

List of abbreviations

AAAS = American Association for the Advancement of Science

BARC = Bhabha Atomic Research Centre

BVS = Bharatiya Vigyan Sammelan

CSE = Centre for Science and Environment

CSIR = Council for Scientific and Industrial Research

DST = Department of Science and Technology

HCSTC = House of Commons Science and Technology Committee

IASc = Indian Academy of Sciences

ICAR = Indian Council of Agricultural Research

IISF = India International Science Festival

IJSC = Indian Journal of Science Communication

INSA = Indian National Science Academy

IPTV = Internet Protocol TV

ISCA = Indian Science Congress Association

KVKs = Krishi Vigyan Kendra

LSTV = Lok Sabha TV

MOOC = Massive Open Online Course

NASA = National Aeronautics and Space Administration

NASEM = National Academies of Sciences, Engineering, and Medicine

NASI = National Academy of Sciences, India

NCSC = National Centre for Science Communicators

NCSM = National Council of Science Museums

NCSTC = National Council for Science and Technology Communication

NGO = Non-Governmental Organisation

NISCAIR = National Institute of Science Communication and Information Research

NRDC = National Research Development Corporation

NRF = National Research Foundation

NSF = National Science Foundation

NSTMIS = National Science and Technology Management Information System

PAS = Public Awareness of Science

PCST = Public Communication of Science and Technology

PE = Public Engagement

PES = Public Engagement in (with) Science

PEST = Public Engagement with S&T

PIB = Press Information Bureau

PR = Public Relations

PUS = Public Understanding in Science

PUST = Public Understanding in Science and Technology

R&D = Research and Development

RSTV = Rajya Sabha TV

S&T = Science and Technology

SA = Scientific Awareness

SA-DST = South African Department of Science and Technology

SASTi = Social Appropriation of Science, Technology and Innovation

SciCom = Science Communication

SiS = Science in Society

SL = Scientific Literacy

SPR = Scientific Policy Resolution

SSR = Scientific Social Responsibility

STEAM = Science, Technology, Engineering, Agriculture and Mathematics

STI = Science Technology and Innovation

STIP = Science Technology and Innovation Policy

TPS = Technology Policy Statement

TPS = Technology Policy Statement

UK = United Kingdom

UNESCO = United Nations Educational, Scientific and Cultural Organisation

US/USA = United States/ of America

List of Tables

Table 1: Details about the academy wise responses and the calculation of response rates...	97
Table 2: Demographic details of the study sample (N = 259).	102
Table 3: Descriptive statistics for the Mother tongue of the respondents (N = 258).	108
Table 4: Group-wise distribution of the importance of science communication mean scores across demographic variables and one-way ANOVA tests.	112
Table 5: Descriptive statistics for the perceived importance of the given six objectives of science communication.	114
Table 6: Scientists' evaluation of the importance of the ways of science communication..	116
Table 7: How do you think about the current level of science coverage in news media in general in India?	117
Table 8: Scientists' agreement with the statements about science and society	119
Table 9: Indian scientists' attitudes about science and association with the importance of science communication.	120
Table 10: Descriptive statistics for scientists' views on whether disseminating their research results to society is part of their current job's roles and responsibilities.	121
Table 11: Scientists' level of agreement with the statement on the moral duty of scientists.....	123
Table 12: Scientists' level of agreement with the given statements on scientists' role and responsibility in science communication.	125
Table 13: Correlation of scientists' perceptions about their moral duty, role, and responsibility in science communication with their attitudes toward science-society interactions.	127
Table 14: Scientists' perception about who should have the main responsibility for communicating science to the public.	128

Table 15: Frequency of scientists’ active engagement in science communication activities in general.	130
Table 16: Frequency of public engagement activities organised by the respondent’s institution.	131
Table 17: Scientists’ frequency of participation in different science communication activities during the last one year.	134
Table 18: Scientists’ views on ease of engaging in science communication activities.	136
Table 19: Scientists’ views on their overall experience so far in science communication activities.	137
Table 20: Scientists’ views on their likelihood to participate in science communication activities in the future, if given an opportunity.	138
Table 21: Scientists’ perception about how likely the following things will happen if they engage in science communication activities.	141
Table 22: Scientists’ level of agreement with three statements about engaging in science communication activities showing their personal attributes.	179
Table 23: Scientists’ rating of their own engagement in science communication with the general public/media.	143
Table 24: Scientists’ level of agreement with four statements related to their engagement in science communication and its impact on their career.	145
Table 25: Indian scientists’ response to scientists who communicate being labelled as ‘Publicists’ by the peers.	146
Table 26: Scientists’ perception about the importance of three given statements for their career advancement.	147
Table 27: Scientists’ perception about how supportive their institutions/employers were to scientists communicating science with the public/media.	149

Table 28: The frequency of participation in science communication activities by the respondents' close academic colleagues.	150
Table 29: The respondents' perception about their colleagues at their organisation or department taking an active part in science communication activities.	151
Table 30: Scientists' views on how supportive their academic colleagues and family/close friends are to their participation in science communication activities.	152
Table 31: Scientists' views on whether they thought their research was too complex for the general public to understand.	153
Table 32: Scientists' perception about the given 11 points being a potential factor preventing their active engagement in science communication activities.	155
Table 33: Scientists' views on how skilled they were in communicating science through media formats.	157
Table 34: Respondents' perception about their willingness to participate in science communication activities in the next 12 months.	158
Table 35: Results of regression models predicting scientists' overall frequency of science communication activities and their willingness to participate in such activities in the next 12 months.	159
Table 36: Respondents' perception about how they were trained in science communication.	161
Table 37: Respondents' perception about whether they had enough training in science communication.	161
Table 38: Respondents' perception about whether attending science communication training/workshops would improve their public engagement.	162
Table 39: Respondents' perception about their willingness to attend science communication / media training.	163

Table 40: Respondents' recommendations for interventions to enhance Indian scientists' public engagement.	166
Table 41: Correlation of the recommended interventions with scientists' frequency of participation in PE activities and their likelihood to engage in the future	168
Table 42: Regression analyses for predicting the impact of the given interventions on scientists' frequency of PE activities and their likelihood to engage in PE in the future	168

List of Figures

- Figure 1:** The perceived importance of science communication among Indian scientists....111
- Figure 2:** Frequency of scientists' participation (percentages) in different science communication activities during the last one year (N = 259). 135
