**Workshops.**—These are situated in the same building as the head office. They are equipped with all the most modern machinery and labour saving devices, power being derived from either a 50-60 horse power steam engine or many individual electric motors aggregating 35 h p. The staff numbers 250.

**Yards.**—These are situated at Mowbray, and cover an area of 62,000 sq. ft.

**Transport.** The company's transport is effected by two 5-ton lorries, respectively a Thornycroft and a Packard, an Albion capable of loading 3 tons, and a 30-cwt Guy lorry, besides the necessary horse waggons.

**Awards.**—The firm is justly proud of three first prizes, a diploma and gold medal awarded to it at the Capetown Exhibition of 1904-5, for joinery work, etc., in competition with overseas firms.

**Personal.**—Mr. Reid represented the Mowbray ward of the Municipality for 12 years, and has been twice Mayor of the town. He has been a councillor for 25 years, and has also held the position of President of the Federated Master Builders' Association of South Africa.

**Head Office.**—Strand and Rose Streets, Capetown. Cables, "Builder," Code. Reuter's.

**Agents.**—Messrs. Keep Bros., 119-20, London Wall, London, E.C.2 and 35-36, Great Charles Street, Birmingham.

**Bankers.**—The Standard Bank of South Africa, Ltd.

(See illustration, page 171.)

**ANDREW CARR.**

**Inception.**—Mr Andrew Carr, who conducts a business as builder and contractor, arrived at Capetown about twenty years ago from Aberdeen, Scotland.

**Development.**—After remaining at the Cape some five years, Mr Carr went to Grahamstown, where he carried out a large number of contracts, including much work for Rhodes' College, St Andrew's College and the Training College. The Ladies' Hostels and Dining Hall, of which an illustration is here reproduced, gives some idea of the importance of the constructions undertaken by the firm at that period. This was only one of the contracts executed during the time spent at Grahamstown.

**Capetown Contracts.**—In 1923 Mr Carr returned to Capetown, where, since that date, he has been engaged upon the large and imposing General Estate Building in Adderley Street, which has cost upwards of £45,000, the architects being Messrs Black and Fagg. A new building for Messrs Cleghorn & Harris in Adderley Street, costing approximately £60,000, has just been completed by the firm.

**Address.**—General Estate and Orphan Chambers, 130, Adderley Street, Capetown P.O. Box 2555.

**Telegrams.**—"Carndrew."

**C. FREEMAN & CO.**

**Inception.** This firm was founded by Mr C Freeman over 50 years ago.

**Development.**—In the earlier days of the company's history, Mr Freeman, an architect by profession, was responsible for many of the large buildings in Capetown, notably the Standard Bank Building in Adderley Street, the Wesleyan Church in Greenmarket Square, and many of the larger commercial emporiums. The firm is now entirely controlled by Mr J Freeman, and the staff numbers 50.

**Activities.**—Messrs C Freeman & Co act as importers of general hardware, cement, plaster, paints and oils, colour and varnishes, stoneware pipes, sheet, plate and fancy glass, and all building materials.

**Premises.**—The fine block at the corner of Strand and Rose Streets, with a frontage to both thoroughfares of 150 feet, is the firm's headquarters in Capetown.

**Departments.**—There are three main departments—glass, hardware, lime and cement.

**Agencies.**—The company is agent for "Burham" Brick, Lime and Cement Co., The Consolidated Rand Brick and Pottery Co., and Williams & Williams, manufacturers of steel windows. It is also sole agent in South Africa for Walter Macfarlane & Co., of Glasgow.

**London Agents.**—William Dunn & Co Ltd, Broad Street Avenue, F.C.

**Address.**—P.O. Box 1238, Capetown.

**Cables.**—"Manfreeco" Codes A B C 5th Edition and Bentley's.

**Bankers.**—The Standard Bank of South Africa, Ltd.

**RUTHERFORD, LIMITED.**

**Inception.**—The business carried on by this firm was established in Capetown by Mr A E Rutherford in the year 1912.

**Development.**—In 1919 the enterprise was converted into a limited liability company, of which Mr. Rutherford was the chief shareholder, but in 1924 Mr Rutherford's interests were acquired by Mr. Herbert E Gearing, who had been associated with Messrs. Gearing Ltd., the well-known engineers, for some seventeen years, and the firm under notice is now managed by Mr Gearing.

RUTHERFORD, LTD., Capetown  
Two Interior Views of the Firm's Stores.

**Activities.** The company deals in general engineering supplies and machine tools of every description, and has large stores and a showroom in Capetown, being the sole agent in the Province for many celebrated British engineering houses. The firm is always ready to correspond with any manufacturer's desirous of efficient representation in the Union whose products do not conflict with connections already held.

**Agencies.**—Among the representations held are the following: Messrs J H Andrew & Co Ltd, "Toledo" Steel Works, Sheffield; Barrow, Hepburn & Gale Ltd (bolting manufacturers), London; Barwells Ltd (bolt and nut manufacturers), Birmingham; Baynes, Chas. & Co (hacksaws), Blackburn; Cookson, Jos. Ltd (waste), Manchester; Cradley Boiler Co Ltd, Birmingham; The Chalmers-Edina Co. Ltd (concrete mixers, etc.), Scotland; Dampney, John & Co Ltd. (paints), London; Fraser Douglas & Co. (transmission machinery), Scotland; Gleniffer Motors, Ltd (marine motors), Glasgow; Hoffman Mfg. Co. Ltd (ball bearings), Chelmsford; Rochdale Asbestos Co Ltd. (packing of all descriptions), Rochdale;

Tangyes Ltd, Cornwall Works, Birmingham; Wadkin & Co (woodworking machinery), Leicester.

**Offices.**—76, Bree Street, Capetown. Cables: "Martlet," Capetown. Codes: A B C 5th and 6th Editions, Marconi International, and Bentley's.

**OTHER COMMERCIAL ENTERPRISES**

**CHAMBERLAIN'S LTD., AFRICA.**—P.O. Box 1718, Capetown. Established 1872. Company manufactures such well-known proprietary medicines as Chamberlain's Cough Remedy and Chamberlain's Pain Balm. Capetown factory was erected in 1912. Head office, Des Moines, Iowa, U.S.A. Factory produces colic, diarrhoea, cough, pain, stomach and liver remedies and tablets.

**DICKINSON, JOHN, & CO. (AFRICA) LTD.**—Croxley House, Wale Street, Capetown. Paper makers, manufacturing stationers, envelope makers, etc. Branches at Johannesburg, Durban and East London.

London House 65, Old Bailey, E.C. 4  
Cables "Croxley" Codes A B C and Bentley's.

MAIN STREET, PORT ELIZABETH, PREMISES OF MESSRS CLEGHORN & HARRIS LTD IN LEFT FOREGROUND.

## PORT ELIZABETH CITY AND PORT

**S**ITUATED on the shores of Algoa Bay, Cape of Good Hope Province, Port Elizabeth owes its origin to a small band of British settlers who arrived in 1820. From the few huts and a military blockhouse of those distant days, the city has grown steadily in size and importance until it now has not only the second largest total of inhabitants in Cape Province, but has attained a commercial and industrial position of great importance. The population at the census of 1921 was in all 46,094, of whom 25,982 were white and 20,112 coloured.

**BUILDINGS.**—The many handsome public buildings of Port Elizabeth include the City Hall, erected at a cost of £26,000, the Magistrates' Offices, the Post Office, which cost £62,000, the Public Library, on the west side of Market Square, which was erected in 1902 and houses a magnificent collection of South African books and pamphlets, St. Mary's and St. Paul's Churches, and St. George's Club. The Provincial Hospital

stands to the north of the main road to Capetown, and near by are the fine buildings of the Grey High School.

**INDUSTRIES.**—The temperate and even climate of Port Elizabeth is particularly suited and eminently advantageous for the establishment of industries. A great development of the tanning and leather making enterprises has taken place during the present century, and foodstuffs, furniture making, tobacco curing, and fruit canning also play a large part in the industrial activity of the city. Port Elizabeth was recently selected as the best possible site in South Africa for the Ford Car Company's assembly factory.

**MUNICIPAL MARKETS.**—At Port Elizabeth is the chief of the produce markets of the country, and the Municipality owns the large and handsome buildings which form the first civic market ever built in South Africa. Sales are held almost daily, and each year shows a considerable increase in the quantity of wool displayed for buyers (who come from almost every country in

the world) and sold by municipal auctioneers. Although large quantities of wool are disposed of out of hand through commission agents, or sent overseas for sale, yet the Municipality has wisely afforded a favourable method for the auctioning of such produce, keen competition being shown and record prices paid for the best quality wool. Catalogue sales of wool are held every Friday, while skins and hides catalogue sales are conducted every Thursday.

**MUSEUM.**—The Museum collection, which is one of the largest and most interesting in South Africa, was recently transferred to new premises in Bird Street. This collection represents every branch of South African natural history, botany, geology, ethnology, etc. The grounds, which are well laid out, contain an aviary and the famous snake park, under the curatorship of Mr F. W. Fitzsimons, the well-known authority on South African fauna. Here is one of the most interesting sights in South Africa.

The recently completed Princess Esplanade, Humewood (Contractors, Murray & Stewart), showing the Municipal Baths in centre of picture.

Looking towards Port Elizabeth, taken from the Municipal Baths.

**PARKS.**—St George's Park, well laid out with shady avenues, lawns, and conservatories, is worthy of notice, much of its soil having been carted to the spot. In the park, forming an ornamental centre to a large circular reservoir, is a memorial to members of the Prince Alfred's Guard who lost their lives when on active service. Adjoining the park are cricket and football grounds with pavilions attached, tennis grounds, running grounds, bowling greens and croquet lawns, etc. To the north of the town is Prince Alfred's Park, with tennis courts and bowling greens, and a lake of nearly 100 acres.

**WATER SUPPLY.**—The water supply, brought 27 miles from Van Staden's, 30 miles from Bulk, and 47 miles from the Sand Rivers at a cost of £600,000, is excellent and has been the means of greatly improving the city. The dams hold 30,000,000, 124,000,000, and 183,000,000 gallons respectively, and the daily consumption is about 1,800,000 gallons. The sewerage scheme recently completed cost £500,000.

#### PORT

Port Elizabeth harbour, which is on the western end of Algoa Bay, is now being developed. The new breakwater, to be 8,500 ft long when finished, is to cost £1,500,000, and

will afford the necessary protection to admit of the work of the port being carried out by lighterage in quiet water at all periods. At the same time it will form a portion of the general scheme for berthage of ocean going ships along the quay, whenever this becomes necessary.

**ACCOMMODATION.**—There are three iron jetties—Don Pedro jetty, 1,400 ft by 105 ft, depth alongside 13 to 24 ft, North jetty, 1,204 ft by 84 ft, depth alongside 9 to 24 ft, and South jetty, 1,162 ft long by 108 ft wide. These jetties are fully equipped with modern hydraulic cranes and railway sidings for the direct transfer

1. Mr. J. HIRSCH.  
President Port Elizabeth Chamber of Commerce (1925).

2. Mr. H. O. FRIELINGHAUS  
Chairman (1928), Produce Association, Port Elizabeth.

of cargo between lighters and railway trucks. There is a shipway capable of carrying craft of 100 tons dead weight, and drawing from 9 to 14 ft.

**ANCHORAGE.** — The roadstead has excellent holding ground, where vessels can ride with absolute safety if properly found with tackle. The prevailing winds are westerly, with intermissions from the south-east, and it is to the latter that the port is most exposed. When signals to prepare for foul weather are made from the post office, sailing vessels with doubtful ground tackle should get under way, making their first task towards St. Croix Island.

**BURNING.** — To prevent injury to the jetties by vessels drifting upon them during south-east gales, no sailing vessel is permitted to lie south of a line from the Hill Lighthouse through the North Malay Mosque, and should any vessel anchor south of this line, she must shift her berth to north as soon as circumstances permit.

Steamers must anchor to south of above line.

**PILOTAGE.** Pilotage is not compulsory at Algoa Bay, and the Harbour Board is not responsible for any accidents which may occur to vessels while in charge of its pilots or tugs. Sailing vessels engaging pilots beyond a three miles' radius from the Port Elizabeth Hill lighthouse are charged 12s. 6d. per 100 tons gross reg. with a minimum charge of £5 10s. 0d. Within a three miles' radius the charge is £2 15s. 0d. Steamers engaging pilots within a three miles' radius are charged 15 10s. 0d. for inward pilotage, and an additional £2 15s. 0d. if outward pilotage services are rendered. To and from the jetty the charge is for steamers 45s. and for sailing vessels £4 10s. 0d.

**PORT CHARGES.** — Harbour and light dues are as at Capetown.

**LANDING CHARGES.** — For receiving from ship in roadsteads and lighterage, landing, and loading into railway trucks in transit. General cargo not exceeding two tons in weight, for any one package, 2s. per ton and in addition 1s. 3d. per ton, 1s. 6d. per ton and 10s. 8d. per cent ad valorem wharfage charge. For receiving as above and delivery by road in Port Elizabeth within the recognised cartage radius general cargo not exceeding two tons in weight for any one package, 4s. 6d. per ton, and in addition 1s. 3d. per ton, 1s. 6d. per ton, and 10s. 8d. per cent ad valorem wharfage charge.

**LOADING CHARGES.** — For general cargo received by rail and delivered to ship in roadstead, not exceeding two tons in weight, 3s. 3d. per ton and an additional 10 per cent ad valorem wharfage charge. For general cargo not exceeding two tons in weight collected from shippers stores and delivered to ship in roadstead, 5s. 9d. per ton, and an additional 10 per cent ad valorem wharfage charge.

**TOWAGE.** — Charges are as at Capetown. Boat to and from ship, £1 maximum per trip.

**WATER.** — At wharf, jetty, or quay direct from mains, 7s. 6d. per 1,000 gallons, supplied by tugs or water boats, 25s. per 1,000 gallons. Maximum charge, 37s. 6d.

**SHIPPING AND TRADE.** — The number of vessels entered at Port Elizabeth in 1924 was 561, compared with 548 in 1923, and their tonnage 2,252,773, as against 2,143,453 tons. British vessels entered during 1924 were 420, and foreign vessels 120. The total tonnage of cargo landed was 398,648, compared with 332,160 tons in 1923, and of cargo shipped 127,893, compared with 162,825 tons.

7. Machine Shop

During the first six months of 1925, vessels entered totalled 298, compared with 276 during the corresponding period of 1924, their tonnage aggregating 1,162,244 and 1,114,531 tons respectively. During the same period the cargo landed totalled 207,120 tons, as against 136,211 tons.

## REPRESENTATIVE COMMERCIAL ENTERPRISES

### PORT ELIZABETH ELECTRIC TRAMWAYS COMPANY.

**Inception.** This company started operations in November 1896 with two lines, one from Market Square to North End, the other from Market Square to South End, 2.4 and 1.2 miles in length respectively.

**Development.** In 1897 two more routes were opened to Cape Road, one via White's Road, the other via Russell Road. These routes joined at the junction of Russell Road and Rink Street and continued to the end of Cape Road. In 1902 a line was opened to Hunnewood, the local seaside resort, a distance of 1.8 miles. The system thus comprises five main routes, all radiating from a central point, Market Square.

**Progress.** Some years later the majority of the routes were extended, the North End route to the Show Yard grounds, about half a mile, the Cape Road route to the local Golf Club house, thus recently being again extended to the Racecourse, the total length of line being now 3.18 miles. The South End route was extended in 1904 to the suburb of Walmer boundary, passing close to Victoria Park, its length now being 1.55 miles. In 1912 the Hunnewood route was continued to near the bathing houses and cafes, the distance being 2.1 miles, and work is now in hand to duplicate this track, which is at present a single one with four sidings.

**Places of Interest.** Those touched by the various routes are -

#### CAPE ROAD VIA WHITE'S ROAD

Some of the best hotels, local museum and Snake Park, Port Elizabeth and St. George's Clubs, St. George's Park, Provincial Hospital, the golf course and racecourse.

#### CAPE ROAD VIA RUSSELL ROAD

Provincial Hospital, golf course and racecourse. *North End Route* - Business and manufacturing centres, Prince Alfred's Park, a branch line to the Agricultural Society's show grounds. *South End Route* - The smaller and cheaper hotels, Victoria Park. *Hunnewood Route* - The seaside route where some of the finest hotels are to be found, and one of the best bathing beaches in the country.

**Concession.** - The company is operating the tramway system under a 30 years' lease, granted by the municipality, with extension periods of 10 years thereafter until the City Council is prepared to take over the concern.

**Properties.** - These include power station, car sheds, machine shops and stores in Valley Road, and a subsidiary car shed and extensive yard in Adderley Street, North End.

**Financial.** - The company has £236,000 invested in land and plant.

**Road Maintenance.** The company is responsible for the upkeep and maintenance of all roadway between tracks, as well as an 18 inch margin on either side. The rails are set in concrete girders fastened to anchors. There is in all a total of 16½ miles of single track.

**Rolling Stock.** - The passenger cars were manufactured by J. G. Brill & Co. and number 39. They comprise 17 closed double deckers

and 22 single deckers (12 closed, 2 open, 8 convertible), with a seating capacity of from 70 in the larger cars to 30 in the smaller. Besides the above, there are 1 freight car, 1 water sprinkler, and a prison trailer.

**Overhead Line and Power Plant.** The company maintains 18 miles of overhead line, of which 8 are span wire suspension and 2 are side bracket suspension. The power plant consists of 2 Belliss & Morcom triple expansion vertical engines of 750 h.p., direct coupled to 2 x 500 k.w., direct current generators of 550

being White's Road (Cape Road route), 1 in 8, Walmer Road (South End route), 1 in 10, and Russell Road (Cape Road route), 1 in 11.5.

**Buses.** - The company owns six buses, four on Clydesdale chassis and two on Reo, built, with the exception of two (which carry 25), to carry 21 passengers each. The buses are mostly run on the Hunnewood route.

**Statistics.** Passengers carried in 1898 numbered 1,800,000, in 1922, 5,850,000, and 1925, 4,975,000. The total miles run in

HEAD'S GRAND HOTEL, Port Elizabeth.

1. The Dining Room.
2. Portion of the Lounge.

(See letterpress, page 180.)

volts running at 300 r.p.m. Superheated steam is supplied from 2 B & W water tube marine type land boilers, equipped with electrically driven mechanical stokers, working at a pressure of 200 lbs per sq. inch. The company is about to add a 500 k.w. 550 volt direct current motor converter, to take power from the Municipal Electricity Supply Station.

**Gradients.** - Port Elizabeth being mostly built on the slopes of a very steep hill, the gradients are naturally severe, the heaviest

1925 was 860,000. Operations were started with 21 cars with a seating capacity of 738, to-day the company has 39 cars with a capacity of 1,850.

**Employees.** These total 166.

**Directors.** Messrs A. Gloag (chairman), W. H. Freemantle (managing director), A. J. Hazell and N. E. Harris.

**Head Office.** - Cape Electric Trams Ltd., 4, London Wall Buildings, Blomfield Street, London, E.C.2.

**HEAD'S GRAND HOTEL.**

**Situation.** The Grand Hotel is situated in the residential quarter on the hill which rises above the business centre of the town, and can be reached either on foot or by tram in a few minutes. A park on either side of the premises ensures uninterrupted views, and prevents the hotel being closed in by other structures.

room, from which an extensive and pleasing view of the bay may be obtained, can seat 200. Dances and other social functions are occasionally held in this room.

**Service and Cuisine.**—These are under the direct supervision of the proprietor, Mr W H Head. The service is carried out by a staff of well trained Indians.

**HIRSCH, LOUBSER & CO. LTD., Port Elizabeth.**  
1. Company's Premises in Strand Street.  
2. Showroom.

**Accommodation.**—This comprises 78 large, airy bedrooms and an adequate number of bathrooms with hot and cold water laid on, there being accommodation for 100 guests. The smoking and general lounges, the reading and writing rooms are all furnished and equipped with due regard for comfort and are decorated with much taste. The dining

**Facilities.**—The hotel porters and motor cars meet all boats and trains. Advance bookings can be arranged by letter or wire, and all bookings for steamers or trains can be effected by the hotel staff if necessary.

**Address.**—Head's Grand Hotel, P.O. Box 82, Port Elizabeth. Cables: "Grand," Port Elizabeth.

(See illustration, page 179.)

**HIRSCH, LOUBSER AND CO. LTD.**

**Inception.** This old established business was founded in Port Elizabeth in the year 1876 by the late August Hirsch and Mathew Michael Loubser.

**Development.**—During the ensuing thirty years it was conducted as a private concern, becoming incorporated as a limited liability company in 1906.

**Activities.**—The company carries on business as general merchants, shipping and commission agents, dealing principally in the following—Rough goods groceries, oilmen's stores, etc. Soft goods such as dress and piece goods, outfitting, clothing, boots and shoes. Hardware arms and ammunition, farming materials, etc. Produce wool, mohair, ostrich feathers, hides and skins, both for local and overseas markets. The firm is also a distributor for the famous Zwartkops Saltpan Company, producers of the best natural salt in South Africa.

**Branch.** The company has one branch, which is in Johannesburg.

**Directorate.**—Sir William Macintosh, M.L.A., chairman. Messrs. John Gauntlett Hirsch and Alexander Yule.

**Addresses.** 29, Strand Street, Port Elizabeth, P.O. Box 100 74, President Street Johannesburg, P.O. Box 1191.

**Cables.** "Hirlobco."

**DREYFUS & COMPANY LTD.**

**Inception.** The firm of Dreyfus & Co. is one of the oldest in South Africa, having been founded at Port Elizabeth in the early 'sixties by Mr. Theodore Dreyfus, who started as a wholesale merchant. Meeting with great success, he soon retired from the active direction of affairs, leaving the management to others, of whom the principal was his nephew, the late Mr. Julius Auerbach.

**Development.** As a result of the rapid increase of business, branches were opened in East London and King William's Town, and larger and more imposing offices were acquired in Strand Street, Port Elizabeth.

**Activities.** The firm's activities embrace every kind of merchandise. In groceries all types of provisions are stocked, including rice and coffee, of which the company is a large importer. In rough goods are included grain bags, woolpacks, and fencing materials, the sale of which has increased enormously. For timber the firm's yards are well known, while in the hardware section a large stock of crockery, glassware, brushware and general ironmongery is always on hand. It is only recently that the company has interested itself in skins and hides, but in these it has already established a great reputation.

**Produce Selling.**—In the important produce department Messrs. Dreyfus & Co. conduct a very large selling business, handling enormous quantities of wool, mohair and ostrich feathers. Wool and mohair are sent from up-country growers, and after display in the Alliance Warehouse, they are sold by the company's own auctioneers and shipped to all parts of the world. The warehouse, the premier produce store of South Africa, is situated in the main thoroughfare of Port Elizabeth, and has over 100,000 square feet of floor space. It is jointly owned by four of the leading Port Elizabeth firms, and is replete with every modern requirement for the display of goods.

**Head Office.**—101, Leadenhall Street, London, E.C.3.

**Directorate.**—Messrs. W. E. Hearson, (chairman), Sir William Bird, J.P., Arthur Auerbach, Major R. H. Lindsey-Renton, D.S.O., H. Samuelson, and E. Crage, the last-named being resident in South Africa, Secretary, Mr. H. Popple-Nunn.

**Bankers.**—The Standard Bank of South Africa, Ltd (See also page 190 "East London.")

#### **EARLE & CO.**

**Activities.**—This company, one of the largest wool buying concerns in South Africa, carries on business under its own name at Port Elizabeth, Durban, Capetown, and London, while at King William's Town and East London the firm bears the name of John Page and John Page & Co respectively.

**Head Office.**—The head office is at Port Elizabeth, where the whole work of the organization, including overseas correspondence, financial arrangements and cable communication, is centralised. It is from this office that all buying orders are sent out to the various branches according to their suitability for supplying the wool, and also to a great extent where the wool can be obtained with the least possible delay and at lowest cost. This is especially advantageous in cases where

wool is urgently required, as the order can be divided amongst the branches and executed in one day, whereas if confined to one port it might take many days to complete.

**London Office.**—Messrs Earle & Co soon found that the cable communication with London was not sufficient for their needs, consequently they opened up their own office in that city. This office is controlled by Mr A Frielinghaus, who is able to keep the company's South African houses supplied with information obtained from personal observation of existing conditions and the likely trend of the markets. The office is at 123, Wool Exchange, E.C. 2.

**Representations.**—Earle & Company represent the following wool firms: G & W. Townend Ltd, Bradford; Wenz & Co, Paris; Oelrichs & Co, New York; Gustav Ebell & Co, Berlin; and Mitsui Bussan Kaisha Ltd, of Tokio and Osaka. The company is likewise represented by the above-mentioned firms in their respective countries.

**Stocks.** Earle & Co buy direct for many of the largest mills in the consuming countries of the world, and in addition carry large stocks of all descriptions of raw wool, so that they are always able to supply mills, even if the season is closed.

**Partners.** The sole partners are Mr H. O. Frielinghaus, who controls the South African side of the business, and Mr A. Frielinghaus, who guides the buying activities from London. Mr John Page is an additional partner who studies the firm's interests at King William's Town and East London.

**Cables.**—"Earldom" Port Elizabeth  
 (See also illustration, page 182.)

#### **THE ALLIANCE WAREHOUSE CO. LTD.**

**Inception.** The decision to build this large warehouse for the classing and disposal of wool and mohair was arrived at in 1918, when it was found that there was insufficient accommodation in Port Elizabeth for the proper exhibition and sale of the produce which was annually arriving at the port.

**Proprietorship.**—Four firms of long standing in the produce trade of Port Elizabeth were the promoters of the company, viz, Dreyfus & Co Ltd, Hirsch, Loubser & Co Ltd, Hannam & Co Ltd, and Stephen Fraser & Co.

**Development.** Careful consideration and rejection of many other suggested sites for the warehouse preceded the selection of the present property on Adderley Street, the main thoroughfare of Port Elizabeth, and exactly two miles distant from the City Hall. The actual building covers an area of 2½ acres, with 102,816 square feet of floor space. In order to ensure the evenness of lighting so essential to the interior of a warehouse displaying wool and mohair, a single-storeyed building, scientifically lit by southward-facing overhead lights, was decided upon. The lights are disposed in a saw-toothed form of roof, the northern section of which is all iron, the southern aspect all glass. By this means light is evenly distributed throughout the store, ensuring complete elimination of shadows and uniform inspection conditions for all clips displayed. Such care is a reciprocation of the producer's efforts constantly to improve his flocks and honestly to class his wool.

**Control of Produce.** To ensure the utmost expedition in loading or unloading bales on wagons or railway trucks, the company has built a concrete platform some 450 feet in length on each side of the warehouse. In addition, there are 30 doorways for the reception and delivery of produce on the north and south sides, while in the front of the building 12 doorways are provided for handling odd lots for market. A private railway siding is established on the company's own property. With such avoidance of congestion or delay, buyers can rely on their purchases being pressed and ready for shipment within a few hours after sale.

**Sales.**—The comfortable and well-fitted sale-room has special accommodation for each of the 40 to 50 buyers. Sales are restricted to those who store in the warehouse, and each firm has its own auctioneer and selling staff. Public sales are generally held on Wednesdays, when all visitors desirous of attending are welcome. Full and keen competition is always assured on all produce offered under the ideal conditions existing. If market conditions are not satisfactory, wools are not put forward for sales at auction, as this would but emphasise the weakness of the market. If conditions are favourable, wools entered on the Alliance Catalogue Sales are so entered with intent to sell if full value is bid, every bale offered for sale having been carefully and expertly valued.

  - Centre. Premises at King William's Town.
  4. Premises at East London.
  5. Elevation of new Premises to be constructed for the Head Office at Port Elizabeth.
- (See letterpress, page 181)

**Extension.** The proprietors of the warehouse have secured enough ground space to double the present storage accommodation, should the need arise, without having to resort to building second or third storeys.

**General.**—The briefest summary has here been attempted of the advantages and conveniences of the Alliance Warehouse for the distribution, storage, display and disposal of wool and mohair entering Port Elizabeth, but inspection, cordially invited, is necessary for the proper appreciation of the ideal conditions maintained by this progressive joint company. The warehouse so operated is an improvement in accommodation commensurate with the advancement made by the country's wool and mohair producers. (See illustration, page 183)

#### KOHLER BROS.

**Inception.** In 1880 the late Mr J Kohler commenced operations in Port Elizabeth as a joinery manufacturer, builder and contractor, amongst the most important buildings erected by him being the General Post Office, St Mary's Church, the National Bank of South Africa, the Harbour Board offices, Mosenthal Bros building, and the Union Castle Line offices.

**Development.**—The present business, which is an off-shoot of the original enterprise, is owned by Messrs George and Chas Kohler (twin brothers and the eldest sons of Mr J Kohler), and they commenced operations about 18 years ago as timber merchants and joinery manufacturers, dealing largely in Scandinavian and American timber, also

teak from Burma and jarrah from Australia. The firm now conducts the largest business of its kind in the eastern provinces.

**Activities.** Besides stocking all classes of timber, Messrs. Kohler Bros also deal largely in builders' materials, and their operations extend throughout the whole of the Union of South Africa, Rhodesia and the Belgian Congo. They have agents all over the country, who are visited periodically by the firm's travellers.

**Timber Yard.**—The company's yard covers an area of 208,000 square feet, and has its own siding, comprising two sets of lines extending the whole length of the yard. The timber is well protected from the weather. The firm is shortly erecting a new joinery factory, which will be fitted with all the most modern machinery.

#### DUFF, MURRAY & CO.

**Inception.**—This company, which has been established for many years specialises in lubricating oils and tanning materials

**Activities.** Duff, Murray & Co occupy their own premises both at Port Elizabeth and at Capetown whence they distribute merchandise to the various centres of the Cape Province territory. The method of distribution is by means of travellers, who visit the various places at regular intervals, thus keeping in constant touch with customers.

**Representation.** The company's chief agency is that for the Standard Oil Company of New York, manufacturers of the famous Vulcan motor oils

**Other Activities.** Messrs Duff, Murray & Co import quebracho extract and other tanning specialties from Brazil, etc and they will be pleased to assist manufacturers desiring representation in any lines or products which fit in with those already handled

**Directorate.** Mr Archibald is the managing director of the company

**Offices.** Head office, Broad Street, Port Elizabeth Branch office—1, Oak Street, Capetown, P.O. Box No 1923

DUFF, MURRAY &amp; CO., Port Elizabeth.

1. Premises at Port Elizabeth: the Head Office.

2. Portion of Company's Store at Capetown.

**L. H. SHAPIRO & CO.**

**Development.**—This company has made rapid strides since its inception, and is now one of the leading motor car and cycle importers in Port Elizabeth.

The whole of the company's operations are under the control of Mr L. H. Shapiro, the proprietor and managing director, whose extensive experience in the motor world, coupled with his unrivalled knowledge of the country, has played an important part in the development and progress of the firm.

**Activities.** Besides the importation of motor cars and cycles, Messrs L. H. Shapiro & Co. deal in every type of motor accessories, garage work in all its branches is undertaken, and repairs of every description are carried out. Manufacturers desiring representation in South Africa or any portion thereof at present being operated by the company can approach the firm with the assurance that they will obtain an efficient and up-to-date organisation to act on their behalf.

**Premises.** The company's fine three-storeyed premises accommodate the work-shops, showrooms, garage, and accessory department. The workshop is situated on the top floor, thus giving the mechanics a better light to work by. There are extensive showrooms on the ground and first floors, and all cars are moved from one floor to another by an elevator which opens on the ground floor to the street or into the garage as desired.

**Staff.** This comprises a number of skilled mechanics, who are in charge of all repair and service work, and many expert salesmen who continually cover the territory allotted to the company for its various representations.

**Agencies.** Messrs L. H. Shapiro & Co. are sole distributing agents for the famous Studebaker car in Port Elizabeth, Mossel Bay, East London and the surrounding districts. They are also agents for the Leyland lorry, Stewart trucks, Mathis motor cars, Norton motor cycles, many well-known makes of tyres, accessories and benzine, etc., of all of which they carry large stocks.

**Address.** Jetty Street, Port Elizabeth.

**Bankers.** The Standard Bank of South Africa, Ltd.

**Cables.**—"Shappy," Port Elizabeth.

**MANGOLD BROTHERS LTD.**

**Inception.** Shortly after his arrival in the country in 1866, Mr J. C. Mangold opened a small smithy and repair shop, which was destined to become the large and thriving business known to-day throughout South Africa as that of Mangold Brothers Ltd. In five years the modest concern had progressed so well that new premises were acquired in Baakens Street, and on this site the head office of the company has ever since been located.

**Development.**—In 1874 Mr Mangold was joined by his brother, and the firm became known as Mangold Brothers. Operations have been extended, new enterprises have been undertaken, and business has increased from year to year. Four sons of the original founder were trained in the enterprise, which gradually spread to other parts of the country. In 1913 the firm was incorporated as a limited company, the sons becoming directors.

**Activities.**—Besides carrying on business as engineers, brass and iron founders, the firm specialises in agricultural and irrigation machinery, and has also acquired extensive interests in the timber industry, having established sawmills in the Taitzikama forest, the sawn timber from which is brought down to Port Elizabeth.

**Agencies.**—Crossley Bros Ltd.; Deering harvesting machinery, Ransomes, Sims & Jeffries; Challenge Windmill & Feedmill.

WHARVES ON BUFFALO RIVER, WEST BANK, EAST LONDON.

## EAST LONDON CITY

**T**HE city of East London the premier wool port of South Africa, originated in 1847, when Fort Glamorgan was erected at the mouth of the Buffalo River as an outpost against the incursions of the Kaffirs into the eastern districts of Cape Colony. Re-christened East London shortly afterwards, its progress was gradual but slow owing to the inability of shipping to enter the river.

With the building of the harbour and the immigration of a large number of German settlers in 1850 the importance of the town and port grew steadily, and East London is to-day, with a population of 31,073, the third largest city of Cape Province and in respect of European inhabitants the sixth largest of the Union.

**BUILDINGS.** The finest of East London's public buildings are the City Hall, with

its handsome clock tower in Oxford Street and the Public Offices, which occupy a large embattled building near the Railway Station. In front of the City Hall is the South-African War Memorial, with a bronze equestrian figure 10 ft high. The Museum, near the City Hall, houses an interesting collection of exhibits and the Public Library, in Argyle Street, contains about 17,000 volumes. Other noteworthy buildings are the Frere

1. EAST BANK OF BUFFALO RIVER, EAST LONDON, LOOKING TOWARDS MOUTH.

2. ORIENT BEACH, EAST LONDON, WITH WINDSOR HOTEL IN CENTRE OF PICTURE.

1. MARKET SQUARE, EAST LONDON, with Municipal Market in left foreground.
2. LOOKING UP OXFORD ST., main business thoroughfare, East London.
3. TERMINUS ST., looking towards the Railway Station.

Hospital, an up-to-date and well-equipped institution containing over 140 beds, the East London Club, which has a membership of about 150 town and 50 country members, the Selborne College for boys, and the Girls' High School.

**CLIMATE.**—East London is noted for its equable climate, the winter months being generally the most perfect of the whole year. Even in mid-winter it is rarely too cold for sea-bathing to be pleasant, whilst winter days may be spent out of doors with complete enjoyment, brilliant sunshine being the rule. Because of this, East London is obtaining increased recognition as a charming health resort in winter.

**INDUSTRIES.**—As a manufacturing centre, East London is growing in importance, the chief industries at present being printing, flour milling, tailoring, wool-washing and pressing, engineering, and the manufacturing of confectionery, footwear, furniture, and tinware. Along the 180 mile seaboard of the East London division fish of many kinds abound: vast shoals of pilchards and other migratory fish of commercial value annually passing the shores. A busy fishing industry is in consequence carried on and developed.

**PARKS.**—The Queen's Park is one of the most noted pleasure parks in South Africa, possessing that grandeur and warmth of colour which is associated with tropical lands. Its natural beauties have been preserved, it is within five minutes' walk of the centre of the city, and is also easily accessible from the harbour. The Marine Park is a well patronised resort on the Esplanade, much in favour on account of the excellent music provided there.

**SPORT AND RECREATION.**—The sea-bathing at East London is of the best, and fine surf-board plunging is obtainable. After bathing, East London's premier sport is boating, the Buffalo River being navigable for light craft for over three miles. On the Zambesi, the Durban Lagoon, the Zwartkops River near Port Elizabeth, and the St John's River East London crews have beaten all comers, and hold a fine collection of challenge cups won on those waters, whilst their own trophy, the Buffalo Grand Challenge Cup, has left East London but twice, and has soon been regained. Fishing along the rocks that fringe the bay provides good sport at almost any season, cricket, football, tennis, hockey, and bowls are all played on the large Recreation Ground, and the new golf course behind the sandhills of the Eastern Beach is an example of everything golf links should be. The town is also the centre for many delightful motor-runs, in length varying from 10 to 50 miles.

### PORT

East London is the port for the Eastern Division of Cape Province, the extensive area being served by over one thousand miles of the South African Railways. The harbour, which was first constructed in 1856, greatly improved in 1871 and since, is situated at the mouth of the Buffalo River, and has a water area of 100 acres. Two breakwaters protect the port entrance, the one on the western side being 2,275 ft. long and affording shelter from seaward to vessels navigating the channel. Much has been accomplished by dredging, and vessels up to 8,000 tons gross register and drawing 26 ft. can now enter the river to discharge at the port, which is principally concerned in the wool export trade.

**ACCOMMODATION.**—The wharves and quays in the river berths give a total frontage of 3,745 ft., of which 1,981 ft. consist of quay

berths with depths alongside of 27 ft 9 in L.W.O.S.I. This deep-water accommodation is being extended through the replacement of timber wharves by concrete quays to a depth of 32 ft at low water. Commodious sheds and warehouses totalling 264,500 square feet floor area, and a modern installation of electric cranes from 3 to 20 tons lifting capacity, serve the quays, and ample railway siding connections enable food of all descriptions to be handled direct from ship to truck or vice-versa. The harbour is one of the port terminals of the South African Railway system, giving through connection to all parts of the Union, Rhodesia and the Congo. A storage area of 30 acres, equipped with a 30-ton electric gantry and with travelling cranes, is available for both open air and warehouse storage. A 50-ton steam crane is at the East Quay

and for shifting a vessel in the roadstead when it has not been moored by a pilot £2 2s. 0d.

**PORT CHARGES.**—These are the same as at Capetown, but, in the case of lighterage, plus 5s per ton on goods landed, and 15 6d per ton on goods shipped.

**SHIPPING AND TRADE.**—Vessels to the number of 605, tonnage 2,142,305, were entered at East London in 1924, compared with 490 of 2,004,572 tons in 1923. The tonnage of cargo landed was 217,599 in 1923 and 290,993 in 1924. In the latter year the tonnage of British vessels entering the port (490) was 1,643,448, landing 243,900 tons of cargo.

During the six months ended June 30, 1925, vessels entered numbered 327 (1,340,783 tons), compared with 286 (1,018,700 tons) in the corresponding period of 1924.

Its popularity among country readers is exceptional and is reflected to a marked degree in its clients' advertising returns.

**Advertising.** Both on account of its popularity and very wide circulation this journal is an excellent advertising medium, a fact that is clearly shown by the volume of letters received from country readers, evincing the eagerness with which its editorial news, and advertising columns are read by all alike.

**Offices.** The accompanying photograph illustrates the "Dispatch" main building, in which the various departments are grouped. Advertising clients will find in these offices a courteous and obliging staff, always ready to attend to their requirements.

**Printing.** This is done on a Hoe rotary machine. The other printing departments

EAST LONDON DAILY DISPATCH LTD.  
Company's Premises.

for dealing with heavy lifts and machinery direct from hold to truck.

**DOCKING FACILITIES.**—There is no dry dock at East London, but a patent slipway, with travelling cradle 200 ft in length, will take vessels up to 1,000 tons dead weight. The Harbour Board has extensive workshops fitted with the most modern machine tools for dealing with all classes of ships repairs, and every facility is given for effecting repairs to hull and machinery.

**PILOTAGE.**—Pilotage is compulsory, the fees for all vessels entering and leaving the Buffalo River ranging (by guineas) from 21s. for vessels below 151 tons to £7 7s. 0d. for vessels of 4,000 tons and over. For mooring vessels in roadstead—£2 2s. 0d.,

## REPRESENTATIVE COMMERCIAL ENTERPRISES

### EAST LONDON DAILY DISPATCH, LTD.

**Inception.**—"The East London Daily Dispatch," which is an old-established and popular daily morning paper, was first issued on September 10, 1872.

It is printed and published at East London (South Africa's chief wool exporting port), and is the leading and most influential organ circulating over a wealthy territory some 50,000 sq. miles in area, with a European population numbering about 140,000.

**Circulation.**—One third of the "Dispatch" circulation is urban and two-thirds rural.

are divided into the hnotype, composing, and "make-up" section, also the stereotyping section.

**Daily Features.**—Mondays: Sporting page. Tuesdays: Farmers' page. Wednesdays: Ladies' and King William's Town pages. Thursdays: Wool and produce page. Fridays: Hotel page and visitors' guide. Saturdays: Motor page, London letter, Paris fashions. Fortnightly: Transkei page.

**London Agents.** The Argus South African Newspapers, Limited, 82-85, Fleet Street, London E.C. 4.

**Governing Director.**—Brigadier-General the Hon. Sir Charles Crewe, K.C.M.G., C.B.

**Editor-in-Chief.**—Mr. B. H. Dodd, M.A.

**Cables.**—"Dispatch," East London.

**DEAL'S CENTRAL HOTEL COMPANY LTD.**

**Inception.** The well-known hotel controlled by this company, and the oldest in East London, was established in the year 1876. The present managing director, Mr. G. G. Deal, who is known throughout the country as an excellent host has been proprietor for the past 34 years.

**Situation.** The hotel is situated in the heart of the business centre of the town, but being just off the principal thoroughfare it escapes any noise, and visitors may be assured of quietude. The railway station and landing jetty are within 5 minutes' car journey, and the beach can be reached in 10 minutes.

**Accommodation.** This comprises 70 bed rooms, a spacious lounge in the cool palm court, very comfortable reading and writing rooms, and a dining room capable of accommodating 250 people, considered to be one of the finest in South Africa. A great feature of the hotel is the Oak Room, furnished in oak of the early seventeenth century period.

**Facilities.** All trains and boats are met by the hotel cars and porters. Garage accommodation and facilities are provided for the use of visitors, and advance booking arrangements can be made by telegraph or cable.

**General.** East London, enjoying a healthy climate is a popular holiday resort. There are good golf links, a fine racecourse, and surfing on the Orient beach, which is a great attraction. The fact that visitors return year after year to the hotel speaks volumes for the comfort of the establishment.

**Address.** Terminus Street, East London.

**Cables.** "Deals," East London.

**DUNN & CO.**—Established in 1882 by the late Sir Wm Dunn, Bart. Dunn & Co. operate as general merchants, wool, shipping and insurance brokers, and conduct a large business in rough goods, building materials, hardware, agricultural machinery and the indenting of soft goods. The principal primary products of the country which the company sells on behalf of up-country clients are wool, mohair, skins and hides. Messrs

Dunn & Co. are agents for the London Assurance Corporation and Alliance Assurance Co. Ltd., and also represent the following steamship lines: Prince Line Ltd., Elder Dempster & Co., Thos. & Jas. Harrison, Andrew Weir & Co., Rio Cape Line Ltd., British India Steam Navigation Co. Ltd. The company's warehouses and stores are situated in Station Street, Market Square and Commissioner Street, and its timber and agricultural implement stores in Cemetery Road. London Office: Messrs Wm Dunn & Co. Ltd., Broad Street Avenue, E.C. Partners: Messrs David Dunlop Nisbet and Ronald Morrison Mackay, the latter being the managing director at East London. Address: Station Street, East London. Cables: "Dunn," East London. Codes: A 1, A B C. Scott's, Bentley's and Watkins' Bankers. The Standard Bank of South Africa, Ltd.

**DREYFUS AND CO. LTD.**

**Inception.** This firm was established at King William's Town in 1876 by the late Mr. Theodore Dreyfus, who previous to that date had been employed in his brother's office at Port Elizabeth. Six years later he opened the East London office.

**Development.** In the year 1889 his nephew, the late Mr. Julius Auerbach, acquired the whole concern, including the London and Port Elizabeth interests, and it was converted into a limited company in 1902.

**Activities.** In the early days of the company importations were naturally restricted, but to day, as general wholesale merchants it is able to deal with practically all South African requirements, such as timber, fencing materials, groceries, oilmen's stores, hardware, crockery, soft goods, glassware, furniture, confectionery, etc. In addition to the above, Messrs Dreyfus & Co. cater for a special indent business, and their extensive knowledge of the various markets enables them through their London office to meet all requirements.

**Shipping.** The East London branch, being agents for many well known steamship lines, is actively concerned in the shipping business, and also in the clearing and forwarding of goods for up country merchants.

**Insurance.** Messrs Dreyfus & Co. also represent many of the leading insurance companies, notably the North British & Mercantile and the Railway Passengers' Assurance Co.

**Produce.** In addition to general merchandise, shipping and insurance, the company is largely interested in produce, and is a large shipper of all descriptions of hides and skins, also of wool. Its field of activities extends throughout the Cape and to the Natal border, the Orange Free State, the Transvaal and Rhodesia.

**Directorate.**—Mr. W. E. Hearson (chairman), Sir William Bird, Messrs R. L. Lindsey-Renton, H. Samuelson, and A. Auerbach.

**Staff.**—Mr. John J. Bombroffe, manager, Mr. H. Ker-Fox, assistant-manager, East London; Mr. A. Walker, manager, Mr. H. Schonewolf, assistant-manager, King William's Town.

**Head Office.**—Leadenhall House, 101 Leadenhall Street, London, E.C. 3.

**Cables.**—For general business, "Dreyfus," East London. For produce business, "Dreyprod," East London. For general business, "King William's Town," "Dreyfus." (See also page 180 "Port Elizabeth.")

DEAL'S CENTRAL HOTEL COMPANY LTD., East London

**WILSON & COMPANY LTD.**

**Inception.**—The business of Wilson & Co Ltd was established over 35 years ago. From humble beginnings, it has progressed steadily until to-day it ranks as one of the largest and best known industrial enterprises in the country.

**Development.** As operations increased year by year new machinery was installed, additional departments were added, and buildings erected, no effort being spared to bring the establishment thoroughly up-to-date, the result being that the company can

success, and are already well known throughout the country.

**Field of Operations.** The company's manufactures are distributed by means of agents and travellers in every part of the sub-continent while an export trade has been developed with Madagascar and Mauritius.

**Buying Agents.** Messrs David Air & Co., of Dundee, are the company's buying agents for Great Britain.

**Head Office.** East London P.O. Box 140. Phones 125 and 550.

**DREYFUS & CO. LTD., East London.**

1. Main Offices and Store
2. Corner of Hardware Showroom.
3. Hides and Skin Warehouse at East London

legitimately claim that the articles which it produces, both in quality and attractiveness of package, bear comparison with the best lines of imported goods.

**Chocolates.**—Messrs Wilson & Co for many years interested themselves only in general confectionery, but recently they have taken up the manufacture of chocolates. For this purpose they erected a large building, installing therein the most modern type of machinery and appliances procurable. The products of the new factory met with instant

**Branch.** Durban P.O. Box 134. Phone 812.

**Telegraph and Cable Address.** "Mixtures," for both East London and Durban. Codes A B C 5th Edition, Bentley's and Lieber's (See illustration, page 192.)

**WOOL GROWERS' AUCTIONS LTD.**—East London Capital, £30,000. Has one of the largest, most central, and best equipped wool stores in the town. Also assists farmers with advice and information.

**D. M. BILLSON & CO.**

**Inception.**—Although Mr D. M. Billson the sole proprietor, has been associated with the wool and produce trade in East London for the past 25 years, the present company was only recently established.

**Development.** Thanks chiefly to Mr Billson's long connection with wool, mohair, hides and skins, and also to the services which the company offers to its clients, business has gradually grown until to-day the firm claims to be the largest handler of wool in the Union.

**Activities.** The company does not operate in a buying capacity, its entire and exclusive attention being devoted to the selling of wool, mohair, cotton, skins and hides by private treaty or public auction. Shipments are made to any part of the world and up-country consignments specially attended to. By means of their excellent cable service Messrs Billson & Co are kept in touch with the state of markets all over the world, as well as with the ruling local rates, customers are therefore always assured of reliable and up-to-date information. Mr Billson and his experienced staff give their personal attention to all consignments.

**Premises.** The company owns two of the finest well lit warehouses in South Africa, equipped with the latest machinery and appliances for the easy and efficient handling of all classes of produce. The floor space of the main warehouse covers approximately 71,000 square feet and the spacious show floors facilitate the exhibition of heavily soiled clippings to the satisfaction of the consignor and buyer.

**Agents.** These are located in all the principal wool producing centres throughout the Union.

**Overseas Representatives.** The company is represented in all the chief textile centres of the world.

**Offices and Main Wool Warehouses.**—These are situated at the corner of Terminus, Buffalo and Union Streets, with a secondary warehouse in Commissioner Street.

**Cables.** "Billsonco" East London.

**Bankers.** The National Bank of South Africa, Ltd.

(See illustration page 192.)

**BEARD, ELLIS & BERLYN LTD.**—Dyer Street, East London. Manufacture all sorts of house, church and hall furniture. Have staff of 170 whites and 45 natives. Value of 1924 productions, £57,186. Factory and plant in which upwards of £10,000 have been invested, stand on 2½ acres. Cables, "Seasoned."

**EAST LONDON BOARD OF EXECUTORS AND TRUST CO. LTD.**—Est 1904. Undertakes all kinds of trust work, including executorship and trusteeship, administration, guardianship of infants, investment of monies on first mortgages, general estate agency work, valuation, and consular agencies. Capital, £20,000.

**MALCOMESS LTD.**—East London. Established 1870, branches Johannesburg, Durban, Port Elizabeth, King William's Town, Cathcart, Tarkastad. Agencies all principal towns. Manufacture deep well cylinders, pumps, pump fittings, windmill fittings. Departments devoted to agricultural implements, irrigation and power plant, trucks, batteries, hardware, &c. Cables, "Malcomido."

**VAUGHAN, HERBERT & CO.**—Terminus Street, East London. Deal extensively in agricultural machinery, implements, farming supplies, and dairy requisites. Also wool-brokers, with large connections at wool-producing centres of the Union.

The Company's Main Premises.

## KIMBERLEY

**K**IMBERLEY, which now includes the former township of Beaconsfield West, is the most important city in Griqualand West. It was founded in 1871, and named after Lord Kimberley, then Colonial Secretary. In the previous year diamonds were first discovered on the farms of Du Toits Pan and Bultfontein, and the ensuing rush speedily created an extensive mining-camp, which, in the course of time, developed into the substantially-built city of to-day.

There is an air of romance about the place which has grown up around the famous Kimberley mine—that great hole in the floor of the world out of which almost fabulous riches have been taken, but which is now fenced in, silent and deserted, an object of interest only.

Kimberley, like all mining centres, has had its periods of prosperity and depression, though the De Beers Company's efforts towards amalgamation and concentration have all tended to secure a settled community. The slump in the diamond market caused a big set back during the years immediately following the European War, but Kimberley holds such a central position that by the diversion of its energies to agriculture and industries it may well be that a distributing and manufacturing business will be built up, to in course of time relegate the diamond industry to a comparatively modest position. (See also special article on "Diamond Mining.")

**BUILDINGS.**—The principal buildings of Kimberley are the High Court of Justice on the Market Square, and having a handsome clock tower, the Post and Telegraph Offices, on the same square, the City Hall adjoining, a handsome building in the Roman-Corinthian style, erected at a cost of £30,000, the Public Library, a striking building of different coloured bricks in the Du Toits Pan Road, and the Kimberley Club, in the same locality. The latter now possesses one of the best furnished and most commodious club houses in South Africa, the original building having been destroyed by fire in 1895. Other fine structures are those of the Grand Hotel, the Theatre (which cost £12,000), and the Hospital, which is one of the best in South Africa.

**CHURCHES.**—The Anglican Cathedral of St Cyprian is in the Du Toits Pan Road. The handsome Roman Catholic Cathedral has a convent and a Nazareth home for children and aged persons attached. The Jewish Synagogue was built at a cost of £8,000. There are other Anglican, Wesleyan, Presbyterian, Congregational, and Lutheran churches.

**INDUSTRIES.**—Kimberley, being almost equidistant from all ports and centrally situated as regards the three Native Protectorates, is unsurpassed as a distributing centre for manufactured goods. It is also an excellent site for woollen factories and the industries based thereon. Over 6,000,000 lb of wool pass through the place yearly, and reports from Government officials indicate that this is of the best quality suitable for manufacturing purposes. Within a few miles of the city is a tract of country wherein are found all the ingredients used in the manufacture of cement, valuable deposits of iron ore, and important clay deposits. An industry of recent introduction is the breeding of horses, for which the locality is particularly well suited. The De Beers Company has a stud farm midway between Kimberley and the Modder River.

VIEWS OF KIMBERLEY.

1. A Portion of the Town showing Railway Station and Goods Sheds, with some of the Diamond Mines in background.
2. Market Square, with Town Hall in Centre.
3. A Portion of the City from the Diamond Market end, showing the Griqualand West Board of Executors Building in left Centre.
4. The Town, showing a Diamond Mine's Native Compound in foreground.

**KING'S PARK.**—This park, known locally as "The Gardens," is a large piece of ground, some 30 acres in extent, containing excellent cricket and football fields and two pavilions. The absence of water for a long time made the laying out and maintenance of the grounds a matter of considerable difficulty, but under the careful management of the Gardens Committee of the City Council great success has been achieved, and the Gardens provide every facility for rest and recreation. In the Park are two memorials, one to Queen Victoria, and the other in honour of the members of the South African Police who fell during the 103 days' siege in 1899-1900. Adjoining the park is Kimberley's largest sports-ground, with racing, cycling, and running tracks, a bowling green, and cricket and football areas. The Kimberley Racecourse is on the Beaconsfield Road, where are also the golf links.

**MARKETS.**—The Municipal Markets, which are very successful, have entailed a capital expenditure of nearly £12,000. The annual sales, excluding wool and skins, average upwards of £100,000.

**MEMORIAL HILL.**—Situated on the Beaconsfield Road, Memorial Hill was laid out and the roads leading to it constructed during the siege of 1899-1900. The memorial to the "Honoured Dead" erected on the summit in memory of those who fell in the defence of Kimberley during the siege, 27 of whom lie in the vault beneath it, is 52 ft high and is built of red and white Rhodesia sandstone. It is modelled on the famous Nereid monument of the 4th century B.C., discovered at Xanthos, Asia Minor, and is of the Doric order of architecture. At the foot stands the famous gun "Long Cecil," which, constructed in

the De Beers Company's shops, did such excellent service during the siege.

**MUSEUM.**—The McGregor Museum, which was opened in 1907, is principally notable for the rich collection of Bushman art which it contains.

**POPULATION.**—The total population of Kimberley at the census of 1921 was 39,702, the European population numbering 18,288, the native 13,048, and Mixed, Asiatic and other 8,366.

**STREETS.**—Kimberley is the only important city of South Africa which was not built according to plan, with rectangular thoroughfares. For the most part the streets follow the lines of the old diggers' camps and are quite irregular, though of fair width and well-kept. In Old Main Street could be seen until quite recently some of the wooden huts formerly occupied by the early diamond merchants. The finest thoroughfare is the Du Toits Pan Road, and here are many of the prominent buildings of the city, others being on the Market Square.

**TRAMWAYS.**—Kimberley is provided with a good electric tramway service, owned and operated by the De Beers Consolidated Mines, Limited. The track laid and worked totalled 37 miles in 1924. Penny half-penny (1½d) fares are in vogue, these being the cheapest tram fares in South Africa.

**WATER SUPPLY, ETC.** The city is lit by electric light and supplied with water from the Vaal River, a distance of 17 miles. The difficulties of the latter undertaking were enhanced by the fact that Kimberley is nearly 500 ft above the river level. The storage reservoir has a capacity of 10,000,000 gallons and a second reservoir, at the halfway station, contains 300,000 gallons. The cost of the installation was £308,103.

**DE BEERS CONSOLIDATED MINES LTD.,** Head office Kimberley, Griqualand West. London office 15, St. Swinham's Lane, E.C. 4. Registered under Act 23 of 1861 and incorporated under Act 13 of 1888 in Cape Province. Authorised capital, £4,750,000, issued capital, £4,628,610. Bankers: The Standard Bank of South Africa, Ltd., Kimberley and London, and the National Provincial Bank, of London.

**GRIQUALAND WEST LOAN, TRUST AND AGENCY CO. LTD.** 15, Stockdale Street, Kimberley. Established for nearly 50 years, undertakes the administration of insolvent, assigned, testate and intestate estates, executorship, property inspection and valuation, and insurance in all its branches. Cables "Primrose," Kimberley.

**KIMBERLEY CHAMBER OF COMMERCE.** Secretary to the Chamber, Mr. J. Carstairs Rogers, M.B.F. Postal address P.O. Box 304, telephone number, 34, telegraphic address, "Collieries," Kimberley.

**SAVOY HOTEL,** Kimberley. Proprietor, Mr. L. Davis. Conveniently situated near the station and all parts of the town. The golf course is easily reached by trams passing the door. Accommodation consists of 66 bedrooms, up to date sanitary arrangements, hot and cold baths, drawing and dining rooms, and open-air palm court. Cables "Savoy," Kimberley.

**SOUTH AFRICAN PERMANENT MUTUAL BUILDING AND INVESTMENT SOCIETY.** 20, Stockdale Street, Kimberley. Established 1883. Branch offices at Johannesburg, Pretoria, Bloemfontein and Durban established subsequently. Bankers: The Standard Bank of South Africa, Ltd.

## OTHER CITIES AND PORTS

### ALIWAL NORTH

This town, which has grown considerably of recent years, has all the advantages of a conveniently situated residential centre and health resort. It is on the Orange River, and is an important railway junction. The place has good streets, handsome Government Buildings, a library, excellent schools, public gardens and recreation ground, golf-links, electric light and water supply. The celebrated Aliwal sulphur springs are a little over a mile from the town, and swimming and private baths have been erected here. Important alluvial diamond deposits were discovered in the neighbourhood about 10 years ago. Population, 6,297.

### BEAUFORT WEST

This is a growing town in the Cape midland section of the Karoo, and the centre of a large farming and apple growing district which is extensively irrigated, the Stoltz River Works having cost £30,000. The population at the last census was 6,204.

### CRADOCK

The chief town of the Midland Cape District, named after Sir John Cradock, Governor of Cape Colony over 100 years ago, Cradock is a busy centre and notable health resort, the latter largely on account of the sulphur baths and mineral springs in the vicinity. The country round Cradock was the first to be irrigated, as long ago as 1815. The population in 1921 was 6,807.

### DE AAR

Situated in the heart of the Karoo, De Aar, besides being one of the principal railway junctions in South Africa, is a centre for large live-stock fairs. The town, which has a population of some 3,000, is rapidly expanding.

### GEORGE

A cathedral city of some 5,500 inhabitants, George is beautifully situated near the Wilderness. (See "Tourist Resorts.")

### GRAAF REINET

The oldest and largest town of the Midland Districts of Cape Province, Graaf Reinet is built in the bend of the Sundays River, which rises among the Sneeuwberg Mountains. The place, which is in the centre of a rich farming district, has many fine old houses in the early colonial style, and a population of 9,279.

### GRAHAMSTOWN

The metropolis of Eastern Cape Province and a cathedral city; Grahamstown, originally a military outpost against native encroachments, is now one of the leading ecclesiastical and educational centres in South Africa. Population at the last census, 14,909.

### KING WILLIAMSTOWN

The history of King Williamstown is indissolubly bound up with that of British Kaffraria, of which, prior to the territory

being annexed to the Cape, it was the principal town, having been founded in 1834 as a result of the Kaffir war of that year. It is now a flourishing centre of some 10,000 inhabitants, with fine streets and handsome public buildings, of which the Government Buildings, the Town Hall, the Grey Hospital, the Public Library, the Museum, the Town Club, and the Border Club are the best known. The educational facilities are first-class, the Buffalo River affords an adequate and pure water supply, the beautiful Botanical Gardens are a notable feature of the place, and King Williamstown has always been noted for successes gained by its cricketers, footballers, golfers, and fishermen.

The industries of the town are chiefly concerned with agriculture, many important tanning, carriage building, and wool washing factories having been established. The Kaffrarian Chamber of Commerce was formed as far back as 1873, and has a strong membership.

### KNYSNA

The town of Knysna lies about 4 miles from the port of the same name, on the River Knysna. It was founded in 1858, and is the outlet for a large timber producing district. Saw milling and furniture making are the principal industries. There is an excellent public library, also several churches and schools, attractive river and sea fishing and a golf course.

The harbour is approached through a narrow entrance formed by the sandstone cliffs known as the Heads. On the bar

there is a depth at low water of 16 ft., but no vessel drawing more than 15 ft. should enter the port, as allowance must be made for the swell on the bar. On the left bank of the river is a concrete quay, 400 ft. in length, with 27 ft. of water alongside at high water, and 21 ft. at low water, as well as other wharves. Pilotage is compulsory, and is charged for at the rate of 45 6d. per foot draught of vessel. Wharfage and other port charges are as at Capetown. Exports in 1923 were valued at £4,900, compared with £2,983 in 1922.

#### MIDDELBURG

Middelburg lies some 250 miles from Port Elizabeth via Rosmead Junction, or 270 via Graaf Reinet. It is the centre of a large district producing corn and other cereals, with a flourishing Agricultural Society and show grounds. Ostrich farming is an important industry of the neighbourhood. At Grootfontein, formerly a British Military Cantonment, there is a large Government Agricultural College. The population of Middelburg, which has four churches, a library, good public schools, and several sports clubs, is 4,500.

#### MOSSEL BAY

The town of Mossel Bay, now a favourite sea-side resort, lies on the shore of the bay of that name and climbs steeply from the sea to the crown of a hill, where it spreads its suburbs over the plateau. The place is well built and laid out, with many beautiful gardens, a fine park and recreation grounds, a racecourse and golf course, and every facility for spending a healthful holiday. The municipality is a progressive one, and has developed admirable water supply, electric lighting, and drainage schemes. The most important public buildings are the Coronation Hall, the Wool Market, the Municipal Offices and Town Hall, the Public Library, High School, and General Hospital. The population at the census of 1921 was 5,720, rather less than half of whom were Europeans.

**PORT.**—Apart from its present-day importance as a commercial centre, the port of Mossel Bay is historically interesting as being the place where the Portuguese navigators of 1487 originally realised that the long sought for sea route to the East now lay open. First called the Bay of Heidsman, later the Bay of San Bras, the port received its present name early in the 17th century. It is now the centre of a large forwarding trade representing the produce of the great and wealthy district of Oudtshoorn and the adjacent areas, which are rich in wool, ostrich feathers, timber and other products. The Bay affords excellent shelter to vessels of any size, the handling of cargo is in the hands of the Mossel Bay Boating Company, and the port is well equipped with tugs, lighters and all necessary plant. Besides the two jetties, which are protected by a substantial breakwater and provided with seven steam cranes to lift 3 to 4 tons each, there are the quay walls, upon which is a 10-ton crane for dealing with heavy lifts. The jetties are served by lines of rail of the Government railway standard gauge, and connect direct with the main line for the purpose of facilitating the landing or shipping of goods direct from the trucks.

Pilotage is neither compulsory nor necessary for steamers. A pilot will meet any

ship signalling for him, the usual charge being 10s. per 100 tons gross register. Port charges are the same as at Capetown, but 1s. 3d. additional per ton is levied for lighterage on goods landed or shipped.

#### UDTSHOORN

The centre of the biggest ostrich farming district in South Africa, as well as of large horse and cattle breeding activities, Oudtshoorn is a town of some 11,000 inhabitants, situated about 60 miles north of Mossel Bay, on the banks of Grobbelaar's River. The place was constituted a municipality in 1863, and the municipal revenues, which in that year amounted to only £316, have since attained the figure of £43,700. Oudtshoorn has the reputation of being one of the cleanest and healthiest towns in Cape Province, and its climate is dry, clean, and invigorating. The municipality controls the electric lighting, drainage, and water supply, as well as a modern abattoir and a public laundry. The Royal South Western Hospital, the Public Library, several high-class schools, the Dutch Reformed Church, St. Jude's English Church and the Roman Catholic Church are the principal buildings.

Near Oudtshoorn are the famous Kamanassie Irrigation Works, the cost of which will probably total three quarters of a million. The irrigable area amounted in 1924 to 15,000 morgen (about 21 acre).

#### PAARL

A busy town of 12,398 inhabitants, Paarl is situated in the most fertile part of Western Cape Province, the Paarl Valley being noted for its vineyards. Tobacco also flourishes there.

#### PORT ALFRED

Situated at the mouth of the Kowie River, the harbour of Port Alfred, though once important, has not been used by shipping for many years. Port Alfred is now only famous for its golf links, on which noteworthy championship matches have been played.

#### PORT NOLLOTH

On the west coast of Cape Province, Port Nolloth has a population of about 2,000, and is the port of shipment for the produce of the Cape Copper Company's Mines at Nababeeb, Ookiep and Corcoria, from which points a private railway connects with the port. Steamers of 2,000 tons can discharge and load here at a reasonable rate. Vessels are well sheltered. Port charges are as at Capetown, native labour costing 3s. per day.

#### PORT ST. JOHN'S

Situated on the east coast of Cape Province, Port St. John's is nearly midway between Durban and East London, at the mouth of the St. John's River (known also as the Umzimvubu, which, translated, means "the home of the hippopotami"). The port is likely to be developed in the near future. The village of St. John's is beautifully situated, and is becoming popular as a holiday resort.

#### QUEENSTOWN

A comparatively modern and rapidly progressing town of 13,000 inhabitants, Queenstown is situated in a rich farming district, whilst it is also a trading centre for the Transkei.

#### ROBERTSON

This is a town of growing importance, being in the centre of a vine growing and agricultural district. Extensive irrigation schemes in the vicinity have contributed to the growth of Robertson, which has a population of 4,500.

#### SIMONSTOWN

Situated on a sheltered bay almost in the north-western angle of False Bay, on the Cape Peninsula, Simonstown is the naval base of the British Fleet in South African waters. The docks, which belong to the Admiralty, consist of a fine tidal deep-water dock and graving dock, the latter completed in 1911, with the necessary equipment for the refitting and repairing of men-of-war. The docks are not available for commercial purposes, and the harbour is of only minor importance as a commercial station. The town has a population of 5,409.

#### SOMERSET EAST

A prettily situated town at the foot of the Bochsberg Range and standing 2,500 ft. above sea level, Somerset East, which at the last census had a population of 5,068, is becoming a popular holiday resort. Gill College, a noted educational centre, is located here. The town is well kept, with an abundant water supply and electric lighting service, excellent facilities for sport of all kinds, and several fine public buildings. Charles Street is the principal thoroughfare, and there are many important industries, such as printing, tanning, a cheese factory, a boot and shoe factory, and a cold storage.

#### STELLENBOSCH

With the exception of Capetown, Stellenbosch is the oldest settlement in South Africa, having been laid out in 1680. The town, which at the last census had a population of 7,305, is beautifully situated, with many pleasant walks and drives in the vicinity, and is noted for its excellent trout fishing. In Stellenbosch many fine examples of early colonial architecture are to be seen.

#### UITENHAGE

An important town of 14,214 inhabitants, Uitenhage has large wool washeries and the workshops of the South African Railways. There are beautiful Botanical Gardens, and the neighbourhood affords good shooting.

#### UMTATA

A progressive township situated on the Umtata River, 220 miles from East London, Umtata is the administrative centre for the Native Territories, and since 1876 has been the seat of an Anglican bishopric. The Cathedral, which cost £14,000, was dedicated in 1906. The handsome Town Hall dates from two years later, and the Hospital from 1916. Other prominent institutions in Umtata, which has a population of 3,800, are the Umtata Club, St. Bede's College, the High School, St. John's College, and a new market hall and abattoir. The Queen's Park covers an area of 19 acres, and the famous falls of Umtata are about three miles from the town, Tsitsa Falls, 375 ft. high, being 40 miles away.

#### WORCESTER

The terminus of the new Cape Central Railway, Worcester is the centre of a most fertile agricultural district. Population, 8,641.

SUGAR FOR DESPATCH, DURBAN.

## COMMERCE

### EXPORTS AND IMPORTS

#### GENERAL DATA

**A** STUDY of the volume of trade in South Africa for both 1924 and 1925, together with its development since 1910 (the time of Union), reveals some interesting facts. In the last named year the value of the total trade of the Union was £90,330,707, which worked out at £15 7s 5d per head of the whole population, or £71 10s per head of the European population, and the proportion per cent of exports to imports was 145.9. In 1924 the total trade had reached the sum of £141,741,004 after the period of economic depression following the War, these figures being increased in 1925 to £145,224,002, or more than £90 per head of the European population. It must, however, be remembered that, owing to the great changes in the prices of commodities that have taken place since the outbreak of the European War, comparisons of total values convey very little idea of the actual development that has taken place in trade. Generally speaking, the economic position of the Union is now sound, and the prospects from a trade point of view are very hopeful. It will be seen from what follows how much solid progress was made in 1924 despite a long and protracted drought in many parts of the country, a visitation of locusts, and the serious set back in the production of maize. The year 1925 was also one of distinct progress, aided, there can be little doubt, by the visit of H.R.H. the Prince of Wales, though later somewhat retarded by the unhappy shipping strike with its far-reaching consequences. There was a recovery in the maize crop and a considerable expansion in the Union's export trade, giving rise to the most favourable expectations for 1926.

*Copyright.—See Preface*

**BALANCE OF TRADE.**—In 1925 the balance of trade in favour of the Union was £10,941,206 as against £18,441,455 in 1924 and £22,232,654 in 1923.

**INSOLVENCIES.**—Insolvencies in the Union have largely declined since 1922, the year in which the post war economic depression was at its worst. From a total of 649 insolvencies in 1920, there were 2,203 in 1923, 1,941 in 1924, and 1,372 in 1925, the insolvents' statements of liabilities in the latter year totalling £2,983,000. A movement is on foot to tighten up the insolvency law. See also under "Constitution and Law."

**WEIGHTS AND MEASURES.**—English weights are in general use throughout the Union, but Dutch measures for land and bulk are commonly utilised. The more important of these are—

BULK MEASURES			
1 leaguer	152 Dutch gals	=	1204 English gals
1 pipe	110 "	=	912 "
1 aum	38 "	=	312 "
1 anker	94 "	=	71 "
	1 " "	=	7895 "
	1 2666 "	=	1 "
	912 Dutch lbs	=	100 English lbs
1 mud (mud) dry measure	= 1 " bag "	=	3 bushels = 24 gals
A "bag" of Indian corn (maize)	weighs 200 lbs nett,		
203 lbs gross			
LINEAL MEASURE			
1,000 Cape ft	= 1,033 English ft		
12 " "	= 1 Cape rood	= 12 396 English ft	
511 3 " "	= 425 944 " "	= 1 English mile	
SQUARE MEASURE			
144 sq Cape ft	= 1 sq Cape rood		
86,400 " "	= 600 " "	= 1 Cape morgen	
1 sq. mile (English)	= 2 11654 English acres		
1 hectare	= 2.471 acres	= 1 1675 morgen	
1 carat (diamond measure)	= 5 2/3 grains (about), actually		
	200 milligrammes.		

#### COMMODITIES

##### EXPORTS AND IMPORTS

**EXPORTS.**—Foremost among South Africa's exports is gold, upon which for many years the prosperity of the country was mainly built up. It is satisfactory, however, to note that wool is steadily improving its position as a source of wealth to the Union, and much is hoped for in the future as a result of the development of the country's pastoral and agricultural industries, for in an increased production of foodstuffs lies the Union's prospect of marked commercial expansion. Diamonds maintain their place as third in the list of revenue producing exports. Of other exports, maize, coal, hides and skins, wattle bark and extracts, mohair, ostrich feathers, and fruits are the most important.

**EXPORT VALUES.**—The total value of South African produce exported overseas during the twelve months ended December 31, 1925, was £77,424,686, as compared with £74,478,231 in 1924, an increase of £2,946,455. The principal exports according to value were—

	1924	1925
	£	£
Gold .. ..	40,190,380	34,337,506
Wool .. ..	15,763,953	15,095,446
Diamonds ..	8,605,525	8,605,525
Sheepskins ..	1 857,179	1,566,739
Coal .. ..	1,211,580	1,071,393
Mohair .. ..	1,142,012	836,328
Hides (ox & cow)	972,723	911,733
Wattle bark and extracts ..	840,772	1,109,161
Maize .. ..	492,001	5,669,405
Maize meal ..	386,746	819,820
Ostrich feathers	353,162	203,976

	1924 £	1925 £
Goat skins	329,210	343,164
Copper (bar) ..	416,510	294,011
Whale oil ..	264,742	471,119
Sugar ..	57,473	766,964
Cotton (raw) ..	170,781	350,005
Tin ore, etc	222,021	220,266
Eggs	160,525	177,703
Fruits (fresh) ..	137,582	729,918
Fruits (dried) ..	128,338	118,462
Lead (bar)	129,108	55,724
Meats (fresh and frozen) ..	100,309	265,348
Wines	58,028	45,831
Other products	1,820,437	3,359,070
<b>Totals</b>	<b>74,478,231</b>	<b>77,424,686</b>

The most notable increases were those in maize (a record), £5,117,104, sugar, £700,191, and fresh fruit, £502,330. Wool slightly decreased in value, though the quantity exported was larger in the case of greasy wool. Fresh and foreign meats, maize meal and whale oil also showed gratifying increases, but there was a decline in the cases of ostrich feathers, bar copper and mohair.

Exclusive of gold, the direction of exports of South African produce overseas in 1924 was as follows—

	£	PER CENT
United Kingdom	21,052,893	61.1
India	387,919	1.1
Australia	172,454	.5
Other British Possessions	1,218,221	3.6
Foreign Countries	11,447,364	33.4
<b>Totals</b>	<b>£34,278,851</b>	<b>100</b>

Of the British Dominions, the Straits Settlements were the best market for Union produce other than gold, taking in all £504,796 worth of goods. Of the share of £11,447,364 absorbed by foreign countries, Germany took 8.6 per cent, Belgium 1.8 per cent, Holland 1.6 per cent, and the United States 3.5 per cent.

**FOREIGN MARKETS.** See "Trade by Countries."

**IMPORT VALUES.**—In 1910, the first year of the Union, imports of all kinds (but excluding specie) had a value of £36,727,367. In 1920, the year of abnormal trade, they rose to £101,827,104, or more than double the highest figure recorded, but dropped again in 1921 to £57,800,316.

Exclusive of goods in transit, imports totalled £67,799,316 in 1925, compared with £65,894,781 in 1924 and £57,836,761 in 1923, and were made up as follows—

	1924 £	1925 £
Merchandise		
From Overseas	58,063,553	61,898,988
From other States in B.S.A.	1,557,449	1,186,797
Government Stores	6,194,515	4,704,813
Specie	79,264	8,718
<b>Totals</b>	<b>£65,894,781</b>	<b>£67,799,316</b>

The following table shows the comparative values of the different classes of imports in 1924 and 1925—

	1924 £	1925 £
Animals, agricultural and pastoral products ..	166,288	231,752
Foodstuffs ..	7,265,443	7,415,684
Alcs, wines, etc ..	595,252	647,648
Tobacco, etc ..	76,329	80,975
Textiles, apparel, yarns and fibres	17,394,445	18,684,208
Metals, metal manufactures, machinery and vehicles..	16,038,833	18,054,670

	1924 £	1925 £
Minerals, earthenware, glass and china ..	1,020,519	1,104,422
Oils, paints, etc	3,368,654	3,363,442
Drugs, chemicals, etc ..	2,352,997	2,144,568
Leather and rubber	2,270,589	2,294,394
Wood, cane and wicker manufactures	2,446,759	2,393,428
Jewellery and fancy goods	1,472,264	1,525,110
Books, paper and stationery	1,895,211	1,884,336
Miscellaneous articles	1,378,195	1,793,060
Articles and materials for industrial purposes	513,090	884,153

The principal increases in imports in 1925 were metals, metal manufactures, machinery and vehicles, £2,015,837, foodstuffs, £849,759, articles and material for industrial purposes, £341,063.

In individual articles the most conspicuous increase was in the number and value of motor cars imported, which advanced in total from 10151 in 1923 to 13552 in 1924 and 18396 in 1925 and in value from £1,721,183 to £2,460,087 and £3,131,961 in the same years. Noteworthy gains also were coal grain and sugar bags, £803,127, miscellaneous manufactures of iron and steel, £859,596, electrical material, £252,443, and materials imported for manufacturing purposes, £341,063.

**TRADE BY COUNTRIES.**—The following table shows the leading countries with whom the bulk of the Union's overseas trade is conducted, the export and import figures being for the years 1923 and 1924, and the former being for South African produce only, excluding specie and ships' stores—

	1923 £	1924 £
<b>Exports</b>		
United Kingdom	57,020,655	47,129,644
India	1,015,785	14,510,548
Germany	2,652,939	2,953,100
France	2,658,001	2,873,387
Netherlands	1,867,671	1,576,262
United States	1,998,843	1,276,481
<b>Imports</b>		
United Kingdom	28,111,180	29,225,891
United States	7,151,472	9,144,176
Germany	2,720,955	3,528,342
Australia	2,103,142	2,269,230
Canada	1,841,714	2,167,088
India	2,308,487	2,113,397
Sweden	1,114,729	1,255,399
France	1,922,155	1,146,966

In the export trade, South Africa's best customer is Great Britain, which increased its share of Union produce (gold, specie and ships' stores excluded) from 59.6 per cent. of the total in 1923 to 61.4 per cent in 1924. The reduced figures for 1924 in the table immediately preceding are due to considerably reduced exports of gold, the large increase in these to India being responsible for the latter country's place in the table.

Turning to imports of merchandise, an examination of the sources of supply reveals that of 102 countries trading with the Union during 1924, 18 accounted for merchandise to the value of £56,911,000 out of a total importation of £59,621,000. The value of imports from the United Kingdom showed an increase of nearly £815,000, but her proportion of the total value of merchandise imported fell from 52.1 per cent to 49 per cent. The United States more than maintained her place as principal foreign supplier, furnishing 14.7 per cent, as against 12.8 per cent in 1923. Germany took third

place with 5.4 per cent. Canada, Sweden, and Holland improved their positions, but India and Belgium showed a slight decline, France and Japan both recovered ground.

**AUSTRALIA.**—The balance of trade with Australia is distinctly in favour of the Commonwealth, imports exceeding exports by £1,332,355 in 1923 and £2,086,830 in 1924. In the latter year imports were of the value of £2,269,230, compared with £2,103,402 in 1923, the value of the wheat imported having risen from £847,324 to the record figure of £1,041,455. Exports to the Commonwealth declined from £748,073 in 1923 to £172,454 in 1924, principally due to a decline of £440,266 in maize and £67,990 in blasting compounds.

**BELGIUM.**—The chief items of Union export to Belgium, which in 1924 totalled £1,646,392, as against £1,303,739 in 1923, were wool (grease), £1,259,601, wool (scoured) £64,100, hides, £53,076, and diamonds £190,260. Imports from Belgium increased in value from £873,277 in 1923 to £907,708 in 1924, and comprised in the latter year textiles, £263,294, machinery and metal manufactures, £417,799, and earthenware and glassware, £93,926.

**BRAZIL.** From Brazil the Union imported merchandise to the value of £970,822 in 1924, as against £741,636 in 1923, imports of coffee having risen from £728,510 to £960,329. Exports to Brazil are negligible.

**CANADA.** Union exports to Canada were valued at £9,724 in 1924, compared with £27,042 in 1923, while imports during the same years rose from £1,841,714 to £2,167,088, the balance against the Union increasing from £1,814,672 to £2,157,364. Imports included motor cars (£692,230 in 1923 and £691,266 in 1924), motor chassis, which fell from £5,042 to £312, and wheat, which rose from £58,129 to £128,129.

**CEYLON.**—Imports from Ceylon to South Africa exceeded exports to that Colony by £342,663 in 1924, being of the value of £575,859 compared with £485,940 in 1923. Tea was responsible for nearly all this total, imports rising from £423,040 to £495,586. Exports to Ceylon were worth £233,196 in 1924, as against £191,509 in 1923.

**EGYPT.**—In 1924 exports from South Africa to Egypt were valued at only £13,657, compared with £106,432 in 1923, the falling off being due to the lessened exports of coal, which dropped in value from £100,016 to £5,295. Imports remained nearly stationary, being valued at £9,204 in 1923 and at £9,364 in 1924.

**FRANCE.**—France imported South African produce to the value of £2,873,387 in 1924, as against £2,658,601 in 1923, the principal items in the first-named year being: wool (grease), £1,785,077, hides, £147,418, sheep skins, £610,965, maize, £32,898, and crayfish, £159,764. Imports from France rose from £922,155 in 1923 to £1,146,966 in 1924, textiles being responsible for £605,575.

**GERMANY.**—In 1924 Germany replaced France as the Union's chief foreign customer, and, with the exception of the United Kingdom, was the largest buyer of wool. Exports of South African produce to Germany totalled £2,953,400 (compared with £2,652,939 in 1923) the principal items being wool (grease), £2,301,850, wool (scoured), £181,759, bark (wattle), £132,876, bark (extract), £69,121, hides, £100,221, and maize, £44,278. As a supplying country to the Union, Germany ranked third in 1924 to the United Kingdom and United States, her export trade amounting to £3,528,342, as against £2,729,955 in 1923, or an increase of £807,387. Leading imports from Germany

For latest statistics see "APPENDIX"

were metals and machinery, £1,601,295, textiles, etc., £401,251, jewellery and fancy goods, £404,150, earthenware and glassware, £203,568.

**GREAT BRITAIN**—The following table shows the balance of trade as between the Union and Great Britain in the years named

IMPORTS		1923	1924
		£	£
Merchandise ..	28,401,189	29,225,891	
S.A. Govt Stores	2,677,643	4,681,690

Specie ..	287,234	300	
	£59,302,814	£49,203,275	
Balance of trade in favour of Union ..	£28,283,960	£15,295,094	

1923, diamonds, £6,498,426, a decrease of £174,197, and hides and skins, £1,652,454, an increase of £497,705

**INDIA**—The total trade of the Union with India increased from £4,227,272 in 1923 to £16,623,945 in 1924. Whilst imports from India during those two years decreased from £2,308,487 to £2,113,397, exports jumped from £1,918,785 to £14,510,548, the rise being entirely due to the volume of bar gold exported, which was 3,324,749 fine oz., value £14,122,629 in 1924, as against 369,255 fine oz., value £1,568,495, in the preceding year. Imports from India are largely made up of jute and cotton goods, tea, and grains.

**ITALY**—Imports from Italy increased from £385,474 in 1923 to £566,889 in 1924, and exports to that country, which totalled £268,720 in 1923, rose to £667,935 in 1924, this decided improvement being due to largely increased shipments of beef, £92,057, as against £436.

**JAPAN**—The total trade of the Union with Japan increased from £658,170 in 1923 to £846,487 in 1924, both imports and exports showing improved results. Of imports from Japan, which totalled £600,050 in 1924, as against £525,880 in the preceding year, textiles were by far the largest item

and stationery (£60,368) were the principal imports.

**NETHERLANDS EAST INDIES**—Imports from the Dutch East Indies were valued at £535,059, against £644,108 in 1923, motor spirit (£419,245) being by far the largest item. Tea to the value of £39,335 was also imported. Exports to the Indies were £14,454 in 1923 and £32,517 in 1924.

**PORTUGUESE EAST AFRICA**—The balance of the Union's trade with Portuguese East Africa is a favourable one, exports exceeding imports by £53,906 in 1923 and by £82,813 in 1924. In the latter year the Union exported £200,708 worth of goods, as against £167,096 in the preceding year, while goods to the value of £84,283 were imported, compared with £146,802.

**SOUTHERN RHODESIA**—In 1924 the Union's total trade with Southern Rhodesia was of the value of £2,419,256, compared with £2,052,737 in 1923. Exports of South African produce to the neighbouring colony declined from £807,908 to £807,184, while those of imported goods re-exported increased from £624,214 to £770,570. Imports of South African produce from Southern Rhodesia increased from £517,825 in 1923 to £738,291 in 1924, while imported goods

IN THE FEATHER MARKET, PORT ELIZABETH.

WOOL MARKET, PORT ELIZABETH.

The following table shows the trade in South African produce only from 1920 to 1924

	IMPORTS FROM GREAT BRITAIN	EXPORTS TO GREAT BRITAIN
	£	£
1920 ..	50,243,569	59,458,140
1921 ..	27,310,863	46,264,544
1922 ..	25,606,243	44,747,519
1923 ..	28,411,189	57,020,655
1924 ..	29,225,891	47,129,644

Leading imports from the United Kingdom in 1924 were, textiles, etc., £12,377,094 (71.5 per cent of total imports under that heading), metals, machinery, etc., £8,232,552 (45.4 per cent), leather and rubber manufactures, £1,300,013 (80.8 per cent), drugs, chemicals and fertilizers, £1,262,985 (60.5 per cent), foodstuffs, £896,662 (12.6 per cent.).

The principal items of export to the United Kingdom were Gold, £26,076,751, wool, £8,169,033, an increase of £2,592,161 over

Exports to Japan were worth £140,837 in 1924, as against £132,290 in 1923.

**KENYA COLONY**—Trade with Kenya Colony has shown a rising tendency during the last few years, but is adverse to the Union at present, imports being £99,743 in 1924 as against £95,760 in 1923, and exports £48,612 as against £21,950.

**NETHERLANDS**—The following are the figures of the Union's trade with the Netherlands in the years named.—

	1923	1924
	£	£
Exports to ..	1,867,671	1,576,262
Imports from ..	551,112	793,378
Total ..	£2,418,783	£2,369,640

It will be seen that exports to Holland fell in 1924 by nearly £300,000, shipments of maize having declined from £348,380 to £33,019. Foodstuffs (£224,551), drugs and chemicals (£131,282); and paper, books,

re-exported from the colony rose slightly from £102,790 to £103,211. The Union took over £260,000 worth of Rhodesian tobacco out of a total of £284,000 exported.

**SOUTH-WEST AFRICA**—The following table shows the value of the Union's trade with South-West Africa in the years named.—

	1924	1925
	£	£
EXPORTS		
South African Produce ..	498,181	526,475
Imported goods re-exported ..	593,828	694,230
Total ..	£1,092,009	£1,220,705
IMPORTS		
South African Produce ..	556,770	337,500
Imported goods re-exported ..	50,463	59,929
Total ..	£607,233	£397,429

The Union furnishes the greater proportion of the requirements of South-West Africa, viz. £1,065,606 out of a total of £1,000,632 imported in 1924 and £1,220,205 out of £2,104,352 in 1925. The principal articles of export to the Territory in 1925 were cereals, £111,738, confectionery, £11,003, jams and jellies, £13,040, sugar, £63,468, fresh vegetables, £12,933, and spirits (potable) £19,054. From South-West Africa the Union imported in the same year live animals, (value £210,000) and articles of food and drink (value, £102,682).

**STRAITS SETTLEMENTS**—Trade with the Straits Settlements reached a total figure of £554,078 in 1924, compared with £398,507 in 1923, exports rising from £356,124 to £504,796 and imports from £42,383 to £49,282.

**SWEDEN**—Statistics for 1924 show that Sweden increased her exports to the Union by £140,630 over 1923, the figures being respectively £1,114,729 and £1,255,399. In addition to timber, imports from Sweden include oil-engines, motors, machines and parts, drill steel, enamelled ware, stoves and ovens, cement, and paper. Exports from the Union to Sweden increased in value from £59,000 in 1923 to £68,000 in 1924.

**UNITED STATES**—If the Union's trade with the United States did not reach the high figure of 1920, when imports alone totalled £17,000,000, both exports and imports showed a rising tendency during the three years 1922-24. The following table gives particulars for the calendar years named—

	1923	1924
Exports to	1,998,843	1,279,481
Imports from	7,151,473	9,144,176

The fall in exports in 1924 was mainly due to smaller shipments of wool, hides and skins.

As regards imports, the United States now ranks second to Great Britain. By far the largest items are comprised under the heading of metals, machinery, and vehicles, and included in 1924 agricultural implements and machinery, £500,978, electrical machinery, £199,548, motor vehicles and accessories, £1,846,793, rubber tyres and tubes, £108,133, lubricating oil, £383,411, illuminating oil, £487,647, and motor spirits, £779,872.

Exports from the Union to U.S.A. were valued at £2,610,000 in the period January-November 30, 1925, compared with £1,450,000 in the corresponding period of 1924. Wool and copper were chiefly responsible for the increase.

**TRADE INSTITUTIONS.**—Following are the principal institutions and associations assisting in the furtherance and protection of South African trade and commerce—

**ASSOCIATION OF CHAMBERS OF COMMERCE OF SOUTH AFRICA**—This important Association was established at Capetown in 1896, and the value of the work which it has accomplished in 30 years may be judged by the fact that it has increased its membership during that period from six to 98 affiliated chambers. The Association has come to be the recognised mouthpiece of commerce in South Africa, and its influence during recent years has expanded enormously. It deals with questions of economic importance, legislation, railway and customs matters, wage problems, and innumerable other subjects. The valuable information and the considered views of experts obtained in this way are at the disposal of the executive of the Association—a highly representative and influential body.

In 1925 a re-organisation scheme was brought forward, the object of which is to place the Association in a position of greatly

increased usefulness to the commercial community of South Africa. In future there is to be a full-time organising secretary and staff, with headquarters at Capetown during Parliamentary session and in Johannesburg or Pretoria during the recess. In this way it is hoped to keep in constant touch with the Government, the various Government Departments, the Board of Trade and Industries, etc., and commercial interests will be more closely watched and protected than has hitherto been possible.

**BRITISH MANUFACTURERS' REPRESENTATIVES' ASSOCIATION OF SOUTH AFRICA**—This Association, which has a large membership of commercial firms and individuals representing British interests, has its offices in Remington Buildings, 86, St. George's Street, Capetown, with a branch office at Johannesburg (8, Standard Buildings). It exists for the furtherance and protection of agents and representatives' interests throughout the Union, its energies being constantly called into operation when questions of harsh or unfair taxation arise.

**CHAMBERS OF COMMERCE**—Each of the cities and larger towns of the Union has its Chamber of Commerce, the largest being those of Johannesburg, Capetown, Durban, Pretoria, Bloemfontein, Pietermaritzburg, East London, Port Elizabeth, Newcastle, Witbank, Boksburg, Germiston and Jagersfontein.

**TRADING METHODS.**—Marketing conditions in South Africa are almost invariably carried out between the wholesaler, the retailer and the customer. That is, the large wholesale firms import or buy locally their requirements, and they then send out their salesmen, who dispose of the goods to the smaller storekeepers, usually on a ninety-day basis, although credit facilities are now being somewhat restricted, and sixty or even thirty days terms are being insisted upon by the more important and stable wholesale houses. The retailer then sells to the consumer, and in towns the usual terms are monthly, by reason of the fact that salaries and wages in South Africa are, as a general rule, paid monthly. In the country, however, and when dealing with the farming community it is by no means unusual for the storekeeper to grant six or even twelve month terms.

Although trade in South Africa is largely in the hands of the wholesale houses, there is an increasing tendency for the larger retail storekeepers to import their requirements direct, and as time goes on and competition becomes keener there can be no doubt that this tendency will further grow.

**ADVERTISING**—In considering the placing of any proposition before the South African public by means of advertising, the fact that there are two distinct European races must be taken into consideration. So far as publicity is concerned, the native population may be dismissed for some time to come, though the coloured population of the Cape is probably worth careful attention.

To advertise successfully in South Africa requires first-hand and specialised knowledge, but two rules are of particular importance. "To reach the African population, advertise in Dutch", and "Aim at clearness rather than at cleverness." The Boer of the Transvaal and Orange Free State is said to be a slow thinker and a deliberate mover. Manufacturers and agents should, therefore, not be disappointed if an immediate response is not always secured. There is an important and influential Dutch press to be considered, in which judicious advertising may be carried out. Advertising in South African (English) papers is not unduly expensive, the rates for

the "Sunday Times" (Johannesburg), which has a very wide circulation, being 15/- per single column inch, while outside Johannesburg the contract rates for 52 insertions in a South African daily paper do not usually exceed 3/6 per single column inch. Oversea advertisers are recommended to use direct mail advertising in conjunction with direct press advertising provided the former be undertaken in the country.

**CATALOGUES**—Catalogues and price lists should be attractively got up, prepared (especially for the Transvaal and Orange Free State) in English and Dutch, be kept up-to-date, give a full description of the wares, and be easy of reference and well illustrated.

**COMMERCIAL TRAVELLERS' AND AGENTS' LICENCES**—Licence fees of South African firms which act as representatives of overseas houses, or, in other words, those firms which sell from samples on a purely commission basis, have been consolidated by a new Licences Consolidation Act, which became effective on January 1, 1926. Formerly, a firm of manufacturers' agents paid a separate licence fee for each Province in which it solicited business. In the Cape Province this amounted to £50 annually, with a 50 per cent reduction for those firms which had a prior residence of three years in the Province, in the Transvaal and Natal, £10 annually, and in the Orange Free State, £5 a quarter. The new measure provides for the licensing of trades, professions, and occupations within the Union of South Africa, and by its provisions agents of foreign firms, as distinct from firms which purchase goods from firms outside the Union for re-sale in the Union, are required to pay £75 for an annual licence. Agents who ordinarily have been resident within the Union for three years prior to taking out a licence pay half the regular rate, or £37 10s.

Provision is also made to cover travelling representatives of foreign firms. These are required to take out a licence at the comparatively high rate of £50, which entitles them to solicit orders for their principals for a period not exceeding three months. Should their stay be of longer duration, they must take out the ordinary annual licence. The licence is required of every person who in any way advertises or purports to be the authorised representative or agent of any manufacturing or trading establishment outside the Union, or who actually invites, solicits, canvasses, or accepts orders for the sale or supply of goods on behalf of a foreign firm. In addition to the £75 or £37 10s fee, whichever the case may be, the representative of an overseas firm is required to pay a licence fee of £15 for each salesman employed by him.

**IMPORTERS' LICENSING DUTY**—The Transvaal Importers' Licensing Ordinance, 1925, provides for the licensing, as from January 1, 1926, of all persons in the Transvaal who import for sale within the Province from beyond the borders of the Union goods exceeding £1,000 in value during the year 1926. The amount of duty to be paid during 1926 for an importers' licence is to be ascertained as follows—(a) In the case of any person who imported goods exceeding £1,000 in value during the year 1925, the amount payable for a licence shall be £5 for the first £1,000, plus 10s for each additional £100 or part thereof, subject to a maximum duty of £200. (b) In the case of any person who had not imported goods exceeding £1,000 in value during the year 1925, the amount payable for a licence shall be £15.

The amount of licence duty thus paid by any person during 1926 will be adjusted after the end of that year, so that he will eventually pay licence duty, at the rate specified in

(a) above, on the total declared value of goods imported by him during the year 1920.

**IMPORTERS' OBLIGATIONS.**—No importation of goods into the Union may be made without due entry and the payment of any customs dues. Every person carrying on business in the Union is required to keep within the Union reasonable and proper books or accounts of his transactions, and within two years after the date of any importation may be required to produce the bills of lading, invoices, and other documents relating to the goods. The particulars to be contained in invoices are prescribed by regulation. Any person offering goods for sale, or removing them, or having such goods entered in his books, may be required to produce proof as to the person from whom the goods were obtained, and, if he be the importer, as to the place where the import dues were paid.

**INVOICING.**—It is advisable that quotations to South Africa should be made in such manner as to give the importer and also as to the landed cost of goods. Further, it is desirable to show separately on invoices each item of cost, packing, freight and insurance. Too much attention also cannot be paid to the giving of the fullest particulars as to measurements and weights of cases (gross and net) and contents of packages. Particular care should be taken to include in invoices the exact descriptions of goods, special marks, or item numbers appearing on the indent or order.

In view of all calculations in South Africa being on the basis of 100 lb and multiples or parts thereof, invoices should show the total number of lbs, instead of tons, cwt or qrs. Exporters should obtain from the High Commissioner in London a copy of the Weights and Measures Act (No. 32) of 1922.

**PACKING.**—Exporters should reduce the sizes of cases and bales to the smallest possible compass compatible with safety to the contents. So large a proportion of the sea-borne trade being carried by measurement and not by weight, economy of space is very important. "Nesting" as a space reducer, where the goods allow of this being done, should be practised. The elimination of unnecessary packing material is also desirable. In packing provisions and "small" goods for places in the interior which require to be carried by porters, the weight of all packages should not exceed 60 lb gross, one man's load.

**SHIPPING DOCUMENTS.**—Appendix A of the Customs Regulations, published in Government Notice No. 1774 of 1922, is the form of invoice required by the Customs Authorities of the Commonwealth of Australia, New Zealand, the Union of South Africa, and Newfoundland, and such other parts of His Majesty's territories as may from time to time be notified in the Board of Trade Journal. On the back of the invoices must be written, typed, or printed the combined certificates of value and origin in respect of all goods, whether sold outright or shipped on consignment. The certificates of value and of origin will be required in respect of goods on which preferential tariff treatment is claimed, exported either from the United Kingdom or British possessions, and only the certificate of value in respect of exports from foreign countries or exports of foreign goods from the United Kingdom or British Possessions.

**TRADE COMMISSIONER SERVICES.**—The most important of these is that of the Trade Commissioner of the Union in London, who deals from the High Commissioner's Office in Trafalgar Square with all the matters relating to the export trade of South Africa. By means of an elaborate intelligence service the Union Department is advised by

cable weekly of the prices obtaining and of the general trend of markets, and this information forms a useful guide to the producer and shipper. Advice is also sent where the Trade Commissioner in his investigations discovers the likelihood of any developments affecting producers' interests. A useful function is also performed in bringing producers and consumers into touch with each other and in giving business introductions where such are necessary.

The Trade Commissioner also performs the important duty of inspecting and reporting upon consignments of Union produce, and organises exhibitions for propaganda purposes. He also represents the High Commissioner on various Boards and Committees, e.g. the Empire Cotton Growing Corporation, the South African Committee of the Imperial Institute, Refrigeration Association, Poultry Association, etc. He is likewise a member of the South African Section of the London Chamber of Commerce, and generally identifies himself with all trade movements in the United Kingdom which have a bearing on the trade interests of the Union.

**American Trade Commissioner.**—The American Trade Commissioner in Johannesburg represents the Bureau of Foreign and Domestic Commerce of the United States, which was established in 1912, the Johannesburg Office having been opened in 1920. The chief function of the Bureau is to give assistance to American commerce in its widest sense, and the activities of the Commissioner are mainly directed to the compilation of exhaustive and up-to-date reports, which are sent to Washington by cable and promptly disseminated. Assistance is also given to South African importers and others who are desirous of securing American agencies, or purchasing American products.

**Canadian Trade Commissioner.**—The Canadian Trade Commission Service was established in 1891, and a Trade Commissioner has been stationed in South Africa for many years. He promotes the sale of Canadian products and submits data to the Home Government in reference to South African markets. A steamship service has been subsidised by the Canadian Government to carry on trade between Canada and South Africa.

**Commissioner of Commerce in Europe.**—The office of the Commissioner of Commerce for the Union on the Continent of Europe was created in 1922. The offices are at 15 Coolsingel, Rotterdam.

**Honorary Trade Commissioners** for the Union have been appointed at Helsingfors and Berlin.

**H.M. Trade Commissioner.**—As a result of the Imperial Conference of 1907, the post of His Majesty's Trade Commissioner was created, and Commissioners were appointed to Cape-town, Melbourne, Montreal and Wellington in the following year. The primary object of the Trade Commissioner is to direct importers in South Africa, whether of finished manufactures, machinery for local production, or raw materials, to British sources of supply, and generally to work for the promotion of trade within the Empire. This obviously entails a close study of local requirements and of foreign competition in this market, as well as a knowledge of the capabilities of British producers and manufacturers overseas. It is also clear that there is almost unlimited scope for work in this field. The work is complementary and parallel to that of the Industries Section of the Union Department of Mines and Industries and of the Union Trade Commissioner in London, with whom the Department of Overseas Trade in London and the Trade Commissioners in South Africa are in constant touch.

## COMMODITIES

The values of the following commodities are taken from the Statistics of Trade and Shipping issued by the Department of Customs and Excise.

**AERATED WATERS.**—See "Beverages."

**ALES AND BEERS.**—See "Beverages."

**ANGORA WOOL.**—See "Mohair."

**ASBESTOS.**—Exports of crude asbestos were valued at £102,308 in 1925, compared with £110,710 in 1924, though there was an increase from 13,205,004 to 13,265,004 lbs. The United Kingdom took some 9,000,000 lbs and Australia the remainder.

**AUTOMOBILES.**—See "Motor Cars."

**BAGS AND SACKS.** Imports of jute bags and bagging increased in value from £954,480 in 1924 to £1,871,403 in 1925. The record export trade in maize accounted for this increase.

**BARK (WATTLE).**—Exports of wattle bark in 1925 rose from 203,000,000 lbs in 1924 to 223,000,000 lbs, the values being £583,972 and £781,003. Of bark extract, some 40,000,000 lbs valued at £328,068 were exported in 1925, as against 34,000,000 lbs valued at £256,800 in 1924.

**BEDSTEADS.**—Metal bedsteads to the value of £58,925 were imported in 1924, as against £53,024 in 1923, the United Kingdom being the leading country of origin. The 3 per cent tariff preference formerly granted to Great Britain on this class of goods has not been conceded under the Act of 1925.

**BEVERAGES.**—Following were the leading imports in the years named:

	1924	1925
	GALLONS	
Ales, beers, and stout	84,155	94,086
Brandy	16,947	18,596
Gin	28,171	31,681
Rum	2,035	2,687
Whisky	334,011	322,648
Wines	42,081	48,001
Aerated and mineral waters	17,108	15,601

The total value of all ales, spirits, wines and beverages imported in 1925 was £581,403, as against £535,416 in 1924. (See also "Wines.")

**BICYCLES.** There was a rise of £65,448 in the value of the Union's imports of bicycles and parts in 1925 as compared with 1924, the figures being £241,750 and £176,302 respectively. Great Britain is the principal source of supply.

**BLANKETS AND RUGS.**—Blankets and rugs of all kinds were valued at £966,617 in 1925, as against £1,273,655 in 1924.

**BOOTS AND SHOES.**—In 1924 the following importations of leather footwear were recorded: Men's, 466,964 pairs (£300,296), women's, 1,213,886 pairs (£631,109), children's, 242,309 pairs (£63,580), slippers, 139,691 pairs (£24,260); infants', 256,729 pairs (£30,041). In each case the United Kingdom was the chief exporting country. From Switzerland came 115,227 pairs of men's boots, valued at £71,345.

Imports of all footwear for 1925 were £1,029,787, compared with £1,193,791 for the corresponding period of 1924.

**BUTTER.**—In 1922 the quantity of butter imported by the Union was 196,025 lb., rising to 1,666,433 lb in 1923, and to 1,582,927 in 1924, the last year's imports being of the declared value of £100,962. There was an increased demand for Australian butter, over 700,000 lb. more being imported in 1924 than in the previous year; but decreased supplies were received from New Zealand. Margarine and other butter substitutes imported also increased con-

siderably, coming principally from the United Kingdom and Holland.

Imports of butter and butter substitutes in 1925 were valued at £103,017.

Exports of butter showed a welcome increase from £44,612 in 1924 to £58,620 in 1925, the United Kingdom having taken larger consignments.

**CANDLES.**—In 1924 imports of candles totalled 41,446 lb., value £905, rising to 18,796 lb., value £2,217, in 1925. Supplies from the United Kingdom have declined, whereas those from Holland have risen.

**CEMENT.**—Imports of building cement declined in value from £117,958 in 1923 to £93,952 in 1924, supplies from the United Kingdom and Belgium decreasing, while those from France increased by £12,854, and Sweden appeared for the first time as a supplying country with £10,383. In 1925 imports rose to £101,000.

**CHEESE.**—There was a large increase in cheese exports from the Union in 1924, the value being £7,208, as against £570 in 1923. Exports to the United Kingdom rose from £327 to £2,574, but those to Portuguese East Africa and Belgian Congo decreased slightly. Imports of cheese declined from £44,775 in 1923 to £29,870 in 1924, and to £16,132 in 1925, supplies coming mainly from Holland.

In 1925, cheese exports rose to £10,324.

**CIGARS AND CIGARETTES.**—See "Tobacco."

**CINEMA FILMS.**—The United States has always led in the supply of bioscope films to the Union, Great Britain being a poor second. The value of imported films was £100,972 in 1923 (U.S.A., £73,794), £107,024 in 1924 (U.S.A., £87,838), £100,675 in 1925.

**CLOCKS AND WATCHES.**—Imports of clocks increased in value from £35,536 in 1923 to £39,631 in 1924. Germany's share of the latter total being £24,237, and the United States' £8,158. Watches and parts thereof are supplied mainly by Switzerland, which was credited with £75,017 out of the total of £93,440 for 1924, compared with one of £100,230 for 1923.

The value of all timepieces imported in 1925 was £148,248.

**COAL.**—The total coal production of the Union for 1924 was 15,561,365 tons, as against 14,678,687 tons in 1923, while the quantities of cargo coal shipped during the same periods were 1,921,977 tons, value £1,211,580, and 1,903,717 tons, value £1,190,688 respectively. The above figures indicate that the steady progress in the Union's coal trade is being maintained. The tonnage exported in 1924 was the highest yet recorded. A decline in exportations to India, Egypt, and France in 1924 was more than compensated for by larger shipments to other countries, notably British Sudan, Straits Settlements, Aden and Ceylon.

A further export record was established in 1925, when 3,860,255 tons were shipped, of which 1,937,623 went to foreign markets.

**BUNKER COAL.**—South African coal bunkered in 1925 showed an increase of 147,186 tons in quantity—1,063,207 tons in 1925, as against 1,816,021 tons in 1924. The following comparative statement indicates the shares of the three leading ports in the bunkering trade in the years named—

Port.	1923 Tons	1924 Tons
Capetown ..	345,966	336,219
Durban ..	1,184,761	1,220,040
Delagoa Bay ..	268,530	245,183
Other Union Ports	8,714	8,579
Total	1,807,971	1,816,021

(See article "Coal Mining.")

**COFFEE.**—Almost all of the coffee imported by the Union comes from Brazil, whose share of the total value of all imports, £788,445 in 1923 and £1,027,720 in 1924, was £728,510 and £969,329 respectively. Supplies from Kenya Colony decreased in value from £40,538 to £28,060, while those from Tanganyika Territory increased from £4,255 to £11,928.

Imports for 1925 were valued at £1,198,180, but there was a decrease of 1,700,964 lb. in the quantity received.

**COPPER.**—Copper is one of South Africa's most valuable minerals, but exports, which had shown a large increase in 1924, fell from £499,098 to £350,238 in 1925.

**COPRA.**—The Union imported 5,069,450 lb. of copra in 1924, valued at £61,674, an increase of 689,125 lb. on the figure for 1923. Kenya, with 1,947,118 lb., and the Seychelles,

lands, saris and downies, piece dyed goods, black cashmerettes, sateens, casement cloth, bed ticking blankets, rings, and shawls. White shirtings are virtually a British monopoly, Hosiery being almost a household word. Great Britain also leads all other countries in the sale of prints and dyed goods. Italian exports have gained ground, but those from France, Japan and India have declined.

**COTTON (RAW).** Recent developments in the cotton industry of the Union are shown by the increase in the quantity and value of exports during 1925, when the raw cotton exported amounted to 6,981,213 lb., value £350,095, as against 3,279,388 lb., value £170,781, in 1924. All but a small fraction was taken by the United Kingdom, to which exports increased in value from £77,626 in 1923 to £150,590 in 1924.

FRUIT ARRIVING AT A COUNTRY STATION FOR SHIPMENT.

with 1,234,044 lb., were the principal supplying countries.

**COTTON PIECE GOODS.** The United Kingdom continues to be by far the largest supplier of cotton piece goods, though imports from the Mother Country declined slightly from £3,044,421 in 1924 to £2,063,605 in 1925. Total imports of cotton manufactures rose from £4,540,204 to £4,557,717. The United States exported 12,171,830 square yards of cotton cloth, valued at some £550,000, as against 7,794,412 square yards with a value of £400,000 in 1924.

The principal classes of cotton piece goods imported from Great Britain are Bleached goods, fancies, cretonnes, salempores, dhooties, handkerchiefs, poplins, and fou-

**CUTLERY.**—Imports of cutlery (not plated) were valued at £183,006 in 1924, against £105,224 in 1923, the United Kingdom being responsible in each year for about two-thirds of the total, and Germany coming next. Imports of plated cutlery during 1924 were valued at £6,223.

**CYCLES.** See "Bicycles" and "Motor Cycles."

**DAIRY UTENSILS.** See "Machinery."

**DIAMONDS.**—The Union's output of diamonds is about 70 per cent of the total world production, and amounted in 1925 to 2,433,280 carats, value £8,198,368, as against 2,443,347 carats, value £6,029,466, in 1924. The diamond being almost entirely an article of luxury, and there being enough diamonds

in the mines now working to satisfy the market for the next hundred years, it became necessary some years ago to regulate and restrict production as between the four chief producers in South Africa, viz., the De Beers, South-West Africa, Premier, and Jagersfontein mines, these four producers selling their diamonds at agreed-upon prices to the London Syndicate. A new five years' contract was made in 1925, to date from January 1, 1926, for the sale of these producers' diamonds to a new syndicate, a decision which is taken to mean continued stability to the diamond trade.

The average price of diamonds increased from £2 18s per carat in 1923 to £3 4s 10d in 1924, and £3 6s 8d in 1925, while exports increased from 2,190,177 carats, value £7 133,370, to 2,591,230 carats, value £8,605,515. In 1924 both the United Kingdom and the United States reduced their purchases from £6,072,623 to £6,498,426 and from £14,865 to £4,079 respectively. Shipments to Holland increased from £360,532 to £440,005, and to Belgium from £149,098 to £190,260. (See also under "Mining and Minerals.")

**DRUGS AND CHEMICALS.**—The main items under the heading of drugs, chemicals and fertilisers, the total imports of which were valued at £2,144,568 in 1925, compared with £2,352,997 in 1924, were in the first-named year as follow: Sohum compounds, £332,918, drugs and apothecaryware, £447,806, fertilisers, £351,670, perfumery and toilet preparations, £196,440, sulphur, £73,684, and other chemicals, £520,729.

**EARTHENWARE.**—Combined imports coming under the heading of earthenware and stoneware rose in value from £347,305 in 1923 to £352,566 in 1924. There was an increase in the value of china and porcelain imported (£19,806 to £25,437), while decreases were shown in miscellaneous earthenware (£222,649 and £222,510) and in pipes and piping (£5,896 and £3,521).

In 1925 imports of earthenware, etc., were valued at £371,316.

**EGGS.**—Imports of fresh eggs were valued at £11,768 in 1925, compared with £4,896 in 1924, exports from the Union, almost entirely to the United Kingdom, totalled £160,525 in 1924 and £177,763 in 1925.

**FEATHERS.**—See "Ostrich Feathers."

**FISH.**—Exports of fish (other than crayfish) fresh, dried, and preserved, were valued at £73,933 in 1925, as against £54,473 in 1924. Australia and Mauritius took the bulk of the dried and cured fish, and Australia almost all the fresh and frozen.

**CRAYFISH.**—One of the minor industries of the Union, at present adversely affected by the fall of the franc and the lack of a tariff understanding with the French Government, is the trade in canned crayfish. Exports increased from 2,997,436 lb. (£216,918) in 1923 to 3,565,698 lb. (£225,854) in 1924. In the latter year shipments to France totalled £159,764 and to the United Kingdom, £33,652.

In 1925 exports were valued at £234,637.

**FRUIT (DRIED).**—There was a drop in the quantity and value of exports of dried fruits from the Union in 1924, these totalling 8,835,369 lb. (£128,338), as against 10,638,741 lb. (£187,781) in 1923. The highest values in 1924 were those obtained for raisins (£93,144) and grapes (£12,814). Exports of preserved fruits increased in value from £44,132 in 1923 to £85,750 in 1924.

Exports of dried fruit in 1925 were of the value of £118,462 (a decrease of £9,876) and of preserved fruit, £72,895 (a decrease of £12,855).

**FRUIT (FRESH).**—The South African fresh-fruit industry is becoming an increasingly important factor in the world trade. The cultivation of citrus fruits has assumed commercial proportions during the past ten years, and there has been a decided increase in the production of deciduous and non-deciduous fruit for export. There has, for instance, been a very marked extension of orange acreage, particularly during 1924 and 1925, which should result in a great increase of the oranges available for commerce when such plantings come into bearing. It is predicted that within ten years the Union will be producing sufficient oranges to permit the export of 7,000,000 or 8,000,000 boxes each year—almost ten times the estimate of 800,000 boxes for 1925. South African fruit finds a ready market in Europe, as it arrives at a time when fruit from the Mediterranean countries and North America is not plentiful. About 80 per cent of the fruit grown is exported, the United Kingdom being the principal market, but by transshipment from English ports an increasing proportion of such exports finds its way to Continental Europe, where the products are rapidly growing in favour.

In 1925 exports of fresh fruit totalled 2,403,059 boxes, value £720,918 compared with 740,850 boxes, value £137,582 in 1924, the following being the items exported in 1925: citrus, 751,814 boxes (£351,800); grapes, 331,831 boxes (£94,301), and other, 71,206 boxes (£15,428). (See also special article on "Fruit Industry.")

**FURNITURE.**—Imports of all wooden furniture totalled £101,274 in 1925, as against £126,035 in 1924. The local furniture-making having been largely developed of recent years, imports in this class are likely still further to decrease.

**GLASSWARE.**—Glassware imported into the Union reached a value of £419,481 in 1924 and of £441,423 in 1925. From 1923 to 1924 bottles and jars (mainly from Germany and the United Kingdom) rose from £161,712 to £169,907, and plate glass from £56,819 to £90,902, the bulk coming from the United Kingdom. Window glass (which rose from £56,849 to £57,230) is supplied chiefly by Belgium.

**GLOVES.** The value of gloves (not leather) imported into the Union in 1923, was £19,979 and £20,508 in 1924. Leather gloves, chiefly from England, France, and Italy, totalled £21,807 in 1924, against £17,756 in 1923.

**GOLD.**—The value of the gold production of the Union, calculated at the standard rate of £4 24773 per fine oz., was £40,672,447 for the calendar year 1924, as against £38,862,794 for the year 1923. The total premium obtained was £4,067,190 in 1924, and £2,712,151 in 1923.

Whereas in former years almost all the gold produced was shipped to the United Kingdom, it is worthy of note that the exports to India increased from 336,255 fine oz. in 1923 to 3,324,749 fine oz. in 1924, with a corresponding decrease in the shipments to the United Kingdom. Gold to India is shipped through the port of Durban, and this accounts for the large increase in the value of exports through that port. The following table gives the exports of gold bars in the years named:

	1923		1924	
	FINE OZ.	£	FINE OZ.	£
United Kingdom	8,809,904	37,122,094	6,138,985	26,076,751
India	369,255	1,568,493	3,324,749	14,922,629

Owing to the loss of the gold premium, the total exports of gold fell to £34,337,506 in 1925.

(See also articles on "Mining.")

**GOVERNMENT STORES.**—Recently the South African Government announced that, so far as practicable, all of its purchases would be ordered locally, a decision which is expected greatly to benefit local industry, though for a considerable period to come the Union must in any case import a large share of its necessities. Previously all Government purchases were made through the High Commissioner in London, who invited tenders from a select list of firms. During the calendar year 1924 the imports of Government stores were valued at £6,194,515 as against £3,270,050 in 1923, an increase of 89.5 per cent, due mainly to large purchases of railway material. Of the 1924 total, Great Britain supplied roughly four-fifths, valued at £4,681,690.

The United States was the second largest source of supply, with a value of £358,673, Australia coming third, with £339,311, and Germany fourth, with £319,375. Stores imported for the use of the Union Government range from supplies for the Army to materials required for the electrification of railways. Railway material, consisting of rails, sleepers, locomotives, and rolling stock, constituted in 1924 about one-third of the total Government purchases. The second largest item was electrical machinery, chiefly for railways and the telegraph and telephone systems.

In 1925 the value of stores imported fell to £4,704,813.

**HABERDASHERY.**—Imports of haberdashery, millinery, and minor articles of attire reached a total value of £1,339,343 in 1925, compared with £1,312,643 in 1924. Leading items in 1924 were—Handkerchiefs, £122,216 (United Kingdom, £98,196), lace and embroidery, £155,567 (Switzerland, £78,709), minor articles of attire (ties, collars, etc.), £160,240 (United Kingdom, £117,034), umbrellas, parasols, and sunshades, £34,224 (United Kingdom, £26,677).

**HATS AND CAPS.**—In the three varieties of felt, straw and other (mainly caps) hats, Great Britain is the principal source of supply. Imports during 1923 and 1924 were felt hats, £233,409 and £205,053, straw hats, £157,322 and £151,516, and other, £164,890 and £144,257 respectively.

In 1925 imports totalled £549,980.

**HIDES AND SKINS.**—Compared with 1923, exports of sheep-skins showed a decrease in quantity of 2,568,909 lb., but an increase in value of £264,227, the average price of 1s 3d per lb. marking an advance of 26.8 per cent. over 1923 prices. A considerable increase in the quantity and value of ox hides exported was noted in 1924—viz., 30,000 lb., value £972,723.

Ox-hides and sheep-skins both declined in 1925, the one to £911,733 and the other to £1,566,739.

**HOPS.**—Not sufficient hops are grown in South Africa to supply the needs of the breweries, and in 1925 imports were worth £25,324, as against £20,288 in 1924. The United States, United Kingdom, Czechoslovakia and Germany are the leading countries of supply.

**HOSIERY.**—Imports of socks and stockings in 1924 were valued at £760,591, the United Kingdom's share of the trade being £482,286. In 1925 the value was £740,139.

**IRON AND STEEL PRODUCTS.**—Imports of iron and steel (raw and manufactured) totalled approximately £6,000,000 in 1925, compared with £5,500,000 in 1924, the following being the principal items listed:

	1924 £	1925 £
Sheet (galvanised and corrugated)	643,695	660,673
Wire fencing	582,811	465,032
Wire, other	544,923	507,437
Pipes (wrought iron and steel)	472,707	438,522
Bar, bolt and rod	333,655	292,654
Plate and sheet	301,819	315,422
Mechanics' tools	154,218	200,905
Angle iron, etc	57,383	128,496
Pipes (cast iron)	94,622	140,459
Nails, screws and washers	157,839	150,392
Other manufactures	715,272	1,574,868

**JEWELLERY.**—(Quite one-half of the imports of jewellery come from the United Kingdom, that country's share of the 1923 and 1924 totals of £107,345 and £129,836 being £50,600 and £63,307 respectively. In 1924 Japan was second with £20,949.

**LEAD.**—Exports of bar lead declined from 84,981 cwtals, value £130,337, in 1924, to 33,886 cwtals, value £55,724, in 1925.

**LIVESTOCK.**—In 1924 there were imported into the Union, 2 bulls, 22 cows and calves, 95 dogs, 81 horses, 1 pig, 297 ewes and lambs, and 449 rams, the total value of all livestock imported being £24,221. Livestock imports in 1925 totalled £49,000 in value.

Exports of livestock in 1924, valued in all at £23,411, included 26 bulls, 110 cows and calves, 2,030 goats, 93 horses, 479 mules, 7,324 head of poultry, and 158 sheep. Most of these went to Portuguese East Africa or to the Belgian Congo. The value of all livestock exported in 1925 was £41,545.

**MACHINERY.**—The value of all machinery (including domestic machines and typewriters) imported in 1924 amounted to £1,967,028, compared with £3,349,617 in 1923. The leading items in this total in 1924 were as follows (1923 figures in brackets): Mining machinery, £901,777 (£734,441); electrical machinery and parts, £1,078,114 (£668,958); ploughs and harrows, £550,997 (£312,901); miscellaneous machinery and parts, £459,087 (£202,314); miscellaneous agricultural implements, £240,995 (£297,741); electric motors, £160,567 (£225,179); sugar milling machinery, £180,683; printing and bookbinding machinery, £158,768 (£70,021).

In 1925, imports of all machinery amounted to £5,483,097 in value.

**AGRICULTURAL.**—Imports of agricultural implements into South Africa in 1924 amounted to £1,047,693, and exceeded by nearly 50 per cent those of 1923, which totalled £708,999. Although the imports in 1924 were unusually high, purchases were estimated to be even larger in 1925. The United States has regained its position of supremacy in this market, and in 1924 supplied nearly 50 per cent of the implements imported, the amount furnished being slightly more than double that imported from the United Kingdom. In 1922 the largest proportion of machinery came from Great Britain, and in 1923 the United States led by only a small margin. Imports of implements from the United States in 1924 were valued at £500,978, and those from the United Kingdom at £250,227. Comparing 1924 with 1923, American machinery registered an increase of £210,500, as against the small British gain of £26,365. Germany ranked third, and supplied machinery valued at £129,994, an increase over the value of £96,916 for 1923. Canada was fourth in 1924, supplying machinery valued at £126,170—an increase of more than 100 per cent. over the value in 1923.

Imports for 1925 were valued at £1,313,353.

**Binders, etc.** Imports of binders, reapers, and mowers totalled £92,159 in 1924, as against £28,459 in 1923, the United States furnishing the bulk, with values of £64,207 in 1924 and £20,782 in 1923.

**Dairy Utensils.**—The value of imported dairy utensils in 1924 was £45,065, of which cream separators were responsible for £26,516. Of this latter amount, £15,224 was credited to Sweden and £6,281 to Germany.

**Ploughs and Harrows.** Imports reached a total of £312,961 in 1923 and £550,997 in 1924. In the latter year the United States led with £262,869, the United Kingdom coming next with £104,997, and Canada following with £101,526.

**Threshing Machines.**—In 1924, out of a total value of £28,428, the United Kingdom supplied £20,973.

**Tractors.** During the year 1924, 167 tractors, valued at £31,602, were imported, of which 156 (valued at £26,910) were received from the United States. The revival of the tractor trade is due largely to the increase in cotton planting, the bulk of the business being done in Natal, Zululand, and the cotton-growing sections of the Transvaal.

**Electrical.**—In 1924 imports of all kinds of electrical machinery (other than Government stores) were valued at £1,078,114, as against £668,058. While imports of electric motors declined from £225,179 to £160,567, those of miscellaneous equipment rose from £168,958 to £554,016.

The figures of value for all electrical machinery for 1925 were £1,175,960.

**MINING.**—Mining machinery to a value of £991,777 was brought into the Union in 1924, compared with £826,472 in 1923. Included in the 1924 total were General mining machinery, £852,275; buckets and tip-trucks, £97,140; battery shoes and dies, £14,136; and tanks and vats, £6,092. Great Britain's share of this business (£486,640) was the largest, the United States following with £414,080.

In 1925, imports of mining machinery were valued at £899,918.

**PRINTING AND BOOKBINDING.**—The printing industry is exceeded by only three others in the Union, and competition in printing machinery and accessories is keen among British, American and German firms. Composing machines are chiefly of American manufacture, though a number of German machines have recently been sold. In the printing press trade British firms lead, as also in the offset machines. The following table shows the amount of printing and bookbinding machinery imported into the Union during the years named—

COUNTRY OF ORIGIN	1923 £	1924 £
United Kingdom	37,465	74,406
United States	27,807	59,119
Germany	3,102	21,502
Other Countries	1,647	3,741
Totals	70,021	158,768

**SUGAR MILLING.**—For this class of industrial machinery Great Britain is the leading source of supply, imports thence in 1924 amounting to £161,240, out of a total of £180,263.

**MAIZE.**—The most noteworthy feature of the Union's export trade in 1924 was the huge decline in maize exports, due to a prolonged drought in the early part of 1924 and to successive locust invasions. In 1923 exports totalled 1,128,314,250 lb, value £3,084,334, but in 1924 only 143,896,566 lb, value £492,001. In consequence of this serious decrease in production, shipments to all countries of destination were reduced, Great Britain taking only a value of £320,127,

compared with £1,801,716 in 1923. Australia, £22,257 (£462,523); Holland, £53,019 (£348,380); Germany, £44,278 (£132,961); and Belgium, £6,302 (£131,537).

There was a welcome reversal of these conditions in 1925, when the maize crop attained a record of 25,000,000 bags or 500,000,000 lbs. and exports jumped from the £492,001 just quoted to £5,069,405. No less than 11,000,000 bags were exported to the United Kingdom and the Continent (See "Agriculture").

**MATCHES.** Swedish wooden matches are largely imported, their value in 1924 being £3,258, out of a total of £3,620.

Imports in 1925 were valued at £3,691.

**MEAT (FRESH AND FROZEN.)**—There was an increase of £89,391 in the value of fresh and frozen meats exported from the Union in 1924, the total value of exports for that year being £100,309, as against £10,918 in 1923. A notable feature of the trade was the substantial increase in the exports of beef to Italy, which rose from 78,989 lb, value £436, in 1923, to 8,239,133 lb, value £92,057 in 1924.

There was a further substantial increase in the value of all exports under this head to £205,348 in 1925.

**MEDICINES, PATENT.**—See "Drugs and Chemicals."

**MOHAIR.**—Although there was a decrease of 1,321,726 lb in the quantity of mohair exported in 1924 (13,666,125 lb as against 14,997,851 lb in 1923), the value increased by £194,129 (£1,142,012 as against £947,883). In 1924 the United Kingdom took 12,240,277 lb valued at £990,504, and the United States 1,390,739 lb valued at £150,090. Exports further declined in 1925 to a value of £836,328.

**MOTOR CARS.**—A noteworthy feature of South African trade in both 1923 and 1924 was the increased imports of motor vehicles of all kinds. Motor cars, which in 1923 numbered 10,151, valued at £1,721,183, rose to 13,476 in 1924, valued at £2,469,087, the shares of the leading supplying countries in the latter year being: United States, £1,480,987; Canada, £691,266; United Kingdom, £195,795; Italy, £50,898; and France, £36,060. Chassis to the value of £2,695 were imported in 1924, as against £9,188 in 1923. Parts and accessories increased in value from £213,530 to £268,768.

In 1925 18,396 motor cars, value £3,131,964, were imported, and parts and chassis worth £401,276.

**MOTOR-CYCLES.**—Imports of motor cycles were 2,170, value £120,267, in 1923 and 3,246, value £167,927, in 1924, the United Kingdom supplying goods to the extent of £119,674 out of the latter total. In 1925 the number of cycles imported was 5,996 and the value, £262,422.

**MOTOR TRUCKS AND VANS (LORRIES).**

—In this branch Canada leads, her exports to the Union totalling 757 in 1924 valued at £65,483, out of a total of £185,911, which compared with £120,267 in 1923.

The number of power lorries imported in 1925 was 519, valued at £105,134, and of parts and chassis, 1,064, valued at £227,452.

**OILS (MINERAL).**—Imports of all mineral oils increased in value from £1,777,273 in 1923 to £2,179,937 in 1924, lubricating oils rising from £327,515 to £410,682, illuminating and burning oils from £340,466 to £490,402, and motor spirits (petrol and gasoline) from £1,081,170 to £1,199,457. Of the last named, imports from the United States increased during the two years under review from £523,194 to £779,872, while those from

Netherlands Indies declined from £555,765 to £419,245.

Imports of all mineral oils during 1925 were valued at £2,184,223.

**OSTRICH FEATHERS.** There was a further drop in the quantity and value of ostrich feather exports in 1925, the value for that year being £203,470, as against £353,162 in 1924.

The following table shows the destination of exports in 1924—

DESTINATION	QUANTITY Lb	VALUE, £
United Kingdom	279,353	252,439
United States	73,248	80,159
Australia	16,323	6,577
France	6,652	5,322
Kenya	5,397	5,242
Germany	2,547	3,108
New Zealand	464	242
Japan	19	74
	384,003	353,162

(See "Stockraising.")

**PAINTS.** The United Kingdom outdistances all competition in the supply of paints and varnishes to the Union, total imports of which were valued at £351,662 in 1925, as against £332,105 in 1924.

**PETROLEUM.** See "Oils (Mineral)." "

**PLOUGHS AND HARROWS.**—See "Machinery."

**RAILWAY MATERIAL.**—The value of railway material imported in 1924 increased by £92,478 over the 1923 figures, the following table showing the imports in detail for the two years:—

	1923 £	1924 £
Light rails	59,749	92,063
Heavy rails	13,139	38,333
Sleepers	9,708	14,031
Locomotives	39,609	31,373
Rolling stock	15,859	26,964
All other	36,094	63,872
Totals	174,158	266,636

Of the total of £92,063 in 1924 for light rails, it is noticeable that £44,879 was credited to Germany, against £19,530 to France and £14,813 to Great Britain. Germany also led in the supply of heavy rails (£17,808), iron sleepers (£5,721) and rolling stock (£14,682), while the United Kingdom held first place in locomotives (£23,130) and other material (£20,256).

Imports in 1925 declined to £236,045.

**RICE.**—Imports of rice increased in quantity from 75,919,072 lb (£501,784) in 1924 to 81,676,046 lb (£560,278) in 1925. In the former year India, supplied 57,435,980 lb, Cochin China, 8,605,118 lb, and Siam, 4,216,922 lb.

**RUBBER GOODS.**—The Union is one of the most important markets for rubber goods of almost every class, but especially for tyres, mechanical rubber articles, and rubber footwear. Possessing only the nucleus of a rubber industry—there is but one rubber manufacturing company there—the trade is still very largely supplied through imports, although the local industry is offering competition in the trade in rubber hose, belting, packing, and mechanical goods generally. Rubber manufactures are imported chiefly from the United Kingdom, Canada and the United States in the order named, although European firms also offer strong competition in the tyre trade and participate on a small scale in the trade in other lines. The United States is gradually losing in percentage of total South African trade in rubber goods, but is doing an increasing business in rubber sundries and specialties.

For latest statistics see "APPENDIX."

Statistics of the major classes of rubber products imported into the Union show that the trade in 1924 was heavier than in 1923 for rubber tyres and rubber footwear, but slightly lighter for mechanical rubber goods, proofed goods and clothing, the total value of imports increasing 6 per cent to £808,791 from £740,255. The value of the principal classes in 1923 and 1924, respectively, was as follows: Rubber tyres and tubes, £428,186 and £504,524; mechanical rubber goods (approximate total value of imports of rubber belting, hose, and packing—definite statistics not available), £155,342 and £135,379; rubber footwear, £68,837 and £84,935; waterproof piece goods and clothing, £19,604 and £45,861; other rubber manufactures, £38,286 and £38,092.

Imports of raw and manufactured rubber during 1925 were valued at £850,105, of which £675,728 represented tyres and tubes.

**SACKS.** See "Bags and Sacks."

**SEWING MACHINES.**—Great Britain supplied sewing machines to the value of £69,475 in 1924, as against £75,341 in 1923, out of totals of £83,209 and £82,863 respectively. Germany was her only competitor, the value of her exports being £6,783 in 1923 and £12,438 in 1924.

**SHIPS' STORES.** The value of all articles of merchandise shipped as stores at Union ports during 1925 was £2,349,512, as compared with £2,295,473 in 1924. The largest item in 1925 was bunker coal, £2,243,190.

**SILK PIECE GOODS.**—Imports of silk piece goods totalled £922,841 in 1924, as against £774,447 in 1923, Japan being the chief country of origin in each year with £375,817 and £219,578 respectively. She was, however, closely followed by Great Britain, imports from which rose from £211,056 in 1923 to £228,807 in 1924. France increased her exports during the same period from £146,774 to £190,815, and Switzerland from £49,763 to £66,350. Imports from China declined from £24,737 to £16,420.

In 1925 the total value of all silk manufactures (not apparel) imported was £1,003,645.

**SILVER.**—Bar silver to the value of £166,768 was exported in 1925, compared with £176,661 in 1924. Practically all went to India.

**SKINS.**—See "Hides and Skins."

**SOAP.**—Imports of common, household and laundry soap, which amounted to 2,057,899 lb, value £32,329 in 1923, declined to 1,701,788 lb, value £25,991, in 1924. The leading source of supply was Australia, with 1,072,840 lb, value £14,092 in 1923 and 862,207 lb, value £11,170, in 1924. In each year Great Britain was a close competitor. In toilet soaps and preparations, the United Kingdom has established a strong lead, the United States being her only serious rival. Imports in 1924 were valued at £53,007, of which Britain's share was £29,028.

The value of all soaps imported in 1925 was £96,227.

**SPECIE.**—Imports of specie in 1924 totalled £79,264, of which £79,231 was in silver, exports totalled £75,228, of which £52,017 was gold and £23,065 silver. Of the specie imported, £66,306 went to Southern Rhodesia, of that imported, £71,655 came from the Nyassaland Protectorate.

In 1925 imports of specie aggregated only £8,718, while exports totalled £84,297,886, of which £77,424,686 went overseas.

**STEEL.**—See "Iron and Steel."

**SUGAR.**—There was a notable decrease in the amount of sugar exported by the Union in 1924, shipments shrinking from 64,365,793 lb, value £656,100, in 1923 to 18,655,619 lb, value £178,762, in 1924. Of the latter total, 17,869,414 lb went to the United Kingdom, the Belgian Congo, Portuguese East Africa, and Tanganyika being the chief remaining customers. Both the quantity and value of sugar imported into the Union decreased in 1924, the one from 5,943,568 lb to 1,073,517 lb, and the other from £93,147 to £18,451.

In 1925 there was a phenomenal rise in both the quantity and value of exports, the figures being 119,907,715 lbs, value £766,961. Imports also increased to 11,891,158 lbs, value £94,815. (See article "Agriculture.")

**TALLOW.**—Australia was the chief source of supply for animal tallow in 1924 and 1925, imports of this and vegetable tallow increasing in value from £125,452 to £128,163.

**TEA.**—Importations of tea have shown a progressive increase during recent years, being valued at £439,169 in 1921, £556,102 in 1922, £693,952 in 1923, £771,951 in 1924, and £788,758 in 1925.

Nearly two-thirds of the imports come from Ceylon, her share of the 1923 and 1924 totals being £423,040 and £405,586 respectively. India's share was £219,241 in 1923 and £227,816 in 1924.

**TEXTILES.**—These (including apparel, yarns and fibres) form the largest item in the Union's import trade, goods under this heading having a declared value in 1925 of £18,684,208, or 29.6 per cent of the total value of merchandise imported. This total compares with that of £17,206,004 for 1924, imports in 1925 having increased by £1,477,304. The principal items under this heading are shown in the following comparative table for the years named:

	1924 £	1925 £
Wearing apparel	6,201,112	5,058,343
Jute bags, etc.	1,877,503	802,706
Blankets and rugs	906,617	1,273,655
Cotton manufactures (not apparel)	4,557,717	4,450,204
Haberdashery, millinery, etc.	1,339,343	1,312,643
Silk manufactures (not apparel)	1,093,045	966,699
Woollen manufactures	1,036,641	933,247
Textile manufactures not otherwise specified	506,207	200,546
Yarns and fibres	132,401	111,778

**TIMBER.**—In 1924 the Union imported unmanufactured timber to the value of £1,299,210, pine (£926,000), teak (£111,580) and oak (£105,775) being the principal varieties. The United States supplied oak to the value of £83,395 and pine to that of £229,184, the largest supplies of the latter timber coming from Sweden and Finland, with £293,932 and £205,705 respectively.

In 1925, imports of unmanufactured timber were valued at £1,281,000. (See "Flora" and "Agriculture.")

**TOBACCO PRODUCTS.**—There was a welcome increase in the value of tobacco exports from the Union in 1925, the figure being £54,422, as against £46,898 in 1924.

Unmanufactured tobacco goes chiefly to the United Kingdom and Holland, cigars to Holland, and cigarettes to the Belgian Congo.

Imports of all kinds of tobacco rose to £80,975 in 1925, from £76,329 in 1924. (See also article on "Tobacco.")

**TRACTORS.**—See "Machinery" (Agricultural).

**TYPEWRITERS.**—In the typewriter trade the United States has always taken first place, her exports to the Union being valued at £33,558 in 1923 and £48,353 in 1924, out of totals of £43,801 and £56,170 respectively.

**TYRES AND TUBES (RUBBER).**—Imports of rubber tyres and tubes for motor cars and cycles increased in value from £428,186 in 1923 to £504,524 in 1924 the United Kingdom and the United States being the chief countries of supply. Imports from France showed an increase.

A further increase was noted during 1925, imports totalling £675,728 in value.

**WATCHES.**—See "Clocks and Watches."

**WATTLE BARK.**—See "Bark."

**WHALE OIL.** Exports of whale oil rose in quantity from 2,142,478 gallons in 1924 to 3,924,138 gallons in 1925 and increased in value from £264,742 to £471,110, the United Kingdom succeeding Holland as the principal destination.

**WHEAT.** The wheat grown in the Union is not nearly sufficient for the country's requirements, and 347,861,737 lb., value £1,548,912 were imported in 1924, as against 285,246,179 lb., value £1,292,842, in 1923. Although importations from Argentina dropped nearly 7,000,000 lb., this was more than counterbalanced by record consignments received from Canada, India and Australia, the latter leading with 236,621,214 lb. No

flour was imported from Argentina during the year, Australia being the chief source of supply with 67,188,376 lb., out of a total of 85,034,644 lb. Canada increased her supplies by nearly 2,000,000 lb.

During 1925 imports of wheat were valued at £1,640,962, and of flour £150,644. (See also article on "Agriculture.")

**WHISKY.**—See "Beverages."

**WINES.** Exports of wine diminished in 1924 by 221,000 gallons, their value being £58,000. Mauritius (in recent years the Union's principal market for this commodity) reducing her purchases by nearly £50,000. The prices obtained for light wines fell from 3s. to 2s. 6d. and for heavy wines from 3s. 2d. to 2s. 8d. per gallon in 1924 as compared with 1923, while in 1922 the prices were 3s. 5d. and 3s. 7d. respectively. Clarets and other light wines went mostly to the United Kingdom, ports to Australia, sherry to the United Kingdom and Straits Settlements, and other heavy wines to Mauritius.

Exports of all wines fell still further during 1925 to £23,931 in value.

**WOOL.**—Wool ranks next to gold in the value of the Union's exports. It rose from £12,388,186 in 1923 to £15,763,953 in 1924, and the quantity from 164,487,578 lb. to 174,595,153 lb. Higher prices were obtained both for wool in the grease and scoured wool, those realised during 1924 averaging 1s. 8½d. per lb. for grease and 3s. 7d. for scoured,

ed, an increase on the previous year's prices of 3½d. and 9½d. respectively. With the exception of the abnormal prices obtained in 1920, those of 1924 were the highest ever realised. The following table shows the principal destinations of the wool exports in the years named—

COUNTRY	1923	1924
	£	£
United Kingdom	5,501,317	8,160,033
Germany	2,000,222	2,483,609
France	1,672,042	1,824,922
Belgium	911,658	1,323,701
Holland	993,234	814,364
United States	984,815	530,649
Italy	207,378	498,430
Other Countries	108,490	110,239
	112,388,186	15,763,953

The quantity of greasy wool (meino) exported in 1925 was 220,668,000 lbs., as compared with 166,000,000 lbs. in the preceding year, an increase of 54,668,000 lbs. To this must be added a further 7,900,000 lbs. of scoured wool. The total value of all wool exports for 1925 was £15,095,440. (See "Stockraising.")

**WOOLLEN GOODS.**—Imports of woollen piece goods, yarns and other manufactures in 1924 reached a total value of £933,257, against £943,319 in 1923, the United Kingdom's share being £800,904 and £884,113 respectively.

In 1925, imports totalled £1,003,645.

## CUSTOMS TARIFF

**3**N terms of section 136 of the South Africa Act, 1909, there is free trade throughout the Union. The application of Customs control, therefore, affects only the trade of the Union with other countries, carried on in the main with countries overseas. For statistical purposes the Protectorates of Basutoland, Swaziland, and Bechuanaland are regarded as integral parts of the Union.

**CUSTOMS TARIFF.** Proposals for an amendment of the Tariff involving substantial changes were introduced into Parliament in 1926. The Tariff of 1925 contains 372 separate headings, and has maximum and minimum columns, the United Kingdom enjoying the minimum column rates in respect of the items given below.

ARTICLE	MAXIMUM RATE OF DUTY	REBATE ON U.K. GOODS
Cotton piece-goods, for which price of which does not exceed 1/4 per yard	15% ad val.	5% ad val.
Hosiery		
Lace, lace containing, flouncing and embroidery		
Motor cycles and side cars, including spare parts		
Cutlery, not plated		
Enamelled ware and hollow ware		
Electric lamp bulbs, radiator type		
Down pipe and guttering, and cisterns		
Electric cooking and heating apparatus	20% ad val.	5% ad val.
Buckets, skips, trucks and tubs, and rails therefor, and metal shaft sets		
Electric lamp bulbs, projector type		
Cocks and taps, meters and pipe fittings, gas		
Electric machinery implements	5% ad val.	Whole duty

	MAXIMUM RATE OF DUTY	REBATE ON U.K. GOODS
Tools (mechanics')		
Wire, excepting electric wire		
Mining machinery and implements		
Iron and steel manufactured and industrial such as plates, sheets, angles, bars, ingots, drill and tool steel	3% ad val.	Whole duty
Lamp bulbs, electric		
Motor and motor cycle headlights	10% per 100	Whole duty
Motor and motor cycle tail and dashlights	5% per 100	Whole duty
Fishlights	2 6 per 100	Whole duty
Carbon filaments	5% per 100	Whole duty
Vacuum type		
Not exceeding 60 watts	5% per 100	Whole duty
Exceeding 60 watts	10% per 100	Whole duty
Grs. filled type		
Not exceeding 100 watts	10% per 100	Whole duty
Exceeding 100 watts	15% per 100	Whole duty
Electric meters		
Less than 50 amperes	2/6 each	Whole duty
From 50 to 100 amperes	5/ each	Whole duty
Exceeding 100 amperes	10/ each	Whole duty
Wrought iron and steel pipes and tubes	1/ per 100 lbs	Whole duty
Cast iron pipes and tubes	8d. per 100 lbs	Whole duty
Newsprint	30/ per 2 cwt. lbs	Whole duty
Water meters, not exceeding 1 inch piping	1/ each	Whole duty
Fish, tinned	1½d. per lb	4d. per lb
Glass, polished plate	7d. per sq. foot	1d. per sq. foot
Glass, sheet, plain clear	7/ per 100sq. ft.	1/ per 100sq. ft.
White lead		
Dry	7/ per 100 lbs.	1/ per 100 lbs.
Ground in oil, in packages containing 50 lbs. or over	10/ per 100 lbs.	1/ per 100 lbs.
In packages containing under 50 lbs.	11/ per 100 lbs.	2/ per 100 lbs.

	MAXIMUM RATE OF DUTY	REBATE ON U.K. GOODS
Rubber tyres	1/ per lb	
Rubber tubes, other than motor cycle tubes	7½d. per lb	1½d. per lb
Rubber tubes for motor cycles and cycles	1/ per lb	2d. per lb
Rubber tyres, solid	3d. per lb	1d. per lb

The following are some of the more important items scheduled, with the maximum and minimum rates of duty—

**AGRICULTURAL AND PASTORAL PRODUCTS.**—Baking powder—4d. per lb., butter—2½d. and 2d. per lb., cheese—30 and 25 per cent ad val., confectionery—3½d. per lb. or 35 per cent ad val., pickles and sauces—2½d. and 2d. per lb., sugar—6s. per 100 lb., tea (in packets or tins not exceeding 10 lb. in weight)—6d. per lb., in larger packets or tins—4d. per lb.

**ALCS, WINES, AND BEVERAGES.**—Per imperial gallon: Ale, beer, cider and perry—2s. 9d., stout—2s. 3d., perfumed spirits—30s., wines—8s. and 4s., sparkling wines 12s. 6d.

**BOOKS, LTC.**—Cards (playing)—9d. per pack and 20 per cent ad val., inks and ink powders—30 per cent ad val., account books, diaries, stationery and forms in books, pads, or loose—40 per cent ad val. or 6d. per lb., catalogues and price lists of Union firms printed abroad—40 per cent ad val. or 6d. per lb.

**DRUGS AND CHEMICALS.** Ammonia (in bulk)—3 per cent ad val., disinfectants—5 per cent ad val., drugs and apothecary ware—20 per cent ad val., medicines—25 per cent ad val., perfumery and toilet preparations—40 per cent ad val.

**JEWELLERY, ETC.** Clocks and watches—25 per cent ad val., gold and silver plate and ware—30 per cent ad val.,

jewellery—30 per cent ad val, sporting and athletic goods—20 per cent ad val

**LEATHER AND RUBBER** — Boots and shoes—30 per cent ad val, (infants' shoes—12 per cent), rubber hose—2½d and 1½d per lb, leather manufactures—25 per cent ad val, rubber tyres—15 and 10d per lb, tubes for motor vehicles other than motor cycles—7½d and 6d per lb, tubes for motor cycles and cycles—15 and 10d per lb.

**METALS, MACHINERY, ETC** —Bolts, nuts, rivets, screws, nails, and washers—3 per cent ad val and free, cash registers and machines—20 and 15 per cent ad val, cutlery—20 and 15 per cent ad val, enamel ware—20 and 15 per cent ad val, guns and rifles single, 20s, double, 15s per barrel, revolvers—5s, electric hand lamps and torches—20 per cent ad val, electrical machinery and apparatus—5 per cent ad val and free, iron and steel (ingots, pigs, plates, sheet, bar, rods, etc.)—3 per cent ad val and free, mining machinery—3 per cent ad val and free, motor cars—not exceeding £400 in value, 20 per cent ad val, over £400 and not exceeding £600, 22 per cent ad val, chassis—10 per cent ad val, spare parts and accessories—20 per cent ad val, motor trucks and vans—20 per cent ad val, sewing and knitting machines—15 per cent ad val, typewriters—20 and 15 per cent ad val, wireless telegraphy instruments and apparatus—3 per cent ad val and free

**MINERALS, ETC** —Bricks (except bath)—25 and 20 per cent ad val, cement—1s 3d and 1s per 400 lb, coal and patent fuel—3s per ton, glass ware—20 per cent ad val, lamp chimneys—25 and 20 per cent ad val, pipes (earthenware)—5 per cent ad val

**OILS, PAINTS, ETC** —Candles—4s 2d per 100 lb, motor spirit—3d per imp gall, oils (essential)—25 per cent ad val, oils (lubricating)—3d per imp gall in bulk, 15 per cent ad val not in bulk, oils (illuminating)—1d per imp gall, paints and colours—25 per cent ad val, polishes—20 per cent ad val, varnishes—2s 6d and 2s per imp gall

**TEXTILES, ETC** — Blankets, rugs, and sheets commonly known as Kaffir sheets—1s to 2s 6d per lb, or 25 per cent ad val, clothing (bespoke)—30 per cent ad val; clothing (ready made)—15 per cent ad val, furs—25 per cent ad val, gloves—15 and 10 per cent ad val, hats and caps—20 and 15 per cent ad val, hosiery—15 and 10 per cent ad val, piece goods (cotton)—15 and 10 per cent ad val, shirts, collars, and pyjamas—25 per cent ad val, threads, yarns, cottons, and silks—10 per cent ad val

**TOBACCO, ETC** — Cigars—8s 6d per lb plus 15 per cent ad val, cigarettes—6s per lb plus 15 per cent ad val, tobacco (manufactured)—5s per lb, tobacco (unmanufactured)—3s 6d per lb

**VARIOUS** —Cartridges—15 per cent ad val plus 6s per lb on gunpowder therein, cinematograph films—2s 6d per 100 ft. or 30 per cent ad val, matches (wooden) 2s 6d and 1s 9d per gross of boxes containing not more than 100, and 5s and 2s 6d per gross of boxes containing from 100 to 200, photographic apparatus and material—20 per cent ad val

**DECLARATION OF VALUE.**—For imported goods subject to an ad valorem duty, the value is the selling price for home consumption in the open market of similar articles in the principal markets of the country from which, and at the time at which, the goods were exported, plus the cost of packages, packing, and carriage to

port of shipment. For goods subject to a rated duty, or free of duty, the f.o.b. (free on board) values are given

**EXPORTS.**—For exports, the value of South African produce is that current at the time and place of shipment plus the cost of packages and packing. For re-exports from open stocks, the f.o.b. price is given, and in the case of exports from bond the value recorded is that at which the goods were originally warehoused

**EXCISE DUTIES.**—The following excise duties are imposed on spirits, beer, cigarettes, tobacco, etc. —

Wine brandy, per gallon, 12s 6d  
Grape brandy, per gallon, 17s 6d  
Dop brandy and spirits, per gallon, 22s 6d  
Beer per imp gallon 15s and 30s according to gravity  
Cigarettes manufactured in Union 3d per half ounce  
Cigarettes imported into the Union—3d per half ounce, in addition to the duty payable under the Customs Laws  
Tobacco (pipe) per lb 3½d  
Tobacco for cigarettes per lb 6d  
Tobacco in roll tobacco per lb 2d

There is a duty on Union sugar of 1s per lb, on matches of 1s per gross boxes, of not more than 100 matches, and on playing-cards of 3d per pack

**EXPORTATION OF GOODS.**—The exportation or carriage coastwise of arms, ammunition, military and naval stores, or goods capable of conversion into such stores, may be prohibited. Entry outwards has to be furnished in respect of every ship bound from the Union, delivery being made to the officer of Customs of a content of goods loaded in such ship with other particulars. Exporters are required to deliver a bill of entry, and export duty (if any) must be paid

Special provisions are made in respect of coasting trade between Union ports.

**FREE LIST.**—The list of imports admitted into the Union free of all duty includes the following:—Agricultural and industrial machinery, airships and aeroplanes, alum, aluminium, ambulance materials, asphalt and bitumen, bags and bagging for flour, gram, etc., battery shoes and dies, borax, brass, copper, and composition metal, cardboard, linoleum and millboard, chloride of platinum, copra, dairy utensils and machinery (other than milk cans and buckets), diamonds and other precious stones (rough), engravings and photographs, fencing material, fertilisers, films of an educational or scientific nature, glycerine, ice, laboratory glass and apparatus, lead, sheet and foil, materials for industrial purposes, nitrates (except nitrate of ammonia), oils, tar, and creosote in bulk, paintings and etchings, photographs, public stores, rope and cordage for drilling and boring purposes, school and hospital furniture and necessaries, surgical and dental instruments and appliances, sulphur, tallow, tar and pitch, zinc

Passengers' luggage, worn clothing, and personal jewellery enter free on the understanding that they are for the personal use of travellers. Unworn clothing, although the property of the traveller, is dutiable.

**PREFERENCE.**—Rebates of duty in favour of British manufactured goods were a feature of several Customs Union Conventions prior to the Union, and have since been continued in favour of the United Kingdom and those British Dominions which have afforded reciprocal treatment, viz., Canada, Australia, and New Zealand.

The British Parliament adopted the principle of Imperial Preference in 1919, a remission of one-sixth of the duty being granted on certain South African (and other Dominion and Colonial) products, and a rebate on alcoholic liquors. Further preferential treatment of Dominion products, proposed by the Imperial Conference of 1924, was refused by the British Government of the day, to the great disappointment of the Dominions, but was endorsed in 1925 by the Conservative Government which had returned to power

The new Customs Tariff, passed in 1925, was, from the point of view of Imperial Preference, a retrograde one, for while, under the old tariff, British manufacturers received a rebate of 3 per cent on practically all classes of goods, that flat rate has been withdrawn, and is replaced by a double column schedule of maximum and minimum rates, on only a few of which preference at the minimum rates has been granted to Great Britain. (For details see preceding paragraph "Customs Tariff")

**MOST FAVOURED NATION CLAUSE** — When the 1925 Tariff Bill was first drafted, it was declared to be the intention of the Union Government to reserve to itself the right to make Most Favoured Nation Treaties with any Foreign Power, quite irrespective of whether equal rights were afforded to the Mother Country. Under pressure this policy was considerably modified, and the Bill as finally passed enacted that Great Britain will in any circumstances retain Most Favoured Nation rights, and that she and the self-governing Dominions will be consulted as to any future treaty agreements made between South Africa and other countries

**PROHIBITED IMPORTS.** The usual prohibitions as to the importation of objectionable books, prints, and photographs, counterfeit coins, etc., apply to the Union. In addition, the following are prohibited:—(a) Goods which, being of foreign manufacture, bear the name, mark, or brands of manufacturers resident in the United Kingdom or any British possession, or which, being of foreign manufacture or not, bear marks contravening the provisions of any law in force in the Union relating to merchandise marks, (d) prison-made and penitentiary goods, (c) books or music which infringe copyright law, (d) second hand boots and shoes, (e) carbide of calcium which, when treated with water, yields less than 250 litres of gas from one kilogram, the gas being measured at 15°C under a pressure of 760 millimetres of mercury

As from November 17, 1925, the importation of cattle, sheep, goats, and pigs from the United Kingdom was prohibited

**REFUNDS.**—A refund of the duty originally paid is made on firearms, motor cars, etc., imported by bona-fide tourists for their use, convenience or comfort while in the Union, under the conditions that: (a) the goods or articles must be re-exported within a period of six months from the date of importation, (b) due notice must be given to the Collector of Customs at the port of shipment of the intention to re-export the articles on which a refund of duty will be claimed, and at the same time the owner must produce proof of the original payment of duty, (c) a certificate must be produced from a proper Officer of Customs that the goods referred to therein have been duly shipped.

**REVENUE.**—The revenue from Customs and Excise in 1923-24 amounted to £8,616,595, as against £7,544,967 in 1922-23.

**REPRESENTATIVE BUSINESS MEN IN SOUTH AFRICAN COMMERCE AND INDUSTRY.**

1. **WALTER GREENACRE, O.B.E., J.P.**  
(Chairman of Messrs Harvey, Greenacre  
and Co., Ltd., Durban)

2. **J. H. CROSBY** (General Manager of  
Johannesburg Consolidated Investment  
Co., Ltd.).

3. **ROBERT NIVEN** (Senior Partner of  
Messrs. J. & R. Niven, Ltd., Johannes-  
burg).

4. **F. G. CONNOCK** (President of South  
African Motor Traders' Association).

5. **E. ROWE** (President of Association of  
Chambers of Commerce of S.A. 1925-  
26; President of Capetown Chamber of  
Commerce, 1921-24)

6. **G. H. NORTH** (Managing Partner of  
Messrs. G. North & Son, Ltd.).

# INDUSTRIES

## GENERAL DATA

**W**HAT may be called the home industries of South Africa, as distinct from the primary industries (mineral, agricultural and pastoral) of the country have made a notable advance during the last few years. This is due in no small measure to the Union Government's definite and decisive policy of protection, the recent revision of the Customs Tariff having given many local industries substantial encouragement. There is a growing feeling that the development of manufacturing industries is especially essential to provide employment for that portion of the Union's increasing population which cannot be maintained in agriculture. The fact that during eight years (that is between 1916 and 1924) the number of factories in the Union increased from 3,098 to 7,029 provides conclusive evidence of the steady expansion of the Union's industrial activity.

### BOARD OF TRADE AND INDUSTRIES.

The Board of Trade and Industries, which was constituted in 1925, consists of a chairman and not more than three other members appointed by the Government of the Union for three years. The functions of the Board, which in many respects equal and almost surpass those of Parliament, are defined as follows: Subject to the direction of the Minister, the Board shall enquire into and advise the Government on all matters concerning the economic development of the natural resources of the Union and its industries and trade, and, in particular, on (a) the payment of bounties or other forms of state-aided industries, (b) the fiscal policy in so far as it bears on commerce and industry, (c) the recasting and revision of the Customs Tariff, (d) the adjustment from time to time of anomalies in the Customs and Excise Tariffs, (e) complaints or recommendations concerning the working of the Customs and Excise Tariffs, (f) combinations, trusts, monopolies, and restraints of trade tending to affect public interests injuriously, especially by restricting production or maintaining or raising prices, (g) dumping of imported goods whereby the Union's interests are likely to be unfavourably affected, (h) the supply of raw materials, labour, and technical knowledge for industry and the encouragement of the investment of capital in industry, (i) transport and markets for the requisites and products of industries, (j) the relation between factory, wholesale, and retail prices, (k) commercial legislation, and (l) such other matters as the Minister may refer to it.

**DEVELOPMENT OF INDUSTRIAL PRODUCTION.**—The following table shows the gross value of the factory production of the various classes of industry for the years 1922-23 and 1923-24, the figures for the last named year being preliminary (For the year 1921-22 the total was £40,342,039) —

CLASS OF INDUSTRY	1922-23 £	1923-24 £
Raw material ..	1,514,583	1,211,000
Stone, clay, etc ..	2,303,275	2,624,000
Wood ..	1,865,778	1,908,000
Metal, engineering, etc	13,238,061	13,054,000

CLASS OF INDUSTRY	1922-23 £	1923-24 £
Food, drink, etc	23,839,179	25,960,000
Clothing, textiles, etc	2,817,980	2,915,000
Books, printing, etc	3,820,714	3,880,000
Vehicles, etc	1,513,044	1,708,000
Shipbuilding, etc	52,647	48,000
Furniture, etc	1,386,320	1,550,000
Chemicals, etc	5,524,316	5,587,000
Surgical instruments, Jewellery, etc	154,742	154,000
Heat, light, and power	5,463,583	5,807,000
Leather and leather-wares	2,546,154	2,877,000
Building and contracting	7,801,126	9,857,000
Other industries	524,790	515,000
Total	174,486,292	179,664,000

During 1923-24 the greatest increases shown were in the classes of building and construction works and of food and drink — in both cases over £2,000,000. In the former class, building and contracting increased by £1,500,000, waterworks and railway construction by over a million and a half, while the construction of gram

## PRODUCTS

elevators decreased by £170,000. In the food and drink class the increase was chiefly due to the greater output of the sugar mills and tanneries, amounting to over £1,700,000; grain mills, £400,000; jam factories, £150,000; butter and cheese factories, £120,000, and there were smaller increases in aerated waters, bakeries and coffee roasting factories. Decreases occurred in the output of breweries, £140,000; tobacco, £80,000, and crayfish canning of nearly £140,000.

The output of bricks and tiles in 1923-24 constituted a record for the Union, as did the number of electric units sold or used by the electric light and power plants, and the quantity of boots and shoes produced. The production of the cement factories increased by a quarter of a million, and of the tanneries by over 1140,000, the quantity of leather produced by the latter being the largest on record. There was increased activity in cycle and motor repair work, and also, although in a less degree, in coach and wagon building. In the latter class a considerable increase was noticeable in furniture making.

**EMPLOYMENT.** Generally speaking, labour may be divided into three broad

WATTLE INDUSTRY, SHOWING BARK STRIPPING OPERATIONS.

classes—skilled, semi-skilled, and unskilled—but there is probably no other country where the workpeople are also so clearly divided as in South Africa. Skilled work in the Transvaal and Orange Free State is almost entirely in the hands of Europeans, semi-skilled work is principally done by coloured or native workers, and heavy unskilled work is almost exclusively performed by native labour. In Cape Province and Natal, on the contrary, a considerable portion of the skilled work is done by coloured people. In these Provinces no colour bar exists, and some of the trade unions catering for highly skilled craftsmen, such as the Amalgamated Engineers' Union, freely admit coloured workers to membership. Although in the Transvaal and Orange Free State practically all the skilled, and a large portion of the semi-skilled, work is performed by Europeans, there are a few occupations where coloured men and women, or even natives, do the work. The lower average efficiency of coloured or native workers is more than compensated for by the greatly reduced wage at which these workers can be employed. On skilled or semi-skilled work of a mechanical nature the efficiency of the coloured and native workers is very little indeed behind the European, and, on the whole, they make very excellent workmen.

The last industrial census taken in the Union showed the total number of factory employees to be 172,047, of which 110,751 were coloured and native and 61,296 Europeans. Non-European labour formed 61 per cent of the total in Cape Province, 71 per cent in Natal, 62 per cent in the Transvaal, and 57 per cent in the Orange Free State. In the same year the wages paid to Europeans in the factories of the Union amounted to £13,903,904, and to

natives and coloured £5,282,430, a total of £19,186,334, the European's average wage being £248 and the native's £48.

**NEW FACTORIES.**—Throughout South Africa there are signs of increased industrial activities and expansion. These are exemplified, not only by new factories and extensions to and rebuilding of old ones, but by the number of inquiries which have been made from overseas regarding the establishment of factories in the country. The latest available statistics show that during 1923 203 new factories were established in the Union. The labour returns of 241 factories which benefited through the tariff show an increase since July of the year just named.

THE UNITED TOBACCO COMPANIES (SOUTH) LTD.  
1, 2, 3. Diverse Aspects of the Fine Modern Factory Buildings at Capetown.  
(See *letterpress*, page 211.)

## PRODUCTS

**BOOTS AND SHOES.**—This industry shows a definitely expanding tendency, having been assisted by the heavier duty placed on imported footwear. Factories throughout the Union number over 140, and the yearly value of output, which in 1915 was only £500,000, is now considerably over £1,500,000.

**BRICKS, TILES, ETC.**—The Union's ceramic industry has expanded rapidly during the last five years, and this applies also to the cement industry. The attempts to build up a glass industry have, however, only met with small success. At present excellent bricks are made in Maritzburg

and Durban, in Pretoria and other Transvaal centres, at Heidelberg and Kimberley in Cape Province, and at Bloemfontein in the Free State. In some cases continuous kilns and up-to-date machinery are in operation. The manufacture of roofing tiles has made great strides during recent years owing to the abnormal price of corrugated iron. Tiles have become the chief roofing material in most South African inland towns, and South African tiles are equal in every respect to the best grades made in Europe. Of the fireclay and firebricks industry the chief centres are Durban, Vereeniging, Oifantsfontein, and Boksburg, all within 50 miles of Johannesburg.

At Durban the well-known Umbilo Brick and Tile Works of H. J. Stranack and

Company, which has a capital of £25,000, occupy 30 acres of land on the Umbilo River, in the centre of the city's industrial area, and turn out firebricks, drampipes, and building bricks of excellent quality. On the ground owned by the company there is said to be an almost inexhaustible supply of firebrick clay of first class quality. Silica bricks of good class are made at Vereeniging.

**CANNED GOODS.**—South Africa is a large exporter of fruits, both fresh and dried, canned fruits are not widely eaten by the people of the Union, who prefer fresh fruit and vegetables, which are quite easily obtainable. Canneries for fruit for export have been established at or on the coast, partly on account of the better supply

of suitable labour and also by reason of proximity to the fruit districts. The article produced is uniformly good, and has improved considerably during the last few years. The chief centres of the industry are Durban, Port Elizabeth and Capetown, with the Paarl and Worcester Districts of Cape Province. The output of all jam factories and fruit preserving works increased in value from £1,338,000 in 1922-23 to £1,488,000 in 1923-24. (See article "Fruit Industry.")

**CLOTHING.** This industry, so far as manufactured clothing is concerned, was severely hit by the post-war slump, and in 1924 had hardly recovered, though signs of distinct improvement were noted in 1925. The last Industrial Census for 1923-24 showed that under the heading of clothing, textiles, etc., the gross output amounted to £2,915,000, compared with £2,848,000 for the preceding year, an increase of £67,000 or 2.35 per cent.

#### COACH AND WAGON BUILDING.

This is an old established industry in South Africa, which has received an impetus since the War from the growing popularity of motor transport. The number of factories has risen to 350 from 200 in 1915, and the value of the annual output from £600,000 to £750,000 during the same time.

**ELECTRICAL EQUIPMENT.**—The increased application of electrical power is essentially a modern development, and in South Africa its importance has been given timely recognition by the passage of the Electricity Supply Act. In accordance with the terms of this Act, a permanent institution called the Electricity Supply Commission has been formed which as an independent body organises and controls the generation and distribution of electrical power throughout the Union. The policy of the commission is based on the develop-

ment of super-power schemes in Germany and the United States. By the application of similar schemes of centralised generation of power in South Africa a very high standard of industrial efficiency will be realised.

In view of the electrification of a large part of the Natal railways and of the Capetown-Simonstown line, as well as of the extension of telephone communications all over the Union, the importance of the manufacture of electrical equipment is obvious. There are at present mines in the country producing and exporting copper, though imports of copper total annually

**ENGINEERING.**—The production of steel is the key to nearly every other department of industrial activity in South Africa. Until recently local engineering firms have been seriously handicapped by the shortage and high cost of their raw material—pig iron. In spite of this, engineering activities have made big advances since the War and there has been a gratifying growth in the interest shown and help given by the Union Government, particularly in the throwing open to South African firms of the supply of Government stores. In 1924 it was estimated that the South African engineering

£6,000,000, while, adding over £7,000,000, the process of manufacture, to the value of those materials, the gross value of its output amounted to appreciably more than £13,000,000.

The amalgamation of the Union Steel Corporation and the Newcastle Iron Works in 1925 has greatly assisted and accelerated the development of the iron and steel industry by increasing the production of pig iron to an adequate point, while the contemplated extension of the Vereeniging Iron Works and the latest improvements in the plant and machinery of the Dunsward Iron and Steel Company are also factors of importance in the progress of the industry.

Another development of the local iron and steel industry is the establishment of a nut and bolt factory in Johannesburg which has an initial output capacity of 12 tons in an eight-hour day. Production started in 1926, and orders from the mines and railways already ensure constant work. South African steel is exclusively used. The Union Steel Corporation's chairman is also a director of this concern. Another associated enterprise is a wire mill which is now in course of erection at Vereeniging, near the Union Steel works.

**FISHERIES.**—See article following.

#### LEATHER AND LEATHERWARE.

There was an increase of £331,000 in the value of the gross output of the leather and leatherware industry of the Union in 1923-24, the amount being £2,877,000, as against £2,546,000 in 1922-23, the value of the materials used also rising from £1,412,000 to £1,680,000. The boot and shoe and tanning industries developed considerably during the War, and that development has continued, as has also the manufacture of bags and trunks. There is still considerable room for expansion in all these industries, particularly in the manufacture of light leathers which has not kept pace with the demand caused by the expansion of the footwear industry.

**MAIZE PRODUCTS.**—Economically, maize is the most important crop grown in the Union. Its by-products are many, and there are markets for all of them. Those that are being exported (for instance, starch) are sold in competition with overseas products, and there is no reason why, with the large quantity of raw material available, the by-products of maize should not be manufactured more extensively in South Africa. At present, starch for all uses and of the best grades is produced principally at Germiston, and oil press-cake, which makes a valuable cattle food, is being prepared to a large extent.

**SOAP AND CANDLES.**—The number of soap and candle factories in the Union at the last industrial census was 26, employing 1,993 hands, and returning a total annual output of the value of £1,927,000.

**TANNERIES.**—Most of the chemicals required for the tanning of leather are available in South Africa, though some are entirely imported products. Vegetable tan is available in the form of wattle bark or wattle extract, one of the Union's most valuable products. Mineral tans are all imported; there were, at the last industrial census, 24 tanneries in the Union, having a yearly output valued at about £750,000.

**TEXTILES.**—The textile industry in South Africa is capable of being developed to a great extent and must in time prove of importance to the country, since the annual wool clip is in the neighbourhood of 125,000,000 lbs., and cotton-growing is

THE UNITED TOBACCO COMPANIES (SOUTH) LTD., Capetown.  
Motor Transport at the Despatch Warehouse.

(See also pages 208, 209, 211 and letterpress, page 211.)

over £20,000, of which nearly £10,000 worth is manufactured copper. There is no doubt that the Union mines are capable of greatly increased production, to stimulate which only the establishment upon a firm basis and careful development of the electrical equipment manufacture are needed.

Electric light and power plants in the Union number about 150, employing some 61,200 hands.

industry, consisting of nearly 900 establishments, represented a fixed capital investment (value of land, buildings, machinery, plant and tools) of over £6,500,000, it employed 54,600 persons, of whom one third (17,410) were Europeans, and its annual wage bill amounted to over £10,500,000. The industry was at that time consuming fuel, light, and power to an annual value of £359,000, used materials to the value of nearly

regularly expanding, the yearly crop now exceeding 10,000,000 lbs.

Since 1921 a large concern, known as the Woollen Mills, Ltd., has been working, with branches and wool washeries at Woodstock, Capetown and Wolseley. This is the pioneer textile factory of the Union. The well known "Waverley" blankets, travelling rugs, tweeds, and blankets for the native trade are manufactured here. During 1923 a large factory was opened at Harmsworth (O.F.S.) known as the National Woollen Industries of South Africa, Ltd. For many years almost the whole of the Union's wool clip was shipped overseas, there to be manufactured into goods which were bought back by South Africa. The volume of imported woollen and cotton goods is still large but there has been a decided shrinkage during the last two financial years, while the production of the South African factories is growing.

**TOBACCO, ETC.** The manufacture of tobacco, cigars, and cigarettes is of long standing in South Africa, though for a lengthy period it was confined to the "roll" variety of the Boer tobacco grown in the Transvaal. With the acclimatisation of the better Turkish and Virginian brands the number of factories has increased to about 65, employing some 2,500 hands, and, with plant and machinery worth £100,000, the total annual value of output averages over £2,000,000. Nearly 2,000,000,000 cigarettes and about 9,000,000 lbs. of tobacco are produced in an ordinary year. (See article "Tobacco.")

**WOOL SCOURING.** This industry is of great importance to the South African wool-grower, as it mainly deals with the heavy classes of wool. During the period 1923-24 it suffered a serious set-back largely owing to Continental buyers purchasing South African wools in the grease to be scoured at destination, and also to the heavy price of washing commodities, which prevents the South African wool scourers from reducing their charges sufficiently to compete with the Continent. A lower rail rate for grease wool which is scoured within the Union is a suggested remedy.

## REPRESENTATIVE INDUSTRIAL ENTERPRISES

### THE UNITED TOBACCO COMPANIES (SOUTH) LTD.

**Inception.** This very important company, which controls by far the largest and most up-to-date enterprise of the kind in South Africa, was founded in 1905 at Capetown, where its head offices and largest factory are located.

**Development.** Tobacco had been grown in South Africa before the year named, but owing to lack of scientific care the character of the leaf produced was of the poorest quality and any system of careful grading was practically unknown. Much praise is therefore due to the United Tobacco Companies (South) Ltd., which commenced operations with great ideals and steadfastly pursued them, with the result that its work has been rewarded by the establishment of the largest and most efficient tobacco organisation in South Africa. Commencing on thoroughly sound lines by providing ample capital for development purposes, and engaging a staff of men with special training and long experience in all the various branches of the industry, the business has been built upon a solid foundation. In connection with the tobacco industry, as with numbers of others, technical knowledge and practical experience play very important parts, and these essentials have been acquired by the experts of this country at the recognised headquarters of tobacco production, namely at Virginia, in the United States of America.

**Early Methods.** In the early days very low prices were obtained for leaf in South Africa owing to the haphazard methods adopted by the farmer, whose ideas with reference to cultivation, grading, etc., were of the most primitive character, in fact, his tobacco was generally sold "as a crop" at a very low figure. To encourage the tiller of the soil to grade his product and see for himself the advantages of improving its quality a small range of prices was adopted by the company and these were approximately 5d for sound dark leaf, 9d for red leaf of light body, and 1s for yellow leaf. Previously, prices had ranged in the main from 1d

to 2d per lb., and a grower who received 6d per lb. was considered lucky. Even with this encouragement, the greatest difficulty was at first experienced in getting the farmers to fall in with the scheme. To-day the position has very much improved, not only from the farmer's point of view, but also from that of the manufacturer.

**Co-operative Movement.** Although in recent years a co-operative movement has existed among the growers, the United Tobacco Companies (South) Ltd. has kept its buying warehouses open, and is always willing to purchase direct from the farmers. In no way has the company tried to oppose the movement. In fact, it has for a lengthy period held contracts with the various co-operative societies themselves.

**Prices.** During the past few years appreciably higher prices have been paid for really good grades, averaging about a 20 per cent advance on the figures ruling in earlier days.

**Progress.** The enormous strides which have characterised the company's progress may be gauged by the fact that whereas in 1905 the total value of South African leaf purchased by the United Tobacco Companies (South) Ltd. was less than £4,000, in 1924 it paid out cheques to the value of over £300,000 to farmers and co-operative societies. Other instructive figures showing the growth of trade since the foundation of the company are those of freight disbursements to the South African Railways. In 1905 the United Tobacco Companies (South) Ltd. paid in this way £5,000. These figures are certainly noteworthy, but they appear somewhat insignificant when it is realised that no less a sum than £800,000 is paid per annum by the South African tobacco industry to the Union and Provincial Governments in taxation, there being a stamp tax of 4d. for every ten cigarettes, and an excise duty of 9d. per lb. on tobacco. In addition to this large sum, the South African tobacco industry has to pay various other Government, provincial and municipal taxes, joint stock company importers and general dealers' licences, representing in all a further large contribution to the revenue of the country, while in salaries and wages a sum of £350,000

per annum is distributed among the workers. The United Tobacco Companies (South) Ltd. to-day employs more than 1,400 hands, and has branches in all the most important towns throughout the country.

**Policy.** The success of the Company is due mainly to its policy of manufacturing and selling nothing but the best quality of tobacco. The machinery employed is of the latest design, while buying, selling, accounting, advertising, etc., have been steadily brought to a very high standard.

**Special Department.** A useful enterprise has lately been inaugurated, and it should prove of material assistance to the tobacco growing industry. At an expense involving some thousands of pounds yearly the company has established a special department, whose duty it is to help free of charge any farmer who seriously desires to improve his crop, provided naturally that he has suitable land available for the purpose. This department is in the hands of highly qualified growers, who have nothing whatever to do with the company's leaf buying arrangements, but whose sole duty it is to advise and assist. Practical demonstrations are given, lectures are delivered and pamphlets distributed covering the whole business of tobacco production, from the selection of the suitable type of seed and soil through the various stages of cultivation, reaping, curing, grading and general handling. This is one of the most important and ambitious schemes on a commercial scale that has been adopted in the country, and the company's department is working in closest conjunction with the Department of Agriculture for the Union of South Africa.

**Employees.** One of the outstanding features of the administration of the United Tobacco Companies (South) Ltd. is the consideration shown to its employees, particularly the work people. It was one of the first to adopt in South Africa a "Welfare Scheme." Large dining rooms and recreation rooms are maintained under the charge of a competent chef and assistants, meals and refreshments being provided for the workers at very low cost. The health and general welfare of the work girls also receive special attention under a fully qualified matron and assistant matron, particular thought being given to good ventilation and general conditions in every department.

**Cigarettes and Tobaccos.** In order to cater for all tastes, the company manufactures a large range of cigarettes and tobaccos, the brands of which are household words in South Africa, and include "Lotus" (retail) as low as 3d. for a packet of 10 cigarettes, in spite of the stamp tax and excise duty. The better class and more expensive lines, such as "Flag," "C to C" and "Loyalist," are scheduled at from 4½d. to 6½d. per packet, but in the case of the famous "Three Castles" cigarettes the price is 8½d. on account of the brand being manufactured of imported tobacco. Pipe smokers are catered for in equal variety from such well-known brands as "Battleaxe" at 1½d. per oz. to the "C to C" mixture at 6d. It has always been the policy of the company not only to sell its products at as reasonable a price as possible, but also to provide for and allow the wholesale and retail distributors a fair profit, and especially to buy as much as possible in South Africa all those materials which it may require.

**Administration.**—The general manager of the United Tobacco Companies (South) Ltd. is Mr. George W. Hawley, who joined Messrs. W. D. and H. O. Wills in Bristol 25 years ago. He represented the Imperial Tobacco Company of Great Britain and Ireland in the Straits Settlements, and developed business for the British American Tobacco Company in the

Dutch East Indies, Siam, Borneo, etc., before he became acquainted with The United Tobacco Companies (South) Ltd. in 1906. Mr F. C. Sandell, who is the assistant manager of the company, has been engaged in the tobacco business since 1896, and came to South Africa in 1905.

**Offices.** The company has its registered office at 32, Kloof Street, Capetown. Postal address: Box 78, Capetown. Telephone No. 1339. Telegrams and cables: "Cigarette."

**Branches.**—The interests of the company extend from Capetown to the furthest parts of Northern Rhodesia. Leaf tobacco warehouses are established at Capetown, Woodstock, Observatory, Kat River, Oudtshoorn, Rustenburg, Brits, Salisbury and Port Jameson; there are factories at Capetown, Johannesburg and Rustenburg, and depôts at Johannesburg, Port Elizabeth, East London, Durban, and Kimberley. Agencies are established at Bulawayo, Salisbury, Delagoa Bay, etc. The fine depot and factory premises at Johannesburg were opened by the late President Kruger, while the factory and leaf warehouses at Rustenburg were erected in 1906, and have accommodation for 4,000,000 lbs. of leaf.

(See illustrations, pages 208, 209, 210, 211.)

#### DUNLOP RUBBER CO. (S.A.) LTD.

**Inception.**—The establishment of the Dunlop Company in South Africa dates from 1896, when a depôt was opened in Capetown under the control of the present general manager.

**Development.** At first the only lines handled were cycle tyres and cycle tyre accessories, but with the introduction of the motor car the scope of the company's business was, as might be expected, enormously increased. As motor cars and lorries gradually came into general use it was found necessary to open other depôts in South Africa, and completely equipped branches were established at Johannesburg, Durban, East London and Port Elizabeth. In addition to these, in order that users might be able to obtain their requirements in tyres, etc., without delay, a chain of stockists was formed throughout the country, so that to-day Dunlop products can be procured on demand in almost every village from the Cape to the Zambezi.

**Activities.** The principal lines handled at the company's depôts at present are solid and semi-solid tyres for motor trucks and omnibuses, pneumatic tyres for motor cars, lorries, etc., motor cycle tyres, bicycle tyres, the Dunlop "Maxfli" golf ball and the Dunlop tennis ball. Besides these, all accessories connected with the above articles can be obtained, also the Dunlop wheels and rims for motor cars, motor cycles and ordinary cycles. The territory controlled by the company, through its depôts and the system of stockists, includes the Union of South Africa, South-West Africa, Rhodesia and Portuguese East Africa, while practically every garage in all this vast territory carries a comprehensive stock of the Dunlop products for the use of motorists.

**Organisation.**—A general manager, chief accountant and the usual office staff are established at the head office in Capetown, but each of the main depôts also has its own manager and complete staff, the number of employees in the country being altogether 83.

**Depôts.**—East London: 5-7, Albert Street; Port Elizabeth: Parker's Buildings, Britannia Street, both of these being sub-depôts to the main establishment in Capetown. There are also important branches at Johannesburg, Dunlop Buildings, Marshall Street, and at Durban: Marine Parade Buildings, Esplanade.

**Offices.**—Head office: Dunlop Buildings, Strand Street, Capetown.

#### ATLANTIC REFINING COMPANY OF AFRICA LTD.

**Inception.**—A subsidiary of the Atlantic Refining Company of Pennsylvania, one of the largest manufacturers of lubricating oils in the world, the company under notice was established in South Africa on August 28, 1924, its object being to market the products of the parent company throughout the Union of South Africa, Rhodesia, and the islands of Mauritius and Rennon.

**Development.** At the outset of operations technical experts made a very careful study

**Activities.**—The company is interested in the sale of motor spirit, lubricating oils and greases, all of which are manufactured at the refineries of the parent company in America, whose long experience, extending over 60 years, has enabled it to manufacture goods that exactly meet the requirements of local conditions. At the fine refineries more than 6,000,000 gallons of the company's products are manufactured daily, these being distributed throughout the world from 40,000 points.

**Depôts.** Johannesburg, Port Elizabeth, Pretoria, Kimberley, Mossel Bay, Salisbury,

DUNLOP RUBBER CO. (S.A.) LTD., Capetown.  
Two examples of Modern Publicity Employed.

of the marketing conditions and requirements in South Africa and a reference hereafter to the large number of depôts which have been established will give some idea as to the success that has met the company's endeavours, and indicate the rapid development that has taken place during the short time it has been in existence. Both in motor spirit and lubricating oils it has placed on the market products of unchallenged quality, which are meeting with an ever increasing sale.

Lourenço Marques, Mauritius, Zanzibar, Chinde, Walvis Bay, Loanda, Durban, East London, Bloemfontein, Maritzburg, Mafeking, Bulawayo, Beira, Madagascar, Dar es Salaam, Mombasa, Luderitzbucht, and Mossamedes.

**Directorate.**—Mr J. E. Grey (managing director) and Mr D. P. Clark.

**Head Office in South Africa.**—South West House, P.O. Box 697 Cables, "Oilatref," Capetown.

(See illustration, page 214.)

**LENNON LIMITED.**

**Inception.** This firm had its origin in an apothecary's shop established about the year 1850 by Dr. Dunsterville for the convenience of his own patients. On the retirement of the doctor to England the dispensary was purchased by the then manager, Mr. B. G. Lennon, and the business was thus thrown open to the public.

**Development.** The undertaking prospered, and, as time went on, Mr. R. A. Fairclough was taken into partnership, while after the discovery of the Diamond Fields trade increased to such an extent that by the year 1880 it was found necessary to open a depot in London. From this period onward the country was being steadily opened up, and the

with a reserve of over £180,000, and for some years past a steady dividend of 9 per cent per annum has been paid on the ordinary shares.

**London Premises.**—The London buying office has shown great progress since its establishment in 1880 in premises in Aldersgate Street. These were vacated for a large warehouse in Bunhill Row, followed by still larger buildings in Leadenhall Street until in 1901, a new factory and warehouse with offices were erected for the company in Queen Elizabeth Street near Tower Bridge.

**Activities.** The firm is now largely engaged in the manufacture of pharmaceutical goods, partly in London, but mainly at Port

**PETERSEN LIMITED.**

**Inception.** The progressive firm of Petersen Ltd. was established at Capetown by the late Mr. P. J. Petersen in 1842.

**Development.** The premises originally occupied by the company were in Plein Street, a small building which is in striking contrast with the many-storeyed modern structures now standing on either side of Barrack Street, which are reputed to be the largest, most complete and best equipped of their kind in the southern hemisphere. Intimately connected with the founder of the firm was his son, the late Mr. D. K. Petersen, governing director of the company from its inception until his death in 1918. To him in great measure was due the rapid progress

(See letterpress, page 213)

firm's business increased correspondingly, compelling the establishment of new branches and a general extension of ramifications throughout South Africa. In 1891 the firm was converted into a limited liability company, while in 1899 it was incorporated as a public company under the title of Lennon Limited. The affairs of Lennon Ltd. having become so important, it was decided in 1902 to set up a separate establishment for the head office in Capetown, and Mr. Albert Walsh, who had been twenty-two years at Port Elizabeth assumed control as general manager.

**Capital.**—The capital of the company, comprising ordinary and 5% cumulative preference shares, now stands at £438,480,

Elizabeth, and to a lesser degree in Capetown. It has also large retail establishments in the more important towns of the country, in almost all of which the growth of the business has necessitated a continual increase in the size of the premises occupied by the firm, and in many cases the special erection of suitable buildings.

**Branches.**—Port Elizabeth, East London, Johannesburg, Durban, Bulawayo, Salisbury, Bloemfontein, Aliwal North, Graaf Reinet, Kimberley, and Mossel Bay, while smaller retail branches are in existence at Gardens, Capetown, Stellenbosch, Oudtshoorn, Germiston and Gatooma.

**Head Office.**—Adderley Street, Capetown.

that has taken place in connection with the enterprise.

**Activities.** Petersen Ltd. are manufacturers of pharmaceutical preparations, pills, tablets, capsules, toilet preparations, perfumery, essences, Dutch medicines and veterinary preparations. They are specialists in the manufacture of proprietaries for overseas firms, and are distributing agents for many well-known English and American and South African proprietary articles. The advantage of manufacturing in South Africa lies in the saving of heavy importation duties, and the firm deals with all alcoholic preparations manufactured in bond from high-class spirit under special manufacturing rebates.

LENNON LIMITED, Capetown.

1. Galenical Department.
2. Steam Pans and Recovery Stills.
3. Portion of Pill and Tablet Packing Room.

4. Tablet Department, Granulating Room showing Machine Room.
5. Pill Making Room.
6. Portion of Girls' Packing Room for Toilet Cream and Specialties.

**Premises.** The premises have been constructed on the most approved principles as to hygiene and safety. Ventilation and lighting are perfect, and flights of cement stairs at one side of the buildings lead from floor to floor without passing through the rooms, from which they are shut off by fireproof doors, thus providing a safe means of escape in case of fire. The floor area of the stores and works exceeds 50,000 superficial feet, and there are nearly 200 employees.

**Machinery.** Amongst the many machines utilised, mention may be made of the automatic pill making, gelatine coating, tablet mixing, and granulating plants, which represent the outcome of many years' experimenting and research.

**Analytical Laboratory.**—Such medicines and other preparations as those made in the perfectly equipped analytical laboratory were formerly imported. The activities of the firm have made possible the utilisation of local products to supply the identical article at a lower price.

#### SOUTH AFRICAN MILLING COMPANY LTD.

**Inception.**—This company is the successor to the Port Elizabeth Steam Flour Milling Co. Ltd., and the first mill was erected at Port Elizabeth in the early eighties.

**Development.** Commencing in a small way, the company has grown to be one of the largest industrial concerns in the country. The original Port Elizabeth mill has recently been re-modelled, and the equipment of a new silo in connection with it has been completed. It was at this establishment that the modern system of roller mills was first installed in South Africa.

**Activities.** The South African Milling Company to-day conducts the largest flour milling enterprise in the country. In addition to the Port Elizabeth mill it has an up-to-date 25 sack Simon mill at Capetown, and smaller flour mills at Artois, Wellington, Mossel Bay and Mahanabum. The company has also a large interest in the Orange Free State Milling Company Ltd., with mills at Bloemfontein and Guntree.

from the separators and a motor. Grain arrives at the silo in railway trucks and is discharged into a concrete tipping hopper, feeding to the boot of either of two intake elevators each having a capacity of 35 tons per hour. The grain is weighed and cleaned, and delivered to various bins by means of two band conveyors running the whole length of the top floor. Each band feeds three rows of bins through travelling throw off carriages and portable spouts. Grain is discharged from the bins through "Exact" wheat measures, and is then carried by means of conveyances and elevators to a trussed steel spout which leads to the wheat cleaning department.

**Milling Plant.**—The milling plant is housed in a four storeyed building, the ground floor of which is occupied by the elevator boots, drives for the roller mill, etc., whilst the first floor contains the mills themselves. The purifiers are on the floor above, and the top floor contains the plan sifters and centrifugals, the latter arranged

PETERSEN LIMITED, Capetown.

2. A Portion of the Laboratory at New Works.

3. A Section of the Packing Department.

(See letterpress, page 211)

**Directorate.**—Dr A. H. Petersen (chairman), John Main (managing director), James Scott (general manager), Howard Fergusson, J. B. Kayser, R. Macintosh (Johannesburg), and H. H. Greenwood (Bloemfontein).

**Agents.**—London: Grimwade, Ridley & Co., 124 to 127, Minories, E.C. 3. New York: Arkell & Douglas Inc., 73, Pearl Street.

**Head Office.**—Barrack Street, Capetown. Wholesale depôts at Johannesburg and Bloemfontein.

**Cables.**—"Iodine" Code A.B.C. 6th Edition.

**Port Elizabeth Mill.** This mill has a 20-sack "Simon" plant, and the silo has a capacity of 9,000 colonial tons. The original silo was partially destroyed by fire in 1920, but has now been replaced by a reinforced concrete building equipped with "Simon" machinery. The building is 160 feet long, 40 feet wide and 107 feet high, it has 99 bins, each 8 ft. square and 68 ft. deep. The receiving house, which is of brick with a steel roof, abuts on the silo, and contains a 1,500 lb. "Avery" automatic weigher, two warehouse separators for cleaning, cyclones for the dust collecting system and exhaust

either two or three high. The dust collectors are also fixed on this floor.

**Directorate.**—Mr William Pringle (chairman).

**Managers.**—Messrs. J. M. Stephen and E. Davies are joint managers, Messrs. J. G. Wood, A. F. Stephen, and A. B. Thomas are joint assistant managers. Secretary: Mr. Peter Paton.

**Bankers.**—The National Bank of South Africa, Ltd.

**Cables.**—"Milling," Port Elizabeth or Capetown.

**ALGOA MILLING CO. LTD.**

**Inception.** Established by Mr Lennox Mackay in 1902, this company commenced operations on the site occupied by the present mill. During the period of nearly a quarter of a century which has elapsed since that foundation the enterprise, by bringing into use each successive development in milling machinery and handling none but the best raw material has won deserved prominence among South Africa's successful milling undertakings. Its output is esteemed all over the country.

**Products.** The products manufactured by the company are milled mostly from Australian wheat, the bulk of which is supplied by that very prominent firm of Australian grain merchants Messrs John Darling & Sons, and are known throughout South Africa under the name of "Peerless" flour, etc.

**Premises.** The company's own modern up-to-date mill and extensive silos are situated on the main Port Elizabeth railway line. The capacity of the silos, to which the overseas wheat is delivered direct, is 2,000 long tons.

**Directorate.** The principal proprietor and managing director is Mr Lennox Mackay.

**Address.** P.O. Box No 491, Port Elizabeth.

**Cables.** "Rollers."

(See illustration, page 218.)

**ORANGE FREE STATE MILLING CO. LTD.**

**Inception.** This company was incorporated on March 1, 1916, on the occasion of the amalgamation of the Free State branch of the South African Milling Company Limited with the Schutte Draai Milling Company Limited.

**Development.** Since its formation the company has acquired the Athole Mills at Bloemfontein, now the largest concern of the kind in the Free State. Its three mills are going night and day, a very large quantity of wheat being absorbed by them. Besides its production of the well-known brands of flour called "Queen of the Snow" and "True Blue," the company markets many different varieties of wheaten meals.

**Other Activities.** In addition to the above products, the company also manufactures samp and all kinds of mealie meals of different qualities to meet the requirements of a large and varied clientele. In conjunction with its mills, the company also owns and operates the largest steam bakery plant in the Province, trading under the name of The Orange Free State Bakery Company, of Hanger Street, Bloemfontein. The bread and confectionery produced at this bakery are manufactured under the most hygienic conditions. The company is the owner of two large sites next the Castle Brewery, and at a later date the erection of an up-to-date mill thereon will be undertaken. A start has already been made at the sites in question, a storehouse with a capacity of some 80,000 sacks of wheat having been erected. This must ensure that the farmers of the Province will always have a good market close at hand.

**Directorate.**—Messrs E. Davies, of Port Elizabeth (chairman), W. E. Stevens of Schutte Draai; William Pringle, of Port Elizabeth, and J. M. Stephen, of Capetown, with Mr W. S. Mannion as general manager of the company.

**Mills.**—Harvey Road, Bloemfontein, Athole Mills, Atherstone Street, Bloemfontein, and at Guntree Station.

ALGOA MILLING CO. LTD., Port Elizabeth  
Mill at Port Elizabeth (See letterpress page 217)

**KAFFRARIAN STEAM MILL CO. LTD.**

**Inception.**— This company commenced business in King William's Town, Cape Colony, about the year 1880.

**Activities.** The firm has now five mills in operation, and one of its chief products is the patent flour "Golden Cloud." This product is well-known all over South Africa and Rhodesia, and was used in the South African Railway restaurant car at the Wimbley Exhibition.

**Durban Branch.** This branch, which controls an extensive maize milling plant and has been established over 20 years, is a large exporter of maize and maize products. The mills and silo are situated on the Maydon Wharf site, where modern machinery has been installed to deal with bags and bulk maize in the most expeditious manner. Among the other products manufactured are samp, gits, maize, rice, maize flour,

and meals of varying quality, which are supplied as rations to different estates and are also exported. Hominy Chop is exported to England and the Continent. During the last 15 years the capacity of the mill has been more than doubled. In addition to the grain silos, the company has large storing capacity for bag maize, it is interested also in the export of wattle bark and is the distributing agent for the famous Fison Albatross fertilisers.

#### **PYOTT LIMITED.**

**Inception.** The firm of Pyott Ltd was established at Port Elizabeth in 1885 by Mr. John Pyott, who commenced in a small way to manufacture jams and confectionery

**Development.** His efforts met with such success that within two years biscuits and cake making were added, while in 1891 flour milling was instituted. The firm, which was converted into a limited liability company in 1900, at that time confined its business to the Midlands, the Orange Free State and the Transvaal. More outlets were needed for expansion, however, and in order to extend the field of operations a branch was opened in 1906 in Woodstock for the manufacture of biscuits, to be followed later with bread making and flour milling. Soon the rapid growth of business necessitated the erection of new premises at that centre, and the establishment of a dépôt in Johannesburg in the year last named

**Factories.**—The factories at both Port Elizabeth and Woodstock are fully equipped with the most modern machinery for manufacturing the firm's productions, and each factory has, in addition, its own engineering, tinsmithing and box making plants

**Distribution.**—The company's products are now distributed throughout the whole of the Union, South West Africa, Rhodesia, and the Belgian Congo, but Natal is supplied by a subsidiary company under the title of Pyott (Durban) Ltd.

**Directorate.**—Messrs. John Pyott (chairman and managing director), James Mudie, (managing director), John Scrimgeour, James McLagan, R Pyott, and C Macdonald.

**Bankers.**—The National Bank of South Africa, Ltd

**Cables.** "Pyotts"

(See illustration, page 219)

#### THE SOUTH AFRICAN BREWERIES LTD.

**Inception.**—This huge enterprise was of modest origin in the year 1890, when the Natal Brewery Syndicate was formed in Pietermaritzburg with a capital of £35,000 for the purpose of brewing beer.

**Development.** The success of the company's operations from the commencement surpassed all expectations, and it was soon found necessary, owing to the rapid expansion of business, to rebuild and extend the brewery premises in the Natal Capital. Furthermore, the opening up of the Witwatersrand gold fields provided an additional region for exploitation, with the result that the company, as a first step, effected the purchase of Messrs. Glass & Co's brewery in Johannesburg, and rebuilt the premises thus taken over. This was followed by the conversion of the original syndicate into the present South African Breweries Ltd., and from that time onward the history of the enterprise has been one of continued and rapid progress.

**Breweries.** There are now no fewer than eight large fully equipped breweries in important towns of South Africa with modern plant for the production of Castle Beers, which are the speciality of this company, and, in addition, its depots and agencies are to be found in all centres of activity in the country.

**Capital.** The authorised capital of the company is £2,500,000, divided into 1,500,000 ordinary shares of £1 each and 1,000,000 5 per cent cumulative preference shares of £1 each. Of these 1,447,920 ordinary and 1,000,000 preference shares have been issued and fully paid, making 2,447,920 in all issued and fully paid. The reserve fund at the end of the financial year on March 31, 1925, stood at £225,000 and the special reserve against trade investments at £65,000.

**Activities.** An idea of the magnitude of the company's present field of operations may be gathered from the fact that the distance between the most southerly and the most northerly of the breweries is over 1,600 miles, while there is an extent of 500 miles between the most easterly and westerly, though the area in which its business is done covers, of course, even greater distances than these.

**Products.**—In actual brewing the company has always insisted upon the best of materials, the most modern plant and absolute cleanliness being used, and, no doubt, much of the progress and popularity of its products is due to the strict observance of this rule. The Castle Beers are drunk from the Cape to the Congo, and have not only won the good opinion of consumers, but also numerous gold and silver medals awarded at all the important exhibitions held in South Africa.

**Malting Barley.**—The South African Breweries Ltd. are, moreover, giving great encouragement to farmers for the cultivation of barley suitable for malting purposes. With this object they have, for some time past imported and distributed to farmers the best types of seed barley. The movement has met with a very encouraging response, with the result that considerable amounts of money which were formerly sent overseas for the purchase of malt can now be spent and kept in circulation in South Africa. A beginning has therefore been made in the industry, but without doubt there is a great

THE SOUTH AFRICAN BREWERIES LTD., Johannesburg.  
1. "Castle Brewery," Woodstock, Capetown.  
2. "Castle Brewery," Port Elizabeth.

opening for advancement in this direction. Progressive farmers will find that barley cultivation is sure to well repay such enterprise, as the Castle Breweries can naturally give much higher prices for barleys suitable for malting purposes than those that are at command for ordinary barley. The malting of barley grown in the country is carried on at Pretoria and Port Elizabeth, where modern plants have been erected for the process, and the company is now constructing large malting works at the Castle Brewery, Johannesburg, for the same purpose.

**Hop Growing.** The management has also lately been considering the question of hop cultivation in South Africa, and has given careful thought to the possibilities of this becoming a successful crop under the conditions prevailing in the country. With this end in view, hop sets were imported some time ago for distribution to farmers and other interested persons about the territory, especially in those parts where the climate and soil give promise of favourable conditions.

ordinary shares (free of income tax), the sum of £20,000 was added to the special reserve against trade investments, and the balance of £88,037 10s. 2d. was carried forward.

**Branches.** Breweries, fully equipped for the production of beer, are now established by the company at Pietermaritzburg, Durban, Johannesburg, Pretoria, Bloemfontein, Cape-town, Port Elizabeth and Salisbury, of which the first two are known as the Natal Brewery and the Durban Brewery respectively, the others going under the name of the Castle Brewery.

**Administration.** Directors: Messrs. John Stroyan, J.P., D.L. (chairman), George Henry Raw, Isaac Lewis, S.B. Joel, J.P., Edgar C. Wigan, Charles A. Chidell and the Rt. Hon. Sir A. Griffith-Boscawen, P.C. General manager in South Africa: Mr. Reginald P. Fitzgerald. Secretary, Mr. Leonard Roomie.

**Head Office.** 8 to, Great St. Helens, London, E.C.

(See also illustrations, pages 220, 221.)

much prized even in this country, renowned for the excellence of its fruits.

**Employees.**—These number between 800 and 1,000.

**Equipment.**—Work in every department is carried out under the strictest hygienic principles, and the machinery is of the most modern and up-to-date description. The cannery has the reputation of being one of the finest in the British Empire.

**Export.**—The corporation's products are marketed in many countries, the principal exports, however, going to Great Britain.

**Directorate.**—Messrs. I. W. Schlesinger (chairman), J. A. MacRae, W. O. Bullock, I. F. Atterbury, A. A. Heaton, A. Pellett, D. M. Burton. General manager: Mr. S. Craig Bam.

**Offices.** Head office: Newmarket Square, Port Elizabeth. London office: 122, Cannon Street, E.C. 4. Cables: "Canpack."

**Bankers.**—The National Bank of South Africa, Ltd.

THE SOUTH AFRICAN BREWERIES LTD., Johannesburg.

1. "Castle Brewery," Salisbury, Southern Rhodesia.

2. "Castle Brewery," Bloemfontein.

(See letterpress, page 220.)

The project can only be considered as being at present in the experimental stage, but the results already obtained encourage the anticipation that an important new enterprise will in the near future be opened up to the agricultural community of South Africa, the efforts of the South African Breweries Ltd. in this connection being supplemented by the interest taken in the subject by the Government agricultural authorities.

**Financial.**—According to the balance sheet for the year ended March 31, 1925, the profits of the company, after making provision for depreciation and London expenses, amounted to £323,047 19s. 8d., which, with the sum of £88,766 16s. 5d. brought forward, made a total of £411,814 16s. 1d. After providing for income tax and corporation profits tax and allowing for the interim dividends paid on both preference and ordinary shares, there remained a balance of £277,829 10s. 2d., which was allocated as follows: final dividends of 2½ per cent. on the preference shares (less income tax) and 2s. per share on the

#### AFRICAN CANNING AND PACKING CORPORATION LTD.

**Inception.**—The corporation bearing this title was established in 1919 to consolidate the interests of a group of pineapple growing estates, and to engage in the canning of pineapples and other fruit.

**Activities.**—The company's factory at Port Elizabeth is devoted to the canning of pineapple, pears, apricots, grape fruit, berries, and other fruits. It also manufactures jams, marmalade, fruit pulp, glace and crystallised fruits. The chief brands are known as "Gold Reef," "Sakabula" and "Surf Maid," all of which have gained a high reputation.

**Capital.**—The capital of the organisation is £530,000.

**Properties.**—The landed property of the corporation covers some 8,000 acres in the Bathurst district of Cape Province, which is in the heart of the pineapple growing industry of South Africa. The fruit from this district acquires a flavour and a rich colour which are

#### PRETORIA PORTLAND CEMENT CO. LTD.

**Inception.**—This very important company was established in 1892, and was then known as the First Portland Factory, Ltd. It began operations with a small shaft kiln plant, producing a few hundred bags of cement per month, but in spite of assistance from the Republican Government in the form of a protective tariff, and the fact that imported Portland cement was almost unobtainable, except at prohibitive cost, little progress was made, due mainly to the antiquated process of manufacture then in use. The enterprise was thus virtually in a state of collapse when reconstruction and revised administrative methods were resolved upon.

**Capital.**—This is £630,000, in £1 fully paid shares.

**Development.**—In 1904 the company under its present name introduced a rotary kiln (which has revolutionised the process of manufacture of Portland cement), and

AFRICAN CANNING & PACKING CORPORATION LTD., Port Elizabeth.  
The Firm's Exhibit at the Wembley Exhibition.

subsequently added other modern units. Success attended the introduction of these improvements, and the demand for cement having increased, the company was encouraged to make considerable additions to its plant. To-day the productive capacity of the factories exceeds 3,000,000 bags (of 100 lbs. each) per annum equivalent to about 1,500,000 casks, and these figures indicate the advancement made by the organisation, whose enterprise is now recognised as one of the most successful of South African industries.

**Activities.**—The company operates two electrically controlled factories—one at Hercules, Pretoria (dry process), on the original site of operations, and the other (wet process) at Slurry, near Mafeking. This latter was erected in 1915, and is to-day the largest Portland cement works operating in South Africa. The limestone deposits owned by the company are of very high quality, are practically unlimited in extent, and the quarries are situated conveniently near to each factory. Gypsum is also quarried on one of the company's properties.

**"Pretoria Cement."**—This cement has been used exclusively in the majority of South Africa's leading buildings, among the most important of which are Union Buildings (approximately 80,000 bags), Railway Station, University Buildings, Post Office and Government Buildings in Pretoria; the Town Hall, new Law Courts, Chamber of Mines Building and University Buildings in Johannesburg, the new Graving Dock (630,000 bags), Harbour Works, Congella, and the Shongweni Dam (250,000 bags) in Durban. It was also used in the construction

of the harbour works at East London and Port Elizabeth, and in many irrigation schemes, the largest of which are the Vaal River Barrage, the Hartbeespoort Dam (250,000 bags), Lake Mentz (201,000 bags), Calitzdorp and Van Rynvelds Pass (120,000 bags).

**Power Plant.** Power is derived from turbo-generators, supplied with super-heated steam from Babcock & Wilcox 250 h.p. sterling boilers, fitted with mechanical chain grate stokers. The stations produce sufficient power to cope with all the needs of the factories, including lighting and driving power. These factories possess chemical and physical testing laboratories equipped with the latest appliances for testing materials used in the manufacture of products. Great care is taken in this connection, every truck of cement leaving the works being tested and full reports kept.

**Staff.**—The average total of employees is 150 whites and 1,200 natives, wages paid amounting to £9,000 per month. No difficulty is experienced in obtaining unskilled native labour, the welfare of the employees receives every attention, and the company provides tennis courts, swimming baths, a recreation club and library.

**Directorate.**—Mr F. G. Izod, M.B.E. (chairman), Sir Julius Jeppe, C.B.E., Mr. E. Davidson (managing director and general manager), Messrs C. Maggs and T. Marks Secretary. Mr M. C. Bird.

**Head Office.**—Colonial Mutual Chambers, 94, Fox Street, Johannesburg. Cables "Cement," Johannesburg.

(See illustration, page 224.)

#### WHITE'S SOUTH AFRICAN CEMENT CO. LTD.

**Inception.**—This company (registered in England) is subsidiary to the two large English Portland cement companies—the Associated Portland Cement Manufacturers and the British Portland Cement Manufacturers, Ltd. The factory, which was erected under the supervision of the companies just named, was completed and started producing Portland cement in 1914. It is equipped with the finest plant procurable, and has one of the most up-to-date cement works in the world besides having behind it the practical experience gained by the parent companies during the past hundred years and the results of the most modern research work.

**Installation.**—The "wet process" of manufacture has been adopted which ensures absolute uniformity of quality. Two rotary kilns are installed, the capacity of the factory being approximately 1,000,000 bags per annum.

**Product.**—The product is not only guaranteed to exceed the requirements of the British Standard Specification, but prolonged tests have proved it to be equal in all respects to the brands manufactured by the parent companies. It has been extensively used in buildings and bridges throughout the Union, Government grain elevators, irrigation and water work schemes, etc., and was exclusively employed in the Kamanassie Dam, Oudtshoorn, the Bethulie Dam, the Steenbras Reservoir and Capetown water supply, being also largely utilised in the Vaal River Barrage of the Rand Water Board.

**BOKSBURG BRICK AND FIRECLAY CO. LTD.**

**Situation.** The works of this company are situated at Boksburg North in the Transvaal and are self-contained, the very complete installation there permitting the execution of orders of any size.

**Activities.** The company has been for many years contractors to the Union Government of South Africa, the South African Railways and the Victoria Falls Power Company Ltd. while its products have also resulted in the winning of many testimonials from numbers of leading firms and others.

**BOKSBURG BRICK AND FIRECLAY CO. LTD., Johannesburg.**  
View of Works at Boksburg, North Transvaal.

A fine exhibit of the company was shown at the Wembley Exhibition, when both English and American experts very favourably commented upon it.

**Products.**—The shale used by the firm is of exceptionally fine quality, and on analysis showed a percentage of from 60 to 68 per cent silica, with a lower iron content than any other known deposit. The over-burden is manufactured into various types of building bricks, these are of excellent quality, and are all double pressed.

The company always desires to introduce the most modern methods of manufacture, and the great success that has attended its efforts is attributable solely to the sterling qualities of its output.

**Head Office.** 60-62, Exploration Buildings, Johannesburg.

Marks' Block, Exchange Building, the Dutch and English Churches, the Flatherley Building in Market Square and Jeppe House, Doornfontein. He also converted the old Rand Club into the old Law Courts. His Pretoria contracts include the following: The old Government Building, the new University College new Mint Building, Artillery Barracks, Investment Building and Union Mansions Ltd., while at Bloemfontein the most important contracts have been the Raadzaal and the Prison.

**Property and Output.**—The land belonging to the factory is some twenty-seven acres in extent; the output amounts to twelve million bricks per annum, and there is a large supply of shale clay on the property, sufficient to last for many years. The plant consists of two continuous and twelve down draft kilns and there is a railway siding running right into the factory.

The company will be pleased to supply information with regard to any of the pro-

and the average turnover is between £170,000 and £200,000.

**Premises.** The works and stock yards, which are situated at Maydon Wharf, cover fully five acres, and the shops are equipped with the most modern plant for structural engineering. There is a compressed air plant for supplying power to the pneumatic riveters, as well as an hydraulic compressor feeding the eight hydraulic riveters which are installed in the yards. Both these plants are electrically driven and have emergency auxiliary steam engines. The yards, with the railways running through them, are in an excellent position for receiving and shipping merchandise. The private siding which traverses the stock yards is equipped with a 5-ton travelling crane, there being a 60ft gib crane with a lifting capacity of eight tons. This crane can be added to considerably. The shops are fitted with overhead travelling cranes. Motive power is electrical, the energy being supplied by the Durban

JOHN J. KIRKNESS (THE GROENKLOOF BRICK, TILE & POTTERY FACTORY), LTD., Pretoria.  
General View of the Works, giving some idea of the size of the Industry.

**JOHN J. KIRKNESS (THE GROENKLOOF BRICK, TILE & POTTERY FACTORY), LTD., PRETORIA.**

**Inception.**—The founder of this enterprise, Mr J J Kirkness, started operations in a small way as a builder and contractor in 1887 at Bethlehem. Some of the first work carried out were bridge construction in the Orange Free State and church buildings in Bethlehem and Heilbron. Business expanding, Mr Kirkness later on went to Barberton, and then, in 1888, to Johannesburg. Gradually the enterprise grew, until to-day the operations cover the Union, Rhodesia and South Africa.

**Activities.**—Some of the principal buildings erected by Mr Kirkness are, Lewis &

ducts which it is manufacturing, these including all varieties of bricks, roofing tiles, quarry tiles, pottery, etc.

**Staff.**—These number 60 Europeans and 440 Natives.

**Bankers.** The National Bank of South Africa, Ltd.

**Cables.**—"Kirkness," Pretoria.

**GILBERT HAMER & CO. LTD.**

**Inception.**—Founded in 1906, this company assumed the name of Gilbert Hamer & Co. four years later, the present style being adopted in 1911 when the enterprise occupied premises at Maydon Road.

**Capital.**—The working capital of the company, incorporated in Natal, is £30,000,

Corporation to 45 motors with an aggregate of between 290 to 300 h.p. The stocks held in Durban average 1,400 tons of assorted sectional steel, which is imported from the United Kingdom.

**Contracts.**—Among the contracts undertaken by the company are the following: supplied the South African Railways and Harbours with the whole of the steel work for the masts and bridges in connection with the electrification of the Natal line (a total of 8,000 tons of light structural steel work), this being the first electrical railway scheme in the country; coal mine head-gears for the Dundee Coal Co.; coal bunkering plant at Cato Ridge for the South African Railways (this being the

2. Tar Dehydrating Plant (left) and Water Cooling Tower (right).

pebble bins for the Central Mining and Investment Corp., Modderfontein East Mine

**Contracts in Hand.**—Among the contracts in hand are the following: Steel work for the new power station at Port Elizabeth, Durban New Theatre, water cooling tray tower and structure for Sparks & Young, steel work for the Town Hall at Springs, shafts, sets and head gear for the S.W. Africa Co., steel work for Station and Tobacco Factory at Salisbury, Rhodesia; structural steel for Durban Falkirk Iron Co., etc.

**Staff.**—This numbers from 80 to 100 workmen, besides about 200 Natives

**Directorate.**—Sir J. L. Hulett, Messrs J. T. Lea (managing director), W. E. R. Edwards, A. S. L. Hulett, and W. Doull Secretary; Mr. J. Johnston

**Capital.**—The authorised capital is £1,075,000 in 4,300,000 shares of 5s each. To March 31, 1924, 2,818,487 shares were issued and fully paid, of which 600,000 were subscribed at par

**Activities.**—The company's interests combine the ownership of freehold farms, covering large areas in the Transvaal and Orange Free State, with extensive mineral rights in the same territories and in Swaziland. Other property includes the lease of townships.

**Industrial Possibilities.**—The manifold natural advantages and services available to the industrial settler in South Africa are exemplified by those existing at the Tweefontein United Collieries. Throughout this property, covering 13,000 acres freehold of

the Witbank coal district of the Transvaal cheap sites with unlimited water and building materials at low cost are obtainable, power, both in electricity and gas, is unlimited and cheap, freedom from municipal taxation ensures lighting and sanitary services at nominal rates, while the Government School, Post Office and Railway connections and daily medical attendance are additional benefits enjoyed. Labour is plentiful and cheap, and comfortable houses at low rental are provided for employees.

**Developments.**—The Tweefontein Group is not confining its attention solely to coal producing, but by the installation of a Lynnby product plant at the Minaar Colliery takes a leading part in the supply of high-grade tar. In course of time the manufacture of sulphate of ammonia and other by-products of coal will be undertaken. Conditions are also extremely favourable for the opening of a starch industry.

**Subsidiary Companies.**—In addition to the Tweefontein United Collieries Ltd., the company is interested in the following: Henderson Consolidated Corporation Ltd., Tweefontein Colliery Ltd., Daggafontein Mines Ltd., Delagoa Bay Development Corporation Ltd., British Asbestos Chrome Co. Ltd. and S.A. Construction Company Ltd.

**Offices.**—London 36, New Broad Street, E.C. 2 Johannesburg City House, 27, Harrison Street Cables "Hibernus," Johannesburg and London

#### WADE AND DORMAN LTD.

**Inception.**—This firm of structural engineers of Durban and Johannesburg was founded in 1903 as Charles Wade & Sons. Six years later it amalgamated with Messrs. Dorman Long & Co. Ltd., of Middlesbrough England.

**Workshops and Stockyards.**—The company has extensive workshops and stockyards both at Durban and Johannesburg, and has supplied steel frame buildings to constituents throughout the Union, some of the contracts for steel work carried out by the Durban shops being those for Stuttaford's new buildings, Norman Anstey, National Mutual Life Association of Australasia Ltd., Payne & Payne, The Natal Land and Colonisation Co., Henderson's, John Orr & Co., Manne Hotel, Royal Hotel, King's Hall, Waverley Hotel, Lion Match Factory, and Natal Estates Ltd.

**Other Contracts.**—These include steel work for the Johannesburg Town Hall, Durban Town Hall, and the Cato Goods Sheds for the Government in Durban, the roof in connection with this latter structure being the largest in Africa, covering 5½ acres and being 400 ft. long by 570 ft. wide. In addition, structural steel was furnished for the New Modderfontein Stamp Mill at Circular Shaft, also for the Colenso Power Station at Colenso.

**Workshop Installation.**—The new and additional plant recently installed here comprises five electric cranes, four of which have a lifting capacity of five and one of 10 tons on a clear span of over 50 feet. Then there are two large punching and shearing machines, saws, plate rolls, rivetting machines, pneumatic hammers and drilling machines, electrical drills and ending machines. The whole of this plant is driven by power supplied by the Durban Corporation, and it is one of the most up-to-date installations of this particular class in the whole of South Africa.

**Stocks.**—The largest stocks of steel sections in the country are carried by the company, and this enables it to supply almost every kind of steel structure at short notice.

**Directorate.**—Sir. A. J. Dorman, Sir Hugh Bell, Mr. Walter B. Wade (managing director), Capt. M. C. Wade and Mr. F. D. Wade.

WADE & DORMAN LTD., Durban.

#### MACDONALD, FORMAN & CO. LTD.

**Inception.** This company was formed in 1916 to carry on the business of grain milling engineers. In 1918 Mr. J. H. Forman joined the concern, which was then formed into a private limited liability company under the title of Macdonald, Forman & Co. Ltd.

**Development.** Originally dealing exclusively in grain milling machinery, the construction and equipment of grain elevators were taken up and several important contracts were carried out. Later a belting department was established, to become an important feature of the enterprise.

**Activities.**—The company operates throughout the Union, Rhodesia and Mozambique, and has representatives constantly travelling, as well as having offices and depôts at convenient points.

**Factory.**—The head office and factory are in Johannesburg, the buildings being erected on six stands, and having an area of 24,000 sq. ft., parts of the premises being double storeyed. The machine shop has, besides the usual equipment, a complete plant for grinding and re-fluting mill rolls, three machines being installed, each capable of taking two rolls up to 60 in. in length, with separate grinders for smooth rolls. The wood-working shop is equipped with modern plant, and is capable of turning out all kinds of joinery in connection with flour mills.

**Staff.**—A large outdoor staff of erectors and millwrights is maintained for work in all parts of the country.

**Contracts.**—Among the many important contracts carried out by Macdonald, Forman & Co. Ltd. are two reinforced concrete buildings with machinery for the Vereeniging Milling Co., together with grain elevator, also in concrete, having a capacity of 100,000 bags of maize. Further recent contracts

MACDONALD, FORMAN & CO. LTD., Johannesburg.  
1. Johannesburg Premises.  
2. Machine Shop.

SILVERTOWN TANNERY AND BOOT FACTORY LTD., Pretoria. The Factory

include large maize plants for Bennett's at Standerton, Schweizer Renecke Supply Stores, Rutowitz Flour Mills, Pretoria, Frenkel & Co., Johannesburg and a large 15-sack flour mill for Pretoria West Flour Mills. The company has also erected plants for the extraction of oil from maize germ.

**Agencies.** - Messrs F. R. & F. Turner Ltd. Ipswich (flour milling engineers) and Southwark Manufacturing Co. Ltd. of London (machine belts).

All general engineering requirements are purchased on the open market.

**Directorate.** - Messrs Thomas Macdonald (managing director), J. H. Forman, C. F., and W. Seddon.

**Bankers.** The National Bank of South Africa, Ltd., Commissioner Street, Central Branch, Johannesburg.

**Address.** - Corner of Kruis and Frederick Streets, Cables "Domak" Code Bentley's.

#### SILVERTOWN TANNERY AND BOOT FACTORY LTD.

**Inception.** The company named was formed in the year 1915 to establish a tannery and footwear factory to deal in South African raw materials, with the object of converting them into sole, harness, upper and fancy leathers, also into footwear.

**Development.** The business was soon placed on a firm basis, and steadily increasing in importance, it now utilises 550 hides and 750 skins weekly.

**Works.** These are located at Silvertown on a large area of ground, provided with an ample water supply, and the equipment of the factory is thoroughly up-to-date. Coal, to meet the company's requirements, is cheap, while wattle bark for tanning is produced on the proprietors' estate in Transvaal Province.

**Products.** - The products of the Silvertown Tannery and Boot Factory Ltd., carry the distinguishing mark of "Magnolia," and are well-known throughout the Union of South Africa, in which they find a ready sale, some indeed being exported to British East Africa and Portuguese East Africa. The products are sold through the medium of the company's agents.

**Employees.** - The white employees of the company number about 80, while the natives and coloured aggregate some 120.

**Directorate.** - The managing director and principal shareholder is Mr. Charles Maggs.

**Bankers.** National Bank of South Africa.

**Head Office.** Somerset House, 178, Vermeulen Street opposite Church Square, Cables "Magnolia."

#### THESEN & CO. LTD.

**Inception.** - A progressive firm, it owes its inception to the enterprise of two brothers, Mr. A. H. Thesen and Capt. M. I. Thesen, shipowners and merchants of Stavanger, Norway. In 1860 the depression in Norwegian shipping and mercantile trade led them to undertake, accompanied by their families, a voyage in their last remaining sailing vessel the "Albatross," bound with a cargo of timber for New Zealand. Owing to various circumstances, however, the schooner ended its voyage at Capetown, where the foundations of the present flourishing concern were laid.

**Personal.** The sound basis and subsequent success of the organisation under notice were due in great measure to the labours of the company's present chairman, Mr. Peter Thesen, a boy of 16 at the inauguration of the South African venture. After shipping office experience successively at Port Elizabeth and Capetown, and a short sojourn on the gold-fields, he joined his brothers (who were then at Knysna) in business when they opened their Capetown office. Later he was accredited to the Union as Consul-General for Norway, being awarded the North Star on his retirement after ten years' service.

**Development.** - The company's initial South African operations lay principally in the direction of the coasting trade. The "Albatross," followed by a Dutch brig, and subsequently a fleet of six coasting steamers, were employed in this service. Constant extension of interests following on prosperity has secured for the firm its present importance as general merchants in timber, grain and ironware supplied for carriage-building.

**Timber Trade.** - The shipping of timber throughout South Africa is carried on from the company's own forest at Knysna and from Woodstock, near Capetown, on which properties electrically-driven mills are installed. The Knysna forest, covering 2,000 acres and constantly replanted, furnishes some twenty varieties of hardwoods, including

boxwood specially exported to England and the Continent for use in carriage-work. The firm handles, in addition to local timber, imported stocks from Norway, Sweden, Finland, Canada, the United States, Burma and Java.

**Flour Milling.** - The original Paarl Roller Flour Mills, with which Mr. J. P. Retief's "Nantes" mill was amalgamated, are among the company's other property. The plant, situated at Paarl, near Capetown, is employed chiefly in milling South African wheat, but imports and mills also Canadian, South American and Australian wheat. Of the latest type and electrically operated, it maintains an hourly output of 22 sacks of 200 lbs. each. Messrs. Thesen's "White Star Flour" is esteemed and distributed throughout Africa. The silo now installed is capable of storing 3,000 tons of grain, a capacity which will soon be doubled.

**Lime.** Under the firm's aegis the Standard Lime and Mortar Co. has been formed for the exploitation and manufacture of white lime on the Cape Flats, near Capetown.

**Fish Oil and Cattle Food.** - The company is now actively considering a projected fish industry in connection with the manufacture of fish oil and cattle food, a similar enterprise being conducted with success in Norway.

**Other Activities.** Other concerns owned by Thesen & Co. are the Premier Engineering Works Ltd. and the South Western Narrow Gauge Railway, which connects the town of Knysna with their forest.

**Representation.** - The company represents the Titan Paint Co., of Oslo, Norway.

**Foreign Agents.** - England: E. W. Bourne, 81, Spencer Street, Birmingham; United States: Henry W. Peabody & Co., New York; Norway: Krag & Co., Oslo.

**Bankers.** - Standard Bank of South Africa, Ltd.; National Bank of South Africa, Ltd.

**Head Office.** - 30, Riebeeck Street, Capetown.

**Cables.** - "Thesen," for Capetown, Knysna and Durban.

**Directorate.** - The following compose the Board, the first two being the senior directors: Peter Thesen (chairman), C. W. Thesen, A. L. Thesen, Harry Thesen, Harold Thesen, M. T. Thesen and Oscar Thesen.

THEISEN & CO. LTD., Capetown.

WHALING STATION, "CUTTING UP STAGE"

## THE FISHING INDUSTRY OF SOUTH AFRICA

**T**he importance of the South African fishing industry is realised by few outside those engaged in it but the rapidity and volume of its expansion during the last few years are well exemplified by the state of affairs in Capetown Harbour to day, where the Railway and Harbour authorities have been seriously troubled to provide accommodation for the large and still growing fleet of trawlers, whalers, and motor fishing craft. Some idea of the potentialities of the industry can be gained from the fact that in Cape Province over 4,000 people are engaged in fishing pursuits, while the amount distributed in Capetown alone for wages and stores is placed at between £15,000 and £20,000 per week. It is further estimated that the fishable area of the Union is something like 110,000 square miles in extent, of which at present less than 20,000 miles have been surveyed.

**EARLY HISTORY.** Very early in the days of the East India trade the region around the "Cape of Storms" acquired a great reputation for the abundance of fish in its seas, a curious, and at the same time convenient, superstition arising among seafaring men that it was not lucky to pass the Cape on the long journey to the East without a short delay for the purpose of fishing on the Agulhas Bank. There is mention by Van Riebeeck in his journal that in an expedition to Saldanha Bay a fish very like the pike of his native country had been caught, to which he gave the name of "sea-pike" or "Zeesnoek". The name snoek is now familiar to all South Africans, and salted snoek not only constitutes an important article of food in the country, but is exported in large quantities to the value of about £10,000 per annum.

Later, though fishing was never exactly encouraged, such industry as existed was mostly identified with the Malay population of the Cape, and was limited in scope and primitive in method. The Malay is an expert fisherman, using his small open boat

and hand lines with skill, and he soon discovered that snoek could be caught in great numbers by the simple device of an unbarbed hook baited with a piece of coloured rag. He found also that crayfish could be procured in any quantity by a simple dip-net. In those days therefore the fish supply was more than abundant and cheap enough, with large snoek and crayfish purchasable at a penny each there could be no fear of starvation, even for the poorest in the land.

**LATER DEVELOPMENTS.** The development of the fishing industry came as a result of the discovery of South Africa's mineral wealth, the rise of the great inland towns, and the opening up of the country by the railways. Just when the supply of fish needed to be increased, it was found that the snoek and other varieties were becoming much scarcer. The capture of fish under a certain size was prohibited, and the experiment of introducing experienced fishermen from the North Sea and Norwegian coasts to develop the deep sea areas off the Cape coast was tried without success. Finally, experiments were made with the steam-trawling method of fishing, though it was some time before suitable areas for this were found. Scientific surveys were made, and the rich areas of False Bay, Mossel Bay and the Agulhas Bank were discovered and utilised. Still later developments were in the direction of larger boats fitted with motor power, the improvement of harbour accommodation, and the installation of modern plant for the conversion of the waste products of the fisheries into valuable poultry and stock foods.

At Capetown especially the progress of the trawling industry has been very marked. By means of well equipped steam vessels it is now possible to bring fish in good condition to Capetown from the Agulhas Bank, and even from distances of over 150 miles. This growth was not attained without serious risks and disappointments. The stormy Cape seas, with their unknown

currents and other dangers, led to the loss of many valuable vessels, the market has often been uncertain, fish, though abundant, are apt to shift their localities and cannot be found. At times it has appeared as if the enterprise would have to be abandoned, but it has at last been put on a sound and permanent basis. The fish supply to South Africa has been more than doubled, and there were in 1925 ten trawlers at work on fishing grounds previously untouched.

**PRODUCTS (MARINE).** The fish found in the waters off Cape Province and Natal coasts include many varieties, the best known and most commercially valuable being the snoek, stockfish (cod), kabeljaauw, kingklip, crayfish, gebeek, harder and sole.

**CRAYFISH INDUSTRY.** The Cape crayfish (or spiny lobster) first became known to Europe towards the end of the 18th century, but the crayfish industry was only started in a tentative way about 1874 by the Right Hon. J. X. Merriman. Several attempts to form companies afterwards failed, until Messrs. Hinchcliffe and Holland and Messrs. H. R. and H. J. C. Stephan started their up-to-date factories at Saldanha Bay, the North Bay Company being formed in 1912-13. During the War the industry thrived, but, owing to its dependence on the French market and the fluctuations of the franc, has since declined.

According to Mr. H. J. C. Stephan, the crayfish industry, which has absorbed a capital of £2,000,000 since 1914 (payment to fishermen alone amounting to over £60,000 per annum), needs Government assistance if it is to be kept on its feet. It is suggested that the Union Government should come to a tariff understanding with the French Government to enable the Saldanha Bay cannery to compete successfully with the Canadian canned fish manufacturers; also that the Government should interest itself in the industry by enforcing improved methods of canning (See also under "Commerce.")

2. One of the Factories.
3. Showing Crates with Crayfish. Method of Storing Live Fish prior to Canning

(See letterpress, page 234)

**GLUBBLK** Often known as Cape salmon, the geelbek belongs to the same family as the kabeljaauw, and is a large handsome fish with a superficial resemblance only to the salmon. Being a surface-swimming fish and not a ground feeder, it is seldom taken by the trawl, but is often caught in large quantities by hook and line.

**HAARDER** The harder or mullet, and the maastanker or horse-mackerel are apparently identical with species found in other parts of the world. They are procurable in abundance, and the former has been salted and dried in quantities for the use of the farming population from early times in South Africa.

**KABELJAAUW** The kabeljaauw, or silver salmon (*Scorpaenidae*), belongs to a family of fishes which is widely distributed in the Northern and Southern Hemispheres. The name "kabeljaauw" is applied to it in the Cape and "silver salmon" in Natal, the latter name probably having reference to the silvery colour characteristic of small specimens. It is captured at the Cape in large quantities, both by line fishers and trawlers, but is not found in deep waters like the stockfish and kingklip fish. It is an important product in the ordinary line fishing industry of the Cape fishermen, as it occurs in fairly shallow parts, and does not migrate from place to place so much as several of the other fish of economic value.

**KINGKLIP** The kingklip (*Genypterus capensis*) is a large fish resembling the European ling. Both in South Africa and Australia it is highly prized as a food fish. In South Africa it was not well known, and was not procured in any abundance until the advent of the trawlers. Recently a considerable export trade in kingklip has arisen, not as a smoked article, but in the frozen state, and the trade with Australia is developing.

**SNOEK** The snook (pike) or zeesnoek, as it was first named by the early settlers, is characteristic of the Southern Hemisphere only, being known in Australia as the barracouta. It is a fish of the colder waters, being found mostly on the west coast of South Africa and never on the east coast except at Port Elizabeth on rare occasions. It was in early times in such abundance that it was practically unsaleable in the season, but as it is a fish which preserves well in salt, whether whole or cut up in small pieces ("mootjes"), quantities are sent inland, and of recent years it has been largely exported to Mauritius, where it is much appreciated by the Indian population.

**SOLE** The different varieties of flat fishes or soles number some fifty species, many of which are highly esteemed for their fine flavour. The most important is the mud sole or Agulhas sole, found in great quantities on the Agulhas Bank. It was first discovered in 1898 in the "Pieter Faure" survey, and this ground has been fished regularly by trawlers for about 20 years without producing any noticeable diminution in the supply. The South African market has therefore been well stocked, and some 50,000 lbs are exported annually.

**STOCKFISH** The stockfish (cod) was so named by the early Dutch settlers on account of its resemblance to the European cod, called stockfish in Holland. It is a large fish of a particularly fine flavour, may be utilised in the fresh state, and is well adapted for preservation, more especially as smoked fillet. This fish will prob-

STEPHAN BROS. LTD., Capetown  
Showing one of the Land Stations' Factory and Accommodation for Workers  
Part of the Company's 70 Miles of Coast.

ably prove the mainstay of the South African export trade, a promising market for it having been opened in Australia.

**WHALING INDUSTRY.** - Whales are found off both coasts of South Africa, and the revival during recent years of a very old industry has been rapid. Off the Natal coast alone over 12 500 whales were killed between 1908 and 1924, and exports of whale oil now amount to over a quarter of a million sterling a year.

#### STEPHAN BROS. LTD.

**Inception.** This firm was established by Mr. H. R. Stephan at Capetown in the early days. In 1918 it was converted into a limited liability company, the entire control being in the hands of Mr. H. J. C. Stephan.

**Activities.** The company is engaged in the crayfish industry and fisheries, having two canning and one can manufacturing factories, the three covering 12 acres. The plant is thoroughly up-to-date, 470,000 having been spent in improvements during a period of five years. As the company owns a coastline extending over 70 miles in the Malmesbury District which is as yet practically undeveloped, there is ample scope for the further expansion of the industry.

**Factories.** - The canning factories are equipped with the most efficient machinery, manufactured by Messrs. Bliss & Co. of U.S.A., while the can manufacturing plant is supplied with Karges-Hammer machines capable of turning out 200 cases of 95 cans each per day.

**Fish Handling.** - There are two important features in the method of handling the fish prior to canning. These are placed in crates alive, the crates remaining in the water until the fish are actually required for the factory, when they are conveyed in retort cages with a capacity of 50,000 fish direct from the crates to the factory. By this means the handling of the fish is eliminated, and the freshness of the product is ensured.

**Packing.** - Owing to "detining," the company has abandoned the usual system of packing with parchment paper lining, and adopted the method of packing with a veneer wood lining, which completely isolates the

contents from the tin. The production is 20,000 cases of 96 half-pound tins per annum. Fishing is confined mainly to general dried and salted fish, chiefly exported to Mauritius, the output being about 600 tons per annum.

**Equipment.** The company owns 67 open five-ton fishing boats for local fishing, 4 forty-ton motor boats, and one 150-ton Diesel engine vessel as well as a steam boat of 80 tons, the total number of craft of every

STEPHAN BROS. LTD., Capetown.  
Another View of Method of Storing Live Fish Prior to Canning.

description being 150. It also possesses workshops fully equipped for any light engineering work, where all five-ton open fishing boats are built.

**Employees.**—Employment is found for a thousand persons, including women and children, and all these dependents of the firm are housed and provided with boats and gear.

**Branches.**—There are eight branches situated along the Malmesbury District coast.

**Offices.**—48, Bree Street, Capetown. Cables: "Stephanus," Capetown. Codes: A B C 5th Edition and Bentley's.

**Bankers.**—Standard Bank of South Africa, Strand Street Branch.

(See illustrations, pages 233, 234.)

#### SALDANHA BAY CANNING CO. LTD.

This enterprise was founded in 1910 by Capt. H. Scharnberg, and became a limited liability company in 1922, with a capital of £12,000. The factory, which is situated at Saldanha, 60 miles from Capetown, is the property of the company and covers an area of 17,000 square feet. It is fully equipped for the canning industry, and employs 15 boys and 40 girls, while 100 fishermen are engaged in the actual fishing. The company owns 9 motor launches for fishing and the transportation of the firm's products to Capetown, and employs 15 fishing boats. The activities of the organisation centre principally in the fishing and canning of crayfish and Cape lobster ("Saldanha Bay Brand") and the export of these articles to Great Britain,

France and Australia. The average output is 6,000 cases per annum, containing 96 half pound or 48 one-pound tins each, the weights and measurements being in the former case 85 lbs. of 2 ft. by 2 ft., and in the latter 75 lbs. of 1 ft. 6 in. by 1 ft. 6 in. The industry is an important one, and the company is fully prepared for further expansion in the near future. The directors of the enterprise are Capt. H. Scharnberg (managing director), Messrs. C. Sher and H. Silverman. The London agents are Messrs. R. T. Turnbull & Co., 4 Lloyd's Avenue, E.C. 3, while the firm's bankers are the Standard Bank of South Africa, Ltd. The offices are in the Royal Exchange Buildings, St. George's Street, Capetown. Cables: "Packers," Capetown. Codes used: A B C 5th Edition and Bentley's.

FISHING AT MONSEEL BAY.

## TRANSPORT

### SHIPPING

#### SHIPPING

**W**ITH a coast line of over 4,000 miles in extent and the two world-famous harbours of Table Bay and Port Natal, to say nothing of the lesser ports of call, South Africa has, from its earliest discovery, attracted to its shores the overseas shipping of the world originally from the need of provisioning and repairing on the long route from Europe to the Far East, latterly for coaling purposes and to carry the trade that has gradually been built up between the Union and overseas ports.

The first regular mail service to and from South Africa (that of the old Union Line) dates from 1853, when 45 or 50 days were occupied on the journey. Today the run from Southampton to Table Bay takes barely 17 days, and the original two small vessels of the Union Line have been replaced by the fleet of the Union Castle Line of nearly 50 well-appointed steamships, while a host of other liners, large and small, intermediates, cargo boats, and tramp steamers fill the docks of the Union harbours from one year's end to another, indeed it is doubtful if any Dominion of the British Empire is so well served as South Africa with the choice of shipping lines to practically all parts of the world.

### RAILWAYS

**ADMINISTRATION.**—The harbours and lighthouses of the Union are under the direct management of, and all harbour works and lighthouses are owned by, the Government. They are associated under the South Africa Act with the railways of the Union for the purpose of control and administration, and financially are upon the same footing as the railways under the provision of the Constitution dealing with the Railways and Harbour Fund. The developments of the separate ports and the numerous facilities offered to shipping, as well as all port charges and regulations, are initiated and carried out by the Administration, largely upon the advice of the Advisory Boards, which are in existence at the five principal ports—Table Bay, Durban, Port Elizabeth, East London, and Mossel Bay. Each Advisory Board consists of seven members, one representing the Municipal Council and three the local Chamber of Commerce, while three are nominated by the Governor-General. In the nomination of the last-mentioned three members, one is selected with a view to the representation of the shipping interest, and one to the representation of the persons paying wharfage, landing, shipping, or transhipping dues at the harbour.

### AIR, RIVER AND ROAD

**FREIGHTS.**—Under the South African Ocean Mail Contract between the Union Government and the Union Castle Steamship Company certain freight rates are fixed, being only subject to revision every three months. Outward freights during the last two years have remained more or less stationary, any alteration displaying a downward tendency. Homewards, the freights have tended to advance, especially during 1924-25, a fact which has led to a serious conflict of opinion as to the advisability of renewing the mail contract by the Union Government, and also to more than one intimation that an extension of governmental activities, even so far as the establishment of a State line, is in contemplation.

**GOVERNMENT SHIPPING.**—In 1919 the Union Government acquired, as prize vessels, three steamers of 15,069 total gross tonnage—the "Seattle" (5,133 tons), "Huntress" (4,997 tons), and "Apolda" (4,939 tons). In 1925 two Glasgow-built cargo steamers, the "Aloe" and "Erica," costing £70,000 and £80,000 respectively, were added to the fleet, which is under the control of the Railways and Harbours Administration. The two last-named vessels are destined to carry maize, coal, and timber, and will be engaged on the Australian service. This

would appear to be the first step in the Government's declared policy of extending its own fleet of steamers, in order to make the country more independent than hitherto of outside shipping resources.

**HARBOURS (REVENUE AND EXPENDITURE.)** The following table shows the financial position of the Administration as to harbours only for the year ended March 31, 1925, as compared with 1923-24 —

	1923-24	1924-25
Total capital expenditure (including lighthouses) at 31-3-25 . . . . .	13,003,432	13,202,701
Total Earnings . . . . .	1,307,076	1,375,045
Gross working expenses . . . . .	603,588	603,187
Surplus of earnings over working expenses . . . . .	703,488	771,858
Net surplus (after paying interest, providing for expenditure on lighthouses and including miscellaneous receipts and charges) carried to Revenue Distribution Account . . . . .	361,602	368,764
Cargo dealt with (tons) . . . . .	6,837,386	7,138,129

**LIGHTHOUSES AND LIGHTS.**—The coast and harbour lights on the South and South-West African coasts are administered as a branch of the Railways and Harbours Administration. The principal coast lights vary in range from 10 to 23 miles, the most important being the lighthouses at Cape Point, The Bluff (Durban), Green Point, (Natal), Great Fish Point, Hood Point, Cape L'Agulhas, Cape St Blaize, Cape St Francis, Cape Recife, Swakopmund, Dassen Island, and Cape Hermes. The erection of further new lighthouses at important points on the coast, as well as improvements to existing lights, is under consideration.

**LINES (STEAMSHIP).**—What are known as the Conference Lines of steamers using the South African ports may be described as a confederation of British steamship companies engaged in the South African trade, which periodically adjusts and fixes freight and other charges in view of the competition from German, Dutch, and other foreign-owned or subsidised lines. The following companies compose the Conference Lines —

**BETWEEN GREAT BRITAIN AND UNION PORTS** — Union Castle Mail Steamship Company Limited, Clan Line, Limited, Ellerman and Bucknall Steamship Company Limited, Ellerman-Harrison Line, Bullard, King and Company Limited (Natal Direct Line), J. F. Rennie, Son and Company Limited, R. P. Houston and Company.

**BETWEEN UNION PORTS AND GREAT BRITAIN** — Union Castle Mail Steamship Company Limited, Ellerman and Bucknall Steamship Company Limited, Clan Line, Natal Direct Line, Harrison-Rennie Line, Hall Line, Limited, R. P. Houston and Company.

**EAST COAST CONFERENCE LINES** — Union Castle Mail Steamship Company Limited, Ellerman and Bucknall Steamship Company Limited, Clan Line, Ellerman-Harrison Line, Houston Line, Natal Direct Line, J. T. Rennie, Son and Company Limited; British-India Steam Navigation Company; Clan-Ellerman-Harrison Joint Service.

1. CAPETOWN DOCKS, VESSEL OFF-LOADING  
2. TITAN CRANE, PORT ELIZABETH.  
3. THE WHARF, DURBAN

EXPORTING WOOL, DURBAN WHARF.

**OTHER SERVICES**—Steamers load direct or call at South African ports to and from Australia, Canada and India. A direct mail passenger and cargo service is established between New York and South African ports, and there is a 10 days' service from the United States. From Rotterdam, Amsterdam, Antwerp and Hamburg a direct service is maintained by the Holland-South Africa Line and the United Netherlands Navigation Company (Holland-East Africa Line), while the Deutscher Afrika Dienst Woermann Line A. G. also trades between Continental and South-West and South African ports.

#### MOVEMENT OF SHIPPING (GENERAL).—

In 1924 the total number of vessels entering Union ports was 4,373, compared with 4,377 in 1923, the gross registered tonnage being 7,762,001 (coastwise) and 4,980,295 (overseas), as against 7,555,534 (coastwise) and 5,137,195 (overseas) in 1923. The total tonnage of cargo landed in 1924 was 2,547,467, as against 2,153,390 tons in 1923. Vessels clearing from Union ports in 1924 numbered 4,334, as against 4,349 in 1923, the gross registered tonnage totalling 12,682,820, compared with 12,642,864 tons, and the cargo loaded, 4,110,498 tons, as against 4,496,480 tons.

Figures for the first seven months of 1925 were:—Total number of vessels entered, 2,892, compared with 2,518 during the corresponding period of 1924, total net tonnage 8,079,334, compared with 7,326,351.

**NEW HARBOUR PROJECT.**—For a long time past the need of a harbour which shall serve the rich and important area of Northern Zululand has been increasingly felt. In 1922 and 1923 an investigation was made by the Railways and Harbours Authorities and by Sir George Buchanan, K.C.I.E., whose services were engaged by the Union Government. The localities examined were Kosi Bay, 214 miles by sea from Durban and 75 miles from Delagoa Bay, and Sordwana

Bay, 171 miles from Durban and 118 miles from Delagoa Bay. The last-named was adjudged to be the most practicable locality for a new port, having regard to time and cheapness of construction. An important feature of the projected harbour at Sordwana Bay would be its value as a new outlet for

the Transvaal coal trade, the construction of railways from the Transvaal coalfields to the northern Zululand coast offering few difficulties. More than a million acres of Crown lands, rich in general agricultural prospects and highly suited to the production of sugar and cotton, would thus be opened up to settlement.

**OVERSEAS SHIPPING.**—The following table shows the number and net tonnage of steamers and sailing vessels from overseas entered and cleared at Union ports during the year 1924.—

	No	Tons
<b>ENTERED</b>		
Steamers	1,276	4,064,942
S. Vessels	17	15,353
Total	1,293	4,980,295
<b>CLEARED</b>		
Steamers	1,221	4,721,800
S. Vessels	19	15,827
Total	1,240	4,737,717

For 1923 the number of vessels entered was 1,365 of 5,137,195 tons in the aggregate, while the clearances totalled 1,316 vessels of 5,005,148 tons.

The tonnage of cargo landed and shipped in 1924 was: Landed 1,322,205, shipped (including bunker coal) 2,368,318, the figures for the preceding 12 months having been: Landed, 1,080,107 tons, shipped (including bunker coal), 3,025,550 tons.

The tonnage of cargo landed at Union ports in 1924 was the highest on record since 1913, being only 22,291 tons less than the inward tonnage handled that year. The record tonnage of cargo shipped in 1923 was principally due to the large shipments of coal (cargo and bunker) and to the phenomenal exports of maize of that year. The fall in the shipments of maize was entirely responsible for the lower tonnage recorded

FLOATING DOCK, DURBAN.

in 1924, the volume of other leading South African exports having increased. (See also under "Commerce.")

The year 1925 promised to establish a new record, the total net tonnage of cargo landed from overseas during the seven months ended July 31, 1925, aggregating 3,273,494 tons.

**SHIPPING BY FLAGS.**—The following table shows the distribution as to flag of the total number of vessels from overseas countries entering the Union ports in 1924.

	No. of Vessels	Tonnage
British		
South African	38	19,763
Other	926	3,849,257
Dutch	68	204,733
German	64	250,656
Swedish	41	169,269
Norwegian	34	86,689
Portuguese	31	111,911
American (U.S.A.)	28	97,951
Japanese	27	97,641
Danish	14	11,852
French	6	15,168
Italian	6	14,530
Other	10	23,871

Total 1,293 4,980,295

There was a decrease of 89 in the number of British steamers entered in 1924, while foreign steamers showed an increase of 17 when compared with the previous year. In 1924 the cargo landed by British ships totalled 1,778,060 tons, against 1,171,181 tons in 1923, an increase of 307,479 tons, while that landed by foreign vessels aggregated 580,658 tons, against 511,926 tons in 1923, an increase of 74,732 tons. Cargo shipped by British vessels in 1924 totalled 3,194,194 tons, against 3,413,843 tons in 1923, a decrease of 219,651 tons, due to reduced exports of maize. During the same years 731,367 and 908,452 tons respectively were shipped by foreign vessels.

**SHIPPING BY PORTS.** The following table shows the shipping entered and cargo landed at South African ports in 1924—

	No. of Vessels	Reg. Net Tonnage	Cargo Landed Tons
Capetown	1,701	3,964,308	710,370
Durban	1,197	3,847,896	1,051,619
Port Elizabeth	501	2,252,773	398,648
East London	605	2,095,572	200,993
Mossel Bay	151	530,797	34,460
Port St. John's	54	4,166	2,080
Port Nolloth	49	14,540	15,688
Knysna	37	9,973	4,568
Simonstown	18	42,301	33,041

Total, Union 4,373 12,742,296 2,547,467

**SHIPPING REGISTER.**—On December 31, 1924, there were 138 vessels of 23,968 tons on the register of South African ports, four having been added during the preceding 12 months. They were distributed as follows:—Capetown, 81; Port Elizabeth, 11; East London, 6; Port Natal (Durban), 40.

**STANDARD TIME.**—The Union of South Africa, Rhodesia, South West Africa, and Portuguese East Africa (Mozambique) have adopted as standard time the mean solar time at the 30th meridian East of Greenwich, which is two hours in advance of zero, or Greenwich time, and 46 minutes in advance of mean solar time in Capetown. Noon in South African standard time corresponds to the following standard times:—London and Paris, 10 a.m.; Quebec and New York, 5 a.m.; Calcutta, 3.30 p.m.; Melbourne, 8 p.m.; San Francisco, 2 a.m. South African time is identical with standard time in Eastern Europe, including Bulgaria, Rumania, Eastern Turkey, and Egypt.

## REPRESENTATIVE SHIPPING AND FUEL COMPANIES, ETC.

### AFRICAN SHIPPING LIMITED.

**Inception.** This company commenced business as shipping, forwarding and customs agents at Johannesburg in 1902.

**Development.**—Operations were gradually extended to other parts of South Africa, the rapid growth of business entailing the opening of branches at Port Elizabeth in 1908, at Durban in 1913, and at Delagoa Bay in 1923.

**Capital.** The capital employed by the company is now appreciably over £20,000.

**Activities.** The services of African Shipping Ltd. include shipping, forwarding, distribution, handling, storage and insurance of every kind of import and export commodity. It possesses spacious and well equipped bonded and duty paid warehouses, and is in a position to store at the coast and to distribute merchandise to towns in any part of the sub-continent. The export side of the business has received special study, and to day practically every kind of exportable product passes through the company's hands. Information with regard to rates, freights, costs, etc., can be obtained from any of the firm's branches by interested concerns. A varied trade is also done in imports, such commodities as Wakefield oils, Rockett's blue, Buchanan's whiskey and other well-

known brands of goods being distributed in large quantities.

**Agencies.** The company represents many famous overseas shipping organisations, including Messrs W. Wingate & Johnston, G. W. Sheldon & Co., of London, Mackay Bros., Scotland, etc. It is also chief agent for the Provincial Insurance Co. Ltd. transacting all classes of insurance business.

**Management.** The managing director is Mr. H. P. J. Verschuyl, who has been associated with the company since its inception. Each branch is equipped with a competent staff under thoroughly capable management.

**Offices.** Hatfield House, President Street, Johannesburg, P.O. Box 3634, Cables "Afriship," Johannesburg and all branches Codes: Western Union and Bentley's Phrase.

**Bankers.** The Netherlands Bank of South Africa.

### MITCHELL COTTS & CO. (S.A.) LTD.

**Inception.** This business was established at Durban in 1864 by Sir W. D. Mitchell Cotts, Bart., K.B.E., J.P., of London.

**Activities.** Mitchell Cotts & Co. (S.A.) Ltd. act as steamship and general agents and coaling contractors, as also importers and exporters.

**"Shell" Products.** Among the principal agencies held by the company is that of the British Imperial Oil Company (S.A.) Ltd. ("Shell" Motor Spirit and Motor Oil).

AFRICAN SHIPPING LIMITED, Johannesburg.  
1. Free and Bonded Warehouse at Johannesburg.  
2. Bonded Warehouse at Durban, installed with Travelling Crane, etc.

**MITCHELL COTTS & CO. (S.A.) LTD., Capetown.**

1. Company's Head Office, Cape House, Capetown.
2. Company's Johannesburg Premises.
3. General Office at Capetown.
4. Main Tank Installation of the British Imperial Oil Co. (S.A.) Ltd. at Durban, for which Mitchell Cotts & Co. (S.A.) Ltd. are Distributing Agents throughout South Africa.
5. Johannesburg General Office.

The development of local industries is a matter of supreme importance to South Africa, and this oil company in erecting a large installation at Durban for the handling and packing of "Shell" motor spirit is deserving of every commendation. The works, known as "Shell" Corner, cover 20 acres of land reclaimed from the bay at the foot of the Bluff. The latest plant has been installed, and operations conducted there give regular employment to about 400 men. Adjacent to the tin and case factory, filling and packing rooms and general stores are three great storage tanks having a capacity of four million gallons. The case and tin making plants have an output capacity of 5,000 cases and 10,000 tins per day.

**Motor Spirit Transport.** From the refineries in the Dutch and British West Indies "Shell" motor spirit is brought to South Africa in bulk in tank steamers of the company's fleet in cargoes of 2,500,000 gallons. On arrival of the tanker at the "Shell" special wharf, the petrol is pumped through pipelines to the storage tanks. From the main tanks it is again pumped to four elevated service tanks as required and is then drawn off by gravitation to the special automatic filling and measuring machines which are used for filling the four gallon tins, the two gallon red cans, and the various drum packings.

**Tank Depôts.** In addition to the large works at Durban, the "Shell" company has erected subsidiary installations for the handling of motor spirit in bulk and in returnable packages at Johannesburg, Pretoria, Bloemfontein and Kimberley and another is in course of erection at Capetown. To stock these depôts twelve specially constructed railway tank cars are kept fully occupied, and motor tank lorries are employed to deliver the spirit from these tanks to the now well known kerbside pumps. One great merit of this bulk distribution is its convenience and safety.

**General.** The "Shell" Company was the first to introduce these modern methods of distribution in South Africa, and it is now organising for the distribution of bulk motor spirit in all the principal towns, so that the advantages and saving which the metropolitan user has enjoyed will now be available to all.

**Branches.** Messrs Mitchell Cotts & Company (S.A.) Ltd. have branches at Johannesburg, Pretoria, Mossel Bay, Port Elizabeth, East London, Bloemfontein and Kimberley.

**Principal Agencies.**—Alfred Holt & Co., Anglo Saxon Petroleum Co. Ltd., Nippon Yusen Kaisha, Harrison Lane, Commonwealth and Dominion Line, British Imperial Oil Co. (S.A.) Ltd. (Shell Motor Spirit & Oil), State Saw Mills of Western Australia, Canada Carbide Co., Natal Navigation Collieries & Estate Co. Ltd., Northern Natal Navigation Collieries Ltd., Vryheid (Natal) Railway Coal and Iron Co. Ltd., Wilham Cotts & Co. Ltd. (Durban), Cotts & Co. (Lourenço Marques and Beira).

**Directorate.**—Messrs William Yuill, Frank C. Horner, H. Newton Morton.

**London Agents.**—Mitchell Cotts & Co., 3, St. Helen's Place, E.C.3.

**Head Office.**—Cape House, Capetown.  
**Cables:** "Cotts"

**Bankers.**—The Standard Bank of South Africa, Ltd., and The National Bank of South Africa, Ltd.

## MANN, GEORGE & CO. (SOUTH AFRICA) LTD.

**Inception.** This organisation is the South African branch of the world wide coaling firm of Mann, George & Co. Ltd. of London, Cardiff, Glasgow, etc. and is registered in Durban.

**Activities.** The firm controls and manages the Tendega Collieries Ltd. and the New Tendega Colliery Co. Ltd. whose mines are

for which is steadily increasing. The company is also agent for many important steamship lines including the New Zealand Shipping Co. Ltd., and the Federal Steam Navigation Co. Ltd. likewise for leading insurance companies.

**Coaling Facilities.** Messrs Mann, George & Co. (S.A.) Ltd. provide facilities at Durban for the dry docking of vessels. A bunkering depot is maintained at Capetown, operations being carried out from the shore by cranes.

2. A Mountain Colliery in Natal General View Tendega Collieries Ltd.
3. New Tendega Colliery Co. Ltd. (Agents, Mann, George & Co. (S.A.) Ltd.). Entrance to Mine.

in the Vryheid district, Natal. The coals from these mines are classed by the Natal Coal Grading Committee as "first grade," and are supplied to the principal steamship lines calling at Durban, to the Admiralty, the South African Railways, and the leading industries and power stations of the Union. An extensive overseas export trade is also carried on. The Tendega collieries are manufacturers of foundry coke, the demand

and lighters simultaneously with loading and discharge. Large stocks are also maintained at Durban, where coaling is effected by means of modern appliances. The company is Lloyd's sub-agent at Walvis Bay, where it represents the Union Castle line and other companies. Stocks of coal are held here, and stevedoring work is undertaken in addition to steamship agency, forwarding and storage contracts.

GEARINGS LIMITED., Capetown  
View of Machine Shop.

**Subsidiary Companies.** - The operations of the company's steamship agency department at Capetown are extended by a subsidiary concern, William Anderson & Co. Ltd., which acts as agents for some of the chief lines trading to Australia via the Cape, and conducts

a large passenger and tourist business. Messrs Mann, George & Co. (S.A.) Ltd. are also proprietors of the Table Bay Stevedores, particularly concerned with vessels loading bulk grain at the elevators. This organisation also gives expert and rapid service in cargo

stowage besides being contractors to the Union Government, the Admiralty and leading steamship lines.

**Oil.** - The company under notice acts as agent for the Anglo-Persian Oil Co. Ltd., which maintains oil fuel storage tanks in the dock area, with

THE SOUTH AFRICAN & GENERAL INVESTMENT & TRUST CO. LTD., Johannesburg.

pipe-line connections to the various quays. Lubricating oils are also kept in stock.

**Agencies.** The organisation has agencies at Port Elizabeth and East London, while its correspondents at Lourenço Marques are Mann George & Co (Delagoa) Ltd, and at Beira, Mann, George & Co (Beira) Ltd.

**Addresses.** Mann, George Buildings, Point, Durban, 24, St. George's Street, Capetown, P.O. Box 4, Walvis Bay, Cables "Malveso."

#### GEARINGS LIMITED.

**Inception.** The firm of Gearings Ltd. was originally established in 1878 under the name of Cunningham and Gearing by Mr. Andrew Cunningham, a millwright, and Mr. Sydney Charles Gearing, a marine engineer. In 1918 the enterprise was converted into a limited company, with Mr. S. C. Gearing as chairman.

**Development.** In the early years of its existence the firm carried out several important contracts for ship repairs, among the steamers concerned being the White Star liner "Ionic," the R.M.S. "Norman," and the S.S. "Wladimir Sawin." About 1892, when the geological survey of the country was being made, the partners manufactured for the Government of Cape Colony a type of prospecting and water boring drill, which was subsequently adopted by the Transvaal and Orange Free State Republics, Southern Rhodesia and German South-West Africa. Later, the firm built the first ammonia refrigerating plant for meat storage in South Africa. Its capacity was 40 tons, and it is interesting to note that after thirty years this plant is still in use. Similar plants were built throughout South Africa for the various branches of the Cold Storage Trust. The

manufacture of windmills was undertaken in 1909, followed shortly afterwards by the production of iron-work for school desks and furniture.

**South African War.** During the South African War (1899-1902) the firm was responsible for the mounting on field-carriages of the 6 inch naval guns used in the relief of Ladysmith, and for the design and erection of condensing plants for the water supply to the Boer prisoners' camp on the Island of St. Helena, also the manufacture of loophole protection plates for Lord Kitchener's system of blockhouses. At this period Mr. Sydney Chas. Gearing assumed sole control of the business.

**World War.** On the outbreak of the World War the firm was established at the present Atlas Works, Ebenezer Road, Capetown and it did much work for the British naval and military authorities, also for the Union forces operating in German East and West Africa. Included in these undertakings was the re-conditioning of H.M. auxiliary cruiser "Himalaya" and defensive-ammunition gun-mounting for over three hundred vessels. At this time also the famous tea-chipper "Cutty Sark" was re-masted and repairs were effected to the S.S. "Bhamo" of the Henderson Line, and to the Union Castle liner "Saxon" whose rudder had been seriously damaged.

**Activities.** Marine repairs continue to be the principal business of the firm, but it still carries on other activities and supplies a large proportion of the school furniture required by the Union. In the western part of Cape Province the firm represents Messrs. John I. Thornycroft & Co. Ltd. the famous

agricultural machinery and motor car manufacturing firm of Southampton and Basingstoke, England.

**Directorate.** Messrs. H. C. Gearing, M. I. Meckle (chairman), Sydney Gearing, and Arthur Gearing.

**Offices.** Atlas Works, Ebenezer Road, Capetown.

#### THE SOUTH AFRICAN AND GENERAL INVESTMENT AND TRUST CO. LTD.

**Activities.** This important financial company, whose principal activities are in connection with the advancing of sums of money against first mortgage of town and suburban holdings and farms chiefly on the Witwatersrand in Natal, Zululand and Rhodesia, the secretaryship of mining, land, industrial and agricultural corporations, in addition to trusteeship, executorship, investment and administration of funds, also interests itself in shipping, holding the representation of the Aberdeen and White Star Lines of Steamers carrying passengers and freight between South Africa and the United Kingdom and Australia.

**Offices.** London (head office), Pinners Hall, Austin Friars, E.C. 2, Johannesburg, Trust Buildings, corner Fox and Loveday Streets (cables "Sphinx," Johannesburg), Durban 1, 2 and 3, Club Arcade, Smith Street, Salisbury, Rhodesia 1, 2 and 3, Union Buildings, Manica Road.

**Directorate.** James W. Bowhill (chairman), John Abernethy (deputy chairman), Henry B. Marshall, J.P., D.L., Clement Davies, J.J. Carlyle Gifford and James Kissik Marshall.

(See also page 68.)

A SCENE IN DURBAN HARBOUR.

SOUTH AFRICAN RAILWAYS: HEAD OFFICES AT JOHANNESBURG.

## RAILWAYS

**T**HE Union of South Africa comprises the territories of the four provinces of the Cape of Good Hope, Natal (including Zululand), the Transvaal, and the Orange Free State and has an area of 472,347 square miles, within which there are 10,555 miles of railways, the whole being operated by the Government under the style of the South African Railways and Harbours. Practically all the lines (about 99 per cent) are owned by the Government, which also owns most of, and controls all, of the 1,331 miles of the connected railways in the adjoining mandated territory of South-West Africa.

Linking up with this system at the eastern border of the Transvaal, the Caminhos Ferro de Lourenço Marques gives access to the port of Delagoa Bay, while northward through Bechuanaland the connecting systems of the Beira and Mashonaland and Rhodesia Railways not only provide direct communication with the port of Beira, but in turn link up on the border of the Belgian Congo with the Chemin de Fer du Katanga, on what is perhaps better recognised as the Cape to Cairo route, the railhead of which is now Bukama, 2,600 miles from Capetown. These various systems place at the service of the traveller and merchant distributor approximately 15,000 miles of connected lines, having

a standard gauge of 3ft. 6in. over all trunk or main lines.

**ADMINISTRATION AND ORGANISATION.**—The railways, ports and harbours of the Union of South Africa are administered under the control and authority of the Governor-General in Council, exercised through the Minister of Railways and Harbours, who is advised by a Railways and Harbours Board, appointed under Section 126 of the South African Act, 1909. The administration and working of the railways and harbours are distributed among the following six departments—General Manager's, Transportation, Engineering; Mechanical, Stores, and Accounting.

Perhaps the greatest problem, after Union, was that of bringing the railways under one control. The difficulties, however, were overcome, with the present-day harmonious working arrangements as a result. The railways are managed from a central point, Johannesburg, where the administrative offices are located, certain sections of the General Manager's staff being stationed at Capetown during the Parliamentary Session. Johannesburg is also the headquarters of the Engineering, Stores, and Accounting Departments, and of the Transportation Department System "C." The

headquarters of the Mechanical Department are at Pretoria.

**DEPARTMENTAL SYSTEM.**—The control and working of the railways and harbours in South Africa on the divisional system are a considerable improvement on the pre-Union method of departmental organisation. Prior to 1910 under the systems in vogue on the three railways, by which each department did its work to the best of its ability without consideration for the good effect or otherwise on other departments, the cost of upkeep was very much higher than it is now, when the working of each department is designed to have a bearing on the others. Efficiency is just as much a consideration to-day in the several departments as it was before the Union, but individual efficiency is now subordinated to the collective good of the railway system in all its aspects.

**CAPITAL COST.**—The capital expended on railways within the Union up to 1925 was over £120,000,000, which represents an increase of £47,000,000 since the Union was established. Expenditure on new lines constructed since the establishment of the Union and up to 1925 totalled £12,170,000. The average cost per mile open of lines of 3ft. 6in. gauge in the Union is £8,035, and of lines of 2ft. gauge, £2,798.

RAILWAY STATION, PRETORIA

RAILWAY INSTITUTE, DURBAN.

**EARLY HISTORY.** Many years must pass before a railway centenary will be celebrated in Africa, as it was only in 1860 when a line of 13 miles from Durban to "the Point" was opened, that the first railway of the Continent was completed. This was followed in 1862 by the opening of a line on the western side of the Continent from Capetown to Perse River, a distance of 21 miles. Of the two systems the Cape line made the more rapid progress, having been extended southward to Wynberg and northward to Wellington by the end of 1864, a total distance of 63 miles. No extension was made to the Natal line until 1867 when it was pushed forward a further four miles as far as Umgeni.

It is worthy of note that at the outset the gauge of the Natal line was 4ft 8½in, while that of the Cape was 3ft 6in, which has become the ruling gauge of all main lines in the Union of South Africa and in the adjoining territories whose systems link up with the South African Railways.

**GOVERNMENT CONTROL.** State ownership of railways had its commencement in the Cape at the beginning of 1873 when the existing roads from Capetown to Wellington and Wynberg were handed over to the charge of the Public Works Department. Three years later this example was followed by the Natal Government in the case of the six miles of track then in operation.

Settlement of the country meanwhile extended from Capetown along the coast to Port Elizabeth and further on to East London whilst the settlement of the fertile Natal interior also proceeded apace from all sides. The lines from Capetown and Durban were pushed inland, and, as time went on, further lines were constructed to serve the interior from Port Elizabeth and East London. By 1886, workshops had given an added importance to each of the four ports. Ten years later the first railway in the Transvaal was opened, a small stretch from Johannesburg to Boksburg being designed

principally to serve the needs of the newly-arisen mining community.

**TRADE DEVELOPMENT.** The mineral wealth of the Transvaal and the rich yield of the Kimberley diamond fields were the principal factors in the linking up by rail of Capetown and Johannesburg, which was an accomplished fact before the war of 1899-1902. At this stage also complete journeys by train could be made to Johannesburg from the ports of Lourenço Marques, in Portuguese East Africa, Durban, East London, and Port Elizabeth.

From the close of the Anglo-Boer War to the date of Union (May 31, 1910) about 3,000 miles were added to the various systems, and amalgamation of the railways in the Transvaal and Free State had been effected, making, together with the Cape and Natal lines, three systems in all in the country.

The union of the four colonies set afoot further activities in railway construction, and between 1910 and 1925, excluding the

VIADUCT, UITEHQUA MOUNTAINS.

SOUTH AFRICAN RAILWAYS.

DEVIATION, WATERVAL ONDER, TRANSVAAL.

**SOUTH AFRICAN RAILWAYS.**  
 1. Unloading a Steamer, East London.  
 Centre. Coal Trains, Witbank, Transvaal.  
 3. Exporting Wood, Port Elizabeth.

1,331 miles in South-West Africa taken over by the Administration, 2,980 miles of line were added to the 7,575 miles then existing. To-day the development of railways within the Union on ultra-modern lines is proceeding in earnest. Allowing that the axis is the gold reef where the high output is consistently maintained, and of which the central point is Johannesburg, factors which have more than ordinary significance are the phenomenal growths witnessed since the conclusion of the European War in the maize and coal and to a certain extent, the citrus and sugar industries. Further, the steady industrial progress in the adjoining countries of Rhodesia, Portuguese East Africa, and the Belgian Congo have all an ultimate bearing on the issue.

**GRADIENTS: ENGINEERING DIFFICULTIES.** South Africa is distinctive in the matter of topography, its high inland plateau (four to six thousand feet above sea level) rendering engineering difficulties more acute than those of most countries. On the coastal belt, curves and grades in quick succession can be regarded as characteristic, thus rendering the distances between points as the crow flies and as the track runs somewhat out of proportion. In the early period of South African railway history the respective administrations were forced to use gradients as severe as 1 in 30, with curves of only 300ft radius, but new locations, in these less importunate times, have been found to ease the situation.

One method adopted on South African lines, where great changes of altitude occur over small distances, was the reversing station, which, however, is gradually being abolished in favour of tunnels and bridges which save a great deal of time. In one case, the 158 miles stretch of line from Durban to Easton has been practically duplicated, the new construction touching the old line only at certain points, by which process the inland grades have been reduced to a maximum of 1 in 65, and the curves to a not sharper radius than 574ft. These recent improvements cannot be taken as a reflection on the work of the old surveyors who laboured at a time when the finances of the country were far from flourishing.

**BRIDGES AND TUNNELS.** Tunnels, bridges, viaducts, and culverts are regular features in South Africa. The longest tunnel (1,001 yds.) is in Natal, between Durban and Maritzburg, while the longest bridge, built primarily for military purposes during the South-West African campaign in 1915, is the structure (2,974 ft in length) which crosses the Orange River at Upington in the Cape Province. Some of the steel viaducts which span deep gorges are interesting spectacles, the one crossing Van Staadens Gorge, in the vicinity of Port Elizabeth, 642ft long and 254ft high, being a notable example.

**GRAIN ELEVATORS.** The grain elevator system has been adopted in the Union, the whole being under the direct control of the Railways and Harbours Administration. Thirty-four elevators, with an aggregate storage capacity of 109,200 tons, are in active working order in the principal maize growing areas, one is located at Capetown with a capacity of 30,000 tons, whilst the largest, having a capacity of 42,000 tons, was to have been completed at Durban by the early part of 1926. Under the elevator system, which has given complete satisfaction to agricultural interests, the Administration undertakes the cleaning, grading, weighing,

storage, transporting, and shipping of grain. Bulk handling in specially designed trucks has proved an expeditious arrangement, both in loading and off-loading. Statistics show that by means of the elevator at Capetown ship loading can be conducted at the rate of 1,000 tons per hour. Not all the export maize, however, goes through the elevators. With a surplus for export of from 400,000 to 1,200,000 tons in a season, much of this commodity is trucked in bags direct to the wharves, where it comes under the surveillance of specially appointed railway graders. The disparity on the off-loading times of bag and bulk grain respectively is very apparent, but quick transport from the farm to the ship's hold is essential in South Africa, where grain is subject to quicker deterioration than in many other parts of the world. The elevator system has proved a boon in many ways, the early results foreshadowing a tremendous increase in the export trade as a consequence of growing confidence by overseas buyers in a commodity on which there is a Government seal.

**MILEAGE.** Including 1,331 miles of railway lines in South-West Africa, which are controlled and worked by the Administration, the total route mileage of all lines, state-owned and private, in 1925 was 12,102 miles. Of this total 500 miles were owned by private companies, and 1,013 miles were of 2ft gauge. Of these latter 303 miles were built to serve mining districts in South-West Africa. The capital cost per mile of the railways stood in 1924 at £10,158. The tram mileage run in 1924-25 10,202,785 miles constituted a record.

It is noticeable that the Union of South Africa owns the second largest mileage in the world under single management, with nearly 12,000 miles in use. Figures given by the Minister of Railways to the House of Assembly in 1925 were 2.24 miles of line to every 100 miles of territory in the Union, as compared with 1.08 in the Argentine Republic, and 1.72 in New South Wales.

**NEW LINES.** In 1925 the House of Assembly passed the Railway Construction Bill, providing for 25 new branch lines, and involving 962 miles of railway at an estimated cost of £4,541,225. These new lines, recommended by the Railways and Harbours Board, are designed to give improved services to agricultural and pastoral areas. They will be simply extensions or branch lines of existing systems, and none of them will exceed 100 miles in length, the average being under 40 miles.

**PASSENGER SERVICE.**—Comfort of travel on South African lines is a byword. The design of the coaches has more regard to individual privacy than to conservation of space. Each first-class compartment contains four sleeping berths, and a limited number of coupés are provided, which contain two berths only. Dining cars are an adjunct of every long distance train. The dining-car staff is European, and the tariff, a standard one on the entire railway system, comparatively moderate.

Of the three classes of accommodation on the South African Railways, first and second, except in the case of special reservation by Asiatics, Natives, or Coloureds, is devoted exclusively to Europeans, whilst the third class is similarly put aside for the use of non-whites.

**PASSENGER FARES.**—The scale of fares in operation for long distances is on a tapering reduction basis, that is, the longer the journey the cheaper the fare per mile. First-class ordinary tickets range in cost from 2.7d per mile to 1.12d per mile. The cost of second-class tickets is two-thirds of

that of first-class tickets. Third class tickets range from 1.4d per mile to 56d per mile. Return tickets are charged for at single fares for double the single distance.

**PASSENGERS CARRIED.**—The number of passengers carried over the Union Railways in 1924-25 (70,832,180) constituted a record, and represented in comparison with the previous year an increase of 5,020,570, or 7.63 per cent. The increases were 1,052,737 in 1st class, 2,033,600 in 2nd class, and 1,934,182 in 3rd class passengers.

**PERMANENT WAY.** The standard gauge of the South African Railways is 3ft 6in, this gauge having been adopted quite early in the history of railway construction because it permitted of easier negotiation of sharp curves as well as of reduction in the quantities of earthworks. The normal formation widths for main lines are banks, 16ft for single track, with slopes of 1½ to 1, cuttings, 18ft, and slopes 1 to 1 or steeper according to conditions. Slopes are rarely sodded but in some few places they have been planted with Hottentot fig, marram grass or other suitable plants to check sand-drift. Wet cuttings are sometimes widened further to provide ample table drains, and are also provided with sub-drainage. Where double tracks are laid, they are at 13ft centres, and the formation is widened accordingly.

**ELECTRIFICATION.** The year 1926 will have seen the completion of the first section a distance of 174 miles on the Natal main line between Pietermaritzburg and Glencoe under an extensive electrification scheme involving more than 800 miles of main line track and 65 miles of suburban. The constantly increasing traffic on the mountainous section cited has made the step expedient, and results thus far tend to confirm the wisdom of the departure. Under electric power haulage capacity has decidedly increased, whilst wear and tear on the brakes and tyres under the regenerative system whereby current is returned to the overhead line to retard motion on the down grade have been considerably reduced. As illustrating the nature of the country on the section under electrification between Pietermaritzburg and Glencoe, it may be stated that the mileage as the crow flies is little more than half that of the track.

**TRACK CONDITIONS.** By successive steps the track position in South Africa has undergone changes for the better. The lightest rail used on main lines weighs 80lb, and is 40ft in length. These are sleepers mostly of jarrah, with a fair proportion of djati hardwood imported from Java. Broken stone ballast is employed, working out to about 2,200 cubic yards per mile. This kind of track will carry axle loads of 18 long tons. On branch lines the respective weights and dimensions are on a lower scale.

**WATER SUPPLIES.** In most parts dependence is placed on subterranean sources for locomotive water supplies, but the injurious qualities apparent in borehole water, which have a deleterious effect on boiler life, have forced the Administration to look more and more to conservation schemes for the solution of the problem, and, in this connection, work is proceeding in the direction of the elimination of the borehole system altogether.

**PORT SERVICES.**—So far as concerns the railways of the Union, the main lines converge from the ports of Capetown, Mossel Bay, Port Elizabeth, East London, and Durban directly upon Johannesburg, and the ports in turn are connected with each

3. FIRST CLASS SLEEPING COMPARTMENT.

KOMATI RIVER BRIDGE

## SOUTH AFRICAN RAILWAYS

ORANGE RIVER BRIDGE AT NORVALS PONT

other by direct routes. Thus the most populous areas although widely separated are served in the speediest manner.

**PUBLICITY.** The work of the Publicity Department has grown to an enormous extent in recent years and ample evidence is forthcoming as to the efficiency of the present system under which every form of advertising together with bookstall management is controlled. The revenue from tourist sources has exceeded expectations

and the receipts from railway bookstalls, automatic machines and hoarding and other advertisement sites on the properties of the Railway Administration are considerable.

**REVENUE AND EXPENDITURE.** The following table gives the main features of the working of the South African Railways for the year 1924-25.

Total capital expenditure at  
March 31, 1925

£120,101,735

Total earnings	£21,747,631
Gross working expenditure, including depreciation, relaying and strengthening	£16,858,571
Surplus of earnings over gross working expenditure	£4,889,060
Interest on capital	£4,147,882
Net surplus (after including miscellaneous receipts and charges) carried to Revenue Distribution Account	£820,925

SOUTH AFRICAN RAILWAYS.  
FIRST CLASS DINING SALOON

	NUMBER
Passengers carried . . .	70,832,189
Goods, minerals and coal (revenue earning) ..	Tons 18,790,806
Open mileage . . .	Miles 11,528
Mileage worked by Adminis- tration . . .	12,162

On March 31, 1925, the accumulated deficit stood at £5,185, being the balance of accumulated deficits of the previous years amounting to £2,220,511, less the surplus earnings of the financial years ended March 31, 1924 and 1925.

**ROAD MOTOR TRANSPORT.**—With due regard for the outlying settlements, the Railway Administration have inaugurated a system of motor transport where the volume of business does not justify the expense of laying a track. Use is made for the most part of the common highways, but a system is in vogue whereby power takes the form of a road tractor, the rubber-tired wheels of which run on specially prepared wheelways outside a tram track, in which the guiding wheels run. Under this arrangement the gripping properties of the tyres have been proved to exert a tractive effort four times greater than that of any engine running on rails. In 1924-25 some 100,000 passengers were carried by the road motor services, and about 8,000 tons of goods. Earnings in the same year totalled £18,495, against an expenditure of £17,379.

**ROLLING STOCK.**—At the end of 1925 the South African Railways were stated to be in possession of 1,862 locomotives and 34,362 wagons, an increase since 1909 of 451 locomotives and 11,795 wagons. At the same date 54 engines were on order, and every month witnesses a substantial increase in the capacity of the system for handling the huge traffic with which it now has to cope.

**TRUCK AND LOCOMOTIVE STRENGTH.**—Relics of former organisations in the way of locomotive and rolling stock—some of it dating back to the nineties—can still be observed in shunting and traffic operations, but the creation of a modern South African standard, after years of experimenting, can be spoken of as an accomplished fact. The importation of Baldwin locomotives of the Pacific and Mountain types, for inland and coastal work respectively, has produced satisfactory results both from speed and haulage view points.

The general scheme of rotatory truck distribution, in a land where the trucking of commodities is more or less seasonal, is gradually reaching a harmonious working basis. South Africa is quickly assuming importance as an exporting country, and the demands on the Railway Administration's supply of trucks for the transport of maize, coal, cattle, and other agricultural and industrial goods increase daily. The tendency is towards the construction of special truck types, some of which are erected in the railway workshops situated in various parts of the country. The aim of specialised trucks is, of course, to get variety of use and to obviate haulage of empty wagons over long distances. Unfortunately, in a land where agricultural and industrial interests are scattered, the haulage of empties is often unavoidable. The coal industry, entirely centred in the Transvaal and Northern Natal, makes constant calls on the truck strength of the Administration. The standard type of coal truck has a capacity of 100,000 lb., for which there is often the difficulty of obtaining a return load. As a partial solution, a vehicle designated the universal cattle truck has been evolved in local workshops. This truck, with a movable roof,

partition, doors, and other conveniences, is readily convertible from a coal to a cattle, sheep, maize or general merchandise carrier.

**WORKSHOPS.**—The Mechanical Department of the South African Railways and Harbours is controlled from Pretoria, where the Chief Mechanical Engineer is stationed. The very efficient workshops of the Administration are situated at Pretoria, Bloemfontein, Pietermaritzburg, Uitenhage, Durban, and Salt River, where engines and rolling stock are built, erected and repaired. The total number of staff employed in the Mechanical Department at the end of 1925 was 10,014, of which number 7,484 were Europeans. Particular care is exercised in training South African born youths for permanent employment in this department.

**SERVICES (INDIRECT).** By comparison, the employees of the South African Railways are liberally treated in the way of facilities in such matters as sick and pension funds. The pension fund is conducted between the Administration and its employees on the £ for £ principle, with interest at 4 per cent per annum accruing on the monthly balance held by the Administration. Under the sick fund regulations, the railway employee and his wife and children are provided not only with ordinary medical attendance and hospital treatment, but also with surgical and specialist treatment, while payment during the period of incapacity is made on a basis of roughly one-third of the ordinary wage or salary. There is a charitable fund which has for its object the relief of distress (arising out of circumstances out of control) among the Administration's servants or ex-servants and their families, whilst Children's Homes have been established within recent times. These institutions, which have for their aim the upbringing of children of deceased railwaymen for whom there is no other provision, are supported entirely by voluntary contributions made by employees.

Under the aegis of the Administration a section of the social life of the employees is catered for by staff institutes, 48 of which are established at various centres. In these buildings the railwayman finds both recreation and rest, as well as the opportunity for friendly intercourse with his fellow employees. In connection with these institutions the railwayman is able to indulge in sports and entertainments which do not have for their venue the actual institution, but which tend to provide him and his family with interests in their leisure hours.

**NEW DEPARTURE.** The South African Railways take considerable interest in agricultural education. In conjunction with the Government Agricultural Department, a train of specially fitted vehicles, each representing a branch of agriculture, is despatched in turn to the various areas. The accompanying technical experts lecture on their respective subjects, and by this means the section of the populace engaged in rural pursuits is enabled to get into closer touch with all the latest developments.

**STAFF.**—The staff of the Railways Administration at the end of 1924-25 numbered 87,271, to whom salaries and wages totalling £13,211,145 were paid.

**STATIONS.**—At Capetown, Johannesburg, and Durban fairly heavy suburban traffic is dealt with, as well as a large number of long-distance passengers; but station arrangements do not call for special description. Germiston, a large junction outside Johannesburg, has 32 miles of track in sidings. There is a similar mileage at Braamfontein, the Johannesburg depot for long-distance passenger trains, and the centre of the large general goods and live

stock traffic dealt with at that city. Durban and Capetown have depôts for goods and coal comparable in magnitude with those at Johannesburg, and lesser towns are provided with passenger and goods stations suitable for handling the necessary traffic. In addition, there are large exchange stations, some of which have grown up (at points where no townships formerly existed) as locomotive changing and traffic sorting depôts.

For the purpose of crossing trains on single lines, wayside stations have to be introduced at regular intervals, whether or not traffic originates from them. Between such wayside stations crossing loops, with no resident staff, are generally placed.

**STORES DEPARTMENT.**—The policy of the Railway Administration in relation to the Stores Department is to draw on local stocks as far as possible, and local purchases by far exceed overseas purchases. The value of materials imported and purchased in the Union in 1924-25 was £4 689,000 and £5,112,000 respectively. Details of the less important items required are exhibited on notice boards at the main centres, whilst formal tenders are invited for lines which involve considerable expenditure. Indents for locomotives, carriages, wagons, permanent way material, and other railway specialities are passed to the High Commissioner for the Union in London, who invites tenders for such supplies.

**TRAFFIC RETURNS.** The gross tonnage of revenue-earning goods and mineral traffic in 1924-25 was 18 790,800, compared with 18 838,573 tons conveyed during 1923-24. The revenue derived from goods traffic during 1924-25 was £11,732,725, the highest ever recorded, that for 1923-24 being £11,611,724.

**COAL TRAFFIC.** Although there was a decline in the goods traffic, occasioned principally by reason of drought conditions which prevailed almost generally throughout the Union during the 1923 planting season, thus adversely affecting the production of staple products such as grain, sugar and citrus fruits, there was an important increase in the goods traffic of 1924-25 reflected in the volume of coal conveyed, 9,736,403 tons having been railed from all collieries in the Union, an increase in comparison with the previous year of 302,784 tons. The tonnage of coal railed during 1924-25 from collieries in the Transvaal and Orange Free State has only once been exceeded, viz., in 1920-21, when a heavy demand for South African coal was created by industrial troubles on the British coalfields. The output from Natal also represented a record in the history of the coal industry of that province.

**TRAIN DISTANCES.** In a land six and a half times the size of the British Isles considerable distances have to be traversed. Agricultural and industrial interests are widely scattered, and travelling time on some of the more uneven stretches is comparatively slow, although the mail train from Capetown to Johannesburg, which to day occupies 30 hours on the 956 miles journey—representing a reduction of just under 15 hours since 1910—can be cited as an example of the progress made in the direction of speeding up. This works out at an average of 32 miles per hour, the average on the return journey being 32½ miles.

The longest continuous journey over the Union Railways (excluding the South-West African system) is from Klaver in the Cape Province to Somkele in Natal, the distance being 1,555 miles.

## AIR, RIVER AND ROAD

### AVIATION

**A**IR travel has developed but slowly in South Africa. The first aeroplane journey was made in 1912 on a Voisin biplane, but little progress took place in civil aviation until after the War, when in 1919 aerodromes were laid out at Wynberg, Bloemfontein, Johannesburg, and other places as stages on the Trans Africa Route. The first flight from Cairo to Capetown was made in 1920 by two South African military pilots. In the same year an Aero Club was formed at Capetown.

**AIR MAIL SERVICE.** See under "Posts, Telegraphs, and Telephones."

**CIVIL AIR BOARD.** The Union Aviation Act of 1923 gives effect to the decisions of the International Air Navigation Convention, and makes provision for the control, regulation and encouragement of flying within the Union. A Civil Air Board advises the Minister of Posts and Telegraphs, who is charged with the administration of the Act. Air Navigation Regulations for the Union have been framed on the lines of the British Regulations, and became effective as from July 1, 1924.

**COBHAM FLIGHT (THE).**—At the beginning of 1926 one of the most noteworthy flights in the history of aviation was accomplished by the British airman, Mr. Alan Cobham, who flew from London to Capetown and back. Leaving the Staglane Aerodrome on November 10, 1925, in a de Havilland 50 biplane (385 Armstrong Siddeley "Jaguar"), accompanied by an engineer and a photographer, Mr. Cobham arrived at Athens (1,765 miles) on November 20, resuming his flight on December 6. Cairo was reached on December 7, Khartoum (3,755 miles) on December 22, Kisumu (5,000 miles) on January 13, Ahercorn on January 19, and Bulawayo (6,670 miles) on January 31, 1926. Here the great height above sea-level (5,000 ft.), the intense heat and the adverse atmospheric conditions made it necessary for Mr. Cobham to send on his photographer by rail and also to reduce his load of petrol. He reached Pretoria (7,000 miles) on February 2, Johannesburg on February 5, Kimberley on February 15, and Bloemfontein on February 16. On the evening of February 17 he landed at Capetown (8,020 miles) before a large and enthusiastic gathering, Parliament having done him the honour to suspend its sitting in order to welcome him.

Mr. Cobham's return journey to London was, if possible, even more spectacular, since he flew from the Cape to Cairo in nine and a half days and completed the eight thousand odd miles in fifteen days (80 hours flying time), receiving the personal congratulations of the King on his return on March 13, 1926.

This flight aroused intense interest in aviation throughout South Africa, which, according to the aviator, is an ideal flying country. It is probable that the accomplishment will prove to be the real inaugurator of a great air line running from the Cape to the Equator and linking up Kenya, Uganda, Tanganyika and Egypt, where it will connect with the sea service to Europe, and reduce mail times.

**FUTURE PROSPECTS.**—The following important announcement was made in the Union House of Assembly by the Minister of Posts and Telegraphs in March, 1926.—

"A tentative agreement has been made under which the Government proposes to subsidise to the extent of £8,000 per annum a weekly civil aviation service for passengers, goods, and mails between Capetown and Johannesburg, via Oudtshoorn, Port Elizabeth, East London, and Durban. Such agreement will be binding for only one year. The first condition is that a company shall be formed in South Africa with none but British subjects on the board, and four at least must be resident in South Africa. One director is to be nominated by the Government."

Other conditions laid down are that the service is eventually to be staffed exclusively with South African personnel, and that the arrangement is not to be completed until a substantial financial guarantee has been lodged with the Government for the due and proper fulfilment of the conditions imposed.

### RIVER

River transport throughout the Union of South Africa is almost negligible, the streams of the Union being only in one or two cases navigable for more than a few miles from their mouths and affording no commercial possibilities. With regard to Portuguese East Africa the situation is different, since that territory is unique among the countries of South and East Africa in possessing a number of rivers which are, or can without very heavy expenditure be made into, valuable inland waterways. The Zambezi, one of the four great rivers of Africa, traverses about 550 miles of Portuguese territory before entering Rhodesia, and over most of this distance is navigable to a greater or less extent. From the Chinde mouth, for some 300 miles to about 30 miles above Tete, sternwheel steamers can usually work for two thirds of the year, but navigation is impossible during the dry season and at high floods. Above Tete, the Quebra Baco rapids, extending for 75 miles, form a bad gap in the waterway. The principal tributary of the Lower Zambezi, the Shire, was formerly navigable to Katunga, in Nyassaland, within about 27 miles of Blantyre, but Port Herald, near the southern frontier of Nyassaland, is now the head of navigation, and can only be reached during a portion of the year.

The second largest river of Mozambique is the Limpopo, which is always practicable for small steamers as far as the progressive river port of Vila Nova de Gaza, 30 miles from the mouth. An important barrage project for this waterway is to be carried into effect as soon as funds are available. Other rivers which are navigable by small craft for some distance from their mouths are the Maputa, flowing into the South end of Delagoa Bay, the Matolla, at Lourenço Marques, the Tembe, a tributary of the Matolla, the Umbeluzi, and the Komati, also flowing into Delagoa Bay. In the Mozambique Company's territory the Pungue, though its navigability is much impeded by shifting shoals, can be ascended for 100 miles in the wet season, and for half this distance during the remainder of the year. The Busi, which enters the sea near Beira, is navigable by launches for about 40 miles and by vessels drawing 9 ft. for 20 miles during the flood season. It is much used for transport purposes, and serves as a traffic route between the sugar mills at Nova Lusitania and Beira.

### ROAD

In 1924 there were altogether some 66,200 miles of roads in the Union of South Africa, 19,423 miles of these being classed as main roads and 44,505 miles as district roads, while the chief traffic roads in the Transkei totalled 2,300 miles. Generally speaking, only the proclaimed main roads are regularly maintained by the Provincial Administrations, the greater proportion of the highways outside the settled areas being the so-called dirt or veld roads. Gravel roads are, however, being constructed each year.

#### DEVELOPMENT OF MOTOR TRANSPORT.

Progress in road construction has been especially marked since 1910, due to the recognition of the motor car as a form of transport necessary to farmers.

Formerly the universal method of road goods transport throughout South Africa was by high wheeled waggons, drawn by oxen at an average pace of three miles an hour, this having sufficed for the owner, who generally accompanied his produce. Although the Union, together with the South-West Africa Territory, possesses some 11,750 miles of railways, the lines covering such a vast area of country do not link up all the outlying farming communities, and road transport must continue for a number of years. Farmers, however, have eagerly taken to the automobile, which enables them to reach their markets, transact business, and return home in a tenth of the time required for ox wagon travelling. The wide use of the motor-car has, therefore, made good roads a necessity, and the authorities are using every endeavour to meet the needs of country as well as town dwellers.

**MOTOR ROADS.** No one district of South Africa has a monopoly of scenery or motor roads. These latter are, however, as might be expected, more numerous in the settled districts of Cape Province, and in the immediate vicinity of Capetown there is a group of roads, many of which have been blasted out of solid rock midway between the sea and the cliff summits, comparable with the famous Corniche Road of the Riviera. In Cape Peninsula alone upwards of 100 miles of new roads have recently been built so as to make a complete circuit of the peninsula when traversed, together with several linking-up roads. Table Mountain, the Constantia Mountains, Nuizenberg Mountains, and the Rhodes residence at Groote Schuur are within this itinerary, which includes magnificent scenery of every description. Mountain passes up to 6,000 ft. have occasionally to be crossed, but the gradients are such that any car of moderate power can easily ascend them. Another motor tour along fine and well kept roads is that from Capetown to Johannesburg, via Caledon, Swellendam, Mossel Bay, George, East London, Pondoland, Port St. John's, Durban, and Pietermaritzburg. Due north from Johannesburg there is an excellent road running some hundreds of miles to the borders of Rhodesia.

In Rhodesia itself the question of motor transport and of roads to take it is already under consideration. With the co-operation of owners of motors it is hoped that a great improvement will soon be visible, and that the ox or donkey wagon will be superseded by the motor lorry and the antiquated mail cart by the motor-van or the char-a-banc. Even under present conditions, however, many of the Southern Rhodesian roads have excellent surfaces. (See also under "Tourist Resorts.")

## PROVINCE OF NATAL

**T**HE original colony of Natal was formally created in 1856, but did not obtain responsible government until 1893. Five years later Zululand and the incorporated Amatongaland were annexed to the colony by Letters Patent. Following the Anglo-Boer War, the districts of Utrecht and Vryheid and part of the district of Wakkerstroom, formerly pertaining to the Transvaal, were annexed. The total area is now 35,284 square miles, rather more than that of Scotland or Tasmania, with a seaboard of about 360 miles. On the north Natal touches Portuguese East Africa, the Protectorate of Swaziland, and the Transvaal, on the west it is bordered by the Orange Free State and Basutoland, and on the south by Cape Province. The Province contains the loftiest peaks in the Union, the Giant's Castle and the Mont aux Sources of the Drakensberg Range, both on the boundary line between Natal and Basutoland, being respectively over 9,000 and 11,000 feet high. From the Drakensberg the subsidiary ranges of the Buggarsberg, the Moon River Heights, and other ranges extend like the fingers of a hand and there are isolated groups of mountains such as the Ingeli Mountains in the extreme south-west and the Mahwaga Mountains in the west also single mountain tops which, in Natal as in Zululand, stand out on the landscape as solitary beacons. The Province is well watered, but the rivers are of little use for navigation. The largest is the Tugela, which rises on the slopes of the Mont aux Sources and flows 200 miles to the sea. The Umfolosi is the main river of central Zululand, others being the Mkusi and Pongola. The climate is on the whole extraordinarily healthy for a sub-tropical country, and the magnificence of the scenery in the Drakensberg and Quathlamba Mountains is proverbial.

**ADMINISTRATION** - The Provincial Council consists of 25 members, elected by ballot to represent the same number of constituencies. Electors must be not less than 21 years of age, and possess immovable property to the value of £50, or rent such property to the annual value of £10, or have resided three years in the Province with an income of not less than £90 per annum. No coloured person can vote unless he has resided for 12 years in the Province, been exempted from native law for seven, is recommended by three European electors, and is granted the franchise by the Governor-General in Council. Natives of India are excluded from the franchise.

Roman-Dutch law is the basis of the legal system, the law being administered by the Provincial Division of the Supreme Court of South Africa, composed of a Judge President and three Puisne Judges, and by Resident Magistrates. In ordinary criminal matters the natives are amenable to the criminal law of the Province, offences of a political character or connected with native law or custom, and all civil actions between natives living under native law, are tried by the Native High Court of the Province, or, subject to the jurisdiction of and appeal to that court, by Magistrates, while the chiefs have a limited criminal and civil jurisdiction, from which an appeal lies to the Magistrates.

The present Administrator of Natal is the Hon. Sir G. T. Plowman, K.C.M.G.

**LOCAL GOVERNMENT** - Natal is divided into ten counties and the province of Zululand, the former being named Victoria, Durban, Alexandra, Alfred, Umvoti, Pietermaritzburg, Weenen, Klip River, Utrecht and Vryheid. For administrative

during the present century has been mainly directed towards the cultivation of sub-tropical products, and the success of Natal as a sugar-growing country has been phenomenally rapid. The total area under cultivation being in a recent year 260,000 morgen (about 2.1 acres) with a production of 1,918,560 tons of 2,000 lb. each. The cotton industry is rapidly expanding, pro-

HOWICK FALLS, NATAL.

poses the country is divided into 31 magisterial districts. There are nine municipalities and 15 local boards.

**AGRICULTURE.**—Natal has the great advantage of variety of climate within a comparatively limited area, and, as far as the fruits of the earth are concerned, the number of its products is out of all proportion to the size of its territory. At one time a great pastoral country, attention

duction in 1923-24 amounting to 5,845,909 lb. from some 7,000 acres. Some coffee is grown, and an increasing amount of tea, maize is cultivated throughout the colony, 538,080 bags being the yield in 1924 and 1,924,000 bags in 1925; wheat, barley, and oats are grown on the higher levels; some 650,000 lb. of tobacco were produced in 1924, and all kinds of fruits and vegetables do well, especially the citrus varieties.

of the former. Though the forests of the province are now of small extent, there are still some, largely of yellowwood, existent on the reserves in the northern district. (See also articles on "Agriculture," "Cotton," and "Tobacco.")

**COMMERCE.**—See general article on "Commerce."

**FINANCE.**—The provincial revenue for a recent year amounted to £976,251, and the expenditure (ordinary) to £973,086. Detailed items of revenue were: Union subsidies, £563,032, general licences, £120,882, racing taxes, £50,701, and departmental receipts, £85,015. Expenditure was concerned with education, £605,320, roads, bridges, and works, £192,312, hospitals and poor relief, £98,852, general administration, £76,446, and refund of revenue, £150. Capital expenditure reached the sum of £91,668, roads and bridges accounting for £63,446 and buildings for £28,162.

On March 31, 1926, the Provincial Council was faced by a deficit of £95,000 on the previous year's working, to meet which an importers' tax had been suggested, ranging from  $\frac{1}{4}$  to  $\frac{3}{4}$  per cent.

**INDUSTRIAL PRODUCTION.**—In 1924 there were 1,213 factories in Natal out of a total of 7,024 for the Union, 268 of these being concerned with food and drink, 160 with clothing and textiles, 138 with vehicles, 121 with metals and engineering, and 109 with building and contracting. The gross value of factory production in 1923-24 was £16,780,211. The whaling and general fishing industries of the Province are important. The former is estimated to bring

in about £150,000 in an average year, the production of other fisheries being about £70,000.

**LIVE STOCK.**—Not all of the Province of Natal is suitable for the rearing of live stock, but there are large sheep farms in the midland and upland districts, in the counties of Pietermaritzburg, Umvoti, Weenen, and Klip River, and on the higher and drier lands of Weenen and Klip River. Angora goats are pastured. Cattle are found principally in the inland counties, they are valued for transport purposes, their hides are exported, and dairy farming is being carried on to an increased extent. The following were the figures of live stock in Natal in 1924: Horses, 72,609, mules, 8,582, asses, 44,408, cattle, 1,035,522, sheep, 1,477,209, goats, 427,464, pigs, 64,867, ostriches, 671.

**MINERAL PRODUCTION.** Natal contains a large and valuable coal field in the Klip River county at the northern end of the Province, the mining centres being Dundee and Newcastle. About 60 per cent of the coal produced in the Province now comes from Utrecht and Vryheid counties, and large fields are known to exist in various parts of Zululand. The highest grade coal in South Africa is produced in Natal, the ash therein being comparatively low compared with other South African coals. How the coal output of the Province has grown may be gathered by comparing the output for 1880-90 (107,000 tons) with the average for the five years 1909-13 (2,263,000 tons), and with the output for the year 1924, which was 4,713,291 tons. Gold is found in the Tugela Valley and at Umzimto, as also in Zululand, but the output is trifling.

Silver, copper, lead, and iron ore are all known to exist. The total value of minerals produced in Natal in 1924 was roughly £2,500,000, of which coal was responsible for £1,824,292. (See also articles on "Mining and Minerals" and "Coal.")

**POPULATION.**—The population of Natal, including Zululand, according to the Census returns of 1921, numbered 1,429,398, or 40.51 to the square mile, having increased by 235,355 in the ten years preceding. The white population totalled 136,838 and the non-European 1,292,560, the latter being made up of 1,139,804 natives (Bantu), 141,649 Asiatics, and 11,107 Coloured. The natives, therefore, outnumbered the whites in the proportion of nearly nine to one, and the total coloured population exceeded the white population by between nine and ten to one, the excess of coloured over white men being much larger than in Cape Province. The large number of Asiatics is due to the introduction of Indian coolie labour previous to 1911. The bulk of the native population of the Province is to be found in native locations, which absorb in all an area of approximately 4,000 square miles. The natives there live under their own chiefs, and to a large extent under their own laws and customs, but are supervised by European officers. There are many tribes, all of Kaffir origin, some indigenous to the soil, not a few immigrants since the days when Chaka and his Zulu warriors laid the land desolate, and a large proportion are Zulus or closely akin to the Zulus.

**TRANSPORT.** See general articles on "Shipping" and "Railways," also "Port of Durban."

## CITY OF PIETERMARITZBURG

**PIETERMARITZBURG**, or Maritzburg as it is more generally called, the administrative Capital of the Province of Natal, is a beautifully situated city of over 18,000 inhabitants, about 70 miles north of Durban. It has always been noteworthy politically, and has now, in addition, become an important commercial distributing centre, besides being the junction of four railway lines. Maritzburg is however known especially as a residential and educational centre, being unrivalled in this respect by any other town in South Africa.

**BUILDINGS.**—The Capital is in all respects a picturesque and up-to-date city, with many fine public buildings and memorials, also wide well-paved streets. St Saviour's Cathedral and St Andrew's Church both date from the fifties, as does the Presbyterian Church with its fine clock tower. The Town Hall was built to replace a former structure, and was opened in 1901 by the present King. It is built almost entirely of red brick, and contains a fine organ and concert hall, the Municipal Art Gallery being above. The Colonial Buildings in Church Street and the old Legislative Council Buildings, now occupied by the Education Department, provide strongly contrasted types of architecture. Other striking buildings are the Post Office, Museum, Law Courts, and Grey Hospital.

**CLIMATE.**—The climate of Maritzburg may be described as warm and moist, but

on the whole invigorating, the rather hot summer months being mellowed to some extent by the mountain breezes and by the rainfall, which at this period attains its maximum, amounting on an average to 82 per cent of the mean annual rainfall of 35.07 inches. The mean annual temperature is 66.6 deg. Fahr.

**FINANCE.**—The ratable value of Maritzburg is £4,492,900. The net debt in 1924 was £985,424, while the value of trading concerns was £664,049, other assets amounting to £1,360,533. Municipal rating is 3½d. in the £ on the value of freehold immovable property, together with a special water rate of ½d. in the £.

**GARDENS AND PARKS.**—A most delightful place in Maritzburg is the Botanic Gardens, which contain one of the most valuable scientific collections in South Africa. Though partly subsidised by the Corporation and Government, these gardens are controlled by private enterprise. The great pleasure resort of the city is Alexandra Park, the central sports-ground and picnicking spot for the majority of the inhabitants. In the park is the small but attractively laid out "Mayor's Garden."

**INDUSTRIES.**—In industrial activities Maritzburg makes no pretence of being very prominent, though it possesses one of the largest wattle-extract factories in the country, a boot factory, and a flourishing

mill industry, it also produces on a considerable scale what are said to be among the best bricks in South Africa. As an agricultural centre the city claims undoubted prominence. Extensive wattle plantations have been laid out upon the surrounding hills, these being principally owned by the Municipal Corporation.

**MUNICIPALITY.**—The seal of the city dates from 1855, when Pietermaritzburg first became an incorporated municipality with a Mayor and Town Council, Mr. D. D. Buchanan being the first Mayor.

**POPULATION.**—The total population of Pietermaritzburg, comprising Europeans, Asiatics and Bantus, amounted in 1923 to 37,750, of which 18,400 were Europeans. The birthrate was 28.3 and the death rate 9.2 per 1000.

**SCHOOLS AND COLLEGES.**—Foremost among the educational institutions for which Maritzburg is noted is the Natal University College, whose buildings occupy a fine site on the north-west side of the town. The Government Training College is installed in the interesting building and grounds which were formerly the residence of the Governor of the colony. Other leading educational institutions are, for boys—Pietermaritzburg College, Hilton College, St Charles' College, and several high-class preparatory schools; and for girls—the Girl's Collegiate School, Wykeham.

School Epworth High School, St John's High School, and the Convent of the Holy Family.

**SPORT AND RECREATION.** The race-course, reached by tram, is at Scottsville, and here popular meetings are held. Beyond the University an 18-hole golf course has been laid out, and it is one of the most delightful of grounds, from which are obtainable fine views of the distant Zwartkop. Boating on the beautiful Unisindusi River is popular, as are cricket, tennis and football in and near Alexandria Park. There is a public swimming bath in the centre of the town, and the construction of an open air bath is under consideration. An excellent theatre and several cinema halls have extensive patronage at all times.

**STOCK SHOWS.** Maritzburg is an important stock centre. The Royal Agricultural Society of Natal, the oldest society of its kind in South Africa, holds its annual show here. The grounds of the Society are about 10 acres in extent, and

## BUSINESS ENTERPRISES

### "THE NATAL WITNESS."

**Inception.** This newspaper was first published as a four sheet weekly on February 27 1846 when Pietermaritzburg was no more than a village, with a white population of some 300 and about eighty houses. The original offices of the paper consisted of a thatched cottage, situated on what is now the principal street of the modern city. Frequently there was a scarcity of news, and the editorial staff found it difficult to fill the small sheets.

**Development.** It was not until nineteen years later that the first telegraph line was established in Natal. The printing press then used was a very primitive machine but little in advance of Caxton's when compared with the monster roller presses of to day. Two men used to work the hand turned press, running off copies at a maximum speed of 200 per hour. Circulation was

Africa to the Empire and to promote immigration and land settlement. Its leaders and articles are dignified and fair, and contain constructive comment on all matters of public interest.

**Circulation.** This covers a field of 10,000 square miles, the journal circulating throughout Natal, Zululand and adjoining territories.

**Advertising.** As an advertising medium, the "Natal Witness" is unrivalled in Natal, and expressions of the excellent results achieved have been received from all over the Union, also from advertisers in Great Britain.

**Durban Representative.** Mr F. H. Tamplin, 10 Plowright Lane.

**A. WOOD.** 331, Pietermaritz Street, Pietermaritzburg. This business was founded by Mr A. Wood thirty-two years ago, and is to day one of the best equipped of its kind in Natal. The organisation acts as general and mechanical engineers, importers of automobile, wattle and industrial machinery, and is in a position to undertake any kind

THE NATAL WITNESS LTD., Pietermaritzburg  
The Firm's Premises

many new buildings have been added during recent years. Latterly the society's activities have greatly increased owing to the added interest being taken in all sections of agriculture in the Province. Many of the finest cattle ever seen in South Africa have been entered for competition at the Royal Show, and during recent years additional sections have had to be provided to accommodate cotton, tobacco and wattle exhibits.

**TRAMWAYS.**—The tramway system of Pietermaritzburg, which dates from 1904, is of the 4 ft 8½ in gauge usual in South Africa, and has eight miles of track. The total capital expenditure exceeds £130,000, and the number of passengers carried annually is about 2,770,000.

**WATER SUPPLY.**—Water for household consumption is laid on throughout the town, and even to the further residences in the modern suburb of Scottsville and Howick Road, where of late rapid strides in development have taken place.

naturally limited, and was greatly hampered by the absence of any postal service in the colony. When its founder and editor, Mr David Dale Buchanan inaugurated his delivery system between Maritzburg and Durban, it was eagerly seized upon by the citizens to forward their letters, a charge of 6d per letter being made. The photograph accompanying this letterpress shows the progress since made by Natal's foremost daily newspaper. The editions now average 16 pages daily, and are run off at the rate of 24,000 per hour on the most up-to-date machinery.

**Feature Pages.**—The "Natal Witness" was the first newspaper in South Africa to publish a regular "feature page" every day. These pages cover many interests, including art, science, literature, etc. The paper was also a pioneer in the publication of photographs of topical events.

**Policy.**—This is strictly non-partisan, and strongly Imperialistic, its chief object being to strengthen the bonds which unite South

of light engineering work. In addition to the usual machinery, engraving, grinding, and milling machines have been installed, and various contracts have been undertaken, both for the Government and the South African Railways and Harbours. The works and machine shops are situated on the firm's own property, and cover an area of 270,000 square feet. All kinds of motor-car repairs are effected, and the firm has held the local agency for Dodge cars in the city of Maritzburg and district for nine years. A complete range of spares for these cars is always in stock. Mr Wood has invented, patented, and manufactured an instrument for cutting and chopping bark, also a wattle-bark packing machine, which are in use by all the principal exporters in Natal. At the Pietermaritzburg Royal Agricultural Show the former obtained the premier award of a gold medal, the latter being granted a silver medal. The firm's bankers are The National Bank of South Africa, Limited.

MITCHELL & EADIE, Pietermaritzburg  
Head Office

#### MITCHELL & EADIE.

**Inception.** The present firm became successors in 1918 to Duff, Mitchell & Eadie, the partners of which concern began business in 1905 as Duff & Eadie subsequently Duff, Eadie & Co.

**Partners.** The partners now associated are Messrs T. C. Mitchell F.S.A.A., R.P.A., D. M. Eadie, R.P.A., and A. C. Mitchell, R.P.A.

**Activities.** The firm operates as registered public accountants and auditors, con-

veyancers, estate, financial and general agents.

**Insurance.**—Messrs Mitchell & Eadie are also agents for the Central Insurance Co. Ltd. (Fire), the Standard Life Assurance Co., and the Railway Passengers' Assurance Co.

**Companies.** The company department of the firm includes the Dalton Wattle Co. Ltd., Natal Investment & Annuity Co. Ltd., and Maritzburg Ricksha Co. Ltd., all of Pietermaritzburg and Ravene Plantations Ltd., Inhambane, Portuguese East Africa.

Other institutions represented are the City Permanent Building Society (secretaries), Pietermaritzburg (established 1890), Cordwalles Preparatory School for Boys (T. C. Mitchell, bursar), Natal Society of Accountants (Inc.), (A. C. Mitchell, registrar), and Natal Agricultural Union (A. C. Mitchell, secretary).

**Invested Funds.**—These amount to £250,000.

**Branch.** Eadie & Mitchell, 344, Smith Street, Durban.

**Cables.** Head Office "Accomptant," Pietermaritzburg Branch office "Comptac," Durban Codes Bentley's and Broomhall's Imperial.

**SOUTHERN ADSSERVICE.** The principal of "Southern Adsservice" realised over a quarter of a century ago the future possibilities of South Africa as a market for world manufactures, and from that period he devoted his time and attention to advertising. To-day the agency undertakes advertising and publicity work of all descriptions and in all media. Its organisation and equipment are as modern and as able as those of the best English and American enterprises of a like nature. The scope of its activities extends from the southern coast to the Northern outposts, and from the East to the West Coast. The Agency arranges contracts and by a system of checking safeguards the advertising outlay of overseas customers, thus saving them unnecessary expense. The one aim is to increase clients' sales. Branches are established at Johannesburg, Durban, and Capetown. Bankers, The Standard Bank of South Africa, Ltd. Business manager, Mr C. O. Salsbury. Postal address, P.O. Box 314, Pietermaritzburg, Natal. Telegrams, "Soutads," Pietermaritzburg.

THE CENTRE OF DURBAN TO-DAY. POST OFFICE ON LEFT, TOWN HALL ON RIGHT.

## CITY AND PORT OF DURBAN CITY

**D**URBAN, the third largest city of South Africa and the chief port of the Union, is at once a busy centre of industry and one of the most enjoyable holiday resorts in the world. Beautifully situated on the south-east coast overlooking a fine bay, and with a climate perhaps the most genial of any to be found in the Union, the city has always been noted for its cleanliness, its liveliness, its brilliant colouring, and its enterprise.

Durban is just over a hundred years old, the centenary of the Province of Natal having been celebrated in 1924. In 1824 Lieutenant F. G. Farewell, an officer of Marines stationed at Capetown, accompanied by a small party of adventurous pioneers, put into Port Natal in the trading brig "Salisbury." He succeeded in obtaining permission from the Paramount Chief of the Zulus, the terrible Chaka, to settle at the Bay, and some years later one Nathaniel Isaacs, on behalf of the few settlers then occupying some wattle and daub huts, obtained from Chaka accession of the settlement district. In 1835 the settlement, with a population of less than 300, was named D'urban, after Sir Benjamin D'urban, the Governor of Cape Colony. In 1854 it was proclaimed a borough, with a population of 1,204.

As an indication of the remarkable progress which Durban has made since those times, it is interesting to note that in 1924 the European population was estimated at 50,792. To-day the Old Fort, erected on the site of the encampment which Captain Smith defended so nobly in 1842, and whence Dick King set forth on his memorable ride to Grahamstown, recalls those interesting events of South African history in which Durban has played so prominent a part, rising from small beginnings through many vicissitudes to the proud position it now occupies as at once the Commercial Gateway and the Playground of South Africa.

**ART GALLERY.**—The Art Gallery, situated above the Museum in the Town Hall buildings, houses a collection of pictures mainly representative of the oil and water-colour work of British artists of the modern school. Recently the Gallery has been enriched by the donation of a very valuable collection of old Dutch pictures, etchings, and prints by some of the best masters, statuary by Rodin and others, and some fine old Chinese, Sevres, and other porcelain.

**BATHS.**—The Municipal Baths are situated in West Street, opposite the Town Hall, and comprise sea water swimming

baths, Turkish and slipper baths, and hot salt water baths. The salt water swimming bath measures 80 ft. in length by 30 ft. in breadth, and has a depth of 6 ft. 9 in. at the one end and 3 ft. 3 in. at the other.

**BROADCASTING.**—Durban is to have the first municipally-owned and operated broadcasting station in the world, a very powerful installation being now in course of erection which, it is anticipated, will easily be heard on 4 valve sets throughout the Union, good reception on crystal sets being possible up to 20 miles.

**BUILDINGS.**—By far the most imposing public building in Durban is the magnificent Town Hall, which was erected by the Provincial Government at the beginning of the present century, and justly ranks as one of the finest edifices of its kind in the world. The building is in three storeys, the dome rising to a height of 167 feet, and is suggestive of grace combined with strength and solidity. Separate blocks divide the structure into three sections, the front portion containing the main assembly hall with a seating capacity of 3,500, known as the Town Hall block, the portion fronting West Street accommodates the Council Chamber and the principal municipal departments, and the block facing Smith

DURBAN AS IT WAS IN 1852.  
Original Offices of Messrs. R. Acutt & Sons in right foreground

Street worthy houses three of the finest of Durban's public institutions, namely, the Borough Library, the Art Gallery and the Municipal Museum.

The arrangement and embellishment of the interior have been carried out with the highest skill, and staircases of marble, balustrades of teak, and panellings of the finest woods procurable are characteristic of the building as a whole.

Within a short radius of the Town Hall and the General Post Office (the old Town Hall) may be found the most striking of Durban's public buildings: the Old Court House, used now as the headquarters of the Native Affairs Department and of the Borough Water Department, the main Railway Station and offices of the Administration, the fine new Wool Exchange, the Law Courts, the Standard and National

Banks, the Durban Club, and the imposing headquarters of the Royal Natal Yacht Club.

**CHURCHES.**—Durban possesses two cathedrals and many other imposing ecclesiastical buildings. St Saviour's, the Anglican cathedral of the diocese, first built when the memorable Colenso controversy was at its height, is a fine building in the heart of the city. The largest church is the Roman Catholic Emmanuel Cathedral, of Gothic style, and enriched by much beautiful Canara marble. The old church of St Paul's was destroyed by fire in 1907, but a finer and more handsome edifice has been erected. The Wesleyan Church is in West Street, the Congregational Church in Alwal Street, and the Presbyterian Church on the Berea.

**CLIMATE.**—The climate of Durban throughout the winter months is uniform and ideal, resembling that of Southern France and Italy, and on this account the city is a favourite winter resort. Even during the summer the heat is never oppressive, being tempered by cool sea breezes and refreshing showers. The mean annual temperature is 70.8 Fahr, the temperature of the warmest month averaging 76.6 and that of the coldest month 64.6 Fahr.

**CLUBS.**—The leading club of Durban—one may say, of Natal—is the Durban Club, whose fine quarters occupy a commanding position on the Esplanade, overlooking the wide sweep of the Bay. The club-house, wherein many distinguished visitors from overseas, including H R H the Prince of Wales, have been entertained, is a substantial building, spaciouly planned, and with

RED HILL, DURBAN.

Two attractive Suburbs developed by Messrs. R. Acutt & Sons.

SEA VIEW, DURBAN.

ample residential accommodation. The Mercantile Club, in Commercial Road, has also a large membership, and is noted for its generous hospitality, as are the Southern and Union Clubs, both situated in Smith Street. The Durban Turf Club and other Sporting Clubs are mentioned elsewhere.

**ELECTRIC POWER.**—All the power needed for the lighting, transport, and industrial and commercial consumption in Durban is provided by the Municipality, whose Power Station is second to none in South Africa, and is being added to yearly to meet requirements.

The Municipality has always recognised the importance of a supply of cheap power to a community which is ambitious of extending its industrial activities, and now, when new works are established, practically no other source of power is put down. In 1924 nearly 42,000,000 units were sold, of

These figures, it is anticipated, will be lowered with the opening of the Stillwood and Umgeni areas. Houses of five, six, and seven rooms are difficult to obtain, and rents are consequently high—from £10 to £12 per month for the smaller, and from £15 upwards for the larger residences. Building societies advance up to three-quarters of the assessed value for purchase of houses, and a variable amount on those to be built on land already acquired and paid for. Repayments are monthly over a period of years.

**INDUSTRIES.**—With its unrivalled situation and pre-eminence as a port, Durban has seen a great industrial expansion during the last quarter of a century, and in a recent year its factories (Pinetown included) numbered 500. Of these, 115 were connected with clothing and textiles, 62 with building and contracting, and 60 with engineering

Collection and the "Hillier" Shakespearean Library, as well as a remarkable collection of technical and scientific works. A special library caters for the children's needs, a very popular "Story Hour" being held four times a week.

**MARKETS.** All the markets are controlled by the Municipality, the largest being the Municipal Market House, opposite the Central Railway Station. This is an imposing building, and a special feature of its trade is the show of Natal fruits. The Indian Market is situated behind the Roman Catholic Cathedral, and the Municipal Native Fating House is close to it. The scenes here recall those of an Indian bazaar.

**MODEL MUNICIPALITY.**—By the scope and efficiency of its municipal works Durban long since earned for itself the name of the "Model Borough." In its electric light and power services, its pure

ALBERT STREET, DURBAN.  
Messrs. Nunnerley & Co.'s New Premises in the right foreground

which over 12,000,000 units were used for industrial motive power. Under the existing ordinary tariff, householders can obtain electricity at five-eighths of a penny per unit, less 10 per cent for cash.

**FIRE BRIGADE.**—Durban possesses an admirably equipped fire station and a fire brigade of 41 employees, of whom 33 are Europeans. There are six fire engines, which in an average year deal with about 100 calls.

**HOUSING AND RENTS.**—At present the demand for houses is greater than the supply. The price of building plots in the best residential area, the Berea, overlooking the ocean, is high, a value of £800 being placed on a number of sites 100 ft. by 100 ft. At Bulwer Park and Stamford Hill a sum of £550 will purchase a similar piece of ground.

and metals. The manufacture of soap and fertilizers has greatly increased during recent years, and the whaling industry now employs a considerable number of men. (See also general article on "Industries.")

**LABOUR SUPPLY.**—Skilled and unskilled labour is always available in Durban in all the usual branches. Native and Indian labourers may be engaged from 30s to £2 10s 6d per month for the former and up to £5 for the latter.

**LIBRARY.**—The Municipal Library and Reading Rooms adjoin the Museum in South Street, and the Lending Library, which is one of the finest in South Africa, contains over 40,000 volumes. In the Reference Department are the valuable "Don"

and plentiful water supply, its tramways and telephones, its abattoir and its municipal markets the Corporation has satisfactorily solved problems which have perplexed many older municipal bodies. With but one exception—the Town Baths—all these undertakings not merely pay their way, but contribute considerable sums in relief of the borough rates.

**MUSEUM.**—The Municipal Museum is in that part of the Town Hall facing Smith Street. It contains, among other interesting features, a large collection of South African antelopes, and a very representative collection of native birds, as well as of eggs, butterflies, and other insects. The room devoted to native and local historical curios is also of great interest.

WEST STREET, DURBAN

The Premises of Messrs. Harvey, Greenacre & Co. Ltd., the finest departmental Store in Durban, if not in Africa, are shown in the left foreground

and contains the bell of H.M.S. "Southampton," the ship which in 1842 brought relief to the besieged Durban garrison in response to Dick King's famous ride to Grahamstown in 10 days.

**PARKS AND GARDENS.**—The parks of Durban are individually small, but together they represent a generous share of the municipal area. The Town Gardens are in the very centre of the city and were once the original Market Square. Here is the stately War Memorial erected by public subscription. Albert Park lies close to the Embankment and has a beautiful avenue of banyan trees and palms, a carriage drive and cycle track, and a grand stand and pavilion overlooking the Oval, on which many famous cricket matches have been played. Mitchell Park, some 15 minutes by tram from the post office, is situated on a slope of the Berea, and is not only a picturesque combination of lawns, flower beds and magnificent trees, but also the home of innumerable birds of gorgeous plumage, the denizens of the municipal aviaries which have been established there.

The Botanical Gardens are a favourite resort of residents and visitors alike, the collection including a wonderful variety of tropical and semi-tropical plants and trees, as well as a palm-house and herbarium, the grounds being beautifully laid out.

**POPULATION.**—The estimated population of Durban, both borough and suburbs, at December 31, 1924, was as under.—

	Borough	Suburbs
Europeans ..	50,792	10,725
Coloured ..	4,471	1,279
Native ..	35,000	10,701
Asiatic ..	16,150	35,562
	106,413	58,267

The total population was therefore, 164,680. The number of burgesses on the roll was 21,736.

**RACECOURSES.**—One of Durban's racecourses is situated at Greyville, at the foot of the Berea, and the other at Clairwood, some 8 miles out of town, on the south coast road. The older track at Greyville is controlled by the Durban Turf Club, and upon it there is good racing on twenty to twenty-five days in the year, the fashionable winter meeting in July and August, with the July Handicap as the *piece de resistance*, attracting huge crowds and unflinching interest.

**SPORT AND RECREATION.**—The City of Durban excels in the opportunities it offers for every variety of sport and recreation. Sea-bathing in the Indian Ocean is a most popular pastime during summer, cricket clubs are numerous, and putting greens for golfers have been laid down near the Model Dairry at Ocean Beach. In addition to many clubs for tennis, which has taken a great hold of the younger population of the city, the Municipality has established a splendid set of courts on the Marine Parade, and the sheltered waters of the Bay provide excellent facilities for boating, yachting, or fishing.

The Durban Rowing Club has a large membership, and offers exceptional terms to visitors, while the frequent races held by the Motor Boat Association are a great attraction.

That football (of both kinds) is popular throughout the winter need hardly be stated, and besides the Oval, at Albert Park, many grounds for the playing of it are scattered about the town and its nearer suburbs. There are two excellent bowling greens at Greyville and Ridge Road, while annually competition of the keenest character takes place for the Crawford Shield and the "Natal Advertiser" Trophy.

**STREETS.**—The principal thoroughfares of Durban are Smith, West and Pine Streets, which run parallel to each other. Of these, West Street is the busiest and most important,

WEST STREET, DURBAN, showing Hanwood's Proprietary Store in left foreground.

containing as it does the fine buildings of the Town Hall and Municipal Offices, the old Volunteer Drill Hall, His Majesty's Theatre and the Theatre Royal, the offices of the Union Castle Line, and many of the banks and principal commercial houses. Pine Street is a fine broad thoroughfare, and the centre is laid out as a public recreation ground. The Victoria Embankment, which runs along the Bay from the Point to Park Street, was constructed at a cost of about £60,000, while the Ocean Beach, which only a few years ago was a stretch of sand-dunes, is now a beautiful esplanade, with motor roads, asphalt pavements, and many hotels overlooking it from the neighbouring slopes.

**TELEPHONES.**—Durban possesses the only municipal telephone system in the Union, and has the second largest exchange. The system controls over 6,000 connections, and the tariff is lower than in any other part of the Union, the charge for the use of the 50 public call-boxes conveniently placed throughout the city being 1d, as compared with 3d in other South African towns.

Automatic exchanges have recently been installed at Toll Gate and Stamford Hill, which provide for 1,000 and 2,000 subscribers respectively.

**TRAMWAYS.**—Durban possesses a fine up-to-date tramway system, providing quick, cheap, and easy transit. This system dates from 1902, and in 1924 had over 20 miles

of route track and some 40 miles of line track. The cars, which number over 120, are of a commodious type, with inside and outside accommodation. The average number of car miles run annually is approximately 2,400,000, and of passengers carried, 28,000,000. The yearly revenue averages about £290,000, and the expenditure £270,000.

**WATER SUPPLY.**—The water supply of the city—controlled by the Municipality—is at present more than adequate for its needs, and is renowned throughout South Africa for its high standard of purity. The present consumption for all purposes is slightly in excess of 6,000,000 gallons of water per diem, but, in order to guard against even the remotest risk of a possible future shortage, the Municipality has embarked upon a new and comprehensive scheme. A dam is being constructed which will increase the available water supply, if need be, to a total of 20,000,000 gallons per diem. This dam will impound no less a quantity of water than 2,000 million gallons, forming within a natural rampart of the Shongweni Hills a fresh water lake 300 acres in extent.

The charge for water for trade purposes is 1s 3d per 1,000 gallons, decreasing to 1s per 1,000 gallons where quantities are consumed. For domestic purposes the supply is unrestricted, and no specific charge is made over the water rate of 4d in the £.

## VISITORS' GUIDE

## PORT OF DURBAN

Port Natal (to use the older name of the Port of Durban) is situated on the south-east coast of South Africa, and is the premier commercial port of the Union. It differs from most other ports of South Africa in being partially landlocked, and is one of the best equipped and most accessible harbours on the coast. Judged on the

basis of tonnage alone, Durban easily outdistances every other South African harbour: its monthly traffic usually exceeding the totals of Capetown, Port Elizabeth and East London added together. With unsurpassed lines of communication with Johannesburg and other up-country centres and the continued growth of the city's industrial

activities, it would appear difficult to place any limits to the future development of what has been well termed the "Commercial Gateway of South Africa."

**ADMINISTRATION.**—The South African Railways and Harbours Administration controls and administers the port of Natal and undertakes all landing and shipping,

POINT ROAD, DURBAN. Office and Warehouses of the Consolidated Stevedoring prominent in right foreground.

SMITH STREET, DURBAN. Sparks, Young & Farmers' Meat Industries Ltd. in right foreground.

1. SMITH STREET, DURBAN. Messrs. Wickins & McNicol's fine Showroom on the right.
2. DURBAN. General View of Harbour. Farmers' Meat Industries and Kaffrarian Mills Prominent in the illustration.
3. COMMERCIAL ROAD, DURBAN. Premises of Messrs. Foaden & Kent on the right.

as well as the loading into trucks and the despatch of goods to their final destination

**ANCHORAGE.**—Port Natal is easily accessible, and the anchorage is uniformly good. In the outer bay the best anchorage is in 10 fathoms, sandy bottom, with the lighthouse bearing S W by S, and Rocket House Beacon W by N, distant from the Bluff about 1½ miles magnetic. Vessels should anchor to the northward of this position in preference to the southward. To the eastward the anchorage is open, with good holding ground.

**APPROACH.**—The position of Port Natal is marked by a prominent headland or bluff (Cape Natal) on the south side of the harbour entrance, 195 ft above sea level, on which stands the lighthouse, painted white, being visible 24 miles in clear weather. The entrance to the harbour is between the North Pier and the South Breakwater. The distance between the piers is 600 ft and the navigable width is 400 ft. The depth maintained at the entrance channel is 36 ft L W O S T, and the depth in the entrance channel is 32 ft L W O S T. The depth on the bar in the entrance channel and in the bay is maintained by two powerful suction dredgers, the "Cetus" and the "Nautilus." On the rare occasions when the entrance is considered impassable a black cone (point downwards) is hoisted at the yard area of the Signal Station at the Point and Bluff before sunset, and a red light after sunset.

**BERTHING ACCOMMODATION.**—The available berthing wharfage in Durban Harbour is as follows—

**BLUFF WHARVES**—These consist of 2,365 ft of concrete quay wall, with a depth alongside varying from 30 ft 6 in to 35 ft at L W O S T, and 100 ft of timber wharfage for the landing of explosives only, with a depth of 25 ft alongside.

**CONGELLA WHARVES**—These wharves, of reinforced concrete, front the reclaimed area of the Congella, and extend 5,360 ft, with minimum depth alongside of from 25 ft to 32 ft 6 in L W O S T. The reclamation sites are occupied by many private manufacturing and other trading concerns, which do a large business in timber, soap, candles, biscuits, flour, maize, sugar, and various other articles and products.

**QUAYSIDE WHARVES**—The main quays at the Point extend 6,266 ft and provide berths with minimum depths of from 23 ft to 38 ft 6 in L W O S T. The quay cargo sheds have a total floor area of 557,200 sq ft and an extensive system of railway sidings enables cargo to be loaded and off loaded immediately alongside the ship with a minimum amount of handling.

The total wharfage accommodation of Port Natal, including repairing quays and jetties, exceeds three miles. At the present time Durban Harbour can accommodate 47 ships of an average length of 480 ft., viz. 28 at berthage and 19 at the moorings. With two abreast along the berthage, a total of 75 ships can find refuge inside, and by the time the additional deep-water berthages are completed and the Congella Wharf is extended to the graving dock, accommodation will be available for 90 ships.

**BUNKERING.**—Durban, being the nearest and also the natural outlet for the extensive coal fields of Natal, does a considerable trade in export and bunker coal.

The coaling appliances of the harbour are electrically driven, and consist of two modern type dumpers of 100 and 80 ton.

**HARVEY, GREENACRE & CO. LTD.**

Durban's Premier Departmental Store—Perhaps the finest in South Africa.

capacity respectively, with storage bin capacity of 10,000 tons served by belt conveyors and mechanical bucket transporter, enabling three vessels to be loaded simultaneously at the rate of 1,000 tons per hour. The coaling plant is situated on the Bluff side of the entrance, and has a quay frontage of 2,465 ft with depths alongside of from 25 ft to 30 ft 6 in L.W.O.S.T. Modern plant for storage and the supply of oil fuel to shipping has recently been installed on reclaimed sites adjacent to the Bluff quays.

**CRANAGE EQUIPMENT.**—Port Natal is equipped with adequate cranage plant to deal with practically all classes, sizes, and weights of cargo. The full equipment is as follows:—1 fifty-ton fixed hydraulic crane, 1 ten-ton travelling hydraulic crane, 4 ten-ton travelling steam cranes, 9 four-ton travelling electric cranes, 20 three-ton travelling hydraulic cranes, 11 three-ton travelling electric cranes and 1 fifteen-ton floating crane.

**FLOATING DOCK.** Excellent repairing facilities are provided. There is a floating dock 470 ft long by 60 ft wide (internal), with a net lifting power of 5,500 tons, and with a draught of 23 ft. Small vessels up to 150 tons dead weight can be accommodated on a patent slipway. In 1925 the floating dock was used by 123 vessels of an aggregate tonnage of 138,519.

**GRAIN ELEVATOR.**—The erection of the new terminal grain elevator adjoining the Congella Wharves, which was begun in 1921, was expected to be completed by the end of 1925. It is of the latest type, and will be of 2,000 tons storage capacity to deal with the export of maize in bulk at the rate of 1,000 tons per hour.

**GRAVING DOCK.** This important undertaking, which is nearing completion, was commenced in December 1919, and is estimated to cost about £2,000,000. When put into commission it will rank second to none in the world in point of length and depth, so far as graving docks for purely mercantile shipping purposes are concerned. Its length is 1,150 ft (which can be increased to 1,191 ft), its breadth 110 ft and its depth at high-water ordinary spring tides 41 ft, or at low-tide 35 ft. The dock is situated at Congella, at the west end of the bay, and is in close proximity to the railway, being within 180 yards of the Natal Main Line. A feature of the Durban Graving Dock is the inner caisson, which enables it to be divided into two compartments, the outer 678 ft 10 in and the inner 450 ft in length. The volume of water required to fill the dock is 38,118,000 gallons, and the time occupied in filling is 47 minutes, while emptying takes four hours.

**PILOTAGE.**—Compulsory. The rates are included in port dues.

**PORT CHARGES.**—The following are the principal charges at the Port of Durban:—

**COALING SHIPS.**—Loading and trimming is performed by the Administration as follows, per ton of 2,240 lb.: Into bunkers or elsewhere for ships' consumption—1s. 6d.; cargo coal shipped into holds—1s., cargo coal, where special stowage or separations are required—1s. 2d., into lighters ex railway trucks, direct—4d., into lighters ex storage bins—8d.

**LANDING AND SHIPPING CHARGES.**—Cargo intended for delivery by rail is landed at a charge of 2s. per harbour ton. Additional to the landing charge of 2s. is tonnage wharfage of 1s. 6d. per ton and ad valorem wharfage of 16s. 8d. per £100. Cargo is shipped at

the rate of 2s. per harbour ton, plus export wharfage of 5s. and 10s. per £100 ad valorem, or 8d. per 100 lbs. and 1s. per harbour ton according to the nature of the cargo.

**LIGHT DUES.**—All vessels, unless specifically excluded, anchoring off Port Natal, or entering the inner harbour, pay light dues at the rate of 2d. per ton for each registered ton.

**PORT DUES.**—These, which include pilotage rates, are the same as at other South African ports. See under "Cape-town," "Harbour Dues."

**STORAGE.**—In store, 3d. per ton per day, in open spaces, 1d. for first 14 days, double afterwards.

**TOIL AGE.**—From about £3 to £7.

**WATER.**—Ships can obtain a plentiful supply of excellent fresh water, which is laid on to the wharves. The charge is 7s. 6d. per 1,000 gallons, with discount of 2½ to 15 per cent, according to quantity taken above 10,000 gallons.

**WHARF DUES.**—On imports is 6d. per ton and 16s. 8d. per cent ad valorem if from ports outside the Union, and 6d. per ton and 8s. 4d. per cent ad valorem if from ports within the Union. On exports, 5s. per cent, ad valorem on coal, grain, forage, fruit, vegetables, sugar, bark, clay, asbestos, and all ores and concentrates, 8d. per 100 lb. on wool, hides, and skins, 1s. per ton on old iron and steel scrap, and 10s. per cent ad valorem on all other goods. On transshipments (except personal baggage) is 3d. per ton wharfage is charged.

**QUARANTINE.**—As soon as possible after the arrival of a vessel the pratique officer and a pilot visit the ship. If the ship is from a healthy port and has no sickness to report, pratique is at once granted.

**SHEDS AND STORES.** In 1924 the shed and storage accommodation totalled 574,370 square feet of floor space, with a cubic capacity of 15,553,700 feet. At the Point there are eleven wharf sheds and one at the Maydon (Congella) wharf, the gross super-area aggregating half a million feet, with a cubic capacity of six and a half million feet. There is also a bond store of over 1½ million cubic feet capacity, provided with a 50 ton hydraulic elevator, which lifts loaded trucks to the first and second floors, as well as a complete telephage system for loading and off loading. All the sheds and the bond store have rail communication either through or alongside the buildings. There are two running tracks and two transporter tracks the whole length of the Bluff concrete wall, and two running tracks and one crane track the whole length of the Point or St Paul's Wharf. Both wharves and sheds are lighted with powerful incandescent electric lights.

**TOWAGE.**—The towage fleet of the harbour consists of seven powerful tugs, four of which are fitted with modern salvage and fire appliances. A large fleet of lighters and punts is utilised in supplementing the shore handling facilities for cargo and bunker coal.

**TRADE AND SHIPPING.**—During the year ended March 31, 1925, a total of 1,257 vessels, excluding warships, of a gross registered tonnage of 6,541,860 called at Durban, an increase of 27 vessels and 99,819 tons compared with 1923-24. Of the total number of vessels, 78 per cent. were on the British register.

During the same year the volume of cargo dealt with, inclusive of coal, totalled

4,520,571 tons, this constituting the largest tonnage so far handled at Durban, being 100,901 tons more than that for 1923-24, when the previous highest tonnage was recorded. The volume of cargo landed (1,089,951 tons) also constituted the highest tonnage recorded in the history of the port, the million mark having never previously been attained.

Coal handled at the port during 1924-25 amounted to 2,805,017 tons, compared with 2,647,365 tons in 1923-24. Of the total, 1,520,601 tons were exported, 1,283,538 tons bunkered, and 878 tons shipped to Union ports.

**IMPORTS AND EXPORTS.**—During 1924 a considerable expansion was shown in the imports and exports passing through Durban. The increase in exports was all the more gratifying in view of the comparative failure of the maize crop in that year and the fact that the sugar crop was adversely affected by the prolonged drought. Fruit, cotton, eggs, citrus fruits, frozen meat, wool and haled produce all showed increases, decreases being observed in maize, sugar, asbestos, wattle bark, and explosives. Gold to the value of about £14,000,000 was exported through Durban in 1924, as compared with about £1,500,000 in 1923. This large increase was due to India importing direct from South Africa instead of via London as hitherto. There was also a large increase in the quantity of coal exported and bunkered.

## REPRESENTATIVE COMMERCIAL ENTERPRISES

### HARVEY, GREENACRE & CO. LTD.

**Inception.** This company owes its inception to the amalgamation in 1869 of the separate businesses of Mr. M. Harvey and Mr. B. W. Greenacre, which had both been carried on since 1861. The partnership thus created became known as Messrs. Harvey, Greenacre, of London and Natal, later to be converted into the present private company.

**Personal.** The honour of knighthood was subsequently conferred on Mr. B. W. Greenacre, who was for many years head of the firm. The late Sir Benjamin was also Mayor of Durban 1875-6, 1889-92 and 1897-8, while he represented that port in the Legislative Council, and subsequently in the Legislative Assembly, after the granting of responsible government. His eldest son, Mr. Walter Greenacre, O.B.E., J.P., is now chairman of the board of directors, while his youngest son, Mr. Edwin Greenacre, personally controls the London office.

**Development.**—The two founders commenced their partnership under the soundest auspices, tendering to potential customers the advantages of their personal selection from the best markets. The consequent saving of all commission enabled their imports to be offered to wholesale and retail buyers at prices considerably below those usually charged in Natal, and progress inevitably followed this far-seeing basic policy. Powerfully organised, and preserving "founders' ideals" of continual extension and consolidation, the store is now inseparably linked with the development and the daily activities of Durban.

**Premises.**—Messrs. Harvey, Greenacre & Co.'s premises are situated in Central West Street, the heart of Durban's retail shopping quarter. The three-storeyed building covers a ground area of 150 by 300 feet, and is surmounted by a tower which forms a landmark for the district.

**Departments.**—The multiple activities of the store are spread over 58 departments, prominent among which in their ever-changing display of reliable and up-to-date wares are the following: Drapery, including wool, cotton and silk piece goods, gloves, hosiery, haberdashery, umbrellas and soft furnishings, ladies' outfitting covering costumes, gowns and jumper suits, millinery, underclothing, corsets, boots, tailoring, men's and boys' outfits of all kinds, trunks, suit cases and hammocks, dress making, fancy goods, including jewellery, silverware, watches and clocks, bags, art needlework, soaps and perfumery, stationery, books, toys, perambulators and photographic necessities, sports equipment for all indoor and outdoor games, fishing tackle and bee-keeping appliances, crockery, hardware, featuring household utensils, brushware, poultry and garden supplies, and furnishing, including bedsteads, carpets and pictures.

**Other Activities.** The manifold activities of this organisation embrace a branch post office and a flourishing mail order business, with special service for country retail orders. Among other amenities of the store are its tea room, ladies' lounge and rest room, and the book club and lending library.

**Staff.** The European employees of the company number 250.

**Branches.** Branches of the firm are established in the Transvaal at Johannesburg and Wakkerstroom, in Natal at Ladysmith and Newcastle, in Cape Province at Kimberley, and in Griqualand East at Kokstad.

**London Office.** Harvey & Greenacre, Ltd., 60, Bunhill Row, E.C. 1.

**Agents.**—The company has foreign buying agents in Paris, New York and Vienna (See illustration, page 263.)

**MARINE HOTEL.** This hotel has been established nearly 45 years. Although within a few minutes' walk of the centre of the town it is delightfully situated and faces the sea. The accommodation consists of 178 bedrooms, 30 of which have bathrooms attached, 9 private suites comprising bedroom, sitting room and bathroom and private telephone installations, two spacious lounges, an Italian garden and a palm court. The dining room has seating accommodation for 200 persons. H. R. H. The Prince of Wales during his recent visit patronised the hotel on three occasions, and the civic banquet held in his honour took place there. Other notable guests who have been banqueted in the hotel include H. R. H. Prince Arthur of Connaught, the Earl of Athlone and Lord Kilsant. The "Marine" is also the headquarters of the Rotary Club. The cuisine and service are well organised, and the cellar holds a large and varied assortment of French, German and Cape wines. Dinner dances are held every Tuesday and Saturday during the season. The staff numbers 30 Europeans, 40 Indians and 60 natives. Hotel motor car meets all trains and steamers.

#### R. ACUTT & SONS.

**Inception.** This well-known and leading firm of land auctioneers and estate agents, which for three quarters of a century has conducted business on the identical site of its foundation, was established in 1851 by the late Mr. Robert Acutt.

**Premises.**—At the time of the firm's inception the colony of Natal was still an infant state, Durban boasting but a few wood and iron shanties, with probably one or two brick buildings. A pictorial record exists of Mr. Robert Acutt's original diminutive premises in Gardner Street, showing the founder conducting a sale of merchandise in front of his offices. In 1860 these premises were rebuilt as a large auction mart, which served on various occasions as town hall, post office, and ballroom for the entertainment of Royalty. In 1895 the building was reconverted into shops and offices, but a generation of the rapid expansion of Durban has made imperative the necessity for rebuilding in the near future.

**Development.** A landmark in the long and honourable career of the concern was the decision in 1895 to relinquish the general auctioneering business and to devote entire attention to real estate transactions. Operations in this field have included the handling of most of the important business properties in Durban as well as many flourishing suburban estates, among them Clairwood, Seaview, Escombe, Kloof Hill Crest, Greenwood Park and Rosehill. The firm has also been instrumental in developing the township of Durban West, recognised as the future industrial centre of Durban and already the site of numerous factories.

**Partnership.** The present senior partner is Mr. Ernest L. Acutt, C.M.G., J.P., sometime Mayor of Durban. With him are associated Mr. Ken Acutt, grandson of the founder, Mr. H. W. Bellville and Mr. W. W. Brady.

**Address.** Acutt's Arcade, 55, Gardner Street, Durban.

R. ACUTT & SONS, Durban.

3. Carpet Department.
4. Sanitary Department.

5. China Department.
6. Silverware Department.
7. Tools Department.
8. Hardware Department.

**P. HENWOOD SON, SOUTTER & CO.**

**Inception.** In 1849 Paul Henwood, a native of Cornwall, sailed from London on the 388-ton ship "Henry Tanner," which took 120 days to complete the voyage to Durban. Seven years were spent in trading trips to the Orange Free State and the Transvaal before this merchant-pioneer, setting up business in Durban as general importer and ironmonger, laid the foundations of the present widely-renowned concern.

**Development.** In 1872 the style of the firm was changed from Henwood & Co to Henwood & Roseveare, and in 1883, on Paul Henwood's son Alfred being taken into partnership, the name P. Henwood, Son & Co. was adopted. Six years later the entolment of the founder's son-in-law, H. Wallace Soutter, gave the firm its final and present

concern takes chief pride as the hardware specialists of Natal and the Transvaal.

**Premises.**—The premises consist of a three-storeyed building affording very extensive floor-space, in which the great variety of stock is effectively displayed. An electric lighting system on the most modern basis has recently been installed for advantageous illumination of the showrooms. Under the same roof large rooms are provided for the accommodation of reserve stocks.

**Departments.** Among the most important departments may be mentioned the following:

**BUILDERS' IRONMONGERY.**—A complete range of household fittings is stocked, and large quantities can be supplied at short notice.

**TOOLS.** Henwood's carry an extensive range of tools for carpenters, bricklayers,

**HOUSEHOLD IRONMONGERY.**—This department has everything for the kitchen and for the house generally, meat safes, ice chests, washing machines, mangles, wringers and all laundry requisites.

**STOVES AND RANGES.** In this section are to be found Henwood's famous Ideal stove and the Range Eternal, the best obtainable and specially adapted to the country, also grates and mantels of every kind.

**FANCY GOODS.** Silverware, electroplate, and brass goods of every description, safety razors, stropping machines and everything necessary for shaving and toilet are stocked.

**FURNITURE.**—This department contains bedroom and dining room suites and a full range of house furniture.

1 and 3. The Showrooms

designation, P. Henwood Son, Soutter & Co. Paul Henwood retired in 1904, leaving the business to be carried on by Alfred Henwood and H. Wallace Soutter. In 1916 Alfred's eldest son, Arthur Lynton Henwood, became a partner, the second son, Alfred Norman Henwood, following his example a year later. Alfred Henwood, sen. and H. Wallace Soutter retired in 1920, and after two years the former's third son, Howard Henwood, entered into partnership. The three brothers are the sole partners to-day.

**Progress.**—To the foresight and initiative of the founder and the progressive qualities mainly of his own kin is thus due the present eminence of the firm, not only in Durban, but throughout South Africa, where the name "Henwood's" is a household word. The

plumbers, engineers and every craft, beside contractors' requirements such as shovels, forks, etc.

**SANITARY.** In this department can be seen baths, lavatory basins, cisterns, sinks, and a fine selection of modern bathroom fittings.

**MACHINERY.**—Forges, drilling machines, and grinding mills for grain and fowl foods are on hand.

**POULTRY, DAIRY AND BLENDING GOODS.** A very full range is carried, and expert advice can be given by practical, trained men. Fearson and Economic incubators and the Isometer tester for all cattle dips are always in stock.

**PAINT.**—Paints, varnishes, enamels and stains are available in every shade and quality.

**SOFT GOODS.**—Among these is a complete stock of curtain and upholstery materials, table and bed linen, carpets and rugs from the finest makers, and linoleums in lengths and squares. Upholstering is done on the premises by experienced employees, and expert advice as to complete furnishing schemes is readily forthcoming.

**CHINA AND EARTHENWARE.**—This section provides a wonderful range of beautiful productions from the world's finest potters, covering wares for domestic use and the artistic achievements of Doulton, Wedgwood, Moorcroft, Fielding and others.

**GLASSWARE.**—The varied display of glass of wonderful quality and colour includes Stuart's English cut glass and the finest Belgian specimens.

**Special Agencies.**-- Ajax cream separator, Bamford's grinding mills and engines, Allegro honer and stropper for safety razor blades, Rolls razors, Copeland's blue Italian earthenware, Sherwin Williams' paints, Fearson's incubators, Economic all-metal incubator, Engman-Matthews' Range Eternal, Smith & Wellstood's Ideal stove, Watkins Pitchford isometer tester for cattle dips, Pollard geysers, West Bromwich steel window frames, Simplicity teak verandah blinds, and Matex roof repairing cement.

**Head Office.** West Street, Durban. This office is under the management of Mr. Alfred Norman Henwood, resident partner for Natal.

**Branches.**-- Branches were originally established by Paul Henwood in Natal at Pietermaritzburg and Newcastle, in Cape Province at Kimberly and in the Transvaal (in which Mr. Howard Henwood is resident partner) at Pretoria, Johannesburg, Barberton and Kroonstad.

**London Office.** The firm has its own buying office in London at 65, London Wall, E.C., under the management of the senior partner, Mr. Arthur Lynton Henwood.

(See also notice, page 70, Johannesburg section.)

#### WICKINS & McNICOL.

**Inception.** This firm was founded in 1919 by the present partners, Mr. H. R. Wickins and Mr. G. McNicol, each of whom has been president of the Motor Traders' Association, the former in 1923 and the latter in 1924. Mr. Wickins may be considered one of the

pioneers of the motor business, having been connected with the industry for over 20 years, whilst Mr. McNicol, who has always been a keen motorist, has travelled all over South Africa in a car.

**Progress.** To day Messrs. Wickins & McNicol are recognised as the foremost motor car importers and garage proprietors in the Province of Natal, their spacious showrooms being well known to all motorists in the country.

**Activities.** All classes of automobile work are undertaken, and repairs are carried out under the supervision of skilled mechanics. The workshops are equipped with the most up-to-date plant, and a complete range of spares and accessories is kept in stock.

**Departments.** These comprise motor showrooms, spare parts, accessories, workshops and second hand cars. The workshops cover an area of 15,000 square feet.

**Staff.** The staff numbers 35 of whom 22 are European.

**Branches.** These are established at Maitzberg and Kokstad.

**Agencies.** The motor agencies held include the Buick Cadillac, Morris Oxford, Morris Cowley Morris one ton truck and the G.M.C. truck, the last named being used by the Vacuum Oil Co. among others. Messrs. Wickins & McNicol are sole distributors of the above motors for Natal, Zululand, East Griqualand and Hartismuth districts. All kinds of accessories are imported from the United Kingdom and America.

**Shippers.** Kemsley & Millbourn, New York, Kemsley, Lover & Millbourn, London.

**Address.**-- 178-186, Smith Street, Durban. Cables: "Tonneau," Durban. Codes: Bentley's and G.M.C. private.

**Bankers.** The National Bank of South Africa, Ltd.  
(See illustration, page 267.)

#### H. J. WALSH & CO.

**Inception.** This firm of automobile importers was founded in 1922, being successors to Williams Hunt & Co. Ltd., who had operated in Durban since 1915.

**Activities.** The company imports automobiles, motor cycles, and accessories, a complete range of spare parts always being on hand. Repairs of all descriptions are undertaken, the workshops being equipped with the latest machinery and appliances. All work is carried out under expert supervision.

**Premises.** The building occupied by the firm covers an area of 7,500 square feet, and comprises excellent showrooms, as well as motor cycle, accessory, and service departments. The assembly department, situated in Palmer Street, has a floor space of approximately 10,000 sq. ft.

**Agencies.** The firm has the sole agency for Natal, Zululand and East Griqualand for Chevrolet motor cars, "Indian" motor cycles, Alemite lubricators and G. & P. petrol pumps, 25 of which have been installed in Durban alone.

**Staff.** This comprises 25 Europeans and a proportionate number of natives.

**Personal.** Mr. Walsh, who has had 15 years' experience in the motor business, is now vice-chairman of the Motor Traders' Association of Natal.

**Address.**-- 99, West Street, Durban. P.O. Box 273.

**Cables.** "Powerplus," Durban. Code: Bentley's.

#### THE CONSOLIDATED STEVEDORING & FORWARDING AGENCY, LTD.

**Inception.** This agency, which has been established over 50 years, was known as Chiazan & Co. Ltd. till 1922, when the style of the firm was altered to the present designation, there being, however, no change of personnel.

**Activities.** The activities of the agency embrace the following:

**CUSTOMS CLEARING AND FORWARDING.** All classes of merchandise are cleared through the Customs and despatched to any part of Africa.

**STORAGE.** Goods may be stored pending shipment in the company's large duty-paid and bonded warehouses, and clients have the advantage of a private railway siding, with consequently cheaper railway rates.

**CARTAGE.** The firm has its own motor transport service, and can readily handle goods for local delivery.

**SHIPPING.** All classes of exports come within the scope of the agency, special attention being given to perishable goods such as eggs and fruit. The firm has established a re-packing depot, so that any consignment that is rejected by the Government inspectors owing to certain causes is attended to at once and re-packed for export. This saves the grower the loss he would otherwise experience if the rejected consignment were sold on the local market. The firm handles 60 per cent. of the fruit shipped through Durban.

**LIVE STOCK.** Special care is devoted to the handling and care of live stock.

**STEVEDORING.** The agency, which is one of the oldest and largest stevedoring concerns at Port Natal, both for import and export, has a large staff conversant with the control of all classes of merchandise, and has

been appointed stevedores to the following lines: Harrison, Aberdeen White Star, Deutscher Africa Dienst, German-Australian, American South African, Commonwealth Government, and Messageries Maritimes. The firm also handles the cargoes of chartered vessels calling at the port, and, should owners wish, will act as their agents.

**Branches.** The Johannesburg branch is controlled by Neale, Wilkinson & Renne Ltd. The Port Elizabeth Office is styled Neale, Wilkinson & Renne (P.E.) Ltd. The Lourenço Marques branch is under the company's own name.

**Head Office.** P.O. Box 3, Point, Durban, Natal.

**London Representatives.** John I. Renne Son & Co., Bury Court St. Mary Axe E.C. 4, and Neale & Wilkinson Ltd., 16 Cannon Street, E.C. 4.

**Management.**—Chairman: Mr. A. H. Renne, of Messrs. John I. Renne Son & Co., London Manager: Mr. A. D. Mitchell.

**Agents.** New York: Pitt & Scott Inc., 55 Frost Street, Hamburg: Herz & Schaberg, Kaiser Wilhelmstrasse 76.

**Cables.** "Chazzaris" Codes: Bentley's ABC 5th & 6th Editions; Scott's 10th Edition.

#### DOUGHERTY & STEAD.

**Inception.** The firm of Dougherty & Stead was established in 1901 by Mr. H. F. Dougherty and Mr. F. Stead, but the last-named retired from the concern in 1917, leaving Mr. Dougherty as sole proprietor.

**Development.**—Commencing in a small way, the firm built up a large enterprise, and it is noted for its integrity and sound business principles. It enjoys the confidence and support of a large number of the leading importers and exporters of the country.

**Activities.** Messrs. Dougherty & Stead act as freight and insurance brokers, customs clearing and forwarding agents, bond and free warehousemen, cartage contractors (motor transport), and as agents for shippers of maize and other South African produce. They have specialised in the export business and in addition to shipments on vessels of the regular trading lines, load a large number of chartered steamers with maize.

**Motor Transport.** Being one of the pioneers of motor transport in Durban, the firm maintains a large fleet of motor trucks for the transportation of goods from the harbour sheds to local merchants, and vice versa.

**Warehouses.**—Messrs. Dougherty & Stead own spacious warehouses, both bond and duty free, having accommodation for upwards of 6,000 tons of merchandise.

**Agencies.** Price's Candle Co., Harmens Bros. (milk), Oxo (South Africa) Ltd., and Ronuk Ltd. The firm is desirous of getting in touch with the owners of steamship lines who desire to appoint agents at Durban.

**Address.** 84, Point Road, Port Natal P.O. Box 4.

**Cables.**—"Stead," Durban.

**Bankers.**—The National Bank of South Africa, Ltd.

(See illustration, page 270.)

**PARKER, WOOD & CO. LTD.**—Durban. Commenced operations as a private company in 1860, limited liability company formed 1890. Engaged in ironmongery, crockery, agricultural, grocery, furniture, rough and soft goods business, with branches at Maritzburg, Harrismith, Vrede, Frankfort, Ficksburg, Johannesburg, Lake Chrissie, Carolina and Barberton. London agents, Wood & Parker, 21, Chiswell Street, E.C. 1.

DOUGHERTY & STEAD, Durban  
The Firm has commodious Warehouses.  
(See letterpress page 266)

#### ROGERS-JENKINS & CO.

**Inception.**—This firm of mechanical electrical and contracting engineers was established in 1892 by Mr A Rogers Jenkins the sole proprietor

**Activities.** The business of Messrs Rogers Jenkins & Co is of an extensive nature. In addition to representing many overseas firms of world-wide repute the firm caters for the requirements of the industrial engineering building and other industries the various departments being staffed with men having high technical qualifications and practical experience

**Engineering.**—This department specialises in the supply and erection of steam and internal combustion engines, boilers pumping

plants grinding mills concrete mixing and hoisting machinery ball bearing appliances railway harbour and municipal appliances

**Contracting.** Contracts are undertaken for the construction of asphalt and bituminous concrete roadways floors and roofs and jointless magnesite floors

**Manufacturing.** An interesting feature of the company's activities in this direction is the dissolved acetylene gas station. Here the gas is generated from calcium carbide and, after passing through the purifiers and driers, it is compressed into specially constructed accumulators or cylinders. This station was originally erected and equipped to provide dissolved acetylene gas as the luminant for the numerous Government lighthouses on the South African coast. The lighting apparatus

for these lighthouses is of the famous A.C.A. system for which the firm acts as sole representative in South Africa. Dissolved acetylene is to day used very extensively in the engineering industry for the welding and cutting of metals by means of the oxy-acetylene blow pipe. Practically every up to date workshop throughout South Africa is using the company's apparatus

**Concrete Works.** These were established to meet the requirements of the building industry concrete columns roofing tiles balusters panels baths and many other commodities being manufactured on an extensive scale. The firm was awarded a gold medal and a certificate of merit for its exhibits at the Pietermaritzburg and Durban agricultural shows

**Bankers.**—The National Bank of South Africa Ltd.

#### HANSFORD & HANSFORD, LTD.

**Inception.**—This company was formed in Durban in 1911 by Mr. C. J. Hansford, who has been associated with the timber trade for over 30 years

**Activities.**—Timber, hardware, and fencing materials form the main portion of the company’s activities. It specialises in the manufacture of “ready to erect” homes, constructed of wood-framing, with outer walling of asbestos cement sheets. The simplicity of the process of erection and the comfort and convenience of the model “Hansford Home” are fully explained in the firm’s illustrated catalogue of designs. Messrs. Hansford & Hansford Ltd. have also done much in popularising the use of ready-mixed paints

**Premises.**—The premises of the firm, situated in Pine Street, cover an area of two acres, and comprise the executive offices as well as the workshops, where the sawmills and general joinery plant are installed. The motive power used by the company is electricity

**Representations.**—Besides acting as distributing agents for many well-known building materials, the firm represents Messrs. White Cross & Co. Ltd., of Warrington, manufacturers of plain and barbed high strained fencing wires

**Staff.**—This comprises 40 Europeans and 50 natives.

**Head Office.**—8-12, Pine Street, Durban, P.O. Box 974. Branch office: Mooi and Main Streets, Johannesburg, mainly for the distribution of the company’s building specialities.

2. Panoramic View of Bay of Durban and Buffalo Collieries.
3. Office at The Point, Durban.

#### STAFFORD MAYER COMPANY (SOUTH AFRICA) LTD.

**Inception.**—In 1918 this company was incorporated in Mauritius by Mr Stafford Edgar Mayer to handle the Durban and Natal agency of the Natal Collieries, which were floated with Mauritius money. Employing capital from the same source the company was enabled to promote the Melville Sugar Co Ltd. (with mills at Stanger, Natal), for which it acts as agents and secretaries, also the Union Engineering Supply Co Ltd., and the Cletract (S.A.), Ltd., serving these firms as secretaries. Mr Mayer, in addition, largely assisted Mr R. A. Rouillard, the pioneer cotton-grower of South Africa on a large scale, in the foundation of the Candover Estates, Ltd., a company now planting yearly a minimum of 11,000 acres of cotton.

**Activities.**—The Stafford Mayer Company (South Africa) Ltd., besides acting as manufacturers' agents and representatives, merchants, shippers and commission agents, has opened a new department for representing overseas manufacturers and in this connection acts for Jute Industries, Ltd., of Dundee, Manchester and Calcutta. The manager in charge of this department has had great experience in soft goods, etc., enabling the firm to take charge on a commission basis of similar agencies for direct representation.

**Collieries.**—The three collieries for which the company are agents supply a high-grade Natal coal, and hold bunkering contracts with the leading steamship lines calling at Port Natal. The Bernica colliery manufactures coke of excellent quality.

**Tractor Agency.** The firm played an outstanding part in introducing to Natal and Zululand the agricultural tractor to aid operations in the sugar belt, and is well-known to millers and planters.

**Agencies.**—The firm holds agencies for three collieries having mines at Vryheid: Enyati Colliery, Ltd., Buffalo Colliery, Ltd. and Bernica Colliery, Ltd., also for the following companies: Coke Producers Agency, Matthews Wrightson & Co Ltd., at Lloyds; Jute Industries, Ltd.; Candover Estates, Ltd.; Cleveland Tractor Co. of Ohio, U.S.A.; Stafford Mayer & Co Ltd., of Port Louis, Mauritius, and the Melville Sugar Co Ltd.

**Offices.** Head office 30, Commercial Road, Durban (P.O. Box 1381). Branch office Wilson's Buildings, Point Road, Durban.

**Management.** General manager, Mr Stafford E. Mayer, Port Mauritius. Joint managers, Messrs F. H. W. Curtin and John Williams, Durban.

**Cables.**—"Stafmayer," Durban. Codes A B C 5th and 6th Edition and Bentley's.

#### UNION ENGINEERING SUPPLY CO. LTD.

**Inception.**—Registered in Natal, this firm of engineers and machinery merchants owes its inception to the enterprise of the Hon. Maurice Martin and Mr Stafford E. Mayer, both of whom have large vested interests in the country.

**Activities.**—The principal activities of the company embrace shipping, coal mines, sugar estates, cotton ginning and cultivating, wattle bark, sawmills, timber, flour and meal. It also supplies the materials for the maintenance of provincial roads and the requirements of corporations, contractors, etc.

**Agencies.**—The company represents amongst others the following: Luminus Cotton Gin Co. U.S.A. (cotton ginning plants), Skoda Works (industrial machinery), Jos. Dixon Crucible Co. (silica graphite paints),

THE UNION ENGINEERING SUPPLY CO LTD Durban.  
View of Showrooms

E. R. & F. Turner Ltd (flour and meal mills), A. Blyde & Co (steels), P. & D. Duncan (ploughs), Edge & Sons (steel wire ropes) and C. S. Milne & Co Ltd (oxy acetylene welding plants)

**Warehouse.** This, situated in Fisher Street, adjacent to the railway receiving and delivery sheds and close to the docks, consists of two floors each covering an area of 1,500 sq. ft.

**Territory Covered.** Natal, Zululand, East Griqualand, Basutoland, Transvaal and a portion of the Mozambique district.

**Staff.** 9 Europeans and a staff of natives. Manager: Mr H. J. Wood.

**Address.** -10, Fisher Street, Durban.

**Cables.** "Umengine," Durban. Codes: Western Union 5 letter and Bentley's.

#### JACK WEERHEIJM.

**Inception.** Established comparatively recently by Mr. Jack Weerheijm, commercial agent and broker, this firm possessed the happiest augury for success in the long and varied experience of its founder. World-wide travel had provided Mr. Weerheijm with practical knowledge of European, United States and Australian markets, and particularly (consequent on a long stay in the Malay Archipelago) of East Indian products.

**Activities.** The firm specialises in East Indian produce, comprising chiefly tea, coffee, cocoa, spices, sugar, rice, ground nuts, copra, fibres, coconut oil, citronella and kenanga oils, rattan, rubber, kapok and seeds. It acts in addition as a buyer of such South African products as maize, cotton, wattle bark and extract, and seeds. Transactions in these

goods are effected on a small commission basis, and a valuable trade, stimulated by the circulation of a regular market report, has been built up with the leading towns of the Union. At a recent exhibition in Durban the firm's stand devoted to East Indian produce received very favourable comment.

**Agencies.** Leading East Indian firms such as the Catz Java Trading Co. and Gyselman & Steup of Batavia are represented by this enterprise.

**Offices.** Colonization Chambers, 355, West Street, Durban.

**Cables.** "Jackagency," Durban. Codes: A B C 6th Edition and Bentley's Phrase.

**Bankers.** The Netherlands Bank of South Africa, Ltd., the Standard Bank of South Africa, Ltd.

JACK WEERHEIJM, Durban.  
Stand at Agricultural and Produce Exhibition.

**FOADEN & KENT.**

**Inception.**—This is a comparatively new firm, having commenced business in 1922. Its recent foundation does not, however, imply immaturity in trade operations, both partners having had long and varied experience among the largest wholesale houses of Durban.

**Development.**—The reputations for integrity and acumen acquired in the course of previous dealings have contributed largely to the success of this new joint concern, which has built up the soundest connection with local and up-country storekeepers.

**Address.**—The firm's premises, held on a long and valuable lease, are situated at 42-44, Commercial Road, Durban.

**Cables.**—"Twinkle," Durban. Codes A B C 5th Edition and Bentley's.

**Bankers.**—The Netherlands Bank of South Africa, Ltd.

**ARMSTRONG, HEMS, LTD.** This firm of advertising agents, contractors and consultants, which was established in Durban by Mr Thomas A Armstrong in 1920 on his return from active service in Europe, was previously known as Thomas A Armstrong. Though backward in the past as regards

has been associated with publicity work for many years, and is one of the most popular men in his sphere. Mr Armstrong, the managing director of the firm, personally controls three publications—"The N A C Review," a popular Natal motor publication, "The South African Cotton Growers' Journal," a most authoritative leading cotton publication, and the "African Trade Organiser," which has no superior as a trade journal in the country. The firm is always willing to supply any information on South Africa or adjacent territories, and enquirers will be placed under no obligation in seeking its assistance in this particular. Head Office—33-41, Acutt's Arcade, Gardiner Street, Durban, Natal. Cables—"Goodads," Durban. Codes Bentley's and A B C (5th Edition). Bankers—The National Bank of South Africa, Ltd.

**CLARK & THISELTON.** This company was established in the year 1880, and operates as customs, shipping, forwarding and general agents, bonded warehousemen, cartage contractors, Government baggage agents, coal and fire insurance agents. The docks are situated about two miles from the town, and goods for delivery to Durban merchants have, therefore, to be carted to their destination, but shipments for rail are forwarded from the steamer side to destination. The firm owns extensive bonded and free store warehouse accommodation. The sole partner and proprietor is Mr F J Lennox, who has been connected with the firm for over 35 years. The staff comprises 35 Europeans and a large number of Indians and natives. Agencies are held for the South African Collieries Ltd, the Phoenix Assurance Co Ltd, and the firm acts as distributing agent for Messrs William Cooper & Nephews Ltd, who manufacture sheep dips, for the Nestle & Anglo Swiss Condensed Milk Co Ltd, and for Messrs John Dewar & Sons Ltd. Offices Lennox Building 30, Gardner Street, Durban. P O Box 927. Branch Office Wharfside Point, Durban. Telephones Head Office 245, Branch Office, 523. Bond 570, Mr Lennox's (private number), 2449, Baggage department, 571, and stables, 110. Cables—"Vigilant," Durban.

**H. J. STRANACK & CO. LTD.**—This firm of machinery importers, merchants, representatives and exporters was founded by Mr H J Stranack in 1899. The showrooms and offices (owned by the company) are situated at 287, Pine Street, Durban, and are located in a double-storeyed building measuring 150 by 33 feet. The firm also occupies the adjoining premises, which are leased. The workshops, which are under the supervision of a qualified engineer, with a staff of skilled mechanics, are replete with the most modern machinery, and any kind of repair work can be undertaken. The staff numbers 28 Europeans and a proportionate number of natives. Representations are held for the following firms: Merryweather & Sons, Ltd, John Whitehead & Co, Fairbanks Morse & Co., Delco Electric Light, Akron Light (petrol gas light), Radio Technique, Barford & Perkins, Ltd, and the Melotte cream separators. H J Stranack & Co. Ltd, are interested in the representation of overseas manufacturers of general machinery, and are in a favourable position to cater for them. Exports comprise: corundum, kieselghur, fireclay, bricks and tiles (see article "Industries"). The company is a private one with a capital of £28,000, and has an annual turnover of £80,000. The directors are Mr. H. J. Stranack and Mr. C. Okell, M.C., A.M.I.E.E., A.R.T.C. Cables: "Stranco," Durban. Code: Bentley's.

FOADEN & KENT, Durban.  
Two Views in the Firm's Warehouse.

**Activities.**—The firm specialises in the supply of groceries and provisions, together with household hardware, brushware and oilmen's stores.

**Proprietary Brand.**—Particular attention is paid to the marketing of commodities bearing the firm's own trade-mark, "Twinkle." Under that brand are distributed several high-quality lines in groceries, hardware, brushware and disinfectants. Messrs Foaden & Kent are open to accept agencies for any of the foregoing lines, of which they carry stocks.

advertising, many up-to-date agencies have been established in the country, with the result that South Africa is now becoming known throughout the commercial world for the general excellence of its publicity work, and Armstrong, Hems Ltd have had much to do with this gratifying progress. They are the recognised agents of the Newspaper Press Union of South Africa, and handle the largest volume of business in the country. Mr. Armstrong has been connected with advertising practically all his life, while Mr. William Hems, who recently joined the firm,

**SYKES, WOOD & WILLS LTD.**—In South Africa, with its mixed races, speaking different languages, having different habits, each possessing distinctly different views, advertising requires a specialised knowledge if the best results are to be obtained. In the case of the European population alone there are two races to be considered—the English and the South African Dutch, the latter speaking the language known as “Africans.” All Government and official notices are printed in these two languages. In addition to the European population, there is also an immense native community, which is fast becoming an important buying factor, so that the problems relative to advertising are more complex than in other countries. It is therefore most important that any selling campaign should be based on actual knowledge of the prevailing conditions, and instructions should be placed with a competent firm of consultants in close touch with local conditions. In this connection the firm of Sykes, Wood & Wills Ltd. can offer special advantages, for it has been established for a considerable time, and, handling as it does a large number of important South African as well as overseas accounts, it is in a position to assist those who contemplate extending their market to Africa or the East. Capt. R. G. P. Wood is the managing director, and Mr. Stanley F. Ashmead-Bartlett, M.L.S.A.C. (Lond.), is the consulting director. Both have had many years’ experience in publicity work in South Africa, and Mr. Ashmead-Bartlett has held responsible positions as an advertising and sales manager both in England and America. The firm undertakes complete advertising and sales campaigns, including preliminary investigations, statistical reports, etc., controls

a well-equipped and efficient studio, and employs a thoroughly competent staff of copy-writers. Address: Gersigny Buildings, Leslie Street, Durban. P.O. Box 1647. Cables: “Propaganda.” Code: Bentley’s.

**AFRICAN SHIPPING LTD.**—Head office: Hatfield House, President Street, Johannesburg. Commenced operations as shipping forwarding and customs agents at Johannesburg in 1902. Durban branch opened in 1913. Cables: “Afriship.” All branches (See “Transport.” Shipping, this section).

**BEAUMANN, KNOWLES & CO.**—Hulston’s Buildings, Smith Street, Durban. Manufacturers’ agents. Represent the Ogilvie Flour Mills Co. Ltd., of Montreal. Cables: “Bomanoles.” Durban. Code: Bentley’s.

**BROWN, JAMES, LTD.**—Point Durban. Established 1878. Shipping and general engineers, metal foundries, blacksmiths, boiler-smiths, copper-smiths, fitters, turners, oxy-acetylene and electrical welders and ship-repairers. Also agents for the Phoenixcroft marine motors. Cables: “Bouler.” Durban. Codes: A B C 5th Edition and private.

**DUNDEE COAL CO. LTD.**—Durban. Commenced operations 1889. Owns leases and freehold property to the extent of about 19,500 acres, with a coal output of over half-a-million tons per annum. Telegraphic address: “Redstar.” Durban. Cables: “Coal.” Durban.

**DURBAN NAVIGATION COLLIERIES LTD.**—Durban. Owns two well-equipped collieries, producing about 60,000 tons per month. The coal is shipped to India, Ceylon, etc., and is also consumed locally, and supplied for bunkering to many steamship companies.

**MILLER, WEEDON & CO.**—Point, Durban. Established in 1806 by Messrs. Spence and Weedon. Landing, shipping, forwarding agents and bonded warehousemen. Cables: “Weedon.” Durban and Lourenço Marques. Codes: A B C (4th) and A 1.

**NATAL STEAM COAL CO. LTD.**—Leuchars’ Buildings, 320, Smith Street, Durban. Colliery: Wessels Nek. Operations commenced in 1897. Produces high grade steam coal. Telegrams and cables: “Steam.” Durban.

**PARRY, LEON & HAYHOE LTD.**—P.O. Box 998, Durban. Established at Johannesburg in 1904 as Parry, Leon & Co. Act as shipping, steamer, forwarding and insurance agents. Branches at East London, Port Elizabeth and Johannesburg. Telegrams and cables: “Freights.”

**SAVORY, WM. H., & CO.**—Southern Place, Smith Street, Durban. Established 1819. Clearing, shipping, forwarding and commission agents, and cartage contractors. Bond and duty paid warehouses in Shepstone Street and Hospital Road respectively.

**STEEL, MURRAY & CO.**—325, Smith Street, Durban. Established 1870. Steamship agents, general merchants, importers, and exporters. Branch at Pietermaritzburg. Agents in the United Kingdom, Webster, Steel & Co., London and Glasgow.

**TSHOBA COAL SYNDICATE LTD.**—9a Leuchars’ Buildings, Durban. Conduct an export and bunkering coal business, owning a colliery in the Vryheid district which produces 9,000 tons of first grade Natal steam coal per month. Cables: “Tshoba.” Durban.

## OTHER CITIES AND PORTS

### DUNDEE

The town of Dundee, which dates from 1882, is situated on the Biggarsberg Range, in the heart of the Natal coalfields. The present population is roughly 4,000. Dundee acquired early notoriety in the South African War, the battle of Talana Hill being fought there on October 20, 1899, when the gallant General Penn-Symons met his death. The town is well lighted by electricity, and has an ample and pure water supply from the Impati Mountain. King Edward’s Park, the Coronation Gardens and the Berea provide splendid facilities for sport and recreation, and there is a good golf course. There are several fine public buildings, the Court Buildings, Post Office, Municipal Offices and St. James’ Church being prominent. Outside the station is a handsome War Memorial to those who fell in the Great War.

### ESHOWE

The capital town of Zululand and interesting by reason of its associations with former wars, Eshowe is 109 miles by rail from Durban, and is the centre of a large district under sugar cane, cotton, and tobacco.

### ESTCOURT

Estcourt lies among the hills at an altitude of 3,138 ft., in the centre of the maize fields of Natal. The town, which is a rapidly developing industrial centre, has an assured future, being able to supply cheap electric power and water, and to offer exceptional educational and building facilities.

### GINGINDHLOVU

Seven miles from the coast, Gingindhlovu, in Zululand, derives its name from an important battle during the Zulu war. Most of the country round is under sugar cane.

### GLENCOE

A railway junction on the Natal main line, and the centre of a coal mining district, Glencoe was the scene of one of the earliest battles in the South African War.

### GREYTOWN

The centre of a fine farming district and of a growing wattle-bark production, Greytown lies at an altitude of 3,581 ft., and has a population of about 3,300. At a small farmstead a mile and a half from Greytown one of the greatest of all South Africans—General Louis Botha—was born.

### LADYSMITH

This is one of those towns whose size and population bear no relation to its importance in history. Named after the wife of Sir Harry Smith, famed for his gallant ride from Capetown to Grahamstown in six days, Ladysmith became a municipal borough in 1891, and was for many years the terminus of the railway to the Transvaal. But in 1899, when the South African War broke out, the town found the eyes of the world focussed upon it and the dogged courage which for four months the defenders put up. Since those days Ladysmith has grown in size and activity. The town lies at an altitude of 3,284 ft. above sea-level, and is considered to be exceedingly healthy. The Corporation controls the electric lighting and power, and has built one of the finest Town Halls in South Africa. Within 40 miles by road is the Great National Park (see “Tourist Resorts”), and its proximity is a great factor in the popularity which Ladysmith now enjoys as a holiday resort. The population in 1921 was 6,807.

### NEWCASTLE

Situated on the main line midway between Johannesburg and Durban, this pretty

and growing town lies at the foot of the Drakensberg range of mountains. Newcastle is one of the busiest centres of the Natal coalfields, and is acquiring increased importance as a pioneer of the iron industry.

The population in 1924 was 5,784. The Municipality controls the water supply, electric light and power and fire brigade, there is a large Government hospital, and the many handsome public buildings include the Town Hall, Public Library, Newcastle Club, and Masonic Hall. Then there is the beautiful Lynch Gate War Memorial.

The large and attractively laid-out Park along the banks of the Incaandu River provides every facility for cricket, football and hockey, while tennis, golf, bowls and racing flourish. The nearby collieries are the most important feature of Newcastle’s industrial activities, but mention must be made of the fine works of the Newcastle Iron and Steel Company Limited, and the important carbide factory at Ballengeich. There are also up-to-date brick making, furniture making, and tanning plants, and two large cereal mills.

### PORT SHEPSTONE

Port Shepstone is situated at the mouth of the River Umzimkulu in the south of Natal, and was created a full fiscal port in 1893. Its trade is mostly with Port Natal, and is carried on by local small craft. The entrance to the river is choked by a sand-spit, and the open channel to the sea is very narrow, with an average depth of from 4 ft. 9 in. to 5 ft. 3 in. The port is, however, being rapidly improved. Port charges are the same as at Capetown.

### VRYHEID

An important railway junction on the Natal line, the Hlobane collieries being 17 miles distant, Vryheid is some two miles from that junction. Population over 4,000.

PICKING COTTON, EAST TRANSVAAL.

## AGRICULTURE

### GENERAL DATA

**S**OUTH AFRICA is a country of infinitely varied conditions, having climatic relations with both the South Pole and the Equator. In the past the mining activities of the Transvaal have bulked largest in the story of the country's development, but it is by agriculture that the latter must eventually primarily stand, and it is to the agricultural possibilities of the four Provinces that the eyes of the most far-seeing of their statesmen are turned.

At present it may be said that the agricultural industry is largely in its infancy. Many causes have militated in the past against successful farming, the principal being an inadequate rainfall, the low yield per acre, the impoverishment of the soil by overstocking and grass-burning, and an indifference to scientific methods of soil fertilisation. Increased irrigation procedure, intensive farming, and a growing attention to scientific husbandry have, however, during the present century accomplished great things, as the growth of the Union's maize crop and the enormous development of fruit farming (to mention only two instances) testify.

In the last year for which complete statistics are available the total value of the agricultural production of the country at market prices was £81,578,000, while according to the last agricultural census there were 88,340 occupied farms and agricultural holdings in the Union. The area of farms was approximately 200,000,000 acres, of which less than 10,000,000 acres were under cultivation.

#### DEPARTMENT OF AGRICULTURE.

Under the South African Act the Union Parliament has the power to administer agricultural affairs itself or to delegate the whole or any part of the work to the Provinces. When the Union was established the Government thereof decided to exercise that power itself, and a Minister of Agriculture was appointed, with a fully equipped Department of Agriculture. That Department is organised

on lines similar to those which characterised the former Transvaal Department the latter having been modelled largely upon the Department of Agriculture of the United States of America. As the head of the Department, the Minister is responsible to Parliament for the acts and policy of his Department, and next in authority is the Secretary, who is the permanent head of the Department and Accounting Officer, being assisted by an Under-Secretary. The activities of the Department are maintained by 18 Divisions and Offices, presided over by scientific and technical officers. The headquarters of the Department are at Pretoria.

**EDUCATION.**—There are two Universities in South Africa having Faculties of Agriculture and five Schools of Agriculture. These institutions are geographically situated so as to serve definite objects applicable to the climatic conditions prevailing in their respective areas. The Stellenbosch University, in the town of Stellenbosch, about 17 miles from Capetown, serves that portion of South Africa which enjoys a temperate climate and a winter rainfall. The Transvaal University College, in Pretoria, deals with conditions where the climate is sub-tropical, and the heaviest rains fall during the summer months. These two main areas are subdivided amongst the five schools of Agriculture situated at Elsenburg, Grootfontein, Glen, Potchefstroom and Cedara respectively. South Africa justly prides herself on her admirable system of education, and these schools, by devoting a great deal of time to the investigation of conditions peculiar to the areas they serve, have done a great work in advancing agriculture generally. Teaching activities have also been extended beyond the confines of the schools to the doors of the farming population by means of itinerant lectures and co-operative experiments; while short courses of instruction for farmers and their wives draw them to the schools.

**IRRIGATION.**—Irrigation farming in South Africa is as yet somewhat limited. Vast

### PRODUCTS

tracts of country are entirely devoid of perennial streams, and though in the aggregate quite a large amount of spasmodic irrigation has been done with the aid of dams across veld drainage-lines, windmills drawing upon borcholes, and flood systems, the tremendous area of the Karoo still remains un-irrigated. The present policy of conservation may be said to have begun with the end of the War, and already there are nearly a score of projects completed or under construction. Excluding private undertakings, well over £10,000,000 has been invested in these storage schemes, and the irrigable areas totalled in 1925 more than 250,000 acres.

The largest and costliest schemes are the Hartbeest Dam, on the Crocodile River, between Pretoria and Rustenburg, the impounded waters of which are calculated to suffice for 31,800 acres, the Sundays River works known as Lake Mentz, which extend 30 miles inland from the mouth of the stream, and the scheme which derives water from the Olifants River, near Van Rhyn's Dorp grazing grounds. There are also large acreages under irrigation on the Upper Modder, near Graaf Reinet, and in the Cradock section of the Fish River. Courses of instruction in irrigation and its significance in the exploitation of Union lands are part of the curriculum of the agricultural colleges.

**LAND BANK.**—The Land and Agricultural Bank of South Africa was established in 1912, its operations and policy being controlled by a central board consisting of a Managing Director and five ordinary members, each of whom is nominated by the Governor-General. The central board meets in Pretoria, where the bank's head office is situated. The main business of the bank is to make advances to farmers on first mortgages, and for fencing and dipping purposes, and also to finance co-operative societies formed by farmers within the Union.

During the year 1925-26 some 3,400 applications for ordinary loans were received, representing £2,366,315, of which

number 2,800 applications for an aggregate amount of £1,665,785 were granted. The total outstanding advances on mortgage at March 31, 1926, were over £8,000,000, for fencing of farms £783,880, and to co-operative societies and companies £1,066,500. In its 13 years the bank has advanced just under £13,000,000 on mortgage to 24,187 applicants. The bank's capital on January 1, 1926, was £7,698,304, to which must be added £742,883 received under Parliamentary votes.

**LAND SETTLEMENT.** Under the various Land Settlement Acts which have been passed by the Union Parliament, the Minister of Lands is empowered, on a recommendation from the Land Board of the Province in which the land is situate, to allot Crown Lands and to purchase, from funds appropriated by Parliament for the purpose, privately owned land for sub-division into suitable holdings for agricultural and pastoral purposes. Advances may be made to allottees for the purpose of acquiring stock, equipment, and other things necessary for the development of their holdings; permanent improvements may also be effected on holdings by the Government and the cost

**SOCIETIES AND UNIONS.**—The importance of agriculture to the Union is reflected in the activities of the rural community in safeguarding and furthering their many interests through the medium of societies of farmers formed for co-operation with the Government and generally for mutual assistance in coping with the problems of the industry. There are altogether some 400 Agricultural Societies and Farmers' Unions, having as members a great many farmers representing the most influential and progressive section of the agricultural community. An important function of these bodies is the promotion of the various agricultural shows, of which those organised by the following societies at the places mentioned are the most popular: Western Province Agricultural Society (held at Rosebank about the end of February), Port Elizabeth Agricultural Society (held at Port Elizabeth in March), Central Agricultural Society (held at Bloemfontein in March), Witwatersrand Agricultural Society (held at Johannesburg at Easter), Pretoria Agricultural Society (held at Pretoria at the end of May), Royal Agricultural Society (held at Pieter-

## PRODUCTS

The principal agricultural products of the Union, in order of commercial importance, are maize, wheat, and the various fruits for which South Africa is so well known. These are dealt with as follow:—

**APPLES.**—These grow in many parts of the Union to perfection, more especially on the cold high veld of the Transvaal and the Orange Free State and in the southern coastal districts of Cape Province. In the former Provinces there is some risk of damage from hail. There are over 2,500,000 trees in the Union, and the value of fresh apples exported in 1924 was £4,625. Some 200,000 lb of dried apples were also produced.

**APRICOTS.**—Apricots are grown chiefly in the Paarl, Tulbagh, Stellenbosch, Robertson, Worcester, Malmesbury, and Somerset East districts of the Cape. They are largely cultivated for the dried fruit trade, 1,143,115 lb being so produced in a recent year. Exports of fresh fruit increased in value from £1,769 in 1922-23 to £3,225 in 1923-24.

Opening of the Rosebank Show at Capetown, 1925, by His Excellency Major-General the Right Honourable the Earl of Athlone, G.C.B., G.C.M.G., G.C.V.O., D.S.O., Governor-General

thereof added to the purchase price of the land. All leases are for five years. No rent is payable during the first year, two per cent per annum, calculated on the purchase price, is payable during the second and third years, and 3 per cent during the fourth and fifth years. A lease may, at the discretion of the Minister, be extended for a further period of five years, in which event rent at the rate of 4 per cent per annum is payable. If the option of purchase is exercised during or at the expiration of the lease period, the purchase price becomes payable over 20 years in equal half-yearly payments, interest on the purchase price being calculated at the rate of 5 per cent per annum. The limit of the advances that can be made to a settler for the purchase of stock and equipment is £500. Settlers are not necessarily entitled to receive advances, which can only be granted on the recommendation of a Land Board. All rights to minerals, metals, mineral oils, and precious stones are reserved to the Crown, the lessee's or grantee's rights to compensation being prescribed.

maritzburg at the end of June), and Durban and Coast Agricultural Society (held at Durban about the beginning of July). Most of the Societies are affiliated to one or more of the four provincial Agricultural Unions, which function from Port Elizabeth, Durban, Bloemfontein, and Pretoria respectively. From each of these provincial Unions ten delegates are chosen to form the South African Agricultural Union, which meets annually for the purpose of deliberating on matters affecting agriculture generally throughout the Union.

**CO-OPERATIVE MOVEMENT.**—There has lately been a great development of the co-operative movement in every province of the Union, and farmers of all kinds are keenly interesting themselves in the formation of co-operative marketing associations. An Act regulating the constitution of Co-operative Agricultural Societies and Companies came into operation on August 14, 1922, and is administered by a Registrar.

There were registered in June 1925 over 270 co-operative associations, with a total membership of 39,804.

**BANANAS.**—These are chiefly grown in Natal, and also on certain portions of the South Eastern Coastal district of Cape Province. Their cultivation is largely in the hands of Indians. There is only a very small export trade, the demand for the fruit within the Union being a large one.

**BARLEY.**—The conditions which favour the growth of barley are those which obtain most in the western and south-western district of Cape Province. In 1923-24 there were 58,992 acres under cultivation, of which some 50,000 acres were in Cape Province. The total production of grain in that year was 50,154,450 lb, compared with 58,235,000 lb. in 1922-23.

**CITRUS FRUITS.**—See "Lemons," "Oranges," also special article on "The Fruit Industry."

**COFFEE.**—Coffee can be grown in Natal and in the warmer parts of the Transvaal, but various pests destroyed many of the plantations some years ago, and production is now almost negligible.

**COTTON.**—See special article.

1. SUGAR CANE FIELD, NATAL.  
2. MAIZE FIELD NEAR PRETORIA.  
3. VINEYARD, CAPE PROVINCE.

**DRIED FRUITS.**—See special article on "The Fruit Industry"

**FIGS.**—Figs of many varieties flourish in most parts of South Africa, and give heavy crops when conditions are specially favourable. In a recent year some 243,000 lb. of dried figs were produced.

**FOREST PRODUCTS.**—South Africa is not a well-timbered country, her acreage of forest being in the proportion of one to New Zealand's 20, Australia's 250, and Canada's 600. Timber forests are found only on the seaward slopes of the mountain ranges, usually within 100 miles of the coast, the best timbered areas being in the neighbourhood of George and Knysna, in Cape Province. The principal species comprising these and other forests are the yellow woods, used for flooring and other building timbers, assegai and black ironwood, used for wagon building, black stinkwood, used for furniture, and kamassi-wood, or "knysna" boxwood, which is exported to Europe for weavers' shuttles. In the scrub and savannah forests of the veld country of the Transvaal, Natal and Cape Province various kinds of acacia predominate, but timbers of good quality, such as wild olive, karee-boom, camel-thorn, knoppiesdoorn, African teak, and kajatenhout, are produced. At the beginning of 1924 the forest reserve areas under the control of the Forest Department comprised 1,738,834 acres demarcated and 893,145 acres undemarcated, representing a total of 2,631,979 acres. The total yield of timber from Government forest reserves and plantations for a recent 12 months amounted to 5,039,669 cubic feet.

**WATTLE BARK.** This is by far the most important of the forest industries of South Africa. It is now a well-established one, and promises to have a future of continued expansion and prosperity. It is centred chiefly in Natal, which province contains some 230,000 acres out of the total of 300,000 acres in the Union planted with wattles. These are privately-owned plantations, the area of wattle on the Government plantations being insignificant in proportion. So successful has the cultivation of wattle (a native of Australia) in Natal become that exports of bark are made yearly to the Commonwealth. The principal use of the bark is for tanning purposes, and the waste wood of the plantations is now being utilised for the distillation of acetic acid, alcohol, and other products.

**FRUITS.**—See special article on "The Fruit Industry" also separate fruits, e.g., "Oranges"

**GRAPE FRUIT.**—This citrus fruit (locally known as pampelmoes) has never been extensively grown in South Africa, but an assured place for it is now being found on the London market and exports are increasing.

**GRAPES.**—See "Viticulture."

**GROUND NUTS.**—These are known also as peanuts and monkey nuts. In South Africa it is a crop of increasing importance in the veld areas and in many parts of the middle veld, the leading areas in production being Pietersburg, Waterburg, Zoutpansberg, Barberton, and Pretoria, in the Transvaal. The nuts are used in the preparation of products for human consumption, while the cake resulting from the expressing of the oil makes a palatable and nutritious cattle-food. Production grew from 7,301,000 lb. in the year 1922 to 11,785,000 lb. in 1923 and 14,378,000 lb. in 1924, of which last total 9,165,000 lb. came from the Transvaal.

**HOPS.**—Hops were at one period grown at Newlands, near Capetown, and at George,

but after a time their cultivation in both localities was discontinued. In recent years efforts have been made by a large brewery company to re-introduce the hop into South Africa, and good results have again been obtained in the George district. (See also under "Commerce.")

**JUTE.**—The plant *Juncus cannabinus*, which is described as a jute substitute, grows wild in parts of the Transvaal, and its cultivation is now being undertaken. It is considered possible that within a few years South Africa may be able to produce from locally-grown material the bags and sacks now imported annually in large numbers. (See also under "Commerce.")

**KAFFIR CORN.**—In South Africa the term "Kaffir corn" is applied to all the grain sorghums, the reason being that red and white Kaffir corns comprise the bulk of the sorghum production. These have long been used by the natives as a food and also in the preparation of an alcoholic drink. On the farms kaffir corn is grown for hay, fodder, silage, or grain production. It now ranks as one of the "World's Crops," and increasing interest is being taken in it throughout the

Union, the acreage devoted to it having increased, while production grew from 188,000,000 lb. in 1904 to 246,000,000 lb. in 1923-24.

lucerne was estimated at some 91,000 acres, and the output of seed, which is now exported in considerable quantities, at 1,755,000 lb.

**MAIZE.**—This is by far the most important agricultural crop produced in South Africa, firstly because it is the staple food of the larger part of the population, and secondly because of the enormous economic value of the product as a stock-feed and for export. Prior to the Anglo-Boer War (1899-1902) insufficient maize was produced to meet local requirements, but maize-growing afterwards assumed great importance, and now occupies the same position as wheat does in Australian and Canadian agriculture. That the industry has made rapid strides is shown by the fact that the total production increased from 301,109 tons in 1904 to 2,416,200 tons in 1925. In just over a score of years, therefore, production increased by over 600 per cent. In 1925, when the output totalled 24,162,000 bags, there was an increase of 12,923,000 bags, or 115 per cent, over 1924, and an increase of 4,308,000 bags or 22 per cent over 1923. The crop of 1923 was the largest then recorded, so that 1925 established a new record. The

pherie conditions in the Union produce a grain with a lower moisture-content, and this grain, thereby less liable to injury during transit, is more suitable for export as well as for manufacturing purposes.

**GRAIN ELEVATORS.**—See under "Railways."

**MARKETING.**—The marketing of maize in the Union, from the farmer's point of view, is rapidly becoming revolutionised. The old system of disposing of the crop for cash to the local storekeeper is giving way to marketing through the co-operative societies and similar organisations. The elevator system will still further improve marketing, to the advantage of the producer. In the past the farmer in many cases had to dispose of his crop as soon as he had reaped it, at a time when prices usually are lowest. With the elevators this difficulty is largely removed by the issue of negotiable certificates for the maize delivered to the elevators, which provide good security for advances from the local bank.

**MANNA.** Known elsewhere as millet, manna was probably the first fodder crop to be grown in the Transvaal, and in that

PLOUGHING WITH OXEN IN SOUTH AFRICA.

TRACTOR PLOUGH.

**LEMONS.**—Lemons are successfully grown in South Africa, though the fruit has not yet been exported in any quantity, the value of exports in 1924 being only £125. The best lemon orchards are in Cape Province and the Transvaal.

**LUCERNE.**—Lucerne (known in South America as alfalfa) is a heavy perennial which provides the best of South Africa's forage crops. It defies heat and grows to perfection in the arid and semi-arid areas of the Karoo. The hay is used for feeding dairy cattle and young growing animals, as pasture it has a high carrying capacity and produces large gains. It is also unexcelled as a green feed for dairy animals. Ostrich farmers consider lucerne pasturage essential in order to produce first-class feathers. The districts of Oudtshoorn and Graaf Reinet are recognised as important lucerne-growing regions. In 1923-24 the total area under

crop for that year was distributed as follows: European-grown, 20,964,000 bags; native-grown, 3,198,000 bags. By provinces, the output in 1925 was: Cape Province, 3,083,000 bags; Natal, 1,924,000 bags; Transvaal, 8,161,000 bags; Orange Free State, 10,994,000 bags.

The 1926 maize crop was expected to exceed 1,150,000 tons, or 44 per cent of the 1925 yield.

**DISTRIBUTION.**—Maize (or mealies) is grown in almost every district of the Union, but the main area of production lies roughly east of a line drawn between East London and Mafeking, which contains the important maize growing districts of Heidelberg, Ladybrand, Thaba Nchu, and Winburg in the Orange Free State, and Bethel, Heidelberg, Krugersdorp, Lichtenburg, and Standerton in the Transvaal. The maize zone in South Africa possesses two distinct and valuable advantages over the famous corn-belt of the United States. The growing season is longer by from four to seven weeks, and this makes the season for planting a considerably more extended one. Again, the drier atmos-

province and the Orange Free State it is extensively raised in dry areas, especially where the soil is poor. Of the 67,000 acres under manna in a recent year, some 44,000 were in the Orange Free State and 16,000 in the Transvaal.

**MARKET GARDENING.**—The local demand for vegetables of all kinds is good. Naturally the best markets are to be found in the largest cities. The business is primarily in the hands of Asiatics, with whom the whites find it hard to compete. Rates for the conveyance of vegetables come under the heading of "South African Produce" and are extremely reasonable.

**MANGOES.**—This most attractive fruit has only been exploited in South Africa during the past few years, but local prices proving remunerative, many hundreds of trees have been planted, the total number in 1924 being roughly 140,000, while the value of exports was £175.

**MELONS.**—The variety known as the Winter Melon is successfully cultivated. In 1924 exports were valued at £620.

**NECTARINES.**—These are grown in almost every district in the Union, and are a profitable culture. In 1924 the value of the 15,055 boxes exported was £3,883, as against £6,783 in 1923.

**NUTS.**—The walnut and the almond are the only nuts planted on a commercial scale, but the supply of both is as yet quite unequal to the demand.

**OATS.**—Oats in South Africa are largely grown for forage, and the crop is sometimes even more valuable than wheat. In 1923-24 the area under crop totalled 346,837 acres, of which 296,240 acres were reaped and 50,297 acres were fed off by stock. Production of grain increased from 165,959,000 lb in 1922 to 183,285,000 lb in 1923, and 211,069,350 lb in 1924. More than two-thirds of the total production is from Cape Province.

**OLIVES.** The olive in South Africa has passed the experimental stage, and the best European varieties are grown satisfactorily in the Paarl District of the Cape and the Waterberg District of the Transvaal. There is a large demand for the pickled olive in Johannesburg, and success has attended the production of olive oil on a small scale in the immediate neighbourhood of the Paarl.

**ORANGES.**—Oranges and naartjes (tangerines) have been grown in South Africa ever since the time when Van Riebeeck, the first Dutch Governor of the Cape of Good Hope, laid out a garden on the slopes of Table Mountain about 1655. The different varieties of orange have always done well, large areas having been planted in Cape Province, the Transvaal, and Natal, the mandarin and tangerine varieties coming especially from the last-named Province. The most popular and generally planted varieties throughout the Union are the South African Seedless (known also as the Washington Navel), Valencia Late, Du Roi, Jaffa, St Michael, and Mediterranean Sweet. There are also the pineapple orange, blood orange, and many others.

There are approximately 1,500,000 grafted and 500,000 seedling orange trees in the Union, and about 450,000 naartje trees. The export values in 1924 were Oranges £197,278 and naartjes £12,182, compared with £193,715 and £6,245 respectively in 1923.

**PAPAWS.** This is a semi-tropical fruit extensively planted in the Eastern Transvaal for the Johannesburg market. The first crop is usually harvested at the end of the first year, after two or three years the trees become unprofitable.

**PEACHES.**—This is the most widely distributed of South Africa's deciduous fruits, the main districts of cultivation being Stellenbosch, Paarl, Ceres, Worcester, Tulbagh, Caledon, and Robertson in Western Cape Province, Estcourt, Newcastle, and Utrecht in Natal, Potchefstroom, Pretoria, Rustenburg, Middelburg, Heidelberg, Krugersdorp, Ermelo, Johannesburg, and Wakkerstroom in the Transvaal, and Bethlehem, Bloemfontein, Kroonstad, Frankfort, Senekal, Harrismuth, Vrede, Lamburg, and Ladybrand in the Orange Free State. Over 6,000,000 trees are in existence, and the value of fresh fruit exports in 1924 was £23,652, as against £40,132 in 1923. In addition, some 2,500,000 lb of dried fruit were produced.

**PEANUTS.**—See "Ground Nuts."

**PEARS.**—Pear-growing is carried on to a much greater extent in the Western Cape Province area than in any other part of the Union. Fresh fruit exported in 1924 was valued at £82,450, as against £153,510 in 1923.

1. Citrus Farm, East Transvaal.  
2. Transporting Lucerne.  
3. A Settler's Holding, Northern Transvaal.  
4. Spraying Trees, Cape Province.  
5. Papaw Tree, East Transvaal.

**PINEAPPLES.**—These grow in different parts of South Africa to perfection, the best being produced in the Albany District of the Cape, whilst in Natal a fine variety of the Queen Pine is grown. Exports in 1924 were valued at £12,660, compared with £9,914 in 1923.

**PLUMS.** Plums and prunes are grown principally in the Western Cape district and round Pretoria, Johannesburg, and Potchefstroom in the Transvaal. The Japanese varieties are in favour, and there is a small export trade worth about 120,000 a year. In a recent year over 1,300,000 lb of dried prunes were produced.

**POTATOES.**—The potato ranks third in importance among the crops produced in the Union, being exceeded only by maize and wheat. It is grown in every Province, the leading districts in production being Humansdorp and Stellenbosch in the Cape, Newcastle and Estcourt in Natal, Pietermaritzburg and Ladybrand in the Orange Free State, and Bethel and Middelburg in the Transvaal. The total yield in 1924 was 211,770,600 lb as against 211,085,000 lb in 1923.

**RICE.**—Chiefly owing to the absence of swampy land, rice has not been cultivated to any great extent in South Africa. Trial crops in Natal, however, between the Tongaat River and Stanger have shown good results, and there is a future for the crop if planted under suitable conditions and prepared for the market with special machinery.

**RYE.** Of the smaller cereals, rye is the least grown in South Africa, the variety in general use being known as Early Cape Rye. It is raised almost exclusively in the Cape Province for feeding purposes, and has taken an important place on sheep farms to provide green feed for lambing ewes. Production fell from 41,804,000 lb in 1923 to 37,825,200 lb in 1924.

**SUGAR.** The culture of sugar in the Union is confined to the Province of Natal, where it was introduced in 1848, when a few canes were imported from Bourbon. For many years the progress of the industry was slow, due principally to a restricted market. Even after the Anglo-Boer War, when increased cultivation resulted, the industry suffered severely from the dumping of German beet-sugar, and the acreage of cane reaped showed a gradual decline. Since 1910 there has been a steady development of cane growing in Zululand, and in the whole Province production, which was 82,000 tons in 1910, reached in 1924 a total of approximately 200,000 tons of sugar, the area under cane being something over 200,000 acres. In 1925 production showed a reduction of about 40,000 tons, falling to 160,250 tons, due to unusually dry weather in the early part of the season.

The total output for the 1925-26 season amounted to 239,463 tons, a record in production.

**CRUSHING PLANTS.**—Milling units vary in size from small plants turning out from 500 to 1,000 tons of sugar to large modern factories with outputs up to 20,000 tons. The tendency to-day is towards decreased number and increased size of units. There are at present 27 sugar mills between the Umzimkulu and Umfolosi, of which five are in Zululand, fourteen between the Tugela and Durban, and eight between Durban and the Umzimkulu. One of the north coast mills is a small plant purchased a few years ago by Indians. All others are European-owned. The total crushing capacity is approximately 2,500,000 tons of cane for the season from May to December inclusive. Although many years ago efforts

were made to interest natives in the manufacturing side of sugar, and at least one mill was erected by the Government of the day for their use, no progress whatever was made, the mill ultimately coming into European ownership. With one or two exceptions, the mills are equipped for making white sugar. Up till two years ago two refineries on the environs of Durban were supplied with refining crystals from certain of the mills, now only one refinery is working. All the mills employ the sulphitation process, with the exception of one, which has adopted carbonatation.

The total capital in this industry is estimated at little short of £5,000,000, and employment is afforded to at least 50,000 persons. The industry is also of course, the foundation of numerous associated industries, such as jam making, fruit canning and confectionery manufacture, all of which are rapidly expanding.

**LABOUR.** At one time the labour employed in the sugar industry was mostly Indian, but during recent years the proportion of Indians has rapidly decreased. At present the majority of the labourers employed both on the estates and in the

of one sixth of the duty given to Empire grown sugar puts other buyers out of the market. To South Africa this preference is of great importance, representing as it does roughly 3s 10d per 100 lb on sugar exported.

**SUNFLOWERS.** These are grown for seed in parts of the Transvaal and in Southern Rhodesia, some 4,000,000 lb of seed being produced annually.

**TEA.** Tea is grown at present only in Natal, where it thrives best at an altitude of about 1,000 ft in the neighbourhood of Stanger. The restrictions placed on Indian immigration into Natal by the Government of India have seriously hampered the industry, the output of green tea having fallen from 7,166,364 lb in 1915-16 to 2,861,745 lb in 1922-23. In 1923-24 output was increased to 3,514,967 lb. This resulted in the production of over 900,000 lb of manufactured tea.

**TEFF GRASS.** This is an introduced hay grass, and has become very popular in South Africa, being sown as a rotatory crop with maize. Owing to the extreme smallness of the seed, great care is needed in sowing and

that almost any kind of wine can be produced. The most important viticultural districts are Paarl, Worcester, and Stellenbosch. Less important are Robertson, Montagu, Ceres, Malmesbury, Caledon, Tulbagh, Piquetberg, and Cape. Outside of these areas the industry is negligible. Vines are also grown to produce table-grapes and dried raisins. Groot Constantia, the homestead of the Government wine-farm near Wynberg, was unfortunately destroyed by fire on December 19, 1925.

**PESTS.** Phylloxera first attacked the Cape vineyards in 1886 and spread with great rapidity, disease-resisting vines being introduced from France in 1892. Most of the vineyards have been reconstructed with American vines, on which wine-making varieties have been grafted. The climate of South Africa generally does not favour the development of diseases, and the worst fungoid and insect pests of Europe are unknown.

**PRODUCTION.**—The following are the latest available figures of production for the year ending August 31, 1924: 492 leaguers of brandy, 240 leaguers of grape brandy, 631 leaguers of vinegar, 720 leaguers of

1. HARTEBEESTPOORT DAM, NEAR PRETORIA.

2. ON A NATAL FARM

mills are natives, of whom about 40,000 work during the cutting season. Europeans are employed on the large estates as managers, chemists, engineers, and overseers, and in work of a technical nature in the mills and refineries.

**MARKETING.**—Natal's production of sugar has increased at greater ratio than South African consumption, exports having risen from 2,790 tons in 1910 to 39,181 tons in 1922-23, while the amount retained for consumption in the country increased from 111,531 to 133,687 tons during the same period. Until July, 1923, Mozambique had the privilege of sending sugar into the Transvaal on equal terms with Natal. Since then Mozambique has had to pay customs duty and has lost the advantage of preferential railway rates. The consequence has been an additional absorption of from 15,000 to 20,000 tons of Natal sugar, raising the annual quantity to be supplied to between 145,000 and 150,000 tons. Exports are now in the region of 50,000 tons, most of these going to the United Kingdom, where the preference

establishing the crop, but once established it is a rapid grower and yields a palatable and nutritious hay. Some 250,000 acres were under production in 1923-24.

**TOBACCO.**—See special article.

**TOMATOES.**—Tomatoes are at present grown as a market-garden product, production for the Rand markets being a considerable industry in the Barberton district. It is hoped in time to build up an export trade, there being no reason why South Africa should not be able to supply English requirements.

**VITICULTURE.**—The vine has been cultivated in South Africa from as far back as 1653, and at one time South African wines had a deservedly high reputation in Europe. The demand then fell off, owing largely to failure to supply a uniform quality. To-day, however, it is possible to secure large quantities of wine which will compare favourably with the same type of wines produced in any other country. The most modern methods of wine-making are in force, and the climate of the country is such

mos komfyt. 24,069 leaguers of superior wine, and 33,167 leaguers of other wine. (A leaguer equals approximately 120 gallons.)

**WHEAT.**—Wheat can be grown in many parts, but, generally speaking, South Africa is not a wheat-country, and cultivation is confined almost entirely to Cape Province, the South Western and Queenstown regions being the best wheat-growing districts. In 1923-24 the area under crop amounted to 380,610 acres, of which 367,994 acres were reaped and 12,616 acres were fed off by stock. The following table shows the production of grain by provinces in the years named—

PROVINCE	1922-23 lb	1923-24 lb
Cape Province	298,578,600	305,056,200
Natal	652,600	490,200
Transvaal	44,003,000	33,405,000
Orange Free State	17,343,000	13,747,000
Native Reserves and Locations	14,793,800	5,693,800
Total Union	376,271,000	358,392,200

# THE FRUIT INDUSTRY OF SOUTH AFRICA

(By G. W. KLERCK, Editor, "Journal of the Department of Agriculture.")

**T**HE Union of South Africa is world-famed for the excellence and variety of its fruit, which is grown under ideal conditions in a glorious climate. In this country fruit growing is an important industry, and provides lucrative enterprise for a large body of farmers. The export industry is developing on sound lines, all fruit (fresh and dried) being subject to rigorous Government inspection, and nothing is admitted to export that does not conform to definite standards as set out in the Government regulations. The packing of South African fruit is of a high standard, and most growers belong to a large Co-operative Company, the funds for which are met out of a levy of 5/- per ton on all exported fresh fruit. There has recently been established also a Fruit Control Board, which controls all shipments of fruit from

- (a) Citrus
- (b) Deciduous, Vines, etc.
- (c) Sub-tropical

The first class comprises those lucious soft fruits that first brought South Africa into prominence as a supplier of high grade fruit in overseas markets. It includes the grape, the peach, the nectarine, the pear, the plum and the apricot. There are also in this class the melons, pomegranates, persimmons, quinces, granadillas, cherries, cape gooseberries, guavas, figs and strawberries that grow in profusion in many parts of the country. Special mention must also be made of the apple, the growing of which is rapidly being developed throughout the country.

**Seasons.** Broadly speaking, the seasons when the two main classes of fruit are in bearing are Deciduous from December

Hemisphere producers to the European market, and its oranges reach the overseas market during the northern summer when the fruit with its refreshing health giving properties is most acceptable.

Yearly South Africa's citrus groves extend. The industry has received the attention of well known authorities, there is no doubt it is laid on sound foundations and that the country is destined to become one of the great world producers of citrus fruits. The market is almost inexhaustible, and it caters for the multitude. The fruit is rich in vitamins, that necessity of life which science has recently revealed, and in that respect alone the orange will rank among the most favoured fruits of the world. The year 1925 marked a great forward stride in the orange export trade, and it is estimated that in three years' time there

GOVERNMENT WINE FARM, CAPE PROVINCE.

MODERN CAPE FARM.

the Union, ordering the priority of shipments and arranging refrigerated freightage on steamers.

What follows is merely an outline of the commercial side of fruit growing in South Africa, it does not deal with the culture of the fruit, which now maintains a large and growing industry with many interests. Conditions in South Africa are undoubtedly favourable to profitable fruit growing, and what adds to the attractiveness of the industry is the pleasant environment in which it is carried on. The laden orchards, the heavy bearing vineyards, and the golden fruited groves of citrus are found in surroundings of beauty unsurpassed anywhere in the world.

**CLASSES OF FRUIT.**—There are three classes of fresh fruit, all grown to perfection in the suitable areas of the country, viz.,

to April (inclusive), Citrus from May to December (inclusive). It will thus be seen that the former fruit reaches the European market during the winter months, and the latter during the summer.

**CITRUS FRUITS.**—While the deciduous fruit is of necessity a comparatively highly priced one when it reaches the overseas consumer during the winter of the Northern Hemisphere, and is confined in a measure to the more affluent section of the community, the citrus class of fruit is essentially for the multitude. It includes the orange, the naartje (known also as the tangerine), and the grape fruit. Citrus fruit grows all over South Africa, but is principally found in the summer rainfall area. Great expansion is taking place in the north, particularly in the Transvaal and Natal, as well as in the eastern districts of Cape Province. South Africa has great advantages in the growing of citrus fruit; it is the nearest of Southern

will be an annual output of three million boxes of oranges alone available for export.

Of citrus fruits the orange is pre-eminent, but the naartje and the grape fruit have their market, which is a growing one, particularly for the latter.

**DECIDUOUS FRUITS.**—South Africa may be divided into two great sections, viz. the winter and the summer rainfall areas. The former area comprises the western and south-western districts of Cape Province; and it is in this area, the oldest and most intensively cultivated in the Union, that the home of deciduous fruit growing is found. Here exist many famous orchards, and here also are still available many acres of land suitable for this most attractive of all farming enterprises. In valley and on mountain slope throughout this beautiful stretch of country are found vineyards and orchards that regularly bring bountiful harvests. The regularity of the winter rainfall and the

brilliant blue skies and ripening sun of summer combine to make this area one of the most favoured in the world for the production of soft fruits of the highest quality. From it come the table grapes that have such popularity in the overseas market.

Nor does Nature's bounty end with the winter rainfall area. Throughout the vast expanse of the country stretching east and north, where the days of winter are one succession of blue skies and sparkling sunshine and the rain of summer brings the harvest to fruition, the same deciduous fruits of the south-west are grown. Indeed, they vie with the products of the Cape in yield, appearance and flavour.

That soft fruit from this large area has not yet become established as a lucrative export trade is due principally to restricted transport facilities, and in part to the occurrence of hail, which renders the growing of it commercially a venturesome business in certain sections. But these disabilities are being overcome. Refrigerator trucks and transport facilities generally are being supplied, large areas are found to be out of the hail zone, while climatic conditions in the north favour the early ripening of the fruit before the hail period and some weeks before the same varieties in the south-west Cape are ready for picking. It was, therefore, in 1924 that the commencement of an export trade in the Transvaal deciduous fruit commenced, and future prospects are bright, opening up a wide field of enterprise for farmers in the north.

**Apple Growing.** Apple growing stands by itself. It has been demonstrated that South Africa is pre-eminently suitable for this fruit, and that it can be grown throughout the length and breadth of the country in suitable localities. The result is that commercial orchards are fast being established. Already the South African apple is known on the world's markets, and indications point to rapid expansion in the export of this most popular fruit.

Mention has been made only of the overseas market. It is natural that in a country of wide reaches and comparatively sparse population the main consideration is to cater for the great market that lies beyond its borders. Yet the local market is of no mean proportions, and a movement has now been started to stimulate demand and establish more firmly the fruit eating habit which is fraught with so much benefit to the individual and the nation.

**SUB-TROPICAL FRUITS.**—The growing of the third class of fruit, which is confined principally to the sub-tropical area of the country in the Provinces of the Transvaal and Natal, is undertaken commercially by comparatively few growers. But there are extensive areas where these fruits—mangoes, bananas, avocado pears, papaws, etc.—grow almost wild and await merely the greater demand to stimulate their production. Mangoes are exported in limited quantities, and although papaws and avocado pears would find a ready sale, the problem at present is to place them on the market in a saleable condition. Experiments in this direction are being conducted, and it is likely that the best methods of packing and transport will be discovered.

**Pineapples.**—The trade in pineapples runs concurrently with that of citrus fruits. The fresh fruit is exported in large quantities, but the canned fruit (prepared in a variety of ways) at present appears to be the more popular form, and it is not improbable that the tendency of future trade will be in the direction of the manufactured rather than of the fresh article. Large areas are under the

1. APPLE TREE, TRANSVAAL.  
2. GRADING ORANGES, RUSTENBURG, TRANSVAAL.  
3. GRAPE FRUIT, EAST TRANSVAAL.

pineapple, which grows easily and well under South African conditions.

**Tomatoes.**—In this brief review of the South African fruit industry, mention must not be omitted of the tomato, which grows luxuriantly throughout the country, and it is not unlikely that in the future trade in this fruit will open both in the fresh and canned article.

**DRIED FRUIT TRADE.**—In addition to the fresh fruit output, the drying of fruit is an important section of the fruit industry, and has developed fast in recent years. The suitability of certain areas of the Union for the production of dried fruits is unsurpassed. Prunes, dried apricots, dried peaches, etc., are being produced in increasing quantities. Throughout the southern, western and northern portions of the Cape Province sun drying is generally practised, in the eastern portion dehydrators will to a certain extent have to be used owing to the incidence of light summer rains. Ideal conditions exist for the growing and production of sundried sultanas, currants, stalk raisins, malagas and leixas of the highest class, and comparing most favourably with similar products from any part of the world. Figs also may be grown to perfection, and can be converted into a high class dried product.

An export trade in the various classes of dried fruit is developing very rapidly. There awaits the investor a wide field of enterprise in the production of dried fruit, an article of universal demand and of easy handling. The preparation of that article in South Africa, in great contrast to methods employed in some older producing countries, is carried out under the most up-to-date and hygienic conditions. The work is largely performed by white women and the fruit is practically untouched by human hands in the course of its preparation.

The farm production of dried fruit during the year 1922-23 is shown in the following table. In addition, South African factories turned out close on 1½ million lb. of dried fruit exclusive of the quantity handled in the packing houses.

VARIETY	QUANTITY lbs.
Apples	216,562
Apricots	1,143,115
Figs	242,816
Peaches	2,394,336
Pears	286,458
Prunes	1,312,405
Currants	179,364
Raisins	
Stalk	2,215,642
Loose	5,891,976
Sultanas	3,713,604
Total	17,596,368

The following statement shows the trade in dried fruit during the Calendar Year 1924.

ARTICLE	IMPORTS		EXPORTS S.A. PRODUCE	
	QUANTITY lb.	VALUE £	QUANTITY lb.	VALUE £
Currants	899,477	20,048	4,678	227
Dates	2,614,020	28,679	—	—
Figs	112,100	2,625	601	30
Prunes	8,463	298	283,400	5,108
Raisins	50,741	2,676	6,666,015	93,144

Grapes	—	—	1,233,800	12,814
Other	75,617	3,306	646,875	17,015
	4,195,160	59,842	8,455,369	128,338

**FRESH FRUIT EXPORTS.**—The following table, taken from the annual Trade Statement issued by the Department of Customs and Excise, shows the exports of South African fresh fruit during the Calendar Year 1924.

A HEAVY CROP, CAPE PROVINCE

CITRUS	QUANTITY BOXES	VALUE £
Lemons	138	127
Naartjes	56 022	12 182
Oranges	399 023	197 278
Other Citrus	19 024	11 623
Total	475 107	221 210
DECIDUOUS		
Apples	11 194	4 625
Apricots	15 574	3 225
Nectarines	15 055	3 883
Peaches	96 581	3 652
Pears	491 468	8 450
Plums	114 710	19 015
Other Deciduous	2 265	734
Total	716 850	137 582
GRAPE		
Total	268 526	62 270
OTHER KINDS		
Mangoes	1 171	175
Melons	3 394	620
Pineapples	52 616	12 660
Others	1 200	130
Total	1 549 170	434 665
Grand Total	1 549 170	434 665

The year 1925 revealed an appreciable increase on the previous year amounting to 2 015 863 boxes exported or something like 43% in both main classes of deciduous and citrus. It was an increase moreover which showed every prospect of continuing in the years immediately ahead. The total production of fruit is unknown. Large quantities are grown for private consumption and these do not appear in any returns.

**FRUIT AND JAM MAKING.** There is considerable production of jams, jellies, fruit juices and pulp a form of industry that will naturally expand with the development in fruit growing that yearly takes place. During the War years production was stimulated by the scarcity of the imported article, but with the return of normal trade conditions the demand for certain classes of imported jams, etc. has revived. During the year 1922-23 South African factories produced 12½ million lb. of marmalade, jams and jellies valued at £251 784, nearly four million lb. of canned and bottled fruit valued at £103 219 and about 200 000 lb. of candied peel etc. to the value of £5 545.

**GRAPES FOR WINE AND BRANDY.** — Vine culture was introduced into South Africa as early as 1653 and forms an important industry in the south western districts of Cape Province. The trade in fresh grapes and in raisins has been referred to previously. Large quantities of fruit are annually converted into wine, brandy, moskonfyt and vinegar. During the year 1922-23 the farm production was as follows:—

Wine	13 395 747 gallons
Brandy	152,349
Vinegar	64 758

In addition 1,486 303 gallons of brandy were produced by professed and agricultural distillers.

**PROFITS IN FRUIT GROWING.** — Profits in any class of farming are difficult to average, for many factors have to be taken into consideration such as climate, situation and farmer himself. It is so also in fruit growing, and it is not advisable to draw up a balance sheet for any one year. The information given hereunder may, however, serve as an indication of the situation as it is to-day.

1. QUINCE TREE, CAPE PROVINCE.
2. APRICOTS.
3. DRYING FRUIT.
4. APPLE TREE, CAPE PROVINCE.
5. PICKING FRUIT.

Good virgin and unirrigated land suitable for peaches, plums and pears is obtainable in the south-west Cape at from £10 to £60 per acre. The average yield from an orchard of this type would be from £25 to £75 per acre. Working expenses would depend on the season, and once the trees are in full bearing the expenses would be about £26 per acre per annum.

An apple orchard in the Transvaal or Orange Free State with 10-year-old trees would give a yearly gross return of approximately 20/- per tree or £75 per acre, and about £53 per acre after allowing for costs. The commercial life of the trees should be from 30 to 50 years, according to the treatment they receive.

In South Africa the vine never fails—it can always be depended upon. The price of land suitable for vines varies from £15 to £50 per acre according to fertility, situation, etc. In some places it is even £100 or more. Well established vineyards are usually valued at £100 per acre. The crops harvested are often astonishing. South African vineyards producing generally 50 per cent rising to 100 per cent more per acre than the vineyards of other countries. From 6½ to 18 tons per acre of fruit are obtained, £4 to £6 per ton of grapes can be depended upon for wine making purposes, while for table grapes 1½ ton or more per acre may be expected. The crop may be reckoned as giving £50 to £100 net profit per acre per annum. Returns come to hand the third year after planting.

All citrus fruits require to be irrigated, therefore land with a sufficient supply of water is necessary. Good land of this nature costs about £30 per acre. To bring 10 acres of such land into bearing would cost about £700. Full grown trees at 100 per acre should bring in a profit of from £90 to £150 per acre.

## SOUTH AFRICAN COTTON

By C. J. HOMEWOOD,

Senior Cotton Grader, Tobacco and Cotton Division,

Union Department of Agriculture

**C**OTTON growing has made rapid strides in South Africa during the last few years, and with a continuance of this encouraging progress the prospects of the industry look particularly attractive, indeed, it is quite possible that in a few years time cotton will be the premier agricultural export of the Union.

**ACREAGE AND PRODUCTION.** The principal cotton growing areas are in Natal and Zululand, Northern Transvaal (including Rustenburg), Eastern Transvaal and Cape Province, while quite a large acreage is planted in Swaziland. In 1925 the extent under cotton in these areas was approximately 65,000 acres, and if growing conditions had been favourable the production would have been at least 25,000 bales of lint of 500 lb. each. Abnormal rains, however, reduced the crop considerably, but exports, at 6,981,000 lbs., were more than double those for 1924.\*

Farmers in the Natal and Zululand areas were likely to increase their acreage in the 1926 season by about 25 per cent, and there was expected to be a large increase also in the acreage in all parts of the Transvaal and

Swaziland. Given reasonable growing conditions, it was likely that the 1926 crop would be at least 40,000 bales.

**QUALITY.** Excellent reports on the quality and spinning results of South African cotton have been received from those British and Continental spinners who have used it. Under normal conditions the average grade is good middling (Universal Standard) and good 1½m staple, but South African cotton is considerably brighter and carries more lustre than good colour American of the same grade, and only an inconsiderable percentage is less than good 1½m staple.

### UNIQUE MARKETING METHODS.

South African methods of marketing are different from those of other countries, for in no other country is grading regulated by Government. Samples of each bale offered for sale must be sent to the Government Grader, who is an experienced and competent authority on the requirements of the Liverpool and Manchester markets. These samples are guaranteed by the grower as being truly representative of the bale, and are drawn as the lint is passing into the pressbox from the gins, layers being taken from the top, middle and bottom of the bale. This practice is insisted upon, and is uniformly followed.

Each ginner has its own ginning or trade mark, which is registered with the Government of South Africa, and every bale must, without exception, bear this stencilled mark. This ensures that any false packing, mixed packing, or incorrect marking is easily traceable to the ginner concerned. These samples are issued in duplicate, and, when graded, one is retained by the Government Grader for future reference in case of a dispute, the other is the buyer's sample and is sent to the selling rooms, duly inspected by prospective buyers, and ultimately retained by the purchaser. In case of dispute a sample is drawn from the bale by an independent party under sworn affidavit, and is sent to the Government Grader at Durban, who compares the same with his reference sample. In the event of variation the grower has to adjust the difference. The Grader's decision is final.

The majority of selling is done either by public auction or private treaty, only a small portion of the crop being sent to Liverpool on consignment. Grading is based on Universal Standards and to Liverpool's idea of stapling. These systems have proved most beneficial to everyone concerned, and have met with the approval of Liverpool merchants and then representatives. So satisfied have buyers been that up to the present not one case for arbitration has arisen.

## TOBACCO

**T**OBACCO growing in South Africa is an old established industry, dating from the early days of Dutch settlement. In those days, and indeed up to 20 or 30 years ago, the tobacco grown by the pioneers and settlers was all turned into roll or plug tobacco on the farms by being first subjected to a crude process of fermentation, the leaf being then twisted into stung. This was the old Boer tobacco which, in the form of a roll, was used for smoking, chewing, and snuff purposes. There is still a considerable quantity of roll tobacco produced in the Transvaal, but the term Boer tobacco has for some 20 years been identified with a loose pipe tobacco made from Virginian leaf grown and manufactured in the country.

**AREA AND PRODUCTION.** The total area under tobacco cultivation in the Union in 1924 was 21,635 acres compared with 19,301 acres in 1923, a considerable amount of land in Natal and the Transvaal having gone out of use since 1921, when the total area cultivated was nearly 27,000 acres. Of the 1924 total the Transvaal returned 12,821 acres, or considerably more than half. In Cape Province 2,104 acres were under Turkish tobacco. The following table gives the production by Provinces and for the Union in the years named—

PROVINCE	1923 lb.	1924 lb.
Cape Province	3,976,396	4,442,815
Natal	392,572	652,241
Transvaal	4,971,481	5,668,883
Orange Free State	131,671	112,615
Native Reserves and Locations	1,104,376	720,818
Total, Union	9,671,496	11,406,362

These totals include 518,768 lb. and 816,699 lb. respectively, of Turkish tobacco.

**DISTRIBUTION.** The principal tobacco growing areas in the Union are the Magaliesberg, Kat River, Potchefstroom, Vredfort and Piet Retief districts of the Transvaal and the Oudtshoorn, and Piquetberg districts of the Cape, where light, medium, and heavy types of Virginian tobacco are raised, the Stellenbosch, Wellington and Eilbigh districts of Cape Province, which produce Turkish tobacco only, and the strip of country between Maitzhurg and Weenen in Natal.

**CLASSES OF TOBACCO.**—The chief type of tobacco grown in South Africa is Virginian, but in addition to this kind from 500,000 to 750,000 lbs. of Turkish tobacco are produced annually in the Western portion of Cape Province. Natal produces annually some 400,000 lbs. of dark tobacco, which probably was developed from an original Cuban or Sumatran type. The qualities are somewhat similar to cigar wrapper and filler tobacco. The lighter types of Virginian are used for the manufacture of cigarettes and light pipe tobacco, and the heavier types for medium and heavy pipe tobacco. The heavier types are also used in the manufacture of chewing tobacco, which has a considerable sale at the mines and to the native trade. The Natal dark tobacco is used mainly in the manufacture of cigars and pipe tobacco.

**COST OF PRODUCTION AND PROFITS.**—Tobacco is a crop that takes practically twelve months to produce and it is also a somewhat expensive one to grow. The so-called Virginian types cost approximately £15 per acre to produce, and the Turkish types approximately £20 per acre. However, if the crops are well looked after they give a good profit per acre, the Virginian types averaging about £15 and the Turkish types £25. Excellent crops are produced which return a profit of double and quadruple the figures given above.

**CULTIVATION.**—In the Transvaal the tobacco crops are raised under conditions depending on summer rains, and are irrigated only when necessary. In the middle districts of Cape Province they are raised mainly on irrigated lands, and entirely so in the Piquetberg district. In the Western Province, where there is an ample winter rainfall and scarcely any summer rainfall, the Turkish tobacco crops are raised exclusively on dry lands.

**METHODS OF CULTIVATION -**

The planting season in the Union ranges from October 1 to the end of January, but in the case of Turkish tobacco the seed beds are prepared and sown during the latter part of May to the end of June, so as to have the plants ready for transplanting in September. Before the seeds are sown the beds, after being well manured, are covered over with bushes, branches, and twigs of trees, which are then set on fire. The heat of the fire is intended to penetrate the soil to a depth of four to five inches to destroy the seeds of weeds, and the eggs larvæ and pupæ of insects. When the ashes are raked off, the beds are sown with the seed, then lightly covered with sifted stable manure and watered regularly till the plants are well established. When about to flower, the top of the stem with four or five leaves (in the case of Virginian plants) is broken off, or "topped". In the case of Turkish tobacco, no topping is done, the object being to obtain a large number of small leaves instead of fewer and larger leaves.

**HARVESTING.** - The harvesting period begins from 50 to 75 days after planting, the leaves being picked off the plants as they mature, from the bottom upwards. Picking is always done early in the morning when the dew is off the leaves. The leaves of each day's picking are placed in boxes or baskets and immediately taken to the threading or working room where they are graded and sorted. The leaves of Turkish tobacco are then threaded by native women and children on strings which are separately tied to 6 ft poles and placed in a wilting room, where the temperature and moisture are regulated. The leaves of Virginian tobacco are suspended from shorter poles, and are loosely tied in bundles for drying purposes. The Turkish leaves are afterwards sun-dried, the Virginian being either cured in flue-barns or air-cured in sheds. When dried the leaves are baled and sent to the manufacturers.

**INSECT AND OTHER PESTS.** South African tobacco is affected by a number of insects and diseases, similar to those of other tobacco producing countries. The principal pests are cutworms, flea beetles, nematode, and slug, and, among diseases, wild-fire and white rust. In the case of most of these pests there are efficient control measures, which, when properly applied, keep them in check and ensure a certain crop. Fortunately the horn worm, which is so destructive to the tobacco crop in America, is not found in South Africa.

**MANUFACTURE.** - At the end of 1923 there were 62 tobacco factories in the Union, as compared with 58 in 1916. The quantity of tobacco used in the factories in 1923 totalled 11,501,000 lb, of which 8,080,000 lb were grown in the Union, 3,352,000 lb in Rhodesia, and 69,000 lb were imported from other sources. The output of the tobacco factories in the same year amounted to 7,723,000 lb of smoking tobacco, 3,925,000 cigars and cheroots, 1,607,345,000 cigarettes, 107,000 lb of snuff, and other products valued at £1,000.

**QUALITIES OF SOUTH AFRICAN TOBACCO.** - The flavour and aroma of South African tobacco are peculiar, and, as a rule, do not appeal to the smoker who is unaccustomed to it. It is universally smoked throughout the Union, and the Empire Exhibition of 1924-5 is said to have created a new demand in the United Kingdom, many people having been surprised by the fine flavour of some brands of cigars and cigarettes. Upon an increased demand from overseas the future of the industry manifestly depends.

## REPRESENTATIVE VITICULTURAL, COLD STORAGE AND MACHINERY FIRMS

### J. SEDGWICK & CO. LTD.

**Inception.**—This company was founded in 1859 by James Sedgwick, a retired captain from the service of the East India Company. It maintained the status of a private concern for over half a century, enjoying a consistent measure of prosperity and consequent expansion of trade, which at length proved too extensive for the limitations of private enterprise. Accordingly the organisation was converted into a limited liability company in 1912.

**Development.** From very modest beginnings, the firm has gradually grown to its present position as one of the leading wine merchants, blenders and distillers in South Africa, with agents not only in the Union and Rhodesia, but in Hong Kong, New Zealand, Mauritius, and other parts of the world. For over sixty years the company's wines and brandies have enjoyed a high reputation, and have gained upwards of two hundred gold medals and other awards all over South Africa, and in Europe at Amsterdam, Paris and London.

**Activities.** Though all their products are uniformly esteemed alike by the connoisseur and the general consumer, Messrs J. Sedgwick & Co. Ltd. are perhaps best known for their Government House Port, Prize Cup, which is a natural white wine, made in the Nuv Valley near Robertson, Chateau Brandy which is one of the leading proprietary brands of the country and for the well-known Van der Hum, a Dutch liqueur made from the "Naartje" or Fangerne orange. The Prize Cup gained great favour at the recent British Empire Exhibition at Wembley and met with a large sale on the South African restaurant train there.

**Premises.** The offices and main cellars are situated in Somerset Road, Capetown, occupying a commanding and commodious corner building, and include maturing cellars, a fully equipped bottling department, sparkling wine cellars, a laboratory and cooperage. There are also fully equipped stores and cellars in Johannesburg, where the company has a flourishing branch.

**Distilleries.**—The company's distilleries are located at Wellington and Goudini Road, Worcester, where a railway siding adjoining the building serves to effect expeditious transport. Both these establishments, installed with the most modern appliances, are situated in the heart of the wine growing districts, and contain wine cellars and large bonded cellars for maturing brandy.

**Staff.**—The staff comprises a number of viticultural experts and wine tasters of many years' experience. The wines are manufactured under their supervision during the vintage.

**Agents.**—The following are the company's appointed agents in Rhodesia and overseas: Rhodesia—H. Behrens, Box 59, Bulawayo; Hong Kong—Caldbeck, McGregor & Co., 15, Queen's Street, Central; New Zealand—G. C. Macindoe Proprietary, Ltd., Box 815, Auckland; Mauritius—Tarby de Speville & Co., Port Louis.

**Bankers.**—The Standard Bank of South Africa, Ltd. (A.B.C. branch), Adderley Street, Capetown.

(See illustration, page 286.)

### SPARKS, YOUNG AND FARMERS' MEAT INDUSTRIES, LIMITED.

**Inception.** The amalgamation of Messrs. Sparks and Young Ltd. and the Farmers' Co-operative Meat Industries Ltd. was successful in linking up the two largest cold storage interests in Durban, one mainly concerned with the local cold storage business and supplies to shipping and the other with the export of meat. South Africa by virtue of its geographical situation is most advantageously placed as regards the supply of refrigerated material to the European continent or to the East, and is to-day in a position to export frozen meat and by-products in connection with packing house activities on quite a considerable scale. Continual expansion of such operations from year to year is anticipated.

**Activities.** Associated as Messrs. Sparks, Young & Farmers' Meat Industries Ltd. are with the Imperial Cold Storage and Supply Company Limited, their interests embrace the whole of South Africa, including South West Africa, Bechuanaland, and Rhodesia. These territories carry nearly ten million head of cattle, and the yearly increase is so much beyond local consumption requirements that the company is in a position to export frozen meat and packing house by-products on a very large scale.

**Cold Storage.** The company has two large cold storages in Durban. That in Smith Street, dealing with local refrigerator business, also undertakes ice manufacture on an extensive scale. The other cold storage premises are situated on the wharf side at Congella, and accommodate an up-to-date packing plant which is being increased annually. Here are received large quantities of live cattle from the inland areas to be dealt with by the firm's several departments, the meat being loaded direct on to steamers coming alongside the company's premises in deep water berths. There are over one and a quarter million cubic feet of refrigerated space available in the company's cold storages at Durban, and ship stores can consequently be catered for in any quantities. Stocks of victualling goods meeting the particular requirements of ships are always available.

**Enquiries.**—All trade enquiries relative to the export of meat or live cattle, or regarding the purchase of horns, hoofs, hides, skins, and other by-products should be addressed in the first instance to the Imperial Cold Storage and Supply Company Ltd., P.O. Box 680, Capetown, which has a European organisation and conducts all selling operations. Quotations can be given for full cargoes or portions of cargoes of frozen meat. Every facility is offered not only for ships which trade regularly with the Union of South Africa, but also to the large number which call at the port of Durban for coaling purposes, where a plentiful and cheap supply of coal is obtainable.

**Offices.**—Smith Street, Durban; Maydon Wharf, Durban. Managing Director—Mr S. B. Woolatt.

**Bankers.**—The Standard Bank of South Africa, Ltd.

**Cables.**—"Frigid." Code Bentley's Telegrams. "Progress."

(See illustration, page 287.)

### G. NORTH & SON LTD.

**Inception.** The origin of the business of this well-known and progressive firm of agricultural implement and machinery merchants and irrigation engineers was a small store opened in 1869 by the late Mr. George North in Commercial Road, Durban, then but a small seaport, and it was the foundation of a concern which was destined to become a forceful factor in the development of the agricultural interests of the country.

**Development.**—Operations at the outset were naturally local in character, and were limited to Durban and adjacent districts. By the "eighties," however, trade had extended throughout Natal into the Orange Free State and the Transvaal. Mr. North was at this time joined by his eldest son, Mr. George Howard North, who directed the destinies of the firm on his father's retirement in 1884 and who is the present controlling force in the business.

**Progress.** Expansion of trade necessitated a move to larger premises, and new quarters were secured in Field Street, the site affording convenient access to the railway which was then in course of construction through Natal. It was in December 1885 that the Rand goldfields were discovered, and the firm opened a branch in Johannesburg three years later. Transportation was then both costly and irregular, but this drawback was removed on the opening up of railway communication a few years later. In 1895 the firm, then known as G. North & Son, extended its operations to Rhodesia. Mr. North having in 1892 been joined by his younger brother, Mr. W. B. North. Mr. North, senior, the original founder, died in 1897.

**Later Activities.**—During the present century the firm has erected many additional stores and opened numerous branches. In 1903 a dépôt, with railway siding, was opened at Northdene, in the following year the Durban stores were greatly improved and enlarged, and a magnificent three storey building was erected on the corner of Queen and Field Streets. In 1905 branch establishments were opened at Pietermaritzburg and Pretoria, followed in 1910 by others at Harrismith and East London. In 1919 a branch was established at Nairobi. This proved a profitable venture, and two additional dépôts were opened in 1924 at Nakuru and Eldoret. (See also section "Agriculture," Kenya Colony.)

**Motors.**—Some sixteen years ago the activities of the firm were extended to the motor car trade, when the Rand Garage and Motor Works were established in Johannesburg. Further developments of this business took place in 1914, when the company established at Maritzburg a subsidiary branch to its Natal organization, known as "North's Garage." Mr. W. B. North has identified himself with this section of the business, which is now under his immediate control.

**Agencies.**—The company holds agencies for the following firms: Cockshutt Plough Co. Ltd., International Harvester Co., Ruston and Hornsby Ltd., R. Hunt & Co., Alfa Laval Separator Co., F. E. Myers & Bro. Co., The Butler Co., Fuller Johnson Mfg. Co., Martin Ditcher Co. and Smith Grubber Co.

**Directorate.** Mr. George Howard North (life and managing director), Mr. Walter B. North (life and deputy managing director), Mr. Robert Forrester (director and general manager), Mr. Fred North and Mr. Herbert S. North.

**Head Office.**—Field Street, Durban, Natal. P.O. Box 916.

**Cables.**—"North," Durban. Codes: Bentley's 5 letter, Western Union 5 letter, and private.

## PROVINCE OF THE ORANGE FREE STATE

**T**HE Orange Free State is that portion of the Union which lies between the Orange River on the south and the Vaal River on the north, being surrounded by its three sister Provinces and the Territory of Basutoland. It has a length of 360 miles, and an average breadth of about 130 miles. The area is 49,687 square miles, less than half that of the Transvaal, and about the size of England without Wales. Its population at the last census of 1921 was 628,827, of whom 188,556 were Europeans. Apart from the Vaal, the northern boundary, the only waterway of much importance to the Province is the Orange River, its main tributaries being the Caledon, Riet, and Modder. Beyond the borders of the Free State the Orange River is joined by the Vaal River in Griqualand West.

Much of the Free State resembles the Karoo, but most of it is prairie-like land—great grassy plains hundreds of square miles in area. These are diversified in places by solitary kopjes, low ridges, or even wooded river valleys, in the main, however, they are flat and featureless, almost devoid even of trees. The eastern part of the Province is well watered and by far the most productive, yielding good crops of wheat, mealies, oats, and potatoes. Westward the country is drier, and often subject to long spells of drought. Yet the Orange Free State is on the whole an exceptionally good cattle territory, with an output of about one-third of the butter and cheese and a large percentage of the wool produced in the Union. The climate is generally healthy, the Bloemfontein district from its height (4,510 ft) above the sea and dry air being especially adapted to those suffering from weak chests.

**ADMINISTRATION.**—The direction of affairs is under an Administrator, appointed by the Union Government, with the aid of the Executive Council of the Provincial Council. The latter consists of 25 members, elected for the same number of constituencies, and the franchise is strictly confined

to adult European males, the conditions governing it being the same as those in the Transvaal. The law of the Province is Roman-Dutch, as modified by laws of the Orange Free State, ordinances of the Orange River Colony under Crown Colony administration, acts of the colony after responsible government, and now by ordinances of the Provincial Council and acts of the Union Parliament. Justice is administered by the Provincial Division of the Supreme Court of the Union, which consists of a Judge President and two Judges, and by Resident Magistrates and special Justices of the Peace. The Magistrates have civil and criminal jurisdiction, and the Provincial Division controls the inferior courts. Bloemfontein is also the seat of the Appellate Division of the Supreme Court of the Union.

The present Administrator of the Orange Free State is the Hon. E. R. Grobler.

**DISTRICTS.** The Province is divided into 24 districts, as follows: Vrede, Frankfort, Heilbron, Vredefort, Kroonstad, and Hoopstad, facing the Transvaal from east to west; Boshof, Jacobsdal, Lauresmith, Philippolis, Bethulie, and Rouxville, facing the Cape Province from north to south-east; Wepener, Thaba Nchu, Ladybrand, Ficksburg, and Bethlehem, facing Basutoland from south-east to north-east, and Harrismith and part of Vrede, facing Natal. The interior districts from south to north are Smithfield, Edenburg, Bloemfontein, Winburg, Senekal, and Lindley.

**LOCAL GOVERNMENT.**—The system of local government embraces municipalities and village boards of management, the latest return giving a total of 56 municipalities and 7 village boards of management. The three areas of Witzieshoek, Thaba Nchu, and Sehba are reserved for the exclusive occupation of natives.

**AGRICULTURE.**—The main wealth of the Orange Free State has always consisted in its flocks and herds. Until lately comparatively little had been done in the way of agriculture, except in the eastern division. During the last 15 years an important

trade in maize has been developed, part of the Province coming within the famous "Maize Triangle," which produces about 60 per cent of the total yield of the Union. The average yield of maize from the Orange Free State (taking the years 1918-1923) is about 890,800,000 lb., or 4,454,000 bags. In 1924, which was an exceptionally poor year, production totalled only 2,610,355 bags, but in 1925 there was a record of 10,994,000 bags. Oats, rye, barley, Kaffir corn, potatoes, lucerne, and groundnuts are the other leading products. (See also article on "Agriculture.")

**COMMERCE.**—See general article on "Commerce."

**FINANCE.**—The total revenue of the Orange Free State for 1923-24 was £1,008,339. Of this total, £607,869 was the Union Government subsidy, the balance of £400,470 being derived from the education tax, general licences and various revenue collections. The ordinary expenditure of the province was £1,010,803. Items of expenditure were education, £833,306, hospitals and poor relief, £28,902, roads, bridges and works, £100,572. The capital expenditure in 1923-24 was £108,805.

**INDUSTRIAL PRODUCTION.**—There are few large centres of manufacturing industries in the Orange Free State, the number of factories of all kinds being between five and six hundred, and the gross value of their production some £4,000,000 a year.

**LIVE STOCK.** The live stock figures for the Orange Free State in 1924 were—Horses, 245,780, mules, 18,630, asses, 40,136, cattle, 1,771,750 (Frieslands and Afrikaners predominating), sheep, 8,335,936, goats, 150,088, and pigs, 98,219. After Cape Province, the Free State is by far the biggest sheep-rearing division of the Union, and its average of such animals to the square mile is about 160, compared with only 65 in the Cape. The production of wool in 1924 amounted to 47,796,015 lb., compared with 44,344,880 lb. in 1923. (See also article on "Agriculture.")

**MINERAL PRODUCTION.**—The Orange Free State produces few minerals, but there are important diamond mines at Boshof, Koffiefontein, Jagersfontein, Kroonstad, and Theunissen, the yield from which was formerly far more considerable than it is to-day. The value of the diamond production in 1913 was £1,667,706, and £1,699,077 in 1920, but in 1924 barely £1,000,000. The Orange Free State coal-field is of great extent, but so far no more than one workable seam has been discovered at any single point, the coal hewn being only of second grade quality. About 900,000 tons were produced in 1924. (See also articles on "Mining and Minerals," "Diamonds," and "Coal.")

**POPULATION.**—The population of the Orange Free State increased from 528,174 in 1911 to 628,827 in 1921; of the latter total, 321,373 were males and 307,454 females, while Europeans numbered 188,556 and non-Europeans 440,271. The non-European population was made up of 421,978 Bantus, 395 Asiatics, and 17,898 mixed and other. The density of population was 12.67 to the square mile, compared with 10.05 in the Cape, 40.51 in Natal, and 18.90 in the Transvaal.

**RAILWAYS.**—See general article on "Railways."

MAITLAND STREET, Bloemfontein, looking towards the Government Buildings, with a portion of the Town Hall and Board of Executors' Buildings in left foreground.

## CITY OF BLOEMFONTEIN

**B**LOEMFONTEIN, capital of the Orange Free State and seat of the Appellate Court of the Union, is beautifully situated on a watershed, and is surrounded by a network of the tributaries of two great rivers, the Modder and the Riet. Though essentially a modern city, the history of Bloemfontein dates back to the time of the Voortrekkers in 1836, when the first settlement was founded, the town becoming the capital of the newly created Orange Free State in 1854. From that period its importance steadily increased, a fact largely due to the policy pursued by the President, Sir John Brand, who held office for 24 years, and after whom the principal street is named. In 1890 Bloemfontein was connected by rail with Capetown and Johannesburg, and with the extension of lines in various directions, also as the result of its central position in the Union, the city has gradually developed into a railway centre of importance, seven lines meeting at this point.

**BUILDINGS.**—The public buildings of Bloemfontein are generally ample in size and dignified in architecture, many of them being built of a combination of red brick and a fine-grained white stone quarried in the neighbourhood. The Raad Zaal, now the House of Provincial Assembly, is a well-designed building, surrounded by Doric columns, and with a domed tower 90 ft high. The cost of this building exceeded £60,000. Government House, which was formerly the President of the Free State's residence, stands at the end of President Brand Street, and is now a Girl's School. Opposite to it is a memorial to those of the 2nd Battalion of the Seaforth Highlanders who fell in the war of 1899-1902. The General Post and Telegraph Office in Market Square is a fine building, and opposite to

it are the Mutual Assurance Company's Buildings and the Bloemfontein Club. In Warden Square are the Public Library and the Orange Free State Museum. A group of buildings, three miles to the west of the town, houses the Grey University and the Grey College Schools. St George's Cathedral, a handsome edifice, fronts on to St George's Street. The fine building of the National Bank of South Africa is on the corner of Market Square and West Burger Street.

**CHURCHES.** The principal church in Bloemfontein is the Dutch Reformed, with two spires. Next in importance comes the Anglican Cathedral of St George, with a very good interior. There are also Lutheran, Wesleyan, Baptist, Presbyterian, Roman Catholic, and other Churches, the Roman Catholic Church having a large convent attached. A Synagogue, the first in the Free State, was erected in 1902. There are also native churches of all denominations.

**ELECTRIC LIGHT AND POWER.**—These are controlled by the Municipality, the works having been established in 1900. At a recent date the total capital expenditure amounted to £248,153, while the annual revenue was £53,139 and the expenditure £49,039. The plant has a capacity of 2,650 k.w.

**INDUSTRIES.**—For various reasons, amongst others its central position, Bloemfontein offers advantages as a manufacturing centre, and the municipality is taking every possible step to encourage the establishment of local industries. At present the most important of these are milling, carriage building, and engineering. The surrounding country is amongst the best in the Union for sheep and cattle raising.

**MUSEUM.**—The National Museum of the Orange Free State is the second oldest

institution of its kind in South Africa, and dates from 1877. The original museum was notable as having in its time filled many uses, among others those of a school, a Raad Zaal, and a Court House, and as having been the scene of the signature of the British Convention in 1854. The new museum occupies a handsome building adjoining the Public Library, and contains an interesting collection of fossils, minerals, birds' eggs, and ethnographical specimens.

**PARKS AND GARDENS.**—The King's Park and Zoological Gardens, lying to the west of the city and covering 300 acres of ground, were opened in 1902 to commemorate the coronation of King Edward VII. The Gardens contain the nucleus of a fine collection of animals, birds, and reptiles. Hanilton Park, about 50 acres in extent, lies to the north of the town and at the foot of the Naval Hill. Victoria Park, about 20 acres, contains some fine old trees.

**POPULATION.**—The population returns at the Census of 1921 showed that there were 10,367 Europeans in Bloemfontein, 17,918 Natives, 126 Asiatics, and 1,623 Mixed and other, or a total of 39,034 inhabitants.

**SCHOOLS AND COLLEGES.**—Bloemfontein is one of the chief centres of education in South Africa, and in 1924 there were nearly 4,000 students with over 250 teachers and professors in the various institutions. This may be attributed to the prominence the old Republic gave to education, while later growth has been accelerated by the excellent climate the city offers for growing boys and girls.

Grey University College was founded in 1855 by Sir George Grey, and was constituted as a separate University College in 1907, being incorporated by statute

1. CHURCH STREET, Bloemfontein, looking South, with G. A. Fichardt's Premises in foreground on both sides of street.

three years later. The curriculum undertaken comprises the usual preparation for the examinations of the University of South Africa in literature and science, education and law including preliminary classes for study of medicine, engineering, agriculture, commerce, and theology. There are special facilities for research in the departments of botany, chemistry, physics, and zoology. A well-known government institution is the Eunice High School, situated in Brand Street, which provides for the education of girls from kindergarten to matriculation. St. Andrew's College for boys, on the outskirts of the town, is run on English public school lines. Other high-class schools are the Normal and Polytechnic Colleges, the Oranges Meisjes School, St. Michael's School and "Home" for Girls, and the Roman Catholic Convent School.

**SEWERAGE.**—The city has a very complete and up-to-date water-borne sewerage system, which has been installed by the municipality at a cost of £180,000. The municipality also owns the sewerage farm of 54 acres.

**STREETS.**—Bloemfontein is regularly laid out, the centre of the town being the Market Square, upon which most of the principal streets abut. A notable exception is President Brand Street, by far the finest thoroughfare in the city, which crosses at right angles to Maitland Street on the side of the town opposite to the railway station. The Raad Zaal, Government Offices, Law Courts, Government House, etc., all front on to this street. Maitland Street is a busy thoroughfare with many fine buildings and business premises, notably the Railway Station, the Town Hall, and the Queen's Hotel. Warden Street contains the Public Library.

A feature of Bloemfontein is the Spruit which runs through the centre of the city and is sometimes full of water. In January, 1904, it swept through the lower town and destroyed much property and several lives. To prevent the recurrence of a similar calamity, the course of the stream has been rectified and six stone bridges have been erected across it.

**TRAMWAYS.** A trackless system of tramways is installed in the city, the electrically driven cars running over 10 miles of route, and carrying about 1,500,000 passengers annually.

**WATER SUPPLY.**—Bloemfontein is well provided with a pure water supply from the Modder River, where two pumping stations have been erected at a cost of £480,000, with a capacity of 1,500,000 gallons a day, while extensive storage facilities exist through the association of the Council with certain large irrigation schemes, securing an independent water supply for two years.

## REPRESENTATIVE COMMERCIAL ENTERPRISES

### G. A. FICHARDT LTD.

**Inception.**—Owing its inception to the late Mr Gustav Adolf Fichardt, this enterprise was established in 1848 in Upper Church Street, Bloemfontein.

**Development.**—From its beginnings as a small, one-man concern, the business has pursued a course of ever-growing prosperity, to become the present multiple store employing over 200 persons.

**Activities.**—Operating as general merchants throughout South Africa, the firm maintains departments retailing agricultural machinery, grain and produce, hardware, furniture, men's and boys' outfitting, drapery, boots and shoes, crockery, groceries and provisions. It is also the proprietor of Fichardt's Garden Hotel.

**Agencies.** G. A. Fichardt Ltd act as distributing agents for the Chilled Oliver Plow Works, Aeromotor Windmills, and other businesses.

**Premises.**—The firm has premises in Upper Church Street, Charles Street and West Burger Street, owning also its private railway siding.

**London Shippers.**—Alex Fraser & Son, Ltd, 80, Finsbury Pavement, E C 2.

**United States Shippers.**—Dodge & Seymour Ltd, 39, West Street, New York.

**Directorate.**—The board of directors is composed as follows: Messrs L. H. Oates, W. S. Mannion, G. A. Fichardt, J. C. Daniels and A. Deale, with A. G. Wood as general manager.

**Head Office.**—Upper Church Street, Bloemfontein. Cables: "Gafco," Bloemfontein.

**Bankers.**—The National Bank of South Africa, Ltd.

### CHAMPIONS LIMITED.

**Inception.** In 1884 Mr C. W. Champion, then eighteen years of age, opened a small produce store in St Andrew's Street, Bloemfontein, to be joined in the same year by the even younger Mr Frank A. Nicolai. For over forty years, until the recent death of Mr Champion, these two men were associated in a business whose assets now approach half a million sterling. To-day the controlling interest is retained by the heirs of the late founder.

**Development.** Rapid strides in prosperity made imperative an early removal to larger premises on the Market Square, and subsequently to Marland Street. The firm then extended its activities from a purely produce business to general merchandise. In 1891 the site of the present premises was acquired, new buildings were erected, and operations extended to embrace every branch of commercial activity. The business having become too complicated for private enterprise, in 1919 the main section was converted into a limited company with an authorised capital of £400,000. A further significant step in the development of Champions Ltd was the acquisition of Polley's Bloemfontein Hotel (see page 295). A further purchase bringing the company's solid assets up to the figure above-named, was that of the residential and business premises in Upper Church Street known as Florence and Hilary Buildings. The firm has established depôts at Port Elizabeth and Durban, and owns maize mills at Kroonstad.

**Subsidiary Interests.**—Controlled by this prominent organisation are Lambons Ltd, who conduct a great motor and ammunition business (see pages 294 and 295), and Conning & Co. Ltd, produce merchants and millers, of Thaba Nchu.

**Activities.** Departments of the establishment cover agricultural implements, produce, hardware, furniture, grocery, timber, boots, outfitting, drapery, fancy goods and haberdashery, Manchester goods, millinery, crockery, motor-cars, and a deposit account department open to receive large or small sums on current account.

**Staff.**—Champions Ltd employs over 100 Europeans and 100 natives in Bloemfontein alone.

**Directorate.**—F. A. Nicolai (chairman) and H. F. Champion, joint managing directors, R. L. Champion, C. W. Champion, Mrs. M. M. Champion, and A. Neale, Secretary, L. V. Coen, attorneys, Messrs McIntyre & Watkeys, auditor, G. W. Warner.

**Bankers.**—The Standard Bank of South Africa, Ltd.

### POLLEY'S BLOEMFONTEIN HOTEL.

**Reorganisation.**—Of long standing and firm reputation, this hotel was acquired in 1919 by the present owners, Messrs. Champions Ltd, who at once undertook complete renovation and structural improvements, providing 10 up-to-date sample rooms (detached from the residential portion) for commercial travellers, and adding to the main building 25 bedrooms, imposing shop-fronts, and showrooms. Equipment throughout is of the most modern pattern, while the efficient staff are solely European.

**Situation.**—The hotel occupies an ideal position in the business centre of the city, adjoining the main traffic arteries and in close proximity to the General Post Office and Railway Station.

**Patronage.**—Regarded as one of the best hotels in South Africa, the place is patronised largely by the delegates to national confer-

CHAMPIONS LIMITED, Bloemfontein.

1. Gentlemen's Outfitting Department.
2. Departmental Store and Head Office of the Company, Bloemfontein.
3. Grocery Department.

ences and congresses held at Bloemfontein, and was the venue of the farewell banquet given to H R H the Prince of Wales on his visit to the city. Replying to the loyal toast, the Prince made allusion to the genial manager, Mr James Harper, and to the excellent fare.

**Sport.** Golf, tennis and bowls are available for visitors, and ample garage accommodation is provided.

**Terms.** Residential terms are 17s 6d per day, with special rates to members of the B M and S A C T Associations.

**Address.** P O Box 506, Bloemfontein. Telephones office and trunk, 81, visitors, 1522.

**Cables.** "Polleys," Bloemfontein.

#### LAMBONS LIMITED.

**Inception.** The history of the firm known as Lambons Ltd, now controlled by the powerful concern Champions Ltd, is interwoven with the progress of the motor industry in South Africa. It was established in 1892 by the late William Lambon, Deputy Mayor of Bloemfontein and a practical gunsmith and locksmith.

**Development.** The enterprise so founded became a central depot for supplying cycles and all sporting requisites, including ammunition, to the Orange Free State. With the advent and development of the motor vehicle the business expanded rapidly, until it became necessary to make separate provision for activities in the new line. In 1913 a modern workshop and garage, fully equipped and with an accessories department were added to the property on Market Square. In April 1920 another garage, covering over 10,000 square feet, was built in Atherstone Street, followed a year later by a two storeyed, reinforced concrete erection in Fountain Street. The first floor of this building accommodates a machine shop and an enclosed painting and varnishing department while tyres, petrol and oils are stored in the basement. The fine showroom facing St Andrew's Street, ideally equipped for displaying cars and accessories, was added in 1924, an electrical department being opened later. Further extensions are in course of completion.

**Activities.** The main activities of the company embrace the supply of new and used cars, spare parts, accessories, wireless apparatus, machinery, tyres, petrol, oil, arms and ammunition, motor cycles and bicycles.

**Service.** Operated from the Bloemfontein office is an efficient mailing and advisory department for the immediate imparting of information assisting customers' own repairs.

**Branches.**—Branch houses are established at Bethlehem, Kroonstad and Frankfort, the last named in 1925, and the preceding one in 1924.

#### THE FRIEND NEWSPAPERS, LTD.—

East Burger Street, Bloemfontein. Newspaper proprietors and publishers. This firm publishes "The Friend," the "Vriend des Volks," the "Motor Weekly," the "Farmers Weekly," the "Homestead," and "De Boerenvriend Huis Almanak." London offices, 72/78 Fleet Street.

#### SOWDEN AND STODDART, LTD.—

Maitland Street, Bloemfontein. Opened at Bloemfontein in 1880 as drapers, outfitters and boot and shoe merchants. Soon afterwards a branch was established at Potchefstroom, and subsequently others at Ladybrand, Ficksburg, and Krugersdorp, and a business was also acquired at Pietermaritzburg. London office, Sowden & Stoddart (London) Ltd., 22, Fann Street, E.C.1.

CHAMPIONS LIMITED, Bloemfontein.

1. Polley's Bloemfontein Hotel: The Premises.

2. Polley's Bloemfontein Hotel: The Dining Room.

**JOHN RODERICK & CO. LTD.**

**Inception.** Prominently engaged to day as auctioneers, estate, insurance and general agents, the firm was incorporated in 1916.

**Appointments.** The company has been appointed official auctioneers to the following bodies: The Friesland Cattle Breeders' Association of South Africa, The Shorthorn Cattle Breeders' Society of South Africa, The Devon Cattle Breeders' Society of South Africa, The Stud Breeders' Association of Natal and East Griqualand, The Witwatersrand Agricultural Society, the Imperial British Authorities and the Government of the Union.

**Pedigree Sales.** Messrs John Roderick & Co. Ltd. are responsible for the sale of the best bred and the major quantity of the pedigree livestock of South Africa, holding dispersal sales anywhere in the country. The

chief pedigree sales are held at Bloemfontein, Pietermaritzburg and Johannesburg in conjunction with one or more of the above Governments or Associations.

**Other Stock Sales.** The chief ordinary breeding and slaughter stock sales by the company are held at Bloemfontein, Westminster, Sepan, Dewetsdorp, Springfontein, Petrusburg and Maritzburg.

**Advantages.** At the various sale centres the firm maintains its own well-equipped stables and farm for the care of clients' stock. It also acts for persons unable to be present at the disposal, and fosters the interests of all stock breeders.

**Wool.** One of the best lighted wool warehouses in South Africa is the property of the company, which conducts weekly wool, skin and hide sales in Bloemfontein during the season.

**Estate Agency.** The company conducts the purchase, sale and letting of estates, farms and houses, and all other estate agency operations.

**Insurance.** The insurance department effects transactions of unrestricted scope, representing some of the soundest insurance companies.

**Management.** J. W. Roderick (governing director), H. W. Hickes (secretary and accountant), W. Smith (statistician), O. J. Adendorff and A. Smith (assistant auctioneers), R. Ovendale (manager, estate and insurance departments), and D. C. Gladwell (adviser on pure bred cattle).

**Offices.** Head office: P.O. Box 248, Bloemfontein; branch office (manager, Mr. A. Smith): P.O. Box 260, Pietermaritzburg. Cables: "Rodericks," for both cities. (See illustration page 296.)

## OTHER CITIES

### BETHLEHEM

A town of 6,500 inhabitants on the River Jordan and at the foot of the beautiful Wittebergen Range, Bethlehem was originally laid out some 60 years ago as a church village for the surrounding Boer farmers, who assembled there four times a year for Naachtmaal. With the development of the rich agricultural district, however, Bethlehem has steadily progressed. It has a large and modern co-operative creamery and cheese factory, also a grain elevator with a storage capacity of 4,800 tons.

### FICKSBURG

Situated on the Caledon River, in that portion of the Free State which was captured from the Basutos in 1866, the town being named after General Fick, the Dutch commander, Ficksburg is charmingly situated at the foot of the Imperani Mountain, and is the centre of a rich agricultural and stock breeding country.

### HARRISMITH

An important town in the Orange Free State, the population at the last census being returned at 6,234. Harrismith stands at the foot of the Platberg, an isolated mountain some four miles long and a mile in width, which rises to 8,000 ft. above sea-level. It is a growing holiday centre, and

is popularly known as healthy and happy Harrismith. The town has well laid out streets, excellent drainage, a good water supply, electric light and power, a handsome town hall, which cost £30,000, a free library, and a museum. As an industrial centre, Harrismith boasts the largest woollen factory in the Union, an up-to-date meat-killing and cold storage industry, large butter factories and a number of lesser but prosperous industrial concerns.

### JAGERSFONTEIN

This is the site of the most important diamond mine in the Orange Free State Province, the stones produced being noted for their fine quality. A flawless white stone of 634 carats found here is claimed to be the most perfect diamond ever discovered.

### KROONSTAD

The second largest town in the Orange Free State, on the main line of the South African Railways, beautifully situated on the Valsch River, Kroonstad has grown largely as the result of the fertility of the surrounding district, of which the chief products are wool, maize, and dairy produce. Diamonds are also mined to some extent, and there are valuable deposits of coal. The population numbers 9,336.

### LADYBRAND

A pretty township 90 miles to the east of Bloemfontein, Ladybrand is the centre of fine grain and pasture lands. The district is also rich in minerals. Population, 3,664.

### PARYS

Situated on the Vaal River in the extreme north of the Free State, Parys has a population of 3,653, and an increasing number of rural industries.

### SPRINGFONTEIN

An important railway junction, and one of the highest points in the Free State, Springfontein is the distributing point for a wide stretch of pastoral country.

### THEUNISSEN

A picturesque town half-way between Bloemfontein and Kroonstad, Theunissen is the centre not only of considerable farming activity, but also to some extent of diamond mining.

### WINBURG

Winburg was one of the towns founded shortly after the great Dutch trek of 1835-36. The centre of an immense sheep district, it awaits with interest the development of the large coal beds which exist in the neighbourhood.

DAIRY CATTLE, SOUTH AFRICA.

## STOCK RAISING

### GENERAL DATA

**S**TOCK raising in South Africa is conducted largely on the high veld, which vast area, comprising the Orange Free State and a great part of the Transvaal, was until the close of the last century almost entirely given up to a primitive kind of pastoral farming. Over the large Boer farms, 2,000 to 10,000 morgen (about 2 1/2 acres), the cattle ranged at will, being only occasionally rounded up and selected for breaking in to ox-teams, for sale, or for slaughter. The terrible outbreak of rinderpest which occurred in 1896-7, followed by the ravages of the South African War, not only reduced the cattle of South Africa to a very low ebb, but made the old method of allowing such stock to run semi-wild over large areas impossible. Since then the cattle have in general been confined so as to be able to isolate healthy stock and prevent the transmission of disease from one herd to another, increased attention has been paid to dipping, and the introduction of pedigree bulls has led to scientific breeding for beef and dairy purposes. As a result the stock raising industry of South Africa now approximates in some degree to that of the two great sister Dominions of Australia and New Zealand. In the south, the excellent grazing grounds of the Karoo maintain the large flocks of sheep for which the Cape Province is famous, as well as being the true home of the ostrich.

The following table gives the 1924 figures of the number of live stock in the Union.—

Horses	848,436
Mules	124,685
Asses	721,850
Cattle	9,906,271
Ostriches	206,785
Sheep (woolled)	26,937,000
Sheep (other)	5,066,000
Goats (Angora)	2,126,631
Goats (other)	5,937,123
Pigs	778,147

**DIPPING.** It has been said that gold, diamonds, and the dipping tank have been the three great factors in South Africa's prosperity, and it may be that eventually the introduction of the tank in question will prove to have been the greatest. Dipping dates from 1901, in which year the first tank was erected in Natal. Before that the cattle industry was at a standstill, the risk to imported stock being so great that any wide improvement of the South African herds was impracticable. It is only necessary to turn to the import and export tables of meat, butter, and milk (see under "Commerce") to see what has been effected. Freshly imported stock are often dipped every three days. Very wisely, the construction of tanks receives Government encouragement and assistance, and loans are granted for that purpose by the Land Bank. There were over 12,000 tanks in the Union in 1925.

**DISEASES AND PESTS.**—One of the greatest difficulties from which South African farming suffers is the prevalence

### STOCK

of disease among all kinds of domestic animals, in forms which are nearly always contagious, though they are more generally caused by some blood parasite than by the bacteria common in Europe and America. The country has been repeatedly ravaged by both horse sickness (paard-ziekte) and rinderpest. Horse-sickness is at times a terrible plague, the disease remaining quiescent for a period but usually over running the country at intervals of from 10 to 15 years, as a rule in seasons of plentiful rainfall. Horses that recover become immune, and a method of immunization which has been worked out is in widespread operation. In the low-lying and warmer districts, as in parts of Zululand and the bush-veld, horses are liable to a trypanosome disease (nagana) distributed by the bites of the tsetse-fly and horse-keeping is practically impossible in the regions where the fly occurs.

Cattle have suffered greatly from recurring attacks of rinderpest, cases having been known where 90 per cent of the stock in a district died, while the antelopes and other big game also suffered severely. Rinderpest, however, is a plague that sweeps through a country and does not recur for some time. Far greater disaster to the cattle industry is wrought by the diseases for which certain species of grass ticks act as carriers, the so-called redwater and East African Coast fever. Cattle sometimes recover from the former, but the latter is almost invariably fatal. A preventive vaccine has been

prepared against redwater but the stamping out of East Coast fever depends upon the preliminary eradication of the tick. Other tick-borne diseases exist, and cattle in South Africa also suffer from anthrax and blackwater, animals freshly imported from Europe are particularly liable to attack, and great care should be taken to get them through the early months after arrival by preventive vaccinations and to keep them free from ticks. Dipping the animal in some arsenical solution at comparatively short intervals has been proved the only way of killing off the ticks before they can inoculate the beasts with the disease. Another difficulty with imported cattle arises from the presence in the veld vegetation of various poisonous plants (tulips), which acclimatised cattle have learned to avoid or to eat with impunity. Sheep in South Africa are also subject to a number of diseases besides scab, several of them being transmitted through ticks like the cattle diseases.

### STOCK

**CATTLE.**—From the days of the earliest settlement in Table Bay the ox has been the most important draught animal of South Africa, and throughout the Union the breeding of cattle for transport purposes has been a feature of the country. To-day whilst this still goes on, the raising of cattle for beef export and dairying purposes is receiving considerable attention. Great advances are being made in the science of cattle breeding, and some of the finest ranches in the world are to be found in the northern Transvaal and Bechnanaland.

In 1924 there were approximately 9,607,000 head of cattle in the Union, the stock being densest in the Eastern Transvaal, Orange Free State high veld area in Natal, and in the eastern coastal district of the Cape Province. The distribution by Provinces in 1923 was as follows: Cape Province, 3,212,225; Natal, 1,789,471; Transvaal, 2,743,518; Orange Free State, 1,862,122; total for the Union, 9,607,336.

nearly exterminated in the Transvaal and Orange Free State during the South African War. Of European breeds, the Friesian is the favourite in South Africa, and deservedly so because of its adaptability to climatic and other conditions.

During the last ten years a marked improvement has been noticeable in the herds throughout the Union, brought about by the importation of pedigree sires and by the establishment of pure-bred herds, from which bulls in considerable numbers are now bred and used for the grading-up of ordinary herds. Each of the following breeds has its own Breed Society: Friesian, Shorthorn, Hereford, South Devon, Aberdeen-Angus, Ayrshire, Afrikaner, Sussex, Red Polls, Jerseys, and Devon. Other breeds to be found in the country, though in comparatively small numbers are Brown Swiss, Siementhaler, Kerry, and Galloways.

**DAIRY FARMING.** The dairy industry in South Africa first received serious attention in 1896, since when it has made

OSTRICH FARM, CAPE PROVINCE.

**EDUCATIONAL FACILITIES.** At the various schools of agriculture of the Union valuable instruction in the methods of stock farming is given, especially at the Grootfontein School, which serves one of the finest sheep-raising areas in the country. The Angora goat and ostrich industries are also given special attention here, Grootfontein being the only institution in the world which offers a course of instruction in ostrich farming. Cattle ranching is taught at Potchefstroom, and both Glen and Cedara specialise in dairying instruction.

**PASTURE.**—The grazing capacity of the South African veld is low, and has actually been depreciated by European occupation, so that the difficulties of the stock farmer, due to the long dry summer of the inland districts, must be overcome by the planting of such hay and ensilage crops as the rainfall for irrigation permits, and by supplementing these with plantations of spineless cactus for prickly pear. The most important hay crops are derived from lucerne, Sudan grass, teff grass, Guinea grass, pasapum, and manna. For sheep the Karoo bush provides food where the veld grass cannot find enough moisture.

**BREEDS.** The horned cattle of South Africa represent only a small proportion of the existing European breeds. The Afrikaners are direct descendants of the indigenous native beasts, improved by European and English blood, notably that imported from Holland and Devon. This breed exhibits quite a distinct type of an almost solid red colour, possessing a wonderful power of impressing its characteristics on the progeny when foreign blood is introduced. These Afrikaner cattle are a true product of the veld, and have many virtues when judged from the standpoint of the South African farmer, who desires hardiness and ability to withstand all the vagaries of the South African climate without artificial feeding. The cows are poor milkers, as far as quantity is concerned, but they yield a surprisingly rich milk, containing a large percentage of fat. The oxen are slow in maturing, but when grown they are excellent for work, being fast and able to travel long distances without food or water. A full grown ox in good condition will weigh about 900 to 1,000 lb. There are not many herds of pure bred Afrikaners left in South Africa, the breed having been

rapid strides, but an enormous amount of pioneering work had to be carried out before the enterprise was placed on a satisfactory basis. In 1896 one or two small creameries were established in the Cape, followed shortly afterwards by two in Natal. In 1924 there were in the Union 73 creameries, 45 cream depôts, and 126 cheese factories. The industry has been to a considerable extent fostered by the Division of Dairying in the Union Government's Department of Agriculture, the compulsory grading of butter and cheese for export, and the spread of co-operative organisations. As showing the advance in dairy farming since the establishment of the Union, the total production of butter increased from 11,350,000 lb. in 1911 to 22,415,000 lb. in 1923, and that of cheese from 545,000 lb. to 5,659,000 lb. during the same period. The year 1923-24 was a bad one for the industry, butter production (farm and factory) dropping to 20,690,000 lb. and that of cheese remaining nearly stationary at 5,889,000 lb. The figures of factory production for 1923 showed a decided improvement in butter, output amounting to 13,185,590 lb., and that of cheese to the record figure of 1,941,050 lb.

**MEAT PRODUCTION** During recent years the prospects of an export trade have stimulated breeders in South Africa to improve the type of cattle bred for beef purposes, and the fattening of stock is receiving increasing attention. The Department of Agriculture has at its agricultural schools and experimental farms conducted upon oxen of different types and ages a large number of feeding experiments which have proved of great value, and experimental shipments of the meat of these oxen to the London market have provided useful information. Good breeding stock is in considerable demand, but prices since the War have ruled low, though there was a noticeable improvement both in the quality and value of beef exports in 1924 (See also under "Commerce").

**GOATS.** The common goat was found in the Cape when Europeans first occupied it, but the breed has since been greatly improved both in size and appearance. South African goats are bred chiefly in the

In the year 1838 South Africa possessed two pure-bred Angoras, in 1868, no fewer than half a million, and in 1924 the number had increased to 2,120,631. Cape Province returning over two million of the total. South Africa has produced two-thirds of the world's supply of mohair, the balance coming from Turkey. Practically all produced in the Union is shipped overseas, the principal market being Bradford where the fleece is spun into yarn and distributed (See also under "Commerce").

**HORSES.** The open grass-lands of South Africa are extremely suitable for horse breeding, and this was realised from the earliest times. The Cape horse has developed into a distinct type of a high average standard. It is typically a light, medium sized sure-footed animal with wonderful staying power and is descended chiefly from Arabian and English thoroughbred stocks. At one time South African horses were in demand in India as racers, and the first horses introduced into Australia were

**OSTRICHES.** The ostrich in its natural state at one time abounded over the habitable parts of Africa, and was hunted for its plumes. With a continuation of such conditions, and an increasing demand for feathers it would most likely have become extinct had not its domestication been undertaken. Wild ostriches are still found in certain parts, but the birds kept in captivity in the Union greatly increased at one time (1913) numbering about 776,000. The totals since then have gradually dwindled by two thirds as a result of the drop in the prices of feathers. Ostrich farming was first seriously undertaken in South Africa about 1863 the export of feathers from the domesticated birds increasing very rapidly from 17,522 lb. value 165,736 in 1865, to 1,023,307 lb., value 12,953,587, in 1913. To-day the trade in the feathers of wild birds is negligible and South Africa is practically the sole producer of the beautiful ostrich plumes employed for decorative purposes the world over.

AFRICANDER CATTLE.

VALUABLE STOCK

dry Karoo districts to the north and north-west of Cape Province, in the various native areas, and in the bush country where sheep do not thrive. These goats are hardy animals, grow to a considerable size, and multiply rapidly, hence they are the most profitable stock which can be raised in districts where there is a demand for their mutton. The number of goats (other than Angora) in the Union in 1923 was 6,030,601, of which total 4,101,450 were in Cape Province and 1,005,179 in Natal. In 1924 the number fell to 5,937,123.

**ANGORA GOATS.** The Angora goat is the result of a cross between the ordinary Boer goat ewe and high-class Angora rams, first introduced at great expense and trouble from Asia Minor in 1838. Most of the imported rams went to the Graaf-Reinet, Somerset East, Bedford, and Adelaide districts of Cape Province, where the best quality mohair is produced, and where the goats do well. The purest flocks of the Union are now greatly superior to any that can be found in Turkey. The South African goat carries a much heavier and more uniform fleece, showing greater character combined with a fairly even covering from head to tail.

supplied by South Africa. Owing to the long distances and scanty railway communications, fast travel was formerly done on horseback, or in the horse-drawn two-wheeled Cape cart, but the increase in railways and the advent of the motor car have largely replaced the horse for such purposes. Some native tribes, e.g. the Basutos, live to a large extent on horseback. In 1923 there were 922,310 horses in the Union, distributed as follows:—Cape Province, 408,489, Natal, 102,180, Transvaal, 149,317, and Orange Free State, 262,324. In 1924 the total had fallen to 848,430.

**MULES.** The ass was introduced into South Africa at a very early date from Cape Verde Islands, and mule-breeding appears to have been taken up during the 18th century, especially in the Malmesbury District. Ultimately the industry became general throughout the country, with intensive areas in the best districts. The South African mule, although somewhat light, is a hardy and most useful animal, and good beasts fetch high prices. In 1924 there were 124,685 mules and 721,850 asses in the Union.

**DISTRIBUTION.** The districts of Oudtshoorn, Ladismith, and Calitzdorp in Cape Province with their large irrigation schemes and extensive lucerne fields, have always taken the lead in ostrich farming. There are however many other districts of Cape Province which are also well suited to the industry and at one time were prominent in it. Among these may be mentioned Uitenhage, Albany, Somerset East, Graaf-Reinet, Alexandria, Middelburg, Humansdorp, Cradock, Swellendam, Fort Beaufort, and Robertson. In 1924 there were in the whole Province some 205,000 ostriches out of the total of 206,785 which the Union carried.

**FEATHER PRODUCTION.** South Africa is unique in the quality and beauty of the ostrich feathers produced, the latter being largely due to the good treatment and the rich pasture provided for their birds by the farmers. This ensures a uniform and perfect growth of feathers. The South African ostrich has been described, not inaptly, as "the most pampered animal in existence." As already stated, the maximum of production was reached in 1913, after which year a set back in prices

and the European War successively dealt severe blows to the industry. At the close of hostilities matters improved somewhat, but the industry has not yet really recovered, and exports since 1919 have shown a diminishing tendency (See also under "Commerce").

**PRICES.** In recent years the highest prices obtained for feathers were secured in 1913, when an average of £2 17s 9d was recorded. The lowest average prices have been 15s 8d in 1915 and 10s 3d in 1919. By 1919 prices had been restored to a basis which again made ostrich farming a profitable proposition but since that time they have steadily fallen.

In 1923 in order to provide funds for the rehabilitation and organisation of the industry, a levy of 2 per cent on the declared value of ostrich feathers exported from the Union was instituted.

**Prospective Rise in Prices.** At the end of 1925 it was announced that the majority of the ostrich farmers had formed a Co-operative Society and had fixed the prices of all pluckings after January 1, 1926 at a minimum of £3 per bird which is nearly

three times above the rates which obtained on October 1, 1925. Further, the Union Government, through the Land Bank, will advance the society half the value of the pluckings that is, 30s per bird which will assist it to hold the feathers for one or two years if necessary until the market is ready to take them at the price. This scheme has been rendered possible owing to the diminution of ostriches in the Union and it is confidently expected that very high prices will prevail.

**PIGS.** In 1924 there were 778,147 pigs in the Union, the returns showing a steady decrease since 1919. Pig farming in South Africa has been given serious attention only during the last ten years and there can be no doubt that the Union offers excellent opportunities for the building up of a bacon industry and an overseas export trade. Maize and lucerne, two of the most valuable pig foods, can be economically produced and the cheapness of labour in South Africa renders pig farming more profitable than in most other countries. In 1925 the factory production of bacon and ham was 1,301,513 lb.

**POULTRY.** The poultry industry is being steadily developed in South Africa and its importance as an adjunct to farming operations is becoming more generally appreciated every year. Egg production has so far been the chief aim, the prices realised for first quality eggs always affording a substantial margin of profit, but with the development of an export trade in table poultry, more attention is being paid to this branch of the industry, there being an increasing demand for table birds of high quality, both for export and home consumption. In 1922 a levy of 9d per case was placed upon all eggs exported from the Union, the proceeds being devoted to the development of the industry. The establishment of this fund enabled the dispatch of a poultry officer to England in 1924 with a view to obtaining the most up to date information in regard to marketing and opening up fresh markets for South African poultry produce.

The poultry figures of the Union in 1922 (the last year for which figures are available) were: fowls, 9,181,824; ducks, 115,810; geese, 201,238; and turkeys, 262,541.

**SHEEP.** See article following.

## SHEEP AND WOOL

**S**OUTH AFRICA is one of the five great wool-producing countries of the world, ranking fourth in order to Australia, Argentina and the United States. It must also be remembered that the greatest wool-producing country—Australia—owes the foundation of its industry to the Merino sheep which it obtained from Cape Colony.

The first Merinos were imported into South Africa in 1785, having been presented to the Dutch Government by the King of Spain. Development at first was slow, as is shown by the fact that early in the 19th century an average of 3½ lb per sheep was considered an excellent yield, whereas to-day the average is 100 per cent more, with vastly improved quality. About this time a number of fine-bred, well-woolled sheep were brought to the country by the English settlers who were located in the Albany District, and these were most successful. A new effort in 1827, still further inland, was even more successful, and laid the foundation of the pastoral prosperity of the Eastern Cape Province. From then onwards frequent importations from Saxony and France, and, later on, from Australia, have greatly improved the character of the South African flocks, the present wool industry of the Union (the value of which has increased from £1,887,459 in 1905 to £14,616,000 in 1925) having been built up by the careful selection of rams and the breeding of pure merinos.

**DIFFERENT TYPES OF SHEEP.**—Generally speaking, on account of pastoral conditions the greater part of South Africa is better suited to the ranging merino than to the majority of English breeds or cross-breeds, which are more at home under rich agricultural conditions. In parts of the Union with a heavy rainfall and suitable agricultural conditions, high-class mutton sheep can be raised successfully. There are from five to six millions of Persian and Afrikaner (non-woolled) sheep, which, crossed with certain of the English breeds, will give a good foundation on which to

build a profitable mutton industry. The Karakul sheep, whence the "Persian" lambskins are obtained, has been found to be the hardest sheep in the country yields good mutton, and can be crossed successfully with the native Cape sheep.

**DISTRIBUTION.** Each of the three distinct types of country into which South Africa is divided, the Karoo mixed veld, and grass country, is well suited to sheep breeding. The Karoo comprising some of the best sheep country in the Union, is a semi-arid and an extremely healthy region with an altitude of from 2,000 to 4,000 ft above sea level. The annual rainfall varies from 10 to 15 inches. Its vegetation consists chiefly of numerous varieties of highly nutritive edible shrubs, much relished by sheep and having great drought-resisting qualities. The mixed veld (Karoo and grass), also excellent sheep country, comprises a large area in the midlands of Cape Province and in the western and south-western Orange Free State. It has an altitude of from 3,000 to 6,000 ft, with an average rainfall of from 15 to 22 inches per annum. The carrying capacity of this country is somewhat higher than that of the Karoo. The grass veld comprises the bulk of the pastoral area of the Union, viz. the coastal belt of the western Cape Province, the whole of the eastern Cape Province, central and eastern Orange Free State, the whole of the Transvaal, and Natal. The rainfall in this area is considerably greater, ranging from 18 to 36 inches.

In 1924 there were 32,002,848 sheep in the Union, an increase of 584,382 on the figure of 31,418,466 returned in 1923. In the latter year the distribution of sheep by provinces was as follows:—

	WOOLLED SHEEP	OTHER SHEEP
Cape Province	14,083,571	4,082,646
Natal	1,286,579	318,112
Transvaal	2,852,361	649,047
Orange Free State	7,601,428	544,722
	25,823,939	5,594,527

**LABOUR.** Labour conditions in the Union are all in favour of sheep farming on a large scale since the South African native furnishes an almost inexhaustible supply of cheap labour and makes an excellent shepherd. Wages approximate from £2 to £3 per month including keep. Practically all the shearing which usually takes place in November and December is performed by native labour, and though not so fast as the Australian shearer, the South African native's work leaves little to be desired. The cost of shearing in the Union ranges from 10s to 15s per 100, as against 7s to 30s in Australia.

**PRODUCTION OF WOOL.**—The following table shows the production of wool by provinces during the years 1921-1924.

	1921-22 lb	1922-23 lb	1923-24 lb
Cape Province	71,340,877	72,045,812	77,674,058
Natal	5,660,092	5,555,543	6,204,061
Transvaal	15,147,702	15,271,370	15,910,541
Orange Free State	47,895,218	44,344,880	48,070,833
Total	140,052,949	137,217,585	147,865,493

To these totals must be added a considerable amount of wool pulled from slaughtered sheep and sheep which have died from disease, as also of wool shorn by speculators and held for a rise in the market, figures of which are not shown in the production returns, but which account for the seeming discrepancy between the latter and the export returns. (See under "Commerce.")

**QUALITY OF SOUTH AFRICAN WOOL.**—For climatic reasons the greater portion of the Union is best suited to the production of wools of 64's to 70's quality. The western and eastern districts of Cape Province, the eastern Orange Free State, the eastern Transvaal, and the whole of Natal and East Griqualand are capable of producing superfine wools of the highest quality. Undoubtedly, a great improvement in the

MERINO RAMS.

RANCHING SCENE.

general character of South African wool has been brought about during recent years through the judicious classing and mating of sheep and much good work has been done by the sheep and wool experts of the Agricultural Department in advising farmers in this direction. An improvement has also taken place in the classing and get-up of the clips so as to make them more attractive to the buyers when the wool is displayed for sale, a result for which the work of the various Wool Growers' Associations is largely responsible.

#### **SOUTH AFRICAN WOOL-MARKET.**

In former days it was customary for South African sheep farmers to sell their wool or barter it to up-country storekeepers, merchants, or speculators, many of whom were supported by large mercantile or broking houses on the coast. These buyers then forwarded the wool to the coast for disposal. Of recent years, however, the majority of sheep farmers, having failed to get the true value of the wool from these buyers, have adopted the more business-like method of forwarding their wool direct to wool-brokers at the principal ports, who sell the clip on a commission basis.

The systems of wool selling in vogue at the different ports are not uniform. In Durban, all wool must in the first instance be offered for sale at public catalogue sales. If the reserve price is not reached and the wool is declared unsold, the highest bidder

has the option until the following day of taking over the wool if desired, but should he not avail himself of this option, the wool may be sold by private treaty between the broker and the buyers. At Port Elizabeth wool is sold either by private treaty or at public catalogue sales, but there is no compulsion, as in Durban, first to offer it at the public sales. In East London and Cape-town wool is at present sold only by private treaty between the brokers and the buyers. Previous to the European War public sales were held in East London, and have since been resumed.

In certain up-country towns in the Western Province of the Cape, viz., Swellendam, Heidelberg, Riversdale, Caledon and also the coast town of Mossel Bay, one public sale per annum is held comprising the various clips grown in those districts. The custom of holding these annual sales has been in vogue for many years. Periodical public wool sales have been started more recently in Bloemfontein and other places in the Orange Free State.

**PRICES** — There has been a great deal of fluctuation in the wool market from time to time. The average price paid for grease wool gradually rose from 6 01d per lb in 1908 to 29 30d in 1920. A great depression in the wool trade then set in, the average price paid in 1921 being only 7 90d per lb, this rising in 1922 to 11 93d. With the development of a world shortage

in the supplies of wool, the price has since moved steadily upwards, averaging 20 5d in 1924, as against 17d in 1923, the prices in 1924 being, with the exception of 1920, the highest ever obtained.

**PRINCIPAL MARKETS** — Prior to the War the bulk of the Union's wool was shipped to the United Kingdom, where a large proportion was marketed and distributed. During the War the usual trade channels were disturbed, and the produce was to a large extent diverted to other centres, notably Japan and the United States. Japan has now almost fallen out of the market, and the trade done is, first and foremost, with the United Kingdom, which in 1924 took more than half the total shipments, and afterwards with Germany, France, and Belgium in the order named. (See also under "Commerce.")

#### **WOOL-GROWERS' ASSOCIATIONS.**

These associations, which have been established throughout the country, in 1925 numbered 35. They are not co-operative societies in the sense only that they do not sell on behalf of their members. They exist for the purpose of enforcing correct skirting, classing, and packing of wool in order to secure a good name for their members by winning the confidence of buyers, and they are doing very valuable work. It is proposed to form a National Wool Growers' Association, to which the local associations will be affiliated.

# SOUTH-WEST AFRICA

**S**OUTH-WEST AFRICA, which is a Protectorate of the British Empire, administered by the Union of South Africa under a mandate from the League of Nations, embraces an area of 322,303 square miles (including the Caprivi Zipfel), lying between latitudes 17° and 28° 57' S. and between the Atlantic Ocean and longitude 21° 1'. As the Caprivi Zipfel for administrative purposes has been transferred to the Protectorate of British Bechuanaland, and Walvis Bay (which is 374 square miles in extent) is administered by the Administration of South-West Africa, the total area of the Territory now under the direction of the Union is 312,104 square miles. The country forms a large plateau on an average 3,600 ft. above sea-level, interspersed with small mountain ranges.

The most mountainous district is that of Windhoek, to the north-east and that of the Aas Mountains in the south and south-east, where each of the principal rivers, the Kunene, the Fish, the Elefant, the Nosob, the Swakop, and the Auob, has its source. The waterways which form three of the boundaries of the Protectorate, the Kunene, the Okavango, and the Grange Rivers, are large and perennial streams. The climate is hot and dry, but healthy, except in the northern districts where malaria is very prevalent during the autumn.

**ADMINISTRATION.**—The mandate under which the Territory of South-West Africa (formerly German South-West Africa) is vested in the Government of the Union of South Africa bears date December 17, 1920, and is exercised by the Governor-General, who delegates most of his powers to an Administrator appointed by the Union Government, who, in turn, had, prior to 1920, the sole power of legislation and the control of all governmental activities in the Territory, except so far as regarded the railways, which are worked in conjunction with the Union Railways and Harbours under the Union Minister of Railways. In terms of the South-West Africa Constitution Act passed by the Union Parliament in 1925, the Territory has now a Legislative Assembly of 18 members, 12 elected and six nominated by the Union Government, the Assembly dealing with all subjects not specifically reserved to the Union Government. The Executive consists of a committee of five—the Administrator, who is chairman with a casting vote, and four members elected by the Legislative Assembly, who may, but need not, be members of the Assembly. In respect of the reserved subjects, the Administrator has an Advisory Council consisting of the four members of the Executive, together with three other members to be appointed by the Administrator, one of whom is to be chosen for special knowledge of native affairs. The franchise is strictly limited to adult male Europeans, who number rather less than 7,000. While not given the status of an "official language," liberal provision is made for the use of German in the Courts and Assembly.

The general system of administration in the Territory is the same as that existing in the Union, and the country, exclusive of Ovamboland, which is a native reserve, is divided into 17 magisterial districts, the magistrates exercising certain adminis-

trative as well as judicial functions. The principal towns have municipal councils, which it is intended shall at no distant date, be wholly elective.

The present Administrator of the Territory is the Hon. A. J. Werth.

**COMMERCE.** There was a gratifying increase in 1924 in the Territory's volume of trade, as will be seen from the following table:

IMPORTS	1923	1924
Direct from overseas	£359,120	£628,020
From Union of S. A.	850,966	1,071,066
Total merchandise	1,210,086	1,699,086
Government stores	82,434	76,420
Specie	8,900	1,112
Grand total of imports	£1,301,404	£1,777,164
EXPORTS		
To overseas destinations	2,110,934	2,243,888
To Union of S. A.	500,060	600,305
Total merchandise	2,670,994	2,850,193
Government stores	—	—
Specie	2,000	1,280
Grand total of exports	£2,672,994	£2,851,473

During the period January-July, 1925, imports into and exports from South-West Africa amounted to £1,076,971 and £1,519,906 as against £1,027,441 and £1,060,219 respectively in the first seven months of 1924.

It will be noticed that the Union furnished by far the greater proportion of imports. Germany, Great Britain, and the United States contributed between them over 90 per cent. of the trade from overseas countries. There is apparently a growing tendency to buy direct from overseas, such imports having risen in value from £283,072 in 1922 to £359,120 in 1923 and to £628,020 in 1924. An even greater increase was foreshadowed in 1925. At present South Africa acts as a species of "clearing house" for South-West Africa, but if direct relations are cultivated between merchants in Windhoek, Luderitz, Swakopmund, and other towns and general shippers and manufacturers in Great Britain, South-West Africa will assuredly assume an important commercial standing when its vast mineral and other natural resources are more thoroughly exploited.

**CUSTOMS AND EXCISE.**—For the purposes of the collection of customs and excise duties the Territory of South-West Africa is regarded as part of the Union, and all customs and excise laws of the Union are applicable to the Territory. The duties collected are paid into the Consolidated Revenue Fund of the Union, out of which fund there is disbursed towards the cost of the administration of the Territory a revenue approximating to £75,000 a year.

**COMMUNICATIONS.**—Besides railway communication with all parts of the Union (see "Railways" following), there is regular communication by sea between South African ports and Luderitz and Walvis Bay maintained by the Woermann Line, which also arranges a three-weekly

sailing between Hamburg and Luderitz and Walvis Bay, the time occupied being usually 19 to 21 days. The Holland Africa line also makes Walvis Bay a port of call once a month, sailing from Rotterdam via Hamburg, Las Palmas, and Tenerife. Union Castle cargo steamers call regularly at Walvis Bay.

**POSTS, TELEGRAPHS, AND TELEPHONES.** Postal, telegraphic, and telephonic facilities and rates are the same as in the Union except that the Agricultural Parcel Post is not available. In 1924 there were 271 centres within the Territory where post or telegraph facilities were at command, included in this number being 27 post offices conducted by full-time officials, transacting all kinds of post, telegraph, telephone, money order, postal order, savings bank, and cash on delivery business. The number of letters posted in 1923 was 2,053,116, while 1,380,392 were in transit and 2,080,796 were received. The total number of telegrams dealt with in 1923-24 was 575,289, and the number of cable messages despatched 4,483. On March 31, 1924, there were 698 telephone exchange connections and 174 extensions. The Walvis Bay Wireless Station, which has a normal day range of 750 miles and a night range of 1,500 miles, dealt with 3,878 messages in 1924. The total expenditure of the Posts and Telegraphs Department in 1923-24 was £51,111, postal revenue amounting to £67,229, while customs collections on parcels and sales of revenue stamps brought in £13,742.

**FINANCE.** Under German administration the Territory was never self-governing, and all estimates of revenue and expenditure prepared therein required the sanction of the Imperial Reichstag. Since 1920 the Administration has been financed from revenue raised in the country, the Territory having been relieved of the burden of maintaining the railways.

The revenue of the Territory for 1922-23 amounted to £853,708, as against £870,924 for 1921-22, and the expenditure to £834,350, compared with £1,116,768. The principal source of revenue is the tax on the diamond mines at Luderitz, which in 1922-23 realised £591,385. An important item of expenditure was the S.W.A. Police £138,042.

**BANKING FACILITIES.**—Immediately after the occupation of the Territory by the Union Forces the National Bank and the Standard Bank of South Africa each established branches, and these institutions have now such branches in all the larger towns. The German banks continued to carry on their business, but the largest of these, the Deutsche Afrika Bank, went into liquidation in 1922, when also several smaller German banks were liquidated.

**HISTORY.**—The first European to land on the shore of what is now South-West Africa was the Portuguese navigator, Bartholomew Diaz, who in 1486 erected an iron cross (the remains of which can still be seen in the Capetown Museum) at Angra Pequena—now Luderitz. For three hundred years afterwards the country attracted no attention, but towards the end of the 18th century the discovery of copper mines excited the interest of explorers, and the rich but hostile Herero tribe of natives was met with. During

the first half of the 19th century missionary activities established thriving stations at most of the important native villages in Great Namaqualand and Damaraland, and whalers also visited the coast with great profit. Missionary labour opened up a field to commercial enterprise, the potential riches of the country began to be talked about, and in 1878 Walvis Bay, the only large and safe harbour along the whole of the South-West African Coast, was annexed by the British Government. Annexation of the whole country was asked for by the Hereros, the Bastards of Rehoboth, and several Hottentot tribes, and was strongly urged by the Cape Government, but the British Government was deaf to these representations, and it was left to the more enterprising Government of Germany to take the important step of proclaiming a protectorate over the whole coastal belt of South-West Africa, the German flag being hoisted on August 6, 1884, at Luderitz. In 1890 the country was formally annexed by Germany, eight years later the discovery of diamonds at Luderitz caused a great influx of immigrants and capital, and progress, which had been seriously interrupted by a revolt of the Hereros and Hottentots (1904-07), was rapid. Luderitz and Swakopmund became flourishing sea-ports, while the construction of railway lines opened up the interior to trade. Then came the outbreak of War in Europe in 1914, one of the earliest results of which was the invasion of German South-West Africa by the Union Forces at the end of that year and its complete surrender a few months later. In 1919 the Territory was handed over to the Union Government as a Mandated Territory, but certain difficulties regarding the status and treatment of Germans naturally took some little time to adjust. The passage of the South-West Africa (Naturalisation of Aliens) Act through the Union Parliament in 1925 put an end to all controversy, and there seems every likelihood that this former German colony will develop on lines which are common to South Africa as a whole. In 1926 German settlers in the territory became, and with their own consent—British citizens, and South-West Africa itself received a form of local self government which would seem to be only preparatory to its future entry into the Union as a fifth Province.

**LAND SETTLEMENT.**—The total area of South-West Africa is roughly 200,000,000 acres, of which rather less than one-sixth was alienated, or in progress of being alienated, during the German regime. Since the country was taken over by the Union Government, 931 farms with a total area of some 2,300,000 acres have been allotted under the two Land Settlement Proclamations in force in the Territory. The number of settlers to whom farms had been allotted up to the end of 1924 was 1,135, and the total valuation of the land so affected amounted to £650,936. Advances totalling £224,267 had been granted to settlers, apart from an amount of approximately £151,458 spent upon boring operations on Government lands on behalf of settlers. There was in 1925 still an area of roughly 129,000,000 acres of vacant Government land, of which rather less than half is suitable for settlement. Under the Union Land Settlement Acts, land in South-West Africa is from time to time advertised as available for settlement purposes by notice in the "Official Gazette" and in newspapers circulating in the Territory and Union. The farms are

advertised for eight weeks, after which period all applications are considered by the Land Board.

**PEOPLES.**—The following table shows the population of South-West Africa as revealed by the last census of 1921—

RACE	
European	19,432
Bantu	177,462
Other Coloured	39,845

Total 227,739

Excluding a certain number of Cape coloured people and non resident native labourers, the purely native population is estimated to number 195,000, namely: Ovambo, 102,000; Herero, including Ova-Hemba and Ova-Mbandero, 43,000; Khip-Kaffirs or Berg Damaras, 21,000; Hottentots, 21,000; Bushmen, 4,000; and Rehoboth Bastards, 4,000. These races afford the main sources of the labour supply for domestic agricultural and industrial purposes. The Ovambo work chiefly in the mines, railways and other industrial concerns, the Hereros and Hottentots on stock farms and the Berg Damara at jobs involving hard manual labour. The Bastards, the descendants of a cross of Cape European farmers and Hottentots, are superior in intelligence to the other natives, and are successful cattle breeders and hunters. The Ovambo, many of the Bushmen tribes in the Kalahari region, and a small section of the Ova Herero in the Kaokoveld still retain their tribal life and customs.

**PRODUCTION.** South-West Africa is essentially a cattle raising country, the climatic conditions adversely affecting many agricultural crops. The country is well mineralised throughout, but its mineral possibilities have as yet only been partially explored.

#### AGRICULTURAL PRODUCTION

In the northern portion of the Territory the short rainy season, excessive heat, and early frosts often affect the crops seriously, but in the south along the banks of the Orange River, where the land is under irrigation and in the Auoh and Lower Nossob valleys, where artesian water supplies are being developed there are great possibilities in the way of maize and wheat crops. Cotton, beans and fibre crops are receiving increasing attention, the cotton land in the territory having the advantage of being cheap at present, while the climate is healthy for white and coloured residents.

**INDUSTRIAL PRODUCTION.**—An industrial census taken in 1923 showed a decline in the number of factories in South-West Africa since the previous census, but an increase in the gross value of output and in the value of the plant and machinery in use. In 1923 there were 34 factories producing articles of food and drink, five working in stone and clay, 12 turning out vehicles, 18 metal-working and engineering establishments, and eight furniture and woodworking concerns, while 27 other firms manufacture a wide variety of goods.

**MINERAL PRODUCTION.**—The most valuable of the minerals and metals mined in South-West Africa up to the present have been diamonds and copper. The diamonds are found only on or near the Atlantic coast, in no place more than 12 miles inland, between the Orange River and a point south of Swakopmund. They are of alluvial origin, and the stones, though small, are of excellent quality and command

a good price. Since the discovery of the fields in 1909 about 219,000,000 worth of diamonds have been exported, the estimated value of the output in 1923 being £1,056,700. Copper is found all over the territory, but the only mines worked in 1924 were those at Tsumbichi, Asis, and Guchab, all in the Grootfontein District in the north. The output in 1923 was 43,317 tons, valued at £446,210, as against 34,351 tons in 1922, valued at £274,808. The extraction of tin ore, which is found mostly in the area round the Frougou mountains, has gradually developed, the value of the output in 1924 being £31,399. Gold is known to exist either alone or in conjunction with other metals in various parts of the country, but has not yet been commercially developed, nor have the extensive non-ferrous deposits received much attention, owing to the distance of the fields from sea or rail. The export of vanadium, which occurs in the Grootfontein District, is becoming of increasing importance, the value of exports in 1924 being £83,443. Other minerals and metals which have been located, but not yet exploited, are—Apatite, asbestos, beryl, corundum, cobalt, haematite, iron, lead, limestone, marble, mica, molybdenite, monazite, mottamite, nickel, oil (shale), rock salt, rose quartz, salt, scheelite, silver, topaz, tourmalines, uranium, wolframite and zinc.

**PASTORAL PRODUCTION.** Live stock thrive everywhere throughout the Territory, which is not only self-supporting in regard to beef and mutton, but has been for some years a source of supply of cattle and small stock for the meat trade in the Union. The whole country is admirably suited to stock farming, cattle doing best in the north and sheep and goats in the south. Several companies and many private individuals owning over a thousand head of large stock are established as ranchers in the Territory. The value of this industry is shown by the exports of live cattle to the markets of the Union and overseas. In 1923 there were exported 55,000 head of cattle, valued at £276,670, in 1924 the figures were 31,330 and £156,655 respectively.

A census of live stock taken at the end of 1923 showed the following figures: Cattle, 530,355; horses, 21,336; mules, 1,760; donkeys, 35,873; pigs, 5,886; woolled sheep, 38,095; Karakul sheep, 58,097; other sheep, 840,962; angora goats, 23,130; other goats, 900,627.

**RAILWAYS AND ROADS.** At the outbreak of war in 1914 the railway system in what was then known as German South-West Africa comprised in all 1,434 miles of line, of which 98 were private. In 1924 the mileage (the railways having been incorporated in the Union system as from April 1, 1922) was 1,697 miles, made up of 1,329 miles broad gauge and 368 narrow gauge. The estimated damage suffered by these lines during the War was approximately £350,000, and up to March, 1922, £150,000 had been expended on necessary repairs and works. The question of the development of the system in the direction of feeder lines is in abeyance, pending more accurate knowledge of the mineral resources of the territory. Railway revenue increased from £379,000 in 1923-24 to £395,000 in 1924-25, in which year goods traffic totalled 391,753 tons, an increase of 24,555 tons over 1923-24. (See also general article on "Railways.")

**ROADS.**—The Territory has always been well served by roads, the principal main trading routes running inland from the

south while Windhoek is the centre of a system of well kept highways trending east, north and west. These main roads are linked up by minor roads. There are good road motor-services connecting with the railways at the following points: Windhoek-Gobabis, 145 miles; Moriental-Malahoe, 75 miles; Keetmanshoop-Aroab, 110 miles; Kalkfontein-Warmbad, 40 miles; and Otjowarongo-Waterberg, 60 miles. In addition, there are some 20 cart services to the smaller settlements off the main lines of communication.

### WINDHOEK

Windhoek is the capital of South-West Africa and the seat of the Administration. It is pleasantly situated in a position dominated by a circular chain of hills, which protect it from high winds but render it very hot in summer. At the outbreak of war in 1914 the powerful wireless station erected here by the Germans was one of the first to be marked out for destruction or capture, and this was accomplished by the Union forces in 1915. It is said that on favourable nights messages could be exchanged with Berlin. Since its capture it has not been in use.

The population of Windhoek at the last census was 7,859, of which number 3,400 were Europeans.

**BUILDINGS, ETC.** The town was well planned by the Germans, and much has been done to improve it since British occupation. Besides the handsome Government buildings, which are commodious and solidly constructed, the Administration owns a large number of substantial houses which are allotted to Government officials, and there are also many fine business premises in the centre of the town. There are three hospitals (two for Europeans and one for natives), as well as a Maternity Home. The Lutheran Church is the principal ecclesiastical building. Large and up-to-date school buildings have been erected, with hostels attached for both the new and the old population, and in addition the Church of England has opened a school and hostel for girls. House building for the increasing population is progressing rapidly. The streets, which are broad and well laid, are now planted with shade trees and a light railway runs the length of the main street. There is a Municipality, which is taking vigorous steps to improve both the streets and the water supply.

**PARK.** A small public park, of which the Zoological Gardens, with the nucleus of a fine collection of African fauna, are the principal attraction, has been laid out. The park is planted with beautiful trees and flowers of every variety, and is a popular resort during the hot summer months.

### GROOTFONTEIN

This is the terminus of a branch line of railway in the rich Otavi copper district, in the extreme north of the Territory. The neighbouring country, besides being highly mineralised, has good agricultural possibilities. In 1921 the population of Grootfontein was 4,892, of whom 1,232 were white.

### KEETMANSHOOP

A town of some 3,000 inhabitants, Keetmanshoop is on the main line of railway connecting South-West Africa with the Union, and in the middle of the best sheep grazing district of the Territory. There is a finely constructed bridge over the Fish River, and the Railway Engineering shops are here.

### LUDERITZ

The town and port of Luderitz (known under the German occupation as Luderitz-bucht) is situated in lat. 26° 35' S. long. 15° 10' E., on the South-West African coast about half way between Walvis Bay and Port Nolloth. Originally named Angra Pequena by the Portuguese navigator, Bartholomew Diaz, as far back as 1486, it acquired its present name from a merchant of Bremen, Adolf Luderitz, who established a trading station there in 1882, from which developed two years later the German protectorate.

The fortunes of Luderitz as a trading centre and port were made by the discovery of alluvial diamonds in 1908 in the adjoining Kolmanskop and Pomona districts. The trade of the port has increased considerably during the last three years and improved facilities are being provided to cope with it. At present vessels discharge into lighters, but the construction and purchase of a new reinforced concrete jetty 540 ft long a shipway for lifting tugs, lighters and small craft and new steel lighters, each of 170 tons capacity have been sanctioned. Important fish canneries have been erected in the town and a considerable amount of trade through the port is anticipated from there. There is a population of rather more than 2,000, of whom one-half are Europeans.

**PILOTAGE.** Not yet compulsory, charge, £2 10s. each way.

**PORT CHARGES.** Luderitz is a free warehousing port for the purpose of warehousing and securing goods.

**BALLAST** 8s. per ton free alongside.

**RIFT OF HEALTH** 0s.

**TOLLAGE.** For vessels up to 750 tons, 17 10s.; from 751 to 1,500 tons, 112 10s.; over 1,500 tons, £15, all each way.

**WATER** £1 10s. per ton, free alongside.

### OMARURU

With a population of 4,000, Omaruru on the Otavi Railway is the nearest station to the tin mines of Okombahu and is likely to develop. The Waterberg near by was the scene of much fighting between the Germans and Heteros.

### REHOBOTH

This is a town lying 60 miles due south of Windhoek, at the head of the great Fish Valley, and is interesting as being the seat of the Bastard Government, the Bastards being ruled by a chief with the title of "Captain," supported by a Raad or Council partly hereditary and partly chosen every five years by the "Burghers" of Rehoboth. The population in 1921 was 9,727.

### SWAKOPMUND

The town and port of Swakopmund, on the Swakop River, is 21 miles north of Walvis Bay, with which there is communication by rail. An open roadstead, Swakopmund was a prosperous and busy seaport during the German regime, but since the British occupation its trade and shipping have gradually been diverted to Walvis Bay, and the future of Swakopmund would seem to lie more in the direction of a seaside resort, for which its temperate climate, long stretch of beach, admirable bathing facilities, and opportunities for sport so admirably fit it.

### WALVIS BAY

Walvis Bay (formerly Walvisch Bay), situated almost in the centre of the coast line of South-West Africa, was for a long time an isolated British enclave in foreign

territory. It was naturally cut off from commercial communication with the hinterland, and was only occasionally visited by British ships of war. When the German colony surrendered to the Union forces in 1915 Walvis Bay was at once connected with Swakopmund to the north by a railway, and thus became the principal seaboard terminus of the South-West African Protectorate Railway system. The whole of the shipping activities of Swakopmund have been transferred here and Walvis Bay is now a regular port of call for mail steamers of the German and Holland Lines.

**ACCOMMODATION.** Considerable development of the harbour works has taken place, additional temporary wharves having been run up, a new slipway constructed and improved and extended goods and station yards provided. Provision has been made for the dredging of a channel and the construction of wharves to enable ships to be brought in to discharge and load. At present this is done by means of small lighters. The pier, which is 200 ft long, has a depth at its end of 7 ft at low water.

By 1927 there will be deep water berth accommodation alongside the jetty now in course of erection, with two berths for steamers drawing up to 34 ft of water. The jetty is to be 1,000 ft long and ample provision has been made for further extension when the requirements of the port demand it. There will also be room for coasters. Extensive reclamation work has been undertaken in the vicinity of the new cold storage buildings to be completed in 1926. These will be fitted with all the latest refrigerating machinery for dealing with beef, butter, fish, etc. and will be the most extensive of their kind in the Union.

**ANCHORAGE.** The bay is a large and safe one, with an entrance 3 miles wide, and protected from all winds except N. and S.W., which rarely blow. The soundings are regular, from 3 to 8 fathoms. The anchorage is in 4 to 7 fathoms, about a mile off shore.

**COMMUNICATIONS.** There is steamship communication with Capetown every three weeks. Railway communication with the Union is via Windhoek, Nakop and De Aar. The construction of the line from Windhoek to Gobabis has greatly improved the prospects of Walvis Bay as a shipping port, a scheme being now under consideration to extend the track from Gobabis 500 miles to Mahalapye, a station on the Rhodesian Railways. Should this proposal be carried out, Walvis Bay would be brought into direct communication with Bulawayo (1,150 m.) and Francistown (1,050 m.), and would become the chief cattle port in South Africa. A further extension of only 100 miles from Mahalapye to Vaalwater, in the Transvaal, would link up Walvis Bay with Pretoria (about 1,100 m.), when the importance of the port to the mail boat services between Europe and South Africa would be at once established.

**PORT CHARGES.**—These are on goods landed 1s. 6d. and 16s. 8d. per cent ad valorem. Sand ballast is charged for at 4s. per ton, not including the cost of digging and placing in lighter, including such labour, 6s. 6d. per ton.

**TRADE.**—Copper ore to the extent of 46,000 tons per annum from the Otavi Minen- und-Eisenbahn-Gesellschaft, Tsumbeh, is exported. A meat canning factory has recently been constructed, and the whaling industry gives employment to a certain number of persons in the reduction of the oil and guano. It is hoped to develop the mineral export trade.

# THE NATIVE PROTECTORATES

Of the native States that at various times have come under direct Imperial protection and control, some on the outskirts of the old Cape Colony and Natal are now absorbed in these Provinces, the tribes forming them having in great measure lost their entities. Only three now remain amenable to the Imperial Government, viz., Basutoland, Bechuanaland, and Swaziland. The Government of each is vested in the office of a High Commissioner, who, since 1910, has been the Governor-General of the Union.

## BASUTOLAND

Basutoland occupies the crown of the great African range of mountains known as the Drakensberg, which extends from the Cape to Rhodesia. The Protectorate lies between the three Provinces of the Cape, Natal, and the Orange Free State. Its area, 11,716 square miles (about the same as that of Belgium), consists for the most part of continuous mountain plateaux of the rugged and broken type, only about half the total area being habitable. The temperature here ranges from 10° F. in winter to 90° F. in summer, and the average rainfall over 10 years is between 30 and 40 inches per annum.

**ADMINISTRATION.**—The territory is governed by a Resident Commissioner under the direction of the High Commissioner for South Africa, the latter possessing the legislative authority, which is exercised by proclamation. The chiefs adjudicate on cases between natives, with a right of appeal to the Magistrates' Courts, where all cases between the natives and Europeans are tried. The present Resident Commissioner (1926) is Mr. John Christian Ramsay Sturrock.

**CAPITAL.**—The capital town is Maseru, which is the headquarters of the Government. It is situated on the Caledon River, 80 miles by rail east of Bloemfontein. The population in 1921 was given as 399 Europeans, 1,890 natives, and 30 other coloured persons. Maseru, which possesses a large industrial school, a public hospital, and an ample water supply, is becoming known as one of the best centres from which to explore the Maluti Mountains, the highest peak of which, Machacha, is nearly 11,000 ft.

**COMMERCE.**—The trade of Basutoland is largely dependent on the seasons and the success or failure of the grain crop. In 1924 exports from the Protectorate exceeded imports by £16,531, imports totalling £942,279, as compared with £827,054 in 1923, and exports amounting to £958,810, a considerably higher total than the figure of £803,769 recorded in 1923. The principal exports are wool and mohair, which both show a rising tendency. Dutiable imports consist chiefly of cotton and woollen goods, haberdashery, saddlery, tinware, agricultural implements and groceries, and are mostly of British origin. Both imports and exports are practically all carried via the Orange Free State. The customs tariff in force is the same as that for the Union.

**FINANCE.**—The revenue of the Protectorate, which is derived from customs, native tax, income-tax on Europeans, post-office, and licences, amounted in

1923-24 to £252,300, expenditure for the same year totalling £241,570, showing a credit balance of £10,730. Under the native tax law every adult male native pays 25s. per annum, and if he has more than one wife by native custom he pays 25s. per annum for his wives up to a maximum of £3 15s. 0d.

**PEOPLES.**—The total population of Basutoland at the last census, taken in 1921, was 498,781, having grown from 404,507 in 1911. In 1921 the number of Europeans in the territory was returned at 1,603. Taking into account the habitable area only, Basutoland is the most thickly populated State in South Africa, all arable ground being under cultivation. Europeans are not allowed to settle in the country without special permission.

The Basutos, of Bantu origin (495,937), form the bulk of the population. They are a healthy and virile race, having, after long years of sanguinary struggle with the Zulus under Chaka, been welded together under a remarkable chief named Moshesh. Every Basuto is a farmer or a labourer, and those who do not cultivate their own land seek work, mostly at the mines of the Orange Free State and Kimberley.

**PRODUCTION.**—There is no private ownership of tenure of land in the Protectorate, land being held on the communal system and apportioned to the people by the chiefs. The principal agricultural and pastoral products are wool, mohair, wheat, maize, Kaffir corn, cattle, sheep, and horses. The country is said to be considerably overstocked at present. The Basuto wool the quality of which has been improved by the introduction of several thousand well-bred Merino rams some years ago, commands a good price. Basutoland possesses neither mines nor forests, and no industrial development has as yet taken place.

**TRANSPORT.**—There are no railways in the territory, but a line crosses the border and connects Maseru, the capital, with Bloemfontein. The roads are, on the whole, good, a main road running from Leribe in the north to Quthing in the south, and connecting up all Government stations, with the exception of Qacha's Nek, which is situated on the Drakensberg on the south-eastern border, and is only accessible to wheeled traffic from East Griqualand. All the District Stations lie on or near the Free State border, and are connected by good roads with the nearest Union town or railway station. The rivers are not navigable, but most of those on the main road are bridged.

## BECHUANALAND PROTECTORATE

The Protectorate of Bechuanaland must not be confused with Bechuanaland proper, which was joined to Cape Colony in 1895, and is now a fiscal district of that province. The Protectorate comprises about 275,000 square miles north of the Matopo River and Mafeking, and extending to the Chobo and Zambesi Rivers. It is bounded by Rhodesia on the north and north-east, by the Transvaal on the east, by Cape Province on the south, and by South-West Africa on the west. The country is, over a large extent, a great waterless tract, forming part of the South African tableland at a level

of between 3,000 and 4,000 ft., covered extensively with small thorn bush. Being in the Tropics, it is hot, but the heat is dry and not oppressive, and the climate, though in parts malarial, is not generally unhealthy.

**ADMINISTRATION.**—The form of Government is very similar to that which obtains in Basutoland, the territory being administered by a Resident Commissioner (Colonel Jules Ellenberger, I.S.O.), whose headquarters are at Mafeking, in Cape Province. Assistant Commissioners are in residence at Francistown and Gaborone. During the rule of Sekgoma, the late Paramount Chief of the Bamangwato, and since the installation of Tshkedi as Regent (during the minority of the heir), certain native leaders have agitated for a more democratic form of administration, and it is said that the idea is favourably viewed by Imperial officials. The native capital is Serowe, probably the largest native town in South Africa. It is well laid out, and contains a fine church and schools.

**COMMERCE.**—The trade of Bechuanaland is confined to exports of horned cattle, small stock, hides, skins and wood, and to imports of a few manufactured goods, such as blankets, articles of clothing, ploughs, iron and tin-ware, and groceries. Trade in 1923-24 was bad, exports of cattle being particularly affected by the overstocking of the Johannesburg market, and many traders' stores had to close down.

**FINANCE.**—Previous to the year 1915-16 the excess of expenditure over the revenues of the Protectorate was met by an Imperial grant-in-aid, since which date the revenue of the Territory has usually exceeded the expenditure. In 1923-24 revenue amounted to £99,994 and expenditure to £81,574, these totals comparing with £91,994 and £82,430 respectively for the preceding year. The principal heads of revenue in 1923-24 were: Hut tax, £31,999; customs, £22,810; income-tax, £14,054; and posts, £13,403.

**PEOPLES.**—Many tribes go to make up the population, which at the census of 1921 totalled 152,983, including 1,743 Europeans (an increase of only 51 over the figures for 1911) and 52 Asiatics. They have never been consolidated under one chief, and are composed of many clans, of which that of the Bamangwato has become the most conspicuous, in the past largely because of the progressive tendencies and temperate habits of their chief Khama, who died in 1923. Taken as a whole they are a non-warlike, pastoral, undemonstrative people, whose main pursuit is ranching cattle and sheep.

**PRODUCTION.**—Bechuanaland is not an agricultural country, owing to an insufficient and ill-distributed rainfall, which renders cultivation a hazardous occupation. When seasons are favourable, maize, Kaffir corn, beans, pumpkins and melons are reaped in fair quantities. Cattle thrive everywhere, and have increased in a wonderful manner since 1896, when they were almost killed off by rinderpest. Between 1904 and 1921 there was an increase from 139,071 to 495,062, and the number in 1923 was put at over 520,000. Sheep and goats also do well. There are large areas of forest, and a great quantity of dead wood for fuel is exported from the Southern

Protectorate, as well as timber for pit-props. Gold has been mined on a small scale in the Tati district for many years. The output for the year 1923-24 was 3,040 oz. of gold and 661 oz. of silver of a total value of £12,838.

**TRANSPORT.**—The section of the Cape-town Bulawayo Railway running through the Bechuanaland Protectorate has an extent of 403 miles, including about 70 miles through the Francistown District. The line enters the Protectorate at Ramathlabana Spruit 16 miles north of Mafeking, and 886 miles north of Capetown, and leaves it at mileage 1,289 (about half way between Ramakubane Siding and Plumtree). There is no other railway in the Protectorate. The roads from railway stations and sidings to the principal villages serve for motor transport but about 50 miles west of the line ox transport becomes a necessity.

### SWAZILAND

Swaziland is the smallest of the South African Protectorates, occupying an area of only 6,678 square miles between the Transvaal and Portuguese East Africa with Zululand as its southern boundary. No country in South Africa has a greater mixture of good and bad land and of climate. The western portion is a high plateau elevated to over 5,000 ft., but in the east which is heavily bushed, malarial fevers are rife, and horses, cattle, and sheep are all infested by a variety of diseases.

**ADMINISTRATION.**—Since 1907 the Territory has been administered by the High Commissioner, who appoints a Resident Commissioner, the present holder of that office being Mr de S. M. G. Honey C.M.G., with headquarters at Mbabane. In 1921 an Advisory Council of nine members was instituted to advise the Administration in matters relating to Europeans. The tribe known as the Abakwangwane or Amaswazi is ruled by the Paramount Chief or his representative appeals lying to the Resident Commissioner. There is a Special Court, with an Advocate of the Provincial Division of the Transvaal as President, which holds Sessions twice a year.

**CAPITAL.**—Mbabane, which is really no more than a small village, was constituted a township in 1912. It is picturesquely situated on the hills, at an altitude of 4,000 ft., and overlooking the middle veld. It is reached by good roads from Ermelo, Breyten, and Carolina in the Transvaal, the latter town distant about 90 miles. It can also be reached from the Portuguese railhead at Goba, by road through Bremersdorp, the former capital.

**COMMERCE.**—By agreement with the Government of the Union Swaziland is dealt with for customs purposes as part of the Union and no statistics of imports and exports for the Protectorate have been kept since 1912. The principal export is cassiterite tin and the imports consist principally of maize, flour, groceries, wearing apparel hardware, spirits tobacco, and kaffir truck. Most of the ocean-borne merchandise enters directly via Delagoa Bay.

**FINANCE.** The revenue for the financial year 1924-25 amounted to £89,710 compared with £90,897 in 1923-24 and the expenditure to £87,597, as against £93,127. The public Debt at March 31 1925 stood at £92,500, being made up of £72,500 Swaziland Consolidated loan at 3½ per cent and £20,000 Swazi Nation Trust Fund at 4 per cent. The National Bank of South Africa Limited has branches at Mbabane and Hlatikula, the bank note issues, etc. being carried out under Union laws.

**PEOPLES.**—The total population of Swaziland in 1921 was 112,951, made up as follows: Europeans, 2,205; Bantu, 110,295; Asiatic, 7; other coloured, 444. The Swazis are akin to the Zulus and other tribes of the south-eastern littoral, a small percentage of the natives in the extreme south being pure Zulus. The Swazis are of good physique and good workers, many going to labour in the Transvaal Mines. During the European War Swaziland contributed in personnel 47 officers and 93 other ranks from among the white population, while the Swazis were represented by a small contingent of 67 men who were attached to the Native Labour Contingent

in Flanders. The Chief Regent and Chiefs raised a fund on their own initiative as a contribution to the expenses of the War. A total of £3,000 was subscribed by them, and was devoted to the purchase of two aeroplanes for the Royal Air Force.

**PRODUCTION.**—Unlike Basutoland and Bechuanaland, Swaziland grows barely enough grain to subsist on, and exports little or no agricultural produce. Maize is grown in all parts, Kaffir corn extensively by the natives, and wheat, oats, rye and barley to a limited extent by European farmers with facilities for irrigation. All classes of fruit do well, and the cultivation of cotton is being developed. Some 245,000 lb. were produced in 1923. There are large numbers of horned cattle in the Territory and the bushveld, or midland area, is one of the finest cattle raising centres in South Africa. Here are several large ranches, one of which in 1924 ran approximately 13,000 head of mixed breeding stock. The exportation of cattle to the Union, except for slaughter purposes is prohibited. About 300,000 sheep come into Swaziland annually from the Union for winter grazing.

**MINERAL INDUSTRY.**—Swaziland possesses what the other Native Protectorates do not, a valuable mining industry carried out under concessions granted to Europeans. The industry is confined principally to gold and tin, the latter (alluvial) being found in payable quantities in the vicinity of Mbabane. The production of cassiterite tin in 1924 was valued at £59,082, a considerable increase on the previous two years' figures, which were £29,250 in 1923 and £16,420 in 1922. The value of the gold produced fell from £62,783 in 1912 to £417 in 1923. Large deposits of coal are known to exist in the low veld.

**TRANSPORT.**—There are no railways in the Territory and the lack of them greatly hinders the development of the country. The main roads are gradually being improved, and it is possible now to motor through the Protectorate from the Transvaal to Delagoa Bay.

# SOUTHERN RHODESIA

## PHYSICAL GEOGRAPHY

**S**OUTHERN RHODESIA is that part of Rhodesia lying south of the Zambesi River, which is the northern boundary separating it from Northern Rhodesia. On the south the Limpopo River divides Southern Rhodesia from the Transvaal. The Bechuanaland Protectorate bounds it on the west, and Portuguese East Africa on the east, the Colony having no direct access to the sea. Together with Northern Rhodesia, Southern Rhodesia forms part of the great South African plateau, which extends northwards from within a short distance of the coast, on its southern, eastern and western sides, beyond the region of the great African lakes, whence issue the Congo and Nile rivers.

well-defined series of ranges running north and south, and practically forming a continuation of the Drakensberg Mountains of the Union. In parts these mountains reach a height of upwards of 8,000 ft., but in general their summits vary from 4,500 to 6,000 ft. Except along the eastern border of the country, altitudes of more than 5,000 ft. are very rare.

**RIVERS.**—By far the greatest river of Rhodesia is the Zambesi, about two-thirds of the combined territories of Southern and Northern Rhodesia lying within its basin. Nevertheless, in common with most other South African rivers, it suffers from not being navigable in the commercial sense, a defect which accounts for the fact that it is only since the middle of the 19th century that the geography of this region has been unfolded to the civilised world. It is only up to Tete, a Portuguese settlement and government centre some 250 miles from its mouth, that the Zambesi is navigable, and then simply for small shallow-draught steamers. Its total length is 1,700 miles.

## CLIMATE

The general climate of the settled areas of Southern Rhodesia approximates to that usually associated with countries in the temperate zone. The winter is very nearly ideal, with warm sunny days and cold nights. During the months of September and October the days are unpleasantly warm at times, but the nights are cool, and the greatest daily range of temperature occurs during these months. Speaking generally, the climate is admirably suited to a white population. Women and children thrive in the towns with a reasonable amount of attention to health, and even in the more remote districts the incidence of malarial and other fevers can be foiled by ordinary precautions.

**RAINFALL.**—Southern Rhodesia has only two seasons. The wet season, or summer, starts in October and lasts intermittently until the beginning of April, when the dry season, or winter, begins. The rains of the wet season do not come on in real earnest until the middle of December, though before

VICTORIA FALLS.

2. Railway Bridge below the Falls.

3. View opposite the Rain Forest.

The greater portion of the country is of an undulating character, studded with moderately-sized rocky hills ("kopjes"), and grass is everywhere abundant. It is as a whole well wooded, being covered more or less with the tree and shrub growth which is known as "bush," and is, generally speaking, freely watered by a series of streams and springs, particularly in those parts which are mainly of granite and sandstone formation. The total area of the colony is 148,575 square miles.

**MOUNTAINS.**—Rhodesia cannot be termed mountainous, although it is abundantly furnished with chains of hills and contains much broken country. The greatest heights lie along the eastern border, where there is a

Included in the river's course are the famous Victoria Falls (see "Tourist Resorts") discovered in 1885 by Livingstone. The most important tributary of the Zambesi is the Kafue, whose sources lie on the frontier of the Congo State, and whose basin includes the greater portion of the central districts of Northern Rhodesia. On the south bank are the Gwaai, the Sanyati, the Hunyani, the Mazoe and a number of smaller streams. The only other rivers of importance are the Sabi, which receives the waters of the southern half of the eastern and central districts, and the Limpopo, which has a large number of tributaries on its northern bank, and by their agency drains the southern districts. Few of these streams, however, flow for more than six months in the year.

that there are occasional heavy thunderstorms. During January and February the rains are at their greatest, sometimes 5 or 6 inches falling in a single day. In March and early April there are occasional thunderstorms. During the dry season rain falls on a few days in May, and scattered thunder showers in September are usual. The mean annual rainfall over the whole country is 28.7 inches, and the standard divergence from the mean is only 7 inches, that is, in any season but an abnormal one the mean rainfall over the whole country can be relied upon to be between 21 and 35 inches. Indeed, the regularity of the Rhodesian rainfall in most years is a marked feature of the climate, and in that respect it has a decided advantage over many parts of South Africa.

**TEMPERATURE** — The mean annual temperature of different parts of Rhodesia depends largely upon their altitude, latitude and distance from the coast. The mean temperature of the very small portion of the colony which lies under 1,000 ft is  $82^{\circ} 76''$  F, while that of the small area at an altitude of over 5,000 ft is  $65^{\circ} 60''$  F. The mean annual temperature of the central Rhodesian plateau is  $66^{\circ}$  F, with a mean annual maximum of  $78^{\circ}$  F and a mean annual minimum of  $54^{\circ}$  F. A feature of the climate is that the night temperatures in Southern Rhodesia are very much cooler than in other localities with similar day temperatures.

### GEOLOGY

A geological survey of Southern Rhodesia was begun in the year 1910, and there are in existence accounts of the geological formations in which the various metalliferous mines of the country are found. The field is, however, so wide, and the quantity of work

country. In other parts of the colony the schists afford the finest scenery, and display deeply serrated ridges of mountains and countless pointed peaks. Sandstones and basaltic rocks also occur, and in many places furnish scenery the principal feature of which consists in long flat-topped hills. The magnificent gorge of the Zambezi River below the Victoria Falls is cut in basalt. Most of the gold mines of the country are found either in the schists or in a younger sedimentary formation of banded ironstone or conglomerate. The mode of occurrences of the gold is mostly that of quartz veins lying in these or other formations of a metamorphic character. Occasionally however, quartz veins containing gold are found in a granite contact.

### FAUNA

The advance of civilisation has not yet robbed Southern Rhodesia of a distinguished place among the chief big game countries of the world. The larger animals and birds are

**BIRDS.**—Of the birds of the country, the largest is the ostrich, which is strictly protected by law, although in Rhodesia it has not yet been found to thrive in captivity. Of other large birds, the eagle, vulture, stork, crane, and hawk are seen in large number and several varieties, the secretary-bird is found everywhere, and may be seen stalking majestically over the veld in search of food. Of game birds, the chief are bustards, francolin (locally known as partridge and pheasant), guinea-fowl and sand grouse, usually spoken of as Namaqua partridge. Of small birds, there is a very large number of species, most of them brilliant in colouring. The handsomest of all is that usually known as the blue jay. Occasionally large bags of snipe can be obtained.

**FISHES.**—Most of the Rhodesian rivers have plentiful stocks of fish, the larger ones being infested by the dreaded crocodile. From a sportsman's point of view the most interesting inhabitant of the rivers is the

done relatively so small, that any account of Rhodesian geology must be very incomplete for many years to come. To the unscientific observer the most prominent geological feature is the large area of granite country, this occupying about 49.5 per cent of the total area, while the Karoo sedimentary rocks take up a further 15.3 per cent. Here and there throughout the territory are immense rounded hills, sometimes very steep, at times sloping gently, composed of unbroken granite masses, more widely distributed are the gigantic boulders piled high and perilously balanced, which give to much of the scenery a characteristic castellated appearance. The granite is coarse-grained and is usually grey, but occasionally has a slight yellowish or pinkish tinge. The most familiar instance of such scenery occurs in the Matopo Hills, where interest centres in the ring of massive rounded boulders which fringe the last resting place of Cecil John Rhodes, the founder of the

generally those of Tropical Africa, but these are gradually becoming rare, except in the quite unsettled parts of the colony.

**ANIMALS.**—In the purely native districts the elephant, the hippopotamus, the rhinoceros, the buffalo, the zebra, and the larger varieties of antelope are still to be met with, while the lion and leopard prowl about the cattle and sheep folds in the remoter parts. Of antelope there are said to be not less than 30 different varieties, amongst them being the steenbuck, klip-springer, duiker, oribi, reedbuck, bushbuck, kudu, waterbuck and the roan and sable antelope. The largest of the antelopes, the eland, is also found in considerable numbers. Jackals, ant-bears, badgers, and meercats (the latter a close relation to the Indian mongoose), as well as the more dangerous varieties of wild vermin, inhabit the country in large numbers, but in all cases they are shy, so that they are not often seen. In Southern Rhodesia the jackal is hunted by organised packs of hounds as is the fox in England.

tiger-fish, which weighs up to 13 or 14 lbs. when fully grown and in good condition; when hooked, it will fight with all the gameness of a salmon.

**INSECTS.**—See under "Agriculture. Insect Pests."

**REPTILES, ETC.**—Of creeping things, snakes and lizards, worms and beetles, there is a vast variety, and several kinds of snakes carry a deadly poison. Besides poisonous snakes, the python, which seizes and kills its victim by constriction before swallowing it whole, is found, and occasionally pythons of great size, up to over 20 feet in length, have been shot.

### FLORA

The general aspect of the surface of Southern Rhodesia has already been described, and it may be said here that over the greater part of the country luxuriant vegetation and a very rich supply of indigenous trees add greatly to the charm of the scenery. Com-

pared with the Provinces to the south, Rhodesia is very heavily wooded, but the majority of the native trees are stunted and gnarled, owing to the ravages of fires which from time immemorial have swept over the country, destroying the more delicate grasses and seriously thwarting the growth of timber. The long droughts of winter and, in some parts of the country, the nearness of the underlying rocks to the surface, cause the trees to grow slowly and prevent their attaining to a great height. There are, however, exceptions to this rule. Along the eastern border there are small patches of magnificent tropical forest, similar in type to the dense forests of Central Africa, and in certain districts, notably between Bulawayo and the Victoria Falls, and over a large portion of the uplands of Northern Rhodesia, there are numerous forest trees providing fine timber of the hardwood varieties. In contrast with the rugged grandeur of the Matopos are the richly wooded hills of the Selukwe and Intaba districts, which in many other localities a further contrast is provided by long stretches of undulating country, whose hollows are filled with rich blue and green marsh grasses, and in certain seasons a great wealth of brightly tinted blue, purple, scarlet and yellow flowers.

**EARLY FOLIAGE.** One special characteristic of Rhodesian scenery not otherwise usual in South Africa is the magnificent colouring of the wooded country in September when the sap is running anew in the trees. Instead of the tender greens of the temperate zone, the young foliage assumes brilliant shades of red and yellow, and rich tones of brown and copper. The whole effect in a hilly, heavily-wooded country is superb and neither the pen nor the camera can do justice to it. At the same season, weeks before the early rains begin, from the dry earth springs a great variety of bushes and wild flowers, many of the latter remarkably beautiful, but nearly all without scent.

## HISTORY

**T**HE history of Rhodesia offers features that are probably unique in the world's annals. It is a country without a recorded past, though for nearly a thousand years there had been rumours in the outside world of the wealth and wonders to be found within its borders. Even before the Norman conquest, Arabs heard of it and bought gold found in its rivers. Their boats called at Sofala, in what is now Portuguese East Africa, and for succeeding centuries Arabs and Persians told tales of the wonderful hinterland where gold lay in abundance. Early in the 16th century the Portuguese were in touch with the coast, and from then onwards missionaries and prospectors made their way into the interior. The great traveller, Dr Livingstone, discovered the Victoria Falls in 1855, two years after the birth of two men who were to make Rhodesia. Cecil John Rhodes and Leander Starr Jameson. It is about this period that the recorded history of Rhodesia begins.

**1870-1888. : LOBENGULA AND THE CONCESSIONS.** From 1870 Lobengula ruled over the Matabele, a warlike offshoot of the Zulu nation. He had hardly commenced his reign when the concession hunters began to besiege him, more than one European Power being anxious to establish itself there. Minor concessions (afterwards purchased by Rhodes) had been granted in 1871 and 1872, but by far the most important was that conceded in 1888 to Messrs C. D. Rudd, Rochfort Maguire, and F. R.

VICTORIA FALLS.

Thompson. The Rudd concession was the basis on which the British South Africa Company was formed.

**1889-1892: FORMATION OF THE CHARTERED COMPANY - THE OCCUPATION** - In 1889 Lobengula despatched two indunas to England to appeal for help and protection from Queen Victoria, and in the same year Mr J. S. Moffat was sent to reside in the country as Assistant Commissioner. But before his arrival the efforts of Cecil Rhodes had led to the formation of the British South Africa Company, which was incorporated by Royal Charter on December 29, 1889. The Company, having decided on the advice of Lobengula to open up Mashonaland first, organised a Pioneer Expedition, which proceeded as far as Salisbury and then began to occupy the country. The next four years saw the development of Mashonaland and the south-east portion of Matabeleland, such well known districts as Melssetter and Charter being among those settled.

**1893-1894: THE MATABELE WAR** - Signs of restlessness among the natives owing to the influx of so many Europeans had been apparent for some time, those in Matabeleland being united under the warlike Lobengula, who watched the progress of occupation with jealous eyes. On July 8, 1893, one of his impi having raided the Victoria district, two columns of police and settlers were hastily organised and marched towards Bulawayo, where was the King's Kraal. The Matabele massed rapidly, and on October 24 a force of 5,000 engaged the united columns at Shangani, but were defeated. A week later a further heavy defeat was inflicted on a force of 7,000 strong at the Bembezi River. On November 4 the columns occupied Lobengula's Kraal at Bulawayo, but the huts had been burned and the King had fled northward. (He died on January 23, 1924). With the occupation of Bulawayo, the war was practically ended. A tragic incident of the campaign was the annihilation by the Matabele of a small body of men under Major Alan Wilson. This force had followed Lobengula, but was cut off by the rapid rising of the Shangani River, and though there was a desperate resistance all were killed. Their bodies were buried near Zimbabwe and later the remains were removed to the Matopos, where they rest under an imposing monument.

**1894-1897: NEW CONSTITUTION - MATABELE AND MASHONA REBELLIONS** - With the occupation of Bulawayo the war was practically ended, and Matabeleland was brought under the administration of the British South Africa Company, a new Constitution being drawn up and sanctioned in 1894. A feature of this was the Rhodes Clause, under which customs dues might not be levied on British goods in excess of the rates then in force in Cape Colony, Mr. Rhodes' object being to secure the trade of Rhodesia to Great Britain for ever at a low tariff rate. Prosperity and peace marked the years 1894 and 1895, but the ill-starred Jameson Raid at the end of the latter year not only deprived the territory of its Administrator, but also for the time being of its police protection. The Matabele were not slow to seize the occasion, and in 1894 both they and the Mashona rebelled, no fewer than 141 white settlers being massacred on March 20, 1896, in Matabeleland, while 104 met their death later in Mashonaland. Imperial troops under Colonel (now Lord) Plumer were sent to Matabeleland and the Matabele were driven to the hills. A large party sought shelter in the Matopos, from which they could be dislodged only by a lengthy campaign. Cecil Rhodes, however, solved the problem

by going into the hills unarmed, with three companions. His fearlessness and the respect the chiefs had for his word enabled him to get into touch with them, and, after several conferences, to secure their submission on October 13, 1896. The Mashona rebellion was not finally quelled until the following year. The settlers had taken a prominent part in putting down these rebellions, and the Chartered Company compensated them for their losses to the extent of £360,000.

**1898-1913: ESTABLISHMENT OF LEGISLATIVE COUNCIL - ANGLO-BOER WAR AND DEATH OF MR RHODES** - In 1899 Southern Rhodesia obtained a Legislative Council, the settlers having long wished to have some voice in the Government of the country. This may be regarded as the first step towards the attainment of Responsible Government. The South African War saw large numbers of Rhodesians serving with the British troops at the front, and the assistance given by the Territory and the Chartered Company to the Imperial cause was very considerable. The war was drawing to a close when the death of the great founder of the country, Cecil John Rhodes, occurred on March 26, 1902. Pre-eminently among the builders of the Chartered Company, he had always regarded Rhodesia as an addition to the Empire rather than as a commercial venture, and the mourning for his death throughout South Africa was very real. His burial in the lonely and beautiful spot selected by himself in the Matopos has been described as one of the most impressive ceremonies on record. The years following were noticeable mainly for the entrance of Rhodesia into the South African Customs Union in 1903, and for her refusal to join the Union of South Africa in 1910, though a section of the Act left the door open for future admittance should it be desired. Gradually the elected representation of the Legislative Council was increased, and the years immediately preceding the Great War brought into public prominence the burning question of the ownership of the unalienated lands of the Territory, the claim to which by the Chartered Company had so often caused friction with the settlers.

**1914-1918: EUROPEAN WAR** - With the possible exception of Newfoundland, no British possession contributed a greater proportion of its population to the great cause than did Southern Rhodesia, 6,831 Europeans, out of a total eligible male population of 10,658, having been on active service. In addition, 2,753 natives were enrolled in the Rhodesia Native Regiment and other Corps. The 1st Rhodesia Regiment took a prominent part in the South-West African campaign, while the 2nd Rhodesia Regiment had two years' hard fighting and service in East Africa. Many of the officers and men of these units afterwards saw service on the European fronts. On all fronts 732 Europeans were killed or died from wounds or disease, and two V.C.'s were won by Southern Rhodesians.

**1919-1924: RESPONSIBLE GOVERNMENT OBTAINED** - A movement towards Responsible Government had begun as far back as 1913, strengthened no doubt by the fact that the British South Africa Company's Charter expired in 1914 and came up for renewal or revision. The Imperial Government confirmed the Charter for a further period of ten years, but with the important proviso that if, at any time before the expiry of the Charter, the people of Southern Rhodesia desired Responsible Government, and were able to satisfy the Imperial Government as to their fitness, financially and otherwise, to control their own

affairs, it would be granted. This clause was inserted with the approval of the Company. In 1918 an important decision was given by the Judicial Committee of the Privy Council that the unalienated land of the colony was the property of the Crown, at the same time holding that the Company (as agents) was entitled to dispose of it until the amount realised re-imbursed it for its outstanding advances to the Territory in the early days of its administration.

The way to Responsible Government was now paved, and of the new Legislative Council elected in 1920 (the last under the B.S.A. Company's administration) all the members but one were pledged to ask for it. Conferences with the Colonial Office as to the form of Government were held, and a Commission, presided over by Lord Buxton, reported favourably in 1921. There remained only the question of inclusion in the Union of South Africa, but this was decided by a Referendum taken on October 27, 1922, the result of which was a majority of 2,785 in favour of Responsible Government. On September 12, 1923, Southern Rhodesia was formally annexed to Great Britain, and on October 1 Responsible Government was established, the Chartered Company having relinquished all financial claims against the Imperial Government in consideration of a cash payment of £3,750,000, the confirmation of the Company's mineral rights, and a title to the land it was occupying for commercial purposes. By the payment of £2,000,000 to the Imperial Government the new Rhodesian Government received a clearance from all past liabilities, and free and full title to all the unalienated lands of the Crown.

Upon the inauguration of Responsible Government, Sir Charles Coghlan, the leader for many years of its advocates, was called upon to form a Cabinet, and this Cabinet remained in office without an elected Assembly until April 1924, when the first elections held under the new Constitution confirmed it in power. The years 1924 and 1925 witnessed the steady political and economic development of the colony, the outstanding event of the latter year being the visit paid to Southern Rhodesia by H.R.H. the Prince of Wales, who was received with enthusiasm by Europeans and natives alike.

## PEOPLES POPULATION

THE census taken in 1921 showed the total population of Southern Rhodesia to be 899,187, the numbers of the different races being as follows: Europeans, 33,620; Coloured (mixed races), 1,998; Asiatics, 1,250; Bantu (natives of Southern Rhodesia), 761,790; Bantu (aliens), 100,519. The total for 1911 was 771,077, and the increase in ten years was, therefore, 128,110, or 16.61 per cent. In 1921 natives formed 96.50 per cent. of the total population, as against 96.56 per cent. in 1911, and Europeans 3.74 per cent., against 3.06 per cent.

**EUROPEANS.** - In 1891 the total European population of the colony was estimated at 1,500; the census taken in 1904 showed that it had increased to over 12,000. Between 1907 and 1911 the number rose by 9,000, but owing to wastage due to the European War and the financial stringency that succeeded it, this rate of increase was not maintained during the ten years 1911-1921, in which period the European population grew in numbers by 10,014, or at the rate of 42.42 per cent. Of the European population in 1921, British numbered 32,203 (of whom 513 were natural-

used), or 95.79 per cent. Greeks totalled 299 and Italians 190.

**NATIVE POPULATION.**—The earliest inhabitants of Southern Rhodesia of whom there is definite evidence were the people now generally called "Bushmen," the "Abatwa." Of their occupation of the country the numerous rock paintings in Central Mashonaland and Matabeleland afford undoubted proof. The Bushmen appear to have been displaced by successive waves of Bantu migration from the north, and the native population of the country to-day consists of a large number of tribes of the Bantu race, most of them with distinct names. (See also sub-section "Bantu Race" under "Union of South Africa" "Population.")

### IMMIGRATION AND LABOUR

The immigration law of Southern Rhodesia differs in one important respect from that of the Union in that it operates irrespective of nationality, its sole object being to prevent the settlement in the colony of persons who, on account of their physical or mental condition, or their standard or habits of life, or their criminal antecedents or tendencies, are considered to be undesirable and may become public charges. Immigrants must have in their possession and for their own use a sum of money not less than £50, or definite evidence of the immediate availability of such a sum within the colony, or must satisfy the Immigration Officer that employment is awaiting them for a period of not less than six months.

**ASSISTED SETTLEMENT.**—Hitherto settlement in Southern Rhodesia has been occasional, depending largely upon individual efforts. In a desire to obtain settlers of independent means much stress has been laid on the possession of ample capital. It is now hoped to attract also men of equal worth, if of less means, and there is a growing desire that the colony should share in the benefits of the Empire Settlement Act.

The proposal of the Government is to pursue a policy of assisted settlement, and for this purpose a small residential depot is being established at the Gwebi Farm. A limited number of new arrivals who desire Government help will be directed there, and will find comfortable quarters ready for them. They will be at once introduced to up-to-date farming, and will receive advice on stock-breeding, tobacco, cotton, etc. Having chosen their line of farming, they will be invited to reside with a well-established farmer of known experience in that particular line. Others may go direct to the practical farmer without a preliminary stay at the Gwebi. In either case, for a modest charge of about £5 a month they will be boarded, lodged, and given the first-hand knowledge which only a practical man can impart. After at least one full season the newcomer will be assisted to acquire the land he needs, usually obtainable at from 4s to 7s per acre. Moreover, advances will be offered for permanent improvements, so that the settler will be able to live on his own money until the land begins to pay him. Repayment of advances and payment for the land, with a strictly moderate rate of interest, will be made by uniform instalments spread over a number of years.

**IMMIGRATION RETURNS.**—Immigration returns for 1925 show that, apart from visitors and travellers, 2,166 persons entered the territory with the definite intention of becoming permanent settlers. Of these, 899 were British born, 676 British South-African born, 219 Dutch South-African born, 62 Indians, 44 Russians, 38 Germans, 34 Americans, 29 Greeks, and 21 Australians.

**INFORMATION FOR SETTLERS.**—In London, the High Commissioner for Southern Rhodesia and his staff are ready to give the fullest advice and provide the latest literature on the colony and its agricultural possibilities. In Rhodesia there is a Settlers' Board (Official), with headquarters in Salisbury and representatives in all the farming districts, which will give information and advice to intending or incoming settlers free on application.

**LABOUR.**—Labour in Southern Rhodesia is plentiful, cheap, and comparatively good. Practically all manual labour is performed by the natives, many of whom attain to great proficiency. This applies to both farm and housework.

### EDUCATION

In view of the fact that Rhodesia has only been occupied by Europeans for a little over 30 years, the rapid development of educational facilities is highly creditable to the colony and its administrators. The problem all through has been largely that attaching to a sparsely settled population. Wherever ten or more children can be gathered together the Government offers every facility for the establishment of "Farm Schools," of which in 1924 there were 55. In the larger centres of population the facilities offered to Europeans are, of course, larger, and at Salisbury, Bulawayo, Umtali, Gwelo, Plumtree, Smoia, Enkeldoorn, and Hartley there are exceptionally good schools with boarding houses attached, while public schools (without boarding accommodation) have also been built in other towns and mining centres. The number of European pupils in Government and aided schools rose from 6,283 on December 31, 1923, to 6,596 on December 31, 1924, an increase of 313 pupils, the average attendance for the latter year being 87.7 per cent of the possible number of attendances.

**CURRICULUM.**—The programme of work in public schools includes complete departmental syllabuses in all the ordinary school subjects up to Standard VII and thereafter prepares pupils for the University of South Africa Junior Certificates and Matriculation examinations. In addition to the ordinary school curriculum, pupils are instructed in commercial subjects, science, carpentry, botany, dressmaking, and domestic science. School gardening, nature study, and hygiene are encouraged whenever possible, and most schools possess good libraries.

**EXPENDITURE.**—The expenditure by the Government on schools in Rhodesia, apart from capital expenditure, in 1900 was £1,302, in 1910 £23,980, and in 1924 £233,223.

**NATIVE EDUCATION.**—In 1924 there were 1,216 schools of all classes for native children, with a total enrolment of 77,610, an advance of 7,619 during the year. The expenditure on these schools totalled £23,099, compared with £19,419 in 1923. For coloured children there were 6 schools open in 1924, with 379 scholars on the roll.

**SCHOLARSHIPS.**—Forty-eight scholarships, provided by the Beit (Rhodesia) bequest, are open for competition annually to enable promising Rhodesian children to obtain secondary education in the higher schools of the Territory, each of the value of £32 for boarders or £16 per annum for day pupils, and tenable for 3 years. Rhodesian boys are eligible to compete for three Rhodes Scholarships, each of the normal value of £300 per annum for three years, tenable at Oxford University. Rhodesian candidates for Rhodes Scholarships are now required to complete at least two years at a South African

University after leaving school, and must have completed their 10th year before proceeding to Oxford. There are also several bursaries and scholarships available to Rhodesian scholars of either sex at South African Universities and University Colleges.

### SPORT

Climate and other conditions in Southern Rhodesia favour all forms of athletic recreation, while as a centre for big game hunting the country is almost unrivalled.

**BIG GAME SHOOTING.**—The game found in Rhodesia may be broadly divided into four classes—the carnivora, the larger mammals, the antelopes, and the birds. Of the first named, lions are still to be found in the south-east and in the north; in the second class, the elephant, giraffe and hippopotamus are to be met with, and it is hardly necessary to state that the different varieties of antelope for which Rhodesia is famous all provide excellent shooting. Game birds abound, and there is no lack of occasional sport for the man with the gun in almost any part of the country.

**CRICKET.**—Cricket is played during the summer months, that is, from October to March. The grounds, with the exception of one at Umtali, which is grass covered, are hard. The wickets consist of gravel or ant-leap, covered with coconut matting.

Occasional visits by teams from the Union and Great Britain have done much to foster the game, which is controlled by the Rhodesia Cricket Union, in affiliation with the South African Cricket Association.

**FOOTBALL.**—Both Rugby and Association football have been played in Rhodesia ever since the occupation. The controlling authorities of both codes owe allegiance to the parent bodies in the Union of South Africa, which, in turn, are affiliated to the amateur associations at Home. Rhodesian teams compete in the inter-provincial tournaments in the Union.

**GOLF.**—This has become a most popular game throughout the colony, and fine 18-hole courses have been laid out at Salisbury, Bulawayo, Umtali and Umvuma. There are 9-hole courses at Gatooma, Gwelo, and other centres.

**LAWN TENNIS.**—Lawn tennis flourishes not only in the larger towns, but also in the smaller ones and villages, as well as at most police camps and mining centres. A championship meeting is held annually.

**POLO.**—In early days Rhodesia laid the foundation of polo in her larger settlements, at Salisbury, Bulawayo, and Umtali polo grounds were reserved in the planning of the town sites, and the game was in active progress 25 years ago. Unfortunately severe epidemics of horse-sickness made it difficult for the clubs to carry on. Since the War, however, polo has been revived, and at Salisbury the Polo Club is able to organise four separate teams.

### PRESS

The principal newspapers published in Southern Rhodesia are the "Rhodesia Herald" (Salisbury), founded in 1891, daily and weekly, the "Bulawayo Chronicle" (1893), daily and weekly; the "Rhodesia Advertiser" (Umtali), founded in 1893, daily and weekly, and the "Gwelo Times" and "Gatooma Mail and Mining Gazette," which are both weeklies. The "Rhodesia Agricultural Journal," published by the Agricultural Department, and the "Rhodesian Poultry Magazine" are monthlies which appeal specially to the farming community.

## ADMINISTRATION AND COMMUNICATIONS CONSTITUTION AND LAW

**R**ESPONSIBLE Government was granted to the colony of Southern Rhodesia on October 1, 1923, the supreme executive authority being administered by the Governor, who is advised by an Executive Council. This attainment of full constitutional privileges was achieved at the close of a period of nearly 30 years' existence as a British Protectorate

is composed of six members, who are chosen by the Governor to hold office during his pleasure. The system of Cabinet Government conforms in all essentials to the practice under the British Constitution. The first Ministry of the Colony, which assumed office in October, 1923, consisted in 1925 of the following: Premier and Minister of Native Affairs—Sir Charles P. J. Coghlan, Colonial Secretary, Minister of Health, Education and Internal Affairs—Mr. J. W. Downie, Treasurer—Mr. P. D. L. Flynn, C.M.G., Attorney-General and Minister of Defence—Major R. J. Hudson, M.C., K.C., Minister of

merge into the Rifle Companies. All burghers are liable to be called upon for service in case of need by any Justice of the Peace.

The Defence Bill introduced into the Legislative Assembly in 1926 provides for a workable and mobile system of defence on the following lines—(1) Every citizen between the ages of 18 and 60 to be liable for service in time of war. (2) Every citizen between his 20th and 24th year to undergo peace training for military service in the Defence Force. (3) All not included in No. 2 to be enrolled as members of the Territorial Reserve Unit, with the exception of those living more than ten miles from a rifle range. The organisation of the Defence Force is to consist of a Permanent Force, a Territorial Force and any Special Reserve that may be established, and a Headquarters Staff and instructional and administrative staffs for military districts are to be created.

**FRANCHISE.**—Southern Rhodesia has an adult male and female franchise for all British subjects or those who intend to reside permanently in the colony and take the oath of allegiance. Female suffrage was granted in 1919. Natives can obtain the vote under certain conditions, but very few avail themselves of the privilege.

**LEGISLATIVE ASSEMBLY.**—The first Legislative Assembly was elected in 1924, and consists of 30 members representing 15 electoral districts. Ten members constitute a quorum. The Assembly has power to make a law constituting a Legislative Council, or Upper House, whenever it shall deem it advisable.

## LAW

Laws in Southern Rhodesia are based on those operating in Cape Colony in June 1891, modified by legislation to meet local requirements, with the right of appeal to the Appeal Court of South Africa in cases where the matter in dispute exceeds £100 in value, with a further appeal to the Privy Council on the same conditions as are composed in the Union of South Africa.

**JUDICATURE.**—There are two Judges of the High Court, who are appointed by the Governor in Council. Resident Magistrates administer the law in the District Courts and Native Commissioners that of the Native Reserves.

## PUBLIC HEALTH

The Public Health Department of the Colony of Southern Rhodesia is in the Ministerial Division of the Colonial Secretary, the staff consisting of a Medical Director with a clerical staff stationed at Salisbury, an Assistant Medical Director stationed at Bulawayo, a Bacteriologist with two assistants, and 21 District Government Medical Officers. These latter accept private practice within their districts. The general health of the colony is good, the European birth-rate in 1922 being 26.09 per thousand, and the European death-rate in the same year the lowest on record, viz., 8.98 per 1,000.

**DISEASES.**—With the exception of the large river basins, the greater part of Southern Rhodesia is classified as sub-tropical highland, eminently suitable for the settlement of white races. There has of recent years been a marked diminution in the prevalence of both malaria and blackwater fever, the death rate having fallen from 18.8 per 1,000 in 1904 to 8.98 per 1,000 in 1924. To-day malarial fevers are seldom contracted in the towns and villages, though they have to be guarded against in the remoter districts.

**HOSPITALS.**—Except at Bulawayo and Rusape, all general hospitals are maintained and administered by the Government. In 1924 there were 12 general hospitals with full

GOVERNOR AND COMMANDER-IN-CHIEF, SOUTHERN RHODESIA.  
His Excellency Lt.-Col. Sir J. R. Chancellor, G.C.M.G., D.S.O., R.E.

under the administration of the British South Africa Company. For ten years the movement towards Responsible Government had gathered strength, a Referendum on that question or union with South Africa resulting in 1922 in a majority of nearly 3,000 for the former.

The present Governor of the Colony is His Excellency Lieutenant-Colonel Sir John Robert Chancellor, G.C.M.G., D.S.O., R.E.

**ADMINISTRATIVE COUNCIL.**—The Executive Council, or Ministry of the Colony,

Mines, Public Works and Industries—Mr. H. U. Moffat, Minister of Agriculture and Lands—Mr. W. M. Leggate, C.M.G.

**DEFENCE.**—The defence of the colony and the preservation of peace and order are, in the first instance, undertaken by the B.S.A. Police, a remarkably fine body of men, of which the European element is over 600 strong. Rifle Companies have replaced the old Volunteer Force, and there is a voluntary system of Cadet Corps connected with the schools, the members of which eventually

staffs, well equipped, and with separate accommodation for Europeans and native patients. At Ingutsheni, on the outskirts of Bulawayo, is a large Mental Hospital, and at Morgenster, near Fort Victoria, a settlement for native lepers. Many of the larger mines maintain hospitals for their own European and native employees.

**NURSING SERVICE.**—The Southern Rhodesia Nursing Service consisted in 1924 of a senior matron, seven matrons, seven nurse-matrons, 36 qualified nurses, and 23 probationers, who are attached to the various Government hospitals throughout the Colony.

### PUBLIC WORKS

The Public Works Department of Southern Rhodesia controls the construction and maintenance of public buildings and the management of Government houses, hired premises and insurance, the records of moveable assets, sales and land reservations for buildings, the inspection of magazines for explosives, the provision and maintenance of fire appliances, and the payment of municipal rates and fees. The work of building since September 1890, though never rapid, has been very definitely progressive, and at the end of 1923 there were in the colony hospitals with 227 beds for Europeans and 128 for natives and coloured people, gaols accommodating 2,500 prisoners, schools for over 4,000 pupils, exclusive of privately owned or rented buildings, and public buildings and works in all of a value of approximately £1,000,000.

**EXPENDITURE.** The total expenditure incurred by the Public Works Department for the year ended December 31, 1924, was £63,073 10s 1d, the principal items being Rents, £10,003; maintenance, £15,300; salaries, £9,450; construction, £9,000; furniture, £5,412; and rates, £2,330.

**GOVERNMENT BUILDINGS.** The first government buildings erected after the occupation consisted of pole and dagga huts (poles plastered with mud) to accommodate the various offices. They were built in the vicinity of the original police lines, a little to the east of the present Salisbury Club. In 1891 the building now occupied by the Chief Native Commissioner's Office was commenced, and contained rooms for the Administrator, the Chief Accountant, the Public Prosecutor, and the Standard Bank. Local timber was cut for use in building these offices, and most of the furniture was made in Salisbury. In 1924 the Residency at Salisbury was privately built, and afterwards purchased by the Administration. In the following year the old Salisbury Hospital was erected, to become in 1922, when the new hospital was completed, the offices of the Agricultural Department. The rebellion of 1896 to some extent checked building, but in that year Government House, Bulawayo, was commenced. Dr Jameson's old residence was imported and erected in 1898. Building went on apace after the South African War, the year 1903 being marked by the erection of the Drill Hall at Salisbury, but for some years afterwards few important buildings were constructed. The Government House at Salisbury was built in 1910, a year notable by the erection of several schools. In 1912-13 the very handsome and spacious Post Office, Customs, and Municipal Buildings in Bulawayo were put up by the Department. Since the Great War many new important buildings have been constructed, the chief of these being the Memorial Library at Plumtree School, the Salisbury Medical Research Laboratory, Salisbury Police Station, Gatooma Post Office, Beit Hall, Bulawayo, and several school premises.

1. Police Barracks in the Camp at Bulawayo.  
2. Town Police Station, Salisbury.  
3. First Wing of the Agricultural School at Matopos.  
4. Dining Hall for the Matopos School.  
5. Open-air Dormitories of School at Umtali.

## POSTS, TELEGRAPHS AND TELEPHONES

### POSTS

On April 1, 1897, the post and telegraph services of Southern Rhodesia were organised under Mr G. H. Eyre, of the Cape Post Office Department, who was appointed Postmaster General. The staff at that time comprised 76 European officials and 103 natives, as compared with 242 Europeans and 270 natives employed by the Department in 1925. The revenue of the Department rose from £45,023 in 1897 to £157,538 in 1924, and the expenditure from £37,848 to £125,091. The Postal Department now deals with all matters relating to the postal, telegraph, and telephone services of the colony, the conveyance of mails and parcels, money orders and postal orders. Mails between England and Salisbury are usually conveyed in 21 days.

**POSTAL FACILITIES.** The number of offices open for the transaction of post office business at recent date was 155, and at the same period 463 private bags were in use by persons living at a distance from post offices. Posting boxes are fitted to the mail trains for the convenience of those who live along the railway lines where there is no post office. During the ten years 1914-1923 there were posted 88,507,511 articles of mail matter, including letters, postcards, newspapers, book packets, etc. This total included 64,400,446 letters, 2,031,063 post-cards, 6,012,014 newspapers, 14,587,313 book packets, 425,252 parcels, and 1,049,023 registered articles. In 1924 the figures were: Letters, 8,263,204; postcards, 255,104; newspapers, 804,622; book packets, 2,501,052; parcels, 66,878; registered articles, 142,798; the total number of articles posted being 12,033,658, as against 10,794,118 in 1923.

**POSTAL RATES.**—For letters 1d per oz, for delivery in same town as posted, 1½d for other places in Southern Rhodesia, 1½d for Northern Rhodesia, the Union of South Africa, the Bechuanaland Protectorate, and the Province of Mozambique, 2d for the United Kingdom and all British Possessions, 3d for foreign countries, including the Belgian Congo. For newspapers ½d per 4 oz for delivery in any part of South Africa, and ½d per 2 oz elsewhere. For parcels 1s for first lb and 6d per lb thereafter in Southern Rhodesia, 1s 6d per lb and 6d per lb thereafter in Northern Rhodesia, 1s 1d per lb elsewhere in South Africa except South West Africa, to which the rate is 1s 4d per lb, 1s 4d per lb to the United Kingdom via Union of South Africa, and 3s 6d per 3 lbs, 4s 6d per 7 lbs, and 5s 6d per 11 lbs, via Beira. For parcels sent by agricultural parcel post within Southern Rhodesia only, the rates are: not exceeding 1½ lbs, 3d; not exceeding 2½ lb, 6d; for every additional lb up to 11 lb, 3d.

**SAVINGS BANK.**—The Post Office Savings Bank of Southern Rhodesia first operated in 1905. In 1923 deposits totalled £87,862, and there was a balance due to depositors at the end of the year of £101,617.

### TELEGRAPHS

In 1897, when the post and telegraph services were organised under one executive head, the Rhodesian telegraph system consisted of 1,028 miles of pole line, with 1,028 miles of wire, and 14 offices. On December 31, 1924, there were in operation 3,162 miles of pole line carrying 7,085 miles of wire, with 121 offices. The number of telegrams dealt with increased from 900,972 in 1923 to 977,814 in 1924, and the revenue from £28,922 to

£30,804. The value of the cable traffic increased in 1924 by £1,392 over 1923.

In addition to the lines within its own borders, the Government of Southern Rhodesia owns and operates 576 miles of pole line and 1,785 miles of wire in the Bechuanaland Protectorate.

**CABLE SERVICES.** Cables can be sent either via the Union or Beira. The charge to the United Kingdom is 2s. 2d. per word for ordinary and 1s. 1d. per word for deferred cablegrams. Deferred letter cablegrams, subject to a delay of 48 hours, carry a minimum charge of 11s. 8d. for 22 words, with 7d. for each additional word.

**WIRELESS.** Wireless telegraphy is mostly confined to amateur enthusiasts, but there are plants at the Drill Halls at Salisbury and Bulawayo erected by the Defence Department, which have proved useful for the instruction of cadets. It is proposed to erect a powerful station at Salisbury.

### TELEPHONES

The first telephone system in Southern Rhodesia was erected during the Matabele Rebellion in 1896, and was of a most primitive nature. In 1898 the initial departmental exchange was opened at Salisbury with a capacity of 30 lines, and a slightly larger one was installed at Bulawayo some time later. In 1924 there were 40 central stations working, with 1,507 subscribers, and 341 sub-stations, whilst there are 200 farms, stores, and other places in every district with which telephonic communication is maintained. Trunk line communication is available practically throughout the colony, and a 24-hour service is provided at Salisbury and Bulawayo both for local and trunk calls. An extensive programme of telephone development has been framed, for which loan funds amounting to nearly £50,000 have been provided.

## FINANCE

**T**HE financial position of Southern Rhodesia showed remarkable improvement during the years 1923-24 and 1924-25, substantial surpluses having been recorded in each. The year which closed on March 31, 1925, marked the first year of account under Responsible Government the estimates for the preceding year (1923-24) having been formed under the direction of the British South Africa Company. The credit of the colony may be gauged by the fact that the first loan of £3,000,000 was issued at 98, bearing interest at 5 per cent, and is now quoted considerably above par.

**PUBLIC DEBT.** The public debt of the colony on March 31, 1925, stood at £3,000,000.

**REVENUE AND EXPENDITURE.** The revenue of the colony is derived mainly from income tax, customs dues, native taxes, mining fees, postal business, trading and other licences, land sales and rents. Mining royalties are payable to the British South Africa Company. The following table shows the revenue and expenditure for the years 1920-21 to 1924-25.

YEAR	REVENUE £	EXPENDITURE £	SURPLUS OR DEFICIT £
1920-21	1,307,828	1,350,005	42,177
1921-22	1,488,006	1,335,041	152,965
1922-23	1,320,460	1,357,442	36,982
1923-24	1,521,881	1,355,029	166,852
1924-25	1,508,303	1,504,137	4,166

It will be noticed that during the first year in which the Ministry under Responsible Government had full control of the finances of the territory accounts showed a balance of revenue in excess of expenditure, this in spite of the fact that the latter was nearly £240,000 in excess of that for any previous year, and included a new item of £150,000 in respect of the interest on the loan of £3,000,000.

## CITY OF SALISBURY

**T**HE City of Salisbury, capital of Southern Rhodesia, was so named after Lord Salisbury, who was Prime Minister when the town was founded in 1890. For many years Fort Salisbury was little more than a name—a collection of dagga and thatch huts with a few wooden buildings nestling under the shadow of the Kopje. Ox-transport was the only means of communication with Bulawayo and the outer world, until in 1899 the railway linked it with Beira and in 1902 with Bulawayo.

Slowly but surely from these modest beginnings a fine modern town has been built, possessing broad and well laid out streets, attractive suburbs, an almost perfect climate, and a chain of municipal activities hardly excelled in Africa. Its citizens are provided with a variety of opportunities for sport and recreation, and it may be added that the importance of Salisbury as a cattle-breeding and agricultural centre is noticeably on the increase.

**BUILDINGS.**—Considering that prior to 1890 Salisbury was non-existent, the size and number of its important buildings are remarkable. Government House, the residence of His Excellency the Governor, is an imposing structure of effective design, and among other buildings the Government Offices, the Town House, the Drill Hall, Queen Victoria Memorial Library, and the

as yet unfinished Cathedral stand out pre-eminent. The British South Africa Company's commodious premises lie to the north of the town, in Manica Road are the handsome Standard Bank Buildings, and the striking and palatial structure of Meikle's Hotel would do justice to a town of twice Salisbury's size.

**EDUCATIONAL FACILITIES.**—Salisbury offers to its residents complete and varied educational facilities. In 1924 there were nearly 1,000 children attending the schools in the town and suburbs, the Boys' and Girls' High Schools alone claiming an enrolment of over 700. The high schools have separate boarding houses for the older and younger pupils, and are thoroughly well staffed and equipped. In these and other secondary schools pupils are prepared for the Cape University Matriculation Examination, University Junior Certificate, and Best Scholarship examinations.

**INDUSTRIES.**—Salisbury has become the centre of several industrial undertakings, portions of the town lands having been set aside as industrial sites, and it is the considered policy of the Municipal Council to encourage such enterprises. A tobacco warehouse has been established for some years, and it handles yearly well over 3,000,000 lb. weight of tobacco leaf, chiefly grown in Mashonaland. Other important industries

Revenue for the ten months ended January 31, 1926, was approximately £200,000 more than for the preceding corresponding period, expenditure for the same time also increasing by £100,000.

**TAXATION.** Income tax was first levied under the provisions of an ordinance promulgated in 1918, and the present rate is 1s. for every £ of the taxable amount, provided the latter does not exceed £500. If the taxable amount exceeds £500, the rate is increased in respect of the whole amount by one two-hundredth of a penny in the £ for each pound or fraction thereof up to a maximum of 3s. in the £. There are abatements of £1,000 in respect of married persons and £500 in respect of bachelors, £100 on account of life insurance premiums and £50 for children and dependants. Collections of income tax for the year ended March 31, 1925, amounted to £261,838, compared with £221,406 for the preceding year.

By far the greater part of income tax (approximately 75 per cent) is derived from companies which are also taxed in the United Kingdom, and which receive from the Imperial Government a refund of half the tax levied by that Government on income derived from sources in Southern Rhodesia. These companies also receive from the Southern Rhodesian Government the difference between the colony's tax and the amount refunded by the Imperial Government.

### BANKING

Branches of the Standard Bank of South Africa, Ltd., and the National Bank of South Africa, Ltd., operate in Salisbury and Bulawayo, and at all the other larger centres. The Land and Agricultural Bank of Southern Rhodesia was established in 1923, principally for the benefit of agricultural pursuits. (See also under Union of South Africa Finance and Banking.)

are those of milling, bacon curing and oil manufacture, brewing, and furniture making.

**LIBRARY AND MUSEUM.**—A fine double-storeyed building situated on the west side of Moffat Street, immediately opposite the Public Gardens, was erected by public subscription in 1902 as a memorial to Queen Victoria, at a total cost, exclusive of furniture and fittings, of £9,000, and is utilised as a Museum and Public Library. It contains a news room, circulating library of 14,000 books, and a reference library. The Museum has a very valuable lot of birds and insects, with a good collection of the fauna and minerals of the country.

**LIGHT AND POWER.**—The town is lighted by electricity from two 300 kw. alternator sets at a cost of £50,000. The units generated in 1923 were 452,499, being an increase of 61,502 units over the preceding year. The charge for lighting is from 1s. 6d. per unit on a sliding scale to 6d. per unit. Electricity for power is supplied at 3½d., but it is anticipated that with the up-to-date plant recently installed a great saving in fuel will result, and that it will be possible to sell power at 1½d. per unit.

**MUNICIPALITY.**—When the Prince of Wales visited Salisbury in 1925 it was in the 28th year of its existence as a municipality, the first Town Council having been elected at the end of 1897, with Mr. W. E. Fairbridge as

the first Mayor. How great has been the progress of Rhodesia's capital since then may be gauged from the fact that the total revenue for the initial municipal year was £7,753, of which £6,316 was raised by an assessment of 2s in the £ on a rateable value of £757,000, whereas in 1925 the rateable value of the town as fixed in 1922 was £2,078,823, and the revenue from rates alone was approximately £25,000. The municipal services, water, light, sanitary fees, etc., yielded in 1923-24 a revenue of close on £45,000, the total revenue from all sources being between £90,000 and £100,000. In addition to water, lighting and sewerage, the Municipality controls the swimming baths, stockyards and abattoirs, fire brigade and the public gardens and commonage. The present Mayor is Mr J. Reid Rowland, the Council consisting of eight members.

**PARKS AND GARDENS.**—The principal open space in Salisbury is the Public Gardens, which were laid out by the Town Council in 1901 and serve as a favourite resort for visitors and citizens. The nucleus of a zoological collection, thanks to the generosity of Lady Chaplin, has been started at this location, and here, too, are the Municipal Swimming Baths. The handsome War Memorial, a granite obelisk nearly 50 ft in height, has been erected in the centre of the Gardens to the memory of all Rhodesians who fell in the Great War. Other public spaces are the Cecil Square where the flag was first hoisted by the pioneers in 1890, Greenwood Park, which is set apart for the cultivation of botanical specimens, and Alexandra Park, in the neighbourhood of Hartman Hill.

**POPULATION.**—In 1897 the white population of Salisbury was roughly 1,500, in 1904 it had grown to 1,725, in 1911 to 4,911, and at the last census of 1921 to 6,462.

**WATER SUPPLY.** Salisbury is provided with an excellent water supply, which is obtained from the upper reaches of the Makabusi River. On a reserve situated about seven miles from the town a dam has been erected having a capacity of 200,000,000 gallons, and the water is conveyed by a 10-inch steel pipe by gravitation to a service reservoir on the north side of the town, capable of holding a three day's supply. The total cost of this undertaking was £68,868. The filtration of the water is carried out, in addition to two primary and secondary sand filters in the vicinity of the dam, by two of Bell's latest high-pressure filters. The charge for water is from 5s per 1,000 gallons on a sliding scale to 2s per 1,000 gallons.

#### FARMERS' CO-OP. LTD.

**Inception.**—This company was established in 1903 with an authorised capital of £250,000, of which £27,047 10s has been issued, the reserve standing at £14,664 10s 8d. The shareholding is confined to maize growers in Mashonaland, the membership numbering about 400.

**Activities.**—The principal business is the distribution of maize, agricultural products and seed maize. The turnover is from half to three-quarters of a million bags of maize annually, 10,000 bags of sunflower seed, 25,000 bags of ground nuts, 10,000 bags of potatoes, and large quantities of beans, forage, wheat, barley, oats, farm seeds, etc. The company also acts as purveyors of rough goods, agricultural hardware, fertilisers, etc., to members only.

**Branches.**—There are depôts at Sinoia, Mapunga, Glendale, Concession, Passaford and Selby.

1 and 3. MANICA ROAD, SALISBURY, RHODESIA.

and 4. FIRST STREET.

FARMERS' CO-OP LTD., Salisbury  
Head Office  
(See letterpress page 315)

**Directorate.** Messrs J. Pascoe, D. Black, R. L. Gray, Chas. Sonthey, J. Black, A. R. Morkel and J. H. Farmer. General manager, Mr. Jno. Buckmaster.

**Offices and Stores.** Wenne Street, Salisbury. Cables "Maize" Salisbury.

#### RHODESIAN FARMERS' CO-OP. INDUSTRIES, LTD.

**Inception.** Established in 1919 with an authorised capital of £75,000, of which £45,000 has been issued, this company is the proprietor of the Salisbury Oil Factory, Salisbury Bacon Factory, Gwelo Creamery (Salisbury Depot) and Gwelo Creamery, Gwelo.

**Activities.** The oil factory produces edible refined monkey nut oils, oil cake and soap, having a capacity of 60,000 bags of ground nuts and sunflower seed per annum. The bacon factory has a capacity and cold storage for 12,000 pigs per annum, while the creamery has cold storage accommodation for 20,000 cases per annum of its "Marigold," "Model Dairy" and "Myrtle" brands.

**Directorate.**—Messrs J. Pascoe, W. P. Chappell, T. J. Rooney and H. Martyn Green.

**Head Offices.** Farmers' Co-op, Ltd., Salisbury (Managers and Secretaries). Cables "Farcoopind," Salisbury.

**London Agents.**—Overseas Farmers' Co-op Federations, Ltd., 88-90, Chiswell Street, E.C.1.

**MEIKLE'S HOTEL.** The position of this hotel leaves nothing to be desired, as it is near the business centre of the town and all Government offices, at the same time it is within two minutes of the station, so that both for residents and visitors it offers every convenience of situation. The finely-designed structure, erected in 1915, covers one of the largest areas of any hotel in Africa, and

visitors are always surprised both at the size of the building and at its graceful exterior. The interior arrangements of the hotel are no less commendable. The public rooms are spacious and splendidly furnished; there is a staff of over one hundred, and the service is all that the most exacting and experienced traveller could wish for. Every attention is paid to the comfort of guests, and provision made for all possible requirements, with a cuisine above reproach. The dining hall is cool and airy, and there is a luxurious lounge, while the ballroom, which is a recent addition to the attractions of the hotel, may be hired on special occasions and for theatrical performances. There is also a well-equipped billiard room, and in the grounds a good tennis court for the free use of guests. The hotel contains 160 rooms, comprising double and single rooms, bedrooms with private bathrooms attached, and suites consisting of double bedroom, sitting-room and bathroom. The charges are reasonable, ranging from 17s. 6d. for a single room upwards. All trains are met, the hotel running its own car to and from the station. Other cars are available for hire if required, and private garages are also provided. The manager is Mr. J. G. Robinson. Cables "Traveller," Salisbury.

**ANGLO-AFRICAN TRADING CO. LTD.**—P.O. Box 394, Salisbury. Est. 1897. General merchants and importers of agricultural implements, timber and building material, hardware, fencing, liquors, groceries, etc. Head office 9, Billiter Square, London, E.C.3. Cables "Anglo," Salisbury.

**BRITISH SOUTH AFRICA CO.**—Charter House, Salisbury. Inc. by Royal Charter 1889, administered S. and N. Rhodesia from 1890 to 1923. Present most important assets: Mineral rights, proprietary interest

in railways, also estates, principal activities being development of estates and ranches. Head office: Rhodesia House, 2, London Wall Buildings, London, E.C.2.

**BAIN, WILLIAM, & CO. (RHODESIA), LTD.**—Corner Second Street and Forbes Avenue, Salisbury. Fencing material and agricultural machinery merchants, including dairy apparatus, etc. Extension of Wm. Bain & Co. Ltd., of Lochmaben Works, Carlisle, Scotland. Cables "Lochrin," Salisbury. Codes A.B.C. 5th Edition, Western Union, and Private.

**CENTRAL COTTON GINNERIES (SOUTHERN RHODESIA), LTD.**—Head office, Salisbury. Formed 1924, reg. in Rhodesia. Ginneries at Salisbury, Umtali and Gwelo. Total capacity 300 bales of lint per diem. Oil press capacity 25 tons of seed per diem. Cables "Ginnery," Salisbury.

**RHODESIAN MILLING & MANUFACTURING CO. LTD.**—Salisbury. Produce and general merchants, manufacturers of flour, maize products, soap, candles, glycerine, salad oils, oil cakes, etc. Mills at Salisbury and Bulawayo. Cables "Atlas," Salisbury. Code Bentley's.

**SYKES (RHODESIA) LTD.**—P.O. Box 110, Salisbury. Originally S. Sykes & Co. Ltd. Rhodesian company formed 1924, maintaining principal agencies of old company. Engineers, contractors and machinery importers. London office 79, Gracechurch Street, E.C. Cables "Psyche," Salisbury. Codes A.B.C. 5th Edition, Lieber's, Engineering, Telegraph 2nd Edition, and Bentley's.

**VASSILATOS & VENTURAS.**—Salisbury. Direct importers of all kinds of soft goods. London representatives: G. Cambitzi & Co., Moorgate Station. Partners: Messrs. P. H. Vassilatos and Ch. Venturas. Cables: "Venturas," Salisbury. Codes A.B.C. 4th and 5th Editions.

GENERAL VIEW OF BULAWAYO, LOOKING SOUTH ALONG MAIN STREET, SHOWING GATLING GUN AND RHODES MEMORIAL

## CITY OF BULAWAYO

**B**ULAWAYO is a Zulu word, which, literally translated, means "the place of the killing," the reference being to the famous Indaba Tree under which Mosilikatse and Lobengula, the great Matabele chiefs, administered their rough and ready justice. This was prior to the Matabele War of 1893, at the close of which a small township of tents was set up on the site of Lobengula's Kraal, where now stands Government House. In 1894 the present town was surveyed and laid out a mile or so to the south, to become within twenty years a busy city containing 46 miles of main streets and a commercial importance unrivalled in the country.

Bulawayo to-day covers an area of 1,400 acres, and is surrounded by a commonage of 22,734 acres, the boundaries of which are from three to four miles away. Healthy in its climate and picturesque in its setting, the town has well kept thoroughfares, electric lighting, a water supply which is being steadily improved, innumerable facilities for sport and recreation, and tremendous industrial possibilities, these latter being largely due to the position it occupies on the line of railway communication between South Africa and the great territories to the North, and to the fact that it is the centre of the largest gold mining activities in the colony.

**BUILDINGS, ETC.**—Government House, which was built by the late Mr Rhodes, is connected with Bulawayo by a magnificent avenue 2,540 yards long and 130

feet broad. It is now used as a residence by H.E. the Governor and by distinguished official visitors. In Main Street are the Municipal Buildings and Government Offices, also the Market House, while the Court House, the British South Africa Company's office, the Stock Exchange, and the Police Station are located within a short distance of Market Square. At the corner of Rhodes Street is the Anglican Church, of local (Paspas) sandstone. The Palace Theatre, in Abercorn Street, accommodates over 1,000 people and possesses the largest stage of any theatre in South Africa. The Empire Theatre, opposite the Grand Hotel in Main Street, can seat 500 persons.

At the juncture of Main Street and Eighth Avenue stands the impressive statue of the late Cecil John Rhodes, "ever looking to the North." The statue, which is of bronze, 12 ft. high, and mounted on a 10 ft. 6 in. pedestal of Matopo granite, is the work of Mr John Tweed of Chelsea. The cost was borne by the Bulawayo Town Council and by the public, and the statue was unveiled on July 4, 1904. Immediately on the left is the Bulawayo Club, with the Rhodesian Museum and the Public Library only a few yards away. The handsome monument near by, surmounted by a Gatling gun, stands as a memorial to the "257 pioneers of civilisation who lost their lives in the Matabele Rebellion of 1896."

**EDUCATIONAL FACILITIES.**—Educationally Bulawayo is well provided with three large and up-to-date public schools

and two hostels, one for boys and one for girls. The schools are controlled by a local Advisory Committee. There is also the St. George's Boys' Public School, under the direction of the Jesuit Fathers, likewise a Convent School.

**HOSPITALS.** The Memorial Hospital was founded in 1894 in commemoration of the pioneers and early settlers who fell in the Matabele War of 1893. The wards are named after Captains Borrow, Judd, Fitzgerald, and Kirtton, other wards are the Victoria, Grey, and Alan Wilson. The hospital, which is thoroughly well staffed and equipped and has an up-to-date operating theatre and X-ray rooms, was formerly controlled by a Board composed of six elected members and four nominated by the Government. In 1925, however, control was handed over to the Government, which has voted a sum of money for the enlargement of the building. The Town Council has recently erected an isolation Hospital on the outskirts of Bulawayo for the treatment of infectious diseases.

**INDUSTRIAL OPPORTUNITIES.**—The Council, realising the great importance of attracting industries, has always adopted a sympathetic attitude in this direction. Unfortunately, with its hands tied as regards the two great essentials—cheap water and power—it was very much handicapped in the past. Now that control is in the hands of the Council it will be possible to adopt a more active policy. Industrial sites on the commonage will, no doubt, be made

1. ABERCORN STREET, Bulawayo, with Offices of C. H. Zeederberg Ltd. in building on extreme right.

3. BULAWAYO, looking south along Main Street from Selborne Avenue.
4. FIVE STREET, Bulawayo, looking south, with portion of Standard Bank Building on the extreme right.

available on very reasonable terms. In this connection also there will probably be an enlargement of the Council's powers in the near future.

**MUNICIPALITY.**—The town, which was declared a municipality on October 26, 1897, is administered by a Mayor and Municipal Council of 8 members. The rateable value of property in 1924 was £2,149,890.

**MUNICIPAL SCHEMES.** Parliamentary powers have been obtained to enable the Council to construct waterworks and supply electricity and to raise a loan not exceeding £350,000 for the following purposes: Waterworks £215,000, electricity £100,000, Town Hall and swimming bath £25,000, other public improvements £10,000.

**PARKS AND GARDENS.** The public parks of Bulawayo cover 250 acres, the three principal open spaces being known as the North, Central and South Parks. In the North Park are the Zoological Gardens, which were started in 1910, and whose collection includes many interesting specimens. The South Park is the favourite resort for rest and recreation and frequent promenade concerts are given here on Sunday afternoons and moonlight nights.

**POPULATION.** At the last census of 1921 Bulawayo had a population of well over 16,000, of whom 6,530 were Europeans, 9,000 natives and 825 Asiatics and other coloured people. Including the suburbs, the whites numbered 6,830.

**SUBURBS.**—The main suburb is connected with the town by a broad road, the eastern continuation of Selborne (7th) Avenue, which passes between Central Park and the Zoological Gardens. Many of the houses and gardens are most attractive. About 2½ miles to the south-east of the town and beyond the commonage is the suburb of Hillside, where building sites are larger and less expensive than nearer in. The reservoirs are located here. On some of the kopjes in this neighbourhood Bushmen paintings may still be seen. Raylton on the south-west side of the Railway Station contains the new Railway Shops to which water is supplied from an artificial lake, nearly two miles long, formed by the Khami Dam about 12 miles from Bulawayo.

## REPRESENTATIVE COMMERCIAL ENTERPRISES

### HOGARTHS METAL WORKS, LTD.

**Inception.**—Early in 1910 this company was incorporated, commencing operations as constructional engineers, manufacturers and metal merchants.

**Development.**—The expansion of business was so rapid that two years after the establishment of the firm it was found necessary to build the large premises in which the undertaking is now housed. To-day it is one of the leading concerns in Southern Rhodesia, and does an extensive trade throughout the country.

**Activities.**—The chief products and interests of the company are steel-framed buildings, sands and slimes plants, steel plate work, gate making, wire weaving, etc., also all kinds of mining requisites and farming appliances. It is sole manufacturer of the following patents: the "Clutch" fencing dropper, the "Simplex" steam condenser, the "Wiry" axe handle, the "Auto" acetylene generator, and the "Domestic" iceless cooler. The Bulawayo works own and occupy two adjoining town sites, centrally situated and within a reasonable distance of the railway. The works are well equipped with modern machinery, such as plate

Showroom.

(See letterpress, page 320)

rollers, cropping, punching and drilling machines, angle iron rollers, shearing, wire weaving, tube bending and sawing machines, forges, presses and other modern manufacturing plant. The firm makes a speciality of gate-making and produces 26 different designs at prices which compare favourably with those of the imported article. New plant was recently put down for the manufacture of wire fencing of various designs, and experiment has proved that this article also can be made in Rhodesia at a lower cost than the imported variety. There is a large warehouse attached to the main building, where stocks of imported goods are kept in great quantity and variety.

**Staff.** The staff numbers 70.

**Agencies.** The company acts as distributing agents for the "Evening Star" lamps, the "Aladdin" lamps, the "Bulala" hunting lamps, "Windolite," "Jetahna," "Holdet," etc.

**Branch Works.**—Large works have been established by Messrs Hogarths Ltd at Pinetown, Natal.

**Directorate.** Messrs T. A. E. Holdengarde (chairman), G. A. Hayler, and R. J. Thommet.

**Offices.**—Head office: Port Street, Bulawayo; hardware store: Abercorn Street, Bulawayo; Cables: "Hogarths," Bulawayo.

**Bankers.** Standard Bank of South Africa, Ltd., Bulawayo, Rhodesia; National Bank of South Africa, Ltd., Pinetown, Natal. (See illustration, page 319.)

#### C. H. ZEEDERBERG, LTD.

**Inception.** This firm is one of the oldest in Rhodesia, Mr C. H. Zeederberg having opened the first properly organised mail service between Mafeking, Bulawayo and Salisbury in 1891, with headquarters at Bulawayo, and employing the American style of stage coach.

**Development.** Until the railway reached Bulawayo in 1897 most of the transport by both oxen and mules was undertaken by the enterprise now under notice, but when long distance trips were ended the mail coaches were used for journeys from the railhead to various mines. In many districts the mails are still carried by this firm, which continues to control a large proportion of the transport in Rhodesia. As business continued to increase Mr Zeederberg leased some ground from the municipality on which to found the well-known Zeederberg stables and workshops, and for the last four years the firm has been developing, slowly but surely, an important motor and motor cycle business.

**Activities.** The Zeederberg stables and workshops are now responsible for much of the vehicular construction for Bulawayo and the surrounding district, the workshops being equipped with all modern appliances. Practically all their large fleet of trolleys for railway cartage and all the wagons for heavier outside traffic were built by Messrs Zeederberg's own workmen. The firm has a showroom devoted to the motor and motor cycle business at the corner of one of the busiest streets, and it contains everything necessary for the owner of the Essex, Hudson or Austin car and the Indian or Francis Barnett motor-cycle. The showroom, with offices attached, is connected by telephone with the workshops, stables and railways. Highly efficient services are accorded to visitors, hunters and tourists, for whom all baggage is safely received, cleared, forwarded or transported.

**Colliery Agency.**—As agents for the Wankie Colliery, the firm can supply coal most reasonably and in any quantity.

**Head Office and Garage.** Land Bank Buildings, Bulawayo. Cables: "Pioneer" Bulawayo. Codes: A B C and Broomhall. **London Representatives.** Messrs Fowhe & Boden, Ltd., 29-35, City Road, E.C.

**Bankers.**—The Standard Bank of South Africa, Ltd. (See illustration, page 319.)

#### A. F. PHILIP & CO. LTD.

**Inception.** This business founded by a member of the Philip family, a name associated with South Africa for a great number of years, especially in the field of missionary endeavour, is almost as old as Rhodesia.

**Development.** With the progress of the country came corresponding expansion of business, with the result that the company is to-day among the leading concerns dealing in the lines in which it specialises, an important branch having been established at Salisbury the centre of agricultural activity.

**Activities.** The firm deals in almost every description of settlers' requirements with the exception of food, drink and clothing. Building materials form the principal line of business, followed closely by agricultural

implements and machinery. In addition, well assorted stocks of hardware, tools, paints and distemper, fencing materials and wagon building and blacksmith's requirements are regularly carried. The branch at Salisbury, owing to its situation, carries the widest range of agricultural implements. Remote as this district is from sources of supply, the customers of A. F. Philip & Co. Ltd. are never in difficulties for want of a spare part for any implement sold by the firm.

**Agencies.** Amongst the most important agencies held are the following: International Harvester Co., of America (whose manufactures include the McCormick line of mowers and reapers), the Bulldog line of ploughs (made in Canada), the Melotte cream separator, Petter oil engines, the original Ruberoid roofing, Hall's sanitary distemper, Sissons' Bros. paints, Stanley tools, Disston's saws, Lamhn's incubators, etc.

**Branches.** The firm has agents and correspondents throughout Northern and Southern Rhodesia, and Mr J. McFadden has a "service" station at Gwelo for the supply of implements and spare parts.

**Bankers.**—The Standard Bank of South Africa, Ltd.

#### JOHNSON & FLETCHER, LTD.

**Inception.**—Founded by the two senior partners Messrs. George Johnson and H. Clarkson Fletcher, this firm commenced business in Bulawayo in July 1897 as engineering and mining machinery suppliers.

**Development.**—In 1899 a branch was opened at Salisbury, in 1901 at Beira, and in 1923 at Gatooma. Fifteen years ago a special timber and building material department was added in conjunction with Messrs. Hunt, Leuchars and Hepburn, Ltd., Durban, and this side of the business is being strongly developed also at Beira.

**Activities.**—The firm played a pioneer part in the introduction into Rhodesia of machines designed for service in gold-mining. It was likewise responsible for installing the first gold-mining machinery successively in British East Africa (1911) and on the Kilo goldfields, N.E. Congo (1918). Special plant was also supplied to the Shamva Mine, the Wanderer Mine, the Bwana M'Kubwa Copper Mining Co., and the Ayrshire Gold Mining Co., while during 1922-24 Crossley-Premier gas engines, totalling 6,500 h.p., were installed by the firm in Rhodesia. The company has also been entrusted with the supply and erection of the generating set for the Beira Municipality.

**Staff.**—The company employs a number of mechanical and electrical engineers. The European staff numbers over 40 and the native staff approximately 150.

**Agencies.**—The enterprise represents Messrs. Belliss & Morcom, Babcock & Wilcox, Premier Gas Engine Co., Engelbert

JOHNSON & FLETCHER LTD., Bulawayo.  
Head Office.

& Co. Crossley Bros. Ltd., Cameron Steam Pumps, and many other renowned businesses.

**Branches.**—At Salisbury, Beira, Gatooma, and agencies at Elisabethville, Belgian Congo, and Gwelo, Southern Rhodesia.

**Directorate.**—Messrs. Geo. Johnson (chairman), H. C. Fletcher, R. Swire Thompson, F. J. Golding and B. J. Brown.

**Head Office.**—Bulawayo, Southern Rhodesia. Cables: "Motor," Bulawayo. Codes: A B C 5th Edition, Bedford McNeil Engineering 2nd Edition, A 1, Western Union, Broomhall's, Bentley's Mining Edition.

**Bankers.**—National Bank of South Africa, Limited.

LANDAU BROS., Bulawayo.  
Firm's Premises.  
(See letterpress, page 322)

**LANDAU BROS.**

**Inception.**—The establishment of this firm of general merchants dates from the year 1897.

**Development.**—Operations were commenced in a wood and iron building, but expanded as the country was gradually opened up. In 1909 a brick building was erected, the present modern warehouse dating from 1920.

**Activities.**—The firm is primarily interested in the importation of soft goods, Kafir truck and hardware. The staff consists of ten Europeans and a number of natives, while two travellers regularly cover the whole of Southern and Northern Rhodesia and the Belgian Congo.

**Premises.**—The present warehouse, a cement building of two storeys, is one of the best in Bulawayo, and provides floor space of about 18,000 square feet.

**Branches.**—There are branches in London, Manchester, Hamburg and Paris, each being under the personal management of one of the partners. The firm has also large interests in Johannesburg.

**Partners.**—Messrs. Philip David, Morris Marks, Louis and Harry Landau. Of these, Messrs. P. D. and M. M. Landau are resident in London, Mr. H. Landau in Johannesburg, and Mr. L. Landau in Bulawayo.

**Offices.**—Bulawayo, Abercorn Street, London 41, Moorfields, where a large South African shipping business is conducted, Johannesburg, Clonmel Chambers, Eloff Street. Cables "Landau," Bulawayo, "Allowingly," London, and "Landauib," Johannesburg. Codes A B C 5th Edition.

**Bankers.**—Standard Bank of South Africa, Limited.

(See illustration, page 321.)

**PALACE HOTEL.**—Something of an historic origin attaches to this hotel, as it was built in 1897 for the reception of the guests assembled at Bulawayo for the ceremonies and festivities taking place at the opening of the railway on November 4 of that year. It is, as might be expected, near the station and in Abercorn Street, the principal business thoroughfare of the town. The building is a substantial one of two storeys, constructed of brick and stone, with a wide verandah front. The interior of the hotel possesses the attractions of large, well-furnished lounges and a fine dining room, while the accommodation for visitors comprises sixty bedrooms and nine bath rooms, all with constant hot and cold water. The baggage master and porters of the hotel meet all trains, motor cars can be hired for any length of time, and trips are arranged to the Matopos and all places of interest in the vicinity. Especial attention is paid to the cuisine, and every provision is made for the comfort and convenience of guests, the service, appointments and general arrangements being all that could be desired. The tariff ranges from 12s 6d to 15s 6d per day. The proprietor of the hotel is the Estate of the late Mr. W. R. Paterson, and the bankers are the Standard Bank of South Africa, Ltd. Cables "Palace," Bulawayo.

**C. SALOMON & CO.**—Founded in Bulawayo in the year 1897 by Messrs. C. Salomon and O. Stenham, this firm commenced operations in a small way as general merchants and importers of soft goods. As, however, the country was opened up and trade developed the business of the firm correspondingly increased, until it was found necessary in 1909 to open a branch office in Salisbury. The company now imports,

besides all kinds of soft goods for both European and native use, hardware, fancy goods and agricultural implements. Messrs. C. Salomon & Co. occupy their own premises in Bulawayo, where their warehouse has a floor space of 32,000 square feet, and in Salisbury, where there is a total of 18,000 sq ft for the accommodation of stores. Their goods are now distributed throughout the whole of Rhodesia, in Beira (Portuguese East Africa) and over the Belgian Congo, all this territory being regularly covered by four travellers, who are continually on the road. In this way the firm keeps in touch with the trade requirements of a vast region which is still in a state of development, and whose varying needs are steadily increasing. The present partners of the firm are Messrs. C. Salomon and O. Kanfman, both of whom are resident in Bulawayo, while the London representative is Mr. O. Stenham, Finsbury Court, Finsbury, E.C.2. The company's bankers are the Standard Bank of South Africa, Ltd. Head office, Fife Street, Bulawayo. Branch office, Manica Road, Salisbury. Cables "Salamander," Bulawayo and Salisbury. Code Bentley's.

**CARLTON HOTEL.** Bulawayo. Est. 11 years, situated in centre of town. Accommodation 100 bedrooms. Proprietor A. Vince. Cables "Carlton," Bulawayo. Bankers Standard Bank.

**DULY & CO. LTD.** Bulawayo. Incorporated 1912, capital, £50,000. Sole distributors of all products of Ford Motor Co. of Canada, Ltd., for Rhodesia and Portuguese East Africa, many branches

and sub-agencies. Cables "Duly," Bulawayo. Code A B C 5th Edition.

**GRAND HOTEL.** Bulawayo. Est. 25 years. Accommodation 100 bedrooms. Cabaret every Saturday. Proprietors T. McMurray and T. Meikle. Manager I. McMurray. Cables "Grand," Bulawayo. Bankers National Bank.

**PREMIER PORTLAND CEMENT CO. (RHODESIA), LTD.** Bulawayo. Producers of high grade Portland cement, capacity, about 15,000 tons per annum. Capital £100,000, of which £60,015 is issued and fully paid. Cables "Cement," Bulawayo.

**PUZEY & PAYNE.** Bulawayo. Est. 1897. Motor car and cycle agencies, bicycles, sporting goods, gramophones, etc. Representations Dodge Bros. (motor cars), Graham trucks, B.S.A. and Raleigh motor cycles and cycles. Partners A. C. G. R., H. G. and F. G. Payne. Cables "Puzey," Bulawayo.

**WILLOUGHBY'S CONSOLIDATED COMPANY LTD.** Willoughby's Buildings, Main Street, Bulawayo. Mining, land-owning, and ranching. At December 31, 1924, 2,307 gold reef claims, 10 chrome locations and 1,123,310 acres of land were held, with 30,000 cattle. Capital £750,000, of which £700,314 is issued and fully paid.

**ZAMBESI SAW MILLS, LTD.** Reg. office A. F. Philip & Co. Ltd., Stand 332, Bulawayo. Formed 1916. Mainly supply sleepers to railways. Mills and offices, Livingstone, N.R. Directors G. R. Holgate (chairman), H. Chapman, C. S. Knight and W. E. Tongue.

POST OFFICE AND MUNICIPAL OFFICES, BULAWAYO,  
with Matabele Rebellion Monument on right.

## OTHER CITIES

### GATOOMA

Gatooma ranks as the third commercial town in Southern Rhodesia, and owes its almost phenomenal rise to that position to the policy adopted by the British South Africa Company in 1904, by which prospectors became able to work their own ground under payment of a royalty upon the gold output, instead of having, as formerly, to promote companies to deal with it. It is also situated in the midst of a rich farming country, the prospects of cotton growing in the neighbourhood being extremely good. The town lies on the main trunk Bulawayo-Salisbury railway line, being 202 miles from Bulawayo and 97 from Salisbury. The white population of the township proper and of the Eiffel Flats numbered 782 in 1921, and the native population 3,200. Most of the mines are situated within easy access of the railway, the Cam and Motor property being by far the largest. Gatooma is well governed by a municipal council with progressive ideas, dating from 1917, and which has succeeded in placing the water supply of the town on a sound basis. The municipal offices face the handsome granite War Memorial in Edward Street. There is a good system of electric light, and among the many public and other institutions of the town are the Anglican and Wesleyan Churches, Public School, Chamber of Commerce, Publicity Committee, Turf Club, Golf Club, and the Rifle Company.

### GWELO

The capital of the Midland or Central District of Southern Rhodesia, Gwelo is a town of some 2,000 inhabitants (1,100 Europeans) situated on the north side of Gwelo Kopje. The original site was selected by the late Sir Starr Jameson in 1894, and the town became a municipality in 1914. The place is admirably laid out, lighted by electricity, and possesses a good water supply. Here are the headquarters of the Magistrate and Civil Commissioner of the district, and of the Mining and Native Commissioners. There is a Government Hospital, also Anglican and Congregational Churches, excellent Government and Convent Schools, a swimming bath, and a golf course. The public library is well

stocked with books, and Municipal schemes include, besides light and water supply, an abattoir, a cattle saleyard and an experimental station on the commonage. In the pretty Public Gardens is an obelisk war memorial.

### HARTLEY

The township of Hartley adjoins the railway a few miles north of Gatooma, and is two miles south of the Umuthi River. This is the largest river in Southern Rhodesia after the Zambezi and the Limpopo, and the position of the town is an admirable one for future industrial development. The European population at present numbers rather more than 100. Already Hartley possesses a fine Public School with 50 boarders and 25 day scholars. There are good cricket, football and croquet grounds, and a golf course.

### QUE QUE

This is an important mining centre, the Globe and Phoenix and the Garka Gold Mines being situated here. What was once a village has grown into a small but well laid out town on the Bulawayo-Salisbury line. The water service is supplied by the Globe and Phoenix Mine, pumping from the Schakwe River. At the Globe and Phoenix Club is a library, and there are a racecourse and good football and cricket grounds. Population 5,500.

### UMTALI

The Eastern Gate of Southern Rhodesia, Umtali is beautifully situated on rising ground between the railway station and the foot of the Ingamitseri Range to the north, being enclosed on all sides by lofty mountains. The town, which is exceedingly healthy, is the chief commercial centre for the goldfields of British Mankaland and several rich agricultural districts, and was for some time the headquarters of the Railway Administration. Large railway repairing workshops lie to the south of the place in which are several important public buildings, the Government offices, a Hospital, Drill Hall, Public Library, two banks, St John's (Anglican) and the Roman Catholic Churches being the most prominent. The town has been a municipality since 1914, the Council controlling an excellent water supply, the Botanical Gardens and Nurseries, and the Victoria Park, while other

municipal schemes for the good of the place (including swimming baths) are in course of construction. Umtali is becoming industrially important, saw mills, aerated water and ice factories, and grinding mills having been erected. The policy of the Council is to foster industrial undertakings by giving all possible facilities. The European population within the municipal area was 1,000 in 1924, natives numbered 2,000 and Asiatics 100, in all 4,000. The valuation of the rateable property was £337,573. Umtali possesses a first-rate club, a racecourse, and two of the best 18-hole golf courses in the colony.

### UMVUMA

This is a small town of about 420 European inhabitants, situated on the line running from Gwelo to Victoria, and is an important collecting and distributing centre for the Central Estates and the Rhodesdale Ranch (two of the largest cattle ranches in Rhodesia), and the Falcon Mine.

### VICTORIA

The town of Fort Victoria is situated at the confluence of the Umshagashi and Macheke Rivers, and was the first permanent settlement founded in Southern Rhodesia. It is the centre of a rich grain and cattle-producing district with enormous potentialities, and mining for gold and asbestos is also carried on in the neighbourhood. The European population is a small but increasing one, 222 in 1921. There are several fine buildings, prominent amongst which are the hotel, Standard Bank, and many business premises. Amongst public buildings are the Government School and Hospital, together with three European Churches of different denominations.

**ZIMBABWE RUINS.** About 12 miles from Victoria are the famous ruins of Great Zimbabwe, immense buildings erected in far-off times for the protection of those engaged in the gold industry. Near the ruins, which are easily reached by motor-coach, a brass tablet marks the place where Major Alan Wilson and his party, who fell on the Shangani River in 1893, were interred previous to the removal of their bodies to the World's End.

## COMMERCE AND CUSTOMS

**W**ITH the development during recent years of Southern Rhodesia's three main agricultural crops—maize, tobacco and cotton—the commerce of the colony has naturally shown an expanding tendency. Gold is still the principal article of the export trade, asbestos ranking second, but there are evident signs that in the future Rhodesia's overseas trade will be largely conditioned by the progress made in agricultural industry. The years 1923, 1924 and 1925—the first of the colony's independent existence—each showed a favourable trade balance, while the prospects for 1926 were distinctly good.

**BALANCE OF TRADE.**—In 1923 exports exceeded imports in value by £1,751,391, in 1924 by £1,510,214, and in 1925 by £792,000.

**CUSTOMS.**—The Customs Tariff of Southern Rhodesia closely follows that of the Union of South Africa. The duty on settlers' effects is 9 per cent. There is no duty on goods taken from the Union to Rhodesia, or vice-versa, except on spirits. In 1925 a Bill was introduced into the

Legislative Assembly providing for the amendment and consolidation of the Customs Laws, and was expected to become operative during 1926. (See under "Union of South Africa", "Customs".)

**EXPORTS.**—The grand totals of exports for the years named were as follow—

	1923 £	1924 £
S A Produce	4,916,121	5,120,058
Imported goods re-exported	340,535	427,488
Articles through post	3,139	3,763
Total	5,265,795	5,551,309
To other S A Govts	15,438	3,928
Specie	29,328	9,479
Grand Total	5,310,561	5,564,716

The principal exports in 1924 (figures for 1923 in brackets) were: Gold, £2,394,601 (£2,586,252), asbestos, £498,855 (£409,026), copper, £324,866 (£323,727), maize, £215,334 (£319,936); and chrome ore, £362,101 (£249,227).

Exports of all kinds during 1925 were valued at approximately £5,575,000.

**IMPORTS.**—These were as follow for the years named—

	1923 £	1924 £
From countries outside British South Africa	2,052,314	2,432,055
From other States in B S A	1,406,119	1,470,269
Total merchandise	3,458,433	3,902,324
Government stores	47,277	53,912
Specie	53,460	98,266
	3,559,170	4,054,502

The values of the leading imports in 1924 (figures for 1923 in brackets) were as follow: Textiles, apparel, etc., £955,521 (£814,372), railway material, £71,504 (£89,541), whisky, £59,854 (£43,788), sodium cyanide, £35,365 (£48,385), and fertilisers, £26,479 (£20,213).

The total value of imports (excluding Government stores and specie) into the colony for the year ended December 31, 1925, was approximately £4,783,000, an increase on the previous twelve months of about £800,000.

**TRADE BY COUNTRIES.**—By far the larger part of the trade of Southern Rhodesia is with the United Kingdom, the total

MAIZE DUMPS, SALISBURY, RHODESIA.

volume amounting in 1924 to £4,377,900, as against £5,041,205 in 1923, out of totals of £9,619,238 and £8,809,731 respectively.

Imports from the Mother Country, which amounted in value to £1,789,692 in 1924, compared with £1,501,487 in 1923, were various, cotton piece goods (£191,630), wearing apparel (£137,083), haberdashery (£59,062), miscellaneous mining machinery (£53,847), cotton underclothing (£50,101), and other machinery and parts (£44,771) being the leading items, while exports to Great Britain (£3,188,210 in 1924, as against £3,456,226 in 1923) were largely made up of the following: Gold (£2,394,601), asbestos (£395,747), maize (£181,209), maize meal (£25,630), and chrome ore (£13,895).

After Great Britain and the Union (see under "Union of South Africa" Commerce") the United States was the leading country of origin for Southern Rhodesian imports (£348,476 in 1923 and £402,399 in 1924). In the export trade the Union also ranked second to the United Kingdom, with £738,291 in 1924, an advance of £211,456 on the 1923 figures, the United States (£624,257) and the Belgian Congo (£235,460) being the nearest competitors.

**TRADING INSTITUTIONS.**—There are five Chambers of Commerce in Southern Rhodesia, namely, at Salisbury, Bulawayo, Gatooma, Umtali, and Gwelo. The primary efforts of these Chambers are directed towards improving trade relations and commercial legislation, customs and postal facilities, and the fostering of new industries. In 1919, with the object of being able when occasion required them to express the point of view of the commercial community of the colony as a whole, these Chambers formed themselves

into the organisation known as "The Association of Chambers of Commerce of Rhodesia." The executive of this Association is composed of nominees from the individual Chambers, selected to represent, as far as possible, different trade interests. The Association, which has from the first enjoyed direct and intimate relations with all Government Departments and Ministers, deals with the wide field of the country's commerce in general, and has undoubtedly accomplished a great deal of very useful work.

**TRADING METHODS.**—See under "Union of South Africa" Commerce.

**WEIGHTS AND MEASURES.**—British weights and measures are generally in use, except that the Cape linear and surface measure of roods, feet and morgen are commonly used. For the sale of agricultural produce the unit of weight is the lb avoirdupois (16 ozs.), and the usual measure of capacity in the case of grain is the sack, which holds approximately 3 bushels. The weight per sack consequently varies with the bushel-weight of seed or grain concerned. It is usual, for the sake of convenience, to adopt a uniform weight for bags of seed and produce having approximately similar bushel weights. Thus, such seeds as maize and beans having a bushel weight of 55 to 60 lbs. are sold in sacks with a weight of 203 lbs. gross while such as oats and barley with bushel weight of 35 to 45 lbs. are sold in sacks weighing 153 lbs. gross, sunflowers in 103 lbs. sacks, and ground nuts in sacks of 83 lbs. gross. The nett weight is usually 3 lbs. less than the figures quoted, the difference being that allowed for the weight of the bag. There is, however, no uniformity in this respect, and weights vary both with the class of produce concerned and the locality in which it is sold.

CHROME QUARRY, BELUWE, RHODESIA.

# TRANSPORT

## RAILWAYS

**T**HE history of the railways in Rhodesia is, to a large extent, the history of the colony itself. The Rhodesia railway system proper started at Vryburg (Bechuanaland) in May, 1893 the line being rapidly pushed on to Bulawayo, which was reached in 1897. Early in 1898 communication was established with the seaboard at Beira by the line between that port and Umtali. This line was extended to Salisbury in 1899 and that town was connected with Bulawayo via Gwelo in October 1902, thus giving Rhodesia an important alternative route to the sea. A line had been projected to cross the Zambesi in order to reach the Southern end of Lake Tanganyika, but questions of expense and the discovery of important coal deposits at Wankie brought about the adoption of the present railway north via Wankie and the Victoria Falls, the latter place being reached in 1904, and the line, after crossing the Zambesi, being carried a further 94 miles to Kalomo in Northern Rhodesia, whence it has since been extended to the Congo border. Between the three points, Beira in Portuguese East Africa, Vryburg in Bechuanaland and Ndola on the Congo border, there are no fewer than 2,462 miles of railway which stand as a truly notable example of enterprise and of the confidence inspired by the resources and future prospects of the country.

Of this total, 1,252 miles of line are in Southern Rhodesia, 506 in Northern Rhodesia, and 198 in Mozambique Territory, the remainder being distributed between Bechuanaland Protectorate and the Union of South Africa.

**ADMINISTRATION.** The railways of Rhodesia are privately owned and operated. They were constructed by several companies in which the late C. J. Rhodes was interested, but under a joint agreement, are operated by the Beira and Mashonaland Railway Company, whose chief executive offices are at Bulawayo. The railway companies and the mileage they own on the whole system as far as the Congo Border are: Mashonaland Railway Company, Limited, 607 miles; Rhodesia Railway Limited, 1,306 miles; Beira Junction Railway Company, Limited, 35½ miles; Beira Railway Company, Limited, 168½ miles; Blinkwater Railway Company, Limited (Gwelo to Victoria), 123 miles; and the Rhodesia-Katanga Junction Railway and Mineral Company, Limited, 132 miles.

**CONTROL.**—The British South Africa Company controls virtually the whole system. Various proposals of railway nationalisation have been made, and in 1925 an exhaustive report was drawn up by Brigadier-General Hammond, C.B.E., D.S.O., under the Railways Act of 1924, favouring either purchase or the acquisition of control under agreement by the Government of Southern Rhodesia. Great interest has been excited by the report and its recommendations, the general opinion, however, appearing to be that the financial and political difficulties involved in the complete acquisition of the system are too severe for a country possessing a total white population of under 40,000.

At the end of 1925 the British South Africa Company expressed its willingness to confer with the Government on the subject of full control. Early in 1926 the Prime Minister, Sir Charles Coghlan, announced the intention of the Government to obtain such control through an independent board, whose business it would be to see that the railways

2. View from the Lounge Porch, Victoria Falls Hotel.

(See letterpress, page 327)

were treated fairly and that the public was not victimised, in other words, statutory control was to be on the lines of the English Railway Act

**COST OF RAILWAYS.**—The total capital expenditure on all railways of the Rhodesian system may be summarised as follows —

	£
Rhodesia Railways, Ltd	8,499,304
Mashonaland Railway	4,349,642
Beira Railway	2,240,469
Beira Junction Railway	709,130
Blinkwater Railway	411,750
Rhodesia-Katanga Junction Railway	767,000
	— — —
	£16,977,304

The cost of the Rhodesian railways per mile of track is very low compared with that of other British African railways, being only £6,890, against amounts ranging from £10,327 in the case of the South African railways to £16,297 for the Gold Coast railways

**FINANCE.**—The total revenues for the whole system of Rhodesian Railways for the year 1923-24 were £3,411,134, compared with £3,021,634 for 1922-23. Of the former total, £383,833, or 11.25 per cent, came from passengers, parcels, and luggage, £1,237,733, or 36.27 per cent, from general goods, £477,169, or 13.99 per cent, from coal and coke, £857,000, or 25.12 per cent, from minerals of all descriptions, £87,443, or 2.56 per cent, from livestock and vehicles, and £46,885, or 1.35 per cent, from maize and maize meal for export

In 1925 the gross receipts of the railways were approximately £3,715,000, and the net receipts £1,740,000. The gross revenue thus exceeded that for 1923-24 by £304,000

Working expenditure for the year 1923-24, plus charges for renewals and interest and sinking fund, totalled £2,988,489, as against £2,884,740 for 1922-23, leaving a surplus on the two year's working of £422,645 and £136,804 respectively. For the year 1924-25 the surplus was estimated at £750,000. From October 1, 1923, to September 30, 1924, the net profits earned by the railways amounted to £1,400,000 to which may be added the estimated profit of £750,000 for 1924-25, which, when deficits amounting to £170,338 are deducted, leaves a total estimated profit to September 30, 1925, of £2,039,662

**TRAVELLING FACILITIES.** All the trains on the Rhodesian Railways are designed for long distance use, with the object of making the journeys as comfortable as possible. The cars are corridors on the English express system, with compartments opening on to a gangway. These compartments are luxuriously appointed for day use, and are rapidly converted into sleeping coaches for the night portions of the trips. Dining cars are attached to all mail trains, where excellently served meals of high quality are obtainable

**CONCESSIONS AND PRIVILEGES.**—Both for residents and tourists the railways offer special concessions and facilities. Tourists travelling through the country are granted a reduction of 20 per cent on ordinary fares. Messrs Thomas Cook & Sons and several steamship companies arrange tours under this concession, which allows tourists to enter from the south and leave by Beira, or vice-versa. Residents of Southern Rhodesia are allowed one trip to Beira or to the junction with the Union system once a year at half fare, whilst excursion tickets are issued for most public holidays and all agricultural shows, for the Victoria Falls, and for the coastal towns during their respective seasons. An average reduction of 7½ per cent. on all passenger fares came into force on July 1, 1925.

## THE BEIRA & MASHONALAND & RHODESIA RAILWAYS

**Inception.**—In devoting himself to the development of the territory to which he gave both name and prosperity, Mr Cecil Rhodes realised the prime importance of establishing railway communications, and even before the granting of the Charter of 1889 he had obtained certain rights over the land north of Kimberley the existing terminus of the Cape system. By 1893 Vryburg had replaced Kimberley as the terminal station, and thence in May of that year the Rhodesia Railways system proper was projected. In February 1898 the section of railway linking the port of Beira via Fontesville with Umtali, on the eastern border of Rhodesia, was completed by the co-operation of the Beira Railway Company Ltd and the Beira Junction Railway Company Ltd, and at once the Mashonaland Railway Company commenced work on the Umtali-Salisbury connection. The Blinkwater Railway Company Ltd was formed to construct the Gwelo-Victoria division and the Rhodesia Katanga Junction Railway and Mineral Company Ltd to connect Broken Hill with the Congo border, in order to tap the extensive mineral deposits of the Katanga.

**Control and Operation.** Such was the inception of each of the railway concerns promoted by financial undertakings under the guidance of Mr Cecil Rhodes. Together they form a complete system virtually controlled by the British South Africa Company, and operated under agreement by the Beira & Mashonaland & Rhodesia Railways.

**Development.** The thirty-three years since the first line was begun have seen the construction of a system of efficiently-operated routes totalling 2,400 miles in length. (For chronological and financial details of the building of each main track the reader is referred to the preceding article on "Railways.") It may be said that the railway in Rhodesia has now passed out of the category of construction line, having become a highly organised business, divided into separate departments and entailing careful co-ordination and control. Among the factors contributing to that efficient service which is the achieved aim of the management are elimination of waste, more capable traffic operation and personal attention to the question of staff welfare.

**Construction Factors.** The prime consideration in the construction of the system was the element of speed, necessitating the choice of the easiest course for the track, where possible along watersheds and avoiding large rivers. The country traversed is, therefore, on the whole easy, the most difficult section being that between Beira and Umtali, built under conditions of much difficulty at excessive cost of life from the attacks of disease and wild beasts. Gradients and curves are as a general rule, excepting the Beira-Umtali line, not severe, the increase of traffic and consequent justification of further expenditure enabling many improvements in alignment from time to time to be effected.

**Line and Rolling Stock.**—The gauge of the line throughout is 3 ft. 6 ins., and the section of rail (except for about 30 miles of track near Dett, relaid with 80 lb rails) is 60 lb. For sleepers, steel is mostly employed, though native timber has been used to a certain extent. The rolling stock is modern and convenient, fitted with vacuum brakes, and most of the vehicles are with automatic couplers. Electric light is installed throughout.

BEIRA & MASHONALAND & RHODESIA RAILWAYS.

1. The Wharf at Beira.
2. Engine Repair Shop at Bulawayo.

**Special Travelling Facilities.**—In addition to those conveniences and concessions mentioned in the foregoing article on "Railways," the Beira & Mashonaland & Rhodesia Railways provide many special facilities. Generally speaking there is a tri weekly service of mail trains throughout the main line, on which compartments may be reserved for distances exceeding 50 miles upon payment of the stipulated minimum number of fares. Those proceeding on shooting trips can be furnished with private carriages having accommodation for six persons, and containing saloon, kitchen, bedroom, bathroom, etc., at an inclusive monthly rate covering haulage, attendance and catering. The administration is specially concerned with the interests of tourists, for whom whether on big game shooting or sightseeing bent, every railway convenience is available. During the summer months (September to April inclusive) reduced fares are in operation for tourists visiting the Victoria Falls, when travelling not less than 280 miles in each direction, and during the same period a reduced tariff is in operation at the Victoria Falls Hotel the company's own first-class establishment.

**Centre of Control.**—A part of the railway system now considered, viz., the section from Vryburg to Bulawayo, is operated by the South African Railways. The remainder is divided for purposes of organisation into four districts, the administrative headquarters being at Bulawayo, the most important railway centre. Here, too, are situated the company's principal workshops, by far the largest railway shops in the colony, equipped with 60-ton travelling cranes, electric traversers, and modern electrically-operated machinery. The railway water supply scheme at Bulawayo includes a dam of the Khamu River, about 18 miles out, furnishing a storage capacity of over 170,000,000 gallons. At the same centre and elsewhere a considerable number of railway houses have been built for the use of employees, involving an expenditure of nearly £500,000 sterling.

**Staff.**—The white staff numbers, according to latest available figures, 2,646, the native staff, 9,929. All clerical and skilled work is done by Europeans.

**Administration.** The principal officers of administration are, Col C F. Birney, M L A, D S O, R E, M Inst T (general manager), Mr H Chapman (assistant general manager), Mr James Buchan, A M Inst C E, M Inst S E (chief engineer), Mr E H Gray, M I Mech E (chief locomotive engineer), Mr Frank Key, F S A A Eng (chief

TRANSPORTING CROP TO RAILHEAD, RHODESIA.

## AGRICULTURE AND LIVESTOCK

**S**OUTHERN RHODESIA is without doubt one of the finest cattle countries in the world, while the range of crops and raw materials which can be produced and of the food-stuffs available is very extensive. Diseases among cattle are comparatively few, and the fungoid and insect pests never do extensive damage. Maize and tobacco are the most important crops, but the cultivation of cotton and citrus fruits has lately received a strong impetus.

**ADMINISTRATION.**—The Department of Agriculture is part of the Ministry of Agriculture and Lands, and functions under a Director. Its activities are largely connected with the suppression of cattle diseases and crop pests, also with experimental work, experimental farms and stations having been established at Salisbury, Gwebi, Bulawayo, Gwelo, and Gatooma. In addition, the Department collects agricultural statistics of great value, these being published in the Rhodesia Agricultural Journal from time to time.

**CITRUS FRUITS.**—Orange growing in Southern Rhodesia is confined to those areas where irrigation can be practised during the dry months of winter. In some cases orange trees of four years old from planting have produced good commercial crops of fruit, but it is generally held that trees should be five years old before fruit suitable for exports can be expected. At the agricultural census taken in 1922 the number of citrus trees in Southern Rhodesia was found to be 166,738, of which 73,144 were in bearing. Exports of oranges

from the colony increased from 41,700 boxes in 1923 to 85,000 boxes in 1924.

**COTTON.**—See article following.

**FORESTRY.** Southern Rhodesia is generally well wooded, the forests in the main being of the savannah type, though there are also a number of high or close-type forests. Most of the timbers are hardwoods, but only a limited number of these have as yet been exploited commercially. Timber suitable for use in the gold mines has always been abundant. A Forest Officer is attached to the Department of Agriculture, the area of State Forest Reserves in his charge in 1923 being 13,236 acres, including the Forest Nursery at Salisbury.

**IRRIGATION.**—There are at present about 16,000 acres of land under irrigation in Southern Rhodesia, the largest scheme being that of the British South Africa Company on the Mazoe River. This comprises an arched concrete dam 100 ft. high, impounding about 18,000 acre feet, or 780 million cubic feet of water, about 25 miles of canals with flumes and pipe syphons, and other subsidiary works. The dam, when full, is capable of irrigating 6,000 acres of land, of which in 1924 about 1,000 acres were under established citrus trees. There are other schemes of smaller proportions embracing areas up to 200 or more acres of irrigable land. Irrigation has so far been confined largely to the growing of winter crops, consisting of citrus, wheat, oats, barley, lucerne, potatoes, onions, and general forage products. Greater attention is, however, being given to the utilisation of irrigation for

assistance in the growing of summer crops, such as tobacco, cotton, etc., especially in years of low and uncertain rainfall.

**LIVESTOCK.**—Unlike Australia and South America, South Africa at the time of its first occupation by white men possessed certain indigenous breeds of cattle. In Rhodesia, for instance, native cattle were grazed in large numbers when the Pioneer Column came up in 1890. Subsequently, owing to lung sickness, underpest, and war, their total was reduced to a small fraction, but when the country settled down after the rebellion of 1896 there still remained numbers of Matibele and Mashona cattle. To this day these native breeds, little (if any) altered, constitute one half of the cattle in the country, and the great bulk of the European-owned cattle is derived from them. Considerable numbers of breeding animals were introduced from Angoni-land, Nyassaland, and Northern Rhodesia, chiefly of the Barotse and humped Zebu types, also some slightly improved stock. Many nondescript grade cattle from the South, containing a good deal of Afrikaner, Shorthorn and Friesian blood, have come into Rhodesia at different times, but latterly only stud animals, mostly of registered pedigree, have been brought up from the Union of South Africa, and there has been some export of breeding stock to the Transvaal, Portuguese East Africa, and the Belgian Congo.

The total head of cattle in the colony at the last agricultural census was 2,008,906, of which 1,003,629 were European owned. During the year 1924 pure-bred cattle in-

1. VAST ACREAGE AWAITING TO BE DEVELOPED, RHODESIA.
2. MAZOE DAM.
3. AN EXAMPLE OF WHAT IS BEING ACCOMPLISHED IN THE COLONY.

creased by 8 per cent, while exported slaughter stock accounted for 50 776 head, an increase of 10,000 over the previous year.

**DAIRYING** — Dairying is becoming an important branch of farming in Mashonaland, both the Union and the Congo taking large and regular supplies of butter. There are four creameries now working in the colony, at Salisbury, Bulawayo and Gwelo. Rhodesian butter fetches about the same price on the overseas market as Australian butter, and considerable quantities have been exported during recent years. It is officially stated that the average farm in Rhodesia is large enough to run a dairy herd of from 30 to 40 cows (as distinct from the beef herds), from which with ordinary local low grade cows a return of from 6s. to 10s. per cow per month may be derived if butter or cream is sold, whilst if cheese is made the return will be higher. This is exclusive of the value of the progeny or of the skim milk or whey, which will be available for pig feeding. If better class cows are kept, or if the settler is so situated as to enable him to enter into a fresh milk contract, the returns may considerably exceed the figure quoted and may reach that of £20 per cow per annum.

**FATTENING FOR BEEF** — This branch of cattle raising is successfully carried on in Southern Rhodesia owing to the grazing being universally good and plentiful. Stock, however bred and treated, are usually rolling fat for at any rate a few months of the year, generally about March, April and May, falling off again from June or July to November, and picking up with the first rains. Very fine examples of stock which have been fattened according to the most approved methods may be seen at the annual Agricultural Show at Salisbury, which never fails to attract the best type of exhibits.

**RANCHING** — The term "ranching" in Southern Rhodesia is usually taken to mean the rearing of beef cattle under more or less extensive methods, whereas the term "farming" is applied to propositions on which various intensive forms of agriculture, dairying and stock raising form the main features of the work. It is not always an easy matter to draw a hard and fast line between ranching and farming. On smaller ranches, where conditions are favourable, a certain amount of intensive agriculture is sometimes undertaken as a means of paying expenses during the initial years and until the herd has reached such proportions as will give a return on the money expended on the land and its development. But as a rule the permanent agricultural operations on a Rhodesian ranch are limited to the cultivation of sufficient food for the stud stock and native labourers, and the provision of a certain amount of rough forage for use in unfavourable seasons. The two most notable ranches in the colony are those of the British South Africa Company at Rhodesdale and Messrs Liebig's Extract of Meat Company at Mazunga, each of which runs about 50,000 head.

**VARIOUS LIVESTOCK** — Pig breeding in Southern Rhodesia is on the increase, the total number of pigs in the colony being well over 20,000. Sheep are practically confined to the native Bechuanaland variety, but Merinos are said to do well in the Gwelo, Melssetter, and Inyanga districts. The number of poultry farmers is increasing every year, the climate being excellent for the purpose, and the egg-laying contests promoted by the Department of Agriculture have done much to foster the industry. There are not more than 4,000 horses in the colony, horse breeding being handicapped by the ravages of the South African disease known as horse-sickness.

**MAIZE.**—Maize may be called the pioneer crop of Southern Rhodesia, and is at once the staple and most important product of the country. It occupies 78 per cent. of the total area of land under cultivation by Europeans, and is the crop upon which a very large section of the farming community mainly relies for its livelihood.

Maize is not only the principal food of the native labourer and of the native in his kraal, but is the most used grain food for livestock, and to no small extent also enters into the diet of Europeans. As a summer or wet season grain or fodder crop for use on the farm it is grown in all parts of the colony, but grain production for sale is mainly concentrated in what is locally termed the maize belt, or those areas possessing heavier and more fertile soils and favoured by a generous average rainfall. The best maize districts in the colony are round Salisbury, Mazoe, and Lomagundi. In addition to being so important a grain crop, maize possesses a further advantage in the value of the green fodder for conversion into hay or silage, and of the dry leaves and stalks after reaping for grazing by cattle or sheep, facts which often render its cultivation desirable even on soils from which only a small yield of the grain can be expected. Maize grown for silage occupies 2.6 per cent.

production for sale is governed by various limiting factors. Amongst these the most important is the fact that it is bulky and weighty, but, comparatively, a low-priced article. It follows, therefore, that maize for market must usually be raised within reasonable distance—15 to 25 miles—of the railway, and that as an exportable crop its value to the grower is largely dependent upon prevailing railway rates and ocean freights. There is good reason to believe that as a general rule Rhodesian maize may be taken to be worth from 27s. 6d. to 32s. 6d. per quarter on European markets. Under conditions obtaining for railway and ocean freights, this represents a value of about 6s. 6d. to 8s. 6d. per bag on rail in Rhodesia. It is hoped, however, that before long both sea freight and railage may be further reduced, to the advantage of the producer. The bulk of the crop from the maize belt is handled and sold on behalf of its members by the Farmers' Co-operative Society, Limited, Salisbury. A Maize Growers' and Breeders' Association, the members of which comprise all the important maize growers in the colony, was formed some years ago. This body has done, and continues to do, much valuable educational work for the further promotion of the maize growing industry.

## COTTON

**C**OTTON has been grown in Southern Rhodesia for many years to a limited extent and with varying results. It is now established as a crop of commercial importance and with an enormous future, profitable returns having been obtained over a number of years of varying climatic conditions. The recent high price of cotton has stimulated production by Southern Rhodesian farmers, and a series of experiments carried out by the Department of Agriculture in the leading cotton growing districts has proved most valuable in testing the unsuitability of certain areas, the best cultural methods to be adopted, and the need for the careful selection of seed. Considering the fact that prior to 1919 practically no cotton was grown in Rhodesia, the return for 1924-25 of 62,858 acres under cultivation and the yield for the same year of nearly 7,000,000 lbs. of seed cotton are a tribute to the progress which this nascent industry has made.

**DISTRIBUTION.** It is a generally accepted fact that cotton cannot be grown with certainty as a commercial crop above an altitude of 3,800 ft. (excepting in very sheltered and isolated spots). For this reason cotton

COTTON EXHIBITS, SALISBURY SHOW

of the total area of arable land farmed by Europeans, while in the maize belt the dry fodder after the grain is reaped provides a great part of the winter grazing for tick oxen and other cattle.

**AVERAGE YIELD.**—The latest figures available show that some 233,000 acres are under maize cultivation, the average crop varying according to seasons from 5 to 6½ bags per acre, but this figure refers to the whole colony, and naturally includes the yield obtained alike by good and bad farmers on rich and poor soils. Many of the principal growers obtain an average of at least 10 bags in normal seasons, while on favourable fields crops of 20 to 30 bags per acre are not uncommon. It is not unreasonable, therefore, to anticipate that as more scientific methods are adopted, and as crop rotation and manuring become more general, both average and individual yields will increase correspondingly.

**MARKETING.**—Although maize is an essential article of diet, on every farm its

**PRODUCTION.**—The record year in the production of maize was 1922-23, when the total yield amounted to 1,505,580 bags. In 1923-24, there was a drop to 1,080,580 bags, the yield all over South Africa being much below the average. In 1924-25, owing to heavy rainfall and locust visitations, the yield was again a disappointing one, amounting to only 1,041,904 bags from 232,947 acres, an average yield per acre of 4.47 bags.

**TOBACCO.**—See article following.

**VARIOUS CROPS.**—Wheat and the other cereals are a winter crop in Rhodesia, the wheat grown being of excellent quality, barley of the malting type is in demand for the local breweries. Ground-nuts and sunflowers are becoming increasingly important, beans are grown both for human consumption and for stock feed, and sweet potatoes, cattle melons, and pumpkins are raised on most farms for stock purposes. The acreage under fodder grasses is comparatively small, teff grass being the most grown.

cannot be raised over the whole of any district in the colony. The crop requires a well distributed rainfall of from 20 to 35 inches, and this further limits its range of cultivation. Up to the present, the Hartley, Mazoe, Lomagundi, Mrewa, Mtoko, Makoni, Umtali and Victoria Districts have been found the most suitable for cultivation. The crop has also been grown successfully in parts of the Bubi, Bulawayo, Nyamandhlovu, Gwelo and Selukwe Districts. Of all these, the districts round Hartley and Gatooma have shown the most promising results. Gatooma, indeed, according to Dr. E. A. Nobbs, a former Director of Agriculture, is likely to acquire a new importance, the yield and quality of considerable acreages planted there during 1924-25 having been most encouraging. The altitude is under 4,000 feet, the rainfall is 30 inches, and the climate is fairly warm and free from frost. The Government, through the Department of Agriculture, has recently established in the immediate vicinity of

#### AGRICULTURE IN RHODESIA.

4. Salisbury Show. Prize Winners.

Gatooma an experimental station for the culture particularly of cotton, where the trial and acclimatisation of varieties from all parts of the world are being conducted, and also the improvement of varieties by selection and breeding and experiments in cultural methods and the use of fertilisers. This undertaking should give a special fillip to cotton cultivation in the Hartley district, but is also intended to serve the whole country.

**GINNERY.**—The continued success of cotton growing in 1924 led to the erection of a ginnery at Salisbury capable of dealing with much more than the output yet in sight. This ginnery, which is the private enterprise of Major Cooper, D.S.O., consists of spacious brick buildings conveniently situated on the edge of the town, and has its own railway siding. The electric current is supplied by the municipal power plant and drives all the machinery, consisting of the delinting plant and the special 50-saw gin used for ginning selected seed, press conveyors and fans and suction cleaners. The ginning plant itself consists of a battery of three eighty 12-inch saw gins made by the Continental Company of Birmingham, U.S.A. After ginning, the lint, thoroughly cleaned, is forced by compressed air on to the condenser to which the lint adheres, whilst the dust and small particles are blown through the gauze and out through the uptakes at each end. The lint is pressed by the hydraulic press to a density of 16 to 18 lbs. per cubic foot, according to the type of cotton. After ginning the seed is taken by a system of conveyors and elevators to the delinting room where the seed is finally cleaned and bagged. The ginnery cost about £10,000, and has recently commenced operations. It is calculated that from the moment of delivery by the farmer of his cotton at the ginnery to that of its sale in England the total costs work out at 5d. per lb., leaving the balance of the price obtained to the original producer.

**INSECT PESTS, ETC.**—There are a number of plants in the Rhodesian veld sufficiently nearly related in a botanical sense to cotton to ensure that as a crop it will not be free from insect pests. Most fortunately neither the pink bollworm nor the boll weevil has shown itself yet, but the insect pests against which due precautions must be taken comprise cutworms and leaf-eating caterpillars, aphids, cotton stainers and other cotton bugs, the American bollworm, the Sudan bollworm, and the spiny bollworm. Stringent measures have been taken to safeguard the country from these evils, which, so far, have not done any serious damage. The only diseases at present noted are angular leaf spot, anthracnose, and boll rot, and these are serious only in seasons of abnormal rainfall.

**LINT (QUALITY OF).**—The quality of lint produced in Southern Rhodesia is indicated by the report of the British Cotton Growing Association on samples of lint forwarded for examination as follows:

No. 1—Middling fair in grade, rather creamy in colour; staple  $1\frac{1}{2}$  inch, little irregular, only fairly strong. Value 26 50d (750 points on).

No. 2—Middling fair in grade, very good colour, staple  $1\frac{1}{2}$  inch, but mixed with short. Value 25 50d (650 points on).

No. 3—Fully good middling in grade, stained, staple about 1 inch, soft and weak. Value 15,00d (400 points off). Based on September middling, 19 00d.

**PRODUCTION.**—The actual acreage planted with cotton in 1925 was 62,858, this figure being a very large one when compared with the 3,000 acres under cultivation in 1923. The type of seed which has so far given the best results is that designated

American Upland, and a variety known as Improved Bancroft is also generally grown. As much as 1,500 lb of lint have been obtained per acre, and other yields of 1,300 lb and 1,200 lb of seed cotton per acre have also been produced. The average yield is, of course, considerably below these amounts, one of 500 lb of seed cotton returning a handsome profit. The yield for the season 1924-25 was 6,958,223 lb of seed cotton, equivalent to 4,100 bales (each of 500 lbs) of lint.

**PROSPECTS.** - As will have been gathered from the facts and figures recorded previously the prospects of the cotton industry of Southern Rhodesia are distinctly encouraging. The area under cultivation is likely before long to exceed 100,000 acres, and there is hardly any limit to be placed to its expansion. For some time to come at any rate, the European farmers are likely to be the chief producers, native labour being largely employed, since it is fairly plentiful and still cheap. Possibly, when they have seen the success attained by the white men and have learned from them how to raise and handle the crop the natives may to some extent themselves take up cotton, but, judging by experience in other directions, this is not likely to be done very largely or immediately. It is not considered that the growth of the cotton industry will seriously affect the native labour question, or that the converse need be apprehended. Cotton growing is likely to be developed by able farmers with their ordinary labour, except at harvest time, when possibly natives—men, women and children living on the farms or reserves—may find profitable piece-work for a limited time working in large parties, which is always a congenial form of occupation.

Cotton will probably prove a valuable addition to the marketable crops of the colony, and instead of replacing these it is likely to lead, as a rotation crop, to an expansion of the area of cultivation of all crops. A good local outlet for the crushed seed or the cake after the extraction of the oil can be assured for cattle fattening purposes. The oil will no doubt be utilised locally in place of present imports. As a rotation for maize, cotton will occupy a most important place in farm routine. It is likely to afford a fair and safe return for a small outlay, and should prove a most welcome addition to the sources of income of many individual farmers. Ginning, in normal seasons, commences between May 15 and June 1. It should, therefore, be possible for a great part of the Southern Rhodesian crop to reach the English market some months earlier than the new American crop, and so benefit by the high prices generally ruling in August and September. As there is little prospect of a local spinning industry, all the lint ginned should be available for export.

## TOBACCO

**T**OBACCO growing has been an established branch of farming in Southern Rhodesia for many years. The natural conditions of the country are well suited to the production of this important crop, and the superior quality of Rhodesian leaf is known to smokers in South Africa and other parts of the world. Both Virginia and Turkish tobaccos are grown, the former to by far the greater extent. The original seed of the Virginia tobacco was probably introduced by the early Portuguese explorers and traders from the East Coast, but its cultivation has been greatly improved by successive importations of seed from America and by experimental work fostered by the Government Department of Agriculture. The growth of Turkish tobacco was initiated

4. BARN FOR FLUE-CURING VIRGINIA TOBACCO.

in 1907 by the selection of fourteen Greek growers for service in the colony. Their instruction in Turkish tobacco growing has been invaluable, and the yearly crop, which averages from 400,000 to 500,000 lb., always commands a good price.

**CULTIVATION.**—Both the soil and the climate of Southern Rhodesia are particularly favourable to tobacco cultivation, two essentials to which are light sandy soil and plenty of sunshine. The rainy season in Southern Rhodesia usually begins in the early part of November and ends in April. The first frost does not usually occur before the end of May. Virginia tobacco is transplanted from the seed beds in November and December, so that the plants mature before the soil becomes dry and the nights grow cool. Turkish tobacco, being sun-cured, is transplanted during January and February, so that the rainfall practically ceases before the harvesting is commenced. The rainfall is usually lighter and ends earlier in Matabeleland or the western portion of the colony (where the best Turkish tobacco is grown) than in the Eastern section. Tobacco requires intensive cultivation and careful handling from the time the crop is transplanted until the leaf is ready for market. It should, therefore, be grown on a limited scale in order that tobacco of good quality may be produced, as inferior leaf does not realise prices which are remunerative to the grower. When grown on an intensive scale and with suitable climatic conditions, a Rhodesian crop produces high returns, as much as £75 per acre gross having been obtained. On the other hand, when grown extensively and carelessly handled, the crop is more often produced at a loss. It is a crop which can be grown by settlers with limited capital, and will produce returns within twelve months, which are often necessary to provide funds for further development.

**CURING.** Virginia tobacco is cured in specially constructed barns, equipped with furnaces and flues to provide the necessary artificial heat. The barns are built either of brick or pisé-de-terre, and if the farmer has a limited knowledge of building the erection of suitable curing accommodation does not entail great expense. For the proper handling of tobacco after the leaf is cured, a bulking shed and grading room are necessary. Turkish tobacco being sun-cured, no barns are re-

quired, but a properly constructed wilting room, bulking shed and grading room are necessary. It is officially stated that the cost to settlers of these buildings should not exceed £400 in the case of Virginia and £300 in the case of Turkish tobacco.

**DISTRIBUTION.**—The principal tobacco-growing districts are Marandellas, Mazoe, Hartley, Salisbury, Lomagundi, Mrewa, Makoni, and Bulawayo, but tobacco of excellent quality has been produced in the Nyamandhlovu, Bubi, Bulahia-Mangwe, Gwelo, Umtali, Chibmanzi, Gutu and Victoria districts. As Turkish tobacco requires less moisture and more sunshine than Virginia, Matabeleland is regarded as being most suitable for the former, while Virginia tobacco is more extensively grown in Mashonaland.

**GOVERNMENT ASSISTANCE.**—The Government of Southern Rhodesia is alive to the importance and possibilities of the tobacco industry. A Tobacco Experimental Farm has been established near Salisbury, where experiments in all branches of tobacco growing will be carried out for the benefit of tobacco growers. Provision is also being made for the training of Rhodesian youths in tobacco culture, and additional tobacco experts are being obtained to strengthen the technical and advisory staff of the Department of Agriculture.

**MARKETING.** The marketing of tobacco in the colony is well organised under the Rhodesia Tobacco Warehouse and Export Company Limited. The shareholding in this company is confined to tobacco growers, and it is operated on purely co-operative lines. The company already controls more than 85 per cent of all the Virginia tobacco grown in Southern Rhodesia, and maintains a warehouse in Salisbury, where tobacco is received, graded, conditioned, packed, classified and marketed. This organisation is of the utmost importance to the tobacco industry and of great benefit to its shareholders. It is confidently expected that every tobacco grower in the colony will eventually become a member.

Until recently the South African demand for both the Virginia and Turkish types of tobacco had been so great that the local market was able to absorb the increasing output from Rhodesia, but commercial shipments of leaf have been sent during the last

two years to England, and readily sold at prices considerably higher than those obtaining locally.

**PREFERENTIAL TREATMENT.**—The grant of a preference of one-sixth of the customs duty on Empire grown tobacco did much to stimulate the production of tobacco in British possessions. Since the preference has been increased from one-sixth to one-fourth by the Home Government, not only has production been further accelerated, but the demand in Great Britain for colonial tobacco is likely to be greatly strengthened.

Of all the colonies, none should obtain greater benefit from the preference than Southern Rhodesia. Tobacco, both Virginia and Turkish, reaches its highest stage of perfection when raised in sandy soils, and fully 75 per cent of the soil of the colony is especially suitable for growing tobacco of the highest quality in addition to which the climate over a great part of the territory is such that no irrigation is necessary. The country has a good labour supply, and the types of tobacco being grown are those required by British manufacturers and consumers. With the preference granted by the Imperial Government, tobacco growers in Southern Rhodesia can expand production with full confidence that the English market will absorb, at remunerative prices, all the tobacco which they produce.

**PRODUCTION.** The production of Southern Rhodesian tobacco is as yet small in comparison with the world's output, but a glance at the table which follows will be enough to show the substantial progress that has been made. In 1917-18, for instance, the output was only 620,171 lb., as compared with 3,878,640 lb. in 1923-24.

YEAR	AMOUNT PRODUCE POUNDS
1914-15	426,423
1915-16	637,261
1916-17	910,684
1917-18	620,171
1918-19	1,467,612
1919-20	2,947,627
1920-21	3,746,982
1921-22	3,182,259
1922-23	2,810,781
1923-24	3,878,640
1924-25	2,405,904

The decrease in production in 1924-25 was due to unfavourable climatic conditions.

## MINES AND MINERALS

**F**ROM a very early period Southern Rhodesia, though the youngest of the self-governing States of the British Empire, has been a centre of mining operations, legend even associating it with the region from which King Solomon derived his wealth. Scattered throughout the colony are the remains of ancient workings for gold, copper, and iron, which attest the activity of primitive miners; the first white settlements in the country were due to the evidences of mineral riches which explorers came across, and the British occupation and development of the colony have been to a great extent conditioned by the industrial possibilities latent in its mineral wealth. Gold is, of course, by far the most valuable metal mined; the production of asbestos and chrome ore are already considerable; enormous deposits of iron ore are known to exist, and there is quite possibly a great future for the coal mining industry. At present, owing to the prevalence of ancient workings, to the re-opening of which the white settlers have principally confined themselves, prospecting has not been carried out at all exhaustively. More modern methods are now being pursued, and, with the discovery almost every year of

new and valuable minerals, there is every reason to forecast a most favourable future for the industry.

**ANCIENT WORKINGS.**—Any mine excavated before the British occupation of Rhodesia is known as an ancient working, the extraordinary number of prehistoric mines occurring in all the gold belts of the territory being one of the outstanding features of the colony. The gold ores were mined with great dexterity down to water level, at depths sometimes of 140 feet, and there are very few of the mines being operated to-day which are not located on ancient workings. It is impossible to estimate the quantity of gold or copper which had been produced before 1890, but as the outcrops were generally rich the early workers must have extracted a considerable amount.

**CHAMBERS OF MINES.**—The Rhodesia Chamber of Mines was formed on July 26, 1895, at Bulawayo, and was incorporated by Ordinance promulgated on November 22, 1901. The Chamber was formed for the purpose of promoting, encouraging, and protecting the mining industry of Southern Rhodesia. It is governed by an Executive

Committee consisting of 15 members, including a President and two Vice-Presidents, seven members of which are elected every year at the annual meeting. There are executive meetings monthly or oftener as required, and a general meeting of all members of the Chamber is held each year. Monthly and annual reports are issued regularly, besides other publications as required. The Salisbury Chamber of Mines, which in 1925 had a membership of 16, was incorporated later.

**LABOUR.**—The average totals of persons engaged in mining during 1924 were Europeans, 1,570, and Natives, 40,048, large numbers of the latter being recruited from Nyassaland and Northern Rhodesia, while about 10 per cent came from Portuguese East Africa. Mine owners are obliged to render monthly returns of all natives employed, and if the average number of native labourers employed or under contract of employment is 25 or over, labour fees at 1s. per head per month must be paid.

**MINING RIGHTS.**—From a mining point of view the conditions for acquiring mineral rights in Southern Rhodesia are simple and satisfactory, the whole of the colony, with the

exception of certain small reservations, being open to prospecting and the pegging of rights. Unless the consent of the landowner is obtained, no claims may be pegged upon cultivated land or within 500 yards of a farm homestead, or within a radius of 100 yards of any other building or permanent improvement of a value of not less than £100. With the above exceptions the whole of the 152,000 square miles of the colony may be said to be open to unrestricted prospecting and pegging.

A prospecting licence, which may be obtained at the office of any mining commissioner on payment of £1, gives the holder the right to prospect and to locate (a) a block of 10 gold reef claims, (b) a block of 30 base mineral reef claims, or (c) an alluvial gold claim. The holder of a prospecting licence may also prospect for and peg coal and mineral oil locations. The fee for registration of a block of reef claims is 5s. for gold and 20s. for base minerals.

**ROYALTIES.** Royalty on gold won is payable on a sliding scale, no royalty being demanded if the value does not exceed £200. Above that amount the royalty ranges from 2½ per cent on gold won over £200 and not exceeding £3,000 to 7½ per cent over £3,000 when the value of ore exceeds one ounce per ton. The royalty payable on the value of base minerals won is 2 per cent on the lower priced minerals and 3 per cent on the higher.

**SMALL WORKERS.** Under this heading may be grouped the individual producers or tributors and unregistered partnership syndicates. The small worker, as such, first came into existence about May, 1903, as a result of the terms offered by the Directors of the British South African Company, whereby working for profit with small batteries was permitted without going to flotation. By March 30, 1904 there were about 20 "small workers" in existence, while a year later the number had reached 72, and in the report of the Secretary for Mines for the year ended March 31, 1906, the total was recorded as having increased to 164. Since that time there has been a steady increase with occasional fluctuations, and at the end of 1924 the number was well over 400.

**TOTAL MINERAL OUTPUT.** The grand total value of output of all minerals won since the commencement of modern mining in Southern Rhodesia had reached the figure of £74,138,426 at the end of 1924. Of this large sum, gold was the principal metal mined, accounting for £60,461,804, whilst the next metals or minerals in importance produced were Asbestos, £3,995,165, chrome ore, £3,281,465, coal, £2,837,361, and copper, £2,652,547. Other metals and minerals won in varying and lesser values were silver, arsenic, mica, lead, tungsten ores, tin, antimony, corundum, and barytes, whilst the output of diamonds and other precious stones amounted to the sum of £79,533. The following table gives particulars of the mineral output of the colony for the year 1924—

	OUTPUT	VALUE
		£
Gold (oz.) ..	627,729	2,939,562
Silver (oz.) ..	166,472	22,488
Diamonds (carats) ..	596	3,322
	TONS	
Copper ..	2,827	165,480
Coal ..	652,049	265,902
Chrome ..	172,724	432,482
Arsenic ..	588	20,780
Asbestos ..	26,141	603,423
Mica ..	150	21,674
Barytes ..	71	89
Corundum ..	42	376
Tin ..	10	2,331
Tungstic ores ..	22	500
Total values ..		£4,478,499

Production in 1924 exceeded that of 1923 by £177,853, this excess being accounted for as follows: Increase in value of gold won, £30,403, of other metals and minerals, £147,450.

In 1925 the total production was valued at £4,134,260, a decrease on the 1924 figure of £244,230. Owing to the decline in premium values during the year, the gold output fell in value by over £400,000, being estimated at £2,539,542.

### MINERALS

**ARSENIC.** A great stimulus to the Rhodesian mineral industry was given by the War prices realised for 'white arsenic' the first plant being erected in 1918 at the Bessie Mine in the Umtali district. Mispickel, the commonest source of arsenic, is abundant in

marketed at a profit, the colony's output will very probably outstrip that of Canada.

**BARYTES.** This mineral, known also as heavy spar, has been produced on a small scale since the War, the known deposits occurring chiefly at Gado Siding, on the main line of railway between Gwelo and the Globe and Phoenix Gold Mine. Other deposits are found to the south of Bulawayo. The output in 1924 (71 tons) was valued at £80, as against £70 in 1923.

**COAL.** Rhodesia is fortunate in the possession of extensive coalfields, but the returns of output, which have hitherto been only small, afford no real indication of their importance. The principal coalfields, that is to say where seams of good quality coal have been definitely proved to occur, are Wankie

THE BECHUANALAND EXPLORATION COMPANY LTD., Bulawayo.  
Working Ore down into Trucks after Blasting (Rhodesia Broken Hill Development Co. Ltd.).  
(See letterpress and illustration, page 338.)

several of the principal mining areas, and another important plant was erected later at the Champion Mine in the Gwanda district. The production of arsenic in 1924 was 588 tons, valued at £20,780, or considerably less than in 1923, when the corresponding figures were 853 and £33,605.

**ASBESTOS.** Asbestos, after gold the most profitable of Rhodesian minerals, was first worked in a small way in 1908, the output being only 55 tons. The quality of Rhodesian chrysotile asbestos is unsurpassed, and, taking all classes of fibre together, Southern Rhodesia is now the second producing country in the world, the return for 1924 being 26,141 tons, valued at £603,423. When railway facilities are afforded to the two chief producing districts and the poorer classes of fibre can be

and Sengwe in the Zambesi basin, and the Tuli and lower Sabi areas in the basins of the Limpopo and Sabi Rivers respectively. Of these, only Wankie is at present producing. It is the one field served by a railway, and is, moreover, capable of supplying all requirements, even should they largely increase. The Tuli deposits are also important, as they lie on the direct line of the projected route connecting the railway systems of the Transvaal and Rhodesia. The Wankie coal has been found to be excellent for steam raising purposes, and it also furnishes a coke of good quality. In 1923 the Wankie Colliery produced 617,207 tons of coal, valued at £252,011, which was increased in 1924 to 652,049 tons, valued at £265,902. In 1925 sales of coal and coke amounted to 402,586 and 153,234

tons respectively, the total value being £424,424.

**CHROMITE.**—After gold and asbestos, chrome ranks as Rhodesia's most valuable mineral. Many large deposits are known to exist in different districts, but the mineral is mainly worked to-day at a single property situated just outside Selukwe township, which has been in operation since 1905. It is also produced in the Lomagundi district. The world's consumption in pre-war times was estimated at a quarter of a million tons per annum, so that the production in 1924 of 172,721 tons (an increase over that of the previous year of 76,049 tons) indicates the important position Southern Rhodesia occupies as a producer. The estimated value of the 1924 output was £132,482 compared with £241,582 in 1923. The chromite mined at Selukwe and in the Lomagundi area is of fairly high grade. At present the difficulty of transport and the cost of same are great obstacles to further development.

**COPPER.** Extensive copper belts exist in Southern Rhodesia, and attention is once more being paid to them. The Falcon Mine, at Umtuma, is at present the only large producer, and it does a considerable amount of customs smelting, which has enabled small workers and others to develop their properties. In 1924 the total output of copper was 2,827 tons, valued at £105,480, or rather less than in 1923.

**CORUNDUM.** This mineral has only been developed since 1923, the output of 42 tons in 1924 coming entirely from the Rusape district. It is known to occur in some quantity at several places, and its future development is anticipated.

**DIAMONDS, ETC.** The precious stones found in Southern Rhodesia comprise diamonds, rubies, sapphires, chrysoberyls, aquamarines, topazes, and turquoise, diamonds forming by far the most important product. They are derived almost entirely from the alluvial deposits of the Somabula Forest, near Gwelo, where the gravels are of great geological antiquity. Diamonds have also been found in situ at two points between the Bemberi and Inkwekweni Rivers, but have not yet proved payable. The variety of topaz found in the Somabula gravels is either colourless or a beautiful pale blue. In 1924 the output of diamonds and other gems was valued at £3,322.

**GOLD.**—Gold is the chief mineral product of Southern Rhodesia, and its output is worth more than that of all the other minerals combined. Contrary to the conditions prevailing in the Transvaal, the occurrence of gold is widely distributed over the territory, most of the mines, however, being on the high veld and at no great distance from the main line of railway between Bulawayo and Umtali. The two largest gold mines at present working are the Cam and Motor and the Shamva, the former being classed as a high-grade mine, whilst the latter is a huge low-grade proposition. The gold values of the Cam and Motor vary from medium to very rich ore, the medium being from 28s. to 50s. per ton, the high grade from 50s. to 100s., and the very rich from 100s. upwards. The Shamva Mine is the largest gold mine in Southern Rhodesia, but its average grade of ore is only about 14s. per ton. These two mines produced in 1924 £925,949 worth of gold out of the total of £1,987,517 which was the value of the output of the 10 mines working in that year.

**COSTS OF WORKING.**—These range from 9s. per ton milled in the case of the largest low-grade mine to 24s. 8d., 37s. 5d., and 52s. per ton in the case of rich-grade mines.

**PREMIUM ON GOLD.**—At the end of 1920 the gold premium distributed was 71 13s. 5d., the highest recorded. Since that date it had, with occasional fluctuations, gradually declined until during the first quarter of 1925 it stood at no more than 2s. 1d. and with the return of gold to par value afterwards disappeared altogether. The loss of this premium will hit the mining industry seriously, and necessitates the strictest economy in working so as to reduce costs to a minimum to make up for the loss in revenue from premium.

**PRODUCTION.**—As shown before, since the commencement of mining under the aegis of the British S.A. Company to the end of 1924 no less than 160,491,804 worth of gold has been yielded by Southern Rhodesian mines out of £71,138,420 for all minerals. In 1924 the output was 627,720 fine oz., valued at £2,939,562, as against 917,491 oz., valued at £2,909,159 in 1923. Compared with the previous year, 1924 showed an increase of £30,403, but a decrease of £171,906 over the figures for 1922. As an indication of the increased gold mining activity during 1924, it may be stated, according to the Secretary of the Rhodesian Chamber of Mines, that the number of claims current at the end of that year was 45,928, as compared with 42,912 in the previous year, showing an increase of 3,016. The above figure of 45,928 is equivalent to about 92,000 acres of land covered by gold locations, and it seems reasonable to expect that in this very large area pegged for gold there are undeveloped mines which will become producers in the near future.

**IRON.** Hitherto only some few thousands of tons of ironstone have been quarried for use as a flux in copper smelting, there being at present no local market to support an iron industry. The supplies of iron ore, however, are said to be practically unlimited, the geological formation known as "banded ironstone," similar to the rich iron-bearing strata of the Lake Superior region of the United States, being the most important future source of supply.

**MICA.**—Prominent among the lesser mineral industries of the colony is mica, which is at present confined to the Lomagundi district. The production in 1924 was 150 tons, valued at £21,671 showing an increase in tonnage of 50 tons and in value of £3,022. Three of the most important factors in placing mica on the world's markets are proper grading, cutting, and packing, and as it was found that these were not receiving proper attention, the Government established towards the end of 1924 a mica grade at Miami, and has also arranged to grant cash advances on graded mica exported through recognised agencies, which should prove of considerable benefit to at least the smaller producers.

**PLATINUM.**—The probability of the discovery of platinum in Southern Rhodesia has always been recognised by local geologists who, beginning with Mr. F. P. Mennell in 1907, have urged the prospecting of the "Great Dyke" which runs through the country. This dyke forming the Doro, Selandi Mhlaba, and Umtukwe ranges, is composed of norite, pyroxenite, diorite and serpentine.

Traces of platinum have been found in the chromite mined at Selukwe. In 1918 the late A. E. V. Zealley described in Short Report No. 3 of the Southern Rhodesia Geological Survey a reef found near Indiva, Gwelo, which contained traces of platinum.

The recent sensational discoveries in the Union of South Africa have stimulated interest in the prospecting of the Great Dyke. Formerly attention was directed to the serpentine associated with the chrome deposits. Since

the discovery of platinum in norite in the Lydenburg district, the norite horizons in the Great Dyke have been systematically examined. Rocks identical with the platinum bearing norite of Lydenburg have been recorded from Makwiro, Rhodesdale, Selukwe and Belingwe districts, and low values of platinum, about 2 cwts. per ton, have been found. Development work is proceeding and it is hoped that payable mines will result.

**SILVER.**—This metal is entirely a by-product of the gold-mining industry, though it occurs in exceptional amounts in conjunction with lead ores at certain mines in the Umtali District. The output in 1924 was 166,172 oz., valued at £22,448.

**TIN.**—Tin occurs in small quantities near the Umtali River to the east of Salisbury and in the Victoria and Abercorn Districts, but the yield has been negligible. Ten tons, valued at £2,331, were produced from one property in 1924.

**VARIOUS.** In addition to the metals and minerals mentioned above many others, some of great economic importance, are known to exist in Southern Rhodesia. Tungsten ore (scheelite and wolfram) occurs in many places and was developed to some extent during the War, while only the fluctuations in market prices have operated against the working of antimony. The rare mineral tantalite has been found near Fort Victoria and molybdenum is known to occur in almost every district. Large supplies of talc are available to meet any demand which may arise.

#### THE WANKIE COLLIERY COMPANY, LTD.

**Inception.** The Wankie colliery, the largest and most important of the fields worked in Rhodesia, was discovered by Mr. A. Giese, a trader, in 1894, when he pegged the original location on an outcrop of shales lying between Bulawayo and the Victoria Falls. In 1895 he returned to peg a concession of 100 square miles which had been obtained by the Mashonaland Agency Ltd. Between that date and 1900 prospecting, surveying and inspecting were carried out by experts and by January 1901 some twenty shallow shafts near the outcrop of the coal had been put down. In the same year the rights of the Mashonaland Agency Ltd. were assigned to the Wankie (Rhodesia) Coal, Railway and Exploration Co. Ltd., and the railway to the property was commenced. At length work was begun on the main drift, which reached the coal in January 1902. Development thereafter actively proceeded, and the colliery was open for business when the railway reached Wankie. In 1914 The Wankie Colliery Company Ltd. was registered to control the increasingly prosperous undertaking, the present company (incorporated on October 26, 1923) being a reconstruction of that concern under the same name.

**Capital.** The authorised capital of the company is £900,000 in 1,800,000 shares of 10s. each, of which 1,762,002 have been issued and are fully paid.

**Accounts.**—Operations for the period October 26, 1923–August 31, 1924, after allowing for depreciation, showed a profit of £138,472.

**Rights.**—The company possesses the sole right under the Rhodesian mining law to mine over an area of 400 square miles (known to contain coal throughout), and has been granted exclusive prospecting rights until 1953 over a further area of 880 square miles. It owns more than 26 square miles of surface rights under farm titles and water rights.

THE WANKIE COLLIERY COMPANY, LTD.

1. General View of Colliery.
2. Coking Plant.
3. Entrance to Incline Shafts, showing Shops and Oven Station.

**Mine in Working.** In the mine now being worked, which is situated on the outcrop, the workings of which may be said to prove an area of 2 square miles, the average thickness of coal is 9 feet, but three prospecting shafts, sunk 6, 14 and 23 miles distant, proved coal of the thickness of 46 feet, 17 feet and 16 feet respectively. The workings are reached by a main incline shaft 600 feet long forming the main outlet, and two auxiliary shafts sunk parallel thereto. At the bottom of the incline shaft, where it intersects the coal, a large space known as the Bell Station has been cut, from which diverge three main haulage ways. The centre, on main dip, haulage way is a continuation of the incline shaft, and on August 31, 1923, reached a point 550 feet from the Bell Station. The seam, which shows remarkable uniformity of width and value, has a vertical depth, at the lowest part of the workings, of about 175 feet.

**Ventilation.** Ventilation of the mine is accomplished by an electrically driven "Sirocco" fan of a capacity of 300,000 cubic feet of air per minute, with a 10 feet "Schiele" exhaust fan, similarly operated, as a standby. The coal seam is singularly free from gas.

**Coke.** Coke making, started in 1912 with a battery of 49 beehive ovens having a total capacity of 3,000 tons of coke per month, has reached such importance in supplying the constantly increasing demand for this product as to employ to-day 140 retort ovens furnishing a monthly output of 12,500 tons.

**Bricks.** From a deposit of fireclay outcropping about 5 miles north of Wankie the

company manufactures firebricks of renowned quality.

**Directorate.**—Mr Edmund Davis (chairman and managing director), Sir Henry Birchenough, Bt, KCMG, Messrs William Rhodes, D N Shaw and H L Stokes Secretary, Mr H W Lampard.

**Registered Office.**—2, London Wall Buildings, London Wall, E C 2.

**Rhodesian Office.** Wankie, Rhodesia (general manager, Mr A R Thomson, M L A) Cables "Shafting," Wankie.

**Bankers.** National Provincial Bank, Ltd (See illustration, page 337).

### THE BECHUANALAND EXPLORATION COMPANY, LTD.

**Inception.** Founded for the purpose of obtaining land and mining concessions, this company was incorporated in London on April 25, 1888.

**Capital.** The capital of the company is £350,000, divided into 700,000 shares of 50s each, of which 601,773 are issued, leaving 98,227 in reserve. The total value of the company's shareholding in other concerns taken at or under cost prices, was £144,025 3s 9d on March 31, 1925.

**Shareholding.** The company owns shares in a large number of West African, Transvaal, and Rhodesian Trust and other companies operating in finance, goldmining, base metal, commercial and industrial interests.

**Mining Concessions.** The principal mining enterprises controlled are the Rhodesia Broken Hill Development Company Ltd.,

the Bwana M'Kubwa Copper Mining Company Ltd., Rhodesia Chrome Mines Ltd., and the Rhodesian and General Asbestos Corporation Ltd.

**Land Holdings.** The land owned by the company comprises some 246,022 acres in Southern Rhodesia, 240,443 acres in Bechuanaland Protectorate, and in Northern Rhodesia 30,500 acres (25,506 acres carrying surface and mineral rights, and 14,000 acres carrying surface rights) in addition to 12,800 acres carrying mineral rights alone. Twelve stands in Bulawayo and twelve town sites at Broken Hill are also the property of the company. Together with the Bechuanaland Protectorate holdings were acquired territorial and other rights adjacent to the Cape-Bulawayo main railway line.

**Cattle.**—The live stock in charge of tenant farmers under the land settlement scheme amounted to nearly 6,000 head on March 31, 1925.

**Directorate.** Messrs Edmund Davis (chairman), Cromwell Hockley and Alexander Stewart M L C.

**South African Agents.** Adolph Mosenthal & Co., Port Elizabeth.

**Bankers.** Coutts & Co., National Provincial Bank, Ltd., and National Bank of South Africa, Ltd.

**Auditor.** Sir William Plender, Bt, G B F, of Deloitte, Plender, Griffiths & Co.

**Registered Offices.** 19, St Swithin's Lane, London, E C 4 (assistant secretary, A H Watts).

2. Steam Shovel for Mining Ore, Bwana M'Kubwa Copper Mining Co. Ltd.

(See also illustration, page 335.)

# PORTUGUESE EAST AFRICA

## PROVINCE OF MOZAMBIQUE

### PHYSICAL GEOGRAPHY

THE Province of Mozambique more frequently called Portuguese East Africa to avoid confusion with the smaller units known as the Mozambique Company's Territory and the island, town and district of Mozambique—stretches coastwise from the north of Natal in the south to the southern border of Langanyika Territory, a length of nearly 1,500 miles. The total area is approximately 300,000 square miles. Of this extent 60,000 square miles and 80,000 square miles represent the areas of the Mozambique Company and the Nyassa Company respectively.

The physical features of Portuguese East Africa vary from low-lying fertile coastal plains with an exuberant tropical vegetation to mountains and plateau regions attaining an extreme elevation of 9,000 ft. North of the Zambezi River the low coastal plain is generally narrow, and behind it lies an extensive plateau from 1,500 to 3,000 ft. above sea level, intersected with numerous river valleys and broken here and there by isolated mountains or short ranges. This is the Namuli highland area, which, when connected by railway with the coast, will probably prove a valuable agricultural district. South of the Zambezi, the Manica and Gorongosa areas are noted for their fertility. The Province is exceptionally well watered throughout, many of the larger rivers such as the Zambezi, the Limpopo, the Umbeluzi, the Quelimane, the Pungue, the Buzi, the Muanango, and the Kwakwa, being also valuable arteries of commerce.

**CLIMATE.** The climate is unhealthy on the coast and along the banks of the Zambezi, where malaria is endemic. With moderate care, however, Europeans are able to enjoy good health. On the uplands and the plateaux the climate is temperate and healthy. A good deal of useful work has been done of late years to make Lourenço Marques a popular resort, and here the predominance of sea breezes results in the climate being often very pleasant.

**FAUNA AND FLORA.** Both the fauna and flora of Portuguese East Africa are largely identical with those of the northern part of Natal, Swaziland, Southern Rhodesia, and the Transvaal, but Mozambique differs from these adjoining territories in having a far greater area of forest land, much of which contains valuable timber trees, such as African mahogany, bean, stinkwood, blackwood, and many others. A notable feature of the coast is the large extent of mangrove trees. Big game exist in many parts of the province, being most plentiful in the Inhambane district, where elephants, hippopotami, giraffes, zebras, ostriches and

antelopes are met with, the Quelimane and Tete districts, and the Mozambique and Nyassa Companies' Territories. Large numbers of excellent fish are found in the waters off the coast.

### HISTORY

**B**EFORE the discovery of the mouth of the Quelimane River by the Portuguese navigator Vasco da Gama in 1497, the territory now known as Mozambique, or Portuguese East Africa, was uninhabited, so far as the coast was concerned by Arabs. By the year 1505 Portuguese influence was established at Sofala and, later in the 16th century, at Sena and Tete on the Zambezi. Successive attempts to obtain full possession of the Zambezi valley (reputed to be full of gold) failed, and for 150 years or more Portugal was unable to make any effective use of her East African possessions. In the early years of the 18th century the Arabs wrested from their former conquerors the country north of Cape Delgado, for some time the Dutch, French and British had been menacing their trade possessions in the south, and the continual state of warfare among the tribes of the interior greatly reduced the production of gold, besides causing trade to decline steadily.

**1772-1850: LACERDA'S ATTEMPTS AT REFORM.** In 1772 Francisco José Maria de Lacerda e Almeida, a man of high attainments who was made governor of the colony at his own request, endeavoured to reform the administration. Lacerda is chiefly remembered for his journey to the heart of Central Africa, where he died in 1798. He had conceived the idea of establishing a chain of Portuguese forts across the Continent from Mozambique to Angola, and his statesmanlike prescience was shown by his prediction that the seizure of Capetown by the British would lead to the extension of British rule over Central Africa, thus isolating the Portuguese possessions on the east and west coasts. After Lacerda's death a state of apathy and decay was again manifest throughout Portuguese East Africa, and during the greater part of the 19th century the country south of the Zambezi was devastated by hordes of savages of Zulu origin.

**1850-1900: ESTABLISHMENT OF THE PORTUGUESE COLONY—THE CHARTERED COMPANIES.**—The discoveries of David Livingstone in the Zambezi Basin in the period 1850-65 attracted the attention of the British to that region, and led to the establishment of British settlements at the southern end of Lake Nyassa and in the Shire Highlands. These events aroused anxiety in Lisbon, which was increased when the British obtained a preponderating influence in Matabele, Mashona, and Manica lands. With sudden energy the Portuguese engaged in the "scramble for Africa," and though

the result may have been disappointing to the patriotic feelings of the people they secured from their powerful neighbours Great Britain and Germany much better terms than might have been anticipated, having regard to the extremely limited area over which they exercised any sort of jurisdiction. Before this, Portugal had obtained in 1875, as the result of arbitration, complete possession of the fine harbour of Delagoa Bay, the southern half of which had been claimed by Great Britain in virtue of acts of annexation in 1823 and later years.

The pressure of these political events, and the commercial activity of her rivals induced Portugal to take steps to develop the agricultural and mineral resources of the territory secured to her by international agreements. Charters conveying sovereign powers were granted to the Mozambique Company in 1891 and to the Nyassa Company in 1893. Both these companies, as well as the Zambezi Company (which lacks a charter), undertook to open up the territories committed to their care. In all of them British capital is heavily engaged.

### 1900-1925: THE TRANSVAAL MOZAMBIQUE CONVENTION THE GREAT BRITAIN PROGRESS

The total decay of Sofala, the removal of the seat of government from Mozambique to Lourenço Marques, the rise of the last named port and of Beira (both largely dependent on the transit trade with British possessions), all served to mark the changed condition of affairs. An agreement concluded in 1909 with the Transvaal gave Delagoa Bay 50 to 55 per cent. of the import trade with that Province, the Portuguese agreeing further to facilitate the recruitment of natives in their Province for work on the Rand Mines. In 1914 Mozambique was granted partial autonomy, further reforms being postponed to 1920. In the Great War, Portugal proclaimed her loyalty to the British alliance on August 7, 1914, and on November 23 formally committed herself to participation in military operations. Indeed, the war was severely felt in the Province of Mozambique, especially in the north where the Portuguese territories were twice invaded by the Germans, who everywhere committed violence and destruction. Portuguese East African troops did good service in co-operating with the British forces in the rounding up of Von Lettow's army. In 1919 the Keonga triangle, some 400 square miles in size, and including the southern shore of the estuary of the Rovuma, was transferred to the Province, having formed part of German East Africa.

Since the conclusion of the War a period of acute depression has been followed by one of distinct progress. The convention with the Transvaal expired in 1921, and the urgent need for a new treaty between the Union and Mozambique is so universally acknowledged that the prospects of an agreement on mutually beneficial lines are considered hopeful.

## PEOPLES

**P**ORTUGUESE EAST AFRICA is sparsely inhabited, the estimated population being under 4,000,000. Some 90 per cent of the inhabitants belong to various Bantu tribes, from whose ranks many of the natives employed in the Transvaal mines have hitherto been recruited. The most important tribes in the northern half of the Province are the Yaos and the Ma Kwa (Makwa). The Makwa, notwithstanding the presence of Arabs, Banyans (Hindus), and Battias in all their coast districts, have preserved in a remarkable degree the purity of race, although their language has undergone considerable change. Most of the country between the Rovuma and the Zambezi is peopled by branches of this race, governed by numerous petty chiefs. The dominant race between the Zambezi and the Mazoe is the Tuvala, mainly of Zulu descent. In the district south of the Pungue, known as Gazaland, the ruling tribes are of Zulu origin, all other tribes being known as Tongas. For the most part these Tongas resemble the Basutos, and occupy themselves with stock raising and agriculture. The white inhabitants of the colony number less than 10,000, chiefly Portuguese and British, and nearly half of these live in Lourenço Marques. A large number of traders in the coastal towns are British Indians.

## DISTRIBUTION OF POPULATION.

An estimate made in 1924 distributed the population of the whole Province approximately as follows:

Lourenço Marques	150,000
Gaza	252,000
Inhamitanga	310,000
Tete	270,000
Chiemane	797,000
Mozambique	800,000
Mozambique Company's Territory	288,000
Nyassa Company's Territory	513,000
	3,425,000

**IMMIGRATION REGULATIONS.** — All passengers landing at Delagoa Bay may be required by the Government authorities to deposit £20 and the fare back to the port of embarkation, which will be refunded as soon as the passenger can prove that he has employment or other means of livelihood. Should he not be in a position to do this within eight days, the authorities may pay his or her fare to any convenient port, refunding the balance of the money deposited, if any, upon embarkation of the passenger. Those staying in Lourenço Marques must obtain a residential permit within five days of arrival. The above applies also to the ports of Beira and Mozambique.

**LABOUR.** — A great deal of the available native labour of Mozambique is absorbed by the Transvaal mines, the labour recruited in Portuguese territory having for many years constituted the backbone of the mining industry. For 1923-24 the figures were: Outgoing labourers, 51,248, repatriated, 40,503, while the number of Mozambique boys working in the Transvaal on June 30, 1924, was put at 96,606, of which 88,484 were employed in mining pursuits. Owing, however, to the decision of the Union Government to employ Union natives as far as possible, fewer labourers from Portuguese East Africa are now being recruited.

LOURENÇO MARQUES.  
1. Port Offices,  
2. The Railway Station,  
3. The Treasury.

**SCHOOLS.** In 1924 there were 25 primary schools, 11 under the control of civil missions, and 103 religious mission schools (a total of 138) with 13,508 scholars on their registers in the districts of the Province under the direct administration of the State.

### ADMINISTRATION

**T**HE Province of Mozambique is ruled by a High Commissioner, which office was created for each of Portugal's African colonies in 1919, the new regime concerning Mozambique coming into force at the beginning of 1921 as an integral part of the Republic Constitution of Portugal. This law gives the right of self-government, financial and administrative, to the colony, defines the powers of the Central Government, and provides for both Legislative and Executive Councils, at the same time withholding powers dealing with the question of sovereignty over territory and the delimitation of boundaries, the right to declare war or conclude peace, etc. The Central Government also has the right, upon consultation with the Colonial Council sitting at Lisbon, to approve or reject laws passed by the Colonial Government, and to substitute therefor enactments of its own. But in this case the proposals of the Central Government must be submitted to Parliament. The Executive Council is formed by the High Commissioner, the Attorney-General, four Chiefs of Departments, and a non-official member of the Legislative Council. The Legislative Council consists of one representative each of the Chamber of Commerce, the Property Owners' Association, the Shopkeepers' Association, the Labor Organisations, with the Attorney-General, Chief of Staff, Chief of Maritime Department, the members of the Executive Council, and a representative each of the districts of Gaza, Inhambane, Quelimane, Fete, and Mozambique. The High Commissioner is the President.

Each of the State-administered districts has a Governor and a District Council of a representative character. The territories of the Mozambique and Nyassa Companies are also administered by Governors. These territories possess separate Customs and fiscal regimes, but their Courts are Provincial Courts.

**DEFENCE.** The military force of the colony varies between 2,250 men (1,370 natives) and 3,004 men (2,468 natives).

**HIGH COMMISSIONER.** - The High Commissioner, who exercises the functions belonging to the Central Government, holds office for five years, and his powers are equal to those exercised by the Portuguese Minister for the Colonies, in so far as they deal with the Colony of Mozambique. In 1926 the holder of the office was General Massad Amorim, whose transfer to Portuguese India was announced in July of that year.

**POSTS AND TELEGRAPHS.** During a recent year the postal matter dealt with by the post offices of the Province amounted to 6,109,032 articles, while 4,011,018 telegrams and 34,289 wireless messages were received and forwarded. Wireless stations have been installed at Lourenço Marques, Inhambane, Beira, Buzi, Quelimane, and Mozambique, and others are in course of erection at Villa Nova de Gaza, Fete, and Mozambique Island. All these stations are provided with valve receivers, enabling them to record messages sent out by stations as far distant as Northern Europe. The telegraph lines of the Province belong to the State, the Chartered Companies, the Submarine Cable Companies and private concessionaires.

### FINANCE AND BANKING

**I**N addition to the large amount of Portuguese capital that has been directed to the Province of Mozambique, many millions of pounds of British capital are invested in Portugal's great East African colony, partly in connection with enterprises in the State-administered districts and partly in the two chartered concerns the Mozambique and Nyassa Companies, as also in undertakings in their respective territories. A certain amount of French and Belgian capital is likewise invested, mainly in the central portion of the province, the districts of Quelimane, Mozambique, and Fete. As regards the country controlled by the State Administration, it is mainly to British investors that the Portuguese have looked to supplement their own resources, which have never been fully adequate for the proper development of the colony.

At present the financial position, though not unhealthy, leaves a good deal to be desired. The conditions which have arisen in Mozambique since the War, partly as the result of the invasion by German East African troops, the whole cost of which was borne by the Mozambique Exchequer, and still more in consequence of the great depreciation in the value of the escudo, have given rise to many difficulties in the way of investment of capital. A readjustment of the currency position would seem to be the prime necessity before any real development can take place. At the same time the sterling resources at the disposal of the Government are considerable, and it was officially stated in May 1925 that the colony not only had its budget balanced, but that its revenue for the financial year was nearly £2,000,000.

**BANKING.** - Excellent banking facilities are provided by the Standard Bank of South Africa, the Banco Commercial de Mocambique, the Banco Nacional Ultramarino, the National Bank of South Africa, and the Banco da Beira. The Banco Nacional Ultramarino holds the privilege of issuing notes in the Portuguese colonies. In the Mozambique Company's territory the Banco da Beira is the bank of issue.

**CURRENCY.** The present unit of currency in all Portuguese colonies is the escudo, which equals 1,000 reis or 100 centavos, and 4s 5½d in English money with the exchange at 4500 reis to the sovereign, 3s 4d when at 6,000 reis, and so on. With the 1 sterling equal to 140-150 escudos, the exchange rate at Lisbon during a great part of 1924 and 1925, the escudo is worth about 1½d. The method of putting currency into writing is as follows: 5 \$30 = 5 escudos 30 centavos, \$60 = 60 centavos.

It would appear that, surrounded as it is by countries using sterling, it must be to the advantage of Mozambique to make the libra the unit of currency. At present national sentiment seems to be against the change.

**LOAN PROJECT.** - In 1924 the Portuguese Parliament authorised the Province of Mozambique to raise an external loan not exceeding £4,000,000, to be applied to the restoration of the currency and to public works which should increase the production of the province and so render it economically self-supporting. In the absence of power to pledge any specific asset, the rate of interest asked was considered too onerous, and, for the time being at any rate, the project was dropped.

### COMMERCE

**S**TATISTICAL records relating to the trade and navigation of the Portuguese Colony of Mozambique (with the exception of those pertaining to the territories under the administration of the Mozambique and Nyassa Chartered Companies) are kept by the department in charge of the Director-General of Customs, which has its headquarters at Lourenço Marques, the capital of the Province.

In the main the Province has recovered from the protracted period of depression which succeeded the European War, and its trade in both imports and exports shows marked features of progress.

**CUSTOMS.** Customs duties in Mozambique are almost entirely on an ad valorem basis. Merchandise originating in Portugal or Portuguese colonies, with the exception of alcohol, brandy, fermented or distilled alcoholic drinks, wine, tobacco, arms, and munitions of war, to which special conditions apply, enjoys a preference of 50 per cent. of the import duties shown in the general tariff. Duties on foreign goods of all kinds are levied at the general tariff rates, there being no exceptions arising from treaties, conventions, or most-favoured nation agreements. Under a special concession, however, certain foodstuffs originating in the Transvaal are provisionally exempted from payment of duties, as was the case previously to the denunciation of the convention with the Transvaal which lapsed in 1923, until a renewal of the convention shall be effected. (See below, "Mozambique Convention.")

**EXPORTS.** The principal exports of Portuguese East Africa are sugar, raw cotton, beans, maize, oilseeds, and sisal. Sugar heads the list, principally because of the free trade in that commodity with the Union, which under any new convention is not likely to be continued. For the last year for which statistics are available, exports were valued at £15,177,001, a considerable improvement on pre-war figures of about £9,000,000.

**IMPORTS.** The imports of the colony are many and varied, and originate to the extent of over 52 per cent. from Great Britain and her colonies (excluding the Transvaal, which supplies about 10 per cent.), 17 per cent. from Portugal and her colonies, and about 21 per cent. from other countries. An index to the development which is taking place in the colony's natural resources is afforded by the increased import figures every year in respect of agricultural and industrial machinery and equipment, coupled with decreased imports of sugar, milk, cattle, furniture, butter, maize, hides and skins, salt, tobacco, soap, etc. Imports, which in the last pre-war years had a value of only £10,000,000, rose to £16,630,150 in 1923 and exceeded £17,000,000 in 1924. Cotton goods, agricultural machinery, table wines, cement, rice, and wheat flour, in the order named, were the principal commodities.

**MOZAMBIQUE CONVENTION.** For many decades there have been close commercial and inter-trade relations between the Province of Mozambique and the Transvaal, both under the Boer regime and British rule. These relations, which also embraced native emigration and Customs matters, were regulated by an agreement known as the Mozambique Convention, signed at Pretoria on April 1, 1909, by the Earl of Selborne (then High Commissioner for British South Africa and Governor of the Transvaal) and Colonel T. A. Garcia Rosado, on behalf of

the Province of Mozambique. This Convention was given a definite life of ten years, to be renewed thereafter for yearly periods until denounced. Notice of its termination was given by the Union Government on April 1, 1922 and the agreement ceased to be operative as from March 31, 1923. More than one attempt has since been made to negotiate a new Convention, and so far as the question of labour for the Transvaal mines is concerned, a *modus vivendi* was agreed to at once.

With regard to inter-trade relations the need for a new convention is great, but the problems of tariff concessions to be accorded by each country, and of the percentage of the Transvaal's import and export traffic which is to be handled through the port of Lourenço Marques, have hitherto proved difficult of solution. It appears tolerably certain that any new convention will be far less reaching in its terms than was the old one.

## TRANSPORT

### RAILWAYS

**T**HE railways of the Province of Mozambique do not form a connected system. Based on Lourenço Marques there are about 150 miles of standard South African gauge (3 ft. 6 in.). The main line to the Transvaal crosses the frontier at Ressano Garcia, 55 miles from the capital. From a junction about 6 miles from Lourenço Marques, the Swaziland branch, 47 miles long to Goba, diverges. When this branch has been extended across Swaziland to Lothair, on the Eastern Transvaal system, a new direct route from Lourenço Marques to Johannesburg will be brought into existence, and the opening up of Swaziland, which is known to be rich in minerals as well as a fertile farming country, will add to the traffic through the Portuguese port. A second branch of the main line running inland from Lourenço Marques is the railway from Moamba, about half-way between the port and the frontier, to Xinavane. This branch, which is 55 miles long, is being extended across the Limpopo to Inharrime to link up with the existing standard gauge line 58 miles in length from Inharrime to the port of Inhambane. A direct connection between the capital and Inhambane will thus be established.

**BEIRA RAILWAYS.**—Beira is the coastal terminus of 357 miles of standard gauge track. This includes the Beira and Beira Junction Railways, which own the line to the Southern Rhodesian border, 200 miles distant. Over this railway the bulk of the heavy traffic to and from Southern and Northern Rhodesia and the Katanga passes. The Trans-Zambesia Railway leaves the Beira Junction Railway at Dondo, 18 miles from Beira, but has running powers over the latter company's track into Beira itself. It is connected by a ferry steamer with Chindio, on the opposite bank of the river, the southern terminus of the Central Africa Railway, which owns the line to Nyassaland as far as Port Herald, 61 miles to the north. Of the Central Africa Railway, 44½ miles are in Portuguese territory.

**MILEAGE.**—The total mileage of all lines in Portuguese East Africa in 1925 was 838.

**PROJECTED DEVELOPMENT.** It will be seen that, for a country covering about 206,000 square miles and containing a population of 3½ millions at a low computation, Portuguese East Africa is as yet deficient in railway communication. A great deal of construction and extension work is, however,

projected. In the Mozambique Company's Territory the lines starting from Quehmane and Mozambique are gradually to be linked up. The proposed extension of the Moamba-Xinavane line has already been mentioned. A most important development of railway facilities in the north will be the budding of the Zambezi at Murraca on the southern bank, the scheme, which has the support of both the British and Portuguese Governments, being estimated to cost about a million sterling. The Government of Mozambique has already schemes in hand involving an expenditure of from four to five millions, to be funded by means of a loan raised in Lisbon and London. Before long, also, the huge territory to the north of the Mozambique district, and controlled by the Companhia do Nyassa, is likely to embark on far-reaching schemes of railway developments, a plan to lay a line from Port Amelia on the seaboard to Lake Nyassa, 400 miles away, having reached the point of preliminary construction.

### RIVER

See under "Union of South Africa"  
"An, River, and Road."

### ROADS

Lacking really adequate railway communications recourse has to be made to the roads through the greater part of Portuguese East Africa, especially in the Chartered Companies' territories. In the Lourenço Marques district, in particular, there are now some excellent tracks, and the journey from the port to Johannesburg via Swaziland (353 miles) can be made comfortably by car. Good road making has also progressed in the Gaza sub-district, in the Mozambique Company's territory, where provision was made in the 1925 programme for a considerable mileage of new construction and better maintenance of existing roads, and in the Quehmane and Mozambique districts. An obstacle to transport in portions of the interior of the Province is the existence of fly-infested areas, which prevent the use of draught animals, a state of affairs which can only be gradually altered by the increase of cultivation. This circumstance should also help to stimulate the demand for motor vehicles, which has certainly increased during the past few years.

### SHIPPING

See under Lourenço Marques and Beira.

## THE MOZAMBIQUE COMPANY'S TERRITORY

**A**BOUT 140,000 square miles of territory, or nearly one-half of the whole of Portuguese East Africa, is divided between the two Chartered Companies, the Companhia do Mocambique and the Companhia do Nyassa.

The Mozambique Company's territory (often known as Manica and Sofala) was acquired by Royal Charter in 1891, which granted sovereign rights for a period of 50 years. It has its own customs, posts, treasury, land and mining offices, and bank, as well as its own customs tariff, land tenure, and mining laws. In 1923 the population totalled 288,039, being an increase over 1922 of 9,087, some 2,350 being whites. Years of post-war depression have since given way to a decided recovery in the financial position, and the excess of receipts over expenditure for the first nine months of 1924 amounted to £95,555. The export trade of the territory, valued at £641,446 in 1913, rose to £1,457,857 in 1923,

and in 1924 was estimated at £1,057,884, imports for local consumption having a value of £1,061,176. Transhipment, transit, coasting and re-export trade reached the record figure of £10,593,260, or nearly £2,000,000 more than in 1923. Agriculturally, the company's territory is one of the richest countries south of the Equator, with immense possibilities in the wonderful fertility of the soil and the valuable system of waterways for production on an extensive scale. Under the fostering care of the Administration, agriculture has of late years been the mainstay of the territory and progress has been most marked, the production (for instance) of sugar having increased from 19,504 tons in 1922 to 35,822 tons in 1924, and of maize from 282,591 bags to 559,359 bags. The production of sisal also greatly increased from 421 tons in 1922 to 970 tons in 1923, a drop to 663 tons being recorded in 1924. Cotton is chiefly grown in various districts on the Zambezi River, the largest production being from the District of Chemba where the Mozambique Industrial and Commercial Company has a ginning and baling press. Cotton has also been grown experimentally by farmers in the Manica, Chimoin, Neves Ferreira and Buzi Districts during recent years as an alternative crop to maize with very encouraging results, and it is hoped greatly to extend its cultivation in these districts in the near future. Other crops, in the cultivation of which progress is taking place, are rice, wheat, tobacco, ground-nuts, and citrus fruits. Many of the hardwood timbers of the Mozambique forests are very valuable and a considerable trade is done in railway sleepers.

## NYASSA COMPANY'S TERRITORY

**T**HE district conceded to the Companhia do Nyassa in 1893 was that known as Cabo Delgado, the northernmost part of the Province. It measures roughly 400 miles between east and west and 200 miles between north and south, with a sea frontage of 180 miles on the Indian Ocean. It is claimed that no better agricultural land exists in Africa, for practically the whole of the district is well provided with water even in the dry season, though there are no navigable rivers. In compensation for this, however, the Territory possesses in Pemba Bay the finest natural harbour on the Continent, and once the railway is constructed to Lake Nyassa, agricultural development in the interior must rapidly increase.

Under the administration of the Company, Portuguese sovereignty has been firmly established throughout the territory, and slave-raiding and tribal wars are now things of the past. Agricultural development has proceeded apace, cotton cultivation having increased both on the coast and in the interior. The whole of the sea coast is dotted with promising coconut plantations, one of the largest being a British undertaking—Nyassa Plantations. Other products are copra, sesame seed, ground-nuts and similar oil seeds, tobacco, gum copal, and ivory.

**PORTO AMELIA.**—The capital of the Nyassa Company's territory is a small settlement on Pemba Bay, said to be one of the most spacious harbours in the world, being eight by five miles in extent, with an entrance one and a half miles wide. Porto Amelia, which has good natural drainage, is a military centre, and a regular port of call for the steamers of the Union Castle line. A railway has been surveyed as far as Mtarika, with the intention of eventual extension to Lake Nyassa.

PANORAMIC VIEW OF LOURENÇO MARQUES.

## CITY AND PORT OF LOURENÇO MARQUES

### CITY

**L**OURENÇO MARQUES, besides being the capital and chief sea-port of the Province of Mozambique, the most important of Portugal's overseas possessions, is now rightly regarded as one of the leading cities in the southern portion of the African Continent, and is becoming increasingly known every year both as a busy shipping centre and a holiday resort. For many years only a centre of the whaling industry, it came into prominence with the development of the Transvaal and its natural resources, and its transformation into a cosmopolitan and handsome town may be said to date from the opening of the railway to Johannesburg in 1895. Since that date the town has extended in three available directions, and notably runs out to the eastward shores of the bay, where steep cliffs fall to a narrow but pleasant beach. Here are the suburbs of Reuben Point and Polana, which constitute the more fashionable residential quarters, and are connected by tram with the town proper. Everywhere are fine roads and shady avenues.

**BUILDINGS.** Many imposing and handsome public buildings have been erected during recent years, the most striking, perhaps, being that containing the new administrative offices of the Railway Department. Situated in the Avenida da Republica are the Post Office and Treasury (Fazenda), both of them notable structures, and between them the fine building, erected at a cost of 500 contos, of the Secretary General's, Public Works, and Agricultural and Native Departments. On the north side of Rand Square are the Union Government Buildings (where the English Club is housed), and on the south are the huge Capitania Buildings (residential), the ground floor of which is occupied by the offices of the Delagoa Bay Development Corporation and other concerns. On the top storey is the British Club. Eastwards, on the way to Reuben Point and Polana, are the offices of the

Governor General, beside His Excellency's Palace which stands back in beautiful grounds. The palatial Polana Hotel is one of the finest edifices in Lourenço Marques, commanding a magnificent view of the bay and beach and beyond is the beautiful new Club House erected for the Golf Club. Dotted over town and suburbs are other prominent buildings, including many very fine residences.

**INDUSTRIAL DEVELOPMENT.** Up to a few years ago Lourenço Marques possessed practically no industries of any consequence. The growth of its population and the ever-increasing cost of imported articles have, however, led to the initiation and development of a number of enterprises. These include furniture - some of which, made of excellent native timbers, is finding a market in the Transvaal; milling, soap making, tobacco manufacture, etc. Other important industrial activities to be undertaken shortly comprise cement and leather production, in both of which cases exclusive rights of manufacture have been secured for a period of 10 years, with option, under certain conditions, to extend to 20 years.

**LIGHT AND POWER.** Lourenço Marques is well lighted by electricity under a concession held by the Delagoa Bay Development Corporation. The public lighting covers about 18 miles of streets, in which are employed over 1,000 incandescent lamps and 12 cluster lamps. About 8,000 lamps of 30 watts are in use by private consumers. The current is supplied from the Tramway Station, but there is a separate (steam-driven) plant for the light, though this is used only in cases of emergency.

**MUNICIPALITY.** - The Camara Municipal of Lourenço Marques was established by decree of December 19, 1876, and, subject to the control of the District and Provincial Councils, administers the internal affairs of the city. The receipts for the year 1923-24 totalled 3,857,647\$35 (gold), and the expenditure 3,038,788\$41 (gold), leaving a balance to be carried over to 1924-25 of 818,858\$94 (gold).

**MUSEUM.** - The Provincial Museum is housed in a fine building situated at the eastern edge of the Municipal Gardens, and with a frontage on the Avenida Elias Garcia. It was founded in 1913, and the exhibits now exceed 2,000 in number, all having their origin in the Province. Some of the entomological exhibits are very rare, and the collection of fossils is noteworthy.

**POPULATION.** The last census of Lourenço Marques was taken in 1912, when the population was returned at 26,079. It is estimated that in 1924 the white population of the city and suburbs, which at the census numbered about 5,000, was at least 7,500.

**SPORT AND RECREATION.** - Large and small game, offering exceptionally fine sport, abound in the district, but hunting or shooting is forbidden from November 1 to April 30. Big game is only to be found some distance away from the town, but most varieties of small game, including steenbuck, duiker, reedbuck, bushbuck, and birds, can be encountered within two hours of the city by rail; guinea fowls and partridges are plentiful ten miles out of the place in almost any direction.

Of athletic sports, the favourites are tennis and golf, the new course at Polana, when completed, promising to be one of the best in South Africa, as it is certainly one of the most unique in point of situation. The Tennis Club dates from 1908 and is affiliated to the South African Lawn Tennis Union. The club's annual open tournament usually held when the winter season is in full swing - is quite the outstanding event of the year, and attracts players from all over South Africa.

At present the town lacks proper cricket and football grounds, but a flourishing Cricket Club has recently been formed. The Polana Club directs the automobile activities of the district. The two theatres, the Varieta and the Gil Vicente, are the equal of any in South Africa, but, unless overseas theatrical companies are the attraction, are usually given over to cinema entertainments.

LOURENÇO MARQUES.

1. Praça 7 de Março.
2. The Market, showing Avenida da República in the foreground.
3. The Capitania.

**TRAMWAYS.**—The Delagoa Bay Development Corporation controls the tramway system of Lourenço Marques, which has been in operation since February 1904. In 1924 the length of track was 10.475 miles of one metre gauge. Under contract the tramway concern generates energy for the power requirements of the Wharf and Railway Departments, and also for practically the whole of the industrial and manufacturing plants in the town. The total capacity of the station is 1,075 kw.

**WATER SUPPLY.**—The Umbeluzi waterworks, 18 miles distant from the town, provide an abundant supply of excellent water. This is controlled by the Delagoa Bay Development Corporation, whose concession dates from 1895.

## PORT

The harbour of Delagoa Bay, discovered in 1504 by Antonio do Campo, in command of one of Vasco da Gama's ships homeward bound from Goa, is regarded as the best in South Africa, the bay being 25½ miles long by 2½ broad. The shifting bar of sand, which is common to nearly all South African ports, is subjected to powerful dredging machinery and large vessels can easily enter the harbour. Without borrowing money, it is estimated that the Portuguese Government has expended more than £7,000,000 on the port of Lourenço Marques and its connecting railways. At present the capacity of both is much in excess of the needs of existing traffic, but there can be little doubt that in a few years Lourenço Marques will be the entrepot of an enormous and most productive region, when the magnitude of the work that has been accomplished will be more fully appreciated.

**ACCOMMODATION.** The accommodation for vessels up to the largest tonnage which the port offers has been increased during the last few years, and further expansion is in hand, details in connection with which are given in a subsequent article.

**ADMINISTRATION.**—The port (as also the railway) is administered by the Port and Railway Council, an autonomous body consisting of official delegates and four local business men, of whom one must be chosen from agents of shipping lines and another from the representatives of forwarding firms. These last-mentioned four members are elected by the permanent members every two years.

**APPROACH.**—See article following.

**COALING PLANT.**—For details of the very up-to-date and efficient coaling installations, see letterpress entitled "Ports and Railways of Lourenço Marques". It may be mentioned here that South Africa coal handled at Lourenço Marques decreased very considerably from 823,274 tons in 1923-24 to 674,778 tons in 1924-25, in the latter year 416,357 tons were exported and 258,421 tons were bunkered.

**EXTENSIONS PROJECTED.**—In March, 1926, the Government announced its intention of constructing a bridge over the Limpopo River at Messina, to take road and rail traffic. It is hoped that the Union Government will defray half the cost of this bridge, which will link Southern Rhodesia and the Transvaal, giving the colony not only a shorter route to the Rand and Natal, but also putting it into direct communication with Delagoa Bay, and thus providing it with an alternative ocean outlet to Beira. An extension is also projected from the main line south of Gwelo to Shabani, which will serve the important asbestos industry.

**PILOTAGE.** This is compulsory. A pilot boat is stationed on the north side of Inyack, where shelter is obtained from southerly winds. Pilot fees are: For sailing vessels or steamers, about 12s 6d per foot of vessel's draught. Changing anchors, 2s 6d (gold) per foot draught. In the case of ships calling regularly at intervals of not more than once a month, an allowance of 25 per cent is made; and in that of those entering the port twice within 30 days, 50 per cent.

**PORT CHARGES.** These are payable in gold at the current rate of exchange for the day.

**CRANE CHARGES.** On working days, 5-ton cranes, 6s 6d to 7s per hour, minimum 18s; 10 to 60-ton cranes, 4s 6d for first 10 tons weight up to 32s 6d for weights exceeding 50 tons; minimum 36s.

**CUSTOMS FEES.** Ocean vessels taking or landing cargo, 30s; ocean vessels not taking cargo, 4s; coasting vessels, 2s 6d; local coasters, 1s 3d.

**LANDING CHARGES.** From vessels at wharf, 4s 6d per ton. Large consignments or contracts at considerably lower rates.

**LIGHT DUTY.** Ten escudos per ton of cargo landed.

**PORT DUTY AND CLEARANCE.** 12 2s for each vessel entering or leaving the port.

**STORAGE RATES.** Free storage at the wharf sheds is given for the first 48 hours, reckoned from the time of completion of the vessel's discharge. Afterwards the goods are removed to the Customs warehouses, and are subject to a charge of 3d per cubic metre per day for the next three days; afterwards 10d per cubic metre per day (gold). Goods

Centre. General Plan of the Port.

in open pay half rates. Goods transhipped, 1d to 3d per ton. A charge of 1,200 reis per ton is made for removal to the warehouses.

**TONNAGE DUES.**—Tonnage dues are imposed only on vessels landing or loading cargo. Ocean sailors, 5d; steamers, 2½d; steamers trading regularly to and from Portugal, 1d per net registered ton. Vessels taking coal are exempt. On ocean going vessels discharging or loading cargo, 62 reis per ton.

**TOWAGE.** For sailing vessels or steamships in ordinary weather. For vessels 1,000 tons, £18; 1,500 tons, £21; over 2,000 tons, £24. Over the three mile limit, 160, 167, and 180 respectively. Shifting in port, 15 to 18 10s.

**WHARF DUES.** 2s per ton on the cargo. On vessels with coal, up to 1,000 tons of African coal, 11 25 esc per ton, for every ton above 05 625 esc, minimum 50 esc. Maximum, 50 per cent of tax collected as follows: up to 3,000 tons measurement, 11 25 esc per ton; 03 75 esc for each ton above. Steamers at the wharf are required to land an average of 350 tons and sailing vessels 150 tons per working day. The demurrage charge is ½d per net registered ton.

**SHIPPING AND TRADE.** During 1924 the number of vessels arriving at the port totalled 644 of 3,060,114 gross tonnage, with 342,054 tons of cargo landed. These figures were slightly less than those for 1923, when 660 vessels of 3,033,644 tonnage entered the harbour. In 1924 the arriving vessels were, British, 350; Portuguese, 135; Dutch, 40; German 41; Others, 66. Passengers landed in 1924 totalled 27,276.

### PORT AND RAILWAYS OF LOURENÇO MARQUES

**Natural Advantages.**—The geographical advantages of the bay of Lourenço Marques place it in the very first rank of the world's great ports. It is not only a natural harbour of great size, affording easy entry and excellent shelter, but it is also, owing to its position, the natural outlet for an immense area of hinterland, including the Transvaal and Swaziland, as well as the district of Lourenço Marques itself. The bay is the estuary of three large rivers, navigable by small craft over considerable distances, so that even without the modern facilities of transport the port could serve a wide area of country for purposes of trade and distribution by means of its splendid waterways.

**Early History.**—The bay was discovered in 1502 and explored by a trader named Lourenço Marques in 1544, but very little development took place until some 30 years ago. During the 16th and early 17th centuries the place was visited by Portuguese ships at fairly regular intervals, trading for slaves, agricultural produce and ivory. As time went on, however, these visits became fewer, and though, in the 18th century, other nations also attempted to found settlements and trading stations, these were mostly shortlived and in all cases unimportant. In 1781 Joaquim de Araujo arrived from Portugal as first Governor of the military settlement at the bay, and a fortress was built on the present site of the town of Lourenço Marques, the stockade encompassing a chapel, barracks, prison and stores. Almost immediately upon the completion of these works the settlement was attacked by the natives, and from this time forward little was continued intermittently, the natives not being finally subdued until 1895. During a lengthy period of the 19th century, portions of this territory were disputed by the British

and Portuguese, the question being finally referred for arbitration to the President of the French Republic, who in 1875 awarded the rights over the disputed land to Portugal, and the whole district which is now the Province of Mozambique became Portuguese territory.

**Later Development.** In 1876 the settlement received the status of a village, and in 1887 that of a corporate town. Even at this latter date, however, Lourenço Marques was still only a small hamlet with six main streets, one square and eight side streets. The only two-storeyed building in the place was the house now occupied by the Banco Colonial Português, and the one hard road was a short stretch leading from the Governor's residence to the shore, the rest being only soft sand. In the bay a solitary boat was available belonging to the Public Works Department, kept for the use of the Governor and other officials; in the town three European firms existed, while one small hotel sufficed for the needs of the place. In 1869, however, a treaty had been made between Portugal and the South African Republic fixing the boundary line, and from this date roads were built, a more or less regular steamship service with Europe was started, and trade began to be opened up. The year 1884 was another most important date for the province, when a contract was signed for the construction of a railway by an Anglo-American company. In 1884 a dispute having arisen as to the interpretation of the contract, the Government seized the line and completed the railway, the first through train to the Transvaal being run in 1895. In 1900 arbitrators awarded the possession of the railway to Portugal, ordering the payment of 7050,000. Since that date the history of Lourenço Marques has been a record of rapid progress, until to-day it may be considered as the most valuable colonial possession of Portugal. In May 1907 the town became the capital of the Province of Mozambique.

**Trading Facilities.** The port of Lourenço Marques is now one of the finest and best equipped harbours on the East or West Coast of Africa. The Government of Mozambique has fully realised the possibilities of its natural position as the gateway of Swaziland, the Transvaal and other parts of the Union of South Africa, and it has laboured to make the port capable of dealing with the volume of trade which, from the resources of the rich lands which lie behind it, is to be expected. Such success has attended these efforts that the port is now able to handle quite easily the existing trade, and fully prepared to cope with the increased traffic which is bound to come in the near future. The entrance to the bay from the Indian Ocean is by the Polana Channel, which is over 125 yards (100 metres) wide, and has been dredged to allow the ingress of vessels drawing up to 20 ft at slack water, and up to 35 ft 6 ins at high tide. The channel is marked by the Catembe line (a lighthouse and beacon in the water) and by 6 light buoys, A G A system. The wharf, a fine piece of ferro-concrete work, is 75 feet wide and 1,624 metres long, and has a berthage capacity for 12 large steamers and 4 coasting vessels. Import traffic is off-loaded direct from the ships' holds into trucks, which are dispatched immediately to their destination, and export traffic from the trucks directly into the ships by means of electric cranes. These cranes, which have been specially installed for the purpose of quick and cheap handling of general cargo, are 23 in number, and capable of dealing with loads from 3 up to 60 tons. There is also excellent and ample cargo accommodation, with 12 large sheds

1 & 3. Showing the New Coaling Plant. Capacity 5,000 tons per diem  
Centre. The Wharf taken from the Bay.

having an area of 16,200 square metres each, and in addition extensive open ground for storage.

**Coaling Plant.**—The trade in coal from the Transvaal mines takes pride of place in the traffic of the port. To deal with this, two large and efficient coaling plants have been erected, the McMiller plant with a capacity of 150 tons of 2,000 lbs per hour, which loaded over 5,000,000 tons between May, 1914, and December, 1924, and the Provay (inaugurated on June 10, 1923), with a nominal capacity of 600 tons per hour. Siding accommodation is provided for trucks carrying 50,000 tons of coal, while other sidings to receive the empties from the coaling installation and bunkering, are available for all the trucks that can be emptied daily. As about 20,000 tons of coal per day of 24 hours can be brought by powerful locomotives with a haulage capacity of 1,200 tons, and this amount can be easily coped with by the coaling plant on the wharf, the annual total capacity of the port may be considered to be about 6,000,000 tons, an amount that is now much in excess of the actual traffic, and therefore leaves ample room for all the likely requirements of this trade for some time to come.

**Dry Dock, Tugs and Dredgers.** Next to the wharf is a dry dock, constructed in 1924 which can take coasting craft up to 1,700 tons, and also a basin for smaller vessels. The maritime equipment of the port includes three tugs, one of which has been specially built for use on the high seas, while of the two dredgers, both of which are of a very powerful type, the suction vessel "Inhaca" has only lately been acquired, and is of the newest design. Although much dredging has already been done, and the channel allows ships to enter drawing up to 29 feet at low water and to 35.6 feet at high tide, the work still goes on. It is expected that vessels drawing up to 40 feet will before long be able to use the channel. The electric power station on the wharf, which was being enlarged during 1925 to attain a capacity of 1,200 k.w., will supply all the electric power necessary to work the coal plants and electrically-driven machinery of the port, also to light the entire port enclosure.

**Shipping Returns.**—The Shipping Returns of the port for the five years 1920-21 to 1924-5 are represented by the following average figures—

	ARRIVALS	DEPARTURES
Number of ships	506	506
Gross tonnage	2,352,056	2,368,820
Tonnage landed and shipped	215,305	768,730
Passengers	35,147	39,065

Over the same period coal trade returns showed average local consumption to have been 21,474 tons, while export and bunker represented 876,456 tons.

**Railways.**—The railway system, which includes three principal lines, with a gauge of 3 ft 6 ins., is also under the control of the Lourenço Marques Port and Railways Administration. The central station may be compared, without discredit, to any other of its size in South Africa. In front of the station itself is the large building containing the offices of the Administration of the Port and Railways, while behind this block lies the station proper with two platforms and the usual waiting-rooms, cloak-rooms, etc., all spacious and well-equipped. The three principal lines are (a) the main line to the border of the Transvaal, covering from Lourenço Marques to Ressano Garcia a distance of 92.5 km. (approximately 56 miles), connecting with the railways of the Union, and providing an excellent mail train

service to Johannesburg, (b) the line to the Swaziland border (69.3 km) which gives access to an area of great agricultural activity, and (c) the Xinavane line (142.6 km), which was opened in 1914, and serves a part of the country mainly devoted to sugar-growing and other planting enterprises. It is proposed soon to extend this last route to the Limpopo Valley. There are also two narrow gauge lines, one in the north of the Lourenço Marques district with the Limpopo River port, Vila Nova de Gaza, as its centre, and the other to Marracuene. The main line trains are as well equipped as those of any country, including sleeping cars, saloon carriages, and a restaurant car-service.

**Railway Traffic.** Average figures for the last five years are as follow:—Goods, 1,208,976 tons, passengers, 303,428, revenue, £338,434.

**Conclusion.**—It is evident, from the details furnished above, that the Administration of the Port and Railways in Lourenço Marques has fully provided for the rapid and convenient handling of the traffic of the territories with which it is connected. To Lourenço Marques, the Transvaal and Swaziland may also be added Rhodesia as a district which this port may expect to serve. A port for Rhodesia on the West Coast of Africa must, it would seem, remain an unfulfilled dream, as all the natural harbours for that region lie on the East Coast, and of these Lourenço Marques is by no means the least fitted to become its chief entrepot. Thus with all the improvements and facilities, both accomplished and projected, added to its natural advantages there is no doubt that the Port of Lourenço Marques, already able to stand on an equal footing with any other South African outlet, will be the commercial centre for one of the most important and productive regions of the whole continent.

(See also illustrations, pages 345, 346, 347, 348)

## REPRESENTATIVE COMMERCIAL ENTERPRISES

### COMPANHIA DO BOROR (Sociedade Anónima de Responsabilidade Ltda.)

**Status.** Constituted a limited company with an authorised capital of 11,000,000, of which £480,000 has been issued, this organisation holds the leases of Government concessions at Macuse, Lacungo, Boror, Namendro and Tirre, all in the district of Ondimane, besides owning coconut plantations in the Angoche district of Mozambique.

**Concessions.** Such concessions as those just mentioned, known as Prazos, are leased by the Government, usually for a period of 25 years, the rental being fixed on the basis of the amount of the native poll tax, this being collected by the leaseholder, anything over the amount assessed for rent belonging to such lessee. It is, in fact, a method of farming out the native tax. In return for all rights over the land, the concessionaire is obliged to construct roads, maintain schools and other public institutions, and in general to administer the territory leased by him through his own employees, who are, in this respect, subordinate to the District Governor.

**Plantations.**—The Boror plantations support a native population of about 100,000. Communications are maintained by some 35 miles of Decauville lines and by good roads built by the company, as well as by a barge canal joining the rivers which flow into the Macuse with the Lacungo. This barge canal, in combination with the Decauville lines, links up all the plantations with Porto Bello, where the organisation has an establishment of considerable importance,

**COCONUTS.**—The whole territory has a coast line about 40 miles in length between the mouths of the Macuse and Karaga rivers, and by far the greater part of the land is under coconuts, some 2,000,000 palms in all having been planted.

**COPRA.** The copra produced is mostly shipped to Europe, though a small share of the crop is taken by the Union of South Africa. During 1924 the yield reached a

**SUGAR.** Formerly the company conducted large sugar-growing operations at Nhamacurra, where a plant exists with a capacity of 6,000 tons per annum, but these have been abandoned consequent upon the low price of sugar, the land being utilised for other and more profitable cultures. The energies of the Companhia do Boror will therefore be devoted for the present mainly to the production of copra, sisal and cotton,

PORT AND RAILWAYS OF LOURENÇO MARQUES  
The McMiller Coaling Plant, capable of handling 3,000 tons per day

total of 4,000 tons, and further development is expected to increase this amount very materially.

**SISAL.**—Besides copra, the company grows sisal on a large scale, the two plantations in the Nhamacurra and Malaguine district now having about 6,000,000 plants, from which the output of fibre in 1924 was 1,500 tons.

**COTTON.**—Cotton is another product which has been lately taken up, and promises increasing success.

**SALT.**—A flourishing salt industry at Macuse yields about 3,000 tons a year

and of these three crops a considerably larger output is expected in the near future, as preparations are being made both for increased planting and treatment.

**General Imports.** In addition to these plantation activities the company carries on a general import business, which in all the ports of the Province where its branches are established shows a very large turnover.

**Agencies.**—The following companies are represented by the firm Holland Afrika Lijn (maintaining a coastal service in connection with a regular European service and transhipment at Beira into coastal steamer

"Holland"), the Mozambique Portland Cement Co., Western Assurance Co., Vacuum Oil Co. (only at Port Mozambique), and the Incomati Brickfield at Chanculo, on the Johannesburg line, with a production of 30,000 bricks a day.

**Branches.**—The concern has opened branches at Lourenço Marques, Queimane, Inhambane, Chinde, Angoche, Mozambique and Macuse.

**Offices.** Head office: Rua do Arsenal, 54, 2°, Lisbon. Committee of Administration in Marseilles. Rue Breteuil, 12. Lourenço Marques office: Rua Araújo (P.O. Box 4), Cables: "Boror", Lourenço Marques. Codes: ABC 5th and 6th Editions, and Bentley's.

#### MANN, GEORGE & CO. (DELAGOA) LTD.

**Activities.** This organisation operates as coal merchants, steamship, landing, shipping and forwarding agents, and as insurance representatives.

**Coaling Section.** Messrs Mann, George & Co. (Delagoa) Ltd. are the sole exporting agents for the Transvaal Coal Owners' Association (1923), Ltd., and as such always have on hand large quantities of first-grade steam coal for bunkering facilities, drawn from the following collieries in the Witbank district of the Transvaal: Clydesdale (Transvaal) Colliery, Douglas Colliery, Middelburg Steam Coal & Coke Co. Ltd., S.A. Coal Estates (Landau and Navigation Mines), Station Colliery, Favistock Colliery, Transvaal & Delagoa Bay Colliery, Witbank Colliery (Witbank and Uitspan Mines).

**Coal Standard.**—The coal produced by the above-named collieries maintains a uniform standard of good quality and high steaming efficiency. Its chemical composition is such as to preclude the danger of spontaneous combustion. Evidence of these characteristics of the coal is afforded by the fact that for many years it has been regularly supplied to all the principal steamship lines trading with South Africa, both at Delagoa Bay and Capetown, also to the British Admiralty and Portuguese Government.

Other large consumers of the Witbank district coals are: The South African Railways & Harbours (about 1,600,000 tons per annum), Caminhos de Ferro de Lourenço Marques, Victoria Falls & Transvaal Power Co. Ltd., and the principal mining and industrial groups in the Transvaal.

**Bunkering Facilities.** The port of Lourenço Marques is adequately equipped with modern electric cranes and two coal loading appliances for the efficient handling of coal, hence vessels putting in for bunker requirements or for the purpose of loading coal cargoes are assured of prompt attention and rapid despatch.

**Landing, Shipping and Forwarding Section.**—A separate department is maintained to deal with the handling of general merchandise discharged at the port for despatch by rail to inland destinations; moreover, ample bonded warehouses are provided at the port for the storage of goods.

**Representations.**—Messrs Mann, George & Co. (Delagoa) Ltd. are agents for the following steamship lines and insurance companies: Peninsular & Oriental S.N. Co., Rio Cape Line Ltd., Nippon Yusen Kaisha, James Nourse Ltd., Italia Navigation Company, Katsuda Steamship Co. Ltd. (Kobe), Yamashita Kisen Kaisha (Kobe), Ocean Transport Co. Ltd. **DELAGOA BAY DEVELOPMENT CORPORATION LTD.** (*Compagnie d'Electricité de Lourenço Marques*).

**Inception.** The purpose guiding the inception in 1903 of this company was the acquisition of certain undertakings, concessions and properties at Lourenço Marques. Among these were the waterworks concession

**Electric Tramways.** The tramways concession extends for 50 years from January 17, 1902. Services of 20 and 30 minutes are maintained over the system, which totals 10.475 miles in length. The power station plant, producing 1,075 kilowatts, supplies power to the Electric Light, Port and Railway Departments, and to various industries (employing over 1,500 h.p.) established in Lourenço Marques.

**Electric Light.** The electric light concession, purchased as a going concern subsequently to the company's inception, applies for 50 years from October 27, 1897. Lourenço Marques is one of the best-lighted towns in the sub-continent, street illumination requiring nearly 1,300 standards while the number of points installed in private houses exceeds 15,000.

**ALLEN, WACK & SHEPHERD, LTD.**

**Inception.** Established in the early 'eighties by Mr. Charles Wack, this firm of general merchants, shipping and forwarding agents controls one of the oldest business houses in Delagoa Bay. Mr. Wack, who arrived in 1880 from Ibo, where he had been resident for some time, was joined in 1887 by Mr. Thame Allen, one of the late Mr. Cecil Rhodes' engineers, who assisted in laying out Kimberley. Mr. Allen at that time owned ironworks in Barberton, and, when he transferred to Lourenço Marques, founded there the Delagoa Bay Ironworks, which are still in existence.

**Development.** The firm started in a small iron store, but as the business gradually increased continual additions became

DELAGOA BAY DEVELOPMENT CORPORATION LTD., Lourenço Marques.  
Company's Pumping Station on the Umbeluzi River.

for the town, taken over as a going concern, a concession for electric tramways, a plot of ground on the seafront, ultimate site of the Capitanía Building block, and several other valuable town stands.

**Capital.** - The original capital of the corporation was £300,000 in £1 shares. In March 1905 an issue was made of £180,000 in 6 per cent debentures.

**Waterworks.** - The water is taken from the Umbeluzi River at a point 19 miles from the town, and after settling is treated by three Jewel mechanical sand filters with a capacity of 1,200,000 gallons per day. It is then pumped into service reservoirs by means of two Worthington triple-expansion duplex pumping engines. Town consumption and the supply to shipping of this extremely pure, potable water together exceed 300,000,000 gallons per annum.

**Directorate.** - Mr. H. K. Heyland (chairman), the Rt. Hon. Lord Oranmore and Browne, K.P., P.C., Lt.-Col. Alexander, Dr. Balthazar Freire Cabral, Mr. W. L. Castleden and Mr. P. Murly Gotto.

**Secretaries and Offices.** - Henderson's, Transvaal Estates Ltd., 36-38, New Broad Street, London, E.C.2, and Capitanía Building, Rua Thomaz d'Almeida, Lourenço Marques.

**AFRICAN SHIPPING LIMITED.** - P.O. Box 297, Lourenço Marques. Steamship, shipping, forwarding and customs agents. Head office: Hatfield House, President Street, Johannesburg. Bankers: Standard Bank of South Africa, Ltd. Cables: "Africship," Lourenço Marques. (See this firm's notice, "Transport-Shipping" Union of South Africa section.)

necessary, until to-day the stores and offices of the company cover several acres of ground, the timber yards alone having an area of over 3,000 square yards. The present site of these stores and warehouses was formerly a mere sand heap, and the firm has spent a very large sum of money in filling up and levelling the ground. A few years ago both the partners died, and in 1913 the concern was formed into a limited company, which took over all the assets and liabilities of the late firm. Since then it has carried on business under the style of Allen, Wack & Shepherd, Ltd.

**Activities.** - As general merchants, landing, shipping and forwarding agents, the company handles practically every description of wares other than soft goods. It owns extensive floating plant, while the stores and warehouses carry consistently large stocks,

including timber, mining and building materials, hardware of all kinds, groceries and provisions, and furniture. Having its own lighters and private pier, as well as bond stores, the firm is in an excellent position to handle merchandise of every sort for the up-country trader. A wide connection has been established throughout Mozambique and the hinterland, while the company's travellers reach all parts of the Transvaal in addition to Portuguese territory.

**Staff.**—A large and experienced staff, comprising about 50 Europeans and some 200 natives, is able to cope with any commissions received without fear of mistake or delay, especially as the long standing of the firm has made it conversant with the peculiar requirements and difficulties of the country.

#### **P. SANTOS GIL, LIMITADA.**

**Inception.**—The establishment of this highly-reputable import and export business dates back to 1889, its initial style being Carvalho & David. In 1905 the present principal, Mr P. Santos Gil, took over the management, and on his entering into

works executed by his firm are the Government Hospital and the Machaquene Reclamation and retaining wall, respectively costing £75,000 and £125,000.

**Activities.** The company does extensive trade in railway, electrical, telephonic, building and hardware supplies, while its export business is mainly in copra, groundnuts, castor-seed, sesame seed, maize, cotton, and fine timbers (including South African mahogany), all obtained from its forests. The most up-to-date sawmill in Lourenço Marques is owned by the firm together with spacious bonded stores for imported goods or those to be exported. An experienced staff loads and forwards every class of wares at the firm's own risk.

**Foreign Agents.** In London, Lisbon, New York and Paris the Banco Nacional Ultra-

ALLEN, WACK & SHEPHERD LTD., Lourenço Marques.  
A View of the Firm's Timber Yard at Kilo 1.

**Other Interests.**—Besides this general merchandise business, the company has special departments which deal with agricultural machinery and implements, including windmills, pumps and oil engines, fencing materials, lubricating oils and greases for farms and mines, and all kinds of engineering supplies, etc. Messrs Allen, Wack & Shepherd, Ltd also undertake marine and fire insurance, shipping, bunkering, clearing and forwarding.

**Branches.**—Branches are established at Beira, and (in succession to R. S. Cotton & Co. and Cotton & Downie) at Ermelo, Salisbury and Bulawayo. The London agents of the firm are John Palmer, Jun. & Co., Dauntsey House, Frederick's Place, Old Jewry, E.C.2.

**Administration.**—The headquarters of the company are at Johannesburg, the chairman

partnership five years later the firm was renamed Carvalho, David & Co. On the retirement of the partners, Messrs Carvalho and David, in 1912 the sole ownership devolved upon Mr Santos Gil, who re-incorporated the concern as P. Santos Gil, Limitada, in 1921.

**Capital.** The capital of the company is £20,000, fully paid up, assets exceeding £80,000.

**Government Contracts.**—Since its formation the firm has executed certain important contracts with the Government of the Province. Mr P. Santos Gil was himself deputed to attend in London the negotiations for the loan of £4,000,000 for the Government, having been a member of the Legislative Council for over 12 years, and chairman of the local Chamber of Commerce among other prominent associations. The most notable

marino acts as agents for the company, which is represented also in Johannesburg and Hamburg.

The capital of the company is £60,000, its bankers being the Standard Bank of South Africa Ltd. (Lourenço Marques and Johannesburg branches), and the Swiss Bank Corporation, London. The firm's appointed buyers in Europe are Messrs. J. H. Trachsler Ltd., Berne. The company occupies its own buildings, erected in the year 1903, and

**Activities.**—The firm's business embraces all branches of service to shipping companies, importers and exporters. It owns, at the foreshore of the Upper Harbour, one of the largest private timber yards in the Port, fitted with a pier, cranes and railway sidings. Here there is ample storage accommodation for several cargoes of timber, while large bonded warehouses provide space for many thousand tons of general cargo, including perishable goods. As forwarding agents for some of the largest importing houses of the Transvaal, the company handles a considerable proportion of the transit traffic of the port of Lourenço Marques, and its bunkering activities ensure a regular supply of bunker coal from the best collieries of the Witbank district of the Transvaal for the immediate use of steamers. In addition, it conducts a varied range of general agency work.

**Agencies.** Among the shipping companies whose agencies are undertaken by The Delagoa Bay Agency Co are The British India Steam Navigation Co., Messrs. Bullard King & Co. (Natal Direct Line), Elder Dempster & Co., the Norwegian African Line and the East Asiatic Co. Ltd., while the firm acts as stevedores and landing agents for these companies and for the Union Castle Co. Ltd., among others. Additional corporations represented are the Bureau Veritas, the Board of Underwriters of New York, the North British & Mercantile Insurance Co., the Southern Life Association, etc. The Consulate of Denmark and that also of Sweden are domiciled at the company's offices.

**Offices.** - Occupying a large two storeyed building at the corner of the Rua Araujo and the Travessa Francisco Fener, the premises extend along the latter street up to the entrance of the Customs and Wharf Area.

PANORAMIC VIEW OF

## CITY AND

### CITY

**BEIRA**, the seat of Government of the Mozambique Company's Territory, is not only the capital of a large and important extent of country but also by virtue of its port facilities, the natural outlet for Northern and Southern Rhodesia, Nyassaland, and the Katanga Province of the Belgian Congo, or in all for an area of some 500,000 square miles, with a population of 3,500,000. The agricultural and mineral resources of these countries are enormous, and although the trade is already considerable there are possibilities of great expansion, the further growth of the port and town being assured.

**BUILDINGS.**—The principal public structure in Beira is the spacious block of Government buildings erected by the Mozambique Company in the centre of the town, in which are the offices of the Governor, the Director of Agriculture, and other departments; adjoining is the handsome Palais de Justice. Beira has several good hotels, the Savoy being a particularly fine building, and the principal banks, the Standard and Banco da Beira, are handsomely housed. Other business firms have good premises, and all new buildings must fulfil the requirements of the Municipal Commission. There are two churches, Catholic and Anglican, and three schools.

**CLIMATE.**—Owing to the sea breezes the climate of Beira is superior to that further up the river, and may be considered fairly healthy. The best months are from May to October. The mean annual rainfall is about 37 inches.

**POPULATION.**—The population of Beira is between 4,000 and 5,000, of whom nearly 1,000 are whites.

**SPORT AND RECREATION.**—In the hinterland served by Beira every variety of large and small game indigenous to the East African littoral is to be found. Shooting parties can be equipped and transported to

the districts with a minimum of expense and a maximum of speed and comfort. Near the town is a fine 18 hole golf course, which attracts many visitors to the port. There is also a very good cricket and football ground, likewise a tennis club under the direction of the Beira Amateur Sports Club in the Vasco da Gama Park. On the ocean front, and in a large sea inlet, there is excellent and safe bathing and more conveniences for this purpose are being provided.

**STREETS, ETC.**—The Mozambique Company has done much to improve Beira as a town out of the revenue derived from the settlers and merchants, who in the early days proposed a schedule of licences and scheme of taxation which has been practically adhered to ever since. From the commencement of 1916 municipal affairs have been under the control of a Municipal Commission, some of whose members are nominated by the public associations of the town and others by the Government. To this Commission much of the improvement of the place is due. The original sand spit has been formed into a town with many fine avenues of trees bordering handsome straight roads and with several tastefully designed squares and gardens. The thoroughfares, the centres of which have been made by a top dressing of a firm and close setting gravel, are kept in good order, but most of the traffic is carried along Decauville tram lines laid through all the streets. The footpaths everywhere are of cement. The tram lines serve every purpose, admirably carrying the fast-travelling passenger car or the heavily loaded flat trolley to any point desired. The absence of any grade makes their propulsion easy to the boys employed in the service. The passenger cars, some 300 or 400, are privately owned, though several of the hotels keep many for hire to visitors.

**WATER SUPPLY.**—Hitherto Beira has been dependent upon wells and rain water tanks for its supply, but a scheme is in hand by the Municipal Commission for the construction of a piped water system.

### PORT

The port of Beira, situated at the centre of a great bight of the East African coast, is for that reason endowed with a larger natural hinterland than any other harbour of East Africa. At present this hinterland is immense, extending from the Limpopo-Zambesi watershed in the south to the upper Congo Valley in the west and Lake Nyassa in the north. Though the opening of direct routes from Katanga to the West Coast may divert a portion of the Congo traffic from Beira in the near future it seems certain that the deficiency will be more than made good by coal traffic from the Zambesi mines, by the enhanced development of Nyassaland and North-Eastern Rhodesia that will result from the bridging of the Zambesi, and by the northward extension of the Nyassaland railway system to the shores of Lake Nyassa. In brief, Beira is the natural sea outlet for an area of some 500,000 square miles, whose agricultural and mineral resources are enormous, and, though the trade of the port has increased already at a greater rate than has that of any harbour in the Union (86 per cent in four years, as compared with the 73 per cent of Durban), there are possibilities of immense expansion.

**ACCOMMODATION.** The minimum navigable depth on the bar is 11 to 12 ft. at low water, ordinary springs rise 18 to 20 ft., and ordinary neaps 5 to 7 ft. From the bar to the berthing accommodation the channel, some 16 miles long, has an average width of over half a mile and a depth varying from 18 to 36 ft. Large vessels do not berth, all cargoes being discharged into lighters. The wharfrage available is at present inadequate for the increasing trade of the port. Great extensions and improvements are, however, projected, and were expected to be commenced in 1926. The first instalment to be undertaken will be the construction of a general import and export wharf 1,200 ft long and a mineral wharf 600 ft long, the face line of which will be in deep water, so that only

THE PORT OF BEIRA.

## PORT OF BEIRA

a small amount of dredging will be necessary to obtain an ultimate depth alongside of 34 ft. at low water ordinary spring tides.

The wharves will be carried on screw steel piles, well braced together. On the deck between the face line of the wharf and the transit sheds, provision will be made for one portable crane track and three lines of 3 ft. 6 in. gauge railway. The cranes will be of the most modern type for the rapid handling of cargoes. There will also be two single-storey transit sheds, each 400 ft. long by 120 ft. wide, placed 50 ft. back from the face line of the general wharf.

The Mozambique Company's custom-house will be established at the site of the new wharves, and the transit sheds will themselves form the custom sheds, to the great advantage of consignees, whose goods can be passed through the customs and placed on wagons with the minimum of handling.

A wharf for the mineral trade will be built on the Pangue River above the general wharves. The first installation is to consist of one berth equipped for dealing with ore, but in the future, when the Tete coalfields have been opened up and are in operation, a large number of berths will be required and special arrangements are to be made for the shipment of coal for export and bunker purpose.

**ADMINISTRATION.**—At present there are three separate authorities concerned in the working of Beira Port—namely (1) the Mozambique Company, the proprietors of the port and which provide the port captain and port offices and control the port approaches and custom-house, (2) the Beira Boating Company, which owns and works the fleet of lighters and conducts the loading and discharging of vessels, and (3) the Beira and Mashonaland Railways Co., which controls the railway wharves and goods sheds. This multiplicity of control has not made for efficiency, and through the medium of the Port of Beira Development Company, Limited, which has been formed to carry out the necessary works of improvement and the future administration of the port, great

developments are being looked for. The new company is to have entire charge of the port administration in all its branches. Schedules of rates and charges and new port rules and regulations will be drawn up, but it is confidently anticipated that, so far from the new works and the necessity for financing them causing an increase in port charges, the reverse will take place, improved facilities and management bringing about a reduction in costs to importers and shippers.

**ANCHORAGE.** The anchorage at Beira is a sheltered river estuary protected by a sand spit. Commercial vessels must anchor within the following boundaries. North boundary the railway pier, south boundary the Intendente's flagstaff. Vessels with explosives or inflammable cargo must anchor between the highest gable of the Donna Amélia Hospital to the north and the old Point de Goa lighthouse to the south, leaving the island of Uíamhe bearing N 15 W. The anchorage for vessels in quarantine is to the north of the Mozambique Company's powder magazine.

**LIGHTERAGE.** The special task of carrying passengers and goods across the shallow waters which lie between the piers and the deeper channels of the harbour is at present conducted by local lighterage companies operated by the Beira Boating Company and the Deutsche Ost-Africa Linie.

Since the volume of import and export commerce at the port has greatly expanded in recent years, the Beira Boating Company has much increased its plant, on which it is known to have spent a very considerable sum during the last three years. The company owns a fleet of more than 62 lighters and pontoons and also eight tugs, together with sundry other craft, and is building more at the present time. In addition to its lighterage plant, the company also possesses a large and well-equipped engineering department, together with a small dry dock. It undertakes the erection of its own plant and effects its own repairs, and is doing a steadily expanding general engineering business.

The lighterage companies have for a long time past been pressing for systematic dredging alongside the wharves and in the harbour, and when this is undertaken they should be able to effect considerable improvements in the assistance now rendered to the shipping companies and the port in general.

**PILOTAGE.** Pilot service at Beira is good and free, the pilot boat being anchored one-third of a mile to the north of the anchorage buoy in the south-east channel. During strong southerly winds the pilot boat is stationed near Buoy No. 4. The taxes for pilotage for entry or departure are, for each foot immersed: Not over 14 ft. 2 esc. (gold), over 14 ft. and not exceeding 20 ft. 2\$50, over 20 ft. 3 esc. Vessels coasting obtain a discount of 25 per cent. Vessels re-entering port within 30 days a discount of 40 per cent. Vessels calling for bunkers only, a discount of 50 per cent. on entry and departure on pilotage fees.

**PORT CHARGES.** The principal port charges at Beira are as follow—

**BLA CON AGI AND BUOYAGE**—10 centavos (gold) per ton on all merchandise loaded or discharged.

**CUSTOMS DUTIES**—Vessels from foreign ports, 12,320 reis; from a Portuguese port, 8,720 reis.

**LANDING CARGO**—7s 6d per ton of 2,240 lb. or 40 cub. ft.

**LIGHTERAGE**—7s 6d per ton.

**SHIPBROKER**—Entrance and clearance, £10 10s. Commission on freight, 5 per cent.

**STEVEDORI**—Loading or discharging, 1s to 1s 3d per ton.

**TONNAGE DUES**—Vessels with cargo to or from Beira pay 7,500 reis on tonnage under 50 (minimum 7,500 reis) up to a minimum of 45,050 reis and a maximum of 75,000 reis on tonnage from 500 to 1,000, and 25 reis per ton for every ton over 1,000.

**TOWAGE**—£20 per service.

1. View looking towards the Residential Quarter from the centre of Beira.
2. Entrance to Railway Station and Goods Yard, with Harbour in the distance.
3. Beira Club.
4. Street Scene outside the Customs House.

**SHIPPING AND TRADE.** The number of vessels entered at the port of Beira during 1924 was 472 (of which 239 were British and 78 Portuguese), of an aggregate gross tonnage of 2,001,576, compared with 474 (1,872,318 tons) in 1923. Whereas in 1913 the tonnage of goods handled at Beira was only 279,039, the tonnage handled at the port ten years later, in 1923, had increased to 524,000 and in 1924 to 611,851 tons, the latter total having been reached in spite of an unusually bad maize harvest. This was a "record" for Beira in tonnage handled, being 105,000 more than in the previous best year. The trade movement in the port during 1924 amounted to a total value of £12,712,000, of which £9,196,000 represented import and export values of Rhodesia, the Belgian Congo, and Nyassaland.

The business of the port, as reflected by the railway figures for the financial year ended September 30, 1925, showed a notable advance over that for 1923-24. Altogether the railway wharf handled 499,849 tons, which added to the 76,180 tons landed at the customs wharf, gives a total cargo movement, exclusive of transshipments in the port, of 576,029 tons in the railway year 1924-25.

The total traffic handled in the railway yard and at the railway wharf during the twelve months—dumped, sorted, and carried to and from the railway wharf—was 1,221,581 tons, an increase of 159,305 tons over the 1923-24 figures.

### REPRESENTATIVE COMMERCIAL ENTERPRISES

#### MANN, GEORGE & CO. (BEIRA) LTD.

**Inception.** Having absorbed the Beira interests of Glenn & Co. and Mann George & Co. (Delagoa) Ltd., who in turn had absorbed the interests of Torre de Valle, this company was established in 1920.

**Activities.** The firm's main activities are forwarding and shipping, marine and fire insurance, steamship agencies and general commercial representation.

**Agencies.** Among the most prominent concerns represented are: Marine and fire insurance, Yorkshire Insurance Co. Ltd., Northern Assurance Co., The World Auxiliary Insurance Corporation Ltd. Steamship agencies: American South African Line, Nippon Yusen Kaisha, Italia Steamship Co. Ltd., P. & O. Steam Navigation Co. Commercial agencies: Cooper & Nephews, South African Breweries Ltd., Ransomes, Sims & Jeffries Ltd., Baldwins Ltd., Transvaal Coal Owners' Association Ltd., Atlantic Refining Co. of Africa Ltd., Duly & Co. Ltd. (Ford car agency).

**Branches.** The parent company has its head office in London, and other offices in Great Britain at Cardiff, Newport (Mon.), Swansea, Liverpool, Glasgow, Newcastle-on-Tyne, and Hull. In North America, branches under the name of Cory Mann George Corporation operate at New York, Philadelphia, Newport News (Norfolk), and Sewalls Point (Virginia), in South America, under the designation of Mann George Depots Ltd., at Montevideo, Buenos Aires, La Plata, and Rosario. Further details of the South African organisation, Mann, George & Co. (S.A.) Ltd., established at Durban, Capetown and Walvis Bay, and the Lourenço Marques office of Mann, George & Co. (Delagoa) Ltd., may be found on pp. 241 and 351 respectively.

**Warehouse.**—A large warehouse, the property of the company, is situated at One Mile Peg, on the main line to Rhodesia.

**Office.** Rua Conselheiro Fomes, Beira (P.O. Boxes 44 and 258) Codes: Scott's 10th Edition, A.B.C. 5th Edition and Bentley's

**Bankers.** Standard Bank of South Africa Ltd. and National Bank of South Africa Ltd.

**ALLEN, WACK & SHEPHERD LTD.**

**Activities.** One of the largest and most important firms operating within the Province of Mozambique this company occupies at Beira a very prominent position in the export and import trade of the port. Among its other activities, it flourishes as wholesale and retail general merchants, carrying extensive stocks of building material, hardware, furniture, tools, electrical supplies, agricultural implements and machinery, groceries and provisions.

**Exports.** The concern handles a very large proportion of the total tonnage shipped

**Imports.** - Of the general goods imported to Rhodesia, Belgian Congo and Nyassaland, a very large part passes through the hands of Messrs. Allen, Wack & Shepherd Ltd. Forwarding agents at Beira for all the largest mining companies and merchants in those territories they represent, to the complete satisfaction of principals, the respective Governments of Southern and Northern Rhodesia, The British South Africa Co., the Globe & Phoenix Gold Mining Co. Ltd., African Explosives & Industries Ltd., The P. & O. Banking Corporation, Ltd., and others.

**Handling Facilities.** The firm's facilities for handling goods are unsurpassed at the port. It possesses extensive bonded or free warehouses for storage of general merchandise: timber, oils, etc., a private railway siding with ample open space for the accommoda-

tion of every kind of machinery, and a travelling crane capable of handling lifts up to five tons.

**Agencies.** The following steamship, marine and fire insurance and mercantile agencies are also in the capable hands of Messrs. Allen, Wack & Shepherd Ltd. at Beira -

**STEAMSHIPS** - British India Steam Navigation Co. Ltd. (Bombay and Home Lines), Scandinavian Fast African Line.

**MARINE FIRE INSURANCE** - Liverpool & London & Globe Insurance Co., London & Lancashire Insurance Co. Ltd., South British Insurance Co. Ltd., Marine & General Mutual Life Assurance Society.

**MERCANTILE** - Vacuum Oil Co. of S.A. Ltd. ("Pegasus" petrol, "Laurel" and "Sunflower" paraffins, and "Gargoyle" mobiloids), John Lysaght Ltd. (galvanized, corrugated and flat iron, wire netting, etc.), Austin Motor Co. Ltd. (motor cars and farm tractors), Phosphor Bronze Co. Ltd. (manganese bronze, white anti-friction metals, etc.), British General Electric Co. Ltd. (electrical fittings, etc.), James Findlay & Co. Calcutta (twines, hessian, gunnies), Newton, Chambers & Co. Ltd. ("Izal" disinfectants), D. & J. McCullum ("Perfection" whisky), W. & A. Galbey (wines and spirits), Ross & Sons, Ltd. (Bellart mineral and tonic waters), Swallow & Ariel (biscuits, cakes, etc.), Lazenby, London (preserves and provisions), Libby, Chicago (jams, tinned meat, etc.), Heinz, Pittsburgh (tinned goods of all kinds).

**Head Office.** Johannesburg, Transvaal.

**Beira Office.** P.O. Box Nos. 270, 280, 290. Cables: "Ebanne," Beira. Codes: A.B.C.

**COMPANHIA DE MOCAMBIQUE.**

**Inception.**—Designed to administer the territory of Manica and Sofala in the Province of Mozambique, Portuguese East Africa, this company received in 1891 its Royal charter, available for 50 years and renewable.

**Capital.**—The capital of the concern is £1,500,000 in £1 ordinary shares fully issued.

**Territory.**—The territory governed has an area of about 60,000 square miles, and a population of roughly 300,000. It contains the richest soil in East Africa producing numerous varieties of tropical and sub-tropical crops, agriculture having become in recent years the main interest of its inhabitants. Virgin bush has been replaced by prosperous farms and homesteads, built under the company's concessions, which, totalling 294,888 hectares in 1915, by 1922 had risen to 891,481 hectares (approximately 2,228,000

acres). Beira. The two large companies producing sugar in the territory are the Sena Sugar Estates and the Companhia Colonial do Buzi, having respectively 15,600 and 11,000 acres under cane. In 1921 the total area of the territory under cotton was some 76 acres, and production about 22 tons of seed cotton; in 1924 the area had increased to about 10,000 acres, and production (independent of native-grown cotton on the Zambesi) to 1,500 tons of seed cotton. (Further details of the agricultural products of the area are furnished in the preceding article, "The Mozambique Company's Territory.")

**Administration.**—President of the company Dr Rui Ennes Ulrich, Managing Director, Dr Augusto Luis Vieira Soares, Governor of the territory, General Pedro Francisco Massano de Amorim, Secretary general, Colonel José Augusto Paure da Rosa.

produced 14,000 tons of sugar, and are gradually working up to the full capacity of 10,000 tons.

**Activities.**—The principal industry is the production of sugar from cane grown on 4,000 hectares (9,880 acres) on both sides of the Buzi River, a plantation that is being yearly increased. Besides the factories, there have been built up-to-date workshops, sawmills, distilleries and stores. For purposes of transport the company has an aerial ropeway across the river about 80 miles of private light railway with 6 engines and 400 trucks, a fleet of 6 big sailing ships and several motor and row boats for communication and transportation to Beira. The mail and passenger service between the estates and Beira runs three times a week by motor boat.

**Plant.** On the estates the company has a large quantity of agricultural machinery, comprising two Fowler steam engines, one

COMPANHIA DE MOCAMBIQUE, Beira  
Typical Sugar Estate in the Company's Territory.

acres). Beira, the headquarters of the administration, is the seaport not only for Manica and Sofala, but for Northern and Southern Rhodesia, Katanga and Nyassaland, and is necessarily the pivot for a heavy cargo movement. This in 1924 totalled 611,000 tons, an increase of 18½ per cent over the figure for 1923. The possibilities are incalculable, an immense augmentation of traffic being assured upon the completion of projected improvements.

**Products.**—The chief agricultural products of the territory are maize, sugar, cotton, sisal, coconuts, rubber, coffee, tobacco, rice, fruit, ground-nuts, mangrove bark and timber; among the minerals recovered are gold, copper and tin. In connection with the export of maize, the prime crop, the Companhia de Mocambique has an up-to-date cleaning and drying plant at

**Offices.**—Lisbon (head office), 10 Largo da Biblioteca Publica, London 3, Thames House, Queen Street Place, F.C.4, Paris 17, Boulevard Haussmann.

**COMPANHIA COLONIAL DO BUZI.**

**Inception.**—This prominent sugar-producing company was established in 1898 by Dr Guilherme d'Oliveira Arriaga, having its head office and directorate in Lisbon.

**Capital.** The capital of the company stands at £300,000.

**Development.**—At first only one factory (the Luzitania, standing on the left bank of the Buzi River) with a capacity of 4,000 tons was operated. In 1920 the firm bought out the Inhanguvo Sugar Estate, including a factory of 12,000 tons capacity situated almost opposite the Luzitania factory on the other side of the river. In 1924 these factories

aveling and Porter steam engine, three 10-ton Holt caterpillars, three Austin tractors and various ploughs, harrows, ditchers and ridgers. The land is irrigated by steam power, the various pumps pouring 40,000 gallons of water per minute through 50 miles of conductors.

**Other Property.** The company's other property includes several hundred head of cattle for work and for meat supplies, large areas of land covering tracts fit for any culture, and vast forests of timber. It owns also a coconut plantation, which is increased yearly, and grows enough maize to feed the 3,500 native employees.

**Offices.**—Lisbon (head office) Avenida da Liberdade, 7 R/C Lisbon, Beira P.O. Box No 68 Cables "Izuba," Beira (See illustration, page 362.)

**H. G. D'ALMEIDA LTD.** Founded in 1915 by Mr H. G. d'Almeida, this firm carries on business as general importers and exporters, commission agents, clearing, forwarding and shipping agents, and manufacturers' representatives. They are indentors in a large way for all classes of cotton goods, kaffir truck, hardware, glassware, wines, stationery, preserves, provisions, biscuits, beer and spirits, etc. Among the concerns for which H. G. d'Almeida Ltd. act as agents

Mozambique, and is open to accept a few reliable agencies. Correspondence is carried out in English, Portuguese, French, Spanish and Italian. At Beira, Messrs H. G. d'Almeida, Ltd. are owners of the premises which house their offices and showrooms, and which provide ample accommodation both for storage and display. The partners are Mr J. George d'Almeida, jun., and the heirs of Mr Joao George d'Almeida, while the manager is Mr Afonso Henriques

importers, wholesale and retail merchants, exporters, ice and mineral water manufacturers, cold storage warehousemen, chemists and druggists (wholesale and retail), and cattle ranchers and farmers. The export department is chiefly concerned with maize, groundnuts, cotton, mangrove bark and hardwood timber, while the principal imports handled are electrical goods, Portland cement, hardware, wines and spirits, all kinds of provisions, chemicals, crockery, cigars and piece goods. The company can store any perishable goods in its refrigerating rooms, which are open daily from 7 to 8 a.m. and 3 to 4 p.m., and specialises in crystallised ice manufactured from rain water which is automatically filtered. Two properties are owned by the company, producing both cotton and maize, one, "Inhaune" at Vila Pevy, of 1,200 hectares (approx. 3,000 acres) and the other, "Muda," covering 1,800 hectares (approx. 4,500 acres). On these farms cattle are also run, "Inhaune" stocking some 200 head and "Muda" about 125. A considerable quantity of maize is handled for local consumption, being ground at the company's own mill. Among the agencies held are Siemens (S.A.) Ltd., electrical engineers, Osram G.m.b.H. electric lamps, Siemens Bannion, concrete constructions, Protos automobile G.m.b.H., Ozongesellschaft, water sterilising plants, Lanum Bros Ltd., Portland cement, etc., Naaml Venn "Isola," boiler coating and insulating material, Hulstkamp & Zin & Molyn gin and hquments, Hickman & Bros., provisions, C. J. van Houten & Zin, cocoa and chocolates, Jute Industries Ltd., Dundee, etc. The directors are Dr Jose Arango de Lacerda, Sms Germanio da Costa Campos and Lcio Abudarrham. Cables, "Industrial," Beira. Codes A.B.C. 6th Edition and Ribeiro.

**QUEEN'S HOTEL.** The situation of an hotel is a question of prime importance to all travellers in tropical or sub-tropical countries, the principal essentials being coolness, comfort, accessibility and attractiveness of outlook. From all these points of view the Queen's Hotel at Beira is in an ideal position. It faces the sea and overlooks the Esplanade Gardens, while both the verandah and the balcony give an uninterrupted view of all shipping and movement in the harbour. Besides this, it has the advantage of being the nearest hotel to the landing jetty and to the railway station, while at the same time standing within easy reach of the shops and main business quarters of the town, so that the traveller will find it in every way convenient for all purposes. The accommodation is good in every particular, the service and attention to the wants of visitors expeditious and obliging, and the cuisine all that may be desired. There are the usual public rooms, a good billiard room and a comfortably furnished smoking room. The terms are moderate, ranging from 12s 6d to 15s a day, special charges being made by arrangement for weekly or monthly residents. Porters from the hotel meet all mail trains. The proprietor is Mr D. Philipatos.

**A. BROOK.** This firm of wholesale and retail general merchants was founded in the year 1908 by the present proprietor, whose name it bears. It is a direct importer of gold and silver ware, jewellery, watches, smokers' requisites, fancy goods and perfumes, photographic materials and cameras, and of ladies' and gentlemen's clothing. These articles are dealt with by the various departments into which the business of the firm is divided, the different sections corresponding in the main to the list of imported goods already detailed. Especial attention is paid to the requirements of tourists and travellers, who will find almost

#### **COMPANHIA INDUSTRIAL DA BEIRA.**

—The business carried on by this organisation, which is a Portuguese concern, was established in 1905 as Santos Silva, E. Fernandes & Graca, being taken over by the present company in 1920. The authorised capital is £75,000, composed of 37,500 shares of £2 each fully paid. The company acts as direct

anything they require from hand-dressing to a complete outfit. There is one department which contains an interesting collection of curios of the country, as well as a varied selection of postcards with views of Beira and of the territory of the Companhia de Mocim-bique. The premises owned by the firm are entirely self-contained, being a two-storeyed building, situated in the main business centre of the town close to all the banks and just opposite the Savoy Hotel. Address: P.O. Box 51, Beira. Cables: "Casabrook," Beira. Code: Bentley's.

**OLIVEIRA DA SILVA, LTD.** In addition to carrying on business as general merchants and commission agents, the firm under notice is co-partner in the Sindicato Agrícola do Tembe Ltda. and the Sindicato do Revue Ltda., landowners, farmers and ranchers. The side of the business devoted to general merchandise comprises the following sections: Drapery, jewellery, stationery, tailoring and outfitting. In all these departments a large stock of articles of good quality and the latest imported novelties is always carried. The farming and ranching concerns in which the firm is interested are of considerable importance. The Sindicato Agrícola do Tembe Ltda. is a property of 12,500 acres, yielding an average crop of 15,000 bags of maize a year, while cotton was tried for the first time in 1925 over an area of 500 acres. Cattle are also reared on this estate, the herds numbering about 1,000 head of the Indian (Zebu) type, crossbred with South Devon and Hereford. The farm and ranch rank among the best of their kind in the colony. The property owned in conjunction with the Sindicato do Revue Ltda. is larger, being 50,000 acres in extent and lying 4 to 18 miles from the Beira & Mashonaland Railway. This concession runs beside the Revue River, and, as well as being excellent land for maize, cotton, sisal, citrus and oil seeds, also extends over areas with mineral resources. The existence of gold and other minerals was proved by the exploration conducted by Mr. F. O. Thiele, M.Sc., F.G.S., and Mr. R. C. Wilson, B.Sc., F.G.S., in connection with the Imperial Institute. These lands are sold freehold in plots of about 2,000 acres, and the company invites correspondence from any persons interested. Address: P.O. Box 400, Beira. Cables: "Speshona," Beira. Code used: A.B.C. 6th Edition.

**BEIRA GENERAL AGENCY, LTD.** Lawyers, attorneys, legal, commercial commission and forwarding agents, manufacturers' representatives, imports, exports and insurance. Cables: "Agencia," Beira.

**EASTERN AND SOUTH AFRICAN TELEGRAPH CO. LTD.** Beira. Cable communication "Via Eastern," direct cables north to Quelimane and Mozambique, south to Durban and Lourenço Marques.

**MANICA TRADING CO. LTD.** Established in Beira 30 years. Import, export, commission, forwarding, insurance and shipping agents. Cables: "Marrojar," Beira.

**NATIONAL BANK OF SOUTH AFRICA, LTD.**—Established April 1891. Beira branch transacts banking business of every description. Head office: Pretoria, Transvaal. Cables: "Nation," Beira. (See also "Finance" Section, Union of South Africa.)

**STANDARD BANK OF SOUTH AFRICA, LTD.**—Beira branch established 30 years. Head office: London. Head office for S.A. Capetown. Cables: "Derby," Beira. (See also "Finance," Union of South Africa.)

## OTHER TOWNS AND PORTS

### CHINDE

Formerly the port of entry for Nyassaland and the eastern portion of Northern Rhodesia, Chinde is situated on one of the mouths of the Zambezi River, 62 miles from Quelimane, 141 from Beira, and 908 from Durban. Since the opening of the Beira-Chinde line in 1922 Chinde has lost much of its importance, and the river services to Nyassaland have been discontinued, but a considerable traffic in sugar and sisal from the estates on the river banks remains.

### INHAMBANE

This is a port of call for ocean-going steamers, a wireless station and the chief town of the district of Inhambane, which has an area of 33,000 square miles and a native population of 750,000. The harbor is spacious and safe, and the town, one of the oldest Portuguese settlements, picturesque and progressive. Cattle raising and agriculture are carried on in the district and groundnuts, rubber, mufum, maize, copra, and beeswax are exported.

### MOZAMBIQUE

Founded in 1508, the town of Mozambique, situated on a small coral island three miles from the mainland, was for many years the official headquarters of the Portuguese East African settlements. The harbor is well protected by the two smaller islands of St. George (Goa) and St. Jago, and is the centre

of a growing trade, a large part of the exports from the smaller harbours along the coast being assembled here. The town is substantially built, with an old Fort, Governor's Palace, three Churches, and a large modern hospital. The population numbers about 4,500. Mozambique is a cable station of the Eastern Telegraph Company and of the French Madagascar Cable Company, and possesses a wireless installation.

### QUELIMANE

A town and port of some 3,000 inhabitants, Quelimane is 12 miles from the mouth of the Rio de Boas Signaes, 300 miles south of Mozambique and 62 miles from Chinde. The harbor, available for ocean-going vessels and protected by the Qua-Qua bar, is situated near one of the mouths of the Zambezi River, which however, is not navigable as far as the main stream. Passengers are landed in motor launches. A wireless station has been erected. Quelimane is the centre of a very fertile agricultural district, with growing exports of sugar, copra, sisal, and rubber.

### TETE

Tete (native Nyimwe) where a Portuguese military station has been in existence for nearly 300 years, is a telegraphic centre and wireless station. The white population, including the military, is about 400. The position of Tete will become one of importance when the Zambezi has been bridged and railway connection made with the great coalfield on the northern bank.

## AGRICULTURE AND OTHER INDUSTRIES

**E**XCEPT for a small number of European farmers, concentrated for the most part in the vicinity of Lourenço Marques, Vila Nova de Gaia, Inhambane, and along the Beira and Mashonaland Railway, agriculture in Portuguese East Africa is carried on mainly by large plantation companies or by native villagers on their own account.

**CROPS.** The most important crops are coconut, cotton, fruit, maize, sisal, hemp and sugar.

**COCONUTS.** After sugar, the cultivation of coconuts occupies second place among the plantation industries. In general, the coconut seems to grow best in the north of the Zambezi mouth, where it is extensively cultivated by the large *prazo* companies, such as the Zambesia, the Boror, which claims to possess more coconut trees than any single proprietor in the world (see text, page 349), the *Empreza Agricola do Lugella* and the *Madal* companies. Very large areas are planted with coconuts in the Quelimane district, and contain over 5,000 palms. There are also many coconut plantations along the coast of the Mozambique district and the Nvassa Company's territory. In 1924 the *Companhia Colonial do Buzi* collected over 308,000 nuts (see article, page 361) and the Inhambane district alone has about 2,000,000 palms.

**COTTON.** It is likely that a great development of the cotton industry will take place before very long in Mozambique, since during the last few years it has been the subject of great agricultural activity. As far, indeed, as natural advantages of soil and climate are concerned, Portuguese East Africa would appear to offer superior attractions for cotton growing to those of any other part of South Africa. During the season 1924-25 over 600 tons of lint of a quality which commands a premium of 2d per lb over middling American was ginned by the Mozambique Industrial and Commercial Company at Chemba, and probably even more than this amount was produced by the European farmers along the Beira and Mashonaland railway.

**FRUITS.** Fruit-growing - principally bananas, citrus fruits, and pineapples - offers possibilities of much promise to European farmers in Portuguese East Africa, though up to the present no large export trade has been developed. Many European fruits, such as strawberries, pears, figs, peaches, melons, and grapes, do well in the Alto Molecue circumscription of the Quelimane district, and there are other elevated regions, at present too remote from centres of population or from the nearest port, where the growth of temperate fruits will eventually be practicable. The vine grows well at Chinde and Quelimane, and in this region, amongst others, tropical fruits such as the pawpaw, custard apple, mango, guava, and banana, also flourish.

**MAIZE.** --- Maize growing on a large scale has been confined almost entirely to the Mozambique Company's territory, in which the annual production has averaged about 50,000 tons. The exports from the State-administered districts have hitherto been small, but only the provision of adequate transport facilities is needed to enable the production of this crop to be expanded.

**SISAL HEMP.** --- The cultivation of sisal hemp has been successfully established at various points in the Province, the annual output of fibre being about 6,000 tons. The chief centre is the Quelimane district, where

4. Sisal Factory at Chapungu.

(See *Interpress*, page 361.)

large fibre factories are owned by the Zambesia, Boror and other companies. It is probable that much more land will be soon brought under this cultivation.

**SUGAR.** --- Pride of place among the plantation industries of the Province is enjoyed by sugar, of which culture the chief centre of cultivation is the Lower Zambezi Valley, where, in 1924, the four factories owned by the Sena Sugar Estates, Limited, produced just under 40,000 tons of sugar, the output for 1925 suffering a decline owing to the heavy floods of that year. The *Companhia Colonial do Buzi* owns a large acreage with two factories of an aggregate capacity of 16,000 tons of sugar per annum at Nova Luzitama on the Buzi River near Feira (see text, page 361). Sugar is also grown and produced extensively along the Namavane railway and near Inhambane. The further development of this important industry is only delayed by the uncertainty as to the trend of sugar prices, and when this is relieved many new enterprises will be initiated.

**VARIOUS PRODUCTS.** Other crops which are at present grown only on a small scale, but can be expanded indefinitely, are tobacco, kapok, coffee, and castor beans. The only existing tea plantations are in the interior of the Quelimane district, where the exceptional rainfall conditions required by this plant exist. Rubber plantations (mainly Ceara) are in the same district and elsewhere, but little has been done in the way of planting and tapping.

**LIVESTOCK.** Of recent years stock-raising has made rapid strides in the Province, especially in the districts of Lourenço Marques, Gaia and Iete. The last statistical returns taken in 1922 showed 271,302 head of cattle in the country. Good natural conditions for cattle-raising on a large scale prevail in the Lourenço Marques and Gaia districts, but in many places the tick offers tremendous difficulties to those engaging in the industry. Against this enemy, however, the Veterinary Department is employing its best efforts, and there are now 24 public and 40 private dipping tanks in the country. Stock-raising is meeting with every possible assistance at the hands of the Government.

**MANUFACTURING INDUSTRIES.** --- With the exception of factories connected with plantation industries, such as sugar, sisal and oil seed mills, the industrial undertakings of the Province are naturally concentrated at Lourenço Marques and Beira, the chief centres of population. At Motolla, near Lourenço Marques, are extensive cold storage works. Certain industrial undertakings such as cement-making, soap-making, leather-making, the manufacture of paper, parchment and pulp, and of ropes, coir matting, sacks, twine, and carpets, are reserved to certain companies which hold monopolies for a term of years. In the Mozambique Company's territory industrial development is largely associated with the *Companhia Colonial do Buzi* (see page 361).

**MINERAL PRODUCTION.** The only mining of any note carried on in Portuguese East Africa is in the territory of the *Companhia de Mocambique*, in Manicaland, which has regular monthly outputs of gold and copper. During the early days of Portuguese settlement it is estimated that the gold recovered amounted to at least £1,000,000 per annum. In the district of Lourenço Marques prospecting for minerals has been going on since 1920, though no definite results are as yet available. Tin and asbestos have been proved in the Chartered Companies' territories, and coal is known to exist in the Sabie region of Lourenço Marques.

A GROUP OF KIKUYU NATIVES, KENYA COLONY.

# KENYA COLONY

## PHYSICAL GEOGRAPHY

**K**ENYA Colony and Protectorate (formerly British East Africa) extending along the Indian Ocean from the Umba to the Juba River and inland as far as Uganda, include within their confines certain mainland territories of the Sultan of Zanzibar, which are held on lease by Great Britain. The whole occupies an area of 209,248 square miles (about equal to that of France) exclusive of the province of Jubaland, which was ceded to Italy by treaty in 1925.

**CLIMATE.**--The climate of Kenya affords a very wide range in temperature, from Lamu,

where the mean in the shade is 80° F. to Lamuru, where the average is recorded at 57.5° F. This diversity is principally due to the variance of altitudes obtaining in the colony, with a consequent decrease of heat at the higher stations. The coast belt, though hot and at times humid, is fairly healthy for the tropics. The hottest season at the coast extends from January to April, during which period the mean shade temperature averages 80.2° at Mombasa. The Highlands can, generally speaking, be regarded as healthy. At Nairobi, although at times hot at mid-day and early afternoon, the evenings and nights are almost invariably pleasantly cool or even sufficiently cold to warrant the lighting of fires and the need for extra blankets. The mean shade temperature at Nairobi is 65.5°. At higher altitudes it becomes correspondingly cooler,

and at some stations frost is by no means uncommon at certain times of the year, but fortunately is seldom attended by disastrous effects. The rainfall is good and generally well distributed.

**FAUNA AND FLORA.**--Both the fauna and flora of the Colony and Protectorate are exceedingly interesting, being rich and varied. While the gradual settlement of the country has necessarily denuded parts of the region of all game save the ubiquitous zebra and an occasional small buck, many districts can still show herds that would form a game reserve in less fortunate parts of Africa. Numbers of the wild and savage animals of Equatorial Africa are in abundance, the elephant is found in every district, rhinoceros are still common in some of the forest and much of the bush country, the hippopotamus is in most of the rivers and

1 &amp; 2. VIEWS OF MOUNT KENYA. KENYA COLONY ALSO HAS ITS ETERNAL SNOWS.

lakes, antelopes, gazelles and buffalo are numerous, as are giraffe, and the game birds of the continent are well represented.

**PHYSICAL FEATURES.** The surface of Kenya Colony consists broadly of (a) a low lying region, less than 3,000 ft. in height and comprising about three-fifths of the total area of the colony, which is poorly watered and mostly covered with thorn scrub, (b) a plateau raised by volcanic action to a height varying from 3,000 to 7,000 ft., and extending in a westerly direction. It continues in the south across the Tanganyika boundary, and in the north extends to about 70 miles beyond Mount Elgon. This plateau is characterised by extensive open plains, such as those of the Athi River and the Usim Gashu district, (c) the Great Rift Valley, formed by the subsidence of a portion of the elevated plateau. It contains Lake Rudolf and numerous smaller lakes, some of fresh water and others impregnated with soda, and many extinct volcanic craters. Extending in a generally northward direction, the eastern wall is formed by the Aberdare Range and the Lukipia escarpment. The western wall consists of the Mau escarpment which is known as the Elgeyo escarpment in the north. Mount Kenya (17,910 ft.) is the highest mountain in the colony, and the only one under perpetual snow and ice. Mount Elgon (11,140 ft.), which, like Mount Kenya is an extinct volcano, is slightly below the snow level. Mounts Settima and Kinangop are the highest peaks in the Aberdare Range.

**RIVER SYSTEM.** The most important river as regards length is the Jubu, whose head streams rise in Abyssinia, and whose total course may be some 1,000 miles in length. Only a small portion is suitable for navigation all the year round. The Tana flows from the slopes of Mount Kenya and the Kikuyu Highlands, and, with a total length of 500 miles, is navigable for about 300. Mount Kenya and the Aberdare Range also give rise to the Athi River, which drains the country to the south east. Its principal tributary is the Isavo, which rises in Mount Kilimanjaro. Below the junction with the Isavo the Athi is known as the Subaki, and enters the sea some eight miles north of the Malindi.

## HISTORY

**T**HE history of British East Africa from the white man's point of view, that is so far as written records extend, is very meagre prior to the celebrated journey of Joseph Thomson in 1882. As far back as the thirteenth and fourteenth centuries Arab enterprise had established important trading centres along the coast, but towards the end of the fifteenth century the Portuguese came on the scene, and rapidly reduced to submission all Arab cities and states along the East African seaboard, their largest and most important settlement being at Mombasa, where they built the great fort which stands to-day. Towards the end of the seventeenth century began a renaissance of Arab power on the east coast, with the result that, after being twice lost to Portugal and twice regained, Mombasa fell finally into the hands of the Arabs, and by 1730 there was not a vestige of Portuguese power left in equatorial East Africa. Henceforth the fate of the Mombasa coast line was much mixed up with that of Zanzibar, the princely family of the Mazini more or less ruling the Mombasa hinterland till 1896.

**1882-1914 : DISCOVERY OF MOUNTS KILIMANJARO AND KENYA. FOUNDATION OF BRITISH EAST AFRICA COMPANY.** As early as 1848 and 1849 two German missionaries, Reimann and Knapf, had discovered the great snow mountains Kenya and Kilimanjaro, while in 1871 Kilimanjaro had been ascended as far as its snow limit, about 14,000 feet, by a British missionary, the Rev. Charles New. To Joseph Thomson, however, who was sent out by the Royal Geographical Society in 1882, belongs the honour of locating the then almost mythical Mount Kenya and examining the north side of Kilimanjaro. As a consequence the British flag was hoisted over the region by Sir H. H. Johnston in 1884, and the Imperial British East Africa Company was formed to administer and develop the country north of Kilimanjaro (which remained in German hands) and south of the Sultanate of Zanzibar. The charter of the Company was recalled in 1895, and from that year the British Government directly administered its East

African territory, which by various arrangements was extended eastwards to the shores of the Victoria Nyanza and the slopes of Mount Elgon, and northward to Lake Rudolf and the Abyssinian and Italian Somaliland frontiers. Some fighting with the Arabs and native tribes took place, but with the construction of the Uganda Railway the initial object of which was to do away with the slave trade which flourished inland, the country became more open to settlement, and began to develop steadily, if slowly.

**1914-1925 . THE WORLD WAR. BRITISH EAST AFRICA BECOMES KENYA COLONY. STEADY DEVELOPMENT.** When the World War broke out in 1914 nearly all the military forces of the Protectorate—one battalion and two companies of the King's African Rifles—happened to be engaged on a punitive expedition on the Abyssinian frontier, the region most distant from the frontier of German East Africa. The majority of the male settlers, however, volunteered for active service, and two East African regiments were formed, which, with the forces from South Africa did great work throughout the campaign which lasted, so far as Kenya was concerned, until 1916, but until the Armistice itself in German East and Portuguese East Africa (see Union of South Africa History).

With the declaration of peace and the surrender of Germany's overseas colonies, the neighbouring territory of German East Africa became the Tanganyika Territory, and in 1920 in British East Africa itself the change from a Protectorate to Crown Colony status was effected, the name Kenya Colony and Protectorate being given to the region. At the same time an elective element for Europeans was introduced into the Legislative Council. The previous year had been notable for a currency crisis, which was eventually relieved by the abandonment of the rupee system and the substitution of an East African silver coinage. The inevitable slump in trade and financial stringency which followed the War were gradually weathered, and in 1924 the visit of T. R. H. the Duke and Duchess of York to the Empire's youngest colony proved, by the interest it aroused and the enthusiastic welcome which attended it,

**EAST AFRICAN GOVERNORS.**

A Group taken at a Meeting held at Nairobi in 1926.

Left to Right: Mr. A. C. Helms (Zanzibar), Sir William Gowers (Uganda), Sir Herbert Stanley (Northern Rhodesia), Sir Edward Grigg (Kenya), Sir Charles Bowring (Nyassaland), Sir Donald Cameron (Tanganyika), and Mr. C. F. Lyall (Civil Secretary, Sudan).

the progress that had been made in all directions since the establishment of British rule. In 1925, by a treaty with Italy, the right bank of the river Juba and the port of Kismayu were transferred to Italian Somaliland.

## PEOPLES

**T**HE population of Kenya Colony, which, at the census of 1921 was recorded as 2,803,721, is roughly divided into three classes, viz., (1) the Europeans, a small but virile group, numbering about 10,000, and consisting of farmers, commercial men, and Government officials, (2) the Indians, who are mainly artisans and traders and number about 23,000, and (3) the Arabs and Africans, totalling about 2,770,000.

**CENSUS (NON-NATIVE).** In 1926 a census of the non-native population of the colony was taken, the figures returned being Europeans, 12,505; Indians, 26,758; Arabs, 10,552; others, 3,821; total non-natives, 53,636. Compared with 1921, these figures show an increase in the European population of 28.54, and of the Indians of 3.936. The occupation group numbers 1,511 agriculturists on their own account.

**ETHNOLOGY.** The people of East Africa, unlike those of Central Africa, are very varied racially. Putting aside the Europeans who have settled on the uplands of Kenya and in administrative centres, the dominant types are those of Andorobo, Arab, Bantu, Ja-luo, Masai, and Somali descent. The bulk of the negro population is of Bantu descent (that is, so far as its linguistics are concerned), and can be sub-divided into an almost indefinite number of tribes and clans. The Somalis or Gahs are of a negroid rather than a negro type, and were at one time bitterly hostile to British rule. The Masai were formerly nomadic and predatory in their habits, but have submitted more easily than most to the white man's rule and influence. The Ja-luo, commonly called the Kavirondo, inhabit the western part of East Africa, and still go about naked and unshamed.

**LABOUR.** The immigration of Europeans into Kenya, which became considerable about the year 1904, started the industrial employment of East African natives on a large scale, and in 1906 the first Masters and Servants Ordinance became law, many amending ordinances having since been introduced. A system of inspection of labour camps and general labour conditions was instituted in 1919, mainly with a view to improving the conditions in the railway fuel camps between Nairobi and Mombasa. It has since been extended both to estates and industries where large numbers of long contract labourers are employed, and also to railways under construction. The objects of this system are beneficial to the native in effecting the recovery of wages from defaulting employers, compensating injured workmen, remitting wages of deceased labourers to their relatives, and supervising the general welfare of natives travelling in search of employment. The benefits derived by the employer are not less important. His easy access to the law is ensured in cases of native inefficiency, insubordination or desertion, or in any of the many cases in which the law may be broken by his employees.

Skilled labour in the colony is mainly supplied by Indian artisans, good native artisans at present being scarce. There are, however, plenty of natives capable of dressing

THE OLD FORT AT MOMBASA

stone, brick laying and rough carpentry. The native population also provide practically all the domestic servants, motor and cart drivers. The unskilled labour is supplied entirely by natives, chiefly of the Kavirondo and Kikuyu tribes. With the growth of the coffee industry and other crops the supply of native labour, besides being irregular, is often insufficient, and in 1926 it was decided to resort to a modified system of indentured workers, supplies to be drawn from Portuguese East Africa.

**WAGES.** The average rate of wages for unskilled labour in Kenya rose from about Sh 4 per month in 1905 to Sh 10 per month in the highlands and Sh 16 on the coast in 1925. Natives on 'long contracts' (e.g. over one month) receive usually a minimum wage of Sh 12 monthly. In addition a daily food ration of 2 lbs of mealie meal is generally given. Conditions as to food, blankets, etc., are mutually agreed upon and specified in the written contract, the Government having prescribed a minimum scale. Native artisans usually receive from Sh 1.50 to Sh 3 per day without food.

**PRESS.**—See under "Nairobi."

**SCHOOLS.**—Education in the East African Protectorate began in 1904 with the appointment of an official of the Indian Educational Department as headmaster of the Railway School, Nairobi. At that time there were few Europeans in the country, and education was required only for the children of European, Eurasian and Indian immigrants on the Uganda Railway. In 1908 the first Indian school was opened at Nairobi, and in 1910 a Board of Education was appointed by the then Governor, Sir Percy Grouard. The Board immediately proceeded to separate the provision for European, Indian, Arab and African education, and a European school was established in the former Police Barracks next to Government House. This school opened with 110 children, and gradually the

number was increased until a maximum of about 250 pupils was reached in 1918. The number of pupils at the combined Day and Boarding School, Nairobi is now 240. Both the Cambridge Junior Local and the London University Matriculation Examinations are taken by Nairobi pupils. European day and boarding schools are also established at Nakuru and Eldoret, the school at the latter town being used largely by the children of the British South African and Dutch residents of the Usam Gishu Plateau. These three schools are now full, and additional accommodation is required.

**ARAB EDUCATION.**—The education of the Arabs has always presented many difficulties, the chief of them being the former submission of the race to a mild system of slavery and their present condition of poverty and indolence. The Arab school at Mombasa provides an elementary curriculum in Kiswahili and in English, and boys on leaving seek employment in the Government or private offices in Mombasa. Proposals are now being entertained for considerably extending and raising the standard of Arab education.

**INDIAN EDUCATION.**—Considerable credit attaches to the Indian community of Kenya for the endeavour it has made to provide education in all centres, particular attention being given to the instruction of girls and raising of the standard of womanhood. With regard to boys' education, the Government school at Nairobi, where Indian languages are freely taught, now has over 400 pupils. Lads are trained here for the Cambridge Local Examinations. A large Indian school at Mombasa prepares its pupils for the Bombay University as well as for English examinations. Small Indian schools also exist at Naivasha, Kisumu, Fort Hall and Machakos, and the majority of private schools are in receipt of a grant-in-aid from the Government.

**NATIVE EDUCATION.** The education of Africans by the Government did not commence until 1911, when the system of grants-in-aid to the Mission Schools was instituted. At that time a grant of £2 per pupil was made for the purchase of tools and an annual grant of £5 for each pupil who passed an examination set by the Public Works, Medical or other Department. Since 1918 grants have been made dependent on an annual inspection, with one year's notice of withdrawal. In Kenya, as throughout East Africa, stress has been laid upon industrial education, which is carried on side by side with literary instruction, and industries have always formed an essential part of the curriculum. At the present time there are two large Government native schools, one at Machakos and one on the coast, which lay special stress upon industrial education, and all the seven Mission Schools which receive Government assistance have industrial departments.

**VILLAGE SCHOOLS.** Some 50,000 Africans throughout the colony attend the village schools founded by the Missionary Societies, and the demand for education increases every day. These schools, however, have hitherto received little assistance and no supervision from Government. They merely teach religion, together with the three "R's," but a great improvement will be effected through the "Education Ordinance, 1924," by which they will come under Government control and be required to introduce gardening, simple handicrafts, hygiene and drill into their curriculum.

**SPORT.**—See article following

## GAME HUNTING IN KENYA

**K**ENYA Colony is now generally accepted as being the premier big game country of the world. Other parts of Africa may boast a variety of animals nearly as great, but nowhere else can the joys of outdoor life and sport be indulged in under such favourable conditions in regard to health, climate, scenery, and general charm. The largest pair of elephant tusks on record came from Kenya, and a greater number of lions have been shot annually for the past 20 years in the colony than anywhere else, these animals being still as plentiful as ever in some of the outlying districts. They are larger and carry finer manes than in other parts of Africa, while the open nature of the country makes the finding of this wary beast almost a certainty. The record buffalo was also shot in Kenya, and large herds are so common that no less than ten bulls are allowed to be taken under Schedule 3 of the Game Laws.

**GAME.**—The list of animals which may be killed or captured under visitors' and residents' licences is a long one. It includes such notable varieties as elephant, hippo, lion, eland, oryx, wildebeeste, giraffe, buffalo, gazelle, bushbuck, zebra, blue duiker, reedbuck and stembuck, whilst leopard, hyena, wild dog and sundry jackals (all classed as vermin) are also common, and other strange creatures, such as antbear, ratel, aardwolf, giant hog, and numerous cats like cervel, lynx, etc., are likewise available to the collector and naturalist. There is an astonishing amount of bird life, about 20 different species of duck and geese being procurable on one lake alone. Snipe (6 kinds), guinea fowl (8 inds), francolin (20 kinds), including several kinds of partridge, sand grouse, pigeon,

greater and lesser bustard, and myriads of quail all provide unlimited sport for the gunner, and wild fowl shooting can be secured at very moderate cost.

**HUNTING GROUNDS.**—Good shooting is readily obtainable working from the Kenya and Uganda Railway, but the variety is naturally more limited than if one visits the regular shooting grounds. For short trips, with a first regard to economy, shooting from the line is quite sound. For the fully organised expedition, however, it is now advisable to journey at least ten days' march from rail-head, and allowance must be made for going to and returning from the outlying districts. Motor cars are frequently employed, but the expense of these is considerable. The best shooting grounds are mainly either north, in the direction of Abyssinia (e.g. lakes such as Baringo, Hannington and Rudolph), and rivers like the Northern Usio Nynio and Tana), or south towards Tanganyika Territory. Both north and south, the use of oxen is risky after about ten days' travel, owing to tsetse fly, which kills practically all domestic animals. This fly occurs in "belts," which are generally known by transport riders, who either avoid them or demand heavy extra hire to compensate for the grave danger to their cattle.

**LICENCES.**—Under the Game Regulations of the colony a visitor's licence, available for one year from the date of issue, costs £100, entitling the holder to shoot any of the animals (over 30 in number) detailed in the third schedule. A resident's licence for one year, conferring similar privileges, costs £10. Elephant, rhino, giraffe, and cock ostrich may only be killed under special licences, which, in turn, are alone issued to holders of either visitors' or residents' licences. These licences are: one elephant, £15, two ditto, £45, one rhino, £5, two ditto, £15, one bull giraffe, £15, one cock ostrich, £5.

**ON SAFARI.**—A "safari" is a hunting expedition, which may be undertaken alone or as a party, large or small. Its expense varies according to the extent of the outfit selected, the route shot over, whether mounted or afoot, whether motor cars are employed or not, whether a white hunter accompanies the party, the number of people in the expedition, and the extent to which the outfit is confined to bare necessities, or, per contra, includes unessential luxuries. In round figures, a properly equipped safari averages from £150 to £200 per month per gun whilst in the field. This does not include the white hunter's salary, cost of battery, licences, or use of motor cars for any great distance, neither are mounts included. But it is possible to reduce this estimate by travelling light, and selecting routes where transport is not difficult.

The experienced big game hunter generally prefers to hunt alone, but to those who can afford it a safari manager or white hunter is invaluable. He not only saves a great deal of trouble, but also, through knowing the favoured haunts of various species, can lead the party to the best shooting grounds without waste of time. European hunters cost from £50 to £150 per month and "all found." After the white hunter, the most important item in a safari is the selection of the natives—porters, gun-bearers, askaris or watchmen, skilled skimmers, tent boys and cook. A good headman is essential. According to the nature of the journey, a single traveller will usually require from 20 to 35 porters, each taking a load of from 54 to 60 lbs.

The usual practice is to provide each porter with 1½ lbs of food daily, one posho bag, one blanket, one water-bottle and a cooking

pot, with a tent to every six men. Skinners are provided with knives in addition and askaris with a Martini-Henry rifle and ten rounds of ammunition each. Wages vary according to supply and demand.

**OUTFIT.**—Nairobi has long been famous as a starting point of safaris, and is without question by far the most convenient place from which to outfit. Situated, broadly speaking, equi-distant between the coast and Lake Victoria, Tanganyika Territory and the Northern Frontier, it possesses, in addition to strategic advantages, several good hotels and extensive stores, among which that of Messrs Shaw and Hunter, the well-known suppliers of ammunition and all safari requisites, is prominent. All classes of outfit, clothing, provisions, wines and spirits, etc., are to be obtained, and the traveller can purchase any kind of firearm, from a heavy double cordite to a light magazine rifle, with ammunition to suit. (See also notice following.)

## SHAW AND HUNTER.

**Objects.**—This firm of gun and rifle specialists and "safari" outfitters was established to deal with the needs of the prospective hunter and traveller, to arrange expeditions, and to advise generally on all matters pertaining to big game shooting in East Africa.

**Service.**—The firm's service extends all over Kenya Colony and the adjacent territory of Tanganyika, in other words, from Zanzibar on the east coast to Lake Victoria Nyanza in the remote hinterland. Both scenically and from a hunting standpoint the country covered has few, if any, rivals, and the illimitable plains, swamps, deep gorges, tumbled rocky valleys and mighty rivers literally teem with game of all descriptions. Mr Shaw, the proprietor of the firm, was for many years with Westley Richards and Company, Limited, and has had over fourteen years' experience in fitting out big game and scientific expeditions. The firm's advice on all matters relative to going on "safari" may therefore be considered as thoroughly trustworthy.

**General.**—The firm carries large stocks of all the most reliable makes of guns and ammunition, camp outfits, provisions, wines, etc., it has at its disposal a number of efficient headmen, gun-bearers, porters and tent boys, and it can always arrange for the services of well-known big game hunters if desired. Those intending to shoot in Kenya or Tanganyika should only bring their personal kit with them, and this should be reduced to the necessary minimum.

**Trophies.**—The firm undertakes the preservation of all trophies entrusted to its care, these are treated with a special preparation to destroy all vermin, beetles, grubs, etc., after which they are labelled with the clients' names and stored until ready for shipment.

**Premises.**—These are situated in the very centre of Nairobi, in Sixth Avenue, and immediately adjoin the New Stanley Hotel. The postal address is P.O. Box No. 70.

**Agents.**—London: Messrs Richman Symes & Co., 39, Charterhouse Square, E.C.1, who will gladly give every assistance to the prospective traveller. New York: Messrs Griffin & Howe Inc., 234/236 East 39th Street.

**Cables.**—"Giraffe," Nairobi.

## ADMINISTRATION

**S**INCE July 23, 1920, the territory formerly known as the East Africa Protectorate, excluding certain dominions of the Sultan of Zanzibar, has been a Crown Colony under the name of Kenya Colony. It is administered by a Governor and Commander-in-Chief, the present holder of the office being His Excellency Lieutenant-Colonel Sir Edward W. M. Gigg, K.C.V.O., C.M.G., D.S.O., M.C., who was appointed in 1925. There are Executive and Legislative Councils, the former consisting of four members in addition to the Governor, the latter of eleven elected representatives of the European community, three nominated members, two representing the Indian population, and one the Arabs, and a sufficient number of official members to give a majority in the Council. Legislation is by ordinances made by the Governor with the advice and consent of the Legislative Council.

The colony is divided into five Provinces, namely: Seyidie (capital Mombasa), Ukamba (capital Nairobi), Lanaland (capital Lamu), Kikuyu (capital Nyeri), and Nyanza Province (capital Kisumu). In addition, there are the Northern Frontier District (capital Moyale), the area known as Suk Kamasia (capital Eldama Ravine), and the Masai Reserve (capital Narok). For administrative purposes the colony is divided into white-settled areas under Resident Commissioners, and native reserves under District Commissioners.

**DEFENCE.** In time of peace the defence of the colony is entrusted to the 3rd and 5th battalions of the King's African Rifles, a force recruited from various parts of the colony, Somaliland and the Sudan. These are under an Officer Commanding Troops in Kenya Colony and Protectorate, who is also responsible for the organisation and administration of the European Defence Force of the colony created in 1921, and in which all European British residents between the ages of 16 and 60 are compulsorily enrolled. This force, in the event of war, is liable for service anywhere in East Africa. The two battalions of the King's African Rifles are officered by British Regular Army Officers, who are seconded from their British units for service under the Colonial Office. Both the battalions have to their credit extensive active service, either during or since the War.

**LAW AND JUSTICE.**—A British Court of Appeal and a High Court sit at Mombasa. Inside the territory still partially subject to the Sultan of Zanzibar, Mohammedans may be tried by their own courts. Matters are complicated, but, speaking broadly, the law consists of Indian Acts and Local Regulations, supplemented by English Law. Natives are governed according to the laws and procedure laid down in the Native Courts Regulations.

**POSTS AND TELEGRAPHS.**—The post and telegraph systems of Kenya and Uganda are combined, and the two countries are members of the Universal Postal Union. The Indian Post Office Act is in force, the administration being in the hands of a Postmaster-General. Rates of postage and other charges are fixed by the Governor-in-Council, subject to certain maximum limits imposed by the Post Office Ordinance. There are now departmental post offices established in all the settled European areas in both countries, the number of post offices and agencies in Kenya in 1924 being 95, with an average of 20,800 inhabitants to each post office. The bulk of the native population may, however, for all practical purposes be disregarded as users of post office services, the very scattered European population and

3. "Safari" with some Ivory Trophies.

the Asiatic community (which lives mostly in the towns) being almost entirely responsible for the 5,000,000 letters, 100,000 parcels and 2,500,000 pieces of other matter which are now dealt with annually by the Department.

**CONVEYANCE OF MAILS.**—When postal services to places off the railway were first established, mails to and from them were conveyed almost exclusively, owing to the absence of other suitable means of transport, by native mail runners, and it has to be placed to the credit of the African that he performed this service in a remarkably loyal, regular and courageous manner; in fact, he is still doing so in the more outlying districts. In the case of long distances, relays of runners travelling night and day are employed, and where there has been failure or delay, this has invariably been found to be due to causes beyond the runner's control. More than one runner has lost his life in attempting to ford flooded rivers or from lion attacks, while there are two instances on record of runners having been waylaid and murdered and the mail looted. With increasing road and rail

facilities, however, the mail runner and ox cart are gradually being displaced by mechanical transport, though there still remain in existence some 750 miles of mail runner routes.

**POSTAL RATES.**—Postal rates, inland and for British possessions, are: letters, 20 cents first oz., 15 cents per oz. over; post cards, 15 cents; book post, 10 cents per oz.; newspapers, 10 cents each. The universal foreign rates are: letters, 30 cents first oz., and 15 cents afterwards; cards and book post, as above. Parcel post rates to the United Kingdom are: 3 lbs., Sh 2 30; 7 lbs., Sh 4 00; 11 lbs., Sh 5 30. Inland rates are Sh 1 50, Sh 3 00, and Sh 4 50 respectively, and for delivery at Uganda offices, Sh 2 00, Sh 4 00, and Sh 6 00.

**TELEGRAPHS.**—The first telegraph line ever constructed in East Africa was laid between Mombasa and Lamu, a distance of 200 miles, by the British East Africa Company. With the construction of the Uganda Railway telegraphic communication was greatly extended. The whole system was linked up by an overland route with the South

African system in 1921, and as the local system extends to Nimule on the Sudan boundary, there is now only a gap of 100 miles between Nimule and Rejaf to be bridged in order to establish through land line communication between Alexandria and Capetown. A landline directly connecting the local system and that of the Belgian Congo was completed and brought into use in 1924.

**Cables** — The overseas cable service is maintained through an Eastern and South African Telegraph Company's branch cable which connects Mombasa with Zanzibar, one

the foregoing, press, Sh 2 00 the first 32 words, each additional 16 words, Sh 1 00, to the United Kingdom and Europe the rate is Sh 2 50 per word to India, Sh 2 50 per word, to the Union of South Africa, Sh 2 60 cable and Sh 1 40 overland, and to Southern Rhodesia, Sh 2 70 cable and Sh 1 40 overland.

**Wireless** — The wireless service is limited to the coast, and consists of stations at Mombasa, Kisumu and Lamu. The Mombasa station was completed in 1915, at a cost of £15,000. The approximate cost of the Kisumu station was £7,000. Radiotelegraphy in the colony is controlled by

general public in that year, during which 18 private subscribers were connected. The Mombasa exchange was also first started for official purposes only, and was situated in the Mombasa Railway Station. It was taken over by the Department in January 1906, and also made available for private subscribers in 1908.

Small exchanges for official purposes, mainly are installed at Nakuru, Kisumu and Kiambu. There are two former party line systems in operation, one at Kori and the other at Kiambu. This latter is connected with the Nairobi exchange by a trunk line.

**PUBLIC HEALTH.** — There has been an efficient Public Health Administration in Kenya since the establishment of a Medical Department towards the close of the last century. Its work has often been cruelly hampered by a depleted staff and inadequate funds, but to-day it can be safely asserted that the general health of the colony compares very favourably with that of any other country situated in the same degree of latitude. Plague has always been a menace, possibly the greatest that the colony has experienced, and in one year (1920) in the North Kavirondo District alone the deaths from this cause were estimated at between 1,500 and 2,000. Small-pox, once a scourge, has, thanks to vaccination, been almost stamped out, sleeping sickness was once terribly epidemic, but has not recurred for a long time, malaria is common in the coast zone, but is as preventable in East Africa as elsewhere, and enteric fever is said to be widespread, though with the improvements in sanitation that are taking place it may before long be eliminated.

**HOSPITALS** — There are European hospitals at Mombasa, Nakuru, Kisumu and Nairobi. There are also native hospitals at Headquarter Stations in each Province, in addition to which there are civil dispensaries and native military hospitals at various points.

**PUBLIC WORKS.** The Public Works Department was inaugurated in 1896, but work was confined to Mombasa Island until 1901. In 1908 the Head Office of the Department was transferred to Nairobi. The branch office at Nairobi was opened in 1902, at Kisumu in 1903, at Naivasha and Nyeri in 1906, and at Eldoret in 1910. The chief duties of the Department are the construction and maintenance of engineering and building works on behalf of the Government, other than those in charge of the Kenya and Uganda Railway. The chief individual works of importance which have been executed by the Department are the following: (1) Administration Offices, Mombasa (£4,247), (2) Mombasa Water Works (£117,622), (3) Thika Railway (£61,796), (4) Nakuru Water Works (£8,607), (5) Nairobi Drainage System (£59,815), (6) Government House, Nairobi (£10,526), (7) European Hospital, Nairobi (£9,383), (8) Kabete Laboratory (£17,524), (9) Nairobi Gaol (£11,178), (10) Machakos Native Hospital (£7,004), (11) Kisumu Native Hospital (£7,050), (12) Treasury, Nairobi (£9,693).

The road system of the colony and protectorate, which now comprises some 4,000 miles of track available for traffic, has been constructed and maintained by the Department, either directly or through various agencies, at a cost of nearly three quarters of a million since the financial year 1905-6. The various Government buildings have been constructed and maintained at a total cost of nearly a million since the same year. In 1925 the Legislative Council adopted the report of a select committee intended to form the basis of a large programme of public

SIR EDWARD W. M. GRIGG, K.C.V.O., C.M.G., D.S.O., M.C., Governor and Commander-in-Chief of the Colony and Protectorate of Kenya

of the company's main stations on the East Coast cable route. This branch cable was laid about 1888 under a concession from the Sultan of Zanzibar, granting the Cable Company "the sole and exclusive right for a term of 50 years of landing ocean telegraph cables from foreign countries" to any point on the coast between Varsheik on the Somali coast and Jungi near Cape Delgado.

**Telegraph Rates** — Inland (Kenya and Uganda) Plain words, 10 cents per word; code, 15 cents per word, urgent, double

the Wireless Telegraphy Ordinance of 1913, which provides that private stations, whether commercial or experimental, can be established and worked only under licence from the Government.

**TELEPHONES** — Public telephone exchanges are established at Nairobi and Mombasa. The Nairobi exchange had its origin in a small switchboard installed in the Government Offices in 1906 for official use only. This was taken over by the Post Office in 1908, and was made available for the

works, involving a colonial loan of nearly £3,000,000. The major works contemplated include the building of schools, provision of water supplies, town planning, maize drying, and cold storage plant, houses for African and European officials, offices for the K. A. R. lines, hospitals, roads, bridges, a Supreme Court, and improvements at Government House. The works will be spread over several years.

### FINANCE AND BANKING

**T**HE finances of Kenya have undergone a very satisfactory change since, in 1923, expenditure exceeded revenue by £298,186, that excess being largely accounted for by the liquidation of war charges and some miscellaneous items. In 1924 revenue exceeded expenditure by £259,954, and at the end of that year the floating debt was converted at a surplus of £59,000. The year 1925 was expected to provide a further balance, increasing the surplus to some £104,000.

This ability of the colony to show such a balance is principally due to an increase in the Customs revenue, which amounted during the first six months of 1925 to £609,516, against an estimate of £500,000, and was £135,000 more than was collected from January to June 1924.

**BANKING FACILITIES.** The following banks have branches in the colony:

**NATIONAL BANK OF INDIA, LIMITED.** Registered in London under the Companies Act of 1862 on March 23 1866, paid up capital, £2,000,000. Head office,

London with branches in Kenya at Mombasa, Nairobi, Kisumu and Nakuru. Bankers to the Colonial Government.

**NATIONAL BANK OF SOUTH AFRICA, LIMITED.** Established 1862; paid up capital, £2,209,165. Head office, London, and branches in Kenya Colony at Eldoret, Kisumu, Mombasa, Nairobi and Nyeri. (See "Finance," Union of South Africa section.)

**STANDARD BANK OF SOUTH AFRICA, LIMITED.** Registered in the Transvaal, paid up capital £2,075,500. Head office, Pretoria, and branches in Kenya at Eldoret, Mombasa and Nairobi. (See "Finance," Union of South Africa section.)

**CURRENCY.** The currency of the East African Protectorate originally consisted of the British India and the late Imperial British East Africa Company rupee as unit, with subsidiary coins, while the pound sterling was also legal tender at the rate of Rs 15 to the pound. In 1907 a coinage was introduced consisting of the rupee divided into cents. Owing to the appreciation of the rupee in 1917, which by the early part of 1920 was quoted in India at 28.9d, it was decided to fix the exchange at 28 sterling per rupee. This order came into operation in July 1920, and a new currency was adopted with the florin (28) as unit divided as before into cents, and on June 22, 1921 the rupee and its subsidiary coins were demonetised. The new currency was however found to be unsatisfactory, and in 1922 in both Kenya and Uganda the shilling was substituted for the florin. The currency now in circulation consists of Silver coins one shilling (legal

tender to any amount) and the 50 cent piece (legal tender up to Sh 20), bronze coins 10 cent, 5 cent, and one cent pieces (legal tender for amounts not exceeding one shilling). Notes to the value of 1,000, 200, 100, 20, 10 and 5 shillings are legal tender up to any amount. There are also still in circulation the East African rupee and florin currency, both in coin and notes, but these are being gradually withdrawn.

**EXCHANGE.** In order to maintain the rate of exchange between the United Kingdom and the colony at par, local coins or notes may be tendered at the Currency Offices in East Africa in exchange for mail or telegraphic transfers on London. The premium charged on such transfers is at present 1½ per cent on mail transfers and 1 per cent on cable transfers. For transfers on Nairobi a rate of ½ per cent is charged.

**LOAN ACCOUNTS.** In 1921 the colony floated a loan of £5,000,000 on the London market, the annual charges for sterling interest and sinking fund on which amount to approximately £365,000 of which £310,000 is for the Uganda Railway account and £55,000 for the Kenya Colony account. In addition, the Imperial Government in 1922 granted a further loan of £3,350,000 free of interest for five years, which, together with another loan of £3,000,000 to be floated at a later date, both secured on the revenues of Kenya and Uganda and the Uganda Railway, will provide funds for the completion of the harbour scheme at Kilindini, for the continuation of the Uasin-Gishu branch of the Uganda Railway to the Eastern Province of Uganda, and for certain other railway works.

THE INDIAN BAZAAR, NAIROBI

THE BUSINESS CENTRE, GOVERNMENT ROAD, NAIROBI.

## CITY OF NAIROBI

**N**AIROBI, the administrative centre and capital of Kenya Colony, dates as a town only from 1899, in which year it was founded during the building of the Uganda Railway, chiefly because of its position at the extremity of the grass-clad plains and the commencement of the ascent to the upper highlands. The situation of Nairobi is superb, for, though lying at the foot of the Kikuyu Hills, it has an elevation of 5,450 ft above sea-level, and a climate which, as a rule, is delightful, being neither hot nor cold, while rain usually falls each month.

**BUILDINGS.**—The main thoroughfare is Government Road, leading from near the Station almost to the suburb of Parklands. Along it most of the prominent offices and shops are situated. From near its centre Sixth Avenue branches off at right angles and leads across the railway line to the hill on which Government House, the Civil Hospital, and a number of fine residences have been built. On the summit of the hill is the Nairobi Club. Sixth Avenue itself contains some of the handsomest buildings in Nairobi, and many of the new Government Offices are being built here. The Post Office, the Treasury and the District Commissioner's Office are the most substantial buildings at present. There are Anglican, Roman Catholic and Presbyterian churches, a Mosque and a Synagogue, also two theatres and a market hall.

**CLUBS.**—Club life in Nairobi is not unlike club life in any part of the Empire. There

are no less than four European clubs in Kenya's capital catering for all classes of the male population. Of these, the Nairobi is the best known, and has a really luxurious club house. The European, Parklands, and City Clubs also offer the usual facilities for social intercourse and recreation to their members and to visitors. Both the Y M C A and Y W C A have local premises.

**FIRE BRIGADE.** Preventive measures in regard to fires were in the hands of the Police till 1921, though the few existing appliances were the property of the Municipality. In that year a native brigade was organised. As the result of several fires in 1921 and 1922 the brigade was put on a more efficient basis. The organisation now consists of a white firemaster and deputy and 12 native firemen, a fire station with firemaster's house and firemen's quarters attached, a motor van carrying two large 35-gallon extingisher tanks, hose, hose cart, escape, hand extingishers, etc. There are 52 hydrants serving the principal streets of the commercial area, but in the suburbs the distribution of water mains is not close enough to provide a sufficient service against fire, and the chemical extingishers are the only means of protection.

Several prominent buildings were destroyed in a disastrous fire which completely burnt out four blocks in Government Road on February 20, 1926, among these being the printing and publishing offices of the "Kenya Observer" and the "Farmer's Gazette." The damage was estimated at over £100,000.

**MUNICIPALITY.**—The present Municipality or Corporation of Nairobi received its charter in 1919, and consists of 16 members, who are nominated by the Governor after an informal election conducted by the Municipality. The Corporation controls and administers the roads, water supply, drainage, fire-brigade, public market, slaughter house, and street lighting (electrical). The municipal revenue is derived from profits on certain services rendered, licences of various kinds, and the rate on unimproved site values. Several services, such as refuse removal, street lighting, etc., are performed without a direct charge, and it may be roughly stated that the profits derived from services rendered produce an amount approximately equal to the revenue derived from the rate on unimproved site values. The balance sheet of the Corporation showed in 1925 assets in excess of liabilities of approximately £40,000. Municipal loans amount to £60,000, whereof £28,000 has been expended on the water supply, the development of native quarters, and the purchase of road plant, while the remainder is earmarked for water supply and sewerage. A water-borne sewerage system for the central area of the town is nearing completion.

**NEWSPAPERS.**—The English papers published in Nairobi are the "East African Standard," the "Kenya Observer," and the "Farmer's Gazette." The "East African Standard" publishes both daily and weekly editions. The "Democrat," an Indian newspaper, is published weekly, and the "Kenya

Medical Journal" monthly. The "Official Gazette" of the colony and protectorate is issued every Wednesday.

**PARK.**—The Corporation of Nairobi is fortunate in possessing a magnificent piece of virgin forest, 200 acres in extent, scarcely a mile distant from the centre of the town, which forms a public park of great natural beauty. In the heart of this forest a large clearing has been made, in which a rustic pavilion and dancing floor have recently been erected. A cross road has been driven through the forest to link up two of the main trunk highways leading out of the town—the Limuru and Kyamburi Roads. The undergrowth has been cleared and a number of woodland paths have been formed.

**POPULATION.**—The population of Nairobi is about 25,000, of which some 3,000 are Europeans and 10,000 Asiatics. Nairobi has always been one of the most cosmopolitan of towns, and the geographical distribution of its inhabitants calls for mention. The town in its earlier days consisted of Government Road, Market (now River) Road, Victoria Street, and the Bazaar, all lying on the plain to the south of the swamp through which Nairobi River runs. There were also the widely scattered European suburbs. The Indian population of from 3,500 to 5,000 was massed in the nine crowded acres of the Bazaar, and Government Road and Victoria Street were mixed European and Indian business centres. The Africans (excepting servants, who were scattered throughout all parts of the town) resided mainly in three large villages of grass huts on Crown land to the north of the river. In the 1910-14 period of development, River Road became a second Bazaar. Government Road became predominantly European, and Sixth Avenue and the new streets adjoining it (Hardinge Street, Eliot Street, Standard Street, and Sadler Street) also developed as European business thoroughfares. The Africans have since been isolated on a location of their own near the Police Training Depot.

**SPORT.** Nairobi is a great sporting centre, cricket, football, tennis and polo all having their grounds and votaries. Just outside the town is the racecourse, on which several two-day meetings provided by the Jockey Club take place every year. The Nairobi Golf Club, the oldest in East Africa, has its links on a plateau which overlooks the Athi Plains, and possesses a view which embraces two snow-clad mountains, namely Kenya, 120 miles to the north, and Kilimanjaro, 110 miles to the south. This is the only 18-hole course in East Africa, having a total length of 6,600 yards, a comfortable club house and a membership of over 400. Zebra, antelope and gazelle all use the links for grazing, and even lions and leopards are said to have been encountered and driven off with a mibick. The Royal East African Automobile Association has its headquarters at Nairobi, where information, maps, etc., can be obtained.

**WATER SUPPLY.**—One of the first acts of the Corporation after its formation was to improve the water supply of the town. The reservoir belonging to the Uganda Railway and situated 14 miles up country was bought at a cost of £20,000, payable in yearly instalments, while two new springs yielding about 600,000 gallons and 175,000 gallons respectively per diem were opened up and connected with the town's supply at a cost of £2,300. The separate water supply of the outlying suburb of Muthaiga was purchased for £6,500. Investigations directed towards the purification of the main supply, which was found to be impure at its source, and to the increasing of the storage have since been taken in hand with satisfactory results.

## BUSINESS ENTERPRISES

**HOWSE AND McGEORGE, LIMITED.**

**Inception.** This firm of chemists and druggists was established at Nairobi in 1912 by the present partners Messrs L. A. Howse and R. McGeorge.

**Development.** The company started operations in a small way, but these have grown to such an extent that it now owns a large central store, with branches in all the principal centres of the country, and further expansion of business is assumed in order to keep pace with the ever increasing needs of so rapidly developing a country as East Africa.

**Activities.** Apart from the company's main activities as chemists and druggists it conducts a large business in toilet veterinary and agricultural sundries and also carries a representative stock of photographic appliances. The products of most of the leading British houses manufacturing the above lines are always obtainable at the company's headquarters and branches.

**Branches.** These were opened by the firm at Kampala (Uganda) in 1913, at Eldoret in 1919 and Nakuru in 1920 (both in Kenya), Jinja (in Uganda) and Kitale (in Kenya) in 1925 and Dar-es-Salaam (Tanganyika) in 1926.

**Address.** Zebra House, Government Road, Nairobi P.O. Box 28.

**London Agents.** Messrs. Tozer, Kemsley and Millbourn, Ltd., 84, Fenchurch Street, E.C. 3.

**Cables.** "Zebra" Nairobi.

**Bankers.** The Standard Bank of South Africa, Ltd.

**S. JACOBS LTD.**

**Foundation.** The business of this firm was founded in the year 1910 in a small wood and iron building in Government Road, Nairobi.

**Development.** At that time the company specialised in hardware and household goods, but with the growth of the colony and consequent increase in the needs of the public other departments were added. To day the firm's large building occupies one of the most important sites in the town and functions as a complete departmental store.

**Departments.** These include outfitting, dressmaking, men's, women's and children's clothing, hardware, glassware, provisions, wines and spirits, butchery, tobaccos and sports accessories. The company has also erected an up-to-date factory equipped with modern machinery, where native woods are manufactured into furniture of all kinds.

**Mail Order.** From time to time catalogues are issued and sent all over the country, thus serving a public who have no opportunities of visiting the company's showrooms. In this manner goods from the firm reach the outposts of Uganda and the Congo, Tanganyika, Zanzibar and other distant territories.

**Agencies.** The company holds agencies for Crawford's whisky and Hennessy's brandy, and it is the sole distributor for Fendler's wines and "His Master's Voice" gramophones.

**London Representatives.** Messrs. Carters, 6, Princes Street, E.C.

**Premises.** Government Road, Nairobi P.O. Box No. 255. Branches have been established at Nakuru and Eldoret.

**Bankers.** The National Bank of India, Ltd.

**Cables.** "Advalorem," Nairobi.

**THE MOTOR MART AND EXCHANGE LTD.**

**Inception.** This company, which is the oldest established motor enterprise in Nairobi commenced operations in 1917.

**Development.** The firm was one of the first to realise the suitability of the light car for the needs of the country, and was largely instrumental in introducing the one-ton truck for commercial use.

**Activities.** The company is a direct importer of motor cars and trucks, and represents well-known motor manufacturing firms. It carries large stocks of spare parts for all cars and trucks, and also accessories, tyres, benzine, oil, and other motorists' sundries. Its operations extend throughout Kenya, Uganda, Tanganyika and Zanzibar.

**Chevrolet Department.** This department is operated separately from the rest of the business, and a special staff is employed both for the sale and service of Chevrolet products. In the last three months of 1925 two hundred and fifty cars and trucks were delivered, and one hundred and twenty more were booked for delivery in January 1926.

HOWSE AND McGEORGE LTD., Nairobi.

1. Head Office.
2. Showroom.

**S. JACOBS LTD., Nairobi**  
Leading Departmental Store in the City.

**Hupmobile Department.** The company has held the agency for these cars ever since it commenced operations. The new eight cylinder model runs between Nairobi and Mongala, the Nile embarkation point for Cairo, and this model recently travelled from the northern frontier via Nairobi to the Nile.

**Service.** The company has its own modern machine shop and employs one of the biggest staffs of mechanics in the country. It does its own assembly work and has a battery equipment, also a special service department. The "Safari" body, peculiar to and in practically universal use throughout the colony, is constructed at the works to clients' own specifications.

**Premises.** The new premises now under construction, covering an area of 15,000 square feet, will, when complete, be thoroughly modern and up-to-date. They are situated in the centre of Sixth Avenue, the heart of the motor industry.

**Branch.** A branch is maintained at Nakuru, in the centre of the agricultural districts.

**Directorate.** Managing director, Major B. Pitt, secretary, Mr. K. Kerth.

**Cables.** "Motomart," Nairobi, codes A B C 5th Edition and Bentley's.

**Bankers.** The National Bank of South Africa, Ltd.

**HAMILTON, R. O., LTD.** Government Road, Nairobi. Manufacturers' representatives, insurance agents and produce brokers. Bankers: The National Bank of India, London and Nairobi. Cables: "Glaswegian," Nairobi.

**NEW STANLEY HOTEL.** Nairobi. Accommodation: 70 bedrooms, hot and cold baths, spacious lounges, and excellent dining room. Cables: "Snuggest," Nairobi.

**NORFOLK HOTEL.** - Nairobi. Standing in three acres of ground. Private suites and

bungalows obtained by arrangement, and proprietor arranges short "safaris" on the hotel farms for big game hunters. Cables: "Norfolk," Nairobi.

**SAFARILAND LTD.** Sadler Street, Nairobi. Outfitters of safari and scientific expeditions, financial, insurance and general agents. Cables: "Travellers," Nairobi.

**TODD, J. H. S., & CO.** Hea Buildings, Government Road, Nairobi. General importers and exporters, buyers and shippers. Agencies: U.S.A., India, Australia, Ceylon, China, Japan, etc. London office: 29/35, City Road, E.C.4. Cables: "Agenticus," Nairobi.

**WHITEAWAY, LAIDLAW & CO. LTD.** Nairobi. Incorporated in England. Drapers, outfitters, glass and china merchants, importers of boots and shoes, etc. Branches at Kampala, Mombasa, Eldoret, and Nakuru. Cables: "Warfield," Nairobi.

**THE MOTOR MART AND EXCHANGE LTD., Nairobi.**

KILINDINI HARBOUR, MOMBASA, WITH LANDING WHARF IN BACKGROUND

## CITY AND PORT OF MOMBASA

### CITY

**A**LTHOUGH Mombasa is an important port of entry and the meeting place of many races, neither the old native town nor its modern surroundings is of striking interest. Formerly the capital of British East Africa, it contains some good public buildings, and many of the old houses have handsome carved doorways. There are several stores of merit, a few of them being European, but mostly they are kept by Goanese.

**BUILDINGS.**—Apart from the Fort, which is described subsequently, there are the Government Offices, several banks and other substantial structures. Government House stands on the Bluff facing the entrance to Mombasa Harbour, a little beyond the Railway Station and the Civil Hospital. Just above the Fort is H.M. High Court of East Africa, opened in 1902. Not far from the Metropole Hotel is a Hostel of the Pères du Saint Esprit, and the Seaman's Institute at Kilindini, opened in 1922, contains a Main Hall erected by his widow in memory of Captain Barry, R.N., who fell in the East African campaign.

**CHURCHES.**—The Anglican Cathedral, a stone building of a somewhat heavy Oriental type, was erected in 1903-05 to the memory of Bishops Hannington and Parker and the Rev. H. Wright. There is a Roman Catholic Church attached to the mission of the Pères du Saint Esprit which possesses beautiful interior decorations, also some small Mohammedan mosques and a Hindu temple.

**CLIMATE.**—Though the heat at Mombasa is very trying, especially during the summer, the climate is not unhealthy, and, in spite of a water supply which is capable of improvement, enteric is not common. Over a period of 33 years the average annual rainfall was 47.05 inches.

**GARDENS.**—In the Public Gardens, which have been carefully laid out and provide a pleasant oasis in what is perforce a somewhat arid setting, there is a statue of Sir

William MacKinnon, Bart., who founded the Imperial British East Africa Company in 1887. These gardens and those of some of the British residents' villas in Mombasa are very pretty; crotons especially grow well in the island, but the vegetation is generally less luxuriant than is the case at Zanzibar. The quaintly-shaped baobab trees are a prominent feature of the landscape.

**FORT.** The most prominent building in Mombasa is the great red Fort of Jesus, which is of quadrangular form and was erected by the Portuguese in 1503-05, at the time when Mombasa was constituted the capital of their East African possessions. An inscription recording this event is to be seen inside the porch. On August 16, 1631, all the Portuguese in Mombasa, numbering over one hundred, were murdered by the then reigning Sultan Yusuf, otherwise known as Dom Jeronymo Chingouha, after which he took up his residence in the Fort. A fleet was sent from Goa to punish the rebel, who, however, succeeded in capturing two of the vessels, he then dismantled the Fort, destroyed the town, and escaped to Arabia. Four years later the Portuguese were again in possession, and the Fort was re-built.

The great siege by the Arabs commenced in March 1696, and continued for 33 months, the entire population of the island, consisting of 50 Europeans and some 2,500 natives, taking refuge in and round Fort Jesus. Towards the end of 1697 reinforcements arrived and the siege was prolonged until December 1698, when the Arabs stormed the walls and massacred the survivors—eleven men and two women only. Two days later the relief fleet from Goa appeared before the town, but left on ascertaining the fall of the Fort, and not until 1727 did the Portuguese flag once more fly from the citadel. In 1729, however, the people of Mombasa invited the Arabs to return, with the result that the Portuguese were once more driven from the town. Forty years later they made a last unsuccessful attempt to regain their lost supremacy.

The Fort, over which the red flag of the Sultan of Zanzibar is flown, is now used as a prison. Opposite the Fort is a memorial to Colonel Wavell, who raised the Arab Rifles for service in the war against Germany, and was then killed near Gazi.

**POPULATION.** The population of Mombasa Island is approximately 45,000, made up as follows: Europeans, 650; Asiatics, 7,575; Goans, 724; Arabs, 5,461; Anglo-Indians, Seychellois, etc., 174; Natives, approximately, 30,000.

**SCHOOLS AND COLLEGES.**—In connection with the Memorial Cathedral is the Buxton High School for Boys, and near by is a Convent School for Girls. Technical and other education is also given to native boys by the Pères du Saint Esprit.

**SPORT AND RECREATION.**—The climate of Mombasa is against the more strenuous forms of athletic exercise. Cricket is regularly played by the British residents and visitors, and the Mombasa Golf Club, with an excellent 9-hole course, has a membership of over 200. The Mombasa Sports Club concerns itself almost entirely with cricket and lawn tennis. The Yacht Club has been in existence since 1910, and has a fleet of nine boats. The sea fishing off Mombasa is said to be excellent.

**SUBURBS.**—Mombasa has, properly speaking, no suburbs, but on the mainland are Freretown, the principal C.M.S. Station, and Kisauni, a native village of some importance.

### VISITORS' GUIDE

**CHURCHES.**—Memorial Cathedral—Macdonald Terrace; Roman Catholic—Kilindini Road.

**CLUBS.**—Caledonian Society, Mombasa Golf Club, Mombasa Yacht Club, Sports Club.

**CONSULATES.**—Belgium—Station Road; France—Station Road; Italy—Macdonald Terrace; Portugal—Vasco da Gama Street.

**HOTELS.**—Kenya—Kilindini, Metropole; Palace.

## PORT

Mombasa, with its two harbours, is the principal port of Kenya Colony and Protectorate. It is situated on an island three miles long by two wide, the principal harbour, Kilindini, "the deep place," being on the west side of the island. From Mombasa the Uganda Railway connects with Nairobi, the capital, and Kisumu, the Lake Victoria terminus, 587 miles away.

**ACCOMMODATION.**—Both the Mombasa and the Kilindini harbours are well sheltered by the natural formation of the coast-line and outlying reefs, and are fairly easy of access, with good leading marks in both harbours. The depth of water in the channels of the harbours ranges from  $5\frac{1}{2}$  to 18 fathoms, low water springs. Mombasa harbour is mainly used by small steamers and native craft (dhows) trading between the African ports, Persia, India and Madagascar. Wharves have been constructed at M'Baraki Creek by a private company. Near these a motor ferry gives access to the road running south by Gazi, and eventually to Fanga, Korogwe, Kilosa, Munga, and Tukuvi to Mwaya on Lake Nyassa. A stretch of water adjoining Mombasa harbour, but further inland, is known as Port Tudor. This is divided from Kilindini harbour by the railway bridge.

At Kilindini, the channel into which is 600 ft wide and a mile long, the wharf, 550 ft long, with a projecting pier 100 ft in length, is being extended at a cost of over a million sterling to cope with the increasing traffic. The new works which were completed in 1925 have added 1,210 ft of wharfage, and there is now deep sea berthing alongside the quays. The Magadi Soda Company has its own pier and landing place. Good fresh water and provisions are obtainable at the port, and competent stevedoring and lighterage companies are available. Oil fuel is also available.

**ADMINISTRATION.**—The question of the control of Kilindini port has produced an acute controversy, the rival claims of an exclusive State control and of a Harbour Board administration having been hotly contested. In 1926 the report of a Commission recommended that the harbour be placed under the control of the manager of the railways, that a Harbour Advisory Board be constituted to advise the general manager, that the harbour and all the land connected therewith remain the property of the Kenya Government and outside the jurisdiction of the Inter-Colonial Railway Council, and that the general manager of the railways be responsible to the Governor of Kenya.

The Advisory Board was to consist of representatives of the Kenya and Uganda Governments and of shipping and commerce. Further recommendations were to the effect that cargo-handling be done by private contractors on the basis of tenders, that the Government negotiate for the termination of the present lease of Mbaraki Pier by the African Wharfage Company, and that the construction of two additional deep-water berths at Kilindini be undertaken.

**COMMUNICATIONS.**—The following regular steamship services are maintained: monthly service to and from London by the Union Castle Mail Steamship Co. and the British India Steam Navigation Co. Fort-nightly service to and from Marseilles by the Messageries Maritimes. Monthly service by the Italiana Navigation Co. Three-weekly

1. Centre of Mombasa, with the Standard Bank's and the African Mercantile Co.'s Premises on the left and the Treasury in the centre.
2. Street leading to Customs House through part of the Old Town.
3. Mombasa end of the Kilindini Road.
4. Redgers Road, showing the four Buildings comprising the Premises of the Old East African Trading Company's Head Office in right foreground.

service to and from Liverpool to Beira by the Clan Elberton-Harrison Line. Fortnightly service by the Holland East Africa Line. Monthly service by the Deutsche Ost Africa Line. Fortnightly mail service to Bombay and Durban by the British India Steam Navigation Co. Coasting services by the British India S.N. Co. and Messrs. Cowasjee Dinshaw.

**PILOTAGE.**—Optional, pilotage fees range from 80s. for vessels up to 500 tons to 170s. for over 1,500 tons.

**PORT REGULATIONS.**—(1) A black ball, hoisted at the south-west yardarm of the flagstaff at Ras Serani, signifies that a vessel is leaving Kilindini harbour. Vessels bound in shall not approach within half a mile of Ras Serani while the black ball remains hoisted. (2) A white ball hoisted on the

### BUSINESS ENTERPRISES

#### SMITH, MACKENZIE & COMPANY.

**Inception.** This firm was founded at Zanzibar in 1877, and extended its operations to Mombasa in 1890. It is the oldest established British house on the coast and originally had branches on the caravan route from Mombasa to Kampala in Uganda. On the advent of the Kenya and Uganda Railway these branches became unnecessary, and were closed down in 1898.

**Shipping Agencies.**—The firm is agent for the Peninsular and Oriental and British India Steam Navigation Companies and associated lines in connection with which it does one of the largest shipping businesses in East Africa. The principal routes along which they operate are those to England, Europe, India, and South Africa. The company is also agent

**General Merchandise.**—Messrs. Smith, Mackenzie and Co. export all primary products and import general merchandise; they also act as clearing and forwarding agents for both exports and imports.

**Representations.** Some of the principal firms represented by the company are Balfour Williamson & Co. of New York (grey sheeting), Vlissingen & Co. Rotterdam (printed cotton goods) and Ledward and Faylor, of Manchester (white shirting, etc.).

**Head Office.** Kilindini, Mombasa Island, P.O. Box 102, Mombasa.

**Branches.** These are maintained at Zanzibar, at Dar-es-Salaam, Tanga and Lindini Tanganyika Territory, at Nairobi and Lamu in Kenya, and at Kampala in Uganda.

**Bankers.** The National Bank of India, Limited.

**Cables.** "Mackenzies," Kilindini.

1. NDIA KUU, THE ENTRANCE TO THE BAZAAR, MOMBASA.

2. THE OLD HARBOUR OF MOMBASA.

flagstaff on the railway pier, Kilindini, signifies that a vessel is approaching the channel to Kilindini harbour. Vessels must not leave their moorings while the white ball remains hoisted.

**SHIPPING AND TRADE.**—During 1924 steamers numbering 302, of which 248 were British, entered the port. The shipping also included 1,205 sailing vessels, mostly Arab dhows.

In 1925 the remarkable total of 36,764 passengers passed through Mombasa, and 440 steamers entered and left the harbour, the total net registered tonnage of these vessels being 1,180,493. The total tonnage of imports landed in 1925 was 346,714, as against 220,333 tons in 1924, and of exports shipped, 293,326 tons, compared with 259,326 tons.

for the Union Castle Mail Steamship Company at Tanga, Dar-es-Salaam and Zanzibar.

**Insurance.** The firm is agent for Lloyd's and for the Marine and Atlas Assurance Companies and is in a position to accept practically all classes of risks.

**Oil.** Smith, Mackenzie & Co. act as distributing agents for the British Imperial Oil Company (S.A.) Ltd., which has its own main installation at Kilindini, where its products are stored in bulk and packed for distribution.

**Coal and Bunkering.**—The company is manager for the African Wharfage Company, Ltd., and as such is in a position to act as coal and bunkering agents, and stevedoring and lighterage contractors. The African Wharfage Company, Ltd., operates its own fleet of lighters and tugs at Kilindini, Dar-es-Salaam and Lindi.

#### THE EAST AFRICAN LIGHTERAGE & STEVEDORING CO. LTD.

**Inception.** This company commenced business at Kilindini in the year 1911.

**Activities.**—For lighterage and stevedoring operations the firm at present owns a fleet of forty-six lighters, with a carrying capacity of 7,000 tons, these vessels being served by five tugs. Twelve more lighters, with a capacity of 200 tons each, have been ordered, and are now in course of construction.

**Contracts.**—The company is contractor to the following: The Clan Line, the Ellerman Line, the Harrison Line, the Ellerman Bucknall Line, the German East Africa Line, The Holland Africa Line, the Scandinavian East Africa Line, Osaka Shosen Kaisha Line, R. P. Houston & Co., the Kenya and Uganda Railway, the Vacuum Oil Co. Ltd., Messrs.

Mitchell Cotts & Co., the Kenya Farmers' Association, Ltd. and the Anglo-Persian Oil Co. Ltd.

**Directors.** - Messrs. T. B. P., F. T. G., and J. J. Davis.

**Associated Companies.** There are associated companies operating at Dar-es-Salaam and Tanga.

**Head Office.** 211, Point Road, Durban.

**Bankers.** The National Bank of South Africa Limited.

**Cables.** "Lightorage."

(See illustration, page 386.)

#### MOMBASA BONDED WAREHOUSE COMPANY LIMITED.

**Inception.** This company was formed in 1918 by various local firms to provide exporters with facilities for the storing of their produce and also with the object of opening Customs bonded warehouses in which importers' goods could be stored until required.

**Development.** Prior to the company's existence there were but few essentials for the storage of dutiable goods, and such Customs bonded warehouses as existed were small and inadequate for the volume of trade. The firm supplied these requirements, and also afforded long needed facilities to importers and exporters who required coast agents on whom they could rely. During the seven years of its existence the company has built up a large clearing, forwarding and export business and acts as agent at the port for many cotton ginneries, also for coffee sisal and rubber estates up-country.

**Objects.** The company specialises in import and export shipping but, not being a trading concern, importers can rely on receiving prompt and efficient service.

**Storage Accommodation.** There are 12 large stone godowns at Kilindini with a total capacity of 13,000 tons. Particular attention has been paid to ventilation, and all packages are stacked on sound cement floors. The warrants issued for all goods received into the warehouse are accepted as security for advances by the local banks.

**Transport Facilities.** - By arrangement with the Kenya and Uganda Railway, a siding has been constructed from Kilindini station to the godowns, and consignments from up-country are sent direct to the company's sidings. Trucks can also be loaded up from godowns, and the goods railed direct up-country.

**Warehouses.** These have been so built that it is possible to bring goods into them either by rail or by road. In addition the company has four more bonded warehouses close to Mombasa Customs and Mombasa Station for the convenience of merchants having goods lying in the harbour.

**Agencies.** - The firm is agent for a number of well-known European firms, and is also the East African agent for Messrs. Harolds Ltd., John Barker & Co., Fortnum & Mason, Wm. Whiteley and other large wholesale and retail London houses. Goods shipped by these firms are cleared and railed to the consignee by the company.

**Congo Trade.** The Mombasa Bonded Warehouse Coy. is agent for the Belgian Colonial Government, the Société des Mines d'Or Kilo-Moto, the Intertropical Comfina Société Anonyme, the Compagnie Minière des Grands Lacs Africains, and others. It is estimated that 95 per cent. of the imports for the Belgian Congo pass through the company's hands, and special arrangements have been made for the delivery of goods.

**Bankers.** - The Standard Bank of South Africa, Limited, Mombasa branch.

**Cables.** "Storage," Mombasa.

**BOUSTEAD & CLARKE LTD.** Mombasa  
Established under style of Boustead & Ridley & Co in 1872 converted into present limited company in 1900. Main activities are centred in Manchester piece goods and general merchandise. Branches Nairobi, Kisumu, Kampala, Jinja, Dar-es-Salaam, and Zanzibar. London buying house 85, Gracechurch Street, E.C. 3. Cables "Progress," Mombasa.

**FRIGERIO, L., & CO. LTD.** P.O. Box No. 50, Mombasa. Specialises in export of hides and skins and all country produce, deals in insurance, and represents many leading firms in Europe and America. Bankers National Bank of India Ltd. Cables "Leghorn," Mombasa.

**JAPAN COTTON TRADING CO. LTD. (NIPPON MENKWA KABUSHIKI KAISHA).** Mombasa. Head offices 10 Nichome, Nakanoshima, Osaka, Japan, agency at Mombasa. Deals in cotton, cotton yarn, piece goods, raw silk, wool, jute, rice, and acts as general commission merchants. Cables "Mankwa," Mombasa.

**MANOR HOTEL.** P.O. Box 51, Mombasa. Established 1913. Accommodation 50 rooms, all fitted with modern sanitary arrangements. Telegrams "Manorial," Mombasa.

**MESSAGERIES MARITIMES.** Mombasa. Head office 8, Rue Vignon, Paris, agency at Mombasa. Steamers run between France and India and Indo-China, and other Eastern countries, Australia, Egypt, Syria and Africa. London offices 72/75, Fenchurch Street, E.C. 3 and 62, Pall Mall, S.W. 1.

**OGDENS & MADELEYS LTD.**—Mombasa. Also Manchester, London, Zanzibar and Kampala. Established 1840. Textile manufacturers and general importers. Transact a large business in native trade goods. Bankers National Bank of India Ltd. Cables "Coronation," Mombasa.

**PALACE HOTEL.** P.O. Box 317, Mombasa. Situated on main Kilindini Road. Present accommodation 21 rooms, but expansion is contemplated in near future. Proprietor C. Schwentafsky. Tariff 15s. per day. Cables "Palace," Mombasa.

# COMMERCE

**T**HERE being no Customs barrier between the neighbouring territories of Kenya and Uganda, their import and export statistics are combined, separate figures for Kenya not being available. As showing the great development in the trade of the two countries, it may be stated that in 1896, the first year of the protectorate, the total value of the merchandise imported amounted to only £250,007. In 1925 the value of all Kenya and Uganda imports and exports was £16,783,202, which is not only a proof of the progress made, but also a demonstration of the capabilities of the two territories. Much of this economic development of the countries has undoubtedly been due to the Uganda Railway which tapping as it does the important productive areas of Uganda and the contiguous portions of Tanganyika Territory and the Belgian Congo, has opened up vast tracts of country with immense potentialities between Mombasa and Kisumu.

A healthy export trade has been built up in agricultural products of European and Native growth also in such manufactured and semi-manufactured commodities as are naturally associated with the by-products of an agricultural and stock-raising community, together with a complementary import trade in articles of necessity and luxury for European, Asiatic and Native consumption and use, viz., agricultural and industrial machinery and implements, commercial vehicles for transport purposes, vehicles for ordinary passenger use, materials for road and railway construction and maintenance, and manufactured goods of all kinds necessary for the development of territories which are denied the usual industries dependent on the possession of mineral wealth.

**CUSTOMS.**—Kenya has a Customs Tariff identical with those of Uganda and Tanganyika Territory, and no amendment of the tariff now in force can take place except by the agreement of the three Governments concerned. The imposts are on an ad valorem basis, the general rate prior to 1922 having been one of 10 per cent. In order to raise revenue during the trying period of 1921-23, duties were increased in a number of cases in 1922, but it should be noted that an effort has been made, as the result of the deliberations of a Customs Conference on East African Tariffs, to differentiate between the rates imposed upon necessities and luxuries. Protective duties have been introduced to assist in the establishment of local industries for the supplying of sugar, flour, timber and dairy products. Specific rates of duty have been imposed on such commodities as lend themselves to that basis of assessment, while the free list has been amplified to include articles necessary for the agricultural, industrial and educational development of the country. Export duties have been abandoned by reason of the fact that the amount of revenue did not compensate for the disturbance caused to the export trade by the incidence of imposition and collection.

The headquarters of the Customs Department is at Mombasa, and there are customs houses and preventive stations at various coastal sub-ports, lake ports, and frontier posts. The Uganda Railway Administration exercises supervision over the dhow traffic of Lake Victoria Nyanza, while in outlying frontier districts customs' work is performed by Administrative Officers in the absence of Customs Stations proper.

**IMPOSTS.**—While the general ad valorem duty on imported goods is one of 10 per cent,

the following important increases have been made since 1922. Spirits (50 per cent) of proof, 60 per gallon, wine 60 per cent, tobacco, 90 per cent, pianos, silk and others, 30 per cent, rice 25 per cent, wheat, wheat-flour and meal 30 per cent, sugar, 15 per cent, provisions, motor-cars and cycles, 30 per cent, timber, 50 per cent, ghee, butter and cheese, 15 per lb., cement, chemicals, iron sheets, petroleum, petrol pump, soap, and others 10 per cent, all not otherwise classified 20 per cent. The free list includes passengers' luggage (covering bicycles, cameras, used sewing machines, binoculars), agricultural and stock-raising implements, industrial machinery and commercial motor vehicles.

**EXPORTS.** Exports from Kenya and Uganda, which for the year 1911-12 had a value of only £710,744 increased from £3,996,432 in 1923 to £13,770,000 in 1924, and to £7,821,844 in 1925. In the last named year Uganda raw cotton accounted for over 60 per cent of the total exports of the two countries, and it is the most rapidly developing as well as the most valuable of East African products. The other principal exports of Kenya and Uganda in order of importance are maize, sisal, coffee, skins, and carbonate of soda. It is impossible to tabulate the destinations of these exports, as cotton exported to India (almost the whole of the crop) is really destined for Japan, while sisal purchased to ship to London is often diverted to New York or Antwerp. Exports of coffee are shipped principally to Great Britain, as are also wool, ivory and flax. The United States buys the total production of goatskins, together with sisal and capsicum.

**IMPORTS.** Imports into Kenya Colony and the Uganda Protectorate increased from £4,257,843 in 1923 to £6,277,007 in 1924, and to £8,901,448 in 1925. The United Kingdom's share of imports declined from 39.53 per cent in 1924 to 38.00 per cent in 1925, India's from 12 to 11 per cent, Japan's from 6 to 4 per cent, and Germany's from 6 to 5 per cent, while Holland's share remained stationary at 5 per cent. Imports from the United States, principally automobiles, accessories, trucks, tractors, tyres, gasoline, kerosene, lubricating oils, agricultural machinery and sewing machines—increased from 5 to 9 per cent. For the first six months of 1925 the figures of value of the chief imports were: Cotton yarns and piece goods, £1,124,317, textile manufactures and wearing apparel, £262,389, motor cars, £234,678, cycles, £233,128, coffee, £232,328, machinery and tools, £224,416.

**MOTORS.** Imports of motor cars were valued at £26,000 in 1922, at £47,000 in 1923, and at £158,000 in 1924, Great Britain's share being £4,500, £7,300, and £28,000 respectively. In the trade in motor lorries and tractors the Mother Country's position is more encouraging. Of commercial vehicles which were imported into Kenya and Uganda to the total value of £64,000 in 1924, only £18,000 represented the share of the United States, against £20,000 British and £23,000 Canadian. Britain furnished motor cycles to the value of £40,000 out of a total of £44,000.

**RE-EXPORT AND TRANSIT TRADE.**—By reason of its geographical position, Kilindini handles a large portion of the import and export trade of the upper part of Tanganyika Territory and the Belgian Congo. In addition, the entrepôt trade of the ports of Mombasa and Kilindini is of considerable importance. Stocks of bonded or duty-paid goods are held for sale in the markets of

Zanzibar, Tanganyika Territory, Italian Somaliland and the Belgian Congo. In the case of duty-paid goods, subsequently re-exported, full drawback is allowed under certain conditions. The re-export trade of the colony rose from £1,583,113 in 1921 to £1,754,309 in 1925.

**TRADE BY COUNTRIES.** The following table shows the shares of the principal countries trading with Kenya and Uganda during the first six months of 1925.

COUNTRY.	IMPORTS.	EXPORTS.
United Kingdom	£3,911,880	£2,537,123
India and Burma	445,571	835,954
Tanganyika Territory	408,887	16,210
Germany	251,361	142,971
The Netherlands	337,361	67,758
Japan	148,855	67,437
Other British Possessions	64,982	7,597
Belgium	52,781	118,565
Union of South Africa	75,162	30,570
France	43,051	61,207
Sweden	22,562	64
Italy	10,767	60,505
China	16,174	-
Zanzibar	8,245	32,302

**TRADING ASSOCIATIONS.** The leading commercial association of Kenya is the Association of East African Chambers of Commerce, which was formed with the object of establishing a responsible and representative body to hold a watching brief in the commercial interests of Kenya, Uganda, Nyassaland and Tanganyika Territory. This is done either by way of advice or assistance to the Governments, or through the Association of Chambers of Commerce and the East African Section of the London Chamber of Commerce. The sessions of the Association are held half-yearly in December and July. The Nairobi, Mombasa, Eldoret and Kisumu Chambers of Commerce, and all constituent chambers of the Association are represented on its executive.

**TRADING LICENCES.** Every person trading in the colony (with certain exceptions) must pay an annual fee according to the licence taken out. The fees are as follow:

(1) For each store the value of whose stock exceeds Shs 3,000, Shs 300 p.a. (2) For each store the value of whose stock does not exceed Shs 3,000 (a) In townships and trading centres, Shs 30 p.a. (b) Elsewhere, Shs 10 p.a. (If it is considered that the charging of the fee for any licence taken out under (a) or (b) will prove a serious check to desirable trade, the whole or part of such fee may be remitted by the licensing officer in any case. Such cases, however, have to be reported to the Governor or any officer he may appoint.) (3) For a commercial traveller's licence, Shs 300 p.a. (4) For a hawkers' licence, Shs 10 p.a. (5) For transfer of a trading licence, Shs 10 p.a. (6) For a duplicate licence, Shs 10 p.a.

Trading licences are required to be taken out on the first day of January in each year, and are due to expire on the last day of December following. A licensing officer may issue a licence on or after July 1 in any year at half the specified fee.

Persons engaged in the following occupations need no licence in respect of them: Planters, farmers, market gardeners or dairy-men disposing of the produce of their own estates, auctioneers, brokers, money-changers, silversmiths, or persons licensed to sell liquor.

**TRADING SYSTEM.**—Large export houses are established on the coast, with branches in

EQUATOR SAW MILLS, Nairobi.

1. Log Yard and Breakdown Mill at Maji Mzuri.
2. Sleeper Dump - Stocks for Seasoning, Kenya Creosoting Works at Maji Mzuri.
3. Pressure Creosoting Plant, Maji Mzuri.

the interior, and these concerns are the primary importers and the ultimate exporters. Staple lines of manufactured goods, cotton-piece goods, foodstuffs, implements, etc., are held in fairly large stocks by those firms, and are distributed to the local retailer. For the European trade there are large departmental stores established in the important towns, selling practically every line known to a similar concern in Europe. For the native trade, the Indian is at present the distributor, with his "duka" or agent, in the native reserves. The crops of the European planters generally pass through one hand before export, that of the merchant-shipper with his connections in the principal overseas produce markets, while those of the native come in small parcels to the "duka," are collected, and may then pass through the hands of two or more parties before ultimate exportation. The merchant-shipper interest is, therefore, likely to be increasingly represented in Kenya. His presence and the facilities he offers mean that the planter can sell his crops outright locally, get his money at once and turn again immediately to further production, without the delay in disposing of his produce himself to the overseas market.

**CREDIT IN EAST AFRICA**—In a recent report issued by the British Trade Commissioner for East Africa, emphasis was laid on the fact that too much business was being done on consignment terms. It was pointed out that a new factor had been introduced by the adoption by foreign firms of the system of making cash advances to the small trader against a lien on his prospective exports, and binding him to place all his indents with the firm that gives him this accommodation. While such liberal accommodation may help to maintain the increased business consequent on present and future developments in crops, it may, on the other hand, encourage over-trading. Although in many lines too generous credit has admittedly been harmful, between the British manufacturer of heavy machinery and the local dealer long credit is, however, necessary and generally justifiable. If it is not granted there is little hope of keeping out the foreign supplier. The demand for expensive goods of this class is not yet sufficiently widespread to warrant the importer in locking up much of his exiguous capital in stocks.

**WEIGHTS AND MEASURES.**—The earliest legislation regarding weights and measures was introduced in 1899, when certain native standards of weight were authorised, properly stamped sets of these measures were obtainable from Government offices. The paraffin tin at a very early date became a popular, though unauthorised, measure amongst the Native population and still remains so.

With the increase of the European population the necessity arose for the legalisation of Imperial standards, and in 1912 an ordinance was passed to this effect; under this the only legal weights and measures became those in general use throughout the Empire. The ordinance was applied at first to Nairobi in 1921, an inspection and verification being made of all the weights and measures used in the town. It is hoped to apply this ordinance gradually to the whole colony as opportunity offers. The protectorate standards are stored at the Treasury, and special precautions taken to safeguard them, these are sent once in ten years for verification to the Standards Department of the Board of Trade in London.

## REPRESENTATIVE COMMERCIAL ENTERPRISES

### EQUATOR SAW MILLS.

**Inception.** This enterprise, the oldest and largest lumber and timber concern in Kenya Colony, was founded in 1904 by the present sole proprietor, Major E. S. Grogan, D.S.O.

**Properties.** Apart from several thousands of acres of forest owned by Major Grogan in the vicinity of Furi, on the Uganda Railway main line, the Equator Saw Mills possess a forest concession from the Crown of over 200,000 acres on Eldama Ravine. The Uasin Gishu Railway runs through this concession.

**Timber.** These forests contain a wide variety of timbers. The most valuable commercially is the *Podocarpus gracilior*, a straight grained, odourless, strong, light, soft-wood with a cream satiny surface. The panels made of this wood exhibited at the Kenya pavilion during the late Wembley Exhibition were greatly admired. This *Podocarpus* is the mainstay of the building trade in Kenya, being used for bridge timbers, joists, rafters, flooring, butter boxes, railway sleepers, fruit crates and many other purposes. *Mushatagi (Olea hochstetteri)* is a very strong olive hardwood, with a grain that outrivals the best walnut. Its toughness is remarkable, and, apart from its value for cabinet work, it lends itself readily to hard wear, enabling it to be used for flax scutching blades, pick handles, and aeroplane propeller blades. Cedar is prevalent throughout the forests. It is insect-proof, and is used largely in the building trade, but has yet to come into its own in the pencil trade. The Equator Saw Mills were the pioneers of the cedar pencil and slat industry of the colony.

**Allied Concerns.** The allied concerns of the Equator Saw Mills are —

**THE KENYA CLOSING COMPANY, LIMITED.** This company is run in conjunction with Messrs. Burt Boulton and Haywood, Ltd., timber merchants and tar distillers, as half-shareholders. The plant which is situated at Maji Muri, was erected in 1922, and is capable of dealing with about ten tons at a charge. It is one of the most up-to-date factories of its kind in the world. The company executes large Government contracts, embracing sleepers, bridge timbers, telegraph poles and telegraph arms.

**THE EQUATOR BRICK AND TILE WORKS.** These are situated in Nairobi, and manufacture bricks both solid and hollow, also a very high-class Brosley pattern roofing tile. The local demand for its products is far in excess of the works capacity, although the output increases annually.

**Address.** The head office of the Equator Saw Mills and the company offices controlling the allied concerns, all under the direction of Major Grogan's personal representative, Mr. A. C. Tannahill, are housed in one block of buildings in Sadler Street, Nairobi. This block has its own railway siding attached to it.

**Cables.** — "Capcat," Nairobi: code, Bentley's.

**Bankers.** The National Bank of South Africa, Limited.

THE OLD EAST AFRICAN TRADING COMPANY, Mombasa.

1. Packing Hides and Skins for Export at one of the Company's Hide and Skin Godowns.
2. Loading General Merchandise imported for up-country Branches.
3. The Sample Room, Dar-es-Salaam.

(See letterpress page 384.)

KENYA GRAIN MILLS LTD., Nairobi.  
The Mill

#### THE OLD EAST AFRICAN TRADING COMPANY.

**Inception.** This company was established at Mombasa in 1903.

**Activities.** - The business of the enterprise is mainly that of import and export merchants. The chief import lines in which the company

specialises are textiles (in particular blankets), khaki drills, varied assortments of native loom cloths, building materials (corrugated iron and cement), hardware, enamelware and cutlery. Exports include Hides and skins (in which line the company has always taken a very active part), maize,

ground nuts, sesame seed, castor seed, cotton seed, beeswax and rubber, of each of which the company is a regular buyer. The Uganda branches of the firm are also engaged in the export of cotton.

**Branches.** The first branch office was opened at Entebbe which was then the headquarters of the Government and the trading centre in Uganda. In the course of years the organisation of the company was extended considerably, and branches were opened at Nairobi in Kenya Colony, Kampala and Jinja, in Uganda, and Mwanza, Dar es Salaam and Tabora in Tanganyika Territory. All these branches are under European management, and have in some of the localities their own organisation of sub-branches.

**Foreign Connections.** The firm has a very old-standing connection with many leading houses in the United Kingdom, as well as on the European Continent and in the United States of America.

**Cables.** "Bruch," both for head office in Mombasa and for all branch offices. Codes: A B C, 5th and 6th Editions, Western Union 5 letter, Western Union Universal, Tanner's Universal Trade (Council Edition), Lacher's, Bentley's, Morse and private. (See illustration page 383.)

#### KENYA GRAIN MILLS, LIMITED.

**Inception.** This company was founded in 1921 by Mr. R. O. Hamilton, the present managing director, who had had many years' experience in Great Britain, both in milling and on various corn exchanges.

**Object.** The main object prompting the formation of the concern was the milling of locally grown wheat. The production of this cereal is increasing annually, and in the very near future it will be a large item in the primary products of the colony.

**Plant.** The mill commenced operations in June, 1925, and at present has a capacity of 37,000 bags a year. It is built on the Simon Long system, and has been so constructed that extensions can be made at any time without interrupting the milling processes in the existing building. Its capacity can be increased by three hundred per cent.

C. C. MONCKTON & CO., Nairobi.

1. Coffee Curing Works at Kahawa, the Largest in the Colony.

2. Portion of the Power Plant at the Works.

**Flour.**—The company manufactures all grades of flour, from Superfine to Atta. The leading brands are known as "Kenya's Pride" and "Good Company" both of which bear favourable comparison with any on the market.

**Wheat.**—At present the country produces insufficient wheat to cope with the local demand for flour, and consequently a certain amount of the product has to be imported. In 1925, 33,000 bags of flour were brought into the country.

**Possibilities.** There is no doubt that as the local production of wheat increases and meets the requirements of the country it will have to look for new markets for its flour, these, owing to the geographical position of the colony, are practically lying at its own door.

**Directorate.** Messrs T. A. Wood, O.B.E., C.M.G. (chairman), Peter Whitclaw, George Blowers and R. O. Hamilton (managing director).

**Head Office.** Cearn's Chambers, P.O. Box 396, Nairobi.

**Cables.** "Cerea," Nairobi.

**Bankers.**—The Standard Bank of South Africa, Ltd.

### C. C. MONCKTON AND CO.

**Inception.**—This firm came into existence in 1918. The sole proprietor Mr C. C. Monckton, has been connected with coffee since 1914, when he joined the firm of Messrs Macdonald and Jameson of Nairobi as a partner. On the death of Mr Macdonald and the retirement of Mr Jameson, Mr Monckton carried on the business under the present style.

**Activities.**—Besides marketing coffee in all parts of the world, the firm also acts as estate agents, managing agents of estates, and secretaries of companies, in addition to importing and exporting goods of all descriptions. Coffee planters' requirements are particularly catered for.

**Overseas Business.**—A large overseas business is done in coffee and other produce. The marketing of coffee in Australia is conducted through the medium of Messrs Gollin and Company Proprietary Limited, while in South Africa the firm acts as coffee buying agents for Messrs Glenon and Mitchell of Johannesburg and Durban.

**Warehouse and Works.** Messrs C. C. Monckton and Co. are lessees of the largest coffee curing works in the colony. These works, which are at Kahawa, 13 miles from Nairobi, are capable of dealing with nearly 30 tons of parchment coffee per day. The warehouse accommodation consists of spacious godowns at these works, and also in Nairobi.

**Branches.**—Branches are maintained at Moshi and Arusha, both in Tanganyika Territory.

**Representations.** The firm represents The Beaver Company, Limited (Beaver Board), of Thorold, Ontario, Canada; The New York Lubricating Oil Company, Limited (oils and greases), of 116, Broad Street, New York, and Messrs J. Gordon and Company (coffee machinery), of 69, Old Broad Street, London, E.C.2.

**London Agents.**—For coffee: Messrs I. H. Allan and Company, 17, Gracechurch Street, E.C.; for fibres: Messrs Hindley and Company, London House, 35, Crutched Friars, E.C.; for buying: Messrs Wm. Menzies and Company, 165, Fenchurch Street, E.C.3.

**Bankers.**—The National Bank of India, Limited.

**Cables.**—"Monckton," Nairobi.

**J. GRAHAM DAWSON.** Nairobi, Kenya Colony. P.O. Box 216. Partners: Mr J. Graham Dawson and Mr A. F. J. Gedy. Manufacturers' representatives. Established in 1912. Field of operations extends throughout Kenya, Uganda, Tanganyika, and Zanzibar, which territories are systematically and regularly worked by the partners and a competent staff. The firm holds no stocks, but confines its activities to procuring indents for the manufacturers it represents. A branch office and showroom are maintained in Mombasa. Among the well-known firms it represents are: Huntley & Palmer Ltd., Crosbie & Blackwell (Mfg. Co.) Ltd., Thomas Townend & Co., J. & N. Phillips & Co. Ltd. of Manchester, The Phoenix Hosiery Co. of Milwaukee, Bartrum Harvey & Co., J. H. Downing & Co. Ltd. of Leicester, Joseph Rodgers & Sons Ltd. and Spear & Jackson Ltd. Correspondence is desired from important manufacturers who are not already represented, and who would not conflict with representations already held. The staff is being augmented, making it the second largest organization of its kind in East Africa. Cables: "Celerty," Nairobi and Mombasa. Bankers: The Standard Bank of South Africa, Ltd., Nairobi and London.

**W. C. HUNTER & CO.** Sixth Avenue, Nairobi. P.O. Box 96. Established 1906 as secretaries, accountants and managing agents. Activities include the supervision of the financial administration of producing estates and the employment of visiting agents to look after all practical managerial matters. The firm is sole agent for Dalgety & Co. in London and as such, is directly interested in the development of the colony. In this connection it advances to primary producers against crops, and erects godown storage facilities at up-country stations, where produce is received for export and local consumption. The firm distributes imported goods as well, and it also holds agencies for the London Assurance Co. and the International Harvester Co. Imports all classes of goods, including agricultural machinery and implements, also live stock from England, Australia and South Africa. Exports the primary products of the country, such as sisal (of which the firm handles 60 per cent. of the colony's production), maize, coffee, wool, flax, linseed, chillies, wattle bark, cotton seed, sunflower seed, ivory, casen, dairy produce, etc. Partners: Mr W. C. Hunter, A.C.I.S., and Mr R. Nicholson, D.S.O., M.C. Branches: Mombasa and Eldoret. Agents at Nakuru, Kisumu, and Kampala. London representatives: Dalgety & Co. Ltd. Cables: "Venator," Nairobi. Bankers: The National Bank of India, Ltd.

**BEALES AND SMITHSON.** Avenue House, Sixth Avenue, Nairobi (P.O. Box No. 320). This firm was established in 1920 for the purpose of carrying on business as company secretaries, accountants, and general agents, and in these capacities it has proved of service to farmers, planters, and others making use of its services. Messrs Beales & Smithson have been especially useful to those who, during temporary absence from the colony, have been able to leave in the firm's hands the management of their affairs. Among the various activities of the partners are the management and secretaryship of the Nairobi Brick, Tile and Pipe Works, Limited. This company's brickfield and works are situated on the outskirts of Nairobi, and produce bricks and tiles of high quality. Messrs Beales and Smithson are also the local representatives of several well-known British manufacturing firms, including The Mirreles Watson Co. Ltd., of Glasgow (manufacturers of sugar and oil machinery, pumps, etc.), The British Re-

inforced Concrete Engineering Co. Limited, of Manchester (makers of "B.R.C." reinforcements), The British Steel Piling Co. Ltd., of London (manufacturers of steel sheet piling, pile driving equipment, concrete mixers, etc.), and Messrs J. Blakeborough and Sons, Limited (valve makers, iron and brass founders). The firm undertakes fire insurance work, and it represents the well-known Fine Art and General Insurance Company, Limited. It is the hon. correspondent of the Federation of British Industries, and supplies British manufacturers with trade reports. It also answers enquiries through the F.B.I. Messrs Beale & Smithson are able to supply valuable information and reports to intending settlers regarding town properties and country estates for sale in Kenya and the adjacent territories. Partners: Messrs C. K. D. Beales and A. L. Smithson. Bankers: The National Bank of South Africa, Ltd., Nairobi. Cable Address: "Adaptable," Nairobi. Codes: Broomhall's Imp. Combn., A.B.C. 5th Edition and Bentley's.

**J. W. MILLIGAN & COMPANY.** Madatally Building, Government Road, Nairobi. P.O. Box No. 148. This firm was started in 1912 by the senior partner, Mr J. W. Milligan, and has developed into one of the principal export and import merchants, land estate and managing agents in Nairobi. It specialises in the handling of coffee, maize, and all kinds of produce for export, and imports all sorts of machinery and farm implements, being agents for Petters Limited and Vickers-Petters Limited (crude oil engines), the International Harvester Company, P & O line of implements, Barton's disintegrators, etc. The land department has on its register a very large selection of farms in all the districts of the colony, and from its long experience is able to place before prospective purchasers farms and estates suitable for the amount of capital it is desired to invest. The partners in the firm are: Messrs J. W. Milligan, F. D. Moore and A. G. Nourse. London agents: Messrs John K. Gilhat & Co. Ltd., 7, Crosby Square, E.C.3. Bankers: The Standard Bank of South Africa, Limited. Telegrams and cables: "Milligan," Nairobi.

**ENRICO N. STEIN, INC.** This company is a branch of the well-known firm of hide and skin merchants Abe Stein & Co. Inc., of 100, Gold Street, New York, which was founded some 50 years ago. Messrs Enrico N. Stein, apart from East Africa, have branches in Aden, Berberah, Bulhar, Zanzibar, Jibouti, and throughout India also. The company opened a branch at Mombasa in 1923, and now has sub-branches and agents in Nairobi, Kisumu, M'hele, Kampala, Bukoba, Muanza, Tabora, Kigoma, Uvua, Usambara, Dodoma, Dar-es-Salaam, Tanga, and Moshi. The China and Java Export Company, a subsidiary concern, has branches in Hamburg and in the main skin and hide centres of China. The firm confines itself to the export and distribution of hides and skins of all marketable kinds, and is a regular exporter of raw hides and skins to the principal markets of the world. The company has its own godowns throughout the country, and the selection, packing and shipping of all hides and skins are done under direct and experienced European supervision. The partners of the firm and of the subsidiary companies are Messrs Enrico N. Stein (president), Charles Bruschhoff (vice-president), and Eugene Newman (treasurer). The head office is at Leather Building, 100, Gold Street, New York, the London office at 19, Tyer's Gateway, Bermondsey, and the Hamburg office at Jungfernstieg, 3. Bankers: The National Bank of India, Ltd. Cables: "Steinico," Mombasa.

**GIBSON AND COMPANY LIMITED.**—P.O. Box 222, Mombasa. This firm was established on January 1, 1920, and was converted into a limited company on August 1, 1923. It acts as general import and export merchants, clearing, forwarding, and shipping agents, insurance and steamers' agents, estate managers, and companies' secretaries. The imports include crude and refined oils, "B.P." motor spirit, lubricating oils and greases, gunnies, timber, fertilisers, etc., and the exports are maize, barley, ground-nuts, coffee, cotton, cotton seeds, copra and other East African produce. It represents the Anglo-Persian Oil Co. Ltd., the British Tanker Co. Ltd., Candles Ltd., Prices Patent Candle Co. Ltd. (London), R. G. Shaw & Co. (Winchester House, Old Broad Street, London, E.C.), Shaw Wallace & Co. (Cal-

cutta), Queensland Insurance Company, Ltd. (Sydney, Australia), Plateau Maize Growers Limited (Eldoret, Kenya), the British Sulphate of Ammonia Federation Limited, and many others. Branches have been established at Nairobi, Kenya Colony, Dar-es-Salaam, Tanganyika Territory, London correspondents R. G. Shaw & Co., Winchester House, Old Broad Street, E.C. The directors are Messrs L. M. Gibson, H. J. Sheldon and William Allan. Bankers: The Standard Bank of South Africa, Limited. Cables: "Factotum," Mombasa.

**VAN NELLE'S OVERSEA TRADING COMPANY.**—P.O. Box No. 301, Mombasa. This is a subsidiary company to De Eeven de Wed. J. Van NELLE, of Rotterdam, Holland, the largest coffee, tobacco, and tea dealers in Holland, and was established in 1921

primarily for the distribution and sale of Van NELLE's "Rising Hope" tobacco, and for the purchase of coffee for the parent company. The firm carries stocks and has agents at Zanzibar, Tanga, Dar-es-Salaam, Lindi, Tabora, Muanza, Bukoba, Nairobi, Eldoret, Kisumu, Mbale, Jinja, Kampala, and Goa. It also acts as agent for several European manufacturing houses, and does a general import and export business. Its premises and stores at Mombasa are situated behind Vasco Da Gama Street, towards Mombasa Harbour entrance. The East African Manager Mr A. L. M. Winkelman, is Netherlands Consul for British East Africa. Head office Rotterdam, Holland. Bankers: The Standard Bank of South Africa, Ltd. Cables: "Winkelman" Mombasa. Codes: A B C 5th and 6th Editions.

KENYA AND UGANDA RAILWAY.  
Nairobi Station and a Portion of the Railway Yards.  
(See letterpress, page 388.)

## TRANSPORT

### RAILWAYS

**T**HE Kenya and Uganda Railway, which was commenced in 1895 and completed in 1903, links the sea-coast with the healthy uplands of Kenya Colony, with the steamer transport on Lake Victoria, and, consequently, via the Busoga Railway and Lake Kioga, with the Upper Nile. Constructed originally as a non-commercial undertaking, the capital expended has since become remunerative, both directly and indirectly, as the prosperity of the colony and the Uganda Protectorate has been built up.

The Kenya and Uganda Railway stands as an example of splendid engineering carried out in the face of great natural difficulties. Starting from Mombasa, the line rises gradually for over 100 miles through tropical forests, only broken occasionally by spaces where native cultivation is carried on. From Makur the country opens out, and on the Athi plateau the railway crosses many miles of grassy plain, over which wanders big game of every description in herds of thousands. It then passes through Nairobi, the capital,

and drops a couple of thousand feet over the edge of the Kikuyu escarpment into the Rift Valley, next skirting Lakes Naivasha and Nakuru, it climbs the Mau escarpment, and from 8,200 feet descends rapidly to Kisumu (Port Florence), its terminus on Lake Victoria. The gradient, however, never exceeds 3 per cent, and below Nairobi is kept down to 1½ per cent or less.

**ADMINISTRATION.**—In 1905 an Order in Council was gazetted creating the office of High Commissioner of Transport for Kenya and Uganda. The High Commissioner (who is the officer administering the Government of Kenya) has control of the working and management of such railways, ports, harbours, wharves, and steamship services as are now or may be hereafter owned by the Governments of Kenya and Uganda, and are declared by the Secretary of State to be included in such services. At the head of the Railway Council, which is advisory to the Government, is the General Manager, who is assisted by an official and non-official member from Kenya and Uganda appointed by the Governor of those territories.

Some of the more important provisions of the new Order-in-Council are: (1)—Complete separation between the revenue and expenditure of the Governments and the revenue and expenditure of the railway, port and lake services; (2) the establishment of separate railway and harbour funds; (3) the working of the railway, port and other services with due regard to agricultural and industrial development in Kenya and Uganda by means of cheap transport; (4) profits remaining after provision for renewals, betterment, interest and sinking fund charges, etc., to be used in reduction of railway rates, instead of being diverted for other Government purposes; and (5) Governments requiring the provision of non-paying facilities to make good the loss in working which may result therefrom.

**CAPITAL COST.**—The capital expenditure on the Kenya and Uganda Railway to Dec. 31, 1924, amounted to £9,986,934, as against £8,290,413 to December 31, 1923, an increase of £1,696,521 for the preceding twelve months. Of this last amount, £216,537 was expended on new lines and £301,895 on rolling stock.

KENYA AND UGANDA RAILWAY.  
New Deep Water Wharves at Kilindini, Mombasa, almost completed  
(See *letterpress*, page 388)

**FINANCIAL POSITION.** The Railway Budget for 1926 estimated revenue at £2,000,000 and expenditure at £1,177,000 (See also article following)

**LOAN.**—In 1924 the Imperial Government sanctioned a loan from the Imperial Treasury to the Government of Kenya for railway, port and lake development in Kenya and Uganda, amounting to £3,500,000. This loan will be free of interest for a period of five years, after which it will carry interest at the rate of 5 per cent and redemption at the rate of one per cent. The object of the loan is to assist in development, and a provisional allocation of expenditure against the loan was made as follows:

- |   |            |
|---|------------|
| (1) Extension of the Uganda Railway into Uganda, and the construction of branches in Kavirondo and Uganda | £2,200,000 |
|---|------------|

- |  |          |
|--|----------|
| (2) Additional rolling stock   | £400,000 |
| (3) Capital improvements to existing lines and lake services and the provision of additional equipment | 500,000  |
| (4) Additional port development and equipment  | 400,000  |

**MILEAGE.**—See article following

**ROLLING STOCK.**—The shops of the Kenya and Uganda Railway, located at Nairobi, are equipped to make necessary repairs to the rolling stock of the line. New steel freight cars, passenger cars, and oil and wood burning locomotives are constructed in England and imported into East Africa, but all parts and accessories are imported for assembly and repairs at Nairobi. The railway is a metre-gauge line, and the rolling stock is correspondingly light. Locomotives weigh up to 50 tons, and steel freight cars are built

to carry maximum loads of 25 tons (See also article following)

**SERVICES.** Trains leave Mombasa four times a week for Nairobi and thrice weekly for Kisumu. The time taken by mail trains on the through journey, not including stoppages, is 38 hours, to Nairobi, 20 hours. The return journey from Kisumu to Mombasa occupies 35 hours. The trip to Nairobi and back covers 62 hours, allowing for 24 hours in the capital. Trains, both up and down, pass the game reserves during daylight. There are refreshment rooms at various stations along the line, and all arrangements are made to suit the convenience of passengers.

**FARES.**—Fares are as follow, per mile, according to distance: first class, 23.40 to 27 cents; second class, 18 cents; third class, from 4 to 6 cents. At certain seasons, and when 30 passengers or more from a ship

1. Typical Mail Train.

wish to travel, excursion trains are run. At all times passengers in steamers lying off Kilindini can obtain return tickets at single fares to Nairobi. Through passengers can also travel between Kilindini and Tanga, via Voi, at reduced fares in either direction.

**REST HOUSES** - These are provided by the railway at certain points. Passengers have free use of same for 24 hours, the subsequent charge being Sh 4 for each 24 hours or fraction thereof. Passengers must share a room with strangers if necessary. Furniture, bedstead, bath, toilet set, lamp, etc., are provided, but no mattress, blankets, sheets or towels.

#### KENYA AND UGANDA RAILWAY.

**Inception.** This railway had its origin in Article (1) of the General Act of the Brussels Conference of July 2, 1890 (constituted a Slave Trade Treaty by Order-in-Council of May 9, 1892), to which Great Britain and other Powers were parties. These Powers declared that the most effective means for counteracting the slave trade in the interior of Africa were the progressive organisation of the administrative, judicial, religious and military services in the African territories placed under the sovereignty or protectorate of civilised nations, the gradual establishment in the interior of strongly occupied stations to make them protective or repressive action effectively felt in the territories devastated by slave hunting, the construction of roads and railways connecting the advanced stations with the coast and permitting easy access to the inland waters, with a view to substituting economical and rapid means of transport for the then means of carriage by men, the establishment of steamboats on the inland navigable waters and on the lakes supported by fortified posts, the establishment of telegraph lines to provide communications, the organisation of expeditions and flying columns to keep up communication between the coast and the interior, to support repressive action and to ensure the security of high roads, and finally the restriction of the importation of firearms and ammunition throughout the territories infected by the slave trade. Great Britain, having placed Uganda and British Africa within her sphere of exclusive influence, felt bound to give effect to the above provisions of the Brussels Act, with the result that railway and telegraph construction was entered upon.

**Development and Construction.** In accordance with this policy, the Imperial Parliament passed a vote of £20,000 as a grant-in-aid of the preliminary survey costs, and reconnaissance surveys were carried out between November 1891 and October 1892. A report wholly favourable to immediate construction was submitted by the surveyors, but, owing to changes of Government in England, it lay dormant until 1895, when Lord Salisbury's Government decided to proceed with the building of the railway immediately. The Chief Engineer, Sir (then Mr) George Whitehouse, and his staff arrived at Mombasa in December of the year just mentioned. Between this time and the arrival of the first material in June 1896 many preliminary operations were undertaken, such as the construction of earthworks for the rail lines leading from the harbour to the Macupa Strait (separating Mombasa from the mainland), a distance of about a mile and a half; the building of shelters for the staff and workpeople; and the construction of temporary offices and sheds. Platelaying was started on the mainland in August 1896, and by the end of the year twenty-two miles of line had been laid. In

1899 Nairobi (326 miles) was reached, and by September of the same year work had been carried up to the 363rd mile. At this period the headquarters of the railway were transferred from Mombasa to Nairobi, and the line to this town was opened for public use in August 1899. By the end of the year the 476th mile had been reached. Owing to various causes, chief amongst which was considerable delay in stores transport, the permanent way was not completed until March 1903, although a locomotive had been run through for the first time to the shore of Lake Victoria Nyanza on December 2, 1901. Practically all the viaducts were then temporary structures, but by March 1903 they had been replaced by permanent ones.

**Open Lines.** The mileage of open lines at December 31, 1925 was: Uganda Railway main line 580 miles, Linka Branch 57 miles, Busoga Railway, 61 miles, Kampala Railway 6 miles, Usim Gashu Branch 142 miles, Voi Kabo Branch 92 miles, and the Magadi Soda Company's Branch 91 miles, making a total of 1,038 miles. The total track mileage, including loops and industrial private sidings, was approximately 1,125 miles.

**New Construction.** The following extensions are in progress: Usim Gashu Railway from Turbo to Mbulamuti, 184 miles, Pindaniha to Nyeri, 47 miles, Solai

Branch, 30 miles, Kitale Branch, 41 miles, the total under construction being 302 miles.

**Lines Surveyed.**—The following branch lines have been surveyed: Tororo to Mbale, 48 miles, N Kavirondo, 45 miles, Eldoret-Sergot, 20 miles, Kericho-Sotik, 70 miles, Donvo Sabuk, 15 miles, Nyeri-Nanyuki 30 miles, Gilgil-Thompson's Falls, 50 miles.

**Passenger Traffic.** During the year 1925 the number of passengers carried was 913,640, an increase of 83,431 over the previous year. The receipts from this source were £227,272, as against £199,500 for 1924, an increase of 13.92 per cent.

**Goods Traffic.** The receipts from public goods and the tonnage conveyed were as follows: Revenue for 1925, £1,580,642, tonnage carried, 534,474. These figures showed an increase of £283,406 on the revenue, and a tonnage increase of 51,631 over the year 1924.

**Motor Service.** The Kenya and Uganda Railway Administration runs a motor service between Masindi Port and Butiaba, a distance of 75 miles. This was taken over from the Uganda Government at the beginning of 1924.

**Steamer Service.** Communications on Lakes Victoria, Kioga, Kwana and Albert and on the River Nile as far as Nimule are maintained by marine services. The first

passenger steamer was launched in 1903. The various fleets now consist of nine large steamers, six tugs, and forty six lighters. One steamer maintains a regular weekly service between Kisumu and Uganda, while two others conduct a service round the lake. Kisumu is the headquarters of the steamer service on Lake Victoria which earned £272,467 in 1925, as against £238,642 in the previous year.

**Earnings and Expenditure.** The steady improvement of the railway services is reflected in the following figures: Earnings for 1925, £1,993,500, working expenditure, £1,090,071, excess of receipts over expenditure, £903,428. For 1924 these amounts were £1,635,180, £878,407 and £756,722 respectively.

**Staff.** At the end of 1925 the staff numbered 20,622, made up as follows: Europeans, 494, Asiatics, 2,455, Native labourers, 15,449, Natives (other than labourers) 2,224.

**Rolling Stock.** This comprises 172 locomotives, 58 of which are of the G.D. super-heater type. Coaching vehicles number 306 and goods stock 2,447. The railway is of the metre (3.28 ft.) gauge.

**General Manager.**—Mr C. L. N. Felling, C.M.G.

(See also illustrations, pages 386, 387-9.)

A COCONUT AVENUE, KENYA COLONY

## AGRICULTURE

### GENERAL DATA

THE future of Kenya promises to be bound up in the main with agricultural development. There are few countries, indeed, where conditions so favourable for the production of economic crops occur as in this East African Colony. Cultivation embraces a great range, from the vegetation of tropical and sub-tropical to that of temperate zones, maize and wheat and maize and flax being frequently grown side by side. Stock of all kinds thrive on the natural herbage, and herds under good management have increased rapidly.

An area of some 7,750,000 acres, mostly in the highlands (that is, in the country lying from 5,000 to 9,000 feet above sea-level), has

been set aside for European occupation, of which a total of 4,420,573 acres was under such occupation on June 30, 1925. Within this zone are to be found extensive areas of great fertility, and moreover, on account of its physical condition, land which is readily and inexpensively cultivated and made productive. A drought attended with serious consequences is rarely experienced, and the sufficient rainfall, coupled with abundance of sunshine for plant growth and crop harvesting, creates a feeling of security in agricultural pursuits.

In the highlands the standard crops are cereals, flax, and pulse, but between the heights and the sea-coast, or along the shores of Lake Victoria, cultivation ranges from the

coco-palm and the pineapple to all kinds of European products, and includes coffee, cotton, maize, sisal hemp, and rubber. A proof of the steady growth of Kenya's agricultural industry is to be found in the recent formation of three new organisations, a Sisal Growers' Association to co-ordinate the industry, a Wheat Growers' Association, and a Hide and Skin Trade Association.

**AGRICULTURAL CONDITIONS.**—Areas alienated for European occupation fall generally into three classes in respect of agricultural pursuits, viz: Agricultural, Mixed and Pastoral, but these are not sharply defined, and they merge into one another. The chief agricultural districts are: Kyambu (coffee and sugar cane), Ruuru (coffee and

2. Drying Coffee.
3. Pruning Trees.

sisal), Thika (sisal, coffee and maize), Njoro (flax, maize and wheat), Eldama Ravine (maize and coffee), Trans-Nzoi (maize, wheat and coffee), Kericho-Sotik (flax, coffee and tea) and Muhoroni (maize, coffee, sugar cane and sisal). Mixed farming is carried on principally in the Nairobi, Machakos-Ulu, Kiu-Sultan-Hamud, Lamuru, Kijabe, Gilgil, Nakuru, Solai, Moro, Lumbwa and Nyeri districts, also on the Uasin Gishu Plateau. The Rift Valley, West Kenya and the Laikipia District are entirely given over to pastoral farming.

**INSECT AND OTHER PESTS.**—Practically all the insects which are responsible for damage to crops in Kenya are indigenous. The two pests known to have been introduced are the Australian bug and the red scale. These, in all probability, were brought in on citrus fruits from Australia. Generally speaking, and in comparison with other parts of the world, Kenya has not in the past suffered greatly from insect pests, invasions of locusts or serious ravages by the cotton boll weevil or the coffee berry beetle being rare. The mealy bug (*Pseudococcus citri*) is sometimes a menace to coffee, while wheat growing has occasionally been hindered by the prevalence of red rust. Leaf blight and cob rot often attack maize, and the tobacco grown sometimes suffers from leaf spot. The most serious stock diseases are rinderpest, pleuro-pneumonia and East Coast fever. Most of the fly infected areas of the colony and protectorate have been more or less accurately mapped.

**LAND SETTLEMENT.**—Except for a few freehold grants, land in Kenya Colony is held on leasehold from the Government either under the Lands Ordinance of 1902 for a term of 99 years, or for 999 years under the 1915 Ordinance. Conversion of the 99 to 999 year leases is allowed by permission of the Governor. Under the 1902 Ordinance annual rents range from six cents of a shilling to 24 cents of a shilling per acre, whilst under the 1915 Ordinance rents are fixed at 20 cents of a shilling per acre. The rent payable is revised every thirty years, and certain development conditions must be complied with at the commencement of the lease.

From time to time such Government land as is available is sold by public auction, but at present the best opportunity which exists for securing a selected holding is by acquiring it from original allottees of freehold or leasehold land by private treaty. Many of these landholders are disposed to sell a portion of their holdings, and, with the exercise of care in selection, land suitable for the purpose which the prospective settler has in view can be obtained at a reasonable price, having regard to its fertility and productive capacity. That varies greatly—very good land suitable for growing a variety of crops, including some for coffee, can be acquired at 30s to 60s per acre, in recognised areas where maize production is already highly successful, 60s to 100s per acre is the present price, while that portion suitable for coffee in a recognised coffee-growing area may be valued at £10 to £20 per acre. In pastoral areas values may vary from a few shillings to 20s per acre, according to the carrying capacity and other factors. In all these cases, however, much will depend upon the water supply, rail and road communications, soil, fertility, etc.

Farming conditions in Kenya are not suitable for the man with small capital, dependent largely upon his own effort and that of his family to secure a livelihood. On the other hand, the colony does offer most attractive propositions to the man with a fair amount of capital, or to a group of shareholders provided with money sufficient for the development of an estate of considerable dimensions.

## PRODUCTS

**COCONUTS.**—Coconut culture is an important industry on the coast lands, a large area of that zone being well adapted to this branch of agriculture. Formerly the industry was mainly in the hands of natives, but a large number of plantations have lately been established by Europeans. From half a million to three-quarters of a million nuts are produced annually by the European plantations.

**COFFEE.**—It is perhaps not generally known that Tropical Africa shares with Central and South America the honour of being the chief home of coffee. Several varieties of wild coffee in Africa have been classified and named, and may be seen in Kenya to-day growing in their natural habitat under the great virgin forest trees. Of the many crops of which the East African planter has a choice, coffee has been by far the steadiest during the years of weak and uncertain markets which have been experienced since the War.

**DISTRIBUTION.**—Coffee in Kenya is grown almost exclusively in the highlands, the best results being obtained between altitudes of roughly 5,000 to 6,000 feet. New districts, however, are constantly being tried, and it is by no means improbable that the best coffee district of the future may not yet have reached the producing stage. The areas under coffee have been steadily increasing, as the following figures show: 1920, 27,813 acres; 1921, 33,813 acres; 1922, 43,350 acres; 1923, 52,249 acres; 1924, 60,054 acres; 1925, 65,140 acres.

The principal coffee-growing districts in order of importance are: Kikuyu, Fort Hall, Lumbwa and Kisumu, Trans Nzoia, Uasin Gishu, Sotik, Nyeri, Nandi and Kavirondo North, Nakuru, Machakos, and Voi (Euta Hills). Kikuyu District, possessing over 25,000 acres, includes the two large coffee areas of Kyambu and Ruiri, besides several smaller areas. This is also the nearest district to Nairobi. Land, therefore, in the neighbourhood commands a higher price than elsewhere, as the areas are "proved" for coffee, and there is also the advantage of being near the railway, with a shorter journey to the coast. The more distant districts of Nyeri and Trans Nzoia and the Uasin Gishu possess good land suitable for coffee, whilst the railway now being laid to the former and already tapping the latter districts will bring them more into touch with other parts of the country and greatly facilitate their transport.

**PRODUCTION.**—In 1913 only 5,000 acres were under cultivation, this area being increased to 65,140 acres in 1925, of which 21,000 acres were fully bearing, 18,000 acres over three and under six years, and 26,000 under three years. In 1925 returns of coffee plantations were made by 696 planters, indicating that 41 per cent of the total number of European occupiers in the colony are coffee growers. The production of clean coffee for the period 1924-25 was estimated at 104,419 cwt., and of "Buni," 11,111 cwt., or a total of 115,530 cwt of coffee. The 1925-26 crop was estimated (given good weather) at 153,536 cwt. Exports decreased from 136,081 cwt. in 1923-24, valued at £636,744, to 117,594 cwt., valued at £606,338, in 1924-25.

**COTTON.**—Cotton was first grown in the colony in 1904, when a cotton expert from Egypt was appointed to conduct experiments in various parts of the coastal zone in order to ascertain which were the most suitable varieties to raise, and further to encourage the natives to take up the industry. For many years cotton growing remained a purely native industry, being assisted by Government subsidies and by the Empire Cotton

2. MAIZE CRIBS, CAPACITY 10,000 BAGS.
3. IN AN APPLE ORCHARD

Growing Association, which erected the first ginnery at Malindi. Since the War increased attention has been paid to cotton culture both by the natives and by the European planters, the latter having planted several tons of Uganda seed, Upland type, in various parts of the highlands. In 1924 the cotton crop of the colony increased by no less than 262 per cent. over that of 1923, and aggregated some 2,000 bales. There are at present six ginneries working, and two more are projected. It is too early to state the limit which cotton production may reach in Kenya, but where labour is plentiful cotton will probably be found to be very remunerative.

economy of the country. They are situated in the heaviest rainfall areas, they protect the hillsides from the erosion to which the deep laterite soil is very liable, and they conserve and maintain the flow of water in the streams on which the whole agricultural prosperity of the colony is dependent. Also they provide the only sources of power, e.g., wood-tuel and water, coal and oil not yet having been discovered. The most important timber trees of the colony are the *Albizia cuanensis* (mbemba kofi), which produces a wood much in demand by the Indians and Arabs on the coast and in Zanzibar for construction works, doors, furniture, etc.,

inside decorative work. Cedar exports are the most valuable, and were valued at £22,272 in 1924. There are indications that the cultivation of casahuate bark may become a valuable native industry.

**LIVESTOCK.**—British East Africa in general, and Kenya Colony in particular, possesses most of the essentials to render it an ideal stock raising country, indeed cattle-breeding may be termed the oldest industry of the region. The climate of the highlands is so equable that the housing of the stock is quite unnecessary at any time of the year, although during the rains cows kept for milk production thrive and yield better results when given some protection at night. The wealth of the natural pasture throughout the uplands can scarcely be surpassed by any country in the world. Even during the dry seasons cattle thrive and keep fat upon the natural grasses without the aid of any artificial feeding. Both pink and white clover are indigenous plants, and in many districts grow thickly, whilst a wild samson is met with on Athi Plains and elsewhere.

The native cattle are abundant and of an excellent type. From the coast up to Victoria Nyanza are to be found vast herds of animals, suitable for grading, in possession of the natives, and although their price is steadily increasing, good cows may still be bought at figures well within their value. The native cow belongs to the Zebu tribe but has been much improved by the infusion of European stock and careful grading up, chiefly by the use of Shorthorn, Ayrshire and Friesian bulls. A large number of oxen are used for draught purposes, and the value of that cheap transport service to the colony is great. The local market for "beef" cattle is strictly limited, and there does not seem to be any immediate prospect of the establishment of an export trade in beef, but dairying is making steady progress.

In the drier parts of the colony there are large areas suitable for sheep farming on an extensive scale. Grade merinos have been bred up from the native ewe, and already their wool is fetching high prices on the London market. Pigs thrive remarkably well under the equable climatic conditions, and, at the extremely low prices at which foods such as maize, pollard, bran lucerne, etc., can be procured for pig-rearing and fattening, it is considered that favourable conditions exist for the establishment of an export trade in bacon and hams. Already a good type of pig, chiefly bred from the Berkshire and large Black breeds, is in the hands of Europeans. Horses are successfully bred and maintained in some districts, chiefly for racing, polo, and as hacks, but neither horses nor mules are much used for transport purposes. Poultry of all kinds thrive well on the farms.

The figures of live stock owned by Europeans on June 30, 1925, were as follow: Cattle, 216,589; sheep, 178,796; pigs, 8,564; goats, 5,372; horses, 1,846; mules, 922; donkeys, 1,336; poultry, 31,159.

**MAIZE.**—Maize has been grown for many years in the colony, but at the time when the first serious European settlement took place the crops raised were poor on account of the weak, attenuated nature of the local seed. By the introduction of such varieties as Cusco, Hickory King, Horsetooth, Ladysmith White, Old Cabin Home and other white maizes great improvement was shown in yields. In 1907 quantities of American varieties were imported by the Agricultural Department, and from these, but mainly from the seed known as Hickory King, a hybrid type now styled Kenya White has evolved. This is the type which is grown on over 90 per cent. of the acreage devoted to maize in

1 & 2. THE USE OF THE FORDSON TRACTOR FOR MANY SERVICES INDICATES THE APPRECIATION IN KENYA COLONY OF UP-TO-DATE METHODS.

**FLAX.**—The growing of flax in Kenya was commenced on a commercial scale in a period of "boom" prices, and when costs of production were abnormally high. It was planted in regions unsuited to the crop, and disappointments were experienced. The area sown consequently dropped from about 25,000 acres to 5,500 acres in 1924, but has since increased, and prospects, with the steadier and better market prices now prevailing, are considered good.

**FOREST PRODUCTS.**—The mountain forests play a most important part in the

Allophyllus abyssinicus (mushami), used for lining railway carriages and for furniture and panelling; Brachylaena hutchinsii (muhugu), a very durable timber in great demand for fence posts, piles, flooring boards and construction work; Dalbergia melanoxylon (ebony), a dense hard blackwood which takes a high polish; Juniperus procera (pencil cedar); Pygeum africanum, identical with the red stinkwood of South Africa; two varieties of Podocarpus much used locally; and Warburgia ugandensis (muthiga), a large cedar easily worked, very suitable for furniture and

SISAL FIELDS, KENYA COLONY.

the colony. It was early recognised that big yields of maize could be secured comparing more than favourably with yields in any other part of Africa.

In 1910 small consignments were sent to England, and a trade sprang up with near by markets. Railway rates were considerably reduced and some 20,000 bags were sold in Europe. The 1912-14 exports amounted to 115,000 bags, and ten years later (1923) 500,000 bags found their way to the London market. The area under crop on European holdings now exceeds 150,000 acres, and the average yield per acre is 7.68 bags. Native areas are also contributing large surpluses of maize for local consumption and for export, the quality showing a decided improvement. For the year ended June 30, 1925, the crop provided an exportable surplus of 800,000 bags and shipments represented a value of over £400,000.

**MINOR CROPS.**—Barley of a quality suitable for malting is raised in some districts of the colony. Fruit-growing is pursued on a scale sufficient for local needs, most of the tropical and sub-tropical fruits being cultivated. The black wattle flourishes, some bark is being exported, and a factory has been established for the preparation and export of tannin extract. Buckwheat does well, as do sunflowers, and much interest has lately been taken in the growing of castor seed, the plant of which thrives luxuriantly.

**PULSE CROPS.**—Peas and beans are produced in small quantities both by Europeans and natives. Samples of high quality are grown, and the output is favoured for seed purposes in other countries, notably France.

**SISAL.**—This valuable fibre occupies an area of nearly 50,000 acres, and there is a steady expansion. Exports of sisal-fibre now stand second in the colony's list, figures for 1924-25 showing a total of 23,772 cwt, with a value of £473,747, an increase of 27,899 cwt upon the exports of 1923-24. It has been proved that vast areas in different parts of the colony are suited to the production of sisal fibre of a high quality, and that, under good management, large profits may be made. With a view to assisting producers in removing difficulties and correcting deficiencies in grading, etc., it has been suggested that standard grades for East Africa should be set up by the London Hemp Association, and

that samples should be furnished to each producer for guidance. In 1925 a Sisal Growers' Association was formed, and is expected to do much to consolidate and develop the industry.

**SUGAR.** Sugar cane planting is still in its infancy, but sufficient has been done to prove the suitability of several areas of the colony for this crop. High yields of cane are obtained under natural conditions of rainfall and soil fertility. One large sugar-mill has been established, and smaller ones are being installed. The industry is protected by a high Customs duty, and production has now reached the local demand. It is hoped soon to establish an export trade.

**TEA.** Developments are taking place for the production of tea in Kenya on a commercial scale. Lamoru and Kericho are the two areas most closely interested, and it is estimated that by the end of 1926 there will be over 1,000 acres under tea, of which 540 acres were planted in 1925. Conditions as regards rainfall and soil are in many respects similar to those obtaining in the tea districts of Ceylon. The great difficulty, however, will be to maintain a supply of trained and fairly intelligent labour, as the East Coast natives are not altogether suitable.

**WHEAT.** With the aid of a heavy protective duty on imported wheat and flour, the production of home-grown wheat has been steadily encouraged, the area sown having increased from 13,696 acres in 1922 to nearly 25,000 acres in 1925, and the actual production from 35,793 bags to some 62,000 bags during the same period. The yield per acre also shows an upward movement, due to a better knowledge of the more suitable wheat-growing districts and soils, and to the use of seeds possessing greater rust resistance. A Plant Breeder was appointed in 1910, and a number of successful hybrids have become popular in the colony. Much of the wheat breeding has been done on Lord Delamere's farm at Njoro, the owner having taken a keen practical interest in the experiments, at the same time introducing hundreds of varieties for trial. Owing chiefly to difficulties not unconnected with yield and the incidence of rust, wheat-growing in Kenya has not yet attained large dimensions, but the crop gives distinct promise of becoming one of the staple products of the country, the importance of the colony producing its own flour requirements being widely recognised.

## COMMERCIAL ENTERPRISES

### G. NORTH & SON LTD.

**Inception.** This firm was established in 1869 to supply agricultural implements and machinery, with headquarters just outside Durban, the Nairobi branch being opened in 1910 some nine months after the Armistice.

**Development.** Shortly after the opening of this branch the great trade slump occurred, in which East Africa like other parts of the world suffered heavily. As a result, many houses gave up business, but Messrs. North & Son Ltd. with 50 years' experience and substantial capital behind them, were able to stand firm. Starting with a staff of one, they are to-day effecting one of the largest turnovers in East Africa in their class of business, the employees now totalling over 20 Europeans and very many Africans. They have also established branches at Eldoret and Nakuru.

**Activities.** In addition to representing a number of implement and machinery houses, Messrs. G. North & Son Ltd. carry a very wide range of tools, paint and general hardware. Over 50,000 spare parts for agricultural machinery are kept in stock, which is an indication of the importance the firm attaches to efficient service. This is still further augmented by a travelling staff equipped for carrying out repairs and adjustments on farms.

**Representations.** Messrs. G. North & Son Ltd. are agents for the following firms: the Cockshutt Plow Company of Canada, the International Harvester Co. of Chicago, the Martin Cultivator Co. of Stamford, England, the Alfa-Laval Separator Co. of Stockholm, R. Hunt & Co. of Earlscotne, and numerous other implement and machinery concerns.

**Address.** P.O. Box No. 485, Nairobi.

**Cables.**—"Hercules," Nairobi. Code Bentley's.

**Bankers.**—The Standard Bank of South Africa, Ltd.

(See letterpress, page 393)

#### GAILEY AND ROBERTS LTD.

**Inception.**—This important and well-equipped enterprise has been established in Kenya for over twenty years.

**Activities.**—The firm's scope of operations includes Kenya, Uganda, Tanganyika and Zanzibar, and it carries large and complete stocks of machinery and engineering requirements. Specialties of the house are agricultural implements, power transmission appliances, building material, electrical machinery, hydraulic machinery, hardware, oils, paints, tubes, fittings, commercial vehicles, pumps, sanitary goods, sugar crushing and refining plants, cotton ginneries, and all classes of wire goods. The company has obtained a large number of important Government contracts.

**Organisation.** The administration is conducted from the head office in the centre of the capital, Nairobi, and there are branches in the principal producing areas, at Nakuru, Eldoret,

Jimba (Uganda), and Dar-es-Salaam (Tanganyika). At these branches large stocks are held.

**Premises.** The main building consists of a double-storeyed stone structure, occupying a floor space of just over 10,000 square feet. More commodious and up-to-date premises are now in course of erection, and when completed will give a total floor area of over 55,000 square feet. The front portion of this building will consist of a three storey reinforced steel and concrete structure, and the rear portion of commodious warehouses, equipped with up-to-date overhead electric travelling cranes. It will be served by its own railway siding.

**Representations.** The company is representative in the colony for the following houses: Ransomes Sims and Jeffries Ltd (agricultural implements and machinery), Ruston and Hornsby Ltd (suction, gas, crude and refined oil engines, excavators, etc.), Harrison, McGregor & Co Ltd

(harvesting machinery), Caterpillar Tractor Co (Holt caterpillar tractors), Platt Bros & Co Ltd (cotton ginning machinery), Samuel Osborn & Co Ltd (steel and steel tools of every description), Douglas Lawson & Co Ltd (wrought iron pulleys), Lewis & Taylor Ltd (machine beltings), Standard Oil Co of New York (lubricating oils and greases), Electric Wheel Co (farm wagons, etc.), S. L. Allen & Co (Planet Junior cultivators), Albion Motor Car Co Ltd (commercial vehicles), Stewarts & Lloyds Ltd (tubes and fittings of all descriptions), G. Fletcher & Co Ltd (sugar refining machinery), California Corrugated Culvert Co (culverts, etc.), A. Ransome & Co (saw milling machinery), Chubb & Sons Ltd (safes and strong rooms, etc.), Gilbert Gilkes & Co Ltd (turbines, Pelton wheels, pumps, etc.), John Blakes, Ltd (hydraulic rams), Boulton & Paul Ltd (steel buildings, water elevators, etc.), Sisson Bros & Co Ltd (Hall's

distemper, paints, colours, etc.), and the Greenfield Tap and Die Corporation (engineers' small tools).

**Insurance.**—The firm is general agent for Messrs Matthews Wrightson and Company, underwriters to Lloyd's, and it effects all classes of insurance in the colony.

**Technical Department.** The company employs a staff of trained engineers, capable of dealing with all classes of engineering work undertaken.

**Directors.** Major J. H. Gailey, D.S.O. (chairman), and Mr. G. E. Ramsay (managing director).

**London Office.** The London office of the company is at 4, Chapel Street, Whitecross Street, E.C. 2.

**Bankers.** The National Bank of India, Limited.

**Cables.** "Gailey," Nairobi.  
(See also illustration, page 396.)

#### TYSON BROTHERS, LIMITED.

**Inception.** This company was established in 1921 with a nominal capital of £25,000 to take over the business of Messrs Tyson Brothers.

**Insurance.**—All classes of insurance are effected, agencies being held for the following companies: Motor Union Insurance Co. Ltd., Union Insurance Society of Canton, Ltd., Central Assurance Corporation Ltd., Ocean Accident and Guarantee Corporation, Ltd. and the South African Mutual Life Assurance Society.

**Imports and Exports.** As managing agents for Messrs Newtons, Ltd., Tyson Brothers, Ltd., import and hold agencies for the following: B.S.A. Cycles, Ltd.; Douglas Motors, Ltd.; C.C. Wakefield & Co. Ltd.; Champion Spark Plug Co. and Parsons Chimney Co. Ltd. The company exports all kinds of produce, specialising in coffee and sisal.

**Managers and Secretaries.**—The company is managing agent for the Spring Valley Coffee Estate, Kathum Coffee Estate, East African Properties, Limited, Bahati Estates, Ltd., and for Sir H. J. Delves Broughton, Bart. Reports and valuations are also made on all classes of properties.

**Directors.** Sir H. J. Delves Broughton, Bart., and Mr. W. Tyson.

**London Agents.** Messrs. Arbutnot Latham & Co., 33 Great St. Helens, E.C. 4.

**Address.** Whiteaway's Buildings, Box 120, Nairobi.

**Cables.** "Managing," Nairobi. Codes: A.B.C. 5th Edition, Bentley's and private.

**GAILLY AND ROBERTS LTD., Nairobi**  
A Train Load of Machinery despatched to up-country Settlers.

(See Interpress, page 391)

**THE SERVICE COMPANY, LIMITED.**

**Inception.** This company, which had operated for a number of years as the Service Motor Company, became a proprietary concern in 1922.

**Activities.** Connected with motor cars and trucks during the War, the company

has also been actively associated with them since that period. The experience thus acquired has considerably assisted the general development of motor transportation in the country. The Service Company is chiefly interested in Ford products, the pioneer motor vehicles in Kenya Colony and these

vehicles, with the exception of the Uganda Railway, have contributed more than any other influence towards the development of the territory. During the great War they were of material assistance in the success of the East African campaign.

**TYSON BROS. LTD., Nairobi.**

**Fordson Tractor.**—This has been an important factor in the progress of mechanical farming, and has relieved the labour situation to a great extent. It has also met the difficulty resulting from the loss of animal life in the tsetse fly area, where, before the advent of mechanical appliances for farming, agricultural development had been much retarded.

**Allied Company.** Messrs. Thos. J. O'Shea & Co. Ltd. are agents for Ford products in the Uasin Gishu and Trans Nzoia districts. Their head office is at Eldoret, with a branch at Kitale, and they form an integral part of the great Ford organisation which stretches throughout the length and breadth of British East Africa. The Thos. J. O'Shea Company co-operates in every way with the Service Company, Ltd., its branches and agents, and stocks all Ford products. It also trades as merchants, land, commission, and insurance agents, land valuers, Government mail contractors and produce brokers.

**Organisation.** The Service Company's head office is in Nairobi, with branches and

subsidiary companies operating in Mombasa, Nakuru, Tanga, Moshu, Arusha and Dar-es-Salaam. Sub-dealers are located at Zanzibar, Mtwara, Nyeri, Nanyuki, Kisumu, Mwanza, Bukoba, Tabora, Dodoma and Tanga. Authorised Ford spare part dealers and repairment depots are established at practically every centre throughout the country.

**Agencies.** The company represents everything connected with the Ford car and Fordson tractor, including the Oliver Chilled Fordson tractor plough, the Electric Wheel Company's Fordson tractor trailers, Robert Hudson's rail locomotive attachment for Fordsons, and Exide batteries.

**London Representatives.** Messrs. Arbuthnot Latham & Co. Ltd., 33 Great St. Helens, E.C. 2.

**Cables.** "Motoring," for head office and all branches.

**Bankers.** The Standard Bank of South Africa Limited.

## MINES & MINERALS

**GEOLOGICALLY**, more than half of the exposed surface of Kenya is composed of the oldest rocks known in the world, namely, gneiss and crystalline schists. These are the rocks in which most of the gold and diamonds are found in other parts of Africa, and there is good reason to think that a systematic search in the unprospected parts of the colony may lead to mineral discoveries of great value. Up to the present the most important minerals found in Kenya are gold, silver, lead, mica, graphite, and soda.

**GOLD.**—The occurrence of gold has been reported from various parts of the country at different times, but until the recent discovery of the gold belt in the Southern Masai reserve its existence in payable quantities had never been proved. The reefs found in this belt vary in width from a few inches up to eight or nine feet, and some

THE SERVICE COMPANY LIMITED, Nairobi.

1. Fordson Tractor for Driving Purposes.
3. Fordson used for General Farm Haulage Work.

2. Tractor pulling a Binder.
4. Fordson at work on a Sisal Estate.

astonishingly high values have been recorded. The gold is said to be exceptionally free, and no difficulty whatever is expected in its extraction.

**GRAPHITE.**—There are large deposits of graphite in Kenya, especially in the Tata Mountains and in the Ulu Mountains, and a good deal of work has been done on a mine near Machakos. This mineral, however, requires to be worked on a large scale to compete with the other graphite mines in the world, and is unlikely to be a commercial success in Kenya at present.

**LEAD.** Galena is found in considerable quantities in the Lolgorien area, and could undoubtedly be worked for the extraction of lead if the price of the mineral rose sufficiently, as the specimens which come from there show that the percentage of the mineral present is very high.

**MICA.** In several parts of the colony mica has been found in sufficiently large crystals to have a commercial value. It has been worked in two places, the more important

of which is at Kenzi, near Sultan Hamud station. The other mine where it has been worked is near Chuka, on the east side of Mount Kenya.

**SILVER.**—From time to time discoveries of silver have been reported from different parts of the colony, and a certain amount of work has been done on a galena-silver proposition about 20 miles inland from Kilifi, in the coast area. Silver is also found associated with gold and galena in the Lolgorien area, but not yet in sufficient quantity anywhere to pay for working by itself.

**SODA.**—The largest deposit of trona (i.e., Sesquicarbonate of soda) in the world occurs in Kenya at Lake Magadi, near the Tanganyika border. This lake, which is about 12 miles long by 3 miles wide, is filled entirely with soda, and is one of the sights of the world. It looks like a frozen lake, and it changes its colour in the most wonderful way from grey to white, and white to pink, according to the amount of moisture on its surface and the brightness of the sunlight.

It has been mined on a fairly large scale by a company with a big capital, but in spite of the purity of the deposit and the extraordinary fact that nature replaces it almost as quickly as it is mined, the venture has not been an unqualified success, owing, chiefly, to the tremendous difficulties of transport which the situation of the deposit imposes.

The lake is 377 miles from the coast, and the soda has to be hauled by the railway to a height of over 4,500 ft. above the lake level before it can be run down to Kilindini. Everything possible has been done to assist development by the granting of exceptionally cheap rates on the railway, but the cost of transport is still very high in comparison with the market value of the product.

**VARIOUS.**—So far, no payable coal has been found in Kenya, though there are carboniferous rocks near the coast. Good quality iron ore exists in the Sama hills, there are several limestone deposits, and from the diatomite found in the Rift valley and other parts of the country excellent roofing tiles are being manufactured near Nairobi.

VIEW OF PORT REITZ AND PORT TUDOR, KENYA COLONY.

## OTHER COUNTRIES

THE vast Continent of Africa comprises no less than 30 distinct countries, excluding the great inland desert of the Sahara. During the 18th and 19th centuries the "scramble for Africa" by the European Powers was such that, in turn Portugal, Great Britain, France, Germany, Spain, Belgium and Italy obtained possession of large and valuable colonies from Cape Mogador to the Cape of Good Hope and from Cape Guardafui to the Gulf of Guinea. A glance at the map of South Africa shows the large extent and the wide distribution of these European colonies, Germany alone of the Great Powers being now unrepresented. The leading physical features and most important facts relating to the Government, peoples and trade of these countries are briefly described in the following pages, the Kingdom of Egypt only being omitted in order that it may be fully dealt with in the immediately succeeding volume of this series.

### ABYSSINIA

Abyssinia, the modern representative of ancient Ethiopia, has the distinction of being the only wholly independent native state in Africa. It occupies a very mountainous part of the Upper Valley of the Nile, to the south-west of the lower end of the Red Sea, extending over the watershed between the Egyptian Sudan and the coast strips of Eritrea and French and Italian Somaliland. The total area (including Abyssinian Somaliland) is about 350,000 square miles.

Abyssinia consists of a huge tableland with a mean elevation of 7,000 ft. The Simen Mountains have summits rising to 15,000 ft. The Abai, an upper branch of the Blue Nile, the Narab, and the Hawash are the principal rivers. Lake Tzana, or Derubca, is 60 miles long. The climate is pleasant owing to the great elevation, but the country is subject to an excessive rainfall.

**ADMINISTRATION.** The government is a feudal despotism, the rulers claiming descent from Menelik, the son of Solomon by the Queen of Ethiopia. After the overthrow of Theodore, King of Amhara, by the British in 1868, the principal event in the country's history was a long war with Italy, ending in the complete rout of the Italian forces at Adowa in 1889. In 1906 Great Britain, France and Italy undertook to preserve the integrity of Abyssinia. The present ruler is the Empress Walzeru Zauditu (daughter of the late Emperor Menelik), whose heir, H. H. Ras Tafari Makonnen, G. C. M. G., G. C. B., practically exercises supreme power, cabinet government, once tried, having fallen into disuse. The Abyssinian army is 300,000 strong and is well equipped. The capital and seat of government since 1894 is Addis-Ababa, in the south of Shoa, on the southern slopes of the Entoto Range. It is little more than a number of villages surrounding the Royal Palace, with a population of 50,000.

**COMMERCE.**—The total trade of Abyssinia is valued at about £2,000,000, but it has suffered for some years from continued depression. That with Great Britain in 1924 was £11,600, exports, £28,000. The principal artery of trade is the French-Ethiopian railway, but caravans also do considerable business in the interior. Exports consist mainly of hides and skins, coffee, wax, ivory, civet, and native butter.

**FINANCE.**—No organised system of finance exists in Abyssinia, bars of salt and cartridges being still used as media of exchange in many parts. The Bank of Abyssinia, with an authorised capital of £500,000 and paid up capital of £125,000, has its head office at Addis-Ababa, with agencies at Harar, Dire Dawa, Gore, Gambela, and Dessie. By its constitution the Governor of the National Bank of Egypt is its President, and the governing body sits at Cairo.

**POPULATION.** The population between ten and eleven millions consists of various elements, but the nucleus is formed of the Abyssinians proper, a brown, well-formed people belonging to the Semitic stock and believed to be the descendants of immigrants from Arabia. The basis of the language is the ancient Ethiopic, or Grez, a Semitic tongue, which is now the sacred language, understood only by the priests. The Amhara is the prevalent language. There is a large Galla population also many negro tribes. The Abyssinians practise a debased form of Christianity, being members of the Alexandrian or Coptic Church. The negro tribes in the border districts are either Pagans or Mohammedans.

**PRODUCTION.** Abyssinia is exceedingly fruitful, and its productions vary from the pines, heaths and lichens of Northern Europe to the choicest tropical plants. Two and in some places three crops can be raised yearly. The banana-tree, date palm, sugar cane, vine, orange, lemon, cotton, coffee, and wild indigo flourish. The higher plateaux furnish rich pastures of European grasses, also oats and barley. The chief industries are the rearing of cattle and the cultivation of grain, agricultural and pastoral pursuits occupying the bulk of the population, but there is also a certain number employed in the preparation of leather and the working of copper and iron. The forests abound in valuable trees and rubber.

**TRANSPORT.** The only railway in Abyssinia is that built under French auspices and known as the Franco-Ethiopian Railway. It runs for 495 miles from Djibouti in French Somaliland to Addis-Ababa, the capital, via Dire Dawa. The posts and telegraphs are also under French management. Roads, excepting a few in the vicinity of the capital, are mere tracks, and transport is generally effected by means of mules, pack-horses, donkeys and camels.

### ALGERIA

Algeria, situated between Morocco on the west and Tunis on the east, has been gradually occupied by the French since 1830, and now forms an integral part of France. It has an area of about 343,500 square miles, with a coast line 545 miles long. The most fertile and populated part is that known as the Tell, which is mountainous and well-watered. The central part of the country—a region of plateaux—is largely used for cattle-rearing. The south limit of this tableland is formed by the chain of mountains constituting the north boundary of the Sahara, culminating in Sheliah (7,585 ft.), the highest point of Algeria. The climate is divided into three seasons—winter, spring, and summer, winter being the rainy season. Except near the coast, it is nearly tropical, and oppressive to Europeans.

**ADMINISTRATION.** Algeria is divided into three civil departments—Algiers, Oran, and Constantine (to each of which is attached a military division) and the Southern Territories, consisting of the districts of Am Sefia, Ghardaia, Tougourt, and the Sahara Oases. A civil Governor is in residence at Algiers, and is assisted by a consultative council. Each department sends two deputies and one senator to the French Chambers, which alone have legislative powers over Algeria. The budget is submitted to a Superior Council and to the Financial Delegations, representing French colonists, urban taxpayers and Moslem natives. The French troops in the country consist of one corps d'armée, and the native troops are the *Fenailleurs Algériens* and *Spahis*.

**CITIES AND PORTS.** The capital of Algeria is Algiers, which dates from 935 A.D. The town rises from the sea shore up a precipitous hill. It is divided into two parts—the old or high town inhabited by the Arabs, and the new or low town the glory of which is the magnificent Boulevard de la République with its fine terrace, built in 1860-66 at a cost of eight million francs. The French have at great expense improved the port, which is safe and spacious and has a lighthouse. Algiers is now in the front rank of Mediterranean bunkering stations. It is strongly fortified and can accommodate 40 warships and 300 trading vessels. Of the 206,595 inhabitants at the last census the majority were French including naturalised Jews.

Constantine a picturesque town of over 78,000 inhabitants, is the capital of the easternmost department of Algeria and is connected by rail with its port Philippeville (40 miles N. E.), also with Algiers and Tunis. It is a great trade centre, being the chief grain market of Algeria, and also exports oil and wool.

Oran, the second seaport of Algeria and also a naval base, has a population of 141,000, of which 124,000 are Europeans.

**COMMERCE.** The chief exports are wine, corn, olive oil, esparto grass, phosphate and zinc, the total value of exports in 1924 being Frs 1,000,304,000. Imports, six-sevenths of which come from France, consist mainly of textiles, clothing, sugar, coffee, coal, automobiles, and building materials. In 1924 they totalled Frs 2,793,744,000. Goods passing direct between Algerian and French ports must be carried in French bottoms (*monopole du pavillon*). About half the ships entered and cleared are French, British ships easily ranking second. Trade with Tunis, Morocco and the Saharan oases has developed greatly in recent years.

**FINANCE.**—The revenue in 1925 was estimated at Frs 519,800,824, and the expenditure at Frs 519,788,955. The finances are on a sound footing, and, were the Algerian franc independent of the French franc, would support a stable currency. As it is, the Algerian exchange rates follow those of France.

**POPULATION.**—The population of Algiers at the census of 1921 was 5,802,464, comprising nearly 8,000 Europeans, of whom 6,000 were French. The native population is divided between Arabs and Berbers.

**PRODUCTS.**—Despite the ravages of phylloxera, Algeria has developed into a great wine-producing land, the total area under cultivation in 1924 being 7,357,000 acres, and the production over a million metric tons.

Wheat, barley and oats are also largely produced, and millions of gallons of olive oil are shipped to France. Pastoral industries are expanding, and the tablelands yield in exhaustible supplies of esparto grass (alfa). The principal minerals are phosphate and zinc.

**TRANSPORT.** In 1923 there were 2,480 miles of railways open for traffic, and in 1924 the number of ships engaged in foreign trade entering Algerian ports was 3,848, of a net tonnage of 3,851,698.

## ANGOLA

Angola, or Portuguese West Africa, stretches from the Congo River to South-West Africa, and is bounded on the east by the Belgian Congo and Rhodesia. The total area is 484,800 square miles. The long coast strip is level, barren, extremely hot, and very unhealthy. Beyond is hill country, reaching to a height of 3,000 feet, and it promises to become an important source of maize, wheat and beef. The main rivers are the Kwango running north to the Congo, and the Coanza and Cunene, which discharge into the Atlantic.

**ADMINISTRATION.** The colony has belonged to the Portuguese since 1575, with the exception of the years 1641-48, when it was held by the Dutch. The present boundaries have been fixed by agreements with France, Belgium and Great Britain. The colony is governed by a High Commissioner, who resides at Loanda, and is vested with large powers. It is divided into eleven administrative districts. The capital is St. Paul de Loanda, which is also the chief port.

**COMMERCE.** Trade is almost entirely with Portugal. There is some export of wax, buffalo hides, ivory, coffee, copal gum, rubber and palm oil. Exports as yet do not balance imports, the yearly figures averaging 24,000,000 escudos and 40,000,000 escudos respectively.

**FINANCE.** The finances, in spite of very heavy taxation, are unsatisfactory. In 1925 revenue amounted to 108,020,000 escudos and expenditure to 158,000,000 escudos. In 1925 the Bank of Angola was obliged to suspend operations.

**POPULATION.** This is returned at about 5,000,000. The aborigines are Congo negroes, and belong to Bantu stock.

**PRODUCTS.** The chief products are coffee, rubber, wax, sugar (for the rum distilleries), vegetable oils, coconuts, ivory, oxen and fish. Rubber supplies are becoming exhausted. In the coast belt, cotton has been cultivated for centuries by the natives, and grows well at an altitude of from 2,000 to 3,000 feet. Tobacco is raised and manufactured for local consumption. Sugar is grown on a large scale at Catumbella, eight miles from Lobito, where some 2,000 acres have been reclaimed and machinery erected capable of treating 250 tons of cane per month. The table land is admirably suited for cattle ranching purposes. The province also contains large quantities of malachite and copper, iron, petroleum and salt. Gold has been found, and in the Lunda district alone (in 1924) 118,011 carats weight of diamonds were recovered.

**TRANSPORT.** The Portuguese National Navigation Company does most of the carrying trade to and from Europe, but the steamers of three British lines and one German line visit Loanda and other ports. Railways run inland from Lobito Bay and Benguela, and from St. Paul de Loanda, the total length of line being about 820 miles. It is hoped before long to link up the Loanda-Lucalla line with the Central African Railway.

## CAMEROONS

The former German colony of Kamerun, on the West Coast of Africa, lies between British Nigeria and French Equatorial Africa, extending from the coast north-eastwards to the southern shore of Lake Chad. The whole colony was captured from the Germans by French and British troops in February 1916, and is now divided between Britain and France. The French administer by far the larger portion (roughly 166,000 square miles), their seat of government being at Yaoundé. The British portion is a narrow strip (about 31,000 square miles), stretching from the sea along the Nigerian frontier to Lake Chad, and is attached to Nigeria. The seat of government is at Buea. The total population is 2,500,000, Bantu negroes inhabiting the coast districts and Sudan negroes the inland portion.

**LEADING FEATURES.** The surface of the Cameroons generally consists of series of plateaux in the interior and of a low-lying coastal strip. The Cameroon Mountains are in the north, near the coast, and they culminate in Mongo-ma-Lobo (13,000 ft.). The principal rivers are the Sanaga, Munga and Wuri, navigable only by steamers for short distances. In the interior litter-transport is employed, and as the distance from Douala, the principal port to the Central Cameroons, is a 30 days' journey, and to Lake Chad 20 days, few products, except ivory and rubber, can bear this expensive means of transit. There are some 400 miles of railway, and good roads in the settled parts.

**PRODUCTION.** The soil throughout the coast region is fertile, and numerous valuable African vegetable productions grow in profusion. Experiments in the cultivation of cloves, vanilla, pepper and other products have been successfully developed. There is an active trade in ivory and palm oil; the colony is rich in hardwood, and ebony is abundant. Salt is found in several districts, and iron is smelted by the natives. Tobacco has been exported.

## CONGO (BELGIAN)

The colony of Belgian Congo, formerly known as the Congo Free State, has an area estimated at 900,654 square miles. With a coast line only 25 miles long, it stretches inland as far as Angola in West Africa, and is also bounded by the Anglo-Egyptian Sudan, the Uganda Protectorate, Tanganyika and Northern Rhodesia. The greater part lies within the geographical basin of the Congo, being drained by that river and its many tributaries. On the whole, the country is not mountainous, but forms a depressed and inclined plateau, rising round its rim to heights of about 6,000 ft., and on the eastern border touching much higher elevations on the flanks of the Ruwenzori and Mfumbiro ranges. Much of its surface is composed of savannas and arable lands, but more is under dense and dark forest, in which rubber trees are abundant and strange forms of animal life are found. The climate is tropical, and the greater part of the country is unsuited to European colonisation.

**ADMINISTRATION.** The Congo Free State was founded in 1885 by Leopold II, King of the Belgians, and was placed under his sovereignty. Annexation to Belgium took place in 1908, and since then the colony has been known by the name of Belgian Congo. Government is centred in Brussels, and a Governor-General administers the territories, which are divided into 21 administrative districts, these being combined to form four provinces—Katanga, with its capital at Elizabethville, Congo-Kasai, with Léopoldville as its capital; the Equator, capital

Coquilhatville, and the Eastern Province, capital Stanleyville. Léopoldville (population 18,100), formerly Kinshassa, is the capital of the whole colony.

**COMMERCE.** The principal exports are palm nuts, copal, rubber, ivory, copper (ore and crude), gold and diamonds. These go chiefly to Belgium, Great Britain ranking next. Imports come mostly from Belgium, Britain, Rhodesia, and the Union of South Africa. In 1924 imports into the Congo from Britain were valued at 47,203,013 francs and exports to Britain at 30,527,221 francs. The chief commercial centres are Boma, Bamana, Léopoldville, Elizabethville and Stanleyville.

**FINANCE.** The public debt in 1924 stood at 543,410,235 francs. The ordinary yearly revenue approximates to 250,000,000 francs, and expenditure to 275,000,000 francs, in addition to which extraordinary expenditure often exceeds 100,000,000 francs. Seven banks are in existence, of which the most important are the Banque du Congo Belge and the Banque Commerciale du Congo. Gold and silver money of Belgium is also current in the Congo, and the Banque du Congo is authorised to issue notes.

**POPULATION.** The population is estimated at from ten to fifteen millions, the last census recording the inhabitants of Bantu origin only at 8,500,000. The white population numbers over 10,000, more than half being Belgians. The native peoples are varied in race, but (except in the north-east) are generally Bantu in speech. In several regions pigmy tribes inhabit the forests, and many of the remoter tribes are cannibals.

**PRODUCTION.** The natural wealth of this enormous territory, which is almost unmeasurable, has so far only been tapped. The chief agricultural products in order of importance are palm nuts and palm oil, rubber, white copal and cocoa. Ivory is also abundant. Coffee grows freely, and the cultivation of cocoa has been successfully developed. Rice, cotton and tobacco are grown in many native villages. Cattle thrive satisfactorily in all districts where there is no tsetse fly, notably in the highlands of Katanga, Ituri and Kivu. Mining flourishes, the chief minerals being gold, diamonds, copper and tin, and coal, iron and cobalt are also known to exist. The most important mines are the famous copper mines of the Union Minière near Kambove (Katanga), whose output in 1925 amounted to 89,583 tons.

**TRANSPORT.** The Congo is navigable for 95 miles from its mouth to Matadi and on this section a fleet of State-owned steamers operates. Above this for 250 miles are numerous rapids, which render the river unnavigable as far as Stanley Pool (Léopoldville). Above the Pool there are about 1,068 miles of navigable water as far as Stanley Falls, while several of the larger tributaries are negotiable over a considerable extent of their courses. Above Stanley Falls the Congo is called Lualaba, and is navigable for 585 miles, from Ponthierville to Kindu and from Pongolo to Bukama.

There are over 7,200 miles of road, 2,000 being suitable for motors. They are principally in the north-eastern district, connecting with the Sudan frontier and the Upper White Nile. The total length of railways is over 1,300 miles, and as several lines have been built where the navigation of the Congo is impeded by rapids, it is now possible to cross the continent by rail and steamer. The Cape to Cairo railway enters Katanga province from the south and reaches the Congo at Bukama, its extension northward and the construction of a branch line to Lobito Bay on the West Coast are only a matter of time.

## CONGO (FRENCH)

This has been known as French Equatorial Africa since 1908. It embraces the former colonies of Gabon and the Middle Congo, and has a total area of 980,000 square miles, including the Cameroons territory which France acquired during the European War. A large part of the coast region consists of primeval forest, with trees rising to 150 and 200 feet, but there are open lagoons, mangrove swamps, park-like reaches and prairies of tall grass with patches of cultivation. Behind the coast region is a ridge which rises from 3,000 to 4,000 feet called the Crystal Mountains, then an extensive plateau some 2,000 feet in height. The rivers which fall into the Atlantic are mostly unnavigable, and the largest part of the country is drained by the Congo.

**ADMINISTRATION.** Each of the colonies of Gabon, Middle Congo, Ubangi-Shari and Chad has its own Lieutenant Governor, financial and administrative autonomy, and an administrative council. The Lieutenant Governors are under the control of the Governor-General of French Equatorial Africa, whose headquarters are at Brazzaville, and who is assisted by a Secretary General and a Council of Government. Brazzaville, on the Congo opposite Léopoldville, the Belgian capital, is the administrative capital, Libreville, or Gabon, the capital of the Gabon colony, with 4,000 inhabitants being the largest town. Bangui, on the Ubangi River, is the capital of the Ubangi-Shari-Chad colony.

**COMMERCE.**—The almost insuperable difficulties of transport in the interior have hitherto hindered commercial development. The principal exports are rubber, palm-oil, ivory, ebony and mahogany, coffee, cocoa and copal, and there is an increasing trade in piassava. The bulk of the export trade is with Britain. The imports, which largely exceed exports in value, are mainly cotton and metal goods, foodstuffs and spirits.

**PEOPLES.**—The country is peopled by diverse negro races, and in the regions bordering Lake Chad and in Wadai by Fulani, Hausa, Arab and semi Arab tribes. Several of these are cannibals, and amongst many of them the fetish worship of the West African negroes prevails. In the northern regions the majority of the inhabitants are Mohammedans, and it is only in those districts that organised and powerful states exist.

**PRODUCTS.**—The resources of the country are largely undeveloped. The tropical forest, which extends for some 30,000 square miles, contains many timbers of industrial value. Wild caoutchouc is the most important. Palm oil is being produced in large quantities, a French company operating a big mill at Gabon. Coffee is also cultivated. In the Chad colony numbers of cattle, sheep, asses, camels, horses and ostriches are raised, but with few facilities for export. Copper, lead and zinc are the minerals found.

**TRANSPORT.**—The question of railway communication with the Atlantic and with the surrounding countries is one of vast importance to the economic future of this colony. At present the main route into French Equatorial Africa is by the Belgian railway from Matadi, on the Congo, to Kinshassa and Léopoldville, and thence across the Stanley Pool to Brazzaville. From that point boats are run on the Congo and Ubangi as far as Zinga during low water, and up to Bangui in the rainy season, the latter journey taking 12 days. To reach Lake Chad via Bangui occupies 71 days. A line from Brazzaville to Pointe Noire,

a deep-water harbour south of Loango is under construction, and will prove a valuable outlet for traffic. Other railways to connect with Lake Chad and the Cameroons are projected.

## DAHOMEY

Dahomey is bounded on the south by the Gulf of Guinea, east by Nigeria, north and north-west by the French possessions on the middle Niger, and west by the Gold Coast Colony. The French colony extends far north of the negro kingdom to the Niger River at a spot a little above Illo. Exclusive of the portion of Togoland administered by the French under mandate, the area of the colony is about 40,000 square miles. The country is mainly flat, with large baricade tracks inland interspersed with forest regions. The most important river is the Weme (300 miles long) which drains the colony from the Bariba country to the Porto Novo lagoon.

**ADMINISTRATION.**—Dahomey, formerly part of an extensive negro kingdom notorious for its slave traffic and human sacrifices, was annexed by France in 1894. The colony is administered by a Lieutenant Governor, assisted by a Council composed of official and unofficial members. It is divided into territories annexed, territories protected, and "territories of political action," but for administrative purposes the division is into "circles" or provinces. Except in the annexed territories, the native states are under French supervision, and native laws and customs, as far as possible, are retained. Natives, however, may place themselves under the jurisdiction of the French law, those doing so being known as "assimilés." The chief source of revenue (about 12,000,000 francs) is the customs, while the capitation tax contributes most to the local budget. The chief port and seat of Government is Kotonou, laid out by Europeans on a definite plan, and with a climate more healthy than that of most coast towns.

**COMMERCE.**—Trade and commerce are chiefly concerned with Dahomey proper and the coast. The prosperity of the country mainly depends on the export of palm-oil and palm kernels. Copra, kola nuts, rubber and dried fish are also exported, the fish going to Lagos. A large proportion of all cargo destined for Dahomey passes through the British port of Lagos. The volume of trade, which increases annually, is about 6,000,000 francs, imports slightly exceeding exports.

**POPULATION.**—The population is approximately 900,000, entirely native except for a few hundred French officials and traders. The inhabitants of the coast region are of pure negro stock. The Dahomeyans of the interior are a tall and well-formed people reserved in demeanour, polite with strangers, warlike and keen traders. Many Hausas and Fulani are found. There are converts to Islamism in the northern districts, but the Mahi and Dahomeyans proper are nearly all fetish worshippers.

**PRODUCTS.** The soil being naturally fertile, can be highly cultivated. The chief product is palm oil, made in large quantities. Next to palm-oil, the principal vegetable products are maize, guinea-corn, cassava, yams, sweet potatoes, plantains, coconuts, oranges, limes, and the African apple, which grows wild. The country also produces ground-nuts, kola-nuts, pineapples, guavas, spices, ginger, okras (hibiscus), sugar-cane, onions, tomatoes and papaws. Cattle, sheep, goats and fowls are scarce. Some cotton of fairly good quality is grown by the interior inhabitants for their own use.

**TRANSPORT.** The few roads in the colony have been greatly improved in recent years. A new metalled highway 310 miles in length for motor traffic extends from Savé to the Niger. From Kotonou the Dahomey railway of metre gauge, runs into the interior to Savé (150 miles), with a branch line to Whydah and Segbourné on Lake Abémé (20 miles). A metre gauge railway has also been constructed from Porto Novo to Pobré (50 miles) along the Lagos frontier. Kotonou is a port of call for steamers from Europe to the West Coast and there is also regular steamship communication along the lagoons between Porto Novo and Lagos.

## ERITREA

The Italian colony of Eritrea, on the African coast of the Red Sea, extends for about 650 miles from Ras Kasar to Ras Demora. It is bounded inland by the Anglo-Egyptian Sudan, Abyssinia and French Somaliland, and has an area of about 45,800 square miles. The northern portion is part of the East African rift-valley, and the latter is diversified by ranges of hills, principally volcanic, and by lakes. The chief rivers of the plains, of which the Hawash and the Ragnah are the largest, enter and are lost in one or other of two salt plains or basins, Asah in the north and Aussa in the south, which in parts are 200 ft. below sea level. There are no navigable rivers. The climate is excessively hot on the coast, but more temperate in the middle zone and on the high plateau.

**ADMINISTRATION.** Since 1890 all the Italian possessions on the Red Sea have been united under the name of the Colony of Eritrea, which is administered by a civil Governor responsible to the Ministry of Foreign Affairs at Rome. The six provinces are each governed by a regional commissioner. Civil justice for natives is administered in the first instance by headmen of villages, provinces and tribes, or by councils of notables, on appeal by the Residents and regional tribunals, and in the last instance by the Colonial Court of Appeal. Europeans are entirely under Italian jurisdiction. Penal justice is administered by Italian judges only.

The capital and seat of Government is Asmara (population, 15,000, including 2,000 Europeans), which has been rebuilt since the Italian occupation and possesses several fine buildings. Massawa is the chief port.

**COMMERCE.**—Hides are the principal export, being valued at about £50,000 a year. Wax, gum, coffee and ivory are also exported. Pearl fishing is carried on at Massawa and the Dahlak Islands, and the annual value of the fisheries is over £40,000. Salt, obtained from the salt lakes, is a valuable article of commerce. Cotton goods are the chief import. There is some trade with Northern Abyssinia, but it is undeveloped.

**FINANCE.** The revenue is derived from customs duties, direct taxation, and tribute paid by the nomad tribes. The local revenue, which amounts to about 12,000,000 lire annually, is supplemented by grants from the Italian Treasury. Nearly half the expenditure is on the large military force maintained.

**PEOPLES.**—The total population is estimated at 380,000. The inhabitants of the plains and foothills are for the most part nomad shepherds. In the north the people are largely of Arab or Hamitic stock, such as the Beni-Amer, but include various negro tribes. Afar and Somali form the population of the southern regions. The inhabitants of the plateau are Abyssinians.

**PRODUCTION.**—Large herds of cattle and camels are owned by the nomad tribes of the plains, the low country being almost entirely pastoral and unsuited to the cultivation of crops. In the intermediate zone and on the high plateau almost all European cereals flourish, the Abyssinian is a good agriculturist and understands irrigation. Numbers of immigrants from Italy possess farms in the highlands and cultivate coffee, cotton and tobacco.

**TRANSPORT.** The one railway in the colony, which is State-owned, runs from Massawa to Asmara, the capital (a distance of 75 miles), and thence to Cheren, a further 65 miles. The line has been extended to Agordat, on the main caravan route to Kassala. The whole territory is crossed by camel and mule paths between the sea and the high plateau, and between the various centres of population. There is regular steamship communication with Italy, and Massawa has cable connection with Perim, via Assab.

## GAMBIA

The Gambia Colony and Protectorate consist of a narrow strip of territory on each side of the lower reach of the Gambia River, together with several small islands in the river. The size of the colony proper is 60 square miles, that of the protectorate being over 4,000 square miles. The island of St. Mary, at the mouth of the river, is the principal district, the protectorate stretching to about 250 miles up stream. The climate is unhealthy during the rainy season, but in the dry season is better than that of most West African countries lying near the equator.

**ADMINISTRATION.**—The country, under British rule, is divided into the colony and the protectorate, the whole excepting only St. Mary's Island, being for practical purposes treated as a protectorate. The colony is governed by a Governor, with an executive and legislative council, the protectorate being ruled by commissioners (directly responsible to the Governor) through the native chiefs. The capital is Bathurst (population, 9,227), on the island of St. Mary, founded in 1816, and one of the cleanest towns in West Africa.

**COMMERCE.**—Imports and exports during 1925 amounted to £615,927 and £722,021, of which amounts £267,172 came from and £419,084 went to the United Kingdom. Ground-nuts are the principal export.

**FINANCE.**—The public revenue declined from £229,688 in 1923 to £208,613 in 1924, the expenditure also falling from £221,317 to £203,653. There is no public debt. There is a Government Savings Bank in Bathurst, also branches of the Bank of British West Africa and the Colonial Bank. The West African silver currency has been in circulation since 1913.

**PEOPLES.** The population of St. Mary at the census of 1921 was 9,227, and that of the protectorate 201,303. The European population is confined to a few hundred officials and traders. The chief peoples forming the native population are Joloffs (or Woloffs), Mandingos, Serers, and Jolas, the first-named being the superior race and constituting the bulk of the non-Christian population in Bathurst. They are noted for their powers of conversation and for their extremely black colour. Being good traders, their language is widely spread through Senegal and Guinea. They are a handsome, fine-hearted people, and have embraced Islam.

**PRODUCTS.**—The great majority of the native male population is engaged for about eight months of the year in the cultivation of the ground-nut, valuable commercially for its oil. Apart from this, the agricultural crops grown include wheat, barley, oats, maize, potatoes, coffee, cocoa, cassava, sugar, tobacco, indigo, and plantation rubber, while the animal products are merino wool, butter, cheese, meat, and hides. Gambia is rich in iron ore, ochres, and china clay, but these are not worked commercially. There are practically no manufactures, with the exception of the weaving of native-grown cotton into pagns ("country-cloths"), the preparation of vegetable oils, boat-building, and the making of bags, sandals, etc., from locally tanned leather and dyed grass.

**TRANSPORT.** In 1924 the tonnage of vessels entered and cleared at Bathurst was 1,100,729. Between Liverpool and Bathurst there is a fortnightly mail service, and the colony is also connected with St. Vincent (Cape de Verde) and Sierra Leone by cable. There are no railways. Overland travelling is accomplished by Europeans on horseback or in hammocks, but there are no metalled roads.

## GOLD COAST COLONY

The Gold Coast Colony, Ashanti, and the Northern Territories are three adjacent strips of territory, the boundaries of which are practically parallel to the coast-line of the Gulf of Guinea—so called either from *Ghana*, "black," or (more probably) from *Jenne*, the once great city in the interior. The colony proper extends along the coast for nearly 270 miles, being bounded on the north—at an average distance of 130 miles from the coast—by Ashanti, above which, again, come the Northern Territories. The area of the whole is about 80,000 square miles. The physical features are mainly those of a low-lying, surf-beaten coast line, with ranges of hills up to 2,000 feet in the interior. Three quarters of the Gold Coast is still primeval forests, with splendid open park-like country in the north-eastern portion. The climate is hot, moist and generally unhealthy.

**ADMINISTRATION.**—The colony is administered by a Governor with an executive and a legislative council, both nominated, with nine unofficial members in the latter. Ashanti, first placed under British protection in 1896, was definitely annexed in 1901, the Governor of the Gold Coast being appointed Governor of the country, though the laws and ordinances of the Gold Coast do not apply to the annexed territory. The Northern Territories are administered, under the Governor, by a chief commissioner, with headquarters at Tamale.

The present Governor and Commander-in-Chief of the Gold Coast is His Excellency Brigadier-General Sir Frederick Gordon Guggisberg, K.C.M.G., D.S.O., R.E.

**CAPITAL.**—The seat of government is at Accra, which has a population of 38,000. Accra is the port of entry for the colony and the hinterland, and the harbour has lately been extended and developed. Landwag is by means of surf boats. The capital of Ashanti is Kumasi, a historic town with a grim story of native sacrifices and warfare with the British.

**COMMERCE.**—The general trade of the colony during 1924 and 1925 was better both in tonnage and value than at any previous time. In 1913 the tonnage of maritime imports and exports was 405,000. The tonnage landed and loaded in 1924 was 755,653, or 118,000 tons more than the colony's previous record of 637,000 tons in 1923.

Imports in 1925 increased by £1,467,385 and exports by £975,286 their values being respectively £9,782,619 and £10,890,223, the latter figure being a record. Record shipments of cocoa, kola, and manganese were made.

In 1925 exports of cocoa were more than 50 per cent of the world's consumption, and good progress was also made in the establishment of the sisal, copra, fruit, and limejuice industries, and in the revival of the palm oil trade.

**CUSTOMS.**—In view of the sound financial position of the colony at the end of 1925, the ad valorem duties on imports were reduced from 20 to 10 per cent, and the duties on provisions from 12½ to 10 per cent. In 1924 the export duty on cocoa was lowered from £2 6s 8d to £1 3s 4d per ton.

**FINANCE.** The Gold Coast, Ashanti and the Northern Territories are administered financially as a single unit. In 1925 the income was nearly 2½ times as great as the average revenue for any five years in succession previous to 1919, while the excess of assets over liabilities was nearly four times as large as the aggregate surplus in 1918. Although recurrent expenditure has also risen since 1918, it has never exceeded revenue, and only on one occasion has the combined recurrent and extraordinary expenditure exceeded the revenue. The excess of assets over liabilities on April 1, 1925, was estimated at £2,405,605.

**PEOPLES.** The last census was taken in 1923, the population returns being: Gold Coast Colony, 1,171,013; Ashanti, 406,193; Northern Territories, 530,535; total, 2,108,401, excluding 2,033 Europeans. The inhabitants are all of the negro race, the most important tribe being the Fanti. The Akim, who occupy the north-eastern portion of the colony, have engaged in gold digging from time immemorial. The Akwapim, southern neighbours of the Akim, are extensively engaged in agriculture and trade. The Accra, a clever race, are in all the towns of the West African coast as artisans and sailors. Fetishism is the prevailing religion.

**PRODUCTS.** The Gold Coast is probably the richest area known in proportion to its size, very large amounts of gold and gold dust having been won from pre-historic times, in addition to which the vegetable resources are almost inestimable. Gold is found all over the colony, the very fine mine at Obnasi owned by the Ashanti Goldfields Corporation being the most important in West Africa. To the end of 1924 it had produced 1,740,000 oz. valued at over £7,500,000, and had paid nearly £2,250,000 in dividends. Manganese ore was first mined in 1916, and is produced at the rate of about 32,000 tons annually, production in 1925 being valued at £564,370. Diamonds are mined in the Birrim Valley, and were valued at £69,054 in 1925.

The greatest wealth, however, lies in the cocoa palm, the colony exporting some 198,000 tons of cocoa in 1924. The production of palm oil has declined, but that of kola nuts has increased. Palm kernels, copra, peppers, ground nuts, and cotton are other valuable products. There is a considerable fishing industry, and the native artificers in gold and other metals have a well deserved fame.

**TRANSPORT.**—A railway (3 ft 6 in. gauge) runs from Sekondi to Kumasi via Tarkwa (whence a branch line goes to Prestea), and is 168 miles in length. It was finished in 1902, the total cost being nearly £2,000,000. Another line to Kumasi starts from Accra, passing through Mangoase. A Caillet's mono-rail runs round the rapids at Krachi.

Horse drawn vehicles are in use in certain parts, and motors have been tried, but away from the railway line head portage is the rule. Europeans travel on horseback in the Northern Territories, in some parts of Ashanti, and near Accra (i.e. in the districts comparatively free of the tsetse-fly), but elsewhere they are carried in hammocks.

## GUINEA (FRENCH)

This colony, on the west coast of Africa, formerly known as *Rivieres de Sud*, is bounded on the North by Portuguese Guinea and Senegal, on the south by Liberia and Sierra Leone, on the east by the Ivory Coast and French Sudan, and on the west by the Atlantic. With an area of 100,000 square miles it has a population of about 2,000,000. The coast lands contain dense forests, where huge chimpanzees are to be found, but the Futa Jallon tableland is covered only by short herbage. Its largest rivers, exclusive of the Senegal, Niger and Gambia, are the Cogon, Kankur, and Fuballa, smaller ones being the Rio Nunez, Little Scauries, and Rio Grande.

**ADMINISTRATION.** The colony has a Lieutenant-Governor, assisted by a nominated Council. Revenue is raised from Customs and a capitation tax, the local budget balancing at about £300,000. Native princes retain their sovereignty over a large part of the country under the superintendence of French officials. The capital and only seaport is Konakry. Built on the island of Fumbo it is joined to the mainland by an iron bridge and has a jetty nearly 2,000 ft long. The population numbers nearly 30,000. Besides an ample supply of good water, there are spacious docks, wharves, and public gardens. Konakry, where there is a wireless station, is visited regularly by steamers of one English and two French companies. Other important towns are Bissandugu, a military station east of the Niger, Koumassa, the centre of three great native races, the Susus, Malinkes, and Fulanis, and famous for its great baobab tree, under which the celebrated chief Samory used to try his prisoners, Kankan, the present terminus of the railway, with 12,000 inhabitants, and a centre of the rubber trade, and Filinge, one of the largest of the bush towns and a centre of the millet-growing industry.

**COMMERCE.**—The chief products are rubber, palm oil and palm kernels, gum copal, ground-nuts and sesame. Coffee, wax, and ivory are among the minor products. Sheep and cattle are reared in the Futa Jallon district, and the trade in hides is considerable. Millet is the staple food. The principal imports are cotton goods, of which over 80 per cent come from Britain, kola from Sierra Leone and Liberia, rice from the East, and spirits, tobacco, arms, ammunition, and building material from various European countries. The average annual value of the colony's trade is about £2,000,000 sterling.

**COMMUNICATIONS.**—The French Guinea railway which runs from Konakry to the Niger at Kourassa was opened in January, 1911, and was later continued to Kankan, a distance of 412 miles. From Kourassa there is railway communication with St Louis and Timbuctu. The roads in the colony are good and connect the railway system, by their means a deal of trade had been diverted from Sierra Leone. There are over 2,200 miles of telegraph and 250 miles of telephone line, which connect French Guinea with Senegal. Cable communication is with France and Pernambuco, also with Free-town, Monrovia and Grand Bassam.

## GUINEA (PORTUGUESE)

Portuguese Guinea extends along the coast of West Africa from Cape Roxo to the Coton estuary. Inland it adjoins the territories of Senegal and French Sudan. The colony, over which Portugal has exercised jurisdiction since the fifteenth century, comprises with the adjacent Bissagos islands an area of about 14,000 square miles. The archipelago of small islands was at one time part of the mainland, the rivers of which—the Geba, Mancoia, Rio Grande, Carcheo and Cassini—are connected by a network of lagoons. The climate is generally unhealthy for Europeans, the rainfall being very heavy.

**ADMINISTRATION.** Portuguese sovereignty, which is administered by a Governor, is still little more than nominal over the greater part of the colony, settlement being practically confined to a limited area.

**COMMERCE.**—Trade has expanded during recent years thanks largely to the increased export of ground-nuts, but imports still greatly outbalance exports. In addition to ground-nuts, rubber, wax, palm kernels and ivory are exported. The great obstacle to improved trade is the lack of roads and transport facilities in the interior.

**POPULATION.** The population of Portuguese Guinea and the Bissagos Islands is less than a million. The natives inland are mostly of Mandingo and Fulani stock, practising ancestor worship and unrepentant of either Christianity or Mohammedanism. The people of the islands and round the lagoons are good seamen, artisans and agriculturists, but among them number are many warlike and piratical tribes.

**PRODUCTS.** The country produces palm-oil, ground-nuts, kola, peppers, and various fruits in abundance. Indeed, thousands of pounds worth of valuable produce is lost because it cannot be gathered and transported. The forests contain valuable timber, and mahogany (khaya) is known to exist. Other woods such as ebony, African teak, and the hard durable camwood are also found. The hinterland is a great rice-producing country, but this industry has never been properly developed.

**TRANSPORT.** Navigation on the coasts and rivers is extremely difficult, owing to strong currents and dangerous rocks. The principal port is Bissau. The greatest need of the colony is railways or at least the opening up of the interior by proper roads.

## GUINEA (SPANISH)

The Spanish Protectorate, known sometimes as the Muni River Settlement, lies on the Guinea Coast of West Africa between the Cameroons and French Equatorial Africa. The small islands of Corisco, Elchey Grande, Elchey Chico and Bana, in Corisco Bay, also belong to Spain, and the administration of the whole is under the superintendence of the Governor of Fernando Po. The colony, which, including the islands, has a total area of some 9,800 square miles and an estimated population of about 150,000, consists of a narrow coastal plain and foothills rising to the Crystal Mountains, which traverse it in a north to south direction, the mountainous region extending beyond the Spanish frontier. A large part of the country is covered with dense forest, the excessive growth being due to the fertility of the soil and the great rainfall. The inhabitants are Bantu-Negroes, immigrants from the Congo basin, cultivators of yams, bananas and manioc, and expert fishers and

hunters. The European settlements are confined to the coast. There are trading stations at the mouths of the Campo Benito and Muni rivers, at Bata, midway between the Campo and Benito, and on Elchey Chico. Cocoa, coffee and other plantations exist, but the chief trade is in natural products—rubber, palm-oil and kernels, and timber.

**FERNANDO PO.** The singularly beautiful island of Fernando Po is of volcanic origin, 44 miles long and 20 broad, with an area of 780 square miles. The population numbers 14,000. The island is very mountainous, with several magnificent peaks, and is clothed with dense forests. The natives are a primitive folk—sportsmen and fishermen rather than agriculturists. Sheep, goats and fowls abound, and cocoa, coffee, vanilla, tobacco, kola nuts and other tropical plants are cultivated. Fernando Po was for some time occupied by the British, and English became, and still remains the common language of the coast people.

## IVORY COAST

The Ivory Coast is a French West African colony lying between Liberia and the Gold Coast and bounded inland by the French Sudan. It has an area of approximately 120,000 square miles. The coastal region, very hot and unhealthy, is notable for the three large lagoons—Grand Lahou, Grand Bassam (Lebrice) and Assini. In the north-east and north-west are mountains rising from 4,000 to 6,000 feet. The chief rivers are the Cavalla (Kavalli), San Pedro, Sassandra (240 m), Bandama, Komoe (360 m), and Bia. They are navigable only near their mouths.

**ADMINISTRATION.** The Lieutenant-Governor is assisted by a Council, which includes nominated unofficial members. Native forms of government are maintained in most parts, the colony being divided into "circles" for local government. The Ivory Coast has a separate budget and is self-supporting, revenue being obtained from customs and from a capitation tax on all persons over ten years of age. The capital and seat of government is Bingerville, named after Captain Binger, the French explorer. Grand Bassam, with a population of 6,000, is the largest town and port. Petit Bassam or Port Bouet, the former capital, is an important port.

**COMMERCE.**—The principal exports are rubber, cocoa, kernels, kola nuts, gum and timber, valued at about 50,000,000 francs annually. Imports, largely from France, consist of cotton goods, tobacco, wines, metal work and machinery.

**POPULATION.**—The population hardly exceeds 2,000,000, of whom some 600 are Europeans. The coastal districts are inhabited by negro tribes allied on the one hand to the Krumen and on the other to the people of Ashanti. Further inland the "Jack-Jacks," (Avikomo) and Kwa-Kwa (Aradian) are met with, and the Jamans, Wongaras, and Mandingos are also represented. Some of these are savage and warlike, but the coast tribes are generally peaceful.

**PRODUCTS.**—The most valuable product to-day is cocoa, chiefly cultivated in the region of Bas Cavally, in the district of Bandama from Tiassale to Lahou, and in the vicinity of Aboisso. At one time the Administration had difficulty in persuading the natives to take up its cultivation, and freely distributed a million and a half of seeds. It is now the custom of the inhabitants to plant cocoa trees, and the movement has already attained remarkable results. Cotton is being

increasingly grown, and many native varieties exist. Manioc and yams grow in abundance, and the forest timbers are commercially valuable.

**TRANSPORT.**—The only railway, running from Abidjan to Buaké (197 miles), is of metric gauge, like other railways in French West Africa. It is being extended to the north, to the Niger and Upper Volta. The lagoons, which form excellent means of communication along the coast, are joined by means of canals. The ports are visited by liners of several French, British and Belgian companies.

## LIBERIA

This Republic is on the Pepper (Guinea) Coast of West Africa, extending north and west of Cape Palmas. It has an area of about 43,000 square miles, the coast line measuring 340 miles. The boundaries in the interior were determined by arrangement with France and Great Britain in 1905.

The coastal region of Liberia consists of mangrove swamps lying behind a belt of sand dunes, is traversed by numerous rivers, and is interrupted by projecting headlands of rock. About 20 miles inland the surface rises into undulating uplands. The climate and vegetation are tropical; the temperature varying only between 75 and 85 degrees.

**ADMINISTRATION.** Liberia owes its origin to the American Colonising Society, which in 1821 bought coastal land and settled thereon a small body of freed African slaves. Since 1847 the State has been a free and independent Republic, the constitution being modelled on that of the United States, with a President, Senate, and House of Representatives. No white man can acquire citizen's rights or hold property. The official language is English. Monrovia, the capital, has an estimated population of 6,000. It is one of the fifteen ports of entry along the coast, Robertsport and Sinoe being the most important of the others. The President is the Hon. C. D. B. King, who is serving his second term of office.

**COMMERCE.** The trade of Liberia is in a few raw products, rubber, palm-oil, cocoa, coffee, ivory, ginger, and camwood being the chief. It is mainly with Britain, the United States, Holland and Spain. Imports average \$1,300,000 and exports \$1,170,000 per annum.

**FINANCE.** Liberia is very undeveloped and the revenue is small. For the financial year 1923-24 it amounted to \$380,078 and expenditure to \$371,652. The finances are under the control of a Financial Adviser lent by the United States Government.

**POPULATION.** The population is estimated at 1,500,000 to 2,000,000, including about 100,000 Americo-Liberians. All are of the African race. The indigenous natives belong to the main to six principal stocks: the Mandingos, the Gassis, the Gola, the Kpweis, the Kru negroes and their allies, and the Greboes. The Kru tribes are pagan, but the Americo-Liberians are Protestant Christians. About 50,000 of the coast negroes are civilised, and among these a progressive system of education has worked good results.

**PRODUCTS.**—The soil is well adapted for coffee, the principal crop grown after the food plants rice and manioc. Other products are sugar, palm oil and kernels, cocoa, arrow-root, piassava fibre, spices, coconuts, rubber, kola nuts, and calabar beans. The grant of a million acres of land to an American (Mr. Harvey Firestone) in 1925, though it has been adversely criticised by a section of Liberian public opinion, will, by the introduction of rubber planting on a large scale, do much

towards the proper development of the country.

**TRANSPORT.** There are no railways, and only about 50 miles of motor-road, transport being entirely by ox-cart. The river St. Paul is navigable for 25 miles from the sea northwards, and various Liberians maintain steam launches thereon. There is direct cable communication with Europe and New York, and Monrovia is a port of call for some 200 steamers annually.

## MADAGASCAR

Madagascar, the third largest island in the world, is situated to the south-east of the African Continent, and is about four times as large as England and Wales, having a total area of 228,000 square miles. The country consists of an elevated interior region, from 3,000 to 5,000 ft. above sea level, and a comparatively level area surrounding the high land, not much exceeding 600 ft. in altitude, although there are lofty mountains extending to the south-eastern extremity of the island. The interior highland comprises nearly half the total area of the island, the highest point being Ankaratua (9,000 ft.), probably an extinct volcano. The chief rivers flow west and north-west, and there are many fine bays and harbours on the north-west coast.

**ADMINISTRATION.** Madagascar has been a French colony since 1896, and is administered by a Governor-General, assisted by a nominated Council which includes unofficial members. The colony is not represented in the French Parliament. Each province (there are 24) has its native Governor and minor officials. The capital and seat of Government is Tananarivo, of some 75,000 inhabitants, and possessing several handsome public buildings.

**COMMERCE.**—The principal exports are cattle, hides, wax, india rubber, rattan, bast, fibre hats and graphite, also ebony and other valuable woods. Imports are mainly cotton goods, metal work, crockery, coal and rum. The chief trade is from the eastern ports to Mauritius and Réunion, and there is now also an increasing trade with South Africa. Imports largely outbalance exports, the value of which is about £5,000,000 annually.

**COMMUNICATIONS.** Tananarivo, the principal seaport, is visited by the steamers of two French shipping companies, and the principal ports are connected with each other by coasting steamers. Tananarivo is joined to Tananarivo, the capital, by a railway 230 miles long, and another line, 100 miles long, runs from Tananarivo to Antisarabe, a watering place. There are regular motor-car services on the main roads.

**PEOPLES.** The total population is 3,504,000, including 17,000 Europeans, of whom nine-tenths are French. The Malagasy races or tribes are very numerous, the Hova being the most important. They are of Malayo-Polynesian origin. The slave-trade, formerly prevalent, was abolished in 1896.

**PRODUCTION.**—Agriculture is the chief employment, rice being the principal product. The manioc-root is also largely consumed, and immense herds of fine hump-backed cattle are found in the island. Coffee, sugar and vanilla are cultivated by Europeans, and ostrich farming is also carried on. Iron is abundant, and the European War brought about a great exploitation of graphite, which occurs in a stretch of country 750 miles in length. Up to 30,000 tons have been produced in a single year.

## MOROCCO

Morocco, known to the natives as Maghreb-el Aksha, the "farthest west," is an empire of sultanate confined to that part of north-west Africa bounded on the east by the Wad Gir, which separates it from Algeria, and on the south by Cape Nun and the Wad Draa, which separate it from Rio de Oro and French Sahara. Very little of the country has been surveyed, but it comprises probably about 230,000 square miles, of which the "Tell," or fertile region west of the Atlas mountains, contains 78,000, the steppes or flat upland pastures 27,000, and the Sahara the remainder. Morocco is as a whole mountainous, the Atlas range traversing it in several chains from south-west to north-east, and by various spurs both to the coast country and to the desert. Many of the plains are rich and fertile. In no instance is a river navigable for any distance from its mouth. The climate varies, that of the western slope, due to the sea-breezes, being temperate, the interior valleys are very hot. In winter, snow often falls in Fez and Mequinez, where ice an inch thick is not uncommon.

**ADMINISTRATION.** Politically, Morocco comprises the old Kingdoms of Fez and Morocco and the Territories of Taflet and Sus. Since 1912 it has been divided into three zones: Tangier in the north, which is neutral, a small Spanish protectorate along the Mediterranean coast, and a large French protectorate. Spain also holds a number of settlements on the north coast. Formerly the Sultan was absolute head of State and Church. Since 1912, however, he and his Grand Vizier have been under the control, in the French zone, of a French Resident General and French Ministers, while in the Spanish zone a High Commissioner nominally controls the Khafia. Neither of the two protecting Powers was able to establish its sway without prolonged and severe fighting, and more than once since 1921 the Ruis under the Sultan Abd-el-Krim, had driven the Spaniards to the coast and had turned upon the French. After prolonged and heavy fighting throughout 1924 and 1925, war was terminated in May, 1926, by the surrender of Abd-el-Krim, who was deported. Morocco has four Capitals or Imperial Residences, at which the Sultan resides at uncertain intervals and for indefinite periods. These are Fez, Mequinez, Marrakesh (better known as the City of Morocco), and Rabat. The most important towns commercially are Tangier and Casablanca, which have good harbours.

**COMMERCE.**—Owing to the disturbed state of the country the trade of Morocco has suffered severely during recent years, though the value of the total trade of French Morocco has increased from rather less than 200,000,000 francs in 1912 to about 1,100,000,000 francs. Trade with the United Kingdom is valued at some £3,000,000 annually. The chief exports are eggs, goatskins, wool, sheepskins, hides and wax.

**FINANCE.**—The finances of the French zone are upon a satisfactory basis, though the public debt, consisting entirely of French loans, amounts to over 700,000 francs. Revenue and expenditure each approximate to 300,000,000 francs yearly. The revenue is mainly derived from direct and indirect taxes and monopolies.

**POPULATION.**—This is estimated at about 6,000,000, of whom 5,400,000 may be taken as the native population of the French zone, the European population of all Morocco numbering about 100,000. The native population is composed of Berbers, or Kabyles (the aborigines of the country), Arabs, Moors and Negroes, the latter having

originally been brought from the Sudan as slaves. The "Moors," a term vaguely applied to all the Mohammedan inhabitants, are really Berbers, with a large admixture of Arab, Spanish and other European blood. The Jewish population, which came largely from Spain, have suffered much persecution but now have the larger part of the trade of the country in their hands.

**PRODUCTS.** Agriculture is the principal resource of Morocco, and forms the basis of the economic future of the country. The chief crops are barley, wheat, maize and millet, representing some 88 per cent. of the total cultivated area. Under proper conditions, Morocco may become one of the richest of cereal-producing countries. Other crops are vegetables, flax, hemp and henna, while there is a considerable acreage under orchards. Stock-breeding is also an important industry, sheep and goats predominating. Rich mineral deposits of copper, lead, iron, antimony, silver, gold, phosphates and petroleum are known to exist in the country.

**TRANSPORT.** There is a railway from Fida on the Algerian border to Fez, Mequinez, Rabat, Casablanca and Marrakesh, with which Tangier is to be connected. Another line runs from Tetuan to Ceuta. Much road-making has been done by the French and it is now possible to go to Fez or Marrakesh by motor-car. In the Spanish zone the lack of roads and the insecurity resulting from anarchy and brigandage have greatly retarded development. There are regular steamship services from Europe to the Morocco ports run by French, British, Spanish and Italian lines. Wireless stations have been established at Tangier, Rabat, and Casablanca.

## NIGERIA

Formerly known as Southern and Northern Nigeria, the British possessions in the neighbourhood of the River Niger were in 1912 grouped together under the single title of Nigeria. The united colony is wholly within the Tropics, and, with the exception of the Niger delta and the coastal plain, lies entirely upon the continental plateau, with an average elevation of 1,000 feet. It possesses an area of 335,600 square miles, that part known as the Protectorate (with headquarters at Lagos) being divided into the Northern and Southern Provinces. The most striking physical feature is the river system of the Lower Niger and the Benue, with the extensive delta projecting into the Gulf of Guinea between the Bights of Benin and Biafra. The southern creeks and forests give place northward to open park-like plains, mountains and plateaux rise within the colony to heights of over 4,000 ft. above sea level, while in the extreme north-east the British possessions extend inward to the margin of the northern desert and to the swampy shores of Lake Chad, in the central Sudan.

**ADMINISTRATION.**—Nigeria is administered by a Governor appointed by the Crown, who is assisted by an Executive Council. Since 1922 there has been a Legislative Council for the colony and the Southern Provinces of the Protectorate, in which is a proportion of elected Africans. The Governor legislates for the Northern Provinces and also administers (under mandate) the former German territory of British Cameroons. Each Province is under a Lieutenant-Governor. In many parts much of the work of administration is left in the hands of native chiefs. The present Governor is Sir Graeme Thomson, K.C.B., appointed in 1925.

**CAPITAL.** Lagos, the capital since 1914, stands on the island of that name only a foot or two above sea-level. The inhabitants number about 500 Europeans and 50,000 Africans. The town, with many handsome buildings of stone and brick, is lighted by electricity and has a supply of pure water. The port has increased in importance, large improvements having been carried out during the last 10 years, and ocean-going vessels can now pass into the harbour at high tides, thus saving transhipment. Kaduna, in the Northern Province, has been the seat of the administration of the United Protectorate since 1916. Port Harcourt, the newest port of West Africa, stands as a remarkable example of European enterprise, and has a population of some 7,000.

**COMMERCE.**—Nigeria is one of the richest tropical dependencies of the British Empire, and commercially the most advanced of all West African colonies. From earliest times the Hausas were the recognised traders of Nigeria and the Central Sudan and well-defined trade routes were established from their northern cities into the countries of the neighbouring tribes, the desire for salt stimulating their nomadic and trading instincts. The establishment of British rule throughout the land was accompanied by a marked increase in internal trade, and where transport by steamer or rail has been provided the Hausa merchant has not been slow to avail himself of modern methods.

In 1924 the total value of the trade (including specie) was £27,640,740, of which £12,635,866 represented imports and £15,004,874 exports, an increase of over £1,000,000 on the figures for 1923, and £13,000,000 more than in 1913. The bulk of trade is with the United Kingdom, which in 1924 supplied 71 per cent. of the imports and took 60 per cent. of the exports. Palm-oil, palm kernels, cocoa, and ground-nuts are the principal exports.

**FINANCE.** Both 1923 and 1924 marked a definite recovery in the financial position of the colony from the years of economic depression which succeeded the War. In 1923-24 revenue (£10,260,501) exceeded expenditure (£5,501,242) by £4,759,259, and in 1924-25 by £1,175,505, the figures being £6,944,220 and £5,768,715 respectively. The surplus assets at the end of March 1925 were £571,000, and at the end of July £4,230,000. The railway results for the financial year 1924-25 reflected the general return to prosperity. The gross receipts for 1923-24 were £1,053,115, which increased to £2,070,591 in 1924-25, and were expected to show a greater increase for the year ended March 31, 1926. Whereas the year 1923-24 showed a net loss on railway working of £12,952, the year 1924-25 gave a net profit of £324,311.

In 1923 a special silver coinage for West Africa was introduced, the denominations being 2s, 1s, 6d and 3d, of the same size, weight and fineness as corresponding coins of the United Kingdom. This currency, with adequate reserves in London, based on gold and securities, is under the control of the West African Currency Board. A nickel coinage (penny and one tenth of a penny) is also in use, and local currency notes from 1/- to £5. The Bank of British West Africa and the Colonial Bank have branches in Nigeria.

**PEOPLES.**—The population at the last census was 18,305,634, including about 2,800 Europeans. The native population embraces a vast number of races and tribes, speaking different languages and dialects, and varying greatly in degree of civilisation. The fundamental type is that of the Negro, which is found in its present form in the Niger delta

and the southern forests. Of the many negro races, the Hausas are the most important, and have from immemorial times been known as the traders of the Central Sudan. The Fulas or Fulani are of a superior type, and were originally pastoralists, but afterwards degenerated into slave dealers and extortioners. Slavery in any form was abolished in 1917 though a certain amount of slave trading still goes on among the tribes east of the Niger.

**PRODUCTS.** The chief native agricultural crops of Nigeria are yams, maize, cassava, and ground-nuts, with smaller quantities of potatoes and Guinea corn. Cotton has been cultivated from earliest times, and in the past cotton cloth formed one of the principal exports from Kano and Zaria to northern Africa by caravan. The 1924 yield of 92,780 lb. of cotton lint has only once been exceeded. Tobacco is cultivated near Ibadan in Southern Nigeria and almost everywhere in the Northern Province. Palm oil is an important forest product, and many varieties of rubber are obtained by the natives from the latices of various trees and vines indigenous to the country. There is a considerable inland trade in kola-nuts, and copra is exported.

**MINERALS.** Small quantities of gold, silver, copper, zinc and lead are found in places, but nowhere in sufficient quantity to repay European exploration. There are large tin-bearing areas, and a colliery has been opened by the Government at Enugu, in the Southern Province, which is connected by rail with Port Harcourt.

**TRANSPORT.** Nigeria is fortunate in possessing a large number of ports, of which the principal are Lagos, Sapele, Warri, Forcados, Akassa, Brass, Bonny, Opobo, and Calabar. A regular weekly steamer service is maintained between Liverpool and Forcados, Lagos, Calabar, and the other ports being served by smaller branch steamers from Forcados able to navigate the creeks and bars. Other steamers ply between the major ports and London and Hamburg. In the past the rivers have been the main arteries of communication, but in consequence of the great fall in the water level between October and May, navigation is then only possible for shallow-draught stern-wheel steamers, launches, barges and canoes. In the delta region every place of importance is easily reached by river steamers, and there is a regular service between Forcados and Lagos by lagoon.

**RAILWAYS.**—The railways are based on two separate ports—the Western line on Lagos, with a length of 968 miles to Kano, and the Eastern on Port Harcourt, with a route mileage of 158 as far as Mukuru. The latter line is being extended to join the Western at Kaduna. A light railway runs east from Zaria to the Bauchi tin-fields. Wide roads, permanently cleared, connect all the large towns and government stations. Motor transport has reached a remarkable stage of development in Southern Nigeria.

## NYASSALAND

The Nyassaland Protectorate (until 1907 the British Central Africa Protectorate) lies along the southern and western shores of Lake Nyassa, extending nearly to the banks of the Zambesi, and includes the Shire Highlands, the greater part of the Shire basin and Lake Shirwa. The larger portion of the country, which has a total area of 48,243 square miles, consists of elevations ranging from 2,500 ft. to 4,000 ft. and the climate is for the most part agreeable.

**ADMINISTRATION.** Nyassaland is administered, under the Colonial Office, by a Governor, assisted by Executive and Legislative Councils. The protectorate is divided into 20 districts, each administered by a Resident and his assistants. The laws consist of local ordinances, with such British Acts as are of general application. Education is entirely in the hands of the various missionary societies. The present Governor is His Excellency Sir Charles Bowring, KCMG, KBE. The seat of government is at Zomba, but Blantyre, a town of 7,300 inhabitants, is the largest settlement. Fort Johnston is the chief port of Lake Nyassa.

**COMMERCE.** The general trade of the protectorate has shown an upward tendency during the last three years, and in 1924-25 the balance was in favour of exports (£583,555, as against imports £548,150) for the first time since 1920. The United Kingdom supplied 57.7 per cent of the imports, consisting largely of cotton goods. The principal exports, 98.5 per cent of which went to the United Kingdom, were tobacco, cotton, fibre, tea, rubber, coffee, capsicum and chillies.

**FINANCE.** The revenue increased from £281,043 in 1923-24 to £293,050 in 1924-25, expenditure also rising from £282,800 to £295,481. The country suffered from acute financial depression during 1922 and 1923, but has since, owing to the improved cotton and tobacco crops, made a substantial recovery.

**PEOPLES.**—The inhabitants are for the most part pure negroes, there being here no trace as in other parts of Africa of an Hamitic intermixture. The term "negro" may be taken to include the Bantu, Hottentot, Bushman and Congo pigmy types, but ethnologically and linguistically the natives belong to the Bantu stock, and are in most respects identical with the peoples of Uganda.

**PRODUCTS.** Cotton, tobacco and tea cultivation have been rapidly developed during the last few years, and these are all now grown for export. Records for both tobacco and tea were established in 1924. Coffee, maize and sugar are also grown; rice is largely cultivated, and oats and barley thrive in the uplands. As regards European and native livestock, horned cattle numbered (1924) 121,875, goats 108,392, sheep 87,546, pigs 36,922, asses 343, and mules 13.

**TRANSPORT.**—Nyassaland has communication with the coast at Chinde by river steamers, but the Zambesi and the Shire having both deteriorated as waterways, communication with the outer world is more and more made by the railway which runs from Blantyre to Chinde and from Murraca to Beira. With the bridging of the Zambesi at Murraca there will be uninterrupted communication with the port of Beira. Railway extension northward to Lake Nyassa is contemplated. Main roads and "carrier" roads are open all over the protectorate, the total mileage being 3,500.

## RHODESIA (NORTHERN)

Northern Rhodesia, comprising a total area of some 297,000 square miles, lies to the north of the Zambesi River, and is bounded by Southern Rhodesia, South West Africa, Portuguese West Africa (Angola), Belgian Congo, Tanganyika Territory, Nyassaland, and Portuguese East Africa. It consists in the main of a high plateau, part of the great South African plateau which extends to beyond the region of the Great Lakes. Owing to its altitude (exceeding 4,000 ft.,

except in the Zambesi, Luangwa and Kafue Valleys), much of the country is suitable for European settlement and farming. The territory is well watered by the Zambesi and its tributaries, the Chambesi and the Luapula.

**ADMINISTRATION.**—In 1911 the two provinces formerly known as North-Eastern and North-Western Rhodesia were amalgamated under the title of Northern Rhodesia, and have since been administered by a Governor appointed by the Crown, assisted by an Executive Council of five official members. There is a Legislative Council of 13 members, with a majority of official members. The seat of Government is at Livingstone, on the Zambesi, and also on the main line of the Rhodesian Railway. Livingstone is connected by a telegraph line with both South Africa and the Congo. The present Governor is His Excellency Sir Herbert J. Stanley, KCMG.

**COMMERCE.** Northern Rhodesia's trade figures for the years named were as follow:

	1923	1924
Imports	£528,068	£684,183
Exports	£472,497	£455,917
Totals	1,000,565	1,140,100

For the first seven months of 1925 imports were valued at £777,516, and exports at £233,355. Exports consist mainly of live animals, pig and ingot lead, maize, and tobacco.

**FINANCE.**—The total revenue of the colony for the financial year 1924-25 amounted to £203,495, compared with £237,443 in 1923-24, and expenditure to £364,233, compared with £344,937.

**POPULATION.**—The permanent European population in 1925 was 4,424, the native population was estimated at 1,106,534. The Barotse, who are the predominant tribe in the region of the Upper Zambesi basin, are the superior, intellectually as well as physically, of the vast majority of the negro races of Africa.

**PRODUCTION.** The chief agricultural products are maize, cotton, tobacco, wheat, and European fruits. Rubber is also produced, and there is plenty of timber of various kinds. Stock raising is successfully carried on, much of the land being excellent for grazing. The native-owned cattle are estimated at 350,153 and European-owned at 85,348. Extensive mineral deposits have been discovered, lead and copper predominating. Gold, zinc, vanadium and coal are also present. The total annual mineral production is valued at over £3,325,000.

**TRANSPORT.**—Northern Rhodesia, being an inland country, depends solely on the main line of the Rhodesian Railway, which traverses the region from south to north as far as, and beyond, the Congo border. The Zambesi, Kafue, and Chambesi rivers are only navigable over a portion of their extent, and a great deal of transport work is still done by "ox-trek."

## RIO DE ORO

Rio de Oro is the only Spanish possession on the north-west coast of Africa. It is bounded on the east and south by the Sahara territory under French protection, and on the north by the undefined limit of Morocco, Cape Mogador being the most northerly point claimed by Spain. The country is really a part of the Sahara, and is practically waterless. Oases are few, and the scattered population consists almost entirely of nomad Arabs and Berbers, who are Mohammedans.

The colony, with its protectorate and occupied territory, which in all has an area of about 110,000 square miles, is under the governorship of the Canary Islands, with a Sub-Governor resident at Cisneros, the capital of the colony. Cisneros is the headquarters of a fishing industry of some extent, the trade in fish with the Canary Islands and Southern Nigeria having grown in value to nearly £100,000.

## SENEGAL

The French Colony of Senegal lies to the north of Portuguese and French Guinea, on the extreme west coast of Africa, having with its protectorate over certain native states a total area of over 74,000 square miles. The country behind the seaboard of Senegal proper is a slightly elevated, and for the most part barren, plain. Further east is a mountainous and fertile region, with altitudes of over 4,000 feet. The mountains sink abruptly towards the Niger valley, while southwards they join the Futa Jallon highlands. The Senegal, its tributary the Falemé, and the upper course of the Gambia are the chief rivers which drain the country. The upper Senegal and Niger country consists of a great plateau rarely more than 1,600 feet high, and in large part barren desert. On the borders of the Sahara, north of the Niger, is a good deal of fertile land.

**ADMINISTRATION.** The government of Senegal is modelled on that of a French department, and it returns a member to the Chamber of Deputies. It is administered by a Lieutenant-Governor, assisted by a Colonial Council of 40 members, 20 selected by French citizens, and 20 by representatives of native chiefs of cantons and provinces. The judicial system applied to Europeans resembles that of France, and the judicature is independent of the executive. Native laws and customs not repugnant to justice are respected. The capital is St. Louis, founded in 1626 and the oldest French settlement on the coast. The town is picturesquely situated but unhealthy, and the port is not used by European steamers, which discharge at Dakar, where there are three large commercial docks, besides a naval dock and arsenal.

**COMMERCE.**—The last figures available of the trade of Senegal are for 1924, in which year the total was valued at 863,969,450 francs, as against 603,829,453 francs in 1923, imports aggregating 477,871,418 francs and exports 386,098,032 francs. The chief imports included Textiles, 167,876,402 francs, rice, 33,925,523 francs, coal, 31,913,763 francs, sugar, 25,977,211 francs; wines, 14,527,356 francs, leaf tobacco, 11,972,083 francs, wheat flour, 9,851,669 francs, biscuits, 8,621,229 francs, building materials, 7,624,895 francs, cotton thread, 6,963,159 francs, timber, 6,327,687 francs, and kola nuts, 6,216,276 francs, while the principal exports comprised ground nuts in husks, 312,854,546 francs, gum, 11,874,803 francs, ground nuts (decorticated), 6,701,051 francs, raw cotton, 6,060,914 francs, palm kernels, 2,950,767 francs, ox hides, 2,003,939 francs, and wool, 1,851,138 francs.

**POPULATION.**—The total population of Senegal (including the protectorate) is 2,250,000, about 5,000 of whom are Europeans. The natives of the four towns of St. Louis, Dakar, Rufisque, and Goree and their descendants are French citizens, all other natives being French subjects. The native population consists largely of the Fulani, Mandingo, and Woloff tribes, the latter being considered one of the finest handsomest and blackest of West African

ances. They are nominally Mohammedans, and, in common with the Mandingoes have an elaborate caste system.

**PRODUCTS.**—Millet and ground nuts constitute the principal, if not the sole wealth of the colony. Maize, rice, castor-beans, gum, and rubber are also cultivated. There are large herds of cattle, also flocks of sheep and goats, besides numerous camels, asses and horses. Gold, iron, quicksilver and copper are found, and a salt industry is being developed. Native industries comprise weaving, pottery, brick-making and jewellery.

**TRANSPORT.** There is regular communication by rail and river between Dakar and Timbuctu the journey occupying ten days. A railway linking the Senegal and Niger rivers starts at Kayes on the Senegal, passes south-east through Bafoulabe and Kita, whence it goes east to Bamako on the Niger, and follows the left bank of that river to Kulikoro, the terminus, from which point the Niger is navigable down stream for 900 miles. The Senegal-Niger railway is 347 miles long and occupied 24 years in construction. Telegraph lines connect the colony with all other parts of French West Africa.

## SIERRA LEONE

Sierra Leone (Lion Mountain) lies on the west coast of Africa between the French possession Guinée Française on the north and north-east and the Republic of Liberia on the south-east and occupies an area of 25,000 square miles. The country is mountainous and exceptionally well watered, the principal rivers being the Rokel and the Boom Kittam, which eventually merges into the Kase Lake. The climate is tropical and not generally healthy for Europeans. Vegetation is profuse, and Sierra Leone is the home of the oil-palm, the chief source of the colony's wealth.

**ADMINISTRATION.** Sierra Leone is a Crown Colony the Governor being aided by an Executive Council composed of the General Officer Commanding the Troops, the Colonial Secretary, the Attorney-General, the Colonial Treasurer, and the Collector of Customs. The Legislative Council contains a proportion of elected African members. The Imperial military forces are represented by a battalion of the West India Regiment, British artillery and engineers, and a battalion of the West African Regiment, a native corps. There is also a native force, under British officers, for interior duties. The present Governor is Sir A. R. Slater, KCMG, CBE.

**CAPITAL.** The capital is Freetown, an important place of some 35,000 inhabitants, which possesses the finest natural harbour in West Africa. Freetown, besides being a garrison town, is also a naval station.

**COMMERCE.** The central fact of Sierra Leone's trade is the oil-palm, since in many of the greatest European industries vegetable fats are more and more required. In the scientific treatment of this immense indigenous wealth lies in the near future the economic development of Sierra Leone and its protectorate. There is a large local trade in kola-nuts. Imports exceeded exports in both 1923 and 1924, the respective totals being—1923 Imports, £1,949,981, exports, £1,607,225, and 1924, imports, £1,730,643, exports, £1,711,438. During the first seven months of 1925 imports (exclusive of specie) reached a value of £1,202,790, as against £934,067 for the corresponding period of 1924, and exports a value of £1,056,281, as against £916,125.

**FINANCE.** The public revenue totalled £868,319 in 1924, compared with £845,320 in the preceding year, while expenditure amounted to £777,790, as against £727,661. The West African silver currency (2s., 1s., 6d. and 3d.) is in circulation, but British coins are still largely used. Currency notes of the United Kingdom and Nigeria are in operation. The Bank of British West Africa and the Colonial Bank have their headquarters at Freetown.

**PEOPLES.** At the census of 1921 the total population of the colony was 85,163, of whom 1,161 were resident Europeans. The population of the protectorate was estimated at about 1,150,000. The natives of the interior are comprised in about 15 different tribes, offering striking differences in physique, languages, and general characteristics. The Sierra Leoneans (often called Creoles) who are found mostly in Freetown and the Peninsula are the descendants of the original settlers and liberated slaves.

**PRODUCTION.** The soil of Sierra Leone is extremely fertile and is easily worked. All agriculture is termed "farming" by the country natives who use the most primitive methods. The principal articles of food are rice and cassava which are grown all over the country. In the forests the oil-palm grows untended, and supplies the natives with the simple necessities of life, as well as furnishing a large export trade. The kola nut is used by natives extensively, and other promising crops are maize, cuscus, and bean seed. Coconut palms are to be found everywhere near the seaboard, and yield prolific crops.

No mining is carried on at present, but ironstone is found everywhere and is smelted by the natives who extract a splendid iron from which swords, spears, knives, hoes and other implements are made.

**TRANSPORT.** The main line of railway which runs inland for 227 miles from Freetown to Pendembu (with the branch line from Boia to Kamabai) has proved of immense value to the country. This was the first railway constructed in West Africa, and was commenced in 1896. It penetrates the heart of prolific oil-palm areas and some very fertile agricultural land. In connection with the railway are numerous government roads to facilitate the overland transport to the sections, and many of these now carry motor traffic.

## SOMALILAND (BRITISH)

The British Somaliland Protectorate includes all the parts of the northern coast of the so-called "Horn of Africa," and is a section about 68,000 square miles in extent, of the great triangular Somali Peninsula, which in many respects forms a continuation of Arabia. The country is dry, without permanent rivers, and almost universally hot but, except during particular seasons in the coastal lowland, the climate is not unhealthy.

**ADMINISTRATION.** The administration of the Protectorate was formerly undertaken by the Government of India, but was taken over by the Foreign Office in 1898, and transferred to the Colonial Office in 1905. The present Governor and Commander-in-Chief is Mr. Harold Baxter Kitchener, C.M.G., formerly Secretary to the Administration, who was appointed in 1926. The capital is Berbera, which possesses the only sheltered harbour on the coast, and has a population of about 30,000 in the trading season. Zeyla and Bulhar are trading centres of some 7,000 population each.

**COMMERCE.** Imports in 1924 were valued at £340,563, as against £328,045 in 1923, exports at £233,145, as against £228,640. The usual imports are mainly of grain (rice and pown) and a little tea from India, cotton piece goods from India, Europe and North America, and dates from Basra. The chief items of export trade are sheep, goats, some cattle and ponies, and hides, ostrich feathers, *ghu* (clarified butter), civet, myrrh, frankincense, gums, and mother-of-pearl may also be mentioned. Almost all goes to Aden, either for consumption or for transshipment to London and elsewhere.

**PEOPLES.** The population, mainly consisting of Somalis, a Mohammedan people, has for many years remained stationary at about 350,000. The Somalis are pastoralists, and tend to live in small vagrant communities, each known as a *tribe*, or *kama*, which rarely stays at one place more than a few days together, moving repeatedly to wherever it can find new grazing.

**PRODUCTS.** Stock-raising, upon very primitive methods, is the main business of the Somali who invests all his gains however earned, in either camels or sheep. It has been estimated that there are between two and three million camels in British Somaliland and perhaps 4,000,000 sheep; the latter carry little wool and are usually white, with black heads and necks and as a rule hornless. Round the towns there is a little scattered agriculture, mainly of millet; of mining or manufacturing activities there are none.

**TRANSPORT.** Methods of transport in Somaliland are primitive, for not only is there no railway, but there are not even roads in the proper sense, the nearest approach to one being the rough track, in parts lit for wheeled traffic, constructed for military operations some twenty years ago. Transport therefore is mainly by pack animals, mostly camels. There is constant communication with Aden, across the Gulf, by sailing boats called *buggalows*, belonging to the natives, and in dhows of between 50 and 300 tons from Basra and Red Sea ports but this traffic is partially suspended during the south-west monsoon, and a great deal of the Aden, together with the rest of the foreign, trade is carried by steamers, mostly British.

## SOMALILAND (FRENCH)

The colony of French Somaliland (Côte française de Somalis) is situated at the entrance to the Red Sea and north of British Somaliland. It covers an area of about 5,700 square miles, and has a population of 200,000, mostly Danakils (Afar) and Somalis, with a number of Arabs, Abyssinians and Indians, and about 2,000 Europeans and Levantines. The country has been progressively occupied by France since 1884, its importance to the mother country consisting principally in its strategic position as regards the Suez Canal and the use made of Djibouti as a coaling station. Djibouti is the capital, with a population of about 9,000. The country has little or no agriculture, and the chief industries are those of salt (procured from the lake deposits) and fishing. Some coffee is grown, and ivory and skins and hides are exported. The railway which runs from Djibouti to Addis-Ababa, the capital of Abyssinia, has aided commerce with that country, and some trade is also carried on with Aden and the Persian Gulf.

## SOMALILAND (ITALIAN)

Italian Somaliland, consisting of a colony and protectorate 154,000 square miles in area, extends on the East African coast from Bangar Ziyada, a point on the Gulf of Aden, eastward to Cape Gardafui, and thence southward to the mouth of the River Juba. Westward it is bounded by Abyssinia and British Somaliland. With a coast line of no less than 1,200 miles, the country does not possess a single good harbour, though there are ports at Mukdishu, Brava, Marka, Warsheik and Yub. The capital is Mogadiscio (20,700 inhabitants), where the Italian Governor resides. The principal occupations of the people, who are largely Somali of Hamitic origin and a very warlike race, are cattle rearing and agriculture, but in Northern Somaliland, where agriculture is almost unknown, camels and sheep are grazed in large flocks. Exports are in value far below imports, consisting principally of ivory, cattle, butter, cotton, myrrh, gums and skins. Animal produce is exported to Italy, Aden and Zanzibar, whence it is shipped to Europe, America, or India. Rich crops of millet and other grains are grown in the fertile district of the Juba Valley.

The budget for 1924-25 provided for a revenue of 2,857,000 lire, plus a State contribution of 8,049,000 lire, and an extraordinary revenue of 12,500,000, total revenue, 24,306,000 lire, to balance an expenditure of the same amount. There are no railways in the colony, but some 1,500 miles of roads. On the Juba River there is a steamship service from Kismayu (ceded to Italy by Britain in 1925) to Bardera.

## SUDAN (FRENCH)

The colony of French Sudan, occupying with its dependent territory some 771,000 square miles, is that vast hinterland which lies at the back of Senegal, French Guinea and the Ivory Coast, thus forming a link which connects all the possessions of France in north, west, and central Africa. The greater part of the colony lies within the bend of the Niger, north of which river it includes the fertile borders of the Sahara. Northward of Timbuctu the desert stretches to the borders of Morocco and Algeria. On the south-west and south the country is somewhat mountainous.

**ADMINISTRATION.**—The colony was formed in 1904 from the territories of Senegambia and the Niger, less the Senegal Protectorate, which was restored to Senegal. Its old name of Upper Senegal-Niger was changed to French Sudan in 1920. The whole of the colony is under civil administration, with the same judicial and educational systems as the other colonies of French West Africa. The capital is Bamako (10,000), planned like a French provincial town, with wide boulevards and solid stone houses. There is an excellent water-supply and the streets are lighted by electricity. Timbuctu, the ancient capital of the Songhay empire and the centre of the caravan trade of the Sahara, lies in the midst of the desert, and is connected with the coast and with Paris by wireless.

**COMMERCE.**—The chief exports are gum (which comes largely from the northern districts), rubber, gold, kola nuts, cotton, leather and ostrich feathers. A good deal of trade is still done by caravans across the Sahara to Morocco and Algeria. Much of the export trade from the Middle Niger passes through the port of Konakry in French Guinea.

**POPULATION.**—The population of the French Sudan, including the Sahara and the territories of the Upper Volta and Mauretania, is approximately 7,000,000, of whom not more than 2,000 are Europeans. The Fulani have long been the dominant race of this part of West Africa, and at various times have overrun and conquered many of the native states. They are a nomadic and pastoral people with marked warlike tendencies, and are generally considered to be the most intelligent of all African tribes, and amongst the finest specimens of mankind found in West or Central Africa.

**PRODUCTS.**—The chief native products of French Sudan are maize, millet, rice, ground-nuts, cotton, sesame, melons, manioc, bananas, and other fruits. Pasturage is extensive and cattle are plentiful; there are several good breeds of horses, donkeys are numerous and largely used as transport animals, and wool-bearing sheep distinct from the smooth-haired sheep of the coast regions—are bred in many districts, the natives using the wool largely in the manufacture of blankets and rugs. Under the direction of French officials, cotton-growing on scientific methods has recently made great progress. Some gold is found in the basin of the Falcine and of the Tankisso.

**TRANSPORT.**—The only railway in the colony is that known as the Kayes Niger line, which runs from Ambidedi to Koulikoro, 389 miles. The latter town is the headquarters of the Niger Navigation Service, which is run by the Government and maintains regular steamer communication between Koulikoro, Bamako and Timbuctu.

## TANGANYIKA

The Tanganyika Territory is, roughly speaking, a block of central East Africa between the Great Lakes, having the eastern side washed by the Indian Ocean. It is the only country in the world whose boundary on two sides consists largely of fresh water coast. It comprises that portion of the former colony of German East Africa which, under the Treaty of Versailles, it was agreed should be administered under a mandate by His Britannic Majesty. The total area of Tanganyika is about 305,000 square miles, the climate is generally of the Indian or trade-wind type, though hotter conditions prevail in the extreme north-west and north-east, and the general aspect of the country is of the savannah or park land order, with large tropical rain forests on the mountain slopes. The peak of Kilimanjaro (19,700 ft.), the loftiest mountain of South Africa, is just within the territory.

**ADMINISTRATION.**—Under an Order in Council, dated July 22, 1920, Tanganyika is administered by a Governor, who is assisted by a nominated Executive Council and an elected Legislative Council. Native laws and customs are respected unless they are opposed to justice or morality. Legislation for the complete abolition of slavery was enacted in 1922. For purposes of administration the Territory is divided into 22 administrative districts, with 47 sub-districts. The present Governor is His Excellency Sir Donald Charles Cameron, K.B.E., C.M.G., who was appointed in 1924.

**CAPITAL.**—The capital of the territory is Dar-es-Salaam, which is also the principal seaport. There is a fine land-locked harbour, in which the largest vessels can find anchorage, as well as a small, but well-equipped, naval dockyard. The population of Dar-es-Salaam is about 24,000.

**COMMERCE.**—The import trade of Tanganyika during 1925 amounted approximately to £2,443,000, compared with £2,100,000 in 1924. Great Britain supplied 39 per cent, India 17 per cent, Germany 11 per cent, and Holland 9 per cent of the imports. Domestic exports were returned at a total value of £2,898,000 in 1925, as against £2,550,000 in the preceding year. Cotton and coffee exports increased 78 per cent and 14 per cent respectively in weight, the decreases in grain and ground nuts being 50 per cent and 52 per cent. Considering the prolonged drought from which Tanganyika suffered in 1925, the export figures showed remarkable progress.

**FINANCE.**—The finances of the territory attained a much more favourable position in 1924-25 than in the previous year. Revenue, amounting to £1,558,082, was considerably above estimates, and expenditure, totalling £1,747,578, was substantially below estimates. These figures compare favourably with those for 1924 of £1,315,188 for revenue and £1,901,158 for expenditure.

The more important revenue items comprised licences and taxes, £532,062, customs, £426,725, railways, £318,028, court fees, £87,070, revenue from Government property, £62,498, posts and telegraphs, £30,663, port and marine, £29,010, and land sales, £2,347. The largest expenditures were on railways, £493,071, public works, £319,021, district administration, £178,483, military, £124,400, police and prisons, £113,850, medical and sanitation, £106,127, posts and telegraphs, £63,450.

**POPULATION.**—The native population consists mostly of tribes of mixed Bantu race, and is estimated at about 5,000,000. The coloured population (mostly Indians) other than native being some 15,000. These figures are exclusive of the inhabitants of the thickly populated provinces of Ruanda and Urundi, which are under Belgian administration. The total white population is about 2,600.

**PRODUCTION.**—Agriculture, including cattle farming, is the principal wealth of the country, and far exceeds in importance any other industry, such as mining, although a strong development of the latter is anticipated. The chief crops distributed generally throughout the territory are different kinds of beans, maize, rice, millet, oil-seeds, root crops, yams, cassava, and potatoes. The cotton industry is being considerably extended, production in 1925 amounting to 8,287,000 lb., compared with 7,517,364 lb. in 1924. There has also been a recent development in the cultivation of tobacco and coffee. Large areas of Cereia rubber exist, and await development. The principal mineral wealth of Tanganyika lies in gold, mica and diamonds, the latter having been discovered in valuable quantities. Coal and copper have been located, and vast iron ore deposits are known to exist.

**TRANSPORT.**—There are three railway lines in the Territory: the Tanga railway from Tanga to Moshi (219 miles), the line from Dar-es-Salaam to Kigoma, and the Vuu-Kake railway from Moshi to Voi (92 miles) on the Uganda Railway. The East African Commission has recommended the construction of three more important trunk lines, one of which will connect the Central Railway with the north end of Lake Nyassa, while another will branch from Jagora to the southern end of Lake Victoria, the third linking the Central and Tanga Railways between Dodoma and Arusha. Motor transport is at present possible only on a few good roads, but new roads are to be constructed. There is good steamer transport on the three lakes of Victoria, Nyassa and Tanganyika.

## TOGOLAND

Togoland, the narrow strip of country with a coast line of 32 miles and a total area of some 34,000 square miles which lies between the Gold Coast Colony on the west and French Dahomey on the east, formerly belonged to Germany, but was surrendered unconditionally to British and French forces in August 1914. The greater part of the country belongs to the basin of the Volta, and lies west and north of the Agome chain of mountains, the highest elevations of which are Mount Dabo (3,133 ft) and Mount Atiknse (3,248 ft). The chief navigable river traversing Togoland is the Oti; the Haho is navigable at its mouth for light canoes. The climate is hot and humid, but with careful hygiene and sanitation is supportable for Europeans.

**ADMINISTRATION.** In 1920 the country was divided between France and Britain, the boundary between the two spheres extending from the north-west corner in a general direction south-east and south, terminating not far from the port of Lome, but so that no part of the British sphere reaches the coast. British Togoland is attached for administrative purposes to the adjacent provinces of the Gold Coast Colony, Ashanti and the Northern Territories. French Togoland is administered as an autonomous territory, the seat of government being at Lome, which has a port of modern construction capable of sheltering and unloading vessels of any size.

**COMMERCE.** Quite one-sixth of the total products of all Togoland is in palm kernels and palm-oil, which are bartered and exported in large quantities. Cocoa, kola nuts, raw cotton, rubber, indigo, ebony and other valuable woods are also exported. Imports are chiefly textiles, metals and hardware.

**POPULATION.** The total native population is about 1,600,000, and the European population (British and French) a few hundred. The southern half of the country is peopled by natives using no less than 30 different languages, of which the principal is Ewe; these may be regarded as an offshoot of the Bantu peoples. The northern half contains ethnologically a totally different population descended largely from Hamitic tribes and speaking in all 16 languages, of which Dagomba and Tuni are the most important. The majority of the natives are pagans, but many profess Mohammedanism.

**PRODUCTION.** Whatever may have been said of the pre-war German administration of the country, there can be no doubt as to the development of its natural resources. Forestry and planting received most careful attention, as did the raising of stock, the result being that Togoland was the first German colony to dispense (1903-04) with an imperial subsidy towards its upkeep. There are flourishing plantations in which coffee, cocoa, cotton, kola and other tropical products are cultivated. The oil-palm grows extensively everywhere, and maize, yams, bananas, tapioca and ginger are cultivated by the natives. In the interior cattle and sheep are plentiful, on the plateau horses and donkeys. There is no mining by the Europeans, but in some districts the natives smelt iron, in which the country is very rich.

**TRANSPORT.** There are excellent roads throughout the colony, and over 800 miles of highway suitable for motor-traffic have been laid out with well-appointed rest-houses under European control. There are three railways connecting Lome with Aneho (Little Popo), with Palime, and with Atakpama, the total mileage exceeding 200. These are all in French territory, and are to be linked up with the Dahomey railways

## TRIPOLITANIA AND CYRENAICA

Italian Libya lies along the north coast of Africa, between Tunisia on the east and Egypt on the west. Formerly known as Tripoli, a vilayet or regency of the Ottoman Empire, it passed under Italian rule as the result of the war of 1911-12 between Italy and Turkey. To Tripoli the Italians gave the name of Tripolitania, the district of Cyrenaica borders on the north-west of Egypt, and on the Egyptian frontier Italy has recently obtained from Great Britain the stretch of territory known as Jarabub. The total area comprised is some 410,000 square miles, consisting very largely of Saharan desert interspersed with several chains of oases. Part of Libya (the general name of the combined territories) within the coast zone is fertile and capable of great development. The climate is variable, cold nights often succeeding very hot days.

**ADMINISTRATION.** For administrative and military purposes the whole country is divided into two independent districts, Tripolitania and Cyrenaica with their respective capitals at Tripoli and Benghazi, both under the jurisdiction of the Italian Minister for the Colonies. In both provinces natives have equal rights with Italians, and in each there is a small local parliament elected by all citizens.

**COMMERCE.** Statistics showed a marked improvement in the trade of the colony in 1921 as compared with 1923. Imports and exports during 1924 amounting in value to 198,672,048 lire and 25,204,132 lire, compared with 142,107,306 lire and 22,126,584 lire respectively. The chief exports in 1924 were tunny fish (in oil), 7,227,750 lire; skins, 3,801,100 lire; esparto, 1,708,024 lire; sponges, 1,538,765 lire; and henna, 1,481,813 lire. Imports, the principal of which were flour, wheat, cotton and linen goods, and sugar, came from Italy, Argentina, the United Kingdom and Tunisia in the order named. Much of the trade of the country is by caravan, between Benghazi and Wadai and between Tripoli and Central Sudan when the routes are free from raiders.

**FINANCE.** In the financial year 1924-25 the revenue and expenditure were estimated at Colonial revenue, 146,841,000 lire; civil expenditure, 34,477,500 lire; military expenditure, 112,304,000 lire. The Banca d'Italia, the Banco di Sicilia, the Banco di Napoli, the Banco di Roma and other banks carry on financial operations.

**POPULATION.** The population of Tripolitania and Cyrenaica is estimated at less than two millions, of which about 30 per cent are Arabs, 40 per cent negroes, 23 per cent Jews, and about 7 per cent Europeans. The country, which is known to have been inhabited by primitive man and to have been the seat of a flourishing Neolithic culture, is now inhabited almost entirely by Arab nomads, who occupy the Jufra flats about the capital and are in almost exclusive possession of Cyrenaica, Marmarica and the Anjala oases. In Fezzan the Saharan Berbers are dominant, but are here largely intermingled with negro or negroid intruders from the Sudan. Jews are numerous in the larger towns, and there are large colonies of Turks, Maltese, Italians, Cretans, and other southern European traders and artisans.

**PRODUCTION.** Tripolitania has four distinct zones, the first of which, along the coast, is covered with palm, olive, lemon, and fruit trees. The second is highland

country, on which olives, palms, fig trees, barley and saffron are grown. The third zone consists principally of oases, and is rich in palms. The fourth zone is covered with palms, figs, vines and almonds. The people possess large numbers of cattle, sheep, goats and camels, and there are good possibilities of developing the country's natural resources. Salt is the only mineral exploited. The output of the valuable sponge fisheries is valued at 250,000 yearly.

**TRANSPORT.** The principal means of communication inland are the caravans which follow long-frequented routes. The total length of the railways is 140 miles; lines run from Tripoli to Zuara along the coast, from Tripoli to Taghura, and from Tripoli to Aziza. There are fortnightly steamship sailings from Tripoli to Naples and Syracuse, and along the coast.

## TUNISIA

The French protectorate of Tunisia occupies an area of about 50,000 square miles in north-west Africa, lying between Algeria and Tripolitania and extending south to the Sahara. On the coast are the two large gulfs of Hammamet and Gabes, and Cape Blanco is the most northerly point of the African continent. Tunisia consists of four well-defined regions, the Tell, or mountainous region, the Sahel, or eastern coast region, the Central Fableland, one of the great granaries of North Africa, and the Sahara, or desert region containing the famous dried up salt lakes. The surface is generally mountainous, and the only important perennial river is the Magerda. The climate is hot, but generally healthy.

**ADMINISTRATION.** The Sultan of Tunisia is descended from the famous Hussein ben Ali, commonly believed to have been a native of Crete, who made himself master of the country in 1705, acknowledging, however, the suzerainty of the Sultan of Turkey. Since 1881 the country has been a protectorate of France, the government being carried on under the direction of the French Foreign Office, which appoints a Resident General, who is also Minister of Foreign Affairs, and a ministry of eleven heads of departments, eight of whom are French and three Tunisians. French tribunals administer justice between subjects of European Powers and between them and natives, purely native matters going before native courts. The capital and chief port is Tunis, with a population of 172,000. The port is now directly accessible to ocean-going steamers.

**COMMERCE.** The general trade, which increases every year, amounts to about 1,500,000,000 francs annually, imports rather exceeding exports. Grain, wines, olives, fish, live animals, hides, ore, esparto grass, sponges, phosphates and fruits are the chief exports. The bulk of the trade is with France, Italy and Great Britain coming next.

**FINANCE.** Revenue and expenditure about balance, amounting each to some 300,000,000 francs yearly. The public debt stands at about 500,000,000 francs. The Banque d'Algerie issues Tunisian bank notes, the legal coinage being similar to that of France.

**POPULATION.** The total European population of Tunisia at the last census was 156,170, composed of 54,477 French, 84,819 Italians, 13,504 Maltese, 604 Spaniards, 920 Greeks, and 1,786 other foreigners. The total native population was 1,938,920, of whom 1,891,280 were Arabs and Bedouins.

and 47,640 Jews. The natives belong almost entirely to the Berber and Arab stocks, the Arabs of more or less unmixed descent being pure nomads. On the littoral the population is very mixed.

**PRODUCTION.**—Tunisia is essentially an agricultural country, and cereals are raised on a large scale. Some 1,700,000 acres are under wheat producing about 300,000 tons annually, and the production of barley and oats averages about 260,000 tons and 40,000 tons respectively each year. There are vast numbers of olive trees and a large annual output of oil. Date palms abound, and there are large acreages under cork and pine forest and under vineyards. Other products are almonds, oranges, lemons, shaddocks, pistachios, esparto grass, and henna. Horses, asses, mules, cattle, sheep, goats and camels are reared extensively. Lead ore, zinc ore, and iron are the minerals worked, and their output is steadily increasing. Phosphate of lime is also produced in large quantities. The fishing industry (sardines, anchovies and tunny) is important.

**TRANSPORT.** Good roads have been constructed by the French to a total length of over 3,000 miles. There are also 1,503 miles of railway, belonging now almost entirely to the French Bone-Guelma Company. Extensions are projected to reach the Tripoli frontier. In the south communication is maintained chiefly by camel caravans. About half the shipping trade is in the hands of the French.

## UGANDA

Uganda was the name applied to a great Central African empire by its discoverer, Captain John Hanning Speke. He derived the name from the version of the Swahili Arabs who were his guides on his two journeys of 1857-58 and 1859-62. Strictly speaking, the word, if it be given in its native form, should be "Buganda," and this is the term now reserved for the designation of the metropolitan province of the protectorate, the native kingdom of Buganda. The form Uganda, however, has been consecrated by long usage and is given to the Protectorate as a whole, which has an area of 110,300 square miles, including 10,169 square miles of water.

The Uganda Protectorate lies in equatorial East Africa, between the Victoria Nyanza, Tanganyika, and the Egyptian Sudan. It is, indeed, essentially bound up with the Nile system, its principal river being the Kagera, a southern affluent of the Nile and the main feeder of the great shallow lake, the Victoria Nyanza, the biggest of the fresh-water seas of Africa. About 140 miles to the west of the lake rises the remarkable mountain mass known as Ruwenzori, isolated almost by the smaller lakes of Albert and Edward Nyanza, the Semliki and Lake Dweru, and rising at its highest point to an altitude of 16,794 feet. Between Ruwenzori and the coast of the Victoria Nyanza the country is sometimes mountainous, and often densely forested. Excepting in the northern province, which is dry and bare, the protectorate has a good rainfall, an exuberant vegetation, and excellent pasturage for stock. In the northern province the climate is extremely hot, but within the kingdom of Buganda fairly agreeable all the year round, the average altitude above sea-level being at least 3,000 feet.

**ADMINISTRATION.**—A British Protectorate has been declared since 1894, and for administrative purposes is divided into five provinces, viz.,—Eastern, Rudolf, Northern, Western, and Kingdom of Buganda.

The latter includes sundry islands in Lake Victoria and the districts of Mengo, Masaka, Mubende, and Entebbe. With the exception of the Rudolf province, the whole Protectorate is now under direct administration, but the native kings or chiefs, whose rights are in some cases regulated by treaties, are encouraged to conduct the government of their own subjects. The province of Buganda is recognised as a native kingdom under a "Kabaka" with the title of His Highness, H. H. Daudi Chwa being the present ruler. He is assisted in the government by three native ministers and a Lukiko, or native assembly. For Europeans and non-natives justice is administered by His Majesty's courts. The Governor (His Excellency, Sir William Frederick Gowers, K.C.M.G.) administers the Protectorate by means of ordinances. An Appeal Court consists of the judges of the High Courts of Kenya, Uganda, Nyassaland and Zanzibar.

**CAPITAL.** The headquarters of the British administration is at Entebbe, a town and port on the western shore of Lake Victoria. The native capital of Buganda is at Mengo, Kampala.

**COMMERCE.**—See under "Kenya Colony."

**FINANCE.**—The finances of the Protectorate are in a thoroughly healthy state, the revenue for 1924 (£1,239,270) as against £999,750 in 1923) exceeding expenditure (£918,662, compared with £938,999) by £321,128. The revenue in 1924 was mainly derived from poll-tax (£400,000) and Customs (£427,000).

**PEOPLES.**—The total population of Uganda on December 31, 1924, is given as 3,145,449, composed as follows: Natives, 3,136,769; Asiatics, 7,229; Europeans, 1,451. Among the natives, approximately 640,000 belong to the intelligent civilised Buganda, a race converted to Christianity by British and French missionaries. The ethnology of the Uganda region is extraordinarily interesting, the races including the Congo pigmies, the forest negroes, and the Nilotic negroes.

**PRODUCTS.**—The main source of wealth in Uganda is cotton, which accounts for approximately seven eighths of the Protectorate's exports. In 1920 the cotton crop amounted to 40,000 bales, in 1924 over 128,000 bales (each of 400 lbs.) were exported and the 1925 crop was expected to reach 200,000 bales, easily the best on record. Coffee is the second principal crop, exports in 1924 being valued at £167,696. Increased attention is being paid to rubber cultivation. There are indications of gold in Bungoro, and perhaps in the northern province, abundant iron is also found in Bungoro, while in the central part of the Protectorate there is copper, but at present there is no mining industry, the exploitable wealth of the country being either vegetable or animal.

**TRANSPORT.**—The Uganda Railway (see under "Kenya Colony") does not enter the protectorate, but a regular steamer service on Lake Victoria is maintained by the Administration between Kisumu, the railway terminus, and Entebbe, Port Bell, and Jinja, the principal Uganda ports.

The Busoga Railway Marine, which, with the Busoga Railway, is controlled by the Uganda Railway, deals with the traffic on Lake Kioga, on which waterway there are two steamers and a large number of lighters. An additional steamer and subsidiary craft ply on Lake Albert and the Nile between Butiaba, Nimule, and the Belgian Port of Kasenye at the south of Lake Albert. The Busoga Railway, of the same gauge as the

Uganda Railway, 62 miles in length, runs from Jinja, on Lake Victoria, to Namasagah, a point on the Nile below the rapids, and deals with the cotton output in the regions round Lake Kioga, connecting that Lake with Lake Victoria. A railway is under construction from Mbulamuth (on the Jinja-Namasagah Railway) to join up with the Uganda Railway via Toror, Turbo, and Eldoret. There is a light railway from Port Bell to Kampala,  $7\frac{1}{2}$  miles in length. The Government runs a fleet of motor vans, and there are said to be over 800 motor cars in Kampala alone.

## ZANZIBAR

The Zanzibar Sultanate and Protectorate consist of two small islands, Pemba and Zanzibar, and an islet, Tumbatu, on the equatorial east coast of Africa, together with some smaller islets. The total area comprised is 1,020 square miles, Zanzibar itself being about 47 miles long and 20 miles in breadth, situated 20 miles from the mainland. The temperature of both islands is always very warm and somewhat trying to Europeans.

**ADMINISTRATION.** The dominions of the Sultan of Zanzibar formerly extended along the mainland as far as Tunghu Bay and north as far as Waisheikh, but since the cession of a large part of the coast line to Germany in 1890, and of the Benadir coast to Italy in 1904, they are now confined to Zanzibar, Pemba, and the adjoining islets, and to a ten mile strip of coast line on the mainland which latter is administered by His Majesty's Government through the Governor of Kenya Colony. Zanzibar has been a British Protectorate since 1890, the administration being transferred from the Foreign to the Colonial Office in 1913. The present Sultan of Zanzibar is His Highness Seyid Khalifa bin Harib, K.C.M.G., K.B.E., who succeeded to the sultanate in 1911. The British Resident at Zanzibar is Mr Alfred Claud Hollis, C.M.G., C.B.E.

**CAPITAL.**—Zanzibar, the capital of the Sultanate, dates from before the Christian era, and has long been the largest in East Africa. The city consists of a picturesque Arab quarter and a highly prosperous European quarter, on the outskirts of which are the rude negro dwellings. The harbour is a magnificent one, with anchorages for men-of-war and merchant vessels. The capital of Pemba is Chaki-Chaki, and there are several good harbours, e.g. Port Cockburn and Port George, on both islands.

**COMMERCE.** Cloves, dry coconut kernel (copra), chillies, vanilla, sesame oil-seeds, copal gum, tortoiseshell, ivory and india-rubber are the chief products and exports of Zanzibar and Pemba, though the ivory and copal gum are only in transit from the mainland. The principal exports from Pemba, besides some £400,000 worth of cloves and cattle, are hides and tortoise "nail," the product of a bivalve shell. Imports in 1924 were valued at £1,976,230, as against £1,943,000 in 1923, and exports at £2,031,770, as against £2,280,000. Trade is largely with India, and for a hundred years the population of Indian traders in Zanzibar has been steadily growing till it is now nearly 12,000.

**PEOPLES.**—At the last census the population of Zanzibar and Pemba was 216,790, about two thirds being of negro blood. There are over 10,000 Arabs, more or less free from negro intermixture; about 16,000 Indians, or types of Indian origin; and a few Malagasies from Madagascar; the remainder

are minglings between all these ethnic types. The Swahili are sturdy and better looking than most negroes and make excellent seamen.

**PRODUCTS.**—The most important industry in the protectorate is that of the cultivation of cloves, the islands of Zanzibar and Pemba yielding the bulk of the world's supply. In both islands there are, it is estimated, about 50,000 acres under cloves and nearly 5,000,000 trees in bearing. The large plantations are

chiefly owned by Arabs, but many natives possess small holdings. Coconuts flourish everywhere and yield a rich harvest. Copra is also largely produced and exported. There is no mineral production, but the manufacture of pottery, coir fibre and rope, soap, oil, jewellery and mats is carried on.

**TRANSPORT.**—Transport facilities between the port of Zanzibar and England are maintained by regular sailings of the vessels of the British Steam Navigation

Company, the Union Castle Steamship Company, and the Clan-Ellerman-Harrison Line, and by various continental lines to and from Europe. The tonnage of ocean-going steamships which entered the port of Zanzibar in 1924 was 930,628, dhows to the number of 5,042 (95,863 tons) also entered. One light railway runs for seven miles from Zanzibar to Bubwlu, and over 75 miles of roads in the island of Zanzibar are suitable for motor transport.

# ADDENDA

## UNION OF SOUTH AFRICA

### POLITICAL

An outstanding event of the year 1926 was the passing of the Colours Bill on May 15 by 83 votes to 67. A Bill providing for the dissolution of the Senate or Upper House whenever the House of Assembly dissolves, including the nomination of Senators, was introduced, but was not proceeded with. In the same session of Parliament the introduction of the Flag Bill aroused keen and even bitter controversy. It was proposed to create a South African flag composed of a red vertical strip next the staff and horizontal strips of green, yellow, and blue, excluding the Union Jack, which was to be flown only on occasions symbolising the British connexion, and then in conjunction with the South African flag. Being strongly opposed by the English-speaking population in Natal and Cape Province, General Smuts, in leading the opposition to the proposed measure, urged its postponement on the ground that the exclusion of the Union Jack would raise far-reaching national issues, going much beyond the politics of the day. If the Government pressed the Bill through, the result would be "a flag which will not be honoured and gladly accepted by South Africa as a whole, but will only divide the people." The Labour Party advocated the postponement of the Bill, and eventually it was withdrawn pending re-introduction in 1927.

### PEOPLES

Unaudited census figures showed that the Union's total white population at the beginning of 1926 was 1,672,106, an increase of 10,007 on the census of 1921. Males numbered 854,157. The provincial figures were

Cape Province	704,898
Natal	158,254
Transvaal	606,763
Orange Free State	202,191

The population of Cape Province increased by 8 per cent, of Natal by 15 per cent, of the Transvaal by 11 per cent, and of the Orange Free State by 7 per cent.

The white population of Capetown rose from 55,000 in 1921 to 60,000 in 1926, and that of Johannesburg from 151,830 to 172,740. The population of Durban increased by 9,898, and of Pretoria and district by 12,000.

### FINANCE AND BANKING

**BUDGET, 1927.**—The Budget for the Union was introduced by Mr. Havenga, Minister of Finance, on March 30, 1927. The surplus on the year to March 31 was estimated at about £1,250,000, Customs duties having exceeded the computed sum by £850,000. The surplus, it was stated, would be devoted to the reduction of debt. The Minister anticipated a surplus of £210,000 in the coming year, but intended to remit £90,000 of the tax on mutual insurance companies, to lower Customs duties on cotton goods, and to make

other remissions which would result in a deficit estimated at £125,000.

During the year just ended exports of farm produce declined by over £8,000,000, but this was counterbalanced by increased export of gold and diamonds, so that the total export decrease was only some £3,500,000.

The statement of revenue and expenditure for the first half of the fiscal year (which ended March 31, 1927) showed a generally satisfactory condition of Treasury finance. Returns from all sources, excluding the loan account, totalled £11,827,000, a gain of £787,000 when compared with the amount for the corresponding half of the preceding fiscal year. The complete year's estimates were computed at £26,814,000.

For the first eight months of the financial year 1926-27 Customs and excise duties yielded £8,000,000, a very satisfactory figure when compared with the estimate for the whole year of £9,500,000. It was anticipated in the light of returns for the eight months stated that not only would the deficit of £138,000 be wiped off, but there would be available a credit balance of some £700,000.

**PUBLIC DEBT.**—The Public Debt of South Africa stood in January, 1927, at £222,000,000, nearly double the figure recorded in 1910, and represented £132 per head of the white population, as compared with £93 at the date of Union.

**PROVINCIAL BUDGETS.**—The public revenue and expenditure of the four provinces of the Union for the financial year 1925-26 were as under—

	REVENUE	EXPENDITURE
Cape Province	1,448,636	3,784,761
Natal	192,366	1,080,239
Transvaal	1,961,278	*3,750,000
Orange Free State	410,425	1,142,824

\*Approximate figure

**BANKING.**—Basic changes in the banking organisation of the Union were scheduled to take place in the early part of 1927 when the accounts of the Government were to be transferred from the National Bank of South Africa (Barclays Bank, Ltd.) and the Standard Bank of South Africa, Ltd., to the South African Reserve Bank. The business affected by the transfer falls into the following categories: The Railway Account, formerly chiefly handled by the Standard Bank, the Revenue Account, including Income Tax, Poll Tax, Customs, etc., and the Land Department Account. The last two accounts were hitherto operated by the National Bank.

The network of branches established by the National and Standard Banks, which covers very comprehensively all Southern Africa, will still be at the service of the Reserve Bank for the transaction of Government business.

During 1926 South African Bank clearings aggregated £468,680,000, constituting a record volume and an increase of 7½ per cent over the total clearings for 1925.

**RESERVE BANK.**—After providing for income tax and other accruing liabilities, and writing off £15,000 and £10,000 for fixed property and furniture and fittings accounts respectively, the net profits of the South African Reserve Bank for 1925-26 amounted to £238,420. A dividend of 10 per cent.

was paid for the 12 months ended March 31, 1926, on which date holders of the capital stock of the bank numbered 1,103.

### COMMERCE

For the first nine months of 1926 the exports of the Union totalled £57,000,000. The decrease of £3,000,000 recorded by comparison with the corresponding period of 1925 was principally due to the reduction of the maize crop and the falling off in wool prices.

The value of South African imports for the first nine months of 1926 was £54,000,000, representing an increase of £4,750,000 over the return for the same portion of 1925. Some 65 per cent of the imports came from the United Kingdom and its Possessions.

**WOOL.**—Exports of wool during the 1925-26 season totalled 213,000,000 lb, representing an increase of 43,000,000 lb over the preceding year's figure, the exportable value, however, amounting to £13,000,000, showed a decrease of £2,000,000.

### CUSTOMS TARIFF

The most important changes in the Customs Tariff of the Union which were introduced by the Budget for 1926-27 and became immediately effective, are as follow—The duty on imported whisky, brandy, and gin is increased from 37s 6d to 45s per proof gallon, equivalent to 1s a bottle. On men's ready-made suits the duty is increased from 15 to 20 per cent ad valorem.

The duty on a complete motor-car is 20 per cent. Steam wagons have to pay an increase of 10 per cent, and steam wagon chassis, of which the bodies are to be built in the Union, an increase of 5 per cent, on steam wagon spares and accessories the increase is 20 per cent. In the former tariff these three items were admitted free.

An increase of 17 per cent, is provided for girders, non bridge work, culvert tops, and trolleys for railway and tramway construction and equipment.

There is a suspended duty of 10 per cent increase on earthenware and stoneware, and a similar increase on glassware, chinaware and porcelain ware. Pipes, piping, and tubes of earthenware for drainage, irrigation, sewerage, and water supply or water pumping will have to pay an increase of 20 per cent, and tiles an extra 5 per cent. Sodium carbonate, including soda crystals (washing soda), will pay an increase of 6d minimum and 1s 6d maximum per 100 lb.

Other articles on which increased duties (the increases are given in brackets) are proposed, subject to rebates and concessions not yet published, are: Macaroni, spaghetti and vermicelli (10 per cent ad valorem on the maximum rate), perfumed spirits (11s an imperial gallon), liquid toilet preparations containing over 3 per cent of proof spirits per imperial gallon (15 per cent where duty is levied on an ad valorem basis), ladies' trimmed hats, linings, bands and borders not constituting trimmings (15 per cent minimum and 10 per cent maximum), cotton piece goods, the f.o.b. price of which exceeds 1s 3d. per yard (¼ per cent ad valorem), buckets, skips, trucks, and tubs,

wheeled or otherwise, for haulage or propulsion except by locomotives on rails or wires, and metal shaft sets (ad valorem suspended duty of 15 per cent), metal smoke stacks (ad valorem 17 per cent maximum and 20 per cent minimum), enamel lampshades and reflectors (suspended duty of 20 per cent), enamelware, i.e. (suspended duty 10 per cent), spare parts of engines and motors for fishing and whaling boats and mercantile marine purposes, and of trawl and whaling winches (20 per cent), barrels for miniature rifles and for single barrel shot-guns of a calibre not exceeding .420 (the difference between 20 per cent ad valorem and 15s each), miners' acetylene hand and bucket lamps (5 per cent of the difference between 15 6d each and 20 per cent ad valorem), electric lampshades, not enamel (20 per cent minimum and 15 per cent maximum).

Further notable increases are Structural steel work for the staging and platforms of industrial machinery (20 per cent minimum 17 per cent maximum), rock drill spurs and metal liners for tube mills (17 per cent), plates and frames for sugar filter presses (17 per cent), machinery for the conversion and transformation of electric power (2 per cent); electrical batteries, wet or dry, primary or secondary, including accumulators (12 per cent for wireless and 10 per cent for other purposes, except for motor-vehicles, and the suspended duty of 15 per cent ad valorem), metal sheets, metal badges, metal name or number plates, and similar articles enamelled (10 per cent ad valorem).

Tooth powders, etc., will have an extra suspended duty of 15 per cent. There is an additional duty of a farthing per lb. on bags and paper not printed and of 15 per cent, or the difference between 25 per cent ad valorem and a rated duty of a minimum of 30 and a maximum of 40 per cent, or, per lb., of 4d minimum and 6d maximum on pocket books.

In introducing the Budget which gave rise to these far-reaching changes, the Minister of Finance claimed that the increased duties would be offset by rebates of duties on materials for industrial purposes and by a reduction of the duty on cheap cotton piece-goods, which is now 7½ per cent minimum and 12½ per cent maximum.

The Union Post Office Department announced in October 1926 that the importation into the Union by letter post of all articles subject to Customs duty would be prohibited on and after January 1, 1927. Letters found to contain such articles will be liable to confiscation. The importation of dutiable goods will be permissible in parcels bearing the usual Customs declaration.

## TRANSPORT

**AIR.**—It was announced in 1926 that the negotiations in regard to the Junkers' scheme for the establishment of a South African civil air service had broken down, owing to the failure of the promoters to comply with the stipulations made by the Government. The Union Government on April 14, 1926, repeated its offer to grant a subsidy not exceeding £8,000 to any company making satisfactory proposals. Later information was to the effect that negotiations had been reopened between the Union Air Board and the Junkers' Aeroplane Company.

**RAILWAYS.**—The South African Railway Budget, presented on March 31, 1927, by Mr. C. W. Malan, showed a deficit of £146,000, or a net deficit (after deducting last year's surplus of £22,000) of £124,000. The Minister budgeted for a surplus of £40,000 during the ensuing year. He claimed that the working

costs of the Union's system were the lowest in the world, and announced that 400 miles of new line would be opened in 1927-28.

For the year ended March 31, 1926 the total railway earnings were £24,160,234, or £1,001,784 over the estimate.

**ROADS.**—The Government Roads and Bridges Committee recommended in 1926 a broad national policy of road construction and maintenance, and said that the Union Government must share in the burden of road building. The only solution lies in the development, at the instance of the Union Government, of a system of national main highways on a plan drafted without regard for provincial boundaries. The Committee recommended the establishment of a permanent National Roads Board and the classification of National main roads, provincial main roads and provincial branch roads, the first class to be maintained by the Government, and the second and third classes to receive Government subsidies.

On October 15, 1926, the South African Good Roads League was organised in Bloemfontein as a national association. This new development is the outgrowth of the work of the Transvaal Roads League, which has carried on an active propaganda during the last two or three years. At the inaugural meeting it was stated that there are 67,000 miles of public highways in the Union of South Africa. Considerable stress was laid on the advisability of adopting the petrol system of inspection and maintenance. According to one authority this would necessitate the appointment of at least 5,000 petrolmen and the purchase of 5,000 light graders or scrapers as part of them.

## AGRICULTURE

**COTTON.**—The total cotton production of the Union of South Africa for the year 1924-25 was 15,110 bales of lint, compared with 7,302 bales in 1923-24, and 21,078,362 lb. of seed cotton, the production of seed cotton by areas being as follows: Natal and Zululand, 8,278,681 lb., Rustenburgh Area, 2,489,842 lb., Northern Transvaal, 5,709,607 lb., Eastern Transvaal, 4,142,090 lb., Southern Transvaal, 123,619 lb., Swaziland, 641,608 lb., Cape Province, 237,600 lb., other, 58,315 lb.

**SUGAR BEET.**—The establishment of a sugar beet industry in South Africa partly as a means of providing work for rural unemployed, is being considered by the Union Government. The reports of the Agricultural Department's experts are promising, and suggest that South Africa contains much land eminently suitable for the production of beet sugar.

In South Africa the sugar content of the crop works out at between 18 and 20 per cent, which is higher than the average English figure. Moreover, experiments have shown that on the high veld at least the crop can be left in the ground in the winter for a long period without damaging its roots. This means a longer milling season, which is an important consideration in dealing with a crop the factory treatment of which demands an extensive plant.

Though sugar beet calls for a fair amount of labour, it is declared that it could be grown in South Africa by family labour, with perhaps a little cheap supplementary assistance at the busiest period. This would allow of production at a lower rate than is generally obtainable in England, where the cost of farm labour is high. The crop is held to be specially suitable for a district closely settled with whites or for small holdings where co-operative transport to the factory could be arranged.

**WINE.**—The South African wine vintage in 1925 was considerably higher than in 1924, totalling 136,030 leaguers, against 115,558.

## MINES AND MINERALS

**GRASFONTEIN "RUSH."**—The new diamond field in South Africa was on March 4, 1927, the scene of a great scramble for alluvial diamond claims, situated on a farm of over 6,000 acres in the Lichtenburg district, Western Transvaal. A few inches below the surface there is, it is stated, a layer of gravel containing hundreds of thousands—possibly millions—of pounds worth of diamonds. So rich is the field claimed to be that the owners of the farm had at time of writing received over £200,000 for only parts of the property. No less than 27,000 men, boys, and even girls took part in the race to peg out claims. Including sightseers, who came from all parts of the Transvaal, over 50,000 people were present before the proclamation was read preparatory to the rush.

**PRODUCTION.**—The production of South African gold valued at £40,800,000 in 1925, has continued to increase. The output figure for 1926 was £42,300,000, which formed a record in volume in the history of gold-mining in South Africa. On the East Rand the development of certain territory has opened up a new gold-field.

The production of diamonds, particularly of the alluvial variety shows constant augmentation, and is now valued at £500,000 per month. Discoveries in the Lichtenburg district of the Transvaal have largely contributed towards this increase.

**WITWATERSRAND GOLD PROFITS.**—During 1926 the 33 mines comprising the six principal groups of the Witwatersrand gold area made profits aggregating £14,985,250, an increase of nearly £600,000 compared with the 1925 figure. Following were the individual profits: Central Mining and Investment Company and Rand Mines Groups, £4,597,262; Barnato Group, £4,300,635; Anglo-American (Oppenheimer) Corporation, £1,777,666; Union Corporation, £1,367,477; New Consolidated Goldfields, £641,786; General Mining and Finance Corporation, £234,395.

The few mines not connected with the groups registered profits totalling £170,000, approximately, raising the year's Rand gold profits to some £13,155,250.

## OBITUARY

Mr Isaac Lewis, the South African millionaire and head of the famous firm of Lewis and Marks, died on March 28, 1927, at his residence, Leeuwenhof, Cape Town, at the age of 78. His name was a household word in South Africa in conjunction with that of his picturesque partner, the late Senator "Sammy" Marks. He was one of the fast-dwindling band of speculators and dealers who amassed wealth at the Kimberley diamond fields before the mines were amalgamated by Cecil Rhodes and became practically De Beers. He went on to make further wealth, especially in land and industrial enterprises. Born at Neustadt, Kovno, Russia, in 1849, he arrived in South Africa in 1870, two years after the "New Rush" which became Kimberley. Mr. Lewis took a great part in establishing a really beneficent enterprise—the great iron and steel works at Vereeniging, on the Vaal River. As a director of the Johannesburg Consolidated Investment Company, he kept in touch to the end with the Barnato interest. He was also a director of the Swaziland Corporation, the South African Breweries, Limited, and the Victoria Falls and Power Company.

## SOUTHERN RHODESIA

**AGRICULTURE.**—In 1924-25 the total area under all crops was 334,604 acres, representing an increase over the previous season of 47,767 acres. Cotton was responsible for an increase of 58,911 acres, maize 1,309 acres, tobacco 438 acres, potatoes 221 acres, while decreases were recorded in the acreage planted with such crops as maize silage, sunflowers, beans and ground nuts. Maize represented 60.6 per cent of the total acreage, as compared with 80.0 per cent in 1923-24.

The maize crop of 1924-25 totalled 1,041,904 bags, the average yield per acre being 4.47 bags. There were 62,858 acres planted with cotton, and the yield was 5,888,462 lb of seed cotton, or 93 lb per acre. The total output of the ginneries was approximately 4,100 bales of 500 lb each. Tobacco was planted on 8,441 acres, the Virginian crop aggregating 1,987,382 lb and the Turkish crop 418,522 lb, or a total of 2,405,904 lb.

Cattle raisers experienced an excellent year, and exports were probably in excess of 50,000 head. A feature of this trade during 1925 was the successful experiment of shipping cattle to Italy and England. In addition Rhodesia exported some 2,000 head of pedigree stock to the Belgian Congo. Dairy farming was also good during the year, as pasturage was plentiful throughout the dry season.

Favourable reports of production in Southern Rhodesia were forthcoming for 1926. Satisfactory tobacco and maize crops had been harvested, and a flourishing export trade established in these commodities, as in beef, through the Union ports.

**MINING.**—The value of the total mineral output of Southern Rhodesia fell to £4,134,260 in 1925, as against £4,478,499 in 1924. The gold section of the industry was principally responsible for this decrease, the output being 581,505 fine oz., valued at £2,539,542, compared with 627,720 oz., valued at £2,930,362. This drop of £409,020 may to some extent be explained by the closing of the Falcon Mine in 1925, for in 1924 this mine alone produced £124,317 worth of gold, as well as £160,816 of copper.

At the end of 1925 there were 41,968 gold claims current.

On the "base-metal" side of the industry (excepting copper, of which the Falcon was practically the only producer) the position and prospects in 1925 were brighter. Asbestos, with a declared value of £766,381, showed an increase of £162,958 over the previous year. Coal, at £324,511, was up £58,519 on 1924. Chrome ore at £337,317 showed a falling off in value of £95,156 when compared with the record year, 1924. The production and exportation of tin increased satisfactorily. With the closing of the Falcon Mine, the production and export of copper have practically ceased. Active development work is in progress in the copper belt in the south-western portion of the Lomagundi district, and there is a reasonable prospect that copper may again be produced in large quantities.

**RAILWAYS.**—In September, 1926, the British South Africa Company announced the heads of the agreement which, after much discussion, was arrived at in regard to the future working of the Rhodesian railway system. The object of the proposals is to secure that the lines serving Northern Rhodesia, Southern Rhodesia, the Bechuanaland Protectorate, the Mozambique Territory, and

112 miles of railway in the Union of South Africa shall continue to be administered as a single transport system. The British South Africa Company's representatives undertook to use their best endeavours to continue the existing arrangements or to make any new arrangement with the Beira Railway Company and the Beira Junction Railway Company as would facilitate such unified administration. An authority, to be called the Railway Commission, was to be set up, composed of three members, one appointed by the Government of Northern Rhodesia, one by the Government of Southern Rhodesia, and one by the Government of the Bechuanaland Protectorate, with a chairman, who was to have practical experience of railways, appointed by the Governments conjointly after consultation with the Railway Company.

## PORTUGUESE EAST AFRICA

**FINANCE.**—The revenue of the Province in 1924-25 was £2,372,985, and the Government had been successful in meeting all its obligations. During the two years 1923-25 no less than £348,000 out of revenue were spent on general improvement works, besides £85,000 expended on power plant, telegraph extensions, wireless installations and other material supplied to the Province by the Home Government on the basis of £3,000,000 export credit obtained by Portugal in London in 1924.

**TRADE AND SHIPPING.**—Final figures relating to the cargo movement at the port of Beira for 1925 show that the total tonnage landed, loaded, and transhipped amounted to 646,000, an increase of 34,000 tons over the total for 1924, the best previous year. This substantial increase was achieved in the face of an interruption of the Beira Railway for 25 days owing to floods, and an export of maize and sugar which was much below normal.

**LOURENÇO MARQUES.**—The following were the shipping returns for the port of Lourenço Marques in 1925—

ARRIVALS	NO.	TONS LANDED	PASSENGERS LANDED
Portuguese	145	19,574	22,465
British	363	227,417	208,710
American	17	3,009	4,543
German	35	15,772	24,199
Dutch	39	24,480	35,916
Japanese	14	3,901	2,075

Danish, Finnish, French, Greek, Italian, Norwegian and Swedish vessels totalled among them 70 vessels, with 15 passengers.

The totals for 1925 were: Gross tonnage of 3,163,953, cargo of 340,213 tons, and 31,891 passengers for 658 vessels. The returns for 1924 were 644 vessels, 3,000,114 gross tonnage, cargo of 342,054 tons, and 25,276 passengers.

## KENYA

**AGRICULTURE.**—The Kenya agricultural census for 1926 testified to the well-maintained development of the colony. The number of landholders had been increased by 200 to 1,800. Out of a total of 4,500,000 acres alienated to Europeans, 460,000 were under cultivation, 41 per cent being allotted to maize, 14 per cent each to sisal and coffee, and 9 per cent to wheat. The exports of maize for the season ending in February, 1927, were expected to reach the record total of 20,000 tons.

**COMMERCE.**—According to the Kenya Blue Book for 1925, imports for home consumption into Kenya and Uganda during the year amounted in value to £8,061,448, while domestic exports totalled £7,821,448. The following tables show the values of the chief classes of imports and exports during 1925—

IMPORTS FOR HOME CONSUMPTION	
Food, drink and tobacco	£1,384,084
Raw materials and articles mainly unmanufactured	675,646
Articles wholly or mainly manufactured	5,420,199
Animals not for food	14,228
Parcel post	343,357
Billion specie	223,934

DOMESTIC EXPORTS	
Food, drink and tobacco	£1,480,156
Raw material and articles mainly unmanufactured	6,322,756
Articles wholly or mainly manufactured	14,488
Miscellaneous and unclassified	4,444

**DISTRIBUTION OF TRADE.**—The principal countries of origin of imports for home consumption were the United Kingdom, £3,008,192, Tanganyika Territory, £1,187,000, India and Burma, £878,745, the United States, £721,146, Holland, £437,749, Germany, £420,920, and Japan, £312,536. The chief recipients of domestic exports included the United Kingdom, £4,410,544, India and Burma, £1,925,559, Belgium, £275,113, Germany, £195,915, Japan, £107,893, Italy, £125,179, Holland, £122,851, the United States, £105,137, and France, £102,302.

Exports to the United Kingdom comprised cotton, £2,685,067, coffee, £817,058, sisal and tow, £264,800, maize, £168,561, hides, £136,314, and oil seeds and nuts, £124,967.

The principal imports from Great Britain were cotton piece goods, £461,195, agricultural, electrical and industrial and other machinery, £315,330, motor-cars, lorries, cycles, etc., £231,666, enamelled hollowware, sheets, nails, screws, rails, sleepers, pipes, fittings, etc., £281,403, bicycles, £170,348, and agricultural and artisans' tools and cutlery, £122,958.

**RAILWAYS.**—The Kenya and Uganda schemes for participation in the East African £10,000,000 loan were outlined to the Legislature of Kenya Colony in May, 1926.

The schemes are, in order of precedence, the improvement of Kilindini (Mombasa) port, including Mbaraki, general improvements in the main line (the Kenya and Uganda Railway) spread over eight or nine years, increased rolling stock and workshops for the existing line, an extension of the railway from Tororo to Jinja and Kampala, an extension via Soroti and Lira towards the Congo and the Sudan, and rolling stock and workshops for the two last-named extensions.

The total expenditure contemplated for these schemes, of which the new and most interesting features are the linking of Kampala with the main line and the projected Sudan extension, is estimated at £5,550,000.

## OTHER AFRICAN DIVISIONS

### ANGOLA

**RAILWAYS.**—Work is in vigorous progress on two railways in Angola—the Benguela Railway towards the Congo frontier and the extension of the track from Porto Amboim to the interior. At the end of 1926 80 kilometres of the latter line were in operation, while Gabela, 124 km. from the seaboard

terminus, was shortly to be reached. A further extension projected is to the rich Bailundo area, over 200 km. from Porto Amboim

### CONGO

**COMMUNICATIONS.**—The Congo aviation service has been extended from the former inland terminus at N'Gule to Elisabethville, in Katanga, affording communication between the Lower Congo and the centre of the mining area Leopoldville and Brazzaville (capital of the French Congo) have been connected by telephone, a cable being laid on the bed of Stanley Pool.

### GOLD COAST

**COCOA.**—For 1926 the export of cocoa from the Gold Coast reached the record figure of 231,000 tons. For the month of February, 1927, the export total of that commodity was 36,787 tons.

**ECONOMIC PROGRESS.**—At the opening of the Budget session of the Legislative Council (March 3, 1927) the Governor reviewed the progress of the colony during the seven years of his administration. In that period Takoradi Harbour had been built and 233 miles of railway, 3,388 miles of motor roads, 1,710 miles of telegraph lines, and 1,570 miles of trunk telephone lines had been constructed. The average annual value of trade and revenue in the last seven years had doubled any previous figures. There existed aggregate surplus balances of over £2,000,000, besides reserve funds of over £900,000. The Government had spent £12,500,000 on development since 1910, of which £7,000,000 had been allocated to railways and roads. That expenditure had been instrumental in increasing the revenue from £1,500,000 to £4,250,000.

### NIGERIA

**COMMERCE AND CUSTOMS.**—The total imports and exports of the colony in 1925 showed an increase of £5,000,000 (equivalent to 19 per cent) over the trade return for 1924. The aggregate of Customs duties collected was the highest on record.

**COMMUNICATIONS.**—A vigorous policy with regard to the development of communications is projected, designed to construct annually 400 miles of road and 150 miles of railway.

The northern section of the Eastern Railway of Nigeria was to have been opened for goods traffic on March 24 and for passengers on April 1, 1927.

**FINANCE.**—The estimated surplus assets of Nigeria at the close of March, 1927, were £5,900,000. The revenue for the succeeding financial year was placed at £5,795,000 and the estimated expenditure at £6,660,000.

Owing to heavy over-subscription, the list for the Nigerian Government's £4,250,000 five per cent loan in January 1927, was speedily closed.

### UGANDA

**COTTON.**—The production of cotton in Uganda, 5,000 bales in 1909, reached 196,000 bales in 1925, and increased export of this commodity is anticipated when the railway is connected with the cotton areas in the south-east.

## EGYPT

### PEOPLES

**CENSUS.**—The first approximate results (furnished in March, 1927) of the recent decennial census returned the provisional total of the population of Egypt as 14,168,756. This figure represents an increase of 11.1 per cent over the total of 12,750,918 returned in 1917, compared with the increase percentage of 12.3 recorded in 1907.

## ADMINISTRATION

**ABBAS HILMI PASHA.**—In July, 1925, Abbas Hilmi Pasha, the Khedive who was deposed by the British Government in 1914, filed a claim for £2,753,825 against the Government under certain clauses in the Treaty of Lausanne. After his deposition his properties and possessions in Egypt were sold to pay off his creditors, and he received £E 589,865 as a final payment of the balance remaining after the discharge of those liabilities. In support of the claim a memorial was lodged by his solicitors in May, 1926, in reply the British Government prepared a memorial, and in November Abbas Hilmi Pasha presented a counter-memorial. The case was expected to come before the Anglo-Turkish Mixed Arbitral Tribunal sitting at Constantinople, during 1927.

**GOVERNMENT.**—On April 18 the Egyptian Government resigned, and on April 25 a new one was formed as follows: Abdel Khalek Pasha Sarwat, Prime Minister and Minister of the Interior, Fatallah Pasha Barakat, Agriculture, Marcos Pasha Hanna, Foreign Affairs, Osman Pasha Moharram, Public Works, Negib Pasha Gharabiy, Wakfs, Ali Pasha Shamsy, Education, Zaki Pasha Abul Seud, Justice, Mohamed Pasha Mahmud, Finance, Ahmed Pasha Khashaba, Communications.

**HEAD WATERS OF THE NILE.**—In March, 1926, the Egyptian Government decided to send Dr H. E. Hurst, Director General of the Physical Department of the Ministry of Public Works, to the Great Lakes to conduct investigations with a view to the possible construction of storage works for the Nile waters. Accompanied by Capt. W. G. Goldsack, Dr Hurst gained valuable information regarding the Kagera system and the Nile head waters generally.

## FINANCE

**GOVERNMENT REVENUE.**—Final Egyptian accounts for 1925-26 showed a revenue of £E 39,580,000 and an expenditure of £E 34,200,000, yielding a surplus of £E 5,380,000. This was transferred to the reserve, which on March 31, 1926, stood at £E 31,000,000. Following were the chief items of revenue: Railways, £E 7,380,000, Customs, £E 6,000,000, tobacco duties, £E 6,200,000, Post Office, £E 780,000, telegraphs and telephones, £E 780,000. Departments yielding profits were: Railways, (£E 2,000,000), Post Office (£E 223,000), Telegraphs and Telephones (£E 80,000).

The State Budget for the financial year 1926-27 passed by Parliament showed expenditure of £E 39,360,000 and revenue of £E 37,873,000, provision being made to take the expected deficit from the reserve. Of this, £E 5,600,000 is invested in Egyptian securities and £E 5,700,000 in British bonds. The main increase in expenditure was £E 2,500,000 for irrigation works, including the Nag Hamadi and Gebel Auha dams.

**RESERVE FUND (BARCLAYS).**—The Reserve Fund of Barclays Bank (Dominion, Colonial and Overseas), which previously stood at £1,000,000, has been increased to £1,100,000.

## TRANSPORT

**AIR SERVICES.**—In December, 1926, the Egyptian Government notified Lord Lloyd of its concurrence with the opening of the Cairo Karachi air service, the permission being provisional and without prejudice to future legislation governing aerial transport in the country. There being no civil aerodrome at Cairo, the starting place, the service

decided to make use of the Military Aerodrome at Heliopolis.

On December 30 Captain Gladstone started from Heliopolis Aerodrome in an R.A.F. mail service aeroplane for Khartoum. On January 3, accompanied by Mr Boyle, he flew in a De Havilland 50 biplane from Khartoum to Kisumu, thus opening the mail and passenger air line between the two towns.

It was proposed that the experimental period should be one of six months. Financial support was forthcoming from the Uganda Government with a contribution of £2,500, the Kenya Colony Government (£2,500), the Sudan Government (£2,000), and the North Sea Aerial & Transport Company, a subsidiary of the Blackburn Aeroplane Co., (£4,000).

**NILE BRIDGE, NEW.**—On February 12, 1927, the Minister of Communications, Mohamed Pasha Mahmud, opened the new railway bridge at Desuq, over the Rosetta branch of the Nile. The Minister congratulated the British company executing the contract on its rapid completion of the bridge, which he said would entail a saving of at least £E 30,000 to the State Railways.

**RAILWAYS.**—The new standard gauge line replacing the old narrow gauge railway between Luxor and Assuan was opened on December 3, 1926, when two special trains carrying King Fuad's representative, the Prime Minister, members of the Cabinet and other distinguished personages were run direct from Cairo to Assuan. The new track obviates the former necessity of changing at Luxor, and reduces the Cairo Assuan journey by four hours, while it is hoped to effect a further reduction of two hours.

## AGRICULTURE

**COTTON.**—During the post-war years whenever cotton prices experienced serious depreciation the Egyptian Government, in deference to the popular demand, played the part of a purchaser on the local market. The great fall in cotton prices encountered in the 1926 season led the Government to propose to intervene, not by purchasing, but by assisting the grower by means of advances on favourable terms through the banks. The Government was prepared to lose substantially over the scheme, since if the market fell below the price fixed it would not, like the banks, call upon the owner to make good the difference. Ultimately, however, the Government's hands were forced by Parliament, which decided (December 15, 1926) that it should resume its former role of purchaser of cotton contracts, the procedure being relegated to a joint committee of the Government and both Houses.

On September 20, 1926, a new law came into effect which prohibits the mixing of different qualities of Egyptian cotton and cottonseed.

## COMMERCE

**FOREIGN TRADE (1926).**—Imports into and exports from Egypt during 1926 amounted in value to £E 52,400,059 and £E 41,759,391, as compared with £E 58,224,895 and £E 59,198,662 respectively in 1925. The favourable balance in 1925, amounting to £E 973,767, was thus converted in the ensuing year into an unfavourable one to the extent of £E 10,640,668. The diminution in imports was chiefly in connection with yarns and textiles, which decreased in value from £E 17,965,629 to £E 13,631,470, and cereals, flour and agricultural produce, which declined from £E 7,101,278 to £E 5,952,440, in 1925 and 1926 respectively. Yarns and textiles were also responsible

largely for the export decrease, falling from £E 52,024,761 in 1925 to £E 34,670,388 in 1926

### MINES AND MINERALS

**MINING.**—The Egyptian mining industry as a whole was active during 1926, and it can now be said that the worst effects of post-war depression have been overcome. More interest was shown in prospecting than for several years past, and this is expected to continue. There was reason to anticipate increases in the output of petroleum, manganese and phosphate for 1927.

### SUEZ CANAL

**CANAL BOARD.**—In October, 1926, on the nomination of the First Lord of the Treasury, the Rt Hon the Earl of Cromer, G.C.I.E. (V.O.), was elected to the Board of the Suez Canal to fill the vacancy left by the death of Mr H. T. Austruther.

**PORT FUAD.**—The ceremonial opening of Port Fuad the new town on the Suez Canal immediately opposite Port Said, took place on December 21, 1926. King Fuad landed at Port Said from his yacht "Mahrussa" and crossed to Port Fuad, where he was met by the Governor of the Canal Province, Aslan Bey Cattani, the Comte de Serionne and the Baron de Benoit, who constitute the Domain Communal organisation for the control of the town. Among those present for the formal handing over of the town to the Government and the laying of the Town Hall foundation stone by the King were the Royal Family, members of the Diplomatic Corps, the Prime Minister, Government officials and Lord Lloyd.

The Egyptian and Palestine Railways have for some time considered plans for making Port Fuad the railhead of the Palestine Railway instead of Kantara. The new port might eventually replace Jaffa as the chief exporting centre for Palestine. Though Jaffa individually would suffer, the general trade of the country, in particular the exportation of oranges, and its railway passenger and goods revenue would benefit considerably.

### SUDAN

**GORDON MEMORIAL COLLEGE, KHARTOUM.**—Presiding at the annual meeting of the trustees and executive committee of the Gordon Memorial College Fund in November, 1926, Sir Reginald Wingate welcomed the appointment of Sir John Maffey (succeeding Sir Geoffrey Archer) as *ex officio* president of the Gordon College at Khartoum. The College has now become virtually the nucleus of the educational system of the Sudan, and the research work carried out in its laboratories has proved extremely valuable, as, for instance, in the investigation of insect pests which attack cotton. A girls' training college recently opened at Omdurman is having great success.

**SUDAN CROP.**—The estimate of the cotton output in the Sudan for the season 1926-27, issued by the Department of Agriculture and Forests at Khartoum, showed a large computed decrease in the production of the northern provinces, Kassala, Blue Nile, Fung and White Nile, where the inadequate rains had turned native attention to food crops. For the southern provinces (Nuba Mountains, Mongalla, Bahr-el-Ghazal and Upper Nile) large cotton crop increases were forecasted.

Estimated crops of certain varieties of cotton for 1926-27 (figures for 1925-26 in parentheses) were: Sakellaridis, 484,238 cantars (424,974 cantars); irrigated American, 47,605 cantars (54,446 cantars); rain-grown American, 43,140 cantars (34,435 cantars).

### PALESTINE

**CLIMATE AND PRODUCTION.**—Reports from Southern Palestine early in 1927 announced a serious position following very unfavourable climatic conditions. In the Beersheba region the entire failure of the barley crop was feared, and in the same zone 30 to 40 per cent of the sheep and goats had perished for lack of pasturage. In Northern Palestine, however, satisfactory weather conditions had prevailed, though gales and sand storms had considerably damaged the fruit trees of Jaffa.

Under the auspices of the Palestine Department of Agriculture important experiments are being carried out in the introduction of ground nuts, flax, sunflowers and other staple crops, while fertilisation questions are receiving much attention.

### INDIA POLITICAL

**COUNCIL HOUSE, DELHI.**—The State opening of the new Council House at New Delhi took place with picturesque ceremonial on January 18, 1927. The Viceroy and Lady Irwin drove to the scene in a State procession, and were received by Sir Bhupendra Nath Mitra, Member of the Viceregal Council for the Department concerned with the building of New Delhi, who presented Sir Edwin Lutyens, the principal architect of the city, Sir Herbert Baker, architect of the Council House, Mr Rouse, chief engineer, and others. After reading a gracious message from the King-Emperor, Lord Irwin formally opened the building, in which a joint session of the Assembly and the Council of State was inaugurated on January 24. The Council House, of which the foundation stone was laid by H.R.H. the Duke of Connaught on February 12, 1921, is a huge circular structure encircled by a pillared verandah. The central building (the joint library for the House of Assembly, the Council of State and the Chamber of Princes) has the finest dome in India.

**INDIAN NATIONAL CONGRESS.**—The session of the Indian National Congress, held at Calcutta, closed on December 28, 1926, having passed by a huge majority a resolution restraining members of the Congress from accepting office until the "national demand" has been conceded. The pledge also required hostility towards Ministries composed of members of any other party.

**LEGISLATIVE ASSEMBLY ELECTIONS.**—In Session at New Delhi on January 20, 1927, the Assembly unanimously re-elected Mr V. J. Patel as President, his return to the Chair being followed by cordial speeches from all parties.

On January 31 the Assembly elected Maulvi Mahomed Yakub Deputy-President.

### ADMINISTRATION

**ARMY REDUCTION.**—In the course of the Budget debate on March 5, 1927, Sir Basil Blackett stated that since 1914 the following reductions had been made in the fighting forces in India: British, 76,000 to 58,000; Indian, 154,000 to 139,000.

**EDUCATION.**—An increase of 9,113 recognised institutions of learning and 482,060 students in the fiscal year 1924-25 over figures for the preceding 12 months' period was shown by the latest report of the Department of Education for India issued towards the end of 1926. The proportion of girls attending school in 1924-25 was only one-fifth that of boys—1.24 per cent. as against 6.05 per cent respectively, 15 per

cent of the total population of India being of school-going age. The Indian Government's expenditure on education in 1924-25, when school and college students totalled 9,797,344, amounted to roughly £6,500,000. It was estimated that 90 per cent of the population was still illiterate.

**GOVERNORSHIPS.**—Sir Charles Alexander Innes has been appointed Governor of Burma in succession to Sir Spencer Harcourt Butler, and Sir Alexander Phillips Muddiman, Governor of the United Provinces of Agra and Oudh in succession to Sir William Sinclair Martin.

### FINANCE

**BUDGET.**—Sir Basil Blackett, the Finance Member of the Legislative Assembly, presented the first Budget of Lord Irwin's Government on February 28, 1927. Dealing with the financial results of 1925-26, he stated that an improvement of over Rs 2,00,00,000 on the revised estimate had been shown. With regard to revised estimates for 1926-27, the Customs receipts were better by Rs 1,30,00,000, taxes on income had decreased by Rs 29,00,000, and the duty on salt by Rs 20,00,000, net receipts on opium contributed an increase of Rs 86,00,000, while the railway contribution was unchanged. On military expenditure there was an increase over estimate of Rs 67,00,000.

The total revenue was expected to be Rs 130,25,00,000 and the expenditure Rs 127,16,00,000, yielding a surplus of Rs 3,10,00,000, against Rs 5,00,000 in the Budget. The total remittance programme of the Government for the next year was £35,500,000 compared with £27,500,000 in the current twelve months.

**DEBT INDIAN.**—During 1926-27 the sterling debt had decreased by Rs 1,15,00,000, the productive debt had risen by Rs 35,85,00,000, and the unproductive debt had been reduced by Rs 29,35,00,000.

**ESTIMATES (1927-28).**—The total estimate of revenue for the coming year was Rs 128,96,00,000, and the expenditure Rs 125,26,00,000, providing a surplus of Rs 3,70,00,000 on the basis of existing taxation and a rupee ratio of eighteen pence.

**TAXATION PROPOSALS.**—The export duty on hides would be abolished, involving a loss of Rs 9,00,000, the export duty on tea would be abolished, involving a loss of Rs 50,00,000, but the basis of assessment on tea companies would be altered from 25 to 50 per cent of their profits, as the latter more nearly represented the non-agricultural position of their profits. This would give Rs 45,00,000 next year, rising to Rs 50,00,000 in 1928-29. The import duty on motor cars would be reduced from 30 to 20 per cent *ad valorem*, and on tyres from 30 to 15 per cent. The import duty of 15 per cent on rubber seeds and stumps would be removed. The stamp duty on cheques and on bills of exchange payable on demand would be abolished with effect as from July 1, 1927. The import duty on unmanufactured tobacco would be raised from Rs 1 to Rs 1½ per lb. The net effect of these measures would be the reduction of revenue by Rs 6,00,000, and the next year's surplus would thus be reduced to Rs 3,64,00,000.

**INSTITUTE OF BANKERS.**—Representatives of banking interests from all over India met in Bombay on March 17, 1927, at a conference convened by the managing governors of the Imperial Bank, when the preliminary details of inaugurating an Indian Institute of Bankers were discussed. It was proposed to make Bombay the headquarters of the organisation, with branches subsequently to be established in other banking centres.

**PRESIDENCY OF BOMBAY.**—The Budget for the Bombay Presidency was submitted to the Legislative Council by Sir Chunilal Mehta on February 21. The previous one had estimated a deficit of Rs 28 lakhs (£210,000), but the actual deficit was placed at Rs 75 lakhs (£502,500). This figure was attributed mainly to decreases respectively in excise revenue, land revenue (consequent upon a poor crop), and in stamp revenue, owing to slackness in trade. The Governor, Sir Leslie Wilson, stated that the Government did not propose to introduce any fresh taxation, as it looked forward to regaining trade prosperity, while relief would be forthcoming from a revision in favour of Bombay of the Meston settlement of provincial contributions to the central Exchequer.

**RUPEE RATIO BILL.**—On March 22 this Bill for standardising the rupee at eighteen-pence passed its third reading in the Legislative Assembly by 63 votes to 51. The closing speech of the Finance Minister, Sir Basil Blackett, showed how prices could not be adjusted on the basis of a sixteen-penny rupee, which had not been stable as a ratio of exchange since 1914.

The Council of State rejected (March 24) by 31 votes to 10 an amendment to the Bill to reduce the ratio to sixteen-pence, and on the following afternoon finally passed the measure introducing the eighteen-penny ratio. At the same time the Council passed a measure referring the Gold Standard and the Reserve Bank Bill to a Joint Select Committee.

**SALT DUTY.**—The Legislative Assembly agreed on March 28 by 52 votes to 41 to the decision of the Council of State restoring the salt duty to 20a per maund from the 10a per maund to which it had been lowered by a previous vote.

## AGRICULTURE

**CINCHONA.**—The cinchona plantations of the Government of Bengal have been steadily extended, the planted area in 1925-26 being 3,153 acres, nearly 100 acres more than the previous year's acreage. The quantity of bark harvested in 1925-26 was 539,000 lbs., compared with 432,000 lbs. in the preceding year. The Government quinine-producing factory made a profit during 1925-26 of Rs 1,93,000.

**COTTON CROP.**—The official forecast of the Indian cotton crop of 1926-27 gave the total area sown as 22,143,000 acres, the condition of the crop being reported fair and the total yield estimated at 6,000,000 bales.

**ROYAL COMMISSION.**—A Royal Commission on agriculture commenced to take evidence in Bombay on March 25, 1927. The first witnesses, Sir Joseph Kay, Vice-President, and Sir Henry Burt, Secretary of the Indian Central Cotton Committee, in the course of their depositions, urged the establishment of open cotton markets controlled by market committees on which cotton growers should be represented.

## IRRIGATION

**BHANDARDARA DAM OPENED.**—The Governor of Bombay opened on December 10 the Bhandardara Dam, which, situated in the Deccan a few miles from Nasik, is 284 ft. high from the bed level (and therefore the highest in the world), 234 ft. thick at the base, and is composed of 12,000,000 cu. ft. of masonry. It encloses a lake with a surface area of about six square miles, which now holds 12,146,000,000 cu. ft. of monsoon water gathered from a catchment area of 47 square miles. The dam, the total cost of which was Rs. 84 lakhs, will considerably reduce the dangers of famine in the Deccan.

## TRANSPORT

**CIVIL AVIATION (GOVERNMENT PROGRAMME).**—In February 1927 the Indian Government decided to establish a definite route for aircraft traversing the country by constructing a chain of aerodromes from Karachi to Victoria Point, on the Burma-Malaya border. A Government Vote for a supplementary grant of Rs 906,000 for the purchase of aerodromes in Bombay, Calcutta and Rangoon came before the Legislative Assembly on March 1 and was passed without a division.

**KARACHI-CAIRO AIR MAIL.**—What was described as the first air mail from Karachi to London, though the actual aeroplane transit was but from Basra to Cairo, was despatched from the Sind port on January 2, 1927. Letters left Karachi by the Gulf mail steamer for Basra, whence they were carried by biplane to Cairo for transmission by steamer to Marseilles and thence overland to London. It was intended, after experience in operating the route had been gained, to convey such mails by air direct from Karachi to Cairo and *vice versa*.

**RAILWAY EXPENDITURE.**—The expenditure on new lines during 1926-27 was estimated (March, 1927) by Sir Charles Innes, Commerce Member of the Indian Government, at Rs 6.47 crores, a reduction of Rs 9 lakhs on the sum estimated a year previously. For the current year the computed capital expenditure is Rs 25 crores, Rs 17.38 crores being allocated to open line works and the balance, Rs 7.62 crores, to new construction. Of the total expenditure, electrification projects absorb over Rs 3½ crores.

## COMMERCE

**FEDERATION OF CHAMBERS OF COMMERCE.**—In January 1927 the Indian Industrial and Commercial Congress approved the constitution of a new Federation of Indian Chambers of Commerce. This body, which will supersede the Congress itself, is intended to rival the largely European Associated Chambers of Commerce of India.

**KARACHI SHIPMENTS.**—During 1925-26 cotton shipments from Karachi, which had increased from 36,245 tons in 1921-22 to 119,504 tons in 1924-25, reached 179,679 tons. This total exceeded that recorded in 1913-14 by 104,993 tons, or 140 per cent.

**MOTOR-CARS (IMPORTS).**—During the fiscal year immediately preceding the War imports of motor cars into India numbered 2,880. Following the armistice the total rose to 15,432 cars, to fall again in 1921-22 to the pre-war figure. In the fiscal year 1925-26, however, the quota had increased to 12,757. Imports of self-propelled vehicles during the seven months April-October 1926 were motor-cars, 7,242; motor-cycles, 1,005; motor omnibuses, vans and lorries, 3,393.

## CEYLON

### ADMINISTRATION

**GOVERNORSHIP.**—In March 1927 the King approved the appointment of Sir Herbert James Stanley, K.C.M.G., Governor of Northern Rhodesia, to be Governor and Commander-in-Chief of Ceylon in succession to Sir Hugh Clifford.

### COMMERCE

**EXPORT TRADE.**—The shipments of Ceylon tea in 1926 amounted to 216,088,944 lbs., as compared with 209,493,536 lbs. in 1925, an increase of over 6½ million lbs. Of the total, the destinations were as follow, the

corresponding figures for 1925 being in parentheses. United Kingdom, 141,047,000 (133,952,697) lbs.; Europe, 3,191,318 (2,802,114); Soviet Union, 793,420 (1,596,220); Australia, 16,593,813 (16,337,096); New Zealand, 7,859,174 (6,247,180); Canada and Newfoundland, 6,867,455 (7,207,806); United States, 10,503,583 (17,280,032); Africa, 7,949,485 (7,182,899); Egypt, 6,104,846 (6,172,052); China, 1,691,354 (1,485,026); other countries, 7,486,596 (9,223,424). Shipments in 1922 amounted to 171,392,249 lbs., in 1923 to 183,501,928 lbs. and in 1924 to 203,680,013 lbs.

The exports of rubber in 1926 were 58,800 tons, against 45,697 tons in the previous year, the chief countries of destination being United Kingdom (18,260 tons) and United States (36,442), the United Kingdom having taken 12,149 tons in 1925 and the United States 29,893. There was a noticeable increase in latex shipments in 1926, the quantity being 13,096 gallons against 3,750 in 1925.

Exports of nearly all coconut products showed a decrease in 1926 as compared with the previous twelve months. Figures: Coconuts, 16,929,074 (against 22,951,458), desiccated coconut, 84,108,108 lbs. (against 89,431,100), copra, 2,425,880 cwt. (against 2,260,630), coconut oil, 570,015 cwt. (against 615,260), coconut ponnac, 150,814 cwt. (against 169,352), bristle fibre, 152,432 cwt. (against 155,400), mattress fibre, 302,792 cwt. (against 298,375), coir yarn, 110,142 cwt. (against 128,134). For copra the chief destinations were Germany, 775,099 cwt., Italy, 645,706, Norway, 332,858, and Holland, 248,246. Coconut oil went mainly to the United Kingdom (133,733 cwt.) and Denmark (149,499 cwt.), desiccated coconut principally to United Kingdom (27,051,900 lbs.), United States (20,968,965) and Germany (14,263,250), and coconuts to United Kingdom (5,826,303), Egypt (6,765,020), and Germany (2,317,305). Germany and Belgium took most of the coconut ponnac, the Continent about half of the bristle fibre, and the United Kingdom, Africa, Belgium, Germany, the United States and Australia most of the mattress fibre.

**RICE IMPORTS.**—During the fiscal year 1925-26 Ceylon was the largest purchaser of rice from India, taking 432,000 tons, as compared with 403,000 tons in 1924-25 and an average of 325,000 tons during the quinquennium ending 1913-14.

**TARIFF AMENDMENTS.**—Certain amendments to the Customs tariff of Ceylon came into operation as from July 22, 1926. The following items were transferred from the list of dutiable goods and added to the list of exemptions from duties:—Curry stuffs, coriander seed, cummin seed, fennel seed, garlic, mathe seed, tamarind, turmeric, etc.; exercise books in paper covers, fish, dried and salted; fish, maldiva; milk, including refrigerated, condensed, sweetened or unsweetened, sterilised, or powdered; and milk foods.

The following duties are imposed in lieu of those previously imposed:—Tobacco—manufactured, per lb.: Rs. 4.50; Cigars, per lb.: Rs. 4.50; Cigarettes and beedies, per lb.: Rs. 6.0.

## TRANSPORT

**MOTOR AND ENGINEERING EXHIBITION.**—The Automobile Club of Ceylon, with the co-operation of the Motor Traders' Association, organised at Colombo (January 6-16, 1927) an All-Ceylon Motor and General Engineering Exhibition, showing practically every type of motor car, accessories, radio and other mechanical equipment imported into the Island.

## FINAL NOTE

IN the preparation of this comprehensive work, notwithstanding our very complete organisation for the collection of necessary data, we have had recourse to books of reference and other periodical publications, to the publishers of which we desire to make the fullest acknowledgment. In this connection we are under an obligation in Great Britain to "The Board of Trade Journal," "The Times Trade and Engineering Supplement," and the "Manchester Guardian"; in the United States to the publications published by the Bureau of Commerce. We have also been indebted to the Department of Commerce for valuable information and trade of the review, as supplementary enabled to draw upon and Trade Commissioners' Reports of publications of countries under review free use, among these annually issued by the Government of the Union of South Africa, Egypt, India and Ceylon.

W. H. MORTON CAMERON.

To the High Commissioner for the Dominion of South Africa, the High Commissioner for Rhodesia, and the High Commissioner for India, as also to those with whom our representatives came in contact in social, professional and business circles, we are indebted for courteous and valuable assistance, all of which has materially contributed to the unique character of this volume.

GLOBE ENCYCLOPEDIA COMPANY.
