. Seven Parsons' Turbo Dynamos provide the necessary power for lighting and driving the various auxiliary machinery. The boiler house is equipped on the most modern lines and is complete with mechanical coal and ash-handling plant

**Electrical Equipment.**—Regarding Messrs Parsons' activities in connection with electrical work in India, an important feature is the engine room equipment of a large electrical power station supplying energy to a group of jute mills. This station has a total capacity of 12,000 kw, which is generated by two 5,000 kw and one 2,000 kw Parsons' Reaction Turbines, coupled to Parsons' Turbo-type Alternators running at a speed of 3,000 r.p.m. A large order recently secured is for four 10,000 kw Turbo-Alternators and Condensing Plant and two 350 kw House Turbo-Alternators for the Kalyan Power Station, G I P Railway Electrification Scheme

**Head Office and Works.**—Newcastle-on-Tyne

**Sole Agents in India.**—Messrs Burn & Co., Ltd., Hongkong House, Calcutta

**Bankers.**—National Bank of India, Ltd.

MARSHALL, SONS &amp; CO. (INDIA) LTD.

- 1 & 2. Aspects of the Engineering Works at Agarpara, near Calcutta.  
3. The Clive Street Godowns.

#### MARSHALL, SONS & COMPANY (INDIA), LIMITED.

**Inception.**—The firm of Messrs Marshall, Sons & Co., Ltd., of Gainsborough, Lincolnshire, is so well known that a detailed description of its activities should not be necessary. It may, however, be permissible to indicate the reasons for the flotation in 1919 of a separate company to carry on the affairs of the home organisation in India. The parent firm was established in Gainsborough in 1848 and very quickly grew to its present magnitude; it now occupies an area of some 45 acres and employs 5,000 workmen.

From the very earliest days of the company's existence it established business connections with India, and through the excellence of its manufactures and service to clients its operations in that country had attained great importance by 1914. The difficulty of obtaining spare parts and replacements during the war for the vast volume of machinery manufactured by the company and in use in India made it imperative that a works should be established in that country to manufacture certain lines of machinery of fundamental importance to indigenous industries, notably the tea industry. A separate company was therefore formed, called Marshall, Sons & Co. (India) Ltd., and this commenced operations on March 27, 1919.

**Services to Industry.** It is probable that in the whole history of the world no individual firm of engineers has done more to foster indigenous industries in any country than has the enterprise now under notice in India. While most carefully studying the needs of the country and keeping abreast of the times in scientific design so that its steam engines, boilers and machines of every description are thoroughly up-to-date and of the highest efficiency, it has kept in mind that simplicity of operation and continuity of service are of paramount importance.

**Installations.**—Every tea garden in India is equipped with machinery designed and manufactured by Marshall, Sons & Co. Ltd., and in practically every town and village will be found Marshall's steam engines and boilers driving flour-mills, rice-mills, oil-mills, cotton gins, spinning and weaving sheds and the like.

Irrigation and waterworks engineers have all used Marshall's machinery in the construction of their notable projects. The great forests of India, if explored to the heart, will reveal Marshall's engines and boilers and saw-milling machinery.

**Railway and Road Building.**—Not a railway in India has been built except with the aid of Marshall's Portable Engines driving pumps, mortar mills, concrete mixers, disintegrators, etc. There is scarcely a mile of first-class road in India which has not been consolidated with a Marshall's Road Roller.

**Works.**—The works at Agarpara (E.B. Railway), situated close to Calcutta, are thoroughly equipped with the most modern appliances, and have been specially laid out and designed not only to manufacture machinery, but also to repair and re-condition plant of all descriptions.

**Manufactures.**—The firm manufactures fixed and portable steam engines and oil engines, boilers of all descriptions, road plants, thrashing machines, flax machinery, tea machinery of all kinds, oil mills and mortar mills, and specialises in the supply and erection of complete plants for cotton ginning, spinning and weaving, rice, flour and oil milling, pumping, stone-breaking, mortar-mixing and disintegrating.

MARSHALL, SONS &amp; CO (INDIA) LTD.

1. Engineering Works at Agarpara, near Calcutta.

2. Office at Bombay.

Harrison Carter, Dunstable; Engelberg Huller Co., Syracuse, New York, U.S.A.; Gwynnes, Ltd., Hammersmith; Hayward Tyler & Co., Ltd., London; A. Ransome & Co., Ltd., Newark-on-Trent; and Rose Downs & Thompson, Ltd., Hull.

**Staff and Branches.**—The firm maintains in India a large and fully-qualified staff of engineers and has branches at Calcutta, Bombay, Lahore, Madras, Bezwada, Combatores, Tanjore, Karachi and Rangoon. Large stocks of machinery are kept in specially constructed warehouses at all the branches, a very wide range of spare parts being also available.

**Head Office.**—P.O. Box 22, Calcutta (cables "Engine," Calcutta) Codes A B C 5th edition, A 1, Lieber's, Engineering, Bentley's and Private.

**Bankers.**—The National Bank of India, Ltd.; The Chartered Bank of India, Australia and China.

**Managing Agents.**—Messrs Marshall's (Direction), Ltd., 99, Clive Street, Calcutta.

#### STEEL PRODUCTS, LIMITED.

**Managing Agents.**—Messrs John King & Co. Ltd., the managing agents for the company to be here dealt with, are the well-known Calcutta firm of engineers and ship-builders. Their Victoria Engine Works at Howrah and the workshops at Garden Reach are noted throughout industrial India for the excellence of their productions. Messrs King & Co. represent a great number of the best British and American machinery manufacturers and carry a large stock of specialties at the stores in Strand Road. The following are a few of the firms represented: Alexander Anderson & Sons, Cardiff Boiler Works, Motherwell and Glasgow; Morgan Crucible Co., London; British Steel Piling Co. Ltd., Penberthy Injector Co., Detroit, U.S.A.; Excelsior Wire Rope Co., Cardiff; Century Electric Co., St. Louis, U.S.A., etc. The registered offices are in Calcutta, and the cable address is "Victoria," Calcutta.

**Inception of Steel Products, Ltd.** This company was formed for the purpose of manufacturing patent steel adjustable shelving and office equipment in India, and was registered under the Indian Companies Act of 1913 on October 9, 1917.

**Development.** The organisation has made steady progress during the period of under a decade since its inception. The balance sheet for the six months ending April 30, 1926, showed the half-yearly profit to be Rs 45,274-2-7. After certain deductions and the addition of Rs 342,235-7 carried forward from last account, there was available a total of Rs 60,837-14-5, which was allocated thus: Rs 25,000 to payment of dividend at a rate equivalent to 16½ per cent per annum; Rs 25,000 to equalisation of dividend account; and Rs 10,837-14-5 carried forward to next account. When it is considered that during two of the six months under review there was a general dislocation of trade, these figures are highly significant.

**Capital.**—This at present is Rs 3,00,000 (divided into 50,000 ordinary shares of Rs 6 each), subscribed and fully paid up.

**Activities.**—The company manufactures a wide range of standardised steel office equipment which has come into universal use in India. The sectional steel fixtures in which it specialises occupy less space than wooden ones and never wear out as the latter do; they need no repairs, are unbreakable, non-inflammable, and easily adjustable. They are built on the unit system, which permits a size and style of unit for every office, no matter what the space limitations may be. This system ensures minimum freight in transit and, in case of fire or sudden emergency, the office equipment can be quickly removed with the contents intact, a section at a time. The range of manufactures includes shelving of all kinds, doors for stacks, lockers, steel bins, steel almshouses and wardrobes, S.P. steel roll-top desks, S.P. steel flat top desks, S.P. safes, steel filing cabinets, card index cabinets, stack-up-tier units, office equipment, steel unclimbable railings, etc.

**Service.**—The company prepares drawings and estimates free of charge for clients contemplating a new installation, and is always prepared to make appointments for them to

inspect installations in actual use. It undertakes contracts in any part of India, and among the prominent users of the steel unit system may be mentioned the Imperial Secretariat, Delhi; Bengal Secretariat, Calcutta; Bihar and Orissa Secretariat, Patna; Punjab Government Press, Lahore; Survey of India, Calcutta; the Port Commissioners at Bombay, Rangoon, Karachi and Madras; Calcutta and Madras Corporations; P.W.D. Central Stores, Bombay; Post and Telegraph Department, Rangoon; Military Works Department, Karachi; Forest Department, Lahore; the main Indian railway companies; all the leading banks; jute mills, cotton mills, mercantile and insurance offices, etc.

**Directorate.**—Messrs Geo. A. King, Millar M. King and F. L. Watts.

**Registered Office.**—10 Strand Road, Calcutta (cables "Adequate," Calcutta) Code Bentley's.

**Factory.**—95-98 Garden Reach Road, Calcutta.

**Bankers.**—National Bank of India, Ltd. (See illustration p. 192.)

**THE BRITISH INDIA CORPORATION, LTD.**—Cawnpore. Incorporated in 1920 to amalgamate the Cawnpore Woollen Mills Co., the Cawnpore Cotton Mills Co., the Empire Engineering Co., Cooper Allen & Co., the New Egerton Woollen Mills Co., and the North West Fannery Co. In 1921 the North West Motor Transport Co. was purchased. Capital, issued and subscribed, Rs 4,32,75,000. Property valuation, Rs 168½ lakhs; stocks and stores valuation, approximately Rs 2 crores; investments in public and private companies, Rs 117 lakhs.

**MUIR MILLS CO., LTD.**—Cawnpore. Established in 1874, present equipment includes 77,340 spindles, 1,538 looms. Firm has own dyeing and bleaching plant, manufactures cotton goods and has departments for tents and durries; employs 3,000 workmen. For nine years (1915-1924) dividend paid on capital of Rs 15 lakhs, after paying 6 per cent. on 15 lakhs of preference shares, averaged 70 per cent per annum; in same period the reserves increased from Rs 1,90,000 to Rs 50,00,000. The profits for 1924 were Rs 16,31,077-2-0. Chairman, Sir Thomas Smith.

5. Steel Shelving.

(See letterpress, p. 191).

# COTTON

**C**otton is the most important textile crop in India. That country stands second only to America in the total production of it, but her cotton is shorter in staple, poorer in spinning value and smaller in yield per acre. Much is being done towards effecting an improvement in the quality of Indian cotton, the efforts of the various Governments and of the Indian Cotton Committee having met with well-deserved success.

Of the progress of cotton manufacture in India the statistics which follow provide illuminating information. The cotton mills, indeed, constitute the oldest and one of the most important of the Empire's industries, they have been erected largely by means of Indian capital, and still remain for the most part under Indian management. During both 1924 and 1925 a succession of strikes adversely affected the industry. Though the abolition of the excise duty has raised a heavy burden from the shoulders of the mill owners, certain industrial problems remain to be solved before the great enterprise which has made Bombay, Ahmedabad and other important cities can overcome the growing menace of competition from Japan.

**AREA AND PRODUCTION.**—The total area reported under cotton for the year 1925-26 was 27,835,000 acres, compared with 26,801,000 acres in 1924-25. The total estimated yield was 6,051,000 bales of 400 lbs each, a figure slightly below that of 6,091,000 bales for 1924-25. The yield per acre worked out at 87 lbs in 1925-26, against 91 lbs in 1924-25. The detailed figures of acreage and output for each Province and State are as follow—

PROVINCES AND STATES	ACRES (THOUSANDS)		BALES OF 400 LBS (THOUSANDS)	
	1925-26	1924-25	1925-26	1924-25

Total . 27,835 26,801 6,051 6,091

(a) Including Sind and Indian States

(b) Including Indian States

**DESCRIPTIONS (TRADE).**—The principal varieties of Indian cotton are known by the trade names of Dholeras, Broach, Oomras (from the Berars), Dharwar and Coomptas. Broach is the best cotton grown in Western India. Hinganghat cotton, from the Central Provinces, has a good reputation. Bengals is the name given to the cotton of the Gangetic Valley, and generally to the cottons of Northern India. The Madras cottons are known as Westerns, Cocanadas, Coimbatore

and Tinnevelles, the best being Tinnevelly. Cambodia cotton has been grown with success in Southern India, but it shows a tendency to revert. The high prices for cotton realised in recent years have given a great impetus to cultivation. The Government has also been active in improving the class of cotton produced by seed selection, hybridisation, and the importation of exotic seeds. Although these measures have met with considerable success they have not proceeded far enough to leave the whole output, which still consists for the most part of a short staple early maturing variety, suitable to soils where the rainy season is brief.

The following table shows the area and yield according to the recognised trade descriptions of cotton in 1925-26, as compared with 1924-25. Of the total yield it will be seen that Oomras represent 41 per cent, Bengal-Sind 17 per cent, Dholeras 10 per cent, Westerns and Northern 7 per cent, Americans, Broach and Coompta-Dharwar 5 per cent, Cambodias 2 per cent and Tinnevelles 2 per cent—

(a) Includes the whole of cotton grown in the Non-Government areas of Hyderabad

(b) Includes Bengal-Sind (Rajputana) variety grown in Bombay

(c) Excludes Bengal-Sind (Rajputana) variety grown in Bombay

**EXCISE DUTY.**—See under "Customs"

**EXPORTS AND IMPORTS.**—See under "Commerce."

**GINNING.**—The differences with regard to ginning, baling and pressing are almost as many as the varieties of cotton grown. In the Punjab and Burma, for instance, the

ginners buy the seed cotton, elsewhere they mostly gin on commission. In the south of India, however, where the ginners are also exporters, they buy only the lint after ginning. The greater part of the crop is machine-ginned, but, except in Dharwar, where the American saw gin is used, chiefly with roller-gins. In many of the more important cotton growing centres the big European cotton exporters have their own gins.

**BALING AND PRESSING.**—Though the loose bundles of ginned cotton, if intended for Indian mills, are sometimes only half-pressed in old-fashioned screw presses, the bulk is pressed in steel hooped bales up country and so railed down to the port. The density of the pressing varies from 45 to 65 lbs per cubic foot.

**INDIAN CENTRAL COTTON COMMITTEE.**—In order that Indian cotton may obtain an adequate price in the world's market it is essential not merely that the spread of the long stapled variety should be encouraged, but also that its adulteration in bulk with the short-stapled local strains should be sedulously avoided. There is thus ample opportunity for close co-operation between the Departments of Agriculture and those who trade in this important crop. In 1921 the Indian Central Cotton Committee was established to act as a connecting link between the traders and the agricultural experts, and also to serve as an advisory body to Government on all questions affecting cotton. It affords a joint meeting ground for all sections of the trade with those who are engaged in the improvement of the crop. Under the recently passed Cotton Cess Act the Indian Central Cotton Committee has been constituted as a corporate body with funds of its own, independent of the finances of the Government of India. It derives its revenues from the levy of a small cess upon the whole of the commercial cotton crop, and devotes the proceeds to the promotion of agricultural technological research in the interests of the industry at large. Amongst other activities, it finances the Central Cotton Research Institute at Indore, and has established a Technological Laboratory at Matunga, near Bombay. It has also been instrumental in getting passed the Cotton Transport Act of 1923 and the Cotton Ginning and Pressing Factories Act of 1925.

**MANUFACTURES.**—Of the cotton produced in India, it may be said in general terms that about two-thirds are exported raw, while the balance is manufactured into yarn and cloth in the country. The spinning of yarn is in great degree centred in Bombay, the mills of that province producing in 1924-1925 nearly 74 per cent of the quantity raised in British India. The United Provinces of Agra and Oudh and Madras produced about 7 per cent and 8 per cent respectively, while Bengal and the Central Provinces furnished 4.7 and 5.2 per cent respectively. Elsewhere the production is as yet very limited.

In the early days of the textile industry the energies of the larger millowners were to a great extent concentrated on the production of yarn, both for the China market and for the handlooms of India. The increasing competition of Japan in the China market, the growth of an indigenous industry in China, and the uncertainties introduced by fluctuations in the China exchanges consequent on variations in the price of silver compelled the millowners to cultivate the home market. The general tendency of

GOCULDAS MADHOWJI SONS & CO., Bombay  
One of the Spinning Rooms at the Madhowji Dharamsi Manufacturing Co's Mill

recent years has been to spin higher counts of yarn, importing American cotton for this purpose to supplement the Indian supply, to erect more looms, and to produce more dyed and bleached goods. This practice has reached a higher development in Bombay than in other parts of India and the Bombay Presidency in 1925 produced nearly 78.8 per cent of the cloth woven in India. The United Provinces produced 3.2 per cent and Madras 4 per cent. Grey and bleached goods represented nearly 74 per cent of the whole production.

**DARIS**—The *daris*, or pileless cotton carpets, are a great feature of the Indian textile trade, being produced in three principal forms—*daris* proper (or bed carpets), *shatranjis* (floor carpets), and *jainamaz* (prayer mats). The looms on which *daris* are woven are generally horizontal, and the dyes formerly in use were indigenous vegetable dyes, principally indigo, but the cheapness of aniline dyes has led to the increasing adoption of the latter. The weavers in most of the provinces are poor Mohammedans or low caste Hindus, and the organisation of the trade largely depends on a system of advances by *mahajans* or middlemen, who sell the outturn at the big trade centres. *Daris* properly so called are generally purchased in the piece, while floor carpets are sold by the yard or by weight.

The chief centres of manufacture are Bareilly, Aligarh, Agra, Cawnpore, Farukhabad, Moradabad and Etawah in the United Provinces. The *daris* of Agra are noted for their finish, those of Bareilly for their cheapness and durability, and those of Aligarh for the closeness of the stitch. The industry is expanding in Cawnpore, where large mills under European and Indian management are manufacturing with machinery greater sizes suitable for tents and bungalows, and turn-

ing out considerable quantities for export to England and America. Other provinces where cotton carpets are made are the Punjab, chiefly in the districts of Mooltan, Amballa and Hoshiarpur, the Delhi Province, the Bahawalpur State, Patna city and the Champaran and Shahabad districts of Bihar, and Ayyampet, Bhavani, Adoni and Kurnool in the Madras Presidency, where the local name for these carpets is *jankalam*. In the Bombay Presidency a not inconsiderable industry is carried on in some of the Deccan districts. It is also a popular jail industry in nearly every province.

**WOVEN GOODS**—The following brief extract is taken from the statement of the quantity (in pounds) and description of woven goods produced in all India, including Native States, in 1923-24 and 1924-25—

MANUFACTURES	1923-24	1924-25
Grey and bleached piece goods	287,049,978	325,265,253
Coloured piece goods	108,330,343	125,580,102
Grey and coloured goods other than piece goods	2,575,352	2,953,886
Hosiery	547,831	672,850
Miscellaneous	2,237,111	3,949,303
Cotton goods mixed with silk or wool	207,229	272,006
<b>Total</b>	<b>400,947,844</b>	<b>458,693,400</b>

(NB The equivalents of the totals of 395,380,321 lbs and 450,845,355 lbs of piece goods manufactured in 1923-24 and 1924-25 were 1,701,574,355 yards and 1,070,446,852 yards respectively.)

**YARN**—The following table shows the quantity (in pounds) of yarn of all counts spun in India during 1923-24 and 1924-25—

(See letterpress p. 202)

BRITISH INDIA	1923-24	1924-25
Bombay	398,552,023	474,202,050
Madras	50,038,054	54,221,000

FOREIGN TERRITORY	1923-24	1924-25
Indian States of Indore, Mysore, Baroda, Nandgaon, Bhavnagar, Hyderabad, Wadhwan, Gwahor (Ujjain) and Pondicherry (a)	47,203,709	58,228,301

Grand total 617,328,632 719,389,994

(a) Including the production of one mill only

In 1921-25 the mills on Bombay Island produced 327,542,750 lbs of yarn and those in Ahmedabad 92,006,041 lbs

**MARKETS.**—The chief markets for cotton cloth woven in India are those colonies and countries to which there is considerable Indian emigration. Bombay is the principal port of shipment for *chadars* and *dhootis*, *T cloths* and *domestics*, the chief destinations being Aden, East Africa, Persia, Zanzibar, the Straits Settlements and Baluchistan (via Karachi), while coloured *lungis* and *saris*, which go in the main from Madras, are shipped to the Straits Settlements, Ceylon and

MATHRADAS GOGULDAS & CO., Bombay.  
The Weaving Room in one of the Sir Shapurji Broacha Mills.  
(See letterpress p. 197)

Sumatra As an example of handloom weaving for export, the trade in Madras "handkerchiefs" may be cited, these being shipped to the United Kingdom, though their ultimate destination is chiefly Africa.

**MILL INDUSTRY (PROGRESS OF).**—The first cotton mill in India was started in 1838 at Ghosery, near Calcutta, while the first to be opened in Bombay dates from 1853 with 5,000 throstle spindles. Between 1898 and 1918 the number of spindles increased by nearly 50 per cent, and the total of looms by 211 per cent, but the tendency during the last sixteen years has been to enlarge existing mills rather than to open new ones. At the outbreak of the World War in 1914 India ranked fourth among the countries of the world manufacturing cotton textiles, being exceeded only by Great Britain, the United States and Germany. In that year the number of mills was 271, with 6,778,895 spindles and 104,179 looms. By the end of August 1925 the total of mills working and in course of erection had risen to 337, spindles to 8,570,632 and looms to 154,203, while the number of hands employed daily was 367,877, as compared with 356,887 in 1924, 260,276 in 1914 and 184,779 in 1904. In 1898 the approximate amount of cotton consumed was 1,481,328 bales of 392 lbs each; by 1908 this had risen to 1,991,500 bales, by 1918 to 2,085,678 bales, and by 1925 to 2,226,310 bales. The grand total of gross excise duty realised from goods woven in all Indian cotton mills had increased from Rs.19,31,754 in 1902-03 to Rs.2,34,63,580 in 1924-25.

The following table shows the distribution of cotton spinning and weaving mills in India on August 31, 1925.—

WHERE SITUATED	NUMBER OF MILLS	NUMBER OF SPINDLES	AVERAGE NO OF HANDS EMPLOYED DAILY	COTTON CONSUMED BALES OF 3½ CWT
Bombay Island	82	3,456,233	153,009	904,732
Bombay Presidency	124	2,368,718	95,565	514,018
Total	206	5,824,951	248,574	1,500,650
Rajputana	4	59,048	2,307	14,068
Barar	4	53,284	2,702	14,022
Central Provinces	8	289,032	18,426	102,008
Hyderabad	5	95,368	2,373	11,072
Central India	10	240,371	12,804	81,200
Bengal Presidency	25	365,004	12,489	89,024
Punjab	9	119,106	5,099	27,300
United Provinces	26	632,697	21,373	179,878
Madras Presidency	29	658,264	28,431	149,176
Travancore	2	25,560	672	8,276
Mysore	6	78,882	6,971	17,796
Pondicherry	3	69,066	5,186	21,850
Totals	337	8,570,632	367,877	2,226,310

**SALE AND SHIPMENT.**—The units of sale and shipment of cotton vary at the different ports. In Bombay the unit of sale is the candy of 784 lbs, in Karachi the maund of 84 lbs, in Calcutta the bazar maund of 82½ lbs., and in the south the candy of 500 lbs generally. Quotations for export to the United Kingdom are as a rule per lb c i f. Shipment is made from Bombay in bales of 392 to 500 lbs and from Karachi in bales of 400 lbs. Calcutta adopts the bale of 392 lbs, while at the Madras ports the weight varies from 400 to 500 lbs.

**FREIGHT.**—For freight purposes all cotton is taken on measurement, one ton being equal to 40 cubic feet. Ordinarily, one hundred bales of 400 lbs each will represent between 25 and 26 tons. In Tuticorin, however, where Cambodia and Tinnevelles are usually shipped in bales weighing 500 lbs, the compression is so great that one hundred

bales measure only 10 tons approximately, that is, five bales to the ton.

**TRADE CONTROL.**—Until almost the end of 1917 the regulation of the cotton trade of Bombay was in the hands of several commercial associations, each of which claimed to have some controlling voice. A single agency for this purpose was first introduced under the Defence of India Act as a temporary war measure, but upon the repeal of this Act in 1922 the Bombay Act XIV of 1922 was passed, giving the East India Cotton Association statutory powers similar to those possessed by the Cotton Contracts Board. Since then the East India Cotton Association, Limited, has, subject to its bye-laws being approved by the Governor-in-Council, controlled the cotton trade of Bombay.

**CLEARING HOUSE.**—Of the many innovations which have been introduced since the Bombay Government assumed in the control of the cotton trade, the one which has met with universal approval is the institution of a Clearing House for the cash payment on a fixed date twice every month of differences outstanding on forward contracts. This system of clearing differences by periodical payments came into being in Liverpool in 1882, that is to say, about one hundred and twenty years after the first import of cotton into that city in 1763 and 41 years after the first Association to regulate cotton trading was started in Liverpool. In Bombay it was introduced in 1918, that is, 43 years after the starting in 1875 of the first Association to regulate the cotton trade of the Province.

**HORMUSJEE & CO., Bombay**  
The Ruby Mills Ltd., Managed by this Company

The total amounts handled by the Clearing House have been as follow —

YEAR	Rs
1921-22	12 08 94,506
1922-23	7 09 37 399
1923-24	9 10 95 270
1924-25	3 18 50,196

During the year 1923-24 the amount cleared at one settlement represented a crore and four lakhs of rupees. Two months later another clearing totalled a crore and eighty-eight lakhs of rupees the highest settlement on record in Bombay.

**MARKET (CLINICAL)** — In the early days of trading the cotton market or "Green" was situated in front of the Town Hall, from that site, owing to the steadily increasing volume of trade and consequent congestion of traffic, it was moved to Colaba in 1844. There the trade was domiciled for over three-quarters of a century, and during that period its steady growth continued, until in 1885-86 the cotton brought into Bombay amounted to 1,534,974 bales, and in 1905-06 to 2,551,761 bales. The market was then moved to Mazagon which is in close proximity to the mills and docks and in December 1925 the handsome new Exchange Building was opened by H.E. the Governor of Bombay.

### REPRESENTATIVE COTTON ENTERPRISES

#### **HORMUSJEE & CO.**

**Operations.** — As managing agents for the Bombay Cotton Manufacturing Co., Ltd., and The Ruby Mills, Ltd., this company is well known in commercial circles in Bombay.

**The Bombay Cotton Manufacturing Co., Ltd.** — Registered in 1883, this company went into liquidation in 1909 and was reconstructed in the same year, the agency being taken up by Messrs Hormusjee & Co. Under the reconstruction scheme the creditors received 61 14 per cent in cash and 38 86 per cent in 5 per cent. cumulative preference shares of Rs 10 each.

**CAPITAL** — The authorised capital is Rs 25,00,000, divided into 2,400 ordinary shares of Rs 500 each and 130,000 5 per cent cumulative preference shares of Rs 10 each, of which 2,377 ordinary and 105,227 preference shares have been issued, subscribed and paid up, totalling Rs 22,40,770.

**FUNDS** — Reserve fund, Rs 6,97,297-11-4, depreciation fund Rs 13,23,000, and equalisation of dividend fund, Rs 50,000.

**ACTIVITIES** — The firm manufactures yarn and cloth, and its piecegoods are well known in Basra, Baghdad and Syrian ports, in addition to Indian markets.

**FACTORY** — Comprising spinning and weaving blocks and a bleaching shed, the mills employ 1,800 day operatives and are equipped with 33,648 spindles, 705 looms, preparatory machinery and a bleaching plant.

**PROPERTY** — The firm owns 100 acres freehold land at Kalachoki Road, Chichpogly,

**HORMUSJEE & CO., Bombay.**

Portion of the Bombay Cotton Manufacturing Co. Ltd.'s Mill managed by this Company.

P. A. HORMARJEE & CO., Bombay.  
General view of a portion of Sewri, one of the principal industrial suburbs of Bombay, showing the Moon Mills in the foreground.

Bombay, the present value of which is ten times its original cost, Rs 79,128,138.

**DIRECTORS**—Mr Kharshedjee Dhunjeebhoy Shroff (chairman), the Hon Sir Phiroze C. Sethna, Kt, O B E, Messrs Rustam K. R. Cama, Purshotam Jeewandas, F. E. Dinshaw, Ardeshir Hormusjee Dubash, and Hormusjee Framjee Commissariat (managing director).

**BANKERS**—The Imperial Bank of India, The Bank of India, The Central Bank of India, Ltd., and The Eastern Bank, Ltd.

**The Ruby Mills, Ltd.** Probably the smallest spinning and weaving mills in Bombay, this concern started spinning in 1916 and weaving in 1917, when about 365 looms were installed. Although it is a public limited company, it may safely be styled a private business, as the managing agents, Messrs Hormusjee & Co., were themselves the promoters and hold all the shares.

**CAPITAL**—The authorised issued and called up capital is Rs 12,00,000, divided into 12,000 shares of Rs 100 each. The reserve fund is Rs 3,05,000, and the depreciation fund Rs 2,10,000.

**ACTIVITIES**—Cloth and yarn are manufactured for the Indian, Egyptian and Far Eastern markets, in which they command a large sale.

**FACTORY**—This is equipped with 12,868 spindles, 365 looms, and the necessary preparatory machines, and employs a mixed staff of 1,140 operatives on day and night shifts.

**PROPERTY**—Foras freehold land at Lady Jamsetji Road, Dadar, Bombay, of the original value of Rs 27,000.

**DIRECTORATE**—Messrs Ardeshir Hormusjee Dubash (chairman), Chagan Gopalji (joint managing director), Gustadji D. Billimoria, Goculdas Doongersey, Dharamsey Ratansey, Kaikhshroo A. Dubash, and Hormusjee Framjee Commissariat (joint managing director).

**MANAGEMENT**—The management of the business by the agent-promoters is a model of economy and efficiency.

**OFFICES**—Messrs Hormusjee & Co., Commissariat Buildings, Hornby Road, Bombay.

**BANKERS**—The Central Bank of India, Ltd., and the Bank of India, Ltd.

#### THE MOON MILLS, LTD. (MANAGING AGENTS, P. A. HORMARJEE & CO.).

**Inception**—This flourishing company was founded on September 2, 1806, by the late Mr P. A. Hormarjee, who acted as its managing agent from the commencement.

**Development**—The mills started as a spinning concern in July 1806 with 16,000 spindles, a number which was increased by 3,916 in 1906 and by 10,000 in 1912. In July 1925 the mills were converted to include weaving, and to-day the entire plant consists of 38,494 spindles and 756 looms. Electric drive was inaugurated on November 11, 1923.

**Capital**—The authorised capital is Rs 5,00,000 in 2,000 shares of Rs 250 each, the subscribed capital Rs 2,50,000 and the issued capital Rs 2,50,000, both in 1,000 shares of Rs 250 each.

**Production**—All yarns and cloths produced for market are sold in Bombay to be distributed throughout India and Burma. Annual production of yarn for market (4's, 6½'s, 2/10's and 12½'s) is 2,500 bales, weighing 1,000,000 lbs., of cloth (long cloth, leopard cloth, dhotees, shirtings, etc.), 7,200 bales, weighing approximately 2,700,000 lbs.

**Premises**—The Moon Mills are situated at New Sewri Road, Bombay, and have a floor space of 238,330 sq. ft. The equipment is of the latest type by standard makers, and the factory employs 1,200 operatives.

**Directorate**—Messrs A. J. Raymond (chairman), F. R. Wadia, F. E. Dinshaw, C. P. Wadia and N. P. Whaddia.

**Agents**—Messrs P. A. Hormarjee & Co. (present partners, Messrs N. P. Whaddia and C. P. Wadia).

**Bankers**—The Hongkong and Shanghai Banking Corporation, The Bank of India, Ltd.

#### THE SIR SHAPURJI BROACHA MILLS, LTD. (Mathradas Goculdas & Co., Managing Agents).

**Inception**—This company was formed in 1916 to take over the Empress No. 1 Mills, the Empress No. 2 Mills, the Connaught Mills, the Imperial Mills and the James Greaves Mills.

**Development**—The book value of the company's fixed assets in 1917 was Rs 51,94,539, as against the present valuation, excluding the Woollen Mills, of Rs 84,91,868, while in

ten years the company has distributed Rs 96,05,242 to its shareholders in dividends.

**Capital**—The original authorised capital was Rs 50,00,000, divided into 50,000 ordinary shares of Rs 100 each. The present paid up capital is Rs 74,93,600, divided into 49,995 ordinary shares of Rs 100 each and 24,941 7 per cent cumulative preference shares of Rs 100 each.

**Activities**—The annual production amounts to 1,54,20,000 lbs. of yarn and 24,60,000 lbs. of cloth. The cotton yarns range from 2's to 50's counts, and find a very favourable market in China, Syria, Egypt and the Levant. The mill caters for the very considerable local demand and also manufactures grey, dyed, bleached and coloured piecegoods, which are in demand in all the chief markets of India.

**Factory**—The spinning mills (manager, W. Taylor) are among the largest in Bombay; the three modern, electrically driven, spinning mills and one weaving mill at Delisle Road, Parel, consisting of nearly 100,000 spindles and 653 looms with the necessary preparatory machinery, and employing daily 5,000 men and women.

**Woollen Mills**—The company has lately taken over the concern known as The Indian Woollen Mills at Mahalaxmi. This is one of the most modern mills in India, equipped with 7,020 spindles and 150 looms, producing 1,600,000 lbs. of yarn and 1,000,000 lbs. of cloth yearly. Its products are well known and in great demand all over India.

**Directorate**—Mr F. E. Dinshaw (chairman), the Hon. Sir Phiroze C. Sethna, and Messrs A. J. Raymond and Ambalal Sarabhai, the same directors as those of the company described in the preceding notice, with the addition of Messrs F. G. Travers, Haji Goolam Mahomed Ajam and Albert Raymond.

**Management**—The managing agents are Messrs Mathradas Goculdas & Co., who are associated in the same offices with Messrs Goculdas Madhowji & Co., managing agents for The Madhowji Dharamsi Manufacturing Co., Ltd.

**Offices**—Commissariat Building, Hornby Road, Fort, Bombay.

**Bankers**—The Imperial Bank of India, the National Bank of India, Ltd., the Central Bank of India, Ltd., and others.

(See illustration p. 195.)

**MORARJEE GOCULDAS SPINNING AND WEAVING CO., LTD. (Morarjee Goculdass & Co., Secretaries and Agents).**

**Inception.**—This business was founded on August 10, 1871, to manufacture yarn and cloth for the Indian markets.

**Capital.**—The authorised capital is Rs 12,00,000, while the issued and paid-up capital is Rs 11,50,000.

**Factory.**—The factory, situated at Supari-bag Road, Parel, Bombay, employs 4,500 operatives. The total power generated is 4,300 E S P.

**Directorate.**—Mr Narottam Morarji, the Hon Mr Ratansi D Morarji, Messrs F E Dinshaw, Trikandass D Morarji, T R N Cama, Madhavji D Morarji, Ambalal Sarabhai, and A J Raymond.

**Management.**—Messrs Morarjee Goculdass & Co.

**Offices.**—Sudama House, 31, Sprott Road, Ballard Estate (cables "Banyantree," Bombay) Codes A B C 5th Edition, Bentley's, Western Union, Liebert's.

**Bankers.**—The Imperial Bank of India, The Central Bank of India, Ltd, The National Bank of India, Ltd, The Eastern Bank Ltd, The Allahabad Bank, Ltd, and the P & O Banking Corporation.

**THE DHARAMSI MORARJI WOOLLEN MILLS, LTD. (Dharamsi Morarji & Co., Agents).**

**Inception.**—Messrs Dharamsi Morarji & Co promoted this soft goods manufacturing company, which was incorporated and registered on September 29, 1919, under the Indian Companies Act.

**Capital.**—The authorised capital is Rs 100,00,000, of which Rs 79,39,700 is issued and subscribed.

**Activities.** The manufactures include worsted hosiery and serge, woollen goods, hosiery cloth, leather cloths, oil cloths and bookbinding cloths, the goods being sold on the markets of India and Burma. The firm is on the list of contractors for the Government and the Indian Railways.

**Mill.**—Situated at Ambarnath, near Kalvan, G I P Railway, the mill is run by electrical power and employs 200 operatives.

**Directors.**—The Hon Mr Ratansi D Morarji (chairman), Sir Hormusji Cawasji Dinshaw, Bt, Messrs F E Dinshaw, Trikandass D Morarji and Ambalal Sarabhai.

**Management.**—Messrs Dharamsi Morarji & Co.

**Offices.**—Sudama House, 31, Sprott Road, Ballard Estate, Bombay (cables "Dharmajaya," Bombay).

**Bankers.**—The Central Bank of India, Ltd, The Bank of India, Ltd, The P & O Banking Corporation, Ltd.

**THE DHARAMSI MORARJI CHEMICAL CO., LTD. (Dharamsi Morarji & Co., Agents).**

**Inception.**—This firm, for which Messrs Dharamsi Morarji & Co, as in the case of the preceding company, act as managing agents, was established on September 25, 1919.

**Capital.**—The authorised capital is Rs 50,00,000, the issued and subscribed capital being Rs 40,00,000.

**Activities.**—The firm manufactures pure acids, heavy chemicals, bonemeal, bone superphosphate and other manures for the Indian and Ceylon markets, and is on the Government and Railway lists.

**Factory.**—This is at Ambarnath and employs 270 workers; the power used is electrical.

**Directorate.**—The Hon. Mr Ratansi D. Morarji (chairman), the Hon. Sir Phiroze C.

**Bankers.**—The Central Bank of India, Ltd., The Bank of India, Ltd., The P & O Banking Corporation, Ltd.

#### **BIRLA BROTHERS, LIMITED.**

**Inception.**—This firm was incorporated as a private limited company in 1918 to take over the businesses of Shivanarayan Baldeo-dass in Bombay and Baldeo-dass Joogalki-shore in Calcutta, two firms of over 50 years' standing in the export and import trade.

**Development.**—The company has made considerable progress in export and import business, particularly in industries.

**Capital.**—The paid-up capital is Rs 50,00,000. The shares can be held by only Raja Baldeo-dass Birla and his descendants.

**Activities.**—In addition to large import and export operations, Messrs. Birla Bros are managing agents for a number of jute, cotton and rice mills, and control a number of subsidiary companies for brokerage and agency business.

**Exports and Imports.**—The chief lines of export are jute, jute goods, oil seeds, food grains and cotton, the principal import interests being bullion, piece goods and sugar.

**Managing Agents.**—The firm are managing agents for the Birla Jute Manufacturing Co. Ltd., whose paid-up capital is Rs 50,00,000, Kesoram Cotton Mills, Ltd., Calcutta, paid-up capital Rs 80,00,000, Jiyajeerao Cotton Mills, Ltd., Gwalior, paid-up capital Rs

30,00,000, Birla Cotton Spinning and Weaving Mills, Ltd., Delhi, paid up capital Rs 15,00,000. They also control two rice mills in Bengal.

**Subsidiary Companies.**—These include Jute & Gunny Brokers, Ltd., Calcutta, Birla Cotton Factory, Ltd., Chitpore Hydraulic Pressing Co. Ltd., and the East Indian Produce Co. Ltd., London.

**Directors.**—Messrs. J. K. Birla, R. D. Birla, G. D. Birla and B. M. Birla, sons of the Raja.

**Head Office.**—137, Canning Street, Calcutta (cables "Lucky," Calcutta). Codes Bentley's and Private.

**Branch.**—11-13 Church Gate Street, Bombay.

**Bankers.**—The Imperial Bank of India, the Central Bank of India, etc.

**BIRLA BROS. LTD., Calcutta.**

2. Spinning Room in the same Mill.

**THE MILL STORES TRADING CO OF INDIA, LTD. (H. M. Mehta & Co., Managing Agents).**

**Inception.**—The firm of H. M. Mehta was established in Bombay in 1896, the partners being Mr. H. M. Mehta, Mr. Mangaldas G. Parekh and Mr. Essa Soomar. Within a year the newly-formed company had floated The Mill Stores Trading Co. of India, Ltd., with a capital of Rs. 1,00,000, to operate as mill stores merchants. Of that organisation H. M. Mehta & Co. still act as managing agents.

**Personal.**—The founder, Mr. Mehta, was educated at Elphinstone High School, matriculating in 1890. His first post was with the Bombay Mint at a salary of Rs. 25 per mensem, but after a year he joined the China Mills as an assistant accountant, and there acquired a thorough knowledge of the cotton mill industry. He next became a salesman for Messrs. D. R. Umrigar & Co., mill stores merchants in Bombay, leaving them in 1896, when he was 25 years old, to start his own business with the partners already mentioned. Mr. Mangaldas G. Parekh of Ahmedabad had also risen from the ranks, having been a store-keeper in one of the mills managed by Mr. Mansukhbhai Bhagoobhai, and between them they conducted the new business very efficiently.

**Development.**—The Mill Stores Trading Co. of India, Ltd., expanded rapidly, the first event of note being the successful visit paid to England in 1901 by Mr. Mehta, when he secured a number of first-class agencies for certain Lancashire manufacturers. After his return to India business continued to increase, and in 1905 the firm was able to buy the Victoria Cotton Mills, which had about 14,000 spindles, for the small sum of Rs. 2,40,000. In the first year the profits were equal to the purchase cost of the mills and were utilised to add 15,000 more spindles to the equipment. The company derived great profits from this mill, which was soon after registered as the Victoria Mills, Ltd., a private company, with a capital of Rs. 8,00,000, derived solely from profits. The mills were equipped with 31,000 spindles and 500 looms.

Mr. Mehta continued to visit England periodically, and by the end of 1907 had secured agencies for about 12 large firms in Lancashire manufacturing machinery and mill stores. The company purchased the Jubilee Mills and the Raja Goculdass Mills prior to the cotton mill boom, and made enormous profits out of these two concerns in the years 1918, 1919 and 1920. The mills were later turned into limited concerns, the present company holding almost all the capital, only a few shares being distributed among the public.

**Activities.**—The operations of The Mill Stores Trading Co. of India, Ltd., cover a wider range than the title suggests, including, under separate departments, machinery, mill stores, sundries, cotton, hessian, paints, insurance, motor cars, and electrical engineering.

**Machinery and Mills Stores.**—The company acts as sole agents for the whole of India for the following important Lancashire manufacturers: Dobson & Barlow, Ltd., spinning machinery; Hacking & Co., Ltd., looms and weaving machinery; J. H. Riley & Co., Ltd., calendars, bleaching and finishing machinery; George Saxon, Ltd., engines and gearing; S. Baldwin & Heap, Ltd., beam-dyeing plants; J. Hodgkinson & Sons, shuttles; Kay & Wilkinson, Ltd., beltings and leather goods; Wilson & Co. (Barnsley) Ltd., bobbins, shuttles, etc.; Porritts & Spencer, Ltd., roller cloth and flannels; Goodbrand & Co., Ltd., economisers and wrapping machines; Clarke

H. M. MEHTA & CO., Bombay.

1. Jubilee Mills Ltd., managed by the Company.
2. Victoria Mills Ltd., also managed by the same firm.

Sprinkler & Co., Ltd, humidifiers, Robert Barker, Ltd, hald and reeds, and James Taylor & Sons (Cleckheaton), Ltd, card clothing. The firm also represents Messrs Turner Bros, asbestos goods and packing, hair belting, etc., and Sacre & Co., sizing ingredients.

**Insurance.**—From 1905 onwards Mr Mehta began giving earnest attention to this business, and in that year the firm became chief agents for the London & Lancashire Fire Insurance Co in the Bombay Presidency. So successfully did it manage this agency that the Gresham Fire Insurance Co offered the firm its chief agency in the Presidency, an offer which was accepted. In 1916 Mr Mehta formed The Zenith Life Assurance Co., Ltd, with a small capital of Rs 1,00,000, the shares being subscribed within a few hours. This company is now progressing steadily, and everything points to its becoming one of the largest of the kind. In 1919 Mr Mehta conceived the idea of floating a fire insurance company in Bombay itself, and accordingly founded the British India General Insurance Co., Ltd, with a capital of Rs 1 crore. Within four days this amount was over-subscribed to the extent of more than six crores. The company has made large strides, and is now one of the premier insurance concerns in India.

**Cotton.** In 1911 the firm extended its operations to include cotton, and to-day ranks among the big Bombay cotton stockholders and shippers, exporting cotton to Liverpool, the Continent and America. In 1919 Mr Mehta commenced trading with East Africa, and in 1921 established a business at Kampala. In less than five years this trade has expanded so much that the company now owns five ginning factories and one press factory, besides doing a large business in long-stapled East African cotton.

**Motor Cars.**—Mr Mehta next turned his attention to the motor car business, and in 1918 established the enterprise of L. R. Pratt (Bombay), Ltd, followed a year later by M. T. Limited, the latter in partnership with Sir Victor Sassoon. Both these firms do a large business and control the sale of the well-known Buick cars all over Bombay and Calcutta, in addition to representing such other famous cars as Lancia, Standard, Cadillac, etc.

**Electrical Engineering.**—This side of the business was formed when the firm bought the business of Crompton's, Bombay, dealers in all electrical goods and machinery. Mr Mehta obtained licenses from the Bombay Government for the electrification of Poona, Ahmedabad and Karachi. He undertook the huge Poona scheme himself, but sold the other two licenses. For the Poona scheme the Poona Electric Supply Co. was formed with a capital of Rs 10,00,000 in 1919, but to such an extent has the company's business increased that a fresh issue of Rs 8,00,000 debentures was made to secure further capital. The company is progressing steadily, increasing its business and bringing in good returns. In 1920 Mr Mehta, in conjunction with others, electrified the town of Navsari, forming the Navsari Electric Supply Co., Ltd., for the purpose.

**Branches.**—Ahmedabad, Calcutta, Kampala (East Africa) and Bolton, Lancashire.

**Managing Agents.**—H. M. Mehta & Co.

**Offices.**—123 Esplanade Road, Fort, Bombay.

**Cables.**—"Mulberry," Bombay, Ahmedabad and Bolton; "Exemplary," Kampala.

2. Firm's Cotton Ginning and Pressing Factory at Akola 3. View of the Cotton Godown at Sewri

**AMERSEY DAMODER; MADHAVDAS AMERSEY & CO.; AMERSEY & SONS.**

**Inception.**—The original firm was founded nearly 70 years ago by Amersey Damoder, who commenced operations as a cotton commission agent and banker, up-country cotton growers consigning their crops to him for sale on their behalf.

**Development.** About the year 1880 Mr Madhavdas Amersey, son of the founder, joined the firm, and further extended the business by establishing ginning and pressing factories in the cotton districts, also by obtaining agencies from the principal Bombay millers and other buyers to purchase on their behalf up-country. Finally, about 1907 the firm started exporting cotton to China, Japan and Europe, and since then has continued to expand this side of the business.

**Activities.**—The company deals exclusively in cotton, acting as commission agents, brokers and exporters.

**Partners.**—These are Messrs Haridas Madhavdas Amersey, Manmohandas Madhavdas Amersey, and Nandlal Madhavdas Amersey, three brothers, who carry on the business under the names and styles of Amersey

Damoder, Madhavdas Amersey & Co. and Amersey & Sons. Mr Haridas Madhavdas Amersey is at present the acting chairman and vice-chairman of the East Indian Cotton Association, Ltd., which is the governing institution for the cotton industry in India and operates under a charter from the Government of Bombay. Mr Manmohandas Madhavdas Amersey has often visited China, Japan, America and Europe in the interests of the firm.

**Offices.** Messrs Amersey Damoder, 106, Bhuleshwar Road, Bombay (cables "Mayoralty"), Madhavdas Amersey & Co. Oriental Buildings, Hornby Road, Bombay (cables "Warbler"), Amersey & Sons, Sudama House, 31, Sprott Road, Ballard Estate, Bombay (cables "Amersons"). The firms have the usual purchase rooms and godown accommodation at the Cotton Depot at Sewri, besides buying offices in most of the cotton-growing districts in India, and ginning and pressing factories in the prominent cotton centres.

**Codes.**—A B C 5th Ed and Parker's **Bankers.**—Bank of India, Ltd, Yokohama Specie Bank, National Bank of India, Imperial Bank of India, and others.

**CURUMSEY DAMJEE & SONS.**

**Inception.**—Established about 1870, this firm acted as *muccadums* (representatives) to Messrs. Greaves Cotton & Co. and their Cotton Mills, the Imperial Bank of India, the French Bank, the Chartered Bank, the Imperial Bank of Persia, the Bombay Port Trust, the Customs Department, the P & O and the British India Steam Navigation Companies, and Messrs Yokohama Kito Ltd. Within recent years the firm has given up the last five of these agencies.

**Development.**—In 1919 a sister company, Messrs. L. K. Vusonjee & Co., was formed to operate as insurance agents and cotton merchants, and in 1923 the firm opened up a cotton export department. Messrs Curumsey Damjee & Sons are now members of the East India Cotton Association, as well as associate members of the Liverpool Cotton Association, Ltd.

**Activities.**—About 50,000 to 60,000 bales of cotton are handled yearly, mostly for export to Japan, China and the Continent of Europe. The company has its own purchasing offices and godowns at Sewri, Bombay, and at Karachi, whilst agents established in Madras complete its facilities for direct shipments from these three great ports.

**Overseas Representatives.**—The company's agents abroad are: Osaka Hibiya Trading Co., Ltd., and A. Cameron & Co., Ltd., Shanghai; Shroff Sons & Co. and A. Cameron & Co., Ltd., Genoa; R. & F. Cevesco, Lille; Francois Faguet, and Liverpool Gruning & Co.

**Partners.**—Messrs Vusonjee Curumsey, Kallianjee Curumsey, Lowjee Meghjee, Deo-jee Jeewandas (representing Seth Jeewandas Vallabhdas & Co.), Nilkanth Ishwardas Mashruwala (representing Ishwardas & Co.), and Mooljee Vusonjee.

**Branches.**—Karachi, Jalna, Broach, Hinganghat, Guntur, and all important cotton centres.

**Offices.**—Sohrab House, Hornby Road, Fort, Bombay. Cables "Noventa," Bombay, also "Dharmataj," "Nyalkaran," "Daring" and other special addresses. Codes: Bentley's and A.B.C. 5th and 6th Editions.

**Bankers.**—The French Bank, The Imperial Bank of India, The P & O. Banking Corporation, Ltd., The Chartered Bank, and the Yokohama Specie Bank, Ltd.

**THE MADHOWJI DHARAMSI MANUFACTURING CO., LTD. (Goculdas Madhowji Sons & Co., Managing Agents).**

**Inception.**—Established in 1893 by Mr. Goculdas Madhowji, this company has made consistent progress ever since its foundation.

**Development.**—In 1894 the book value of the company's fixed assets was Rs.9,41,498. The present valuation is Rs.73,71,540, while a reserve fund of over Rs 38,00,000 has been built up and a crore of rupees distributed to shareholders in dividends.

**Capital.**—The original capital of the concern was Rs.12,00,000, in 2,400 shares of Rs 500 each. The present authorised capital is Rs 21,75,000, divided into 15,000 ordinary shares of Rs.100 each and 2,700 6 per cent. cumulative preference shares of Rs.250 each. The paid up capital is Rs.20,23,750, divided into 13,500 ordinary shares and 2,700 preference shares.

**Activities.**—The firm produces 402,060 lbs. of yarn and 242,884 lbs. of cloth per month, besides manufacturing artificial silk shirtings, malmals, saris, etc., for which there is a great demand.

**Factory.**—The spinning and weaving mill at Tardeo, Bombay (manager, D. A. Tata), is thoroughly modern. Equipped with 903

looms, 37,812 spindles and the necessary preparatory machinery, it is driven by electrical force of 2,614 h.p. There is a waste manufacturing plant, also a fully equipped bleaching, dyeing, and finishing plant capable of doing 5,00,000 lbs per month. The mills employ 1,861 men and 507 women daily, and produce cotton yarns up to 50's counts, grey, dyed and bleached piecegoods of all kinds. The company also has a cotton ginning and pressing factory of 38 gins and one press at Tiruppur in the Madras Presidency.

**Property.**—The firm owns several workmen's chawls, stables and other buildings in Bombay.

**Directorate.**—Mr. F. E. Dinshaw (chairman), the Hon. Sir Phiroze C. Sethna, and Messrs. A. J. Raymond and Ambalal Sarabhai.

**Managing Agents.**—The company's affairs are managed by Messrs. Goculdas Madhowji Sons & Co., in which firm Messrs. F. E. Dinshaw and Haji Goolam Mahomed Ajam are partners.

# COMMERCE

## EXPORTS AND IMPORTS

### GENERAL DATA

**I**N general, India enjoys a considerable surplus of exports over imports. Whereas the average credit balance of merchandise in pre War years was 78 crores of rupees, this rose at the time of the post-Armistice trading boom to Rs 129 crores. During the trade slump there was a debit balance of 20 crores of rupees, but India's recovery from that slump was shown when in 1922-23 the debit was converted into a credit balance of Rs 90 crores. The total visible balance of trade as measured by statistics of merchandise, treasure, encased rupee paper and the like during 1924 was in India's favour to the extent of Rs 80 crores, a figure which rose to Rs 101 crores in 1925, as compared with a debit balance of Rs 33 crores in 1922. The total visible balance of trade in the fiscal year 1925-26 showed a credit of Rs 109 crores.

This evidence of expanding trade is the more significant because it was not until the 20th century was ushered in that the economic situation in India was stabilised sufficiently to make recent progress possible. Previously, famine and plague had been frequent, but when British organisation mastered these evils the times were ripe for a big effort in the direction of trade expansion and industrialisation. The World War did much for the latter movement by forcing India to improvise substitutes for the stores and manufacturing materials which could not reach her from overseas owing to the shortage of shipping. As for trade, the heavy sales of Indian produce resulted in the remarkable boom which followed the Armistice. The immediate consequences of this were far from satisfactory. After the boom came a slump, during which Indian dealers repudiated many contracts, throwing great quantities of stock back upon shippers. From that slump India may be said definitely to have recovered, and the way is open for the steady development of her export and import trade, a progress which, apparently, only political differences can disturb.

During the fiscal year 1925-26 a good monsoon enabled India to have another exportable surplus of raw materials and to sustain the favourable trade balance. The wholesale price levels of that country's three best customers, the United Kingdom, Japan and the United States, were relatively stable. Of the utmost importance to India's foreign trade has been the stabilisation of most European currencies in relation to gold. In 1925-26 that general movement continued; Great Britain again adopted the gold standard practically in April 1925, and towards the end of that year the Royal Commission on Indian Currency and Finance began to function. The Commission recommends for application to India (1) the adoption of a gold bullion standard; (2) the institution of a central bank of issue; (3) the stabilisation of the rupee at one shilling and sixpence, a rate

which has been operative for some considerable time.

The chief features of India's trade during the three years 1923, 1924 and 1925 were good harvests, with a consequent increase of the exportable surplus, satisfactory prices for staple commodities, such as jute, cotton and tea, a restricted demand for imported manufactured goods, due to falling prices, which prevents the Indian dealer from laying in large stocks, and fluctuations in the course of the rupee-sterling exchange which tended irregularly upwards. Thus, while on the whole Indian goods were sold in increasing quantities and at favourable rates in the world's markets during the three years, foreign goods declined in value. But the effect of a rising exchange was to discount (to the extent of the rise) the rupee profits on Indian exports, and to emphasise in rupees the fall in the values of imports.

**BALANCE OF TRADE.**—Only once since 1883 (taking the pre War averages of five years) has the trade of India shown an adverse balance—in 1921-22, when the post-War slump was at its worst and the total visible balance of trade was 36.06 lakhs of rupees. The following table shows the visible balance of trade in merchandise and treasure during the calendar year 1925, as compared with the preceding year. The sign plus (+) signifies net export and minus (—) net import.

	1924 R (LAKHS)	1925 R (LAKHS)
Exports of Indian merchandise (private)	+369.05	+395.95
Re-exports of foreign merchandise (private)	+13.65	+10.99
Imports of foreign merchandise (private)	—238.13	—224.42
Balance of trade in merchandise (private)	+144.57	+182.52
Gold (private)	—45.21	—60.83
Silver (private)	—18.75	20.23
Currency notes (private)	—58	—9
Balance of transactions in treasure (private)	64.54	—81.15
Total visible balance of trade	+80.03	+101.37

Statistics for the fiscal year 1925-26 with regard to the balance of trade of India yielded the following particulars (the figures signifying lakhs of rupees). Exports of Indian merchandise (private), +374.84, re-exports of foreign merchandise (private), +10.49, imports of foreign merchandise (private), —224.20; balance of trade in merchandise (private), +161.13, gold (private), —34.85, silver (private), —17.15, currency notes (private), +12, balance of transactions in treasure (private), —51.88, and the total visible balance of trade, +109.25.

**COMMERCIAL ORGANISATIONS.**—The principal non-official organisations connected with trade in India are the Chambers of Commerce at Calcutta, Bombay, Madras, Rangoon, Karachi and other important

### COMMODITIES

centres with a membership, except in Bombay preponderatingly European, though open to Indians also. Closely connected with these and not infrequently employing the same secretarial staff, are the associations representing particular branches of trade, such as jute mills, cotton mills, etc. The Trades Associations representing the retail traders in the principal cities are scarcely less important bodies, and there are other associations representing general interests of more recent growth, such as the Marwari Association in Calcutta, the South Indian Chamber of Commerce in Madras and the Indian Merchants' Chamber and Bureau in Bombay, which are exclusively Indian in membership. These bodies, though they differ from time to time on questions of policy, are in no sense antagonistic to the older associations.

The membership of most of these bodies is confined to the province or city where their headquarters are situated, but they maintain close touch with similar organisations at other trade centres. In the case of jute, which is grown only in Bengal, the associations connected with it are representative of the entire industry.

**ASSOCIATED CHAMBERS OF COMMERCE OF INDIA AND CEYLON.**—This organisation was constituted in 1920 and consists of the following fifteen Chambers: Bengal, Bombay, Burma, Calicut, Ceylon, Chittagong, Cocanada, Cochin, Karachi, Madras, Narayanganj, Punjab, Upper India, Tellicherry and Tuticorin. The principal work of the Association is the organising of an annual meeting of its members, at which commercial and industrial questions are discussed and suitable resolutions adopted. The articles of association provide for the election of a Chamber by whom a President for the year is nominated, and also of two Chambers, each of whom nominates a Vice-President for the year. A Secretary is also appointed yearly by the annual meeting.

#### BENGAL CHAMBER OF COMMERCE

—This is the oldest association of its kind in India, having been founded in 1834 and reconstituted in 1851. The business of the Chamber is transacted in the handsome Royal Exchange Hall in Calcutta. The institution at present consists of over 250 members, and may fairly claim to be representative of the European trade, commerce and manufactures of the Presidency. In addition to the work of the body proper, as represented by a President, Vice-President and Committee of seven, there are no fewer than 22 commercial associations recognised by and affiliated to the Chamber.

The Bengal Chamber of Commerce enjoys the privilege of electing a representative to the Council of State and six representatives to the Bengal Legislative Council, as well as

representatives to the Improvement Trust of Calcutta. A very important branch of its work is the weighing and measuring of most of the principal commodities exported from the city just named. For this work the Chamber has a special department—the Licensed Measurers' Department—which has been in existence for more than 40 years. It maintains a staff of about 110 measuring officers who measure and weigh goods chiefly in course of shipment. The measurements so recorded are used by the steamship companies as the basis upon which to calculate freights charged to exporters, and the weights are required chiefly by exporters for contract purposes.

**BOMBAY CHAMBER OF COMMERCE**—This organisation was founded in 1836. Its affairs are controlled by a Chairman, a Vice-Chairman and a Committee of seven. The Chamber has given particular attention to the publication of statistical returns, and enjoys special facilities from the Customs House for their preparation. The daily issues include an arrival return and trade return, details of all import and export manifests are published twice a week and current quotations weekly, while the figures of exports and imports by sea, and of movements of piece goods and yarn by rail are issued monthly. A Measurement Department is responsible for the measurement of exports in the docks prior to loading, and, as elsewhere, one of the most important duties performed by the Chamber is that of arbitration in commercial disputes. The institution elects a representative to the Council of State and two to the Bombay Legislative Council. It has one seat on the Bombay Corporation, and five and one on the Port Trust and Improvement Trust respectively.

**EAST INDIA COTTON ASSOCIATION, LIMITED**—See special article on "Cotton."

**INDIAN CENTRAL COTTON COMMITTEE**—See special article on "Cotton."

**INDIAN JUTE MILLS ASSOCIATION**—See special article on "Jute."

**INDIAN LAC ASSOCIATION**—See special article on "Shellac."

**INDIAN MERCHANTS' CHAMBER AND BUREAU**—This Chamber and Bureau, Bombay, was established in the year 1907 to promote and protect the trade, manufactures and commerce of India, and to secure organised action on all subjects relating to the interests of the Indian business community directly and indirectly. Eleven leading Commercial Associations of Bombay are affiliated to the Chamber, which is thus thoroughly representative of Indian commercial interests. The Chamber elects a representative each to the Indian Legislative Assembly, the Bombay Legislative Assembly and the Bombay Legislative Council, besides electing five representatives to the Bombay Port Trust and one to the Bombay Municipal Corporation. It has recently taken up the work of arbitration, and publishes quarterly an Anglo-Gujarati journal giving commercial and statistical information.

**INDIAN MINING ASSOCIATION**—See section on "Mines and Minerals."

**INDIAN MINING FEDERATION**—See section on "Mines and Minerals."

**INDIAN TEA ASSOCIATION**—See special article on "Tea."

**KARACHI CHAMBER OF COMMERCE**—Founded in 1860 on lines similar

to those of the Bombay Chamber, the Karachi Chamber of Commerce has for its objects the promotion and protection of the general mercantile interests of the province of Sind, to communicate with the public authorities, with similar associations in other places and with individuals on all subjects of general mercantile interest, to collect and classify commercial information, and to receive and decide references on matters of usage and custom in dispute. Its affairs are managed by a Chairman, Vice-Chairman and Committee of eight, elected annually. The Chamber elects a representative to the Bombay Legislative Council and three representatives to the Karachi Port Trust. There are more than 80 members on the roll.

**MADRAS CHAMBER OF COMMERCE**—This Chamber was founded in 1836 with a view to watch and protect the interests of trade in the Presidency, and it has carried out a great deal of most useful work. The number of members at present exceeds sixty, including the leading firms in Madras, the principal banks and the two railways serving the Presidency. The South Coromandel, Cochin, Calicut and Cocanada Chambers of Commerce are affiliated to the Madras Chamber of Commerce, which is itself affiliated to the British Imperial Council of Commerce, London, and is also an original member of the Associated Chambers of Commerce of India and Ceylon. The Madras Trades Association and the United Planters' Association of Southern India are represented on the Chamber by honorary members, and Government officials interested in trade and commerce are also invited to join the institution from time to time in a similar capacity.

The Chamber has two seats on the Madras Legislative Council, and in addition three seats on the Corporation of Madras, as also four seats on the Madras Port Trust Board. It is also represented on the Advisory Committees of the South Indian and Madras and Southern Mahratta Railways, the Madras Provincial Cotton Committee, the Provincial State Aid to Industries Board and the Indian Tea Cess Committee.

**PUNJAB CHAMBER OF COMMERCE**—This Chamber of Commerce, Delhi (founded in 1905), with local committees at Amritsar and Lahore, is concerned with the trade and manufactures of the North-West Frontier Province and Kashmir, as well as of the Punjab. The Chamber shares with the Punjab Trades Association the seat allotted to the representation of Commerce in the Punjab Legislative Council.

**SOUTH INDIAN CHAMBER OF COMMERCE**—This Chamber (founded in 1909), with a membership exclusively Indian, claims to represent Indian trade, commerce, industries and banking in the city of Madras and the adjoining districts of the Presidency. Its objects are identical with those of similar bodies, and its affairs are managed by an Executive Committee of twenty-four members, a President and two Vice-Presidents. There are two classes of members—resident and non resident. The right of electing two members to the Madras Port Trust was accorded to the Chamber in 1915, and it also enjoys the privilege of electing two councillors to the Madras Corporation. It likewise elects a representative to the Madras Legislative Council, and one to the Provincial State Aid to Industries Board. The Chamber registers trade marks, surveys goods and undertakes arbitration of disputes. There are about 200 members.

**UPPER INDIA CHAMBER OF COMMERCE**—This important Chamber, having its headquarters in Cawnpore, was

inaugurated in 1888 and began with a membership of 22, now increased to over 80. Among the members are included all the railways serving these provinces, the principal banks, and, save for a few small ginning, flour and similar mills, all the power driven industries of the United Provinces and some in the adjoining provinces. The major portion of the joint stock capital invested in Agra and Oudh is represented on the Chamber, and in addition there is a considerable individual membership. It is affiliated to the British Imperial Council of Commerce, to the International Federation of Master Cotton Spinners and Manufacturers' Associations, and returns two members to the United Provinces Legislative Council. It is also represented on the Provincial Board of Industries, the Provincial Board of Agriculture, the Cawnpore Municipal Board, the Central and Provincial Cotton Committees, the Provincial Board of Loan Commissioners and the Advisory Committees of the various railways of the Province. The Chamber maintains a tribunal of arbitration and a commercial survey which are freely availed of.

**UNITED PROVINCES CHAMBER OF COMMERCE**—This Chamber (founded in 1914) is purely Indian in membership, and is intended to protect the interests of Indians engaged in trade or industry in Agra and Oudh.

#### COMMERCIAL PRACTICE AND LAW.—

The development of trade in India has been largely assisted by the removal of many hindrances which existed prior to the stabilisation of British rule. Among these may be mentioned the practical non-existence of roads, the high cost of transit to and from Europe, the incidence of heavy inland Customs duties, and the repeated difficulties with the exchange. In those days the customs of the people were adjusted to such conditions as prevailed, the great mass being agriculturists, with wants of a primitive nature, easily met in most cases by the produce of their own land or the crude manufactures of village artisans. The construction of roads, and later of railways, has rendered possible an enormous development, but a long period must still pass before the habits of the people will change sufficiently to allow them to take full advantage of the facilities thus afforded.

Broadly speaking, the greater part of the internal trade remains in the hands of Indians, but the European firms which export agricultural produce have extended their agencies. Almost every village has at least one resident trader, who combines the functions of money-lender, grain-merchant and cloth-seller. Markets are held at convenient centres on fixed days each week, and at many of the great religious fairs trade is by no means the least important object of the crowds of pilgrims attending. A large proportion of the surplus produce is handed over to the village dealer, while some is sold in the markets and the rest to itinerant buyers. Small quantities are thus brought to the larger towns and railways, and despatched to the ports and other centres of commerce. This process of collection is complicated and hampered by an unnecessary number of middle-men. Imported merchandise is distributed by the same cumbrous machinery, working in the reverse direction. The growth or decay of towns has been largely affected by changes in trade, the chief factors being the presence or absence of railway communication. In the tracts where agricultural produce is available for export, bazars spring up at every railway station and rapidly develop into thriving

towns, while historic cities, left a few miles on either side, dwindle and lose their importance.

**BUSINESS NAMES (REGISTRATION OF)**—The Calcutta Trade Association has recently been active in moving for the compulsory registration of business names in India, for which there is at present no provision in law. The object of the proposed legislation will be two-fold, viz. to identify alien interest and by compelling disclosure of assumed names to facilitate, by rendering more precise, commercial transactions. Action would not be aimed at Indians trading under assumed European names, though disclosure of real names would be desirable in the case of Europeans trading under assumed names. Difficulties are likely to arise in the enactment of any measure relating to business names owing to the joint family system prevalent in India. The Indian Industrial Commission in the course of its sittings examined the question, but the evidence placed before it did not justify it in making definite recommendations, and the Government of India, as in the case of registration of partnerships, has not yet been disposed to legislate.

**MERCHANDISE MARKS**—Importers into India should make themselves acquainted with the law and regulations relating to merchandise marks, complete information as to which is contained in the "Merchandise Marks Annual," published under the authority of the Government of India. Though there is no compulsory registration of marks, there are many infringements or offences under the Act of 1880, which may be conveniently classified under four heads, viz. (1) counterfeit trade marks, (2) trade descriptions that are false in respect of the country of origin, (3) trade descriptions that are false in other respects, and (4) lengths not properly stamped on piece goods. The last quoted infringement is an exception to the general rule, for the Act does not require that other descriptions of goods should be stamped or marked, though it requires that when goods are so marked the marks must be a correct description. (See also later, "Trade Marks.")

**PARTNERSHIPS (REGISTRATION OF)**—The question whether the registration of business partnerships should be made compulsory has been frequently considered during the last half century. The absence of any such measure hampers materially the development of business between Indian firms and foreign constituents, and also restricts the grant of financial accommodation by European banks. In 1908 the Bengal and Bombay Chambers of Commerce prepared draft bills on the subject, but their proposals being irreconcilable the Government of India was not disposed to accept either as the basis for legislation. The Indian Industrial Commission recommended that the Government of India should take an early opportunity of re-examining the whole question, and the conference of Associated Chambers of Commerce of India and Ceylon, held in January 1920, unanimously adopted a resolution favouring legislation to provide for registration of partnerships and registration of business names, but no bill has yet been introduced. The main stumbling block to a practical solution of the problem is the joint family system.

**PATENT LAW**—The law and procedure in India for the protection of inventions and registration of designs closely follows that of the United Kingdom, the only difference of importance being that, in the absence of any legal provision for the registration of trade marks, India cannot become a party

to the International Convention for the protection of industrial property, under which certain rights of priority are obtainable in other countries. The reciprocal arrangement with the United Kingdom and other parts of His Majesty's Dominions affords, however, a partial substitute.

The Indian Patents and Designs Act, 1922, is in force in British India only (that is, not in Indian States), and patents granted under it are not valid in the United Kingdom or any British Possessions, nor does this Act permit the registration of trade and property marks or names.

**TRADE MARKS**—There is no recognised registration of trade marks in India. Most of the Chambers of Commerce consider that the introduction under legislative enactment of such a system would seriously affect existing rights of user between firms in India and also between firms in India and abroad. Registration of new trade marks on payment of a fee is made by the Madras and South Indian Chambers of Commerce, and as evidence of the date on which the mark or ticket was registered, may be useful in subsequent litigation, though it conveys no legal rights. The Bombay Millowners' Association keeps a register of all trade marks in use by members, and has a special set of rules governing their registration, to which all members upon election agree to conform in view of the protection afforded by the Association to the trade marks and tickets used by them.

**TRADING SAMPLES**—On the production by a commercial traveller of a list or declaration containing a full description of every sample brought by him, officially attested by the Customs authorities of his country, examination of the samples may be limited to ascertaining that they are fully enumerated on the list produced.

The list is to be utilised in assessing the duty chargeable on the samples. A deposit of the duty is required before delivery of the samples, or alternatively a bond (with sufficient security) for the amount thereof may be accepted instead of a cash deposit.

All samples of no commercial value are entitled to free entry.

**MANAGING AGENCY SYSTEM**—When the trade monopoly of the East India Company was abolished commercial interests in Calcutta were financed by various banking firms. The distinction between banking and other commercial activities not yet having been worked out, banks took part in the buying and selling of the market. During the first quarter of the nineteenth century many companies were forced into liquidation as a consequence of the serious slump in trade which marked these years. The banks had to meet the situation. Instead of advancing the requisite money they floated public companies, relying on their own credit for finance, and before long they called themselves Managing Agents. As banking practice developed it became specialised, banks and mercantile houses in the general sense of the word became distinct, and the Managing Agencies became identified with the latter.

**ACTIVITIES AND DUTIES**—The duties of Managing Agents may be briefly summarised as follows—

- (a) The control of management.
- (b) The appointment and dismissal of staff.
- (c) The calling of directors' and shareholders' meetings.
- (d) The keeping of the company's books and the issuing of yearly and half-yearly reports, showing the company's progress and financial position.
- (e) The purchase of raw materials and the sale of the finished product.

It is difficult to draw an analogy between the activities of a firm of merchants in England and of a firm in India. In India Messrs X Y Z & Co. may control jute mills, tea gardens, flour mills, coal mines, cotton mills, oil mills, shipping lines, presses, gas factories, light railways, sugar factories, and rubber plantations, while also acting as agents for various manufacturing houses in England or elsewhere. All these separate companies and interests are housed in one office, under one name. Such conditions do not obtain in England, where specialisation and separation have been carried much further. The famous commercial houses of the middle ages offer an analogy, except that they were largely identified with banking transactions and were often called on to accept wide responsibilities for national and international finance.

**ADVANTAGES OF SYSTEM**—It is generally agreed that the Managing Agency system is the most economical way of meeting existing conditions. The interests involved must have their representatives on the spot, but if they worked independently they could not afford this. Ten or twelve selling concerns in England and twenty or thirty development concerns in India can have their interests attended to by a comparatively small staff. This method of combining a number of activities saves expense and man power, it also increases credit and efficiency. In short, the Managing Agency system is a bottle-neck through which English capital and goods come to India for wide distribution, and through which Indian goods pass for distribution to the rest of the world. [For these particulars explanatory of the managing agency system we are indebted to Mr A. H. Clark, a partner in the firm of Messrs Holmes, Wilson and Co., of Calcutta.]

**TRADING CASTES**—Before the commencement of British rule the great Banjara tribe with numerous branches bearing different names, supplied most of the carriers, but the extension of the railways has largely replaced pack animals. Almost every province has its peculiar trade castes. The Marwaris of Rajputana are, however, found almost everywhere, and in Assam they are of more importance than the natives of the province. In Bombay, the Parsis, by the boldness and extent of their operations, tread closely upon the heels of the great English houses, while Lohanas, Vanis, Bohras, Memons, Khojas and Langayats occupy different areas in the Presidency. Langayats are found also in Northern Madras and Mysore, but farther south Chettis and Komatis prevail. The traders of the Punjab are largely Khattis and members of the numerous castes included in the generic name of Bania. In Bihar and the United Provinces Baniyas take the lead, while in Bengal Brahmans and a number of lower castes share different classes of trade.

**WEIGHTS AND MEASURES**—The various systems of weights used in India combine uniformity of scale with immense variations in the weights of units. The scale used generally throughout Northern India, and less commonly in Madras and Bombay, may be thus expressed: one maund = 40 seers, one seer = 16 chittaks or 80 tolas. The actual weight of a seer varies greatly from district to district, and even from village to village, but in the standard system the tola is 180 grains Troy (the exact weight of the rupee), the seer thus weighs 2.057 lbs., and the maund 82.28 lbs. The standard is used in official reports. The name of the unit for square measurement in India generally is the *bigha*, which varies greatly in different parts of the country.

**PRICES (RETAIL).**—When calculating retail prices, the universal custom in India is to express them in terms of seers to the rupee. Thus, when prices change, what varies is not the amount of money to be paid for the same quantity, but the quantity to be obtained for the same amount of money, in other words, prices in India are quantity prices, not money prices. When the figure of quantity goes up, this of course means that the price has gone down, which is at first sight perplexing to an English reader. If it be desired to convert quantity prices from Indian into English denominations without having recourse to money prices (which would often be misleading), the following scale may be adopted—based upon the assumption that a seer is exactly 2 lbs. and that the value of the rupee remains constant at 15 4d 1 seer per rupee = (about) 3 lbs. for 2s., 2 seers per rupee = (about) 6 lbs. for 2s., and so on.

**REFORMS (PROPOSED).**—Various attempts have been made to introduce a uniform system of weights. In 1915 a Committee of Inquiry reported in favour of a uniform system based upon the 180 grain tola. The Government of India at first approved the principles of the Report, but left it to the Provincial Governments to take such action as they thought advisable to standardise dry and liquid measures of capacity within their provinces. At present any Imperial standardisation of weights is considered to be premature.

**SCALE OF WEIGHTS AND MEASURES.**—The following are the principal weights and measures at present in use, with their English equivalents—

Angul	..	= 0.75 inch
Guz, usually, 33 inches	;	also the yard
Koss	..	= 2,000 yards
Bigha (Bengal), usually	..	= 0.625 acre
Cawny (Madras)	..	= 1.33 "
Tola (rupee weight)	..	= 180 grains
Chittak	..	= 2.0571 oz
Seer, 16 chittak, or 80 tolas	..	= 2.0571 lbs
Maund, 40 seers	..	= 82.284 lbs
" (Bombay)	..	= 27.864 lbs
" (Madras)	..	= 24.68 lbs
Seer (Liquid)	..	= 1.760 pints
Candy	..	= 500 lbs
Visham—3 lb., Dangan	..	= 3 pints
Parah	..	= 15 gallons
Catty (Singapore)	..	= 1½ lbs
Pikul	..	= 100 catties = 133 lbs

### EXPORTS AND IMPORTS

The grand total of exports, re-exports and imports of merchandise during the calendar year 1925 was Rs 633 crores, as compared with Rs 626 crores in 1924, Rs 508 crores in 1923 and Rs 426 crores in the pre-War year 1913. Exports and imports of treasure (private and Government) totalled 86 crores in 1925, as against Rs 74 crores in 1924. The total trade figure for 1925 was, therefore, Rs 719 crores, compared with Rs 700 crores in 1924, Rs 636 crores in 1923 and Rs 474 crores in 1913.

The grand total of exports, re-exports and imports of merchandise during the fiscal year 1925-26 was Rs 633½ crores.

**EXPORTS.**—The total value of the Indian export trade of 1925 was Rs 396 crores, as against Rs 369 crores in 1924 and Rs 327 crores in 1923, the increase in 1925 amounting to Rs 27 lakhs or 7.3 per cent. This is by far the most satisfactory feature of Indian trade, and it shows clearly that the wonderful possibilities before India as an exporter of food and raw materials are at last being adequately realised.

The total figures of exports of merchandise during the fiscal year 1925-26 fell by Rs 13 crores from the record reached during 1924-25 to Rs 387 crores, the decrease being due

chiefly to reduced shipments of food grains and tea.

**RE-EXPORTS.**—Re-exports in 1925 reached a value of Rs 10,98,77,131, compared with Rs 13,65,63,824 in 1924 and Rs 14,07,77,451 in 1923.

The total value of re-exports in the fiscal year 1925-26 declined to Rs 10½ crores, there being important decreases in raw cotton, cotton piecegoods, raw wool, raw skins and sugar.

**EXPORTS BY CLASSES.**—The following table summarises the value of the exports of Indian merchandise during 1925 as compared with the two preceding years, according to the different categories of merchandise (Exports of food, drink and tobacco decreased, as compared with 1924, by Rs 12 crores to Rs 89 crores, due chiefly to smaller shipments of barley, wheat and tea. Raw materials and articles mainly unmanufactured increased by Rs 28 crores to Rs 215 crores, owing principally to increased exports of oilseeds, raw cotton, raw jute and rubber. Articles wholly or mainly manufactured increased by over Rs 10 crores to Rs 89 crores, due chiefly to larger shipments of gunny bags and cloth, and postal articles decreased by Rs 10 lakhs to Rs 261 lakhs) —

	1924 Rs	1925 Rs
Food, drink and tobacco	100,12,23,309	85,13,18,553
Raw materials, produce and articles mainly unmanufactured	186,78,04,729	215,19,14,413
Articles wholly or mainly manufactured	78,91,79,299	89,29,82,375
Living animals	29,52,695	32,36,316
Postal articles	2,71,05,856	2,60,60,961
Grand total	369,04,65,948	395,95,37,175

The following figures indicate the value of the exports of private merchandise during the fiscal year 1925-26, according to the five main classes (sums in thousands of rupees). Food, drink and tobacco, 82,23,23, raw materials and produce and articles mainly unmanufactured, 199,98,22, articles wholly or mainly manufactured, 89,56,96, living animals, 34,62, postal articles, 2,71,18. Grand total, 374,94,21.

**EXPORTS BY COMMODITIES.**—The following table shows the leading commodities in export values in the years named—

	1924 Rs	1925 Rs
Cotton (raw)	94,98,85,607	104,40,46,974
Jute manufactures	47,61,16,616	58,58,55,693
Rice	36,92,07,217	38,42,54,949
Jute (raw)	25,95,97,435	37,08,33,519
Tea	33,28,29,624	28,36,87,258
Ground nuts	6,90,32,707	12,99,59,371
Cotton manufactures	10,49,74,027	9,90,65,714
Linseed	8,43,50,180	9,55,77,876
Wheat	11,56,68,018	9,08,29,945
Hides and skins (raw)	6,34,34,239	7,58,50,958
Leather and leather goods	7,02,39,390	7,20,87,087
Lac	7,75,28,548	7,05,01,657
Wool (raw)	4,86,09,018	4,48,77,271
Rapeseed	6,19,52,493	4,12,81,007
Castor seed	2,62,01,399	2,88,87,155
Rubber	1,28,36,205	2,54,66,807
Coffee	1,64,74,857	2,38,63,561
Opium	1,88,00,598	1,56,72,965
Barley	5,82,84,401	1,30,79,166

The following were the corresponding export values for the commodities named during the fiscal year 1925-26 (totals in thousands of rupees). Cotton (raw), 94,99,28, jute manufactures, 58,83,99, rice, 39,97,21, jute (raw), 37,94,57, tea, 27,12,17, ground nuts, 12,02,33, cotton manufactures, 9,64,85, linseed, 8,08,53, wheat, 3,60,25, hides and skins (raw), 7,23,38, leather, 7,10,21, lac, 6,90,10, wool (raw), 3,79,88, rapeseed, 2,68,09, castor seed, 2,67,69, rubber (raw), 2,94,10, coffee, 1,85,26, opium, 1,93,37, barley, 56,23.

**FRONTIER TRADE.**—Despite primitive transportation methods, India's trade with frontier countries assumes considerable proportions. During the fiscal year 1924-25 imports from the various frontier countries into India reached Rs 230,900,000

and exports to these areas Rs 187,400,000, as compared with Rs 199,600,000 and Rs 162,800,000 respectively during the preceding fiscal year. Among imports, increases were noted in cattle, hides, lead, grain and pulse, fruits, nuts, tea, silk, jute and wool, while receipts of cattle, teak, oil seeds and sheep and goats declined. Larger quantities of cotton, twist and yarn, piece goods, coal and coke, sugar and salt were taken from India, but railway material, spices, metals and manufactures declined.

From the beginning of the fiscal year 1925-26 the old system of registering trade across the land frontiers through the agency of clerks posted upon the chief trade routes was abandoned in favour of the registration of traffic in certain commodities at railway stations near the most important of the frontier routes.

**IMPORTS.**—The value of the imports of merchandise into British India during 1925 amounted to Rs 226,18,05,000, compared with Rs 243,76,02,000 in 1924, a decrease of Rs 17,57,97,000 or 7.2 per cent. Imports of treasure (private and Government) increased during the same period by over Rs 14 crores to nearly Rs 84 crores. The distribution of imports by classes was as follows—

	1924 Rs	1925 Rs
Food, drink and tobacco	34,58,72,133	31,27,32,395
Raw materials, produce and articles mainly unmanufactured	20,88,46,697	20,15,21,011
Articles wholly or mainly manufactured	184,64,99,724	169,44,81,858
Living animals	30,91,483	15,14,729
Postal articles not specified	3,33,11,792	3,25,56,510
Total	243,76,02,829	226,18,05,501

As compared with 1924, imports of food, drink and tobacco decreased in 1925 by Rs 1.41 lakhs, chiefly owing to smaller imports of sugar and salt. Raw materials and articles mainly unmanufactured also fell by Rs 73 lakhs, due chiefly to decreases under raw cotton, while articles wholly or mainly manufactured decreased by Rs 15.40 lakhs, due in the main to smaller imports of metals, railway plant and cotton and silk manufactures, notwithstanding a considerable increase in the imports of machinery, motor cars and woollen manufactures. Noteworthy decreases were those of cotton piece goods by 64 million yards and by nearly Rs 8 crores, or 12 per cent, to Rs 59 crores, cotton twist and yarn from 54 million lbs., valued at Rs 9.63 lakhs, to 49 million lbs., valued at Rs 7.75 lakhs, raw cotton, from 20,800 tons to 16,500 tons, iron and steel from 933,000 tons (Rs 20 crores) to 787,000 tons (Rs 16½ crores), and imports of railway plant and rolling stock on private account from Rs 7.38 lakhs to Rs 4.68 lakhs. The principal increases were in machinery (prime movers), Rs 41 lakhs, electrical machinery, Rs 10 lakhs, mineral oils (excluding kerosene), Rs 47 lakhs, motor cars, Rs 24 lakhs, cotton hosiery, Rs 32 lakhs, and electrical instruments, Rs 33 lakhs.

During the fiscal year 1925-26 the value of imports of private merchandise into India was Rs 226,17,57,000, compared with Rs 246,62,54,000 in 1924-25, the decrease being mainly due to smaller imports of cotton piece goods and to the lower prices of sugar imported. The value of imports according to the five main classes was as follows (in thousands of rupees). Food, drink and tobacco, 32,95,16, raw materials and produce and articles mainly unmanufactured, 20,99,39, articles wholly or mainly manufactured, 168,39,67, living animals, 34,56, postal articles not specified, 3,48,79.

Imports of treasure (private and Government) totalled Rs 55,48,77,000 during the fiscal year 1925-26.

**TRADE BY COUNTRIES.**—The following table gives the values of India's trade with the twelve leading foreign countries during the calendar years named —

	1924 Rs	1925 Rs
<b>EXPORTS</b>		
United Kingdom	94,23,59,287	87,78,23,770
Japan	51,14,46,442	62,44,58,248
United States	32,29,18,980	38,93,07,032
Germany	27,02,70,279	31,07,82,927
Italy	24,12,61,384	22,03,29,787
France	19,74,45,972	21,93,02,371
Belgium	14,17,18,475	15,32,21,144
Ceylon	13,23,11,234	14,04,76,905
China	8,99,69,309	11,40,28,688
Straits Settlements	8,30,95,800	9,12,03,716
Netherlands	7,34,28,603	8,32,54,699
Spain	5,08,00,810	5,23,06,557
<b>IMPORTS</b>		
United Kingdom	132,50,15,002	118,32,90,881
Japan	16,74,43,251	17,78,32,581
Java	14,69,70,060	14,01,26,819
United States	14,15,18,284	13,85,92,423
Germany	15,06,70,264	13,38,21,859
Belgium	6,92,39,368	5,98,09,022
Straits Settlements	5,03,75,162	5,37,46,311
Italy	3,65,18,855	4,08,06,917
Netherlands	2,85,49,343	3,28,77,127
Kenya Colony	3,74,74,322	3,22,95,013
France	2,58,62,650	2,91,24,689
China	2,94,85,734	2,44,66,934

Out of India's grand total of trade of Rs 622,13,42,576 in 1925, the British Empire's share was Rs 276,35,30,008, of which imports accounted for Rs 137,01,29,927 and exports for Rs 139,34,00,141, compared with Rs 151,32,95,401 and Rs 140,69,93,852 respectively in 1924. The total trade in 1925 with countries outside the British Empire was thus Rs 345,78,12,608, of which Rs 89,16,75,574 were imports and Rs 256,61,37,034 exports, as against Rs 320,77,78,524 in 1924 (imports, Rs 92,43,06,428, exports, Rs 228,34,72,096). Seven of the leading countries reduced their exports to India in 1925, on the other hand exports from India increased to all countries except the United Kingdom, Italy and Spain.

The values of India's trade with the twelve leading foreign countries during the fiscal years named were as follow —

	1924-25 Rs 1,000	1925-26 Rs 1,000
<b>EXPORTS</b>		
United Kingdom	97,54,33	77,72,27
Japan	55,14,54	56,65,80
United States	34,23,11	39,49,34
Germany	27,98,72	26,77,39
France	20,75,34	21,10,98
Italy	23,19,01	18,88,51
China	9,56,47	15,43,97
Ceylon	13,00,29	14,68,58
Belgium	15,35,25	12,34,47
Straits Settlements	8,03,19	9,81,41
Netherlands	8,06,18	7,65,28
Spain	5,94,15	4,84,95
<b>IMPORTS</b>		
United Kingdom	1,33,45,16	1,15,32,02
Japan	17,12,07	18,19,00
United States	14,07,03	15,07,35
Java	15,46,30	14,03,79
Germany	15,46,86	13,30,79
Belgium	6,76,06	6,13,06
Straits Settlements	4,85,59	5,65,98
Italy	3,83,95	4,25,67
Kenya Colony	4,32,38	4,06,94
Netherlands	2,97,82	3,69,25
France	2,58,55	3,23,88
China	2,76,71	2,60,67

The grand total of India's trade in merchandise during the fiscal year 1925-26 was Rs 6,11,57 lakhs, of which the British Empire's share was Rs 2,69,30 lakhs (imports Rs 133,72 lakhs and exports Rs 135,58 lakhs,

compared with imports Rs 153,49 lakhs and exports Rs 154,01 lakhs during the fiscal year 1924-25).

The total value of trade in merchandise with foreign countries during 1925-26 was therefore Rs 342,21 lakhs, imports representing Rs 92,46 lakhs and exports Rs 249,75 lakhs. The corresponding figures for the financial year 1924-25 were Total of trade, Rs 337,30 lakhs, imports, Rs 93,14 lakhs, exports, Rs 244,16 lakhs.

**BELGIUM**—The share of Belgium in India's import trade before the War was 2.3 per cent, in 1924 it was 2.4 per cent, but in 1925 it had fallen slightly to 2.2 per cent. Over 60 per cent of Belgium's shipments to India consists of iron and steel manufactures, the balance being made up of miscellaneous items such as window-glass, hardware, etc. In 1925 imports from Belgium were valued at Rs 5,98 lakhs, compared with Rs 6,92 lakhs in 1924. Exports to Belgium, on the other hand, increased from Rs 14,17 lakhs to Rs 15,32 lakhs, raw jute accounting for Rs 2,11 lakhs, linseed for Rs 1,06 lakhs, wheat for Rs 1,01 lakhs, and raw cotton for Rs 6,62 lakhs, the latter item showing an increase of Rs 65 lakhs.

For the fiscal year 1925-26 Belgium's percentage of India's import trade was 2.7, the same as in 1924-25. Among imports from Belgium, machinery and millwork rose in value, as also woollen manufactures, while steel imports decreased. Belgium's percentage of the export trade of India dropped from 3.9 to 3.2 in 1925-26, the chief decreases being in wheat and barley.

**CEYLON**—The value of the total trade with Ceylon increased from Rs 14,61 lakhs in 1924 to Rs 15,05 lakhs in 1925. Imports from Ceylon are only small, and amounted in value in 1925 to Rs 1,60 lakhs, as against Rs 1,38 lakhs in the preceding year. Betel nuts, tea, lead sheet for tea chests and cobra are the chief imports. Exports to Ceylon were valued at Rs 14,04 lakhs in 1925, as against Rs 13,23 lakhs in 1924, shipments of rice increasing in quantity from 382,000 to 430,000 tons and in value from Rs 6,52 to Rs 7,03 lakhs. Exports of coal fell slightly, while those of cotton piece goods remained stationary. Rubber exports rose in value from Rs 34 lakhs to Rs 52 lakhs.

Ceylon was the largest purchaser of Indian rice during the fiscal year 1925-26, with 432,000 tons, compared with 403,000 tons in 1924-25. Oils imported from Ceylon into India showed a rise in value from Rs 13,44,000 in 1924-25 to Rs 30,00,000 in 1925-26.

**CHINA**—The total value of India's trade with China rose from Rs 11,94,55,053 in 1924 to Rs 13,84,95,622 in 1925. Imports, mainly of silk (raw and manufactured) and tea, decreased from Rs 2,94 lakhs to Rs 2,44 lakhs, while exports, principally of raw cotton, rice and jute goods, increased from Rs 9,00 lakhs to Rs 11,40 lakhs.

China's percentage of the Indian import trade rose from 1.1 in the fiscal year 1924-25 to 1.2 in 1925-26 and that of the export trade from 2.4 to 4.0. Among exports, the most remarkable increase was in grain, pulse and flour.

**EGYPT**—Exports to Egypt declined from Rs 6 crores in 1924 to Rs 5 crores in 1925. Rice, tea, wheat, gunny bags and cloth, cotton twist and yarn are the chief exports. Small amounts of raw cotton and cigarettes are the principal imports.

Exports of Indian produce to Egypt during the fiscal year 1925-26 in every case showed a decrease in comparison with 1924-25, as did imports therefrom, except in the cigarettes category.

**FRANCE**—The balance of trade with France is largely in India's favour, exports to that country being valued at Rs 21,93,02,371 in 1925, as against Rs 19,74,45,972 in 1924, and imports from France at Rs 2,91,24,689, compared with Rs 2,58,62,650, the total trade between the two countries thus increasing from Rs 22 crores in 1924 to Rs 24 crores in 1925. France increased her supplies of brandy, iron and steel and motor cars. Shipments of groundnuts to that country rose from 165,000 to 221,000 tons (Rs 4.34 to Rs 6.17 lakhs), of raw jute from 77,000 to 83,000 tons (Rs 2.90 to Rs 4.49 lakhs), and of raw cotton from 28,000 to 33,000 tons, though in the last case there was a slight fall in value from Rs 4.69 to Rs 4.39 lakhs. France in 1925 took less wheat, gram and coffee, but more rice than in 1924.

During the fiscal year 1925-26 France contributed 1.4 per cent of India's import trade (1 per cent in 1924-25) and 5.5 per cent (5.3 per cent in 1924-25) of her export trade. Considerable increases for 1925-26 over the previous year were recorded in the import into India of iron and steel and the export of raw jute.

**GERMANY**—In 1925 Germany stood fourth in order of importance in India's foreign trade, as in the two preceding years, the total value of Indo-German trade increasing by Rs 2½ crores. Both imports and exports showed a large improvement on the pre-war average, which was Rs 9.35 lakhs for imports and Rs 22.36 lakhs for exports. The figures for 1925 were Rs 13.38 lakhs for imports and Rs 31.07 lakhs for exports. The balance of trade remains therefore steadily in India's favour. Germany has increased her exports to India mainly in machinery, hardware (this substantially at the United Kingdom's expense), railway plant and rolling stock, "instruments," liquors, and paper. The principal exports to Germany are rice, raw jute and raw cotton, which in 1925 had values respectively of Rs 6.63 lakhs, Rs 9.27 lakhs and Rs 6.05 lakhs.

Germany was responsible during the fiscal year 1925-26 for 5.9 per cent of India's import trade (as against 6.3 per cent in 1924-25) and 7 per cent of her export trade (as against 7.1 per cent). Imports of dyeing substances from Germany showed a remarkable decrease, and exports of ground nuts a considerable increase, in the later financial year.

**GREAT BRITAIN**—The following table summarises India's trade with Great Britain in the three calendar years named (treasure excluded).

	1923 Rs LAKHS	1924 Rs LAKHS	1925 Rs LAKHS
Exports	82,91	94,23	87,78
Imports	130,84	132,50	118,33

**Exports.** The principal articles exported to the United Kingdom in 1925 were Tea (Rs 24½ crores), food-grains (Rs 14½ crores), raw and manufactured jute (Rs 12,80 crores), seeds (Rs 8 crores), raw and tanned hides and skins (Rs 6½ crores), raw cotton (Rs 6 crores), raw wool (Rs 4 crores), and lac (Rs 1½ crores). These articles combined represent about 80 per cent of the exports to that destination, as in the preceding year. The most noticeable feature was the decline in tea exports, which dropped from 304 million to 287 million lbs. and in value from Rs 26½ crores to Rs 24½ crores. Shipments of grains also declined, but those of raw jute increased from 170,000 to 177,000 tons, and of gunny cloth from 58,000,000 yards to 67,000,000 yards. Gunny bags remained stationary. Shipments of coffee, mica, paraffin wax, raw rubber, and raw hemp

increased, while there were marked decreases in molasses, spices, myrobalans and rapeseed

Returns for the fiscal year 1925-26 showed the following commodities at the head of the list of exports to the United Kingdom (values in thousands of rupees). Tea (23,74,77), raw jute (10,56,96), raw, dressed and tanned skins (9,42,78), raw cotton (5,42,14), raw wool (3,36,59), linseed (2,89,68), cottonseed (2,13,04). Compared with the totals for 1924-25, considerable increases were registered in the exports of raw jute and raw rubber, and decreases in connection with raw wool, oils and wheat

**Imports.**—While the share of the British Empire as a whole in the total overseas trade of India declined from 46.6 per cent in 1923 and 1924 to 43.6 per cent in 1925, that of the United Kingdom was reduced from 37.5 per cent in 1923 to 36.2 per cent in 1924 and 32.5 per cent in 1925. In the import trade the share of the United Kingdom fell from 64.3 per cent in 1923 to 61.4 per cent in 1924 and 60.1 per cent in 1925, which is four per cent below the pre-War proportion. This decline in Great Britain's position in the Indian market is not so much due to foreign competition in manufactured goods of the type usually exported by the United Kingdom (although German, Japanese and American competition is distinctly keener) as to reduced shipments in British specialties, such as cotton piece goods, textile machinery, railway plant, boilers, etc., which normally form such a large proportion of the total British shipments that any material decrease in the out-throw affects the British proportion of the total trade. The percentage figure of 60.1 quoted above represents the British share of the total imports of all kinds of merchandise, including raw materials and comestibles, such as mineral oils, ores, raw wool, sugar, etc., in which the United Kingdom has no direct interest. Taking the imports of articles wholly or mainly manufactured, it is found that the British share in 1913-14 was 75.7 per cent, while in 1925 it had fallen to 69.3 per cent, a decline of 6.4 per cent. It should be noted, however, that even the imports of manufactured goods include items such as Chinese and Japanese silk pongees, matches, certain kinds of Oriental medicines and provisions, very low grade earthenware, glassware, toys, etc., in which British manufacturers do not compete. After eliminating these articles, it is found that Great Britain still supplies 75 per cent of the imports into India of competitive manufactured goods.

The following table shows the leading imports from Great Britain in the fiscal years named:—

	1923-24 Rs LAKHS	1924-25 Rs LAKHS
Building materials	87	79
Chemicals	1.35	1.30
Cotton piece goods—		
Grey	19.14	24.06
White	14.61	19.24
Coloured	15.12	16.45
Cotton twist and yarn	4.61	4.55
Cotton goods (other)	1.78	1.94
Hardware	2.07	2.00
Instruments, etc.	2.24	1.98
Iron and steel	11.26	11.25
Machinery and millwork	16.24	12.39
Motor cars and cycles	73	74
Paper and pasteboard	1.33	1.30
Railway plant, etc.	11.03	5.41
Spirits	1.37	1.30
Stationery	1.11	1.24
Woollen manufactures	1.44	2.08

It will be seen that cotton manufactures, including twist and yarn, accounted for over 49 per cent of the total value of imports

from the United Kingdom and increased to Rs 66 crores, as compared with Rs 55 crores in 1924. The other important groups, namely metal and manufactures, machinery, and railway plant and rolling stock, fell off by no less than Rs 10 crores in 1925, compared with the preceding year. Woollen manufactures showed a gratifying increase, and other notable increases were in piece goods of mixed cotton and artificial silk (Rs 25 lakhs), tea-chests (Rs 26 lakhs), motor cars (Rs 15½ lakhs), cycles (Rs 19 lakhs), and raw wool (Rs 14 lakhs), while there were important decreases in synthetic dyes (Rs 19 lakhs), copper (Rs 47 lakhs), spirits (Rs 7 lakhs), and paper and pasteboard (Rs 3 lakhs).

The following table represents the chief imports into India from the United Kingdom during the fiscal year indicated:—

	1925-26 (Rs 1,000)
Brass	1,27,96
Chemicals	1,24,01
Cotton piece goods—	
Grey	17,08,36
White	15,08,86
Coloured	11,00,00
Cotton twist and yarn	3,13,80
Cotton goods (other)	1,76,53
Hardware	1,97,76
Instruments, etc.	2,22,18
Iron and steel	11,60,99
Machinery and millwork	11,87,23
Motor cars and motor cycles	1,23,58
Paper and pasteboard	1,16,63
Provisions	1,71,50
Railway plant, etc.	4,24,53
Soap	1,35,67
Spirits	1,31,62
Tobacco	1,76,23
Woollen manufactures	2,11,14

**ITALY.**—The value of India's total trade with Italy declined from Rs 27,77,80,230 in 1924 to Rs 26,11,36,704 in 1925, exports falling from Rs 24 to Rs 22 crores, while imports rose slightly from Rs 3,65 lakhs to Rs 4,08 lakhs. Imports of motor cars increased from Rs 7 to Rs 24 lakhs, and those of woollen piece goods from Rs 22 to Rs 32 lakhs. Imports of cotton piece goods, silk yarn and glassware declined. Exports of raw cotton fell in quantity from 92,241 tons to 90,795 tons and in value from Rs 15 crores to Rs 12 crores. Wheat exported rose from 18,000 to 32,000 tons and its value from Rs 27 lakhs to Rs 56 lakhs. Exports of rice increased from Rs 7 lakhs to Rs 57 lakhs, those of oil-seeds and pepper declined.

The increased imports of motor cars, etc., from Italy were also indicated by the returns for the fiscal years 1924-25 and 1925-26, rising in value from Rs 10,16,000 to Rs 29,94,000. Rubber manufactures likewise showed a remarkable rise, import values for 1924-25 and 1925-26 being Rs 3,77,000 and Rs 18,11,000 respectively. Wheat exports suffered a notable reversal of the conditions just stated, falling in value from Rs 56,78,000 in 1924-25 to Rs 16,49,000 in 1925-26.

**JAPAN.**—In 1924 and 1925 Japan held second place in India's foreign trade, the total value rising from Rs 67,88,89,693 to Rs 80,22,90,829. Exports to Japan increased by Rs 11 crores from Rs 51 to Rs 62 crores, while imports from Japan rose from Rs 16 to Rs 17 crores. Japan's export trade to India increased from 2.6 per cent of the total Indian import trade in 1913-14 to 7.9 per cent in 1925, and she is now a serious competitor with Great Britain in cotton and silk piece goods.

The leading items of India's import trade with Japan in 1924 and 1925 were: Cotton piece goods, grey (unbleached), Rs 4,08 lakhs to Rs 4,47 lakhs, white (bleached),

Rs 16,20,80 to Rs 16,80,467, coloured, etc., Rs 1,25 lakhs to Rs 2,00 lakhs, silk piece goods, Rs 1,38 lakhs and Rs 1,17 lakhs, glass and glassware, Rs 72 lakhs and Rs 68 lakhs, matches, Rs 38 lakhs and Rs 30 lakhs, earthenware and porcelain, Rs 28 lakhs and Rs 32 lakhs. Under exports, raw cotton increased from Rs 42 crores to Rs 53 crores, and rice from Rs 3,83 lakhs to Rs 3,97 lakhs. Pig iron rose in quantity from 149,697 tons to 158,713 tons, but declined in value from Rs 1,04 lakhs to Rs 80 lakhs. Jute rose in value from Rs 46 lakhs to Rs 61 lakhs. Gunny bags also increased from Rs 90 lakhs to Rs 1,10 lakhs.

Indian imports from and exports to Japan both showed increases in value in 1925-26 as compared with the previous fiscal year. Among imports notable augmentations were in cotton hosiery, brass, bronze, etc., and woollen manufactures, exports of rice (not in the husk) rose considerably, but iron and steel exports dropped from Rs 1,15,30,000 in 1924-25 to Rs 76,57,000 in 1925-26.

**JAVA.**—Trade with this country is practically confined to the importation of sugar, imports of which were valued at Rs 13,43,81,578 in 1925, as against Rs 14,06,24,798 in 1924.

Figures compiled for the fiscal years 1924-25 and 1925-26 showed that imports of sugar declined in value from Rs 15,23,48,000 to Rs 13,79,47,000.

**KENYA COLONY.**—The decline in imports from Kenya and Zanzibar from Rs 3,75 lakhs in 1924 to Rs 3,23 lakhs in 1925 was due to reduced purchases of cotton, which aggregated Rs 3,64 lakhs and Rs 3,15 lakhs respectively. Exports are practically confined to rice, cotton piece goods and gunny bags.

During the fiscal year 1924-25 the import of raw cotton was valued at Rs 3,60,42,000, but decreased in 1925-26 to Rs 3,37,08,000.

**SOUTH AFRICA (UNION OF).** The value of the imports from the Union increased from Rs 50 to Rs 59 lakhs, while exports rose from Rs 2,23 to Rs 2,00 lakhs. Imports of coal from Natal showed an increase in quantity of 11,000 tons and in value of Rs 42,559. Exports of rice declined slightly from Rs 47 to Rs 46 lakhs, but gunny bags increased from Rs 82 to Rs 1,57 lakhs.

The reduced import of coal and coke from the Union during 1925-26 was responsible for lowering the total import figure for that fiscal year to Rs 41,94,000, as against Rs 59,15,000 for 1924-25. Export totals for the two periods showed little variation.

**STRAITS SETTLEMENTS.**—Imports from the Straits Settlements were valued at Rs 5,37 lakhs in 1925, as against Rs 5,03 lakhs in 1924, betel nuts, unwrought tin, kerosene and canned fish being leading items. Exports, mainly rice, gunny bags, raw rubber, cotton twist and yarn and piece goods, also wheat flour, increased from Rs 8,30 to Rs 9,12 lakhs.

Among imports during the fiscal year 1925-26 betel nuts, mineral oils, tin and fish showed considerably increased values over those for 1924-25; on the export side rice values were practically stable, but jute manufactures, including twist and yarn, registered a noteworthy rise.

**UNITED KINGDOM.**—See "Great Britain."

**UNITED STATES.**—While the American trade with India is small compared with the possibilities, the United States stands fourth on the list of countries supplying India's overseas needs. During 1925 imports from the States amounted to Rs 14 crores, a decrease of Rs 30 lakhs over 1924, but more than three times the pre-War

average. The list of imports is of wide variety, and in 1925 included machinery and millwork, Rs 1,34,61,046, hardware and cutlery, Rs 76,26,849, foodstuffs, Rs 33,75,907, electrical apparatus and appliances, Rs 20,45,664, wearing apparel, Rs 10,30,225, leather and leather goods, Rs 4,86,225, raw cotton, Rs 4,57,554, hosiery, Rs 5,14,350, cotton piece goods (grey unbleached), Rs 12,20,089, motor cars, Rs 82,11,250, and motor lorries, etc., Rs 34,35,565. The two last named items showed large increases, from Rs 78,64,963 and Rs 14,62,390 respectively in 1924.

Imports from the United States during 1925-26, totalling Rs 15,07,35,000, exceeded the total for the previous fiscal year by almost exactly one crore. The principal articles contributing to this increase were motor cars, rubber and iron and steel.

**Exports.**—The United States stands third on the list of countries taking India's exports. During 1925 shipments to the States were valued at Rs 38,93,07,932, as against Rs 32,20,18,980 in 1924 and Rs 16,83,60,000 pre-war average. The principal exports in 1925 were gunny cloth, Rs 21,50 lakhs, jute (raw), Rs 3,60 lakhs, lac, Rs 3,08 lakhs, hides (raw), Rs 2,88 lakhs, castor seeds, Rs 1,07 lakhs, gunny bags, Rs 86 lakhs, cotton (raw) Rs 84 lakhs, mica, Rs 35 lakhs, rubber (raw), Rs 31 lakhs, and manganese ore, Rs 14 lakhs. Exports of gunny cloth increased by Rs 4,54 lakhs, those of raw jute by Rs 1,41 lakhs, and those of gunny bags by Rs 32 lakhs.

Exports of raw hides and skins, raw jute and gunny cloth in 1925-26 also showed increases over the corresponding 1924-25 totals.

**TRADE BY PROVINCES.**—The total imports and exports, including re-exports of private merchandise, of the several maritime provinces during the years named were as under:—

IMPORTS	1924 Rs (LAKHS)	1925 Rs (LAKHS)
Bengal	86.82	79.22
Bihar and Orissa	—	—
Bombay	90.28	79.51
Sind	26.74	27.05
Madras	19.86	18.24
Burma	20.06	21.56
	243.76	226.18
EXPORTS	1924 Rs (LAKHS)	1925 Rs (LAKHS)
Bengal	143.75	155.63
Bihar and Orissa	2	—
Bombay	110.78	112.78
Sind	48.16	47.29
Madras	37.37	44.00
Burma	42.62	46.64
	382.70	406.94

Under imports, Bengal showed a decrease in 1925 of Rs 7,60 lakhs or 9 per cent, Bombay of Rs 10,77 lakhs or 12 per cent, and Madras of Rs 1,62 lakhs or 8 per cent, while Sind had an increase of Rs 91 lakhs or 3 per cent, and Burma of Rs 1,50 lakhs or 7 per cent, as compared with 1924. Under exports, Bengal showed an increase of Rs 11,88 lakhs or 8 per cent, Bombay of Rs 2,00 lakhs or 2 per cent, Madras of Rs 7,23 lakhs or 19 per cent, and Burma of Rs 4,02 lakhs or 9 per cent, while Sind had a decrease of Rs 87,00 lakhs or 2 per cent.

The decreases of imports into the provinces of Bengal, Bombay and Madras were mainly attributable to reduced importations of raw and manufactured cotton and metals and ores, also of machinery and millwork, mineral oils, silk and woollen goods into Bombay in particular. The increase in the case of Sind was due chiefly to larger imports of liquors and machinery, and in the case of Burma to cotton and woollen manufactures.

## COMMODITIES.

**AGRICULTURAL IMPLEMENTS.**—See "Hardware."

**AGRICULTURAL MACHINERY.**—See "Machinery."

**ALES AND BEERS.**—The total value of all ales, beers and porters imported in 1925 was Rs 83,37,115, compared with Rs 83,87,264 in 1924. The United Kingdom supplied 2,095,647 gallons out of a total of 3,433,170 gallons imported in 1925, Germany coming next with 1,072,931 gallons.

Fiscal year 1925-26. Imports, 3,498,000 galls, value Rs 85 lakhs.

**ANIMALS.**—See "Livestock."

**ASPHALT.**—See "Building Materials."

**BARLEY.**—This is an important article of India's export trade. A record was reached in 1924, when 524,249 tons, valued at Rs 5,82,84,101, were exported. In 1925 there was a fall to 98,328 tons, valued at Rs 1,30,79,169. Nearly all the exports were from Sind. (See also under "Agriculture.")

Fiscal year 1925-26. Exports, 42,000 tons, value Rs 56,23,000.

**BEET SUGAR.**—See "Sugar."

**BETEL NUTS.**—These nuts, which are extensively used in India, are imported chiefly from the Straits Settlements and Ceylon. Imports rose from Rs 2,05,11,266 in 1924 to Rs 2,24,97,973 in 1925. (See also under "Agriculture.")

Fiscal year 1925-26. Imports, 1,272,000 cwt, value Rs 2,53,04,000.

**BICYCLES.**—See "Cycles."

**BLANKETS.**—Woollen blankets imported in 1925 were valued at Rs 11,81,420, compared with Rs 7,00,295, and cotton blankets at Rs 34,98,788, against Rs 42,32,262 in 1924.

**BOLTS AND NUTS.**—See "Iron and Steel."

**BOOTS AND SHOES.**—Out of a total of 1,259,729 pairs of boots and shoes imported in 1925, the value of which was Rs 38,11,506, Great Britain supplied 653,901 pairs (Rs 25,39,883). There is also a considerable export trade in Indian manufactured boots and shoes, 170,526 pairs (Rs 4,85,446) being exported in 1925, against 202,603 pairs (Rs 4,85,446) in the preceding year.

**BRISTLES AND FIBRES.**—These are exported from India for the manufacture of brushes and brooms. The bristles are chiefly those of pigs, they are collected in the United Provinces, graded, and either absorbed by the local trade or shipped from Calcutta and Bombay for the foreign market which takes certain qualities for which there is no demand in India. The quantities and values of exports in 1925 compared with 1924 were: Bristles, 3,053 cwt (Rs 22 lakhs), compared with 3,797 cwt (Rs 24 lakhs); fibre, 5,392 tons (Rs 23 lakhs), against 5,983 tons (Rs 25 lakhs). Belgium and Germany are the largest purchasing countries.

Fiscal year 1925-26. Exports (bristles), 4,000 cwt, value Rs 19,33,000, (fibres), 5,000 tons, value Rs 22,20,000.

**BUILDING MATERIALS.**—The total value of building and engineering materials imported into India declined from Rs 1,10,13,472, in 1924 to Rs 1,13,90,274 in 1925, the principal items in the last-named year being cement, Rs 62,52,462, tiles, Rs 21,81,851, asphalt, Rs 12,79,916, and firebricks, Rs 3,61,191. The United Kingdom supplied cement to the value of Rs 55,03,556.

Fiscal year 1925-26. Imports (cement) 110,000 tons, value Rs 64,83,000, (bricks and tiles), 16,911,000, value Rs 27,43,000.

**BULLION.**—See "Coin and Bullion."

**BUTTER.**—Exports of butter totalled 4,494 cwt. in 1925, value Rs 6,09,272, compared with 4,360 cwt (Rs 5,96,666) in

1924. Exports of gbi (liquid butter) rose in value from Rs 34,85,070 in 1924 to Rs 37,83,253 in 1925.

**CARDAMOMS.**—Cardamoms, chiefly used for medicinal purposes, are exported mainly from Bombay, the value falling from Rs 23,02,324 in 1924 to Rs 12,61,847 in 1925. (See also under "Agriculture.")

**CASTOR SEED.**—There was an increase of 32 per cent in quantity and of 10 per cent in the value of castor seed exported in 1925. Shipments amounted to 111,000 tons valued at Rs 2,88 lakhs, compared with 85,000 tons valued at Rs 2,62 lakhs in the preceding year. The United States was, as usual, the principal customer, the quantity exported there increasing from 31,468 tons (Rs 90,47,902) to 40,327 tons (Rs 1,00,93,820). The United Kingdom increased her demands from 20,000 to 30,000 tons, and France from 16,000 to 20,000 tons. Bombay was responsible for some 73 per cent of the trade, and Madras for 21 per cent.

Fiscal year 1925-26. Exports, 110,000 tons, value Rs 2,67,60,000. (See also under "Agriculture.")

**CEMENT.**—See "Building Materials."

**CHEMICALS.**—The total value of chemicals imported declined from Rs 2,14 lakhs in 1924 to Rs 1,98 lakhs in 1925. Soda compounds accounted for Rs 97,60,401, compared with Rs 1,15,13,510 in 1924, the bulk coming from the United Kingdom. Sodium carbonate declined from 842,156 cwt, valued at Rs 57 lakhs to 770,441 cwt, valued at Rs 45 lakhs. Caustic soda increased in quantity from 104,000 to 183,000 cwt and in value from Rs 15,10,000 to Rs 15,17,052. Acids showed a falling off from 12,701 cwt valued at Rs 5,67,709 to 10,957 cwt valued at Rs 5,63,913.

Fiscal year 1925-26. Imports (soda compounds), 1,146,000 cwt, value Rs 88,39,000.

**CHUTNIES.**—Exports of pickles, chutnies and condiments declined in value from Rs 12,19,537 in 1924 to Rs 11,84,160 in 1925.

**CIGARS AND CIGARETTES.**—See "Tobacco."

**CLOCKS AND WATCHES.** Imports of clocks and watches (mainly from Switzerland and the United States) were valued at Rs 10,81,820 in 1924 and Rs 24,23,193 in 1925.

**COAL.**—Imports of foreign coal decreased in value in both 1924 and 1925, though rising somewhat in quantity in the last named year. Quantities imported were 430,017 tons (Rs 17,40,627) in 1924 and 459,340 tons (Rs 1,07,55,847) in 1925. The Union of South Africa increased her supplies from 172,173 tons in 1924 to 183,582 tons in 1925, while Portuguese East Africa reduced hers from 141,537 to 130,312 tons, and Australia hers from 21,803 to 7,495. The United Kingdom's shipments rose from 89,785 to 111,898 tons, but the value thereof declined from Rs 31,11,064 to Rs 29,65,309. The value of coke imported fell from Rs 13,10,628 to Rs 10,41,218.

Fiscal year 1925-26. Imports (coal and coke), 402,000 tons, value Rs 97,65,000, exports (coal and coke), 241,000 tons, value Rs 34,80,000. (See also under "Mines and Minerals.")

**COCONUT OIL.**—Exports of coconut oil declined in quantity from 118,187 gallons in 1924 to 105,292 gallons in 1925, and in value from Rs 3,00,140 to Rs 2,75,576. In 1925 the United Kingdom took 54,000 gallons at Rs 1,36,755, the United States being the next largest purchaser. Imports in 1925 were valued at Rs 45,07,390, against Rs 25,71,361 in the preceding year.

Fiscal year 1925-26. Exports, 126,000 galls, value Rs 3,28,000.

**COCONUTS.**—In 1925 some 265,000 coconuts, valued at Rs 22,922, were exported, against 300,500 in 1924, valued at Rs 46,684. Imports of coconuts amounted to 11,276,000 (Rs 9,41,410) in 1925, compared with 7,296,000 (Rs 6,42,008) in 1924.

**COFFEE.**—Exports of Indian coffee increased from 200,241 cwt valued at Rs 1,63,74,857 in 1924 to 258,952 cwt valued at Rs 2,38,63,561 in 1925. Values taken by countries of destination in 1925 were: United Kingdom, Rs 1,03,24,805; France, Rs 41,48,936; Germany, Rs 25,02,158; Netherlands, Rs 14,19,424; Bahrein Islands, Rs 12,24,951; and Mesopotamia, Rs 10,32,466. The share of Madras in the export trade was Rs 2,30,18,211, and of Bombay, Rs 8,42,520. Fiscal year 1925-26 Exports, 205,000 cwts, value Rs 1,85,20,000. (See also under "Agriculture.")

**COIN AND BULLION.**—A most important feature of 1925 was the increased import of gold on private account, which rose from Rs 45 crores to Rs 61 crores. 21 crores came from the United States, Rs 19 crores from Natal, and Rs 18 crores from the United Kingdom. Imports of gold bullion increased from Rs 35 crores to Rs 47 crores, and of sovereigns and other British gold coin from Rs 9 crores to Rs 13 crores. Exports of gold were valued at Rs 46 lakhs in 1925, against Rs 24 lakhs in 1924. Imports of silver on private account declined from Rs 23 crores to Rs 22 crores and exports from Rs 4 crores to Rs 1.51 lakhs during the two years under review.

Fiscal year 1925-26 Imports (gold), Rs 35.23 lakhs, (silver), Rs 19.85 lakhs. Exports (gold), Rs 38 lakhs, (silver), Rs 2.70 lakhs.

**COIR.**—Exports of unmanufactured coir fell from 36,170 tons, valued at Rs 1,17,38,925, in 1924 to 32,284 tons, valued at Rs 1,13,20,166, in 1925. Great Britain and Germany were the largest purchasers, the Netherlands, Belgium and France coming next.

Fiscal year 1925-26 Exports (manufactured coir), 29,800 tons, value Rs 1,07 lakhs.

**COTTON.**—Exports of raw cotton increased in quantity from 586,000 tons in 1924 to 739,000 tons in 1925, and in value from Rs 95 crores to Rs 104 crores. All the principal countries which buy Indian cotton took larger quantities during 1925, particularly Japan, which increased its share from 267,000 to 373,000 tons. Italy was the largest purchaser at Rs 12.62 crores, against China's Rs 9.99 crores, Belgium's Rs 6.61 crores and the United Kingdom's Rs 6.11 crores. Exports from Bombay in 1925 totalled 490,701 tons, valued at Rs 68.65 crores, from Sind 166,977 tons, valued at Rs 24.46 crores, and from Madras 56,948 tons, valued at Rs 8.01 crores. In the same year 192,498 tons of cotton waste were exported, valued at Rs 67 lakhs.

Fiscal year 1925-26 Exports, 745,000 tons, value Rs 94,99,28,000. (See also under "Industries" and special article on "Cotton.")

**COTTON MILL MACHINERY.**—See under "Machinery."

**COTTON PIECE GOODS.**—Both in the export and import trade of India cotton manufactures bulk very largely.

**EXPORTS.**—Of the cotton produced in India it may be said in general terms that about one-third is manufactured into yarn and cloth in Indian mills. The chief centre of the cotton manufacturing industry, as of the trade in raw cotton, is Bombay. Cotton manufactures now represent about 22 per cent of the total value of Indian manufactures exported and about 6 per cent of the total export trade of the country. The following tables show the values of the three classes of cotton piece goods exported in

the years named and the leading countries of destination—

	1924 Rs	1925 Rs
Grey (unbleached)	1,20,42,738	1,15,44,359
White (bleached)	4,75,650	3,55,406
Coloured, printed or dyed	5,32,54,090	4,80,37,211
<b>Totals</b>	<b>6,57,72,478</b>	<b>6,05,36,976</b>
LEADING COUNTRIES OF DESTINATION	1924 Rs	1925 Rs
Straits Settlements	1,38,68,502	1,46,51,664
Mesopotamia	1,11,40,908	87,15,198
Persia	99,37,432	85,64,049
Ceylon	82,23,446	84,06,713
Kenya Colony and Zanzibar	39,34,411	36,37,304
Portuguese East Africa	25,72,372	27,23,192
Tanganyika Territory	20,90,654	23,26,060
Aden	22,03,743	16,11,019
Siam	14,59,207	15,37,162
Arabia	26,05,100	13,60,784
Bahrein Islands	22,04,520	13,65,186
Other countries	54,73,075	55,39,645
<b>Totals</b>	<b>6,57,72,478</b>	<b>6,05,36,976</b>

Fiscal year 1925-26 Grey (unbleached), 37,395,000 yds., value Rs 1,03,45,000; coloured, printed or dyed, 126,545,000 yds., value Rs 5,08,86,000.

**IMPORTS.**—The imports of cotton piece goods, including fents, decreased by 3 per cent in quantity from 1,704,937,073 yards to 1,640,670,358 yards, and by 10 per cent in value from Rs 66 crores to Rs 59 crores. Grey goods declined from 818,000,000 to 734,000,000 yards, and white goods from 497,000,000 to 493,000,000 yards, while coloured goods rose from 369,000,000 to 388,000,000 yards.

The following table shows the values of these three classes of cotton piece goods imported in the years named—

	1924 Rs	1925 Rs
Grey (unbleached)	27,93,01,830	23,56,49,870
White (bleached)	18,75,46,415	17,18,92,636
Coloured, printed or dyed	19,02,43,872	17,10,42,020
Fents	65,99,388	70,61,244
	66,36,91,505	58,50,45,770

The United Kingdom supplied grey goods to the value of Rs 19 crores in 1925, as against Rs 23 crores in 1924, white goods to the value of Rs 16 crores, compared with Rs 19 crores, and coloured goods value Rs 13 crores, compared with Rs 16 crores. Japan's exports of grey goods increased by Rs 38 lakhs, and those of coloured goods by Rs 74 lakhs. Exports of grey unbleached goods from the United States rose from Rs 6 lakhs to Rs 12 lakhs.

Fiscal year 1925-26 Grey (unbleached), 709,085,000 yds., value Rs 21,88,72,000; white (bleached), 465,112,000 yds., value Rs 15,99,32,000; coloured, printed or dyed, 365,836,000 yds., value Rs 15,92,12,000; fents, 23,679,000 yds., value Rs 70,32,000. Total, Rs 54,50,48,000.

**COTTON SEED.**—Shipments of cotton seed (almost entirely from Bombay) increased from 163,576 tons, valued at Rs 1,92,91,833, in 1924 to 241,410 tons, valued at Rs 2,76,56,776, in 1925. They went, as usual, almost entirely to the United Kingdom, which took 230,905 tons in 1925, valued at Rs 2,64,99,813.

Fiscal year 1925-26 Exports, 197,000 tons, value Rs 2,18,11,000.

**COTTON TWIST AND YARN.**—Exports of cotton twist and yarn in 1925 were valued at Rs 3,21,72,442, against Rs 3,23,07,187 in

1924. China is the largest purchasing country, followed by Egypt, Persia, Aden and dependencies, and Syria.

Imports of twist and yarn declined in value from Rs 9,62,90,558 in 1924 to Rs 7,75,12,935 in 1925, Japan having taken the place of Great Britain as the chief source of supply.

Fiscal year 1925-26 Exports, 31,874,000 lbs., value Rs 2,03,37,000; imports, 51,688,000 lbs., value Rs 7,76,67,000.

**CUTLERY.**—Imports of cutlery were valued at Rs 32,15,839 in 1925, against Rs 38,25,277 in 1924. In 1925 Germany led with Rs 21,40,186, Great Britain's share of the trade reaching Rs 9,05,243.

Fiscal year 1925-26 Imports valued at Rs 33,08,000.

**CYCLES.**—Imports of all bicycles (other than motor cycles) rose in number from 56,464 in 1924 to 82,850 in 1925, the respective values being Rs 38,64,881 and Rs 48,17,585. Parts and accessories also increased in value from Rs 31,94,193 to Rs 41,95,851. In 1925 the United Kingdom's share of the total was Rs 78,02,791.

Fiscal year 1925-26 Imports valued at Rs 1,01,25,000.

**CYCLES (MOTOR).**—See "Motor Cycles."

**DATES.**—Of dried fruits these are the most imported, the value in 1925 being Rs 97,24,288, compared with Rs 1,07,15,454 in 1924.

Fiscal year 1925-26 Imports, 58,000 tons, value Rs 97,00,000.

**DRUGS AND MEDICINES.**—The imports of drugs and medicines in 1925 were valued at Rs 1.86 lakhs, an increase of Rs 8 lakhs on the 1924 total. Camphor decreased in value from Rs 25 to Rs 22 lakhs, some 14,000 lbs less coming from Japan, while China increased her consignments by 12,000 lbs. Imports of quinine salts on private account rose in quantity from 99,891 lbs to 133,132 lbs and in value from Rs 26 to Rs 31 lakhs. Imports of proprietary and patent medicines increased from Rs 23 to Rs 26 lakhs.

Fiscal year 1925-26 Imports valued at Rs 1,83,55,000; exports valued at Rs 36,77,000.

**DYES.**—Imports of synthetic dyes declined in value from Rs 2,84,06,008 in 1924 to Rs 1,59,62,802 in 1925. Of the latter total, Germany was responsible for Rs 98,22,768, the United Kingdom's share of the trade having declined to Rs 11,29,093.

Fiscal year 1925-26 Imports 10,309,000 lbs., value Rs 1.43 lakhs.

**EARTHENWARE AND PORCELAIN.**—Imports of earthenware and porcelain rose in value from Rs 71,87,583 in 1924 to Rs 75,55,818 in 1925. In the latter year Japan's share of the trade was Rs 31,67,039 and Great Britain's Rs 28,88,183.

Fiscal year 1925-26 Imports valued at Rs 76,45,000.

**ELECTRICAL MACHINERY.**—See "Machinery."

**ENGINES.**—See "Railway Material."

**FIRE BRICKS.**—See "Building Materials."

**FLOUR.**—Exports of wheat flour increased from 70,011 tons in 1924 to 75,074 tons in 1925, and in value from Rs 1,39,96,087 to Rs 1,75,87,383. In 1925 Egypt took 20,948 tons (Rs 48 lakhs) against 19,522 tons (Rs 37 lakhs) and Mesopotamia 8,884 tons against 1,541 tons, while Arabia reduced her demand from 11,696 tons (Rs 21 lakhs) to 4,335 tons (Rs 9 lakhs). Sind exported flour to the value of Rs 9 crores, and Bombay Rs 2 crores.

Fiscal year 1925-26 Exports, 67,000 tons, value Rs 1,56,20,000.

**FURNITURE.**—Imports of furniture and cabinetwork in 1925 were valued at Rs 19 lakhs, against Rs 15 lakhs in the previous year.

Fiscal year 1925-26 Imports valued at Rs 22,00,000, exports valued at Rs 6,12,000.

**GHI.**—The internal consumption of ghi in India greatly exceeds that of butter. Ghi, which is known as *ghee* in Southern India, is clarified butter prepared in practically every household by heating butter over a slow fire until an oil is formed that rises to the surface, while the refuse (mostly cascin) settles down as sediment. This oil is then decanted, and has the great advantage over butter that it will keep almost indefinitely. Ghi is used for all purposes to which butter is put in Europe, and is also extensively employed in the preparation of bazar sweetmeats. The bulk of the quantity produced is locally consumed, and supplies are reinforced by a considerable trans-frontier trade, as well as by imports by sea from Persia and the Persian Gulf, these being valued at Rs 1,97,378 in 1925, compared with Rs 70,611 in 1924. There is also a considerable export trade, which was worth Rs 37,83,253 in 1925, as against Rs 34,85,679 in the previous year.

Fiscal year 1925-26 Exports, 41,000 cwt. value Rs 40,15,000.

**GINGER.**—Exports of ginger declined in value from Rs 23 lakhs in 1924 to Rs 16 lakhs in 1925. Imports of the same commodity also fell from Rs 3,86,930 to Rs 2,49,239.

Fiscal year 1925-26 Exports, 33,000 cwt., value Rs 17,51,000.

**GOLD.**—See "Coin and Bullion."

**GROUNDNUTS.**—The greater portion of the rich harvest of groundnuts produced in India is consumed locally, but in 1925 there was a substantial rise in the volume of exports, which totalled 402,799 tons valued at Rs 12,99,59,371, against 242,770 tons, valued at Rs 6,90,32,707, in 1924. All the principal importing Continental countries increased their purchases. France was, as usual, the best customer, taking 220,084 tons, or 47 per cent of the total quantity shipped, compared with 155,383 tons in 1924. Germany took 63,703 tons, the Netherlands 63,111 tons, and the United Kingdom 30,301 tons. Of the export trade, Madras had the lion's share, viz. 382,111 tons value Rs 10,83,63,869 in 1925, Bombay being second with 80,365 tons value Rs 2,15,39,750.

Fiscal year 1925-26 Exports, 455,000 tons, value Rs 12,02,33,000. (See also under "Agriculture.")

**GUNNY BAGS.**—These bags shipped overseas numbered 437,591,846 in 1925, as against 416,008,317 in 1924, the respective values being Rs 26,75 lakhs and Rs 21,27 lakhs. Australia (Rs 4,84 lakhs), Cuba (Rs 3,20 lakhs) and Chile (Rs 1,01 lakhs) were the principal purchasing countries.

Fiscal year 1925-26 Exports (hessian), 76,873,000 bags, value Rs 3,01,16,000; (sacking), 348,210,000 bags, value Rs. 23,70,98,000.

**GUNNY CLOTH.**—In 1925 the value of the 1,484,000,000 yards of gunny cloth exported was Rs 31,50 lakhs, compared with 1,418,000,000 yards, valued at Rs 26,05 lakhs, in 1924. The United States took 1,048,000,000 yards in 1925, valued at Rs 21,5 lakhs.

Fiscal year 1925-26 Exports (hessian), 1,400,017,000 yds., value Rs 30,20,54,000; (sacking), 61,364,000 yds., value Rs. 1,59,55,000.

**HABERDASHERY.**—Total imports of haberdashery and millinery declined slightly from Rs 1,09 lakhs in 1924 to Rs 1,07 lakhs in 1925. Japan supplied Rs 21 lakhs in

1925, against Rs 12 lakhs in the preceding year. Imports from Germany fell from Rs 31 lakhs to Rs 23 lakhs, and those from Great Britain from Rs 29 lakhs to Rs 28 lakhs.

Fiscal year 1925-26 Imports valued at Rs 1,09,99,000, re-exports valued at Rs 6,99,000.

**HARDWARE.**—This is a comprehensive heading, and includes among others the following—

	1924 Rs (LAKHS)	1925 Rs (LAKHS)
Agricultural implements	18	16
Other implements and tools (except machine tools)	65	68
Builders' hardware	30	29
Domestic hardware	10	10
Enamelled ironware	31	38
Metal lumps	83	88
Metal lumps, parts	8	6
Stoves	9	10
Safes, etc.	3	3
Gas mantles	6	6
Other sorts	2 31	2 18

The total value of the imports decreased from Rs 4,96 lakhs in 1924 to Rs 4,94 lakhs in 1925. Of the latter total, Rs 1,93 lakhs represented the share of the United Kingdom and Rs 1,30 lakhs that of Germany.

Fiscal year 1925-26 Total value of imports, Rs 5,19,57,000, re-exports valued at Rs 25,70,000.

**HEMP (RAW).**—Exports of raw hemp increased in quantity from 597,352 cwt in 1924 to 976,147 cwt in 1925, and in value from Rs 1,32,80,544 to Rs 1,81,20,256. Belgium was the best customer in 1925, as in the two preceding years, taking 302,251 cwt., against Great Britain's 147,342 cwt. and Germany's 80,297 cwt. Bengal exported 418,334 cwt. valued at Rs 1,05,59,226, and Bombay 232,071 cwt. valued at Rs 68,08,325.

Fiscal year 1925-26 Exports, 624,000 cwt., value Rs 1,59,17,000.

**HIDES AND SKINS.**—The exports of raw hides and skins amounted to 47,700 tons valued at Rs 6,77 lakhs in 1925, compared with 48,000 tons valued at Rs 6,93 lakhs in 1924. Exports of tanned hides and skins increased from 18,100 tons (Rs 5,90 lakhs) in 1924 to 19,400 tons (Rs 7,18 lakhs) in 1925. The United Kingdom in 1925 took 76 per cent of the total quantity of tanned skins exported. Though India has increased her exports of dressed hides and skins, her trade in raw hides is considerably less than before the War.

Fiscal year 1925-26 Imports, 1,000 tons, value Rs 17,33,000, exports, 51,000 tons, value Rs 7,23,38,000.

**HOPS.** Some 1,500 cwt of hops were imported into India in 1925, the value being Rs 1,88,309, compared with Rs 2,16,095 in 1924.

**HOSIERY.** The value of the imports of cotton hosiery rose from Rs 1,05 lakhs in 1924 to Rs 1,37 lakhs in 1925. Japan increased her supplies from Rs 81 to Rs 1,07 lakhs, and the United Kingdom from Rs 3,50,647 to Rs 3,60,826. The United States' share also rose from Rs 4,15,940 to Rs 5,14,350.

Fiscal year 1925-26 Imports valued at Rs 1,40,46,000.

**IMPLEMENTS AND TOOLS.**—See "Hardware."

**INDIGO.**—Natural indigo, formerly cultivated to a large extent in India, received an artificial stimulus from war conditions, but is now feeling severely the competition of synthetic dyes, particularly those from Germany. The total exports in 1925 were less than half those for 1924, which again were nearly 50 per cent lower than those for

1923. In 1925 they amounted to 1,838 cwt., valued at Rs 5,27,369, against 3,884 cwt. (Rs 12,53,290) in the preceding year. The export trade is almost all equally divided between Bengal and Madras, the principal countries of destination being Egypt, Mesopotamia and the United Kingdom.

Fiscal year 1925-26 Exports, 2,000 cwt., value Rs 5,59,000.

**IRON AND STEEL.** Despite the enactment of a protective tariff on steel and the granting of a bounty to the domestic iron and steel industry, the importation of iron and steel into British India during the fiscal year ended March 31, 1925, showed a fair advance over the previous year. The figure for 1924-25—920,845 gross tons—represented a gain of 5 per cent over 1923-24 and of 1 per cent over 1922-23. During 1925-26 imports declined by about 1 per cent, decreasing to 917,247 gross tons of iron and steel, this last figure being still about 4 per cent above that for the year 1923-24. The value of all imports of iron and steel, which averaged Rs 9,61 lakhs before the War, fell from Rs 18 crores in 1922-23 to Rs 17 crores in 1923-24 and rose again to Rs 19 crores in 1924-25. In 1925-26 the total value was Rs 18.80 crores.

The following table shows the detailed imports of iron and steel into British India for the fiscal years named—

ARTICLES	IN GROSS TONS YEAR ENDED MARCH 31	
	1924-25	1925-26
Pig iron	3,425	2,895
Scrap	1,920	2,038
Angle, bolt and rod iron	740	220
Bars and channel iron	9,206	7,680
Steel bars, not cast	183,467	125,764
Ingot, blooms, billets, and slabs	626	481
Beams, pillars, girders and bridge work	80,879	98,080
Railway bridge work	10,203	1,254
Steel angles, tees	37,482	42,402
Anchor and cables	556	944
Hoops and strips	35,451	38,887
Sheets and plates		
Galvanised	209,148	283,056
Tinned	36,529	29,758
Other	118,068	91,667
Pipes and fittings, cast	12,501	11,708
Tubes, pipes, and fittings, wrought	33,810	25,270
Rails, chairs, and fish plates		
Railway	25,553	34,063
Other	16,434	
Sleepers and keys for railways	22,161	32,173
Fencing materials	6,023	8,223
Wire, other than fencing	6,588	6,605
Wire nails	16,238	7,700
Nails (other than wire), rivets, and washers	15,260	14,957
Bolts and nuts	8,033	8,604
Screws	1,997	2,007
Wire rope	2,820	2,647
Rice bowls, iron	572	700
Spring steel	4,164	5,241
Tool steel		
Carbon	956	1,223
High-speed	417	575
Cast-steel bars	730	837
Other cast steel	430	256
Other manufactures	24,341	29,308
Total	920,845	917,247

From the preceding table it will be seen that the more important losses in imports during 1925-26 were in steel bars, sheets and plates (except galvanised), railway bridgework and wire nails. Considerable advances were made in galvanised sheets, beams, pillars, etc., also sleepers and keys for railways.

The United Kingdom was the leading source for imports during 1925-26, her share of the total being Rs 11.64 lakhs, against Rs 11.88 lakhs in 1924-25. The next largest contributor was Belgium, which made some important shipments. Germany was third in the trade, while France and the United States were close contestants for fourth place.

**Exports.**—Exports of pig iron totalled 402,000 tons (Rs 1.98 lakhs) in 1924-25, against 271,000 tons (Rs 1.70 lakhs) in 1923-24. America and Japan together taking three-fourths of the quantity exported.

**JEWELLERY.**—Articles of jewellery imported, including unset stones and gold and silver plate, rose in value from Rs 12,90,423 in 1924 to Rs 16,08,881 in 1925. Exports during the same years increased from Rs 1,92,200 to Rs 7,72,111.

Fiscal year 1925-26 Imports valued at Rs 19,61,000.

**JUTE.**—Exports of raw jute increased in quantity from 676,000 tons in 1924 to 692,790 tons in 1925, while the value, on account of higher prices, showed a rise of 42.3 per cent, from Rs 26 crores to Rs 37 crores. The United Kingdom increased its takings from 170,000 to 177,000 tons, valued at Rs 6.81 and Rs 9.93 lakhs respectively, the last figure making it the largest purchaser in point of value. Germany came next, with 180,183 tons, valued at Rs 9.27 lakhs, as against 176,050 tons, valued at Rs 6.77 lakhs, in the preceding year. The value of the exports to France rose from Rs 2.90 to Rs 4.49 lakhs, to the United States from Rs 2.28 to Rs 3.69 lakhs, and to Italy from Rs 2.17 to Rs 2.93 lakhs. In quantity, Belgium, Japan and China all took less than in 1924, but Argentina increased her takings from 3,223 to 13,720 tons and the Netherlands from 9,400 to 14,430 tons. There is a growing tendency for more jute to be consumed in the Indian mills and less to be exported, the increases in the exports of manufactured jute goods being very marked.

Fiscal year 1925-26 Exports, 647,000 tons, value Rs 37,94,57,000, imports valued at Rs 96,000 (See also "Gunny Bags," "Gunny Cloth," and special article on "Jute.")

**KAPOK.**—The value of the 45 575 cwt. of kapok exported in 1925 was Rs 27,67,358, compared with Rs 24,50,794 for 42,138 cwt. in 1924.

**KEROSENE.**—See "Mineral Oils."

**LAC.**—The total quantity of lac exported increased in quantity from 430,400 cwt. in 1924 to 486,422 cwt. in 1925, but decreased in value during the same period from Rs 7.75 lakhs to Rs 7.05 lakhs. Of the total quantity exported in 1925, 77 per cent consisted of shellac, 4 per cent of button lac, 7 per cent of seed lac, 4 per cent of stick lac, and 8 per cent other kinds. Shipments of shellac increased from 328,984 cwt. to 378,709 cwt., the United States taking 192,599 cwt. and Great Britain 82,522 cwt. Out of 21,055 cwt. of button lac exported, the United Kingdom took 11,549 cwt.

Fiscal year 1925-26 Exports, 540,000 cwt., value Rs 6,90,10,000 (See also special article, "Shellac.")

**LEAD.**—Imports of lead were practically the same in 1925 as in 1924, amounting to 51,080 cwt., valued at Rs 16,40,803, compared with 51,232 cwt. valued at Rs 15,19,362. Imports of sheet lead for tea chests from the United Kingdom rose slightly from 14,159 to 14,464 cwt. and their value from Rs 4,36,875 to Rs 5,32,046. Ceylon also supplied more in 1925 than in the preceding year.

Fiscal year 1925-26 Imports, 51,000 cwt., value Rs 15,62,000.

**LEATHER.**—Imports of tanned or dressed hides and skins and of leather manufactures (excluding boots and shoes) were valued at Rs 56,02,388 in 1925, compared with Rs 52,74,794 in 1924, the United Kingdom's share of the trade in 1925 being Rs 44,95,252, an increase of Rs 1,77,352 on 1924. Exports of leather and manufactures thereof totalled Rs 7.20 lakhs in 1925, against Rs 7.02 lakhs in 1924.

Fiscal year 1925-26 Total value of exports, Rs 7,10,21,000 (See "Boots and Shoes.")

**LINSEED.**—The Indian linseed crop of 1923-24, which was marketed in 1924-25, was estimated at 493,000 tons, of which 371,000 tons were shipped, the value being Rs 9.74 lakhs, a slight increase on the Rs 9.62 lakhs obtained in 1923-24.

Fiscal year 1925-26 Exports, 308,000 tons, value Rs 8,08,53,000 (See also under "Agriculture.")

**LIVE STOCK.**—Exports of Indian live stock increased in value from Rs 20,52,695 in 1924 to Rs 32,20,330 in 1925, the total number of animals (208,593) including 120,762 sheep and goats and 10,190 cattle. Imports during the same period rose from Rs 20,17,400 to Rs 31,90,185. Imported animals are nearly all horses, 1,876 arriving from New Zealand in 1925.

Fiscal year 1925-26 Exports valued at Rs 34,62,000, imports valued at Rs 31,50,000.

**LOCOMOTIVES.**—See "Railway Material."

**LUBRICATING OILS.**—See "Mineral Oils."

**MACHINERY.**—In previous years machinery and mill-work ranked second in order of importance in India's import trade, being next to cotton manufactures. In 1924-25 there was a considerable drop in the importations, resulting in a fall back to fourth place, cotton manufactures, sugar and iron and steel occupying respectively the first, second and third positions. The total imports of machinery of all kinds, including belting for machinery and printing presses, during the year 1924-25 decreased to Rs 16 crores, as compared with Rs 20 crores in 1923-24 and Rs 24 crores in 1922-23. The values of the more important items are given below (in lakhs of rupees).

	19-24	1924-25
Prime movers	2.02	1.86
Electrical	2.23	2.02
Boilers	.90	.72
Metal working (chiefly machine tools)	.52	.37
Mining	1.08	1.26
Oil crushing and refining	.38	.31
Paper mill	.6	.7
Refrigerating	.9	.7
Rice and flour mill	.21	.28
Saw mill	10	14
Sewing, knitting	54	69
Sugar	.13	.17
Tea	.39	.46
Cotton	5.60	2.08
Jute	1.37	.93
Wool	.11	.6
Typewriters	16	15
Printing and lithographing presses	21	20
Belting for machinery	88	94

It will be observed that in 1924-25 cotton mill machinery alone accounted for a decrease of Rs 2.92 lakhs, nearly three-fourths of the total fall in trade. This was owing to the depression in the cotton mill industry in the Bombay Presidency. Jute mill machinery also showed a fall, owing mainly to lack of new extensions, while, as a result of the prosperity of the industry, tea machinery recorded a considerable increase.

The value of all textile machinery imported decreased by 47 per cent, from Rs 7.20 to Rs 3.81 lakhs, of which Rs .61 lakhs, or

95 per cent, came from the United Kingdom, compared with Rs 7.04 lakhs, or 98 per cent, in 1923-24. Wool manufacturing machinery declined from Rs 11 to Rs 6 lakhs. The value of electrical machinery imported in 1924-25 amounted to Rs 2.02 lakhs, compared with Rs 2.22 lakhs in 1923-24, the decrease being mostly in motors, which fell from Rs 72 to Rs 40 lakhs. The United Kingdom sent electrical machinery in 1924-25 valued at Rs 1.77 lakhs, an increase of Rs 13 lakhs over 1923-24, while the United States reduced her supplies from Rs 41 to Rs 15 lakhs. Prime movers (other than electrical) fell from Rs 2.02 to Rs 1.86 lakhs, of which steam engines decreased from Rs 87 to Rs 68 lakhs, while oil engines rose by Rs 11 lakhs to Rs 1.10 lakhs. There were also decreases in boilers from Rs 90 to Rs 72 lakhs, in metal working machinery from Rs 52 to Rs 37 lakhs, and in oil-crushing and refining machinery from Rs 38 to Rs 31 lakhs. Rice and flour mill machinery (Rs 17 lakhs), saw mill and wood working machinery (Rs 14 lakhs), and tea machinery (Rs 46 lakhs) all showed increases compared with the preceding year. The value of sewing and knitting machines and parts thereof increased by Rs 15 lakhs to Rs 69 lakhs, while typewriters and parts fell from Rs 17 to Rs 15 lakhs. The number of sewing machines imported increased from 48,385 in 1923-24 to 61,220 in 1924-25, of which 49,942 came from the United Kingdom and 11,257 from Germany, compared with 41,857 and 6,145 respectively in the preceding year. The number of typewriters fell from 7,930 to 7,445, of which 6,732 came from the United States.

The following table shows the relative shares of the principal countries in all imports of machinery in the years named—

	19-24	19-24	19-24	19-24
	RS	PER	RS	PER
(LAKHS)	(CENT)	(LAKHS)	(CENT)	
United Kingdom	17.02	81.2	14.13	81.9
United States	2.11	10.4	1.51	9.5
Germany	.40	2.4	.59	3.7
Japan	.57	2.8	.4	2.3
Other countries	57	2.8	4	2.6
Total	20.23	100	15.89	100

The share of the United Kingdom showed a small decrease. America also reduced her share, while Germany had an increase.

Fiscal year 1925-26 Total value of imports, Rs 14,88,59,000.

**MACHINE TOOLS.**—See "Hardware."

**MANGANESE.**—Exports of manganese ore, valued at Rs 1.76 lakhs in 1922-23, fell to Rs 1.95 lakhs in 1923-24 and Rs 1.60 lakhs in 1924-25. Belgium was the best customer in the last two years, Great Britain and France coming next.

Fiscal year 1925-26 Exports, 564,000 tons, value Rs 1,54,36,000.

**MATCHES.**—Matches imported during 1925 totalled 7,721,424 gross, valued at Rs 91,25,522, against 7,167,404 gross, valued at Rs 90,01,061, in 1924. Supplies were almost entirely from Sweden and Japan.

Fiscal year 1925-26 Total value of imports, Rs 93½ lakhs.

**MEDICINES.**—See "Drugs and Medicines."

**METALS, ETC.**—The imports of metals and manufactures thereof increased by 15 per cent in quantity from 808,000 tons in 1923-24 to 930,000 tons in 1924-25 and by 8 per cent in value from Rs 24 to Rs 26 crores. Iron and steel represented Rs 19 crores of this total, compared with Rs 18 crores in 1923-24.

Fiscal year 1925-26: Imports, 945,000 tons, value Rs 25,35,36,000; exports, 494,000 tons, value Rs 4,92,81,000. (See "Hardware," "Iron and Steel," "Machinery," and "Railway Material.")

**MICA.**—Exports of mica increased in value from Rs 94 lakhs in 1924 to Rs 1,06 lakhs in 1925, mica splittings totalling Rs 73 lakhs and block mica Rs 33 lakhs in the latter year. The United Kingdom (Rs 50 lakhs), United States (Rs 35 lakhs) and Germany (Rs 11 lakhs) were the leading purchasers.

Fiscal year 1925-26 Exports, 96,000 cwt, value Rs 1,04,17,000

**MILK.**—Imports of condensed and preserved milk increased from 89,542 cwt in 1921 to 126,111 cwt in 1925, the respective values being Rs 54 and Rs 61 lakhs. The Netherlands and Australia are the two leading countries of supply.

Fiscal year 1925-26 Imports, 136,000 cwt, value Rs 62,04,000

**MINERAL OILS.**—Imports of mineral oils into India from foreign countries increased in both 1923-24 and 1924-25, the total quantity imported in the latter year rising by 18 million gallons from 169 to 187. Imports of petrol from abroad are insignificant, almost all the consumption in India being indigenous oil. More than 38 per cent of the total quantity imported in 1924-25 consisted of kerosene oil, 48 per cent of fuel oil, and 11 per cent of lubricating oils. Kerosene increased by 3 million gallons, fuel oils by 10 million gallons, and lubricating oils by 4½ million gallons. Seventy-two million gallons of kerosene oil (bulk oil 68 million and case oil 4 million gallons) were imported in 1924-25, compared with 69 million gallons (bulk oil 65 million and case oil 4 million gallons) in 1923-24. The following table shows the sources of imports of kerosene oil during the years named—

	1923-24	1924-25
United States	16,515	34,224
Borneo	10,267	11,041
Straits Settlements	1,807	1
Russia	2,004	—
Georgia	6,013	5,328
Egypt	—	1,385
Sumatra	1,070	—
Other countries	—	1
	68,955	71,980

Fiscal year 1925-26 Imports (kerosene and other kinds), 200,410,000 galls., value Rs 10,05,11,000

**FUEL OILS.**—The steady increase in the consumption of liquid fuel by railways, steamships, and industrial concerns is reflected in the import figures. Incomings of fuel oils in 1919-20 amounted to 34,000,000 gallons, to 62,500,000 gallons in 1922-23, to 80,500,000 gallons in 1923-24, and to the then record of 90,000,000 gallons in 1924-25, valued at Rs 1,84½ lakhs, of which 77½ million gallons, or 86 per cent, came from Persia, compared with 60 million gallons, or 75 per cent, in 1923-24. Both Borneo and the Straits Settlements reduced their supplies to 11 and 1 million gallons respectively in the preceding year.

Fiscal year 1925-26 Imports, 93½ million galls., value Rs 2,11½ lakhs

**LUBRICATING OILS.**—Imports of lubricating and batching oils increased from 16,000,000 gallons valued at Rs 1,74 lakhs in 1923-24 to 21,000,000 gallons valued at Rs 2,17 lakhs in 1924-25. The United States supplied 16,000,000 gallons and Dutch Borneo 3,000,000 gallons, compared with 11,000,000 gallons and 3,000,000 gallons respectively in the preceding year. The United Kingdom sent a little over 1,000,000 gallons, compared with 1,500,000 gallons in 1923-24.

Fiscal year 1925-26 Imports, 21,363,000 galls., value Rs 2,08 lakhs.

**MOTOR SPIRIT.**—Importations of foreign motor spirit into India amounted to only 3,500 gallons in 1924-25. Coastwise imports from Burma into India proper of petrol and other motor spirit totalled 14,000,000 gallons compared with 14,750,000 gallons in 1923-24 and 15,500,000 gallons in 1922-23.

Fiscal year 1925-26 Imports, 5,600 galls.

**MINING MACHINERY.**—See "Machinery"

**MOTOR CARS.**—Since 1921-22 the importation of motor vehicles into India has steadily increased. In a recent world census of motor vehicles conducted by the United States Department of Commerce, the number of motor vehicles in India was estimated at 82,737, of which 58,303 were passenger cars. The American percentage of this latter number was calculated to be 85 per cent, with percentages very nearly as high for motor-omnibuses and motor trucks. These figures indicate the trend of the Indian import trade in motor vehicles up to and including the official year ended March 31, 1925. The figures for the year ended March 31, 1926, were, from the standpoint of the British manufacturer, much more encouraging.

With regard to motor cars, the progressive improvement in the British position is indicated by the following table which shows the imports from the chief supplying countries in the years named.

	1923-24	1924-25	1925-26
United Kingdom	1,005	1,682	2,300
Italy	570	235	800
Canada	3,200	3,956	4,775
United States	2,805	3,106	4,143
Other countries	151	401	580
Totals	7,981	9,380	12,757

Respecting values, British cars in 1925-26 displaced Canadian in the position of second in point of importance. American vehicles coming first, valued at Rs 90½ lakhs, followed by British cars Rs 77½ lakhs, and Canadian Rs 72½ lakhs. In crores of rupees, Indian purchases of passenger cars from all sources were valued in 1925-26 at 2.82, against 2.10 a year previously, and 2.04 in 1923-24, an improvement of nearly 80 lakhs in three years.

Much of the increased popularity of British motor cars in India is undoubtedly due to the East India Section of the Motor Trades Association, under whose auspices an all British motor exhibition was held in Calcutta at the end of 1926. It is confidently expected that this exhibition will result in a further improvement in the trade in British motor vehicles, and for the British light car in particular.

**MOTOR CYCLES.**—British motor cycles totalled 1,458 out of 1,629 imported in 1925-1926, these figures comparing with 1,201 out of 1,456 in 1924-25. The value of all imports in 1924-25 was Rs 9,66,000.

**MOTOR TYRES.**—Tyres for motor vehicles were imported to the value of Rs 1,08,32,069 in 1925, against Rs 1,29,95,422 in 1924. Pneumatic motor covers came mostly from the United Kingdom (Rs 30 lakhs), United States (Rs 19 lakhs) and France (Rs 16 lakhs). The United Kingdom accounted for Rs 1,48 lakhs out of a total of Rs 1,85 lakhs for the 9,457 motor-cycle covers imported. In cycle covers her share was Rs 9 lakhs out of a total of Rs 14 lakhs. Solid rubber tyres for motor vehicles were imported mostly from the United Kingdom (Rs 5 lakhs) and the United States (Rs 4 lakhs).

Fiscal year 1925-26 Imports, 1,683,739 covers, tubes and solid tyres, value Rs 1,89 lakhs.

**MOTOR VEHICLES (HEAVY).**—Under this heading are included motor omnibuses, vans and lorries. Imports of these have shown a large advance since 1922, in which, however, British manufacturers have shared to only a limited extent. The total quantity imported in 1924 was 1,809, rising to 3,987 in 1925, Great Britain's share increasing from 70 to 297, while her share of the total values (Rs 35 lakhs and Rs 71 lakhs respectively) rose from Rs 5 to Rs 11 lakhs. In 1925 Canadian exports under this heading numbered 1,808, valued at Rs 24 lakhs, and those from the United States 1,793 valued at Rs 34 lakhs.

**NUX VOMICA.** Exports of nux vomica (strychnia) in 1925 were valued at Rs 2,50,565 compared with Rs 2,03,986 in 1924.

**OILS (MINERAL).**—See "Mineral Oils"

**OPIUM.** Exports of opium on private account amounted to 3,700 chests (5,424 cwt) valued at Rs 1,56 lakhs in 1925, as compared with 4,280 chests (6,522 cwt) valued at Rs 1,88 lakhs in 1924. Siam received 1,500 chests in each year. Indo-China's share was slightly reduced to 1,225 chests and Java increased her takings from 300 to 800 chests. Exports by the Government of India declined from 3,010 chests (7,811 cwt) valued at Rs 1,10 lakhs in 1924 to 2,740 chests (5,878 cwt) valued at Rs 1,01 lakhs in 1925.

In the year 1926 the Government decided to fix ten years as the period within which the export of opium from India for other than strictly medical purposes will be progressively and finally extinguished. A 10 per cent reduction of such exports will accordingly be effected in the year 1927, so that the last export will take place in 1935.

During this period exports will be under the system of direct sale to the Government of the importing countries, the sale of opium by public auction at Calcutta having been finally discontinued with effect from April 7, 1926.

Fiscal year 1925-26 Exports, 7,000 cwt, value Rs 1,93,37,000

**PAINTS AND COLOURS.**—Imports of paints and colours reached a total value of Rs 99 lakhs in 1925, against Rs 1,05 lakhs in 1924. From the United Kingdom in 1925 came imports to the value of Rs 73 lakhs, compared with Rs 80 lakhs in the preceding year.

Fiscal year 1925-26 Imports, 358,000 cwt, value Rs 1,01,05,000

**PAPER AND PASTEBOARD.**—Imports under this heading were valued at Rs 301 lakhs in 1924 and Rs 2,75 lakhs in 1925. Packing paper increased from Rs 27 lakhs to Rs 32 lakhs, Germany and Sweden leading as supplying countries. Newsprint declined from Rs 1,14 to Rs 87 lakhs, the United Kingdom leading with Rs 28 lakhs. This country also led in the trade in writing paper and envelopes her share of the total for 1924 (Rs 56 lakhs) being Rs 32 lakhs, and of the 1925 total (Rs 51 lakhs) Rs 30 lakhs.

Fiscal year 1925-26 Imports, 1,749,000 cwt, value Rs 2,81,05,000

**PEPPER.**—The quantity of pepper shipped in 1925 declined from 84,094 cwt to 74,917 cwt, but increased in value from Rs 28 lakhs to Rs 37 lakhs. The United Kingdom and Italy are the largest recipient countries.

Fiscal year 1925-26 Exports, 129,000 cwt, value Rs 93,29,000

**PERFUMERY.**—The value of perfumery (not including spirits) imported in 1925 was Rs 3,20,142, compared with Rs 3,55,102 in 1924.

**PIECE GOODS (COTTON).**—See "Cotton Piece Goods."

**POPPY SEED.**—A considerable export trade is done in poppy seed (largely with France), exports of which were valued at Rs 17 lakhs in 1924 and Rs 16 lakhs in 1925.

Fiscal year 1925-26: Exports, 6,000 tons, value Rs 16,16,000.

**PRECIOUS STONES.**—Imports of precious stones and pearls (unset) rose in value from Rs 1.15 lakhs in 1924 to Rs 1.18 lakhs in 1925, Belgium (Rs 47 lakhs), the Bahrein Islands (Rs 23 lakhs), the United Kingdom (Rs 18 lakhs) and the Maskat Territory (Rs 13 lakhs) being the leading sources of supply.

Fiscal year 1925-26 Imports valued at Rs 1,24,03,000.

**RAILWAY PLANT, ETC.**—The value of the imports of railway plant and rolling stock on private and Government accounts combined declined from Rs 8.39 lakhs in 1924 to Rs 7.53 lakhs in 1925. Details of these imports were as under—

	1924 LAKHS OF RUPEES	1925
Carriages and wagons	4.88	4.41
Locomotive engines and tenders	1.81	1.79
Bridge work	4.2	4
Rails, chairs and fish plates of steel or iron	3	2
Sleepers and keys of steel and iron	60	54
Sleepers of wood	1	14
Other kinds	55	59
Totals	8.39	7.53

The shares of the principal countries in the above imports were as follow—

	1924 Per cent	1925
United Kingdom	94.6	87.0
Australia	1.3	—
Belgium	1.9	4.1
United States	1.2	2.6
Germany	4	2.5

Fiscal year 1925-26 Imports valued at Rs 4,99,54,000.

**RAPESEED.**—The quantity of rapeseed exported in 1925 was 168,138 tons, compared with 276,647 tons in 1924, the value being Rs 4.12 lakhs, compared with Rs 6.19 lakhs. As in preceding years, Italy was the largest purchaser, but her takings declined from 96,890 to 58,531 tons. The United Kingdom came next with purchases to the extent of 31,673 tons, against 60,982 in the preceding year.

Fiscal year 1925-26 Exports, 112,000 tons, value Rs 2,68,09,000.

**RICE.**—The two most important food crops of India are rice and wheat, and the former accounts for over 50 per cent of the total quantity of food grains and flour exported. The following table shows the figures of export of all classes of rice from India (including Burma) in the years named

	1924 Tons (1,000)	Rs. (lakhs)	1925 Tons (1,000)	Rs. (lakhs)
Rice in husk (laddy)	25	23	28	28
Rice not in husk—				
Boiled	514	8.92	584	10.21
Cleaned	1,508	24.46	1,616	24.69
Broken cleaned	113	1.50	118	1.45
Other kinds	122	1.81	123	1.79
Totals (all rice)	2,287	36.92	2,419	38.42

Exports of all rice not in the husk increased from 2,262,000 tons, valued at Rs 36½ crores, in 1924 to 2,441,000 tons, valued at Rs 38 crores, in 1925. Most of the provinces cultivate the crop primarily for home consumption, the one exception being Burma, which normally exports half her crop, the bulk of it going to foreign countries and

some to other provinces in India. The following table shows the quantities of all rice exported by provinces in the years named

	1924 Tons (1,000)	1925 Tons (1,000)
Bengal	339	197
Bihar and Orissa	1	—
Bombay	12	28
Sind	25	40
Madras	63	53
Burma	1,847	2,145
	2,287	2,419

Fiscal year 1925-26 Exports, 549,000 tons, value Rs 39,60,54,000.

**TRADE BY COUNTRIES.**—In 1925 Germany was again the largest purchaser of Indian rice taking 435,806 tons, against 421,961 in 1924. Ceylon came next with 429,095 tons, compared with 381,521 tons in the preceding year. Japan and Egypt increased their demands to 270,150 tons and 103,195 tons respectively from 233,612 and 40,614 tons, while shipments to the Straits Settlements decreased from 220,384 tons in 1924 to 208,880 tons in 1925 and to China from 130,938 to 73,150 tons. The United Kingdom (99,491 tons), Sumatra (83,329 tons), the Netherlands (100,912 tons) and Mauritius (60,655 tons) purchased more than in 1924, while Java, Cuba and Austria considerably reduced their demands. The following table gives details as to the destinations of India's rice exports, the figures being in thousands of tons and for unhusked rice only. Practically one half of the total shipments go to Asiatic countries and about one-quarter to Germany and the Netherlands.

	1924 (Tons, 1,000)	1925
Germany	422	436
Ceylon	382	430
Japan	234	270
Straits Settlements	220	209
Egypt	41	103
Netherlands	95	101
United Kingdom	94	99
Sumatra	67	83
Cuba	117	79
China	137	73
Mauritius	44	61
Java	99	43
Arabia	10	40
Fed. Malay States	35	33
Austria	34	22

(See also article on "Rice" following "Agriculture.")

**RUBBER.**—Raw rubber exported from India totalled 22,583,000 lbs. valued at Rs 2.54 lakhs in 1925, as against 17,241,000 lbs. valued at Rs 1.28 lakhs in 1924. In 1925 the United Kingdom took rubber to the value of Rs 1.07 lakhs, compared with Rs 65 lakhs in 1924, and the Straits Settlements to the value of Rs 60, against Rs 18 lakhs. Exports were about equally divided as from Madras and Burma.

Fiscal year 1925-26 Exports, 22,396,000 lbs., value Rs 2,94,10,000, imports (raw and manufactured), valued at Rs 2,17,72,000.

(See also "Motor Tyres.")

**SALT.**—The taxation of salt in India is a legacy from the Moguls and results in a considerable revenue. Imports represent about one-fourth of the total annual consumption and aggregated 541,141 tons (Rs 1.02 lakhs) in 1925, compared with 595,666 tons (Rs 1.38 lakhs) in 1924. The chief exporting countries in order are Aden, Egypt and the United Kingdom.

Fiscal year 1925-26: Imports, 560,000 tons, value Rs 1,04,20,000.

**SALTPETRE.**—Exports of saltpetre declined in quantity from 167,700 cwt. in 1924 to 126,973 cwt. in 1925 and in value from Rs 27,99,213 to Rs 19,63,301.

Fiscal year 1925-26 Exports, 134,000 cwt., value Rs 20,28,000.

**SESAMUM.**—Exports of sesamum oil fell from 73,700 gallons in 1924 to 72,202 gallons in 1925. Sesamum seed exports increased from 25,379 tons to 46,800 tons during the same period.

Fiscal year 1925-26 Exports, 40,000 tons, value Rs 1,17,34,000. (See also under "Agriculture.")

**SHELLAC.**—See "Lac."

**SILK.**—Imports of raw silk in 1924-25 increased by nearly 4 per cent in quantity from 1,365,000 lbs. to 1,414,000 lbs., but the value was Rs 1.19 lakhs, about the same as in the preceding year. Imports from China and Hongkong showed a small decrease from 1,270,000 lbs. to 1,174,000 lbs. and accounted for 83 per cent of the total quantity imported, compared with 93 per cent in 1923-24. Siam and Japan increased their supplies. Silk yarn, noils and warps increased from 967,000 lbs. valued at Rs 71 lakhs in 1923-24 to 1,525,000 lbs. valued at Rs 1.02 lakhs in 1924-25. These came largely from Japan, Italy, China and France. The quantity of silk piece goods, the most important description of manufactured silk imported, increased by 14 per cent from 14,087,000 lbs. in 1923-24 to 16,128,000 lbs. in 1924-25, and the value by one per cent from Rs 2.30 to Rs 2.33 lakhs. Ninety-eight per cent of the total quantity came as usual from the Far East (China, Hongkong and Japan). Imports of artificial silk yarn also increased during the two years under review from 496,000 lbs. valued at Rs 19½ lakhs to 1,171,000 lbs. valued at Rs 42 lakhs, both the United States and Italy considerably increasing their supplies.

Fiscal year 1925-26 Imports (raw silk), 1,325,000 lbs., value Rs 94,34,000, (piece goods), 16,281,000 yds., value Rs 2,11,62,000.

India's exports of raw silk totalled 132,504 lbs., valued at Rs 18 lakhs in 1925, against 158,462 lbs. valued at Rs 26 lakhs in the preceding year, France and the United Kingdom taking 58,880 lbs. and 34,142 lbs. respectively. The value of silk manufactures exported in 1925 was Rs 3,16,357, compared with Rs 3,07,510 in 1924.

Fiscal year 1925-26 Exports (raw silk), 1,466,000 lbs., value Rs 35,75,000, (manufactures), value Rs 3,01,000.

**SKINS.**—See "Hides and Skins."

**SLEEPERS (RAILWAY).**—See "Railway Material."

**SPICES.**—Exports of all spices increased in value from Rs 2.76 lakhs in 1924 to Rs 2.98 lakhs in 1925.

Fiscal year 1925-26 Exports, 343,000 cwt., value Rs 1,76,28,000, imports, 1,412,000 cwt., value Rs 3,28,01,000. (See also "Ginger" and "Pepper.")

**STEEL.**—See "Iron and Steel."

**STICKLAC.**—See "Lac."

**SUGAR.**—The year 1924-25 may be regarded as the turning point in the post-War history of sugar, as it witnessed for the first time an excess of world supplies over requirements. The general feature of the world's markets for the year was, necessarily, a steady decline in prices. This downward course of prices led to a reduction in the area under cane in India, and consequently the indigenous production of sugar and gur was much reduced. The result was a large increase in the importation of foreign supplies, and sugar, which in the preceding two years

had fallen back to fourth place in India's import trade, in 1924-25 ranked second to cotton manufactures. The following table shows the origin of all sugar imports in that year and in 1923-24, the rise in quantity being from 411,500 to 671,000 tons and in value from Rs 14.78 to Rs 20.37 lakhs

	1923-24 Tons	1924-25 Tons
Java	368,300	480,200
Mauritius	1,300	133,000
Straits Settlements	2,900	2,900
China and Hongkong	5,800	2,600
Egypt	700	200
Japan	-	-
Germany	5,100	21,700
Austria	6,600	2,700
Hungary	11,300	10,800
Netherlands	300	100
Belgium	2,100	6,500
Czecho-Slovakia	5,300	5,100
United States	200	600
Other countries	1,600	4,000

Total (all countries) 411,500 671,000  
Value Rs (lakhs) 14.78 20.37

Fiscal year 1925-26 Imports, 805,000 tons, value Rs 15,84,39,000

**BEET SUGAR.** In 1924-25 there was a large increase in imports of beet sugar, the total quantity amounting to 45,000 tons compared with 20,700 tons in 1923-24. The principal sources of supply were Germany, 21,700 tons (5,000 tons), Hungary, 10,800 tons (11,300 tons), and Czecho-Slovakia 5,000 tons (5,200 tons), the figures in parentheses referring to the year 1923-24.

Fiscal year 1925-26 Imports, 43,400 tons.

**TALLOW.**—Imports of tallow and stearine aggregated 91,110 cwt in 1925, compared with 74,442 cwt in 1924, the respective value being Rs 31 and Rs 26 lakhs. Exports during the same period rose from 11,472 to 11,509 cwt, valued at Rs 5 lakhs in each year.

Fiscal year 1925-26 Imports, 85,000 cwt, value Rs 29,40,000

**TEA.**—The quantity of tea exported in 1925 decreased from 344,000,000 lbs to 335,000,000 lbs and the value from Rs 33 to Rs 28 crores. The United Kingdom took 287,000,000 lbs, compared with 304,000,000 lbs in 1924.

Fiscal year 1925-26 Exports, 325,733,000 lbs, value Rs 27,12,17,000 (For further figures of the exports to various countries and from the different ports see special article on "Tea")

**TIMBER.**—Exports of all wood and timber and manufactures thereof were valued at Rs 1.67 lakhs in 1923, against Rs 1.54 lakhs in 1924. The most valuable export under this heading is teakwood exports of which rose from Rs 1.31 lakhs in 1924 to Rs 1.41 lakhs in 1925 the United Kingdom taking 20,750 tons out of the 50,710 tons exported in the latter year. In that year exports of sandalwood were valued at Rs 17,44,468, compared with Rs 14,30,107 in 1924.

Fiscal year 1925-26 Exports (teakwood), value Rs 1,69,75,000 (sandalwood), value Rs 17,36,000

**TOBACCO.**—The bulk of the tobacco grown in India disappears in local consumption, but the export trade, chiefly from Madras and Rangoon is of considerable value. In 1924-25 there was an increase in the exports of unmanufactured tobacco by 31 per cent in quantity and by 24 per cent in value, from 33,000,000 lbs valued at Rs 96 lakhs to 43,000,000 lbs valued at Rs 1,18½ lakhs. The Netherlands was the best customer as in 1923-24, and took 12,200,000 lbs, compared with 8,300,000 lbs in the preceding year. Cigars to the value of Rs 3,74,000 were exported in 1924-25 against Rs 3,98,000 in 1923-24.

Fiscal year 1925-26 Exports (unmanufactured tobacco) 37,193,000 lbs, value Rs 1,05,05,000, (cigars), 403,000 lbs, value Rs 3,69,000

**IMPORTS.** Imports of unmanufactured tobacco rose from 4,500,000 lbs valued at Rs 48½ lakhs in 1923-24 to Rs 7,000,000 lbs valued at Rs 55½ lakhs in 1924-25. On the other hand, the imports of cigarettes declined from 3,500,000 lbs in 1923-24 to 2,750,000 lbs in 1924-25. The increase in the imports of unmanufactured tobacco and the falling off in those of cigarettes are together attributable to the steady growth in the manufacture of cigarettes in India. Unmanufactured tobacco comes almost entirely from the United States, which supplied some 6,653,000 lbs in 1924-25 or 94 per cent of the total quantity. The United Kingdom had in 1924-25 nearly 90 per cent of the cigarette trade.

Fiscal year 1925-26 Imports (cigarettes), 3,412,000 lbs, value Rs 1,58,82,000, (others), 5,250,000 lbs, value Rs 54,53,000 (See also under "Agriculture" and "Industries")

**TYRES.** See "Motor Tyres"

**WATCHES.** See "Clocks and Watches"

**WHEAT.**—The following table shows the figures of exports of wheat to the various countries of destination in the years named—

	1924 Tons	1925 Tons
United Kingdom	575,280	284,177
Belgium	71,981	60,768
Mesopotamia	15	31,780
Italy	17,005	31,705
France	36,549	18,524
Netherlands	10,112	7,848
Persia	170	7,746
Arabia	3,216	7,270
Germany	9,320	6,150
Other countries	48,047	85,343

Total tons 774,595 511,311  
Value, lakhs Rs 11,56 Rs 9,08

The decrease in exports is due to the appreciably larger local consumption of wheat since the War.

Of the total value of Rs 10.84 lakhs for all exports of wheat and flour in 1925, the share of Sind was Rs 8.72 lakhs and that of Bombay 1.80 lakhs.

Fiscal year 1925-26 Exports, 212,000 tons, value Rs 3,60,25,000 (See also under "Agriculture")

**WHISKEY.**—In 1924-25 whiskey accounted for 75 per cent of the total imports of spirits from the United Kingdom, exports increasing in quantity from 527,000 to 528,000 gallons, but decreasing in value from Rs 97 to Rs 93 lakhs.

Fiscal year 1925-26 Imports 568,000 galls, value Rs 95½ lakhs

**WIRE FENCING.**—See "Iron and Steel"

**WIRE NAILS.**—See "Iron and Steel"

**WIRE ROPE.**—See "Iron and Steel"

**WOOD.**—See "Timber"

**WOOL.** As the result of higher prices and a strong demand, exports of raw wool showed a large increase in 1924, rising from 37,681,000 lbs to 51,440,000 lbs valued respectively at Rs 3.26 lakhs and Rs 4.86 lakhs. In 1925 there was a slight fall in quantity to 49,774,000 lbs and in value to Rs 4.48 lakhs. The United Kingdom took 13,674,000 lbs in 1925, valued at Rs 3.97 lakhs, the United States purchases totalling 5,031,000 lbs valued at Rs 40,21,000.

Fiscal year 1925-26 Exports (raw wool), 43,410,000 lbs, value Rs 3,79,88,000

**WOOLLEN PIECE GOODS.** Imports of woollen piece goods increased in value from Rs 2.67 lakhs in 1924 to Rs 2.86 lakhs in 1925. The total of all woollen manufactures imported in 1925 was Rs 4.14 lakhs, against Rs 3.63 lakhs in 1924.

Fiscal year 1925-26 Imports, 14,575,000 yds, value Rs 2,92,17,000 (See also "Blankets")

**YARNS.**—See "Cotton Twist and Yarns"

**THE ENTERPRISES HEREAFTER DESCRIBED AND ILLUSTRATED REPRESENT A SELECTION OF ALL THAT IS BEST IN THE COMMERCE OF INDIA. THE VIEWS OF PREMISES, EXTENSIVE SHOWROOMS AND STOCKS ARE ELOQUENT OF THE MODERN BUSINESS PROCEDURE IN VOGUE, AND THE DETAILS (PRESENTED AS CONCISELY AS POSSIBLE) EMPHASISE IN THE MOST EFFECTIVE MANNER THE EXTENT AND METHODS OF THE MARKETS OF INDIA.**

#### SHAW WALLACE & CO.

**Inception.**—The history of this firm is a record of continuous and steady expansion from the date of its inception in Calcutta on January 1, 1886, until the present time.

**Development.**—In 1901 operations were extended by the opening of an office in Bombay, followed by similar expansion in Madras in 1906, in Karachi in 1907, and in

Colombo, Aden, Morinugao, Cochin and Ceylon during subsequent years. The firm is thus established at every port of importance on the Indian Coast. Its activities are as widespread as its representation, and in practically every branch of commerce in India it has a very considerable interest.

**Premises.**—The Head Office at Calcutta is in Bankshall Street, in premises which were

built to the firm's requirements, and in which it has been established since 1911. A photograph of these premises is reproduced in this volume, and it is significant of the growth of business that whereas one half of the building was at one time leased to outside firms, only three-fourths of the ground floor remain so let. What has happened at the Head Office is in the main what has occurred at the branches.

**Activities.**—Messrs Shaw Wallace & Co are engaged directly or indirectly in practically every branch of commerce in India, as the following plainly shows

**OIL.**—In the Indian oil world they are agents for the whole country for the Burmah Oil Co Ltd and the Anglo-Persian Oil Co (India) Ltd, acting as well in the same capacity for the Assam Oil Co Ltd, the Tank Storage Co (India) Ltd, and as managing agents for the Finplate Company of India Ltd, at whose works tinplates for kerosene and petrol containers are produced in vast quantities

**COAL.**—In this trade the firm manages a number of collieries as far distant from one another as Nazim in Assam and the pits of the Pench Valley Coal Co Ltd in the Central Provinces

**COTTON AND FLOUR.**—In industrial circles it manages the Bengal Nagpur Cotton Mills Co Ltd and also such sound concerns as the Hooghly Flour Mills Co Ltd and the United Flour Mills Co Ltd

**TEA.**—In this commodity the company occupies a prominent position as agents and managing agents for numerous tea companies situated in Northern India and Ceylon, in which island it also manages rubber-producing properties

**FERTILISERS.**—It likewise takes a leading position in its arrangements to meet the growing needs of India and Ceylon in connection with fertilisers for all purposes. In its Dhappa and Atlas Works at Calcutta, and its Atlas Works at Colombo, every possible want in the fertiliser world in India and Ceylon is catered for while as agents for the British Sulphate of Ammonia Federation in India, Shaw Wallace & Co have achieved a marked success

**INSURANCE.**—In insurance the company represents a lengthy list of some of the best known houses

**Import and Export.**—On the merchant side of the business the firm as importers and exporters, plays an important part in practically every channel of commerce. On the import side it is prominent in the importation of cotton piece goods from Lancashire, Continental, American and Japanese mills. Through its Finber Department, established, like the Piece Goods Department, at all the branches, it caters for the requirements of the Indian market in Burma timbers and in pine from America, whilst the Import Department handles wire ropes, rock drills, paints, explosives, metals, agricultural implements, etc. At most branches, likewise, the company has established a Sugar Department dealing with the importation of sugar into India. On the export side its Produce Department holds a prominent position in the shipment of all grades of Indian products, wheat, rice, linseed, hemp, etc., in its Jute Department it participates on an extensive scale in the pressing and baling of raw jute under the supervision of its own staff and the shipment of this product to the markets of the world under its own marks, whilst the same product, converted into gunnies in the Jute Mills on the Hooghly, is handled by the Gunny Department, which has more than once brought the name of Shaw Wallace & Co to the head of the list of exporters of this article from India

**Head Offices.**—4, Bankshall Street, Calcutta (cables: "Shawlace," Calcutta). Also at Bombay, Madras, Karachi, Colombo, Cochin, Aden, Codes A B C 5th Edition, Bentley's, Scott's.

## JAMES FINLAY & CO. LIMITED.

**Inception.**—Founded at Glasgow in 1750 by Mr James Finlay, the firm opened branches subsequently in other cities of Great Britain, on the Continent of Europe and in America. To day the head office is still in Glasgow, and there are branch offices in London and Liverpool, while the company has cotton mills and bleaching works at Catrine and Deanston in Scotland

**Development.**—Under the administration of Mr Kirkman Finlay, a son of the founder of the business, the various enterprises made great strides, and in 1816 operations were extended to India, a branch being opened in Bombay. At the present time the organisation has four establishments in India, viz at the city just named, at Karachi, Calcutta, and Chittagong, while there is also an office at Colombo, Ceylon

**Capital.**—In 1900 the firm was converted into a private company under its present name, and in 1924 became a public company with a capital of £2,000,000

**Activities.**—The business ramifications of the organisation are wide and varied, the trading operations of the Calcutta house alone covering an extensive field in Indian commerce. This branch was opened in 1870, and the following brief summary of the interests of its various departments will convey some idea of the vast extent of its operations

### Departments :—

**TEA.**—James Finlay & Co Ltd are the largest growers in the world of Indian tea, and are the agents in Calcutta for the under-noted tea companies. The Consolidated Tea & Lands Co Ltd, Amalgamated Tea Estates Co Ltd, Kanai Devan Hills Produce Co Ltd, Anglo-American Direct Tea Trading Co Ltd, Achabam Tea Co Ltd, Borhat Tea Co Ltd, Chalgola Tea Association Ltd, Baraoota (Sylhet) Tea Co Ltd, Dhamai Tea Co Ltd, Noyapara Tea Co Ltd, Doloi Tea Co Ltd, Chubwa Tea Co Ltd, Balmatapootra Tea Co Ltd, Killing Valley Tea Co Ltd, Dhunseri Tea Co Ltd, Sapoi Tea Co Ltd, Jungpana Tea Estate, Gopaldihara Tea Estate and Avongrove Tea Estate. These concerns cultivate more than 90,000 acres of tea in North East and South India and in the State of Travancore, representing over 13% of the total tea produced in India, the teas being shipped to all parts of the world

In addition to tea, the Anglo-American Company is interested in coffee and cardamoms, owning five plantations in South India

**JUTE.**—The Champdany Jute Co Ltd, which is on the agency list of the firm under notice, owns two mills, containing 1,217 looms, where an extensive range of hessian cloths, sacking bags and twine are manufactured from jute fibre. The mills are situated on the banks of the River Hooghly, Wellington Mill at Rishra and the Champdany Mill at Badlyabati, both on the East Indian Railway. Raw jute is also shipped by James Finlay & Co Ltd to the United Kingdom, to the Continent of Europe, to South and the United States of America. They are the proprietors of M Sarkies & Son, Naraingunge, who are balers of many marks well known in the jute trade, and they control the Golaberry Co., Ltd, which has a press house in Calcutta where a large business is done yearly in pressing and exporting jute bales.

**HESSIAN CLOTH AND GUNNY BAGS.**—The firm is one of the leading shippers of gunny bags and hessian cloth, and exports such goods to all parts of the world. Its shipments of bags cover the South African, Java, South American, Egyptian, Home, Continental, Australian and Far Eastern markets, whilst hessian cloth is also shipped in quantity to both North and South America.

One of the most gratifying features of these connections is the reputation which has been built up by the firm, after many years of trading, for supplying bags of cloth of the most reliable makes

**Imports and Exports.** Cotton piece goods are imported from Great Britain and the Continent, in addition to the goods produced in the firm's own mills at Bombay. These goods are exported to various countries

Sugar is imported from Java and Europe, and the company are the managing agents for the United Provinces Sugar Co Ltd, whose factory and plantations are situated in Gorakhpore, United Provinces. They also represent the Belsund Indigo Concern in Bihar which grows and manufactures natural indigo

**Shipping.** Throughout its branches in India and Ceylon, James Finlay & Co Ltd are agents for the Clan Line Ltd of London and the Ellerman Wilson Line Ltd, Hull, which both supply regular tonnage between India and United Kingdom and Continental ports. The Clan liners are the only ocean-going ships which carry cargo direct from the United Kingdom to Chittagong, a rising Indian port. The company are agents also for the Houston Line London and the East Asiatic Co Ltd Copenhagen, likewise financial agents for Messrs William Simons & Co Ltd Renfrew, the world famous dredger building firm, which has supplied numerous dredgers to the Government of India on account of Harbour Port Trusts there

All shipping and other business connected therewith for the Central Provinces Manganese Ore Co Ltd, London is transacted by the firm's branches at Calcutta and Bombay. The manganese ore and other minerals come from the district of Nagpur in the Central Provinces

**Insurance.** Business of a general nature, chiefly fire, marine, life, motor, baggage, workmen's compensation and loss of profits, is undertaken the following companies being represented: Phoenix Assurance Co Ltd, Royal Insurance Co Ltd, South British Insurance Co Ltd, Java Sea & Fire Insurance Co Ltd, Union Insurance Society of Canton Ltd, and Queensland Insurance Co

**Other Branches.**—In Bombay James Finlay & Co Ltd are managing agents for the Finlay, Swan and Gold Mohur cotton mills and agents for the Clan and Ellerman Wilson Lines, besides carrying on a piece goods import business and an export department for general merchandise, cotton and pearls

The Karachi branch is similarly engaged in shipping, and also in the import of piece goods and the export of general merchandise

At Chittagong, a large import business in salt, piece goods, corrugated iron and rice, is effected, and here also the Clan Line, which carries a large portion of the tea grown in Assam and Sylhet, besides the native grown jute, is represented by the company

**Administration.**—The entire business of James Finlay & Co Limited is controlled from the head office in Glasgow, and the Board of Directors as at present constituted is as follows: J F Muir (chairman), Messrs. J B Muir, W Brown, R Langford James, J D Gatheral, C A W Warrington, D M Hannay and A M McGrigor

**Head Offices.**—These are at 22, West Nile Street, Glasgow

**Calcutta Office.**—1, Clive Street (cables: "Mercator," Calcutta). Codes: Bentley's, Whitelaw's, Scott's and Acme

**Bankers.**—Royal Bank of Scotland, Imperial Bank of India, Ltd., National Bank of India, Ltd., Chartered Bank of India, Australia and China.

**McLEOD & CO.**

**Inception.**—Mr C C McLeod (now Sir Charles McLeod, Bt) was, in partnership with Mr A Campbell, the founder of this firm in 1889 at 5, Mangoe Lane, Calcutta.

**Development.**—Throughout the 37 years of prosperous trading a steady but progressive policy of expansion has been a feature of the company's operations. At first a small engineering department, seven tea estates and an insurance agency marked the limits of its interests. To day the plates at the door of the present McLeod House indicate that the firm, with six partners and 40 European assistants, controls five jute mills, two collieries, 40 tea estates, five railways, three industrial companies, and two Zemindari companies, in addition to representing four insurance companies and numerous British, Continental and American firms with interests in India.

From their original site in Mangoe Lane the offices were removed in 1890 to 31, Dalhousie Square. A second move was necessitated 28 years later, when the present building at 28, Dalhousie Square was erected, to be occupied in 1918.

**Premises.**—In 1917 the land on the west side of Dalhousie Tank—recently vacated by the Mercantile Bank—was purchased, Messrs. Martin & Co. being entrusted with the design and construction of a suitable building. The foundation stone was laid on March 22, 1917, by Mrs. Norman McLeod, and on April 4, 1918, the staff moved into the new offices. The building is an imposing one, and commands a unique view over the Dalhousie Tank, or "Tall Digi," towards the centre of the city. The style is Doric, faced with massive Ionic columns. There are four storeys, each of which provides a floor space of approximately 11,000 square feet. The general appearance is impressive, and in keeping with Calcutta's other great commercial buildings, which are rapidly replacing the old low-roofed structures of a past generation.

During the illuminations in honour of the Prince of Wales' visit in 1920-21 the McLeod House was one immense blaze of light, the entire face being decorated in coloured lights to represent a huge Union Jack.

**Departments.**—A brief summary of the interests of its various departments will help to convey some idea of the many operations of the company.

**JUTE MILLS.**—These represent one of the two main branches of business and are five in number—the Kelvin and Empire on the east bank of the river at Tittaghai, Soorah at Narculdanga on a canal, Presidency on the river at Rishra, and Chitavalah in the north of the Madras Presidency, the last having been recently taken over from South India Industrials Ltd.

Soorah is one of the oldest mills on the river, and was taken over from Marwari management. Kelvin and Empire were built and floated by the firm, but the building of Presidency (then named Benjamin) was commenced under B N Elias' management. Subsequently, when B N Elias found it impossible to complete the mill and the company was in danger of going into liquidation, the present owners took it over. The most recent acquisition is Chitavalah, which, like Presidency, was in financial difficulties. After considerable negotiations Messrs. McLeod & Co. took over the control, and a special staff was sent to attend to the local administration.

The prime movers at all the mills, except Empire, are horizontal compound steam engines, but at Empire there is a modern electrical plant. Each mill works 54 hours

per week in accordance with the Indian Jute Mills Association's Agreement, and each is a member of the association.

The following figures are eloquent of the magnitude of the business and its prosperity during the past decade.

	KELVIN	EMPIRE	SOORAH	PRESIDENCY	CHITAVASAH
Registered in	1907	1912	1919	1919	1920

**Tea.**—This is the second of the firm's two main interests. The companies and gardens controlled or represented by them are found in almost every tea growing district of Northern India including the Dooars, Terai, Assam, Cachar and Sylhet.

Of the greater companies, the Imperial Tea Company Ltd. heads the list with 12,080 acres under cultivation out of a grant of 41,262 acres, a capital of £533,600 and an average annual production of 6,012,854 lbs of black tea. Its divisions number eleven, of which seven are in the Dooars, and it employs 15,516 hands.

The firm are managing agents for the Bharkawa Tea Co. Ltd., Rajahmhat Tea Co. Ltd., Rutema Tea Co. Ltd., Atal Tea Co. Ltd., and Felogan Tea Co. Ltd. while they act as agents for the Imperial Tea Co. Ltd., British Assam Tea Co. Ltd., Dooloogram Tea Co. Ltd., Hakum Tea Co. Ltd., Gingia Tea Co. Ltd., East India & Ceylon Tea Co. Ltd., Empire of India & Ceylon Tea Co. Ltd., Burmah Jan Tea Co. Ltd., and Nilpur Tea Co. Ltd.

The following statistics give a concise idea of annual production, capital invested, staffs employed, etc.—

	McLEOD & Co MANAGING AGENTS	McLEOD & Co AGENTS
Area of grants	9,417 acres	80,022 acres
Area under tea	4,230 "	30,098 "
Average yearly output of tea 1923-25	2,136,341 lbs	150,801,166 lbs
Europeans employed	12	101
Labour forces	5,313	15,934
Capital	Rs 14,05,800	£1,498,937
Debentures	Nil	£64,300

In addition to the above, Messrs. McLeod & Co. have arranged to purchase some large mouzas in furthest Assam, where it is proposed to open up two new companies for the production of "quality" teas in the next four years.

**Tea Seed.**—As agents for the Tingamira Tea Seed Company, Limited, the firm under notice is responsible for the disposal of approximately 1,600 maunds of tea seed each year of the following well-known types, "Tingamiri Assam," "Tingamiri Manipuri," "Gopani Assam," and "Kutchu Manipuri." Most of the crop is sold in Northern and Southern India, but a considerable quantity is exported to Java, Sumatra and Kenya Colony.

**Tea Boxes.**—In this highly competitive trade the company represents Iralda Ltd. in India. Large stocks are carried in Calcutta to meet urgent orders, and an average annual sale of approximately 150,000 complete chests has been reached in recent years.

**Triangle Lead Mills Company Limited.**

This is a private company formed in 1926 and managed by McLeod & Co. for the production of lead foil for tea box linings and other uses. It is situated at Kidderpore, and all its lead rolling machinery is electrically driven.

**Coal.**—This department controls, as managing agents, the Gopalchuck Coal Company Ltd. and the Bansjorah Coal Company Ltd. both in the Manbhum District. The output of both collieries has been sold forward by private contract for a considerable period and under normal conditions none of the coal comes on the public market. Following are details of the two companies:—

	GOPALCHUCK	BANSJORAH
Screens worked	13, 14, 15, 16, 17	10, 11, 12, 13, 14
1921 Raisins	125,015 tons	125,216 tons
Despatches	148,203 "	46,102 "
1921 Raisins	162,165 "	135,188 "
Despatches	149,886 "	65,153 "

Europeans employed	4	1
Coolies	800	500
Capital issued	Rs 9,50,000	Rs 6,00,000
Debentures	Rs 5,50,000	—

**Insurance.**—The following British insurance companies are represented by Messrs. McLeod & Co. London and Lancashire Insurance Company, for fire, marine and workmen's compensation, North British & Mercantile Insurance Company, for burglary, all risks, personal accident, etc., Railway Passengers' Assurance Company, for motor cars and workmen's compensation, Scottish Union & National Insurance Company, for life insurance. The policy of the firm is to represent only first-class offices and so provide ample security for their constituents. All classes of insurance are transacted.

**Railways.**—This department deals with the administration and operation of light railway companies, undertakes surveys, and reports upon new projects. Five feeder railways are so administered: Katakhal Lala Bazar Railway, a feeder to the Assam Bengal Railway, Ahmadpur Katwa Railway, a feeder to the East Indian Railway; Burdwan Katwa Railway, a feeder to the East Indian Railway; Bankura Damoodar River Railway, a feeder to the Bengal Nagpur Railway; and Kalighat Falta Railway, a feeder to the Eastern Bengal Railway. The four last named railways are also operated in all

- 4 & 5. Jainti Tea Estate, Eastern Doars.
6. Britannia Engineering Co., Tittaghur.
7. Another view of Banajorah Colliery, Dhanbad.

branches by this department. These five companies represent a capital of Rs 110,00,000, all subscribed in India. They carry an average of 2,100,000 passengers, with a tram mileage of 420,000 miles per annum, and afford employment to three European officers, four Indian officers, 10 subordinate officers, and 1,200 other grades.

The firm are also agents for the Tezpur Balipara Tramway Company, Ltd., in Assam. Formed in 1893 for the benefit of the tea concerns in the Tezpur District of Darrang, it acts as a link between the gardens on the north bank of the river and the steamer station at Tezpur, where Messrs. Kilburn & Co. are the local agents.

**Engineering.**—This department manages the Britannia Engineering Co. Ltd., started in 1917 with the object of specialising in the production of spare parts for jute mill machinery. That object being soon attained, the company turned to the production of cotton and tea machinery. The works cover six acres and are situated alongside the main line of the Eastern Bengal Railway near Ittaghur. In the same year that the company was started a complete smith's shop was laid down to deal with the manufacture of railway material. The foundry is able to produce iron castings up to ten tons, and particularly castings suitable for mass production. The machine shop is equipped with the latest type of machine tools and is capable of handling every class of high grade work, specialising in the gear cutting of spur, bevel, worm, single and double helical wheels and milling machine work. The forge and smith shop undertakes the manufacture of couplings, buffers, spindles, hooks, draw bars, axle guards, keys and wagon locks used on the several railways in India. One of the many interesting features of the works is the manufacture of complete machines such as looms, softeners, cop winders etc. for jute mills and patent tea rolling machines for tea gardens. A full range of tea machinery designed and manufactured at the works will shortly be placed on the market.

**Jute Export.**—This department exports jute to various countries, principally the United Kingdom, the Continent and America, the jute being bought here from Indian or European balers and then resold for shipment. The volume of business transacted during the three years named has been approximately 1923—17,200 tons, 1924—32,000 tons and 1925—25,500 tons. The firm is amongst the leading shippers of this commodity, and occupied sixth place in the shippers' list for 1925.

**Shipping.**—The import and export of material and merchandise for all departments are dealt with by this department, which also represents the Dollar Line and the Admiral Oriental Line in Calcutta.

**Solano Estates.**—The firm controls, on behalf of the proprietors, the Solano Estates, situated in the neighbourhood of Gya, Shahabad and Patna. These estates date back to 1820 when Joaquin Solano, a surgeon in the Spanish Navy, came to India. After years of successful trading he bought a factory in Bengal, since when the property has greatly increased in extent, and been handed down from generation to generation. Descendants of the original Solano are still existing.

**Agencies.**—Messrs. McLeod & Co. represent the following manufacturers in Calcutta: Davey Paxman & Co. Ltd., makers of steam engines and boilers, oil engines, etc.; Bruntons, mild steel shafting and machinery and manufacturers; Hick, Hargreaves & Co., Ltd., makers of turbines and engines of all descriptions; Bucyrus Co., manufacturers of all machinery for excavating, dredging,

mining, etc.; Dobson & Barlow Ltd., makers of textile (cotton) machinery of every description.

**Accounts and Stores.**—Separate departments each under European supervision, exist for the efficient control of these important sections.

**General.**—Other interests represented and not listed under any particular department are: Lalserah Indigo Concern (of Bihar); Irrawaddy Flotilla Company (of Rangoon); Rajghat & Furrowah Estates Ltd.

**Head Offices.** 28, Dalhousie Square, Calcutta.

**London Representatives.**—Messrs. Geo. Duncan & Co. were appointed agents at the time of the firm's inception and continued in this capacity until Messrs. D. M. Stewart & Co. superseded them in 1891. Upon the retirement of Sir Charles McLeod in 1899, Messrs. D. M. Stewart & Co. were named Stewart McLeod & Co., only to be designated a few years later McLeod, Russell & Co.

The London branch thus constituted was situated at 10 and 11 Lane Street until 1917, when a bomb from a German raider caused a removal to the present premises at 50-51 Lane Street.

**Cable Addresses.**—"Kelvin," "Dimples" and "Onthine." Codes: Bentley's A.B.C. 4th and 5th Editions, Lieber's, Broomhall's, Western Union, Premier, McNeill's, Whitelaw's, A.I., and Private.

**Bankers.**—Imperial Bank of India, National Bank of India, Ltd., Mercantile Bank of India, Ltd., Chartered Bank of India, Australia and China, Lloyds Bank, Ltd., Central Bank of India, Ltd.

#### MACNEILL & CO.

**Inception.**—Established in the year 1872, this firm has from its foundation, been closely connected with the tea industry. It has, however, other very extensive interests, which include collieries, inland steamers, jute mills, ropeworks, engineering works and printing works.

**Tea Industry.**—At the present time Messrs. Macneill & Co. are agents for 44 tea gardens situated in Assam, Cachar, Sylhet and the Doars, with an area of 112,223 acres, of which 30,422 acres are under tea cultivation, with an annual outturn of approximately 16 million pounds of manufactured tea.

**Collieries.** In connection with the coal industry they are managing agents for the following companies: Equitable Coal Co. Ltd., Aldih Coal Co. Ltd., Hurnladhi Coal Co. Ltd., Mundulpur Coal Co. Ltd., Nodhi Coal Co. Ltd., West Jamunia Coal Co. Ltd., and Dhemo Mam Collieries Ltd. These form one of the largest coal mining groups in India, with extensive properties and collieries equipped according to the latest methods. The coal seams worked are the Disherghari and Pomati in the Raneegunge Coalfield, also Nos. 14 and 17 seams in the Jharria Coalfield. The first two seams are of highly volatile coal, with a low ash content and no clinker, thus forming excellent steaming and gas coal. The seams 14 and 17 are low volatile coal, of splendid coking quality, and admirable for steaming under forced draught.

In 1925 a Coal Grading Bill was introduced by the Indian Government. This measure was necessary in order to grade the various qualities of coal mined in India, to provide buyers with grading certificates, and generally to protect the interests of buyers by ensuring deliveries of the actual grade of coal purchased. The highest quality classification under this scheme is "Selected," and it is worthy of note that the whole output raised

by Messrs. Macneill & Co. is of this special quality.

The coaling agents here named have been appointed to represent the firm at the following ports and railway junctions: Singapore, Roustead & Co. Ltd., Karachi.

Graham's Trading Co. Ltd., Bombay—Graham's Trading Co. Ltd., Rangoon—Graham's Trading Co. Ltd., Madras—Binny & Co. Ltd., Cawnpore—Allen Bros. & Co. (India) Ltd., Colombo—Mackinnon Mackenzie & Co. The Calcutta Coal Agency address is Macneill & Co. Post Box 15, Calcutta.

**Shipbuilding and Repairing.** The yards and works are at Garden Reach, on the Hooghly. All the repairs and renewing of constructional work of the British India Steam Navigation Company's vessels operating in East Indian and Far Eastern waters are carried out at this establishment, which also undertakes the repairs and renewals of vessels belonging to the Peninsular and Oriental Steam Navigation Company, the Nourse Line, and other allied companies whose vessels visit this port. Here are constructed and overhauled the splendid river vessels belonging to the River Steam Navigation Company, while every type of river craft for inland service is designed and built to contract.

**Ropemaking.**—The steadily increasing market for ropes led to the establishment in 1904 of an entirely modern ropery, under the name of the Ganges Rope Co. The site occupied by it adjoins the Ganges Jute Mill, another of the company's pioneer enterprises on the Howrah foreshore of the River Hooghly facing Calcutta City. The arrangement of the machinery in the ropewalk admits of the manufacture of ropes of 135 fathoms long without any joining or splicing whatever, and the total area occupied by the works is 11 acres. Machinery of the latest pattern has been installed at a cost of some £40,000, the preparing, spinning, cord and line laying machines being by Lawson & Sons of Leeds and the ropewalk machinery by Coombe, Barbour, of Belfast.

Manila, sisal fibre, country hems and various varieties of coir fibre yarns are used in the rope, etc., made at the works, and, in this matter of raw material supplies, the Indian ropeworks have a marked advantage in reduced costs, inasmuch as they are on the spot for all the Indian supplies and have a much shorter sea lead for Manila fibre. The actual sources of the Indian supplies are sisal fibre from Central Provinces and Bombay Presidency, country hems from Central India and Bengal, and coir yarns from the Malabar Coast and Western Ghats. This fact, combined with cheaper labour, places the company in an unassailable position so far as Western makers are concerned.

The quality of their productions will bear comparison with any imported ropes, as may be judged from their standards.

The capacity of the factory is 10 tons of ropes and lines per day in the following classes: Manila (oiled and dry), coir (oiled and dry), hemp (tarred and white), hemp lines (tarred and white), fishing lines, gasketings, cotton ropes, seizings, fencing strands, jute, hemp, cotton, and Manila cords, tennis and cricket nets, paulus, and all kinds of waterproof covers and awnings.

The Ganges Ropeworks Co. makes a speciality of driving ropes and ship's hauling lines, etc., made of the finest Manila hemp, and in all cases giving a maximum of length and strength for minimum weights.

**Printing.**—Messrs. Macneill & Co. act as managing agents for The Ganges Printing Company Limited, which owns an up-to-date printing press at Seebpore, Howrah. The press occupies an area of approximately 4

biggahs and contains machinery of the most modern type. The company specialises in commercial printing, but undertakes printing of all descriptions, including book-work, periodicals, and illustrated pamphlets.

**Head Offices.**—2, Earle Place, Calcutta.

**Cable Address.** "Macneills" Codes Broomhall's, A B C 5th Edition, and Bentley's.

**Bankers.** P & O Banking Corporation, Chartered Bank of India, Australia and China, National Bank of India Ltd.

#### **BALMER LAWRIE & CO. LTD.**

**Inception.**—This famous house of merchants, agents, engineers, bankers and shippers was instituted in 1867. Its subsequent history has been one of steady progress along well organised lines, the several departments having been efficiently controlled by experts and directed to meet the growing demands of Indian commerce.

**Banking.**—The banking department is operated mainly for the convenience of the firm's own clients, for whom it opens and conducts current accounts free of charge. Interest is allowed on all fixed deposits, and securities are held in trust.

**Stocks and Shares.**—The company undertakes the buying and selling of every form of Government and other securities, debentures, shares, etc., as also the collection of dividends and interest.

**Metal Department.**—In addition to being one of the largest importers of steel sectional material, G. C. iron and metals of all kinds, Messrs Balmer Lawrie & Co. Ltd. act as agents in Eastern India for the well known Katni "Castle" brand Indian Portland cement and Katni fire bricks, also as selling agents for the Manbhumi Hydraulic Lime and Stone Works' hydraulic lime. The following metal manufacturers are represented: Peter Spence & Sons Ltd. (Manganese-ferrie), F. Braby Corrugated Iron Co., "Alco" brand G. C. iron, Betts & Co., Ltd.—tea lead, The Associated Portland Cement Manufacturers Ltd.—Gillingham cement, The Hoyt Metal Co. Ltd.—metal antifriction linings, R. Hood Haggie & Sons—wire ropes, Frost Steel & Wire Co.—fencing.

**Machinery Department.**—The Engineering Department specialises in the mechanical requirements of factories, mills, collieries, contractors, Government departments and railways in India, large stocks of belting, pulleys, steam pumps, oil engines, steam engines and boilers being carried.

A speciality is made of fire-lighting appliances, and a large stock of fire engines, hose and extinguishers is held. The company, which acts as sole agents in India for Messrs. Merryweather & Sons Ltd., London, supplies fire equipment to many large towns in that country, being one of the biggest distributors to the mills and collieries.

The Machinery Department comprises a general stores in the centre of Calcutta, a heavy machinery store with siding in Howrah and a workshop under European supervision at Kidderpore. The manufacturers represented by the company in this line include International Channelling Machine Co. Ltd., "Siskol" coal cutters and rock drills, Robey & Co. Ltd., engines and boilers, Hadfields Steel Foundry Co. Ltd., colliery equipments, Pulsometer Engineering Co. Ltd., pumps, The Haslam Foundry & Engineering Co. Ltd., refrigerating machines, British Belting & Asbestos Co., cotton and hair belting, Houseman & Thompson Ltd., boiler composition, McEwan Pratt & Co. Ltd., internal combustion rail locomotives, Farrar Boiler Works Ltd., vertical boilers; Kay & Wilkinson Ltd., leather belting; R. A. Lister

& Co. Ltd., small oil engines and combined pumping sets, Merryweather & Sons Ltd., fire appliances, United Flexible Metallic Tubing Co. Ltd., flexible metallic tubing, A. G. Mumford Ltd., boiler feed pumps.

**Electrical Department.** The activities of this department include sole agencies for "Ediswan" lamps, Johnson & Phillips' A. I. R. wires and cables, Tudor Accumulator Co.'s storage batteries and the Electric Construction Co.'s A.C. and D.C. dynamos and motors. A very important section is the Mayor & Coulson's electric coal cutter agency.

The installation section undertakes electrical contract work of every kind, and has been responsible for a very large number of complete jute mill and tea garden installations, as well as town lighting schemes. The following electrical manufacturers are represented by the firm: Edison & Swan Electric Co., lamps, Tudor Accumulator Co. Ltd., storage batteries, Johnson & Phillips, cables, transformers and switchgear, Cable Accessories Co. Ltd., tins and switchgear, Nalder Bros. & Thompson Ltd., electrical instruments, Crag Miners Supply Co. Ltd., miners' electric lamps, Waygood Otis Ltd., lifts, Electric Construction Co. Ltd., electrical plants, Morgan Crucible Co. Ltd., carbon blocks, Giskel & Crocott Ltd., insulators, Belling & Co., heating apparatus, Mayor & Coulson Ltd., coal-cutters and conveyors, R. A. Lister & Co. Ltd. Lister Bruston electric sets, Robbins & Meyers, Bengal fans.

**Tea Export Department.** This department buys and ships teas in bulk to all parts of the world on the usual commission basis, and is under the supervision of expert tea tasters.

**Shipping and Passage Department.** The Anglo-Indian Carrying Co. is one of the pioneer establishments in India specialising in shipping, clearing, forwarding and transport work, and its vast experience in connection with the intricacies of Custom House requirements respecting the import and export trade, together with travelling facilities in all parts of the world is at the disposal of clients. The department looks after the interests of passengers, affording them every possible help, including the handling of baggage.

**Tea Garden Department.**—The firm acts as agents for the following tea companies in Assam and Darjeeling: Jokai (Assam) Tea Co. Ltd., Jhanze Tea Association Ltd., British Indian Tea Co. Ltd., Jampur Tea Co. Ltd., Makum (Assam) Tea Co. Ltd., Dejee Tea Co. Ltd., Namdang Tea Co. Ltd., Dr. D. O'Brien's Tea Co. Ltd., Darjeeling Consolidated Tea Co. Ltd., Lebong Tea Co. Ltd., Prithimpassa Wards Estate, Rishchehat Tea Estate, Rajabhetta Tea Estate, Balunara Tea Estate.

**Insurance Department.**—All classes of insurance are undertaken, and the company represents the Sun Fire Office, the Liverpool London & Globe Insurance Co. Ltd., the Phoenix Assurance Co. Ltd., the Alliance Assurance Co. Ltd., the Union Insurance Society of Canton Ltd. and the Fire Art & General Insurance Co. Ltd. The liberality and comprehensiveness of these companies' policies render them acceptable to leading business houses, and clients whose insurance is accepted by this department may rely on a prompt and equitable settlement of all claims.

**Produce Department.**—Established over 58 years ago for the export of Indian produce to all parts of the world, and especially to Colonies whither Indians have emigrated, this department has made progressive strides.

**Agencies.**—The following managing agencies are held:—

#### **BRIDGE & ROOF CO. (INDIA) LTD.**

Structural engineers and contractors. The works are situated at Howrah and have a private railway siding in direct communication with the East Indian Railway. They are well-equipped with modern machinery, and all orders are executed under the supervision of European experts. The company undertakes the design, fabrication and erection of all classes of steelwork—plate girder and other types of bridges, heavy steel structures, tea factories, withering houses, bingdows, cooke lines, pit head gears, screening plant, coal tubs, tanks, stagings, etc.

**THE CALCUTTA ICE ASSOCIATION LTD.** This is the oldest established ice-making company in India and among the best equipped in the East, holding large contracts with the leading railways, mills, hotels, theatres, collieries and steamer companies.

**BENGAL FLOUR MILLS LTD. AND EMPIRE FLOUR MILLS LTD.** These mills are fitted with the latest milling machinery, and their leading brands, "Peacock" and "Twin Elephant," are widely known. They produce various other popular brands to meet the different demands of consumers.

**THE BENGAL PAPER MILL CO. LTD.**—This company was registered in 1886. The factory is situated at Ranegunge on the East Indian Railway, and is equipped with the latest machinery, enabling it to produce the standard qualities of paper used in India.

**BRITISH INDIA ELECTRIC CONSTRUCTION CO. LTD.**—These electrical works, essentially modern, specialise in electrical repair work and the manufacture of plain switchboards, C.I. boxes, etc. A vacuum drying and impregnating plant, coil former winders, insulation cutters and other items necessary for the efficient handling of electrical repairs and transformer rebuilding have been added to the winding department.

The fan repair department is thoroughly up-to-date. The machine shop, foundry, carpenter's shop, plating and polishing section are all well-equipped.

The company is a recognised concern for repairs, spares and special switchgear, and its products are accepted by the Indian Stores Department, also by leading dealers and contractors in India, on the same footing as imported goods.

**INDIAN GALVANISING CO. LTD.**—This company specialises in the manufacture of buckets, drums, tanks, Hamilton poles and every kind of galvanised hollow-ware. The works are at Ghosery, Howrah, and the galvanising plant is one of the largest in India; there is also a notable electric welding plant of the most modern pattern. The company is a recognised supplier to the Director of Contracts, Indian Stores Department, and the leading railways, etc.

**ARTHUR BUTLER & CO. (MOZUFFERPORE) LTD.**, Mozufferpore.—This is the oldest established engineering firm in North Behar, dating back to 1851. Building work of all descriptions—structural iron work, bridges, roofs, etc.—is carried out in a thoroughly satisfactory manner.

Every class of machinery is supplied, erected and repaired, the company preparing designs and estimates for building and engineering projects. The Behar Motor Works having been acquired by the concern, acts as agents for Ford cars and lorries, and for Fordson tractors with relative agricultural implements. All motor car repairs are efficiently carried out at the works.

Other interests owned by the company in the Behar Territory include a number of brickfields.

#### **VOLKART BROTHERS.**

**Inception.**—Founded in February 1851 in Winterthur and Bombay, this well-known Swiss concern was established for the purpose of inaugurating direct commercial relations between India and the Continent of Europe.

**Development.**—Wide but steady, expansion has marked its progress throughout a period of 75 years, until to-day it ranks among the foremost of such enterprises in the Indian Empire. Employing about 125 Europeans and 2,000 Indian officials, together with 5,000 labourers or coolies, it controls over 100 branches, factories and agencies, as shown on the accompanying map. In addition, the organisation has offices at Singapore, London, Bremen, New York and elsewhere, while it also has financial interests in four allied concerns founded by the firm, these being Volkart's United Press Co. Ltd., Bombay; Nichizui Trading Co. Ltd., Osaka; "Fohka" Swiss-Chinese Trading Co. Ltd., Shanghai; and Volkart Brothers, Inc., New York.

**Activities.** At the outset the firm confined itself to the export of raw cotton to Europe and the importation into India of manufactured goods; to-day it handles all kinds of export and import trade, operating also in insurance and shipping.

**Export.**—The most important goods exported are raw cotton, oilseeds and oilcakes of every description, barley, maize and other foodstuffs, nux vomica, essential oils, raw hides, rubber, copra, coconut oil, coconut poonac, fish oil, ginger, pepper, coffee, turmeric, cardamoms, coir yarn, aloe yarn, coir fibre, palmyra fibre, senna leaves and pods, sandalwood, sandalwood oil, palisander wood, cocculus indicus, tamarinds, silk waste, cocoons, beeswax, jute bags, hessian cloth, and costus root.

**Import.**—In this department the principal interests are sugar, metals, matches, paper, chemicals, cotton yarn, aniline dyes, vegetable oils, vegetable fat, artificial stones, typewriters, pyrotechnic articles, amorces, gelatine, leather, wire nails, embroidery, artificial silk, mill stores, steel and baling hoops, old (unread) newspaper, pipes (water, gas, etc.) and dealwood planks.

The firm is always prepared to take up any promising fresh lines, being, with its extensive network of up-country agencies, exceptionally well placed to develop these.

**Engineering.**—Encouraged by the success of its engineering department in Japan, the firm recently organised a similar establishment in India. The staff is composed of experts, and European erectors are available for services to clients. In choosing concerns for representation, first consideration is

given to the quality of the specialty manufactured, and each supplier is selected for eminence in his own particular line. In this way the firm represents leading manufacturers of the foremost industrial countries of the world, and is always prepared to give careful attention to any proposals for new connections that may be submitted.

A considerable stock of many types of machinery and spare parts is always kept in India, the following being a selection from the machinery handled by Messrs. Volkart Brothers:

*Steam Power Plants* Boilers, superheaters, economisers, steam turbines, etc.

*Crude Oil Engines* For every land and marine purpose.

*Electrical Machinery* Alternators, dynamos, motors, switchgear, furnaces, tram lighting equipment, rotary converters, rectifiers, crane equipment, transformers, etc.

*Pumping Plant* Centrifugal, steam, hydraulic, Deepwell pumps, etc.

*Locomotives* All descriptions.

*Railway Material* Turntables, dynamometer cars, cable railways, etc.

*Steel Structures* Bridges to any size, roof and tank constructions, etc.

*Printing Machines*

*Refrigerating Machinery*

*Chemical Plants*

*Testing Machinery*

*Textile Machinery* of all descriptions.

*Presses*

*Compressors*, road making and contractors' plant, machine tools, woodworking machinery, flour and rice mill plant, oil mill machinery, scientific and optical precision instruments.

*Agricultural Machinery* Tractors, threshing machines, separators.

**Insurance.**—For many years the firm has maintained and still maintains, a trained insurance department under European supervision. The operations embrace all classes of insurance, fire, marine, transit, life, motor car, motor cycle, motor lorry, workmen's compensation, burglary, plate glass, "all risks," personal accident and sickness. The agencies accepted consist only of insurance companies of world wide repute and first-class financial standing, full advantage being taken of the network of up-country agencies, referred to previously, to develop all categories of insurance on sound and progressive lines. Prompt and equitable claims settlements are a special feature of the firm's activities.

Average and claims settling agencies of a large number of British and Continental marine insurance companies are also held, and applications are invited from first-class corporations desiring adequate and efficient representation throughout India.

**Shipping.**—Messrs. Volkart Brothers, Bombay, represent the following lines: Compania Trasatlantica, Barcelona; Deutsch-Australische Dampfschiffs-Gesellschaft, Hamburg; East Asiatic Co., Copenhagen; Roosevelt Steamship Co. Inc., New York; and United American Lines, New York.

**Offices.**—In addition to the parent house at Winterthur (Switzerland), and that in London (96 and 98, Leadenhall Street, E.C.3), the firm has the following branches and affiliated houses: Bombay (Volkart Building, Graham Road, Ballard Estate), Colombo, Cochin, Karachi, Tellicherry, Tuticorin, Madras, Calcutta, Singapore, Bremen and New York.

**Cables.**—"Volkart." Codes: Bentley's Complete Phrase Codes, A B C 5th and 6th Editions, Scott's Shipping 10th Edition, Lieber's, etc.

**DUNLOP RUBBER CO., LTD.**

1. A Corner of the Bombay Office.
2. Stocks of tyres in Store Room.
3. Head Office for India, Burma and Ceylon at Bombay.
4. Another Store Room.
5. Despatching Department.

**DUNLOP RUBBER CO. LTD.**

**Inception.**—The year 1888 proved one of immense significance in the world of wheeled transport, for it was then that the invention by Mr J B Dunlop of the pneumatic tyre laid the foundation of a gigantic industry taking every continent for its market. The Dunlop Rubber Co Ltd., incorporated in England as the pioneer firm exploiting that epoch-making discovery, has during less than 40 years built up an organisation no less international in character than is its reputation for the manufacture of motor car, motor cycle and bicycle pneumatic tyres, solid tyres for commercial vehicles, and accessories.

**Raw Material.**—In Ceylon the company owns estates extending to about 2,300 acres, while in the Malay Peninsula it possesses nearly 70,000 acres. These vast lands enable the organisation to produce a very large proportion of its requirements in raw rubber, the firm being convinced that, in order to make a really satisfactory tyre, raw materials of consistently high quality are necessary, and can only be secured by careful isolation from bulk deliveries of the highest average. As with rubber, so in the case of cotton, all but the best is rejected. The whole of the cotton fabric employed in the manufacture of Dunlop tyres is produced in the company's own mills at Rochdale, which have a floor area of 30 acres, the spinning section occupying a seven-storeyed building covering 3½ acres.

**Tyre Factory.**—Dunlop tyres are manufactured at Fort Dunlop, Birmingham, where the company's buildings cover 481 acres, 115 acres being allotted to the actual manufacturing site. Out of the 30,000 persons employed by the organisation all over the world, some 12,000 are engaged at Fort Dunlop in the annual production of millions of tyres suitable for all types of vehicles.

**Indian Activities.**—As it was the founder of the pneumatic tyre industry, so the Dunlop Rubber Co Ltd was the pioneer and the first of all big tyre manufacturers to establish a regular and organised business in India. Its scope has now reached such a pitch that the general manager for the Peninsula controls the whole of India, Burma and Ceylon, at the same time conducting minor operations with Afghanistan and Turkey. The territory covered is divided into areas each controlled by a district manager, and depôts which supply their areas are established at Bombay, Calcutta, Delhi, Rangoon, Madras, Colombo, Karachi, Lahore, and Rawalpindi. All the principal posts in the company's Eastern organisation are at present held by Europeans, while the travellers, clerks, storekeepers and working hands are all Indian.

**Stock Organisation.**—Continuous and close co-operation with the London office ensures a re-stocking system of the utmost facility. As tyres, tubes, etc., are required they are consigned direct from the factory at Fort Dunlop, weekly shipments of fresh stocks arriving at each important port in India. The motoring public can thus rely on receiving newstocks of the latest type and make.

Such services also embrace the famous "Maxfli" golf ball, which holds a well-merited premier position in the estimation of golfers in the East, and is distributed as far as Kashmir, Assam and the heart of Burma. The Dunlop tennis ball, the latest

2. Rolling Stock built by the Firm for Light Railways.

innovation in the rubber world, is rapidly coming to the front, and, it is anticipated, will be to the tennis player what the "Maxfli" is to the golf enthusiast.

**Road Services.**—One of the most advantageous features of the Dunlop Company all the world over, and particularly in India where good roads are scarce, is the service given to motorists. In the small villages in the mofussil the familiar yellow sign of the company can be seen, while at all the big towns the organisation maintains solid tyre presses available free of charge for the benefit of the commercial motoring fraternity.

**Head Office in India.**—The office of the general manager for India, Burma and Ceylon is situated in Bombay. The building, a handsome one close to the Taj Mahal Hotel, is the property of the company.

**Addresses.**—London 1, Albany Street, N W 1 and 55-56 Pall Mall, S W 1, Bombay "Dunlop House," Nowroji Furdoonji Road, Apollo Bunder (cables "Covers," Bombay).

**PARRY & CO.**

**Inception.**—Fifty years ago this firm, whose parent house is in Madras, opened a branch in Calcutta, where it has had a number of activities, but at the present juncture is principally engaged as agents in that city, forming at the same time the connection for its head office.

**Agencies.**—It represents Van den Berghs, United Glass Bottle Manufacturers Ltd., Natal Emigration Agents, and acts as agents

for those concerns for which the head office is managing agents, East India Distilleries & Sugar Factories Ltd., Deccan Sugar and Abkhari Co Ltd., Russelkonda Saw Mills, and New Malabar Timber Yards & Saw Mills Ltd.

**Engineering.**—The large engineering establishment at Ramkrishnapur, known as Parry's Engineering Ltd and employing about 600 hands under expert European supervision, is owned by Parry & Co. Here is turned out fabricated material for all light railway work, such as tipping tubs, coal tubs, switches and light structural steel work. A number of tea withering sheds in Assam, railway engine and goods sheds and workshops were produced at the works in question.

The engineering business was started at Calcutta in 1914, and the following agencies are now held: Drysdale & Co Ltd, pumps, G & J Weir Ltd, pumps, Graphite Products Ltd, paints, Ransome Machinery Co (1920) Ltd, cement mixers and steel piling, Taylor & Hubbard Ltd, cranes; James Neill & Co (Sheffield) Ltd, hack saws; Buda Co, rail motor trolleys, Chain Belt Co, "Rex" chain conveyors, Harnischfeger Corp, excavators, and Clark Bros., sawmill machinery.

**Offices.**—Madras, 1st Line Beach, Calcutta, 11, Clive Street.

**Cables.**—"Ubiquitous" and "Dogspike." Codes: Bentley's and A.B.C. 5th Edition.

**Bankers.**—Imperial Bank of India.

#### JOHN CATLOW & SONS (CALCUTTA) LTD

Mills of the Parent Company, John Catlow & Sons, Ltd., of Darwen, Lancashire, England

#### JOHN CATLOW & SONS (CALCUTTA) LTD.

**Inception.**—This company was formed in 1925 as an Indian branch of the well-known firm of John Catlow & Sons Ltd., of Darwen, Lancashire, England, the business previously having been carried on in Calcutta under the style of the parent company for a period of six years. The Home firm has, however, been shipping direct to Native houses for some 25 years, and it will thus be readily realised that its products are well known throughout the country.

**Mills.**—The mills of the original company in England number five, and comprise the Olive, Anchor, Radford, Rose and Sudside works, besides a Cotton Hall Finishing and Packing Warehouse.

**Products.**—Amongst the lines for which John Catlow & Sons Ltd. are famed are the following: grey and white shirtings, grey

and white dhooties, plain and bordered jacconets, white nainsooks, mulls, etc., prints and fancies, Para reds, a speciality, Turkey red yarns, Turkey red, Para red, and plain printed cloths. These are shipped regularly abroad and are warehoused in Calcutta.

**Agencies.**—The Calcutta firm acts as sole agents in Bengal for several well-known machinery manufacturers, among them being *Messrs. Jones Textiles Ltd., Manchester* makers of jute and cotton mill stores, cambs, healds, reeds, all kinds of bobbins, bobbin ends, shuttles, shuttle covers, temple rollers, and picking sticks. A stock of these products, sufficient for all ordinary demands, is always carried by the Indian branch. *Messrs. Willan & Mills Ltd., Blackburn* makers of cotton mill, loom and preparation machinery. *Messrs. Yates & Thom Ltd., Blackburn*

manufacturers of steam engines, boilers and mill gearing of all descriptions.

In addition to these sole agencies, the company are agents for (1) all kinds of spinning, weaving and preparation machinery by the best makers, (2) for china clay from the best Cornwall mines, (3) for all descriptions of leather beltings, pickers, picking bands and roller skins for cotton and jute mills. Immediate requirements in these lines can always be met from stock. The firm acts also as selling agents for dyes manufactured by the Berlin Aniline, Weiler-ter Meer, and Elekron Companies, Germany.

**Head Offices.** Darwen, Lancashire, England, and 11 Chive Street, Calcutta.

**Directors.**—James H. Catlow, Reginald S. Catlow, John Catlow, Harold Catlow.

**Cables.**—“Talon,” Calcutta. Codes Private, A B C 4th and 5th Editions, Bentley's, Whitelaw's.

# **ELLERMAN'S ARRACAN RICE AND TRADING COMPANY LIMITED.**

**Inception.** About the year 1882 this company established at Calcutta a branch in order to operate as rice, timber and general merchants.

**Rice.**—This commodity is imported into Calcutta from Burma in large quantities to meet the demand which comes chiefly from up-country districts. Buying arrangements operate in the interior for all types of Bengal rice for export. This work is done mainly through London, but arrangements can be made to ship direct to certain ports.

**Produce.** Messrs Ellerman's Arracan Rice & Trading Co. Ltd. are interested in the export of all kinds of Indian produce which

corrugated sheets, flat sheets, slates, etc., "Fibrent" millboard and jointings, "Fibrent" brake lining, "Crocid" liquid glues and cement, "Self Sealing" expanded metals, "Rhinos" super leather fabric, painting brushes, "Antifectol" wood preservative, Steel windows and patent roof glazing.

Messrs Ellerman's Arracan Rice & Trading Co. Ltd. are open to accept further agencies for all India or for the Provinces before mentioned for good class products, especially those of particular interest to Government and railway engineers, tea and other industries.

**Offices.** The company's office is in the Royal Insurance Building, 20, Dalhousie Square, Calcutta.

it is active in marine, railway and automotive trade and has a general section devoted to every industry in which machinery is used. The present position of the Company has been attained by its unique selling policy of "Correct Lubrication" and throughout its extensive selling organisation its representatives are trained to sell only on the basis of the "Correct" oil which will give most economical results in the working of the plant. These salesmen cover all India, Burma and Ceylon, while a staff of specialised lubrication engineers is sent out gratis to assist and advise clients on the more important technical problems. The head office is at Nicol Road, Ballard Estate, with branches and warehouses at Calcutta, Colombo, Karachi, Madras and Rangoon from

**VACUUM OIL COMPANY.**—Founded in America on October 4, 1866, by Hiram Bond Everest, this company is the oldest and largest among the lubricating oil manufacturers of the world. Having as its motto "A grade for every type of service," its growth, achieved by sound policy and the marketing of only high grade products, has been enormous, its interests being universal. It has no connection with any other oil company, but is owned exclusively by its thousands of stockholders. Opened in 1890, the Indian division has developed steadily in importance. Besides marketing those lubricating oils and greases which have earned for the firm a world-wide reputation

which goods are promptly railed to any part in Mesopotamia at Basra and Bagdad. Messrs. Cotterell & Greig Ltd. market the company's famous "Gargoyle" products. The cable address is "Vacuum."

## **L. A. STRONACH & CO. (INDIA) LTD.**

Advertising consultants and agents, Caxton House, Fretter Road, Bombay. London offices, 27, Chancery Lane, W.C.2. Possessing its own printing process, studio, copywriting, translation and research departments, with a Western-trained European at the head of each, the firm claims to be the only organisation in India, Burma and Ceylon which can give an efficient, complete advertising service, and which is so accredited by the entire newspaper press, both English and vernacular. The company's knowledge and local experience and the fact that it has trained Indians on the staff, enable it to

get correct translations, idioms and local colour, both in illustration and text, into advertising, so making it conform to the religious and caste susceptibilities of the people. The research department is unique and of particular importance to manufacturers desirous of sounding the possibilities of the Indian market for their goods. The data it already possesses, and the thorough and extensive investigations it institutes, enable it to give a report which can be taken as reliable and acted upon by manufacturers. The firm has lately enlarged and improved its facilities for turning out blocks, and is now fully organised to offer a complete service to any advertiser. For this purpose an experienced and highly skilled staff gives personal attention to all orders, while the studio department is prepared to execute ideas, drawings, designs and re-touching. Stronach & Co. manufacture all kinds of blocks, line, half-tone and 3-colour, and are stereotypers also. Cable address "Adservice."

#### JOHN DICKINSON & CO. LTD.

**Inception.**—For years the Indian interests of this world famous paper making business were entrusted to a firm of general importers, John Scott & Co. of Calcutta, now defunct. Among their operations was included speculation in precious stones, which perhaps was found more lucrative than the factoring of paper, for in 1878 Messrs John Dickinson & Co. Ltd. sent out Mr G. A. James Rothney to open a branch in Calcutta. This was a happy choice, for Mr Rothney, who was a most enthusiastic rugby player, founded also the Calcutta Football Club and was mainly instrumental in their gift of the handsome Calcutta Cup to the Rugby Union. For reasons of sentiment the old John Scott & Co. signboard was for years carefully cared for in the Calcutta office.

**Activities.**—Founded in 1805, the House of Dickinson occupies a leading position in the paper and stationery trade of Great Britain. Its four mills at Croxley, Apsley, Nash and Home Park have been operating continuously for 100 years, and the productions are known in every part of the Globe. Croxley, Nash and Home Park produce papers of every kind, from a high class printing or Esparto writing to the best type of chromo paper and boards in almost equal variety, and have a weekly output of more than 400 tons. The envelope and stationery mill at Apsley is the largest organisation of its kind in the world, and leads the way in modern appliances for the production of manufactured stationery.

Subsidiary factories exist in Manchester, Birmingham, Bristol, Leeds and Glasgow in the United Kingdom, and overseas in Australia, South Africa, New Zealand and India. The total manufacturing capacity of the Dickinson factories in envelopes alone exceeds 100 million weekly. The trade mark of the firm is the well-known "Lionbrand," and no stationery store is considered complete that does not carry a prominent display of goods bearing this design.

**Organisation.**—The history of the firm is synonymous with the development of the British paper trade in India. The firm has claimed for years to have the finest selling organisation in the industry, both at home and abroad, and when the Indian market, early in the nineteenth century, merited attention for exploitation in the distribution of "Lionbrand" products, it was fitting that Dickinson & Co. Ltd. should be the leading British paper house in "The Jewel of Britain's Crown." So much is this the case that their trade mark "Lionbrand" and a number of their other trade designations are used in the

paper markets to describe grades of paper in general demand. For example, "Lionbrand" cream laid is universally interpreted as meaning Esparto Cream Laid Paper of a certain grade, and a request for Yellow Label Quality in Calcutta or Red Label in Bombay is invariably met with the offer of a British Free Printing Lane, whilst the term "Ivory Finish," coined by Dickinsons, is freely used, not only by dealers and pressmen, but also by consumers with no claim to any technical paper knowledge. "Ivory Finish" has, in fact, become a household word.

**Development.**—After successfully weathering the critical years of the Rupee instability, the company set itself to a policy of safe but steady expansion. Mr Rothney was called to the head office as secretary of the firm, but he also occupied the position of general manager of the Export Department, and in this capacity, continued to guide the policy of the Indian business. Under his admirable leadership and inspiration the Indian connections, as well as the other overseas operations, developed rapidly, and before the century closed in 1900 stock-carrying branches were trading successfully in the four Presidency Towns—Calcutta, Bombay, Madras and Rangoon. Moreover, India was made to serve as a training ground for salesmen who passed on to the rapidly developing markets in the Straits Settlements, China and Japan.

The Indian managements were responsible for the local application of the firm's imperial trading principles, and it was their policy to vest the fullest possible powers in their Indian staffs. For upwards of 25 years the sales promotion and direction were entrusted to Babu Kah P. Ghose, and, after his death, to his son, Borendra K. Ghose. This family served the firm for three generations, and left behind them a tradition of faithful and successful service. The head Indian salesmen in Calcutta, Bombay and Madras were trained by them, and many of the firm's most valuable connections to-day were initiated 30 to 40 years ago by one or other of the Ghose family.

From 1900 the ramifications of trading grew daily, the increasing output of the mills at home and the steady improvement in printing practice in India called for specialisation, with the result that the European staff was reinforced. The slogan "Everything for the Printer" was adopted, leading not only to a wide extension of the scope of trading in papers and manufactured stationery, but also to participation in the printing machinery business.

As national sentiments began to tend increasingly towards the creation and protection of local manufactures, the company's directors gave early consideration to this problem, and, after successfully launching envelope and stationery factories in South Africa and Australia, they acquired a site of over 12 acres at Kamarhatti, Bengal, where in 1922 the first factory of this type in India was opened.

**Machinery.**—Originally regarded as an adjunct to the paper and stationery departments, this branch has now become a vital factor in the firm's trading activities. In early years the company was able to secure the sole selling rights of the leading printing machinery manufacturers in Great Britain, and to these agencies were later added a battery of very strong American and German representations, so that to-day it is able to offer machines ranging from the most simple unit needed by a humble jobbing printer, operating in a "gully" in the heart of an Indian city, to the complete equipment of an up-to-date rotary newsprinting outfit, or

a process plant for the production of the best art printing. Selected technical assistants are attached to the branches, and their services are at all times available for advice, as also for the erection and supervision of new or standing plant. All these changes have involved big accessions to the European branch personnel, and in 1925 there were 16 covenanted men from home on the staffs.

**Trade Marks.**—Amongst a host of qualities and watermarks in their paper and stationery widely in use in India are the following: Croxley Lion Ledger, Croxley Manifest Bank, Croxley Extra Strong, Croxley Cambric, Croxley Imitation Art, Croxley 1st Quality Litho, Croxley Invitation Cards, Croxley Cordelia Cover, Lionbrand Cream Laid, Pucca Note and Envelopes, Atholi Note and Envelopes, Swastika Note and Envelopes, Vanguard Boards, White Foam Art Paper, Pictorial Coated Boards, and Asoka Blotting.

Amongst the firm's registered trade marks are Lionbrand (in several representations), Deer Brand, Onu Brand, Akbar, Taj Mahal, Gold Mohur, Aurengzebe, Kutub Minar, Asoka, Shivaji, Swastika, Royal Hart, Kaiser Hind and Kolumoor.

**Agencies.**—The company acts as agents for the best known printing machinery manufacturers in England, Germany and the U.S.A., including Dawson, Payne & Elliott, Otley, England; wharfedales, John Kitchell & Sons Ltd., Leeds, England; litho machinery, Waite & Saville Ltd., Otley, England; Canadian American Machinery Co., London; folding machines, J. W. Caslon, London; types, The Winterbottom Book Cloth Co. Ltd., Manchester; John Shaw & Sons, England; ruling machines, The Miehle Printing Press Manufacturing Co. Ltd., London; The Intertype Corporation, Broadway, U.S.A.; composing machines, The Chandler & Price Co., Cleveland, U.S.A.; Gordon presses, The Thompson Type Machine Co., Chicago, U.S.A.; Thompson type-casters, Karl Krause Leipzig, Germany; box making machinery, and Gebroder Brehmner, Leipzig, Germany; stitching machines.

In paper, the representation of the famous Boregaard Mills of Norway and the Howard Smith Canadian group are also carried.

**Constitution.**—The success of the firm is largely due to its essentially democratic constitution. The associations between the directorate and the staffs have always been most cordial, and entrance to the board is by way of service in the ranks. The present chairman, Mr R. H. Ling, won his spurs by working his way step by step to a senior position at the mills and finally to the Board. Mr F. G. Hawdon, the export director, and two others of his colleagues spent many years in humble capacities of service.

**Capital.**—The firm became a limited company in 1886, and carries to-day £1,423,000 in preference and ordinary shares, besides £497,000 in debentures. A special issue of employees' ordinary shares, opened in 1922, has met with a ready response among the mill, office and overseas staffs, and at December 31, 1925, over £73,000 had been subscribed by them—another indication of the traditions prevailing throughout the company's mills and branches, and of the confidence in its future among those whose task it is to carry on the great heritage with which they have been entrusted.

**Head Office.**—In India, at Calcutta. Branches at Bombay, Madras and Rangoon.

**Cables.**—"Commiles," Calcutta. Codes: A.B.C. 5th Edition, Tybo and Bentley's.

**Bankers.**—National Bank of India, Ltd.

DAVENPORT &amp; CO. LTD., Calcutta.

1. General Office.
2. Engineering Department.
3. Accounting Department.

**DAVENPORT & COMPANY LIMITED.**

**Inception.**—Founded by Mr. William Lloyd prior to 1870, this well-known house for many years traded as Lloyd & Co. In 1886, however, the name was changed to Davenport & Co., that title being continued until 1925 when the concern was incorporated as a private company.

**Activities.**—The original business of the firm was almost entirely devoted to tea garden agencies and tea buying for shipments to the markets of the world. In recent years, however, it has extended its activities, having added and developed an important engineering department at the same time representing as agents many well-known manufacturers in both Europe and the United States of America.

**Estate Interests.** The company controls a very large number of tea estates in Northern India, and acts as managing agents for the following tea companies: Belgachi Tea Co. Ltd., Gidde Tea Co. Ltd., Gulma Tea Co. Ltd., Hasimura Tea Co. Ltd., Hopetown Tea Co. Ltd., Huldibari Tea Co. Ltd., New Chumta Tea Co. Ltd., Pussimbing Tea Co. Ltd., Sonai River Tea Co. Ltd., Teesta Valley Tea Co. Ltd., and Jimsong Tea Co. Ltd.

It also represents as agents the Ambari Tea Co. Ltd., British Darjeeling Tea Co. Ltd., Laxmi Tea Co. Ltd., Nuddea Tea Co. Ltd., and Sahabad Tea Co. Ltd.

**Exporters.**—Messrs. Davenport & Co. Ltd. also hold a prominent position as buyers and shippers of tea for some of the best-known dealers in the world, and in this important connection their office and tasting rooms are splendidly equipped for that particular task.

**Engineering.**—In addition to structural work, the company act as secretaries for Messrs. Bell's United Asbestos India Ltd. and Lewis and Tyler, Ltd., also as agents for the following well-known manufacturers: Acheson Graphite Co., Brown Instrument Co., Cromul Engineering Co. Ltd., Alloy Welding Processes Ltd., August Muffle Furnaces Ltd., Burys & Co. steel drills and files, Drabble & Sanderson Ltd., saws, Exois of James Mills Ltd., Foamite Fire Foam Ltd., Henry Wells Oil Co. Ltd., Magnolia Anti-friction Co. Ltd., Milwaukee Tank Works Inc., petrol supply pumps and tanks, Norris Henty & Gardeners Ltd., oil engines, A & T Parkes & Co. Ltd., tea garden and colliery tools, Parker, Wunder & Achurch Ltd., "Empire" wire fencing, Russell Newbery & Co., electric lighting sets and industrial oil engines, Thomas Piggott & Co., Ltd., pressed steel tanks, Unbreakable Pulley & Mill Gearing Co. Ltd., Wales Dove Bitumastic Ltd., etc.

**Insurance.**—The firm undertakes insurance business, acting as agents for the State Assurance Co. Ltd. and the Ocean Accident & Guarantee Corporation Ltd.

**Directors.**—Messrs. J. M. Davenport, I. A. Magnus, and L. A. Collin.

**Head Office.**—135, Canning Street, Calcutta.

**Cables.**—"Davenports," Calcutta. Codes: Bentley's, A B C 5th and 6th Editions, and Private.

**Bankers.**—Chartered Bank of India, Australia and China.

**ANGLO-DUTCH CORPORATION LTD.**

**Inception.**—On January 28, 1926, this private limited company was incorporated under the laws obtaining in British India, and offices were opened at 3, Clive Row, Calcutta.

**Capital.**—The authorised capital of the Corporation is Rs. 1,000,000, of which Rs. 250,000 have been paid up, while the balance was to have been called for during the course of the year 1926.

DAVENPORT & CO. LTD., Calcutta  
Tea Tasting Room

**Objects.**—The company was formed to carry on the business of general importers, exporters, and commission agents, but particularly to devote itself to the exportation to all parts of the world of raw jute, jute cloth (Burlap), gunny bags, twines, yarns, raw hemp and other fibres.

**Directors.** These are Mr. J. F. Gubbay, a wealthy merchant and financier, and J. H. Ziesse, who has been connected with the Trading Company "Orient" for many years and who was manager of that concern for three years. Mr. Ziesse has a vast knowledge

of Indian trade conditions, particularly in the exportation of those commodities in which the firm specialises.

**Turnover.**—The trading account, showing a turnover of £100,000 in the two months following incorporation, is striking evidence of the volume of business handled.

**Bankers.**—The company's bankers are the Netherlands India Commercial Bank and the Netherlands Trading Society.

**Insurance.** All such risks as fire, marine, etc., are underwritten by the Corporation

which already acts as agents for the Java Sea & Fire Insurance Co. Ltd. and the Home Insurance Co. Ltd. of New York.

**Representatives.**—In London the firm is represented by Messrs. Falconer, Patterson & Co., 7, Minning Lane, E.C. 3 and in Australia by Messrs. L. D. and R. S. Anderson, of 21, Collins Street, Melbourne.

**Head Office.**—3, Chive Row, Calcutta. Cables: "Anglo-Dutch," Calcutta. Codes: A.B.C. 5th and 6th Editions. Bentley's and Private.

PLUMMER BROS. & CO., Calcutta.  
 1. Riverside Warehouse.  
 2. Offices located at No. 7, Hare Street  
 3. Timber Yard, Shalimar.

#### PLUMMER BROS. & CO.

**Inception.**—Established in 1921 by the present partners, Messrs E. T and J. L. Plummer (for 25 years connected with the firm of George Henderson & Co Ltd of Calcutta), this private business has made gratifying progress, and to-day has a staff of 40 employees.

**Activities.**—Registered as import and export merchants, the firm's operations embrace timber, in which a large turnover is done, and native produce. It also holds manufacturing and insurance agencies.

**Premises.**—The offices are situated at Allen House, 7, Hare Street, Calcutta, the timber yards, covering over 15 acres, at Sibpur and Shalimar, opposite Kidderpore Docks and adjoining the works of Turner Morrison & Co., and the warehouse, a commodious and well-ordered structure of 45 000 cubic feet, at Riverside, Strand Road.

**Import.**—A growing business is done in imports, timber, sleepers and railway materials, stores, hardware, and all descriptions of building material forming the bulk of the goods handled.

**Export.** All kinds of Indian timber, native produce, opium, and manganese and other ores are regularly exported, a large and increasing trade having been organised with Europe, South Africa and other countries.

**Agencies.**—The firm represents many important manufacturers, amongst whom are Ibbotson's Brothers & Co Ltd, Sheffield, railway steel and equipment, Ruberoid Co Ltd, London, roofing materials, District Chemical Co Ltd, London, welding rods and fluxes, Imperial Light Ltd, oxy-acetylene welding and acetylene flares, etc., railway signal manufacturers, Aspinalls Enamel Ltd, London, Sydney Smith & Son Ltd, Nottingham, locomotive boilers and fittings, and Patent Axle Box & Foundry Co Ltd, Wolverhampton. A large number of contracts has already been placed for the Ruberoid Co Ltd.

**Insurance.**—The firm undertakes insurance business, acting as agents for The Ocean Marine Insurance Co Ltd and the New Zealand Insurance Co Ltd.

**Head Office.**—7, Hare Street, Calcutta.

**Cables.**—"Woodford," Calcutta. Codes A B C 5th and 6th Editions, Bentley's and Marconi.

**Bankers.**—The Chartered Bank of India, Australia and China.

**E. D. SASSOON & CO., LTD.**—Established over 50 years ago, this firm of bankers, merchants and mill agents has many large interests. In banking and finance it represents the Bombay Trust Corporation, Ltd., the Oriental Investment Co., Ltd., and the Asian Finance Corporation, Ltd.; in chemicals, the Eastern Chemical Co., Ltd., manufacturers and importers. In connection with cotton, agencies are held for the E. D. Sassoon United Mills Co., Ltd., comprising the Jacob, Rachel, and E. D. Sassoon Mills, the Alexandra Mills, the E. D. Sassoon Turkey Red Dye Works and the Manchester Mills; the Edward Sassoon Mills, Ltd.; the Meyer Sassoon Mills, Ltd.; the Apollo Mills, Ltd., the Elphinstone Spinning and Weaving Mills Co., Ltd., and the David Mills Co., Ltd. The company's export department is divided under three heads, the Persian Gulf section, shipping piecegoods, sugar and sundry merchandise against indents to all parts of the world; the Yarn section, exporting yarn to China, Egypt, and Syrian ports; and the Consignment section for the export of hides, skins, pearls, myrabolams, wool, ivory, spices, etc., to Europe, America and China. In insurance

MITSUI BUSSAN KAISHA LTD Head Office, Tokyo, Japan

the following companies are represented: The Royal Exchange Assurance Corporation (marine and accident), The Atlas Assurance Co (fire), The British India General Insurance Co., Ltd (fire, marine and accident), The St Paul's Assurance Co (marine) and The American Foreign Insurance Association (claims settling agents). Imports include cotton piece goods, cotton yarns, sugar, timber and ivory. The firm acts as agents for the Holland British India Line, while its Wheat and Seeds Department exports food grains, such as wheat, barley and maize, and seeds, including linseed, cottonseed, mustard-seed, etc. In wool the representation is undertaken of The Raymond Woollen Mills, Ltd., importers of raw and prepared wool, manufacturers and exporters of finished woollen and worsted cloths and yarn. The firm's general agencies include Ahmuty & Co., Ltd., with which is merged R. Bossi & Co., general importers; Tozer, Kemsley, Millbourn & Co., Ltd., commission agents, Lewis Berger & Sons, Ltd. and The Amalgamated Press of India, Ltd. Directorate: Sir Victor Sassoon, Bt., A. J. Raymond (managing director), Capt. R. E. Sassoon, M.C., and Albert Raymond. Manager, A. K. MacEwan, O.B.E. Secretary, M. P. Mehta. Head office: E. D. Sassoon Building, Ballard Estate, Bombay (cables: "Ehas," Bombay). Branches: London, Manchester, Calcutta, Karachi, Rangoon, Hongkong, Shanghai, etc.

#### MITSUI BUSSAN KAISHA, LTD.

**Operations.**—This very powerful Japanese concern, with a paid-up capital of 100,000,000 yen and ramifications extending throughout the Far and Middle East, has an important branch in Calcutta, as also in Bombay, Rangoon and Karachi, in each of which centres an extensive business is transacted.

**Import and Export.** Merchandise passing through the Calcutta house is of a general kind, including gunny, hessian cloth, jute, sugar, metals, ores, coal, seed, seed-cake, shellac, rice, chemical manures, silk goods, singlets, woollen goods, hemp, beer, confectionery, dyestuffs, drugs, chemicals, matches and match-making material, cement, paper, pulp, etc.

**Insurance.**—The company undertakes all kinds of business under this head and acts as agents for the undernamed first-class companies: Tokio Marine & Fire Insurance Co. Ltd., Union Insurance Society of Canton, Taisho Marine & Fire Insurance Co. Ltd., and The British Equitable Insurance Co. Ltd.

**Branch Addresses.**—Calcutta: Central Bank Building, 100, Chive Street—manager, Mr R. Tamaki. Bombay: Dwarkadas Building, Hornby Road—manager, Mr B. Titamura. Rangoon: 26, Merchant Street—agent, Mr S. Takeuchi. Karachi: MacLeod Road—agent, Mr I. Morioka.

**Other Branches.**—These are:—In Japan: Otaru, Yokohama, Nagoya, Osaka, Kobe, Moji, Wakamatsu, Nagasaki and Muke. In China: Taipeh, Tsainan, Seoul, Dairen, Newchang, Mukden, Changchun, Harbin, Tientsin, Shanghai, Chefoo, Tsingtau, Hankow, Canton, Foochow, Amoy and Hongkong. In Indo-China: Saigon. In Philippine Islands: Manila. In Siam: Bangkok. In Java: Sourabaya, Semarang and Batavia. In Straits Settlements: Singapore and Penang. In Great Britain: London. In U.S.A.: New York, San Francisco, Seattle and Portland. In Australia: Sydney and Melbourne.

**Head Office.**—1, Nichome, Honcho, Nihonbashiku, Tokyo.

**Cables.**—"Mitsui." Codes: A B C 5th Edition; Scott's, 10th Edition; Bentley's and Private.

**Bankers.**—National Bank of India, Hongkong and Shanghai Banking Corporation, Chartered Bank of India, Australia and China, Yokohama Specie Bank and others.

**COBBOLD & CO. LTD.**—Mercantile Buildings, 9 to 12, Lall Bazar Street, Calcutta. Founded some years ago by Mr H. R. Cobbold, who has had nearly 40 years' experience in India, the firm as at present constituted was incorporated in 1923 as a private limited company, with Mr Cobbold and Mr Wood as directors. Mr Cobbold has retired from active work, but still retains his interest, the present directors being Mr J. M. Wood and Mr J. S. Rennie. The company supplies the products of the following machinery and equipment manufacturers: Yale & Towne Manufacturing Co., American Saw Mill Machinery Co., F. B. Mallory & Co., E. C. Atkins & Co., Rumsey Pump Co., George L. Squier Manufacturing Co., Buffalo Forge Co., Richard Lloyd & Co. Ltd., United States Rubber Export Co., Lancashire Hill Rope & Twine Co., Virax Die Stock Co., White Milne & Co., and Fitzpatrick Products Corp., employing a trained staff to draw up schemes and give advice and service in the installation of the different equipments offered by those concerns. The firm imports direct, and always carries in stock a good selection for immediate delivery. Among its clients are the Bengal-Nagpur, Eastern Bengal and East Indian Railways, the Calcutta Port Trust, Calcutta Electric Supply Corporation, Tata Iron & Steel Works, who are all users of hoisting and conveying equipment supplied by Cobbold & Co., and the various Government Forest Departments for sawmill machinery and logging equipment. Cables: "Marcellus", codes Bentley's and A B C, 6th Edition. British agents: Messrs. White, Milne & Co. Dundee. Bankers: International Banking Corporation.

TAN KAH KEE & CO., Singapore.

1. Head Office. (Inset: New Rubber Factory at Singapore.)
2. Part of General Office. (Inset: Another View of Rubber Factory, showing wharf and godowns.)

#### TAN KAH KEE & CO.

**Inception.**—This company, well known in Indian business circles, with branches or representatives in all the principal centres, was established in 1904 by Mr Tan Kah Kee, assisted by his brother, Mr Tan Keng Hean. Mr Tan Kah Kee, apart from his great business success, has given much financial support to education.

**Activities.**—The main activities of the enterprise are growing, manufacturing and exporting rubber, growing and canning pineapples, importing and exporting rice, manufacturing bricks and biscuits, operating several coasting steamers (used in connection with the rubber industry), maintaining engineering works, and operating a printing press.

**Rubber.**—This embraces the largest proportion of the firm's business, although each department is of importance. A feature in connection with rubber is the process of re-conditioning the native article, and this constitutes the removal of foreign elements such as sand, bark, etc., the presence of which, if retained, would affect the marketable value of the commodity. Water is one of the essentials to effective re-conditioning, and the company uses approximately 10,000,000 gallons per month, which, if purchased from an outside source, would cost about \$250,000 per annum. The rubber comes from Djambi, Bandjermassin, Pontianak, and Palembang to be dealt with at the company's plant, where 100 machines of 1,600 horse power, handle over 100 tons per day. The firm has extensive estates in the Straits Settlements and Federated Malay States, covering over 10,000 acres, thus ensuring a continuous supply of rubber for its own factories.

**Manufactory.**—Modern plant has been installed at the company's factories and at present the daily output is as follows: White canvas tennis shoes, 4,500 per day; bicycle tyres, 700; bicycle tubes, 300; motor car tyres and tubes, 200 tyres and 150 tubes per day when working at full capacity; raincoats, 100 per day; children's play balls, 3,000; also a limited number of tennis balls. Approximately 2½ tons of rubber are used per day. A large business is also done in raw or crude rubber, the amount handled monthly being roughly 3,500 tons which goes chiefly to America and Europe.

**Pineapple Department.**—Tan Kah Kee & Co have three factories equipped with the latest automatic machinery for canning this fruit, the installations being capable of turning out annually 400,000 cases, each of from two to four dozen tins. The factories are respectively at Singapore, Johore, and Klang.

**Rice Department.**—The company acts as rice merchants, supplying many European houses and rubber and tin mines in the East.

**Brick and Tile Department.**—The organisation has a brick kiln at Pulo Tekong, an island near Singapore, the monthly output being about 300,000 bricks.

**Biscuit and Printing Factories.**—The company's World's Biscuit Factory, at Singapore, has an output of from 5 to 6 tons per day, while the Nanyang-Siangpau Printing Press turns out the "Chinese Journal of Commerce."

**Insurance.**—The firm is agent for the Home Insurance Co Ltd, of New York, handling fire and marine risks.

**Engineering.**—Messrs Tan Kah Kee & Co are proprietors of the Khiam Cheong engineering and boiler works, equipped with powerful modern plant for metal work, etc.

**Staff.**—This numbers between 6,000 and 7,000.

**Branches.**—There are 16 branches throughout the Straits Settlements and Federated Malay States, also branches in Borneo, Java, Sumatra, Bangkok, Siam, India and China.

**Agents.**—London: Kleinwort Sons & Co., 20, Fenchurch Street; New York: C. B. Kaufmann, 77, Broad Street; Germany: L. Pehrns & Sohne, Hamburg.

**Head Office.**—1, River Valley Road, Singapore (P.O. Box 1093).

**Bankers.**—Hongkong & Shanghai Bank, Chartered Bank of India, Australia and China, Mercantile Bank of India, P. & O. Banking Corporation, Chinese Commercial Bank, Overseas Chinese Bank, and Ho Hong Bank.

**Cable Address.**—“Tanjahke.”

**E. SPINNER & CO.** Tamarind Lane, Fort, Bombay and Manchester, England. Founded in 1872 by Mr. Emile Spinner, who became resident Bombay partner, while his brother Ferdinand, who joined him in partnership, took charge of the Manchester office. The main interest of the firm since its inception has been the export of Indian cotton to Europe. Of imports, Manchester piece-goods have been dealt in most extensively, this trade being developed in a remarkable way from 1884 onwards by the introduction of fast-dyed khaki goods made according to a patented process by Leemann and Gatty (now F. A. Gatty & Co. Ltd.) at Preston, Lancashire. Through the acumen of Mr. E. Spinner and his collaborators the advantages of this invention were made to be realised by the military authorities, and in the course of the next ten years these khaki goods were standardised for use of the Army in India. The founder of the firm died in 1903, while his brother lived till 1918, but ceased to be an active partner in 1900. Being without male issue the brothers left the business to their former managers, thereby establishing a tradition which has been kept up by their successors. The present partners are Mr. E. Erb, Mr. S. Hanhart, Mr. F. Hanser and the executors of the late Mr. A. Guggenheim. Bankers in London, Glyn Mills & Co. In India, National Bank of India Ltd. and Chartered Bank of India, Australia and China. Cables: “Spinner,” Bombay or Manchester, codes A 1, A B C 4th and 5th Editions, Official Vocabulary, Berne 1894, and Bentley's.

**J. A. BEGBIE & CO. LTD.** (Incorporated in England).—Yusuf Building, Church Gate Road, Bombay. Head office at Gresham House, Old Broad Street, London. Founded in London, Bombay and Rangoon in 1894 and constituted a limited company in 1922, the firm conducts a large import and export business and holds a number of important agencies. The present directors are J. S. Wardlaw Milne, M.P., chairman, London; H. G. Buchanan, London; A. R. Finlay, Rangoon; and P. J. Arnot, London. The chief imports are sugar and cotton piece-goods, and on the export side the principal commodities of Indian produce shipped are cotton, oilseeds, spice seeds, hemp, myrabolams, wool, bristles, etc. The Bombay house acts as agents for Marine Insurance Co. Ltd., London; Union Marine Insurance Co. Ltd., Liverpool; Army, Navy & General Assurance Association Ltd., London; and Eastern Assurance Co. Ltd., Calcutta, while the Rangoon branch represents Burma Para Rubber Co. Ltd., Burma Rubber Estates Ltd., Sittang Valley Rubber Estates Ltd., Marine Insurance Co. Ltd., London, and Central Insurance Co. Ltd. The firm's bankers are: National Bank of India Ltd., Mercantile Bank of India Ltd., and all exchange banks in Bombay. Begbie & Co. are well represented throughout the Continent of Europe, their chief agents being E.

MOOLJI JAITHA & CO., Bombay.  
“Ewart House,” in which the Company's Offices are situated

Stradella & Co. Via Tommaso Grossi 7 Milan. Cables: “Begbie Bombay.”

#### MOOLJI JAITHA & CO.

**Inception.**—The history of this concern goes back to 1834 when the late Mr. Moolji Jaitha of Bombay began dealing in coconut oil, coir ropes and general produce from the Malabar Coast. Twenty years later he established the firm bearing the above name.

**Development.**—Though valuable contracts were secured by the founder, it was his son, Mr. Soonderdas Moolji Jaitha, who prepared the basis of future prosperity. Among his achievements was the consigning to Lancashire mills of six sailing vessels laden with cotton which arrived in the Mersey at the height of the cotton famine consequent upon the American Civil War, fabulous prices for their cargoes being obtained. In 1870 he began to form a number of joint stock companies comprising The New East India Press Co. Ltd. (capital Rs. 3,50,000), The Khandesh Spinning & Weaving Co. Ltd. (Rs. 7,50,000), The Sind & Punjab Cotton Press Co. Ltd. (Rs. 1,00,000), The Madras United Spinning & Weaving Co. Ltd. (Rs. 5,00,000), The Soondeidas Spinning & Weaving Co. Ltd. (Rs. 8,00,000), and finally The New Piece-Goods Bazaar Co. Ltd. (Rs. 6,00,000). Of these concerns Messrs. Moolji Jaitha are still managing agents for the Khandesh and New East India Companies and large shareholders in The New Piece-Goods Bazaar Co. Ltd.

**Activities.**—The firm to-day occupies a prominent position in the commercial life of Bombay, in which city and elsewhere it owns extensive landed property. A cotton ginning factory at Karanja is also under its

proprietorship. Another branch of activity is the subsidiary establishment known as Messrs. Chatrabhuji Gordhandas & Co., which holds the sole selling agency for all cloth manufactured by The Bombay Dyeing Spinning & Weaving Co. Ltd.

Messrs. Moolji Jaitha are agents for the Prudential Assurance Co. Ltd.

**Branch.**—In addition to headquarters at Bombay the firm maintains a branch at Cochin, whence produce is transferred to Bombay and Karachi by its own native craft.

**Proprietor.**—The present head and proprietor of the concern is Mr. Chatrabhuji Gordhandas, great-grandson of the founder.

**Head Office.**—Ewart House, Tamarind Lane, Fort, Bombay (cables: “Coronet” Bombay). Code: A B C 5th Edition.

**Bankers.**—Imperial Bank of India, National Bank of India Ltd., Chartered Bank of India, Australia and China, Hongkong & Shanghai Banking Corporation and others.

**MEHTA & CO.** 119, Meadows Street, Fort, Bombay. Started in 1906 this is one of the leading auctioneering firms in the city. Mr. K. A. Mehta being the sole proprietor. The concern is well known throughout the commercial and banking community in Bombay having an acknowledged reputation for straightforward dealing and enjoying a very sound financial standing. It is a large supplier to the Government of India, and amongst its activities is the importation of paper and piece-goods. At present it is interested in the expansion of the import section, and will be pleased to enter into correspondence with manufacturers in England or on the Continent of Europe with a view to handling the distribution of their

products in Bombay. The principal piece-goods lines dealt in are cotton, woollen, and silk. The company's bankers are the Hongkong & Shanghai Banking Corporation and the International Banking Corporation. Cables "Hallmark," "Paper," and "Papia."

**W. BILLINTON & CO.**—Engineers, head offices, 9, Clive Street, Calcutta. Bombay branch at Vulcan House, Nicol Road. The firm commenced operations with a view to handling various products of Vickers Ltd., Barrow, Sheffield and Lrith, but it now carries additional representations affecting the railways and other Government institutions. The business is under the personal supervision of the managing director, Mr W. Billinton, for over 20 years identified with the Indian engineering market, the Calcutta

office being under the management of Mr A. Roy Craven and the Bombay branch under Mr C. F. Renfree. The company is interested in all railway and mining equipment, such as special saloons, the automatic vacuum brake, railway rubber, special electric locomotive head lamps, all crushing plants, pit-head gear machinery, cement machinery, etc. It represents Vickers Ltd., George Spencer Moulton & Co. Ltd., railway rubber fittings and springs, Taylor Bros & Co. Ltd., disc wheels, tyres, axles and best Yorkshire iron. Consolidated Brake & Engineering Co. Ltd., makers of the vacuum brake, G. D. Peters & Co. Ltd., railway fittings, Wilson plastic arc welders and railodok electric trucks, Wota Limited, engineers and white metal founders, Hulburd Patents Ltd., copper-smiths and engineers, F. R. Rand, railway carriage

roofing material, Loudon Brothers Ltd., wheel lathes and machine tool makers, and acts as sub-agents for Pyle-National electric head-lamps for locomotive and Dearborn scientific feed water treatment. Among contracts executed are: The Prince of Wales' Royal Train, special saloons for H. H. The Gaekwar of Baroda, H. H. The Nawab of Rampur, special train for H. E. H. The Nizam of Hyderabad, a large ore crushing installation at Doraha, Amballa District, for the Government of India, and pit head gear for the Mysore Gold Mine. The firm introduced steel disc railway wheels into India. Bankers Hongkong & Shanghai Banking Corporation and Westminster Bank, London. Cables "Immaculate," Bombay. "Immaculate," Calcutta, codes Bentley's and A. B. C. 5th Edition.

## CUSTOMS TARIFF

**T**HE distribution of trade between Great Britain and her commercial rivals in Indian markets is necessarily closely connected with the Indian Tariff. For many years this was a revenue one, but in course of time it took on a protective character, the need for making provision for war expenses having been met by the raising of the general duty on imports from 5 per cent to 15 per cent *ad valorem*, the duty on cotton piece-goods standing at 11 per cent.

**ASPECTS (POLITICAL AND ECONOMIC).**—Nowadays the Indian Tariff is a subject with a political as well as an economic aspect. Until the formation of the Montagu-Chelmsford Reforms, India did not control her fiscal policy, but to-day the Secretary of State refrains from interfering in fiscal matters when the Government of India and the Indian Legislature are in agreement. India has not so far been able to commit herself to a policy of Imperial Preference, the principle does not even obtain in public contracts. Generally speaking, however, the policy of accepting the lowest satisfactory tender, to which the Government is pledged, has not been found incompatible with India remaining the best customer of Great Britain.

**COMMISSION (INDIAN TARIFF).**—The Indian Tariff Commission, which published its report in 1922, definitely advocated a policy of protection, and recommended the creation of a permanent Tariff Board to investigate the claims of particular industries. The Commission pronounced against a general system of Imperial Preference, though it was ready to approve preferential duties on a limited number of commodities if the Indian Legislature judged such preference desirable. The Tariff Commission added that no preference should be given in such a way as to diminish the protection required by Indian industries, and that no preference should involve on the balance any appreciable economic loss to the country. It was further proposed that any preferences which it might be found possible to give to the United Kingdom should be granted as a free gift, but that in the case of the other parts of the Empire preferences should be granted only by agreements mutually advantageous.

Such is the general policy of India to-day so far as it relates to a tariff and protection, but it must be remembered that this policy has been formulated by a politically active minority in Indian affairs, rather than by the landed and agricultural interests who make up the great part of India's population. The

fact that 70 per cent and more depend upon agriculture for a living is a sufficient guarantee that protectionists will not be able to persuade their countrymen to approve an extravagant policy.

**DUTIES (IMPORT).**—The present import duties were imposed in 1923 and were revised in certain cases in 1925. They include the following items of interest to British and foreign shippers: Ale, beer, cider and porter, 8 annas per imperial gallon or six-quart bottles, spirit unfit for consumption, 7½ per cent *ad valorem*, perfumed spirits, Rs 36 per gallon, or 15 per cent *ad valorem*, whichever is the higher, all other spirit, Rs 21 a 14 per gallon. Champagne (less than 47 per cent of proof spirit), Rs 9 per gallon, or six-quart bottles, other wines, Rs 4 a 8 per gallon. Manufactured tobacco, Rs 1 per lb, cigars, 75 per cent *ad valorem*, cigarettes—not exceeding in value Rs 10 a 8 per 1,000, Rs 7 per 1,000, exceeding Rs 10 a 8 per 1,000, Rs 10 a 8 per 1,000, other tobacco, Rs 2 a 4 per lb. Firearms (including rifles), Rs 15 each, or 30 per cent *ad valorem*, opium, Rs 24 per seer of 80 tolas.

The following goods are liable to a duty of 2½ per cent *ad valorem*: Vinegar in casks, telegraphic instruments imported by a railway, machinery, including locomotives, steam rollers, etc., electric, steam, water and other driving engines, printing presses, type, ink, lithographic stones, paper-folding machinery, etc.

The following are subject to a duty of 15 per cent *ad valorem*: Flour, provisions and oilmen's stores and groceries, spices, coffee, and other articles of food and drink, wearing apparel, including drapery, boots and shoes, and military uniforms and accoutrements; explosives, carriages and carts, including jinrickshas, perambulators and wheelbarrows, but excluding motor-cars. Chemicals, drugs, and medicines, clocks and watches, cutlery, electro-plate, hardware and other implements and instruments coming under the 15 per cent heading, as do dyes and colours, furniture, glassware, earthenware and china; machinery to be worked by manual and animal labour; iron and steel manufactures not otherwise specified; paper, stationery, account books and Christmas cards. Other goods which are liable to the 15 per cent *ad valorem* duty are: haberdashery, millinery, hosiery, thread (other than sewing or darning thread, which pays only 5 per cent.), and all other manufactured cotton goods, silks, woollen goods and other textile goods not

otherwise specified, brushes, candles, matches, oilcloth, polishes, pictures, rubber tyres, soap and toilet requisites, and umbrellas. Articles wholly or mainly manufactured not otherwise specified pay the 15 per cent *ad valorem* duty.

**DUTIES (PROTECTIVE).**—The first burst of fiscal reform enjoyed by India was utilised to secure protection by imposing a tariff and granting a bounty to the iron and steel industry. As a result of the duty on steel wares passed in May 1924 it was estimated that by 1927 the imports of the iron and steel goods affected would be reduced from 581,000 tons to 363,000 tons, while Indian production would be increased from 46,000 to 264,000 tons. In 1925 the Legislative Assembly at Simla also accepted a Government proposal for a duty of one anna (1d) per lb on writing paper and printing paper—other than newsprint—containing 65 per cent or more of mechanical pulp. Newsprint, which is imported to the extent of 17,800 tons a year, escapes the duty. As the result of this tariff alteration the Indian paper mills are expected to capture about 20,000 tons of trade. The effect of the duty has been to increase the cost of imported writing paper by 56 rupees a ton. Other Indian industries have applied to the board for the imposition of duties to protect them against outside competition, but their applications have not been granted.

**EXCISE.**—The excise revenue in British India is derived from the manufacture and sale of intoxicating liquors, hemp, drugs, toddy and opium. These (with the exception of opium) are a considerable source of revenue to the Provincial Governments, to whom excise has been entirely made over. The duties vary from province to province, the governing principle in fixing rates being the highest duty compatible with the prevention of illicit distillation.

Opium is consumed in all the provinces of India, and the sale is controlled by the Central Government, which in 1925-26 derived Rs. 3.55 lakhs from it. Excise duties are also imposed on kerosene and motor-spirit.

**COTTON EXCISE DUTY.**—Noteworthy events of the years 1925 and 1926 were the suspension and subsequent abolition of the cotton excise duty of 3½ per cent., which had been imposed in 1896 on all cotton yarns of 20's and above produced by mills in India. After 30 years of agitation, both in India (where the duty was universally unpopular) and in the United Kingdom (where Lanca-

shire free-traders were almost its only supporters), the promise given by Lord Hardinge during the War, that the duty should be abolished as soon as financial considerations permitted, was fulfilled by Lord Reading, who promulgated an ordinance in November 1925 suspending the levy and collection of the duty. Its abolition "finally and entirely" was included in the Finance Act which became law in 1926.

**EXPORT DUTIES.**—The principal export duties are as follow: Jute manufactures, when not in actual use as coverings, receptacles or bindings for other goods—Rs 20 per ton on sacking, Rs 32 per ton on hessians and other descriptions, rice, 3 annas per maund of 82½ lbs., tea, Rs 1 a 8 per 100 lbs., hides and skins, 5 per cent *ad valorem*.

**COTTON PIECE GOODS.**—The import duty on manufactured cotton piece goods is 11 per cent *ad valorem*. Now that the countervailing excise duty of 3½ per cent has been removed (see previously) the Indian cotton spinners should find their position in the local markets immensely strengthened.

**FREE IMPORTS.**—There is a generous free list, which covers such goods as arms forming part of the equipment of an officer, many agricultural implements, dairy appliances, raw cotton and wool, manures, wood pulp, cotton machinery, books, maps, music and trade catalogues and advertising circulars imported by packet, book or parcel post.

**MOTOR CARS, ETC.**—Of special interest to British manufacturers is the relatively

high duty of 30 per cent *ad valorem* imposed on motor-cars, motor-cycles, motor-scooters and parts and accessories thereof. This duty has long been the subject of complaint on the part of traders in India, and a strong agitation has been started to have it reduced.

**REVENUE (CUSTOMS).**—The total revenue realised in the twelve months ended March 31, 1926, was Rs 48,67 lakhs, as compared with Rs 49,11 lakhs in 1924-25. Import duties contributed Rs 39,16 lakhs, export duties, Rs 5,89 lakhs, excise duties on cotton manufactures, Rs 1,47 lakhs, on kerosene Rs 99 lakhs, and on motor spirit Rs 78 lakhs, land customs and miscellaneous, Rs 38 lakhs. Increases were noticeable in import duties on sugar, motor cars and cycles, iron and steel, pneumatic rubber tyres, mineral oils, cutlery and hardware, and liquors, and in export duties on rice, raw hides and skins. On the other hand, import duties on cotton yarn and piecegoods, tobacco, railway plant, silk piecegoods, match splints and veneers, and metals other than iron and steel and export duty on raw jute showed important decreases. The protective special duties collected on private imports during the twelve months April to March 1925-26 amounted to Rs 3,05 lakhs. The duties on Government stores amounted approximately to Rs 93 lakhs inclusive of the protective duties, as against over Rs 60 lakhs in the twelve months ended March 1925.

For the eight months ended November 1926 the total gross Customs revenue (excluding salt revenue) was Rs 31,97,47,000. To this amount import duties contributed

Rs 26,79,70,000, export duties Rs 3,58,66,000, excise duties on cotton manufactures, Rs 31,000, on kerosene, Rs 71,29,000; on motor spirit, Rs 65,27,000, land customs, Rs 12,06,000, miscellaneous, Rs 2,63,000.

**SALT TAX.**—The salt revenue was inherited by the British Government from Native rule, together with miscellaneous transit dues. These transit dues were abolished and the salt duty consolidated and raised. There are four great sources of supply: rock salt from the Salt range and Kohat Mines in the Punjab, brine salt from the Sambhar Lake on Rajputana, salt brine condensed on the borders of the Lesser Rann of Cutch, and sea-salt factories in Bombay, Madras and at the mouth of the Indus.

Broadly, one-half of the indigenous salt is manufactured by the Government Agency; the remainder under license and excise systems. In the Punjab and Rajputana the salt manufactures are under the control of the Northern India Salt Department, a branch of the Commerce and Industry Department. In Madras and Bombay the manufactures are under the supervision of Local Governments. Special treaties with Native States permit of the free movement of salt throughout India, except from the Portuguese territories of Goa and Damaun, on the frontiers of which patrol lines are established to prevent the smuggling of salt into British India.

The salt tax, which in 1923 stood at Rs 2 a 8, was reduced in 1924 to Rs 1 a 4. The estimated salt revenue in 1925-26 was Rs 6,95,00,000.

## ELECTRICAL DEVELOPMENT in INDIA and CEYLON

By P. S. JACKSON

	Para
Agriculture (Electricity in)	20
Alternating Current System	17
Broadcasting	23
Cauvery River Installation	3
Ceylon Government Scheme	7
Darjeeling Plant	8
Electric Power from Coal, etc.	13
Electrical Development (General)	1

**U**ERY great strides have been made in the direction of electrical enterprise in India since the first public installation in the country was inaugurated in Madras city some thirty-two years ago. Though progress at the outset was slow, it has speeded up considerably of recent years, and we now find electrical plant and apparatus in fairly general use in the larger towns throughout the country. In fact, there is now being set in operation in Bombay one of the largest hydro-electric plants in the whole world.

It is important to remember that India is and always will be for the most part an agricultural rather than an industrial country, and that the distances encountered are very great. That being so, there is not the same scope for intensive electrical development away from the towns in India such as obtains in countries which can be classed as largely industrial, as for example in the West.

At the present time a great deal of development is taking place in the West in connection

with the uses of electricity for agriculture, but except in irrigation it will probably be many years before the Indian agriculturist becomes accustomed to the use of electricity to any marked extent in connection with his operations, this matter will, however, be referred to later.

India's enormous water power resources, which were so ably investigated some time ago by the Hydro Electric Survey of India under Messrs G. T. Barlow & J. W. Meares, are already proving of considerable benefit to the country, and as the best sites are developed there will in time no doubt be a vast network of supertension power transmission lines which will link up large areas of country in a similar manner to that which is now taking place in the United States of America.

**1. ELECTRICAL DEVELOPMENT (GENERAL).**—Electrical development in India falls naturally under separate heads, which may be broadly classified as follow:—

	Para
Railway Electrification	19
Simla Municipal Plant	10
Steam Turbine Plants	14
Tata Hydro-Electric Schemes	5
Telegraphy	21
Telephony	22
Tramways (Electric)	18
Uhl River Scheme	6

- 1 Hydro-electric development
- 2 Development of electric power from coal or oil fuel
- 3 Public electric supply for lighting, fans, and miscellaneous purposes
- 4 Electricity in industry
- 5 Electric traction
- 6 Electricity in agriculture
- 7 Telegraphs, telephones and broadcasting
- 8 Electro-medical work

What follows is intended to give a brief survey of the present position in respect to the development under each of the above headings, and to indicate the lines which electrical progress is likely to follow in the future.

**2. HYDRO-ELECTRIC SCHEMES.**—It has been computed that the total water power available in India for maximum development is equivalent to over 25,000,000 horse power. So far, of this immense amount of power less than two per cent. has been developed.

The principal hydro-electric schemes are as follow —

### 3. CAUVERY RIVER INSTALLATION.

—Prior to the Great War there was only one hydro-electric plant of first-class importance in India, namely the Mysore Government hydro-electric installation on the falls of the Cauvery River at Sivasamudram. This interesting installation, initiated by Lt.-Col. Lotherniere, R.E., and set to work as far back as 1902, has been an unqualified success from the start, and, since its inauguration with a plant capacity of 6,000 h.p., has been extended no less than six times, until at present the maximum available output of 48,000 h.p. has been reached. The total gross revenue from this scheme is expected shortly to reach the annual figure of 62 lakhs of rupees (say 467,000).

The plant was originally installed mainly for the purpose of supplying power to the Kolar Goldfields, some 92 miles distant, and the bulk of the power generated is still consumed there. Transmission lines have, however, been run to the cities of Mysore and Bangalore, where considerable quantities of power are being used not only for lighting, etc., but also for power supply to several important textile and other mills. It is interesting to note that the Kolar transmission line was at one time the longest transmission line in the world. It was originally arranged for 35,000 volts, but subsequently, as the demand for power increased the voltage was raised to 70,000.

There is no doubt that the development of the Cauvery scheme has been a very important factor in the phenomenal advancement of Mysore State. No fuel other than wood is found in the State or in the surrounding country, so that for industrial development Mysore is almost entirely dependent on water power and the greatest credit is due to the foresight of the then Dewan, Sir K. Seshadri Iyer, who first took up the scheme.

**4. GERSOPPA FALLS SCHEME.**—In spite however of the repeated extensions to the plant, the output of power has not kept pace with the demand, so that Mr. S. G. Forbes, the Chief Electrical Engineer to the Government of Mysore has been obliged to search elsewhere for other sources of power in the State. Among these the famous Gersoppa Falls on the Sharavati River near Shimoga have been investigated. The drop is 800 feet, and the falls are said to be among the highest in the world. The estimated cost of the development of this scheme is 4½ crores (say 3,400,000), and the minimum continuous power available is probably about 20,000 h.p. Two other important schemes, namely those at Shimsha and Mekadatu on the Cauvery River, are also under consideration in Mysore.

Mysore has truly set an example to the rest of India of which it may well be proud, and it is to be hoped that, for the sake of the industrial development of the country, others will not be slow to follow Mysore's magnificent lead.

### 5. TATA HYDRO-ELECTRIC SCHEMES.

—The most important developments of hydro-electric power in India, if not in the whole of the Eastern Hemisphere, are to be found in the three Tata hydro-electric schemes near Bombay.

The first of these (that of the Tata Hydro-Electric Power Supply Company Ltd.) was set to work in 1915. It comprises a series of lakes for water storage, pipe lines, power house, transmission lines, etc., etc., the transmission distance to Bombay is some 45 miles, and the voltage of transmission is nominally 100,000.

The second plant (that of the Andhra Valley Power Supply Co. Ltd.) was set to work in 1922. It has similar characteristics to those described for the Tata Hydro Co. and has, like its forerunner, proved a complete success. These two plants have an aggregate capacity of nearly 100,000 h.p.

The third and most important scheme of all is that of the Tata Power Co. Ltd., with its huge storage lake and dam at Mulshi and power house at Bhura. The plant installed in the power house is capable of a continuous output of 150,000 h.p. All three Tata water power schemes are of the high fall variety, each having a net head of the order of 1,050 to 1,750 feet. It is of interest to note that, whereas the machinery for the Tata Hydro and Andhra Valley schemes was largely supplied from the U.S.A. and from the Continent, practically the whole of the machinery for the huge installation of the Tata Power Co. was manufactured in England.

**6. UHL RIVER SCHEME.**—With regard to other water power developments in India, mention must be made of the important enterprise now being carried out by Lt.-Col. Batty for the Punjab Government known as the Uhl River scheme, in the Mandi State. This scheme is intended ultimately to supply power over the greater portion of the Punjab, and it cannot but greatly influence the agricultural and industrial development of the province.

### 7. CEYLON GOVERNMENT SCHEME.

The Ceylon Government is proceeding with a very important project known as the Aberdeen-Lixapana Hydro-Electric scheme, and considerable progress has already been made. Ceylon is entirely without native coal or oil and has therefore up to the present been obliged to import fuel from overseas. The chief industry of Ceylon is the cultivation and manufacture of tea and for this purpose a considerable quantity of electricity is required, chiefly in the form of heat for the tea drying process. It is proposed to run a network of transmission lines over the island for the supply of electricity to the tea gardens etc. and also to bring power in bulk to Colombo for general electric supply purposes. When this has been accomplished the present power station in Colombo will probably be converted into a distributing station.

**8. DARJEELING PLANT.**—The interesting old plant at Darjeeling set to work in 1897, is still undergoing extension in order to enable it to cope with the demand for electricity in Darjeeling itself and in the surrounding tea gardens.

**9. KASHMIR GOVERNMENT INSTALLATION.**—The Kashmir Government installation on the river Jhelum started in 1906 includes a generating plant of a total capacity of some 5,000 h.p. It is used for general power and lighting purposes in Srinagar, etc., and for the spinning and reeling processes in the Government silk-factory.

**10. SIMLA MUNICIPAL PLANT.**—The Simla municipal hydro-electric plant, which has been working since 1913, has been doubled in capacity, some 2,300 h.p. having been installed, but as there is no more water available it is proposed to augment the supply during the dry months by means of an oil-driven generating station in Simla itself.

**11. MUSSOORIE MUNICIPAL PLANT.**—The Mussoorie municipal hydro-electric plant at Galogi has also recently been largely augmented to a total of 5,000 h.p. and here also an oil-driven station is to be installed at Dehra Dun to supplement the supply of power during the dry months of the year.

**12. PYKARA - MOYAR PROJECT.**—A very important hydro-electric development is about to be undertaken by the Madras Government known as the Pykara Moyar project near Ootacamund. It is proposed to bring the power to Madras, electrifying a number of important towns en route, and also to electrify some portions of the South Indian Railway.

**13. ELECTRIC POWER FROM COAL, ETC.**—Many important plants have been installed in India utilising coal or oil fuel for the generation of electricity. The first plant of importance was set in operation in Madras in 1895 for working the electric tramways. This plant has now grown from its original capacity of 400 h.p. to approximately 22,000 h.p.

**14. STEAM TURBINE PLANTS.**—The Calcutta Electric Supply Corporation, which began operations in 1800 on a modest scale, has now approximately 100,000 h.p. of steam turbine plant installed in two separate power houses. The Cawnpore Electric Supply Corporation possesses a fine new power house on the right bank of the Ganges, containing 24,000 h.p. of steam turbine plant. The power is largely used in the textile mills at Cawnpore. The Lahore Electric Supply Company has recently set in operation a steam turbine power house at Shahdara, Lahore, with two 4,000 h.p. turbo-alternator sets.

Other important steam turbine installations are as follow. The Bhatpara Electric Supply Co., Calcutta possesses a large steam turbine plant for the supply of electric power to the jute mills in the district. The Tata Iron and Steel Co. has an important steam turbine plant at Jamshedpur for the supply of power not only to the steel works, but also to neighbouring industries. The G.I.P. Railway is about to construct at Kalyan a large steam turbine power house for the supply of power for the electrification of the ghat sections of the railway and there are several important steam turbine central stations in operation in the various coalfields of India.

With the exception of Lahore, all these installations are of British design and manufacture.

**15. OIL DRIVEN STATIONS.**—As regards oil-engine driven stations, several are running in Bombay in connection with the supply of electric power to cotton mills, and an oil driven power house containing some 3,600 h.p. of plant (Diesel and Fullagar engines) has recently been started at Sukkur for the supply of electricity for the Lloyd Barrage works. In addition, there are several large oil engine driven stations for public electricity supply, the most important being at Karachi, Ahmedabad and Delhi. Oil engines are much favoured in India for the smaller electricity supply stations on account of their lower capital cost and economy in fuel, consequently their number is increasing rapidly.

**16. PUBLIC ELECTRICITY SUPPLY.**—Public electricity supply is rapidly coming into being all over the country, and about 100 towns have already been electrified. The undertakings owe their success largely to the fact that in India to-day the electric ceiling or desk fan is looked upon as one of the necessities of life. Throughout the greater part of the year fans are kept running day and night, with the result that the "load-factor" of the undertaking is usually much higher in India than for a corresponding installation in the West.

**17. ALTERNATING CURRENT SYSTEM.**—The alternating current system is now the rule in the majority of public electricity schemes, partly on account of the ease of

distribution over the scattered areas frequently met with in Indian towns, and partly due to the fact that in many cases, such as in the Punjab, there is the likelihood of an alternating current supply in bulk becoming available later on from outside. In several of the older public installations both alternating and direct current supply is available—in the original supply areas at 450 and 225 volts direct current, and in areas more recently developed at 400 and 230 volts on the 3-phase 4-wire 50 cycle alternating current system.

**18. TRAMWAYS (ELECTRIC).—**The first electric tramway in India was started in Madras in 1895 on the surface contact system, but, owing to the flooding of the streets during the monsoon, this system had to be abandoned, the overhead trolley system has now been standardised in Madras and throughout India. Successful electric tramway undertakings have also been in operation in Colombo since 1899, in Calcutta since 1902, in Mandalay since 1904, in Bombay since 1905, in Cawnpore since 1907 and in Delhi and Rangoon since 1908. Several undertakings operate motor-buses as auxiliaries to the tramway.

**19. RAILWAY ELECTRIFICATION.**—Railway electrification schemes are proceeding apace in the country. The first line to be electrified was the Great Indian Peninsula Railway (Bombay Harbour Branch), which was opened for traffic early in 1925, subsequently the G.I.P. suburban lines were electrified as far as Thana and very shortly the main line to Kalyan will be converted to electrical operation. Forty-two electric main line locomotives have been ordered from British firms for the lines between Bombay, Igatpuri and Poona, which include the well-known ghāt sections, the maximum designed speed being 85 m.p.h.

The Bombay Baroda and Central India Railway Co. is also actively engaged in electrifying its suburban lines in Bombay district, and, as in the case of the G.I.P. motor coaches with trailer cars will be used for these trains. The 1,500 volt direct current overhead conductor system, with pantograph type collectors on the motor coaches, has been standardised throughout.

Other railway electrification schemes at present under consideration in India are: The Calcutta suburban lines of the East Indian and Eastern Bengal Railways and an electric elevated railway to serve the heart of Calcutta. It is also proposed to electrify certain portions of the main line of the South Indian Railway Company in Madras.

**20. AGRICULTURE (ELECTRICITY IN).**—Probably there are few fields for the use of electricity so wide in India as that of agriculture, except, however, in connection with irrigation, progress is likely to be slow. Land is for the most part cultivated in small holdings by the ryot (peasant farmer), who is quite unable to afford any but the most rudimentary implements at present, and labour is so cheap as to render competition by mechanical apparatus almost out of the question in many districts. At the present time something like 350,000,000 acres in India are under cultivation, and of this total only some 50,000,000 are served by canal irrigation, much of the balance is dependent upon wells. In this latter sphere there is a great opportunity for electricity, and already schemes have been inaugurated in which a number of wells are supplied with power from a central electric generating station. The pioneer installation in this respect was set to work by Dr. Besant at Adyar, Madras, in 1912, and it has been a complete success. Recently Sir Ganga Ram started a large electric irrigation scheme at Renala, Punjab,

obtaining about 1,000 h.p. from a fall of only six feet on the Lower Bari-Doab canal.

In other parts of the world electricity is playing an important role in connection with the following agricultural processes: ploughing, electro-culture of crops, artificial drying of crops, threshing, rice-husking, the killing of moths, silkworm-rearing, the operation of milking machines, etc. In due course India will, no doubt, reap the advantage of the experience gained in other countries by the adoption of electrical methods in agriculture, but before much can be accomplished in this direction a system of overhead distributing mains will have to be erected in agricultural districts. The importance of such a system will be apparent from the fact that over 70 per cent of the population of India is engaged in agriculture and nearly 90 per cent lives away from the towns.

The Royal Commission on Agriculture, under the Marquis of Linlithgow, is at present engaged in the investigation of agricultural problems in India and its report is sure to be of absorbing interest.

**21. TELEGRAPHY.** Extensive developments have taken place of recent years in connection with the electric telegraph in India. Thirty years ago there were only some 50,000 miles of line in operation, whereas to-day this distance has been doubled, and during the same period the number of messages transmitted per annum has been quadrupled.

The number of Government wireless transmitting stations in India at present is about 25. High-speed wireless transmission in connection with the Bandot apparatus is in continuous use between Madras and Rangoon with conspicuous success. The Indian Radio Telegraph Company has erected Beam stations at Poona and Dhond and these are expected to commence working shortly.

**22. TELEPHONY.**—Rapid developments are taking place in telephony, and approximately 250 telephone exchanges with 50,000 subscribers are operating. Long distance telephony between Bombay and Simla, etc. is available and the line between Bombay and Calcutta is expected to be opened soon. Automatic telephone exchanges are very popular, and are in use in a large number of towns.

**23. BROADCASTING.** The Indian Broadcasting Company is erecting main broadcasting stations in Bombay and Calcutta which are expected to be in operation shortly. Each station is to have a capacity of 12 k.w. A senior official of the British Broadcasting Company is about to assist in the development of the art in India. Unquestionably broadcasting has a wonderful future in the country, and if properly handled it is bound to become an immense power for the uplift of the people.

**24. ELECTRO-MEDICAL WORK.**—At the present time X-ray and other electro-medical apparatus is only used in the large towns and in other places where a supply of electric power is available, but there appears to be immense scope in India for a cheap and portable electro-medical outfit with self-contained electric generating plant operated by a small petrol engine. No doubt as electricity becomes more widely adopted in towns and villages for lighting and ventilating purposes, electro-medical treatment will become universal in the innumerable hospitals and dispensaries spread all over the country.

The Government of India X-Ray Institute at Dehra Dun is performing excellent work in the way of training local radiographers, also in centralising and co-ordinating the

supply of the necessary apparatus and materials to the hospitals, etc., throughout India.

P. S. JACKSON

## SUPPLEMENTARY DATA

**CALCUTTA-DELHI TRUNK LINE.** It was announced in February 1927 that the new trunk line for telephonic communication between Calcutta and Delhi was ready for public use. Operating in conjunction with the existing trunk lines connecting Delhi with Bombay and Delhi with Lahore, the new line affords Calcutta direct communication with Bombay and Lahore. The magnitude of this achievement may be gauged from the fact that the distance between Calcutta and Bombay via Delhi is considerably over 1,800 miles.

**CALCUTTA TELEPHONE SYSTEM.**—The introduction by the Calcutta Telephone Corporation of the message-rate system towards the end of 1924 was responsible for a considerable increase in traffic since that period. Particulars of that growth are furnished by the report of the Corporation for the year ended June 30, 1926. The average cost of an exchange line has been reduced from Rs 23 to Rs 21. As at a month, while the number of lines installed has increased by 100 a month. Since the close of 1924 the percentage of ineffective calls has been lowered from 36 to 20.

For the year ended June 30, 1926, the profit amounted to Rs 570,000. At the date mentioned the number of exchange extension and private telephonic lines working in Calcutta totalled 11,549, for a population of 1,328,000.

## IMPORTS OF ELECTRICAL EQUIPMENT

Statistics of the imports of electrical equipment into India during October 1926 showed an appreciation in value aggregating almost exactly 100 per cent over the total for the corresponding month of 1925. The respective figures were: October 1926, Rs 3,700,000; October 1925, Rs 1,853,000.

**RAILWAY AND POWER STATION CONTRACTS.**—Railway electrification schemes projected or in progress in India during 1926 furnished British manufacturers with a number of important contracts, among which the following may be particularised. The Great Indian Peninsula Railway ordered from one company 41 freight engines of 2,600 h.p., weighing 115 tons each, the most powerful locomotives yet constructed in England, also a passenger locomotive of 2,100 h.p., weighing 72 tons and capable of attaining a safe speed of 85 miles per hour. For the Kalyan extension of the same Railway's system another firm had in hand 15 motor-coach and 42 trailer equipments.

Power station equipment of great magnitude was delivered during the year to the order of the Tata Power Company. It comprised five 30,000 h.p. impulse turbines, the generators having a continuous rating of 26,000 k.v.a. at 12,000 volts and a speed of 375 r.p.m. Another machine made for the same company and installed at the Khopoli power station was a 15,000 h.p. impulse wheel.

**WIRELESS STATION.**—The wireless station established at Victoria Point, the southern extremity of the Province of Burma, was reopened on December 1, 1926, having been closed down since February of the preceding year. The discontinuance of the station had exerted a severe influence upon shipping in the Bay of Bengal. No land telegraph or ocean cable lines exist between Rangoon and Victoria Point, and the wireless station operating at the latter affords the only means of communication along that part of the coast of Burma.

BABCOCK & WILCOX, LTD., Calcutta.

1. Boilers fitted with mechanical chain-grate stokers.
2. Oil firing system as applied to Lancashire boilers installed in cotton mills.
3. Oil fired boilers as supplied to cotton mills.
4. Coal elevating buckets and bunkers for automatic stoking.

## REPRESENTATIVE ENGINEERING AND MACHINERY ENTERPRISES BABCOCK & WILCOX LTD.

**Inception.**—Established in 1867 under the title of the Babcock & Wilcox Co., the present limited company was incorporated in England in 1900.

**Organisation.**—One of the largest manufacturers of boilers and engineering plants in the world, this firm of international reputation stands for the most progressive achievement in the science of developing power from steam. Contracts are executed with H.M. Government, Admiralty, War Office, Air Ministry and Foreign Governments.

**Water-Tube Steam Boiler.**—During the past half-century of engineering activity, probably no development has been more notable than that of the design and construction of boilers, and, likewise, no improvement more revolutionary than the invention of the Babcock & Wilcox water-tube steam boiler, which after patient trials over many years was evolved to satisfy the world-wide demand for power by steam generator.

**Land Boiler.**—The usual type Babcock & Wilcox land boiler has a longitudinal drum, and with the exception of furnaces is entirely suspended by wrought steel slings. The boiler is constructed throughout of wrought steel, and is composed of a number of sections each consisting of several tubes expanded at each end into staggered headers, the headers being provided with handholes placed opposite the end of each tube to permit cleaning, or in case of need the removal of a tube. Every handhole is provided with a cap, fastened with a wrought steel bolt and clamp, and a cap nut.

**Marine Type Boiler.**—The marine type boiler for land purposes is of a different construction, but embodies the same principles as before indicated. This type when fitted with superheaters, chain grate stokers, and superposed economiser is favoured for use in electricity works owing to its occupying less space for H.P. generated than the standard land type boiler.

**Portable Boiler.**—In this type the drum is placed transversely to the tube, and for easy transportation the boilers can be constructed and shipped so that no piece exceeds 280 lbs in weight. To avoid the use of bricks the casing is constructed of steel, reinforced by fire resisting material. The boiler is also supplied with a steel chimney.

**Marine Boiler.**—This is more or less of similar construction to the marine type land boiler, with the exception that the design is for application to vessels. Over 8,800,000 h.p. of this type of boiler has been supplied or is on order. It is used in battleships and cruisers of the British, American, Italian, Spanish, Danish, Chinese, Chilean, Mexican, Cuban, Brazilian and Argentine Navies, as in hundreds of mercantile marine vessels.

**Furnaces.**—Babcock & Wilcox boilers can be fired by almost any class of fuel, and furnaces adapted for each fuel have been carefully studied and designed to give the best result. Large numbers of installations utilise wood fuel and other forms including saw dust, bagasse, oil, tar, waste from olive oils, rice husk, spent tan, etc.

**Installations.**—The total horse power of boilers in use by the clients of Messrs. Babcock & Wilcox throughout the world now represents on land 17,700,000 h.p., and over 8,800,000 h.p. in marine type water-tube boilers supplied to navies and mercantile marines.

**INDIA.**—In India the h.p. supplied at the present date to principal industries such

as the following represents: Cotton mills and ginning factories, 20,187; woollen mills, 5,481; iron and engineering works, 31,528; cement works, 9,232; jute mills, 17,783; power stations, 67,007; sewage and pumping stations, 17,380; paper mills, 2,031; sugar factories, 11,918. In addition, boiler plants have been supplied or ordered for numerous other industries in India such as chemical works, gumme factories, tea estates, leather works, bone works, coal mines, oil mills, rice mills, river steamers, dredgers, etc.

**Manufactures.** In addition to the patent water-tube boilers the firm's range of manufacture comprises steam super-heaters, mechanical stokers, feed water heaters, air heaters, economisers, soot blowers, steam piping, structural steel work, steel chimneys, water softeners and purifiers, ash plants, coal conveying machinery, electric cranes and steel works, chargers, patent boat davits, liquid fuel burning installations, boiler house accessories, oil engines, etc.

Messrs Babcock & Wilcox Ltd. are also the sole licencees and makers of the Buller Products for pulverised coal burning.

**Superheaters and Mechanical Chain Grate Stokers.** For power stations and industrial purposes Babcock & Wilcox patent mechanical chain grate stokers and integral super-heaters are usually installed, and up to the present there have been supplied throughout the world over 23,000 of the former and over 30,000 of the latter.

**Cranes.** The company's patent lever balanced lifting jib crane has been supplied extensively to the Port of London Authority's docks and wharves and many others. The lever balanced lifting jib has been furnished for lifts up to 100 tons and can be recommended as saving time and power while ensuring safety. The provision afforded for free and rapid lifting, or movement of the load to and from the crane, is an advantage of the greatest importance; ready recognition of this is shown in the large number of these cranes ordered by Dock and Harbour Authorities.

Other cranes made by the company are electric Gantt and Goliath cranes, electric overhead cranes of different types and electric jib and portable cranes, etc.

**Mechanical Conveyors.** These are manufactured by the company for numerous purposes such as the mechanical conveyance of coal, chalk, lime, iron ore and similar material. The two principal types—gravity bucket and tray—are both much used.

**Steam Generating Plant.**—Estimates, designs, specifications and schemes for the lay-out of steam generating plants to suit all conditions are prepared by the company's engineers, and clients are thus assured of the services of manufacturers who not only have experience in the production of such plant on the best and most up-to-date principle, but have vast experience in running these installations under various conditions.

**Liquid Fuel Burning Equipment.** The Babcock & Wilcox oil fuel apparatus has been on the market for more than 20 years, and the fact that over 750 naval and mercantile vessels equipped with Babcock & Wilcox marine boilers representing some 4,000,000 h.p. have been fitted for burning liquid fuel indicates not only the suitability of the boiler for this service but also the firm's comprehensive experience in oil firing. On land the use of oil-fired boilers is also very extensive, the majority being fitted with the company's oil firing apparatus, which combines efficiency with continuous economy in fuel.

**Directorate.**—Sir John Dewrance, K.B.E. (chairman), Arthur T. Simpson, Chas. A. Knight, E. H. Wells, and Sir James Kennal (managing director).

BABCOCK & WILCOX, LTD., Calcutta.

1. Overhead crane supplied to the Bengal Nagpur Railway.
2. Type of cranes furnished to Karachi Port Trust.

**Offices and Works.**—Head office: Babcock House, Farringdon Street, London, E.C. 4. Calcutta: 10, Clive Street (cables: "Boiler," Calcutta). Bombay: Exchange Buildings, Sprott Road, Ballard Estate (cables: "Boiler," Bombay). Codes: Western Union and Engineering. Branch offices are situated in all other principal cities throughout the world.

Principal works: Renfrew, Scotland; branch works: Dumbarton, Scotland; Oldbury and Lincoln, England; and in Australia and Japan.

**Bankers.** The National Bank of India, Ltd.

#### WORTHINGTON-SIMPSON LTD.

**Inception.** In the year 1700, when engineering was in its infancy, the business of

**Indian Operations.**—The firm's operations in India began some 30 years ago, when the present managing director came to that country and became responsible to the home directors for all business transacted in India, Burma and Ceylon.

**Calcutta Premises.**—In 1904 the Indian branch was transferred from Dalhousie Square to 10, Clive Street, a site it has ever since occupied. Here in 1920 a new building was erected for office accommodation, consisting of four storeys fitted with all modern equipment, the top floor being reserved for residential purposes.

**Development.**—The steady increase in business since its formation is reflected in the large staff which the Indian branch requires to-day to keep in touch with its Indian customers and the home office. On

water and the large drainage pumping station for the whole of Delhi were supplied by Worthington-Simpson Ltd. They have also been engaged in laying out complete water supplies with pumping plant, water tanks, water filtration plant, distribution mains etc. for tea estates, some of the schemes being equivalent to the water-supply of a town of 100 dimensions.

The great variety of plant produced is of interest, contracts having been executed for every condition of service imaginable, from the very large capacity irrigation pumps at Dair to the high pressure pumps at Simla Water Supply. The first are centrifugal pumps directly coupled to Diesel oil engines, the total capacity of the nine sets being the very high figure of 730 cubic feet of water per second, while at Simla the installation

VULCAN IRON WORKS LTD., Calcutta

1. Offices and partial view of the Works

2. The Works

(See letterpress, p. 46)

James Simpson & Co. was established and factories were set up in London. In 1838 the firm moved to Belgrave Road, and then to 101, Grosvenor Road, where large and complete workshops and manufacturing plant were put down. In those works were built some of the most important pumping machinery designed for London and many of the capitals of the world, also for all the most important cities in India. In 1886 the business was converted into a private limited company, and in 1900 the firm erected extensive new workshops covering many acres at Newark-on-Trent, Nottinghamshire. These works are arranged so that there is ample space for all their many requirements, and they are in direct communication by rail with the London and North Eastern Railway, providing rapid access to all the main railway lines and ports in England.

the one hand there is an organised staff of engineers in the local office, and on the other a large outdoor staff engaged on works in every corner of the territory.

**Activities.**—The name of Worthington-Simpson is synonymous with pumping plant and allied interests throughout India, and many large contracts have been carried out by the firm for water supply, drainage, and condensing installations for turbine and other steam generating plant. In all the municipal water and drainage supplies for the large towns in India their plant is to be found, and W-S feed pumps, centrifugal pumps (driven by electricity, steam or oil engines), water meters, etc., are regularly supplied to mills, tea estates, plantations and industries generally. It is noteworthy that all the water supply pumping plant for new Delhi, both for drinking and irrigation

consists of power pumps driven through gearing by A.C. electric motors and delivers the water against 2,780 feet in one lift.

**Agencies.**—The companies for which the firm holds agencies in India are as follows:

**GEORGE KENT LTD.** Luton, manufacturers of meter plant for steam, water, air and other purposes, also for meters and such material as water level recorders, etc.

**J. BLAKEBOROUGH & SONS, LTD.** Yorkshire, manufacturers of valves of all descriptions, sludge elevators, sewage screening plant, etc.

**VIGILANT SPRINKLER PLANT,** London, makers of all fire prevention materials such as sprinkler plants, etc.

**ASTER ENGINEERING CO. (1913) LTD.,** Wembley, manufacturers of high speed oil and petrol driven engines for all purposes as prime movers.

**W. SISSON & CO.**, Gloucester, manufacturers of high speed steam engines suitable for prime movers of all descriptions.

**JEWELL EXPORT FILTER CO.**, York, manufacturers of water filtration plant for domestic and industrial purposes, also agents for chlorination plant.

**SEABORNE INTERCEPTORS** (manufacturers, **THE HUNSLET ENGINE CO.**, Leeds)—Patent priming apparatus for pumping plant, making the ordinary foot valve or charging device unnecessary.

**J. DAMPNLY & CO. LTD.**, London, manufacturers of "Apexior" boiler compound for facilitating the removal of scale and "Asphaltene," a bituminous compound for preserving iron work, etc.

**AYELING & PORTER LTD.**, Rochester, England, manufacturers of road rollers, scarifiers, etc.

**Staff.**—A large technical staff familiar with the products of the above manufacturers is at the service of the head office in India, and a large stock of plant and spare parts is held by the company in such centres as Calcutta, Bombay, Madras, Rangoon and Ceylon.

**Registered Offices.**—Queen's House, Kingsway, London, W.C.

**Indian Offices.**—Calcutta (head office) 10, Clive Street (cables "Aquosity," Calcutta), Bombay Asian Building, Nicol Road (cables "Aquosity," Bombay).

**Codes.**—A 1, A B C, Lieber's Engineering, Western Union Business and 5-letter, Bentley's and Private.

**Bankers.**—Chartered Bank of India, Australia and China.

#### **VULCAN IRON WORKS LTD.**

**Inception.**—As at present constituted this company was formed in 1900 to take over the business of Messrs Parry & Co. Ltd., whose property at Garden Reach, Calcutta, had been acquired by the Bengal Nagpur Railway Company.

**Workshops.**—The ground on which the works stand was originally the site of a garden house, and the bungalow served as an office for 22 years until the present buildings were erected and the old structure pulled down. The works cover about 4 acres of land, all of which is the company's own property, and consist of machine shop, foundries (both iron and brass, including gun-metal), blacksmith's and constructional steel shops. The different shops have been extended from time to time to meet the demands of increasing business, and further extensions are at present under contemplation and shortly to be put in hand. After using steam as the driving power of the works for 24 years the firm installed an electric drive, which has proved more economical and just as reliable as the older method. The numbers employed in the workshops average 450–500 men, including nine Europeans.

**Activities.**—The Vulcan Iron Works Ltd. carry on a large general engineering business, and a visit to the works at any time will show the great variety of the contracts undertaken. If it can be said they have any specialities, mention might be made of their tanks, self-supporting steel chimneys and machinery repair work, but, so long as the firm is satisfied that it can meet the wishes of its increasing clientele, any orders will be willingly undertaken. The annual consumption of steel is about 1,200 tons, and of cast iron 800 tons, besides considerable quantities of other metals.

**Directorate.**—The board consists of Messrs. G. Perce, J. Russell, A.M.I.C.E. and J. W. Mediand, A.C.A., O.B.E.

**STEWARTS & LLOYDS, LTD., Calcutta.**

1. Transporting large steel pipe in India.

4. Transporting 20" diameter lap-welded steel inserted joint pipes in Ceylon, 1912.

**Head Offices** 172, Lower Circular Road, Calcutta (cables "Cupola," Calcutta) Coles A B C 5th Edition, Bentley's and Private.

**Bankers.**—Allahabad Bank, Ltd.

See illustration, p. 245.

#### **STEWARTS AND LLOYDS LTD**

**Inception.**—There are few industries which in some part of working or development do not depend upon or utilise, iron and steel tubes, a world-wide desideratum recognised and now fully supplied by the enterprise of Messrs. Stewarts and Lloyds, Ltd., incorporated in Scotland over 50 years ago.

**Development.**—Since that inception the firm, whose name soon became a guarantee of the best in quality and workmanship, has developed into the largest and probably the best known of British manufacturers of iron and steel pipes of all sizes from  $\frac{1}{4}$  inch to 6 feet internal diameter and for all purposes.

**Products.**—Messrs. Stewarts and Lloyds, Ltd., manufacture steel tubes for the conveyance of water, oil, steam, gas, air, etc., weldless boiler tubes for locomotives, boats and casing tubes of every description, tubular steel columns employed in building and for tramway electric light, telephone and telegraph standards, ships' davits, derricks and masts, steel plates for boilers and for ships, bridges, tanks and wagons. Steel castings and Ashford Strainers are additional products.

**Indian Activities.**—This firm was among the first British manufacturers to recognise the potentialities of the Indian market and the necessity for being directly represented in order that engineers, contractors, and others could have the benefit of expert advice, and it is fully 20 years since they opened an office in Calcutta, from which all information relative to the multitudinous uses of iron and steel tubes can be readily obtained.

This step was more than justified, as the Indian business of the firm has increased with a rapidity beyond expectations. To-day the company's products are known in every city, town and native State in India, in mills, railways, gold and coal mines, water works, irrigation works, electric supply works and oil wells. Its pipes convey water to the inhabitants of Bombay and Calcutta, Simla and Colombo, Rangoon and Singapore, alike to the parched land of the ryot and the palace of the Rajah. Its steel tubes supply water in the Khyber Pass, oil in the Punjab and Burma, steam in every mill in the Peninsula, gas in each hotel and fresh air to the deepest gold mine. Tubular electric standards of the firm's manufacture light the way to the Taj Mahal and to the elevated palace of the Jhondpur Princes, its tubular coils are employed in ice making, and its tubular point-rod guides the tram driven by the power generated in the company's weldless boiler tubes throughout the whole of India.

**Wells.**—In recent years a great advance has been made in India in sinking wells by means of tubes, and this method is much less costly than by digging and building up with brick or stone, as was formerly done. After the well has been sunk and water reached, the most up-to-date plan is to install Ashford's "Patent Well Screen" (the licensed manufacturers being Messrs. Stewarts and Lloyds Ltd.), with a few feet of suction pipe and a reliable pump, as large tracts of rich land have in this manner been irrigated. The Government having given its approval to this method of obtaining water for irrigation, this business has since reached very large proportions, and is continually growing.

BOVING &amp; CO. LTD., Calcutta.

- 2 Burma Corporation Mansam Falls Power Plant One of three units of 3,000 H.P. erected in the shops
3. One of six 5,600 H.P. units at Sivasamudram Falls for Mysore Government
- 4 Paper making machine for high-class printing and writing paper in course of erection

**Water Distribution.**—The manufacture of steel tubes for water distribution mains is a branch of the industry to which Messrs. Stewarts and Lloyds have paid particular attention. These are much lighter than the heavy cast iron pipes formerly used; they are made in long lengths up to 50 feet in any diameter up to six feet; they are unbreakable and they combine all the essentials for India, being cheaper in first cost, easier to handle, and having fewer joints to be made than is the case with cast iron pipes. The numerous water supply schemes throughout India in which they have been installed testify to their efficiency. High pressure mains for hydro-electric power installations are also a special feature of the firm's manufactures.

**Industrial Importance.**—Although the manufacture of iron and steel tubes has not yet become a local industry, the enterprise of Messrs Stewarts and Lloyds Ltd. may be looked upon as an essential adjunct to the many industries of each and every province in India.

**Offices.**—Glasgow (registered office) 41, Oswald Street; Birmingham Broad Street Chambers; London "Winchester House," Old Broad Street, E.C. 4; Calcutta 6, Royal Exchange Place (cables "Tubemakers" Calcutta); Bombay, Dougall Road, Ballard Estate (cables: "Tubular," Bombay) Codes A.B.C. 5th Edition and Bentley's

**Bankers.**—Chartered Bank of India, Australia and China.

#### BOVING & CO. LTD.

**Inception.**—The only firm of water power and paper and pulp engineers to possess its own representative office in India, Messrs. Boving & Co. Ltd. opened premises at Calcutta in 1923.

**Activities.**—They specialise in the design and manufacture of water power and pulp and paper equipment, either as complete plants or in separate items such as water turbines of various types, pelton wheels, automatic speed governors, pipe-lines, gates, valves, etc. on one side, and in the other department digesters, diffusers, beaters, screens, paper machines, soda recovery plant and innumerable accessories. In this connection they have behind them technical designers, practical experience, manufacturing achievements, and experimental laboratories second to none, and an unequalled record of water power machinery installed overseas. During the past 15 years no fewer than 16 pulp and paper mills, representing an annual output of 120,000 tons of paper, have been supplied to Japan and the East.

**Staffs.**—Because of their success in other fields, notably New Zealand, Australia, Japan, South America and parts of Europe, Boving & Co. Ltd. maintain in their overseas offices staffs of engineers fully qualified in all their specialised branches of engineering to advise clients and undertake investigations and reports. The availability of these consultants has proved of great service to Government officials, commercial men, and

others interested in the development of the country's resources.

**Contracts.**—The Mysore Government's hydro-electric plant at Sivasamudram on the Cauvery River stands foremost amongst the stations equipped by the firm in India. Six turbines, each of 5,600 b.h.p. under a head of 415 feet at 500 r.p.m. and two exciter sets of 470 b.h.p. each with corresponding pipes, have been supplied since 1920, and two 9,000 b.h.p. units at 375 r.p.m. with complete pipes, gates, valves, etc., are being supplied during 1926-1927. This is one of the largest and oldest stations in India, and now with the new equipment has become one among the most modern and best paying.

In 1914-15 the complete hydraulic equipment of turbines, pipes and valves was supplied and installed for the Simla Municipality station at Chaba. A further unit has since been added, and the station now aggregates 3,650 b.h.p. in six main units (and two exciters) at 500 r.p.m. under a net head of 510 feet.

Among other plants supplied, Mansam Falls, Burma, consisting of three turbines of 3,300 b.h.p. each; Gangbok, Sikkim, one turbine of 180 b.h.p. with pipes, etc.; Pulivassal, complete hydraulic equipment for two 580 b.h.p. peltons; Mussoorie, two 1,450 b.h.p. peltons; Makum, Assam, 105 b.h.p. low head turbine, are worthy of mention. On the Bombay side the firm has been associated with the supply of the Tata Power Co.'s pipe-lines at Bhira, as well as acting as contractors for the duplicate and extension pipes at

#### THE ENGLISH ELECTRIC COMPANY LIMITED.

**Inception.**—Incorporated in 1918, this organisation, which has achieved the highest reputation in every part of the globe where electrical equipment is employed, represents under a new name the consolidation of a number of old and familiar interests. It controls and operates in England under one management the following manufacturing works: The Dick, Kerr Works (Preston), The Ordnance Works (Coventry), The Phoenix Works (Bradford), The Siemens Works (Stafford) and The Willans Works (Rugby).

**Manufactures.** The company exists primarily to develop by the most modern methods of manufacture a wide range of electrical and allied products, the principal items being scheduled as follows: Electric generating plant of all capacities, steam turbines and condensers, turbo-blowers, water turbines, internal combustion engines, rotary converters, static transformers, phase advancers, switchgear and controlling apparatus of all kinds, electric locomotives, electrical equipment and rolling stock for railways and tramways, electric plant for rolling mills, iron, steel, copper works, etc., electric winding equipments for mines, electrical equipment for textile mills, standard industrial motors, high-speed twist drills, milling cutters and reamers; pneumatic hammers and drilling machines.

**Indian Activities.**—In India the company has three important branches, at Calcutta (the head office for that country), Bombay and Madras. These offices were originally those of one of the former companies which were responsible for and associated with many of the early installations of electrical plant in India.

The staffs at the branches are fully trained and capable of dealing with any proposals which come within the scope of the company's activities. Many members have long and varied experience of Indian conditions, and they are thus able to render that advice and assistance which are essential in this country.

As an adjunct to the selling organisation, the branches in India maintain a large and expert erecting staff, and contracts are undertaken which include supply, erection, connecting up setting to work and maintaining complete plant installations up to any capacity.

**Contracts in India.**—Among the more important contracts and installations carried out in India may be mentioned the following:

**STEAM TURBINE PLANT**—One 15,000 k.w., 1,500 r.p.m. and one 800 k.w. 3,000 r.p.m. set for Calcutta Electric Supply Corporation, two 6,000 k.w. 3,000 r.p.m. and two 3,000 k.w. 3,000 r.p.m. sets for Cawnpore Electric Supply Corporation, three 1,500 k.w. 3,000 r.p.m. pass-out type sets for Madras Electric Supply Corporation, also one 3,000 b.h.p. 3,000/216 r.p.m. geared turbine for rope drive for the Union Jute

been supplied to various collieries, among them The Standard Collieries, Kenwadhi Collieries, Rewa State Collieries, Lodna Collieries and Argada Collieries.

**ELECTRIC TRACTION**—For the G.I.P. Railway, Bombay Suburban Electrification all the electrical equipments including motors and camshaft control gear etc., were manufactured, supplied and erected by the English Electric Co. This was the first railway electrification in India, and commenced operation on February 3, 1925. Hundreds of "English Electric" tramcar equipments are in service in Calcutta, Burma, Colombo and elsewhere.

**ROTARY CONVERTERS** (for main line electric railway automatic sub-stations)—Twelve "English Electric" 1250 k.w. rotary converters with H.T. direct current switchgear for G.I.P. Railway Kalyan

for the Government of India Salt Mines, Khewra.

**Larger Installations.**—As regards the larger installations carried out by the organisation, it may be recorded that the Tata Power Company's power house plant of which mention has been made above is one of the largest of its kind in the world. It is designed to deal with no less a quantity of water than 1,000 cubic feet per second at a head of some 1700 feet. The Tata Power Company's receiving station at Dharavi, Bombay, equipped with "English Electric" transformers, is certainly one of the largest of its kind in India.

**Associated Concerns.**—The works of the company under notice are primarily employed with the manufacture of machinery and plant, but for the expansion and consolidation of the enterprise's interests certain associa-

THE ENGLISH ELECTRIC CO., LTD., Calcutta

The first Electric Train in India on the G.I.P. Railway, Bombay, equipped with "English Electric" Motors and Camshaft Control

Mill, Calcutta, and four 2,000 k.w. 3,000 r.p.m. turbo alternator sets for the North Western Railway—Moghulpura Workshops.

**OIL ENGINES**—Two 750 b.h.p. Fullagar oil engines for Lloyd Barrage, Sukkur, also various Willans-Diesel engines ranging from 100 to 600 b.h.p. for Amritsar, Delhi, Kirkee, Bombay, Colombo, Hyderabad, etc.

**HYDRO-ELECTRIC PLANTS**—Five 20,000 k.w. and two 750 k.w. water turbine and alternator sets for the Tata Power Co., one 15,000 b.h.p. water turbine for the Kundley Power Co., and one 500 k.w. water turbine and alternator for the Nepal Government.

**TEXTILE MILLS**—The English Electric Company have extensive experience in the electrical equipment of textile mills, and have supplied plant to many mills throughout India. Complete electrical equipments have been furnished for the following: Wellington Jute Mills, Anglo-India Jute Mills, Jagatdal Jute Mills, all situated in Calcutta, also the Kasturchand Mills and the Indian Manufacturing Co.'s mills situated in Bombay, and various mills in Bangalore, Coimbatore and Cawnpore.

**COLLIERIES.**—Electrical equipments, comprising power house plant, electric winders, hoisting and pumping plant, etc., have

Many other rotary converters have been supplied for general tramway power and lighting purposes in various parts of India.

**STATIC TRANSFORMERS**—Twelve "English Electric" single-phase transformers each 10,000 k.v.a. 110,000/22,000 volts for Tata Power Co., Dharavi, Bombay. These transformers are oil-immersed water cooled for outdoor service. They are the largest transformers in India. For G.I.P. Railway, Kalyan, twelve 1,350 k.v.a. transformers, of the oil-immersed self-cooled type, have been installed. Many other transformers have been supplied throughout India for general tramway, power and lighting purposes.

**MINING EQUIPMENTS (OTHER THAN FOR COLLIERIES)**—Large electric winding engines have been supplied by the English Electric Co. for mines other than coalfields. The following are a few details of these installations: Two 2,000 b.h.p. electric winders on the Ward Leonard System, one 800 b.h.p. 3-phase electric winder, together with various motors for driving compressors, stamps, ventilating fans, etc., for the Kolar Gold Fields, Mysore, one 295 h.p. D.C. winder motor and one 75 h.p. A.C. winder motor for the Burma Corporation, two 300 b.h.p. induction motors driving compressors

tions have been arranged, those operating in India being dealt with as follows:

**Siemens and English Electric Lamp Co. Ltd.** Branches of this company have been established in the branch offices of the English Electric Company in India to act as main distributing points for the lamps, etc., manufactured at the Works at Preston and Dalston. Comprehensive stocks of standard vacuum and gas-filled lamps and special lamps such as train lighting, traction and automobile lamps are held in India. The lamps manufactured by this company are sold under the trade name of Siemens Brothers & Company Limited.

**Siemens Brothers & Company Limited.**—The English Electric Company is the sole selling agent for this company in India and holds at its branches stocks of those products which are in most demand, i.e., rubber insulated wires and cables, paper insulated cables, dry and wet primary cells and batteries, insulating tapes and materials, telephone instruments, transmission line materials, switchboard instruments, etc. The branches also undertake the supply and installation of cables of all descriptions, complete telephone equipment and complete transmission lines for high or low tension.

**Bankers.**—London: Lloyds Bank Ltd., Bank of Liverpool & Martins, Ltd., National Bank of Scotland Ltd. India: P. & O. Banking Corporation Ltd.

#### BRITISH INSULATED CABLES LTD.

**Inception.**—For many years this important company was represented in India by agents, but in 1915, encountering the great demand for insulated cables consequent on the rapid development of electrical power schemes throughout the whole country, the management decided to open a direct Indian branch in Calcutta with an expert staff on the ground personally to direct the large contracts being placed.

**Activities.**—The firm specialises in complete installation contracts for overhead and

underground power distribution schemes, railway electrification, colliery installation, and telephone cable contracts. It is on the list of contractors for the Home Colonial and Foreign Governments and the principal corporations for electric lighting, traction, telephone and telegraph equipments. A staff of home trained engineers and skilled workmen, ensuring supervision and workmanship of the highest standard is employed.

**The Indian Cable Company Limited.**—This concern was floated in 1920 with an authorised capital of 15 lakhs. In 1922 British Insulated Cables Ltd. became the managing agents thereof, since when the authorised capital has been increased to 30 lakhs. The company's factory is situated in Jamshedpur and is well equipped to manufacture all kinds of rubber insulated cables, cotton covered wires, and hard drawn bare copper wires. The factory employs approximately 700 hands, and its productions are equal to the best among those either imported or locally manufactured.

**Works.**—British Insulated Cables Ltd., which is incorporated in England, has its principal works at Prescott and Helsby. At those centres everything is manufactured on a large scale by the very latest processes and under the supervision of experts.

**Head Offices.**—Telephone Building, 8, Chittaranjan Avenue, Calcutta (cables "Insulator," Calcutta). Codes, Western Union (5-letter edition) and Private.

**Bankers.**—Mercantile Bank of India, Ltd.; National Bank of India, Ltd.

#### ASSOCIATED BRITISH ENGINEERS LTD.

**Inception.** The floating of this powerful company in 1920 put into effect the policy of many of the leading British engineering concerns who considered that they could be more effectively represented in India as a combine than for each to have its separate branch there.

**Development.**—The justification of the combine policy is reflected in the rapid advance which "A.B.E.L.," as the company is termed, has made. It now ranks as one of the foremost engineering firms in India.

**Activities.**—The company's operations cover the entire field of engineering, and are in the hands of an expert staff fully qualified to deal with all enquiries, technical and commercial, and to give sound advice on types of plant or machinery for any undertaking.

**Agencies.**—A.B.E.L. act as sole agents in India for some of the foremost firms in the world, which in itself is a guarantee of the class and quality of the productions the company deals in, and the following list of their manufactures shows how comprehensive are the engineering specialities handled.

**WM. BEARDMORE & CO. LTD.**—London and Glasgow, manufacturers of steel castings, locomotives, rolling stocks, oil engines, plates and angles, barges, and pumps of all types.

**ALLEY & MACLELLAN LTD.**—Steam traps and general products.

**AVELING & PORTER LTD.**—Steam and motor road rollers, from 2 to 18 tons.

**CHANCE BROS. LTD.**—Channel lights, gas buoys, etc.

F & C OSLER LTD  
Beautiful Showroom at Calcutta

**HAGGILL BROS LTD**—Gateshead on Tyne—All classes of wire rope and fittings for mining and other uses.

**HATHORN DAVY & CO LTD**—Makers of all kinds of pumping plant, including triple plant, hydraulic pumping sets of every description and their latest vertical spindle "Helivane" pump.

**LIGHT RAILWAYS LTD**—All classes of light railway trucks and requirements, including special steam coaches, petrol locos, wagons, tubs, etc.

**PRIESTMAN BROS LTD**—Makers of grabs of every description, grab line excavators, and grab dredgers.

**RAILLESS LTD, LONDON**—Builders of railless trolley buses, overhead equipment and all accessory plant.

**WALKER BROS (WIGAN) LTD**—Makers of high class mining machinery and colliery equipment, including haulages, winders, air compressors, and Pagefield motor vehicles, etc.

**GOODALL CLAYTON & CO LTD**, Leeds.—Manufacturers of the most up-to-date coal handling plants, headgears and all kinds of structural engineering requirements.

**BECKETT & ANDERSON LTD**, Glasgow.—Manufacturers of the famous "Becander" haulage gears, "Becander" electric rotary drills and "Becander" Mining switchgear, of which several are already in operation in the Indian coalfields.

**MAIN ROPEWAYS LTD**, London—Makers of every kind of aerial ropeway.

**JOHN BIRCH & CO LTD**, London—The world famous exporters founded in Liverpool in 1875, whose operations, commencing in Egypt, have during half a century extended to every part of the habitable globe where British machinery has penetrated.

**INTERNATIONAL CHANNELLING MACHINES LTD**—Sheffield—Makers of the world-famous "Siskol" coal cutters.

**PATTERSON & CO**—Manufacturing miners' safety lamps (approved by British Mines Department).

**GOODWIN BARSBY & CO LTD**, Leicester—Makers of the "Acme" stone breaker in fixed and portable types with or without automatic screens, the "Acme" granulator, "Open Drum" concrete mixer and "Springfield" concrete block machine.

The Associated British Engineers Ltd hold extensive stocks of such products, and are ready at all times to go into specification details with clients.

**Cementation**.—Although this process has not been applied to any extent in India, ABEL, which represents Blandford & Gee of Doncaster, the well-known cementation experts and consulting engineers, will be pleased to go into details of any undertaking where the process is applicable and submit a report and estimate after inspection.

**Head Offices**.—23, Ezra Mansions, Government Place, East, Calcutta (cables "Abel" Calcutta).

#### F & C. OSLER LTD.

**Inception**.—Founded in Birmingham, England, in 1807, this is the oldest firm of electrical contractors in India, its connection with that country dating back to the days before the Mutiny.

**Activities**.—Messrs Osler Ltd are manufacturers and designers of electric light fittings and fans, having carried out many important electric light and power installations in various parts of the country, their work in the native States at Gwalior, Mysore, Jamnagar, Kashmir, Hyderabad, Nabha,

Jind, Alwar, Rewari and Benares being particularly well known. They were entrusted with the very fine and up-to-date hydro electric scheme at Kabul, which marked the introduction of electricity into Afghanistan, and completed important work for the Government of Nepal.

At the Coronation Durbars at Delhi in 1903 and 1911 they were responsible for a great deal of the electrical work, including the whole of the installation in the camp of H M the King Emperor.

**Agencies**.—The name Osler is synonymous with quality products, and is known throughout the length and breadth of India in connection with Osler fittings, Osler fans, or the other electrical and mechanical apparatus for which the firm has sole agency rights in India, Burma and Ceylon. These agencies include "Cosmos" electric lamps, W T Glover & Co Ltd, V I R cables, R A Evans Ltd, electric lifts, Wardle Engineering Co Ltd, street light fittings; Rees Roturbo pumps, dynamos, motors and condensers, The Arrel Manufacturing Co Ltd, tools, Leyland-Roturbo fire pump, Exide batteries, The Relay Automatic Telephone Co. Ltd and British-Sangamo electricity meters.

**Showroom**.—The firm's showroom has long been famed as one of the sights of Calcutta, containing many fine examples of the art of electric light fittings design and workmanship.

**Branches**.—Bombay, Madras, Delhi and Lahore, sub-agencies. Karachi and Rangoon.

**Head Offices**.—12, Old Court House Street, Calcutta (cables "Oslerco" for Calcutta and branches). Code: A.B.C. 6th Edition.

**Bankers**.—Imperial Bank of India

|--|---|

#### W. T. HENLEY'S TELEGRAPH WORKS COMPANY LTD.

**Inception.**—Manufacturers of electric cables ever since electrical energy was first transmitted as a commercial proposition through insulated conductors in 1837 this world-famous concern was early in the field in India. It was not, however, until 1911 that Messrs. Henley's opened their own office in Calcutta, followed in 1912 by one in Bombay, but prior to that they were represented in both cities by agents.

**Activities.**—Their business consists of the manufacture and supply of electric cables of every description and for every purpose, and they also undertake overhead line work, cable electrification of cities and mills, and cable laying contracts, of any magnitude.

**Contracts.**—Among contracts carried out since April 1913 the following are noteworthy: His Majesty's Mint, Calcutta supply and erection of cables from power house to distribution board; The Aldah Colliery; supply and installation of shaft and distribution cables, Bombay Port Trust supply and laying of paper insulated, lead covered and armoured cables, 400 volt 3

phase supply for lighting and power to Queen Alexandra Docks, The Empire Jute Mills, Calcutta supply and erection of overhead mains and cabling to motors, The Fata Cotton Mills supply and erection of main and auxiliary cables, Mazagon Docks, Bombay supply and erection of main and auxiliary cables on solid system, East Indian Railway, Belur supply and laying of F.H.T. 3 core paper insulated and bitumen sheathed cable for pumping station, Elgin Mills Co. Ltd. Cawnpore Textiles Ltd. New Victoria Mills, Baginath Balmukund Woollen Mills, Swadeshi Cotton Mills supply to each of these Cawnpore companies and installation of all main and auxiliary cables, 550 volt, 3-phase supply, The Dumbur Cotton Mills, Calcutta supply and erection of overhead lighting mains for mill and road lighting, 110 volt D.C., United Provinces Government, Nani Tal supply and erection of underground cables, boxes, etc., for lighting of grounds, Government Posts and Telegraphs Department, Calcutta laying of cables (approximately 2 miles), Government Marine Department, Bombay supply and erection of L.T. feeders and distributors in R.I.M. dockyard, The Model Mills, Nagpur

supply and erection of all main and auxiliary cables, 550 volt, 3-phase Bartholomew & Co. Calcutta supply and erection of L.T. switchgear and cables for lighting also fan mains for Mackinnon Mackenzie & Co.'s offices the largest office building in India, The Cleveland Bridge & Engineering Co., Calcutta supply and erection of overhead distributor and interior cabling, 440 volt 3-wire, North Alliance Jute Mills, Calcutta supply and installation of main and auxiliary cables, 3,300 volt, 3-phase, Commissioners for the Port of Calcutta supply and erection of feeder cables on solid system for hydraulic pumping installation, Budge Budge Jute Mills, Calcutta supply and erection of overhead mains and 3-core cables, 550 volt, 3-phase, and overhead lighting mains for mill and road lighting, 110 volt D.C., Nasmyth Jute Press, Calcutta H.T. and L.T. cables between transformers, switchgear and motors, Corporation of Calcutta supply and erection of all cables for electrically driven pumps for water supply, 6,000 volt, 3-phase, Kotah State Rajputana supply and erection of overhead and underground mains, H.T. and L.T.

SULZER BROTHERS, Calcutta

- 1 Refrigerating plant with ammonia compressor, direct coupled to Diesel Engine.  
3 Special type of Centrifugal Pump for Pumping Sewage

- 2 Cross Compound Extraction Steam Engine at the Delhi Cloth and General Mills  
4 1,500 B.H.P. Two-cycle Diesel Engine

switchgear for lighting and water supply, —H.T. supply 3,300 volt, 3-phase, L.L. supply 400 volt, 3-phase. Government of India Army Department, Lucknow supply and erection of overhead feeders and distributors for lighting scheme, 440 volt, 3-wire D.C., also sub-station cabling. The Auckland Jute Mill, Calcutta supply and erection of main and auxiliary cables 3,300 volt, 3-phase. East Indian Railway at Ondal and Moghal Serai, supply and jointing of underground cables. United Provinces Government Public Health Department, Hardwar supply and erection of 4-core paper insulated, lead covered and armoured cable for pumping station, 3-phase, 4-wire supply, 400 volt, The New Egerton Woollen Mills Co. Ltd., Dhariwal supply and erection of cables and distribution boards in power house, D.C. 440 volt, Indian Ordnance Factory, Ishapore supply and erection of cables for power house and of overhead mains to Palta estate, East Indian Railway, Moghal Serai supply and jointing of underground 2,200 volt, 3-core cables, disconnecting and non-disconnecting joint boxes, The Gourepore Co. Ltd., Calcutta supply and erection of 3-core cables, 20-way distribution panel and two 8-way distribution panels for power station auxiliaries, Jessop & Co. Ltd., Calcutta supply and erection of cables and boxes at the Port Engineering Works, Jardine Skinner & Co. supply and erection of material for overhead transmission line, 6,900 yards,

6,000 volts at Jealgora, Indian Stores Department Sukkur laying and connecting 2 cables across the River Indus. The cable for this contract was supplied on two drums each weighing 10 tons 3 cwt. the heaviest drums hitherto imported into India.

**Wiring System.** Henley's first introduced "lead" covered wiring into India where almost any type of "lead" covered wiring is now known as "Henley wiring." This system has been installed in practically every building of note including Government House, Calcutta, Memorial Church, Cawnpore, The Amir of Afghanistan's Palace, Kabul, Agra College, all Calcutta hospitals, Calcutta and Bombay Cathedrals, Mackinnon Mackenzie & Co.'s offices, Calcutta, Council Chambers in Calcutta, Madras, Simla, Bankipore and Shillong, Bengal and U.S. Clubs, Calcutta, Imperial Bank buildings, Colombo and Calcutta, etc.

**Agencies.**—The firm acts as agents for Griffiths Bros. & Co. (London) Ltd., insulating, varnishes, etc., Thos. De La Rue & Co. Ltd., "Telenduron" insulators, and The Diamond Coal Cutter Co., Ltd., of Wakefield.

**Share Appreciation.**—The £1 share was on November 12, 1926, quoted on the London Stock Exchange at £4.

**Directorate.**—The Board consists of Sir George Sutton, Bt., M.I.E.E. (chairman and managing director), R. J. Hattan, W. J. Potter, A.A. Campbell Swinton, F.R.S., and Sir Montague Hughman.

**Head Office.**—Holborn Viaduct, London, E.C.1

**Indian Head Office.**—The head office for India, at Henley House, Old Court House Corner, Calcutta controls Burma, Ceylon, Mesopotamia and Aden.

**Bombay Branch.**—Henley House, Ballard Estate.

**Agents.**—The firm is represented by agents at Madras, Rangoon, Karachi and Aden, as follow:—Madras: The Crompton Engineering Co. (Madras), Ltd., Burma: C. R. Cowie & Co. Rangoon, Sind and Baluchistan: The General Electric Trading Co., Karachi, Aden: Cowasjee, Dinshaw & Bros., Steamer Point.

**Cables.**—"Wiring," Calcutta and Bombay Codes: Bentley's, Western Union (Universal and 5-letter), A.B.C. 5th Edition and Private.

**Bankers.**—The Chartered Bank of India, Australia and China.

#### SULZER BROS.

**Inception.**—As far back as 1876 and 1878 this famous Swiss firm installed "Sulzer" steam engines in Mandalay and Bombay respectively, and from that time has been a regular supplier of engineering plant to all parts of the country. In 1923 it was decided to centralise the firm's activities in India, and offices were opened in Calcutta in that year.

**Activities.**—Manufacturers of centrifugal pumps, high and low pressure fans, Diesel oil engines, steam engines, refrigerating

machinery, water tube and Lancashire boilers. Messrs Sulzer Bros. undertake the supply and installation of such plant throughout India. Some of the more important electric generating stations utilising "Sulzer" Diesel engines are the Patna Electric Supply Co., the Dacca Electric Supply Co., the Delhi Electric Tramways & Lighting Co. and the Colombo Electric Tramways Co.

In addition to the above, recent orders have been obtained for the Dehra Dun Power Plant of the Mussoorie Municipality, having a total capacity of 900 kw. and comprising three "Sulzer" Diesel Engines, each having an output of 500 b.h.p., while a further 500 b.h.p. engine has recently been ordered for the Patna Electric Supply Co. and three similar engines each of 500 b.h.p. have been purchased by the Bhagalpur Electric Supply Co. for their new Power Station.

**Specialities.** The "Sulzer" centrifugal pump is famous throughout the coal-mining world, and some of the important collieries in the Bengal coalfields using these pumps are the East India Coal Co., the Central Kurkend Coal Co., the Tata Iron & Steel Co., and the Bengal Iron & Steel Co. A recent important order is for the pumping plant of the Multan Waterworks, comprising four sets of electrically driven "Sulzer" borehole centrifugal pumps. Sulzer Bros. are pioneers in this type of pump, which they have been manufacturing for over 20 years.

The cross-compound extraction steam engine, as supplied to the new mills of The Delhi Cloth & General Mills, is capable of giving a continuous output of 1,125 b.h.p. and is the first installation of its kind in India. Its chief feature is its power to extract a certain proportion of the steam from the receiver between the h.p. and l.p. cylinders, such steam being used for heating purposes in the mills at practically no cost. The installation of this most economical prime mover is an all important consideration for manufacturers in the light of the stricter economic conditions prevailing to-day.

**Head Offices.**—11, Chive Street, Calcutta.

**Works.**—Winterthur, Switzerland.

**Cables.**—"Geba Sulzer," Calcutta. Codes Bentley's and Schofield's Eclectic.

**Bankers.**—The International Banking Corporation, Calcutta.

THOMAS ROBINSON & SON (INDIA) LTD., Calcutta

- 1 The Company's Offices
- 2 Handsome Showrooms at Calcutta

### THOMAS ROBINSON & SON (INDIA) LTD.

**Inception.** The amalgamation of several leading British and American engineering concerns formed the origin in November 1924 of this enterprise.

**Development.** The company is one of the most progressive of its kind in India, and within ten months of its inception had secured the first complete contract ever placed by an Indian railway for fully equipped workshops. This was for the erection and completion of buildings, cranes, machines, shaftings, pulleys, etc. for the new saw mills of the East Indian Railway. The company's designs and lay outs having met with the unqualified approval of the engineers in charge. The firm under notice is one of the few in India to submit designs and estimates and send its own expert staff to supervise the erection and starting up of the plant supplied. Several minor contracts of a similar nature for machine shops, etc. have been successfully handled within the past year.

**Branches.**—Already offices have been opened at Lahore, and a further extension at Bombay is under consideration.

**Constituent Firms.** The principal engineering firms comprising the organisation are: Thos. Robinson & Son Ltd., Rochdale; Craven Bros. (Manchester) Ltd., Reddish; The Gloucester Railway Carriage & Wagon Co. Ltd., Gloucester; Laurence Scott & Co. Ltd., Norwich; The Atlas Engineering Co., London; Reavell & Co. Ltd., Ipswich; The Phosphor Bronze Co. Ltd., London and Birmingham; Alfa-Laval Co. Ltd., London; The

Brooke Tool Co. Ltd., Birmingham; J. Beardslow & Son Ltd., Baltic Steel Works, Sheffield, C.A.V. Small Tools Ltd., Brighton; J. B. Corrie & Co., London; The Equipment & Engineering Co. Ltd., London; John Robson (Shipley) Ltd., Shipley; The Longford Wire Co. Ltd., Warrington; Hancock & Co. (Engineers) Ltd., Croydon; Brown & Sharpe Mfg. Co., Providence, Rhode Island, U.S.A.; Warner & Swasey Co., Cleveland, Ohio, U.S.A.; The Cushman Chuck Co., Hartford, U.S.A.; The Vitrified Wheel Co.,

Westfield, U.S.A.; The Landis Machine Co., Pennsylvania, U.S.A.; and Alfred Baillet & Co., Paris.

**Directorate.**—The board consists of Messrs Charles J. Robinson (chairman), J. B. Corrie, Kanai Lal Jatia and C. Warren-Boulton (managing director).

**London Offices.**—15, Victoria Street, Westminster, S.W.

**Head Offices and Showrooms.**—24, Park Street, Calcutta (cables "Thorobind" Calcutta). Code Bentley's.

**Bankers.** The Chartered Bank of India, Australia and China.

### GREAVES COTTON & CO. LTD.

**Inception.**—Founded in 1863, this company conducts the business of general import merchants in metals, piece-goods and machinery, electrical and mechanical engineers and contractors and manufacturer's representatives.

**Representations.**—Very valuable agencies are held in all the lines covering the cotton and woollen textile industries: cotton ginning and pressing, ice-making, pumping, flour milling and agricultural machinery, and electric generation and distribution. The company represents 15 leading British and American firms in mechanical engineering, eight textile machinery manufacturers, over a dozen electrical engineering concerns, and some of the best British houses for engineers' and mills' stores.

**Insurance.**—This department of the firm represents the Sun Insurance Office (Asiatic Agency), Western Assurance Company,

GREAVES COTTON & CO., LTD.  
Head Office at Bombay  
(See *Literary*, p. 145)

Reliance Marine Insurance Co. Ltd., South British Insurance Co. Ltd. and the National Mutual Life Association of Australia Ltd.  
**Management.**—The company is controlled by the Managing Agents Greaves Cotton & Co. Ltd., the partners being Messrs. J. B.

Greaves, N. G. Hunt, A. McIntosh and A. St. P. Pooley.

**Buying Offices.**—James Greaves & Co. 14 John Dalton Street and 11-13 Ridgely Manchester

**Branches.** Calcutta, Karachi, Ahmedabad and Lahore.

**Head Offices.**—1, Forbes Street, Bombay (cables "Greaves," Bombay). Codes Bentley's and Private.

**Bankers.** Bank of England, Manchester & County Bank for James Greaves & Co. and Hongkong & Shanghai Banking Corporation, Lloyds and other banks for Greaves Cotton & Co. Ltd.

#### DUNCAN, STRATTON & COMPANY.

**Inception.**—This firm was established in Bombay in 1881 by the late Mr. T. W. Shallis, the original designer of the Nasmyth cotton baling press, the most popular of its kind in India.

**Representations.** Operating as engineers and machinery importers, Messrs. Duncan, Stratton & Co. represent many leading manufacturers, the chief being Henry Simon Ltd., Nasmyth Wilson & Co. Ltd., Ransomes Sims & Jefferies Ltd., Brooks & Doxey (1926) Ltd., Crofts (Engineers) Ltd., Vickers Boiler Co. Ltd., Greenwood & Batley Ltd., Sir James Farmer Norton & Co. Ltd., Skefko Ball Bearing Co. Ltd., Alexander Shanks & Son, Ltd., Power-Gas Corporation Ltd., The Texas Company, New York, Sulzer Brothers, Winterthur, Clyde Oil Fuel System Ltd., BSA Tools Ltd., Ames Crosta Sanitary Engineering Co. Ltd., and Lea Recorder Co. Ltd., etc.

**Administration.**—The organisation is divided into sections, each controlled by a trained specialist in every line handled by the company. The firm has built its connection on the basis of service to clients, and with this object in view has always made the closest study of Indian conditions, relying for its technical information on its principals in England.

**Head Office.** 5, Bank Street, Fort, Bombay (cables "Hydraulic," Bombay).

**Branches.**—100, Clive Street, Calcutta (cables "Dunstrat," Calcutta); and 86, The Mall, Lahore (cables "Hydraulic," Lahore). Code Bentley's.

**London Representative.**—Mr. F. Harwood, Atherstone, Upper Brighton Road, Surbiton.

**Bankers.**—The Mercantile Bank of India, Ltd., The P & O. Banking Corporation, Ltd.

DUNCAN, STRATTON & CO., Bombay.

Boiler House of Southern Power Station, Calcutta, designed and installed by Messrs. Duncan, Stratton & Co. Ind. Ganeesh Flour Mills, also designed and constructed by the Firm.

**WILLIAM JACKS & CO.**

**Inception.**—The present Indian branch of these well-known metal merchants of London, Birmingham and elsewhere, whose weekly metal market report is a feature of local newspapers throughout India, was established some 20 years ago.

**Activities.**—The firm operates as importers and exporters, builders, engineers' suppliers and reinforced concrete specialists among its clients being the Government of India, the Provincial Governments, the Railways and all the leading commercial organisations in the country.

**Agencies.** Messrs W. Jacks & Co. are sole agents in India for a number of important manufacturers, including

**THE ARMCO INTERNATIONAL CORPORATION**, makers of 'Armco' Ingot Iron, the purest iron made and in great demand by the P.W.D., Railways, District Boards, Port Trusts, M.F.S. etc. the "Armco" Corrugated Nestable Culvert, the strongest, simplest and most economical nestable culvert for the solution of the small bridge and drainage opening problem, and the "Armco" Lennon Type Flume, largely used in India and Burma for irrigation and hydro-electric works. **THE EXPANDED METAL CO., Hartlepool** whose productions have been supplied to many of the largest projects in India, **THOS. TIRTH & SONS LTD., Sheffield**, the world famous steel and stainless steel manufacturers. **THE AMERICAN ROLLING MILLS CO., Ohio**. **THE CALIFORNIA CORRUGATED CULVERT CO., West Berkeley** and the **SENTINEL WAGON WORKS LTD., Shrewsbury**, makers of steam rail coaches, patent locomotives, tipping wagons and lorries. The company also acts as secretaries for the **Crittall Mfg. Co. (India) Ltd., Bombay** manufacturers of steel windows.

**Branches.**—The company is also established at Calcutta, Karachi and Madras, and represented at Lahore by Messrs W. J. Knott & Co., Charing Cross.

**Partners.** John Gray, Buchanan, Stewart, Barry and R. Russell Walker.

**Head Offices.**—Westminster House, Old Broad Street, London, E.C. 2.

**Bombay Offices.**—Ballard Estate.

**Cables.**—"Alkalize," London. "Terrocere," Calcutta. "Astorr," Bombay and Karachi. "Limpet," Madras. Codes: A.B.C. 5th Edition, Bentley's and Acme.

**Bankers.**—The Chartered Bank of India, Australia and China and the P. & O. Banking Corporation.

**ALFRED HERBERT (INDIA), LTD.**—13, British Indian Street, Calcutta. Engineers and machine tool importers. Branches at Bombay, Lahore and Madras. Agents for Alfred Herbert, Ltd., Coventry; C. Redman & Sons, Halifax; Webster & Bennett, Ltd., Coventry; E. G. Herbert, Ltd., Manchester, etc. Cables: "Machine" Codes: Western Union, A.B.C., Lieber's and Private.

**ALLEN, W. H., SONS & CO. LTD.**—26, Strand Road, Calcutta. Works: Bedford, England. Mechanical and electrical engineers, manufacturers of steam engines and turbines, condensing plants, pumps, Diesel and semi-Diesel oil engines, electrical machinery, fans, etc. Cables: "Darby."

**ANGUS KEITH & CO.**—98-5, Clive Street, Calcutta. Importers of hardware, machine and small tools and engineering stores. Agents and stockists for many well-known manufacturers. Cables: "Conformity." Code: Bentley's.

WILLIAM JACKS & CO., Bombay

1. The King Edward Memorial Hospital, Parel, Bombay, where steel windows manufactured by the Crittall Manufacturing Co. (India) Ltd., of which Wm. Jacks & Co. are Secretaries, were utilized.
2. Installing a 36" Armco Corrugated Culvert (manufacturers, The Armco International Corporation, another important representation held by William Jacks & Co. in India) under supervision of the Public Works Dept., Vizagapatam Division.

**ASBESTOS AND BELTING CO., LTD.**—7, Council House Street, Calcutta. Manufacturers of "Salva" asbestos packings and jointings, asbestos and magnesia boiler and steam pipe coverings, hair, balata, cotton and leather beltings, Trafford tiles, asbestos cement sheets and slates and steel roof framework. Cables: "Asbestos" Codes: Bentley's, Western Union 5-letter Marconi, A.B.C. 5th edition and Private.

**ASSOCIATED BRITISH MACHINE TOOL MAKERS, LTD.**—Temple Chambers, 6, Old Post Office Street, Calcutta. Registered offices: 17, Grosvenor Gardens, London, S.W. 1. Formed by the co-operation of nine well-known firms to improve design and reduce cost of machine tools, this company is in no sense a "Trust" or "Combine." An efficient sales organisation is being established to further the interests of British trade in all parts of the world. Cables: "B. Toolmak." Calcutta.

**AVERY, W. & T., LTD.**—Head office for India and the East: Calcutta. Office and showrooms: Waterloo Street. Works: Dacres Lane, Godowns, British Indian Street. Incorporated in England. Bombay sub-branch office: 11, Dongall Road, Ballard Estate. Other branches at Lahore and Rangoon. British offices and works: Soho Foundry, Birmingham. Cables: "Weighme" Codes: A.B.C. 5th Edition and Marconi International.

**BALDWIN LOCOMOTIVE WORKS.**—5, Dalhousie Square East, Calcutta. Head office: Philadelphia, U.S.A. Locomotive builders and railway engineers, machine tools. Agencies: "Sunbeam" electric headlights; Fairmont motor trolleys; Watson Stalman drop pit jacks, etc. London office: 34, Victoria Street. Paris office: 14, Rue Duphot. Cables: "Baldwinloc." Codes: A.B.C. 5th Edition, Bentley's and Private.

LONGOVICA INDUSTRIAL &amp; COMMERCIAL EXPORT CO., LTD

General view of Steel Depot

**LONGOVICA LTD.**

**Inception.** Commencing operations in Calcutta in September 1922 this important engineering concern made rapid headway and in December 1925 opened a sub-agency in Madras.

**Activities.**—The firm's operations cover a wide field embracing electrical mechanical civil and structural engineering the manufacture of rolling stock for railways and tramways, and the importation into India of hardware, steel, tubes and building material. The office staff numbers 50 under European supervision.

**Premises.** In addition to the office buildings the company has its own godowns for hardware such as bolts and nuts, rivets, galvanised wire and wire of all descriptions, wire nails, hoop iron, etc., covered sheds for light steel sections, and an open yard for heavy sections like joists, ship plates, structural sections, etc., all situated on the Howrah side. Further, the establishment is directly connected by rail with the Calcutta jetties, having one siding close to Jagannath Ghat and the Durmahatta Street Market, and therefore in the best position to comply with up-country orders and the local demand.

**Stock.**—The total tonnage of goods of all descriptions constantly in stock amounts to 3,500—4,000, while the regular consignments arriving every week allow the firm to push its business on an extensive scale.

**Godowns.**—5, Rose Mary Lane, Howrah.

**Head Offices.**—102, Clive Street, Calcutta (cables "Longovica," Calcutta) Codes Bentley's, A B C 6th Edition and Private.

**Bankers.**—Anglo-South American Bank Ltd., London, National Bank of India, Ltd., London and India.

**BEHRENS, SIR JACOB, & SONS** F-4 Clive Buildings, Clive Street, Calcutta. This firm of merchants is also established at Delhi, Manchester, London and Bradford. Bombay agents: W. N. Cresswell & Co. Cables "Narakmo" Codes A B C 5th Edition Bentley's, Western Union Whitclaw's 301 and 1020 Million Artificial Words and Private.

**BRADY, W. H., & CO. LTD.**—20, Strand Road Calcutta. Head office: Royal Insurance Buildings, Churchgate Street, Bombay, and at 154-155 Popham's Broadway, Madras Canal Range, The Mall, Cawnpore. Manchester office: 10, John Dalton Street. Merchants, machinery agents, engineers and contractors, etc. Cables "Darby" Codes A 1, A B C 5th and 6th Eds., Bentley's and Private.

**BRAITHWAITE & CO., ENGINEERS. LTD.**—7 Royal Exchange Place, Calcutta. Incorporated in England. Structural and mechanical engineers. Registered office: Broadway Buildings, Broadway, London, S.W.1. Works in England: Crown Bridge Works, West Bromwich. Cables "Brom-kirk," Calcutta, and "Braithwaite," Bombay. Codes A B C 5th Ed. and Bentley's.

**BRITISH MANNESMANN TUBE CO. LTD.**—C-6 Clive Buildings, Clive Street, Calcutta. Incorporated in England. Manufacturers of Weldless (Solid Drawn) steel tubes of every description, including boiler tubes, water, gas, steam, air and sewage mains, electric transmission, lighting, traction, telegraph and telephone poles, etc. Cables "Tubular," Calcutta, and "Seamless," Bombay.

**BRITISH ROPES (INDIA), LTD.**—1, Mission Row, Calcutta. Steel wire rope manufacturers, engineers and contractors for aerial ropeways, cableways, suspension bridges.

Sole agents for: George Cradock & Co. Ltd., Leeds; Meter Co., Bootle; Martin & Co. Cables "Ropes" Codes A B C 5th Ed. Bentley's and Private.

**BRITISH THOMSON - HOUSTON CO. (INDIA), LTD.** Head office: A-3 Clive Buildings, Clive Street, Calcutta. Also at Bombay, Cawnpore and Madras. Electrical engineers and contractors, manufacturers of steam turbines, electric generators, motors, rotary converters, railway and tramway apparatus, measuring instruments, etc. Cables "Mamland" all offices. Codes Schofield's and Private.

**CAMMELL, LAIRD & CO. (INDIA), LTD.**—Registered office: 5, Fairlie Place, Calcutta. Suppliers of rolling stock and all parts for same, tool steel, spring steel and files. Secretaries: Hoare, Miller & Co. Ltd. London correspondents: Hoare, Miller & Co., Pinners Hall, Austin Friars, E.C.2. Cables "Hoare-miller," Calcutta.

**GENERAL ELECTRIC CO. (INDIA), LTD.**—Head office: 14, Old Court House Street, Calcutta. Branches at Bombay, Madras and Lahore. Manufacturers of everything electrical. Bombay branch: Sohrab House, 235, 237, 239, Hornby Road, Madras branch: 100, Armenian Street, Lahore branch: Lawrence Road. Cables "Kilowatt," Calcutta.

**GLENFIELD & KENNEDY, LTD.**—Fairlie House, 4, Fairlie Place, Calcutta. Incorporated in Scotland. Hydraulic engineers, manufacturers of reservoir iron works and all classes of water supply fittings, valves for water, steam, gas and oil, hydrants, air-valves, etc. Head office and works: Kilmarnock, Scotland. London office: 39, Victoria Street, S.W.1. Cables: "Glenfield," Codes: A.B.C. 5th Ed., Engineering 2nd Ed. and Private.

**HEATLY & GRESHAM, LTD.**—6, Waterloo Street, Calcutta. Incorporated in England. Engineers, railway specialists, metal, asbestos sheets, and general merchants. Bombay office 204, Hornby Road, Lahore. The Mall, Head office 40, Wood Street, Westminster, London, S.W. Engineering works 22, Gobra Road, South, Entally, Calcutta. Cables "Brake" Codes A B C 5th Ed and Bentley's.

**INGERSOLL-RAND (INDIA), LTD.** 15, Chive Street, Calcutta. Incorporated in Calcutta, December, 1922. Limited liability company working under the London office of Ingersoll-Rand Company, Ltd., 165 Queen Victoria Street, London. Mining, tunnelling and quarrying plants, rock drills, water leucydrills, jackhammers, air compressors, etc. Cables "Ingersoll."

**INTERNATIONAL GENERAL ELECTRIC CO.** (of New York)—Stephen House, Dalhousie Square, East, Calcutta. Also at Bombay and Bangalore. Electrical engineers and contractors, manufacturers of hydro-electric plant, electric railway and tramway plant, steam turbines, transformers, switch gear, electric motors and generators, fans, lamps and fittings. London office Crown House, Aldwych, W.C.2. Cables "International," all offices. Codes Schofield's, Bentley's and Private.

**IVAN JONES, LTD.**—12, Mission Row, Calcutta. General merchants. Godowns 5, Mangoe Lane. Motor section and engineering works 206 Lower Circular Road. Amongst this firm's activities it controls the following departments: General sales, railway engineering, motor and motor engineering,

general and analytical department for the commercial analyses of coal, iron and steel, shellac, etc. Cables "Lustitz" Codes A B C 5th Edition, Western Union and Bentley's.

**KEYMER, BAGSHAW & CO. LTD.**—5, Mangoe Lane, Calcutta. This office was established about the year 1902. The firm specialises as combustion engineers and maintains an expert staff for advising on and drawing up prospective schemes on all matters pertaining to combustion, including pulverised fuel and heat efficiency generally. Many large industrial schemes have been carried out throughout India, including those for the leading State Railways. Cables "Keymerco," Calcutta. Codes A B C 5th and 6th Eds.

**LIGHTFOOT REFRIGERATION CO. LTD.**—138, Balhaghatta Road, Entally. P.O. Refrigerating machines, ice manufacturers, oxygen production and welding appliances. Cables "Lightfoot."

**LINOTYPE & MACHINERY, LTD.**—Linotype House, 21, Bowbazar Street, Calcutta. Engineers and printing machinery manufacturers. Inventors and manufacturers of the linotype composing machine. Head office 9, Kingsway, London, W.C.2. The Indian branches at Calcutta and Bombay are staffed by English engineers and specialists, and maintain stocks of machines and spare parts. Manager for India Mr A. J. May.

**MATHER & PLATT, LTD.** (Incorporated in England)—7, Hatfield Street, Calcutta, P.O. Box No. 389. Phone No. 1557, manager James Widdup. Bombay office Bombay

House, Bruce Road, Fort, P.O. Box No. 327; Phone No. 21753, manager W. Davidson. Cawnpore district representative S. J. Ricks, "Invernal," Nawabganj. London office Park House, 14, Great Smith Street, Westminster, S.W.1. Works Park Works, Newton Heath, Manchester. Manufacturers of the Grinnell Sprinkler, fire extinguishing appliances, armoured fire doors, electrical machinery, pumping machinery, bleaching, dyeing and finishing machinery, patent tram lighting dynamos, Vortex humidifiers, etc. Cables "Sprinkler," all offices. Codes A B C 5th Ed., Tybo, M & P.

**McKENZIE, G. & CO. (1919), LTD.**—General manager's office and showrooms, 18a, Park Street, Calcutta. Motor engineers. Branches in India Ranchi, Lucknow, Cawnpore, Delhi, Agra, Jaipur, Lahore, Rawalpindi, Peshawar, Bareilly and Rangoon. Cables "Oland," Calcutta and Rawalpindi, and "Overland," all other Indian branches. Code Bentley's.

(See also letterpress, page 274.)

**METROPOLITAN-VICKERS ELECTRICAL CO. LTD.** Head office for India Hongkong House, Council House Street Calcutta. Incorporated in England. Manufacturers and suppliers of electrical machinery of all descriptions, including A.C. and D.C. generators, motors, transformers, switchgear, controlgear, electric railway and tramway equipments, steam turbines, condensing plant, hydro-electric plant, motors, instruments, electric fans, installation and electrical accessories. Branch at Murzban Road, Fort, Bombay.

## BENGAL PRESIDENCY

THE Presidency of Bengal, which comprises the lower valleys and deltas of the Ganges and Brahmaputra, in the main consists of a great alluvial plain intersected in its southern portion by innumerable waterways. It has a total area of 82,277 square miles and a population of 47,592,462. Included within this area are the two Indian States of Cooch Behar and Tripura, which are now placed in direct political relations with the Government of India.

**ADMINISTRATION.**—The present form of control in Bengal dates from January 1921. In 1912 the Government of the Province underwent an important change, when, in accordance with the Proclamation of His Majesty the King-Emperor at Delhi, that Province, which had previously been administered by a Lieutenant-Governor, was brought under the direction of a Governor-in-Council, thereby coming into line with the Presidencies of Madras and Bombay. In 1921, under the Reform Scheme, the Local Government was reconstituted, certain of the departments being placed under the control of Ministers appointed from among elected members of the Legislative Council. There are normally four members of the Executive Council, who are in charge of the "reserved subjects," and three Ministers in charge of the "transferred subjects,"

but in 1924, owing to political reasons, there were only two Ministers, and these had to resign owing to the refusal of the Legislative Council to vote their salaries. On their resignation the administration of transferred subjects was thereupon assumed by H.E. the Governor of Bengal, and subsequently the Secretary of State ordered the suspension of transfer of all transferred subjects in Bengal until January 21, 1927.

The present Governor of Bengal is H.E. the Right Hon. the Earl of Lytton, P.C., G.C.I.E., who assumed office in 1922. The capital and seat of the Provincial Government is Calcutta.

**COMMERCE.**—In 1925-26 the foreign seaborne trade of Bengal (excluding treasure but including Government stores) amounted to Rs 276 crores, of which Rs 104 crores represented imports and Rs 172 crores exports. The six chief exports from Bengal are in order of importance: jute (raw and manufactured), tea, lac, gram (pulse and flour), seeds, hides and skins (raw), while the six leading imports are cotton goods, metals and ores, sugar, machinery and millwork, railway plant and rolling stock, and oils. (See also general article, "Commerce.")

**FINANCE.**—The estimated revenue of the Province of Bengal for the financial year 1925-26 was Rs 12,16,60,000, of which Rs 2,11

lakhs were derivable from land revenue, Rs 3,31 lakhs from excise, and Rs 3,41 lakhs from stamps. Expenditure was estimated at Rs 10,77,01,000, leaving a favourable balance of Rs 1,39,59,000.

**MANUFACTURES.**—The main industries in Bengal, in addition to agriculture (jute, rice, wheat, barley, pulses, oil-seeds, sugar and tobacco), which employs over 77 per cent of the population, are the jute mill industry, the tea industry (largely an Assam industry), and coal mining. The jute mills in and around Calcutta constitute the principal manufacturing industry of the Presidency, and at the beginning of 1926 there were about 80 such mills at work, operating a total of 49,399 looms and over 1,200,000 spindles. The average number of persons employed daily is about 325,000. (See also special article on "Jute.") Other principal industries of the Presidency are cotton twist and yarn, silk yarn and cloth, hand-made cloth, sugar, molasses and paper. The manufacture of tea is carried out on an extensive scale in Darjeeling and Jalpaiguri. Coal mines worked in Bengal in 1924 numbered 270, their total output exceeding 5,000,000 tons.

(For details bearing upon the Presidency of Bengal see separate articles in this Section as indicated in the "Contents" pages and "Index.")

## CITY AND PORT

### CITY

**T**HOUGH not enjoying quite the antiquity of the capital of either of its two sister Presidencies, Bengal's premier city, which was also for years the capital of British India, out-distances both Bombay and Madras in point of size and population. Its history begins in 1690, when the earlier English settlement at Hooghly was abandoned in favour of the present site, on which the three villages of Sutanati, Kalikata, and Gobindpur then stood, Job Charnock being the leader of the merchants who settled there. These estates were sold to the East India Company in 1700, and in 1707, when the population of Calcutta was already 10,000, Bengal was formed into a separate Presidency, independent of Madras. In 1756 Calcutta was lost to the Nawab of Murshudabad, but was retaken by Clive in the following year, and from that time onwards the city has enjoyed continued and increasing prosperity. A succession of great governors and of public spirited citizens—Indian as well as English—has endowed it with fine buildings and beautiful palaces. It is now the second city in the British Empire as regards population, and, with centuries of history behind it, may confidently look forward to a future of splendid growth and development.

**ART GALLERY.**—The Government Art Gallery and School of Art occupy the Southern end of the Indian Museum in Chowringhee. The Art Gallery, which contains a fine collection of paintings of the Hindu and Mohammedan periods, is open to the public.

**BLACK HOLE.**—The actual site of the famous Black Hole of Calcutta (see "History") is at the north-east corner of the General Post Office, and the small railled-off enclosure was paved with black marble by Lord Curzon. The pavement marks the exact breadth of the prison (14 ft 10 in), but not its full length, 18 ft, about a third of the area at the north end being covered by the Post Office buildings.

**BUILDINGS.**—See special article following.

**CHAMBER OF COMMERCE (BENGAL).**—(See under "Commerce.")

**CHURCHES.**—Of old and new places of worship Calcutta has its full share, all creeds and denominations being represented. St Paul's Cathedral, on Chowringhee Road, dates from 1847, and is built in a spurious Gothic style, modified to suit the Indian climate. Its principal features of interest are the tall graceful spire 201 ft. high, the west window by Burne Jones, and the many memorials to civil and military notabilities. The old Church of St. John, built after the model of St. Stephen's, Walbrook, was originally the Cathedral Church of the diocese. Here are the tomb of Lady Canning and a large picture of the Last Supper by Zoffany, in which the Apostles are all portraits of well-known inhabitants of Calcutta. The Old Mission Church (*Purana Giryā*) stands in Mission Row. St Andrew's (Presbyterian) is an outstanding feature of the Radha Bazar, and St. James' Church in Lower Circular Road is noted for its double steeple. The Roman Catholic Cathedral of

Our Blessed Lady of the Rosary is the old Portuguese Cathedral of Murgibhatta, and dates from the time of Charnock. The finest Mohammedan Mosque in Calcutta is that known as Tipu Sultan's Mosque, which stands at the corner of Esplanade East and Durrumtola Street, and whose white domes and slender minarets with their gilded pinnacles provide a pleasing contrast to the monotonous flat-roofed buildings surrounding it. The Jains have a handsome series of temples in Halsi Bagan, off Upper Circular Road, known as the Temples of Pareashnath. The largest Parsee fire temple is situated in Metcalf Street.

**CLIMATE.**—The climate of the city of Calcutta is essentially tropical, but the temperature varies considerably, ranging from 52° to 106°F. The most unhealthy times are the months after the end of the rains, the most enjoyable those of the winter period, that is from November to the end of February. The humidity is great, the average rainfall being about 66.04 inches. The biggest rainfall occurs in August and the smallest in December.

The situation of Calcutta is very flat (16 to 19 ft. above sea level), and being less than a hundred miles from the sea it is subject to violent cyclones and hurricanes, which sweep up from the Bay of Bengal and often do much damage to the shipping in the harbour and the houses on shore. Calcutta is also liable to occasional shocks of earthquake.

**FORT WILLIAM.**—The largest fortress in India was completed in 1773 at a cost of

CALCUTTA.

To, and General Post Office (with dome) are seen in the centre

## OF CALCUTTA.

two millions sterling. The fort is really a miniature town, and has seven gates, being built in the shape of an irregular octagon five sides facing the land and three the river. It is surrounded by a ditch which can be flooded with water from the River Hooghly.

**GHATS.**—Objects of considerable interest in Calcutta are the many Ghats or landing places along the banks of the Hooghly, some of which are used regularly as bathing places by the faithful. The most important of these Ghats are Baboo Ghat, which lies a little to the south of the High Court, opposite Auckland Road, and has fine Doric pillars, Chandpal Ghat, named after a certain Chand Pal (who sold coarse refreshments to pedestrians and boatmen), and the favourite starting point for river expeditions, Kali Ghat, which is the shrine of the patron Goddess of Calcutta, and is visited annually by thousands of pilgrims from all over the country, Outram Ghat, opposite the Eden Gardens, a landing stage for passengers to and from England, and Prinsep's Ghat, now the state landing stage of Calcutta, where both the present King-Emperor and his father (when Prince of Wales) landed on the occasions of their respective visits to India.

**HOWRAH BRIDGE.**—The pontoon bridge across the River Hooghly connects Calcutta with Howrah. It was originally constructed as a temporary measure and opened to traffic in 1874, the question of a permanent bridge, however, has not been settled to the present day. In 1922 a New Bridge Committee reported that, in view of the serious condition of the existing floating

bridge and the grave consequences which would result from its failure, no time should be lost in providing a new bridge over the Hooghly and that the structure should be on the cantilever principle. The present bridge is 1,528 ft in length, and consists of 14 pairs of wrought-iron pontoons, the central portion is movable, and is removed at appointed times to allow ships to pass along the river.

At either end of the bridge the visitor will notice in the morning an immense concourse at the bathing "ghats" which have been built by pious Hindus. A mixed crowd of men and women can be seen taking their morning "dip," a practice which is considered a sacred duty.

**IMPROVEMENT TRUST.**—The Calcutta Improvement Trust was instituted by Government in 1912, with a view to making provision for the improvement and expansion of Calcutta by opening up congested areas, laying out or altering streets, providing open spaces for purposes of ventilation or recreation, demolishing or constructing buildings and re-housing the poorer and working classes displaced by the execution of improvement schemes. The problem of expansion has always been a difficult one because of the peculiar situation of Calcutta, which is shut in on one side by the Hooghly and on the other by the Salt Lakes. During the 14 years that it has been at work the Trust has spent over 7 crores of rupees on capital account, among other important road-making schemes has laid out the Central Avenue, has provided parks and playgrounds,

and has constructed many blocks of chawls for working-people.

**INDUSTRIES.**—Calcutta is, next to Bombay, the greatest manufacturing city in India. The chief of the manufactures is the spinning and weaving of jute, Calcutta having become the world's supplier of jute-cloth and gunny bags. There are also cotton mills, paper mills, rope works (hemp and coir), sugar factories, engineering works and iron foundries. A great advantage to the manufacturers of Calcutta is the nearness of the Raniganj coalfield, from which cheap fuel can be procured. In the manufacture of jute, also, Calcutta has a great advantage in the monopoly of the crop, which grows at its doors, and in cheap labour and land. (See also special article on "Jute.")

**LIBRARIES.**—The Imperial Library, which is included in Metcalfe Hall, was founded by Lord Curzon, who amalgamated the old Calcutta Public Library with the Government of India Home Department Library. "The Imperial Library Council aim at making the Library one from which or through which any book may be obtained that anyone in India may want." The Bohar Library consists of a collection of valuable Arabic, Persian and Urdu books and manuscripts. The Imperial Library is open from 10 a.m. to 7 p.m., and the spacious reading rooms are very freely used; admittance to the private reading rooms is granted only to persons engaged in protracted research work.

The Library of the Asiatic Society of Bengal, situated in Park Street, contains over 15,000 volumes, more than 5,000 of which

MERCHANT PRINCES OF INDIA.

1. Clive Fow, showing Jardine Skinner's Building on the right.
2. Clive Street. Head Office of Martin & Co. in the right foreground.

are Sanskrit, Arabic, Persian and Hindi manuscripts. There is also a fine collection of Burmese, Nepalese and Tibetan manuscripts. Included in the library is a rich collection of copper *sanads*, portraits, pictures and busts, and these are well worth inspection.

Mention should be made of the Commercial Library and Reading Room at 1, Council House Street, which has been organised to meet the needs of the commercial and industrial public, offering to it unique facilities for the borrowing or consultation of books.

**MARKET (MUNICIPAL).**—The Municipal Market, the main entrance to which is in Lindsay Street, is called Sir Stuart Hogg Market after the name of a Chairman of the Calcutta Corporation and Commissioner of Police, in whose time (1874) it was founded. It is one of the best managed and most magnificent public markets in the world, and certainly the best and biggest in India and the East. Originally a food market it has developed into one where anything and everything can be bought, the different departments being well set out and arranged in groups.

**MINT.**—His Majesty's Mint occupies a handsome building in Grecian Doric style on the Strand Road north of Howrah Bridge. It is said to be the largest Mint of its kind in the world, having occupied from 1824 to 1830 in building, the construction cost 13 lakhs of rupees and the machinery 11 lakhs. In normal times the output is six lakhs of rupees per day, but during the Great War it was increased to 20 lakhs. Though gold coin is no longer struck in the Calcutta Mint, some very fine specimens of coins and medals minted are preserved in show cases.

**MUNICIPALITY.** For municipal purposes the civic administration of Calcutta is vested in the Corporation, which was remodelled in 1924 and now consists of 85 councillors, of whom ten are appointed by the local Government, 75 being elected by the ratepayers and certain public bodies. Five aldermen are elected by the councillors, and at the head are a Mayor and Deputy-Mayor, who are elected for one year by the councillors. For the purpose of electing councillors, Calcutta is divided into thirty-two general constituencies, in addition to which there are several non-territorial constituencies for the representation of the commercial communities. For valuation and administrative purposes the municipal area is divided into districts comprising 32 wards, which correspond to the constituencies. The income of the Corporation, which exceeds 114 lakhs of rupees, is derived chiefly from a consolidated rate and taxes on trades and professions and on vehicles and animals, and there is a municipal debt of about 400 lakhs in the form of loans. The present Corporation, which was created by the Act of 1899, has amply justified its existence, as very great improvements have been effected during recent years in water-supply, drainage, road paving, conservancy and municipal amenities generally.

**MUSEUMS.**—Calcutta's leading museum is the Indian Museum, an immense building which stands at the corner of Chowringhee and Sudder Streets. Its architecture is in the Italian style, and in Persian it is known as *Ajash Khana*, or the House of Wonders. It contains a particularly comprehensive collection of Indian antiquities. Special sections are devoted to the archaeological, ethnographical, geological, numismatic, Indo-Scythian, industrial and zoological collections, which are of great interest and value, many of the fossil remains, especially the Siwalik mammals and birds, being unique. The collections of zoölites and meteorites are amongst the finest in the world. In the adjoining Economic Galleries are fine samples of the products of Indian manufactures. The

Indian Museum is visited by over half a million people annually. In Council House Street is the Commercial Museum, an institution established in 1916 and housing a collection of Indian manufactures.

**OBSERVATORY.**—The Alipore Observatory is one of the first class observatories under the Government of India Meteorological Department. It possesses a transit instrument and gives Calcutta mean time to the port and shipping. The observatory also publishes daily weather reports and warnings.

**PARKS AND GARDENS.**—See special article following.

**POPULATION.**—The area of modern Calcutta with its suburbs is 42 sq. miles, with a population of 1,327,517, of which 940,841 are Hindus and 325,093 Mohammedans. Calcutta proper, excluding the suburbs, has an area of 32 sq. miles, with a population of 907,851.

**RACING (HORSE).** The racetrack at Calcutta is a famous institution and is about two miles long. It lies to the west of the Victoria Memorial, at the south end of the Maidan. The racing season begins in November and continues till the middle of March. There is also a monsoon meeting. Christmas week meeting is the great attraction, and the Viceroy's Cup, which is run during this carnival, is a great social event. The Royal Calcutta Turf Club was established in 1861. There are also fine racetracks at Tollygunge and Dum Dum.

**SCHOOLS AND COLLEGES.** Among the many educational institutions of which Calcutta is a notable centre is the Medical College of Bengal, the oldest and largest institution of its kind in India; the School of Tropical Hygiene and Institute of Medicine, in Central Avenue; the Carmichael Medical College, Belgachia; the Campbell Medical School and Hospital; the Presidency College, which was established in 1855 by the East India Company; the Government Sanskrit College and the Calcutta Madrassah, which are schools of Oriental studies; the Scottish Churches College; and St. Xavier's College, the deservedly famous school of the Jesuit Fathers. The Bengal Engineering College at Shibpur is affiliated to the Calcutta University, and the Bose Research Institute, founded by the distinguished Indian scientist, Sir J. C. Bose, is accomplishing a great deal of useful scientific work. (See "University.")

**SPORT AND RECREATION.**—The climatic conditions of Calcutta do not lend themselves to any appreciable extent to such strenuous games as football or hockey, but these are, nevertheless, played year in and year out by a large number of persons. There are over 150 Association football clubs in Calcutta and district, "soccer" has always been the great game of the British regiments stationed at Calcutta and many excellent matches are played there. Rugby football is indulged in only during the monsoon period, and then almost entirely by military teams. Cricket is played throughout the cold weather season, the ground of the Calcutta Cricket Club in Eden Gardens being one of the best, if not the best, in India. During the short Christmas season some very good cricket is seen. Tennis has attained to extraordinary popularity in Calcutta and its environs, and many Indians have taken it up with great success. The Bengal Tennis Championship, which takes place at the Eden Gardens each winter, is one of the sporting events of the year. Polo is played by British and Indian military teams, Calcutta claiming to have been the birthplace of the game. (See also "Racing" and general article on "Sport.")

**STATUES.**—There is probably no other city in the Empire so richly adorned with statues of public persons as is Calcutta. The

1. CLIVE STREET, Calcutta, from just below Messrs. Marshall & Co.'s Building, seen in right foreground.
2. The same thoroughfare, showing the Worthington-Simpson Building on right.
3. Another view of Clive Street.

1. ROYAL EXCHANGE PLACE, Calcutta.
2. STRAND ROAD, with Mackinnon Mackenzie's Building, in course of construction, in middle distance.
3. DALHOUSIE SQUARE; Standard Life Assurance Building on the left.

Maidan, in particular, is dotted with statues of Viceroys, Commanders-in-Chief and other notabilities. Nearly opposite the United Service Club rises the fine bronze statue of Outram, the Bayard of the East, while facing the south entrance of Government House is a full-length bronze statue of John Lawrence, well conveying the dignity and power of the saviour of the Punjab. Near by are statues of Canning, Napier of Magdala, the first Lord Hardinge, Mayo, David Ochterlony, the hero of 50 wars, and Bentinck the wise administrator. From the Ochterlony monument a beautiful view of Calcutta can be obtained.

More recent additions are the statues of Lord Curzon, Lord Kitchener and Lord Ripon. Lord Curzon's stately bronze statue faces the main entrance to the Victoria Memorial (see later) and is a worthy memorial to a great administrator. The Calcutta Cenotaph in memory of "the glorious dead" who fell in the Great War, stands at the head of the Red Road, facing the Ochterlony Monument. Another beautiful war memorial is that erected to the south of Prinsep's Ghat and known as the Lascar's War Memorial.

**STREETS.**—See special article following.

**SUBURBS.**—Most of the suburbs of Calcutta are situated in the districts in which busy native bazars predominate. Mention should be made of Alipore, named after Mir Muhammad Jaffer Ali, Nawab of Murshidabad, and Calcutta's most fashionable suburb. Here most of the houses have fine and spacious compounds and there are many places of interest connected with old Calcutta, as for instance Penn Road, which is a remainder of the extensive estate of Warren Hastings. Barrackpur, the big military cantonment, lies some 14 miles from Calcutta and is used by the Viceroy as an occasional weekend residence. Chandernagore, 21 miles from Howrah, is a French settlement with its own Governor and administration. Hooghly and Howrah are notable as being respectively great educational and industrial centres, and Lillooah is the pretty garden city planned and owned by the East Indian Railway Company, the site of their large workshops. Serampore and Sibbala have interesting buildings and temples, and Ittagarh is famous as having been once the stronghold of Thugs. It was on the bank of the Hooghly, near Ittagarh Factory, that Job Charnock dramatically rescued from the funeral pyre the beautiful young Hindu widow whom he afterwards married. At Tollygunge, four miles from Government House, are the ruins of the palaces once occupied by the eleven sons of Tipu Sultan of Mysore. Among Europeans, Tollygunge is noted for its fine racecourse and meetings, while the Tollygunge Gymkhana Club and the Golf Club for both sexes are famous throughout the East.

**TRAMWAYS.**—The tramway system of Calcutta has been since 1880 under the control of the Calcutta Tramways Company, Limited, which in that year obtained a "running" concession for 21 years, extended in 1901 for a further period of 31 years, about which time the installation was converted from steam and horse-power to electric traction. The system is a satisfactory one, most of the rising suburbs having been linked up with the central portions of the city. First and second-class cars (trailers) are run on all sections, and the convenience of the travelling public is further considered by the issue of transfer tickets, enabling passengers to change cars from one section to another at the different junction stations. On the working for 1925 there was an available balance of Rs.1,54,296, due largely to the traffic receipts for that year having shown an increase of Rs.6,69,388 over 1924.

**UNIVERSITY.**—The Calcutta University is the oldest institution of its kind in India, having been founded in 1857, with "The Advancement of Learning" as its motto and the Governor-General of India as its Chancellor. In 1921 the Viceroy ceased to be the Chancellor, the office now being held by the head of the Provincial Government. The University of Calcutta was started as a federal university, with an examining body modelled on the lines of the University of London, and had affiliated to it the Colleges of Lahore, Allahabad, Aligarh, Nagpur, Patna, Gauhati and Rangoon. From the time of the Chancellorship of Lord Curzon the teaching has gradually taken the form of a University institution. Since 1904 its post-graduate department has developed considerably, and now includes the teaching of Pali, Tibetan, Japanese and Chinese among modern languages. A scheme for a Department of Technology, Agriculture and Commerce has been put into operation. The Senate is divided into five faculties, namely, those of Arts, Science, Engineering, Medicine and Law. There is a Board of Higher Studies in the different subjects of Arts and Sciences.

The buildings known as the Senate House are situated in College Square. They were completed towards the end of the year 1872 at a cost of Rs 4,34,697, and the University took possession of them early in 1873. The meetings of the Senate are held in the western hall of this building, and the annual Convocation takes place in the spacious Senate Hall, which is provided with a fine auditorium at the back of the hall. This hall is more than 200 ft in length and 60 ft in breadth. In the Darbhanga Library Buildings, to the west of the Senate House, are accommodated the University Law College, the University Library, and the University classes. The University College of Science, thanks to the munificence of the late Sir Taraknath Palit and Sir Rashbehary Ghosh, has been installed in fine buildings in Upper Circular Road.

**VICTORIA MEMORIAL.**—This Memorial has long since taken its place as one of the noble buildings of the modern world. Its conception as a great treasure house of Indian history and art which should at the same time commemorate the reign of the great Queen-Empress was due to Marquess Curzon, but the funds for its construction, amounting to no less than Rs 76 lakhs, were voluntarily subscribed by the Princes and peoples of India. Of this beautiful building, which stands to the west of the Cathedral, and is constructed throughout of pure white marble, the foundation stone was laid by His Imperial Majesty King George V, when Prince of Wales, on January 4, 1906, on December 28, 1921, it was formally opened by his son, H R H the Prince of Wales.

The main entrance is to the north, and inside the garden immediately in front of the steps leading to the north entrance and facing Queen's Way is a majestic bronze statue of Queen Victoria enthroned. The south gate has a lofty white marble arch, surmounted by a fine equestrian statue of King Edward VII. Lord Curzon's statue facing the south entrance has already been described. Within the Memorial are halls and galleries containing many interesting pictorial and historical records of Indian history and of the Victorian era in particular.

**WATER SUPPLY.**—At one time noted for its insanitary conditions, Calcutta now possesses an excellent pure water supply and a thoroughly efficient drainage system. The first attempt to supply filtered water was commenced in 1867 and took three years to complete. A supply of 6,000,000 gallons per day at 15 gallons per head was estimated, and the project cost 67 lakhs of rupees.

1. The busy Junction of Clive and Canning Streets, Calcutta; Messrs. Davenport & Co. are located in Building on the left.
2. Hare Street, Messrs. G. F. Keilner & Co.'s city deposit on the corner.
3. Lall Bazar.

With the inclusion of the southern suburbs in the main area, arrangements were made for supplying 20,500,000 gallons per day. The rapid growth of the population rendered further extension necessary, and the improved scheme now provides for a supply of 40,000,000 gallons of filtered water per day. A pumping plant at Pulta puts pressure on the mains to Calcutta through which water formerly flowed only by gravitation. There is also a large reservoir of 9 million gallons capacity at Tallah into which filtered water is pumped. From here it gravitates throughout the town, and the tank also acts as a

reserve if the pumps at Pulta fail. The water-supply is obtained from the River Hooghly at Pulta, which is about 17 miles above Calcutta. Here the water is put into settling tanks to allow the matters held in suspension to settle with the assistance of a small quantity of alumino-ferric, which helps the process of sedimentation so very necessary during the rains when the water gets muddy. From these settling tanks the water is conducted slowly to sand filter-beds, and after filtration flows by gravitation to collecting wells. It is thence pumped through two cast-iron mains of about 4 feet diameter to

the overhead reservoir at Tallah, the capacity of which is 9 million gallons.

**ZOOLOGICAL GARDENS.**—These gardens, which cover about 40 acres of ground in Alipore near Belvedere House, date from 1875, when they were planned by Sir Richard Temple, Lieutenant-Governor of Bengal. The popular name for the Gardens is *Chura Khana* (the aviary), but the collection also includes many remarkable animal varieties, as well as reptiles and fishes. On January 1 each year a Fancy Fair is held in the Zoo, which is an event of great importance.

**C**ALCUTTA is on a marsh, and for nearly two and a half centuries it has been fighting this handicap. To-day the census shows a city with a population of nearly a million, that of Howrah on the opposite bank of the river making up a total of over one and a quarter million people. In the left half of the great Ganges delta British grit and British energy have inspired the languid Bengalee to co-operate and build on the bank of the Hooghly an island of industry, which now extends 45 miles north and south with a maximum width in the centre of but two or three miles. Here traders have settled from every part of India and Asia, indeed from the whole world, and a migratory population, only to be numbered in millions, flows into the mills and shops to gather a store of rupees before returning to the villages to carry on the cultivation of ancestral lands by methods which are rooted in the very origins of agriculture.

**2. GROWTH OF CITY.**—Job Charnock, trader, John Company's official and soldier, three times sailed to Sutanati before he finally decided that its strategic and commercial advantages were unique, but in 1690 he landed, stayed and acquired by purchase some 2½ square miles of marsh and villages. The stockaded trading centre, or Fort, was rapidly raised by digging earth from the surrounding areas and forming "tanks" or large ponds, which has been the universal method of making building land from mud, and accounts for one of the most conspicuous features of the town and its suburbs to-day. So the place began, and traders settled outside the walls in a confused and congested muddle, the clearance of which is still one of the city's most pressing problems. The settlement grew, great houses appeared, the "Black Hole" tragedy became a memory, public buildings, churches, courts, and a new and mighty Fort William arose, and Calcutta became the first city of India, a metropolis whose fame has spread throughout the world. The Mutiny left it untouched, and it flourished with the recovery of trade after that grim chapter closed, but the

discovery of the commercial possibilities of jute in the latter part of the nineteenth century gave an impetus to its development, which has made it equally independent of and indifferent to the transfer of the Central Government to the splendid solitude of New Delhi, islanded by the tombs of the dead cities of the scorching plains.

**3. IMPROVEMENT TRUST.**—Meanwhile the city had grown where it willed, its organisation and planning were left to chance, except when plague-induced panic and efforts were made to remedy the more obvious sanitary defects. The normal death rate was appalling, water-borne diseases, cholera and malaria decimated the population annually. Justices and Lottery Commissioners made valiant efforts to end the muddle, till gradually a network of straight streets cut the swarming human cheese into squares and produced the semblance of a plan within the Circular Road, a wide avenue looping round the city and formed by filling in a moat or ditch which had been dug as a protection against marauders from the west. Successive Municipal Corporations struggled with the sanitary and planning problems, always well in arrear of the abuses which increased faster than they were mended, and eventually the accumulation was seen to be beyond any normal means of disposal. So the Improvement Trust was called into being, and, thanks to its strong personnel, a new Calcutta is arising despite the bitter opposition of the Indian landowners to its inception and its main schemes. Forty-five miles of new main roads have been authorised for the city and its suburbs, and a substantial proportion of these has already been constructed. The great Central Avenue has broken through the clotted mass of buildings which was North and Indian Calcutta, and joined up with the broad avenues of the South City. Roads 100 and 150 ft. wide are bringing the suburbs into direct communication with the centre; parks and squares are springing up everywhere; and over a hundred miles of subsidiary roads are making possible building sites in garden suburbs and clearance

schemes. The work of the Trust will see out the twentieth century, but it has already produced such enormous and obvious benefits that it is one of the most popular public bodies in the East.

**4. MAIDAN (THE).**—The present city is grouped round the Maidan, a magnificent open space which was originally cleared as the field of fire for Fort William when it was constructed on its new site. It is over 5 miles in circumference, having an area of 2 square miles, and is well planted with forest trees. The principal recreation ground of the city, portions of it have been laid out as gardens (the Victoria Memorial, a white marble palace standing in one, the other being Curzon Gardens), with a park and magnificent cricket ground, the Eden Gardens. It runs for two miles along the River, and the fine embankment road is a popular resort for driving of an evening, the shipping at the moorings being particularly picturesque as the sun sets over the smoky factories of Howrah on the opposite bank.

**5. CHOWRINGHEE ROAD.**—On the east of the Maidan lies the principal European residential quarter, well laid out with wide roads, large gardens, and numberless flowering trees of every size, shape and colour, the principal being the glorious gold mohur. Whole streets have been planted with this flaming forest giant, and in May the sight is as unforgettable as it is unique. Chowringhee Road, a two-mile broad avenue, bounds this quarter and runs along the Maidan. On it stand the Theatres, the Clubs, the Museum and the Cathedral; at the north and business end are fine shops and two of the European hotels, the Continental and the Grand; here also are found "Furpo's" restaurant and dance-hall, which have brought the standards of the West to Calcutta and in cuisine and "flair" are unique. Further south are the fine Museum, blocks of flats, boarding and private houses, and at the extreme south the road runs on into the new Indian suburb of Bhowanipore, out to the famous (and hideous) temple of the Goddess Kali. Central Avenue has been

joined on to it at the north, and eventually there will be a through trunk road, nowhere less than 100 ft wide and almost straight throughout, with an unbroken length of over 20 miles.

**6. DALHOUSIE SQUARE.**—North of the Maidan is Government House, a real palace with fine grounds. To the north again, and along its eastern side lie the great commercial areas of the city, the civic centre being Dalhousie Square, containing an enormous tank which was formerly the sole water supply of the town. Around this stand Writers' Buildings, the offices of the Government of Bengal, the General Post Office, a fine building of the classical style much in favour for public buildings in the city, the Telegraph Office and the Commerce and Industry Building, both good, if dull, examples of similar modern treatment, the Currency Office, McLeod House and the Hongkong and Shanghai Bank, typical contractors' designs, and miscellaneous commercial structures.

**7. CLIVE STREET.**—Clive Street continues the west side of the square to the northwards, and this is the site of the principal commercial buildings, including the Royal Exchange, erected some ten years ago to the designs of Messrs King and Stevens of Bombay, one of the most beautiful buildings in the city. Clive Street contains the offices of the East Indian Railway, the Chartered Bank, the Eastern Bank, Lloyd's (Cox's) Bank and the National Bank, also a number of commercial firms, including Messrs James Finlay & Sons, Bird & Co, the South British Insurance Coy, Martin & Co, the well-known contractors, whose works include small towns, institutions and buildings in all parts of India, Gillanders, Arbuthnot & Co, Graham & Co, Duncan Bros, George Henderson & Co, Balmer Lawrie & Co, and Hoare Miller & Co. In turnings out of the main street there are Kilburn & Co, the Imperial Tobacco Coy (India) Ltd, The Eastern Bengal Ry, Shaw Wallace & Co, Cox's Shipping Co, Mackinnon Mackenzie & Co and the P & O Bank, the Port Commissioners, the Customs House, Girdlay & Co, King Hamilton & Co, Burn & Co, Gladstone Wyllie & Co, Jardine Skinner & Co, Birkmyre & Co, Andrew Yule & Co, the Central Bank of India, the Allahabad Bank, Turner Morrison & Co, and many others.

**8. OLD COURT HOUSE STREET.**—The eastern side of Dalhousie Square is continued to the south as Old Court House Street, the site of some of the finest old-established shops whose names are woven into the fabric of Anglo-India history, such as Manton's, the gunmakers, Osler's of glass (now electrical engineers), Hamilton's, Garrard's, the jewellers, T. Cook & Son, Ranken's, Harnack's and others for men's clothes and uniforms, Murray's for clocks and chronometers, The Great Eastern, the premier hotel, and Pehti's, restaurateurs to all the Viceroys. In this locality also are Thomas & Co and all the other tea brokers, Mackintosh Burns, the contractors, Walter Locke & Co., T. E. Thomson & Co., and W. Leslie & Co, all hardware merchants and ironmongers.

**9. BARABAZAR.**—North and east of this area lies the Indian town, and near the centre, particularly by the river, the congestion and intensity of trading premises reach a degree which is almost unbelievable. North of Clive Street, just beyond a densely crowded Jewish quarter which has housed the Sassoons, the Manassehs, the Elias's, the Ezras and others for a century and a half, the great speculating trading community of this side of India, the Marwaris, have established themselves firmly by forcing out all competitors and building great square blocks

MERCHANT PRINCES OF INDIA.

1. Bankshall Street. The Head Office of Shaw Wallace & Co. dominates the view.
2. Clive Street. James Finlay & Co.'s building in left foreground.

of buildings, one floor generally being occupied by the owner, the ground floor a maze of small shops and "godowns". another name for warehouses—and the remainder cut up into small rooms facing the central courtyard, each box-like cupboard of them containing a family. Two hundred is a common number of occupiers in one house, and in some cases they exceed the thousand mark. This is Barabazar, notorious for its congestion, its plagues and its filthy narrow lanes, there being not a single street in the area with a width exceeding 10 ft. Fortunately the Improvement Trust is now taking it in hand.

**10. CONGESTION.**—The remainder of North or Indian Calcutta is much of a pattern. Within the chessboard of main streets hundreds of houses hold each other up in a formless mass, every one crowded with joint families, coolies or students, who have to reach their homes through narrow lanes and passages winding and staggering in a crazy way. Mixed up in this are dozens of great "palaces," some still maintained with a crude and muddled grandeur, but many falling into decay with dissipation or folly as the explanation. Property descends to all members of the family, so that unless there is a strong member to insist on work and trade to increase the family fortunes, eventual break-up is inevitable. In the north city also are to be found on the main roads the University Buildings and the colleges and the great hospitals, always crowded in spite of the prejudice against them on the part of strict Hindus. The famous School of Tropical Medicine is on Central Avenue. Thousands of qualified graduates are turned out by the colleges every year, of whom the greater number are doomed to permanent unemployment.

**11. DOCKS.**—The whole of the riverside north of the Maidan is occupied by the import jetties of the Port Commissioners, and along the rear of them runs the Port Trust Railway, which connects them with the Docks on the south of the town. The Commissioners have under construction a new dock system which will eventually accommodate all overseas traffic, and the first portion of the new King George's Dock will be open in 1928. They have also constructed a number of riverside berths as part of the new dock area, all of which is tending to relieve congestion in the centre. The Commissioners, in addition, maintain the Howrah Bridge and run a fine service of river steamers. They own, in connection with their new dock scheme, several square miles of land to the south of the town.

**12. RAILWAY SERVICES.**—Three main railways serve Calcutta, the Bengal Nagpur Railway and the East Indian Railway having their termini at Howrah, both being trans-Indian lines. The third is the Eastern Bengal Railway, with its terminus at Sealdah on the east of the town, it serves Northern Bengal and Assam and carries the tea and jute traffic. The latter two lines are State-owned and worked, and a new bridge is being constructed across the Hooghly some 5 miles north of Howrah Bridge which will enable the main line trains across India to be worked from Sealdah station. A project is also under consideration for electrifying the suburban services and bringing them to a new Central Station in Dalhousie Square by an overhead line.

**13. SUBURBAN AREAS.**—The outer areas of the city are becoming more densely populated every day, and the Corporation's jurisdiction has recently been extended by the inclusion of all adjacent suburban areas. Fine European suburbs have grown up in Ballygunge and Alipore to the south. The

European Hospitals, the Military Works and Stores and the Police Training School all lie between the Maidan and these suburbs; the Government lands at this point also housing the Zoo, Belvedere—the Viceroy's Calcutta House—the Prisons and the Agri-Horticultural Society's Gardens.

The Botanical Gardens, with the famous Banyan tree, are on the Howrah side of the river to the south of the town, while 16 miles to the north is Barrackpore Park, containing the country house of the Governor and a public park of much quiet beauty. Both banks of the river from Budge Budge on the south and even below, to Naihati on the north, are lined with a succession of jute mills, designed and constructed by engineers and severely utilitarian in aspect, but maintained in perfect order, and representing tens of millions of sterling investment. Outside the mills are congested masses of huts occupied by the operatives and standing upon lands which the owners refuse to sell at any price to the mill companies, who, whatever they can obtain land, build model "lines" of quarters for their employees. Legislation is urgently required to deal with this very unsatisfactory state of affairs.

#### 14. ARCHITECTURAL MISTAKES.

Some of the principal buildings of the city have already been referred to. Calcutta has not been well served in the design of its buildings, and there is more than a trace of "Victorianism" in its less attractive aspects in the majority of the more ambitious efforts. It is possibly fitting therefore that the city should contain the Victoria Memorial, a great mass of white marble whose restless and disorderly detail prevents it from being completely dull. Even the severely classic beauty of the Royal Exchange, the home of the Bengal Chamber of Commerce is completely out of relation with any other adjacent building, and it has no apparent connection with the site and its position. The High Court, on the other hand, does fittingly occupy its position at the head of the Maidan, and it has no neighbours to distract from its Gothic intentions. The buildings of the city generally show clearly the fact that only since the War have there been any independent professional architects practising there. Indian architecture simply does not exist, the prevailing principle being to make as large a mass as money will produce and load it with wedding cake finery, finishing the whole in all the primary colours. The Jain Temple, a vaunted "sight," is a collection of bath-room tiles, broken china paving and soda water bottle decorations, while the "Marble Palace" is an exact copy of an Italian house with crude additions, crowned and smothered with tawdry statues and "novelties" of every description.

#### 15. ARCHITECTURAL SUCCESSES.

Government Buildings have saved the older city from complete architectural anarchy, although they are mostly copies by soldier engineers of models in all parts of the West, they frequently show ingenuity in adaptation and a good sense of proportion. Such are the Cathedral, well placed on the Maidan, Government House, the Imperial Bank, Writers' Buildings and some of the hospitals. Of a subsequent date there are many examples of the work of Sir John Begg, the late architect to the Government of India, and these are generally successful even if they are entirely Western in conception and eloquent of a great opportunity lost. The Indian Museum on Chowringhee, however, must be recognised as inspired work. Mr. Henry Crouch, sometime architect to the Government of Bengal, has left much similar work. The late Mr. Edward Thornton, architect to Messrs. Martin & Co., has two ambitious commer-

cial blocks with elevations recalling the Indo-Saracenic in the Chartered Bank and Clive Buildings. There are many large blocks of commercial buildings for which Messrs. Mackintosh Burn are responsible in design and building, whose main impression is that of solidity, but this is preferable to the architectural conceptions in Whiteaway Laidlaw's building and the Bengal Club. Apart from these, nearly all property in the city is Indian-owned, and to a large extent follows Indian traditions. The exceptions are the blocks of flats and mansions which have arisen out of the enterprise of Jewish and Armenian landowners, had it not been for this, which is responsible for the majority of European house accommodation, the rent levels would have been more notorious than they are at present.

What then is the justification for the name of the City of Palaces? There are many explanations of its origin, but if it is justified to day it is principally so on account of the size of its buildings rather than any claim to beauty or good proportion. The visitor will be impressed with the great and lofty rooms which are a common feature in the European houses in fact with the spaciousness of life generally.

**16. CLUBS.** The Clubs in the town, the Bengal United Service, New, Calcutta, Saturday, and others, all are in harmony with this, and the Turf Club, with its beautiful Club House and one of the finest racecourses in the world, completes the picture. Recently the Turf Club has laid out an entirely new course on most modern lines at Barrackpore. In the southern suburbs lie the golf links, Tollygunge Club with a perfect park course and a fine gymkhana race track, the Royal Calcutta Golf Club with two of the best courses that money can make from the cultivated lands of the plains, and the Jodhpur Club, a beautifully kept golf and gymkhana institution. Other sports are catered for by cricket, football and rowing clubs, the latter shortly moving into new headquarters on a great lake excavated by the Improvement Trust for raising building sites in the south of the city.

**17. MUNICIPAL AND OTHER SERVICES.**—Municipal administration is fairly efficient, but is inclined to fall back since Indian political extremists came into power on the grant of full self-government. There are excellent markets and a satisfactory drainage system in spite of ever-increasing difficulties. The water supply is good, but limited largely owing to Indian waste, and a scheme is in hand for increasing supplies by several hundreds *per centum*. There is a good tramway service maintained by the Calcutta Tramways Company, which is now putting several bus services on the streets to meet growing competition from private motor bus companies. The Walford Transport, Ltd., runs lorry services as well as buses.

The whole city is served by the gas mains of the Oriental Gas Co., and many of the streets are lighted by high-power gas lamps. The remainder are electrically lighted by the Calcutta Electric Supply Corporation. The coming of electricity has revolutionised the life of the people by the introduction of the electric fan, which has made the hot weather and rains merely uncomfortable instead of almost impossible. The consumption of current is growing so fast that the Corporation has had to duplicate its main power station on the north of the city with one in the Dock area, and the latter is rapidly approaching completion. Practically all the mill areas are electrically lighted, either from mill installations or from companies organised to supply the mills. The Bengal Telephone Company provides the public services, but Government has its own exchange, which is connected

with its general post and telegraph services. Long distance Government 'phones join up the coal areas with the city.

**18. FUTURE NEEDS.**—Thanks to its Improvement Trust, which is inspiring the Corporation to emulation, and to the gradual enlightenment of landowners and merchants, Calcutta has set out upon an endeavour to remedy the mistakes of the past and to ensure that the city shall grow in future upon orderly and sanitary lines. Howrah, however, festers in filth on the opposite bank of the river, and there are sections in all the riverside municipalities which reek to the heavens, calling for a strong hand to force Government to cleanse them or wipe them out. The new politics, however, have made the old landowners more powerful than ever in obstruction, and the future looks none too bright, but health and sanitation are but common sense, and common sense prevails. Calcutta, especially greater Calcutta, awaits the strong man who will again make straight roads and destroy its disease-ridden hovels, who will in short make the crooked paths straight and the rough places plain.

A DE BOIS SHROSBREE

## REPRESENTATIVE BUSINESS ENTERPRISES

### BRITANNIA BUILDING AND IRON COMPANY, LIMITED.

**Inception.**—Responsible for the erection of some of the most modern and well-known structures in Calcutta, this company was registered as a joint stock corporation in 1919, being an amalgamation of the old-established building and contracting firm of Messrs. K. L. Mukherjee & Co. and the Britannia Brass Works. The former of these two concerns was founded as an engineering and building business in 1867, and up to the time of its being merged in the company now under notice had to its credit many prominent erections in the "City of Palaces" and its environs, including the East Indian Railway offices in Fairlie Place, the steelwork of the Jubilee Railway Bridge over the Hooghly River at Naihati, the Hooghly Flour Mills, built for Messrs. Shaw, Wallace & Co., and the factory buildings and all machinery for the Britannia Biscuit Co., Ltd. Messrs. K. L. Mukherjee & Co. were also one of the first firms of the kind to be placed on the Government List, this distinction being confirmed by the Public Works and other Departments when the present company took them over.

For the Britannia Building and Iron Co., Ltd., the managing agents are Messrs. Holmes, Wilson & Co., Ltd.

**Holmes, Wilson & Co., Ltd.**—In addition to the building company just mentioned, Messrs. Holmes, Wilson & Co., Ltd. act as managing agents for the Fraserpet Fibre Co., Ltd. (see page 122 in the "Agriculture" section of this volume). In their capacity as general merchants they hold the sole agency in India for Rutherford & Kay's "Silverburn" and "Dreadnought" whiskies, wines, etc., and also represent Messrs. Galloways, Ltd., Archibald Kenrick & Sons, Ltd., Anglo-Enamelware, Ltd., United Hinges, Ltd., and The Commercial Cable Co. Insurance activities include a fire and general accident agency for the Prudential Assurance Co., Ltd., and marine business on behalf of the Atlas Assurance Co., Ltd. The firm's London correspondents are Messrs. Alex. D. Wilson (101, Leadenhall Street, E.C.), and T. A. Shepherd & Co., Ltd. (16, St. Helen's Place, E.C.3).

**Capital.** The capital of the Britannia Building and Iron Co., Ltd. is Rs 5,00,000.

**Contracts.** The following details of contracts executed with the utmost efficiency and despatch by the company indicate the scope and importance of its operations. Allen House, Calcutta, a steel frame and masonry building constructed for Messrs. Allen Bros. & Co. (India), Ltd. in 1921-22, the extension to the Allahabad Bank Buildings, the steel work for which was fabricated in the company's workshops and erected in three and a half months, dwelling houses to the firm's own designs, providing for handsome exteriors, comfortable rooms and economy in construction, residential quarters for the B.O. Co., consisting of three large two-storied houses, residential quarters for the A.P. Co., the new palatial club quarters for the Saturday Club Calcutta, interior brick and ornamental plaster work for the new P.O. offices, Calcutta, interior decorations, embracing ceilings, cornices, capitals and wall panelling of a kind described as the finest of its class in Calcutta, roofs, steel bridges and frame structures such as the public race stand built for the Tollymore Club in just over five weeks after the placing of the order, steel and building work for five and six storey offices in Calcutta, goods sheds for the O. & R. Railway at Lucknow covering an area of 131,000 square feet, cast iron overhead tanks and stagings, passenger station platform roofing, foot overbridges and workshop buildings for the E.I., B.N., and E.B. Railways, well crabs for the new King George's Dock, tea houses, withering houses, bungalows, etc.

**Activities.**—The company is fully equipped for the complete construction of any class of building, guaranteeing first-class materials and supervision by qualified and expert engineers. Repairs, re-decoration and alterations of any kind, including sanitary and plumbing work, are promptly undertaken.

**Workshops.** The workshops, situated on the Grand Trunk Road, Howrah, are completely equipped with up-to-date machinery for steel fabrication of all descriptions.

**Managing Directors.** A. Paterson and D. G. McGilveray. Manager, S. N. Dass.

**Offices.**—Norton Buildings, Old Court House Corner, Calcutta. Cables "Bentley's" Calcutta Codes A.B.C. 5th edition, Bentley's and Private.

**Bankers.** National Bank of India, Ltd., and Mercantile Bank of India, Ltd.

See illustration, page 269.

### THE PATERSON ENGINEERING COMPANY (INDIA) LTD.

**Inception.**—Intimately associated with the most valuable achievements in the organisation of water purification in India, this well-known engineering concern commenced operations some 16 years ago in that country. During that period its installations have been set up in most of the progressive cities and towns of India.

**Research.**—Water purification requires for its successful accomplishment the application of plant carefully designed on reliable technical data and experience of local conditions. During the past 16 years the Paterson Company has carried out in various parts of India much valuable research and experimental work in conjunction with Government and other authorities, enabling a large volume of scientific knowledge and experience relating to Indian waters to be accumulated for future works.

**Technical Department.**—The firm has fully qualified technical staffs at the Calcutta and Bombay offices, and in the former city

possesses its own chemical and bacteriological laboratory, where investigation and analytical work is conducted. The technical organisation—drawing office and research laboratory—based largely on the result of 16 years' strict specialisation on Indian water purification problems, is available for service in any part of India whenever required.

**Contracts.**—During the past 16 years over 80 Paterson plants have been installed in India, and the total amount of water treated by the Paterson system at the present time is over 500 million gallons daily. The following are some of the important contracts, with in most cases the capacity in gallons per day dealt with: Imperial Delhi Water Works, 15,000,000; Simla Municipal Water Works, 3,000,000; Kukee Water Works, 1,000,000; Deolali Water Works, 1,250,000; Peshawar City and Cantonment Water Works, 3,500,000; Bannu Municipal Water Works, 500,000; Allahabad Municipal Water Works, 15,000,000; Lucknow Municipal Water Works, 3,000,000; Naini Tal Water Works, 300,000; Poona Cantonment Water Works, 3,000,000; Sukkur City Water Works, 2,000,000; Ambernath Water Works (Bombay Development), 3,000,000; Bombay Municipal Water Works, 200,000,000; Calcutta Municipal Water Works, 60,000,000; Chittagong Water Works, 1,000,000; Comilla Municipal Water Works, 250,000; Uttarpara Municipal Water Works, 250,000; Hyderabad and Secunderabad Water Works, 10,000,000; Jammu City Water Works, 1,000,000; Jamshedpur Water Supply, 2,500,000; Abadan Water Supply (Persia), 500,000; Lahore Municipal Water Works, 10,000,000; Fardla Water Supply, 200,000; Kalyan Water Supply, 1,400,000; Bhilsawal Water Supply, 2,300,000; Dhond Water Supply, Dhanbad Water Supply (B.I.R.), 300,000; Lyallpur Water Supply, 500,000; Achi Water Works; Rangoon Water Works, 15,000,000; Metur Water Works, 1,000,000. Numerous jute mill and factory installations have also been executed.

**Specialities.**—The Paterson water purification plant is the outcome of 25 years of strict specialisation. The fundamental principles and general design are protected by over 50 patents granted in Great Britain, France, Belgium, Germany, U.S.A., Canada, India, Japan and other industrial countries. Their originality is attested by Letters Patent having been granted on the first application in Great Britain, Germany, the United States and elsewhere. This system is in extensive use among railways, mills, tea estates and other industrial concerns.

**THE PATERSON CHLORONOME (Chlorine Dispenser).**—Chlorine is one of the cheapest, most conveniently handled and effective disinfectants for the purification of water supplies and sewage. Accurate regulation, measurement and administration are ensured by the use of the Paterson Chloronome, it is entirely British made and has been widely installed throughout India both in municipal undertakings and commercial enterprises.

THE GREAT EASTERN HOTEL LTD., Calcutta.

1. Winter Garden Lounge      2. Private Suite Sitting Room.  
3. Section of Dining Room.      4. A Corridor.      5. Restaurant.

#### THE GREAT EASTERN HOTEL, LIMITED.

**Record.**—Nearly three generations of travellers visiting Calcutta have been accustomed to make the Great Eastern Hotel their headquarters, recognising its generous provision for every comfort and convenience that guests may desire. The establishment has now been in existence for over 80 years, and its enviable reputation has become almost traditional.

**Situation.**—The hotel faces Government House, being within a few minutes' walk of Dalhousie Square, the commercial and financial centre of the city.

**Accommodation.**—Contained in this solidly-constructed building are 186 bedrooms and suites, all of which have hot and cold running water laid on and modern sanitary arrangements. The floors are connected by three fast electric lifts.

**Dining-Room.**—This is one of the prominent features of the hotel, being very cool and most attractively appointed. There are, in addition, three private dining-rooms available for the use of guests or special parties. The establishment's own orchestra plays daily at tiffin and dinner.

**Lounges.**—The spacious and comfortable lounge on the ground floor is the rendezvous for many of the best-known people of Calcutta, while the palm-court and lounge on the first floor add yet another to the distinctive features of the hotel.

**Facilities.**—For the use and convenience of guests there are provided within the premises an excellent billiard-room, a first-class hair-dressing saloon, a newsagent's stand and a chemist's store. Porters meet all boats and trains with the hotel omnibus.

**Board of Directors.**—E. L. Watts, G. F. Ross, E. Nussim, O. Josephson and G. N. Roy.

**General Manager and Secretary.**—W. J. Reynolds.

**Address.**—Old Court House Street, Calcutta (cables "Greastern," Calcutta) Codes A B C, 4th and 5th editions, A I and Bentley's.

**Bankers.**—Chartered Bank of India, Australia and China.

#### STEUART AND COMPANY.

**Inception.**—In all probability this is the only commercial firm in India showing an unbroken record of over 150 years' trading. It was founded in 1775 by Mr. A. Steuart, who set up as a coachbuilder at No. 8 Old Court House Corner, premises which were occupied up to 1907, when a move was made to Mangoe Lane.

**Personal.**—It is to be regretted that the early records of the firm are not available for inspection. Some were destroyed ruthlessly,

STEUART & CO., Calcutta.

1. Section of Body-building plant at Ballygunge
2. Partial View of Showroom.
3. Second Storey Garage.
4. A small section of large Garage at Calcutta.
5. New Body-building Plant at Ballygunge.

while others were eaten by white ants. When, in 1885, the safe in which they were deposited was opened there remained only a heap of dust. The efforts of Mr. Frank Bushby, senior partner in 1885, were successful in unearthing some authentic documents, which showed that Messrs. Robert, James and John Hastie, who had arrived in India in 1807, 1811 and 1818 respectively, were partners in 1824. After them came Mr. Burkinyoung in 1841 (master of the 'Trades' Association in Calcutta for two years), who was a partner until 1860, Mr. W. Roberts, who retired to Europe after some years' service, Mr. T. C. Carter, made a partner in 1860, Mr. R. Allardice, jun., and Mr. P. M. Kilgour, from 1868 to 1879, Messrs. Kilgour and Hay, from 1881 to 1885, Mr. W. Bushby and Mr. A. W. Westrop, from 1886 to 1893, Mr. W. Bushby, sole partner from 1894 to 1901, and Messrs. W. Bushby and R. E. Josland in the following six years. Mr. Walter Bushby retired in 1907, leaving Mr. Josland, Mr. A. H. Martin and Mr. Frank E. Bushby as partners. In 1911 Mr. Josland retired, when Mr. Frank E. Bushby became senior partner, his colleagues being Mr. G. Berridge Page, M.I.A.E., and Mr. W. Shenton. Some old leases relating to the original property of the firm are still in existence, and contain the names of Captain Robert Steuart and Lady Mary Steuart, who probably were descendants of the founder.

**Development.**—Steuart & Co. have kept pace with improved methods of road transport from the days of the pack-horse to the automobile of to-day. There has not been a vehicle on the roads for the past 150 years which has not had its type in their workshops. The palanquin, sedan chair and the springless lumbering coach of early days up to the more modern and luxurious buggies or ralla carts, mail phaetons, broughams, victorias, landaus, barouches and State coaches have been in turn built in their shops.

**Contracts.**—In addition to carts and carriages for every-day use, Steuart & Co. build elegant State coaches, largely composed of gold, silver and precious stones, and fitted with the most costly appointments. Among contracts executed were the State howdah for King Edward in 1876, a carriage for the Maharajah of Jind, enriched by 25,000 tolahs (tolah—7 dwts. 12 grains Troy) of silver in

1878, in 1882 and subsequent years, gorgeous vehicles were constructed for the Nawab of Bhowalpoore, the Commander-in-Chief of Nepal, and the Amir of Kabul, a solid silver howdah for the Durbar held by Lord Curzon in 1902, no fewer than 22 landaus and 18 victorias for the Viceroy's personal guests, a most ornate carriage for H.M. the King-Emperor when, as Prince of Wales, he visited India in 1906, and another in 1911 after his succession to the Throne, when many State and other carriages were built for ruling chiefs, princes, and other notabilities. The company has held special appointments to all the Viceroys and has enjoyed the patronage of nearly every ruling chief in India.

**Motor Cars.**—The advent of the motor car opened up new possibilities, which the partners quickly seized upon. They obtained immediately agencies for the leading manufacturers in England and established a factory to build their own cars. The chassis are imported, but the whole body-work is constructed by them of indigenous timber, as being more suited to the Indian climate than other woods. They know the requirements of patrons and guarantee their work to be equal to that of the best London tradesmen.

**Agencies.** The firm acts as representatives in India for the Austin, Essex, and Hupmobile Companies, and has received innumerable letters of appreciation proving the high qualities of these cars for that country. Visitors to the workshops in Calcutta may see the bodies in all stages of construction and clients may have these made with fittings conforming to any design.

**Workshops.**—These have been considerably enlarged owing to the rapid expansion of the motor business, and there is now ample accommodation for carrying out all kinds of alterations and repairs, for storing motor accessories and spare parts, and for a large garage. Fully competent workmen are employed in each branch, and the sound, practical experience of the partners ensures thorough supervision of every detail of work.

**Directors.** H. Hannay, S. Weston, J. H. Pattinson and G. H. Crane-Williams.

**Head Office and Garage.**—3 Mangoe Lane.

**Cables.**—"Cotelme" Codes A B C 5th edition, Bentley's, Motor Trade Telegram Code.

**Bankers.** Mercantile Bank of India, Ltd.

#### G. MCKENZIE & COMPANY (1919) LIMITED.

**Inception.**—The rapid development of the motor engineering industry in India is strikingly exemplified in the growth of this concern, which, in less than 10 years, has attained a most prominent position and possesses the largest organisation of its kind in the East. Originally established in Burma in 1917, it was formed into a limited company in 1919, and immediately began to open up branches in India, with headquarters at Calcutta.

**Branches.**—These are situated in the following cities of India and Burma: Calcutta, Ranchi, Cawnpore, Lucknow, Bareilly, Agra, Delhi, Jaipur, Lahore, Rawalpindi, Peshawar, Rangoon, Mandalay, Moulmein, Thabon and Yenangyaung.

**Agencies.** The firm represents, among others, Willys-Overland cars, Federal lorries, Royal Cord tires, and Stewart Warner Service Agencies.

**SLEEVE-VALVE ENGINES.**—A great asset lies in being representatives of the world's largest manufacturers of sleeve-valve engines in view of the remarkable development now taking place in the United States regarding this particular type of engine. The Willys-Knight engines, noted for their smooth, silent running and economy of up-keep, have proved exceedingly popular, especially for transport work—e.g., Gauhati to Shillong in Assam, or Khatgodam to Nainital in the United Provinces. The same engine is fitted to the light-weight Federal lorries and is extremely efficient in omnibus services in Calcutta, also in transport services on the Frontier, where conditions are very difficult.

**TRANSPORT.** The chief trade routes to India via the Khyber Pass, from Kabul to Peshawar, 191 miles, and the road from Kandahar to Quetta, 125 miles, are quickly covered by Federal-Knight expresses carrying 1½ tons per trip over sandy, stony and excessively hilly tracks. Mountain ranges, chief among which is the Hindu Kush, cover three-fourths of the Afghan territory, the elevation being generally over 4,000 feet and the roads probably the worst in the world for wheeled traffic. The steady transport services that are now maintained are striking testimony to

3. Fine Showrooms.

the efficiency of the Federal-Knight. There are over 30 motor buses carrying passengers and baggage daily on the Peshawar-Kabul route alone. Among other users are the Royal Mail Service (Pabbi Cherat Hill Road), the Army Canteen Board (Bannu to Razmak, 7,500 ft. elevation), Torkham-Kabul Transport Co. (with a climb of 10,000 ft.), and the majority of bus owners on the Kandahar-Chaman-Quetta run.

**Showrooms.**—The firm has recently opened what are claimed to be the finest motor car showrooms in India. Located on the Park Street-Middleton Row corner of Stephen's Court, the premises have a very attractive exterior, and are large enough to effectively display the full range of motor cars distributed by the company. From the popular and low-priced Overland Whippet to the elegant Willys-Knight Six there is a car in either four or six cylinders that should satisfy every taste.

**Policy.**—The firm believes in providing efficient after-sales service and in rendering genuine help to owners, and it is largely due to this policy that so many branches have been opened up for the convenience of its ever-increasing clientele. The showrooms and the imposing range of cars are ample proof of Messrs Mackenzie & Co.'s aim to give the motoring public the best car possible at the lowest price, as well as a first-rate service to all car-owners. A centralised purchasing department for the 15 branches enables them to effect savings impossible in a smaller concern, while, with the distributing facilities of so many branches, they eliminate, for the benefit of motorists, the profits taken in many cases by middlemen and brokers. Such a policy, combined with its progressive methods generally, shows a keen sense of discrimination in the business administration of the company.

**Head Offices.**—18a, Park Street, Calcutta (cables "Oland" Calcutta) Code Bentley's.

**Bankers.**—International Banking Corporation.

#### MEHTA, H. M., & CO.

In 1918 Mr. H. M. Mehta, one of the original partners in the firm of H. M. Mehta & Co. (founded in 1896), established the business of T. R. Pratt (Bombay), Ltd. motor dealers and engineers, whose head offices, showrooms, garage and workshop are situated in fine premises in Hughes Road, Bombay. In 1919 Mr. Mehta, in partnership with Sir Victor Sassoon, founded the motor engineering firm of M. T. Ltd., which possesses head offices in Bombay and a fully equipped establishment in Calcutta. The two companies mentioned are now conducting a flourishing business, controlling the sales of the Buick car throughout Bombay and Calcutta and representing the Lancia, Standard, Cadillac and other well-known automobiles. Before turning his attention to the motor car trade Mr. Mehta and the firm to which he gave his name had been instrumental in floating The Mill Stores Trading Co. of India, Ltd., and in purchasing and converting into limited concerns various cotton mills. Other operations of the enterprise cover hessian, paints, insurance and electrical engineering. (For fuller details see letterpress in "Industry" section.)

A. MILTON & CO., LTD., Calcutta  
Head Office Premises and Staff

#### A. MILTON AND COMPANY, LIMITED.

**Inception.** This well-known motor and mechanical engineering firm is the successor to A. Milton & Co. established in 1886 by Mr. Alfred Martin Milton. The business is now under the able management of Mr. Morgan B. Milton, and enjoys a sound reputation in commercial circles.

**Development.** Expansion has kept pace with road transport improvement, passing from horse-drawn to mechanical methods. The firm imported horses for some 30 years, dealt in grain, maintained large numbers of bullock and buffalo transport wagons, and specialised in all kinds of coach, wagon and wheel work. Then, about 15 years ago, it entered whole heartedly into the mechanical

transport trade, in which it maintains a commanding leadership in India.

**Agencies.**—As agents for the Dennis, Fiat, Republic, Reo and Chrysler cars and lorries, Miltons have carried mechanical transport to the utmost limits of India, Burma and Ceylon, and have distributed thousands of transport units of practically every known type.

**Municipal Vehicles.** The firm specialises in such municipal vehicles as gully flushers, dump and tipping wagons, oil and water tanks, sprinklers, etc., and has supplied fire engines, tenders and other fire appliances to the leading municipalities.

**Premises.**—The city premises, comprising showrooms, offices, machine shops, body-building and assembling plants, occupy

several acres and employ 500 to 600 workmen. The new structure (showrooms and offices), shown in the accompanying view, is a thoroughly modern and distinctive architectural achievement, built of ferro-concrete and occupying the main frontage site of the old headquarters. It is one of the finest buildings of its kind in India.

**Offices.**—156, Dharamtala Street, Calcutta, 44, Park Mansions, Calcutta, and Milton Park, Ballygunge.

Fiat Motors Eastern Indian Agency, Madras, is a branch of the company's Fiat Department.

**Cables.**—“Amilco” Codes A.B.C. 5th edition, Bentley's, Lubber's, Western Union 5 letter, and Private.

A SELECTION OF THE MOST REPRESENTATIVE RETAIL ESTABLISHMENTS, GIVING A COMPREHENSIVE IDEA OF THE EXCELLENT SHOPPING FACILITIES AT CALCUTTA (FOR CONSULAR AND OTHER ADDRESSES. SEE "VISITORS' GUIDE," PAGE 288)

#### HALL AND ANDERSON, LIMITED.

**Inception.**—Founded in 1894, this firm, which conducts a well-known departmental store, was converted into a private limited company in 1913. The enterprise is entirely British-owned, and owes its position as one of the most important businesses of its kind in India to the range and variety of the great stock carried. It holds the appointment of furnishers to H. I. M. The King-Emperor, and has been confirmed in similar appointments to most of the Viceroys during their terms of office. There is a branch of the establishment at Datjeching.

**Buildings and Showrooms.**—The photographs here reproduced show the present premises, part of the new building, and a perspective view of those premises when completed. This magnificent edifice at the corner of the two most important thoroughfares in Calcutta, Chowringhee and Park Street, will have a frontage of 850 feet, five floors of a total height of 120 ft., and a floor space of approximately half-a-million square feet, making it the finest departmental store in India.

**Departments.** Visitors are catered for in 28 different sections, each of which is replete with all that is new from the leading markets of the world. The following is a summary of these departments, which will be added to when the new premises are complete.

**FURNISHING.** This section has an area of 50,000 square feet and is situated in the new portion of the building. It contains one of the most up-to-date selections of modern furniture and reproductions to be seen in the East, furniture expressing the best traditions of workmanship and finish, from the simplest pieces to examples of the finest art in dining-room, drawing-room and bedroom suites of every period and style, as well as every article of furniture for the saleroom or domestic use.

**SOFT FURNISHINGS.**—A fine selection of silks, brocades, damasks, printed linens, cretonnes, poplins, and furnishing fabrics of exclusive designs and wonderful colours at very reasonable prices is available for inspection.

**CARPETS.** The largest display in the East of Axminsters and Wiltons, in ready-made squares and in body and border, in addition to Indian carpets from Benares, Kashmir, Mirzapore and Ellore, is to be viewed in this department.

**BEDSTEADS AND BEDDING.**—A large range of all-metal and wood bedsteads is carried, and a special feature made of bedding manufactured in the firm's workshops.

**UPHOLSTERED FURNITURE.**—This is made by the company's experts and is unsurpassed in all India for wear, comfort, artistic design and coverings.

**ESTIMATES.**—These are prepared and submitted for schemes of any size, from the furnishing of a bungalow to a prince's palace. The furnishing departments are entirely supervised by European experts, whose advice is at the disposal of all intending purchasers.

**LINEN**—The stocks of household linen embrace the best that Ireland, England and Scotland produce in napery, fancy linens, sheets, blankets, quilts, towels, flannels, etc., in addition to the famous "Palmetta" household linens for which Hall & Anderson, Ltd., are sole agents.

**CROCKERY AND GLASS**—The choicest Royal Worcester and Crown Derby are to be found in the large selection of exclusive designs in dinner ware, tea ware, dessert ware, toilet sets, etc., at reasonable prices. The glassware section contains the very latest from the English and Continental markets.

**CUTLERY AND PLATE**—This division contains a splendid selection of modern plated ware comprising tea sets, coffee sets, trays, etc., of the newest designs at moderate prices.

**IRONMONGERY**—In this section there is to be seen everything necessary for the household, including the firm's famous range of "Hercules" aluminium ware.

**LADIES' DEPARTMENT**—Organised on most up-to-date lines it contains one of the finest selections of gowns, millinery, lingerie, dress materials, silks and hosiery in India, all chosen in the best English and Continental markets.

**GENT'S DEPARTMENT**—This has the largest stock in India of men's requirements—suits, shirts, ties, collars, underwear, boots and shoes. Visitors will see here the latest and best goods produced by high-class manufacturers only.

**TRAVELLING REQUISITES**—"Travel in comfort" might be the motto of this modern department, which displays everything needed under that head.

**STATIONERY AND FOREIGN FANCY**—Messrs Hall & Anderson, Ltd., carry one of the finest stocks of stationery in the East, and do their own die-stamping and cutting. The display of fancy leather goods such as dressing-cases, bags, attache cases and writing cases, is much appreciated by visitors.

**PERFUMERY AND TOILET REQUISITES**—In this division are to be found the newest and best toilet preparations by all the best known makers.

**MAIL ORDER**—One of the most important sections of the business and organised on the latest principles, the mail order department employs a large staff to deal with orders by post arriving from all parts of India, Burma, Shan States, Ceylon, Aden and Mesopotamia. The company does a large mail order business, which it encourages, and issues in the course of a year 100,000 catalogues. The principal one is the Red Catalogue—known throughout India as the "Lal Kitab," and acknowledged to be the finest shopping guide produced outside of London—which consists of 600 pages, profusely illustrated and is published every October.

**Workshops**.—These have recently been considerably enlarged and fitted with modern machinery, so that specially urgent joinery and cabinet work for interior decoration, etc., can be carried out under expert supervision in the shortest possible time.

**Inspection**.—Visitors are cordially welcomed to visit Hall & Anderson's when in Calcutta, where they are always certain to see many interesting displays. When the new premises are completed they will find that even shopping can be a real pleasure in a tropical land.

**Head Offices**.—Chowringhee and Park Street, Calcutta (cables: "Hallson," Calcutta). Codes: A.B.C.\*6th edition and Bentley's Complete Phrase.

**Bankers**.—National Bank of India, Ltd.

2. View of that section at the corner of Russell and Park Streets, having a frontage of 275 feet.
3. The Fancy Departments in the older section of Store.

**RANKEN & CO. LTD.**  
Fine Store at Calcutta

**RANKEN AND COMPANY, LIMITED.**

**Inception.**—Over a century and a half ago, in the year 1770 the tailoring establishment of this name was founded in Calcutta

city. To-day, after the lengthy interim, it still flourishes and retains the prestige it gained in the days of the Honourable East India Company.

**Activities.**—From its early days the firm has specialised in military, court and tropical outfitting, and its name is known throughout the Indian Empire for the quality of its productions.

**Military.** In the first years of the Indian Army the gorgeous uniforms worn by many of the regiments, some of which have since been disbanded or have lost their old identity under new designations, were designed and made by Ranken's, whose reputation is such that most of the present-day units patronise the establishment.

**Court.** They have been appointed tailors to H. M. The King Emperor and H. R. H. The Prince of Wales, and have been so honoured by other members of the Royal Family, by different Viceroys, Governors and Commanders-in-Chief in India. They are robe-makers to the Most Exalted Order of the Star of India and the Most Eminent Order of the Indian Empire, and for long years have enjoyed the patronage of many of the ruling princes of the country.

**General.** Excelling in all branches of tailoring, Ranken's keep stocks of the most exclusive articles of men's wear and equal to any found in the highest class establishments of London or Paris. In fact it has been remarked that the house maintains in India a much larger stock of woollen and silk goods than can be found in most fashionable London retail stores. The quality and workmanship of their tropical outfits, political uniforms and dress clothes leave nothing to be desired. The firm is, and has been from its commencement, under European supervision, and the premises in Calcutta occupy a large area.

**Branches.**—These are established at Delhi, Lahore, Rawalpindi, Simla and Murree, where every facility for turning out high-class work is equally available as in Calcutta.

**Head Offices.**—4, Old Court House Street, Calcutta.

**London Agents.**—Ranken & Co., 20, George Street, Hanover Square, London, W. 1.

**Cables.**—Mentally for head offices and all branches. Codes A B C 4th and 5th editions.

**RANKEN & CO. LTD.**  
One of Calcutta's most exclusive Stores.

**HAMILTON AND COMPANY, LIMITED.**

**Inception.**—Known throughout India as 'The Government Jewellers,' this house was founded in 1808 by Robert Hamilton under the direct patronage of the Honourable East India Company with a recommendation to the Court of Directors to the Government of India, by whom he was permitted to display their arms as jewellers and silversmiths to the Government.

For 118 years it has occupied the same premises, and in 1920 was formed into a private limited company, with Mr J F Snaith as managing director and Messrs Wm Smith, C H Pratt and F J Read as directors.

**Appointments.**—Ever since the founder was permitted to display the Government of India arms the house has been honoured with the patronage of Viceroys and Governors-General. In 1877 Messrs Hamilton & Co had the honour of being appointed by Royal Warrant jewellers in Calcutta to H R H the Prince of Wales, in 1901 to H I M King Edward VII, in 1911 to King George V, an honour continued to the new company, and in 1922 silversmiths in ordinary to H R H the Prince of Wales. Under instructions from the Government of India the firm has conducted sales by auction of Toshakhana and property in the form of jewels, precious stones, etc.

**Workshops.** The manufactory, the largest of its kind in India, is devoted exclusively to the production of jewellery, gold and silverware. The remodelling of jewels, the modernising of State ornaments and diamond mounting in platinum are specialties. Over 200 skilled Indian workmen under direct European supervision manufacture silver thrones, howdahs, assahs, and other State paraphernalia, and these workshops turned out the silver-gilt thrones used by Their Imperial Majesties at the Delhi Durbar in 1911-12.

**Showrooms.** These are among the finest in the East, being replete with choice specimens of the jeweller's art and the silversmith's craftsmanship.

**Branches.** The Delhi branch is open from November to March, and the Simla one from March to October.

**Head Offices.**—8, Old Court House Street, Calcutta (cables "Hamiltons," Calcutta).

1. Wine Stores.

2. Tinned Goods Store.

Centre. One of the Retail Stores.

4. Packing Department.

5. Bottling Department.

**G. F. KELLNER AND COMPANY, LIMITED.**

**Inception.**—The opening of the railway refreshment room at Burdwan on the East Indian Railway in 1853 by the late Mr. George F. Kellner marked the beginning of the enterprising business conducted by this company.

**Activities.**—In addition to being one of the leading wine merchants in India, the firm directs a large railway and general catering business and imports on a big scale tinned bottled and fresh provisions.

**Railways.** For 73 years it has catered continuously for the East Indian Railway, and to-day controls 30 refreshment rooms and branches, besides providing the excellent catering on the dining cars of the East Indian Bombay Mails between Calcutta and Jubbulpore, the East Indian Punjab Mails between Calcutta and Delhi and, on alternate weeks, the outward and inward Imperial Indian Mail Train running in connection with the P & O mail boats.

**General.**—In addition to these normal railway responsibilities, the firm invariably looks after the comfort of large parties of American tourists who come annually to India. That the service responds successfully to such onerous demands and satisfies a clientele inexperienced in Indian conditions is in itself a commendation of the efficiency and elasticity of its organisation.

A special feature of the activities of the catering department is the appointment from the Royal Calcutta Turf Club, which the company has held for many years, as caterers to the public. It is entrusted also with the catering arrangements at many other race meetings throughout the year in Eastern India.

**Special.**—Besides catering for the general public, this firm *par excellence* has often superintended the arrangements for many Royal and exalted personages during their Indian tours. At the Delhi Durbar in 1911 it conducted the messes of the camps of the Government of India, the Army, the Cavalry, the Provincial camp and those of Indore, Pudukkotta, Kashmir and the Press (European and Indian).

**Wine Merchants.**—In the wine trade Kellner's are second to none, and for over 70 years have specialised in wines and spirits to suit the climate. Their policy is to provide the highest quality only, so that when buying a wine or a whiskey from them one does not require to be a connoisseur, for the knowledge of the connoisseur and of the wine merchant with a reputation is clearly illustrated in the brands and vintages Kellner's offer their customers. The highly-skilled European staff which supervises this department has experience such as is only to be acquired in Europe. The magnificent warehouses furnish the necessary facilities for bestowing the special care that good wines require if they are to reach the consumer in perfect condition.

**Stores.**—The extensive development of this business has entitled the firm to be called India's "Fortnum & Mason" in much the same way as the pioneer work in railway catering earned it the name of the "Spicers & Pond" of India. The facilities and arrangements at Chowringhee and in some of the branches are calculated to make shopping as pleasant as in London's best stores.

**Agencies.**—The policy of representing only the best houses has given Kellner's an unique position in Eastern India, a status which their excellent service consolidates daily. Among the representations are: The Distillers' Co., Ltd., Edinburgh; King George IV Whisky,

**FRANK ROSS AND COMPANY, LIMITED.**

**Inception.**—This well-known firm was started in 1908 as a private concern at its present address. So rapidly did it advance that large godowns and manufacturing premises were soon added, while branches were opened at Camac Street, Calcutta, and Commercial Row, Darjeeling. In 1919 it was converted into a public limited liability company with a fully-subscribed capital of 5½ lakhs.

**Activities.**—The principal business is that of manufacturing and retail chemists and druggists. Drugs and chemicals are supplied to tea gardens, collieries, shipping companies, missions, etc., while the firm manufactures and sells many of its own specialties. It carries large stocks of toilet goods, druggist's sundries, and surgical instruments, and has installed a photographic chemicals department and Kodak agency. The Camac Street branch caters for the southern area of Calcutta, and the Darjeeling branch supplies visitors to this favourite hill station all the year round. Mofussil orders from practically every area in India, Burma and Ceylon are dealt with by a special department. The firm specialises in regular fresh importations of important lines from England, the Continent and America, and manufacturers of proprietary articles will find it an excellent distributing agency.

**London Agents.**—Frank Ross & Co., 6, Jewry Street, E.C.3.

**Head Office.**—15/7, Chowringhee, Calcutta.  
**Cables.**—"Chemicus," Calcutta. Code: Bentley's.

**Bankers.**—National Bank of India, Ltd.

W. LESLIE & CO.

1. Premises at Calcutta.
2. Mr. William Leslie, founder and sole proprietor.
3. Grocery and Hardware Department.

4. Ground Floor Showroom.
5. Bicycles and accessories, etc.
6. Sanitary Installations.

**W. LESLIE AND COMPANY.**

**Inception.**—The House of Leshe, to use the title by which the famous organisation is best known throughout India and Mesopotamia originated in a modest way when Mr Wm Leshe, the present chief, began business on his own account in 1890.

**Activities.**—Acknowledged to be the largest firm engaged in the hardware and metal business in Asia, the firm handles the goods of the leading British manufacturers.

**Premises.**—The enterprise rapidly outgrowing its original premises, was moved into larger quarters. These in turn became too small, and additional houses had to be obtained to accommodate each increase until 1911, when Mr Leshe decided to erect a building which would combine all the departments under one roof. He proceeded to construct premises on a block of land owned by him in Chowringhee, but it was only two years ago that the firm was able to occupy them, the War had interfered with their completion, and the finished portion was taken by the Government for its munitions department. During the War the company rendered great services to the Empire under difficult circumstances. The staff was greatly depleted, and Mr Leshe was left practically alone to supply to the Government in Calcutta, Bombay and in Mesopotamia material in large quantities that could not have been obtained through any other agency.

Leshe House, Chowringhee, Calcutta is even now not complete, for the southern end has still to be erected. Nevertheless the late Governor, Lord Ronaldsday, described it as a worthy addition to that thoroughfare of palaces.

**Directors.**—So far the firm has not become a limited liability company, but remained entirely in the hands of Mr Leshe himself until recently, when he took in as partners his two sons, Mr Mark and Mr Kenneth W. Leshe, Mr J. B. Greig (who had been several years with the firm), and Mr George Nicholson, who had served in India and acted for some years as London manager.

**Agencies.**—The firm has confined itself entirely to the hardware trade and its aim has been to supply only goods which it can guarantee as first class. Among the leading British manufacturers whose products are handled are Wm Bam & Co, Ltd, Wm Briggs & Sons, Ltd, Caledonian Wire Rope Co, Ltd, wire ropes for mining, engineering, oil wells, shipping, fishing, dredging, steam ploughing, aerial ropeways, etc., Carron Company, ranges, fire-grates, stoves, electric and gas fires and cookers, cooking apparatus, stable fittings, baths and lavatory stands, gates and railings, and engineering specialities, James Cartland & Son, Ltd, brass founders, James Chesterman & Co, Ltd, rules and tape measures, Clyde Rubber Works Co, Ltd, Coalbrookdale Co, Ltd, art castings and ornamental work, Daniel & Arter, Ltd, silver and silver-plated ware, Darlington Fencing Co, Ltd, Jos Evans & Sons, Ltd, toolmakers, Jos Evans & Sons (Wolverhampton), Ltd, pumps, R. C. Gibbins & Co, Ltd, hoisting and lifting tackle, Gitting & Hills Ltd, varnishes, paints and enamels, C & J Hampton, Ltd, Hardy Patent Pick Co, Ltd, Harrison MacGregor Co, Ltd, food-preparing machinery, Hayward-Tyler & Co, Ltd, soda water machinery, James Hinks & Son, Ltd, Hobbs, Hart & Co, Ltd, safe-makers, R. Hunt & Co, Ltd, Wm. Hunt & Sons, Ltd, The Brades, Ltd, James Cycle Co, Ltd, Jonas & Colver, Ltd, Jos. Kaye & Sons, Ltd, Kitson Engineering Co. (London), Ltd, C. H. Leng & Sons, R. A. Lister & Co, Ltd, London Emery Works Co, Ltd, J. & G. Meakin, Ltd, pottery

**T. E. THOMSON AND COMPANY, LIMITED.**

**Inception.**—This large firm of engineers, ironmongers, metal merchants and contractors whose parent house is John Shaw & Sons (Wolverhampton), Ltd, was originally established by a Mr T. E. Thomson in 1820 on a site now occupied by a part of the Great Eastern Hotel, when the Earl of Mordaunt was Governor-General of Fort William.

**Premises.**—Those at 9, Esplanade East, have been occupied since 1853 and cover a land area of over 20,000 square feet. Consequently, however, on the rapid expansion of business and the need for more warehouse accommodation, the firm acquired some years ago a large site near Ballygunge Railway Station. Here were erected a modern workshop and foundry under expert European supervision and a commodious warehouse of the latest design.

**Activities.**—Thomson's are among the largest and best known of European firms throughout India and Burma in the hardware trade and carry immense stocks of all kinds including engineering machinery. Their catalogue is one of the most comprehensive in the East, and is regarded as the authoritative and most up-to-date medium in the

3. Private House.

hardware business. It brings large returns in direct orders from all over India, and its annual issue is eagerly anticipated by dealers and public alike.

**Agencies.** Among the well-known British and American manufacturers represented by them are Petters Ltd., Yeovil, oil engines, Thomas Chatwin Birmingham, engineers' tools, Smith & Wellstood, Bonnybridge, cooking ranges Samuel Osborn & Co., Sheffield, files Richmond & Chandler, Ltd. Manchester, corn crushers, L. S. Starrett & Co., fine tools and Charlton Silicate Paint Co., paints.

**Head Offices.** 9, Esplanade East, Calcutta (cables "Hardware" Calcutta) Codes A B C 5th edition and Pantelegraphy.

**Bankers.** The Imperial Bank of India and Hongkong & Shanghai Banking Corporation.

#### C. LAZARUS AND COMPANY, LIMITED.

**Inception.**—This company whose high-class productions are well-known throughout India, was established more than 100 years ago as cabinet-makers and billiard table manufacturers.

**Stock and Plant.**—The first essential to the manufacture of sound furniture in a tropical climate is a good stock of thoroughly seasoned timber, and this the firm always has on hand and is very particular to keep replenished. The second is an up-to-date electrically driven plant that will enable large orders to be turned out in the shortest time and this also it possesses.

**Activities.**—Messrs Lazarus specialise in complete furnishing and decorating, office fitting and billiard table making. They undertake work at any distance and seek further connections in Java, Malaya and up the China coast.

**Furnishing.**—The company has very old connections with all the big Indian States whose rulers require up-to-date furnishing for their palaces. Most of its work is in connection with large orders for princes and rich merchants, the houses being taken over after the builders have finished, when the remaining work, including plaster decorations, wall-papering, painting, parquet flooring and furnishing, is undertaken. Colour schemes are developed for the different rooms, and the furniture is designed in the various English and French period styles, being turned out in solid teak or mahogany at the price paid for veneered furniture in England. No glue is used, and all furniture is constructed specially to suit the varying climates in different parts of India. In addition to this class of work, simpler types of furniture for less pretentious homes are made to meet the requirements of different customers.

**Decorating.**—The firm is probably alone in being thoroughly equipped for this work, and employs a large staff of competent workmen. It acts as agents for Tynecastle decorations and for Sanderson's wallpapers, and executes fine work in fibrous plaster.

**Billiard Tables.**—These are produced in the company's own works, with the exception of the cloth and slates, which are imported from England, and are to be found all over India, Burma, parts of China, Malay States and the Philippine Islands. An expert European is in charge of the billiard section, and fitters are sent everywhere to overhaul and execute table repairs.

**Office Fitting.**—Messrs Turner Morrison & Co's new building and the office of the North British and Mercantile Insurance Co. were fitted and furnished by Messrs Lazarus.

**Soft Furnishings.**—A large stock of carpets, curtain materials, etc., is carried.

**Head Offices.**—Park Street, Calcutta.

**Cables.**—"Mahogany," Calcutta. Code: A.B.C. 5th edition.

**Bankers.**—Imperial Bank of India.

1 Head Office in India

HOUGHTON BUTCHER (EASTERN) LTD., Calcutta

2 Large Staff at Head Office, Calcutta

**HOUGHTON BUTCHER (EASTERN), LIMITED.**

**Inception.**—This company, well known to photographers throughout the East, is subsidiary to Houghton Butcher (Great Britain), Ltd., the largest manufacturers in the Empire of photographic goods, and acts as their sole distributing agents in India. The wholesale depot is at 10, Hungerford Street, Calcutta, and there are retail depots at 12b, Park Street, Calcutta, and 4, Queen's Road, Bombay.

**Activities.**—The firm does an extensive developing and printing trade, giving the most prompt and efficient service in the East through its staff of expert assistants, who advise and help customers in every way. Large stocks of photographic sundries are carried, and a prominent display is made of the famous Ensign, Carbine, Popular Pressman, Sanderson and other cameras manufactured by the British company. A wireless section dealing in wireless accessories is a growing feature of the business.

**Agencies.**—It acts as sole distributors in India for: Ilford, Ltd., plates, paper, roll films, etc.; Johnson & Sons, Ltd., photographic chemicals, Fordham & Co., Ltd., mounts, boards, etc.; Ross, Ltd., lenses, Williamson Kinema Co., Ltd., kinema machinery and cameras, and Mullard, Ltd. wireless valves, etc.

**Cables.**—"Ensignette," Calcutta Codes A B C, 5th edition, Marconi International and Private.

**Bankers.**—National Bank of India, Ltd.  
**WALTER LOCKE AND COMPANY, LIMITED.**

**Inception.**—In 1884 this important firm established a sports emporium which now ranks among the leading Calcutta enterprises.

**Activities.**—In its rapid progress there have been added a number of new departments, embracing electrical engineering, cycles and motors, safes and meters, silverware, and refrigerators.

**Sport.**—Messrs Locke represent the leading houses for sports and games and such well-known gun and rifle makers as Holland & Holland, Webley & Scott, Westley Richards, Winchester & Remington Arms Companies, and are special agents for Diamond grain sporting cartridges.

WALTER LOCKE &amp; CO. LTD.

1. The Calcutta Premises.

2. Branch at Lahore.

**Electrical Engineering.**—The workshops are extensive and equipped for the repair of fans, motors, etc. The Locke fan is well known, and the company are agents for the Lally Automatic Lighting Equipment, sole agents for the Ky-Ho hot air fan and contractors to the Government, Calcutta Corporation, Port Commissioners and the Indian Railways.

**Cycles and Motors.**—They are also the chief distributors for the Raleigh Cycle Co., and represent Jowett motor cars, Raleigh, Lewis and Indian motor cycles. The works and garage are equipped to meet the general requirements of motorists.

**Sales and Meters.**—Besides being chief distributors for the Ratner Safe Co., the firm represents the National Meter Co., having supplied many thousands of water meters to different municipalities.

**Silverware.**—Another representation is that of Elkington & Co., Ltd., for electro plate racing and sporting trophies.

**Refrigerators.**—Manufacturers and proprietors of Tundice Refrigerators, the company under notice have appointed the following overseas agents, Caldbeck, MacGregor & Co., Ltd., Federated Malay States and Hong

kong, Barrow, Brown & Co., Ltd., Bangkok, Siam, The Real Estate Syndicate, Ltd., Beira, East Africa, J. Lyons & Co., Ltd., Accra, Gold Coast, and Lindet eyes-Stokvis for Batavia.

**London Agents.**—Lancelot Dent & Co., Ltd., 24, Martin Lane, E.C. 4.

### CONTRACTORS

#### J. B. NORTON AND SONS, LIMITED.

**Inception.**—Established in 1869 by Mr J. B. Norton on the site of the Old Court House, this firm and its affairs remained in the hands of the family, through the sons, until 1911, when a private limited liability company was formed with Mr H. B. Norton as managing director. The old building was demolished in 1910 and replaced by the present commanding block, while in 1910 land was acquired at Entally, where an extensive works, capable of meeting the demands of a rapidly increasing business, was erected.

**Capital.**—This at present is Rs 7,50,000 (£50,000).

**Activities.**—The firm carries out sanitary engineering contracts all over India, and is a large supplier to the trade. The works comprise iron and brass foundries, machine, riveting, pattern, smith and plating shops, all fitted with modern machinery.

**Branches.**—In 1912 a branch was opened at Kashmir Gate, Delhi, and in 1916 one at The Mall, Simla. From the Delhi and

Simla establishments many important contracts in the Punjab, Rajputana and Central India have been undertaken.

**Contracts.**—The firm employs a large staff of expert European engineers, and the work turned out is equal to the best western standards. The following are a few of the contracts carried out in widely separated

parts of India. Medical College and Presidency General Hospitals, Government House, Belvedere (Viceregal Residence) and railway offices, banks and jute mills in Calcutta, Government Houses at Darjeeling, Ranchi and Simla, The Cinnamara Tea Co., Jorhat, and The Assam Tea Co., Mariani, Assam, British Legation Buildings, Kabul, Afghanistan, Viceregal Lodge and Lady Hardinge Hospital, Delhi, Mayo Hospital Lahore, Moti Bagh Palace, Patiala, etc.

**Directors.**—The present board consists of Messrs W. T. Hamlyn, J. H. Hamlyn and

H. M. Rodden, with Mr F. J. Inness as secretary.

**Head Offices.**—Norton Buildings, Calcutta (cables: "Nortonson," Calcutta). Codes: A.B.C. 5th edition and Bentley's.

**Bankers.**—The Mercantile Bank of India, Ltd.; The Chartered Bank of India, Australia and China.

# SIMPLEX CONCRETE PILES (INDIA) LTD., Calcutta.

1. A Test Load at the E. I. R. Offices

2. Mackinnon Mackenzie's New Building under construction  
3. Aquilina and Louaza Building, Cairo, supported on Concrete Piles.

## SIMPLEX CONCRETE PILES (INDIA), LIMITED.

**Inception.**—Owing to the very bad subsoil in and around Calcutta many important buildings, erected upon ordinary foundations, have settled unevenly, causing damage to their superstructure. In 1924 Mackinnon Mackenzie & Co adopted Simplex concrete piles for the foundations of their new building, the largest and heaviest of its kind in the East. A total of 2,330 piles were installed by Simplex Concrete Piles Ltd., London within six months, and so quickly did it become evident that this type of pile was eminently suitable for heavy foundations in Bengal that an Indian company was incorporated in December, 1924, under the name of Simplex Concrete Piles (India), Ltd.

**Activities.**—The company designs and constructs foundations and executes all classes of reinforced concrete work.

**Contracts.**—After a satisfactory test, the Calcutta Port Commissioners adopted the Simplex concrete piles for shed foundations at the new King George's Docks, where many

of the piles have been driven to a depth of over 65 feet.

In 1925 an interesting test was made by the East Indian Railway on four Simplex piles driven to a depth of 55 feet. A load of 280 tons was placed upon the foundation and so successful was the result that the firm under notice was entrusted with the whole piling and reinforced concrete foundation for the new railway offices in Farlie Place, Calcutta.

Other contracts have been executed in Great Britain, Trinidad, Johore, Europe, India and America.

**Description of Piles.**—A steel tube with an enlarged cast iron shoe is driven until solid ground is reached, the reinforcement is placed inside the tube, which is then filled with freshly mixed concrete. When the tube is withdrawn the concrete flows out and cements itself to the surrounding soil.

**Advantages.**—(1) The pile is not subjected to damage during installation, as with pre-cast piles; (2) The concrete hardens below ground and is not affected by extremes of temperature; (3) A greater skin friction is

obtained, (4) No wastage occurs. The tube is filled to the required level, never too short or too long, as with pre-cast piles, whose lengths are predetermined, (5) Concrete piles are not subject to rotting, (6) They can be installed immediately the pile driver is on the site, whereas pre-cast piles have to be manufactured and left to mature before being driven, and (7) Simplex piles effect a saving in reinforcement. No moulds are required for casting.

**Agents.**—United Engineers, Ltd., 240-241 Merchant Street, Rangoon, represent the company in Burma, and Hettner Brothers (15, Hammam El Talat, Cairo, and at Alexandria) in Egypt.

**Offices.**—**ENGLAND**—London (head office) 137, Victoria Street, Westminster, S.W. 1, Warrington, 31, Bold Street.

**SCOTLAND.**—10, Cook Street, Glasgow.

**INDIA**—Simplex Concrete Piles (India), Ltd., 8, Strand Road, Calcutta, P.O. Box 2159 (cables "Simplexco," Calcutta). Code: Bentley's Complete Phrase

**Bankers.**—Eastern Bank, Ltd.

J. C. BANERJEE, Calcutta.

Three of many important constructions by the firm.

1. Hongkong Bank Building.
2. Royal Exchange Building, Calcutta.
3. University Institute, Calcutta.

#### J. C. BANERJEE.

**Inception.**—This private firm, which has erected so many substantial buildings in Calcutta, was established there in 1907 by Mr J. C. Banerjee, well-known in financial circles as a director of some 20 public companies in India and a Commissioner for the Port of Calcutta. His partner in business is the eminent engineer, Mr P. B. Bhattacharyya.

**Activities.**—The operations of the enterprise are extensive, including structural and electrical engineering, building, contracting, import and export of hardware and metals, and the manufacture of bolts, nuts, rivets, dogspikes and railway and engineering materials. In addition, the firm are the proprietors of The Burdwan Electric Supply Co., Calcutta Housing Co., The Kenduguri Tea Estate and Chunar Stone Quarry, and managing agents for Matidhar Tea Co., Ltd. and Bijnmoni Tea Co., Ltd., Purnea.

**Premises.**—The stores, godowns and offices are at Strand Road, the structural workshops, metal yard and foundry at Andul Road, Shahman, the stone works at Upper Circular Road, and The Standard Rivet, Bolt and Nut Works at Ramkrishnapur.

**Development.**—Beginning work under the Port Commissioners, the firm soon obtained contracts from the Public Works Department, and within two years was placed on that body's roll of first class contractors. Then followed rapidly contracts from corporate bodies, the Government, princes and large commercial concerns in Calcutta and other parts of India. The numerous substantial buildings constructed by it during the past 20 years are indeed monuments to the skill and prestige of the organisation under notice, whose head Mr J. C. Banerjee, was styled the 'Prince of Contractors' by His Excellency Lord Carmichael, Governor of Bengal, when he opened the University Institute, one of the firm's great achievements, in 1915. Among so many noteworthy buildings, the following few and their approximate cost will convey an idea of the gigantic undertakings of the house of J. C. Banerjee.

**IN CALCUTTA.** Prince of Wales Hospital, Rs 9,38,000/-; Lady Dufferin Hospital, Rs 8,00,000/-; Baker's Laboratory, Presidency College, Rs 5,60,000/-; College of Science, Calcutta University, Rs 4,00,000/-; Royal Exchange Place Building, Rs 6,50,000/-; Calbazar Police Building, Rs 4,50,000/-; Hongkong and Shanghai Banking Corporation Building, Rs 5,50,000/-; Tropical School of Medicine, Rs 7,50,000/-; and Chetia Government Press Buildings, Rs 11,00,000/-.

**IN BOMBAY.** The University Extension, Rs 3,50,000/-; Magistrates Court, Rs 7,00,000/-; and Kirkee Munition Factories, Rs 32,00,000/-.

**Bankers.**—Imperial Bank of India, Lloyds Bank (Cox's Branch), Karwani Industrial Bank, National Bank of India, Ltd.

CALCUTTA PORT Kidderpore Docks: View from Dock No. 2

## PORT OF CALCUTTA

**C**ALCUTTA, situated in lat  $22^{\circ}33'N$  and long  $88^{\circ}24'E$ , on the left bank of the River Hooghly, some 80 miles from the sea, is the largest and most populous city of India, and owes its fame to the fact that it affords the only outlet to the markets of the world for an enormous area of country, in which are situated some of the most important industries of British India. From the time when the genius of Job Charnock saw the commercial possibilities of the situation the importance of Calcutta as a world port has steadily progressed, so that to-day it commands more than one-third of the whole commerce of India and must be counted among the greatest centres of shipping in the world. During the year 1925-26 no less than 1,194 vessels entered the port, with a gross tonnage of 6,453,982 tons.

**ADMINISTRATION.**—The limits of the Port proper extend from Konnagar, nine miles above, to Budge Budge, sixteen miles below Calcutta, and all affairs concerning it are in the hands of a Port Trust founded in 1870, which is at present composed of a Chairman, a Deputy Chairman, and fourteen Commissioners, nine of whom are elected and five nominated by the Local Government. Of the elected members the Bengal Chamber of Commerce appoints six, the Calcutta Trades Association one, the Commissioners of the City of Calcutta one, and another is nominated by such bodies or firms as the Government shall from time to time select as best representing the interests of the Indian mercantile community.

The powers and duties of the Commissioners are prescribed by the Calcutta Port Act 1890. Under Section 7 of the Indian Ports Act they are also appointed conservators of the Port of Calcutta, and, as such, have charge of the navigable channels of the river, but the Pilot Service is not under their control. The income of the Port Trust rose from Rs.1,51,28,435 in 1913-14 to Rs.3,21,27,748 in 1925-26.

**APPROACH TO THE PORT.**—The Hooghly is notoriously a dangerous and

difficult river, and the conservancy of the hundred and twenty odd miles between Calcutta and the Sandheads forms an important part of the activities of the Port Commissioners, who maintain a large and expert staff of River Surveyors, etc., for the purpose. There are numerous bars between Calcutta and the open sea, and vessels drawing thirty feet of water can be handled at the height of ordinary spring tides, but these conditions, of course, only occur for a limited number of days in each semi-lunation, so that very deep vessels are occasionally neaped, this, however, is a rare occurrence. Starting from seawards, there is a line of three lightships lying roughly from east to west some forty-one miles off-shore—the Mutlah, the Eastern Channel, and the Pilots' Ridge. The two last named burn blue lights at intervals of half an hour and one hour respectively between sunset and sunrise from March 15 to October 31, and the glare reflected on the clouds can be seen by a ship making her land-fall considerably before the light becomes visible. An in-coming ship picks up her pilot near the Eastern Channel light and follows a line of lightships and buoys shorewards, passing in turn the Intermediate, the Lower Gaspar, the Upper Gaspar and the Middleton light vessels, the last two being unattended. The Middleton light marks the inshore end of the first of the bars, which, though fairly stable, is sometimes the governing bar, having at present an average depth of between fifteen and sixteen feet below datum. After the Middleton Bar the channel leads shorewards, with Saugor Island and lighthouse close on the starboard hand, thence crossing the Gabtola Bar, at the head of which is the Gabtola light vessel, soon to be replaced by an unattended light. Some miles further up the estuary the Balari Bar forms a third obstacle. The channel is lighted as far up as Hospital Point, which marks the limit of night navigation and is approximately 80 miles from the Eastern Channel light.

The next bar, the Eastern Gut, frequently has the least water over it; the average low water depth throughout the year being 17 ft

The channel leads close in past Hooghly Point, with the Muckrapatti Shoal in the middle of the river. The whole of this stretch known as the James and Mary Reach is troublesome owing to the extremely strong eddies which have given it a world-wide reputation as a danger spot for shipping. Proceeding up the river past Iulta village, the Royapur Bar, 23 miles below Calcutta, and the Moyapur Bar five miles further up, are of considerable importance and sometimes shoal badly. Beyond these the bars are of small importance, so that outgoing vessels cross them at or near low water so as to be able to negotiate Moyapur as soon as the tide has risen sufficiently. All the bars in the river proper, as distinct from the estuary, suffer seasonal variations in depth, but some are more stable than others. The Eastern Gut, which is the worst in this respect, has been known to shoal  $2\frac{1}{2}$  ft. in 24 hours with a dredger working on it at the time. Besides buoys and lights, there are numerous leading marks and tidal semaphores as aids to navigation, while experiments in directional wireless telegraphy, to give bearings to ships in the Bay, are being carried out. Powerful dredgers are continually at work on the worst of the bars, so that during recent years the river, which for a long time was thought to be deteriorating, is now, if not actually improving, at least stable.

**COMMUNICATIONS.**—Three great railways converge on Calcutta. The East Indian Railway connects the city with Bombay, the United Provinces and the Punjab, and is the outlet for the rich traffic of the Ganges Valley. Its terminus is on the west bank of the river at Howrah, but a branch line crosses the Hooghly by a bridge at Naihati, 25 miles up the river, providing access to the docks at Kidderpore over the Eastern Bengal State Railway. The Bengal-Nagpur Railway runs through Orissa to Madras and westwards through the Central Provinces to Bombay, its terminus is also at Howrah, but a wagon ferry plies between Shalimar and the docks. The Eastern Bengal State Railway, the terminus for which is at Sealdah, connects

Calcutta with north and east Bengal and Assam, also with Diamond Harbour. The railways, however, by no means monopolise the traffic. Numerous native craft ply up and down the rivers, along the channels through the Sunderbans which connect Calcutta with Eastern Bengal and the Valley of the Brahmaputra, and on the Midnapore and Orissa coast canals. There are also several large steamer companies whose vessels navigate these inland waters and carry an extensive coasting trade to the Orissa ports, the most important of these are the India General, the Calcutta Steam and the Rivers Steam Navigation Companies.

**DOCKS AND JETTIES.**—All the facilities commonly found in a first-class port are provided, and communication between the various points is maintained by the Commissioners' Railway, which has over 100 miles of permanent way, and connects with all the main railway systems serving Calcutta.

**CALCUTTA JETTIES.**—The Calcutta Jetties are the oldest part of the Port, four of them having been handed over to the

It has five general produce berths, serving double-storeyed sheds, and eleven coal berths. Two of the latter are fitted with Beckett's Patent Mechanical loading gear, and experiments are also being made with the use of magnets for handling pig iron.

**DRY DOCKS.**—There are two Graving Docks, entered from the Tidal Basin—No 1, 538 ft 9 in., by 69 ft 6 in., with 25 ft of water on the sill, and No 2, 488 ft 6 in. by 69 ft 6 in., and having 27 ft on the sill. There is besides a third and smaller Graving Dock, but this is reserved for the Commissioners' own vessels.

**GARDEN REACH JETTIES.**—The Garden Reach Jetties, the latest addition to the Port and finished since the War, consist of a coaling jetty for ships up to 463 feet in length and four jetties for ships up to 600 feet, and they are built according to the most modern ideas. The transit sheds are double-storeyed, the largest having an area of 127,000 sq ft on each floor, and are very fully equipped with electric cranes, lifts

type and the export berth by a two-storeyed shed. The whole scheme when completed will comprise one of the most extensive dock systems extant.

**OIL DEPOT.**—Budge Budge, the oil depot for Calcutta, is situated 12 miles downstream. There are six pontoon jetties for unloading bulk or non-dangerous petroleum and its products, and one for dangerous petroleum. The storage installations, which have a total capacity of 50,000,000 gallons, are company-owned, the Commissioners merely owning the sites which are served by the Eastern Bengal Railway.

**WAREHOUSE ACCOMMODATION.**—The Commissioners provide extensive warehouse accommodation, consisting of two tea warehouses having a storage area of 304,000 sq ft, a hide depot having an area of 1,000,000 sq ft, a grain and seeds depot at Kantapukur of approximately the same area and consisting of 31 single-storeyed sheds, and various other warehouses situated close to the Calcutta jetties. Much of this accommodation is let out to firms, who then become entirely responsible for the custody and

CALCUTTA PORT. The Tidal Basin, with Kidderpore Docks in background

Commissioners, when the Port Trust was founded in 1870. To-day they are used entirely for imports, the whole of which, with the exception of relatively few bulk and bag cargoes, which are unloaded at Kidderpore Docks, is handled there. They suffer from the disadvantages of lack of space for expansion and congestion of traffic caused by unloading in the business quarter of the city. There are nine of these jetties, with a total length of 4,735 feet, but only eight are available for steamers, as the remaining one, 340 feet long, is used for the discharge of lighters and boats. Of the eight steamer jetties, three have two-storeyed and the remaining five single-storeyed sheds, all of which are equipped with the usual 35-cwt and 5-ton cranes.

**DOCK NO. 1.**—This dock is 2,700 ft. in length by 600 ft wide, gives 30 ft of water and has twelve berths serving single-storeyed cargo sheds, which are provided with hydraulic cranes to lift 35 cwt. and 5 tons. In addition, there is one general berth in the tidal basin.

**DOCK NO. 2.**—This has a length of 4,300 ft. by 400 ft., and also gives 30 ft. of water,

and trolley lines, while there are specially designed facilities for rail and lorry traffic.

**KIDDERPORE DOCKS.**—These, consisting of Nos 1 and 2 docks and a tidal basin, were completed in 1892. Although at first they were not used as freely as had been expected, they are now the centre of the export trade of Calcutta. There are two entrances from the river, one of 60 ft and the other of 80 ft, but as the latter entails using the whole basin as a lock and can only be used at certain states of the tide, a new 80 ft lock is under construction.

**KING GEORGE'S DOCK.**—This is at present under construction, and will eventually provide 33 berths, a heavy lift yard, and two Graving Docks. Only a portion of this work is in hand, and it is not proposed to complete the scheme until the trade of the port increases enough to justify so large an outlay. The portion under construction will comprise the lock entrance, two Graving Docks arranged tandem and entered either from the river or the docks, three import berths, one export berth, and a heavy lift yard. The import berths will be served by three-storeyed sheds of the most modern

handling of goods while they remain in the warehouse, but loading from or unloading into these warehouses is done by the Commissioners' contract labour. The remaining part is utilized as public sheds, and the liability as of a bailee remains with the Commissioners.

**EXPORTS.**—The Kidderpore Docks and Garden Reach Jetties are the centre of the export trade, although a considerable amount of loading is done from lighters, owned by private firms, directly into ships lying in the river. The chief commodities exported in 1925-26 were: coal, 1,796,415 tons, pig iron, 376,313 tons, wheat and seeds, 222,402 tons, manganese ore, 277,221 tons, jute, 198,838 tons, rice, 82,426 tons, tea 97,887 tons, hides and skins, 33,150 tons, gunnies, 32,716 tons, and shellac, 33,903 tons. The total amount loaded over the Commissioners' wharves was 3,290,857 tons. The amount of coal exported, although still the largest item, has fallen very much from the total of ten years ago, when it amounted to about 3 million tons; on the other hand the exports of manganese ore and particularly pig iron have increased very considerably during the last few years.

MACKINNON MACKENZIE & CO., Calcutta  
Fine new office building at that city nearing completion.  
(N. 10/17/77 p. 33 page 194)

**IMPORTS.**—A great part of the imports, totalling in 1925-26 951,442 tons, is handled at the Calcutta jetties, where all miscellaneous cargo is unloaded. The chief items are cotton piece goods, galvanised iron sheets, wrought iron, and machinery. All the bag cargoes, consisting almost entirely of sugar and rice, are discharged at the Kidderpore Docks, or sometimes at the Garden Reach Jetties, but these constitute only a small part of the whole. During 1925-26, out of a total of 352,714 tons handled at the Docks 306,739 tons consisted of sugar and 7,651 tons of rice, the latter figure being purely nominal compared with some years when the Indian crop has failed. All the oil imports are, of course, handled at Budge Budge. During 1925-26, 123 vessels arrived and 116,899,554 gallons were discharged. Besides these imports, a considerable number of ships discharge into privately owned lighters when lying in the stream, the chief items treated in this way being timber and salt, 436,837 tons of the latter being unloaded in 1925-26.

**LABOUR.**—There is always a fairly constant supply of labour to be obtained in Calcutta. The Commissioners keep a small permanent labour force, but rely on contract labour for by far the greatest proportion of their supply.

**PILOTAGE.**—Pilotage is compulsory between Garden Reach and Sandheads, and an extra fee is charged for night navigation. The charges vary with the draught of the vessel, and the river is divided into twelfths for the purpose of reckoning broken pilotage. The Commissioners' Harbour Master takes charge of vessels when they arrive at Garden Reach.

**PORT CHARGES.**—Port dues are charged at the following rates on net registered tonnage—

	ANNAS PER TON
Dhoomies and country vessels employed in the coasting trade, payable not more than once in sixty days	2
Vessels entering in ballast and not carrying passengers	3
Other sea-going vessels of 20 tons and upwards, payable by mail steamers and coasting vessels not more than once in sixty days	4
Tug steamers and river steamers, payable once between January 1 and June 30, and once between July 1 and December 30 in each year	4

**DIFFERENTIAL TOLL.**—In addition to landing charges levied on all goods handled at the jetties or docks, a differential toll is levied on all goods landed at the Calcutta Jetties. Differential toll is also levied on all goods landed at the Docks or Garden Reach Jetties which are removed from the transit sheds or yards by foreign railway wagons or in Port Commissioners' wagons in through booking to destinations beyond the Commissioners' system, except sugar, rice, wheat and other grain traffic, copper matte, iron ore and any other commodity which may hereafter be specially exempted under the orders of the Commissioners in Meeting. The toll is 12 annas per ton or part of a ton on all goods for which the landing charge is levied by weight, and three-fifths of the landing charge in all other cases.

**HOSPITAL DUES.**—These dues, which, like those for pilotage, are recovered by the Commissioners on behalf of Government, are at the rate of 4 pies per ton on net registered tonnage on all sea-going vessels entering the port.

**JETTY OR BERTH HIRE.**—This is Rs. 70 per day, except coal berths, which are charged Rs. 30 per day. There are various other charges for night work, hire of hawser boats, etc.

**LANDING CHARGES.**—These are levied on all goods landed at the jetties and docks. For goods on which freight is charged by weight by the steamer companies the landing charge ranges from Rs. 1 a 4 per ton on packages not exceeding 35 cwt. to Rs. 3 a 12 on packages from 35 cwt. to 30 tons, and Rs. 10 on packages over 30 but not exceeding 100 tons. For goods on which freight is charged by measurement the charge is from Rs. 1 to Rs. 3 a 12 per 40 cubic feet.

Goods are rent free for two clear working days from the date of landing, after which they incur rent, which is doubled after a further period of three days.

At the petroleum wharf a uniform wharfage charge of 10 annas per ton of 280 gallons is levied on all non-dangerous petroleum and its product. Petrol is charged 1½ pice per gallon.

There are, in addition, various miscellaneous charges for loading into wagons, weighing-in, etc.

**MOORING FEES.**—Mooring time is charged per day and varies with the size of the ship.

**RIVER DUE ON EXPORTS.**—On all goods loaded into any sea-going vessel within the limits of the port, whether the loading is done by the Commissioners or not, river due is charged at the following rates:

Manganese ore 10 annas per ton or part of a ton.

Bunker coal loaded into vessels bunkers for consumption on board that vessel 6 annas per ton or part of a ton.

All other export coal 8 annas per ton or part of a ton.

Pig iron and scrap iron Rs. 1 per ton or part of a ton.

All other goods on which freight is charged by weight by the steamer companies Rs. 1-4-0 per ton or part of a ton.

All other goods on which freight is charged by measurement by the steamer companies. Equal to the shipping charge chargeable for such or similar goods.

Motor cars not in cases Rs. 20 per car.

Where no basis for freight charge is laid down, the river due, shipping charge and all other charges payable to the Commissioners will be recovered on the weight or measurement basis at the Commissioners' option.

**RIVER DUE.**—River due on imports is charged at the following rates—

(a) On all goods discharged directly from any sea-going vessels into a Commissioners' lighter, on to the quay in the Docks, or on to the Calcutta or Garden Reach Jetties—12 annas per ton or part of a ton when the landing-charge is levied by weight, and in other cases at a rate equal to three-fifths of the landing-charge.

(b) On all other goods discharged from any sea-going vessel.

(i) when freight is charged by weight by the steamer companies at the rate of Rs. 1-4-0 per ton or part of a ton,

(ii) when freight is charged by measurement by the steamer companies at a rate equal to the landing-charge which would have been levied had the same goods been landed by the Commissioners.

**TOWING CHARGES.**—These vary according to the service required.

**TIME SIGNALS.**—Chronometers can be checked. Three balls, situated on the semaphore tower at Fort William, at the Port

Commissioners' office, and at the Kidderpore Docks Tower respectively, are hoisted close up as preparatory about five minutes before the signal, and are dropped every day at 1 p.m. Calcutta (Fort William) meantime, equal to 19 h 6 m 39 s 2 s (Greenwich mean-time). A flag is also hoisted on the semaphore tower 20 minutes before the signal as preparatory.

**TRADE AND SHIPPING.** The following table shows the aggregate trade of Calcutta with foreign countries and with Indian ports in the years named.

	1924-5 RS LAKHS	1925-26 RS LAKHS
FOREIGN TRADE		
Imports	91,50 85	86,54 94
Exports	1,42,91 91	1,47,22 77
Total	2,34,42 76	2,33,77 71
COASTING TRADE		
Imports	21,11 55	16,05 52
Exports	16,58 12	15,59 02
Total	37,69 67	32,25 14

**SHIPPING.**—Following are the figures of tonnage passing through the hands of the Port Commissioners for the years named.

	1924-25	1925-26
Net tonnage of vessels entering Port	3,845,788	3,887,544
Jetty imports	874,714	951,460
Dock imports	290,412	352,712
Dock exports (general)	1,770,054	1,494,442
Dock exports (coal)	1,495,913	1,796,406

## SHIPOWNERS, AGENTS, ETC.

### MACKINNON MACKENZIE AND COMPANY.

**Inception.**—As managing agents for the British India Steam Navigation Co., Ltd., Messrs Mackinnon Mackenzie & Co. are known throughout the East for all that is best in British commercial integrity and enterprise, and their name is synonymous with shipping over more than half the globe. Founded in 1847 by William Mackinnon and Robert Mackenzie, two young Scotsmen, with one small coasting steamer, the history of the firm's development is a shipping romance.

Two names stand out prominently in its long years of activity: those of William Mackinnon, the co-founder, and James Lyle Mackay, the present Lord Inchcape, who joined the firm in 1874. To the wisdom, pluck, endurance and adventurous enterprise of these men the present position of the Company is primarily due.

**Development.**—The first important step forward was the securing of the mail contract between Calcutta and Burmese ports for which purpose the Calcutta and Burmah Steam Navigation Company was formed in 1856. The success of the venture was early assured, and the partners then looked ahead for further expansion. This was a stupendous undertaking, involving a general system of steam communication over the whole Indian littoral, with extensions to the Persian Gulf and Singapore. The new contract provided for the conveyance of troops and Government stores, a fortnightly service between Calcutta and Burma, monthly services to Chittagong and Akyab, to Singapore, from Rangoon to Andaman Islands, and from Madras to Rangoon, a fortnightly service between Bombay and Karachi, and a service every six weeks to the Persian Gulf. In 1863 the name of the Calcutta & Burmah Steam Navigation Co. was changed to the British India Steam Navigation Co., Ltd., in consonance with the increased activities. The fleet then numbered 17 steamers in commission and four building. This wonderful growth was accomplished in the face of adversity and competition. In the cyclone

of 1863 the Company lost five ships, and was assailed for a few years by two companies formed in 1864, each with a large capital.

In 1866 the British India Steam Navigation Co., Ltd., entered into a 10 years' contract with the Dutch East India Co. to run the mail service of the East Indies, and the Netherland Steam Navigation Co. was formed with practically the same board of directors. Twenty years later this company owned 33 steamers of 41,000 tons trading in the Eastern Archipelago, but the more exclusive Dutch colonial policy ended its activities a few years later.

**Further Expansion.**—The opening of the Suez Canal in 1869 and the universal adoption of the compound marine engine led to further great expansions. The following new routes were thus opened: London, Red Sea ports and the Persian Gulf, Aden, Mombasa, London, Mombasa and Zanzibar, London, Bombay and Karachi every two weeks, London, Colombo, Madras and Calcutta, etc. In 1873, under a fresh 10 years' contract with the Indian Government, nearly all the existing services were doubled. In 1881, under contract with the Queensland Government, steamers were run from London to Brisbane via the Torres Straits, then the longest mail service in the world, while, five years later the Australian United Steam Navigation Co., one of the foremost shipping corporations in the Southern Pacific, was formed. Finally in 1914-15 the P. & O. and B.I. Companies, which for 45 years had worked harmoniously together, were fused under Lord Inchcape's chairmanship.

**Agencies.**—In addition to being managing agents of the B.I.S.N. Co. Ltd., Messrs Mackinnon Mackenzie & Co. are managing agents of Eastern Coal Co. Ltd., Madura Co. Ltd., Coromandel Co. Ltd., India Jute Co. Ltd., Megna Mills Co. Ltd., and British Arc Welding Co. (India) Ltd., also agents for the P. & O. S.N. Co., James Nourse Ltd., Union Steamship Co. of New Zealand Ltd., Canadian Government Merchant Marine Ltd., Canadian Pacific Steamships Ltd., Atlas Assurance Co. Ltd., London and Lancashire Insurance Co. Ltd., British and Foreign Marine Insurance Co. Ltd., Marine and General Mutual Life Assurance Society, Marine Insurance Co. Ltd., and Salomah Tea Co. Ltd.

**Head Office.**—16, Strand Road, Calcutta (cables "Mackinnons," Calcutta) Codes Bentley's, A B C and Scott's.

**Bankers.**—The P. & O. Banking Corporation, Ltd., The Chartered Bank of India, Australia and China, The National Bank of India, Ltd.

#### **GLADSTONE, WYLLIE AND COMPANY.**

**Inception.**—In the year 1839 Sir John Gladstone, father of the famous statesman of that name and head of the old well-known West Indian firm of Gladstone & Co., Liverpool, sent out from England a Mr. James Wyllie and a Mr. Andrew Hay to found an Eastern branch of his business in Calcutta. The house has developed steadily in influence and prestige during its 87 years' existence, and is to-day one of the best-known in that city.

**Activities.**—Operations are confined chiefly to the business of general East Indian merchants, shipping and insurance agents, and managing agents for two important concerns, The Calcutta Landing & Shipping Co., Ltd., and The Sutna Stone & Lime Co., Ltd.

**Shipping.**—The firm acts as agents for the Ellerman City Line, which has maintained since 1840 a regular and frequent service of passenger and cargo steamers between Calcutta and the United Kingdom, and for the Ellerman & Bucknall Steamship Co., managers, American & Indian Line, running

GLADSTONE, WYLLIE & CO., Calcutta.

4. Office at Aden.

5. Coal stocks at Aden.

between Calcutta and North American ports. Messrs Gladstone, Wyllie & Co became connected with the Corporation of Lloyds in 1862, and have acted as its agents in Calcutta ever since.

**Insurance.**—In addition to Lloyds, they are agents also for the Salvage Associations of London and New York, and represent many of the leading insurance companies of the world, either as underwriting or claim settling agents.

**Imports and Exports.**—A large business is done in the importation of timber from Burma and California, of cotton piece goods from Lancashire and sugar from Java, etc. Metals, paints and varnishes are imported for supply to the railways and engineering organisations of India. The export side includes gunnies, hessians, jute, shellac, rice, carpets, and other Indian products.

**Managing Agents.**—The Calcutta Landing & Shipping Co., Ltd., which is managed by

the organisation under notice, maintains a fleet of 114 boats and launches, with a carrying capacity of 7,900 tons, for the transport of merchandise to and from ships, jetties, docks and mills on the river, and a fleet of motor lorries for similar work on shore. The Sutna Stone & Lime Co., Ltd., another concern under the management of Gladstone, Wyllie & Co., was started 32 years ago to operate the stone quarries at Sutna in the Rewa State of Central India, with which State and Nepal the firm is closely connected.

**London Office.**—36, Lime Street, E C 3

**Head Offices.**—5, Council House Street, Calcutta (cables "Gladswyll," Calcutta) Codes A B C 5th and 6th Editions, A. I. Watkin's, Scott's 9th and 10th Editions, Premier, Bentley's, Western Union and Lieber's Standard.

**Bankers.**—London: The Westminster Bank, Ltd.; Calcutta: Chartered Bank of India, Australia and China.

#### CORY BROTHERS AND COMPANY, LTD.

**Inception.**—There are few bunkering businesses so widely established and represented as that of this Cardiff firm of coalowners, founded almost a century ago. A private limited company having no connection with any other concern of the name of Cory, its ramifications are world-wide, and its name is on the list of contractors to the principal Governments and Admiralties.

**Activities.**—Cory Bros are large colliery and coaling depôt proprietors, coal exporters and fuel oil contractors, and sole shippers of Cory's Merthyr steam coal and Penrhyber Navigation steam coal. They are suppliers to the Governments of Great Britain, United States, France, Italy, Japan, Holland, Denmark, Greece, Brazil, etc., and to the principal railways, steamship lines, etc.

**Depôts and Branches.**—The network of depôts, branches and agencies, embracing practically all the great ports of the world, is

extremely efficient for the purpose of meeting the demands of a world trade, and is at least equal to the organisation of any similar business. The European branches are at London, Liverpool, Newport, Swansea, Glasgow, Newcastle, Paris, Marseilles, Genoa, Rome, Leghorn, Trieste, Fiume, Messina, Catania, Bilbao, Vigo, Huelva, Barcelona, Tarragona, Alicante, Malaga, Valencia, Cartagena, Rotterdam, Amsterdam, Antwerp, Berlin, Hamburg, Bremen, Copenhagen, Oslo, Trondhjem, Reykjavik, Gothenburg, Bergen, Haugesund, Abo, Stockholm, Gibraltar, and the United States branch is in New York. The firm has established coaling depôts at Aden, Algiers, Bahia, Bahia Blanca, Barbados, Bombay, Buenos Aires, Cardiff, Colombo, La Plata, Las Palmas, Liverpool, London, Madeira,

Malta, Marseilles, Mombasa, Monte Video, Newport (Mon.), Pernambuco, Port Said, Rio de Janeiro, Rosario, Santos, St Vincent (Cape Verde), Seychelles (Mahé), Suez, Swansea, Tenerife and Zanzibar. In addition to these, the Company is represented by agents in ports throughout the world, and has its own oil fuel installations at Port Said and St Vincent (Cape Verde).

**Calcutta.**—This branch was opened in November, 1924, by Mr. William Meek, who is well known to the merchant marine as the manager for 20 years of the firm's depôt at Aden, but for many years previously Messrs. Cory had been represented here. The coal depôt at Kidderpore carries the usual adequate stocks, never less than 3,000 tons, and

a further depot is maintained at Shalimar for jetty bunkering, offering the only facilities of the kind at the docks.

**Bombay and Karachi Branches.**—The Bombay office and depôt have been in existence more than 30 years, and are now under the charge of Capt G. J. Davies. The firm is represented at Karachi by Eduljee Dinshaw, C.I.E.

**Offices.**—Head office Cardiff. London office 59, St. Mary Axe, E.C.3, Calcutta office 8, Clive Street (cables, "Coribro," Calcutta) Codes Scott's 10th Edition and Bentley's.

**Bankers.**—Cardiff and London. The National Provincial Bank, Ltd., Calcutta, The National Bank of India Ltd.

## ADDITIONAL ENTERPRISES PROMINENT IN THE VARIOUS BRANCHES OF THE COMMERCE OF INDIA.

**AHMUTY & CO. LTD.** (Managing Agents Messrs. E. D. Sassoon & Co., Ltd.)—100 Clive Street Calcutta. Originally founded in 1815, this firm has undergone many changes. The business being reorganised by the present managing agents in 1925 is now carried on in two sections: (1) Metal machinery and engineering and (2) sundries. In the former department (cables, "Drill-steel" Calcutta) regular shipments of tin, copper, brass rods and sheets, etc., are received, while the latter section is interested in cotton and woollen piece-goods, continental sundries, wines and spirits, etc (cables "Rebassico," Calcutta).

**ALLEN BERRY & CO. LTD.**—Head office and works 62 Hazra Road, Ballygunge Showrooms 24 Park Street, Calcutta. Branch office Queen's Road, Delhi. Automobile engineers, oxy-acetylene and electric welders and motor car importers. Managing agents for The Oxy-Acetylene Welding and Metal Cutting Co. Ltd. Cables "Repairs" Codes Western Union and General Code of America.

**ALLEN BROS. & CO. (INDIA), LTD.** Registered office, Allen House, 7, Hart Street, Calcutta. Branches Bombay and Cawnpore. Export and import merchants, manufacturers, shippers, insurance agents, piece-goods merchants and agents. Agents in Europe. Allen Bros. & Co. Ltd., 1, Devonshire Square, Bishopsgate, London. Besides being the managing agents for a number of important firms, the company is the proprietor of Dum Dum Canvas Proofing Works, Dum Dum Paulin Factory, Calcutta. Fertiliser Works and Cawnpore Bone Mills. Cables, "Capricorn." Codes: Bentley's, A B C 5th and 6th Editions and Western Union.

**ALLEN & HANBURY'S, LTD.**—Block E-2, Clive Buildings, Calcutta. Wholesale druggists and surgical instrument makers. Head office: 37, Lombard Street, London. Cables, "Hynogen."

**ANDERSON, WRIGHT & CO.**—22, Strand Road, Calcutta. Founded in 1872, this firm for upwards of twenty years confined itself almost entirely to importing Manchester piece-goods and exporting Indian produce. In 1895, however, the Khardah Co. Ltd. (Jute Mill) was floated, with the firm as managing agents. The company has acted as agents of the Natal Line of steamers for many years. London correspondents: Clark, Wilson & Co., 93, Gracechurch Street, E.C.3.

**ANDREW YULE & CO. LTD.**—8, Clive Row, Calcutta. Merchants and agents. This well-known firm acts as managing agents for the under-named jute mills and tea gardens: Albion Jute Mills Co. Ltd., Belvedere Jute Mills Co. Ltd., Budget Budget Jute Mills Co. Ltd., Cheviot Mills Co. Ltd., Delta Jute Mills Co. Ltd., Lothian Jute Mills Co. Ltd., National Co. Ltd., New Central Jute Mills Co. Ltd., Orient Jute Mills Co. Ltd., Midnapore Zemindary Co. Ltd., Assam Consolidated Tea Estates, Ltd., Banarhat Tea Co. Ltd., Choonabhatti Tea Co. Ltd., Dilaram Tea Co. Ltd., Engo Tea Co. Ltd., Hoograjuli Tea Co. Ltd., Jaybirpara (Dooars) Tea Co. Ltd., Mun Tea Co. Ltd., Murphulani (Assam) Tea Co. Ltd., New Dooars Tea Co. Ltd., Rajgarh Tea Co. Ltd., Red Bank (Dooars) Tea Co. Ltd., and the Singtom Tea Co. Ltd. It also acts as secretaries and agents for the Basmatia Tea Co. Ltd.; Gillapukri Tea and Seed Co., Ltd., and as secretaries for the Hoolungoree Tea Co. Ltd., and the Sarugaon Tea Co. Ltd. In shipping Andrew Yule & Co., Ltd., are managing agents for the Bengal Assam Steamship Co. Ltd., Port Shipping Co. Ltd., Yule Line, Ltd., and the India Cuba Line, Ltd., managers for the Anglo-Oriental Navigation Co. Ltd., and general agents for the Kerr Steamship Co. Inc., New York and the Roosevelt Steamship Co. Inc., New York. They act also as managing agents for the following industrial concerns: Adjai Coal Co. Ltd., Adjai Second Coal Co. Ltd., Adjai Valley Coal Co. Ltd., Bengal Bhatdee Coal Co. Ltd., Bengal Coal Co. Ltd., Bengal Giridih Coal Co. Ltd., Bengal Karanpura Coal Co. Ltd., Bengal Nagpur Coal Co. Ltd., Bengal Talcher Coal Co. Ltd., Bihar Karanpura Coal Co. Ltd.; Burra Dhemo Coal Co. Ltd., Deoh Coal Co. Ltd., Girimint Coal Co. Ltd., Industry Coal Co. Ltd.; Kalapahari Coal Co. Ltd., Katras Jheriah Coal Co. Ltd., Khankoya Coal Co. Ltd., Minto Coal Co. Ltd., North West Coal Co. Ltd.; Seebpore Coal Co. Ltd., Sudamih Coal Co. Ltd.; Tori, Ltd.; Western Coal Co. Ltd.; Calcutta City Flour Mills Co. Ltd., Howrah Oil Mills Co. Ltd., Eastern Oil Products, Ltd., Central Hydraulic Press Co. Ltd.; Chutpore Golabari Co. Ltd., Bengal Aerating Gas Factory, Ltd.; Hooghly Printing Co. Ltd.; Port Engineering Works, Ltd.; Reliance Firebrick & Pottery Co. Ltd.; Associated Power Co. Ltd., Dishergarh Power Supply Co. Ltd.; Digwarrah Rubber Co. Ltd., and New Savan Sugar and Gui Refining Co.

Ltd., as secretaries to Anglo-Bengal Co. Ltd., Argent Co. Ltd., Barony Co. Ltd., Bond Co. Ltd., Calcutta Discount Co. Ltd., City Co. Ltd., Clive Investment Co. Ltd., Easterly Co. Ltd., Fleet Co. Ltd., Garden Co. Ltd.; Herald Co. Ltd., Index Co. Ltd., Leader Co. Ltd.; Plough Co. Ltd., Mond Co. Ltd., Paris Co. Ltd., Nonesuch Co. Ltd., Praise Co. Ltd., Russell Co. Ltd., Regent Co. Ltd., Rock Co. Ltd., Signet Co. Ltd., Textile and General Investment Co. Ltd., and India Paper Pulp Co. Ltd. They are interested also in insurance business, being local managers for the Guardian Assurance Co. Ltd., Gresham Fire and Accident Insurance Society, Ltd., and the Jupiter General Insurance Co. Ltd., branch managers for the British Equitable Assurance Co. Ltd., and Calcutta representatives for the Royal Exchange Assurance Corporation. In addition they are agents for Batavia Sea and Fire Insurance Co. Ltd., New Zealand Insurance Co. Ltd., and Triton Insurance Co. Ltd., chief agents for the Continental Insurance Co. Ltd., and chief representatives for the Union Insurance Society of Canton, Ltd. The London agents of Andrew Yule & Co. Ltd. are Yule, Catto & Co. Ltd., Finsbury House, Bloomfield Street, E.C. Cables "Unicorn" and "Yuletide."

**ARMY AND NAVY CO-OPERATIVE SOCIETY, LTD.**—Chowringhee Road, Calcutta. Up-to-date and comprehensive stock is kept in all departments common to a modern departmental store. Exploring, shooting and other parties fitted out, including Mount Everest Expeditions of 1921-1923 and 1924. Cables: "Armistice" Codes A B C 5th edition, A 1 and Bentley's.

**ATLAS ASSURANCE CO., LTD.**—Eastern branch office, 4, Clive Row, Calcutta. Agents Mackinnon, Mackenzie & Co. and Macneill & Co. Cables, "Orion." Codes A B C 5th Edition and Bentley's.

**BARLOW & CO.**—37, Strand Road, Calcutta. Established soon after 1860. Is a branch of Messrs. Thomas Barlow & Bro., Manchester and London. Connected with development of the Indian tea industry for many years, now act as agents for tea estates controlled by the partners in the parent firm. Correspondents Messrs. Thomas Barlow & Bro., P.O. Box No. 15, Manchester, and "Ceylon House," 49-51 Eastcheap, London, also Barlow & Co., Shanghai, Singapore and Kuala Lumpur. Cables: "Cephusus," Calcutta.

**BECKER, GRAY & CO. (CALCUTTA), LTD.**—Hongkong House, Calcutta. This firm of merchants organises the following departments: Gunny and shellac, jute shipping, grain, seed and sugar. Correspondents in Europe: Becker, Gray & Co., 24, Fenchurch Street, London. Cables: "Volleyed."

**BEGG, DUNLOP & CO., LTD.**—2, Hare Street, Calcutta. Merchants and agents. Secretaries for Tea Districts Labour Association. Managing agents for the following companies: Alliance Jute Mills Co. Ltd., Alexandra Jute Mills, Ltd., Waverley Jute Mills Co. Ltd., etc. Agents and secretaries for: Sungma Tea Co. Ltd. Agents: Begg, Sutherland & Co. Ltd., Cawnpore. Agents for: Trustees of the Jaintpore Debenture Loan. London agents: Begg, Roberts & Co., 138, Leadenhall Street, E.C. Cables: "Dunbegg." Codes: Western Union, A.B.C. 5th Edition and Bentley's Complete Phrase.

**BELISS & MORCOM, LTD.**—B-5, Clive Buildings, Calcutta. Engineers, manufacturers of engines for mill driving, electric light power traction, condensing plants, air compressors, turbines, crude oil engines (Diesel type), paraffin engines, pneumatic hose couplings, etc. Cables: "Beliss." Codes: Bentley's and A.B.C. 5th Edition.

**BIRD & CO.**—Chartered Bank Buildings, Clive Street, Calcutta. Merchants and agents. This company acts as managing agents for the Burrakur Coal Co. Ltd., Budroochuck Coal Mining Co. Ltd., Karanpura Development Co. Ltd., South Karanpura Coal Co. Ltd., Auckland Jute Co. Ltd., Clive Mills Co. Ltd., Dalhousie Jute Co. Ltd., Lansdowne Jute Co. Ltd., Lawrence Jute Co. Ltd., Northbrook Jute Co. Ltd., Standard Jute Co. Ltd., Union Jute Co. Ltd., Sonakunda Baling Co. Ltd., Crown Woollen Mills, R. Steel & Co. Ltd., Steel Baling Co. Ltd., Indian Patent Stone Co. Ltd., Chota Nagpur Mica Syndicate, Ltd., Kumardihubi Engineering Works, Ltd., as agents for the Warrington Wire-ropes Works, Ltd., Frank Pearn & Co. Ltd., Ropeway's, Ltd., Escher Wyss & Co. (Zurich), Browett, Lindley & Co. Ltd., Kumardihubi Fireclay & Silica Works, Ltd., Sijua (Jherriah) Electric Supply Co. Ltd., Orissa Cement Co. Ltd., Bisra Stone Lime Co. Ltd., Indian Graphite Co. Ltd., Assam Saw Mills and Timber Co. Ltd., Orissa Mineral Development Co. Ltd., United Steel Corporation of Asia, Ltd., Fairbairn Lawson, Combe, Barbour (India), Ltd., and as secretaries to General Investment and Trust Co. Ltd., Investment and Finance Co. Ltd., and Doornah, Ltd. The company transacts all kinds of insurance business and acts as agents for British American Assurance Co. Ltd., South British Insurance Co. Ltd., New Zealand Insurance Co. Ltd., Scottish Metropolitan Assurance Co. Ltd., and Sea Insurance Co. Ltd., as general agents for the Western Assurance Co. and the National Mutual Life Association of Australasia, Ltd., and as chief representatives for the State Assurance Co. Ltd. Messrs. Bird & Co. have separate departments under European supervision for each section of their many activities: jute and gunny export, accounts and finance, insurance, jute mills, piece goods, coal, stores and imports, engineering, timber, lime, labour, research, construction and Indian patent stone. The company has the following agencies throughout the country, each under the direction of Europeans: jute agencies at Naranganj, Chandpur and Madaripur; labour agencies at Kidderpore Main Docks, Kidderpore Coal Dock, Chandpore, Nimtala, Juggernath Ghat, Armenian Ghat, Salt Gollahs, Howrah, Rangoon agency, F. W. Heilgers &

Co., Bombay agency, agents, Messrs. Killick, Nixon & Co., also at Cawnpore, Lahore, Delhi, Goalundo, Dacca and Khulna. The London agents are Bird & Co., 7, Gracechurch Street, E.C.3. Cables: "Popinjay."

**BROOKE BOND INDIA, LTD.**—2, Metcalfe Street, Calcutta. In addition to owning tea estates in Assam and S. India, this firm is the largest buyer and shipper of tea sold on the Calcutta market. Factory at Kidderpore is the most up-to-date of its class in the East. Special plant installed for packing tea in tins under vacuum as protection against humid climate. Original and blended teas are shipped to almost every corner of the globe. Cables: "Blenders." Codes: Bentley's, A.B.C. 5th and 6th Eds.

**BRUNNER MOND & CO. (INDIA), LTD.**—Norton Buildings, 2, Old Court House Corner, Calcutta. Sole distributors in India, Burma and Ceylon of products of Brunner Mond & Co., Ltd., of Northwich, England. Bombay branch: Cook's Building, Hornby Road. Agents: Parry & Co., Madras; Bulloch Bros. & Co., Ltd., Rangoon; Katrak & Co. Karachi; Hayley & Kenny, Colombo. Cables: "Alkali." Calcutta Codes: A.B.C. 5th Ed. and Schofield's.

**BURMAH OIL CO. LTD.**—Calcutta. The Burmah Oil Co. is the pioneer in developing by modern methods of drilling and production, having much the biggest interest in the Burma field. The company is self-contained and handles the oil it wins until it reaches the market as a finished product. Crude oil is collected in storage tanks at the fields and pumped through the company's main pipeline, some 270 miles, to the tank farm at Syrian Refinery, near Rangoon. This refinery has just been reconstructed to handle in the most modern plant what, with old methods, furnished "throughout" for three refineries. Burma petroleum yields a complete range of petroleum products, the chief of which are petrol and kerosene of varying grades, and a mixture of heavier oils and paraffin. This mixture is separated into (1) hard and "soft scales" or paraffins, and (2) heavy oil, by being refrigerated and then filtered through specially prepared cloth under pressure. The scale is further refined by being "sweated" at a fairly high temperature which removes the remaining oil from it. Purified through a special filtering medium, it becomes white wax, a solid white substance chiefly familiar in the shape of the paraffin wax candle. The heavy oil separated from the wax yields a wide variety of products, as a result of complicated processes of distillation and chemical treatment, the most interesting being a complete range of lubricating oils. The refinery contains its own foundry and workshops, and plant for making steel casks and other containers. The bulk of the Burma Oil Company's production of petrol and kerosene is shipped to the other provinces of India. Petrol is also distributed in bulk for sale from kerbside pumps, and in 2-gallon cans. Trade in this commodity is very large and steadily expanding. Apart from developing its proved properties, the company is naturally interested in prospecting for new petroliferous areas in India, and part of its geological staff is regularly engaged in this work. Cables: "Rigs." Code: Bentley's.

**CHILEAN NITRATE COMMITTEE (Indian Delegation).**—7, Hare Street, Calcutta. Interested in propaganda for nitrate of soda as a fertilizer. Head office: Chilean Nitrate Committee, Friars House, New Broad Street, London, E.C.2. Cables: "Salitros." Code: Bentley's.

**COX & KING'S SHIPPING AGENCY, LTD.**—5, Bankshall Street, Calcutta. This branch was opened in 1911, and is now the largest clearing, forwarding and transport agency in the city. Cables: "Coxship." Codes: A.B.C. 5th Ed., Lieber's, Scott's, Bentley's and Private.

**CALCUTTA ELECTRIC SUPPLY CORPORATION, LTD.**—Temple Chambers, 6, Old Post Office Street, Calcutta. Registered offices in London: 3 and 4, Clement's Inn, Strand, W.C.2. In 1895 the Government of Bengal passed the Calcutta Electric Lighting Act, whereupon an application for a licence was made, and on January 7, 1897, the Indian Electric Company was formed to take over the licence granted. In February of that year the company's designation was changed to its present form. The English practice of the "three-wire" system of distribution was adopted. Underground cables were laid in main streets and overhead wires erected in the outskirts. The central station is at Jheel Road, Cossipore, with another in course of construction at Garden Beach Road, Kidderpore. There are 24 sub-stations and transformer houses, while a further two are projected.

**CALCUTTA TELEPHONE SYSTEM.**—This system is operated under licence from the Government of India, which receives as royalty 5 per cent of the company's gross revenue, by the Bengal Telephone Corporation, Ltd. Present capital consists of 600,000 ordinary shares of Rs. 10 each and 300,000 cumulative 7 per cent preference shares of the same nominal value. The four main exchanges, Calcutta, Burra Bazar, South and Howrah, are equipped on the Central Battery System. The equipment at the Calcutta exchange is partly American and partly British, while the apparatus in use at the other three is of Swedish origin. The operating staff consists of girls of the Anglo-Indian community. They are on duty for periods of five to six hours, during which time they are relieved for half an hour at intervals of not more than two hours. The European staff is not numerous, the electricians, linemen, etc., being in the main Indians. The control of the company is in the hands of six directors, of whom two are Indian. The Oriental Telephone and Electric Company, of Bishopsgate, London, which guaranteed a dividend to the Bengal Telephone Company's shareholders at the inception of the latter, has the right to nominate two directors to the board. The corporation serves approximately 8,000 exchange lines with 3,000 extensions, and there are in addition some 700 private lines.

**CUTLER PALMER & CO.**—30, Bondel Road, Ballygunge, and 10, Government Place East, Calcutta. Established in Calcutta 1815. Head office: 34, New London Street, London, E.C.3. Codes A.B.C. 5th Ed., Broomhall's and Bentley's.

## OTHER CITIES AND PORTS IN BENGAL

### CHITTAGONG

The port of Chittagong, the chief town of the district and an important tea-growing centre, is the natural outlet for the large trade of Assam and North-Eastern Bengal. It is situated on the River Karnaphub, nine miles from the Bay of Bengal, and the two bars at the entrance make great caution necessary when entering during south-west monsoons. The present facilities of the harbour consist of four jetties, which are fitted for 4 ten-ton and 17 other cranes. There are also provided fixed moorings for seven cargo steamers and swinging buoys for three more, besides berths for two tank steamers for the oil trade.

**DEVELOPMENT SCHEME.**—An important scheme is now in hand by the Government of Bengal for the further development of the port in order to provide facilities to cope with the steadily growing trade of the district. The plan of improvement, which involves an expenditure of 5,000,000 rupees, will open up immense possibilities for Chittagong. By dredging the bars ocean-going steamers of considerable depth, which can now enter the port at special tides only, will be able to pass over the bars and into the mouth of the river without regard to special conditions. In addition to the dredging, a large amount of money is to be spent on revetments, the building of a new shipway and the extension on a larger scale of the present system of lighting the approaches to the port. The entire project will take from five to six years to complete.

### DACCA

Chief town in the division of the same name, Dacca was the capital of Eastern Bengal in the 17th century, and at that time was a great trading centre, the principal commodity being its muslins, which were then famous throughout the civilised world. To-day this trade has succumbed to the competition with machine-made goods, but the city is still famous for its shell brackets, for its fine filigree work, and for the making of buttons. The bazars are good and interesting, and the town, which is the largest civil station in Bengal outside Calcutta, having 120,000 inhabitants, possesses a fine promenade along the Buriganga River, many public and commercial buildings, a handsome Roman Catholic Cathedral and an Anglican Church, a hospital, museum and many interesting monuments. In the neighbouring forest fine tiger and leopard hunting may be obtained.

### MURSHIDABAD

Standing on the left bank of the Bhagirathi River, 123 miles north of Calcutta, Murshidabad was, before the British occupation, a city of great commercial importance. The district and town are noted for their silk manufactures, and the latter is also interesting for its many ancient temples, tombs, ruins, etc. Among these may be mentioned the remains of the different Nawabs' palaces, an old gun brought from Dacca, the Imambara, which dates from 1847, and the Khushbagh

("Garden of Happiness") or old cemetery of the Nawabs. Murshidabad has a population of about 12,000.

### NARAYANGANJ

On the Lakhya river, Narayanganj is the port of Dacca and has a large trade, particularly in jute for which it is the great mofussil centre. Near it there are some old forts of Mir Jumla, and opposite the town, on the east bank of the Lakhya, the celebrated shrine of Kadam Rasul. Population about 31,000.

### PLASSEY

So called from the Palas tree, Plassey is famous as the scene of Clive's great victory in 1757 over Suraj ud-Dowlah, the Nawab of Bengal. The position of the British forces in that battle is marked by a mound near the river bank and the old monument, it has also been more recently fully indicated by a memorial erected by Lord Curzon.

### RANIGANJ

The town of Raniganj (population 15,000) is situated on the eastern edge of the great coal fields of Bengal, and was formerly the property of the Rajah of Burdwan. It was here that practically the first discovery of coal in India was made, the three most important fields being named Raniganj, Jherria and Giridih. At Raniganj are also large potteries and paper mills.

## MADRAS PRESIDENCY

**T**HE Madras Presidency comprises the whole of the southern portion of the Indian Peninsula, and, excluding the Native States, the majority of which have now come under the direct control of the Government of India, has an area of 141,075 square miles, with a total population of 42,794,155. With a coast line on the east and west of about 1,650 miles, the Presidency has, with the exception of Madras, and perhaps of Cochin, no really good harbours, though a great future is anticipated for the port of Vizagapatam, while important extensions and improvements are projected at Cochin. The capital and chief city of the Presidency is Madras.

**ADMINISTRATION.**—The Madras Presidency is governed on a system generally similar to those operating in Bombay and Bengal. There are associated with the Governor four members of the Executive Council in charge of the Reserved Subjects and three Ministers in charge of the Transferred Subjects. Madras administration differs, however, in some respects from that of the other major provinces. There is no intermediate local authority between the Collector of the District and the authorities at headquarters, Commissioners of Divisions being unknown in Madras.

The present Governor is His Excellency the Rt. Hon. Viscount Goschen of Hawkhurst, G.C.I.E., C.B.E., who was appointed in 1924.

**COMMERCE.**—The total sea-borne trade of the Madras Presidency (including Government transactions) during 1925-26 was Rs 97,53,65,851, as against Rs 95,30,37,386 in 1924-25, an increase of Rs 2,14,28,465 or 2.24 per cent. Excluding Government transactions, the total value of the trade was Rs 95,36 crores, a figure Rs 64 lakhs higher than that of the previous year. The value of the foreign trade in private merchandise increased by Rs 2.16 crores as compared with 1924-25, and by Rs.20.59 crores (or nearly 50 per cent) compared with 1913-14. Imports, valued at Rs.18.84 crores, were Rs.1.10 crores below those of 1924-25, the decrease being due to smaller arrivals of cotton manufactures, sugar, cotton twist and yarn, metals, tobacco, etc., the chief items showing increases being motor vehicles, mineral oils, railway materials and woollen manufactures. Exports amounted to Rs 44.01 crores, as compared with Rs 40.66 crores in the previous year, the increase being the net result of heavier shipments of raw cotton, seeds, raw rubber, tea, spices, cotton manufactures, rice and paddy, and raw jute and leather.

Coasting trade in private merchandise declined from Rs 32.83 crores in 1924-25 to Rs 32.39 crores in 1925-26.

**INDUSTRIES.**—The principal industry of the province is agriculture, in which 68 per cent of the population is engaged. The chief food crops are rice, cholam, ragi and kambu. The leading industrial crops are cotton, sugarcane and ground-nuts. A special feature of the agricultural activities in the Presidency is the large industry which the planting community have built up, contributing substantially to the economic development of the province. They have organised themselves as a registered body under the title of "The United Planters' Association of South India," on which are represented the coffee, tea, rubber and a few other minor planting products. There are some 22 cotton mills in the Presidency, and they employ 35,000 operatives. Minor industrial concerns number over 120, and consist of oil mills, rope, rubber and tile works. As in other provinces, the forest resources are exploited by Government. There are close upon 19,000 square miles of reserved forests.

**IRRIGATION.**—See "Irrigation" in the article devoted to "Agriculture."

MADRAS. Showing Fort and General Hospital on left, Gymkhana Club grounds in centre, and Government House on the extreme right.

## CITY AND PORT OF MADRAS.

### CITY

**M**ADRAS, capital of the Madras Presidency and the third largest city in the Indian Empire, is built in a straggling manner on a strip of land 9 miles long, from 2 to 4 miles wide and 27 square miles in extent, on the shore of the Bay of Bengal, in latitude  $13^{\circ} 4' N$  and longitude  $80^{\circ} 15' E$ . The site is low-lying and almost dead level, its highest point being only 22 ft above the sea, it is intersected by two languid streams, the Cooum and the Adyar, of which the former enters the sea immediately south of Fort St George, in the centre of the city, and the latter near the southern boundary. Neither of them carries enough water to maintain a clear channel, and except in the rains they both form salt lagoons separated from the sea by narrow ridges of sand.

If Madras is not exactly a beautiful place, it is at all events the least urban in appearance of the large Indian cities, its population being spread over an area five square miles larger than that occupied by Bombay and only three square miles less than that covered by Calcutta. Most of the roads in the European Quarter run between avenues, being flanked by groves of palms and other trees, both shops and houses are often fronted with large gardens and rice fields are seen winding among extensive and beautifully kept compounds, so that Madras, in addition to being a busy commercial city, is also one of wide and shady spaces, and as such has a distinct charm of its own.

Founded in 1639, the history of Madras, then the headquarters of the East India Company on the Coromandel coast, has been a sufficiently varied one. It was abandoned to the French under Bourdonnais in 1746, but was restored to England three years later. In 1758-59 occurred the two months' bitter siege of Fort St George, but, with the exception of Hyder Ali's threatening approach in 1769, and again in 1780, on which last occasion he ravaged the country up to the very gates of the Fort, Madras has been free from outside attack since Lally's siege.

**ADMINISTRATION.** The internal administration of the city is in the hands of the Municipal Corporation, which consists of a President (paid from municipal funds and appointed by the Government) and 50 councillors, of whom 41 are elected by the ratepayers and certain public bodies, nine being nominated by the Government. The Corporation has been active in the prosecution of schemes devised for the public welfare, such as street sanitation and the improvement of the water supply of the city.

**BUILDINGS.**—Government House is situated on the Mount Road about one mile inland from the Fort, and stands in an extensive park. It is usually occupied by His Excellency during some part of the cold weather of each year. Near the house, in a separate building, is the "Banqueting Hall," containing portraits of many Governors of the province and other celebrities who helped to make Madras history.

At the south end of George Town the High Court and Law College form a handsome group of buildings, while along the South Beach, or Marina, are several fine public structures, these including the Senate House of the University, Chepauk Palace used by the Board of Revenue and the Engineering College, and the Presidency College. Other important buildings, apart from the churches, colleges and museums, which are dealt with elsewhere, are the General Hospital, the School of Arts near Egmore Station, the Victoria Public Hall and the Mutiny Memorial Hall near Central Station, and Pachayappa's Hall on the Esplanade Road, George Town. Most of the European shops, some of which are housed in handsome buildings, are in Mount Road.

**CHAMBER OF COMMERCE.**—See under "Commerce."

**CHURCHES.**—The Cathedral of St. George, which stands in an enclosure on the east side of the Horticultural Gardens, dates from 1816, and became the Cathedral Church when the diocese of Madras was constituted in 1835. It is largely built of *channam*, the dazzling

white stucco for which Madras is famous, and has several fine monuments. The Roman Catholic Cathedral of San Thome, built by the Portuguese in 1504, has the reputation of standing over the earthly remains of St. Thomas. His tomb is pointed out in a subterranean recess covered by an altar. St. Mary's Church, built about 1678, was the first English church in India, and contains many interesting memorials, the most remarkable being one erected by the East India Company to the famous missionary, Schwartz, at one time the intermediary between the British and Hyder Ali. A very fine building, St. Andrew's Church, built in 1828 at a cost of £20,000, with a steeple rising to a height of 166 ft., is one of the principal landmarks in Madras. The church on Little Mount, where, according to tradition, St. Thomas was mortally wounded, is interesting, as are the cross, fountain and other relics associated with the Saint's martyrdom outside the church. The larger church on St. Thomas' Mount, some eight miles south of Madras, is one of the most ancient on the Coromandel Coast.

**CLIMATE.**—Madras is a healthy town, both for Europeans and Indians, its dry soil and the sea breeze making up for the lowness of the site. The mean temperature in the shade ranges from  $74^{\circ}$  to  $87^{\circ} F$ , the extremes being  $67^{\circ}$  in January and  $110^{\circ}$  in June. The temperature is high all the year round, but there are fewer sudden alternations of heat and cold than in most places in India. The average rainfall over the town area, from observations taken over a period of 85 years, is 49 inches.

**CLUBS.**—The Madras Club, one of the finest in India, was established in 1831. It is situated in the Mount Road,  $2\frac{1}{2}$  miles from Fort St George. The Adyar Club is a very handsome building, beautifully situated on the left bank of the Adyar River. It occupies one of the famous Garden Houses, known as Mowbray's Garden. There are also the Gymkhana Club, a boat club and cricket club.

**EDUCATIONAL FACILITIES.**—Madras is the educational centre of the Presidency. Apart from the University (see "University," later), there are numerous colleges, secondary and primary schools, technical and training colleges. Of these, the Presidency College (managed and financed by Government), the Madras Christian College and Pachaiyappa's College are first-grade institutions giving instruction up to the B A degree. There are three excellent professional colleges—the Law College, the Medical College and the College of Engineering. At Saidapet, just outside the city, is the important Teachers' College. A noticeable point in connection with all these special colleges is the high proportion of Brahmmins among the students. Games and athletics are greatly encouraged at all the colleges and larger schools.

**FORT ST. GEORGE.**—Fort St. George, commenced in 1639 by Mr. Francis Day, originally consisted of a factory and other buildings surrounded by a wall, with four light bastions and batteries, the whole being about 400 yards long by 100 deep. It was gradually strengthened and extended until in 1787, after Lally's siege, it stood much as it stands now. Here, in Writers' Buildings, history records that Clive twice snapped a pistol at his own head. From this Fort he marched to his first victories, and from it went the army which, on May 4, 1799, killed Tipu Sultan and captured Seringapatam.

Within the Fort are nearly all the principal Government offices—the Secretariat and fine Council Chamber, the Military Headquarters, Arsenal and Barracks. Unlike the houses in the city generally, the fort residences have no "compounds" or enclosures. The arsenal contains many curious trophies of the wars in which the armies of Madras have been engaged. St. Mary's Church has already been mentioned.

**INDUSTRIES.**—The chief indigenous arts of Madras are silk and cotton-weaving, silver-work and embroidery. Raw silk is obtained from Bangalore, Calcutta and Bombay, mixed with cotton and woven into native cloths which are sold locally and also exported to Ceylon, Burma, the west coast of the Presidency, and even to Natal and East Africa. The cotton cloths made are of the ordinary coarse variety. The hand-made silver-work and embroidery employ now only comparatively few hands, but the former is less known than it deserves to be, while the latter is usually in excellent taste, consisting of silk, gold or silver thread, and green beetle wings procured from Cuddapah and worked on satin or muslin. The School of Arts gives instruction in a number of other directions, such as wood carving in the Dravidian style, brass and copper repousse work, lacquer work and carpet weaving.

Tanning is an important industry, while several large cotton mills spin yarn and weave cotton cloths of various descriptions. There are also oil mills, rope, rubber and tile works.

**MUSEUM.**—The Government museum in the Pantheon Road is a fine block of buildings containing a technical institute, a library, and a theatre for lectures, dramatic performances and other purposes. The museum, which is ranked high by scientists in all parts of the world, houses a large and interesting collection of natural history objects, gold and other coins, also numerous specimens illustrating the resources and manufactures of British India. It also contains a collection of carved marbles and stones from ancient temples.

**OBSERVATORY.**—The first observatory at Madras was a small private one started in 1787 by Mr. W. Petrie, a scientific member of Council. The present building was erected in 1793 by order of the East India Company. At one period it gave the railway time for all

1. First Line Beach, the principal thoroughfare in Madras.
2. Mount Road, showing Spencer & Co. Ltd.'s Head Offices on left.
3. General Hospital Road, with Central Station on left.
4. The Marina, with the Senate House on right.

India, but is now used only as a meteorological station, the actual observatory having been moved to Kodaikanal.

**PARKS AND GARDENS.**—In Madras itself the Marina Promenade and the People's Park, which contains a small zoological collection, are the principal recreation grounds. The People's Park, which owes its inception to Sir Charles Trevelyan, a Governor of Madras, has an area of 116 acres and is dotted with artificial lakes of various sizes. On the Marina, along which there are a fine esplanade and riding track, is an aquarium which is very popular.

The Horticultural Gardens, at the end of Mount Road, occupy 22 acres, and are most tastefully laid out. Many rare trees, shrubs and plants are to be seen there, one of the great attractions being the splendid *Victoria Regia*, in a couple of small ponds.

**POPULATION.**—The population of Madras in 1921 comprised 525,021 persons, made up of 427,722 Hindus, 53,163 Mohammedans and 44,136 Christians. During the previous 20 years it increased by rather more than 15,000.

**STATUES.**—The principal statues of Madras are those of Lord Cornwallis, in the Connemara Library, Sir Thomas Munro (by Chantry), in the centre of the island, Queen Victoria, by the Senate House, King Edward VII, outside the main entrance to Government House; His Majesty King George V, opposite the Pachaiyappa College, China Bazar Road, General Neill, in Mount Road, and Sir T. Muthuswami Iyer, in the High Court Buildings.

**STREETS, ETC.**—The Mount Road, Poonamalle Road and the Beach Road, the three main thoroughfares of Madras, divide the city into roughly three areas. In Mount Road, which was once the fashionable riding and driving resort of Madras, are many of the finest shops and larger houses of business. The road is beautifully shaded by coconut, banyan and other trees, but is now so busy and active that, as a resort for leisure hours, it has given way to Beach Road, which runs parallel to the seashore, and the southern half of which is known as the Marina. Other leading thoroughfares are the Nungumbaukam High Road, which connects Poonamalle Road with Mount Road, and Cathedral Road, leading from Mount Road into the beautifully shaded Mowbray Road.

**UNIVERSITY.**—The University of Madras is one of the older universities of India, having been constituted in 1857. The reconstituted University, while functioning as a teaching and residential university in so far as the City of Madras is concerned, continues to exercise jurisdiction over the mofussil (provincial) colleges which remain affiliated to it. The administration of the University is in the hands of a Senate which has been so constituted as to include both those who are educationalists and those who are connected with the actual business and commercial life of the city, and a large elective element has been introduced into its constitution.

**WATER SUPPLY.**—Madras is supplied with water from a reservoir called the Red Hills Lake, which is fed from another reservoir called the Cholavaram Tank, and this in turn is filled by a channel from the Korttalaiyar River. The Red Hills Lake is 7 miles distant from the city, and the water is brought from it by an open channel, being eventually led into pipes and distributed throughout the city. The scheme was begun in 1868 and finished in 1872. The Red Hills Lake has a capacity of 100 million cubic yards, but as it lies low, the head of the supply channel being not quite 36 ft. above sea-level,

only a portion of the water can be drawn off at a level which will command the city, when the water in the lake falls below a certain height the supply has to be maintained by pumping. The annual quantity of water supplied exceeds 425 million cubic feet.

## PORT OF MADRAS

Although Madras (Fort St. George) has no natural harbour, it ranks fifth among the ports of India in the value of its trade and in the tonnage of vessels which enter and clear from it. A quarter of a century ago the foreign movement of the port was greater than that of Karachi and frequently in excess of that of Rangoon, but these ports have, during the last 20 years and especially since the War, exceeded it in respect of both trade and tonnage.

Great care has been taken at heavy expense in the construction and later improvements of the harbour, which has been described as "a challenge flaunted in the face of Nature." The foundation-stone of the harbour works was laid by King Edward VII (when Prince of Wales) in 1875, but one of the many violent cyclones which have visited Madras did much damage in 1881, and the harbour was not completed till several years later. A number of improvements have since been added, and the further extensions projected will, it is hoped, do much to increase its importance as a commercial port.

**ACCOMMODATION.**—The harbour is entirely an artificial one, practically square, with the entrance on the north side, and protected by an outer sheltering arm 1,719 ft in length. The enclosed area is 200 acres in extent, and in all weathers vessels lie in smooth water. There are seven quay berths, four at the West Quay, which is 3,000 ft long, having depths alongside at low water of 26 ft, 28 ft, 30 ft and 30 ft respectively, one on the south side having a depth of 28 ft and one on the east side a depth of 26 ft. In addition, three new deep water quays are now under construction on the north side which will have a depth alongside at low water of 33 ft.

Apart from the seven quay berths, there are ten moorings in the harbour, at which vessels drawing 30 ft can lie and handle import and export cargo by means of lighters. Two of these berths are equipped for pumping oil or kerosene ashore, and a special pier outside the harbour is provided for pumping petrol ashore in bulk.

**WAREHOUSE ACCOMMODATION.**—The warehouse accommodation of the port covers over ten acres, and includes four transit sheds for the storage of goods in movement between ship and shore and three warehouses with flat roofs for the convenience of shippers dealing in ground nuts or other staples which ordinarily need to be cleaned, dried and graded before shipment from Madras.

**ADMINISTRATION.**—The affairs of the port are administered under the Madras Port Trust Act of 1905 (as amended up to 1919) by the Madras Port Trust Board, consisting of 14 members (six nominated by Government, four elected by the Madras Chamber of Commerce, two by the South India Chamber of Commerce and two by the Trades Association) and a Chairman. Normally the Government nominees include the Collector of Customs, the Presidency Port Officer, and the Agents of the Railways running into Madras. The Board also are Conservators of the Port under the Indian Ports Act, with a Royal Indian Marine officer as Deputy Port Conservator. During the year 1924-25 the receipts of the Port Trust on revenue account from all sources were Rs.33,93,121, as against

Rs.29,84,285 in 1923-24, and the gross expenditure out of revenue was Rs.25,83,879. The outstanding debt of the port amounted in June 1926 to £1,450,000 and the capital valuation to £3,350,000.

**BUNKERING.**—Bunker coal and oil are always available. Coal vessels discharge about 1,200 tons per day at each of the three quays direct into railway wagons. There is an oil fuel pipe line for bunkering vessels lying at the West Quay berths, and this will be extended to the New North Quay berths.

**COMMUNICATIONS.**—The harbour is connected with the broad gauge system of the Madras and Southern Mahratta Railway on one side and with the metre gauge system of the South Indian Railway on the other, and via these two trunk lines goods are booked direct over the entire railway system of India. All quay berths are served by railway tracks of mixed gauge to accommodate both 5 ft 6 in and metre gauge rolling stock. There are 30 miles of such track within the harbour.

**CRANES.**—Two of the West Quay berths are equipped with hydraulic luffing cranes of from 35 cwt to 5 ton capacity, and the remaining two West Quay berths are now being equipped with electric luffing cranes of 3 to 5 ton capacity and 60 ft. radius. There are also one 40-ton, one 33-ton and one 15-ton steam cranes for heavy lifts, as well as several smaller steam cranes of 2 to 5 tons capacity.

**EXTENSION SCHEMES.**—Proposals for further improvements to cost £330,000 are now before Government, and include a large increase in the shed space, the provision of modern electric portal cranes to work direct from ships' holds, and the construction of an additional ship quay, besides many minor amenities.

**LIGHTERAGE.**—The lighter fleet of the port consists of from 40 to 180 tons capacity, so that some 4,000 tons of cargo can lie afloat at one time. Four tugs are available for towing this fleet. Lightered cargo is landed or shipped at extensive quays provided for the purpose, which are equipped with 48 hydraulic cranes of from 1 to 2 tons capacity.

**PASSENGER TRAFFIC.**—On the South Quay an extensive passenger station with Customs examination hall has been provided, mainly for the emigrant and immigrant traffic between Madras, Rangoon and Singapore. The total of this traffic reaches 150,000 persons a year.

**PILOTAGE.**—Pilotage in and out of the port is compulsory. The fees, which include both inward and outward, amount to 1 anna per registered ton. For shifting the berth of a vessel the charge is Rs.10; for re-mooring, Rs.10; and for mooring a craft outside the harbour when she does not enter or leave it, Rs.20. Vessels re-entering the artificial harbour after discharging timber are exempt from pilotage fees. There is a fee of Rs.3 levied on each steamer for a stern fast.

**POLICE.**—The watch and ward of the harbour and its premises are performed by the Harbour Police, consisting of one European inspector, 3 sub-inspectors, 11 sergeants, 25 head constables and 125 constables, who are under the direct control of the Deputy Commissioner of Police. Two-thirds of the maintenance charges of this force are borne by the Port Trust and one-third by Government.

**PORT CHARGES.**—The following port dues are payable by all foreign vessels of 15 tons and upwards entering Madras ports:—

- (a) A foreign ship or steamer engaged in trade with the Straits Settlements, calling at any one port in the eastern or western group—2½ annas.

- (b) Any other foreign ship or steamer calling at any one port—2½ annas.
- (c) A foreign ship or steamer engaged in trade with the Straits Settlements, calling at more than one port—3½ a
- (d) Any other foreign ship or steamer calling at more than one port—3½ a

With regard to (a) and (c), payment of the due at the port will exempt the vessel for a period of 60 days from liability to pay the due again at that port. In the case of (b), the due is payable on each entry into the port, and in the case of (d) once for the whole voyage.

**LIGHT DUES.** Coast light dues are levied at rates specified per schedule, which range from 5 pies to 9 pies per registered ton.

**WATER.** Supplied by water boat inside harbour, 8 annas; outside harbour, Rs 1 per 100 gallons, not including the cost of the water. From alongside quays, Rs 2 per 500 gallons, as indicated by the Port Trust meter.

**SHIPPING AND TRADE.**—The total number of vessels entered at the port during 1924-25 was 275 of 1,032,990 tons, compared with 248 of 923,267 tons in the preceding year. Of the former total, 269 of a total tonnage of 1,032,493 were steam-vessels.

The total trade of the port in 1924-25 was valued at Rs 32,51,14,412, compared with Rs 30,30,40,487 in 1923-24. Exports increased from Rs 14 crores to Rs 16 crores and imports from Rs 15.96 lakhs to Rs 16.27 lakhs. Leather exports rose from Rs 4.90 lakhs to Rs 5.93 lakhs, and tea from Rs 14 lakhs to Rs 24 lakhs, while raw hides and skins declined from Rs 68 lakhs to Rs 49 lakhs and textiles from Rs 4.43 lakhs to Rs 4.10 lakhs.

### IMPORTANT BUSINESS ENTERPRISES IN MADRAS

#### SPENCER & CO., LTD.

**Inception.** This company was formed in 1897 to continue the old-established business of the same name founded in 1863.

**Capital.** The authorised capital is Rs 70,00,000, of which Rs 65,00,000 have been subscribed and paid up.

**Activities.** The firm carries on the business of wholesale and retail merchants, chemists and druggists, importing general store supplies, wines and spirits, hardware, sporting requisites, piecegoods, etc., and acting as advertising contractors to the South Indian, the Madras and Southern Mahratta, and the Mysore State Railways. The company manufactures cigars at Dindigul and aerated waters at Madras.

**Retail.**—The large departmental stores in Madras supply everything for personal or home use. The main showroom, over 400 feet long, is one of the finest in the East.

**Catering.**—Through this department the company's name is possibly one of the best known in India, as they are refreshment room contractors to the South Indian, Madras and Southern Mahratta, North Western, and Mysore State Railways.

**Hotels.**—The Hotel Spencer and Connemara Hotel at Madras and the West End Hotel at Bangalore, which are more fully dealt with later, are owned and managed by the company, and can be recommended to all those visiting Southern India, as they are considered the best in this part of the country.

**Cigar Factory.**—Here are manufactured the company's well-known brands of cigars, which are sold in India and also exported in large numbers.

**Aerated Waters Factory.**—Adjoining the head offices, this factory manufactures many special varieties of aerated drinks.

SPENCER & CO. LTD., Madras.

1. Hotel Spencer (from Mount Road, showing ideal situation amongst trees and palms).
2. An aspect of the Connemara Hotel.
3. West End Hotel, Bangalore.

**SPENCER & CO. LTD**  
Head Office Premises, Madras.

**Branches.**—Branches are established at Bombay, Karachi, Lahore, Bangalore, Secunderabad, Ootacamund, Coonoor, Kolar Gold Fields, Coimbatore, Waltair, Kodakanal, Madura, Trichinopoly, Calicut, Cochin, Quilon, Cocanada, Kotagiri, Pollibetta, Mer-

cara, Trivandrum, George Town, and Vepery. These are worked in conjunction with Kellner & Co., Ltd., Calcutta, and Jamsjee & Son, Ltd., Rawalpindi.

**Head Office.** Mount Road, Madras (cables "Torpedos," Madras)

**London Office.**—57-58 Broad Street Avenue, E C 2 (cables "Nemophily," London) Codes A B C 5th Edition and Bentley's

**Bankers.**—Imperial Bank of India, National Bank of India, Ltd., Chartered Bank of India, Australia and China, Mercantile Bank of India, Ltd.

#### **SPENCER, CONNEMARA, AND WEST END HOTELS.**

**Situations.**—Owned and managed by Messrs. Spencer & Co., Ltd., of Madras, these hotels are strongly recommended to all visitors to Southern India. The two first named are situated in the city of Madras, while the third is at Bangalore.

**Hotel Spencer.** Standing in its own extensive grounds in Mount Road, this select hotel is within easy distance of all parts of Madras.

**ACCOMMODATION.**—There are 35 large airy rooms, each having a separate bath and dressing room. All are well furnished and fitted with electric lights and fans, while each bedroom contains several lounge chairs and a writing table. There is a comfortable lounge in the main building.

**FACILITIES.** Hotel guides meet all boats and trains, and cars and carriages for hire are always available at the establishment.

**CUISINE.**—The fullest care and attention are given to the preparation and service of meals.

**Connemara Hotel.**—This hotel stands in its own grounds in Binny's Road, between the residential and business quarters of Madras.

**ACCOMMODATION.**—This comprises 40 large rooms, each with its own bath and dressing room, and the usual public rooms in the main building. Covered ways lead to the various blocks, and two full-sized tennis courts are at the service of visitors. The dining room has windows on all sides, overlooking the gardens and securing the maximum of fresh air, while an open-air verandah lounge runs along its entire length. The facilities, furnishing and cuisine are on a par with those of the Hotel Spencer.

**West End Hotel.**—This hotel stands in the best part of Bangalore, 3,000 ft. above sea-level, and within easy reach of both railway stations.

Head Office, Royapuram, Madras.

**MASSEY & CO. LTD.**

2. Bridge constructed by the Company.

**ACCOMMODATION.**—The main block and villas comprising the hotel accommodate 50 guests. The rooms are comfortably furnished, the majority having private verandahs. There are two tennis courts in the grounds, while a golf links and racecourse are immediately adjacent.

**CUISINE.**—The catering is comprehensive and excellent, the daily supply of fresh meat, vegetables and fruit being especially tempting to the tired visitor from the plains.

**CABLES.**—"Westend," Bangalore

#### **MASSEY & CO., LTD.**

**Inception.**—The engineering works of Messrs Massey & Co., Ltd., were started by Mr. A. S. Massey at Calcutta in about 1856 under the name of the Kalki Works, but were transferred, after a successful period of over twenty years, to the Napier Works, Madras, formerly belonging to Messrs Arbutnot & Co.

**Development.**—Steady expansion marked the occupation of the Napier Works until in 1923 the firm absorbed the Madras Engineering Works, Ltd., and moved into the present commodious buildings at Royapuram.

**Activities.**—Massey & Co., Ltd., are recognised to be the leading firm of structural and mechanical engineers in the Madras Presidency, to which their operations are chiefly confined and for which territory they hold valuable agencies.

**Agencies.**—Such representations comprise Ruston & Hornsby's oil and gas engines, excavators, etc., Douglas & Grant's rice machinery, Atlas & Co. (Copenhagen), refrigerating machinery, Gandy Belt Co., Ltd., belting, Paraffin Co. (Inc.), Pabco paints and Malthoid roofing; Shanks & Co., Ltd., sanitary fittings, Stephenson Blake & Co., Ltd., printing type, and Harrild & Sons, Ltd., printing machinery.

**Branch.**—The firm has established numerous agencies throughout Southern India, and has opened a branch at Coonoor under the management of Messrs E. Vincent & Co.

**Managing Directors.**—Messrs J. O. Robinson, L. C. Nicholson, W. Simmons, H. Robinson, and M. E. S. Thompson.

**Offices and Works.**—Main Road, Royapuram, Madras (cables: "Massey," Madras). Codes: A B C 5th and 6th Editions and Bentley's.

**Bankers.**—The Imperial Bank of India, The National Bank of India, Ltd.

#### **THE SOUTH INDIAN EXPORT CO., LTD.**

**Inception.**—This well-known company was formed in 1891 to carry on the old-established Madras export business of De Clermont & Donner, hides and leather merchants, of 27 St. Thomas Street, London, S.E.1.

**Activities.**—The firm handles a large and varied export and import business, specialises in waterworks and electrical engineering, and holds important mercantile and insurance agencies for Southern India.

**Exports.**—For many years the South Indian Export Company have been among the largest shippers in Southern India, both as buyers and consignors, of East India tanned kips, tanned and raw goat and sheep skins. In one of their spacious godowns is a 200-ton electric baling press, where the bales are pressed for shipment by almost every steamer leaving Madras for Great Britain and the Continent. In 1925 the company exported tanned and dry skins and tanned hides to the value of approximately a million sterling, and their marks are recognised at the London Sales to represent a high standard of quality. They are the largest shippers from Madras of mica, mined in the Presidency by the Madras Mica Co., Ltd., for which they act as managing agents, and in 1925 their exports of mica

THE SOUTH INDIAN EXPORT CO. LTD., Madras.

1. Two hundred ton Electric Baling Press in one of the Skin Godowns
2. A Hide Godown.
3. Coolies ready to take a load of baled Hides from the Company's Godown to the Wharf for export.

exceeded half a million pounds. Other exports include manganese ore and sarongs.

**Imports and Agencies.**—The company under notice acts as a confirming merchant house for approved indentors of hardware, cement and general miscellaneous imports, and as wholesale agents in Southern India for Horlick's Malted Milk Co., Slough, A. Johnson & Co., Ltd., London, paper manufacturers and exporters, The Pyrene Co., Ltd., London, fire-lighting appliance manufacturers, and The Hoase Spinning Co., Ltd., Dundee, jute and canvas manufacturers. Among notable industrialists in India the firm represents F. W. Heilgers & Co., Calcutta, colliery owners and managers, paper manufacturers and agents, for coal (in which line it acts as steamer bunkering contractors at the port of Madras), for Indian-made paper of all kinds, and for imported mineral oils.

**Engineering.**—In this department the company specialises in waterworks and electrical engineering, and has a resident engineer in charge of each section. It also imports hydraulic machinery and waterworks materials from Glenfield & Kennedy, Ltd., Kilmarnock, and electrical machinery and apparatus of all kinds from the well-known firm of Siemens-Schuckert, while for both these firms it is the accredited representative in Southern India. The firm is also agents for the Bengal Iron Co., Ltd., Kulti Iron Works, Bengal, ironfounders and manufacturers of cast iron pipes and general castings, and for manufacturers of rock drills, air and electrical coal cutters, steel wire ropes, light railway materials, etc.

The South Indian Export Co. is a regular contractor on a large scale to the Madras Government Public Works Department and to the Governments of Mysore, Travancore and Cochin, the Madras Port Trust, the Madras and Southern Mahratta Railway, the South Indian Railway, and various prominent municipalities and municipalities.

**Insurance.**—The insurance department represents the Caledonian Insurance Co., the London & Lancashire Insurance Co., Ltd., the British General Insurance Co., Ltd., the North China Insurance Co., Ltd., and the Law Union and Rock Insurance Co., Ltd.

**Agents.**—Besides their office in London, the South Indian Export Co., Ltd., are represented in Glasgow and Leeds by Wood Malvenan & Co., in Paris by Gangnat Ewald & Cie (formerly De Clermont & Cie), and in America by A. Helmrath Inc., New York. Among hides and leather correspondents in other parts of the world are the Arabian Trading Co., Ltd., of Aden and Mombasa (a sister concern, also under the control of De

THE SOUTH INDIAN EXPORT CO. LTD.

Premises at Madras.

Clermont & Donner), and firms in Sydney and Melbourne, Australia.

**Head Offices.**—4, McLean Street, Georgetown, Madras (cables: "Xebec," Madras).

**Registered Office.**—27, St. Thomas Street, London, S.E. 1.

**Bankers.**—The National Bank of India, Ltd.

## OTHER CITIES AND PORTS

### CALICUT

On May 11, 1498, Vasco da Gama arrived at Calicut, after a voyage of ten months and two days from Lisbon. It was then an important city, containing many noble buildings, especially a Brahman temple. Long known as the "Fortunate City," it was the site of one of the earliest English settlements, was ravaged by Tipu Sultan, and was finally ceded to the British Government in 1792. From Calicut the cotton cloth originally exported obtained its name of calico, there is a large textile factory there, as well as a college, a hospital and several fine European buildings.

**PORT.**—The port is guarded by a light-house, 52 ft. high, which serves to guide

vessels to the anchorage, clear of the reef. The harbour is an open roadstead, and easy of access except during the south-west monsoon. There are two good piers, and loading is carried out by means of lighters. The port is in rail communication with the other commercial centres of India by means of the South Indian Railway. Supplies and provisions can be procured, but no coal for steamers. Exports include coffee, tea, oils, copra, coir, timber, ginger, pepper, sandalwood, cardamoms and rubber.

### COCANADA.

Situated about 120 miles to the north of Masulipatam on the Godavari delta, Cocanada, in spite of certain disabilities, ranks fourth in importance among the ports of the

Madras Presidency. Large steamers anchor about seven miles from the shore, service with them being maintained by lighters ranging from 16 to 86 tons, which land their cargo at the numerous small wharves situated near the mouth of the Cocanada Canal. Smaller craft can come within three miles and (if not drawing more than five feet) at certain tides even reach Cocanada itself. There are 28 jetties and wharves from which goods can be shipped. The export trade of the port is chiefly in raw cotton to the United Kingdom and France, while rice and paddy are despatched in large quantities to Ceylon and Mauritius. The town has a population of some 53,000, and there are a European and an Indian Chamber of Commerce.

**COCHIN.**

The town and port of Cochin are of special interest as being the site of the earliest European settlement in India, the Portuguese adventurer Cabral having landed there in 1500. With a population of some 20,000, the place has an interesting Jewish quarter and a picturesque main street. The harbour affords shelter to a large number of coasting craft, and has good anchorage some 1½ miles off shore for oversea steamers. These vessels, however, load and discharge at Cochin only during the north-east monsoon, using the auxiliary port of Malhipuram for the rest of the year. Coasting steamers between Bombay and Calcutta call once, and sometimes twice, a week. Coal and oil are obtainable.

**MADURA.**

With a population of 139,000, Madura is the centre of considerable silk and cotton weaving and dyeing industries, and is the second town of importance in the Madras Presidency. It was originally the capital of the Pandya kings, the chief of whom, Tirumala Nayak, built the Great Temple to Siva and his consort. This famous building is perhaps the most interesting to visit of all the Hindu shrines in India, as it contains many notable and beautiful features, and affords the most complete idea of Hindu ritual. The Hall of a Thousand Pillars is a wonderful sight, its sculptures surpassing those of any other hall of its class, while Tirumala's Choultry is also distinguished by many beautiful carvings and paintings. Seven miles distant from Madura is the no less famous Temple of Rameswaram, one of the most venerated Hindu shrines in India.

**MASULIPATAM.**

A port of the Madras Presidency, Masulipatam is situated in the delta of the Kistna River, and is connected by a branch line from Bezvada with the main line from Madras to Calcutta. As a port it has few natural advantages, and large vessels cannot anchor within five miles from the shore, while the harbour wharves (five in number) are distant another three miles up a tortuous tidal creek, with a lighthouse near the entrance. Steamers touch here only occasionally, foreign trade in paddy, rice, gingelly and cotton seeds being chiefly by native craft with Ceylon. The prosperity of the port has never recovered from the cyclone of 1864, when a tidal wave caused a disastrous inundation involving the loss of 30,000 lives. Population, about 44,000.

**NEGAPATAM.**

Some 48 miles east from Tanjore, Negapatam is a flourishing port on the east coast of the Madras Presidency. It does a brisk trade with the Straits Settlements and coast ports and contains the large workshops of the South Indian Railway. There is a harbour bar, which frequently shifts, and the depth on it varies. The quays amount to 800 ft., but there is only 2 ft. of water alongside at low water, with 4 ft. at high. Passengers and cargo are landed at a jetty in the River Cuddavayar, and most of the country vessels use their own boats the greater part of the year. A port improvement scheme is in hand with the object of affording cargo lighters a free channel out to sea at any state of the tide throughout the year. The principal export trade of Negapatam is in ground nuts, cotton piecegoods, tobacco and vegetables. The population of the town and port is about 60,000.

**TANJORE.**

On the Canvey, in the Garden of Southern India, Tanjore was the last capital of the Chola dynasty and contains two forts, much dismantled, enclosing the chief part of the native city. The principal sights are the Great Pagoda in the Little Fort, the Palace of the Rajah in the Great Fort, and Schwartz' Church. The Great Pagoda is considered the most remarkable of all the temples of Southern India, and, having been preserved with little alteration, is the best specimen of the style of architecture peculiar to India south of Madras. At the north-west corner of the outer enclosure is the wonderful shrine of Karttikeya, the son of Siva, an exquisite piece of decorative building. The Rajah's Palace is a vast edifice of masonry of no architectural merit containing statues and pictures, also a library of some 18,000 Sanscrit MSS., of which 8,000 are written on palm leaves. Schwartz' Church contains a very fine group of figures in white marble by Flaxman, representing the death of the aged missionary Schwartz. Tanjore is famed for its artistic manufactures, such as jewellery, copperware, pith models, carpets, silk, etc. For ages the city has been noted as one of the chief political, literary and religious centres of the South. Population, 59,913.

**TELLICHERRY.**

The importance of Tellicherry as a port lies in the fact that steamers, which anchor about two miles off the shore, can work even during the monsoon (when all the other ports on the coast are closed), owing to the natural back-water provided by the rocky approaches to the port. A fine sea-wall 1,195 ft. in length, has been built to afford protection against erosion and also a pier, 500 ft. in length, with good craning facilities. There is railway communication with Madras and Mangalore, and the construction of a line to Mysore through the coffee-growing districts is under consideration. Coffee and pepper are the principal exports. Population, about 28,000.

**TRICHINOPOLY.**

Trichinopoly (properly Tirunirupathi, or the 'City of the Three-headed Demon') is a city famous for much fighting during the wars with the French. It now contains several fine buildings, the many colleges and schools, for which as an educational centre it is renowned, being the most prominent. Weaving, tobacco and cigar making are the most important local industries, the cigars being well-known, though the so-called Trichinopoly cheroots come for the most part from Dindigul. The local silver and gold manufactures are also famous. Population, 120,422.

**TUTICORIN.**

The terminus of the South Indian Railway and an important sea-port on the Gulf of Manaar, Tuticorin was originally a Portuguese settlement, which was thence afterwards occupied by the Dutch, whose cemetery with many interesting memorials is worth a visit. It has a population of 45,000.

**PORT**—Steamers leave Tuticorin regularly for Colombo, the passage occupying 10 hours. There is a large coalse traffic from this port, also a busy export trade in cotton, coffee, chillies, tea and cattle. The port possesses good anchorage in front of the town, about five miles distant and outside Hare Island, in 5 to 6 fathoms of water. There are two Government piers 600 and 500 ft. long respectively, with 3½ ft. alongside at low water, and with cranes to lift up to 5 tons. There is no dry-dock accommodation.

**VIZAGAPATAM.**

Chief town of the district of that name, on the Coromandel coast of Madras, Vizagapatam is principally notable as being one of the best sheltered and most important ports on the India sea-board. Geographically, it is the natural outlet of one of the richest tracts of India, and one which at present is the largest land-locked area in the peninsula. There is a stretch of country without railways extending some 400 miles from north to south and 300 miles or more from east to west, even when allowance is made for lines sanctioned or under construction. Vizagapatam lies in front of the only practicable gap in the barrier of the Eastern Ghats. From the Central Provinces a considerable amount of trade has taken this route in the past, even with the imperfect communications hitherto available. The port serves rich coal and manganese fields, the great agricultural and forest areas forming the south-east of the Central Provinces, nearly all Orissa, and all the north-easterly portion of the Nizam's dominions. Its natural hinterland includes more than half the length of the great valley of the Godavari, the entire valley of the Mahanadi down to its delta, and the valley of the Indravati.

In 1925 it was notified by the Government of India that Vizagapatam would henceforward rank as a major port, thus coming under the control of the Central Government, a fact which cannot fail to aid its development.

**ACCOMMODATION**—Vizagapatam, like Bombay, has the natural makings of a port. A high promontory protects it from the south-westerly gales that prevail during a part of the year, under the lee of this lies a deep swamp and estuary stretching a considerable distance inland and having a stream running through. Across the mouth is a sandy bar. The project for creating a port consists primarily of dredging a passage through this bar and as much of the swamp as is necessary to provide room for shipping. A small portion will be dredged to start with, and extensions made as trade requires, wharves and other facilities being constructed simultaneously. At present vessels can load and discharge all the year round, the port possessing a fleet of Masulahi boats which carry 2½ tons each, while a private firm has a fleet of big boats built to land large and awkward materials. Slight repairs can be executed at the railway workshops.

**PILOTAGE AND TOWAGE**—There are no pilotage or towage charges.

**RAILWAY COMMUNICATION**—A necessary complement of the scheme to provide the great area mentioned previously with adequate port facilities is the construction of a railway north and west by Parvatipuram to Rupur (160 miles east of Nagpur), which will go through the gap in the hills to the centre of the country, the total length being about 300 miles. The southern end of this line has been built, and provision made for the construction of the remaining portion.

The prospects of this railway and those of the port of Vizagapatam are interdependent, since the additional traffic which the railway will bring to the seaport could not be handled by Vizagapatam with its existing facilities; on the other hand, any considerable development of the port would be unnecessary in the absence of the new line. It is, therefore, the intention of the Government that the further building of the railway and the construction of the new harbour shall be undertaken simultaneously. (See also article on "Railways.")

## BOMBAY PRESIDENCY

**T**HE Bombay Presidency stretches along the West Coast of India from Sind in the north to Kanara in the south. It embraces, with its feudatories and Aden, an area of 187,074 square miles and a population of 26,757,048. Of these totals, 63,453 square miles are in the Native States, with a population of 7,412,341. Geographically included in the Presidency, but under the Government of India, is the first-class Native State of Baroda, with an area of 8,182 square miles and a population of 2,032,798. The States in the Cutch, Kathiawar and Palanpur Agencies have since 1924 been in direct political relations with the Government of India. The territories under the rule of Indian Princes and Chiefs which are in direct political relations with the Government of Bombay extend now only to an area of about 28,562 square miles, their population totalling approximately 4,000,000.

The Presidency embraces a wide diversity of soil, climate and peoples. In the Division proper are the rich plains of Gujarat, watered by the Nerbudda and the Tapto, whose fertility is so marked that this district has long been known as the Garden of India. South of Bombay City the Province is divided into two sections by the Western Ghats, above which are the Deccan districts, while south of them are the Karnatic districts. On the sea-side of the Ghats is the Konkan, a rice-growing tract, intercepted by creeks which make communication difficult. In the far north is Sind, totally different from the Presidency proper, a land of wide and monotonous desert, except where irrigation from the Indus has brought abounding fertility.

**ADMINISTRATION.**—The Presidency is administered by a Governor and an Executive Council of four (of whom two are Indians) for the "reserved" subjects, and of the Governor and three Indian Ministers for the "transferred" subjects. The Legislative Council consists of 111 members, including the four Members of Council. The Government frequently moves, it is in Bombay from November to the end of March, at Mahabaleswar from April to June, and in Poona from June to November, but the Secretariat is always in Bombay. There are, in addition to Bombay City, five administrative divisions—Northern, Central and Southern, Bombay, Suburban and Sind—under which are 27 districts, each under a Collector.

The present Governor of Bombay is H.E. Lieutenant-Colonel the Rt. Hon. Sir Leslie O. Wilson, P.C., G.C.I.E., C.M.G., D.S.O., who assumed office in 1923.

**COMMERCE.**—The situation of Bombay on the western sea-board, in touch at once with the principal markets of India and the markets of the West, has given the Presidency an immense sea-borne trade. The older ports, Surat, Broach, Cambay and Mandvie, were famous in early times, and their mariners carried Indian commerce to the Persian Gulf and the coasts of Africa. But the opening of the Suez Canal and the increasing size of ocean steamers have tended to concentrate foreign trade in modern harbours with deep water anchorages, with the result that the sea-borne trade of the Presidency is now centred at Bombay and Karachi, although attempts are being made to develop

Mormugao, in Portuguese territory into an outlet for the trade of the Southern Mahratta country.

The total sea-borne trade of the Presidency increased from Rs 2,54,38,88,256 in 1923-24 to Rs 2,95,29,69,210 in 1924-25. In the latter year the value of all imports aggregated Rs 1,82,47,21,784, against Rs 1,36,47,02,923, while that of exports declined slightly from Rs 1,17,91,86,033 to Rs 1,12,82,37,430. Cotton and cotton manufactures form the bulk of exports.

**FINANCE.**—The present contribution of the Government of Bombay to the Government of India is Rs 56 lakhs. For the financial year ended March 31, 1926, the estimated revenue of the Province amounted to Rs 16,10,40,000 and the expenditure to Rs 17,05,91,000.

**INDUSTRIES AND MANUFACTURES.**—After agriculture, which supports 64 per cent of the population, and the principal products of which are cotton, wheat, grain, millet, rice and sugar-cane, the cotton milling industry of Bombay and the surrounding district takes first place, Bombay City being the great centre in India of the textile trade. (See special article on "Cotton.") Other handicrafts are widely distributed, the handloom weavers of the Presidency produce bright-coloured *saris*, and to a diminishing extent the exquisite kincobs of Ahmedabad and Surat; Bombay silverware has a reputation of its own, as has also the brass-ware of Poona and Nasik. The mineral wealth of the Presidency is small, being confined to building stone, salt extracted from the sea, and a little manganese.

## CITY of BOMBAY

**B**OMBAY, capital of the Presidency of that name and the principal seaport of Western India, is situated on an island, one of a group lying off the coast of the Konkan, but by the construction of causeways and breakwaters it is now permanently united on the north end with the larger island of Salsette, and so continuously with the mainland. It constitutes a District by itself of 22½ sq miles.

In the beauty of its scenery, as well as in the commercial advantages of its position, Bombay is unsurpassed by any city in the East. The entrance to the harbour from the sea discloses a magnificent panorama, the background is shut in by the range of the Western Ghats, which provides an admirable setting for a city of well-built houses and broad streets ennobled by imposing public buildings, the lighting is good, and the health services have been much improved. Thanks to the labours of the City Improvement Trust, the Presidency capital under review is rapidly taking a place amongst the most beautiful and best managed cities of the world.

**BUILDINGS.** — Government House, the official residence of the Governor of the Presidency, is a picturesque building that has at different times been considerably enlarged, and stands in very beautiful grounds. The Old Government House, in Parel Road, once a Portuguese church, is now a laboratory for bacteriological research.

Many of the public and commercial buildings constructed during the last 50 years are of splendid dimensions and have no rival in any other Indian city, except perhaps Calcutta. The houses in the native bazar are also handsomely built, rising three, four, and even six storeys high, with elaborately carved pillars and front work. The most conspicuous line of public buildings is on the Esplanade, facing Back Bay. Here are the Secretariat, an enormous erection in the Venetian-Gothic style of architecture, the University Library, Senate Hall and Rajabai Clock-tower, the High Court, the Public Works, Post and Telegraph Offices. Along one side of Rampart Road is a colonnade of arches giving access to the Bombay Club, the French Bank and other buildings. Colaba Church is a fine and well-proportioned structure, conspicuous for some distance at sea. Near the Apollo Bunder is the Sailors' Home, erected at the expense of a former Gaekwar of Baroda, while opposite is the handsome Prince of Wales' Museum (see later). Behind the Sailors' Home is the Yacht Club, a favourite resort of Bombay society; adjoining it are the Club residential quarters and the imposing building of the Taj Mahal Hotel. The most important structures in the densely crowded space occupying the site of the Fort are the circular row of warehouses and offices known as the Elphinstone Circle, the Custom House, the Mint, the Town Hall and the Cathedral. The Victoria terminus of the Great Indian Peninsula Railway is a strikingly handsome building, which occupies the site of an old temple of Mambadevi. Opposite the station are the Municipal Offices, and beyond them the fine offices of the "Times of India."

To the north of Paydhuni are two interesting buildings, namely the City Jail in Umakhadi and the Jewish synagogue called the "Gate of Mercy." Other important structures, many of considerable beauty, are the Royal Institute of Science, on the Mayo Road, the Elphinstone College, the Sassoon

3. Esplanade Road, showing Messrs. Asquith & Lord's premises in the foreground.

Mechanics' Institute on Esplanade Road, and Wilson College.

**CASTLE.**—Hidden behind the Town Hall and Mint, the existence of Bombay's most historical building is unknown to many. Nevertheless, the old Castle, erected by the Portuguese, strengthened and further fortified by their English successors, still commands the eastern shore of the island. Despite time and many changes, it maintains its warlike traditions. Originally known as the Quinta or Manor House, it was the residence of Garcia da Orta, the celebrated physician and botanist, who in 1538 took over Bombay on lease at an annual quit rent of 185. From that time until the Portuguese ceded the islands it boasted the fairest garden in all India, but no traces of this now exist. Passing the sentry on guard at the gateway, a large courtyard is entered enclosed by formidable walls, east of which dashes the sea. On the northern side a passage leads through to an inner court wherein stands Bombay Castle, a square yellow building of small architectural pretensions. Winding stone stairs lead to the massive battlements, south-east of which is a flagstaff and a slender grey tower, the old Portuguese keep.

**CHAMBER OF COMMERCE.**—See under "Commerce."

**CHURCHES.**—The Anglican Cathedral of St. Thomas is one of the most interesting mementoes of the early English community in Bombay. Originally built as a garrison church in 1718, it was made a cathedral on the establishment of the See of Bombay in 1835, and to mark its new honours the present clock-tower was substituted for the old belfry. The edifice, which is a mixture of the classical and Gothic in style, contains many fine monuments and memorials. The Roman Catholic Cathedral, the seat of an archbishop, is a handsome modern building, and the Jesuits have ten other churches in the island. All Saints' is the Anglican Church of Malabar Hill and Christ Church of Byculla. The United Free Church of Scotland has a fine church in Waudby Road.

**CLIMATE.**—The average temperature of Bombay is 79 °F., and it is neither so hot in summer nor so cold in winter as some places in the interior. The coolest months are from November to March. The S.W. monsoon begins about the second week in June, and the rains continue until the end of September. The average rainfall is 70.30 in.

**CLUBS.**—Known all over the East and to travellers generally is the famous Byculla Club of Bombay, which offers all the amenities of a first-class institution of the kind, and has sleeping accommodation for its members. The Bombay Club on the Esplanade is noteworthy for its particularly excellent tilim. The Royal Bombay Yacht Club, on the Apollo Bunder, overlooking the Bay, has a large and influential membership, and extends a warm hospitality to strangers. In the beautiful grounds of this club a band plays on two evenings in the week. The Willingdon Sports Club, with its own golf-course, the Bombay Gymkhana and Golf Club, and the Ladies' Gymkhana on Malabar Hill are social and sporting clubs of the highest standard.

**CRAWFORD MARKET.**—The largest market in Bombay is the Crawford Market, on the Carnac Road. Founded by Mr. Arthur Crawford, C.I.S., Municipal Commissioner from 1865 to 1871, and costing 19 lakhs of rupees, it consists of a Central Hall, surmounted by a clock tower 128 ft. high. Two wings to the right and left serve for flowers and fruit, also for vegetables. The whole is covered with a double iron roof. On the south side is the poultry market.

Crawford market is famous for its fine display of every kind of fruit and there is also a Fish Market, where turtles, oysters, and the noted bunmaloe, or Bombay Duck, can be purchased.

**DEVELOPMENT SCHEME.**—The Bombay Development Scheme in its widest sense represents concerted attempts by the three local bodies, the Municipality, the City Improvement Trust and the Port Trust, each working in its own sphere and with Government assistance, to secure the rapid and adequate development of the city. On the part of the two former organisations various areas are being developed for housing facilities, the want of which has been largely felt since the War. (See later, "Improvement Trust.")

**BACK BAY RECLAMATION.**—The scheme undertaken by the Port Trust known as the Back Bay Reclamation has for its objects the reduction of congestion in the business area and the provision of residential accommodation and open spaces in the south of the city. This involves the reclamation of nearly 1,300 acres from the sea and the construction of a great enclosing wall four miles in length. The work was put in hand, but it became apparent as early as 1921 that all was not going well, and in 1924 the Bombay Government requested the Advisory Committee to the Department of Development, which was in charge of the undertaking, to make an investigation. A sub-committee appointed for this purpose reported early in 1926 that the scheme would cost £8,500,000—about three times the original estimate—and require about twenty years to complete. It was, therefore, recommended that only three out of eight sections of the work should be finished and that the remainder of the scheme should then be reviewed, the Advisory Committee, by a majority, adopting this recommendation. The Bombay Government sought the opinion of Sir Alexander Gibb, the well known consulting engineer, in the matter. Speaking in the Bombay Legislative Council on February 22, 1926, the Governor, Sir Leslie Wilson, said the Government would be unable to make use of Sir Alexander Gibb's report without further reference to him regarding the figures. His report, however, strengthened the Government in its intention to proceed with the southernmost block (No. 8) at Colaba Point and blocks 1 and 2 at the northern end of the reclamation. It is not considered likely that further developments on a large scale will be carried out for many years to come.

**ELEPHANTA.**—The famous caves of Elephanta are situated on Elephanta Island, in Bombay Harbour, about six miles from the Apollo Bunder. They can best be visited by the motor-launch which leaves the Apollo Bunder twice a day, the time occupied being about an hour in each direction.

The Caves date back to about the middle of the eighth century, and there are five in all. The most important is the Great Cave, situated in the western or the larger of the two hills of the island. The entrance is reached by a winding path about a quarter of a mile from the landing place. Travellers can be carried up the hill in chairs if desired. The Cave is entirely hewn out of solid rock, from the front entrance to the back it measures about 130 feet, and its length from east to west is nearly the same. It is a representation of Siva, who is the leading character in all the groups of the Cave. The front face is Siva in the character of Brahma the creator, the face on the left is Siva as Rudra the destroyer, and the face on the right is considered to be Siva in the form of Vishnu the preserver, holding a lotus flower in his hand.

TAJ MAHAL HOTEL, Bombay.  
 1. Sea Front View from Apollo Bunder.  
 2. The Entrance.  
 3. Beautiful Dining Room.  
 (See *Interpress*, p. 255.)

It may be mentioned that the name of Elephanta was given to the place early in the 16th century by the Portuguese because of a large stone elephant that stood near the old landing stage on the south side. The figure measured 7 ft 4 in in height and 13 ft 2 in in length, in 1814 the head dropped off. Subsequently it was removed to its present position outside the Victoria and Albert Museum. Splendid views of the harbour and surrounding country can be obtained from the cleared space at the entrance to the Great Cave.

**ENVIRONS.** The environs of Bombay are gradually being opened up. The beach at Juhu provides splendid bathing, the monsoon jungles of the Lake District of Vihar and Pawan attract the naturalist, the Caves of Kanheri, Jogeswar, and Borivli draw their weekly quota of pilgrims and the old-world charm of the early Portuguese church of Bhayandar and the parochial village community of the island of Dharavi reveal an unexpected element in modern Indian life which is worthy of a leisurely inspection. A good motor road for a distance of 50 miles now encircles the whole island of Salsette, where much of the scenery is exceedingly beautiful.

**GARDENS.**—The beautiful Victoria Gardens constitute one of the many triumphs of art over nature which Bombay boasts. They occupy what was once a useless stretch of low-lying land, some 48 acres in extent, which was reclaimed and laid out in 1862 as the ground of the Agri-Horticultural Society. Eleven years later the Society was dissolved, since when the gardens have been managed by the Municipal Corporation.

The entrance is rendered imposing by a handsome gateway on Parel Road, the David Sassoon clock-tower and fountain, and a small Græco-Roman pavilion to the memory of Lady Frere. The grounds are charmingly arranged and abound in rare plants and flowers, amid which tiny lakes sparkle, while brightly plumaged birds perch on the tall palms and strangely tropical trees. The gardens also house a fine collection of wild animals.

**HEALTH.**—The general health of Bombay has greatly improved. For 1925 the death rate was 25.38 per 1,000, which was the lowest for 50 years, with the exception of 1915, when the average was untrustworthy, owing to the general exodus of population. This fall is considered to be due to the stamping out of plague and cholera and the disappearance of the influenza epidemic. Effective measures have been taken for killing rats, about 14,000,000 having been destroyed in 20 years. Other factors contributing to healthier conditions are a purer water supply, better housing, sanitation and slum clearance, general welfare work, and the spread of education. Infant mortality shows a marked decrease, which, it is thought, is partly due to the national "Baby Week" and to health propaganda.

**IMPROVEMENT TRUST.**—The City of Bombay Improvement Trust was formed after a terrible visitation of plague in 1896 had directed public attention to the insanitary conditions resulting from overcrowding, seventy-six per cent of the inhabitants occupying one-roomed tenements. The Trust consists of 14 members, of whom four are elected by the Municipality and one each by the Chamber of Commerce, the Millowners' Association and the Port Trust, the remaining seven being either nominated by Government or sitting ex-officio as officers of Government. The Trust has practically reconstructed large areas on sanitary lines, and enormous schemes for the expansion of housing in the city are now passing through

the final stages before being put into execution. At Worli, on the north-west of the island, at Dharavi on the north, and at Sewri and Wadala on the north-east the Trust has undertaken development schemes involving the acquisition and improvement of 1,558 acres, or 2.43 square miles, that is between 1/9th and 1/10th of the whole area of Bombay Island. A considerable amount of filling in of low-lying land is involved, and for this purpose material from the hills on the north-east and north-west of the island will be utilised, the hills being lowered in such manner as to level them into desirable building sites. Room will be provided for more than a quarter of a million new population, equal to nearly one fourth of the present total population of the city, in the three new estates when they are fully developed, and the recoupment which the Trust will derive from the disposal of building

49,000 acres of reclaimed ground. It was erected by the East India Company in 1820 at a cost of thirty-six lakhs of rupees. The building is a plain one, with an Ionic portico, seven and a half lakhs of silver can be turned out daily. The nickel mint can produce two lakhs of pieces per diem. The workmen are chiefly Indians, supervised by Europeans under the control of the Mint Master, an officer belonging to the Royal Engineers, who is directly responsible to the Indian Government.

**MUNICIPALITY.**—The City Corporation of Bombay consists of 100 members, of whom 70 are elected from the different wards, four by the Chamber of Commerce, the Indian Merchants' Chamber and Bureau, the Mill-owners' Association, and the University, 10 are nominated by the Government, and 10 are co-opted by the elected and nominated members. Inside the Corporation, which is

to commemorate Queen Victoria's assumption of the title "Empress of India." The building is a handsome one in the Italian renaissance style and the collection within, originally intended to represent the economic products and natural history of Western India, has since become more catholic in scope, now including a reference library and a number of statues.

The Prince of Wales' Museum of Western India, which occupies an island site at the southern end of Esplanade Road, is one of the finest structures in Bombay and dates from 1905, when the present King-Emperor laid the foundation-stone. Its contents cover Art, Archaeology and Natural History, the latter being especially well represented. A section devoted to forestry has been added, and a small local geological collection of rocks, minerals and fossils is also exhibited.

**POPULATION.**—According to the

• WESTERN INDIA TURF CLUB LTD.

Bombay Racecourse: Portion of the Members' Lawn and Paddock from the Members' Stand.

sites upon them should repay almost the whole of the enormous capital outlay.

The total capital expenditure of the Trust up to March 31, 1925, was Rs 1,644 lakhs.

**PROJECTED TRANSFER.**—It was announced in 1926 that the Government had decided to transfer the functions of the Trust to Bombay Municipality, and that the necessary formalities and legislation to effect the transfer were receiving attention.

**MAHIM.**—Now chiefly famous because of the tomb of Sheik Makhtum Ali Paru, which renders it one of the most celebrated places of Mohammedan pilgrimage in Western India, the ancient city of Mahim lies ten miles outside Bombay, whence it is quickly reached by train from either Colaba or Church Gate stations. Particular interest attaches to it as being the first capital of a dynasty to be established in the islands, having been founded in the 13th century by King Bhimdev. It was at Mahim that the Portuguese first landed on January 21, 1509. The once powerful capital is now chiefly visited by large numbers of Mussulman pilgrims, who come from near and far to pray at the shrine of Makhtum Fakih Ali Paru, a saint of Arab origin, born at Mahim in the 14th century, whose tomb is credited with the virtue of working miraculous cures in cases of spirit possession.

**MINT.**—The Bombay Mint stands behind the Town Hall and next to the Castle on

a deliberative body, are two statutory committees: (1) the standing committee of 16, of whom 12 are elected by the Corporation and 4 nominated by the Government, this being practically the finance committee of the Corporation; and (2) the Schools Committee, also consisting of 10 members, twelve elected by the Corporation from its own body and four, of whom two must be women, from outside. The Municipal Commissioner appointed by Government exercises supreme executive authority in all municipal matters except primary education, in respect of which the entire executive authority is vested in the Schools Committee.

**FINANCE.**—The municipality's budget estimates for the year ended March 31, 1926, indicated a surplus of Rs 700,000. Expenditure was placed at Rs 31,950,000, against an income of Rs 32,650,000. There has been an average increase of Rs 2,600,000 yearly in municipal expenditure during the past six years. For 1924-25 and 1925-26, 2,330,000 and 1,400,000 rupees respectively were set aside for road construction. Other new undertakings provided for in the budget were a memorial hospital and medical college, and also the chlorination of the city water supply.

**MUSEUMS.**—The older of the two large museums in Bombay is the Victoria and Albert Museum, which was founded in 1858

(See *Interpress*, p. 317.)

last census, the population of Bombay was 1,175,914. The inhabitants were then classed as follows: Hindus, 837,690; Mohammedans, 184,685; Parsis, 52,234; Jains, 23,884; Europeans, 14,726; Anglo-Indians, 4,724; Indian Christians, 48,719; Jews, 7,548. The growth of the inhabitants was from 150,000 at the beginning of the 19th century to 776,006 in 1901, and from 979,445 to 1,175,914 during the ten years 1911-1921.

**STREETS.**—The streets and roads of Bombay have by means of gradual improvement been brought to a high state of perfection. The main thoroughfares are broad, well-laid out and delightfully shaded, and if some of the smaller streets of the native quarters are narrow and tortuous, they are certainly not lacking in picturesqueness.

The business and shopping centre is clustered about the Fort, the nucleus around which the city grew up. From just above the ancient Castle, Mint Road leads north to the Victoria Station and onwards to the main part of the Indian city; Marine Street and Apollo Street lead south to Rampart Row along the south side of the Fort and the open space west of the Apollo Bunder, and Church Gate Street leads west to Esplanade Road, with its handsome buildings and offices, and to the Back Bay, beyond which the residences of the more wealthy classes are situated. Rampart Row and its continuation to the Apollo Bunder

WESTERN INDIA

form the main line of thoroughfare of the European quarter.

Two well-known and busy thoroughfares are the Kalbadevi Road and Abdur Rahman Street, both of which lead to the Paydhuni ("foot-wash") quarter, so called from the fact that in very ancient times a stream flowed there, in which passers-by used to wash the dust of travel from their feet. Princess Street, named after Her Majesty Queen Mary, who opened it when Princess of Wales, deserves mention as being the first arterial thoroughfare created by the City Improvement Trust.

**TEMPLES.**—At Malabar Point is the picturesque Hindu temple of the Sand God Walkeswar, which occupies the site of a still older sanctuary. The Great Banganga tank is the home of huge turtles, and there is a sunken well with deeply venerated properties. The Mombadevi Tank and Temple lie to the south-east of the bazar, and the place is supposed by some to have been the origin of the name Bombay. A little way off Warden Road are two Hindu sanctuaries of much repute, the Maha Lakshmi Temple, dedicated to the goddess of good fortune, and Dhakji's Temple, built by a former Prime Minister of Baroda. Zaoba's Mandar is famed for the images of its three principal deities, said to be the most beautiful in Bombay.

**TOWERS OF SILENCE.**—On Malabar Hill at the head of the bay stand the five Parsi Towers of Silence. Almost any day of the week processions of white-robed Parsis may be seen wending their way along Gibbs Road, each couple grasping a *parwand*, or handkerchief, between them in silent sympathy. The bier is carried up the eighty steps that lead into the Tower by four "Carriers of the Dead," but the two bearded men known as Nasr Salars are the only living beings who may enter the Tower.

Within are receptacles for the bodies of men, women or children, and beyond is the big central well into which the bones are swept after having been stripped clean by the vultures. There they crumble into dust, and there, according to the precepts of Zarathustra, the rich and the poor meet in death. This unique method of interment originates from the veneration the Parsis pay to the elements, fire being too highly regarded by them to allow it to be polluted by burning the dead, and water and earth being almost equally respected.

**UNIVERSITY.**—The University of Bombay was founded in 1857 and is of the affiliated type, consisting of a group of colleges in the Presidency and Baroda State, the University acting not as a teaching body, but as the controlling organisation which determines the qualifications for admission, prescribes the courses of study, confers degrees, and exercises a mild form of control over the affiliated colleges. The University Library and Senate Hall are two Gothic buildings among the finest in Bombay, the former containing the famous Rajabai Clock with its peal of sixteen bells, and the latter being noted for its magnificent hall, which measures 104 ft by 44 ft and is 63 ft high.

**WATER POWER.**—The greatest water-power undertakings in India—and in some respects the greatest in the world—are the Tata hydro-electric schemes recently brought to fruition (and constantly undergoing expansion) for the supply of power in Bombay. The cotton mills and other factories of the city (the third largest in the British Empire and the biggest manufacturing town in Asia) use over 100,000 horse-power of mechanical energy, and until a few years ago this was almost entirely provided by steam generated by coal coming from a distance—mostly

from Bengal. The Tata Hydro-electric Power Scheme, devised by the late Mr D. Gostling, utilised the exceptional position of the Western Ghats, which rise 2,000 ft from ocean level within a very short distance of the Arabian Sea, to conserve the heavy rainfall produced by the south-west monsoon in the natural catchment area formed by the table lands behind them. After a great deal of preliminary investigation a syndicate secured the necessary licence from the Government, and an endeavour was made to enlist the support of financiers in England, who tried to impose terms which were not acceptable. Meanwhile the attention of Sir George Clarke (now Lord Sydenham), then Governor of Bombay and an engineer of distinction, was drawn to the scheme. The interest shown by him attracted the notice of Indian Chiefs in the Presidency of Bombay and outside to its possibilities, funds flowed in, and a company with an initial capital of Rs 1,75,00,000 was started.

The hydro-electric engineering works in connection with the project are situated at and about Lonavla above the Bhore Ghat, where the rainfall is often 500 inches and is stored in three lakes at Lonavla, Walwhan and Shirawta, whence it is conveyed in masonry canals to the forebay or receiving reservoir. The dams of these three lakes are approximately 90 ft., 70 ft. and 34 ft. in height, with areas of 3,000, 1,700 and 720 acres respectively, all at 2,000 ft. above sea-level. At the forebay near the Duke's Nose the water enters the pipe line, to take a plunge of 1,725 ft. down to the generating station at Khopoli, where 40,000 horse-power is generated by five big turbines. When the scheme is extended to its fullest capacity, with three more turbines, it may be possible to develop 80,000 h.p. The water which will thus be utilised and released at Khopoli,

**TURF CLUB, LTD.** Bombay Racecourse.

computed in cubic feet per second, will equal the River Thames in volume. The power generated is conveyed 43 miles to a receiving station at Parel, in the Island of Bombay, by aerial transmission cables at a pressure of 100,000 volts, crossing several navigable creeks on lofty steel towers. From the receiving station the first instalment of 40,000 h.p. is distributed, among other consumers, to 35 mills. The introduction of electric power from this and other hydro-electric undertakings instituted by the house of Tata has already done much to remove the smoke nuisance of Bombay.

**WATER SUPPLY.**—For many years Bombay had been content to depend upon a supply of unfiltered water from the Tansa Lake, which in 1924 was severely condemned in a report to the Municipal Corporation submitted by two English experts. Since that date a great deal has been done towards the proper filtration and purification of the water, and Bombay has now a supply of 90,000,000 gallons per day, capable of expansion to 160,000,000 gallons. The supply is obtained from four separate impounding reservoirs, viz. Tulsī, Powai, Velhar and Tansa lakes, each fed from its own catchment area and delivering water by gravitation to service reservoirs in Bombay. The Paterson System of purification is in use.

The water is conveyed from Tansa Lake to Bombay Island, a distance of 55 miles, in parallel lines of steel pipes, each 72 in. in diameter, which, as they near Bombay, branch into three smaller pipes. The pipe track along which the pipes are laid and the tramway for their transport were constructed at an estimated cost of Rs. 95 lakhs by the Tata Construction Company, while the total sum sanctioned for the completion of the Tansa works amounts to Rs. 5,48,02,511.

#### **WESTERN INDIA TURF CLUB.**

**Historical.**—The earliest record of horse-racing in the Bombay Presidency dates back to the end of the seventeenth century, but it was not until 1814 that control became vested in one body. In that year the Byculla Turf Club, the first known racing institution in Western India, assumed control of all racing in that region and upon it devolved the task of organising on proper lines the regular meetings in the Presidency. Subsequently the Byculla Turf Club became merged into the Western India Turf Club. The former Club, as the Byculla Club, however, still holds sway as one of the leading social institutions in Bombay. From its inception the Western India Turf Club has held regular meetings at Bombay and Poona, which are conducted in the best spirit of the sport and patronised by the leading owners in India. Other race meetings held under the rules of this Club take place twice annually at Quetta, Karachi, Rajkot and Kolhapur.

**Development.**—During recent years the growth of the Club has been beyond all expectations, and it can be truthfully said that the Bombay racecourse and enclosures compare favourably with the best in the world. The attendances are increasingly large, and the numbers of entries received each year for all races point to the popularity of the Western India Club fixtures with the public and racehorse owners. Both the Bombay and Poona courses are within easy reach of the railway terminus, the view from all parts of each enclosure enables the racing to be watched in comfort from start to finish, and the catering arrangements are excellent. The approximate cost of erecting the grand stands, totalisators, tea houses, stables, etc., at Bombay was £300,000.

**Control.**—The affairs of the Club are directed by a Committee of nine, of whom

five are elected stewards, which has full authority over all racing matters. The secretary is Major J. E. Hughes, the handicapper Lt.-Col. S. Findlay and the stipendiary stewards Col. R. H. Collis, C.M.G., D.S.O., Col. F. D. Hunt and Mr. D. Manee. Mr. E. F. Lance and Capt. C. R. Chambers are also assistant secretaries and starter and judge respectively.

**Seasons.**—The racing season in Bombay extends from the middle of December until the middle of March, and comprises 20 days' racing, while at Poona the season commences at the end of July and finishes in the middle of October, providing 16 days' racing.

**Horses.**—The Western India Turf Club was founded to encourage especially the breeding of the Arab class of horse, and a large number of events are framed for this particular type. At the same time English and Australian horses are encouraged, and have been racing in the Presidency regularly during the past 40 years.

**Betting.**—All betting is carried out by means of the totalisator, bookmakers having been abolished in 1911. The Club's totalisators are the latest of their kind, driven by electricity and absolutely automatic in their workings.

**Stakes.**—A feature of the Club's policy in the division of its handsome stakes is the large proportion given for second and third places. The chief events at Bombay are the Eclipse Stakes of India, 1½ miles, the Rajpipla Gold Cup, 1 mile, The Grand Western Handicap, 1 mile, The Bombay City Plate, 1½ miles, The C. N. Wadia Gold Cup, 1 mile 5 furlongs, H. H. The Aga Khan's Cup, 1½ miles, The Bombay Derby, 1½ miles, and The Turf Club Cup, 1½ miles, while at Poona the Aga Khan's Cup, 1½ miles, The Western India Stakes, 1½ miles, The Poona

**Cables.**—"Turf," Bombay

**Bankers.**—The Chartered Bank of India, Australia and China

#### **McKENZIES LIMITED.**

**Inception.**—Founded in Bombay some 40 years ago to conduct a private timber business, and now eminent among the foremost contracting firms of Western India, this concern was floated as a company in 1907. The many notable achievements to its credit include a large share in the reconstruction and development of the city of its origin.

**Activities.**—Besides specialising in concrete, timber, masonry and other structures, the firm holds a number of agencies for materials, the most important being Malthoid waterproof roof covering, Trinidad and Bermudez asphalt for roads, and the Truscon Steel Company's products, comprising Khan and rib bars, Hy-rib, steel sash and waterproofing products for concrete and masonry construction. It has also the agency for 160 tons road-making machinery and equipment, including the tandem rollers used on the Trinidad roads in Bombay.

**Trinidad Asphalt.**—The success of roads laid with this material, from the standpoints of cleanliness and durability, has led the Municipality and Bombay Improvement Trust to embark on an extensive programme for constructing permanent thoroughfares. Among the more important laid with Trinidad asphalt are Hornby Road, Kalbadevi, Mint Road, Colaba Causeway, Lamington Road, Parel Road, Kingsway, Grant Road, Worli Sea Front, etc., and they will compare favourably with the main roads of London, Paris and New York.

**Malthoid Roofing.**—This waterproof material has stood the trying conditions of the East for over 15 years, and is coming into universal use. Over 500 of Bombay's most important buildings and recently the Port Trust Cotton godowns have been covered with it, the latter contract being the largest for roofing (1,000,000 sq. ft.) ever

placed in the East. The whole work of laying is under expert European supervision.

**Trinidad Mastic.**—The problem of constructing durable floors in structures like docks, railroad terminals and platforms, etc., has been solved by the use of Trinidad Lake asphalt mastic, the first of that composition in Bombay being laid by McKenzies Ltd. This material, widely used in England has been adapted with extremely satisfactory results to the more severe conditions in India.

**Timber.**—The company's saw mills at Sewri are equipped with modern machinery, and include a commodious carpentry shop. Large stocks of hard and soft timbers are carried to meet all demands. The departments are under experienced supervision, and capable of undertaking all kinds of timber construction.

**Construction Department.**—This department is staffed by highly qualified engineers, many of whom have had years of experience on various works in India. McKenzies Ltd. specialise in concrete work, employing a modern concrete handling plant comprising Rex mixers, Insley concrete placing equipment and Blaw steel forms. Continuous supervision of constructions in hand, and exceptional facilities offered by the possession of the Sewri Saw Mills for obtaining first-class form work, assure the excellence of their undertakings. The following are the more important contracts on which they have recently been engaged: Victoria Jubilee Technical Institute, reinforced concrete chawls, piers and jetties, reservoirs and tanks, Imperial Bank of India, Allahabad Bank, National Bank of India, new offices for Mr. Mulji Haridas, Mackinnon Mackenzie & Co. and Turner Morrison & Co., Ahmedabad Power House, Barnes School, Deolali, the Bombay Racecourse (the largest contract ever let in Bombay, amounting to 22 lakhs of rupees, or approximately £150,000), and the Mahalaxmi Overbridge.

**Policy.**—The record of McKenzies Ltd. has been one of steady growth. Established on sound business principles, it is more than maintaining its high reputation for first class materials and workmanship, combined with the best technical experience and sound direction. The complete satisfaction of its clients and the fact that a large amount of

work is carried out on a cost plus percentage basis are valuable tributes to its excellent workmanship and business integrity.

**Managing Directors.**—Messrs H. L. McNeil and C. C. Sherwood

**Offices.**—Bombay (head office) St. Helen's Court, Currimbhoy Road, Ballard Estate (cables "Sawmills," Bombay), Calcutta Allahabad Bank Building, Codes Western Union, Bentley's, A B C 5th Ed.

**Bankers.**—National Bank of India and Chartered Bank of India, Australia and China.

#### **SHAPOORJEE N. CHANDABHOY & CO**

**Inception.**—This prominent firm of chartered architects, civil engineers, surveyors and fire loss assessors was established in 1868 by Mr. Nusservanjee Chandabhoi, C.E., the first Parsi civil engineer.

**Development.**—In 1880 the founder was joined by his son, Mr. Shapoorjee N. Chandabhoi, who was elected F.R.I.B.A., M.S.A. and M.S.E. (Lon.), receiving the first of those distinctions in 1904, when he was the only Parsi practising as an architect in Bombay to hold that honour. He designed and supervised the erection of various architectural and mill buildings, among his achievements being the Albee Building, Hornby Road, Framjee Petit Parsec Sanatorium at Cumballa Hill, new block of Great Western Hotel, Apollo Street, Chhatree at Wanowrie (Poona), and the Hospital at Rajppla.

**Present Principal.**—Mr. Burjor S. Jamshetji Aga, grandson of the late Mr. Nusservanjee Chandabhoi and nephew of the late Mr. Shapoorjee N. Chandabhoi, joined his uncle's firm as a partner in 1907, after having qualified as a Civil Engineer by passing the L.C.E. Examination of Bombay University in 1902. Mr. Shapoorjee died in 1920, and the business has been continued by the surviving partner, Mr. Burjor S. J. Aga, F.R.I.B.A., M.I. Struct. E. (Lon.), L.C.E., M.I.E. Mr. Burjor Aga was elected a Licentiate of the Royal Institute of British Architects (Lon.) and a Member of the Society of Architects (Lon.) in 1912. He was also made a Fellow of the Society of Architects (Lon.) in 1920, being the only Indian to bear that distinction from the time the Fellowship was founded to just a little before the Society's amalgamation with the Royal Institute of British Architects in 1925. He was the first

2. Showrooms.
3. Garage and Workshop.

Parsi member of the Institute of Structural Engineers (Lon.)

**Designs and Erections.**—The firm have been acting as architects to several Indian Ruling Princes, notably Their Highnesses the Maharajasahibs of Gwalior, Rajpipla and Devgadhi-Baria. For H H the Maharajasahib of Gwalior Mr Burjor Aga has designed and erected a large building at Gwalior with a frontage of 400 feet for the Polytechnic Institute, and a Temple (Chhattree) at Shivapuri in Gwalior State, besides designing buildings for Secretariat, School, Hospital, bungalows, etc., for Gwalior State. For the purpose of the State works a branch office was maintained at Gwalior from 1917 to 1925. Designs for extensions to the Palace, the new School building and Guest Houses for H H the Maharajasahib of Rajpipla have been prepared by Mr Aga, and work on these buildings has just been started at Rajpipla. Mr Aga has in addition designed a Secretariat Building, Palace, etc., for H H the Maharajasahib of Devgadhi-Baria.

**Other Commissions.**—The firm have also been acting as architects to public bodies, charitable institutions and some of the leading private individuals—e.g., The Western India Turf Club, Ltd., The Indian Share & Stock Brokers' Association, Messrs Volkart Brothers, Messrs Courtaulds (India), Ltd., The Central Bank of India, Ltd., The Bai Avabai Framjee Petit Parsi Girls' Orphanage, The Bai Shrimbai Cama Convalescent Home, The Zoroastrian Building Society, Sir Sarupchand Hukumchand, Mr Sorabji N Pochkhanawalla, Mr Ramnarayan Hurnandrai, and others. Messrs Shapoorjee N Chandra Bhoj & Co have also been responsible for the erection of and extensive additions to several spinning and weaving mills. Mr Burjor Aga has designed and carried out the work of extensive additions to about 15 mills in Bombay. In 1925 almost all (about 50) mill-owners in Ahmedabad engaged the services of Mr Burjor Aga for inspecting and preparing reports on their mill buildings for submission to Government, and the reports so prepared by him carried much weight with the Government officials concerned.

Mr Burjor Aga has often been appointed arbitrator, umpire or commissioner by Courts of Law as well as by private individuals.

The following are a few of the other buildings designed and erected by the firm's present principal. The Polytechnic Institute Building at Lashkar, Gwalior, The Framjee Cawasjee Institute Building at Esplanade Road, Bombay, Sir Sarupchand Hukumchand's Building at Kalbadevi Road, Bombay, Secretariat Building and Palace at Devgadhi-Baria, Temple (Chhattree) at Shivapuri, Gwalior State, Mr Sorabji N Pochkhanawalla's Building on the Work Estate of the Bombay Improvement Trust (this being the first building to be erected on that Estate), Mr. Ramnarayan Hurnandrai's bungalow at Mount Pleasant Road, and H H the Maharajasahib of Rajpipla's bungalow at Nepean Sea Road, Bombay.

**Offices.**—Morarbhai Building, 43 Apollo Street, Fort, Bombay (cables: "Wisdom," Bombay)

#### MEHTA, H. M., & CO.

Mr. H. M. Mehta, one of the original partners in this firm (established in 1896, offices, 123, Esplanade Road, Fort, Bombay), extended its activities to the motor car business in 1918, when he founded the company of T. R. Pratt (Bombay), Ltd. The latter concern occupies fine corner premises in Hughes Road, Bombay, furnishing well appointed showrooms and a commodious garage fully equipped for every class of repair. In partnership with Sir Victor Sassoon, Mr Mehta in 1919 established the business of

M T Ltd, which has a head office in Bombay and an important branch in Calcutta. These two automobile engineering firms, conducting a large trade, hold sales concessions for the Buick car all over Bombay and Calcutta, and also represent the Lancia, Standard and Cadillac. (Further details regarding companies controlled or represented by H. M. Mehta & Co. will be found in the "Industry" and "Calcutta" sections.)

#### FORD AUTOMOBILES (INDIA) LTD.

**Inception.**—Beginning operations as a private concern in 1914, this well-known Western India Ford motor organisation made rapid headway, becoming in 1916 a private limited company with a capital of 6 lakhs of rupees and a public company in 1920 with a capital of 30 lakhs.

**Development.**—From 360 cars ordered in 1914 to 2,800 in 1926 is the measure of the firm's expansion in the course of twelve years.

**Capital.**—The authorised capital is 30,000 shares of Rs 75 each, the issued capital 28,000 shares and the subscribed capital 25,530 shares, all of Rs 75 each. The company has adopted the sound policy of building up a reserve fund and writing down assets whenever possible.

**Activities.**—Sole importers of Ford products manufactured by the Ford Motor Company of Canada for Western India, the company handles cars, trucks and tractors, and always carries its own stocks with all the necessary spare parts. Service is the key word of every organisation connected with the Ford Company, and in India this is as good as can be afforded in any other country of the world. The firm's executive has always worked along progressive and modern lines, and therefore has an organisation that can offer service in the true sense of the word. To do so entails modern equipment and full stocks of spare parts.

**Stocks.**—About six lakhs of rupees worth of spare parts, some 400 cars and the necessary trucks and tractors, according to their requirements, are regularly carried in stock. The truck business has developed enormously during the past few years, especially since its introduction as a passenger-carrying vehicle, and tractors are beginning to develop as industrial haulage vehicles.

**Workshops and Assembly Plant.**—Situated at Ballas Road, Byculla, these cover an area of 60,000 sq ft and are fitted with all the latest labour-saving devices. Every branch of the firm is fully equipped and has its own workshop and assembly plant attached to the office.

**Branches.**—These are situated at Karachi, Delhi and Lahore, and each is under the personal supervision and control of a depot manager, thus keeping the company in close touch with all developments throughout Western India. In addition, the firm has over 100 agents in its territory, ensuring the full application of the Ford slogan of "Service".

**Management.**—The firm's operations are under the personal supervision of the chairman, managing director, and three depot managers. The present chairman and the late chairman, who has just retired, were the original founders of the business. The board now consists of Messrs. H. H. Lilley (chairman), H. E. Ormerod (managing director), A. S. Andrews, F. W. Willis, A. S. Chadwick and J. P. Bradshaw.

**Head Offices.**—"Ford Buildings," Hughes Road, Bombay. Cables: "Autoford," for Bombay, Karachi, Delhi and Lahore, code Bentley's Phrase Code.

**Bankers.**—Chartered Bank of India, Australia and China.

FORD AUTOMOBILES (INDIA) LIMITED, Bombay.

1. Head Office, Ford Buildings, Hughes Road.
2. Portion of the fine up-to-date Showrooms and Offices.

GRAND HOTEL, Bombay.

1. The Dining Room.
2. Fine Premises on Ballard Estate.
3. The Lounge.

#### GRAND HOTEL (BOMBAY), LTD.

**Situation.**—No better site could have been chosen on which to erect the imposing buildings of the Grand Hotel than the one in Spiroff and Wittet Roads on the Ballard Estate. The position is most convenient for visitors arriving or departing by the mail steamers, being within a few minutes' walk of the Ballard Pier, and only five minutes from Victoria Terminus, from which the most important mail and passenger trains depart. It is in the very centre of the new business quarters of the city, and is surrounded by the most up-to-date buildings.

**Premises.** The hotel buildings are the latest and most modern of their kind in India, having been built quite recently. They comprise all the up-to-date improvements that modern hotel construction can offer, and the establishment is one of the most popular and comfortable family hotels in Western India.

**Cuisine.**—This is excellent, and regarded by guests as equal to the best in the East. All food is carefully inspected before being prepared for the table, and the kitchens, fitted with the latest cooking devices, are scrupulously hygienic throughout. A good selection of wines is kept and served at reasonable rates.

**Music.**—The hotel's own orchestra plays every evening during dinner.

**Accommodation.**—The "Grand" offers every convenience and comfort, including English baths, the latest sanitary arrangements and hot and cold running water day and night in every room. Electric light and fans are installed in all apartments, while indirect electric light illuminates the public rooms.

**Departments.**—These include a first-class ladies' and gentlemen's hairdressing saloon, a bar and billiard room, and a most up-to-date English steam laundry.

**Services.** Porters and baggage clerks meet all incoming trains and steamers, and personally supervise the transportation of all guests' luggage to the hotel. There is a taxicab stand within the premises.

**Management.**—The Grand Hotel is under the personal supervision of an expert European manager, who gives personal attention to everything conducive to the comfort and convenience of patrons.

**Address.**—Grand Hotel, Ballard Estate, Bombay. Cables "Grandotel," Bombay. Code Bentley's.

#### HOUGHTON BUTCHER (EASTERN) LTD.

**Inception.**—To ensure adequate distribution of their well-known products in the East, Messrs Houghton Butcher (Great Britain) Ltd the largest manufacturers in the Empire of photographic goods, formed this subsidiary Eastern concern with headquarters in Calcutta and branches at Bombay and Singapore.

**Activities.**—The Bombay house is one of the first and last places at which visitors to India should call in order to secure cameras, photographic apparatus and materials and have their permanent records printed and developed. A large business is done in this way, and an expert staff is always in attendance to offer advice and assistance, ensuring the most prompt and efficient service in the East. In addition to photographic goods, the firm deals largely in wireless apparatus.

**Stocks.**—Large stocks of photographic sundries and of the famous Ensign, Carbine, Popular Pressman, Sanderson and other cameras manufactured by the British company are held.

**Agencies.**—The company under notice are sole distributing agents in India for Ilford's

Ltd., papers, plates, roll-films, etc., Johnson & Sons Ltd., photographic chemicals, Fordham & Co. Ltd., mounts, boards, etc., Ross Ltd., lenses, Williamson Kinema Co. Ltd., kinema machinery and cameras, Mullards Ltd., wireless valves, etc.

**Registered Offices.**—88-89, High Holborn, London

**Bombay Offices.**—4, Queen's Road, Appabagh Estate, cables "Ensignette," Bombay Codes A B C 5th Edition, Marconi International and Private

#### **HOTEL MAJESTIC.**

**Situation.**—Erected in the heart of the European quarter of Bombay, this magnificent hotel forms a block in the beautiful square of which Wellington Fountain is the centre. The exterior of the structure recalls in the beauty of its Oriental lines the world-renowned Taj Mahal at Agra. Directly in front of the hotel is the Prince of Wales Museum amid its picturesque gardens, and within a stone's throw is the Sir Cowasji Jehangir Hall, a meeting place for intellectuals. The Majestic also fronts the roads in which are situated Bombay's leading business establishments, banks, shipping companies, tourist agencies, post and telegraph offices, theatres, the railway terminus, and the Mole where travellers embark and disembark.

**Accommodation.**—There are 96 handsomely furnished suites and rooms, each fitted with hot and cold running water and private bath. The sanitary fittings, imported from England, are of the latest type.

**Ground Floor.**—The whole ground floor is given up to the dining and banqueting hall, ball room, reading room, lounges, bar, billiard and card rooms.

**Services.**—A trained, efficient and polite staff controls the departmental services, which include telephones, electric passenger lifts, hairdressing and laundry. A private European orchestra plays every evening during dinner and afterwards until 10 o'clock in the lounge, while a special band performs on dance evenings.

**Management.**—The lessee is Mr. H. D. Bihmorla, who is a co-director with Mr. F. D. Bihmorla.

**Address.**—Hotel Majestic, Wodehouse Road, Bombay (cables "Celestial," Bombay) Code A B C 5th Edition

**Bankers.** Allahabad Bank

The Building by Night

#### **THE INDIAN HOTELS COMPANY LTD.**

**The Taj Mahal Hotel.**—Fronting the harbour of Bombay, open to the sea breezes and commanding an unsurpassed view, stands the Taj Mahal Hotel, which The Indian Hotels Co. Ltd., its proprietors, claim to be the largest and best appointed establishment of its kind in the East.

Situated near-by are Green's Hotel and Restaurant and the Wellington Mews, also the Company's property.

**Amenities.**—The Taj Mahal Hotel is constructed on the through ventilation system, the sanitary arrangements are in accordance with Western principles, and the 30 private suites and 350 double and single rooms are

**HOUGHTON BUTCHER (EASTERN) LIMITED.**  
Wholesale and Retail Depot at 4, Queen's Road, Appabagh Estate, Bombay.

fitted with electric lights and fans, bells and clocks. The whole is under European management and offers every facility to the visitor. Four electric passenger lifts, an electric and steam laundry, refrigerators and an aerated water plant are installed, and post and telegraph offices on the premises, together with booking offices for the two railways serving Bombay, furnish the utmost convenience for travellers. The ground floor

Anglo-Indian literature. The "Taj Mahal" dinner is served in the restaurant, and Green's band plays daily in the gardens overlooking the harbour.

**The Wellington Mews.**—The stables, situated in proximity to the Taj Mahal Hotel, are under the control of a highly qualified veterinary surgeon. The job department furnishes well-appointed turn-outs by the day or on longer contracts, while

#### ASQUITH & LORD LIMITED.

**Inception.**—The all-important problem of tropical clothing for men is best left to concerns of high repute like that of Asquith & Lord, Ltd., which has devoted itself exclusively to men's wear since its foundation in 1870, being the oldest established Bombay house to so operate.

**Premises.**—The steady expansion of business over a period of forty years led to

ASQUITH & LORD LIMITED, Bombay.

1. Contrast the Business Premises in 1870 and 2. Fine Retail Store of to-day.

comprises the confectionery, restaurant and café, the American bar, the billiard room (six tables) and the hairdressing saloon. A resident physician is in attendance, and a fully stocked pharmacy, tailors', jewellers' and tobacconists' establishments, also a bookstall with an efficient news service, complete the appointments. An orchestra performs daily in the lounge and weekly dances are held, while a speciality is that of catering for outside functions, such as banquets, balls and receptions.

**Green's Hotel and Restaurant.**—Close to the Taj Mahal, "Green's" is the recognised "Simpsons" of India for all that is best in old English fare. The merits of its grills and fish, oysters and pomfrets are featured in

the commodious garage attached is for the convenience of visitors.

**Directorate.**—The following gentlemen, the first two of whom are concerned with the control of the famous industrial firm of Messrs. Tata Sons Ltd., dealt with in the "Industry" section of this volume, are the directors of The Indian Hotels Co. Ltd.: Sir D. J. Tata, Kt. (chairman), R. D. Tata, J. D. Ghandy, N. B. Saklatvala, C.I.E., the Hon. Mr. Phiroze C. Sethna, O.B.E., J. H. Bhabha, N. M. Muzumdar, C. E. Randle and R. P. Ghandi (secretary).

**Head Office.**—24, Bruce Road, Fort, Bombay.

(See illustration, page 314.)

the commencement of the present palatial building in 1914. Built on the site of the old premises - the firm being accommodated elsewhere in the interim - it took two years to complete. The first two floors, with an area of 1,600 square feet, are occupied by Messrs. Asquith & Lord, whose 12 departments cater for every branch of the men's wear trade.

**Tailoring.**—This is the main feature of the business, and is under the control of experienced European cutters, with a trained staff of tailors who work in sanitary well-aired rooms on the premises. Here customers from all parts of India and Burma are catered for by a simple means of self-measurement, with invariably satisfactory results. The finest quality materials are in stock, and particular attention is paid to the

View of Bombay from Malabar Hill.

purchase of those for tropical wear, whether cotton, silk or worsted

**Shirtwear.**—The business of shirt-making is carried on extensively and satisfactorily, the best goods only being produced and at moderate prices. This is the fixed policy of the house, and the results prove it a wise one. The range of cotton, woollen and silken materials is extensive, and the cotton fabrics are made exclusively for the company in special tropical weights unobtainable outside India, while an excellent range of ready-to-wear shirts ready for service in styles for sports, negligé and dress is always on hand.

**Outer Garments.**—A large stock of ready-for-service garments in all sizes is available, and includes Burberry weather proofs, overcoats, bath gowns, dressing gowns, flannel trousers, sports coats, blazers, washing suits and thin woollen suits.

**Hosiery, Underwear, etc.**—Every variety and texture of half-hose, tropical underwear, and "Jaeger" "Pesco" and "Hendawick" underwear for colder climates are stocked.

**Headwear.**—For the Tropics a thoroughly reliable sun hat for day-wear is absolutely essential, and the company supply only those that the management, with 30 years' experience in the country, can confidently recommend. There also is always available in this department a varied selection of afternoon and evening headwear, such as soft felts, panamas, tweed hats and caps, as well as silk or grey top hats, opera hats, etc.

**Footwear.**—All requirements in gentlemen's and ladies' high-class footwear for all occasions are obtainable.

**Haberdashery.**—This includes every article of small wear for men as gloves, belts, braces, handkerchiefs, neckwear, mufflers, scarves.

**Jewellery.**—This embraces studs, links, etc., also walking sticks and umbrellas.

**Linen.**—This section is in the main confined to the supply of household linen for the bachelor, but it also has a splendid variety of travelling rugs.

**Toilet and Fancy Leather.**—Every toilet requisite for a man is obtainable in the toilet section, while presentation fancy leather goods for ladies and gentlemen, fitted dressing and suit cases, and fitted lunch and tea cases are on view in other sections.

**Travel Goods.**—These include trunks, holdalls, suit and uniform cases, etc., in the best makes.

**Wardrobes.**—This department is confined to wardrobe trunks, fitted wardrobes, presses and stretchers and kindred appliances.

**Catalogue.**—The firm issues annually a fully illustrated catalogue covering the twelve departments, copies of which are obtainable at Bombay or from the shippers, Messrs Harman & Wilkes, 1 and 2, Maiden Lane, Queen Street, London, E.C.

Visitors to India are recommended to defer ordering tropical clothes until their arrival in Bombay, where they are assured of procuring the correct texture and build of clothes for the varying climates of the Tropics at shortest possible notice. The firm's constant aim is to provide a prompt service excellent fit and high-class goods at moderate prices.

**Branches.**—These are at Poona and Delhi, and are devoted more to the manufacturing side of the business, although a good selection of the firm's goods is also available. A branch at Madras is contemplated, and will shortly be in all probability an accomplished fact.

**Head Offices.**—Esplanade Road, Bombay. Cables: "Asquithco," Bombay. Codes: A.B.C. and Bentley's.

**Bankers.**—National Bank of India, Ltd.

ASQUITH & LORD LIMITED, Bombay.

EVANS, FRASER & CO., Bombay  
Fine Premises in Hornby Road

#### EVANS, FRASER & CO.

**Inception.**—This company was established in a modest way in small premises adjoining the Bombay Currency Office in October 1895. Within five years it had outgrown that accommodation, and a move was made to larger quarters opposite, on the ground floor of the building now occupied by the P. & O. Bank. Expansion thenceforward was rapid, and the historic "Fort House"—the scene of the initial movement towards the emanci-

pation of the Parsi woman—was taken over, to be converted into one of the largest and most up-to-date departmental stores in the East.

**Premises.**—Fort House is a splendid building of four floors, totalling over 65,000 sq. ft., and comprises offices, stockrooms, workrooms, factories, fitting and retiring rooms, all provided with electric lights and cooling fans. It is centrally situated in the principal business thoroughfare and forms

an ideal shopping centre where practically every want can be satisfied under one roof. The business is conducted on the "strictly cash" basis, the firm aiming always to supply high grade goods at the lowest prices.

**Departments.**—These are arranged as follows: *Ground Floor*—dress fabrics, silks and sunshades, laces, ribbons, hosiery and fancy goods, haberdashery, stationery, art needlework, jewellery, silver and presentation goods, toilet and perfumery.

1. Head Office Building in the City.

HOBAR & CO., Bombay.

2. Branch Office at Karachi

watches and clocks; *Men's Wear Department* (reached by a separate entrance) boots and shoes, travelling requisites

**First Floor** ladies' outfitting, millinery, corsets, lingerie, etc., infants' and children's complete outfitting, house furnishing, household linens and bedding, pictures

**Second Floor** China and glassware, household and kitchen utensils, ironmongery, brassware, electro-plated ware, bedsteads, baby carriages, etc

**Third Floor** warehouses and stockrooms

**Specialties.**—In art needlework probably the largest and most comprehensive stock in the East is carried, a big trade being done with convents, missions and other institutions. Furnishing is another specialty, and the firm has a large clientele amongst the ruling chiefs and nobility of India

**Branches.**—Two branches are established, one at Mussoorie and the other at Dehra Dun

**Offices.**—Bombay (head office) Hornby Road (cables "Smallwares," Bombay), London 61, Basinghall Street, E.C.2, Code A B C 5th Edition

**Bankers.**—The Mercantile Bank of India Ltd

#### HOAR & CO.

**Inception.**—Credit for the foundation of this soundly established business must be assigned to Mr. James Frederick Hoar, who some 50 years ago came from London to Bombay as an assistant to a tailoring firm, speedily saw the possibilities of trade in the Orient and started operations on his own. Soon after that commencement the original premises in Esplanade Road were exchanged for the present more commodious quarters, which have been occupied for the last 48 years

**Activities.**—The Company has an all-Indian reputation as specialists in every class of men's wear. In the tailoring department only the best English materials, produced by the leading firms, are utilised. English cutters are employed, working from the latest Bond Street and Savile Row models. Shirts and shirtings constitute a flourishing part of business, being in charge of an English tailor. Agencies for Lincoln Bennett & Co. and for Hawkes & Co., the famous sun-helmet manufacturers, are held by the hat and cap department, which stocks also the products of Scott, Herbert Johnston and Tress & Co. Ties, hosiery, collars, suit cases, wardrobe trunks, etc., are other goods in constant demand

**Karachi Branch.**—The firm's new premises here are considered the finest men's stores east of Suez, and, as at Bombay, every department is under English control

**Quetta Branch.**—Quetta is a large military station, and the branch is controlled by an English cutter, whose work is known at practically every military station in India

**Management.**—The company is British throughout, and all business is conducted under the personal supervision of Mr. R. E. Clarke, the proprietor.

**Head Offices.**—139, Esplanade Road, Bombay. Cables "Hoarco," Bombay, Karachi and Quetta. Code A B C 5th edition

**Bankers.**—The Chartered Bank of India Australia and China

#### JOHN ROBERTS & CO. LTD.

**Inception.**—The late Mr. John Roberts, the world's champion billiard player, founded this well-known Bombay firm of billiard table manufacturers over half a century ago, since when it has grown into such a large industry that there are few clubs, messes or hotels in India to-day without a John Roberts' billiard table.

JOHN ROBERTS & CO., LIMITED, Bombay.

3. Billiard Table Manufacturing Department at same Factory, Sewri, near Bombay.

SHALEBHOY TYEBJEE & SONS.

1. "Shale Buildings," Bombay, the Firm's Head Office.
2. General Office, showing the modern and up-to-date planning.

**Development.**—In the early years the firm manufactured billiard tables only, but, as the business grew and larger factories became necessary, it was decided to produce high-class furniture in addition. For forty years the company's reputation in this line has been recognised throughout India and the East, numerous palaces and Government Houses having been furnished by it. Despite world-wide trade depression, everything points to the continued prosperity of this famous house.

**Factory.**—The recently opened factory in Bombay is a commodious structure, equipped with the latest machinery for furniture making and the manufacture of billiard tables. The factory staff is composed of highly skilled men, and each department is under the supervision of a fully qualified European manager.

**Billiards.** Believing always that "There is no cheap substitute for the best," and having a long experience of the special requirements of the Indian climate, the firm is able to supply tables which have been carefully tested by prominent players, world famous men like H. W. Stevenson, George Gray and Claude Falkner, the latter of whom broke all Indian records on tables fitted with John Roberts' "Climate Express" billiard cushions at Bombay in October 1925.

**Furniture.**—As cabinetmakers and upholsterers John Roberts & Co. Ltd. have an unequalled reputation for quality and workmanship, and have shown conclusively that furniture of distinction need not be prohibitive in price. The tone of their productions is appreciated by the auctioneers of Bombay, who, when holding sales of furniture, which usually contain several examples of various styles, always endeavour to include a few articles of Messrs. Roberts' make to lend distinction to the collection.

**Interior Woodwork.**—All styles of woodwork for interiors, such as panelling, counters and seating arrangements, are manufactured at the factory and many large banks and offices in Bombay have been fitted by the firm.

**Curtains and Covering Fabrics.**—A large selection of high class carpets, curtains and other rich fabrics of exclusive designs suited to the various styles of furnishing now in vogue is always carried.

**Head Office.**—Hornby Road, Bombay (only address), cables "Billiards," Bombay.

#### SHALEBHOY TYEBJEE & SONS.

**Inception.**—Probably the oldest and certainly at the present day one of the largest Government, railway and shipping contractors in Bombay, this firm was established by Mr. Tyebjee Dawoodkhan in 1840. On his death in 1881 the concern passed into the hands of his eldest son, Mr. Shalebhoy Tyebjee, who maintained the enviable reputation already achieved by it. After nearly 40 years Mr. Shalebhoy Tyebjee handed over the management to his son, the late Mr. Abdulcayum Shalebhoy Tyebjee, and subsequently to Mr. Amrudin Shalebhoy Tyebjee, the present director, who has largely contributed to the firm's prosperity to-day. Latterly the youngest son, Mr. Dawoodkhan Shalebhoy Tyebjee, also joined the business.

**Development.**—In 1907 the expansion of business necessitated the opening of a branch office in Bombay (Nagdevi Street), which is conducted under the name and style of Amir Bros. This off-shoot transacts all general matters, but technical business is referred to the head office. Since 1914 the greatest development of this organisation has taken place, due to the adoption of the most

up-to-date ideas in administration and operation

The head office in Bank Street, Bombay, is a fine modern building, possessing approximately 15,000 feet of floor space. The firm has its go-downs and premises in other parts of the city.

**Activities.**—Messrs Tyejee & Sons conduct a general hardware trade, specialising in railway and engineering tools and ship-chandlery stores.

**Hardware.**—This department handles both imported and locally manufactured tools used by municipalities and public works departments, such as pickaxes, jowrahs, chisels, hammers, etc.

**Engineering and Shipchandlery.**—The company supplies the Royal India Navy, leading steamship companies, port trusts and main railways with deck and engine room stores, rope, canvas, railway material, etc.

**Agencies.**—The following important agencies are held by the firm: "Locomotive" brand leather cloth, "Locomotive" canvas, "Locomotive" hosing, "Locomotive" roofing canvas, "Locomotive" beltings, Genuine Barrett jacks and rail lifters, Bruce's patent (spring) switch reversers, Prince's patent sure grip wagon pushers, Pierce's patent window catches, Vertex bronze bars and sheets, Brunton's wire ropes, Beldam Packing & Rubber Co. Ltd., Paripan brand enamels, Corass products and anti-corrosive compositions, Sheffield Twist Drill & Steel Co. Ltd., Agricultural Implements Co. Ltd., and Manila ropes, to Government and Board of Trade regulations.

**Partners.**—Mr. Shalebhoy Tyejee (Senior), Mr. Amirudin Shalebhoy and Mr. Dawoodkhan Shalebhoy Tyejee.

**Head Office.**—Shale Buildings, 28-32, Bank Street, Bombay. Cables: "Rotator," Bombay. Codes: A.B.C., 5th Edition, Bentley's and Private.

**Bankers.**—Hongkong and Shanghai Banking Corporation, P. & O. Banking Corporation and The Imperial Bank of India.

#### **S. ROSE & CO. LTD.**

**Inception.**—The oldest European firms in India dealing exclusively in music and musical instruments are S. Rose & Co. Ltd. of Bombay and Harold & Co. Ltd. of Calcutta. The latter establishment was founded in 1847 by Mr. Samuel Harraden, and a branch was opened in Bombay under the name of S. Rose & Co. Ltd.

**Development.**—In the early eighties of last century the firm just mentioned became independent of the parent house, and in 1904 purchased the goodwill of the Calcutta house from the executors of the late Mr. Harraden, but business is still carried on there under the original name of Harold & Co. Ltd.

**Activities.**—The two firms are agents for the principal European and American manufacturers of high grade pianos, organs, band and other musical instruments, including Bluthner, Bechstein, Steinway, Collard, Allison, Chappell, Brasted, Strolimenger, Erard, Schiedmayer & Soehne, Cramer, Mason & Hamlin, and Rachal pianos, Estey Reed organs, Hawkes, Boosey's and Benson band instruments, "H.M.V." and "The Chitophone" gramophones. A large business is done in music, while the respective houses are the official booking offices for theatres and concerts in Bombay and Calcutta.

**Offices.**—Rampart Row, Fort, Bombay; Dalhousie Square, Calcutta. Cables: "Rosebud," Bombay and "Pianoforte," Calcutta. Code: Bentley's.

#### **MADHAVDAS RUGNATHDAS & CO.**

Building in which the Firm's showroom is situated, corner of Churchgate Street and Esplanade Road

the name, policy and traditions of its founder, this famous house of silk mercers was established by Mr. Madhavdas Ragnathdas some 65 years ago

**Development.**—The business has pursued a steadily progressive course, characterised by careful buying and an intimate knowledge of markets and quality, and to this more than anything is due its present favourable position

**Activities.**—It imports on a large scale the very best Chinese, Japanese, and French silks, all personally selected, besides carrying an extensive stock of assorted Indian silks, purchased up-country direct from the manufacturers. It also imports large quantities of high-class French perfumes, in which a growing business is being built up. The tailoring department specialises in all classes of ladies' apparel and executes orders to any design with accuracy and promptitude

**Premises.**—The offices and showrooms are centrally and conveniently situated in Hornby Road, close to the Victoria Terminus

**Management.**—The proprietors of the business are Mr. Bagvandas and his sons

**Head Offices.**—160, Hornby Road, Bombay  
Cables "Maruco," Bombay

**Bankers.**—Central Bank of India

#### **JEWELLERS LIMITED.**

**Inception.**—This trade name was adopted by the old established firm of Janson & Scowen when they absorbed the entire business of J. C. Bechtler, Son & Co. in 1920

**Development.**—The firm is well known, and, besides its head office at Bombay, has branches at Allahabad, Cawnpore and Mussoorie. Each branch has its own system of departments under the headings of "Jewellery," "Silver," "Watches and Clocks," "Silver Plate," "Cutlery," "Fancy Goods," "Cut Crystal" and "Manufacturing"

**Activities.**—The firm has the distinction of being the only manufacturing jewellers in the East with a directorate of practical goldsmiths, and is therefore in a position to design and execute any order. It also manufactures watches and clocks, including tower

clocks. The showrooms are fitted up in modern style, carrying large and varied stocks of gems, jewellery, watches, clocks and plated ware. Each department is under the direct supervision of a fully-trained European, and the workshops (at Bombay and Allahabad) are modernly equipped. A mail order department handles Mofussil orders, and at Bombay a special department advises on and undertakes valuations for insurance

**Management.**—Head offices, showrooms and workshops are under Mr. F. G. Scowen, Allahabad and the branches under Mr. J. H. Janson

BALLARD ROAD, BOMBAY, WITH THE PORT TRUST OFFICES ON THE LEFT  
(See letterpress, page 331)

## PORT OF BOMBAY

**L**ITERALLY, as well as figuratively, Bombay is the Gate of India. It is not, however, to their geographical situation alone that the port and city owe their wealth and importance. The great seaport whereby travellers and commerce enter India from the West is actually more indebted to man than to nature for its present prosperity. Under the rule of the East India Company the seven islands upon which Bombay originally stood were linked together by causeways, land was reclaimed from the sea, breaches were filled and docks were built. The opening of the Suez Canal in 1869 did much to increase the importance of the port, which rapidly became one of the largest in the world, wherein to-day craft flying the flags of all nations may ride safely at anchor, and the entrepôt for the now firmly-established cotton trade of Western India.

**ACCOMMODATION.**—Bombay harbour is very capacious, being about 10 miles long from north to south, with a general width of 4 to 6 miles. The usual anchorage is on the west side of the harbour, off the city. There is from 23 to 36 ft. of water in the port, with a minimum depth in the fairway of six fathoms until abreast of the Sunken Rock. The accommodation for vessels of the largest tonnage is continually being increased and improved.

**ADMINISTRATION.**—The affairs of the port are under the control of the Port Trust, a body consisting of a chairman and twenty members (seven of whom are nominated by Government). It had its origin in 1862 by means of a private concern called the Elphinstone Land and Press Company, whose rights were taken over by the Government and vested in the newly created Port Trust in June 1873. In 1879 the Trust was reconstituted by Government on a basis which has remained practically unchanged to the present day. (See article following on the "Bombay Port Trust.")

**BACK BAY RECLAMATION.**—See under "City of Bombay."

**DOCKING FACILITIES.**—There are three fully equipped wet docks, known respectively as Prince's Dock, Victoria Dock and Alexandra Dock, having a total water area of 104½ acres and a quayside of nearly 4½ miles, also two dry docks, the newer having a length of 1,000 ft. and width of 100 ft., and the other a length of 500 ft. and a width of 65 ft. Over 200 hydraulic cranes, with a lifting capacity varying from 30 cwt to 100 tons, are in use in the wet docks. Until comparatively recently the railway connection with the docks was decidedly inadequate, necessitating a double handling of goods. Raw cotton had to be transported by carts from the railway goods termini to the Cotton

Green at Colaba, and thence to the mills or docks. The new scheme completed by the Port Trust provides direct communication between the railways, docks and goods depôts, also extensive storage shed accommodation at Sewri. The cotton trade has now been transferred from Colaba to Sewri, where the Port Trust has provided the largest and best equipped depot of its kind in the world. About three million bales of cotton can be accommodated, the depot, with its fireproof ferro-concrete godowns fitted with automatic fire-sprinklers, etc., covering an area of nearly 500,000 square yards.

**EQUIPMENT.**—See article following on the "Bombay Port Trust."

**OIL FUEL.**—For bunkering with liquid fuel there are an 8 in. and a 10 in. pipe line, pumping capacity, 65 tons per hour. For kerosene oil, one 8 in. pipe line, pumping capacity, 105 tons per hour, and one 10 in. pipe line, pumping capacity 184 tons per hour. For petrol, one 8 in. pipe line from Bulk Oil Pier at Pir Pau to the installations at Sewri (distance 4½ miles), pumping capacity, 134 tons per hour. Oil bunkering from service pipes can be carried out at the principal loading berths.

**PILOTAGE.**—In and out of harbour pilotage is compulsory for sailing vessels and steamers from 100 tons upwards. Minimum charge, 100 to 300 tons, Rs 30; for steamers

## BOMBAY PORT TRUST

West Side of the new Alexandra Dock. Depth of water alongside quays, 37 ft.

of from 2,100 to 2,200 tons, Rs 49, an increase of Rs 1 for every 100 tons or part above that tonnage

Pilotage to or from sea, or from dock or anchorage, for vessels of from 2,100 to 2,200 gross tons, Rs 68, with an increase of Rs 2 for every 100 tons in excess. In addition to the above charges, a surtax of 25 per cent on all pilotage charges is at present in force

**PORT CHARGES.**—See article following on the "Bombay Port Trust"

**RAILWAY COMMUNICATIONS.** — See article following on the "Bombay Port Trust"

**STEAMSHIP SERVICES.**—The following are the principal lines using Bombay Port: Peninsular and Oriental Steam Navigation Company, British India Steam Navigation Company, Lloyd Triestino, Marittima Italiana, Clan, Anchor, City and Ellerman Lines, Wilson Line, Hansa, Asiatic Steam Navigation Company, Scindia Steam Navigation Company, Nippon Yusen Kaisha, and Osaka Shosen Kaisha.

**TIDES.**—By the outer floating light it is high water, full and change, at 12 h, but at the dock head and where ships moor, at 11 h 31 m, extraordinary springs rise 18 ft 6 in, ordinary, 15 to 16 ft, neaps, 9 ft

It is necessary for every master sailing in or out of Bombay harbour to remember that the tides rise and fall from 14 to 18 ft on the springs and 9 to 10 ft at the quadratures. Except upon the reefs or shoals, the bottom is soft mud or clay

**TRADE AND SHIPPING.**—The total sea-borne trade of the port of Bombay with foreign countries and Indian ports for the years named is shown in the following table.

	1924-25 Rs	1925-26 Rs
1 Foreign trade (private)		
Imports		
Merchandise	87,37,89,045	78,93,13,987
Gold, silver and notes	95,05,10,759	51,00,98,965
Total imports	1,82,42,99,804	1,29,94,12,952

	1924-25 Rs	1925-26 Rs
Exports.		
Foreign merchandise	9,90,94,022	7,57,85,191
Indian produce	98,60,52,738	94,73,79,559
Gold, silver and notes	4,30,75,836	3,19,58,777
Total exports	1,12,82,22,596	1,05,51,23,527
Aggregate foreign trade	2,95,25,22,400	2,35,45,36,479
2 Coasting trade		
Imports	29,96,93,966	35,27,82,785
Exports	31,36,62,685	30,13,93,632
Total	61,33,56,651	65,41,76,417
3. Government transactions	2,18,50,053	3,49,82,419
Total trade	3,58,77,29,104	3,04,36,95,315

In 1925-26 the foreign trade (private) of the port declined by Rs. 59.8 crores to Rs. 235 crores. Exclusive of treasure, the decline in foreign trade was one of Rs 14.64 crores,

BOMBAY HARBOUR

1. Ballard Pier. 2. General View of Alexandra Dock 3. Victoria Dock 4. Prince's Dock

or 7 per cent, to Rs 181 crores. Imports of merchandise into Bombay decreased in value by 10 per cent, cotton manufactures, sugar, metals and ores, dyeing and tanning substances, cotton yarn, raw cotton and machinery and millwork chiefly accounting for the decline. On the other hand, there were notable improvements in silk manufactures, rubber, provisions, motor cars and cycles, spices, instruments and apparatus, and tobacco. Exports of Indian produce also declined by Rs 3 87 crores, or 4 per cent, to Rs 94 74 crores, the decrease being chiefly in cotton manufactures and yarn, raw wool, seeds and raw cotton.

**SHIPPING.**—The total number of vessels (steam and square-rigged) which entered the docks or were berthed at the harbour walls and paid dues in 1924-25 was 1,890, of an aggregate tonnage of 4,500,636, compared with 2,044 (tonnage 4,661,904) in 1923-24. The two dry docks were occupied during 1924-25 by 193 vessels, whose total tonnage aggregated 677,239, which was less than that of the preceding year by 51,952 tons.

### THE BOMBAY PORT TRUST

**Inception.**—The affairs of the Port of Bombay are controlled by a Trust created by the Government in 1873.

**Constitution.** This Trust consists of a chairman and twenty trustees, seven of whom are officials nominated by Government, five are elected by the Bombay Chamber of Commerce, five by the Indian Merchants' Chamber, two by the Municipal Corporation and one by the Millowners' Association.

**Administration.**—The whole administration of the Harbour—lighting, pilotage, docks, bunders, port railway and land estates—is vested in the Board.

**Harbour.**—Bombay harbour, one of the finest in the world, is a deep arm of the sea between the Island of Bombay and the mainland, 14 miles long, from 4 to 6 miles across, with an area of about 70 square miles. The general depth varies from 20 to 40 feet, with a mean tidal range of 13.9 feet. The port is well protected from the monsoon, and its approaches are excellently lighted.

**Docks.**—The harbour has commodious docks, wet and dry, equipped with the most modern cranes and machinery. The wet docks are Prince's Dock, 30 acres in extent for vessels drawing up to 24 feet; Victoria Dock, 25 acres for vessels drawing up to 26 feet; and Alexandra Dock, 49½ acres, for vessels drawing up to 36 feet. There are two dry docks, the Merwether Dock, 500 × 65 × 25½ feet, and the Hughes Dock, 1,000 × 100 × 34½ feet.

**Equipment.**—This consists of one hydraulic crane of 100 tons lifting capacity, one of 30 tons, one of 5 tons, eight 6-ton, eighty-four 35 cwt, one hundred and twelve 30 cwt, one 60 ton floating crane, 85 hoists and several runabout cranes. There is also a specially equipped barge for the reception of oil waste and bilge water, likewise a dredging fleet of 9 large modern dredgers, 9 steam hopper barges and a rock breaker.

**Railways.**—The docks are connected by railway with the G.I.P. and B.B. & C.I. systems, while the terminal passenger station on Ballard Pier (1,500 ft. long) is in direct

communication with all the railways in India. The Port Trust Railway effects these connections through a large Interchange Yard at Wadala, over 100 miles of track having been laid down, and the railway handles nearly 50 per cent of the terminal goods traffic of Bombay. The pier is used by the largest vessels to embark and disembark passengers and mails, and its facilities for baggage, Customs examination, refreshments, etc., are generally acknowledged to be unsurpassed by any large port.

**Development Schemes.**—The principal schemes completed during the past 20 years include (1) Alexandra (wet) and Hughes (dry) Docks, (2) Port Trust Railway and Ballard Pier Station, (3) Mazagon Sewri Reclamation Works, involving 583 acres of reclaimed land to provide goods depôts. The Sewri and Wadala reclamations accommodate the railway Interchange Yard, Antop model village for employees, the bulk oil installations, depôts for cotton, grain, manganese ore, etc., and other industrial works, (4) a deep water pier at Trombay for the discharge of bulk petrol and kerosene oil, with several miles of connecting pipe-line to the oil installations at Sewri. Oil bunkering can also be carried out at most berths in the Alexandra Dock.

The completion of the first three schemes just before the outbreak of the Great War enabled Bombay to be successfully utilised as the chief base port in India.

The Ballard Estate, on reclaimed ground south of Alexandra Dock, is being developed as a first-class business and residential area.

**Depôts, Sheds, etc.**—The transit sheds and warehouses cover 3,200,000 sq ft, providing ample accommodation for goods in transit. A new three-storied transit shed, 400 ft long by 120 ft wide, with a floor area of 140,000 sq ft, is now under construction at No. 9 berth, Alexandra Dock. The cotton depôt is probably the largest in the world, providing covered accommodation for 1 million bales and uncovered accommodation for another million. The total area is 432,500 sq yds, and the depôt is fully equipped with reception and loading stations, roads, godowns, offices, fire and salvage service.

**Revenue.**—The following are the gross receipts of the Trust since 1917-18 in lakhs: 1917-18, Rs 178.30, 1918-19, Rs 192.62, 1919-20, Rs 196.90, 1920-21, Rs 222.97, 1921-22, Rs 217.17, 1922-23, Rs 259.62, 1923-24, Rs 260.71, 1924-25, Rs 273.70, 1925-26, Rs 284.13. The value of the trade of the port has risen from 182 crores in 1917-18 to 304 crores in 1925-26. The volume of cargo handled in the Port during the financial year ended March 31, 1926, was 6,460,000 tons.

**Imports and Exports.**—The principal imports handled at the port are piece-goods, metals, sugar, machinery, rice, oils, glassware, motor cars, oilmen's stores, paper and hardware, the chief exports being cotton, piece-goods, grain and seeds, ground nuts, myrabolams, twist and yarn, oil cakes, wool, and manganese ore.

**Charges.**—Prince's, Victoria and Alexandra Dock dues, 2 pies per ton per diem on vessels under 1,500 tons, and 3 pies on vessels of 1,500 tons and over, cranes (30 and 35 cwt) hired at Rs.12 per diem. Import and Export wharfage charges at the Docks on goods vary according to class. The wharfage on cotton piece-goods is 6 annas a bale up to 40 cubic feet, and 12 annas over 40 cubic feet; iron, average Rs.2 per ton; grain, 12 annas per ton; seeds, 12 annas per ton; raw cotton (Indian), 8 annas per bale of 3 cwt; American or other pressed bale of 4 cwt or over, 12 annas; Egyptian 6 cwt. bales, 12 annas per bale. The above charges are at present subject to 50 per cent. surtax.

THE SCINDIA STEAM NAVIGATION CO., LIMITED, Bombay

- 1 "Sudama House," in which the Company's Head Office is situated.
- 2 S.S. "Jalarashmi," one of its Steamers.

**Secretary's Office.**—Ballard Road, Fort, Bombay. Cables "Port Trust," Bombay Code. Bentley's.

**Bankers.**—Imperial Bank of India

#### THE SCINDIA STEAM NAVIGATION CO. LTD.

**Inception.**—The steady increase in sea-borne merchandise between Burma and India, and also between the East and West Coasts of India, led to the formation of this purely Indian firm of steamship owners in March 1919 at Bombay. Messrs. Narottam Morarjee & Co. are Managing Agents for the company.

**Capital.**—This at present amounts to Rs.1,50,00,000, divided into 10,00,000 shares of Rs 15 each.

**Activities.**—The company maintains fortnightly services between Burmese ports and Bombay via Colombo and Malabar, and between Calcutta and Karachi via the Indian Coast ports. In addition, it controls the two important subsidiary companies, The Eastern Bunkers Ltd. for bunkering and steve-

doring and Narottam Limited for rice and other business.

**Fleet.**—The Scindia Steam Navigation Co., Ltd. owns seven steamers of a total deadweight tonnage of 50,402, and has at present on time charter a further four steamers of 32,470 dead weight tonnage. The fleet proper comprises s.s. "Jalavihar" (8,750 d.w. tons), s.s. "Jalaputra" (8,310 d.w. tons), s.s. "Jalajyoti" (7,104 d.w. tons), s.s. "Jalarashmi" (7,020 d.w. tons), s.s. "Jalapalaka" (7,570 d.w. tons), s.s. "Jalavijaya" (7,250 d.w. tons), and s.s. "Jalatarang" (4,398 d.w. tons). Three steamers of a total dead weight tonnage of 21,900 are under construction.

**Branches and Agencies.**—The company has branch offices at Rangoon, Moulmein, Akyab and Calcutta, also 29 agencies at all the principal ports on the Indian seaboard.

**Directorate.**—The Board consists of Mr. Narottam Morarjee (Chairman), The Hon. Sir D. E. Wacha, Kt., Mr. Walchand Hirachand, Mr. Lalji Naranji, Mr. Hiralal Dayabhai Nanavati, Mr. Ravashanker Jagjivan

Zaveri and Sir Lalubhai Samaldas, Kt., C.I.E.

Ltd., Asian Finance Corporation, Ltd., Ahmuty & Co. Ltd., and Lewis Berger & Sons, Ltd. E. D. Sassoon & Co. have branches in London, Manchester, Calcutta, Karachi, Rangoon, Hongkong, Shanghai and elsewhere. Cables "Ehas," Bombay.

**SCALES, W. H., & CO. LTD.** Central Bank Building, Esplanade Road, Bombay. Incorporated in England. Established in 1882 and re-registered as a private limited company in 1923. Piece-goods merchants and general agents. Head offices 63 East Parade, Bradford, also at Manchester and Delhi. Cables "Scales," Bombay. Codes: Lieber's 5 Letter A B C 5th and 6th Eds., Bentley's and private.

**SUMITOMO BANK, LTD.**—35-39 Church Gate Street, Fort, Bombay. Incorporated in Japan. Established 1912, successors to The Sumitomo Bank. Subscribed capital, yen 70,000,000, paid-up capital, yen 50,000,000, reserve fund, yen 21,000,000. Head offices: Kitahama, Osaka, Japan. Foreign branches: London, New York, San Francisco, Los Angeles, Bombay, Shanghai, Hankow. Cables "Sumitbank".

**SUN LIFE ASSURANCE COMPANY OF CANADA.**—Canada Building, Bombay (chief office for India, Burma and Ceylon). Incorporated 1805. Head office Montreal, Canada. Indian branches and agencies: Bombay, Calcutta, Madras, Lahore, Secunderabad, Karachi, Colombo and Rangoon. Burma agents: Harperink, Smith & Co. Bankers Bank of England, Bank of Scotland.

**SUZUKI & CO. LTD.**—Taj Building, Hornby Road, Fort, Bombay. Incorporated in Japan. Established in Bombay, 1917. Importers, exporters and general merchants, dealing in camphon, sugar, cotton, piece-goods, cotton yarn, iron, seeds, cotton, etc. Head office 10 Kaigan Dori, Kobe, Japan. London office 29 Mincing Lane, E.C. Cables "Suzuki," Bombay. Codes: A B C 5th and 6th Eds., Bentley's, Scott's 10th Ed., etc.

**TATA CONSTRUCTION CO. LTD.**—Phoenix Building, Sprott Road, Ballard Estate, Bombay. Engineers and contractors. Since 1920 carried out works amounting to 3½ millions sterling. Cables "Tatabuild," Bombay.

**"TIMES OF INDIA."**—Times Building, Hornby Road, Bombay. Proprietors: Bennett, Coleman & Co. Ltd. Founded in 1838 as the "Bombay Times" and published bi-weekly until 1850, when it became a daily paper. The present title was adopted in 1861, when Mr. Robert Knight was the editor. Among more recent editors the late Sir Thomas Bennett, Sir Stanley Reed, K.B.E., and Mr. Lovat Fraser were prominent. The present offices were built early in this century. The paper has expanded greatly in recent years, especially since the price was reduced to 1 anna. It now averages 16 pages, including a page of illustrations. Several other publications are associated with the "Times of India" and issued by Bennett, Coleman & Co. Ltd. These include the "Times of India Illustrated Weekly," which was founded in 1880 and turned into an illustrated journal in 1902, having now the largest sale of any weekly paper in India, the "Times of India Annual," an artistic production particularly distinguished for its colour work, published in November, the "Times of India" Directory for Bombay and Western India, now in its 74th year; the "Indian Year Book," a work of reference dealing with every aspect of

Indian affairs, now in its 13th year, and the "Evening News of India," a daily paper founded in 1924.

**TURNER HOARE & CO. LTD.**—Gateway Buildings, Apollo Bunder, Fort, Bombay. Works and warehouses: Suparibag Road, Parel. This engineering company acts as agents for the leading manufacturers of machinery, railway and general engineering material. These include the Anmonia Company of Australia, Ltd., Sydney, ammonia products, Aveling & Porter, Ltd., Rochester, steam road rollers, etc., Wm Beardmore & Co. Ltd., Glasgow, locomotives, wagons, railway and dock material, Bombay Motor Car Co. Ltd., Bombay, Daimler, Rover and Paige-Jewett motor cars, etc., Columbia Batteries, F. W. Brackett & Co. Ltd., Colchester (patent self-clearing circulating water screen), British Thomson-Houston Co. Ltd., Rugby, electrical plant, J. W. Brooke & Co. Ltd., Lowestoft, marine motors and motor boats, Broom & Wade, Ltd., High Wycombe, air compressor plants, Cable Accessories Co. Ltd., Tipton, Revolving and desk fans, etc., Chance Bros & Co. Ltd., Birmingham portable searchlights, signalling lamps and lighthouse machinery, Thomas Chatwin Ltd., Birmingham, stocks and dies, J. & F. Hall, Ltd., Dartford, refrigerating and cold storage plants, Hathorn Davey & Co. Ltd., Leeds, pumping machinery, Holophane, Ltd., London, electrical fittings, Perfecta Seamless Steel Tube and Conduit Co., Birmingham, Petters, Ltd., Yeovil, oil engines, Priestman Bros., Ltd., Hull, dredging machinery, Pulsometer Engineering Co. Ltd., Reading, centrifugal pumps, Pyrene Co. (India), Ltd., Pyrene, Phenolic and Simplex fire extinguishers, F. Reddaway & Co. Ltd., Manchester, "cannel hau" and cotton beltings, etc., Robey & Co. Ltd., London portable steam engines, loco type and vertical cross tube boilers, etc., A. R. Fattersall & Co., London, flour-milling machinery, Waygood-Otis, Ltd., London electric, hydraulic and hand power lifts. Turner Hoare & Co. Ltd. are also established at The Mall, Lahore. Cables "Endeavour," Bombay.

**WILSON, LATHAM & CO., LTD.**—Central Bank Buildings, Bombay. Incorporated in England. Successors of Latham, Abercrombie & Co. established 1882. Importers of piece-goods, yarns, metals, etc., exporters of Indian produce, also agents. Cables "Heureuse," Codes: Bentley's, A B C 6th Ed. and private.

**YORKSHIRE INSURANCE CO. LTD.**—16 Elphinstone Circle, Bombay. Established in 1824 at York, England, this company ranks among the great British insurance offices and has organisations in many parts of the world. For over a quarter of a century it has made all-round progress and now includes all those varied departments that are a feature of the great composite insurance companies of the 20th century. It transacts business in various classes of insurances, including life, marine, fire, consequential loss, livestock, accident, etc. It may truly be said that its business is built upon a solid foundation, just as its principal office in York is erected on a foundation that the ages have not been able to destroy—namely, the Roman wall of York. During its long, successful career a policy of building up extensive reserves has been maintained, as is evidenced by the enormous figures of its reserve funds. The Yorkshire Insurance Co., Ltd., has been represented in India for over a quarter of a century, and its present organisations embrace chief and sub-agencies in the important cities including Bombay, Calcutta, Madras and Karachi, the first-named being the chief.

Mammoth Figures in the Dumar Lena at Ellora Caves, on the G I P Railway.

## OTHER PORTS & CITIES OF THE BOMBAY PRESIDENCY

### AHMEDABAD.

(See under "Tourist Resorts")

### BIJAPUR.

One of the most ancient of the cities of Bombay, Bijapur (originally Vijayapura, "City of Victory,") is also among the most interesting places in India. During the 15th and 16th centuries it was the capital of the Shahi Kings of Bijapur, whose domination only ceased when the city was taken by Aurungzebe in 1686. The great architectural development of the place occurred during their reigns, and many of its most noteworthy features still survive. The population at the last census was 32,458.

**BUILDINGS**—The city has seven gates, all of which are architecturally interesting. Many of the ancient buildings of Bijapur are remarkable for their magnificence. The Jamī Masjid is said to be one of the finest mosques in India and dates from the middle of the 16th century. The Gol Gumbas, or "Round Dome," is the mausoleum of Muhammad 'Adil Shah, the seventh king, and is famous for its beautiful proportions and its great dome, 16 ft. more in diameter than that of St. Paul's. The Old Mosque is a converted Jain temple of beautiful Mohammedan design, and the Gagan Mahal, or "Heavenly Palace," is noted for its three magnificent arches. Had not the death of the Sultan put a stop to its progress and prevented completion in conformity with the original design, the Tomb of Ah 'Adil Shah II, which lies outside the citadel, would have surpassed every other building in Bijapur,

both in magnificence and in size. Even unfinished it is a noble ruin, with seven large Gothic-like arches on each side, constructed on a terrace 15 ft. high and 215 ft. square. Other imposing memorials are the Ibrahim Rauza, a group of tomb-buildings, the Andū Masjid, the Sat Manzil, or "Palace of Seven Storeys," and the Palace of the Asar-i-Sharif, which contains some hairs of the Prophet's beard.

### KOLHAPUR.

The city of Kolhapur, capital of the State of that name, with a population of 55,504, is celebrated on account of the antiquity of its temples, and is now also distinguished for its fine modern buildings. The Maharajah's Palace, between the Residency and the city, was built at a cost of Rs 800,000, and other prominent buildings are the Albert Edward Hospital, the Town Hall, the High School, and All Saints' Church. There are numerous Government offices, and behind them is the Shrine of Amba Bai, the tutelary deity of Kolhapur. North of the city is a sacred spot—the Brahmapuri Hill—where the Brahmans undergo cremation, and near by, close to the Panchganga River, is the Rani's Garden, where the bodies of the ruling family are cremated.

### POONA.

The important junction of the Great India Peninsula and Madras and Southern Mahratta Railways, Poona is the capital of the Deccan and the headquarters of the Bombay Government during the rains, also of the Southern Command. It was formerly the capital of the Mahrattas, and at Kirkce, 3½ miles distant, the British gained a great victory over the last Peshwa in 1817. The city,

with a population of 215,000, has many interesting and handsome buildings, the chief of these being Government House at Ghanesh Khind, the Council Hall (containing interesting pictures and portraits), the Sassoon Hospitals, Government Offices, and St. Mary's Church. The fine Wellesley Bridge, 48½ ft. long and 28½ ft. broad, crosses the Mutha River to the Sangam promontory close to its confluence with the Mula. It takes the place of a wooden bridge erected to commemorate the victories of the Duke of Wellington in India, and cost Rs 111,000.

The streets of Poona are wide, while many of the older houses are substantial and picturesque buildings. It is divided into nineteen divisions, called *paths*, some of them named after the days of the week on which the markets were held. In the Shanwar, or "Saturday," division are the remains of the Peshwa's castle, called Junawada, or "old palace," once a massive building of which only the walls remain. Not far away is the street in which, under the Peshwas, offenders were executed by being trampled to death by elephants.

**WATER SUPPLY**—The supply for the Poona Cantonment is obtained from Lake Fyfe, a large irrigation lake impounding 4,000 million cubic feet of water. There are eighty-six villages in the catchment area, resulting in very serious pollution, which is increased during the passage of the water through an open canal 11 miles long to the Cantonment Water Works. In 1916 the Government of Bombay installed the Paterson system of water purification, and the new Water Works, which have a maximum daily capacity of 3,000,000 gallons, have been one of the most successful undertakings in the Bombay Presidency.

### SHOLAPUR.

The city of Sholapur has attained to great importance owing to the development of its cotton industry. It is also a notable educational centre. Population, 119,581.

### SURAT.

Of nearly 120,000 inhabitants, Surat is one of the most important cities of the Bombay Presidency, and has been known as a trading centre since the end of the 15th century. It is the headquarters of a collectorate, is situated on the river Tapti and is surrounded on the land side by a wall about 5½ miles in circuit, with twelve gates. Except the main thoroughfare, running from the station road to the castle, the streets in Surat are narrow and tortuous, and some of them still bear marks of the great fire in 1837, which raged for nearly two days, when 9,374 houses were destroyed and many lives lost. Surat also suffered severely from another great fire in 1889 and from floods.

The city is historically important as having been the site of one of the earliest English settlements, of the defeat of the Portuguese by the English in 1615, and of later Dutch and French settlements. The Castle, prominent in the early annals of the British in Western India, stands at the point where the fine Tapti Bridge abuts on the banks of the river. Adjoining it are the well-kept Victoria Gardens. The remains of the original English Factory are near the way to the Katargam Gate, close to the river on the north side of the city. The English and Dutch cemeteries are of interest, and the four large mosques and tombs of the Bohras deserve a visit.

**PORT**—The port of Surat continues to have a good share of the coasting trade, while larger vessels can anchor off the mouth of the river. The River Tapti is buoyed, but is dangerous during April and May. Cotton, cotton seed, cashmere shawls, oil cake and grain are the principal exports.

PORT OF KARACHI

2. Another View of the Harbour

## CITY AND PORT OF KARACHI

### CITY

**K**ARACHI, the chief city of Sind, is the headquarters of the Commissioner, the Judicial Commissioner and the General commanding the Sind-Rajputana Detachment. Until 1842 it was only a fort guarding the natural rock-bound haven which is now a busy harbour, but in that year it was ceded by the Talpur Amirs to the British. The present large and flourishing city is entirely a creation of British rule, its extensive commerce, splendid harbour works and numerous flourishing institutions having all sprung up since the establishment of settled administration.

The present-day importance of Karachi lies in its situation as the principal market and port of shipment for the surplus produce of North-western India and as a storage depot for the manufactures and foreign produce which the hinterland requires in exchange for the raw products sent down. Of recent years all branches of Karachi's growing export trade have shown gratifying increases, while the value of imports has also exhibited marked improvement. The vast irrigation projects recently carried out in Sind, the United Provinces and the Punjab are likely in the near future to triple or even quadruple the present trade of the city and port under notice while the recent decision of the Imperial Civil Aviation authorities to make Karachi the terminus and an port for the first airship service to India from the United Kingdom is bound still further to aid the city's development as a centre of world commerce and traffic.

**BUILDINGS, ETC.**—The architecture of Karachi is essentially modern and Anglo-Indian. Government House, the residence of the Commissioner in Sind, was built by Sir Charles Napier, the victor of Miani, to whose memory there is a fine stained-glass window in Trinity Church and also the

Obelisk by the Napier Mole. Frere Hall, built in 1865, commemorates Sir Bartle Frere, and contains in addition to the large entertainment chamber the Karachi General Library. North of the station are the Napier Barracks and Station Hospital, a fine block of buildings extending over the Maidan for a mile, with accommodation for 1,500 European troops.

From Government House, M'Leod Road leads to a fine block of buildings containing the quarters of the European and Persian Gulf Telegraph Staff, the General Post Office, the D. J. Sind College, the Victoria Museum, the Burns Garden and the Municipal Offices. On the left of the road is the Karachi City Railway Station, beyond are the Court House, the Chamber of Commerce and the offices and godowns of the European merchants, banks and steamship agencies. Northwest of these lies the native city, which contains many important public and commercial buildings. The New Karachi Municipal Offices on the Bunder Road, now in course of construction, will be a handsome addition to the city's architecture, and mention must be made of the Merewether Clock Tower at the junction of the Bunder and M'Leod Roads, the Port Trust Offices, the Observatory at Manora, and the Max Denso Hall, built to commemorate a former chairman of the Chamber of Commerce. Of private and commercial buildings the most noteworthy are those of the Imperial Bank of India, Cox's Bank, Mackinnon Mackenzie and Company, Ralli Brothers and Forbes, Forbes, Campbell and Company. The Sind Club occupies a conspicuous position in Victoria Road, and the fine buildings of the Mama Palace and the Madressah-tul-Islam are also prominent.

**CHAMBER OF COMMERCE.**—See under "Commerce."

**CHURCHES.**—The chief churches of Karachi are Trinity Church, the oldest and

largest Anglican edifice in Sind, St. Patrick's, a Roman Catholic church of fine proportions and some historical interest, the Scotch Church of St. Andrew, and the Methodist Episcopal Church.

**CLIMATE.** The climate of Karachi, owing to the prevalence of sea-breezes during eight months of the year, is more healthy than that of any other part of Sind. The low situation of the city and the near neighbourhood of marshland render the atmosphere moist and warm, but the heat during the hottest months cannot compare with that experienced in the interior. The mean annual temperature, collected from data for 25 years, may be stated at 65° in January, 85° in May and 75° in November. The annual rainfall averages about five inches.

**EDUCATIONAL FACILITIES.**—There is no lack of these in Karachi, schools and colleges of all grades providing instruction in every branch for Europeans and Indians. Probably the oldest educational institution in the city is the Church Mission High School, which was founded in 1846, and now has 600 boys on its roll. The Karachi Grammar School, which dates back to 1847, is a high class school for English and Anglo-Indian boys and girls, the Narayan Jaganath High School is a Government Institution of deservedly high repute, and the two Roman Catholic schools, St. Joseph's Convent and St. Patrick's High School have a record of educational progress for the last 60 years. The D. J. Sind College was opened in 1887, and provides full courses in arts and engineering. There are also several Anglo-vernacular, vernacular and guls' schools, all doing good work.

**GARDENS.** The Karachi Municipality maintains the Frere Hall Gardens, which are the popular resort of the city in the evenings and on holidays, Merewether Garden, which

1. KARACHI, looking over Retail Shopping Centre.
2. Convergence of Bunder Road, Marriott Street and Napier Road, the principal Indian Business Thoroughfares.
3. Eighth Avenue Street, the Shopping Centre, with Hear & Co.'s Premises in right foreground.

lies south of the Zoological Gardens and contains some very fine trees, and the Burns Garden, on the Kitchery Road which covers an area of 26 acres and is beautifully laid out with trees and flower beds. The Zoological Gardens (also controlled by the Municipality) contain not only an interesting collection of Indian and other animals, but also a remarkable fruit garden, the grapes from which are famous.

**HOSPITALS.**—The Karachi Civil Hospital, the Lady Dufferin Hospital and Louise Lawrence Institute are each well-staffed and equipped institutions doing a notable work among all sections of the populace. There are also an Eye Hospital, a Leper Asylum and a large Maternity Home.

**INDUSTRIES.**—Karachi is not yet a great industrial centre but with the provision of an increased water supply the way will doubtless be opened for further enterprise. At present the city possesses large railway workshops and three extensive and well-equipped flour mills, several cotton presses, dye works, printing presses and ice factories, whilst engineering works are likely to increase, and saw milling is also growing in volume. Salt is manufactured on a fairly large scale at the Mauripur Works a few miles to the north of Karachi.

**MAGAR PIR.**—The curious Magar Pir 11 miles north of Karachi, is well worth a visit, and there is a good motor road running within a mile of the tomb. From the roots of a clump of date trees gushes out a stream of hot water the temperature of which is 133 degrees. On the west side of the valley is a temple surrounded by a thick grove and close to a swamp caused by the superfluous waters of the spring. There is also a tank surrounded by a 5 ft. mud wall, containing some eighty or ninety crocodiles, which, as they attract a large number of visitors, the Mohammedans in charge of the Pir's Tomb regard as sacred for a brisk and remunerative business is done by these custodians in killing goats for visitors to see the crocodiles fed. The crocodiles are of the snub-nosed species, different from the long-snouted *gharial* of the Indus.

**POPULATION.**—The population of Karachi City and suburbs at the last census was 216,883, the density of population being 19,716 to the square mile.

**SPORT AND RECREATION.**—The presence of a large garrison and the fact that the Depot of the Royal Air Force is situated here make Karachi the centre of first-class cricket and football. Good sea-fishing is to be had in the harbour, which is famed for its fish and oysters. In the immediate neighbourhood of Karachi and Clifton the tanks and jeels swarm with small game-birds, while in the Baluch Mountains, 25 miles west of Manora, ibex, urial, panther and bear are occasionally to be found. In the Hub River, the boundary between India and Baluchistan (20 miles from Karachi), good mahsir fishing can be had.

**WATER SUPPLY.**—The difficulty of water-supply long formed one of the chief drawbacks to Karachi's proper development, most of the wells being too brackish for drinking purposes. Since 1882, however, by the construction of an underground aqueduct 18 miles in length from the Mahir river, the city has been in possession of a pure water supply. The capital outlay on this undertaking, including the pipes for distributing the water to the city, Kiamari and the Cantonment, amounted to Rs.17 lakhs. At the end of 1925 a municipal loan of Rs.500,000, running for 30 years, was sanctioned, the proceeds to be applied to extensions of the service to the newer parts of the city.

## PORT OF KARACHI

Karachi, situated in latitude  $24^{\circ}47'N$ , longitude  $68^{\circ}58'E$ , is the nearest port in India to Europe, being distant from Liverpool 10,580 miles by the Cape and 6,037 miles by the Suez Canal. The bay is formed by the projecting point of Manora Head, the extreme end of a reef 10 miles in length, which provides a natural barrier against the Arabian Sea. The opening of the indentation between Manora and the opposite sanatorium of Chifton has a width of about 3 miles, but the mouth is blocked by a group of rocky islets known as the Oyster Rocks, as well as by what was formerly the larger island of Kiaman now part of the mainland. The harbour stretches for five miles northward from Manora Head to the narrows of the Larian River, and about the same distance from the old town of Karachi on the eastern shore to the extreme western point.

The growth of Karachi port under British rule has been phenomenal. For a century and a half the city has been a gate of foreign commerce not only for Sind, but also for a great part of North-west India, Baluchistan and Afghanistan. The value of its trade at the time of the conquest of Sind in 1843 amounted to only 480,000 annually. In 1863 the value rose to 24,440,000, but this was due to a temporary cause, viz., the effect of the American Civil War on the Indian cotton market, and it was not until after direct rail communication had been established with the Punjab in 1878 that this level was again touched. The value of the total trade now exceeds 63,000,000. The completion of the Great Sutlej Valley and Sukkur Barrage Irrigation schemes and of the important extension and improvement works now in progress will certainly make Karachi one of the finest and busiest ports in the East.

**ACCOMMODATION.** The port area of Karachi consists of all the water contained in the space between the extreme end of Manora Point to the end of the Breakwater, and from it in a line due east to the shore at Ghuzri, thence by high water mark up the Chinni Creek round the head of all the creeks in the eastern, northern and western parts of the harbour by Baba point, and along the shore of Manora Spit to Manora Point. The breakwater running out from Manora Point a distance of 1,500 ft ensures safe entrance to the western channel during the south-west monsoon and the entrance is well marked by buoys.

The shipping facilities within the harbour at present afford a sufficient draught of water for any vessel that can pass through the Suez Canal, those drawing 27 ft are able to cross the bar at the lowest state of the tide. The *ss "Ivetina"* and "*Manoran"* hold the record for the deepest draught on leaving the harbour, having drawn 30 ft 6 in. Following are particulars of the principal works now in existence on the eastern side of the Ship Channel, commencing from the south end, where the eastern groyne constructed in 1863-65 springs from the mainland.

**BOAT BASIN.**—This, 11 acres in extent, is used to land and embark passengers from and on vessels in the stream. It has a railway service and hydraulic cranes erected in 1911.

**BULK OIL PIER.**—At this pier liquid fuel, oil and petroleum are discharged by pipes direct into the installations of the Standard Oil Company of New York, the Burma Oil Company, Limited, the Asiatic Petroleum Company, the Tank Storage Company, Limited, and the Anglo-Saxon

Petroleum Company, Limited, also by drums and into railway wagons. The pier was built in 1909.

**HEAVY LIFT PIER.**—This contains one 11-ton crane for use in connection with a 30-ton floating crane.

**KEMARI WHARF 1GL.**—This is a continuous line of wharfrage, 8,000 ft in length, completely served by the railway, with 87 hydraulic cranes of 35 cwt. one of 30 tons and one of 14 tons. The wharfrage line is divided as follows. The "*Merewether*" Wharf, with berths for four ships, the "*Erskine*" Wharf, for three ships, part of the old wharf of the same name built in 1888 and completed in 1908, the "*James*" Wharf, with three berths, built in 1895, the "*Gales*" Wharf, for three ships, erected in 1906-07 and the "*Younghusband*" Wharf built in 1907-10 to accommodate three ships. All these wharves are named after former Commissioners in Sind.

**NAPIER MOLE BOAT WHARF.**—With a length of 1,24 ft it is available for country craft trade.

**RETURN WHARF.**—This wharf is 325 ft in length is used by coasting steamers and is served by railway and hydraulic cranes provided in 1912.

There are thus seventeen ships' berths in line at which vessels can be discharged and load with the greatest ease and rapidity, and there are 20 moorings in the stream for ocean-going steamers, together with ample anchorage for native craft. At the north end of the Ship Channel is the Native Jetty, with warehouses for the cargo of vessels discharging and loading in the stream. This was built before the Port Trust was constituted, but it has been greatly improved, especially by the construction of additional warehouses during the past 23 years.

**ADMINISTRATION.** The affairs of the port are administered by the Karachi Port Trust which was formed in 1886 to take over the functions formerly exercised by the Harbour Board. (See article following.)

**BUNKERING.** Two 10-in. oil fuel pipe lines have been laid from berths 2, 3 and 4, Merewether Wharf, and 5 and 6, Erskine Wharf, to a place adjoining the oil companies' installations and can be connected with these and the North Western Railway installation pipe lines. They permit of simultaneous bunkering of two vessels, or the bunkering of one and the discharge of a tanker. This is a great convenience to vessels burning oil fuel, as they are able to bunker without removal from their loading and discharging berths, while it also provides an additional berth for tankers with oil fuel.

**DOCKS.**—There is a dry dock at Manora 273 ft long over all, 50 ft wide at the entrance at the high spring level, and 12 ft on the sill at high springs. There is also a small ship for steam launches at Manora. Ordinary repairs to hull and machinery can be undertaken.

**IMPROVEMENT SCHEMES.** In 1921 the Karachi Port Improvement Scheme was worked out, following the report of a distinguished English engineer, and was adopted at an estimated cost of nearly three crores of rupees (approximately 22,250,000), it is now being carried out. This scheme comprises the construction of a quay wall for six berths and equipment thereof on the west side of the main Ship Channel; the construction of two ship berths at the Native Jetty and the widening of the Native Jetty frontage; improved accommodation for country craft, the provision of a fishermen's harbour, more oil piers and a second boat

basin, a graving dock, the development of the Lower Harbour, and the reconstruction of the East Wharf. Provided that no unforeseen delays were experienced, it was estimated that three berths on the west side would be ready for occupation by the middle of 1927, nine additional berths to be built as required.

The quay wall is of the latest type of construction, being built on the monolith system, and each of the three berths is being equipped with a liberal number of up-to-date electrically driven lifting cranes of 2 to 5 tons' lifting capacity and a two-storied transit warehouse for the reception of over 12,000 tons of cargo. The cranes will span three lines of rails and deliver goods into either wagon or transit warehouses. Rail facilities for the expeditions removal and supply of goods are being laid along the quays and behind the warehouses, the whole being connected up as at the existing East wharves, with the North-Western Railway system. The original intention was to use these berths for imports only, but it has been decided to make them suitable for both import and export cargoes. The width of the channel between the East and West wharves will be 1,400 ft.

**PILOTAGE.**—Masters of ships should not on any account attempt to enter the harbour without a pilot. The pilot boat is a steam lifeboat. Charges in and out of port on sailing vessels and steamers vary according to the season and are as follow. The monsoon season commences May 15 and ends September 30.

	FAIR SEASONS	MONSOONS
	RS.	RS.
From 100 to 300 tons	35	52 8
" 300 " 500 "	30	50 8
" 500 " 1,000 "	43	60 8

With Rs 4 extra for every additional 100 tons. Sailing vessels when towed in or out pay half pilotage. Extra charge for pilotage on Sundays or holidays or between sunset and sunrise, is Rs 15.

**PORT CHARGES.** The port dues are 4 annas per registered ton, payable every three months. Vessels entering in ballast without passengers pay 3 annas per reg. ton, vessels neither loading nor discharging (excepting such transshipment as may be necessary to effect repairs) pay 2 annas.

**CRANE 1GL.**—Machinery up to 1 ton, 2 annas. Bales, cases and casks of merchandise, 1 anna each. Hire of cranes. Small cranes, Rs 3 per day, 1 hydraulic crane, per half-day, Rs 6. 30-ton crane minimum charge, Rs 30 (All cranes plus 33 per cent).

**CUSTOMS FELS.**—Rs 10 per night.

**DOCK DUES.** Rs 4 per 100 tons net reg., minimum, Rs 10, maximum, Rs 25 per day.

**LIGHT DUES.**—7 pies per ton.

**WATER.**—Charges for supplying shipping in the stream 1,000 gallons, Rs 7 a 8, at the pier or wharf, Rs 4 a 8.

**RAILWAY COMMUNICATIONS.**—Besides being the port of call for various steamship lines, chief among which is the British India Steam Navigation Company, Karachi is connected with two important railway systems and a number of trade routes from Afghanistan, Kalat and Central Asia. The North-Western Railway links the port with the Punjab, the United Provinces and British Baluchistan, while at Hyderabad (Sind) the narrow-gauge Jodhpur-Bikaner Railway connects with the North-Western line. The interior of Sind is tapped by a few small feeder railways of narrow gauge, constructed and managed by a private firm in Karachi.

#### KARACHI PORT TRUST

1. Suction Plant "Burns," built in 1925 at a cost of Rs 8,000, employed in discharging harbour silt from barges for reclamation purposes.
2. Portion of stacking area; wheat bags ready for export.
3. Manora Breakwater, constructed by Mr. W. H. Price in 1870-73.

**TRADE AND SHIPPING.**—The rupee value of the total sea-borne trade of the port of Karachi for the year 1925-26 amounted to Rs 84,03,58,462, a decrease of 2½ crores, or 23 per cent., on the corresponding figures for 1924-25, which in turn were nearly 2 crores in advance of those for 1923-24. The foreign trade accounted for 78 per cent of the total, or Rs 6½ crores, a reduction of 26 per cent on 1924-25. Exports contributed 56 per cent, and imports 44 per cent of the total value of the foreign trade, the former falling by Rs 1,788 lakhs to Rs 3,710 lakhs, and the latter by Rs 469 lakhs to Rs 2,873 lakhs. The following is a summary of the foreign and coasting trade of the port for the financial years named

FOREIGN TRADE	1924-25 Rs	1925-26 Rs
Imports	33,42,12,849	28,73,35,230
Exports	54,08,15,593	37,09,62,906
COASTING TRADE		
Imports	12,12,50,749	11,65,76,416
Exports	9,23,50,503	6,54,83,814

Rs 109,76,44,694 Rs 84,03,58,462

**EXPORT TRADE**—As is natural in a port which depends for the prosperity of its trade on the extent of the supplies of food stuffs and raw materials and produce shipped to foreign countries, the set back in 1925-26 was due in the first place to curtailed exports of wheat, barley and rape seed owing to a reduction in the world prices of the first two commodities, accompanied by a fall in the quantities available for export. The drop was most marked in the case of wheat, shipments having declined by no less than Rs 1,342 lakhs, though serious decreases were also recorded in the shipments of rape seed and barley. The unfavourable position created by the decline in the value and volume of these exports was relieved only by a notable expansion in the shipments of raw cotton, which, amounting to Rs 22.10 lakhs, as against Rs 18.60 lakhs in 1924-25, made a fresh record in the history of the port. Notable increases in exports in 1925-26 were: Skins (raw), Rs 73 lakhs, compared with Rs 55 lakhs, cotton seed, Rs 82 lakhs (Rs 39 lakhs), and rice not in the husk, Rs 91 lakhs (Rs 61 lakhs).

**IMPORT TRADE**—The position in 1925-26 in regard to the import trade was less depressing, though there was a fall in the total value of Rs 468 lakhs, due partly to a reduction in the general price level of several commodities, but mainly the result of the contraction in the values of cotton manufactures and sugar, which are the two leading commodities in the import trade of Karachi. Business in cotton goods was restricted through the heavy losses suffered by dealers owing to the drop in prices and to the disastrous speculations by many of them in sugar. Increases were recorded in metals and ores, oils, wool, motor-cars and cycles, tobacco, and fruits and vegetables; decreases in chemicals, coal and coke, cotton twist and yarn, tea, and dyeing and tanning substances.

**SHIPPING FIGURES.**—The number of vessels entering the port during 1925, exclusive of craft put back and fishing boats, was 3,565, with a tonnage of 2,869,362, against 3,647, with a tonnage of 2,486,175, in 1924. In the same year 1,036 steamers of all nationalities entered the port with a tonnage of 2,726,923, against 945 and 2,337,536 respectively in the previous year. Of these, 839 were of British nationality,

## KARACHI PORT TRUST

**Formation.**—From the year of the British Occupation, 1843, to the formation of a Harbour Board in 1880 the port of Karachi was managed by a Master Attendant and other officials who acted under the orders of the Commissioner in Sind. The necessity for the formation of a Port Trust was continually pressed upon the attention of Government, and was finally met by the passing of the Karachi Port Trust Act No. VI of 1886, a measure amended in 1902 and in subsequent years.

**Development.** Karachi, in the province of Sind, is situated on the northern border of the Arabian Sea, at the extreme northern end of the delta of the river Indus. It has the advantage of being the nearest of all the British ports in India to Europe, and is also 200 miles and 470 miles nearer to Aden and Basra respectively than is Bombay.

Karachi was quite an unimportant town of about 10,000 inhabitants when the fort at Manora, the headland on the western side of the harbour entrance, surrendered in 1839 to a British squadron commanded by Rear-Admiral Sir Frederick Maitland, of H.M.S. "Wellesley," but the census of 1921 showed a population of over 210,000. The port is the natural outlet for the produce of Sind, Baluchistan, the Phulkian and other States of the best wheat-growing areas of the Punjab and the United Provinces of Agra and Oudh.

**Harbour.**—One of the first steps taken by Sir Charles Napier, the conqueror of Sind and Governor of the Province from 1843 to 1847, was the construction of a mole over 1½ miles long across the tidal marshes and the Chinna Creek between Karachi and Keamari. The last-named, now a township of some 9,000 persons, near the main entrance to the port, was at that time only a small fishing village. The causeway over the Chinna Creek was subsequently removed, having been replaced in 1864 by a steel bridge, 1,200 ft. in length and 40 ft. in width, the latter being increased to 70 ft. by the Port Trust in 1914.

The first British ship to make the voyage from England to Karachi was the "Duke of Argyll," of 800 tons burden, and she passed safely over the bar into the harbour in 1853 when there was a depth of only 21 ft. of water at high tide.

**Merewether Pier.**—During all the years before the formation of the Port Trust the question of providing safe anchorage received the most careful consideration of engineers and others among whom Mr. James Walker, C.E., was prominent in rendering expert assistance. He designed the breakwater which forms a continuation seaward of Manora headland and protects the harbour entrance from the fury of the south-west monsoon, the work being admirably carried out in 1870-3 by Mr. W. H. Price, M.I.C.E., the port engineer.

At this time (ca. 1873) the port was merely an anchorage, there were no docks, no ship piers and no wharves, and all export and import goods by sea-going vessels had to be shipped by means of country boats. The foundation stone of the "Merewether" ship pier, the first to be built, was laid by His Excellency the Viceroy of India, the Marquis of Ripon, in 1880, and this structure served a useful purpose until 1908, when the scheme of general improvements necessitated its removal. In 1906 H.M.S. "Renown" lay at this pier and received on board Their Royal Highnesses the Prince and Princess of Wales (now Their Majesties the King and Queen) at the termination of their first Indian tour.

**Accommodation (1887).**—The Port Trust Board, constituted by the Act of 1886, held its first meeting on April 4, 1887, under

KARACHI PORT TRUST.

1. General Plan of the Harbour.
2. View of Wharves and Railway System in Keamari Yards, looking North.
3. Another view of same installation.

Unloading two drums of Electric Cable at Karachi, each weighing 19 tons 3 cwt., diameter 9 ft. 8 in., width 6 ft. 2 in., the largest and heaviest drums of cable ever imported into India. Sent out by W. T. Henley's Telegraph Works Co. Ltd. for laying across the River Indus. Each contains 4,500 ft., 04 sq. in. 3-core extra high tensile 6,600 volt double wire armoured Underwater Cable.

The chairmanship of Col. R. I. Crawford C.I.E., the Collector of Karachi, when it found itself in possession of a port with facilities for accommodating steamers up to 3,000 tons burden as follows: (a) anchorage for three ocean-going steamers; (b) fixed and swinging moorings for eight similar vessels; (c) the Merewether Pier, accommodating one ocean-going steamer; and (d) the Napier Mole Boat Wharf, 680 ft. in length, for smaller craft used in country trading, while the construction of a wharfage line, 2,000 ft. in length, sufficient for five large steamers had just been commenced. The statistics given in the preceding article on the port of Karachi show how rapid has been the progress of late years, how the port has developed into one of first-class importance and become a most valuable Imperial asset.

**Reclamation.** Since the year 1900 the Board has reclaimed some 115 acres of land between Keamari and the Chinna Creek bridge, thus greatly improving the Trust's Keamari railway and produce yards, and this work has completely consolidated the area between the Chinna Creek bridge and Keamari to the north of the Napier Mole Road. In 1900 the Board purchased from the Karachi Municipality an area of 177 acres of tidal swamp, and this has been converted into a produce yard, named after the late Mr. A. Thole, an able and valued port trustee for 35 years. Since that year a further area of 61 acres has been reclaimed and is now the "Mansfield" Import Yard (named after a former Commissioner in Sind), in which there are extensive ranges of warehouses for import cargoes on the Karachi side of the Chinna Creek.

**Revenue and Expenditure.** The following figures relating to the financial years (April 1 to March 31) named show interesting variations in the annual revenue and expenditure—

YEAR	REVENUE Rs.	EXPENDITURE Rs.
1887-88	4,63,690	5,11,157
1897-98	9,03,422	8,97,841
1907-08	32,04,986	26,45,278
1917-18	66,75,962	50,78,748

(Continued next column)

YEAR	REVENUE Rs.	EXPENDITURE Rs.
1918-19	55,50,450	55,70,640
1919-20	13,22,545	52,20,033
1920-21	58,31,044	50,23,911
1921-22	63,18,378	61,27,745
1922-23	62,04,885	62,72,202
1923-24	68,08,040	61,53,085
1924-25	87,16,767	71,40,143
1925-26	94,51,210	63,99,050

It will thus be seen that in 35 years the revenue of the Port Trust has increased to over seventeen times as much as when the Trust was constituted. The revenue for 1924-25 was the highest obtained. The decrease in the revenue after 1917-18 was chiefly due to restriction on the export of wheat, but since this was removed it has steadily increased.

**Value of Trade.**—The values of the trade of the port for the years stated were:

YEAR	IMPORT Rs.	EXPORT Rs.	TOTAL Rs.
1887-88	6,18,61,331	1,08,16,877	10,26,78,208
1897-98	8,71,07,380	7,27,20,313	15,98,27,693
1907-08	21,60,01,881	11,14,26,339	32,74,28,220
1917-18	23,03,65,700	39,80,80,361	59,87,52,061
1918-19	21,13,31,710	28,92,73,501	49,73,05,211
1919-20	31,54,73,854	28,50,32,138	60,10,45,992
1920-21	50,36,96,493	29,99,02,761	80,15,99,254
1921-22	43,33,07,480	21,86,84,098	65,22,91,578
1922-23	37,02,34,431	33,85,00,332	70,87,34,763
1923-24	38,38,70,789	51,23,61,210	89,62,31,999
1924-25	49,36,43,573	13,52,80,123	83,89,32,696

**Financial Position.** In the earlier years of the port, debt was incurred by loans from Government. These were inherited by the Port Trust Board, and have since been paid. The financial position of the Trust is a very strong one, as it possesses exceedingly valuable assets in land, buildings and material, and has further established a Reserve Fund, amounting on March 31, 1926, to Rs. 45,16,000, while debts incurred by loans from the public aggregate only Rs. 4,35,24,000, the repayment of which at prescribed periods is secured by sinking funds, which now amount to Rs. 1,26,95,846. These sinking funds are maintained under Government audit.

**Extensions.**—In view of the certainty of future increase in both export and import trade on account of the Sutlej River project and the Lloyd Barrage Scheme, the Trustees

contemplate considerable extensions and improvements to the harbour. The estimated cost of the first series of which is about 3 crores of rupees equivalent to nearly £1,000,000 sterling.

**Transport.** Oversea transport is conducted through the agency of the British India Steam Navigation Co., the Ellerman City Hall, Wilson, Austrian Lloyd's and other well-known shipping companies, some of which run passenger vessels with a direct service between Karachi and England.

**Future Development.** Karachi is the principal port in India for the export of wheat, its supplies being drawn from the Punjab and the United Provinces. With the completion of the Lloyd Barrage it is estimated that nearly 6,000,000 acres of hitherto unproductive land will be brought under cultivation in British and Khairpur territories, and that the yield from this cultivation, together with additional supplies from the Punjab, will considerably increase the export trade in grain, seeds and cotton. This produce will find an outlet to the world's markets through Karachi, so that the port's future is assured, and, if railway developments keep pace with the increased traffic demands, the rate of progress should be equal to, if not greater than that experienced in the past. From time to time the necessity of providing a direct trunk line of railway communication between Cawnpore and Karachi has been represented to Government, but so far no steps have been taken to make provision for this important communication.

**Buildings.** The Port Trust Offices are a magnificent group of buildings at the corner of Bunder Road and Edulji Dinshaw Road, opposite the Karachi end of the Hardinge overbridge. The buildings are semi-circular, the exterior being treated in broad Renaissance manner; the ground floor is strengthened with channelled masonry and the two upper floors are grouped in one, with panelled piers carrying the architrave, frieze and cornice. Designed by Mr. G. Wittet, F.R.I.B.A., F.U.E., late Consulting Architect to the Government of Bombay, the buildings were constructed by the Engineering Depart-

ment of the Port Trust and completed in December 1915 at a total cost of Rs 9,74,990. The new offices were opened on January 5, 1916, by His Excellency Lord Willingdon, G.C.I.E., Governor of Bombay, and a month later the entire block was taken over by Government and utilised as a Military Hospital (No. 1 Indian General Hospital), with 500 beds and a large medical and nursing staff. The military vacated the buildings on May 6, 1919, and the various departments of the Port Trust re-entered their offices.

**The Mansfield Import Yard.**—This has already been mentioned. It is served by lines of rails from the neighbourhood of Bunder Head Station and is capable of practically limitless expansion to the W. and N.W.

**The McHinch Seamen's Rest.** This is a substantial oblong, two-storeyed structure at Kenari, on the east side of the Napier Mole Road, erected by the Port Trust about 1910 and managed by a committee, the president of which must be the Chairman of the Trust.

**Manora Lighthouse.** In 1880 the Trust decided to build the present lighthouse, at a safe distance from the Fort, from which a fixed light was exhibited. In 1900 the fixed light was replaced by the present modern 1st order Dioptric light and apparatus, with a candle power of 1,100,000 showing a flash of three-tenths of a second with an eclipse of 7/8 seconds. The light is 15 ft. above mean sea level with a range of 70 to 80 miles, and the tower is 91 ft. high, painted with red and white horizontal bands and black at the base.

**The Observatory, Manora.** Built and maintained by the Karachi Port Trust, this specially constructed building has a slit which can be opened for star observation from the north to south horizons. It is equipped with a transit and sidereal clock on isolated foundations and with two solar clocks, one of which is electrically connected with and drops the Time Ball on Blat Island at 2 p.m. Indian standard time. The meteorological instruments are in charge of the Port Trust, and weather observations are sent daily to the Director-General of Observations at Simla.

**Administration.**—The affairs of the Port Trust are managed by a board consisting of five trustees appointed by Government, four Trustees elected by the Karachi Chamber of Commerce, two by the Indian Merchants' Association, two by the Buyers' and Shippers' Chambers, one by Karachi Municipality.

### PROMINENT ENTERPRISES

#### ANDERSON & CO.

**Inception.**—Established more than 40 years ago, this is the oldest firm of steamship brokers in Karachi.

**Activities.**—As brokers, Messrs. Anderson & Co. handle freight, wheat, cotton, indies and skins, seeds and all primary products of the Punjab and North Western India. As steamship agents they represent the Lloyd Triestino and Marittima Italiana Navigation Companies (Italian Mail and Far Eastern service), and are brokers for the Hansa Line. The company also transacts a large business in exchange and represents a number of first-class insurance companies.

**Insurance.**—The following agencies are held by the company: New Zealand Insurance Co. (fire and marine), Australian Alliance Assurance Co. (marine), London and Lancashire Insurance Co. Ltd., and Motor Car Insurance.

**Lloyd Triestino and Marittima Italiana.**—These companies maintain a joint fortnightly service between Italy and Bombay, the steamers of the Lloyd Triestino sailing outwards from Trieste, Venice and Brindisi and

ANDERSON & CO., Karachi.

2. The Lounge.

those of the Marittima Italiana from Genoa and Naples. On these services are employed modern oil-burning steamers fitted with electric fans, and ventilated throughout on the thermo-tank system. The port holes of each cabin open to the sea, and every steamer carries a laundry, a gymnasium equipped with all modern appliances and a swimming bath. Cinema performances afford the passengers a change in entertainments during the voyage, while the cuisine is excellent. The officers, crews, stewards and stewardesses are of Italian nationality. The fleet comprises the T.S.S. "Cracovia" and T.S.S. "Pilsna," both of 9,000 tons and 4,200 h.p., belonging to the Lloyd Triestino, and the T.S.S. "Genova" and T.S.S. "Aquilgia," both of 8,300 tons and 4,600 h.p., belonging to the Marittima Italiana Line.

The Lloyd Triestino Company also maintains a monthly service of motor vessels from Trieste and Venice to China and other Far East Ports, calling en route outward at Karachi and Colombo. These new vessels combine all modern improvements, and have excellent saloon (one class) accommodation for passengers. Messrs Anderson & Co's Karachi office will give all information as to

accommodation from that port to Colombo and the Far East.

The services of the Lloyd Triestino and Marittima Italiana companies have a high reputation for comfort and punctuality.

**Offices.**—Volkart's Buildings, McLeod Road, Karachi (cables "Nosredna," Karachi).

#### CARLTON HOTEL.

**Situation.**—Within two minutes' walk of the Cantonment Railway Station, the terminus for the residential part of Karachi, this hotel is most conveniently situated, being away from the noise and dust of the city proper, yet forming an admirable centre for residence.

**Accommodation.**—There are 47 rooms, single, double and in suites, each bedroom having its own bathroom and verandah and being fitted with overhead electric fans. The dining room is one of the largest and airiest in India, cooling breezes being continually wafted through the open arches from the verandah, while the comfortably furnished lounge, which adjoins the dining room, serves as a pleasant rendezvous for guests and visitors. The bedrooms are exceptionally large, even for the East, and are furnished to secure the maximum of comfort.

**Facilities.**—Visitors to this hotel will find at their command all the facilities usually obtaining at a first-class European establishment of the kind. The hotel porters meet all trams and steamers to supervise the transport of guests' luggage.

**Dances.**—A guest night is held every two weeks, at which there are usually 100 or 120 patrons, who dance to the accompaniment of high-class music rendered by an English band. These dances have proved very popular, and rank among the social functions of Karachi.

**Residents.**—There are always a large number of resident guests at the hotel, and visitors to Karachi for any length of time will be well advised to make this hospitable place their home during their sojourn in the city.

**Management.**—The hotel is under the personal supervision of the proprietress, Mrs. Croal, whose courtesy and attention to the comfort of guests have made it the best known and most popular of such establishments in Karachi.

**Address.** Bonus Road, opposite Cantonment Station (cables "Carlton" Karachi).

#### INDIA FLOUR MILLS, LTD.

**Inception.** The buildings of this well-known firm were completed in 1910, being erected on land more than six acres in extent.

**Development.** The following quotation from the pen of an expert writing in a leading English milling journal is a note worthy tribute to this organisation: "I have been all through the India mills, and am very pleased indeed with the way the miller is working this mill (The India Flour Mills). He has all the rollers working and the feeds are very evenly distributed throughout the buildings. The grinding is even, true, and lively without any flaking, even on the last reduction. The finished flour is bright and pure and I can well understand that the demand is greater than they can supply if the price is the same as other millers, for certainly the 'household' grade is to my mind well above the standard I have seen in other mills."

**Capital.** The authorised capital is Rs. 6,00,000 in 6,000 shares of Rs. 100 each; the subscribed capital stands at the same figure, the amount paid up being Rs. 5,10,000.

**Activities.**—Only the finest samples of flour-making wheat are used, and the mill is kept working day and night (except Sundays) to meet the demand. The average output for 24 hours is 1,000 bags of flour, each 190 lbs., 300 bags of attas, each 164 lbs., and 600 bags of sharps and bran, each 112 lbs. The term flour includes semolina or sooji, the high-class "patent," "superfine" and the baker's grade known as "households."

**Premises and Plant.**—The mills embody the latest improvements in constructional work. The whole of the machinery, erected on Turner's system, is driven by suction gas producing power, developing 600 indicated h.p., transmitted by 18 ropes from a flywheel, while an electrical lighting plant supplies the illumination. The firm has several large godowns and sheds for the storage of wheat, flour and other products.

**Directors.**—Messrs E. Raymond, B.A., LL.B. (chairman), Dr. George Pires, Barr-at-Law, L.R.C.P., M.R.C.S., I. Sequeira, P. V. Castellino, I. J. Carneiro and A. N. Menezes.

**Offices and Mills.**—Lawrence Road, Clifton Town, Karachi (cables: "India-flour," Karachi).

#### SIND FLOUR MILLS CO., LTD.

**Inception.**—Incorporated in 1896, this is the oldest commercial flour milling organisation in Karachi. The promoter was Mr. George Miller, who remains a director of the company.

**Development.**—Commencing with one mill, the business progressed so satisfactorily that

INDIA FLOUR MILLS LIMITED, Karachi Western View of the Mill.

in 1906 it was decided to double the capacity. Accordingly, a second mill was built and commenced working in 1907. It has again been found that the capacity is insufficient to meet all requirements, and a scheme is now under consideration whereby the output will be considerably increased and the mills brought thoroughly up-to-date.

**Capital.**—The capital of the company is Rs. 3,00,000, divided into 600 shares of Rs 500 each, of which 587 shares have been issued and fully paid.

**Output.**—The combined output of the two mills is now equal to 20 sacks per hour, requiring about 900 bags of wheat per day. The firm's products are "Sooji," "Rawa Superfine Flour," "Household Flour," "Atta No. 2" and "Atta No. 4," and bran and pollard, all of which are packed in sacks bearing the company's "Palm Tree" brand. The company has no agents but deals direct with buyers or through correspondents.

**Distribution.**—A proportion of the products is consumed in Karachi and district, and a

SIND FLOUR MILLS CO., LIMITED, Karachi.

4. Overhead-drive Mortar Mill.

considerable business is done with near-by coast ports, also with Tuticorin, Colombo and Madras. In the north the company's products are well known at all Persian Gulf ports, and a good quantity goes to Basrah and Bagdad; other markets are Mauritius, Jeddah, Port Sudan and Egypt.

**Equipment.**—The machinery for both mills was supplied by the well-known milling engineers, Henry Simons Ltd, Manchester.

**Directors.**—Messrs W. D. Young (chairman), George Miller, F. K. Soparivala and K. K. Soparivala.

**Mill Agent and Managers.**—The agent for the company is Mr Soparivala, the manager is Mr R. F. Keeling, and the mill manager Mr W. Miller.

**Offices.**—Dhobie Ghat Road, Karachi (cables "Mill," Karachi). Codes: A B C, 5th Edition and Bentley's Complete Phrase.

**Bankers.**—National Bank of India, Ltd.

#### **B. R. HERMAN & MOHATTA, LTD.**

**Inception.**—The possibilities for engineering concerns arising from the development of North Western India were quickly seized upon by Mr B. R. Herman who founded the firm under notice in 1883. Originally a private concern trading under the name of B. R. Herman & Co., it was converted into the present limited liability company in 1919.

**Capital.** The authorised, subscribed, and paid up capital is Rs 10 lakhs.

**Activities.** Having made steady progress, the firm ranks to-day among the leading engineering concerns in India, devoting its energies mainly to constructional steel work—railway rolling stock of all gauges, bridges, cranes, barges, pontoons, bulk oil tanks, sheds, mooring buoys, well curbs, agricultural and other machinery, shipbuilding up to about 300 tons, and general contracts. Among the latter may be mentioned the British Residences at Bagdad and Bundar Abbas, and the Hannah Lake Dam near Quetta.

The company has a reputation for producing steam and motor-driven tugs and launches equal in every way to the products of the best known British yards, and several boats are still in service in Karachi Harbour which were built over 30 years ago.

**Agencies.**—The firm maintains an Engineering Sales Department which acts as technical and selling agents in North West India for a number of well-known British manufacturers of machinery, engineering plant and stores, amongst whom are the following: Marshall Sons & Co. (India) Ltd.; Blackstone & Co., Ltd.; Gwynnes

Engineering Co., Ltd.; Hayward Tyler & Co., Ltd.; A. Ransome & Co.; Small & Parkes, Ltd.; Manchester; Arthur Balfour & Co., Ltd.; Sheffield; Warrington Wire Rope Works, Ltd.; Liverpool; Consolidated Pneumatic Tool Co., Ltd.; Mitchell Conveyor & Transporter Co., Ltd.; Wales Dove Bitumastic, Ltd.; John M. Henderson & Co., Ltd.; Aberdeen; Bergius Co., Ltd.; Glasgow; Blacklock & MacArthur Ltd.; Glasgow.

**Works.**—The Vulcan Iron Works at McLeod Road, covering an area of about 36,000 square yards, are equipped with modern machinery and a foundry capable of handling castings up to 5 tons.

**Directors.**—The directors of the firm, which is a member of the Indian Engineering Association, are Messrs B. R. Herman (chairman), L. B. Herman (managing director), Ramgopal G. Mohatta, Shivrattan G. Mohatta (finance director), B. E. Herman, and Chandratan G. Moondhra.

**Offices.**—McLeod Road, Karachi (cables: "Expansion," Karachi). Codes: A B C, 4th and 5th Editions, Bentley's Phrase and Engineering 2nd Edition.

**Bankers.**—The Chartered Bank of India, Australia and China.

## INTERIOR PROVINCES

### BIHAR AND ORISSA

THIS administrative province of the Indian Empire includes the three sub-provinces of Bihar, Orissa and Chota Nagpur, lying to the south-west of Bengal. The area of the British territories which constitute the Governorship of Bihar and Orissa is 83,181 square miles inclusive of the area of large rivers. In addition to the districts which are directly under British rule, there are two groups of petty States which lie to the south and south west of the Province, and which under the name of the Feudatory States of Orissa and Chota Nagpur, are governed each by its own Chief under the superintendence and with the advice of the Political Agent and Commissioner, Orissa Feudatory States. The area of these territories is 20,650 square miles and as it is usual to include them when speaking of Bihar and Orissa, the extent of the whole Province may be stated at 103,837 square miles. The population at the last census numbered 37,961,858 and is almost entirely rural, no fewer than 903 per 1,000 living in villages. The principal industry is agriculture, Bihar (more especially North Bihar) being known as the "Garden of India." Rice is the staple product, but the spring crops, wheat, barley and the like, are of considerable importance. Oilseeds are also a prominent crop and the cultivation of sugar cane has largely succeeded that of indigo. Opium production has declined in consequence of the agreement with the Chinese Government. The principal industrial centres are Jamshedpur, where the Tata Iron and Steel Works are among the largest of their kind in the world, and Monghyr, noted for its cigarette factories. The iron and coal fields of the Province have shown enormous development during the present century.

#### CUTTACK

A pleasantly situated town on the Mahanadi River, Cuttack is the headquarters for ad-

ministrative purposes of the sub-province of Orissa. It has an area of about four square miles and a population of some 51,000. Cuttack was founded in the 10th century A.D. by one of the kings of the Kusan, or Laou, dynasty. Its position as the key to the Orissa hill territory and the centre of the Orissa canals gives it both military and commercial importance. It is famed for its filigree work in gold and silver. There are two clubs, one European and one Indian, a Circuit House, the Ravenshaw College (which is affiliated to Patna University), a Medical School and the Orissa School of Engineering.

#### DINAPORE

Situated in the district of Patna on the East Indian Railway, Dinaapore, a town of 50,000 inhabitants, has a number of thriving industries and a widespread reputation for its excellent cabinet-work, furniture, oil and printing presses, foundries and other establishments. The name Dinaapore is derived from the word *dana* and means "City of Gran" the town being an important centre of the trade in cereals.

#### JAMSHEDPUR

The great industrial centre of Jamshedpur, where is situated the parent company of the Tata Iron and Steel Works, is now the pivot of a ring of industries, covering tin-plates, agricultural implements, jute machinery, enamel ware, locomotive parts, etc. The population already exceeds 80,000 and is growing rapidly. The town is maintained at a high level of efficiency, having its own sewage disposal and water purification plants, the latter having been installed by the Paterson Engineering Company. The Paterson filters deal with a daily duty of 2,500,000 gallons and are capable of extension up to 12,000,000 gallons a day.

#### MONGHYR

A municipal town in the Bhagalpur division of the Province of Bihar and Orissa, Monghyr

has a population of 48,000. The chief attraction of the place is a fort, with walls of great extent which surround a high mound, the site of a citadel in earlier days. Monghyr is noted for the manufacture of arms and ebony work and possesses a large cigarette factory.

#### PATNA

Patna (locally known as Azimabad), formerly celebrated as one of the agencies by which the Government monopoly of Bengal and Bihar opium used to be worked, is the largest city in Bihar, is situated on the south bank of the Ganges, and has a population of 120,000. Occupying the site of an ancient city which is known to have existed five centuries before Christ and at one time to have been the metropolis of India, modern Patna is a long straggling place of business premises and brick residences in the European quarter, and of mud and tile-roofed huts in the bazar and native quarters. Bankipore, which is the western suburb of Patna, is an entirely modern and up-to-date Indian town, well laid out with Government and other public buildings. Patna College is one of the best in India, and near it are the Temple Medical School and Patna Hospital. The Patna Oriental Library, founded by Maulvi Klunda Baksh Khan Bahadur, contains a number of beautiful Persian and Arabic manuscripts, also some rare examples of Oriental calligraphy.

### THE UNITED PROVINCES

The United Provinces of Agra and Oudh lie in practically the centre of Upper India, and occupy an area of 106,295 square miles, with a population of 46½ millions. Since 1921 they have formed a province under a Governor, who is assisted in the administration by an Executive Council of two members and a Legislative Council of 123 members, of whom 100 are elected.

1. AGRA Garden and Great Gateway at Sikandra, Mausoleum of Akbar

2 AGRA Mausoleum of Prince I'timad-ud-Daulah and the Garden

The principal industry is agriculture, which supports no less than 75 per cent of the population, and the greater part of the provinces is highly cultivated, yielding excellent crops of rice, millet, maize, linseed, cotton, wheat, sugar cane, pulses, barley and poppy. Cotton

is ginned and spun throughout the provinces as a home industry, and weaving by means of hand-looms is carried on in most districts. Silk-spinning is confined almost entirely to the district of Benares, the embroideries of Lucknow are famous, and there are large

cotton factories at Aligarh, Meerut, Bareilly and Mirzapur. The main line of the East Indian Railway intersects the province, which in 1925 had over 7,500 miles of metalled and 28,000 miles of unmetalled roads.

#### AGRA

See under "Tourist Resorts."

#### ALLAHABAD

Capital of the United Provinces of Agra and Oudh and the seat of a University, Allahabad is situated 316 ft above sea-level on the left bank of the Jumna, on a wedge of land between it and the Ganges. The present fort and city were built by Akbar in 1583, but the Aryans possessed a very ancient city here called Prayag, which the Hindus now call Prag (place of sacrifice). It is a very sacred town with them, for they believe that Brahma performed a sacrifice of the horse here in memory of his recovering the four Vedas. After having changed masters many times, Allahabad was ceded to the British in 1801. In 1857 the city and cantonment played a prominent part in the Mutiny. Population, 157,220.

**BUILDINGS, ETC.**—The Fort forms a striking object from the river, but its high towers have been cut down and the stone ramparts topped with turfed parapets and fronted with a sloping glacis. The principal gateway is capped with a dome and has in addition a wide vault. The Zenana building of the Old Palace has been well restored and has wonderful examples of rich ornamentation. In front of the gateway inside the Fort is Asoka's Pillar, which rises 35 ft above ground and is of much interest on account of its great antiquity. The famous Akshai Bat, or Undying Banyan, is said to have existed in the seventh century, but probably the stump has been renewed from time to time. Modern erections of note in Canning Town, the European quarter, are All Saints' Cathedral, a fine 13th century Gothic structure, the Roman Catholic Cathedral, in the Italian style, the English Club, the Mayo Memorial Hall, the Muir College, and the New University buildings. The Khusru Bagh is a well-kept garden containing some interesting tombs.

**MAGH MELA.**—The Magh Mela, a religious fair of great antiquity, to which Allahabad probably owes its origin, occurs every

ALLAHABAD.  
Portions of the City, with the Ganges in the distance.

CITY OF CAWNPORE

year about January. On the chief day, called the Amawas, of the fair about a million pilgrims bathe (in ordinary years) at the confluence of the sacred rivers, at the Kumbh Mela, held every twelfth year, the number of bathers on the Amawas day is between three and four millions. On ordinary days the attendance would, in normal years, be about 20,000, in the Kumbh year it might be 200,000.

**WATER SUPPLY.**—The water supply for the city of Allahabad and cantonnments is pumped from the Jumna River and after natural settlement is filtered for distribution. The Allahabad Municipality has recently put in hand a very extensive waterworks reorganization scheme, including a new Paterson water purification plant. The estimated total cost of these new works is Rs 46 lakhs and on completion they will be among the finest of the kind in the world.

#### BAREILLY.

Bareilly is the capital of the country of Rohilkhand, in the United Provinces. It passed to the British by cession in 1801, was one of the prominent places of the Indian Mutiny in 1857, and has always been noted as a centre of religious differences which have often threatened to develop into actual fighting. The city, with a population of some 130,000, contains some fine bazars and mosques, and was always famous for its splendid avenues of bamboos, from which it is commonly called Bans Bareilly.

#### BENARES.

Benares is the second largest city of the United Provinces, but its population of 198,447 includes a great number of pilgrims and is liable to considerable fluctuation. The antiquity of the city is attested by its mention in several of the ancient chronicles, but details of its history are very scanty, and even the Puranas record only one dynasty of kings. It was close to Benares that Gautama Buddha commenced to preach. The city is accordingly one of the holiest of places to the orthodox Hindu and attracts great concourses of pilgrims, while many of its inhabitants are persons who have settled there in the hope of salvation through a death within its sacred

precincts. Every pilgrim besides visiting the various holy spots, must make the circuit of the Panch Kosi road (unnietalled) outside the city round the sacred territory of Benares, commencing at the Manikarnika Ghat, proceeding by the Asi Ghat, and returning by the Barna Ghat. The route, which is 36½ miles in length and the pilgrimage along which occupies six days is picturesquely lined by fine trees and small shrines. The end of each stage is marked by a village, with numbers of temples and small rest houses.

**DESCRIPTION.** The native city extends for four miles along a limestone ridge on the north-west bank of the Ganges, which forms a slightly curved reach below it, thus permitting the eye to take in at a single sweep the long line of picturesque ghats, surmounted by irregular buildings of various styles and proportions, the slender white minarets of Aurunzebe's Mosque rising high above the general level. For from one to two miles from the bank the city consists of winding labyrinths and alleys lined by many-storied buildings, used as shops and shrines in every part, ranging from a shapeless fragment of stone smeared with vermilion to magnificent temples. Rajah Man Singh of Kanpur is said to have presented thousands of temples to the city in a single day.

**BUILDINGS, ETC.**—To enumerate all the temples and shrines of Benares is clearly impossible within a small compass. One of the most revered is the Golden Temple, dedicated to Siva as the Lord of the Universe, with many interesting and beautiful features. The great Mohammedan Mosque, usually attributed to Aurunzebe, but probably built by Jahangir, lies to the north-west of the Gyan Kup, or "Well of Knowledge." Other Mohammedan monuments of interest are the tomb of Lai Khan (1725 A.D.), the Palang Shahid, and the Gang-i-Shahidan Mosque. Famous Buddhist temples are the Shrine of Sanchar, the temple of Shakh Vinayak and the Argal Kangura mosque. From the palace and fort of the Maharajah of Benares at Ramnagar, on the right bank of the Ganges, a splendid view of the river front can be obtained.

**MODERN BUILDINGS.**—These are by no means insignificant, the finest being the Town Hall, which was built at the sole expense of a Rajah of Vizianagram, the King Edward VII Hospital, Queen's College and St. Mary's Church.

**GHATS.**—The finest view of Benares is obtained from the River Ganges, the banks of which are bordered by *ghats*, or flights of stone steps, descending to the water from the most famous buildings in the city. The Asi, Barna and Manikarnika Ghats have already been mentioned. The latter is considered the most sacred of all the *ghats* and in November is visited by multitudes of pilgrims. The Desaswamedh Ghat is one of the five celebrated places of pilgrimage, the others being the junctions of the Asi and Barna with the Ganges, and the Manikarnika and Panchiganga Ghats. The first named is specially thronged during eclipses. Here Brahma is said to have offered in sacrifice ten horses, and to have made the place equal in merit to Allahabad. Beneath the Panchiganga Ghat the five rivers are supposed to meet.

**INDUSTRIES.**—The wealth of Benares depends largely upon the influx of pilgrims from every part of India. Many of the Hindu chiefs have town houses in holy Kasi and the city thus absorbs a large share of the agricultural produce of the district, besides acting as a distributing centre. The ornamental brass work, which is met with all over the world, has always been a speciality of Benares, but the modern work is far less carefully executed than the old, which is now difficult to procure. Small idols and other images in brass and other materials are made in great quantities in the narrow lanes around the Golden Temple. Shawls, brocades and embroideries are also manufactured in Benares, and there is a good trade in jewellery and lacquered wooden toys.

#### CAWNPORE.

Cawnpore (the city of Kanh, or Krishna) is the twelfth largest city of the Indian Empire, having a population of 216,436, and is situated

on the right bank of the Ganges, 270 miles from Delhi. Its importance as a great commercial centre dates from its cession to the East India Company by the Nawab Wazir of Oudh. The place, which is of no great antiquity, owes its present size and importance entirely to the British, its development having largely coincided with that of the railway system of Upper India. In addition to the East Indian Railway, the Oudh and Rohilkand broad gauge system passes through Cawnpore, providing through communication with the northern part of the United Provinces and with Bombay, while the narrow gauge lines traversing Rajputana and Central India on the west and the district north of the Gogra and Bihar and Bengal on the east meet here.

The chief interest of Cawnpore for Englishmen lies in the terrible events of the Mutiny in 1857. (See under "History.")

**BUILDINGS, ETC.**—Many of these, as is natural, are closely and indelibly associated with the Mutiny. The Memorial Church, built on the north-east edge of the entrenchment, is in the Romanesque style. Costing over £20,000 and consecrated in 1875, it contains an interesting series of memorials to those who fell near here in the Mutiny. A fine view of Cawnpore is obtained from the belfry. The Sati Chaura Ghat, east of the Church, is the site of the massacre on June 27, 1857. Higher up the river, near the fine bridge of the Oudh and Rohilkand Railway, was the pontoon bridge over which the convoy, three miles long, of women and wounded, brought by Sir Colin Campbell from Lucknow, passed, and here was Windham's small entrenched camp, the site of which is now occupied by the Government Harness Factory. From the head of the Sati Chaura Ghat raving the road runs north over the railway and the Ganges Canal and past the Queen's Park, with a statue of the Queen Empress, to the Memorial Gardens, situated at the east corner of the city. These are beautifully laid out and well kept, and in the middle, upon a mound raised over the well in which the victims of the Bibi-garh massacre were buried, is the memorial in the form of an octagonal Gothic screen, with Marochetti's Angel of the Resurrection. The King Edward Memorial Hall, in Queen's Park, is a fine building used for public functions and entertainments.

**INDUSTRIES.**—Cawnpore is a great collecting and distributing centre for raw products, such as cotton, food grains, oil seeds, salt, saltpetre, sugar and foreign manufactured goods. It is also a large manufacturing town, being a great emporium for harness, shoes and other leather work, and the principal centre of the cotton-mill industry in Northern India. The Upper India Chamber of Commerce has its headquarters here.

#### LUCKNOW.

Formerly the capital of the Kingdom of Oudh, Lucknow is now the junction of several branches of the Oudh and Rohilkand Railway. It is the greatest city in the United Provinces, its population at the last census totalling 240,566, including the cantonments. These latter are the most extensive in the United Provinces, Lucknow being garrisoned by British and Indian regiments of both infantry and cavalry, and by garrison and field artillery. The city has been a municipality since 1862, and is provided with a good water supply and drainage system.

**BUILDINGS.**—To Europeans, the central feature of Lucknow must always be the Residency (see later), but there are other buildings, both old and new, of great interest. The Moti Mahal, from which the King of

Oudh used to watch the fights between wild animals on the farther side of the river, the Shah Najaf and the Kadam Rasul all played their parts in the siege of 1857. The former palaces of the kings of Oudh are situated to the north up to the river-bank, but many of these have been adapted to European use and are utilised as Government offices, etc. The Jama Masjid, begun by Muhammad 'Ali Shah, is perhaps the most satisfactory specimen of Oriental architecture in Lucknow. The Nadan Mahal and tomb of Ibrahim Chishti, in the centre of the city, are also fine specimens of early Moghul architecture.

Government House, the Martinière, one of the best European schools in India, Christ Church, the Provincial Museum and the Post Office and Husainabad Clock Tower are the most prominent modern buildings.

**INDUSTRIES.**—The industries of Lucknow are no longer of great importance, though there are large railway workshops, printing presses, flour mills and an iron foundry. At one time rich fabrics and costly jewellery were manufactured here, but production in this particular has virtually ceased. Lucknow, however, is still noted for its *chikan*, or embroidery in silk or cotton on muslin, and for embroidery with gold and silver thread. Its silver-work has a good reputation, and the Lucknow potters and clay modellers are pre-eminent in the whole of India.

**PARKS AND GARDENS.**—Lucknow covers a vast area on the south of the Ganges, with suburbs extending across the river. It is often called the "City of Parks," and no place in India has more extensive or more tastefully laid-out open spaces. The Wing field and Victoria Parks, the Kaiserbagh, the beautiful Horticultural Gardens, the Sikandarbagh, and the Alambagh, which contains the grave and memorial of General Havelock, are the chief of these.

**RESIDENCY (THE).**—The stirring siege of Lucknow during the Mutiny of 1857 has made the city for ever famous in the annals of the British Empire, the Residency being the scene of the prolonged and gallant defence that was maintained by the garrison the siege lasting from July 1 to November 17, 1857.

The mound occupied by the ruins of this historic structure lies to the north of the Charbagh. The shattered walls of the main block of buildings in which Sir Henry Lawrence received his fatal wound, Dr. Fraser's house, where he died, the noble banqueting hall used during the siege as a hospital, the cellar where the women and children took refuge, and several other buildings are still standing, while high above all the topmost tower rears its battered sides. Further decay has been prevented by carefully executed repairs, and the grounds have been levelled and turfed. In one corner, under the shade of many cypresses, are the tombs or cenotaphs of over 2,000 Europeans who perished during the Mutiny. In front of the Baillie Guard is a memorial erected by Lord Northbrook to the faithful Indian soldiers who shared the defence with the British.

**WATER SUPPLY.**—The crude water supplying the city is pumped from the River Ganges at Gaughat and delivered to the water works station at Aishbagh. The Ganges is a typical large Indian river; in addition to the extraordinary amount of fine silt carried during the Monsoon periods, there are troublesome colloidal impurities, making the water most difficult to purify. The authorities have recently installed the Paterson system of water purification, and the whole of the

water now issued for public consumption is not only efficiently filtered, but is finally sterilised by chlorination.

#### MEERUT.

Famous as the scene of the outbreak of the Indian Mutiny in 1857, Meerut is a large city and cantonment, of which the total population numbers some 123,000. The cantonment is the headquarters of the United Provinces District of the Eastern Command, and is one of the biggest military stations in India. The city has a large number of temples and mosques, not one of which, however, is particularly noticeable. In the cantonment St. John's Church and the Cemetery have many interesting memorials.

#### MUTTRA.

Muttra (Muthara) is of very ancient origin, and is said to have been the centre of the Buddhist faith long before the Christian era. Not only the city itself, but the greater part of the district, known as Braj Mandal, commands the reverence and respect of Hindus. Muttra, which has a population of 53,000 and contains a fine Museum, is visited annually by devout crowds of pilgrims.

### THE CENTRAL PROVINCES AND BERAR

The Central Provinces and Berar comprise a great triangle of country midway between Bombay and Bengal. Their area is 131,052 square miles, of which 82,000 are British territory proper, 18,000 (Berar) are held on perpetual lease from the Nizam, and the remainder is controlled by feudatory chiefs. The population is 13,012,760 under British administration, including 3,075,310 in Berar.

Rice is the most important agricultural crop of the Central Provinces, wheat coming next, followed by pulses and other cereals and oilseeds. Industries are not yet highly developed, except in one or two centres, Nagpur being noted for its busy cotton-spinning enterprise.

#### BURHANPUR.

The city of Burhanpur (Central Provinces), once the Mohammedan capital of the Deccan, is now a centre of the gold and silver wire industry, and boasts a population of about 36,000. It has always been a place of considerable importance, and is completely walled in. The neighbourhood contains some interesting Mohammedan ruins and a curious aqueduct still in use. In the town are two handsome mosques, the Jam Masjid and the Bibi Masjid. The Badshahi Kila—a ruined citadel and palace—is beautifully situated on a height overlooking the Tapti river. Here died in 1629 Shah Jehan's wife, to whose memory the Taj Mahal was erected. The principal handicraft of Burhanpur is the production of silk cloth embroidered with gold and silver lace, which continues now in the same manner as described by Tavernier as long ago as 1638. The town has also a spinning and weaving mill, besides several ginning and pressing factories.

#### JHANSI.

The city of Jhansi, in the province of Bundelkhand (Central Provinces), is one of the main halting places for troops proceeding up-country, and has always been of great military importance. Its most interesting feature is the Fort, which has been many times besieged and captured, notably by Sir Hugh Rose in 1858. Jhansi, which has a population of 133,000, is a centre from which various places of interest can be reached.

**JUBBULPORE.**

Jubbulpore (population 108,793) ranks as the second city in the Central Provinces, and is considered to be the most desirable of the plain stations, having a good soil, a plentiful water-supply and a comparatively cool climate. It is an important civil and military station, besides being the meeting-place of the Great Indian Peninsula and East Indian Railways. The town is well laid out and cared for, and there are a number of fine buildings, including the Victoria Town Hall, Anglican and Roman Catholic churches, two colleges and six high schools.

The Government gun carriage factory employs many hands, and there are cotton mills and pottery works.

**NAGPUR.**

Seat of the Chief Commissioner of the Central Provinces, Nagpur is the terminus of the standard-gauge line of the Bengal-Nagpur Railway in the direction of Bombay. It is a stirring industrial and commercial centre in which are large spinning and weaving mills, cotton presses and ginning factories. Nagpur is also famous for its delicious oranges, quantities of which are exported, as are also teak wood, grain, seed and jungle produce. The hill fort of Sitabaldi, with its fine view and interesting collection of arms, dominates the town, which contains, amongst many fine buildings, the Secretariat, Law Courts, Victoria Memorial Technical Institute, the new Central Provinces' Club-house, Anglican and Roman Catholic Cathedrals, and a fine Mahatma Church.

Population 145,193.

**THE PUNJAB**

The Punjab, or land of the five rivers, is so called from those waterways by which it is enclosed—namely the Jhelum, Chenab, Ravi, Beas and Sutlej. Together with the North-West Frontier Province and the Native State of Jammu and Kashmir which lie to the north, the Punjab occupies the extreme north-western corner of the Indian Empire, and, with the exception of the above-mentioned province, comprises all of British India north of Sind and Rajputana and west of the river Jumna. Previous to 1912 the Punjab with its feudatories embraced an area of 136,330 square miles and had a population of over 24 millions—that is to say, about one-thirtieth of the area and population of the Indian Empire. But the formation of a separate province of Delhi reduced the area and population by about 450 square miles and 380,000 souls respectively. The total population of the province at the last census was 25,101,000, of whom 4,416,036 were in the Indian States.

The Punjab contains several well-diversified areas, those of the eastern and western plains being fertile, thickly populated, and including the large industrial centres of Lahore, Amritsar and Mooltan. Agriculture is the province's staple industry, wheat being the most important crop grown, after which come gram, barley, rice, millets, maize and oil-seeds. Cotton is grown generally throughout the province. The country being preponderantly agricultural, a considerable proportion of the wealth of the people lies in live-stock. Large profits are derived from the cattle and dairy trades, and wool is a staple product. The production of hides and skins is also important. Cotton weaving is carried on everywhere as a domestic industry, blankets and rugs are produced in considerable numbers, and the carpets of Amritsar are world-famous.

JUBBULPORE. Street Scene.

**AMBALA.**

Ambala city and civil station, together with the cantonments, five miles to the south-east, have a total population of some 76,000. The city is a second class municipal town, and the cantonments are laid out with roads and fine trees. The European shops are good, and there is a racetrack on the East Marian.

**AMRITSAR.**

Amritsar is, after Delhi, the wealthiest and next to Lahore, the most populous city of the Punjab. It is also the religious capital of the Sikhs. At the last census the population numbered 190,218. It was founded in 1577 by Ram Das, 4th Guru of the Sikhs, upon a site granted by the Emperor Akbar around a sacred tank from which the city takes its name, "Pool of Nectar." In 1802 it was seized by Ranjit Singh, who roofed the great shrine with sheets of copper gilt and also built the Fort of Govindgarh in order to overawe the pilgrims. He also surrounded the city with a massive wall, the greater part of which has been demolished since the British occupation. In 1919 Amritsar came into world-wide notoriety owing to the serious rioting and deplorable loss of life that took place. (See under "History.")

**BUILDINGS, ETC.**—The most imposing feature of Amritsar is the Golden Temple, containing the shrine at which thousands of Sikh pilgrims worship. The Temple Garden (Guru Ka Bagh) is 30 acres in extent and contains pomegranate, orange and other fruit-trees, a tank called Kaulsar and several small pavilions. The Fort of Govindgarh is usually garrisoned with British and Indian troops. More modern buildings are the Clock Tower, from which a magnificent view can be obtained, the Roman Catholic Church, the Khalsa College, the national college for Sikhs,

and several first class high schools. The Amritsar Municipality has given the city a good water-supply, a sewage-disposal scheme has been completed and an electric power station built.

**INDUSTRIES.** The manufactures for which Amritsar is most famous are those of pashmina silk and carpets, the first being the name of any fabric made from the fine wool of a breed of goats found in and beyond the Himalayas. Pashminas are either plain self-coloured cloths made up into lengths which can be cut as required, or are woven into plain or embroidered shawls, some of which are known as Rampur chadars. This industry at one time employed 4,000 looms, but it has declined and has been succeeded in importance by the carpet industry in which Kashmiris and Punjabi Mohammedans are chiefly employed. There are four large carpet factories in the city, and excellent goods are turned out. The manufacture of silk piece-goods is also still carried on to a considerable extent, while gold and silver thread, ribbon, spangles, etc., for embroidery are manufactured. Ivory carving is practised with considerable success, but is chiefly confined to combs, paper knives, card-cases and toys. Two important fairs, primarily religious, but also largely utilised for the buying and selling of agricultural stock, are held at Amritsar in April and November.

**FEROZEPORE.**

One of the busiest cities in the Punjab, Ferozepore is also of great antiquity, but has been almost entirely rebuilt since the British occupation. The principal battle fields of the Sikh Wars—Mudki, Ferozeshah and Sobraon—lie within easy distance. Ferozepore, which has a population of about 55,000, is an important market for raw produce.

1. The Mall, main thoroughfare of Lahore, looking West. The building in which the offices of the Jallo Rosin and Turpentine Factory are situated is in right foreground.
2. Dabbi Bazar with the Golden Mosque on left: the city's principal Indian business street.
3. The Delhi Gate, one of the entrances to the old City.

### LAHORE.

Lahore is the largest city of the Punjab, capital of the Province, seat of an Episcopal See, and an important commercial centre, as well as being one of the oldest and most historically interesting places in India. Its chief period of magnificence was during the rule of the Moghuls, the greatest of whom, Akbar, held his court here between 1578 and 1598 and greatly enlarged the city, surrounding it with a wall, which has been demolished. The glory of Lahore then declined, though some of its former splendour was regained under Ranjit Singh and since the period of the British rule, which commenced in 1849, buildings have greatly multiplied. The moat has been filled in and has been converted into fine lawns, which encircle the city on every side except the north west. The Circular Road runs round Lahore, to which it gives access by thirteen gates.

**ADMINISTRATION.** Lahore has been a municipality since 1867, and the elective principle is now established. The city is provided with an excellent water-supply from wells outside whence it is pumped by engines direct into four connected tanks. The Upper Mall and other parts of the town are lighted by electricity.

**BUILDINGS, ETC.**—Of the ancient buildings of Lahore the most prominent are the Fort, containing the Diwan-i-Am and the beautiful little Pearl Mosque, the Souhri Masjid, or Golden Mosque, the singularly fine Mosque of Wazir Khan and the Tomb of Anar Khan, who was a favourite of Akbar and is said to have been buried alive for venturing to smile at the Emperor's son. The Fort and Palace are full of interest to both archaeologist and sightseer, and many of the older buildings of the city offer an irresistible attraction to artists. The more modern buildings of which there are a great number, have been erected in a praiseworthy attempt to adapt Hindu and Mohammedan styles of architecture to present necessities. Government House stands on the Mall and was formerly the tomb of Mohammed Kasim Khan, cousin of the Emperor Akbar. The Lawrence Hall and the Montgomery Hall contain many interesting portraits and memorials, and the Central Museum, with its rich collections of sculpture, coins, paintings and jewellery, is well worth inspection. Other prominent buildings are the Cathedral of the Resurrection, a fine structure in the Early English style, the Roman Catholic Cathedral, a mixture of Roman and Byzantine, the Town Hall, the Punjab Public Library, the University Hall, the Mayo School of Arts, the Punjab Club and the Post Office.

**EDUCATIONAL FACILITIES.**—Lahore contains the principal educational institutions of the Province—the University of the Punjab, with its five colleges, Government College, and Forman Christian, Dayanand Anglo-Vedic, Islamia and Oriental Colleges, also the Medical and Law Colleges and the Central Training College. There are in addition a number of excellent high schools for Europeans and Indians. Technical and special education are provided by the Mayo School of Arts, the Medical School, the Agricultural and Technical Schools, the Veterinary College, the Hindu Technical Institute and the Government Normal School.

**INDUSTRIES.**—Most of the decorative arts for which Lahore was once famous have greatly declined or vanished altogether. The silk-workers, at one time noted for superior cloths of Bokhara thread, now turn out only coarse and inferior materials, though the trade in these still flourishes. The mystery of gold and silver-wire drawing has almost entirely disappeared, and so has the produc-

tion of glass, enamel and arms, while but little gold embroidery is now done. On the other hand, trades of a useful character have largely increased, among them being the manufacture of vegetable oils, candles and soaps, sulphuric and nitric acids, printing, lithography and bookbinding. The leather trade of Lahore is an important one, a large quantity of saddlery and shoes being turned out annually. Cotton fabrics are largely made, and a great deal of printing on coarse cotton stuffs is done. There are also furniture manufactories, cotton ginning factories and presses.

**FALETTI'S HOTEL.**—Lahore. Picturesquely situated in wonderful gardens, accommodating about 100 guests. Reconstructed in 1912. Cables "Faletti's," Lahore. Controlled by The Associated Hotels of India, Ltd. (See notice following "Simla," p. 74.)

#### **NEDOU & SONS' HOTELS.**

**Proprietors.**—The firm of Nedou & Sons, hotel proprietors and licensees, controls hotels of the highest repute at Lahore, Srinagar and Gulmarg.

**Nedou's Hotel, Lahore.**—Situated on the Mall, opposite the Government Horticultural Gardens and in close proximity to Government House and the Gymkhana and Punjab Clubs, the hotel stands in its own grounds and is surrounded by a beautiful garden, in which there are many fine shady trees. A post office and a number of shops are close to the hotel gate.

**Accommodation.**—There are 78 large airy bedrooms, and the public rooms include a lounge and billiard saloon, public and ladies' sitting rooms, card and smoking rooms. Every bedroom has hot and cold running water and its own bathroom, and, as soon as Government grants authority for the sewerage of Lahore, the hotel will have the most up-to-date sanitary arrangements.

**Premises.**—The hotel is built on the Eastern principle, which permits a free circulation of air through every room. The whole is surrounded by a stone verandah, and each room has its own section, which serves to keep the rooms cool in the hottest of weather. The building is one of the most imposing in Lahore, being built on the architectural design of a fort, with turrets and towers at all corners.

**Other Hotels.**—These are at Srinagar, 5,000 feet above sea level, and at Gulmarg, 9,000 feet above sea level, both in Kashmir State in the Himalaya Mountains. They are the only hotels in these summer resorts and are most popular. Nedou's Hotel at Srinagar, which has just been rebuilt, comprises three large annexes with private living rooms, and the usual public rooms. It stands in its own grounds, which are very extensive and contain gardens, orchard, vegetable garden, dairy, bakery, confectionery manufactory, soda-water factory, etc., making the hotel practically self-supporting.

The company's establishment at Gulmarg was originally started with accommodation for only four guests, but now there is ample room for 200, and in the season as many as 350 sit down to dinner, many visitors coming from the neighbouring bungalows. The hotel is built on the Swiss system of individual pinewood bungalows, each accommodating from six to twelve persons.

**Cables.**—"Nedou," Lahore, Srinagar and Gulmarg.

#### **MOOLTAN.**

Mooltan City (population, 84,806) is situated near the River Chenab in the Punjab, and was the scene of considerable fighting

during the first and second Sikh wars. The heat of Mooltan is notorious, the rainfall being little above 7 inches annually. There are in the city and neighbourhood several interesting Mohammedan tombs, and the Old Fort, containing the famous temple of the Narsingh (Lion Man) form of Siva or Prahladpuri, is especially attractive to archæologists and visitors.

#### **MURREE**

The northern sanatorium of the Punjab and the headquarters of the Northern Command, Murree is situated on the south face of the Himalayas, 37 miles from Rawalpindi. At its highest point the station is 7,507 feet above sea-level, and from its houses, built on an irregular ridge, may be obtained extremely beautiful views of snowy peaks, wooded hills,

valleys and tilled fields. In the hills north-west of Murree, and easily reached therefrom, are certain small camps and stations known as the Galies, which afford delightful walks during the spring. Of these stations the furthest north, Nathagali, is the summer seat of the Chief Commissioner of the North-West Frontier Province. The climate is well suited to the English visitor, the minimum recorded temperature being 21° and the maximum 66°. During the four monsoon months Murree receives a rainfall of some 34 inches.

**CECIL HOTEL.**—Murree. Superbly situated, overlooking the plains of India, close to the Kashmir ranges. Provides excellent cuisine and comforts. The latest addition to the establishments of The Associated Hotels of India, Ltd. (See notice following "Simla," p. 74.) Cables "Cecil," Murree.

**NEDOU & SONS' HOTELS.**

Nedou's Hotel, Lahore.

1. Centre block of the Palatial Building, in which are the main entrance and most of the Public Rooms.
2. Portion of the Western Wing and Western Entrance.

**RAWALPINDI.**

The headquarters of a Civil Division and District of the Punjab and of the 1st Indian Army Division, Rawalpindi is one of the largest military stations in India, and was formerly surrounded by a chain of detached forts, which have been dismantled. A very fine Mall runs for 4 miles through the station, forming part of the Grand Trunk Road. Rawalpindi possesses an attractive public park, golf links, a European Club and Anglican and Scotch churches. The city and cantonment have a total population of 101,142.

**FLASHMAN'S HOTEL.**—Rawalpindi. An excellent residential hotel, accommodating 100 guests, and the main halt for travellers to and from Kashmir. Established on a small scale in the 'nineties, it has been taken over and immeasurably improved by The Associated Hotels of India, Ltd. (See notice following "Simla," p. 74.) Cables "Flashmans," Rawalpindi.

**NORTH-WEST FRONTIER PROVINCE**

This province, as its name denotes, is situated on the north-west frontier of the Indian Empire. It is in form an irregular strip of country lying between the Indus and the Durand boundary line with Afghanistan. To the north it extends to the mountains of the Hindu Kush. The total area of the province is about 30,000 square miles, and the population 5,076,476. The mountain regions north and west are occupied by tribes subject only to the political control of the Chief Commissioner in his capacity as Agent-General to the Governor-General, and are administered by five political Agencies. The most important sections of the population, both numerically and by social position, are the Pathans, with whom for many years the British in India waged war. The province is practically without manufactures on an organised scale, the population deriving its subsistence almost entirely from agriculture. Any commercial importance that it possesses is owing to the fact that it lies across the great trade routes which connect the trans-border tribal territories and the marts of Afghanistan and Central Asia with India, but the influence of railways is diminishing the value of these trading interests.

A division of the Province from the Punjab has frequently been discussed, with the double object, in the earlier stages of these debates, of securing closer and more immediate control and supervision of the frontier by the Supreme Government, and of making such alterations in the personnel and duties of frontier officials as would tend to the establishment of improved relations between the local British representatives and the independent tribesmen. The Province was eventually removed from the control of the Punjab Administration, and constituted under the before-mentioned Chief Commissioner and Agent to the Governor-General, with headquarters at Peshawar, in direct communication with the Government of India in the Foreign Department.

The climatic conditions of the North West Frontier Province, which is mainly the mountainous region, but includes the Peshawar Valley and the riverine tracts of the Indus in Dera Ismail Khan District, are extremely diversified. The air is generally dry, and hence the annual ranges of temperature are frequently very large. The province has two wet seasons, one the S.W. monsoon season, when moisture is brought up from the Arabian Sea and the Bay of Bengal; the other in winter, when storms from Mesopotamia, Persia and the Caspian Districts bring widespread rain and snowfall.

As to the flora of the region, it varies from the shrubby jungle of the south-eastern plains to barren hills, pine forests and fertile mountain valleys.

The inauguration of a system of light railways throughout the province apart from all considerations of strategy must materially improve the condition of the people and also by that means strengthen the hold of the Administration over them. The great engineering project of the Upper Swat River Canal, which was completed in 1914, and the lesser work of the Baharpur Canal also completed a few years ago, will bring prosperity to a number of peasant homes.

**PESHAWAR.**

This is the ancient capital of the Gandhara Province, a noted Buddhist centre in olden times, in the North-West Frontier Province. It is the headquarters of the 1st Army Division, the most important military station in India, and the residence of the Chief Commissioner. The city stands upon a ridge above the plain, stretching towards the mountains, on the left bank of the Bara stream, 15½ miles south-west of the junction of the Swat and Kabul rivers and 10½ miles east of the Khyber Pass. The houses of Peshawar (population, 104,452) are built of small bricks or mud, held together by a wooden framework to protect them from earthquakes, and the streets are irregular and tortuous. There is a large Islamic College, also good schools. The Idwardes, or Kabul, Gate leads to the main Kissa Kahani Street, and at the Bajauri Gate is a fine building used as a Government guest house. Peshawar has a great transit trade from Kabul and Bokhara and Central Asia. The bazars are well worth a visit, both for the objects they contain—many of them not seen in Central India—and for the fierce-looking and picturesquely dressed natives from Afghanistan and Central Asia.

**INDUSTRIES.**—The special manufacture of Peshawar is bright-coloured scarves or *lungis*, worn as turbans. Waxcloth work and some ornamental needlework are also produced here, as well as knives and small arms, in addition, a special form of wood-carving flourishes.

**WATER SUPPLY.**—Peshawar has an up-to-date and adequate water supply, the water being taken from the Bara River into large natural sedimentation tanks, constructed near Bara Fort. The tanks operate on the continuous flow system, and are of sufficient capacity to meet the demands of the city and cantonments, in addition to the British out-post station at Kachagarhi. Government has recently installed the Paterson system of water purification, and the new plant is capable of delivering 3,500,000 gallons of sterilised water per day.

**BRITISH BALUCHISTAN**

Baluchistan is an oblong stretch of country occupying the extreme western corner of the Indian Empire. It is divided into three main divisions: (1) British Baluchistan, with an area of 9,476 square miles, (2) Agency Territories, with an area of 44,345 square miles, composed of tracts which have from time to time been acquired by lease or otherwise brought under control and placed directly under British officers, and (3) the Native States of Kalat and Las Bela. The country is largely rugged and barren, with an irregular rainfall, the principal occupations of its inhabitants being agriculture and the rearing of live stock. Under the control of the Agent a large measure of self-government is allowed to the tribesmen.

**QUETTA.**

The administrative capital of British Baluchistan and the headquarters of the Western Command, Quetta is surrounded by

fortified lines, and, commanding both the Khojak and Bolan Passes, is one of the most important frontier posts. It is also a favourite summer resort. Population, 49,000.

**THE NATIVE STATES.**

Of the total area of India (1,773,168 square miles), a large part is not under British administration at all. That portion covered by the Indian States which are under the government of their own Rajahs or Chiefs is 675,267 square miles, with a population of 70 millions. These States embrace the widest variety of country and jurisdiction, varying in size from petty States like Lawa, in Rajputana, with an area of 19 square miles, and the Simla Hill States, which are little more than small holdings, to States like Hyderabad, as large as Italy, with a population of 13 millions. They include the inhospitable regions of Western Rajputana, Baroda (part of the Garden of India), Mysore, rich in agricultural wealth, and Kashmir, one of the most favoured spots on the face of the globe.

**ADMINISTRATION.**—The conditions under which the various Indian States were established and have come into political relation with the Government of India have varied greatly. Speaking generally, it may be said that as the British boundaries expanded the States were brought under the influence of the Government and their rulers were confirmed in their possessions. The Chiefs have, without exception, gained protection against dangers from outside and a guarantee that Great Britain will protect their rights as rulers, the Paramount Power acting for them in relation to Foreign Powers and other Indian States. The inhabitants of the States are the subjects of their rulers, and, except in the case of personal jurisdiction over British subjects, these rulers and their subjects are free from the control of the laws of British India. For instance, criminals escaping to an Indian State cannot be arrested by the police of British India without the permission of the ruler of the State.

On the other hand, the Indian States are under an obligation not to enter into relations with foreign nations or other States; the authority of their rulers has no existence beyond their territories. Their subjects outside their dominions become to all intents and purposes British subjects. Since the Indian States have no use for a military establishment other than for police or ceremonial purposes, or for co-operation with the Imperial Government, their military forces and armament are prescribed by Great Britain. Where cantonments exist in an Indian State, jurisdiction over the cantonment and the civil station is exercised by the Suzerain Power.

**POLITICAL OFFICERS.**—The powers of the British Government are exercised through Political Officers, who, as a rule, reside in the States themselves. In the larger States the Government is represented by a Resident; in groups of States by an Agent to the Governor-General, assisted by local Residents or Political Agents. These officers form the sole channel of communication between the Indian States and the Government of India and its Foreign Department, the officials of British India and other Indian States. They are expected to advise and assist the Ruling Chiefs in any administrative or other matters on which they may be consulted.

**PRINCIPAL STATES.**—The Indian States, in the order of their Chiefs' precedence, are Hyderabad, Gwalior, Mysore, Baroda and Jammu and Kashmir, whose rulers are each entitled to permanent salutes of 21 guns; Bhopal, Indore, Kolhapur, Travancore and Udaipur (19 guns); Bahawalpur, Bharatpur, Bikaner, Bundi, Cochin, Cutch, Jaipur,

Jodhpur, Patiala and Rewa (17 guns), and some hundred others of varying importance whose chiefs receive salutes ranging from 15 to 9 guns

### STATE OF HYDERABAD

Hyderabad, the premier Indian State in India, is in the Deccan, occupies an area of 82,628 square miles, and has a population of 12,471,770. During the long struggle between the British and the French for mastery in India the Nizam of Hyderabad threw in his lot with the British, and his successors have been so staunch in their engagements to the British Raj as to earn the title of "Our Faithful Ally". The present ruler is His Exalted Highness Sir Usman Ali Khan Bahadur Fateh Jung, G. C. B., G. C. S. I.

#### HYDERABAD CITY

Hyderabad, capital of the territory of the Nizam of Hyderabad, stands on the south bank of the Musi River, and is the fourth largest city in India, having a population of over 400,000. It has always been famous for its varied and warlike population. Formerly the inhabitants all carried weapons, but the practice is now confined to the Arab mercenaries, who may be seen disporting themselves in the streets with a perfect armoury stuck in their waistcloths. The city is in shape a trapezoid, of a total area of two square miles, it is modern and has but few remarkable buildings, but the bazars are extremely picturesque and are thronged with natives from all parts of India.

**BUILDINGS.**—The Residency is situated in a suburb of the city called Chadarghat, and in extensive grounds which contain many fine trees. Within the Residency limits is the Prestonji Kothi, now called the Kothi (large house) of Rajah Narsingh Gir, a large building erected on a high stone basement by the famous Parsee bankers, Prestonji & Co., who for some years farmed the revenues of Berar. Close to the Kothi are the Imperial Bank and St. George's Church. The General Hospital is a fine building in the Saracenic style, and there are two other large hospitals. The palace of the late Sir Salar Jang contains many interesting portraits. The Mecca Masjid is the principal mosque of the city, a grand but sombre building, whose gateway was completed by Aurungzebe in 1692. The Falaknuma Palace of the Nizam, situated to the south of the city, is considered the finest in India.

**GARDENS.**—To the north of the railway station are the beautiful public gardens, covering an extensive area, and surrounded by a high wall castellated with two lofty gateways. In addition to rare plants and well-laid-out beds of flowers, the gardens contain a menagerie and an Industrial Exhibition. In the north corner a Town Hall has been built to commemorate the anniversary of the fortieth birthday of the late Nizam.

**GOLCONDA.**—The Fort and Tomb of Golconda lie five miles west of the city, and are of great interest. The Fort, which is walled and moated, contains now little but ruins. The King's Tombs are those of the Kutb Shahi Kings, who reigned for 180 years in Golconda. They were repaired at the instance of the late Sir Salar Jang, and are now admirably kept, some of them are beautifully enriched with carvings and minarets.

The diamonds of Golconda, which have become proverbial, were cut and polished here, but came principally from Purlial, on the south-east frontier of the Nizam's territory, and from Kollur, in the Krishna district.

**INDUSTRIES.** Hyderabad has a considerable manufacture of textile fabrics, carpets, velvets for horse-trappings, and a material composed of cotton and silk. Red earthenware is also extensively made.

**WATER SUPPLY.** The water supply of Hyderabad is derived from a large impounding reservoir at Gundipet, which serves the double purpose of preventing floods and furnishing the city with drinking water. H. H. The Nizam's Government installed the Paterson system of water purification, and the new works have a daily capacity of 10,000,000 gallons. In addition to serving the whole of the city of Hyderabad, water is supplied to Secunderabad.

#### SECUNDERABAD

One of the largest British military cantonments in India, Secunderabad covers 19 square miles and stands 1,830 ft. above sea-level. It is connected with Hyderabad and Bolarum by excellent motor roads. The Parade Ground is a fine stretch, and is used almost entirely for ceremonial purposes. There are several imposing buildings, including the Hospital, Railway Station, Jail and Mahboob College, while the United Service Club stands out as a landmark for miles around. The military headquarters are at Bolarum, six miles to the north.

### STATE OF BARODA

The State of Baroda, situated partly in Gujarat and partly in Kathiawar, covers an area of 8,135 square miles, the population numbering 2,126,522. Its history as an independent State dates from the break-up of the Moghul Empire, and the Maharajah was one of those who remained staunch to the British during the Mutiny. The present ruler is His Highness Farzand-i-Khas-i-Dowlat-i-Englishia Maharaja Sir Sayaji Rao Gaekwar Sena Khas Khel Samsher Bahadur, G. C. S. I., G. C. I. E., L. L. D.

#### BARODA CITY

Baroda (population, about 95,000) is the capital of the very important Mahratta State of the Gaekwar. It is a handsome city containing several fine buildings, among which are the Baroda Hotel, or State Rest-House, the College, Museum, General Hospital, State Offices and Library. In the market-place are a fine pavilion of Mohammedan architecture, a clock-tower and the old Nazar Bagh Palace. The new Lakshmi Palace cost 60 lakhs of rupees.

### STATE OF GWALIOR

This State, which has from almost immemorial times been ruled by the House of Scindia, is the most important of the large number of native States which are for political purposes grouped together under the title of the Central Indian Agency. It occupies an area of 26,357 square miles, and has a population of 1,494,375. The main industries are cotton-ginning and the manufacture of fine muslins and leather work. The ruler is a minor, His Highness Jeewajirao Scindia, the administration of the State being at present carried on by a Council of Regency.

#### GWALIOR CITY

Famous above all for its fort, one of the most ancient and renowned strongholds in India, the city of Gwalior is the capital of Maharajah Scindia. The Old City has gradually decayed, and is now only one-sixth the size of the New City (Lashkar), in which the Sarafa, or Merchants' Quarter, is considered to be one of the finest streets in India. The Jama Masjid, outside the gate of the Fort, is a very beautiful mosque, with gilt pinnacled

domes and lofty minarets. The tomb of Mohammed Ghaus, a saint venerated in the time of Babar and Akbar, is one of the best specimens of Mohammedan architecture of the early Moghul period. The rock sculptures of Gwalior are unique in Northern India.

### STATE OF BIKANER

The Bikaner State in point of extent is the seventh largest of all Indian States and the second largest in Rajputana. With an area of 23,315 square miles, its population at the last census was 650,685. This is one of the States due to benefit enormously from the construction of the Sutlej Canal, which will bring over 600,000 acres under irrigation, while even larger expectations are associated with the Bhakra Dam project. The State owns a large railway system, with a mileage of 568.48. Bikaner is the capital. The present ruler, Major-General His Highness Maharajah Dhiraj Raj Rajeshwar Narendra Shiremani Sri Sir Ganga Singhji Bahadur, G. C. S. I., G. C. I. E., G. C. V. O., G. B. E., K. C. B., A. D. C., L. L. D., is the twenty-first of a long line of distinguished men renowned for their bravery and statesmanship, he himself holding the distinction of having fought for the British Crown on three continents.

#### BIKANER CITY.

Capital of the Bikaner State, Bikaner is the fourth largest city in Rajputana. It is situated on an eminence and has an imposing appearance, being surrounded by a battlemented wall and possessing many fine buildings. The stone carving with which many of the houses are faced is unique. From the Fort a magnificent view can be obtained, and the palace buildings, of every style and period, are magnificent. Other fine structures are the Durgar Memorial Home, the Nobles' School, the Maharajah's new palace, called Lalgarh, the King-Emperor's Hall and the Victoria Memorial Club.

### STATE OF JAIPUR

Jaipur, the ancient kingdom of King Virata, is the fourth largest of the Rajputana States, with an area of 15,579 square miles and a population numbering 2,338,802. For over 200 years the capital has been the city of Jaipur. The present ruler is His Highness Maharaja Sawai Man Singhji Bahadur.

#### JAIPUR CITY

A city of 120,000 inhabitants, Jaipur, surrounded on the north and east by rugged hills and crowned with forts, is the modern capital of Jaipur State—Amber, five miles distant, now ruined and deserted, being the ancient capital. Jaipur is a busy and important commercial town, with large banks and trading establishments. It is a centre of native manufactures, especially those of many kinds of jewellery and of coloured printed cloths and muslins. The enamel-work done here is the best in India, and the cutting and setting of garnets and other stones found in the State is an important industry. The crowded streets and bazars are lively and picturesque, while the city is renowned for the width and regularity of its thoroughfares. It is also well lighted by gas.

**BUILDINGS, ETC.**—The Maharajah's Palace, with its beautiful gardens and pleasure grounds, adorned with fountains, fine trees and flowering shrubs, occupies the centre of the city and covers one-seventh of its area. Here are the Chandra Mahal, a lofty and striking building, the famous Jantra, or observatory, the Hall of the Winds, and a particularly beautiful Minaret. The Public Garden, outside the city wall, is one of the finest in India, and attached to it are a note-

worthy menagerie and aviary. These gardens are said to cost the Maharajah Rs 16,000 a year to keep up. The Albert Hall contains a large Durbar Hall and a beautiful museum. Other notable buildings are the Mayo and Lansdowne Hospitals, the Maharajah's College, and the Public Library. The Old Palace of Amber ranks architecturally only second to that of Gwalior.

### STATE OF JODHPUR

Jodhpur State (also called Marwar), the largest in Rajputana, extends over an area of 34,963 miles and has a population numbering 1,841,642. As far back as 1818 this State entered into a treaty of alliance with the British Government, to whom in the European War it rendered notable service. The Maharaja of Jodhpur (Major Maharaja Sir Umed Singh Sahib Bahadur, KCSI, KCVO) claims descent from Rama, the deified King of Ayodhya.

#### JODHPUR CITY

Jodhpur is the capital of the Rajput State of that name and of the country known as Marwar. The Maharajah resides here, as also the Resident. The city (population, 73,480) stands on the south end of a range of sandstone hills running east and west, and is surrounded by a strong wall nearly six miles in extent, with seven gates, each bearing the name of the town to which it leads. Some of the houses and temples are of stone, richly carved. Amongst the most important buildings are the Temple in the Dhar Mandi (grain market) and the Talati Mahal (an old palace now used as the Jaswant Women's Hospital). The Fort of Jodhpur stands up boldly some 400 ft. above the city and plain, and presents a magnificent appearance. Here are the interesting Old Palaces and the Jewel House, which contains the Maharajah's wonderful collection of jewels. There is very good pig-sticking near Jodhpur.

### STATE OF MYSORE

The State of Mysore is surrounded mainly by the Madras Presidency, except on the north and north-west, where it is bounded by the districts of Dharwar and North Canara respectively, and towards the south west by Coorg. It embraces an area of 29,460 square miles, excluding that of the civil and military station of Bangalore, and has a population of 5,978,892. From 1831 to 1881 the management of the State was in the hands of the British Government, but in the latter year it was restored to the ancient dynasty. The city of Mysore is the capital of the State, but Bangalore city is the administrative headquarters. The present Maharajah is Colonel Sir Sri Krishnarajendra Wodeyar Bahadur, GCSI, GBE, who has reigned since 1902.

#### BANGALORE CITY

Together with that of the cantonment (the largest in the south of India), the total population of the city of Bangalore is nearly 250,000. Bangalore City, or Pettah, the seat of Government of the Mysore State and the headquarters of the British Resident, who is also Chief Commissioner of the Province of Coorg, covers an area of about 12 square miles. It stretches from Gibbon Park in the east to Chamrajpet in the west, some four miles, and is under the jurisdiction of the Mysore Durbar. The city has been extended in recent years, the congested native parts having been opened up, with the result that it has been virtually freed from plague visitation. The civil and military station of Bangalore adjoins the city on the east and covers an area of about 13 square miles. The cantonment was established in 1809 on the removal here of the garrison from Seringapatam, which had proved too unhealthy for

the troops. In 1881, on the rendition of Mysore, this area was made over to the British as an "assigned" tract, and became subject to the administration of the British Resident in Mysore.

By the Army reorganisation scheme Bangalore is the headquarters of the Bangalore area under the Wellington District Command. The garrison includes three batteries of artillery, regiments of British cavalry and infantry, sappers and miners, pioneers, and Indian infantry, also the Auxiliary Force. As many as 30,000 troops were stationed here during the Great War.

**BUILDINGS, ETC.**—The Fort of Bangalore, which stands in the extreme south-west, was said originally to have been built of mud in 1537 by Kempe Ganda. The present fortifications of rubble stone were constructed in 1761 by Hyder Ali from plans by a French engineer. Only one of the original gateways now remains—the Delhi Gate, handsomely built of cut granite. In the centre of the Fort is the arsenal, and there are some remains of Tipu's Palace. To the east of the Pettah and Fort is the Lalbagh, a beautiful garden said to have been laid out in the time of Hyder Ali; it contains fine collections of tropical and sub-tropical plants and wild animals.

In the cantonment are several notable buildings, the Maharajah's Palace, Indian Institute of Science, Roman Catholic Cathedral, Trinity Church, All Saints' Church, St. Andrew's Kirk, British Infantry Barracks, Lady Curzon Women's Hospital, the Residency and the various Public Offices. Gibbon Park is the popular afternoon resort of Bangalore, and in it are situated the Museum and the Seshadri Memorial Hall, where the Mysore Government Public Library is located. North east of the Museum is the Memorial Statue of the Queen-Empress, unveiled by King George, then Prince of Wales, in 1906.

**CAVALRY, ETC.**—See under "Tourist Resorts."

**INDUSTRIES.**—Bangalore, an important centre of industry, contains large spinning and cotton-manufacturing mills, woollen and silk mills, oil mills and a soap factory, brick and tile works, and a silk-worm farm under Japanese management. To the south-west, near the city railway station, are the locomotive workshops, the distillery and an iron foundry. Near the Cantonment Railway Station are large coffee-curing works, where also artificial manures are prepared. The Imperial Tobacco Company has a factory at Bangalore, and at the central Jail cloths, towels, table-cloths, dhurries, woollen pile carpets, etc., are manufactured in large quantities.

#### MYSORE CITY

This city, which is the dynastic capital of the State of Mysore and the residence of the Maharajah, covers an area of 7½ square miles, and has a population of over 84,000. It is of great antiquity, the earliest records dating back to the third century B.C. The modern city is handsome, and is laid out with fine roads and attractive public buildings. The Maharajah's Palace is situated inside the old Fort, and contains a large hall in which the Maharajah shows himself to the people on great occasions seated on his throne, which is of great antiquity. The new portion of the palace is a magnificent example of Indian architecture and is surmounted by a golden dome, which commands the whole city. There are also well-stocked Zoological Gardens, and the grounds contain an old maze which is a source of much amusement to visitors.

The racecourse at Mysore is one of the best in Southern India. Overlooking the city is

the Chamundi Hill, 3,489 ft. above sea-level, but with an excellent motor road which leads to the temple on the summit, famous for the human sacrifices which were there offered in the time of Hyder Ali and for the colossal figure of Nandi, the sacred bull of Shiva, which is hewn out of the solid rock.

### SERINGAPATAM

Though now little more than a village in size, its prosperity having rapidly declined after the fall of Tipu, Seringapatam is a town of historic importance and great interest, the neighbourhood having been the chief theatre of the wars between the British and Tipu Sultan, while the great fort was twice besieged by the English in 1792 and 1799. The Darya Daulat Bagh, a summer palace of Tipu Sultan, is distinguished for its graceful proportions and the arabesque work in rich colours which covers it. In the Lalbagh are the tombs of Hyder Ali and Tipu Sultan.

### STATE OF COCHIN

The State of Cochin occupies an area of 1,417 square miles on the south west coast of the Madras Presidency, and its population numbers 979,019. The most valuable asset of Cochin is its forests of teak, ebony and other hardwood trees. Rice forms the staple of cultivation, and coconuts are extensively grown and exported. The capital is Ernakulam.

#### COCHIN CITY

The city and port of Cochin are of special interest as being the site of the earliest European settlement in India, the Portuguese adventurer Cabral, having landed there in 1500. There is a population of some 20,000, also an interesting Jewish quarter and a picturesque main street. The harbour affords shelter to a large number of coasting vessels, and has good anchorage some 1½ miles off shore for over-sea steamers. These vessels, however, load and discharge at Cochin only during the north-east monsoon, using the auxiliary port of Malhipuram during the rest of the year. Coasting steamers between Bombay and Calcutta call once, and sometimes twice, a week. Coal and oil are obtainable.

### FRENCH POSSESSIONS

The French possessions in India comprise five Settlements, with certain dependent lodges or plots, and cover in all 203 square miles, with a total population of 277,516. These Settlements are known by the names of Pondicherry, on the east coast of Madras, Chandernagar, in Lower Bengal, Mahé, on the Malabar coast, Karikal, on the Comorandiel coast, and Yanam, on the coast of the Northern Circars. Since 1697 Pondicherry has been by far the most important of the Settlements, and is the seat of the administration-in-chief of the French possessions in India. The five Settlements are represented in the French Parliament by one senator and one deputy, and are administered by a Governor, the present holder of the office being Monsieur L. Gerbais.

#### PONDICHERRY

This is the capital of the French establishments in India, and dates from 1674. It is laid out in the French style, contains several handsome public buildings, and is well lit by electricity. Population, 46,533. There are important cotton mills and a large iron foundry. The port, which has no harbour or dock, is chiefly utilised in the very large export trade in groundnuts with Marseilles and in the importation of French manufactures.

### PORTUGUESE POSSESSIONS

The Portuguese possessions in India consist of the province of Goa, situated within the limits of Bombay Presidency, on the Arabian Sea Coast, the territory of Daman, with the small territory called Pargana-Nagar Avelly on the Gujarat coast, at the entrance to the gulf of Cambay, and the little island of Diu, with two places called Gogla and Sumbor, on the southern extremity of the Kathiawar peninsula. The territory of Goa is by far the most important of these, having a total area of 1,301 square miles, and containing the historic city of Goa and the port of Mormugao. The total population of the whole Goa territory is about 500,000. The Governor General of Portuguese India is His Excellency Senhor Mariano Martino.

### GOA

The present capital of Portuguese India, Nova Goa, comprises Panjim and Ribandar, as well as the old city of Goa, and is six miles in extent. Old Goa is some five miles distant from the new city. Panjim occupies a narrow strip of land leading up to the Cabo, the cape dividing the Aguada bay from that of Mormugao, and mainly slopes down to the edge of the Aguada. Selected as the residence of the Portuguese Viceroy in 1759, in 1843 it was raised to its present rank as the capital of Portuguese India. The appearance of the city, with its row of public buildings and elegant private residences, as seen from the water is very picturesque, and this impression is not belied by a closer inspection of its neat and spacious roads, bordered by well-built houses. The most imposing public buildings are the quadrangular shaped barracks which

accommodate the Lycum, the Public Library and the Government Press. Other noticeable structures are the Governor's Palace and the Cathedral. The square in the lower part of the town is adorned with a life-size statue of Albuquerque standing under a canopy.

Old Goa, once the metropolis of the Portuguese empire in the East and the wealthiest city in all India, is now a place of magnificent churches only, four or five of these ranking as first-class and being in perfect preservation. The cathedral of St. Catherine erected by Albuquerque is the seat of an archbishop, while the convent of St. Francis is notable as having been the first structure consecrated to Christian worship in Goa. The church of Bom Jesus is a magnificent edifice which contains the shrine of St. Francis Xavier, the great missionary of the East and the patron saint of the Goanese.

## MINES AND MINERALS

### GENERAL DATA

**T**HE mineral resources of India are immense but as yet largely unexploited. There are deposits of some minerals unrivalled in quantity and quality—mica, manganese, barytes, barite and corundum. Iron ore exists to a degree only partially realised. Copper deposits are extensive, but have not yet been very freely drawn upon; the tin mines of Burma are of considerable importance, and the gold production of the country is worth nearly £2,000,000 annually.

**MINERAL OUTPUT.**—There was an apparent increase of £3,607,740 to £28,026,598, or about 14.6 per cent., in the value of the total output of minerals in India during 1924 over that of 1923 according to the last issued records of the Geological Survey of India. The figures are, however, somewhat artificial, being in part due to the higher average value of the rupee during 1924, while in some instances, though the output fell in quantity, it increased in value. The money figures of the principal minerals produced in 1924 were as follow, those given in parenthesis being for the preceding year: Coal, £10,706,928 (£9,738,569), petroleum, £7,341,202 (£7,007,915), manganese ore, £2,749,187 (£2,215,984), gold, £1,827,433 (£1,702,642), lead and lead-ore, £1,691,154 (£1,121,474), salt, £664,371 (£749,382), silver, £810,869 (£677,207), mica, £679,796 (£538,435), building materials, £733,117 (£512,409), tin and tin-ore, £191,026 (£185,641), saltpetre, £182,305 (£149,757), iron ore, £197,612 (£136,415), other minerals, £781,508 (£283,028).

The total for 1924 was thus £28,026,598, compared with £25,018,858 in 1923.

**MINES ACT.**—The Indian Mines Act of 1901 was amended in 1923 and came into force in its altered form in 1924. The rules and regulations under the measure of 1901 have generally been incorporated, but the provisions of some rules were strengthened and certain new ones inserted. The most important are those limiting the weekly hours of employment to 60 hours for work above ground and 54 hours for work below; those relating to the certification of mine surveyors and of underground foremen; to the raising and lowering of persons and to the conditions of roads and working places, to the use and custody of explosives, and to the use of safety lamps.

### MINING ASSOCIATIONS.

The leading associations connected with Indian mining are the Indian Mining Association (founded in 1892), whose headquarters are at Calcutta, and the Indian Mining Federation (Calcutta), which represents Indian capital in the coal-mining industry of Bengal and Bihar and Orissa. The Indian Mining Association has a membership of 150, and exists to protect by every legitimate means the interests of those engaged in developing the mining industries of India as also to provide a ready means of arbitration for the settlement of disputes.

### MINING EDUCATION.

—Some years ago a scheme for establishing a School of Mines at Dhanbad was strongly recommended by the Indian Industrial Commission, but was temporarily shelved on the recommendation of the Lythgoe Committee. The scheme has now taken practical shape, funds have been allotted, and a site has been selected. The building, which was expected to reach completion in 1926, is designed to accommodate 150 students in the first instance, but is capable of expansion. The Jamshedpur Technical (metallurgical) Institute has done a good deal for the advancement of mining education, and receives annual grants from the Governments of Bihar and Orissa and Bengal, from the State of Mysore and from other bodies.

### PRODUCTS

#### BUILDING MATERIALS, CLAY, ETC.—

The estimated value of building stone and road metal produced in 1924 was £733,117, the total increase in value over the previous year being above 43 per cent. The recorded output of building material and road metal now stands seventh in value among Indian minerals. By far the most important item in the building materials is limestone and kankar, including dolomite, of which the total production during 1924 was 1,851,455 tons, valued at £265,657. The value of the clay produced was £1,153, and of fuller's earth £1,153, both these products, as also gypsum (£5,527), showing a decline.

**CHROMITE.**—The principal chromite-producing regions of India are Baluchistan, Mysore, and Bihar and Orissa. The Baluchistan deposits are large and produce a rich ore averaging nearly 55 per cent chromic oxide

### PRODUCTS

The chief mines are located at Hindubagh, in the Zhob Valley. The chromite of the State of Mysore is high in iron and generally inferior to that of Baluchistan, yielding up to 52 per cent chromic oxide. It is stated that important deposits are being reserved by the State of Mysore in anticipation of an increased local demand for chrome chemicals to meet the requirements of the large domestic tanning industry and for projected steel plants. In Bihar and Orissa chromite deposits are very irregular in size and distribution, although they yield ore of fairly good quality, with 50 per cent chromic oxide. The total output in 1924 was 45,462 tons, against 54,242 tons in 1923, the decline being due to a greatly reduced output in Mysore.

**COAL.** Coal-mining is by far the most important branch of the Indian mineral industry. It is not generally realised that India produces more coal than any other division of the British Empire (Great Britain excepted), and that considerably over 90 per cent of the total output is consumed in the country. At present almost all the output is obtained from the Gondwana coal-fields in Bihar and Orissa and Bengal, and the remainder from the Tertiary coal-fields. There was a remarkable increase in production in 1924, the total 21,776,000 tons—being some 1,520,000 in advance of the 19,056,883 tons yielded in 1923. All the provinces except Baluchistan, Burma and Hyderabad showed an increase, the total being the largest recorded in any year with the exception of 1919, when the production was 22,628,037 tons.

The production of Indian coal in 1925 was provisionally stated as 20,900,088 tons, of which 216,000 tons were sent to foreign ports. (See also under "Commerce" and "Transport—Railways.")

**COAL COMMITTEE.**—In 1924 the Government of India announced the appointment of a Coal Committee to inquire generally into what measures should be taken by the Government, by the railways and by the ports, whether singly or in combination, to stimulate the export of suitable coal from Calcutta to other Indian and foreign ports. The most important recommendations in the report of the committee are those devised to ensure that the quality of Indian coal as exported shall reach certain guaranteed standards, for no freight or other concessions of a

financial nature will be of avail if the quality of the mineral as exported is below anticipated standards

**GROWTH OF COAL INDUSTRY.** The growth of the coal-mining industry is shown by the fact that at the end of the year 1923-24 there were 281 joint stock companies, with a paid-up capital of Rs 1,235 lakhs, as compared with 288 and 276 companies, with capitals of Rs 1,137 lakhs and Rs 1,013 lakhs respectively, in the years 1922-23 and 1921-22.

**LABOUR.** Coal mining employs more labour than any other mining industry in India, the number of persons working in all the coal-fields being slightly over 200,000. According to a report by the Department of Statistics, the major portion of those employed are the aboriginal Dravidians from the mountainous country of Chota Nagpur and the Central Provinces, but other castes are also engaged, particularly in the outlying fields. The majority of the workmen follow the vocation of agriculture as well as mining and return to their homes during the period of sowing and reaping, the result being that at such times the output of many of the mines is seriously restricted. At the Makum collieries of the Assam Railway and Trading Company, where the labour question has always been a very difficult one, nearly a third of the total labour force are Mekrans, Chinese and Nepalese.

Most of the large collieries are now equipped with electric power, while the scarcity of coal-mining labour has brought about a great advance in the use of coal-cutting machinery, over 40 electrically-driven machines being in operation in the RaneeGUNGE and Jharia mines alone.

**DIAMONDS.** The days when India occupied an important position as a source of diamonds have long passed, and as a result diamond mining is now comparatively unimportant. Stones valued at £1,085 were mined in 1924, as against £3,200 in 1923.

**GOLD.** The greater part of the total output of gold in India is derived from the Kolar gold-field in Mysore. Small quantities are also raised from the Nizam's mine at Hutti in Hyderabad and in the Anantapur district of Madras. There was a small increase in the output for 1924, which was 396,351 103 oz., valued at £1,827,433, as compared with 383,697 85 oz. (£1,702,642) in 1923.

In 1926 an extensive deposit of gold was located in the Patiala State, near Narnaul. The area of the field is said to be about 16 square miles, and the ore samples are reported to show from 1½ oz. to 2 oz. of gold to the ton, comparing favourably, therefore, with Mysore ore.

**IRON-ORE.** The production of iron-ore increased by 76 per cent from 821,053 tons in 1923 to 1,445,313 tons in 1924. Bengal and Bihar and Orissa are the only provinces in which iron ore is mined for smelting by European methods. The largest deposits of ore now being mined are those at Mayurbhanj and Singhbhum, in Bihar and Orissa, which are worked by the Bengal Iron and Steel Company and the Tata Iron and Steel Company respectively. (See also under "Commerce" and "Industries.")

**MAGNESITE.** The most important magnesite deposits in India are those found in the chalk hills situated between the town of Salem and the foot of the Shevaroy hills in the Madras Presidency. The magnesite here occurs over an area of about 4½ square miles, and the reserves of ore are practically unlimited. Important deposits also occur at Dod Kanya and Dod Katir in the Mysore area. The magnesite industry was revived in 1921 and has since shown continued prosperity, the value of the 24,461 tons mined in 1924 being £21,088, the highest figure yet recorded.

**MANGANESE ORE.** This industry commenced towards the end of the last century by quarrying the deposits of the Vizagapatam district, and from an output of 674 tons in 1892 the production rose rapidly to 92,028 tons in 1900, when the richer deposits in the Central Provinces were also worked. These latter now yielding a larger quantity of ore than the Vizagapatam mines. India alternates with Russia as the first manganese-producing country in the world. The ore raised in the Central Provinces is of very high grade, ranging from 50 to 54 per cent of the metal, and in consequence of its quality is able to pay the heavy tax of freight over 500 miles of railway, besides the shipment charges to Europe and America. The total output in 1924 was 803,000 tons, valued at about £1,750,000, as against 695,055 tons, valued at about £2,250,000 in 1923. These figures have only been exceeded in 1907 and 1913. (See also under "Commerce.")

**MICA.** Mica is the most efficient insulator known to practical scientists, and Indian mica ("Bengal Ruby") is the finest quality obtainable anywhere in the world. The successful exploitation of the metal is thus of high military as well as commercial importance, a fact recognised so clearly by the German General Staff that before the war Bengal Ruby was practically in German hands. In short, mica is a key industry, and steps have been taken to ensure the strict licensing of dealers, as well as of producers in the Government forest of Kodarma, which is the principal source and covers several square miles. At present, India furnishes at least one half of the total world production, the output in

1924 was 3,504 tons. Mica is mined to some extent in the Nellore district of Madras, but the main deposit is in the great Bihar belt in the northern part of the Hazaribagh district. The Indian mica resources are tremendous, but the methods of mining are crude and wasteful, and far stricter supervision is necessary.

**MINOR MINERAL PRODUCTS.** Copper is found in Southern India, in Rajputana, and at various places along the outer Himalayas, but the ore is smelted for the metal alone, no attempt being made to utilise the by-products. Silver, lead, tin and zinc concentrates are mined almost exclusively in Burma. Jadeite, the output of which decreased in quantity from 3,636 cwt in 1923 to 2,630 cwt in 1924, but increased in value from £54,675 to £61,006 during the same period, also comes exclusively from that province, as does tungsten. Graphite is found in small quantities in various places, but little progress has been made in mining except in Travancore. The production of monazite in that region was valued at £0,301 in 1924, as against £3,697 in the preceding year.

**PETROLEUM.** Petroleum is found in India in two distinct areas, one on the east which includes Assam, Burma, and the islands off the Arakan coast, a belt extending to the productive oil fields of Sumatra, Java and Borneo. The other area is on the west, and includes the Punjab and Baluchistan, the same belt of oil bearing rocks being continued beyond the borders of British India to Persia. Of these two, the eastern area is by far the most important, and the most successful oil fields are found in the Irrawaddy Valley. The value of the oil deposits in the islands is uncertain. Attempts to develop the oil springs of the Punjab and Baluchistan have not hitherto met with much success.

The peak of petroleum production in all India was reached in 1919 and 1921, since when there was a small but definite fall in output to nearly 294½ million gallons in 1923. However, as the total production for 1924 was a little over 294½ million gallons, the decline appears to have been arrested. (See also under "Commerce.")

**SALTPETRE.** For many years the world's supply of potassium nitrate, or saltpetre, came chiefly from natural deposits in British India. The most important of these are in the district of Tirhut, Bengal. These deposits are constantly forming, a white crust appearing on the surface of the earth, which is scraped up and purified by re-crystallising from water. Owing to the competition furnished by potassium nitrate made from Chilean nitrate, the production of Indian saltpetre has steadily decreased, and amounted to only 8,543 tons in 1924.

# CEYLON

## PHYSICAL GEOGRAPHY

### CLIMATE

### GEOLOGY

### FAUNA

### FLORA

#### PHYSICAL GEOGRAPHY

THE Island of Ceylon lies between  $5^{\circ} 55'$  and  $9^{\circ} 50'$  north latitude, and  $79^{\circ} 42'$  and  $81^{\circ} 53'$  east longitude, to the south-east of the Indian Peninsula, from which it is separated by Palk Strait, a shallow division some 40 miles across. The colony has an area of 25,332 square miles, about the same as that of Tasmania, or of Holland and Belgium together. England is twice and India sixty times as large. The greatest length of Ceylon from north to south is 270 miles, and its principal breadth is 137 miles. In general outline the island resembles a pear, the apex of which points towards the north. It is divided into nine provinces as follow:—Western, 1,432 sq m, Central, 2,287 sq m, Northern, 3,370 sq m, Southern, 2,146 sq m, Eastern, 3,848 sq m, North Western, 3,016 sq m, North Central, 4,068 sq m, Province of Uva, 3,272 sq m, and Sabaragamuwa, 1,893 sq m.

**COAST.**—The coast is fringed on the north-west by numberless sandbanks, rocks, and shoals, and may be said to be almost connected with India by the island of Rameswaram and Adam's Bridge, a succession of bold rocks reaching nearly across the Gulf of Manaar at its narrowest point. Between Ceylon and the opposite coast are the Manaar Passage, navigable only by very small craft, and the Paumben Passage, deepened considerably and used by large vessels passing from the Malabar to the Coromandel Coast. The west and south coasts, which are uniformly low, are fringed by coconut trees, which grow to the water's edge in great luxuriance and give the island a most picturesque appearance. Along these shores there are numerous inlets and backwaters of the sea, some of which are available as harbours for small native craft. The east coast from Point de Galle to Trincomalee is of a bold and precipitous nature.

**LAKES.**—Lakes strictly so-called do not occur in Ceylon, but lagoons, due to the damming up of river mouths by prevailing winds and currents, are frequent round the coast, and were united by canals in the time of the Dutch, forming important means of transport.

**MALDIVE ISLANDS.**—Some 400 miles west and south-west of Ceylon lie the Maldive Islands, a group of atolls or rings of coral, which are tributaries of the Empire. The Sultan of the Maldives sends an annual embassy and present to the Governor of Ceylon as representing the King. The

inhabitants are principally of Sinhalese descent, with an admixture of Tamils; then language is a dialect of Sinhalese though traders understand some Tamil, and Mohammedanism is their religion. The principal island is Male, where produce consisting of dried fish, coconuts, cowrie shells, tortoiseshell, woven mats, yarn and cloth is collected for export.

**MOUNTAINS.** Most of Ceylon is flat and undulating, but in the southern portion a mountain mass, composed of ridges running generally to the south-east and reaching its culminating height in Mt. Pidurutalagala (8,296 ft.), rises abruptly from the plains. The most conspicuous mountain is Adam's Peak (7,355 ft.), but it is only fourth in point of elevation. This mountain is chiefly remarkable as the resort of pilgrims from all parts of the East. The hollow in the lofty rock that crowns the summit is said by the Brahmans to be the footsteps of Siva, by the Buddhists that of Buddha, and by the Mohammedans that of Adam, while the Portuguese Christians divide their allegiance between the claims of St. Thomas and those of the Eunuch of Candace (Queen of Ethiopia). The footstep is covered by a handsome roof, and is guarded by the priests of a rich monastery (half way up the mountain), who maintain a shrine on the summit of the peak.

**RIVERS.** The chief rivers of Ceylon take their rise in the mountainous district of the south. The largest is the Mahaweli-ganga (Great Sandy River), which is 206 miles long. Rising in the district round Hattton and Nawalapitiya, it flows in a northerly direction to Kandy, where it runs eastward for a few miles before turning again to the north, and entering the sea near Trincomalee. The next largest river is the Malwatte Oya, or Aruvi-ar (104 miles), associated in history with the escape of Robert Knox from Kandy. No other river is 100 miles long. The Kelaniganga (90 miles) enters the sea near Colombo, and the Kalu-ganga (70 miles) near Kalutara, between which town and Ratnapura, the centre of the gemming industry, there is constant communication by boats. Generally speaking, however, the rivers of Ceylon flow so rapidly, and in recent times especially have become so silted up by floods caused by the clearance of forests for planting, that they are only navigable to a little extent by small boats, and are not a factor of serious geographical importance as means of transport.

#### CLIMATE

Ceylon, being close to the Equator, has an equable climate, with but minor variations from one time of the year to another.

**MEAN TEMPERATURE.** The range of temperature in one day is only slight at sea level, though more pronounced at altitudes, the average daily range for Colombo being about 12 deg. Fahr., while in Kandy (1,000 ft. up) it is 15 deg., and in Nuwara Eliya (6,200 ft.) about 18 deg. The mean temperature of the hottest month in Colombo is 82.6 deg., of the coldest 79.1 deg., the corresponding figures for Nuwara Eliya being 60.8 deg. and 50.6 deg. Fahr.

**MONSOONS.** The seasons are determined by the monsoons which blow alternately from north-east and south-west for about six months each. As a rule the earlier part of each monsoon is wet, the later comparatively dry, the end of the north-east monsoon (January to March) being distinguished in south-western Ceylon as the "dry season". The island may be clearly marked out into climatic zones by the effects of the monsoons, the south-west monsoon (April to September) bringing rain to the hills (chiefly on the western side) and the south-western plains, while the north-east monsoon (October to March) at first brings rain to all the island, but later only to the eastern side of the hills.

**RAINFALL.**—The annual rainfall is less than 50 in. in Jaffna, the north-west and the south-east from 50 to 75 in the north-east, 75 to 100 inches in a belt of 20 miles width surrounding the mountain zone, and from 100 to 200 inches in the tea country. The occurrence of rain can be anticipated with fair accuracy, and the seasons for heavy downpours regularly coincide with the change of the monsoons.

**WETTEST MONTHS.**—As much as 53 in. has been registered in Colombo during October and November. These months are therefore to be avoided by the tourist. August and September are often delightful months in Ceylon, and they are in great favour with the many visitors from India, Burma and the Straits Settlements.

#### GEOLOGY

A probable theory is that the island of Ceylon was at one time at the outer end of a peninsula which stretched north-eastward from South Africa through Madagascar towards Southern India. By the action of the tides, by subsidence and otherwise, this peninsula became broken up into islands, and finally disappeared, but traces of the connection may be seen to this day in the African affinities of some of the plants and animals of Ceylon and Southern India.

A small area round the coast of Ceylon, especially in the north, is of raised coral or other recent formation, and there is a sub-

merged or outer shelf along the northern coast of the island composed of detritus washed down from the rivers of India. In general, however, all the rocks are of igneous origin, gneisses resembling those of Southern India, and consisting mainly of felspar, quartz, and pyroxene, with frequent occurrences of mica, hornblende, and iron ores. Bands of crystalline limestone are also found and the decomposition of some of the rocks has resulted in the formation of kaolin, or China clay, and in the production of laterite (known locally as "kabok"), a rock which occupies large areas in the plains, and of which the famous "red roads" of Colombo are made.

### FAUNA

Ceylon belongs in a zoo-geographical sense to India, and, in common with Southern India, it has a number of animals whose nearest relatives are African. There are also slight indications of faunal relations with the Malayan and Australian regions. The centre and south-west of Ceylon, excepting the mountain tops and the scattered patches of forest, are too much cultivated to have many wild animals, but they are plentiful in the plains of the north and east, especially in the game reserves, of which the best known is that near Hambantota, occupying an area of 150 square miles.

**ANIMALS.**—Of mammals, the most interesting is the elephant, which is still common and is carefully preserved. The Ceylon species is smaller than the African and rarely possesses tusks. Among other interesting mammals are the small black bear, the leopard, generally known as the cheetah, the monkey, of which there are five kinds, deer, buffalo, wild boar, jackal, mongoose, otter, and porcupine. Squirrels are about the commonest animals on the island, and bats are frequent, one gigantic species being known as the flying fox.

**BIRDS.** There are said to be 400 different varieties of feathered life on the island, of which a leading authority considers 47 to be peculiar to Ceylon. Few of them are of vivid colouring or are noted for their song, and they have been greatly reduced by the clearances made for agriculture.

The largest bird, the peacock, is plentiful in the denser jungles, and a variety of hawks are familiar to both town and jungle. A very attractive bird, whose song is heard in the low country during the mating season, is the koel, or Indian cuckoo. It is almost as large as an ordinary crow, and the male is jet black in colour. The female is spotted after attaining maturity, laying its eggs always in the nest of the crow which hatches them out. Eagles and owls, herons and egrets are indigenous to the island, and a popular bird is the weaver-bird.

**FISHES.**—Fish are abundant round the coasts of Ceylon, and there are some good edible varieties in the inland tanks and rivers. Of those in ordinary use for the table, the finest is the seer, a species of scomber. Mackerel, dories, carp, whiting, mullet (red and striped), soles, and sardines are abundant. Sharks appear off all parts of the coast, and the huge saw-fish infests the eastern side of the island, where it attains a length of from 12 to 15 feet. There are also several varieties of fish remarkable for their brilliant colouring, such as Red Sea perch, of the deepest scarlet, and the great fire fish, with scales of a lustrous green, known to the natives as the "parrot fish."

**INSECTS.**—These are well represented. There are many large and beautiful butterflies and moths. Leaf and stick insects,

1. Peradeniya Garden: Tall palm trees.  
2. Seehore, Mount Lavinia.  
3. Mount Lavinia Hotel.  
4. Fishing Coaster on Seehore, Welisawatta.  
5. Peradeniya Garden: Tall palm trees.

which successfully mimic the appearance of green leaves or twigs, are common. Ants, especially white termites, abound, as do fireflies, crickets, cicadas and cockroaches.

**MOLLUSCS.** Molluscs are very numerous, the most noticeable perhaps being the large snail which climbs up palm trees and lays eggs of enormous size. One of the most interesting events on the island is a "pearl fishery," when the pearl oyster, really a mussel, is captured in large numbers upon the shallow banks between Ceylon and India. For several years there will be no fishery, and then will come a season of favourable years, when the oysters are present in large numbers and can be fished.

**REPTILES.**—Of the reptiles of Ceylon, the most striking is the crocodile which is common in the irrigation tanks and some of the rivers, and has been known to carry off bathers, as well as cattle and wild animals which come to drink there. Two enormous lizards, the kabaragoya and the talagoya, are frequent, and snakes are common but are rarely seen. The largest is the rock snake (python molurus), which sometimes grows to over 20 feet in length. There is also the rat snake, which is the next largest, and which lives on frogs and rats; it is quite harmless. The most deadly are the cobra and the tie polonga, or viper. There are many varieties of non-poisonous snakes whose colourings are most beautiful.

### FLORA

The extensive range of climate in Ceylon is accompanied by a corresponding range of vegetation, though the total flora is poor compared with that of the Malay Islands. Generally speaking, the flora resembles that of Southern India.

**PLANTS.** Very many of the species of plants are peculiar to the island. Most common are the gregarious plants known as Vilu, species of the genus *Strobilanthes*, which only flower at intervals of five, six and seven years. Tree ferns, often 25 ft in height, numerous tufted bamboos, melastomads, and orchids are found in the mountain forests. The orchids number about 150 species. In the more elevated parts many plants partake of European forms, yet presenting tropical characteristics. Such are the guelder rose, St John's wort, the pitcher plant, violets, geraniums, buttercups, sundews and campanulas. The most beautiful flowering shrub of the alpine regions is the rhododendron, which in some instances grows to a height of 70 feet. It is met with in great abundance in the moist plains of the elevated land above Nuwara Ehiya, flowering very freely in June and July.

**TREES.**—Palms are prevalent everywhere, the beautiful areca palm, the feathery jaggery or kitul, and the lovely talipot being the glories of Ceylon lowland vegetation. The coconut palm is characteristic of the southern and western districts, and the palmyra palm of the northern and eastern. The *Cocos nucifera*, or coconut palm, is a native of the island, and may justly be considered the most valuable of its trees. It grows in great abundance along the entire sea-coast of the west and south sides of the island, and furnishes almost all that a Sinhalese villager requires. Its fruit, when green, supplies food and drink, when ripe it yields oil. The juice of the unopened flower gives him toddy and arrack. The fibrous casing of the fruit when woven makes him ropes, nets and matting. The nut shells form drinking vessels, spoons, etc., while the plaited leaves serve as plates and dishes, and as thatch for his cottage. The dried leaves are used as

torches, the large leaf stalks as garden fences, and the trunk of the tree sawn up is employed for every possible purpose from knife handles to door-posts. There are four kinds of this palm: the common, the king, the dwarf and the Maldiva.

In the recesses of the low-country forests the trees are high and closely packed. Amongst the timber trees the most valuable are the calamander, satin wood, and ebony. One of the most valuable native trees of Ceylon is the mirinda. In the north the

dry forest region is remarkable for its valuable timber trees, of which the palu and halmilla, or Trincomille wood, are noticeable. Plantations of tea, rubber, cacao, cinnamon, cardamom, and tobacco abound in various parts of the island.

## HISTORY

**T**HE earliest inhabitants of Ceylon belonged to a prehistoric race now represented by the fast-dwindling Veddas, or wild men of the island. This was about three thousand years ago, when the Sanskrit-speaking Aryans of the north of India had not emerged from obscurity. But before the dawn of civilisation fell upon England the colonisation of Ceylon, according to the long metrical translation called the Maha Vansa, had been accomplished by a people of the Aryan race, who had discovered the wonderful resources of the island, had conquered and colonised it, and by a system of irrigation which is the admiration of engineers of to-day had brought the whole country into a high state of culture; moreover they had built beautiful cities, the remains of which even now hold a high position among the wonders of the world. The Maha Vansa recounts the history of Ceylon and its 171 native kings down to A.D. 1798. The Tamils from Southern India who established dynasties in the island in the third century B.C. waged war incessantly with the Sinhalese settlers. By the beginning of the 16th century the Tamils had gained possession of the greater part of the country, while the Sinhalese kings reigned in the south and west. The seaports remained in the possession of Arab traders, who introduced into the island the Mohammedan religion, and their descendants are settled to-day in all the chief trading centres, especially on the east and west coasts.

### 1508-1602 : THE PORTUGUESE

The first intrusion of the white man took place in 1506, when the Portuguese, who at that time were active in Eastern waters, discovered Ceylon, and entered into an agreement with the King of Cotta. Ceylon at that time was ruled by a number of petty rajahs or chieftains, both Sinhalese and Tamil, who were all subordinate in a greater or lesser degree to the Maharajah Dharana Prakrama Bahu the IXth. The power of the Maharajah had declined greatly since the time when a predecessor had sent a fleet of 500 galleys to Cambodia to avenge an insult offered to his ambassadors, a condition of affairs due to incessant strife with his rivals for supreme authority, and it was during these distractions that the Mohammedans from the Malabar coast gradually took into their hands the entire trade of the island. This trade lay principally in cinnamon which was of a finer quality than that found elsewhere. The Portuguese sought successfully to monopolise the trade in this commodity, and, after forming a settlement at Colombo in 1517, soon secured all the harbours on the north, west, and south of the island. Of these they remained the undisputed masters for over 100 years, though the Sinhalese, many of whom had embraced Christianity and adopted Portuguese names, never relaxed their struggle for independence,

and often inflicted local defeats upon their Portuguese masters.
