

List of Tables

2.1	PV, Wind and Hybrid power installation in different Countries over the world [120] . . .	26
2.2	”Growth of Solar Power installed capacity in India” [121]	27
2.3	”Installed wind capacity by state in India as of 19 October 2016” [122]	28
2.4	Target set for the various RES [128]	28
3.1	”THE ELEMENTS AND PARAMETERS INVOLVED IN THE DESIGN OF PV CELL”	34
3.2	Electrical Parameters of manufacturer Data sheet	34
3.3	SIMULATION RESULTS IN MATLAB/SIMULINK/SIMSCAPE	52
3.4	ELECTRICAL PARAMETERS OF SHARP NU-E245 (J5) FROM DATA SHEET	60
3.5	Comparing Electrical Parameters of Two PV Panel Models at STC With Manufacturer Data-Sheet	61
3.6	Maximum Power Point Tracking Techniques	67
3.7	P & O algorithm MPP tracking technique	69
3.8	Electrical Parameters of PV based generation	71
4.1	Wind turbine parameters	96
4.2	Parameters of PMSG	101
4.3	The output voltage variation in time and steady state error under varying wind speed and constant load condition	109
4.4	The output voltage variation in time and steady state error under varing wind speed and load condition	111
5.1	Fuzzy rule base for P & O algorithm	123
5.2	Fuzzy rule base for HCS algorithm	124
6.1	Comparison of Mean Absolute Percentage Error (MAPE)	145
7.1	Historical data of Monthly Average Solar illumination levels (W/m^2)	157
7.2	Performance of the inverter under varying environmental and constant load condition . .	161
7.3	Performance of the Inverter under varying environmental and load condition	163
7.4	Frequency deviation of the system under two different loading conditions	163
7.5	THD for Increasing Load Pattern	165
7.6	THD for decreasing load pattern	167
7.7	THD analysis of the system	180
7.8	Performance of the inverter under different loading conditions	183
8.1	Electrical Parameters of PV Panel	188
8.2	A Comparative analysis of mathematical and simulation of two-area system	203
