fiolax. A trade name for an alkali-free glass resistant to sudden temperature changes; used for test-tubes, and other chemical glassware.

fir. (1) A coniferous tree of the Abies genus. (2) Same as firkin. (3) A *Pinus* species. **balsam of-** Canada balsam. **oil of-** Pine oil.

fire. A bright flame caused by combustion. **f. air.** Scheele's name for oxygen. **f. brick.** A fire-clay or fire-resistant brick for lining furnaces, containing as crystalline phases: mullite, cristobalite and tridymite. **f. clay.** Stowbridge clay. A refractory clay containing large proportions of silica and alumina in comparison with the basic oxides. **f. damp.** An explosive mixture of methane and air. It occurs in coal mines and is detected by the "corpse light" in a Davy lamp. **f. extinguisher.** An agent that extinguishes fires. It may act either by cooling the burning substance (*e.g.*, water), or by covering it with a medium in which combustion cannot occur; as, carbon tetrachloride, sand, fire-foam. **f. foam.** A colloidal blanket of alumina and carbon dioxide by which fires are extinguished, *e.g.*, in oil-tanks. The blanket is produced by spraying over the burning surface two solutions, one containing alum, the other sodium carbonate and glue, or sodium silicate. **f. point.** The minimum temperature at which an inflammable oil will burn continuously. Cf. *flash point.* **f. proofing.** See *fireproofing.* **f. tester.** A device for determining the flash-point of illuminating oils.

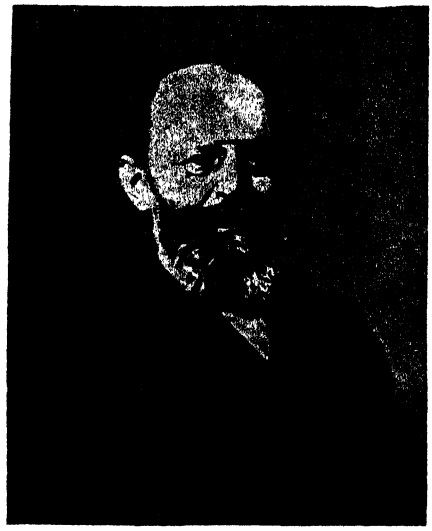
firepolishing. To smooth the sharp edges of glass by slightly fusing them in a flame.

fireproofing. The coating or impregnation of a combustion material with a substance that makes it less combustible; as, waterglass for textiles and wood, or selenium for wire insulators in telephone switchboards.

fireworks. A pyrotechnic display such as colored flames, and sky-rockets. **daylight-** F. utilizing colored smokes for effects.

firkin. (1) Fir. An obsolete measurement: 9 gallons = 34.06799 liters. (2) A wooden vessel.

firn. Snow in a granular, compact form.



Emil Fischer.

(From Moore "History of Chemistry." McGraw-Hill Book Company, New York, N. Y.)

Fischer, Emil. 1852–1919. A German chemist noted for his work in biochemistry and on the synthesis of polypeptides and carbohydrates. **F., Hans.** A German biochemist noted for his work on blood, and synthesis of hemin (Nobel prize 1940).

fisetic acid. Fisetin.

fisetin. $C_{15}H_{10}O_6$ = 285.1. Fisetic acid. Tetraoxymethylanthraquinone, *3.7.3'.4.'*-tetrahydroxy flavone. A yellow coloring matter from the wood of *Quebracho colorado*, fustic, or *Rhus cotinus.* Yellow, crystalline, glistening needles, m.360. Cf. *fustin.* **iso-** Luteolin.

fish bean. See *tephrosia.* **f. berry.** Cocculus indicus, Indian berry, oriental berry. The dried fruit of *Anamirta cocculus*, a Menispermaceae. It is an active narcotic poison. **f. glue.** See *isinglass.* **f. guano.** F. scrap, f. tankage. A fertilizer made from non-edible fish and from offal (heads, tails, etc.) from fish canneries by cooking, expressing the oil, and grinding. It contains 6–10 % N,

0.4–8 % P_2O_5. **f. oil.** Liquid fats obtained from fishes; as, dugong, porpoise, seal, sperm and sardine. They are characterized by their great absorption of oxygen without drying to a varnish, and yield little or no elaidin. They are colored dark red by concentrated acids. **f. poison.** (1) A ptomaine produced by the decaying proteins of fishes. (2) The poisonous substances produced by certain species of fishes, as fugu toxin, or ichthyotoxin. (3) A poisonous substance used by natives to stupefy fish prior to catching them; usually derived from *Derris*, *Cracca* and *Lonchocarpus* species. **f. scrap.** F. guano. **f. tankage.** F. guano.

fission. A division. (1) In biology the separation of a single cell into two or more equal parts, capable of developing to the original size of the parent cell. Cf. *karyokinesis*. (2) In astronomy the separation of a spherical and semi-liquid body into two parts that revolve around each other. Certain double stars are assumed to have been formed by fission from a single star. (3) In chemistry, the splitting of an atom into two atoms of nearly identical weight when bombarded by neutrons, as occurs with uranium 235 and certain other elements.

fistelin. The aglucone of the glucoside fustin.

Fittig, Rudolf. 1835–1910. A German chemist noted for organic research. **F. reaction.** *Fittig synthesis.* **F. synthesis.** The formation of an aromatic homolog from an aryl iodide or bromide by means of an alkyl iodide or bromide and metallic sodium, *e.g.*,

$$RBr + R'Br + 2Na = R{-}R' + 2NaBr$$

five finger grass. Cinquefoil. The herb of *Potentilla reptans*, a Rosaceae, used as a febrifuge and astringent. **American-** The herb of *P. canadensis* used similarly. Cf. *tormentil*.

fixanal. An analytical chemical, accurately weighed and sealed in a glass ampule; used for the rapid preparation of volumetric solutions. Error 0.2 %. Cf. *analoid*.

fixation. The process of rendering permanent. (1) In photography, the process of dissolving light-sensitive silver salts from plates, films, or paper, thus making them insensitive to the further action of light. (2) In microscopy, the preparation of minute structures in their original form on a slide. (3) In immunology, the prevention of hemolysis by the complement, q.v. (4) In industry, the combining of atmospheric nitrogen in the form of a useful compound. See *nitrogen fixation.* **complement-** See *complement fixation.* **nitrogen-** See *nitrogen fixation.*

fixative. A substance used to make an object permanent, as (a) a mordant used in dyeing, (b) a varnish for pastel paintings, (c) an agent employed in botany, zoology and histology to make permanent tissues. *E.g.*,

	1	2	3
formaldehyde (40 %)	6.5	12	10 cc.
glacial acetic acid	2.5	4	2 cc.
alcohol 95 %	55	34	30 cc.
water	45	56	60 cc.

1. *Formal-acetic-alcohol* for all plant specimens and many animals.

2. *Carl's solution* for insects and arthropods; remove specimen after 42 hours and transfer to 70 % alcohol.

3. *Kahle's solution* for insects, insect eggs and embryos.

(d) in perfumery, a f. makes a substance less volatile and more permanent; as, methylanisate, benzyl cinnamate, benzoisoeugenol.

fixator. Amboceptor.

fixed. Made permanent or definite. **f. air.** An early name for carbon dioxide. **f. oils.** A liquid fat which absorbs oxygen and becomes resinous (drying oils) or remains liquid (non-drying oils) as compared with evaporating oils (essential or volatile oils). **f. proportions, Law of.** See *constant proportions.* **f. white.** Barium sulfate.

fixing. The act of rendering permanent.

fixing-bath. A 20 % solution of sodium thiosulfate; used for the fixation of photographic plates, films or papers. **hardening-** A freshly mixed solution of

A. 500 gm. sodium hyposulfite
2000 cc. water.

B. 45 gm. sodium sulfite
25 gm. chrome alum
10 gm. sulfuric acid
500 cc. water.

Used for hardening and fixing photographic films, plates or papers.

Fizeau, Armand, Hippolyte, Louis. 1819–1896. A French physicist noted for research on the interference of light and heat, and the determination of the velocity of light and electricity.

fl. An abbreviation for fluid. **fl. dr.** A fluid dram or drachm. **fl. oz.** A fluid ounce.

Fl. An abbreviation for fluorine, F.

flag. See *calamus*.

flagella. A thin, hair-like protuberance on protozoa.

flagstaffite. $C_{12}H_{24}O_3$. An orthorhombic mineral, m.99–105.

flame. A source of heat consisting essentially of a stream of gas or vapor heated as the result of chemical reaction, usually oxidation. The luminosity of the flame may depend on glowing solid particles, *e.g.*, dust, carbon, etc. It consists usually of a number of cones, the temperature of which depends upon the degree of combustion taking place. **acetylene-** The hot, ignited gases emerging from a blowpipe fed with acetylene and compressed air or oxygen. **Bunsen-** The flame produced by a bunsen burner burning gas; it is either non-luminous (with air) or luminous (without air). **dark-** A non-luminous flame, *e.g.*, produced by burning pure hydrogen in oxygen, or ethylene in chlorine. **hydrogen-** A bluish or non-luminous flame produced by the oxidation of hydrogen in air. **luminous-** A bright or pale, colored flame, *e.g.*, candle flame, sodium light. **non-luminous-** Dark-. **oxidizing-** The non-luminous flame of a gas burner, used in blowpipe analysis for oxidation. **reducing-** The luminous blowpipe flame. It owes its properties to the presence of solid particles of carbon. **oxy-hydrogen-** The hot gas-mixture from a blow-pipe fed with compressed hydrogen and oxygen. **solar-** Protuberances on the sun consisting of hydrogen flames or luminous gases.

f. coloration. A qualitative test performed by placing the substance, moistened with hydrochloric acid on a platinum wire, in the non-luminous flame of a bunsen burner, and observing the resulting color of the flame.

Bright yellow	sodium
Brick red	calcium
Crimson	strontium
Red	lithium
Green-yellow	molybdenum, boron
Green	barium
Blue	indium
Blue-white	lead, arsenic, antimony
Purple	potassium
Blue, changing to green	copper

f. reactions. See *Bunsen, f. tests.* **f. spectra.** Spectra produced by the vapors of elements; used for the spectroscopic detection, identification or determination of elements. The characteristic lines of the f. spectra are due to electrons falling back to normal orbits from the lowest or more easily excited levels. Cf. Arc and spark *spectrum.* **f. temperature.** The following temperatures are produced by different sources of heat (Féry, 1907).

alcohol and air	1705°C
gas (bunsen burner—no air)	1712°C
gas (bunsen burner—½ air)	1812°C
gas (bunsen burner—full air)	1871°C
hydrogen and air	1900°C
gas and oxygen	2200°C
hydrogen and oxygen	2420°C
acetylene and air	2458°C
acetylene and oxygen	3000°C
thermite (Al + Fe)	3000°C

f. tests. Qualitative test made with the bunsen burner, such as the flame reactions or colorations, bead tests, and other blowpipe tests.

flamo. A compressed natural gas shipped in cylinders.

flash. (1) A sudden, luminous and temporary flame. (2) A volatile mixture, thrown on the fires of a kiln to produce a colored glaze on bricks or tiles which are being baked; thus, **black-** containing manganese. **zinc-** containing zinc salts (yellow and green shades).

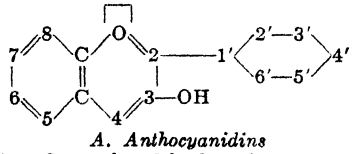
flash-light. A mixture of combustible solids used in photography; as, magnesium powder.

flash point. The lowest temperature at which the vapors of a liquid may be ignited momentarily. It is a constant of oils. Cf. *auto-ignition.* **f.** *firepoint.* **f. tester.** A device for heating substances gradually to the temperature at which spontaneous combustion of their vapors occurs; used in the analysis of oils.

flash spectrum. The reversal of the Fraunhofer lines of the solar spectrum in the form of a bright line spectrum, immediately before a total eclipse.

flask. A glass, metal, paraffin, or rubber receptacle or vessel for holding solids, liquids, or gases. **Aberhalden-** A small glass vessel intermediate in shape between a beaker and an erlenmeyer. **acetylation-** A small pear-shaped flask used in menthol determinations. **assay-** A conical glass beaker used for precipitation. **boiling-** A spherical glass vessel with long neck. **delivery-** A f. graduated to deliver a specified volume of liquid as distinct from a f. containing this volume. Cf. *volumetric* **f. Dewar-** Vacuum flask, with side tube in its neck. **erlenmeyer-** A conical-shaped flask with narrow neck and wide flat bottom. **filtering-** An erlenmeyer flask with heavy walls and side

FLAVANOLS



A. Anthocyanidins

f. = flavanol or 3-hydroxybenzopyran

pelargonidin	5.7.4′-trihydroxy-*f.*
fisetinidin	7.3′.4′-trihydroxy-*f.*
cyanidin	5.7.3′.4′-tetrahydroxy-*f,*
delphinidin	5.7.3′.4′.5′-pentahydroxy-*f.*
peonidin	3′-methoxy-5.7.4′-trihydroxy-*f,*
oenidin	3′.4′-dimethoxy-5.7.5′-trihydroxy-*f,*
hirsutidin	3′.5′-dimethoxy-5.7.4′-trihydroxy-*f,*
myrtillidin	7-methoxy-5.3′.4′.5′-tetrahydroxy-*f,*

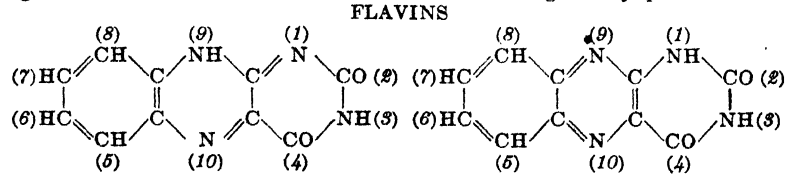
B. Anthocyanins

c. = cyanidin or tetrahydroxy-*f.*

p. = pelargonidin or trihydroxy-*f.*

chrysanthemin	3-glucosidyl-*c.*
pelargonenin	5-glucosidyl-*p.*
oxycoccincyanin	3′-methoxy-3-glucosidyl-*c.*
oenin	3-glucosidyl-oenidin 3-galactosidyl-*c.*
pelargonin	3.5′-diglucosidyl-*p.*

FLAVINS



flavin or isoalloxazine — alloxazin

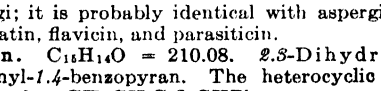
lumilacto flavin	*6.7.9*-trimethyl-flavin
lumichrome	*6.7*-dimethyl-alloxazin
lactoflavin	*6.7*-dimethyl-*9*(*2′.3′.4′*-trihydroxy propyl) flavin.

tube. **mercury-** The commercial unit of measurement of mercury; equivalent to 75 pounds. **silica-** A flask made of semi-opaque silica. **vacuum-** Dewar vessel. A double-walled glass vessel of various shapes; used for holding liquefied gases. **volumetric-** A flask with long graduated neck. **Wurtz-** Distillation f-.

flavacidin. An antibiotic substance obtained from fungi; it is probably identical with aspergillin, flavatin, flavicin, and parasiticin.

flavan. $C_{15}H_{14}O$ = 210.08. *2.3*-Dihydro-*2*-phenyl-*1.4*-benzopyran. The heterocyclic hydrocarbon

flavaniline. $C_{16}H_{14}N_2$ = 234.28. α-aminophenyl-γ-methylquinoline, *2*-(*p*-aminophenyl) lepidine.

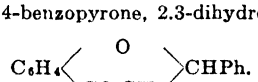


Colorless, long prisms, m.97, insoluble in water, soluble in alcohol, ether or benzene.

flavanol. $C_{15}H_{10}O_3$ = 238.1. 3-hydroxy-flavone, Yellow needles, m.170, soluble in alcohol.

flavanols. A group of vegetable dyes derived from flavonol (see table).

flavanone. $C_{15}H_{12}O_2$ = 224.09. 2.3-dihydro-2-phenyl-1.4-benzopyrone, 2.3-dihydro flavone,



flavatin. See *flavacidin.*

flavazine. $C_{16}H_{13}N_4O_4SNa$. The sodium salt of *1*-*p*-sulfophenyl methyl-*4*-phenyl-diazonium-*5*-pyrazolone, used as a yellow acid dye.

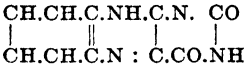
flaveanhydride. $C_2H_2N_2S$ = 86.2. Cyanogen monosulphydrate, $NC.CS.NH_2$.

flavianic acid. $C_{10}H_6N_2O_8S$ = 314.0. *2.4*-dinitro-*1*-naphthol-*7*-sulfonic acid. Yellow crystals, used in the separation of amines.

flavicid. $C_{18}H_{22}N_3Cl$ = 315.5. *2.7*-Dimethyl-*3*-dimethylamino-*6*-amino-*10*-methyl acridinium chloride. A reddish-brown, water-soluble powder, used as antiseptic.

flavicin. See *flavacidin.*

flavin(e). (1) $C_{10}H_6N_4O_2$ = 214.05. Isoalloxazine. The heterocyclic ketone.



(2) Quercetin. (3) One of a group of yellow plant pigments as

(a) lactoflavin, the free yellow pigment.

(b) lumiflavin, a cleavage product formed on irradiation of (a).

(c) protein flavin, united to proteins.

(d) purine flavin, united to purines.

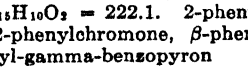
(e) carbohydrate flavin, united to carbohydrates, as in vitamin G.

flavine. (1) Acriflavine. (2) Flavin.

flavinduline. A yellow dye, 9-phenyl-9αγ-dibenzophenazonium.

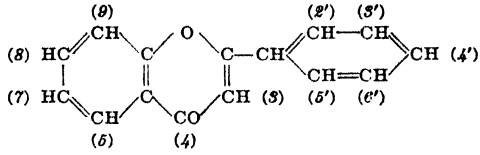
flavol. *1.3*-Anthradiol. Cf. *flavanol.*

flavone. $C_{15}H_{10}O_2$ = 222.1. 2-phenylbenzo-1.4-pyrone, 2-phenylchromone, β-phenylchromon, beta-phenyl-gamma-benzopyron



Colorless needles, m.97, insoluble in water, soluble in alcohol. It is present in many flower colors; cf. *flavones.* **dihydro-** Flavanone.

flavones. A group of vegetable coloring matters, the hydroxy or methoxy derivatives of flavone (see table). Cf. *flavylium, syringetin, anthoxanthin.*



Flavone (in *iso*-flavone the phenyl group is at 3). *h.* = hydroxyflavone; *h.i.* = hydroxy-isoflavone

flavanol	3-*h.*
chrysin	5.7-di-*h.*
daidzein	7.4-di-*h.i.*
baicalin	5.7.8-tri-*h.*
quercetin	2.3′.4′-tri-*h.*
genistein	5.7.5-tri-*h.i.*
apigenin	3.7.4-tri-*h.*
luteolin	5.7.3.4-tetra-*h.*
quercitin	3.5.7.3.4-penta-*h.*
morin	3.5.7.2′.4′-penta-*h.*
myricetin	3.5.7.3.4.5-hexa-*h.*
gossypetin	3.5.7.8.3′.4′-hexa-*h.*
quercetagin	3.4.5.6.7.3′.4′-hepta-*h.*
wogonin	7-methoxy-5.6-di-*h.*
hesperetin	4-methoxy-5.7.3-tri-*h.*
rhamnazin	7.3-dimethoxy-3.5.4-tri-*h.*
rhamnetin	7-methoxy-3.5.2.4-tetra-*h.*
Flavone-glucosides	
genistin	7-glucosidyl-genistein
daidzin	7-glucosidyl-daidzin

flavopannin. $C_{21}H_{26}O_7$ = 390.2. A monobasic acid from the root of *Aspidium athamanticum.*

flavophenine. Chrysamine. Cf. *pannol.*

flavopurin. $C_{14}H_8O_5$ = 256.13. 1.2.7-trihydroxy-anthraquinone, alizarin X, alizarin R.G., C.A., S.D.G., and I.O. A yellow powder, used as a dye.

flavopurpurin. $C_{14}H_8O_5$ = 256.13. 1.2.6-trihydroxy-anthraquinone. Yellow needles, m.459, slightly soluble in hot water, soluble in hot alcohol or ether; used as a dye.

flavoxanthin. $C_{40}H_{56}O_2$ = 584.5. A carotinoid pigment, m.184, from the petals of *Ranunculus acer.*

flavor, flavour. The taste of a substance.

flavoring agents. Any substance of a pleasant taste, used to improve the taste or odor of a drug, food or beverage. The flavor is usually due to some essential oil, *e.g.*, peppermint, cinnamon, clove, lemon extract.

flavylium. A salt derived from flavones which contains tetravalent oxygen. Cf. *anthocyanidin.*

flax. Byssus. The bast fiber of *Linum usitatissimum*, or flax plant, an annual herb about two feet high. It is grown in Europe and Egypt for the fiber, in the United States, Russia, and Argentine for the seeds (linseed oil). The unbleached flax is used for ropes, twine and coarse fabrics. The sunbleached flax or linen is used for fine linens, laces, etc., while linen rags are the stock for the highest quality of paper. **earth-** Asbestos. **mountain-** (1) A fine silky variety of asbestos. (2) The herb of *Linum catharticum*, purging flax, used as a laxative. **New Zealand-** See New Zealand *hemp.* **stone-** Asbestos.

flax seed. Linseed.

fleabane. The herb or seeds of *Erigeron Canadense*, a Compositae; used as a diuretic and tonic.

Fleischl hemometer. An optical instrument used for determining the percentage of hemoglobin in the blood, by comparing the sample with a set of pale to deep blood color glass-wedges.

Fleming tube. A glass apparatus used for the absorption of CO_2 in the determination of carbon in steel or iron.

Flemming's solution. A fixative and preservative for small organisms: 25 cc. 1 % chromic acid, 10 cc. 1 % osmic acid, 5 cc. glacial acetic acid and 60 cc. water.

Fletcher furnace. A laboratory furnace burning gas or gasoline, with or without blast; used for metallurgical, or ceramical operations. **F. burner.** A gas ring-burner.

flex. Flexible insulated copper wire, used for electrical connections.

flexibility. (1) The property of a substance of bending without breaking, *e.g.*, a lead pipe. (2) Adaptability.

flexible. Pliable, pliant, capable of being bent or twisted without breaking, *e.g.*, copper wire, lead tubing.

flexile. Flexible.

flexure. Any curved or bent portion or section.

flint. SiO_2. Flintstone. An opaque quartz found in chalk stone, and resembling chalcedony. Used in the ceramic and glass industries, and for road-making. **f. brick.** A brick made of powdered flint; used as a fire-brick. **f. glass.** Potash-lead glass. A highly refractive and easily fusible glass; used in optical instruments (prisms, lenses) and for chemical apparatus (tubing). **f. stone.** Flint.

float. A buoyant, sealed glass tube used in burettes for easier and more accurate reading. **f. stone.** A light, porous quartz that floats on water.

floats. A finely-ground phosphate rock, used as fertilizer.

floccose. A growth of bacteria characterized by short, curved chains, resembling wool threads.

flocculation. The coagulation or coalescence of a finely-divided precipitate.

flocculent. Woolly or cloudy, flake-like, and non-crystalline, *e.g.*, a liquid containing irregularly shaped particles. In bacteriology, a growth of bacteria characterized by the presence of pseudo-zooglea, *e.g.*, small, adherent masses of bacteria of various shapes floating in the culture media.

flora. The plants of a region or geographical district. Cf. *fauna*.

Florence test. The formation of brown needles or plate-shaped crystals on addition of a solution of I in KI solution to semen. It is a test for spermatic fluid.

florentium. Ft. The element of atomic number 61, claimed to be discovered in 1924 by Rolla and Fernandez. Cf. *illinium*.

flores. (1) The flowers or blossoms of a plant. (2) A chemical obtained by sublimation. See *flower*. **f. martiales.** Ferriammonium chloride.

floridin. A variety of fuller's earth from Florida.

flotation. A method of concentrating ores by grinding them with a frother, (*e.g.*, oils or acids) and separating the differentially-moistened or wetted mineral particles by floating them on water, usually agitating the mixture by compressed air. The wet gangue settles, and the concentrated ore is skimmed off. Cf. *wetting, zone, Horwood process, Owen process.* **f. activator.** A reagent producing a metallic coat; as, Na_2S or $CuSO_4$. **f. collector.** An agent which increases the carrying capacity of air bubbles; as, xanthates. **f. depressor.** An agent preventing the gangue from being carried by the air bubble; as, cyanides. **f. frother.** A reagent producing a foam of stable air bubbles; as, f. oils. **f. oils.** Petroleum and wood oils; as, pine oil, tar oil, creosote, which are used to wet the metallic particles. **f. regulator.** A reagent which controls the pH value; as $Ca(OH)_2$ or H_2SO_4.

flour. Wheat flour, farina tritici. The white starchy powder made by bolting wheat. In its wider sense any powdered cereal or seed used for food. **baker's-** A second grade wheat flour. **bleaching-** See *Agene, beta-chlora* and *Golo processes*. **buckwheat-** A powder made from buckwheat. **enriched-** Plain white flour, to which vitamin concentrates and calcium salts, or a proportion of the wheat germ, have been added. **Graham-** An unbolted wheat meal. **National-** A war-time enriched f. (q.v.). **patent-** A high-grade, white, wheat meal, which has been bolted and all bran removed. **rye-** A powdered rye.

flow. The motion or passage of a fluid. Cf. *flux*. **cold-** See *cold*. **molecular-** The relative number of gas molecules which pass through a fine orifice: $Q = p_2 - p_1/(W\sqrt{\rho})$, where Q is the quantity of gas in cc. per second which flows through a tube or opening at a difference of pressure $p_2 - p_1$, while ρ is the density of the gas at 1 barye pressure (= M/83.15 + 10.6T), and W is the resistance or work overcome in passing through the orifice. For a circular opening in a thin plate: $W = 3.184/d^2$, and for a tube of length l and diameter d: $W = (2.3941/d^3) + (3.184/d^2)$. **f. sheet.** The diagrammatic representation of a works process, showing the sequence and interdependence of the successive stages.

flowers. (1) A chemical obtained by sublimation; usually a metallic oxide, as **f. of antimony** (= antimony trioxide), **f. of arsenic** (= arsenic trioxide), **f. of sulfur** (= sublimed sulfur), **f. of tin** (= stannic oxide). (2) The blossoming portion of a plant, consisting normally of a calyx (composed of the sepals), corolla (composed of the petals), and stamens and pistils. Many flowers contain anthocyanin or other coloring materials, essential oils and other odoriferous substances. The following flowers are official (U.S.P.):

Anthemis	Matricaria
Arnica	Pale rose
Calendula	Red rose
Cloves	Sambucus
Kousso	Santonica

floz. Fl. *oz.* Abbreviation for fluid ounce.

fluavil. $C_{20}H_{32}O$ = 288.3. A resinous product derived from guttapercha, m.42, soluble in alcohol.

fluctuate. To vary or move within certain limits.

fluctuation. Successive rises and falls.

flue. A channel for gases or liquids.

fluellite. $AlF_3.H_2O$ = 102.67. Hydrous aluminum fluoride occurring in orthorhombic, colorless crystals, d.2.17, hardness 3.

fluid. A form of matter that cannot permanently resist any shearing force, however small. Such forces cause flow, but fluids do not recover their shapes when it ceases. **elastic-** A gas, *e.g.*, a condition of matter in which the molecules flow

apparently without resistance. **inelastic-** A liquid, *e.g.*, a condition of matter in which the molecules move freely but are restricted by gravitation. **perfect-** A hypothetical state of matter in which the molecules yield immediately and offer no mechanical resistance, *e.g.*, flow without viscosity. **viscous-** A syrup or soft mass which flows slowly, *e.g.*, a very viscous liquid.

fluid acetextract. A solution made by extracting a drug with dilute acetic acid.

fluid-dram. A pharmaceutical measurement. 1 fl. dr. = 60 minims = 3.69661 cc. or 3.7 ml. = 0.125 fl. oz. (U. S. A.).
1 fl. dr. = 60 minims = 3.55 cc. = 0.125 fl. oz. (*British*).

fluid extract. An alcoholic solution of a drug representing the drug-weight by volume, *e.g.*, 1 gm. of the drug corresponds with 1 cc. of fluid extract. Cf. *tincture*.

fluid-friction. Viscosity.

fluid-ounces. Floz. A pharmaceutical measurement of volume:
1 fl. oz. = 29.57 cc. or 29.6 ml. = 8 fl. dr. = $\frac{1}{128}$ Am. gallons. (U. S. A.).
1 fl. oz. = 28.41 cc. = 8 fl. dr. = $\frac{1}{160}$ Imper. gallons (*British*).

fluid-wax. Liquid waxes obtained from the oils of marine animals. They consist of esters of mono-atomic alcohols, with traces of glycerides.

fluidity. The property of flowing easily, as opposed to viscosity. It is measured in ρ = rhe, the reciprocal of poise, (q.v.).

fluo- (1) A prefix indicating the presence of fluorine, *e.g.*, fluobenzene, fluoform, etc. (2) A prefix indicating the property of fluorescence, *e.g.*, fluoflavine, fluorane.

fluobenzene. C_6H_5F = 96.1. Fluorobenzene, phenyl fluoride. Colorless liquid, d.1.023, m. −41.2, b.86, soluble in alcohol.

fluobenzoic acid. $C_7H_5O_2F$ = 140.1. Fluorobenzoic, fluorbenzoic acid. Colorless rhombic crystals, m.182, soluble in alcohol, ether, or hot water.

fluoborate. A salt of fluoboric acid containing the monovalent BF_4— radical, *e.g.*, ammonium fluoborate, NH_4BF_4.

fluoboric acid. HBF_4 = 87.8. The hypothetical acid from which the fluoborates are derived.

fluocerite. $(Ce,La,Nd,Pr)_2OF_4$. A rare earth mineral containing the fluorides of the ceria-earths.

fluochromate. A salt of fluochromic acid containing the monovalent CrOF— radical

fluochromic acid. HCrOF = 88.1. A monobasic acid.

fluoflavine. $C_{14}H_{10}N_4$ = 234.1. A fluorescent substance, m.360, soluble in alcohol or ether.

fluoform. See *fluoroform*.

fluogermanate. M_2GeF_6. A salt, derived from fluogermanic acid.

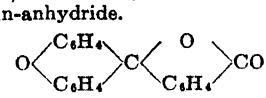
fluogermanic acid. H_2GeF_6 = 188.6. Hydrofluogermanic acid. An acid obtained by passing GeF_4 into water.

fluohydric acid. Hydrofluoric acid.

fluomethane. Fluoromethane.

fluoplumbic acid. H_2PbF_6 = 323.2. Hydrofluoplumbic acid. A white powder obtained by passing PbF_4 into water.

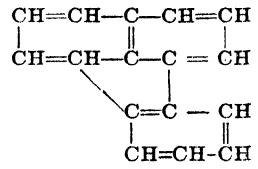
fluoran(e). $C_{20}H_{12}O_3$ = 300.20 o-phenolphthalein-anhydride.



Colorless needles, m.182, soluble in alcohol or acids. It is an intermediate in the manufacture of dyes.

fluorandiol. Fluorescein.

fluoranthene. $C_{16}H_{10}$ = 206.16. Idryl. A hydrocarbon in coal tar.



Colorless monoclinic needles, m 110, b.250, soluble in hot water, alcohol, ether, carbon disulfide or glacial acetic acid.

fluoranthraquinone. $C_{16}H_7O_2$ = 219.1. Colorless crystals, m.188, soluble in alcohol.

fluorapatite. The mineral $CaF_2.3Ca_3(PO_4)_2$. Cf. *apatite*.

fluoration. The introduction of fluorine into an organic molecule.

fluorbenzene. See *fluobenzene*.

fluorbenzoic acid. See *fluobenzoic acid*.

fluorometry. The measurement of fluorescence. Cf. *fluorescence analysis*.

fluorene. $C_{13}H_{10}$ = 166.15. α-Dipheneylenemethane. $C_6H_4\langle CH_2 \rangle C_6H_4$. Fluorescent, colorless scales, m.113, b.295, insoluble in water, soluble in alcohol, ether, carbon disulfide or benzene. It occurs in coal tar and is used in the manufacture of dyes. Its radicals are fluoryl and fluorylidene. **amino-** Fluoryl amine. **benzo-** Chrysofluorene. **chryso-** See *chrysofluorene*. **di-** See *difluorene*. **dibenzo-** q.v. **dinaphtho-** Dibenzofluorene. **naphtho-** q.v. **oxo-** Fluorenone*. ***ms*-phenyl-** Diphenylene dimethyl ethane. **picene-** q.v.

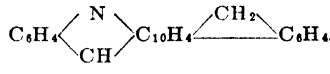
f. alcohol. $C_{13}H_{10}O$ = 182.15. Diphenylenecarbinol, fluorenol*, $C_6H_4.CHOH.C_6H_4$. Colorless crystals, m.153, soluble in alcohol. **f. carboxylic acid.** $C_{14}H_{10}O_2$ = 210.15. Diphenylene acetic acid.

fluorenic acid. $C_{14}H_{10}O_2$ = 210.08. Colorless crystals, soluble in water or alcohol.

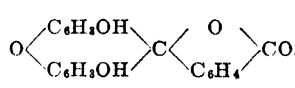
fluorenol*. Fluorene alcohol.

fluorenone*. $C_{13}H_8O$ = 180.15. Diphenyleneketone, oxofluorene, $C_6H_4\langle CO \rangle C_6H_4$. An oxidation product of fluorene. It occurs in yellow prisms, m.84, b.341, soluble in alcohol.

fluoren-naphthacridine. $C_{24}H_{15}N$ = 317.13. The heterocyclic system



fluorescein. $C_{20}H_{12}O_5$ = 332.20. Uranin A, 3.6-dihydroxyfluoran, resorcinolphthalein, resorcinphthalein, fluorandiol, dioxyfluoran.



An orange-red powder, insoluble in water, ether, or chloroform, soluble in hot alcohol, hot acetic acid, and alkalis with orange color and green fluorescence; used in the manufacture of eosin and other dyes and as an indicator: pH3.6 (yellow) to pH5.6 (fluorescent). **dihydroxy-**

Gallein. **dimethyl-** Cresorcin. **sodium-** Uranin A. **tetrabromo-** Eosin. **tetrabromodichrolo-** Phloxin. **tetraiodo-** Erythrosin.

f. paper. Zellner's paper. Paper impregnated with a solution of fluorescein in alcohol, and used as an indicator. *potassium-* Potassium fluorescein. *sodium-* Uranin.

fluorescence. The transformation of light by matter; *e.g.*, the property of certain substances to radiate, when illuminated, an unpolarized light of a different, usually greater wavelength. It may occur with solids, liquids or gases, and is due to the return of electrons displaced by the exciting radiation to a more stable position. It differs from phosphorescence, q.v., where the luminescence, q.v., continues, even after illumination has ceased. Cf. *excitation, phototropy, Raman effect, scattering, Compton effect.* **f. analysis.** The examination of substances in ultraviolet light with the object of identifying or determining them or assessing their quality or purity from the color and intensity of the f. produced. **f. microscopy.** Microscopical examination using ultraviolet instead of visible light; the structures of many objects appear fluorescent. **f. serology.** The diagnosis of disease from the f. of sera. Cf. *fluorometry.*

FLUORESCENCE OF SOLIDS

Substance	Exciting light	Reflected light	Intensity
novocaine	mercury vapor lamp	violet	20
β-naphthol		violet	19
benzidine		violet	16
sodium salicylate	ditto	pale blue	15
aniline	ditto	pale violet	12
antipyrin	ditto	pale violet	10
resorcinol	ditto	red	8

FLUORESCENCE OF SOLUTIONS

Substance	Exciting light	Reflected light
anthracene in alcohol	white	blue
eosin in water	white	yellow-green
esculin in alcohol	white	blue
fluorescein in water	white	green*
naphthalene-red in alcohol	white	red
quinine sulfate in water	white	purple
resorcin blue in water	white	red
rhodamine in water	white	green

* Recognizable in a dilution of 1 part in 2 million.

FLUORESCENCE OF GASES AND VAPORS

Substance	Temperature	Exciting light	Reflected light
iodine	10–30°C	mercury arc	greenish yellow
mercury	10–30°C	aluminum spark	blue
oxygen	10–30°C	mercury arc	ultra-violet
potassium	300–400°C	white light	red
rubidium	250–300°C	white light	red
sodium	300–400°C	white light	yellow

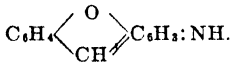
fluorescent. Epipolic. The property of having different colors by transmitted and reflected lights. **f. screen.** A glass plate covered with a fluorescent substance, *e.g.*, a tungstate or platinocyanide. Used for making visible those rays which are normally invisible to the eye. **f. unit.** The standard luminescence produced by 1 mg. radium element on 1 square centimeter of a barium platinocyanide screen. See *fluorimeter.*

fluorescin. $C_{20}H_{14}O_5$ = 334.2. A light yellow powder, insoluble in water, soluble in alcohol or ether; used as a dye. Cf. *fluorescein.*

fluoric acid. An incorrect term for hydrofluoric acid, HF. The name fluoric acid indicates the compound HFO_3, which does not exist.

fluoride. A salt of hydrofluoric acid containing the monovalent F— radical. **acid-** A salt of the type MHF_2.

fluorime. $C_{13}H_9ON$. The heterocyclic system

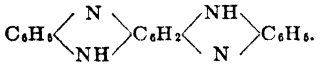


fluorimes, Compounds derived from fluorime.

fluorimeter. An absorbing screen of varying thickness or other instruments, used for measuring the intensity of fluorescence, especially the fluorescence caused by X-rays, cathode-rays and radium. See *fluorimetry.*

fluorination. The introduction of fluorine into an organic molecule.

fluorindene. $C_{16}H_{12}N_4$ = 260.3. The heterocyclic system



Substitution usually takes place on the nitrogen atoms.

fluorine. F = 19.00. An element, atomic number 9. A halogen and poisonous pale green gas, $d_{(air=1)}$.1.31, m.−233, b.−187, d. of liquid F 1.14, soluble in water, alcohol or ether. Fluorine is the most negative element, and hence even more reactive than oxygen. It has a valency of 1, and forms only one series of compounds, the fluorides; no oxysalts are known. It was discovered in 1771 by Scheele in fluorite, cryolite and other minerals, and isolated (1886) by Moissan. Liquid fluorine has a bright yellow color, and solid fluorine is colorless. Fluorine salts are of the types:

MF or M_2F_2 ..... normal fluorides
MHF_2 ..... acid fluorides.

proto- Coronium. **f. hydride.** Hydrofluoric acid. **f. iodine.** Fluoriodine. **f. oxide.** OF_2 = 54.0. A gas less active than fluorine, having the same odor, soluble in alkali, sparingly soluble in water. There also exist a brown gas, O_2F_2 = 70.0, and a colorless gas, OF = 35.0.

fluorinion. Fluorion.

fluoriodate. A compound derived from the iodates by the partial replacement of the oxygen by fluorine; as difluoriodates $R.IO_2F_2$, in which R may be potassium, sodium, ammonium, rubidium, cesium, or pyridine.

fluoriodine. F_5I = 221.8. Iodine pentafluoride. A colorless, heavy, fuming liquid, m. −8, b.97, of great chemical reactivity, decomp. by water and solvents.

fluorion. The monovalent fluorine ion, F^-.

fluorite. CaF_2 = 78.09. Fluorspar. Siliceous sinter. Native calcium fluoride, variously colored, brittle, d.3.18, hardness 4. Used as flux in the steel and glass industries and in the manufacture of hydrofluoric acid.

fluorobenzene. Fluobenzene.

fluorochrome. A substance capable of causing another substance with which it comes in contact to fluoresce.

fluoroform. CHF_3 = 70.0. Fluoform, trifluoromethane*. A colorless gas, d.2.53, $b._{40atm}$ 20, slightly soluble in water, soluble in alcohol or chloroform.

fluoroformol. A 2.8 % solution of fluoroform in water. A colorless, odorless, tasteless, nonirritant liquid. Used medicinally for the treatment of tuberculosis.

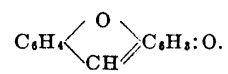
fluorogen. Fluorophore.

fluorometer. Fluorimeter.

fluoromethane. CF_4 = 88.0. Fluomethane, carbon tetrafluoride. A colorless gas formed as by-product in the manufacture of metallic aluminum from cryolite.

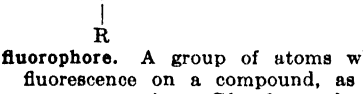
fluorometry. The measurement of the color and intensity of fluorescence (q.v.); as, in fluorescence analysis and microscopy. Cf. *fluorimetry.*

fluorone. $C_{13}H_8O_2$ = 196.06. 3-isoxanthone. The heterocyclic system



An isolog of fluorime.

fluorones. A group of compounds of the type



derived from fluorene.

fluorophore. A group of atoms which confers fluorescence on a compound, as the oxazine or pyrone ring. Cf. *chromophore, resonator, constellation.*

fluoroscope. (1) A fluorescent screen used for making visible certain rays, *e.g.*, X-rays, cathode rays, radioactive rays. (2) An apparatus to determine the fluorescence of a solution by comparison with a standard.

fluorosis. Disease (and in particular mottling of the enamel of the teeth) due to an excess of fluorine ions in the system; usually derived from drinking water.

fluorspar. Fluorite.

fluoryl. The monovalent radical, $C_{13}H_9$—, derived from fluorene. There are five isomers. **f. amine.** $C_{13}H_9NH_6$ = 181.09. Aminofluorene. White crystals, insoluble in water.

fluorylidene. The bivalent radical, $C_{13}H_8$=, derived from fluorene.

fluosilicate. Silicofluoride. A salt of the type M_2SiF_6 derived from fluosilicic acid.

fluosilicic acid. H_2SiF_6 = 144.3. Hydrofluosilicic acid, silicofluoric acid, hydrosilicofluoric acid. A strong acid which exists only in solutions, and decomposes on concentration or heating into HF and SiH_4. It forms insoluble K and Ba salts, and is obtained by the action of SiF_4 on water.

fluotitanic acid. H_2TiF_6 = 163.9. Hydrofluotitanic acid. A dibasic acid obtained by passing TiF_4 into water.

flüssigas. Calorgas.

flux. (1) A continuous flowing or discharge. See *electrical, luminous, magnetic, thermal.* (2) A substance that causes other substances to melt more readily by dissolving their oxides or surface impurities, *e.g.*, sodium carbonate, saltpeter, zinc chloride, sodium pyroborate, lead oxide, or borax. It increases the fluidity of the materials and brings them into more intimate contact. **aluminum-** A mixture of the alkali chlorides and fluorides. **black-** A flux and reducing agent used in metallurgy; a mixture of potassium carbonate and charcoal made by heating tartar. **radiant-** The amount of radiant energy (electromagnetic radiation) that flows along a beam per unit of time. **reducing-** A mixture of 50 % borax glass, 15 % boric acid, 25 % argol and 10 % animal charcoal. **oxidizing-** A mixture of 30 % borax glass, 20 % boric acid, 5 % silica, 20 % $KClO_3$ and 25 % sodium perborate. **soldering-** A mixture of 55 % borax glass, 35 % boric acid, 10 % silica or dry sodium silicate.

f. density. The radiant f. per unit area. Cf. *intensity.*

fly ash. The fine ash or flue-dust carried by the combustion products of pulverized coal plants.

foam. A heterogeneous mixture of a gaseous phase in a liquid phase, or finely-divided gas bubbles suspended in a liquid. Cf. *flotation, colloids.*

foaming. Describing a liquid which on heating or on agitation forms a surface foam.

focal. Pertaining to a focus.

focus. A point on which rays converge and produce an intensified effect. **acoustic-** The meeting point of waves reflected from a concave surface. **anterior-** A point before an optical system, which corresponds with the posterior focus. **aplanatic-** The point from which rays pass through a lens without spherical aberration. **conjugate-** The anterior and posterior foci of a lens. They are mutually convertible. **posterior-** A point behind an optical system corresponding with the anterior focus. **principal-** The point on which parallel rays passing through a lens converge. **real-** The point at which convergent rays intersect. **virtual-** The point at which rays if prolonged, would intersect one another.

focusing. The adjustment of lenses or mirrors to produce a distinct image, *e.g.*, in a photographic camera, lantern or microscope.

fodder. Dry food for domestic animals *e.g.*, hay, straw, corn.

fog. A heterogeneous mixture of a liquid phase in a gaseous phase (see *colloid, dispersed systems);* finely-divided liquid droplets suspended in a gas. **f. chamber.** Cloud chamber. A small container in which a haze is produced by sudden pressure changes. Cf. *Wilson tracks.*

fogging. (1) To cause a mist by agitating or heating a liquid in a closed container. (2) In photography, a uniform haze over the plate, due to over-exposure or light leakage.

foil. A thin sheet of metal, *e.g.*, of aluminum, gold, platinum, tin.

folia. Latin for leaves.

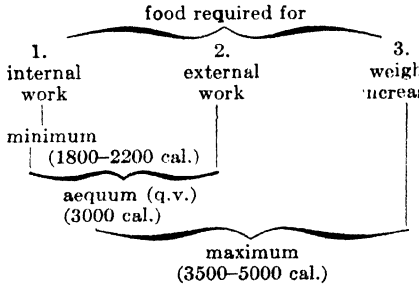
folic acid. A probable B-vitamin present in green leaves and animal tissues, and important in yeast nutrition.

Folin, Otto. 1867–1934. An American biochemist born in Sweden, noted for devising analytical methods and apparatus, particularly for the determination of uric acid and its constituents. **F. apparatus.** A glass apparatus consisting of a specially-designed absorption tube, a cylinder with a rubber stopper, drying tube and bottle; is used for the rapid determination of nitrogen. urea, or ammonia in urine or other fluids. **F. diet.** A daily food ration consisting of 500 cc. milk, 300 cc. cream, 450 gm. eggs, 200 gm. Horlick's malted milk, 20 gm. sugar, 6 gm. salt, and 2100 cc. water.

folliculin. Oestrone.

fongisterol. $C_{28}H_{40}O.H_2O$ = 382.39. Fungisterol. A sterol (q.v.), m.144, from ergot.

food. A substance which serves to build up tissues, repair waste, and supply living organisms with heat. The essential constituents are: Water, carbohydrates (starch, glucose, etc.), fats, proteins (albumins, etc.), salts vitamins. The food essential for the human body is expressed as follows:



The approximate daily quantity for a person of 70 kg. body weight is:

120 gm. proteins	(430 calories)
500 gm. carbohydrates	(2000 calories)
50 gm. fat	(450 calories)

with a daily mineral requirement of:

10	gm. NaCl	0.35 gm.	Mg
3	gm. K	0.015 gm.	I
1.50	gm. Mn	0.010 gm.	Fe
1.30	gm. P	0.002 gm.	Cu
0.7	gm. Ca	traces of	Zn, Al, Si, F

in addition, vitamins, q.v.:

A	200 Int. Units	(0.004 gm. haliver oil)
B	200 Int. Units	(20 gm. dried yeast)
C	400 Int. Units	(40 cc. lemon juice)
D	1100 Int. Units	(0.1 gm. haliver oil)
G	450 Sherman Units	(30 gm. dried yeast)
E	doubtful.	

See also *f. sources.*

animal- A nourishing material derived from animals; as, meats, fish, milk, eggs, cod liver oil, etc. **flesh-forming-** The proteins and salts necessary as tissue builders. **heat-forming-** The carbohydrates and fats which supply the body-heat. **iron-** F. containing iron. The iron percentage varies from 0.01921 % (parsley) to 0.00015 % (lemon). **nitrogenous-** The proteins, lecithins, and other foods containing nitrogen. **non-nitrogenous-** The carbohydrates and salts. **protective-** F. which supply calcium, vitamin A, C, and G (milk, cheese, and green vegetables), in which common diets are often deficient. **staple-** F. which are most frequently used; as, bread, bacon, rice, etc. **vegetable-** Nourishing materials derived from plants; *e.g.*, cereals or seeds, nuts, vegetables, fruits, sugars.

f. and drug act. A legislative measure in force in the U. S. A. since Jan. 1, 1907 and in Great Britain since 1860, prohibiting the manufacture, sale, or transportation of adulterated, misbranded, poisonous, or deleterious foods, drugs, medicines, or liquors. **f. hormones.** Vitamins. **f. poisons.** Toxic substances developed by decomposition of foods, especially ptomaines and other protein split-products. **f. sources:**

1. CEREALS—the seeds of Gramineae; rich in carbohydrates.
   - *Avena sativa* ..... oats
   - *Fagopyrum esculentum* .. buckwheat
   - *Hordeum vulgare* ..... barley
   - *Oryza sativa* ..... rice
   - *Panicum miliaceum* ..... millet
   - *Secale cereale* ..... rye
   - *Triticum sativum* ..... wheat
   - *Zea Mays* ..... maize, corn
2. PULSES—the seeds of Leguminosae; rich in proteins.
   - *Arachis hypogaea* ..... peanut
   - *Cajanus indicus* ..... cowpea
   - *Glycine* species ..... soya bean
   - *Lathyrus* species ..... peas
   - *Lens esculenta* ..... lentils
   - *Phaseolus vulgaris* ..... kidney beans
   - *Phaseolus lunatus* ..... Lima beans
   - *Pisum sativum* ..... peas
   - *Vicia gaba* ..... broad beans
3. NUTS—the oily seeds of various plants; rich in fats.
   - *Bertholletia excelsa* ..... brazilnut
   - *Carya* species ..... pecan
   - *Castanea vulgaris* ..... chestnut
   - *Cocos nucifera* ..... coconut
   - *Corylus Avellana* ..... hazelnut
   - *Juglans regia* ..... walnut
   - *Juglans cinerea* ..... butternut
   - *Pistacia vera* ..... pistachio
4. ROOTS and TUBERS—the underground reserves of certain plants; generally rich in carbohydrates.
   - *Allium cepa* ..... onion
   - *Beta vulgaris* ..... beets
   - *Brassica campestris* ..... turnips
   - *Colocasia antiquorum* ... taro
   - *Daucus carrota* ..... carrots
   - *Dioscorea* species ..... yam
   - *Helianthus tuberosus* .... Jerusalem artichoke
   - *Ipomoea batatas* ..... sweet potato
   - *Manihot utilissima* ..... cassava
   - *Maranta arundinacea* ... arrowroot
   - *Peucedanum sativum* .... parsnip
   - *Raphanus sativus* ..... radish
   - *Solanum tuberosum* ..... potato
5. GREEN VEGETABLES—the leaves, inflorescences, stems and young shoots of certain plants; generally containing vitamins and salts.
   - *Allium sativum* ..... garlic
   - *Apium graveolens* ..... celery
   - *Asparagus officinalis* .... asparagus
   - *Bambusa* species ..... bamboo sprouts
   - *Brassica oleracea* ..... cabbage, cauliflower
   - *Cynara scolymus* ..... artichoke
   - *Lactuca sativa* ..... lettuce

Lepidium sativum..... cress
Rheum Rhaponticum.... rhubarb
Spinacia oleracea..... spinach

6. FRUITS used as VEGETABLES—the fleshy fruits of various plants:
Artocarpus incisa..... breadfruit
Cucumis sativus..... cucumber
Cucurbito Pepo..... squash, pumpkin
Solanum lycopersicum.. tomato
Solanum melongena..... eggplant

7. FRUITS and BERRIES; generally containing acids, sugars and salts;
Ananas sativus..... pineapple
Citrus species..... orange, lemon
Cucumis melo..... melon
Ficus carica..... fig
Fragaria vesca..... strawberry
Magnifera indica..... mango
Musa sapientum ..... banana
Phoenix dactilyfera..... date
Prunus species..... apricot, cherry, peach, plum, prune, nectarine
Psidium guajava..... guava
Punica granatum..... pomegranate
Pyrus species..... apple, pear
Ribes species..... black and red currant, gooseberry
Rubus species..... blackberry, loganberry, raspberry, thimbleberry
Vaccinium species..... cranberry, bilberry, blue huckleberry
Vitis vinifera..... grapes.

8. MEAT and FISH; rich in proteins.
Beef, Veal, Mutton, Pork
Chicken, Goose, Turkey
Mackerel, Salmon, Tuna, Herring

9. DAIRY PRODUCTS; rich in calcium and vitamins
Milk, Cream, Buttermilk
Eggs
Butter, Cheese

10. MISCELLANEOUS
Mushrooms and Yeast
Honey, Sugar, Maple syrup
Sago, Tapioca
Spices and Condiments.

foot. A unit of length, 1 foot = 12 inches = 0.304801 meter. **board-** q.v. **square-** Sq. ft. or ft^2. A measure of area. 1 $ft.^2$ = 144 $in.^2$ = 0.092903 $m.^2$ = 929.03 cm^2. **cubic-** Cb. ft. or ft^3. A measure of volume. 1 $ft.^3$ = 1728 $in.^3$ = 0.02832 $m.^3$ = 2832 cm^3.

foot-candle. A measure of illumination: 1 ft. candle = 1 lumen per $ft.^2$ = the illumination given by a standard candle upon a surface of 1 sq. ft. one foot distant. 1 ft. candle = 1.076 milliphots = 10.76 lux. Cf. *meter candle.*

foot-pound. A unit of work in the F.P.S. system; the work required to lift one pound one foot, where g = 32.2 ft./$sec.^2$ 1 ft. pd. = 0.1383 kg. m. = 1.356 joules = 0.3240 calories = 0.001285 British thermal units = 0.3766×10^{-6} kilowatt hours. 1 horse power = 33,000 ft. pds. of work/min. **f.p. second.** F.P.S. system. A system of measurements based upon the foot, pound, and second. Cf. *c.g.s., system, M.K.H. system.*

foot-poundal. A unit of force in the F.P.S. system; the force which during one second will accelerate a mass of one pound one foot per second = poundal.

foot-powder. A mixture of fine salicylic acid and French chalk, used as an antiseptic dusting powder.

foots. The sediment which settles from an oil on standing. It is chiefly albuminous matter.

forbesite. A rare nickel-cobalt arsenate.

forbidden explosives. A group of unstable chemicals and mixtures which may not normally be transported or shipped, and which are condemned by the U. S. Bureau of Explosives. They include liquid nitroglycerin, dynamite containing over 60 % nitroglycerin, nitrocellulose dry and uncompressed in quantity greater than 10 pounds, and dry mercury fulminate. **f. lines.** Spectrum lines corresponding with atomic transitions not in harmony with Pauli's principle.

force. The rate of change of momentum. The interaction between two bodies whereby their state of rest or motion, or their form or size is changed. Cf. *attraction, repulsion, acceleration, electromotive force, energy, action.* The unit of force is the dyne (C.G.S. system) or poundal (F.P.S. system). Force = (Mass × Velocity) / Time = Mass × (Velocity / Time) = Mass × Acceleration. Suggested classification of forces (P. E. Wells):

1. *Electronic*, which bind electrons together into atoms.
2. *Atomic*, which bind atoms together into molecules.
3. *Molecular*, which bind molecules together into masses.
4. *Molar*, which affect masses; as, gravitation.

catabiotic- The heat energy derived by a living organism from food. **catalytic-** The chemical work performed by a catalyst. **centrifugal-** See *centrifugal.* **chemical-** See *affinity.* **cohesive-** See *cohesion.* **electromotive-** See *electromotive force.* **kinetic-** See *kinetic energy.* **latent-** See *latent energy.* **living-** See *vital force.* **vital-** The energy obtainable from a living organism or cell.

forceps. A small V-shaped instrument for grasping, pulling or holding objects such as analytical weights. Cf. *tongs.*

forensic. Pertaining to courts of law. **f. analysis.** Chemical analysis performed for the purpose of detecting crime, especially the examination of body-fluids and tissues for poisons. **f. chemistry.** Legal chemistry, judicial chemistry. The application of c. for purposes of law, e.g. detection of crime, misbranding and adulteration. **f. medicine.** See *medicine.*

forgenin. $C_5H_{13}O_2N$ = 119.1. Tetramethylammonium formate. $HCOONMe_4$. Colorless hygroscopic crystals, used medicinally. In small doses it stimulates; in large doses it acts like curare.

forked chain. A chain of carbon atoms linked together with two smaller chains;

as,  . Cf. *branched chain.*

formal. (1) $C_3H_8O_2$ = 60.1. Methylal, dimethoxymethane*, methylene dimethylate, methyl aldehyde, formyl aldehyde, oxymethylene, methylene dimethyl ether. $CH_2(OMe)_2$. A colorless liquid, used medicinally as an anesthetic and hypnotic. (2) Containing one gram-molecular weight in 1 liter; cf. *molar* (in 1000 cc.), and *molal* (in 1000 gm.).

formaldehyde. CH_2O = 30.03. Formic aldehyde, methanal*, methylene oxide. The simplest aldehyde H.CHO, derived from methanol.

A colorless gas, m. −92, b. −21, soluble in water, alcohol or ether; marketed as an aqueous solution. **f. solution.** A 37 % aqueous solution of formaldehyde. A clear colorless liquid with a characteristic odor. Used extensively as a reagent, preservative, (not for foods), embalming agent, antiseptic, and deodorant; industrially in large quantities in the synthesis of many substances; and in for the formation of plastic, *e.g.*, bakelite.

formalin. A 27 % (U. S.) or 40 % (British) formaldehyde solution.

formaldoxime. CH_3ON = 45.1. The simplest oxime, $H_2C{:}NOH$. A colorless liquid, b.84.

formaloin. $CH_2{:}C_{17}H_{16}O_7$. A condensation product of formaldehyde and aloin. A yellow, amorphous, tasteless powder, soluble in water; used medicinally.

formamide. CH_3ON = 45.1. Formic acid amide, formyl amine, methanamide*, $H.CO.NH_2$. A colorless hygroscopic liquid, d.1.337, m.4, $b._{10mm}$ 105–106, soluble in water, alcohol, or ether; decomp. into NH_3 and CO by heating. **ethyl-** C_3H_7ON = 73.1. A colorless liquid, b.199. **allyl-** C_4H_7ON = 85.1. A colorless liquid, b.109. **phenyl-** Formanilide.

formamides. A compound containing the monovalent HCONH— radical.

formamidine. A compound containing the bivalent —N:CH.NH— radical. **diphenyl-** $C_{13}H_{12}N_2$ = 196.2. Methenyldiphenyldiamine. PhN:CH.NHPh. Colorless crystals, m.135. **o-phenylene-** Benzimidazole.

formamido. (1) The monovalent radical, H.CO.NH—, derived from formamide. (2) CH_4N_2 = 44.05. $HN{:}CH.NH_2$.

formamine. Hexamethylenetetramine.

formamyl. Amide group. The $—CONH_2$ radical, the presence of which confers weakly basic properties.

Formanek's indicator. Alizarin green, dihydroxydinaphthazoxonium sulfonate. A green oxazine dye, used as an indicator: pH 0.3 = violet; pH 1.0 = pink; pH 12.0 = yellow; pH 14.0 = brown.

formanilide. C_7H_7ON = 121.14. Phenylformamide, formylaniline, formamidobenzene, carbanil aldehyde. Colorless or slightly yellow prisms, d.1.144, m.50, b.271, soluble in water, alcohol, glycerin or oils; used medicinally as an antiseptic. **thio-** Thioformanilide.

formate. Formiate. A compound containing the monovalent H.COO— radical, *i.e.*, a salt of formic acid.

formation. (1) The process of being made. (2) A geologic era, q.v. **heat of-** See *heat.*

formazyl. (1) $C_{13}H_{12}N_4$ = 224.2. Formazylhydride. Ph.N:N.CH:N.NH.Ph. Colorless crystals, m.116. (2) The monovalent radical $PhN{:}N\diagdown$ $PhNH.N\diagup C—$. **f. carboxylic acid.** $C_{14}H_{12}O_2N_4$ = 268.4. PhN:N.C(COOH):N.NHPh. Colorless crystals, m.162. **f. hydride.** Formasyl. **f. methylketone.** $C_{15}H_{14}ON_4$ = 266.4. PhN:N.C(COMe):N.NHPh. Colorless crystals, m.134.

formhydroxamic acid. The theoretical compound H.CO.NH.OH.

formiate. Formate.

formic acid. CH_2O_2 = 46.03. Formylic acid, methanoic acid*, aminic acid, methane acid. A monobasic acid, the first member of the aliphatic series, HCOOH. A colorless liquid, $d_{20°}$.1.218, m.8.6, b.100.8, miscible with water, alcohol, or ether. It is contained in the bodies of ants, spiders, and various plants; used as a reagent for detecting nitrates in water and in the analysis of essential oils. **acetyl-** Pyruvic acid. **amidobenzoyl-** Isatic acid. **amino-** Carbamic acid. **benzoyl-** Benzoylformic acid. **carbamyl-** Oxamic acid. **carbobenzoyl-** Phthalonic acid. **formyl-** Glyoxylic acid. **hydrazino-** Carbazic acid. **hydrazobis-** Bicarbamic acid. **hydroxy-** Carbonic acid. **formyl-** Glyoxylic acid. **phenyl-** Benzoic acid. **styryl-** Cinnamic acid. **f. aldehyde.** Formaldehyde. **f. nitrile.** Hydrocyanic acid.

formin. The glycerol esters of formic acid:

monoformin	$C_3H_5(OH)_2OOCH$
diformin	$C_3H_5(OH)(OOCH)_2$
triformin	$C_3H_5(OOCH)_3$.

bromoethyl- Bromalin.

formine. Hexamethyleneamine. **f. salicylate.** Saliformin.

formoguanine. $C_3H_5N_5$ = 111.1. Diamidocyanidine.

formohydrazide*. Formyl hydrazine.

formol. A commercial antiseptic consisting of a solution of formaldehyde in methanol and water. **f. nitrogen.** That part of nitrogen in the protein molecule which combines with formaldehyde, *e.g.*, the nitrogen of unsubstituted amino groups. **f. titration.** A method for the determination of aminoacids by titration with an alkali, after formaldehyde has been added to annul the alkalinity of the amino group.

formolide. A commercial antiseptic; an aqueous solution containing 15 % alcohol, 2 % boric acid, 0.5 % sodium benzoate, and 0.25 % formaldehyde.

formonitrile. Hydrocyanic acid.

formonitrolic acid. CH_2O_3N = 90.03. Methylnitrolic acid, nitroformoxime. $HC\langle^{NOH}_{NO_2}$. Colorless crystals, m.64, very soluble in water, alcohol or ether. Cf. *nitrolic acid.*

formose. i-Fructose.

formosul. Rongalite (q.v.), a condensation product of formaldehyde and phenols.

formoxime. CH_3NO = 45.03. Formaldoxime, formaldehyde oxime, HCH:NOH. A colorless liquid, b.84, decomp. in hot water. **nitro-** Formonitrolic acid.

formoxyl. *Formyl.* **f. hydride.** Formic acid.

formoyl. Methanoyl. The H.COO— group.

formula. A combination of chemical symbols expressing the composition of a molecule. All formulae indicate: (a) the kind of elements and the number of atoms which constitute the molecule; (b) the weight relations of these elements and the molecular weight of the compound; (c) the percentage by weight of the elements composing the molecule; (d) the valency of the elements. In addition formulae for gases or vapors indicate: (e) the volume relation of gaseous constituents; (f) the specific gravity or density of the gas or vapor; (g) the weight of one liter gas or vapor; (h) the volume occupied by one gram of gas or vapor. Thus, chemical formula H_2O means: (a) a molecule of water consists of two atoms of hydrogen

and one atom of oxygen, making three atoms in the molecule; (b) the molecular weight is the sum of the atomic weights, hence $2 \times 1.0 + 16.0 = 18.0$. (c) The percentage composition by weight is calculated from (b); thus in 18 parts by weight water are 2 parts hydrogen, hence 18:2::100:x, or $(2 \times 100)/18 = 11.11$ % hydrogen by weight; and in 18 parts water are 16 parts oxygen, hence 18:16::100:x, or $(16 \times 100)/18 = 88.89$ % oxygen by weight. (d) The valence of hydrogen is +1, hence two atoms, or +2 are the equivalent of oxygen, whose valency is −2. (e) Two volumes hydrogen and one volume oxygen combine to give two volumes water (vapor). (f) The density of water vapor is: (1) compared with oxygen, the molecular weight, hence—$D_{(O_2=32)} = 18.00$; (2) compared with hydrogen, one-half of the molecular weight, hence—$D_{(H_2=1)} = 9.00$; (3) compared with air the molecular weight divided by 28.95, hence—$D_{(air=1)} = 0.622$. Water vapor is thus about half as heavy as oxygen gas or air and nine times heavier than hydrogen. (g) A gram-molecule of any gas or vapor occupies 22.4 liters, hence 22.4 liters water vapor weigh 18 grams, and 1 liter weighs 18/22.4 = 0.803 grams. (h) As 18 grams of water vapor occupy 22.4 liters, then 1 gram will occupy 22.4/18 = 1.245 liters.

FORMULA SIGNS

. = Periods are used to separate radicals ($CH_3.COOH$), the constituents of a double salt ($KCl.PtCl_3$), or the water of crystallization ($CuCl_2.6H_2O$).

, = Commas are used in a formula to indicate elements which are interchangeable: (Ni,Fe)AsS means FeAsS and NiAsS in variable proportion; or to separate water of crystallization *e.g.*, $FeSO_4, 7H_2O$.

( ) = Parentheses are used to group elements together, or to indicate radicals, *e.g.* $(NH_4)_2SO_4$ or $Cu_2(SO_4)_2$.

· + = Plus-signs or upper dots indicate positive charge or cation, K^+ or NH_4^-.

′ − = Minus-signs (vertical or horizontal) indicate a negative charge or anion, Cl^- or SO_4''.

→ = Arrows indicate direction of the reaction.

⇋ or ⇌ = Indicate equilibrium or a tendency to react.

* = asterisk indicates (a) an excited atom or molecule, as, Cl* or Cl_2*; or (b) a name recommended by the International Union of Chemistry.

] = Square brackets are used in addition to parentheses, *e.g.* $Fe_4[Fe(CN)_6]_3$ to indicate radicals; or in coordination formulae, to show the relationship to the central atom.

1, 2, . . . = *Numeral behind* the symbol or parenthesis is a multiplier for the preceding symbol; *numeral before* a formula is a multiplier of the whole formula. Thus $2Al_2(SO_4)_3.6H_2O$ means two molecules of crystalline aluminum sulfate each containing 6 molecules of water of crystallization.

$A^{1,2,3}$ . . . = *Small upper numerals* behind the symbol of an element indicate the isotopic weight.

$_{1,2,3}$ . . . A = *Small lower numerals* before the symbol of an element indicate the atomic number; thus, $_1H^2$, $_3Li^6$ etc.

M, X = Letters such as M or X indicate a metal or halogen. For other abbreviations (not symbols), see *radicals*.

— or = or ≡ = Lines or dots either single,
. or : or ⁝ = double, or triple, indicate valence bonds in a structural formula.

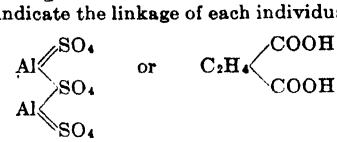
: = Dots which indicate electron pairs, in the octet formula.

—o— = Lines and circles to indicate the position of shared electron pairs in the polarity formula.

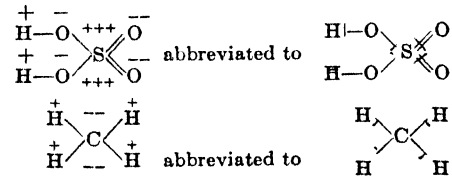
abbreviated- An abbreviation of radicals, thus Am for ammonium, Ac for acetyl, Bz for benzyl, Cy for cyanide, Et for ethyl, Me for methyl, Ph for phenyl. **atomic-Structural-.** **Beckmann's-** See *Beckmann's reaction.* **coordinate-** An expression indicating the relation of complex compounds to a central atom, thus

$$\left[\begin{matrix} NH_3 . & . NH_3 \\ NH_3 . Co . & NH_3 \\ NH_3 . & . Cl \end{matrix}\right] Cl_2$$

shows that two of the chloride atoms are less firmly held by the cobalt atom, and can readily be separated from it. **constitutional-** A notation indicating constitution by valence bonds or the linkage between radicals and atoms; it does not indicate the linkage of each individual atom:



dynamic- See *benzene ring* (figs. k′ and k″) **electronic-** A notation that indicates the electropositive or electronegative character of an atom in a compound, as

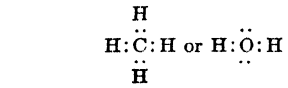


empirical- A notation showing the number and kind of atoms without indicating their grouping:

$Al_2S_3O_{12}$ or $C_4H_6O_4$

excitation- See *excitation.* **general-** An algebraic expression representing the formula of a series of compounds; thus, $M_2X(SO_4)_2.12H_2O$ is the general equation for the alums, in which M may be any monovalent metal, and X any trivalent metal. C_nH_{2n-2} is the general equation for the methane series. **graphic-** Diagrammatic. A f. showing space relations; as, a tetrahedron

for carbon. Cf. *structure, symbol.* **ionic-** The symbol for an electrically charged atom or radical, as Na^+ or NH_4^-. **molecular-** A formula for a complex compound indicating the participating molecules; thus $NH_3.HCl$ is the molecular equation for NH_4Cl. **octet-** A f. showing the number of electrons; as



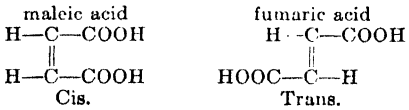
Cf. *Lewis-Langmuir theory.* **polar-** Octet-. **polarity-** A f. which indicates the relative position of the electron pairs held in common between two atoms:

C—o—C and C—o—O

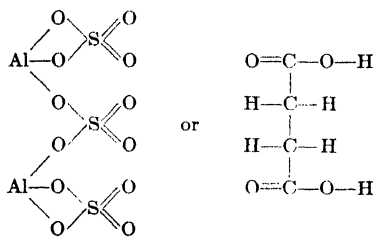
or

C—:—C and C—:—O

rational- A formula indicating, by the use of radicals the intra-atomic arrangement, thus $Al_2(SO_4)_3$ or $C_2H_4(COOH)_2$. **shorthand-** See *structure symbol.* **space-** Stereometric-. **stereochemic-** Stereometric-. **stereometric-** A diagram depicting the arrangement of atoms in an optically-active compound, *e.g.*,



structural- A notation indicating the spatial structure of a compound and the linkage of every atom, thus



Cf. *molecular diagram.* **symbolic-** Structure symbol. **transmutation-** See *equation.*

formula-symbol. Structure symbol.

formula-weight. The molecular weight expressed in grams,—one mol.

formulary. A collection of recipes and prescriptions. Cf. *dispensatory.*

formvar. Trade name for a polyvinyl formaldehyde plastic.

formyl. (1) The monovalent HCO— radical, derived from formaldehyde or formic acid. (2) An obsolete term for methenyl, HC≡. **f. acetic acid** $C_3H_4O_3$ = 88.0. $CHO.CH_2.COOH$. **f. aldehyde.** Formaldehyde. **f. amide.** Formamide. **f. bromide.** Bromoform. **f. chloride.** Chloroform. **f. diphenylamine.** $C_{13}H_{11}ON$ = 197.2. Colorless crystals, m.73, insoluble in water, soluble in alcohol. **f. hydrazine.** CH_4ON_2 = 60.1. Formohydrazide*. $NH_2.NH.CHO$. Colorless crystals, m.54, soluble in alcohol. *di*-$C_2H_4O_2N_2$ = 88.1. Colorless crystals, m.106, soluble in alcohol. **f. sulfaldehyde.** $C_3H_6S_3$ = 138.2. $CH_2SH.CH_2.CSSH$. Colorless, tetragonal prisms, m.218, sparingly soluble in water, slightly soluble in alcohol or ether. **f. trichloride.** Chloroform. **f. triiodide.** Iodoform.

formylation. The introduction of the formyl radical into an organic compound.

formylene. Methenyl.

formylic acid. Formic acid.

forsterite. Mg_2SiO_4. A white orthorhombic magnesium silicate of the olivine group, containing iron oxide; d.3.2–3.3, hardness 7.

fortified. Strengthened. **f. wine.** (1) Wine to which a fermentable sugar has been added. (2) Wine to which alcohol or wine brandy has been added.

fortoin. $CH_2(C_{14}H_{11}O_4)_2$ = 500.3. Methylene dicotoin. Yellow needles or powder of faint cinnamon-like odor, m.211, insoluble in water, soluble in alcohol, ether, acetone, or chloroform. Used medicinally as an antiseptic and astringent.

fossil. Traces or remains of prehistoric organisms imprinted or entombed in geological formations.

fossil copal. See *copals.*

fossilin. Vaselin.

Foster tester. An apparatus for determining the flash point of illuminating oils.

foto- Photo-.

fotosensin. A condensation product of phthalic acid and resorcinol, with small amounts of Cu and Fe, used to sensitize plant growth.

fouadin. Fuadin.

Foucault. Jean Bernard Léon. 1819–1868. A French physicist. **F. current.** Eddy current. **F. pendulum.** A Galileo pendulum. **F. prism.** A polarizing prism using a thin film of air for reflection. Cf. *Nicol prism.*

Fourneau 309. A complex urea compound, used as a cure for sleeping sickness.

Fowler solution. An aromatic solution of potassium arsenite (1 % arsenic trioxide); used medicinally as an antiseptic, and technically in the preservation of furs.

fowlerite. $(Mn,Fe,Ca,Zn,Mg)SiO_3$. A red, brownish or yellowish triclinic iron-manganese silicate, d.3.4–3.7, hardness 5–6.5.

Fowler's series. The lines of the helium spectrum. $1/\lambda = 4N\left(\frac{1}{3^2} - \frac{1}{n_2^2}\right)$, where n_2 is 4, 5, 6; λ the wavelength and N a constant.

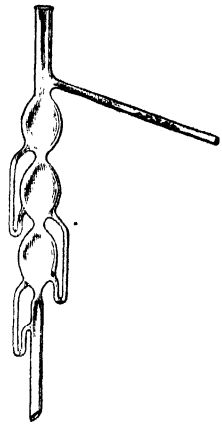
foxglove. See *digitalis.*

foyaite. A nepheline syelite found in Portugal.

F.P.S. Abbreviation for foot-pound system, q.v.

fraction. A part or separated portion of a whole.

fractional. Pertaining to separated parts. **f. column.** Dephlegmator. Same as f. distilling tubes. **f. combustion.** A method of separating gas mixtures by removing one constituent by combustion. **f. condensation.** A method of separating gases in a mixture by lowering the temperature or increasing the pressure until one of the gases liquefies. **f. condensing tube.** An air-cooled vertical condenser tube



Fractional distilling tube.

of varied shape used in fractional distillation to promote condensation. **f. crystallization.** A method for separating or purifying compounds in solution by successive slow crystallizations, the mother liquor being removed for further crystallization. **f. distillation.** A method of separating volatile substances by collecting separately the distillates evaporating at certain temperatures. **f. distilling tube.** A group of variously shaped glass tubes which are used for collecting the distillates at different temperatures separately (see figure.) **f. expression.** The collection of plant oils or juices expressed at different temperatures, *e.g.*, peanut oil. Usually the lower the temperature, the better the grade of oil. **f. filtration.** The filtration of solutions consecutively through coarse, medium, and fine filters. **f. precipitation.** Salting out. **f. weights.** The analytical weights less than one gram.

fractionating. Separating into parts. **f. column.** Dephlegmator. A device for fractional distillation. Cf. *still head.*

fractionation. Fractional distillation.

fracture. A sharp edge produced on breaking a solid substance. Cf. *cleavage.* **conchoidal-** The irregular fracture of an amorphous body. **crystalline-** A fracture producing the plane faces and sharp edges of a crystal, *i.e.*, cleavage.

fragility. Brittleness. The characteristics of falling or breaking apart; not tenacious.

fragment. A detached or broken-off part.

fragrance. A pleasant odor.

francisceine. An alkaloid from the root of *Franciscea uniflora*, Brazilian manaca, a Solanaceae; used as a diuretic and purgative.

franckeite. $Pb_5FeSn_3Sb_2S_{14}$. A rare tin-lead sulfostibide.

francolite. A calcium phosphite containing calcium carbonate.

frangula. Buckthorn bark, arrow-wood. The dried bark of *Rhamnus frangula*, a Rhamnaceae; used medicinally as a laxative. **f. emodin.** Emodin.

frangularoside. A rhamnoside from the freshly-dried bark of black alder.

frangulic acid. A dihydroxyanthraquinone derived from frangula.

frangulin. $C_{20}H_{20}O_9$ = 404.15. A glucoside from the bark of *Rhamnus frangula.* Yellow crystals, m.226, insoluble in water, soluble in hot alcohol or ether.

Frangulineae. Rhamnales. A group of plants comprising the Rhamnaceae (buckthorn) and Vitaceae (grape) families.

frangulinic acid. Frangulic acid.

frankincense. Olibanum. **American-** An oleoresin from the bark of *Pinus palustris*, the common pine. Cf. *colophony.*

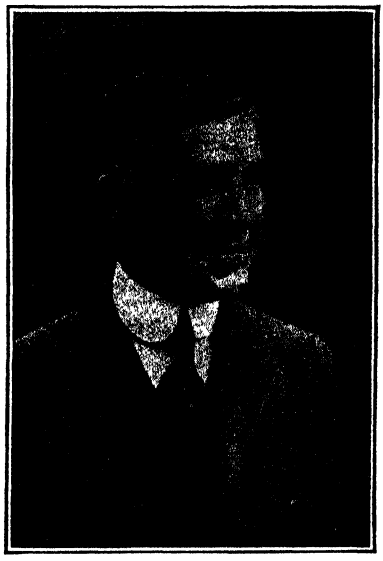
Frank, Adolf. 1834–1916. A German industrial chemist and developer of the potash industry.

Frankland, Sir Edward. 1825–1899. A British chemist noted for research on organo-metallic compounds, valency, water-supply, the theory of flames; and a co-worker of Lockyer in the discovery of helium in the sun. **F. notation.** The grouping together of radicals in a formula, and the assumption that certain salts are addition compounds, thus SO_2Ho_2 for H_2SO_4; SO_2Nao_2 for Na_2SO_4; $SO_2Ho_2Zno.6OH$ for $ZnSO_4.7H_2O$; in which Ho is hydroxyl, Nao "sodoxyl," and Zno "zincoxyl." **F. reaction.** The synthesis of hydrocarbons by the zinc-alkyl condensation:

$$Zn(CH_3)_2 + 2R.Br = 2R.CH_3 + ZnBr_2$$

Franklin, Benjamin. 1706–1790. An American statesman and scientist, noted as founder of the American Philosophical Society; for electrical experiments; and the use of fertilizers.

Franklin, Edward Curtis. 1862–1937. An American chemist noted for his theory of the ammonia system (q.v.) of compounds.



Edward Curtis Franklin.

franklinic. Static. Cf. *franklinizations.*

franklinite. $(Fe,Zn,Mn)Fe_2O_4$. A black or blue, brittle, isometric, spinel, d.5–5.1, hardness 6.1–6, 5; used as an iron ore and source of zinc.

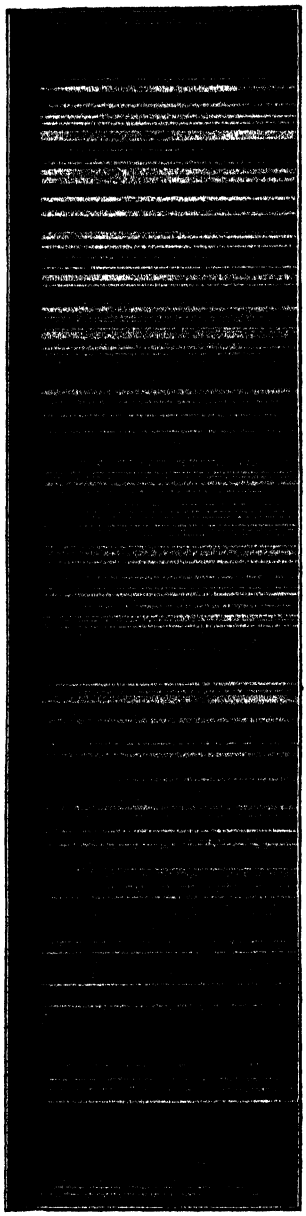
franklinization. The therapeutic application of static electricity.

Frary's metal. An alloy of lead with small amounts of barium and calcium. It is made by electrolytic deposition of Ca and Ba in molten lead, and is as hard as Pb-Sb alloys. Used during World War I for shrapnel bullets.

fraserin. The combined principles from the root of *Frasera walteri*, American calumba; used medicinally as a tonic and stimulant.

Fraude reagent. Perchloric acid.

Fraunhofer, Joseph von. 1787–1826. A German physicist noted for developing optical lenses, prisms, and diffraction gratings. He mapped the dark lines of the sun spectrum and measured the wavelength of sodium light (D-line). **F. lines.** The dark lines in the spectrum of the sun and other stars. They are produced by the absorption of certain rays of the photosphere by the incandescent gases of the solar atmosphere. Some 20,000 of them have been measured in the sun spectrum, and more than 5000 have been identified with chemical elements. A study of F. lines and the corresponding bright emission lines gives an indication of stellar conditions; as, composition, motion, temperature, magnitude and mass.



Fraunhofer lines in a section of the solar spectrum, photographed with a grating.

It should be noted that Fraunhofer lines H and K are due to calcium. Spectrum lines H_α, β etc. are due to hydrogen.

The principal F lines (and the corresponding bright emission lines) are shown in the table.

WAVE LENGTHS OF FRAUNHOFER LINES

Line	Wave length in Ångström units	Line due to	Color
A′	7621.28	oxygen of	crimson
A″	7594.06	earth atmosphere	crimson
a	7164.72		red
B	6870.18	oxygen	red
C or H^α	6563.04	hydrogen	red
	6278.30	oxygen	orange
D_1	5896.15	sodium	yellow
D_2	5890.18	sodium	yellow
D_3	5875.98	helium	yellow
E_1	5270.56	iron	green
	5270.43	calcium	green
E_2	5269.72	iron	green
b_1	5183.79	magnesium	green
b_2	5172.85	magnesium	green
b_3	5169.22	iron	green
	5169.07	iron	green
b_4	5167.68	iron	green
	5167.50	magnesium	green
F or H_β	4861.53	hydrogen	bluish green
d	4383.72	iron	blue
G′ or H_γ	4340.63	hydrogen	blue
f	4325.94	iron	blue
G	4308.08	iron	indigo
	4307.91	calcium	indigo
g	4226.90	calcium	indigo
h or H_δ	4101.80	hydrogen	purple
H	3968.62	calcium	purple
K	3933.82	calcium	purple
K	3933.82	calcium	ultraviolet
L	3820.58	iron	ultraviolet
M	3727.78	iron	ultraviolet
N	3591.35	iron	ultraviolet
O	3443.15	iron	ultraviolet
P	3361.33	iron	ultraviolet
Q	3286.89	iron	ultraviolet
R	3181.39	calcium	ultraviolet
	3179.45	calcium	ultraviolet
	3100.78	iron	ultraviolet
	3100.43	iron	ultraviolet
S	3100.04	iron	ultraviolet
s	3047.72	iron	ultraviolet
T	3020.76	iron	ultraviolet
t	2994.53	iron	ultraviolet
U	2947.99	iron	ultraviolet

fraxetin. $C_{10}H_8O_5$ = 208.06. A crystalline split product of fraxin, m.227.

fraxin. $C_{16}H_{18}O_{10}$ = 370.14. A glucoside from the bark of *Fraxinus* and *Aesculus* species, m.190. Colorless needles, soluble in hot water or alcohol.

fraxinine. $C_{42}H_{36}O_{27}$ = 972.3. A bitter, crystalline principle from the bark of *Fraxinus excelsior*.

Fraxinus. A genus of trees including ash. Cf. *manna*

fraxitannic acid. $C_{28}H_{32}O_{14}$(?). A tannin from the leaves of the ash, *Fraxinus excelsior*. A brown powder, soluble in water.

free. Uncombined, unattached, or available. **f. acid.** (1) See degree of *acidity*. (2) The HCl of the stomach juices. **f. charge.** An electric charge on a body; *e.g.*, free electrons attached to an atom or molecule and not a part of its structure. **f. electron.** An electron which takes no part in the chemical constitution of matter, but is free to move from one kind of matter to another, as in a galvanic current. **f. energy.** That portion, F, of the total energy which can be utilized for work. F = (H − TS), where H is the heat content (the internal energy +

pressure × volume), T the absolute temperature of the system, and S the entropy. **f. path.** The average distance traveled by an electron, ion, or molecule before colliding with another atom, ion, or molecule. See *ionization, electrons, radioactive bombardment, ionic mobility, kinetic theory.* (*molecular-*) The average distance travelled by a molecule of a gas or by an ion in solution between collisions. **f. radical.** An organic compound in which all the valencies are not satisfied; hence, an unsaturated molecule; as,

$$2Ph_3C \rightleftharpoons Ph_3C—CPh_3$$

triphenylmethyl from hexaphenylethane,

$$2Ph_2N \rightleftharpoons Ph_2N—NPh_2$$

diphenylnitrogen from tetraphenylhydrazine, in a strict sense also

$$2NO_2 \rightleftharpoons N_2O_4$$

nitrogen peroxide from nitrogen tetroxide

f. valence. An unsatisfied bond.

freedom. Variance. In the phase rule: P + F = C + 2, where P is the number of phases, C the number of component substances reacting, F, the degree of freedom, an integer which indicates the least number of variable factors (pressure, temperature or volume) which must be arbitrarily fixed in order to define the state of equilibrium of a chemical system. The one-component system (solid-liquid-gas) is invariant, *i.e.*, has no degree of freedom. A one-component (liquid-gas) system is univariant (F = 1); while a one component gas system is bivariant, or has two degrees of freedom.

freeness. The extent to which a pulp for the manufacture of paper has not been hydrated by beating. Antonym—*wetness.*

freeze. (1) To lower the temperature until a liquid solidifies. (2) The interlocking of accurately machined and polished steel parts of machinery; it is avoided by chromium plating one part.

freezing. The solidification of a liquid or solution by lowering its temperature. **f. attachment.** A device attached to microtomes for freezing tissues by means of liquid or solid carbon dioxide. **f. mixture.** Frigorific mixtures. A mixture of substances that absorbs heat and thus lowers the temperature of themselves or of their immediate surroundings. Used in analytical and synthetic chemistry for reactions at a low temperature. *E.g.*,

1 pt. NH_4NO_3, 1 pt. Na_2CO_3 and 1 pt. of water.....	=	10 to −26°C
5 pts. NH_4Cl and 10 parts powdered ice or snow.....	=	−5 to −18°C
5 pts. NaCl, 5 pts. NH_4NO_3 and 12 pts. ice or snow....	=	−15 to −25°C
3 pts. $CaCl_2$ and 1 pt. ice or snow.....	=	−40 to −70°C
10 pts. dilute H_2SO_4 and 8 pts. ice or snow.....	=	−65 to −90°C
solid CO_2 and ether or chloroform.....	=	−77°C.

f. point. Congelation or solidification point. The temperature at which a liquid freezes. **f. point apparatus.** A device for the accurate determination of the freezing point of liquids or solutions. It is used in physiological and physical chemistry to determine the concentration of solutions, osmotic pressure, and molecular weight. See *cryoscopy, freezing-point depression.* **f. point depression.** The phenomenon that solutions freeze at a lower temperature than the pure solvent. This lowering or depression of the freezing point of dilute solutions is proportional to the concentration of the dissolved substance. See *Raoult's law.* A solution containing one-tenth gram molecule lowers the freezing point of water by −0.186°C.; hence the molecular weight (M) can be determined. Cf. *additive properties.* **f. salt.** Crude sodium chloride.

freibergite. $(Ag,Cu)_3Sb_2S_7.(Fe,Zn)_4SbS_7$. A grayish-black, silver-copper and iron-zinc sulfantimonide, d.4.85–5.

freierslebenite. $(Pb,Ag_2)_8Sb_4S_{11}$. A black, metallic silver-lead sulfantimonide d.2–2.5.

Fremy, Edmond. 1814–1894. A French chemist noted for developing the manufacture of iron and steel, sulfuric acid, saponification of fats, and artificial rubies. **F. salt.** Potassium hydrogen fluoride.

French chalk. A hydrated silicate of magnesium.

freon. Trade-mark for a group of halogenated hydrocarbons containing one or more fluorine atoms and which are widely used as refrigerants and propellants. **f-12.** Trade-mark for dichlorodifluoromethane (CCl_2F_2), used as a refrigerant and propellant.

frequency. (1) The rapidity with which an occurrence, oscillation or vibration is repeated. (2) The number, ν, of complete vibrations or waves per unit time. Thus $\nu = c/\lambda$, where c is the velocity of light and λ the wavelength of the ray concerned. The numerical value of ν is very great, *e.g.* for green light it is 6×10^{14} vibrations per second. F. is related to energy (e) and mass (m) by $h\nu = e = mc^2$, and if the energy unit is 9×10^{20} ergs: F = E = M. **high-** A rapid alternating electric current, q.v. **molecular-** The molecular vibrations. See *gas laws, excitation,* state of *aggregation.* **radiation-** The f. of the emitted radiation is proportional to the amount of energy radiated; $W_1 - W_2 = E = h\nu$, where W_1 and W_2 is the energy of the atom in the initial and final state, respectively, E the energy expressed in ergs, and h Plank's constant, q.v.

f. curve. Histogram. A curve obtained by dividing a number of values obtained for a particular determination into classes differing by a standard amount, and plotting the number of samples in each class against the corresponding values. The maximum gives the most correct result (*median*), and the ends of the series are the *quartiles;* 25 % of the values being in each quartile. Cf. *mean.*

Fresenius, Karl Remigus. 1818–1897. A German chemist noted for his work on analytical methods. **F. desiccator.** A desiccator with bell-shaped cover. **F. nitrogen bulb.** A conical flask with side-tubes having two bulbs near the base.

Fresnel, Augustin Jean. 1788–1827. A French physicist noted for experiments on aberration and diffraction of light.

Freund acid. *3.6*-Naphthylamine disulfonic acid.

Freundlich, Herbert. 1881–1941. A German-born chemist, noted for his work on colloid chemistry.

freyalite. A variety of thorite, q.v.

friction. The resistance offered to sliding motion by rubbing. **fluid-** Viscosity. **internal-** The resistance to bending of metals due to their

crystalline structure. **mechanical-** See *f. coefficient.*

friction coefficient. A number (f) indicating the relation of the force (F) necessary just to move an object along a horizontal plane under pressure (N): F = fN. It depends on the material of the substance, but not on the velocity or area of the surfaces in contact. Cf. *lubricants.*

Friedel, Charles. 1832–1899. A French chemist noted for his work on mineralogical and organic chemistry.

Friedel-Crafts reaction. The synthesis of an aromatic hydrocarbon homolog by the catalytic action of aluminum chloride:

$$R + R'.Cl + AlCl_3 = R.R' + HCl + AlCl_3$$

as in the synthesis:

$$3C_6H_6 + CHCl_3 = (C_6H_5)_3CH + 3HCl.$$

or

$$C_6H_6 + CH_3Cl = C_6H_5.CH_3 + HCl.$$

F. C. condensation. The condensation of hydrocarbons and halogen compounds in the presence of anhydrous aluminum chloride according to the Friedel-Crafts reaction. Alkyl halides yield hydrocarbons; acyl halides, ketones; carbonyl halides, ketones and acids.

friedelin. $C_{30}H_{50}O$ = 426.4. A sterol (q.v.), obtained from cork and related to the hydrocarbon $C_{30}H_{52}$.

Friedenthal cryoscope. A device for determining molecular weight from the lowering of the freezing point; used in physiological work.

Friedrichs condenser. A condensing screw or worm surrounded by a glass or metal tube. **F. gas bottle.** A glass cylinder with a spiral tube for washing gases.

frieseite. $Ag_2Fe_5S_8$. A rare silver-iron sulfide.

frigid. Cold.

frigidity. Coldness.

frigorific. All agent that produces coldness, or freezing. **f. mixture.** Freezing mixture.

fringe tree bark. Chionanthus.

fringes. The dark, parallel and equidistant lines observed in the interferometer.

frit. (1) Enamel. A complex alkaline borosilicate glass, usually containing fluorine, produced by melting a mixture such as borax, feldspar, quartz, and cryolite. (2) To sinter.

fritted, frittered. Having been heated near its melting point. **f. glass.** A glass powder heated sufficiently to stick together; used in filter crucibles, etc.

fritting. Becoming pasty and beginning to melt; as, some soft coals.

Froehde reagent. A solution of 5 mg. molybdic acid in 1 cc. hot concentrated sulfuric acid; used as a reagent for alkaloids.

froth. Foam. **iron-** A fine, spongy variety of hematite.

frother. A chemical used in the flotation process to cause frothing; as, pine oil causing a thin transient foam, or cresylic acid, causing a heavy permanent foam.

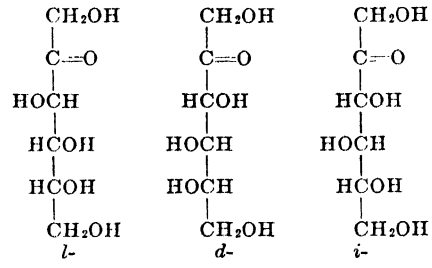
frothing. Foaming. **f. agent.** A substance which produces a froth when shaken with a liquid; as, saponin, oleic acid, lactic acid, essential oils, or phenols when shaken with water.

F.R.S. Abbreviation for Fellow of the Royal Society.

fructosamine. $C_6H_{13}NO_5$ = 179.11. *i*-dextrosamine, *i*-glucosamine. $CH_2OH(CHOH)_3CONH_2$. A colorless syrup, insoluble in alcohol.

fructosans. A group of sugar anhydrides which hydrolyse to fructose. Cf. *hemicellulose.*

fructose. $C_6H_{12}O_6$ = 180.13. Levulose, fruit sugar, l-fructose. A carbohydrate in all sweet fruits and honey. Colorless needles, $d_0°$.1.555, m.94, soluble in water, alcohol, or ether. Used as food for diabetics, as a preservative, etc. **dextro-** d-*Fructose.* **inactive-** i-Fructose, acrose, or formose. An unfermentable carbohydrate which is synthesized by polymerization of formaldehyde in lime water. **levo-** l-fructose, or levulose. **pseudo-** Allulose.



fructoside. A glucoside which hydrolyses to fructose.

fruit. The ripened ovary of a plant together with parts of the flower that share in its development. The following fruits are official (U.S.P.) and used medicinally (see also *seeds*):

Anise	Hops
Capsicum	Lemon
Caraway	Orange
Cardamon	Pepper
Cassia fistula	Poke berries
Chenopodium	Pimenta
Colocynth	Prune
Conium	Raspberry
Coriander	Rhus glabra
Cubeb	Staranise
Fig	Tamarind
Fennel	Vanilla

fruit-essence. An artificial mixture imitating the taste of a fruit, and consisting of the esters of alkyl radicals with organic acids, usually in alcoholic solution which must be highly diluted. **f. oil.** See *oil.* **apple-** A mixture containing chiefly amyl valerate. **banana-** A mixture containing chiefly amyl acetate. **pear-** A mixture containing chiefly amyl acetate. **pineapple-** A mixture containing chiefly ethyl butyrate.

fruit-sugar. Fructose.

ft. The abbreviation for foot. $ft.^2$ = square foot. $ft.^3$ = cubic foot.

fuadin. Fouadin, stibophen, neoantimosan. Sodium antimony-bispyrocatechol-3,5-sodium disulfonate. See *stibophen.*

fuchsin. $C_{20}H_{19}N_3HCl$ = 337.8. Magenta red, rosaniline hydrochloride, aniline red, azaleine, harmaline, rosein, erythrobenzene, rubine, solferino. A red dyestuff, a mixture of the hydrochlorides of rosaniline and pararosaniline. Rhombic, red crystals with greenish fluorescence, d.1.220, soluble in water or alcohol. Used as dyestuff and coloring matter for inks, stains, microscopical stains, and as dye for wool, silk and cotton. **acid-** A mixture of the disulfonic and trisulfonic acids of pararosaniline; used as a dye and stain. **English-** A mixture of the acetates of rosaniline and pararosaniline; used as a dyestuff. **German-** Fuchsin.

fuchsite. A variety of muscovite containing chromium.

fuchsone. $C_{19}H_{14}O$ = 258.1. Quinonediphenylmethane. $O{=}C_6H_4{=}C(C_6H_5)_2$. An intermediate in the manufacture of rosaniline dyes.

fucitol. $C_6H_{14}O_5$ = 166.11. A sweet, five-atomic alcohol, m.153, from fucus.

fucosan. A polymer of fucose contained in the cell-walls of marine algae.

fucose. $C_6H_{12}O_5$ = 164.09. *2.3.4.5*-Tetrahydroxy hexanal*. A colorless and crystalline methylpentose, $C_5H_9MeO_5$, obtained from fucus, m.145, soluble in water. It is an isomer of rhodeose.

fucosite. A mineral composed of the degenerated, modified and least water-soluble portion of seaweed. It contains fucose, algarose and an oil. **pseudo-** Elkerite.

ucoxanthin. $C_{40}H_{56}O_6$ = 632.5. A carotenoid (q.v.) pigment of brown algae. Brick red crystals, m.160.

fucus. Bladderwrack, seawrack. The dried thallus of *Fucus vesiculosus*, a Fucaceae or seaweed; used medicinally as an alterative and resolvent.

fucusamide. Fucusine.

fucusine. $C_{15}H_{12}O_3N_2$ = 268.2. Fucusamine. A crystalline alkaloid from seaweeds and fucus species.

fucusoic acid. β-Pyromucic acid. A constituent of seaweeds.

fucusol. $C_5H_4O_2$ = 96.1. A colorless, oily liquid, resembling furfurol, which is distilled from sea-weeds.

fuel. A material that furnishes heat by combustion. Classification: *Natural f.* or *solid f.* as wood, peat, lignite, coal, (q.v.). *Prepared f.*, dried f., as, briquettes and compressed fuels. *Liquid f.*, as petroleum, gasoline. *Gaseous f.*, as coal or water gas. **metallic-** Finely powdered magnesium or aluminum. Cf. *thermit*. **f. gases.** The compressed gases used for welding and cutting metals; as, blau-gas, butane, coal-gas, Pintsch-gas, pyrogen, thermoline, prestolite. **f. oil.** Crude petroleum.

fugacity. The escaping tendency of a substance in a heterogeneous mixture, by which a chemical equilibrium responds to altered conditions. In a dilute solution obeying the gas laws, the f. equals the osmotic pressure. In other solutions it is the value of the pressure for which these equations are still valid. Cf. *activity*.

fugin. Fugutoxin, tetrodonine. A poisonous protein in the organs of *Tetrodon* species, a fish of the Japanese and Chinese seas.

fugitive. Unstable, not fast (as a color).

fugitometer. An apparatus for the rapid testing of dyed materials for fastness to light. Cf. *fadeometer*.

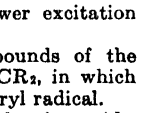
fugugetin. $C_{17}H_{12}O_6.5H_2O$ = 402.5. The coloring matter of fukugi, *Garcinia spicata*, a plant of Japan, m. 288. Cf. *garcinin*.

fugutoxin. Fugin.

Fulcher spectrum. That portion of the hydrogen spectrum between H_α and $H\beta$, which consists of many fine lines due to a lower excitation level of the H_2 molecule.

fulgenic acids. A group of compounds of the type $R_2C{:}C(COOH).C(COOH){:}CR_2$, in which R is either a hydrogen, alkyl or aryl radical.

fulgides. The anhydrides of fulgenic acids, or compounds of the type



They show phototropy; *i.e.*, change the color under the influence of radiation. **diphenyl-** A form (yellow green) $\rightleftharpoons$ B form (blue). **triphenyl-** A form (orange) $\rightleftharpoons$ B form (blue).

fulguration. Burning or melting together, with an electric spark. Cf. *fritting*.

fulgurator. An atomizer of salt solutions for producing flame spectra.

fulgurite. Fritted sand produced by lightning passing through the soil.

full gas. A term for a class of combustible gases, consisting of saturated hydrocarbons, *e.g.*, water gas.

fuller's earth. Calcium montmorillonite. An impure kaolin containing magnesium and iron; used extensively for decolorizing solutions, oils and other liquids, as a substitute for absorbent charcoal, and medicinally, as a dusting powder.

fulmar oil. An oil from the petrel species, *Procellaria glacialis*, a seabird of the Northern Coast of England; used as a substitute for cod-liver oil.

fulmargin. A colloidal solution of silver.

fulminate. A salt of fulminic acid containing the monovalent CNO— radical. **silver.** AgCNO = 149.89. Small, white needles which explode readily.

fulminates. A group of explosive compounds (general formula, MONC) consisting of the salts of fulminic acid; used to detonate high explosives.

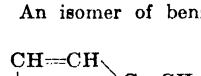
fulminating. Capable of causing detonation or explosion. **f. caps.** Small amounts of fulminates used to explode the charge of shells, grenades, torpedoes, etc. They usually contain mercuric fulminate. **f. gold.** Aurodiamine. **f. powder.** Percussion powder.

fulminic acid. CNOH = 43.0. Paracyanic acid *ψ-i*-cyanic acid. C:N.O.H. An isomer of cyanic acid known only as its very explosive salts.

fulminurate. A salt of fulminuric acid.

fulminuric acid. $C_3H_3N_3O_3$ = 129.14. *2*-Cyano-*2*-nitroethanamide*, isocyanuric acid, cyanonitroacetamide, $CN.CH(NO_2).CONH_2$. Colorless needles or prisms, m.138, explode at 145, soluble in alcohol, water, or ether. It is a trimer of cyanuric acid. Cf. *pentoxime*.

fulvene. (1) C_6H_6 = 78.1. Methylenecyclopentadiene. An isomer of benzene; a yellow oily liquid.



(2) A general term for colored products formed on exposure of indanthrene resins to light. **benzo-** See *benzofulvene*.

fumaramic acid. $C_4H_5O_3N$ = 115.1. $NH_2{-}CO.CH{:}CH.COOH$. Colorless crystals, m.217.

fumaramide. $C_4H_6O_2N_2$ = 114.1. $NH_2CO.CH{:}{-}CH.CONH_2$. Colorless crystals, m.266.

fumarhydrazide. $C_4H_6O_2N_4$ = 142.1. Colorless crystals, m.220.

fumaria. The dried herb of *Fumaria officinalis*, common fumitory; used medicinally as a sedative, general tonic and alterative

Fumariaceae. A family of herbs yielding alkaloids:

Corydalis cava	corydalis
Corydalis tuberosa	corydaline
Dicentra pucilla	dicentrine
Fumaria officinalis	fumarine

fumaric acid. $C_4H_4O_4$ = 116.05. *trans-* Butenedioic acid*, *trans-1.2*-ethylene dicarboxylic acid. A dibasic acid occurring in *Fumaria officinalis*, and an isomer of maleic acid: trans-ethylene dicarboxylic acid, allomaleic acid,

HOOC.C.H
‖
H.C.COOH

Colorless prisms, d.1.635, m.286, b.290, (sublimes), slightly soluble in water, soluble in alcohol or ether. **ethyl-** $C_8H_8O_4$ = 144.1. Ethylethylene dicarboxylic acid. Colorless crystals, m.194. **methyl-** Mesaconic acid.

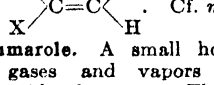
f. acid series. A group of dibasic acids with a double bond; general formula, $C_nH_{2n-4}O_4$. There are many isomers; *e.g.*,

fumaric, maleic acid	HOOC.C_2H_2.COOH
glutaconic, citraconic, itaconic, ethidene-malonic, mesaconic acid	HOOC.C_3H_4.COOH
allylmalonic, propylidenemalonic, hydromuconic; pyrocinchonic acid	HOOC.C_4H_6.COOH
allylsuccinic, carboprolactonic, teraconic acid	HOOC.C_5H_8.COOH
xeronic acids	HOOC.C_6H_{10}.COOH
cetylmalonic acid	HOOC.$C_{17}H_{32}$.COOH

fumarimide. $C_4H_4O_2N_2$ = 112.1. Colorless crystals.

fumarine. $C_{21}H_{19}O_4N$ = 349.2. Protopine. An alkaloid from *Fumaria officinalis*, a Papaveraceae. Colorless, tasteless crystals, m.199, insoluble in water, soluble in chloroform, benzene, alcohol or ether; used medicinally as an antiphlogistic.

fumaroid. A structural arrangement of ethylene derivatives characterized by trans-isomerism:



Cf. *malenoid*.

fumarole. A small hole from which volcanic gases and vapors escape. **f. acid.** Boric acid. **f. gases.** The vapors escaping from fumaroles; those of Italy contain steam, boric acid, carbon dioxide, ammonia and hydrogen sulfide.

fumaryl. The bivalent radical —OC.CH:CH.CO— derived from fumaric acid. **f. chloride.** $C_4H_2O_2Cl_2$ = 152.9. A colorless liquid, d.1.410, b.160.

fume. A visible or invisible vapor or smoke. Fine particles of solid or liquid suspended in a gas. **f. cupboard.** A glass-enclosed shelf or table provided with a fan or other ventilating device for performing experiments involving the production of poisonous or unpleasant fumes or gases.

fumigacin. An antibiotic substance produced by different strains of *Aspergillus fumigatus*. It is identical with helvolic acid.

fumigant. A gaseous insecticide. A substance that produces disinfecting vapors which are used to destroy insects; as,

chloropicrin	0.8
ethylene oxide	2.0
trichloroethylene	7.0
vinyl chloride	8.0

The figures indicate the pounds per 1000 ft.^{3} needed to destroy all insects and larvae within 24 hours at 75–80°F.

food- A f. used to destroy insect pests on foodstuffs; as ethylene oxide, ethylene dichloride, propylene chloride.

fumigate. To disinfect by means of vapors or smokes.

fumigatin. $C_8H_8O_4$ = 168.1. *3*-Hydroxy-*4*-methoxy-*2.5*-toluquinone. Maroon-colored crystals, m.116, occurring in laboratory cultures of *Aspergillus fumigatus*. It has antibacterial qualities. Cf. *penicillin*.

fumigation. Disinfection by means of volatile substances.

fumigator. A closed chamber in which to carry out fumigations.

fuming. Emitting smoke or vapors, *e.g.*, fuming nitric acid.

function. (1) Any specific power. (2) In physiology, the work or purpose of an organ. (3) In mathematics, one quantity is a function of another when for each value of the latter (y) there corresponds a definite value of the former (x). It is represented thus x = f(y). **chemical-** (1) *simple-* Describes a substance containing only one type of radical, which may, however, be repeated several times in the same molecule; *e.g.*, an alcohol, glycol, polyhydroxy alcohol. (2) *complex-* Describes a molecule having two or more different types of radicals; as, hydroxy aldehydes, amino acids, nitrophenols.

fundament. The foundation or basis of a structure, either physical or mental.

fundamental. Pertaining to the basis for groundwork. **f. chain.** The longest chain of a branched hydrocarbon. **f. units.** Units of measurement to which all physical phenomena may be reduced, *i.e.*,

L or length, (L^2 = surface, L^3 = volume)
M or mass (M/L^3 = density)
T or time (LMT = velocity, acceleration)
K or the dielectric constant (basis of electrostatic system)
μ or the magnetic permeability (basis of magnetic system)
θ or the temperature.

Cf. *dimensional equation*.

fungi. Plural of fungus.

fungicide. An agent that destroys spores and fungi; as Bordeaux mixture, arsenicals, etc.

fungisterin. Fungisterol.

fungisterol. $C_{28}H_{40}O$ = 356.3. Fungisterin. An inert alcohol in ergot; colorless wax-like masses, m.144.

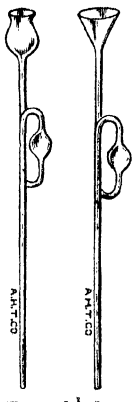
fungus. (Plural: fungi). (1) A main division of *Thallophyta* or primitive plants, either parasitic or saprophytic, distinguished from *Algae* by the absence of chlorophyll. They include:

Eumycetes	mushrooms
Schizomycetes	bacteria
Phycomycetes	alga-like fungi
Blastomycetes	yeasts
Hypomycetes	molds

(2) Popularly, the mushrooms and toadstools. **f. dyestuff.** Any pigment obtained from a f.; as, muscarufin, litmus.

funnel. A glass tube with one enlarged, and usually conical end. It is used chiefly for filling containers and for filtering solutions. **Buchner-** A porcelain funnel having a flat perforated round bottom; used for rapid filtration by suction. **bunsen-** The ordinary, conical glass funnel. **double wall-** A metal funnel with two

walls, between which hot water or steam is circulated. Used for the hot filtration of liquids, *e.g.*, gelatin or agar solutions. **dropping-** A separatory f., with long stem and glass stopcock. **Hirsch-** A porcelain f. with a fixed porcelain plate. **hot-air-** Double wall-. **hot-water-** Double wall-. **separatory-** A funnel of varied shape with a stop-cock on its stem; used to separate immiscible liquids. **tap-** Separatory-.



Funnel tubes.

funnel tube. A glass tube with a conical or thistle-shaped top; used to convey liquids into a chemical apparatus.

fur. (1) An abbreviation for furlong. (2) The hairy coat of animals.

furac. See *lead* and *zinc dithiofuroates.*

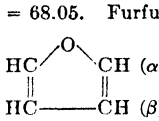
furacrolein. Furfur acrolein.

furacrylic. Furanacrylic.

fural. Furfural, furfurylidene. The bivalent radical O.CH:CH.CH:C.CH=, derived from furfural; there are two isomers.

furaldehyde. Furfural.

furan. C_4H_4O = 68.05. Furfuran, tetrol,



A colorless liquid, d_{15}°.0.9444, b.31, miscible with alcohol or ether, insoluble in water, in pine and fir tar. **dimethyl-** C_6H_8O = 96.1. Colorless liquid, d.0.902, b.94, soluble in water. A tanning agent and solvent for polyvinyl plastics. Cf. *uvic acid.* **methyl-** Sylvan. **tetrahydro-** Butylene oxide. **thio-** Thiophen.

f. carbinol. Furfuralcohol. **f. carboxylic acid.** *2-* Pyromucic acid.

3- Furoic acid. **f. dione.** Maleic anhydride. **f. methylamine.** Furfurylamine.

furanacrylic acid. $C_7H_6O_3$ = 138.05. *β-2-*furylacrylic acid, 2-furalacetic acid. White crystals, m.141, b.226, insoluble in water.

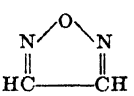
furanose. A sugar having a furan ring, as γ-glucose.

furanoside. A glucoside derived from pentoses, having a furan ring; as, adenosine. Cf. *pyranoside.*

furancarboxylic acid. Pyromucic acid.

furandione. Maleic anhydride.

furazan. $C_2H_2ON_2$ = 70.1. Azoxazole, oxdiazole.



methylethyl- $C_5H_8ON_2$ = 124.1. Ethylmethyl-1.2.5-oxidiazole. A colorless liquid, b.170. **phenyl-** $C_8H_6ON_2$ = 146.2. Phenyl-1.2.5-oxidazole. Colorless crystals, m.30.

f. carboxylic acid. $C_3H_2O_3N_2$ = 114.2. Colorless crystals, m.107. (*methyl-*) $C_4H_4O_3N_2$ = 128.2. Colorless crystals, m.74. **f. propionic acid.** $C_5H_6O_3N_2$ = 142.2. Colorless crystals, m.86. **f. dicarboxylic acid.** $C_4H_2O_5N_2$ = 158.2. Colorless crystals, m.178.

furfuracrolein. $C_7H_8O_2$ = 122.1. Colorless crystals, m.51.

furfuracrylic acid. $C_7H_6O_3$ = 138.1. A colorless crystalline acid.

furfural. (1) $C_5H_4O_2$ = 96.06. *α-*Furfuraldehyde, furol, furfurol, furfuryl aldehyde, *2-*furancarbonal*, 2-furaldehyde, $C_4H_3O.CHO$. A colorless liquid, turning yellow on standing, d_{22}*.1.159, m.−36, b.161, soluble in water, miscible with alcohol or ether. Used as a reagent for urea, alkaloids, santonin, cholesterol, ketones, or phenols, and in organic synthesis. (2) Fural. **3-,** *3-*furancarbonal*. A liquid of benzaldehyde odor, d.1.111, b.144, n_D^{20}.1.4945.

furfuralcohol. $C_5H_6O_2$ = 98.07. Furancarbinol, furfurylalcohol, $C_4H_3O.CH_2OH$. A solid, m.200, (sublimes), $b._{170mm}$.168, soluble in water, alcohol or ether.

furfuraldehyde. Furfural.

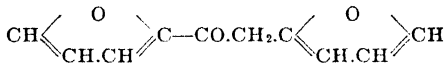
furfuramide. $C_{15}H_{12}O_3N_2$ = 268.11. Furfuryl amide. Colorless crystals, m.121, decomp. 250. It is an isomer of furfurine.

furfuran. Furan.

furfurbutylene. $C_8H_{10}O$ = 122.1. Butylfurfuran. A colorless oily liquid.

furfurine. $C_{15}H_{12}O_3N_2$ = 268.1. Light brown rhombic crystals, m.116, insoluble in water, soluble in alcohol or ether. An isomer of furfuramide.

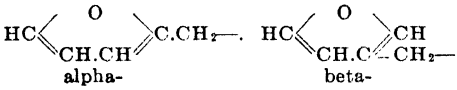
furfuroin. $C_{16}H_8O_3$ = 176.1. Furfuryl-furfural, furfuryl-fural. The compound



furfurol(e). Furfural.

furfurostilbene. $C_{10}H_8O_2$ = 160.1. Colorless crystals, m.101.

furfuryl. The monovalent C_5H_5O— radical, derived from furfural. Two isomeric forms:



alpha- beta-

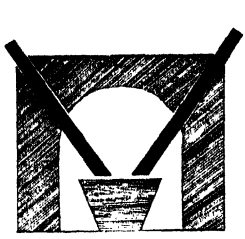
f. acetate. $CH_3COO.C_5H_5O$. A colorless liquid, d.1.1175, b.176, insoluble in water, soluble in alcohol or ether; used as a solvent. **f. alcohol.** $C_5H_6O_2$ = 98.08. Furyl carbinol, $C_5H_5O.CH_2OH$. A colorless liquid, d_{20}°.1.136, b.170, soluble in water, alcohol or ether. Used as a lacquer solvent. **f. aldehyde.** Furfural. **f. amide.** Furfuramide. **f. amine.** C_5H_7ON = 97.1. Colorless liquid, b.145, soluble in water, alcohol or ether. **f. fural.** Furfuroin. **f. methylether** $C_6H_8O_2$ = 112.1. A colorless liquid, b.135.

furfurylidene. Fural.

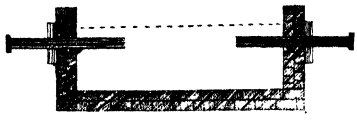
furil. $C_{10}H_6O_4$ = 190.1. Difurylglyoxal, bipyromucil. $C_4H_3O.CO.CO.C_4H_3O$. Yellow needles, m.165, insoluble in water. Cf. *furoin.* **f. dioxime.** A color reagent for copper.

furlong. An eighth part of one mile.

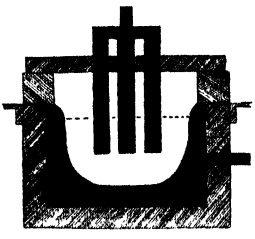
furnace. An apparatus for heating, fusing or hardening materials by exposing them to high temperatures; the heat may be produced by burning gas, oil, alcohol, coal, hydrogen or other fuels, or electrically. Classification: (see figures)



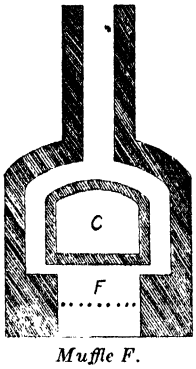
Direct Arc F.



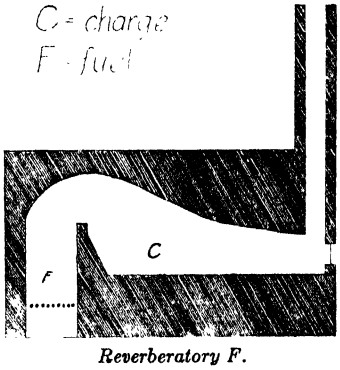
Indirect Arc F.



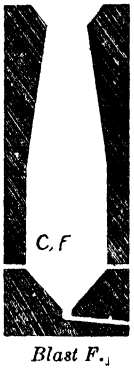
Héroult F.



Muffle F.



Reverberatory F.



Blast F.

Types of furnace.

	The fuel is	*The combustion products are*
blast f.....	+	+
reverberatory f...	−	+
muffle f.....	−	−

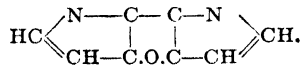
+ in contact with the charge
− not in contact with the charge

arc- A device for obtaining high temperatures by means of an electric arc. **blast-** A tall oven, in which molten iron is produced by heating a mixture of iron ore and coal by a blast of hot air. **crucible-** A small laboratory device for heating crucibles by gas, oil or electricity. **combustion-** An oven, elongated to take a combustion tube, and heated either by a row of bunsen burners or a coil of resistance wire; used in organic analysis. **electric-** See *arc-* or *resistance-*. **Héroult-** An electric arc f. used for the reduction of iron. **induction-** A f. heated from outside by electrically induced currents. **muffle-** A f. made of refractory material, and completely enclosed except for a small air inlet. **reducing-** (1) A shaft f. in which ores are reduced to metals. Cf. *aludel*. (2) A furnace in which incomplete combustion occurs, or an atmosphere of reducing gases is maintained. **resistance-** (1) A modified arc f., in which the electrodes dip into the molten material. (2) A heating device consisting of a wire-wound electrical resistance coil embedded in a refractory material. **reverberatory-** A f. for roasting ores, so constructed that the flame and hot gases are reflected by the curved roof and come in direct contact with the material to be heated, which is not contaminated by the solid fuel. **revolving-** A sloping, revolving metal cylinder lined with fire bricks, down which the charge passes and up which the hot gases are driven. **roasting-** q.v. **tank-** A large oil- or gas-heated container in which glass is melted.

furoates. The methyl, ethyl, butyl, or amyl esters of furoic acid, used in perfumery.

furodiazole. Oxdiazole.

furodipyrrole. $C_8H_4ON_2$ = 144.2. The heterocyclic compound



furoic acid. Pyromucic acid. **f. acid esters.** See *furoates*.

furoin. $C_{10}H_8O_4$ = 192.1. A condensation product of furfuran: $C_4H_3O.CHOH.CO.C_4H_3O$. Colorless crystals, m.135.

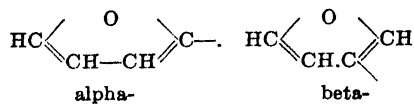
furol. Furfural.

furomonazole. a- Isoxazole. **b-** Oxazole.

furonic acid. $C_7H_8O_3$ = 140.1. Furfuryl acetic acid. Colorless crystals, soluble in water, alcohol, or ether.

furoyl. 2- Pyromucyl. **3-** The monovalent radical CH:CH.O.CH:C.CO—.

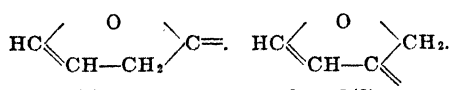
furyl. The monovalent —C_4H_3O radical. Two isomers:



alpha- beta-

Cf. *furfuryl*. **f. acrolein.** $C_7H_6O_2$ = 122.05. *3(2-*furyl)propenal*, $(C_4H_3O)CH:CH.CHO$. Yellow crystals, m.51, b.200, insoluble in water. **f. alcohol.** Furfuralcohol.

furylidene. The bivalent radicals:



α- or 2(3)- β- or 3(2)-

fusain. Mineral charcoal. Mother of coal. A constituent of coal (q.v.).

fuschin. Magenta, erythrobenzene.

fuscochlorin. A dark-green pigment from algae.

fuscorhodin. A dark red pigment from algae.

fuse. (1) To melt. (2) A safety device to protect electrical instruments, consisting of a fine wire which melts when the electric current becomes too strong. (3) Fuze. A device for igniting an explosive charge. **Abel-** An ignition fuse consisting of potassium perchlorate and copper sulfate, and ignited by an electric current. **combination-** A military fuse for shells consisting of a time fuse and concussion fuse. **electric-** A device for igniting an explosive charge by electric sparks, *e.g.*, Abel fuse. **concussion-** An explosive mixture which ignites by concussion, *e.g.*, fulminates. **time-** A device used in shells, grenades, etc. consisting of slow burning material, which ignites an explosive mixture after a certain time.

fused. Cooled to a compact mass after having been molten or sintered, as fused ash, slag or sodium hydroxide.

fused ring. A polycyclic compound in which two rings have two atoms in common, *e.g.*, naphthalene, quinoline.

fusel oil. Potato spirit, fermentation amyl alcohol. A crude mixture of isoamyl, amyl, butyl and propyl alcohols, obtained in spiritous fermentation and used as a source of amyl acetate.

fusibility. The property of solid matter of becoming liquid when heated.

fusible. Capable of being melted. **f. alloys.** An alloy having a low melting point, which is lower than the mean melting-point of the constituents, *e.g.*, Wood's alloy, Lippowitz metal, etc. **f. metals.** Any metal or alloy of relatively low melting point; as, Na, Pb, Sn. Cf. metal *bath*.

fusing. Melting. **f. point.** Melting point.

fusion. The act of melting or flowing together, *e.g.*, the transformation of a solid into a liquid by the application of heat and without using a solvent other than a flux. **alkaline-** The substitution of the $-SO_3H$ group of an organic compound by the $-OH$ group by means of concentrated NaOH, followed by treatment with acid. **aqueous-** The liquefaction of a substance below 100°C., by solution in its water of crystallization. **false-** Aqueous-. **watery-** Aqueous-. **f. heat.** See *heat* of fusion. **f. mixture.** A mixture of sodium and potassium carbonates; used to fuse insoluble substances of high melting-points and to render them soluble in the form of carbonates. **f. point.** Melting point.

fustic. (1) *old-* Yellow Brazilwood, fustic wood. The wood of *Morus tinctoria*, an Urticaceae of South America; used for making morin and in drying textiles. (2) *young-* The wood of *Rhus cotinus*, an Anacardiaceae. Cf. *osage orange wood, morin*.

fustin. (1) $C_{58}H_{46}O_{23}$ = 1110.4. A glucoside from the wood of *Rhus cotinus*, an Anacardiaceae. Fine silvery needles, m.218, soluble in alcohol or alkalis, hydrolysed to fisetin. (2) The coloring matter of the male fern, *Aspidium filix-mas*. (3) A coloring matter from sumac. (4) The coloring matter of fustic.

fuze. Fuse (3)

G

g. Abbreviation for gram.

g. A mathematical constant expressing the acceleration of a body due to gravitation. It is calculated for any latitude by Helmert's formula. *g* at sea level and equator = 978.038 cm./sec.^{2}; at latitude 45° = 980.624 cm./sec.^{2}

G. (1) The Newtonian constant of gravitation: $G = (6.65786 \pm 0.0017) \times 10^{-8}$ dyne. cm.^{2} g^{-2}. (2) Thermodynamic potential.

γ. The Greek letter gamma. A symbol indicating: (1) the third carbon atom of an aliphatic chain. (2) In the naphthalene ring, the position opposite to the α-position. (3) 10^{-6} gram. (4) 10^{-4} gauss. **γ-rays.** See *gamma rays.*

G. An abbreviation for yellow (gelb) in describing proprietary colors.

G-acid. 2-Naphthol-6.8-disulfonic acid.

G salt. The sodium or potassium salt of G-acid.

Ga. Symbol for gallium.

Gabbet solution. A solution of 2 gm. methylene blue in 25 gm. sulfuric acid and 75 cc. water; used in bacteriology for staining.

gabbro. A group of igneous rocks consisting of plagioclase and pyroxenes.

gabianol. A dark brown, oily liquid from natural shale, used in diseases of the lung and throat.

gadinine. $C_7H_{16}NO_2$ = 146.1. A ptomaine from putrefying fish, *e.g.*, haddock.

gadoleic acid. $C_{20}H_{38}O_2$ = 310.2. A fatty acid, m.20, from codliver oil.

Gadolin, Johann. 1760–1852. A Finnish chemist and mineralogist, noted as discoverer of rare earth minerals.

gadolinite. Principally $4BeO.FeO.Y_2O_3.2SiO_2$. Ytterbite. Yttria. A rare-earth silicate found at Ytterby in black, monoclinic masses, d.4–4.5, hardness 6.5–7. It is a source of Gd, Ho and Re.

gadolinium. Gd = 156.9. Atomic number 64. A rare earth metal discovered 1880 by Marignac in gadolinite, d.1.31. Principal valency 3. On account of its rarity it is of scientific interest only. **g. acetate.** $Gd(C_2H_3O_2)_3.4H_2O$ = 406.4. A colorless crystalline powder, d.1.611, soluble in water. **g. bromide.** $GdBr_3.6H_2O$ = 505.4. Colorless crystals, soluble in water. **g. chloride.** $GdCl_3 6H_2O$ = 371.8. A colorless crystalline powder, soluble in water. **g. oxalate.** $Gd_2(C_2O_4)_3.10H_2O$ = 758.76. Monoclinic crystals, dehydrated at 110°C., slightly soluble in water. **g. oxide.** Gd_2O_3 = 362.6. Colorless crystals or a white powder, insoluble in water, soluble in acids. **g. hydroxide.** $Gd(OH)_3$ = 208.3. An amorphous white powder, insoluble in water, soluble in acids. **g. sulfate.** $Gd_2(SO_4)_3.8H_2O$ = 746.8. Colorless crystals, soluble in water.

gadose. A fat from codliver oil, occurring as a yellow, greasy mass, m.34, soluble in ether, chloroform or benzene, slightly soluble in alcohol. **anhydrous-** Pure, anhydrous gadose. **glycerinated-** G. containing 25 % glycerin. **hydrous-** G. containing 25 % water.

gadusene. An unsaturated hydrocarbon from animal and vegetable oils, chiefly codliver oil.

gagat. A variety of soft coal.

gage. (1) An instrument for measuring the dimension of an object, or the pressure or flow of a liquid. (2) The diameter of a wire, the thickness of a sheet or plate. **high and low-** A g. which registers both, maximum and minimum dimensions. **hot wire-** (1) A resistance wire sealed in a vacuum tube and used to measure very low pressures by determining: (a) change of current at constant voltage; (b) change of total watts at constant temperature (resistance); (c) change of resistance at constant current. (2) A small thermocouple, q.v. **ionization-** A device for measuring low pressures by the ionization produced in a gas by a definite electron current. With a galvanometer the sensitivity is 10^{-7} amps (= 10 milliamp.) **McLeod-** q.v. **resistance-** Hot wire g.

Gahn, Johann Gottlieb. 1745–1818. A Swedish mineralogist, and discoverer of manganese (1780).

gahnite. $ZnAl_2O_4$. Automolite, zinc-spinel. A variously-colored, vitreous zinc aluminate, d.4–4.6, hardness 7.5–8.

gaidic acid. $C_{16}H_{30}O_2$ = 254.3. A monobasic, unsaturated acid, and homolog of elaidic acid. Colorless crystals, m.39.

Gaillard tower. An absorption tower in which a spray of lead chamber sulphuric acid falls through rising furnace gases and is concentrated.

gaine. An intermediate explosive, used to pass on the action of the detonator to the main, less-sensitive explosive charge.

gainic acid. $C_{40}H_{12}O_{14}$ = 716.1. An acid in humus.

gaize. A very friable argillaceous sandstone, which is converted into a pozzolana when heated.

gal. Abbreviation for gallon.

galactagogue. A drug which increases the secretion of milk.

galactan. $(C_6H_{10}O_5)_x$ = $(162.08)_x$. Gelose. The carbohydrate in the cell-wall of algae, *e.g.*, *Irideae*, *Laminarioides*, obtained as a dextrorotatory gum from agar-agar. It yields galactose on hydrolysis, and mucic acid on oxidation; insoluble in cold water, alcohol, acids and alkalis.

galactase. A proteolytic enzyme of milk resembling erepsin.

galactin. $C_{54}H_{78}O_{46}N_4$ = 1510.62. An amorphous substance derived from milk.

galactolipins. Cerebrosides. Lipin substances of animal and vegetable tissues; as, phrenosin, kerasin, nervone.

galactometer. (1) A graduated glass funnel for determining the fat in milk. (2) A hydrometer for determining the specific gravity of milk.

galactonic acid. $C_6H_{12}O_7$ = 196.1. Pentahydroxy-hexoic acid. A monobasic acid, m.97, b.141, derived from galactose. Cf. *lactonic acid.*

galactosamine. $C_6H_{11}(NH_2)O_5$ = 179.11. The amine of galactose.

galactosan. Galactan.

galactosazone. $C_{18}H_{21}O_4N_4$ = 357.21. The phenylosazone of galactose; yellow needles, m.192–195.

galactose. $C_6H_{12}O_6$ = 180.03. Dextrogalactose, pentahydroxy-hexanol, cerebrose. d- A hexose sugar, derived from milk sugar by hydrolysis either by fermentation or mineral acids. Colorless, hexagonal scales, m.168, soluble in water, slightly soluble in alcohol. l- Laevogalactose, m.162–3, soluble in water, very soluble in alcohol.

galactoside. Cerebroside. A group of glycolipins containing nitrogen, galactose and a fatty acid, *e.g.*, phrenosin, cerasin.

galalith. Artificial horn prepared by the action of formaldehyde on casein.

galangal. Galanga, India root, China root, Kaw-liang ginger, kaw liang kiang. The dried rhizome of *Alpinia officinarum*, a Zingiberaceae of Asia, used as an aromatic and carminative. **g. oil.** The essential oil, d.- 0.910–0.940, of g.; it contains d-pinene and cadinene.

galangin. (1) $C_{15}H_{10}O_5$ = 270.1. A glucoside from the root of galangal. Cf. *alpinin, kaempferide.* (2) *3.5.7*-trihydroxy flavanol, q.v.

galbanum. A gum resin from *Ferula galbaniflua.* Whitish, yellowish or reddish tears of wax-like consistency, m.100; used medicinally as an expectorant or antispasmodic, and externally in plasters.

galega. Goats rue. The herb *G. officinalis*, a Leguminosae; used as vermifuge and galactagogue.

galegine. $C_6H_{13}N_3$ = 127.02. *α-2*-isopentenyl guanidine. An alkaloid, $Me_2C{:}CH.CH_2.N{:}C(NH_2)_2$, from *Galega officinalis*, a Leguminosae; used as an insulin substitute.

Galen. (130-circ. 200 A.D.). An iatrochemist who advocated the use of vegetable in place of mineral preparations in medicine. Cf. *galenical.*

galena. PbS. Galenite. A metallic lead-gray, isometric, lead sulfide, d.7.3–7.6, hardness 2.5. **false-, pseudo-** Sphalerite.

galenical. Medicines of vegetable origin, especially the liquid preparations, *e.g.*, decoction, infusion, percolation, fluid extracts, ect. Cf. *Galen.*

galenite. Galena.

galenobismuthite. A sulfobismuthide of lead.

galhumic acid. Metagallic acid, q.v.

Galilei, Galileo. 1564–1642. An Italian physicist and astronomer, who invented the thermometer and telescope.

galipeine. $C_{20}H_{21}O_3N$ = 323.2. An alkaloid from angostura bark; colorless needles, insoluble in water.

galipene. $C_{15}H_{24}$ = 204.19. A sesquiterpene from *Galipia officinalis*, the source of angostura bark.

galipidine. $C_{19}H_{19}O_3N$ = 309.2. An alkaloid from angostura bark. White, silky lustrous plates, m.110.

galipine. $C_{20}H_{21}O_3N$ = 323.2. An alkaloid from angostura bark. Colorless, slender, lustrous needles, m.115.5.

galipol. $C_{15}H_{26}O$ = 222.2. A sesquiterpene alcohol in the oil of the angostura bark. Colorless crystals, m.89.

galipot resin. The exudation of *Pinus maritima*, a Pinaceae; a source of pimaric acid. Cf. *gallipot.*

galiquoid. A proposed name for a dispersed colloidal system consisting of a gaseous phase in a liquid phase (*e.g.*, foams).

galitannic acid. $C_{14}H_{16}O_{10}.H_2O$ = 362.12. A tannin from the bark of *Galium verum*, a Rubiaceae.

gall. (1) Bile. (2) Nutgalls.

gallacetophenone. $C_8H_8O_4$ = 168.1. *2.3.4*-Trihydroxyacetophenone, methyl-keto-trioxybenzene, alizarin yellow C. A pale yellowish or brownish gray powder, m.168, soluble in water, alcohol, or ether; and used medicinally as an antiseptic for skin diseases.

gallal. An aluminum gallate, used medicinally as a dusting powder.

gallamic acid. $C_7H_7O_4N$ = 169.1. The amide of gallic acid.

gallanilide. $C_{13}H_{11}NO_4$ = 245.09. Gallanol, gallinol, *3.4.5*-trihydroxybenzanilide, $PhNHC_6H_2(OH)_3$. Colorless crystals, m.205, soluble in hot water, alcohol or ether; used medicinally as a dusting powder.

gallanol. Gallanilide.

gallate. (1) A salt of gallic acid; $C_6H_2(OH)_3COOM$. (2) A salt of gallic hydroxide; as; $Ga(OH)_3 + NaOH = NaGaO_2 + 2H_2O$.

gallein. $C_{20}H_{10}O_7$ = 362.1. Gallin, pyrogallolphthalein, anthracene violet. A brown powder or greenish lustrous scales, nearly insoluble in water, soluble in alcohol; decomp. when heated. Used as an indicator in alkalimetry, being very sensitive to alkali (alkalis = bright red, acids = pale brown); in the determination of phosphates in urine; in the manufacture of cerulene and other dyes.

gallic. (1) Describing a trivalent gallium compound. (2) Pertaining to nutgalls. **g. acid.** $C_7H_6O_5.H_2O$ = 188.11. 3.4.5-trihydroxybenzoic acid. White or pale yellow, triclinic crystals or a crystalline powder, d_4° = 1.694, m.225, b.253, (decomp.) slightly soluble in water, soluble in alcohol. It is a constituent of nutgalls, mangoes, and other vegetable matter, and is used as a reagent for detecting small amounts of ferric salts and mineral acids. **g. bromide.** Gallium bromide. **g. chloride.** Gallium chloride. **g. compounds.** See *gallium.* **g. hydroxide.** Gallium hydroxide. **g. iodide.** Gallium iodide. **g. nitrate.** Gallium nitrate. **g. oxide.** Gallium trioxide. **g. sulfate.** Gallium sulfate.

gallicin. $C_8H_8O_5$ = 184.1. Methylgallate, methyl gallic ester. Colorless needles or rhombic prisms, m.202, soluble in hot water, alcohol, or ether; used medicinally as a nontoxic antiseptic dusting powder.

gallin. Gallein.

gallinol. Gallanilide.

gallipot. A small glazed earthen-ware jar used by druggists. Cf. *galipot.*

gallitannic. (1) Galitannic. (2) Gallotannic.

gallium. Ga = 69.72. Austrium. A metallic element of the third sub-group of the periodic system, atomic number 31. Bluish or grayish-white octahedric crystals, d.5.94, m.30.15 to a mercury-like liquid. It was discovered in 1875 by Lecoq de Boisbaudran in zinc blende, after its existence had been predicted in 1869 by Mendelejeff from the periodic system (eka-aluminum). The valencies of gallium are 2 and 3, hence it forms gallous and gallic compounds the latter being the stabler. Like aluminum it forms alums of the general formula, $MGa(SO_4)_2.12H_2O$ *e.g.*, $NH_4Ga(SO_4)_2.12H_2O$,

ammonium gallium sulfate. Used for quartz thermometers (500–1000°C.), for brightening optical mirrors, as a substitute amalgam in filling teeth, and for vacuum lamps, instead of mercury. **g. acetate.** $4Ga(C_2H_3O_2)_3 2Ga_2O_3.5H_2O$ = 1312.7. White crystals, decomp. 128, soluble in water. **g. acetylacetonate.** $Ga(C_5H_7O_2)_3$ = 366.88. White monoclinic (α) or rhombic (β) crystals, d.α-1.42; β-1.41; m.194, soluble in water. **g. bromide.** $GaBr_3$ = 309.9. G. tribromide, gallic bromide. Colorless deliquescent crystals, soluble in water. **g. chloride.** See *g. dichloride*, and *g. trichloride*. **g. dibromide.** $GaBr_2$ = 229.9. Gallous bromide. A colorless powder, decomp. by water. **g. dichloride.** $GaCl_2$ = 140.9. Gallous chloride. Colorless crystals, m. 164, b.535, decomp. by water. **g. diiodide.** GaI_2 = 323.7. Gallous iodide. A colorless powder, decomp. by water. **g. hydride.** Ga_2H_6 = 145.4. A gas, m. −21, decomp. 130. **g. hydroxide.** $Ga(OH)_3$ = 120.7. Gallic hydroxide. A white powder, insoluble in water. **g. iodide.** GaI_3 = 450.5. Gallium tribromide, gallic iodide. A white powder, soluble in water. **g. monoxide.** GaO = 86.0. Gallous oxide. A bluish mass obtained by heating Ga_2O_3 in a stream of hydrogen. **g. nitrate.** $Ga(NO_3)_3$ = 256.2. Colorless crystals, soluble in water. **g. oxalate.** $Ga_2(C_2O_4)_3.4H_2O$ = 475.50. A white microcrystalline powder, insoluble in water. **g. sulfate.** $Ga_2(SO_4)_3$ = 428.0. Gallic sulfate. Colorless crystals, soluble in water or alcohol. It forms double salts with alkali sulfates analogous to alums, *e.g.*, gallium ammonium sulfate, $Ga_2(NH_4)_2(SO_4)_4.24H_2O$. **g. sulfide.** Ga_2S_3 = 235.4. A white powder, insoluble in water. **g. tin alloy.** A liquid metal, m.15, consisting of 88 % Ga and 12 % Sn. **g. tribromide.** See *g. bromide*. **g. trichloride.** $GaCl_3$ = 176.35. Gallic chloride. Colorless, deliquescent needles, m.75.5, b.220, very soluble in water or alcohol. **g. trioxide.** Ga_2O_3 = 187.4. Gallic oxide, g. oxide. A colorless, friable mass, insoluble in water and acids.

gallobromol. $C_7H_4O_5Br_2$ = 327.9. Dibromgallic acid. A light brown powder or fine needles, m.205, slightly soluble in cold water, soluble in hot water, alcohol, or ether. Used medicinally for neurasthenia and epilepsy.

gallocyanin. $C_{15}H_{12}O_6N_2$ = 300.3. A bluish-purple dye obtained from nitrosodimethylaniline and gallic acid; used as a dye.

galloflavin. $C_{12}H_8O_8$ = 277.0. A yellow dye.

galloformin. A condensation product of gallic acid and hexamethylene tetramine. Colorless needles, used as an internal antiseptic.

gallogen. $C_{14}H_6O_8$ = 302.1. Anhydrous ellagic acid. A constituent of divi-divi, the pods of *Caesalpinia coriaria* occurring as a yellow, odorless and tasteless powder, insoluble in water or acids, soluble in alkalis; used medicinally as an astringent and antidiarrhetic.

gallol. Gallinol.

gallols. A group of compounds of pyrogallol, resorcinol and chrysarobin with various acids, as:

eugallol..... pyrogallol monoacetate
lenigallol..... pyrogallol triacetate

gallon. A measure of liquids. The U. S. gallon has a volume of 231 cubic inches, the Imperial or English gallon 277.274 cubic inches. 1 U. S. gallon = 3.785332 liters = 4 quarts = 8 pints = 0.833 imp. gallons.

1 Imperial gallon = 4.54596 liters = 277.420 cubic inches = 1.20032 U. S. gallons = the volume occupied by 10 lbs. of distilled water at 62°F., bar. 30 in.

gallotannic acid. $C_{76}H_{52}O_{46}$ = 1700.3. A glucoside from Chinese gall nuts, sumac, tea, etc., which hydrolyses to glucose and digallic acid. Cf. *tannin*.

gallotannin. Tannic acid.

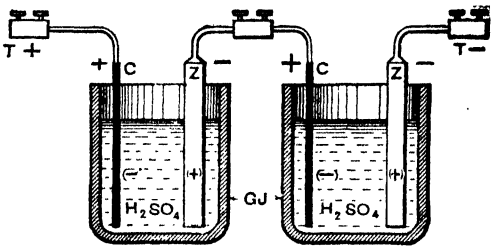
gallous. Any divalent gallium compound. **g. bromide.** Gallium dibromide. **g. chloride.** Gallium dichloride. **g. iodide.** Gallium diiodide. **g. oxide.** Gallium monoxide.

galloyl. The radical $(HO)_3C_6H_2CO$— from tannin, q.v.

gallulmic acid. Metagallic acid.

Galvani, Luigi. 1737–1798. An Italian physician and anatomist, who accidentally discovered the galvanic current.

galvanic. Voltaic. Pertaining to an electric current produced by chemical action. **g. battery.** A series of voltaic cells. **g. current.** A stream of electrons produced by a displacement reaction as in an electric or voltaic cell. Cf. *cell*. **g. element.** Voltaic cell. **g. pile.** A series of disks of two different metals, placed alternately over each other and separated by moistened paper; formerly used for producing a galvanic current.



Galvanic battery of carbon: zinc cells.

galvanism. A branch of physics which deals with electric currents produced by chemical action, as opposed to those produced by heat, friction, or induction.

galvanize; -ise. To protect a metal with a layer of a less oxidizable metal by electric means.

galvanized iron. (1) Iron coated with tin by electrolysis, and then immersed in a zinc bath. (2) Iron immersed in molten zinc and so coated by that metal without the aid of electricity.

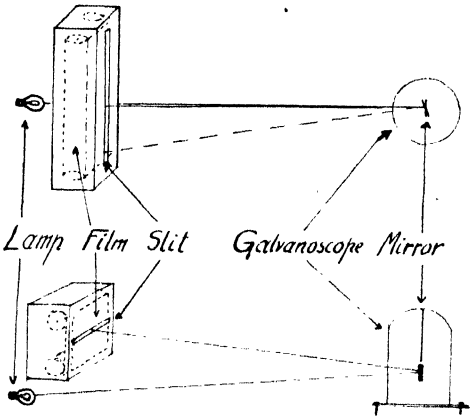
galvanograph. The photographic record of a sensitive galvanometer arranged so that its mirror deflects a beam of light on to a moving film or paper (see figure).

galvanolysis. An obsolete term for electrolysis.

galvanomagnetic effect. (1) A galvanomagnetic difference in potential, see *Hall effect*. (2) A galvanomagnetic difference in temperature, see *Ettinghausen effect*.

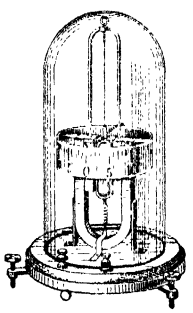
galvanometer. An instrument for detecting and measuring the strength of an electric current. It consists essentially of a magnetic needle suspended in a wire coil. The slightest deflection of the needle produced by a current through the coil is measured by some optical system, *e.g.*, reflection of a beam of light from a mirror attached to the needle, and observation of the reflected beam on a scale. The coil

may be fixed and the magnet moveable, or vice versa. Cf. *potentiometer, polarograph.* **absolute-** An instrument directly measuring current by means of two equally strong electromagnets. **astatic-** An instrument in which two magnetic needles of equal magnetic moment are



Galvanograph arrangement.

suspended parallel to one other, but with their poles in opposite directions. Terrestrial magnetism is thus eliminated and the needles swing freely under the influence of the current. **ballistic-** A galvanometer for the determination of the capacity or energy produced in the discharge of a condenser. **differential-** An instrument with two equal coils through which two separate currents are sent and their comparative strengths thus determined. **D'Arsonval-** A delicate g. in which a magnet and mirror is suspended inside a coil and the deflection of the mirror is read by means of a reflected light beam on a scale, or the scale may be read in the mirror by means of a telescope. Cf. *galvanograph* and figure. **Einthoven-** String-, or thread-. A delicate instrument for detecting minute electric currents, consisting of a silvered quartz thread or platinum thread stretched between the poles of a strong magnet. The shadow of the thread, magnified by a microscope, is read on a screen. **Kelvin-** q.v. **mirror-** Reflecting-. **photo-** Galvanograph, q.v. **reflecting-** Mirror-. A small mirror attached to the galvanic needle. Its deflection is read on a scale by reflected light. **sine-** An obsolete type of g. in which the current passing is proportional to the sine of the angle of deflection. **string-** Einthoven g. **tangent-** The strength of the current through a tangent g. is proportional to the tangent of the angle of deflection. **thread-** Einthoven g.



D'Arsonval galvanometer.

galvanometry. The branch of physics dealing with the measurement of the strength of electric currents.

galvanoscope. Quadrant electrometer. An instrument indicating the presence and direction of an electric current, but not its strength. It consists essentially of a magnetic needle inside a wire coil.

galvanostegy. (1) Galvanotropism. (2) Electrolytic tinning as a protection against hardening by the nitrite process.

galvanotaxis. The response of a living organism or single cell to a galvanic current.

galvanotropism. Galvanostegy. The orientation or motion of living cells in a galvanic current.

galyl. $C_{24}H_{22}O_8N_4P_2As_4$ = 856.5. Tetroxy diphospho-amino-diarseno-benzene. An antisyphilitic preparation, said to be less toxic than salvarsan.

gama wax. Candelilla wax.

gambin. $C_{10}H_7O_2N$ = 173.1. *R.* or g. Reddish, β-nitroso-α-naphthol. A nitroso dye. *Y.* or g. Yellowish, nitrosonaphthol, α-nitroso-β-naphthol. A nitroso dye.

gambir. Pale catechu. The dried extract from a decoction of the leaves and twigs of *Ourouparia* or *Uncaria gambir*, a Rubiaceae of Asia. An odorless brown powder, insoluble in water, soluble in alcohol; used, as tincture or fluid extract, as an astringent and tanning material. **g. catechol carboxylic acid.** $C_{16}H_{14}O_8$ = 334.11. A white solid from gambir, *d*-β- m.259; *l*-β- m.261, *dl*-β- m.252.

gamboge. Camboge, cambogia, gummi guttae. A gum resin from *Garcinia hanburii* and other species of Guttiferae. Grayish or orange brown cylindrical pieces, insoluble in water forming a colloidal solution, soluble in alcohol; used medicinally as a hydragogue and cathartic; also as pigment.

gamete. A sexual cell capable of uniting with another sexual cell to form a zygote, or fertilized cell.

gamma. (1) The third letter of the Greek alphabet, γ or Γ. (2) A unit of weight, γ = the one-millionth part of a gram, microgram, 0.001 mg. or 0.000,000,353 ounce. (3) A unit of magnetic field intensity, γ = 0.000,01 gauss. (4) The g. position. **g. acid.** γ-acid. 2.5-Naphthylamine sulfonic acid. An intermediate in dyestuff manufacture. **g. iron.** An allotropic, non-magnetic variety of iron existing above 860°C., and crystallizing in the cubic system. **g. particles.** A misnomer for g. rays. **g. position.** (1) The third carbon atom in an aliphatic chain; as, γ-chloro-hexane. (2) The third atom of a pentacyclic, or the fourth atom of a hexacyclic compound, as γ-naphthalene substitution, *i.e.*, the position following the β-position and opposite the α-position. **g. rays.** γ-rays. Radiations similar to x-rays, (q.v.), but having shorter wavelengths, emitted by radioactive substances (q.v.), as secondary radiation caused by β-rays striking matter.

gammagraph. A radiograph obtained by the use of γ-rays.

gangaleodine. $C_{18}H_{14}O_7Cl_2$ = 413.0. A depsidone which occurs in lichens of the *Lecanora* species.

ganglion. A nerve cell.

gangue. The earthy portion of an ore (calcite, quartz, barites, fluorspar). It forms a fusible slag which flows away from the metallic portion on reduction. Cf. *flotation.*

ganister. A fine, compact, hard sandstone, used for grinding and for furnace hearths.

ganja; ganjah. The rounded, compressed masses of cannabis as exported from Calcutta.

ganomalite. $(Ca,Mn)Pb_3Si_3O_{11}$. A rare lead-manganese silicate.

ganomatite. $(Fe,As,Sb)_2O_3$. A grayish, reddish, or brownish mineral, d.2.3.

ganophyllite. $Mn_7Al_2Si_8O_{26}.6H_2O$. A brown, monoclinic aluminum-manganese silicate.

garage poison. Petromortis. A mixture of carbon monoxide and air from the exhaust of combustion engines, occurring in garages or tunnels and subways with automobile traffic.

garancin. A preparation made from madder, containing the coloring matter of madder in readily available form. One part garancin has the same dyeing powers as 3–4 parts of madder.

garantose. A brand of saccharin, q.v.

garbage. Waste and refuse from kitchens and households. **g. tankage.** The dried and ground product obtained by steaming and degreasing g.; used as fertilizer.

garcinin. A pigment isolated from fukugi; used as a dye for silk. Cf. *fugugetin.*

garden celandine. The dried herb of *Chelidonium majus*, used medicinally as a cathartic, diuretic and diaphoretic.

gardenic acid. $C_{14}H_{10}O_6 = 274.1$. A quinone split-product of gardenin.

gardenin. $C_{14}H_{12}O_6 = 276.1$. A yellowish crystalline principle from the resin of *Gardenia lucida*, a tree of Southern Asia.

gardinol. A detergent made by reduction of sulfonated fatty acids to the corresponding alcohols, *e.g.*, $HO.R.HSO_3$.

gargle. (1) A solution containing disinfecting substances for rinsing the mouth and throat. (2) To wash the throat.

garlic. Allium. The fresh bulb of *Allium sativum*, a Liliaceae; used medicinally as an irritant and expectorant, and as a condiment. **g. oil.** The essential oil of g., d.1.046–1.057. It contains allyl-propyl disulfide, diallyl-disulfide and the compounds $C_6H_{10}S_3$ and $C_6H_{10}S_4$.

garnet. A dark red, yellowish, or greenish, transparent silicate of the general type $A_3B_2Si_3O_{12}$, in which B is a trivalent metal (Al, Fe, or Cr) and A a divalent metal (Ca, Mg, Fe, Mn). Many of the garnet varieties are used as gems; the common garnet is usually almandite. **g. rock.** A metamorphic rock containing garnet as an accessory mineral, *e.g.*, garnet-mica schists, garnet gneiss, garnet-olivine rock, and garnet hornfels.

aluminum- $R_3Al_2Si_3O_{12}$: 1. *grossularite*, $Ca_3Al_2Si_3O_{12}$ occurring in the following varieties: hessonite = yellowish brown, succinite = amber colored, romanzovite = brown, wiluite = pale green. 2. *pyrope*, $Mg_3Al_2Si_3O_{12}$, deep red to black crystals, d.3.7. 3. *almandite*, $Fe_3Al_2Si_3O_{12}$, red to dark red, d.3.9–4.2, and cut into gems. 4. *spessartite*, $Mn_3Al_2Si_3O_{12}$, red to brown, d.4.2. **calcium-** Essonite. **chromium-** $R_3Cr_2Si_3O_{12}$: 5. *uvarovite*, $Ca_3Cr_2Si_3O_{12}$, emerald green, d.3.5. **iron-** $R_3Fe_2Si_3O_{12}$: 6. *andradite*, $Ca_3Fe_2Si_3O_{12}$, occurring in the varieties: topazolite = yellowish green, colophonite = amber, melanite = black, pyreneite = grayish black, jelleteite = green, dematoid = light green. 7. *manganese garnet*, $Mn_3Fe_2Si_3O_{12}$, occurring in the varieties: rothoffite = yellowish brown, allochroite = light green to black, polyadelphite = brownish yellow to green, aplome = yellowish green. 8. *sodium garnet*, $Na_6Fe_2Si_3O_{12}$ lagoriolite. **manganese-** See *iron g.* (7). **sodium-** See *iron g.* (8). **titanium-** $R_3Fe_2(Si,Ti)_3O_{12}$; *e.g.*, *schorlomite*, $Ca_3(Fe,Ti)_2(Si,Ti)_3O_{12}$.

garnierite. $(Ni,Mg)SiO_3.xH_2O$. Noumeite, numeite. A bright green, amorphous nickel-magnesium silicate, d.2.5–4, hardness 7.5–8.

garryine. An alkaloid from the leaves of *Garrya fremontii* or skunk bush, a Cornaceae of California and Oregon.

gas. (1) The vaporous or air-like state of matter, defined as a non-elastic fluid, in which the molecules are in free movement, and their mean positions far apart. Gases are characterized by their tendency to expand indefinitely, to diffuse and mix readily with other gases, to have definite relations of volume, temperature and pressure and to condense or liquefy at low temperatures, or under sufficient pressure. One cubic centimeter of any gas contains under standard conditions 27×10^{18} molecules. Cf. *Avogadro's, Charles'* and *Boyle's law.* (2) Illuminating or fuel **gas. air-** An illuminating and fuel gas made by blowing air through hydrocarbons. **anesthetic-** The vapors of a volatile anesthetic; as ether or chloroform or an anesthetic gas (nitrous oxide, ethylene or acetylene). **atmospheric-** The gaseous constituents of the atmosphere. Cf. *atmosphere, abundance of elements.* **Blau-** q.v. **chlorine-** Chlorine. **coal-** An illuminating and fuel gas distilled from coal, consisting of aliphatic hydrocarbons, methane, ethane, etc. **coercible-** Liquefiable-. **combustible-** An inflammable gas produced by incomplete combustion, and containing chiefly carbon monoxide, *e.g.*, coke gas, coke oven gas. **compound-** A gaseous compound, *e.g.*, methane, carbon dioxide. **compressed-** See *compressed gases.* **electrolytic-** A mixture of 2 vols of H_2 and 1 vol of O_2. **elementary-** A gaseous element; an element which is gaseous under ordinary conditions, *e.g.*, chlorine, fluorine, hydrogen, nitrogen, oxygen and the noble gases. **fluorine-** Fluorine. **forest-** Producer gas obtained from wood and wood-charcoal; used as a fuel. **fuel-** A gas used as fuel, *i.e.*, for the production of heat by combustion. **full-** An inflammable gas consisting of saturated hydrocarbons, *e.g.*, water gas. **hydrogen-** Hydrogen. **ideal-** Perfect-. **illuminating-** A gas used for the production of light, *e.g.*, Common gas (coal gas), natural gas, water gas, or oil gas. **inflammable-** A gas which is able to burn in air, *e.g.*, hydrogen. **industrial-** G. produced commercially and used in trades, and industries. **inert-** (1) Noble gases. (2) A gas which does not react chemically, *e.g.*, nitrogen is an inert gas towards living organisms. **intestinal-** The gases produced during digestion, consisting of nitrogen, hydrogen sulfide, etc. **lachrymatory-** Any gas which produces a profuse secretion of tears. **laughing-** Nitrous oxide. **lighting-** Illuminating-. **marsh-** Methane. **natural-** (1) The inflammable gases from oil wells, used in certain communities as an illuminating and fuel gas; they consist mainly of paraffins (methane, etc.), small amounts of hydrogen, ethylene, carbon dioxide, and carbon monoxide. (2) Helium. **noble-** The members of the zero group of the periodic system consisting of entirely inert elements: He, Ne, Ar, Kr, X, and Nt. **oil-** An illuminating and fuel gas distilled from crude petroleum. **noxious-** Any poisonous g. or a g. with a strong odor. **oil-** Natural g. **olefiant-** Ethylene. **oxygen-** Oxygen. **perfect-** A fluid

INDUSTRIAL GASES

Name (1)	Formula (2)	B.P. (3)	T_c (4)	P_c (5)	C_p/C_v (6)	Use (7)	Pressure (8)

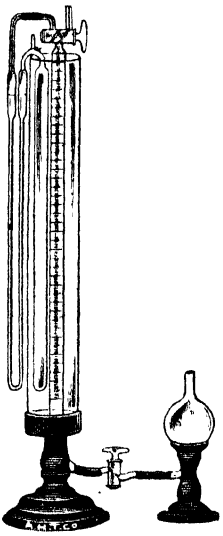
dichloroethylene	$C_2H_2Cl_2$	50	243	55	1.15	R.	

(3) Boiling point in °C.
(4) Critical temperature in °C.
(5) Critical pressure in atmospheres
(6) Ratio of specific heat capacity at constant temp. and pressure (15°C).
(7) Principal uses: A, anesthetic; B, airships; C, chemical reactions; F, fumigant; I, illuminant and fuel; L, lamps; R, refrigerant; W, welding.
(8) Pressure in shipping cylinder (pounds per square inch).

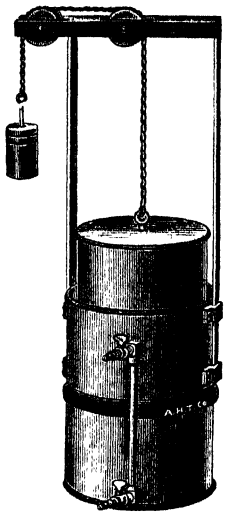
which obeys the gas laws. None is known, but it is assumed that as the pressure on a gas becomes infinitely small, the gas approaches nearer and nearer to the ideal state, where there is no viscosity or internal resistance to molecular motion. **permanent-** An obsolete term for gases which are not liquefyable; with sufficiently low temperature and high pressure all gases condense to liquids, hence this term has only a relative meaning. **petroleum-** Oil. **poison-** A harmful gas, used in chemical warfare. Classification: (a) Lung irritants (chlorine, phosgene, diphosgene, chloropicrin). (b) Lacrimators (bromoacetone, ethyliodoacetate, bromobenzyl cyanide, chloracetophenone). (c) Sternutators (diphenyl cyanarsine, diphenylamine chlorarsine). (d) Vesicants (mustard gas, lewisite). **rich-** Full-. **rock-** Natural-. **sewer-** The gaseous products from a sewer, containing the vapors resulting from the decay of organic material. **sternutatory-** A gas which produces sneezing. **suffocating-** Any gas which is non-respirative, causes smothering and finally stops respiration. **sun-** The gaseous constituents of the sun, *e.g.*, hydrogen, helium, carbon dioxide, etc. **toxic-** A gas which causes poisoning. **two dimensional-** A layer of adsorbed atoms; cf. *adatom*. **vesicant-** A gas which produces blisters of the skin; used in chemical warfare. **volcanic-** A group of gases issuing from volcanoes, which consist of carbon dioxide, nitrogen, hydrogen, sulfur-dioxide, hydrogen sulfide, etc., in varying quantities. **war-** Poison-. **water-** An illuminating and fuel gas prepared by passing steam over glowing coal, and enriching the hydrogen thus produced by hydrocarbons, and carbon monoxide. There are many varieties, which differ according to the conditions of manufacture, (Mond gas, blue gas, water gas, etc.).

g. analysis. Gasometric analysis. The qualitative and quantitative detection and determination of gases. **g. analysis apparatus.** Devices used in gasometric analysis, see *Allen, Burrell, Haldane, Orsat, Petersen, etc. apparatus*. **g. bag.** An oval rubber container for holding gases. **g. balance.** A balance for determining the specific gravity of gases. **g. ballons.** A blown spherical glass container with one or more necks, used for weighing gases. **g. bath.** Air bath. **g. battery.** G. cell. **g. black.** Lamp black. **g. bleaching.** Bleaching by sulfur dioxide or chlorine. **g. buret.** A graduated glass tube with stopcocks on both ends; used in gasometric analysis (see figure). **g. burner.** A burner using gas as fuel. **g. calorimeter.** An

analytical apparatus for determining the heat value, dust, moisture and tar contents of inflammable gas. **g. carbon.** The amorphous, compact residual carbon remaining in the retorts after distillation of gas from coal; used for electrodes in cells and arc lamps. **g. cell.** An electrolytic cell formed by the combination of two gas electrodes, *e.g.*, the E.M.F. of polarization in the electrolysis of water. **g. collecting tube.** An elongated cylinder or bulb closed at each end by a stop-cock. **g. constant.** The



Gas buret.



Gasholder.

constant, R, in the gas-law equation $pv = RT$. This constant, is independent of the chemical nature of a gas, but depends on the units of measurement chosen: $R = p_0v_0/T_0$, where p, v, and T are the pressure, volume, and temperature under the conditions of an ideal gas respectively.

When p is expressed in gm./cm.^{2}, and v in cm^3: R = 84.780 gm.cm./T.

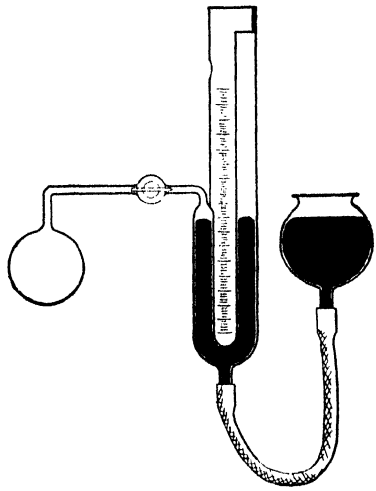
If p is in atmospheres, v in liters: R = 0.08204 l.atm./T.

If p in dynes, v in cm.^{3}: $R = 8.315 \times 10^7$ ergs/g.mol. (or = 1.98 calories).

If p in kg./m.^{2}, and v in cm.^{3}: $R = 8.48 \times 10^5$ kg.m.^{2}/T.

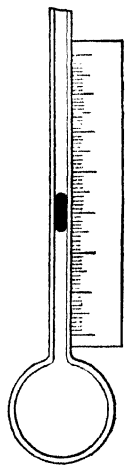
To derive R for 1 gram of gas, it should be divided by the molecular weight (O = 16).

See also *equations of state.* **g. cylinder.** A long steel tank or iron bottle used in shipping liquefied gases, such as carbon dioxide, oxygen, hydrogen, ammonia, chlorine, etc. See *compressed gases.* **g. distributor.** A three-, or four-way stop-cock. **g. electrode.** An electrode, usually of a finely-divided metal, which, by virtue of its power to dissolve or hold a gas on its surface, behaves as a reversible electrode when placed in a solution. See *hydrogen electrode.* **g. engine.** An engine in which the motive power is obtained by the combustion of a gas or gas-mixture in the cylinder. **g. filter.** A device for removing solid or liquid particles from gases. **g. generating bottles.** A device for generating gases in the laboratory, as a Kipp generator. **g. generators.** A machine for the manufacture of gases, *e.g.*, the retort of a gas plant. **g. holder.** A storage tank for holding gases at atmospheric pressure; it consists of two overlapping halves expanding



Constant volume gas thermometer.

within each other and sealed by a liquid (see figure); or, the gas may be displaced from a gas-tight container by allowing water to flow in. **g. laws.** The combination of Boyle's, Gay-Lussac's, and Charles' laws in the equation PV = RT, where V is the volume occupied by the molecular weight in grams, under a pressure P and at temperature T, and R is the g. constant, q.v. See *equation of state.* **g. liquor.** The watery liquor which results from the washing of gas obtained in the distillation of coal. It is a source of ammonia, and also contains sulfides and carbonates. **g. manometer.** A steam gage, q.v. **g. mask.** Respirator. **g. meter.** Gasometer. **g. pipet.** A series of glass bulbs mounted on a frame; used in gasometric analysis. **g. regulator.** (1) A device for regulating the pressure of the gas taken from a cylinder in which it is compressed. (2) A device for regulating the temperature of a gasheated incubator or water-bath by controlling the gas supply. **g. thermometer.** An apparatus for measuring temperature by the variation in pressure or volume of a gas, generally hydrogen. *constant volume-* designed to observe the variation in the pressure of a gas confined at constant or nearly constant volume. *constant pressure-* designed to demonstrate the change in volume of a gas confined at constant pressure, generally air-pressure (see figures).



Constant pressure gas thermometer.

gaseous. The third state of matter, as opposed to the solid and liquid state.

gasogene. Charcoal gas used as fuel.

gasolene, gasoline. Petroleum ether. The third fraction obtained on distillation of petroleum or crude oil, b.75, consisting chiefly of paraffins, *e.g.*, hexane, heptane. Used as a fuel in

combustion engines, as a solvent and cleaning agent. Cf. *oronite*. **ethyl-** See *ethyl*.

gasoloid. A proposed name for a dispersed system which consists of a gaseous dispersed phase in a solid surrounding phase; *e.g.*, gas of occlusion (see *colloids*).

gasometer. (1) An instrument for measuring the quantity of gas flowing through it. (2) A gas-holder.

gasometric. Pertaining to the analysis of gases.

gasometry. Gasometric analysis, gas analysis. The examination and qualitative and quantitative analysis of gases.

gassed. Overcome by noxious gas.

gassing. (1) In agriculture the gassing of plants, *e.g.*, the use of carbon dioxide as a fertilizer, or of a poison gas for destroying animal pests or weed eradication. (2) In warfare, the use of poison gas (q.v.) as a measure of attack or defense.

Gassner cell. A voltaic dry cell (1.3 volt), consisting of a zinc and carbon electrode in a mixture of 1 pt. zinc oxide, 1 part ammonium chloride, 3 parts calcium sulfate, 2 parts zinc chloride moistened with water to form a paste.

gastric. Pertaining to the stomach. **g. content.** Semi-digested food mixed with digestive enzymes. Analysis: (1) Macroscopic: Amount, color, odor, appearance, food-remnants. (2) Microscopic: Blood cells, pus cells, starch cells, mucus shreds and sarcinae. (3) Chemical: Total acidity, free hydrochloric acid, free organic acids, total free acids, combined hydrochloric acid, combined organic acids, lactic acid, pepsin, peptone, occult blood. **g. digestion.** The decomposition of food-materials in the stomach; chiefly the hydrolysis of proteins by pepsin with hydrochloric acid as activator. **g. juice.** The secretions of the stomach glands, containing the digestive ferments and enzymes. **g. tonic.** A drug which improves or stimulates digestion.

gastrin. A gastric hormone, *i.e.*, a substance in the gastric mucous membrane which excites the secretion of gastric juice.

Gattermann, Ludwig. 1860–1920. A German organic chemist, noted for laboratory methods.

gauchamacine. *Guachamacine.*

gauge. Gage.

gaultheria. The dried leaves of *Gaultheria procumbens*, wintergreen, partridge berry or checker berry, an Ericaceae of North America; used as a stimulating tea. **g. oil.** Wintergreen oil.

gaultheric acid. Methylsalicylate.

gaultherilene. $C_{10}H_{16}$ = 136.2. A terpene in wintergreen oil.

gaultherin. $C_{14}H_8O_8$ = 314.4. Monotropitoside. A glucoside from the bark of *Betula lenta* or black birch. It hydrolyses to methyl salicylate and glucose.

gaultherolin. Methyl salicylate.

Gauss, Karl Friedrich. 1777–1855. A German mathematician who developed the conception of the three fundamental units: length, mass and time.

gauss. H. The unit of intensity of a magnetic field (field strength): A magnetic field which exerts a force of one dyne on a unit magnetic pole: 1 gauss (E.M.U.) = $\frac{1}{3} \times 10^{-10}$ e.s.u. For small measurements: 1 γ = 0.00001 gauss.

Gautier receiver. A glass apparatus for collecting different samples from the same condenser during distillation (q.v.) in a vacuum.

gauze. A light, loosely-woven fabric, or fine wire netting. **g. top.** A piece of g. attached to the top of a bunsen burner to prevent the flame from striking back.

Gay-Lussac, Joseph Louis. 1778–1850. A French chemist and physicist noted for the formulation of the gas laws; inventing volumetric methods, and many scientific and industrial devices; isolating boron. **G. hydrometer.** A hydrometer used for alcoholic liquids and graduated in percentages. **G. law.** When gases intereact the volumes of the reacting gases and the volume of the reaction product are in simple proportions, and can be expressed by whole numbers. **G. tower.** A tower used in the chamber process for the manufacture of sulphuric acid to absorb the oxides of nitrogen in the crude acid produced.

Joseph Louis Gay-Lussac.

(From McPherson and Henderson "First Course in Chemistry." Courtesy of Ginn & Co.)

gaylussite. $Na_2Ca(CO_3)_2.H_2O$ = 224 03. A natural sodium-calcium carbonate.

gazogene. A fuel gas made by burning charcoal.

Gd. The symbol for gadolinium.

Ge. The symbol for germanium.

Geber. Abu Abdallah Jaber. An Arabian alchemist and writer living in about the 9th century, noted as the discoverer of sulfuric and nitric acid. The Latin writings attributed to him (which may be of a later date), also contain speculations on the alchemical "elements."

gedanite. A fossil resin resembling amber.

gedrite. A variety of anthophyllite containing alumina.

gee-lb. Slug.

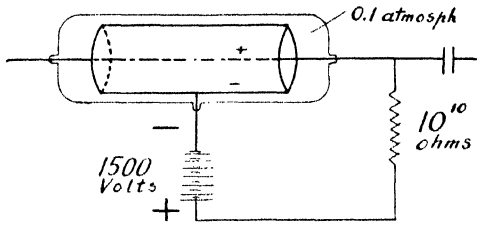
gehlenite. $Ca_2Al_2Si_2O_{10}$. A greenish, resinous, tetragonal calcium aluminum silicate, d.2.9–3, hardness 5.5–6.

geic acid. Ulmic acid.

Geiger counter tube. A fine wire, axially placed in a metallic cylinder under a gas pressure of about 5 cm Hg; used for detecting and counting electrons.

Geiger-Müller counter. A metallic cylinder, charged negatively, in a vacuum tube (0.1 atm.), having in its center a fine wire positively charged. A radiation producing a negative ion will cause it to move towards the wire, and by encountering and colliding with gas molecules it will successively ionize them, thus causing an avalanche

of ions on the wire which can be detected by electrical amplification (see figure).



Geiger-Müller counter.

geikielite. Ilmenite.

geissine. $C_{19}H_{24}O_2N_2.H_2O$ = 330.3. Geissospermine. An alkaloid from the bark of *Geissospermium laeve* or pereira bark, an Apocynaceae of Brazil.

Geissler, Heinrich. 1814–1879. A German physicist who determined the coefficient of expansion of water and experimented with tubes, now called Geissler tubes. **g. bulb.** A potash bulb. **G. tube.** A sealed and partly evacuated glass tube of varied shape, used in the study of electric discharges through gases and for spectroscopic examinations

geissospermine. Geissine.

gel. (1) Jel. A jelly, or the solid phase of a colloids' solution, as opposed to sol, the liquid phase. It consists of a colloidal solution of a liquid in a solid. (2) To form a gel or jelly. Cf. *coagel, swelling, thixotropy, zone.* **alco-** A solid colloidal solution in alcohol. **hydro-** A solid colloidal solution in water. **irreversible-** A gel that cannot be converted into a sol. **reversible-** A gel that becomes a liquid sol on heating or by other treatment, and gels or solidifies again on cooling. **silica-** See *silica.*

gelate. Gelatinise. To cause the solidification of a colloidal solution.

gelatification. Conversion into gelatin.

gelatin. An albumin from animal tissues (bones, ligaments and skin), obtained by boiling them under pressure with water. It occurs as white or yellowish films, insoluble in cold water but which soften and swell when immersed in it; insoluble in alcohol or chloroform, soluble in hot water, acetic acid, or glycerin, and coagulated by tannin, chlorine, bromine, or mercury salts, and hardened by formaldehyde. Composition:

	C	H	N
Commercial gelatin.	49.38 %	6.81 %	17.97 %
ligament gelatin....	50.49 %	6.71 %	17.90 %
tendon gelatin.....	50.11 %	6.56 %	17.81 %
		S	O
Commercial gelatin.....		0.71 %	25.13 %
ligament gelatin.....		0.57 %	24.33 %
tendon gelatin.....		0.26 %	25.24 %

The formulae $C_{76}H_{124}O_{29}N_{24}S$ and $C_{102}H_{151}O_{31}N_{39}$ have been proposed. G. is an amphoteric compound which combines with cations to form "gelatinates," and with anions to form "gelatin-salts":

1. nonionized (iso-electric)..... pH 4.7
2. ionized: (*e.g.* with sodium chloride)
   - A. Metal-gelatinate (*e.g.* sodium gelatinate)..... pH < 4.7
   - B. Gelatin-salt (*e.g.* gelatin chloride)..... pH > 4.7

Gelatin is used as a nutrient; medicinally as a hemostatic; pharmaceutically as an excipient; in bacteriology as a culture medium; technically for photographic papers, films and plates, and in glues, as a clarifying agent in many processes (brewing, etc.), as adhesive, sizing or stiffening agent and colloidal protector. Cf. *isinglass, agar, glue.* **ana-** One of the two constituents of gelatin, soluble or insoluble ana-gelatin, which, when present in the correct proportions produce a gel. **animal-** Gelatin. **bone-** Gelatin prepared from bones. **chinese-** Vegetable-. **chromatized-** A mixture of 5 parts of a 10 % gelatin solution and one part potassium dichromate. **formalin-** Glutolin. **glycerinated-** A mixture of equal parts of glycerol and gelatin. **Japanese-** Agar-agar. **nitro-** A mixture of nitroglycerin and nitrocellulose. Cf. *dynamite, gelignite.* **plain-** A culture medium which consists of 100 gm. gelatin, 10 gm. peptone, and 5 gm. sodium chloride in 1000 cc. bouillon stock solution and neutralized with NaOH. **silk-** Sericin. **vegetable-** A gelatinous substance obtained from various vegetable tissues; as, agar.

g. culture. A bacterial culture grown on a medium containing gelatin; as, pure g., glucose g. **g. discs.** A small disc of medicated gelatin used for the application of drugs to the eye. **g. sugar.** Glycocoll.

gelatinate. A compound of gelatin, (q.v.), with a positive ion or radical.

gelatinize. (1) To gelate. (2) To convert into gelatin.

gelatinous. Jelly-like or resembling gelatin.

gelation. The formation of a gel, q.v. **con-** See *congelation.* **re-** See *regelation.*

gelignite. Blasting gelatin, gelatin dynamite. An explosive consisting of nitroglycerin, nitrocellulose, potassium nitrate and wood-meal. Cf. nitro*gelatin.*

gelling point. The setting point (concentration and temperature) at which semi-liquids or pastes become solid.

gelose. Galactan.

gelsemic acid. Scopoletin.

gelsemin. $C_{49}H_{63}N_5O_{14}$ = 945.9. A resinous substance from the rhizome of *Gelsemium sempervirens.* A yellowish-brown powder, insoluble in water, soluble in alcohol; used medicinally as an antipyretic.

gelsemine. $C_{22}H_{26}O_3N_2$ = 366.22. An alkaloid from the roots of *Gelsemium sempervirens.* A white, amorphous powder, m.160, insoluble in water, soluble in alcohol, ether, or chloroform; used medicinally as an analgesic and antispasmodic.

gelseminic acid. Scopoletin. $C_{10}H_8O_4$ = 192.1. The monomethylether of esculetin: 4-methoxy-5-hydroxycoumarin, m.204.

gelseminine. $C_{42}H_{47}O_{14}N_3$ = 819.6. An alkaloid from the roots of *Gelsemium sempervirens,* yellow jassamine or Carolina jasmine, a Loganiaceae of North America. Colorless crystals, insoluble in water, soluble in alcohol, ether or chloroform; used medicinally as an antipyretic, antineuralgic, and antispasmodic. **g. hydrobromide.** $C_{42}H_{47}O_{14}N_3.HBr$ = 900.53. Colorless crystals, soluble in water or alcohol; used as gelseminine. **g. hydrochloride.** $C_{42}H_{47}O_{14}N_3.HCl$ = 856.07. Colorless crystals, soluble in water or alcohol. **g. nitrate.** $C_{42}H_{47}O_{14}N_3.HNO_3$ = 881.61. Colorless crystals, soluble in water or alcohol.

Gelsemium. (1) A genus of loganiaceous (de Candolle), apocynaceous (Decaisne) or rubia-

ceous (Chapman) plants. (2) Yellow jasmine root. The dried rhizome and roots of *Gelsemium sempervirens*, a Loganiaceae, used medicinally as a nerve sedative, antispasmodic and antineuralgic.

gelsemoid. The combined principles from the root of *Gelsemium sempervirens;* used medicinally as an antispasmodic.

gem. (1) A precious stone. (2) *gem-* A prefix indicating in a disubstituted compound that the radicals, R', are both on the same carbon atom; $R.CR_2'$. **artificial-, synthetic-** A precious stone made by a chemical process, *e.g.*, ruby.

gemmatin. $C_{17}H_{12}O_7$ = 328.08. A coloring matter from the fungus, *Lycoperdon gemmatum.*

-gen. A suffix meaning to produce or bear; as, hydrogen, oxygen.

genalkaloids. An alkaloid in which the amino group has been converted into an amino-oxy group. They have the same therapeutic effect but are less toxic than the parent alkaloid.

gene. A supermolecule or micelle of proteins, considered to be the unit of heredity, which surrounded by colloidal matter, forms the chromomere, the latter, banded together, being the chromosome. (In the tiger lily there are 2200 genes per chromosome.)

genease. Maltase.

generate. To produce or make a gas or an electric current.

generator. An apparatus for manufacturing gases; as, Kipp's g.

generator gas. A fuel gas obtained by blowing air through layers of heated coal or coke. It consists chiefly of CO and CO_2.

generic test. The reactions of organic compounds which determines their place in Mulliken's classification of organic compounds.

Geneva nomenclature. A system of naming carbon compounds recommended by the Geneva Convention for general and international use. See *organic compounds, nomenclature.*

genistein. $C_{15}H_{10}O_5$ = 270.08. Prunetol, 4'.5.7-trihydroxyisoflavone. A flavone (q.v.) from various plants; the aglucone of genistin.

genistin. $C_{21}H_{20}O_{10}$ = 432.15. A glucoside, m.-254, from soy-bean meal. Cf. *plant-pigments.*

genoline oil. Linseed oil polymerised by boiling; used as a lithographic varnish.

gentaric acid. $C_7H_{10}O_6$ = 190.08. Methane triacetic acid. $CH(CH_2COOH)_3$.

genthite. Nickel gymnite.

gentian. Gentian root. The dried rhizome and roots of *Gentiana lutea*, a Gentianaceae; used medicinally as a bitter tonic and stomachic. See *aromatin.*

gentianviolet. The hydrochloride, sulfate, or nitrate of triphenyl-rosaniline and triphenyl-pararosaniline. Grayish-green or bluish powder, soluble in water or alcohol. Used as a stain, and as a disinfectant in tonsillitis.

Gentianaceæ. Gentian family, a group of herbs with a colorless, bitter juice, containing little or no tannin. The following are drugs:

roots:	
Gentiana lutea	gentian
Frasera walteri	American calumba
Tachia guianensis	tachia
herbs:	
Swertia chirayita	chirata
Centaurium centaurea	centaury
Sabbatia paniculata	sabbatia
Menyanthes trifoliata	menyanthe

gentianic acid. Gentisinic acid.

gentianin. (1) An extract containing the bitter principle of the root of *Gentiana* species. (2) Gentisin.

gentianite. $C_{16}H_{32}O_{16}$ = 480.3. A carbohydrate found in the root of *Gentiana* species.

gentianose. $C_{18}H_{32}O_{16}$ = 504.25. A trisaccharide, $[\alpha]_D$ +31°, from gentian, which yields 2 molecules glucose and one molecule fructose.

gentienin. $C_{14}H_{10}O_5$ = 258.1. An isomer of gentisin, m.225.

gentiin. $C_{25}H_{28}O_{14}$ = 552.2. A glucoside from *Gentiana* species, m.274.

gentiobiose. $C_{12}H_{22}O_{11}$ = 342.17. A disaccharide, $[\alpha]_D$ +9.6°, from the hydrolysis of starch. Isomaltose, glucose-β-glucoside.

gentiogenin. $C_{14}H_{16}O_5$ = 264.2. A split-product of gentiopicrin.

gentiopicrin. $C_{16}H_{20}O_9$ = 356.2. A glucoside from the root of *Gentiana* species. Yellowish crystals, m.191°, soluble in water.

gentisaldehyde. $C_7H_6O_3$ = 138.05. *2.5*-Dihydroxybenzene carbonal*, *2.5*-dihydroxybenzaldehyde. $(HO_2)C_6H_3CHO$. Cf. *protocatechualdehyde, resorcylaldehyde.*

gentisein. $C_{13}H_8O_5$ = 244.1. 1.3.7-trihydroxyxanthone. Colorless crystals, m.315.

gentisic acid. $C_7H_6O_4$ = 154.1. Hydroquinone carboxylic acid, 2.5-dihydroxybenzoic acid, gentisinic acid, gentianic acid, 5-hydroxysalicylic acid. Colorless crystals, m.200, soluble in water or alcohol.

gentisin. $C_{14}H_{10}O_5$ = 258.1. Gentianin, 1-methoxy-3.7-dihydroxyxanthone. The yellow pigment of the root of *Gentiana* species. Yellow needles, m.267, sublimes and decomp. at 400°C., slightly soluble in water, soluble in alcohol or ether. **iso-** 7-Methoxy-1.3.dihydroxyxanthone.

gentisin alcohol. $C_7H_8O_3$ = 140.1. 2.5-dihydroxytoluyl-alcohol. A colorless liquid. **dimethyl-** $C_9H_{12}O_3$ = 168.1 2.5-dimethoxytoluyl alcohol. A colorless liquid, b.278.

gentisinic acid. Gentisic acid.

genus. (1) A group of related organic compounds in Mulliken's classification. (2) A group of related species of plants or animals.

geocerinic acid. $C_{28}H_{56}O_2$ = 424.5. An unsaturated aliphatic acid obtained from lignite.

geocerinone. $C_{27}H_{57}.CO.C_{27}H_{57}$ = 791.1. An unsaturated, aliphatic ketone obtained from lignite. Colorless crystals, soluble in water or alcohol.

geochemistry. A branch of geology which deals with the chemical changes occurring on the earth's crust, by which its composition is altered.

geocoronium. A hypothetical element assumed to exist in the upper layers of the atmosphere.

geocronite. $Pb_5Sb_2S_8$ or $5PbS.Sb_2S_3$. A grayish, metallic, rhombic lead antimony sulfide, d.6.4–6.5, hardness 2–3.

geodesy. The science of the form and dimensions of the earth and its surroundings.

geodynamics. The active phase of geology, or a study of the forces and causes which change the earth surface. Cf. *geomorphology.*

geoffrayin. Rhatanin.

Geoffroy, Claude Joseph. 1685–1752. A French apothecary who determined the constitution of borax, salmiac and other salts. **G., Etienne Francois** 1672–1731. A French physician and teacher of chemistry, noted for his theory of affinity.

geologic. Pertaining to geology.

GEOLOGIC ERA

ERA PERIOD AND SYSTEM EPOCH AND SERIES	*Time*, estimated in millions of years			*Rock-types;* Maximum known thickness in 1000 ft.		
	era	period	epoch	era	system	series
CENOZOIC ERA	60	.....	.....	70	..	..

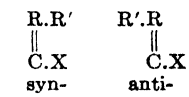
Keweenawan epoch and series	...	.....	?	...	..	50
Huronian epoch and series	...	.....	?	...	..	32
Archean period and system	...	?	.....	...	94	..

geologic era. The periods during which certain rock strata were formed on the earth's surface. Accordingly the earth's physical history is divided into *eras*, subdivided into *periods* and again divided into still smaller units called *epochs*. The rocks formed during a period constitute a geologic *system*, those formed during an epoch constitute a *series* which are again subdivided into *formations*, many of them characterized by the remains of vegetable and animal life. Hence we speak of the quaternary period and the quaternary system, but the pliocene epoch and the pliocene series. (See table, adapted from Bulletin No. 769, U. S. Geologic Survey, Washington, 1926.)

geology. The science of the physical history of the earth and the structure of the earth surface. **dynamic-** The study of the agencies which cause geological changes. **economic-** The study of the occurrence and formation of economically important minerals, ores, or stones. **eolic-** The study of the changes produced by wind. **historical-** The study of the successive development of rock formations. **palaeantologic-** The study of the remains of animal and vegetable life and their relation to rock formations. **stratigraphic-** Historical-. **structural-** The study of the formation, arrangement, and aggregation of rocks on the earth surface.

geometric(al). Pertaining to or determined by the principles of geometry. **g. conversion.** The change from one g. isomer to another; as elaic acid to oleic acid, or maleic acid to fumaric acid. **g. isomer.** An optically inactive compound which exists in two or more geometrically different atomic arrangements; as, cis- and trans-form, syn- and anti-form. **g. isomerism.** Describing isomeric organic compounds characterized by a double bond, in which the molecules differ by a geometrically different spacial arrangement of the atoms, but which are optically inactive; as,



g. progression. A series of numbers related by a constant ratio between successive terms. For instance the number of possible peptides from 1,2,3 . . . amino acids are:

1 amino acid	1 compound
2 a.a. = 2 × 1 or	2 compounds
3 a.a. = 3 × 2	6 compounds
4 a.a. = 4 × 6	24 compounds
5 a.a. = 5 × 24	120 compounds
6 a.a. = 6 × 120	720 compounds

geomorphology. The passive phase of geology, or a study of the form of the earth surface. Cf. *geodynamics*.

georhetinic acid. $C_{28}H_{40}O_{31}$ = 836.4. A resin from lignite.

geosote. Guaiacol valerate. A compound of guaiacol and valeric acid, used as an antiseptic.

geranene. $C_{10}H_{16}$ = 136.2. A liquid hydrocarbon derived from geraniol.

geranial. Citral.

geranic acid. $C_{10}H_{16}O_2$ = 168.2. *3.7*-Dimethyl-*2.6*-octadienoic acid*. A monobasic acid and the oxidation product of citral or geraniol. An oily liquid, d.0.952, b_{20mm}.119. **iso-** Colorless crystals, m.103, b_{11mm}.138.

geraniol. $C_{10}H_{18}O$ = 154.20. An unsaturated alcohol $Me_2C{=}CH.CH_2.CH_2.CMe{=}CH.CH_2OH$, a constituent of the oils of geranium, roses, eucalyptus, citronella, lavender, and ylang. A colorless liquid, d.0.881, b.231, insoluble in water, miscible with alcohol, or ether; used as insect bait. Cf. *ylangol*, *geranyl*. **dihydro-** Citronellol.

geranium. Cranesbill. The dried rhizome of *Geranium maculatum*, used medicinally as an intestinal astringent. **g. oil.** The essential oil from the leaves of *Pelargonium* species occurring in many grades, d.0.889–0.906, and containing geranial, citronellol, phellandrene and tiglates. *Turkish-* Palmarosa oil. The essential oil of *Andropogon* (*Cymbogen*) *martini*, a Geraniaceae, containing 70 % geraniol.

geranyl. The monovalent $C_{10}H_{17}$— radical derived from geraniol. **g. acetate.** $CH_3.COO\text{-}C_{10}H_{17}$ = 196.22. Geraniol acetate. A colorless liquid, d.0.915, decomp. 245, slightly soluble in water or alcohol, miscible with ether. **g. chloride.** $C_{10}H_{17}Cl$ = 172.6. A colorless liquid, soluble in alcohol.

Gerhardt, Charles Friederich. 1816–1856. A French chemist who formulated the concept of homologous and heterologous series among organic compounds. **G. test.** A test for diacetic acid in urine by means of ferric chloride solution.

gerhardtite. A native, basic copper nitrate.

germ. (1) A primitive embryo or embryonic cell. (2) A bacterium, microbe or spore.

german silver. Nickel silver. A white alloy of copper (60), nickel (30) and zinc (30); used in resistance coils and for cutlery.

germane. GeH_4 = 76.63. Germanium hydride. A colorless gas, burning with a blue flame, $d_{-142°}$,1.523, m.−165, b.−90. **di-** Ge_2H_6 = 150.81. Germanoethane. A gas, $d_{-109°}$1.98, m.−109, b.29. Cf. *germanium ethide*. **tri-** Ge_3H_8 = 225.20. Germanopropane. A liquid d.2.20, m.−105, b.110.

germanate. A salt of the type M_2GeO_3, derived from germanium dioxide. **thio-** A salt of the type M_2GeS_3 derived from germanium disulfide.

germander. Chasse fièvre. The herb of *Teucrium chamaedris*, a Labiatae, used as tonic, diuretic and for gout. **water-** Wood garlic, English treacle. The herb of *T. scordium*, used as antiseptic and stimulant.

germanic. A compound of tetravalent germanium, Ge≡. **g. chloride.** Germanium tetrachloride. **g. oxide.** Germanium dioxide.

germanin. Bayer 205, naganol, suramin. The sodium salt of 3,3′-ureidobis [8-(3-benzamido-p-toluido)-1,2,5-naphthalenetrisulfonic acid]. A colorless, readily soluble substance, used as a specific in the treatment of sleeping sickness in man or animals.

germanite. A copper mineral from Tsumeb, S. W. Africa, which contains 6–8 % Ge and 1 % Ga.

germanium. Ge = 72.60. Atomic number 32. A metallic element of the carbon family, d.5.496, m.958, b.1300, insoluble in water, acids or alkalis. It was discovered in 1886 by Winkler in argyrodite, after being previously predicted in 1871 by Mendeleeff (ekasilicon). Germanium is a very rare metal, occurring in any quantity only in argyrodite, euxenite and germanite. Its valency is two or four, hence it gives rise to the compounds:

+2: germanous	Ge^{++}
+4: germanic	Ge^{++++}

Ge is at present little used, but it has great possibilities: it gives strength to aluminum alloys, greater hardness to magnesium alloys, and higher refractive power to glass.

g. alkyls. A group of organo-metallic compounds in which tetravalent germanium replaces carbon, *e.g.*, germanium ethide. **g. chloride.** See *g. tetrachloride*, or *g. dichloride*. **g. chloroform.** $GeHCl_3$ = 179.4. A colorless liquid, b.72, decomp. by water, soluble in hydrochloric acid. **g. dichloride.** $GeCl_2$ = 143.4. Germanous chloride. A colorless liquid. **g. dibromide.** $GeBr_2$ = 232.46. Germanous bromide. Colorless crystals, decomp. on heating. **g. diiodide.** GeI_2 = 326.46. Yellow crystals. **g. dioxide.** GeO_2 = 104.5. G. oxide, germanic oxide. A white powder, $d_{18°}$4.703, m.1025, slightly soluble in water, soluble in acids; used in the treatment of pernicious anemia. **g. disulfide.** GeS_2 = 136.6. G. sulfide, germanic sulfide. A white powder, decomp. on heating or by water, soluble in alkalis. **g. ethide.** $GeEt_4$ or $C_8H_{20}Ge$ = 188.5. Germanium tetra-ethyl. A colorless liquid, b.160. **g. hydride.** Germane. **g. hydroxide.** $Ge(OH)_2$ = 106.6. A yellow powder, insoluble in water, soluble in alkalis. Cf. *germanoformic acid*. **g. iodide.** See *g. tetraiodide*. **g. monosulfide.** GeS = 104.5. Germanous sulfide. Dark brown, thin plates of metallic luster, soluble in alkalis. **g. monoxide.** GeO = 88.5. Germanous oxide. A dark gray volatile powder, soluble in HCl. **g. oxide.** See *g. dioxide* or *g. monoxide*. **g. sulfide.** See *g. disulfide*, or *g. monosulfide*. **g. tetrabromide.** $GeBr_4$ = 392.31. Germanic bromide. A colorless fuming liquid, d.3.13, m.26.1, b.185.9. **g. tetrachloride.** $GeCl_4$ = 214.4. G. chloride, germanic chloride. A colorless fuming liquid, $d_{18°}$.1.887, m.−49.5, b.86, decomp. by water to a hydrated germanium dioxide. **g. tetraethyl.** G. ethide. **g. tetrafluoride** GeF_4 = 148.6. Germanic fluoride. Colorless hygroscopic crystals, $GeF_4.3H_2O$, readily soluble in water. **g. tetraiodide.** GeI_4 = 580.2. G. iodide, germanic iodide. A red, crystalline powder, d.4.32, m.144, b.355, decomp. by water, soluble in dilute acids.

germanoformic acid. H.GeOOH. A tautomer of germanium hydroxide obtained by heating $Ge(OH)_2$ with alkali. It is a red powder and a reducing agent.

germanous. The compounds of divalent germanium, Ge=, which are generally less stable than the germanic compounds. **g. chloride.** Germanium dichloride. **g. oxide.** Germanium monoxide. **g. sulfide.** Germanium monosulfide.

germicidal. Destructive to microorganisms or germs.

germicide. An agent that destroys microorganisms; applied especially to agents that kill disease germs, cf. *disinfectant*. Their strength is measured by the Salle index, the ratio a/b, where a is the germ-killing power and b the tissue destroying effect. Values:

iodine trichloride	0.04
iodine	0.09
hexylresorcinol	3.0
metaphen	12.7
phenol	12.9
pot. merc. iodide	13.3
merthiolate	35.3
mercurochrome	262.0

Cf. *Rideal-Walker test.*

germination. The sprouting of a seed or spore.

germinator. A device to determine the germinating power of barley or other seeds; it consists of a perforated disc holding a certain number of seeds, supported over water, and kept at a definite temperature.

geronic acid. $C_9H_{16}O_3$ = 172.10. *2*-Dimethyl-*6*-ketoheptoic acid. An oxidation product of β-carotene and β-ionone.

gerontin. $C_6H_{14}N_2$ = 102.1. A leukomaine from dog's liver.

gerontology. The study of diseases of the aged.

gersdorffite. (Ni,Fe)AsS or NiS_2,$NiAs_2$. Plessite. A native, metallic, grayish nickel-iron sulfarsenide, d.5.2–6.3, hardness 5.5, soluble in nitric acid.

Geryk pump. A vacuum pump. Cf. *Guericke.*

gesarol. See DDT.

gesnerin. The *5*-glucoside of *4'.5.7*-trihydroxyflavylium chloride. An anthocyanin from the orange flowers of *Gesneria* species.

gesso. A plaster made of whiting and glue, and found on objects from ancient Egyptian monuments.

gestalt. Showing properties other than can be derived from the individual constituents by summation.

getter. (1) A substance which "cleans" gases, such as, O, N, H_2O etc., from vacuum tubes, such as, radio valves, transmitting tubes, rectifiers. **absorptive-** or **chemical-** A g. which reacts with the gas; as, Li, Mg and Ca. **adsorptive-** or **physical-** A g. which binds gases on its surface, as zirconium. (2) A metal, e.g., thallium, used to coat the filament of a tungsten lamp and so to prolong its life.

geyserite. A sinter produced near geysers, consisting essentially of hydrous silicic acid.

ghatti gum. Indian gum.

ghee. Indian butter fat. A butter-like substance from the seeds of *Bassia butyraceae*, used for soap making and edible purposes. **Phalka-** An oil from the seeds of various *Bassia* species, used to adulterate ghee.

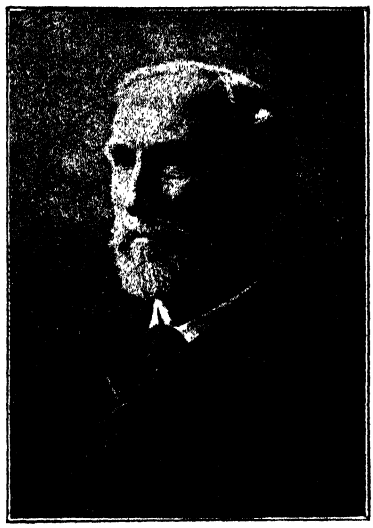
ghetta acid. $C_{24}H_{48}O_2$ = 508.54. A fatty acid from ghedda, an East Indian wax.

giallioline. Lead antimoniate.

Gibbs, Josiah Willard. 1839–1903. An American mathematician and physicist noted for the development of the phase rule (q.v.) and thermodynamics. **G. function.** Thermodynamic potential. **G.-Helmholtz equation.** The relationship between the chemical energy transformed and the maximum energy obtainable electrically in a reversible galvanic element.

$$E = \frac{Q}{nF} + T\frac{dE}{dT}$$

where E is the E.M.F. of the cell, Q the heat equivalent of the chemical change for molar quantities, expressed in electrical units, F 96,540 coulombs, T the absolute temperature at which the cell is working, and n the valency, or the number of charges carried by a mol of the substances undergoing change; dE/dT is the rate of change in E.M.F. of the cell with temperature. **G. paradox.** Work is obtainable when 2 gases of thermodynamically identical physical properties (*e.g.*, N_2 and CO) are mixed,



Josiah Willard Gibbs.

but not when 2 portions of the same gas are mixed. **G. phase rule.** See *phase rule.*

Gibbs, Oliver Wolcott. 1822–1908. An American chemist noted for his work on cobaltammines, complex acids and platinum compounds.

gibbsite. $Al_2O_3(H_2O)_3$. A native aluminum hydroxide.

Giemsa, Gustav. 1867– . A German chemotherapist noted for laboratory methods. **G. stain.** A microscope staining solution for white blood corpuscles, consisting of 0.3 gm. azur II eosin, 0.8 gm. azur II, 250 gm. glycerin, and 250 cc. methanol. **G. ultra filter.** A device for sterilizing and filtering small quantities of biological liquids through a collodion membrane.

gigantic acid. An antibacterial substance produced by a species of *Aspergillus giganteus;* it may be identical with flavacidin.

gigantolite. A pseudomorphic alteration of iolite.

Gilbert, Sir Joseph Henry. 1817–1901. An English chemist noted for agricultural research, and the formulation of the nitrogen theory. **G., Ludwig Wilhelm.** 1769–1824. A German chemist, and editor of *Annalen der Physik.* **G., William.** 1540–1603. An English natural philosopher, physician to Queen Elizabeth and a pioneer in magnetism and electricity.

gilbert. An obsolete unit of magnetic quantity. 1 gilbert = 0.7956 ampère-turn. 1 International gilbert = 0.99991 absolute gilberts. 1 absolute gilbert = 1.00009 international gilberts.

Gilead balm. Balm of Gilead, Mecca balsam. An oleoresin from *Balsamodendron gileadense*, a Burseraceae. Cf. *poplar buds.*

Giles flask. A volumetric flask with long neck, graduated at x and at $\left(x + \frac{x}{10}\right)$ of its volume; *e.g.*, at 500 cc. and 550 cc. Used in preparing normal solutions.

gill. A liquid measure: 1 gill = 4 fluid ounces = 118.29 cc. = 0.25 pint.

gillenia. Indian physic, American ipecac. The root bark of *G. trifoliata* or *G. stipulacea*, a Rosaceae; used as an emetic and cathartic.

gilsonite. Uintaite. A black, brittle, lustrous mineral consisting of hydrocarbons.

Giltner tube. A tube for anaerobic cultures.

gin. An alcoholic beverage made by distillation of a fermented extract of grain in the presence of Juniper leaves. **artificial-** Fancy g. to which flavoring essences have been added. **fancy-** A mixture of g. and neutral alcohol.

ginger. Zingiber. The dried rhizome of *Zingiber officinalis*, a Scitaminaceae of Asia, West Indies, and Africa, used medicinally as an aromatic and stimulant. **black-** The crude drug having a black skin. **jamaica-** The yellowish white roots, from which the skin has been removed. **wild-** Asarum.

g. oil. The essential oil of g., d.0.882–0.900, b.155–300, containing phellandrene and zingiberene.

gingerin. An oleoresin derived from ginger.

gingerol. An essential oil derived from ginger.

ginkgoic acid. $C_{24}H_{48}O_2$ = 368.5. An unsaturated acid from the fruit of *Ginkgo biloba*.

ginning. The removal of the larger seed hairs from the cotton plant. Cf. *cotton, linter.*

ginseng. Panax. The dried roots of *Panax quinquefolium*, an Aralia species, used medicinally as a tonic and demulcent.

Girard reagents. Quaternary ammonium compounds of the type $Me_3N(Cl).CH_2CONH.NH_2$, which form soluble compounds with substances containing CO groups; these may subsequently be regenerated. Used to separate sex hormones from urine.

gismondine. Gismondite.

gismondite. $CaAl_2Si_4O_{12}$. Gismondine, abrazite. A white or grayish, hydrated lustrous, monoclinic zeolite, d.2.4, hardness 5–5.5.

gitalin. $C_{28}H_{48}O_{10}$ = 544.37. A glucoside, m.-253, from digitalis leaves.

githagenin. $C_{28}H_{44}O_4$ = 444.4. The aglycone of **githagin.** A saponin from corn cockle, *Agrostemma githago*, which hydrolyses to githagenin and glucuronic acid.

gitogenic. Having a digitalis-like effect, or the structure of digitalis aglucones. See *cholane derivatives.*

gitoxigenin. $C_{24}H_{36}O_5$ = 404.3. A split-product of gitoxin.

gitoxin. A glucoside from the leaves of digitalis; it hydrolyses to 1 mol. gitoxigenin and 3 mol. digitoxose.

glacial. Describing a compound of ice-like, crystalline appearance, especially the solid form of a liquid compound, as glacial acetic acid.

Gladstone, John Hall. 1827–1902. An English chemist who investigated the optical constants of compounds, and electrical storage batteries.

gladwin. The root of *Iris foetidissima*, used as an antispasmodic.

glance. The general term for minerals with a glassy luster, *e.g.*, lead glance, galena.

gland. An organ that separates a specific substance (waste product) from the blood, or which secretes specific substances (*e.g.*, enzymes).

glandula. A group of therapeutic preparations consisting of dried glands.

glanzstoff. See *rayon.*

Glaser furnace. A combustion furnace used for organic elementary analysis.

glaserite. $Na_2SO_4.3K_2SO_4$. Aphthitalite, arcanite. A colorless, vitreous potassium-sodium sulfate, d.2.6, hardness 3–3.5, occurring at Stassfurt.

glass. An amorphous, hard, brittle, often transparent material consisting of a mixture of the silicates of the alkali and alkaline earth or heavy metals. It is obtained by the solidification of a fused mass containing:

A. SiO_2 as quartz, flint pebbles or siliceous sand; this can be replaced by B_2O_3, Al_2O_3, or Mn_2O_3.

B. Na_2O or K_2O as carbonate or sulfate, and coal.

C. CaO as limestone or marble; this may be replaced by PbO, MgO, ZnO, or BaO.

The constituents, A, B, and C, are finely powdered, well mixed and heated to 1000–1100°C.; on cooling to 890°C. the pasty glass is worked by blowing, drawing, casting, or fusing piece to piece, and then annealed by slow cooling or by reheating and cooling. The composition of glass varies between $(K,Na)_2O,(Ca,Pb)O,6SiO_2$ and $5(K,Na)_2O,7(Ca,Pb)O,36SiO_2$, and the following formula has been ascribed to it: $(K, Na)O—Si_nO_{2n-1}O(Ca, Pb)O\text{-}Si_nO_{2n-1}—O(K, Na)$. According to the predominating constituents glass is classified into:

(1) Potash-lime glass—hard, not soluble and resistant to water and acids, d.2.4, generally used for chemical glassware.

(2) Soda-lime glass—more fusible and less resistant, d.2.65, used for ordinary window glass or venetian glass. Average composition: 18.58 % Na_2O, 5.06 % CaO, 73.4 % SiO_2.

(3) Potash-lead glass—readily fusible and highly refractive; as crystal glass, d.2.9–3.6, flint glass, d.3.3–3.6, consisting of 13.88 % K_2O, 32.95 % PbO, and 53.17 % SiO_2, paste for artificial gems and lenses, crown glass (containing BaO) d.1.5–1.56.

(4) Bottle glass consisting of Na, K, Ca, and Al silicates, d.2.73.

(5) Opaque glass—a glass made opaque by the addition of $BaSO_4$, smalts, or bone-ash.

(6) Colored glass—a glass colored by the addition of metallic oxides, as

yellow—antimony, iron, silver or uranium;
red—gold chloride, ochre, cuprous oxide or selenium;
green—ferrous sulfate, copper or chromium oxide;
blue—cobalt oxide or traces of copper;
iridescent—the vapors of metallic chlorides on the hot glass;
nacreous—by the addition of scales of mica.

	Window (%)	Flint (%)	Bottle (%)	Pyrex (%)
(A) SiO_2	71.5	54	74	80.6
Al_2O_3	1.5	..	0.5	2.6
B_2O_3	....	..	....	11.9
(B) Na_2O	14.0	..	17	4.4

(C) CaO	13.0	..	5	1.1
PbO	....	36	....	....
MgO	....	..	3.5	....

blown- A glass which is blown into shape. **Bohemian-** Potash glass. **borax-** A glass with a low expansion coefficient, which contains borax. **boro-silicate-** An optical glass containing lead boro-silicate. **bottle-** A glass which is blown into shape in a mold. **bullet-proof-** A series of plate-glass sheets cemented together in layers by a transparent medium. **canary-** Uranium-. **cast-** Plate-. **chemical-** An acid- or alkali-resistant glass used for chemical apparatus. **chromium-** A glass colored yellow by chromium compounds. **clock-** A circular piece of glass similar in shape to that used for covering clock faces; used to cover beakers etc., and may contain a hole to take a rod. **cobalt-** A glass colored purple-blue by cobalt compounds; used as a light filter in analytical chemistry. **copper-** A glass colored blue or red by copper compounds. **cover-** A thin glass square used to cover microscope specimens on the slide. **crown-** A hard optical glass consisting of a silicate of sodium with calcium and aluminum oxides. **cryolite-** Milk-. **crystal-** Flint-. **electric bulb-** A lime glass used for electric bulbs. **flint-** A soft optical glass consisting of potassium and lead silicates. **frosted-** A glass having a roughened surface. **iron-** A glass colored yellow, olive-green, or pale blue by iron compounds. **jena-** A group of optical and heat-resisting glasses made at Jena. **laminated-** Safety g. G. made by cementing thin sheets of g. together with a plastic at 200–260°F. and 250–350 pounds pressure per square inch. It may crack but will not splinter or shatter under impact. **lead-** A soft glass with a low melting point, containing lead oxide, *e.g.*, flint glass. **lime-** A glass containing calcium oxide, *e.g.*, venetian-. **manganese-** A glass colored violet by manganese compounds. **milk-** An opaque glass colored milky-white by cryolite. **opal-** An opaque glass colored milky-white by calcium phosphate or bone ash. **organic-** A term used for certain synthetic resins which have the appearance of glass, *e.g.*, perspex. **muscovy-** Muscovite. **normal-** A g. of definite chemical composition. **optical-** A glass used for optical purposes, *e.g.*, crown, flint, jena glass etc. **plate-** A thick sheet of glass manufactured by pouring the molten glass on iron tables, then rolling and polishing it. Used for mirrors or windows. **potash-** Bohemian glass. A glass containing more potassium than sodium, *e.g.*, crown, flint, etc. **pyrex-** A heat-resisting glass, d.2.25, m.750, used extensively for chemical glass-ware and household dishes. It contains a high proportion of silica. **rolled-** An inferior quality of plate glass. **ruby-** A dark-red glass containing copper compounds or colloidal gold. **safety-** Laminated g. **silica-** Though not a true glass, fused silica is often used where a transparent, resistant glass is required. **silicate-flint-** A jena glass used for optical purposes containing SiO_2 (29–53 %), PbO (67–36 %), K_2O (3–8 %), Na_2O (0–1 %), Mn_2O_3 (0.04–0.06 %), and As_2O_3 (0.2–0.3 %). **soda-** A glass containing more sodium than potassium, *e.g.*, venetian glass. **soluble-** Waterglass. **spun-** G. wool. **synthetic-** A glass-like, transparent plastic made (e.g.) by the condensation of urea and formaldehyde; as, pollopas, perspex. **thallium-** A g. containing Tl in place of Pb. **toughened-** Plate glass which has been specially heat-treated to prevent splintering under impact. Cf. *bullet-proof g. laminated g.* **uranium-** A dichroic greenish-yellow glass containing uranium compounds, used for light filters. **watch-** A small concave-convex glass used for watches, and in laboratories. **water-** An aqueous solution of sodium or potassium tetrasilicate. **window-** Ordinary glass plates manufactured by blowing the molten glass into cylinders, then slitting and flattening them out on tables. **zinc-crown-** An optical glass consisting of 65.4 % SiO_2, 15 % K_2O, 5 % Na_2O, 9.6 % BaO, 2.0 % ZnO, 0.4 % As_2O_3, 0.1 % Mn_2O_3, and 2.5 % B_2O_3.

g.-beads. Solid or hollow glass spheres; used to prevent excessive ebullition of heated liquids or, when properly calibrated, to determine the specific gravity of liquids. **g. colors.** A metal or oxide used to give color to a glass; cf. *glass* (6). **g. cullet.** (1) Broken g. waste. (2) The waste g. left over in g. manufacture, which is powdered and used as abrasive in matches, primers, polishes, soaps and cements. **g.-cutter.** Small mounted diamond fragments or a steel knife used for cutting glass plates or tubing. **g.-drops.** Prince Rupert drops. **g.-gage.** A circular metal disc with round holes, used for measuring the outside diameter of glass tubing. **g. marking.** Ceramic ink. **g. of antimony.** The fused mass which results from the incomplete oxidation of stibnite. **g.-paper.** Calico or paper covered with thin glue and sprinkled with powdered glass; used for levelling and polishing wood and metal. **g.-rods.** A solid stick of glass. **g.-stirrer.** A glass rod, either straight or suitably shaped. **g.-tubing.** A hollow glass rod, used in making chemical and physical apparatus, having various diameters, heavy or thin walls. (*barometer-*) Capillary. (*capillary-*) A thick-walled glass tube having a bore less than one millimeter in diameter. **g. tank.** The container in which g. is melted; it is lined with aluminum silicate. **g.-wool.** Fine thin glass threads used for filtering, or in place of cotton wool.

glassine. A thin, hard and almost transparent paper made from well beaten chemical wood pulp.

Glauber, Johann Rudolf. 1603–1668. A Dutch iatrochemist who prepared sodium sulfate, hydrochloric acid and many metallic salts, and suggested improvements in industrial chemistry. **g. salt.** Crystalline sodium sulfate.

glauberite. $CaSO_4.Na_2SO_4$. A calcium sodium sulfate found at Stassfurt.

glaucine. $C_{21}H_{25}O_4N$ = 355.3. An alkaloid from the sap of *Glaucium flavum* or yellow horned poppy, a Papaveraceae. Yellow rhombic prisms, m.119. It is related to dicentrine and laurotetanine.

glaucinic acid. An acid from certain lichens.

glaucochroite. $CaMnSiO_4$. A rare calcium manganese silicate of the olivine group.

glaucodot. $(Fe,Co)S_2$, $(Fe,Co)As_2$. A cobalt iron sulfarsenide. Cf. *alloclasite.*

glaucomelænic acid. $C_{12}H_2O_8$ = 242.0. A black compound derived from ellagic acid.

glauconite. Bravaisite. An amorphous, olive green, granular iron, potassium, aluminum, magnesium, calcium silicate formed from oceanic sediments, and occurring in the rocks of all ages.

glaucophane. $NaAlSi_2O_6.(Fe,Mg)SiO_3$. A rock-forming mineral of the amphibole series, occur-

ring in monoclinic, bluish-gray masses, d.3–3.1.

glaucopicrine. An alkaloid from the roots of *Glaucium flavum* and *Chelidonium majus*.

glaze. A glassy coating. **enamel-** A suspension of metallic oxides in a glass which is burned into pottery or iron ware. **porcelain-** A mixture of feldspar, lime and quartz fused into ware. **salt-** A glassy covering of a silicate of sodium and aluminum produced on earthenware by adding salt to the kiln during firing. **transparent-** A glass covering for earthenware.

glazed. Having a glassy or glossy appearance. **g. paper.** A paper with a glossy surface, used in the laboratory for transferring precipitates, or for obtaining curves from delicate instruments, *e.g.*, from the kymograph, in which case the paper is previously smoked with carbon.

gleditschine. Stenocarpine. An alkaloid from the leaves of *Gleditschia triacanthos*, three-thorned acacia or honey locust tree, a Leguminosae of the United States.

glendonite. A pseudomorphous variety of calcite found in Australia.

gliadin. Prolamin, vegetable protein. A group of simple proteins or globulins derived from gluten, the protein of wheat, rye, durum, spelt, etc. Wheat gliadin has the composition: 52.72 % C, 6.86 % H, 17.66 % N, 1.03 % S, 21.73 % O, corresponding with the empirical formula $C_{688}H_{1068}O_{211}N_{186}S_5$ = 15,578.0.

glidin. An albuminous preparation from wheat flour, used as nutrient. **arsenic-** Arsan. **bromo-** G. containing bromides. **ferro-** G. containing iron salts. **iodo-** G. containing iodides.

gliotoxin. An antibiotic substance isolated from cultures of various fungi; its formula is $C_{13}H_{14}N_2O_4S_2$.

globin. An animal protein in hemoglobin. It is a stone-like body, insoluble in water, soluble in acids and alkalis, coagulated by heat, but redissolved by acids. Proposed formula: $C_{700}H_{1098}O_{196}N_{184}S_2$ = 15,283. **hemo-** See *hemoglobin*. **oxyhemo-** See *hemoglobin*.

globularesin. $C_{22}H_{36}O_8$ = 404.4. A resin-like substance from *Globularia alypum*, the wild senna of Southern Europe.

globularetin. C_9H_6O = 130.0. A split-product of globularin.

globularin. $C_{15}H_{20}O_8$ = 328.2. An amorphous glucoside from the leaves of *Globularia alypium*, a Globulariaceae of Southern Europe.

globulin. A simple protein, coagulated by heat, insoluble in water, soluble in dilute solutions of salts. **acid-** Syntonin. **crystalline-** A g. derived from the lens of the eye. **serum-** A simple protein occurring in the blood. That of the horse has the proposed formula $C_{628}H_{1002}O_{209}N_{160}S_5$.

globulins. A group of simple proteins (q.v.), as serum globulin, edestin, etc., in vegetable and animal tissues (blood, wheat, cotton seed, squash seed).

globulol. $C_{15}H_{26}O$ = 222.20. A sesquiterpene alcohol from eucalyptus oil.

globulose. A split-product of globulins produced by peptic digestion.

globulus. A small sphere; *e.g.*, a button or drop of metal.

glonoin. Nitroglycerin.

Glover tower. A tower in sulfuric acid plants. See *sulfuric acid manufacture*.

glucal. $C_6H_8O_3$ = 128.1. An unstable and toxic aldehyde derivative of glucose

glucase. An obsolete term for maltase.

glucic acid. $C_3H_4O_3$ = 88.0. Acrolactic acid, β-hydroxyacrylic acid, 3-hydroxypropenoic acid*. A colorless liquid, soluble in water.

glucide. A group-term including carbohydrates and glucosides, q.v.

glucin. Sodium aminotriazinesulfonate. A sweetening agent resembling saccharin.

glucinic acid. $C_{12}H_{16}O_9.3H_2O$ = 358.2. A hexabasic acid formed in the decomposition of glucose by acids or alkalis. Colorless crystals.

glucinum. Gl. An obsolete name for beryllium, q.v.

gluco- See also *glyco-*.

glucochloral. Chloralose.

glucocholic acid. $C_{24}H_{39}O_4.NHCH_2COOH$ = 465.52. Colorless needles, m.134, slightly soluble in water, soluble in alcohol or ether.

glucofurone. $C_6H_{10}O_6$ = 178.07. The γ-lactone of gluconic acid. Cf. *glucopyrone*.

glucogen. Glycogen.

glucohydrazones. A group of intermediate compounds formed during the ozasone reaction of carbohydrates by heating aromatic hydrazines and hexoses, *e.g.*, phenyl hydrazine and glucose: $PhNHNH_2 + C_6H_{12}O_6 = C_6H_{11}O_5{:}N.NHPh + H_2O$.

glucokinin. Insulin.

gluconate. A salt of gluconic acid containing the $HOCH_2(CHOH)_5COO—$ radical; usually a homogeneous paste. **aluminum-** A salt of varying composition, partly a colloidal suspension of $Al(OH)_3$ in gluconic acid; used in tanning. **calcium-** $[CH_2OH(CHOH)_5COO]_2Ca$. A white powder, used medicinally to obtain a calcium effect.

gluconic acid. $C_6H_{12}O_7$ = 196.1. Pentahydroxyhexoic acid*, dextronic acid, glycogenic acid, *2.3.4.5.6*-hexapentol acid. An isomer of mannonic acid, derived from glucose by oxidation. Two optically-active isomers: **dextro-** (Dextronic acid, maltonic acid). A white powder, m.125, of pleasant sour taste. In 65 % solution it forms lactones and becomes plastic. Used for fruit jellies, baking powders, etc. **levo-** $C_5H_6(OH)_5COOH$. A white crystalline solid, soluble in water, insoluble in alcohol.

glucophore. A group of atoms which form sweet compounds with atoms or radicals (auxoglucs). (Analogous to chromophore and auxochrome); *e.g.* —CHOH.CH_2OH, —NH_2-CH.COOH, and —CH_2I.

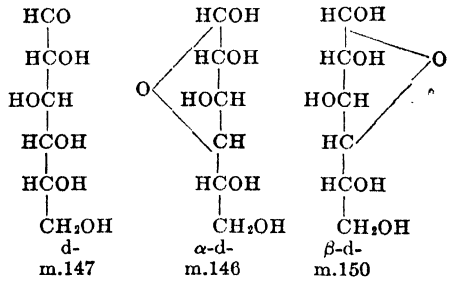
glucopyrone. $C_6H_{10}O_6$ = 176.07. The δ-lactone of gluconic acid. Cf. *glucofurone*.

glucosamine. $C_6H_{13}O_5N$ = 179.2. An amino sugar, $CH_2OH(CHOH)_3CHNH_2CHO$. The amine of glucose and a split-product of chitin, b.110 (decomp.).

glucosazone. $C_{18}H_{22}O_4N_4$ = 358.31. A reaction product of monosaccharides and aryl hydrazines $C_6H_{12}O_6 + 3PhNHNH_2 = C_4H_9O_4C{:}NNHPh$ —$CH{:}NNHPh + PhNH_2$ (phenylglucosazone) + $NH_3 + 2H_2O$. Their characteristic crystalline forms and melting points are used to separate, identify and distinguish monosaccharides.

glucose. $C_6H_{12}O_6$ = 180.15. Dextrose, phlorose, grape sugar, saccharum amylaceum. A monosaccharide or carbohydrate constituent of many animal and vegetable fluids (blood, sweet fruits, etc.), formed by hydrolysis of starch, cane sugar, and glucosides. **dextro-** Colorless needles, d.1.562, m.147, soluble in alcohol or water. Used as a reagent for

detecting carbon dioxide in blood, tellurous acid, etc., and in the form of glucose liquid or syrup, as a nutrient in pharmacy; industrially, in the manufacture of confectionery and the production of beer and alcoholic liquors, curing of tobacco, tanning; and as reducing agent. The following structures are ascribed to its isomers:



Instead of the 1,4-oxygen bridge (furanose) there is also the 1,5-linkage (pyranose). Cf. *furanoside, pyranoside.*

g. agar-agar. A culture medium containing 10 pts. glucose, 15 pts. agar, 10 pts. peptone, 5 pts. sodium chloride, and 1000 pts. bouillon stock, neutralized with NaOH. **g. amine.** $C_6H_{13}O_5N$ = 179.11. $C_5H_{11}O_5.NH_2$; decomp. 110. **g. bouillon.** A culture medium containing 10 pts. glucose, 10 pts. peptone, 5 pts. salt, and 1000 pts. bouillon stock, neutralized with NaOH. **g. evolué.** A bacteriological medium having high reducing properties. Prepared by heating a 10 % solution of g. in 0.1 *N.* NaOH at 110°C. for 15 mins. **g. gelatin.** A culture medium containing 10 pts. glucose, 100 pts. gelatin, 10 pts, peptone, 5 pts. salt, and 1000 pts. bouillon stock, neutralized with NaOH. **g. imine.** $C_6H_{13}O_5N$ = 179.11. $C_6H_{12}O_5$:NH. A solid, m.128. **g. liquid.** Glucosum, syrup. A thick liquid made by the incomplete hydrolysis of starch, and containing glucose and dextrins. Used pharmaceutically as a nutrient. **g. oxime.** $C_6H_{12}O_5$:NOH = 195.14. A reaction product of hydroxylamine and glucose, m.138.

glucosene. $C_6H_{10}O_5$ = 162.08. An unsaturated anhydroglucose of the type

$$CH_2{:}C.CHOH.CHOH.CHOH.CHO$$

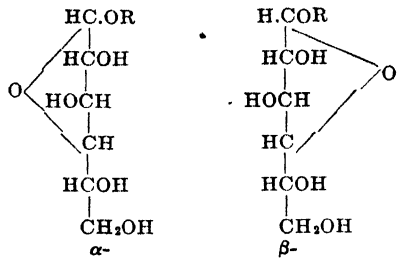
glucosenide. A group of compounds derived from the glucosenes. General formula:

$$CH_2{:}C(CHOR)_4.O$$

where R is Ac, Me, etc.; they may occur in both α- and β-forms.

glucosidase. A hydrolytic enzyme which decomposes glucosides.

glucoside. (1) A compound of glucose; as, glucose-α-glucoside or maltose. (2) See *glycosides.* A neutral, non-nitrogenous, vegetable constituent decomposed by heat, dilute acids, alkalis, enzymes, bacteria or fungi to form a sugar (glucose) and another compound, (*e.g.*, salicin,strophanthin, amygdalin etc.). Chemically they are the ethers of monosaccharides, and may occur in two types, **alpha-** and **beta-glucosides.**



thus: **methyl-** $C_7H_{14}O_6$ = 194.11; where R is CH_3. α-. Long needles, m.168, [a] + 157°. β-. Rectangular prisms, m.104, [a] −33°. In its derivatives the oxygen bridge may be between other carbon atoms, and is then indicated by numerals:

$$\langle 1, 3\rangle; \qquad \langle 1, 4\rangle; \qquad \text{or } \langle 1, 5\rangle.$$

Natural glucosides have the suffix *-in* and are classified as:

1. Ethylene derivatives: jalapin, sinapin, sinalbin, sinigrin.
2. Benzene derivatives: arbutin, populin salicin.
3. Styrolene derivatives: coniferin, phlorhizin, naringin, hesperidin, esculin, daphnin.
4. Anthracene derivatives: emodin, chrysophanic acid, frangulin, digitoxin.
5. Cyanogen derivatives: amygdalin.

glucosimine. Obsolete term for amino sugar.

glucosin. A group of ptomaine bases obtained by the action of ammonia on carbohydrates.

glucosone. $C_6H_{10}O_6$ = 178.1. An osone of glucose and aldehyde ketone formed as a reaction-product from glucosazone. CH_2OH-$(CHOH)_3COCHO$.

glucosophosphoric acid. $C_6H_{13}O_9P$ = 260.1. The dibasic acid $(C_6H_{11}O_6)H_2PO_3$.

glucothionic acid. A substance obtained from nucleoproteins.

glucotin. A cement; a mixture of isinglass, gelatin and acetic acid.

glucuronic acid. $CHO(CHOH)_4COOH$ = 194.11. Glycuronic acid. An aldehyde-hydroxy acid in urine, m.175, soluble in alcohol.

glue. Colla. An impure gelatin obtained from animal organs by boiling with water, straining and drying; thin, hard and brittle cakes, used as a cement and adhesive. **albumen-** G. obtained from flour in starch manufacture. **bone-** Artificial isinglass; a glue made from hides and bones. **cartilage-** Chondrin. **casein-** A solution of casein and borax, used as bookbinder's glue. **elastic-** G. containing glycerin and used for printer's rollers and flexible molds. **fish-** Isinglass. **liquid-** G. acidified with acetic or nitric acid. **marine-** A waterproof g. or cement made of caoutchouc or shellac in turpentine, benzene, or other. **skin-** G. made from hides. **vegetable-** Acacia. **waterproof-** A fish glue dissolved in hot milk.

glukagon. An insulin-like albumin from the pancreas.

Glumiflorae. An order of monocotyledonous plants, comprising the families of Cyperaceae and Gramineae.

gluside, glusidum. The official name for saccharin.

glutaconic acid. $C_5H_6O_4$ = 130.1. Propene dicarboxylic acid, pentenedioic acid*. The dibasic, unsaturated acid,

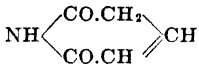
$HOOC.CH_2.CH:CH.COOH.$
$\alpha \quad \beta \quad \gamma$

Colorless crystals, m.134. Cf. *fumaric acid. glutaric acid.* **oxymethylene-** $C_6H_6O_5$ = 158.1. A dibasic, unsaturated acid.

g. anhydride. $C_5H_4O_3$ = 112.03. The heterocyclic compound  .

Colorless crystals, m.87; b.$_{15mm}$152. An isomer of pyronone.

glutaconimide. $C_5H_5O_2N$ = 111.1. 1.5-dioxypyridine. The heterocyclic compound



Colorless crystals, m.182.

glutamic acid. $C_5H_9O_4N$ = 147.14. α-Aminoglutaric acid, glutaminic acid, glutanic acid, $NH_2.CH(COOH)CH_2.CH_2.COOH$. A colorless crystalline acid, decomp. 208, soluble in water or alcohol. It is a constituent of proteins and occurs chiefly in seeds and beets, also in the Japanese flavoring, ajinimoto. **g. a. hydrochloride.** A white powder which yields HCl with water; used medicinally.

glutamine. $C_5H_{10}O_3N_2$ = 146.13. The optically inactive amino acid $C_3H_5.NH_2CONH_2.COOH$; slightly soluble in water, insoluble in ether or alcohol.

glutaminic acid. Glutamic acid.

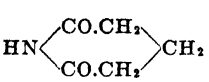
glutamyl. The bivalent radical —OC.CHNH$_2$.$CH_2.CH_2.CO$—

glutanic acid. Glutamic acid.

glutaric acid. $C_5H_8O_4$ = 132.09. n-pyrotartaric acid, pentane-diacid, deoxyglutaric acid, pentanedioic acid*, $COOH(CH_2)_3COOH$. A dibasic acid in sheep wool. Colorless monoclinic crystals, soluble in water, alcohol, or ether, m.97, b.290; a constituent of the grease of sheep wool, pus, etc. **amino-** Glutamic acid. **dimethyl-** $C_7H_{12}O_4$ = 160.1. Colorless crystals, m.127. **α-ethyl-** $C_7H_{12}O_4$ = 160.1. Colorless crystals, m.60, **β-ethyl-** Propidene diacetic acid. Colorless crystals, m.67. **α-methyl-** $C_6H_{10}O_4$ = 146.1. Colorless crystals, m.76. **β-methyl-** Ethidene diacetic acid, colorless crystals, m.86.

g. anhydride. $C_5H_6O_3$ = 114.1. The heterocyclic compound  .

glutarimide. $C_5H_7O_2N$ = 113.1. 2,6-Piperidinedione. The heterocyclic compound



Colorless crystals, m.152.

glutaronitrile. $C_5H_6N_2$ = 94.2. Trimethylenecyanide, pentane dinitrile*, $CN(CH_2)_3CN$. A colorless liquid, b.286.

glutaryl. The bivalent radical, —$OC(CH_2)_3$-CO—.

glutathione. $(NH_2)_2(C_4H_5O)CONH(C_2H_4S)CO-NHCH_2.COOH$. γ-glutamyl cysteyl glycine. A tripeptide occurring in blood and many animal organs, in embryos and germinating plants, etc. Cf. *thioneine.* It is a hydrogen acceptor,

$$2RSH \rightleftharpoons RS.SR + 2H,$$

and plays an important part in metabolism.

glutazine. $C_5H_6O_2N_2$ = 126.2. Betaimidoglutarimide. Colorless crystals, m.300.

glutelins. A group of simple vegetable proteins, coagulated by heat and insoluble in water or dilute salts, soluble in very dilute acids or alkalis: as glutenin, oryzenin.

gluten. A mixture of proteins occurring in the seeds of cereals; a grayish brown, sticky and tough mass remaining after washing the starch out of wheat flour with water. It confers the property of toughness on dough. The amino acids of glutens are:

	Wheat	*Oats*	*Maize*
glutamic acid.....	24.0	18.4	12.7
leucine.....	4.1	15.0	6.2
proline.....	4.0	5.4	5.0
arginine.....	4.4	....	7.1
other amino acids...	10.2	14.0	14.7
total amino acids....	46.7 %	52.8 %	45.7 %

animal- *Fibrin.*

glutenin. A protein of wheat, soluble in dilute alkalis.

glutin. $C_{192}H_{294}N_{60}SO_{70}(?)$ A protein in gelatin.

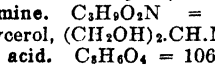
glutinic acid. $C_5H_4O_4$ = 128.09. Pentinedioic acid, propine-1.3-dicarboxylic acid, HOOC.C:-C.CH_2.COOH. A white solid, m.146.

glutol. A reaction product of starch and formaldehyde. Cf. *amyloform.*

glutolin. $C_{204}H_{336}N_{60}SO_{70}$. Formalin gelatin. A protein derived from gelatin.

glutose. The principal product formed by the action of alkali on invert sugar; probably a 3-ketohexose.

glycals. A group of derivatives of sugars obtained by removing H_2O_2; as



glucal, from glucose.

glyceraldehyde. $C_3H_6O_3$ = 90.1. Glyceric aldehyde, glyceryl aldehyde, *2.3*-dihydroxypropanal* $CH_2OH.CHOH.CHO$. A colorless solid, m.132, soluble in water, alcohol or ether.

glycerals. A group of compounds derived from glycerol and aldehydes, similar to the acetals.

glyceramine. $C_3H_9O_2N$ = 91.1. The amine of glycerol, $(CH_2OH)_2.CH.NH_2$.

glyceric acid. $C_3H_6O_4$ = 106.1. *1.2*-Dihydroxypropionic acid, *2.3*-dihydroxypropanoic acid*, the hydroxyacid $CH_2OH.CHOH.COOH$, which occurs in two stereoisomeric forms as *d-* and *l-* acids. A colorless syrup-like liquid, soluble in water, alcohol or ether. It is formed during alcoholic fermentation. **α-phenyl-** Atroglyceric acid.

glyceric aldehyde. Glyceraldehyde.

glyceride. A group of ethers or esters derived from glycerol; *e.g.*, (R = fatty acid radical):

CH_2O—R	CH_2O—R	CH_2O—R
|	|	|
CHOH	CHO—R	CHO—R
|	|	|
CH_2OH	CH_2OH	CH_2O—R
mono-	di-	tri-

The fats and oils are mainly triglycerides of fatty-acids, *e.g.*, tripalmitin, tristearin, etc.

glycerin. Glycerol. **g. agar-agar.** A culture media containing 60 cc. glycerol, 15 gm. agar,

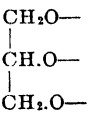
10 gm. peptone, 5 gm. sodium chloride, and 1000 cc. bouillon stock, neutralized with NaOH.

glycerinate. A salt of glyceric acid indicated by the $C_3H_5O_4$— radical.

glycerino- Glycero-.

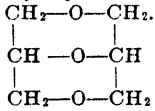
glycerinum. Glycerol.

glycero. (1) Same as glyceryl. (2) The trivalent radical from glycerol:



glycerol. $C_3H_8O_3$ = 92.08. Glycerin, glycerinum *1.2.3*-propanetriol*, propenyl hydrate $(CH_2OH)_2CHOH$. A clear, colorless, syrupy, sweet liquid, d.1.260, m.17, (but solidifies at much lower temperature), b.290, soluble in water or alcohol, insoluble in ether, chloroform, benzene, or carbon disulfide. It is obtained by the saponification of fats in the soap industry; used as a solvent and reagent, technically in the manufacture of printer's ink and rolls, and in medicine for application to the skin. It is the basis of many explosives, and is used as a mordant, and with boric acid, as a preservative. **absolute-** A glycerol entirely free from water. **amyl-** Quintenyl glycerin, $C_5H_9(OH)_3$. **diethyl-** Diethylglycerol. **mesitylene-** Mesicerin.

g. diacetate. Diacetin. **g. dilaurate.** Dilaurin. **g. dinitrate.** Dinitroglycerin. **g. diphenylether.** $C_{15}H_{16}O_3$ = 244.2. *1.3*-diphenoxy-*2*-propanol*. A white crystalline solid, m.80, b_{2mm}.175; used as plasticizer for nitrocellulose. **g. distearate.** Distearin. **g. ether.** $C_6H_{10}O_3$ = 130.2. Glyceryl ether. The heterocyclic compound



liquid, d.0.091, b.169. Cf. *glycerides, ethylin, allylin, protosal.* **g. monochlorhydrin.** $C_3H_7O_2Cl$ = 110.51. **α-** or 3-chloro-1.2-dihydroxypropane, *3*-chloro-*1.2*-propanediol*. A colorless liquid, d.1.322, n_D^{25}.1.4811, $b_{.5mm}$81, miscible with water, alcohol or ether; used in the synthesis of glycidol. **β-** or 2-chloro-1.3-dihydroxy propane. A liquid, d.1.321, $b_{.14mm}$-124. **g. monophenylether.** $C_9H_{12}O_3$ = 168.1. *1*-phenoxy-*2.3*-propanediol*, autodyne. A white solid m.53, $b_{.6mm}$145; used as a plasticizer in lacquers, and medicinally in nervous diseases. **g. phosphoric acid.** $C_3H_5(OH)_2H_2PO_4$ = 172.1. A dibasic acid. An oily liquid and constituent of lecithins and nerve tissues; used in medicinal preparations. **g. sulfuric acid.** $C_3H_5(OH)_2$-HSO_4. **g. tributyrate.** Tributyrin. **g. trilaurate.** Laurin. **g. trinitrate.** Nitroglycerin. **g. tripalmitate.** Palmitin. **g. tristearate.** Stearin.

glycerophosphate. Lecithin. A salt of glycerol phosphoric acid containing the bivalent = $PO_4.C_3H_5(OH)_2$ radical.

glycerophosphoric acid. See *glycerol phosphoric acid.*

glycerose. $C_3H_6O_3$ = 90.1. A triose derived from glycerol; a mixture of glyceraldehyde and dioxyacetone, obtained by oxidation of glycerol. It changes to acrose when treated with dilute NaOH.

glycerosulfate. A salt of glycerol sulfuric acid containing the monovalent —SO_4—$C_3H_5(OH)_2$ radical.

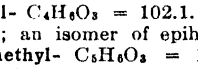
glycerosulfuric acid. Glycerol sulfuric acid.

glyceryl. Propenyl. The trivalent ≡C_3H_5 radical, —$CH_2.\overset{|}{C}H.CH_2$— derived from glycerol. Cf. *propenyl allyl.* **g. aldehyde.** Glyceraldehyde. **g. chloride.** Trichlorhydrin. **g. ether.** Glycerol ether. **g. hydroxide.** Glycerol. **g. laurate.** Trilaurin. **g. lineolate.** Trilinolein. **g. nitrate.** Nitroglycerin.

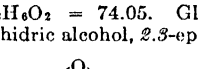
glycide. Glycidol.

glycides. A compound containing the atomic group —CH$\overset{O}{\diagdown\!\diagup}$CH—

glycidic acid. $C_3H_4O_3$ = 88.0. Epihydrinic acid, epoxypropionic acid.



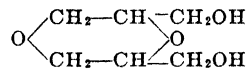
alphamethyl- $C_4H_6O_3$ = 102.1.



betamethyl- $C_4H_6O_3$ = 102.1. Colorless crystals, m.84; an isomer of epihydrinecarboxylic acid. **dimethyl-** $C_5H_8O_3$ = 114.1. Colorless crystals, m.62.

glycidol. $C_3H_6O_2$ = 74.05. Glycide, epihydrin alcohol, ephidric alcohol, *2.3*-epoxy-1-propanol*.

A colorless liquid, d.1.114, n_D^{25}. 1.4032, $b_{.761mm}$ 162, miscible with water, alcohol or ether; used in organic synthesis. **di-** $C_6H_{12}O_4$ = 148.96. The heterocyclic compound



glycin. (1) Glycine. (2) p-Hydroxyphenyl aminoacetic acid (a developer). (3) Mannite. (4) Beryllium. (5) Glycyrrhiza.

glycinaldehyde. C_2H_5ON = 59.05. Aminoacetaldehyde. NH_2CH_2CHO. Cf. *aminoacetal.*

glycine. $C_2H_5O_2N$ = 75.09. Glycocoll, aminoacetic acid, aminoethanoic acid*, glycocin, gelatin sugar, $NH_2.CH_2.COOH$. Colorless monoclinic crystals, d.1.575, m.232, slightly soluble in water, alcohol or ether. It is a constituent of many proteins, and has a sweet taste. **acetyl-** q.v. **benzoyl-** Hippuric acid. **carbamyl-** Hydantoic acid. **glycyl-** The simplest peptide, $NH_2CH_2CONHCH_2COOH$. **guanylmethyl-** Creatine. **N-methyl-** Sarcosine. **α-methyl-** Alanine. **trimethyl-** Betaine.

g. anhydride. 2.5-Piperazinedione. **g. betaine.** $C_5H_{11}O_2N$ = 117.08. $Me_3.N.CH_2.CO$ (—O—)

occurs in crustaceans, *Palinurus Japanicus*, the cephalopod, *Loligo breekeri*, and in the octopus.

glycine anhydride. 2.5-Piperazinedione.

glycinin. The principal protein of the soya bean.

glycirrhiza. Glycyrrhiza.

glycocholate. A salt of glycocholic acid.

glycocholeate. A salt of glycocholeic acid.

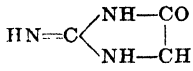
glycocholeic acid. $C_{27}H_{45}O_5N$ = 465.3. A bile acid; a combination of glycogen and choleic acid. Colorless, thick prisms, m.175, slightly soluble in hot water.

glycocholic acid. $C_{26}H_{43}O_6N$ = 465.4. A bile acid consisting of glycine and cholic acid. Colorless crystalline needles, m.134, soluble in water, alcohol, or ether, insoluble in benzene or chloroform.

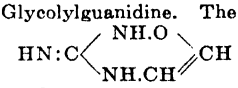
glycoclastic. Glycolytic.

glycocoll. Glycine. **g. betaine.** Glycine betaine.

glycocyamidine. $C_3H_5ON_3$ = 99.1. A colorless crystalline compound formed on dehydration of glycocyamine.



iso- Glycolylguanidine. The heterocyclic system.



methyl- Creatinine.

glycocyamine. $C_3H_7O_2N_3$ = 117.2. Guanido acetic acid. A colorless crystalline compound obtained from cyanamide and glycine. $HN{=}C(NH_2).NH.CH_2.COOH$. **methyl-** Creatine.

glycogen. $(C_6H_{10}O_5)_x$. Animal starch, glucogen, liver sugar, hepatin. A carbohydrate occurring in large amounts in the animal organism, especially liver (600 gm. in human body). A colorless tasteless powder, readily hydrolysed to glucose, and giving a deep red color with iodine. Acids hydrolyse it to dextrose, and enzymes to maltose.

glycogenase. An enzyme of the liver, which hydrolyses glycogen to maltose and dextrin.

glycogenolysis. The successive breaking down of glycogen in animal tissues (cf. *staircase reaction*), including the final splitting and oxidation of glucose. In *normal* tissue one glucose splits into lactic acid and one is oxidized; in *cancer* tissue thirteen split into lactic acid and one is oxidized.

glycol. (1) A member of the glycols, q.v. (2) $C_2H_6O_2$ = 62.06. The simplest diatomic alcohol $CH_2OH.CH_2OH$. Ethylene glycol, 1.2-ethane-diol*, dihydroxyethane. A colorless liquid, d.1.115, m. −17.4, b_{20mm}.197.5, insoluble in ether, miscible with water or alcohol. Used in antifreeze solutions for automobiles:

60 % in water freezes at −49°C (−56°F)
35 % in water freezes at −20.6°C (−5°F);

as a solvent for cellulose esters in lacquers, and in the manufacture of low-freezing dynamites. **benzylene-** Hydrobenzoin. **butylene-** Butanediol. **diethylene-** Carbitol. **diphenyl-** Hydrobenzoin. **ethylidene-** $MeCH(OH)_2$, known only in derivatives; as, acetals, chloral hydrate. **mesitylene-** Mesitylene glycol. **phenyl-** Cinnamic alcohol. **propylene-** Propanediol. **tetramethylene-** Butanediol. **thiodi-** Dioxyethylene sulfide. **tetramethylethylene-** Pinacone. **tetraphenyl-** Benzopinacol. **trimethylene-** Propanediol.

g. acetate. See *g. monoacetate, g. diacetate.* **g. aldehyde.** $C_2H_4O_2$ = 60.04. Hydroxyaldehyde, hydroxyacetaldehyde, glycolal, hydroxyethanal*. The simplest alcohol-aldehyde, $CH_2OH.CHO$. Colorless plates, m.96, soluble in water or alcohol, slightly soluble in ether. **g. amide.** $C_2H_5O_2N$ = 75.09. *2*-Hydroxyethaneamide*, *α*-hydroxyacetamide. The simplest alcohol-amide, $CH_2OH.CONH_2$. A colorless solid, m.120, b.147, soluble in water or alcohol. **g. bromohydrin.** C_2H_5OBr = 124.97. Ethylene bromhydrin, 2-bromo-1-hydroxyethane, $CH_2OH.CH_2Br$. A colorless liquid, b.147, soluble in water. **g. chlorohydrin.** C_2H_5OCl = 80.51. Ethylene chlorhydrin, 2-chloro-1-hydroxyethane $CH_2OH.CH_2Cl$. A colorless liquid, d.1.223, b.128, miscible with water. **g. cyanohydrin.** C_3H_5ON = 71.07. Ethylene cyanhydrin, 2-cyano-1-hydroxyethane, $CH_2OH.CH_2CN$. A colorless liquid, $d_0°$.1.059, b.222, miscible with water, alcohol, or ether. **g. diacetate.** Ethylene acetate. **g. dibromide.** Ethylene bromide. **g. dichloride.** Ethylene chloride. **g. dicyanide.** Ethylene cyanide. **g. diiodide.** Ethylene iodide. **g. dinitrate.** Ethylene nitrate. **g. dinitrite.** Ethylene nitrite. **g. ethers.** A group of compounds used as lacquer solvents, as:

g. butylether..... see *butylcellosolve.*
g. dimethylether..... see *dimethoxyethane.*
g. ethylether..... see *cellosolve.*
g. methylether..... see *methylcellosolve.*

g. leucine. Norleucine. **g. monoacetate.** Ethylene monacetate. **g. mercaptan.** $C_2H_6S_2$ = 94.1. Dithioethylene glycol, $(CH_2SH)_2$. A colorless liquid, d.1.120, b.146, slightly soluble in water. **g. salicylate.** Spirosal. **g. sulfhydrate.** Ethylene mercaptan. **g. thiourea.** $C_3H_4ON_2S$ = 116.13. A solid, soluble in water, alcohol or ether, m.200 (decomp).

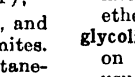
glycolal. Glycol aldehyde.

glycoleucine. Norleucine.

glycollic acid. $C_2H_4O_3$ = 76.04. Glycolic acid. Hydroxyacetic acid, hydroxyethanoic acid*, the simplest hydroxy-acid, $CH_2OH.COOH$. Colorless leaflets, m.78, decomp. on heating; soluble in water, alcohol, or ether. **diphenyl-** Benzilic acid. **phenyl-** See *mandelic* and *amygdalic acids.*

g. aldehyde. Glycol aldehyde. **g. amide.** Glycol amide. **g. anhydride.** $C_4H_6O_5$ = 134.07. $(CH_2OH.CO)_2O$. A colorless powder, m.129, insoluble in water, alcohol or ether.

glycolide. $C_4H_4O_4$ = 116.0. $(C_2H_2O_2)_x$ = $(58.0)_x$. Glycollide. The anhydride of glycollic acid.



Colorless leaflets, m.86, insoluble in water, soluble in alcohol, ether or acetic acid.

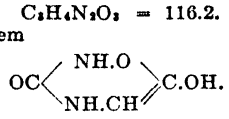
glycolipins. A group of fatty substances, yielding, on hydrolysis fatty acids and a carbohydrate, usually glucose. They contain no phosphorus; *e.g.*, cerebron, phrenosin, kerasin.

glycolocide. A compound of the type

glycols. Diols. A group of diatomic alcohols of the aliphatic series, *e.g.*, aliphatic compounds containing two —OH groups, as *e.g.*, ethandiol (glycol), propandiol, butandiol, etc. Analogous to alcohols there are:

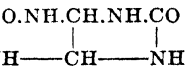
diprimary..... two $—CH_2OH$ groups
disecondary..... two $=CHOH$ groups
ditertiary..... two $\equiv C.OH$ groups
primary-secondary..... one CH_2OH and CHOH groups
primary-tertiary..... one CH_2OH and C.OH groups
secondary-tertiary..... one CHOH and C.OH groups

glycolureine. $C_3H_4N_2O_3$ = 116.2. The heterocyclic system



glycoluric acid. Hydantoic acid.

glycoluril. $C_4H_6O_2N_4$ = 142.10. Acetylene diureine.



White needles, soluble in water or alcohol.

glycolyl. (1) The monovalent radical, $HOCH_2.CO$—. (2) The bivalent $=C_2H_2O$ radical.

g. guanidine. Glycocyamidine.

glycolysis. The decomposition of glucose and other sugars by enzymes.

glycolytic. Glycoclastic. The degradation of sugars to lactic acid, alcohol, carbon dioxide, etc., by the enzymes of animal tissues or blood.

glycophospholipin. A group of fatty substances which yield a fatty acid, a carbohydrate and phosphoric acid on hydrolysis.

glycoproteins. Glucoproteins. A group of conjugated proteins containing a carbohydrate radical and a simple protein; *e.g.*, ichthulin, mucin, mucoids.

glycosal. Glycerol salicylate.

glycosamine. $C_6H_{11}O_5NH_2$ = 179.2. A decomposition product of chitin. A colorless crystalline powder, slightly soluble in water.

glycoside. A compound of a sugar with some other substance, which occurs in nature and hydrolyses to the carbohydrate and some other substance; there are *glucosides* yielding glucose, *fructosides* yielding fructose, *galactosides* yielding galactose, etc. Many pigments (as anthoxanthins and anthocyanins), saponins and tannins are glycosides.

(ar) = arabinoside. (di) = digitoxoside.
(ga) = galactoside. (gl) = glucoside.
(ri) = riboside. (rh) = rhammoside

1. ethylene derivatives:

sinigrin, $C_{10}H_{16}NO_9S_2K$ (gl).... black mustard
sinalbin, $C_{30}H_{44}N_2O_{16}S_2$ (gl).... white mustard
jalapin, $C_{34}H_{56}O_{16}$ (gl)..... jalap

2. benzene derivatives:

arbutin, $C_{12}H_{16}O_7$ (gl)..... bearberry
helicin, $C_{13}H_{16}O_7$ (gl)..... willow bark
salicin, $C_{13}H_{18}O_7$ (gl)..... willow bark
populin, $C_{20}H_{22}O_8$..... aspen
gallotannic acid, $C_{76}H_{52}O_{46}$..... tea, sumac
gaultherin, $C_{14}H_{18}O_8$ (gl)..... gaultheria

3. styrolene derivatives:

esculin, $C_{15}H_{16}O_9$..... horse chestnut
daphnin, $C_{15}H_{16}O_9$..... laurel
coniferin, $C_{16}H_{22}O_8$ (gl)..... conifers
datiscin, $C_{21}H_{22}O_{12}$..... datisca
phlorizin, $C_{21}H_{24}O_{10}$ (gl)..... cherry bark
naringin, $C_{21}H_{26}O_{11}$..... grapefruits
hesperidin, $C_{22}H_{26}O_{12}$..... oranges

4. flavone derivatives: (anthoxanthins)

quercitrin, $C_{21}H_{22}O_{12}$ (rh)..... oak bark

(anthocyanins)

cyanin $C_{27}H_{30}O_{16}$..... cornflowers
delphinin, $C_{51}H_{38}O_{21}Cl$..... larkspur

5. anthracene derivatives:

frangulin, $C_{21}H_{20}O_9$ (rh)..... buckthorn
saponin, $C_{32}H_{54}O_{18}$..... soapwort
rubianic acid, $C_{26}H_{28}O_{14}$..... madder
caulosaponin, $C_{55}H_{88}O_{17}$..... caulophyllum
caulophyllosapogenin, $C_{55}H_{88}O_9$. caulophyllum

6. cyanogen derivatives:

gynocardine, $C_{13}H_{19}NO_9$ (gl)... gynocardia oil
sambunigrin, $C_{14}H_{17}NO_6$..... elder
prulaurasin, $C_{14}H_{17}NO_6$..... cherry laurel
prunosin, $C_{14}H_{17}NO_6$..... prunes
phaseolunatin, $C_{14}H_{17}NO_6$..... lima beans
dhurrin, $C_{14}H_{17}NO_7$..... sorghum
amygdalin, $C_{20}H_{27}NO_{11}$ (gl).... almonds
lotusin, $C_{28}H_{31}NO_{16}$..... lotus

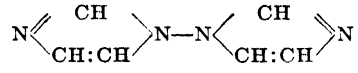
7. indoxyl derivatives:

indican, $C_{14}H_{17}NO_6$ (gl)..... indigo

8. cholane derivatives:

digitalin, $C_{35}H_{56}O_{14}$ (gl)..... digitalis
digitonin, $C_{54}H_{92}O_{28}$ (gl)..... digitalis
digitoxin, $C_{34}H_{54}O_{11}$ (di)..... digitalis

glycosine. $C_6H_6N_4$ = 134.3. Bisglyoxaline. The heterocyclic system:



glycotropin. A hormone similar in effect to prolactin, q.v.

glycuronate. A salt of glucuronic acid.

glycuronic acid. Glucuronic acid.

glycyl. The monovalent $NH_2.CH_2COO$—, or bivalent —$NH.CH_2.COO$— radical derived from glycine (aminoacetic acid); it occurs in peptides; as, glycyl-alanine, glycyl-glycine, glycyl-alanyl-glycine, etc.

glycyrrhetin. $C_{18}H_{26}O_4$ = 306.3. An amorphous bitter substance derived from licorice root.

glycyrrhiza. (1) Licorice. The dried aqueous extract of licorice root. A lustrous, black, brittle mass, soluble in water. (2) The rhizome and roots of *G. glabra typicat* (Spanish licorice), or *G. glabra glandulifera* (Russian licorice), a Leguminosae.

glycyrrhizic acid. $C_{44}H_{64}O_{19}N$ = 910.50. A crystalline acid, m.220, derived from licorice.

glycyrrhizin. $C_{44}H_{64}O_{19}$ (?). A sweet principle from the roots of licorice. Dark-brown scales, soluble in water or alcohol, m.205 (decomp.), optically inactive.

glyoxal. $C_2H_2O_2$ = 58.03. Oxalaldehyde, ethanedial*, diformyl, oxal, $(CHO)_2$. A colorless, amorphous and deliquescent powder or liquid, d.1.14, m.15, b.50.5, soluble in water, alcohol, or ether. **difuryl-** Furil. **dimethyl-** Biacetyl. **diphenyl-** Benzil. **methyl-** Pyruvaldehyde. **phenyl-** Benzoyl formaldehyde.

glyoxalase. An enzyme which occurs in all animal tissues, except pancreas and lymph-glands. It converts glyoxal or its substitution compounds into glycollic acid or its substitution compounds:

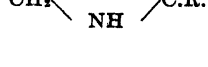
$$R—COCHO + H_2O = R.CHOHCOOH$$

glyoxalcarbonic acid. $C_3H_2O_4$ = 102.0. H.CO.CO.COOH.

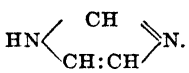
glyoxalene. Imidazole.

glyoxalic acid. (1) $C_2H_2O_3$ = 74.0. Glyoxylic acid, ethanal acid, oxoethanoic acid*, oxaldehydic acid, the simplest aldehyde acid: HCO.COOH. Colorless rhombic crystals, soluble in water, forming the hydrated acid $(HO)_2$-CH.COOH. Cf. *glyoxylic acid.* **g. hydrate.** Glyoxylic acid.

glyoxalidine. A compound of the type



glyoxaline. $C_3H_4N_2$ = 68.13. The azole



Imideazole, 1.3-diazole. Colorless prisms, m.-88°, b.255, very soluble in water, alcohol or ether. **bis-** Glycosine. **triphenyldihydro-** Amarine. **g. alkaloids.** A group of alkaloids containing the imidazole nucleus, *e.g.*, pilocarpine, pilocarpidine.

glyoxime. $C_2H_4O_2N_2$ = 88.12. The diimide $(CH:NOH)_2$. Colorless, rhombic tablets, m.-178, soluble in water, alcohol or ether. Cf. *dimethylglyoxime, Tschugajew's reaction.*

glyoxyl. The monovalent CHO.CO— radical, derived from glyoxal. **g. carboxylic acid.** Glyoxal carbonic acid.

glyoxylase. Glyoxalase.

glyoxylic acid. $C_2H_4O_3$ = 92.04. Glyoxalic acid hydrate, dihydro-acetic acid, *1.1*-dihydroxyethanoic acid*, $(HO)_2CHCOOH$. The hydrated and crystalline form of glyoxalic acid, q.v. It occurs in unripe fruit. **amino-** Oxamic acid. **aminophenyl-** Isatic acid. **carboxyphenyl-, o-.** Phthalonic acid. **p-.** Terephthalic acid. **methyl-** Pyruvic acid. **phenyl-** Benzoyl formic acid.

glyoxylic aldehyde. Glyoxal.

glyptal. A trade name for synthetic resins prepared from a polyhydric alcohol and phthalic anhydride.

gm. An abbreviation for grams. (Gm. in U.S. Phar. XI.)

Gmelin, Christian Gottlieb. 1792–1860. A German chemist noted for making artificial ultramarine. **G., Johann Friedrich.** 1748–1804. German physician and writer on chemistry and pharmacy. **G., Leopold.** 1788–1853. A German chemist noted as a discoverer of potassium ferricyanide and a prolific author. **G. test.** The detection of bile acids in urine by means of nitric acid, which is dropped on filter paper saturated with urine; a series of concentric rings of various colors appears.

gmelinite. $(Ca,Na_2)Al_2Si_3O_{12}$. A native chabazite.

gneiss. A group of crystalline metamorphic rocks, which consist typically of quartz or feldspar.

gnoscopine. $C_{24}H_{26}O_{11}N_2$ = 648.4. *dl*-Narcotine. An opium alkaloid, m.229. Found in the mother liquor of narceine and synthesized by dehydration of a molecular mixture of meconine and cotarnine.

goa. Araroba, crude chrysarobin, goa powder, Brazil powder. A light yellow powder from the cavities in the trunks of *Andira araroba*, a Leguminosae of Brazil. It contains 80 % chrysarobin, and resin, gum, etc., and is used in skin diseases (taenifuge) and as a source of chrysarobin. Cf. *yaba bark, andirin.*

Göckel condenser. A condenser, similar to Liebig's, in which the inside tube is U-shaped; one arm is connected to the distilling flask, the other to a hood, etc., while at the base the tube may be connected with an air-tight receiver.

goethite. FeO.OH. Ruby mica. A hydrated oxide of iron (cf. *göthite*).

Goethlin. See *Göthlin.*

gold. Au = 197.2. Aurum. An element of atomic number 79. A yellow ductile, noble metal, $d_{17.5°}$.19.32, m.1065, b.2500, insoluble in acids or alkali, soluble in aqua regia. It occurs in nature as an uncombined metal, has valencies of 1 and 3, and tends to form complex compounds:

aurous	Au^+
auric	Au^{+++}
dicyano aurate	$Au(CN)_2^-$
tetroxy aurate	$Au(OH)_4^-$
tetrachlor-aurate	$AuCl_4^-$
disulfo aurate	AuS_2^-

The world's gold production (in million fine ounces) was:

	1933	1934	1935	1939
South Africa	11.0	10.5	10.7	12.8
Russia	2.8	4.2	5.3	5.0
U. S. A.	2.5	2.9	3.4	4.3
Canada	2.9	2.9	3.3	5.1

coinage- An alloy of 90 % Au and 10 % Cu. **fulminating-** Aurodiamine. **hall-marked.** Standard g. **liquid-** A mixture of a solution of a complex organic g. compound in an essential oil with an adhesive. It is brushed on to pottery, and burned in to form a pattern. **mosaic-** q.v. **rhodium-** Rhodite. A native alloy of 57–66 % Au and 34–43 % Rh. **standard-** Pure gold (24 karats) and 4 alloys of 22, 18, 14 and 9 karats are legal standards in England. Four alloys are used in the U.S.A.— 22, 18, 14 and 10 karats. **white-** An alloy of g. with 20 % of Pd, used in jewelry. **g. alloys.** An alloy of gold and another metal; see *coinage metal, gold plate, standard gold.* The melting points of the principal alloys are:

Gold with	21.6 90 % 10 %	19.2 80 % 20 %	16.8 70 % 30 %	14.4 60 % 40 %	12 karats 50 % 50 %
Ag	1062°	1061°	1058°	1054°	1049°
Al	675	1055	1025	970	915
Cu	910	890	895	905	925
Pt	1125	1190	1250	1320	1380

The gold content of alloys is indicated (1) in "karats" (q.v.), or parts in twenty-four. (2) By the fineness (parts per 1,000). **g. amalgam.** A fusible crumbling amalgam of gold (40 %), silver, and mercury. **g. bromide.** See *auric* or *aurous bromide.* **g. chloride.** See *auric chloride.* **g. cyanide.** See *auric*, or *aurous cyanide.* **g. dichloride.** $AuCl_2$ = 267.9. A reddish crystalline powder, decomp. by water. **g. foil.** Thin leaves of hammered gold, used for gilding, lettering, or in dental work. **g. iodide.** See *auric iodide* or *aurous iodide.* **g. leaf.** G. foil. **g. monobromide.** Aurous bromide. **g. monochloride.** Aurous chloride. **g. monoiodide.** Aurous iodide. **g. number.** A measure of the protecting action of a colloid. The weight (in mgms.) which, when added to 10 cc. of a 0.005–0.006 % red g. sol., just prevents the color change to blue (due to coagulation) on addition of 1 cc. of 10 % sodium chloride

solution. **g. perchloride.** Auric chloride. **g. plate.** An alloy of gold, silver and copper. *E.g.*, 18 karats: 18 pt. Au, 2 pt. Ag, and 4 pt. Cu. 20 karats: 20 pt. Au, 2 pt. Ag, and 2 pt. Cu. **g. plating.** The electrodeposition of gold from a solution of gold cyanide in potassium cyanide. **g. salt.** G. sodium chloride. **g. size.** A solution of white and red lead and yellow ochre in linseed oil, used to seal permanent microscopical preparations. **g. sodium bromide.** $NaAuBr_4$, $2H_2O$, sodium aurobromide. A yellow, water-soluble salt used in photography. **g. sodium chloride.** $NaAuCl_4.2H_2O$ = 398.1. Sodium aurochloride. A yellow hygroscopic crystalline mass, soluble in water; used in photography for toning. **g. sponge.** A porous spongy form of metallic gold obtained by precipitating gold solution with oxalic acid, and drying and heating the precipitate. **g. terchloride.** Auric chloride. **g. tribromide.** Auric bromide. **g. trichloride.** Auric chloride. **g. tricyanide.** Auric cyanide. **g. triodide.** Auric iodide. **g. trioxide.** Auric oxide. **g. trisulfide.** Auric sulfide.

golden. g. rod. Solidago. **g. seal.** Hydrastis. **g. yellow.** Naphthalene yellow.

Goldschmidt's process. Thermite process.

Golo process. A process of bleaching flour with nitrosyl chloride.

gomabrea. An exudation from a Chilean tree, used as a substitute for gum arabic.

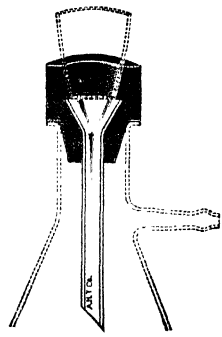
Gomberg, Moses. 1866– . An American chemist, noted as pioneer in the study of free radicals.

gonan. The luteinsing sex hormone of pregnancy urine.

gondoic acid. $C_{20}H_{38}O_2$ = 310.31. An eicosenoic acid from the oil of the pilot whale.

goniometer. An optical device for measuring angles, especially of crystals.

Gooch, Frank Austin. 1852– . An American chemist, noted for analytical methods. **G. crucible.** A crucible with a perforated bottom. It is used in analytical work for filtering through glass or asbestos. The precipitate is then dried and weighed (see figure).



Gooch crucible with funnel and holder.

goose foot. Chenopodium.

Gordon, Neil Elbridge. 1886– . An American chemist noted for his work in chemical education.

Gore phenomenon. The recalescence of an alloy or steel on cooling, due to transition into another crystalline form.

gorgonin. A scleroprotein from the skeletal tissue of the coral. *Gorgonia cavollisa* (sea fans), which contain 9 % di-iodo-tyrosine.

gorli oil. The fixed oil of *Oucoba echinata*, a Flacourtiaceae of South Africa, which resembles chaulmoogra oil.

gosio gas. C_3H_9As = 119.91. Trimethyl arsine, $AsMe_3$. A gas of garlic odor generated by certain molds growing in media containing carbohydrates and arsenic compounds.

goslarite. $ZnSO_4,7H_2O$. A mineral zinc sulfate.

gossypetin. $C_{15}H_{10}O_8$ = 318.08. 3.5.7.8.3′.4′-hexahydroflavone. A flavone (q.v.) of gossypium, m.230.

gossypiin. Gossypoid.

gossypin. The cellulose of cotton.

Gossypium. (1) The cotton plant, a genus of Malvaceae. (2) Cotton, or the hairs of the seeds of *G. herbaceum.*

gossypoid. The combined principles from the bark of the root of *Gossypium herbaceum* (cotton root bark), used as an emmenagogue.

gossypol. The toxic principle of cotton seeds. **bound-** An ether-insoluble product formed from g. in the commercial manufacture of cottonseed meal.

göthite. Fe_2O_3,H_2O. Pyrrhosiderite. A crystalline hydrated ferric oxide, (cf. *goethite*).

Göthlin solution. An artificial serum consisting of 6.5 gm. NaCl, 1 gm. $NaHCO_3$, 0.1 gm. KCl, 0.13 g. $CaCl_2$ per liter water.

Göttling, Johann Friedrich August. 1755–1809. A German apothecary, and the first in Germany to accept Lavoisier's theory.

Göulard's extract. A solution of basic lead acetate, $Pb(OH)_2.Pb(OAc)_2$, used as a reagent for phenols.

goutine. Citarin.

gr. An abbreviation for grain.

Gräbe. See *Graebe.*

grade. The ratio of the rise of a slope to its length; the sine of the angle of slope.

graded. Differentiated. **g. potential.** A method of analysis by electro-deposition in which various metals are separated at specific voltages.

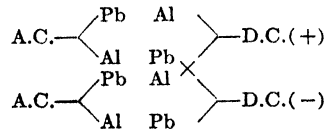
grading. The sorting of materials on the commercial scale according to size, quality, rank, etc. by gravity action (air separators), centrifugal force (cyclone separators), or mechanical action (screening).

graduate. (1) A measuring device for liquids, generally a cone-shaped or cylindrical vessel marked with lines showing the volume. (2) One who has earned a degree from a college or university.

graduated. Divided into units by a series of lines, as a vessel which is marked for measuring liquids. *E.g.*, cylinders, thermometers, rulers etc.

Graebe, Carl. 1841–1927. A German organic chemist who established the constitution of naphthalene, anthracene and phthalic acid, etc. Co-synthesizer (with Liebermann) of alizarin.

Graetz rectifier. A device for converting alternating current to direct current, consisting essentially of four electric cells with lead and aluminum plates in a solution of sodium bicarbonate, and connected as follows:



Graham, Thomas. 1805–1869. A Scottish chemist, and pioneer in the study of colloids, the diffusion of gases and dialysis. He introduced bronze coinage. **G. law.** The velocities of diffusion of any two gases are inversely proportional to the square roots of their densities, hence $\frac{v_1}{v_2} = \frac{\sqrt{d_2}}{\sqrt{d_1}}$. Cf. *diffusion law.* **G. salt**

Soluble sodium hexametaphosphate. Prepared by strongly heating monosodium dihydrogen orthophosphate, and rapidly cooling the molten mass.

grain. (1) A unit of the apothecaries, avoirdupois, and troy weights (originally that of an average wheat grain):
1 gr. = 64.798918 mg. = 0.064798918 gm.;
1 gr. = $\frac{1}{20}$ scruple = $\frac{1}{60}$ dram = $\frac{1}{480}$ ounce = $\frac{1}{5760}$ pd.
(2) The seeds of Gramineae or the cereals. (3) The appearance of a heterogeneous surface, *e.g.* the size of particles in a photographic plate or alloy. **g. alcohol.** Ethanol. **g. germinator.** Germinator. **g. oil.** Fusel oil. **g. tester.** (1) Germinator. (2) A device for sectioning grains.

graininess. The lack of homogenity of deposits due to aggregations of particles, as shown in photomicrographs.

gram. (1) As suffix: a mechanical record; as, photogram, spectrogram. Cf. *graph.* (2) Gramme, g., gm., (Gm., U.S.P.XI.). A unit of weight in the C.G.S. system: the mass of 1.000027 cc. water at 4°C. See *liter.*
1 g. = 1000 mg. = 1000000γ = $\frac{1}{1000}$ kg.
1 g. = 15.43248 gr. = 0.03527 av. oz. = 0.03215 ap. oz.
kilo- One thousand grams = 1 kg.
micro- The one-millionth part of a gram, 1μg or 1γ.
milli- The one-thousandth part of a gram, 1 mg.
g.-atom-. The atomic weight of an element expressed in grams. **g. calorie.** Small *calorie.* **g. centimeter.** The gravitational unit of work, g. ergs. **g. equivalent.** The equivalent weight of a substance expressed in grams, or n grams of a substance, where n is atomic weight/valency. **g. molecular solution.** Molar solution. **g. molecular volume.** The volume at 0°C. and 760 mm. pressure occupied by 1 mol of an element. For a gas it equals the volume of 2 gm. hydrogen at N.T.P./limiting density = 22.242 liters. **g. molecular weight.** G. molecule. **g. molecule.** The molecular weight of a substance expressed in grams; or one mol.

Gram, Hans C. J. 1853–1938. A Danish bacteriologist noted for his methods of identifying bacteria. **G.-negative.** Gram-negative. Bacteria which are decolorized by G. method of staining. **G.-positive.** Gram-positive. Bacteria which retain the Gram stain. **G.'s iodine solution.** A solution of 1 pt. iodine, 2 pts. potassium iodide in 200 pts. water; used for staining microscopical sections and bacteria. **G.'s stain.** A solution of 15 cc. aniline, 7 cc. saturated alcoholic solution of methylviolet, 10 cc. absolute alcohol in 100 cc. water. Used as a test stain in bacteriological work.

gramicidin. A compound isolated from cultures of certain bacteria in phosphate-enriched soils, which is toxic to all Gram-positive organisms.

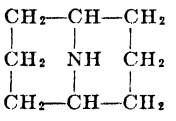
Graminaceae, Gramineae. The grass family, a group of plants that yield cereals, sugar, starch and essential oils.

Saccharum officinarum....	cane sugar
Agropyron repens.....	triticum
Zea mays.....	Zea or Indian corn maize oil corn starch dextrin
Avena sativa.....	oatmeal
Triticum vulgare.....	wheat flour
Lolium temulentum.....	temulentine
Cf. *ergot, andropogon, bamboo, esparto.*	
Metroxylon sagu.....	pearl sago
Colocasia esculenta.....	taro flour or poi
Oryza sativa.....	rice rice starch
Hordeum distichum.....	barley malt malt extract

gramine. A protein, m.133, from barley.

gramme. Gram. Used in the B.P.

granatanine. $C_8H_{15}N$ = 125.2. *1.5*-Imino-cyclo-öctane. The heterocyclic compound



granatine. An alkaloid from pomegranate.

granatonine. Pseudo-*pelletierine.*

granatotannic acid. $C_{20}H_{16}O_{13}$ = 464.1. An amorphous substance from the root-bark of *Punica granatum* or pomegranate.

granatum. Pomegranate.

grandiflorine. An alkaloid from the fruit of *Solanum grandiflorum.*

granite. A crystalline, igneous rock, consisting of quartz, orthoclase with both muscovite and biotite, which has cooled slowly under great pressure.

granular. Grain-like.

granulated. Made of small particles.

granulation. The process of converting a substance into granules or grain-like particles; *e.g.*, by rubbing the moist substance through a sieve, or by rapidly quenching drops of a molten metal (as with granulated zinc).

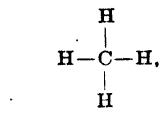
granule. (1) A small grain (2) A medicinal substance in the form of small pellets.

granulose. (1) β-amylose. A sugar of starch found in plants, enclosed by an envelope of starch cellulose. It gives the blue color with iodine solution. (2) The product obtained when cotton wool is charred.

grape. (1) Vine. The plant *Vitis vinifera.* (2) The edible fruit of *Vitis* species. **mountain-** The root of *Berberis aquifolium,* a Berberidaceae, used as an alterative and tonic. **Oregon-** Mountain.
g. fruit. The edible fruit of *Citrus maxima,* rich in vitamin C. **g. juice.** The expressed and sterilized, unfermented juice of g. used as beverage. **g. pomace.** A fertilizer consisting of the dried cake remaining after pressing the juice from grapes. It contains about 1.2 % N, small amounts of P and K. **g. seed oil.** An oil expressed from g. seeds, and used as lubricant for watches and for coating raisins; d.0.923, n_D.1.477, acid value 4–5, sapon. no. 182. **g. sugar.** Glucose.

graph. As suffix: (1) a pictorial record; *e.g.*, photograph. Cf. *gram, diagram.* (2) An instrument to make mechanical records, (gram), as, spectrograph, telegraph.
As noun: (1) A record obtained by physical means, as, electrochemical spectrum. (2) A line drawing showing the frequency or periodicity of a phenomenon or relating 2 variables.

graphic. Pertaining to diagrams. **g. formula.** A spacial structure formula, *e.g.*,



or a geometrical drawing indicating the isomeric forms of certain carbon compounds. **g. symbol.** See *structure symbol, molecular diagram.*

graphite. Black lead, plumbago. A native or artificially-made allotropic carbon; shining amorphous masses or hexagonal lamellae, d.1.9–2.3, hardness 0.5–1.0. Used as pigment, as material for crucibles, retorts, electrodes and pencils, and as a lubricant. **colloidal-** Deflocculated suspensions of graphite in oil (oildag) or in water (aquadag), used as lubricants. Cf. *dag.*

graphitic acid. $C_{11}H_4O_5$ = 216.0. An acid produced from native graphite by the action of potassium chlorate and nitric acid, as a yellow-green powder. **pyro-** See *pyrographitic acid.*

graphon sulfate. The black substance produced by the slow action on graphite of potassium chlorate and concentrated sulfuric acid.

grappa. A brandy prepared by fermenting pressed pomace, adding grape residues etc., and distilling.

grasses. See *Graminaceae.* **g. time factor.** A supposed vitamin (q.v.) in grass juice, the absence of which affects the optimum growth-rates of rats and guinea pigs.

grating. A lattice work or screen composed of lines, *e.g.*, a glass, metal, or film with minute fine rulings (often 20,000 per centimeter) and producing a series of spectra by the dispersion of a ray of light. Cf. *diffraction.* **concave-** A slightly concave piece of speculum metal on which the lines are ruled; it focuses the light and no collimator is needed. **plane-** A g. which requires parallel rays of light, hence a slit, collimator and telescope. **g. spectroscope.** A spectroscope in which the spectrum is produced by diffraction (by means of a grating), and not by refraction (prisms).

gratiolin. $C_{20}H_{34}O_7$ = 386.3. A glucoside from *Gratiola officinalis* or hedge hyssop, a Scrophulariaceae; yellow silky needles.

gratiolirhetin. $C_{17}H_{28}O_{31}$ = 728.3. A resinous decomposition product of gratiolin.

gratioloic acid. $C_{28}H_{56}O_4$ = 456.5. An acid from *Gratiola officinalis;* pearly white scales.

gratiosoletin. $C_{20}H_{38}O_{17}$ = 586.7. A decomposition product of gratiosolin.

gratiosolin. $C_{46}H_{84}O_{25}$ = 1036.8. A glucoside from *Gratiola officinalis,* hydrolysed by water to gratiosoletin.

graukalk. Technical calcium acetate.

gravimetric. Measurement by weight. **g. analysis.** Quantitative analysis by weighing precipitates.

gravimetry. The science of measurement by weight.

gravitation. (1) The universal attraction between material bodies. Its intensity varies directly as the product of the two masses. (2) The tendency of substances to move toward the center of the earth, as measured by the gravitation constant, *g.* **g. constant.** A measure of the attractive force of the earth. $g = 666.07 \times 10^{-10}$ cm./²gs.² = 980.665 cm./sec.² **g. formula.** The force, f, of gravitational attraction between two masses, m and m_1, separated by the distance $r = G\frac{mm_1}{r_2}$, where G is the gravitation constant = 6.658×10^{-8} dynes cm.²/gs.²

gravitational. Pertaining to gravitation. **g. constant.** Gravitation constant. **g. effect.** Westling effect. The loss of weight of body A weighed underneath body B on a beam balance. The effect is specific for those pairs of elements whose atomic numbers are related by $B^2/A^2 = n$, where n is an integer. **g. force.** Gravitation formula.

gravity. (1) The tendency of substances to move toward the center of the earth, *e.g.*, the attractive force of the earth for bodies, measured by the gravitation constant. (2) Specific gravity. Cf. *Helmert's equation.* **distillation-.** The specific gravity of 200 cc. of distillate from 200 cc. of an alcoholic liquor. **original-.** O.G. The specific gravity of a wort before fermentation as determined from the amount of alcohol in the fermented liquor. It is given by the residual gravity plus the gravity lost according to the spirit indication (q.v.). **present-.** The actual specific gravity of a fermented liquor. **residual-.** The specific gravity of the liquid remaining after all the alcohol has been removed by distillation from 200 cc. of a fermented liquor, and the residue made up to 200 cc. **specific-** See *density* and *specific gravity.*

gravure. A process of printing from an inked metal surface which has been etched with acid in such a way that the darker the shade the deeper the etch and the more ink it holds available for transfer to the paper.

gray, grey. Ash color, a mixture of white and black pigments. See **grey.**

grease. (1) Any soft, butter-like fat. (2) Any low-grade waste products containing lard, tallow, bone, horse or fish fat, stearins etc. Greases usually have an unpleasant odor, high unsaponifiable matter and free fatty acids, and are dark colored. They are used as lubricants. **black-.** A dark fatty matter obtained from cotton-seed oil, and used in candle manufacture. **cup-.** An emulsion of mineral oil (80 %), lime soaps, water (1 %) used as a lubricant. **Yorkshire-** Lanolin.

Greek alphabet *

A	α	alpha (*al'-fah*)	a	1
B	β ($\mathcal{B}$)	beta (*be'-tah*)	b	2
Γ	γ	gamma (*gam'-ah*)	g (hard)	3
Δ	δ (∂)	delta (*del'-tah*)	d	4
E	ϵ (ε)	epsilon (*ep-sī'-lon*)	e (short)	5
Z	ζ	zeta (*ze'-tah*)	z	6
H	η	eta (*e'-tah*)	e (long)	7
Θ	θ (ϑ)	theta (*the'-tah*)	th	8
I	ι	iota (*i-o'-tah*)	i	9
K	$\varkappa$ (κ)	kappa (*kap'-ah*)	k	10
Λ	λ	lambda (*lam'-dah*)	l	11
M	μ	mu (*mū*)	m	12
N	ν	nu (*nū*)	n	13
Ξ	ξ	xi (*ksī*)	x	14
O	o	omicron (*om-i'-kron*)	o (short)	15
Π	π	pi (*pī*)	p	16
P	ρ (ϱ)	rho (*ro*)	r	17
Σ	σ s	sigma (*sig'-mah*)	s	18
T	τ	tov, tau (*taw*)	t	19
Υ	υ	upsilon (*up-sī'-lon*)	u	20
Φ	φ (ϕ)	phi (*fī*)	ph (f)	21
X	χ	chi (*kī*)	ch (hard)	22
Ψ	ψ	psi (*psī; sī*)	ps	23
Ω	ω	omega (*o'-me-gah*)	o (long)	24

* In chemical names the Greek letters are used to indicate the carbon atoms, thus "λ-hydroxy" means a hydroxyl radical on the eleventh carbon atom.

Greek numerals (as used in chemistry)

1 hen (mono)	18 octadeka
2 duo (bi)	19 nonadeka
3 tria	20 eicosa
4 tetra	21 heneicosa
5 penta	22 docosa
6 hexa	23 tricosa
7 hepta	30 triakonta
8 octo	40 tetrakonta
9 nona	50 pentekonta
10 deka	60 hexekonta
11 hendeka	70 heptakonta
12 dodeka	80 octokonta
13 trideka	90 nonakonta
14 tetradeka	100 hekaton (hekta)
15 pentadeka	1000 chilioi (kilo)
16 hexadeka	10,000 myria
17 heptadeka	

green. (1) Grass color, a hue obtained by mixing yellow and blue pigments. (2) Unused or raw; untreated or incompletely treated. **g. pigments.** See *arsenic green, brunswick green, chrome green, copper green, Guignet green, ultramarine green, Rinman green, etc.* **g. vitriol.** Ferrous sulfate.

greenockite. CdS. A rare mineral cadmium sulfide.

greensalt. A wood preserving solution containing potassium dichromate, copper sulfate and arsenic acid.

greensand. (1) A sandy deposit containing glauconite. (2) Natural sand dampened for molding.

greenstone. A variety of jade.

greisen. A granite in which feldspar is replaced by quartz.

Grenacher stain. Three solutions (alum-, borax- and hydrochloric acid-carmines), used for staining the nucleic and muscle tissues.

Grenet battery. An electrolytic cell of the carbon-zinc type.

grenz rays. Infra-röntgen rays, Bucky rays, long-wave x-rays. Very soft x-rays produced at low voltages and absorbable by glass; used in skin diseases. Cf. *radiations.*

Grethen weighing bottle. A small glass tube with a ground glass stopper holding a glass tube and stopcock, used for weighing corrosive and fuming liquids.

grey oil. Gray oil. A mixture of 40–50% finely-divided mercury in an oil base, used as an ointment and in hypodermic medication. **g. powder.** A dried finely-divided mixture of 38% mercury, 57% chalk with 10% honey.

Griess, Peter. 1829–1888. A German-born English chemist, noted for his work on diazo-compounds. **G. reaction.** The substitution of amino radicals by hydroxyl, halogen, or cyan radicals. The amine is diazotized, and treated with water or a solution of a cuprous halide. **G.-Ilosva reagent.** A solution of sulfanilic acid and α-naphthylamine in acetic acid, used as a reagent for nitrites.

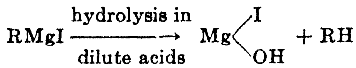
grifa. Lithium acetyl salicylate.

Griffith white. Lithopone.

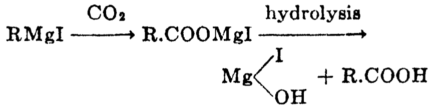
Grignard, Victor. 1871–1935. A French chemist and Nobel Prize winner (1912), noted for organic syntheses. **G.'s reaction.** Magnesium alkyl-condensation. A synthetic reaction, by which a carbon atom is introduced into the hydrocarbon radical of a compound by G.'s reagent. It offers a ready means of passing from a lower member of a homologous series to a higher member, and has become one of the most valuable methods of organic synthesis. **G.'s reagent.** Any one of a group of organic magnesium compounds of the general type R.Mg.X, where R is an organic radical and X a halogen.

Typical Grignard reactions:

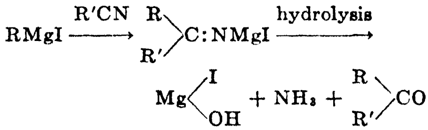
1. Formation of a *hydrocarbon:*



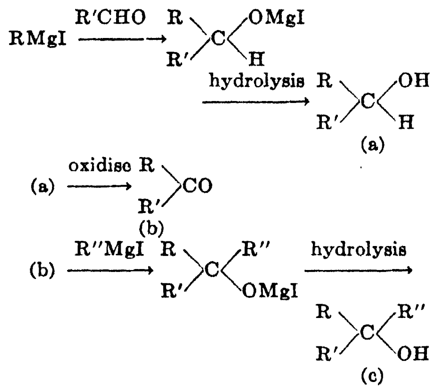
2. Preparation of an *acid:*



3. Preparation of a *ketone:*



4. Preparation of a *secondary alcohol* (a), *ketone* (b), or *tertiary alcohol* (c) Polaises reaction:



grindelia. Gum plant, tar weed. The dried leaves and flowering tops of *Grindelia* species, a Compositae used as an antispasmodic and anticatarrhal.

grindeline. An alkaloid from *Grindelia robusta;* colorless crystals.

grindeloid. The combined principles of *Grindelia* species, containing an alkaloid resin and oily substance.

grinder. A power-operated device for pulverizing materials by grinding. Cf. *crusher, mill.*

grinding. The process of powdering a substance by lateral motion, as opposed to perpendicular motion (crushing).

grinding *crushing*

g. apparatus. A grinder.

griphite. $8[(NaAlCaFe)_3Mn(PO_4)_2.5(OH)_2]$. A native hydrophosphate of the garnet type.

griserin. Sodium lorinate.

grm. An abbreviation for gram.

grog. Broken bricks, or burnt ground fireclay, used as a refractory.

Grossmann reagent. An ammoniacal solution of dicyandiamidine sulfate, $(C_2H_6ON_4)_2H_2SO_4$.

which gives a yellow precipitate with traces of nickel.

grossularite. A pale green calcium aluminum garnet.

Grotthus' law. Radiation must be absorbed in order to produce a reaction.

ground. Powdered or pulverized. **g. cherry.** Physalis. **g. nut.** Arachis. **g. wood.** Mechanical pulp.

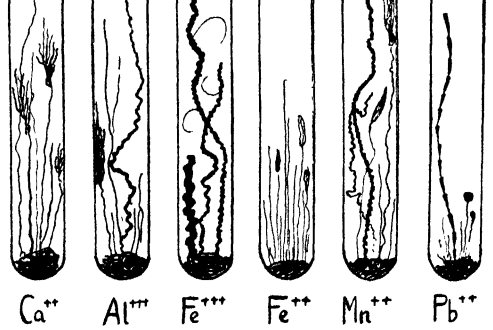
ground-nut oil. Arachis oil.

group. (1) A number of elements having similar properties, *e.g.*, the alkali metals. See *periodic system.* (2) A number of atoms that pass through a series of reactions unseparated. See *radical.* (3) A number of elements with similar reactions. See qualitative *analysis.* **functioning-** A g. which has a replaceable hydrogen; as, —OH, —CHO, —NH_2, —SO_3H. Cf. *Beilstein, derivative.* **negative-** A negatively-ionised atom of an acid radical, *e.g.*, SO_4. **nonfunctioning-** A g. which has no replaceable hydrogen. Beilstein mentions seven: —F, —Cl, —Br, —I, —NO, —NO_2, —N_3. Cf. *derivative.* **positive-** A positively-ionised atom of a metal or radical, *e.g.*, NH_4.

g. precipitant. A reagent which precipitates elements of the same group, *e.g.*, H_2S, NH_4OH. **g. properties.** The properties of elements belonging to the same group, *e.g.*, those characteristic of a vertical division of the periodic system as opposed to period properties. **g. reaction.** The precipitation of elements in a definite analytical group, *e.g.*, salts of Ag, Hg, Pb, by HCl, etc. **g. relation.** The relation among elements of a group (vertical division) of the periodic system.

Grove, Sir William Robert. (1811–1896). British scientist, noted principally for the Grove voltaic cell. **G. cell.** A voltaic cell consisting of amalgamated zinc in sulfuric acid (d.1.136) and platinum in concentrated nitric acid (potential, 1.91 volts).

growth. An increase in size. **bacterial-** The appearance of a bacterial colony after incubation; see *arborescent, beaded, brittle, bullate, butyrous, coriaceous, cretaceous, curled, echinulate, effuse, erose, filamentous, filiform, floccose, fimbriate, lobate, membranous, mycelioid, napiform, pulvinate, punctiform, raised, rhizoid, rim, ring.* **colloidal-** A phenomenon observed when a few crystals of any soluble metallic salt (whose silicate is insoluble) is placed in a 50% solution of waterglass. Each metallic salt produces within a few minutes its characteristic structure as a result of osmotic pressure and the breaking of the insoluble membrane of metal silicate. Previous addition of small amounts of sodium carbonate or phosphate to the waterglass effects a change of structure. Most active are the salts of Fe, Ni, Co, Mn, Al, Mg, Ca, Ba, etc.; least active are Cu, Pb, U. See figure. **inorganic-** The aggregation of solid particles, either by (1) crystallization, (2) periodic precipitation, or (3) colloidal growth.



Colloidal growth, about ½ natural size.

g. factor. A supposed vitamin (q.v.), the absence of which hinders the growth of *Lactobacillus* casei.

grumose. Clotted.

grundy. Granulated pig iron.

grunerite. $Fe_7H_2(SiO_3)_8$. The mineral found in Massachusetts.

guachamacine. Gauchamacine. An alkaloid from *guachamaca,* the bark of *Malouetia nitida,* an Apocynaceae of Venezuela. It is said to have properties like curarine, and is used by the natives as a virulent arrow poison.

guacin. A resin extracted from the leaves of *Mikania guaco;* said to be isomeric with eupatorin. The leaves are used by South American natives to cure snake bites.

guaethol. Thanatol.

guaiac. The resin from the wood of *Guaiacum officinale,* a Zygophyllaceae of South America and the West Indies. **g. resinic acid.** $C_{20}H_{26}O_4$ = 330.3. Yellow crystals. An acid of guaiac. **g. wood.** Lignum vitae, guaiaci lignum. The heartwood of *Guaiacum* species, used as a dye. **g. wood oil.** The essential oil of g. d.0.965–0.975, soluble in alcohol. It contains tiglic aldehyde. **g. yellow.** The coloring matter of guaiac wood; pale yellow crystals.

guaiacene. C_5H_8O = 84.0. Tiglic aldehyde. A clear, oily liquid obtained by distillation of guaiac wood.

guaiacic acid. $C_6H_8O_3$ = 128.1. An acid of guaiac.

guaiaci lignum. Guaiac wood.

guaiacin. $C_{14}H_{24}O$ = 208.3. An alcohol, the odorous principle of balsam wood. Colorless crystals, m.91, soluble in alcohol; used in perfumery.

guaiacol. $C_7H_8O_2$ = 124.1. Methylpyrocatechin, o-methoxyphenol, o-hydroxyanisole, *1*-hydroxy-*2*-methoxybenzene. A phenol ether, $C_6H_4(OH)OMe$, in wood tar. Colorless prisms, $d_{15°}$.1.140, m.32, b.205, soluble in water, alcohol, or ether. Used as a reagent in detecting lignin, narceine, chelidonine, nitrous acid and acacia; and medicinally, as an antiseptic. **allyl-** *4-* Eugenol. *5-* Chavibetol. **cinnamyl-** Styracol. **methyl-** Creosol. **methylenedi-** Pulmoform. **propenyl-** Isoeugenol. **vinyl-** Hesperetol.

g. acetate. $C_9H_{10}O_3$ = 166.1. Eucol. A colorless fluid, d.1.138, b.238. **g. benzoate.** Benzosol. **g. benzylic ether.** Benzeain. **g. biniodide.** $C_7H_6O_2I_2$ = 374.7. A reddish-brown powder, used medicinally in tuberculosis. **g. cacodylate.** Cacodiliacol. A reddish-brown crystalline compound, used medicinally. **g. carbonate.** $(C_7H_7O)_2CO_3$ = 274.1. A white crystalline powder, m.87, soluble in ether, slightly soluble in alcohol, insoluble in water. Used as a tasteless and non-irritant substitute for g. oleate. **Oleoguaiacol.** A mixture of g. and oleic acid in ether. **g. valerate.** Creosote.

guaiaconic acid. $C_{20}H_{24}O_5$ = 344.2. A resinous acid, derived from guaiac. An amorphous brown powder, used in the guaiac test for blood.

guaiacum. Guaiac.

guaiacyl. (1) o-Anisyl. (2) $[C_6H_3(OH)(OCH_3)\text{-}SO_3]_2Ca$. Calcium-o-guaiacolsulfonate, gujacyl. A bluish-gray powder, soluble in water or alcohol; used medicinally as a local anesthetic.

guaiaretic acid. $C_{20}H_{26}O_4$ = 330.22. An acid from guaiac.

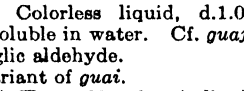
guaiene. $C_{12}H_{12}$ = 156.09. *2.3*-Dimethylnaphthalene*. Colorless liquid, d.1.008, m.−20, b.266, insoluble in water. Cf. *guajene*.

guaiol. Tiglic aldehyde.

guaj. A variant of *guai*.

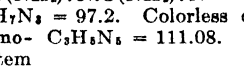
guajene. $C_{15}H_{24}$ = 204.19. A liquid hydrocarbon, d.0.8954, b.124, from guaiac. Cf. *guaiene*.

guanamine. A compound containing the trivalent =N.C(NH$_2$):N.C(NH$_2$):N— group; as **acet-** $C_4H_7N_3$ = 97.2. Colorless crystals, m.265. **formo-** $C_3H_5N_5$ = 111.08. The heterocyclic system



guanase. An enzyme converting guanine into xanthine; found in thymus, adrenals and pancreas.

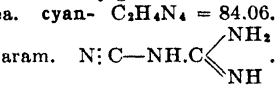
guanazole. $C_2H_5N_5$ = 99.3. The heterocyclic compound



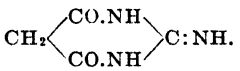
Colorless crystals, m.206.

guanazyl. The bivalent —N:NC(:N.NH.CNH.NH$_2$)— radical. **g. benzene.** $Ph_2C_2H_4N_6$ = 266.3. Colorless crystals, m.199.

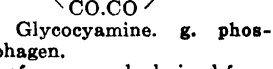
guanidine. CH_5N_3 = 59.17. Carbamidine, aminomethanamidine*, carbondiamide imide, uramine, $(NH_2)_2C(:NH)$. Colorless crystals, soluble in water or alcohol. It is an isolog of urea. Cf. *synthalin*. **amidophenol-** See *amidophenolguanidine*. **aminobutyl-** Agmatine. **benzoylene-** q.v. **bi-** Guanylguanidine. **carbamyl-** Guanylurea. **cyan-** $C_2H_4N_4$ = 84.06. Dicyandiamide, param.



Colorless crystals, m.205. **decamethylenebis-** Synthalin. **diphenyl-** q.v. **guanyl-** Biguanidine. **isopentenyl-** Galegine. **lactyl-** Alacreatine. **malonyl-** $C_4H_5O_2N_3$ = 127.2. The heterocyclic system,



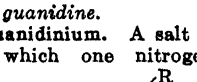
nitro-* $CH_4O_2N_4$ = 104.2. Colorless crystals, m.240. **nitroso-** CH_4ON_4 = 88.2. $NH_2.C(:NH).NH.NO$. **oxalyl-** $C_3H_3O_2N_3$ = 113.2. The heterocyclic system



g. acetic acid. Glycocyamine. **g. phosphoric acid.** Phosphagen.

guanidines. A group of compounds derived from guanidine, *e.g.*, compounds containing the =N.C(NH).N= radical; as methylguanidine, $NH_2.CNH.NHMe$. See *creatine*, *glycocyamine*, *guanidine*.

guanidinium. A salt derived from guanidine, in which one nitrogen atom is pentavalent:



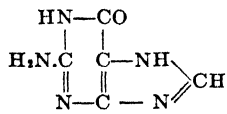
guanidino phosphoric acid. Phosphagen.

guanido. The monovalent —NH.C(:NH)NH radical.

guanidoacetic acid. Glycocyamine. **methyl-** Creatine.

guanidopropionic acid. Alacreatine.

guanine. $C_5H_5ON_5$ = 151.27. Imidoxanthine, 2-amino-6-oxypurine, 2-aminohypoxanthine,



A leucomain found in guano, excrements of spiders, scales of fishes, swine, human liver, pancreas and spleen, and formed as a decomposition product of nucleins. Colorless needles, decomp. above 360, insoluble in water, soluble in alcohol, ether, or alkalis.

guano. Bird manure. The partly decomposed excrements of sea birds found on the islands off the Western Coast of South America, especially Peru. It is an excellent fertilizer and a source of guanine.

guanoline. $C_4H_9O_2N_3$ = 131.1. Guanidocarbonic ethylester. Colorless crystals, m.114.

guanosin. $C_{10}H_{13}N_5O_5$ = 283.4. A pentoside in the pancreas. **g. phosphoric acid.** Guanylic acid.

guanyl. The monovalent radical, —C(:NH)NH$_2$. **g. guanidine.** $C_2H_7N_5$ = 101.3. Biguanide. $NH_2.C(:NH).NH.C(:NH).NH_2$. **g. urea** $C_2H_6ON_4$ = 100.3. Dicyandiamidine, carbamylguanidine, $NH_2.CO.NH.C(:NH).NH_2$. An isolog of guanylguanidine.

guanylic acid. $C_{10}H_{13}O_8N_5P$ = 362.4. A nucleic acid consisting of guanosine, phosphoric acid and a pentose, $H_3PO_4.C_5H_7O_3.C_5H_4ON_5$, occurring in pancreas, ox liver, and yeast.

guarana. Brazilian cocoa. A dried paste from the ground seeds of *Paullinia sorbilis*, a Sapindaceae; used for migraine. **g. tannin.** Paullinio tannin.

guaranine. $C_8H_{10}O_2N_4$ = 194.3. An alkaloid resembling caffeine, from guarana.

guard tube. A tube which usually contains calcium chloride, and is used to prevent access of atmospheric moisture to gas absorption bulbs while they are being weighed. Cf. *witness*.

guavacine. Guvacine.

guayule. The shrub, *Parthenium argentatum*, a Compositae of the Chihuahuan Desert (Mexico), which is cultivated in Central California. **g. rubber.** A commercial rubber made from g. by a mechanical process.

Guericke, Otto von. 1602–1688. A German philosopher noted for experiments with the air pump, vacuum (Magdeburg hemispheres), and hydrometer.

Guignet's green. $3CrO_3,B_2O_3,4H_2O$(?). A green pigment resulting from the fusion of potassium dichromate and crystalline boric acid.

guinea green. $C_{37}H_{35}N_2O_6S_2Na$. A dye used as food color and hydrogen ion indicator, changing at pH 6.0 from magenta (acid) to green (alkaline).

Guldberg, Cato. 1836–1902. A Norwegian chemist. **G. rule.** The boiling point of a liquid is $\frac{2}{3}$ the critical temperature (°A.) of the gas. **G. and Waage law.** Mass law, law of mass action, law of chemical kinetics. The velocity of a reaction is proportional to the active masses of reacting substances; velocity =

amount transformed/time. See *mass law.* **G. Guye rule.** The critical temperature of a substance is about 3/2 of the absolute boiling point: $T_c/T_b = 1.5$ (varying from 1.4 to 1.9).

gulonic acid. $C_6H_{12}O_7 = 202.1$. A monobasic acid derived from gulose.

gulose. $C_6H_{12}O_6 = 180.2$. A hexose, isomeric with glucose.

gum. A thick, mucilaginous excretion from various plants, consisting of complex carbohydrates which yield sugars on hydrolysis. They are the products of disintegration of internal tissues, and exude from the stems; they dissolve or swell in water, and are insoluble in and precipitated by alcohol.

Classification:

A. Arabin-type: completely soluble in water.

Acacia senegal	gum arabic
Piptadenia rigida	angico gum
Piptadenia cebil	cebil gum
Prosopsis juliflora	mesquite gum
Cedrela australis	cedar gum
Anogeissus latifolia	Indian gum

B. Bassorin type: slightly soluble in water.

Astragalus gummifer	tragacanth
Sterculia species	sterculia
Sterculia urens	hog gum
Feronia elephantum	amrad gum
Chloroxylon swietenia	satinwood gum

C. Cerasin type: swelling in water.

Prunus cerasus	cherry gum
Covillea tridentata	sonora gum
Albizzia fastigiata	sassa gum

acacia- See *acacia.* **acaroid-** See *acaroid.* **ammoniacum-** See *ammoniac.* **angico-** See *angico.* **arabic-** See *acacia.* **benjamin-** Benzoin g. (2). **benzoin-** See *benzoin* (2). **blue-** See *eucalyptus.* **british-** Dextrin. **cebil-** See *cebil.* **cedar-** See *cedar.* **chewing-** Chicle. **chicle-** See *chicle.* **doctor-** Hog gum. **dragon-** Tragacanth. **elastic-** Caoutchouc. **gettania-** Guttapercha. **guiac-** Guaiac. **hog-** See *hog.* **Indian-** See *Indian.* **kauri-** See *kauri.* **ladanum.** See *labdanum.* **mango-** See *mango.* **mesquite-** See *mesquite.* **red-** See *gum-tree.* **sassa-** See *sassa.* **sonora-** See *sonora.* **starch-** Dextrin. **sweet-** Storax.

G. arabic. Acacia. **G. benjamin.** See *benzoin* (2). **G. cistus.** See *labdanum.* **G. copal.** Copal. **G. dragon.** Tragacanth. **G. elastic.** Caoutchouc-. **G. galbanum.** See *galbanum.* **G. kino.** See *kino.* **G. lac.** See *lac.* **G. olibanum.** See *olibanum.* **G. plant.** Grindelia. **G. resin.** See *gum-resins.* **g. running.** The process of melting gums in varnish manufacture. **G. sandarach.** See *sandarac.* **g. sugar.** Arabinose. **G. thus.** Olibanum. **G. tragacanth.** Tragacanth. **g. tree.** See *gum-tree.*

gummeline. Dextrin.

gummon. Trade name for an insulating material of tar and asbestos.

gummy. Sticky or resembling gum.

gum-resins. Oleoresina. A group of aromatic exudations of plants which consist of a mixture of various substances (as essential oils) with the gum. The following are official (U.S.P.): ammoniac, asafetida, gamboge, myrrh, and scammony. *Cf. resins.*

gums. The dried gummy exudations of plants, formed by conversion of the cell walls; soluble in water, insoluble in alcohol. Acacia, and tragacanth are official (U.S.P.).

gum-tree. Red gum, sweet gum. A large tree, *Liquidambar styraciflua,* which grows in the swamps of the Mississippi, and yield valuable lumber. **blue-** Eucalyptus. **cotton-** A tree, *Nyssa sylvatica,* of Asia, which yields timber and an edible fruit.

guncotton. $C_{12}H_{14}O_4(NO_3)_6 = 594.17$. Cellulose hexanitrate. A highly nitrated and sparingly soluble cellulose; used as an explosive. **soluble g-.** Pyroxylin.

gunmetal. Bronze. An alloy consisting of 90 % copper and approximately 10 % Sn, 2 % Zn, and 1 % Pb, Ni, Sb, Fe, Al, etc.

Gunning reagent. A 10 % solution of iodine in alcohol, used for detecting acetone in urine. **G. test.** The formation of iodoform by adding Gunning reagent and ammonia to urine; it indicates the presence of acetone.

gunny. A jute bagging cloth.

gunpowder. A granulated explosive mixture of about 2 pts. charcoal, 3 pts. sulfur and 15 pts. potassium nitrate. Its character depends largely on the size and shape of the grains, their density and hardness, glazing, and moisture-content.

Gunter's chain. A measurement of length = 20.1168 meters.

Günzberg reagent. A solution of 1 pt. phloroglucinol, 1 pt. vanillin in 30 pts. alcohol; or two solutions: (a) phloroglucinol 1:15, (b) vanillin 1:15, mixed shortly before applying the test. Used for detecting free mineral acids. **G. test.** A drop of Günzberg reagent is carefully evaporated on white porcelain plate; after adding the unknown solution and again evaporating, a pink color indicates the presence of hydrochloric acid.

guoethol. Thanatol.

gur. Jaggery. A crude Indian sugar obtained by evaporating unclarified cane juice in open pans over fires.

gurjun. A balsam obtained from several *Dipterocarpus* species of India; used as a varnish. **g. oil.** The essential oil of g., d.0.915–0.925, b.255, containing sesquiterpenes.

gutta (pl. guttae). The Latin for "drop."

guttameter. A device for measuring surface tension by the number of drops formed.

guttapercha. Gummi plasticum. $(C_{10}H_{16})_2$. A group of hydrocarbons consisting of the purified and coagulated milky exudate of various trees of *Palaquium* species, (Sapotaceae). Colorless masses, sticks, or sheets, usually yellowish with red streaks, insoluble in water, partly soluble in chloroform, benzene, oil of turpentine. It consists of hydrocarbons, fluavil, alban and a volatile oil. It softens at 65°C., and burns with a bright flame. Used for insulating purposes, in dentistry, and as a rubber substitute.

Gutzeit, Heinrich Wilhelm. 1845–1888. A German chemist noted for analyses of vegetable products. **G. test.** A test for arsenic performed by adding zinc and dilute sulfuric acid to the substance in a test tube, covering the tube with a filter paper moistened with mercuric chloride solution and observing the formation of a yellowish spot on the filter paper, due to $AsH(HgCl)_2$. This turns black with the formation of $As(HgCl)_3$, and then As_2Hg_3.

G.w.a. Grams of water in air. See Mohr *liter.*

guvacine. $C_6H_9O_2N = 127.1$. An alkaloid, m.-271, from the betel nut, the fruit of *Areca catechu,* an East Indian palm; used medicinally as an anthelminthic.

Guyton de Morveau, Louis Bernard. 1737–1816. A French lawyer who made chemistry a hobby, and introduced the first nomenclature, promoted the antiphlogiston theory and translated many books.

gymnemic acid. $C_{32}H_{56}O_{12}$ = 631.4. The active constituent of *Gymnema sylvestre*, an Asclepiadaceae of Australia, India and Africa.

gymnosperm. A large group of plants in which the seeds are not enclosed in an ovary: *e.g.*, the conifers. Cf. *angiosperm.*

gynergen. $C_{70}H_{76}N_{10}O_{16}$ = 1313.13. Ergotamine tartrate. Colorless crystals, decomp. 180, soluble in water or alcohol. A constituent of ergot; increases the blood pressure.

gynesin. $C_{19}H_{23}O_3N_3$ = 341.4. A basic substance isolated from urine from females.

gynocardic acid. (1) $C_{18}H_{34}O_2$ = 282.2. An acid from the oils of *Gynocardia odorata* and *G. Prainii*, m.67, insoluble in water. (2) A mixture of unsaturated acids from gynocardia and chaulmoogra oils, containing hydnocarpic, taraktogenic and gadoleic acids.

gynocardine. $C_{13}H_{19}O_9N$ = 333.15. A glucoside, m.162, from the seeds of *Gynocardia odorata.* It yields on hydrolysis glucose, HCN and $C_6H_8O_4$. Cf. *chaulmoogra oil.*

gynoval. $C_{15}H_{26}O_2$ = 238.3. The isovaleric ester of isoborneol. $MeCHMeCH_2COOC_{10}H_{17}$. A colorless neutral liquid of peculiar aromatic odor, d.0.952–0.957, b.135; used medicinally as a hypnotic and sedative.

gypsum. Selenite. A native hydrated calcium sulfate (q.v.) or plaster of Paris (q.v.). Cf. *anhydrite.*

gyration. Revolving in a circle.

gyrophoric acid. $C_{16}H_{14}O_7$ = 318.11. An acid from the lichen, *Gyrophora vellea.*

H

H. (1) The symbol for hydrogen, H^+ hydrogen ion, H^* excited hydrogen atom, H_2 hydrogen molecule, H_2^+ ionized hydrogen molecule, H_2^* excited hydrogen molecule. H^1 or H^a hydrogen isotope of mass 1, protium. H^2 or H^b hydrogen isotope of mass 2, deuterium. H^3 or H^c hydrogen isotope of mass 3, tritium. (2) The symbol for the unit of strength of a magnetic field (gauss). (3) Henry, the unit of inductance. (4) The symbol for enthalpy (q.v.). **H acid.** 8-Amino-1-naphthol-3,6-disulfonic acid. **H ion.** See *hydrogen-ion.* **H line.** (1) The spectrum lines due to hydrogen; as,

Hα or Fraunhofer line C.....	λ 6573	(red)
Hβ or Fraunhofer line F.....	λ 4861	(blue)
Hγ or Fraunhofer line G.....	λ 4340	(blue)
Hδ or Fraunhofer line h.....	λ 4101	(violet)

(2) The Fraunhofer line H, λ 3968, due to calcium. **H.M.** Abbreviation for heavy metals. **H. rays.** A stream of hydrogen nuclei; they can be detected by electrometer or photographic plate. **H. salt.** The sodium salt of H-acid.

h. An abbreviation for (1) hour, (2) height, (3) hundred, (4) hetero-.

h. Planck's constant (q.v.), or $(6.559 \pm 0.008) \times 10^{-27}$ erg-seconds.

H. and D. Abbreviation for Hurter and Driffield curve, the basis of measurement of the sensitiveness of photographic materials. It is obtained by plotting log (exposure time) against the density of the photographic negative produced by the exposure.

ha. Abbreviation for hectare.

Haber, Fritz. 1868–1934. A German chemist and Nobel prize winner. **H. process.** A method of producing ammonia synthetically from nitrogen and hydrogen in presence of a catalyzer. Cf. *nitrogen fixation.*

habitat. The abode or region in which a living organism, either plant or animal, is located or found. **abyssal-** A h. in the deep sea. **alpine-** A h. in high mountains. **fossorial-** A h. in burrows and caves. **littoral-** A h. near the shores. **pelagic-** A h. in the open sea.

Hackh symbols. Structure symbols. **H.'s table.** See *periodic table.* **H. theory.** The atomic nucleus consists of I neutrons, and A positrons, where I is the isotopic mass and A the atomic number.

Hadfield, Sir Robert. 1859–1940. A British metallurgical chemist, noted for the development of stainless steels. **H. process.** A metal oxide is reduced by heating with granulated aluminum and fluorspar in a crucible.

hadromal. Ferulaldehyde.

hæ- See *hae-, he-.*

haem. $C_{34}H_{33}O_3N_4Fe$. The essential unit of the group of cellular and blood pigments, related to aetioporphyrin.

haema-, haemo- A prefix indicating a relationship to blood; see *hema-, hemo-.*

haemanthine. $C_{18}H_{23}O_7N$ = 365.19. An alkaloid from buphane.

haematoxylin. Hematoxylin.

haematoxylon, hematoxylon. (a) A genus of leguminous trees of Central America, specifically *H. campechianum.* (b) The heart-wood of *H. campechianum,* log-wood or campeachy wood, which contains a purple-red coloring material, hematoxylon, also used as an astringent.

Haeser's coefficient. The number 2.33, with which the last two figures of the specific gravity of urine are multiplied in order to obtain the amount of solids in 1000 cc. of urine. Cf. *Haine's coefficient.*

haeterolite. The mineral $ZnO.Mn_2O_3$.

hafnium. Hf = 178.6. Celtium, Ct. Oceanum. An element of the carbon group, atomic number 72, discovered in 1924 by Coster and Hevesy in zirconium minerals. It has a valency of 4, d.13.31, m.2500, and occurs in thortveitite, zircon and baddeleyite. **h. carbide.** HfC = 190.6. A gray powder, m.3887. A mixture of 25 % HfC and 75 % TaC has the highest known melting point of 4200°C. **h. hydroxide.** $Hf(OH)_4$ = 246.6. A white powder, insoluble in water. **h. oxide.** HfO_2 = 210.6. A white powder, m.3025, insoluble in water, soluble in acids. **h. oxychloride.** $HfOCl_2$ = 265.6. A white powder, insoluble in water, soluble in hydrochloric acid. **h. sulfate.** $Hf(SO_4)_2$ = 370.6. A white crystalline powder, soluble in water.

Hahn, Otto. 1879– . A German physical chemist, noted for his work on radium.

Hahnemann's mercury. Soluble mercury.

Haine's coefficient. The number 1.1, which when multiplied by the last two figures of the specific gravity of urine, gives the amount of solids in grains for each fluid ounce. Cf. *Haeser's coefficient.*

hairari root. The roots of *Lonchocarpus* species containing rotenone. Cf. *cubé root.*

halazone. $C_7H_5O_4NSCl_2$ = 269.9. p-dichloramidobenzo-sulfonic acid, $C_6H_4(SO_2NCl_2)$-COOH. A white powder with a strong chlorine odor, m.213, soluble in water or chloroform; used as an antiseptic.

half period. The period in which the activity of a radioactive substance decreases to half of its initial value. It varies from 3×10^{10} years (thorium) to 0.002 sec. (AcA).

half-stuff. A pulp intended for paper-making, before it goes to the paper-making machine.

halide. A binary compound of the general type MX, MX_2, or MX_3, in which M is a metal, X a halogen (F, Cl, Br, I). **acid-** A compound of the type R.COX. **alkylaryl-** A compound of the type RX, where R is an alkyl or aryl radical. **magnesium-** A compound of the type RMgX; *e.g.* Grignard's reagent.

h. lamp. An alcohol torch with copper tube, which ordinarily burns colorless but gives a green flame in presence of organic halides; used to detect leaks in refrigerators using halides as refrigerants.

halite. A native sodium chloride.

haliver oil. Halibut liver oil, which is rich in vitamins A and D.

Hall, Arthur Daniel, Sir. 1864–1942. A British agricultural chemist. **H., Carl von.** 1819–1880. An Austrian chemist, noted for work on vanadium compounds. **H., Charles M.** 1863–1914. An American chemist noted as inventor of the electrolytic aluminum process.

H. effect. Galvanomagnetic difference of potential. A difference of potential is produced in a metal plate placed transversely between two magnetic poles; when the electric current passes from left to right, and the upper edge of the metal plate becomes positive, the effect is called positive. **H. formula.** If E is the difference of potential between the lower and upper edge of the metal plate of thickness t, then $E = R(Hi/t)$, where R is a constant specific for different metals, H the magnetic field strength in gausses, and i the electric current in C.G.S. units.

Hall purinometer. A graduated glass tube of special construction, used for the determination of purine bodies in urine.

Hallwachs effect. Photoelectric effect.

halloylite. Halloysite.

halloysite. $Al_2O_3.2SiO_2.nH_2O$. Halloylite. A refringent, micaceous silicate constituent of clay.

halo. (1) A series of luminous concentric circles around a source of illumination caused by the refraction of light in passing through solid or liquid particles suspended in the atmosphere. (2) A circular photographic image produced when x-rays pass through an *amorphous* substance. Cf. *x-ray crystallogram.*

halo- A prefix indicating the presence of a halogen, as haloplatinates.

halochromism. (1) The formation of colored salts from colorless organic bases by the addition of acids. Cf. *solvatochromism.* (2) The production of colorless solutions in some solvents and colored solutions in others.

haloform. A compound of the type CHX_3; as, chloroform. **h. reaction.** The reaction analogous to that by which iodoform is made from alcohol or acetone.

halogen. The non-metallic elements of the seventh group of the periodic system: F, Cl, Br, and I. Halogens are multivalent and have a valence number of −1 (*e.g.*, chlorides), 1 (*e.g.*, hypochlorites), 3 (*e.g.*, chlorites), 5 (*e.g.*, chlorates), and 7 (*e.g.*, perchlorates). **h. acids.** The hydrogen compounds of the halogens: HF, HCl, HBr, and HI.

halogenide. A compound containing a halogen.

halophile. A bacterium which can grow in saline media.

halogenation. The introduction of a halogen into an organic compound, either by addition or substitution; as chlorination or bromination.

halohydrin. An organic compound of the type X—R—OH, as $Cl—CH_2.CH_2.OH$, where X is a halogen.

haloid. Resembling or derived from halogens; as, chlorohydrin, bromohydrin. **h. acid.** An inorganic acid, HX, containing a halogen but no oxygen. **h. elements.** The halogens.

halowax. $C_{10}H_7Cl = 762.51$. β-chloronaphthalene. Colorless solid, m.56, b.264, used in gasoline to lubricate valve-stems in internal combustion engines.

Halphen reagent. A solution of sulfur (1 %) in carbon disulfide, used for the H. test for cottonseed oil. **H. test.** To 1 cc. of oil add 1 cc. of H. reagent and 1 cc. of amyl alcohol and heat in a brine bath for 30 mins.; 1 % of cottonseed oil gives a red color.

hamamelidin. An extract from *Hamamelis virginiana*, witch-hazel, used as a tonic.

Hamamelidaceae. Witch-hazel family, a group of trees or shrubs which yield the following drugs:

Hamamelis virginiana	witch-hazel
Liquidambar orientalis	storax
Liquidambar styraciflua	sweet gum

hamamelin. A precipitate from the extract of the bark of *Hamamelis virginiana*, used as a tonic and astringent.

Hamamelis. A genus of trees or shrubs, *e.g.*, witch-hazel, whose leaves or barks are used as tonic and sedative.

hamamelitannin. $C_{20}H_{20}O_{14}.6H_2O$. A tannic acid from the bark of witch-hazel. Fine white needles, m.115, soluble in hot water, alcohol or acetone.

hamartite. Bastnasite.

hamathionic acid. Euxanthic acid.

hand. An obsolete unit of length: 1 hand = 4 inches = 10.16 cm.

hanfangchine. $C_{36}H_{40}N_2O_6 = 596.4$. An alkaloid from the Chinese plant han-fang-chin, *Cocculus japonicus*, the root of which is used for cholera and pulmonary diseases.

Hanovia lamp. An evacuated quartz tube with two mercury reservoir electrodes, used to produce mercury vapor radiations rich in ultraviolet light.

Hantzsch, Arthur. 1857–1935. A German organic chemist noted for studies of the stereochemistry of nitrogen compounds.

Hanus solution. A solution of iodine monobromide in glacial acetic acid, used in the determination of iodine values of fats and other materials containing unsaturated organic compounds.

haptaphore. The chemical group which unites with the amboceptor.

hapten(e). An alcohol-soluble substance present in the organs of various animal species, capable of producing anti-bodies *in vitro* but devoid of antigenic properties.

haptin. A receptor in Ehrlich's side chain theory (q.v.).

haptogen. The protein substance constituting the membrane surrounding the globules of fat in milk.

hard. (a) Firm or resistant. (b) A condition of water, due to the presence of calcium and magnesium salts (see *hardness*). **h. salt.** Hartsalz.

Harden, Sir Arthur. 1865–1940. A British biochemist, noted for his work on yeast and fermentation. **H.-Young ester.** Fructose diphosphate, produced in the fermentation of sugar by yeast.

hardening. A process which makes a material more resistant to cutting, breaking or bending. **-of fats.** Hydrogenation. **-of steel.** Tempering.

hardness. (1) The state or quality of being hard. The resistance in differing degrees to cutting, bruising, scratching or grinding. Cf. *penetrometer, sclerometer, Keen tester.* (2) The presence of calcium and magnesium salts in water (usually carbonates and bicarbonates), which causes incrustations in boilers, and im-

pairs the lathering qualities of soap. These salts combine with the fatty acids of the soap, and form insoluble soap salts. **Brinnell-** See *Brinnell hardness.* **Moh's-** See *h. scale.* **Shore-** See *Shore.*

h. scale. Moh's scale. An empirical scale of minerals arranged so that each substance will scratch the preceding one in the list:

1. talc, kaolin	6. feldspar, augite
2. rocksalt, alum	7. quartz, agate, flint
3. calcite, serpentine	8. topaz, beryl
4. fluorite, marble	9. corundum
5. apatite, asbestos	10. diamond.

N.B. finger nail—2.5 penknife—6.5

Extended or new Moh's scale

6. orthoclase, periclase	*12. fused alumina, tungsten carbide*
7. vitreous pure silica	*13. silicon carbide*
8. quartz, stellite	*14. boron carbide*
9. topaz	*15. diamond.*
10. garnet	
11. fused zirconia, tantalum carbide	

h. of water. A measure of the calcium and magnesium content of water, as: *permanent-* The presence of magnesium or calcium sulfate or carbonate or other calcium salts (except bicarbonates) in water. These salts cannot be removed by simple boiling and must be removed by chemical treatment (see *permutite*). *temporary-* The presence of magnesium or calcium bicarbonate in water; the water is softened by boiling, as insoluble calcium carbonate is formed: $Ca(HCO_3)_2 = CaCO_3 + CO_2 + H_2O$. *total-* The total amount of calcium and magnesium salts in water, expressed in degrees of hardness:

English degree of hardness = 1 grain $CaCO_3$ in 1 gallon H_2O, or 1 mg. $CaCO_3$ in 70 gram water = 1 Clark degree.

German degree of hardness = 1 pt. CaO or MgO in 100,000 pt. H_2O, or 1 mg. CaO in 100 gm. water.

French degree of hardness = 1 pt. $CaCO_3$ in 100,000 pts. H_2O, or 1 mg. $CaCO_3$ in 100 gm. water.

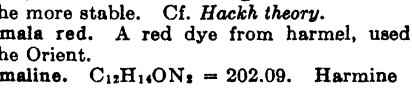
Hare, Robert. 1781–1858. An American chemist noted for work on the oxy-hydrogen flame, colorimeter, gas analysis and artificial graphite.

Hargreaves-Bird cell. An electrolytic cell for the manufacture of chlorine and caustic soda from brine. The cathode is copper gauze, and the anode gas carbon on a lead core.

Harkins, William Draper. 1873– . An American chemist noted for research on isotopic weights and atomic structure. **H. theory.** The atomic nucleus consists of He and H kernels, and those containing even numbers are the more stable. Cf. *Hackh theory.*

harmala red. A red dye from harmel, used in the Orient.

harmaline. $C_{12}H_{14}ON_2 = 202.09$. Harmine dihydride. 3,4-dihydroharmine. An alkaloid from the seeds of *Peganum harmala*, a Rutaceae of the steppes of Southern Russia and Turkey. Trimetric, octahedric, colorless crystals, m.238,



slightly soluble in water, soluble in alcohol or ether; used as an anthelmintic and stimulant. Cf. *turkey red.*

harman. Aribine.

harmel. The wild rue, *Peganum harmala*, the commonest weed of the Russian and Turkish steppes; used as a vermifuge. Its seeds contain the alkaloids harmaline, harmine and aribine. Cf. *harmala red.*

harmine. $C_{13}H_{12}ON_2 = 212.0$. Yajeine. An alkaloid from the seeds of *Peganum harmala.* **3,4-dihydro-** Harmaline. **h. dihydride.** See *harmaline, banisterine, yajenine.*

harminic acid. $C_{10}H_8O_4N_2 = 220.1$. A crystalline acid obtained by the oxidation of harmine or harmaline.

harmonic progression. A series whose terms are the reciprocals of an arithmetic progression.

harmony. The adaptation of component parts to a state of equilibrium; or a joining or fitting together; as, the harmony of milk.

Harrison Narcotic Act (U. S. A.). An Internal Revenue regulation to govern the production, importation, manufacturing, compounding, dispensing, selling, or giving away of opium or coca leaves, their salts, derivatives or preparations.

hartin. $C_{20}H_{34}O_4 = 338.3$. A substance found in fossil wood or in lignite. Cf. *hartite.*

hartite. $(C_6H_{10})_x$. A hydrocarbon found with hartine in lignite and fossil wood.

Hartman's solution. A solution of 12.5 gm. thymol, 10 gm. ethyl alcohol and 20 gm. sulfuric ether. Used to desensitize dentin selectively; it burns the flesh.

hartsalz. A mixture of sylvinite and kainite, used as a fertilizer (16 % K.).

hartshorn. Spirit of hartshorn. A popular name for ammonia water. **h. salt.** A popular name for ammonium carbonate, q.v.

harvel coating. A paint made with cashew nut oil; used for waterproofing materials, *e.g.*, cement, wood, etc.

hashish. The dried leaves and stalks of *Cannabis indica* (q.v.), used as a narcotic by the races of India.

hatchettenine. Rock tallow. A white or yellow native waxy hydrocarbon of the type C_nH_{2n+2}. It is amorphous, and is soluble in ether.

hausmannite. A native manganese oxide, Mn_3O_4, or mangano-manganite, Mn_2MnO_4; dark brown masses

hawthorn. The fruits of *Crataegus oxycantha*, a Rosaceae used as a cardiac and tonic.

hay fever extract. Pollen extract.

Hayem solution. A solution consisting of 5 pts. sodium sulfate, 1 pt. sodium chloride, 0.5 pt. mercuric chloride and 200 pts. water; used in the microscopical analysis of blood.

hazard. The danger to life or property caused by improper or neglectful handling of chemicals. Hazards fall into two groups;

LIFE HAZARDS

1. Materials which are corrosive or caustic. (Acids, bases.)
2. Materials which are poisonous. (Alkaloids, etc.)
3. Materials which emit suffocating vapors. (Bromine.)
4. Materials which form irritating gases.
5. Materials which produce toxic fumes when heated.
6. Materials which are highly explosive.

FIRE HAZARDS

1. Substances which are combustible or inflammable.
2. Substances which are explosive.
3. Substances which form inflammable vapors.
4. Substances which form inflammable dusts.
5. Substances which ignite by friction.
6. Substances which ignite with water.
7. Substances which produce a combustible gas with water.
8. Substances which produce explosive mixtures with water.
9. Substances which are oxidizing agents, and which may ignite or explode in contact with organic substances.
10. Substances which may cause spontaneous combustion.

hazardous chemicals. A group of materials which may cause loss of life or property by improper handling, shipping, or storing. Cf. *explosives, poisons, compressed gases, storage, shipping, label* and the following tables.

hb. An abbreviation for hemoglobin.

H.C. A mixture of Zn and herachloroethane used to produce artificial smokes in warfare.

HCN discoids. Wood-pulp or filter paper disks impregnated with liquid hydrocyanic acid and used in fumigation. Cf. *zyklon.*

He. The symbol for helium.

heart sugar. Inositol.

heat. A form of energy which can be transmitted from one body to another by: (a) radiation; *e.g.*, vibrations or waves in the ether which, when stopped by a substance, cause the molecules of that substance to vibrate faster, and so produce the effect of heat. (b) By contact, where the molecular vibrations are transmitted directly by conduction and convection. It is supposed that all bodies possess molecular vibrations to varying extents at ordinary temperatures, and that at −273°C., the absolute zero, these vibrations cease. **animal-** The heat evolved during the life processes of an animal by oxidation of carbonaceous materials to carbon dioxide. **atomic-** The amount of heat required to raise the temperature of a gram-atom of substance from 0°C. to 1°C. **latent-** The heat absorbed by a substance which does not cause a rise in its temperature; as h. of fusion, h. of evaporation. The heat is used to produce a change of state, *e.g.*, liquid to vapor. **mechanical equivalent of-.** See *h. equivalent.* **molecular-** The amount of heat required to raise the temperature of one mole of a substance by one degree centigrade, *i.e.*, the specific h. of a substance multiplied by its molecular weight. Cf. *Kopp's law.* **radiant-** Heat waves transmitted through space. **radioactive-** Heat evolved during radioactive decomposition. **specific-** The amount of heat required to raise one gram of a substance through one degree centigrade under specific conditions (see *calorie*).

h. capacity. The amount of heat required to raise the temperature of a body 1°C.; usually expressed in calories. *atomic-* Specific heat. Cf. *Dulong and Petit law. molecular-* Cf. *Kopp's law.* The molecular heat capacity is the sum of the atomic heat capacities. **h. conductivity.** The number of calories transmitted per second through a plate one centimeter thick across an area of one square centimeter when the temperature difference is one degree centigrade. If Q is the conductivity, $Q = k\frac{(t_2 - t_1)aT}{d}$ where k is a constant, depending on the nature of the substance, t_1 and t_2 the temperatures of the two bodies, a the area, and d the thickness of the conductor, and T the time in seconds. *specific-* The constant k in the above equation. **h. degree.** The intensity of heat (see *thermometer scale*). The entire absence of h. is considered the "absolute zero" or "zero-degree," which equals −273.13°C., −459.60°R. or 0°K. **h. effect.** Joule effect. The number of calories developed by an electric current in a metallic circuit. It is proportional to the quantity of electricity (in coulombs) multiplied by the fall in potential (volts), thus

$$H = \frac{(\text{Coulombs} \times \text{Volts})}{4.181 \text{ small cal.}} = \frac{\text{Watts}}{4.181}$$

where H is expressed in small calories; or $H = ri^2t/4.181 = Eit/4.181$, where r is the internal resistance, i the electric current equal to E/R, or the electromotive force divided by the total resistance ($i = E/R + r$), and t the time in seconds, (cf. *Peltier effect*). **h. engine.** An arrangement for converting heat into work. **h. equivalent.** A factor used to convert heat into energy units: 1 mean calorie = 4.1816×10^7 ergs; 1 calorie (15°C.) = 4.1809×10^7 ergs. The conversion factors for the gas constant, (q.v.) are

R = 82.07 cc. atm. per degree
= 1.9885 calories per degree
= 8.316 joules per degree.

h. function. When a system passes from one state to another the heat absorbed is the difference of a function (known as the heat function, W) for the initial and final states. At constant pressure, $W = U + pu$, where U is the intrinsic energy, p the pressure and u the volume. **h. index.** Maumené number. The rise in temperature produced by mixing 50 cc. of an oil with 10 cc. of conc. sulfuric acid. It is expressed in degrees centigrade and used to evaluate oils. **h. number.** H. index. **h. of activation.** H. involved in catalytic processes. **h. of absorption.** The quantity of heat consumed or liberated when a gaseous substance is dissolved. **h. of adhesion.** The quantity of h. consumed or liberated in the formation of heterogeneous mixtures; *e.g.*, rubber with filler. **h. of admixture.** H. of mixing. **h. of adsorption.** The quantity of heat liberated when a substance is adsorbed or condensed on the surface of a solid; as hydrogen gas on platinum sponge. **h. of aggregation.** The h. involved in the formation of aggregates; as *h. of condensation, h. of cooling, h. of crystallization.* **h. of association.** The quantity of h. needed to form co-ordinate compounds. **h. of combination.** *H. of formation* or *h. of hydration.* **h. of combustion.** The number of calories liberated per gram-atom or gram-molecule when an element or compound, respectively, is completely oxidized. **h. of compression.** The heat produced when a gas is compressed. **h. of condensation.** The reverse of h. of evaporation(q.v.). **h. of cooling.** The h. liberated at a certain temperature during cooling; it indicates the existence of an allotropic rearrangement. **h. of crystallization.** The number of calories liberated or absorbed per

COMMON HAZARDOUS CHEMICALS

(Condensed from Reports by the Committees of National Fire Protection Association U. S. A., and the American Chemical Society)

	Life hazard	Fire hazard	Storage	Shipping container	I.C.C.* label

Uranium nitrate	p	9	Dry	Glass bottles	y
Zinc chlorate	..	9	Away from Comb. M.	Bottles, drums	y

* Interstate Commerce Commission (I.C.C.) label: r–red, w–white, y–yellow.
Life Hazard: c–corrosive or caustic, e–explosive, p–poisonous, s–suffocating vapors.
Fire Hazard: The numbers refer to the types of hazard, q.v.
Storage: Comb. M. = combustible materials. Ox. M. = oxidizing materials.

mol when a substance passes into the crystalline state. **h. of decomposition.** The number of calories liberated or absorbed during the complete decomposition of a mol of substance. **h. of dilution.** The quantity of heat consumed or liberated when a liquid or solution is diluted. **h. of dissociation.** The h. involved in the disruption of certain bonds. **h. of dissolution.** H. of solution. **h. of evaporation.** H. of vaporization. The quantity of heat required to convert a definite amount of a liquid at its boiling point into the gaseous state; *e.g.*,

H_2O (liquid) $\rightarrow$ H_2O(steam)—9720 calories.

Such equations refer to moles, and hence must be divided by the molecular weight in order to find the number of calories per gram; *e.g.*, 9720/18 = 540 calories per gram water at 100°C. Cf. *latent heat.* **h. of explosion.** The calories liberated from a mole of explosive. **h. of foods.** See *h. value.* **h. of formation.** The quantity of heat liberated or consumed when a compound is formed from its component elements. The quantity of h. depends on the physical condition (solid, liquid or gaseous) of the reacting mblecules; thus,

$2H_2$ (g) + O_2 (g) = $2H_2O$ (l) −136,000 calories
$2H_2$ (g) + O_2 (g) = $2H_2O$ (g) −118,000 calories

as well as on their crystalline forms:
S (rhombic) = S · (monoclinic) + 77 calories.
h. of fuels. See *h. value.* **h. of fusion.** H. of melting. The quantity of heat required to convert a definite amount of a solid at its melting point into the liquid state: as,

H_2O (ice) $\rightarrow$ H_2O (liquid)—1438 calories;

hence 1438/18 = 79.8 cal. per gram of water at 0°C. **h. of hydration.** The amount of heat consumed or liberated when a substance takes up water; *e.g.*,

$CdCl_2 + H_2O$ (l) $\rightarrow$ $CdCl_2.H_2O$—1320 cal.
$CaCl_2 + 6H_2O$ (l) $\rightarrow$ $CaCl_2.6H_2O$ + 21,750 cal.

h. of ionization. The number of calories consumed or liberated when a gram-equivalent of a molecule ionizes. **h. of isomerization.** The h. involved in the formation of isomers. **h. of linkage.** The amount of h. required to form or disrupt certain atomic bonds. **h. of mixing.** For solid and liquid, see *h. of solution;* for liquid and liquid see *h. of dilution,* for gas and liquid see *h. of absorption.* **h. of neutralization.** The number of calories liberated on neutralization, or $H^+ + OH^- \rightarrow H_2O$ + 13,700 calories (at 18°C). **h. of oxidation.** See *h. of combustion.* **h. of racemization.** The quantity of heat consumed or liberated during the change from one stereoisomer to the other. **h. of reaction.** The quantity of heat consumed or liberated in a chemical reaction, as *h. of combustion, h. of neutralization, h. of formation,* etc. The condition of the reacting substance as well as of the reaction product is an important factor in the amount of heat produced or consumed, hence it is generally indicated in the equation by the abbreviations: (s) for solid, (l) for liquid, (g) for gas. **h. regenerators.** Stoves used in the blast furnace process for iron, which are heated up by waste hot gases, and then cooled by heating up cold gases for the blast. (See *Cowper stoves.*) **h. shocking.** A process similar to pasteurisation, in which a preliminary heat treatment is used to ensure that only the most virile and heat-resistant organisms in a culture are surviving. The resulting culture has thus increased virility. **h. of solidification.** The quantity of heat liberated on freezing or solidifying. **h. of solution.** H. of dissolution. The quantity of heat liberated or consumed when a solid is dissolved in a liquid. Cf. *h. of hydration* and *h. of ionization.* **h. of sublimation.** The number of calories required to convert a solid into a gas at constant temperature. **h. of swelling.** The heat evolved when a colloid (*e.g.*, gelatin) is placed in water and absorbs the latter. **h. of transition.** The quantity of heat liberated or consumed at the transition temperature, when a substance passes from one into another allotropic form. **h. of vaporization.** See *h. of evaporation.* **h. quantity.** The amount of heat energy expressed in calories. **h. rays.** See *infrared, radiation.* **h. summation.** See *Hess law.* **h. units.** Heat (H) may be expressed in dynamical units (ML^2T^2), in thermal units ($M\theta$) or thermometric units ($L^3\theta$); to the last two types belong respectively the practical units:

heat quantity..... calories,
heat intensity..... degree centigrade.

h. value. The number of calories obtained by the complete combustion of a substance: *E.g., Foods:* The heat liberated on oxidation of 100 grams of food is:

$$4.1C + 4.1P + 9.3F = \text{calories per 100 gms.}$$

where C, P, and F are the number of grams or the percentage of carbohydrates, proteins and fats, respectively. *Fuels:* The heat obtained on the complete combustion of fuels is given approximately by:

$$8149C + 34{,}500H—3000(O-N)/100 \text{ cals.}$$

where C, H, O and N are, respectively, the percentage of carbon, hydrogen, oxygen and nitrogen in the fuel. The A.S.M.E. formula for coals approximates to this heat value:

$$\text{B.t.u. per pound} = 14{,}600C + 62{,}000\left(H - \frac{O}{8}\right) + 4000S$$

where C, H, O and N are the respective weights of carbon, hydrogen, oxygen and sulfur in one pound of fuel.

heater. A device by which the temperature of a body can be raised. Cf. *furnace.* **direct-** An open fire or flame, *e.g.*, burners, lamps, ovens. **indirect-** A water-bath, steam-bath, air-bath, oil-bath, etc. or an electric heater.

Heaviside layer. See *Kennelly-Heaviside.*

heavy. (1) Not light. (2) Large in quantity. **h. acids.** Those which are used in large quantities; as, sulfuric, hydrochloric and nitric acids. **h. chemicals.** Those which were formerly manufactured in ton lots; as, sodium carbonate, potassium cyanide, oxalic acid, etc. **h. hydrogen.** Deuterium. **h. metal.** A metal whose specific gravity is greater than four. The heavy metals are all located in the lower half of the new periodic table; they have complex spectra, form colored salts and double-salts, have a low electrode potential, are mainly amphoteric, and yield weak bases and weak acids. They have usually more than one valency forming more than one series of compounds, and therefore behaving as oxidizing or reducing agents. *E.g.*,

valence number:	Fe 0 metallic iron	Fe^{++} 2 ferrous compounds	Fe^{+++} 3 ferric compounds	FeO_4^{--} 6 ferrates

OXIDATION →
← REDUCTION

h. spar. Barite. **h. water.** See *water, deuterium.*

hectare. A unit of area in the metric system. 1 hectare = 100 acres = 2.471 acres.

hecto- A prefix indicating "hundred." In the metric system it indicates one hundred units.

hectogram. In the C.G.S. system 1 hgm. = 100 gm. = 3 oz. 230.7 grains (seldom used).

hectoliter. In the C.G.S. system 1 hl. = 100 liters = 2.8378 bushels = 22 Imperial gallons = 26.4 U. S. gallons.

hectometer. In the C.G.S. system 1 hm. = 0.1 km. = 100 m. = 328 ft. 1 inch.

Hector's base. $C_{14}H_{12}N_4S$. An oxidation product of phenyl thiocarbamide.

hedenbergite. $CaO.FeO.2SiO_2$. A silica mineral (q.v.) of the pyroxene group, q.v.

hedeoma. The dried leaves and tops of *H. pulegioides*, American pennyroyal, an annual herb of U. S. and Canada; used as stimulant, carminative and emmenagogue. **h. oil.** The essential oil of *Hedeoma pulegioides*. A colorless or yellowish liquid of pungent odor, used to drive off mosquitos and fleas.

hedeomol. $C_{10}H_{18}O$ = 154.2. The ketone of the oil from hedeoma. A colorless liquid, b.217. Cf. *pulegone.*

hedera. Ivy.

hederagenin. $C_{31}H_{50}O_4$ = 486.5. A glucoside from the seeds of *Hedera* species (ivy), a genus of araliaceous plants. Cf. *hederaglucoside.*

hederaglucoside. $C_{32}H_{54}O_{11}$ = 614.43. Helexin. A glucoside from *Hedera helix*, ivy, a common Araliaceae. White powder, m.233, soluble in alcohol.

hederic acid. $C_{15}H_{26}O_4$ = 270.2. A crystalline acid from the seeds of ivy, *Hedera helix.*

hederine. $C_{42}H_{66}O_{11}$ = 746.7. An organic principle from the seeds of ivy, *Hedera helix.*

hedgehog crystals. Crystals of ammonium urate found in urinary deposits.

hedonal. $C_6H_{13}O_2N$ = 131.1. Methyl-propyl-carbinol-urethane, pentan-2-ol-urethane. $NH_2.CO.OCH(Me)Pr$. A white crystalline powder, m.74, b.215, soluble in 120 pts. water; used as a hypnotic and diuretic. Cf. *aponal.*

Heerwagen pipette. A glass tube with outlet tube and piston for delivering small quantities of mercury.

Hefner lamp. A device for burning amyl acetate and regulating and measuring the height of the flame, which should be 4 cm. high. Used as a standard for photometric measurements in Germany. **H. unit.** The horizontal illuminating intensity of the Hefner lamp burning at a pressure of 760 mm. in an atmosphere containing 8.8 % of water vapor. 1 Hefner unit corresponds with 0.9 candle power.

Hehner Number. A measure of the percentage of water-insoluble fatty acids and unsaponifiable matter in a fat or oil.

Heidenhain thermometer. A delicate thermometer ranging from −2.5°C. to 5°C. and graduated in 1/100°C., used in cryoscopes (q.v.) for molecular weight determination from the depression of the freezing point of solutions.

Heim's cage. A metal box with a wire screen and two compartments for breeding mice and other small rodents for experimental purposes.

Heisenberg, Werner. 1901– . A German physical chemist. **H. principle.** The uncertainty or indeterminism principle. Within the atom it is meaningless to define both position and velocity of the electrons, because Δx, the error in specifying velocity x, multiplied by Δp, the error in specifying position p, is always of the order of magnitude of Planck's constant, h; *i.e.*,

$$\Delta x \Delta p \sim h.$$

Hence, assuming a definite velocity, only an approximate position is calculable; likewise, assuming a definite position, only an approximate velocity can be calculated: Cf. *wave mechanics.* In simple language: The limit to observational experiments is reached when the observational or determining factors begin to interfere with normal happenings in the experiment under observation.

Heitler, Walter. 1904– . A German theoretical physicist. **H. and London bond.** A pair of electrons in opposite spin. Cf. *bond.*

helcosol. Bismuth pyrogallate.

helenene. $C_{19}H_{26}$ = 254.2. A hydrocarbon obtained by distilling crude helenin with phosphoric acid.

helenin. (1) C_6H_8O = 96.1. Inula camphor. True helenin. Odorless, colorless crystals, m.72, b.150, from the roots of *Inula helenium.* (2) $C_{21}H_{28}O_{31}$ = 776.3. Crude helenin. A principle from the root of *Inula helenium* consisting of alantol, alant camphor and alantic anhydride. (3) Inulin. (4) $C_{20}H_{26}O_5$ = 345.3. A bitter, crystalline substance from the leaves of *Helenium autumnale*, sneezewort, a Compositae. It differs from the true or crude helenin obtained from inula. (5) Helenene.

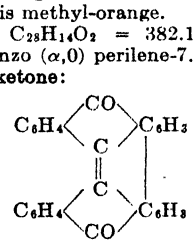
helenite. Mineral caoutchouc.

helexin. Hederaglucoside.

helianthic acid. $C_{14}H_9O_8$ = 305.1. An acid from the seeds of *Helianthus annuus*, sunflower, a Compositae.

helianthin. Dimethyl amido azo benzene sulfonic acid. $Me_2N—C_6H_4—N:N—C_6H_4SO_3H$. A dye occurring in lustrous red crystals. Its sodium salt is methyl-orange.

helianthrone. $C_{28}H_{14}O_2$ = 382.17. Benzodianthrone, dibenzo (α,0) perilene-7.16-dione. The homocyclic ketone:



helianthus. Sunflower.

helicin. $C_{13}H_{16}O_7.\frac{1}{4}H_2O$ = 297.71. Salicyl-aldehyde glucose. An oxidation product of salicin. Colorless crystals, m.170–175, soluble in water or alcohol.

helicoprotein. A glucoprotein from the snail, *Helix.*

helictite. A stalactite or stalagmite of irregular shape.

helide. A supposed compound of helium, *e.g.*, mercury helide, $HgHe_{10}$.

heliolamp. An electric lamp containing a silicon-coated carbon filament; used for the production of artificial sunlight.

heliotrope. A variety of quartz with a greenish tint and red specks, used as a semiprecious stone.

heliotropic acid. Piperonylic acid.

heliotropin. (1) Piperonal. (2) A purple diazo dye. (3) The odorous principle of *Heliotropium* species; cf. *piperonal.*

heliotropine. An alkaloid from *Heliotropium europaeum*, a Boraginaceae.

helisterol. $C_{26}H_{44}O_2$ = 388.4. A colorless sterol from plant carotenoids.

helium. He = 4.003. A chemically-inert gas and element, atomic number 2. It is a constituent of the atmosphere, of radioactive minerals and of natural gases. Discovered in 1895 by Ramsay and Cleve, after its presence in the sun was indicated spectroscopically by Lockyer and Frankland in 1869. A colorless gas, $d._{(air-1)}0.137$, m. −272, b. −268.8. Used in America for filling balloons and airships; also for filling incandescent lamps. It is transported in steel cylinders. **h. atom.** The h. atom is assumed to consist of a nucleus having two positive charges, around which two electrons move in orbits whose planes are inclined at 120°. **h. compounds.** H. has a valency of zero; hence it forms no ordinary compounds. Excited He molecules however, give compounds, helides, q.v. **h. nucleus.** The atomic nucleus of He (mass nearly four times that of hydrogen) is assumed to be a constituent of all other elements (Harkin's theory), and is itself composed of hydrogen nuclei. Cf. *packing effect.* In radioactive disintegration (q.v.) He nuclei (alpha rays) are thrown off at a high speed. Their positive charge is neutralized by attracting two electrons, thus forming the He gas which is always associated with radioactive minerals. Cf. *petalon, piezoelectron, Hackh theory.*

helix. (1) The coil of wire in an electromagnet. (2) A spiral arrangement of the periodic system, q.v. (3) A snail.

hellebore. A genus of ranunculaceous plants. **American-** *Veratrum viride.* **black-** The root of *Helleborus niger.* **false-** American-. **green-** The root of *H. viride.* **white-** *Veratrum album.*

helleborein. $C_{37}H_{56}O_{18}$ = 788.6 or $C_{21}H_{34}O_{10}$ = 446.26. A glucoside from the roots and leaves of *Helleborus niger* and *H. viridis.* Soluble in water or alcohol. Used as a local anesthetic and heart stimulant.

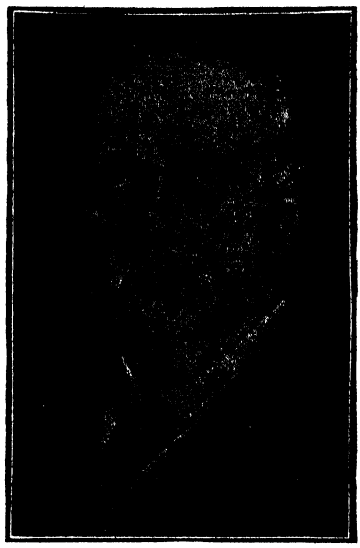
helleboresin. $C_{30}H_{38}O_4$ = 462.29. A decomposition product of helleborin.

helleboretin. $C_{14}H_{20}O_3$ = 236.2. A deep violet decomposition product of helleborein.

helleborin. $C_{36}H_{42}O_6$ = 570.4. A crystalline glucoside from the roots of *Helleborus niger.* Slightly soluble in water, soluble in ether or alcohol. Used as a narcotic.

Helmert's equation. The acceleration due to gravity at sealevel is $g = 978.038\ (1 + 0.005302\ \sin^2 H - 0.000007\ \sin^2 2I)$ where I is the latitude. Subtract 0.000192 for each meter of height (H) from the value of g.

Helmholtz, Herman Ludwig Ferdinand von. (1821–1894). A German scientist noted for his generalizations on the conservation of force, physiological optics, electrodynamics, theories of electricity, and his discovery of nerve cells. **H. equation** of inductance: $I = \frac{E}{R}\left(1 - e^{-\frac{R}{T}.t}\right)$, where E is the electromotive force, R the resistance, I the coefficient of self-inductance, and e the base of Naperian logarithms. **Gibbs-H. equation.** See *Gibbs.*



von Helmholtz.

helminth. A worm or intestinal parasite.

helminthic. Anthelminthic.

helmitol. $C_7H_8O_7(CH_2)_6N_4$ = 344.26. Hexamethylenetetramine anhydromethylene citrate. Colorless crystals, m.163, used as urinary antiseptic. Cf. *cystopurin.*

Helmont, Johann Baptist van. 1577–1644. A Belgian alchemist whose work represents the transition from speculative to experimental chemistry. He originated the term "gas" (chaos).

helonias. False unicorn root, starwort. The root of *H. dioica* (*Chamaelirium luteum*), a Liliaceae, used as tonic and diuretic.

helonoid. The combined principles from the root of *Chamaelirium luteum*, false unicorn; used medicinally as a tonic, diuretic, and vermifuge. Cf. *chamaelirin.*

Helvella. A family of cryptogams.

helvellic acid. $C_{12}H_{20}O_7$ = 276.2. A dibasic, poisonous acid from *Helvella esculenta*, which causes hemoglobinuria.

helvetium. An element, atomic number 85. Discovered in 1940, by Minder of Berne, in the decomposition products of actinium.

helvite. $(BeMoFe)_7Si_6O_{12}S$. A brittle, lustrous, yellowish to greenish colored mineral.

helvolic acid. An antibiotic substance, now known to be identical with fumigacin.

hema- A prefix denoting blood. See *haemo-.*

hemachate. Blood agate. A yellow variety of agate.

hemacyanin. Hematocyanin. A blue coloring matter found in bile; cf. *hemocyanin.*

hemacytometer. Hemocytometer.

hemaglobinometer. Hemoglobinometer, q.v.

hemaglutination. Hemoglutination.

hemaglutinins. Substances (agglutinins) which cause the clumping of red blood corpuscles.

hemagog. An agent that promotes the menstrual or hemorrhoidal discharge of blood.

hemanthine. An alkaloid of *Haemanthus toxicarus*, an Amaryllidaceae; constituent of Aus-

tralian arrow poisons, resembling scopolamine in its effect.

hemase. A catalase (q.v.) derived from blood.

hematein. $C_{16}H_{12}O_6$ = 300.1. An oxidation product of hematoxylin. A brownish powder, insoluble in water, slightly soluble in alcohol, soluble in ether; used as indicator in alkalimetry.

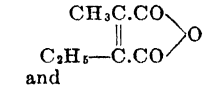
hematic acid. Δ^3-1,3,4-pentene tricarboxylic acid. A tribasic acid obtained from hematin; $HOOC\text{-}(CH_2)_2C(COOH):C(OOH)Me$.

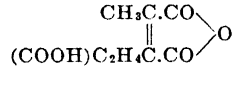
hematin. $C_{34}H_{32}N_4O_6Fe$ = 648.5. Phenodin, haematin. The prosthetic group of the hemoglobin of blood. A brownish-black powder, soluble in alkalis. **oxy-** $C_{34}H_{32}N_4O_7Fe$ = 664.5. The coloring matter of oxyhemoglobin. It yields on strong oxidation hematinic acid, on strong reduction hematoporphyrin, and on heating pyrrole and pyrrole derivatives. Cf. *porphin*.

hematine crystals. Hematoxylin. **h. extract, h. paste.** Hematoxylin paste; more strictly applied to its oxidation product.

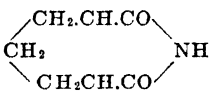
hematinic. An agent that increases the hematin content of blood.

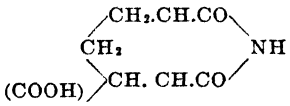
hematinic acids. A group of di- and tribasic acids obtained by the strong oxidation of hematin; the anhydrides and imides have the formulae:





and





Cf. *hematic acid*.

hematite, haematite. Fe_2O_3. Red iron ore. Raddle. The most common iron ore used in metallurgy for the manufacture of iron and steel. **brown-** The hydrated variety or limonite. **red-** Kidney ore. Rhombic or reniform native Fe_2O_3. **spicular-** Specularite.

hematocrit. A small centrifuge, used to separate blood corpuscles in clinical analysis.

hematocrystallin. Oxy*hemoglobin*.

hematocyanin. Hemocyanin.

hematoglobulin. Oxy*hemoglobin*.

hematoidin. Bilirubin.

hematology. The science of the properties and diagnostic indications of blood.

hematolysis. Hemolysis.

hematoporphyrin. (1) $C_{16}H_{18}N_2O_3$ = 286.16. Porporino. A decomposition-product of hematin, occurring with hemoporphyrin in urine; m. below 100 (decomp.). (2) $C_{34}H_{38}N_4O_6$. Cruentine. A dark violet powder obtained by adding hemin to glacial acetic acid saturated with HBr, and neutralizing after some time with NaOH. It is insoluble in water, soluble in alcohol. Cf. *porphin*.

hematoxylic acid. Hematoxylin.

hematoxylin. $C_{16}H_{14}O_6.3H_2O$ = 356.2. Haematoxylic acid, haematine, hematine crystals, logwood crystals, campeachy wood, Jamaica wood, steam black. The coloring principle of *Haematoxylon campechianum* (logwood). Colorless or slightly yellow crystals, soluble in water, alcohol, or glycerin, slightly soluble in ether or carbon disulfide. Soluble in alkalis (ammonia, borax, etc.) producing a purple color; with acids the color changes to yellow. On exposure it turns black with the formation of hematoxylin. Used as a mordant dye, as an indicator in the titration of alkaloids, as a stain in microscopy, and as reagent for copper and iron. **h. paste.** Logwood paste, hematin extract, logwood extract. A technical grade of hematoxylin used as coloring material in the textile and leather industries.

hematoxylon. Haematoxylon.

heme compounds. Derivatives of hemoglobin and chlorophyll; as, porphyrins and hemins. For their structure, see *porphin*.

hemellitic acid. *2.3*-xylic acid.

hemellitol. Hemimellitene.

hemerythrin. A relatively rare iron-protein compound in living tissues.

hemi- A prefix derived from Greek meaning "half." See also "*semi-*" (Latin) and "*demi-*" (French).

hemialbumose. Propeptone. A decomposition product of albumin, related to peptone.

hemicellulose. (1) A constituent of the cell wall of bacteria. (2) Pseudocellulose. A group of gummy substances intermediate in composition between cellulose and the sugars. (3) A constituent of starch. Cf. *xylan*.

hemicolloid. A colloidal particle having a chain length up to 250 Å.U. and a polymerization of 20 to 100 molecules. Cf. *mesocolloid*.

hemihedral. Describing a crystal which has only half the number of faces that the symmetry of the system requires, Cf. *holohedral*.

hemimellitene. C_9H_{12} = 120.1. Hemimellitol, 1.2.3-trimethylbenzene, $C_6H_3Me_3$. A colorless liquid, b.175.

hemimellitic acid. $C_9H_6O_6$ = 210.05. Benzene-1.2.3-tricarboxylic acid, v-tricarboxybenzene, $C_6H_3(COOH)_3$. Colorless needles, m.196 (decomp.), slightly soluble in water, soluble in alcohol or ether. Cf. *hemellitic acid*.

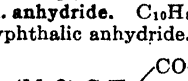
hemimellitol. (1) $HO.C_6H_2Me_3$. (2) Hemimellitene.

hemimorphite. Calamine (British usage).

hemin. $C_{34}H_{32}O_4N_4FeCl$ = 658.0. Teichmann's crystals, hematin chloride. The characteristic microcrystals obtained by heating a crystal of sodium chloride, a drop of glacial acetic acid, and blood on a microscope slide. It is an identification test for blood of different species (see figure).

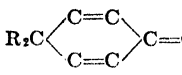
hemipic acid. Hemipinic acid.

hemipinic acid. $C_{10}H_{10}O_6$ = 226.1. Hemipic acid. Dimethoxybenzene-dicarboxylic acid, 3.4-dimethoxyphthalic acid, $C_6H_2(OMe)_2(COOH)_2$. Colorless crystals, slightly soluble in water, soluble in alcohol. It is a split-product of nicotine, and occurs in the following isomeric forms, where the first two numbers indicate the position of the methoxy groups, the last two numbers the carboxyl groups: **3.4.1.2-** m.185, (decomp.). **4.5.1.2-** m.178. **5.6.1.2-** m.180. **h. anhydride.** $C_{10}H_8O_5$ = 208.1. 3.4-dimethoxyphthalic anhydride.



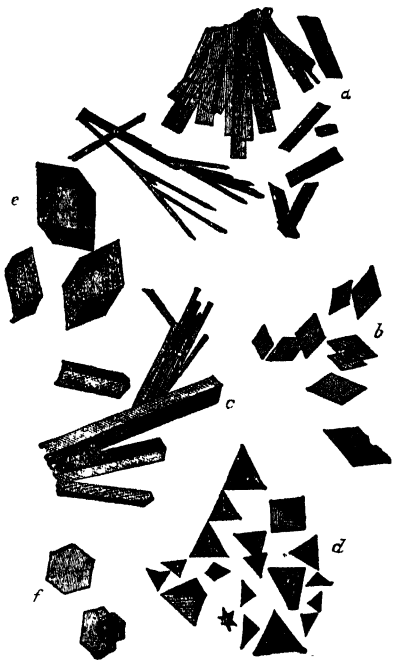
hemipyocyanin. An antibiotic pigment derived from pyocyanin.

hemiquinoid. The structural arrangement



Cf. *quinoid.*

hemisotonic. Having an osmotic pressure equal to that of blood. Cf. *isotonic.*



Hemin crystals,

from the blood of man (a, b), cat (c), guinea pig (d), marmot (e), and squirrel (f). (Gautier.)

hemit. A trade name for molded tar and asbestos products used for electrical insulation.

hemiterpenes. A group of hydrocarbons of the general formula C_5H_8, related to the terpenes (q.v.); as, isoprene.

hemlock. (1) The fir tree *Tsuga canadensis* of Western and Northern America. (2) The poisonous plants and shrubs of the *Conium* species, Umbelliferae. **poison-, spotted-** Conium. **water-** Cicuta. **h. alkaloids.** Alkaloids from the seeds and bark of *Conium* species: coniine, conhydrine, conicine. **h. bark.** The bark of the hemlock fir, used in tanning. **h. fir.** The tree, *Tsuga canadensis* of W. and N. America. **h. spruce.** H. fir. **h. tannin.** $C_{26}H_{16}O_{10}$ (?). A tannin from the bark of *Tsuga* species.

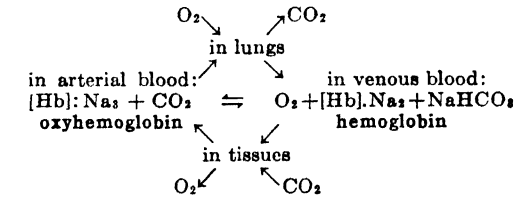
hemocuprein. A blue copper-protein compound in the red blood corpuscles and livers of mammals.

hemocyanin. Haemocyanin. A blue coloring matter from the blood of mollusks. It is related to hematin, but contains copper instead of iron. *Cf. hemacyanin, chromoprotein.*

hemocytometer. Hemacytometer, hemameter, etc. A microscope slide with square rulings; used for counting the number of blood corpuscles in a preparation.

hemodyn. See *periston.*

hemoglobin. Haemoglobin. Hb. A chromoprotein and coloring matter of red blood corpuscles of mammals. Brownish-red powder, soluble in water. It consists of hematin combined with the histon; *globin*, is the oxygen carrier of the blood of mammals and is related chemically to chlorophyll. Molecular weight, 68,000 ± 1000. **kat-** A compound of denatured globin and hematoxylin, produced by the action of chloroform on methemoglobin. **met-** An oxidation product of h. formed when blood is left standing. It contains trivalent iron. **oxy-** The hemoglobin of arterial blood, containing divalent iron. **reduced-** The hemoglobin of venous blood. Its reactions and changes in the blood stream are:



Cf. *cytochromes, respiration, porphin, hemocyanin.*

hemoglobinometer. An instrument for determining the amount of hemoglobin in the blood.

hemoglutination. The clumping together or agglutination of the red blood corpuscles.

hemolysin. A substance that causes hemolysis, such as saponin, venoms; or the proteins formed in the body by the introduction of red blood corpuscles from another species, which are capable of dissolving the red blood corpuscles of the host species. **h-** H. made from *Helix pomatia.* **l-** H. made from *Limulus polyphemus.* **o-** H. from *Octopus vulgaris;* molecular weight, 2,050,000.

hemolysis. Hematolysis. (1) In the living organism: The abnormal loss of hemoglobin of the blood corpuscles, causing the blood to become brighter and clearer; it finally results in death. (2) The dissolving of red blood corpuscles by chemicals, heating, freezing, or biological agents, which causes the blood to become transparent and clear. Used in certain diagnostic reactions to determine the presence or absence of antibodies. See *Wassermann reaction, Ehrlich side-chain theory, heterolysis.*

hemolytic. An agent that causes the destruction of red blood corpuscles.

hemolyzate. The product of hemolysis.

hemoporphyrin. $C_{16}H_{18}O_3N$ = 272.2. A decomposition product of hematin, closely allied to the phylloporphyrin, decomposition product of chlorophyll; both split to hemopyrrole. Cf. *porphin.*

hemopyrrole. $C_8H_{13}N$ = 123.2. A pyrrole derivative and decomposition-product of both, hemoglobin (hemoporphyrin) and chlorophyll (phylloporphyrin).

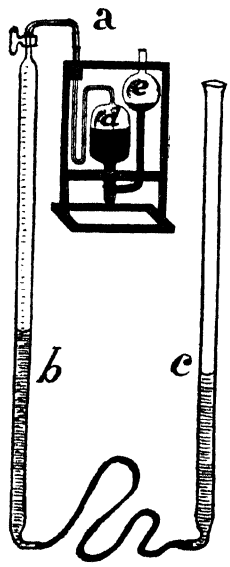
hemostatic. An agent which when applied externally checks the flow of blood; as tannin, Monsel's solution, ferric chloride. Cf. *styptic.*

hemp. The plant *Cannabis indica* or *C. sativa*, an Urticaceae, of which: (a) the flowering tops are the drug cannabis and yield a resin (cannabin; (b) the leaves and stalks are hashish; (c) the seeds yield h. seed oil; and (d) the

stems a fiber used for ropes or paper. **bowstring-** A tough fiber from *Sanseviera Zeylanica*, a Liliaceae of Ceylon. **Bombay-** Sunn-. **Canadian-** *Apocynum cannabinum*. The roots are used medicinally. **China-** See China *jute*. **Deccan-** The fiber from *Hibiscus cannabinus*, a Malvaceae of India. **Manila-** Abaca. **Mauritius-** The fiber *Furcraea gigantea*, an Amaryllidaceae. **New Zealand-** N. Z. flax. The fiber from *Phormium tenax*. **sisal-** See *sisal*. **sunn-** Bombay h. A fiber obtained from the stems of *Crotalaria juncea*, a Leguminosae of India and Australia.

h. seed. The seeds of Cannabis species. **h. seed oil.** A light-green, non-drying oil, expressed from hemp seeds. Its chief constituent is linolein; d_{15} 0.925–0.932, m. −15 to 23. Used for soap, paints and varnishes.

Hempel, Walther. 1851–1916. A German analytical chemist. **H. gas buret.** A glass apparatus used frequently in gas analysis for the absorption of gases by solid or liquid reagents. The gas is measured in the buret b and on raising the leveling tube c it enters the absorption bulb, d (of which there may be one or more), through the capillary tube "a," and pushes the absorbing liquid partly into the levelling bulbs, e, the whole being mounted compactly upon a metal frame. After absorption of the residual gas is pulled back into the buret and measured. **H. palladium tube.** A U-shaped glass tube filled with palladium sponge for use in gas analysis to absorb hydrogen.



Hempel gas buret.

henbane. Hyoscyamus.

hendecanal*. $C_{11}H_{22}O$ = 170.17. Undecylic aldehyde, undecanal*, $Me(CH_2)_9CHO$. A colorless liquid, d.0.825, m. −4, b.117.

hendecane*. Undecane. **h. carboxylic acid.** Lauric acid. **h. dicarboxylic acid.** Brassylic acid.

hendecanoic*. Undecylic.

hendecanol. Hendecyl alcohol.

hendecanone*. $C_{11}H_{22}O$ = 170.17. Undecanone. **1-** Hendecanal. **2-** Methyl-*n*-nonyl-ketone, $MeCOC_9H_{17}$. A colorless liquid, d.0.826, m.121.1, b.228, in oils of rue and lime. **6-** Diamyl ketone, amyl ketone, $C_5H_{11}COC_5H_{11}$. A colorless liquid, d.0.826, m.14.6, b.226.3.

hendecene*. $C_{11}H_{22}$ = 154.17. Undecylene, undecene*. A group of unsaturated hydrocarbons; as, **α-** or **1-** $CH_2{:}CH(CH_2)_8Me$. A colorless liquid, d.0.763, b.188. **β-** or **2-** $MeCH{:}CH(CH_2)_7Me$. A liquid, d.0.774, b.193; both are insoluble in water, soluble in alcohol or ether.

hendecoic acid. Undecylic acid.

hendecyl. Undecyl. The monovalent radical, $Me(CH_2)_{10}$— or $C_{11}H_{23}$—. **h. alcohol.** $C_{11}H_{24}O$ = 172.19. **1-** 1-hendecanol*, *n*-undecyl alcohol, undecan-1-ol. A colorless liquid, d.0.883, m.19, $b._{30mm}$ 146. **6-** 6-hendecanol*, n-undecan-6-ol. A colorless liquid, d.0.833, m.16, b.235. **h. amine*.** $C_{11}H_{25}N$ = 171.20. *n*-undecylamine, 1-amino-undecane. A colorless liquid, m.16.5, b.234.

Henderson, George Gerald. 1862–1942. A British chemist, noted for his work on terpene chemistry. **H. process.** Roasting copper ores with salt, subsequent leaching of the chlorides, and precipitation of the metals.

heneicosane. $C_{21}H_{44}$ = 296.4. A saturated hydrocarbon, m.40.5, of the methane series. **h. dicarboxylic acid.** $C_{23}H_{44}O_4$ = 384.3. Colorless crystals, m.124, in Japan wax (3 %).

heneicosanic acid. $C_{21}H_{42}O_2$ = 326.3. White needles, m.74, in fats.

henequen. The fiber of *Agave fourcroydes*, a Mexican plant and the West Indies; used for ropes. Cf. *sisal*.

henna. The powdered leaves of *Lawsonia inermis*, A Lythraceae of Asia Minor, Egypt and Persia. Used as a brown dye, especially for hair.

Henry, Joseph. 1797–1878. An American physicist noted for his research in magnetism. Cf. *henry*. **H., William** 1775–1836. An English chemist and co-worker of Dalton. **H.'s law.** The amount of gas dissolved in a liquid is proportional to the pressure of the gas; hence, the ratio of the concentrations of the gas in gaseous and soluble form is a constant, provided the temperature is constant.

henry. H. The unit of induction. If the e.m.f. induced is 1 volt, and the inducing current varies at the rate of 1 amp. per second, a henry, or quadrant, or secohm is = 10^9 e.m.u. or $\frac{1}{9} \times 10^{-11}$ e.s.u.
1 international henry = 1.00052 absolute henry
1 absolute henry = 0.99948 international henry
= 1.1124×10^{-12} c.g.s. e.s.u. = 10^9 c.g.s. e.m.u.
= 1 practical henry.

hentriacontane*. $C_{31}H_{64}$ = 436.6. A hydrocarbon of the methane series, m.69, obtained from the roots of *Oenanthe crocata*, an Umbelliferae; also found in beeswax.

hepar. The Greek term for "liver." **h. antimoni.** Sodium or potassium antimoniate. **h. calcis.** Calcium sulfide. **h. reaction.** A test for sulfur. The compound is reduced with soda and carbon, and the mass moistened on a silver coin. A black stain indicates sulfur. **h. siccum.** The powdered dried liver of animals used as food in diabetes. **h. sulfuris.** Liver of *sulfur*.

heparin. A blood anti-coagulant of the liver; a conjugated glucuronic acid glucoside.

hepatic gas. Hydrogen sulfide.

hepatica. The dried plant *Hepatica triloba*, liverwort. Used as a mild mucilaginous astringent.

hepatin. Glycogen.

hepatocuprein. A blue compound containing copper, in mammalian red blood corpuscles and liver.

hepatoflavin. Vitamin B_2.

hepotic acid. Oenanthic acid.

heptacosane*. $C_{27}H_{56}$ = 380.5. A hydrocarbon of the methane series, m.59; found in beeswax.

heptad. An element or radical having a valency of seven.

heptadecane*. $C_{17}H_{36}$ = 240.3. Dioctyl-methane. A hydrocarbon of the methane series. **h. carboxylic acid*.** Stearic acid. **h. nitrile*.** Margaronitrile.

heptadecanoic acid*. Margaric acid.
heptadecanone*. Pelargone.
heptadecoic acid. Margaric acid.
heptadecylic acid. Margaric acid.
heptadiene*. C_7H_{12} = 96.09. **2.4-** $MeCH{:}CH.CH{:}CH.CH_2Me$. Colorless liquid, b.107. **h. one.** Phorone.
heptaldehyde. Heptyl aldehyde.
heptamethylene. Suberane.
heptanal*. Heptyl aldehyde.
heptane*. C_7H_{16} = 100.2. (a) Normal, heptane, methyl hexane, dipropylmethane, hexylmethane, heptyl hydride, dimethylpentane $Me(CH_2)_5Me$. A colorless liquid, d.0.690, b.95, insoluble in water, soluble in alcohol or ether, highly inflammable. Used as a solvent and an anesthetic, and occurs in the needles of *Pinus sabiana*. (b) Dimethylisopentane, $(CH_3)_2CH(CH_2)_3CH_3$. A colorless liquid, d.0.680, b.90, soluble in alcohol or ether. (c) Triethylmethane $(C_2H_5)_3CH$. A colorless liquid, d.689, b.96, soluble in alcohol or ether. (d) Diethyldimethylmethane $(C_2H_5)_2C(CH_3)_2$. A colorless liquid, d.0.711, b.86, insoluble in water, soluble in alcohol or ether. **bicyclo-** See *carane, fenchane*. **heptahydroxy-**. Volemitol.
heptane-1,7-dicarboxylic acid. Azelaic acid.
heptanedioic acid*. Pimelic acid.
heptanoic acid*. Heptoic acid.
heptanol*. Heptyl alcohol.
heptanone*. **4-** Butyrone. **3-** Ethylbutylketone. **2-** Methylamyl ketone.
heptatomic. (1) Heptavalent. (2) A molecule consisting of seven atoms.
heptavalent. (1) A molecule containing seven replaceable hydrogen atoms or seven hydroxyl groups. (2) Septavalent. An atom which has seven valence electrons; as, Mn or Cl.
heptene*. C_7H_{14} = 98.2. Heptylene, pentylethylene, $CH_2{:}CH(CH_2)_4Me$. A colorless liquid, d.0.703, b.98, soluble in alcohol or ether.
heptenyl. The monovalent C_7H_{13}— radical, derived from heptene. **h. methyl carbonate.** Heptine methyl carbonate.
heptenylene. Heptine.
heptine. C_7H_{12} = 96.1. Heptenylene, heptyne*, oenanthine, pentyl-acetylene. The unsaturated hydrocarbon; $HC{:}C(CH_2)_4Me$. A colorless liquid d.0.831, b.104, soluble in alcohol or ether. **h. methyl carbonate.** $C_9H_{14}O_2$ = 154.11. Heptenyl methyl carbonate. An ester, $Me(CH_2)_4C{:}C.COOMe$, from the ricinoleic acid of castor oil; d.0.930, insoluble in water, used in perfumery.
heptitol. A group of pentatomic alcohols derived from heptoses.
heptoic acid. $C_7H_{14}O_2$ = 130.2. n-heptylic acid, amylacetic acid, oenanthic acid, oenanthylic acid, heptanoic acid*, enanthic acid, $Me(CH_2)_5COOH$. A colorless oily liquid with an unpleasant odor, d.0.9345, m. −10, b.223, insoluble in water, soluble in alcohol, ether or chloroform. Used in organic synthesis. **iso-** $Me_2CH(CH_2)_3COOH$. iso-heptylic acid, isooenanthic acid. Colorless liquid, b.210, soluble in alcohol. **h. alcohol.** Heptyl alcohol. **h. aldehyde.** Heptyl aldehyde.
heptose. A sugar having seven carbon atoms. See *carbohydrates*.
hepturonic acid. Any pentahydroxy aldehyde acid derived from heptoses, of the general formula $CHO.(CHOH)_5COOH$. Cf. *uronic acids*.
heptyl. The monovalent radical C_7H_{15}— or $Me(CH_2)_6$— derived from heptane. **h. acetate.** $C_9H_{18}O_2$ = 158.2. The ester $AcOC_7H_{15}$. A colorless odorous liquid, d.0.874, b.190, insoluble in water, soluble in alcohol; used in artificial flavoring extracts. **h. alcohol.** $C_7H_{16}O$ = 116.2. (1) $C_7H_{15}OH$. Oenanthol, heptylic alcohol, *1*-heptanol*, normal hexyl carbinol. A colorless, odorous liquid, d.0.830, m. −36, b.176, soluble in water, alcohol, or ether. Used in organic synthesis. (2) $Me(CH_2)_2CHOH(CH_2)_2Me$. Iso-hexyl carbinol, dipropylcarbinol, *4*-heptanol*. A colorless liquid, d.0.814, m. −41.5, b.149, soluble in alcohol or ether. (3) $Me_2CH.CHOH.CH.Me_2$. Diisopropylcarbinol, *1.5*-dimethyl-*3*-pentanol*. A colorless liquid, d.0.832, b.131, slightly soluble in water, soluble in alcohol or ether. (4) Et_3COH. Triethylcarbinol, *1.1*-diethyl-1-propanol*. A colorless liquid, d.0.860, b.140, slightly soluble in water, soluble in alcohol or ether. (5) $Me_2COH.CH_2.CHMe_2$. Dimethylisobutylcarbinol, *2.5*-dimethyl-*2*-pentanol*. A colorless liquid, b.130, soluble in alcohol or ether. (6) $Me_3C.COHMe_2$. Pentamethylethanol, *2.3.3*-trimethyl-2-butanol*. A colorless liquid, b.132, soluble in alcohol or ether. **h. aldehyde.** $C_7H_{14}O$ = 114.1. Oenanthal, enanthaldehyde*, oenanthylic aldehyde, heptoic aldehyde, normal heptylic aldehyde, heptanal. $Me(CH_2)_5CHO$. An aldehyde obtained from castor oil. A colorless, refractive, fragrant liquid, d.0.850, m. −45, b.155, slightly soluble in water, soluble in alcohol, ether or chloroform. Used in organic synthesis. **h. amine***. $C_7H_{17}N$ = 115.2. 1-Aminoheptane. $Me(CH_2)_6NH_2$. A colorless liquid, d.0.78, b.155, slightly soluble in water, soluble in alcohol or ether. **h. ether.** $(C_7H_{15})_2O$ = 214.3. Heptylic ether, enanthylic ether, cognac oil, heptyloxyheptane*. A colorless liquid, d.0.815, b.265, insoluble in water, soluble in alcohol or ether. **h. ethyl ether.** $C_9H_{20}O$ = 144.2. Oenanthic ether, oenanthylic ether, cognac oil, heptylethyloxide, ethoxyheptane*. $Me(CH_2)_6OEt$. A colorless, fragrant, oily liquid, d.0.840, b.166, insoluble in water, soluble in alcohol or ether. Used in flavoring extracts and in organic synthesis. **h. formate.** $C_8H_{16}O_2$ = 114.2. The formic acid ester $HCOOC_7H_{15}$. A colorless, aromatic liquid d.0.894, b.176, insoluble in water, soluble in alcohol or ether. Used in organic synthesis. **h. resorcinol.** Dihydranol.
heptylene. Heptene.
heptylic acid. Heptoic acid.
heptyne*. Heptine.
Heraeus hot plate. An electrically-heated plate or table used to replace gas burners.
herapathite. $4Qu.3H_2SO_4.2HI_4.6H_2O$. Artificial tourmaline. Quinine sulfate periodide. It is produced as optically-active crystals when iodine vapor is passed into a solution of quinine sulfate; used for polaroids, q.v.
herb. A drug that consists of the leafy, flowering, or fruiting stems of the smaller plants. Many are used in the form of teas (infusions), others in the manufacture of essential oils. The following are official (U.S.P.):

Absinthium	Grindelia
Cetraria	Hedeoma
Chelidonium	Indian cannabis
Chirata	Lobelia
Eupatorium	Marrubium

Melissa	Scutellaria
Peppermint	Spearmint
Pulsatilla	Tansy
Scoparius	

bitter- Snakehead. The leaves of *Chelone glabra*, a Scrophulaceae, used as anthelminthic. Cf. *chelonin*. **blanket-** Mullein. **felon-** Mugwort. **Fuller's-** Saponaria.

Hercules stone. Magnetite.

hercynite. $FeAl_2O_4$. Iron spinel. A fine, granular black mineral, d.3.92, hardness 7.5–8.

herderite. $Be(OH,F)CaPO_4$. A beryllium calcium phosphate mineral, d.3.0, hardness 5.

heretine. An alkaloid from *Heritiera javanica*, a Sterculiaceae of the Dutch Indies.

hermetic. Air-tight. **h. art.** Magic or alchemy. **h. casing.** A water-tight casing.

Hermite process. The manufacture of hypochlorite liquor for bleaching by the electrolysis of a solution containing 0.5 % NaCl and 0.05 % $MgCl_2$.

herniarin. $C_{10}H_8O_3$ = 176.1. Methylumbelliferone, 7-methoxycoumarin. A ketone from *Herniaria glabra*, a Caryophyllaceae. Cf. *resocyanin*.

heroine. $C_{21}H_{23}O_5N$ = 369.2. Diacetylmorphine. A white, odorless, powder, m.170, slightly soluble in water, soluble in alcohol, chloroform or ether. It is a very toxic narcotic and considered to be the most habit-forming drug; its manufacture in the United States is prohibited. **h. hydrochloride.** $C_{21}H_{23}O_5N.HCl$ = 405.7. Diacetylmorphine hydrochloride. A more soluble form of heroine is used in hypodermic tablets.

herpatite. Herapathite.

herrerite. $(Zn,Cu)CO_3$. A cupriferous smithsonite.

Hertz, Heinrich Rudolf. 1857–1894. A German physicist noted for his research in theoretical physics.

hertzian waves. A group of electromagnetic oscillations, resembling light waves but much longer (0.2 cm. to 1000 meters). Cf. *radiations, diffraction*.

herudin. (1) A constituent of leeches which prevents the coagulation of blood. (2) A preparation made from leeches.

Herzberg's stain. (1) A solution of I, KI and $ZnCl_2$ in water, used to stain rag fibers *red;* chemically treated paper pulp *blue;* and mechanical woodpulp or lignin *yellow*. (2) A solution of potassium iodide in sulfuric acid.

hesperetic acid. Hesperitinic acid.

hesperetin. $C_{16}H_{14}O_6$ = 302.2. A split-product of hesperidin. Yellow crystals, decomp. 220, soluble in alcohol or ether. It is a chalcone of phloroglucinol.

hesperetol. $C_9H_{10}O_2$ = 150.08. *5*-Vinylguaiacol, *3*-hydroxy-*4*-methoxystyrene, $CH_2:CH.C_6H_4(OMe)OH$. Colorless crystals, m.57.

hesperidene. d-Limonene.

hesperidin. $C_{22}H_{26}O_{12}$ = 482.2. Citrin, vitamin P. A glucoside from the unripe fruits of *Citrus aurantium*. A yellowish powder, or small needles, decomp. 251, slightly soluble in water or alcohol, insoluble in ether. It splits on hydrolysis to hesperitinic acid, glucose and phloroglucinol. Cf. *naringin*.

hesperidine. An alkaloid from the leaves of *Peucedanum galbanum*, wild celery, (Umbelliferae).

hesperitinic acid. $C_{10}H_{11}O_4$ = 195.1. Isoferulic acid, m-oxy-p-methoxy cinnamic acid, 4-oxy-3-methoxy-cinnamic acid. Yellow needles, m.228.

Hess, Germain Henri. (1802–1850). A German-born Russian chemist, and a founder (1840) of thermochemistry. **H., Victor Franz** 1883– . A German physicist and Nobel prize winner (1936), noted for pioneer work in cosmic radiations. **H.'s law.** The law of constants heat summation. The amount of heat liberated or absorbed in a chemical reaction remains the same, whether the reaction is performed in one or successive steps; hence the heat change of a chemical reaction is independent of its course and depends on the initial and final states of the substances involved. **H. photometer.** Hess-Ives tint photometer. A colorimeter for matching the colors of solutions with a number of colored glasses. **H. rays.** Ultra-γ-rays. Cosmic rays. **H. viscosimeter.** A graduated capillary tube with a rubber bulb, used for determining the viscosity of blood and other biological or colloidal solutions.

hessian. Cuttings from jute cloth, used for paper manufacture; cf. *botany*. **h. crucible.** (1) A sand crucible. (2) A large clay crucible.

hessite. Ag_2Te. Silver telluride. A black mineral, d.8.3–9, hardness 2.5–3.

hessonite. $Al_2(Ca,Fe)_2Si_3O_{16}$. Cinnamon stone. A variety of garnet, d.3.5, hardness 6.5–7.

hetero- A prefix derived from Greek, indicating unlikeness or difference.

hetero-albumose. A form of albumose, insoluble in water, soluble in salt solutions, and precipitated by saturation with sodium chloride.

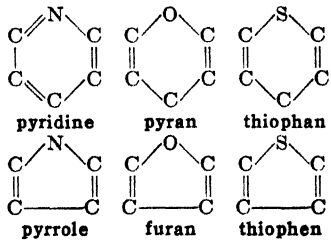
hetero-artose. A protein, $C_{74}H_{130}N_{20}O_{24}S$.

hetero-atom. A heterocyclic atom.

heterobaric. Possessing different atomic weights; as isotopes and heterotopes.

heterocycle. A ring consisting of different types of atoms. Antonym: homocycle. Cf. *heterocyclic compound*.

heterocyclic. Pertaining to dissimilar atoms in a ring. **h. atom.** Any atom, other than carbon, that is a member of an atomic ring; the more common atoms are N, O, S, Se, P, As, and others. **h. compound.** A ring compound containing in its nucleus, besides carbon atoms, one or more other types of atoms. Antonym, homocylic. The more important heterocycles are:



See also *ring compounds*.

heterogeneity. The condition or state of being composed of particles or aggregates of different substances; hence, matter which is of dissimilar composition or has different properties along any dissecting line or plane. Antonym, homogeneity.

heterogeneous. Heterogeneous. Opposed to homogeneous (q.v.). Describes a substance which consists of more than one phase, and therefore is not uniform; as, granite, colloids,

suspensions, emulsions. It has different properties in different parts. **h. reaction.** A reaction in which two or more reactions take place simultaneously.

heteroion. An adsorption complex ion whose charge is due to an adsorbed simple ion; *e.g.*, a protein complex with adsorbed OH^-.

heterolysis. (1) The dissolution of a cell by an external agent; as opposed to autolysis. (2) The hemolytic action of the blood serum of one animal species on the blood-corpuscles of another species.

heterolyzate. The filtered liquid portion of the products of heterolysis.

heterophase. Forming two or more states of aggregation. Cf. *phase.*

heteropolar. An unequal distribution of electric charges in a bond (q.v.), so that one atom is more positive or negative than the other. Cf. *homopolar.*

heteropolyacids. The complex acids of heavy metals with phosphoric acids; as, phosphomolybdic a., phosphotungstic a.

heterosugars. *h*-sugars. The structural isomers of the α- and β-mutarotation forms of a sugar; *e.g.*, the γ-sugars.

heterotopes. Elements which have different atomic numbers and therefore, occur in different parts of the periodic table. Antonym: Isotopes. **heterobaric-** H having different atomic weights. **isobaric-** H. having the same atomic weight. Cf. *isobars.*

heterotypes. A compound which differs in its properties from compounds of a similar type.

hetoform. Bismuth cinnamate.

hetol. Sodium cinnamate.

hetralin. $C_6H_{12}N_6.C_6H_6O_2$ = 278.20. Dioxybenzolhexamethylentetramine. Colorless needles, decomp. 155, soluble in water. Used as a substitute for hexamethylenetetramine.

heulandite. A zeolite, $CaAl_2Si_6O_{15}$.

Heusler alloys. A group of strongly ferromagnetic alloys containing no iron but a mixture of manganese, copper, and aluminum. They do not show the Kerr-effect.

hevea. See *rubber.*

Hevesy, George von. 1885- . A German chemist, and codiscoverer of hafnium.

hex. Hexamethylenetetramine.

hexa- A prefix derived from Greek, denoting "six."

hexa-atomic. (1) Hexavalent. (2) A molecule consisting of six atoms.

hexabasic. An acid or compound in which six hydrogens can be replaced by basic radicals.

hexabiose. Hexobiose.

hexaborane. B_6H_{10} = 71.31. A boron hydride, q.v.

hexabromide number. An analytical value of fats, indicating their content of acids with three (or more) double bonds; is the number of mg. Br needed to brominate 100 gm. fat.

hexabromo- A prefix indicating the presence of six bromine atoms. **h. ethane.** C_2Br_6 = 403.8. Yellowish rhombic needles, decomp. 210; slightly soluble in water or alcohol. **h. silico ethane.** Silicon tribromide.

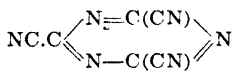
hexachloro- A prefix indicating the presence of six chlorine atoms. **h. benzene.** C_6Cl_6 = 284.7. Colorless rhombic needles, d.2.044, m.229, b.326; insoluble in water or alcohol. Used in organic synthesis, in airfield flares and in waterproofing dopes. **h. ethane.** C_2C_6 = 236.8. Carbontrichloride, hexoram. White rhombic crystals, d.2.011, m.184, insoluble in water, soluble in alcohol or ether. Used in organic synthesis, in the manufacture of explosives and fireworks, smoke-screens and disinfectants. Cf. *H.C.*

hexacontane. $C_{60}H_{122}$ = 843.3. A saturated hydrocarbon of the methane series. Colorless crystals, m.102.

hexacosane. $C_{26}H_{54}$ = 366.42. A saturated hydrocarbon of the methane series. Colorless crystals, m.57, $b._{40mm}296$.

hexacosanic acid. $C_{26}H_{52}O_2$ = 396.4. White solid, m.83, which occurs in peanut oil and in the wax from tubercle bacilli.

hexacyan. C_6N_6 = 180.5. A polymer of cyan having the structure



hexad. (1) An element or radical having a valency of six. (2) In crystallography: showing six similar faces on rotation of the crystal around its axis of symmetry.

hexadecane. $C_{16}H_{34}$ = 226.3. Dioctyl, cetane. A saturated hydrocarbon of the methane series. White leaflets, d.0.775, m.18, b.287; insoluble in water, soluble in alcohol or ether.

hexadecanoic acid*. Palmitic acid. *11*-**hydroxy-*** Jalapinolic acid. *16*-**hydroxy-*** Juniperic acid.

hexadecanol*. Cetyl alcohol.

hexadecene. Cetene.

hexadecenoic acid*. Zoomaric acid.

hexadecine. $C_{16}H_{30}$ = 222.2. Hexadecyne*. An isomer of cetenylene, m. − 25, b.280.

hexadecoic acid. Palmitic acid.

hexadecyl. Cetyl. The monovalent radical, $-C_{16}H_{33}$, derived from hexadecane. **h. alcohol.** Cetyl alcohol. **h. amine.** Cetylamine.

hexadecylene. Cetene.

hexadiene*. C_6H_{10} = 82.1. An unsaturated hydrocarbon with two double bonds. **1.4-** $CH_2{:}CH.CH_2.CH{:}CHMe$ **1.5-** Diallyl. **2.4-** $(MeCH{:}CH{-})_2$. Bipropenyl, dipropylene. A colorless liquid, d.0.7108, b.82. *2.5*-**dimethyl-** $(Me_2C{:}CH{-})_2$ = 101.11 Diisocrotyl. A colorless liquid, d.0.7158, m. −91, b.102.5.

hexadienedioic acid*, *2.4*-. Muconic acid.

hexadienic acid. Sorbic acid.

hexadienoic acid*, *2.4*-. Sorbic acid.

hexadiine. Bipropargyl.

hexadiyne*. Bipropargyl.

hexaethylbenzene. $C_{18}H_{30}$ = 246.3. C_6Et_6. Colorless monoclinic crystals, d.0.831, m.129, b.298, insoluble in water, soluble in alcohol or ether.

hexafluorodisilane. Disilane.

hexagalloyl mannite. $C_{48}H_{38}O_{30}$ = 1094.45. A tannin occurring as a brown powder, soluble in water.

hexagon. A plane figure bounded by six sides, and having six angles. **h. tester.** An electrically-heated device for determining the flash- and fire-points of oils.

hexagonal crystal system. A crystal system made up of four axes; 3 equal and intersecting in one plane at 60°, and one of a different length in a plane at right angles.

hexahydrate. Containing six molecules of water.

hexahydric. Containing six atoms of replaceable hydrogen.

hexahydro- A prefix indicating that a compound contains six more hydrogen atoms than are

normally present. **h. anthracene.** $C_{14}H_{16}$ = 184.2. White leaflets, m.63, b.290, insoluble in water, soluble in alcohol, ether or benzene. **h. anthraquinone.** Rufigallol. **h. benzene.** C_6H_{12} = 84.1. Cyclohexane hexamethylene. Saturated benzene. A hydrocarbon occurring in Austrian and Caucasian petroleum. A colorless liquid, b.79, d.0.76, insoluble in water. **h. benzodipyrazolone.** Dipyrazolone. **h. benzoic acid.** Naphthenic acid. **h. cumene.** C_9H_{18} = 126.2. Trimethylcyclohexane. A colorless liquid, d.0.787, b.139, insoluble in water, very soluble in alcohol or ether. **h. cymene.** $C_{10}H_{20}$ = 140.3. p-hexahydrocymol. A colorless liquid, d.0.802, b.156, insoluble in water, soluble in alcohol or ether. **h. hematoporphyrin.** $C_{32}H_{32}O_5N_4$ = 552.5. A reduction product of hematin. **h. mellitic acid.** $C_{12}H_{12}O_{12}$ = 348.2. $C_6H_6(COOH)_6$. Colorless crystals, decomp. on heating, soluble in water, alcohol or ether. **h. mesitylene.** C_9H_{18} = 126.2. $C_6H_9Me_3$. 1.3-5-trimethylhexahydrobenzene. Colorless liquid, b.136. **h. naphthalene.** $C_{10}H_{14}$ = 134.2. A colorless liquid, d.0.924, b.208. **h. naphthinoline.** $C_{16}H_{16}N_2$ = 236.2. Colorless crystals, m. 128. **h. phenol.** Cyclohexanol. **h. pyridine.** Piperidine. **h. pyrazine.** Piperazine. **h. salicylic acid.** $C_7H_{12}O_3$ = 144.1. $C_6H_{10}OH(COOH)$. Colorless crystals, m.110, very soluble in water, alcohol or ether. **h. thymol.** Menthol. **h. toluene.** C_7H_{14} = 98.2. $C_6H_{11}Me$. Colorless liquid, d.0.769, b.101, insoluble in water, miscible with alcohol or ether. **h. xylene.** C_8H_{16} = 112.2. *meta-* Colorless liquid, d.0.771, b.118, insoluble in water, soluble in alcohol or ether. *para-* Colorless liquid, d.0.769, b.121, insoluble in water, soluble in alcohol or ether.

hexahydroxy- A prefix indicating the presence of six hydroxy groups. **h. benzene.** Triquinoyl. **h. hexahydrobenzene.** Inositol. $C_6H_6(OH)_6$. **h. lene.** Hexahydro-xylene.

hexaiodo- A prefix indicating the presence of six iodine atoms in a molecule. **h. benzene.** C_6I_6 = 833.6. Reddish-brown needles.

hexakontane. Hexacontane.

hexal. Hexamethylenamine sulfosalicylate; a compound of salicylic acid and urotropine used as a sedative.

hexalet. Trade name for hexamethylenetetramine salicylsulfonic acid.

hexalin. Cyclohexanol*.

hexamethylated. Describing an organic compound containing six methyl groups.

hexamethylbenzene. $C_{12}H_{18}$ = 162.2. C_6Me_6. Colorless rhombic crystals m.164, b.264, slightly soluble in alcohol.

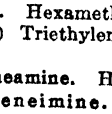
hexamethyldisilicane. $Si_2(CH_3)_6$ = 146.26. A white solid or colorless liquid, m.13, b.112.5.

hexamethylenamine. Hexamethylenetetramine.

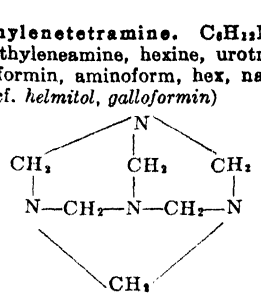
hexamethylene. Cyclohexane*. **amido-** $C_6H_{11}NH_2$ = 99.11. Aminohexahydrobenzene A colorless liquid, b.133. **diketo-, triketo-** q.v. **h. amine.** Hexamethylenetetramine. **h. diamine.** (1) Triethylenediamine. (2) See *diamine.*

hexamethyleneamine. Hexamethylenamine.

hexamethyleneimine. $C_6H_{13}N$ = 99.1. The heterocyclic ring-compound.



hexamethylenetetramine. $C_6H_{12}N_4$ = 140.2. Hexamethyleneamine, hexine, urotropine, hexamine, formin, aminoform, hex, naphthamine, uriton (cf. *helmitol, galloformin*)



Colorless rhombic crystals, m.280, slightly soluble in alcohol or ether, soluble in water. Used extensively in medicine as a urinary antiseptic, as a reagent for metals and alkaloids, as a rubber accelerator, in the manufacture of synthetic resins, and as an absorbent for phosgene in gas masks.

h. alliodide. A condensation product of h. and allyl iodide, used as a reagent for cadmium. **h. bromethylene.** Bromalin. **h. camphorate.** Amphotropine, hexamethylenetetramine camphorate, $(CH_2)_6N_4.C_8H_{14}(COOH)_2$. A molecular combination of camphoric acid and hexamethylenamine. A colorless, light crystalline powder, soluble in water or alcohol. **h. methylenecitrate.** $C_7H_6O_7(CH_2)_6N_4$ = 342.3. Helmitol. A white crystalline powder, m.165. Used on account of its agreeable acidic taste instead of hexamethylenamine. **h. quinate.** Quinotropine. **h. salicylate.** Saliformin. **h. salicylsulfonic acid.** Hexalet. A white, odorless crystalline powder, soluble in water; used as a diuretic. **h. sulfosalicylate.** Hexal. **h. tannin.** Tannopin. **h. tetraiodide.** $(CH_2)_6N_4I_4$ = 647.6. Siomine. A red powder, decomp. 138; used therapeutically in place of iodides.

hexamethylparafuchsin. Crystal violet.

hexamethylviolet. Crystal violet.

hexamine. The B.P. name for hexamethylenetetramine.

hexanal*. Caproaldehyde.

hexanamide*. Caproamide.

hexanaphthene. Cyclohexene.

hexane*. C_6H_{14} = 86.14. (1) Normal hexane, caproyl hydride, hexyl hydride. $Me_2(CH_2)_4$. A colorless liquid, d.0.658, m. −94, b.69, highly inflammable, insoluble in water, soluble in alcohol or ether; used as a solvent. (2) $Me(CH_2)_2CHMe_2$. Ethylisobutane. A colorless liquid, d.0.701, b.62, soluble in alcohol or ether. (3) $Me_2(CH_3)_2Me_2$. Diisopropane. A colorless liquid, d.0.67, b.58, soluble in alcohol or ether. (4) Me_3CEt. Trimethylethylmethane. A colorless liquid, b.44, soluble in alcohol or ether. **amino-** Hexylamine. **bromo-*** Hexylbromide. **chloro-*** Hexylchloride.

h. carboxylic acid. Heptoic acid. **h. dial*.** Adipaldehyde. **h. diamide*.** Adipamide. **h. dicarboxylic acid.** Suberic acid. **h. dioic acid*.** Adipic acid. **h. diol*.** Hexamethylene glycol. **h. dioyl chloride*.** Adipyl chloride.

hexanitrin. Mannitol nitrate.

hexanitro- A prefix indicating the presence of six nitro groups. **h. diphenylamine.** $C_{12}H_7N_7O_{12}$ = 439.10. Dipicrylamine, $[2.4.6\text{-}(NO_2)_3C_6H_2]_2NH$. Yellow crystals, used as high explosive. **h. mannitol.** A misnomer for mannitol nitrate. **h. phenyl sulfide.** $C_{12}H_4N_6O_{12}S$ = 466.0. The compound $[C_6H_2(NO_2)_3]_2S$; used as high explosive.

hexanoic acid. Caproic acid.

hexanol*. (1) Hexylalcohol. (2) Hexan-3-ol. See *hexyl alcohol* (3).

hexanone*. Ethyl propyl ketone.

hexaphenyl. (1) Sexiphenyl. (2) Six phenyl radicals. **h. ethane.** $C_{38}H_{30}$ = 486.24. The hydrocarbon $Ph_3C—CPh_3$, which is the dimer of a free radical, q.v. **h. tin.** $Ph_3Sn.SnPh_3$ = 699.62. White crystals, m.232.5.

hexasaccharose. A polysaccharide of the general type $(C_6H_{10}O_5)_6.H_2O$.

hexatomic. (1) Consisting of six atoms. (2) Hexavalent.

hexatriene. C_6H_8 = 80.1. The unsaturated hydrocarbon, $CH_2{:}CH.CH{:}CH.CH{:}CH_2$.

hexavalent. (1) Sexavalent. An element or radical having six valence electrons, as Os. (2) A compound containing six replaceable hydrogen atoms or hydroxyl groups.

hexecontane. Hexacontane.

hexenal*. $C_6H_{10}O$ = 98.08. α,β-hexenic aldehyde, propyl acrolein, $PrCH{:}CH.CHO$. An oil, $b._{17mm}48$; constituent of green leaves.

hexene*. (1) C_6H_{10} = 82.1. Tetrahydrobenzene. Colorless crystals, m.83. (2) Hexylene.

hexenic*. See *hexenoic**.

hexenoic acid. $C_6H_{10}O_2$ = 114.08. Hexenic acid. **α- or 1.2-** Prophylacrylic acid, $MeCh_2CH_2CH{:}CH.COOH$. A white solid, d.0.965, m.32, b.217. **β- or 2.3-** Hydrosorbic acid, $MeCH_2{-}CH{:}CHCH_2COOH$. A white solid, d.0962, b.208. Cf. *pyroterebic acid.*

hexenoic aldehyde. Hexenal*.

hexenyl. The monovalent unsaturated radical C_6H_{10}— derived from hexylene. **h. alcohol.** $C_6H_{12}O$ = 100.1. The saturated alcohol, $C_6H_{11}OH$. A colorless liquid, d.0.891, b.137, soluble in water, alcohol, or ether.

hexestrol. Hexoestrol. Dihydrodiethylstilbestrol, $HO.C_6H_4(C_2H_5)CH.CH(C_2H_5).C_6H_4.OH$. Used where estrogenic hormones are indicated.

hexine. (1) Hexyne*. (2) Hexadiene. (3) Hexamethylenetetramine.

hexinic acid. $C_6H_{10}O_3$ = 130.1. α-propyltetronic acid. Colorless crystals, m.126.

hexitols. $C_6H_{14}O_6$ = 182.11. A group of hexatomic alcohols, as dulcitol, mannitol, sorbitol, derived from hexoses.

hexobarbitone. Evipal, evipan, cyclural, hexobarbital; the 5-Δ^1-cyclohexenyl-5-methyl-N-methylbarbituric acid, a sedative and anesthetic.

hexobiose. A carbohydrate (disaccharide) consisting of two hexoses, *e.g.*, sucrose, lactose, maltose.

hexodiose. Hexobiose.

hexogen. Trimethylene trinitramine. A constituent of high explosives.

hexoic. The monovalent radical $—CO(CH_2)_4Me$. **h. acid.** Caproic acid. *pentahydroxy-* Galactonic acid. **h. aldehyde.** Caproaldehyde.

hexon(e). $C_6H_{12}O$ = 100.08. Methylisobutyl ketone, $Me_2CH.CH_2.COMe$. Colorless liquid, b.118, insoluble in water; used as solvent for gums, resins, nitrocellulose. **h. bases.** Histon bases. A group of organic bases which contain six carbon atoms and are formed by hydrolysis of proteins and histons; *e.g.*, lysine, histidine, arginine.

hexonic acids. A group of acids obtained by the oxidation of hexoses: $C_5H_5(OH)_6.COOH$. Cf. *galactonic, gluconic, mannoic acids.*

hexoran. Hexachloroethane.

hexosans. A group of hemicelluloses (q.v.) which are hydrolysed to hexoses. Cf. *glucosans, fructosans.*

hexose. A carbohydrate (monosaccharide) containing six carbon atoms: dextrose, fructose, glucose. They are widely distributed in plants and animals and each occurs in three optical isomers (d-, l-, and i-).

hexotriose. A carbohydrate (trisaccharide) consisting of three hexoses; *e.g.*, raffinose.

hexoylene. *2*-Hexyne*.

hexuronic acid. A tetrahydroxy aldehyde acid obtained by oxidation of hexoses; $CHO(CHOH)_4COOH$, as, glucuronic galacturonic, ascorbic acid.

hexyl. Enanthyl. The monovalent radical C_6H_{13}— or $Me(CH_2)_5$—, derived from n-hexane. **h. acetate.** $C_8H_{16}O_2$ = 144.2. $AcOC_6H_{13}$. A colorless liquid, d.0.890, b.169, insoluble in water, miscible with alcohol or ether. **h. acetylene.** Caprylidene. **h. alcohol.** $C_6H_{14}O$ = 102.2. Hexanol*, capryl alcohol. (1) Normal hexylalcohol, amylcarbinol, hexan-1-ol. $Me(CH_2)_5OH$. A colorless liquid, d.0.820, b.158, slightly soluble in water, soluble in alcohol or ether. (2) $MeCH(OH)(CH_2)_3Me$. Methylbutylcarbinol, hexan-2-ol. A colorless liquid, d.0.833, b.137, slightly soluble in water, soluble in alcohol or ether. (3) $Et(CHOH)(CH_2)_2Me$. Ethylpropylcarbinol, hexan-3-ol. A colorless liquid, d.0.834, b.134, slightly soluble in water, soluble in alcohol or ether. (4) $Me_2C(OH)(CH_2)_2Me$. Dimethylpropylcarbinol. A colorless liquid, d.0.830, b.115, soluble in alcohol. (5) $Me_2C(OH)CHMe_2$. Dimethylisopropylcarbinol. A colorless liquid, d.0.836, m.−35, b.112, soluble in water, alcohol or ether. (6) $Et_2C(OH)Me$. Diethylmethylcarbinol. A colorless liquid, b.120, soluble in alcohol or ether. (7) $Me_3C.CH(OH)Me$. Pinacolylalcohol, tetramethylethanol. A colorless liquid, d.0.835, m.4, b.120, soluble in alcohol. **h. aldehyde.** Caproaldehyde. **h. amine***. $C_6H_{15}N$ = 101.2. Aminohexane. A poisonous (ptomaine) base obtained by autolysis of protoplasm. **h. bromide.** $C_6H_{13}Br$ = 165.02. *1*-Bromohexane*, $Me(CH_2)_4CH_2Br$. Colorless liquid, d.1.1705, m.−85, b.156. **h. chloride.** $C_6H_{13}Cl$ = 120.56. *1*-Chlorohexane*, $Me(CH_2)_5Cl$. Colorless liquid, d.0.8741, m.−83, b.132.4. **h. formate.** $C_7H_{14}O_2$ = 130.2. The ester, $HCOOC_6H_{13}$. A colorless liquid, d.0.898, b.153, miscible with alcohol or ether. **h. iodide.** $C_6H_{13}I$ = 212.1. Iodohexane*. A colorless liquid, d.1.453, b.70. **h. methylketone.** $C_6H_{16}O$ = 128.12. 2-octanone. A liquid, d.0.818, m.−21.6, b.172.7. **h. resorcinol.** $C_{12}H_{18}O_2$ = 194.2. n-hexyl.2.4-dihydroxybenzene, caprokol. $C_6H_{13}.C_6H_3(OH)_2$. A colorless crystalline powder, soluble in alcohol. Used as a urinary antiseptic being more powerful than phenol and less toxic. (Phenol coefficient 45.0–55.0.) Cf. *dihydranol.*

hexylene. C_6H_{12} = 84.1. (1) n-hexylene, Δ^1 hexylene, hexene*, $CH_2{:}CH(CH_2)_3Me$. Colorless liquid, d.0.683, m.−98, b.68, insoluble in water, soluble in alcohol or ether. (2) Δ^2-hexylene. $MeCH{:}CH(CH_2)_3Me$. (3) Δ^3-hexylene, diethylethylene. $MeCH_2CH{:}CHCH_2Me$.

hexylenglycol. Pinacone.

hexyleniodide. $C_6H_{12}I_2$ = 337.8. Diiodohexane. A yellowish liquid, decomp. on heating, d.2.024.

hexylic acid. Caproic acid.

hexyne*. C_6H_{11} = 82.08. **1-** *n*-Butylacetylene, 1-hexine, $Me(CH_2)_3C{:}CH$. Colorless liquid, d.0.712, m.−150, b.71.5. **2-** Methyl propyl acetylene, 2-hexine hexoylene, $MeC{:}CPr$. A colorless liquid, d.0.7377, b.84.

Heyrovsky Jaroslav. 1890– . A Czechoslovak chemist, co-discoverer of rhenium (1925), and inventor of the polarograph, q.v.

Hf. The symbol for hafnium.

h.f. Abbreviation for high-frequency.

Hg. The symbol for mercury (hydrargyrum).

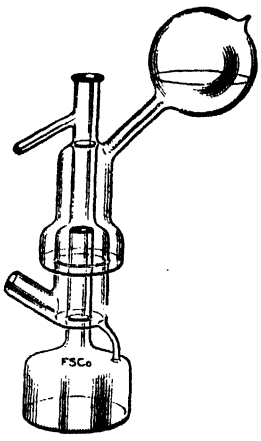
hg. An abbreviation for hectogram (100 grams).

Hi. The symbol for hibernium.

hibernium. Thorium-Ω. A supposed new radioactive element of atomic number approximately 40, occurring in the black mica of Ytterby. It has a half-life period of 10^{16} years. (Joly, 1922.)

hibiscus. Musk-seed.

Hickman pump. A diffusion pump for producing high vacua made of pyrex glass and butyl phthalate instead of mercury. Cf. *vacuum pump*, and see figure.



Hickman pump.

hiddenite. An emerald-green variety of spodumene, used as gem.

hiding power. The opacity of a paint.

hidrotic. A substance that causes sweating, as a diaphoretic or sudorific.

hielmite. Hjelmite. A Ca, Fe, Mn, and Yt tantalate and stannate found in Sweden as black rhombic crystals, d.5.8, hardness 5.

hierro. Spanish for iron.

hiflash. An oil having a high flash point.

high. Above the average; great. **h. cranberry.** Cramp bark. **h. explosive.** A class of unstable chemicals or mixtures which detonate by a blasting cap, *e.g.*, dynamite, picric acid, picrates, chlorates, nitrotoluenes, nitrocellulose, nitrostarch, tetranitroaniline, tetranitromethylaniline. **h. flash point.** A substance, generally a lubricating oil, that ignites at high temperatures only. **h. frequency.** Describing a rapidly-alternating electric current. **h.f. spectrum.** An x-ray spectrum, produced by a high-frequency current. **h. furnace.** A blast furnace. **h. grade.** (1) A pure substance. (2) A concentrated substance. (3) A rich ore. **h. speed steel.** A steel rich in carbon, used for tools. Cf. *ferrotungsten*.

Hildebrand, Joel Henry. 1881– . An American chemist noted for his theory of solubility. **H. electrode.** (a) A modified calomel electrode (q.v.) and cell. (b) A platinum electrode in a bell-shaped tube, through which hydrogen passes; used as a hydrogen electrode, being partly immersed in the solution and partly exposed to the gas. Cf. *hydrogen-ion determination*. **H. rule.** The molal entropy of vaporization, $M\lambda/T$, is a function of the molal concentration of the vapor involved. Cf. *Trouton's rule*, *Dieterici rule*.

Hill bottle. A weighing bottle with ground-in bulb and pipet. **H. filter.** An apparatus for filtering by hydraulic pressure through a diatomaceous cylinder.

Hillebrand, William Francis. 1853–1925. An American chemist noted for his development of mineralogical analysis.

Hilt's law. In any single vertical section (*e.g.*, of coal seams) the deeper seams are of higher rank than the upper seams.

hindered settling. The resistance, other than that due to specific gravity, which a liquid offers to the passage and settling of crushed ores in jigging.

hindrance. A lag or retarding factor. **steric-** See *steric hindrance*.

Hinds-Doremus ureometer. A graduated glass apparatus for determining urea in urine.

Hinman tube. A glass apparatus for determining ammonia in illuminating gas.

hinokitol. $C_{12}H_{12}O_2$(?). A constituent of the coloring matter of certain Japanese woods.

H-ion. Hydrogen-ion. **H-ion concentration.** Hydrogen-ion concentration.

hippocastanum. The horse-chestnut, the seed and bark of *Aesculus hippocastanum*, a Sapindaceae, used as a tonic, narcotic and febrifuge.

hippol. $C_{10}H_9O_3N$ = 191.1. Methylene hippuric acid. Colorless prisms, m.151, soluble in water; used as an antiseptic.

hippurate. A salt of hippuric acid, containing the monovalent $PhCONHCH_2COO$— radical.

hippuric acid. $C_9H_9O_3N$ = 179.1. Benzoylglycine, urobenzoic acid, benzaminoacetic acid, $PhCONHCH_2COOH$. Colorless crystals, d.-1.371, m.188, decomp. on further heating, soluble in hot water, alcohol or ether; used as an antirheumatic and in organic synthesis. **h. aldehyde.** $C_9H_9O_3N$ = 178.1. The aldehyde of hippuric acid; $PhCONHCH_2CHO$.

hippuryl. The monovalent radical $PhCONHCH_2$-C:O— derived from hippuric acid. **h. hydrazine.** $C_9H_{11}O_2N_3$ = 193.1 or $Ph.CO.NH.CH_2$-$CO.NHNH_2$. Colorless crystals, m.162; used in organic synthesis.

hiptagin. $C_{10}H_{14}O_9N_2$ = 306.2. A glucoside from *Hiptage madablota*. Colorless silky needles, m.110.

hiragashira oil. An oil from the livers of *Scoliodon lacticaudus*, d.0.9170, n_D.1.4752, containing scoliodinic acid.

hiragonic acid. $C_{16}H_{20}O_2$ = 244.2. A liquid, unsaturated fatty acid from sardine oil.

hirathiol. Ammonium sulfoichthyolate. A synthetic sulfoichthyolate forming a brownish-black syrup of empyreumatic odor, soluble in water; used as a mild antiseptic.

hircine. (1) A strongly odorous fossil resin. (2) The odorous principle in the suet of goats.

Hirsch funnel. A porcelain filter funnel, with a fixed perforated porcelain plate.

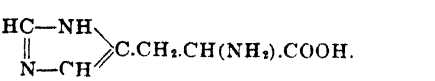
hirudine. The active principle of a secretion from the buccal glands of leeches. It prevents the coagulation of blood.

hirudo. The leech, *Sanguisuga medicinalis*.

histamine. $C_5H_9N_3$ = 111.1. Ergamine, β-iminazolylethylamine, 4-imidazolylethylamine. $C_3H_3N_2.CH_2.CH_2.NH_2$. An amine derived from histidine, in ergot. A powerful uterine stimulant, which lowers the blood pressure. **h. hydrochloride.** The hydrochloride of histamine, which is more readily soluble than histamine.

histazarin. 2.3-Dihydroxy anthraquinone.

histidine. $C_6H_9O_2N_3$ = 155.2. An amino acid derived from the protamin of fishes, or by the action of sulfuric acid on ptomaines.



dl- Tetragonal prisms, m.285, soluble in water. *d-* White scales, m.288, soluble in water. *l-* Colorless leaflets, m.277. **thiol-** A constituent of proteins.

histo- A prefix derived from the Greek denoting *tissue.*

histochemistry. The chemistry of the histological structures of the body.

histogram. Frequency curve.

histology. The branch of anatomy dealing with the structure of tissues. **normal-** The study of healthy tissues. **pathological-** The study of diseased tissues. **phyto-** The science of plant-tissues. **zoo-** The science of animal tissues.

histolysis. The disintegration or liquefaction of tissues.

histon. (1) Hexon bases. (2) A protein from cell nuclei, soluble in water, insoluble in dilute ammonia, and coagulated by heat.

Hitschen syringe. A Y-shaped glass tube with rubber bulb and needle, used for injecting liquids and subsequently rinsing with salt solution without withdrawing the needle from the tissue.

Hittorf, Johan Wilhelm. 1824–1914. A German physicist and discoverer of the cathode rays. **H. cell.** Transference cell. **H. numbers.** Transport numbers. **H. tube.** A modified Crookes' tube.

hjelmite. Hielmite.

hl. An abbreviation for hectoliter, or 100 liters.

hm. An abbreviation for hectometer, or 100 meters. **hm²**. An abbreviation for square hectometer, or 10,000 square meters. **hm³**. An abbreviation for cubic hectometer, or 1,000,000 cubic meters.

HMT. Hexamethylenetetramine.

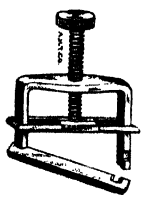
Ho. The symbol for holmium.

hoangnan. The bark of *Strychnos malaccensis*, a Loganiaceae, used as arrow poison.

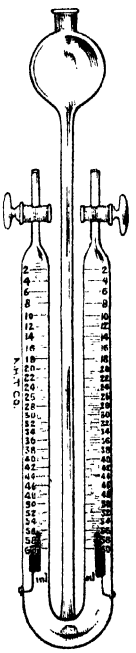
hoarhound. Horehound.

Hoff, Jacobus Hendricus van't. See *van't Hoff.*

Hoffman, Friedrich. 1660–1742. A German physician and professor of chemistry, noted for analytical methods. Cf. *Hofmann.* **H. clamp.** A clamp with one V-shaped and one flat jaw (see figure). **H. drops.**



Hoffman clamp.



Hoffman electrolytic apparatus.

A mixture of alcohol and ether. **H. electrolytic apparatus.** A device for demonstrating the decomposition of water. Two inverted burettes with platinum electrodes, with an overflow tube and bulb (see figure).

Hofmann, August Wilhelm von. 1818–1892. A German chemist and founder of the coal tar industry. **H. reaction.** The shortening of carbon chains by eliminating CO. In general bromine is added to the alkaline solution of an acid amine, whereby the amine of the shorter carbon chain is formed according to the general reactions,

(a) $R.CONH_2 + Br_2 = R.CONHBr + HBr.$

(b) $R.CONHBr + 3NaOH = R.NH_2 + Na_2CO_3 + NaBr + H_2O.$

H. sodium press. An iron barrel, piston, and screw used for making sodium wire or ribbon.

Hofmeister schaelchen. A bell-shaped form of thin glass dishes, used in organic analysis. **H. series.** For every emulsoid the anions and cations may be arranged in a definite order according to their powers of coagulation in neutral, acid or alkaline solutions. Cf. *lyotropic series.*

hog bane. Hyoscyamus.

hog gum. Kuteera gum, gum hogg. A variety of Bassora gum from *Sterculia urens*, used in marbling paper.

hog weed. Scoparius.

hogshead. (1) A measure (h.h.d.) containing 52.5 imperial gallons or 238.5 liters. (2) A cask of varying capacity (100–140 gallons, U.S.A.; 50–100 gallons, British). **Irish-** 52 gallons. **United Kingdom-** 54 gallons.

holadin. An extract of the pancreas containing its enzymes. A grayish-white hygroscopic powder which slowly dissolves in water leaving an insoluble residue; used in medicine. Cf. *pancreatic* juice.

holarsol. Dichlorophenarsine hydrochloride (q.v.).

Holborn-Kurlbaum pyrometer. An instrument for determining high temperatures in furnaces.

holder. A device for retaining or holding objects in a definite position. **animal-** A wire net or metal tube, used for keeping small animals in position while inoculating or taking their temperatures. **buret-** A clamp to hold burets. **clamp-** Boss. Two iron screws used to attach clamps to supports. **crucible-** A wire clamp or frame for holding crucibles. **culture dish-** A wire frame for holding Petri dishes together while in the sterilizer. **gas-** Gasometer. **plate-** A light-tight box for holding photographic plates. **specimen-** (1) A steel plate with notches to hold metallic samples on the microscope stage. (2) A sample-bottle or museum jar. **watch-glass-** A pair of circular wire springs for holding two watch glasses together.

Hollow prism.

hollander. An early form of beater (q.v.).

hollow prism. Three glass plates forming a hollowed glass prism, used to test the refractivity of liquids, or to obtain a longer (dispersed) spectrum when filled with a highly refractive liquid, *e.g.*, carbon disulfide.

hollyhock. (1) Althaea. (2) The flowers of *Althaea rosea*, a Malvaceae, used as an emollient.

holmia. (1) A mixture of the oxides of holmium and dysprosium. (2) Holmic oxide.

holmic. A compound of the trivalent Ho atom. **h. oxide.** Ho_2O_3 = 375.0. A grayish-white powder, insoluble in water.

holmium. Ho = 164.94. At. No. 67. A rare earth metal occurring in gadolinite, discovered by Soret in 1878. Its valency is three, and its salts are slightly yellow. **h. chloride.** $HoCl_3$ = 269.8. Holmic chloride. A colorless powder, soluble in water. **h. oxalate.** $Ho_2(C_2O_4)_3$ = 591.0. A colorless powder, insoluble in water. **h. oxide.** Holmic oxide.

holo- A Greek prefix indicating "the whole" or entirety.

holocaine. $C_{18}H_{22}O_2N_2$ = 298.3. Ethenyl-*p*-diethoxydiphenyl amidine, phenacaine. Small, odorless, colorless crystals, m.189, slightly soluble in water or alcohol; used as a local anesthetic. **h. hydrochloride.** Phenacaine chloride. The soluble or commercial form of holocaine, MeC:$(NC_6H_4OEt)(NHC_6H_4OEt)$.HCl.

holocellulose. The total carbohydrate constituents of wood.

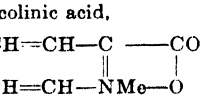
holohedral. A crystal which has the full number of faces required for the maximum and complete symmetry of the system. Cf. *hemihedral.*

holopon. A trade-name of a preparation said to contain all the alkaloids of opium.

holosiderite. Meteoric iron.

Holtz, Wilhelm. 1836–1913. A German physicist. **H. machine.** An induction machine.

homarine. $C_7H_7NO_2$ = 137.1. The methylbetaine of picolinic acid,



found in mussels, lobster muscles and *Arbatia pustulosa.* Cf. *trigonelline.*

homatropine. $C_{16}H_{21}O_3N$ = 275.2. A condensation product of tropine and mandelic acid: tropinemandelate. An alkaloid, colorless prisms, m.97, slightly soluble in water, soluble in ether or alcohol. **h. hydrobromide.** $C_{16}H_{21}O_3N.HBr$ = 356.2. Homotropine hydrobromide. A more soluble form of homotropine occurring in colorless prisms, m.213, soluble in water, alcohol or ether. Used in ophthalmology. **h. hydrochloride.** $C_{16}H_{21}O_3N.HCl$ = 311.2. Homotropine hydrochloride. A more soluble form of homatropine occurring in small white crystals, m.216, soluble in water, alcohol or ether. Used in ophthalmology.

homeopathic. Pertaining to homeopathy. **h. dose.** An extremely small amount. **h. vial.** An elongated bottle used for homeopathic tablets.

homeopathy. A system of medicine employing extremely small doses of agents, which if administered in health, would produce symptoms similar to those for the relief of which they are given.

homilite. $FeCa_2B_2Si_2O_{10}$. A borosilicate of calcium and iron. d.3.0–3.28, hardness 5.5, soluble in HCl.

homo- (1) A prefix derived from Greek indicating "similarity." (2) In names of organic compounds it indicates a difference of $—CH_2—$, but an otherwise similar structure.

homoantipyrine. $C_{12}H_{14}ON_2$ = 202.2. 1.2.3-phenylethylmethylpyrazolone. Colorless crystals, m.73.

homoarecoline. $C_9H_{15}O_2N$ = 169.2. Ethoxyarecaidine. A yellow liquid, soluble in water, alcohol, ether, or chloroform. **h. hydrobromide.** $C_7H_{10}EtO_2N.HBr$. Colorless crystals, m.118, soluble in water or alcohol; used as an anthelmintic.

homoatomic ring. Homocycle.

homoatropine. Homatropine.

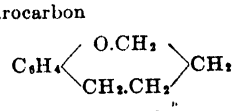
homocamphoric acid. $C_{11}H_{18}O_4$ = 214.1. An acid, similar to camphoric acid, but having a $—CH_2—$ bridge. Distillation of its calcium salts yields camphor.

homocentric. Having the same center. **h. rays.** Light rays that are parallel or have a common focus.

homochelidonine. $C_{21}H_{21}O_5N$ = 347.2. An alkaloid from the seeds of *Chelidonium majus* and sanguinaria. Colorless crystals, slightly soluble in alcohol or ether, soluble in chloroform.

homochemical. A compound or molecule which consists of two types of atoms only, as a binary compound.

homochroman. $C_{10}H_{12}O$ = 148.1. The heterocyclic hydrocarbon



homochromic. Possessing the same color, but a different molecular composition.

homochromoisomers. Substances having similar absorption spectra, but different molecular compositions.

homocycle. A ring compound or closed chain composed of the same type of atoms, generally carbon atoms. Cf. *heterocycle.*

homocyclic. Pertaining to a compound which contains a closed chain or to a ring consisting of atoms of the same type, usually carbon atoms; *e.g.*, benzene.

homogeneity. Matter which is uniform throughout, or has at all points the same property or composition. Cf. *heterogeneity.*

homogeneous. Of uniform or similar nature throughout. Antonym: heterogeneous.

homogentisic acid. $C_8H_8O_4$ = 168.06. 2.5-dihydroxytoluic acid, $(HO)_2C_6H_3.CH_2COOH$. Colorless crystals, m.147. It is formed as an intermediate in the oxidation of tyrosine and phenylalanine, and occurs in urine during alkaptonuria.

homoisohydric. Having the same ions always present in the solution, and a constant hydrogen ion concentration.

homolevulinic acid. $C_6H_{10}O_3$ = 130.08. δ-methyl levulinic acid, γ-ketocaproic acid. $EtCOCH_2CH_2COOH$.

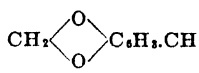
homolog, homologue. Member of a series of compounds whose structure differs regularly by some radical (*e.g.*, $=CH_2$) from that of its adjacent neighbours in the series.

homologous. Of similar structure. **h. lines.** A pair of spectrum lines, the relative intensities of which are independent of variations in the conditions of the electrical discharge producing them. In quantitative spectroscopy one may be due to the main component, the other to the impurity to be determined by the logarithmic sector method, q.v. **h. series.** A series of organic compounds which differ by CH_2 or some other multiple. These series are not limited to hydrocarbons, but refer also to alcohols, ethers, etc. Cf. *methane series, alcohols, acids, phenols, amines, benzene series, etc.*

homologue. Homolog.

homology. The similarity of organic compounds and their gradation of properties, as shown by the homologous series obtained when they are arranged in order of the number of carbon atoms they contain.

homometric. Having the same x-ray pattern.
homophase. Forming a single and similar state of aggregation. Cf. *phase.*
homophthalic acid. $C_9H_8O_4$ = 180.11. $C_6H_4(CH_2COOH)(COOH)$. (ortho-.)
homophthalimide. $C_6H_4\begin{<}CH_2CO\\CO\end{>}NH$, derived from homophthalic acid.
homophthalonitrile. Cyanbenzylcyanide.
homopiperonyl. The monovalent radical



(3, 4-)

homopolar. (1) An equal distribution of electric charges between two atoms (generally carbon atoms), neither of which becomes negative or positive; hence, a bond, q.v., in which both atoms share equally the electron pair. (2) Covalent.
homopyrocatechol. $C_7H_8O_2$ = 124.1. *3.4*-Dihydroxytoluene, *4*-methylpyrocatechol. (1.3.-4) $Me.C_6H_3.(OH)_2$. Colorless prisms, m.51, b.251, very soluble in water, alcohol or ether; used in organic synthesis. Cf. *orcinol.*
homopyrrole. Methyl pyrrole.
homoquinine. $C_{19}H_{22}N_2O_2.2H_2O$. A crystalline alkaloid from cinchona bark.
homorenon. $C_{19}H_{11}NO_3$ = 301.1. Ethylamino acetocatechol, $(HO)_2C_6H_3CO.CH_2.NHMe$. A white powder.
homosalicylic acid. $C_8H_8O_3$ = 152.1. Cresotic acid. A compound containing a —COOH, —OH, and CH_3— group attached to the benzene ring. There are the following ten possibilities:

Position of (COOH)	(OH)	(CH_3)	
1	2	3	= 3-methyl-o-oxybenzoic acid, m.163
1	2	4	= 4-methyl-o-oxybenzoic acid, m.177
1	2	5	= 5-methyl-o-oxybenzoic acid, m.151
1	2	6	= 6-methyl-o-oxybenzoic acid, m.168
1	3	2	= 2-methyl-m-oxybenzoic acid, m.183
1	3	4	= 4-methyl-m-oxybenzoic acid, m.206
1	3	5	= 5-methyl-m-oxybenzoic acid, m.208
1	3	6	= 6-methyl-m-oxybenzoic acid, m.172
1	4	2	= 2-methyl-p-oxybenzoic acid, m.177
1	4	3	= 3-methyl-p-oxybenzoic acid, m.172

homosaligenin. Salicyl alcohol.
homotaraxasterol. $C_{26}H_{40}O$ = 356.31. A sterol, m.164, from dandelion.
homotope. Any one of the elements in a vertical group of the periodic system; thus Br is a h. of Cl, Tl a h. of Ga.
homotropine. Homatropine.
homozyme. Vitagon.
Honduras bark. Cascara amarga.
hone. A mounted stone used for sharpening razors and dissecting knives.
honey. Mel.
honeystone. $Al_2C_{12}O_{18}.18H_2O$. Aluminum mellate, mellite. A yellowish or reddish, soft, resin-like mineral, d.1.6, hardness 2, soluble in nitric acid or sodium hydroxide.
Hönigschmid, Otto. 1878– . A German chemist noted for inorganic work.
honing guide. A device for keeping the dissecting knife at the proper angle while honing.
hood. A glass-enclosed ventilator shaft or flue in the laboratory which carries away the acid or poisonous fumes that arise from chemicals manipulated in it, by the worker who stands outside the hood.
hoof and horn meal. A fertilizer made by processing, drying and grinding hoofs and horns. It contains 11–15 % N, but is not readily available as plant food.
Hooke, Robert. 1635–1703. An English philosopher and pioneer in scientific experimentation. **H.'s law.** The stress applied to stretch or compress a body is proportional to the strain, or alteration in length, so produced. This is true so long as the limit of elasticity is not exceeded.
hoolamite. A mixture of pumice, iodine pentoxide and fuming H_2SO_4 used as absorbing agent and reagent for carbon monoxide, which changes in color from white through blue-green to violet-brown.
hopcalite. (1) A mixture of cobalt, copper, silver, and manganese oxides, used in gas-masks as a catalyst to oxidize carbon monoxide. (2) A mixture of manganese dioxide and cupric oxide (3:2), prepared by heating hydrated manganese oxide and copper carbonate.
Höpfner process. A method of recovering copper by electrolysis.
hopogan. A trade name of magnesium peroxide.
hop oil. A green, odorous, oil distilled from hops. Its chief constituents are terpenes, humulene and geraniol; used in flavoring extracts. Cf. *humulene.* **Spanish-** Origanum oil.
hopper. A funnel-shaped trough or trap.
Hoppe-Seyler, Ernst Felix Immanuel. 1825–1895. A German physiologist noted for the development of biochemical analysis.
hopred. $C_{38}H_{26}O_{16}$ = 722.2. A hydrolytic split-product of the coloring matter, phlobabene, from hops.
hops. Humulus. The dried spikes or strobiles of *Humulus lupulus*, an Urticaceae (Moraceae). They contain tannin, humulon, and lupulin (q.v.) and have a bitter aromatic taste. Used, as the extract, as aromatic bitter and stomachic, and in beer as a flavoring and preservative. **h. oil.** See *hop oil.* **h. substitutes.** Bitter principles, such as quassia or camomile.
horbachite. A native sulfide of gold, iron and nickel.
hordein. A protein of barley, the seeds of *Hordeum salivum.*
hordeine. Hordenine.
hordenine. $C_{10}H_{15}ON$ = 165.2. Hordeine, ephedrine, p-oxyphenyl-dimethylethylamine. An alkaloid, m.117.8, from malted barley, which is used to cure diarrhea and dysentery.
hordeum. Barley.
horehound. The dried leaves and flowering tops of *Marrubium vulgare*, used as a fluid extract as an expectorant and stimulant. Cf. *marrubiin.*
horismascope. An albuminometer used in clinical analysis. It consists of a U-tube with arms of unequal diameters, with which it is possible to perform ring-reactions.
hormone. One of a group of substances produced by the internal secretion of glands, which acts as an accelerating or retarding catalyst in metabolism and other internal reactions. They are specific directive substances of the organism, and considered to be "chemical mes-

sengers," which by circulation in the blood-stream coordinate the functions of organs by exciting the latter to activity. **food-** Vitamin. **plant-** H. which promote growth of plants; *e.g.* auxin; they especially favor the formation of roots; as, indole butyric acid, naphthalene acetic acid and phenyl acetic acid.

HORMONES

*Class**	*Name and formula*	*Source*
	1. Isolated and synthesized	
1	adrenalin, $C_9H_{13}NO_2$	suprarenal medulla
1	thyroxin, $C_{15}H_{11}NO_4I_4$	thyroid gland
3	progestin, $C_{21}H_{30}O_2$	corpus luteum
3	oestrone, $C_{18}N_{22}O_2$, m. 257	ovarian follicles
3	oestriol, $C_{18}H_{24}O_3$	ovarian follicles
3	androstenedione, $C_{19}H_{26}O_2$	testicular extract
	2. Isolated and crystallised	
2	insulin, $C_{45}H_{69}N_{11}O_{14}$	pancreas
2	oxytocin	posterior pituitary
2	vasopressin (α,β-hypophamin)	posterior pituitary
	3. Concentrated in form of extracts	
3	relaxin	corpus luteum
3	cortin	suprarenal cortex
2	elityran	anterior pituitary
2	prolan	anterior pituitary
2	rho 1	anterior pituitary
2	rho 2	anterior pituitary
	callicrein	pancreas
	4. Present in organs, but not concentrated	
	secretin	intestines
	sympathin	supposed hormone
	placental hormone	
	thymus hormone	
	pineal hormone	
	mammary hormone	

* *1* = Amino acid. *2* = Peptide. *3* = Lipoid, or cholane derivative.

horn. A substance composed mostly of keratin and containing insoluble mineral salts, particularly calcium phosphate. **h. fiber.** See *fiber, vulcanized.* **h. scoop.** A small shovel made of horn, for handling chemicals, especially in weighing and filling bottles. **h. spatula.** A flattened stick made of horn, used for handling chemicals. **h. spoon.** A spoon made of horn, used for handling chemicals.

hornblende. $Ca(MgFe_3),(SiO_3)_4$. A variety of amphibole occurring in colors ranging from black through green and olive to white.

hornlead. Phosgenite.

hornquicksilver. A native mercurous chloride.

hornsilver. Argentum cornu.

horsechestnut. The seeds of *Aesculus hippocastanum,* used (as fluid extract) as a tonic, astringent, and febrifuge. **h. bark.** The bark of *Aesculus hippocastanum;* used medicinally as a fluid extract. **h. tannin.** $C_{26}H_{24}O_{11}$ = 528.2. A tannin from the wood, leaves and bark of the h. and the root of the apple tree, used in tanning.

horsehair. The hair from the mane or tail of horses; used for mattresses and fabrics. **vegetable-** Spanish moss. The fibers of *Tillandsia usneoides,* a Bromeliaceae of America; used for pillows and mattresses.

horsemint oil. Monarda oil. A reddish-brown essential oil, obtained by distilling the leaves and stems of *Monarda punctata:* used in pharmacy in the preparation of liniments. Cf. *monarda.*

horsenettle. See *solanum.* **h. berries.** Solanum.

horse oil. A yellowish-brown oil from horse fat; used in soap manufacture.

horsepower. A unit of power, or the rate of doing work. 1 HP = 33000 ft. pd. per minute = 550 ft. pd. per second = 76 kg. m. per sec. = 745.8 watts = 2.545 B.T.U. **American-** 1 HP = 746 watts. **Continental-** 1 HP = 736 watts.

horseradish. The root of *Cochlearia armoracia,* a cruciferous plant used as a condiment or, as a fluid extract, as a stomachic, stimulant, and diuretic. It contains potassium myronate.

horseshoe magnet. A magnetized iron bar bent U-shape.

horsetail. See *aconitic acid, Equisetum.*

horsfordite. Cu_5Sb. A native copper-antimony ore.

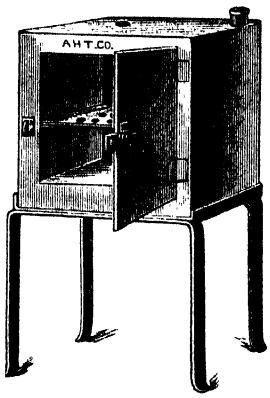
Hortvet cryoscope. An apparatus for the determination of the freezing point of milk, sugar solutions or oils. **H. tube.** A graduated glass tube used in a centrifuge for determining the volume of a precipitate or sediment.

Horwood process. A method of flotation of partly-roasted sulfides of Fe, Cu, Pb, and Zn, and separation of the zinc.

hose connector. A metal tube with outside concentric ribs or corrugations, by which the ends of rubber tubes are joined together.

Hoskin furnace. An electric heating device for obtaining high temperatures. Used in metallurgical and dental laboratories.

hot. Having or producing the sensation of heat. **h. air sterilizer.** A metal-box with a double door, heated by gas or electricity, used to sterilize glass ware and instruments. **h. bed.** A mass of fermenting material, whose heat is used to accelerate the growth of plants. **h. plate.** A metal plate, heated electrically, used in laboratories for distillation, crystallization, evaporation, etc. **h. water funnel.** A double-walled metal funnel. By circulating a hot liquid through the walls the solution to be filtered is kept at the desired temperature. Used *e.g.,* in filtering gelatin and agar solutions. **h. wire gage.** Gage.



Hot air sterilizer.

hour. The unit of time, 60 minutes, 3600 sec., $\frac{1}{24}$ of a civil day.

Howard chamber. A microscope slide with a small counting chamber, used for counting yeast cells, molds, etc. **H. pan.** A jacket and coil type of vacuum evaporating kettle, used to concentrate sugar juice.

Howe, Harrison Estell. 1881–1942. An American chemist, noted for his development of industrial chemistry.

howler. A microphone hummer or audio-oscillator used as an end-point detector for Wheatstone bridges.

HP. or **h. p.** An abbreviation for horse-power.

huantajayit. A native sodium-silver chloride.

huanuco bark. Cinchona bark.

Hübl number. Iodine number.

H. solution. A solution of iodine and mercuric chloride used to determine iodine numbers of unsaturated compounds.

hübnerite. $MnWO_4$. A native manganese tungstate occurring in the Western part of the United States, as a dark red crystalline mineral, d.7.17, soluble in HCl. It contains less than 20 % of iron tungstate. Cf. *ferberite.*

Hudson, Claude Silbert. 1881– . An American chemist, noted for work on enzymes and carbohydrates. **H. rule.** To assign α and β to a sugar in comparison with their molecular rotation, R_α and R_β, select names so that $R_\alpha - R_\beta$ is equal to and of the same sign as the difference for the two corresponding forms of glucose.

hue. A property of color, q.v.

Huff separator. An electrostatic concentrator for crushed ores. The ore travels over a charged belt, and falls through an electric field whereby the charged ore particles are separated.

huile. French for "oil."

Hulett, George Augustus. 1867– . An American physical chemist. **H. still.** A device for distilling mercury.

hülsneride. $FeWO_4$. A native ferrous tungstate.

humboldite. A variety of melilith, an aluminum iron silicate.

Humbold penetrometer. A device for testing asphalt by measuring its resistance to the pressure of a needle.

humic acid. A general term for the acids derived from humus.

humidity. Dampness, hygrometric state. The amount of water vapor in the air. **absolute-** The actual moisture content of air, in grams per cubic meter. **relative-** The weight of water vapor (expressed as a percentage) contained in a given volume of air divided by the weight which would be contained in the same volume of saturated air at the same temperature. See *dew-point, hygrometer.*

humidor. A compartment in which the atmosphere is kept saturated with water vapor.

huminite. A native hydrocarbon from Sweden.

humite. Chondrodite. A basic magnesium fluosilicate.

hummer. A microphone used in conductivity measurements, to determine a point at which no current is passing by the absence of the humming.

humoceric acid. $C_{19}H_{34}O_2$ = 294.26. An acid from peat wax.

humulene. $C_{15}H_{24}$ = 204.19. A sesquiterpene from the hop oil. A colorless liquid d.0.9001, b.265.

humulic acid. $C_{15}H_{22}O_4$ = 266.2. A compound formed by the action of alkali on humulon.

humulin. Lupulin.

humulon. $C_{21}H_{30}O_5$ = 362.2. A bitter constituent, m.66, of the soft resin of hop lupulin (cf. *lupulon*).

humulo tannin. $C_{26}H_{24}O_{13}$ = 532.2. A white amphoteric powder obtained from hops. It loses water at 130°C, and forms a phlobabene.

humulus. Hops.

humus. (a) The top-layer of the soil containing the organic decomposition products of vegetation (leafmold, rotten wood, etc.). (b) The decayed products of plant life. Cf. *gainic acid.*

Hünefeld solution. A reagent for the detection of blood: 25 cc. alcohol, 1.5 cc. glacial acetic acid, 5 cc. chloroform, 15 cc. old turpentine.

Huntington mill. An ore crusher in which steel rollers are pressed by centrifugal force against a heavy encasing steel ring.

Huppert's reagent. A 10 % aqueous solution of calcium chloride, used in urine analysis for the detection of biliary pigments.

hurricane drier. An air-drying chamber used for textiles, especially wool.

Huyghenian ocular. Negative ocular. A magnifying lens used as an eyepiece on a microscope or telescope. It consists of two convex lenses mounted convex sides down, whereby the field of the microscope is enlarged. Cf. Ramsden *ocular.*

Huyghens, Christiaan. 1629–1695. A Dutch physicist noted for the development of optical instruments, and for his wave theory of light.

Christiaan Huyghens.

hyacinth. A transparent red variety of zircon, used as a gem. The term is erroneously applied to light-colored garnet, to yellowish-red spinel from Brazil, and to red quartz. **Ceylon-** Garnet. **false-** Garnet. **oriental-** Corundum (rose-colored).

hyacinthozontes. A sapphire-blue beryl used as a gem.

hyaenasic acid. Hyenic acid.

hyaline. Resembling glass.

hyalite. A clear, colorless opal used as a gem.

hyalophane. $(K_2,Ba)Al_2(SiO_3)_4$. A barium feldspar.

hyalosiderite. A deep olive-green olivine, used as a gem.

hyaluronic acid. A viscous mucopolysaccharide (q.v.) in skin.

hybrid. An organism, usually a plant, obtained by cross-breeding.

hycar OR. Trade name for an oil-resistant synthetic rubber.

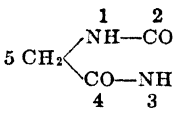
hychlorite. Antiformin.

hycoloid. Trade name for a cellulose nitrate plastic.

hydantoic acid. $C_3H_6O_3N_2$ = 118.1. Carbamido acetic acid, carbamyl glycine, glycoluric acid, $NH_2CONHCH_2COOH$. Colorless prisms, m.-171, slightly soluble in water, alcohol, or ether.

iso- $NH_2.C(:NH).O.CH_2.COOH$. **phenylthio-** $C_9H_{10}N_2O_2S$ = 210.07. (1) *ϕ*-iminocarbimin thio glycolic acid, $NH_2.C(:NPh)S.CH_2.COOH$. White needles, m.150, insoluble in water. (2) *ortho*- $PhNH.C(:NH).S.CH_2.COOH$. White crystals.

hydantoin. $C_3H_4O_2N_2$ = 100.1. Glycolylurea, imidazoledione. The pentatomic ring compound:

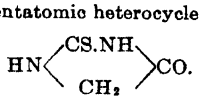


Colorless needles, m.216, soluble in hot water or alcohol. Cf. *barbituric acid*. **5-carbamido-** Allantoin. **α-dimethyl-** Acetonyl-urea.

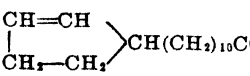
Colorless crystals, m.175. **β-ethyl-**

1-ethylhydantoin. Colorless crystals, m.100. **ethylphenyl-** Nirvanol. **α-methyl-**

5-methylhydantoin, lactylurea. Colorless crystals, m.140. **β-methyl-** 
1-methylhydantoin. Colorless needles, m.157. **pseudothio-** The pentatomic heterocycle:  **sulfo-** Pseudothiothio- The pentatomic heterocycle:



hydnocarpic acid. $C_{16}H_{28}O_2$ = 252.22. *κ*-Δ^2-cyclopentenyl undecylic acid,



White crystals, m.60, from the seeds and oil of *Hydnocarpus* species; used in the treatment of leprosy. Cf. *chaulmoogric acid*.

Hydnocarpus. A genus of trees, Bixaceae, whose seeds yield oils used in leprosy; as, kavatel oil, maroti oil. Cf. *arabin, avenyl, chaulmoogra oil*. **h. oil.** An oil of *H. wightiana*. d.0.947, m.20.5–24.0.

hydr- A prefix derived from Greek indicating water or hydrogen.

hydracetamide. $C_6H_{12}N_2$ = 112.2. $(MeCH)_2N_2$. A yellow powder, soluble in water or alcohol.

hydracetin. Pyrodin.

hydracid. An acid without oxygen atoms, as HCl or HCN.

hydracrylic acid. $C_3H_6O_3$ = 90.1. *β*-Hydroxypropionic acid, ethylene lactic acid, *3*-hydroxypropanoic acid*. CH_2OHCH_2COOH. A colorless crystalline mass, decomp. on heating. **amino-** Serine. **phenyl-** Tropic acid.

hydracrylo. The trivalent radical $HOCH_2.CH_2.C\equiv$. **h. nitrile.** C_3H_5NO = 71.05. *3*-Hydroxypropanenitrile*, ethylene cyanohydrin. $HO(CH_2)CN$. A colorless liquid, d.1.059, b.221, soluble in water or alcohol

hydragog(ue). A cathartic producing a profuse and watery stool, *e.g.*, elaterine, jalap, colocynth, magnesium citrate, sodium sulfate.

hydramine. A hydroxyalkylamine or glycol in which a hydroxyl group is replaced by an amine radical, $HO.R.NH_2$ or $HO.R.NR_2$.

hydramyl. Pentane.

hydrangea. Seven barks. The dried roots of *Hydrangea arborescens*, a saxifragaceous shrub. Used in a fluid extract, as a cathartic and diuretic.

hydrangin. $C_{34}H_{25}O_{11}$ = 609.39. A glucoside from hydrangea.

hydranthranol. Hydroanthranol.

hydrargillit. $Al(OH)_3$. A native aluminum hydroxide; colorless needles.

hydrargotin. Mercurous tannate.

hydrargyrol. $C_6H_4OH.SO_3Hg$ = 373.7. p-Phenyl mercury thionate. An antiseptic.

hydrargyrum. The Latin for mercury.

hydrastin. A concentrate containing the principles of golden seal.

hydrastine. $C_{21}H_{21}O_6N$ = 383.3. An alkaloid from *Hydrastis canadensis*, goldon seal. White prisms, m.132, slightly soluble in water, alcohol or ether; used as an alterative and uterine hemostatic. **h. hydrochloride.** $C_{21}H_{21}O_6N.HCl$ = 419.77. The more soluble hydrochloride of hydrastine. A colorless, hygroscopic powder, soluble in water or alcohol.

hydrastinine. $C_{11}H_{13}O_2N$ = 207.1. A decomposition product of hydrastine. Colorless crystals, m.116, slightly soluble in water. **h. hydrochloride.** $C_{11}H_{12}O_2.N\,HCl$ = 242.6. A yellowish crystalline powder, m.210, soluble in water or alcohol; used as an astringent and hemostatic.

hydrastis. Golden seal, yellow pucoon, orange root, turmeric root. The dried roots of *H. canadensis*, a ranunculaceous plant. The fluid extract is used medicinally as a bitter tonic and astringent. **h. alkaloids.** Compounds of the isoquinoline group; as, berberine, canadine, hydrastine, hydrastinine, xanthopuccine.

hydratated. Combined with water in the form of a hydrate. Cf. *hydrated*.

hydrate. (1) A substance containing water combined in the molecular form, as $H_2SO_4.H_2O$. (2) Aqua compound. A crystalline substance containing water of crystallization. They are classified according to the number of molecules of water which crystallize with one molecule of substance:

monohydrate	$1H_2O$
dihydrate	$2H_2O$
trihydrate	$3H_2O$
tetrahydrate	$4H_2O$
pentahydrate	$5H_2O$
hexahydrate	$6H_2O$
heptahydrate	$7H_2O$

etc. (3) Hydroxide. (4) A solvate, q.v. **carbo-** See *carbohydrate*.

hydrated. Combined with water. Cf. *hydrate, solvate*. **h. ion.** An ion surrounded by oriented water molecules; cf. *aquation, micelle, solvation, zone*. **h. lime.** Dry calcium hydroxide.

hydration. Combination with water, but not necessarily in the form of a hydrate. Cf. *aquation, solvation*. **heat of-** The energy difference between anhydrous and hydrous compounds, expressed in calories.

hydratisomery. An isomerism that depends upon the structure of hydrated crystals. Thus,

$CrCl_3.6H_2O$, chromic chloride hexahydrate, occurs in the following three forms:

grayish-blue	$[Cr(H_2O)_6]Cl_3$
grayish-green	$[Cr(H_2O)_5Cl]Cl_2.H_2O$
green	$[Cr(H_2O)_4Cl_2]Cl.2H_2O$

hydratropic acid. $C_9H_{10}O_2$ = 150.1. α-phenyl-propionic acid, α-methyl-α-toluic acid, Ph.CH-MeCOOH. Colorless crystals, m.265, slightly soluble in water. **hydroxy-** Atrolactic acid.

hydraulic. Pertaining to liquids, especially water. **h. cement.** A cement which sets under the action of water, instead of atmospheric CO_2 and moisture. **h. lime.** A variety of limestone which, on burning, yields a quicklime that will set or harden under water. Cf. *hydrated* lime. **h. mining.** Excavating by means of a strong jet of water. **h. mortar.** A mortar which will harden under water. **h. press.** An extraction press of great force using water to transmit the pressure; used in bacteriology and chemical work.

hydraulics. Hydro mechanics. A branch of physics which deals with the mechanical properties of liquids.

hydrazi- A prefix indicating the presence of the bivalent.  group, where both valencies belong to the same atom (indicated by a dot)

e.g. hydrazibenzyl 
Cf. *hydrazo, hydrazono, hydrazimethylene.*

hydraziacetic acid.  , which is hydrolyzed by acids to hydrazine and glyoxylic acid.

hydrazide. An acyl hydrazine, an organic compound of the type $R.CO.NH.NH_2$; as $C_3H_7.CONH.NH_2$, butyrohydrazide* or propane carbohydrazide. They are metamers of diureides. Cf. *malein hydrazide.* **acet-** See *acethydrazide.* **carbo-** See *carbohydrazide.* **oxy-** See *oxyhydrazide.*

hydrazidine. (1) A compound containing the bivalent $—NH.N:C.NH_2$ group. Cf. *amidrazones.* (2) The theoretical compound, $NH_2.N:CH.NH_2$. **ethylphenyl-** $PhNH.N:CEt.NH_2$ methylamidrazone.

hydrazido mesoxalamide. $C_3H_6O_2N_4$ = 130.2. $NH_2.N:C(CONH_2)CONH_2$. Colorless crystals, m.175.

hydrazimethylene. The theoretical compound  from which the hydrazi compounds are derived. **benzoylphenyl-** NH.NH.CPh-(COPh). Colorless crystals, m.151. **diphenyl-** $(NH.NH.CPh)_2$. Colorless crystals, m.147.

hydrazine. N_2H_4 = 32.1. Diamine, diamidogen, $H_2N—NH_2$. A colorless liquid, d.1.08, m.1.4, b.113, soluble in water or alcohol. Used extensively as a reducing agent in organic synthesis. In liquid ammonia solution it acts as nitridizing agent, analogously to the oxidizing action of H_2O_2 in aqueous solution. It gives the following radicals:

$H_2N.NH—$	hydrazino, hydrazyl
$H_2N.H=$	hydrazono
$—HN.NH—$	hydrazo, hydrazi
$=N.N=$	azo, diazo

Cf. *hydrazinium, hydrazidine.* **h. carbamide.** Diurea. **h. carboxamide.** Semicarbazide. **h. carboxylic acid.** Carbazic acid. **h. dicarbamide.** Biurea. **h. chloride, h. dihydrochloride.** $N_2H_4.2HCl$ = 105.5. Colorless crystals, m.198, soluble in alcohol or ether; used in organic synthesis. **h. formate.** $N_2H_4.2HCOOH$ = 124.08. Cubic crystals, m.128, soluble in water. **h. hydrate.** $N_2H_4.H_2O$ = 50.07. A colorless solid, m. −40, $b._{40mm.}$118.5. **h. nitrate.** $NH_2.NH_2.NO_3$. White crystals, used as a high explosive. **h. sulfate.** $N_2H_4.H_2SO_4$ = 130.1. Colorless scales, m.254, soluble in water, insoluble in alcohol or ether; used as a reagent in separating copper, and in organic synthesis.

hydrazines. A series of compounds derived from hydrazine: $H_2N—NH_2$; as *methylhydrazine,* $MeNH.NH_2$; or *phenylhydrazine,* $PhNH.NH_2$. They are analogous to peroxides. **acyl-** Hydrazides. **alkyl-** A compound of the type $RNH.NH_2$, $R_2N.NH_2$, or RNH.NHR, in which the hydrogen is replaced by an alkyl radical. **aryl-** An organic compound derived from hydrazine, in which the hydrogen is replaced by an aryl radical.

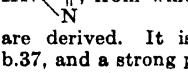
hydrazinium. Hydrazonium. The monovalent radical $H_2N.NH_3—$, or the bivalent radical $—NH_3.NH_3—$, which is derived from hydrazine and contains respectively, one and two pentavalent nitrogen atoms. **h. salt.** A compound of hydrazine and an acid, analogous to the ammonium salts derived from ammonia. Thus, there are $N_2H_4.HCl$, *i.e.*, $H_2N.NH_3Cl$, h. chloride; and $N_2H_4.2HCl$, *i.e.*, $ClNH_3.NH_3Cl$, h. dichloride.

hydrazino. The monovalent $H_2N.NH—$ group derived from hydrazine. **h. acids.** A group of organic compounds, derived from hydrazine, of the general type $H_2N.NH.R.COOH$; as, α-hydrazino-propionic acid, $H_2N.NH.CHMe.COOH$, or amidoalanine.

hydrazo- A prefix indicating the presence of the bivalent $—NH.NH—$, or the tetravalent $=N.N=$ group. (The latter is properly called the azo-group.) Cf. *hydrazi, hydrazono.* **h. amine.** Triazane. **h. benzene.** $C_{12}H_{12}N_2$ = 184.2. **1.1-** See *1.1-diphenylhydrazine**. **1.2-** *1.2-* Diphenylhydrazine*, *N*-bianiline, $PhNH.NHPh$. Colorless scales, d.1.158, m.132, slightly soluble in water or alcohol, soluble in ether. It is an intermediate in the manufacture of benzidine. **h. benzoic acid.** See *benzoic acid.* **h. compounds.** A group of organic compounds of the general formula RNH.NHR. **h. dicarbonamide.** $C_2H_6O_2N_4$ = 118.3. Hydrazoformamide, $NH_2.CO.NHNH.CO.NH_2$. Colorless leaflets, m.245, slightly soluble in water. **h. dicarbonimide.** Urazole. **h. formamide.** H. dicarbonamide. **h. naphthalene.** $C_{20}H_{16}N_2$ = 284.2. Dinaphthylhydrazine. $C_{10}H_7NH.NHC_{10}H_7$. **1.1-** (alpha-). Colorless leaflets, m.275, insoluble in water, soluble in alcohol or ether; used in organic synthesis. **2.2-** (beta-). White flakes, m.163, insoluble in water, soluble in alcohol or ether. **h. toluene.** $C_{14}H_{16}N_2$ = 212.2. Ditoluylhydrazine, $MeC_6H_4NH.NHC_6H_4Me$. **1.2-** (ortho-). Colorless leaflets, m.156, slightly soluble in water, soluble in alcohol or ether; decomp. by heat. **1.3-** (meta-). Colorless crystals, soluble in alcohol. **1.4-** (para-). Monoclinic, colorless crystals, m.130, insoluble in water, soluble in alcohol; used in organic synthesis.

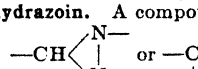
hydrazoate. A compound derived from hydrazoic acid, NH.N:N; as sodium hydrazoate, NaN_3.

hydrazoic acid. HN_3 = 43.03. Hydronitric acid, azoimide, diazoimide, NH—N = N or



, from which the unstable hydrazoates are derived. It is highly explosive m. −80, b.37, and a strong protoplasmic poison.

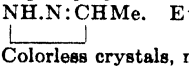
hydrazoin. A compound containing the trivalent



or —CH.N.N— group; as benzhydrazoin, PhCH

hydrazone. (1) A condensation product containing the trivalent —NH.N:C— group,

resulting from the action of compounds containing $—N.NH_2$ (*hydrazines*) with compounds containing —CO (*aldehydes* or *ketones*). (2) A phenylhydrazone (q.v.). **acetaldehyde-** Ph-NH.N:CHMe. Ethidenephenylhydrazine.



Colorless crystals, m.64. **diacetyl-**

Colorless crystals, m.133. **diphenyl-** Osazone. **monoacetyl-** PhNH.N:CHCOMe. Colorless

crystals, m.148.

hydrazonic acid. A compound of the general type R.C(OH):N.NH, metameric with amidoximes and tautomeric with acethydrazides.

hydrazonium. Hydrazinium.

hydrazono. The bivalent radical $=N.NH_2$, from hydrazine. Cf. *hydrazido.*

hydrazyl. A free radical of the type $R_2N.NAc—$, derived from the hydrazino group. The nitrogen atom bound to the acyl radical is designated as alpha-, and that with the hydrocarbon radical, as beta; as, α-benzoyl-β-diphenylhydrazyl, $Ph_2N.NOCPh$.

β α

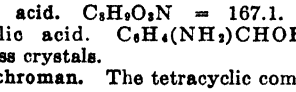
hydride. A compound of hydrogen with (a) a more positive element; as sodium hydride, NaH; or (b) a member of the phosphorus group. (c) A radical, RH; as, methylhydride (methane). **antimony-** Stibine. **arsenic-** Arsine. **phosphorus-** Phosphine.

hydrin. The hydrogen acid ester of a polyatomic alcohol, as, glycol, glycerol. They are of the type HO—R—X, as $HO.CH_2.CH_2.Cl$, glycolchlorohydrin; or $HO.CH_2.CHOH.CH_2Cl$, glycerol α-monochlorohydrin.

hydrindene. C_9H_{10} = 118.1. Indan.

hydrindic acid. $C_8H_9O_2N$ = 167.1. o-aminomandelic acid. $C_6H_4(NH_2)CHOH.COOH$. Colorless crystals.

hydrindochroman. The tetracyclic compound



hydrindone. Indone.

hydrine. Hydrin.

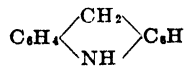
hydriodic acid. HI = 127.9. A 57 % solution of hydrogen iodide in water, d.1.700. Used as a reagent for detecting nitrites, determining methoxyl, and as a general reducing agent.

hydriodide. A compound (usually an alkaloid) combined with hydrogen iodide.

hydrion. (1) Hydrogen ion. (2) A proton, or the positive nucleus of an atom (Soddy).

hydro- (1) A prefix derived from Greek indicating "water" or "hydrogen." (2) Abbreviation for hydroextractor.

hydroacridine. $C_{13}H_{11}N$ = 181.16. The heterocyclic compound



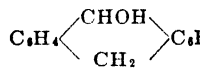
Colorless crystals, m.169, insoluble in water, soluble in hot alcohol or ether.

hydroalium. An aluminum alloy resistant to alkalis, containing 7–9 % Mg and 0.2–0.6 % silicon and manganese.

hydroangelic acid. α-Methyl butyric acid.

hydroanthracene. Dihydroanthracene.

hydroanthranol. $C_{14}H_{12}O$ = 196.1. Hydranthranol.



Colorless needles, m.76, soluble in hot water, alcohol, or ether. Cf. *oxanthrol.*

hydroatropic acid. $C_9H_{10}O_2$ = 150.1. α-phenylpropionic acid, hydratropic acid, α-methyl-α-toluic acid, MeCHPhCOOH. A colorless liquid b.264, slightly soluble in water; an isomer of hydrocinnamic acid.

hydrobenzamide. $C_{21}H_{18}N_2$ = 298.2. Tribenzaldiamine, tribenzilidendiamine. Colorless prisms, m.101, insoluble in water, soluble in alcohol or ether.

hydrobenzoin. $C_{14}H_{14}O_2$ = 214.2. Benzylene glycol, diphenyl dihydroxyethane PhCHOH.-CHOHPh. Colorless leaflets, m.136, b.300, slightly soluble in water, soluble in alcohol or ether.

hydroberberine. $C_{20}H_{21}NO_4$ = 339.17. White crystals, m.167, insoluble in water.

hydrobilirubin. Urobilin.

hydroboron. See *boron hydrides.*

hydrobromic acid. HBr = 80.9. A 40 % solution of hydrogen bromide in water. A colorless liquid, d.1.38, used as a reagent.

hydrobromide. Hydrogen-bromide. An organic salt of hydrobromic acid and an alkaloid. Cf. *bromide.*

hydrocaffeic acid. See *caffeic acid.*

hydrocarbobase. See *base.*

hydrocarbon. A compound consisting of carbon and hydrogen. The number of hydrocarbons is very large, and they are classified into several series, q.v. **aliphatic-** A compound in which the principal molecules are carbon atoms arranged in chains. **aromatic-** A compound in which the principal molecules are carbon atoms arranged in a ring. **cyclic-** Aromatic. **normal-** A h. without side-chains. **saturated-** A hydrocarbon in which all four valencies of the carbon atom are satisfied. **unsaturated-** A hydrocarbon in which there is one or more double or triple bonds between the carbon atoms.

h. black. Lampblack. **h. burner.** An oil stove in which vaporized kerosene is used as fuel. **h. radical.** A group of atoms of C and H, with one or more free bonds. Cf. *organic radicals, structure symbols.* **h. series.** One of the groups of hydrocarbons in which the

compounds are arranged as homologs, which generally differ by :CH_2. Cf. *hydronitrogen.* The general formulas of some series, and of some of their members are:

C_nH_{2n+2}—ALKANES, paraffins or methane series (for members of this series, see *methane* series)

C_nH_{2n}—ALKENES, olefines, or ethylene series (see *ethylene* series, *cyclo-paraffins*)

C_nH_{2n-2}—ALKINES, acetylenes or ethine series (see *acetylene series, cyclo-olefines, diolefines*)

C_nH_{2n-4}—ALKONES or terpenes

C_4H_4 butone, vinylacetylene
C_5H_6 pentone, valylene
C_6H_8 hexone, diallylene
$C_{10}H_{16}$ decone or terpenes, q.v.; as camphene, citrene, dipentene, pinene, sylvestrene, terpinene
$C_{18}H_{32}$ octodecone, fichtelite

C_nH_{2n-6}—BENZENES and diacetylenes

C_4H_2 diacetylene, q.v.
C_6H_6 benzene (see *benzene* series), dipropargyl
$C_{15}H_{24}$ sesquiterpenes, q.v.; as calamene, cadinene, cedrene, etc.

C_nH_{2n-8} Phenylene series

C_6H_4 phenylene
C_8H_8 cinnamene, styrolene
C_9H_{10} allylbenzene, phenylpropene
$C_{10}H_{12}$ butylenebenzene, phenylbutene and tetrahydro naphthalene

C_nH_{2n-10} Indene series

C_8H_6 ethinylbenzene, acetylenebenzene
C_9H_8 indene
$C_{10}H_{10}$ dihydronaphthalene, phenylcrotonylene
$C_{26}H_{42}$ cholesterene
$C_{30}H_{50}$ squalene

C_nH_{2n-12} Naphthalene series

$C_{10}H_8$ naphthalene
$C_{11}H_{10}$ methylnaphthalene
$C_{12}H_{12}$ ethylnaphthalene
$C_{14}H_{16}$ hexahydroanthracene

C_nH_{2n-14} Diphenyl series

$C_{12}H_{10}$ diphenyl and acenaphthene
$C_{13}H_{12}$ diphenylmethane
$C_{14}H_{14}$ diphenylethane, dibenzyl, ditolyl
$C_{15}H_{16}$ diphenylpropane, benzylethylbenzene, benzylxylene

C_nH_{2n-16} Stilbene series

$C_{13}H_{10}$ fluorene
$C_{14}H_{12}$ stilbene, diphenylethene, dihydroanthracene
$C_{15}H_{14}$ diphenylpropene
$C_{16}H_{18}$ diphenylbutene, hexahydropyrene

C_nH_{2n-18} Anthracene series

$C_{14}H_{10}$ anthracene, phenanthrene, tolane, diphenylthine, dimethylanthracene
$C_{15}H_{12}$ methylanthracene
$C_{16}H_{14}$ dimethylanthracene, ethylanthracene, distyrene
$C_{17}H_{16}$ trimethylanthracene
$C_{18}H_{18}$ tetramethylanthracene or retene

C_nH_{2n-20}

$C_{16}H_{10}$ fluoranthene
$C_{17}H_{14}$ naphthylphenylmethane, benzylnaphthene

C_nH_{2n-22}

$C_{16}H_{10}$ pyrene, diphenyldiethine, 1 diacetenylbenzene
$C_{18}H_{14}$ diphenylbenzene
$C_{19}H_{16}$ triphenylmethane
$C_{64}H_{106}$ illipene

C_nH_{2n-24}

$C_{18}H_{12}$ chrysene

C_nH_{2n-26}

$C_{20}H_{14}$ dinaphthyl, phenylanthracene
$C_{21}H_{16}$ dinaphthylmethane

C_nH_{2n-28}

$C_{20}H_{12}$ perylene

C_nH_{2n-30}

$C_{22}H_{14}$ idrialene, picene pentacene
$C_{23}H_{16}$ methylidrialene
$C_{24}H_{18}$ triphenylbenzene
$C_{25}H_{20}$ tetraphenylmethane

C_nH_{2n-32}

$C_{24}H_{16}$ crackene
$C_{26}H_{20}$ tetraphenylethylene
$C_{27}H_{22}$ tetraphenylpropene

C_nH_{2n-36}

$C_{26}H_{16}$ anthanthrene

C_nH_{2n-38}

$C_{25}H_{14}$ rubicene
$C_{28}H_{18}$ dianthryl
$C_{30}H_{22}$ tetraphenyl benzene

C_nH_{2n-54}

$C_{42}H_{30}$ hexaphenylhexadiine

hydrocarbostyril. C_9H_9ON = 147.2. Colorless prisms, m.163, slightly soluble in water, soluble in alcohol or ether.

hydrocarpic. Misnomer for hydnocarpic.

hydrocellulose. $C_{12}H_{22}O_{11}$ = 342.2. A compound obtained from cellulose by prolonged treatment with concentrated acids.

hydrocerulignone. $C_{16}H_{18}O_4$ = 274.22. A solid, m.190, soluble in alcohol, ether or water.

hydrochelidonic acid. $C_7H_{10}O_5$ = 174.12. Acetone diacetic acid, 4-ketopimelic acid, 4-oxoheptanedioic acid*, CO:$(CH_2.CH_2COOH)_2$. A crystalline solid, m.142, soluble in alcohol, slightly soluble in water or ether.

hydrochinone. Hydroquinone.

hydrochlorate. An incorrect term for hydrochlorides.

hydrochloric acid. HCl = 36.5. Muriatic acid. A solution of hydrogen chloride gas in water. **conc.-** Not less than 35 % HCl. A clear, colorless fuming liquid, d.1.18, used extensively as a reagent and in organic synthesis. **dilute-** A solution of about 20 % HCl. **fuming-** A solution of about 37 % HCl, d.1.19. **nitro-** Aqua regia.

hydrochloride. (Cf. *hydrochlorate, chlorhydrate.*) A salt of hydrochloric acid and an organic base, especially an alkaloid, it differs from chlorides in retaining the hydrogen atom, as *Alk* HCl. Such a salt is usually more soluble than the base.

hydrocinnamide. $C_9H_{11}ON$ = 149.09. α-benzylacetamide. $PhCH_2CH_2CONH_2$.

hydrocinnamic acid. $C_9H_{10}O_2$ = 150.1. β-phenylpropionic acid. Colorless needles, d.-1.071, m.49, b.280, slightly soluble in water, soluble in alcohol or ether. **amino-** Phenylalanine. **aminohydroxy-** Tyrosine. **hydroxy-**, (*alpha-*) Phenyllactic acid. (*ortho-*) Melilotic

acid. (*para-*) Phloretic acid. **methylene-** Benzylacrylic acid.

hydrocinnamic aldehyde. $C_9H_{10}O_2$ = 134.1. β-phenylpropionic aldehyde. A colorless liquid, b.208, insoluble in water, soluble in alcohol or ether. Used in organic synthesis.

hydrocollidine. A ptomaine from putrefying fish.

hydrocoridine. $C_{10}H_{17}N$ = 151.2. A ptomaine produced by *Bacillus allii* or *Bacterium album* in agar cultures.

hydrocotarnine. $C_{12}H_{15}O_3N$ = 221.12. An alkaloid derived from opium. Colorless crystals, m.53, insoluble in water, soluble in alcohol or ether; used as a hypnotic.

hydrocotoin. See *cotoin.*

hydrocoumaric acid. $C_9H_{10}O_3$ = 166.1. β-phenylpropionic acid. **para-** Monoclinic colorless crystals, m.128, soluble in water, alcohol or ether. **ortho-** Melilotic acid.

hydrocoumarone. C_8H_8O = 120.1. A colorless fragrant liquid, b.188.

hydrocupreine. $C_{19}H_{24}N_2O_2$ = 312.2. An alkaloid from cuprea bark, q.v. **ethyl-** Optochine. **methyl-** Hydroquinine.

hydrocyanic acid. HCN = 27.06. Prussic acid, hydrogen cyanide, formonitrile. A colorless gas, very poisonous with an almond odor; d.0.697, m. −14, b.25, soluble in water, alcohol or ether. Used as a poison gas, disinfectant, in metallurgy and mining (Cyanide process), agriculture (insecticide and fumigation) and in organic synthesis. Cf. *HCN discoids, zyklon, cyanogas.* **h. cyanogen chloride.** Soffitume. A mixture of NaCN and $NaClO_3$, used for fumigation by adding to 50 % HCl solution.

hydrocyanide. The salt of an organic base with hydrocyanic acid, containing the HCN molecule.

hydrodiffusion. Diffusion into water.

hydrodynamics. A branch of physics dealing with the mechanical properties of liquids, especially water.

hydrodynamometer. An instrument for measuring the velocity of a fluid in motion.

hydroextractor. Hydro. A rapid centrifuge for drying or dehydrating crystals, textiles, etc.

hydrofermentation. Destructive hydrogenation, *e.g.*, as applied to hydrocarbons.

hydroferricyanic acid. Ferricyanic acid.

hydrofluogermanic acid. Fluogermanic acid.

hydrofluoric acid. HF = 20.0. Phthoric acid. A solution of hydrogen fluoride in water. A colorless liquid which must be kept in paraffin, rubber or bakelite bottles as it attacks glass. Used to etch glass; and as a reagent. Its salts are the fluorides.

hydrofluoride. A salt of hydrogen fluoride and an organic base, usually an alkaloid. Cf. *fluoride.*

hydrofluosilicic acid. Fluosilicic acid.

hydrofranklinite. Chalcophanite.

hydrogel. A gel produced by the coagulation of a colloid with the inclusion of water; *e.g.*, coagulated silicic acid.

hydrogen. (A) **History:** H. was probably first discovered in the 16th century by Paracelsus, and first investigated in 1766 by H. Cavendish in connection with the action of acids on metals ("inflammable air"). Later he showed that water is produced when this gas burns (Greek ὕδωρ, water and γεννάω, to produce). Liquid and solid H were first prepared by Dewar in 1898. (B) H_2 = 2.0160. The simplest **element,** atomic number 1. Hydrogen gas is a colorless, inflammable gas, m. −256.5, b. −252.5, slightly soluble in water, alcohol or ether. Used in filling balloons, as fuel in torches for cutting metals, welding and melting, the production of synthetic stones or gems, annealing of steel, in the "lime-light," in the hydrogenation of oils, the cracking of hydrocarbons, and the production of synthetic ammonia. (C) H = 1.0080. Hydrogen **atom,** the basis of the valence system, being taken as unity; elements combining directly with hydrogen atoms have a negative valence number, *e.g.*, Cl −1, O −2, N −3; elements replacing hydrogen have a positive valence number, *e.g.*, Na +1, Ca +2, Al +3. (D) **constants** of hydrogen atom and molecule:

mass of atom = 1.662×10^{-24} gram
radius of molecule = 10^{-8} cm.
mean free path of molecules at 760 mm. pressure and 0°C. = 1.6×10^{-5} cm./sec.
average velocity at 760 mm. and 0°C. = 1.70×10^{-6} cm./sec.
1 cubic meter weighs 89.87 grams (Regnault value)
1 liter at 760 mm. and 0°C. weighs 0.08987 gm.

(E) **Isotopes** of H. are protium, H^1 or H^a, mass 1.00756; deuterium (diplogen), H^2, H^b or D, mass 2.0136; tritium, H^3, H^c or T, mass 3.0221. These form six possible molecules with molecular weights from 2.015 to 6.04. Cf. *h. molecule.* (F) **Compounds** of hydrogen: Three types: (1) Nonmetallic *e.g.* SbH_3, PH_3, NH_3, in which hydrogen is the positive part. These compounds are usually gaseous and volatile; As_2H_4 and Sb_2H_2 are solids. (2) Salts, or hydrides *e.g.*, NaH, CaH_2, in which the hydrogen is the negative part. These are crystalline, transparent substances. (3) Metallic (hydrogen alloys), *e.g.*, PdH_x in which the hydrogen is alloyed with, occluded on or absorbed in the metal. For other types of h. compounds see:

hydrocarbons	C_xH_y
hydronitrogens	N_xH_y
silanes	Si_xH_y
stannanes	Sn_xH_y
boron hydrides	B_xH_y

activated- Atomic-. **arseniuretted-** Arsine. **atomic-** Hydrogen gas which has been subjected to a strong electromagnetic field, and whose molecules are thought to be torn apart. Used in certain blowpipes for obtaining extremely high temperatures. **excited-** Hydrogen gas subjected to a high potential at low pressure. It is thought that the electrons move in less stable energy levels, and on falling back, emit the characteristic radiations. **heavy-** The h. isotope of mass 2; deuterium or diplogen. **labelled-** Deuterium. **nascent-** Freshly generated H, which is supposed to owe its greater chemical activity to being in the atomic form. **ortho-, para-.** See *h. molecule.* **phosporetted-.** Phosphine. **proto-** See *protohydrogen.* **sulfuretted-** Hydrogen sulfide. **telluretted-** H. telluride. **triatomic-** H_3 = 3.02. A modification of h. obtained by exposure of H to (1) α-rays, (2) vacuum discharge, (3) corona discharge, (4) a glass-tube ozonizer, (5) high-frequency Tesla discharge. It is very unstable, reduces, S, As, Hg and N, can be condensed by liquid air, and decomposed (to H_2) by Pt, Ni, Co, etc. **trivalent-** Misnomer for triatomic.

h. acid. Hydracid. An acid containing no oxygen; as HX. **h. bromide.** HBr = 80.9.

(1) Hydrobromic acid gas. A colorless gas, $d._{(air-1)}$ 2.71, m. −87, b. −68.7; soluble in water, alcohol, or ether. Used as a reagent, in organic synthesis, and forms salts, the bromides. (2) Same as hydrobromide cf. *bromide*. **h. calomel cell.** An electrolytic cell comprising a hydrogen gas- and calomel-electrode; used for conductivity and pH measurements. **h. cell.** An electrolytic cell in which hydrogen gas electrodes are used. **h. chloride.** HCl = 36.46. (a) Hydrogen chloride gas, hydrochloric acid gas. A colorless gas, $d._{(air-1)}$.269, m. −112.5, b. −83.1, very soluble in water, alcohol or ether. The aqueous solution is hydrochloric acid. Used as a reagent and in organic synthesis. (b) A compound of an organic base (alkaloid) with HCl; it is usually more soluble in water than the base. **h. cyanide.** Hydrocyanic acid. **h. dioxide.** Hydrogen peroxide. **h. electrode.** A gas electrode in which action depends on the potential set up between an electrode of finely-divided metal saturated with hydrogen, and the hydrogen ions of the solution in which it is placed. It is used in potentiometric and pH measurements, since its potential depends on the pH value of the solution. **h. equivalent.** The number of replaceable H atoms in a molecule of an acid; or the number of replaceable OH groups in the molecule of a base. **h. fluoride.** HF = 20.0. Hydrofluoric acid gas, phthoric acid. A colorless poisonous gas, $d._{(air-1)}$0.713, m. −83.5, b.19.4, soluble in water or alcohol; used as an aqueous solution or as gas (liberated from CaF_2 with H_2SO_4) for etching glass. **h. iodide.** HI = 127.9. Hydroiodic acid gas. A colorless gas, $d._{(air-1)}$-4.38, m. −51, b.34, soluble in water or alcohol. The aqueous solution (hydriodic acid) is used as a reagent and in organic synthesis. **h. ions.** The electrically charged particles consisting of a h. nucleus, H^- or H^+. They are present in all acids, Cf. *hydrogen-ion*. **h. line.** The spectrum lines due to hydrogen; as, H_α, H_β, H_γ, etc. Cf. *Bohr atom, quantum theory, atomic structure*. **h. molecule.** The simplest molecule, consisting of two hydrogen atoms. With three isotopes, H, D and T, the following six molecules are possible:

HH, DD, TT, HD, HT, DT.

Of these the simplest, H_2, consists of two types: **ortho-** and **para-** which differ slightly in physical properties; as, specific heat; vapor pressure. They are explained by the different spins of the two nuclei, which may be:

in ortho- ⇄ and in para- ↑↑, ⇉, ↓↓.

Hydrogen consists of:

	ortho-	para-
At −235°C (liq. H_2)	= 99.7 %	0.3 %
At −140°C (liq. air)	= 50 %	50 %
At 20°C (room temp.)	= 25 %	75 %

ortho- (symmetrical- or alpha-) has even rotation quantum numbers, 0,2,4 . . . ; para (antisymmetrical- or beta-) has odd numbers, 1,3,5 . . . **h. nitrate.** Nitric acid. **h. nitride.** Ammonia. **h. overvoltage.** The electrical charge needed to liberate hydrogen, $2H \rightarrow H_2$, at a metallic surface forming one of a pair of electrodes in a solution; *e.g.*,

Pt 0	Ni 0.29	Sn 0.44	
Pd 0	Ag 0.33	Pb 0.45	
Al 0.18	Cu 0.33	Tl 0.55	
Co 0.23	C 0.34	Mn 0.58	
Fe 0.24	Sb 0.38	Hg 0.61	
W 0.28	Cr 0.41	Zn 0.70	

h. oxide. Water. **h. peroxide.** H_2O_2 = 34.016. H. dioxide, oxygen, auricome, perhydrol, peroxide of h. A clear colorless liquid with a faint odor of nitric acid, d.1.458, m. −2, b.85, soluble in water in all proportions; marketed usually as a 3 or 6 % solution, which are designated according to the number of volumes of oxygen they evolve, viz. as "10 volumes" and "20 volumes," respectively (cf. *perhydrol*). It is acid to litmus, but neutral in dilute solutions. In the solid state it is explosive, in solution it decomposes into water and oxygen; this action is accelerated by alkalis, and retarded by acids. It can act as a reducing or oxidizing agent. Used as a reagent, disinfectant, antiseptic, antichlor, and for bleaching. It occurs in traces in natural waters that are exposed to the sun. **h. peroxide hydrates.** $H_2O_2.H_2O$, $H_2O_2.2H_2O$. They are stable if pure, but otherwise decompose explosively. **h. peroxide of crystallization.** A series of compounds which crystallize with one or more molecules of H_2O_2, analogous to water of crystallization. **h. persulfide.** H_2S_2, H_2S_5, or S—H_2S_2—H_2S_3. A yellow oily liquid, d.1.7, soluble in benzene. Decomp. by alcohol into sulfur and hydrogen sulfide, and bleaches litmus. **h. phosphide.** Phosphine. **h. selenide.** H_2Se = 81.2. A colorless poisonous gas, m. −64, b. −42; very soluble in water. Aqueous solutions react with metallic salts, similarly to hydrogen sulfide. **h. sulfate.** Sulfuric acid. **h. sulfide.** H_2S = 34.1. Sulfuretted h., hydrosulfuric acid, hepatic gas. A colorless gas having the odor of rotten eggs, $d._{(air-1)}$1.189, m. −85.5, b. −61.8; very soluble in water or alcohol. Used as a reagent for the precipitation of metals; shipped in steel cylinders. **h. sulfide water.** An aqueous solution of H_2S; a colorless liquid of strong characteristic odor, used extensively as a reagent in qualitative analysis, for the purification of chemicals by precipitation of heavy metals, and as an antichlorinating agent. **h. telluride.** H_2Te = 129.52. A combustible gas or liquid, m. −48, b.9; soluble in water with decomposition. **h. thermometer.** An instrument for measuring temperatures from the pressure exerted by a certain volume of confined H gas.

hydrogenate. (1) To combine with hydrogen or to introduce H into a molecule; as, the saturation of unsaturated compounds. (2) To reduce, cf. *oxidation*.

hydrogenated. Treated or saturated with hydrogen; as, an oil which has been solidified by transforming unsaturated into saturated compounds; as, olein to palmitin.

hydrogenation. The process of combining with hydrogen. *E.g.*, (1) saturation of aliphatic unsaturated compounds with H in the presence of nickel or palladium as catalyst; or (2) cracking higher hydrocarbons to gasoline by H under pressure. Cf. *Sabatier, Bergius process*. **h. apparatus.** A heavy copper retort with stirrer, used to transform liquid fats into solid fats by h.

HYDROGEN ION CONCENTRATION

	pH	pOH	Hydrogen ion concentration in mols per liter (or n gm. H^+ per liter)	Hydroxyl ion concentration in mols per liter (or $10^{-14}/n$ gm. OH^- per liter)
Acid reaction	0.00	14.0	1.0 normal	0.000,000,000,000,01 normal

	14.0	0.0	0,000,000,000,000,01 normal	1.0 normal

hydrogen-ion: H^- or H^+. A constituent present in aqueous solutions of acids consisting of positively charged hydrogen atoms. All acids dissociate, more or less into this ion, $HCl = H^+ + Cl^-$, and the strength or "acid" character of the acid is denoted by the sour taste, change of color of indicator, reaction with metals, etc., according to the extent of this dissociation. Cf. *hydronium ion.* The degree of dissociation varies inversely with the concentration of the acid within certain limits. **h.i. concentration.** pH, P_H or p_H. Potential of hydrogen, "momentary," true, actual or active acidity. The amount of H^+ per unit volume (moles per liter, $[H^+]$ or $C_H{}^+$) of an aqueous solution. It denotes the true acidity or alkalinity of such solutions, and is expressed by the pH value (potential of hydrogen) which is the concentration of H^+ in terms of the reciprocal logarithm of the number of gram-ions of hydrogen per liter, $p_H = \log_{10} 1/C_H$. Pure water dissociates very slightly, so that in one liter there are one-ten-millionth gram-ion (10^{-7} gm.), or in other words:

1 gram-ion of hydrogen is in ten million liters (10^7 l.) of water; naturally, there is an equal number of OH^- ions. Hence,

$$[H_2O] = [H^+] + [OH^-]$$
$$1 \text{ liter} \quad 10^{-7} \text{ gm.} \quad 10^{-7} \text{ gm.},$$

and

$$pH = pOH = \text{constant.}$$
$$7.0 + 7.0 = 14.00.$$

Accordingly p_H values from 0 to 7 indicate an acid solution; p_H7 neutrality; and p_H7 to p_H14 an alkaline solution. See tables. **h.i. conversion.** Owing to the different methods of measurement the h.i. concentration can be expressed, for 0.1 N-HCl in the following terms:

$[sH^+]$ and $ps_H2.038$, based on the dissociation of HCl = 0.9165 (Sörensen)

$[H^+]$ and p_H2 000, assuming complete dissociation (actual acidity)

$[aH^+]$ and pa_H 2.075, activity coefficient (q.v.), from e.m.f. measurements.

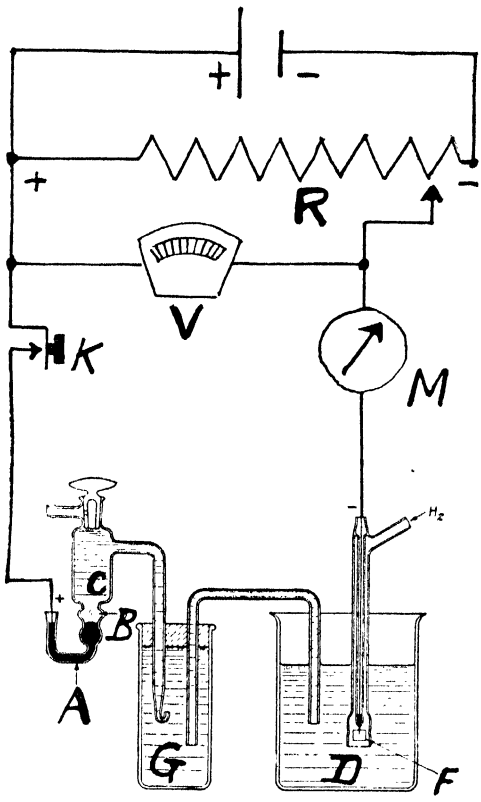
Conversion Table of p_H and C_H

$n.00 = 1.00 \times 10^{-n}$	$n.50 = 3.1 \times 10^{-(n+1)}$
$n.05 = 8.9 \times 10^{-(n+1)}$	$n.55 = 2.8 \times 10^{-(n+1)}$
$n.10 = 7.9 \times 10^{-(n+1)}$	$n.60 = 2.5 \times 10^{-(n+1)}$
$n.15 = 7.1 \times 10^{-(n+1)}$	$n.65 = 2.2 \times 10^{-(n+1)}$
$n.20 = 6.3 \times 10^{-(n+1)}$	$n.70 = 2.0 \times 10^{-(n+1)}$
$n.25 = 5.6 \times 10^{-(n+1)}$	$n.75 = 1.8 \times 10^{-(n+1)}$
$n.30 = 5.0 \times 10^{-(n+1)}$	$n.80 = 1.6 \times 10^{-(n+1)}$
$n.35 = 4.5 \times 10^{-(n+1)}$	$n.85 = 1.4 \times 10^{-(n+1)}$
$n.40 = 4.0 \times 10^{-(n+1)}$	$n.90 = 1.26 \times 10^{-(n+1)}$
$n.45 = 3.5 \times 10^{-(n+1)}$	$n.95 = 1.1 \times 10^{-(n+1)}$

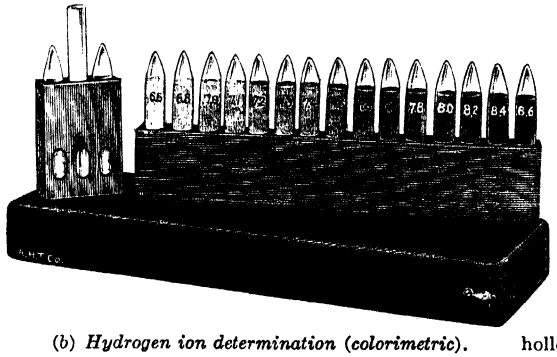
Examples: P_H 7.0 equals 1.0×10^{-7} gm. H^+ per liter; p_H 7.5 equals 3.1×10^{-8} gm. per liter; p_H 5.5 equals 3.1×10^{-6} gm. per liter.

h.i. determination apparatus. A device to measure or determine the p_H value. It may be either: (a) *electrometric,*—measures the potential of a hydrogen electrode (which depends on the p_H of the solution) against a standard calomel electrode; or, (b) *colorimetric,*—compares the color of an indicator added to the solution with its color in a solution of known p_H. See figures. **h.i. indicator.** A vegetable or synthetic dye which has definite colors at different p_H values. See *indicators.* **h.i. recorder.** An automatic potentiometer for measuring and recording the acidity and alkalinity of solutions. Such devices are used in various industrial processes, and for controlling p_H values.

hydrogenite. A mixture of 25 % Si, 60 % NaOH and 15 % slaked lime which ignites o burnin to give 270–3 70 liters of hydrogen gas per



(a) *Hydrogen-ion determination (electrometric).*
A = Calomel electrode consisting of mercury (A), calomel (B) and saturated KCl solution (C).
D = Hydrogen electrode with platinum foil (F) in hydrogen gas and the unknown solution (D).
G = Connecting vessel with salt bridge.
K = Key. V = Voltmeter. R = Rheostat. M = Galvanometer.



(b) *Hydrogen ion determination (colorimetric).*

hydrogenium. The volatile metallic element of which hydrogen is the supposed vapor; the metallic modification of hydrogen.
hydrogenize. Hydrogenate.
hydrogenolysis. The cleavage of a C—C or C—O bond accompanied by the addition of H_2; as, $R.R' + H_2 \rightarrow RH + R'H$. Cf. *hydrogenation, hydrolysis.*
hydrogenomonas. The first genus of bacteria, occurring in the soil and oxidizing H_2 to form water by catalytically reducing CO_2:

$$CO_2 + H_2 \rightarrow HCHO + O$$
$$HCHO + O_2 \rightarrow H_2O + CO_2.$$

hydrogenylase. An enzyme which promotes liberation of molecular hydrogen.
hydrohaeterolite. The mineral, $2ZnO.2Mn_2O_3.H_2O$.
hydrohalic. Composed of hydrogen and halogens.
hydrohematite. $2Fe_2O_3.H_2O$. A crystalline, hydrated ferric oxide.
hydrohydrastine. $C_{11}H_{13}O_2N$ = 191.1. An alkaloid derived from hydrastine, m.66, soluble in alcohol or ether.
hydrokinetics. The science of the motion of fluids under a force.
hydrol. See *hydrone theory.*
hydrolase. Any enzyme or ferment that causes hydrolysis.
hydrolith. Calcium hydride.
hydrolysis. A decomposition reaction caused by water. In general, a reaction of the type

$$AB + H_2O = AOH + HB,$$

which, in its ionic form, $H_2O = H^+ + OH^-$, is the reverse reaction of neutralization. *Eg.:*

In inorganic chemistry—
$CuSO_4 + H_2O = Cu(OH)_2 + H_2SO_4$
In organic chemistry—
$RCOOR' + H_2O = RCOOH + R'OH$
In biochemistry (by enzymes)—
$R.CONH.R' + H_2O = R.COOH + NH_2R'$
$C_{22}H_{22}O_{11} + H_2O = 2C_6H_{12}O_6$

Cf. *hydrogenolysis.*
hydrolyst. A catalyst causing hydrolysis; as a hydrolase.
hydrolyte. A substance which undergoes hydrolysis.
hydrolytic. Pertaining to hydrolysis. **h. condensation.** An erroneous term applied to condensations in which water is eliminated. **h. dissociation.** (1) Ionization. (2) Hydrolysis. **h. enzymes.** See *enzymes* A.
hydrolyze. To produce hydrolysis.
hydromagnesite. A white, chalk-like variety of magnesium carbonate.
hydromechanics. Hydraulics.
hydromel. A fermented (mead) or unfermented mixture of water and honey.
hydrometallurgy. The reduction of ores by leaching (wet processes).
hydrometer. Aerometer. A device for measuring the specific gravity of liquids. It consists usually of a graduated hollow weighted glass tube which sinks in the liquid to a certain depth; this depth read on the scale indicates the density of the liquid. See figure. **Sikes-** A hydrometer in which 1 degree equals a mean density-interval of 0.002. **h. scales.** Any one of the conventional graduations on a hydrometer; as, Béaume.

Hydrometer.

Twaddle, Beck, Brix, Balling and Sikes. See conversion table. Conversion of °Bé to *D* (density):

$$D = \frac{144.3}{144.3 - Bé}$$

°*Tw* to *D*: $D = 1 + \frac{Tw}{200} = 1 + 0.005T$

°*Brix* to *D*: $D = 1 \pm \frac{400}{Brix}$ at 12.5°R.

°*Balling* to *D*: $D = 1 \pm \frac{200}{Balling}$ at 17.5°C.

hydronal. Polychloral, viferral. A polymerised product of pyridine and chloral, used as a hypnotic.

hydronaphthoquinone. $C_{10}H_6O_2$ = 160.1. **1.2-** Colorless leaflets, m.60, soluble in water. **1.4-** Colorless needles, m.175, soluble in water, alcohol or ether.

hydrone. (1) An alloy of 35 % sodium and 65 % lead, used for making small quantities of hydrogen gas by the action of water (hydrogen cubes). (2) The active molecule H_2O. **h. theory.** Water is a complex mixture of active molecules: *hydrone*, H_2O, *hydrol*, H_4O_2, and inactive or associated molecules, *polyhydrones*, $H_{2n}O_n$. Cf. *liquids*, *bonds*.

hydronitric acid. Hydrazoic acid.

hydronitrogen. A compound of hydrogen and nitrogen in which the H is generally replaceable by a hydrocarbon radical. **h. series.** A group of homologous compounds differing by NH (Audrieth), many of which exist only as derivatives.

Saturated Hydronitrogens:

N_nH_{2n+2}

NH_3	ammonia
N_2H_4	hydrazine
N_3H_5	triazane
N_4H_6	bihydrazine

Unsaturated Hydronitrogens:

N_nH_{2n}

N_2H_2	diimide
N_3H_3	triazene
N_4H_4	tetrazone, buzylene
N_5N_5	hydrazineazide

N_nH_{2n-2}

N_3H	hydrazoic acid
N_4H_2	diiminohydrazide
N_5H_3	bisdiazoamine
N_6H_4	bisdiazohydrazine

N_nH_{2n-4}

N_8H_4	octazone

hydronitrous acid. Nitroxylic acid.

hydronium ion. The solvated hydrogen ion, $H^+(H_2O)$ or H_3O^+, which is considered to be present in all acids:

$$HCl + H_2O \rightarrow H_3O^+ + Cl^-.$$

Cf. *protophilia*.

hydrophane. A transparent variety of opal.

hydrophil(e). Lyophile. A substance, usually in the colloidal state or an emulsion, which is wetted by water, that is: attracts water or water adheres to it.

hydrophilic. (1) Lyophilic. Describing a substance which absorbs or adsorbs water. Antonym, hydrophobic. (2) Protophilia. **h. colloid.** Finely-divided particles which form

stable suspensions in water. Antonym, hydrophobic colloid.

hydrophilite. Native calcium chloride or chlorocalcite, $CaCl_2$, occurring as white incrustations at Vesuvius.

hydrophilous. Hygroscopic or hydrophilic.

hydrophobe. Lyophobe. A substance, usually in the colloidal state, which is not wetted by water.

hydrophobic. Describing a substance which does not absorb or absorb water. Antonym, hydrophilic. **h. colloid.** Finely-divided particles which form unstable suspension in water and precipitate readily.

hydropirin. Sodium acetylsalicylate.

hydroponics. Tank culture. The cultivation of plants in aqueous solutions of inorganic salts, free from soil.

hydropyrine. Lithium acetysalicylate.

hydroquinine. $C_{20}H_{26}O_{22}.2H_2O$ = 362.3. Methylhydrocupreine. A white crystalline powder, used as a quinine substitute in malaria, as a developer in photography and reducer in chemical analysis.

hydroquinol. $C_6H_6O_2$ = 110.1. Hydrochinone, p-dioxybenzene, $C_6H_4(OH)_2$, p-dihydroxyphenol. Cf. *quinol*. Shining white leaflets, m.169, b.285, soluble in water, alcohol or ether; used as an antiseptic, and in photography as a developer. **ethyl-** H. ethylether. **hydroxy-** *1.2.4*-Trihydroxybenzene. **tetrachloro-** Chloranol.

h. carboxylic acid. Gentisic acid. **h. dimethylether.** $C_8H_{10}O_2$ = 138.1. Dimethylhydrochinone, p-dimethoxybenzene, $C_6H_4(OMe)_2$. Colorless leaflets, m.55, b.217, insoluble in water, soluble in benzene; used as an antiseptic. **h. ethylether.** $C_8H_{10}O_2$ = 138.1. Ethylhydrochinone, p-ethoxyphenol, 1-oxy-4-ethoxybenzene, HOC_6H_4OEt. Colorless leaflets, m.66, b.246, soluble in water, alcohol or ether. Used as an antiseptic and reducing agent.

hydroquinone. Hydroquinol.

hydroscopic. Hygroscopic.

hydrosilicon. See *silanes*.

hydrosilicofluoric acid. Fluosilicic acid.

hydrosorbic acid. Hexenic acid.

hydrosol. A colloidal suspension in water.

hydrosphere. The liquid portion of the earth's surface, as the oceans, lakes, rivers, etc. Cf. *lithosphere*, *atmosphere*. Its estimated *composition* is (F. W. Clarke):

O	85.79 %
H	10.67 %
C	2.07 %
Na	1.14 %
Mg	0.14 %
Ca	0.05 %
S	0.05 %
K	0.04 %
N	0.02 %
Br	0.01 %
C	0.01 %
I	0.006 %
Fe	0.002 %
Remainder	0.002 %

Its *quantity* is distributed as follows (Krümmel):

oceans	1330	Million cb. km.
lakes	0.25	Million cb. km.
swamps	0.006	Million cb. km.
rivers	0.02	Million cb. km.
ground-water	0.25	Million cb. km.
ice	4.00	Million cb. km.
atmospheric vapor	0.012	Million cb. km.

hydrostatics. The branch of physics which deals with liquids in equilibrium.

hydrosulfate. A combination of an organic base, usually an alkaloid, with sulfuric acid. It differs from a sulfate in that the hydrogen of the acid is not replaced, *e.g.*, *Alk*.H_2SO_4 or *Alk*-hydrosulfate.

hydrosulfides. Sulfhydrates, sulfhydryls, thioalcohols, thiols, sulfur alcohols, mercaptans. (1) A compound containing the monovalent SH^- radical and analogous to hydroxides in that the oxygen is replaced by sulfur. (2) An erroneous term for sulfide.

hydrosulfite. (1) Hyposulfite. A salt containing the bivalent—S_2O_4 radical. (2) An erroneous term for sodium hyposulfite.

hydrosulfuric acid. (1) Hydrogen sulfide. (2) Dithionic acid.

hydrosulfurous acid. Hyposulfurous acid.

hydrotaxis. The motion of organisms or cells (protozoa, etc.) towards water.

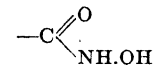
hydrotetrazone. An aromatic compound containing four consecutive nitrogen atoms in the molecule, *e.g.*, dibenzaldiphenyldihydrotetrazone, PhCH:N.NPh.NPh.N:CHPh. Cf. *tetrazone*.

hydrotherapy. The treatment of disease by water.

hydroumbellic acid. β-2.4-Dioxyphenylpropionic acid.

hydrous. Containing water, as opposed to anhydrous. **h. salt.** A salt containing water of crystallization.

hydroxamic acid. An organic compound containing the monovalent



radical; isomeric with hydroximic acid. **iso-** Hydroximic acid.

hydroxamino. The monovalent radical—NH.OH. Cf. *hydroxylamine*.

hydroxide. A compound containing the monovalent hydroxyl OH^- group. In general the hydroxides of metals are bases; those of nonmetal are acids.

MOH	bases
NOH	acids
ROH	alcohols, phenols
RCO.OH	organic acids.

aryl- Phenols. **alkyl-** Alcohols. **inorganic-** Bases.

hydroxidion. Hydroxyl ion. The monovalent ion OH^-, possessing alkaline or basic properties.

hydroximic acid. An organic compound of the type $R.C(NOH)OH$, isomeric with hydroxamic acids. **acet-** $CH_3C(OH):NOH$. Colorless crystals, m.59. **di-** HON:C(OH)—C(OH):NOH.

hydroximino. Isonitroso.

hydroxonium. Hydronium.

hydroxy. Hydroxyl. A prefix indicating the presence of the monovalent OH group in an organic compound analogous to acids of the lactic series. It is preferable to oxy-. **h. acetic acid.** Glycollic acid. **h. acetophenone.** $C_8H_8O_2$ = 136.10. $C_6H_4(OH)COMe$. *ortho-* A

liquid b.$_{10mm}$96–97. *meta-* A solid, m.95. *para-* A solid, m.110. **h. acetophenone carboxylic acid.** Acetyl hydroxybenzoic acid. **h. acid.** An organic compound containing both the hydroxyl and carboxyl radicals, or HO.R.COOH. *E.g.*,

monobasic, monohydroxy..... HO.R.COOH
dibasic, monohydroxy..... HO.R.$(COOH)_2$
monobasic, dihydroxy..... $(HO)_2$.R.COOH

etc. See *lactic acid series.* **h. amides.** Oxyamides. **h. aminobenzoic acid.** $C_7H_7NO_3$ = 153.0. Amino salicylic acid $NH_2.C_6H_3(OH)$-COOH. **3-** or *1.2.3-* Colorless crystals, m.235. **4-** or *1.2.4-* m.220. **5-** or *1.2.5-* m.283, soluble in water, alcohol or ether. **h. anthraquinone.** $C_{14}H_8O_3$ = 224.1. 1- or *α-* m.190. 2- or *β-* Yellow leaflets, m.302, very slightly soluble in water, soluble in alcohol or ether. **h. azobenzene.** $C_{12}H_{10}ON_2$ = 198.2. (*ortho-*) Colorless needles, m.83, slightly soluble in water, soluble in alcohol or ether. (*para-*) Colorless prisms, m.152, very slightly soluble in water, soluble in alcohol or ether; used in organic synthesis. **h. benzaldehyde.** $C_7H_6O_2$ = 122.2. (*ortho-*) A colorless liquid, d.1.159, m. −20, b.197, slightly soluble in water, soluble in alcohol or ether. (*meta-*) Colorless needles, m.104, b.240, soluble in water, alcohol or ether. (*para-*) Colorless needles, m.116, soluble in alcohol, ether, or water. **h. benzamide.** $C_7H_7O_2N$ = 137.1. (*ortho-*) Yellow leaflets, m.140, decomp. 270, soluble in water. (*meta-*) Colorless leaflets, m.167, soluble in water, alcohol or ether. (*para-*) Colorless needles, m.162, soluble in water alcohol or ether. **h. benzene.** Phenol. **h. benzoic acid.** $C_7H_6O_3$ = 138.1. (*ortho-*) Colorless needles, m.158, slightly soluble in water, soluble in alcohol or ether. (*meta-*) Rhombic crystals, m.200, slightly soluble in water, soluble in alcohol or ether. (*para-*) Colorless monoclinic crystals, d.1.404, m.201, slightly soluble in water, soluble in alcohol or ether. **h. benzylalcohol.** $C_7H_8O_2$ = 124.1. (*ortho-*) Saligenin. Colorless rhombic crystals, d.1.61, m.85, (sublimes), slightly soluble in water, soluble in alcohol or ether; used as an antiseptic. (*meta-*) Colorless needles, m.67, slightly soluble in water, soluble in alcohol or ether. (*para-*) Colorless needles, m.120, soluble in water, alcohol, or ether. **h. butyric acid.** $C_4H_8O_3$ = 104.1. (*alpha-*) 1-hydroxybutyric acid. Colorless crystals, m.43, decomp. 255, soluble in water, alcohol, or ether. (*beta-*) 2-hydroxybutyric acid, $CH_3CHOHCH_2COOH$. (*gamma-*) 3-hydroxybutyric acid, CH_2OH-$(CH_2)_2COOH$. Acetonic acid. **h. caffeine.** See *caffeine.* **h. caproic acid.** $C_6H_{12}O_2$ = 132.1. (*alpha-*) 1-hydroxycaproic acid, 1-oxycaproic acid. Colorless crystals, m.60, b.100, slightly soluble in water, alcohol, or ether. **h. choline.** Muscarine. **h. cinnamic acid.** Coumaric acid. **h. citric acid.** $C_6H_8O_8$ = 208.2. A colorless liquid, soluble in water, alcohol or ether; found in sugar beets. **h. ethylamine.** C_2H_7NO = 61.06. $NH_2(CH_2)_2OH$. A colorless liquid, d.1.022, b.171, produced by the putrefaction of kephalin and serin. **h. formic acid.** Carbonic acid. **h. glutamic acid.** $C_5H_9NO_5$ = 163.08. $NH_2(OH)C_2H_4(COOH)_2$. *β-* An amino-acid obtained by extraction of protein hydrolysate in butane. **h. isobutyric acid.** Acetonic acid. **h. isophthalic acid.** $C_8H_6O_5$ = 182.1. (*a-*) 2-hydroxy-1.3-isophthalic acid, 2-hydroxy-1.3-carboxylbenzene. Colorless needles, m.243, slightly soluble in water, soluble in ether or alcohol. (*s-*) 5-hydroxy-1.3-isophthalic acid. 5-hydroxy-1.3-carboxylbenzene. Colorless needles, m.288, slightly soluble in water, soluble in alcohol or ether. (*v-*) 4-hydroxy-1.3-isophthalic acid. 4-hydroxy-1.3-carboxyl benzene. Colorless needles m.305, slightly soluble in water, soluble in alcohol or ether. **h. peucedanin.** $C_{16}H_{14}O_5$(?). A lactone, m.142, from *Peucedanum officinale*, and *Imperatoria osthruthium.* **h. phenyl acetic acid.** $C_8H_8O_3$ = 152.06. *p-* $HO.C_6H_4.CH_2COOH$. An acid, m.148, produced from tyrosine by intestinal putrefaction. **h. phthalic acid.** $C_8H_6O_5$ = 182.1. (*a-*) 4-hydroxy (1.2)phthalic acid, 4-hydroxy-1.3-dicarboxylbenzene. Colorless rosettes, decomp. 181, soluble in water, alcohol or ether; used in organic synthesis. (*v-*) 3-hydroxy (1.2) phthalic acid. Colorless prisms, decomp. on heating, soluble in water, alcohol or ether. **h. propanone.** Acetol. **h. propionic acid.** Lactic acid. **h. pyridine.** Pyridone. **h. quinol.** 1.2.4-Trihydroxybenzene. **h. quinoline. 2-** Carbostyril. **4-** Kynurin. **8-** C_9H_7NO = 145.03. A precipitant for aluminum, magnesium and zinc. **h. quinoline carbonic acid.** (4-) Kynurenic acid. **h. succinic acid.** Malic acid. **h. terephthalic acid.** $C_8H_6O_5$ = 182.1. 2-hydroxy-1.4-terephthalic acid, 2-hydroxy-1.4-dicarboxylbenzene. A colorless powder, slightly soluble in water, soluble in alcohol or ether. **h. toluene,** Cresol. **h. toluic acid.** $C_8H_8O_3$ = 152.1. Methyl-hydroxybenzoic acid, methylsalicylic acid, cresotic acids. Ten possibilities, according to the position of:

(CH_3)		(COOH)		(OH)	
1	-	2	-	3	m.168
1	-	2	-	4	m.172
1	-	2	-	5	m.177
1	-	2	-	6	m.145
1	-	3	-	2	m.163
1	-	3	-	4	m.151
1	-	3	-	5	m.208
1	-	3	-	6	m.172
1	-	4	-	2	m.204
1	-	4	-	3	m.177

They are all colorless needles, soluble in alcohol or ether; some are used in organic synthesis. **h. urea.** $CH_4O_2N_2$ = 76.1. $NH_2CONHOH$. Colorless needles, m.130, soluble in water or alcohol. **h. valeric acid.** $C_5H_{10}O_3$ = 118.1. *alpha-* $MeCH_2CH_2CHOHCOOH$. Colorless needles, m.31, soluble in water alcohol or ether.

hydroxyl. The monovalent —OH group. Its hydrogen can be replaced by positive elements (K, Na etc.), while the entire group can be replaced by halogens. **h. group.** The monovalent OH radical. **h. ion.** The monovalent OH^- ion, present in excess in all alkaline or basic solutions; also present in smaller quantities than the hydrogen ion (q.v.) in all aqueous acid solutions.

hydroxylamine. NH_2OH = 33.1. Oxyammonia. Colorless crystals, decomp. 130 (explosive), m.33, b.70, soluble in water, alcohol, or ether. Used as a reducing agent, and in the manufacture of synthetics. **amino-nitroso-phenyl-** Cupferron. **di-** The hypothetical compound HO.-NH.OH. **h. hydrochloride.** $HCl.NH_2OH$ = 69.6. Colorless crystals, soluble in water; used

as reducing agent, for the detection of acetone, sulfonic acids etc.

hydroxylamines. A group of organic compounds containing the monovalent NH_2O— group (alpha-hydroxylamines), or the monovalent —NHOH group (beta-hydroxylamines), *e.g.*,

NH_2OMe—*α*-methylhydroxylamine, methoxylamine, or methoxyamine*.

NHMeOH—*β*-methylhydroxylamine* or methylhydroxylamine*.

NH_2OEt—*α*-ethylhydroxylamine, ethoxylamine, or ethoxyamine*.

NHEtOH—*β*-ethylhydroxylamine or ethylhydroxylamine*.

alpha- An organic compound derived from hydroxylamine by substituting the hydroxyl hydrogen by an aryl or alkyl radical NH_2OAr (aroxyl amine) or NH_2OAk (alkoxyl amine). **beta-** An organic compound derived from hydroxylamine by substituting the hydrogen of the amino group by an alkyl or aryl radical: NHR—OH. **nitroso-** See *nitrosohydroxylamines*.

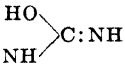
h. hydrochloride. $NH_2OH.HCl$ = 69.5. Oxammonium hydrochloride, hydroxylamine chlorhydrate. Colorless crystals, m.151, decomp. above this temperature, soluble in water or alcohol. Used as a reagent in determining gold, silver, copper, acetone, glucose or colchicine; in organic synthesis; as a reducing agent (developer); and in medicine, as an antiseptic. **h. hydrosulfate.** $(HN_2OH)_2H_2SO_4$ = 164.2. Hydroxylamine sulfate, oxammonium sulfate, hydroxylaminsulfate. Colorless crystals, m.140, soluble in water, alcohol, or ether; used in organic synthesis, as a reagent and reducing agent.

hydroxylamino. The monovalent radical —NH.OH, amidoxyl, derived from hydroxylamine.

hydroxylammonium. See *quaternary amines*.

hydroxylation. An oxidation as opposed to a hydrolytic reaction, by which one or more hydroxy-groups are formed within an organic molecule.

hydroxylimide. An organic compound of the type



metameric with amidoximes. Cf. *isomery*.

hydroxynaphthalene. Naphthol.

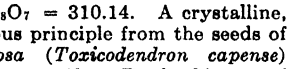
hydroxyphenyl. A prefix indicating the monovalent HOC_6H_4—group.

hydrozincite. $ZnCO_3.2Zn(OH)_2$. Zincbloom. A native hydroxide and carbonate of zinc occurring in massive or fibrous incrustations in zinc mines.

hyenanchin. $C_{15}H_{18}O_7$ = 310.14. A crystalline, extremely poisonous principle from the seeds of *Hyaenanche globosa* (*Toxicodendron capense*) hyena poison, boesmansgif, an Euphorbiaceae of South Africa; decomp. 234. **iso-** Decomp. 299.

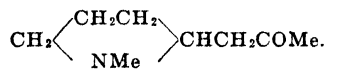
hyenic acid. $C_{25}H_{50}O_2$ = 382.5. Tricosylacetic acid. The saturate fatty acid $Me(CH_2)_{23}COOH$. A solid, m.78.

hygric acid. $C_6H_{11}O_2N$ = 129.09.

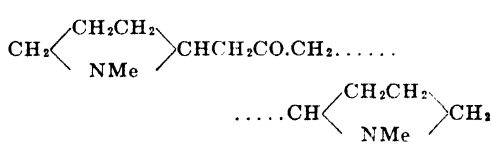


Cf. *nipecotic acid*. **4-hydroxy-** $C_6H_{11}O_3N.H_2O$ = 163.09. A crystalline, toxic principle from *Croton goubuga*, Transvaal croton bark, an Euphorbiaceae of South Africa.

hygrine. $C_8H_{15}ON$ = 141.2. An alkaloid from coca leaves,



A liquid, d.0.935, b.195. **cusco-** $C_{18}H_{24}ON_2$ = 226.19. An alkaloid, $b._{23mm}170$, from coca leaves,



hygrol. Colloidal mercury.

hygrometer. A device for measuring the amount of moisture in the atmosphere. See also *psychrometer*. **chemical-** A hygroscopic mixture of chemicals which indicate the atmospheric moisture by a change of color (cobalt salts) or the formation of crystalline precipitate (camphor solutions). **physical-** A dry- and wet-bulb thermometer. The difference between their readings indicates the humidity by reference to tables. **whirling-** A physical h. which is attached to a handle in such a way that it may be whirled round rapidly, thereby producing rapid circulation of air around the thermometer bulbs.

hygrometric. Pertaining to humidity. **h. paper.** A filter paper impregnated with a solution of 4 pts. $CoCl_2$, 2 pts. NaCl, 1 pt. acacia, 11 pts. H_2O, and 1 pt. glycerin. The amount of moisture is indicated by colors ranging from red (moist) to blue (dry). **h. scale.** An erroneous term for hydrometric scale. **h. state.** Humidity.

hygrometry. The measurement of the humidity or moisture of the atmosphere.

hygroscopic. Becoming moist; as a substance which absorbs water from the atmosphere, *e.g.*, $CaCl_2$, or PCl_5. See *desiccants*, *deliquescence*, *hydrophilic*.

hygroscopy. Hygrometry.

hygrosterol. A dextrorotary phytosterol from the roots of *Hygrophylia spinosa*, m.194.

hylergography. The study of the influence of foreign matter on the working of living cells.

hylogenesis. The theory of the formation of matter (ὕλη = hyle, greek for matter).

hylon. The positive nucleus of the atom.

hylotropic. A substance which can undergo a change in phase (*e.g.*, be melted or distilled), without a change of composition.

hylotropy. The property of a substance of having a constant melting or boiling point. Cf. *azeotropy*.

hymolal salts. The salts of sulfuric esters of monohydric alcohols of high molecular weight; *e.g.*, sodium lauryl sulfate, $CH_3(CH_2)_{10}CH_2O.SO_3Na$; used as detergents.

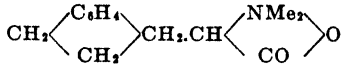
hyoscine. $C_{17}H_{21}O_4N$ = 303.17. Scopolamine. An alkaloid obtained from several Solanaceae. A thick, nearly colorless syrup, soluble in alcohol, ether or chloroform, and optically-active (*levorotatory*). Its salts are used as hypnotics. Cf. *scopoline*, *scopomannite*. **inactive-** Atroscine. **h. hydrobromide.** $C_{17}H_{21}O_4N.HBr.3H_2O$. = 438.2. Atroscin. The tropic ester of scopine. Scopolamine hydrobromide. Colorless crystals, m.194, (anhydrous), soluble in water, or alcohol; used as a hypnotic (twilight sleep). **h. hydro-**

chloride. $C_{17}H_{21}O_4N.HCl.2H_2O$. Scopolamine hydrochloride. Colorless crystals, m.200, soluble in water or alcohol; used as a hypnotic, anodyne and antispasmodic. **h. hydroiodide.** $C_{17}H_{21}O_4N.HI$ = 417.13. Scopolamine hydroiodide. Colorless prisms, soluble in water or alcohol. **h. hydrosulfate.** $(C_{17}H_{21}O_4N)_2.H_2SO_4$ = 676.49. Scopolamine sulfate. Colorless crystals, soluble in water or alcohol. **h. sulfate.** Hyoscine hydrosulfate.

hyoscyamine. $C_{17}H_{23}O_3N$ = 289.3. Daturine. An alkaloid from *Hyoscyamus niger* and other solanaceous plants, isomeric with atropine. Colorless fibrous needles, m.107, slightly soluble in water, soluble in alcohol or ether; used as a hypnotic, sedative and antispasmodic. **h. bromide.** H. hydrobromide. **h. chloride.** H. hydrochloride. **h. hydrobromide.** $C_{17}H_{23}O_3N.HBr$ = 370.2. Colorless prisms, m.152, soluble in water or alcohol; used as a hypnotic. **h. hydrochloride.** $C_{17}H_{23}O_3N.HCl$ = 325.7. Colorless crystals, soluble in water or alcohol; used as a hypnotic. **h. hydroiodide.** $C_{17}H_{23}O_3N.HI$ = 417.3. Colorless crystals, soluble in water or alcohol; used as a hypnotic. **h. hydrosulfate.** $(C_{17}H_{23}O_3N)_2.H_2SO_4$ = 676.6. H. sulfate. Colorless crystals, m.199, soluble in water, alcohol or ether. **h. salicylate.** $C_{17}H_{23}O_3N.C_7H_6O_3$ = 427.3. Colorless crystals, soluble in water or alcohol; used as a hypnotic. **h. sulfate.** H. hydrosulfate.

hyoscyamus. Henbane, poison tobacco, hog bane. The dried leaves and tops of *H. niger*, a solanaceous plant, which should contain not less than 0.065 % alkaloids (hyoscine, hyoscyamine, etc.); used as a sedative, analgesic, and antispasmodic.

hypaphorine. $C_{13}H_{17}O_2N$ = 203.15. Trimethyl tryptophane



An alkaloid from the seeds and bark of *Hypaphorus subrumbrans*, a solanaceous plant. Colorless crystals, soluble in water.

hyper- A prefix from the Greek, indicating an excess or more; *e.g.*, hyperoxide or peroxide.

hyperchromic. Describing a radical which causes an increase in the colour intensity of a coloring material; see *hypsochrome*.

hyperol. Ortizon.

hypersthene. $(FeMg)O,SiO_2$. A brown or green ferruginous, orthorhombic, pyroxene mineral. It resembles enstatite.

hypertensin. Renin.

hypertonic. Describing a solution having a higher osmotic pressure than blood or another solution with which it is compared (as opposed to isotonic and hypotonic).

hypnacetine. $C_{16}H_{15}O_3N$ = 269.2. Hypnoacetine. $PhCO.CH_2OC_6H_4NHCOMe$. Colorless crystals, m.160, slightly soluble in water, alcohol or ether; used as an antiseptic and hypnotic.

hypnal. $C_{13}H_{13}O_2N_2Cl_3$ = 335.5. Chloralhydrateantipyrine, monochloralantipyrine, chloralantipyrine. Colorless crystals, m.67, soluble in water, alcohol or ether; used as a hypnotic, antipyretic and analgesic.

hypnoacetine. Hypnacetine.

hypnone. Acetophenone.

hypnotic. An agent which produces sleep, *e.g.*, chloral, paraldehyde, bromides, sulfonal, semnal. Cf. *soporific, somnifacient*.

hypo- (1) A prefix from the Greek, indicating below or under. (2) Common name for sodium hyposulfite, used as a photographic fixing agent.

hypoborate. A compound of the type MH_2BO, which is readily decomposed and a strong reducing agent.

hypobromite. A compound derived from hypobromous acid containing the monovalent—BrO radical. **h. nitrogen.** The nitrogen which can be liberated from organic compounds by hypobromites.

hypobromous acid. HBrO = 96.93. An unstable compound of monovalent bromine, b.40 (in vacuo).

hypochlorite. (1) A compound containing the monovalent—ClO radical. (2) The hypochlorites of sodium, potassium, calcium or magnesium, used in bleaching.

hypochlorous acid. HClO = 52.5. An oxyacid of chlorine containing monovalent chlorine; it is readily oxidized to chlorous acid or reduced to free chlorine.

hypochlorous ion. The monovalent ClO^- ion.

hypodermic. Beneath the skin; as, an injection.

hypogaeic acid, hypogæic acid. $C_{15}H_{29}COOH$ = 254.3. 7-Hexadecenoic acid*. A fatty acid in tallow and some oils, notably arachis (peanut) oil. Colorless needles, m.33, $b._{15mm}236$, insoluble in water, soluble in alcohol or ether. Cf. *physetoleic acid*.

hypoiodous acid. HIO = 143.9. A hypothetical acid. **ammono-** H_2IN = 142.9. A solution of I in liquid NH_3; used as nitridizing agent.

hypon. A hypothetical noble gas, atomic number 118, assumed to be the radioactive source of stellar energy.

hyponitrite. A compound containing the monovalent NO— or divalent N_2O_2=radical, of the general type MNO or $M_2N_2O_2$; used in synthetic chemistry.

hyponitrous acid. $H_2N_2O_2$ = 62.2. An oxyacid of monovalent nitrogen, isomeric with HNO, decomp. to N_2O; an active reducing and oxidizing agent.

hypophamine. The hormone of the posterior lobe of the pituitary gland. **α-.** Oxytocin, pitocin. The uterus-contracting principle. A white powder, soluble in water and 150 times as potent as the International Standard powdered Pituitary. **β-.** Vasopressin, pitressin. The blood pressure-raising principle. A white stable powder, soluble in water, and 80 times as potent as the International Standard powdered Pituitary.

hypophorine. $C_{14}H_{18}N_2O_2$ = 246.11. Trimethyltryptophane. An amino acid, decomp. 255, from the proteins of the seeds of erythrina; it causes tetanus in frogs.

hypophosphate. A compound containing the trivalent $\equiv PO_2$ radical, or the monovalent acid $—HPO_3$ radical.

hypophosphite. A salt of hypophosphorus acid, containing the $—H_2PO_2$ radical.

hypophosphoric acid. H_3PO_3 = 66.05. An oxyacid of monovalent phosphorus. m.17.4, decomp. on further heating to phosphine and phosphoric acid.

hypophosphorous acid. A 30 % aqueous solution of HPH_2O_2 or $HP(OH)_2$.

hypophysis. Desiccated pituitary body. The cleaned, dried, and powdered posterior lobes of the pituary body of cattle. A yellowish or grayish amorphous powder of characteristic odor, slightly soluble in water; used as a stimulant and hemostatic.

hyposulfate. (1) Dithionate. (2) Thiosulfate.

hyposulfite. (1) A compound containing the divalent $=S_2O_4$ radical. (2) Hypo or antichlor. The sodium thiosulfate used in bleaching and as a photographic fixing bath. **h. process.** A method of extracting silver from roasted ores by leaching with sodium hyposulfite solution and precipitating the silver with sodium sulfide.

hyposulfuric acid. Dithionic acid.

hyposulfurous acid. Hyposulphurous acid. A term no longer used, but formerly applied incorrectly to dithionous acid. It more correctly describes sulfoxylic acid, q.v.

hypothesis. A theory which has not been fully proved by experiment. Cf. *theory, law.*

hypotonic. A solution having a lower osmotic pressure than blood, (less than 6.6 atmospheres), as opposed to hypertonic and isotonic.

hypovitaminosis. Vitaminosis.

hypoxanthine. $C_5H_4ON_4$ = 136.1. Sarkine, 6-oxypurine, xanthoglobulin *6(1)*-purinone. Colorless needles, decomp. 150, insoluble in water. Cf. *purines.*

hypsochrome. A radical which when introduced into a colored compound intensifies the color by shifting it towards the violet. Cf. *hyperchromic, bathochrome, auxochrome.*

hyptolide. $C_{18}H_{26}O_8$ = 370.3. The bitter principle of the leaves of *Hyptis pectinata*, a labiataceous plant. Colorless needles, soluble in hot water, alcohol or ether.

hyraldite. A preparation consisting principally of sodium thiosulfate and formaldehyde, used in bleaching.

hyrax. A synthetic resin used as mounting agent for microscopic work requiring a high refractive index (n. 1.75).

hyrgol. A colloidal solution of mercury, used in syphilis.

hyssop. The dried leaves of *Hyssopus officinalis.* Used as the fluid extract as an aromatic stimulant, carminative and tonic. **wild-** Verbena. Cf. *ysopol.* **hedge-** See *gratiolin.* **h. oil.** A colorless oil distilled from hyssop, d.0.932, soluble in alcohol, ether, or benzene. Used in flavoring extracts.

hystazarin. $C_{14}H_8O_4$ = 240.1. 2,3-dihydroxyanthraquinone. Orange-yellow needles, m.260, soluble in alcohol or ether. Used as a dye.

hystazine. Hystazarin.

hysteresis. (1) The magnetic lag, or retention of the magnetic state of iron in a changing magnetic field, due to the reluctance of the molecules to rotate freely. (2) The retardation of a chemical system in reaching equilibrium.

Hytor compressor. A rotary pump or blower employing a centrifuged liquid to obtain suction or pressure.

hyzone. Triatomic hydrogen. Cf. *ozone*

I

i. (1) An abbreviation for inactive (optically inactive = *dl*). (2) An abbreviation for *iso-* (3) The Van't Hoff factor.

I. The symbol for: (1) iodine; (2) moment of inertia; (3) ionic strength; (4) electric current; (5) light intensity. I^-,I'. Symbols for the iodide ion.

I. A. T. M. International Association for Testing Materials.

I. C. I. Imperial Chemical Industries, Ltd.

I. G. An abbreviation for "Interessen Gemeinschaft" q.v.

I. P. K. International Prototype kilogram.

I. P. M. International Prototype meter.

I. R. Insoluble residue (in analysis).

I. U. International unit.

I. W. An abbreviation for isotopic weight.

iatrochemistry. A 16th century school of medicine based on the principles of Paracelsus.

iatrol. $C_8H_{11}O_3NI_2$ = 423.2. Oxyiodoethylanilide, $PhNH.O_2EtOI_2$. A grayish powder, insoluble in water, soluble in alcohol or ether; used as an antiseptic.

ibit. Bismuth oxyiodotannate. A gray powder, isoluble in alcohol or ether; used as a bactericide and disinfectant.

ibogaine. $C_{26}H_{32}O_2N_2$ = 404.26. An alkaloid, m.152, from the roots of *Tabernanthe iboga;* the latter is used as an arrow poison in the Congo and has a narcotic effect.

-ic. (1) A suffix indicating a higher valency, as compared with -ous. Thus ferrous (2) and ferric (3); sulfurous (4) and sulfuric (6). (2) A termination of acids generally. Cf. *-ate* (the salt).

ice. Frozen or solid water. A transparent colorless solid, d.0.92, m.0. **dry-** Solid carbon dioxide, used as refrigerating packing material. **salt-** Frozen brine, m. −21 (−6°F). A 2.5 lb. eutectic mixture has the same effect as 1 lb. solid carbon dioxide (dry ice). **i. flowers.** Water flowers. Negative ice-crystals produced in a slab of ice by exposure to heat rays. **i. ton.** The theoretical number of heat units required to melt one ton of ice at 0°C. to water of 0°C. For a 2000-pound ton it equals 284,000 B.Th.U. **i. water mixture.** A mixture of pure water and crushed ice; used to maintain a constant temperature of 0°C.

Iceland agate. An obsidian from Iceland. **I. moss.** Cetraria. The dried lichens *Cetraria islandica*, which occur as grayish white, brown or reddish plant bodies. Cf. *cetraric acid, cetrarin, lichen stearic acid, thallochlor.* **I. spar.** A transparent variety of calcite possessing the power of double refraction and used in polariscopes (Nicol prism).

chthalbin. Ichthyol albuminate. A fine grayish-white powder, odorless, tasteless, insoluble in water; used as an antiseptic.

ichthargan. Ichthyol silver, silver sulfoichthyolate. A brown powder containing 30 % silver and 15 % sulfur, soluble in water, dilute alcohol, or glycerin; used as an antiseptic and astringent.

ichthulin. A glycoprotein (q.v.) from the eggs of the carp.

ichthylepidin. A protein of fish scales, intermediate between collagen and keratin.

ichthyocolla. Isinglass.

ichthyoform. Ichthyolformaldehyde. A blackish-brown, odorless powder, insoluble in water or alcohol; used as an intestinal antiseptic.

ichthyol. $C_{28}H_{36}S_3O_6(NH_3)_2.2H_2O$ = 634.40. Ammonium ichthyolsulfonate, anysin, ammonium ichthyolate. A reddish brown to black syrup of characteristic empyreumatic odor and burning taste, obtained by distillation of bituminous shale; is soluble in water, partly soluble in alcohol or ether. Used as an antiseptic, alterative, and astringent. **i. albuminate.** Ichthalbin. **i. formaldehyde.** Ichthyoform. **i. silver.** Ichthyolate. **i. sulfonic acid.** The dibasic acid $C_{28}H_{38}O_6S_3$, derived from ichthyol. Cf. *sulfoichthyolic acid.*

ichthyolate. A compound containing the bivalent $=C_{28}H_{36}S_3O_6$ radical.

ichthyophthalmite. A variety of apophyllite, sometimes used as gem.

iconoscope. Electric eye. An instrument in which invisible radiations (*e.g.*, x-rays, ultraviolet rays) are rendered visible by impact against a luminescent screen. A cathode-ray tube and a screen consisting of a mosaic of tiny photo-electric cells is used as the source of picture modulation signals in television.

icosane. Eicosane.

icosinene. $C_{26}H_{38}$ = 278.4. A liquid hydrocarbon from ozocerite.

-id, -ide. A suffix indicating: (1) a compound derived from a negative or nonmetallic element and usually a binary compound, as chloride, sulfide, phosphide, nitride, carbide, etc.; (2) a glyceride.

-idene. A suffix indicating a bivalent radical with a point of attachment to a single atom; thus:

$R.CH_2.CH_2.R$ and $CH_3.CH.R_2$

R-ethyl*ene* R-ethyl*idene*

idioblast. A hypothetical unit of the living cell, a biophore.

idiosyncrasy. An abnormal, constitutional or personal reaction to the effects of certain substances. Cf. *allergy.*

idite, iditol. $C_6H_{14}O_6$ = 182.1. A hexatomic alcohol occurring in the d- and l- form. Cf. *idonic* and *idosaccharic acids.*

-ido. A suffix which denotes the substitution of an NH_2 group by an acid residue (*e.g.*, an acetyl group).

idocrase. A variety of vesuvianite, used as gem.

idonic acid. $C_6H_{12}O_7$ = 196.1. A monobasic, pentahydroxy acid, derived from idite.

idosaccharic acid. $C_6H_{10}O_8$ = 210.1. A dibasic, tetrahydroxy acid, derived from idite.

idose. $C_6H_{12}O_6$ = 180.1. Pentahydroxyhexanal. A hexose or aldose sugar, isomeric with glucose; osazone m.156.

idrialene. $C_{22}H_{14}$ = 278.11. A hydrocarbon from asphalt. **methyl-** $C_{23}H_{16}$ = 291.11. White solid.

idryl. Fluoranthene.

idoplatinic acid. Platinic acid.

amid. A German trade name for superpolyamide synthetic fibers.

igepon. A. $C_{30}H_{57}O_5SNa$. An ester of sodium isethionate and oleic acid, $C_{17}H_{33}COOCH_2CH_2SO_3Na$, used as detergent. **T.** A substituted amide of oleic acid, $C_{17}H_{33}CONMe.CH_2CH_2SO_3Na$, used as detergent.

ignatia. Saint Ignatius' bean, ignatia bean. The dried ripe seeds of *Strychnos ignatia*, a loganiaceous plant. It contains 2 % alkaloids, mainly strychnine and brucine. **i. alkaloids.** See *strychnine, brucine.* **i. bean.** Ignatia.

igneous. Plutonic. A term applied to rocks formed from a molten state, as opposed to sedimentary rocks.

ignis. A fire.

ignite. (1) To heat a substance at a high temperature until no more loss in weight occurs. (2) To set fire to a reaction mixture, with or without a primer.

ignition. Combustion, burning, or setting on fire. In analysis: (a) the complete oxidation of an organic compound by means of oxygen gas and heat. (b) The heating of an inorganic compound until all volatile matter has been driven off. (c) Placing a flame directly or indirectly in contact with a reaction mixture until the reaction starts and continues, with or without production of a flame, to its completion; as, a mixture of Al and Fe powder. **pre-** See *knock.* **i. point.** Kindling temperature. The temperature at which a substance begins to burn. It is defined as the temperature at which the rate of gain of heat by a volume of vapor balances the rate of loss of heat; the substance then ignites. It usually depends on the fineness of the particles; *e.g.*, powdered zirconium (0.4–8μ) ignites at 210°C. Cf. *flash point.*

ihlenite. A native ferric sulfate, $Fe_2(SO_4)_3.12H_2O$.

ilang-ilang. Ylang-ylang.

iletin. A brand of insulin.

Ilex. A genus of shrubs and trees, Aquifoliaceae, to which the hollies belong. Cf. *bird-lime, maté, ilexanthin.*

ilexanthin. $C_{17}H_{23}O_{11}$ = 403.2. The yellow coloring matter of *Ilex aquifolium*, (holly), an Aquifoliaceae. Yellow needles, m.198, decomp. 214, insoluble in cold water or ether, soluble in hot water or alcohol.

ilicic alcohol. $C_{30}H_{50}O$ = 426.5. α-Amyrin. A substance, m.185, b. exceeds 300, prepared from *Ilex* species; used as a constituent of bird-lime.

ilicin. A bitter principle from holly, *Ilex aquifolium.*

ilicyl alcohol. $C_{22}H_{38}O$ = 318.29. A waxy solid, m.139, b.360.

-ilium. A suffix indicating tetravalent oxygen; as pyrylium. Cf. *-inium.*

illicium. Star *anise.*

illinium. Il = 146–147(?). A rare earth metal and element, atomic number 61, discovered in 1926 by B. S. Hopkins by the fractional crystallizations of samarium and niobium salts. It gives the characteristic x-ray spectrum with a line at 5810Å., and was named in honor of Illinois. With the exception of elements No. 85 and 87 it is the last element which can be discovered, as it completes the series of elements from hydrogen to uranium. It is also called "florentium" by Rolla and Fernandes, who claimed priority in its discovery. It occurs in minute traces in monazite, gadolinite and xenotime.

illinum. An acid-resistant alloy of Ni, Cr, Co, W, Al, Mn, Ti, B and Si for the construction of acid-resistant pumps, calorimetric bombs, etc. invented by S. W. Parr.

illipé. (1) The fat of *Bassia latifolia* or *B. longifolia.* (2) Borneo tallow. This is a misnomer. See *tallow.*

illipene. $C_{64}H_{106}$ = 874.7. An unsaturated hydrocarbon from the unsaponifiable matter of illipé.

illuminant. An agent which produces light; as, a candle, electric bulb or flame.

illuminating gas. A gas mixture used for illuminating purposes, containing approximately H(50 %), CH_4(28 %), C_nH_{2n}(4.5 %), CO(2 %), N(2 %), O(6 %). Cf. *gas, natural gas.*

illumination. (1) The act of lighting up. (2) The quantity of light thrown on an object: I = F/S, where I is the intensity of illumination, F the flux density and S the surface area. It is measured in metercandles, foot-candles, phot, or lux. **axial-** Light passing in the direction of the axis of a microscope. **dark-ground-** Light passing at right angles to the direction of the axis of a microscope. **direct-** Light falling on the object on the stage of a microscope from above without being reflected from the mirror. **indirect-** Dark-ground i. Cf. *ultramicroscope.*

illuminator. A device for producing light; as a lamp for microscopes or other instruments.

illuminometer. (1) A device for measuring the intensity of light. (2) A photometer.

ilmenite. Menacantite, geikielite, $FeTiO_3$. A native, black iron titanate, used as a gem.

ilmenium. A supposed element, which proved to be a mixture of niobium and tantalum.

ilvaite. $CaFe_2Fe(OH)(SiO_4)_2$. Yenite. A hydrous silicate of iron and calcium, sometimes used as a gem.

im- A prefix indicating the divalent >NH group.

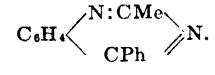
image. (1) The likeness or a reproduction of an object. (2) The picture of an object formed by rays of light after passing through an optical device. **real-** An image formed at the place where the rays of light meet or converge. **virtual-** An apparent image, formed in the direction from which the rays enter the eye. The rays do not converge at the point where the image is seen, but would do so if produced backwards.

image-stone. A variety of pyrophillite, sometimes used as gem.

imasatic acid. Isamic acid.

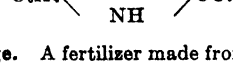
imasatin. The lactam of isamic acid, q.v.

imazine. An organic compound containing the trivalent =C:N.CH:N— radical; as in phen-β-methyl-α-phenylimazine,



Imbibition. The absorption of a liquid by a solid or gel.

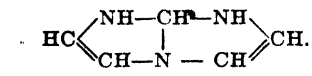
imesatin. $C_9H_6ON_2$ = 146.1. β-amino-isatin, 3-iminoöxindole. The heterocyclic compound



Imhoff sludge. A fertilizer made from sewage run into settling tanks, where the solid matter settles with the aid of anaerobic bacteria. It contains 2–3.3 % N and 1 % P.

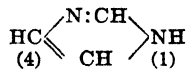
imid. Imide.

imidazimidazole. $C_6H_7N_3$ = 109.07. The bicyclic heteroatomic compound



Its isomers have the N in different positions.

imidazole. $C_3H_4N_2$ = 68.1 1,3-diazole, glyoxaline. The monocyclic heteroatomic ring compound



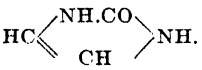
Cf. *glyoxaline.* *2.4.5*-**triphenyl-** Lophine.

imidazoledione. Hydantoin.

imidazoleethylamine. Histamine.

imidazoletrione. Parabanic acid.

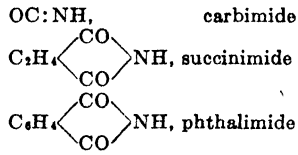
imidazolone. $C_3H_4ON_2$ = 84.1. Iminazolone. The heterocyclic compound



Colorless crystals, m. −105. Cf. *creatinine.*

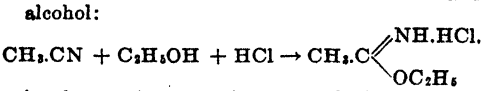
imidazolyl. The monovalent radical, C_3H_3N—, derived from imidazole. There are four isomers. **i. ethylamine.** Histamine. **i. mercaptan.** $C_3H_3N_2SH$ = 100.2. **meta-** Colorless crystals, m.222.

imide. (1) A compound containing the divalent >NH group, or a secondary amine, R_2NH, in which R is an acyl radical. (2) A compound derived from acid anhydrides in which O is replaced by NH; thus:



acid- A compound of the type R.C:NH.OH. Cf. *imino bases.* **cyclic-** A ring formed by replacing two —OH groups by >NH; as, maleinimide, pyrotartrimide. **di-** See *diimide.* **i. chloride.** A compound containing the monovalent  radical, formed by the action of HCl on nitriles: $R.C{:}N + HCl \rightarrow R.C{:}NH.Cl$. **i-group.** Imido.

imido. The divalent radical, >NH. Cf. *imino, imide.* **acet-** The radical MeC(:NH)—. **i. carbamide.** Guanidine. **i. carbonic acid.** $(HO)_2C{:}NOH$. **i. esters.** A compound of the type  ; obtained as hydrochloride by the action of HCl on a mixture of a nitrile and alcohol:

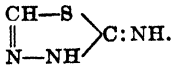


i. ethers. A group of compounds derived from i. carbonic acid; of the general type 
i. hydrogen. The H of the NH-group, which is replaceable by metals, such as Ag, K.

imidodiphenyl. Carbazole.

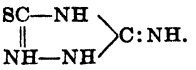
imidogen. Imido group.

imidothiobiazoline. $C_3H_3N_3S$ = 101.2. The heteroatomic ring compound:



Colorless crystals, 191.

imidothiourazole. $C_2H_4N_4S$ = 116.2. The heteroatomic ring compound:



Colorless crystals, m.222.

imidoxanthin. Guanine.

iminazolone. Imidazolone.

imineazole. Glyoxaline.

imino. The bivalent =NH group which may be attached to one or two carbon atoms, as =C:NH or —C.NH.C—. **i. bases.** A group of compounds containing the =C:NH group, such as guanidine, creatine, creatinine, etc. **i. acetic acid.** $C_4H_7O_4N$ = 133.1. $NH(CH_2COOH)_2$. Colorless rhombic crystals, m.225, soluble in water, insoluble in alcohol or ether. **i. acetonitrile.** $C_4H_5N_3$ = 95.1. $NH(CH_2CN)_2$. Colorless leaflets, m.75 soluble in water, alcohol, or ether. **i. ethanol.** $C_4H_{11}O_2N$ = 103.1. $NH(CH_2CH_2OH)_2$ = 105.1. Colorless crystals or liquid m.28, b.270, soluble in water, alcohol, or ether. **i. ethyl alcohol.** Iminoethanol. **i. nitrogen.** See *ammonia nitrogen.* **i. urea.** Guanidine.

immersion. Submerging in a liquid. **oil-** Covering an object and objective of a microscope with oil. **water-** Connecting the object and objective of the microscope with a few drops of water.

i. electrode. An electrode which can be lifted from the liquid and immersed at will. **i. objective.** See *objective.*

immiscible. Describing liquids which will not mix with one another. **i. solvent.** A liquid which dissolves a substance from a solution with which it does not mix; as "shaking out" a dissolved substance with ether, chloroform, etc., from an aqueous solution and separating the two liquids. See *partition coefficient, distribution coefficient, Perrin equation.*

immune. Completely resistant to a disease. **i. body.** An amboceptor, q.v. **i. serum.** The serum from the blood of an actively-immunized animal, containing the antibodies for a certain disease.

immunity. The power of resistance of an organism to withstand infection (opposed to susceptibility). **acquired-** I. acquired by a previous attack of the disease, or by inoculation with bacterial preparations. **active-** I. in which the cells of the organism manufacture antibodies, stimulated by bacterial preparations or a slight attack of the disease. **natural-** I. with which an individual is born. **passive-** I. in which the cells of the organism do not manufacture the antibodies, and which depends entirely on inoculated immunizing sera. **theory of-** See *Ehrlich's side-chain theory.*

immunization. The process of enabling an organism to withstand the harmful effects of microorganisms, to endure the metabolism products of the invader without injury, and finally to be able to destroy the parasite.

immunochemistry. The branch of science which deals with the chemical changes and phenomena of immunity. Cf. *Ehrlich's theory.*

immunology. The science dealing with immunity.

immunotherapy. A system of treatment by the action of vaccines.

impact. A sudden collision. **atomic-** The collisions between electrons and protons; as, in the bombardment of a gas with cathode rays. Cf. *Wilson tracks.* **molecular-** The collisions between molecules which are essential for the progress of a reaction. It is assumed, that without them no chemical change could take place, as molecules must come in contact before their atoms can be exchanged.

imperatorin. $C_{16}H_{16}O_4$ = 272.2. Peucedanin. A tasteless, crystalline principle from masterwort, the root of *Imperatoria ostruthium*, an Umbelliferae. Colorless prisms, m.98; soluble in alkalis, ether, or warm alcohol. Cf. *osthruthin.*

imperial jade. A green aventurine quartz, used in China as a gem. **i. yu stone.** I. jade.

imperialine. $C_{35}H_{60}O_4N$ = 558.6. A colorless crystalline alkaloid, decomp. 254, from *Fritillaria imperialis*, a Liliaceae.

impermeable. Not permitting a passage.

impervious. Impenetrable, non-absorbent.

impinger. An apparatus for sampling dust (q.v.) in air by drawing it at high velocity through a glass tube and letting it strike a wet glass plate; microscopic counts are made on the plate.

impregnate. To saturate or charge with a gas or liquid.

impregnation. Saturation with a protective material; as, waterproofing, fireproofing, etc. Cf. *introfaction.*

improver. (1) A mixture of starch and salts (as, phosphates, chlorides, sulfates of calcium, sodium, or ammonium), added to flour to stimulate the yeast and improve the rising properties of the bread. (2) Bleaching or whitening agents (as, persulfates, iodates, bromates, nitrogen chloride, nitrosyl chloride or chlorine), added to flour to remove or mask the color due to carotene.

I.M.S. Industrial methylated spirit.

in. Abbreviation for inch. q.v. in^2. square inch; in^3. cubic inch. **in-** A prefix indicating: (1) within; (2) not, *e.g.*, *in*organic. **-in.** A suffix indicating: (1) a neutral carbohydrate, as, inulin; (2) glucoside, as, amygdalin; (3) protein, as, albumin; (4) a glyceride, as palmitin. For alkaloids the suffix *-ine* is customary; as, morphine.

In. The symbol for indium.

inactivate. To destroy activity.

inactivation. Destruction of activity (as, of a catalyst or a serum) by chemical or physical means.

inactive. Describing a compound having an asymmetric carbon atom and yet no optical activity. **divisibly-** Able to be resolved into two optically-active substances or racemic compounds. **indivisibly-** Unable to be resolved into its optically-active components.

Inca stone. A pyrite used as a gem.

incandescence. A state of glowing with intense brilliance.

incandescent. Emitting heat or light or both by virtue of being at a high temperature. **i. light.** An electric light bulb which producing light by the passage of an electric current through a fine metallic filament, which becomes heated to a bright glow.

incendiary. An agent that causes combustion. Classes: a. *Spontaneously inflammable solids*, such as P, Na, and liquids such as $ZnEt_2$, PH_3, SiH_4, CrO_2Cl_2, P in CS_2. b. *Metallic powders*, such as thermite, FeO Al, Mg $KClO_4$. c. *Oxidizing combustible mixtures*, such as KNO_3, $Ba(NO_3)_2$, BaO_2, PbO_2 or $KClO_3$ with C, S, Sb, Al or organic compounds. d. *Flammable material* such as petroleum oils, CS_2.

inch. A unit of length in the English system. 1 in = $\frac{1}{12}$ foot; $\frac{1}{36}$ yard; $\frac{1}{63,300}$ mile; $\frac{1}{4}$ of a hand. 1 in. = 2.54 cm = 25.4 mm. = 254,000 Ångstrom Units (= 100 lines = 1000 points). Its fractions and their metrical equivalents are:

$\frac{1}{2}$ in. = 12.70 mm.
$\frac{1}{4}$ in. = 6.35 mm.
$\frac{1}{8}$ in. = 3.175 mm.
$\frac{1}{16}$ in. = 1.588 mm.
$\frac{1}{32}$ in. = 0.794 mm.

cubic- in^3. or cu. in. A unit of volume in the English system. 1 in^3. = 0.0005787 ft^3. = 16.387 cm^3. **square-** in^2. or sq. in. A unit of area in the English system. 1 in^2. = 0.006944 ft^2. = 6.452 mm^2.

inchi grass oil. An oil from *Cymbopogon caesius* containing borneol, terpineol, camphene and limonene; used as a substitute for palmarosa oil.

incidence. The striking contact of one body with another. **angle of-** The angle made with the normal by a beam of light striking a surface.

incineration. Cremation. The process of burning to ashes. **i. dish.** A flat dish of alundum, platinum, or sillimanite, used for reducing substances to ash in analytical work.

incinerator. A laboratory furnace for burning refuse, especially that of dissected and infected animals.

incipient. Beginning. **i. red heat.** Beginning to glow. Cf. *color scale* (2).

inclination. Deviation. The angle of an object above the horizon.

inclinator. A stand in which large bottles or carboys are lodged so that they can easily be tipped for emptying.

inclusion. A state of being enclosed in or surrounded by a substance; as, enclosed gas in a metal, or suspended foreign matter in a crystal. Cf. *colloids.*

incompatibility. Inability to be mixed without impairing the original properties. **chemical-** Describing substances which, when mixed, react with each other. **physical-** The property of repellent substances, as, water and oil. **physiologic-** Describing drugs which have a mutually antagonistic effect. **therapeutic-** Describing drugs which have opposite therapeutic effects.

incompatible. Applied to a substance which for chemical, physical or physiological reasons can not be mixed with another without changing its nature or effect.

incomplete. Not carried to its greatest possible extent. **i. equilibrium.** Equilibrium that has not reached a balanced condition. **i. purification.** A purification process that leaves an impure product. **i. reaction.** Reversible *reaction.*

incompressibility. Not compressible. Ability to resist pressure without change of form or volume.

incompressible volume. That part of a gas which is not uniformly compressed according to the gas

law: the quantity *b* of van der Waal's equation, q.v.

inconel. A corrosion-resisting alloy of 80 % Ni, 14 % Cr and 6 % Fe.

increment. The addition to or augmentation of a substance; *e.g.*, during crystallization or in stalactite formation.

incrustation. The formation of a crust or scale.

incubation. The period elapsing between implanting an infection in a culture medium or an organism, and its first symptoms or growth.

incubator. A chamber or box kept at a definite temperature, usually 37°C., in which bacterial cultures are grown.

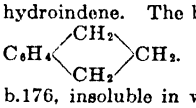
indaconine. $C_{27}H_{47}NO_9$ = 529.37. An alkaloid, m.94, from aconite.

indaconitine. $C_{34}H_{47}NO_{10}$ = 629.37. Acetyl benzoyl-ψ-aconine. An alkaloid from aconite, m.202.

indamine. $C_{12}H_{11}N_3$ = 197.2. Phenylene blue. $HN{:}C_6H_4{:}N.C_6H_4.NH_2$; obtained by the oxidation of p-phenylenediamine and aniline.

indamines. A group of dyestuffs derived from indoaniline and containing the =NH group instead of the quinone oxygen; as in indamine.

indan. C_9H_{10} = 118.1. Hydrindene, 2.3-dihydroindene. The bicyclic hydrocarbon,



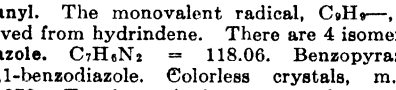
A colorless liquid, d.0.957, b.176, insoluble in water, soluble in alcohol or ether.

indandione. $C_9H_6O_2$ = 146.05. Diketohydrindene. **1.2-** White crystals, m.107. **1.3-** White crystals, m.130.

indanone. Indone.

indanyl. The monovalent radical, C_9H_9—, derived from hydrindene. There are 4 isomers.

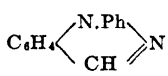
indazole. $C_7H_6N_2$ = 118.06. Benzopyrazole, 2,1-benzodiazole. Colorless crystals, m.146, b.270. Two isomeric ring compounds:



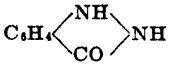
indazole (2,1-) isindazole (1,2-)

Cf. *benzimidazole, benzodiazole.*

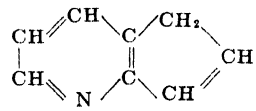
indazole. A compound containing the indazole nucleus; as, **α-phenylisindazole.** Colorless crystals, m.142.



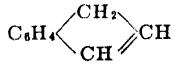
β-phenylindazole. Colorless crystals, m.84, b.345.  **γ-phenylindazole.** Colorless crystals, m.110. 
indazolone. $C_7H_7ON_2$ = 135.2. Benzopyrazolon. The bicyclic heteroatomic compound



indenazin. C_8H_7N = 117.1. 4-indenazin, 4-isobenzazol, 4-pyriden. The heterocyclic compound

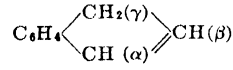


indene. C_9H_8 = 116.1. The hydrocarbon



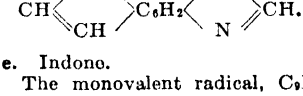
A colorless liquid, d.1.040, m. −2, b.188, soluble in alcohol or ether. **dihydro-** Hydrindene. **iso-** See *isoindene.* ***1*-methylene.** Benzofulvene.

indenes. Compounds derived from indene.



The Greek letters indicate the positions at which substitution may take place.

indenimidazol. $C_{10}H_8N_2$ = 156.2. The tricyclic heteroatomic compound



indenone. Indone.

indenyl. The monovalent radical, C_9H_7—, derived from indene; 7 isomers.

indeterminable. (German: unbestimmbar). That which cannot be determined.

indeterminate. (German: unbestimmt). That which cannot be predicted, but which when it happens, can be determined.

indeterminism. See *Heisenberg's principle.*

index. [pl. **indexes** or **indices**]. (1) Mathematical. The power to which a quantity is raised. (2) Physical. Any numerical ratio of measurement in comparison with a fixed standard; as, the i. of refraction. (3) Bibliographical A classified list; as, authors subjects, formulas, or patent numbers. **i. catalog.** A card catalog containing in alphabetical order the authors and subjects covering the books of a library or the articles of periodicals. **i. compound.** The parent substance under which derivatives are listed.

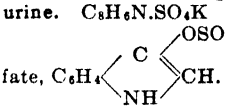
Decennial Index. A collective index published at ten-year intervals by: (1) Chemical Abstracts of the American Chemical Society, and (2) British Chemical and Physiological Abstracts.

Indian. I. agate. A moss agate used as a gem. **I. arrowroot.** Euonymus. **I. balm.** Trillium. **I. balsam.** Peru balsam. **I. barley.** Sabadilla. **I. bel.** Bael. **I. cannabis.** Cannabis. **I. corn.** Maize. **I. fig.** Prickly pear. **I. ginger.** Asarum. **I. gum.** (1) Ghatti gum, gummi indicum. The exudation of *Anogeissus latifolia*, a tree of India. Yellowish-white tears, soluble in water, and used as a mucilage. (2) Sterculia gum. **I. hemp.** Cannabis, **I. hippo.** Gillenia. **I. laburnum.** Cassia. **I licorice.** Abrus root. **I. ocher.** A native ferric oxide used as war paint by North American Indians. **I. physic.** Gillenia. **I. pink.** Spigelia. **I. poke.** Veratrum. **I. red.** (1) A red ocher from the Island of Ormus in the Persian Gulf, used in early times as a coloring material. (2) I. ocher. **I. rubber.** Rubber. **I. saffron.** Turmeric. **I. sage.** Eupatorium. **I. shot.** Cannabin. **I. tobacco.** Lobelia. **I.**

topaz. A saffron-yellow variety of topaz. **I. turnip.** The corm of *Arisaema triphyllum.* Used as an expectorant, and diaphoretic as the fluid extract. **I. yellow.** (1) Purree. A yellow pigment manufactured in India, containing the magnesium salt of purreic acid. (2) Azoflavin. (3) Cobalt and potassium nitrite. (4) Euxanthone.

india-rubber. Rubber.

indican. (1) $C_{14}H_{17}NO_6$ = 295.14. A glucoside from woad, *Isatis tinctoria*, a Cruciferae; also from indigo, *Indigofera* species, or leguminosaceous plants. Colorless leaflets, m.57, hydrolyzing to glucose and indoxyl, soluble in water. It is also formed from the indole present in the intestine during putrefaction. (2) **I. of urine.** $C_8H_6N.SO_4K$ = 251.2. Indoxyl sulfate,



A normal constituent of urine. **i. meter.** A device for estimating the quantity of i. in urine. **i. test.** To 5 cc. urine add a few drops of Obermayer's reagent (q.v.), shake, and add chloroform. After shaking the chloroform separates with a blue color if i. is present.

indicarmine. Indigo carmine.

indicator. (1) A solution of a substance which changes in color on the passage from acidity to alkalinity, or the reverse. The gradation of color changes is a measure of the pH value. (2) A substance which shows the beginning or end of a chemical reaction; as, ferric ammonium sulfate in the titration with KCNS; or starch in iodimetry. **achromatic-** A mixture of two i. or of an i. and dye which produces at the end point a color complementary to that of the i. itself at its transition point. The mixture thus appears colorless or grey at its end point; *e.g.*, methyl red (0.125 %) and methylene blue (0.0825 %). **acid-base-** Hydrogen ion-. **adsorption-** Substances which indicate the end point of a precipitation reaction by being released from the adsorbed state; as, rhodamine on silver chloride. **ammono system-** A substance which indicates the presence of an ammono acid or ammono base in a liquid ammonia solution; thus:

	Am. acid	Am. base
Hydrazobenzene	yellow	reddish
Hydrazotoluene	yellow	brown

aquo system- Hydrogen ion-. **Clark and Lubs-** A series of phthalein i. (q.v.) covering a pH range from 1.0 to 9.0. See table. **compound-** A mixture of indicators; as, universal i. **external-** Outside-. **fluorescent-** A substance which indicates an endpoint or pH value by a change of fluorescence; as quinine sulfate. **hydrogen ion-** A substance which indicates by its color the approximate hydrogen-ion concentration of a solution. **inorganic-** Metallic salts used in titrations; as, potassium chromate and ferrocyanide. **inside-, internal-** An i. added to a liquid to be titrated; as, litmus in neutralisation titrations **one-colour-** An i. which changes from colored to colorless *e.g.*, phenolphthalein. **outside-** External- An i. to which a drop of the titrated liquid is added on a porcelain plate. **oxidation-reduction, redox-** A substance which indicates the state of oxidation by its color; as, compounds of Mn, Cr, Fe etc., or organic compounds. At *p*H 7.0 the potentials are:

indigo disulfonate	−0.121
indigo trisulfonate	−0.081
indigo tetrasulfonate	−0.046
methylene blue	+0.011
toluylene blue	+0.115
Bindschedler's green	+0.224
o-chlorophenol indophenol	+0.233
m-bromophenol indophenol	+0.248
benzoquinone	+0.30
ferrocyanide	+0.40

phthalein- An important group of synthetic dyes derived from the phthaleins, used as indicators; the following are commonly used:

phenolphthalein		60
tetrabromo-		—
phenolsulfonphthalein	Phenol-red	50
dibromo-	Bromphenol-red	43
dichloro-	Chlorphenol-red	41
dibromdichloro-	Bromchlorphenol-blue	29
tetrabromo-	Bromphenol-blue	21
diiodo-		—
nitro-		—
tetranitro-		—
o-cresolphthalein		57
o-cresolsulfonphthalein	Cresol-red	53
dibromo-	Bromcresol-purple	40
m-cresolsulfonphthalein	Cresol-purple	15
tetrabromo-	Bromcresol-green	31
thymolphthalein		61
thymolsulfonphthalein	Thymol-blue 12,	55
dibromo-	Bromthymol-blue	45
nitro-		—
anisolsulfonphthalein		—
naphtholphthalein		52
fluorescein		—
eosin		—

The numbers refer to the classified list of indicators. **redox-** Oxidation-reduction. **screened-** An i. which has been added to another coloring matter (not necessarily an i.) to make the color change more readily detectable or sharper. Cf. *achromatic-*. **Sörensen-** A series of synthetic indicators covering the pH range 0.1–13.0. They are numbered consecutively in the classified list in the column marked S. **turbidity-** A semicolloid which fluocculates at a certain pH value (iso-electric point) and so indicates when this point has been reached in volumetric analysis. **two-color-** An i. which changes from one color to another, *e.g.*, a phthalein i. (see table). **universal-** A mixture of indicators covering a wider pH range than each individual i. *E.g.*, a solution of methyl orange 0.1, methyl red 0.4, bromthymol blue 0.4, α-naphtholphthalein 0.32, phenolphthalein 0.5 and cresolphthalein 1.6 gm. in 100 cc. 70 % alcohol. One drop in 10 cc. of test solution gives colors as follows:

red	3.0	bluish-green	8.5
orange-red	4.0	greenish-blue	9.0
yellow-orange	5.0	blue	10.0
yellow	6.5	violet	11.0
green	8.0	reddish-violet	12.0

vegetable- A coloring matter derived from plants which has different colors in acid and alkaline solutions.

SYNTHETIC INDICATORS

(Classified List)

No.		Acid	pH	Alkali	S.*	C&L**
1	Ethylviolet	yellow	0.0 – 2.0	green		
2	Methylgreen	yellow	0.0 –11.0	green		
3	Fuchsin, basic	yellow	0.0 –12.5	magenta		
4	Methylviolet	yellow	0.5	green	1	
5	Brillantyellow	blue	0.5 – 7.0	yellow		
6	Diphenylaminoazobenzene		1.2 – 2.1		2	
7	Iodine green	yellow	0.5 – 1.5	blue-green		
8	Malachitegreen	yellow	0.5 – 1.5	green		
9	Metanilyellow	red	1.2 – 2.5	yellow	3	
10	Crystalviolet	green	1.5	blue		
11	Erythrosin	orange	1.2 – 2.5	magenta		
12	Thymolblue	pink	1.2 – 2.8	yellow		1
12a	Xylenolblue	pink	1.2 – 2.8	yellow		
13	Methylviolet	green	2.0	blue		
14	Brilliantgreen	yellow	1.0 – 3.0	blue-green		
15	m-Cresolpurple	red	1.5 – 2.5	yellow		
16	Tropeolin OO (Orange IV)	red	1.4 – 2.6	yellow	4	
17	Aminoazobenzene	orange	2.5	yellow		
18	Dinitrophenol	colorless	3.0	yellow		
19	Benzeneazobenzylamine	red	2.3 – 3.5	orange	5	
20	Dimethylaminoazobenzene	magenta	2.9 – 4.0	yellow	6	
21	Bromphenolblue	yellow	3.0 – 4.6	blue		2
22	Congo red	blue	3.0 – 4.6	red		
23	Methylorange	orange	3.1 – 4.4	yellow	7	
24	Benzopurpurin	purple	3.5 – 4.5	scarlet		
25	Methylviolet	blue	4.0	purple		
26	Benzoazo-α-naphthylamine		3.7 – 5.0		8	
27	Ampho-magenta	red	4.0 – 5.0	blue		
28	Naphthylamineazosulfanilic acid		3.5 – 5.7		9	
29	Bromchlorphenolblue	yellow	4.5 – 5.5	blue		
30	Methylred	red	4.4 – 6.0	yellow	10	3
31	Bromcresolgreen	yellow	4.5 – 5.5	blue		
32	Cochineal	orange	5.0 – 6.0	violet		
33	Lacmoid	red	4.4 – 6.4	blue		
34	Propylred	red	4.8 – 6.4	yellow		4
35	Hematoxylon	yellow	5.0 – 6.0	brown		
36	Carminic acid	red	5.0 – 6.0	magenta		
37	Alizarin red	yellow	5.5 – 6.8	magenta		
38	Phenacetolin	brown	5.5 – 6.5	red		
39	p-Nitrophenol	colerless	5 – 7.0	yellow	11	
40	Bromcresolpurple	yellow	5.2 – 6.8	purple		5
41	Chlorphenolred	yellow	5.5 – 6.5	red		
42	Azolitmin	red	5.4 – 7.8	blue	12	
43	Bromphenolred	yellow	6.0 – 7.0	red		
44	Nitrophenolsulfonphthalein	yellow	6.5 – 7.5	purple		
45	Bromthymolblue	yellow	6.0 – 7.6	blue		6
46	Curcumin	yellow	7.4 – 8.6	brown		
47	Aurin	yellow	7.0 – 8.0	magenta		
48	Neutralred	magenta	6.8 – 8.0	orange	13	
49	Nileblue	blue	7.0 – 8.0	magenta		
50	Phenolred	yellow	6.8 – 8.4	red		7
51	Rosolic acid	orange	6.9 – 8.0	yellow	14	
52	α-Naphtholphthalein	pale pink	7.3 – 8.4	green	15	
53	Cresolred	yellow	7.2 – 8.9	red		8
54	Brilliant yellow	yellow	7.5 – 8.5	scarlet		
55	Thymolblue	yellow	8.0 – 9.6	blue		9
56	Bromphenolpurple	colorless	8–12	purple		
57	p-Cresolphthalein	colorless	8.2 – 9.2	red		10
58	Purpurin	orange	8.5 – 9.5	magenta		
59	Tropeolin OOO	orange	7.6 – 8.9	scarlet	16	
60	Phenolphthalein	colorless	8.3 –10.0	magenta	17	
61	Thymolphthalein	colorless	9.3 –10.2	blue	18	
62	Alizarin yellow	yellow	10.1 –12.1	purple	19	
63	Methylblue	blue	10.5 –11.0	red-brown		
63a	Nitramin	colorless	10.8 –13.0	brown		

SYNTHETIC INDICATORS—(*Continued*)

No.		Acid	pH	Alkali	S.*	C&L**
64	Methylgreen	blue-green	11–12	colorless		
65	Benzopurpurin	violet	11–12	orange		
66	Tropeolin O	yellow	11.1 –12.7	brown	20	
67	Poirrier's blue	blue	11.0 –13.0	red		
68	Alkali blue	blue	12–13	red		
69	Fuchsin, basic	magenta	12–13	colorless		
70	Crystalviolet	purple	12–13	colorless		
71	Alizarin blue	green	12–14	blue		
72	Fuchsin, acid	magenta	12–14	colorless		
73	Trinitrobenzene		13–14			

* Sørenson indicators ** Clark and Lubs indicators

VEGETABLE INDICATORS

Source	Family	Acid	Alkali	Active constituent
Lichens				
Roccella tinctoria (litmus)	Parmeliaceae	red	blue	azolitmin
Parmelia parietina	Parmeliaceae	yellow	violet	parietin
Roots, rhizomes etc.				
Alkanna tinctoria	Boraginaceae	red	green	alkannin
Beta vulgaris	Chenopodiaceae	purple	red	
Curcuma long (turmeric)	Zingiberaceae	yellow	brown	curcumin
Perezia adnata	Compositae	yellow	red	pipitzahoin
Raphanus sativus	Cruciferae	red	green	
Woods				
Baphia nitida	Leguminosae	orange	blue	
Pterocarpus santalinus	Leguminosae	red	violet	santalin
Caesalpinia echinata	Leguminosae	yellow	violet	brazilin
Haematoxylon campechianum	Leguminosae	yellow	purple	hematoxylin
Flowers, yellow or white				
Convolvulus species	Convulvulaceae	colorless	yellow	
Geranium species	Geraniaceae	colorless	yellow	
Rose species	Rosaceae	colorless	yellow	
Trifolium repens	Leguminosae	colorless	yellow	
Viola tricolor	Violaceae	colorless	yellow	
Mimosa species	Mimosaceae	colorless	yellow	
Philadelphus coronarius	Saxifragaceae	colorless	yellow	
Flowers, red and blue				
Begonia species	Begoniaceae	red	blue	
Aster species	Compositae	red	bluishgreen	
Dahlia species	Compositae	red	green	
Centaurea cyanus	Compositae	red	blue	cyanidin
Convolvulus arvensis	Convolvulaceae	red	green	
Delphinium species	Ranunculaceae	red	green	delphidin
Dianthus caryophyllus	Caryophyllaceae	red	bluishgreen	
Geranium species	Geraniaceae	red	bluishgreen	pelargonidin
Iris species	Iridaceae	red	green	
Lathyrus species	Leguminosae	red	bluishgreen	
Vicia sativa	Leguminosae	red	green	
Malvae species	Malvaceae	red	green	
Nasturtium species	Cruciferae	orange	green	
Papaver species	Papaveraceae	red	violet	
Portulaca species	Portulacaceae	red	violet	
Phlox drummondi	Polemoniaceae	red	green	
Petunia species	Solanaceae	red	green	
Solanum species	Solanaceae	red	green	
Rose species	Rosaceae	red	green	
Viola tricolor	Violaceae	red	bluishgreen	
Berries and Seeds				
Bixa orellana	Bixaceae	green	yellow	bixin
Morus rubra	Moraceae	red	violet	
Phytolacca decandra	Phytolaccaceae	purple	orange	
Vaccinium myrtillus	Ericaceae	red	blue	myrtillin
Vitis vinifera	Vitaceae	red	blue	enidin

SYNTHETIC INDICATORS

(Alphabetical List)

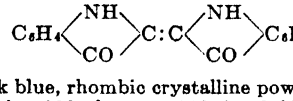
The numbers correspond with the numbers of the following classified list.

	No.
Alizarin blue	71
Alizarin red	37
Alizarin yellow	62
Alkali blue	68
Aminoazobenzene	17
Ampho-magenta	27
Aurin	47
Azolitmin	42
Benzene-azobenzylaniline	19
Benzene-azonaphthylamine	26
Benzopurpurin	24, 65
Brilliantgreen	14
Brilliantyellow	5, 54
Bromchlorphenolblue	29
Bromocresol-green	31
Bromocresol-purple	40
Bromophenol-blue	21
Bromophenol-purple	56
Bromophenol-red	43
Bromothymol-blue	45
Carminic acid	36
Chlorophenol-red	41
Cochineal	32
Congo red	22
o-Cresolphthalein	57
m-Cresol-purple	15
Cresol-red	53
Crystalviolet	10, 70
Curcumin	46
Dimethylaminoazobenzene	20
Dinitrophenol	18
Diphenylaminoazobenzene	6
Erythrosin	11
Ethylviolet	1
Fuchsin, basic	3, 69
Fuchsin, acid	72
Hematoxylin	35
Iodine green	7
Lacmoid	33
Malachite green	8
Metanil yellow	9
Methylblue	63
Methylgreen	2, 64
Methylorange	23
Methylred	30
Methylviolet	4, 13, 25
α-Naphtholphthalein	52
α-Naphthylamine-azo-sulfanilic acid	28
Neutral red	48
Nile blue	49
p-Nitrophenol	39
Nitrophenolsulfophthalein	44
Phenacetolin	38
Phenolphthalein	60
Phenol-red	50
Poirrier's blue	67
Propyl-red	34
Purpurin	58
Rosolic acid	51
Thymolblue	12, 55
Thymolphthalein	61
Trinitrobenzene	73
Tropeolin O	66
Tropeolin OO	16
Tropeolin OOO	59
Xylenolblue	12a

i. exponent. The pH value at which the color change of an i. is most rapid. Theoretically it is the midpoint of the i. range. **i. paper.** A paper impregnated with an i. and dried. See *test paper*. i. **range.** The pH values over which the color of an i. changes (see tables).

indicolite. A blue variety of tourmaline, used as gem.

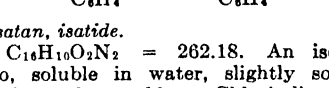
indigo. $C_{16}H_{10}O_2N_2$ = 262.2. Indigo-tin, synthetic indigo, $\Delta^{2,2}$-bis-ψ-indoxyl.



A dark blue, rhombic crystalline powder, d.1.35, subliming 300, decomp. 390, insoluble in water, alcohol, or ether, soluble in hot aniline or hot chloroform. Used in dyeing, and as a reagent. **Chinese green-** A dye prepared from the bark of *Rhamnus chlorophora*, of China, used in dyeing silk. **leuco-** I. white. **natural-** I. blue. **soluble-** I. white or I. carmine.

i. blue. The blue coloring matter obtained by fermentation from various species of *Indigofera* (Leguminosae); used in dyeing and as a constituent of printing inks. **i. carmine.** $C_{16}H_8N_2O_2(SO_3Na)_2$ = 466.3. Soluble indigo, sodium indigotinsulfonate, sodium coerulinsulfate, indigo extract. A blue powder or paste, soluble in water or alcohol. Used as a dye, and clinically in the function test of the kidneys. **i. copper.** $CuSO_3$. Covellite. A blue native copper sulfite. **i. dicarboxylic acid.** $C_{18}H_{10}O_6N_2$ = 350.2. A blue powder, insoluble in water alcohol or ether, soluble in sulfuric acid. **i. disulfonate.** An oxidation-reduction and *p*H indicator changing at 12.5 from blue (acid) to yellow (alkali). **i. red.** Indirubin. **i. extract.** I. carmine. **i. white.** $C_{16}H_{12}O_2N_2$ = 264.2. Biindoxyl, leuco indigo, soluble indigo. A colorless powder which is insoluble in water, soluble in alcohol, ether or alkalis, and oxidized to i. blue; used in the vat-dyeing of textiles with indigo.

indigotin. (1) Indigo. (2) The heterocyclic compound, diindogen or $\Delta^{2,2}$-bis-ψ-indoxyl. Cf. *indigo*. **iso-** $C_{16}H_{10}O_2N$ = 262.2. Bioxindol.



Cf. *isatan*, *isatide*.

indin. $C_{16}H_{10}O_2N_2$ = 262.18. An isomer of indigo, soluble in water, slightly soluble in alcohol or ether. **chloro-** Chlorindin.

indirubin. $C_{16}H_{10}O_2N_2$ = 262.18. Indigo-red, oxindole-$\Delta^{3,2}$-ψ-indoxyl. An isomer of indigo, occurring as a red coloring matter in urine.

indium. In = 114.76. A ductile, trivalent metal and element of the aluminum subgroup, atomic number 49. Silver-gray crystalline masses, d.7.362, m.115, b.1450, insoluble in water, soluble in acids. It was discovered in 1863 by Reich and Richter, and named in allusion to the indigo-blue lines of its spectrum. It is usually trivalent, but may be di- or monovalent. It is at present not used commercially, but it forms low-melting alloys.

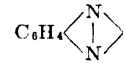
i. bromide. $InBr_3$ = 354.5. **I. tribromide.** A yellow powder, soluble in water. **i. chloride.** There are three chlorides: InCl, I. monochloride; $InCl_2$, I. dichloride; $InCl_3$, I. trichloride. **i.**

cyanide. $In(CN)_3$ = 192.8. A colorless poisonous powder which is soluble in water. **i. dichloride.** $InCl_2$ = 185.7. A yellow liquid, decomp. by water into the trichloride and metallic indium. **i. hydroxide.** $In(OH)_3$ = 165.8. A colorless powder, insoluble in water. **i. iodide.** InI_3 = 495.8. Yellow hygroscopic crystals, soluble in water. **i. nitrate.** $In(NO_3)_3.3H_2O$ = 354.9. White crystals, soluble in water. **i. oxide.** In_2O_3 = 277.6. A white or slightly yellow powder, d.7.18, insoluble in water, soluble in acids. **i. sulfate.** $In_2(SO_4)_3$ = 517.6. A white or gray powder, hygroscopic, poisonous and soluble in water. **i. sulfhydrate.** $In(SH)_3$ = 213.8. A yellow powder, precipitated from aqueous indium salt solutions by the action of hydrogen sulfide. **i. sulfide.** In_2S_3 = 325.6. A carmine-red powder, insoluble in water. **i. trichloride.** $InCl_3$ = 221.2. I. chloride. White, hygroscopic, poisonous crystals, sublime 500; readily soluble in water, and used as an external antiseptic.

indoaniline. $C_{12}H_{10}N_2O$ = 198.07. *N*-*p*-aminophenyl quinonimine. Colorless crystals

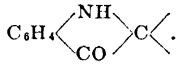
indoanilines. A group of compounds derived from indoaniline, q.v. Cf. *indamines.*

indodiazole. Pseudoazimide. A compound which contains the monovalent radical



indoform. Salicylic acid methylene-acetate. A white powder of acid astringent taste, sparingly soluble in water; used for gout and rheumatism.

indogen. The bivalent radical

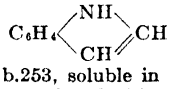


di- *Indigo.* **pseudo-** Isatin.

indogenide. A compound containing the indogen radical.

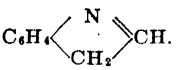
indoldione. ψ-Isatin.

indole. C_8H_7N = 117.11. 1-benzazole, ketole, benzopyrrole.



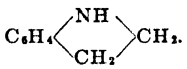
Colorless leaflets, m.52, b.253, soluble in water, alcohol, or ether. It occurs in oil of jasmine, clove oil, and as a product of intestinal putrefaction, and has a peculiar feces-like odor. Used as a microchemical reagent for cellulose and in great dilution in perfumery (orange blossoms). Its radical is indyl. **dihydro-** Indoline. **dihydrodiketo-** Isatin. **dihydroketo-** Oxindole. **hydroxy-** Indoxyl. **iso-** 2-Benzazole. **α-methyl-** C_9H_9N = 130.1. Alpha-methylindole, methylketol. Colorless crystals, m.59, soluble in water. **β-methyl-** Skatole. **n-nitro-** $C_8H_7N_2O_2$ = 163.2. Colorless crystals, m.172. **pseudo-** Indolenine.

indolenine. C_8H_7N = 117.11. Iso-1-benzazole, ψ-indole.



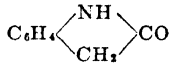
iso- 2-Isobenzazole.

indoline. C_8H_9N = 119.11. 2, 3-dihydroindole.

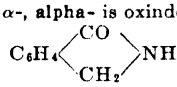


2-keto- Oxindole. **3-keto-** ψ-Indoxyl.

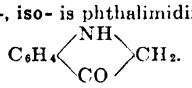
indolinone. C_8H_7ON = 133.06. A group of heterocyclic compounds



1-, or **α-**, **alpha-** is oxindole



2-, or *i-*, **iso-** is phthalimidine

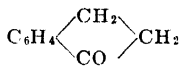


3-, or **β-**, beta- is ψ-indoxyl

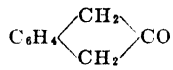
indolol. Indoxyl.

indolone. **1(3)-** Phthalimidine. **2(3)-** Oxindole. **3(2)-** ψ-Indoxyl. Cf. *indolinone.*

indone. C_9H_6O = 132.1. Indanone, hydrindone. **alpha-** Rhombic leaflets, d.1.101, m.41, b.244, slightly soluble in water, soluble in alcohol or ether. **beta-** Colorless crystals, m.61, b.220,



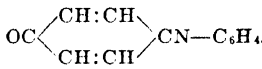
alpha-



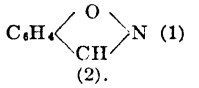
beta-

indophenine. $C_{12}H_7ONS$ = 213.19. A colorless powder, soluble in alcohol or ether, but not in water.

indophenol. $C_{12}H_9O_2N$ = 199.08. Hydroxyphenylimino benzenone. A compound of the type

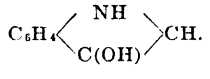


indoxazeine. C_7H_5ON = 119.05. Benzisoxazole. The heterocyclic compound.

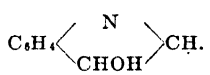


2-phenyl- $C_{13}H_9ON$ = 195.08. Colorless crystals, m.84, b.334.

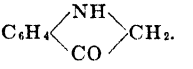
indoxyl. C_8H_7ON = 133.1. **α-. alpha-.** 3-Hydroxyindole,



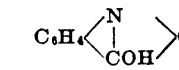
Light yellow crystals, m.85, soluble in water, used in organic synthesis. **β-. beta-.**



ψ-. Pseudo-. 3-Ketoindoline, β-indolinone, 3(2)-indolone, 3-ketoindoline.



An intermediate in the synthesis of indigo. **i-, *i-*, Iso-.** The heterocyclic compound



i. potassium sulfate. Indican (of urine).

indoxylic acid. $C_9H_7O_3N$ = 177.11. An oxidation-product of indoxyl, b.122, (sublimes and decomp.); soluble in water.

induced. Caused or produced indirectly. **i. current.** A high-frequency current produced by an induction coil, q.v. **i. radioactivity.** Artificial radioactivity produced by the bombardment of a substance with neutrons, protons or other particles, q.v. See *radioelements*. **i. reactions.** Sympathetic reactions: (1) If a slow reaction between the substances A and C is hastened by promoting a fast reaction between A and B, at the same time and in the same system, then A is the *actor* or *donor;* usually an oxidizing or reducing agent, B the *inductor*, and C the *acceptor*.

$$A + C \rightarrow AC \text{ (slow)}$$
$$A + B \rightarrow AB \text{ (fast)}$$
$$AB + C \rightarrow AC + B.$$

(2) An enzyme which removes an element from a compound and leaves the remainder free to react, acts as an acceptor in an induced reaction; *e.g.* the water in milk may be split by an enzyme into O and H, which are then able to oxidize and reduce, respectively. Cf. *induction* (*4*).

inducer. Inductor.

inductance. See *dielectric constant*.

induction. (1) A process of inference by which one passes from particular data to general principles. Cf. *deduction*. (2) The production of an electric or magnetic phenomenon by the influence of a neighboring electric or magnetic field; as, electrifying by proximity to a charged body, or magnetizing by proximity to a magnet. It is measured in henrys.

1 International henry = 1.00052 absolute henry
1 Absolute henry = 1 practical e.m.u.
= 10^9 e.m.u.
= 1.1124×10^{-12} e.s.u.

(3) See *induced reaction*. (4) A change in the energy of a molecule produced by interaction with another molecule, which is at a distance from it greater than the diameter of the molecule, by means of radiation. Cf. *collision*. **chemical-** See *induction* (*4*). **electromagnetic-** See *induction* (*2*). **mutual-** See *mutual induction*. **photochemical-** See *photochemical i.* **self-** See *selfinduction*.

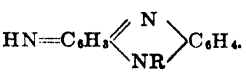
i. coil. Electric transformer. A set of two wire spools, one inside the other, used for obtaining high-frequency alternating currents from a continuous current passed through the primary (inner) coil. **i. furnace.** See *furnace*.

inductive capacity. Di-electric constant.

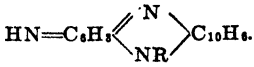
inductivity. Di-electric constant.

inductor. A substance which, when added to a reaction mixture accelerates a slow reaction. See *induced reactions, catalysts, state*.

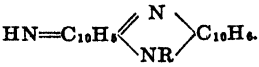
indulines. A group of blue or black dyestuffs derived from the tricyclic ring



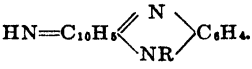
Substitution is usually at the N atom indicated. **benz-** Aposafranine. **isoros-** A group of dyestuffs derived from



naphth- A group of dyestuffs of the type



ros- A group of dyestuffs of the type



indurated. Hardened, as in the firing of clay mixtures, etc.

industrial. Pertaining to large-scale production as opposed to laboratory methods. **i. poisons.** Those chemicals which may lead to respiratory, intestinal, cardiovascular or other disturbance in the worker handling it. The most common are:

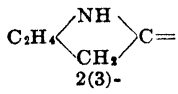
acetaldehyde	lead
acridine	manganese
acrolein	mercury
amylacetate	methanol
aniline	methylbromide
antimony	nitroglycerin
arsenic	nitrous gases
arsine	oxalic acid
benzene	petroleum
brass	phenol
carbon disulfide	phenylhydrazine
carbon monoxide	phosgene
chlorine	phosphorous
chromium	picric acid
copper	pyridine
diazomethane	sulfuric acid
dimethylsulfate	sulfur dioxide
dinitrobenzene	sulfur chloride
ferrosilicon	tar
formaldehyde	turpentine
hydrochloric acid	dust (q.v.)
hydrocyanic acid	

industry. The organization of human and material units for the production of some useful material on an economic basis. Chemistry enters into many industries, which may be classified as follows:

Heavy chemicals, acids, and alkalis.
Coal, coal gas and fuels.
Minerals and metals.
Dyes, explosives, cellulose, textiles and paper.
Synthetics, organic condensation products, plastics.
Rubber.
Leather.
Glass and enamel.
Cement and mortar.
Pottery, ceramics, and porcelain.
Oils, fats, and waxes.
Agriculture, foods and packing industries.
Brewing, fermentation and yeast products.
Tobacco.
Inks and printing inks.
Pharmaceuticals.

indyl. The monovalent radical, C_8H_6N—derived from indole. **iso-** See *isoindyl*.

indylidene. A group of bivalent radicals derived from dihydro-indole; as,



2(3)-

-ine. A suffix indicating: (1) a halogen, as chlorine; (2) a hydrocarbon of the acetylene series, as butine; (3) an alkaloid or nitrogen base, as, morphine. Cf. *-in.*

inert. Sluggish, having no, or only a slight chemical action. **i. elements.** The members of the "zero" group of the periodic system: the noble gases, which have no valency and do not combine with any other element, cf. *noble gases.* **i. substance.** A substance which is resistant to chemical or physical action.

inertia. The tendency of a physical body to remain in an unchanged condition, either in a state of uniform motion if moving, or at rest if resting. **moment of i.** A factor of fundamental importance in the mathematic treatment of the rotation of a body. It is expressed in terms of the mass and squares of the linear dimensions of the body. Cf. *momentum.*

infection. The successful invasion and growth of one or more species of bacteria or parasites in the tissues of an organism (plant, animal or man), and thus the transmission of disease by contact. Cf. *contamination.* **aerial-** I. caused by the dust particles suspended in air. **focal-** Infection in which the bacterial growth is restricted to a small area of the organism. **mixed-** Infection caused by more than one kind of bacteria.

infectious disease. A pathological condition of the organism produced by invasion and growth by one or more microorganisms (bacteria or protozoa).

infiltration. (1) The deposition of minerals from solution in the pores of a rock. (2) The slow diffusion of injected solutions into the tissues of an organism.

infinitesimal. Smaller than any assigned quantity. Negligible.

inflammable. Combustible; able to be set on fire. **i. air.** The original name for hydrogen.

infra. Beyond. **i. phonic.** Vibrations in air too long in wavelength to be audible. **i. photic.** Radiations of a wavelength too long to be visible; as, i. red. **i. red.** Ultra-red. The invisible part of the spectrum from 10^{-4} to 10^{-1} cm. which extends into the portion of the visible spectrum. Cf. *radiations, ultra-violet. far-* or *long-* I.r. rays from 14,000 to 150,000 Å.U. *near-* or *short-* I.r. rays from 7,200 to 14,000 Å.U. Sources:

	Infrared rays	Visible rays
Sunlight	60 %	34 %
Incandescent lamp	95 %	4.8 %
Carbon arc	80 %	15 %
Resistance wire	99 %	0.5 %

i. röntgen rays. Grenz rays. **i. sonic.** Infraphonic.

infundibuliform. A bacterial growth in the shape of a funnel or inverted cone.

infusible. Unable to be fused. **i. white precipitate.** Mercuridiammonium chloride.

infusion. Infusum. An aqueous solution obtained by steeping vegetable drugs in water below its boiling-point, and straining. Cf. *decoction.*

infusoria. A class of protozoa. Sometimes erroneously applied to diatoms (protophyta).

infusorial earth. Diatomaceous earth, tripolite, kieselguhr, q.v. A light, earthy sedimentary rock consisting of the microscopic empty shells of diatoms and other protophyta. Used as a filtration aid, and as an adsorbent.

infusum. Infusion.

ingluvin. An enzyme from hen gizzards used in dyspepsia.

ingredient. Any substance that enters into a mixture. Cf. *constituent, component.*

inhaler. (1) A device for the administration of vapors or gases. (2) A device for filtering dust from the air to be breathed. Cf. *gas-mask, respirator.*

inhibin. The testicular hormone which prevents overdevelopment of the pituitary gland. Soluble in water.

inhibition. A restraint or encumbrance.

inhibitor. A substance which arrests or stops a chemical action.

inhibitory phase. Protective *colloid.*

initiator. Trigger. Cf. *promoter.*

-inium. -ium. **i. compound.** Compounds of organic nitrogen bases with acids in which N is assumed to be pentavalent; as, piperidinium, pyridinium, strychninium. Cf. *-ilium, -onium.*

injection. The administration of a substance into a part of an organism, either intravenously (into the blood stream), intramuscularly (into muscular tissue), or subcutaneously (under the skin). **i. needle.** A hypodermic needle. **i. syringe.** A graduated glass-tube, with piston, used to inject liquid medicines into an organism.

ink. (1) A colored liquid, used for writing. (2) A colored paste or liquid used for printing. **aniline-** A solution of an aniline dye in a volatile solvent or dilute gum; used for printing in bright colors or at high speeds, *e.g.*, by the gravure process. **cancelling-** A suspension of lamp-black in oil, used for stamp pads. **Chinese-** India ink. **copying-** An iron-tannic acid ink. **diamond-** A mixture of barium sulfate and hydrofluoric acid, used for writing on glass. **fugitive-** An i. which disappears on treatment with water or bleaching chemicals. Used for printing checks. **India-** Finely divided lamp-black suspended in water or gum. **invisible-** Secret i., sympathetic i. An i. which is normally invisible to the human eye, but may be rendered visible by heat (*e.g.*, lemon juice), light (*e.g.*, soap solution in ultra-violet light), water (*e.g.*, solutions of cobalt salts), or chemicals (*e.g.*, iodine vapour on a starch ink). Used for sending secret messages. **marking-** A solution of silver nitrate, used to write undelibly on paper, textiles, laundry, etc. **printing-** Three types: (1) A suspension of a pigment (usually C black) in a mineral oil. It dries by absorption of oil into the paper. Used for high-speed letterpress printing. (2) A suspension of a pigment in a drying oil (*e.g.*, linseed oil). It dries by formation of a protective layer of hard linseed oil varnish over the pigment. Used for general lithographic and letter-

press work. (3) An aniline ink, q.v. This dries mainly by evaporation. (4) A warm molten resinous pigment which dries by simple solidification. Used for high-speed printing. **secret-** Invisible i. **sympathetic-** Invisible i. **writing-** (1) Blue-black i. Normally, a slightly acidic solution containing principally an iron salt, a tannin and a blue aniline dye (provisional color). The dye renders the ink visible while it is being used, and in course of time oxidation of the iron-tannin compound produces a very permanent blue-black color. (2) A solution of an aniline dye in a dilute gum. Used for fountain pens, and for colored inks other than black.

ino- A suffix that denoting substitution by one of the groups, NH_2, NHR, NR_2, NH or NR. Cf. *amino, imino.*

inoculation. (1) The insertion of a virus or virulent vaccine into a wound or scratch in the skin. (b) The planting of bacteria on a culture medium.

inoculum. The substance to be inoculated.

innocuous. A harmless substance.

innoxious. Harmless. Antonym: toxic or noxious.

inorganic. (1) Unorganic. Pertaining to chemicals which do not contain carbon (carbonates and cyanides excepted). Cf. *organic.* (2) Devoid of an organized structure. **i. chemistry.** Chemistry which deals with inorganic or polar compounds, generally those compounds which do not contain carbon as a principal element. **i. compound.** A substance containing an electropositive element or radical and an electronegative element or radical. Generally, mineral substances, or those chemicals which do not contain carbon, (compounds of the polar type).

inose. Inositol.

inosin. $C_{10}H_{12}N_4O_8$ = 284.1. Hypoxanthin riboside. White needles, m.218, soluble in hot water.

inosinic acid. $C_{10}H_{13}N_4O_8P$ = 348.13. Inosin phosphoric acid. A nucleotide from adenylic acid of nucleoproteins.

inosite. Inositol.

inositol. $C_6H_{12}O_6.2H_2O$ = 216.2. Muscle sugar, cyclohexanhexanol, *1.2.3.4.5.6*-cyclohexanehexol*, dambose, inose, hexahydroxybenzene, Bios I, nucite, phaseomannite, $C_6H_6(OH)_6$. A cyclic hexahydric alcohol found in the seeds of plants (as barley, peas and beans), also in animal flesh, in the form of its phosphoric acid ester (phytin). Optically inactive. White crystals, m.200 (decomp.), soluble in water, insoluble in alcohol or ether. It is part of the vitamin B complex, q.v. **dextro-** Colorless crystals, m.247. **levo-** Colorless crystals m.-238.

inquartation. Quartation.

insect bait. See *baits.*

insecticide. An agent used to destroy insects, generally by dusting or spraying on plants (cf. *fumigant*). They are conveniently classified: (1) **contact** i., I. which corrode the surface of soft-bodied insects; as, kerosene, soap, tobacco juice, pyrethrum, lime, rotenone. (2) **stomach** i., I. which poison through the intestinal tract, namely: arsenicals (*e.g.*, $Ca_3(AsO_4)_2$, $PbHAsO_4$); fluosilicates (Na_2SiF_6, $BaSiF_6$); fluorides (NaF, CaF_2, AlF_3). (3) **gaseous** i., I. used as fumigants, as, carbonsulfide, hydrocyanic acid and p-dichlorobenzene vapor.

INSECTICIDES

Against	
Aphis	nicotine
Beetles	barium fluosilicate
Codling Moth	beta-naphthol
Crickets	barium fluosilicate
Flea Powder	rotenone, derris
Fly Sprays	pyrethrum
Japanese beetle	carbon disulphide
Leaf Hopper	oil emulsion
Mealy bug	thiocyanates
Mites (ascarides)	derris, selenium
Peach Tree borer	p-dichlorobenzene
Red Spiders	selenium
Scale	manganese arsenate

insect powder. Pyrethrum flowers. The powdered flowerheads of *Chrysanthemum* species, a group of Compositae, used medicinally as a stimulant and local irritant; commercially as an insecticide. **Dalmatian-** A powder obtained from *Chrysanthemum cinerariae folium.* **Persian-** A powder obtained from *Chrysanthemum roseum.*

insect wax. Chinese wax.

insipid. Almost or completely tasteless.

insipin. $(C_{20}H_{23}O_2N_2)OCH_2CO.H_2SO_4.3H_2O$. Quinine diglycolsulfate. A tasteless quinine substitute.

in situ. In the normal, or natural place or position.

insolation. Exposure to the sun's rays, solarization, irradiation.

insolubility. The degree of being immiscible with, or insoluble in a liquid.

insoluble. Incapable of dissolving in a liquid.

inspirator. (1) Respirator. (2) A device for controlling automatically the proportions of the constituents of a mixture of gases; as, gas and air.

inspissation. Thickening a liquid by evaporation.

inspissator. An evaporator.

instrument. A mechanical device, apparatus or appliance.

insuccation. Soaking a material with water.

insulation. The process of mechanically placing apart or separating a physical system. **electrical-** Preventing the escape of electricity. **heat-** Preventing the escape of heat.

insulator. A protective and separating agent, or non-conductor. **electrical-** A device to prevent the passage of electricity from a conductor. **thermal-** A packing that is non-conductive to heat.

INSULATORS

Substances used for both, ELECTRICAL and THERMAL insulation are in CAPITALS

Substances used chiefly for electrical insulation in roman type.

Substances used chiefly for *thermal* insulation in *italic* type.

Gaseous or liquid:

AIR, *water,* hydrocarbons, mineral oil, petrolatum.

Resins and waxes:

Amber, copal, shellac, rosin, beeswax, ceresin, ozokerite, paraffin.

Bituminous:

Asphalt, tar, pitch.

Fibrous materials:

PAPER, Kraft p., Manila p., paraffined p., laminated p., vulcanized p., varnished p., *corrugated p., wood fiber, cardboard, grasses,*

barks, cork, husks, bagasse, peat, PRESSBOARD, COTTON, SILK, *wool, kapok, linen,* varnished cloth, oiled textiles, WOOD, oiled hardwood.

Rubber:

soft r., vulcanised r. GUTTA PERCHA.

Vitreous materials:

GLASS, *glasswool,* porcelain, enamel, *slag.*

Mineral materials:

ASBESTOS, oiled asbestos, varnished asbestos, (Ambrion, Gummon Hemit, Tegit, etc.), mica, marble, SLATE, serpentine, *diatomite, coal, fuller's earth, clay.* Cf. *refractories.*

Plastics:

Nitrocellulose products (pyroxylin), Phenol products (bakelite, redmanol, condensite).

insulin. $C_{45}H_{69}O_{14}N_{11}S.3H_2O$. Iletin, glucokinin. White, *l*-rotatory crystals, m.233. A protein hormone substance. It is secreted by the Islets of Langerhans in the pancreas, and a deficiency of it results in diabetes; it is prepared from beef pancreas for use medicinally as a cure for diabetes. Its aqueous solution is standardized in "units," each unit being one-third of the amount required to lower the blood-sugar in a normal rabbit for a given time. On hydrolysis it yields glutamic acid, cystine, tyrosine and other amino acids. Cf. *synthalin, myrtilin, agmatine.*

intaglio. A process of printing from plates which have been etched slightly in recess; the ink filling these is absorbed by the paper.

intarvin. $C_{54}H_{104}O_6 = 848.7$. Margarin, glycerol trimargarate; $C_3H_5(C_{16}H_{33}COO)_3$. A fat used in diabetes, to cause an increase of sugar, but not of β-hydroxybutyric acid.

integration. (1) Assimilation or synthesis, as opposed to disintegration. (2) Mathematical: the summation of a series of values of a continuously varying quantity. Cf. *calculus.*

intensification. (1) A process of concentrating force. (2) In photography, to increase the density of the silver deposit or activated image.

intensity. The strength or amount of energy per unit space. **acid-** Hydrogen ion concentration. **color-** The (1) brilliance or (2) saturation of a color. Cf. *Beer's law.* **electric-** The electric moment per unit volume. **electric field-** The force exerted on a unit charge; or the electric field which exerts a force of one dyne on a unit positive charge. **heat-** Temperature. **light-** Brightness. **magnetic field-** The force acting on a unit magnetic pole, or the magnetic field which exerts a force of one dyne on unit magnetic pole (Gauss). **magnetization-** The magnetic moment per unit volume. **sound-** Degree of loudness.

i. factor. (*of acidity*) *p*H; (*of redox*) *r*H.

inter- A prefix from the Latin, indicating between.

interenin. A hormone from the suprarenal gland, containing 30 % chlorine.

Interessen Gemeinschaft. I.G. A co-operative organization of large German chemical industries.

interface. Interphase. The boundary between two phases. Cf. *zone.*

interference. A conflict between two agencies which produces a retardation effect, or a waste of energy. **light-** Two sets of light waves which annul each other and produce darkness. **sound-** Two sets of sound waves which annul each other and produce silence.

i. colors. Complementary *colors.*

interferometer. An instrument to determine the wavelength of light by the production of interference with waves of known lengths. Cf. *fringes.*

intermediate. A chemical used in organic synthesis in the production of pharmaceuticals, dyes, or other artificial products; usually a derivative of the "crudes" or raw materials.

intermolecular. Referring to action between the same or different molecules. Cf. *intramolecular.*

internal. Pertaining to the inside *e.g.*, of a molecule. Synonym: intramolecular. **i. anhydride.** A compound formed by elimination of water from the atoms of a molecule. **i. compensation.** The property of an optically-inactive molecule that contains two asymmetric carbon atoms, one of which is dextro-, the other levo-rotatory. **i. reaction.** A reaction within the molecule of a compound, due to a rearrangement of the atoms. **i. salts.** An organic compound formed by the union of a basic and acid radical within the molecule; *e.g.*,  derived from $NH_2.R.SO_3H$. **i. standard.** The principal line in the spectrum used in spectrum analysis, *e.g.*, by the logarithmic sector method, q.v. Cf. *homologous lines.*

international. Agreed upon between nations; as, i. candle, i. henry, i. ohm. **i. atomic weight.** A value for the atomic weight selected from the literature of the preceding year by a commission consisting of the leading chemists of several nations; 15 years after World War I cooperation had ceased, and each national chemical society published annually its own atomic weights. **i. catalogue.** A reference list and index of the scientific literature of the world. Since World War I the publication has ceased, and the newer literature must be sought in the abstract Journals. **i. tables.** A list of constants selected by an international commission, which embodies the latest values of chemical, physical, biological and other data. **i. unit.** (1) See *unit.* (2) I. U. A measure of the vitamin potency of a substance; see *vitamin units.*

interphase. Interfacial *zone.*

interpolation. The deduction of a value of a varying quantity, from values already known, by arithmetical or graphical methods.

interruptor. A device for breaking an electric current.

interstice. A small space or capillary in a structure or tissue. **atomic-** The distance between the atoms in a molecule.

intertraction. Barophoresis. The increase in density of a colloidal solution (*e.g.*, albumin) placed on a salt-solution of nearly equal density, due to the rapid diffusion of the solute.

interval. The period of time elapsing between two events.

intolerance. The inability to withstand the drastic effects of a drug.

intoxication. The state of being poisoned by a drug.

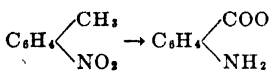
intra-. A prefix from the Latin, indicating within.

intra-annular. Within the ring. **i. tautomerism.** The redistribution of double bonds within a ring. Cf. *intranuclear.*

intra-atomic. Pertaining to atomic structure. **i. matter.** The material from which atoms are assumed to be constructed, *e.g.*, electrons and positive nuclei, or hydrogen and helium nuclei. Cf. *mass-energy cycle, particles.*

intramine. $C_{12}H_{12}N_2S_2$ = 248.1. *o,o'*-Dithiobisaniline, contramine. $[C_6H_4(NH_2)S—]_2$; used as an antiseptic.

intramolecular. Pertaining to the inside of molecules or to molecular structure. Cf. *internal, intermolecular.* **i. action.** A reaction occurring within the individual molecule. **i. condensation.** Ring formation. A reaction of organic compounds, in which the atoms within a molecule combine or rearrange themselves and form a condensation product (usually a ring compound) and another (usually a binary) compound. **i. oxidation and reduction.** The reaction of an organic compound caused by internal oxidation and reduction, as the change from nitrotoluene to anthranilic acid which takes place on heating with alkalis:



intramuscular. Inside muscular tissue; *e.g.*, an injection.

intranuclear. (1) Within an atomic nucleus. (2) Within a molecular ring-system. **i. tautomerism.** The shifting of a double bond within one or more rings; *e.g.*, in sterols.

intravenous. Within or inside the blood vessels, *e.g.*, an injection.

intravital. Within the living organism. **i. microscopy.** The study and examination of vital organs or living cells by fluorescence microscopy, q.v.

introducing. To cause one or more different atoms to combine with an organic molecule, *e.g.*, chlorination.

introduction. The entrance of a different type of atom into an organic molecule; *e.g.*, the combining of chlorine with a hydrocarbon. Cf. *chlorination, bromination.*

introfaction. A change in the fluidity and specific wetting properties of an impregnating material, caused by the addition of an introfier, which alters a colloidal sol to a fluid with slightly associated simple molecules.

introfier. Impregnation accelerator. A substance which speeds up the penetrating power of fluids; as, **sulfur-** Naphthalene or its derivatives which, when added to molten sulfur, effect an increased rate of impregnation of the sulfur into fiberboards, wood, asbestos or concrete.

intrusion. Material forced into the cavities or pores of a substance.

intumescence. (1) The swelling up of a material, especially certain crystals, on heating. (2) Popping, puffing. The violent escape of moisture on heating; as, in poplox, $Na_2O,3.2SiO_2$.

inula. Elecampane, alant root, elfwort, horseheal, helenium. The dried rhizome of *Inula helenium*, a Compositae of U. S., Europe and Central Asia. It contains carbohydrates, possesses an aromatic odor, and is used as an expectorant and stimulant. **i. camphor.** Helenin.

inulase. A hydrolytic enzyme derived from fungi and other plants, which changes inulin to levulose.

inulenin. $(C_6H_{10}O_5)_x.2H_2O$. A carbohydrate associated with inulin. Microscopic colorless needles, slightly soluble in water.

inulic acid. Alantic acid.

inulin. $C_{36}H_{62}O_{31}$ = 990.8. Alant starch, alantin, dahlin, sinistrin. A carbohydrate from the rhizome of *Inula helenium* or *Dahlia variabilis.* A white starch-like powder, soluble in hot water; used in bacteriology as a culture medium, m.160 (decomp.). **pseudo-** $(C_6H_{10}O_5)_6$. A polysaccharide; irregular granules, soluble in hot water. Inulin sources are:

elecampane	*Inula helenium*
dahlia	*Dahlia variabilis*
Jerusalem artichoke	*Helianthus tuberosus*
chicory	*Cichorium intybus*
dandelion	*Taraxacum officinale*
burdock root	*Lappa minor*
goldenrod root	*Solidago*
camas root	*Quamasia quamash*

in vacuo. In a vacuum, q.v.

invar. A ferro-nickel which contains 36 % Ni, and 64 % steel (carbon content 0.2 %), d.8.0, m.1500. It has a low coefficient of heat expansion, and is used for watch parts and precision instruments.

inversion. (1) The turning of a levo- to a dextro-compound, or vice versa. (2) The change of an isomeric compound to its opposite, as a cis- to a trans-compound. (3) The hydrolysis of an optically-active disaccharide to two optically-active monosaccharides; *e.g.*, the hydrolysis of cane sugar to dextrose and levulose by dilute acids, alkalis, or enzymes; the resulting solution shows a change in the rotation of polarized light, both in direction and degree. Cf. *Walden i., Clerget i.* **i. point.** The temperature at which inversion takes place. *E.g.*, above 26°C. a racemic sodium tartrate crystallizes, while below 26°C. the d- and l-sodium tartrate crystallize.

invert sugar. A mixture of approximately 50 % dextrose and 50 % levulose obtained by the acid hydrolysis of cane sugar. It is slightly levo-rotatory, fermentable, reduces Fehling's solution; used in brewing.

invertase. Saccharase, sucrase, raffinase, invertin. A carbohydrase of the pancreatic juice and of yeast, which converts cane sugar into invert sugar.

invertin. Invertase.

inverting. The process of inversion.

in vitro. Describing a biological reaction which occurs outside the living organism, and which can be performed in the test tube. Antonym: *in vivo.*

in vivo. A reaction which takes place within the living organism. Antonym: *in vitro.*

inyoite. $2CaO.3B_2O_3.13H_2O$. A native calcium borate occurring in Southern California (Inyo County).

iod- See *iodo-, iodi-.*

iodacetanilide. C_8H_9INO = 260.9. Iodantifebrin. $C_6H_4INHCOMe$. Colorless crystals, m.182, insoluble in water, soluble in alcohol; used as an antipyretic.

iodacetone. C_3H_5OI = 184.1. Iodoacetone, monoiodoacetone, $CH_2I.CO.CH_3$. A colorless crystalline substance, used in the treatment of carbuncles.

iodagol. A colloidal iodine preparation, used as an antiseptic.

iodal. C_2I_3OH = 421.77. A hypnotic liquid which resembles chloral.

iodalbin. A compound of blood albumen and iodine; a red, tasteless powder of peculiar molasses-like odor.

iodaniline. Iodoaniline.

iodanisole. C_7H_7OI = 234.2. Orthoiodanisole, C_6H_4IOMe. A yellow liquid, d.1.80, b.240, insoluble in water, miscible with alcohol, ether, or

chloroform; used as an antiseptic and local irritant.

iodantifebrin. Iodacetanilide.

iodate. A salt of iodic acid, containing the monovalent IO_3^- radical.

iodeikon. Sodium tetraiodophenolphthalein, used as an x-ray contrast medium.

iodeosin. $C_{20}H_8O_5I_4$ = 835.4. Erythrosin, tetraiodofluorescein. A red powder, soluble in alcohol or ether, and used as indicator in titrating dilute alkalis. Alkalis, rose-red; acids, yellow. **i. solution.** A test solution or indicator containing 0.002 gm. iodeosin in 1000 cc. ether. Of this 10–20 cc. is added to the dilute alkali and titrated until the rose-tint passes from the ether into the aqueous solution.

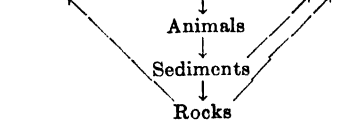
iodi- See *iodo-*.

iodic acid. HIO_3 = 175.93. A colorless rhombic crystalline powder, d.4.629, m.110, decomp. 270, soluble in water, alcohol or ether. Used as an oxidizing agent; reagent for alkaloids, biliary pigments, naphthol, sulfocyanides, and guaiacol; in organic synthesis; and for volumetric solutions. **i. anhydride.** Iodine pentoxide.

iodide. A binary compound of iodine with a metal of the type MI. **i. ion.** The monovalent, negative I^- ion.

iodimetry. Iodometry.

iodine. I_2 = 253.84, or I = 126.92. Iodum. A non-metallic element, atomic number 53, belonging to the halogen group. Rhombic, bluish-black plates or scales of metallic luster, d.4.948, m.114, b.184, slightly soluble in water, soluble in alcohol, ether, or iodide solutions. Iodine was discovered in 1811 by Courtois and named after its purple vapors from the Greek iodes (the violet) and ion (similar). It is obtained from the mother liquor of Chile saltpeter and the ashes of sea weeds, and occurs in small quantities widely diffused through nature.



Iodine cycle.

Its usual valency is one (iodides), but may be three (iodonium) or five (iodates). Used as a reagent in volumetric analysis, in organic synthesis, in the manufacture of iodides, iodates and iodine preparations, and medicinally as an alterative, antiseptic and caustic. **eka-** Eline. **fluoro-** Fluoroiodine. **solution of-** (1) Lugol solution. (2) *colorless.* Lugol solution decolorized with sodium thiosulfate. (3) Iodine water, q.v. **tincture of-** An alcoholic 7 % iodine solution in 5 % potassium iodide solution.

i. acetate. $I(C_2H_3O_2)_3$ = 304.00. A solid prepared from chlorine dioxide and iodine in glacial acetic acid. **i. bromides.** IBr, i. monobromide; IBr_3, i. tribromide; IBr_5, i. pentabromide. **i. chlorides.** ICl, i. monochloride; ICl_3, i. trichloride. **i. cyanide.** ICN = 152.9. Cyanogen iodine. Colorless crystals, m.146, soluble in water or alcohol. An extremely poisonous substance, used as an animal poison and for the preservation of insect and mamma collections, furs, birds, etc. **i. dioxide.** IO_2 = 158.93 or I_2O_4 = 317.86. A lemon-yellow powder, decomposing into its elements at 130°C. **i. disulfide.** Sulfur iodide. **i. green.** A phenolphthalein dye, used as *p*H-indicator, changing at 1.0 from yellow (acid) to blue-green (alkaline); also to stain liquefied xylem in plant tissues. **i. fluoride.** See *i. pentafluoride* and *i. fluoriodide.* **i. monobromide.** IBr = 206.8. A purple crystalline mass, m.36, soluble in water (decomp.). Used in analysis for determining iodine numbers, and in organic synthesis. **i. monochloride.** ICl = 162.4. A reddish-brown oily liquid, d.3.182, m.25, b.101 (decomp.), decomp. by water, soluble in alcohol or ether; used in analysis and organic synthesis. **i. number.** Iodine absorption value, Hübl number, Wijs number. The quantity of iodine (in mg.) absorbed by one gram fat or oil under specified conditions; it indicates the amount of unsaturated acids present. *hydro-* The number of parts of hydrogen (calculated as the equivalent amount of iodine) absorbed by 100 parts of a fat. **i. oxide.** (1) I. dioxide. (2) I. pentoxide. (3) I_4O_9 (?) = 651.73. A green powder, a supposed oxide of iodine. **i. pentabromide.** IBr_5 = 526.7. A brown liquid, decomp. by water; used as a reagent. **i. pentafluoride.** IF_5 = 221.93. A compound of 5-valent iodine, m. −8, b.97. **i. pentoxide.** I_2O_5 = 333.9. Iodic anhydride. A white crystalline powder, soluble in water, insoluble in alcohol; used as an oxidizing reagent and in organic synthesis. **i. perchlorate.** $I(ClO_4)_3,2H_2O$ = 461.34. Yellow-green crystals. **i. sulfate.** $I_2(SO_4)_3$ = 542.07. Yellow crystals, soluble in water. **i. tincture.** See *tincture of i.* **i. tribromide.** IBr_3 = 366.7. Tribromiodine. A brown liquid, soluble in water or alcohol; used as an antiseptic. **i. trichloride.** ICl_3 = 233.3. A yellow deliquescent crystalline powder, decomp. 25, soluble in water, alcohol, or benzene; used as an antiseptic and disinfectant. **i. value.** I. number. **i. water.** An aqueous solution of iodine containing 0.2 gram iodine per liter. Used as a reagent.

iodinin. A purple-bronze antibiotic pigment produced by *Chromobacterium iodinum.*

iodipin. An iodine addition-product of the fatty acids of sesame oil; used as an alterative and as x-ray contrast medium.

iodite. A salt of the hypothetical iodous acid containing the $=IO_2$ radical. **hypo-** A salt of hypoiodous acid of the type MOI.

iodo- A prefix indicating the presence of an iodine atom in an organic compound. Cf. *iodonium, iodoso, iodoxy.*

iodoacetanilide. Iodacetanilide.

iodoacetic acid. CH_2ICOOH = 185.95. Iodacetic acid, carboxymethyliodide. Yellow crystals, m.82, decomp. on further heating, insoluble in water, soluble in alcohol.

iodoaniline. $C_6H_4INH_2$ = 219.0. Amino-iodobenzene. **ortho-** Colorless needles, m.57. **meta-** Colorless leaflets, m.25. **para-** Colorless needles m.63. All are insoluble in water, soluble in alcohol or ether.

iodobenzene. C_6H_5I = 204.0. A colorless liquid, m. −28, b. 188, insoluble in water, soluble in alcohol or ether.

iodocasein. A compound of milk casein and iodine (18 %). A yellow-brown powder, odorless, tasteless, and insoluble in water.

iodocrase. Vesuvianite. The mineral, $Ca_6[Al(OH,F)]$, $Al_2(SiO_4)_3$.

iodocresine, iodocresol. Traumatol.

iodocrol. Carvacrol iodide.

iodoethylene. $CH_2{:}CHI$ = 153.9. Vinyl iodide. A colorless liquid, d.2.08, b.56, slightly soluble in water, soluble in alcohol or ether.

iodoform. CHI_3 = 393.8. Triiodomethane, methenyl iodide, formyl triiodide. Iodoformum (U.S.P.). Small hexagonal, yellow crystals, d.4.08, subliming at 119, slightly soluble in water or alcohol, soluble in ether or chloroform; decomp. on further heating. An antiseptic for wounds, alterative and antituberculant.

iodoformin. A colorless, odorless substitute for iodoform.

iodogorgoic acid. $C_9H_9I_2NO_3$ = 432.92. *3.5*-Diiodotyrosine, $HO.C_6H_2I_2.CH_2CH(NH_2)COOH$. An amino acid from proteins, occurring in two forms: *dl*- Rectangular prisms, m.204. *d*- White needles, m.194.

iodohydromol. Thymol iodide.

iodol. C_4HI_4N = 570.74. Tetraiodopyrrole. An odorless, amorphous brown powder, used as an antiseptic; m.150 (decomp.).

iodoleine. An iodized poppyseed oil, used medicinally.

iodomethane. Methyliodide.

iodometric. Iodimetric. Pertaining to analysis with standard iodine solutions.

i. acid value. Acidity determined in terms of the amount of iodine liberated from an iodide-iodate mixture.

iodometry. Iodimetry. A method of volumetric analysis, by titrating with a standard iodine solution with standard sodium thiosulfate solution, (usually 0.1N). Based on the reaction:

$$I_2 + Na_2S_2O_3 \leftrightarrows 2NaI + Na_2S_4O_6$$

Starch solution is indicator. This method is useful in determining chlorine, bromine, iodine, chlorides, bromides, iodides, hydrogen sulfide, sulfur dioxide and sulfites, arsenous and arsenic acid and their salts, manganese dioxide, ferrous salts, etc.

iodonium. The trivalent iodine atom ≡I, occurring in an organic compound. **i. hydroxide.** The bivalent radical =I—OH, as diphenyliodonium hydroxide Ph_2IOH. **i. iodide.** The bivalent radical =I—I, as in diphenyliodonium iodide $Ph_2I.I$.

iodophen. Nosophen.

iodophosphonium. Phosphonium iodide.

iodopropionic acid. $C_3H_5O_2I$ = 200.0. **alpha-** $MeCH_2ICOOH$. Colorless prisms, m.45, slightly soluble in water. **beta-** CH_2ICH_2COOH. Colorless leaflets, m.82, slightly soluble in water.

iodoso- The monovalent —IO radical derived from iodonium hydroxide. **i. benzene.** C_6H_5IO = 220.0. Colorless amorphous powder, exploding at 210, soluble in water or alcohol, insoluble in ether.

iodosol. Thymol iodide.

iodous acid. The hypothetical acid H_2IO_2, known as its salts. **hypo-** The unstable acid HIO, which decomposes to HI and HIO_3.

iodotannic acid. Iodotannin. A dark brown powder obtained from iodine and tannic acid; used as an alterative and astringent.

iodothyrin. $C_{11}H_{10}O_3NI_3$ = 584.89. The iodine compound of the thyroid glands.

iodotoluene. C_7H_7I = 218.0. Methyliodobenzene. **ortho-** A colorless liquid, d.1.69, b.211. **meta-** A colorless liquid, d.1.70, b.204. **para-** Colorless leaflets, m.35, b.211. All insoluble in water, soluble in alcohol or ether.

iodoxy. The monovalent radical —IO_2. **i. benzene.** $C_6H_5IO_2$ = 236.0. Colorless needles, m.167, exploding at 230, slightly soluble in water, soluble in alcohol, chloroform or benzene.

iodstarin. $Me(CH_2)_{10}.CI_2(CH_2)_4COOH$, *5.5*-diiodoheptadecanoic acid*, decomp. by light to tariric acid, q.v.

iodum. The U.S.P. name for iodine.

iodylin. A bismuth iodosalicylate, used as an iodoform substitute in medicine.

iodyrite. A native silver iodide, AgI.

iolanthite. A jasper from Crooked River, Oregon, used as gem.

iolite. $Mg_4Al_8O_6(SiO_3)_{10}$. Cordierite, dichroite, water sapphire. A blue orthorhombic magnesium aluminum metasilicate, hardness 7, d.2.65; used as gem. Cf. *aspasiolite, gigantolite, praseolite.*

ion. An electrically charged (1) atom, (2) radical, or (3) molecule; if positively charged it is called a *cation* (or *posion*); if negatively charged an *anion* (or *negion*). They travel in solution to the cathode (posode) and anode (negode), respectively. Cf. *ionic theory.* The following suffixes have been proposed:

-ion..... for metals (*e.g.*, sodion for sodium ion)
-idion.... for -ides (chloridion for chloride ion)
-anion... for -ates (chloranion for chlorate ion)
-osion.... for -ites (chlorosion for chlorite ion)
hypo-osion.... for hypo- -ite (hypochlorosion for hypochlorite ion)

Ions may be grouped into:

(1) positively charged atoms—an atom which yields, respectively, one, two, or three electrons and thereby becomes positively charged: $K^{\cdot}$ or K^+ potassium ion.

$Ca^{\cdot\cdot}$ or Ca^{++} calcium ion.
$Al^{\cdot\cdot\cdot}$ or Al^{+++} aluminum ion.

(2) negatively charged atoms—an atom which attracts an additional electron and becomes thereby negatively charged:

Cl' or Cl^- chloride ion
S'' or S^{--} sulfide ion.

(3) positively charged radicals—a group of atoms which loses one or more electrons:

NH_4 or NH_4^+ ammonium ion

(4) negatively charged radicals—a group of atoms which attracts one or more electrons:

NO_3' or NO_3^+ nitrate ion
SO_4'' or SO_4^{++} sulfate ion.

(5) positively charged molecules—a gaseous molecule which has lost one or more electrons:

H_2^+ ionized hydrogen

(6) negatively charged molecules—a gaseous molecule with one or more additional electrons:

N_2^- ionized nitrogen

acid- Anion. **aquated-** An i. surrounded by oriented water molecules. Cf. *solvated.* **amphoteric-** Zwitter. **i. basic-** Cation. **colloidal.** Micelle. **hydrogen-** See *hydrogen.* **hydroxyl-** See *hydroxyl.* **molecular-** A gaseous ion which is either positively or negatively charged; *e.g.*, a molecule which has lost or gained electrons under the influence of electric discharges or radiation. Cf. *activation, excitation.* **negative-** Anion. **positive-** Cation. **solvated-** An i. which is surrounded by oriented molecules of solvent. **zwitter-.** Amphoteric-. An i. containing both, a negative and positive charge; as, $^+NH_3RCOO^-$.

i. product. Solubility product. **i. states.** Matter can exist ionically in all three forms of aggregation; *i.e.*,

(a) **solid i.**—surrounded by oppositely charged ions; as in a polar crystal.

(b) **liquid i.**—surrounded by oriented molecules of the solvent; as in a solution.

(c) **gaseous i.**—with kinetic motion overcoming electrostatic charge; as in an ionized gas.

ionene. $C_{13}H_{18}$ = 174.14. *1.2.3.4*-Tetrahydro-*1.1.6*-trimethyl naphthalene. A hydrocarbon formed on dehydration of ionone (q.v.). Cf. *irene.*

ionic. Pertaining to electrically-charged atoms, radicals, or molecules. **i. charge.** The unit electrical charge carried by the hydrogen ion, e = 4.77×10^{-10} e.s.u. or 1.59×10^{-20} e.m.u. units. **i. conductivity.** The amount of electricity carried by the ions in solution, or the passage of a current by means of ions. **i. migration.** The bodily transfer of ions toward the anode or cathode; as, in electrolysis. **i. mobility.** (1) The motion of ions in a solution, analogous to the motion of molecules in gases. It is expressed numerically by the velocity under a gradient of 1 volt per centimeter, and it is a periodic function of the atomic weight: H^+, 3.25×10^{-4}; OH^-, 1.78×10^{-4}; K^+, 6.5×10^{-4} cm. per sec. (2) The velocity of ions under the influence of an electric current. **i. number.** The number of extra-nuclear electrons of an ion. It equals the atomic number plus or minus the valence electrons. The commoner i.n.*s* and the distribution of their component electrons are:

ionic numbers.

2 = 2
8 = 2.8
18 = 2.8.8
28 = 2.8.18
36 = 2.8.18.8
46 = 2.8.18.18
54 = 2.8.18.18.8
68 = 2.8.18.32.8
78 = 2.8.18.32.18
86 = 2.8.18.32.18.8
K.L.M.N.O.P
valence shells

i. potential. Assuming the ion in a crystal to be a charged sphere of definite extension, then the i.p. = valence/radius of ion. It is a periodic function of the ions (see table). Cf. *ionization potential.* **i. reactions.** The reactions characteristic of an ion; as, the precipitation of Cl^- by Ag^+, or of SO_4^{--} by Ba^{++}. **i. radius.** The distance in Ångström units of the periphery of the effective sphere from the center of a charged atom or group of atoms:

Pb^{4-} 86	Bi^{3-} 86			Nt 86 0		Ra^{2+} 86 1.24	Ac^{3+} 86 1.57	Th^{4+} 86 1.90	IONIC NUMBER: (upper numeral) The number of extra-nuclear electrons of an ion. IONIC POTENTIAL: (lower numeral) The valence divided by the ionic radius. Values given are the square-roots. For the position of an element see PERIODIC TABLE.		
Sn^{4-} 54 −1.17	Sb^{3-} 54 −1.10	Te^{2-} 54 −0.95	I^- 54 −0.68	Xe 54 0	Cs^+ 54 0.77	Ba^{++} 54 1.21	La^{3+} 54 1.61	Ce^{4+} 54 2.00

i. theory. The theory according to which electrolytes split into component ions whenever they are dissolved in water. **i. velocity.** The product of the mobility of an ion and the actual potential gradient. Cf. *migration.*

ionidine. $C_{19}H_{25}O_4N_4$ = 373.5. An alkaloid obtained from the California poppy, *Eschscholtzia californica.*

ionium. Io = 230.5. A radioactive isotope, atomic number 90 (thorium), formed by the disintegration of uranium X. It emits β- and γ-rays and is transformed into radium.

ionise. Ionize.

ionization, ionisation. (1) Electrolytic dissociation. The breaking up of a molecule into two or more negatively- and positively- charged components (ions). It usually occurs when a polar compound is dissolved in water and is expressed by the equations (*e.g.*):

$$NaCl \rightarrow Na^+ + Cl^-$$
$$Al_2(SO_4)_3 \rightarrow 2Al^{+++} + 3\ SO_4^{--}$$

Cf. *solvation, acidity, electromotive force, displacement series.* (2) The removal of one or more outer electrons from an atom or molecule, by which gases become electrically charged under the influence of a strong electro-static field or radioactive rays:

$$H_2 \rightarrow H_2^+ + e$$

Cf. *excitation, i. potential, spectrum, luminescence.* **degree of-** The ratio of the molecules which become ionized at a given temperature and concentration of solution, to those molecules which remain unionized; generally expressed as a percentage. It is given numerically by the ratio of the equivalent conductivity under the conditions concerned to that of the solution at infinite dilution. Most salts and the "strong" or active acids and bases are from 80–95 % ionized in N/10 solution. Cf. *activity coefficient, acidity, hydrogen ion concentration.*

i. constant. The analogue of the dissociation constant, $k = \frac{[H^+][X^-]}{[HX]}$, in the application of the Law of Mass Action to ionisation. **i. gage** See *gage.* **i. potential.** The amount of energy V, in volts, required to remove an electron from an atom in its normal state; it is related to the wavelength of any ray λ, in Ångstroms, by the equation $V = 12.345/\lambda$. Cf. *energy levels, Bohr atom, orbits, quantum.* Thus for sodium the transition (1s − 1p) gives lines λλ 5896, 5890 (D-line), where V is 2.11 volts, as the excitation potential for the 1p state; the transition (1p − 2d) gives λλ 8195, 8184 and 1.51 volts as the excitation potential, and adding 2.11 + 1.51 gives 3.62 as the excitation potential for the 2d state. The sum of the excitation potentials from the 1s state to the limit will be 5.11 volts which is the i. potential of sodium. Cf. *ionic potential.*

ionize. To dissociate into ions or to become electrically charged.

ionized, ionised. (1) Describing a molecule which is separated into oppositely-charged atoms or radicals, the sum of positive and negative charges being zero. (2) Describing a molecule or atom from which electrons have been removed, whereby it becomes positively charged; as, $He \rightarrow He^+$. **non-** or **un-** Remaining in the molecular condition, not dissociated.

ionizing. The process of ionization q.v. **i. potential.** Ionization potential. **i. solvent.** A liquid which facilitates ionization, *e.g.*, water, liquid ammonia (ammonia-system), or liquid sulfur dioxide. Organic liquids are generally non-ionizing.

ionogenic. A little-used term for ionic.

ionone. $C_{13}H_{20}O$ = 192.2. A ketone terpene, $Me_2C_6H_6CH{:}CHCOMe$, and isomer of irone. α- A colorless liquid, d.0.934, b.120. β- A colorless liquid, d.0.949, b.135. Both are slightly soluble in water, soluble in alcohol or ether, and used in perfumery as artificial extract of violets.

ionosphere. The radio-reflecting layer of the upper atmosphere consisting of daily-changing areas of ionized molecules. It is part of the Kennelly-Heaviside layer.

iontophoresis. Migration of ionic medication through unbroken skin under the influence of a direct electrical current.

ionotropy. The existence of tautomeric ions, a positive or negative atom or group becoming detached from an unsaturated molecule thus leaving a − or + charge on the residual ion; the position of this charge may vary, resulting in the presence of two isomeric ions in dynamic equilibrium. When the detached atom is positive (H^+, M^+, NH_4^+) the phenomenon is called *cationotropy;* when it is negative (OH^-, X^-) *anionotropy;* in the special case of H^+, *prototopy* (cf. *pseudo-acid*), and in the case of OH^-, *pseudobasicity* (cf. *pseudo-base*).

iopax. Uroselectan. Sodium-2-oxo-5-iodopyridine-*N*-acetate. Used in pyelography.

iosol. Thymol iodide.

iothion. Diiodohydroxypropane, diiodopropyl alcohol. A yellow, oily liquid, d.2.4, insoluble in water, soluble in alcohol, ether, chloroform or oils; used in external iodine ointments.

Ipatiev reaction. The preparation of alcohols by the catalytic reduction of ketones with nickel oxide under pressure.

Ipatiew. Ipatiev.

ipecac. Ipecacuanha, ipecac root. The dried root of *Cephaelis ipecacuanha* (Rio ipecac) or *Cephaelis acuminata* (Carthagena ipecac), of the

family Rubiaceae. It contains 1.75 % alkaloids (emetine, cepheline, etc.); used as an emetic, anti-amebic, stomachic and expectorant, usually as the fluid extract. **American-** Gillenia. **Goanese-** Naregamine.

ipecacuanhic acid. $C_{14}H_{18}O_7$ = 298.12. A reddish brown powder from the roots of *Psychotria ipecacuanha.*

ipoh. A Malay name for various arrow poisons derived from Strychnos species. Cf. *upas.*

ipomic acid. Sebacic acid.

ipomoea. (1) Mexican scammony root. The dried root of *I. orizabensis*, a Convolvulaceae. (2) A genus of Convolvulaceae, (q.v.), yielding jalap and turpeth; used as a cathartic.

ipomoein. A globulin from the sweet potato, *Ipomoea batatas.*

ipral. $Ca(C_9H_{13}O_3N_2)_2.3H_2O$. Trade name for the calcium salt of ethylisopropyl barbituric acid. Colorless crystals, m.202, soluble in water, insoluble in alcohol; used as a hypnotic.

ipsilene. A gaseous disinfectant made by heating ethyl chloride and iodoform under pressure.

ipuanine. Artificial *emetine.*

Ir. The symbol for iridium.

ipuranol. $C_{23}H_{38}O_2(OH)_2$ = 380.31. An alcohol from buphane, m.290.

iradiation. Irradiation.

iregenone. $C_{13}H_{20}$ = 176.20. A terpene-like hydrocarbon, $MeEtC_6H_3.CMe_3$, in the roots of the Iris species.

irene. $C_{14}H_{20}$ = 188.17. *1.2.3.4*-Tetrahydro-*1.1.2.6*-tetramethylnaphthalene. A hydrocarbon and white solid. Cf. *irone, ionene.*

iretol. $C_7H_8O_4$ = 156.1. 1.2.3-trihydroxy-5-methoxybenzene, *5*-methoxypyrogallol, $MeO.C_6H_2(OH)_3$. Colorless crystals, m.186; used in perfumery.

Iridaceae. A family of plants which yield the following drugs:

Iris florentina	orris
Iris foetidissima	gladwin
Iris pseudacorus	yellow flag
Iris versicolor	iris

iridescence. The display of rainbow colors on the surface of a substance, as, opals or the tarnish on coal and copper pyrites.

iridescent. A surface colored like that of nacre (mother of pearl); is usually due to very thin films or strata of air or other materials which cause interference of light rays. **i. quartz.** A rock crystal filled with fine interstices, containing air films which produce combinations of rainbow colors; used as a gem.

iridic. Describing a compound of tetravalent iridium. **i. bromide.** $IrBr_4$ = 512.9. Iridium tetrabromide. A hygroscopic brownish powder, or bluish crystals, soluble in water or alcohol. **i. chloride.** $IrCl_4$ = 334.9. Dark red crystals, soluble in water. **i. iodide.** IrI_4 = 700.8. Iridium tetraiodide. A hygroscopic black powder, soluble in water. **i. sulfide.** IrS_2 = 257.3. Iridium disulfide. A black powder, insoluble in water or acids, soluble in potassium sulfide solution.

iridin. $C_{24}H_{26}O_{13}$ = 522.3. A glucoside derived from *Iris* species; used as a cholagogue.

iridious. Iridous.

iridium. Ir = 193.1. A metallic element, atomic number 77, of the platinum family; discovered in 1804 by Tennant. A white, hard, brittle, lustrous metal, d.22.42, m.1950, soluble in aqua regia. Used mainly, as alloys of the noble metals, to coat hydrogen electrodes and to harden platinum for jewelry (10 % Ir); also as catalyst, and with Os, for pen tips and compass bearings.

i. compounds. Three series: valency 2: irido-, as, IrO, $IrCl_2$; valency 3: iridous-, as, Ir_2O_3, $IrCl_3$; valency 4: iridic-, as, IrO_2, $IrCl_4$. **i. sodium chloride.** $Na_2IrCl_6.12H_2O$ = 691.02. Sodium iridichloride. Yellow crystals, m.50.

irido. A prefix for divalent iridium, Ir<.

iridosmine. Osmiridium.

iridous. Describing a compound of trivalent iridium, Ir≡. **i. oxide.** Ir_2O_3 = 434.2. Iridium trioxide, iridium black. A black powder, slightly soluble in hydrochloric acid, used in ceramics as a pigment.

iris. (1) An iridescent quartz or other mineral. Sometimes used as a gem. (2) Blue flag. The dried rhizome of *I. versicolor* or *I. caroliana.* Used as purgative, emetic or diuretic. (3) A genus of plants, Iridaceae, q.v.

Irish diamond. A quartz crystal from Ireland, sometimes used as a gem. **I. moss.** Carragheen, *Chondrus crispus*, killeen. The dried thallus of the kelps from the coast of Ireland and North America; used as a demulcent, and as a clarifying agent in brewing.

irisin. An extract from blue flag or *Iris versicolor.*

irisoid. The combined principles from blue flag (*Iris versicolor*), used as a cathartic and alterative.

irium. Trade name for sodium lauryl sulfate, used as detergent.

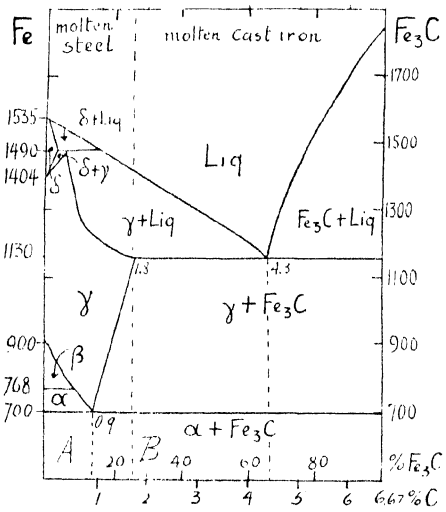
iron. Fe = 55.85. Ferrum. A metallic element, atomic number 26, in the eighth group of the periodic system. A black, lustrous, cubic, magnetic metal, d.7.85, m.1530, b.3200. Iron forms several series of compounds:

Valence	In acid solution	In alkaline solution
2	Fe^{++} ferrous (*green*)	$HFeO_2^-$ hypoferrite
3	Fe^{+++} ferric (*brown* or *yellow*)	FeO_2^- ferrite
4	FeO^{++} ferryl	$HFeO_3^-$ hypoferrate
6	.....	FeO_4^{--} ferrate (*purple*)

The many modifications of metallic iron, (wrought, cast, steel, reduced i.) consist chiefly of its allotropes (see figure). The world output of iron excluding steel (q.v.) in 1941 was 105,000,000 long tons, produced in U.S. > Germany > U.S.S.R. > Gt. Britain > Japan > France > Sweden.

alibated- I. covered with a protective layer of aluminum. **cast-** The molten iron from blast furnaces. Gray metallic masses, d.7.86, m.1275 to 1505. **ingot-** The malleable i. from the Bessemer process. **malleable-** Wrought-. **meteoric-** q.v. **native-** Meteorites. **passive-** I. rendered insoluble in dilute acids by immersion in fuming nitric acid, chloric or perchromic acid, or hydrogen peroxide, or by making it the anode in electrolysis. This property is lost by mechanical shock. **pig-** Cast-. **Quevennes-** Reduced i. **reduced-** Finely powdered metallic i. obtained by heating ferric oxide in a current of hydrogen. **specular-** Specularite. **steel-** A gray metal, d.7.7, m.1375.

See *steel*. **white-** (1) Cast iron containing only combined carbon. (2) Marcasite. **wrought-** A cast iron which has been heated and hammered. A gray metal, d.7.86, m.1505.



Iron-carbon system.

$\alpha \rightleftharpoons \beta \rightleftharpoons \gamma$
760°C 900°C

Pure iron melts at 1535°, and pure cementite, Fe_3C, containing 6.67 % carbon at 1850°C. The different solid solutions and compounds which are formed depend on the carbon content and are: α = ferrite; β = beta-iron; γ = austenite; δ = delta-iron; Fe_3C = cementite; $\alpha + Fe_3C$ = pearlite. During the cooling of molten iron several transformations take place, which below a carbon content of 1.8 % are important in the heat treatment of steel and cause, in section *A*, more or less grained crystals of ferrite in pearlite, and in section *B*, pearlite in cementite. Thus:

α-ferrite. The chief constituent of wrought iron, stable below 760°C., is soft and magnetic; it dissolves little iron carbide. **β-ferrite.** A non-magnetic i. produced at 760°C.; it also dissolves i. carbide. **γ-ferrite.** A non-magnetic i. produced at 900°C.; it forms solid solutions with i. carbide. Cf. *diagram*.

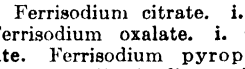
i. acetate. Ferric acetate. **i. alginate.** Ferric alginate. **i. alloys.** See *steel, ferrimanganese, silicon alloys*. **i. alum.** A native ferripotassium sulfate. See *alums*. **i. albuminate.** Ferric albuminate. **i. ammonium bromide.** Ferroammonium bromide. **i. ammonium chromate.** Ferriammonium chromate. **i. ammonium chloride.** Ferriammonium chloride. **i. ammonium citrate.** Ferriammonium citrate. **i. ammonium cyanide.** See *ammonium ferrocyanide, ammonium ferricyanide*. **i. ammonium oxalate.** Ferriammonium oxalate. **i. ammonium sulfate.** (1) Ferroammonium sulfate. (2) Ferriammonium sulfate. **i. ammonium tartrate.** Ferriammonium tartrate. **i. alginate.** Ferric alginate. **i. arsenate.** (1) Ferric arsenate. (2) Ferrous arsenate. **i. benzoate.** Ferric benzoate. **i. black.** Finely-divided antimony. **i. brass.** A brass containing from 1–9 % iron. **i. bromide.** (1) Ferric bromide. (2) Ferrous bromide. **i. buff.** Nanking yellow, or ferric hydroxide. **i. cacodylate.** Ferric cacodylate. **i. camphorate.** Ferric camphorate. **i. carbide.** (1) Fe_3C = 179.52. Regular, gray crystals, d.7.07, insoluble in water. (2) FeC_4 = 103.84. A gray crystalline mass. See figure. **i. carbonate.** (1) Ferric carbonate. (2) Ferrous carbonate. **i. carbonyl.** (1) $Fe(CO)_5$ = 195.84. Iron pentacarbonyl, a pale yellow viscous liquid, freezing at −20; b.102.5, decomp. 180. (2) $Fe_2(CO)_9$ = 363.68. Diferrocarbonyl. Orange crystals, decomp. on heating. (3) $Fe(CO)_4$ = 167.84. Iron tetracarbonyl. Green crystals. **i. chloride.** (1) Ferric chloride. (2) Ferrous chloride. **i. chromate.** Ferric chromate. **i. citrate.** Ferric citrate. **i. citrate green.** Ferriammonium citrate. **i. cyanides.** See *ferric ferricyanide, ferric ferrocyanide, ferrous ferricyanide*, and *ferrous ferrocyanide*. **i. dinitrosothiosulfates.** $M[Fe(NO)_2S_2O_3]H_2O$, where M is K or Rb. **i. disulfide.** FeS_2 = 120.0. Yellow rhombic crystals, d.4.86, m.1171, produced by the precipitation of ferric salts with hydrogen sulfide. **i. flint.** An opaque variety of quartz, containing iron. **i. family.** The elements Cr, Mn, Fe, Co, Ni, all of which form colored salts and two or more series of compounds. Cf. *periodic system*. **i. fluoride.** Ferrous fluoride. **i. formate.** Ferric formate. **i. founding.** Making a facsimile of a pattern by running molten iron into a sand impression or mold of the pattern. **i. froth.** A fine spongy variety of hematite. **i. glycerophosphate.** Ferric glycerophosphate. **i. glance.** Hematite. **i. hydroxide.** (1) Ferric hydroxide. (2) Ferrous hydroxide. **i. hypophosphite.** (1) Ferric hypophosphite. (2) Ferrous hypophosphite. **i. hyposulfite.** Ferrous hyposulfite. **i. iodate.** Ferric iodate. **i. iodide.** (1) Ferrous iodide. (2) Ferric iodide. **i. lactate.** (1) Ferric lactate. (2) Ferrous lactate. **i. liquor.** A solution of ferrous acetate. **i. magnesium citrate.** Ferrimagnesium citrate. **i. magnesium lactate.** Ferromagnesium lactate. **i. magnesium sulfate.** Ferromagnesium sulfate. **i. malate.** Ferric malate. **i. manganese chloride.** Ferromanganous chloride. **i. manganese citrate.** Ferrimanganic citrate. **i. manganese iodide.** Ferromanganous iodide. **i. manganese lactate.** Ferromanganous lactate. **i. manganese sulfate.** Ferromanganous sulfate. **i. manganese tartrate.** Ferrimanganic tartrate. **i. minerals.** Iron is, after aluminum, the most abundant metal, and occurs in practically all rocks and a large number of minerals.

meteorites	Fe
hematite	Fe_2O_3
magnetite	Fe_3O_4
limonite	$Fe(OH)_3$
pyrite	FeS
marcasite	FeS_2
siderite	$FeCO_3$

i. mordant. (1) Ferrous sulfate. (2) Ferric nitrate. **i. nitrate.** (1) Ferrous nitrate. (2) Ferric nitrate. **i. nitride.** Fe_4N. A catalyst for the synthesis of ammonia. **i. nucleinate.** Ferric nucleinate. **i. oleate.** (1) Ferric oleate. (2) Ferrous oleate. **i. oxalate.** Ferric oxalate. **i. oxide.** (1) FeO, ferrous oxide. (2) Fe_2O_3, ferric oxide. (3) Fe_3O_4, ferriferrous oxide. ***black-*** Ferric oxide. ***magnetic-*** Ferrous

oxide. *red-* Ferric subcarbonate **i. paranucleinate.** Triferrin. **i. pentacarbonyl.** See *i. carbonyl.* **i. peptonate.** Ferric peptonate. **i. perchlorate.** Ferric perchlorate. **i. perchloride.** Ferriferrous chloride. **i. persulfate.** Ferriferrous sulfate. **i. phenolate.** Ferric phenate. **i. phosphates.** (1) Ferric phosphate. (2) Ferrous phosphate. **i. phosphide.** FeP = 86.86. A black powder, d.5.2. There are also Fe_2P, Fe_2P_3, Fe_3P, Fe_3P_4. **i. potassium citrate.** Ferripotassium citrate. **i. potassium cyanide.** (1) Potassium ferricyanide. (2) Potassium ferrocyanide. **i. potassium oxalate.** Ferripotassium oxalate. **i. potassium tartrate.** Ferropotassium tartrate. **i. protocarbonate.** Ferrous carbonate. **i. protochloride.** Ferrous chloride. **i. protosulfide.** Ferrous sulfide. **i. putty.** A mixture of ferric oxide and boiled linseed oil, used for making joints in pipe connections. **i. pyrite.** Pyrites. **i. pyrophosphate.** Ferric pyrophosphate. **i. pyrosulfate.** Ferric pyrosulfate. **i. pyrothioarsenate.** (1) Ferric pyrothioarsenate. (2) Ferrous pyrothioarsenate. **i. quinine citrate.** Brown-green, water-soluble scales. An official preparation containing 15 % quinine, and not more than 11 % of water. **i. rhodanate.** Ferric thiocyanate. **i. rust.** Hydrated ferric oxide, $2Fe_2O_3,3H_2O$. **i. salts.** See *ferrous, ferric.* **i. sesquichloride.** Ferric chloride. **i. sesquioxide.** Ferric oxide. **i. sesquisulfate.** Ferric sulfate. **i. sodium benzoate.** Ferrisodium benzoate. **i. sodium citrate.** Ferrisodium citrate. **i. sodium oxalate.** Ferrisodium oxalate. **i. sodium pyrophosphate.** Ferrisodium pyrophosphate. **i. sodium sulfate.** Ferrisodium sulfate. **i. spar.** Siderite. **i. sponge.** Ferric oxide. **i. stearate.** Ferric stearate. **i. stone.** Siderite. **i. subcarbonate.** Ferric subcarbonate. **i. subsulfate.** Ferric subsulfate. **i. succinate.** Ferric succinate. **i. sulfate.** (1) Ferrous sulfate. (2) Ferric sulfate. **i. sulfide.** (1) FeS, iron monosulfide, see *ferrous sulfide.* (2) FeS_2, iron disulfide, see *pyrites.* (3) Fe_2S_3, iron trisulfide, see *ferric sulfide.* (4) Fe_3S_4, iron tetrasulfide, see *ferriferrous sulfide.* **i. sulfite.** Ferrous sulfite. **i. sulfocyanate.** Ferric thiocyanate. **i. tannate.** Ferric tannate. **i. tantalate.** Tantalite. **i. tartrate.** (1) Ferric tartrate. (2) Ferrous tartrate. **i. tersulfate.** Ferric sulfate. **i. thiocyanate.** Ferric thiocyanate. **i. trichloride.** Ferric chloride. **i. trioxide.** Ferric oxide. **i. tungstate.** See *ferberite, reinite, wolframite.* **i. valerianate.** Ferric valerianate. **i. vanadate.** Ferric vanadate.

irone. $C_{14}H_{22}O$ = 206.1. Iron,



A terpene from orris root, and isomer of ionone. A colorless liquid, d.0.939, $b._{16mm.}$ 144, slightly soluble in water, soluble in alcohol or ether. Used in perfumery, for manufacturing violet essence.

ironpentacarbonyl. See *iron carbonyl.*

ironperiod. The central part of the third period in the periodic system, consisting of the elements: Cr, Mn, Fe, Co, Ni, and Cu. All form colored salts and ions, and have two or more series of compounds.

irradiation. Exposure to ultraviolet radiation, either the small fraction of solar rays not absorbed by the atmosphere or those produced by a mercury vapor lamp. The most active rays have a wavelengths of 250–300 mμ. Sterols exposed to these rays become active, and exert a vitamin-like effect; *e.g.* ergosterol exposed for 22.5 seconds to 265 mμ, absorbing a total of 3.2×10^{13} quanta (which corresponds with 3.2×10^{13} activated molecules or 2×10^{-3} gram) forms sufficient vitamin D to affect a rat suffering from rickets (Fosbinder, Daniels and Steenbock). I. is measured by Eder's solution, q.v.

irregular. Not according to rule.

irreversible. Describing a reaction which cannot be reversed, and usually proceeds to completion in one direction.

irritant. (1) An agent which produces inflammation or irritation; as, mustard oil, cantharides, croton oil, phenol. Cf. *lacrimatory gases.* (2) The metals Ni, Mn, Cr, W and Si, which in iron alloys are i. to carbon.

Irvine, Sir James Colquhoun. 1887– . A British chemist noted for research on carbohydrates.

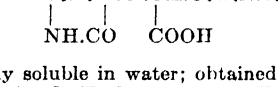
isabellin. An alloy of Al, Mn and Cu; used for standard electrical resistances.

isaconic acid. Itaconic acid.

isaconitic acid. $C_6H_6O_6$ = 174.0. Isoaconitic acid. The tribasic acid $HOOC.CH:CH.CH.(COOH)_2$.

isamatic. Isamic.

isamic acid. $C_{16}H_{13}N_3O_4$ = 311.1. Red prisms, m.164.5.



slightly soluble in water; obtained from isatin.

isanic acid. $C_{14}H_{20}O_2$ = 220.15. The fatty acid, $C_{13}H_{19}COOH$. Colorless crystals, m.41, from the oil of tsano nuts.

isaphenic acid. $C_{17}H_{11}NO_3$ = 277.1. White leaflets, m.295, insoluble in benzene or chloroform, soluble in acetic acid.

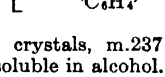
isapiol. An isomer of apiol, $C_{12}H_{14}O_4$.

isarol. Ammonium sulfoichthyolate obtained by distilling bituminous slate, sulfiting the distillate and combining it with ammonia. It forms a dark-brown sticky liquid, soluble in water and used as an antiseptic, analgesic, and antipuretic.

isatan. $C_{16}H_{12}O_3N_2$ = 280.11. Hydroxybioxindol.

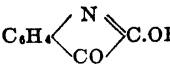
isatic acid. $C_8H_7NO_3$ = 165.1. Isatinic acid, aminophenylglyoxylic acid, amidobenzoyl formic acid. $NH_2.C_6H_4CO.COOH$. A white powder, decomp. on heating, slightly soluble in water or alcohol.

isatide. $C_{16}H_{12}N_2O_4$ = 296.11. Dihydroxybioxindol, isatin-*3.3'*-pinacol.

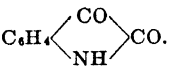


Colorless crystals, m.237; insoluble in water, slightly soluble in alcohol.

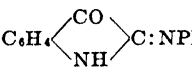
isatin. $C_8H_5O_2N$ = 147.1. 2-hydroxy-3-pseudoindolone, pseudoindogen oxide, o-aminobenzoylformic acid, lactam of isatinic acid.



Red needles, m.198, soluble in hot water or alcohol; used in the manufacture of dyestuffs. **β-imino-** Imesatin. **pseudo-** Indoldione. The lactim form of isatin:



i. anilide. $C_{14}H_{10}N_2$ = 222.17.

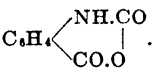


m.120. **i. chloride.** C_8H_4ONCl = 165.5. Brown needles, decomp. 180, insoluble in water, soluble in alcohol; used in the manufacture of dyestuffs.

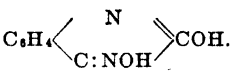
isatinic acid. Isatic acid.

isatogenic acid. $C_9H_5O_4N$ = 191.05. The bicyclic compound  . Cf. *diisatogen.*

isatoic acid. $C_8H_7NO_4$ = 181.09. *N*-carboxyanthranilic acid, anthranyl carboxylic acid:  . **i. anhydride.** $C_8H_5NO_3$ = 163.09. Benzoxazinedione.



isatoxime. $C_8H_6O_2N_2$ = 162.1. Nitrosoindoxyl. The bicyclic compound



Yellow needles, m.202 (decomp.), slightly soluble in water, soluble in alcohol, ether, or bases; used in dyestuff manufacture. **pseudo-** The bicyclic compound  .

Yellow crystals, m.200.

isatropic acid. $C_{18}H_{16}O_4$ = 296.12. *1.2.3.4*-Tetrahydro-*1*-phenyl-*1.4*-naphthalene dicarboxylic acid. A solid, m.237, insoluble in ether, soluble in water or alcohol. Cf. *atropic acid.*

isatropylcocaine. $C_{19}H_{22}O_4N$ = 328.3. An alkaloid derived from coca leaves.

isazol. C_3H_3ON = 69.1. The heteroatomic pentacycle:  . An isomer of oxazole.

ischidrotic. An agent that causes retention or suppression of perspiration.

isentropic. Involving no change in entropy.

iserite. A sand rich in titanium and iron.

isethionic acid. $C_2H_6O_4S$ = 126.1. Ethylenehydrinsulfonic acid, oxyethylsulfonic acid, *2*-hydroxyethane sulfonic acid. The hydroxy acid, $CH_2OH.CH_2.SO_2OH$, from which taurine is derived. A syrupy liquid. With oleic acid it forms detergents, igepons.

ishkyldite. $H_{20}Mg_{15}Si_{11}O_{47}$. A structural variety of chrysotile found in the Volga district.

isindazole. Isoindazole.

isinglass. (1) Fish glue, ichthyocolla. A pure gelatin derived from the swimming bladders of fishes (*Acipenser* species); used as an adhesive and clarifying agent. (2) Mica in thin sheets, used for windows in ovens and in asbestos goggles. **Japanese-** Agar. **vegetable-** Agar.

Isle of Wight diamond. A quartz crystal from the Isle of Wight, sometimes used as a gem.

Isle Royal greenstone. Chlorastrolite.

iso- A prefix derived from the Greek "equal," which indicates a similarity. In organic compounds it is generally abbreviated to *i-*; listed under the corresponding normal compound. Cf. *isomery.*

isoaconitic. Isaconitic.

isoallyl. Propenyl.

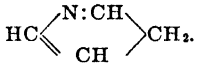
isoamoxy. The monovalent radical, $Me_2CH(CH_2)_2O$—.

isoamyl. The radical $Me_2CH.CH_2.CH_2$—. See *i-amyl.*

isoamylene. Pental.

isoanthraflavic acid. $C_{14}H_8O_4$ = 240.13. 2.7-dihydroxyanthraquinone. A yellow crystalline solid, m.330; soluble in alcohol, insoluble in water.

isoazole. C_4H_5N = 67.1. Isopyrrole. The pentatomic heterocyclic compound



isobar. (1) A line drawn through points of a map or chart which have the same barometric pressure at a given time. (2) Any one of a set of isobars, q.v.

isobaric. Pertaining to atoms having the same weight. Cf. *isobars.* **i. isotopes.** Those atomic species which have the same atomic weights and the same atomic numbers. Cf. *isobars, isotopes.*

isobars. (1) Any two or more atomic species having the same atomic weight; they may or may not have the same atomic number. (2) A line in a diagram or map showing equal barometric pressures.

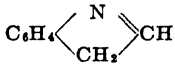
TABLE OF ISOBARS

A. Having different atomic numbers:
- At. Weight 40: 18-A, and 20-Ca.
- At. Weight 70: 30-Zn and 42-Ge.
- At. Weight 74: 32-Ge and 24-Se.
- At. Weight 78: 34-Se and 36-Kr.
- At. Weight 80: 34-Se and 36-Kr.
- At. Weight 82: 34-Se and 36-Kr.
- At. Weight 86: 36-Kr and 38-Sr.
- At. Weight 112: 48-Cd and 50-Sn.
- At. Weight 114: 48-Cd and 50-Sn.
- At. Weight 115: 49-In and 50-Sn.
- At. Weight 116: 48-Cd and 50-Sn.
- At. Weight 121: 50-Sn and 51-Sb.
- At. Weight 124: 50-Sn and 54-Xe.
- At. Weight 126: 52-Te and 54-Xe.
- At. Weight 128: 52-Te and 54-Xe.
- At. Weight 130: 52-Te and 54-Xe.
- At. Weight 136: 54-Xe and 56-Ba.
- At. Weight 142: 58-Ce and 60-Nd.
- At. Weight 206: 81-ActC″, 82-ActPb, and RaG.
- At. Weight 208: 81-ThC″ and 82-ThD.
- At. Weight 210: 81-RaC″, 82-ActB, 82-RaD, 83-ActC, 83-RaE, 84-RaF, and 84-ActC′.
- At. Weight 212: 82-ThB, 83-ThC, and 84-ThC′.

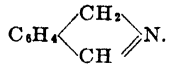
At. Weight 214: 82-RaB, 83-RaC, 84-RaC', and 84-ActA.
At. Weight 218: 84-RaA and 86-ActEm.
At. Weight 222: 86-Rn and 88-ActX.
At. Weight 226: 88-Ra, 89-Act, and 90-RaAc.
At. Weight 228: 88-MsThI, 89-MsThII, and 90-RaTh.
At. Weight 230: 90-Io, 90-Uy, and 91-Pa.
At. Weight 234: 90-Ux_1, 91-Ux_2, 91-Uz, and 92-UII.

B. Having the same atomic number (isobaric isotopes):
At. Wt. 206, At. No. 82: Act.Pb, RaG.
At. Wt. 210, At. No. 82: Act.B, RaD.
At. No. 83: Act. C, RaE.
At. No. 84: RaF, ActC', etc.

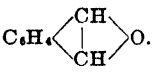
isobenzazole. C_8H_7N = 117.1. **1-** Indolenine, ψ-indole.



2-ψ-isoindole.



isobenzofuran. C_8H_6O = 118.1. Isocoumarone.

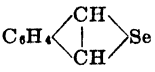


dihydroketo- Phthalide. **i. dione.** Phthalic anhydride.

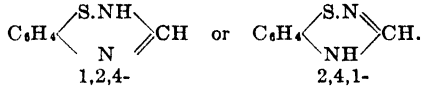
isobenzofurandione. Phthalic anhydride.

isobenzofuranone. Phthalide.

isobenzoselenofuran. C_8H_6Se = 181.2.

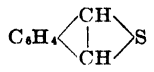


isobenzothiodiazine. The heterocyclic compounds:



1,2,4- 2,4,1-

isobenzothiofuran. C_8H_6S = 134.1.



isobutane. See *i-butane.*

isobutenyl. The monovalent radical, $Me_2C{:}CH—$, from *i*-butylene.

isobutoxy. The monovalent radical, $Me_2.CH.CH_2O—$, from *i*-butyl alcohol.

isobutyl. The monovalent radical, $Me_2.CH.CH_2—$, from *i*-butane.

isobutyryl. The monovalent radical, $Me_2C.CHCO—$, from *i*-butyric acid.

isocarb. A line in a diagram showing equal carbon contents.

iso-catalysis. See isomeric *catalysis.*

isocetic acid. Pentadecanoic acid.*

isocholine. Amantine (2).

isochore. The curve obtained by plotting the pressure and temperature of a gas at constant volume. See *reaction* isochore.

isochromatic. Having the same color throughout.

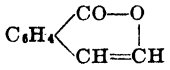
isochrone. A line joining points of equal stability (expressed as log gelation time) on triangular diagrams; used to express the stability of colloids.

isochronism. The characteristic of (1) occurring at the same intervals of time; (2) lasting for equal periods of time.

isochronous. Occurring in the same period of time at equal intervals.

isocorybulbine. $C_{21}H_{21}O_4N$ = 351.3. An alkaloid from *Corydalis cava.*

isocoumarin. $C_9H_6O_2$ = 146.1.



isocrotonic acid. $C_4H_6O_2$ = 86.046. *cis-*α-butenic acid, β-crotonic acid, q.v. A colorless liquid, d.1.0252, m.14.6, decomp. 171.

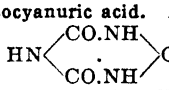
isocyanate. Carbimide. A compound containing the monovalent —N=C=O radical.

isocyanide. Isonitrile, carbylamine. A compound containing the monovalent —N=C or —N≡C radical.

isocyanin. A member of a group of dyes used as photographic sensitizers. Cf. *carbocyanin.*

isocyano. The monovalent radical, C:N—, or C⋮N—. Cf. *isocyanide.*

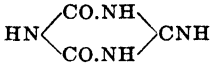
isocyanuric acid. A heterocyclic ring compound:



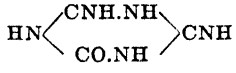
Cf. *cyanuric acid.*

isocyanurimide. The heterocyclic ring compounds:

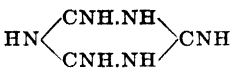
$C_3H_4O_2N_4$ = 128.05. **monoimide** or melanuric acid,



$C_3H_5ON_5$ = 127.08. **diimide** or isoammelidic acid,

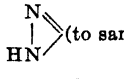


$C_3H_6H_6$ = 126.09. **triimide** or isomelamine,

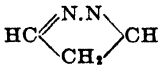


isocyclic. (1) Describing a closed chain compound containing the same number of atoms as the compound with which it is isocyclic, *e.g.*, the benzene ring (6 carbon atoms) is isocyclic with the pyridine ring (5 carbon atoms and 1 nitrogen atom). (2) Sometimes incorrectly used for homocyclic.

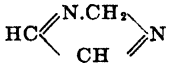
isodiazo. The trivalent radical,



isodiazole. $C_3H_4N_2$ = 68.2. **1.2-** Isopyrazol. The pentacyclic compound



1.3- Isoimidazol. The pentacyclic compound



isodigitoxigenin. $C_{23}H_{34}O_4$ = 374.2. Lustrous, white crystals, m.271, from digitalis.

isodimorphism. Isomorphs which have two crystalline forms in common. Cf. (*isomorphism*).

isodisperse. Dispersable in solutions having the same pH value.

isodulcite. Rhamnose.

isodurene. $C_{10}H_{14}$ = 134.11. *1.2.3.5*-Tetramethyl benzene, $C_6H_2Me_4$. A colorless liquid, d.0.896, m. −24, b.197. **amino-** Isoduridine.

isodurenol. $C_{10}H_{14}O$ = 150.1. *2.3.4.6*-Tetramethyl phenol, C_6HMe_4OH. White crystals, m.80, b.240.

isoduridine. $C_{10}H_{15}N$ = 149.13. *2.3.4.6*-Tetramethyl aniline, $Me_4C_6H.NH_2$. White crystals, d.0.978, m.23, b.255.

isodurylic acid. $C_{10}H_{12}O_2$ = 164.09. Trimethylbenzoic acid. α- or *3.4.5*-. Needles, m.215. β- or *2.4.6*-. White scales, m.152. γ- or *2.3.5*-. White plates, m.147; all are very slightly soluble in water.

isodynamic. (1) Having equal force. (2) Generating or liberating the same amount of energy (expressed in calories); *e.g.*, a group of isodynamic food materials.

isoelectric point. The point of electric neutrality or zero potential; hence the *p*H value at which a substance (protein, etc.) is neutral. Below or above this *p*H-value it acts either as a base or acid, respectively. In the case of colloids, coagulation occurs at or near this hydrogen ion concentration. Cf. *gelation*, *casein*. Typical values:

pH	*Protein*
4.4....	serum globulin
4.6....	ovalbumin
4.7....	gelatin, casein, serum albumin
5.3....	fibrinogen
5.5....	edestin, serum albumin pseudo globulin
6.8....	hemoglobin, oxyhemoglobin
8.1....	globin

isoelectronic. Describing atoms which resemble one another in all but mass and nuclear charge. The spectra of such atoms are thus simply related. Cf. *isostere*, *ionic number*.

isoerucic acid. Brassidic acid.

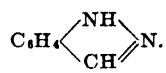
isoferulic acid. Hesperitinic acid.

isogamous. Having male and female gametes which are morphologically identical.

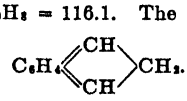
isohexane. See *i-hexane*.

isohydric. Describing a neutralization, during which the pH value does not change. Cf. *buffer*. Hence a set of solutions of similar H^+ concentration. **homo-** See *homoisohydric*.

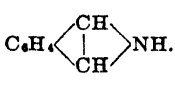
isoindazole. $C_7H_6N_2$ = 117.1. 1.2-benzodiazole, benzopyrazole.



isoindene. C_9H_8 = 116.1. The hydrocarbon:



isoindole. C_8H_7N = 117.1. 2-Benzazole.



dihydro- Xylenimine. **pseudo-** *2*-Isobenzazole. **i. dione.** Phthalimide.

isoindoledione. Phthalimide.

isoindyl. The monovalent radical, C_8H_6N—, derived from isoindole. There are four isomers.

isokom. A line drawn through a diagram to connect points of equal viscosity.

isolate. To separate or prepare an element or a compound in a pure condition.

isoleucine. $C_6H_{13}NO_2$ = 131.11. β-methylethyl-α-aminopropionic acid, *2*-amino-*3*-methylpentanoic acid*. The amino acid $NH_2.CH(CHEtMe)COOH$. *dl*- Rhombic or monoclinic plates, m.292, slightly soluble in water. *d*- Greasy leaflets, m.283.

isoleucyl. The monovalent radical, $MeCH_2.CHMe.CHNH_2.CO$—.

isologue, isolog. A member of a series of compounds of similar structure, but having different atoms of the same valency and usually of the same periodic group.

isologous series. A set of isologs; *e.g.*, the pentacyclic compounds fall into three isologous types, namely:

furan type, as C_4H_4O, C_4H_4S, C_4H_4Se.
pyrrole type, as C_4H_5N, C_4H_5P, C_4H_5As.
pentamethylene type, as C_5H_5, C_4H_5Si.

Other examples of isologous series are:
Water: H_2O, M_2O, R_2O, M_2S, M_2Se, M_2Te.
Ammonia: NH_3, NR_3, PR_3, AsR_3, BiR_3.
Hydroxylamine: R_2NOH, R_2POH, R_2IOH, R_2TlOH.
Methane: CH_4, CR_4, SiR_4, SnR_4, PbR_4.
Carbinol: $R_3C.OH$, R_3SiOH, R_3SnOH, R_3SOH.
Ammonium hydroxide: R_4NOH, R_4POH, R_4AsOH, R_4WOH.
Formaldehyde: H_2CO, R_2CO, R_2SiO, R_2SO, R_2TeO.
Formic acid: H.CO.OH, R.CO.OH, R.SiO.OH, R.SO.OH, R.SnO.OH.

isomalic acid. See *malic acid*.

isomer. One of a pair of or more compounds having the same composition, but different properties. Cf. See *metamers*, *dimers*, *polymers*.

isomeric. Pertaining to isomerism.

isomeride. One of a set of compounds which have similar structural groups but not necessarily the same number of atoms; thus, anabasine is an *isomer* of nicotine, but nornicotine is an *isomeride*.

isomerism. The phenomenon shown by a compound which has the same percentage composition as another compound, yet differs in the relative position of the atoms within the molecule, from which result different physical and chemical properties. There are three types of simple isomerisms:

(a) Structural isomerism; as, *chain*-isomerism (propane and isopropane), *place* isomerism (1-chloropropane and 2-chloropropane), *meta*-isomerism (Δ^1-butylene and Δ^2-butylene), *ring*-isomerism (o-, m-, p-, v-, s-, and a-position).

(b) Geometrical isomerism; as, *cis-trans*-isomerism, *syn-anti*-isomerism.

(c) Stereo-isomerism: or isomerism due to the presence of an asymmetric carbon atom which gives optically active d-, and l-compounds. **dynamic-** Tautomerism.

isomery. Isometry. The general phenomena of isomerism, tautomerism, and pseudomerism of organic compounds. See *coordination theory* and *Werner's theory*. Four factors determine the types of isomery, namely:

P = the position, or arrangement of the atom within the molecule.
T = the type of the resulting compound.
V = the valency of the principal atom.

L = the linkage or connection between the atoms.

Accordingly an organic molecule may show the following differences, (d), or similarities, (—),:

P	T	V	L	
d	—	—	—	= isomerism and stereoisomerism.
d	d	—	—	= metamerism } dynamic
—	d	—	d	= desmotropism } isomerism.
d	d	—	d	= tautomerism }
—	—	d	—	= pseudomerism.

Classification and examples:

1. Isomerism
   (a) structural isomerism

$CH_3.CH_2.CH_2.CH_3$ and $CH_3.CH(CH_3).CH_3$

nuclear or chain-isomerism

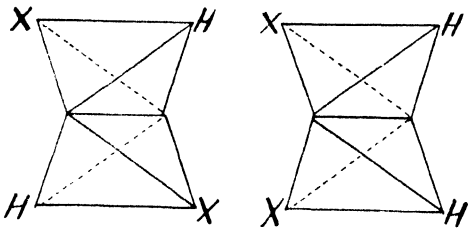
$CH_3.CH_2.CH_2Cl$ and $CH_3CHCl.CH_3$

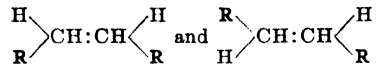
position or place-isomerism

$CH_3.CH_2.CH:CH_2$ and $CH_3.CH:CH.CH_3$

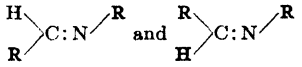
metamerism or meta-isomerism

   (b) geometrical isomerism



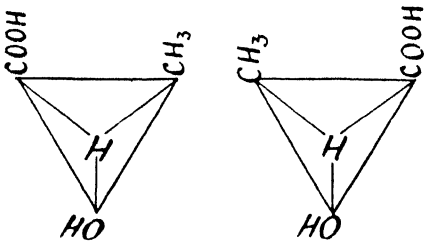


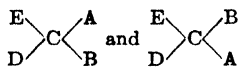
(cis-isomerism and trans-isomerism)



(anti- and syn-isomerism)

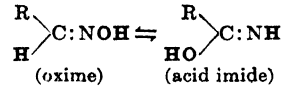
   (c) stereo- or optical-isomerism:



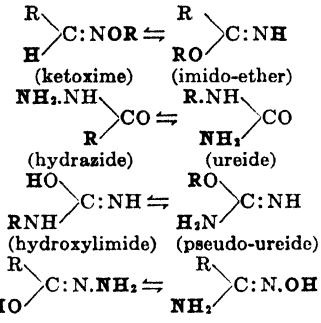


(A, B, D, and E are different atoms or radicals)

2. Metamerism: The type of compound and the position of the atoms change, but the linkage and valency remain the same.



(oxime) (acid imide)



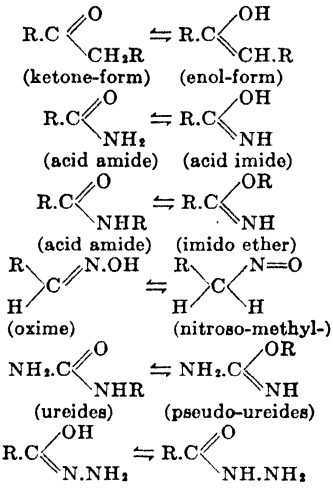
(ketoxime) (imido-ether)

(hydrazide) (ureide)

(hydroxylimide) (pseudo-ureide)

(hydrazonic acid) (amidoximes)

3. Desmotropism: Linkage of atoms and type of compound change, but position and valency remain the same.



(ketone-form) (enol-form)

(acid amide) (acid imide)

(acid amide) (imido ether)

(oxime) (nitroso-methyl-)

(ureides) (pseudo-ureides)

(hydrazonic acid) (acid hydrazide)

4. Tautomerism: Linkage and position of atoms, as well as the type of compound changes, but valency remains the same.

$R.O.N:O \rightleftharpoons R.NO_2$
(nitrite) (nitro-compound)

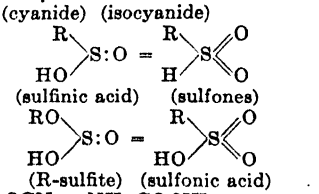
$R.O.C{:}N \rightleftharpoons R.N:C:O$
(cyanate) (tauto-cyanate)

$R.O.N{:}C \rightleftharpoons R.C:N:O$
(fulminate) (iso-cyanate)

5. Pseudomerism: The valency of one atom changes:

$R.OC{:}N$ $R.C{:}N.O$
(cyanate) (isocyanate)

$R.C{:}N = R.N{:}C$
(cyanide) (isocyanide)



(sulfinic acid) (sulfones)

(R-sulfite) (sulfonic acid)

$NH_4.OCN = NH_2.CO.NH_2$
(ammonium carbamate) (urea)

6. Coordination isomerism: The different arrangement of radicals around the two nuclei in combination; as,

$[Cr(NH_3)_6].[Cr(SCN)_6]$ and
$[Cr(NH_3)_4(SCN)_2].[Cr(NH_3)_2(SCN)_4]$

7. Hydration isomerism: The formation of aquo compounds from ionisable halides in the nucleus; as,

$$\left[\begin{matrix}H_2O. & .H_2O\\ H_2O.\ Cr & .H_2O\\ H_2O. & .Cl\end{matrix}\right]Cl_2.H_2O$$

and

$$\left[\begin{matrix}H_2O. & .H_2O\\ H_2O.\ Cr & .Cl\\ H_2O. & .Cl\end{matrix}\right]Cl.2H_2O$$

8. Coordination polymerism; as, $[Cr(NH_3)_3(SCN)_3]$ and $[Cr(NH_3)_6(SCN)_3]_3.[Cr(SCN)_6]_2$, its polymer

isometric. Of the same dimension. i-crystal. See *crystal systems.*

isometry. Isometry.

isomorph. One of a set of similarly-shaped crystals, having different compositions, *e.g.*, Na_2SO_4, Na_2SeO_4.

isomorphic. Pertaining to similar crystalline forms.

isomorphism. The crystallization of different compounds in the same form. These elements and radicals can replace one other without causing any essential alteration in crystalline form. On this basis the elements are classified into eleven groups of *isomorphs*, q.v.

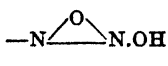
isomorphous mixture. A mixture of isomorphs usually found in minerals and represented in the formula in parenthesis; as, $(Fe,Mn)CO_3$, which indicates that Mn and Fe are interchangeable and behave as the equivalent weight of either element.

isomorphs. The elements arranged in the order of periodic groups and according to their isomorphism:

1. Cl, Br, I, F, Mn; as $KMnO_4$ and $KClO_4$.
2. S, Se, Te, as sulfides and tellurides; Cr, Mn, Te, as K_2RO_4; As, Sb, as MR_2 (glances).
3. As, Sb, Bi; Te (as element), P, V, (in salts); N, P (in organic compounds).
4. K, Na, Rb, Cs, Li; Tl, Ag.
5. Ca, Sr, Ba, Pb; Fe, Mn, Zn, Mg; Ni, Co, Cu; Ce, La, Pr, Nd, Er, Y, with Ca; Cu, Hg, with Pb. Cd, Be, In, with Zn; Tl, with Pb.
6. Al, Fe, Cr, Mn; Ce, U, in oxides M_2O_3.
7. Cu, Ag (as monovalent compounds), Au.
8. Pt, Ir, Pd, Rh, Ru, Os; Au, Fe, Ni; Sn, Te.
9. Cd, Si, Ti, Zr, Th, Sn; Fe, Ti.
10. Ta, Nb.
11. Cr, Mo, W.

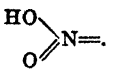
On the basis that i. have similar formulas in their compounds, some atomic weights (as, of vanadium) have been determined. Cf. *isodimorphism.*

isonitramine. The monovalent radical,



isonitrile*. Isocyanide.

isonitro. The divalent group



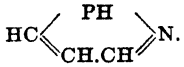
Cf. *acinitro compound.*

isonitroso. Oximido. The divalent group >N.OH.

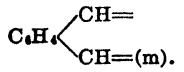
isontic. Being equal. Applied or relating to any line or surface points that are equal in some respects; as, isobar, isotherm.

isopentane. See *i-pentane.*

isophophazol. C_3H_4NP = 85.1. The heterocyclic compound



isophthalal. The tetravalent group



isophthalidene. Isophthalal.

isopral. $C_2H_3OCl_3$ = 163.44. Trichloro-*i*-propanol, $CCl_3.CMeH.OH$. White prisms, m.49, soluble in water, alcohol or ether; a hypnotic.

isoprene. C_5H_8 = 68.1. 2-methylbutadiene (1,3). $CH_2:CMe.CH:CH_2$. A distillation-product of india rubber, d.0.679, m. −120, b.34. It is the unit structure of terpenes, carotenoids, phytol and rubber. Cf. *duprene.* **di-** The geraniol and linalool chain. **tri-** The farnesol and nerolidol chain. Cf. *vinyl compounds.*

isopropanol. C_3H_8O = 60.1. Isopropyl alcohol, 1-methyl ethanol, $Me_2CH.OH$. A colorless liquid, d.0.780, b.82, soluble in water, alcohol or ether; used as germicide, denaturant and in perfumery.

isopropenyl. The monovalent radical, $CH_2:-CMe-$ from isoprene.

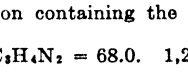
isopropoxy. The monovalent radical, $Me_2CH.O-$ from *i*-propyl-alcohol.

isopropyl. The monovalent radical, Me_2CH-. From *i*-propane. **i. alcohol.** Isopropanol. **i. benzene.** Cumene. **i. carbinol.** Butanol-2. **i. ether.** $C_6H_{14}O$ = 102.11. $(Me_2CH)_2O$. Colorless liquid, d.0.7247, b.68.7, used as solvent for waxes, fats and resins. **i. metacresol.** Thymol. **i. toluene.** Cymene.

isopropylidene. The bivalent radical, $Me_2C=$ from *i*-propane.

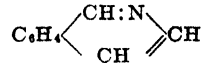
isopyknoscopy. Determination of the end-point of a volumetric reaction from the specific gravity of the solution containing the reactants. Cf. *pyknometer.*

isopyrazole. $C_3H_4N_2$ = 68.0. 1,2-isodiazole.



isopyre. An impure variety of opal, sometimes used as a gem.

isoquinoline. C_9H_7N = 129.1. Leucoline, 2-benzazine.

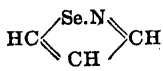


i. alkaloids. Alkaloids (q.v.) derived from 1-benzyl-N-methyl-tetra-hydroisoquinoline; *e.g.*, those of the papaverine, corydine, corydaline, morphine, dicentrine, hydrastine, cryptopine, berberine and protopine groups.

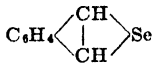
isorhamnetin. A glucoside from the pollen of ragweed and bulrush.

isorheic. A set of liquids which have equal viscosity or fluidity. Compare *rhe.*

isoselenoazol. C_3H_3NSe = 132.3. The pentacyclic compound



isoselenonaphthene. C_8H_6Se = 181.0. The heterocyclic compound

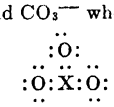


isosmotic. Isotonic; having the same osmotic pressure.

isostere. One of 2 or more atoms or atomic groups having an analogous arrangement of electrons and similar physical properties. Thus:

(a) molecules: CO_2 and N_2O in which the electrons are arranged in two octets:

(b) ions or radicals: NO_3^- and CO_3^{--} where the electrons form the octets



(c) atoms and ions: Na and Mg+ with one electron, Ne, Na+ and Mg++ with no electron in the valence shell. Cf. *ionic number, isoelectronic.*

isosteric. Pertaining to similar electronic arrangements. **i. properties.** The physical properties due to electronic arrangements; see *isosterism.*

isosterism. A similarity in the physical properties of elements, ions, or compounds, due to similar electron arrangements. *E.g., isosteres* have:

(a) similar crystalline form; as $NaNO_3$ and $MgCO_3$.

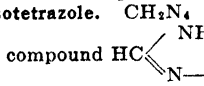
(b) similar boiling point, etc.; as N_2 and CO, or CO_2 and N_2O.

(c) similar spectra; as, Na, Mg+ and Al++; or Ne, Na+ and Mg++.

isotachiol. Silver silicofluoride.

isoteniscope. An instrument for the static determination of vapor pressure from the change in level of a liquid in a U-tube.

isotetrazole. CH_2N_4 = 70.3. The pentatomic compound



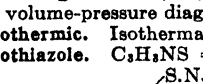
isotherm. An expression of equal temperature for a number of points, systems, or phases. Cf. *reaction isotherm.*

isothermal. Having a uniform or constant temperature. **i. change.** The change of volume of a gas which takes place under such conditions that the temperature remains constant. Cf. *adiabatic.* Thus any heat gained passes out of the system. **i. line.** Isotherm.

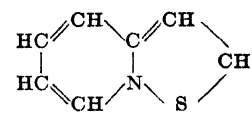
isothermals. A group of curves which pass through regions having the same temperature at a given time; as, on a climatic chart or a volume-pressure diagram. See figure.

isothermic. Isothermal.

isothiazole. C_3H_3NS = 85.1. The pentacyclic compound



isothiazolopyridine. C_7H_7NS = 137.1.



isothiocyanate. Sulfocarbimide. A compound of the type R.SNC. Cf. *mustard oil.*

isothyanic acid. HSNC = 59.1. Sulfocarbimide. HS.N≡C. It yields isothiocyanates.

isothiocyano. The monovalent radical, —N:C:S.

isotoma. The dried herb *Isotoma longiflora*, a Lobeliaceae of the East and West Indies.

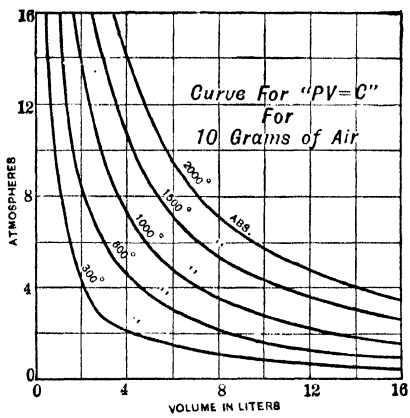
isotomine. An alkaloid from isotoma.

isotonic. (1) Isosmotic. (2) Describing a solution which has the same osmotic pressure as blood serum. Cf. *hypertonic, hypotonic.* **i. salt solution.** Normal *saline.* **i. water.** A natural water: the sum of its mineral constituents amounts to about 300 millimols per liter, which corresponds with an osmotic pressure of 7.7 atm., and a freezing point depression of −0.57°C. If lower, the water is *hypotonic;* if higher, *hypertonic.*

isotope. Any one of a number of atomic species differing in atomic weight, but having the same atomic number. (1) Originally it indicated radioactive disintegration-products which occupied an identical place in the periodic system; thus the isotopes of lead (atomic number 82) and their weights are:

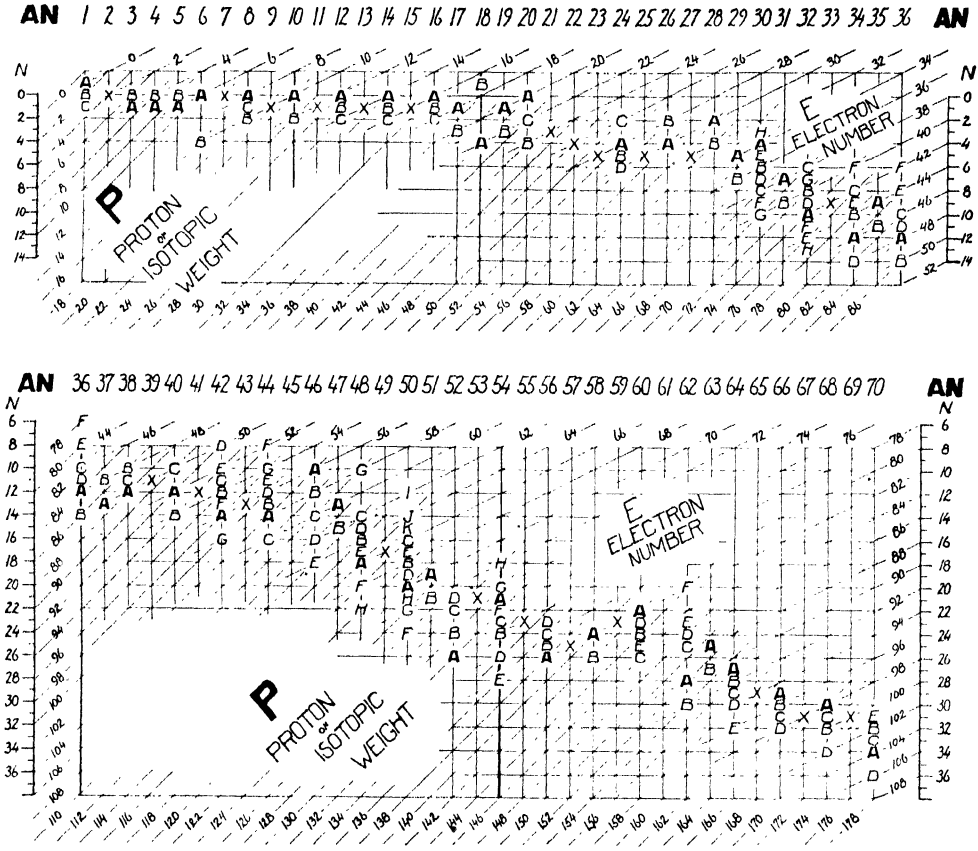
lead from actinium	206
lead from radium	206
lead from thorium	208
actinium B	210
radium D	210
thorium B	212
radium B	214

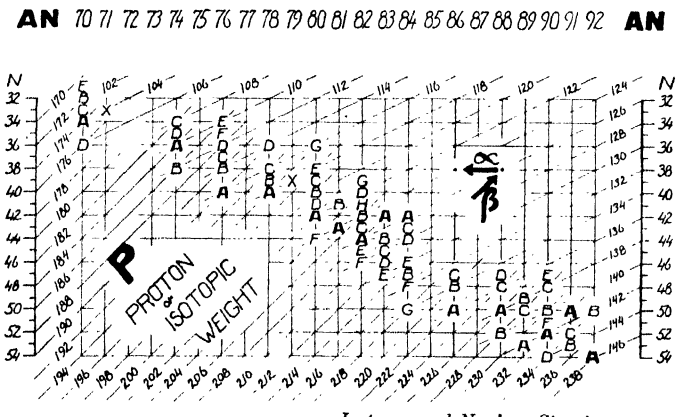
(2) The term now applies to all other elements which consist of two or more atomic species as



Isothermals.

revealed by their high-frequency or mass spectra; *e.g.*, chlorine as we know it is made up of the isotopes Cl^{35} and Cl^{37}, and its atomic weight of 35.5 is the resultant of the isotopic weights 35 and 37. I. are determined from (a) mass spectrum, q.v. or (b) the band heads of molecular spectra. **heterobaric- I.** of different atomic





The order of abundance of isotopes is shown by the letters A, B, C, etc. X indicates that no isotopes are known.

Nuclear composition is shown by

AN = atomic number or number of positive charges.
P = isotopic weight or number of protons.
E = electron number or number of negative charges.
N = neutron number or number of neutrons.

The following relations exist:

$AN = P - E$ and $N = P - 2AN$.

ISOTOPES

Atomic number		*Isotopic weight**
1	hydrogen	1, 2 (3)
3	lithium	7, 6.
4	beryllium	9, 8
5	boron	11, 10
6	carbon	12, 13
7	nitrogen	14, 15 (16)
8	oxygen	16, 18, 17
10	neon	20, 22, 21
12	magnesium	24, 25, 26
14	silicon	28, 29, 30
16	sulfur	32, 33, 34
17	chlorine	35, 37
18	argon	40, 36
19	potassium	39, 41
20	calcium	40, 44, 42
22	titanium	48, 50
24	chromium	52, 53, 50, 54
26	iron	56, 54
28	nickel	58, 60
29	copper	63, 65
30	zinc	64, 66, 68, 69, 65, 70, 63
31	gallium	69, 71
32	germanium	74, 72, 70, 73, 75, 76, 71, 77
34	selenium	80, 78, 76, 82, 77, 74
35	bromine	79, 81
36	krypton	84, 86, 82, 83, 80, 78
37	rubidium	87, 85
38	strontium	88, 86, 87
40	zirconium	90, 94, 92, 96
42	molybdenum	90, 96, 95, 92, 94, 97, 100
44	ruthenium	102, 101, 104, 100, 99, 96, 98
46	palladium°	102, 104, 106, 108, 110
47	silver	107, 109
48	cadmium	114, 112, 110, 113, 111, 116
50	tin	120, 118, 116, 124, 119, 117, 122, 121, 112, 114, 115
51	antimony	121, 123
52	tellurium	130, 128, 126
54	xenon	129, 132, 131, 134, 136, 128, 130
56	barium	138, 137, 136, 135
58	cerium	140, 142
60	neodymium	142, 144, 146
62	samarium	152, 154, 149, 148, 147, 144
63	europium	151, 153
64	gadolinium°	155, 156, 157, 158, 160
66	dysprosium	161, 162, 163, 164
68	erbium	166, 168, 167, 170
70	ytterbium	174, 172, 173, 176, 171
74	tungsten	184, 186, 182, 183
76	osmium	192, 190, 189, 188, 186, 187
78	platinum	196, 195, 194, 192
80	mercury	202, 200, 199, 198, 201, 204, 196
82	lead	208, 206, 207, 204, 209, 210, 203, 205

81–92 See radioactive series.

*Arranged in the order of the intensities of the mass-spectrum line, which indicates the order of abundance. Those in parenthesis are uncertain; ° indicates order unknown. See figure, also.

---

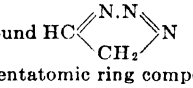
weights: as, the products of different disintegration series. Cf. *radioactive elements.* **isobaric-** I. of the same atomic weight, produced by expulsion successively of an alpha- and a beta-particle in a different order; as RaD and RaC_2. Cf. *heterotopes, isobars, packing fraction.*

isotopic. Pertaining to an element which occurs as more than one atomic species. **i. number.** The number, N, which probably indicates the number of neutrons in the atomic nucleus: N = (AW) − 2(AN) or IW − 2(AN) where AW is the atomic weight, IW the isotopic weight and AN the atomic number. **i. reaction.** Chemical change which involves isotopes; as,

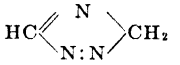
$$H^1H^2O + NH^1_3 \rightleftharpoons H^1_2O + NH^1_2H^2$$

i. weight. I.W. The atomic weight of an isotope. This was considered to be an integer, but more accurate measurements with the mass spectrograph indicate small deviations from whole numbers. See *packing fraction.*

isotriazole. $C_2H_3N_3$ = 69.2. **1.2.3-** The pentatomic compound



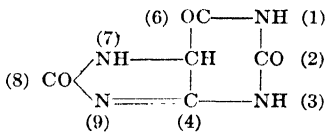
1.2.4- The pentatomic ring compound



isotropic. Having similar properties in every direction. Cf. *anisotropic.*

isourea. Pseudo-*urea.*

isouric acid. (1.3.7)-purine-2.6.8-trione.



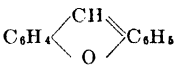
isovaleric acid. See *i-valeric acid.* **amino-** Valine.

isovaleryl. The monovalent radical, $Me_2CH.CH_2.CO$— from *i*-valeric acid.

isovaline. $C_5H_{11}O_2N$ = 117.09. Amino-*i*-valeric acid, α-amino-α-methyl butyric acid. An amino acid (q.v.), m.217.

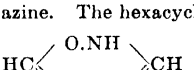
isovanillin. $C_8H_8O_3$ = 152.1. 3-hydroxy-4-methoxybenzaldehyde, 3-hydroxy-anisaldehyde. Colorless crystals of aromatic odor, m.116.

isoxanthene.

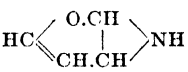


isoxazine. C_4H_5ON = 83.05.

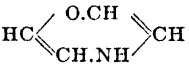
1.2- 1.2[2]-oxazine. The hexacyclic compound



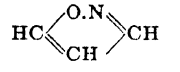
1.3- 1.3.[3]-oxazine. The hexacyclic compound



1.4- 1.4.[4]-oxazine. The hexacyclic compound

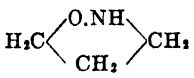


isoxazole. C_3H_3ON = 69.1 Furo(a)-monazole. The pentacyclic compound:

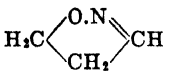


dihydro- Isoxazoline. **tetrahydro-** Isoxazolidine.

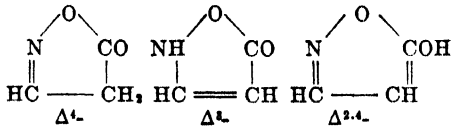
isoxazolidine. C_3H_7ON = 73.1. The pentacyclic compound



isoxazoline. C_3H_5ON = 71.1. The pentacyclic compound



isoxazolone. $C_3H_3O_2N$ = 85.1. The pentacyclic compounds:



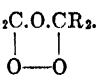
isoxazolyl. The monovalent radical, C_3H_2ON—, derived from isoxazole; five isomers.

isozonide. A more stable rearrangement-product of an ozonide, with the typical formula $R_2C.O.OC.R_2$. Cf. *isozonide, ozozonide.*

isoxylic acid. $C_9H_{10}O_2$ = 150.07. *p*-Xylic acid, *2.5*-dimethyl benzoic acid, $Me_2C_6H_3.COOH$. White needles, m.132, b.268, soluble in alcohol.

isozingiberene. $C_{15}H_{24}$ = 204.15. *1.7*-Dimethyl-*4*-propenyl octahydronaphthalene. An isomer of zingiberene.

isozonide. A stable rearrangement-product of an ozonide, having the formula



Cf. *isozozonide, ozonide.*

Issoglio test. A test for water-soluble or steam volatile substances characteristic of rancid fats.

itaconic acid. $C_5H_6O_4$ = 130.1. 2, 3-dicarboxypropene, methylenebutanedioic acid*, methylenesuccinic acid. $CH_2:C(COOH)CH_2COOH$, m.161; decomp. on further heating. Cf. *fumaric acid, citraconic acid.*

itakolumite. An elastic sandstone from Brazil; used in refractories to minimize thermal fracture.

itamalic acid. $C_5H_8O_5$ = 148.09. $CH_2OH.CH.COOH.CH_2COOH$. A colorless deliquescent solid, m.64 (decomp.), soluble in alcohol or ether. Cf. *citramalic acid.*

-ite. (1) A suffix indicating the salt of an *-ous* acid; *e.g.*, sulfite (sulfurous acid), chlorite (chlorous acid). (2) A common ending to indicate a mineral.

itrol. Silver citrate.

I.U. See *vitamin units.*

-ium. A suffix denoting: (1) the presence of a metal or nonmetal in a salt-forming capacity, cf. *-onium;* (2) a Latin derivation. Cf. *-ilium, -inium;* (3) many elements, generally metals; as, sodium, vanadium.

iva oil. A greenish oil, distilled from the flowering tops of *Achillea* species; used in flavoring extracts.

ivaine. $C_{24}H_{42}O_5$ = 410.2. An alkaloid obtained from *Achillea moschata*, a Compositae.

ivaol. $C_{10}H_{20}O$ = 156.1. An alcohol found in iva oil. A pale, yellow oily liquid of bitter taste, but pleasant odor.

ivory. The bone-like substance from the tusks of animals. **vegetable-** Corajo.

i. **black.** An animal charcoal prepared by calcining the refuse from ivory working; used as a decolorizing agent and filtering medium.

ivy. The climbing plant *Hedera helix*, an Araliaceae; the leaves and berries are used as a stimulant and diaphoretic. **American-** Virginia creeper, woodvine. The bark and twigs of *Vitis hederacea*, a Vitaceae, used as a tonic and astringent. **ground-** Gill-go-over-the-ground. The herb of *Glechoma hederacea*, a Labiatae, used as diuretic and tonic. **poison-** *Rhus toxicodendron.*

iztac chalchihuitl. A white or green variety of Mexican onyx, sometimes used as a gem.

J

J. (1) Abbreviation for joule. (2) Yellow (French = jaune). Cf. *colors*. (3) Abbreviation for gram-equivalent weight.

J-acid. 6-Amino-1-naphthol-3-sulfonic acid. 2, 5-Aminonaphthol-7-sulfonic acid. **J-phenomenon.** The absorption of x-rays by a substance varies discontinuously with a change in wavelength, λ; thus certain λ correspond with the frequency required to excite the characteristic radiation of the adsorber.

jaborandi. See *Pilocarpus*. **j. oil.** A yellowish essential oil distilled from jaborandi leaves, d.0.865, b.220, insoluble in water, soluble in alcohol or ether; used in pharmacy. It contains pilocarpene and ketones.

jaboridine. $C_{10}H_{12}O_3N_2$ = 208.2. An akaloid from jaborandi leaves.

jaborine. $C_{22}H_{32}O_4N_4$ = 416.6. An alkaloid from jaborandi leaves. A yellow syrupy paste, insoluble in water, soluble in alcohol or ether; used as an atropine substitute in ophthalmology.

jaboty fat. A white tallow obtained in Brazil from the kernels of *Erisma calcaratum* and *E. uncinatum*, a Vochysiaceae, m.42; used as a substitute for cacao butter.

jacinth. Hyacinth.

jack. Sphalerite.

jacket. (1) The false wall of a container by which it may be cooled or heated. (2) The iron sheath of a furnace. (3) The brick covering of a boiler.

Jackson, Sir Herbert. 1863–1936. A British chemist noted for his work on chemical research as applied to industry.

jacobine. $C_{18}H_{23}O_5N$ = 333.3. An alkaloid from *Senecio jacobaea*, ragwort, a Compositae. It is considered to be the cause of Winton's disease of grazing animals.

jaconecic acid. $C_{10}H_{16}O_6$ (?). The acid product of the hydrolysis of jacobine.

jade. (1) True j., nephrite, $3MgO.CaO.2SiO_2$. A silica mineral (q.v.) of the amphibole group. A fusible green or flaked gem material from China and Siberia, d.3.0, hardness 6.0; used as an ornament. See *imperial j.* (2) Jadeite, greenstone, $NaAlO_2.2SiO_2$. A silica mineral, (q.v.) of the pyroxene group resembling j.

jadeite. Jade (2).

jaggery sugar. A crude sugar from the date palm. Cf. *gur*.

jaipurite. A native cobaltous sulfite, CoS.

jalap. The dried root of *Exogonium* or *Ipomoea purga*, a Convolvulaceae of Mexico and the West Indies. It should contain not less than 7 % of resins. It is a hydragogue cathartic.

jalapic acid. $C_{17}H_{30}O_9$ = 378.23. An acid, m.120, from jalap.

jalapin. $C_{34}H_{56}O_{16}$ = 700.3. Orizabin. A resinous glucoside, m.150, from jalap. Cf. *convulvulin*.

jalapinolic acid. $C_{16}H_{32}O_3$ = 272.25. *d-11*-Hydroxyhexadecanoic acid*, $Me(CH_2)_5CHOH(CH_2)_{10}COOH$. A hydroxy acid from jalap resin.

jalapoid. The combined principles from extracted jalap. A cathartic and diuretic.

Jamaica dogwood. The bark of *Ichthyomethia piscipula* or *Piscidia erythrina*. Used as the fluid extract, as an anodyne and hypnotic. **j. wood.** Haematoxylon.

jamaicine. A bitter principle from the bark of the cabbage tree, *Andira inermis*, a Leguminosae of Jamaica. It resembles berberine, and is probably an alkaloid.

jamboo. (1) Jambu. The seeds of *Piper jaborandi*, a Piperaceae. (2) Jambul.

jambosine. $C_{10}H_{15}O_3N$ = 197.2. A crystalline alkaloid from the root of *Jambosa vulgaris*, a Myrtaceae, or the rose apple of the Tropics. Used medicinally in the treatment of dysentery and leucorrhea.

jambul. The bark of *Eugenia jambolanum*, the Java plum tree, a Myrtaceae, of the East Indies; used as the fluid-extract, as a stomachic astringent. **j. seeds.** The seeds of *Eugenia jambolanum*, used as the fluid extract, as a carminative and stomachic. Cf. *antimellin*.

jambulol. $C_{16}H_8O_9$ = 344.1. A dibasic, pentahydroxy acid found in the seeds of *Eugenia jambolanum*, a Myrtaceae of Java. It resembles ellagic acid.

James powder. Pulvis antimonialis. Antimoniated calcium phosphate. **J. tea.** Labrador tea.

jamesonite. $Pb_2Sb_2S_5$. Feather ore. A native lead antimony sulfide.

Jamin effect. A capillary tube filled with alternate air and water bubbles sustains a finite pressure. This is due to oily contamination on the glass surface, which prevents complete wetting.

Janus green. A green dye, used as an intravital stain.

japaconine. $C_{26}H_{41}O_{10}N$ = 527.4. An amorphous alkaloid, m.97, derived from Japanese aconite.

japaconitine. $C_{34}H_{49}NO_{11}$ = 647.39. Acetylbenzoyljapaconine. An alkaloid, m.204, from Japanese aconite.

japan. A varnish for metallic and wooden articles. **j. camphor.** Camphor. **j. tallow.** Japan wax. **j. wax.** A glyceride containing chiefly palmitic acid and small amounts of eicosanic and heneicosanic acids; obtained from the berries of *Rhus succedanea* and other species of sumach tree. A yellow solid wax, d.0.970, m.53, soluble in benzene; used in the manufacture of candles, wax, and leather dressing.

japanic acid. $C_{22}H_{44}O_4$ = 372.34. A dibasic acid from japan wax, m.117; probably a mixture of eicosanic and heneicosanic dicarboxylic acids.

japanning. A process of varnishing, by successive applications of a lacquer and heating in an oven.

japonic acid. A tannic acid from catechu.

japopinic acid. $C_{14}H_{22}O_2$ = 222.17. A monobasic acid from Japanese turpentine.

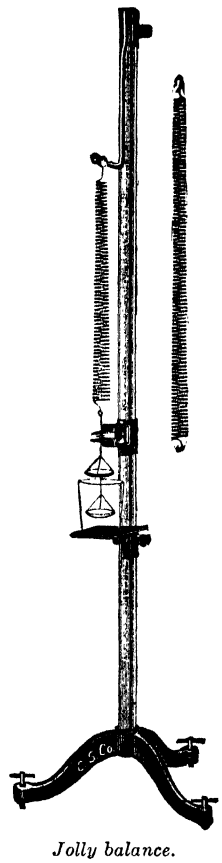
jar. A small earthen vessel, without spout or handle. **bell-** Bell glass. **Leyden j.** An electric condenser consisting of a glass-vessel lined internally and externally with tinfoil. **Naples-** See *Naples*.

jara jara. β-Naphthylmethylether.

jargon, jargoon. Zircon.
jargonia. Zirconia.
jargonium. An alleged element, discovered by Sorby in 1869 and probably impure hafnium.
jasmine oil. A colorless essential oil, distilled or extracted from the flowers of *Jasminum grandiflorum*, an Oleaceae. It contains benzyl acetate, linalol, linalyl acetate and indole, d.1.008, soluble in alcohol or ether; used in perfumery.
jasmone. $C_{11}H_{16}O$ = 164.12. A ketone derived from jasmine oil.

$$CO.(CH_2)_2CMe{:}C.CH_2.CH{:}CH.CH_2Me.$$

jasper. Touchstone, Indian stone, bloodstone. A variety of chalcedony sometimes used as a gem, *e.g.*, iolanthite. **porcelain-** Porcellanite.
jateorhiza. Calumba.
jatrophine. $C_{14}H_{20}O_6N$ = 298.17. An alkaloid from the *Jatropha gossipifolia*. A light yellow powder, soluble in cold water or alcohol, insoluble in ether; acid solutions are fluorescent. Used for stomach disorders.
jaune. The French for yellow. **j. brillant.** Cadmium sulfide. **j. d'or.** Martius yellow.
Java pepper. Cubeb. **J. plum.** Jambul. **J. tea.** Orthosiphonin.
javelle. Eau de javelle.
javellization. The sterilization of water supplies by hypochlorites.
jaw oil. An oil from the jaws of the black fish, *Globicephalus melas*, used as a lubricant for fine machinery.
jecolein. A glyceride from codliver oil.
jecorin. A protein in the liver, spleen and brain; it has the composition $C_{103}H_{186}O_{46}N_5SP_3$.
jel. See *gel*.
jelletite. A green variety of andradite. See *garnet*.
jelly. A soft, usually transparent, substance, which consists of the colloidal system (q.v.): liquid suspended in a solid; as, water in gelatin. **mineral-** or **petroleum-.** See *vaselin*.
jellying power. The capacity of substances to solidify in solution, as gelatin, agar-agar etc.
jelutong. The exudate from *Dyzra costulata*, an Apocynaceae, used for chewing gum and insulating cables. Cf. *pontianac*.
jena ware. Very heat-resistant glass-ware, made in Jena, Germany.
jenkolic acid. $C_7H_{14}O_4S_2$ = 226.2. Djenkolic acid. An amino acid, $CH_2[SCH_2CH(NH_2)\text{-}COOH]_2$ from djenkol beans, *Pithecalobium lobatum*, a Leguminosae.
Jenner' stain. A microscope stain for white blood corpuscles. It consists of two solutions: (A) 0.5 % eosin in methanol. (B) 0.5 % methylene blue in methanol.
jeppel oil. Bone oil.
jequiritin Abrin.
Jersey tea. The dried roots of *Ceanothus americanus*, a Rhamnaceae, used as the fluid extract, as an astringent, sedative and expectorant.
jervine. $C_{26}H_{37}O_3N$ = 411.1. An alkaloid from *Veratrum* species (Liliaceae). Long, white prisms, m.240, insoluble in water.
jesaconitine. $C_{40}H_{51}NO_{12}$ = 735.35. An aconite alkaloid, q.v.
jesuits balsam. Copaiba balsam. **j. bark.** Cinchona bark.
jet. A dense black lignite (or cannel coal rendered black by fossilization) of varying hardness and taking a good polish. Sometimes used as jewelry.
jews pitch. Asphalt.
jig. A device for ore concentration consisting of a vibrating screen submerged in water.
jigger. Jig.
Jimson weed. Stramonium.
johannite. Uranvitriol.
johimbine. $C_{23}H_{32}O_4N_2$ = 400.4. An alkaloid from the bark of *Corynanthe yohimbehe*, a tree of Africa. Cf. *quebrachine, yohimbine*.
jojoba. The shrub *Simmondsia Californica*, a Buxaceae of California and Mexico. **j. oil.** The oil from the nuts of j. containing unsaturated fatty acids, resembling the sperm oil of the whale.
Joliot, Frédéric. 1900– , and his wife J., **Irène Curie,** 1897– , daughter of Pierre and Marie Curie. French physical chemists and Nobel prize winners (1935) for their work in induced radioactivity.
Jolly balance. A spring balance for determining the specific gravity of a solid by weighing it alternately in air and water.



Jolly balance.

Jones' reagent. A bath of molten zinc in which a metal to be etched is immersed. **J. reductor.** A glass tube filled with amalgamated, granulated zinc or zinc wire spirals, used for reducing solutions of Fe, Ti, Mo, V, Cr and U, prior to their volumetric determination by oxidation reduction methods.
jordanite. A native arsenic and lead sulfide, $AsS_3.4PbS$.
joseite. A bismuth tellurite, Bi_3Te.
josephinite. A native iron and nickel alloy from Oregon.
Joule, James Prescott. 1818–1889. An English physicist and experimenter on energy transformations. Cf. *joule*. **J. effect.** Heat effect. **J. equivalent.** The mechanical equivalent of heat; or the quantity of energy which, when transformed into heat, is equal to unit quantity of heat: 4.185×10^7 ergs = 1 Calorie (20°). In absolute units (q.v.): $J = L^2T^{-2}\theta^{-1}$, or $JH = JM\theta = ML^2T^{-2}$. **J.-Kelvin effect.** The fall in temperature of a gas forced at high pressure through a small orifice. It is proportional to the difference in pressure on the two sides, and is used in the Linde-Hampson process of liquefying gases. **J.-Thomson effect.** J.-Kelvin effect. **J.'s law.** (1) The heat, H, produced by a current (I) is proportional to the square of the current, multiplied by the time (t) during which it flows: $H = RI^2t$. (2) The internal energy of a volume of gas does not vary with temperature, if the volume remains constant. (3) The molecular heat of a solid compound is the sum

of the atomic heats of its constituents. **J. unit.** Joule.

James Prescott Joule.

joule. The unit of work. One joule equals 10^7 units of work (ergs) in the C.G.S. system, and is practically equivalent to the energy expended in one second by one ampere passing through one ohm of resistance. Hence:

Joule = amp.^{2} × ohm × sec. = watt × sec. = (volt^2 × sec.)/ohms = 10^7 ergs.

Conversion factors:

1 joule = 1 volt-coulomb = 0.24 calorie = 0.1020 kg.-m. = 0.7376 ft.-pds.

1 calorie = 4.1850 joules = 0.04337 volt-electrons.

3600 joules = 1 kelvin = 1 watt-hour.

juar. Sorghum.

Juerst ebullioscope. A device for determining small percentages of alcohol by observing the boiling point of the liquid, which varies directly with the percentage of alcohol.

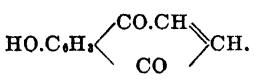
juglandin. A resinoid from the root-bark of juglans. A grayish-brown powder, slightly soluble in alcohol; used as a cathartic.

juglandoid. The combined principles from the root-bark of juglans, or butternut.

juglans. Butternut bark, white walnut. The dried inner bark from the roots of *Juglans cinerea*, a Juglandaceae; used as the fluid extract, as a cathartic and antiperiodic. Cf. *nucite*.

juglansin. A globulin from walnuts and butter nuts.

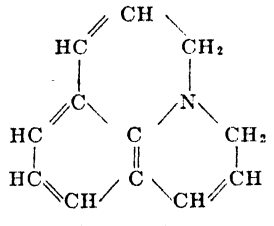
juglone. $C_{10}H_6O_3$ = 174.1. 5-hydroxy-naphthoquinone, nucin.



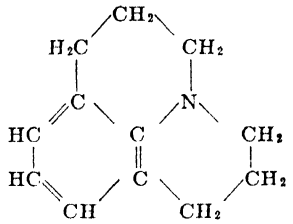
Reddish-brown prisms, m.153, insoluble in water. It occurs in the bark of the European walnut, *Juglans regia*.

juice. (1) Any fluid from a vegetable or animal tissue; usually however, fruit juice. (2) A colloquial term for an electric current.

julol. $C_{12}H_{11}N$ = 169.1. The theoretical compound:



julolidine. $C_{12}H_{15}N$ = 173.2. 1,2,5,6-tetrahydrojulol.



jumble beads. Abrus.

Jungius, Ioachim. 1587–1657. A German alchemist, and forerunner of Boyle in claiming that observation and experiments alone give information as to the nature of matter.

juniper. The juniper tree, *Juniperus communis*, a Coniferae of temperate zones. **gum-** Sandarac. **j. berries.** The dried ripe fruits of juniper, used as a diuretic and tea, or as the fluid extract. **j. berry oil.** An essential oil distilled from juniper berries. Colorless or yellow liquid, d.0.865, b.120, soluble in alcohol or ether. Used as stimulant diuretic, or in flavoring extracts. It contains pinene, cadinene and j. camphor. **j. tar.** Cade oil.

juniperic acid. $C_{16}H_{32}O_3$ = 272.25. Dihydroambrettolic acid, *o*-hydroxypalmitic acid, *16*-hydroxyhexadecanoic acid*. A monobasic acid, m.95, from savin, *Juniperus sabina*, and arbor vitae.

juniperin. A bitter principle from juniper, *Juniperus communis*.

juniperus. (1) The dried tops, with wood and berries, of juniper; used for distillation of an essential oil, and in fumigation. (2) A genus of Coniferae yielding berries, oils and wood: *J. communis*, juniper; *J. sabina*, savin.

junket. Curds and whey, a food prepared by coagulating milk with rennet.

jurubeba. *Solanum insidiosum*.

jute. The bast fiber of *Corchorus* species, a Tiliaceae of the East Indies and South America; used extensively in the manufacture of gunny sacks, bags, and twine. **China-** The fiber of *Abutilon avicenna*, a Malvaceae cultivated in China. **medical-** the fibers of *Corchorus olitorius*, used in surgical dressings.

juvenile water. A water of magmatic or deep-seated origin, supposed to come for the first time to the earth surface; *e.g.*, the waters of certain hot springs, volcanic geysers and artesian wells. Antonym: vadose water.

K

(See also under C)

K. (1) The symbol for potassium (kalium), K^+, K· potassium ion; K* excited potassium atom, K_2^+ ionized potassium molecule, K_2^* excited potassium molecule. (2) An abbreviation for Kelvin, °K degree on the absolute temperature scale. **K acid.** 1-Amino-8-naphthol-4.6-disulfonic acid. **K electrons.** The two electrons in the innermost shell or orbit of the atom. **K line.** (1) Any one of a group of lines having the shortest wavelength which are visible when K radiations pass through an x-ray spectrograph. The separated lines are termed, respectively, $K\alpha_1$, $K\alpha_2$, $K\beta_1$, $K\beta_4$ etc. (2) The Fraunhofer line, λ3933.7, due to calcium. (3) Symbol for chemical equilibrium constant (see *law of mass action*). (4) Symbol for Kelvin. **K_S.** Symbol for solubility product. **K orbit.** The innermost path of electrons around the atomic nucleus. Cf. *atom, Bohr's theory, orbit.* **K radiation.** The homogeneous x-rays emitted by metals when used as an anticathode in an x-ray tube; their origin is assumed to be due to the excitation of the K electrons. Cf. *energy levels.* **K series.** The spectral lines produced by K radiations. Cf. *Moseley spectrum.* **K spectrum.** The spectrum produced by K radiations. The frequency of any line is approximately proportional to $A(N - b)^2$, where N is the atomic number, A and b are constants. The atomic number $N = Q_K + 1 = Q_L + 7.4$, where Q_K and Q_L are quantities expressing the frequencies of the K and L series of radiations, respectively.

k. (1) Abbreviation for a constant. Symbol for: (2) Boltzmann's constant; (3) thermal conductivity; (4) velocity constant of chemical reactions.

κ. The Greek letter *kappa.* See *Greek* alphabet.

K.A. An aluminum alloy similar to duraluminum.

kabaite. A native hydrocarbon found in meteorites.

kæ- See *kae-, ke-.*

kaempferide. $C_{16}H_{12}O_6$ = 300.1. Kaempferyl-4-methyl ether. A constituent of galangal, m.225, soluble in sulfuric acid (blue fluorescence) and in alkali (yellow color).

kaempferol. $C_{15}H_{10}O_6$ = 286.08. A cyclic alcohol, m.274, from *Indigofera erecta.*

kafir. Sorghum. **k. corn.** Durra.

kafirin. A protein derived from sorghum.

Kahle's solution. See *fixative.*

kahweol. $C_{19}H_{26}O_2$ = 302.2. A highly-unsaturated alcohol, m.143, from coffee bean oil.

kainite. $MgSO_4.K_2SO_4.MgCl_2.6H_2O$. A native potassium magnesium sulfate from Strassfurt (Germany) and made synthetically; used as a potash fertilizer, and in water treatment. The A.O.A.C. defines it as potassium and sodium chloride sometimes with magnesium sulfate, containing not less than 12 % K_2O.

kairine. $C_{10}H_{13}ON$ = 163.2. Methyloxytetrahydroquinoline. A quinine substitute, usually marketed as the hydrochloride. **k. hydrochloride.** $C_{10}H_{13}ON.HCl$ = 199.6. A grayish-white crystalline powder, soluble in water; used as an antipyretic and quinine substitute. Cf. *thalline.*

kairoline. $C_{10}H_{13}N$ = 147.2. Methyltetrahydroquinoline. A colorless liquid, $b._{720mm}245$, soluble in alcohol; used as an antipyretic.

Kaiserling solution. A solution for preserving tissues, consisting of 3 gm. CH_3COOK, 1 gm. KNO_3, 75 cc. water and 30 cc. formaldehyde.

kakodyl. Cacodyl.

kakoxene. The mineral $2Fe_2O_3,P_2O_5,12H_2O$.

kaladana. The dried seeds of *Ipomoea hederacea;* used as a purgative and anthelminthic. **k. resin.** A resin obtained from kaladana; used as purgative.

kalaite. A form of turquoise which contains copper and iron. Cf. *callaite.*

kali. The German term for potassium hydroxide. **k. ammonsalpeter.** A mixture of KCl and NH_4NO_3 used as fertilizer (16 % N, 27 % K_2O).

kalicrete. A modification of Portland cement, containing iron, which is resistant to alkali soils.

kalimeter. Alkalimeter.

kalinite. A native potassium aluminum sulfate, $K_2Al_2(SO_4)_4.24H_2O$.

kaliophylite. $KAlSiO_4$. A silica mineral (q.v.) of the nephelite group.

kalium. The Latin and German for potassium.

kalk. The German for lime. **k. ammon.** A mixture of NH_4Cl and $CaCO_3$ used as fertilizer. **k. ammon salpeter.** Calnitro.

kallaite. Kalaite.

Kalle acid. *1*-Naphthylamine-*2.7*-disulfonic acid.

kallekrein. Padutin. A circulatory hormone, which regulates the capillaries and small vessels.

kalmia. Mountain laurel, sheep laurel, lambkill. The leaves of *K. latifolia,* a Ericaceae; used as cardiac sedative and astringent. They contain asebotin and andromedotoxin.

kalsilite. $2KAlSiO_4$. A polymorph mineral resembling nepheline, occurring as minute grains in volcanic rocks of high K_2O-content from Uganda.

kamacite. A component of meteoric iron-nickel alloys, which is present only when the nickel-content is less than 6.5 %.

kamala. Glandulae Rottlerae. A light, fine granular powder which consists of the glands and hairs from the capsules of *Mallotus philippinensis,* an Euphorbiaceae; used as the fluid extract, as a purgative.

kamalin. $C_{23}H_{30}O_6$ = 380.1. Rottlerin. The bitter principle of kamala. A yellowish-brown powder, m.200, soluble in alcohol or ether; used as an anthelminthic.

kamarezite. A native basic copper sulfate, occurring in grass-green compact masses.

kambi. An aromatic gum, resembling elemi, from *Gardenai lucida,* a Rubiaceae of India.

Kamerlingh-Onnes, Heika. 1853–1926. A Dutch physicist and Nobel prizewinner, noted for experiments at very low temperatures.

kampometer. An instrument for measuring heat radiations. Cf. *kapnometer.*

kanerol. $C_{30}H_{50}O$ = 426.5. An alcohol from the roots of *Kanher nerium*, a plant of India. Colorless crystals, m.185, insoluble in water.

kanirin. Trimethylamine oxide.

kanyl alcohol. $C_{10}H_{18}O_2$ = 170.14. An alcohol from the liver oil of tarabakani, *Paralithodes camtschatica*, of the Japan Sea.

kaoliang oil. Koryan oil.

kaolin. $Al_2O_3.2H_2O.2SiO_2$. China clay, porcelain clay, bolus alba, terra alba, white bole, argilla. A native aluminum silicate, $H_2Al_2Si_2O_8$. A grayish-yellow, fine, inert powder which is used in ceramics, as filler for paper and textiles, and for pencils. It occurs in three distinct types produced as shown:

1. kaolinite (by weathering).
2. dickite (by moderate heating).
3. nakrite (by hypogene processes).

Cf. *atalpo, fuller's earth, kaolinite, montmorillonite.*

kaolinite. The chief constituent of kaolin or clay, $Al_2O_3.2SiO_2.2H_2O$; if heated above 1100°C. it breaks down to mullite and cristobalite. A soft white, fine powder, used medicinally as an absorbent and dusting powder, as a clarifying agent and in pharmacy.

kaolinization. Natural rock-disintegration and formation of clay from the feldspars of decomposed granite (orthoclase).

kapnometer. An instrument for measuring the density of smokes. Cf. *kampometer.*

kapok. The Malay name for the cotton-like down from the seed-pods of *Eriodendron anfractuosum*, a Sterculiaceae, used in making mattresses and life-saving jackets. **k. oil.** A yellowish-green oil, expressed from k. seeds, d.0.923, soluble in alcohol or ether; used in the manufacture of soap and edible fats.

kappa. κ. The tenth letter of the Greek alphabet. A symbol for: (1) kata position. (2) The tenth carbon atom.

karabin. $C_{21}H_{40}O_6$ = 397.5. A resinous substance from *Nerium oleander*, an Apocynaceae.

karat. See *carat.*

karaya gum. An Indian gum similar to tragacanth, used in tooth-pastes.

karitene. $C_{32}H_{56}$ = 440.4. A solid hydrocarbon, m.64, from shea fat.

karpholite. The mineral $(Mn,Fe)O.(Fe,Al)_2O_3.SiO_2.2H_2O$.

karyokinesis. The phenomena of cell-division or mitosis, during which the protoplasm of the cell and its nucleus undergo a series of changes which are subdivided into a number of phases merging from one into the other (see figure).

kata- cata. A prefix derived from the Greek, indicating down or below. **k. position.** κ- (1) The *1.7*-substitution in naphthalene, q.v. (2) On the tenth carbon atom of a chain. **k. thermometer.** An instrument which measures the cooling effect of air flow as distinct from the temperature of the air: used to evaluate working conditions in terms of ventilation.

katabolism. Catabolism.

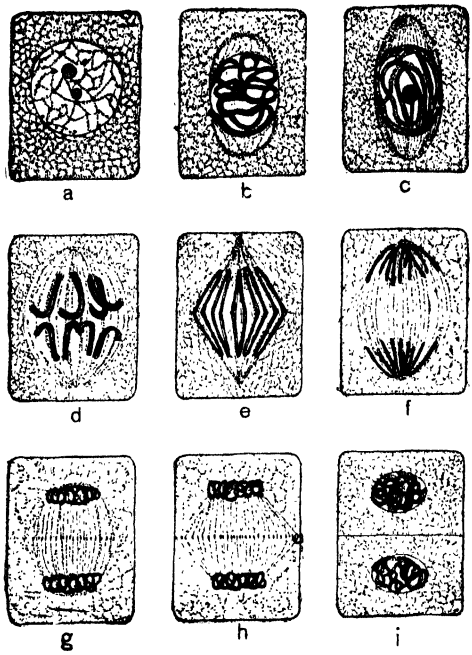
katalase. See *catalase.*

katalysis. Catalysis.

kataphoresis. Cataphoresis.

katchung. Chinese for peanuts. [Kachang = Malay.] **oil of-** Peanut oil.

katharometer. An instrument for the analysis of a gas mixture by the changes in its therma conductivity.



KARYOKINESIS

(*Semidiagrammatic and highly-magnified. After Stevens'* "Plant Anatomy")

a. Resting cell ready to divide.

b. Nuclear reticulum forming a thickened thread; the cytoplasm at opposite poles becoming thread-like, to form the spindle fibers.

c. Nuclear thread divided longitudinally; spindle fibers more definite.

d. Nuclear membrane and nucleolus disappear; the nuclear thread is segmented into chromosomes assembled at the equator of the cell. Phases a. to d. are *prophases.*

e. The *metaphase.* The longitudinal halves of the chromosomes are being drawn apart prior to their journey to the opposite poles.

f. The *anaphase*, or movement of the chromosomes toward the poles, is complete; connecting fibers extend from pole to pole.

g. The *telophase.* The chromosomes begin to spin out as a nuclear reticulum. The connecting fibers thicken in the equatorial plane.

h. The connecting fibers spread out and touch the wall of the mother cell in the equatorial plane; the thickening of the fibers throughout this plane has made a complete cell plate, within which the dividing wall will be produced.

i. A nuclear membrane is formed about each daughter nucleus; the dividing cell-wall is completed. The two daughter cells are now ready to grow to the size of the parent cell; the daughter nuclei will appear as the nucleus in a.

kathode. Cathode.

katine. $C_{10}H_{15}ON_3$ = 182.2. An alkaloid from the leaves of *Catha edulis* or African tea, a Celastraceae. Cf. *celastrine, cathine.*

kation. Cation.

katode. Cathode.

kauri. Kauri gum, kauri resin. A resin exuded from the kauri tree, *Agathis australis*, a conifer of New Zealand, and dug from the soil in large masses. A yellow amber-like resin, d.1.05, m.180–230, insoluble in water, soluble in alcohol, turpentine or benzene; used in varnishes. **k. gum.** Kauri. **k. oil.** An oil obtained by distilling the peat which remains from prehistoric kauri forests.

kaurinic acid. $C_{10}H_{16}O_2$ = 168.2. An acid constituent (about 1.5 %) of kauri.

kaurinolic acid. $C_{17}H_{34}O_2$ = 270.3. An acid constituent (about 15 %) of kauri.

kaurolic acid. $C_{12}H_{20}O_2$ = 196.2. The principal constituent (50 %) of kauri.

kauronolic acid. $C_{12}H_{34}O_2$ = 200.2. A constituent of kauri (10 %).

kautchin. Terpene.

kava. Kava kava. Ava. The dried rhizome of *Piper methysticum*, a Piperaceae of the Polynesian islands, used as the fluid extract as a mild diuretic and stimulant. **k. resin.** A resin derived from kava, containing kavaic acid.

kavaic acid. $C_{13}H_{12}O_3$ = 216.1. An acid derived from kava. A yellow crystalline powder, m.165.

kavain. $C_{16}H_{18}O_5$ = 290.2. Methysticin. A principle derived from kava. White crystalline needles, m.137, soluble in alcohol or ether.

kavatel oil. An oil obtained from the seeds of *Hydnocarpus Wightiana*, used in place of chaulmoogra oil.

kawa. Kava.

Keen tester. An instrument for determining the hardness of metals by the impact ball method.

kefir. Kephir, kephyr. A fermentation product of goat's milk produced by the *Bacillus caucasicus;* used as a nutritious and restorative food. Cf. *koumiss.* **k. milk.** A beverage made from cow's milk and kefir powder. **k. powder.** White irregular bodies containing a yeast fungus and several bacteria; used to make kefir and kefir milk.

keilhauite. A native titanate and silicate of aluminum, calcium, iron and the rare earths metals, similar to sphene, q.v.

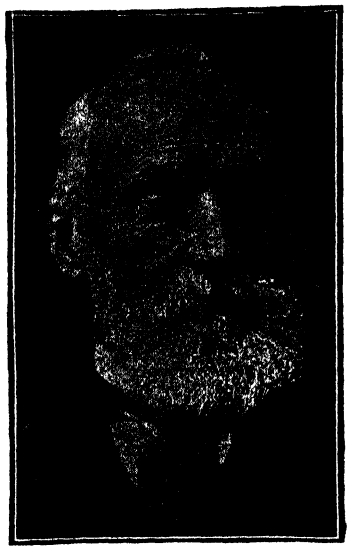
Kekulé, Friedrich August. 1829–1896. A German chemist and a pioneer in the theories of the constitution of carbon compounds. **K. ring.** See *benzene ring.*

kelene. A trade name of ethyl chloride.

kellin. A glucoside from the fruit of *Ammi visnaga.*

kelp. (1) Varec. The large seaweeds, *Laminaria* species, floating near the shores of the Pacific and Atlantic. (2) Kelp ashes. **dried-** A fertilizer containing 1.6–3.3 % N, 1–2 % P_2O_5 and 15–20 % K_2O. Cf. *algin.* **k. ashes.** Kelp. The ashes of kelp, formerly used for the preparation of potassium salts and iodine.

Kelvin, William Thompson (Lord Kelvin). 1824–1907. A British physicist and pioneer in electrical and magnetic experimentation; noted for his work on thermodynamics, the compression of gases, the absolute temperature scale and the Atlantic cable. **k. bridge.** A set of coils by which highly accurate resistance measurements may be made. **k. galvanometer.** An elliptical coil surrounding a magnetic needle suspended on a fine wire with mirror attached, by which small electric currents are detectable. **k. scale.** °K. An absolute temperature scale (q.v.) assumed to be a measure of kinetic energy. The freezing point of water is 273.13°K, the boiling point of water 373.13°K, hence (°K) = (°C) + 273.13, (if above 0°C); and (°K) = 273.13 − (°C), (if below 0°C).



William Thompson Kelvin.

kemfert. Trona potash. A potassium chloride from the waters of Searles Lake in California.

Kendall, Edward, Calvin. 1886– . An American chemist, noted principally for the isolation of thyroxin from the thyroid gland. **K., James.** 1889– . A British chemist, noted for his work in inorganic and physical chemistry.

Kennelly-Heaviside layer. A stratum of electrons, 100-200 miles above the earth's surface, created by solar rays. It is supposed to form a layer impenetrable by radio waves, and is the seat of the aurora, q.v. Cf. *ionosphere.*

kepayang oil. An oil resembling chaulmoogra oil, from the seeds of Pokok kepayang.

kephalin. (1) Cephalin, brain lipoid. A lecithin phosphatid from spinal and brain tissue of the ox or other mammals. It is an amorphous yellow substance of characteristic odor, slightly soluble in alcohol or acetone, soluble in ether or chloroform. Cf. *cuorin.* (2) A group of phosphatides from white brain substance resembling lecithin (q.v.) in structure, but with aminoethyl alcohol in place of the choline residue. They are white, brittle, very hygroscopic solids, forming colloidal solutions in water, soluble in fat solvents (except acetone); hydrolysed slowly to stearic acid and a mixture of unsaturated fatty acids by acids and alkalis.

kephaloidin. A constituent of the buttery substance of brain, q.v.

kephyr. Kefir.

ker. A Polish synthetic rubber, made from alcohol.

kerasol. $C_{20}H_{10}O_4I_4$ = 821.8. Tetraiodophenolphthalein. The soluble sodium salt is used to render the gall bladder visible in x-rays. It is administered in small gelatin capsules (nosophen, antinosin).

kerasin. $C_{48}H_{93}O_8N$ = 881.7. A cerebroside associated with phrenosin in the brain tissue. A white amorphous powder, m.180 (decomp.), soluble in hot alcohol, insoluble in water or ether.

keratin. $C_{41}H_{71}O_{14}N_{13}S$. A protein from horns, feathers, hoofs, shells or finger nails; sometimes used for coating pills. It is resistant to digestion by pepsin and trypsin and insoluble in water, dilute acids or alkalis. On acid hydrolysis it yields arginine, lysine and histidine in the ratio 12:4:1. It is believed to exist in a straight chain and folded chain form; the latter is converted into the former by simultaneous steaming and stretching.

keratoelastin. A protein from the egg shells of fishes, reptiles and monotremes.

kerenes. That portion of kerotenes which is insoluble in organic solvents.

kerites. The naturally-occurring bitumens and protobitumens, which consist of kerotenes.

kermes. The dried insects, *Coccus ilicis*, found on the leaves of various oak species in the Orient; used since ancient times as a red dye for textiles.

k. mineral. Kermesite.

kermesite. Sb_2S_2O. Lyrostibnite. A native, red antimony sulfide. Used as pigment.

kern. The German for "ring" and "nucleus," especially the benzene ring.

kernel. An atom stripped of its valence electrons; it consists of the atomic nucleus surrounded by its proper number of electrons in their respective orbits or shells (cf. *periodic system, isostere*) with the exception of the outermost series of valence electrons. Atomic kernels fall into eight groups, according to the number of electrons missing. The k. are always positively charged and those having a charge of from one to four correspond with the respective ions, Na^+, Mg^{++}, Al^{+++}, and Sn^{++++}. The k. differs from the nucleus, q.v. (See figure.)

kernite. $Na_2B_4O_7.4H_2O$. A natural borate, from Kern County, California.

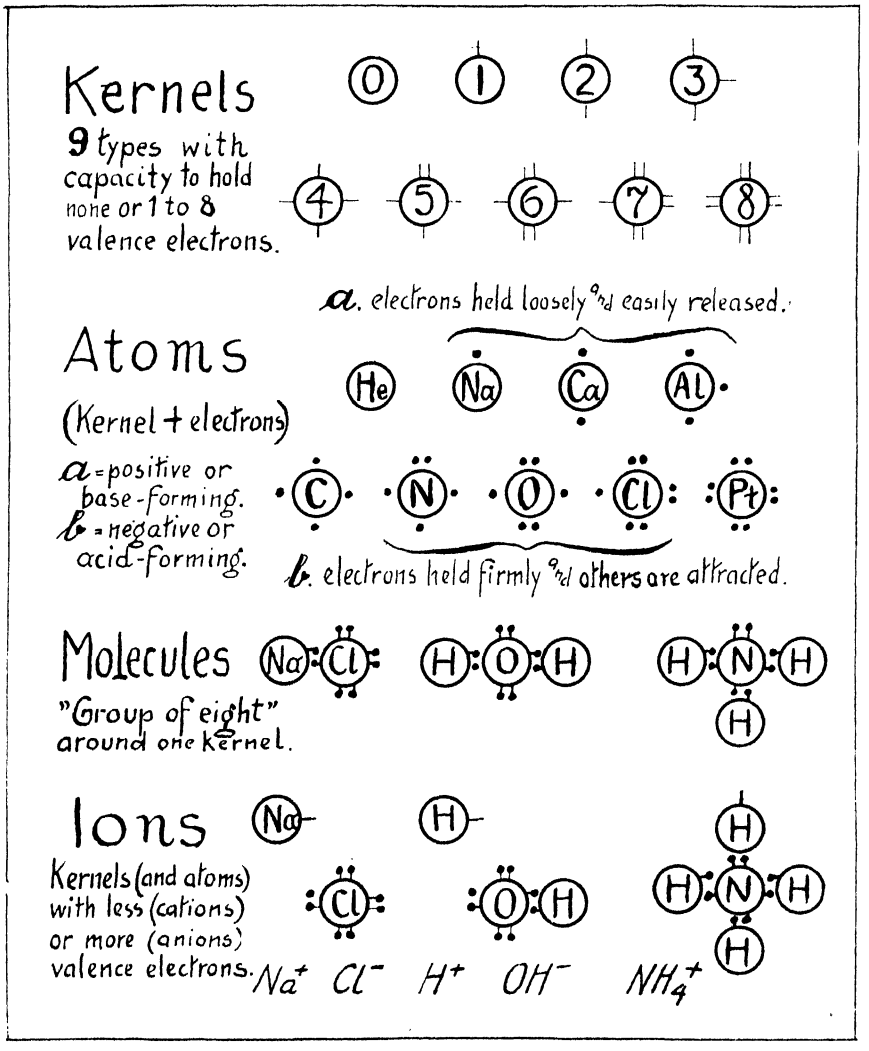
kerogen. $(C_6H_8O)_n$. A resinous substance and the chief organic constituent of shale oils; insoluble in most solvents. Cf. *oil shale*.

kerokaine. Procaine.

keroles. That portion of kerotenes which is soluble in pyridine, but insoluble in chloroform.

kerols. That portion of kerotenes which is soluble in both, chloroform and pyridine.

kerones. Those portions of kerotenes which are insoluble in organic solvents.



kerosene. Coal oil, astral oil, paraffin (British usage). A mixture of hydrocarbons b.150–280°C.; the fifth fraction in the distillation of petroleum (after the gasoline and before the oils). Used as a fuel illuminant and cleaning agent.

kerotenes. That portion of bitumen which is insoluble in carbon disulfide. Cf. *carboids, kerenes, kerites, keroles, kerols, asphaltenes.*

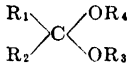
Kerr constant. If L is the difference in wavelength between the ordinary and extraordinary rays, λ the wavelength of the light, v the potential, and d the distance between the poles; $L = k\lambda v^2/d^2$, where k is the Kerr constant which is characteristic for a liquid. **K. effect.** Electrical birefringence, or the polarizing effect of an electro-magnet. The elliptical double refraction of light by liquids in an electric field.

kesso oil. Japanese valerian oil. An essential oil distilled from the roots of *Valeriana officinalis.* A thick, green, liquid, d.0.996, insoluble in water, soluble in alcohol, ether, chloroform or benzene; used in pharmacy.

kessyl alcohol. $C_{14}H_{24}O_2$ = 224.19. Wrongly called kersyl alcohol. An alcohol, m.85, $b._{11mm}$156, from kesso oil.

Kestner, Paul. 1864– . A Swiss chemist, noted for work on refractories and filtering materials.

ketal. (1) An obsolete term for the >CO group; as, dimethyl ketal (= acetone). (2) Ketone acetates prepared by condensation of alkyl orthoformates with ketones in presence of alcohols. General formula,



ketazin. $C_6H_{12}N_2$ = 112.2. A colorless liquid, d.0.836, b.131; soluble in water.

ketazine. Bisazimethylene. A compound containing the radical >C:N—N:C<; as,

$Me_2CN.NCMe_2$..... dimethyl-ketazine or bisdimethylazimethylene.

$Et_2CN.NCMe_2$..... diethyl-ketazine, or bisdiethylazimethylene.

MeEtCN.NCEtMe... methylethyl-ketazine or bismethylethylazimethylene.

ketene. C_2H_2O = 42.0. Keto-ethylene, ethenone, carbomethene, CH_2:CO. The simplest possible ketone. A colorless gas of penetrating odor, b.−56, decomposed by water, soluble in alcohol or ether. It may be considered as an anhydride of acetic acid; used for acetylation in the manufacture of cellulose acetate. **k. diacetal.** $C_6H_{12}O_2$ = 116.0. Ethoxyethylene, CH_2:C(OEt)$_2$. A colorless liquid, b.125, which reacts with water to form ethylacetate. It polymerizes to a white solid on standing.

ketenes. A group of very reactive organic compounds of the general type R_2C:CO; as, $(CH_3)_2$-C:CO, dimethylketene*. Two types: **aldo- K.** having the general formula  ; colorless, polymerized by pyridine, and incapable of auto-oxidation. Cf. *aldo-ketens.* **keto- K.** having the general formula  ; colored, readily auto-oxidized and forming additive compounds. Both aldo- and keto-ketenes are homologs of ketene. Cf. *ketoketenes, ketines.*

ketimide. An organic compound of the general type R_2:C:NX, where X is an acyl radical. Cf. *ketimine, amide.*

ketimine. An organic compound containing the bivalent >C:NH group. Cf. *ketone, imine.*

ketine. $C_6H_8N_2$ = 108.2. *2.5*-Dimethyl-pyrazine,  . A colorless liquid, d.0.990, m.15, b.153, slightly soluble in water.

ketines. A group of organic compounds of the general type  , derived from ketine. Cf. *ketenes, pyrazine.*

ketipic acid. $C_6H_8O_6$ = 174.1. Oxalodiacetic acid, hexane-3.4-diondiacid. The dibasic acid, HOOC.CH_2.CO.CO.CH_2.COOH.

keto- Oxo-. A prefix indicating the presence of the keto or carbonyl group, >C:O, in an organic compound. Cf. *ketone.* **k. acid.** See *ketone acid.* **k. enol.** See *tautomerism, desmotropism, ketonic ester type.*

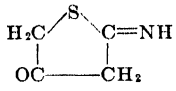
ketoamine. An organic compound containing both, the keto and amino group; as, R:CNH$_2$-CO.R, formed by the action of ammonia on ketones. Cf. *polypeptide.*

ketocoumaran. $C_8H_6O_2$ = 134.1. Ketodihydrocoumarone,  . Colorless crystals, m.97.

ketohexose. A monosaccharide with six carbon atoms, with a keto-group instead of the usual aldehyde group, *e.g.*, fructose and sorbose.

ketohydroxyestrin. $C_{18}H_{22}O_2$ = 270.1. A hormone isolated from the urine of pregnant women and mares. It is an anhydride of trihydroxyestrin. Cf. *sterols, cholane derivatives.*

ketoimine. A compound containing an imino and keto group as *e.g.*, in ketoimidotetrahydrothiazole:



ketoindole. Oxindole.

ketoketenes. The dialkylated homologs of keten, R_2C:CO. They are colored, readily auto-oxidized and form additive compounds with tertiary amines. Cf. *aldoketens.*

ketol. Ketone alcohols. A compound containing a keto and hydroxy group. **alpha-** A compound containing the R—CO.CH_2OH group. **beta-** A compound containing the R—CO.CH_2.-CH_2OH group. **saturated-** Either an alpha- or beta-ketone alcohol. **unsaturated-** Acivinyl alcohols. A compound containing the unsaturated R—CO.CH:CHOH group.

ketole. Indole.

ketone. An organic compound R.CO.R, containing the bivalent ketone group, >C:O. The nomenclature is either the naming of the two radicals before the term *ketone* (as dimethylketone), or attaching the suffix *-one* to the hydrocarbon: CH_3.CO.CH_3 is dimethylketone or propanone* (acetone); C_2H_5.CO.C_2H_5, diethylketone, or 3-pentanone*; CH_3.CO.CH_2.CH_2-CH_3, methylpropylketone, or 2-pentanone.* **acid-** Ketone acid. **aldehyde-** A compound containing the =CO and —CHO groups. **amino-** Ketoamine. **amylethyl-** *3*-Octanone*

KETONES

a. aliphatic, saturated:

acetone, propanone*.. $Me.CO.Me$
butanone*..... $Me.CO.Et$
3-pentanone*..... $Et.CO.Et$
2-pentanone*..... $Me.CO(CH_2)_2Me$
3-hexanone*..... $Et.CO(CH_2)_2Me$
2-hexanone*..... $Me.CO(CH_2)_3Me$
pinacolin..... $Me_3C.CO.Me$
palmitone..... $Me(CH_2)_{14}CO(CH_2)_{14}Me$

b. aliphatic, unsaturated:

Δ^3-2-butenone..... $MeCOCH:CH_2$
Δ^3-2-pentanone..... $MeCOCH:CH_2Me$
phorone..... $Me_2C:CH.CO.CH:CMe_2$

c. aliphatic, diketones:

biacetyl, *2.3*-butanedione*..... $MeCOCOMe$
2.4-pentanedione..... $MeCOCH_2COMe$
2.3-pentanedione..... $MeCOCOEt$

d. cyclic:

cyclobutanone*..... $CO.CH_2.CH_2.CH_2$
cyclopentanone*..... $CO.CH_2.CH_2.CH_2.CH_2$

e. aromatic:

acetophenone..... $Ph.CO.Me$
propiophenone..... $Ph.CO.Et$
butyrophenone..... $Ph.CO(CH_2)_2Me$
1-phenyl-2-propanone. $Ph.CH_2.CO.Me$
benzophenone..... $Ph.CO.Ph$
1.3-diphenyl-2-propanone..... $(PhCH_2)_2.CO$
benzil..... $Ph.CO.CO.Ph$

f. quinones:

quinone..... $CO.CH_2.CH_2.CO.CH_2.CH_2$. See also *indone*, *naphthoquinone*, *anthraquinone*, *phenanthrenequinone*, etc.

amylmethyl- *2*-Heptanone*. **butylmethyl-** *2*-Hexanone*. **di-** A compound containing two ketone groups, *e.g.*, di-alpha-ketones of the type R.CO.CO.R; di-beta-ketones of the type $R.CO.CH_2.CO.R$; di-gamma-ketones of the type $R.CO.CH_2.CH_2.CO.R$. **dibutyl-** *5*-Nonanone*. **diethyl-** *3*-Pentanone*. **diheptyl-** *8*-Pentadecanone*. **dimethyl-** Acetone. **dipropyl-** *4*-Heptanone*. **ethylmethyl-** *2*-butanone*. **ethylpropyl-** *3*-Hexanone*. **methylpropyl-** *2*-Pentanone*. **mixed-** A compound in which two different radicals are attached to the ketone group, *e.g.*, Me.CO.Et (methyl ethyl ketone). **nitroso-** A compound containing the ketone and nitroso groups. **olefine-** A ketone of the olefine series. **paraffin-** A ketone of the paraffin series. **simple-** A compound in which two similar radicals are attached to the ketone group, *e.g.*, Me.CO.Me (dimethylketone). **tri-** A compound containing three ketone groups, of the type R.CO.CO.CO.R.

k. acid. A compound containing both the >CO and —COOH radicals. *alpha-* A compound containing the monovalent —CO.COOH radical, *e.g.*,

$CH_3.CO.COOH$—Propanone-acid or pyruvic acid.

$CH_3.CH_2.CO.COOH$—propyonyl-carboxylic acid.

$HOOC.C_6H_4CO.COOH$—phthalonic acid.

beta- A compound containing the monovalent —$CO.CH_2.COOH$ radical, *e.g.*,

$CH_3.CO.CH_2.COOH$—Butanone-acid, acetoacetic acid.

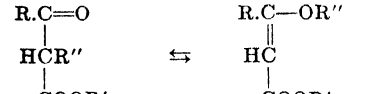
gamma- A compound containing the monovalent —$CO.CH_2.CH_2.COOH$ radical, *e.g.*

$CH_3.CO.CH_2.CH_2.COOH$—laevulinic acid.

delta- A compound containing the monovalent —$CO.CH_2.CH_2.CH_2.COOH$, radical, *e.g.*, $CH_3.CO.CH_2.CH_2.CH_2.COOH$—acetobutyric acid.

k. alcohol. See *ketol*. **k. base.** Tetramethyldiaminobenzophenone. **k. color.** An artificial coloring material containing the ketone group, *e.g.*, alizarin, chrysophanic acid. **k. form.** See *ketonic ester type*. **k. group.** The bivalent >C:O group. Its presence usually confers reducing powers.

ketonic. Pertaining to a ketone. **k. ester type.** An isomer of an enolic ester type compound:



ketonic ester type enolic ester type

The radical R'' has changed place, and the double bond of the ketone group has swung to a carbon-carbon double bond. Cf. *acetoacetic ester*, *desmotropism*.

ketose. A sugar containing a ketone group, as opposed to an aldose (containing the aldehyde group). Cf. *ketohexose*, *fructose*.

ketoside. A glucoside which yields a ketose when hydrolyzed.

ketosis. The excretion of acetone bodies.

ketotriazole. Triazolone.

ketoxime. (1) Acetoxime. A compound containing the bivalent =C:NOH group. *E.g.*, $Me_2C:N.OH$, acetoxime or dimethyl ketoxime; $Et \diagdown C:N.OH$, methylethyl ketoxime. (2) $Me \diagup$ Compounds containing the divalent —HC.NO— group. Cf. *Beckmann rearrangement*. (3) See *dioximes*. **tetra-** See *diphenyl t.k.*

kettle. A cylindrical vessel for boiling or evaporating a liquid or digesting it with a solid.

key. A mechanical device for establishing electrical contact, or reversing or switching on an electrical current. **three-way-, two-way-.** K. for switching a current three or two ways, respectively.

k. atom. (1) An atom in a chain whose alteration of electronic structure (or number of shared or free valences) induces corresponding changes in the other atoms of the chain. (2) An atom in a ring whose oscillations cause a shift of bonds; as, the metallic atom in the porphin ring, q.v.

kg. An abbreviation for kilogram.

kharsivan. British-made salvarsan.

khat. Cafta, Arabian tea. The dried leaves of *Catha edulis*, used as a tea.

Khotinsky, Achilles de. 1850–1933. A Russian-born American designer of instruments, diffraction-gratings, etc. **de K. cement.** A laboratory c. for glass and porcelain, insulating, covering and connecting electric wires, glass, rubber, wood, etc. It is not attacked by ordinary solvents.

kibbled. Broken up into small lumps of about 1 cm. diameter.

kidney. A mammalian organ which eliminates urea, chlorides, and creatinine from the blood. It also filters, through the capsule, the noncolloidal material from the blood plasma.

kidney ore. Red *hematite.*

kies. A general term for sulfide ores.

kieselguhr. Diatomite. Tripoli powder. A diatomaceous or infusorial earth (q.v.). Used as an absorbent for nitroglycerin (dynamite); also for filtering, insulating, and as an abrasive in soaps.

kieserite. $MgSO_4.H_2O$. A native magnesium sulfate, occurring in white compact masses in the Stassfurt salt beds.

Kikuchi lines. The black and white lines which appear when a stream of electrons is directed on a crystal surface; they are due to the scattering of electrons by the row of atoms. Cf. electron *microscope.*

killeen. Irish moss.

Kiliani, Heinrich. A German chemist. **K. reaction.** The synthesis of a higher homolog by forming a nitrile, followed by hydrolysis; *e.g.*, pentose to hexose:

$$\text{R.CHO} \xrightarrow{HCN} \text{R.CHOH.CN} \xrightarrow{2H_2O} \text{R.CHOH.COOH} \xrightarrow{NaHg} \text{R.CHOH.CHO}$$

kiln. (1) A potter's oven for baking bricks. (2) A furnace for calcining or drying coarsely-broken ore or stone.

kilo- (1) A prefix derived from the Greek, indicating one thousand units. (2) Kilogram.

kilocalorie. Cal. A great (or large) calorie: 1 Cal. = 1000 calories.

kilocycle. A frequency of 1000 vibrational cycles per second. Radio ranges principally from 550–1500 k.c. (545–200 meters), and the ultra short wave 60,000 k.c. (5 meters).

kilodyne. 1000 dynes (0.9806 gram).

kilogram. A unit of weight in the metric system, equal to 1000 grams. It was intended to be the mass of 1 cubic decimeter of water at 4°C. 1 kg. = 1000 grams = 15,432.25 grains = 2.2046 pounds av. = 35.27 oz. av. = 32.1507 ounces troy = 2.679 pounds apoth. Cf. *liter, cubic centimeter.* **International prototype-** I. P. Kg. A cylinder of platinum-iridium alloy, which is the standard k. weight.

kilogrammeter. A unit of energy in the metric system. The energy required to raise one kilogram one meter. 1 kg.m. = 7.233 ft.-pd.

kilojoule. A unit of heat: A large joule, J; 1000 joules = 239.1 gram-calories.

kiloliter. Stere, kl. = 1000 liter = 35.371 cubic feet = 2641.7 U. S. liquid gallons.

kilometer. A unit of length in the metric system: 1 km. = 1000 m. = 3280.83 feet = 1093.61 yards = 0.62137 mile. (1 mile = 1.609 km.)

kilonem. A unit of nutrition equivalent to 667 calories; supplied by a liter of milk.

kilostere. A unit of volume; equivalent to one thousand cubic meters = 1000 kiloliters (steres).

kilowatt. A unit of electrical power: 1 KW = 1000 watts = 1000 joules per second = 1.341 horse power = 238.7 calories per second. (1 horsepower = 746 KW.) **k. hour-** A commercial unit of electrical energy: 1 K.W.H. = 1000 watt-hours = 3,600,000 joules per second = 1 B.Th.U.

kilurane. A unit of radio-activity: 1 ku. = 1000 uranium units (uranes).

kinase. Zymoexcitor. A substance existing in various tissues of a living organism, which activates or transforms a zymogen into an active enzyme. **entero-** See *enterokinase.*

kinematics. The science of motion and types of motion, apart from the forces which produce it.

kinetic. (1) Pertaining to motion. (2) The branch of dynamics which deals with the action of forces in causing or influencing the motion of bodies. **k. chemicals.** Gases used as refrigerants. **k. energy.** The force possessed by a body due to its motion; it is proportional to one-half of its mass, m, multiplied by the square of its velocity, v: KE = $mv^2/2$; or (in ergs) = $\text{gm.} \times \frac{(\text{cm./sec.})^2}{2}$. **k. theory.** The hypothesis that all molecules are in motion: this motion is most rapid in gases, less rapid in liquids and very slow in solids, and is a function of the temperature. It is related to the gas-laws by the equation $PV = \frac{1}{3} nmv^2 = RT$, where n is the number of molecules. Evidence of this motion of the molecules is found in evaporation, diffusion, Brownian motion, expansion, the gas laws.

kineurine. Quinine glycerophosphate.

kings yellow. Orpiment.

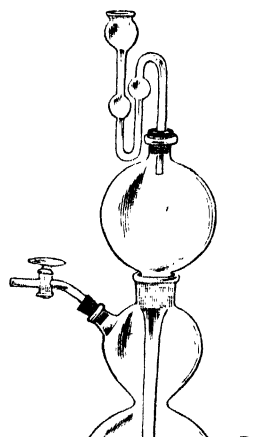
kinic acid. Quinic acid.

kino. Kino gum. The dried juice of *Pterocarpus marsupium,* a leguminous tree of tropical Africa. Reddish-brown, brittle, odorless fragments, slightly soluble in water, soluble in alcohol. Used as the tincture, as an intestinal astringent; also in tanning and textile industries. **African-** Kino. **American-** The dried juice of *Coccoloba uvifera,* used as a k. substitute. **Marri-** A red gum from *Eucalyptus calophylla,* a Myrtaceae.

kinoin. $C_{14}H_{12}O_6$ = 276.1. A resin from kino.

kinovin. Quinovin.

Kipp generator. A glass apparatus consisting of three compartments, used in the laboratory for generating gases, generally hydrogen sulfide, from solid and liquid reagents.



Kipp generator.

Kirchhoff, Gustav Robert. 1824–1887. A German physical chemist noted for the development of the spectroscope, spectrum analysis, electrical subjects. **K. equation.** $\log p = A + B/t + C \log t$, where p is the vapor-pressure of a gas at the absolute temperature t, and A, B, and C are constants.

kish. Crystalline graphite deposited in iron furnaces from molten iron.

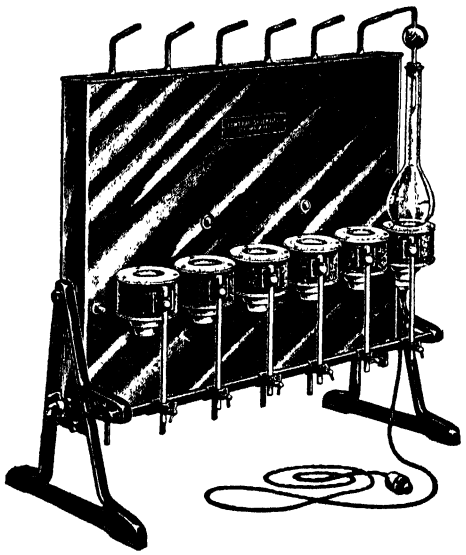
kisidwe oil. A hard, white, solid fat obtained from the nuts of *Allanblackia* species, from the Gold Coast of Africa; used in soap manufacture.

kittool fiber. Kittul. A fiber obtained from the leaves of a Ceylon palm, *Caryota urens;* used in the manufacture of brushes.

kittul. Kittool.

Kjeldahl, J. 1849–1900. A Danish chemist noted for analytical methods. **K. apparatus.** An arrangement for distilling ammonia from an

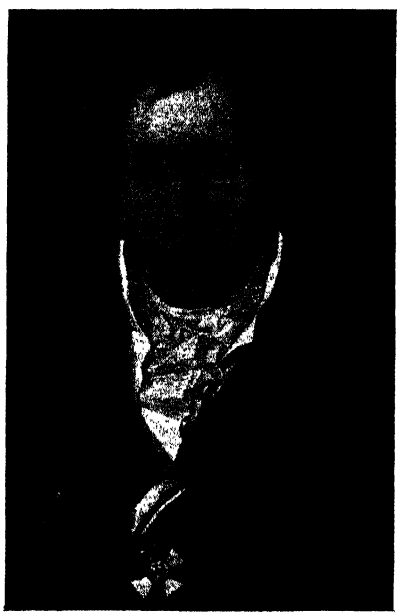
organic compound. **K. flask.** A pear-shaped flask of heat- and acid-resistant glass with a long neck. **K. method.** A method of determining the nitrogen in an organic compound by digesting the substance with concentrated sulfuric acid and distilling the ammonia from the ammonium sulfate formed into a measured quantity of standard sulfuric acid (see figure).



Kjeldahl apparatus showing one K. flask and six heaters.

kl. An abbreviation for kiloliter = 1000 liters.

Klaproth, Martin Heinrich. 1743–1817. A German chemist, who discovered uranium, titanium, and zirconium.



Martin Heinrich Klaproth.

klaprotholite. A copper bismuth sulfide, $Cu_6Bi_4S_9$.

Kleinenberg mixture. A mixture of cacao butter, spermaceti, and castor oil, used in microscopy as an imbedding material.

kleinite. A native mercury oxide and chloride, $HgCl_2.3HgO$.

Klein's liquid. A saturated solution of cadmium borotungstate, d.3.28, used in mineralogy for the separation of minerals.

klydonograph. A device to record automatically a temporary excess voltage, which causes a spark to pass through a moving film. The resulting Lichtenberg figures indicate the nature of the current.

km. An abbreviation for kilometer = 1000 meters.

knap. To break up, *e.g.*, lumps of ore.

knead. To work or press a number of ingredients into one mass, usually with the hands.

knock. The nearly instantaneous and very high-pressure explosion of a compressed mixture of fuel and air in an internal combustion engine. In this explosion a large proportion of the energy is given out as radiant energy and absorbed by the walls of the cylinder, thus reducing the available mechanical energy. It is usually identified with pinking and preignition, but these are considered by some to be distinct phenomena. **anti-** A substance added to a liquid fuel, as gasoline, which slightly retards the explosion and thereby reduces the wasted energy. *Antiknock gasoline* contains 0.05 % of tetraethyl lead. See *ethyl* gasoline, *motalin.*

knock-compound. Antiknock. A substance which when added to gasoline, reduces the knock and thereby increases the efficiency of the combustion engine.

Knop, Johann Ludwig Wilhelm. 1817–1871. A German agricultural chemist and founder of the "Chemisches Centralblatt." **K.'s solution.** A nutrient for plants: 1 pt. KNO_3, 1 pt. KH_2PO_4, 1 pt. $MgSO_4$, 4 pts. $Ca(NO_3)_2$ and a trace of ferric phosphate in 1000 pts. H_2O.

knoppern. Galls. A tannin material produced on various oaks by insects.

Knorr, Ludwig. 1859– . A German chemist noted as discoverer of antipyrine. **K. alkalimeter.** A device for determining carbon dioxide, used extensively in agricultural laboratories.

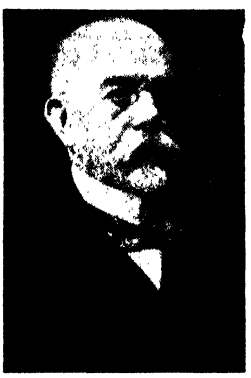
knot. The speed of 1 nautical mile (6082.66 ft. per hour).

knotgrass. English- The herb of *Polygonum aviculare*, a Polygonaceae; used as an astringent. **Russian-** The herb of *P. erectum;* used as an astringent.

knoxvillite. A native chromous sulfate, $CrSO_4$.

kobold. An early name for cobalt.

Koch, Robert. 1843–1910. A German bacteriologist and discoverer of the tubercle bacillus.



Robert Koch.

K.'s acid. Naphthylamine-*3.6.8*-trisulfonic acid. **K. bacillus.** The tuberculosis bacillus. **K. flask.** A pear-shaped flask used for growing bacterial cultures. **K. grinder.** A grinding apparatus for powdering bacteria.

koechlinite. A native bismuth molybdenum oxide, $Bi_2O_3.MoO_3$.

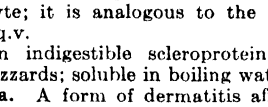
kogi. An enzyme used in the production of miso, q.v.

Kohlrausch, Friedrich. 1840–1910. A German physicist. **K. law.** The conductivity of an electrolyte is the sum of the conductivities of its component ions, provided complete ionization has taken place. **K. bridge.** An instrument for measuring the conductivity of an electrolyte; it is analogous to the Wheatsone bridge, q.v.

koilin. An indigestible scleroprotein lining of birds' gizzards; soluble in boiling water.

koilonychia. A form of dermatitis affecting the fingers of workers with alkaline cements.

kojic acid. $C_6H_6O_4$ = 142.05. *3*-hydroxy-*5*-hydroxymethyl-γ-pyrone. A hydroxy acid formed from glucose, m.153, by certain molds, *e.g.*, *Aspergillus oryzae*.



Cf. *ascorbic acid*.

kok-sagyz. Russian dandelion, the roots of which yield a rubber.

kola. Cola, kola nuts. The dried seeds of several *Cola* species, a Sterculiaceae of Africa; it contains 2–3 % caffeine. Used medicinally, as a nervine and cardiac stimulant; commercially, in the manufacture of beverages.

kolanin. $C_{40}H_{56}O_{21}N_4$ = 928.7. A glucoside from kola, which hydrolyses to caffeine, glucose and kolared.

kolared. $C_{14}H_{12}(OH)_6$ = 266.2. A red coloring matter from kola nuts.

Kolbe, Adolph Wilhelm Hermann. 1818–1884. A German organic chemist and prolific writer, who made the second organic synthesis (chloroacetic acid). Cf. *Wöhler*.

kolm. A radioactive asphaltic mineral containing 0.45 to 0.027 % Pb.

komanic acid. Pyrone-α-carboxylic acid.

konel. An alloy of 8 % ferrotitanium, 17 % cobalt and 73 % nickel, used as platinum substitute for radio-tube filaments.

koniogravimeter. An instrument for the determination of the amount of dust in air.

kontrastin. Zirconium oxide used as a contrast medium in x-ray examinations.

Kopp, Hermann. 1817–1892. A German physical-chemist. **K.'s law.** Every element has the same specific heat in its solid free state, and in its solid compounds. Thus, the molecular heat is the sum of the atomic heats of the component atoms.

Koppeschaar solution. A 0.1 N. bromine solution. Cf. *potassium bromate*.

koppite. A vitreous brown mineral, (Ca,Ce,Fe, Hg,Na_2)O,NbO_2,H_2O.

koprosterol. Coprosterol.

koroseal. Trade name for a vinylchloride plastic.

koryan oil. Kaoliang oil. An oil from *Andropogon sorghum*, koryan corn, from Manchukuo, d.0.926, n_D^{20}1.4655, sap. no. 187, iodine no. 121.

kosam seeds. The fruits of *Brucea sumatrana*, a Simarubaceae of China; used for dysentery and diarrhea.

kosin. Koussin.

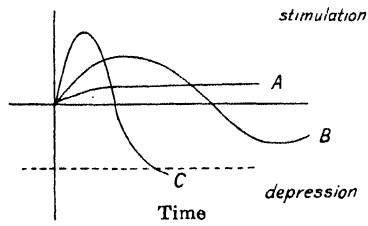
koso. Kousso.

kosotoxin. $C_{28}H_{44}O_{10}$ = 506.3. A yellow, amorphous principle from kousso.

Kossel press. A metal syringe, used for making sodium wire.

kotoin. Cotoin.

Kötschau hypothesis. The effect of small (A), moderate (B) and large (C) doses of drugs is expressed by the following curves where "*degree of stimulation*" is plotted against *duration* of effect:



Cf. *Arndt Schulz rule*.

Köttstorfer number. Saponification number.

koumiss. A drink prepared from mare's milk by fermentation with kefir yeast.

kounidine. $C_{21}H_{24}N_2O_5$ = 384.18. An alkaloid from the stem and leaves of Chinese *Gelsemium* species, which produces muscular and respiratory weakness.

Kourbatoff's reagent. An etching agent in the microanalysis of steel: A. 4 % HNO_3 in isoamyl alcohol. B. Equal parts of 20 % HCl in isoamyl alcohol and a saturated solution of nitroaniline in alcohol. C. Equal parts of 4 % HNO_3 in acetic acid, methanol, ethanol and isoamyl-alcohol. D. 3 pts. of saturated nitro-phenol in alcohol and 1 pt. 4 % HNO_3 in alcohol.

koussein. A yellowish, amorphous principle from kousso; used as an anthelmintic.

koussin. $C_{31}H_{38}O_{10}$ = 570.4. Kosin. Kussin. A resinous substance from kousso; used as an anthelmintic.

kousso. Cusso, brayera. The dried flowers of *Brayera anthelmintica*, (*Hagenia Abyssinica*), a Rosaceae; used as a fluid extract, as an anthelmintic. Cf. *brayerin*.

kovar. A group of alloys of Fe, Ni, and Co which show a sharp change in the coefficient of expansion at certain temperatures; used for all-metal radio tubes and thermostats.

Kr. The symbol for krypton.

K-radiation. See *K*-radiation.

kraft paper. A strong (German: kraft = force) wrapping paper made from wood pulp prepared by the sulfate process.

krameria. Rhatany root, payta. The dried root of *K. triandra* (Peru) or *K. argentia* (Brazil) a genus of polygalaceous shrubs of South America. Used as the fluid extract, as a powerful astringent and tonic.

krantzite. A variety of retinite.

Kraut's reagent. A microchemical reagent for ephedrine made by mixing *A* and *B* and diluting to 100 cc. *A* is 8 gm. bismuth nitrate in 20 cc. conc. HNO_3. *B* is 27.2 gm. potassium iodide in 50 cc. H_2O.

kreatine, kreatinine. See *creatine, creatinine*.

Krebs cycle. See *citric* acid cycle.

Kreis test. A test for three-carbon chain unsaturated aldehydes, characteristic of rancid fats. A red color develops in the aqueous layer after an ethereal solution of fat has been treated with HCl and phloroglucinol solution.

kremersite. A native potassium, ammonium and iron chloride, KCl.NH_4Cl.$FeCl_3$.1½H_2O.

krennerite. (1) A native telluride of gold and silver, (Ag, Au)Te_2. (2) Bunsenite.

kreosol. Cresol.

kreotoxin. A meat-poison or ptomaine formed by bacteria.

kresatin. $C_9H_{10}O_3$ = 166.2. m-cresylacetate, $MeCOOCH_2C_6H_4OH$. A colorless oily liquid; used medicinally as an antiseptic for diseases of the eye, ear, nose and throat.

krinosin. $C_{38}H_{70}O_5N$(?). A lipin isolated from the brain substance.

krith. Crith. The weight of one liter of hydrogen, at 0°C. and 760 mm. 1 krith = 0.0896 gram. A term used in the statement of density of a gas with reference to hydrogen; thus the density of hydrogen is one krith, the density of chlorine 35.5 kriths.

krocodylite. Crocidolite.

krügite. A native potassium and magnesium sulfate, $MgSO_4.K_2SO_4.4CaSO_4.2H_2O$.

Krupp's disease. The special type of fragility shown by steels after tempering and reheating.

kryofine. $C_{11}H_{15}O_3N$ = 209.12. Cryofine, methoxyacet-p-phenetidine, methylglycocoll-phenetidine, $EtO.C_6H_4.NHCO.CH_2OMe$. Colorless needles, m.98; soluble in water, alcohol, ether, or chloroform. Used as an antipyretic.

kryogenin. (1) See *cryogenin*. (2) $C_8H_{10}O_2N_4$ = 194.1. m-benzaminosemicarbazide, $NH_2CO.C_6H_4.NH.NH.CONH_2$. An odorless, colorless, slightly bitter powder, soluble in water; used as an antipyretic and antiseptic.

kryoscopy. (1) The methods of determining the molecular weight of a substance by observing the lowering of the freezing point of its solutions. See *cryoscopy*. (2) In general, the production of low temperatures. (3) That branch of metallurgy which deals with the phenomena occurring during the cooling of molten alloys.

kryptidine. $C_{11}H_{11}N$ = 157.1. *2.4*-dimethyl quinoline. A homolog of quinoline.

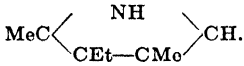
krypto- See *crypto-*.

kryptocyanin. $C_{25}H_{25}N_2I$ = 480.0. *1.1'*-diethyl-*4.4'*-carbocyanin iodide. A photographic sensitizer for the infra-red; used to photograph through haze.

kryptol. A granular mixture of graphite, carborundum and clay; used as a resistance in electric furnaces.

krypton. Kr = 82.7. A colorless, inert, noble gas and element, atomic number 36, which occurs in the atmosphere (1 per 1,000,000); $d._{(air=1)}$3.708, m. −169, b. −152.9. It forms no known chemical compound, and appears to consist of six isotopes of atomic weights 84, 86, 82, 83, 80, and 78.

kyptopyrrole. $C_8H_{13}N$ = 123.1. $\alpha.\beta'$-dimethyl-β-ethyl-pyrrole, 2.4-dimethyl-3-ethyl-pyrrole.



A split-product of chromoproteins.

kryptoxanthin. $C_{40}H_{55}OH$ = 552.4. Caricaxanthin. A yellow, carotinoid pigment from the pods of *Physalis* species, *Carica papaya* and yellow corn. Cf. *carotene*.

K.S.K. Ethyl iodoacetate.

kuh-seng. A Chinese drug consisting of the dried roots of *Sophora flavescens*, a Leguminosae. Its chief alkaloid is matrine.

kukersite. An Esthonian shale oil containing 43 % of organic matter (kerogen).

kukoline. An alkaloid obtained from *Cucullus diversifolius*, an Asclepiadaceae.

kumyss. Lac fermentatum. A sweetened cow's milk, fermented with yeast and used as a nutrient. Cf. *koumiss*.

Kundt. 1839–1894. A German physicist. **K.'s constant.** (1) See *K.'s rule*. (2) A value obtained by dividing Verdet's constant by the magnetic susceptibility of the substance. Values: Fe = 2.63, Ni = 3.15, Co = 3.99. **K. effect.** The rotation of the plane of polarised light in certain vapours and gases under the influence of magnetic forces. **K.'s rule.** In the absorption of light by a solution, an increase in refractive index of the latter produces a shift in the absorption bands towards the red to an extent defined by K.'s constant. **K.'s tube.** A horizontal tube containing a light powder, in which the gas or air is made to vibrate, by sounding a note at the open end. The sand sets itself in heaps whose distance apart is a measure of the velocity of sound in the gas and hence of its specific heat.

Kunkel, Johann. 1638–1703. A German alchemist who published, under the pseudonym "Baron von Lowenstjern," a chemical textbook "Laboratorium Chymicum." He also developed glass manufacture and prepared phosphorus.

kunzite. A native lithium aluminum silicate, $LiAl(SiO_3)_2$; a pink variety of spodumen.

kupfernickel. Niccolite.

kupferron. Cupferron.

kupramite. A preparation used in gas-masks as an absorbent for ammonia.

kurchi. The bark from the root of *Holarrhena antidysenterica*, an Apocynaceae; used as a fluid extract, as a febrifuge and antidysenteric.

kurchine. An alkaloid obtained from kurchi, q.v.

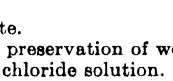
kurrajong oil. A thick, red oil from the seeds of *Brachychiton populenum*.

kusamba. A liquid opium solution obtained by macerating opium with rose-water.

kussin. Koussin.

kuteera gum. Hog gum.

kyanidine. $C_3H_3N_3$ = 81.2. *1.3.5*-triazine. The heterocyclic compound



Cf. *cyanidine*.

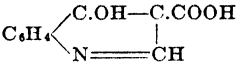
kyanite. Cyanite.

kyanizing. The preservation of wood by steeping it in mercuric chloride solution.

kyanol. An early name for aniline.

kymograph. An instrument for recording variations of blood pressure.

kynurenic acid. $C_{10}H_7O_3N$ = 189.09. 4- or γ-hydroxy quinoline carboxylic acid, 4-hydroxyquinaldic acid. The cyclic compound



A decomposition-product of tryptophane occurring in dog's urine, as prisms, m.289, soluble in hot water.

kynurenine. $C_{11}H_{12}N_2O_4$ = 236.08. A dibasic amino-acid from urine, $NH_2.C_6H_4.C(COOH):CH.CH(NH_2)COOH$.

kynuric acid. $C_9H_7O_3N$ = 209.1. Oxalylanthranilic acid, carbostyrilic acid. Colorless crystals, m.288.

kynurin. C_9H_7ON = 145.06. 4- or gamma-hydroxyquinoline, *4*-quinolinol. Colorless crystals, m.201, b.300, soluble in water or alcohol.

kyrine. A basic substance resulting from the hydrolysis of proteins.

kytoplasm. Cytoplasm.

L

l. An abbreviation for: (1) liter; (2) latent heat per gram; (3) length, (4) ionic mobility; (5) mean free molecular path.

l- Abbreviation for levo- or levorotary; *l(d)*- levo- (or dextro-); *ld-* levo- and dextro- (= meso).

L. An abbreviation for: (1) the abstract unit of length; L^2. abstract unit of area; L^3. abstract unit of volume; (2) latent heat per mol.; (3) solubility product. **L acid.** Same as *1*-Naphthol-*5*-sulfonic acid. **L electron.** The electrons located in the second shell or orbit of the atom; their maximum number is eight, and they are built up in the period from Li = 1, Be = 2, to O = 6, F = 7, and completed by Ne = 8. **L lines.** (1) The group of lines following the K lines, q.v. (2) The Fraunhofer lines λ 3820 to λ 3858, due to iron. **L orbit.** The second series of paths of electrons around the atomic nucleus, and outside the innermost K orbit. **L radiations.** The second series of homogeneous x-rays characteristic of the metal used as anticathode, and analogous to the K radiations, q.v. **L shell.** The second layer of electrons in the static atom (Lewis-Langmuir), which correspond with the L-orbit of the dynamic atom (Bohr-Sommerfeld). **L. spectrum.** The spectrum due to L radiations. Cf. *K spectrum, Moseley spectra.*

λ The Greek letter "lambda," q.v.

Λ The Greek capital letter "lambda," q.v. The symbol for equivalent conductivity.

La. The symbol for lanthanum.

lab. Lab ferment, rennase. The ferment of rennet, which causes the coagulation of milk.

Labarraque Antoine Germaine. 1777–1850. A French apothecary. **L. solution.** A solution of sodium hypochlorite, used as a disinfectant and deodorant; contains not less than 2.4 % available chlorine.

labdanum. A resin from *Cistus* species; used as stimulant and expectorant.

label. A square, colored paper tag, prescribed for shipping chemicals in the U. S. by the Railroad Commissioners.

white—for corroding liquids, acids, etc.

yellow—for oxidizing materials and inflammable solids.

red—for inflammable liquids and inflammable compressed gases.

green—for non-inflammable compressed gases. Cf. *hazard, compressed gases, storage.*

LaBel tube. A distilling tube with two or more bulbs and return tubes, used for fractional distillation.

Labiate. Mint family, a group of aromatic herbs that yield several important essential oils:

herbs:

Mentha piperita	peppermint
Mentha spicata	spearmint
Hedeoma pulegioides	pennyroyal
Marrubium vulgare	horehound
Melissa officinalis	balm
Scutellaria lateriflora	skullcap
Cunila mariana	dittany
Glechoma hederacea	ground ivy
Lycopus virginicus	bugle
Lavandula spica	lavender oil
Origanum majorana	sweet majoram
Origanum vulgare	wild marjoram
Thymus serpyllum	wild thyme
Leonurus cardiaca	motherwort
Monarda punctata	horsemint
Monarda fistulosa	wild bergamot
Hyssopus officinalis	hyssop
Teucrium chamaedrys	germander
Teucrium scordium	water germander
Teucrium marum	teucrium
Lamium album	lamine
Nepcta cataria	catnip

leaves:

Salvia officinalis	sage
Rosmarinus officinalis	rosemary
Thymus vulgaris	thyme
Orthosiphon stamineus	Java tea
Pycnanthemum montanum	mountain mint
Satureia hortensis	summer savory
Micromeria douglasii	yerba buena
Ocimum basilicum	sweet basil
Stachys betonica	betonica

flowers:

Lavandula vera	lavender

rhizomes:

Collinsonia canadensis	stone root.

labile. Unstable. **l. acid.** See *acid.* **l. state.** Temporary stability.

laboratory. The chemical working place.

Modern laboratory.

Labrador tea. James tea, marsh tea, wild rosemary. The leaves of *Ledum palustre*, an Ericaceae, used as tea in Labrador, and as an expectorant. It contains ledum camphor, ericinol and ericulin.

labradorite. Saussurite. An irridescent lime-soda feldspar.

laburnine. An alkaloid from *Cytisus laburnum*, a Leguminosae. Cf. *cytisine.*

lac. (1) Lacca, resina lacca, lacca gum, lakh. A resin exuding around twigs of *Croton* species, a Euphorbiaceae, and *Fiscus* species, a Moraceae of the East Indies, caused by the bite of the female insect, *Coccus lacca.* (2) The bodies of *Coccus lacca*, used as a red dye. (3) Milk;

as *lac sulfuris* = milk of sulfur. **α-lac.** A suggested name for the insoluble portion of shellac. **stick-** The crude l. as taken from the tree, still impure with twigs; a deep reddish-brown resin. **seed-** L. broken from the twigs; minute irregular fragments. **shel-** Shellac. Prepared from the above by melting and straining. Cf. *shellac.*

lacca. See *lac, shellac.* **l. coerula.** Litmus.

laccaic acid. $C_{16}H_{12}O_8$ = 332.1. Laccainic acid. A red crystalline constituent of lac; decomp. 180.

laccase. (1) An oxidizing enzyme of the sap of plants (lac tree, etc.). (2) A class of oxidases which act on phenols.

lacceroic acid. $C_{31}H_{63}COOH$ = 480.29. Dotriakontanic acid. A fatty acid, m.95, in some waxes. Cf. *psyllic acid.*

lacerate. To cut or tear a margin into irregular segments.

lachry- See *lacri-.*

lacmoid. $C_{12}H_9O_4N$ = 231.1. Resorcinol blue. Lustrous, dark violet scales, slightly soluble in water, soluble in alcohol or acetone; used as an indicator in titrating mineral acids, bases, and alkaloids: blue (pH 6.4) in alkaline, red (pH 4.4) in acid solution. **l. tincture.** A solution of 0.5 % gm. lacmoid in 100 cc. water and 100 cc. alcohol. Used as indicator.

lacmus. Litmus.

lacquer. (1) A varnish, natural or containing shellac. (2) The solution of a resinous body which applied to an object (by dipping, spraying or brushing), dries by evaporation of the solvent, and leaves a protective covering. (3) A solution of a cellulose ester in a solvent; *e.g.*,

cellulose nitrate	15 parts
plasticizer	5–10 parts
resin	5 parts
solvent	70–75 parts.

acetate- A relatively uninflammable solution of cellulose acetate in carbon tetrachloride. **bronzing-** A solution of nitrocellulose in amyl acetate with suspended aluminum or bronze powder. **brush-** A l. applied with brushes. **Burmese-** A natural l. exuding from the stems of *Melanorrhea usitata*, an Anacardiaceae, which turns black on exposure. **cellulose-** Lacquer (3). **Chinese-** Japanese- **collodion-** See *collodion.* **dip-** A l. used for the dipping or immersion of objects. **glyptal-** A solution of the synthetic resins made from glycerol and organic acids. **Japanese-** The resinous sap of *Rhus vernicifera*, an Anacardiaceae of Japan and China. It is often colored by pigments and thinned with camphor oil or turpentine. **nitrocellulose-** The commonest form of l., containing cellulose nitrate in an organic solvent.

l. solvent. A group of organic liquids which dissolve resins, gums or nitrocellulose, and are used in the manufacture of lacquers, varnishes, and rayon. They are classified according to (1) boiling point (see solvents); or (2) type:

One-type solvents, such as:

1. Alcohols *e.g.*, ethanol.
2. Ethers *e.g.*, ethyl ether.
3. Ketones *e.g.*, acetone.
4. Esters *e.g.*, ethyl acetate.

Two-type solvents, which may be either a mixture of two or more of the above compounds, or a single compound that contains two or more of the characteristic groups, such as

1. Alcohol-esters, *e.g.*, ethyl glycollate.
2. Alcohol-ethers, *e.g.*, diethylglycerol.
3. Alcohol-ketones, *e.g.*, diacetone alcohol.
4. Ketone-esters, *e.g.*, ethyl pyruvate.
5. Ketone-ethers, *e.g.*, ethoxy acetone.
6. Ester-ethers, *e.g.*, ethoxy ethyl lactate.

lacri- A prefix indicating tears.

lacrimation. An excessive secretion of tears.

lacrimator. A tear-producing substance; as, ethyl iodoacetate.

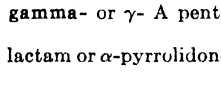
lacrimatory. An agent which produces excessive secretion of tears. Cf. *dacryagogue.* **l. gas.** A poison gas used in warfare which produces tears, as benzyl bromide, dichlorophenylcarbylamine.

lacry- Lacri-.

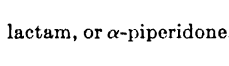
lactalbumin. The albumin of milk; of high biological value. Cf. *proteins.*

lactam. Lactan. An organic ring-compound containing in its ring the —NH—CO— group. The ring is formed by the elimination of water from the —COOH and $—NH_2$ group. Cf. *lactims, lactoxime.* The more common are:

gamma- or γ- A pentatomic ring; as γ-butyrolactam or α-pyrrolidone,



delta- or δ- A hexatomic ring; as δ-valerolactam, or α-piperidone,



lactamic acid. Alanine.

lactamide. $C_3H_7O_2N$ = 89.1. α-hydroxypropionamide, lactic acid amide, 2-hydroxypropanamide*, Me.CHOH.$CONH_2$. Colorless crystals, d.1.138, m.74; slightly soluble in water or alcohol.

lactamine. Alanine.

lactan. Lactam.

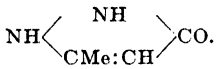
lactase. An enzyme occurring in the intestinal juice, which hydrolyzes lactose to dextrose and galactose.

lactasidase. A zymase which converts lactose to lactic acid.

lactate. (1) A salt of lactic acid, a compound containing the monovalent Me.CHOH.COO— radical. (2) To produce milk.

lactation. The secretion of milk.

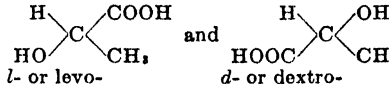
lactazam. A ring compound containing the —NH.NH.CO—group in its ring, as butyrolactazam or 3-methylpyrazolon



Cf. *pyrazolone, phenyllactazam.*

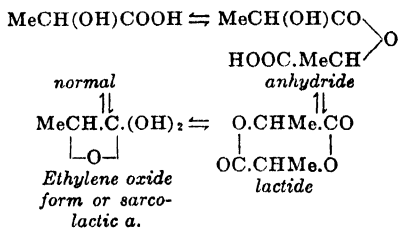
lactazone. Lactoxime.

lactic acid. $C_3H_6O_3$ = 90.1. α-hydroxypropionic acid, 2-hydroxypropanoic acid*, ethilidenelactic acid, acid of milk, fermentation lactic acid. A fermentation acid from milk or carbohydrates. A colorless and odorless liquid, d.1.240, m.18, $b._{12mm}$.119, soluble in water, alcohol, or ether. Used as a reagent in detecting glucose and pyrogallol; also in organic synthesis; in leather, textile, and tanning industries; and in pharmacy. Also used as to substitute citric and tartaric acids. There are two tautomeric varieties of which the above is the *dl-* form, produced by fermentation of carbohydrates.



l- or levo- and *d-* or dextro-

d- l. produced in muscle tissues by splitting glucose, or by the action of *Micrococcus acidi paralactici*. A solid, m.25. **l-** L. formed by the action of *Bacillus acidi levolactica*. **p-** Para- See *d-*. **sarco-** *d-*. The aqueous solution of l. consists of an equilibrium of four forms:



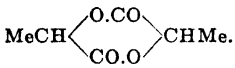
Ethylene oxide form or sarcolactic a. *lactide*

l. acid series. A group of monobasic hydroxy acids of the general type HO.R.COOH, and the general formula $C_nH_{2n}O_3$ or $C_nH_{2n}(OH)COOH$.

carbonic (hydroxyformic) acid	HO.COOH
glycollic acid, hydroxyacetic acid	$HO.CH_2.COOH$
lactic acid, hydroxypropionic acid	$HO.C_2H_4.COOH$
hydroxybutyric acid	$HO.C_3H_6.COOH$
hydroxyvaleric acid	$HO.C_4H_8.COOH$
hydroxycaproic (leucinic) acid	$HO.C_5H_{10}.COOH$

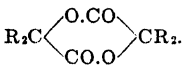
lactic anhydride. $C_6H_{10}O_5$ = 162.1.. Lactic acid anhydride, *2*-hydroxypropanoic anhydride*, $(MeCHOHCO)_2O$. An amorphous white powder, m.250, slightly soluble in water, soluble in alcohol or ether.

lactide. $C_6H_8O_4$ = 144.1. *3.6*-Dimethyl-*2.5-p*-dioxandione. A condensation-product of lactic anhydride:

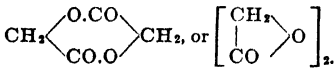


Monoclinic crystals, d.0.862, m.128, b.255; slightly soluble in water or alcohol. Cf. *lactides*.

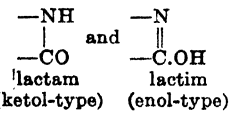
lactides. Compounds formed by the condensation of two *α*-hydroxyacids or their anhydrides. They are of the general type:



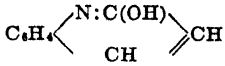
The simplest is glycollide,



lactim. Lactin. An organic ring compound containing the bivalent —N:COH— group in its ring. They are isomeric with lactams, and differ in that they are formed by the elimination (as water) of the two H of the NH_2 group and the O of the CO group:



Thus, carbostyryl,



is the lactam of o-aminocinammic acid. The H of the OH group is replaceable. Cf. *peptide*.

lactin. (1) Lactose. (2) Lactim.

lactobacillus. A bacillus which causes lactic acid fermentation of milk.

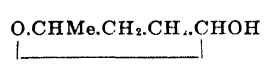
lactobiose. Lactose.

lactochrome. $C_6H_{13}O_6N$ = 200.2. A coloring matter isolated from milk.

lactocrit. Lactokrit. An instrument for determining the amount of fat in milk.

lactoflavin. $C_{17}H_{20}N_4O_6$ = 376.15. *6.7*-Dimethyl-*9*-isoalloxazine. A flavin (q.v.) pigment, m.287, from milk, alfalfa, clover and green leaves identical with vitamin B_2, q.v. Orange-red needles, giving, in water, a yellow solution with green fluorescence.

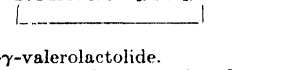
lactol. (1) $C_{13}H_{12}O_2$ = 216.1. Lactonaphthol, naphthyl lactate, $MeCHOHCOOC_{10}H_7$. Colorless crystals, insoluble in water, soluble in alcohol; used as an intestinal antiseptic. (2) The cyclic form of hydroxy aldehydes (aldolactols) and hydroxy ketones (ketolactols); as,



γ-valerolactol or pentanol-*3*-al-*1*.

lactolactic acid. Dilactic acid.

lactolide. The ether of a lactol; as,

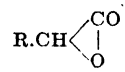


methyl-*γ*-valerolactolide.

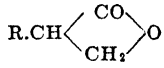
lactometer. A hydrometer for determining the specific gravity of milk.

lactonaphthol. Lactol.

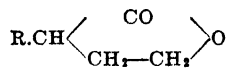
lactone. An anhydro-ring compound produced by intramolecular condensation of an oxyacid with the elimination of water, *e.g.*, *α*- or **alpha-** (*The least common type*). The triatomic ring



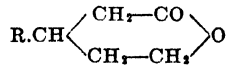
β- or **beta-** (*A less uncommon type.*) The tetratomic ring:



γ- or **gamma-** (*The commonest and most stable type.*) The pentatomic ring:



δ- or **delta-** The hexatomic ring:



The nomenclature of lactones is derived by either (a) adding -olid to the hydrocarbon, or (b) lactone to the acid; as

(gamma lactones)

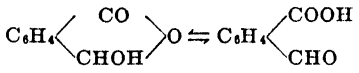
$CH_2.CH_2.CH_2.CO.O$ = *γ*-butyrolactone or butanolid

$CHMe.CH_2.CH_2.CO.O$ = *γ*-valerolactone or 1.4-pentanolid

$CHEt.CH_2.CH_2.CO.O$ = *γ*-caprolactone or 1.4-hexanolid

(delta lactones)
$CH_2.CH_2.CH_2.CH_2.CO.O$ = δ-valerolactone or 1.5-pentalolid
$CHMe.CH_2.CH_2.CH_2.CO.O$ = δ-caprolactone or 1.5-hexanolid

l. isomerism. The shift from lactone to aldehyde-acid; as,



lactonic acid. Galactonic acid.

lactonitrile. C_3H_5NO = 71.05. 2-Hydroxypropanenitrile*, Me.CHOH.CN. A colorless liquid, d.0.992, m. −40, b.183.

lactose. $C_{12}H_{22}O_{11}.H_2O$ = 360.2. Milk-sugar, sugar of milk, lactobiose, glucose-galactoside. A disaccharide occurring in milk. Colorless rhombic, crystalline powder, d.1.525, m.203 (decomp.), slightly soluble in water, insoluble in alcohol or ether. Used extensively in pharmacy (for tablets), medicine (as nutrient), and industry. **l.-litmus-agar.** A culture medium for growing certain bacteria, consisting of

10 gm. lactose
15 gm. agar-agar
10 gm. peptone
1000 cc. boullion stock

to which is added azolitmin solution and the whole neutralized with sodium hydroxide to a pale blue color.

lactoxime. Lactazone. An unsaturated lactam, or a compound containing the —CH=N—O—CO— group in the ring.

lactucarium. The dried milky juice of *Lactuca virosa*, wild lettuce, a Compositae. It is a mild narcotic and sedative.

lactucerol. $C_{18}H_{30}O$ = 262.23. An alcohol from *Lactuca* species. Cf. *sycoceryl alcohol.*

lactyl. The monovalent acyl radical $CH_3.CHOH.CO$— derived from lactic acid. **l. lactate.** Dilactic acid. **l. urea.** $C_4H_6O_2N_2,H_2O$ = 132.11. The heterocyclic compound:  .
Colorless rhombic crystals, m.145, soluble in water, alcohol, or ether.

ladanum. Labdanum. **l. oil.** An essential oil distilled from the resin of *Cistus creticus*, a Cistaceae of the Mediterranean Islands. A yellow oil, d.1.01, insoluble in water, soluble in alcohol, ether or chloroform; used in perfumery.

Ladenburg, Albert. 1842–1911. A German chemist noted for research on alkaloids and organic compounds of silicon. **L. flask.** A distilling flask, with several bulbs in its long neck, used for fractional distillation. **L. formula.** See *benzene structure.* **L. law.** The velocity of a photoelectron is proportional to the square root of the voltage exciting it.

ladle. A vessel or pot for holding, transporting and pouring molten metal.

lady's slipper. Cypripedium.

læ- See *lae-, le-.*

laevo- Levo-.

laevulinic acid. Levulinic acid.

laevulose. Fructose.

Lafayette mixture. Mixture copaiba.

lag. (1) To drag or follow behind. (2) To bind a pipe conducting steam with a non-conducting material (as asbestos), to keep it hot and prevent the steam condensing. **magnetic-** See *hysteresis.* **nitrogen-** See *nitrogen.*

lagam balsam. A thick yellow liquid resembling copaiba balsam.

lagoriolite. $3Na_2O.Al_2O_3.3SiO_2$. A silica mineral (q.v.) of the garnet group.

lake. An adsorption compound of a vegetable or animal coloring material with aluminum oxide or other metallic oxide, produced by coprecipitating the color with the corresponding metallic salts (mordants). Lakes are usually bright in color and insoluble, but the same dye can give different shades with different mordants, *e.g.*, alizarin produces with

aluminum and tin—reddish shades
calcium or barium—bluish shades
ferric salts—purplish shades
chromium—violet-brownish shades.

lakh. (1) Lac. (2) In India = 100,000.

laking. Hemolysis.

lamb. An abbreviation for lambert.

Lamb, Arthur Becket 1880– . An American chemist, noted for research in inorganic chemistry.

lambda. The Greek letter Λ or λ (L, l). The symbol for: (1) microliter; (2) latent heat of reaction; (3) wavelength; (4) lithium nucleus; (5) equivalent conductivity.

lambert. Lamb. A unit of brightness of a perfectly diffusing surface, which radiates or reflects one lumen per square centimeter. 1 lamb = 1 phot = 1 lumen per $cm.^2$ = 0.3183 candles per $cm.^2$ = 2.054 candles per in^2.

Lambert's law. Each layer of an absorbing medium of equal thickness absorbs an equal fraction of the radiation which traverses it, provided the medium is homogeneous. $I = I_0 e^{-al}$, where I_0 and I are the intensities of the incident and emergent radiations, respectively, of rays of light of a wave-length λ, e the thickness of the transmitting medium in cm., and a the absorption coefficient (q.v.) of the medium for the wave-length λ.

Lambrecht's polymeter. A meteorological measuring instrument, consisting of a hygrometer and thermometer with humidity conversion scales.

lamella. (1) A medicated disk or wafer. (2) Lamina.

lamina. A thin flat plate or scale; as mica.

Laminaria. Tangle, seagirdle. A genus of *Phaeophyaceae* or algae of the brown sea-weed type, order Laminariaceae. Cf. *kelp.*

laminated. Split, or arranged in thin layers.

lamine. An alkaloid obtained from the blossoms of *Lamium album*, dead-nettle, a Labiatae.

lamp. A device for obtaining light or heat. **alcohol-** A small vessel with wick, for burning alcohol. **arc-** See *arc.* **blast-** See *burner.* **carcel-** See *carcel unit.* **electric-** A device for transforming an electric current into light. Three types: arc l., filament l., and vacuum l. **filament-** A device for heating a thread of carbon, tantalum, or tungsten to incandescence in an evacuated glass bulb. The temperature and brightness of some filament l. are:

50 Watt carbon.....	1840°C,	3.3 lumens per watt
50 Watt tantalum....	1885°C,	4.9 lumens per watt
50 Watt tungsten (gas-filled).....	2425°C,	11.1 lumens per watt

gas-filled- (1) Vacuum l. (2) A filament l. which contains a small quantity of gas *e.g.*, N_2 or A. **halide-** See *halide lamp*. **Harcourt-** A standardized device for burning a definite quantity of pentane at a definite rate; used as standard of illumination in measuring brightness. **Hefner-** A standard lamp used in photometry. **Kromayer's-** A mercury arc in a quartz container, which produces actinic rays. **mercury-** An evacuated glass or quartz container containing mercury vapor; on the passage of an electric current it emits an intense bluish light, which is rich in ultraviolet or actinic rays. It is used in spectroscopy and photography. **microscope-** An electrical illuminating device for microscopes. **mignon-** A small electric lamp for examining tissues, or organs. **miner's-** q.v. **neon-** A vacuum type lamp containing a trace of neon. **Nernst-** An electric lamp with metal oxide filament, which becomes a conductor when heated. **pentane-** A lamp burning pentane, used as photometric standard. **quartz-** A mercury vapor lamp made of quartz. **spectrum-** A device for coloring a non-luminous flame with vapors, sprays or solid particles; used for the production of spectra of metals. **vacuum-** An illuminating device consisting of a vacuum tube, variously shaped in form of letters or ornaments, through which passes an electric current. Different gases, used as the residual gas in the tubes, produce different colors.

lampblack. Carbon black. Paris black. Finely-divided carbon obtained by burning gas or oil under a slowly rotating metal cylinder. Used as a paint, printer's ink, and paper pigment, after removal of the oily impurities. Cf. *soot*.

lamprobolite. A basaltic hornblende.

lana. Wool. Flannel.

lanain, lanalin. Lanolin.

lanarkite. A native, basic lead sulfate, $PbSO_4.PbCO_3$, derived from $PbSO_4.PbO$.

lanatoside. A newer term for digilanid (q.v.).

lancet. A small pointed knife with two edges.

land plaster. Gypsum.

Landmark process. The synthesis of ammonia by passing steam over TiN_2 and carbon, and the recovery of TiN_2:

(1) $2TiN_2 + 2C + H_2O \rightarrow 2TiN + CO + 2NH_3$.
(2) $N_2 + 2TiN \rightarrow 2TiN_2$.

Landolt, Hans Heinrich. 1831–1910. A Swiss physical chemist, noted for his work on optical refractivity.

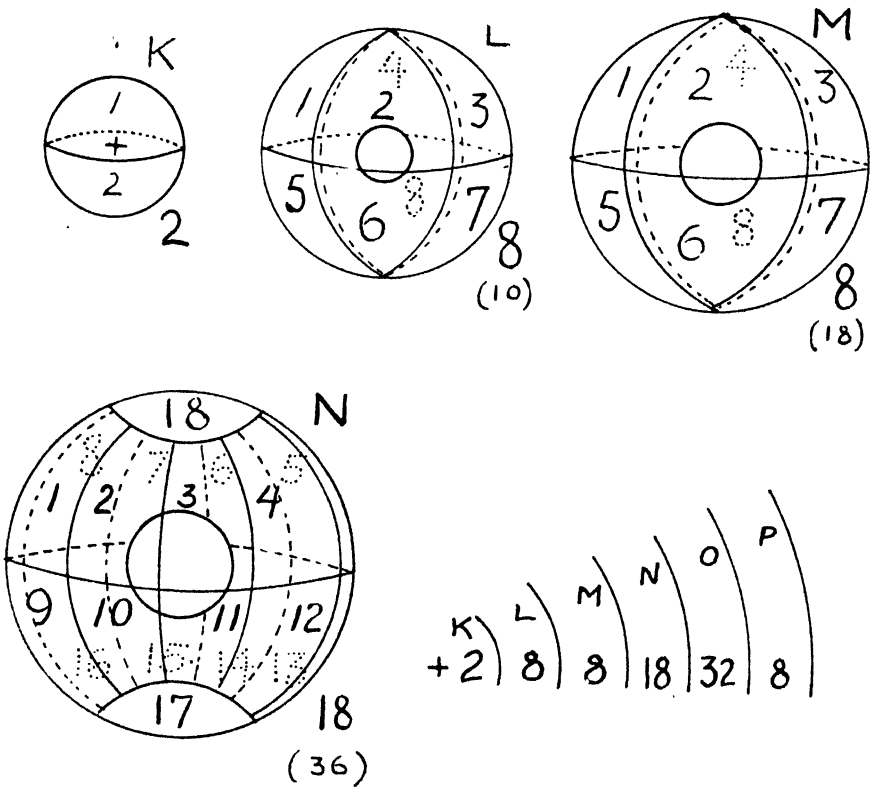
Landsberger apparatus. An apparatus for the determination of molecular weights from the rise in boiling-point of a solution.

langbeinite. A native potassium-magnesium sulfate, $K_2SO_4.2MgSO_4$.

Lange solution. A colloidal solution of gold.

Langevin formula. The activity coefficient, α, of ions or the coefficient of combination of ions is: $\alpha = \Lambda_0/\kappa$, where Λ_0 is the equivalent conductivity and κ the dielectric constant per volt.

Langmuir, Irving. 1881– . An American physical chemist noted for experiments on atomic hydrogen, low pressure and high vacuum reactions and development of theories of isosterism and atomic structure. Cf. *Lewis-Langmuir theory*. **L. theory.** (1) An extension of Lewis' atomic theory: Electrons occupy



Langmuir theory.

positions in the imaginary shells around the atom (see original figure). The white central disk represents the shell, and the numbers indicate the electrons added when passing from one element to the other. See *periodic system*. (2) In the solid state secondary valencies supplant the effect of primary valences.

lanital. An artificial wool produced in Italy from casein. Cf. *aralac*.

lanoceric acid. $C_{30}H_{60}O_4$ = 484.46. A dibasic fatty acid, m.105, from lanolin; constituent of wool grease.

lanolin. Lanum, lanain, lanalin, lanesin, lanichol, laniol, adeps lanae hydrous, hydrous wool fat. A purified and hydrated wool fat; used as an excipient for external use, and in cosmetics. **anhydrous-** Adeps lanae, wool fat. A yellowish semi-solid fat from sheep's wool, consisting of cholesterol esters of higher fatty acids, m.38–42, soluble in alcohol, ether or benzene.

lanopalmic acid $C_{16}H_{30}O_3$ = 358.2. A fatty acid from wool grease.

lanosterol. $C_{30}H_{50}O$ (?). Isocholesterol. An unsaturated sterol closely related to cholesterol, m.139–140, comprising approximately 25 % of wool wax, q.v.

lantanine. An alkaloid from *Lantana brasiliensis*, a Verbenaceae of Brazil; used as an antiperiodic, antipyretic and quinine substitute. Cf. *yerba sagrada*.

lanthanite. The dull, infusible mineral $La_2(CO_3)_3.9H_2O$.

lanthanum. La = 138.92. A rare earth metal, atomic number 57, discovered in 1839 by Mosander. A lead-gray lustrous metal, d.6.15, m.810, found in the rare earth minerals cerite, samarskite, lanthanite and gadolinite. It decomposes water slowly, and has a valency of three; not at present used in industry or medicine, but forms pyrophoric alloys and can be used as a catalyst in ashing biological material. **l. acetate.** $La(CH_3COO)_3.1\frac{1}{2}H_2O$ = 343.01. White crystals, soluble in water. **l. carbonate.** $La_2(CO_3)_3.8H_2O$ = 602.1. A white crystalline powder, insoluble in water, soluble in dilute acids. **l. chloride.** $LaCl_3.7H_2O$ = 371.4. White transparent triclinic crystals, soluble in water or alcohol. **l. nitrate.** $La(NO_3)_3.6H_2O$ = 433.1. White transparent, deliquescent crystals, m.40, b.126, soluble in water or alcohol. Used as an antiseptic, and for incandescent gas mantles. **l. oxalate.** $La_2(C_2O_4)_3$ = 451.8. A white crystalline powder, insoluble in water. **l. oxide.** La_2O_3 = 325.8. An amorphous, infusible, white powder, d.6.41, insoluble in water, soluble in acids and ammonium chloride solutions. Used in incandescent gas mantles, and for "lime-lights." **l. sulfate.** $La_2(SO_4)_3.9H_2O$ = 727.9. Colorless, hexagonal needles, d.2.81, slightly soluble in water, decomp. when heated. **l. sulfide.** La_2S_3 = 374.02. A yellow powder, d.4.997, m.2300–2350, insoluble in water.

lanthopine. $C_{20}H_{25}O_4N$ = 343.20. Lantol. A colorless crystalline alkaloid of opium, m.200.

lantol. Lanthopine.

lanum. Lanolin.

lapacho bark. The bark of *Avicennia nitida*, black mangrove, used for tanning. **l. wood.** The heart wood of *Avicennia tomentosa*, a Verbenaceae of the tropics.

lapachoic acid. Lapachol.

lapachol. $C_{15}H_{14}O_3$ = 242.11. Lapachoic acid, targusic acid, 2-hydroxy-3-amylene-α-naphthoquinone. A constituent of lapacho wood m.141.

lapis. (1) The Latin term for stone. (2) An alchemical term applied to any non-volatile substance. **l. albus.** A native calcium silicofluoride. **l. amiridis.** Emery. **l. calaminaris.** Calamine. **l. causticus.** Fused sodium or potassium hydroxide. **l. divinus.** Cuprammonium. **l. imperalis.** Silver nitrate. **l. lazuli.** (1) A mixture of minerals, usually calcite, pyrite, lazulite, sodalite and häyenite (blue Na, Al silicates), which were the source of the ancient ultramarine. (2) A native copper silicate; translucent deep blue, green, or purple compact masses. Used as semi-precious stone for ornaments, vases, or jewelry. **l. lunaris.** Fused silver nitrate.

lappa. Burdock, clotbur, bardana. The dried roots of *Arctium lappa*, a Compositae; used as the fluid extract, as a diuretic and diaphoretic.

lappaconitine. (1) $C_{32}H_{44}O_8N_2$ = 584.32. An alkaloid of *Aconitum septentrionale*, a Ranunculaceae, m.205. (2) $C_{32}H_{42}N_2O_9$ = 598.34. An alkaloid, m.223.

larch. The bark of *Larix Europaea* (*Pinus larix*), a Coniferae, used as astringent and diuretic; it contains larixine. **American-** or **black-** Tamarac. **European-** Larch. **l. agaric.** Agaric. **l. extract.** An extract obtained by leaching the bark of *Pinus larix;* it is rich in tannin and is used in the tanning industry.

lard. Adeps. The purified abdominal fat from the hog. A white, granular mass, insoluble in water, soluble in alcohol, ether or chloroform. Used in cooking and pharmaceutical preparations. **l. benzoinated.** Adeps benzoinatus. Lard containing 1 % of benzoin. Used as mild antiseptic and ointment base. **l. oil.** A colorless oil, chiefly triglycerides of oleic acid, pressed from lard, d.0.915, soluble in alcohol, ether or chloroform. Used as lubricant, and illuminant.

lardacein. A wax, d.0.6969, m.55, from the scale of *Ceroplastens rubens*, an insect living on tea and citrus trees.

lardine. A substitute for lard prepared by hydrogenating cottonseed oil.

large calorie. Great calorie. The amount of heat required to raise the temperature of 1 kg. water from 14.5°C. to 15.5°C. 1 large calorie (Cal.) equals 1000 small calories (cal.). See *calorie*.

Larix. A genus of Coniferae yielding timber, oils, and resin:

L. Americana	tamarac
L. cedrus	cedrus
L. Europaea	larch

larixine. $C_{10}H_{10}O_5$ = 210.1. Larixinic acid. A principle obtained from larch bark, *Larix europaea*, a Coniferae. Long, white lustrous crystals of empyreumatic odor and bitter astringent taste, m.153, soluble in water, alcohol or ether.

larkspur. Delphinium. A ranunculaceous plant. **l. seeds.** The dried seeds of *Delphinium* species, used as a fluid extract, as an antiparasitic and diuretic

Larmor, Sir Joseph. 1857–1942. A British physicist, noted for his work on the electrical structure of matter.

larodon. A registered trade-mark for 1-phenyl-2,-3-dimethyl-4-isopropyl pyrazolone, $C_{14}H_{18}N_2O$. Used as an analgesic.

larosan. A trade-mark for a calcium caseinate preparation, used as an addition to infants' milk.

larvicide. An agent that destroys larva, the first stage of development of insects after hatching.

latent. Not manifest or readily obtainable. Lying hidden. **l. energy, l. force.** Potential energy. **l. heat.** The amount of heat required to change the state of a body from solid to liquid at its melting point, or from liquid to gas at its boiling point. Likewise the quantity of heat liberated if a gas changes to a liquid, or a liquid to a solid, at its condensation or freezing point, respectively. **l. h. of fusion.** The number of gram-calories required to convert 1 gram of a substance from solid into liquid, without a change of temperature. **l. h. of vaporization.** The number of gram calories required to convert 1 gram of substance from liquid into vapor without a change of temperature. **l. image.** The invisible change produced on a photographic plate by exposure to light. It is made visible by exposure, and is due to the effect of light on AgBr, which is changed to excited molecules, Ag^*Br^* or Ag_2Br.

lateral chain. See *chain.*

laterite. A hydrated oxide of iron and aluminum, and sometimes titanium (cf. bauxite), which occurs as a brown surface earth.

latex. The milky juice of plants, or the exudation of trees, shrubs or vines obtained by tapping the trunk. **rubber-** A colloidal emulsion of 33 % rubber (q.v.), d.0.983, p_H 7.0–7.2.

lather. A foam or froth of soap and water.

lathering power. The relative amount of froth formation of soap solutions. Sodium oleate promotes, sodium palmitate retards the foam production.

lattice. See *space lattice.*

laucaniline. Paraleucoaniline.

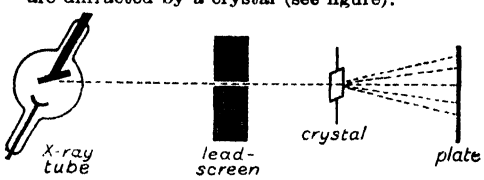
laudanidine. $C_{20}H_{25}NO_4$ = 343.3. Tritopine, *l*-laudanine. An alkaloid from opium. Hexagonal prisms, m.166.

laudanine. $C_{20}H_{25}O_4N$ = 343.3. An alkaloid from opium. dl- Small colorless prisms, m.166, insoluble in water, soluble in alcohol, ether or benzene; used as a strychnine substitute. l- Laudanidine.

laudanosine. $C_{21}H_{27}O_4N$ = 357.3. N-methyltetrahydro-papaverine. An alkaloid from opium. A yellow-white crystalline powder, m.89, insoluble in water, soluble in alcohol, ether, or benzene.

laudanum. Tincture of opium. A brown solution of opium in alcohol; used as a powerful anodyne.

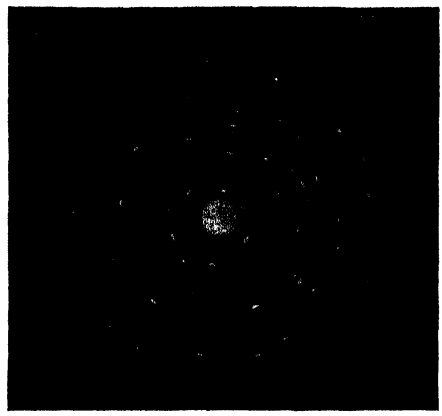
Laue, Max von. A German physicist, noted for research on subatomic phenomena. **L. diagram.** L. pattern. **L. method.** The diffraction of x-rays by means of a crystal. **L. pattern.** The photographic record produced when x-rays are diffracted by a crystal (see figure).



Laue method.

laughing gas. Nitrous oxide.

laumonite. The vitreous mineral $CaO,Al_2O_3,4SiO_2,2H_2O$ (cf. *lawsonite*).



Laue pattern.

Showing the high temperature (hexagonal) form of Al_2O_3, taken with the X-ray beam nearly normal to the (0001) planes (Huggins).

Lauraceae. Laurel family, a group of aromatic shrubs or trees, all parts of which yield an essential oil.

Cinnamomum camphora.....	camphor
	camphor oil
	camphor wood oil
Cinnamomum zeylanicum....	Ceylon cinnamon
	cinnamon oil
Cinnamomum cassia.....	cassia bark
	cassia oil
Sassafras variifolium.....	sassafras bark
	sassafras oil
	sassafras wood
Nectandra rodiaci.....	bebeeru bark
Nectandra puchuri.....	pichurim beans
Lindera benzoin.....	spice bush
Laurus nobilis.....	sweet bay
	laurel oil
Umbellularia californica.....	California laurel

lauraldehyde. Lauric aldehyde.

laurane. $C_{20}H_{42}$ = 282.32. An isomer of eicosane in laurel fat, m.69.

laurel. Laurus, sweet bay, bayberry, noble berry. The dried leaves and berries of *Laurus nobilis*, used for making laurel oil. **cherry-** See *prune.* **ground-** Arbutus. **mountain-** Kalmia. **New Zealand.** See *pukateine.*

l. berries oil. An essential oil from the fruits of l., soluble in alcohol, and containing pinene, cineol, eugenol and methylchavicol. **l. camphor.** Camphor. **l. fat.** Bay oil, l. oil. A soft, buttery fat, m.32–36, obtained by pressing l. leaves. It contains trilaurin, olein, laurane, etc. and is used in veterinary work. **l. leaves oil.** Bay leaves oil. A bright yellow essential oil distilled from laurel, d.0.924, insoluble in water, soluble in alcohol or ether. Used in medicine and in flavoring extracts. **l. oil.** (1) L. fat. (2) L. leaves oil. **l. tallow.** Undung. **l. wax.** (1) Myristin. (2) Bayberry wax.

laureline. $C_{17}H_{17}NO_3$ = 283.1. An apomorphine alkaloid from *Laurelia Novae Zealandicae*, a Monimiaceae. Cf. *pukateine, corytuberine.*

laurene. Pinene.

Laurent, Auguste. 1807–1853. A French organic chemist, discoverer of phthalic acid, aniline, caffeine, naphthalene and their derivatives. Noted for his theory of types and

radicals. **L. acid.** 1.5-Nitronaphthalene sulfonic acid.

lauric acid. $C_{12}H_{24}O_2$ = 200.3. Nonylacetic acid, dodecanoic acid*, 1-hendecanecarboxylic acid, $Me(CH_2)_{10}COOH$. A fatty acid derived from laurel and spermaceti. Colorless needles, d.0.864, m. 47, b.$_{100mm}$.225, insoluble in water, soluble in alcohol or ether. **hydroxy-** Sabinic acid.

lauric aldehyde. $C_{12}H_{24}O$ = 184.3. Dodecanal*, lauraldehyde. The aldehyde of lauric acid. Colorless leaflets, m.44.5, b.$_{100mm}$185, insoluble in water, soluble in alcohol or ether.

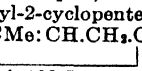
laurin. $C_{39}H_{74}O_6$ = 638.57. Trilaurin. $C_3H_5(C_{12}H_{23}O_2)_3$, laurostearin, glyceryl laurate. A glyceride of lauric acid in the seeds of laurel, palms, coconuts; white needles, d.0.891, m.46.5; used to prepare medicinal soaps.

laurite. A native sulfide of ruthenium, RuS_2.

lauroleic acid. $C_{12}H_{22}O_2$ = 198.2. Dodecenoic acid*. An unsaturated acid, b.$_{2mm}$90, from the head oil of the sperm whale.

laurolene. C_8H_{14} = 110.11. 1.2.3.-trimethyl-1-cyclopentene. The hydrocarbon

A colorless liquid, d.0.800, b.120.5. **iso-** 1.1.2-trimethyl-2-cyclopentene. The hydrocarbon,



A colorless liquid, d.0.791, b.108.5.

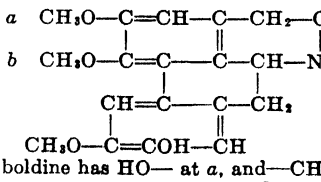
laurone. $C_{23}H_{46}O$ = 338.35. *12*-Tricosanone*. The ketone, $(C_{11}H_{23})_2CO$. Colorless crystals, d.0.789, m.69.

lauronolic acid. $C_9H_{14}O_2$ = 154.11. Laurolene-3-carboxylic acid.

A colorless liquid, d.1.016, m.6, b.$_{14mm}$135.

laurostearin. Laurin.

laurotetanine. $C_{19}H_{21}O_4N$ = 345.2. A strychnine-like alkaloid from the bark of *Litsea latifolia* a Lauraceae of southern Asia. Cf. *glaucine*.



boldine has HO— at *a*, and —CH_3 at *c*

actinodaphnine has CH_2  at *a*, *b*, and —CH_3 at *c*

lauroyl. See *lauryl* (2).

laurus. Laurel.

lauryl. (1) The monovalent radical $C_{12}H_{25}$—, derived from dodecane. (2) The group $Me(CH_2)_{10}CO$—, drived from lauric acid, more properly termed lauroyl. **l. alcohol.** $C_{12}H_{26}O$ = 186.20. *1*-Dodecanol*, *n*-dodecyl alcohol. $Me(CH_2)_{11}OH$. White leaflets, d.0.8309, m.-22.6, b.255, insoluble in water. **l. bromide.** $C_{12}H_{25}Br$ = 249.11. *1*-Bromododecane*, dodecyl bromide, $Me(CH_2)_{11}Br$. A colorless liquid, b.$_{45mm}$177. **l. chloride.** $C_{12}H_{25}Cl$ = 218.64. *1*-Chlorododecane*, dodecyl chloride, $Me(CH_2)_{11}Cl$. A colorless liquid, m.−17, b.$_{18mm}$145.

laurylene. (1) $C_{12}H_{24}$ = 168.2. An unsaturated hydrocarbon in mineral oils. (2) $C_{10}H_{16}$ = 136.12. A terpene from laurel oil.

lautal. A hard aluminum alloy containing 4–5 % Cu, 1.5–2 % Si and 0.4–0.7 % Fe.

Lauth's violet. Thionine.

lava. The molten and solidified magma ejected from volcanoes.

lavandula. Lavender.

lavender. The dried flowering tops of *Lavandula latifolia;* used as a tincture or fluid extract as a tonic, carminative and stimulant. **l. flower oil.** A colorless essential oil distilled from lavender flowers, d.0.885, insoluble in water, soluble in alcohol, ether, or benzene and used in perfumery. **l. spike oil.** An essential oil distilled from the herb *Lavandula officinalis.* A colorless liquid, d.0.905; insoluble in water, soluble in alcohol, ether, or chloroform. Used in liniments and pharmaceutical preparations.

Lavoisier, Antoine Laurent. 1743–1794. A French chemist, regarded as the founder of modern chemistry by virtue of his study of combustion and the role of oxygen. He formulated the theory of the conservation of matter, and laid the basis for chemical nomenclature. He was unjustly accused and executed during the French revolution.

Antoine Laurent Lavoisier.

(From Brownlee, Fuller and Hancock "Elementary Chemistry." Courtesy of Allyn & Bacon.)

law. A generalized statement of facts or principles. **empirical-** A l. which is the result of experience without theoretical considerations. **natural-** The formulation of systematized experience as to the workings of nature. Science concerns itself mainly with the effects caused by varying conditions, and therefrom deduces theories of the "modus operandi." **periodic-** (1) A l. which expresses a periodic variation. (2) See *periodic system.*

Law cell. An electric cell (1.37 volt) consisting of a zinc anode, and carbon cathode in a 15 % solution of ammonium chloride.

lawang oil. An oil from the bark of an East Indian plant, resembling mace oil.

lawsone. $C_{10}H_6O_3$ = 174.1. Hydroxynaphthoquinone. The coloring matter of henna leaves,

Lawsonia alba. Fine red needles, m.194, used as a hair dye; it is a constituent of henna, q.v.

lawsonite. A vitreous, colorless mineral, $CaO.Al_2O_3,2SiO_2.2H_2O$. Cf. *laumonite.*

laxative. A mild cathartic, such as petrolatum or milk of magnesia.

layer. A mass of uniform thickness covering an area. **molecular-** A film of single molecules alongside each other over the surface of a liquid or solid. Cf. *zone.*

lazulite. $(MgFeCa),(AlOH)_2P_2O_8$. A blue, vitreous mineral.

lb. An abbreviation for pound or pounds; *lbs.* is incorrect. **lb. ap.** An abbreviation for apothecary's pound. **lb. av.** An abbreviation for avoirdupois pound. **lb. t.** An abbreviation for troy pound.

leaching. The process of washing or extracting the soluble constituents from insoluble material; as of sodium nitrate from caliche, or the extraction of coloring matter or tanning materials from plant tissues.

lead. (1) Pb = 207.21. Plumbum. A metallic element, atomic number 82. A gray, soft, monoclinic or regular crystalline metal, d.11.34, m.327, b.1470, insoluble in water, soluble in nitric acid. Its principal ore is galena. Lead was known to the Romans under the name of plumbum nigrum. It is used for chemical apparatus and machinery (lining acid tanks, water pipes), in electrotechnics, as a solder, and in low melting point alloys. Lead forms three series of compounds, and has two valencies:

+2	+4	+4
plumbous	plumbic	plumbate
Pb^{++}	Pb^{++++}	PbO_3^{--}

ISOTOPIC COMPOSITION OF LEAD

	1.	*2.*	*3.*	*4.*
A.W.	207.17	206.02	207.85	206.08
I.W.	%	%	%	%
203	0.04			
204	1.50			
205	0.03			
206	27.75	93.3	4.6	89.9
207	20.20	6.7	1.3	7.9
208	49.55	0.02	94.1	2.3
209	0.85			
210	0.08			

1. Common lead of atomic weight 207.17.

2. Lead from Katanga pitchblende and Morogoro uranite, A.W. 206.02 (RaG is 206)

3. Lead from Norwegian thorite, A.W. 207.85 (ThD is 208)

4. Lead from Great Bear Lake pitchblende, A.W. 206.08 (AcD is 207)

Lead salts are all poisonous. Metallic lead consists of several isotopes of different atomic weights (see *isotopes, radioactive elements* and table). **actinium-** Actinium D. **antimonial-** See *antimonial.* **argentiferous.** (1) A lead ore, PbAgS. (2) An alloy of silver and lead obtained in the cupellation process. **black-** Graphite. **brown-** Vanadinite. **horn-** Phosgenite. **pyrophoric-** Lead in a finely-divided state, which oxidizes spontaneously with a glow on exposure to air. **radio-** The natural radioactive mixture of lead isotopes. **red-** L. tetroxide. **secondary-** Lead recovered from scrap. **thorium-** Thorium D. **white-** L. carbonate. **uranium-** Radium G. (2) A conduit or vein which is being followed; cf. l. wire.

l. accumulator. A reversible voltaic storage cell (2.2 volts) consisting of an anode of lead and a cathode of lead dioxide, suspended in sulfuric acid of d.1.1. **l. acetate.** $Pb(C_2H_3O_2)_2.3H_2O$ = 379.3. Lead sugar, sugar of lead, plumbous acetate. Colorless efflorescent crystals, d.2.50, m.75, b.280, soluble in water. Used as a reagent for chromic and molybdic acids, tannin, oxalic, and malic acids, detection of hydrogen sulfide, manufacture of lead salts, as a mordant in dyeing, in the tanning industry and in the preparation of white lead paints. **l. acetate, basic.** L. subacetate. **l. acetotartrate.** Colorless crystals, soluble in water; used as an astringent and antiseptic. **l. alkyles.** Organic compounds of tetravalent lead and alkyl-radicals; as

lead tetramethide: $PbMe_4$
lead tetraethide: $PbEt_4$
dilead triethide: $PbEt_3—PbEt_3$
lead triethylhydroxide: Et_3PbOH

Some are used as anti-knock compounds. **l. alloys.** Alloys containing lead; they usually have low melting points:

	Lead				
	90 %	80 %	70 %	60 %	50 %
with	10 %	20 %	30 %	40 %	50 %
Sn	295°C	276°C	262°C	240°C	220°C
Bi	290°C	.....	.....	179°C	145°C
Te	710°C	790°C	880°C	917°C	760°C
Sb	250°C	275°C	330°C	393°C	440°C
Cu	870°C	920°C	925°C	945°C	950°C
Ag	460°C	545°C	590°C	620°C	650°C
Na	360°C	420°C	400°C	370°C	330°C

Other important lead alloys are:
type metal: 82 % Pb, 15 % Sb, 3 % Sn.
solder: 67 % Pb, 33 % Sn.
carbox metal; 84 % Pb, 14 % Sb, 0.6 % Fe, 0.7 % Zn, 0.6 % Sn.
Cf. *pewter, linotype metal, solder.*

l. antimoniate. $Pb_3(SbO_4)_2$ = 993.1. Plumbous antimoniate, Naples yellow, plumbous stibnate, giallioline. An orange-yellow powder, insoluble in water; used as a pigment in oil paint, ceramic, crockery and glass industries. **l. arsenate.** $Pb_3(AsO_4)_2$ = 899.6. Plumbous arsenate. Colorless, very poisonous crystals, insoluble in water, soluble in nitric acid; used as an insecticide. **l. aryles.** An organic compound of tetravalent lead and an aryl radical, *e.g.*, lead tetraphenyl: $PbPh_4$. **l. azoimide.** L. nitride. **l. benzoate.** $Pb(C_7H_5O_2)_2$ = 449.3. Plumbous benzoate. Colorless crystals, slightly soluble in water. **l. bichromate.** $PbCr_2O_7$ = 423.2. Plumbous bichromate. A brick-red powder, insoluble in water; used as pigment. **l. bioxide.** L. peroxide. **l. bitannate.** L. tannate. **l. black.** Graphite. **l. borate.** $Pb(BO_2)_2.H_2O$ = 311.2. Plumbous borate, lead drier. A white powder, d.5.59, insoluble in

water, soluble in nitric acid; used as a drier in paints and pigments. l. **borosilicate.** A mixture of the borate and silicate of lead; a constituent of optical glass. l. **bromate.** $Pb(BrO_3)_2$ = 463.2. Plumbous bromate. Colorless crystals, slightly soluble in hot water. l. **bromide.** $PbBr_2$ = 367.0. A colorless, rhombic crystalline powder, d.6.57, m.380, decomp. 448, insoluble in water or alcohol. l. **butyrate.** $Pb(C_4H_7O_2)_2$ = 381.2. Plumbous butyrate. Colorless scales, m.90, insoluble in water. l. **carbolate.** L. phenate. l. **carbonate.** $PbCO_3$ = 267.2. Plumbous carbonate. A white powder, d.6.47, decomp. on heating, insoluble in water; used as a pigment. Native as cerrusite. Cf. *Dutch process.* l. **carbonate, basic.** $2PbCO_3.Pb(OH)_2$ = 775.6. Plumbous subcarbonate, basic l. carbonate, white lead, ceruse, cerussa, lead flakes. A white, heavy powder, decomp. on heating, insoluble in water. Used as a pigment and in putty; medicinally, as constituent of ointments for burns and inflamed surfaces. l. **chamber.** See *sulfuric acid manufacture.* l. **chlorate.** $Pb(ClO_3)_2$ = 374.1. Plumbous chlorate, d.4.037. White monoclinic crystals, soluble in water, decomp. 230. Cf. *Thiel*-Stoll solution. l. **chloride.** $PbCl_2$ = 278.1. Plumbous chloride. Colorless rhombic crystals, d.5.80, m.501, b.861, insoluble in water; used as a reagent for silver, alkaloids and carbonates, and mixed with lead oxides, as pigment. l. **chromate.** $PbCrO_5$ = 323.2. Plumbous chromate, Leipzig yellow, Paris yellow, "chrome" yellow. Fusible, yellow monoclinic crystals, d.6.123, insoluble in water; used as a reagent in organic analysis, as a pigment, and in the textile industry. l. **chromate basic.** $PbCrO_4.PbO$ = 546.4. Plumbous subchromate, basic l. chromate. Red crystals, insoluble in water, used as a pigment. l. **citrate.** $Pb_3(C_6H_6O_7)_2$ = 1001.76. Plumbous citrate. A colorless crystalline powder, soluble in water. l. **cyanate.** $Pb(CNO)_2$ = 291.24. Plumbous cyanate. A colorless crystalline powder, insoluble in water, decomp. on heating. l. **cyanide.** $Pb(CN)_2$ = 259.2. Plumbous cyanide. A colorless crystalline powder, insoluble in water, soluble in potassium cyanide solution; used as an insecticide and in metallurgy. l. **dichromate.** L. bichromate. l. **dioxide.** L. peroxide. l. **dish.** A container made of metallic lead, used for corrosive liquids and hydrofluoric acid; as, in glass etching. l. **dithiofuroate.** $(C_4H_3O.CS_2)_2Pb$. Furac III. A red powder, used as accelerator in vulcanization. l. **drier.** L. borate. l. **dust.** Finely powdered metallic lead. l. **ethylsulfate.** $Pb(C_2H_5SO_4)_2.H_2O$ = 475.46. A colorless liquid, soluble in water, used in organic synthesis. l. **ferrocyanide.** $Pb_2Fe(CN)_6$ = 626.5. Plumbous ferrocyanide. A yellowish powder, insoluble in water. l. **flake.** L. carbonate basic. l. **fluoride.** PbF_2 = 245.2. Plumbous fluoride d.8.241. A fusible white powder, insoluble in water. l. **fluosilicate.** $PbSiF_6$ = 349.28. L. silicofluoride. *dihydrate* .$2H_2O$. White monoclinic prisms, soluble in water. *tetrahydrate* .$4H_2O$. Monoclinic crystals, soluble in water. l. **flux.** A reducing and desulfurizing agent used in the assay of gold and silver, and consisting of: 16 pts. $NaHCO_3$, 16 pts. K_2CO_3, 8 pts. flour, 4 pts. borax glass. l. **formate.** $Pb(CHO_2)_2$ = 297.2. Plumbous formate. Lustrous rhombic needles, d.4.63, decomp. 190, soluble in water: used as a reagent. l. **hydrate.** See *l. hydroxide.* l. **hydroxide** (1) $Pb(OH)_2$ = 241.2. Plumbous hydroxide, l. hydrate. A white powder, d.7.59, m.145 (decomp.), slightly soluble in water, soluble in acids or alkalis. (2) $3PbO, H_2O$ = 687.6. White cubic crystals. l. **hypophosphite.** $Pb(H_2PO_2)_2$ = 337.2. A hygroscopic, white powder, soluble in water. l. **hyposulfate.** PbS_2O_6 = 367.2. Plumbous hyposulfate. Colorless crystals, soluble in water. l. **hyposulfite.** PbS_2O_3 = 319.2. Plumbous hyposulfite, plumbous thiosulfate, l. thiosulfate. White crystals, which darken with age due to the formation of PbS, insoluble in water, soluble in alkali thiosulfate solutions; used in inorganic synthesis. l. **iodate.** $Pb(IO_3)_2$ = 557.0. Plumbous iodate. A colorless crystalline powder, insoluble in water. l. **iodide.** PbI_2 = 461.0. Plumbous iodide, plumbi iodidium. Yellow, hexagonal crystals, d.6.16, m.375, b.861, insoluble in water, soluble in hydroxides or iodide solutions. Used in medicine as an astringent and resolvent; and technically, for bronzes, mosaic gold, printing and photography. l. **isotopes.** See *radioactive elements.* l. **lactate.** $Pb(C_3H_5O_3)_2$ = 385.2. Plumbous lactate. A white powder, soluble in water. l. **laurate.** $(C_{12}H_{23}O_2)_2Pb$ = 605.58. White powder, m.104.7, insoluble in water. l. **linoleate.** $Pb(C_{18}H_{31}O_2)_2$ = 765.7. Plumbous linoleate. A yellowish paste, insoluble in water, used in ointments and varnishes. l. **malate.** $Pb(C_4H_4O_5).3H_2O$ = 393.3. Plumbous malate. A white powder, slightly soluble in water. l. **minerals.**

galena	PbS
clausthalite	PbSe
altaite	PbTe
massicot	PbO
minium	Pb_3O_4
plattnerite	PbO_2
cerussite	$PbCO_3$
phosgenite	$Pb_2Cl_2CO_3$
cotunnite	$PbCl_2$
anglesite	$PbSO_4$
crocoite	$PbCrO_4$
wulfenite	$PbMoO_4$
stolzite	$PbWO_4$

Cf. *brongniardite, carminite, caryinite, lanarkite, plagionite, zinkenite.*

l. **molybdate.** $PbMoO_4$ = 367.2. Plumbous molybdate. A yellow powder, insoluble in water, soluble in hot nitric acid; used as a reagent in analysis. l. **monosulfide.** L. sulfide. l. **monoxide.** L. oxide (yellow). See also *massicot.* l. **myristate.** $(C_{14}H_{27}O_2)_2Pb$ = 661.64. White powder, m.108.6, insoluble in water. l. **naphthalene sulfonate.** $Pb(C_{10}H_7SO_3)_2$ = 621.45. White crystals, insoluble in water, soluble in alcohol. l. **nitrate.** $Pb(NO_3)_2$ = 331.2. Plumbous nitrate. Colorless octahedral crystals, d.4.531, decomp. 223, soluble in water or alcohol. Used as a reagent, as an astringent, deodorant and detergent in medicine; technically, in the manufacture of lead salts, as a mordant in the dye and textile industries, as oxidizing agent in organic synthesis, in the manufacture of matches, as a sensitizer in photography and in the manufacture of pyrotechnic toys. l. **nitride.** PbN_6 = 291.27. L. azoimide. Colorless crystals, exploding at 350. l. **nitrite.** $Pb(NO_2)_2$ = 299.2. Plumbous nitrite. Yellowish crystals, soluble in acids.

l. oleate. $Pb(C_{18}H_{33}O_2)_2$ = 769.8. Plumbous oleate. White fatty granules, insoluble in water, soluble in alcohol or ether; used in medicine for ointments, and in commerce for varnishes. **l. oxalate.** PbC_2O_4 = 295.2. Plumbous oxalate. A white, crystalline powder, d.5.03, decomp. 300, insoluble in water. **l. oxide.** (1) *L. suboxide*, Pb_2O = 430.4. A black, amorphous powder, d.8.34, insoluble in water, decomp. if heated. (2) *Yellow monoxide*, PbO = 223.2. Plumbous oxide, litharge, massicot, lead protoxide. A yellowish rhombic crystalline powder, d.9.37, m.888, insoluble in water, soluble in acids or alkalis. Used as reagent, in ointments, in manufacture of glass and pottery, for acid-resisting cements and putty, as pigment, and as filler in the rubber industry. (3) *Red monoxide*, PbO = 223.2, plumbous oxide. A hexagonal red crystalline modification of the yellow lead monoxide. d.8.74, insoluble in water. (4) *L. sesquioxide*, Pb_2O_3 = 462.4. L. trioxide, plumbous plumbite, l. metaplumbate, $PbO.PbO_2$. An amorphous reddish-yellow powder, used as a pigment. It is probably lead meta-plumbate, PbO, PbO_2, since it is decomposed by acids into these oxides. (5) *L. oxide red*, Pb_3O_4 = 685.6. Plumbous plumbate, l. orthoplumbate, Pb_2PbO_4, red lead oxide, minium, sandix, lead orthoplumbate, lead tetroxide, plumbous-plumbic oxide, ($2PbO.PbO_2$). A heavy, orange-red powder, d.9.07 decomp. 500, insoluble in water, soluble in nitric acid. Used as a reagent, for ointments, for cements, in ceramics, and as a pigment. It is probably lead orthoplumbate, $2PbO,PbO_2$. (6) *L. peroxide*, PbO_2 = 239.2. Plumbous peroxide, lead dioxide, brown lead oxide, lead superoxide. A brown, hexagonal crystalline powder, d.8.91, decomp. on heating, insoluble in water, soluble in acetic acid. Used as an oxidizing agent in organic synthesis. It has both basic and acidic properties, and forms salts (PbX_4) and plumbates (X_2PbO_3). **l. oxychloride.** (1) $PbCl_2.PbO$ = 501.3. Plumbous oxychloride. White, tetragonal crystals, d.7.21, insoluble in water, soluble in alkalis, decomp. 541. (2) $PbCl_2.2PbO$ = 724.5. A brown solid, d.7.08, m.693. **l. palmitate.** $(C_{16}H_{31}O_2)_2Pb$ = 717.70. White powder, m.112.3, insoluble in water. **l. pentasulfide.** See *l. sulfide*. **l. pernitrate.** Colorless hygroscopic crystals, soluble in water. **l. peroxide.** L. oxide (6). **l. phenate.** Pb(OH)OPh = 317.2. Plumbous phenate, l. phenolate, lead carbolate. A yellowish or grayish-white powder, insoluble in water, soluble in nitric acid; used in medicinal ointments. **l. phenolate.** L. phenate. **l. phenolsulfonate.** $Pb(C_6H_4(OH)SO_3)_2.5H_2O$ = 643.52. White lustrous needles, soluble in water or alcohol, used as an astringent or antiseptic. **l. phosphate.** (1) $Pb_3(PO_4)_2$ = 811.7. Plumbous phosphate. Lead orthophosphate. A white powder, d.6.9, insoluble in water, soluble in nitric acid. (2) $Pb(PO_3)_2$ = 365.27. Lead metaphosphate. White crystals. (3) $Pb_2P_2O_7$. Lead pyrophosphate (q.v.). (4) $PbHPO_4$ = 303.26. Lead acid phosphate. White crystals. **l. phosphite.** $PbHPO_3$ = 287.2. Plumbous phosphite. A white powder, decomp. on heating, insoluble in water, soluble in nitric acid. **l. plaster.** A medicinal plaster containing chiefly lead linoleate and glycerol. Often used as a standard solution for the determination of the hardness of water by the soap method. **l. plumbate.** *ortho-* L. oxide (5). *meta-* L. oxide (4). **l. poisoning.** Plumbism, saturnism. A form of anemia, and colic produced as a result of frequent contact with lead. **l. propionate.** $Pb(C_3H_5O_2)_2$ = 353.2. Plumbous propionate. A colorless, crystalline powder soluble in water. **l. protoxide.** L. oxide (1). **l. pyrophosphate.** $Pb_2P_2O_7.H_2O$ = 606.5. Plumbous pyrophosphate. A colorless, rhombic, crystalline powder, decomp. on heating; insoluble in water, soluble in alkalis or nitric acid. **l. resinate.** $Pb(C_{20}H_{29}O_2)_2$ = 809.2. Plumbous resinate. A yellowish paste, insoluble in water or alcohol, used as a paint drier. **l. rhodanate.** L. thiocyanate. **l. saccharate.** A compound of saccharose with l. oxide; a white powder, insoluble in water, used in medicine. **l. salicylate.** $Pb(C_7H_5O_3)_2.H_2O$ = 499.3. Plumbous salicylate. White crystals, soluble in water or alcohol. **l. selenate.** $PbSeO_4$ = 350.4. Plumbous selenate. A white powder, insoluble in water. **l. selenide.** PbSe = 286.18. A brown powder. *colloidal-* A suspension used in cancer therapy. **l. sesquioxide.** Pb_2O_3. Lead oxide (5). **l. silicate.** $PbSiO_3$ = 283.3. Plumbous silicate. A white crystalline powder, insoluble in water or alcohol; used in ceramics, in the manufacture of lead glass, in flukes, for porcelain and glass paints, for enamels, and for fireproofing fabrics. **l. silicofluoride.** $PbSiF_6.H_2O$ = 367.3. Plumbous silicofluoride. A colorless crystalline powder, soluble in water. **l. stearate.** $Pb(C_{18}H_{35}O_2)_2$ = 773.8. Plumbous stearate. A yellowish, granular, fatty powder, m.115.7, insoluble in water, soluble in alcohol; used as a paint drier and constituent of varnishes. **l. stibnate.** L. antimoniate. **l. subacetate.** $2Pb(C_2H_3O_2)_2.Pb(OH)_2$ = 891.77. Plumbous subacetate, basic acetate of lead, monobasic lead acetate. A white powder, soluble in water, used for preparing lead acetate solutions. **l. subacetate solution.** A clear, colorless liquid, containing 189.5 gm. per liter, d.1.24; used as a reagent and clarifier. Cf. *l. water, Goulard's extract.* **l. subcarbonate.** L. carbonate, basic. **l. suboxide.** L. oxide (1). **l. sugar.** L. acetate. **l. sulfate.** $PbSO_4$ = 303.3. Plumbous sulfate. A white rhombic crystalline powder, d.6.23, m.1170, insoluble in water, soluble in hot acids or ammonium acetate solution; used as a pigment, paint drier, and in accumulators. **l. sulfate acidic.** $Pb(HSO_4)_2.H_2O$ = 419.4. A crystalline solid, decomp. if heated. **l. sulfate basic.** $PbSO_4.PbO$ = 526.5. A white powder, insoluble in water, decomp. if heated. **l. sulfide.** (1) PbS = 239.3. Plumbous sulfide, galena, galenite. A regular, crystalline black powder, or silvery-gray crystals, d.7.48, m.1120, insoluble in water, soluble in nitric acid; used in ceramics and as a decolorizer. Decomp. if heated. (2) PbS_5 = 367.57. Lead pentasulfide. An unstable yellow powder. **l. sulfite.** $PbSO_3$ = 287.3. Plumbous sulfite. A granular white powder, insoluble in water, used as an antiseptic and astringent. **l. sulfocyanide.** L. thiocyanate. **l. superoxide.** L. oxide (6). **l. tannate.** A compound of tannin and lead. A brown powder, slightly soluble in water or alcohol; used as an astringent and antiseptic in dusting powders. **l. tartrate.** $PbC_4H_4O_6$ = 355.3. Plumbous tartrate. A white powder, insoluble in water.

l. tetrachloride. $PbCl_4$ = 349.0. Plumbic chloride. A yellow oily liquid, d_0.3.18, m. −15, decomp. by water and at 105; used in inorganic synthesis. **l. tetraethide, l. tetraethyl.** Tetraethyl *plumbane*. **l. thiocyanate.** $Pb(CNS)_2$ = 323.4. Plumbous sulfocyanide, l. rhodanate. A yellow monoclinic crystalline powder, d.3.82, slightly soluble in water, soluble in thiocyanate solutions. **l. thiosulfate.** PbS_2O_3 = 319.2. Plumbous thiosulfate, lead hyposulfite. A white amorphous powder, decomp. with age, insoluble in water, soluble in acids and thiosulfate solutions. Used in inorganic synthesis, and medicinally, as a dusting powder for rhus poisoning. **l. tree.** The branching crystalline growth of lead which is precipitated from its solution by more positive metals. **l. tungstate.** $PbWO_4$ = 455.2. Plumbous tungstate, l. wolframate, raspite, stolzite. A yellow powder, d.8.23 insoluble in water, soluble in acids; used as a pigment. **l. vanadate.** $Pb(VO_3)_2$ = 405.1. Plumbous vanadate. A yellow powder, insoluble in water; used as a pigment. **l. water.** A 1 % solution of lead subacetate. **l. white.** L. carbonate, basic. **l. wire.** (1) A wire made from l. (2) A chromel-alum or other alloy wire of a thermocouple of a pyrometer. **l. wolframate.** L. tungstate. **l. yellow.** L. chromate.

leadate. Trade name for dimethyl dithiocarbamate, a rubber accelerator.

leadhillite. A native basic sulfate of lead.

leaf. (1) See *leaves*. (2) A thin sheet or foil of metal; as, gold l., palladium l., used for lettering and ornamenting.

lean. Deficient. Cf. *fat*. **l. clay.** A clay of poor plasticity. **l. coal.** A low gas content coal. **l. ore.** A low grade ore; *i.e.*, with a small metal content.

leather. A tanned skin. **l. tankage.** A fertilizer made from l. scraps by digestion with steam, drying and grinding.

leatheroid. Vulcanized *fiber*.

leaves. The stem appendages of a plant, containing chlorophyll and possessing respiratory openings. The following dried leaves are official (U.S.P.):

Belladonna	Hyoscyamus
Buchu	Matico
Chestnut	Pilocarpus
Chimaphila	Rhus toxicodendron
Coca	Sage
Digitalis	Senna
Eriodictyon	Stramonium
Eucalyptus	Tobacco
Hamamelis	Uva-ursi

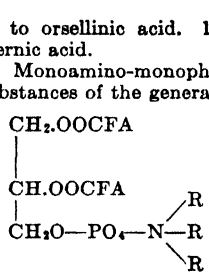
LeBel, Jules Achille. 1847–1930. An Alsatian capitalist who, using chemistry as a hobby, discovered the asymmetric carbon atom, (independently of van't Hoff) in 1874; in 1891 he prepared the first optically-active compound of asymmetric nitrogen.

LeBlanc, Nicolas. 1742–1806. A French chemist, and founder of the alkali industry. **L. soda process.** The manufacture of sodium carbonate by treatment of the salt-cake (Na_2SO_4) obtained from sulfuric acid and salt with carbon and limestone.

LeChatelier, Henry Louis. 1850–1936. A French chemist noted for the law of chemical equilibrium and work on metallurgical instruments.

lecanoric acid. $C_{16}H_{14}O_7$ = 318.1. Diorsellinic acid. Colorless crystals, decomp. on heating with water to orsellinic acid. **l. monomethyl ether.** Evernic acid.

lecithin. (1) Monoamino-monophosphatide. A group of substances of the general composition:



in which FA indicates a fatty acid, R an alkyl radical. They are the esters of oleic, stearic, palmitic or other fatty acids with glycerophosphoric acid and choline. Cf. *kephalin*. (2) $C_{42}H_{84}NPO_9$ = 777.93. A yellowish-brown waxy solid occurring in various animal and vegetable tissues and egg yolk; insoluble in water, soluble in alcohol, ether or chloroform, decomp. by heat. Used as a tonic and nutrient.

lecithoprotein. A compound of lecithin and protein in man and animals. Cf. *conjugate proteins*.

Leclanché cell. A voltaic cell consisting of an anode of amalgamated zinc, and a cathode of carbon suspended in a solution of ammonium chloride, with manganese dioxide as a depolarizing agent. It has an intermittent potential of about 1.46 volts.

leditannic acid. $C_{15}H_{20}O_8$ = 328.2. A tannin from *Ledum* species, Ericaceae.

ledixanthin. $C_{33}H_{34}O_{13}$ = 602.3. A yellowish-red coloring matter from *Ledum* species.

Leduc effect. Thermomagnetic difference of temperature, or the effect of a magnetic field on the distribution of heat. The effect is considered positive when the upper edge of a metal plate placed transversely between two magnetic poles has the higher temperature, the heat current flowing from left to right.

ledum camphor. A stearoptene from *Ledum palustre*, wild rosemary, an Ericaceae. Cf. *Labrador tea*.

lees. The sediment which accumulates in fermented liquids (*e.g.*, wine) on standing; mainly albuminoid in character.

Leeuwenhoek, Anton van. 1632–1723. A lens maker of Delft, Holland, who discovered bacteria by means of a crudely-constructed microscope in 1675.

Lefébre, Nicolas. 1620–1674. A French apothecary, noted for his textbook of chemistry, 1660.

legume. The pod of a leguminous plant.

legumelin. An albumin from peas and beans.

legumin. A globulin from leguminous plants. Cf. *avenin*.

Leguminosae. Pulse family; a group of herbs, shrubs or trees whose seeds are used as food (q.v.), and from which many important commodities and drugs are obtained:

roots:

Glycyrrhiza glabra...	Spanish licorice
Abrus precatorius....	Indian licorice
Baptisia tinctoria....	wild indigo
Derris elliptica.....	cube
Derris Lour.....	deguela
Ononis spinosa.....	ononin

barks:

Erythrophloeum guineense	sassy bark, muavin
Acacia mimosa.....	mimosa bark
Andira inermis.....	jamaiciin
Robinia pseudacacia.	robin

Cercis canadensis.... redbud bark
Saraca indica..... saraca bark
Piscidia erythrina.... Jamaica dogwood
woods:
Caesalpinia sappan.. sappan
Haematoxylon campechianum logwood
Pterocarpus santalinus red sandalwood
leaves:
Cassia acutifolia..... senna
Cassia marilandica.. American senna
Theophrosia virginiana theophrosia
herbs:
Medicago sativa..... alfalfa
Melilotus officinalis.. sweet clover, melilot
Melilotus coeruleus... melan
Lonchocarpus species. nicoline
Trifolium pratense... red clover, trifolium
Trifolium repens..... white clover
Stylosanthes elatior... pencil flower
Galega officinalis..... goats rue, galega
Cytisus scoparius.... broom, scoparius
fruits:
Cassia fistula..... purging cassia
Ceratonia siliqua..... St. John's bread
Tamarindus indica.. tamarind
Dipteryx odorata..... tonka bean
seeds:
Abrus precatorius.... prayer beads, jequirity
Arachis hypogoea.... peanut
Coronilla scorpioides. coronillin
Erythrina species.... erythrine
Ormosia dasycarpa... ormosine
Sophora species..... sophora
Trigonella foenum graecum fenugreek
Ulex Europaeus..... ulexine
Physostigma venenosum calabar beans
plant products:
Acacia catechu..... catechu
Acacia senegal..... gum arabic
Astragalus gummifer. tragacanth
Andira araroba..... goa powder
Albizzia anthelmintica musennin
Pterocarpus marsupium kino
Copaifera langsdorffii. copaiba balsam
Pongamia glabra..... kurung oil
Soja hispida..... soybean
Toluifera pereirae.... Peru balsam
Toluifera balsamum.. tolu balsam

Cf. *brazilwood, calliandrein, camwood, indican, lupine, Mackay bean, robinin, syringin.*

Lehman cardiograph. A specially constructed sphygmomanometer, or device for recording heart beats.

lehrbachite. A mercury ore, HgPbSe.

Leibnitz, Gottfried Wilhelm Freiherr von. 1646–1716. A German mathematician and philosopher. Founder of the Berlin Academy of Science (1701).

Leipzig yellow. Lead chromate.

lemco. A commercial meat extract, used in the preparation of beef-broth media.

Lémery, Nicolas. 1645–1715. A French physician and chemist, noted for his chemical textbook and experimental work.

lemon. The ripe fruit of *Citrus limonum*, a Rutaceae, of which fruit, rind and juice are used. Cf. *lime.* **l. balm.** Melissa. **l. chrome.** Barium chromate. **l. grass.** See *lemongrass.* **l. juice.** Lime juice. **l. oil.** Oleum limonis, oil of lemon. A pale yellow essential oil of fragrant odor, expressed from fresh lemon peels, d.0.849–0.855, $[\alpha]_D$ + 57–65, insoluble in water, soluble in alcohol or ether. Used extensively in flavoring extracts, lemonades, etc. **l. peel.** Cortex limonis. The outer rind of fresh ripe fruits of *Citrus medica*, lemon, a Rutaceae. Used medicinally, as a tincture or fluid-extract, as a tonic; industrially, in flavoring essences for cooking and baking. **l. yellow.** (1) Lead chromate. (2) Barium chromate.

lemonbalm. Melissa.

lemongrass oil. Indian melissa oil. A colorless or slightly yellow essential oil distilled from *Cymbopogon* or *Andropogon citratus*, a grass of the East Indies; d.0.89, insoluble in water, soluble in alcohol or ether. Used in flavoring extracts, for cooking and confectionery, and in perfumery. It contains citral, geranial and methyl heptenone. Cf. *citronella oil, melissa oil.*

Lenard, Phillipp. 1862– . A German physicist. **L. rays.** Cathode rays penetrate thin sheets of metal (aluminum or gold), and give rise to long blue streamers, called Lenard rays after their discoverer.

length. The shortest distance between two points. Length is measured in the C.G.S. system by the meter (q.v.), which was supposed to be the $\frac{1}{10{,}000{,}000}$ part of the distance from the equator to the pole. Some magnitudes are:

Einstein universe	2,000,000,000 light yrs.	1.9×10^{25} m.
Farthest spiral nebula	140,000,000 " "	1.3×10^{24} "
Galaxy to galaxy	1,800,000 " "	1.7×10^{22} "
Andromeda nebula	900,000 " "	8.5×10^{21} "
Milky Way diameter	50,000 " "	4.7×10^{20} "
Sirius from sun	8.9 " "	8.4×10^{16} "
1 parsec. = 3.08 × 10^{13} km.		**3.1×10^{16}** "
1 light year = 9,462,700,000,000 km.		**9.5×10^{15}** "
Solar system diameter	10,000,000,000 km.	1×10^{13} "
Neptune from sun	4,400,000,000 km.	4.4×10^{12} "
Earth from sun	149,000,000 km.	1.5×10^{11} "
Sun radius	692,000 km.	6.9×10^{8} "
Moon from earth	384,000 km.	3.8×10^{8} "
Jupiter radius	72,000 km.	7.2×10^{7} "
Earth equator	40,070 km.	4×10^{7} "
Earth radius	6,377 km.	6.4×10^{6} "
N.Y. to San Francisco (highway)	5,230 km.	5.2×10^{6} "
" " " (air-line)	4,451 km.	4.4×10^{6} "
Moon radius	1,740 km.	1.7×10^{6} "
1 kilometer = 1000 m. = 1,000,000 mm.		**10^{3}** "
Denver above sea-level	1,638 m.	1.6×10^{3} "
Steamer Queen Mary, length	310 m.	3.1×10^{2} "
Lowest sound wave	16 m.	1.6×10^{1} "
Man, average height	172 cm.	1.72 "
1 meter = 1000 mm. = 1,000,000μ = 10^{-3} km.		**1**
Longest sound wave	17 mm.	1.7×10^{-2} "
1 millimeter = 1000μ = 1,000,000 mμ = 10^{-6} km.		**10^{-3}** "
Smallest visible particle	50 μ....	5×10^{-5} "
Cells of Drosophillum	7–25 μ....	2.5×10^{-5} "
Nucleus of Drosophillum	5–15 μ....	1.5×10^{-5} "

Chromosomes of Drosophillum	0.2–3 μ....	3 × 10^{-6} "
Coccus bacteria	2 μ....	2 × 10^{-6} "
1 micron (μ) = 1000 mμ = 1,000,000 μμ...		10^{-6} "
Red blood corpuscle	800 mμ..	8 × 10^{-7} "
Red light wave	770 mμ..	7.7 × 10^{-7} "
Smallest microscopic particle	300 mμ..	3 × 10^{-7} "
Average path of hydrogen	170 mμ..	1.7 × 10^{-7} "
Large colloidal particle	100 mμ..	1 × 10^{-7} "
Shortest ultra-violet wave	13 mμ..	1.3 × 10^{-8} "
Thickness of oilfilm	5 mμ..	5 × 10^{-9} "
Ultramicroscopic particle	4 mμ..	4 × 10^{-9} "
Molecules	0.2 to 5 mμ..	5 × 10^{-9} "
Gas molecule, distance	1 mμ..	1 × 10^{-9} "
1 millimicron (mμ) = 1000 micromicrons (μμ) =		10^{-9} "
Sulfur atoms, distance	900 μμ...	9 × 10^{-10} "
Atoms	100–600 μμ...	6 × 10^{-10} "
Silver atoms, distance	400 μμ...	4 × 10^{-10} "
Soft x-ray wave	136 μμ...	1.4 × 10^{-10} "
1 Ångström = 100 μμ = 1000 milliångström (må.) =		10^{-10} "
Electron orbit in hydrogen	53 μμ...	5.3 × 10^{-11} "
Hard x-ray wave	19 μμ...	1.9 × 10^{-11} "
1 micromicron (μμ) = 10 x-units (λ) or må. =		10^{-12} "
Shortest gamma ray	2 μμ...	2 × 10^{-12} "
Longest cosmic ray	0.6 μμ...	6 × 10^{-13} "
Shortest cosmic ray	0.04 μμ...	4 × 10^{-14} "
Electron diameter	0.038 μμ...	3.8 × 10^{-15} "
Nucleus of gold atom	0.0004 μμ...	4 × 10^{-17} "
Nucleus of hydrogen atom	0.00002 μμ...	2 × 10^{-18} "

The smallest accurate determination of length is 0.000,03 mm. (Fizeau's interference method). The largest accurate measurement of length (for the purpose of determining the velocity of light) is the distance between Mt. Wilson and Mt. San Antonio, Calif. = 35,426.3 meters.

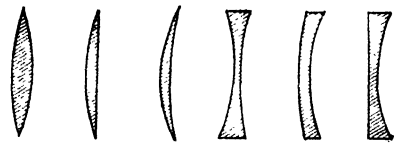
lenigallol. Pyrogallol triacetate.

lenirobin. Chrysarobin tetracetate. A yellowish powder, used medicinally for skin diseases.

lens. A piece of glass or other transparent material, with one or both faces curved, which converges, or diffuses light. The principal focus F of a lens is related to the radii of curvature of the surfaces r_1 and r_2 and the index of refraction n by the equation:

$$\frac{1}{F} = (n-1)\left(\frac{1}{r_1}+\frac{1}{r_2}\right) = \frac{1}{f_1}+\frac{1}{f_2}$$

where f_1 and f_2 are conjugate focal distances, or the distances of the object and of the image. **achromatic-** A lens which has been corrected for chromatic aberration so as to bring different spectral rays to one focus. **aplanatic-** A system of lenses corrected for spherical aberration so as to bring rays into focus in the same plane. **apochromatic-** A system of lenses which correct for chromatic and spherical aberration by bringing three spectral rays to one focus. **biconcave-** A lens which has a concave surface on both sides:) (. **biconvex-** A lens which has a convex surface on each side: (). **bifocal-** A double lens, especially used in eyeglasses, each portion of which has its own different focus. **compound-** Two or more lenses combined in effect, one behind the other. **concave-** A lens in which the center is thinner than the periphery:) |. **convex-** A lens in which the center is thicker than the periphery: (|. **convex-concave-** A lens with both a concave and a convex surface:)). **electron-** See electron optics. **plano-concave-** A lens with both a plane and concave surface. **plano-convex-** A lens with both a plane and convex surface. **quartz-** A lens made of quartz, used in experiments with ultraviolet rays, to which glass is relatively opaque. **rocksalt-** A lens made of salt, which permits the passage of many ultraviolet rays to which glass and quartz are opaque.



Lenses.

1. Biconvex; 2. plano-convex; 3. concavo-convex or convergent meniscus; 4. biconcave; 5. convexo-concave or divergent meniscus; 6. plano-concave.

lenticular. Having the shape of a lentil or lens.

lentine. $C_6H_4(NH_2)_2.2HCl$ = 181.0. m-diaminobenzene hydrochloride. A colorless crystalline powder, which turns pink with age. Used in organic synthesis, as a reagent for nitrites in water, and medicinally for diarrhea.

leometer. Dynamic *meter*.

leonite. A Stassfurt salt, $MgSO_4.K_2SO_4.4H_2O$.

leontin. Caulosaponin.

leonurus. Motherwort.

lepargylic acid. Azelaic acid.

lepathinic acid. $C_{20}H_{18}O_{14}$ = 482.2. A crystalline principle from the roots of *Rumex* species, Polygoniaceae.

lepidene. $C_{28}H_{20}O$ = 372.2. Tetraphenylfurfurane,  O. Colorless crystals, m.175.

lepidine. $C_{10}H_9N$ = 143.2. γ-methyl-quinoline, cincholepidine,  . An alkaloid from cinchona bark. A colorless oily liquid, d.1.086, b.266, slightly soluble in water, soluble in alcohol or ether; used in organic synthesis. **aminophenyl-** Flavaniline. **oxy-** Dibenzoyl*stilbene*.

lepidolite. $(Li,Na,K)_2Al_2(SiO_3)_3(F,OH)_2$. Lithium mica. A slightly colored, lithium-bearing variety of mica (aluminum silicate).

lepidone. $C_{10}H_9ON$ = 159.1. Hydroxylepidine, γ-methyl-α-oxyquinoline, γ-methylcarbostyril. Colorless crystals, m.223, b_{17mm}.270, slightly soluble in water, alcohol or ether.

lepinine. 4-Methyl quinine.

leprotin. $C_{40}H_{54}$ = 534.4. A carotenoid red pigment isolated from chromo mycobacteria, m.198–200. It is a provitamin A.

leptandra. Culver's root. The dried rhizomes and roots of *Veronica* (*Leptandra*) *virginica*, a Scrophylariaceae, used as a fluid extract, as a cathartic and tonic.

leptandrin. A yellow crystalline glucoside from the roots of *Veronica* (*Leptandra*) *virginica;* used as an alterative and purgative.

leptandroid. An extract containing the combined principles of *Leptandra;* used as a tonic laxative, and alterative stimulant.

leptometer. A device for comparing the viscosity of two liquids simultaneously and under equal conditions.

leptynol. Palladous hydroxide suspended in water; used medicinally.

lerp. A kind of manna found on the Australian shrub, mallee, or *Eucalyptus dumosa*.

Lessing ring. Contact ring. A ¼" metal tube, split and bent, used as packing material in gas absorption towers or fractionating columns.

lethal. Fatal or deadly. **l. dose.** The quantity of a substance which causes death. **l. gas.** Hydrocyanic acid.

letterpress. Printing by direct impression from inked type.

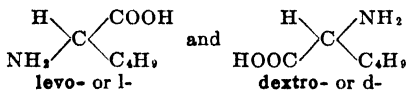
leucacene. $C_{64}H_{32}$ = 680.2. A pyrolytic product of acenaphthene containing 12 hexa-atomic and four penta-atomic rings. Silky crystals, m.250, insoluble in water.

leucaniline. $C_{19}H_{19}N_3$ = 289.3. Triaminotriphenylmethane, methenyltrianiline, $CH(C_6H_5NH_2)_3$. According to the position of the amino group there are: **p₃**-leucaniline, in which all three amino groups are in para position to the methyl carbon; **o,p₂-**, in which one is in ortho position and two are in the para position; **m,p₂-** or pseudo-, in which one is in the meta, and two are in the para position. **para-** Colorless leaflets, m.148, insoluble in water, soluble in alcohol or ether; used in organic synthesis. Cf. *leucoaniline*. **tetramethyl-** See *tetramethyl*.

leucaurine. $C_{19}H_{16}O_3$ = 292.2. Trihydroxytriphenylmethane, triphenylolmethane, **p₃**-trioxytriphenylmethane, $CH(C_6H_4OH)_3$, derived from aurine. **o-methyl-** Leucorosolic acid.

leucic acid. Leucinic acid.

leucine. $C_2H_{13}O_2N$ = 131.1. Aminoisocaproic acid, *α*-aminocaproic acid. An aminoacid and constituent of many proteins (27 % in zein). Colorless leaflets, d.1.293, decomp. 283, slightly soluble in water, alcohol or ether; used in organic synthesis. Two optically-active isomers:

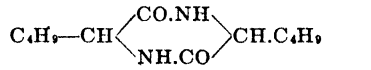


levo- or l- **dextro-** or d-

Cf. *leucyl*. **iso-** See *isoleucine*. **nor-** See *norleucine*.

leucinic acid. $C_6H_{12}O_3$ = 132.13. *2*-Hydroxy-*4*-methyl-pentanoic acid*, *α*-hydroxyisocaproic acid, $C_5H_{10}(OH)COOH$, soluble in alcohol, ether or water, m.77 (racemic), 82 (active).

leucinimide. $C_{12}H_{22}O_2N_2$ = 226.2. The imide of leucyl-leucine; or anhydride of *3.6*-di-isobutyl-*2.5*-diacipiperazine. A dipeptide formed by reaction of the amino and carboxyl groups of two leucine molecules:



Leucippos of Elea. A contemporary of Zeno, Empedocles and Anaxagoras (about 450 B.C.); the founder of the Ancient Greek atomistic theory, later developed by Democritos.

leucite. $K_2O,Al_2O_3,4SiO_2$. A vitreous, white or gray crystalline mineral in lava. Cf. *lucite*.

leuco- A prefix meaning white, and indicating in names of compounds the presence of a triphenylmethane group.

leuco bases. Leuko bases. A group of colorless derivatives of triphenylmethane produced by the reduction of dyes, which on oxidation, are reconverted into the dye.

leucoaniline. $C_{20}H_{21}N_3$ = 303.4. Triaminodiphenyltolylmethane, **triaminotriphenylmethane.** $(NH_2C_6H_4)_2.CH.C_6H_3(NH_2)Me$. Colorless crystals, m.100, insoluble in water, soluble in alcohol or ether; used in organic synthesis. Cf. *leucaniline*. **para-** See *para-*.

leucocyte. Leukocyte, white blood corpuscle. A colorless, ameba-like cell-mass wandering through the tissues. **l. extract.** An extract of leucocytes obtained from exudates produced in the pleural cavities of rabbits or other animals by the injection of an irritant. Cf. *aleuronate*.

leucocytosis. The dissolution of leucocytes.

leucodendron. Kienabossie, langbeen. The plant *L. concinnum*, a Proteaceae of South Africa, used as malaria remedy.

leucodrin. $C_{15}H_{16}O_8$ = 324.12. Proteacin. A crystalline bitter principle, m.212, from leucodendron.

leucoglycodrin. $C_{27}H_{44}O_{10}$ = 528.32. An amorphous white glucoside from leucodendron.

leucoindigo. Indigo white.

leucoline. Quinoline.

leucomaines. A group of poisonous nitrogen compounds, formed in animal tissues by metabolic activities (Cf. *ptomaines*). They are generally compounds of the uric acid type, as adenine, guanine, xanthine, or of the creatinine type.

leucomalachite green. $C_{23}H_{26}N_2$ = 330.3. Didimethylaminophenyl-phenylmethane. $PhCH(C_6H_4NMe_2)_2$.**p₂**-tetramethyldiaminotriphenylmethane. Colorless crystals, m.93, insoluble in water, soluble in alcohol or ether, which give malachite green on oxidation.

leucone. $SiH(OH)_3$ = 80.09. Orthosilicoformic acid.

leuconic acid. C_5H_5 = 140.0. Pentaketocyclopentane. The pentatomic ring compound

Small colorless needles, produced by strong oxidation of croconic acid.

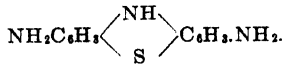
leucopyrites. The silvery mineral $FeAs_2$.

leucorosolic acid. $C_{20}H_{19}O_3$ = 307.2. o-methylleucaurine, **p₃**-trioxy-o-methyl-triphenylmethane. Colorless crystals derived from rosolic acid, used in organic synthesis.

leucoscope. (1) An optical pyrometer for determination of the temperature of an object. The light is separated by polarization into two complementary parts. (2) A photometer for the study of colored rays of light.

leucosin. An albumin from wheat, rye and barley embryos.

leucothionine. $C_{12}H_{11}N_3S$ = 229.1. Diamidothiodiphenylamine.



Cf. *thionine*.

leucotrope. Phenyldimethyl benzylammonium chloride.

leucyl. (1) The bivalent group —NH.CH(C₄H₉).CO— derived from the aminoacid leucine. (2) The monovalent group $NH_2.C_5H_{10}CO$—. **l. leucine.** The dipedtide: $NH_2.CH(C_4H_9).CO$—NH.CH(C₄H₉).COOH.

leuko- Leuco-.

leukomaines. Leucomaines.

leukonic acid. Leuconic acid.

leukonin. A commercial name for sodium antimoniate, used in enamels.

leukotine. $C_{21}H_{20}O_6$ = 368.2. A crystalline substance found in paracoto bark.

leunaphos. A fertilizer consisting of diammonium phosphate and ammonium sulfate (20 % N; 15 % P_2O_5).

leunaphoska. A fertilizer consisting of diammonium phosphate, ammonium sulfate and potassium chloride (13 % N, 10 % P_2O_5, 13 % K_2O).

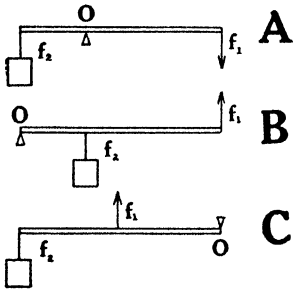
leuna saltpeter. A fertilizer from Leuna, Germany, consisting of 165 pts. ammonium sulfate and 100 pts. ammonium nitrate.

levan. A soluble polysaccharide found in the leaves of certain grasses and made up of repeating units of fructo-furanose.

Levant wormseed. Santonica.

leveler. A liquid which is added to a lacquer solvent to adjust volatility and/or viscosity.

levelling bulb. A glass vessel connected by rubber tubing to a burette, and used in gas analysis to level a liquid to the same height in both, so that the pressure in both containers is the same.



Levers.

O = *fulcrum*, f_1 = *power*, f_2 = *load*. A = *first order*, B = *second order*, C = *third order*.

lever. A mechanical device for increasing the speed or force of an agent source of power (see figure).

leverierite. $Al_2O_3.2SiO_2.nH_2O$. A pearly, light brown clay, resembling kaolin.

levigation. The reduction of a substance to a powder by grinding in water, followed by fractional sedimentation, in order to separate the coarser from the finer particles.

levo-, lævo- A prefix indicating that a substance rotates the plane of polarized light to the left (counter-clockwise); abbreviation: *l-* *e.g.*, *l*-leucine.

levogyric. Levorotatory.

Levol's alloy. An alloy of 71.9 % silver and 28.1 % copper.

levorotatory. Rotating the plane of polarized light from right to left (counter-clockwise). Cf. *polariscope, optical activity.*

levulic acid. Levulinic acid.

levulin. Synanthrose.

levulinamide. $C_5H_9O_2N$ = 115.1. $MeCOCH_2CH_2CONH_2$. Colorless crystals, m.107.

levulinic acid. $C_5H_8O_3$ = 116.1. Levulic acid. β-acetopropionic acid, γ-ketopentanoic acid, oxopentanoic acid*. The keto acid, $MeCOCH_2CH_2COOH$. Colorless leaflets, d.1.137, m.33, b.245, soluble in water, alcohol or ether. **dimethyl-** Mesitonic acid. **methyl-** Homolevulinic acid. **phenylhydrazine-** Antithermin.

l. **aldehyde** $C_5H_8O_2$ = 100.1. b-Acetopropionaldehyde. A colorless liquid, d.1.016, decomp. 187, soluble in water, alcohol, or ether.

l. **hydrazide.** $C_5H_{11}O_2N_2$ = 131.2. $MeCO.CH_2.CH_2.CO.NHNH_2$. Colorless crystals, m.82.

l. **oxime.** $C_5H_9O_2N$ = 115.1. $MeC:NH.CH_2.CH_2.COOH$. Colorless crystals, m.95.

levulosans. See *fructosans.*

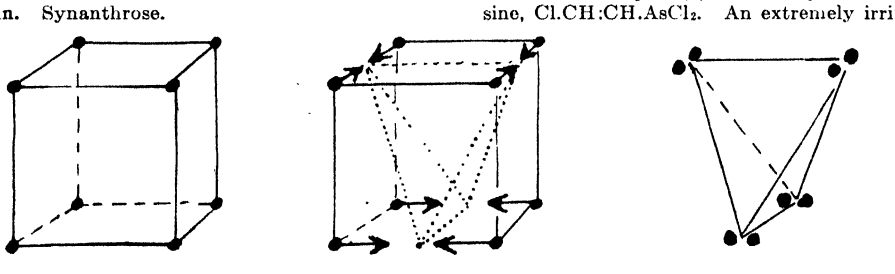
levulose. Fructose.

Lewis, Gilbert Newton. 1875– . An American chemist, noted for thermodynamic theories and their application to chemistry, and theories of atomic structure, valence, and photons. **L.-Adams formula.** An expression which relates the fundamental constants, *h*, *c*, and *e*. (Cf. *constants, Bohr's formula for Rydberg's constant*):

$$\frac{hc}{2\pi e^2} = 8\pi\left(\frac{8\pi^6}{15}\right)^{\frac{1}{4}}$$

The numerical values are 137.29 and 137.348. **L.'s atom.** The static concept of the atom, based upon the facts of crystallography and chemical combinations; as opposed to the dynamic Bohr atom, based upon ionized gases and spectroscopy. The electrons are thought to oscillate or vibrate around definite centers located at the corners of a cube (**cubical atom**) or in pairs at the corners of a tetrahedron (**tetrahedral atom**). See figure, and cf. *kernel, octet, valence.* **L. color theory.** Color is produced by the absorption of certain rays by those electrons of a molecule which vibrate with the same frequency. **L.-Langmuir theory.** The atom is built up of successive shells which hold 2, 8, 18, 32, 18 and 8 electrons as their maximum capacities. **L. symbols.** A method of illustrating bonds by indicating electrons with dots. One electron of each atom will pair with another electron of another atom to form a bond; thus $2H\cdot$ and $\cdot\ddot{O}\cdot$ give $H:\ddot{O}:H$. See also *octet, formula, bond, polar compounds.* **L. theory.** A chemical bond is *polar* when an electron passes from one atom to another; *non-polar* when two atoms share a pair of electrons equally.

lewisite. $C_2H_2AsCl_3$ = 207.28. *1*-Dichloroarsino-*2*-chloroethylene, β-chlorovinyl dichloroarsine, $Cl.CH:CH.AsCl_2$. An extremely irritant,



Lewis atom.

liquid, d.1.89, m. −5, b.190 (decomp.); used as vesicant poison gas.

ley. (1) The mixture of salt and glycerol formed during the saponification of crude fats by sodium hydroxide in soap manufacture. It contains 6–8% glycerol, 10–20% salts, less than 0.4% Na_2O (as carbonate), organic impurities and 0.2–0.3% fatty acids. (2) Describing a system of farming of crops in rotation, interspersed with ploughing. Cf. *lye.*

Leyden jar. See *jar.*

li. An abbreviation for link.

Li. The symbol for lithium.

liatris. Deers' tongue. The dried leaves of *Liatris odoratissima*, a Compositae, used for flavoring tobacco and in flavoring extracts.

Libavius, Andreas. 1540–1616. A German alchemical writer and pioneer in blowpipe analysis.

liberation. The act of setting free, as the formation of a gas from a compound.

lichen. Algae and fungi which live symbiotically, that is: two primitive plants, one with, the other without chlorophyll, which live together; *e.g.*, Iceland moss. They yield coloring matter (litmus, orchil, zearin), numerous acids (*e.g.*, orsellic acid), carbohydrates and depsides. **l. sugar.** Erythrite. **l. starch.** Lichenin. **l. stearic acid.** $C_{14}H_{14}O_3$ = 230.1. A crystalline dibasic acid derived from Iceland moss, m.120, insoluble in water.

lichenin. $(C_6H_{10}O_5)_n$ = (162.11)$_n$. [n = 80–160]. Lichen starch, moss starch. A β-gluco-pyranose carbohydrate derived from Iceland moss, *Cetraria islandicus*, which is digested by invertebrates only. A white gelatinous substance or a white powder, soluble in hot water, m.10.

lichenol. $C_9H_9O_4.C_2H_5$ = 210.1. The ethyl ester of evernesic acid from the oil of oak moss, *Evernia prunastri.* Cf. *sparassol.*

licorice. Glycyrrhiza. **Indian-** Abrus. **Spanish-** Glycyrrhiza. (U. S. usage, cf. *liquorice.*)

Lichtenberg figures. The pattern formed by an electric spark when passing through a thin layer of insulator; as, sulfur. They are recorded on a photographic film and the pattern indicates the nature of the current. Cf. *klydonograph.*

Lieben solution. A solution of iodine in potassium iodide.

Liebermann, Carl. 1842–1914. A German chemist noted for the synthesis of alizarin (with Gräbe). **L. reaction.** Nitroso reaction for phenols. A small fragment of sodium nitrite is dissolved in 5 cc. conc. H_2SO_4 and added to a crystal of phenol; a brown solution results, which changes to blue. The mixture poured into water gives a red solution, which changes to blue on the addition of alkali, owing to the formation of p-nitroso-phenol.

Liebig, Justus Freiherr von. 1803–1873. A German chemist, noted as the founder of agricultural chemistry and a popular teacher. **L. condenser.** A glass tube, surrounded by a wider tube in which water circulates; used as condenser in distillation apparatus. **L. extract.** A meat extract, manufactured in Argentine, used as a nutrient and in bacteriological work for making bouillon. **L. potash bulb.** A triangularly-bent glass tube with two or more bulbs filled with potassium hydroxide, used in organic analysis.

lien siccus. The dried and powderized spleen of cattle; used medicinally.

Liesegang rings. A periodic precipitation formed in gelatin by the gradual diffusion towards one another of two types of ions, which are previously added to different portions of the gelatin and which normally precipitate one another. Under these conditions the precipitate appears banded in distinct rings.

Justus von Liebig.

(From Moore's "History of Chemistry." McGraw-Hill Book Company, New York, N. Y.)

life. (1) The vital force, or the principle underlying the phenomena of organized beings. It depends on the *protoplasm*, which exercises the function of *metabolism, growth, reproduction, adaptation*, and *evolution*, q.v. (2) An inappropriate synonym for "time" or "time-period"; as: **damping l.** See *damping period.* **half l.** See *half-life* and *radioactivity.* **lingering l.** See *lingering period.* (3) Colloquially, but inappropriately, the period of usefulness of a device, machine, or other inanimate thing.

l. elements. The bioelements (q.v.) necessary for an organism. Their functions are classified as follows:

Group I.	Hydrogen and oxygen; *energy exchange elements.*
Group II.	Carbon, nitrogen, sulfur, and phosphorus; *anion (or acid) group formers, with varying valence; energy storers.*
Group III.	Sodium, potassium, calcium and magnesium; *cation (or base) formers, with fixed valence; translocation regulators.*
Group IV.	Manganese, iron (cobalt and nickel), copper and zinc; *cation (or base) formers, with varying valence; oxidation-reduction regulators.*
Group V.	Boron, aluminium, silicon, arsenic, selenium; *ampholytes, with varying valence; functions unknown.*
Group VI.	Chlorine, fluorine (bromine and iodine); *anion (or acid) formers, with fixed valence; functions unknown.*

Group VII. Cobalt and nickel; *cation (or base) formers, with varying valence; functions unknown, but perhaps those of Group IV.*

Group VIII. Germanium, gallium and other rare elements; *ampholytes; functions unknown.*

Cf. *abundance, protoplasm, periodic system, food, fertilizer.*

l. everlasting. The dried herb of *Gnaphalium obtusifolium* (*Antennaria dioica*), a Compositae, used as a fluid extract as a diuretic and astringent. **l. root.** Senecio.

ligasoid. A dispersed colloidal system, consisting of a liquid phase suspended in a gaseous phase; as, a fog or mist.

light. (1) A form of radiant energy. Cf. *radiation, spectrum.* In particular, those electromagnetic waves which affect the sight sense and form the visible spectrum: red orange, yellow, green, blue, violet; or those radiations which, on being stopped by an object, render it visible by virtue of their transformation into visible rays. The average velocity of light in air is 299,711 km. per second. The average velocity of light in a vacuum is 2.99776×10^{10} cm. per second = 984×10^6 ft. per sec. = 299,776 km. per second = 186,285 miles per sec. In different media it changes proportionally to the wavelength as follows:

	For violet λ 4200	*For red* λ 6500
in air	1.000297	1.000292
in water	1.3420	1.3320
in diamond	2.4570	2.4108

These figures represent the ratio: velocity in vacuo/velocity in medium. Its *intensity*, is measured in phots; its *quantity*, in lumens; its *quality* as colors. Thus:

Physical phenomenon	Objective stimulus	Subjective response
radiation	light	color
intensity	brightness	brilliance
wavelength-distribution	dominant λ and purity	hue and saturation

Cf. *photometry, spectroscopy.* (2) Not heavy; as, l. metals. **absorbed-** Those radiations which are transformed by matter. **actinic-** Radiations which are rich in ultraviolet rays; as, the l. of a mercury vapor lamp. Cf. *irradiation.* **artificial-** A gas-filled lamp operated at a color temperature of 2848°K. which was adopted as the *normal* artificial l. by an International Commission in 1931. **axial-** The rays passing through the optic axis of a system. **diffracted-** L. which has undergone diffraction, q.v. **diffused-** L. which has been scattered or reflected. **Finsen-** Sunlight which has passed through a copper sulfate solution, which absorbs the yellow, red and infrared rays. **monochromatic-** L. consisting of one wavelength only; as the l. of a sodium flame; however, this apparently pure yellow light is made up of several wavelengths. An absolutely monochromatic l. can be obtained only by screening a spectrum. **polarized-** L. whose vibrations are all in the same plane, or whose vibrations are parallel to each other and change uniformly; as, circularly- or elliptically-polarized l., q.v. Polarized light can be obtained by reflection, or by passage through certain minerals; as Iceland spar (Nicol prism, q.v.). **reflected-** L. which is turned back from a smooth surface; as a glass plate, mirror, or polished metal surface. **refracted-** L. which passes at an angle through a transparent medium, gas, liquid or solid, and thereby changes its direction; as in prisms and lenses. **scattered-** See *scattering, Raman effect, Tyndall effect.* **transmitted-** L. which has passed through a medium, and has not been absorbed. **ultraviolet-** See *radiations* and *rays.*

l. filter. Color screen. **l. metal.** A metallic element with a density below four. In particular, the elements located in the upper right hand portion of the periodic table; alkali metals, earth-alkali metals and earth metals. They are characterized by a single valence (1, 2, or 3), a simple spectrum, strong electromotive force (positive), and they form colorless compounds. Their valence electrons rotate at a distance from the nucleus. Cf. *periodic system.* Antonym: Heavy metals, nonmetals. **l. oils.** A fractional distillate from coal tar, b.110–210, used as a source of benzene, toluene and xylenes. **l. scattering.** See *scattering.* **l. titration.** See *titration.* **l. year.** A unit of astronomical distance. The distance which light travels in one year at the rate of 299,800 km. per sec. It equals 9.5×10^{12} km. or 5.9×10^{13} miles.

lightning. The electric flash associated with thunderstorms; or artificially produced. **l. jar.** An electric condenser or Leyden jar.

lignasan. Ethyl mercuric chloride. A wood preservative.

lignin. (1) A generic term for the cellulose-like substance which lines woody fibres, and includes lignose, lignone and lignin. It is supposed to consist of four condensed molecules of coniferol. (2) $C_{20}H_{20}O_6$ = 356.2. A cyclic unsaturated compound from wood.

lignite. A brown coal, in which the original structure of the wood is still recognizable. It contains 25–45 % carbon. See *jet, hartite, geocerinic acid, montan wax.*

lignoceric acid. $C_{24}H_{48}O_2$ = 368.50. Tetracosanoic acid*, $C_{23}H_{47}COOH$. An acid derived from wood, m.81, soluble in alcohol or ether. **Δ^{14}-.** Nervonic acid. **α-hydroxy-** $C_{22}H_{45}CHOH.COOH$. An acid from phrenosin. **α-hydroxy-Δ^{14}-** α-Hydroxy-nervonic acid. An unsaturated acid, $Me(CH_2)_7CH:CH(CH_2)_{12}CHOH.COOH$, from nervone.

lignone. A substance derived from wood, containing 50.1 % C, 5.82 % H and 44.08 % O. **l. sulfonate.** The waste liquor from sulfite process of paper making.

lignose. A substance derived from wood, containing 46.1 % C, 6.09 % H and 47.81 % O.

lignosulfin. Lignosulfite.

lignosulfite. Lignosulfin. A liquid obtained as by-product in the manufacture of sulphite cellulose; used for inhalations in pulmonary tuberculosis, and as a tanning agent.

lignum. The Latin term for wood. **l. benedictum.** The wood of guaiac. **l. cedrum.** Cedar wood. **l. nephriticum.** The wood from *Pterocarpus indicus*, a tree of the Philippines, or *Eysenhardtia polystachia*, a Mexican tree. These woods give highly fluorescent infusions. **l. rhodium.** The wood of *Amyris balsamifera*,

a tree of tropical America. **l. sanctum, l. vitae.** Guaiac.

ligroin. Ligroine. The fourth fraction petroleum distillation-product. d.0.707–0.722, b.90–120; used as a solvent.

ligustrin. Syringin.

ligustron. A crystalline principle from the bark of *Ligustrum vulgare.* Colorless crystals, m.105.

Ligustrum. A genus of oleaceous shrubs, the privets.

lilac. The dried leaves and fruits of *Syringa vulgaris;* used as a bitter tonic.

lilacin. Syringin.

Liliaceae. Lily family, a group of herbs with flowering stems springing from bulbs or corms, with parallel nerved leaves. The following species yield drugs:

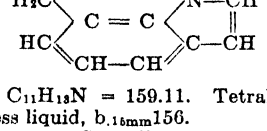
Smilax china	china root
Smilax officinalis	sarsaparilla
Convallaria majalis	lily of the valley
Veratrum viride	American hellebore
Schoenocaulon sabadilla	sabadilla
Polygonatum biflorum	Solomon's seal
Trillium erectum	trillium
Asparagus officinalis	asparagus
Allium sativum	garlic
Helonias dioica	helonias
Urginea maritima	scilla or squill
Colchicum autumnale	meadow saffron, colchicum seeds
Aloe vera, ferox, etc.	aloes
Xanthorrhoea species	acaroid gum

See also *comosic acid, imperialine, superbine, zygadenine.*

Liliiflorae. An order of phanerogamous plants consisting of the families Juncaceae, Liliaceae, Amaryllidacea, Iridaceae, Dioscoraceae and Bromeliaceae.

liliquoid. A dispersed or colloidal system consisting of two liquid phases; as emulsions.

lilole. $C_{11}H_9N$ = 155.1. The heterocyclic hydrocarbon:



lilolidine. $C_{11}H_{13}N$ = 159.11. Tetrahydrolilole. A colorless liquid, $b._{15mm}$156.

lily of the valley. Convallaria.

limanol. A preparation of salt-marsh mud used for rheumatism.

lime. (1) Calcium oxide, calx, quicklime, burnt lime. (2) The fruit of *Citrus acida,* a Rutaceae, used for its juice and as antiscorbutic. (3) The linden or l. tree, *Tilia Europaea,* a Tiliaceae. Its flowers are used as tonic. Cf. *linden.* **burnt-** Calcium oxide. **chloride of-, chlorinated-** Bleaching powder. **fat-** Burnt-. **quick-** Calcium oxide. **hydrated-** Calcium hydroxide. **slaked-** A dry white powder, chiefly calcium hydroxide, obtained by treating quicklime with sufficient water to satisfy its chemical affinity under the condition of its hydration. **unslaked-** Calcium oxide. **sulfurated-** Calcium sulfide.

l. juice. Succus Citri. The expressed sap from lemons, the ripe fruits of *Citrus medica C. limonum* or *C. acida,* a Rutaceae. It contains 5–10 gm. citric acid, and is used as antiscorbutic, antiseptic and refrigerant. **l. nitrate.** A commercial grade of calcium nitrate, used as fertilizer. **l. oil.** (1) An essential oil expressed from the rinds of the fruit of *Citrus limetta,* a Rutaceae, containing citral and limonene. Used in flavoring extracts and perfumery. (2) An essential oil distilled from citron, b.175–215, containing d-limonene. **l. water.** Liquor calcis. A saturated solution of calcium hydroxide in water; it contains about 0.15 gm. of $Ca(OH)_2$, and is used as a reagent and as an antiacid.

limelight. An illumination produced by heating lime to brilliant white heat with an oxyhydrogen flame.

limene. $C_{12}H_{24}$ = 204.2. A sesquiterpene from lime oil.

limestone. A pulverized rock consisting mainly of calcium carbonate; used in fertilizers, concrete mixtures, and in metallurgy. **magnesian-** q.v.

liminal. (1) Barely perceptible by the senses. (2) The lowest or minimal quantity. **l. value.** That fraction of a normal solution (in moles per liter) of a narcotic or other drug which produces a definite physiological effect; it is therefore inversely proportional to the narcotic power of a drug. *E.g.,* the liminal value for monacetin is 0.5, for sulfonal 0.006. Cf. *schwellenwert, Meyer's theory.*

liming material. Material used as a medium for the application of lime or limestone in agriculture, *e.g.,* burnt or lump lime mixed with marl.

limit. A border or boundary. **l. of elasticity.** The smallest stress which produces a permanent alteration.

limiting curve. A line on a graph which represents a boundary between two phases.

limnology. The study of fresh waters.

limonene. $C_{10}H_{16}$ = 136.2. $\Delta^{1,8(9)}$-*p*-menthadiene, q.v. A terpene of lemon-like odor. A colorless liquid, d.0.853, b.176, insoluble in water, soluble in alcohol or ether. Three isomers: **d-** or dextrolimonene, citrene, carvene, hesperidene, found in the essential oils from citrons and dill. **l-** or levolimonene, occurring in the oil of fir cones. **dl-** or **i-** inactive limonene (terpene).

limonite. Bog ore. A hydrated ferric oxide (60–70 % Fe_2O_3), with some carbonate used as iron ore from Rotorua, New Zealand; used as a cure for bushsickness.

Linaceae. Flax family. A group of herbaceous (sometimes woody) plants that yield some important drugs and fibres:

Linum usitatissimum	linen, flaxseed, linseed oil.
Erythroxylon coca	coca leaves

linaloe oil. An essential oil distilled from a Mexican wood. A colorless fragrant, liquid, d.0.88, insoluble in water, soluble in alcohol, ether, chloroform or benzene; used in the manufacture of linalool and in perfumery.

linalool. $C_{10}H_{18}O$ = 154.2. Coriandrol, 2,6-dimethyloctadiene-2,7-ol-6, $Me_2C{:}CH(CH_2)_2{\cdot}CMeOHCH{:}CH_2$. A terpene of bergamot-like odor in coriander and linaloe oil. A colorless liquid, *d-* d.0.875, b.198; *l-* d.0.866, b.195, slightly soluble in water, soluble in alcohol or ether; and used in perfumery.

linalyl. The monovalent radical $C_{10}H_{17}$—, 2.6-dimethylocta-2.7-dienyl, derived from linalool. **l. acetate.** $C_{12}H_{20}O_2$ = 196.2. Linalool acetic ester. $Me_2C{:}CH(CH_2)_2CMe(OCOMe)CH{:}$-

CH_2. A colorless liquid, d.0.91, b.220, slightly soluble in water, soluble in alcohol or ether. Used in perfumery.

linamarin. $C_9H_{13}NO_7$ = 247.14. An acetone cyanhydrin glucoside, m.141, from flax and *Phaseolus lunatus*.

linarin. A glucoside from toad-flax, *Linaria vulgaris*, a Scrophulariaceae.

linarite. A basic copper and lead sulfate. $PbSO_4,Cu(OH)_2$.

linden. A tree of genus *Tilia*, a Tiliaceae. **American-** Basswood, American lime, *T. americana*, which yields l. oil. **European-** *T. europaea*, yielding tilia and lime (3). **l. flowers.** See *lime* (3). **l. oil.** Basswood oil. An oil expressed from linden flowers and seeds, which resembles cotton seed oil.

lindgrenite. $2CuMoO_4.Cu(OH)_2$. A Chilean mineral, transparent, green, biaxial holohedra.

lindol. Trade name for tricresyl phosphate.

line. (1) The dimension of extension which possesses length but neither breadth nor thickness. (2) The $\frac{1}{12}$ part of an inch. (3) A narrow streak or strip; as, the image produced by the slit of a spectroscope, q.v. **absorption-** A line corresponding with light which has been absorbed on its passage through a gaseous, liquid or solid medium. **bright-** The emission lines characteristic of an element. **C-** The dark Fraunhofer line of λ6562.8 which corresponds with the hydrogen line H_α. **calcium-** The characteristic lines of calcium, especially the Fraunhofer lines G, H, and K. **D_1-, D_2-** The yellow light of the sodium flame; λ5895.9, λ5890.0, respectively. **dark-** Absorption or Fraunhofer lines. **emission-** The bright l. characteristic of an element. **Fraunhofer-** A dark l. in the solar spectrum caused by the absorption of light in passing through incandescent vapor. Cf. *solar spectrum*. **hydrogen-** See *H. line*. **hyperfine-** L. close together, due to nuclear moments. **K-** See *K line*. **metallic-** L. due to metallic elements. **nebular-** L. characteristic of nebulae. Cf. *nebulium*. **solar-** See *solar spectrum*.

l. of force. The direction in which a force acts; as: **electric-** The curves radiating from a positive towards a negative charge. **magnetic-** The curves or lines made visible by small iron filings in the field of force of a magnet. **l. spectrum.** A spectrum which shows lines instead of bands. They are the images of the slit before the prism, and the source of light contains rays of as many different wavelengths as there are lines. Single wavelengths, (lines) are caused by excited atoms and ions; while bands are due to molecules.

linear. Pertaining to one dimension: length. **l. expansion.** The length-wise expansion of materials under the influence of heat. Cf. *cubical expansion*. **l. measures.** The units of measuring length (q.v.) or distance.

linen. A textile manufactured from flax, the fibers of the flax stem. Cf. *lint*.

lingering period. The time, usually very short, during which an electron travels in the highest energy level of an excited atom. It is followed by the *damping* period (during which the characteristic radiation is emitted), and return to the normal state.

linhay. A concrete platform, on which china clay is stored prior to shipment.

liniment. An oily liquid preparation, used medicinally for external application.

linin. (1) Oxychromatin. A morphological or structural element of the cell, commonly termed the linin network. (2) The active principle of purging flax, *Linum catharticum*, a Linaceae of Europe. Colorless, lustrous, bitter crystals; used as a purgative.

lining. (1) The inside portion of a furnace. (2) A thin coating. **acid-** L. made of silica bricks. **basic-** L. made of magnesite bricks. **neutral-** L. made of coal or chrome bricks.

link. li. An obsolete linear measure used in surveying. 1 li. = 0.66 feet = 20.11684 cm. = $\frac{1}{25}$ rod.

linkage. The lines used in structural formula to represent valency connections between the atoms; thus each line represents a valency of one, a double line a valency of two, etc. In more recent conceptions a linkage or nonpolar bond (q.v.) is produced by a pair of electrons, one from each atom, by which two atoms are held together. See *bond, polar*.

linnaeite. $(Co,Ni)_3S_4$. Linnaetite. Cobalt-nickel pyrite. A native cobalt-nickel sulfide.

linnaetite. Linnaeite.

linoleate. A compound of a metal and linoleic acid of the type $C_{17}H_{31}COOM$, where M is a monovalent metal. If M is replaced by an alcohol radical, the resulting compound is a fat.

linoleic acid. $C_{17}H_{31}COOH$ = 280.2. Linolic acid, *9.12*-octadecadienoic acid*, octadecadien-*9.12*-oic acid, $Me(CH_2)_4CH:CH.CH_2.CH:CH.(CH_2)_7COOH$. A fatty acid occurring as glyceride in all drying oils. A yellow oily liquid, d.0.921, m.−18, b.230, insoluble in water, soluble in alcohol, ether, chloroform or benzene. **l. acid series.** A group of unsaturated aliphatic acids of the general formula

$C_nH_{2n-4}O_2$.

sorbic acid	$C_6H_8O_2$
geranic acid	$C_{10}H_{16}O_2$
palmitolic acid	$C_{16}H_{28}O_2$
linoleic acid	$C_{18}H_{32}O_2$
humoceric acid	$C_{19}H_{34}O_2$
eicosinic acid	$C_{20}H_{36}O_2$

linolenic acid. $C_{17}H_{29}COOH$ = 278.2. Octadecatrien-*9.12.15*-oic acid, *9.12.15*-octadecatrienoic acid*. A colorless liquid, d.0.922, insoluble in water, soluble in alcohol or ether.

linoleum. A canvas coated with a mixture of linseed oil, powdered cork and pigment. Cf. *oil cloth*.

linolic acid. Linoleic acid.

linotype metal. An alloy of lead (83.5 %), antimony (13.5 %) and tin (3 %) used for making printing type.

linoxyn. Solid, oxidized linseed oil, used in the manufacture of linoleum.

linseed. The dried seeds of flax, *Linum usitatissimum*, a Linaceae, sometimes used medicinally as a demulcent and emollient. **l. cake, l. meal.** The solid residue of l. after removal of the oil; used as a cattle feed. **l. oil.** Flax seed oil, oleum lini. A yellow oil expressed from linseed, the seeds of *Linum usitatissimum*, a Linaceae. Oily yellow liquid, d.0.932, m.−27, saponification value 188–195, iodine value 170–192, refractive index 1.473 at 40°C., insoluble in water, soluble in alcohol, ether, chloroform, benzene or turpentine. Used in paints, varnishes, lacquers, rubber substitutes, linoleum and leather industry. *boiled-* A linseed oil which has

been thickened by boiling, and dries more rapidly on exposure to air; used in varnishes and driers.

lint. Charpie byssus. A soft and flexible linen used for dressing wounds. **cotton-** An inferior short-fibred product made from cotton.

linter. The short cotton fibers left after ginning; they are used as a source of pure cellulose.

linum. The Latin term for linseed (flax).

lionite. An impure native tellurium.

lion's tooth. Taraxacum.

lipase. A ferment occurring in the liver, pancreas and other digestive organs, which splits neutral fats into glycerin and fatty acids: also applied to any ferment which splits fats into fatty acids and alcohol. **gastric-** A lipase of the stomach. **pancreatic-** Steapsase. **vegetable-** A lipase occurring in many plants.

lipide. A proposed name for lipins. **complex-** A l. which contains phosphorus and/or nitrogen. Cf. *lipoid*. **tertiary-** A l. which contains neither phosphorus nor nitrogen.

lipins. A generic term for fats and lipoids, or the alcohol-ether soluble constituents of protoplasm, which are insoluble in water. Classification, (Matthews):

1. a. FATS—neutral esters of glycerol and fatty acids. b. FATTY ACIDS.
2. FATTY OILS—neutral esters of glycerol and fatty acids, liquid at 20°C.
   a. drying oils—harden on exposure to air.
   b. semi-drying oils—thicken slowly on exposure to light and air.
   c. non-drying oils—remain liquid on exposure to light and air.
3. ESSENTIAL OILS—Volatile, generally odoriferous substances, *e.g.*, terpenes, aldehydes and alcohols.
4. WAXES—Esters of sterols and fatty acids.
5. STEROLS—High-atomic alcohols, solid at 20°C.
6. PHOSPHO-LIPINS—Phosphatides. Fatty compounds which contain phosphoric acid, as lecithins.
7. GLYCO-LIPINS—Fatty substances which contain carbohydrates, as cerebron, phrenosin.
8. SULFO-LIPINS—Fatty substances, contain sulfuric acid, as protagon, brain-sulfatide.
9. AMINO-LIPINS—Fatty substances, contain amino-acids, as bregenin.
10. CHROMO-LIPINS—Lipochromes. Fatty substances, contain a pigment or coloring matter.

lipochrome. One of a group of fatty pigments or coloring matters occurring in natural fats, such as egg-yolk and butter. See *carotenoids*.

lipoclastic. Lipolytic.

lipoid, lipoidic. Having the character of a lipid.

lipoids. A group of nitrogenous fats consisting of lecithins, cholesterol, and phosphatides.

lipoiodine. $C_{21}H_{39}I_2COOEt$ = 618.1. Ethyl-diiodobrassidate, ethylester of diiodobrassidic acid. White odorless, tasteless, needles m.37, insoluble in water, slightly soluble in alcohol, soluble in ether, phenol or oils; used medicinally as a substitute for iodides.

lipolysis. The decomposition or dissolving of a fat; the reverse reaction of saponification.

lipolytic. Lipoclastic. An agent that decomposes a fat into its alcohol (glycerin) and fatty acid.

lipoprotein. A group of complex proteins consisting of a simple protein combined with a higher fatty acid.

Lipowitz' alloy. A low melting-point alloy of 50 % Bi, 27 % Pb, 13 % Sn and 10 % Cd; m.71.7. Used in automatic fire sprinklers and for toy spoons.

lippia. Yerba dulce. The dried leaves and inflorescence of *Lippia dulcis*, a Verbenaceae, used as the fluid extract, as a demulcent or expectorant. **l. citriodora.** Lemon scented verbena. The dried leaves of *Aloysia citriodora*, a Verbenaceae, used as sedative and in sachets.

lippianol. A monohydric alcohol from the essential oil of *Lippia species* (Verbenaceae).

Lippmann, Edmond O. von. 1857– . A German organic chemist, noted for work on the sugar industry and chemical history. **L. electrode.** Capillary electrode. An early form of the mercury dropping electrode (q.v.), used as a standard electrode. **L. electrometer.** Capillary electrometer.

liquation. The extraction of metals from ores by heating on an inclined hearth and collecting the molten metal.

liquefaction. The change to the liquid form, especially the condensation of gases to a liquid.

liquefon. A unit of the starch-liquefying power of enzymes:

$$\text{Log}_{10} L = (S - 1078)\ 0.000565,$$

where L = liquefons per 10 cc. infusion, S = mg. starch liquefied in one hour.

liquescent. Tending to become fluid or liquid.

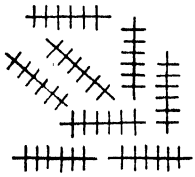
liqueur. A strongly flavored and sweetened alcoholic beverage.

liquid. A fluid or substance that flows readily. A state of matter intermediate between a solid and a gas, shapeless and fluid, taking the shape of the container and seeking the lowest level. It differs from a gas in its inability to diffuse throughout the whole volume of a containing vessel. Cf. *solvent*, *parachor*. **associated-** Polar-. A l. in which the molecules form groups, (probably coordinate bonds, q.v.), and in which K of the Ramsay-Shields or Morgan equation increases linearly with temperature until at t_c it has maximum value. **Newtonian-** True liquids, which do not alter in viscosity on stirring. Cf. *thixotropy*. **non-associated-** Normal-. **normal-** Nonpolar-. A l. consisting of independent molecules, that is, with no coordinate bonds or unshared electrons in the octet, and in which K = 2.12 ergs per degree. **polar-** Associated. **semipolar-** A l. intermediate between associated and normal; as, alcohol, glycerol. See figure.

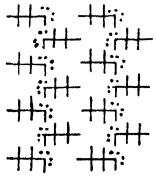
l. acetylene. Acetylene gas compressed into steel cylinders containing some infusorial earth and acetone; used in welding. **l. air.** Liquefied air, or a mixture of liquid oxygen and nitrogen. A clear colorless liquid, intensely cold, and giving off oxygen and nitrogen vapors which freeze the moisture of the surrounding air; kept in open Dewar vessels. Used for the production of low temperatures; medicinally, in the treatment and relief of poison oak and poison ivy eruptions. **l. ammonia.** Ammonia gas liquefied under pressure and shipped in steel cylinders. For uses, see *ammonia*. **l. carbon dioxide.** Carbon dioxide gas compressed into steel cylinders. Used as a refrigerant, for producing pressure in carbonated and soft drinks, for blowing up tires of automobiles, etc.; see

carbon dioxide. **l. chlorine.** Chlorine gas compressed into steel cylinders and used extensively in bleaching industry; see *chlorine.* **l. ethylene.** Ethylene gas compressed in steel cylinders and used as an anesthetic and in welding. See *ethylene.* **l. helium.** Helium gas compressed into steel cylinders, and used for filling dirigibles. **l. hydrogen.** Hydrogen gas compressed in steel cylinders and used in welding, production of high temperatures, filling balloons and dirigibles, hydrogenation of oils and cracking of petroleum; see *hydrogen.* **l. hydrogen sulfide.** Hydrogen sulfide gas compressed in steel cylinders; used in chemical industry, and as a reagent. **l. nitrous oxide.** Nitrous oxide gas compressed in steel cylinders and used as a dentist's anesthetic, as a substitute for oxygen in jewelers' blowpipes, as a preservative for perishable foods, fruits, tissues, and biological liquids. **l. oxygen.** Oxygen gas compressed into steel cylinders and used in welding, anesthesia, mine-rescue work and as a detonating and blasting material; see *oxygen.* **l. smoke.** The first distillate in the fractional distillation of wood, which contains acetic acid, tar, and phenol compounds (pyroligneous acid); used in the preservation or "smoking" of meat. **l. sulfur dioxide.** Sulfur dioxide gas compressed into glass bottles; used in the laboratory as a reducing agent and in synthesis. See *sulfur dioxide.*

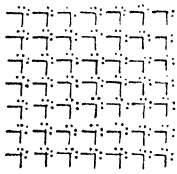
TYPES OF LIQUIDS



Hexane
Nonpolar or *normal* L.
benzene
carbon tetrachloride
hydrocarbon oils



Alcohol
Semipolar or *intermediate* L.
alcohol
glycerol
methylal
ether
acetone
chloroform



Water
Polar or *associated* L.
glycol
liq. ammonia
water

liquidambar. Copal balsam, copalin. The balsamic exudates of *Liquidambar styraciflua,* a Hamamelidaceae, of North America; used medicinally for coughs. Cf. *storax.*

liquidus. A curve relating to a liquid phase of a 2-component solution (see *solidus*).

liquor. An aqueous solution. **l. ammoniae.** Ammonium hydroxide. **l. calcis.** Lime water. **l. of flints.** A solution of silica in potash (potassium silicate). **l. trinitrin.** A 1 % solution of glyceryl trinitrate in alcohol.

liquorice. Glycyrrhiza. (British usage, cf. *licorice.*)

liroconite. A native, hydrated copper aluminum arsenate.

lisoloid. A dispersed or colloidal system consisting of a liquid phase surrounded by a solid phase; as, a jelly or a liquid crystal.

Lissajou's figure. The pattern produced by a spot of light reflected from two mirrors, mounted on the ends of two tuning forks that are vibrating at right angles.

Lister, Joseph, [*Baron*]. 1827–1912. An English surgeon who founded antiseptic surgery.

listerine. A proprietary antiseptic solution containing boric acid, benzoic acid, thymol, and essential oils of *Eucalyptus, Gaultheria,* etc.

liter, litre. The metric unit of volume or capacity. One liter is the volume occupied by 1 kg. of pure water at 4°C. and 760 mm. pressure. It was originally intended to be 1000 cc. 1l. = 1000 mil = 1000.028 cc. = 1.05671 quarts = 0.264178 gallon = 33.8174 fluid ounces = 270.518 fluid drams. 1 mol of any gas occupies 22.4 liters at 0°C. and 760 mm. **micro-** μl or λ, lambda. One millionth part of a liter, $1\lambda = 10^{-6}$ l. **milli-** ml. One thousandth part of a liter, 1 ml. $= 10^{-3}$ l. = approximately 1 cc. **Mohr-.** An obsolete unit of volume. The volume of 1 kg. of water at 15°C. weighed in vacuo. It occupies 1000.91 cc.

litharge. Lead oxide, yellow.

lithate. Urate.

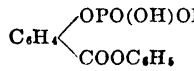
lithia. Lithium oxide. **l. mica.** Lepidolite. **l. water.** A solution of lithium bicarbonate.

lithic acid. Uric acid.

lithii. The Latin genitive of lithium, used in the U.S.P. to designate salts of lithium; as, lithii benzoas = lithium benzoate.

lithium. Li = 6.94. An element, atomic number 3, the first member of the alkali metals in group 1 of the periodic system. It has a valency of one. A silver-gray metal, d.0.524, m.186, b.1400, reacting with water and must be stored in kerosene or petrolatum. L. is widely distributed, but only in very small quantities; its principal minerals are amblygonite (8–9 % Li) lepidolite (1–6 % Li) petalite, and spodumene (5–7 % Li); it occurs also in several mineral waters. It was discovered in 1817 by Arfvedson, and named from the Greek lithos (= stone). It forms only one series of compounds which are all soluble in water and dissociate into the Li^+ ion. Used as "scavenger" in purifying metals; traces of Li added to Al increase hardness; with Pb it produces a bearing metal. Also used as deoxidizer in copper alloys. **l. acetate.** $Li(C_2H_3O_2).2H_2O$ = 102.0. Rhombic white crystals, m.70, soluble in water; used as a diuretic and antirheumatic. **l. acetyl salicylate.** $C_2H_3O.OC_6H_4COOLi$ = 186.06. Hydropyrine, apyron, tyllithin, litmopyrine, grifa. Used for medicinal purposes. **l. agaricinate.** A white powder of slight saline taste, soluble in water and used as an anhidrotic. **l. amide.** $(LiNH_2)_n$ = $(22.96)_n$. Colorless cubic crystals, d.1.178, m.390, b.430, decomp. in water; used in organic synthesis and as catalyst. **l. arsenate.** $Li_3AsO_4.\frac{1}{2}H_2O$ = 168.8. A white powder, soluble in water; used as an anti-arthritic in gout, malaria and anemia. **l. benzoate.** $LiC_7H_5O_2$ = 128.0. A light white powder of cooling taste, soluble in water; used as a diuretic, urinary antiseptic and sedative. **l. benzosalicylate.** A white crystalline powder, soluble in water and used as an urinary antiseptic. **l. bicarbonate.** $LiHCO_3$ = 68.0. A white powder, slightly soluble in water (lithia water). **l. bichromate.** $Li_2Cr_2O_7$ = 229.9. An orange-red crystalline powder, soluble in water. **l. bitartrate.** $LiC_4H_5O_6.H_2O$ = 174.1. Tartarlithine. Colorless

crystals, soluble in water; used medicinally for gout. l. **borate.** $Li_2B_4O_7.5H_2O$ = 259.2. A white powder, slightly soluble in water; used as an antiseptic and in dental cements. *meta*- $LiBO_2$ = 49.76. A white powder, soluble in water. l. **borocitrate.** $Li_2HC_6H_5O_7.2HBO_3.2H_2O$ = 359.4. A white powder, soluble in water; used as an urinary antiseptic. l. **bromide.** LiBr = 86.9. A hygroscopic, colorless powder, d.3.464, m.442, soluble in water, or alcohol; used as a nerve sedative. l. **cacodylate.** $LiMe_2AsO_2.H_2O$ = 162.1. A light, white powder, soluble in water; used medicinally for anemia. l. **caffeine sulfonate.** Symphorol. l. **carbide.** Li_2C_2 = 37.89. A white powder. $d_{18°}$.1.65. l. **carbonate.** Li_2CO_3 = 73.9. Colorless prisms, d.2.11, m.700, slightly soluble in water, insoluble in alcohol; used as an antiacid and in artificial mineral waters. *acid*- L. bicarbonate. l. **chlorate.** $2LiClO_3.H_2O$ = 198.82. A deliquescent solid, m.50. *per*- L. perchlorate. l. **chloride.** LiCl = 42.4. Colorless octahedric crystals containing $2H_2O$, d.2.068, m.606, soluble in water, alcohol or ether; used medicinally as an antirheumatic, and commercially in pyrotechnics for the production of red fires. l. **chromate.** $Li_2CrO_4.2H_2O$ = 166.1. A yellow, hygroscopic crystalline powder, soluble in water, alcohol or ether. l. **citrate.** $Li_3C_6H_5O_7.4H_2O$ = 281.9. A white, odorless, slightly hygroscopic, powder. It is frequently used medicinally in the treatment of gout. l. **dichromate.** L. bichromate. l. **dithiosalicylate.** $(LiC_7H_4O_3S)_2$ = 350.1. A gray powder, soluble in alcohol or water; and used as an antirheumatic. l. **fluophosphate.** $LiF.Li_2PO_4.H_2O$ = 169.8. Colorless crystals, soluble in water; used as a flux in ceramics. l. **fluosilicate.** $Li_2SiF_6.2H_2O$ = 191.97. L. silicofluoride. White monoclinic crystals, d.2.33, soluble in water. l. **fluoride.** LiF = 26.0. A white crystalline powder, slightly soluble in water; used in ceramics for enamels. l. **formate.** HCOOLi = 52.1. Colorless crystals, soluble in water; used medicinally for gout. l. **germanate.** Li_2GeO_3 = 134.48. Colorless powder, d.3.53, m.1239, slightly soluble in water. l. **glycerophosphate.** $Li_2C_3H_7O_6P$ = 184.1. A white crystalline powder soluble in water; used medicinally in gout. l. **hippurate.** $LiC_9H_8O_3N$ = 185.1. A white powder, slowly soluble in hot water, used medicinally for uric acid diathesis. l. **hydride.** LiH = 7.95. A white solid, m.680, d.0.82, decomp. in water to H_2 and LiOH. l. **hydroxide.** LiOH = 24.0. White crystals, soluble in water, slightly soluble in alcohol; used as a reagent and in the manufacture of lithium salts. l. **iodate.** $LiIO_3$ = 182.0. A white powder, soluble in water. l. **iodide.** LiI = 133.86. White hygroscopic crystals containing $3H_2O$, d.4.063, m.720 soluble in water or alcohol. Used medicinally as a diuretic and alterative; commercially, in the manufacture of artificial mineral waters. l. **lactate.** $LiC_3H_5O_3$ = 96.0. A colorless crystalline powder, soluble in water; used as a diuretic. l. **laurate.** $C_{12}H_{23}O_2Li$ = 206.12. A white solid, m.229.5. l. **mercuric iodide.** Mercuric lithium iodide. l. **metaborate.** $LiBO_2$ = 49.8. A white powder, slightly soluble in water. l. **myristate.** $C_{14}H_{27}O_2Li$ = 234.15. White solid, m.223.9. l. **nitrate.** $LiNO_3$ = 69.0. Colorless rhombohedric crystals, d.2.39, m.253, soluble in water; used in pyrotechnics for red fires, and in the manufacture of artificial mineral waters. l. **nitride.** Li_3N = 34.83. Used as catalyst in ammonia synthesis. l. **nitrite.** $LiNO_2.H_2O$ = 70.96. Colorless needles, d.1.615, soluble in water. l. **oxalate.** $Li_2C_2O_4$ = 102.0. Colorless crystals, soluble in water. l. **oxide.** Li_2O = 29.9. Lithia. A colorless and caustic powder, d.2.102, subliming at 600, soluble in water, slightly soluble in alcohol; used in the manufacture of lithium salts. l. **palmitate.** $C_{16}H_{31}O_2Li$ = 262.18. A white solid, m.224.5. l. **perchlorate.** $LiClO_4.3H_2O$ = 160.45. A deliquescent soluble solid. l. **phenate.** LiC_6H_5O = 100.0 L. carbolate, l. phenylate, phenollithium. A colorless powder which turns pink with age, soluble in water or alcohol; used as an antiseptic. l. **phenolsulfonate.** $LiC_6H_5SO_4.H_2O$ = 198.1. L. sulfocarbolate. A white crystalline powder, soluble in water; used medicinally in the treatment of uric acid diathesis. l. **phosphate.** $Li_3PO_4.H_2O$ = 133.9. Colorless rhomboidal crystals, d.2.41, m.857, slightly soluble in water; used in medicine. l. **platinichloride.** $Li_2PtCl_6.6H_2O$ = 529.9. Yellow crystals, used in analysis. l. **quinate.** Urosine. l. **rhodanate.** L. thiocyanate. l. **salicylate.** $LiC_7H_5O_3$ = 144.0. A white, hygroscopic, odorless powder, soluble in water or alcohol; used as an antirheumatic and intestinal antiseptic. l. **salol orthophosphite.** Salvosal lithia, the lithium salt of salol-o-phosphorous acid:



Colorless crystals, decomp. in hot water, soluble in cold water; used medicinally for influenza and gout. l. **silicate.** Li_2SiO_3 = 89.94. White rhombic crystals, d.2.52, m.1201, insoluble in water. **basic-** Li_4SiO_4 = 119.82. White crystals, d.2.28, m.1256, insoluble in water. l. **silicide.** Li_6Si_2 = 97.76. Blue crystals, d.1.16, decomp. by heat or water. l. **silicofluoride.** L. fluosilicate. l. **sozoiodolate.** $C_6H_2(OH)I(SO_3Li)$ = 304.97. Colorless or slightly yellow, shining leaflets, slightly soluble in water; used as an antirheumatic. l. **stearate.** $C_{18}H_{35}O_2Li$ = 290.21. A white solid, m.221.0. l. **succinate.** $Li_2C_4H_4O_4.3H_2O$ = 184.1. Colorless crystals, soluble in water or alcohol; used as an antiseptic. l. **sulfate.** Li_2SO_4 = 110.0. Colorless monoclinic crystals containing $1H_2O$, d.2.21, m.843, soluble in water or alcohol. Used medicinally as a diuretic and antirheumatic, technically in pyrotechnics for red fires, and in the manufacture of artificial mineral waters. l. **sulfide.** Li_2S = 46.0. A colorless powder, d.1.66, soluble in water. l. **sulfite.** $Li_2SO_3.H_2O$ = 111.96. Needle-shaped soluble crystals. l. **sulfocarbolate.** L. phenolsulfonate. l. **sulfocyanide.** L. thiocyanate. l. **sulfoichthyolate.** A tarry liquid, used as an ichthyol substitute. l. **tartrate.** $Li_2C_4H_4O_6.H_2O$ = 180.1. A white crystalline powder, soluble in water or alcohol; used as an antirheumatic. l. **thallium tartrate.** $C_4H_4O_6LiTl.2H_2O$ = 396.39. Triclinic crystals, d.3.144. l. **thiocyanate.** Li-CNS = 65.0. L. rhodanate. Colorless, hygroscopic crystals, soluble in water; used as a reagent. l. **urate.** $C_5H_3O_3N_4Li$ = 174.04. A soluble salt of lithium used for gout. l. **valerate.** $LiC_5H_9O_2$ = 108.1. White crystals of valerian-like odor, soluble in water; used medicinally as an antirheumatic and sedative. l. **vanadate.**

$LiVO_3.H_2O$ = 123.9. A yellowish crystalline powder, soluble in water.

litho- A prefix derived from the Greek indicating "stone"; as in lithography (stone-writing).

lithocholic acid. $C_{24}H_{40}O_3$ = 376.32. An acid from bile. Cf. *choline, sterols.*

lithofellic acid. $C_{20}H_{36}O_4$ = 340.28. Microscopic crystals, m.206, insoluble in water.

lithography. A method of printing in which the design is drawn transversely inverted on a stone with a greasy ink, and treated in succession with water and a printing ink which is accepted only by the greasy design; the stone is then used for printing on paper. In modern lithography the design is produced photographically on a zinc plate from which it is transferred on a rotary machine to a rubber blanket, which is brought into contact with the paper (offset process).

lithology. Petrology.

lithomarge. The mineral, $K_2O,Al_2O_3,6SiO_2, xH_2O$.

lithopone. Lithophone, Griffith white, Orr white, Charlton white. A stoichiometric mixture of zinc sulfide and barium sulfate, used as a white pigment in paints, in the rubber industry, for oil cloth manufacture and as a filler. **cadmium.** A red or yellow pigment analogous to l., in which the zinc sulfide is replaced by cadmium sulfide.

lithosphere. The solid earth crust as compared with the liquid (hydrosphere) and gaseous (atmosphere) layers of the earth surface. For composition, see *abundance.*

lithuric acid. $C_{15}H_{19}NO_9$ = 357.15. White crystals, m.204.5, from bladder stones.

litmin. azo- See *azolitmin.* **erythro-** See *erythrolitmin.*

litmopyrine. Lithium acetyl salicylate.

litmus. Lacmus, turnsole, lacca coerulea. A purple coloring matter obtained from various lichens, *Roccella* and *Dendrographa* species. A blue, amorphous powder, which is usually marketed mixed with calcium carbonate and compressed into small cubes; it contains azolitmin and lecanoric acid. Used as an indicator in volumetric anaysis, for the preparation of litmus paper and litmus tincture. **l. milk.** Milk colored with litmus and used in bacteriology as a culture medium, to detect the production of acidity. **l. paper.** (*neutral-* or *purple-*) A filter paper impregnated with a solution of litmus of pH 7.0. (*blue-*) A filter paper impregnated with a litmus solution of pH 8.0 (colored blue by a few drops of alkali). (*red-*) A filter paper impregnated with litmus solution of pH 6.0 (colored red by a few drops of acid). **l. pencil.** A wax pencil colored red and blue with litmus, used in analytical chemistry to make streaks on glass ware or paper, thus to detect acidity alkalinity. **l. tincture.** A saturated solution of litmus in alcohol and/or water; used in analytical chemistry as an indicator and in bacteriology for culture media.

litre. Liter.

Little, Arthur Dehon. 1863–1935. An American chemist noted for developments in chemical engineering.

littorol. See *pelagic.*

Littrow prism. A glass prism with 90°, 60° and 30° angles, which reflects light internally from one surface; used in spectrographs. Cf. *Cornu prism.*

liver. (1) A gland of mammals which forms glycogen from the maltose of veinous blood, and which secretes bile. It also stores glycogen, takes part in the formation and destruction of blood corpuscles, and converts nitrogeneous materials into urea. (2) A natural sulfide mineral. **l. extract.** A concentration of the antianemic principle of mammalian l.; used to stimulate erythrocyte-formation in the bone marrow. **l. of sulfur.** The result of fusing together potassium carbonate and sulfur. It contains chiefly potassium sulfide and polysulfides; used for skin diseases. **l. ore.** Cinnabar. **l. sugar.** Glycogen.

liverwort. The dried herb of *Hepatica triloba,* a Ranunculaceae, used as a mild mucilaginous astringent. **English-** Lichen caninus, ground liverwort. The lichen, *Peltigera canina,* used as a mild purgative.

livetin. A protein from egg-yolk.

livingstoneite. $2Sb_2O_3.HgO$. Antimonite (q.v.) containing mercury.

lixiviation. The extraction and separation of a soluble substance from a mixture with insoluble matter; *e.g.,* leaching of salts from ashes.

lixivium. The filtrate obtained by leaching a soluble from an insoluble matter, as the lye obtained from wood ashes.

ln. Abbreviation for natural logarithm.

loadstone, lodestone. Magnetite.

loading. A heavy substance, usually of mineral nature, (clay, gypsum, starch etc.) added to textiles, papers, rubber etc. to give weight or smoothness. Cf. *filler.*

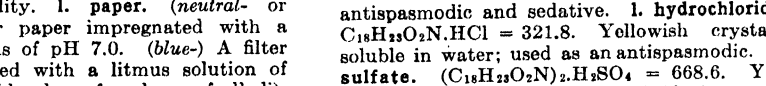
loalin. Trade name for a polystyrene plastic.

loam. Clay mixed with sand.

lobate. Describing a growth of bacteria, in which the borders of the cultures show lobes or deep undulations or fissures.

lobelia. Indian tobacco. The dried leaves and flowering tops of *Lobelia inflata,* a Lobeliaceae. Used as a fluid extract, as an antispasmodic and expectorant.

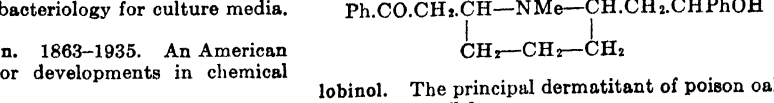
lobeline. $C_{18}H_{23}O_2N$ = 285.3. Inflatine. An alkaloid from the seeds of lobelia.



A yellowish syrupy liquid, insoluble in water, soluble in alcohol or chloroform; used as an antispasmodic and sedative. **l. hydrochloride.** $C_{18}H_{23}O_2N.HCl$ = 321.8. Yellowish crystals, soluble in water; used as an antispasmodic. **l. sulfate.** $(C_{18}H_{23}O_2N)_2.H_2SO_4$ = 668.6. Yellowish, hygroscopic crystals, soluble in water. Used as a powerful relaxant and antispasmodic, and in the treatment of the tobacco habit.

lobeloid. The combined principles of Indian tobacco; used medicinally as an expectorant and relaxant.

lobinine. $C_{22}H_{27}NO_2$ = 335.2. An alkaloid from *Lobelia inflata.*



lobinol. The principal dermatitant of poison oak, *Rhus diversiloba.*

local. Restricted to one place or spot; as, local anesthesia (anesthesia of one particular region of the body).

locamphen. A liquid obtained by the interaction of 10 pts. iodine, 20 pts. phenol, and 70 pts. camphor. A dark reddish-brown viscid liquid,

insoluble in water, soluble in alcohol; used as an antiseptic.

Locke's solution. An artificial, protein-free blood-serum consisting of 9.0 gm. NaCl, 0.2 gm. $CaCl_2$, 0.4 gm. KCl, 0.2 gm. $NaHCO_3$, 0.25 gm. glucose in 1000 cc. water. Cf. *Ringer's solution.*

Lockyer, Sir Joseph Norman. 1836–1920. An English astronomer who discovered (with Frankland) helium in the sun's chromosphere.

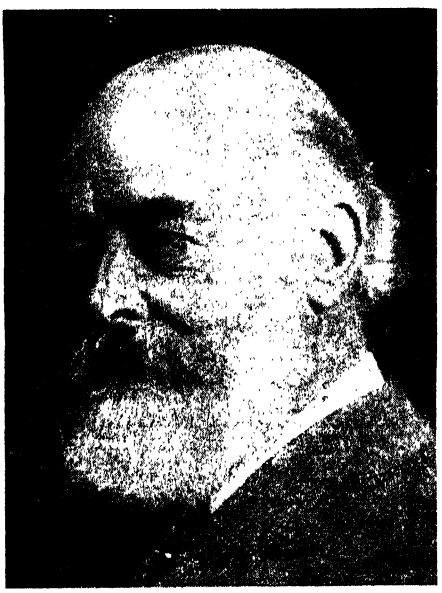
locust bean. Carob bean. **l. tree.** The tree *Robinia pseudacacia* of semi-desert North America, which yields robin.

lodal. A derivative of papaverine: 6.7-dimethoxy-2-methyl-3.4-dihydroisoquinoline chloride; it is a proprietary drug.

lode. A vein of metallic deposit filling the fissure of a rock. **mother-** The great gold vein of Central California.

lodestone. Magnetite.

Lodge, Sir Oliver Joseph. 1851–1940. An English physicist, noted for his work in electrical science. **L.-Cottrell process.** A process for the electrostatic precipitation of smokes and fog, widely used in industry. Cf. *Cottrell.*



Sir Oliver Joseph Lodge.

(From Thomson's "Outline of Science." Courtesy of G. P. Putnam's Sons, N. Y.)

Loeb, Jacques. 1859–1924. An American physiologist, noted for his work on colloids, artificial parthenogenesis and the effects of ions on protoplasm. **L. collection.** A collection of chemical types (elements and compounds) deposited by research workers in the United States National Museum for record purposes.

Loeffler. See *Löffler.*

Loew theory. A theory explaining the physiological action of poisons on a chemical basis: All substances capable of acting on aldehyde- or amino-groups are poisonous to the living tissue, even in very dilute solutions, as they exert a substituting action and thereby change the dynamic equilibrium of the protoplasm.

Löffler, Friedrich A. J. 1852–1915. A German bacteriologist, noted for his methods of staining bacteria. **L. methylene blue.** A bacteriological dye-solution prepared by dissolving 0.5 gm. methylene blue, in 40 cc. alcohol, 2 cc. N/10 KOH, and 98 cc. water. **L. mixture.** A culture medium for the growth of bacteria: 250 cc. glucose bouillon and 750 cc. horse-serum or beef-blood serum.

log. Abbreviation for logarithm. $\log_{10}$. Common logarithm. $\log_e$ or ln. Natural logarithm.

Loganiaceae. Logania family. A group of herbs, shrubs or trees, many of them poisonous, which yield many important alkaloids and drugs; as:

seeds:	
Strychnos nux vomica.....	nux vomica strychnine brucine
Strychnos ignatii.....	St. Ignatius bean
bark:	
Strychnos malaccensis.....	hoang-nan
rhizomes:	
Gelsemium sempervirens....	gelsemine
Spigelia marilandica.....	pink root
extractive:	
Strychnos castelnaeana.....	curare.

loganin. $C_{25}H_{34}O_{14}$ = 558.26. A glucoside from nux vomica, m.215.

logarithm. The logarithm (log) of a number, n, is the power, x, to which the logarithmic base, a, must be raised to give that number. $n = a^x$, and $x = \log_a n$. **common-** L. whose base is 10. Abbreviated log or $\log_{10}$. **Napierian-** Natural. **natural-** Napierian-. L. whose base is e (q.v.) or 2.71828 . . . Abbreviated, $\log_e$ or ln.

l. conversion: ln ( ) = **2.3026** log ( ), where ln is the natural, and log the common logarithm.

logarithmic. Pertaining to logarithms. **l. sector method.** Quantitative spectroscopy based on the difference in length between two tapering wedges, produced by photographing the two spectra concerned after passage of the incident light through a wedge-shaped aperture in a disc which rotates in front of the spectrograph.

logwood. Haematoxylon. **l. crystals.** Hematoxylin. **l. extract.** A dark reddish-blue paste made by extracting logwood. Used in dyeing textiles and leather and for the manufacture of haematoxylin. **l. paste.** Hematoxylin paste. Cf. *brazilwood, fustic, sappan.*

-logy. A suffix derived from the Greek λογος (word), indicating a science or doctrine; as, histology, pathology.

loiponic acid. $C_{17}H_{11}NO_4$ = 173.1. Piperidine-3.4-dicarboxylic acid. An oxidation-product of meroquine and quinine.

lokav. Chinese blue.

loliin. A volatile constituent of the seeds of *Lolium* species.

lolium. Poisonous darnel. A grass, *L. temulentum*, found abundantly in wheat and oat fields during wet seasons.

Lomonósov, Michájlo Vasílievič. 1711–1765. A Russian scientist noted for theories of molecular structure, conservation of energy and matter, and of light waves.

London clay. A tough, compact, lower Eocene clay formation, red-brown at the surface and blue-gray below. **L. paste.** A mixture of quicklime and caustic soda moistened with alcohol. **L. purple.** An insecticide: 43 parts arsenic trioxide, 12 parts aniline, 21 parts lime and 1 part ferrous oxide.

longitude. See *co-ordinates.*

longitudinal. Lengthwise or parallel to the longer axis of a body. Antonym: latitudinal.

looseness. The extent to which a dyestuff may be removed by friction.

lophine. $C_{21}H_{16}N_2$ = 296.27. *2.4.5*-Triphenylimidazole. Colorless needles, m.275, insoluble in water.

lophophorine. $C_{13}H_{17}O_3N$ = 235.2. Methoxyanhalonine. An alkaloid from mescal buttons, the buds of *Anhalonium lewinii*, a cactus of Mexico. It is physiologically active, similar to anhalonine and mescaline, and produces hallucinations.

lopion. G2949. A gold-thiourea preparation, used for treatment of tuberculosis.

lorandite. A native sulfo-arsenide of thallium, $TlAsS_2$.

lorenit. $C_9H_6O_4NSI$ = 351.04. An isomer of loretin, used medicinally in dressing wounds and as a substitute for iodoform.

Lorentz, Hendrik Antoon. 1853–1928. A Dutch physicist noted as a pioneer of the electron theory. **L.-Lorenz equation.** The molecular refractivity, R, is related to the molecular weight, M, density, d, and refractive index, n, by

$$R = \frac{n^2 - 1}{n^2 + 1} \cdot \frac{M}{d}$$

Cf. *collinsics*.

loretin. $C_9H_4IN.OH.SO_3H$ = 351.05. 7-iodo-8-hydroxyquinoline-5-sulfonic acid, yatren. Bright yellow, odorless crystals, slightly soluble in water, insoluble in ether, readily soluble in Na_2CO_3 solution. It forms salts with metals; used medicinally as a wound dressing substitute for iodoform and a specific amebicide in dysentery.

loretinates. The metal salts of loretin, *e.g.*, bismuth loretinate (loretin bismuth) and calcium loretinate (loretin calcium); used as antiseptics in wound dressings.

Loring, Frederick Henry. 1870– . An English chemist. **L. numbers.** See *probability*.

loriodendrin. A bitter principle from the bark of the tulip-tree, *Liriodendron tulipifera*, a Magnoliaceae. White, brittle crystalline scales, m.82, decomp. 125, insoluble in water, soluble in alcohol or ether. Cf. *tulipiferine*.

lorol. Trade name for a mixture of aliphatic alcohols formed by the high pressure hydrogenation of coconut oil.

Loschmidt number. The number, n, of gas molecules per cc. at 0°C. and 760 mm. pressure: $n = 2.705 \times 10^{19}$ molecules. Cf. *Avogadro number*.

losophan. $C_7H_5I_3O$ = 485.6. Triiodo-m-cresol. $C_6HI_3(OH)Me$. Colorless crystals, insoluble in water, soluble in ether, chloroform oils, or fats; used as an external antiseptic.

lotase. An enzyme of *Lotus arabicus*, converting lotusin into hydrocyanic acid and lotoflavin.

loth. An obsolete German metallurgical unit of weight. 1 loth per centner = 1 part per 3200.

lotion. A liquid preparation used for washing and rinsing; usually an antiseptic solution. **black-** A solution of calomel in lime water, used as a parasiticide and antiseptic. **yellow-** A solution of corrosive sublimate in lime water.

lotoflavin. $C_{17}H_{16}O_6$ = 286.08. A yellow coloring matter from *Lotus arabicus*. Cf. *lotusin*.

lotusin. $C_{28}H_{31}NO_{16}$ = 637.3. A glucoside from the leaves of *Lotus arabicus*, a Leguminosae. Yellow crystals hydrolysed to dextrose, hydrocyanic acid and lotoflavin.

loudness. The intensity of sound as measured by the human ear and expressed in bels (q.v.). Common conversation is about 60 decibel. L. differs from the sound energy as measured by electrical instruments (cf. *phon*):

Loudness (*human ear*)	=	Sound Energy (*electric instrument*)
10 decibels	=	10
20 decibels	=	100
30 decibels	=	1,000
40 decibels	=	10,000
50 decibels	=	100,000
60 decibels	=	1,000,000
70 decibels	=	10,000,000
80 decibels	=	100,000,000
90 decibels	=	1,000,000,000
100 decibels	=	10,000,000,000

loup. A simple magnifying lens.

louver. A ventilator of sloping boards or slats, usually fixed, which keep out rain, but not air.

lovage. Sea parsley, levisticum, ligusticum, Chinese tang-kui, man-mu. The dried herb of *Levisticum officinale*, an Umbelliferae; used as the fluid extract, as an aromatic and carminative. Cf. *eumenol*. **Scotch-** The root of *Ligusticum scoticum*, used sometimes by Highlanders as chewing tobacco. **l. oil.** A colorless essential oil of fragrant odor distilled from lovage; insoluble in water, soluble in alcohol or ether and used in perfumery. It contains terpineol and terpene.

Lovibond tintometer. A colorimeter for comparing the color of a liquid with a standard series of tinted glass slides.

low. Weaker or poorer. **l. carbon.** A steel with small carbon content. **l. explosives.** A class of unstable chemicals and mixtures consisting of carbon, sulfur and nitrates, such as black gunpowder, blasting powder. Antonym: high explosives.

löweite. $2MgSO_4,2Na_2SO_4,5H_2O$. A vitreous yellow, or white, fusible mineral.

Lowenstjern. See *Kunkel*.

lox. An explosive consisting of liquid oxygen, used in mining. With fuses it explodes like gunpowder; with detonators it detonates like dynamite.

loxa bark. Cinchona bark.

lozenge. A medicated tablet, usually for throat diseases.

Lu. The symbol for lutecium.

luargol. $(C_{12}H_{12}O_2N_2As)_2.AsBr.SbO(H_2SO_4)_2$. *3.3'*-Diamino-*4.4'*-hydroxy arsenobenzene silver bromide antimonyl sulfate. A remedy for sleeping sickness.

lubanol. Coniferol.

luboil. Lubricating oil.

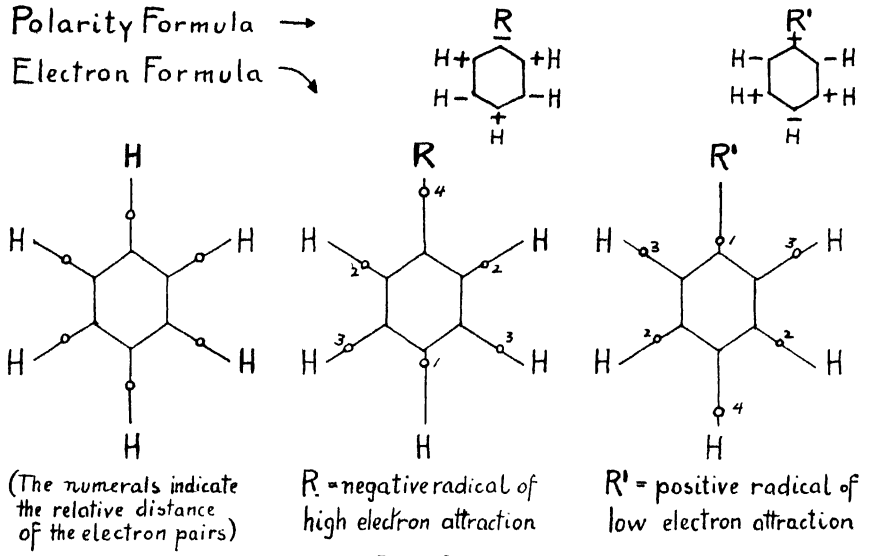
lubricant. An agent that decreases friction between moving surfaces. **liquid-** An oil or semi-liquid grease. **solid-** A lubricant such as graphite, talc, soap, or sulfur.

lubricating oil. A heavy distillate of petroleum of varying density, used for lubricating machinery.

lubrication. Making smooth or slippery.

lubricator. Lubricant.

Lucas, Howard J. 1885– . An American chemist, noted for work in organic chemistry. **L. theory.** In an organic compound the substituting radical affects the electronic orbits of a carbon atom either: (a) by pulling the electronic pair towards the substituting radical if it has a high electron attraction (*i.e.*, is nega-



Lucas theory.

tive); or (b) by repelling it from the substituting radical, if the latter has a low electron attraction (*i.e.*, is positive). In each case the remaining electronic orbits are either shortened or elongated. This explains, in conjunction with the Pauling structure of benzene, the difference in the degrees of reactivity of the para, ortho, and meta positions which are respectively, most, less and least influenced by the substituting radical. (See figure.) Cf. *screening effect.*

lucerne. Alfalfa.

luciferase. An enzyme found in a luminous mollusk, *Pholas dactylas*, which is luminescent in cold but not hot aqueous solutions.

luciferin. A water-soluble protein from a luminous mollusk, *Pholas dactylus*, or the fire-fly, *Cypridina hilgendorfi.*

luciferinase. An enzyme associated with the production of luciferin.

lucigenin. Methyl acridilium nitrate.

lucinite. A native aluminum phosphate $Al_2O_3.P_2O_5.4H_2O$.

lucite. Trade-mark for plastic based on polymerized methyl methacrylate resin, widely used for the enclosures of airplanes. Cf. *leucite.*

lucitone. Trade-mark for methyl methacrylate resins used in making dentures.

lucium. A supposed chemical element discovered in 1896, which proved to be a mixture of rare earth metals.

Lucretius. About 98–55 B.C. The earliest scientific writer, in whose works a conception of the atomic theory exists.

lucumin. A glucoside from the bark of *Lucuma glycyphloea.* Colorless needles. See *monesia.*

ludlamite. $Fe_3(PO_4)_2$. A green mineral.

Ludolf's number. The ratio of the circumference of a circle to its diameter, usually termed π or pi = 3.14159,26535,89793,23846.

Ludwig effect. Soret effect.

ludwigite. $3MgO.B_2O_3$, Fe_3O_4. A blue or green mineral.

ludyl. $C_{30}H_{26}O_3N_4S_2As_4Na$. Sodium salt of benzene-*m-3.3'*-disulfamino-bis-(*3*-amino-*4.4'*-dihydroxybenzene), used for syphilis.

luetin. An extract from killed cultures of *Treponema* bacteria; used in skin tests for syphilis.

luffa. Vegetable sponge, gourd towel, wash-rag sponge, loofah. The fibrous skeleton of the fruits of *Luffa cylindrica*, a Cucurbitaceae, used as a sponge.

Lugol solution. A solution containing 5 gm. iodine and 10 gm. (U.S.P.) or 7.5 gm. (B.P.C.) potassium iodide per 100 cc.

lukabro oil. An oil from *Hydnocarpus anthelmintica*, of Siam, similar to hydnocarpus oil; $d._{30}°0.943–0.950$, n_D^{30} 1.4733–1.4753.

Lully, Raymond. 1235–1315. Ramon Lull, Raymundus Lullus. A Spanish alchemist and writer of alchemical books, who described and prepared nitric acid, aqua regia, alcohol and potassium carbonate.

lumarith. Trade name for a cellulose acetate plastic.

lumbang oil. Candle nut oil. A colorless oil expressed from the seeds of *Aleurites moluccana*, candle nut, d.0.923, insoluble in water, soluble in alcohol or ether. Used as an illuminant, in soap manufacture and in paints.

lumen. (1) A unit of luminosity or luminous flux, the light emitted by a point-source of one candle power: 1 lumen = 0.001496 watt = 0.07958 spherical candle powers. 1 lumen emitted per square foot has a brightness of 1.076 milli-lamberts. 1 spherical candle power = 12.57 lumens. (2) The bore of a small tube. *E.g.*, the cavity of a thermometer tube, blood vessel, etc.

luminal. $C_{12}H_{12}O_3N_2$ = 232.2. Phenobarbital, phenylethylbarbituric acid, phenylethylmalonylurea, *2.4.6*-trioxy-*5*-phenylethylpyramidine. A white, odorless powder, m.172, insoluble in water, soluble in alcohol or ether; used medicinally as a hypnotic. **l. sodium.** Sodium phenyl ethyl barbiturate. Cf. *luminol.*

luminescence. The emission of light at room temperature under the influence of various physical agents; as mechanical (tribo-l.), electrical (electro-l.), radiant (photo-l.), thermal (thermo-l.), or chemical (chemo-l.) means. Cf. *fluorescence, irradiation, excitation, phosphorescence.* **chemo-** The emission of light as a result

of a slow chemical reaction in which no appreciable increase in temperature takes place; as, by phosphorus, decaying wood, fireflies. *Cf. phosphorescence, luminol.* **crystallo-** The emission of light during crystallization; as, arsenous acid from HCl-solution, or on crystallization after fusion. **electro-** The emission of light due to the passage of electricity through gases at low pressure and temperature; as, in vacuum tubes. **photo-** The emission of light on exposure to invisible radiations; hence the transformation from one wavelength into another; as, ultraviolet rays into visible rays. According to the quantum theory the atoms become excited by the absorption of energy from radiations, and on returning to normal they emit the energy previously absorbed in the form of their own characteristic radiations. Cf. *quantum, Bohr atom, spectrum, scattering, Raman effect.* The intensity of l. of some substances under the influence of ultraviolet rays from a mercury arc lamp or an ultraviolet argon lamp are:

Intensity	*Color*
10 uranium nitrate	green
9 sodium salicylate	violet
9 anthracene	green
9 calomel	orange
9 caffeine	violet
8 phloroglucinol	blue
8 antipyrine	white
8 quinine salicylate	violet
8 salol	green
8 benzidine	blue
8 salicylic acid	blue
7 novocaine	violet
7 calcium gluconate	orange
6 aluminum tartrate	white
6 phthalic anhydride	violet
6 phenolphthalein	blue
5 atropine	white
5 potassium cyanide	blue
4 mercury salicylate	green
4 methyl salicylate	green
3 turpentine	blue
2 phenol	yellow.

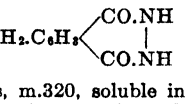
radio- The emission of light by radioactive substances. **thermo-** The emission of light after slight heating; as, by chlorophane. **tribo-** The emission of light caused by friction or other mechanical means in which no rise of temperature takes place; as, by sugar crystals, calcium chloride, quartz.

luminiferous. Giving off light without a rise in temperature. Cf. *incandescent.*

luminoflavin. A luminescent substance having a blue fluorescence which is produced by the irradiation of flavin with ultraviolet light; it occurs in urine and in plant products.

luminogram. A registered trade name for a photograph of the fluorescence of a substance produced by the action of ultraviolet light.

luminol. $C_8H_7O_2N_3$ = 170.04. *3*-Aminophthalhydrazide, *5*-amino-*1.4*-dihydroxyphthalazine,



White crystals, m.320, soluble in water. The alkaline solution becomes brightly luminescent when treated with H_2O_2 and $K_3Fe(CN)_6$. Cf. *luminal.*

luminophore. (1) A substance which gives off light at room temperature. (2) An organic radical which produces or increases the luminescence of a compound.

luminosity. (1) The quantity of visible rays or light emitted by a body, measured in lumens. (2) Luminescence.

luminous. Pertaining to luminescence. **l. flux.** The radiant power of a substance, *e.g.*, its capacity to produce the sensation of light; the unit is the lumen. **l. intensity.** The unit of brightness; candle power. **l. paint.** A pigment which is luminescent or phosphorescent and glows in the dark after exposure to light, composed usually of the sulfides of calcium, barium and zinc, to which may be added a small quantity of a radioactive substance. Used for watch dials, door knobs, signs, or electric switches.

lumisterol. Irradiated ergosterol. Cf. *cholane, vitamin D_1.*

lumophore. Luminophore.

lunar caustic. Fused silver nitrate. **l. cornea.** Fused silver chloride.

Lunge, Georg. 1839–1923. A German chemist, noted for work on technological analytical methods, (nitrometer), coal distillation and commercial production of chemicals. **L. nitrometer.** Nitrometer.

lupanine. $C_{15}H_{24}ON_2$ = 248.3. An alkaloid from the seeds of *Lupinus angustifolius*, a Leguminosae. A pale yellow, syrupy liquid of green fluorescence, slightly soluble in water, soluble in alcohol or ether. **iso-** Matrine.

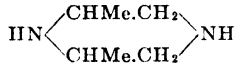
luparenol. $C_{15}H_{24}O$ = 220.2. An unsaturated alcohol from the higher-boiling fraction of hop oil, b.$_{3mm}$125–128.

luparol. $C_{16}H_{26}O_2$ = 250.20. A phenolic ether derived from luparone. A colorless liquid, d.0.9170, b.$_{2mm}$123.

luparone. $C_{13}H_{22}O$ = 194.17. A ketone derived from the higher-boiling fractions of hop oil. A colorless liquid, d.08861, b.$_{3mm}$75.

lupeose. $C_{22}H_{42}O_{21}$ = 666.32. A tetrasaccharide from lupine.

lupetazin. $C_6H_{14}N_2$ = 114.2. Dimethylpiperazine, dipropylenediamine



A white crystalline powder, insoluble in water, soluble in alcohol or ether; used as an antirheumatic.

lupetidine. $C_7H_{15}N$ = 113.2. 2.6-dimethylpiperidine,  A colorless oily liquid.

lupigenin. $C_{17}H_{12}O_6$ = 312.1. A decomposition-product of lupinin.

lupin(e). *Lupinus.* A genus of leguminous plants; some are poisonous, others are cultivated as forage plants. **l. alkaloids.** The alkaloids derived from *Lupinus* species; as, lupinine, lupinidine, arginine and their derivatives.

lupinidine. (1) $C_8H_{15}O_2N$ = 157.2. An alkaloid from the seeds of *Lupinus luteus* and *L. niger.* A yellowish syrupy liquid. (2) Sparteine. **l. hydrosulfate.** $(C_8H_{15}O_2N)_2 \cdot H_2SO_4$ = 412.4. Colorless crystals, soluble in water; used in medicine.

lupinin. $C_{29}H_{52}O_{16}$ = 636.3. A glucoside from various *Lupinus* species. Yellowish crystals, soluble in alkali and hydrolysed to glucose and lupigenin. Cf. *lupinine.*

lupinine. $C_{21}H_{40}N_2O_2$ = 352.33. An alkaloid from the seeds of *Lupinus niger* and *Lupinus luteus*. A colorless crystalline powder, m.67, b.256, insoluble in water, soluble in alcohol, ether or chloroform. Cf. *lupinin*. **anhydro-** $C_{10}H_{17}N$. **dimethyl-** $C_{10}H_{17}ONMe_2$. **methyl-** $C_{10}H_{18}ONMe$.

lupulin. Humulin. A bright, yellowish-brown granular powder, of characteristic odor and hop taste, consisting of the glandular trichomes from the strobiles of *Humulus lupulus*, hops; used medicinally as a sedative and stomachic.

lupulinic acid. $C_{32}H_{50}O_7$ = 546.5. The bitter principle of hops. Brittle, large, rhombic prisms of hop taste.

lupulon. $C_{26}H_{38}O_4$ = 414.3. A constituent of the soft resin of hop lupulin. Cf. *humulon*.

lupulus. Hops.

lupus lapidis. Stone consumption. The decay of rocks due to the action of bacteria, yeasts and molds, and not to weathering.

luster. The reflection from the fractured surface of a rock, metal or crystal.

lustron. Trade name for a polystyrene plastic.

lute. A mixture of fireclay and water used to seal cracks in or covers of crucibles.

lutecium. Lu = 174.99. A rare earth metal, atomic number 71, valencies 3 and 4. It was discovered (1905) by Auer von Welsbach and named cassiopeium; and in 1907 by Urbain, and named after Lutetia (= Paris). **l. chloride.** $LuCl_3$ = 281.5. White crystals, soluble in water. **l. oxide.** Lu_2O_3 = 398.0. White powder, insoluble in water.

lutein. (1) $C_{40}H_{56}O_2$ = 568.4. The carotenoid (q.v.) coloring matter of egg yolk, consisting of 70 % xanthophyllin and 30 % zeaxanthin. (2) A yellow pigment from the fully-developed corpora lutea of the hog, free from foreign material, dried and powdered. **l. solution.** A solution of the water-soluble extractives of lutein; used in medicine for injections in pregnancy and for women's diseases.

luteo- A prefix, from the Latin, indicating orange-yellow.

luteocompounds. A series of yellow cobaltiammonium compounds, *e.g.*, hexammincobaltic-chloride; $[Co(NH_3)_6]Cl_3$. The ammines of a tetra-, tri- or bivalent metal of the general type, $[M(NH_3)_6]X_3$ and $[M(NH_3)_6]X_2$.

luteol. Oxychlordiphenylquinoxaline. An indicator exceeding in its sensitiveness litmus and phenolphthalein, and more sensitive to ammonia than Nessler's reagent; it is yellow in alkali and colorless in acid solutions. **l. solution.** A solution of one gram of luteol in 100 cc. alcohol, used as an indicator in volumetric analysis.

luteole. A carotene in yellow corn grain.

luteolin. $C_{15}H_{10}O_6$ = 286.08. Isofisetin. Tetrahydroxyflavone. A flavone derivative and a coloring matter of weld, *Reseda luteola* which was used as a dye in Caesar's time. Yellow, silky shining crystals, m.328, insoluble in water, soluble in alcohol, alkalis, ether or benzene. Used in dyeing silk and as a diuretic.

luteosalts. See *luteo-compounds*.

luteosterone. Progesterone.

lutidine. C_7H_9N = 107.07. Dimethylpyridine*. A group of pyridine derivatives: α- or alpha- or **1.2-** A colorless liquid, d.0.947, soluble in water. β- or beta or **1.3-** A colorless liquid, used medicinally as an antispasmodic. **2.4-** A colorless liquid, d.0.938, b.157, soluble in water. **2.6-** The commonest lutidine, obtained from tar and bone oils. A colorless liquid, d.0.942, b.142, soluble in water. **3.6-** A colorless liquid, b.163, soluble in water. **dihydro-** See *dihydrolutidine*. **hexahydro-** Lupetidine.

lutidinic acid. $C_7H_5O_4N,H_2O$ = 185.07. 1.3-pyridine dicarboxylic acid*. Colorless crystals, m.249, soluble in water or alcohol, insoluble in ether.

lutidone. C_7H_9ON = 123.1. 2.4-dimethyl-3-oxypyridine, $HN\langle \begin{matrix} CH.CMe \\ CH.CMe \end{matrix} \rangle CO$. Colorless crystals, m.225.

lutol. Aluminum borotannate.

lux. A unit of illumination: 1 lux equals 1 lumen per square meter. 1 lux = 1 lumen per $m.^2$ = 0.0001 phot = 0.1 milliphot = $\frac{1}{10}$ foot-candle.

luzidol. Benzoyl peroxide.

lyaconine. Acolytine.

lyate ion. A solvent molecule minus a proton, as OH^- from water. Cf. *acid*, *base*.

lycetol. $C_{10}H_{20}O_6N_2$ = 264.3. Lupetazin tartrate, dimethylpiperazine tartrate. Colorless crystals, m.243, soluble in water; used in medicine.

lychnin. A poisonous glucoside from *Lychnis* species, Caryophyllaceae.

lycine. $C_5H_{11}O_2N$ = 117.1. An alkaloid from the leaves of *Lycium halimifolium*, a Solanaceae. White, hygroscopic, crystals, soluble in hot water or alcohol. Cf. *lysine*.

lycoctonine. $C_{27}H_{41}O_9N$ = 523.4. An alkaloid from the roots of *Aconitum lycoctonum*, a Ranunculaceae. White crystals, m.100, insoluble in water, soluble in alcohol, or chloroform.

lycopene. $C_{40}H_{56}$ = 536.4. Licopin. An unsaturated hydrocarbon and carotenoid (q.v.) pigment from many plants, as, tomato, etc.; also in *Lycopersicum esculentum*. Red crystals, m.168, isomeric with carotene, q.v.

lycopodium. Vegetable sulfur. A dry, light, yellow powder consisting of the inflammable spores of *Lycopodium clavatum*, a club-moss. It is used as a dusting powder, microscope reagent, for coating medicinal pills, and formerly on the stage for producing flashes of light.

lycorine. $C_{16}H_{17}O_4N$ = 287.2. Narcissine. An alkaloid from the bulbs of *Crinum giganteum*, *Lycoris radiata*, *Narcissus pseudonarcissus*, and other Amaryllidaceae species. Colorless polyhedric crystals, decomp. 250, slightly soluble in water, soluble in alcohol or ether; used medicinally as a substitute for emetine. **dimethyl hydroxy-** Sekisanine.

lyddite. An explosive containing principally picric acid.

lydian stone. Jasper.

lye. (1) The alkaline solution obtained by leaching wood-ashes. (2) A solution of sodium or potassium hydroxide. Cf. *ley*.

lygosin. $C_{17}H_{12}O_3Na_2.7H_2O$ = 436.2. Sodium lygosinate, $CO(CH:CH.C_6H_4ONa)_2$. Lustrous green crystals, soluble in water with a red color; used as a bactericide.

Lyman series. The first group of spectrum lines of hydrogen. Cf. *energy level*, *Balmer*, *Paschen series*.

lymph. A transparent, slightly alkaline liquid, permeating the animal organism and resembling blood serum.

lymphocyte. A white blood-corpuscle with a single nucleus. They constitute about 25 % of the white blood-corpuscles.

lyochromes. A group of natural water-soluble plant pigments. Cf. *carotenes.*

lyonium ion. A solvent molecule plus a proton, as H_3O^+ from water. Cf. *acid, base, hydronium.*

lyophil(e). Attracting liquids. A colloidal system in which the dispersed phase is a liquid and has an attraction for the dispersing medium. Cf. *hydrophile.*

lyophilized biological. Any biological substance, such as blood plasma, antitoxins, toxins, serums, etc., which has been prepared in dry form by rapid freezing and dehydration, while in the frozen state, under high vacuum. Such a preparation is more stable than the product from which it was derived, does not require refrigeration, and is made ready for use by the addition of sterile, distilled water. Commercial processes of freezing and dehydration are referred to as *cryochem, desivac,* and *lyovac.*

lyophobe. Repelling liquids. A colloidal system in which the dispersed phase is a solid and has no attraction for the dispersion medium; hence it is unstable and tends to separate. Cf. *hydrophobe.*

lyosorption. The adhesion of a liquid to a solid; hence the adsorption of a solvent film on the surface of suspended particles. Cf. *adsorption.*

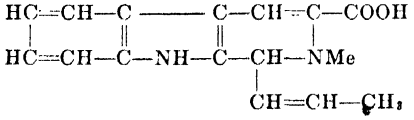
lyotrope. (1) An ion or radical of a lyotropic series. (2) A readily soluble substance.

lyotropic series. A number of ions, radicals, or salts, arranged according to their influences on different phenomena in colloid chemistry on physiological action or on catalytic effects, which are due to the alteration of the properties of the solvent by the ions. Thus the following salts appear always in the same order, although with some phenomena the order is reversed. Potassium ferrocyanide > sodium citrate > sodium hydrogen phosphate > sodium fluoride > sodium sulfate > sodium tartrate > sodium thiosulfate > sodium acetate > sodium formate. Cf. *Hofmeister series.*

lyovac process. A process of freezing and dehydrating aqueous preparations. Cf. *lyophilized biological.*

lysatine. $C_6H_{13}O_2N_3$ = 159.2. A crystalline alkaloid derived from casein.

lysergic acid. $C_{16}H_{16}N_2O_2$ = 270.14. A monobasic acid from ergot.



lysidine. $C_4H_8N_2$ = 84.1. Ethylene-ethenyldiamine, μ-methylglyoxalidine, methyldihydroimidazol, . Red, hygroscopic crystals, m.105, b.196; soluble in water, alcohol, or ether. Used medicinally. **l. solution.** A 50 % aqueous solution of l., a yellowish or pinkish, soapy liquid used medicinally as a solvent for uric acid. **l. tartrate.** Colorless crystals, soluble in water.

lysimeter. A device for determining approximately the solubility of substances.

lysin. An antibody which dissolves cells; as, hemolysin, bacteriolysin, cytolysin.

lysine. $C_6H_{14}O_2N_2$ = 146.32. α, ϵ-diaminocaproic acid, *2,6*-diaminohexanoic acid*. $NH_2.CH_2.CH_2.CH_2.CHO_2.CHNH_2.COOH$. An isolog of ornithine and an amino-acid in many proteins. White needles, m.224, very soluble in water. Usually prepared from casein, gelatin or protamines. Cf. *lycine, lysin.* **hydroxy-** $C_6H_{14}N_2O_3$ = 162.32. An amino acid and constituent of proteins.

lysis. (1) The dissolution of a substance as the result of the action of a lysin; as hemolysis, cytolysis, etc. (2) The decomposition of a substance; as, electrolysis and analysis. (3) The cleavage of a bond or the decomposition of a compound accompanied by the addition of:

H—OH, water	hydrolysis
H—NH_2, ammonia	ammonolysis
HO—C_2H_5, alcohol	alcoholysis
H—H, hydrogen	hydrogenolysis

lysitol. Lycetol.

lysogen. A substance which produces or generates a lysin.

lysol. The registered trade-mark for a cresylic disinfectant and antiseptic.

lysozyme. The powerful antiseptic agent found in tears, in leucocytes, bodily secretions, egg albumin and turnips.

lytic. (1) Pertaining to lysins, *e.g.*, hemolytic, cytolytic. (2) Pertaining to lysis, as hydrolytic, electrolytic.

lyxose. $C_5H_{10}O_5$ = 150.1. A pentose or pentatomic monosaccharide, which ocurs in two optically active isomers: d- and l-. $(CHOH)_3.O.CH.CH_2OH$.

M

M. (1) A symbol for metal; M^I a univalent, M^{II} a divalent metal etc. (2) An abbreviation for: (*a*) mass, (*b*) molal, (*c*) molecular weight, (*d*) mega, or one million, (*e*) the mathematical constant, $\log_{e10} = 0.43429,44819$. $(M)^{-1}$. The mathematical constant $\log_e 10 = 2.30258,50930$. **M. acid.** *1*-Amino-*5*-naphthol-*4*-sulfonic acid. **M.A.R.** An abbreviation for microanalytical reagent. **M. electron.** The e. of the M shell or M orbit (q.v.); there are eight in the second, and eighteen in the third and following periods. **M. orbit.** The third layer or energy-level, in which electrons move around the proton in the dynamic atom. **M. radiation.** A series of homogeneous x-rays characteristic of the metal used as anticathode, and fainter than the K and L series. They are assumed to be caused by electrons falling back to the M orbit. **M. series.** The spectral lines produced by the M radiations when they are diffracted through a crystal grating. Cf. *Moseley spectra.* **M. shell.** The third layer or energy level, in which electrons oscillate in the static atom.

m. An abbreviation for: (1) meter, (2) meta-position, (3) milli or one-thousandth part. m^2. An abbreviation for square meter. m^3. An abbreviation for cubic meter. Cf. *mm., mmm.*

♏. An abbreviation for minim.

μ. The Greek letter "mu" (m). An abbreviation for: (1) micron, (2) meso-position, (3) micro- or one-millionth of a unit, (4) magnetic permeability. Cf. mμ, μμ.

Ma. The symbol for masurium.

ma. An abbreviation for milliampere.

Maassen cylinder. A porous, unglazed porcelain cylinder, used for filtering biochemical solutions.

Mac. See also *Mc.*

macaroni. Long, slender, stiff brittle tubes made of paste of the highly glutinous flour of hard Italian wheat. If cooked it is edible.

macassar oil. A yellowish-white fat of pleasant odor extracted from the seeds of *Schleichera trijuga*, from India and the Malay States.

mace. Macis. The dried covering tissues of the seeds of *Myristica fragrans;* used as a condiment. **m. oil.** An essential oil from mace. A colorless liquid of characteristic odor, d.0.91, soluble in alcohol or ether; used in flavoring agents. Cf. *nutmeg, otoba, myristica, lawang oil.*

macene. $C_{10}H_{18} = 138.1$. A liquid terpene from mace oil.

maceral. A general name for the microscopic structures of the mineral constituents of coals.

macerate. To steep or soften and break up a solid by soaking in water.

maceration. The act of steeping or soaking a solid in a liquid.

mache unit. [Heinrich Mache, Austrian physicist, 1876– .] M.E. A unit of radioactive emanation. The quantity of emanation which produces a saturation current of one-thousandth of an electro-static unit. 1 curie $= 2.8 \times 10^9$ mache; 1 mache $= 3.64 \times 10^{-10}$ curie/liter = 3.64 eman.

mackay bean. The dried seeds of *Entada scandens*, a leguminous plant of Queensland, used as a coffee substitute.

Mackey test. A test to determine the autoxidation fire hazards of oils.

Maclaurin series. A series of numbers expressed by the general equation:

$$f(x) = f(o) + \frac{x}{1} f'(o) + \frac{x^2}{2} f''(o) + \cdots \frac{x_n}{n} f^n(o) \cdots$$

maclayine. $C_{17}H_{32}O_{11} = 412.26$. An alkaloid derived from *Illipe maclayana*, a Sapotaceae of the tropics.

MacLeod, John James Rickard. 1876–1935. A Scottish-Canadian biochemist, noted as discoverer of insulin (with Banting) and Nobelist in 1924.

macleyine. Protopine.

maclurin. $C_{13}H_{10}O_6.H_2O = 280.1$. Pentahydroxybenzophenone, osage orange (q.v.), moringatannic acid; $C_6H_3(OH)_2CO.C_6H_2(OH)_3$. The pale yellow coloring matter from the wood of *Maclura aurantiaca.* A bright, yellow, crystalline powder, m.200, soluble in hot water, alcohol or ether; used as a dye.

macro- A prefix derived from the Greek (*μακρός* broad), indicating "large."

macroaxis. The long axis in orthorhombic or triclinic crystals.

macrobacterium. A large bacterium.

macrocarpine. An alkaloid from *Thalictrum macrocarpum*, a Ranunculaceae; yellow crystals, soluble in water.

macrochemistry. (1) The chemistry of chemical reactions which are seen by the naked eye. Antonym, microchemistry, q.v. (2) Chemical operations on a large scale.

macrodome. See *dome.*

macrofarad. Megafarad.

macrograph. Photomacrograph.

macroscopic. Objects visible to the naked eye. Antonym, microscopic, q.v.

macrotin. Cumicifugin.

macrotoid. The combined principles from the root of *Cimicifuga racemosa;* used in medicine as an antispasmodic.

macrotys. Cimicifuga.

maculanin. Potassium amylate.

madder. Turkey red, q.v. The dried and pulverized root of *Rubia tinctorum* and other species. It contains several glucosides which yield, on fermentation, alizarin and purpurin. Used in dyeing, and as a pigment in lakes. Cf. *garancin, purpuroxanthic acid.*

mafic. A rock-forming material consisting mainly of magnesium and iron silicates.

mafurite. A mineral association of kieserite and augite (q.v.).

magdala red. $C_{30}H_{21}N_4Cl$. Naphthalene red. A safranine of the naphthalene series. A dark brown powder, used as a dye for silk.

magenta. Fuchsin.

magma. (1) In geology: a liquid molten rock, or the material from which igneous rocks have been formed. (2) in pharmacy: a suspension of a fine precipitate in water; *e.g.*, ferric hydroxide magma, magnesia magma. Cf. *milk.*

magnalium. An alloy of magnesium and aluminum containing from 2–10 % magnesium. Used in the construction of airships, flying machines, balances, and automobiles.

magnesia. Magnesium oxide. **calcined-** Magnesium oxide obtained by heating the carbonate. **fluid-** A solution of magnesium bicarbonate (2.65 grams per 100 cc.). **milk of-** See *milk.* **ponderous-** Heavy magnesium oxide.

m. alba. A hydrated magnesium carbonate. *m. a. levis.* $4MgCO_3.Mg(OH)_2.5H_2O$. *m. a. ponderosa.* $MgCO_3.Mg(OH)_2.4H_2O$. **m. mixture.** A clear, colorless liquid made by dissolving 55 gm. $MgCl_2.6H_2O$, and 70 gm. NH_4Cl in 650 cc. water and adding 350 cc. 10 % NH_4OH. Used in analysis for precipitation of phosphates and arsenates. **m. niger.** An early name for pyrolusite. **m. usta.** Magnesium oxide.

magnesian limestone. Limestone containing variable amounts (about 10 %) of magnesite.

magnesioferrite. A spinel, $MgFe_2O_4$.

magnesite. $MgCO_3$. A native magnesium carbonate, used as a refractory lining for furnaces and kilns, and in medicine as a substitute for plaster of Paris.

magnesium. Mg = 24.32. An alkaline earth-metal element, atomic number 12, valency 2. A silver-white metal, d.1.74, m.651, b.1120, insoluble in water, decomp. or dissolved by all acids with the formation of the corresponding salts. It occurs in nature in magnesite and dolomite (carbonates); serpentine, asbestos, talcum, biotite and meerschaum (silicates); in Stassfurt salts and mineral waters; and in sea water. The metal was first obtained by electrolysis (1830) by Liebig and Bunsen. Magnesium forms only one series of compounds, which yield the Mg^{++} magnesium ion in aqueous solutions. It is manufactured in bars, sheets, ingots, ribbons, wire, and powder. Used in electric batteries; in construction of airships and flying machines; in flash-light powders, and pyrotechnics; as a deoxidizer in making brass and for thermite. **m. acetate.** $Mg(C_2H_3O_2)_2.4H_2O$ = 214.4. Colorless monoclinic crystals, d.1.45, soluble in water or alcohol. **m. acid citrate.** $MgHC_6H_5O_7.5H_2O$ = 304.4. Citresia. A white, odorless, crystalline substance of pleasant acid taste, soluble in water; used as a laxative and purgative. **m. alkyl compounds.** A series of organic compounds of the general type, MgX_2, where X is an alkyl radical; *e.g.*, $MgEt_2$ = magnesium ethide. **m. alkyl condensation.** Grignard reaction. **m. aluminate.** $MgAl_2O_4$ = 142.26. Spinel. Colorless cubic crystals, d.3.6, m.2135, insoluble in water; used as refractory. **m. ammonium arsenate.** $MgNH_4AsO_4.6H_2O$ = 289.4. Colorless tetragonal crystals, soluble in water. **m. ammonium chloride.** $MgCl_2.NH_4Cl.6H_2O$ = 254.4. A white, crystalline powder, soluble in water; used in magnesia mixture, q.v. **m. ammonium phosphate.** $MgNH_4PO_4.6H_2O$ = 245.6. Colorless, tetragonal crystals, d.1.71, decomp. by heat into magnesium pyrophosphate; soluble in water or acids. **m. ammonium sulfate.** $MgSO_4(NH_4)_2SO_4.6H_2O$ = 360.4. Colorless crystals, soluble in water. **m. arsenide.** Mg_3As_2 = 222.88. Decomp. by water. **m. aryl compounds.** A series of organic compounds of the general type, MgX_2, where X is an aryl radical; *e.g.*, $MgPh_2$ = magnesium diphenyl. **m. benzoate.** $Mg(C_7H_5O_2)_2$ = 266.4. A white powder, soluble in water; used as an antiseptic. **m. bicarbonate.** A solution of $MgCO_3$ in carbonated water. **m. bichromate.** $MgCr_2O_7$ = 240.3. Orange-brown, hygroscopic crystals, soluble in water. **m. biphosphate.** $MgH_4(PO_4)_2$ = 218.4. Acid magnesium phosphate; monobasic magnesium phosphate. A yellow, crystalline powder, insoluble in water or alcohol, soluble in acids; used as a laxative. **m. bisulfate.** $MgH_2(SO_4)_2$ = 218.3. Acid magnesium sulfate. A colorless crystalline powder, soluble in water; used as a cathartic. **m. borate.** $Mg(BO_2)_2$ = 109.9. Antifungin. A white powder, soluble in water, used as an antiseptic. **m. boride.** An insoluble powder of doubtful composition. **m. boro-citrate.** $Mg_2(BO_2)C_6H_5O_7$ = 280.6. A colorless powder, soluble in water, used as an antiseptic. **m. bromate.** $Mg(BrO_3)_2.6H_2O$ = 388.3. Colorless crystals, soluble in water, decomp. by heat. **m. bromide.** $MgBr_2.6H_2O$ = 292.25. Colorless, hexagonal crystals, decomp. by heat, soluble in water; used for the electrolytic preparation of magnesium, and in medicine as a sedative. **m. butyrate.** $Mg(C_4H_7O_2)_2$ = 198.4. Colorless, hygroscopic crystals, soluble in water. **m. cacodylate.** $Mg(AsMe_2O_2)_2$. A white powder, soluble in water. **m. calcium chloride.** Tachhydrite. **m. carbide.** (1) MgC_2 = 48.32. (2) MgC_3 = 60.32. **m. carbonate.** $MgCO_3$ = 84.32. Magnesite, dolomite, heavy m. carbonate. Colorless, rhombic, crystalline powder, d.3.04, decomp. 350; slightly soluble in water, soluble in acids or carbonated water. Used in the preparation of magnesium salts, fireproofing compositions, and pharmaceutical preparations (tooth-paste). *basic-* $4MgCO_3.Mg(OH)_2.5H_2O$ = 485.7. Magnesia alba levis, light m. carbonate, magnesii carbonas (U.S.P.). Very light, white powder, d.2.18, slightly soluble in water, soluble in ammonia; used medicinally as a dusting powder, antiacid, and laxative. *heavy-* Magnesia alba ponderosa. *light-* Basic magnesium carbonate. **m. chromate.** $MgCrO_4.7H_2O$ = 266.4. Orange-yellow crystals, m.100; soluble in water. **m. chlorate.** $Mg(ClO_3)_2.6H_2O$ = 299.2. A hygroscopic, colorless, crystalline powder, m.40, soluble in water; used medicinally in ointments for skin diseases. **m. chloride.** $MgCl_2$ = 95.21. Fused magnesium chloride, anhydrous m. chloride. White, crystalline masses, d.2.17, m.708, soluble in water. Used in the manufacture of metallic magnesium; for fireproofing; for magnesia cements, composition floorings and artificial stones. *hydrated-* $MgCl_2.6H_2O$ = 203.3. Crystallized magnesium chloride. Colorless, bitter, hygroscopic crystals, d.1.57, m.100, decomp. 186, soluble in water or alcohol. Used in medicine as a saline cathartic; commercially for disinfectants, fireproofing, and dressing cotton fabrics. **m. citrate.** $Mg_3(C_6H_5O_7)_2.14H_2O$ = 703.1. Colorless scales, soluble in water; used in pharmaceutical preparations. *effervescent-* A granular mixture of magnesium citrate, sodium bicarbonate, citric acid, and sugar; used medicinally as a saline laxative. **m. copper**

alloy. An alloy used as activator for the Grignard reaction. **m. dioxide.** M. peroxide. **m. dust.** Finely powdered, magnesium metal used in pyrotechnics, for photographic flashlights, and as a chemical reagent. **m. ethide.** $Mg(C_2H_5)_2$ = 82.4. A colorless liquid. **m. ethyl bromide.** EtMgBr = 133.23. Grignard's reagent, used in organic synthesis. **m. fluoride.** MgF_2 = 62.3. A white powder, d.2.47, m.1396, insoluble in water; native as sellaite. Used as an antiseptic, in ceramics and in glass. **m. fluosilicate.** $MgSiF_6$ = 166.6. M. silicofluoride. A white powder, used in ceramics. *hexahydrate-* $6H_2O$ = 274.38. Trigonal crystals, d.1.788, soluble in water. **m. formate.** $Mg(CHO_2)_2.2H_2O$ = 150.3. Colorless prisms, soluble in water, insoluble in alcohol or ether; used in analysis. **m. glycerinate.** $Mg(C_3H_5O_4)_3$ = 339.4. A white powder, soluble in water. **m. glycerinophosphate.** $Mg(C_3H_7O_2)PO_4$ = 194.4. M. glycerophosphate. A white powder, soluble in water; used medicinally for anemia. **m. glycerophosphate.** M. glycerinophosphate. **m. halides.** A group of organic compounds of the general type, RMgX, (see *Grignard reagent*) where R is an aryl or alkyl radical, and X, a halogen (Cl, Br, I or F). **m. hydrate.** M. hydroxide. **m. hydrosulfide.** $Mg(HS)_2$ = 90.44. An unstable compound, which on warming, yields pure hydrogen sulfide. **m. hydroxide.** $Mg(OH)_2$ = 58.34. M. hydrate. Brucite. White, rhombohedric crystals, or white powder, d.2.36, decomp. on heating. It is insoluble in water, soluble in ammonium salt solutions; used in the manufacture of magnesium oxide, milk of magnesia, and in refining sugar. **m. hypophosphite.** $Mg(H_2PO_2)_2.6H_2O$ = 262.5. Colorless crystals, soluble in water. Used as a tonic. **m. hyposulfite.** M. thiosulfate. **m. iodate.** $Mg(IO_3)_2.4H_2O$ = 446.22. A crystalline powder, soluble in water, decomp. by heat. **m. iodide.** MgI_2 = 278.2. A colorless powder decomp. by heat, soluble in water, alcohol, or ether. *hydrated-* $MgI_2.8H_2O$ = 422.33. A colorless, hygroscopic, crystalline powder, soluble in water; used in medicine. **m. lactate.** $Mg(C_3H_5O_3)_2.3H_2O$ = 256.4. White crystals, soluble in water, insoluble in alcohol or ether. Used as a laxative. **m. lactophosphate.** M. phospholactate. A white powder soluble in water; used in medicine. **m. laurate.** $Mg(C_{12}H_{23}O_2)_2$ = 422.68. Colorless crystals, m.150.4. **m. lime.** Lime or quicklime containing 20 % or less of MgO. **m. magma.** An aqueous suspension containing 7–8.5 % $Mg(OH)_2$, with a flavoring agent. Cf. *milk of magnesia.* **m. malate.** $MgC_4H_4O_5$ = 156.3. Colorless crystals, soluble in water; used as a laxative. **m. minerals.** Magnesium is one of the most abundant metals, and is an essential constituent of rocks (olivines, micas, pyroxenes, and amphiboles):

magnesite	$MgCO_3$
dolomite	(Mg, Ca)CO_3
talc	Silicates
chlorite	Silicates
serpentine	Silicates
kieserite	$MgSO_4$
boracite	MgB_4O_7
brucite	$Mg(OH)_2$

m. molybdate. $MgMoO_4$ = 184.3. Colorless crystals, soluble in water. **m. myristate.** $(C_{14}H_{27}O_2)_2Mg$ = 478.74. White powder, m.131.6. **m. nitrate.** $Mg(NO_3)_2.6H_2O$ = 256.4. Colorless monoclinic or triclinic crystals, d.1.46, m.90, soluble in water or alcohol. Used as a reagent and in pyrotechnics; decomp. by heat. **m. nitride.** Mg_3N_2 = 100.98. A yellow-green amorphous mass, decomp. by water. **m. nitrite.** $Mg(NO_2)_2.2H_2O$ = 152.31. Colorless hygroscopic crystals, soluble in water. Used as a reagent. **m. oleate.** $Mg(C_{18}H_{33}O_2)_2$ = 587.0. M. oleinate. A yellowish, oily mass, insoluble in water, soluble in oils, alcohol, or ether. Used as a varnish drier. **m. oxalate.** $Mg(OOC)_2.2H_2O$ = 148.4. Colorless crystals, d.2.45, soluble in water, used in organic synthesis. **m. oxide.** MgO = 40.3. Magnesia, calcined magnesia, periclase, ponderous magnesia, magnesia usta. A white, regular or hexagonal, crystalline powder, d.3.43, m.1900, insoluble in water, soluble in acids or ammonium salt solutions. Used commercially in packings and heat insulations, refractories, rubber and paper manufacture; medicinally, as a dusting powder, antiacid, and laxative. *heavy-* Amorphous m. oxide, obtained by heating basic m. carbonate, d.3.58. *light-* Crystalline m. oxide obtained by heating m. carbonate, d.3.36. See also *m. peroxide.* **m. palmitate.** $Mg(C_{16}H_{31}O_2)_2$ = 535.0. A white, soap-like mass, m.120, insoluble in water, soluble in alcohol; used as a varnish drier. **m. peptonate.** A yellowish powder, slightly soluble in water, used medicinally in stomach disorders. **m. perborate.** MgB_4O_7 = 179.6. A white powder, soluble in water, used in dryers. **m. perchlorate.** $Mg(ClO_4)_2$ = 223.23. Anhydrone. A porous, white granulated substance, used as a regenerable desiccant. **m. perhydrol.** M. peroxide. **m. permanganate.** $Mg(MnO_4)_2.6H_2O$ = 370.3. A granular, dark blue mass, soluble in water; used as an antiseptic. **m. peroxide.** MgO_2 = 56.3. M. superoxide, m. dioxide. A white powder containing 25 % MgO_2 and 75 % MgO, insoluble in water. Used as a reagent to detect bilirubin; medicinally, for gastric disturbances; also used for bleaching silk and wool. **m. phosphate.** $Mg_3(PO_4)_2.4H_2O$ = 179.6. Tribasic or normal m. phosphate. A colorless monoclinic crystalline powder, insoluble in water. *acid-* $MgHPO_4.7H_2O$ = 246.5. Dibasic or m. orthophosphate. A colorless hexagonal crystalline powder, d.2.13, insoluble in water, soluble in dilute acids; used medicinally as an alterative and antirheumatic. *dibasic-* Acid m. phosphate. *monobasic-* M. biphosphate. *pyro-* $Mg_2P_2O_7$, $3H_2O$ = 276.77. Colorless crystals, d.2.40; insoluble in water. *tribasic-* M. phosphate. See also *m. ammonium phosphate.* **m. phosphide.** Mg_3P_2 = 135.01. A dark powder, decomp. by water. **m. phosphite.** $MgHPO_3$ = 104.3. A colorless crystalline powder, soluble in water. **m. phospholactate.** M. lactophosphate. **m. propionate.** $Mg(C_3H_5O_2)_2$ = 170.4. A white powder, soluble in water. **m. pyrophosphate.** See *m. phosphate.* **m. rhodanate.** M. thiocyanate. **m. salicylate.** $Mg(C_7H_5O_3).4H_2O$ = 233.4. A white, crystalline powder, soluble in water; used as an antirheumatic, antifermentative, and intestinal antiseptic. **m. silicate.** $MgSiO_4$ = 116.6. A fine white powder, insoluble in water; used as an astringent, and in the manufacture of rubber. **m. silicides.** (1)

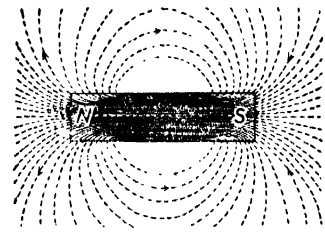
Mg_2Si = 76.70. (2) MgSi = 52.38. (3) Silicon magnesium. **m. silicofluoride.** M. fluosilicate. **m. stearate.** $(C_{18}H_{35}O_2)_2Mg$ = 590.86. Dolomol. A white, soap-like powder, m.132. **m. succinate.** $MgC_4H_4O_4$ = 140.3. A white powder, soluble in water. **m. sulfate.** (1) $MgSO_4$ = 120.4. Anhydrous m. sulfate. A white powder, d.2.66, soluble in water. (2) $MgSO_4{\cdot}2H_2O$ = 156.4. *Dihydrate*, desiccated m. sulfate. A white powder, soluble in water. (3) $MgSO_4.7H_2O$ = 246.5. *Heptahydrate*, crystallized m. sulfate, epsom salt, Magnesii sulfas (U.S.P.), bitter salt. Colorless tetragonal or monoclinic crystals, d.1.67, decomp. by heat, soluble in water or alcohol. Used as a reagent; for loading and warp-sizing cotton goods and textiles; fireproofing; in mineral waters; as a constituent of bleaching solutions; in the paper and leather industries; in electrical batteries; and medicinally, as a saline cathartic and refrigerant. (4) $MgSO_4$, H_2O = 138.4. Kieserite. d.2.3. **m. sulfide.** MgS = 56.4. Brown cubical crystals, d.2.82, decomp. by heat; soluble in water. **m. sulfite.** $MgSO_3.6H_2O$ = 212.4. A white crystalline powder, m.260, soluble in water; insoluble in alcohol. Used as an antiseptic and cathartic. **m. sulfocyanide.** M. thiocyanate. **m. tartrate.** $C_6H_4O_6Mg.5H_2O$ = 262.43. White monoclinic crystals, d.1.67, slightly soluble in water. *acid-* $MgH_2(C_4H_4O_6)_2.4H_2O$ = 394.46. White rhombic crystals, d.1.72, soluble in water. **m. thiocyanate.** $Mg(CNS)_2$ = 140.3. M. rhodanate. Colorless, hygroscopic crystals, soluble in water. Used as a reagent. **m. thiosulfate.** $MgS_2O_3.6H_2O$ = 244.4. M. hyposulfite. Colorless crystals, soluble in water. Used medicinally as an antiseptic. **m. tungstate.** $MgWO_4$ = 272.3. M. wolframate. Colorless crystals, insoluble in water or alcohol, soluble in acid solutions. It becomes fluorescent in X-rays, and is used for fluorescent screens and luminous paints. **m. urate.** $MgC_5H_2O_3N_4$ = 190.3. A white amorphous powder, insoluble in water or alcohol. **m. valerate.** $Mg(C_5H_9O_2)_2$ = 226.4. A white powder, soluble in alcohol. Used medicinally as a sedative. **m. wolframate.** M. tungstate.

magneson. *p*-Nitrobenzene azo-resorcinol. **m.-II.** p-Nitrobenzene azo-α-naphthol.

magnesyl. The monovalent radical —MgX, of the Grignard reagent.

magnet. A lodestone or iron that attracts iron. **bar-** A rod or bar of magnetized soft iron. **electro-** A piece of iron rendered temporarily magnetic by an electric current passing through a coil wound around it. **horse-shoe-** A bar of iron first magnetized and then bent into U-shape.

magnetic. Pertaining to or possessing magnetism. **m. declination.** The deviation of the compass needle from the true axis of the earth, owing to the magnetic pole not being coincident with the geographic north or south pole. **m. deflection.** The deflection of radioactive rays or particles by a magnetic field, according to the sign and magnitude of their charges. **m. elements.** The elements of the iron family all of which show perceptible magnetism; other elements have only very slight magnetic properties. **m. field.** The region or the lines of force in the space around the magnetic poles of a magnet. *atomic-* The magnetic region around an atom. **m. flux.** The state existing in a magnetic circuit, which is proportional to the strength of the magnetic poles, and is measured by the total number of lines of force round the coil and circuit. Magnetic flux = μH, where μ is the magnetic permeability and H the intensity of the field of force. **m. force.** The force (F) that acts on a magnetic pole; it depends on the strengths of the pole and of the field. The strength or intensity of a magnetic field (H) at a point is equal to the number of dynes (m) which act on a unit magnetic pole at the point; hence, F = m × H. **m. guard.** A mask of magnetised steel wire gauze, used to protect workers from iron dust. **m. induction.** The m. flux per unit of area taken perpendicularly to the direction of the magnetic flux. Cf. *induction*. **m. intensity.** The magnetic moment per unit volume. **m. iron ore.** Magnetite. **m. meridian.** The direction registered by a compass needle at any place. **m. moment.** Pole strength × length of magnet. **m. optic.** See *magneto-optic*. **m. ore.** (1) Magnetite. (2) A magnetic ore. **m. permeability.** The value of the total magnetic induction in a unit field, (μ). It is a measure of the force (F) of repulsion between two rigid magnetized poles (m and m′) a distance r apart: $F = \mu(m.m')/r^2$. Cf. *magnetic flux*. **m. phenomena.** The effects produced in a magnetic field; *e.g.*, the *Ettinghausen-*, *galvanometric-*, *Hall-*, *Joule-*, *Leduc-*, *Nernst-*, *thermomagnetic-*, *Wiedemann-* effects. **m. polarization.** The optical activity acquired by an optically-inactive substance when placed in a magnetic field. **m. pole.** The point on which magnetic lines of force converge. **m. p. strength.** See *magnetic units*. **m. potential.** Magnetomotive force. **m. pyrite.** Pyrrhotite. **m. reluctance.** The ratio: magnetomotive force/flux. **m. rotation.** Magnetic polarization. *specific-* The ratio of the m. rotation of the substance to that of water under the same conditions. **m. separator.** A device, usually a powerful electromagnet, for separating magnetic iron ore from non-magnetic minerals. **m. spectrum.** The pattern produced by iron filings scattered on a plane surface in a magnetic field. It illustrates the lines of force. See *m. field*. **m. susceptibility.** (1) The susceptibility of a substance to magnetism. (2) The magnetic intensity produced in a substance compared with the intensity of the magnetic field which produces it. **m. units.** (a) Quantity: A unit pole is the quantity of magnetism that repels another unit pole with a force of one dyne. (b) Intensity: The intensity of magnetization, or pole strength per unit area. (c) Field strength: The number



Magnetic field.

of lines of force which cross a unit area in normal direction; a unit for one line per unit area = gauss. (d) Magnetic flux: unit, the maxwell.

magnetism. (1) The property of substances, like iron, which under certain conditions attract or repel each other or a like substance. (2) The science of magnetic phenomena. **electro-** M. due to induction currents. **ferro-** M. due to iron and independent of an electric current. **photo-** See *photomagnetism.*

magnetite. $FeO.Fe_2O_3$. Magnetic iron ore, hercules stone, lodestone. A native ferrous-ferric oxide; a black, dense mass with magnetic properties. Cf. *ferriferrous oxide.*

magnetization. The act of rendering magnetic. **specific-** See *specific m.*

magneto-electricity. A current of electricity produced by magnetism. Compare *electro-magnetism* (magnetism produced by electricity).

magnetometer. A device for measuring magnetic force.

magnetomotive force. M.M.F. The amount of work required to bring a unit quantity of positive (attractive) magnetism from zero to a certain potential.

magneton. A ring of negative electricity, assumed to consist of an electron traveling in a circular motion with the velocity of light. **m. theory.** A theory of atomic structure in which magnetons form octets, similar to the electrons of Lewis-Langmuir theory. It has been developed by Parsons and others.

magneto-optic effect. A time lag observed in m. rotation which is characteristic for and used to detect minute quantities of substances. **m. rotation.** Magnetic rotation, magnetic polarization. A beam of polarized light is rotated when passing through a magnetic field. The amount of rotation depends upon the strength of the field, the wavelength of light, and the kind of matter through which the polarized light passes. The magnetic rotation of a substance is usually read at 15°C., with monochromatic light (sodium flame), and a length of liquid of one decimeter. Cf. *Verdet's constant.*

magnification. An enlargement or increase in size, *e.g.*, produced by a reading glass, microscope, stereopticon, or telescope.

magnifier. A lens used to read accurately, thermometer scales, burette scales, balances and other instruments.

magnify. To increase the apparent size of an object by means of lenses.

magnifying power. The ratio of the actual size of an object to the amplified image of that object. Cf. *auxiometer.*

magnitude. Any measurement taken of an object. Cf. *units, constants, length* and tables for *mass, time, velocity, temperature.* **astronomical-** The size of a star, measured in the terms of its brightness.

magnochromite. A variety of chromite containing magnesium.

Magnoliaceae. A family of trees and shrubs including:

Drimys	drimin, drimol
Illicium	staranise, sikimin
Liriodendron	loriodendrin, tulipiferine
Magnolia	magnolin
Michelia	champakol

magnolin. A crystalline glucoside from the fruit of *Magnolia tripetala*, a Magnoliaceae; insoluble in water, soluble in ether.

magnolite. Hg_2TeO_4. A white mineral.

magnolium. An alloy of 90 % Pb and 10 % Sb.

Magnus, Albertus. 1193–1280. Albrecht, Graf von Bollstädt. A German philosopher, the founder of the European school of alchemists.

Magnus, Heinrich Gustav. 1802–1870. A German chemist, noted for research in physical and inorganic chemistry. **M. rule.** There is for each metal a specific voltage at which it is deposited from a solution containing a mixture of metallic salts. **M. salt.** The first of the platin-ammonium compounds; discovered by Magnus in 1828. Dark green needles, slightly soluble in water: tetramin-plato-tetrachloro-platinate, $Pt(NH_3)_4PtCl_4$.

main cell. An accumulator consisting of an amalgamated zinc cathode and a lead dioxide anode suspended in sulfuric acid; 2.5 volts.

maisin. A protein from maize.

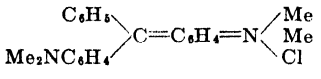
maize. Indian corn. The seeds of *Zea mays*, used as a cereal. Cf. *zea, corn starch.* **m. oil.** Corn oil. A yellow oil, d_{25} 0.915–0.920.

maizolith. An insulating material, obtained from cornstalks and corncobs and pressed into sheets.

majolica. A lustrous pottery enameled with a tin oxide composition.

malachite. $Cu_2(OH)_2CO_3$. A green basic copper carbonate, forming dense, smaragd or emerald green masses, which may be polished. Azurite is a blue variety. **azur-** A bluish-green m. from Arizona. **blue-** Azurite. **pseudo-** $Cu_3(PO_4)_2,H_2O$. Phosphocalcite. Phosphochalcite. A green native copper phosphate.

m. green. (1) Pulverized malachite, used as a pigment. (2) Victoria green, benzal green. A triphenylmethane dye,



Dark green, shining crystals, soluble in water. Used as a reagent for detecting sulfites in the presence of thiosulfates; also for bacteriological staining solutions. It is a pH indicator, changing at 1.0 from yellow (acid) to blue-green (alkaline). **leuco-** See *leucomalachite.*

malacolite. Augite.

malacon. An impure zircon.

Malaguti, Faustino Jovita. 1802–1878. An Italian-born French chemist, noted for his work on the mass-action of salts.

malakin. $C_{15}H_{15}ON$ = 225.2. Salicylal-p-phenetidine, $EtO.C_6H_4.N:CH.C_6H_4(OH)$. Small yellow needles, m.92, insoluble in water, soluble in ether, used as an antirheumatic.

malakograph. An apparatus which measures the rate of softening of wax by means of a falling weight attached to an arm which carries an indicator.

malamide. $C_4H_8O_3N_2$ = 132.2. *2*-Hydroxybutanediamide*, malic amide. The diamide of malic acid, $NH_2CO.CH_2.CHOH.CONH_2$. Colorless crystals, m.156. Cf. *aspargine, malonamide.*

malarin. $C_{17}H_{19}ON$ = 253.15. Acetophenonephenetidine, $EtO.C_6H_4.N{=}CMe.C_6H_4Me$. A yellowish crystalline powder, used as an antipyretic.

malate. A salt of malic acid, which contains the bivalent —OCO.CH_2.CHOH.COO— radical.

Malay camphor. *d*-Borneol.

malchite. A variety of diorite containing quartz, feldspar, hornblende and biotite.

maldonite. A slightly pink native alloy of gold and bismuth, Au_2Bi.

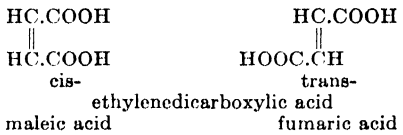
male fern. Aspidium. **m. f. oil.** An essential oil distilled from the rhizome of *Dryopteris filix-mas*. Colorless liquid, d.0.85, b.150, used in flavoring extracts. It contains hexyl and octyl esters of fatty acids.

male hormone. See *androsterone, cholane derivatives*.

maleamic acid. $C_4H_5O_3N$ = 99.1. Aminomaleic acid, maleinamic acid, maleamidic acid, $NH_2CO.CH:CH.COOH$. Colorless crystals, m.152.

maleate. Any salt of maleic acid which contains the bivalent —OCO.CH:CH.COO— radical.

maleic acid. $C_4H_4O_4$ = 116.1. Ethylene dicarboxylic acid, *cis*-butanedioic acid*. An unsaturated dibasic acid, HOOC.CH:CH.COOH. Colorless prisms, d.1.59, m.130, soluble in water, alcohol or ether, decomp. by heat. It is an isomer of fumaric acid:



amino- Maleamic acid. **methyl-** Citraconic acid. **m. anhydride.** $C_5H_4O_3$ = 98.04. *cis*-butenedioic anhydride*. A heteroatomic pentacycle  O. Colorless, trimetrical crystals, d.0.93, m.56, b.202, insoluble in water.

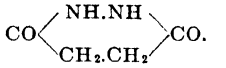
m. hydrazine. $C_4H_4O_2N_2$ = 112.2. A heteroatomic hexacycle:  Colorless crystals, m.250, used in organic synthesis.

maleinamic acid. Maleamic acid.

maleinanil. $C_{10}H_7O_2N$ = 173.1.  NPh.

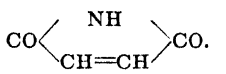
Colorless crystals, m.90.

maleinhydrazide. $C_4H_6O_2N_2$ = 114.1.



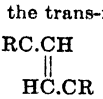
maleinhydrazine. $HOOC.CH:CH.CONH.NH_2$.

maleinimide. $C_4H_3O_2N$ = 97.1.



malenoid. The cis-form of geometrical isomerism:

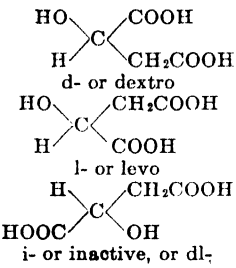
as compared with the trans-form (fumaroid):



maletto tannin. $(C_{19}H_{20}O_9)_n$. A brown powder, from the bark of *Eucalyptus occidentalis*, soluble in water or alcohol.

maleyl. The bivalent $C_4H_2O_2<$ radical, derived from maleic acid.

malic acid. $C_4H_6O_5$ = 134.07. Oxyethylene-succinic acid, butanoldiacid, hydroxysuccinic acid, hydroxybutane dioic acid*. A dibasic hydroxy acid in unripe fruits. It is an intermediate in metabolism, and exists in three isomeric forms:



dextro-, (*d*)- Colorless needles, d.1.59, m.133, soluble in alcohol, water, or ether. **inactive-,** (*dl*)- Colorless crystals, d.1.60, m.129, soluble in water, alcohol, or ether, decomp. by heat. **iso-** Methyltartronic acid. The isomer. $Me.COH(COOH)_2$. A white solid, m.160 (decomp.), soluble in water, alcohol or ether. **levo-,** (*l*)- Common m. Colorless crystals, d.1.595, m.100, decomp. 140. Cf. *aceric acid*. **β-hydroxy-** Tartaric acid. **methyl-** Citramalic acid.

m. amide. Malamide.

mallardite. A vitreous, fusible, yellow or white, native manganese sulfate, $MnSO_4.7H_2O$.

malleability. The quality of tenacity and ability to withstand hammering out or rolling into thin sheets, without fracture or returning to the original shape.

malleable. Capable of being hammered or shaped by hammering, or by pressure. **m. casting.** A small iron casting, which is made m. by heating.

mallee bark. The bark of *Eucalyptus occidentalis*, from which a commercial grade of eucalyptus oil is distilled.

Mallet, John William. 1832–1912. An Irish-born American chemist, noted for atomic weight determinations.

mallophene. $C_{11}H_{11}N_5.HCl$ = 249.6. Phenylazo-α-diaminopyridine hydrochloride. $Ph.N:N.C_5H_2N(NH_2)_2.HCl$. A dark red powder, soluble in water or alcohol, used as dental and surgical antiseptic. Cf. *mellophanic acid*.

mallotoxin. Rottlerin.

mallow. Malva. The dried leaves of *Malva sylvestris* and other *M.* species; used as herb-teas. **marsh-** Althaea.

malol. Ursolic acid.

malon oil. Black fish oil. An oil from the pilot whale, *Globicephalus melas*.

malonaldehydic acid. $C_3H_4O_3$ = 88.03. Formylacetic acid, $CHO.CH_2.COOH$. An isomer of peruvic acid.

malonamic acid. $C_3H_5NO_3$ = 103.03. The half-amide, $COOH.CH_2.CONH_2$, of malonic acid.

malonamide. $C_3H_6O_2N_2$ = 102.1. Propanediamide*, malonic diamide. The diamide, $NH_2CO.CH_2.CONH_2$. Colorless crystals m.170. Cf. *malamide*.

malonanilic acid. $C_9H_9O_3N$ = 179.1. The monobasic acid, $PhNH.CO.CH_2.COOH$. Colorless crystals, m.132.

malonanilide. $C_{15}H_{14}O_2N_2$ = 254.1. $PhNH.CO.CH_2.CO.NHPh$. Colorless crystals, m.232.

malonate. A salt of malonic acid of the type $M_2C_3H_2O_4$.

malonic acid. $C_3H_4O_4$ = 104.1. Propanedioic acid*, methane dicarboxylic acid. The dibasic acid, $CH_2(COOH)_2$, propandiacid, occurring in many plants. Colorless triclinic crystals, m.132 (decomp.), soluble in water, alcohol or ether. **allyl-** See *allyl malonic acid.* **bromo-** $CHBr(COOH)_2$ = 183.01. Colorless needles, decomp. 112, soluble in water. **butyl-** $CHBu(COOH)_2$ = 160.09. *n-* White crystals, m.101.5. *iso-* m.107. *sec.-* m.76. **cetyl-** $C_{19}H_{36}O_4$ = 328.29. White solid, m.121. **chloro-** $CHCl(COOH)_2$ = 138.48. Colorless crystals, m.133. **diethyl-** $CEt_2(COOH)_2$ = 160.09. White powder, m.121. **dimethyl-** $CMe_2(COOH)_2$ = 132.06. Colorless crystals, m.193. **ethyl-** $CHEt(COOH)_2$ = 132.06. White crystals, m.111.5, decomp. 160. Cf. *pyrotartaric, glutaric acid.* **ethylene.** Vinaconic acid. **hydroxy-** Tartronic acid. **keto-** Mesoxalic acid. **methyl-** Isosuccinic *acid.* **nitril-** Cyanacetic acid. **oxo-** Mesoxalic acid. **oxy-** Tartronic acid.

m. anhydride $C_3H_2O_3$ = 87.1. 

m. amide. $C_4H_6O_2N_2$ = 168.1. $CH_2(CONH_2)_2$. Colorless needles, m.170, slightly soluble in water, insoluble in alcohol; used in organic synthesis. **m. dinitrile.** Malononitrile. **m. ester.** $C_7H_{12}O_4$ = 160.08. Diethyl malonate, $CH_2(COOEt)_2$. A colorless liquid, d.1.055, m.50, b.198. Its two H are replaceable by Na, and these sodium compounds react with alkyl halides yielding homologs of malonic ester. **m. e. synthesis.** Synthesis of complex compounds by use of m. e. and sodium.

malonitrile. $C_4H_4N_2O$ = 96.0. Malic dinitrile, dicyanoethanol, $CN.CHOH.CH_2.CN$.

malononitrile. $C_3H_2N_2$ = 66.1. Propanedinitrile*, malonic dinitrile, methylene cyanide, $CH_2(CN)_2$. White powder, m.30, b.218, soluble in water, alcohol or ether; used in organic synthesis.

malonurea. Veronal. Cf. *malonyl urea.*

malonyl- The bivalent radical $-OC.CH_2.CO-$ derived from malonic acid. **m. urea.** Barbituric acid, cf. *malonurea.*

malourea. Barbital.

malt. Maltum. The grain of *Hordeum distichum* or *H. sativum* (barley), which has been partly germinated, then dried. Yellow grains of agreeable odor and sweet taste. Used as a nutritive and digestant, and in the manufacture of malt extract, and beer. **m. extract.** Extractum malti. A dark brown syrupy liquid obtained by evaporating an infusion of malt; used as a tonic, starch digestant, and emulsifying agent. **m. liquor.** An alcoholic beverage derived from fermented infusions of malt; as beer.

maltase. Grease. An enzyme in yeast, blood-serum, lymph, salivary, pancreatic and intestinal juices, which hydrolyzes maltose to dextrose; used in brewing.

maltha. A tar or pitch resulting from the oxidation and drying up of petroleum. Dark asphalt-like masses, insoluble in water, soluble in benzene.

malthenes. Petrolenes.

maltobionic acid. $C_{12}H_{22}O_{12}$ = 358.2. An oxidation-product of maltose.

maltoboise. Maltose.

maltodextrin. Amyloin. A polysaccharide, which is converted to maltose by hydrolysis. Constitutionally it is midway between dextrin and maltose, and it is produced from the starch material of barley during modification in the manufacture of malt. Its composition depends on the relative amounts of maltose and dextrin.

maltonic acid. *d*-Gluconic acid.

maltosazone. $C_{12}H_{14}O_7(:N.NHPh)_4$. The osazone of maltose, used in the synthesis of $C_{226}H_{142}O_{58}N_4I_2$ = 4021.0. (Hepta-tribenzoyl-galloyl-p-iodophenyl maltosazone), the largest molecule so far synthesized (by Emil Fischer).

maltose. $C_{12}H_{22}O_{11}.H_2O$ = 360.2. Maltsugar, glucose-α-glucoside. A dextro disaccharide obtained from malt and starch. Colorless crystals, $[\alpha]_D$ +138°, soluble in water or alcohol. Used as a sweetening agent, and is fermentable, being an intermediate formed in brewing, distilling and vinegar manufacture. **iso-** Gentiobiose.

maltsugar. Maltose.

maltum. Malt.

malva. Shallow.

Malvaceae. Mallow family, a group of mucilaginous plants:

Althaea officinalis	marsh-mallow
Althaea rosea	hollyhock
Hibiscus abelmoschus	musk seed
Malva sylvestris	mallow
Gossypium herbaccum	cotton-plant

malvidin. The blue aglucone of the glucoside malvin in wild mallow.

malvin. A glucoside and anthocyan pigment from mallow.

malvon. $C_{29}H_{36}O_{20}$ = 704.3. An oxidation-product of malvin and the glucoside of a didepside sugar ester.

mammary gland. The dried mammary gland of the sheep. A yellow powder with slight odor, partly soluble in water; used medicinally for menorrhagia.

man. The highest, living organism of the third group of living beings. See *life.* The elementary composition of the human body has been calculated as follows:

oxygen	66.0 %
carbon	17.6 %
hydrogen	10.1 %
nitrogen	2.5 %
calcium	1.5 %
phosphorus	1.0 %
potassium	0.4 %
sodium	0.3 %
chlorine	0.3 %
sulfur	0.25 %
magnesium	0.04 %
iron	0.004 %
Si, F, I	traces

manaca. The dried root of *Brunfelsia hopeana,* a Brazilian Solanaceae. The fluid extract is used as a diuretic and diaphoretic, and contains francisceine.

manacine. Vegetable mercury. An alkaloid from manaca; used as diuretic and diaphoretic.

manchester brown. Triaminoazobenzene.

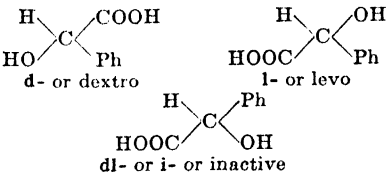
mancona bark. Erythrophloeum.

mancophalolic acid. $C_{10}H_{30}O_2$ = 184.3. An amorphous resinous acid from Manila copal.

mandarine. (1) The reddish-yellow fruit of *Citrus nobilis.* (2) Orange II, β-naphtholorange. A monoazo dye, $C_{10}H_6(OH)N:NC_6H_4SO_3H$. **m.**

oil. The essential oil from m., b.175–179, containing limonene, citral and methyl anthranilate.

mandelic acid. $C_8H_8O_3$ = 152.1. Phenylglycollic acid, amygdalic acid, amygdalinic acid, α-hydroxy-α-toluic acid, phenylhydroxyacetic acid, benzoylglycolic acid. An aromatic hydroxy acid occurring in three isomeric forms:



inactive-, *dl-*. Colorless rhombic crystals, d.1.36, m.118, soluble in water, alcohol or ether. **levo-**, **l-** The natural form from amygdala, m.133. **para-** Inactive. **amino-** Hydrindic acid. **methyl-** Atrolactic acid. **phenyl-** Benzilic acid.

Mandelin's reagent. A reagent for alkaloids: 0.5 gm. vanadium oxide or chloride in 100 cc. conc. sulfuric acid.

mandelonitrile. C_7H_7ON = 133.06. *dl*-Benzaldehyde cyanohydrin, benzalcyanhydrin, Ph.CH(OH)CN. A yellow oily liquid, d.1.124, m. −10, b. (decomp.) 170, insoluble in water; used in organic synthesis.

mandioc. Tapioca.

mandragorine. $C_{17}H_{23}O_3N$ = 289.2. An alkaloid from the seeds and roots of *Mandragora officinalis*, a Solanaceae of the Orient. Colorless, odorless, deliquescent crystals, m.78. Used as a narcotic and sedative.

mandrake. Podophyllum.

mandrel. A handle or shaft in which a rotating tool is held.

manelemic acid. A constituent of elemi; α-$C_{37}H_{56}O_4$, and β-$C_{44}H_{80}O_4$.

mangal. A non-corrosive aluminum alloy containing 1.5 % manganese.

mangan. Manganese. **m. blende.** A native manganese sulfide, MnS.

manganate. A salt containing the bivalent MnO_4= radical. **per-** A salt containing the monovalent MnO_4— radical.

manganese. Mn = 54.93. A metallic element, atomic number 25, valencies 2, 3, 6, and 7. A grayish-pink, lustrous, brittle metal, d.7.42, m.1207, b.1900, insoluble in water, reacting with boiling water, soluble in acids. Used in alloys with iron, copper, and silicon. Metallic manganese was discovered in 1774 by Scheele, isolated in 1789 by Gahn, and named from the Greek manganidso (purify) in allusion to the use of its dioxide in the manufacture of glass; it neutralizes the green color due to iron compounds. Manganese forms several series of compounds according to its valency:

Valence number		Ions	Color of compounds	Oxide
2	manganous.....	Mn^{++}	slightly pink	MnO
3	manganic.....	Mn^{+++}	slightly green	Mn_2O_3
4	manganites.....	MnO_3—	green	MnO_2
6	manganates.....	MnO_4—	dark green	
7	permanganates.	MnO_4^-	dark purple	Mn_2O_7

black- Pyrolusite. **dvi-** Rhenium. **eka-** Masurium. **red-** (1) Rhodonite. (2) Rhodochrosite.

m. acetate. Manganous acetate. **m. binoxide.** M. dioxide. **m. blende.** A native manganese sulfide, MnS. **m. boride.** MnB_2 = 76.6. A black powder, insoluble in water. **m. boron.** A bronze containing manganese: 88 % Cu, 10 % Sn, 2 % Mn. **m. carbide.** Mn_3C = 177.1. A black crystalline mass. **m. chloride.** See *manganic, manganous.* **m. copper.** M. bronze. **m. dioxide.** MnO_2 = 86.93. M. peroxide, pyrolusite, battery manganese. Black, amorphous powder, d.5.03, decomp. 390, insoluble in water, soluble in acids. Used as an oxidizing agent; in the manufacture of chlorine and other halogens; in electric dry cells; in paints and varnishes; as a black or purple color for glass glaze, enamel and ceramics; for making ferromanganese and manganese compounds, in the rubber industry; medicinally, as a tonic and alterant. **m. glaze.** A dark-colored lustrous enamel on porcelain containing manganese. **m. green.** Barium manganate. **m. heptoxide.** Mn_2O_7 = 221.86. Permanganic acid anhydride. A dark green liquid, rapidly decomp. to MnO_2, a most powerful oxidizing agent. **m. minerals.** Manganese occurs in nature in small quantities widely diffused in most rocks and minerals. The principal ores are:

pyrolusite	MnO_2
psilomelane	$Mn(OH)_3$
braunite	Mn_2O_3
hausmannite	Mn_3O_4
manganite (manganese spar, rhodochrosite)	MnO(OH)
mangan spar (rhodonite, manganite)	$MnCO_3$
mangan blende	MnS

m. nitrides. There are two nitrides: Mn_6N_2 = 302.67. Mn_3N_2 = 192.81. **m. oxides.** (1) MnO, *manganous oxide.* (2) Mn_3O_4, *manganic manganous oxide.* (3) Mn_2O_3, *manganic oxide.* (4) MnO_2, *manganese dioxide.* (5) MnO_3, *manganese trioxide.* (6) Mn_2O_7, *manganese heptoxide.* **m. peroxide.** M. dioxide. **m. protoxide.** Manganous oxide. **m. sesquioxide-** Manganous manganic oxide. **m. silicate.** Mn_2SiO_4. See *braunite, rhodonite, tephroite.* **m. spar.** (1) Rhodonite. (2) Rhodochrosite. **m. steel.** A steel containing about 12 % Mn, which is extremely hard and ductile; used in machinery that is subject to hard wear, *e.g.*, crushers. **m. sulfate.** See *manganic, manganous.* **m. tetrachloride.** $MnCl_4$ = 196.77. A green solid. **m. tetrafluoride.** MnF_4 = 130.93. A brown solid. **m. titanium.** An alloy of m. and titanium, used in the steel industry. **m. trioxide.** MnO_3 = 102.93. An acidic oxide, which forms manganates, *e.g.*, K_2MnO_4. **m tungstate.** See *hübnerite.*

manganesium. Manganesum. An early name for manganese.

manganic. Describing compounds of trivalent manganese. They are generally unstable and yield in aqueous solution the green Mn^{+++} ion, which readily decomposes to the stable Mn^{++} state (manganous). **m. acid.** H_2MnO_4 = 120.9. An acid unknown in the free state, but existing in salts of the type M_2MnO_4—, manganates. **per-** $HMnO_4$ = 119.9. A dark red unstable liquid. It forms salts of the type $MMnO_4$—, permanganates. **m. chloride.** $MnCl_3$ = 161.3. An unstable compound which forms more stable double salts; soluble in water, and decomposes to $MnCl_2$ and Cl_2. **m. hydrox-**

ide. $Mn(OH)_3$ = 106.1. An unstable hydroxide, which rapidly loses water and forms a brown crystalline precipitate, MnO(OH) of d.4.4; insoluble in water, decomp. by acids. Used as a pigment for textiles. **m. manganous oxide.** Mn_3O_4 = 228.79. Manganomanganic oxide. A red, insoluble, crystalline solid. **m. metaphosphate.** $Mn_2(PO_3)_6.2H_2O$ = 620.13. Pink crystals. **m. oxide.** Mn_2O_3 = 157.9. Manganese trioxide, m. sesquioxide, black m. oxide, braunite. A black powder, d.4.33, insoluble in water, but soluble in acids. *hydrated-* $Mn_2O_2(OH)_2$ = 175.88. A black powder. **m. sulfate.** $Mn_2(SO_4)_3$ = 398.1. Dark green crystals, decomp. by water or at 160; used as a powerful oxidizing agent in synthesis.

manganiferous. Containing or carrying manganese.

manganin. A non-corroding alloy of 12 % Mn, 84 % Cu, and 4 % Ni, d.8.4, m.910. Used in electric rheostats and heating elements.

manganite. $Mn_2O_3.H_2O$. Acerdese. A native manganic oxide hydrate.

manganites. A series of compounds derived from tetravalent manganese and its hydroxide, $Mn(OH)_4 = H_4MnO_4$, by replacement of the hydrogen; hence, a salt containing the tetravalent MnO_4 radical or the divalent MnO_3 radical:

$$H_4MnO_4 = H_2MnO_3 + H_2O$$

mangano-manganic oxide. Manganic-manganous oxide.

manganosiderite. A native carbonate of manganese and iron.

manganosite. MnO. A native manganous oxide, occurring in emerald green, isometric masses.

manganostilbite. A mineral consisting of MnO with As_2S_3 and Sb_2S_3.

manganotantalite. A mineral consisting of MnO and Ta_2O_5, Sn, and W.

manganous. The more common manganese salts containing the divalent Mn^{++} ion; usually colorless or slightly pink, soluble in water. **m. acetate.** $Mn(C_2H_3O_2)_2.4H_2O$ = 245.0. M. acetate. Pale red, monoclinic crystals, d.1.59, soluble in water or alcohol. **m. ammonium phosphate.** $MnNH_4PO_4.H_2O$ = 186.0. Manganese ammonium phosphate. Colorless crystals, soluble in water. **m. ammonium sulfate.** $Mn(NH_4)_2(SO_4)_2$ = 283.1. M. alum. Pale rose crystals, soluble in water; used as a reagent. **m. arsenate.** $MnHAsO_4$ = 195.0. Manganese arsenate. A pale rose powder, slightly soluble in water. Used medicinally as a hematinic, nutritive, and alterative tonic. **m. benzoate.** $Mn(C_7H_5O_2)_2$ = 297.1. Manganese benzoate. Colorless scales, soluble in water, slightly soluble in alcohol. **m. borate.** $Mn_2B_4O_7$ = 265.1. Manganese borate, manganese siccative. A white powder, soluble in water; used as a drier in varnishes and paints, and in the leather industry. **m. bromide.** $MnBr_2$ = 214.8. Manganese bromide. Rose red crystals, soluble in water. **m. butyrate.** $Mn(C_4H_7O_2)_2$ = 229.2. Manganese butyrate. A rose red, crystalline powder, soluble in water or alcohol; used for acute streptococcal infection. **m. cacodylate.** $Mn(Me_2AsO_2)_2$ = 329.1. Manganese cacodylate. Pale, rose red crystals, soluble in water; used as a tonic. **m. carbonate.** $MnCO_3$ = 114.9. Manganese carbonate, native as dialozite and rhodochrosite. Rose colored, rhombic crystals, d.3.13, decomp. by heat, insoluble in water, soluble in dilute acids. Used medicinally for anemia. **m. chloride.** *anhydrous-* $MnCl_2$ = 125.9. Rose red crystals, d.2.98, m.650, soluble in water. *hydrous-* $MnCl_2.4H_2O$ = 197.7. Rose red, monoclinic crystals, d.1.91, m.87, soluble in water, slightly soluble in alcohol. Used medicinally in chlorosis, and as an antiseptic in gargles; technically, as a mordant; in the manufacture of manganese salts; in the glass industry; as a disinfectant; and for regeneration of manganese dioxide. **m. chromate.** $MnCrO_4$ = 171.1. Manganese chromate. A dark brown powder, partly soluble in hot water. **m. citrate.** $MnHC_6H_5O_7$ = 245.1. Manganese citrate. A white powder, soluble in water; used medicinally as a tonic and astringent. **m. dithionate.** M. hyposulfate. **m. ferrocyanide.** $Mn_2Fe(CN)_6$ = 322.0. Manganese ferrocyanide. A pale green powder, insoluble in water, soluble in cyanide solutions. **m. fluoride.** MnF_2 = 93.0. Manganese fluoride. A rose red powder, soluble in water. **m. fluosilicate.** $MnSiF_6.6H_2O$ = 305.08. Rose red hexagonal prisms, d.1.903, soluble in water. **m. formate.** $Mn(OOCH)_2.2H_2O$ = 180.98. Rhombic, red crystals, d.1.953, soluble in water. **m. glycerinophosphate.** $MnC_3H_7O_3PO_3$ = 225.0. Manganese glycerophosphate. A rose red, crystalline powder, soluble in water; used medicinally as a tonic. **m. glycerpphosphate.** M. glycerinophosphate. **m. hydrate.** M. hydroxide. **m. hydroxide.** $Mn(OH)_2$ = 89.0. Manganese hydroxide, native as pyrochroite. A white, hexagonal, crystalline powder, d.3.26, insoluble in water, soluble in acids, decomp. if heated. **m. hypophosphite.** $Mn(H_2PO_2)_2.H_2O$ = 203.0. Manganese hypophosphite. Rose red crystals, soluble in water; used medicinally for anemia and chlorosis. **m. hyposulfate.** MnS_2O_6 = 215.1. Manganese dithionate. Colorless needles, soluble in water. **m. iodide.** $MnI_2.4H_2O$ = 183.8. Manganese iodide. Rose colored monoclinic crystals, decomp. by heat, soluble in water; used medicinally as an antiseptic, tonic, and alterant. **m. lactate.** $Mn(C_3H_5O_3)_2.3H_2O$ = 287.1. Manganese lactate. Pale rose, crystals, soluble in water or alcohol; used medicinally as a tonic. **m. lead resinate.** Manganese lead resinate. A mixture of lead and manganese resinates; used as a drier in varnishes and paints. **m. linoleate.** $Mn(C_{18}H_{31}O_2)_2$ = 613.1. Manganese linoleate. A dark brown fatty mass, insoluble in water, soluble in oils; used in driers for varnishes and paints. **m. metaphosphate.** M. phosphate. **m. nitrate.** $Mn(NO_3)_2.6H_2O$ = 287.1. Manganese nitrate. Rose red, monoclinic crystals, d.1.82, m.25.8, b.129, decomp. 230, soluble in water; used as a reagent. **m. oleate.** $Mn(C_{18}H_{33}O_2)_2$ = 617.6. Manganese oleate. A brown, granular, fatty mass, insoluble in water, slightly soluble in alcohol, soluble in ether or oils. Used medicinally in ointments, and as a drier for varnishes. **m. oxalate.** $Mn(OOC)_2 2\frac{1}{2}H_2O$ = 188.0. Manganese oxalate. A white, crystalline powder, d.2.45, decomp. 150; slightly soluble in water, soluble in acids. Used for the preparation of metallic magnesium, and as a drier. **m. oxide.** MnO = 70.9. Manganese protoxide. A grayish-green powder, d.5.09, insoluble in water, soluble in acids. *manganic-* Mn_3O_4 = 228.8. Mangano-manganic oxide, manganous manganate. A brownish-black powder, d.4.61,

used as a reagent in chemical analysis. **m. peptonate.** Manganese peptonate. A brown powder, soluble in water; used medicinally as a nutritive and tonic. **m. phosphate.** (1) *ortho-*. $Mn_3(PO_4)_2.7H_2O$ = 481.0. Normal manganese phosphate. Red amorphous powder, insoluble in water, slightly soluble in alcohol, soluble in dilute acids. Used as a reagent, and medicinally as a tonic. (2) *meta-*. $MnHPO_4$ = 150.97. Manganese metaphosphate. Pale rose crystals, soluble in water, used in analysis. (3) *pyro-*. $Mn_2P_2O_7$ = 283.9. Manganese pyrophosphate. A white amorphous powder, d.3.58, insoluble in water. **m. propionate.** $Mn(C_3H_5O_2)_2$ = 201.0. Manganese propionate. A pale rose powder, slightly soluble in water. **m. pyrophosphate.** M. phosphate. **m. salicylate.** $Mn(C_7H_5O_3)_2$ = 329.1. Manganese salicylate. A white, crystalline powder, soluble in water or alcohol. Used medicinally as a tonic and antirheumatic. **m. silicate.** $MnSiO_3$ = 131.2. Manganese silicate. Pale red crystals, d.3.35, m.1218, insoluble in water. Used in ceramics and the glass industries. **m. succinate.** $MnC_4H_4O_4$ = 171.0. Manganese succinate. A white crystalline powder, soluble in water. **m. sulfate.** (1) *anhydrous-* $MnSO_4$ = 151.0. Manganese sulfate, native as mallardite. Red crystals, d.2.95, soluble in water. (2) *tetrahydrate-* $MnSO_4.4H_2O$ = 223.1. Labile, rose red prisms, slightly hygroscopic, d.2.11, m.30, soluble in water. Used medicinally as a tonic and carthartic; in the ceramic and glass industries; as a mordant in the textile industry. (3) *pentahydrate-* $MnSO_4, 5H_2O$ = 241.08. Stable at 8–27. (4) *heptahydrate-* $MnSO_4.7H_2O$ = 277.10. Red prisms, d.3.1, m.542. **m. sulfide.** MnS = 87.0, or $MnS.H_2O$ = 105.0. Manganese sulfide, native as alamandite and mangan blende. A gray to pink to brown fusible powder, d.3.93, insoluble in water, soluble in acids; used as a pigment. **m. sulfite.** $MnSO_3$ = 135.0. Manganese sulfite. A gray, crystalline powder, insoluble in water, soluble in dilute sulfurous acid. Used medicinally. **m. sulfophenate.** $Mn(C_6H_4OH.SO_3)_2$ = 401.1. Manganese phenolsulfonate. Red crystals, soluble in water or alcohol; used medicinally as an antiseptic and tonic. **m. tannate.** Manganese tannate. A compound of Mn and tannin. A brown powder, insoluble in water, soluble in acids. **m. tartrate.** $MnC_4H_4O_6$ = 203.1. Manganese tartrate. A white crystalline powder, slightly soluble in water. **m. valerate.** $Mn(C_5H_9O_2)_2.2H_2O$ = 293.2. Manganese valerate. A brown powder, slightly soluble in water; used as a tonic.

manganum. The Latin term for manganese.

mangiferin. $C_{19}H_{18}O_{11}$ = 422.2. Euxantogen. A principle from the leaves of *Mangifera indica;* thin, pale yellow needles, m.271.

mango. The tree *Mangifera indica*, an Anacardiaceae of India. **m. gum.** A resin from the mango tree; amber colored or reddish-yellow lumps.

mangrove. An extract from the bark of *Rhizophora mucronata*, containing 30–35 % tannin; used in tanning. Cf. *cutch.*

Manihot. A group of South American shrubs and herbs (Euphorbiaceae) which yield cassava, Brazilian arrowroot, cassareep and ceara rubber.

Manila copal. A resin from *Agathis dammara*, a conifer of the Philippine Islands. It contains 80 % of mancopha olic acid. **M. hemp.** Abaca. **M. paper.** A strong paper made from old M. rope (M. fibers).

manioc. Cassava.

manioca. Tapioca.

manna. The dried saccharine exudation of *Fraxinum ornus*, an Oleaceae of the Orient. It contains mannite, and forms a yellowish-white mass of sweet, slightly acrid taste. Used medicinally as a mild cathartic. **Armenian-** A m. from oak trees, containing glucose. **Australian-** A m. from the eucalyptus species, containing melitose. Cf. *lerp.* **yeast-** Yeast gum.

mannan. A glucoside constituent of yeast gum, and manna, analogous to araban.

mannide. $C_6H_{10}O_4$ = 146.08. An anhydride of mannitol, b.317. **iso-** A solid, m.87, b.274.

mannitan. $C_6H_{12}O_5$ = 164.3. An anhydride of mannitol. A syrupy liquid, m.100; or crystals, m.137.

mannite. Mannitol.

mannitol. $C_6H_{14}O_6$ = 182.2. Mannite. A hexatomic alcohol obtained from manna and many plants (larch, celery, sugar cane, *Viburnum*, *Opulus*, *Syringa* and *Fraxinus* species), occurring in two isomeric forms: dextro- and levo-. Colorless needles, d.1.52, m.166, $b._{1mm}$.278, soluble in water or alcohol. Used medicinally as a mild laxative, and chemically as a reagent for detecting glucose. **m. nitrate.** $C_6H_8(ONO_2)_6$ = 452.15. Hexanitrin, nitromannite, nitromannitol, d.1.604. Insoluble in water, and soluble in ether, m.108. It explodes on further heating, and is used as a substitute for mercury fulminate in high explosives.

mannitose. Mannose.

mannoheptitol. Perseitol.

mannoheptonic acid. $C_7H_{14}O_8$ = 226.11. White solid, decomp. 175, soluble in water.

mannoheptose. $C_7H_{14}O_7$ = 210.11. A heptose m.134, in the avocado, the fruit of *Persea gratissima*, a Lauraceae.

mannolite. Chlorazene.

mannonic acid. $C_6H_{12}O_7$ = 196.1. d-, l-, or i-. An acid derived from mannitol, which forms its lactone (q.v.) on heating. **m. lactone.** $C_6H_{12}O_6$ = 180.1. d- A solid, m.150,

mannosans. Polysaccharides, $(C_6H_{10}O_5)_n$, which hydrolyze to mannose.

mannose. $C_6H_{12}O_6$ = 180.1. $CH_2OH(CHOH)_4CHO$. A hexose or fermentable monosaccharide and isomer of glucose, occurring in two optically-active forms and obtained from manna. **dextro-** Seminose. Colorless prisms, d.1.539, m.132, soluble in water or alcohol.

mannoside. A glucoside which yields mannose. Cf. *rhamnomannoside.*

mannotriose. $C_{18}H_{32}O_{16}$ = 504.25. Glucose-galactose-galactoside. A trisaccharide from manna, indigestible by man and hydrolyzed to glucose and 2 galactose molecules.

manocryometer. A device for determining the melting point of substances under pressure.

manometer. An instrument for measuring the pressure of gases or liquids. **differential-** A glass instrument for measuring pressures up to 20 mm. water pressure. **gas-** See *gage, McLeod steam gage.* **mercury-** A U-tube filled with mercury; the difference in the heights in the arms indicates the pressure. **photo-** A m. adapted for making a photographic record of the pressure changes (see figure). **sphygmo-** An instrument for measuring blood pressure. **spring-** A manometer constructed from a coiled

tube into which the gas or steam passes and, according to its pressure, uncoils and records on the dial. Cf. *McLeod*. **water-** A U-tube filled with water, with one side open and the other connected to the gas container. The difference

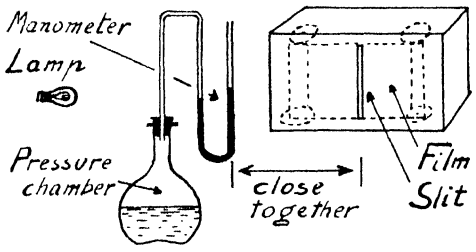


Photo-manometer.

in the heights of the water columns indicates the pressure.

MANOMETERS
(*Behar's Classification*)

(1) Low pressure

Ionization gage	0.0001–0.1μ Hg.
pyrometric gage	0.001–1μ Hg.
resistance gage	0.01–1μ Hg.
McLeod gage	0.01–1000μ Hg.
Micromanometer	0.01–10 mm.

(2) Atmospheric pressure

U-tube	1–1000 mm.
single tube	2–2000 mm.

(3) High pressure

spring manometer	0.5–10 lb.
diaphragm	0.5–200 lb.
carbon pile	50–2000 lb.
crystals	100–20000 lb.
steel-tube spiral	1000–10000 lb.

manoscopy. Gas-volumetric analysis.
mantle. The outer wall of a furnace. **filter-** Berkefeld filter. **gas-** Welsbach mantle.
manure. Refuse (*e.g.*, excreta, straw, etc.), used as a fertilizer. **m. salt.** A potassium salt (chiefly chloride) containing 20–30 % potash.

AVERAGE COMPOSITION OF MANURES

	% N_2	% P_2O_5	% K_2O
cattle manure	0.58	0.28	0.53
horse manure	0.59	0.34	0.52
sheep manure	0.68	0.40	0.75
yard manure	0.51	0.33	0.53

manzoul. A mixture of hashish and muscat nut, used as a narcotic.
mapharsen. Trade name for the hemialcoholate of oxophenarsine hydrochloride (q.v.).
maple. The tree *Acer saccharum* (in U.S.) or *Acer campestris* (in Britain). **red-** The bark of *Acer rubrum*, swamp m., used by American Indians for sore eyes. **m. sugar.** A brown mass obtained by evaporating m. syrup. It is chiefly sucrose with small amounts of glucose, coloring matter and proteins. **m. syrup.** The concentrated sap of *A. saccarum*, which yields 2–4 lbs. per tree.
Maranta. Arrowroot.
marble. $CaCO_3$. A native calcium carbonate, which occurs in many forms and colors and is limestone recrystallized under the influence of heat and/or pressure.
marc. (1) The residual vegetable tissue and mucilage which remains after expression of oil from a plant or nut kernel. (2) The cellular tissue left after complete extraction of the juice of the sugar beet or sugar cane. Cf. *bagasse*.
marcasite. FeS_2. Coal brass. A native iron sulfide, pale yellow, orthorhombic crystals, sometimes called white iron, spear, binarite, coxcomb, or radiated pyrites.
Marcet, Alexander. 1770–1822. A Swiss physician, who became an English chemist and noted lecturer-demonstrator.

Jane Marcet.

Marcet, Jane Haldemand. 1769–1858. A Swiss writer and exponent of popular science, noted for her "Conversations on Chemistry."
Marchand, Richard Felix. 1813–1850. A German chemist, noted for atomic weight determinations. **M. tube.** A U-shaped, calcium chloride tube, with bulb and side-tube attached.
marcitine. $C_8H_{19}N_3$ = 157.1. A basic substance obtained from putrid pancreas.
Marcy tambour. A writing point attached to a drum-like membrane; used in physiological work.
marennin. A green pigment from certain oysters on the French coast, which is derived from the chlorophyll of microorganisms which infest them.
maretin. $C_8H_{11}ON_3$ = 165.11. m-tolyl semicarbazide, m-tolylhydrazine carbonate, $MeC_6H_4NH.NH.CONH_2$. Colorless crystals, m.184, insoluble in water or alcohol, soluble in acetone or chloroform; used as an antirheumatic.
margaric acid. $C_{17}H_{34}O_2$ = 270.4. Heptadecanoic acid*, heptadecylic acid, daturic acid. A saturated fatty acid (q.v.) occurring in lichens but also synthesized. Colorless mass, d.0.853, m.60, $b._{100mm.}$227, insoluble in water, soluble in alcohol or ether. Cf. *dorosmic acid*.
margarine. A butter substitute which consists of a solid emulsion of fats in milk serum. **oleo-** The liquid fat from which margarine is made by hydrogenation, which saturates the double bond.
margarite. $CaAl_4H_2Si_2O_{12}$. A native calcium aluminum silicate, forming lustrous, pearly, monoclinic masses of various shades.

margaron. $(C_{16}H_{33})_2O$ = 466.7. Dihexadecyl ether. A white, odorless powder from beef suet; used as an ointment base.

margaronitrile. $C_{17}H_{33}N$ = 251.27. Heptadecane nitrile*, cetylcyanide, *n*-hexadecylcyanide, $Me(CH_2)_{15}CN$. White crystals, m.53.

Marggraf, Andreas Sigismund. 1709–1782. A German chemist, the founder of the beet sugar industry.

margosa oil. Neem oil, veepa oil, veppam fat, oil of azedarach. An oil from the seeds of *Melia azedarach*, the bead tree, Indian lilac, Cape syringa or China tree, a Meliaceae of Asia and Africa.

margosic acid. $C_{22}H_{40}O_2$ = 336.4. A fatty acid obtained from margosa oil; probably impure oleic acid.

margosine. An alkaloid from the bark of *Melia azadirachta*, the Indian lilac tree. Colorless crystals, m.175. Cf. *azedarine.*

marialite. The vitreous, green mineral, $2NaCl, 2Na_2O, 3Al_2O_3, 18SiO_2$.

Marie Davy cell. A voltaic cell, which consists of amalgamated zinc, in dilute sulfuric acid, as anode; and carbon, in a paste of mercurous sulfate, as cathode (1.5 volts).

Marignac, Jean Charles Galissard de. 1817–1894. A Swiss (Geneva) chemist, noted for determinations of atomic weights, and investigations of rare earth metals. **M. salt.** Potassium stannosulfate.

marigold. Calendula.

marihuana. Hashish.

marinating. Pickling in brine.

Mariotte, Edme. 1629–1684. A French prior and experimenter, noted for his gas law. **M. law.** The product of volume and pressure of a gas is constant (1676). Cf. *Boyle's law.*

marjoram. The herbs, *Origanum*, of the Labiatae. **sweet-** The herb and leaves of *O. major*, used as tonic and emmenagogue. **wild-** The herb of *O. vulgare*, used as a stimulant. It yields origanum oil. **m. oil.** An essential oil from *Origanum majorana*, a Labiatae. An odorless liquid, d.0.9, in soluble in water, soluble in alcohol or ether; used in perfumery and for scenting soap. Cf. *origanum oil.* **French-** The essential oil of *Calamintha nepeta*, a Labiatae, containing calaminthone.

marker. An electric instrument for registering small time intervals on smoked paper; used in physiological work.

marking. To brand or label. **m. apparatus.** A device which takes the place of the objective in a microscope, and is used to make small circles on the cover-glass marking desired fields for future reference. **m. ink.** A solution of silver nitrate; used to mark textiles. **m. nut.** Seme-carpus.

Markownikoff's rule. (1) In the addition reaction of two organic molecules at a *low* temperature the least hydrogenated carbon atom of one will combine with the most negative element of the other; whereas, at a *higher* temperature, it will combine with the more positive element or radical. (2) When the additive agent adds as H and R, the latter goes to the carbon atom with the smaller number of H atoms.

marl. (1) An earth consisting of clay, sand, and chalk. (2) An earthy or soft rock deposit rich in calcium carbonate.

marmatite. A native zinc, iron, and manganese sulfide.

Marme's reagent. A solution of 6 gm. KI and 3 gm. CdI_2 in 18 cc. water. Used as a reagent for alkaloids, most of which generally form a white or yellowish precipitate with it.

marmite. (1) An earthenware vessel for boiling large volumes of bouillon or media. (2) A trade name for a food prepared by treating yeast with an acid under pressure, and neutralising the product.

Marne, N. H. [Johann Bernhard Herrmann.] A German phlogistic chemist who attempted the first classification of elements, 1786; *Ueber die Anzahl der Elemente.*

maroti oil. A fatty oil, d.0.96, expressed from the seeds of *Hydnocarpus wightiana*, a Flacourtiaceae. Cf. *chaulmoogra oil.*

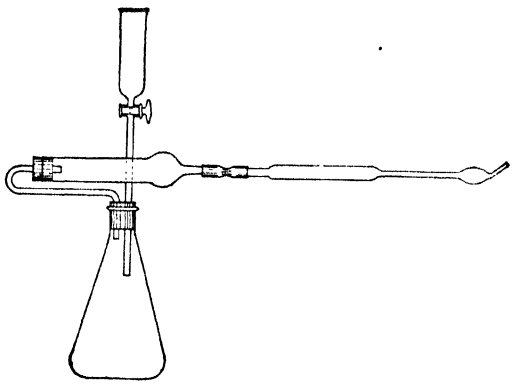
marri-kino. A red gum from *Eucalyptus calophylla*, a Myrtaceae, used in tooth powders.

marrubiin. $C_{21}H_{28}O_4$ = 344.22. The active principle from the leaves of *Marrubium vulgare*, a Labiatae. Colorless scales, m.155, $b._{15mm}$297, slightly soluble in water; used medicinally as a tonic.

marrubium. Horehound.

marsh gas. The gaseous products, chiefly methane, formed from decaying, moist organic matter in marshes and mines. Cf. *firedamp.* **m. mallow.** Althaea. **m. mint.** Wild mint. The herb, *Mentha sativa*, a Labiatae, used as an emetic and stimulant. **m. ore.** Bogore. **m. tea.** Labrador tea.

Marsh, James. 1789–1846. An English chemist. **M. test.** Marsh-Berzelius test. A test for arsenic. The substance is added to pure zinc in a gas-generating bottle. Pure hydrochloric acid is slowly added, and the evolved hydrogen, together with the arsenic hydride, AsH_3, is passed through a long tube which is heated near



Marsh test apparatus.

the end so that a deposit of As forms; or the escaping hydrogen is ignited, and a cold porcelain dish is held above the flame. The As deposits on it as a black mirror that can be dissolved in KOCl solution, while the Sb deposit does not dissolve.

Marshall apparatus. A device for the determination of urea in blood.

marshmallow. Althaea.

Martens densitometer. An optical device for measuring the density of the silver deposit on photographic plates. **M. illuminator.** A photometer for determining the relative efficiency of illumination in rooms. **M. spectroscope.** A direct-vision spectroscope.

martensite. A solid solution of 2% carbon in iron, which is present in quenched steel. On slow cooling it decomposes into iron and iron carbide.

martial ethiops. Magnetic ferric oxide.

Martin's flask. A culture flask, consisting of a glass bulb with three long necks which can be sealed; used in the manufacture of toxins. **M.'s centrifuge.** A small laboratory centrifuge driven by water power. **M.'s filter.** A Berkefeld filter with a funnel, used for filtering toxins directly into a flask.

martite. A native ferric oxide (see *hematite*).

Martius yellow. The calcium salt of naphthalene yellow.

marzipan. A mixture of sugar, ground almonds and starch, used for confectionery.

mascagnine. A mineral ammonium sulfate.

mash. A warm mixture of malted barley and water used in the brewing industry to prepare wort, q.v.

masked. Hidden or concealed. **m. element.** An element present in an organic compound, but combined in such a manner that its properties are subdued or hidden, so that it does not give the usual reactions; *e.g.*, iron is masked in hemoglobin, magnesium is masked in chlorophyll. **m. group.** An atomic group present in an organic compound, but combined in such a manner that its usual properties are subdued. **m. radical.** M. group.

masonite. Gun fiber. A wood fiber used as a constructional and insulating material. **m. process.** Chips of wood are placed in autoclaves (guns) and subjected to steam of 1000 pds. pressure per in.^{2} for five seconds; the sudden release explodes the chips.

mass. (1) M. A definite quantity of matter (q.v.) which offers resistance to change of motion. It is the physical quantity of an electron, atom, molecule, or an assembly of these; *e.g.*, mole. The unit is the milligram, gram, or kilogram. Mass is an unchangeable quality of matter; *e.g.*, one gram of water always contains a definite number of molecules. Weight is a changeable property of matter as it is influenced by location on the earth surface, and a gram-weight of water at sea level contains less molecules than a gram-weight at the top of a mountain. **active-** The number of moles (gram-molecules) in unit volume (1 liter). Cf. *atomic mass.* (2) In pharmacy: a homogeneous solid or semi-solid mixture, as; **blue-** A preparation of fine metallic mercury, suspended in honey or syrup. **copaiva-** Copaiva solidified with magnesium oxide. **ferrous carbonate-** Vallet's mass. A paste containing 33% ferrous carbonate; used as a hematinic. **mercury-** Blue mass. **Vallet's-** Ferrous carbonate mass.

MAGNITUDES OF MASS

Einstein universe	8×10^{78} gm.
Galaxy (Milky Way system)	2.3×10^{55} "
Large stars	1×10^{36} "
Sun 331,950 × earth	1.99×10^{33} "
Small star	1×10^{32} "
Jupiter 317 × earth	1.9×10^{29} "
Earth 1.0 earth	5.99×10^{26} "
Mercury 1/25 × earth	2.5×10^{25} "
Moon 1/81.56 × earth	7.5×10^{24} "
Hydrosphere 1,335,000,000,000 Mill. tons	1.3×10^{24} "
Atmosphere 5,633,000,000 " "	5.6×10^{21} "
Average steroid 1,000,000,000 " "	1×10^{21} "
Steamship Queen Mary 72,000 tons	7.2×10^{10} "
Meteorites, annual fall 40,000 "	4×10^{10} "
1 ton = 1000 kg. (2205 pounds)	1×10^{6} "
Man, average weight 76 kg. (166 pds.)	7.5×10^{4} "
1 kilogram (kg.) = 1000 gm. (2.2 pds.)	1×10^{3} "
1 gram (gm.) = 1000 mg. (15.4 grs.)	1 "
1 milligram (mg.) = 1000 μg.	1×10^{-3} "
1 microgram (μg.) = 1000 γ.	1×10^{-6} "
1 gamma (γ) = 0.000,000,001 gm.	1×10^{-9} "
Vitamin A, effective dose 3 γ	3×10^{-9} "
Magnesium by chemical test 2 γ	2×10^{-9} "
Microbalance sensitivity 0.4 γ	4×10^{-10} "
Sodium by flame test 0.07 γ	7×10^{-11} "
Mercaptan by odor 0.002 γ	2×10^{-12} "
Gold particle (0.000,01 cc. cube)	2×10^{-14} "
Colloid particle (0.000,000,5 cc. cube)	2×10^{-18} "
Protein molecule 100,000 × H	1×10^{-18} "
Maltoseazone molecule 4,021 × H	6.7×10^{-21} "
Octodecapeptide molecule 2,112 × H	3.5×10^{-21} "
Oilfilm (0.000,000,2 cm. square)	2×10^{-21} "
Tristearin molecule 890 × H	1.48×10^{-21} "
Cane-sugar molecule 342 × H	5.7×10^{-22} "
Uranium atom 238 × H	4×10^{-22} "
Water molecule 18 × H	3×10^{-23} "
Hydrogen atom 1 × H	1.663×10^{-24} "
Electron 1/1845 of H	9.01×10^{-28} "

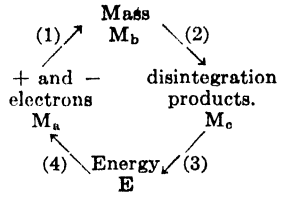
m. action. A law of chemical reaction: In a homogenous system, the product of the molar concentrations of the different participating substances on one side of the equation, when divided by the product of the molar concentrations of the substances on the other side of the equation, gives a constant value for each temperature, no matter how great or small the concentration was at the beginning of the reaction. It applies to both the direct and reverse reactions (law of Guldberg and Waage). The velocity of a chemical reaction is proportional to the active masses (= molar concentrations) of the reacting substances. For instance in the reaction:

$$n_1A_1 + n_2A_2 + \cdots \rightleftharpoons n_1'A_1' + n_2'A_2' + \cdots$$

$$K = \frac{k_1}{k} = \frac{[A_1]^{n_1}.[A_2]^{n_2} \cdots}{[A_1']^{n'_1}.[A_2']^{n'_2} \cdots}$$

where K is the dissociation constant, and k and k_1 the constants of proportionality for Guldberg and Waage's Law applied to the direct and reverse equations. **m. a. constant.** The constant k in the above formula. The equation is applicable to other types of equilibria *e.g.*, ionization, etc. **m. conservation.** A law of physics: No matter can be destroyed, neither can new matter be created; all changes of matter are simply transformations. It is analogous to the law of energy conservation. Cf. *energy, matter.* **m. energy cycle.** The

postulate of a transformation of matter into energy, and vice versa, which follows from Einstein's theory:



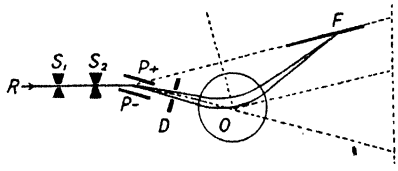
where for each given system $\Sigma M_a > \Sigma M_b > \Sigma M_c$ (degradation of mass). It is based upon:

(1) *Atom building* (q.v.), as in the process $4H \rightarrow He$, or $4 \times 1.00778 \rightarrow 4.00216$ where 0.029 gm. per mol disappears and is transformed into $0.029 \times c^2$ ergs, as $c^2\delta M = \delta E$, where $\Sigma M_a > M_b$.

(2) *Atom disintegration* (q.v.), as exemplified by radioactive elements: $\delta E/c^2 = \delta M$, where $M_b > \Sigma M_c$.

(3) *Atom annihilation* (q.v.), as the disappearance of a hydrogen atom when its electron neutralizes its positive charge: $H^+ + e = 1.00778c^2$ ergs; the complete transformation, $Mc^2 = E$.

(4) *Atom creation* (q.v.), or the formation of positive and negative electrons by the absorption of energy, $E/c^2 = M$, which probably occurs in interstellar or intergalactic space. Cf. *materialization*. **m. law.** (1) Mass conservation. (2) Mass action. **m. number.** The isotopic number, applied where the atomic number is not ascertained. Cf. *isobars*. **m. spectra.** Aston spectra. Spectra of isotopes. The separation of an element into its isotopes by making it the anode in a vacuum tube with a perforated cathode. By passing a current of high voltage through the tube, the canal rays (formed behind the cathode), when exposed to a magnetic field or electric field, are deviated more or less from a straight path.



Mass spectra.

This deviation is proportional to their mass, and can be made visible either by a fluorescent screen or a photographic plate. **m. spectrogram.** The photographic images produced when positive rays, deflected by a magnetic or electric field, fall on a photographic plate. **m. spectrograph.** A device for determining the relative masses of isotopes: canal rays, R, pass through slits, S, into the electric field, P^+ and P^-, and diaphragm, D, selects a portion of equal velocity which passes over magnetic field, O, which focusses particles of equal mass at F.

massecuites. A mixture of syrup and crystals of cane sugar, used in the sugar industry.

massicot. A native lead monoxide, d.9.3, m.-600.

mastic. (1) Mastiche. The concrete resinous exudations from *Pistacia lentiscus*, an Anacardiaceae of the Mediterranean region. A pale yellowish or greenish, transparent resin, insoluble in water, soluble in alcohol. Used in lacquers, incense, plasters, dental cements, chewing gum; and medicinally, as a styptic and carminative. (2) A mixture of finely-powdered rock and bituminous material, used for highway construction. (3) A mortar used for plastering walls; a mixture of finely-ground limestone, sand, litharge, and linseed oil. **m. oil.** An essential oil from m., d.0.858–0.868, b.155–160, containing d-pinene.

mastic acids. A group of resinous acids obtained from mastic:

masticihic acid	$C_{20}H_{32}O_2$	= α-resin
masticin	$C_{20}H_{30}O$	= β-resin
masticinic acid	$C_{23}H_{36}O_4$	
masticolic acid	$C_{23}H_{36}O_4$	
masticonic acid	$C_{32}H_{48}O_4$	

mastication. The process of chewing food, in which it is mixed with the salivary enzymes and amylolytic changes begin. Cf. *digestion*.

masticatory. An agent to increase the secretion of saliva; *e.g.*, chewing gum.

mastix. Mastic (1).

masurium. Eka-manganese. Ma = 98(?). An element of the manganese family, atomic number 43, discovered (1925) by Noddack from the x-ray spectra of platinum ores, gadolinite, and columbite. Its existence has been doubted. Cf. *nipponium*.

masut. The residue remaining after the distillation of benzine and kerosene from Russian petroleum. It contains 87 % C, 12 % H and 1 % O and burns at about 100°C.

mat. Matte (2).

match. A small strip of wood, paper, or wax dipped in a pyrophoric mixture. **lucifer-** A m. dipped into a paste of scarlet or yellow phosphorus or P_4S_3, gum, red lead, and sometimes potassium chlorate, which ignites when rubbed on sand paper. **safety-** A m. dipped in a mixture of 24 pts. antimony sulfide, 22 pts. potassium chlorate, 12 pts. potassium dichromate, 22 pts. red lead, and gum and coloring pigments. It ignites when rubbed on paper coated with red phosphorus, glass powder and gum. The wood, being impregnated with borax, does not glow.

maté. Paraguay tea, yerba, Jesuit tea, Brazil tea, yerba mate. The dried leaves of *Ilex paraguayensis*, an Aquifoliaceae of South America. Its infusion is used as a beverage. **Zapek-** Maté leaves which have been treated at high temperature.

Materia Medica. (1) A knowledge of the natural history, physical characters, and chemical properties of drugs. (2) Pharmacy. (3) Pharmacology. (4) Therapeutics.

materialization. The production of matter, *e.g.*, electrons and positrons, by the transformation of gamma-rays: $h\nu = m_{e+} + m_{e-}$ + kinetic energy; where m_{e+} and m_{e-} are the mass of the positron and electron. Cf. *mass-energy cycle*.

matesterin. $C_{23}H_{40}O_3$(?). A dihydroxy sterol from maté. White needles, m.270.

matico. The dried leaves of *Piper angustifolium*, a Piperaceae. Used as fluid extract, as a genito-urinary stimulant. **m. camphor.** $C_{12}H_{16}O$ = 176.1. A terpene from matico. **m. oil.** An essential oil from m., d.0.930–1.130, soluble in alcohol.

matildite. A silver ore, $AgBiS_2$.

matlochite. A native lead chloride and oxide, $PbO.PbCl_2$.

matrass. An obsolete term for a distilling flask.

matricaria. German chamomile. The dried flowerheads of *M. chamomilla*, a Compositae; used as the fluid extract, as a febrifuge and tonic.

matrine. (1) $C_{15}H_{24}ON_2$ = 248.20. Isolupanine. The chief alkaloid of kuh-seng; it occurs in four isomeric forms: α- Needles, m.77. β- Rhombic prisms, m.87. γ- A liquid, d.1.088, b.223. δ- Prisms, m.84. They are all soluble in water, alcohol or chloroform. (2) $C_{15}H_{26}N$ = 220.2. A liquid alkaloid from *Sophora angustifolia*. Cf. *cytisine, sophorine.*

matrix. (1) Ground mass; rock or earth which contains a metallic ore or a mineral. (2) The impression left in a rock by a fossil or crystal. (3) The material surrounding a precious stone. (4) A conventional arrangement of numbers in horizontal rows and vertical columns, the latter being more numerous. It is useful in interpreting quantum numbers. Cf. *Pauli's principle, Stoner quanta.* **m. theory.** The spectral line which corresponds with a transition from one quantum state to another (*e.g.*, 2 to 1; 2 to 3, etc.) is expressed by an amplitude or intensity factor (a) and a frequency or energy factor (e) in terms of the following series:

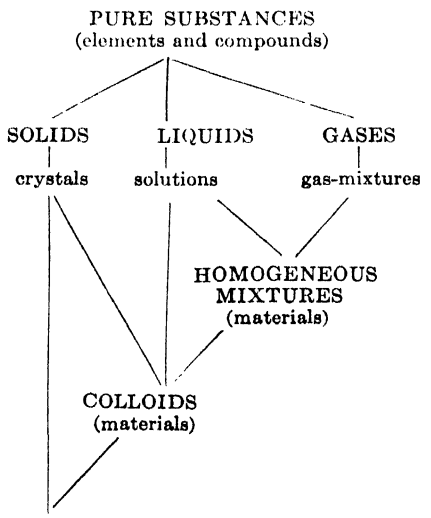
a(11) a(12)e(12) a(13)e(13).....
a(21)e(21) a(22) a(23)e(23).....
a(31)e(31) a(32)e(32) a(33).....

Cf. *quantum theory.*

matt salt. Acid ammonium fluoride.

matte. (1) The crude metal obtained by smelting sulfide ores, which still contains some sulfur. (2) A roughened surface which diffuses light. Antonym—glossy.

matter. Any body, substance or particle which is subject to gravitation; hence any substance, either solid, liquid or gaseous, which occupies space. Cf. *mass.* Classification:



annihilation of- The theory that matter is destroyed in the interior of a star by the transformation of mass into radiations; cf. *energy, mass-energy cycle.* **conservation of-** See *mass conservation.* **creation of-** The assumption that the diffuse gaseous nebulosities absorb radiations and transform it into matter; cf. *energy, mass-energy cycle.* **destruction of-** See *annihilation of-* and *disintegration of-.* **disintegration of-** The radioactive transformations by which matter of one kind is transformed into matter of another kind with the partial liberation of energy. Cf. *packing effect, radioactivity.* **transformation of-** Chemical changes, reactions.

Matthiessen's rule. The product of specific resistance and mean temperature coefficient of resistance is constant.

Maumené, Edme Jules. 1818–1891. A French chemist. **M. number.** The rise in temperature occurring in the M. test. **M. test.** A reaction to distinguish between drying and non-drying oils. 50 gm. of oil are added to 10 cc. of conc. H_2SO_4; if the rise in temperature succeeds 70°C, drying oils are present.

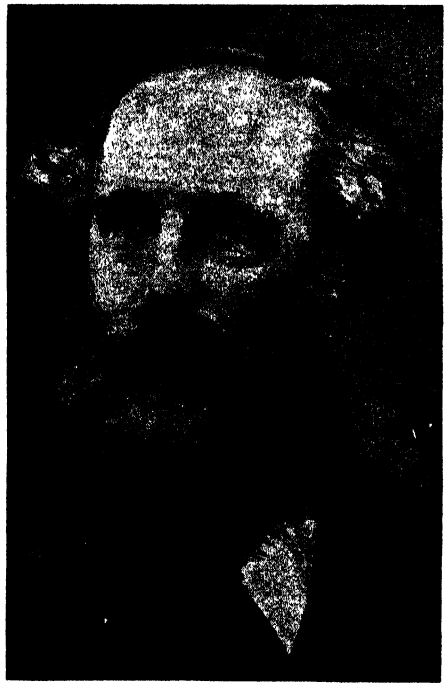
mauvein. $C_{27}H_{24}N_4$ = 404.4. Aniline purple, Perkin's mauve. A violet dye of the phenyl safranine group; the first aniline dye, and prepared by Perkin in 1856.

maximal. The greatest value. **m. work.** The greatest amount of energy obtainable from a process or reaction.

maximum. The largest quantity or value. **m. boiling point mixture.** That mixture of two or more liquids which has the highest boiling point. **m. temperature.** The temperature above which the growth of bacteria does not take place.

maxite. Leadhillite.

maxivalence. The highest valency of an element; it generally corresponds with the group-number in the periodic system.



James Clerk Maxwell.

(From Thomson's "Outline of Science." Courtesy of G. P. Putnam's Sons, N. Y.)

Maxton screen. A rotating screen.

Maxwell, James Clerk. 1831–1879. A Scottish physicist, noted for his electrical and magnetical researches. **M. demon.** A means by which molecules of different velocities may be separated. **M. law.** If μ is the refractive index of a medium, and k the inductivity of a medium: $k = \mu^2$, provided the frequencies of the electrical and light vibrations are the same.

maxwell. A unit of magnetic quantity or flux:
1 Internat. maxwell = 1.00043 absolute maxwells = 1 line = 10^{-8} volt-seconds.
1 Int. maxwell per cm.^{2} = 6.452 maxwell per inch.
1 absol. maxwell = 0.99957 intern. maxwell.
Absolute dimensions, $L^{\frac{1}{2}}M^{\frac{1}{2}}k^{-\frac{1}{2}}$ *e.s.u. units* or $L^{\frac{1}{2}}M^{\frac{1}{2}}T^{-1}\mu^{\frac{1}{2}}$ *e.m.u. units.*

may apple. Podophyllum.

Mayer, Julius Robert von. 1814–1878. A German physician and physicist, who originated the mechanical theory of heat and conservation of energy and matter. Cf. *Meyer.*

mayer. My. A unit of heat capacity. The mayer is the heat capacity of a body which is raised one degree centigrade by one joule. The heat capacity of 1 gram water, at 20°C., is 4.18 mayers.

Mayer's hemalum. A staining solution consisting of 1 gm. hematein, 50 cc. 90 % alcohol, 50 gm. alum, 0.5 gm. thymol, and 1000 cc. water.

Mayer's reagent. A solution of 1.35 gm. $HgCl_2$ and 5 gm. KI, in 100 cc. water; used as a reagent for alkaloids, with which it gives a white precipitate.

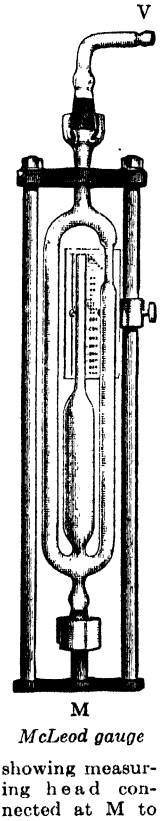
maysin. A globulin in corn meal (0.25 %), which coagulates at 70°C.

Mayow, John. 1643–1679. An English chemist who discovered that the atmosphere consists of two gases, one supporting life and combustion, and indicated their origin.

McBain, James William. 1882– . A Canadian-born, American physical chemist. **McBain-Baker balance.** A silica spring-balance enclosed in heavy glass tubing, for the study of sorption at different pressures. **McB. centrifuge.** An ultracentrifuge (q.v.), consisting of a spinning top driven by and floating on air.

McLaurin process. A low-temperature carbonization method for coal.

McLeod gauge. A device for measuring low gas pressures (0.2 to 0.0005 mm.) in a high vacuum system by trapping a known volume of gas and compressing it to a measurable pressure. Cf. *MacLeod.*



McLeod gauge
showing measuring head connected at M to barometric mercury column, and at V to high vacuum pump.

McPherson, William. 1864– . An American chemist noted for research on organic compounds.

Me. Abbreviation for methyl, CH_3—.

mead. Hydromel.

meadol. Trade name for a lignin plastic prepared from soda wood black liquors.

meadow anemone. Pulsatilla. **m. crocus.** Colchicum. **m. lily.** The bulb of *Silium candidum*, a Liliaceae, used as mucilaginous emulsion. **m. sweet.** Queen-of-the-meadow. The herb of *Spiraea ulmaria*, a Rosaceae, used as a diuretic. **m. saffron.** Colchicum.

mean. An average. **arithmetic-** The quotient obtained by dividing the sum of n numbers by n, hence $\frac{a+b+c+d}{4}$ = arithmetical mean of a, b, c and d. **geometric-** The nth. root of n numbers multiplied by each other; hence, $\sqrt[4]{abcd}$ = geometrical mean of these 4 numbers. **harmonic-** The quotient obtained by dividing n by the sum of 1/n numbers, or $\frac{4}{\frac{1}{a}+\frac{1}{b}+\frac{1}{c}+\frac{1}{d}}$ = harmonic mean of these 4 numbers. **proportional-** The quotient obtained by dividing $ma + nb + oc \cdots$ by $(m + n + o \cdots)$; thus the atomic weight is the p. mean of the isotopic weights (multiplied by the percentages present). **quadratic-** The square root of the quotient obtained by dividing the sum of n^2 numbers by the number of added numbers; as, $\sqrt{\frac{a^2+b^2+c^2+d^2}{4}}$ = quadratic mean of the 4 numbers. A comparison of the different means shows that their numerical value is in the following order: quadratic (highest value), arithmetic, geometric, harmonic (lowest value). **m. path.** The mean free path of molecules is the average distance which they are supposed to travel without collision. **m. refractive index.** The average refractive index of a substance for the extreme red and extreme violet rays.

means. The second and third term in the mathematical expression a:b::c:d where b and c are the means, a and d the extremes: $\frac{a}{b} = \frac{c}{d}$. The rule: "Multiply the means and divide by the extremes," enables any unknown value to be obtained if three values are known; thus $a = \frac{bc}{d}$; $b = \frac{ad}{c}$; $c = \frac{ad}{b}$; and $d = \frac{bc}{a}$.

measure. An appliance with which to determine a physical quantity; generally restricted to those which determine length, diameter, volume, and capacity; *e.g.*, rules, calipers, graduates, etc. For units of measures, see *metric system.*

measuring. The determination of a physical quantity.

meat. The edible portion of animal flesh, excluding fish. **m. bases.** An arbitrary analytical number of meat foodstuffs. It is given by the difference (in percentages): [Total nitrogen − insoluble and coagulable nitrogens, proteoses, peptones and gelatin] × 3.12. **m. extract.** A partly-evaporated bouillon, used as nutrient and for culture media. **m. meal.** A fertilizer consisting of cooked, dried and powdered meat, with little bone. It contains 10–11.5 % nitrogen and 1–5 % P_2O_5. **m. sugar.** Inositol.

mebaral. Phemitone (q.v.).

Mecca balsam. Balm of Gilead.

mechanical. Pertaining to the physical forces of masses and their control; *e.g.*, levers, gravita-

tion, hydraulic, and gaseous pressures. **m. analysis.** Analysis by mechanical as distinct from physical or chemical means, *e.g.*, sifting, sedimentation. **m. antidote.** The use of the stomach-tube or -pump to remove a poison from an organ. **m. equivalent.** Joule. The quantity of energy which, transformed into heat, yields 1 calorie of heat = 4.8×10^7 ergs (at 20°C). **m. pulp.** A pulp obtained by the wet grinding of wood and used in the manufacture of low grades of paper.

mechanics. A branch of physics dealing with those actions of forces or bodies (solid, liquid, or gaseous) which involve no change in state or composition: *e.g.*, machines (levers, wheels, screws), hydraulics, and pneumatics. **quantum-** See *quantum theory.* **wave-** See *wave mechanics.*

mechanism. A machine or instrument which transforms or transmits mechanical force.

mecholyl. Acetyl β-methyl choline.

mecocyanin. $C_{27}H_{30}O_{16}$ = 610.23. An anthocyanin from the poppy.

meconate. A salt of meconic acid, containing the bivalent $C_5H_2O_3(COO)_2$ = radical.

meconic acid. $C_7H_4O_7,3H_2O$ = 254.12. Hydroxypyrocomane dicarboxylic acid. A dibasic hydroxy acid, from opium. White crystals, soluble in water or alcohol. Cf. *comenic acid.*

meconidin. $C_{21}H_{23}NO_4$ = 353.19. Yellow amorphous powder, m.58, insoluble in water.

meconin. $C_{10}H_{10}O_4$ = 194.1. Opianyl, 5.6-dimethoxyphthalide. The lactone of meconinic acid, derived from opium. Colorless crystals, m.102, slightly soluble in water, soluble in alcohol or ether.

meconinic acid. $C_{10}H_{12}O_6$ = 212.1. $C_6H_2(OMe)_2(CH_2OH)COOH$, 1.2-methoxy-3-carboxyl-4-methanol-benzene. It exists only in salts, and as its lactone, meconine.

media. The plural of *medium.*

median. See *frequency.*

medical. Pertaining to the diagnosis and treatment of disease. **m. jurisprudence.** Legal *medicine.*

medicinally. Pertaining to a remedy used in the treatment of disease.

medicine. (1) The science and art of healing. (2) A drug or substance administered to the body to correct a disturbance of its normal function. **clinical-** The study of disease by laboratory methods. **forensic-** Legal medicine. **legal-** The study of disease applied to the detection of crime. **patent-** A medicine or drug protected by letters of patent. **preventive-** A branch of medical knowledge, which aims to prevent disease. **veterinary-** The application of medical knowledge in the treatment of diseases of animals.

medinal. A proprietary brand of *barbital sodium.*

medium. (1) A substance which acts as the transmitter of a force. (2) See *culture* medium. (3) An average or mean.

meerschaum. $H_2Mg_2(SiO_3)_3,H_2O$. Sepiolite. A common porous rock-forming magnesium silicate, d.2.

mega- (1) A prefix derived from the Greek term for large. (2) One million times.

megabar. A unit of pressure: 1 megabar = 1,000,000 bars = 0.987 atm. It is equivalent to the pressure of one megadyne per square centimeter. (Sometimes used erroneously for millibar.)

megabarye. Megabar.

megadyne. A unit of work: 1 megadyne = 1,000,000 dynes (about 1 kg.).

megaerg. A unit of force: 1 megaerg = 1,000,000 ergs.

megafarad. Macrofarad. A unit of electrical quantity: 1 megafarad = 1,000,000 farads.

megameter. A unit of length: 1 megameter = 1,000,000 meters.

megarrhizin. A glucoside from the root of *Megarrhiza californica*, a Cucurbitaceae.

megavolt. A unit of electrical potential: 1 megavolt = 1,000,000 volts.

meiler. A pit or heap of wood covered with soil for the manufacture of charcoal.

meinorite. A vitreous, white to colorless, translucent to transparent, native calcium aluminum silicate.

Meissner, Paul Traugott. 1778–1850. An Austrian pharmaceutical chemist, noted for his *Handbuch.*

MEK. A technical abbreviation for methyl ethyl ketone.

Mekker burner. A modified bunsen burner containing, in its enlarged opening, a metal screen in which the gas and air are more intimately mixed than usual, and thus produce a high temperature (about 1700°C. at the center of the cone).

mekonine. Meconin.

mel. Honey. The saccharine substance deposited by the honey bee, *Apis mellifera*, rich in fructose. Cf. *nectar, ceromel, hydromel, oxymel.*

melaconite. A native, black copper oxide, CuO.

melamac. Trade name for a melamine-formaldehyde plastic.

melam. $C_6H_9N_{11}$ = 235.21. A white powder, obtained by heating ammonium thiocyanate; insoluble in water. See *albene, melem.*

melamine. $C_3N_3(NH_2)_3$ = 126.7. Cyanurotriamide, cyanuramide, *2.4.6*-triamino-*s*-triazine. The amide of cyanuric acid:

Transparent colorless crystals, d.1.573, m. below 250, soluble in water.

melampyrine. Dulcitol.

melampyrite. Dulcitol.

melan. A dark brown oily fluid expressed from *Melilotus coeruleus*, a Leguminosae; used externally on burns and ulcers.

melaniline. Diphenylguanidine.

melanine. $C_{77}H_{98}O_{33}N_{14}S$ = 1779.2. A black coloring matter (chromoprotein) obtained from various insects, hairs of animals, and dark skins; soluble only in alkali and is formed by oxidation of the tyrosine ring of white protein. Cf. *tyrosinase.*

melanite. A black variety of andradite. See iron *garnet.*

melanterite. A native ferrous sulfate, $FeSO_4.7H_2O$.

melanuric acid. See *isocyanurimide.*

malasol. An emulsion of titrol used as an antiseptic.

meldola blue. New blue. Naphthol blue. A blue aniline dye of the methylene blue type.

melee. A diamond weighing less than a quarter carat; used for glass cutting.

melem. $C_6H_6N_{10}$ = 218.2. An amide of cyanuric acid, obtained with melam by heating ammonium thiocyanate.

melene. $C_{30}H_{60}$ = 420.6. Triacontylene. An unsaturated hydrocarbon from bees-wax. A colorless, fatty mass, d.0.89, m.62, b.375, insoluble in water, soluble in hot alcohol or ether.

meletin. Quercetin.

melezitose. $C_{18}H_{32}O_{16}$ = 504.3. Melicitose, melizitose. A trisaccharide obtained from manna and from the sap of conifers and poplars, which hydrolyzes to glucose and turanose (glucose-fructose). Cf. *melizitose.*

melibiase. An enzyme in bottom- but not top-yeasts, which ferments raffinose.

melibiose. $C_{12}H_{22}O_{11}$ = 342.17. Glucose-α-galactoside. A disaccharide $[\alpha]_D$ + 143°, obtained from Australian manna, yellow mallow, and by hydrolysis of raffinose.

melicitose. Melezitose.

meligrin. A condensation-product of dimethyl oxyquinine and methylphenylacetamide; used medicinally in neuralgia.

melilite. (1) A group of anhydrous, calcium, aluminum silicates in igneous rocks. (2) The mineral $(Al, Fe)_2(Ca, Mg)_3Si_2O_{10}$.

melilith. $Ca_4Si_3O_{10}$. A melilite.

melilot. Melilotus, sweet yellow clover. The dried leaves and flowering tops of *Melilotus officinalis*, a Leguminosae, which contains coumarin, coumaric and melilotic acid; used as a mild anodyne.

melilotic acid. $C_9H_{10}O_3$ = 166.08. o-hydrocoumaric acid, oxyhydrocinnamic acid, β-phenolpropionic acid. An aromatic, hydroxy acid obtained from the Melilotus species. Colorless crystals, m.81; on heating further it forms a lactone. **m. lactone.** $C_9H_8O_2$ = 148.-06. m.25.

melinite. A high explosive of the lyddite type.

melissa. The dried leaves and tops of balm, *Melissa officinalis*, a Labiatae used as carminative and febrifuge. **m. oil.** Verbena oil. **East Indian-** Lemongrass oil.

melissic acid. $C_{30}H_{60}O_2$ = 452.6. A monobasic, fatty acid beeswax. Colorless scales, m.90, insoluble in water, soluble in alcohol or ether. **m. alcohol.** Myricyl alcohol. **m. palmitate.** Myricin.

Melissos of Samos. 470–410 B.C. A Greek philosopher famous for the statement: "Nothing can come from nothing."

melissyl alcohol. $C_{30}H_{62}O$ = 438.65. Colorless crystals, m.88.

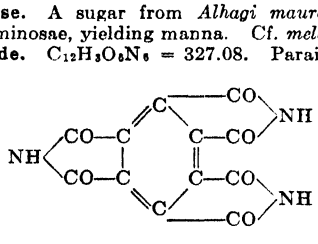
melitic. Mellitic.

melitose. $C_{12}H_{22}O_{11}$ = 342.2. A disaccharide from Australian manna.

melitriose. Raffinose.

melizitose. A sugar from *Alhagi maurorum*, a Leguminosae, yielding manna. Cf. *melezitose.*

mellimide. $C_{12}H_3O_6N_3$ = 327.08. Paraimide.



mellisic. Melissic.

mellite. (1) In pharmacy, any medicated honey. (2) In mineralogy, *honeystone.*

mellitene. $C_{12}H_{18}$ = 162.1. Hexamethylbenzene, C_6Me_6. Colorless scales, m.164, insoluble in water.

mellitic acid. $C_{12}H_6O_{12}$ = 342.1. Hexacarboxyl-benzene, benzene hexacarboxylic acid, $C_6(COOH)_6$. Colorless needles, m.287, soluble in water or alcohol. Its aluminum salt occurs in peat as honeystone. **m. imide.** Euchroic acid.

mellityl alcohol. $C_{11}H_{16}O$ = 164.12. Tetramethylphenyl metanol. $C_6HMe_4CH_2OH$.

mellon(e). C_9H_{12} = 121.1. A hydrocarbon obtained, in addition to melam and melem, by igniting mercuric thiocyanate. See *Pharaoh's serpents.*

mellophanic acid. $C_{10}H_6O_8$ = 254.05. Benzene-1.2.3.5-tetracarboxylic acid, q.v. Colorless crystals, m.238. Cf. *prehnitic* and *pyromellitic acid, mallophene.*

Mellor, Joseph William. 1869–1938. An English chemist, noted for his handbook of inorganic chemistry.

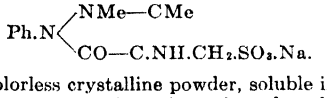
mellorite. A complex lime-ferric oxide silicate of the garnet type.

Mellot's metal. D'Arcet metal.

melonite. (1) Ni_2Te_3. Tellurnickel. A native nickel-telluride, reddish granular particles. (2) A silica mineral of the scapolite group, $Ca_4Al_6Si_6O_{25}$.

melting. Fusing. The transformation of a solid to a liquid by means of heat. **m. furnace.** A furnace used for fusing; as a glassmaker's furnace. **m. point.** The temperature at which a solid changes to a liquid; or at which liquid and solid phase are in equilibrium under a pressure of 1 atmosphere. The highest known m.p. is 4200°C. for a mixture of 25 % HfC and 75 % TaC; and 3887°C. for HfC. The lowest m.p. that of helium. **m. point tube.** A capillary tube used to determine the melting point of the substance which is contained in it, by attaching it to a thermometer and heating it in a liquid until the contents fuse. Cf. *Thiele tube.*

melubrin. $C_{12}H_{14}O_4N_2SNa$ = 305.2. Sodium-1-phenyl-2.3-dimethyl pyrazolone sulfonate.



A colorless crystalline powder, soluble in water; used as a nontoxic antipyretic and analgesic.

membrane. A thin, enveloping or lining substance, which divides a space or an organ. **animal-** A skin-like tissue obtained from animal tissues (parchment), used for dialyzing. **semi-permeable-** A tissue which permits the passage of certain substances (*e.g.*, water or crystalloids), but prevents the passage of others (*e.g.*, colloids). Classification:

(1) *sieves*, as such, or coarse filterpaper.
(2) *cell filters*, such as very fine filterpaper.
(3) *bacterial filters*, such as kieselguhr.
(4) *colloidal filters*, such as parchment or collodion.
(5) *molecular sieves*, such as copper ferrocyanide.

menachanite. Menaccanite, menacanite, menakanite, menacconite. A titaniferous magnetic oxide of iron from Menachan, in Cornwall. Cf. *ilmenite.*

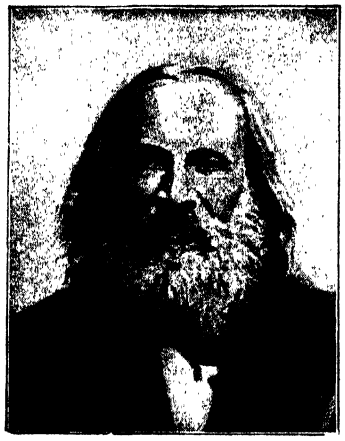
menadione. 2-Methyl naphthoquinone.

menaphthone. 2-Methyl naphthoquinone.

menaphthyl. The monovalent methyl naphthyl radical, $C_{10}H_7.CH_2$—.

Mendelyeev, Dmitri Ivanovitch. Mendeléeff, Mendelejeff. 1834–1907. A Russian chemist,

noted as one of the discoverers of the periodic law (see *Meyer*, Lothar), and predictor of several *eka* elements. **M. chart.** Periodic



Dmitri Ivanovitch Mendelyeev.

(From McPherson & Henderson's "First Course in Chemistry." Courtesy of Ginn & Co.)

table. **M. group.** A vertical group of the periodic table. **M. law.** Periodic law. **M. system.** Periodic system.

MENDELYEEV'S PERIODIC TABLE

Series	Period	0	I R_2O	II RO	III R_2O_3	IV RO_2 RH_4	V R_2O_5 RH_3	VI RO_3 RH_2	VII R_2O_7 RH	VIII
1			H							
2	1	He	Li	Be	B	C	N	O	F	
3	2	Ne	Na	Mg	Al	Si	P	S	Cl	
4	3	A	K	Ca	Sc	Ti	V	Cr	Mn	Fe Co Ni
5			Cu	Zn	Ga	Ge	As	Se	Br	
6	4	Kr	Rb	Sr	Y	Zr	Cb	Mo	Ma	Ru Rh Pd
7			Ag	Cd	In	Sn	Sb	Te	I	
8	5	Xe	Cs	Ba	La	Ce				
9					Rare Earths					
10	6					Hf	Ta	W	Re	Os Ir Pt
11			Au	Hg	Tl	Pb	Bi	Po	El	
12	7	Rn	Ve	Ra	Ac	Th	Pa	U		

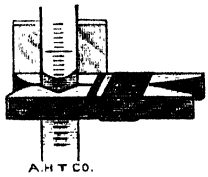
mendozite. A massive, white, fibrous, sodium-aluminum sulfate, or sodium alum.

meneghinite. A native, lead-antimony sulfide, $4Pb_2SbS_2$.

menformon. Theelin.

menhaden. The fish *Brenvoortia tyranniss*, used for making oil and fertilizer.

meniscus. The crescent-shaped surface of a liquid in a tube, either concave (when the liquid wets the material of the container, as water and glass), or convex (when liquid does not wet, as mercury and glass). **m. reader.** (1) A colored streak placed behind a buret to enable the height of the liquid to be read more exactly. It is customary to read the lowest point of the meniscus. (2) A clamp and card attached to the buret.



Meniscus reader.

Menispermaceae. Moonseed family, a group of woody, climbing tropical plants:

Anamirta paniculata	cocculus indicus
Cisampelos pereira	cisampeline
Jateorhiza palmata (calumba)	calumba
Chondodendron tomentosum	pareira
Menispermum canadense	menispermum

Cf. *cucoline, deyamittin, diversine, sinomenine.*

menispermine. $C_{18}H_{24}N_2O_2$ = 300.3. An alkaloid from *Cocculus indicus, (Anamirta paniculata)* and *Menispermum canadense;* colorless crystals.

menispermoid. The combined principles from *Menispermum canadense;* used in medicine.

menispermum. Yellow parilla or moonseed. The dried roots of *Menispermum canadense.* Used as the fluid extract, similarly to sarsaparilla.

menstruum. A solvent used for the extraction of drugs.

mensuration. The act of measuring. **m. formula.** (pl. **-ae, -as**). The mathematical equations by which plain, cubical, or spherical figures or bodies are measured.

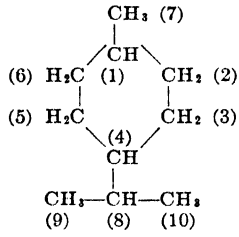
mentha. (1) Mint (*e.g.*, peppermint). (2) A genus of Labiatae.

M. aquatica	marshmint, poco oil
M. crispa	spearmint oil
M. longifola	pennyroyal oil
M. piperita	peppermint oil
M. sativa	marshmint
M. spicata	spearmint
M. sylvestris	English horsemint
M. viridis	spearmint

m. camphor. l-Menthol. **m. viridis.** Spearmint.

menthadiene. A group of terpenes with two double bonds, derived from menthane, *e.g.*, $\Delta^{1.8(9)}$-*m-* or *1.8(9)-m-* Sylvestrene. *1.3-p-* α-Terpinene. *1.4(8)-p-* Terpinolene. *1.5-p-* α-Phellandrene. *1(7)2-p-* β-Phellandrene. *1.8(9)-p-* Limonene. **m. dione.** Thymoquinone. **m. one.** Carvone.

menthane. $C_{10}H_{20}$ = 140.2. Terpane. 4-isopropyl-1-methylcyclohexane, hexahydrocymene, menthonaphthene. A saturated hydrocarbon and parent substance of many terpenes:



A colorless liquid, d.0.807, b.169, insoluble in water. **amino-** Menthylamine. **dihydroxy-** Terpine. **epoxy-** Cineole. **3-hydroxy-** Menthol. **m. diol.** Terpinol.

menthanol. A hydroxy derivative of menthane. **2-** Carvomenthol. **3-** Menthol.

menthanone. A keto-derivative of menthane, *e.g.*, **3-** Menthone.

menthe. A peppermint liqueur (Créme de menthe), prepared from menthol and alcohol.

menthene. $C_{10}H_{18}$ = 138.2. Δ^3-menthane. A colorless liquid, b.167, d.0.814, insoluble in water. **carvo-** Carvomenthane.

menthenol. A hydroxy-derivative of menthene. **3-** Pulegol.

menthenone. A keto-derivative of menthene, **3-$\Delta^{4(8)}$-** Pulegone; **3-$\Delta^{8(9)}$-** Isopulegone. **Δ^1-** Piperitone. **Δ^2-** Carvenone.

menthol. $C_{10}H_{20}O$ = 156.2. Peppermint camphor. 3-hydroxymenthane, menthacamphor, 1-methyl-4-isopropyl-3-hydroxy-hexahydrobenzene. A d-rotatory terpene alcohol, in many essential oils. Colorless crystals, d_{15}.0.890, m.42, b.212, slightly soluble in water, soluble in alcohol or ether. Used in perfumery, flavoring extracts, confectionery; and medicinally (externally), for headache, toothache, colds, skin diseases, and internally as an anodyne, anesthetic, and antispasmodic. **m. salicylate.** Salimenthol. **m. valerate.** Validol.

menthonaphthene. Menthane.

menthone. $C_{10}H_{18}O$ = 154.2. Δ^3-hydroxymenthene, 3-terpanone. A d-rotatory colorless liquid, d.0.896, b.207, slightly soluble in water, soluble in alcohol or ether. **levo-** Apinol.

enthyl. The monovalent radical, 3-menthanyl, $C_{10}H_{19}$—, derived from menthane by replacing the hydrogen of the third carbon atom. **m. amine.** $C_{10}H_{19}NH_2$ = 155.1. 3-aminomenthane. A colorless liquid, b.205. *carvo-* See *carvomenthylamine*. **m. borate.** $BO_3(C_{10}H_{19})_3$. Estoral. Colorless crystals, used in medicine. **m. camphorate.** A white powder, insoluble in water, soluble in alcohol or oils; used medicinally in the treatment of tuberculosis.

menyanthes. Marsh trefoil, buckbean. The dried leaves of *Menyanthes trifoliata*, a Gentianaceae. Used as an aromatic bitter.

menyanthin. $C_{33}H_{50}O_{14}$ = 670.4. Celastin. A bitter glucoside from the leaves of the buckbean; soluble in water or ether, insoluble in alcohol.

menyanthol. $C_7H_{11}O_2$ = 111.09. A split-product of menyanthin.

mepacrine. Quinacrine (q.v.).

mephitic. An obsolete term for foul, noxious, or poisonous. **m. air.** Black damp, choke damp. An obsolete name for carbon dioxide or nitrogen.

mephobarbital. Phemitone (q.v.).

merbaphen. $C_{16}H_{19}N_2O_6ClNaHg$ = 592.1. Novasurol. A mercury derivative of barbital, used as a diuretic.

mercaptal. Thioacetal. A compound formed from mercaptans and aldehydes which combine in the presence of hydrochloric acid. Thus, in general—

$$R'.CHO + 2HSR'' = H_2O + R'.CH(SR'')_2.$$

Cf. *mercaptol*.

mercaptan. (1) Ethyl mercaptan. (2) A hydrosulfide or compound containing the radical —SH. It is indicated by the *prefix* mercapto- and the *suffix* -thiol; thus CH_3SH, methanethiol*; $CH_2SH.CH_2SH$, *1.2*-ethanedithiol*.

mercaptan acid. An organic compound containing the —SH and —COOH radicals, *e.g.*, $HS.CH_2.COOH$, thioglycollic acid, or ethanethiol acid; HS.CHMe.COOH, thiolactic acid or i-propanthiol acid.

mercaptide. Metal mercaptan. A metallic derivative of mercaptans, in which the sulfur hydrogen is replaced by a metal; thus, a compound of the general type, R—SM, where R is an aryl or alkyl radical and M, a metal.

mercapto- A prefix indicating the presence of a thiol group, —SH *e.g.*, mercaptothiazole. **m. sulfothiobiazole.** Bismuthiole.

mercaptol. Mercaptans and ketones combine in the presence of acid to form mercaptols of the general type $R_2C(SR')_2$. Cf. *mercaptal*.

mercaptophenyl- A prefix indicating the presence of the $HS.C_6H_4$— radical. **m. dithiodiazolone.** $C_8H_6N_2S_3$ = 226.05. White crystals, used as a microreagent for bismuth (red precipitate). Cf. *bismuthiole*.

mercaptothiazole. The hypothetical ring compound,  .

Mercer, John. 1791–1866. An English cotton printer who developed the mercerization process in 1850; this was developed practically in 1889 by Horace Arthur Lowe. **M. process.** Mercerization.

mercerization. The treatment of cotton with 25 % NaOH, which causes it to shrink and become heavier, stronger, denser and acquire a milky luster; it will not shrink and is more easily dyed.

mercerized. Treated with caustic soda; see *mercerization*.

mercur- A prefix indicating a mercury compound. **m. ammonium.** Mercurammonium. **m. diammonium.** The bivalent radical $Hg(NH_3)_2$=. **m. diammonium chloride.** $Hg(NH_3Cl)_2$ = 305.9. An infusible, white precipitate obtained from Hg^{++} and Cl^- in the presence of NH_4^+.

mercurammonium- A prefix indicating the presence of mercury and ammonia-nitrogen in a compound. The usual type have the formula NHg_2X, where X is a halogen, and Hg_2 has replaced the H_4 of ammonium. They are yellow or brown solids, insoluble in water; as,

m. bromide	NHg_2Br
m. chloride	NHg_2Cl
m. hydroxide	NHg_2OH
m. iodide	NHg_2I
m. nitrate	NHg_2NO_3.

Cf. *mercuriammonium*.

mercuration. Mercurization.

mercurial. A drug containing mercury. **m. oil.** Grey oil.

mercurialine. A supposed alkaloid of *Mercurialis annua*, an Euphorbiaceae; probably methylamine.

mercurialis. The dried herb of *M perennis*, sometimes used medicinally for syphilis.

mercuriammonium. Mercuric ammonium. A double salt of NHg_2X with one or three molecules of NH_4X; as

(a) $NHg_2Cl + NH_4Cl \rightarrow 2HgNH_2Cl$
(b) $NHg_2Cl + 3NH_4Cl \rightarrow 2Hg(NH_2)_3Cl_2$

Cf. *mercurammonium*.

mercuric. A compound of mercury, containing the divalent Hg= atom. **m. acetate.** $Hg(C_2H_3O_2)_2$ = 318.7. White crystals, d.3.25, soluble in water or alcohol; used as a reagent, medicinally as an antisyphilitic, and as a cosmetic. **m. acetylide.** $3C_2Hg.H_2O$ = 691.8. A white powder, d.5.3, insoluble in water, and explosive. **m. amidosuccinate.** $Hg(C_4H_7N_2O_3)_2$. Colorless needles, insoluble in water, soluble in acids; used as an antisyphilitic. **m. aminophenyl arsenate.** Mercuric atoxylate.

m. ammonium chloride. $HgNH_2Cl$ = 251.8. Mercuriammonium chloride, white precipitate, ammoniated mercury. White powder, insoluble in water, soluble in ammonium carbonate solutions; is used medicinally as an antiseptic and alterant. **m. ammonium propionate.** $HgNH_2C_3H_4O_2$ = 288.6. Mercuriammonium propionate. White needles, soluble in water; used medicinally as an antisyphilitic. **m. anilinate.** $Hg(C_6H_4NH_2)_2$ = 384.3. A white, microcrystalline powder, insoluble in water; used as an antisyphilitic. **m. arsenate.** $Hg_3(AsO_4)_2$ = 879.7. A yellow powder, insoluble in water, soluble in acids; used as an antisyphilitic. **m. atoxylate.** $C_{12}H_{14}O_6N_2As_2Hg$. Mercuric-p-amino-phenylarsonate, asiphyl, aspirochyl, atoxyl mercury. A white powder, insoluble in water, used as an antisyphilitic. **m. benzoate.** $Hg(C_7H_5O_2)_2.2H_2O$ = 478.6. Colorless crystals, insoluble in water, slightly soluble in alcohol, soluble in sodium chloride or ammonium benzoate solution. Used medicinally as an antisyphilitic and in skin diseases. **m. bichromate.** $HgCr_2O_7$ = 416.5. A red, crystalline powder, insoluble in water. **m. borate.** M. pyroborate. **m. bromide.** $HgBr_2$ = 360.4. Mercury dibromide. Colorless, rhombic crystals, d.5.74, m.235, b.319, slightly soluble in water, soluble in alcohol or ether; used as an antisyphilitic. **m. cacodylate.** $Hg(Me_2AsO_2)_2$. Mercuric methyl arsenate. A white, crystalline powder, soluble in water; used in ampule medication. **m. carbolate.** M. phenolate. **m. carbonate.** $HgCO_3$ = 260.3. A white powder, insoluble in water. Known chiefly as its basic salts, $HgCO_3.2HgO$, and $HgCO_33HgO$. **m. chloride.** $HgCl_2$ = 271.5. Corrosive sublimate, sublimate, corrosive mercury chloride, mercury bichloride. White rhombic crystals which are extremely poisonous (antidote: 10 % sodium thiosulfate solution), d.5.43, m.287, b.305. Soluble in water, alcohol, or ether. Used for the preservation of wood and museum specimens, as an insecticide and exterminator of rodents and other animals, in tanning, embalming, purification of gold, photography, textile printing, etching of steel and iron, as a mordant and in dyeing furs; also medicinally, as an antiseptic and caustic; and chemically, as a reagent. **m. chloro-iodide.** $HgCl_2.HgI_2$ = 725.8. A red, crystalline powder, soluble in alcohol; used as an antisyphilitic. **m. chromate.** $HgCrO_4$ = 316.4. A yellow, crystalline powder, insoluble in water. **m. cyanide.** $Hg(CN)_2$ = 252.6. Colorless, tetragonal crystals, d.4.02, decomp. by heat, slightly soluble in water or alcohol. Used in photography and in manufacturing cyanogen; medicinally, as an antiseptic, antisyphilitic, and tonic, usually as ampoules; chemically, as a reagent for palladium. **m. diiodosalicylate.** $Hg(C_7H_3I_2O_3)_2$. A yellow, amorphous powder, insoluble in water, soluble in alcohol. **m. ethylchloride.** Colorless, lustrous scales, slowly soluble in water or alcohol; used medicinally as an antisyphilitic. **m. ferrocyanide.** $Hg_2Fe(CN)_6$ = 612.8. A brown powder, insoluble in water or alcohol. **m. fluosilicate.** $HgSiF_6.6H_2O$ = 450.76. Rhombohedral crystals. **m. fulminate.** $Hg(ONC)_2.\frac{1}{2}H_2O$ = 293.6. Colorless, rhombic crystals which explode on detonating or at 175°C, slightly soluble in water or alcohol; used as a detonator. **m. gallate.** $[C_6H_2(OH)_3COO]_2Hg$. A greenish-black powder, insoluble in water, used as an antisyphilitic. **m. halides.** The divalent halogen compounds of mercury, HgX_2. *alkyl-* A group of organic compounds of the type, RHgX, where R is an aliphatic or alkyl radical. *aryl-* A group of organic compounds of the type, RHgX, where R is an aryl or aromatic radical. **m. hydroxide.** $Hg(OH)_2$ = 234.6. White amorphous powder, insoluble in water. **m. hydroxides.** A group of organic compounds of the type, RHgOH. **m. iodate.** $Hg(IO_3)_2$ = 550.4. A white amorphous powder, insoluble in water, soluble in sodium chloride or potassium iodide solutions. **m. iodide.** HgI_2 = 454.4. *red-* Mercury biniodide. Red, tetragonal crystals, d.6.25, m.241, b.349, insoluble in water, soluble in alcohol or potassium iodide solution. Used medicinally as an alterative, antiseptic and germicide, and as an antisyphilitic in form of tablets, granules, and ampoules. *yellow-* Yellow, rhombic, crystalline powder, d.6.0, m.241, b.349, insoluble in water, soluble in iodide solutions. **m. lactate.** $Hg(C_3H_5O_3)_2$ = 378.4. A white, crystalline powder, slightly soluble in water; used as an antisyphilitic. **m. lithium iodide.** $HgI_2.2LiI$ = 722.4. Mercuricide. A yellow powder, soluble in water or alcohol; used as an antisyphilitic. **m. naphtholate.** $Hg(C_{10}H_7O)_2$ = 486.6. β-naphtholmercury, mercury naphthol. A lemon-yellow powder, insoluble in water, used as an antiseptic. **m. nitrate.** $Hg(NO_3)_2$ = 324.6. A white, hygroscopic powder, decomp. by heat, soluble in water, m.79. Used as a reagent, and medicinally, as an antisyphilitic. *basic-* (1) $2Hg(NO_3)_2.2H_2O$ = 685.29. Deliquescent colorless crystals. (2) $2Hg(OH).NO_3.H_2O$ = 577.27. (3) $Hg(NO_3)_2.2HgO.H_2O$ = 775.87. A white, unstable powder. **m. oleate.** $Hg(C_{18}H_{33}O_2)_2$ = 763.0. A yellowish or red liquid; a solution of mercuric oxide in oleic acid, insoluble in water, soluble in alcohol or ether. Used medicinally as an antiseptic and antisyphilitic. **m. oxalate.** HgC_2O_4 = 288.61. White powder insoluble in water. **m. oxide.** HgO = 216.6. *red-* Hydrargyri oxydum rubrum, red mercury oxide. Red, monoclinic prisms, d.11.14, decomp. by heat, insoluble in water, soluble in acids. Used in the manufacture of mercury salts, for paints and pigments for ship keels, in ceramics; medicinally, as a stimulant, caustic and parasiticide. *yellow-* Hydrargyri oxydum flavum, yellow precipitate. Orange-yellow, tetragonal crystals, or amorphous powder, insoluble in water, soluble in acids; used medicinally in ointments as a parasiticide. **m. oxycyanide.** $HgO.Hg(CN)_2$ = 469.2. A white, crystalline powder; soluble in water; used as an antiseptic. **m. phenolate.** $Hg(C_6H_5O)_2$ = 386.7. Mercury phenolate, m. carbolate, phenol mercury. A gray to pink powder, insoluble in water, soluble in alcohol or ether; used medicinally as an antiseptic and antisyphilitic. **m. phenylacetate.** $HgC_6H_5.C_2H_3O_2$ = 336.7. Colorless prisms, m.149, soluble in alcohol or benzene. **m. phosphate.** $Hg_3(PO_4)_2$ = 791.9. A white powder, insoluble in water. *acid-* $HgHPO_4$ = 296.3. A white or slightly yellow powder, insoluble in water, soluble in acids; used medicinally as an antisyphilitic. **m. potassium cyanide.** $HgK(CN)_3$ = 317.7. Potassium mercury cyanide. Colorless crystals, soluble in water or alcohol; used technically, in the manufacture of mirrors, and medicinally, as an antiseptic. **m. potassium**

iodide. $HgI_2.2KI$ = 786.5. Mayer's reagent. Yellow, deliquescent crystals, soluble in water; used as a reagent for alkaloids. Cf. *Toulet's* solution. **m. potassium thiosulfate.** $3Hg(S_2O_3)_2.5K_2S_2O_3$. Mercury and potassium thiosulfate. Colorless crystals, soluble in water, used as an antisyphilitic. **m. pyroborate.** HgB_4O_7 = 355.9. Mercuric tetraborate. A brown amorphous powder, insoluble in water. **m. rhodanate.** Mercuric thiocyanate. **m. salicylate.** $Hg(C_7H_5O_3)_2$ = 474.6. A white powder, insoluble in water, soluble in alkalis or salt solutions; used medicinally as an antiseptic, antisyphilitic, and alterant. **m. santonate.** $Hg(C_{15}H_{19}O_4)$ = 463.5. A colorless powder, used in medicine. **m. silicofluoride.** $HgSiF_6.2H_2O$ = 579.3. Prismatic crystals, soluble in water; used as a wound antiseptic. **m. stearate.** $Hg(C_{18}H_{35}O_2)_2$ = 767.0. Yellow, granular powder, slightly soluble in alcohol, soluble in fats and oils; used medicinally in ointments. **m. subsulfate.** $HgSO_4.2HgO$ = 729.9. Basic mercuric sulfate, turpeth mineral, Queen's yellow. A lemon-yellow, heavy powder, insoluble in water, soluble in acids. **m. succinate.** $Hg(C_4H_4O_4)$ = 316.6. Colorless crystals, insoluble in water, soluble in salt solutions. *imido-* M. succinimide. **m. succinimide.** $Hg[C_2H_4(CO)_2N]_2$ = 372.5. M. imido-succinate. A white crystalline powder, soluble in water; used as an antiseptic and antisyphilitic. **m. sulfate.** $HgSO_4$ = 296.7. Mercury bisulfate, mercury persulfate. A white or yellow powder, d.6.47, decomp. by heat, slightly soluble in water. Used in the manufacture of calomel, in the extraction of gold and silver, in electric batteries, and medicinally, as an antisyphilitic. *basic-* M. subsulfate. *hydrous-* (a) $HgSO_4.2H_2O$ = 332.71. (Erroneously called "basic.") Yellowish crystals, d. 6.44, slightly soluble in water; used similarly to the anhydrous salt. (b) $3HgO.SO_3.4H_2O$ = 962.10. A yellow powder. **m. sulfide.** HgS = 232.7. *black-* Black mercury sulfide, metacinnabarite. Amorphous, black powder, d.7.7, insoluble in water or alcohol, soluble in sulfide solutions; used as a pigment. *red-* Red mercury sulfide, artificial cinnabar, vermilion, cinnabar. Rhombohedric, scarlet red, crystalline powder, d.8.09, subliming at 446°C, insoluble in water or alcohol; used technically as a pigment and for fumigation. **m. sulfite.** $HgSO_3$ = 280.6. A white powder which becomes pink with age, slightly soluble in water. **m. sulfocyanide, m. thiocyanate.** $Hg(CNS)_2$ = 316.6. M. rhodanate, m. rhodanide, m. sulfocyanate. A white powder, usually pressed into sticks, decomp. by heat. When ignited it glows and forms a voluminous, cohesive and light ash (Pharaoh's serpent, q.v.), insoluble in water or alcohol, soluble in chloride or cyanide solutions; used in photography. **m. urate.** $HgC_5H_2O_3N_4$ = 366.6. A yellowish powder, insoluble in water. **m. xanthates.** A group of organic compounds of the type, R.HgS.CS.OR, in which R is either an aliphatic or aromatic radical.

mercuricide. Mercuric lithium iodide.

mercurides. An organic compound of divalent mercury, R_2Hg, where R is a hydrocarbon radical. See *mercury methide*, and *ethide*.

mercurification. Amalgamation. Cf. *mercurization.*

mercurify. Amalgamate.

mercurimetry. The determination of a substance by precipitating it with a mercury salt and determining the mercury in the precipitate.

mercurindene. C_8H_6Hg = 302.6. The ring-system, 
mercurio-vegetal. Manaca.

mercurius. Mercury. **m. praecipitatus.** The "red precipitate" (HgO) of the Latin alchemist Geber. **m. vitae.** Antimony oxychloride.

mercurization. The addition of mercury to an organic compound.

mercuroammonium. Mercurous ammonium. A double salt of the type $HgNH_3X$. **m. chloride.** $HgNH_3Cl$, a black powder.

mercurochrome. $C_{20}H_8O_6Na_2Br_2Hg$. Disodium-dibromo-hydroxy-mercury-fluorescein. An iridescent, green, crystalline powder, soluble in water producing a deep red color. Its 2% solution is used as a germicide and genito-urinary antiseptic, and as a less irritating household antiseptic than tincture of iodine. Cf. *apagallin.*

mercurol. Mercury nucleinate. A compound of mercury and nucleic acid made from yeast (20% Hg). A brownish-white powder, soluble in water, insoluble in alcohol; used medicinally as an astringent, antisyphilitic, and antipyretic.

mercurophen. Sodium hydroxy mercury-o-nitrophenolate. A brick red powder, soluble in water, used as germicide.

mercurous. A compound of monovalent mercury, Hg—, usually represented as Hg_2X_2, where X is a monovalent acid radical. **m. acetate.** $HgC_2H_3O_2$ = 259.6. Colorless, crystalline powder, slightly soluble in water; used medicinally as an antisyphilitic. **m. arsenite.** Hg_3AsO_3 = 724.8. A brownish-white powder, insoluble in water, soluble in acids; used as a parasiticide. **m. benzoate.** $HgC_7H_5O_2$ = 321.3. A colorless, crystalline powder, insoluble in water; used as an antiseptic. **m. bitartrate.** $HgHC_4H_4O_6$ = 349.3. A colorless, crystalline powder, insoluble in water. **m. bromide.** HgBr = 280.5. Yellow, tetragonal crystals, d.7.31, sublime at 350°C, insoluble in water, soluble in chloride solutions; used as a substitute for calomel. **m. carbonate.** Hg_2CO_3 = 461.2. A yellow powder, slowly decomp., insoluble in water. **m. chloride.** HgCl = 236.1. Hydrargyri chloridum mite, calomel, mercury monochloride, mild mercury chloride, mercury subchloride, mercury protochloride; native as horn quicksilver. Colorless, rhombic, or tetragonal, crystalline powder, d.7.1, sublimes at 303°C, insoluble in water. Used as a reagent; medicinally, as a cathartic, intestinal antiseptic, and alterative; in pyrotechnics, for green fires; in ceramics, for gold colors. **m. chromate.** Hg_2CrO_4 = 517.2. A red powder, insoluble in water, decomp. by heat. **m. citrate.** $Hg_3C_6H_5O_7$ = 790.8. A colorless powder, slightly soluble in water. **m. diammonium acetate.** $Hg(NH_2)_2(C_2H_3O_2)_2.H_2O$ = 370.74. White rectangular plates, very soluble in water. **m. fluosilicate.** $Hg_2SiF_6.2H_2O$ = 579.29. Colorless prisms. **m. formate.** $H.COOHg$ = 245.62. White glistening scales, slightly soluble in water. **m. iodide.** HgI = 327.5. Yellow mercury iodide, hydrargyri iodidum flavum, mercury protiodide, mercury monoiodide. Yellowish-green, tetragonal, crystalline powder, d.7.7, m.290, b.310, insoluble in water, alcohol or,

ether; used medicinally as an alterative and antisyphilitic. **m. iodobenzene-p-sulfonate.** Anogen. A yellow, crystalline powder, insoluble in water or oils; used suspended in oil as an antisyphilitic. **m. lactate.** $HgC_3H_5O_3$ = 289.3. A white, crystalline powder, slightly soluble in water; used as an antisyphilitic. **m. nitrate.** $HgNO_3.2H_2O$ = 298.6. Colorless monoclinic crystals, d.4.78, decomp. by heat, soluble in water. Used as a reagent, and as an antiseptic, caustic, and antisyphilitic. **m. oxalate.** HgC_2O_4 = 489.22. A white powder, insoluble in water. **m. oxide.** Hg_2O = 417.2. A black powder, d.9.8, insoluble in water. *Hahnemann's-* $Hg_2O.Hg_2NH_2NO_3$ = 896.4. Black precipitate, mercurius solubilis, Hahnemann's mercury. A black or gray powder, insoluble in water or alcohol, soluble in acetic acid; used as an antisyphilitic and in ointments. **m. phosphate.** Hg_3PO_4 = 681.2. A colorless powder, insoluble in water. **m. potassium tartrate.** $HgKC_4H_4O_6$ = 387.74. White crystals, insoluble in water. **m. protoxide.** Black m. oxide. Native as montroydite. **m. santonate.** $HgC_{15}H_{19}O_4$ = 463.5. A white powder, insoluble in water, slightly soluble in alcohol. **m. sulfate.** Hg_2SO_4 = 497.3. White, monoclinic crystals, d.7.56, slightly soluble in water, decomp. by heat; used for batteries and standard cells. **m. sulfide.** Hg_2S = 433.3. A black powder, insoluble in water. **m. tannate.** $Hg_2OH(C_{14}H_9O_9)_3$. Hydrargotin. A gray powder, used as an antisyphilitic. **m. tartrate.** $Hg_2C_4H_4O_6$ = 549.25. Yellowish white crystalline powder, insoluble in water. *acid-* $HgHC_4H_4O_6$ = 349.65. M. bitartrate. White crystals, insoluble in water.

mercuroxyammonium. A double salt of the type $NH_2Hg_2O.X$. *E.g.*, m. chloride $NH_2Hg_2O.Cl$, and **m. hydroxide** $NH_2Hg_2O.OH$.

mercury. Hg = 200.61. Hydrargyrum, Quicksilver, mercurius, liquid silver. A liquid metal and element, atomic number 80. A silver-white, metallic liquid, d.13.595, freezing at −38.8, b.357.2, insoluble in water, alcohol, or ether, soluble in nitric acid. Mercury occurs in nature chiefly as sulfide (cinnabar). It forms two series of compounds: mercurous (valency 1), and mercuric (valency 2). Used as a catalyst in Kjeldahl nitrogen determination; for filling gas analysis apparatus; as a catalyst; in electric cells; in the manufacture of mercury salts, the filling of thermometers, barometers, and mercury vapor lamps; in metallurgy and dentistry for amalgams with gold and silver; for electric rectifiers, and vacuum tube lights; for silvering mirrors; and in the manufacture of explosives. **ammoniated-** $HgNH_2Cl$ = 251.8. Sal alembroth, white precipitate, hydrargyrum ammoniatum, mercury and ammonium chloride. A white powder, insoluble in water; used medicinally as an antiparasitic. **biphenyl-** Mercury biphenyl. **repurified-** Redistilled mercury used for dental amalgams or for electrodes. **soluble-** See *soluble*. **vegetable-** Manacine.

m. acetate, m. acetylide, etc. See *mercuric* and *mercurous*. **m. arc.** An electric arc between mercury electrodes. **m. alloys.** Mixtures of mercury with other metals. If liquid or semi-liquid they are termed amalgams. **m. amalgams.** See *m. alloys*, and *amalgams*. **m. alkylides.** An organic mercury compound of the general type, HgR_2, in which R is a monovalent alkyl radical, *e.g.*, mercury ethide, mercury methide, etc. **m. arylides.** An organic compound of mercury and an aryl radical, *e.g.*, mercury phenide. **m. bichloride.** Mercuric chloride. **m. biiodide.** Mercuric iodide. **m. biphenyl.** $Hg(C_6H_4Ph)_2$ = 506.75. Colorless crystals, m.216. **m. boiler.** A power plant using mercury vapor instead of steam, said to be more efficient. **m. cathode.** (1) See dropping *electrode*. (2) The positive electrode in a rectifier or a mercury vacuum tube lamp. Cf. *polarograph*. **m. cathode cup.** A glass cylinder with fused-in platinum electrode; used in the electrolytic determination of mercury. **m. chloride.** See *mercuric chloride* (sublimate), and *mercurous chloride* (calomel). *corrosive-* Mercuric chloride. *mild-* Mercurous chloride. **(ethyl-)*** C_2H_5HgCl = 265.11. Ethylmercuric chloride. White iridescent crystals, d.3.5, m.-192.5. **(methyl-)*** CH_3HgCl = 251.09. Silvery crystals, d.4.063, m.170. **(phenyl-)*** Chloromercurybenzene, C_6H_5HgCl = 313.11. White leaflets, m.251. **(*p*-tolyl-)*** *p*-Chloromercury toluene, $Me.C_6H_4HgCl$ = 327.12. Silky crystals, m.233, insoluble in water. **m. cup.** A small tray containing mercury into which the ends of two electric wires are dipped in order to make contact. The glass bulb of a thermometer containing mercury. **m. dibenzyl.** $Hg(C_7H_7)_2$ = 382.72. Long needles, soluble in alcohol or ether. **m. dibutyl.** $Hg(C_4H_9)_2$ = 314.75. Colorless liquid, d.1.835, b.-205. **m. diethyl.** M. ethide. **m. dimethyl.** M. methide. **m. dinaphthyl.** M. naphthide. **m. diphenyl.** (1) M. phenide. (2) M. biphenyl. **m. dipropyl.** $Hg(C_3H_7)_2$ = 286.72. Colorless liquid, d.2.124, b.190, insoluble in water. **m. ditolyl.** $Hg(C_7H_7)_2$ = 382.72. White powder, m.107, b.219, soluble in hot benzene. **m. dropping electrode.** See *electrode*. **m. ethide.** $HgEt_2$ = 258.7. M. diethyl. A colorless liquid, d.2.44, b.159, insoluble in water, slightly soluble in alcohol. **m. furnace.** A retort for distilling mercury from cinnabar. **m. gatherer.** A stirrer for collecting mercury from amalgams and rock material. **m. helide.** The supposed compound $HgHe_{10}$. **m. mass.** See *mass*. **m. mercaptide.** $Hg(SEt)_2$ = 322.8. Colorless leaflets, m.86, insoluble in water. $EtSHgCl$ also exists. **m. methide.** $HgMe_2$ = 230.66. M. dimethyl. A colorless liquid, d.3.069, b.96, insoluble in water, soluble in alcohol or ether. **m. minerals.** The chief ores of mercury are native mercury and its sulfide:

native mercury	Hg
cinnabar	HgS
tiemannite	HgSe
coloradoite	HgTe
onofrite	Hg(S,Se)
lehrbachite	HgPbSe
livingstonite	$HgSb_4O_7$
montroydite	HgO
calomel	HgCl
terlingarite	Hg_2ClO
eglestonite	Hg_4Cl_2O

m. naphthide. $Hg(C_{10}H_7)_2$ = 454.71. Dinaphthylmercury. A white powder, d.1.921, m.188. **m. nitrate.** See *mercuric* and *mercurous*. **m. nucleinate.** Mercurol. **m. ointment.** Blue *mass*. **m. ore.** (1) Native mercury. (2) Cinnabar. **m. oxide.** See *m. peroxide, mercuric*, and *mercurous oxide*. (*black-*) Mercurous oxide. (*red-*) Mercuric oxide. (*yellow*)- Mercuric oxide. **m. periodide.** HgI_4 = 962.20. A

brown unstable powder. **m. peroxide.** HgO_2 = 232.61. An amorphous, brick-red powder, fairly stable in the absence of water. **m. phenide.** $HgPh_2$ = 354.4. A white powder, d.2.3, m.120, insoluble in water. **m. phosphate.** See *mercuric, mercurous.* **m. potassium iodide solution.** See *Toulet's solution.* **m. protiodide.** Mercurous iodide. **m. protochloride.** Mercurous chloride. **m. protoxide.** Mercurous oxide. **m. pump.** Sprengel pump. **m. rhodanate, m. rhodanide.** Mercuric thiocyanate. **m. saccharate.** A mixture of 1 pt. Hg and 2 pts. sugar; used as a vermifuge. **m. subchloride.** Mercurous chloride. **m. subsulfate.** Mercuric subsulfate. **m. sulfuret.** See *mercuric* or *mercurous sulfide.* (*black-*) Mercurous sulfide. (*red-*) Mercuric sulfide. **m. thiocyanate reagent.** A solution of 30 gm. mercuric chloride and 33 gm. ammonium thiocyanate in 50 cc. water. It gives crystals of characteristic shape with copper, cobalt and zinc solutions. **m. trap.** M. well. A box used in amalgamators to prevent the escape of mercury. **m. vapor lamp.** An evacuated glass tube containing some mercury which is vaporized by heat and gives an intense blue light on passage of an electric discharge; used in photography and as an ultra-violet light source.

mer-, mere-, meri- A prefix derived from the Greek, indicating a "part."

mergal. A mixture of one part mercuric cholate and two parts albumin tannate; used as an antisyphylitic.

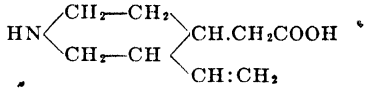
meridian. A geographical unit equal to 4 quadrants or 40 million meters.

meriquinone. A compound whose electronic constellation resembles that of a quinone but which contains no oxygen; as, *Wurster's red.*

merit number. A numerical expression of the quality of a steel. Merit number = ultimate strength (in pds. per in.^{2}) × elongation (in inches). For the best and strongest manganese steel it is 7 millions; for the next strongest (nickel) steel, 2 millions.

merochrome. A chromo-isomeric crystal consisting of two isomeric forms.

meroquinene. $C_9H_{15}O_2N$ = 169.5. β-vinylpiperidine acetic acid,



A split-product of quinine.

merotropy. Desmotropy. Cf. *tautomerism.*

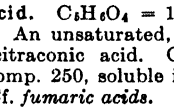
merron. Proton.

merthiolate. $C_2H_5.HgS.C_6H_4.COONa$. Sodium ethyl mercurithiosalicylate. Colorless crystals, soluble in water, used as germicide.

merwinite. $Ca_3Mg(SiO_4)_2$. A calcium magnesium orthosilicate in refractory bricks and blast furnace slags, m. (approx.) 1590. It is formed when the mixed oxides of calcium, magnesium and silica are heated at 1500°C.

mes-, meso- A prefix derived from the Greek "middle" or "intermediate."

mesaconic acid. $C_5H_6O_4$ = 130.1. Methylfumaric acid. An unsaturated, dibasic acid and isomer of citraconic acid. Colorless needles, m. 202, decomp. 250, soluble in water, alcohol, or ether. Cf. *fumaric acids.*



mescal. An intoxicant spirit distilled from pulque, the fermented juice of various Mexican species of *Agave.*

mescal buttons. The dried buds or young leaves of *Anhalonium lewinii* (q.v.), used as cardiac tonic and narcotic. Cf. *lophophorine, pellotine.*

mescaline. $C_{11}H_{17}O_3N$ = 211.2. *3.4.5*-Trimethoxy-*1*-β-aminoethyl benzene. (*3.4.5*-)MeO.-$C_6H_2.CH_2CH_2NH_2$(*1*). An alkaloid from *Anhalonium lewinii,* a cactus species of Central America.

mesembrene. $C_{28}H_{56}$ = 392.45. An unsaturated hydrocarbon from *Mesembryanthemum expansum,* a Ficoidaceae (Aizoaceae).

mesembrine. $C_{16}H_{19}NO_4$ = 289.15. An alkaloid from *Mesembrianthemum tortuosum,* the kougoed or channa, an Aizoaceae of South Africa.

mesh. The number of openings per unit area in a screen or sieve. See *particles.*

mesicerin. $C_9H_{12}O_3$ = 168.1. Mesitylene glycerol, $C_6H_3(CH_2OH)_3$. A colorless, viscous liquid.

mesidine. $C_9H_{13}N$ = 135.1. A homolog of aniline, *2.4.6*-trimethyl aniline. A colorless liquid, d.0.963, b.233.

mesitene lactone. Dimethyl *coumalin.*

mesitic acid. Uvitic acid.

mesitilol. Mesitylene.

mesitine spar. Mesitite.

mesitite. $2MgCO_3.FeCO_3$. Mesitine spar. A native magnesium and iron carbonate.

mesitol. $C_9H_{12}O$ = 136.1. Mesitylene alcohol, 2.4.6-trimethylphenol, $Me_3C_6H_2OH$. Colorless crystals, m.69, b.220.

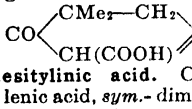
mesitonic acid. $C_7H_{12}O_3$ = 114.09. Dimethyl levulinic acid, α.β-dimethyl-γ-keto pentoic acid, Me.CO.CHMe.CHMe.COOH.

mesityl. The radical $C_6H_3Me_2CH_2$— from mesitylene. **m. alcohol.** Mesitol. **m. chloride.** Chloromesityl. **m. oxide.** $C_6H_{10}O$ = 98.11. 4-methyl-Δ^3-2-pentenone, $MeCO.CH:CMe_2$. A colorless liquid, d.0.858, b.131.

mesitylene. C_9H_{12} = 120.2. Mesitylol, *sym.*- or 1.3.5-trimethylbenzene, $C_6H_3Me_3$. A colorless liquid, d.0.86, m. −57.5, b.164; insoluble in water, soluble in alcohol or ether. **chloro-** Chloromesitylene. **dihydroxy-** Mesorcinol. **hexahydro-** *1,3,5*-Hexahydrocumene. **hydroxy-** Mesitol. **m. alcohol.** Mesitol. **m. carboxylic acid.** *2.4.6*-Trimethylbenzoic acid. **m. glycerol.** Mesicerin. **m. lactone.** Dimethyl*coumalin.*

mesitylenic acid. Mesitylinic acid.

mesitylic acid. $C_9H_{13}O_3$ = 169.1. trimethyl glutaric lactam. The pentacyclic compound,



mesitylinic acid. $C_9H_{10}O_2$ = 150.13. Mesitylenic acid, *sym.*- dimethylbenzoic acid, $Me_2C_6H_3$-COOH. White, monoclinic crystals, m.166, slightly soluble in water, readily soluble in alcohol or ether. **hydroxy-** See *phenol acids.*

mesitylol. Mesitylene.

mesityloxide. See *mesityl.*

meso- A prefix, indicating between.

meso-form. Mesomer. An optically-inactive isomer containing asymmetric carbon atoms with internal compensation of the optical rotation; one C-atom is dextrorotatory, the other levorotatory, thus: —C(*d*-)—C(*l*-)—

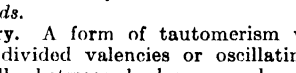
Cf. *racemic* mixture.

meso-paraffins. See *paraffin.*

meso-position. (1) That of a substituting radical that is attached to a carbon atom situated between the two hetero-atoms in a ring; it is indicated by the Greek letter μ. (2) The *5-* or *10-*position in the anthracene ring. (3) The *10-*position in phenanthridine.

mesocolloid. Particles from 250 to 2500 Å.U. long, and consisting of 100 to 1000 molecules. They are midway between *hemicolloids* and *eucolloids.*

mesohydry. A form of tautomerism which assumes divided valencies or oscillating bonds; especially between hydrogen and some other atoms;  , where the dotted line indicates the oscillating bond; as in:



mesomer. Meso-form.

mesomeric. Pertaining to the meso-form.

mesomerism. (1) Desmotropism. (2) Resonance.

mesomethylene carbon. The 7th carbon atom in the camphane or menthane structure, which forms a bridge inside the ring system.

mesomorphic. The anisotropic liquid crystal shape, intermediate in properties between the true liquid and the crystal states.

mesonin. A protein constituent of wheat gluten in which it occurs to the extent of 25 %; separates at low temperature in presence of acetic acid.

mesorcin. Mesorcinol.

mesorcinol. $C_9H_{12}O_2$ = 152.1. A homolog of resorcinol: Mesorcin, 1.3-dioxy-2.4.6-trimethylbenzene, 2.3-dioxymesitylene, or 2.4.6-trimethylresorcinol. Colorless, lustrous scales, m.150, b.275, insoluble in water.

mesotan. $C_9H_{10}O_4$ = 182.1. Ericin, methyloxymethylsalicylate, $C_6H_4(OH)COOCH_2OMe$. A yellow liquid, d.1.2, slightly soluble in water; soluble in alcohol, ether, or chloroform; used medicinally as an anodyne.

mesotartaric acid. $C_4H_6O_6.H_2O$ = 168.1. Colorless scales, d.1.66, m.140, soluble in water. See *tartaric acid.*

mesothorium. MsTh: A radioactive isotope of radium formed from thorium (see *radioactive elements*). It is produced technically from thorium minerals; used, on account of its radioactivity, in luminous pigments, and medicinally, for its radium emanations. Weight for weight it is 250 times as active as radium.

m. 1. $MsTh_1$. An isotope of element No. 88, atomic weight 228, average life of 9.7 years.

m. 2. $MsTh_2$. An isotope of element 89, atomic weight 228, average life of 8.84 hours.

m. mud. Barium carbonate containing m. and radium carbonates, used as source of m.

mesotomy. The separation of optically-inactive isomers into equal parts of dextro- and levorotatory compounds. Cf. *inversion, resolution.*

meson. mesotron. Heavy electron.

mesoxalate. A salt of mesoxalic acid.

mesoxalic acid. $C_3H_4O_6$ = 136.1. Propan-dioldiacid, dioxymalonic acid, oxomalonic acid, oxopropanedioic acid*. A dibasic, dihydroxyacid: $COOH.C(OH)_2.COOH$. Hygroscopic, colorless needles, m.120, souble in water, alcohol, or ether. **anhydrous-** Oxymalonic acid. The simplest dibasic keto-acid: $COOH.CO.COOH$, from which the mesoxalyl radical is derived.

mesoxalyl. A bivalent radical,  , derived from anhydrous mesoxalic acid.

mesoxalyl urea. Alloxan.

mesozoic. An era of geologic (q.v.) time, which followed the paleozoic and preceded the cenozoic era.

mesquite gum. A dark brown resin obtained from *Prosopis juliflora,* a Leguminosae of New Mexico and Texas. It resembles gum arabic.

met-, meta- A prefix derived from the Greek (beyond, over, or after) and indicating: (1) The 1.3-position of benzene; cf. *ortho-, para.* (2) A change, exchange, or transformation, as in petrology; a mineral which has undergone metamorphosis. (3) A polymeric compound, *e.g.,* metaldehyde. (4) A less hydrous acid, *e.g.,* metaphosphoric acid. (5) Any derivative of a complex compound, *e.g.,* a metaprotein.

metaacetaldehyde. Metaldehyde.

metaacetone. Diethylketone.

metaaluminates. Aluminates.

metaarsenate. A salt of the type $MAsO_3$.

metaarsenic acid. See *arsenic acid.*

metaarsenite. A salt of the type $MAsO_2$.

metabolic. Pertaining to metabolism.

metabolism. The resultant of chemical reactions occurring in a living cell or organism, by which food is transformed into living protoplasm, reserve materials stored up, and waste materials eliminated. **analytic-** Catabolism, or destructive metabolism. The reduction of complex into simpler compounds, as carbohydrates to glucose, proteins to aminoacids. **basal-** The energy metabolism of an individual at rest. **constructive-** Anabolism, or synthetic metabolism. The processes which build the more complex from the simpler compound, as the construction of new protoplasm and tissues from absorbed digestive products. **destructive-** Analytic *metabolism.* **energy-** The heat liberated by a living organism. **synthetic-** Constructive *metabolism.*

metaborate. A salt of the type MBO_2.

metaboric acid. See *boric acid.*

metacasein. An intermediate protein formed in the digestion of caseinogen to casein by the pancreatic juice.

metacellulose. An isomer of cellulose, soluble in concentrated sulfuric acid, insoluble in cuprammonia. It occurs in fungi and lichens.

metacenter. The center of gravity of that portion of a floating body which is not submerged. For stable flotation it should be as high as possible above the center of gravity of the body.

metacetaldehyde. Metaldehyde.

metacetin. Methacetin.

metacetone. Diethylketone.

metacetonic acid. Propionic acid.

metachemistry. See *chemistry.*

metachromatic. The property of certain substances of appearing in different colors according to the wavelength of the light in which they are viewed.

metacinnabarite. HgS. A native, black mercuric sulfide.

metacrolein. $(C_3H_4O)_3$ = 168.1. A derivative of acrolein. Colorless crystals, m.45, b.170.

metacompound. A derivative of benzene obtained by substitution of the first and third

hydrogen atoms. (See under the respective compounds.)

metacresol. See *cresol.* **m. purple.** Cresol purple. **m. sulfon phthalein.** A pH indicator, changing at pH 2 from red (acid) to yellow (alkaline); and at pH 8.5 from yellow (acid) to purple (alkaline).

metadiazine. Pyrimidine.

metadyne. An electric machine utilising the principles of both the dynamo and electric motor to produce rapid acceleration and braking.

metaelement. A hypothetical substance, intermediate between an element and protyl.

metafiltration. Edge-filtration through superimposed metallic strips with bevelled edges, which thus involves a change from coarse filtration (due to the strips themselves) to fine filtration (due to the filter bed formed in their interstices).

metaformaldehyde. Trioxymethylene.

metafuel. A tablet-form of metacetaldehyde, used as a solid substitute for methylated spirits in alcohol lamps.

metaiodate. A salt of the type MIO_3.

metaiodic acid. See *iodic acid.*

metaisocymophenol. Carvacrol.

metaisomerism. A form of isomerism (q.v.) due to the shifting of a double bond; as, in sterols.

metakliny. An intramolecular transference of groups, as the pinacone-pinacoline rearrangement (*pinacole conversion*).

metal. (1) An electropositive chemical element characterized by ductility, malleability, luster, and conductivity of heat and electricity, which can replace the hydrogen of an acid and forms bases with the hydroxyl radical. Cf. *nonmetal, periodic system.* (2) An alloy. **alkaline-** The elements of the first group in the periodic table. **alkaline earth-** The elements of the second group of the periodic table: Mg, Ca, etc. **basic-** Base metal. A metal which is readily oxidized, *e.g.*, iron in comparison with the noble metals. **earth-** The elements of the third group of the periodic system: Al, etc. **fine-** White-. **fusible-** A metal or alloy of relatively low melting point, *e.g.*, Na, Pb, Sn. **heavy-** A metal with a density above 4. They are located in the lower half of the new periodic table, q.v. **light-** Any metal with a density below 4. They are located in the right upper part of the new periodic table. **noble-** A metal which is not readily oxidized or dissolved in acid, *e.g.*, members of the gold and platinum families of the periodic table. **primary-** A m. used for the first time. Cf. *secondary m.* **rare-** An element which occurs only in small quantities, *e.g.*, Os, Ir, V, W. **rare earth-** The elements of the third long period, from at. no. 57 to 72. **respiratory-** The metals: iron, manganese, copper and vanadium. **secondary-** A m. recovered from waste and scrap. **type-** See *type.* **virgin-** Primary-. **white-** (1) Fine m. The almost pure cuprous sulfide obtained in the Welsh process for smelting copper. (2) Alloys containing large proportions of Pb or Sn; *e.g.*, plumber's solder, pewter, type m., and certain bearing m., and fusible alloys.

m. bath. A fusible metal, as lead or tin, which can be used instead of a steam or sand bath to obtain a higher temperature. **m. compounds.** Intermetallic compounds, usually present in alloys.

metalammine. Metal ammonia compound, ammino-compounds. An ammine (q.v.) of a metal.

metalammonia compound. Metalammine.

metalbumin. Paralbumin. A protein from ovarian cysts.

metalceramics. Powder metallurgy.

metaldehyde. (1) $(C_2H_4O)_3$ = 132.2. Metacetaldehyde. Colorless tetragonal crystals or needles, sublime 112, insoluble in water, soluble in alcohol or ether; used medicinally as a sedative or hypnotic. (2) $(C_2H_4O)_4$ = 176.12. A polymer of acetaldehyde, b.150. Cf. *aldol, paraldehyde.*

metalepsis. A term introduced by Dumas in 1834, to indicate a substitution.

metalepsy. Substitution.

metalignitious. Non-caking; as, of coals.

metallic. Pertaining to metals in their uncombined forms. **m. carbonyls.** A group of compounds of carbon monoxide with metals, such as cobalt carbonyl $Co(CO)_4$, nickel carbonyl $Ni(CO)_4$. **m. luster.** The more or less mirror-like and bright surface of compact masses, usually metals or minerals. **m. nitroxyls.** A group of compounds of nitrogen peroxide with metals, *e.g.*, cuprous nitroxyl, $Cu_2(NO_2)$. **m. oxide.** An oxide of a metal. **m. poison.** A poisonous metal salt, as distinguished from vegetable and other poisons. **m. soap.** See *soap.* **m. sulfides.** A sulfide of a metal, especially those occurring in nature, as iron sulfide, zinc sulfide.

metalliferous. Describing an ore which contains a metal.

metallify. (1) To convert into a metal. (2) To extract a metal from its ore.

metalline. Resembling a metal.

metallization. A process by which a surface is coated with a metal.

metallochrome. A tint imparted to metal surfaces by metallic salts.

metallography. (1) The science of metals, and of their ores, production, properties, and uses. (2) The microscopic study of the etched surface of metals and alloys and its interpretation. Cf. *mineralography.* (3) The modern m., which relates structure of metals and alloys to their properties. Cf. *crystallography, phase rule, diagram.*

metalloid. (1) A non-metal (French usage). (2) Having the physical properties of metals and the chemical properties of non-metals, *e.g.*, As, Sb, Si, Bi.

metallurgy. The science and art of preparing metals from their ores: smelting, amalgamation, electrolytic separation, etc. Cf. *siderurgy.* **electro-** The preparation of metals by electrical means. **hydro-** The preparation of metals by leaching processes. **powder-** The working of metals in the state of compressed powders, *e.g.*, as obtained by reducing the corresponding oxides. Metals of very high melting point (*e.g.*, tungsten) may thus be formed nto solid masses by heat and pressure, and can then be forged or drawn into wire. **pyro-** The preparation of metals by smelting, roasting, or furnace methods.

metalorganic. Pertaining to a metal in organic combination. **m. compounds.** Organometallic c. A compound of organic radicals with a metal, R_xM; they are designated by the name of the radical as prefix to the metal, *e.g.*, dimethyl zinc, methylmagnesium chloride.

metamerie. A term whose meaning has changed repeatedly in the history of chemistry; today it means *metamerism.*

metamerism. Isomerism between two compounds which contain the same number and kind of atoms, each having the same valency but the radicals in different positions. Hence they produce compounds with different properties: as,

$CH_3.CH_2.CH_2.CO.H$ and $CH_3.CH_2.CO.CH_3$
(an aldehyde) (a ketone)

Cf. *isomery.*

metamers. Metameric compounds. A set of substances which exhibit metamerism, q.v.

metamorphism. In geology, a change in the texture and composition of a rock due to the external agencies of heat and cold, wet and drought, etc.

metamorphosis. (1) In biology, a change of form or structure, as during the embryonic development of an organism. (2) In geology, a change in the crystalline structure of a mineral. **thermo-** Thermometamorphism.

metandren. A trade name for methyltestosterone.

metanil yellow. Metaniline yellow, sodium phenylamidobenzene metasulfonate. A yellow aniline dye for wool or paper; also used in bacteriology for counterstaining tissues; and as an indicator, changing at pH 2.5 from red (acid) to yellow (alkaline).

metanilic acid. $C_6H_7O_3NS.2H_2O$ = 209.19. m-Aminobenzene sulfonic acid, aniline-*m*-sulfonic acid, $NH_2.C_6H_4.HSO_3$. An intermediate in dyestuff manufacture, decomp. 280.

metaniline yellow. Metanil yellow.

metantimonate. A salt of the type $MSbO_3$.

metantimonic acid. The monobasic acid $HSbO_3$, from which the metantimonates are derived.

metapeptone. A digestive product of peptone.

metaperiodic acid. Periodic acid.

metaphen. $CH_3.C_6H_2.ONO_2Hg$ = 783.0. The anhydride of 4-nitro-5-hydroxy mercury-*o*-cresol. A yellow powder, insoluble in water; used as a germicide and antiseptic.

metaphenylene. The bivalent radical, $C_6H_4{=}$, derived from benzene in which substitution takes place in the *1-* and *3*-positions. **m. diamine.** $C_6H_4(NH_2)_2$ = 108.1. Phenylenediamine, 1.3-diaminobenzene. **m. diamine hydrochloride.** $C_6H_4(NH_2)_2.2HCl$ = 181.0. Metadiaminobenzene hydrochloride. White crystals, which are soluble in water. Used as a reagent for the detection of nitrites in water.

metaphosphate. A salt of the type MPO_3. See *phosphates.*

metaphosphinic acid. (1) A group of nitrogen-phosphor acids of the general type $[PN(OH)_2]_n$. (2) $PN(OH)_2$. **hepta-** $7PN(OH)_2.H_2O$. **tetra-** $4PN(OH)_2.2H_2O$.

metaphosphoric acid. The monobasic acid, HPO_3. See *phosphoric acids.*

metaposition. The *1-* and *3*-positions in the benzene ring.

metaprotein. A hydrolytic split-product of proteins, soluble in either weak acids or alkalis, insoluble in water.

metargon. An isotope of argon, at. wt. 38.

metarsenic acid. Metaarsenic acid.

metartrose. $C_{315}H_{504}O_{106}N_{90}S$. A product obtained on digestion of the proteins of wheat.

metasilicic acid. The dibasic acid H_2SiO_3, derived from silicic acid.

metasomatism. The natural enrichment of ores by chemical reactions with external substances.

metasomatosis. A chemical alteration of a mineral, by which a new mineral is formed.

metasome. An individual mineral which has developed within another mineral.

metastability. An intermediate condition between stable and unstable.

metastable. An unstable condition which changes readily, either to a more stable or to a less stable condition. **m. electron.** An electron moving in an excited orbit. **m. phase.** The existence of a substance as a solid, liquid, or vapor under conditions in which it is normally unstable in that state.

metastannate. A salt of the type $M_2Sn_5O_{11}$.

metastannic acid. See *stannic acid.*

metastasic electron. (1) An electron which transfers from one atom to another. (2) An electron which changes its position within the atom during a radioactive change; *e.g.*, changes from one shell to another.

metastasis. The alpha-change in radioactive disintegration, during which an α-particle is thrown off and two electrons pass from the valence shell into inner orbits of the atom.

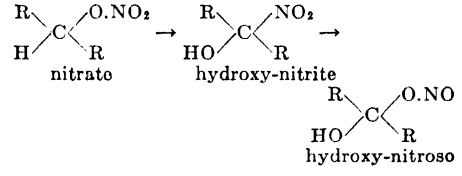
metastructure. A structure having one or more dimensions between that of the molecule and the smallest structure visible microscopically; cf. *colloids, micelle, mesocolloid.*

metastyrene. $(C_8H_8)_x$ = $(104.10)_x$. Metastyrolene. A fatty liquid, d.1.054, b.320, (decomp.) insoluble in water or alcohol, soluble in ether.

metastyrolene. Metastyrene.

metasulfite. Pyrosulfite. A salt of the acid $H_2S_2O_5$ (see *sulfur* acids); only a few are known.

metatenomeric change. The irreversible tautomeric transformation of nitrogen compounds; as,



metatenomery. An irreversible rearrangement of the atoms in a nitrogen compound.

metathesis. A chemical reaction (as, neutralization) in which there is an exchange of elements or radicals according to the general equation:

$$\overset{+-}{AB} + \overset{+-}{CD} = \overset{+-}{AD} + \overset{+-}{BC}$$

It differs from oxidation-reduction reactions in that there is no change of valency.

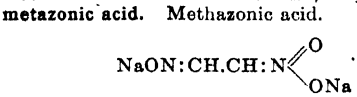
metathiazole. Thiazole.

metavanadate. A salt of the type MVO_3, derived from metavanadic acid.

metavanadic acid. The monobasic, hypothetical acid HVO_3, which exists only in the form of its salts, metavanadates.

metazoa. A multicellular animal; cf. *protozoa.*

metazonic acid. Methazonic acid.



Metchnikoff. See *Metshnikoff.*

meteoric. Pertaining to meteorites. **m. iron.** The metallic iron which occurs in meteorites;

it usually contains nickel. **m. stone.** A meteorite, which consists mainly of aluminum silicates. **m. water.** Water reprecipitated as rain, snow, etc., that has entered the lithosphere from the earth's surface.

meteorite. Aerolite. A stony or metallic body that has fallen to the earth from the outer space. Three types:

1. siderite	meteoric iron
2. siderolite	meteoric iron and stone
3. aerolite	meteoric stone.

For average composition of m., see *abundance*.

meteorograph. An apparatus that automatically records atmospheric pressure, temperature, humidity, and wind velocity.

meteorology. A branch of physical geography that deals with the causes of climatic conditions: rainfall, wind, barometric pressure, temperature, cloudiness and humidity.

meter, metre. (1) A unit of length which was supposed to be the $\frac{1}{10{,}000{,}000}$ part of the distance from the pole to the equator. Newer measurements have shown a slight difference, so that the meter is defined as the length of a platinum-iridium bar, copies of which are kept in the principal capitals; the original being in Paris. The meter is likewise defined as 1,553,164.13 times the wavelength of the red cadmium line.

1 m. = 100 cm. = 1000 mm. = 0.001 km.
1 m. = 39.37011 inches = 3.280843 feet = 1.093 yards = 4.97096 links = 0.198838 rods = 0.0497096 chains.

(For larger and smaller units see *magnitudes, kilometer, millimeter, micron.*) **atom-** Ångström unit. **centi-** One hundredth of a meter. **dynamic-** The gain in potential when a body is raised through 1 meter in a hypothetical place where g = 1000 cm./sec². It equals 10^5 ergs per gram. See *specific energy*. **fast-** A measure of the volume of a stack of wood. 1 fast m. = approx. 35 cu. ft., voids excluded. Cf. *cord, cunit, board foot*. **International-** Prototype meter. The platinum-iridium bar taken as the standard meter. **kilo-** One thousand meters. **leo-** Dynamic m. **milli-** One thousandth meter. **tenth-** Ångström unit, *i.e.*, 10^{-10} meter.

m. angle. The angle of vision on viewing a point a meter distant. **m. bridge.** A slide-wire resistance one meter long, used in electrical resistance measurements. **m. candle.** The intensity of illumination produced by a candle one meter distant; or the luminosity of a white surface at one meter from a standard candle. **m. kilogram.** The force necessary to lift one kg. one m.

(2) A measuring device for determining the quantity of matter or force. **electro-** See *electrometer*. **gas-** A device for determining the quantity of gas passing through a pipe-line. **gaso-** Gas holder. **photo-** See *photometer*. **ureo-** See *ureometer*. **Venturi-** A pipe-line meter for liquids.

meth- A prefix indicating methyl, *e.g.*, methoxy.

methacetin. $C_9H_{11}O_2N$ = 165.1. p-methoxy-acetaminophenol, p-acetanisidine, p-methoxy acetanilide, m-acetaniside, $MeOC_6H_4NHCO$-Me. Colorless needles, m.127, slightly soluble in water, soluble in alcohol or ether; used as an antipyretic and analgesic.

methacrylic acid. $C_4H_6O_2$ = 86.07. Δ^1-methyl-1-propionic acid, α-methyl-acrylic acid. d.-1.015, m.16, b.160. The unsaturated acid, CH_2=CMeCOOH, which is isomeric with vinylacetic, crotonic, and isocrotonic acid.

methal. Myristic alcohol.

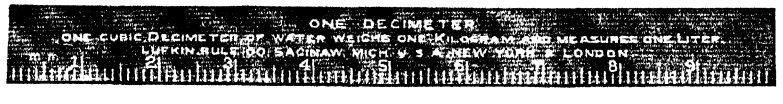
methallyl chloride. $CH_2CMe.CH_2Cl$ = 90.0. A colorless liquid $d._{20°}$0.925, b.72, made from petroleum hydrocarbons; used as an insecticide.

methanal*. Formaldehyde.

methanamide*. Formamide.

methane*. CH_4 = 16.04. Methylhydride, MeH. Cf. *marsh gas, fire damp*. The simplest saturated hydrocarbon. A colorless, inflammable gas, $d._{air}$0.558, m. −184, b. −164, slightly soluble in water or alcohol. It is one of the chief constituents of illuminating gas, and is formed in the decomposition of organic matter. Pure methane is obtained from aluminum carbide and water; used in the manufacture of formaldehyde and in organic synthesis. For most of its compounds see: *methyl-* (CH₃—), *methylene* (—CH₂—), *methenyl* (=CH—). **m. d.** Deuteromethane, diplogen m. The isotopic compounds CH_3D, CH_2D_2, CHD_3 and CD_4. **azi-** Diazomethane*. **bromo-*** Methyl-bromide. **chloro-*** Methylchloride. **cyano-** Acetonitrile. **diazo-*** Diazomethane. **dibromo-*** Methylene bromide. **dichloro-*** Methylene chloride. **dichlorodifluoro-*** Dichlorodifluoromethane. **dimethoxy-*** Formal. **dimethyl-** Propane*. **dimethylethyl-** Isopentane. **diphenyl-** Diphenylmethane. **diphenylene-** Fluorene. **fluoro-*** Methyl-fluoride. **hydroxy-** Methanol. **iodo-*** Methyliodide. **methoxy-*** Methylether. **methyldithio-*** Methyldisulfide. **methyl thio-*** Methyl sulfide. **nitro-*** CH_3NO_2 = 61.03. A colorless liquid, d.1.130, m. −29.2, b.101.9, slightly soluble in water. **phenyl-** Toluene. **tetrabromo-*** Carbon tetrabromide. **tetrachloro-*** Carbon tetrachloride. **tetrahydroxy-** *ortho*-Carbonic acid. **tetramethyl-** *tert.*-Pentane. **tribromo-*** Bromoform. **trichloro-*** Chloroform. **trichloronitro-*** Chloropicrin. **trifluoro-*** Fluoroform. **triiodo-*** Iodoform. **trimethyl-** Isobutane.

m. acetic acid. Gentaric acid. **m. acid** Formic acid. **m. alcohol.** Methanol. **m. aldehyde.** Formaldehyde. **m. amide.** Formamide. **m. arsonic acid.** Methylarsinic acid. **m. base.** Tetramethyl diamino diphenylmethane. **m. chloride.** Methyl chloride. **m. dicarboxylic acid.** Malonic acid. **m. disulfonic acid.*** Methionic acid. **m. phosphonic acid.** Methylphosphinic acid. **m. series.** Paraffins, alkanes. A group of saturated hydrocarbons of the general formula C_nH_{2n+2}, denoted by the suffix *-ane*.



10 cm. = $\frac{1}{10}$ meter (actual size).

METHANE SERIES

Paraffins, alkanes, saturated aliphatic hydrocarbons

CH_4	Methane, methylhydride, MeH.	1*
C_2H_6	Ethane, ethylhydride, EtH.....	1
C_3H_8	Propane, propylhydride, PrH...	1
C_4H_{10}	Butane, butylhydride, BuH.....	2
C_5H_{12}	Pentane, amylhydride.....	3
C_6H_{14}	Hexane, hexylhydride.....	5
C_7H_{16}	Heptane, heptylhydride.....	9
C_8H_{18}	Octane, octylhydride.....	18
C_9H_{20}	Nonane, nonylhydride.....	35
$C_{10}H_{22}$	Decane, decylhydride.....	75
$C_{11}H_{24}$	Undecane, undecylhydride.....	159
$C_{12}H_{26}$	Dodecane, dococylhydride.....	355
$C_{13}H_{28}$	Tridecane, tridecylhydride.....	802
$C_{14}H_{30}$	Tetradecane, tetradecylhydride..	1858
$C_{15}H_{32}$	Pentadecane, pentadecyl hydride	4347
$C_{16}H_{34}$	Hexadecane, hexadecyl hydride..	10,359
$C_{17}H_{36}$	Hepdecane, heptadecyl hydride..	24,894
$C_{18}H_{38}$	Octodecane, octodecyl hydride..	60,523
$C_{19}H_{40}$	Nondecane, nondecyl hydride...	147,284
$C_{20}H_{42}$	Eicosane, eicosyl hydride.....	366,319
$C_{21}H_{44}$	Heneicosane, heneicosyl hydride	
$C_{22}H_{46}$	Docosane, docosyl hydride	
$C_{23}H_{48}$	Tricosane, tricosyl hydride	
$C_{24}H_{50}$	Tetracosane, tetracosyl hydride	
$C_{25}H_{52}$	Pentacosane, pentacosyl hydride.	36,797,588
$C_{26}H_{54}$	Hexacosane, hexacosyl hydride	
$C_{27}H_{56}$	Heptacosane, heptacosyl hydride	
$C_{28}H_{58}$	Octocosane, octocosyl hydride	
$C_{29}H_{60}$	Noncosane, noncosyl hydride	
$C_{30}H_{62}$	Triacontane.....	4,111,846,763
$C_{31}H_{64}$	Hentriacontane, hentriacontyl hydride	
$C_{32}H_{66}$	Dotriacontane, dotriacontyl hydride	
$C_{35}H_{72}$	Pentatriacontane, pentatriacontyl hydride	
$C_{40}H_{82}$	Tetracontane.....	62,491,178,805,831
$C_{60}H_{122}$	Hexacontane, hexacontyl hydride	

* The number of possible isomeric forms.

m. siliconic acid. MeSiOOH = 76.09. Silicoacetic acid. White powder, insoluble in water. **m. stannonic acid.** MeSnOOH = 106.73. Methylstannic acid, stannoacetic acid. White amorphous powder, infusible and insoluble in water. **m. sulfonic acid*.** Methylsulfonic acid. **m. sulfonylchloride.*** $MeSO_2Cl$ = 114.54. Colorless liquid, d.1.51, b.160. **m. thial*** Thioformaldehyde. **m. thiol*.** CH_3SH = 48.09. Methylmercaptan. Colorless liquid or gas, d.0.868, m. −123, b.7.6. **m. triacetic acid.** Centaric acid.

methano- A prefix indicating a $—CH_2—$ bridge in a ring compound; as, *1.8-*; *2.9-* and *9.10-*methanoanthracene, indicating the $—CH_2—$ group between the carbon atoms 1.8-; 2.9- and 9.10-respectively.

methanoic acid*. Formic acid.

methanol*. CH_4O = 32.04. Methyl alcohol, carbinol, wood alcohol, pyroxylic spirit, wood spirit, wood naphtha, columbian spirit, colonial spirit, methyl hydroxide, CH_3OH or MeOH. A colorless liquid, d.0.810, m. −97.1, b.64.7, inflammable, soluble in water, alcohol, or ether. Used as a solvent in place of alcohol (ethanol) for varnishes, paints, organic compounds; as fuel; in the manufacture of formaldehyde; in organic synthesis, and for denaturing alcohol (ethanol). For derivatives, see *carbinol* ($—CH_2OH$).

methanoyl. Formoyl.

methazonic acid. Metazonic acid.

methedrine. Desoxyephedrine (q.v.).

methemoglobin. A transformation product derived from oxyhemoglobin but not from hemoglobin, having the same composition as the latter but with its oxygen more firmly bound; it contains trivalent iron. It occurs in transudates containing blood, and in urine after hematuria. Molecular weight, 16,666. Cf. *porphin.*

methenamine. Hexamethylene tetramine.

methene. Methylene. The bivalent group $—CH_2—$. Cf. *methano.* **m. disulfonic acid.** Methionic acid.

methenyl. Formylene-, methine. The trivalent radical, HC≡. **di-** Acetylene. **m. bromide.** Bromoform. **m. chloride.** Chloroform. **m. iodide.** Iodoform.

methethyl. A mixture of ethyl and methyl chlorides, used as a local anesthetic.

methide. A methyl compound of a metal, as $MgMe_2$ or $AlMe_3$.

methine. Methenyl: HC≡.

methionic acid. $CH_2(SO_3H)_2$ = 176.3. Methene disulfonic acid. Colorless hygroscopic crystals, used in organic synthesis.

methionine. $C_5H_{11}NO_2S$ = 149.15. *2-*Methylthiol-*α*-aminobutyric acid, *2-*amino-*4-*methylthiobutanoic acid*, $MeS.CH_2.CH_2.CHNH_2.COOH$. An amino acid obtained from many proteins, *e.g.*, casein, edestin, gelatin and wool, m.283 (decomp.).

methionyl. The bivalent radical. $—SO_2.CH_2.SO_2—$.

metho- A prefix indicating that a methyl group is attached to a carbon atom of a side-chain, or sometimes to a nitrogen atom in a ring; as, methochloride of pyridine.

methonal. $C_5H_{12}O_2S$ = 136.1. Dimethyl sulfone dimethyl methane. $Me_2CSO_2Me_2$. Colorless crystals, soluble in water, used as a hypnotic.

methose. $C_6H_{12}O_6$ = 180.09. A carbohydrate synthesized by the polymerization of formaldehyde in presence of magnesia. Cf. *i-fructose.*

methoxide. Methylate.

methoxy- A prefix indicating the presence of a methoxy group, $—OCH_3$.

m. group. The monovalent $CH_3O—$ or MeO—radical. **m. phenylacetone.** Anisacetone.

methoxybenzoic acid. $C_8H_8O_3$ = 152.1. **ortho-** 2-methoxybenzoic acid. Colorless monoclinic scales, d.1.18, m.98, slightly soluble in water. **meta-** 3-methoxy-benzoic acid. Colorless needles, m.167, slightly soluble in water, soluble in alcohol or ether; used in organic synthesis. **para-** Anisic acid.

methoxyl. Methoxy, MeO—. **m. amine.** Methyl hydroxylamine.

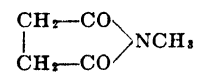
methyl. The monovalent $CH_3—$ or Me— radical. **m. acetamide.** C_3H_7ON = 73.1. $Me.CO.NHMe$. **m. acetanilide.** Exalgin. **m. acetate.** $C_3H_6O_2$ = 74.0. The ester, MeCOOMe. A colorless, volatile, inflammable liquid with a fragrant apple-like odor, d.0.924, m. −98, b.54,

soluble in water, alcohol, or ether; used as a solvent, and in flavoring extracts. **m. acetic acid.** Propionic acid. **m. acetoacetate.** $C_5H_8O_3$ = 116.03. $MeCOCH_2COOMe$. A colorless liquid, d.1.077, b.170; used in organic synthesis. **m. acetone.** A mixture of methylacetate and acetone; used as a solvent for rubber. **m. acetyl.** Acetone. **m. acetylene.** Allylene. **m. acetylsalicylate.** $C_{10}H_{10}O_4$ = 194.08.

$$C_6H_4\langle{}^{O.CO.Me}_{CO.OMe}.$$

Colorless crystals, m.54. It is an isomer of dimethyl phthalate. **m. acrylic acid.** See *acrylic acids.* **m. alcohol.** Methanol. **m. aldehyde.** Formaldehyde. **m. allylphenol.** Anethol. **m. amidophenol.** Anisidine. **m. amine*.** CH_3NH_2 = 31.1. Aminomethane. A colorless gas, $d._{11°}0.699$, m. −92.5, $b._{75mm}$ − 6, soluble in water. It is formed in the distillation of wood and bones, the putrefaction of fats, in putrefying fish, and is a constituent of mercurialis. **m. allyl ether.** Allyl m. ether. **m. amyl ketone.** $MeCOC_5H_{11}$ = 114.11. A constituent of oil of cloves and oil of cinnamon. **m. aniline.** C_7H_9N = 107.12. C_6H_5NHMe, d.0.986, m.−80, b.193.8. **m. anthranilate.** $C_8H_9O_2N$ = 151.08. M. o-aminobenzoate, $NH_2.C_6H_4.CO$-OMe. Colorless crystals, d.1.168, m.24.5, b.125, soluble in alcohol or ether. It has an orange flower odor; used in perfumery and cosmetics. **m. arsenic acid.** *mono-* Arrhenic acid. *di-* Cacodylic acid. Cf. *m. arsinic acid.* **m. arsine.** See *arsine.* **m. arsine dichloride.** CH_3AsCl_2 = 160.90. A volatile liquid, d.1.858, m. −59, b.136; used in organic synthesis. **m. arsenic acid.** $MeAsO(OH)_2$ = 139.97. White monoclinic leaflets, m.161, soluble in water. Cf. *m. arsenic acid.* **m. arsenious oxide.** CH_3AsO = 105.98. The anhydride of arrhenic acid, Me.As:O, m.95. **m. azide.** CH_3N_3 = 57.1. Azoimidemethane, methylazoimide. The hypothetical compound, $CH_3N\langle{}^{N}_{N}\|$, known from its derivatives. **m. benzene.** Toluene. **m. benzoate.** $C_8H_8O_2$ = 136.1. Essence niobe, PhCOOMe. The simplest aromatic ester. A colorless fragrant liquid, d.1.094, m. −12, b.198, insoluble in water, soluble in alcohol or ether; used in perfumery. **m. benzoic acid.** Toluic acid. **m. borate.** $C_3H_9O_3B$ = 104.0. Trimethoxyboron, $B(OMe)_3$. A volatile liquid, $d._{0°}0.94$. It imparts a green color to a flame, and is used to test for borates in foods etc. **m. bromide.** CH_3Br = 95.0. Bromomethane*. A colorless, volatile liquid, d.1.732, m. −84, b.4.5, insoluble in water, soluble in alcohol or ether. Used in organic synthesis, in refrigerators and as an antiseptic. **m. bismuthine.** $MeBiH_2$ = 226.04. A colorless liquid, d.2.30, b.110, insoluble in water. **m. blue.** A pH indicator changing at 11 from blue (acid) to brown (alkali). **m. butyl.** Pentane. **m. butyl carbinol.** Hexyl alcohol. **m. butyrate.** $C_5H_{10}O_2$ = 102.08. The ester $C_3H_7COOCH_3$ used in perfumes. **m. capri blue.** An oxidation-reduction indicator, q.v. **m. carbamate.** Urethylan. **m. carbimide.** CH_3NCO, methyl ψ-cyanate. **m. carbinol.** Ethanol. **m. carbonate.** See *carbonic acid esters.* **m. carbylamine.** CH_3NC = 41.1. Methylisocyanide acetoisonitrile, d.0.76. A volatile liquid of characteristic unpleasant odor, m. −45, b.59.6, slightly soluble in water, alcohol or ether. **m. catechol.** Guaiacol. **m. cellosolve.** See *cellosolve.* **m. chloride.** CH_3Cl = 50.5. Chloromethane*. Artic, arctic. A colorless gas, d.0.918, m. −91.5, b. −23.7, soluble in water or alcohol. Used medicinally as an external anesthetic, and refrigerant. **m. chlorofluoride.** Dichlorodifluoromethane. **m. chloroform.** $MeCCl_3$ = 133.4. Trichlorethane, ethenylchloride. A colorless, volatile liquid of pungent odor, d.1.346, b.74; used as an anesthetic. **m. cinnamate.** C_8H_7COOMe = 162.08. White crystals, d.1.091, m.36, b.261, insoluble in water, used as an insect bait. **m. cocaine.** Cocainidine. **m. crotonic acids.** See *tiglic* and *angelic acids.* **m. cyanate.** C_2H_3ON = 57.04. $N{\equiv}COCH_3$. Cf. *m. isocyanate.* **m. cyanide.** Acetonitrile. **m. cyclohexane.** Hexahydro toluene. **m. diacetyl.** A diketone: pentane-2.3-diketone or 2.3-pentanone, Me.CO.CO.Et. **m. disulfide.** $C_2H_6S_2$ = 94.19. Methyldithiomethane*, MeS.SMe. **m. ene.** Methylene. A colorless liquid, b.112. **m. ether.** C_2H_6O = 46.06. Dimethyl ether, methoxymethane*, MeOMe. A gas, d.1.617, m. −138, b. −25; soluble in alcohol, slightly soluble in ether or water; used as a refrigerant. **m. ethylamine.** MeNHEt. **m. ethylether.** MeOEt. **m. ethylketone.** C_4H_8O = 72.1. Butanone, M.E.K., MeCOEt. A colorless, inflammable liquid, d.0.808, m. −86, b.80, soluble in water, alcohol, or ether; used in organic synthesis, as a solvent, and in the manufacture of colorless plastics. **m. fluoride.** CH_3F = 34.02. Fluoromethane*. A colorless gas, b. −78. **m. formate.** $C_2H_4O_2$ = 60.1. Methyl formic acid ester: HCOOMe. A colorless liquid, d.0.973, m. −100, b.32, soluble in water, alcohol, or ether; used in organic synthesis. **m. gadenine.** $C_8H_{19}NO_2$ = 161.16. A poisonous oxygenated ptomaine from fish. **m. gallate.** Gallicin. **m. gallium dichloride.** $GaMeCl_2$ = 155.66. White crystals, m.75, decomp. in water. **m. glycine.** Sarcosine. **m. glycosine.** Sarcosine. **m. glyoxal.** Pyruvic aldehyde. **m. glyoxalidine.** Lysidine. **m. green.** A triphenylmethane dye $(Me_2N{-}C_6H_4)_2C{=}C_6H_4{=}NMe_2Cl$, used in dyeing silk, in bacteriology to stain mitochondria, and as pH indicator changing from yellow (acid) through blue green to colorless (alkaline). **m. guanidine.** $MeN{:}C(NH_2)_2$ = 73.06. A ptomaine formed from creatine or arginine. **m. heptenone.** $Me_2C{:}CH(CH_2)_2COMe$ = 126.11. Colorless liquid, d.0.860, m.67.3, b.174, found in some essential oils. **m. heptine carbonate.** Heptine methyl carbonate. **m. heptyl ketone.** 2-Nonanone*. **m. hexalin.** Methyl cyclohexanol. **m. hexane.** Heptane. **m. hexylketone.** Hexylmethyl ketone. **m. hydrate.** Methanol. **m. hydrazine.** $MeNHNH_2$ = 46.07. A liquid, $b._{745mm}$87. **m. hydrazone.** $MeCH{=}NNH_2$. **m. hydroxide.** Methanol. **m. hydroxy-benzene.** (1) Cresol. (2) Hydroxybenzyl alcohol. **m. hydroxylamine.** See *hydroxylamine.* **m. indole.** Skatole. **m. iodide.** CH_3I = 142.0. Iodomethane*. A colorless liquid, d.2.28, m. −66, b.44, insoluble in water, soluble in alcohol or ether, used in organic synthesis, and as a local anesthetic. **m. isocyanate.** C_2H_3ON = 57.04. CONMe, b.45; cf. *m. cyanate.* **m. isocyanide.** C_2H_3N = 41.03. Methylcarbylamine, m. isonitrile,

MeNC. A colorless liquid, d.0.756, m. −45, b.60. **m. isophthalic acid. 4-** Seylidic acid. **5-** Uvitic acid. **m. isothiocyanate.** M. *mustard oil.* **m. mercaptan.** Methane thiol. **m. mercuric chloride.** MeHgCl = 251.09. White crystals with a disagreeable odor, d.4.063, m.170. **m. mercuric iodide.** MeHgI = 342.55. Pearly leaflets, m.145, insoluble in water. **m. morphine.** Codeine. **m. nitramine.** $CH_4N_2O_2$ = 76.0. $Me.NH.NO_2$. **m. nitrate.** CH_3NO_3 = 77.04. Me—O—NO_2. An explosive liquid, $d._5$°1.2, soluble in water. **m. nitrite.** CH_3NO_2 = 61.04. Me—O—NO. A gas, d.0.99, b. −12. **m. nitrobenzene.** Nitrotoluene. **m. nitrolic acid.** Formoxime. **m. nitrosamine.** $CH_4N_2O_2$ = 60.1. Me—NH—NO. **m. nonyl ketone.** *2*-Hendecanone*. **m. orange.** The sodium salt of p-dimethylaminoazobenzenesulfonic acid, $Me_2NC_6H_4N:NC_6H_4SO_2Na$. An orange-yellow powder, soluble in water or alcohol. It is used as an indicator in volumetric analysis, (alkalis, yellow; acids, red; pH range 3.1–4.4). **m. oxide.** M. ether. **m. oxyaniline.** Anisidine. **m. pentose.** A sugar, $C_6H_{12}O_5$, containing 6 carbons but only 5 hydroxy groups; as, fucose, rhamnose. **m. phenate.** Anisole. **m. phenidine.** See *phenacetin.* **m. phenylacetamide.** Exalgin. **m. phenyl ether.** Anisole. **m. phosphate.** CH_5O_4P = 112.09. The solid $MePO_2(OH)_2$, m.105. **m. phosphine.** CH_5P = 48.09. The gas, $MePH_2$, b. −14, soluble in water or alcohol. **m. phosphinic acid.** $CH_3PO(OH)_2$ = 96.06. Methane phosphonic acid. Colorless crystals, m.105. **m. propionate.** Et-COOMe = 88.06. M. propanoate*, colorless liquid, d.0.9148, m. −87, b.79.9, soluble in water; used in perfumes. **m. propyl ether.** $C_4H_{11}O$ = 74.77. MeOPr. A colorless liquid, d.0.738, b.38.9. **m. propyl ketone.** $C_5H_{10}O$ = 86.77. Acetylpropane, 2-pentanone*, Me.CO.Pr. A colorless liquid, d.0.812, m. −77.8, b.101.7. **m. propylphenol.** Thymol. **m. pyridine.** Picoline. **m. pyruvate.** $C_4H_6O_3$ = 102.05. MeCOCOOMe. A liquid, d.1.154, b.137; used as a solvent for resins. **m. quinolines.** *alpha-* Quinaldine. *gamma-* Lepidine. **m. red.** $C_{15}H_{16}O_2N_3$ = 269.3. p-dimethylaminoazobenzene carboxylic acid, $Me_2NC_6H_4N:NC_6H_4COOH$. A dark red powder, insoluble in water, soluble in alcohol or ether; used as an indicator for titrating ammonia, alkaloids, and weak organic acids (alkalis, yellow; acids, violet red; pH range 3–6). **m. resorcinol.** Orcinol. **m. rhodanate, m. rhodanide.** M. thiocyanate. **m. rubber.** An early name for synthetic rubber made by polymerisation of dimethyl butadiene. Cf. *elastomer, plastics.* **m. salicylate.** $C_8H_8O_3$ = 152.1. Artificial wintergreen oil, methylic salicylas, synthetic oil of wintergreen, $C_6H_4(OH)COOMe$. A colorless, liquid, d.1.183, m. −8, b.222, insoluble in water, soluble in alcohol or ether. Used medicinally as an antipyretic, antiseptic, and in antirheumatic liniments; also in flavoring extracts and confectionery. **m. salicylic acid.** $MeC_6H_3(OH)COOH$. **m. selenide.** Selenium dimethyl. **m. silicane.** CH_6Si = 46.11. $SiH_3.CH_3$. A colorless gas, $d._{-57}$°0.62, m. −156.5, b. −56.8. **m. stannic acid.** CH_4O_3Sn = 166.73. MeSnOOH. White amorphous powder insoluble in water. **m. styryl ketone.** Benzylidene acetone. **m. succinic acid.** Pyrotartaric acid. **m. succinimide.** $C_5H_7O_2N$ = 113.1. 1-Methyl-2.5-diketopyrrolidine.



m. sulfate. Me_2SO_4 = 126.1. Dimethylsulfate. A colorless liquid, d.1.352, m. −10, b.188, slightly soluble in water, soluble in alcohol or ether. Used as a poison gas in warfare; and in organic synthesis, for methylating phenols and amines. **m. sulfide.** Me_2S = 62.1. Dimethylsulfide, methylthiomethane, methyl thioether. A colorless liquid, d.0.845, m. −83, b.37, insoluble in water, soluble in alcohol or ether; used in organic synthesis. **m. sulfine.** CH_4O_2S = 80.1. Me—SO—OH. **m. sulfocyanide.** M. thiocyanate. **m. sulfonal.** Trional. **m. sulfone.** $C_2H_6O_2S$ = 94.1. Me—SO_2—Me. **m. sulfonic acid.** CH_4O_3S = 96.1. Methane sulfonic acid*. Me—SO_2—OH. A syrupy liquid, d.1.481, decomp. 130. **m. sulfoxide.** C_2H_6OS = 78.1. Me—SO—Me. **m. tartronic acid.** Iso*malic acid.* **m. telluride.** $(CH_3)_2Te$ = 157.1. A light-yellow liquid with garlic-like odor, b.82. **m. theobromine.** Caffeine. **m. thiocyanate.** CH_3CNS = 73.1. M. rhodanate, m. rhodanide, m. sulfocyanide. A colorless liquid, d.1.088, b.133, soluble in alcohol or ether. **m. thionine chloride.** Methylene blue. **m. thiophen.** Thiotolene. **m. tin bromide.** CH_3SnBr_3 = 373.47. White needles, m.54, b.211, soluble in water. **m. tin chloride.** CH_3SnCl_3 = 240.09. Colorless crystals, m.43, soluble in water. **m. tin iodide.** CH_3SnI_3 = 514.48. Yellow needles, m.86.5, soluble in water. **m. toluidine.** Xylidine. **m. urea.** See *urea.* **m. urethane.** Urethylan. **m. violet.** Crystal violet, pyoktanin blue. A mixture of the hydrochlorides of pentamethyl-p-rosaniline and hexamethyl-p-rosaniline. Dark green, lustrous crystals, soluble in water or alcohol. Used as a reagent, indicator, and as a textile dye. (Alkalis, violet; acids, yellow; pH range 2–3.1.)

methylal. Formal.

methylamine. See *methyl.*

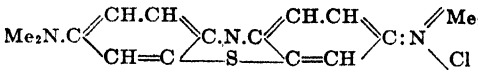
methylamino- A prefix indicating the monovalent—NHMe radical.

methylate. (1) The introduction of the methyl radical, or the substitution of a methyl group for another atom or radical. (2) Methoxide. A compound of a metal with the methoxy group, of the general type, CH_3OM, *e.g.*, sodium methylate, $NaOCH_3$. (3) To add methanol, with or without other substances, to grain alcohol to render it unpotable (denaturate).

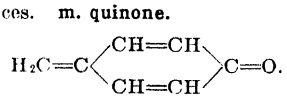
methylated ether. Ethyl ether made from methylated spirit instead of from pure ethanol. **m. spirit.** Rectified spirit (q.v.) denatured by addition of 10 % of crude wood spirit, 0.4 % of mineral naphtha or pyridine and a purple coloring matter. Cf. *ethanol.* **power m.s.** The official British term for alcohol denatured for power purposes.

methylation. The process of substituting a CH_3— group for an H atom.

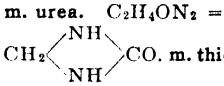
methylene. Methene. The bivalent radical. —CH_2—, derived from methane. Cf. *di-, tri-, tetra-, penta-, hexa-, hepta-methylene.* **meso-** See *mesomethylene.* **trioxy-** Paraformaldehyde. **m. blue.** $C_{16}H_{18}N_3SCl.3H_2O$ = 373.7. Tetramethylamidophenthiazinium chloride, methylthionine chloride, tetramethylthioninchlorhydrate, methylthioninae chloridum U.S.P., a dye of the thiazine group:



Dark blue-green crystals with a metallic luster, soluble in water or alcohol. Used as an indicator in volumetric analysis, for determining sugars, chlorates or perchlorates; in bacteriology, as stain; in medicine, as an antidote to cyanide poisoning, as anodyne and a antiperiodic; in the textile industry, as a dye. *alkaline-* A solution containing 5 gm. methylene blue, 5 gm. sodium percarbonate per liter of water; used as a stain. **m. bromide.** CH_2Br_2 = 174.0. Dibromomethane*. A colorless or yellowish liquid, d.2.59, b.98, insoluble in water, soluble in alcohol or ether; used in organic synthesis. **m. chloride.** CH_2Cl_2 = 85.0. Dichloromethane*, methylbichloride, carrene. A colorless liquid, d.1.377, m. −96.7, b.40.5, soluble in alcohol or ether. Used medicinally as an anesthetic in the skin spray; in industry, as a solvent, constituent of lacquers, degreaser, dewaxing and spotting agent; as a refrigerant, for air conditioning. **m. cyanide.** Malonitrile. **m. dicotoin.** Fortoin. **m. dioxy.** The bivalent radical, $-OCH_2O-$. **m. disulfonic acid.** Methionic acid. **m. ditannin.** Tannoform. **m. glycol.** CH_4O_2 = 48.0. The hydrated form of formaldehyde, $CH_2(OH)_2$, present in aqueous formalin solution. **m. imine.** See *methylenimine.* **m. iodide*.** CH_2I_2 = 267.86. Diiodomethane, methylbiiodide. A yellow liquid, d.3.335, m.4, b.180, insoluble in water, soluble in alcohol, or ether; used for determining the density of mineral mixtures and water-soluble substances. **m. quinone.**



m. urea. $C_2H_4ON_2$ = 72.1.



m. thiourea. $C_2H_4N_2S$ = 88.1.

m. triol. Is phloroglucitol.

methyleneblue. See *methylene.*

methylenimine. CH_3N = 29.01. Azomethine. The simplest imine, $H_2C{:}NH$.

methylgreen. See *methyl.*

methylic. An obsolete term for methyl. **m. acid.** Formic acid. **m. alcohol.** Methanol.

methylin. A lignin extracted from wood, straw or other plant material by the mono-methyl ether of ethylene glycol.

methyloic. A prefix indicating that the —COOH or carboxyl group is present as a sidechain; thus $Et_2CH.COOH$ is pentane-3-methyloic acid (diethylacetic acid). Cf. *ethyloic, propyloic.*

methylol. Hydroxymethyl. The monovalent radical, $HO.CH_2-$. See *carbinol.*

methylorange. See *methyl.*

methyltestosterone. Metandren, neo-hombreol-M, oreton-M. The 17-methyl derivative of testosterone (q.v.).

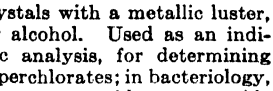
methylviolet. See *methyl.*

methysticin. Kavain.

methysticum. Kava.

metol. C_7H_9ON = 123.1. Methyl-p-aminophenol, pictol, rhodol, $MeNH—C_6H_4OH$. Used as its hydrochloride or hydrosulfate, as a photographic developer. **m. poisoning.** A mis-nomer for dermatitis caused by alkali; or by *p*-dimethyldiaminobenzene, formerly an impurity of metol.

metoxazine. C_4H_9ON = 87.1. The ring compound,



metozine. Antipyrine.

metrazol. $C_5H_{10}N_4$ = 126.1. Pentamethylenetetrazole. White monoclinic crystals, m.58. soluble in water; thought to be a heart stimulant,

metre. Meter.

metric. (1) Pertaining to measure. **gravi-** Analysis involving the use of the balance. **volu-** Analysis carried out by measuring volumes with pipette and burette. (2) Pertaining to the system of weight and measures of which the meter is the basis. **m. slug.** See *slug.* **m. system.** The weights and measures based on the "meter," from which all other scientific units are derived. The multiples of units are uniformly prefixed with the Greek terms:

mega	= 1,000,000	$= 10^6$
myria	= 10,000	$= 10^4$
kilo	= 1,000	$= 10^3$
hekto	= 100	$= 10^2$
deka	= 10	$= 10^1$

The fractions of units are uniformly prefixed with the Latin terms:

deci	$= \frac{1}{10} = .1$	$= 10^{-1}$
centi	$= \frac{1}{100} = .01$	$= 10^{-2}$
milli	$= \frac{1}{1000} = .001$	$= 10^{-3}$
micro	$= \frac{1}{1000000} = .000001$	$= 10^{-6}$

The units commonly used are:

Length = meter = m.; also km., cm., mm. and μ (10^{-6} m.), mμ, $\mu\mu$.
Area = square meter = $m.^2$, also are = 100 $m.^2$
Volume = liter = l., also cc. (cubic-centimeter) and λ (10^{-6} l.)
Mass = gram = g., also kg., mg. and γ (10^{-6} g.)

m. ton. One thousand kilograms = 2204.6 pounds.

metronome. An instrument for measuring short time intervals, usually by means of a mechanically driven pendulum.

metrotonin. An ergot substitute consisting of epinephrine, acetylcholine, and other amines.

-metry. A suffix indicating measurement and measuring.

Metshnikoff, Elie. Metchnikoff. 1845–1918. A Russian physiologist, noted as the discoverer of phagocytosis.

metso. Sodium metasilicate used as a scouring agent.

metycaine. Neothesin, hydrochloride of γ-(2-methyl piperidino) propyl benzoate. A white powder, used as local anesthetic.

mev or MEV. Abbreviation for million electron volts.

Mexican poppy oil. A brownish-yellow oil extracted from the seeds of prickly poppy, *Argemone mexicana,* d.0.922; used in soap manufacture. **M. onyx.** A variety of calcite, used in interior decorations. **M. scammony root.** Ipomoea.

Meyer, Lothar Julius. 1830–1895. A German chemist noted as a discoverer of the periodic system. Cf. *Mendeléeff.* **M., Victor.** 1848–

1897. A German chemist noted for his research in stereochemistry and organic chemistry, and for his methods of vapor-density determination. **M.'s formula.** (1) See *molecular free path.* (2) An equation connecting viscosity (q.v.) and temperature. **M.'s law.** Law of *esterification.* **M.'s theory.** Anesthetics and narcotics are generally substances which diffuse rapidly. See *liminal value.* **M.'s tube.** An absorption tube for CO_2, filled with $Ba(OH)_2$; used in steel analysis. **M.'s value.** Liminal value. Cf. *Mayer.*

meyerhoffite. $2CaO.3B_2O_3.7H_2O$. A native calcium borate.

meymacite. $WO_3.H_2O$. A native, hydrated tungsten oxide, light-brown, resinous masses.

meymacite. A native hydrated tungsten oxide, $WO_3.H_2O$; light-brown, resinous masses.

mezcal. Mescal.

mezcaline. Mescaline.

mezereum. Mezereon.

mezereon. Mezereum, dwarf bay, paradise plant, wild pepper, spurge flax. The dried bark of *Daphne mezereum,* a European shrub; used medicinally as a diaphoretic stimulant or diuretic. Cf. *daphnin.*

mezquit. The shrub or tree *Prosopis juliflora* of Mexico and the S. W. United States. Its gum resembles gum arabic.

mg. Milligram. **mg.-%.** Mg. per 100 cc.

Mg. Symbol for magnesium.

mho. A unit of electrical conductivity (the reciprocal of ohm, the unit of resistance). One mho conductance per centimeter cube with a potential of one volt allows the passage of one ampere current per square centimeter.

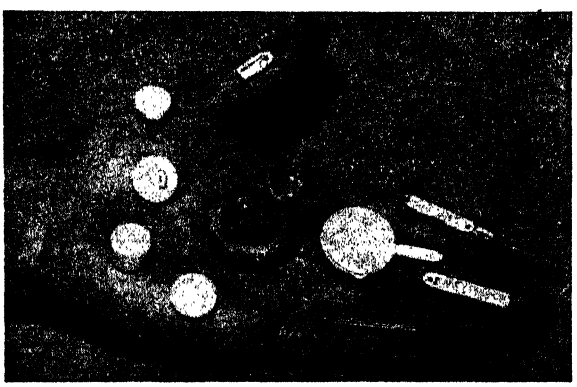
miamine. Chlorazene.

miargyrite. $AgSbS_2$. A silver sulfide ore.

miasma, miasm. A noxious exhalation, or vapors arising from swamps.

miazines. Meta-diazines or pyrimidines. A group of heterocyclic compounds having two nitrogen atoms in the meta position; as, pyrimidine and quinazoline. Cf. *piazines, oiazines.*

mica. (1) One of a group of laminated silica minerals (q.v.). (2) $3Al_2O_3.K_2O.6SiO_2.2H_2O$. Isinglass, muscovy glass. A native hydrous silicate, which can be split into very thin transparent sheets. Used as an insulator for electrical instruments; as windows in furnaces and refracting instruments; and in the ground state, as a lubricant. The term is used in geology as a prefix to rocks containing it, such as mica basalt. **amber-** Phlogopite. **lithia-, lithium-** Lepidolite. **potash-** $KH_2Al_3(SiO_4)_3$, potassium metasilicate. **ruby-** Muscovite. **m. black.** See *hibernium.*



Microchemical apparatus.

micell(e). (1) An electrically-charged colloidal particle; a colloidal ion, consisting of oriented molecules. Cf. *zone.* (2) An oriented arrangement of a number of molecules; as in cellulose, rubber, starch, where there are no or few unshared electron pairs. Cf. *liquid, association.* (3) An aggregate composed of a number of molecules held loosely together by secondary forces (which are weaker than primary valence bonds). Cf. coordinate *bonds.*

Michael's reaction. An organic addition reaction in which the sodium salts of acetocetic acid or malonic esters disrupt the double bond to unsaturated compounds of the type, R—CH:-CH—X, where X is a carbonyl or cyanogen radical.

Michler's hydrol. $C_{17}H_{22}N_2O$ = 270.19. *p*-Tetramethyl diaminobenzo hydrol, $(Me_2NC_6H_4)_2CH_2OH$. White crystals, m.96, used in organic synthesis. **M. ketone.** $C_{17}H_{20}ON_2$ = 268.3. Tetramethyl-p,p'-diaminobenzo-phenone, $(Me_2NC_6H_4)_2CO$. Colorless, lustrous plates or scales, m.172, b.360, insoluble in water, soluble in alcohol. Used in the synthesis of dyestuffs and auramine derivatives.

micrinite. An opaque material found in coal durains (q.v.), and intermediate in character between fusain and vitrain.

micro- (1) A prefix derived from the Greek, indicating small. (2) The one-millionth part of a unit; as, μ = micrometer, λ = microliter and γ = microgram.

microampere. One-millionth of an ampere.

microanalysis. The identification of substances by examination with the microscope. Cf. *microchemistry, microreaction.*

microbalance. A very sensitive balance (*e.g.,* based on the torsion of a very fine quartz fibre, as McBain balance). Used for weighing micro quantities.

microbe. An microorganism of animal or vegetable nature; generally those which may cause disease, as bacteria and pathological protozoa.

microbic. Pertaining to microorganisms.

microbicide. Any agent that destroys microorganisms.

microbiology. The study of microorganisms or microbes.

microbiotic. Any antibacterial substance produced by molds, bacteria or other organisms; an antibiotic.

microburner. A small bunsen burner.

microcalorie. See small *calorie.*

microchemical. (1) Pertaining to reactions observed under the microscope. (2) Pertaining to chemical reactions in miniature apparatus with small quantities. **m. analysis.** The qualitative or quantitative analysis of small amounts of substances, *e.g.,* of the order of 10 mg. or less. Qualitative methods are based on spot, colour or microscope tests, q.v.; quantitative methods are usually small-scale adaptations of existing macro-methods.

microchemistry. (1) Microscopical chemistry. Chemical investigation by means of the microscope, especially the performance of chemical reactions on a microscope slide and the observa-

tion of resulting precipitates or colors. This requires only minute quantities of substances. (2) The qualitative and quantitative reactions performed with small quantities (micrograms and microliters), using small apparatus (*e.g.*, a capillary tube for burette).

microcidin. A surgical antiseptic consisting of sodium-β-naphtholates and phenates.

microcline. Amazonite.

micrococcus. A minute spherical or round bacterium.

microcosmic salt. $NaNH_4HPO_4.4H_2O$. Phosphor salt. Acid sodium ammonium phosphate; used in blow-pipe analysis for bead tests (q.v.). It occurs in blood, and natural waters.

microcoulomb. One-millionth part of a coulomb.

microcrith. An obsolete term for the weight of a hydrogen atom.

microcrystalline. Cryptocrystalline. Crystallizing in minute crystals.

microfarad. One-millionth part of a farad, the ordinary measure of electrostatic capacity.

microfilm. A photographic film on which is reproduced printed matter on a greatly reduced scale. In this way the contents of whole libraries can be reproduced and stored in a comparatively small space. The m. are read by projection on to a large screen.

microgram. Gamma, γ, the one-millionth part of a gram; a measure in microanalysis.

micrography. (1) Photomicrography. (2) The measurement of physical properties with the aid of the microscope.

microhm. One-millionth part of an ohm.

microlamp. (1) A lamp used as an illuminator for microscopes. (2) Any small artificial source of light.

microline. $K_2O,Al_2O_6,6SiO_2$. A vitreous yellow mineral.

microliter. Lambda, λ, the one-millionth part of a liter; a measure in microanalysis. 1λ = 1 mm^3.

microliths. Very small crystals ($\frac{1}{1000}$ inch) in microscopic sections of rocks and slags.

micromanipulator. The attachments to the microscope stage, consisting of controls and levers which enable one to manipulate an object while under observation; *e.g.*, for dissections, injections, etc.

micromerol. $C_{33}H_{52}O_2$ = 480.43. A monobasic alcohol from *Micromeria chamissonis*, a Labiatae.

micrometer. (1) Micron. (2) An instrument for measuring small lengths or objects under the microscope, *e.g.*, the extension or expansion of cement or iron bars, the size of bacteria. **m. caliper.** An instrument for measuring with an accuracy up to $\frac{1}{100}$ mm.

micromicron. $\mu\mu$(mu-mu) = the one-millionth part of a micron; = 10^{-12} meter = 10^{-9} mm. = 10λ = 10 x-units. (See *magnitudes.*)

micromillimeter. Same as micron = one-thousandth part of a millimeter.

micromonosporin. An antibiotic substance produced by *Micromonospora* species of actinomycetes.

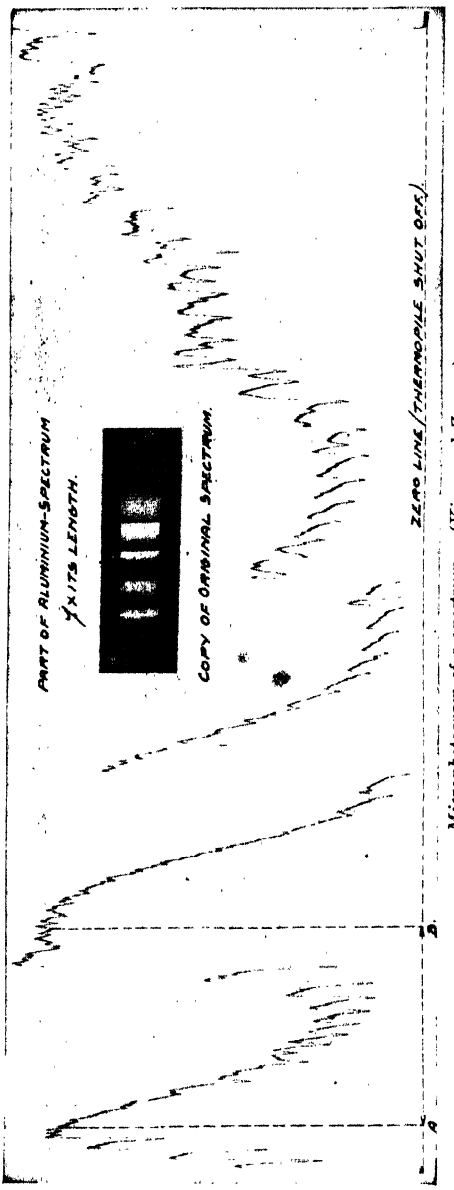
micron. (1) μ = mu, or $m\mu$. A unit of length equal to one-millionth part of a meter, or one-thousandth part of a millimeter. **micro-** See *micromicron.* **milli-** See *millimicron.* (See *magnitudes, amicron, submicron, ultramicron.*) (2) A colloidal particle whose size ranges from 0.2 to 10μ. The range is:

micron... 10 to 0.2μ; or 10^{-3} to 2×10^{-3} cm.
submicron 0.2μ to 5mμ; or 2×10^{-5} to 10^{-7} cm.
amicron.. less than 5mμ; or 10^{-7} cm.

m. of mercury. The pressure exerted by a column of Hg 1μ high; a unit of high vacua. 1μ Hg = 0.001 mm. Hg = 1.333 bars = 0.000,001,3 atm.

microörganism. Any minute animal or plant, visible only through a microscope.

microphone. An instrument for intensifying or transmitting sound by means of electrical impulses.



Microphotogram of a spectrum. (Kipp and Zonen.)

microphotogram. The record made by a microphotometer.

microphotograph. (1) A photograph reduced in scale. Cf. *photomicrograph.* (2) Is microphotogram.

microphotometer. An instrument to measure the intensity of spectral lines by determining

the density of their photographic images over small areas. It consists of a lighting system driving mechanism, photoelectric cell, and a galvanometer which magnifies greatly any change in the intensity of the photographic image and thus produces automatically a microphotogram on a sheet of light-sensitive paper (see figure).

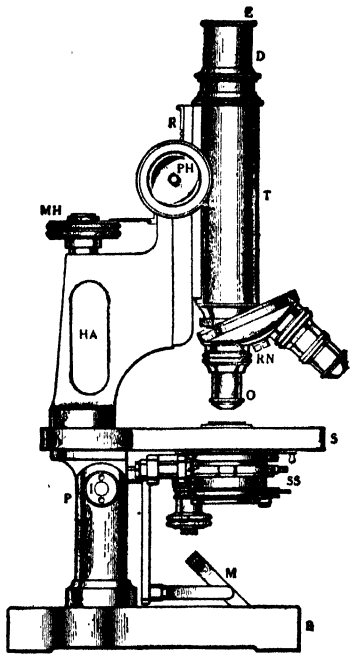
microporous. Having openings or cavities of microscopic size. **m. rubber.** See *mipor rubber.*

micropolariscope. A microscope with polariscope attached; used in the study of minerals and crystals.

microreaction. A chemical reaction performed under the microscope with minute amounts of reagents. Used for the visual identification of elements or ions by means of their characteristic crystalline precipitates. Cf. *spot analysis.*

microsal. A mixture of copper carbonate and crude sulfonephenolic acids, used as disinfectant.

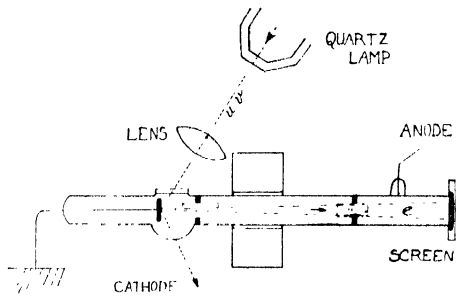
microscope. An optical instrument consisting of objectives and eyepiece that magnifies minute objects for visual inspection or photographic record by direct illumination. Normally the lower limit of visibility is 0.10μ.



Microscope.

E = ocular or eyepiece
O = objective
RN = revolving nosepiece
PH = pinion head (adjustment of focus)
MH = micrometer head (fine adjustment)
S = stage
SS = substage with diaphragm and condenser
M = mirror

binocular- A m. having two eyepieces, which used simultaneously, produce a perspective effect of the object examined. **compound-** An ordinary m., enlarging from 30–1000 diameters. **electron-** A device analogous to an ordinary microscope, in which a beam of electrons replaces the source of light and magnetic condensers replace the lenses; the image is rendered visible by projection on to a fluorescent screen. Magnifications of up to 100,000 are obtainable. Cf. *Kikuchi lines.* **fluorescence-** A m. in which the illumination is filtered ultraviolet light; used to study fluorescence (q.v.) phenomena. Cf. *ultraviolet*



Electron microscope.

m. **polarizing-** A m. in which the object is on a rotating stage between crossed nicols. **ultra-** A m. in which the object is indirectly illuminated, *e.g.*, a thin layer of a colloidal solution is illuminated at right angles to the line of sight, and the colloidal particles appear as bright points on a dark field. The lower limit of visibility is 5mμ. **ultraviolet-** A high-power m., in which an ultraviolet ray of few or single wave-length is the illumination. Objects may be enlarged from 1000 to 6000 diameters. The lower limit is 30$\mu\mu$ (3×10^{-6} cm. or 10^{-6} inches). Cf. *fluorescence m.* **m. test.** Microreaction.

microscopic. Visible under the microscope; lower limit, about 0.10μ. **a-** Invisible under the ordinary microscope. **sub-** Amicroscopic. **ultra-** Recognizable with the ultramicroscope; lower limit, about 5mμ. Cf. *micron.*

microscopy. (1) The art and science of the optical enlargement of objects, and their photography. (2) The application of the microscope to useful ends. **fluorescence-** See *fluorescence.*

microspectroscope. (1) A microscope with spectroscope attached; used for a study of the absorption spectra of tissues. (2) A spectroscope with microscope attached; used for a study of the structure of spectral lines.

microtome. An instrument for cutting thin sections of materials and tissues for microscopic examination.

micro-unit. A unit of small measurement, usually the one-millionth part, to which micro- is prefixed. It is characterized by a Greek letter; as, γ, λ, σ for microgram, microliter, microsecond, respectively.

microvolt. The one-millionth part of a volt.

midrol. Iodomethylphenylpyrazolone, mydrol. Colorless crystals soluble in water; used in medicine as a mydriatic.

miemite. $CaCO_3.MgCO_3$. A vitreous, yellow-brown mineral.

Miers, Sir Henry. 1858–1942. A British chemist, noted for his work on mineralogy and crystallography.

Miescher pipette. A small tube used for diluting blood specimens for hemacytometers.

mignonette oil. Reseda oil.

migrainin. A proprietary mixture of 85 % antipyrine, 9 % caffeine, and 5 % citric acid; used medicinally for headaches.

migration. A movement or change of place, such as the m. of ions in an electric cell. **atomic-** See *rearrangement.*

m. tube. An H-shaped glass vessel with electrodes. On filling this tube with a salt solution, adding a suitable indicator, and passing an electric current through the solution, the migration of the ions is illustrated by the progress of the color reaction. **m. velocity.** The velocity with which ions move through a solution during electrolysis. (See *transport numbers.*) They are related to the absolute ionic velocities, (expressed in cm. per sec. per dyne). Thus, abs. velocity = $10^8 \times$ migration velocity/96,000. Cf. *mobility.*

mikro- Micro-.

mikrobe. See *microbe.*

mikrobin. Sodium p-chlorobenzoate. A preservative for wine or cider.

mil. (1) ml. The one-thousandth part of a liter, 1 mil = 1.000028 cc. This term is used in the British Pharmacopoeia (milliliter) but was discontinued in the U.S.P. X in favor of 1 cc. (2) A wire measurement, equal to $\frac{1}{100}$ inch = 25.4001 microns.

milammeter. Milliammeter.

milarite. $HKCa_2Al_2(SiO_3)_{12}$. A native, potassium, calcium, aluminum silicate; colorless or greenish, brittle, hexagonal prisms.

mile. A measure of length; 1 mile = 1.60935 km. = 1609.35 meters. (1 mile = 5280 feet = 1760 yards = 80 chains.) **admiralty-** 6080 ft. **nautical-** 1.853 km. = 1853.25 m. = 6082.66 feet = 80 fathoms. **geographical-** Nautical mile.

milk. (1) The opaque secretion of the mammary glands; an important food. A white emulsion, d.1.029–1.039, containing (averages, in 10 × %):

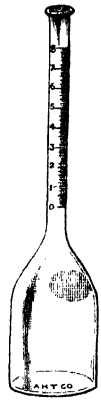
Milk of the	Water	Proteins	Fat	Sugar	Salts
Dog.....	754.4	99.1	95.7	31.9	7.3
Cat.....	816.3	90.8	33.3	49.1	5.8
Goat.....	869.1	36.9	40.9	44.5	8.6
Sheep.....	835.0	57.4	61.4	39.6	6.6
Human....	875.5	12.5	35.0	75.0	2.0
Cow.....	871.7	35.5	36.9	48.8	7.1
Mare.....	900.6	18.9	10.9	66.5	3.1
Ass.....	900.0	21.0	13.0	63.0	3.0
Pig.....	823.7	60.9	64.4	40.4	10.6
Elephant...	678.5	30.9	195.7	88.5	6.5

acid of- Lactic acid. **butter-** Milk from which the fat has been removed. **certified-** A good quality milk, which has been chemically and bacteriologically tested, and contains but few bacteria. **condensed-** Milk from which some water has been removed and to which sugar has been added. **fermented-** Kumyss. **homogenized-** A milk which has been re-emulsified (*e.g.*, after pasteurization) or treated so that the fats do not separate into cream. **modified-** A cream which is diluted with a lactose solution; used for infant feeding. **pasteurized-** A milk which has been heated at 60°C. for 30 minutes. **skimmed-** Milk from which the separated cream has been removed. **sterilized-** A milk that has been heated at 100°C. for 45–60 minutes. **vegetable-** An emulsion of fats derived from the soya bean, used extensively in China for beancakes or cheese-like foods.

m. extract. A condensed milk, in which the casein has been partly peptonized. **m. fat.** The total fats obtained from milk. **m. powder.** A milk that has been evaporated and powdered. **m. scale.** A white opal strip which runs the length of a burette or other graduated glass instrument, and enables accurate meniscus (q.v.) readings to be obtained with ease. **m. serum.** Whey. **m. stone.** A flint, whitened by fire. **m. sugar.** Lactose. **m. test bottle.** A graduated centrifuge tube, used in the determination of the fat-content of milk (see figure). **m. weed.** Silkweed.

(2) Magma. An emulsion or suspension.

m. of almonds. An emulsion of 6 % almond oil with acacia, in water; used in pharmaceutical preparations and cosmetics. **m. of asafoetida.** An emulsion of 4 % asafoetida in water; used medicinally as a sedative and carminative. **m. of barium.** A suspension of barium hydroxide in water. **m. of bismuth.** Magma bismuthii, bismuth magma. A suspension of bismuth subnitrate in water; used medicinally. **m. of lime.** A suspension of calcium hydroxide in water. **m. of magnesia.** Magma magnesia. A suspension of 7 % magnesium hydroxide in water; used medicinally as an antiacid for gastric disturbances. **m. of sulfur.** Precipitated sulfur.



Milk test bottle.

milky. Having a flat, white or opaque appearance. **m. quartz.** A variety of quartz having a milk-like color and greasy luster.

mill. (1) A crushing, grinding, or pulverizing apparatus. (2) An establishment for reducing ores by mechanical means. (3) An establishment in which grinding, crushing, or powdering is done, as paper mill, flour mill, etc. (4) The equipment of a rolling mill; hence, a steel plant. **assay-** A small mechanical crusher for the laboratory. **ball-** A grinding apparatus in which iron or quartz balls are used for powdering. **drug-** A laboratory apparatus for grinding drugs or seeds. **pebble-** Ball mill. **porcelain-** A laboratory machine for grinding wet or dry chemicals or bacteriological materials.

m. iron. A pig iron suitable for puddling or for the basic open-hearth process.

millboard. Board made from paper-refuse.

Miller, William Lash, 1866–1940. A Canadian chemist, noted for his study of bios and physical chemistry. **M. indices.** See *atomic planes.*

millerite. NiS. Nickel pyrites. A native nickel sulfide.

millet. A small-grain, edible cereal, cultivated on dry, sandy soils, *Setaria italica,* a Gramineae.

milli- A prefix derived from the Latin, indicating one-thousandth.

milliammeter. An amperemeter for measuring one-thousandth of an ampere.

milliampere. One-thousandth part of an ampere.

milliångström. λ. The one-thousandth part of an Ångström unit, $\lambda = 0.1\mu\mu = 10^{-11}$ cm.

millibar. One-thousandth part of a bar.

milligram. mg. A unit of weight equal to the one-thousandth part of a gram. 1 mg. = 0.01543 grains. **m. atom.** mg. at. The number of milligrams of an element, divided by its atomic weight; used in the analysis of sea water. **m. per cent.** mg.-%. The concentration of a solution expressed in mg. per 100 cc.

milligramage. A unit of radioactive dosage: the amount of radium exposure produced by 1 mg. radium in one hour.

milligram hour. Milligramage.

Millikan, Robert Andrews. 1868– . An American physicist, noted for his researches on electric phenomena, electrons, x-rays and radiation. **M.'s rays.** Cosmic rays. A high-frequency radiation from the cosmos, which penetrates the atmosphere and upper crust of the earth. Its origin is at present thought to be the interstellar space. Cf. *mass-energy cycle.*

millilambert. A unit of illumination, equal to 0.929 lumens emitted per square foot.

milliliter. Same as mil. (Cf. *cc.*)

millimeter. mm. = The one-thousandth part of a meter.

millimicron. mμ = The one-millionth part of a millimeter; the one-thousandth part of a micron; cf μμ = micro-micron.

millimol. The one-thousandth part of a gram-molecule (mol).

milling. The operation of crushing, grinding, or powdering.

millinormal. A solution having one-thousandth part of the concentration of a normal solution.

million. 10^6 or 1,000,000. One thousand thousands.

milliphot. A unit of illumination equal to one-thousandth part of a phot = 0.929 foot candle.

Millon's base. A yellow powder [probably $HO(Hg_2O)NH_2.H_2O$ or $(HOHg)_2NH_2OH$] produced from a solution of mercuric oxide in ammonium hydroxide. **M.'s reagent.** A reagent for the detection of proteins made by dissolving mercury in twice its weight of concentrated nitric acid and diluting with twice the volume of water; originated in 1849 by N. A. E. Millon, a French chemist. **M.'s test.** An intense, red precipitate or color is produced in the presence of proteins by warm Millon's reagent.

millstone. Burstone. A hard stone used for grinding cereals; it usually consists of a coarse sandstone with fine quartz inclusions.

milorganite. An organic fertilizer prepared in Milwaukee by the dehydration of sewage. A brown granular powder resembling coffee grounds, free from bacteria and seeds, and containing 5.4 % N and 3 % H_3PO_4.

milori blue. A pigment similar to soluble Prussian blue, but having a red tint; prepared by the oxidation of a paste of potassium ferrocyanide and ferrous sulfate.

mimetite. $PbCl_2.3Pb_3(AsO_4)_2$. Mimetisite. A native lead chloride and lead arsenate.

mimosa bark. The dried bark of *Acacia mimosa*, a Leguminosae. It contains an astringent principle used in tanning.

min. ℿ. An abbreviation for minim.

mine. The subterranean workings for minerals, coal, or ores; cf. *quarry, outcrop.*

mineral. Any non-organic or fossilized organic substance found in nature. Minerals have a definite chemical composition, and are formed by inorganic reactions. They are classified according to their chemical compositions, or to their forms of physical crystallization. **Ethiops-** Black mercuric sulfide with some free Hg and S.

m. acid. An inorganic acid. **m. adhesive.** Sodium silicate. **m. alkali.** An inorganic base, *e.g.*, NaOH, $Ca(OH)_2$. **m. blue.** (1) A mixture of ferriferrocyanide with calcium sulfate or barium sulfate. (2) A blue copper or tungsten ore. **m. butter.** Antimonous chloride. **m. caoutchouc.** Alaterite, helenite, bitumen elastic. A plastic type of bitumen. **m. carbon.** Graphite. **m. chameleon.** Potassium permanganate. **m. charcoal.** An amorphous coal having a distinct vegetable structure, which occurs as thin layers in bituminous coal. See *coal* (fusain). **m. coal.** Fusain. **m. cotton.** M. wool. **m. dye.** An inorganic pigment. **m. fat.** Petrolatum. **m. green.** Copper carbonate. **m. jelly.** A semi-solid mixture of hydrocarbons; as, vaselin, solid petrolatum. **m. oil.** Paraffin oil, or its homologs. **m. oils.** An oil obtained from inorganic matter, as petroleum and its products. **m. paint.** A pigment derived from a colored mineral. **m. pigments.** A native colored ore, or any artificial inorganic coloring matter. **m. pitch.** Asphalt. **m. purple.** A red, iron oxide pigment, or ochre. **m. resin.** A hydrocarbon mineral, such as asphalt, bitumen, copal. **m. rubber.** Gilsonite. **m. separating fluid.** See *density fluid.* **m. streak.** The characteristic colored streak produced when certain minerals are rubbed on a porcelain plate. **m. tallow.** Hatchettenine. **m. water.** A natural water containing sufficient salts or gases in solution to give it certain properties and taste (see *water*). *artificial-* A solution of certain salts in carbonated or distilled water. **m. wax.** Ozocerite. **m. white.** Pearl hardening. A pure form of natural calcium sulfate, used as a loading in paper, etc. **m. wool.** Mineral cotton. A mass of finely interlaced filament produced by suddenly cooling molten slag. Used as a filling material, for walls and coverings for steam pipes. **m. yellow.** Lead oxychloride.

mineralization. The process of replacing organic constituents by inorganic matter, *e.g.*, in fossilized plants and animals. Cf. *petrifaction.*

mineralize. Petrify.

minerallac. A trade name for asphalt solution used for insulating cable joints.

mineralography. (1) The descriptive branch of mineralogy. (2) The study of minerals by microscopic methods, and the recording of their structures by photographs of thin sections of the polished and etched minerals.

mineralogy. A branch of science dealing with the occurrence, description, mode of formation, and uses of minerals.

miner's inch. An arbitrary measurement of water, which is generally fixed as that quantity of water which will flow through a square inch hole through a two inch plank, the water standing six inches above the top of the hole. This quantity of water amounts to 2274 cubic feet in 24 hours (= 1½ cubic feet per minute).

miner's lamp. A lamp used by miners: oil lamps, carbide lamps, Davy lamp, electric cap-lamps, or flame-safety lamps.

minetisite. Mimetite.

minim. ℿ = min. A unit of volume in the English system. 1 minim = 0.0616 cc.; 1 min.

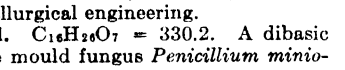
= $\frac{1}{60}$ part of a fluid dram. **U.S.-** 0.9606 imperial m. = 0.9483 grain H_2O at 62°F.

minimal. Smallest quantity.

minimum. The smallest amount or the lowest value or limit.

mining. The processes by which useful minerals are obtained from the earth's crust, both by surface mining (from quarries) and by underground mining (from mines). **m. engineering.** The art and science of excavating, working, and controlling the technical processes of mines, including branches of civil, electrical, mechanical, and metallurgical engineering.

miniloteic acid. $C_{16}H_{26}O_7$ = 330.2. A dibasic acid from the mould fungus *Penicillium miniloluteum.*



minium. Red *lead oxide*, Pb_3O_4. Originally the term for cinnabar, but now applied to its chief adulterant, red lead. Cf. *sandix.*

minivalence. The lowest valency of an element, as shown by its position in the periodic system.

mink fat. The soft fat from *Putorius lutreula.* White solid, d.0.941, m.36.5, n_D.1.4608.

mint. Mentha (q.v.). **horse-** Monarda. **marsh-** Marshmint. **mountain-** Calaminth. **pepper-** Peppermint. **spear-** Spearmint.

minulite. The mineral $KAl_2(OH,F)(PO_4)_2.3.5H_2O$ from Western Australia.

minute. (1) Any particularly small object. (2) A unit of time, the sixtieth part of an hour. **m. glass.** An 8-shaped sealed glass vessel, on a base. It is filled with fine sand which flows, in a given time, from the upper to the lower compartment.

Miocene. The geological epoch (q.v.) between the Eocene and Pliocene periods.

miostagmin reaction. Ascoli reaction. The lowering of the surface tension of diluted blood-serum which results from the antigen-antibody reaction, and is measured with Traube's stalagmometer.

miotic. Myotic.

mipor. Microporous. **m. rubber.** A soft rubber, penetrated by pores of about 0.0004 mm. average diameter. Used in filter-presses. **m. scheider.** A diaphragm of m. rubber used in accumulators and batteries.

mirabilite. A native sodium sulfate, Na_2SO_4, H_2O.

miramant. A tungsten-molybdenum alloy, used in cutting tools.

mirbane oil. Nitrobenzene.

mirror. A highly-polished surface that reflects light, made of polished metal, (nickel or its alloys) or glass with a metal backing (mercury, tin). **concave-**A)-shaped mirror. **convex-** A (-shaped mirror. **plane-** A perfectly flat mirror.

mirrorstone. (1) Mica. (2) Muscovite.

misce. The Latin term for mix.

mischmetall. (1) An impure form of selenium. (2) An unseparated reduction product from a natural mixture of the rare earths. It contains a mixture of rare earth metals. (3) Commercial cerium. A mixture of 40–75 % Ce, with varying amounts of La, Nd, Pr, etc. and sometimes 1–5 % Fe; used for pyrophoric alloys. Cf. *Auer metal.*

mischzinn. [German, mixed tin.] An alloy of 54.4 % Sn, 41.9 % Pb and 3.6 % Sb, used for the preparation of solders.

miscibility. The ability of certain liquids to mix with each other in all proportions. **m. gap.** The temperature range in which certain liquids which are normally miscible will not mix.

miscible. Capable of mixing or dissolving in all proportions. **im-** Not able to mix.

miso. A fermented soya-bean paste used as food. Cf. *kogi.*

mispickel. $FeS_2.FeAs_2$. A native iron sulfide and arsenite.

mist. Fog. Cf. *colloidal systems.* **m. tree.** Chionanthus.

mistletoe. The leaves and young twigs of *Phoradendron flavescens;* used, as a fluid extract, as antispasmodic and narcotic. Cf. *viscum.*

mistura. The Latin term for mixture; used in the U.S.Pharmacopoeia.

mitogenic. Describing radiations supposed to be emitted by living humans. They have been associated with religious hysteria; cf. *scotography.*

mitosis. Karyokinesis.

mitragynine. $C_{22}H_{31}O_5N$ = 389.25. Mitragyne. An alkaloid, m.106, $b._{5mm}$.240, from *Mitragyna speciosa,* a Rubiaceae.

mitraversine. $C_{22}H_{36}O_4N_2$ = 392.30. An alkaloid, m.237, from *Mitragyne diversifolia,* a Rubiaceae.

Mitscherlich, Eilhardt. 1794–1863. A German chemist, noted for his research in mineralogical and organic chemistry. **M. desiccator.** A desiccator, with side-tubes attached for evacuation. **M. eudiometer.** A closed glass buret, with platinum electrodes at one end and glass stopcock at the other end. **M. law.** (1) The law of isomorphism (q.v.), which is not rigidly correct. The same number of atoms of similar elements combined in the same way produce an identical crystalline structure, which is, therefore, not dependent on the elements contained in it, but on the mode of arrangement of the atoms. (2) The spectra of isomorphous substances are similar. **M. pulp.** A strong sulphite wood pulp prepared by the M. process, in which wood chips are digested for 70–80 hr. at 45 lbs./sq. in. pressure, the cooking liquors being circulated and heated outside of the digester.

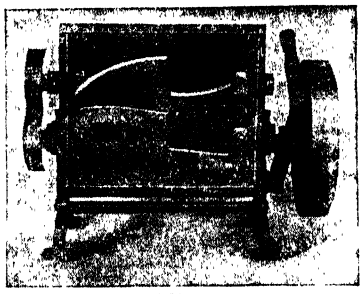
mitsubaene. $C_{15}H_{24}$ = 204.19. A sesquiterpene from *Cryptotaenia japonica* (mitsuba-zeri), a Japanese Umbelliferae.

mix. (1) To intermingle. (2) The physical mixture of substances from processing; as applied to rubber, asphalt etc.

mixed crystals. A crystal of two isomorphous substances, both of which crystallize in the same system. **m. esters.** An ester R—COO—R′, in which the two radicals, R and R′ are different. **m. ethers.** An R—O—R′ ether, in which the radicals, R and R′ are different *i.e.*, an oxide of two different hydrocarbons. **m. infection.** The invasion by and growth of two or more microorganisms in the animal body. **m. ketones.** A ketone of the type R—CO—R′. **m. salt.** A salt derived from a polyvalent acid, in which the hydrogen atoms are replaced by different metals, as $KNaNH_4PO_4$, $KAl(SO_4)_2$, or $KNa(C_4H_4O_6)$. **m. vaccine.** A suspension of two or more microorganisms, as bacteria in water; used medicinally for injections.

mixer. Equipment used for incorporating one or more material into another; it consists of

a steel bowl, with revolving mixing arms moving in opposite directions, which mix or knead pastes, semi-solid or solid materials. Cf. *mill* (see figure).



Mixer.

mixite. Cu_2O,As_2O_3,xH_2O with 13 % Bi_2O_3. An emerald mineral.

mixture. (1) Two or more substances which are mixed; but not chemically combined. Mixtures are non-homogeneous, and may be separated by mechanical means. **A.C.E.-** An anesthetic mixture: 1 part alcohol, 2 parts chloroform, 3 parts ether. **constant boiling-** A mixture of two liquids which, at a given pressure, distils unchanged, the boiling point remaining constant. Cf. *azeotropy*. Thus 20 % HCl and 80 % H_2O boil at 110°C., a *maximum* b.p. for these mixtures, while 95.6 % alcohol boils at 78°C., a *minimum* b.p. for alcohol-water mixtures. **freezing-** A mixture of salts and water or ice which produces low temperatures. **law of-** Law of *alligation*. (2) Mistura. A pharmaceutical preparation. **m. copaiba.** Lafayette m. A solution of 15 min. copaiva and 30 min. acacia in 1 fl. oz. of water.

M.K.S.-system. Meter-kilogram-second system. A technical system of measurements derived from the metric system: C.G.S-system (centimeter-gram-second). It was recommended by the International Electrotechnical Commission in 1938, as for certain purposes it is simpler than the C.G.S. system.

ml. Abbreviation for mil or milliliter (B.P. usage).

mm. Abbreviation for millimeter = $\frac{1}{1000}$ meter. **mm^2.** Abbreviation for square millimeter. **mm^3.** Abbreviation for cubic millimeter. **mm.** Abbreviation for millimoles.

mμ. Abbreviation for millimicron, 10^{-9} m.

μμ. Abbreviation for micromicron, 10^{-12} m.

mmm. An abbreviation for millimicron.

Mn. The symbol for manganese.

Mo. The symbol for (1) molybdenum; (2) monium.

(*Mo.*) The abbreviation for $C_{17}H_{19}O_3N$ (morphine).

mobile. Changing or moving.

mobility. (1) The motion of atoms, molecules, ions, or colloidal particles. The mobility (α) of an ion in a liquid is given by the expression, $\alpha = 1.037 \times 10^{-5}\lambda n$, where λ is the equivalent conductivity, and n the transport number of the ion concerned. (2) The visible motion of colloidal particles and micro-organisms. Cf. *Brownian motion*.

mobilometer. A form of viscometer in which the time is noted for a disc to fall through a column of the liquid under investigation. It is used for measuring the consistency of oils, cream and liquid foods.

mocha. See *coffee*. **m. stone.** Moss agate.

mochyl alcohol. $C_{26}H_{46}O$ = 374.35. An alcohol, m. 234°C., from mochi, a Japanese birdlime.

mock gold. Iron pyrites. **m. lead.** Zinc blende. **m. ore.** Sphalerite. **m. silver.** Britannia metal. **m. vermilion.** Lead chromate.

mode. The actual composition of a substance (*c.g.*, rock) as compared with its norm (q.v.).

model. An arrangement by which an idea or concept can be visualized. **crystal-** A set of glass or cardboard forms or other devices, which illustrate the shapes of crystals. **space lattice-** A group of wire nets and balls which indicate the arrangement of atoms within a crystal. Cf. *space lattice*.

modification. (1) A slight alteration or change. (2) The conversion of cereal starch into a form in which it is readily acted on by proteolytic or amylolytic enzymes, as in the malting of barley.

modified soda. A mixture of sodium carbonate and sodium bicarbonate, used as a cleaning agent in laundries, dairies, the textile industries, and in the household.

modulus. The measure of a force or properties of mass or their effects. A constant which converts a proportionality into an equality. **bulk-** An approximate value, expressed in dynes per sq. cm., which lies between the limit of elasticity and the breaking strength of a material. **Young's-** The force (or longitudinal elasticity), in dynes per sq. cm., required to stretch a metal wire a length proportional to $M = \frac{FL}{al}$, where M is Young's modulus, F the whole force, a the area, L, the entire length of wire, and l, the extension.

m. of elasticity. The ratio of the magnitude of the stress to that of the corresponding strain. (*a*) If the strain is one of volume and the stress is pressure, P, the modulus of elasticity of volume (= k, bulk modulus) is $k = PV/v$, where v is the change in volume. (*b*) If the strain is a shear, the modulus of elasticity is the ratio: $n = T/\theta$ (shear modulus), where T denotes the shearing stress, and θ, the corresponding shear. **m. of rigidity.** Modulus of elasticity (*b*).

Mohr, Karl Friedrich. 1806–1879. A German chemist and physicist. He is considered by some as the originator of the conservation of energy law, prior to Mayer. **M. condenser.** A modified Liebig condenser. **M. pipet.** A small buret with tap, which is used as a pipet. **M. liter.** G.W.A. The space occupied by an amount of water at 17.5°C. having an apparent weight in air (brass weights) of 1000 grams. 1000 G.W.A. = 1002 milliliters. **M. salt.** $(NH_4)_2Fe(SO_4)_2.6H_2O$. Ferrous ammonium sulfate, used as a standard in volumetric analysis.

Mohs, Friedrich. 1773–1839. A German mineralogist. **M. scale of hardness.** The hardness of a mineral is gauged by its ability to scratch or be scratched by one of ten standard minerals:

1. talc	6. orthoclase
2. gypsum	7. quartz
3. calcite	8. topaz
4. fluorite	9. corundum
5. apatite	10. diamond

Each mineral in the scale is scratched by all below it. Cf. *abrasives*.

Moissan, Henri. 1852–1907. A French chemist noted for his research on the production of artificial diamonds and gems, and on the isolation of fluorine. **M. furnace.** A high-temperature electric furnace. **M. process.** The production of metallic chromium by the reduction of chromic oxide with carbon in an electric furnace lined with calcium chromite.

moistness. The amount of liquid, generally water, held by a solid or gas. Cf. *wetting, adsorption.*

moisture. The wetness or dampness of a substance; the percentage of water contained in a substance.

mol. Mole. A gram-molecule, or formula weight in grams. The quantity of matter weighing M grams, where M is the molecular weight. Thus, one mol water weighs 18 grams, two mols, 36 grams.

molal. (1) Molar. Gram-molecular, or pertaining to mols; the molecular weight expressed in grams. (2) Moles per weight, as in m. solution. **m. conductivity.** The conductivity between electrodes one centimeter apart of a solution containing one mol (gram-molecule) of the substance dissolved in one liter. **m. latent heat.** Molecular heat of vaporization. The quantity of heat in calories required per molecular weight to transform a substance from the liquid to the gaseous state. **m. surface.** The area of a sphere of one mol of a substance. **m. solution.** The concentration of a solution expressed in moles of solute per 1000 grms. of solvent. Cf. *molar solution.* **m. volume.** The volume occupied by one mol of a substance. This volume is 22.4146 ± 0.0008 liters for an ideal gas under standard conditions. **m. weight.** The molecular weight expressed in grams; a mol.

molality. *M.* The concentration of a solution expressed in mols per 1000 gm. of solution. Cf. *molal, molar solution.*

molar. (1) Molal. (2) Referring to molecules in bulk; as distinguished from *molecular* (single molecules) and *molal* (a definite quantity). Cf. *molecular, colloidal, molal, normal solutions.* (3) Moles per volume, as in *m. solution.* **m. solution.** A solution which contains one mol of substance in 1000 cc. of solution = M. Thus:

1.0M NaCl solution contains 58.5 gm. per liter
0.5M NaCl solution contains 29.25 gm. per liter
2.0M NaCl solution contains 117.0 gm. per liter

It may or may not be identical with a *normal* solution (q.v.), or a *molal* solution.

molarity. M. The concentration of a substance in one thousand cc. of solution, expressed in mols. Cf. *molar, molal solution, concentration.*

molasses. Treacle. The uncrystallizable syrup obtained on boiling down raw cane- or beet-sugar. It contains 70 % of sugars. Cf. *affination.*

mold. Mould. A variety of fungoid growth, usually filamentous, which grows on damp vegetable material. Cf. *mould.* **slime-** Myxomycetes.

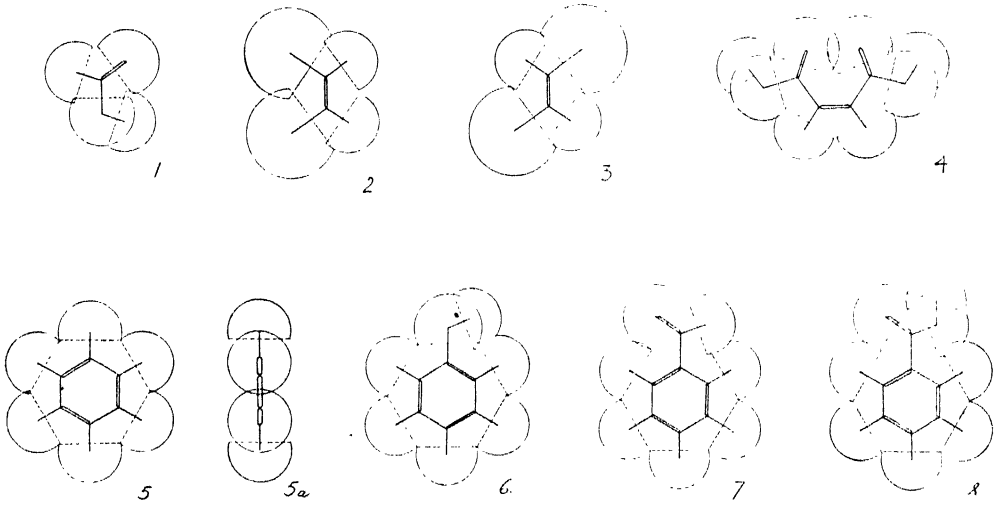
moldavium. Virginium.

mole. Mol.

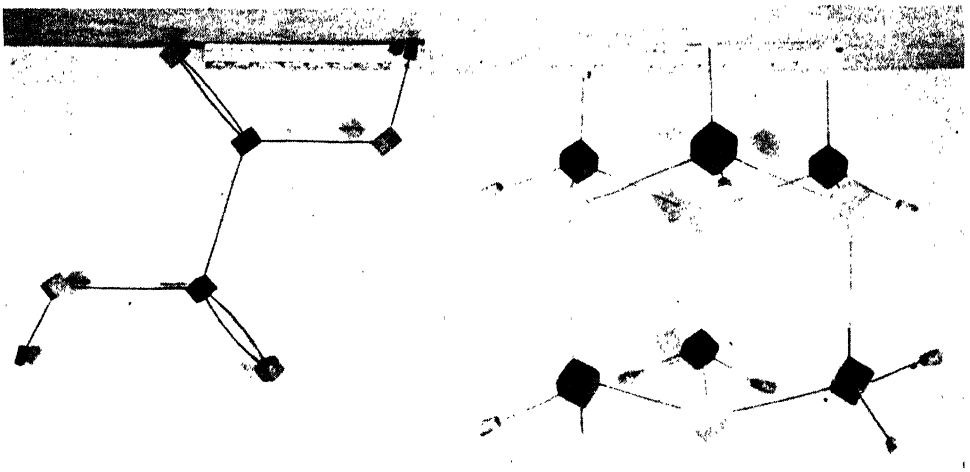
molecular. Pertaining to single molecules. Cf. *molar, molal.* **m. association.** Two or more molecules held by coordinate bonds, q.v. **m. colloid.** See *colloid.* **m. combination.** See *combination.* **m. compound.** Double salt. **m. conductivity.** Molal conductivity. **m. conversion.** See *rearrangement.* **m. depression.** The lowering of the freezing point of a solution. See *Raoult's Law.* **m. diagrams.** Drawings to scale of a view of the m. model. They resemble structure symbols, but show the ionic and effective radii and the shape of the molecule. **m. diameter.** The diameter of a molecule expressed in 10^{-8} cm. and calculated either from (a) Sutherland's equation, (b) van der Waal's equation, (c) the heat of conductivity, (d) the

MOLECULAR DIAGRAMS

These are drawn to scale in Ångström units. The HEAVY lines represent the bonds (cf. *structure symbols*) or the vector force lines from the atoms. The CIRCULAR lines are the effective radii around the atoms. The DOTTED lines dissect the bonds at the atomic radii; thus, 0.77Å. for C, 0.66Å. for N.



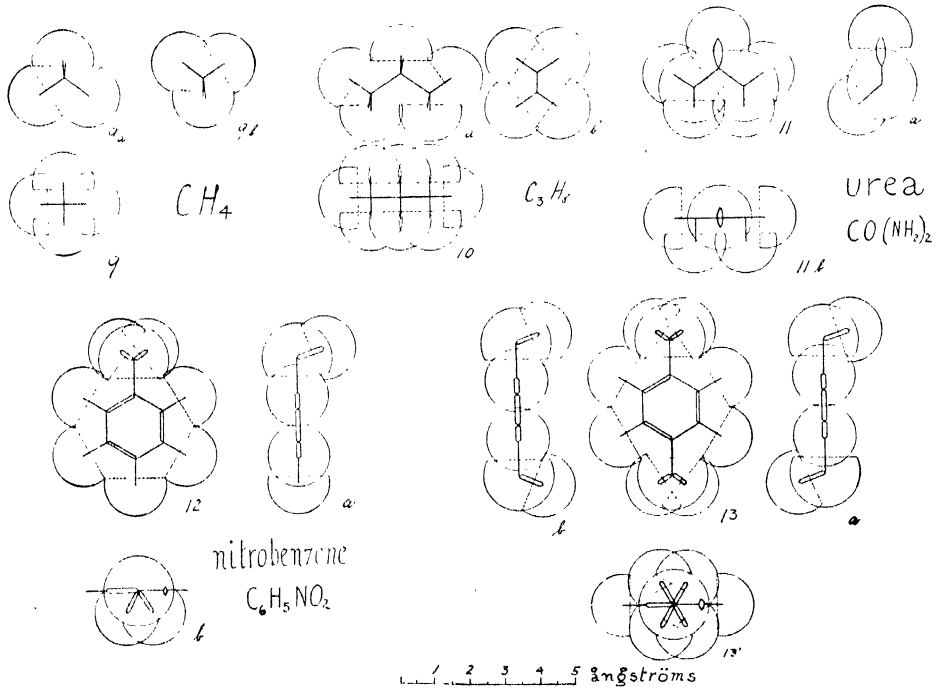
Front views of: **1. *formic acid***, H.CO.OH; **2. *cis-dichloroethylene***, CHCl:CHCl; **3. *trans-dichloroethylene***, CHCl:CHCl; **4. *maleic acid***, HO.CO.CH:CH.CO.OH; **5. *benzene***, C_6H_6, **5a., *side view;*** **6. *phenol***, C_6H_5OH; **7. *benzaldehyde***, C_6H_5.CO.H; **8. *benzoic acid***, C_6H_5.CO.OH.



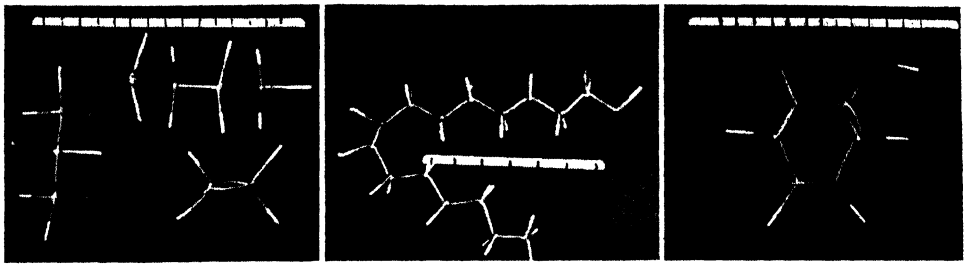
Hexamethylenetetramine Oxalic acid

Molecular models (2).

Scale of models: 10 cm. per Ångström. (Note that the cubes representing atoms are located so that their corresponding faces are all parallel.)



Three-directional views of: 9. *methane,* CH_4 *top view,* 9*a. front view,* 9*b. side view;* 10. *propane,* $CH_3.CH_2.CH_3$ *top view,* 10*a. front view,* 10*b. side view;* 11. *urea,* $NH_2.CO.NH_2$ *front view,* 11*a. side view,* 11*b. top view;* 12. *nitrobenzene* $C_6H_5.NO_2$ *front view,* 12*a. side view,* 12*b. top view;* 13. *para-dinitrobenzene,* $NO_2.C_6H_4.NO_2$ *front view,* 13*a. side view of trans-form,* 13*b. side view of cis-form,* 13. *top view of trans-form.*



Propane, Propylamine, Ethylene cis-oleic acid Phenol

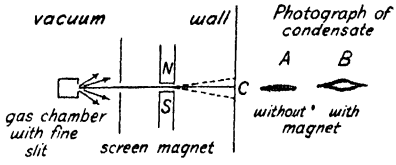
Molecular models (3).

Scale of models: 2 cm. per Ångström. (Compare these wire models with the corresponding structure symbols.)

specific heat at constant volume. Some of the molecular diameters are, (Ångström units):

	(a)	(b)	(c)
hydrogen	2.40	2.34	2.32
helium	1.90	2.65	2.30
oxygen	2.98	2.92	—
nitrogen	3.18	—	—
mercury	—	3.01	—

See figures. **m. dispersion.** M. rotation. **m elevation.** The raising of the boiling point of a solution. See *Raoult's Law.* **m. equation.** See *chemical equation.* **m. field.** See *field.* **m. film.** A monomolecular layer; as produced in adsorption. **m. flow.** See *flow.* **m. formula.** A combination of chemical symbols from which the molecular weight of a substance can be obtained by the simple addition of the atomic weights of the constituents. Cf. *formula.* **m. free path.** The average free path, L, of a molecule in a solution or gas. It is calculated from (a) Boltzmann's equation, $L = \mu(0.3592\rho\Omega)$ or (b) Meyer's formula, $L = \mu(0.3097\rho\Omega)$, in which μ is the viscosity, ρ the density of the medium and Ω the molecular velocity. **m. frequency.** A ratio obtained by $v = k(T_m/M\gamma^{\frac{2}{3}})^{\frac{1}{2}}$, where v is the molecular frequency, T, the absolute temperature of the melting point of the substance, M, the molecular weight, γ, the molecular volume, and k, a constant whose empirical value (Nernst) is 3.08×12^{12}. **m. heat.** The specific heat of a substance multiplied by its molecular weight. **m. heat of vaporization.** Molal latent heat. **m. model.** (1) A series of differently-sized balls, representing atoms, which are united to show the structure of a m. (2) A series of cubes, representing atoms, having holes from the corners to the center into which fit wires that may be cut to suitable lengths (10 cm. for 1 Ångström unit) and united with other cubes to illustrate a molecule. (3) A series of wires of suitable length (2 cm. for 1 Ångström unit) which are the vectors representing bonds, as in (2). (See figures.) **m. number.** (1) A number, analogous to the atomic number, obtained by arranging the different molecules according to their molecular frequencies. (2) The sum of the atomic numbers of the elements of a molecule; in a compound it is *even*, in a free radical it is an *odd* number. Cf. *combination.* **m. rays.** A stream of molecules moving uniformly in a similar direction, obtained by the escape of vapor through an orifice into a vacuum, screening, and condensing the vapor on the wall of the vessel. Such a beam of molecules may be influenced by electric and magnetic fields. The velocity is calculated by $\alpha = \sqrt{2RT/M}$, and is about 2×10^4 cm. for hydrogen at room temperature. **m. rearrangement.** See *rearrangement.* **m. rotation.** The specific rotation of a substance multiplied by its molecular weight. **m. solution.** A true



Molecular rays.

solution in which single molecules of the dissolved substance are moving in the dissolving liquid; cf. *colloidal solution,* which consists generally of aggregates of molecules in the solvent. **m. solution volume.** The difference between the volume of a solution containing 1 mol substance per liter, and that of 1 liter of the pure solvent. **m. velocities.** The mean velocity, G, with which the molecules move. It is proportional to the mean kinetic energy, and the pressure which the molecules exert on the walls of the vessels (cf. *kinetic theory*) and is calculated from: $G = W\sqrt{\frac{3}{2}} = 1.225W$. W is the most probable velocity obtained by the equation, $W = 15{,}800\sqrt{(T/m.)}$ (cm./sec.) in which T is the absolute temperature and, m, the molecular weight. **m. volume.** The molecular weight, M, of a substance divided by its density D; hence, $MV = M/D$. In an ideal gas: $R = 22.416 \pm 0.0008$ liter $mole^{-1}$. See *parachor, volume.* **m. weight.** M. The relative mass of a molecule in relation to that of a hydrogen atom. It is calculated by adding together the atomic weights indicated by the formula of the substance; or it may be determined by many chemical and physical methods, as, lowering of freezing point, raising of the boiling point, vapor pressure, conductivity or vapor density. Cf. *Landsberger, Sakurai-Landsberger.*

molecule. The chemical combination of two or more like or unlike atoms. It has been defined as the smallest quantity of matter that can exist in the free state and retain all the properties of the original substance. In noble gases and metals the molecule is identical with

the atom, *i.e.*, the molecules are monatomic. Other gaseous molecules usually consist of two atoms, as O_2, Cl_2. All the molecules of all compounds contain two or more atoms. Cf. *additive, colligative, entropy, Sutherland's equation, molecules, kinetic theory, contraction.* **activated-** A m. with one or more excited atoms; *i.e.*, atoms with one or more electrons moving at a higher energy level. It is indicated by a ′ or *; as Cl_2′ or Cl_2*. **biatomic-** (1) A m. of two atoms. (2) An isosteric m. having two atoms, the hydrogen atoms not being counted; as, O_2, N_2H_4, C_2H_6, CH_3F, CH_3OH. **compound-** A m. consisting of different types of atoms. **elementary-** A m. consisting of one type of atoms. **excited-** Activated. **gram-Mol. isosteric-** A group of molecules having the same number of electrons, the same sum of atomic numbers and, sometimes, the same molecular weight; as, CO_2 and N_2O; O_2 and HN:NH; N_2 and CO. **nonpolar-** q.v. **oriented-** q.v. **polar-** q.v. **saturated-** A molecule in which all valencies are satisfied. **tetratomic-** (1) A m. having four atoms. (2) An isosteric m. with four atoms, excluding the hydrogen; as, $(CH_3)_3N$ and $(CH_3)_3CH$. **triatomic-** (1) A m. having three atoms. (2) An isosteric m. having three atoms, excluding the hydrogen atoms; as, $(CH_3)_2O$, $(CH_3)_2NH$ and C_3H_8. **unsaturated-** A m. in which there are double and/or triple bonds between certain of the atoms.

molecules (constants). (1) The number of molecules per gram-molecule (mol.) is $N = 6.06 \times 10^{23}$, (mean). Avogadro's number. (2) The number of molecules of a gas per cc. at 0°C. and 760 mm. pressure is, $n = 2.70 \times 10^{19}$. Loschmidt number. (3) The following are calculated constants for some molecules of gases:

	H_2	O_2
mass of molecule (molecular weight)	2	32
velocity of molecule (average in meters per second at 0°C.)	1859 m.	465 m.
mean free path (in mm.)	965×10^{-7}	560×10^{-7}
collisions (millions per second)	17,750	7,646
diameter (in mm.)	5.8×10^{-7}	7.6×10^{-7}
mass (in grams)	46×10^{-25}	736×10^{-25}
number of molecules in 1 cc	3.8×10^{19}	3.8×10^{19}

molions. The supposed negatively-charged atomic groups of an ionized inert gas.

moloxide. An unisolated primary auto-oxidation product of one or more molecules of oxygen, added to an unsaturated organic compound.

molybdate. A salt of molybdic acid. The simpler salts have the formula, $M_2(MoO_4)$, or, $M_2Mo_2O_7$, corresponding with the chromates and bichromates, respectively. A more complex salt is $M_6Mo_7O_{24}$, as in ammonium molybdate.

molybdaenum, molybdan. Early names for both native molybdenum sulfide and graphite, which were frequently confused.

molybdenic. Molybdic.

molybdenite. MoS_2. The white or green mineral sulfide of molybdenum.

molybdenous. A salt of divalent molybdenum, Mo=.

molybdenum. Mo = 95.95. A heavy metal; atomic number 42, belonging to the chromium group of the periodic system. A gray metal, d.9.01, m.2535, b.5690, insoluble in water or alkalis. It occurs in molybdenite, molybdite, wulfenite, and other rare minerals. The metal is used in metallurgy and steel manufacture for crank-shafts and connecting rods; as a resistor, in heating devices and radio-apparatus; as wire, for vacuum tubes and contacts. Its valency may be 2, 3, 4, 5, or 6; but the more common compounds are derived from divalent (molybdenous), trivalent (molybdic), and hexavalent (molybdates) molybdenum. **m. blue.** A mixture of m. dioxide and trioxide, $MoO_2.4MoO_3.H_2O$. **m. chlorides.** *di-* $MoCl_2$ = 166.9. Molybdenous chloride. A yellow insoluble amorphous powder. *tri-* $MoCl_3$ = 202.4. Molybdic chloride. Red needles. *tetra-* $MoCl_4$ = 237.8. Brown crystals. *penta-* $MoCl_5$ = 273.3. Black crystals, d.9.5, m.194, b.268. **m. hexacarbonyl.** $Mo(CO)_6$ = 264.0. Colorless crystals. **m. hydroxide.** (1) $Mo(OH)_3$. A black, insoluble powder. (2) $Mo(OH)_5$. A brown, insoluble powder. **m. minerals.** The principal ore of molybdenum is the sulfide; ores:

molybdenite	MoS_2
molybdite	MoO_3
wulfenite	$PbMoO_4$
powellite	$CaMoO_4$
belonesite	$MgMoO_4$
koechlinite	$Bi_2(MoO_4)_3$

m. orange. A series of pigments formed by the co-precipitation of lead molybdate, lead chromate and lead sulfate in varying proportions. **m. oxides.** *di-* MoO_2 = 128.0. Bluish-red prisms, d.6.44, used as blue pigment in the textile industry. *sesqui-* Mo_2O_3 = 240.0. Yellowish to black amorphous mass, soluble in HCl. *tri-* MoO_3 = 144.0. Molybdic anhydride. The most common oxide; white rhombic crystals, d.4.39, soluble in ammonia or strong alkalis. Used as a reducing agent, and reagent for P_2O_5, As_2O_5, H_2O_2, aromatic oxycompounds, phenols, and alcohols. **m. sulfides.** *di-* MoS_2 = 160.1. Molybdenite. A black crystalline mass, d.4.80, insoluble in acids or water. *tri-* MoS_3 = 192.2. Red brown crystals. *tetra-* MoS_4 = 224.3. Brown crystals.

molybdenyl. (1) The divalent MoO_2 = radical. (2) The tetravalent MoO ≡ radical. **m. dichloride.** $MoO(OH)_2Cl_2$ or $MoO_2Cl_2.H_2O$. **m. tetrachloride.** $MoOCl_4$. **m. trichloride.** $MoOCl_3$. Green, soluble crystals.

molybdic. Describing a salt of trivalent or hexavalent molybdenum. **m. acid.** H_2MoO_4 = 162.0. Molybdic hydroxide. Colorless needles, soluble in alkalis. *hydrous-* $H_2MoO_4.4H_2O$ = 234.08. Yellowish, monoclinic crystals, d.-3.124, soluble in ammonia or alkalis. Used as a reagent, in the preparation of ammonium molybdate solution. **m. anhydride.** MoO_3. See *molybdenum oxides.* **m. ochre.** Molybdite.

molybdite. MoO_3. Molybdenum trioxide, molybdic ochre. Occurring native as yellowish earthy or capillary tufted forms.

molybdœna. An obsolete term applied in confusion to both graphite and molybdenum sulfide.

molybdyl. Molybdenyl.

molysite. An incrustation of ferric chloride found in lava and near volcanos.

moment. The power to overcome resistance. **magnetic-** The strength of a magnetic pole

multiplied by its length. **m. of force.** Torque. The effectiveness of a force in producing rotation around a center, measured in dyne-centimeters (the force multiplied by the distance from the center). **m. of inertia.** See *inertia, momentum.*

momentum. The force effect of a moving body (inertia), measured by multiplying its mass by its velocity. Quantity of motion = MV = MLT^{-1} (M-mass, V-velocity, L-length, T-time). **angular-** Spin.

momordicin. Elaterin.

mon-, mono- A prefix derived from the Greek, indicating "one."

mona wax. Peat wax.

monacetin. $C_5H_{10}O_4$ = 134.1. Glyceryl monoacetate. $CH_2OH.CHOH.CH_2OOCCH_3$. A colorless liquid, d.1.221, soluble in water, alcohol or ether, $b._{2-3mm}$.131. Used as a solvent for basic dyes.

monacid. A compound having one hydroxyl group that can replace the hydrogen of an acid; thus, monacid bases, KOH or NaOH; monacid alcohols, MeOH or EtOH.

monad. A monovalent element or radical, atom or atomic group, *e.g.*, Na—, NH_4—, CH_3—, or —COOH. Cf. *dyad, polyad.*

monamide. An amide containing one amido group.

monamine. An amine containing one amino group.

monarda. American horsemint, bee-balm. The dried herb of *Monarda punctata*, a Labiatae; used medicinally. **m. oil.** An essential oil from m., of thyme odor, d.0.930–0.940, containing thymol and cymol.

monardin. A thymol-like terpene from horsemint oil.

monascin. $C_{24}H_{30}O_6$ = 414.2. A red pigment produced by the growth of the fungus *Monascus purpureus* on rice, m.137, insoluble in water.

monastral blue. A phthalocyanin, (q.v.) containing a copper atom. It is a blue pigment and has a greater combined resistance to light, heat, reagents, etc. than any other blue dye known.

monatomic. (1) Monad. Describing: (2) a molecule consisting of one atom; (3) an atom or atomic group having one free valency.

monazite. A native phosphate sand of the rare earths, especially Ce, La, and Th, found in India and Brazil. Used in the manufacture of thorium and cerium compounds for Welsbach burners, and in the production of pyrophoric alloys.

Mond, Ludwig. 1839–1909. An English chemist (naturalized German). **M. gas.** A process for manufacturing a fuel gas by the passage of superheated steam over coal. **M. process.** A method for separating nickel and copper by means of carbon monoxide; the volatile nickel carbonyl, $Ni(CO)_4$, is formed, and is subsequently decomposed by heat. Cf. *Oxford process.*

monel metal. A native alloy of 67 % nickel, 28 % copper, 1–2 % manganese and 1.9–2.5 % iron, d.8.82, m.1160–1360. It is very resistant to corrosion, and is used in chemical plant.

monesia bark. The bark of *Chrysophyllum glyciphloeum*, a Brazilian tree; used medicinally as a tonic and astringent.

monesin. $C_{32}H_{54}O_{16}$ = 694.5. A saponin-like glucoside from monesia bark.

mongumic acid. An acid obtained from monguma bark, a bark from a Madagascan tree.

monistic. Pertaining to singleness. **m. compound.** A substance which does not ionize in solution; as, sugar.

monium. Victorium (q.v.). A supposed rare earth element discovered in 1898, which proved to be a mixture of rare earth metals.

monks hood. Aconite.

mono- Mon-.

monoacetin. Monacetin.

monoacid. A base or alcohol with one hydroxyl group which can replace one hydrogen atom of an acid.

monoamino acid. An organic acid of the type, NH_2—R—COOH.

monoatomic. Describing: (1) a base or alcohol containing one replaceable hydroxyl group; (2) an acid containing one replaceable hydrogen atom; (3) a molecule consisting of one atom.

monobasic. Describing an acid having one hydrogen atom which can be replaced by a metal or positive radical.

monobromated. A compound having one bromine atom. **m. camphor.** See *camphor.*

monobromethane. (1) Ethyl bromide. (2) Methyl bromide.

monobromo- Describing a compound which contains one bromine atom. **m. acetanilide.** Antisepsin. **m. isovaleryl urea.** Bromural.

monobutyrin. $C_7H_{14}O_4$ = 162.1. Glycerol monobutyrate. $C_3H_7COOC_3H_5(OH)_2$. Colorless liquid, d.1.008, b.271 which is produced by lipolytic action.

monochloro- Describing a compound having one chlorine atom. **m. amine.** NH_2Cl = 51.5. An intermediate product in the preparation of hydrazine from chlorine and ammonia. It is an unstable, pungent liquid. **m. ethane.** Ethyl chloride. **m. methane.** Methyl chloride.

monochroic. Monochromatic.

monochromatic. Monochroic. A substance having but one color; more accurately, represented by one wavelength only. **m. analysis.** The measurement of colors by mixing white light with light of a pure spectral hue; the hue and whiteness only vary. **m. illuminator.** M. lamp. **m. lamp.** A gas flame colored yellow with sodium compounds, or a spectrum apparatus provided with a narrow slit for isolating a ray of one wavelength; used as a source of light for a polariscope or for irradiation.

monoclinic. See *crystal systems.*

monoethanol. A compound having one ethanol radical, —$CH_2.CH_2OH$. **m. amine.** See *ethanolamine.*

monoethyl. Any compound containing one ethyl radical.

monoethylin. See *ethylin.*

monofilm. Monolayer.

monoformin. $C_4H_8O_4$ = 120.1. Glycerylformate, $C_3H_5(OH)_2.COOH$. An oily liquid, b.165.

monogenetic. (1) In biology: pertaining to non-sexual reproduction. (2) In industry: pertaining to dyestuffs which produce only one color on textiles, as compared with polygenetic dyes.

monoglyceride. A glyceride, (q.v.) containing one acid molecule.

monohydrate. A crystal containing one molecule of water of crystallization. **m. crystals.** Sodium carbonate. $Na_2CO_3.H_2O$. Used as cleansing agent in laundries, dairies, and the household.

monohydric. Describing a compound or acid containing one replaceable hydrogen atom.

monolayer. Monofilm. A mono-molecular layer. Cf. *adsorption, orientation.*

monolupine. $C_{16}H_{22}N_2O$ = 258.2. An alkaloid from *Lupinus caudatus* (0.45 %). A yellow glass, b.$_{4mm}$257, $[\alpha]_D$.−40.81° soluble in alcohol. It is related to anagyrine.

monoleate. A combination of a base with one oleic acid radical.

monometric. Isometric.

monomolecular. Pertaining to one molecule. **m. layer.** A layer one molecule thick; cf. *zone, orientation, adsorption.* **m. reaction.** A reaction concerning one molecule only, such as, decompositions or dissociations, intramolecular oxidations and reductions, intramolecular rearrangements. Cf. *reaction order.* **m. zone.** See *zone.*

monomorph. Occurring in one crystal form only. Cf. *dimorph.*

mononitraniline. See *nitraniline.*

mononuclear. (1) In chemistry: describing an aromatic compound having one ring of atoms. (2) In biology: a cell having one nucleus.

monoolein. $C_{21}H_{38}O_4$ = 354.30. Glycerol-*1*-monooleate, $C_{17}H_{31}COOCH_2.CHOH.CH_2OH$. White crystals, d.0.947, m.35, insoluble in water. It has been synthesized from fats by pancreatic lipase.

monopalmitate. An ester, especially of glycerol, containing one palmitic acid radical only.

monopalmitin. $C_{19}H_{38}O_4$ = 330.3. α- Glycerol-*1*-monopalmitate, $C_{15}H_{31}COOCH_2CHOHCH_2$-OH. White leaflets, m.77, soluble in alcohol. β- Glycerol-2-monopalmitate. $C_{15}H_{31}COOCH$-$(CH_2OH)_2$.

monophosphate. A salt containing one phosphate radical.

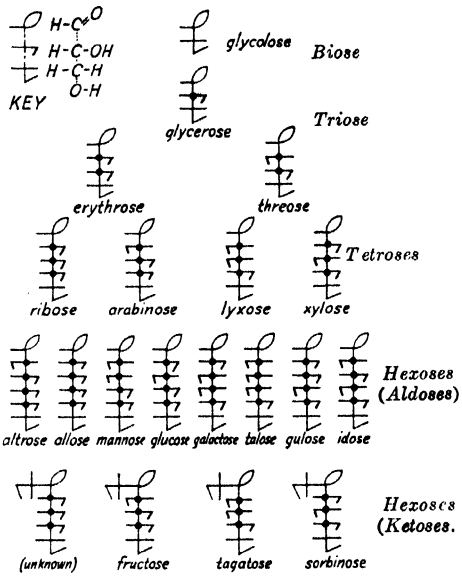
monopole soap. A soap of highly sulfonated fatty acids.

monopoly. Control over the production and sale of an article or material. Taking the world's production as 100, the commodities come nearest to being monopolized by the countries shown in the table. Cf. *trust, patent.*

Commodity	*Proportion produced*	*Annual value in million dollars*
Helium	100 % by U. S. A.	No sale
Radium	100 % by Belgium	6
Chilean nitrate	100 % by Chile	100
Natural camphor	95 % by Japan	7.5
Potash	95 % by Germany and France	75
Asbestos	91 % by British Empire	
Quinine	90 % by Dutch Indies	
Nickel	90 % by Canada	
Molybdenum	85 % by U. S. A.	
Vanadium	78 % by Peru	
Iodine	80 % by Chile	4
Sisal	75 % by Mexico	15
Silk	75 % by Japan	270
Sulfur	71 % by U. S. A.	
Coffee	65 % by Brazil	140
Antimony	66 % by China	
Manganese	64 % by Russia	
Petroleum	61 % by U. S. A.	
Chromium	63 % by Rhodesia	
Rubber	55 % by British Empire	400
Gold	53 % by South Africa	
Copper	51 % by U. S. A.	

monorefringent. An isotropic solid or mineral.

monosaccharide. A hexose or pentose; in general, an aldehyde-alcohol or ketone-alcohol, cf. *carbohydrates.* There are:



Monosaccharides.

monose. A hexose or pentose. See *saccharides.*

monosilane. Silane.

monostearin. $C_{21}H_{42}O_4$ = 358.3. α- Glycerol-*1*-monostearate, $C_{17}H_{35}COOCH_2.CHOH.CH_2$-OH. White needles, m.73.5, insoluble in water. β- Glycerol-2-monostearate, $C_{17}H_{35}$-$COOCH(CH_2OH)_2$. White solid, m.80.

monosulfide. Containing one divalent sulfur atom, *e.g.*, FeS. **m. equivalent.** A value of lime-sulfur solutions determined by titrating with iodine to disappearance of the yellow color. It represents the S of calcium sulfide, as distinct from the polysulfides.

monotropitoside. A primeveroside of methyl salicylate from *Monotropa hypopitys*, yellow birds nest, a Pyrolaceae. It is probably identical with gaultherin.

monotropic. Describing a substance occurring in one crystalline form only. **pseudo-** Describing a substance which occurs in one stable form only; as iodine chloride.

monotype metal. An alloy of Pb (80 %), Sb (15 %), Sn (5 %), used for making printing type.

monovalent. Describing an atom or radical having a valency of one.

monovinyl acetylene. Vinylacetylene.

monox. A mixture of silicon monoxide and dioxide, used as a thermal and electric insulating material.

monoxide. A binary compound containing one oxygen atom; as PbO, FeO, N_2O.

monsel salt. Ferric subsulfate. **m. solution.** Liquor ferri subsulfatis. A dark, reddish-brown liquid containing about 15 % iron; used medicinally as a styptic.

montan wax. A native hydrocarbon extracted from lignites. Brown or white masses, soluble in chloroform or benzene; used as a substitute for carnauba wax.

montanic acid. $C_{29}H_{58}O_2$ = 438.46. A monobasic acid, m.87, from montan wax.

montanin. A disinfectant consisting chiefly of hydrofluosilicic acid.

montanite. $Bi_2O_3.TeO_3.2H_2O$. A rare bismuth tellurate from Montana.

montanyl alcohol. $C_{29}H_{60}O$ = 424.26. Nonacosanol*. White crystals, m.84.5, from beeswax, and *Parosela barbata*, a Leguminosae.

monte-acid. An acid elevator or acid pump for raising acids to the tops of towers by means of air pressure.

montejus. An apparatus for raising liquids by air pressure (acid egg or monte-acid).

month. The twelfth part of a year; the period of revolution of the moon around the earth. **anomalistic-** = 27.5546 days, or the time of revolution of the moon from one perihel to another. **nodical-** = 27.2122 days, or the time of revolution of the moon from a node to the same node again. **sidereal-** = 27.32166 days, or the time of revolution of the moon from some distant star back to that star. **synodic-** = 29.5306 days, or the time elapsing from new moon to new moon. The ordinary month.

monticellite. $MgO.CaO.SiO_2$. A native, calcium, magnesium silicate, belonging to the olivine group, and occurring in limestone in colorless or gray crystalline masses.

montmorillonite. $(Mg.Ca)O.Al_2O_3.4SiO_2.nH_2O$. A rose-red mineral and acidic clay constituent, active in base exchange. **calcium-** Fuller's earth. **sodium-** Bentonite.

montroydite. HgO. Native mercury protoxide.

moonstone. A variety of feldspar with a delicate, pearly opalescent play of colors; used as a gem.

mora. Mowrah.

Moraceae. A group of plants belonging to the Urticaceae, (q.v.), yielding important products (rubber, lac, hemp, timber, etc.).

moradeine. An alkaloid from the bark of the rubiaceous tree, *Pogonopus febrifugus* of South America. Colorless prisms, m.195, soluble in alcohol or ether; used similarly to quinine.

moradin. A fluorescent substance from the bark of *Pogonopus febrifugus*, allied to scopoletin.

morbific. Producing disease.

mordant. A chemical used for fixing colors on textiles by adsorption. Common mordants are the soluble salts of aluminum, chromium, iron, tin, antimony, and copper. **m. dye.** An artificial or natural color for fibers which usually forms an insoluble metal-compound (lake) with metallic salts (mordants). **m. rounge.** Aluminum acetate.

morenosite. The mineral $NiSO_4.7H_2O$. Nickel vitriol.

Morgan, Sir Gilbert Thomas. 1872–1940. A British industrial and research chemist; the first Director of the Chemical Research Laboratory. **M., John Livingston Rutgers.** 1872– . An American physical chemist, noted for research on the liquid state. **M. equation.** A modification of the Ramsay-Shields equation;

$$w(M/D) = k(t_c - t - 6);$$

where w is the weight of the drop of liquid, M mol. wt., D density, t_c critical temperature. Cf. *stalagmometer*. Used to determine the molecular weights.

morin. $C_{15}H_{10}O_7$ = 302.1. *2'.3.4'.5.7*-Pentahydroxyflavone. A flavone (q.v.), and the coloring matter of the wood of *Morus tinctoria*, fustic wood, m.285. Used in dyeing wool yellow; and in chemistry, as a sensitive indicator for aluminum, with which it develops a greenish fluorescence.

morindone. $C_{15}H_{10}O_5$ = 270.1. Trihydroxymethylanthraquinone. A red coloring matter, similar to morin, from fustic, the dye wood of *Morus tinctoria*, a Moraceae.

Morley, Edward W. 1838–1923. An American chemist, noted for his research on the composition and synthesis of water and the density of gases.

morograph. Death point delineator. An instrument that records the death of vegetable tissues.

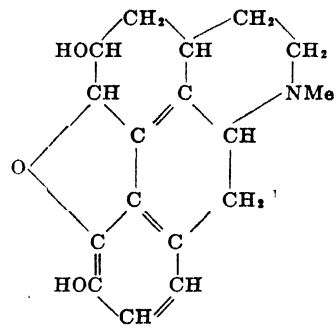
-morph, -morphous. A suffix derived from the Greek, meaning "form." See *amorphous*, *isomorph*, *monomorph*, *polymorph*.

morphenol. $C_{14}H_8O_2$ = 208.05. The anhydride of *3.4.5*-trihydroxyphenanthrene.

morphia. Morphine.

morphina. Morphine.

morphine. $C_{17}H_{19}O_3N.H_2O$ = 303.3. Morphina, morphinum, morphia, morphium. (*Mo.*) An alkaloid derived from opium.



Knorr formula.

Colorless, shining crystals, d.1.32, decomp. 230, slightly soluble in water, alcohol, or ether. Used medicinally as a narcotic. **apo-** Apomorphine. **benzyl-** Peronine. **dehydro-** See *dehydromorphine*. **diacetyl-** Heroine. **dimethyl-** Thebaine. **ethyl-** Codethyline. **para-** Thebaine. **methyl-** Codeine.

m. acetate. $(Mo)C_2H_4O_2.3H_2O$ = 399.36. A yellowish-white powder, soluble in water, alcohol, or glycerol; used as a narcotic. **m. anisate.** $(Mo)C_8H_8O_3$ = 413.35. The salt of morphine and anisic acid, a colorless crystalline salt, soluble in water; used as a narcotic. **m. benzoate.** $(Mo)C_7H_6O_2$ = 407.33. The salt of morphine and benzoic acid. White prisms or colorless powder, soluble in water; used as a narcotic. **m. borate.** The salt of morphine and boric acid. Used in ophthalmology and for hypodermic injections. **m. bromide.** See *m. hydrobromide*. **m. chloride.** See *m. hydrochloride*. **m. citrate.** $(Mo)_3C_6H_8O_7.H_2O$ = 1065.92. Colorless crystals, soluble in water or alcohol; used as a narcotic. **m. hydrobromide.** $(Mo)HBr.2H_2O$ = 402.24. Colorless, crystalline needles, soluble in water or alcohol; used for hypodermic injections. **m. hydrochloride.** $(Mo)HCl.3H_2O$ = 375.8. Colorless needles, soluble in water or alcohol; used medicinally as a narcotic. **m. hydro-**

sulfate. M. sulfate. **m. lactate.** $(Mo)C_3H_6O_3$ = 375.33. Colorless prisms, soluble in water or alcohol. **m. meconate.** $(Mo)_2C_7H_4O_7.5H_2O$ = 575.5. The natural form of morphine in opium. A yellowish, crystalline powder, soluble in water or alcohol; used medicinally as a narcotic. **m. methylbromide.** Morphosane. **m. phthalate.** $(Mo)_2C_8H_6O_4$ = 736.4. Colorless crystals, soluble in water or alcohol; used for hypodermic injections. **m. saccharinate.** $(Mo).C_7H_4ON(SO_2)$ = 467.2. Colorless crystals. **m. salicylate.** $(Mo)C_7H_6O_3$ = 423.2. A colorless crystalline powder. **m. stearate.** $(Mo)C_{17}H_{35}COOH$ = 569.57. Colorless crystals, soluble in water or alcohol; used as a narcotic. **m. sulfate.** $(Mo)_2H_2SO_4.5H_2O$ = 758.6. Colorless needles, decomp. 250, soluble in water or alcohol. It is the most commonly used morphine salt. **m. tartrate.** $(Mo)_2C_4H_6O_6.H_2O$ = 738.4. A colorless crystalline powder, soluble in water, alcohol, or ether; used medicinally in hypodermic injections. **m. valerate.** $(Mo)C_5H_{10}O_2$ = 387.36. Colorless crystals, soluble in water or alcohol; used medicinally as a narcotic.

morphinone. $C_{17}H_{17}NO_3$ = 283.05. The keto-form of morphine. **dihydro-** Dilaudide.

morphinum. Morphine.

morphol. $C_{14}H_{10}O_2$ = 210.1. *3.4*-Dihydroxyanthracene, *3.4*-phenanthrenediol. White needles, m.143, insoluble in water.

morpholine. C_4H_9ON = 87.1. Tetra-hydro-*p*-oxazine, 2.3.5.6-tetrahydro-1.4-oxazine. The ring compound,  . A colorless liquid, d.0.9998, b.128, soluble in water, alcohol or ether; used as a reagent for Zn or Cu. **pheno-** See *pheno-morpholine.*

morphology. A branch of biology that deals with the form and structure of the living organism:

internal: cytology = the structure of cells. histology = the structure of cell-aggregates (tissues). anatomy = the structure of tissue-aggregates (organs).

external: taxonomy = the arrangement of organisms.

morphosane. Morphine methylbromide. A proprietary morphine salt, used as a narcotic.

-morphous. See *-morph.*

morrenine. An alkaline isolated from *Morrenia brachystephana*, an Argentine milkweed. Colorless crystals, m.106.

morrhua. The codfish, *Gadus morrhua*, from which cod liver oil is obtained.

morrhuic acid. An acid obtained in the saponification of cod-liver oil. Its salts are used in the treatment of tuberculosis and varicose veins.

morrhuin. $C_{19}H_{27}N_3$ = 297.3. A thick, liquid ptomaine, occurring in some samples of cod liver oils.

morrhuol. The active principle of cod liver oil containing S, I, and P. A dark-brown liquid, d.0.94, insoluble in water; used medicinally in place of cod liver oil.

Morse, Harmon Northrup. 1848–1920. An American chemist noted for osmosis experiments. **M. buret.** A capillary buret holding one cubic centimeter.

mortar. (1) An urn-shaped container of glass, iron, agate, or brass, used for powdering materials. (2) A building material consisting of slaked lime and sand, sometimes mixed with plaster of Paris or cement. Cf. *pozzolana.*

morus. The Latin term for mulberry. **m. tinctoria.** Yellow Brazil wood, old fustic. The yellow wood from *Morus tinctoria;* used for making morin and dyeing textiles.

Morveau. See *Guyton.*

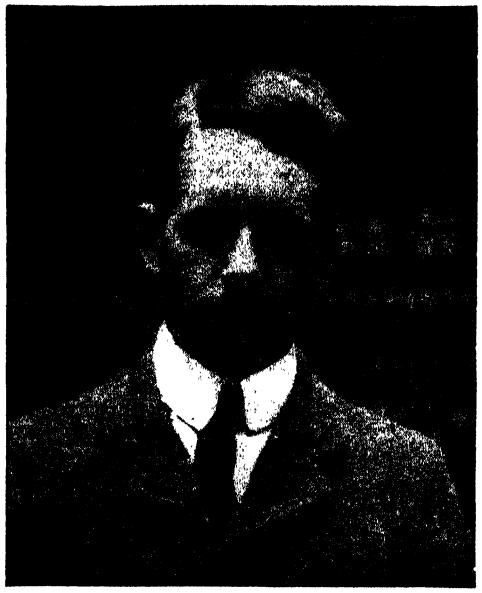
moryl. Carbachol.

mosaic gold. (1) A pigment consisting of stannic sulfide, SnS_2. (2) A yellow alloy of copper and zinc. **m. silver.** An amalgam of tin and bismuth.

Mosander, Carl Gustav. 1797–1858. A Swedish chemist, noted for the discovery of some rare earth metals.

mosandrium. A rare earth metal isolated from samarskite by J. Lawrence Smith; it was later separated into Sa and Gd.

Moseley, Henry Gwyn Jeffreys. 1887–1915. An English physicist killed in the World War; noted for his research on x-ray spectra.



H. G. Moseley.

M. formula. The frequency, ν, is related to Rydberg's constant, ν_0, and atomic number, N, by: $\nu = \frac{3}{4}\nu_0(N - 1)^2$. **M. law.** All elements can be arranged successively, according to the frequencies of their x-ray spectra, in one continuous series which corresponds generally with the order of their atomic weights. The following relation exists: $Q = \sqrt{\frac{\nu}{\frac{3}{4}\nu_0}} = N - 1$, or $\sqrt{\frac{1}{\lambda}} = a(N - N_0)$; in which ν is the frequency of the principal line of the x-ray spectrum of longer wavelength, ν_0 is Rydberg's constant, and N the atomic number of the element, which is identical with the nuclear charge or the number of electrons outside the nucleus. **M. number.** Atomic number. **M. series.** An arrangement of elements according to increasing atomic numbers, as determined from the square-root of the frequency of the principal line in their x-ray spectrum. Cf. *periodic chain.* **M. spectrum.** The characteristic lines pro-

duced when the x-rays produced at the anticathode (which consists of the metal under examination) are diffracted through a crystal. Cf.; *crystallogram, x-ray spectrometer, K lines.*

moslene. $C_{10}H_{16}$ = 136.12. A terpene from *Mosla japonica*, a Labiatae.

moss. A small cryptogamic plant of the natural order *Musci.* **Ceylon-** See *agar.* **Iceland-** Cetraria. **Irish-** Chondrus.

m. agate. Mocha stone. A variety of chalcedony, or an agate containing brown or black, moss-like dendritic forms due to infiltrations of iron and manganese salts. It is used as a semi-precious stone. **m. gold.** Native gold in moss-like form. **m. silver.** Native silver in moss-like form. **m. starch.** Lichenin.

motalin. A German anti-knock fuel, which contains iron penta-carbonyl.

mote. A solid particle (*e.g.*, of dust or soot) in air or a gas, which acts as a nucleus of condensation; hence, the black fog of the modern city.

mother. A progenitor. **m. cell.** A single cell that divides into two daughter cells. **m. liquor.** The residual saturated liquid which remains after the crystallization of a portion of a liquid or solution. **m. lode.** The principal vein of a metallic deposit passing through a district, especially the California gold vein extending eighty miles from Amador County to Mariposa County. **m. of coal.** Fusain. **m. of pearl.** Nacre.

motherwort. The dried herb of *Leonurus cardiaca*, used as the fluid extract, as a bitter tonic and antispasmodic.

motile. Possessing motion.

motility. The phenomena of motion, especially as observed under the microscope (colloidal motility, Brownian motion) or detected by chemical or physical means (ionic motions).

motion. Change of position. **Laws of-** (Newton). (1) A body left to itself will continue in its state of rest or of motion. (2) The rate of change of momentum of a body is proportional to the impressed force acting on it.

motor. An agent that produces motion or mechanical power (muscle or machine). **air-** A windmill. **electric-** A reversed dynamo or a machine for transforming electrical into mechanical power. **hot air-** An apparatus in which a current of hot air drives a set of propellers. **water-** A device for transforming a stream of water into mechanical power.

motor fuels. A liquid (as gasoline) used in internal combustion engines. Motor fuels may be manufactured from coal by: (1) high temperature carbonization; (2) low temperature carbonization; (3) Bergius process; (4) gasification and conversion into methanol and other liquid combustibles; (5) cracking processes. Cf. *petroleum.* **synthetic-** Methanol or synthol obtained from hydrogen and carbon monoxide subjected to pressures of 150–250 atmospheres at 300–425°C., using a catalyst, *e.g.*, the oxides of Zn, Cr, V, Mn, W, Pb, or Bi.

mould, mold. (1) A receptacle in which a molten or liquid mass solidifies. (2) To shape or form. (3) A variety of minute fungus growths, *Hypomycetes*, found on damp, usually vegetable material; *e.g.*, *penicillium.* (4) The loose earth on the upper surface of cultivated soil. Cf. *humus.*

mountain ash. Sorbus. **m. balm.** Eriodictyon. **m. blue.** Azurite. **m. butter.** A hydrated aluminum sulfate, occurring in fibrous masses or crusts. **m. cork.** An elastic form of asbestos. **m. crystal.** Rock crystal. **m. flax.** (1) A fine silky variety of asbestos. (2) Purging flax. The herb of *Linum catharticum*, used as laxative and cathartic. **m. grape.** Oregon grape. The root of *Berberis aquifolium*, used as alterative and tonic. **m. green.** Malachite. **m. laurel.** Kalmia. **m. leather.** A tough variety of asbestos, occurring in thin, flexible sheets. **m. milk.** A soft, spongy variety of calcite. **m. mint.** Calamint. **m. soap.** An unctuous variety of halloysite. **m. tallow.** Hatchettenine. A wax-like, soft hydrocarbon. **m. tobacco.** See *Arnica.* **m. wood.** A brown, compact, fibrous variety of asbestos.

mounting. The preparation of specimens for microscopic study.

Moureu, Charles Léon Francois. 1863–1929. A French chemist noted for research in catalysis, rubber chemistry and autoxidation.

mouse jar. A glass jar with an iron screen top, to hold small animals. **m. factor.** A supposed vitamin (q.v.), the absence of which causes blindness in mice.

mowrah. Mora, mowa. The seeds of *Bassia butyraceae*, a Sapotaceae of India. **m. fat.** A soft fatty mass expressed from m., used in soap making. **m. meal.** The dried and ground residue of m. seeds, remaining after expression of the fat. It contains saponin and is unfit for animal food, but is used as fertilizer. It contains 2.7 % N. If spread on lawns or golf greens and washed into the ground it causes worms to come to the surface.

m-radiations. See *M.*

ms. Abbreviation for *meso-*

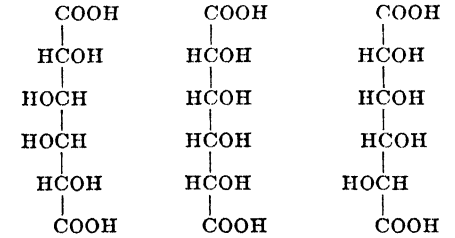
M. S. or **M. Sc.** Abbreviation for Master of Science.

mu. The greek letter μ. A unit of microscopical length, micron or micromillimeter.

muava. The dried bark from a leguminous tree of Madagascar, used by the natives as an arrow poison.

muavine. An alkaloid from muawa or muavi bark, an East African tree of the *Erythrophloeum* species of the Leguminosae. A yellowish powder, soluble in water or alcohol; used as a digitalin substitute.

mucic acid. $C_6H_{10}O_8$ = 210.5. *2.3.4.5*-Tetrahydroxy hexanedioic acid. A tetrahydroxy acid, $COOH(CHOH)_4COOH$. Colorless crystals, decomp. 224, insoluble in water or alcohol; formed by the oxidation of *d-* galactose. Three of the other ten isomers of this constitution are named from mucic acid, namely *allo* m. from *l*-galactose and *d-* and *l-talo* m. from *d-* and *l-talose*, respectively.



mucic acid *allo*mucic acid *talo*mucic acid.

mucicarmine. A staining solution for mucin, consisting of 2 pts. carmine, 1 pt. aluminum chloride, and 4 pts. distilled water.

mucilage. (1) A paste prepared from dextrin or gum. (2) In pharmacy, a solution of acacia, chondrus (Irish moss), tragacanth, or starch.

mucilaginous. Slimy or adhesive.

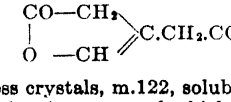
mucin. A glycoprotein, or the chief constituent of mucus, the slimy secretion of organs or organisms. It is soluble in water and precipitated by alcohol. Cf. *chitosan*, *mucoid*. **frog egg-** M. from frog eggs; it yields galactosamine on hydrolysis. **salivary-** M. from saliva containing mucoitinsulfuric acid. **m. sugar.** Fructose.

muck. (1) A soil composed largely of organic matter, so highly decomposed as to show little or nothing of the original plant structure. Cf. *humus*. (2) Peat. (3) The miners' term for loose rock and ore.

muckite. A resinous substance, $C_{20}H_{28}O_6$, found in some coal beds.

mucoid. A group of glycoproteins, differing from the mucins in solubility and precipitated by acetic acid. They are found in bone, tendon, cartilage, the cornea, white of egg and ascitic fluids. **ovo-** The nitrogeneous substances from the white of egg, which do not coagulate. **chondro-** M. from cartilage yielding chondroitin sulfuric acid. **cornea-** A m. from the cornea. **ovo-** A m. forming 10 % of the solids of egg-white. **serum-** A mucoid from blood serum, forming from 0.5–1 % of its proteins.

mucolactonic acid. $C_6H_6O_4$ = 142.0.



Colorless crystals, m.122, soluble in water.

mucolipoid. A compound which contains a fatty acid residue bound to a carbohydrate residue; *e.g.*, Wassermann antigens.

muconic acid. $C_6H_6O_4$ = 142.0. *2.4*-Hexadienedioic acid, $\Delta^{1,3}$-1,4-butadiene carboxylic acid, COOH.CH:CH.CH:CH.COOH. Colorless crystals, m.260, decomp. 272, soluble in water.

mucopolysaccharide. A compound having a low but significant protein content, but whose chemical reactions are primarily those of a carbohydrate. *E.g.*, skin, heparin.

mucoprotein. A compound having a relatively high protein or peptide content, but whose chemical reactions are predominantly those of a protein; *e.g.*, plant globulins.

mucorin. A protein from plant molds.

mucous. Mucus.

mucus. (1) Slimy. (2) The saliva. (3) A slimy secretion from an organ or organism. **vegetable-** Tragacanthin.

mudaric acid. $C_{30}H_{46}O_3$ = 454.37. An acid from *Calotropis gigantea* (mudar), an Asclepiadaceae.

mudat. The poorest quality of opium, which consists of the refuse recovered from "yenshee," q.v.

Muencke pump. A filter pump made of glass, attached to a water faucet.

muffle. A semicylindrical container of alundum, fire-clay, porcelain or silica, that protects substances placed in it from fuel gases and sudden temperature changes when heated. **m. furnace.** A square box of fire-clay, provided with resistance wires or other means of heating, which produces high temperatures rapidly owing to reflection of the heat from the walls. Used in laboratory operations (drying, fusion, cupellation, scorification, ignition); for hardening high carbon steel (razor blades, dies, punches); and for experimental work; and in dental laboratories, for porcelain and gold work.

mugwort. Felon herb. The leaves of *Artemisia vulgaris*, a Compositae, used as emmenagogue and diaphoretic.

muirapuama. The dried stems and roots of *Dulacia ovata* of Brazil; used as a fluid extract, as an aphrodisiac or nervine.

muirapuamine. An alkaloid obtained from muirapuama wood, an *Olacaceae* of Brazil.

mukogen. $C_{18}H_{15}N_2O_3Cl$ = 326.5. Dimethylphenyl-*p*-ammonium-*β*-oxynaphtoxazime chloride. A green crystalline powder, insoluble in water, soluble in alkalis or alcohol; used as a cathartic.

mullein flowers. The dried flowers of *Verbascum thapsus*, a Scrophulariaceae; used as the fluid extract, as a demulcent. **m. leaves.** The dried leaves of *Verbascum* species, used as the flowers.

Müller's glass. Hyalite.

Mulliken, Samuel Parsons. 1864– . An American chemist, noted for methods of identifying organic compounds. **M.'s classification.** An arrangement of organic compounds based upon their qualitative (*genus*) and quantitative (*order*) reactions:

Order I—Compounds containing
(1) carbon and hydrogen.
(2) carbon, hydrogen and oxygen.
Order II—Compounds containing
(1) carbon and nitrogen.
(2) carbon, nitrogen and hydrogen.
(3) carbon, nitrogen and oxygen.
(4) carbon, nitrogen, hydrogen and oxygen.
Higher Orders—Compounds containing any combination of the elements found in order I and II with any additional elements, such as halogens, sulfur, phosphorus, etc.
Suborder I—*Colorless* compounds.
Suborder II—*Colored* compounds.
Genus I consists of aldehydes.
Genus II consists of carbohydrates.
Genus III consists of acids.
Genus IV consists of phenolic compounds.
Genus V consists of esters.
Genus VI consists of anhydrides.
Genus VII consists of ketones.
Genus VIII consists of alcohols.
Division A of each genus are *solid* compounds.
Division B of each genus are *liquid* compounds.
(See M., Method of Identification of Pure Organic Compounds.)

mullite. $3Al_2O_3.2SiO_2$. An orthorhombic aluminum silicate, from the Island of Mull, or artificially made by heating andalusite, sillimanite or cyanite, and consists of a homogeneous solid solution of alumina in sillimanite. It is the only compound of Al and Si which is stable at high temperatures, and it is formed in fire-clay above 1060°C.; it does not deform under loads up to a temperature of 1800°C. is resistant to corrosion and has a low coefficient of expansion. Used as a refractory.

mulls. A group of pharmaceutical ointments of high melting point, which are spread on soft muslin or "mull."

mulser. An emulsifying machine.

multi- A prefix derived from the Latin, indicating "many." Cf. *poly-*.

multifrequent. Different wavelengths; as comprising a heterogeneous beam of light.

multiple proportions. Dalton's law. The chemical elements always combine in a definite ratio or in multiples of that ratio. If A and B form several compounds, then the ratio of their relative combining masses is a simple one, as N_2O, NO, N_2O_3, NO_2, and N_2O_5. **m. series.** Parallel series. A method of wiring a large number of lamps, electrical apparatus, or other devices in series, and connecting these series in parallel. It is used in mining for wiring a large number of blasting charges. **m. tube burner.** Three or more bunsen burners mounted close together and supplied from one connection.

multiplet. A spectral line, which on close examination is found to consist of two, three or more single lines close together. Hence the terms, doublet and triplet.

multipolar. Having more than two poles.

multirotation. Birotation.

multivalent. Having a valency of three or more. Cf. *polyvalent*. **m. vaccine.** A suspension of two or more species or varieties of the same microorganism.

mumetal. An alloy which contains approximately 74 % Ni, 20 % Fe, 5.3 % Cu and 0.7 % Mn. It has a high magnetic permeability and low hysteresis; used for electric cables.

mundic. Iron pyrites. **white-** Arsenical iron pyrites.

mung. Green gram. The mung bean, *Phaseolus mungo* (*Ph. aureus*), used in China and India as a food; it is rich in vitamin B.

Munktell paper. A brand of filterpaper.

Muntz metal. Yellow brass. An alloy of 60 parts copper and 40 parts zinc. It can be rolled hot or cold, and is corroded less than copper.

murexan. Uramil.

murexide. $C_8H_4O_6N_5NH_4.H_2O$ = 302.2. Ammonium purpurate. Purple carmine. A purple coloring matter produced from uric acid by the action of nitric acid and neutralizing with ammonia. Brownish-red, crystalline powder, green in reflected and red in transmitted light, soluble in water, insoluble in alcohol or ether; used as a dye.

muriacite. Anhydrite.

muriate. An obsolete term for chloride. **m. of potash.** Potassium chloride. **m. of soda.** Sodium chloride.

muriatic acid. An obsolete term for hydrochloric acid. **oxygenated-** An early name for chlorine.

muscarine. $C_8H_{19}O_3N$ = 177.11. Hydroxycholine, $MeCH_2.CHOH.CH(NMe_3OH)CHO$. An alkaloid from mushrooms, *Agaricus muscarius*, and a ptomaine of decaying fish. It is extremely poisonous and resembles pilocarpine in its effects. Cf. *amanitine*. **m. effect.** See *m. wirkungs einheit*. **m. hydrochloride.** $Me_3NCl.CH_2.CH(OH)_2.HCl$ = 277.5. Colorless crystals, soluble in water. **m. nitrate.** $Me_3C(OH).CH_2.CH(OH)_2.HNO_3$ = 198.14. An oxidation product of choline. Brown, hygroscopic crystals, soluble in water or alcohol. **m. sulfate.** $C_5H_{15}O_3N.H_2SO_4$ = 238.1. *artificial-* An oxidation product of choline. Yellowish, deliquescent needles, soluble in water. *natural-* A salt from the alkaloid of *Amanita* (toadstool). Dark-brown syrup, soluble in water; used medicinally as a cardiac sedative. **m. wirkungs einheit.** M.W.E. A unit of poison effect; the amount which, in Ringer solution, reduces the activity of an isolated frog heart by 25 ± 5 %. Muscarine base has 184 Mill. M.W.E. per gram.

muscarufin. (1) $C_{25}H_{16}O_9$ = 460.15. An orange dyestuff, m.275.5, from *Amanita muscaris*. (2) $C_{25}H_{16}O_8$ = 396.15. A glucoside from *Amanita muscaris*.

musci. Mosses. A division of Bryophyta.

muscicide. An agent that destroys flies.

muscle fibrin. Syntonin. **m. sugar.** Inositol.

muscone. $C_{16}H_{30}O$ = 238.2. Muskine. *3*-methyl cyclopentadecanone. A ketone derived from musk. A thick, heavy liquid, b.328; used in perfumery.

muscovite. $KH_2Al_2(SiO_4)_3$. Phengite. A potash-mica, and constituent of granite. Varieties are baddeckite, damourite, fuchsite, sericite and plumose mica.

musenine. Mussanine.

musennin. An acid resin from the bark of mussena (*Albizzia anthelmintica*), a Leguminosae; used as a tenifuge.

mushroom. (1) A fungus (q.v.) having the form of a toadstool; *e.g.*, *Amanita*, *Boletus*. (2) The edible m., *Agaricus campestris*.

musical note. A succession of sharp regular impulses at regular intervals of time. (Cf. *sound*, *phonic*.) **m. scale.** An arrangement of sound vibrations in a harmonic series, the frequency of vibration of successive notes being denoted by fixed ratios for a particular scale. The scientific diatonic scale is based upon C_3 = 256 vibrations per sec.; the musical even-tempered chromatic scale, on A_3 = 435 v.p.s. The lower and higher octaves are obtained by multiplying or dividing by a power of two.

Scientific scale		*Practical scale*			
C_3	256	C_3	258.6	C_3	274
D_3	288	D_3	290.3	D_3	307.6
E_3	320	E_3	325.9		
F_3	341.3	F_3	345.3	F_3	365.8
G_3	384	G_3	387.5	G_3	410.6
A_3	426.6	A_3	435	A_3	460.8
B_3	480	B_3	488.3		
C_3	512	C_3	517.3		

musk. Moschus, deer musk, tonquin musk. The dried secretion from the follicles of *Moschus moschiferous*, the musk deer of Central Asia. Irregular, dark, shiny grains of penetrating and persistent odor, soluble in water or alcohol; used in perfumery, and medicinally as an antispasmodic. **artificial-** $C_{12}H_{13}N_3O_6$ = 295.1. *2.4.6*-Trinitro-*1.3*-dimethyl-*5*-*tert*.-butylbenzene. Trinitro-*tert*.-butyl xylene, $Me_2C_6(NO_2)_3CMe_3$. A musk substitute, occurring in colorless prisms, m.96, slightly soluble in water; used in perfumery. **vegetable-** M. seed.

m. root. Sumbul. **m. seed.** The seeds of *Hibiscus abelmoschus*, a Malvaceae; used for clarifying sugar, and medicinally.

muskine. Muscone.

Muspratt, James Sheridan. 1821–1871. An Irish chemist, and founder (1848) of the College of Chemistry in Liverpool; noted for his works on applied chemistry.

mussanine. Musenine. An alkaloid from *Acacia anthelmintica*.

must. (1) Most. The expressed and unfermented juice of grapes. (2) Any juice freshly expressed from fruits.

mustard. A condiment made by grinding the seeds of *Brassica* (*Sinapis*) species. **black-** The finely-ground seeds of *Brassica nigra*. It con-

tains a fixed oil, a pungent, irritant, essential oil consisting chiefly of allyl thiocyanate, an enzyme myrosin, and a glucoside sinigrin. Cf. *sinamine*. **French-** Table m. **table-** A semi-liquid mixture of 3 parts white mustard, ¼ part salt, 1 part sugar, and 8 parts vinegar. **white-** Yellow or English mustard. The finely-ground seeds of *Sinapis alba*, containing the same constituents as black mustard except that a different glucoside (sinalbin) is present. Used as a condiment, and medicinally, as a counter-irritant and stimulant. **m. meal.** The dried and ground residue of m. seeds after extraction of the oil. It contains 5 % N, 1 % P_2O_5 and 1 % K_2O; used as fertilizer. **m. seeds.** The dried ripe seeds of *Brassica nigra*, used as a source of m. oil.

mustard gas. $C_4H_8Cl_2S$ = 158.9. *2,2'*-Dichlorodiethyl sulfide, yperite, H.S., $(CH_2Cl.CH_2)_2S$. A sulfoether occurring as an oily liquid d.1.28, m.14, b.215–217, which was used in the World War as a vesicant; it causes blistering of the skin by penetrating the tissues and forming HCl.

mustard oil. (1) A fixed oil expressed from mustard seeds, d.1.1014, m. −17; it is used in medicine. (2) Oleum sinapis volatile. A volatile or essential oil obtained by distillation of macerated mustard seeds. Its chief constituents are allyl isothiocyanate and allyl thiocarbimide. A colorless liquid of pungent odor, d.1.018, b.148, soluble in alcohol, ether, or chloroform; used in medicine. (3) Allyl isothiocyanate, C_3H_5CNS = 99.0. Allylmustard oil, $CH_2:CH.CH_2.N{:}CS$, a colorless liquid, d.1.017, b.151, which was used in the World War as poison gas. (4) Acrinyl isothiocyanate. (5) A group of isothiocyanic esters. See *mustard oil*. **artificial-** Mustard oil (3). **black-** Mustard oil (2). **fixed-** Mustard oil (1). **essential-** Mustard oil (2). **synthetic-** Mustard oil (3). **volatile-** Mustard oil (2).

mustard oils. Isothiocyanates, isosulfocyanic esters, sulfocarbimides. Compounds containing the monovalent —N:C:S radical:

MeNCS. Methyl mustard oil, m. isothiocyanate, m. isosulfocyanic ester, m. sulfocarbimide. Colorless crystals, m.34, b.-119.

EtNCS. Ethyl mustard oil. A colorless liquid, b.133.

PrNCS. Propyl mustard oil. A colorless liquid, b.153.

Me_2CHNCS. Isopropyl mustard oil. A colorless liquid, b.137.

$CH_2:CHCH_2NCS$. Allyl mustard oil. See *mustard oil (3)*.

mutamer. A compound showing dynamic isomerism, that is, the attainment of equilibrium which is the cause of mutarotation; *e.g.*, *α-* and *β-d-*glucose.

mutamerism. The phenomenon of changing from one newly-dissolved isomer into another, and establishing an equilibrium between the two; as shown by mutarotation, q.v.

mutarotation. Birotation. A change of optical rotation occurring in newly-prepared solutions of reducing sugars. Thus *α-d-*glucose solution has at first a specific rotation of $[\alpha]_D$ + 110°; this drops slowly to +87° in 25 minutes, and finally to +52.5° in six hours, at which it remains constant (*β-d-*glucose).

Muthman liquid. Acetylene tetrabromide.

mutterlauge. German for *mother liquor*.

mutual induction. The change of current in a circuit produced by a change of current in a neighboring circuit.

M.W. Abbreviation for molecular weight.

mycelioid. A bacterial growth that resembles the radiated filamentous appearance of molds.

mycelium. A mass of protoplasmic colorless threads, constituting the plant body of mushrooms, toadstools and certain molds (spawn).

mycoban. Trade name of a product containing sodium propionate used by bakers to prevent bread mold.

Mycoderma. Torula.

mycogalactan. $(C_6H_{10}O_5)_n$. A polysaccharide from the fungus, *Aspergillus niger*.

mycoin. An antibacterial substance, probably identical with notatin.

mycophenolic acid. $C_{17}H_{20}O_6$ = 320.2. An acid from the mould fungus, *Penicillium brevi-compactum*.

mycoporphyrin. Penicilliopsin.

mycoprotein. The albuminous material of bacteria.

mycose. $C_{12}H_{22}O_{11}.2H_2O$. = 360.17. A carbohydrate occurring in manna, several fungi, and in ergot of rye. It does not reduce copper solutions, and is soluble in alcohol. Cf. *trehalose*.

mycosterol. $C_{30}H_{48}O_2$ = 440.37. A sterol, m.160, from fungi and lichens.

mycoxanthin. A biologically-active carotinoid, from algae.

mydaleine. A ptomaine from putrefied viscera.

mydatoxin. $C_6H_{13}O_2N$ = 131.1. A ptomaine from decaying flesh.

mydine. $C_9H_{11}O_2N$ = 165.1. A ptomaine found in cultures of typhoid bacillus and in putrefied flesh.

mydriatic. An agent that causes dilation of the pupil, as atropine, homatropine, daturine, cocaine.

mydrol. Midrol.

myelin. (1) A soft, yellowish kaolin. (2) A lipoid from organic tissues differing from fat in being doubly refractive.

mykonucleic acid. $C_{36}H_{52}O_{14}N_{14}.2P_2O_5$ = 1192.5. A nucleic acid obtained from yeast.

mylonite. A rock deformed by earth movements, so as to lose all its original structure.

myocardiograph. An apparatus for recording movements of the heart muscles.

myogen. An albumin in muscle juice that is said to change to myosin; soluble in water and salt solutions.

myoglobin. The principal red pigment of meat; it is similar to hemoglobin.

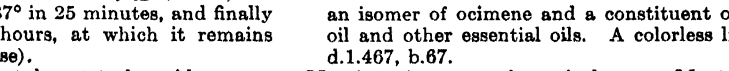
myosin. A globulin forming the clot in muscle press juice, insoluble in water, soluble in dilute alkali or salt solutions, coagulated by heat, and converted into santonin by acids. Cf. *myogen*.

myotic. Miotic. An agent that causes contraction of the pupil, as eserine, pilocarpine.

myoxanthin. A lipochrome, m.117.5, from the unsaponifiable matter of *Rivularia nitida*.

myrbane oil. Nitrobenzene.

myrcene. $C_{10}H_{16}$ = 136.1. *2*-Methyl-*6*-methylene-*2,7*-octadiene*. The unsaturated hydrocarbon,



an isomer of ocimene and a constituent of bay oil and other essential oils. A colorless liquid, d.1.467, b.67.

Myrcia. A genus of tropical trees, Myrtaceae, related to the tree-myrtles. **m. oil.** The essen-

tial oil of *Pimenta acris*, a Myrtaceae of the West Indies.

myria- A prefix derived from the Greek, indicating 10,000.

myrialiter. Ten thousand liters.

myriameter. Ten thousand meters, or ten kilometers.

myrica. Bayberry, waxmyrtle, candleberry. The dried bark of *Myrica cerifera*, a shrub of the United States; used in medicine. **m. leaves.** The leaves of *Myrica acris*, from which bay-rum is prepared. **m. oil.** Bay oil.

myricetin. $C_{15}H_{10}O_8$ = 318.1. Oxyquercetin. A ketone and yellow pigment derived from the bark of Myrica species.

myricetrin. A glucoside resembling quercitrin.

myricin. $C_{30}H_{61}O_2C_{16}H_{31}$ = 676.9. Myricyl palmitate. A fatty ester (wax) and crystalline principle from bees-wax; or extracted from the bark of the wax myrtle (*Myrica cerifera*).

myricoid. The combined principles of *Myrica cerifera* (wax myrtle); used medicinally as an alterative and hepatic stimulant.

myricyl. The monovalent radical, $C_{30}H_{61}$—. **m. alcohol.** $C_{30}H_{61}OH$ = 438.7. Melissic alcohol. A constituent of carnauba and bees-wax. Colorless needles, m.85, insoluble in water, soluble in alcohol or ether. **m. palmitate.** Myricin.

myriocarpin. A neutral resinous substance, insoluble in water, soluble in alcohol, from the fruit of *Cucumis myriocarpus*, wild cucumber, a Cucurbitaceae.

myristamide. $C_{14}H_{29}NO$ = 227.23. Tetradecanamide*, myristic amide, $Me(CO_2)_{12}CONH_2$. White leaflets, m.103, b.$_{12mm}$217.

myristic acid. $C_{13}H_{27}COOH$ = 228.29. Tetradecylic acid, tetradecanoic acid*. An acid occurring in many fats; human subcutaneous fat contains 1%. Colorless leaflets, m.54, b.251, insoluble in water, slightly soluble in alcohol or ether.

myristica. Nutmeg, nux moschata. The kernels of the ripe fruits of *Myristica fragrans:* used as a condiment, and in pharmaceutical preparations. Cf. *mace, otoba.* **m. oil.** Oleum myristicae, oil of nutmeg. The essential oil of m.

myristicene. $C_{10}H_{14}$ = 134.1. An eleoptene derived from the essential oil of nutmeg.

myristicin. $C_{11}H_{12}O_3$ = 192.1. *3*-Methoxy-*4-5*-methenedioxypropenyl benzene, *5*-methoxysafrole. An aromatic ether from myristica oil; a yellow liquid, d.1.1425, m. below −20, b.$_{15mm}$149.5.

myristicol. $C_{10}H_{16}O$ = 152.1. A stearoptene from the essential oil of nutmeg.

myristin. $(C_{14}H_{27}O_2)_3C_3H_5$ = 722.9. Trimyristin, glyceryl myristate, trimyristic acid glycerin ester, laurel wax, myrtle wax. A fat in nutmeg butter, spermaceti, and other fats. Colorless needles, m.55, soluble in ether, insoluble in water.

myristoleic acid. $C_{14}H_{26}O_2$ = 226.2. Tetradecenoic acid*. Unsaturated fatty acid from whale and fish oils. Δ^9-. Colorless liquid, b.$_{2mm}$135. The Δ^5-isomer also exists.

myristone. $(C_{13}H_{27})_2{:}CO$ = 394.57. Myristic ketone. A solid, d.0.801, d.$_{76°}$76, m.75, soluble in alcohol.

myrobalan. Terminalia. The dried fruits of *Terminalia* (*Myrobalanus*) *chebula*, a Combrataceae, a tree of Asia, containing 30% tannin; used as tanning material. Cf. *beda nuts, chebulinic acid.*

myronic acid. $C_{10}H_{19}NS_2O_{10}$ = 377.3. An acid found in sinigrin, the glucoside of black mustard, which is hydrolysed to mustard oil.

myrosase. Myrosin.

myrosin. Myrosase. An enzyme of white and black mustard, which hydrolyzes the glucosides sinalbin and sinigrin to allyl mustard oil, glucose, and potassium sulfate.

myroxin. $C_{23}H_{36}O$ = 328.31. A principle from Peru balsam.

myrrh. A resinous gum exuded from the stems of *Commiphora myrrha*, a burseraceous tree of Arabia, Abyssinia, and Somaliland. It contains the resin myrrhin, a volatile oil, and a gum, which occurs as irregular brown tears or masses of balsamic odor. Used medicinally as an astringent or carminative; and in dentistry for carious teeth, and in toothpowders. **m. oil.** An essential oil distilled from myrrh. A colorless liquid d.0.998, b.220–235, insoluble in water, soluble in alcohol or ether; used in perfumery. Cf. *oxyburserasin, myrrholic acid.*

myrrhin. A resin from myrrh.

myrrholic acid. $C_{17}H_{22}O_5$ = 306.17. An acid from myrrh.

Myrtaceae. The bay or eucalyptus family, a group of trees and shrubs which usually have pungent and fragrant leaves, fruits and seeds, that yield essential oils and spices.

roots:	
Eucalyptus globulus	eucalyptus
	eucalyptus oil
Eugenia vulgaris	jambosine
leaves:	
Pimenta (Myrcia) acris	bay leaves
	bay oil
Eugenia chekan	chekan
Melaleuca leucadendron	cajuput oil
Myrtus communis	myrtle, myrtol
flowers:	
Eugenia aromatica	cloves
	clove oil
fruits and seeds:	
Pimenta officinalis	pimenta
	pimenta oil
Eugenia jambolana	Java plum

myrtenal. $C_{10}H_{14}O$ = 150.11. Myrtenic aldehyde. A colorless liquid, d.0.988, b.$_{10mm}$90; obtained from myrtol.

myrtenic acid. $C_{10}H_{14}O_2$ = 166.2. An acid from myrtol.

myrtenol. $C_{10}H_{16}O$ = 152.12. An alcohol, d.0.976, b.224, and the chief constituent of myrtol.

myrtilin. An aqueous extract of myrtle, used as an insulin substitute.

myrtillidin. The aglucone of an anthocyan glucoside from the flowers of stocks, rose and mallow.

myrtillin. $C_{22}H_{22}O_{12}$ = 478.17. An anthocyanin from billberry, *Vaccinium myrtillus*, an Ericaceae; used as an indicator. **m. chloride.** (1) $C_{22}H_{23}ClO_{12}$ = 514.67. An anthocyanin from whortle berries, *Vaccinium uliginosum.* (2) A plant extract from *Vaccinium* with insulin-like properties.

myrtle. The dried leaves of *Myrtus communis.* The finely-powdered leaves are used as antiseptic in wound-dressings. **m. oil.** A light yellow oil distilled from myrtle leaves, which contains eucalyptole, d-pinene, and dipentene, d.0.90, insoluble in water, soluble in alcohol or

ether; used in medicine for vapor inhalations. **m. oil.** Myrtol. **m. wax.** Bayberry wax.

myrtol. A refined myrtle oil, the essential oil of *Myrtus communis;* used in medicine for bronchial and pulmonary affections, and as an antiseptic. Cf. *myrtenal, myrtenol.*

mystin. A mixture of sodium nitrite and formaldehyde, used as a preservative.

mytilite. Mytilitol.

mytilitol. $C_7H_{14}O_6$ = 194.11. Mytilite, pentahydroxy methoxybenzene, methyl inositol, $C_6(OH)_5OMe$. A methyl cyclose from the mussel, *Mytilus edulis.* Rhombohedral crystals, d.1.335, m.186, b.210. Cf. *inositol.*

mytilotoxin. $C_6H_{15}O_2N$ = 133.2. A leukomaine derived from mussels and rendered harmless by canning alkaline.

mytolin. A protein obtained from muscles, to which the empirical formula $C_{234}H_{360}O_{70}N_{60}S$ has been given.

myxo- A prefix indicating mucus or mucoid. **m. xanthinophyll.** $C_{40}H_{56}O_7$ = 648.6. The characteristic pigment of certain freshwater algae.

myxomycetes. Mycetozoa, myxogastres, slime molds. A group of thallophytes, comprising microorganisms having both vegetable and animal characteristics.

N

N. (1) The symbol for nitrogen: N_2-nitrogen molecule; N_2^* an excited N molecule; **N*** an excited N atom; **NI** an ionized atom, **NII** a doubly-ionized N atom. (2) The abbreviation for: (a) normal; (b) normal solution. (3) Avogadro's number, the number of molecules in one mol. **N electron.** The e. of the N shell or orbit; there are eight in the third, eighteen in the fourth, and thirty-two in the fifth period. **N orbit.** The fourth layer or energy level, in which electrons move around the proton in the dynamic atom. **N shell.** The fourth layer or energy level in which electrons oscillate in the static atom. **N.V.M.** Abbr. for non-volatile matter. **N.W. acid.** Neville acid.

N-. In chemical names: the radical prefixed by N- is attached to the nitrogen atom.

n. (1) Any unknown number; as in C_nH_{2n}. (2) The symbol for the index of refraction. (3) The number of molecules (q.v.) in 1 cc. of gas. (4) Transport number. **n rays.** See *n-rays*.

n-. In chemical names: normal, as distinguished from isomeric, thus, *n*-butane or *n*-butanol.

ν The Greek letter nu. A symbol for frequency.

η. The Greek letter eta. See under *E*.

Na. The symbol for sodium (natrium).

naal oil. An essential oil distilled from naal grass, *Cymbopogon nervatus*, a grass growing in the Sudan. Colorless or slightly yellow liquid, d.0.954, insoluble in water, soluble in alcohol or ether. Its chief constituents are l-limonene and perilla alcohol.

nacconol. The trade name of a group of sodium alkyl aryl sulfonates possessing surface-active properties.

nacre. Mother of pearl. The hard, iridescent inside layer of oyster, mussel, abalone and other sea-shells.

nadorite. $PbClSbO_2$. A native Algerian lead chloro-antimoniate, occurring in brownish orthorhombic crystals.

naehrsalz. (Germ. for nutrient salt.) A mixture of sodium and ammonium phosphates.

naftolens. $(C_9H_4)_n$. A group of unsaturated vulcanisable hydrocarbons, b.200–380, obtained from acid tar by-products of mineral oil refining; used as extenders for rubber.

nagyagite. Tellurium glance. A lead sulfotelluride which contains gold and antimony.

nahcolite. Naturally-occurring sodium bicarbonate.

nakrite. $Al_2O_3,2SiO_2,H_2O$. A gray-white clay.

nandinine. $C_{19}H_{19}O_3N$ = 309.2. A diisoquinoline alkaloid from the root-bark of nanten, *Nandina domestica*, a berberidaceous tree of Japan. Cf. *domesticine*.

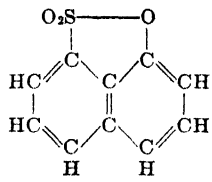
nantokite. CuCl. A native cuprous chloride.

napalite. C_6H_4. A native hydrocarbon; a dark red wax, m.42, b.300, from the Phoenix mine, near Napa, Cal.

napelline. $C_{26}H_{35}O_7N(OH)_4$ = 541.3. Benzaconine. An alkaloid from aconite.

naphsultam acid. $C_{10}H_7O_2NS$ = 205.1. The ring compound, (8) O_2S——NH (1) $C_{10}H_6$. Cf. *naphsultone*.

naphsultone. $C_{10}H_6O_3S$ = 206.1. Naphthosultone. The ring compound,



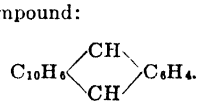
Colorless crystals, m.154, b.360, soluble in water, alcohol or ether.

naphtalin. Naphthalene.

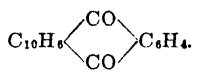
naptha. (1) Oils of the C_nH_{2n+2} series. A mixture of low-boiling hydrocarbons, b.95–150, obtained in the distillation of petroleum coal tar, and shale oil. (2) Gasoline. (3) A kind of bitumen, q.v. **boghead-** Photogen. **coal tar-** Mainly benzene and its homologs. **petroleum-** Mainly paraffins and naphthenes distilled from crude oil. **shale-** Ligroin. It contains olefines and paraffins. **solvent-** A coal tar distillate. **wood-** Mainly methyl alcohol and acetone, obtained by the distillation of wood; used as a solvent and for denaturing alcohol.

naphtha aceti. Ethyl acetate.

naphthacene. $C_{18}H_{12}$ = 228.1. A hydrocarbon and ring compound:

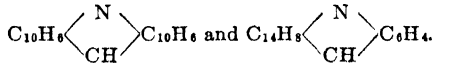


naphthacenequinone. 5,12- $C_{18}H_{10}O_2$ = 258.1. The aromatic ketone and ring compound:



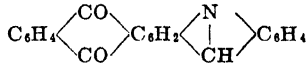
naphthacetol. *4*-Acetamido-*1*-naphthol.

naphthacridine. $C_{21}H_{13}N$ = 279.1. Dibenzacridine. The ring compound



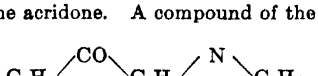
There are 6 possible isomers. **di-** Dinaphthacridine. **fluoren-** Fluorenaphthacridine. **pheno-** Benzacridine.

n. dione. $C_{21}H_{11}O_2N$ = 319.11. Anthraquinone acridine. A group of compounds of the type



n. **5,13-** dione

n. trione. $C_{21}H_{10}O_3N$ = 324.12. Anthraquinone acridone. A compound of the type



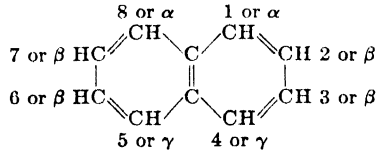
n. **5,8,13-** trione

naphthal. The bivalent radical, $C_{10}H_7CH=$, from naphthoic aldehyde.

naphthalene*. Dekalin.

naphthaldehyde. $C_{10}H_7CHO$ = 156.1. Naphthoic aldehyde, naphthalene carbonal. **alpha-** A colorless liquid, b.291. **beta-** Colorless crystal m.59.

naphthalene*. $C_{10}H_8$ = 128.1. Naphthalin, naphthene, tar camphor. A hydrocarbon obtained from coal tar distillates:

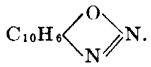


Colorless monoclinic crystals, d.4°1.152, m.80, b.218, insoluble in water, soluble in alcohol or ether. Used as raw material for aniline dyes; under the name of "albocarbon," for enriching illuminating gas and gasolene; for the manufacture of indigo and lampblack; and as an insecticide (moth balls), introfier and antiseptic. The mono-substitution products are alpha-, beta- or gamma-, compounds. The poly-substitution products are termed according to numbers or names viz.:

1.2 = ortho	= *o*	—
1.3 = meta	= *m*	—
1.4 = para	= *p*	—
1.5 = ana	= α	—
1.6 = epi	= ε	—
1.7 = kata	= κ	—
1.8 = peri	= π	—
2.6 = amphi	= φ	—
2.3 = pros	= ρ	—

acetyl- Naphthylmethyl ketone. **amino-** Naphthylamine. **azo-** See *azonaphthalene*. **azoxy-** See *azoxynaphthalene*. **benzyl-** See *benzylnaphthalene*. **bi-** See *binaphthalene*. **bromo-*** $C_{10}H_7Br$ = 206.97. **1-** or α- Colorless crystals, m.5, b.279, d.1.476. **2-** or β- Colorless crystals, d.1.605, m.59, b.282. **chloro-*** $C_{10}H_7Cl$ = 162.51. **1-** or α- Colorless liquid, d.1.191, b.258, immiscible with water. **2-** or β-. Colorless crystals, d.1.138, m.56, b.264.3. Used in organic synthesis and added to gasoline to lubricate the valve stems of internal combustion engines (*halowax*). **chlorinated-** C.K wax. **decahydro-*** Dekalin. **di-** Binaphthalene. **diamine-** Naphthylenediamine. **dihydro-*** $C_{10}H_{10}$ = 130.08. **1.2-** or o- Colorless liquid, d.0.997, m.−9, $b._{16mm}$84.5. **1.4-** or p- d.0.998, m.15.5, b.212. **diazoamine-** See *diazoaminonaphthalene*. **dichloro-*** $C_{10}H_6Cl_2$ = 196.96. Colorless solids, insoluble in water. **1.2-** d.1.315, m.37, b.282. **1.3-** m.61, b.289. **1.4-** d.1.300, m.68, b.287.6. **1.5-** m.107. **1.6-** m.48. **1.7-** d.1.261, m.62, b.286. **1.8-** d.1.292, m.88. **2.3-** m.120. **2.6-** m.135, b.285. **2.7-** m.114. **dihydro-*** $C_{10}H_{10}$ = 130.08. Dialine. A colorless liquid consisting of **1.2-** or o- d.0.997, m.−9, $b._{16mm}$84.5; and **1.4-** or p- d.0.998, m.15.5, b.212. **dihydrodiketo-** Naphthoquinone. **dihydroketo-** Naphthalenone. **dihydroxy-** Naphthalenediol. **dimethyl-*** $C_{12}H_{12}$ = 156.09. **1.4-** Colorless solid, d.1.1016, b.264.3. **2.3-** b.266. **2.6-** m.111. **dinitro-** Dinitronaphthalene. **ethoxy-*** Bromelia. **ethyl-*** $C_{12}H_{12}$ = 156.09. **1-** or α- Colorless liquid, d.1.064, m.−1.1. b.258. **2-** or β- m.−19, b.251, d.1.008. **ethylene-** Acenaphthene. **fluoro-*** $C_{10}H_7F$ = 146.05. **1-** or α- d.1.135, b.216.5. **2-** or β- m.59, b.212.5. **hexahydro-*** $C_{10}H_{14}$ = 134.11. A colorless liquid, d.0.934, b.205.5. **hydrazo-** Hydrazonaphthalene. **hydroxy-** Naphthol. **isopropylmethyl-** Eudalene. **methyl-*** $C_{11}H_{10}$ = 142.08. **1-** or α- Colorless liquid, d.-1.025, m.−22, b.243. **2-** or β- Colorless crystals, d.1.029, m.35.1, b.245. **methyl-i-propyl-** Eudalene. **monoxy-** Naphthol. **nitro-*** Nitronaphthalene. **para-** Anthracene. **phenyl-** Phenyl-naphthalene. **phenyldihydro-** Atronene. **tetrahydro-*** Tetralin. **tetrahydrotetramethyl-** Irene. **tetrahydrotrimethyl-** Ionene. **tetranitro-*** See *tetranitronaphthalene*. **trimethyl-** Sapotalene. **trinitro-*** See *trinitro-naphthalene*.

n. aldehyde. Naphthoic aldehyde. **n. carbonal.** Naphthaldehyde. **n. carboxylic acid.** Naphthoic acid. **n. diamine.** Naphthylene diamine. **n.-2.1-diazo oxide** $C_{10}H_6N_2O$ = 170.1.

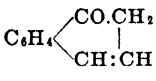


Colorless crystals, m.76. **n. dicarboxylic acid.** $C_{10}H_6(COOH)_2$ = 216.12. (1) **1.5-**Colorless crystals, m. exceeds 286. (2) **1.8.** Naphthalic acid. **n. diol.** See *naphthalenediol**. **m. disulfonic acid.** $C_{10}H_6(SO_3H)_2$ = 288.2. Armstrong acid. **2.6-** or amphi-. Colorless needles, soluble in water or alcohol, insoluble in ether; used in organic synthesis. **2.7-** or pros-. Colorless leaflets, very soluble in water or alcohol, insoluble in ether; used in organic synthesis. **n. red.** Magdala red. A complex red dyestuff derivative of naphthalene. **n. sulfinic acid.** $C_{10}H_7SO_2H$ = 192.13. A colorless solid, *alpha-* m.85; *beta-* m.105. **n. sulfonic acid.** $C_{10}H_7SO_3H.H_2O$ = 226.15. *alpha-* or 1-. Colorless crystals m.90 soluble in water or alcohol; used in organic synthesis and the manufacture of alpha-naphthol. *beta-* or 2-. Colorless crystals, m.102, soluble in water or alcohol; used in organic synthesis and the manufacture of beta-naphthol. **n. sulfonic chloride.** $C_{10}H_7SO_2Cl$ = 194.6. *alpha-* Colorless tablets, m.67, insoluble in water, soluble in alcohol or ether. *beta-* Colorless tablets, m.77, insoluble in water, soluble in alcohol or ether. Both are used in organic synthesis. **n. thiol*.** Thio*naphthol*. **n. yellow.** $C_{10}H_5(NO_2)_2OH$ = 234.2. Dinitro-α-naphthol. Its calcium salt is the yellow dye, martius yellow.

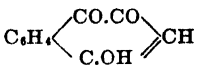
naphthalenediol*. $C_{10}H_8O_2$ = 160.1. Dihydroxynaphthalene. A group of naphthols: **1.2-** m.60. **1.3-** m.125. **1.4-** m.176. **1.5-** m.258. **1.6-** m.138. **1.7-** m.178. **1.8-** m.140. **2.3-** m.159. **2.6-** m.216. **2.7-** m.190.

naphthalenedione*. Naphthoquinone.

naphthalenone. $C_{10}H_8O$ = 144.06. Dihydroketonaphthalene. A group of ketones of the type



naphthalic acid, 1.8-, or alpha-. (1) $C_{10}H_6(COOH)_2$ = 216.1. Naphthalene dicarboxylic acid. Colorless crystalline needles, slightly soluble in water, alcohol, or ether; used in organic synthesis. (2) $C_{10}H_6O_3$ = 174.05.



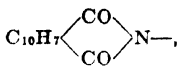
Yellow needles, m.190 (anhydride).

naphthalic acid lactone. $C_{10}H_6(CO.O)_2$ = 214.1. Colorless crystals, m.169, slightly soluble in water.

naphthalide. (1) A compound of the type $MC_{10}H_7$, as, $Hg(C_{10}H_7)$, mercury naphthalide. (2) A compound of the type $RNHC_{10}H_7$; as, $CH_3CONHC_{10}H_7$, acetnaphthalide.

naphthalidine. Naphthylamine.

naphthalimido. The monovalent radical,



derived from naphthalic acid amide.

naphthalin. Naphthalene.

naphthalize. To enrich a gas or liquid with naphthalene; as illuminating gas or gasolene.

naphthalol. $C_6H_4(OH)COOC_{10}H_7$ = 264.0. Betol, salinaphthol, naphthyl salicylate. A colorless powder, insoluble in water; used medicinally as an intestinal antiseptic.

naphthamide. $C_{10}H_7CONH_2$ = 171.1. Naphthalene carbonamide*. **alpha-** Colorless leaflets, m.202, slightly soluble in water or alcohol. **beta-** Colorless crystals, m.192, soluble in alcohol or ether.

naphthamine. Hexamethylenamine.

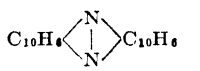
naphthane. Dekalin.

naphthanthracene. Benzanthrene.

naphthaquinone. Naphthoquinone.

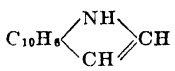
naphthazarine. Alizarin black.

naphthazin(e). $C_{20}H_{12}N_2$ = 280.2. Anthrapyridine. The ring compound,

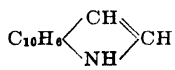


Colorless crystals, m.273.

naphthazole. $C_{12}H_9N$ = 167.1. Naphthindole. The ring compounds,



alpha- or 1-



beta- or 3-

peri- $C_{11}H_8N$ = 154.1. The ring system

naphthene. (1) A group of cyclic hydrocarbons of the general formula, C_nH_{2n}; also termed cyclo-paraffins or hydrogenated benzenes. They occur in Caucasian and Californian petroleums, and are derivatives of cyclo-pentane and cyclohexane. Polycyclic members are also found in the higher-boiling fractions. (2) The naphthalene ring system; as, in acenaphthene. **mentho-** Menthane.

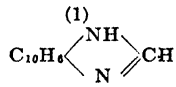
naphthenic acid. (1) $C_6H_{11}COOH$ = 128.1. Hexahydrobenzoic acid. Colorless crystals, d.1.048, m.38, b.232, slightly soluble in water. (2) A group of acids found in some petroleums; derivatives of methyl cyclo-pentanes.

naphthenics. The undesirable constituents of lubricating oil, which may be separated from the paraffinic hydrocarbons by organic solvents. They have steep viscosity-temperature curves.

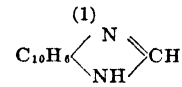
naphthenyl. The trivalent radical, $C_{10}H_7C\equiv$.

naphthieno. The bivalent radical $—C_{10}H_6S—$, attached to two carbon atoms of another ring.

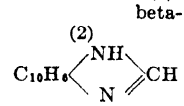
naphthimidazole. $C_{11}H_8N_2$ = 168.0. The ring compounds:



alpha-



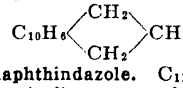
beta-



betabeta-

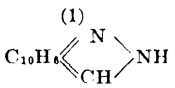
Cf. *benzimidazole.*

naphthindan. $C_{13}H_{12}$ = 168.1. The ring system

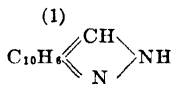


Cf. *naphthindene.*

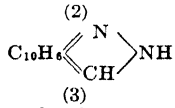
naphthindazole. $C_{11}H_8N_2$ = 168.1. A series of tricylic compounds:



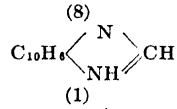
alpha-



beta-



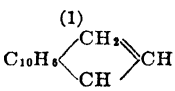
betabeta-



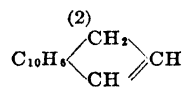
peri-

Cf. *naphthisoiindazole.*

naphthindene. $C_{13}H_{10}$ = 166.1. The aromatic hydrocarbon:



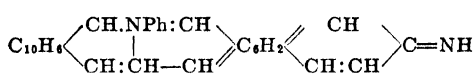
alpha-



beta-

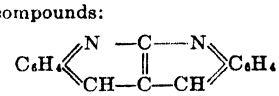
Cf. *indene.*

naphthinduline. $C_{27}H_{18}N_2$ = 370.2. A crystalline coloring material, m.250.



Cf. *induline.*

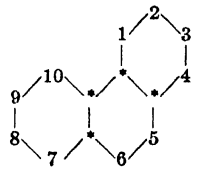
naphthinoline. $C_{16}H_{10}N_2$ = 230.1. The heterocyclic compounds:



naphthionic acid. $NH_2.C_{10}H_6.SO_3H.\frac{1}{2}H_2O$ = 232.2. **o-** *1*-Naphthylamine-*2*-sulfonic acid. **p-** or 1.4-Naphthylaminesulfonic acid. Colorless needles, slightly soluble in water, soluble in alcohol, insoluble in ether; decomp. by heat. Used in the synthesis of dyestuffs and pharmaceuticals.

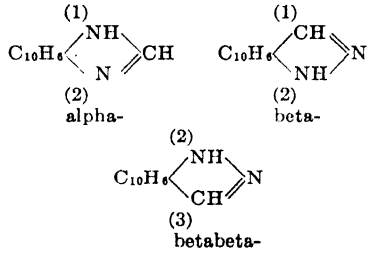
naphthisodiazine. $C_{12}H_8N_2$ = 180.1. The ring compounds derived from phenanthrene by the replacement of two carbon atoms by two nitrogen atoms. The ten different structural

possibilities are named according to the positions of the two nitrogen atoms in the ring:



1.2-naphthisodiazine (or 9.10-)
1.3-naphthisodiazine (or 8.10-)
1.4-naphthisodiazine (or naphthoquinoxaline)
2.3-naphthisodiazine (or 8.9-)
2.4-naphthisodiazine (or 7.9-)
3.4-naphthisodiazine (or 7.8-)
4.7-naphthisodiazine (or pseudophenanthroline)
4.10-naphthisodiazine (or phenanthroline)
5.6-naphthisodiazine (or benzocinnoline)
5.10-naphthisodiazine (or quinoquinoline).

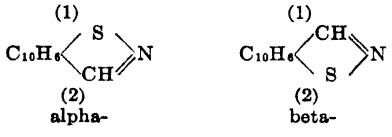
naphthisoindazole. $C_{11}H_8N_2$ = 168.1. The ring compounds:



Cf. *naphthindazole.*

naphthisotetrazine. $C_{10}H_6N_4$ = 182.2. The ring compound derived hypothetically from phenanthrene (see *naphthisodiazine*) by the replacement of four carbon atoms by four nitrogen atoms. The numberings on the ring are the same, *e.g.*, 1.2.3.4-naphthisotetrazine, 1.4.7.10-naphthisotetrazine.

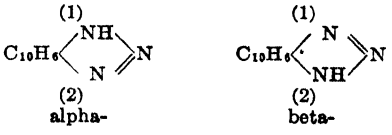
naphthisothiazole. $C_{11}H_7SN$ = 169.1. The ring compounds:



Cf. *naphthothiazole.*

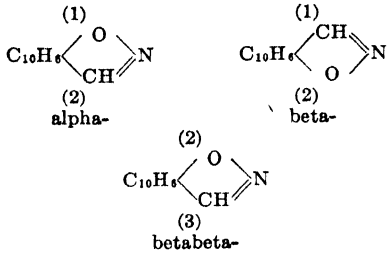
naphthisotriazine. $C_{11}H_7N_3$ = 181.2. The ring compounds derived from phenanthrene by the replacement of three carbon atoms of the ring by three nitrogen atoms. The positions of the nitrogen atoms are indicated by the numbers (see *naphthisodiazine*), as 1.2.3-, 1.2.4- or 1.3.4-naphthisotriazine. Cf. *naphthotriazine.*

naphthisotriazole. $C_{10}H_7N_3$ = 169.2. The ring compounds:



Cf. *naphthotriazole.*

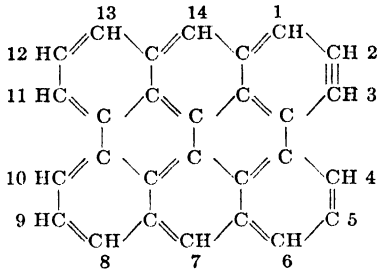
naphthisoxazole. $C_{11}H_7ON$ = 169.1. The ring compounds:



Cf. *naphthoxazole.*

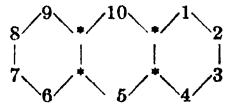
naphtho- A prefix indicating relationship to naphthalene or to its ring structure.

naphthodianthrene, meso-. $C_{28}H_{14}$ = 350.1. An octocyclic hydrocarbon,



Cf. *benzodianthrene.*

naphthodiazine. $C_{12}H_8N_2$ = 180.1. The ring structures derived hypothetically from anthracene by replacing two of its carbon atoms by two nitrogen atoms:

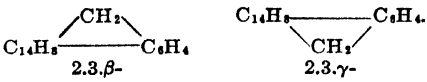


There are six different structures, which are designated by the positions of the nitrogen atoms in this ring as follows:

1.2-naphthodiazine (or 3.4-, or 6.7- or 8.9-)
1.3-naphthodiazine (or 2.4-, or 6.8- or 7.9-)
1.4-naphthodiazine (or 6.9-)
1.9-naphthodiazine (or 4.6-)
1.10-naphthodiazine (or a-quinoquinoline)
5.10-naphthodiazine (or phenazine).

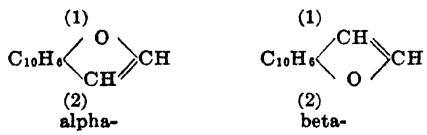
See *naphthisodiazine, perinaphthodiazine, benzodiazine.*

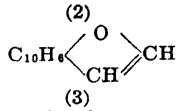
naphthofluorene. $C_{21}H_{14}$ = 266.2. A hydrocarbon and ring compound.



Cf. *benzofluorene.*

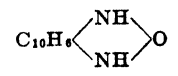
naphthofuran. $C_{12}H_8O$ = 168.0. Benzocoumarane. The ring compounds:





betabeta-

naphthofurazan. $C_{10}H_8ON_2$ = 172.2. The ring compound:



naphthoic acid. $C_{10}H_7COOH$ = 172.1. Naphthalene carboxylic acid. **alpha-** Colorless crystals, m.160, slightly soluble in water, soluble in alcohol or ether. **beta-** Colorless crystals, m.184, slightly soluble in water, soluble in alcohol or ether. **nitro-** See *nitronaphthoic acid.* **oxy-** See *oxynaphthoic acid.*

naphthoic aldehyde. $C_{10}H_7CHO$ = 156.1. Naphthyl aldehyde, naphthalene aldehyde. **alpha-** Colorless liquid, b.292, insoluble in water, soluble in alcohol or ether. **beta-** Colorless leaflets, m.60, slightly soluble in water, soluble in alcohol or ether; used in organic synthesis.

naphthol. $C_{10}H_8O$ = 144.1. Hydroxynaphthalene, monoxynaphthalene, naphthyl hydroxide or alcohol, $C_{10}H_7.OH$. **alpha-** Colorless monoclinic crystals, d.1.224, m.94, b.278, slightly soluble in water, soluble in alcohol or ether. Used in organic synthesis for dyestuffs and pharmaceuticals; medicinally as an antiseptic and antifermentative. **beta-** Colorless leaflets, d.1.217, m.122, b.285, slightly soluble in water, soluble in alcohol, ether or chloroform. Used technically in organic synthesis, and medicinally as an antiseptic. **acetamino-** See *acetaminonaphthol.* **amino-** $C_{10}H_9NO$ = 159.08. $NH_2.C_{10}H_6.OH$. 3-β-. White crystals, m.234. 7 β-. m.163. Cf. *helthin.* **aminoazobenzene-** Sudan red. **anilineazo-** Sudan yellow. **benzoyl-** N. benzoate. **diiodo-** Thymol iodide. **dinitro-** See *dinitronaphthol.* **lacto-** Lactol. **nitro-** See *nitronaphthol.* **nitroso-** See *nitrosonaphthol.* **sulfo-** See *sulfonaphthol.* **thio-** $C_{10}H_8S$ = 160.12. 2-Naphthalenethiol*, β-naphthyl mercaptan, $C_{10}H_7SH$. White shining scales, d.1.550, m.81, b.288, slightly soluble in water.

n. antipyrine. Naphthopyrine. **n. aristol.** Diiodo-β-naphthol. **n. benzoate** $C_{17}H_{12}O_2$ = 248.09. Benzoylnaphthol, benzonaphthol, naphthylbenzoate, $PhCOOC_{10}H_7$. White crystals, α- m.56, β- m.110, slightly soluble in water. **n. bismuth.** Bismuth β-naphtholate. **n. blue.** Meldola blue. **n. disulfonic acids.** See *sulfonic acids.* **n. ethyl ether.** Nerolin. **n. green B.** $C_{20}H_{10}O_{10}N_2S_2FeNa_2$ = 604.2. The disodium ferrous salt of nitroso-β-naphthol sulfonic acid. A green powder, soluble in water. **n. lactate.** Lactol. **n. methyl ether.** Jara-jara. **n. orange.** Tropaeolin. **n. phthalein.** A pH indicator changing from slight pink (pH = 7.3) to green (pH = 8.7); used especially for titrating weak acids in alcoholic solution. **n. salicylate.** Naphthyl salicylate. **n. sulfonic acid.** $HO.C_{10}H_6.SO_3H$ = 224.2. A group of acids, used in organic synthesis as intermediates for dyestuffs. **1.2-** or ortho-. Colorless tablets, m.250, soluble in water. **2.6-** amphi- or Schäffer's acid. Colorless leaflets, m.122, soluble in water or alcohol. **1.4-** Neville-Winther's acid. Colorless crystals, m.170 (decomp.), soluble in water. **1.5-** Cleves' acid. Colorless hygroscopic crystals, soluble in water, alcohol or ether. **2.7-** Casella acid. Colorless crystals, m.89, soluble in water or alcohol. **n. yellow.** $(NO_2)_2C_{10}H_4(OH)SO_3H$ = 314.2. **2.4-** Dinitro-α-naphthol sulfonic acid, S yellow. Yellow crystals. **n. yellow S.** $C_{10}H_4O_8N_2SNa$ = 412.21. Citronin. The potassium salt is used as a dye for woolen and silken textiles, as a food color and as an oxidation-reduction and pH indicator, changing from colorless (acid) to yellow (alkali).

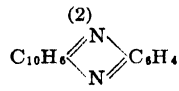
naphtholate. A compound derived from naphthol by replacing the hydroxyl-hydrogen by a base.

naphtholbenzein. $C_{54}H_{38}O_5$ = 766.3. A reddish-brown powder, soluble in alcohol. Used as an indicator in volumetric analysis (alkalis—green; acids—orange), but very sensitive to carbon dioxide.

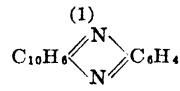
naphthonitrile. $C_{10}H_7CN$ = 153.1. Naphthylcyanide, naphthalenecarbonitrile*. **alpha-** Colorless needles, d.1.117, m.34, b.296, insoluble in water, soluble in alcohol or ether. **beta-** Colorless leaflets d.1.094, m.66, b.304, insoluble in water, soluble in alcohol or ether.

naphthophenanthrene. Dibenzanthrene.

naphthophenazine. $C_{16}H_{10}N_2$ = 230.2. Tribenzoparadiazine, benzophenazine, phenonaphthazine. The ring compounds:



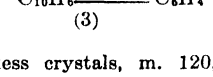
betabeta- m.233



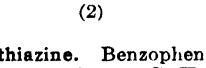
alphabeta- m.142, b. exceeds 360

Both are soluble in alcohol, ether or benzene. Cf. *benzophenazine.*

naphthophenocarbazole. $C_{16}H_{11}N$ = 217.1. Phenylnaphthylcarbazole. Colorless crystals,

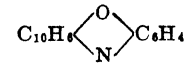


iso- Colorless crystals, m. 120, insoluble in water.

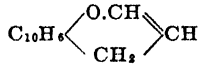


naphthophenothiazine. Benzophenothiazine.

naphthophenoxazine, 1.6.-. $C_{16}H_{10}ON$ = 233.2. The ring compound:

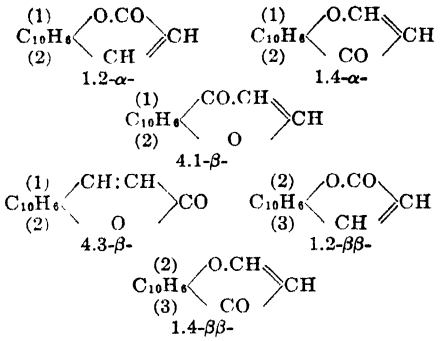


naphthopyrane. $C_{13}H_{10}O$ = 182.1. The ring compound:



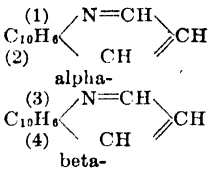
naphthopyrazine. Benzoquinoxaline.

naphthopyrone. $C_{13}H_8O_2$ = 196.1. The ring compounds:



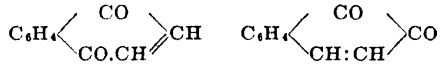
naphthoquinaldine. $C_{13}H_9N.CH_3$ = 193.17. **alpha-** A liquid, b. exceeds 300. **beta-** A solid, soluble in water, alcohol or ether, m.82, b. exceeds 300.

naphthoquinoline. $C_{13}H_9N$ = 179.1. **alpha-** Colorless crystals. Soluble in alcohol or ether, and slightly soluble in water, m.52, b.351. **beta-** Colorless crystals, m.93, b.$_{740mm}$350, soluble in water, alcohol or ether.



octohydro-α-, 1.2.3.4.7.8.9.10-octohydro-α-naphthoquinoline. Colorless crystals, m.48, b.216. **octohydro-β-,** 1.2.3.4.5.6.7.8-octohydro-b-naphthoquinoline. Colorless crystals, m.325, b.325. **tetrahydro-α-,** 1.2.3.4-tetrahydro-a-naphthoquinoline. Colorless crystals, m.46. **tetrahydro-β-.** Colorless crystals, m.63.

naphthoquinone. $C_{10}H_6O_2$ = 158.1. Dihydrodiketonaphthalene. **alpha** or **1:4-** Yellow crystals, m.125, slightly soluble in water, soluble in alcohol or ether. **beta** or **1:2-** Red needles, decomp. 115, soluble in water, alcohol, chloroform or ether; used as test for resorcinol and thalline. **amphi-** or **2:6-** Orange crystals, changing to gray at 130–135.



1.4- or alpha- or para- *1.2-* or beta- or ortho-**n. dioxime.** $C_{10}H_8O_2N$ = 174.1. A group of derivatives of naphthoquinone formed by replacing the =CO groups by =CN.OH groups. Alpha-compound, m.207. ***δ*-hydroxy-** Tuglone.

naphthoquinoxaline. *1.4*-Naphthisodiazine.

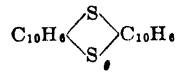
naphthoresorcinol. $C_{10}H_8O_2$ = 160.0. *1.3*-Dihydroxynaphthalene, naphthalenediol*. Colorless crystals, m.124, soluble in water; used as reagent for aldehydes, sugars and uronic acids.

naphthosalol. Betol.

napthosultone. See *naphsultone.*

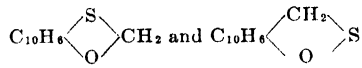
naphthotetrazine. $C_{10}H_6N_4$ = 182.2. The ring structures derived theoretically from anthracene by the replacement of four carbon atoms by four nitrogen atoms. According to the position of the nitrogen atoms the compounds are numbered: 1.2.3.4.-, 1.4.6.9-, or 1.4.5.10-naphthotetrazine (see *naphthodiazine*). Cf. *naphthisotetrazine.*

naphthothianthrene. $C_{20}H_{12}S_2$ = 316.3. The ring compound:



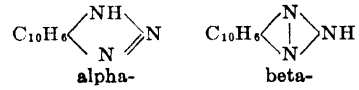
naphthothiazole. $C_{11}H_7NS$ = 185.2. Ring compounds similar in structure to the corresponding naphthoxazoles, the O of the latter being replaced by an S-atom. For structure of a-, aa-, b-, and bb-, see *naphthoxazole.*

naphthothioxole. $C_{11}H_7OS$ = 187.1. The ring compounds



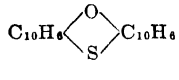
naphthotriazine. $C_{11}H_7N_3$ = 181.2. Ring compounds similar to the naphthodiazines, but having one more nitrogen atom in place of a carbon atom. The position of N-atoms is indicated by numbers, as 1.2.3-, 1.4.9-, and 1.4.10-naphthotriazine (see *naphthodiazine*). Cf. *naphthisotriazole.*

naphthotriazole. $C_{10}H_7N_3$ = 169.2. The ring compounds: (cf. *naphthisotriazole, perinaphthotriazole*)



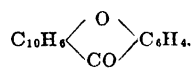
naphthoxanthene. Benzoxanthene.

naphthoxanthine. $C_{20}H_{12}OS$ = 300.2. The ring compound:



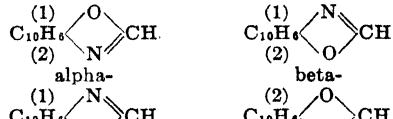
Cf. *phenothioxthine.*

naphthoxanthone. $C_{17}H_{10}O_2$ = 246.1. The ring compound:



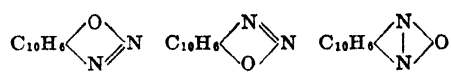
naphthoxazine. Phenoxazine.

naphthoxazole. $C_{11}H_7ON$ = 169.1. The ring compounds:



Cf. *naphthisoxazole, naphthothiazole, benzoxazole.*

naphthoxdiazole. $C_{10}H_6ON_2$ = 170.1. The ring compounds:



Cf. *benzoxdiazole.*

naphthoxy. The monovalent radical, $C_{10}H_7O$—, derived from naphthol.

naphthoyl. The monovalent radical, $C_{10}H_7CO$—, derived from naphthoic acid.

naphthyl. The monovalent $C_{10}H_7$— radical derived from naphthalene. **di-** See *dinaphthyl.*

n. acetate. $CH_3COOC_{10}H_7$ = 186.1. *alpha-* Colorless needles, m.130, slightly soluble in water, soluble in alcohol or ether. *beta-* Colorless needles, m.142, insoluble in water, soluble in alcohol or ether. **n. acetic acid.** $C_{10}H_7CH_2COOH$ = 186.1. *alpha-* Colorless crystals, m.131. *beta-* Colorless crystals, m.139. **n. alcohol.** Naphthol. **n. acetylene.** $C_{12}H_8$ = 152.1. *alpha-* A liquid, b.$_{25mm}$143. *beta-* white crystals, m.36, soluble in alcohol, ether or acids. **n. aldehyde.** Naphthoic aldehyde. **n. amine.** See *naphthylamine.* **n. benzene.** A hydrogen ion indicator changing at pH 8.0 colorless (acid) to blue (alkaline). **n. benzoate.** Naphthol benzoate. **n. carbinol.** $C_{10}H_7.CH_2OH$ = 158.1. Naphthobenzyl alcohol. *alpha-* Colorless crystals, m.60, b.301, soluble in alcohol. *beta-* Colorless crystals, m.80. **n. cyanide.** Naphthonitrile. **n. ether.** $(C_{10}H_7)_2O$ = 270.2. N. oxide, naphthoxy-naphthalene*, *alpha-* or *1.1.-* Colorless crystals, m.110, b.360, insoluble in water, soluble in alcohol or ether. *beta-* or *2.2-* Colorless crystals, m.105, b.360, insoluble in water, but soluble in alcohol or ether. **n. ethyl ether.** *α-* See *ethyl naphthyl ether.* *β-* Bromelia. **n. hydrazine.** $C_{10}H_7.NHNH_2$ = 158.1. *alpha-* Colorless leaflets, m.117. *beta-* Colorless leaflets, m.125. Both are slightly soluble in water, soluble in alcohol or ether. The hydrochlorides are used as reagents for sugars. **n. hydroxide.** Naphthol. **n. isocyanate.** $C_{10}H_7.NCO$ = 169.0. Colorless crystals used as reagent for hydroxy and amino compounds. **n. ketone.** $(C_{10}H_7)_2CO$ = 282.1. *alphabeta-* Colorless needles, m.135, insoluble in water, soluble in alcohol or ether. **n. lactate.** Lactol. **n. mercaptan.** $C_{10}H_7SH$ = 160.17. Thionaphthol. A liquid, insoluble in water, decomp. 285. **n. methyl ether.** $C_{10}H_7.O.CH_3$ = 158.1. Methoxynaphthalene*. *α-* Colorless liquid, d.1.096, m. below −10, b.258. *β-* Yara-yara, nerolin. A colorless powder of fruit-like odor, m.78, b.274, insoluble in water, soluble in alcohol or ether. Used in perfumery and in synthetic perfumes. **n. methyl ketone.** $C_{10}H_7.CO.Me$ = 170.1. *alpha-* Acetonaphthone. Colorless crystals, m.34, b.295, soluble in alcohol. **n. salicylate.** *α-* Alphol. *β-* Betol.

naphthylamine. $C_{10}H_7NH_2$ = 143.1. Naphthalidine. **alpha-** Colorless needles, d.$_{25}$°1.123, m.50, b.300, slightly soluble in water, soluble in alcohol or ether. Used in organic synthesis in the manufacture of Martius yellow, magdala red, and other dyestuffs; also as a reagent for nitrites and nitrates. **beta-** Colorless leaflets, d.$_{98}$°1.0614, m.111, b.306, soluble in water, alcohol, or ether; used in organic synthesis, in the manufacture of azo-dyes. **acet-** Acetnaphthalide. **dimethyl-β-** $C_{10}H_7NMe_2$ = 171.11. Colorless crystals, m.46, b.305. **ethyl-α-** $C_{10}H_7NHEt$ = 171.11. A colorless liquid. b.303. **methyl-α-** $C_{10}H_7NHMe$ = 157.10. A colorless liquid, b.293. **nitro-** See *nitronaphthylamine.* **nitroso-** q.v., **phenyl-** q.v., **tetrahydro-** q.v. **thiophenyl-** Benzophenothiazine.

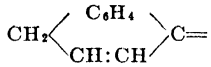
n. brown. Acid brown. 4-sulfo-α-naphthalene-azo-α-naphthol. An indicator for the pH range 6.0 (orange)-8.4 (pink). **n. hydrochloride.** $C_{10}H_7NH_2.HCl$ = 179.6. *alpha-* Colorless needles, soluble in water, alcohol, or ether; used as an intermediate in organic synthesis. *beta-* Colorless leaflets, soluble in water, alcohol, or ether; used in organic synthesis. **n. sulfonic acid.** A compound derived from naphthalene by substitution of one hydrogen by —NH_2, and another H by —SO_2OH. There are 13 isomeric monosulfonic acids $C_{10}H_6.(NH_2)SO_3H$; 20 isomeric disulfonic acids $C_{10}H_5(NH_2)(SO_3H)_2$; and 10 isomeric trisulfonic acids, $C_{10}H_4(NH_2)(SO_3H)_3$. The more important are:

1.4-naphthylamine sulfonic acid, see *naphthionic acid.*
2.8-naphthylamine sulfonic acid, Baden acid or α-acid.
2.6-naphthylamine sulfonic acid, Brönner's acid, or β-acid.
2.5-naphthylamine sulfonic acid, Dahl's acid or γ-acid.
2.7-naphthylamine sulfonic acid, F-acid, δ-acid or Bayer acid.

naphthylene. (1) The bivalent radical, $C_{10}H_6$=, derived from naphthalene. (2) An obsolete name for cyclohexene, C_6H_{10}. **di-** Perylene. **periethylene-** Acenaphthene.

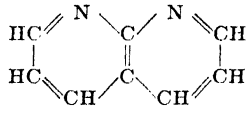
n. diamine. $C_{10}H_6(NH_2)_2$ = 158.1. Diaminonaphthalene, naphthalenediamine. There are several compounds, all colorless crystals: 1.2-naphthylene diamine, m.98; 1.3-naphthylene diamine, m.95; 1.4-naphthylene diamine, m.120; 2.3-naphthylene diamine, m.191.

naphthylidene. The bivalent radical,



naphthylmercuric. The monovalent radical $C_{10}H_9Hg$—. **n. acetate.** $CH_3COOHgC_{10}H_9$ = 388.70. Colorless fine needles, m.154, insoluble in water. **n. chloride.** $C_{10}H_9HgCl$ = 356.14. Silky, quadratic crystals, m.188, insoluble in water.

naphthyridine. $C_8H_6N_2$ = 130.06. *1.8-*benzodiazine, q.v., *1.8-*pyridopyridine. The ring compound:



Cf. *benzodiazine.*

octohydro- $C_8H_{14}N_2$ = 138.2. Colorless crystals, m.227.

naphtol. Naphthol.

Napier, John. 1550–1600. A Scotch mathematician, the inventor of logarithms.

Napierian logarithms. The exponent of the power to which the quantity e (= 2.71828) must be raised in order to produce a given number. See *logarithms, "e."*

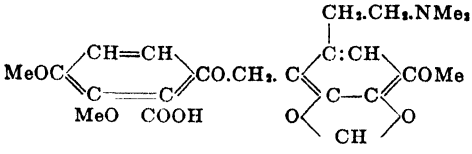
napiform. Having the form of a turnip. The turnip-shaped cavities seen in culture media that have been liquefied by bacteria.

Naples jar. A glass jar for staining microscope slides. **n. yellow.** Lead antimoniate.

napoleonite. Corsite.

naptha. Naphtha.

narceine. $C_{23}H_{27}O_8N.3H_2O$ = 499.4. An alkaloid from opium. Colorless prisms, m.170, slightly soluble in water or alcohol. Used medicinally as a hypnotic and sedative.



ethyl- Narcyl. **n. hydrochloride.** $C_{23}H_{27}O_8N.HCl = 535.7$. White, granular powder, m.-190, soluble in water, alcohol, or ether; used as a hypnotic. **n. meconate.** $C_{23}H_{27}O_8N.C_7H_4O_7 = 699.4$. Yellow crystalline needles, m. 126, soluble in hot water or alcohol. **n. sodium salicylate.** Antispasmin. **n. sulfate.** $C_{23}H_{27}O_8N.H_2SO_4 = 595.3$. Yellowish crystals, soluble in water or alcohol. **n. valerate.** $C_{23}H_{27}O_8N.C_5H_{10}O_2 = 601.5$. A greenish-white powder, decomposes on ageing, soluble in hot water or alcohol.

narcine. Narceine.

narcissine. Lycorine.

narcophine. A double salt of morphine and narcotine meconate.

narcosan. A solution of the lipoids from soya beans and cotton seeds (extracted with hot alcohol), the non-specific proteins from alfalfa seeds (extracted with dilute HCl), and the water-soluble vitamins from plant seeds (percolated with physiological salt solution). Used for nervous disorders and drug addiction.

narcotic. A drug that produces stupor, complete insensibility, or sleep; as opium, chloral, cannabis. Three chief groups:

opium group—which produce sleep.

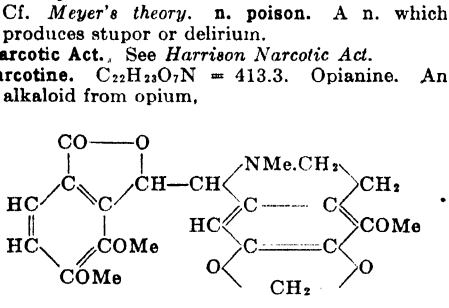
belladonna group—which produce illusions and delirium.

alcohol group—which produce exhilaration and sleep.

Cf. *Meyer's theory.* **n. poison.** A n. which produces stupor or delirium.

Narcotic Act. See *Harrison Narcotic Act.*

narcotine. $C_{22}H_{23}O_7N = 413.3$. Opianine. An alkaloid from opium,



Colorless needles, m.176, insoluble in water, slightly soluble in alcohol or ether. Used medicinally as an antipyretic and tonic, and has little narcotic effect. Cf. *cotarnine.*

narcyl. $C_{25}H_{31}O_8N.HCl = 509.7$. Ethylnarceine hydrochloride. Colorless crystals, slightly soluble in water, soluble in alcohol.

narcylene. A pure acetylene gas, used as an anesthetic gas.

nard. Aralia.

naregamine. An alkaloid from the root of *Naregamia alata,* Goanese ipecac, used as an emetic.

nargol. Silver nucleinate.

naringenin. $C_{15}H_{12}O_5 = 272.09$. 4.5.7-trihydroxyflavanone. A synthetic flavone, q.v.

naringin. $C_{21}H_{26}O_{11} = 454.2$. Aurantium. A crystalline glycoside from the flowers of *Citrus decumana,* the grapefruit or pomelo tree. Yellow prisms, soluble in hot water or hot alcohol, insoluble in ether. It hydrolyzes to naringenin.

narki metal. An alloy of iron and silicon, used in acid resisting utensils.

nascency. Nascent state.

nascent. Describing a chemical substance at the moment of its formation; especially a gas at the moment it is generated in which condition it is more chemically-active, presumably on account of free single *atoms* being present, instead of the less active gas *molecules.* **n. state.** The condition of a substance during its formation, or liberation from its compounds (see *status nascendi*).

nasrol. Symphorol N.

naszogen process. The production of oxygen from a mixture of a chlorate, inert substance (as, kieselguhr) and an exothermic compound.

natalite. A mixture of alcohol and ether, used as fuel in internal combustion motors.

nataloin. $C_{34}H_{38}O_{15} = 686.3$. A principle derived from Natal aloes. Cf. *aloin.*

National Physical Laboratory. An English Government institution near London, which issues certificates for scientific glassware, weights, and measuring instruments having a specified high degree of accuracy, and carries out physical research. Certified articles bear a monogram N.P.L.

National Research Council. An institution established in April, 1916 by the National Academy of Sciences in Washington (U. S. A.) for the better coordination of research in industrial problems.

native. A pure substance occurring in nature. The term is used (a) to indicate an uncombined element, as native mercury or native gold; and (b) to distinguish substances which occur naturally, from those artificially made, as native garnet, native soda. **n. coke.** Carbonite. **n. compounds.** A chemical compound that occurs in nature. **n. element.** A chemical element that occurs uncombined in nature. **n. metal.** A metal that occurs uncombined in nature, as copper, silver, gold. **n. paraffin.** Ozocerite. **n. prussian blue.** Vivianite. **n. soda.** Natron.

natrine. An alkaloid from *Solanum tomatillo,* a Solanaceae.

natrium. The Latin and German names for sodium, Na.

natrocalcite. Gaylussite.

natrolite. $Na_2O,Al_2O_3,3SiO_2,2H_2O$. Needle stone. A white or yellow zeolite mineral or sodium aluminum silicate. Cf. *radiolite.*

natron. $Na_2CO_3.10H_2O$. A native sodium carbonate, occurring in the desert regions of Egypt, from which the term natrium (sodium) has been derived. (Cf. *trona, urao.*)

natronkalk. Soda-lime.

natrum. An early (Arabic) name for trona. Cf. *natrium.*

natural. Not artificial or synthetic. **n. bases.** Alkaloids. **n. changes.** (1) The reactions produced by decay, fermentation, or putrefaction of organic compounds. (2) The reactions produced by decomposition, corrosion, oxidation and hydrolysis of inorganic compounds. **n. dyes.** The coloring materials derived from the vegetable or animal world, as indigo or carmine. **n. gas.** (1) An almost pure mixture of hydrogen and methane gas or a mixture of simple hydrocarbon homologs found in the vicinity of oil fields. Typical compositions are:

	Eastern, per cent.	Western, per cent.
Hydrogen	20	
Methane	70	70
Other hydrocarbons	6	27
Carbon dioxide	1	3
Nitrogen, oxygen	3	

It is collected at the oil fields, and piped to the cities to be used as fuel. An odorous substance is usually added as a warning aid in detecting leaks. (2) Helium. **n. immunity.** The resistance of species or races to certain infectious diseases. *E.g.*, Man is never attacked by chicken cholera. **n. logarithm.** Napierian logarithm. **n. philosophy.** The interpretation of natural science by theories and abstract concepts. It includes theoretical chemistry and theoretical physics. Cf. *natural science.* **n. science.** The knowledge of the phenomena of nature, as opposed to abstract or philosophical science. Natural science is mainly descriptive and is conveniently classified into: descriptive chemistry and physics, descriptive biology (botany, zoology and anthropology), descriptive geology (topography, oceanography, and meteorology), and descriptive astronomy. (Cf. *natural philosophy.*) **n. ventilation.** The ventilation of a mine by natural means.

naucleine. $C_{21}H_{26}O_4N_2$ = 370.2. An alkaloid obtained from *Nauclea excelsa*, a Japanese plant; used as a cure for the opium habit.

nauli gum. An oleoresin from *Canarium commune*, a tree of the Solomon Islands. **n. oil.** An essential oil of anise-like odor, distilled from nauli gum. Cf. *elemi.*

naumannite. A native lead-silver telluride, $(Ag_2Pb)Se$; large cubes with a metallic luster.

nauseant. An agent that produces a feeling of sickness and vomiting.

nautical mile. A measure of distance, equal to 1.15136 statute miles = 6082.66 feet. **n. speed.** See *knot.*

naval brass. An alloy of 61 parts Cu, 38 parts Zn, and 1 pt. Sn. **n. stores.** (1) A group name for the materials originally used by builders of wooden ships; such as, tar, pitch, rosin, turpentine, asphalt, pine oil. (2) The products obtained from rosin; as, turpentine, pine oil.

Navashin's solution. A fixative for plant tissues consisting of equal parts of (a) (1.5 % CrO_3, 10 % CH_3COOH, 90 % H_2O); (b) (40 cc. formaldehyde, 60 cc. H_2O).

Nb. The symbol for niobium (columbium).

Nd. The symbol for neodymium.

Ne. The symbol for neon.

neat's-foot oil. Oleum bubulum. A liquid oil of varying composition obtained by boiling calves' and sheep's feet and shinbones. A pale yellow oil, d.0.916, soluble in alcohol, ether, benzene, or chloroform. Used as a lubricant, leather dressing, and for oiling wool.

nebulium. A hypothetical light element, atomic weight 1.31. It is assumed (from spectroscopic evidence) to exist in nebulas, but its characteristic lines are due to doubly- and triply-ionized oxygen and doubly-ionized nitrogen. Cf. *coronium, aurorium.*

nebulization. The transformation of a liquid into a fine spray.

nebulizer. An atomizer or instrument for producing a spray.

necic acids. The acid products of hydrolysis of senecio alkaloids.

necines. The basic products of hydrolysis of senecio alkaloids.

necrocryptoxanthol. A provitamin A in yellow corn grain.

nectandrine. $C_{20}H_{23}O_4N$ = 341.3. An alkaloid from the bark of *Nectandra rodiaei*, a Lauraceae. A white amorphous powder resembling bebeerine in action.

nectar. The sugary juice of flowers, and the source of honey.

needle. (1) A sharp pointed rod of metal for puncturing or sewing. (2) A needle-shaped crystal. (3) A magnetic needle. **astatic-** See *astatic.* **compass-** A magnetized needle, mounted so that it can move freely in a horizontal direction. **dipping-** A magnetized needle, hung so that it can move freely in a vertical plane. **hypodermic-** A hollow needle, used for the injection of solutions beneath the skin. **n. ore.** (1) An iron ore, which occurs in long fibrous filaments. (2) Aikenite. A native sulfide of lead, bismuth, and copper. **n. spar.** Aragonite. **n. stone.** Natrolite. **n. valve.** A screw-valve with a long tapering point instead of a disk; used on high pressure gas cylinders.

neem. n. bark. Azadarach. **n. oil.** Margosa oil, nim oil. An oil expressed from the seeds of *Melia azadirachta*, containing various sulfur compounds. Used medicinally for syphilis, as an anthelmintic, and as a denaturant for alcohol. Cf. *margosa* oil, *margosic* acid.

negative. (1) Having a charge due to electrons, as a negative ion or radical. (2) The absence of a reaction, property or phenomenon; as, negative catalysis or negative crystal. (3) The opposite of positive, as a photographic negative. **n. catalysis.** The retardation of a chemical reaction by means of a catalyst. **n. cotton.** A low-nitrated cellulose, soluble in ether or alcohol, used for photographic plates. **n. crystal.** A birefractive crystal in which the refractive index of the ordinary ray is more than the refractive index of the extraordinary ray. **n. electrode.** Cathode. **n. element.** An acid-forming element or an atom with four to seven valency electrons, as C = 4, N = 5, O = 6, Cl = 7. It is characterized by tendency to attract additional electrons and form a stable system of eight. Cf. *octet, negative ion, periodic system.* **n. group.** (1) An acid radical. (2) A radical, the introduction of which into a molecule, causes an organic compound to become more negative, that is, become less basic and so enable the hydrogen atoms to be replaceable by metals. Such negative radicals are carbethoxyl-, carboxyl-, naphthyl-, nitro-, nitrosyl-, phenyl-, and thionyl-groups. **n. ion.** An atom charged with one or more negative electrons; an anion. **n. plate.** A photographic plate in which, on exposure to light and subsequent development and fixation, the image is inverted: light appears black, and shadows white. **n. radical.** An acid radical. **n. test.** A reaction or test which indicates the absence of the substance sought.

negatron. A negative electron (q.v.) as compared with the positron.

negion. Proposed name for cation. Cf. *posion.*

negode. Proposed name for cathode, q.v.

nemalite. Brucite.

nematic. Pertaining to liquid crystals of the thread-like type. Cf. *smectic.*

nembutal. Pentobarbital.

neo- A prefix derived from the Greek, indicating "new" or "recent."

neoarsaminol, neoarsenobenzol, neoarsphenamine. Neosalvarsan.

neoarsycodyl. Sodium methyl arsenate.

neobrucidine. $C_{23}H_{26}N_2O_4$ = 394.2. An isomer of brucidine.

neobrucine. $C_{23}H_{26}N_2O_4$ = 394.2. An isomer of brucine.

neocaine. Procaine.

neocalamine. Prepared neocalamine. A mixture of 93 % zinc oxide, 3 % red ferric oxide, and 4 % yellow ferric oxide; used like calamine in skin diseases but has a uniform color.

neocerotic acid. $C_{25}H_{50}O_2$ = 382.4. A fatty acid, m.77.8, from bees-wax.

neocianite. The blue mineral CuO,SiO_2.

neocid. See DDT.

neocinchophen. Novatophan. A cincophen derivative used similarly to that compound in medicine.

neocryl. Succinanilomethylamide-*p*-arsonic acid. Used in treating syphilis and sleeping sickness.

neocupferron. The homologous napthyl derivative of cupferron (q.v.). It is a reagent for iron.

neocyanine. A dyestuff derivative of cyanine, used as a photographic sensitizer for infrared.

neodiarsenol. Neosalvarsan.

neodymia. Neodymium oxide. See also *didymia.*

neodymium. Nd = 144.27. A rare earth metal, atomic number 60, discovered by Auer v. Welsbach (1885). Cf. *rare* earths. A yellowish metal, d.6.96, m.840, which tarnishes slowly in air. It occurs in cerium and lanthanum minerals, and forms salts that are generally purple colored and fluorescent. Its valency is 3. **n. acetate.** $(CH_3COO)_3Nd.H_2O$ = 339.36. Pink crystals, soluble in water. **n. acetylacetonate.** $Nd(MeCOCH_2COO)_3$ = 441.43. Violet crystals, m.120–125, soluble in water. **n. chloride.** $NdCl_3$ = 250.65. Rose crystals, soluble in water. **n. hydroxide.** $Nd(OH)_3$ = 195.29. A reddish-white powder, insoluble in water. **n. iodide.** NdI_3 = 525.07. A purple crystalline powder, soluble in water. **n. oxalate.** $Nd_2(C_2O_4)_3$ = 732.70. Rose crystals, insoluble in water. **n. oxide.** Nd_2O_3 = 336.54. A pale blue powder, insoluble in water. **n. phosphate.** $NdPO_4$ = 239.29. A red powder, used as an amethyst coloring for porcelain. **n. sulfide.** Nd_2S_3 = 384.72. A yellowish-green powder, d.5.387, m.2200.

neogen. A silver-white alloy: 58 parts copper, 27 parts zinc, 12 parts nickel, 2 parts tin, 0.5 part of aluminum and bismuth.

neohexane. *2.2*-Dimethylbutane*.

neo-hombreol. A trade name for testosterone propionate. **n-h M.** Methyltestosterone.

neokharsivan. A British-made brand of neosalvarsan.

neolactose. An isomer of lactose.

neoline. $C_{28}H_{39}O_6N$ = 425.2. An alkaloid obtained by hydrolysis of neopelline.

neolite. A green, silky, fibrous, aluminum-magnesium silicate.

neolithic. Late Stone Age. Pertaining to an epoch in human civilization characterized by the beginning of agriculture, discovery of fire, and better implements of stone and bone. It was preceded by the paleolithic age and followed by the copper and bronze age.

neon. Ne = 20.183. A rare, noble gaseous element, atomic number 10, discovered in the atmosphere in 1898 by Ramsay and Travers. A colorless gas, $d._{H=1}$9.96, m. −253, b. −243. It occurs in the air in traces (1 in 55,000) and consists of two isotopes (atomic weight, 20 and 22). It forms no chemical compounds, and is used as a residual gas in vacuum tubes (*e.g.*, for spark plug testers, and sources of illumination for spectroscopic work), and incandescent lamps. **n. lamp, n. light, n. tube.** A vacuum tube containing a trace of neon. It emits an intense red light of great fog-penetrating power, used for advertising signs and beacons for airways and lighthouses.

neonal. $C_{10}H_{16}O_3N_2$. 5-*n*-Butyl-5-ethylbarbituric acid, used as a hypnotic.

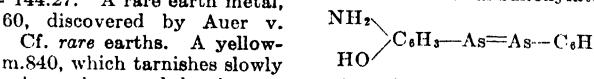
neonicotine. Anabasine.

neopelline. $C_{32}H_{45}O_8N$ = 571.36. An alkaloid from *Aconitum napellus*, aconite.

neopentane. *2.2*-Dimethylpropane.

neoprene. Generic name for synthetic rubber made by polymerization of 2-chloro-1,3-butadiene (prepared by the action of hydrogen chloride on monovinylacetylene). Neoprene vulcanizates are markedly resistant to oils, greases, chemicals, sunlight, ozone, and heat.

neosalvarsan. $C_{12}H_{11}O_2N_2As_2(CH_2)O.SONa$ = 466.2. Neoarsaminol, neoarsphenamine, neodiarsenol, Ehrlich No. 914, novarsenobenzol, sodium-3.3′-diamino-4.4′-dihydroxy-arsenobenzol-methanal-sulfoxylate,



A product of salvarsan and formaldehyde sodium sulfoxylate discovered by Ehrlich and Bertheim in 1912. An orange-yellow powder, with a peculiar odor, very soluble in water; used for intravenous and intramuscular injections.

neosine. A nitrogenous base from muscle.

neostibosan. The diethylamine salt of stibanilic acid. It is similar in action, and preferable to stibosan, q.v.

neostrychnine. $C_{21}H_{22}N_2O_2$ = 334.15. An isomer of strychnine.

neosynephrine. $C_9H_{13}NO_2$ = 167.1. Levo-α-hydroxy-β-methylamino-3-hydroxy ethylbenzene. White crystals, used as a vasoconstrictor.

neothesine. $C_{16}H_{23}NO_2.HCl$ = 297.7. γ-(*2*-methylpiperidino) propyl benzoate hydrochloride, $PhCOO(CH_2)_3N.(CH_2)_4CHMe.HCl$.

White crystals, m.172, soluble in water, alcohol or chloroform; used as local anesthetic. Cf. *procaine, cocaine.* **n. base.** A yellow oil, insoluble in water.

neotype. Alstonite.

neoytterbium. Ytterbium.

nepalin. $C_{17}H_{14}O_4$ = 282.11. A crystalline constituent from the *Rumex* species, Polygonaceae. Cf. *nepodin.*

nepheline. A granular rock, which consists chiefly of nephelite and pyroxene.

nephelite. (1) An orthosilicate of sodium, potassium, and aluminum consisting of 20 % $KAlSiO_4$, 75 % $NaAlSiO_4$, and 5 % $NaAlSi_3O_8$. It is the basis of many rocks. (2) $NaAlSiO_4$. Elaeolite. A silica mineral (q.v.) typical of a group. Cf. *beemerose.*

nephelometer. A photometric or optical device for determining the amount of suspended matter in a solution by comparison of the amount of light scattered by the suspended particles with that scattered by the particles of a standard suspension. It is used to determine proteins, the growth of bacteria, and any metallic or acid radicals which can be precipitated in finely-divided form. Cf. *turbidimetry.*

nephelometry. Quantitative analysis by determining the degree of light scattered from a fog or suspension. Cf. *turbidity.*

nephrite. Jade.

nepodin. $C_{18}H_{16}O_4$ = 296.12. A principle, m.-158, from *Rumex nepalensis*, a Polygoniaceae. Cf. *nepalin.*

neptunium. (1) An element of atomic number 93, and atomic weight 239, obtained by bombarding ordinary uranium with neutrons. It undergoes transformation into plutonium, of atomic number 94, and atomic weight 239. (2) A supposed element of atomic weight 118, which proved to be a mixture of tantalum and niobium.

neral. β-Citral.

neriantin. A crystalline glucoside from the leaves of *Nerium oleander.*

neriin. A glucoside from the leaves of *Nerium oleander*, an Apocynaceae, soluble in water or alcohol, insoluble in ether, which resembles strophantin and has a digitalis-like action. Cf. *oleandrin.*

neriodorin. A glucoside from the bark of *Nerium odorum.*

nerium. Oleander.

Nernst, Walter. 1864–1942. A German physicist and chemist, noted for his work in thermodynamics and physical chemistry. **N. effect.** The thermomagnetic difference in potential observed on passing a current from left to right through a metallic plate placed between two magnetic poles. The effect is positive when the upper edge of the plate has the higher potential. **N. heat theorem.** The entropy of a condensed, chemically-homogeneous substance vanishes at the zero of absolute temperature. **N. lamp.** See *lamp.* **N. law.** Partition law. Distribution law, Nernst theorem. A substance in contact with two immiscible liquids and soluble in both, will dissolve in each of the two liquids in fixed proportions, regardless of the quantity of liquid, providing no molecular association or electrolytic dissociation takes place. **N. theory.** (1) The electric stimulus to the tissues of an organism is due to the dissociation of the salts, as a result of which a concentration of ions is produced in the solution surrounding the cell membranes. (2) The theory of electrolytic solution pressure (q.v.), according to which the potential of a metal in a solution of its ions may be calculated from a knowledge of the concentration of the latter. The potential is set up as a result of the tendency of the metal to go into solution with the formation of ions.

nerol. $C_{10}H_{18}O$ = 154.14. A primary alcohol derived from neroli oil. A colorless liquid, d.0.881, b.226.

neroli oil. A brown, essential oil distilled from orange blossoms, *Citrus bigardia* and *C. aurantium*, d.0.87, containing nerol, linalool, geraniol, and limonene; used in perfumery.

nerolidol. $C_{15}H_{26}O$ = 222.20. Peruviol, *3.7.11*-trimethyldodecatriene-*1.6.10*-ol-3. $Me_2C:CH(CH_2)_2CMe:CH(CH_2)_2CMeOH.CH:CH_2$. A tertiary alcohol from neroli oil and Peru balsam, d.0.880, b.277. It is an isomer of farnesol; used in perfumery.

nerolin. (1) $C_{10}H_7.O.C_2H_5$ = 172.1. β-naphthylethylether. (2) $C_{10}H_7.O.CH_3$ = 158.1. β-naphthylmethylether. A colorless crystalline powder of fruity odor, m.72, b.271, insoluble in water, soluble in alcohol or ether; used as a substitute for nerol in perfumery.

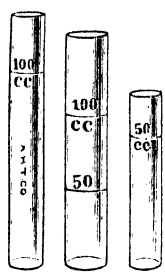
nerve. A fiber-like whitish cord, which transmits impulses to and from the central nervous system. **n. sedative.** An agent that diminishes the activity of sensory nerves, as chloral, bromides, belladonna, opium, henbane. **n. stimulant.** An agent that increases the activity of sensory nerves, as nux vomica, strychnine, caffeine.

nervon. $C_{48}H_{91}NO_8$ = 809.74. A galactoside, m.61, containing nervonic acid, sphingosine and galactose occurring in the brain. Cf. *cerebroside.*

nervonic acid. $C_{24}H_{46}O_2$ = 366.36. Selacholeic acid, *6,15*-tetracosanic acid. The unsaturated acid, $Me(CH_2)_7CH:CH(CH_2)_{13}COOH$. White crystals, m.41, insoluble in water; in fish liver oils, nervon and sphingo myelin. **α-hydroxy-** $C_{24}H_{46}O_3$ = 382.36. An acid from hydroxynervone.

nesquehonite. A hydrous magnesium carbonate, $MgCO_3.3H_2O$.

Nessler, A. 1827–1905. A German chemist noted for his development of analytical methods. **N. reagent.** Dissolve 3.5 gm. KI in 10 cc. H_2O (Sol. A), and 1.7 gm. $HgCl_2$ in 30 cc. H_2O (Sol. B). Slowly add B to A until a permanent precipitate occurs, then dilute with 20 % NaOH to 100 cc. Again add solution B, until a permanent precipitate forms, let settle, decant, and keep solution in the dark. The solution improves on keeping. **N.'s solution.** An alkaline mercuric potassium iodide solution. See *Nessler's reagent, N. test.* **N.'s test.** A delicate test for detecting ammonia, aldehydes, and hexamethylenamine. N. reagent gives a reddish brown precipitate with ammonia and with traces of NH_3 a more or less intense yellow tint due to NHg_2I, which can be used for its colorimetric determination. 1 part per 100,000,000 of water is detectable. **N. tube.** A glass cylinder with a flat bottom; used for the comparison of colors in colorimetric reaction analysis.



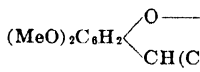
Nessler tubes.

nesslerize. To treat with Nessler's reagent.

nethamine. N-ethylephedrine hydrochloride; the levo 1-phenyl-2-methylethylaminopropan-1-ol hydrochloride. It is used like ephedrine.

nether. An early (Egyptian) name for trona.

netoric acid. $C_{12}H_{14}O_5$ = 218.08. A monocarboxylic acid, m.92, derived from rotenol.



nettle. Urtica. **horse-** *Solanum carolinense*, q.v.

Neuberg ester. Fructose-*6*-monophosphate, produced in the fermentation of sugar by yeast. Cf. *Robison ester.*

neudorfite. $C_{18}H_{28}O_2$ = 276.2. A resinous oxidized hydrocarbon in Bavarian coal beds.

neuridin. $C_5H_{14}N_2$ = 102.2. A ptomaine found in decaying animal matter.

neurine. $C_5H_{13}ON$ = 103.4. Amantine. Trimethylvinylammoniumhydroxide. A quaternary amine: $(CH_3)_3{\equiv}N\langle^{CH:CH_2}_{OH}$, in decaying proteins from fishes, fungi, and brain substances. An extremely poisonous liquid known in solution only, soluble in water, alcohol or ether. (See also *choline, amanitine, muscarine.*) **oxy-** Betaine.

neurodin. $C_{13}H_{16}O_3N$ = 282.12. Acetyl-p-oxyphenylurethane. $C_6H_4(OCOCH_3)_2NHCOOC_2H_5$. A colorless crystalline powder, soluble in water; used medicinally as an antineuralgic and antipyretic.

neurodine. $C_5H_{19}N_2$ = 107.1. A ptomaine in decomposing flesh.

neurolecithin. An ester of fatty acids with glycerophosphoric acid and choline, prepared from the brain and spinal cord of healthy animals and used medicinally as a lecithin preparation. Cf. *lecithin.*

neuron. A nerve cell.

neuronal. $C_6H_{12}ONBr$ = 194.0. Diethyl bromacetamide, bromodiethylacetamide, $NH_2.CO.CBrEt_2$. Colorless crystals, m.66, soluble in water; used medicinally as a somnifacient.

neurosin. Calcium glycerophosphate.

neurotic. An agent or substance acting on the nervous system (see *poisons*).

neuton. The theoretical zero element, consisting of neutrons, $_0n^1$, having atomic number zero and mass one. Cf. *neutron.*

neutral. (1) Non-acidic and non-basic. Cf. *amphoteric.* (2) Having no free electric charge. Cf. *neutron, isoelectric point.* **n. atom.** An atom in which the nuclear positive charge is balanced by the negative electrons, but the latter may be in *excited* or in *normal* orbits. **n. compound.** A compound that has neither acid nor basic reaction. **n. element.** A member of the zero group of the periodic system, the rare gases: He, Ne, A, Kr, Xe and Rd. **n. molecule.** A system of two ions (cation and anion) in a solvent. (See *solvate theory.*) **n. oil.** Light petroleum, d.32–32°Be., flash point, 290–320°F., which is sometimes mixed with animal or vegetable oils. **n. point.** The point at which a solution has a neutral reaction, due to the union of the H^+ ions from an acid and the OH^- ions from a base to give practically undissociated water. The hydrogen ion concentration therefore, corresponds with pH = 7.00, which is that of pure water. Cf. *isoelectric point.* **n. principle.** The non-acid and non-basic constituents of plants; as, glucosides, esters, oils. **n. reaction.** A reaction that is neither acid nor basic. **n. red.** Toluylene red, dimethyldiaminotoluphenazin hydrochloride, $Me_2NC_6H_3\langle^{N}_{N}\rangle C_6H_2MeNH_2.HCl$. A dark green powder, soluble in water (red color). Used as a dye, and medicinally to test the function of the stomach. It is an indicator, changing at pH 7.5 from blue (acid) to magneta (alkaline), and at pH 8 to orange-yellow. **n. salt.** A salt that does not react acidic or basic. It differs from the normal salt which may be either neutral, acid or basic. **n. salt effect.** The reduction of the ionisation of a weak acid or weak base by the addition of an ionisable salt containing one of the ions already present. Cf. *buffer solutions.* **n. solution.** A solution in which the number of hydrogen ions equals the number of hydroxyl ions. A solution with pH 7.07, or a concentration of $10^{-7}H^+$ and OH^-. **n. violet.** $C_{14}H_{18}N_4Cl$. A compound similar to n. red, having H in place of a methyl group.

neutrality. The state of being neither acid nor basic in reaction.

neutralization. (1) The process of making a solution neutral, that is, adding a base to an acid solution or an acid to an alkaline or basic solution. (2) The fundamental reaction of neutralization is

$$H^+ + OH^- \leftrightarrows HOH,$$
$$\text{Acid} + \text{Base} \leftrightarrows H_2O + \text{Salt}$$

while the reverse reaction is hydrolysis. The end-point of neutralization is determined either by indicators or by measuring the electrical conductivity (volumetric analysis and electrometric titration respectively). **heat of-** The amount of heat liberated during the neutralization of a strong acid and a strong base in equivalent quantities of dilute solutions equals about 13.7 large calories or 57 kilojoules. (3) Proton reaction. The transfer of a proton, H^+, from an acid to a base, producing a weaker acid, A′, and a weaker base, B′; such as,

$$A + B = A' + B'$$
$$HCl + H_2O \rightleftharpoons H_3O^+ + Cl^-$$
$$H_3O^+ + Ac^- \rightleftharpoons HAc + H_2O$$
$$H_3O^+ + OH^- \rightleftharpoons H_2O + H_2O$$
$$NH_4^+ + OH^- \rightleftharpoons NH_3 + H_2O$$

n. ratio. The ratio of the concentration of the anion of an acid to the total concentration of the undissociated acid.

neutralize. To make neutral.

neutralizer. Any agent produces a state of neutrality.

neutrino. Photon. (1) A nuclear particle (q.v.) of zero mass and zero charge, probably a positron and electron. Cf. *neutron.* (2) A hypothetical particle with no charge and small mass, 6×10^{-30} gm., emitted with an electron in radioactive and similar changes. It shares the momentum and part of the energy of the particle. Cf. *neutron.*

neutron. n or $_0n^1$. (1) A proton and electron in immediate contact; a "building stone" of the atomic nucleus. Each isotope contains in its atom (I—A) neutrons, where I is the isotopic weight and A the atomic number. (2) An electrically-neutral particle, with the mass of 1.006, which does not ionize air, produced from elements by bombardment with alpha-particles. Cf. *nuclear reactions, neutrino, neuton, particles.*

Neville acid. 1.4-α-Naphthol-sulfonic acid.

nevyanskite. A native alloy of iridium and osmium with other platinum metals.

new blue. (1) Meldola blue. (2) Prussian blue. **n. fuchsin.** $C_{22}H_{23}N_3.HCl$ = 367.8. Soluble fuchsin. A bluish-red dye obtained by oxidation of diamino-o-ditolyl-methane.

Newlands, John Alexander Reina. 1838–1898. An English chemist and pioneer in the development of the periodic system (q.v.) from his conception of "octaves."

Newton, Sir Isaac. 1642–1727. An English mathematician and philosopher, the originator of the Law of universal gravitation. **N.'s alloy.** An alloy of 20 parts bismuth, 30 parts tin, and 50 parts lead, m.202°F. **N.'s law.** The attractive force between two bodies is proportional to their masses. **N.'s rings.** Colored rings produced when plane and convex

Sir Isaac Newton.

glass surfaces are pressed together; they are the result of interference between the beams of light reaching the eye by reflection from the two surfaces on account of the difference in the lengths of the paths traversed.

N.F. Abbreviation for National Formulary, a supplement to the United States Pharmacopoeia. It contains the non-official remedies.

ngai camphor. Borneol.

Ni. Symbol for nickel.

niacin. Nicotinic acid (q.v.).

niacinamide. Nicotinamide (q.v.).

Niagara blue. Trypan blue.

niccolic. Nickelic.

niccolite. A pale-red native nickel arsenide, NiAs. Copper nickel, arsenical nickel.

niccolous. Nickelous.

niccolum. The Latin name for nickel.

Nichols, William Henry. 1852–1930. An American industrial chemist. **N. medal.** A prize founded in 1902 for an achievement in industrial chemistry.

Nicholson, William. 1753–1815. An English physicist and chemist, and a pioneer in electrolyzing water.

nicholsonite. A variety of aragonite, $CaCO_3$, containing various proportions of zinc.

nichrome. A high melting-point alloy of 60 % nickel, 25 % iron and 15 % chromium used in electric heating or resistance devices and acid-resisting apparatus. A trade name. **n. wire.** A wire of 80 % nickel and 20 % chromium alloy. Used in the laboratory as a platinum substitute (for bead and flame tests), for the construction of heating elements around glass tubings, and the construction of electrical resistances.

nickel. Ni = 58.69. An element of the iron group, atomic number 28. A silver-white metal, d.8.8–8.9, m.1452, b.3380, insoluble in water, dilute acids or alkalis. It occurs in niccolite and monel metal, in kupfernickel, nickel glance, and nickel blende. It was isolated in 1751 by Cronstedt. Nickel has valencies of 2 and 3.

2	3
Ni^{++}	Ni^{+++}
nickelous	nickelic
(niccolous)	(niccolic)

It is refined either by the Mond or the Oxford process, and is used for the galvanic coating of other metals (stainless steels), for acid-resisting alloys, for chemical apparatus, for coins and medals, for electric apparatus, surgical and dental instruments, as a catalyst in the hydrogenation of fats and oils (margarine manufacture), and in the manufacture of nickel salts. World output in 1940 was 130,000 tons, mostly produced in Canada. **Admiralty-** Adnic. **arsenical-** Niccolite. **emerald-** Zaratite. **Raney-** q.v. **super-** q.v.

n. acetate. Nickelous acetate. **n. alloys.** A series of non-corroding alloys, as argentan, china-silver, new-silver, nickelin, ferronickel. Some of these are harder than steel and are used for surgical instruments. The melting points of some common alloys are (in °C.):

with	90 %Ni 10 %	80 %Ni 20 %	70 %Ni 30 %	60 %Ni 40 %	50 %Ni 50 %
Cu	1440	1430*	1410‡	1380†	1335§
Sn	1380	1290	1200	1235	1290

* = nickeline, † = constantan, ‡ = corronel, monel, § = alpro, copel.

See also mumetal (74 %), permalloy (30–80 %), nichrome (60–80 %), monel (67 %), permivar (45 %) and German silver (30 % Ni). **n. ammonium nitrate.** $Ni(NO_3)_2(NH_3)_4(H_2O)_2$ = 286.9. Nickelo-amin-nitrate. $[Ni(NH_3)_4(H_2O)_2](NO_3)_2$. Green crystals, soluble in water, insoluble in alcohol, used in nickel plating. **n. ammonium chloride.** $Ni(NH_4)Cl_3.6H_2O$ = 291.2. Nickelous ammonium chloride. A double salt which occurs in green, rhombic crystals, d.1.645, soluble in water or alcohol; used in nickel plating. **n. ammonium sulfate.** $Ni(NH_4)_2(SO_4)_2.6H_2O$ = 395.0. Nickelous ammonium sulfate. A double salt, green crystals, d.1.929, soluble in water; used in nickel-plating and as a reagent. **n. arsenate.** Nickelous arsenate. **n. benzoate.** Nickelous benzoate. **n. black.** N. peroxide. **n. blende.** A native n. sulfide, NiS. **n. bloom.** Annabergite. **n. borate.** Nickelous borate. **n. bromide.** Nickelous bromide. **n. carbide.** Ni_3C = 188.07. A black solid. **n. carbonate.** Nickelous carbonate. **n. carbonyl.** $Ni(CO)_4$ = 170.7. N. carbonoxide. A colorless liquid, d.1.318, m. −25, b.43, insoluble in water or alcohol. Used medicinally for hypodermic injections; and in the Mond process for the isolation of nickel (q.v.) since it gives this metal if heated: $Ni(CO)_4 \leftrightarrows Ni + 4CO$. If pure it explodes at 60:—$Ni(CO)_4 = Ni + 2CO_2 + 2C$. **n. carbonoxide.** Nickel

carbonyl. **n. carbonyl.** A poisonous gas. **n. chloride.** Nickelous chloride. **n. chrome steel.** An alloy of 95 pts. Fe, 3 pts. Ni, 1.5 pts. Cr, and 0.5 pt. C; used for heat- and acid-resisting machinery. **n. chromium triangle.** A triangle made of nickel-chromium (nichrome) wire and used for heating small laboratory utensils (crucibles, dishes). **n. citrate.** Nickelous citrate. **n. cyanide.** Nickelous cyanide. **n. dimethyl glyoxime.** $Ni(C_4H_7N_2O_2)_2$ = 288.7. A bright red crystalline precipitate, used to determine so little as 0.01 mg. nickel; sublimes at 120. **n. fluosilicate.** $NiSiF_6$-$6H_2O$ = 308.84. Green trigonal crystals, d.2.109, soluble in water. **n. glance.** Ni_2AsS. A native arsenide and sulfide of nickel. **n. gymnite.** Genthite. A gymnite, in which part of the magnesium is replaced by nickel. **n. iodide.** Nickelous iodide. **n. minerals.** Nickel occurs in nature associated with cobalt and iron as a constituent of meteorites; with chromium in olivine; and as sulfide, arsenide, and silicates.

native nickel	Ni
awaruite	(Ni, Fe)
bunsenite	NiO
millerite	NiS
pentlandite	(Ni, Fe)S
beyrichite	Ni_2S_3
polydymite	Ni_4S_5
niccolite	NiAs
chloanthite	$NiAs_2$
rammelsbergite	$NiAs_2$
gersdorffite	NiAsS
morenosite	$NiSO_4.7H_2O$
zaratite	$NiCO_3.Ni(OH)_2$
garnierite	$2(Ni, Mg)_6Si_4O_{13}, 3H_2O$
smaltite	$(NiCoFe)As_2$
white nickel ore	$NiAs_2$
nickel ochre	$Ni_3(AsO_4)_2, 8H_2O$

n. monoxide. Nickelous oxide. **n. nitrate.** Nickelous nitrate. **n. ocher (ochre).** Annabergite. **n. oleate.** $Ni(C_{18}H_{33}O_2)_2$. A waxy nickel soap or a compound of nickel with oleic acid; used medicinally in ointments. **n. oxalate.** Nickelous oxalate. **n. oxides:** NiO, nickelous oxide; Ni_2O_3, nickelic oxide; Ni_3O_4, nickelous nickelic oxide; NiO_2, nickel peroxide; NiO_4, nickel superoxide. **n. phosphate.** Nickelous phosphate. **n. plating.** The deposition of pure nickel on copper, or steel coated with copper. The deposit is soluble in acetic acid. Saturated nickel ammonium sulfate is the usual medium. **n. pyrites.** Millerite. **n. salipyrine.** A salt of nickel and salicylic acid and antipyrine. A pale greenish powder, used medicinally as an antiseptic. **n. sesquioxide.** Nickelic oxide. **n. silver.** An alloy of 10–30 % Ni, 50–70 % Cu and 10–30 % Zn. Cf. *German silver*. **n. steel.** A very tough alloy of 96.5 pts. iron and 3.5 pts. nickel. **n. stibine.** Ullmannite. **n. sulfate.** Nickelous sulfate. **n. sulfide.** Nickelous sulfide. **n. superoxide.** NiO_4 = 122.69. A black oxide produced by electrolysis. **n. tetracarbonyl.** N. carbonyl. **n. vitriol.** Morenosite. **n. yellow.** See *nickelous phosphate*.

nickelic. Niccolic. Describing compounds of trivalent nickel. They are all strong oxidizing agents, and readily reduced to the more stable nickelous compounds. **n. hydroxide.** $Ni_2(OH)_6$ = 219.41. Niccolic hydroxide. A black powder, rapidly decomp. by heat. Used as an oxidizing agent, and in the manufacture of nickelic compounds. **n. nickelous sulfide.** Ni_2S_4. Native as polydymite. **n. oxide.** Ni_2O_3 = 165.4. Nickel sesquioxide, niccolic oxide, nickel tetroxide, black nickel oxide. A black powder, d.4.83, reduced to NiO at 600°C., insoluble in water, soluble in acids and ammonium hydroxide; used in storage batteries as an oxidizing agent. **n. sulfide.** Ni_2S_3. Native as beyrichite (q.v.).

nickeline. (1) An alloy of 80 pts. copper and 20 pts. nickel. (2) An alloy consisting of 56 pts. copper, 31 pts. nickel, and 13 pts. zinc; used in high resistance apparatus.

nickelous. Describing compounds containing divalent Ni^{++}. The anhydrous salts are yellow, the hydrous salts green. **n. acetate.** $Ni(C_2H_3O_2)_2.4H_2O$ = 248.8. Green crystals, d.1.798, soluble in water. **n. arsenate.** $Ni_3(AsO_4)_2$-$8H_2O$ = 598.2. A yellowish-green powder, insoluble in water, soluble in acids. **n. benzoate.** $Ni(C_7H_5O_2)_2.H_2O$ = 318.7. A light green powder, soluble in ammonium salt solutions. **n. borate.** $Ni(BO_2)_2.2H_2O$ = 180.7. A bright green powder, insoluble in water. **n. bromide.** $NiBr_2$ = 218.52. Anhydrous nickel bromide. Yellow scales, d.4.64, decomp. by heat, soluble in water, alcohol, or ether. *hydrous-* $NiBr_2.3H_2O$ = 272.57. Nickel bromide trihydrate. Green, deliquescent needles, soluble in water, alcohol, or ether; used in medicine as an antiseptic and nerve tonic. *ammonia-* $NiBr_2.6NH_3$ = 320.73. Nickel ammonia bromide, nickelo-ammonia bromide. Purple crystals, d.1.837, soluble in water. **n. carbonate.** $NiCO_3$ = 118.7. A light green, rhombic, crystalline powder, insoluble in water, soluble in acids; used in electroplating. *basic-* $2NiCO_3.3Ni(OH)_2.4H_2O$ = 587.5. A light green, amorphous powder, insoluble in water, but soluble in acids or ammonia; used in nickel plating. **n. chloride.** $NiCl_2$ = 129.6. Anhydrous nickel chloride. Yellow scales, d.2.56, soluble in water or ammonium hydroxide. It sublimes, and is used as a reagent for detecting sulfocarbonates, as an absorbent in gas masks, for nickel plating, and for preparing sympathetic ink. *hydrous-* $NiCl_2.6H_2O$ = 237.7. Nickelo-aqua-chloride. Hexagonal green crystals, soluble in water or alcohol; similarly to the anhydrous salt. *ammonia-* $NiCl_2.6NH_3$ = 231.8. Nickelo-ammonia-chloride (different from nickelous ammonium chloride). Purple crystals, soluble in water. **n. citrate.** $Ni_3(C_6H_5O_7)_2.8H_2O$ = 698.2. Nickel citrate. A green, hygroscopic, crystalline powder, soluble in water; used in nickel plating. **n. cyanide.** $Ni(CN_2).4H_2O$ = 182.8. Nickel cyanide. An apple-green powder, insoluble in water, soluble in cyanide solutions; used in electroplating and metallurgy. **n. formate.** $(HCOO)_2Ni.2H_2O$ = 184.74. Green crystals, d.2.154, soluble in water. **n. hydroxide.** $Ni(OH)_2$ = 92.7. A white amorphous powder d.4.36, insoluble in water, soluble in ammonia. *hydrous-* $4Ni(OH)_2H_2O$ = 388.8. A light green powder, d.4.36, insoluble in water, soluble in ammonia solutions or acids; used in the manufacture of nickelous salts. **n. iodide.** NiI_2 = 312.5. Nickel iodide. Black scales, d.2.05, m.57, b.137, soluble in water or alcohol. **n. nickelic oxide.** Ni_3O_4 = 240.0. Nickel tetroxide. A gray powder, insoluble in water, soluble in acids. **n. nitrate.** $Ni(NO_3)_2$

= 182.7. Anhydrous nickel nitrate. A yellow powder, soluble in water (green color). *hydrous-* $Ni(NO_3)_2.6H_2O$ = 290.8. Nickelo-aqua-nitrate. A monoclinic, crystalline, deliquescent mass, d.2.05, m.57, b.136.7, soluble in water, alcohol, or ether; used as a reagent and in nickel plating. *ammonia-* $Ni(NO_3)_2.6NH_3$ = 284.7. Nickelo-ammonia-nitrate. Dark blue crystals, soluble in water; used combined with tannic acid, in staining hair and fur. **n. oxalate.** NiC_2O_4 = 146.7. Nickel oxalate. A pale green powder, insoluble in water, soluble in acids. **n. oxide.** NiO = 74.7. Nickel monoxide, nickel protoxide, green nickel oxide. A green powder, d.6.96, insoluble in water, soluble in acids or ammonium hydroxide; used in the manufacture of nickel salts, and in green pigments for ceramics. **n. phosphate.** $Ni_3(PO_4)_2.7H_2O$ = 492.2. Normal nickel (ortho) phosphate. A green powder, insoluble in water, soluble in acids. Used in the nickel plating of iron, copper, and brass, and in the manufacture of a yellow pigment (nickel yellow). **n. sulfate.** $NiSO_4$ = 154.8. Anhydrous nickel sulfate. Regular yellow crystals, d.3.418, decomp. 830, soluble in water or alcohol. *hydrous-* (1) $NiSO_4.7H_2O$ = 280.86. Nickelous sulfate heptahydrate, nickelo-aqua-sulfate. Green rhombic crystals, d.1.98, dehydrated at 100°C, soluble in water, or alcohol. Used in nickel plating, for blackening brass and zinc, as a mordant in the textile industry, and in medicine as a tonic and sedative; also as a reagent for glucose and albumose. (2) $NiSO_4,6H_2O$ = 262.84. Blue or green crystals, soluble in ammonia. **n. sulfide.** NiS = 90.8. Nickel sulfide. A black, hexagonal, crystalline powder, d.4.60, m.797, slightly soluble in water, soluble in acids; used in ceramics. **n. tartrate.** $NiC_4H_4O_6.5H_2O$ = 296.9. Light green powder, insoluble in water. **n. thallous sulfate.** $NiSO_4.Tl_2SO_4.6H_2O$ = 767.6. Nickel thallium sulfate. A double salt, forming green crystals soluble in water.

Nicol, William. 1768–1851. An English physicist noted for his inventions of optical devices. **N.'s prism.** See *nicols.*

nicoline. C_3H_4O = 56.0. A constituent of *Lonchocarpus rufescens,* a Leguminosae of Guiana. The plant is used by the natives to stupify fishes.

nicols. Nicol's prism. A set of two prisms of Iceland spar cemented together, used as polarizer and analyzer in polariscopes. Cf. *polaroids, polarizing disks.*

nicopyrite. A variety of pyrite containing nickel.

nicoteine. $C_{10}H_{12}N_2$ = 160.11. An alkaloidal mixture from Kentucky tobacco, consisting of nornicotine and anabasine.

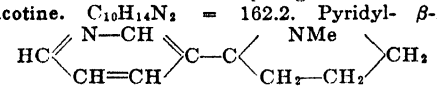
nicotelline. An alkaloid from tobacco.

nicotiana. Tobacco.

nicotianine. A volatile, fragrant principle from tobacco.

nicotinamide. $C_6H_6N_2O$ = 122.12. Niacinamide. Nicotinic acid amide, $C_5H_4N.CONH_2$. A white, crystalline powder, soluble in water. Used in the treatment of pellagra.

nicotine. $C_{10}H_{14}N_2$ = 162.2. Pyridyl- *β*-N-



methylpyrrolidine. A di-acid alkaloid from the leaves of *Nicotiana tabacum.* Colorless or yellowish liquid, d.1.01, b.247, soluble in water, alcohol or ether. Used as an antiparasitic and insecticide in horticulture and agriculture; in sheep dips; and medicinally, as an antitetanic agent. **dihydroxy-** Pilocarpidine. **neo-** Anabasine. **nor-** Nornicotine.

n. group. A group of alkaloids derived from pyridine and pyrrolidine:

1. Nicotine and pilocarpine and derivatives. 2. Sparteine, oxalethyline, and lobeline. 3. Coniine. 4. Pyridine bases. **n. hydrochloride.** $C_{10}H_{14}N_2.2HCl$ = 235.1. Colorless hygroscopic crystals, soluble in water. **n. salicylate.** $C_{10}H_{14}N_2.C_7H_6O_3$ = 300.3. Colorless plates, m.117, soluble in water, or alcohol; used medicinally in ointments for skin diseases. **n. tartrate.** $C_{10}H_{14}N_2.(C_4H_4O_6)_2.2H_2O$ = 494.4. Colorless or reddish crystals, soluble in water or alcohol; used medicinally as an anti-tetanic agent and in strychnine poisoning.

nicotinic acid. Niacin. C_5H_4NCOOH = 123.1. Pyridine-*β*-carboxylic acid, 2-pyridine-carboxylic acid*. Colorless needles, m.228, slightly soluble in water, soluble in alcohol or ether. Cf. *vitamin* B_5. **iso-** 3-pyridine-carboxylic acid. Colorless crystals, m.304, slightly soluble in water. **tetrahydro-*1*-methyl-** Arecaidine.

nicouic acid. $C_{12}H_{12}O_8$ = 284.09. *2.4*-$(COOH)_2$-*3*-$(OH).C_6H_2OCMe_2COOH$. A tribasic acid obtained from rotenone and deguelin.

nicoulin. A resin from nekoe or stink wood, *Gustavia ocotea;* used by the Malayans as an arrow poison.

nicouline. Rotenone.

niello silver. Russian tula, blue silver. A bluish alloy of silver, copper, lead, and bismuth.

Nierenstein, Max. 1877– . An English chemist, noted for organic synthesis. **N. reaction.** The synthesis of ketones by means of diazomethane: $R.COCl + CH_2N_2 \rightarrow R.COCH_2Cl + N_2$. Cf. *Schlotterbeck reaction.*

Nieuwland, Father Julius Arthur. 1878–1936. A Jesuit American chemist, noted for the synthesis of acetaldehyde, vinylacetylene and synthetic rubber from acetylene.

nigella. Black caraway, black cumin, small fennel. The dried seeds of *Nigella sativa;* used as a condiment, in snuff, and medicinally.

nigelline. An alkaloid in the seeds of *Nigella sativa,* a Ranunculaceae.

night-blooming cereus. Cactus grandiflorus.

nightshade. The name of several plants of the Solanaceae. **deadly-** Belladonna. **garden-** *Solanum nigrum.* **woody-** Bittersweet.

nigraniline. Nigrosine.

nigre. A dark colored layer, formed in the soap pan, between the neat soap and the lye, as an isotropic solution containing a higher concentration of soap than the lye, a fairly high concentration of salts and colored impurities.

nigrite. A variety of asphalt.

nigrium. Alleged new element discovered by Church in 1869, probably impure hafnium.

nigrometer. An instrument to evalue the color of carbon blacks.

nigrosine. $C_{36}H_{27}N_3$ = 525.3. Aniline black. Pure nigrosine obtained by oxidation of aniline; used as a microscopic stain.

nigrosines. A group of black or deep blue aniline dyes obtained by oxidation of aniline and its homologues. Used in the manufacture of inks and shoe polishes, and in dyeing leather, textiles, wood, and furs.

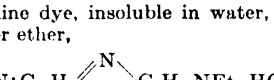
nigrotic acid. *3.6*-Dihydroxy-*2.7*-sulfonaphthoic acid.

nihil album. Zinc oxide.

nikethamide. Coramine. Nicotinic acid diethylamide.

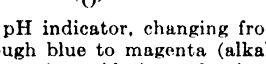
Nikiforoff stain. (1) A borax-carmine solution acidified with acetic acid and used to stain nuclei. (2) An alkaline concentrated methylene blue solution, used as counter-stain.

nile-blue. $C_{20}H_{19}ON_3$ = 317.2. A bright, green-blue aniline dye, insoluble in water, soluble in alcohol or ether,



Used as a pH indicator, changing from yellow (acid) through blue to magenta (alkaline). **n. blue sulfate.** An oxidation-reduction and pH indicator, used also as vital stain.

ninhydrin. $C_9H_6O_4$ = 178.09. A trade name. Triketohydrindene hydrate, ninidrine,



Colorless crystals, used as a reagent in the Abderhalden test for proteins and amino acids (blue color) in diagnosing pregnancy.

ninidrine. Ninhydrin.

niobate. Columbate, CbO_3^{--}.

niobe oil. Methyl benzoate.

niobic. A salt of pentavalent columbium (Nb^{+++++} or Cb^{+++++}). See *columbic.* **n. acid.** $HNbO_3$. Columbic acid. $HCbO_3$. **n. anhydride.** Nb_2O_5. Columbic anhydride, Cb_2O_5.

niobite. $(Fe,Mn)O.(Nb,Ta)_2O_3$. A native iron, manganese niobate and tantalate, which occurs in black crystals.

niobium. Nb. A metallic element, discovered in 1844 by H. Rose and named after Niobe, the daughter of Tantalus, as it resembles tantalum. It is commonly named columbium, Cb, (q.v.).

niobous. Columbous.

nioboxy. Columboxy.

nioform. Vioform.

nipagin. $C_8H_8O_3$ = 152.06. Solbrol. Methyl-*p*-hydroxybenzoate, $HO.C_6H_4COOMe$. An isomer of methylsalicylate, used as a preservative.

nipasol. $C_{10}H_{12}O_3$ = 180.18. Propyl-*p*-hydroxybenzoate. White powder, used as preservative.

nipecotic acid. $C_5H_{10}N.COOH$ = 129.09. 3-piperidinecarboxylic acid. An isomer of hygric and nicotinic acids, q.v.

nipponium. The element No. 43 reported by Ogawa. It has not been verified. See also *masurium.*

ni-resist. A heat-resistant, non-magnetic weldable alloy of iron with 12–15 % Ni, 5–7 % Cu and 1.5–4 % Cr, used in glass-annealing furnaces and in manifold valves of automobile engines.

nirvanine. $C_{14}H_{20}O_4N_2$ = 280.2. Diethylglycine-methyl-*2*-hydroxy-*5*-amino benzoate.

$$Et_2N.CH_2CONH.C_6H_3(OH)COOMe.$$

A cocaine alkaloid. Colorless prisms, m.185, soluble in water; used medicinally as a local anesthetic.

nirvanol. $C_{11}H_{12}O_2N_2$ = 204.11. *5.5*-phenylethyl hydantoin. A white powder, used as a hypnotic. Cf. *luminal.*

nisinic acid. $C_{24}H_{36}O_2$ = 356.29. A highly-unsaturated acid from fish liver oils.

niter, nitre. Potassium nitrate. **Chile- or cubic-** Sodium nitrate. **Norwegian-** Calcium nitrate. **rough-** Magnesium chloride. **spirit of-** Spirit of *ethyl nitrite.*

n. air. See *oxygen.* **n. cake.** Crude sodium sulfate containing some bisulfate and nitrate, obtained as a by-product in the manufacture of nitric acid by the retort process.

niton. Nt. (1) The element of atomic number 86, which consists of the isotopes radon, actinon, and thoron. It was discovered in 1898 by Mme. Curie. (2) Radon.

nitracetanilide. $C_8H_8O_2N_2$ = 180.12. Nitroacetanilide. Colorless crystals, *o-* m.92, *m-* m.151, *p-* m.210.

nitragin. A nitrifying bacterial ferment obtained from the root tubercles of leguminous plants.

nitralloy. Chromium-aluminum steels containing 0.2–0.6 % carbon. They are surface-hardened by nitridation.

nitramide. NH_2NO_2 = 62.1. Colorless crystals, m.75. **phenyl-** $C_6H_5NH.NO_2$ = 138.1. Colorless crystals, m.46, b.98, soluble in water.

nitramides. A group of compounds derived from nitramide and differing from nitramines by the presence of a —COO— radical:

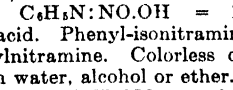
$NO_2.NH_2$ = nitramide
$NO_2.NH.COOH$ = nitrocarbamic acid
$NO_2.NH.COOEt$ = nitrourethane
$NO_2NH.CH_2.COOH$ = nitramineacetic acid.

nitramine. (1) An organic compound containing the monovalent $-NH.NO_2$ or the bivalent $=N.NO_2$ radical. (2) Picrylmethylnitramine used as a pH indicator, changing at pH 10.5 from colorless (weakly) alkaline to brown (strongly alkaline). **diethyl-** $Et_2N.NO_2$ = 118.1. A colorless liquid, b.206. **dimethyl-** $Me_2N.NO_2$ = 90.1. Colorless crystals, m.58, b.187, soluble in water. **ethyl-** $EtNH.NO_2$ = 90.1. A colorless liquid, m.3. **iso-** An organic compound containing the monovalent

radical. **phenyl-** $NHPh.NO_2$ = 138.1. Colorless crystals, m.46, b.98, soluble in water. **phenylmethyl-** $MeNPh.NO_2$ = 152.2. Colorless crystals, m.39, soluble in water. **propyl-** $PrNH.NO_2$. A colorless liquid, b.140.

nitramino. The monovalent radical, $NO_2NH—$. **n. acetic acid.** $C_2H_4O_4N_2$ = 120.2. A homolog of nitrourethane: $NO_2.NH.CH_2.COOH$. Colorless crystals, m.103, soluble in water, or alcohol, with a strong acid reaction.

nitranilic acid. $C_6H_2O_8N_2$ = 230.07. Dinitrodihydroxy benzoquinone



A solid, m.100, decomp. 170, soluble in water or alcohol, but insoluble in ether.

nitranilide. $C_6H_5N:NO.OH$ = 138.1. Diazobenzene acid. Phenyl-isonitramine. An isomer of phenylnitramine. Colorless crystals, m.46, soluble in water, alcohol or ether.

nitraniline. $NH_2.C_6H_4.NO_2$ = 138.1. **ortho-** 1.2-nitraniline, 1-amino-2-nitrobenzene. Colorless needles, d.1.443, m.71, slightly soluble in water, soluble in alcohol or ether. **meta-** 1.3-nitraniline. Yellowish needles, d.1.430, m.114, b.285, slightly soluble in water, soluble in alcohol or ether. **para-** 1.4-nitraniline. Yellow needles, $d._{14}$1.437, m.146, slightly soluble in water, soluble in alcohol or ether. Used in organic synthesis and as indicators for strong acids. **di-** See *dinitroaniline.*

nitranilines. A group of compounds derived from benzene by the substitution of two or more hydrogen atoms by one or more NH_2— and NO_2— radicals:

Mononitranilines: 1.2- = ortho-, 1.3- = meta-, and 1.4- = para-.

Dinitranilines: 1.2.3- and 1.2.4-.

Trinitranilines: 1.2.4.6- = Picramide.

Tetranitraniline: 1.2.4.5.6- = Tetryl.

The higher nitrated anilines are extremely powerful explosives.

nitrate. (1) A salt of nitric acid, or any compound containing the monovalent —NO_3 radical. (2) Nitration. **n. ion.** The NO_3^- ion, colorless, and forming no insoluble precipitates with metallic ions. **n. of lime.** Calcium nitrate. **n. of potash.** Potassium nitrate. **n. of soda.** Sodium nitrate. **n. of soda-potash.** A crude Chilean saltpeter containing 75 % $NaNO_3$ and 25 % KNO_3, used as fertilizer.

nitrated. Describing an organic compound containing the —NO_2 group.

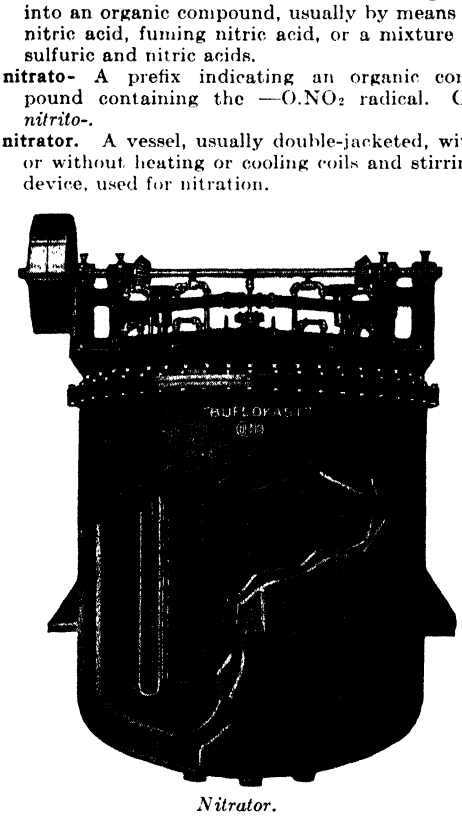
nitratine. A mineral form of sodium nitrate.

nitrating. Performing a nitration, q.v.

nitration. The introduction of the NO_2 group into an organic compound, usually by means of nitric acid, fuming nitric acid, or a mixture of sulfuric and nitric acids.

nitrato- A prefix indicating an organic compound containing the —$O.NO_2$ radical. Cf. *nitrito-*.

nitrator. A vessel, usually double-jacketed, with or without heating or cooling coils and stirring device, used for nitration.



Nitrator.

nitrazine yellow. A dye used as a pH-indicator. At pH 6.5 it changes from yellow (acid) to blue-green (alkaline). **n. paper.** A filter-paper impregnated with sodium dinitrophenyl-azo-naphthol disulfonate; used to determine pH-values of solutions as follows: yellow, pH 4.5; olive green, pH 6.2; blue, pH 7.0.

nitre. Niter. **n. air.** See *oxygen*.

nitrenes. A group of compounds of the type, $R_2C{:}NR{:}CR_2$.

nitric acid. HNO_3 = 63.02. A colorless liquid, $d._0$1.53, m. −40.3, b.86, soluble in water in all proportions; used extensively in its aqueous solutions:

(a) Fuming, d.1.48, containing 86 % HNO_3.

(b) Concentrated, d.1.40–1.42, containing 65 % HNO_3.

(c) d.1.20, containing 32–34 % HNO_3.

(d) Dilute, d.1.06, containing 10 % HNO_3.

concentrated- 65 % HNO_3. Aqua fortis, azotic acid. A clear, colorless or faintly yellow liquid, d.1.40. Used as a solvent for metals, as an oxidizing agent, in nitrating organic compounds, as a reagent, in etching, and in innumerable chemical operations. **chloro-** See *chloro-*. **diluted-** 10 % HNO_3. A clear, colorless liquid, used as a reagent, as a solvent, as an acidifying agent, and in numerous chemical operations. **fuming-** 86 % HNO_3 with some N_2O_4. Yellow or brownish-red fuming liquid, d.1.48–1.5. Used as an energetic oxidizing agent in chemical analysis and synthesis. **per-** HNO_4. An acid of doubtful existence. **n. anhydride.** Nitrogen pentoxide. **n. hydrate.** $HNO_3 + 32\ \% H_2O$. $d._{15.5}$1.414, b.120.5.

nitric ether. Ethyl nitrate.

nitric oxide. NO = 30.0; N_2O_2 = 60.0. Nitrogen dioxide. A colorless gas, $d._{(air=1)}$1.0366, m. −160, b. −153. Slightly soluble in water. Formed in the electric arc from air, and oxidizes readily to nitrogen peroxide.

nitridation. (1) The formation of metallic nitrides by heating metals in an atmosphere of nitrogen. The hardness of the metal is increased. Cf. *nitration*. (2) A type of de-electronation in the ammonia system, analogous to oxidation in the water system. Cf. *nitridizing agent*.

nitride. A binary compound of nitrogen and a metal. The alkali and earth-alkali nitrides are readily hydrolyzed by water to ammonia: $Mg_3N_2 + 6H_2O = 3Mg(OH)_2 + 2NH_3$.

nitridizing agent. A substance which furnishes nitrogen or causes an exchange of electrons in liquid ammonia; as, hydrazoic acid (ammono-nitric acid) HN_3, iodoamine (ammono-hypoiodous acid) H_2NI, mercuric nitride Hg_3N_2, which are analogous to HNO_3, HOI and HgO as oxidizing agents.

nitrifiable. Any nitrogen compound that can be transformed into nitrates by soil bacteria.

nitrification. The oxidation of the nitrogen in ammonia to nitrous and nitric acid or salts.

nitrifiers. The soil bacteria which oxidize ammonia and its derivatives to nitrites, as nitromonas and nitrococcus; or to nitrates, as nitrobacter.

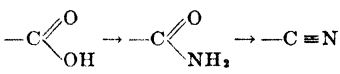
nitrifying. To cause the oxidation of ammonia or atmospheric nitrogen to nitrites and nitrates, *e.g.*, by n. bacteria and n. catalysts.

nitrilase. A catalase which converts aldehydes to hydroxynitriles or cyanohydrins, R.CHOH.-CN.

nitrile. A cyanide prepared from an acid amide, $R.CONH_2 - H_2O$ = R.CN; hence acetonitrile or methylcyanide, propionitrile or ethylcyanide, which on hydrolysis yield the corresponding acid with evolution of ammonia. **n. group.** The negative, trivalent ≡N which remains from ammonia after substitution of its three hydrogen atoms.

nitriles. Cyanides. An organic compound containing the monovalent —CN radical. **acid-**

Nitrile. This name indicates their relationship with the —COOH group:



On hydrolysis they yield acid amides and acids. **basic-** A tertiary amine: NR_3. It differs from the nitriles by having three different carbon atoms attached to the same nitrogen. **di-** Dicyanide. A compound containing two —CN radicals. **mono-** A compound containing one —CN radical.

nitrilo- A prefix indicating the presence of a triple bond nitrogen atom, ≡N

nitrine. N_3 = 42.02. A hypothetical allotropic form of nitrogen analogous to ozone, O_3. See *active nitrogen.*

nitrite. A salt of nitrous acid, or a compound containing the monovalent —NO_2 radical. The inorganic nitrites of the type, MNO_2, are all insoluble, except the alkali-nitrites. The organic nitrites or nitrito-compounds may be isomeric, but not identical with the corresponding nitro-compounds.

nitrito- Describing an organic compound containing the monovalent —O.N:O (or oxynitroso) radical.

nitro- (1) A prefix which denotes the presence of the monovalent —NO_2 or  radical.

Nitro-compounds are usually yellowish in color, and differ from the less stable, isomeric nitrito-compounds. Cf. *nitroxyl, nitrite, nitrito.* (2) A misnomer for nitrate; as, nitroglycerin (glyceryl nitrate). **aci-** Isonitro- **iso-** See *isonitro-*

nitroacid. A compound containing both the —COOH and —NO_2 radicals, as
$NO_2.CH_2.COOH$ = nitroacetic acid;
$NO_2.CH_2.CH_2.COOH$ = nitropropionic acid.

nitroalizarin. $C_{14}H_5O_2(OH)_2NO_2$ = 285.1. **alpha-** or 4:1:2. Yellow crystals, decomp. 290. **beta-** 3:1:2. Alizarin orange. Orange-yellow crystals, decomp. 244, slightly soluble in water, soluble in alcohol; used as dye, and as an intermediate in organic synthesis.

nitroamine. Nitramine.

nitroanisole. $C_6H_4(OMe)NO_2$ = 153.1. **ortho-** 1-methoxy-2-nitrobenzene. A yellow liquid, d.1.268, m.9, b.265. **meta-** m.38, b.258. **para-** Colorless or yellowish plates, d.1.233, m.54, b.258. Both are insoluble in water, soluble in alcohol or ether.

nitroanthracene. $C_{14}H_9NO_2$ = 223.2. Nitroso-anthrone. Yellow needles, m. 146, insoluble in water, soluble in benzene or chloroform.

nitroanthraquinone. $C_6H_4(CO)_2C_6H_3NO_2$ = 253.1. **alpha-** or 1- Yellow needles, m.228, subliming when heated, insoluble in water, soluble in alcohol or ether. **beta-** or 2- Yellow needles, m.184, subliming when heated, insoluble in water, soluble in alcohol or ether. **n. sulfonic acid.** A reagent for sugars.

nitrobacter. A soil bacterium or other micro-organism that oxidizes ammonia and its derivatives, or atmospheric nitrogen, to nitrites or nitrates.

nitrobacteria. Soil bacteria, as nitrobacter, nitrosococcus or nitrosomonas.

nitrobarite. A native barium nitrate, $Ba(NO_3)_2$.

nitrobenzaldehyde. $C_6H_4(NO_2)CHO$ = 151.1. **ortho-** Yellow needles, m.44, $b._{23mm}$153, slightly soluble in water, soluble in alcohol or ether. **meta-** Colorless needles, m.58, $b._{23mm}$164, soluble in alcohol or ether. **para-** Colorless prisms, m.106, slightly soluble in water, soluble in alcohol or ether; used in organic synthesis. The ortho-compound is used in the synthesis of indigo.

nitrobenzamide. $NO_2.C_6H_4.CONH_2$ = 166.1. **ortho-** Colorless needles, m.174, b.317, soluble in water, alcohol, or ether. **meta-** Yellow needles, m.140, b.310, soluble in alcohol or ether. **para-** Colorless needles, m.198, slightly soluble in water, soluble in alcohol or ether; used in organic synthesis.

nitrobenzanilide. $NO_2.C_6H_4.CONHPh$ = 242.2. **meta-** 3-nitro-1-benzamido benzene. Colorless leaflets, m.143, insoluble in water, soluble in alcohol or ether.

nitrobenzene. $C_6H_5NO_2$ = 123.08. Nitrobenzol, oil of mirbane, phenylnitrite, essence of mirbane, artificial oil of bitter almonds. $Ph\text{-}NO_2$. A yellow liquid, $d._{20°}$1.198, m.5, b.210, slightly soluble in water, soluble in alcohol or ether. Used as a reagent for sulfur, calcium oxide, and glucose; in perfumery, as a substitute of almond oil; technically, in large quantities, as a raw material for aniline and aniline derivatives, benzidine, quinoline, and other organic compounds. **amino-** Nitraniline. **chloro-** $C_6H_4ClNO_2$ = 157.50. Colorless crystals. **o-** d.1.365, m.32.5, b.245.7. **m-** d.1.534, m.44, b.235. **p-** d.1.520, m.83.5, b.242. **di-methyl-** Nitroxylene. **methyl-** Nitrotoluene. **tetra-** q.v. **tri-** q.v.

n. azoresorcinol. Magneson. A reagent for magnesium (blue color). **n. reduction.** The chemical reactions involved in the reduction of nitro-benzene to amino-benzene (aniline) in alkaline solutions. The following compounds are produced:

$PhNO_2 + NO_2Ph$ = 2 mol. nitrobenzene.
$Ph.N\langle\rangle N.Ph$ = 1 mol. azoxybenzene.
$Ph.N{=}N.Ph$ = 1 mol. azobenzene.
$Ph.NH{-}NH.Ph$ = 1 mol. hydrazobenzene.
↓ $PhNH_2 + NH_2Ph$ = 2 mol. aniline.

n. sulfonylchloride. A reagent for amines.

nitrobenzoic acid. $NO_2.C_6H_4.COOH$ = 167.1. **ortho-** Yellow crystals, d.1.57, m.148 soluble in water, alcohol or ether; used in organic synthesis and as a reagent. **meta-** Yellowish white leaflets, d.1.49, m.141.4, soluble in water, alcohol, or ether. **para-** Nitrodracylic acid. Yellowish crystals, d.155, m.242.4, slightly soluble in water, soluble in alcohol or ether; used in organic synthesis.

nitrobenzol. Nitrobenzene.

nitrobenzonitrile. $NO_2.C_6H_4.CN$ = 148.1. **ortho-** 2-nitro-1-cyano-benzene. Colorless, silky needles, m.109, soluble in hot water, alcohol, or ether. **meta-** Colorless needles, m.115, slightly soluble in water, soluble in alcohol, or ether. **para-** Colorless leaflets, m.149, insoluble in water, slightly soluble in alcohol, soluble in chloroform or ether; used in organic synthesis.

nitrobenzophenone. $NO_2.C_6H_4.CO.C_6H_5$ = 227.1. **ortho-** Colorless needles, m.105, soluble in alcohol. **meta-** Colorless leaflets, m.95, soluble in alcohol. **para-** Colorless needles, m.1?8, soluble in alcohol.

nitrobenzoquinone. $C_6H_3O_2NO_2$ = 153.1. Yellow crystals, decomp. 206, slightly soluble in water.

nitrobenzoyl. The monovalent radical, $NO_2.C_6H_4.CO$—, derived from nitrobenzoic acid. **n. chloride.** $C_7H_4O_3NCl$ = 185.5. **ortho-** A solid, m.75, $b._{165mm}$205. **meta-** m.34, b.278. **para-** m.72. **n. formate.** $C_6H_4NO_2.CO.COOH$ = 195.09. **ortho-** A solid, soluble in warm water, m. about 123.

nitrobenzyl. The monovalent radical, $NO_2.C_6H_4.CH_2$—, derived from nitrotoluene by replacing a hydrogen of the methyl group. Three isomeric radicals: ortho-, meta-, and para-nitrobenzyl. **n. alcohol.** $NO_2C_6H_4CH_2OH$ = 153.1. **ortho-** Colorless needles, m.74, slightly soluble in water, soluble in alcohol or ether. **meta-** Rhombic crystals, m.27, **para-** Colorless needles, m.93, b.180, soluble in alcohol or ether. **n. bromide.** $C_6H_4NO_3CH_2Br$ = 215.95. A reagent for hydroxy compounds. **n. chloride.** $C_6H_4NO_2.CH_2Cl$ = 171.55. **ortho-** A solid, m.48. **meta-** A solid, m.46. **para-** A solid, m.71. **n. cyanide** $NO_2C_6H_4CH_2CN$ = 162.1. **ortho-** Colorless needles, m.83, soluble in hot water. **meta-** Colorless prisms, m.115, insoluble in water, soluble in alcohol or ether. **para-** Colorless crystals, m.110, soluble in alcohol.

nitrobromoform. NO_2CBr_3 = 297.78. Bromopicrin. A colorless liquid, d.2.81, m.10, $b._{48mm}$.-128, insoluble in water, soluble in alcohol or ether.

nitrocarbamate. Any salt or ester of nitrocarbamic acid or a compound containing the $NO_2.NH.COO$— radical. **ethyl-** Urethane. **potassium-** $NO_2NHCOOK$.

nitrocarbamic acid. $CH_2N_2O_2$ = 74.0. $NO_2.NH.COOH$.

nitrocarbol. Nitromethane.

nitrocellulose. $C_6H_7O_5(NO_2)_3$ = 297.2. Any ester of nitric acid and cellulose; thus, pyroxylin (11.2–12.4 % N) and guncotton (12.4–13 % N). Cf. *rayon, viscose.* A granular, amorphous, yellow mass used in the manufacture of celluloid and collodion; mixed with picrates and other explosives, as an explosive; also extensively used as constituent of lacquers, q.v. The name is also applied to other nitrates of cellulose (cf. *cellulose nitrate*).

nitro-chalk. A fertilizer containing 10 % of available nitrogen. It consists of ammonium nitrate and calcium carbonate (cf. *calnitro*).

nitrochlorobenzene. $NO_2C_6H_4Cl$ = 157.6. **ortho-** Colorless crystals, soluble in alcohol or ether; used in organic synthesis.

nitrochlorobenzol. Nitrochlorobenzene.

nitrochloroform. Chloropicrin.

nitrocinnamic acid. $NO_2C_6H_4CH:CHCOOH$ = 193.1. **ortho-** Colorless scales, m.240, insoluble in water, soluble in alcohol or ether. **meta-** Yellow needles, m.196, slightly soluble in water. **para-** Colorless prisms, m.285, insoluble in water, soluble in alcohol or ether; used in organic synthesis.

nitrococcus. Nitrosococcus.

nitrocolors. A series of colored compounds and dyes containing the nitro-group, as picric acid, naphthol yellow, naphthol green.

nitrocompound. An organic compound containing the monovalent —NO_2 group.

nitrocotton. Guncotton.

nitrocresol. $CH_3.C_6H_3.NO_2.OH$ = 153.10. A yellow solid, m.54, soluble in ether or alcohol, insoluble in water.

nitrocumene. $C_9H_{11}O_2N$ = 165.14. $C_6H_4.NO_2.CHMe$. A colorless liquid, m.−35, b.224 (decomp.).

nitrocymene. Nitroisopropylmethyl benzene.

nitrodiethylaniline. $NO_2C_6H_4NEt_2$ = 194.2. **ortho-** A soluble oily liquid, b.290. **para-** Colorless needles, m.77, soluble in hot alcohol or ether.

nitrodimethylamine. NO_2NMe_2 = 114.1. Colorless crystals, m.57, b.187, soluble in water, alcohol, or ether.

nitrodimethylaniline. $NO_2C_6H_4NMe_2$ = 166.14. **ortho-** A liquid, $b._{32mm}$151. **meta-** Red prisms, d.1.31, m.60, decomp. 280, insoluble in water, soluble in alcohol or ether. **para-** Yellowish needles, m.164, insoluble in water, soluble in alcohol or ether.

nitrodiphenyl. $NO_2C_6H_4Ph$ = 199.14. **ortho-** Colorless leaflets, m.37, b.320, insoluble in water, soluble in alcohol or ether. **meta-** Yellow solid, m.61. **para-** Colorless needles, m.114, b.340, insoluble in water, slightly soluble in alcohol or ether.

nitrodracylic acid. p-Nitrobenzoic acid.

nitrodye. A dyestuff containing one or more nitro-groups (**n**itrocolor).

nitroerythrite. Nitroerythrol.

nitroerythrol. $C_4H_6(NO_3)_4$ = 302.11. Butine tetranitrate, erythrol tetranitrate, tetranitroerythritol. Large glistening plates, m.61, exploding on percussion or heating, soluble in ether, slightly soluble in water; used in explosives.

nitroethane. $C_2H_5NO_2$ = 75.047. A colorless liquid, d.1.056, m.−50, b.114, slightly miscible with water, soluble in alcohol or ether; cf. *ethyl nitrite.*

nitroform. $CH(NO_2)_3$ = 151.1. Trinitromethane. Colorless crystals, m.15, which explode when heated, soluble in water.

nitrogelatin. Dynamite.

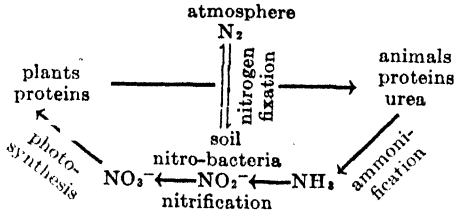
nitrogen. N = 14.008. A gaseous element (N_2) in the atmosphere, atomic number 7. Colorless gas, $d._{air=1}$ 0.967, m.−210, b.−195, slightly soluble in water or alcohol. Nitrogen was first produced by Rutherford in 1772 from air and named "mephitic air," Priestley, in 1780, called it "phlogisticated air," and Cavendish, in 1785, produced nitric acid from air and called it nitrogen (niter-producing gas). Nitrogen (as element) occurs in many minerals, *e.g.*, chili nitre $NaNO_3$, saltpeter KNO_3. The principal valencies of nitrogen are 3 and 5, but it forms numerous oxides and several series of compounds. On account of its readiness to change its valency, all nitrogen-containing compounds are fairly unstable, such as explosives and proteins. It is the cheapest chemical substance, and is used in the manufacture of nitric acid, nitrates, cyanamides, ammonia, nitrides, and cyanides by the various processes of nitrogen fixation. The different series of nitrogen compounds, or the various stages of oxidation are closely interrelated (see table). **activated-** Excited. **active-** A chemically-active form of nitrogen, which is considered by some to be analogous to ozone, N_3; by others to be of atomic character. It has a characteristic afterglow. **alloxuric-** The N contained in organic tissues which is bound in purine bases. **alpha-** See *n. molecule.* **ammonia-** The N of the NH_4 group of ammomniu salts. **atmospheric-** The N of the atmosphere, q.v. **beta-** See *n. molecule.* **carboxyl-** α-amino acid

NITROGEN COMPOUNDS

Valence		Oxide or hydride	Hydroxide or acid	Derivatives
Reduction ↓ Oxidation ↑	+5	N_2O_5	HNO_3	nitrates
	+4	N_2O_4		
	+3	N_2O_3	HNO_2	nitrites
	+2	N_2O_2		
	+1	N_2O	HNO	hyponitrites
	±0	N_2		nitrogen
	−1	(NH)	NH_2OH	hydroxylamines
	−2	N_2H_4		hydrazines
	−3	NH_3	NH_4OH	ammonium salts

nitrogen. **excited-** The N which has been exposed to radiations and low pressures and has become luminous, due to the electrons passing back from the excited to the normal state: $N^* = N + h\nu$. **filtrate-** Rest n. **fixed-** See *n. fixation.* **formol-** The N of the NH_2 group of amino acids. See *formol titration.* **free-** Uncombined N; as in the atmosphere, or the elementary N which enters vegetable or animal tissues (leaves or lungs). **hydro-** See *hydronitrogens.* **ionized-** The atoms or molecules of nitrogen which have become ionized at low pressures, and are the cause of certain lines in the spectra of aurora, corona, nebulas and stars. They are indicated as NI for singly- and NII for doubly-ionized N. **ortho-** See *n. molecule.* **oxides of-** See *nitrous oxide* (N_2O), *nitric oxide* (NO), *nitrogen peroxide* (N_2O_4), *nitrogen pentoxide* (N_2O_5). **para-** See *n. molecule.* **protein-** The N contained in the protein portion of the tissues. **radio-** A short-lived isotope of mass 13, obtained by bombardment with alpha-particles. Cf. *radio elements.* **soil-** The N found in the soil as nitrate or nitrites. **urea-** The N eliminated as urea.

n. apparatus. A glass apparatus for the determination of N in urine. **n. balance.** The relation of n. intake (proteins) to the n. output (urea, uric acid) of the human body. In the normal adult it is equal. **n. benzide.** Azobenzene. **n. carbon monoxide.** $CO(N_3)_2 = 112.06$. The compound, $N_3—CO—N_3$. **n. cycle.** The passage of nitrogen from the atmosphere to the soil by means of gaseous nitrogen compounds produced as a result of climatic changes (*e.g.*, thunder storms); through bacteria to the plant; from the plant to the animal body; and thence back to the soil as excreta:



n. degradation. The annual loss of N from the soil by crops. In U.S. it is estimated as:

Removal of N by crops	9,000,000 tons
Returned as fertilizer	5,466,000 tons
Degradation, or loss	3,534,000 tons

n. dioxide. Nitric oxide. **n. equilibrium.** The state of an organism in which the N in the food equals the amount of N in the excreta during a definite period. **n. equivalent.** The amount of nitrogen contained in proteins: 1 gm. nitrogen is equivalent to 6.25 gm. of protein, or 1 gm. of protein to 0.16 gm. of nitrogen. **n. fixation.** A process by which atmospheric nitrogen is made into a compound; two types:

(a) natural processes
  (1) Non-symbiotic fixation—the direct conversion of atmospheric nitrogen to nitrates by soil bacteria; as, azotobacter.
  (2) Symbiotic fixation—the gradual conversion of atmospheric nitrogen into nitrates by the intermediate formation of ammonia and nitrites. Each step is due to a certain group of bacteria, as nitrosococcus, nitrosomonas, etc.

(b) artificial processes
  (1) The electric arc process—the direct union of nitrogen and oxygen to oxides of nitrogen at 2800–3300°C. in the electric arc. It requires 12 HP-year for each ton of nitrogen.
  (2) Furnace process (Hausser process)—the direct union of oxygen and nitrogen in an electric furnace.
  (3) Haber process—the direct catalytic union of nitrogen and hydrogen to form ammonia at 200 atm. pressure and 600°C. It requires ½ HP-year for each ton of nitrogen.
  (4) Claude process—similar to the Haber process, but at 900 atm. pressure.
  (5) Casalle process—similar to the Haber process, but uses 600 atm. pressure.
  (6) Nitride process (Serpek process)—the formation of metallic nitrides: $Al_2O_3 + 3C + N_2 = 2AlN + 3CO$ at 1750°C. It requires 2 HP-year for each ton of nitrogen.
  (2) Cyanamide process—the formation of calcium cyanamide from calcium carbide and nitrogen at 1100°C. It requires 2 HP-year for each ton of nitrogen.

(8) Cyanide process (Bucher process)—the formation of cyanides, as $Na_2CO_3 + 4C + N_2 = 2NaCN + 3CO$ at 1000°C. It requires 1½ HP-year for each ton of nitrogen.

World consumption (1926):

atmospheric n	588,000 tons
(ammonia n	408,000 tons)
(cyanamide n	150,000 tons)
(arc process	30,000 tons)
coal distillation	333,000 tons
Chilean nitrate	324,000 tons.

In 1935 the World's nitrogen-fixation production was:

Germany	33.3 %	England	2.6 %
Japan	16.8 %	Poland	1.7 %
France	8.9 %	Yugoslavia	1.1 %
United States	8.8 %	Czechoslovakia	1.0 %
Norway	5.9 %	Switzerland	0.5 %
Italy	5.9 %	Manchuria	0.5 %
Netherlands	5.3 %	Sweden	0.4 %
Belgium	3.7 %	Spain	0.3 %
Canada	3.1 %	Rumania	0.1 %

n. iodide. $N_2H_3I_3$ = 411.80. A dark-red explosive compound, d.3.5, soluble in water. **n. lag.** The time elapsing between protein intake and the appearance of an equivalent amount of nitrogen compounds in the urine. **n. molecule.** Like the hydrogen molecule (q.v.) normal N_2 is a mixture of 1 part *ortho*-N or β-N with odd rotational quantum numbers, (1.3.5.7 . . .); and 2 parts *para*-N or α-N with even rotational quantum numbers (0.2.4.6 . . .). **n. monoxide.** Nitrous oxide. **n. output.** An indication of protein metabolism by an analysis of the waste materials. The daily nitrogen output is:

	N-rich diet	N-poor diet
Total N_2	14.8–18.2 gm.	4.8–8.0 gm.
Distributed as follows		
Urea-nitrogen	86–89 %	62–80 %
Ammonia-nitrogen	3–5 %	4.11 %
Creatinine-nitrogen	3–4 %	5–11 %
Uric acid-nitrogen	0.5–1 %	1–2.5 %
Undetermined nitrogen	3–5 %	5–15 %

n. oxychloride. NOCl = 65.5. Nitrosylchloride. Yellow or red crystals or a colored gas, $d._{air=1}2.31$, m. −60, b. −5, decomp. by water. It is a constituent of aqua regia, and a strong oxidizing agent. **n. partition.** The distribution of the total nitrogen in urea, ammonia, uric acid, and other compounds (see *nitrogen output*). **n. pentoxide.** N_2O_5 = 108.0. Nitric acid-anhydride. Colorless crystals, d.1.64, m.30, b.46, (decomp.), soluble in water forming nitric acid. **n. peroxide.** N_2O_4 or NO_2 = 46.0. An isomer of nitrogen tetroxide. Colorless crystals, m. −9.3, b.22; or a brown gas of irritating odor. **n. sulfides.** (1) N_4S_4 = 184.28. An orange-red crystalline solid, d.2.2, m.179, decomp. 185, or by water; sublimes at 135. (2) N_2S_5 = 188.32. Nitrogen pentasulfide. A deep red liquid $d._{18°}1.9000$ m.10–11, decomp. by heat. **n. sulfochloride.** N_2S_4Cl. Thiazylchloride. **n. tetroxide.** N_2O_4 = 92.0. An isomer of nitrogen peroxide. A colorless crystalline mass at low temperatures, d.1.49, m. −9, b.22, soluble in water. **n. tribromide.** NBr_3 = 253.77. A dark red, volatile explosive oil. **n. trichloride.** NCl_3 = 120.39. A dark liquid, exploding at 95. **n. trifluoride.** NF_3 = 71.01. A liquid, m. −200. **n. trioxide.** N_2O_3 = 76.0. A bluish-green liquid, d.1.447, m. −103, b.3.5, soluble in water.

nitrogenated. Containing nitrogen. **n. oil.** Describing an oil containing nitrogen compounds, as oil of bitter almonds.

nitrogenium. The Latin name for nitrogen.

nitrogenization. The act of combining with nitrogen; or of impregnating with nitrogenous compounds.

nitrogenize. To combine with nitrogen; or to impregnate with nitrogenous compounds.

nitrogenous. A compound containing nitrogen, or a substance containing nitrogen compounds. **n. equilibrium.** A condition in metabolism, in which the intake and output of nitrogen are equal. **n. food.** An article of food containing proteins. **n. tankage.** Process tankage. A fertilizer made by digesting nitrogenous waste materials (wood, felt, leather, hair, feathers, etc.) with steam under pressure, sometimes adding sulfuric acid, drying and grinding.

nitroglucose. $C_6H_9O_8NO_2$ = 207.2. Yellowish crystals, used medicinally as an arterial stimulant.

nitroglycerin. $C_3H_5(ONO_2)_3$ = 227.1. Glyceryl nitrate, nitroglycerol, trinitrin, agioneurosin, nitric ester of glycerin, glonoin, trinitroglycerin, propenyltrinitrate, nitroleum, blasting oil. A colorless or pale yellow oil, d.1.60, m.13, explodes 260, insoluble in water, soluble in alcohol or ether. Used in the preparation of explosives; and medicinally, as a vasodilator.

nitroglycerol. Nitroglycerin.

nitro group. Nitryl. The monovalent —NO_2 group.

nitroguanidine. $NO_2.NH.CNH.NH_2$ = 104.1. Colorless needles, m.230 (decomp.), slightly soluble in water, soluble in alcohol, ether or potassium hydroxide.

nitrohydrochloric acid. Aqua regia.

nitroic acids. A group of compounds containing the monovalent—$NO(OH)_2$ radical.

nitroleum. Nitroglycerin.

nitrolevulose. Levulose nitrate, dextrose nitrate. Yellow crystals, which explode when heated.

nitrolic acid. A series of organic compounds of the type, $R—C\begin{matrix}NOH\\ \\ NO_2\end{matrix}$; thus,

$H.C(:NOH)NO_2$ is methylnitrolic acid, or nitroformoxime, m.64

$CH_3—C(NOH)NO_2$, ethylnitrolic acid or nitroacetoxime, m.80.

$CH_3.CH_2.C(:NOH)NO_2$, propylnitrolic acid, m.60.

The solutions of nitrolic acids are deep red.

nitrolim(e). Calcium cyanamide.

nitrols. A series of organic compounds of the type,

$R_2{=}C\begin{matrix}NO\\ \\ NO_2\end{matrix}$, or $R.CH\begin{matrix}NO\\ \\ NO_2\end{matrix}$,

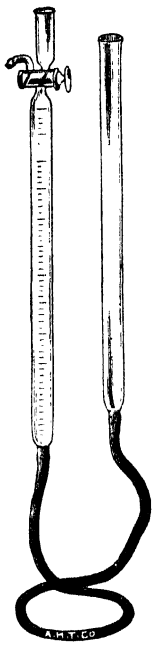
thus, $(CH_3)_2{=}C(NO)NO_2$, propyl-pseudonitrol. The solutions of nitrols are deep blue.

nitromagnesite. A native magnesium nitrate, $Mg(NO_3)_2.xH_2O$.

nitromannite. Mannitol nitrate.

nitrometal. An addition-compound (nitroxyl) of nitric oxide and metallic oxides, *e.g.*, Cu_2NO_2, Ni_2NO_2, or Co_2NO_2. They form nitrites and NO with water, and are decomposed by heat into the metal and NO_2.

nitrometer. A glass apparatus for measuring nitrogen or other gases evolved during a chemical reaction. It consists essentially of a buret (a eudiometer with a two-way stopcock connecting the air or a funnel to the buret) in which NO is liberated from the sample by concentrated sulfuric acid in the presence of mercury.



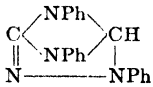
Nitrometer.

nitromethane. CH_3NO_2 = 27.0. Nitrocarbol. A heavy, colorless liquid, d.1.14, m. −26, b.101, slightly soluble in water, soluble in alcohol or ether.

nitromonas. A group of soil bacteria that convert ammonium salts into nitrites and nitrates. They will not grow in organic media.

nitromuriatic acid. Aqua regia.

nitron. (1) $C_{20}H_{16}N_4$ = 312.39. 1.4-Diphenyl-3.5-endo-anilino-4.5-dihydro-1.2.4-triazole, *4.5*-dihydro-*1.4*-diphenyl-*3.5*-phenyl-imino-*1.2.4*-triazole,



Yellow crystalline needles, insoluble in water, slightly soluble in alcohol or ether, soluble in chloroform or acetone. Used for the detection and determination of nitrates. (2) An early (Greek) name for trona. Cf. *nitrone*.

n. nitrate. $C_{20}H_{16}N_4.HNO_3$ = 375.3. An insoluble precipitate formed by nitrates and nitron.

nitronaphthalene. $C_{10}H_7NO_2$ = 173.1. **alpha-** Yellow crystals, d.1.33, m.61, b.304, insoluble in water, soluble in alcohol or ether. Used technically in organic synthesis, and to remove the fluorescence from oils. **beta-** Colorless, rhombic needles, m.79, b.165, insoluble in water, soluble in alcohol or ether; used in organic synthesis.

nitronaphthoic acid. $C_{10}H_6(NO_2)COOH$ = 217.1. A group of acids, colorless prisms, slightly soluble in water, soluble in alcohol or ether. **2.1-** or 2-α- m.218, **3.1-** or 3-α- m.168, **4.1-** or 4-α- m.164. **5.1-** or 5-α- m.171. **8.1-** or 8-α- m.215. **1.2-** or 1-β- m. 103, **5.2-** or 5-β- m.147, **6.2-** or 6-β- m.158, **8.2-** or 8-β- m.145.

nitronaphthol. $C_{10}H_6(NO_2)OH$ = 189.1. **2.1-** Colorless leaflets, m.128. **1.2-** Yellow crystals, m.103, **4.1-** Yellow needles, m.164, **5.2-** Yellow needles, m.147, **8.2-** Yellow needles, m.144. **1.5-** Yellow needles, m.171. **3.1-** m.168. **6.2-** m.158. They are all soluble in alcohol or ether, and used in organic synthesis.

nitronaphthylamine. $C_{10}H_6(NO_2)NH_2$ = 188.1. **2.1-** Yellow prisms, m.144, **1.2-** Orange-yellow needles, m.126, **5.2-** Red needles, m.142, **8.2-** Red needles, m.103. They are all soluble in alcohol or ether, and used in organic synthesis. **1.4-** m.191, **1.8-** m.97, **1.5-** m.118.

nitrone. (1) The trivalent radical =C:NO—; as in phenylnitrone, $Ph_2C:N(:O)$—Ph. Cf. *nitron*. (2) $CH_2:NH:O$.

nitronic acid. A group of compounds containing the  radical.

nitronitroso- See *pseudonitrols*.

nitropentaerythrol. $C_5H_{11}O_4.NO_3$ = 165.09. An explosive.

nitrophenetol. $C_8H_9O_3N$ = 167.08. $C_2H_2O.C_6H_4NO_2$. **ortho-** Yellow crystals m.2.1, b.$_{57mm.}$-267. **meta-** Yellow crystals, m.34, b.264. **para-** Yellow crystals, m.57.8, b.$_{758mm.}$283.

nitrophenol. $C_6H_5O_3N$ = 139.05. $C_6H_4(NO_2)$-OH. **ortho-** Yellow prisms, m.45, b.214, slightly soluble in water, soluble in alcohol or ether. **meta-** Yellow tablets, m.96, slightly soluble in water, soluble in alcohol or ether. **para-** Colorless monoclinic crystals, m.114, decomp. 279, slightly soluble in water, soluble in alcohol or ether. Used in organic synthesis for the manufacture of rhodamine dyestuffs, phenolphthalein, phenacetin, etc. The para-compound is also used as an indicator in alkalimetry, and as a pH indicator for blood and seawater, changing at pH 6 from colorless (acid) to yellow (alkaline). **chloro-** $C_6H_4ClNO_3$ = 173.50. Chloro-nitro-hydroxy benzene, $Cl.C_6H_3(OH)NO_2$. A group of solids used in organic synthesis. The first number indicates Cl, the second NO_2, while OH is assumed to be in the 1-position: **4.2-** m.87, **5.2-** m.38.9, **6.2-** m.70, **2.3-** m.120, **4.3-** m.127, **5.3-** m.147, **6.3-** m.118. **2.4-** m.111, **3.4-** m.133.

nitrophenols. A group of organic compounds, derived from phenol by the substitution of one or more nuclear hydrogen atoms by the nitro group:

mono- containing one nitro-group, $C_6H_4(NO_2)$-OH

di- containing two nitro-groups, $C_6H_3(NO_2)_2OH$

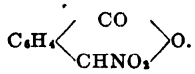
tri- containing three nitro-groups, $C_6H_2(NO_2)_3$-OH (see *picric acid*)

tetra- containing four nitro-groups, $C_6H(NO_2)_4$-OH

nitrophoska. A fused, ternary mixture of KNO_3, NH_4Cl and $(NH_4)PO_4$, used as a fertilizer.

nitrophthalic acid. $C_6H_3(NO_2)(COOH)_2$ = 211.1. **3-** Yellow, monoclinic crystals, m.220, slightly soluble in water, soluble in alcohol or ether. **4-** Colorless needles, m.161, soluble in water, alcohol, or ether; used in organic synthesis.

nitrophthalide. $C_8H_5O_4N$ = 179.2.



Colorless needles, m.141, insoluble in water, soluble in alcohol or ether.

nitropropane. $C_3H_7NO_2$ = 89.1. A colorless liquid, d.1.01, b.131, slightly soluble in water, soluble in alcohol or ether.

nitroprussiate. Nitroprusside.

nitroprusside. A compound containing the bivalent $[Fe(NO)(CN)]_5$ = radical.

nitroquinoline. $C_9H_6N.NO_2$ = 174.1. **5-** Colorless needles, m.72, slightly soluble in water, alcohol, or ether. **6-** Colorless needles, m.150, slightly soluble in alcohol, water, or ether. **7-** Colorless needles, m.132, soluble in alcohol or ether. **8-** Colorless needles, m.88, insoluble in water, soluble in alcohol or ether. Used in organic synthesis, and as reagent for palladium.

nitrosalicylic acid. $C_6H_3(NO_2)(OH)COOH$ = 183.1. **3-** or meta-, (3.2.1-) Long, white needles, m.144, slightly soluble in water, soluble in alcohol or ether. **5-** or asymmetric-, (5.2.1-). Colorless needles, m.230, slightly soluble in water, soluble in alcohol or ether. Used in organic synthesis.

nitrosalol. $C_6H_4(OH)COOC_6H_4NO_2$ = 259.08. A yellow powder, m.148, insoluble in water, soluble in alcohol or ether.

nitrosamine. (1) A series of yellow organic compounds containing the bivalent =N.NO radical. They are obtained by the action of nitrous acid on secondary amines, and differ from nitrosoamines which contain the $—NH_2$ and —NO radicals. *E.g.*, **diethyl-** $Et_2N.NO$. Nitrosodiethyline, b.177. **dimethyl-** $Me_2N.NO$. Nitrosodimethyline, b.148. **diphenyl-** $Ph_2N.NO$. **phenylethyl-** PhEtN.NO. **phenylmethyl-** PhMeN.NO. (2) A compound containing the monovalent —NH.NO radical; as: **ethyl-** EtNHNO. **methyl-** MeNHNO. **phenyl-** PhNHNO.

nitrosates. A series of organic compounds containing the trivalent $\begin{matrix}=C.ONO_2\\|\\—C=NOH\end{matrix}$ group; as, isoamylene nitrosate, $\begin{matrix}Me_2C—ONO_2.\\|\\Me\ C=NOH\end{matrix}$

nitrose. A solution of nitrosyl sulfuric acid in sulfuric acid, made by passing NO_2 and NO into sulphuric acid.

nitrosites. A series of organic compounds containing the trivalent $\begin{matrix}=C—ONO\\|\\—C=NOH\end{matrix}$ group, as *isoamylene nitrosite.* $\begin{matrix}Me_2=C—ONO.\\|\\Me—C=NOH\end{matrix}$

nitroso. Oximido, hydroximino. The monovalent radical, —NO, containing trivalent nitrogen. **iso-** The monovalent radical, —N:OH. **oxy-** Nitrito. **n. R. salt.** $C_{10}H_4OH.NO(SO_3Na)_2$, which gives a blue color with cobalt and iron only.

***i*-nitrosoacetophenone.** Benzoylformoxime.

nitrosoamines. A series of organic compounds containing both the $—NH_2$ and —NO radicals; as, nitrosoaniline. Cf. *nitrosamines.*

nitrosoaniline. $C_6H_4(NO)NH_2$ = 122.1. **para-** Steel-blue needles, m.174, insoluble in water, soluble in alcohol or benzene; used in the synthesis of organic dyestuffs.

nitrosobacter. A rod-like form of nitrifying bacteria.

nitrosobacteria. Nitrifying bacteria. See *nitromonas.*

nitrosobenzene. C_6H_5NO = 107.1. Blue monoclinic needles, m.68, soluble in alcohol or ether.

nitrosobenzoic acid. $C_6H_4(NO)COOH$ = 151.1. **ortho-** Colorless crystals, decomp. 210, very slightly soluble in water, alcohol or ether.

nitrosococcus. A round-shaped nitrifying bacteria of the soil; converts ammonia to nitrites. Cf. *nitrosomonas.*

nitrosodiethylamine. $(C_2H_5)_2N.NO$ = 102.1. Nitrosodiethyline, diethylnitrosamine. A yellow, oily liquid, d.0.951, b.177, soluble in water, alcohol, or ether; used in organic synthesis.

nitrosodiethylaniline. $C_6H_4(NO)NEt_2$ = 178.2. **para-** Colorless needles, m.84, slightly soluble in water alcohol or ether.

nitrosodimethylamine. $(CH_3)_2N.NO$ = 74.1. Nitrosodimethyline, dimethylnitrosamine. A yellow, oily, liquid, b.148, soluble in water, alcohol, or ether.

nitrosodimethylaniline. $C_6H_4(NO)NMe_2$ = 150.1. **para-** Green scales, m.88, slightly soluble in water, soluble in alcohol or ether; used in the manufacture of dyestuffs. **n. hydrochloride.** $C_6H_4(NO)NMe_2.HCl$ = 186.45. Yellow needles, soluble in water, alcohol, or ether; used in the manufacture of dyes.

nitroso dyes. A series of dyestuffs derived from quinone oxime, which contains the chromophore group: $\begin{matrix}=C—O\\|\ \ |\\=C—N.OH.\end{matrix}$

nitrosoethane. C_2H_5NO = 59.1.

nitrosohydroxylamines. A series of organic compounds containing the monovalent $—N\begin{matrix}NO\\OH\end{matrix}$ radical; as, phenyl-nitroso-hydroxylamine, $C_6H_5N(OH)NO$.

nitrosoketones. A series of compounds containing the bivalent $\begin{matrix}—CO\\|\\—C:NOH\end{matrix}$ group, *e.g.*, isonitrosoacetone, Me.CO.CH(:NOH); isonitrosomethylacetone, MeCO.CMe(:NOH).

nitrosomonas. A soil bacterium of Europe, Asia, and Africa that converts ammonia into nitrites. Cf. *nitromonas, nitrosococcus.*

nitrosonaphthol. $C_{10}H_6(NO)OH$ = 173.1. **alpha-alpha-,** 4-nitroso-1-hydroxy-naphthalene. Yellow crystals, m.194, insoluble in water, soluble in alcohol or ether. **alpha-beta-,** 1-nitroso-2-hydroxy-naphthalene. Yellowish prisms, m.110, slightly soluble in water, completely soluble in alcohol or ether. **beta-alpha-,** 2-nitroso-1-hydroxy-naphthalene. Yellow needles, m.162, slightly soluble in water, completely soluble in alcohol or ether. They are used in organic synthesis, and as reagents for cobalt.

nitrosonaphthylamine. $C_{10}H_6(NO)NH_2$ = 172.1. **alpha-beta-,** 1-nitroso-2-amino-naphthalene. Green needles, m.150, slightly soluble in hot water, soluble in alcohol or ether; used in organic synthesis.

nitrosonitric acid. Fuming nitric acid.

nitrosophenol. $C_6H_5O_2N$ = 123.1. $OH.C_6H_4.NO$. A solid, m.140 (decomp.), soluble in water, alcohol or ether. See also *quinone monoxime,* its tautomeric form.

nitrosophenyldimethyl pyrazole. $C_{11}H_{11}O_2N_3$ = 217.2. A reaction-product of antipyrine and nitrites in acid solution. Green needles, exploding at 200, soluble in ether, chloroform, or alkalis; used as an antipyretic and diuretic.

nitrososulfuric acid. Nitrosyl sulfate.

nitrosotoluene. $C_6H_4(NO)CH_3$ = 121.1. **ortho-** Yellow needles, decomp. 120, soluble in water, alcohol or ether, used in organic synthesis.

nitrostarch. Starch nitrate, $[C_{12}H_{12}O_{10}(NO_2)_8]n$. A nitrated starch used in the manufacture of explosives. An orange powder, soluble in alcohol or ether.

nitrostyrene. $NO_2C_6H_4.CH:CH_2$ = 149.1. Nitrostyrolene. **ortho-** A colorless liquid, m.12 (decomp.) insoluble in water, soluble in concentrated sulfuric acid. **meta-** A colorless liquid, m.15.8, b.235, soluble in alcohol or ether. **para-** Colorless prisms, m.58, b.254, soluble in hot alcohol or ether.

nitrostyrolene. Nitrostyrene.

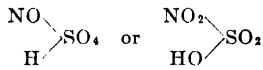
nitro-substitution. The result of the process of nitration, (q.v.).

nitrosulfamide. $H_2N.SO_2:NHNO$ = 125.2. A colorless liquid obtained by nitrating sulfamide. Its silver salt is used as a detonator.

nitrosulfonic acid. Nitrosyl sulfate.

nitrosulfuric acid. A mixture of one part nitric acid and two parts sulfuric acid, used as a nitrating agent. Cf. *nitrosyl sulfuric acid.*

nitrosyl. The nitroso radical, NO—, when attached to a strongly electro-negative element or group; as, Cl— or —HSO_4. **n. bromide.** NOBr = 109.93. A brown liquid decomp. −2. **n. chloride.** NOCl. Nitrogen oxychloride. **n. fluoride.** NOF = 49.01. A gas, m. −134, b. −56. **n. perchlorate.** $NOClO_4$ = 129.47. An unstable liquid. **n. sulfate.** $NO.HSO_4$ = 111.1. Nitrososulfuric acid, chamber crystals, nitrosulfonic acid, n. sulfuric acid, nitrose.



Colorless crystals, m.75 (decomp.), formed in the lead chambers during the manufacture of sulfuric acid. **n. sulfuric acid.** N. sulfate. **n. sulfurylchloride.** $ClSO_4ONO$ = 177.54. A crystalline solid, produced from sulfur trioxide and nitrosyl chloride.

nitrothiophen. $NO_2.C_4H_3S$ = 129.1. Colorless crystals, m.44, b.224, insoluble in water, soluble in alcohol or ether.

nitrotoluene. $C_7H_7O_2N$ = 137.1. $Me.C_6H_4.NO_2$. **ortho-** A yellow liquid, d.1.168, m. −3.8, b.218, insoluble in water, soluble in alcohol or ether. **meta-** Yellow crystals or liquid, m.16, b.230, insoluble in water, soluble in alcohol, ether or benzene. **para-** Yellow crystals, m.54, b.238, insoluble in water, soluble in alcohol or ether. They are used in organic synthesis. **di-** q.v. **tri-** See *trinitrotoluene.*

nitrotoluidine. $C_6H_3(NO_2)(NH_2)CH_3$ = 152.12. A series of nitro-amino-methyl-benzenes, used in the synthesis of dyestuffs. They are usually slightly soluble in water, soluble in alcohol, ether, or benzene. According to the positions of the three groups in the benzene ring there are:

NO_2	NH_2	CH_3	
			(ortho-toluidines)
3	2	1	= Orange prisms, m.92,
4	2	1	= Yellow monoclinic crystals, m.104.
5	2	1	= Yellow needles, m.127.
6	2	1	= Yellow leaflets, m.92.
			(meta-toluidines)
2	3	1	= Yellow needles, m.53.
4	3	1	= Yellow leaflets, m.109.
5	3	1	= Orange needles, m.98.
6	3	1	= Yellow needles, m.138.
			(para-toluidines)
2	4	1	= Yellow monoclinic crystals, m.77.
3	4	1	= Red prisms, m.114.

nitrourea. $CH_3O_3N_3$ = 105.1. $NH_2.CO.NHNO_2$. A white crystalline powder, decomp. by heat, slightly soluble in water, soluble in alcohol or ether.

nitrourethane. $NO_2.NH.COO.C_2H_5$ = 134.1. Colorless leaflets, m.64, b.140 (decomp.), soluble in water, alcohol, or ether.

nitrous. (1) Describing nitrogen compounds containing positive trivalent nitrogen, as nitrous acid. Their ammonia compounds contain negative trivalent nitrogen. (2) An early term describing a compound of nitric acid. **n. acid.** HNO_2 = 47.0. An aqueous solution of nitrogen trioxide (N_2O_3). **n. anhydride.** Nitrogen trioxide. **n. ether.** $C_2H_5NO_2$ = 75.047. (1) Ethyl nitrite. (2) Nitroethane. **n. oxide.** N_2O = 44.1. Nitrogen monoxide, laughing gas, dental gas. A colorless gas, d.1.529, m. −90.7, b. −88.4, soluble in water, alcohol, ether, or benzene. Used as a surgical and dental anesthetic, and to preserve perishable organic liquids and tissues, including milk, fruits, and other foods. **n. vitriol.** A solution of oxides of N and sometimes of SO_2 in strong H_2SO_4, formed during the manufacture of H_2SO_4 (q.v.).

nitroxanthic acid. Picric acid.

nitroxyl. The radical, —NO_2, when attached to a strongly electro-negative group, as F; or to a metal, as copper nitroxyl, $Cu_2(NO_2)$. **n. chloride.** NO_2Cl. = 81.47. A yellow liquid, d.1.316. **n. fluoride.** NO_2F = 65.0. A colorless gas m. −139, b. −63.5, rapidly decomp. by water.

nitroxylene. $C_8H_9O_2N$ = 151.1. $Me_2.C_6H_3.NO_2$. **1.2.3-** A yellow liquid, d.1.147, m.8, b.250. **1.2.4-** Ortho- Yellow crystals, d.1.139, m.29, b.258. **1.3.2-** Meta- A yellow liquid, d.1.112, m.13, b.225. **1.3.4-** A liquid, d.1.126, b.238. **1.3.5-** A solid, m.74, b.275. **1.4.2-** Para- A yellow liquid, d.1.132, b.239. They are all insoluble in water, soluble in alcohol, ether, benzene, or chloroform, and are used in organic synthesis.

nitroxylic acid. H_2NO_2 = 48.0. Hydronitrous acid. The hypothetical acid from which nitroxyls (q.v.) are derived.

nitrum. An early (Latin) name for trona.

nitryl. Nitro-group. The monovalent radical, —NO_2, derived from nitrous acid, HNO_2. **n. fluoride.** Nitroxyl fluoride.

nivalic acid. $C_{20}H_{26}O_6$ = 362.22. An acid from the lichen, *Cetraria nivalis.*

nivenite. A variety of uranite containing a large proportion of rare earths.

nizin. Zinc sulfanilate.

No. Atomic number; also Z (German: zahl).

No. 606. Salvarsan. **914.** Neosalvarsan.

Nobel, Alfred Bernhard. 1833–1896. A Swedish chemist, the inventor of several explosives and artificial rubber, noted as the founder of the Nobel Prize. **N.'s explosive.** A high explosive consisting of 25–80 % nitroglycerin, 0.5–7 % guncotton, 0.4–9 % liquid nitro-body, 0.9–10 % wood meal and 6–45 % K or Na nitrate. Cf. *dynamite.* **N. oil.** Nitroglycerin. **N. Prize.** An annual award from the interest of N.'s capital which is divided among five scientists who have been outstanding in the five branches of knowledge: physics, chemistry, physiology, medicine, and world-peace. The thirty chemistry awards since 1901–1935 inclusive are distributed

Geographically:
Germany 13, England 4.5, France 4, U.S.A. 3, Sweden 2.5, Switzerland 1, Holland 1, Austria 1.
Departmentally:
Physical c. 9, biochemistry 7, organic 6, radioactive 5, inorganic 4, industrial 3.

Alfred Bernhard Nobel.

Noble, Alfred. 1844–1914. An American civil engineer who founded the **Noble Prize** for the best technical paper in an engineering periodical. Cf. *Nobel Prize.*

noble gas. A member of the zero group of the periodic system: He, Ne, A, Kr, Xe, and Rn. For occurrence, see *atmospheric gases.* Uses: He, for filling dirigibles; A, for rectifiers and incandescent bulbs; also in illuminating signs, with or without mercury, the following colors being produced:

Ne	fiery orange red
A	blue
Kr	pale violet
Xe	sky blue or green.

n. laurel. Laurel. **n. liverwort.** Liverwort. **n. metal.** A metal which is not readily oxidized, in particular the metals of the gold, platinum, and palladium family of the periodic system.

noctal. $C_{10}H_{13}BrN_2O_3$ = 189.00. Nostal, *i*-propyl-β-bromo-allyl barbituric acid. White powder, m.178, used as a narcotic.

nodakenin. $C_{20}H_{24}O_9$ = 408.15. A glucoside from nodake, *Pellecedanum decursivium,* an Umbelliferae of Japan.

node. The point at which a curve or wave-motion intersects a fixed plane.

nodular. Resembling a knot or protuberance.

nodule. A small round lump, as of a mineral or earth.

noise. See *loudness, sound, decibel.*

nomenclature. The systematic terminology of chemical compounds, cf. *notation.* **Geneva-** A set of rules adopted at the International Conference on chemical nomenclature held in Geneva in 1892. These rules refer mainly to organic compounds and have since been altered in many respects (see Report 1937). The general rules for the nomenclature are:

INORGANIC COMPOUNDS

Binary compounds:
The positive element (metal) is named first, and followed by the electronegative element (nonmetal).
metal suffixes:
-ous indicates the lower valence, as ferr*ous*-
-ic indicates the higher valence, as ferr*ic*-
nonmetal suffixes:
-ide as ox*ide*, hydrox*ide*, chl*oride*, sulf*ide*, nitr*ide*.

Tertiary compounds:
acids:
-ous acid, indicating a lower valency, as chlor*ous* or sulfur*ous* acid.
-ic acid, indicating a higher valency, as chlor*ic* or sulfur*ic* acid.
If there are more than two stages of oxidation, then:
hypo- ous, the acid of lowest valency; as *hypo*chlor*ous* acid.
per- ic, the acid of highest valency; as *per*chlor*ic* acid.
salts:
-ite, when derived from an *ous*-acid, as chlor*ite*, or sulf*ite*.
-ate, when derived from an *ic*-acid, as sulf*ate* or chlor*ate*.

ORGANIC COMPOUNDS

-ane, for saturated hydrocarbons (meth*ane*, eth*ane*, menth*ane*).
-ene, for unsaturated hydrocarbons containing one double bond (eth*ene*, prop*ene*) or double bonds (benz*ene*, naphthal*ene*).
-diene, for unsaturated alkyl hydrocarbons containing two double bonds (buta*diene*).
-ine, for unsaturated hydrocarbons containing a triple bond (eth*ine*).
-enine, for hydrocarbons containing a double and triple bond (but*enine*).
cyclo-, for hydrocarbons which form a closed saturated chain (*cyclo*pentene).
-ine, for alkaloids, (morph*ine*, coca*ine*, strychn*ine*).
-in, for glucosides (sapon*in*).
-one, for ketones (also -dione, -trione).
-ose, for carbohydrates (also -pentose, -hexose etc.).
-ol, for alcohols and phenols (also -diol, -triol).
-al, for aldehydes (also -dial, -trial).
-ase, for enzymes (pep*sase*).
-oid, for an active principle of unknown composition.
-yl, for a radical.
-ino, for an ammonia derivative (amino).
-ido, for an ammonia derivative substituted in an acid group: amido —$CONH_2$.
-thial, for thioaldehydes (—CSH group).

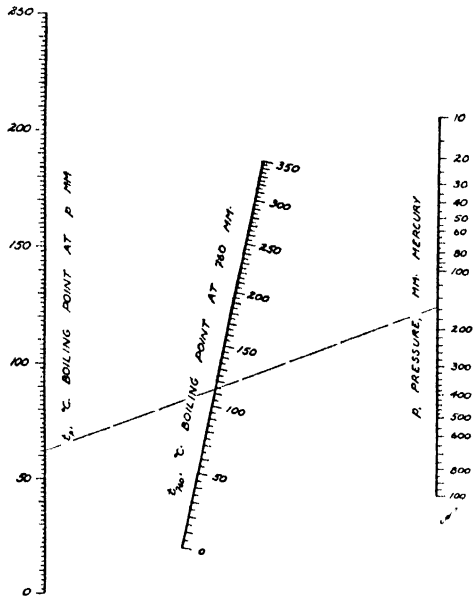
SPECIFIC NAMES

hydrate, for a compound with water, as chlorine hydrate, $Cl_2.10H_2O$.
hydroxide, for a compound containing —OH radicals, as calcium hydroxide, $Ca(OH)_2$.
hydroxy- (not oxy-), for the —OH group in an organic molecule.
-ite, for minerals.

thio- for sulfur which has replaced oxygen; as thiosulfate $=S_2O_3$, thiocyanate —CNS.
sulfo- for the group, $—SO_3H$.
oxy- for —O—, as in ethers, Me—O—Me.

nomogram. Nomograph.

nomograph. Nomogram. Alignment chart. A system of two or more graphical scales, used for the calculation of analytical results or rapid solution of complicated equations. *E.g.*, **boiling point-** A set of scales by which the boiling point of a liquid at 760 mm. may be found from its boiling point at a different pressure, and vice versa. This n. solves Trouton's rule and the integrated Clausius-Clapeyron equation. Thus *e.g.*, the b.62°C. (left scale) at 154 mm. pressure (right scale) corresponds with 114°C. at atm. pressure (middle scale).



Boiling point nomograph.
(D. S. Davis, Chemist-Analyst, 1931, 20, No. 3)

nomography. The representation of analytical or other correlations by means of charts and graphs, which eliminate calculations.

non- (1) A Latin prefix, indicating not. (2) A Greek prefix, for nine.

nonacosane*. $C_{29}H_{60}$ = 408.5. A hydrocarbon occurring in bees-wax and the fat of cabbage leaves. A colorless paraffin-like substance, m.63, b.348.

nonacosanol*. $C_{29}H_{59}OH$ = 304.5. **1-** Montanyl alcohol. **9-** White solid, m.75.4. **10-** m.74.8. **12-** m.74. **14-** m.79. **15-** m.83.6.

nonacyclic. (1) Having nine rings; as violanthrole. (2) Not acyclic.

nonadecane*. $C_{19}H_{40}$ = 268.42. Enneadecane, enndecane. A solid, $d._{32°}$0.777, m.32, b.330.

nonadecanoic acid*. $C_{19}H_{38}O_2$ = 298.30. Nonadecylic acid, $C_{18}H_{37}COOH$. White leaflets, m.66.5, $b._{100mm}$299.

nonadecanol*. $C_{19}H_{40}O$ = 284.31. Nonadecyl alcohol, $C_{19}H_{39}OH$. Opaque crystals, m.62.

nonadecanone*. $C_{19}H_{38}O$ = 282.30. **10-** Caprinone, dinonyl ketone, $(C_9H_{19})_2CO$. Colorless leaflets, m.58, insoluble in water.

nonadecyl alcohol. Nonadecanol.*

nonadecylic acid. Nonadecanoic acid.*

nonaldehyde. Pelargonaldehyde.

nonane*. C_9H_{20} = 128.2. A saturated aliphatic hydrocarbon. A colorless liquid, d.0.718, m.—51, b.149, insoluble in water, soluble in alcohol or ether. **n. carboxylic acid.** Capric acid. **n. dioic acid*.** Azelaic acid.

nonanediol*. $C_9H_{20}O_2$ = 160.16. Nonamethylene glycol, $CH_2OH.(CH_2)_7CH_2OH$. Colorless liquid, b.149, slightly soluble in water.

nonanenitrile*. $C_9H_{17}N$ = 139.14. Pelargononitrile, $Me(CH_2)_7CN$. Colorless liquid, d.0.8331, m.—34, b.224, insoluble in water.

nonanoic acid*. Pelargonic acid.

nonanol*. $C_9H_{20}O$ = 144.16. **1-** *n*-Nonyl alcohol. **2-** Heptylmethylcarbinol, $Me(CH_2)_6CHOHMe$. Colorless liquid, d.0.8190, m.—35, b.193, insoluble in water, soluble in alcohol. **3-** Ethylhexylcarbinol, $Me(CH_2)_5CHOHEt$. Colorless liquid, d.0.825, m.—22, b.194. **4-** Amylpropyl carbinol, $Me(CH_2)_4CHOHPr$. Colorless liquid, d.0.8282, b.192. **5-** Dibutylcarbinol, $[Me(CH_2)_3]_2CHOH$. Oily liquid, d.0.823, b.194.

nonanone*. $C_9H_{18}O$ = 142.14. **2-** Methyl-*n*-heptyl ketone, $Me.CO(CH_2)_6Me$. A constituent of oil of rue and oil of cloves. Colorless liquid, d.0.8317, m.—8.2, b.195. **3-** Ethyl-*n*-hexyl ketone, $Et.CO(CH_2)_5Me$. A liquid, d.0.84, m.—8, b.190. **5-** Dibutyl ketone, $[Me(CH_2)_3]_2CO$. Colorless liquid, d.0.827, m.—5.9, b.186.5.

nonanoyl*. Pelargonyl. The radical $Me(CH_2)_7CO—$ derived from nonanoic acid. **n. chloride.** $C_9H_{17}OCl$ = 176.59. Pelargonyl chloride. Colorless liquid, d.0.9590, m.—60.5, b.215, decomp. by water.

nonconductor. A substance that does not transmit electricity, heat, or light. Cf. *insulator*.

nondecylic acid. Nonadecanoic acid.*

nondrying oil. A liquid fat which remains fluid on exposure, and does not become hard. Such fats contain olein and glycerides of other unsaturated fatty acids, and absorb but little oxygen. *E.g.*, castor oil, sperm oil.

nonene*. Nonylene.

nonferrous. A metal other than iron.

nonine. Nonyne*.

nonmetal. An electronegative element located in the upper left half of the periodic system. It has no metallic properties. They are generally polyvalent (except O and H), and exist in several stages of oxidation. Their oxides form acids.

nonmetallic. Not of a metallic nature.

nonoic acid. Pelargonic acid.

nonvalent. Inert, having no combining power, and a valency of zero; as, the noble gases.

nonyl. The monovalent radical, $—C_9H_{19}$, derived from nonane. **n. alcohol.** $C_9H_{19}OH$ = 144.2. A colorless liquid, d.0.842, m.—5, b.213, insoluble in water, soluble in alcohol. For other isomers see *nonanol**. **n. aldehyde.** Pelargonaldehyde. **n. amine.** $C_9H_{19}NH_2$ = 143.17. Colorless liquid, b.195. **n. cyanide.** Caprinitrile.

nonylene. C_9H_{18} = 126.15. Nonene*. A liquid hydrocarbon, $d._{20°}$0.7433, b.147.

nonylic acid. Pelargonic acid.

nonylone. 9-Neptadecanone.

nonyne*. C_9H_{16} = 124.12. *n*-Heptyl-acetylene, nonine, $Me(CH_2)_6C{:}CH$. Colorless liquid, d.0.7924, m.—36, b.160, insoluble in water.

nopco. Trade name of a group of surface-active agents.

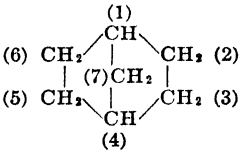
nopinene. $C_{10}H_{16}$ = 136.12. β-pinene, 7.7-dimethyl-2-methylene norpinane. A terpene occurring (30 %) in the oil of *Ferula galbaniflua* of Russia. Cf. *galbanum, asafetida.*

nopinic acid. $C_{10}H_{16}O_3$ = 184.12. 4-Hydroxy-norpinane-4-carboxylic acid. A hydroxy acid derived from norpinane. Cf. *pinonic acid.*

nor- A prefix indicating a normal or parent compound.

noratropine. An alkaloid from various Solanaceae species, allied to atropine.

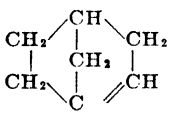
norcamphane. C_7H_{12} = 96.09. 1.2.2-bicycloheptane. The hydrocarbon:



It is the parent-compound of many terpenes. **dimethyl-** Camphenilane. **dimethylmethylene-** Camphene. **trimethyl-** Camphane.

norcamphanyl. The monovalent radical, C_7H_{11}—, derived from norcamphane.

norcarene. C_7H_{10} = 94.08. Bicycloheptene, Δ^3-norcamphane.



trimethyl- Carene.

nordenskioldine. [Swedish.] $CaSnB_2O_6$. A tin ore.

Nordhausen acid. Oleum.

norephedrine. $C_9H_{13}ON$ = 151.11. α-aminoethyl benzyl alcohol, $Ph.C(OH)NH_2.Et$, used similarly to ephedrine, q.v.

Norge saltpeter. A calcium nitrate made in Norway, and used extensively as a fertilizer.

norgine. Algin.

norit. Purified charcoal made from birch, and used to decolorize and deodorize syrup, oils or pharmaceutical products.

norium. A supposed rare earth element from zircon, which proved to be a mixture of various rare earth metals.

norleucine. $C_6H_{13}O_2N$ = 131.1. Caprine, glycoleucine, α-amino-*n*-caproic acid, α-amino-α-butyl acetic acid, 2-aminohexanoic acid*. An aminoacid (q.v.) from the leucine fractions of proteins of the brain and of casein.

norm. A theoretical standard. **n. system.** In mineralogy, a system of classification of rocks based on their theoretical chemical compositions. Cf. *mode.*

normal. (1) A plane or line perpendicular to another plane or line. (2) A fixed standard or an established type, as a normal solution, or normal hydrocarbon. (3) A prefix which indicates: (a) a neutral salt in which all the available hydrogen atoms are replaced; (b) an organic compound in its "normal" form as distinct from its "iso" form. (4) The average or mean. **n. atom.** An atom in the unexcited state; it may differ from a *neutral* atom (q.v.). **n. benzine.** Benzine of d.-0.695–0.705, b.65–95. **n. element.** An electrical battery or electrolytic cell, used as a standard of electromotive force. See *Weston element, cadmium cell.* **n. glass.** A glass whose composition can be represented by a definite chemical formula; as, $6SiO_2.CaO.Na_2O$. **n. hydrocarbon.** An aliphatic hydrocarbon that has a straight carbon chain in its molecule and no side-chains; as, n-pentane. **n. pressure.** Atmospheric pressure, atmosphere. The pressure of a column of mercury 760 mm. high at sea-level (approximately 14.7 pounds per square inch). **n. saline,** q.v. **n. salt.** A salt in which all the hydrogen atoms of the acid have been replaced by a metal, or all the hydroxide radicals of a base replaced by an acid radical:

Na_2CO_3 (normal salt); $NaHCO_3$ (acid salt).

$Bi(NO_3)_3$ (normal salt); $Bi(OH)_2NO_3$ (basic salt).

n. solution. A solution which contains one equivalent of the active reagent in grams, in one liter. The equivalent in grams may be defined as that quantity of the active reagent which contains, replaces, unites with, or in any way, directly or indirectly, brings into reaction one gram of hydrogen. A *normal* solution, N, is used for titration in quantitative analysis, and it may or may not be equal in strength to the *molal* solution.

N.HCl = 36.5 gm. HCl per liter = M.HCl.

$N.H_2SO_4$ = 49 gm. H_2SO_4 per liter = $M/2.H_2SO_4$. Weaker or stronger solutions are indicated thus, *e.g.*,

0.5N or N/2 = half-normal
0.1N or N/10 = tenth-normal
2N = twice normal.

Cf. *centinormal, millinormal, supernormal.* **n. temperature.** Room temperature; 20°C. or 68°F. It differs from standard temperature (0°C.). **n. thermometer.** A standardized thermometer.

normality. The concentration of a solution expressed in gram-equivalents per liter; thus N-solution = one gram-equivalent per liter. 2N-solution = two gram equivalents per liter. 0.5N or N/2-solution = one-half gram equivalent per liter. Cf. *normal solution.*

normalization. The process of restoring normality.

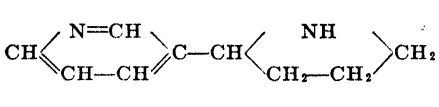
normalizing. The heat-treatment of metals (especially aluminum alloys), by the action of a molten mixture of sodium and potassium nitrates at 500°C.

normeconine acetic acid. $C_{10}H_8O_4$ = 188.1. Dihydroxyphthalide acetic acid.

Colorless crystals, m.228.

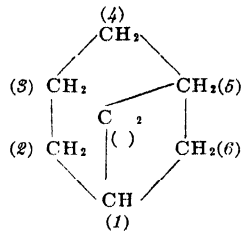
normenthane. Isopropyl cyclohexane.

nornicotine. $C_9H_{12}N_2$ = 136.11. An isomer of nicotine in Kentucky tobacco



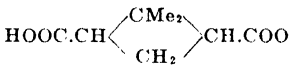
noropianic acid. $C_8H_6O_5$ = 182.1. 5.6-dihydroxy-phthalaldehyde acid. Colorless crystals, m.171, soluble in alcohol or ether.

norpinane. C_7H_{12} = 96.09. 1.1.3-bicycloheptane. The hydrocarbon:



Cf. *nopinic acid.* **dimethylmethylene-** Nopinene.

norpinic acid. $C_8H_{10}O_4$ = 170.08. 2.2-dimethyl-1.3-cyclobutane dicarboxylic acid,



Cf. *truxillic acid, nopinic acid.*

Norris, Flack James, 1871– . An American chemist noted for organic research.

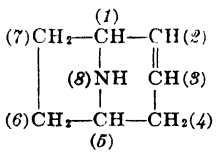
norsolanellic acid. Biloidanic acid.

Northrup furnace. An electric high-temperature furnace.

nortropane. $C_7H_{13}N$ = 111.1. *2.3*-Dihydronortropidine, *1.5*-iminocycloheptane. A cyclic hydrocarbon derived from nortropidine, q.v.

nortropene. Nortropidine.

nortropidine. $C_7H_{13}N$ = 111.1. *1.5*-Iminocycloheptene-*2*. The aromatic, heterocyclic hydrocarbon,



nortropinone. $C_7H_{11}ON$ = 125.09. A ketone derived from tropine by oxidation, a colorless powder, m.70.

norvaline. $C_5H_{11}O_2N$ = 117.1. α-aminovaleric acid. An aminoacid (q.v.) m.291, from proteins.

Norwegian saltpeter. Norge saltpeter. A calcium nitrate used as a fertilizer.

nosean. An aluminum sodium silicate containing gypsum.

noselite. $Al_3Na_8SSi_3O_{16}$. A silicate mineral (q.v.) of the sodalite group.

nosepiece. A revolving disc on a microscope, into which the different objectives can be screwed.

nosology. The classification of disease.

nosophen. $C_{20}H_{10}O_4I_4$ = 821.5. Tetraiodophenolphthalein, iodophen. $(C_6H_2I_2OH)_2(CO)_2C_6H_4$. A yellow powder, m.225, slightly soluble in alcohol or ether, soluble in alkalis; used as an iodoform substitute. **bismuth-** Eudoxin. **mercury-** Apallagin. **sodium-** Antinosin.

nostal. Noctal.

nostrum. A "cure-all," or quack medicine.

notatin. An antibiotic substance from various *Penicillium* species. It is identical with coryl-ophilline, mycoin, penatin and penicillin B.

notation. A system of numerals, or numerals and symbols, which indicate the structural characteristic of an organic compound. The principal symbols are:

a—asymmetric, or alpha-position.
α—ana-position, alpha-position, or first carbon atom.
β—beta-position, or second carbon-atom.
c—cyclic, or cis-type.
d—dextro-rotatory.
dl—racemic
δ—fourth carbon atom.
ε—epi-position, or fifth carbon atom.
γ—gamma-position, or third carbon atom.
i—iso or inactive
κ—kata-position
l—levorotatory.
m—meta-position, or mesoisomer.
μ—meso-position.
n—normal, or nitrogen substitute.
o—ortho-position, or oxygen substitute.
ω—substitution in the side-chain or on the last carbon atom, farthest from a functional group.
p—para-position or primary.
π—peri-position.
r—racemic.
ρ—pros-position.
s—syn-type, symmetric, secondary or sulfur substitute.
t—trans-type, or tertiary.
v—vicinal position.
ψ—pseudo.
φ—amphi-position.
Δ— Double bond, as Δ^2, a double bond between the second and third carbon atoms, and $\Delta^{2(4)}$, a bond between the second and fourth carbon atoms of a ring.
T—Triple bond.

Cf. *formula, nomenclature.* See also first definition(s) under each letter.

n. of energy levels. See *quantum numbers.*

n. of isotopes. See *hydrogen, isotopes, nuclear reactions.*

noumeite. Garnierite.

novaculite. Razor stone. A fine-grained rock, used as an abrasive.

novadelox. A mixture of 1 part benzoyl chloride and 3 (or 5) parts calcium phosphate, used to bleach flour.

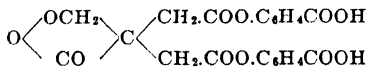
novain. Carnitine.

novaldin. A brand of dipyrrole.

novargan. A silver proteinate containing 10 % silver A yellow powder, soluble in water, is used medicinally as an astringent and bactericide.

novarsenobenzol. Neosalvarsan.

novaspirin. $C_{21}H_{16}O_{11}$ = 444.1. Methylenecitrylsalicylic acid, salicitrin.



A white, odorless powder, insoluble in water, soluble in alcohol; used medicinally as an antirheumatic and antiseptic.

novasurol. Merbaphen, the double salt of sodium mercury chlorophenoxy acetate and diethyl malonyl urea. White crystals, soluble in water, used as a diuretic and antisyphilitic.

novatophan. Neocinchophen. A trade name.

novatropine. $C_{16}H_{21}NO_3.MeBr$. Homoatropine methyl bromide. A white powder, used as an antispasmodic.

novocaine. Procaine. **n. oxide.** $C_{12}H_{22}N_2O_4$ = 274.2. A genalkaloid produced by the action of hydrogen peroxide on procaine; it is a less powerful anesthetic than procaine.

novolak. A plastic of the resole type (q.v.), but formed under acid conditions.

noxious. Harmful or hurtful. **n. gases.** A poisonous gas or any gas of strong odor.

Noyes, Arthur Amos, 1866–1936. An American chemist, noted for development of thermodynamics and chemical education. **N., William Albert,** 1859–1941. An American chemist noted for organic synthesis and atomic weight determinations.

N.P.L. Abbreviation for National Physical Laboratory (q.v.).

n-rays. A non-luminous radiation whose wave length is lower than those of visible light or heat rays, discovered in 1903 by Blondlet. It is emitted by a Welsbach burner, an x-ray tube, or the sun, and passes through thin metals, and increases the luminosity of phosphorescent bodies.

Nt. Symbol for niton, now termed radon, Rn.

NTP. Abbreviation for normal temperature (0°C.) and pressure (760 mm.).

nu. The Greek letter, ν, a symbol for frequency.

nuces. The Latin plural of "nut"; as, nuces nucistae = nutmeg.

nucin. Juglone.

nucitannin. A glucoside obtained from walnuts. It splits into glucose and rothic acid.

nucite. $C_6H_{12}O_6$ = 180.09. A carbohydrate from the leaves of *Juglans cinerea*, white walnut. It resembles inositol. Cf. *juglans*.

nuclear. Pertaining to a nucleus, q.v. **n. chemistry.** The branch of chemical physics dealing with the changes occurring in the atomic nucleus, that is, the transmutation of elements and the production of induced radio-activity. q.v. **n. equation.** An expression indicating the changes occurring in the nucleus during a n. reaction, q.v. In a n. equation both the sum of the atomic numbers (= *positive charges*) and of the isotopic weights (= *mass*) must be equal on both sides of the equation. **n. halogen.** A term erroneously applied to a halogen attached to a ring. **n. particles.** The building units of the atomic nucleus (see *atomic structure*) which may be classified as shown in the table. **n. reactions.** The disruption of an atomic nucleus by bombardment with protons, deuterons or alpha-particles, which is accompanied by the emission of neutrons, protons, alpha-particles, positive or negative electrons, and the formation of excited states or radioelements, q.v. (see table). **n. structure.** (1) Each isotope consists of Z half-alpha particles (pze) and 1-2Z neutrons (pe), where Z is the atomic number, I the isotopic weight, p a proton with one positive charge, e an electron. (2) An isotope contains Z protons and I-Z neutrons. **n. symbols.** The symbol for an element, X, is prefixed by the atomic number, Z, as subscript, and followed by its isotopic weight, I, as superscript; thus ${}_Z X^I$. *E.g.*, ${}_4Be^9$, ${}_2He^4$.

NUCLEAR REACTIONS

a. Formation of gamma rays from excited intermediates of short life:

$${}_5B^{11} + {}_1H^1 \rightarrow ({}_6C^{12})^* \rightarrow {}_6C^{12} + \gamma\text{-rays}$$
$$10^{-18} \text{ sec.}$$
$${}_6C^{12} + {}_1H^1 \rightarrow ({}_7N^{13})^* \rightarrow {}_7N^{13} + \gamma\text{-rays}$$
$$10 \text{ min.}$$

b. Formation of beta rays (electrons) from unstable intermediates:

$${}_{11}Na^{24} \rightarrow {}_{12}Mg^{24} + {}_{-1}e^0 \text{ (15 hrs.)}$$
$${}_{12}Mg^{27} \rightarrow {}_{13}Al^{27} + {}_{-1}e^0 \text{ (10 min.)}$$

c. Formation of neutrons:

$${}_8O^{16} + {}_1H^2 = {}_9F^{17} + {}_0n^1$$
$${}_4B^9 + {}_2He^4 = {}_6C^{13} = {}_6C^{12} + {}_0n^1$$
$${}_5B^{10} + {}_2He^4 = {}_7N^{13} + {}_0n^1$$

d. Formation of protons:

$${}_{12}Mg^{26} + {}_1H^2 = {}_{12}Mg^{27} + {}_1H^1$$
$${}_{14}Si^{30} + {}_1H^2 = {}_{14}Si^{31} + {}_1H^1$$
$${}_7N^{14} + {}_2He^4 = {}_8O^{17} + {}_1H^1$$

e. Formation of alpha-particles:

$${}_{12}Mg^{26} + {}_1H^2 = {}_{11}Na^{24} + {}_2He^4$$

f. Formation of positrons from radio elements:

$${}_7N^{13} \rightarrow {}_6C^{13} + {}_1e^0$$
$${}_9F^{17} \rightarrow {}_8O^{17} + {}_1e^0$$

nuclease. Any bacteriolytic enzyme that digests the nucleoproteins of bacteria.

nucleate. A salt of nucleic acid (q.v.).

nuclei. The plural of nucleus.

nucleic acids. Nucleinic acids. A group of compounds in which one or more molecules of phosphoric acid are combined with carbohydrate (pentose or hexose) molecules, which are in turn combined with bases derived from purine (such as guanine and adenine) and from pyrimidine (such as thymine, cytosine and uracil). They commonly occur, conjugated with proteins, as nucleoproteins. The molecules of the most common nucleic acids are comprised of four phosphoric acid, four carbohydrate and two basic molecules each from purine and pyrimidine and are therefore tetranucleotides. Cf. *nuclein*. *E.g.*,

from salmon	$C_{40}H_{56}N_{14}O_{26}P_4$
from thymus	$C_{43}H_{61}N_{15}O_{34}P_4$
from yeast	$C_{38}H_{49}N_{15}O_{29}P_4$
from yeast	$C_{29}H_{42}N_{13}O_{23}P_3$
from wheat embryo	$C_{41}H_{61}N_{15}O_{31}P_4$

NUCLEAR PARTICLES

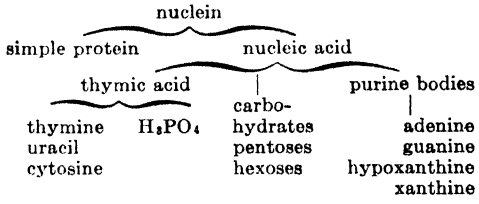
	Atomic no. −1	0	1	2
Mass 0	electron ${}_{-1}e^0$ or e^-	neutrino ${}_0n^0$	positron ${}_1e^0$ or e^+	
Mass 1	neg. proton ${}_{-1}e^1$	neutron ${}_0n^1$ or n	proton ${}_1e^1$ or ${}_1H^1$ or p	
Mass 2	.....	.....	deuteron ${}_1H^2$ or ${}_1D^2$	
Mass 4	.....	.....	.....	alpha particle ${}_2He^4$ or α

nucleid. A metal compound of nuclein.

nuclein. $C_{29}H_{49}O_{22}N_9P_3$ = 968.7. A phospho-protein in the nuclei of cells. It is obtained by peptic digestion or acid hydrolysis of albumins, and consists of nucleic acids combined with a base. A grayish powder, slightly soluble in water, soluble in alkalis: used medicinally as a bactericide and alterative.

nucleinic acid. Nucleic acid.

nucleins. A series of phospho-proteins occurring in the nuclei of cells. They consist of nucleic acids, phosphoric acids, simple proteins and xanthine bases. **cell-** True nucleins. **pseudo-** Nucleoalbumin.



nucleoalbumin. Paranuclein, phosphoglobulin, pseudonuclein. A combination of nucleic acid and albumin.

nucleogen. A compound of iron, nuclein and arsenic, used in medicine.

nucleol. Phosphoric acid. A pure nuclein from yeast.

nucleoplasm. (1) The protoplasm of the cell nucleus. (2) The liquid portion of the cell nucleus.

nucleoprotein. A compound protein, which consists of a simple protein combined with nuclein and a hexose (in animals) or a pentose (in plants). They contain from 0.5–3.0 % P, and form an important part of the cell nuclei and blood plasma. The isolated products are white powders, insoluble in water, soluble in weak alkalis and precipitated by acids.

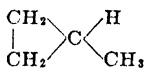
nucleoside. A glucoside-like complex of a base (cytosine, thymine, etc.) and a carbohydrate (hexose, pentose) contained in a nucleotide, e.g., cytidine, thymidine; a nucleotide (q.v.) without the phosphoric acid.

nucleosin. A thymine from the spermatozoa of salmon.

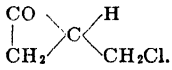
nucleothymic acid. Thymic acid.

nucleotide. The unit atomic groups of nucleic acids: HO—PO—Sugar—Base, where the PO group of one is attached to the "sugar" of the other to form polynucleotides, and the "base" is adenine, uracil, guanine, cytosine, etc. Cf. *nucleoside.*

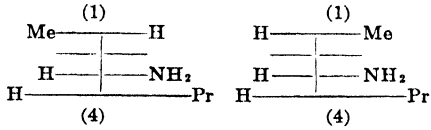
nucleus. A kernel or central part. **acyclic stem-** A hydrocarbon chain, thus $CH_3.CH_2.CH_3$ is the a.s.n. of $ClCH_2.CH_2.CONH_2$. **alicyclic-** A saturated carbon ring. **atomic-** Proton. The positively-charged center of an atom. It differs from the atomic kernel, and consists of (I) positive charges and (I–N) negative charges; where I is the isotopic weight, and N the atomic number. The positive charges are assumed to be hydrogen-kernels or protons. Cf. *nuclear reactions, particles.* **benzene-** The six-carbon ring of benzene (q.v.). **cell-** The central part of protoplasm which is darker than the remainder, and contains structural elements (chromosomes). **condensed-** A carbocyclic or heterocyclic compound, which consists of two or more rings joined by at least two carbon atoms, as in naphthalene, anthracene. **heterocyclic-** A ring compound that has another atom besides carbon in its ring. **homocyclic-** A ring compound which consists of only carbon atoms. **isocyclic stem-** A hydrocarbon ring; thus,



is the *isocyclic stem nucleus* of the compound



naphthalene- The condensed nucleus occurring in naphthalene. **projection-** A misnomer for the graphic representation of a part of an optically-active carbon ring (as, terpenes), by projecting the asymmetric carbon atoms. Thus menthylamine:



where the first and third carbon atom are asymmetric. **stem-** The hydrocarbon obtained by replacing all other atoms (except C, H, and heterocyclic atoms) by hydrogen. All organic compounds can then be classified as derivatives of

Division I.....	Acyclic stem nuclei
Division II.....	Isocyclic stem nuclei
Division III.....	Heterocyclic stem nuclei

nugget. A water-worn piece of native gold.

nujol. The trade name for a heavy medicinal paraffin oil.

null instrument. An instrument used to denote an end-point, or point of balance between two effects, owing to the fact that it ceases to be actuated at that point; *e.g.*, the galvanometer in a Wheatstone bridge circuit.

numal. Allonal.

number. A definite and characteristic value. See *atomic number, iodine number, saponification number*, etc. **preferred-** An industrial standard of the increase in size of a commodity, arranged so that a certain range is divided into 5, 10 20, 40 or 80 steps in which the increase is a constant ratio, that is 60 %, 25 %, 20 %, 6 % or 3 % respectively. Thus for the 5 step series:

	10	16	25	40	63	or 100
	$\frac{4}{4}$	$\frac{5}{4}$	1	$1\frac{1}{2}$	$2\frac{1}{2}$	
or	$\frac{2}{2}$	$\frac{2}{2}$	$\frac{2}{2}$	$\frac{3}{2}$	1	

numbering. In aliphatic compounds the carbon atoms are numbered from end to end, beginning with the carbon atom having a principal radical and continuing along the longest chain. In aromatic compounds the numbers begin with the most saturated or the heterocyclic atom.

numoquin. Optochine.

nupercaine. Percaine.

nupharine. $C_{18}H_{24}O_2N_2$ = 300.3. An alkaloid obtained from the bulbs of *Nuphar luteum*, a Nymphaeaceae (pond lily).

nutgall. Galls, galla. The excrescence of *Quercus infectoria* a Cupuliferae, and allied species, produced by the punctures and deposited

eggs of *Cynips tinctoria*, a small gall fly. Nutgalls contain tannic acids, and are used medicinally as an astringent.

nutmeg. Myristica. **n. butter.** Myristica oil. **American-** Otoba wax. **n. oil.** Myristica oil.

nutriant. A drug that modifies the nutritive processes of the body.

nutrient. A substance that nourishes and serves as food for a body, organism or cell.

nutrilite. A nutrient.

nutriment. Nourishment or food.

nutrition. The processes of taking and absorbing food, and the more remote functions of respiration, circulation, secretion and excretion connected therewith.

nutrose. A sodium caseinate, used with milk as a nutrient.

nux. A nut. **n. moschata.** Myristica. **n. vomica.** Poison nut, quaker nuts, quaker buttons. The dried seeds of *Strychnos nux-vomica*, a Loganiaceae of Ceylon, India, and Northern Australia. It contains 2.5 % alkaloids, principally strychnine and brucine; used medicinally as an extract, fluid extract or tincture, as a tonic and stimulant.

NW acid. Neville and Winther's acid.

nyctanthin. $C_{28}H_{27}O_4$ = 331.22. A crystalline principle from the tree of sadness, *Nyctanthes arbortristis*, an Oleaceae.

Nylander, Claes Wilhelm. 1835–1902. A Swedish chemist, noted for his work in biochemistry. **N. reagent.** A solution of 4 gm. potassium-sodium tartrate, 10 gm. sodium hydroxide, 2 gm. bismuth subnitrate in 100 cc. water. **N. test.** A test for sugar in urine. Add 1 part N. reagent to 10 parts of urine. A black coloration or precipitate indicates the presence of sugar.

nylon. A generic term for any long-chain synthetic polymeric amide which has recurring amide groups as an integral part of the main polymer chain, and which is capable of being formed into a filament in which the structural elements are oriented in the direction of the axis.

nystagmus. An involuntary oscillatory movement of the eyeballs. It is an occupational disease (*e.g.*, of miners) due to inadequate light reaching the eye.

Nyrop process. A method of drying and powdering substances by atomizing their solution into a heated space (*e.g.*, for soap).

O

O. (1) The symbol for oxygen. (2) Abbreviation for orange (see *colors*). **O-** A prefix indicating that the radical is attached to the oxygen atom. (See *notation.*) **O orbit.** The fifth shell. Cf. *Bohr's theory, periodic system.* **O shell.** See *atomic structure.*

o. An abbreviation for *ortho-*, or the 1.2-position.

Ω The Greek capital letter omega. (1) The symbol for ohm. (2) A symbol for the ultimate disintegration products of each of the radioactive series (lead isotopes).

ω The Greek letter omega. (1) A prefix indicating substitution in a side-chain of an aromatic compound. (2) The symbol for angular velocity. (3) Solid angle.

O.M. Abbreviation for organic matter.

oak. A genus of trees, *Quercus*, of the order Cupuliferae, which yield cork, nutgalls, quercin, and tanning materials. **poison-** See *poison oak.* **white-** Quercus. **o. bark.** The cut and dried bark of oak species, *Quercus robur*, containing 25 % tannin; is used in tanning leather, and medicinally as an astringent. **o. red.** $C_{28}H_{22}O_{11}$ = 534.2. A coloring matter obtained by hydrolysis of quercitannic acid. **o. tannin.** (1) Quercin. (2) Quercitannic acid.

oakum. A fiber made by untwisting old hemp ropes. Used medicinally as a dressing and in pads; and (usually impregnated with pitch and tar) for caulking purposes.

oat. Avena.

oatmeal. A coarse flour made from oats.

Obermayer, Fritz. 1861– . An Austrian physician, noted for clinical tests. **O.'s reagent.** A 0.4 % solution of $FeCl_3$ in dilute HCl. **O.'s test** (for indican in urine). To equal parts of urine and chloroform a few drops of Obermeyer's reagent are added, and the mixture is shaken and left to separate. The intensity of the blue color of the chloroform indicates the amount of indican.

Obermüller's test (for cholesterol). The substance is melted in a test tube, and a few drops of propionic aldehyde added; on cooling, the mass becomes successively blue, green, orange and brown-red.

oberphos. A dry, granular superphosphate, used as a fertilizer.

objective. (1) The lens of the microscope nearest the object. (2) The lens of a photographic camera. **achromatic-** A compound lens which corrects chromatic aberration (q.v.). **immersion-** An objective which is dipped into a drop of cedar oil or other liquid covering the object, and thus establishes a continuous film between object and microscope. **tele-** A lens of long focus, used for photographing distant objects.

obsidian. A volcanic glass rock used by Indians for arrow-heads, spear-heads, and other implements.

occlude. To take in or retain in pores; to adsorb.

occluded. Pertaining to a substance which is mechanically adhering to or inclosed in some other substance.

occlusion. The adhesion of a gas or liquid on solid particles or inside a solid mass; as occlusion of hydrogen on palladium, occlusion of solvent on precipitates, or occlusion of air or liquids in crystals.

oceanic sediments. The materials at the sea-bottom, which consist either of the mechanical deposits from rivers or the remains of marine animals; or substances formed by chemical action on the ocean floor. The deep sea deposits have been classified as:

red clay.....	2790 fathoms,	6.7 % $CaCO_3$
radiolarian ooze.	2894 fathoms,	4.0 % $CaCO_3$
diatom ooze.....	1477 fathoms,	22.96 % $CaCO_3$
globigerina ooze.	2049 fathoms,	64.5 % $CaCO_3$
ptoropod ooze...	1044 fathoms,	79.2 % $CaCO_3$

oceanium. Hafnium.

ocher. Paint rock, mineral purple, yellow earth. A powdered iron oxide, usually contaminated with clay. Used as a yellow (limonite), red (hematite) or brown pigment in paints, varnishes, linoleum, paper-making and oilcloth manufacture. **antimony-** Stibiconite. **bismuth-** Bismite. **brown-** Bogore. **Indian-** q.v. **molybdic-** Molybdite. **nickel-** Annabergite. **plumbic-** Brown lead oxide. **red-** A variety of hematite. **Roman-** A deep-orange o. **synthetic-** An artificial pigment, obtained by precipitating ferrous sulfate with soda and lime **telluric-** Tellurite. **tungstic-** Tungstite. **uranic-** Uraconite. **yellow-** Selwynite. A mixture of ferric oxide and clay.

ocherous deposit. The accumulation of precipitated ferric hydroxide and calcium carbonate from mineral waters, due to the escape of carbon dioxide.

ochre. Ocher.

ocimene. $C_{10}H_{16}$ = 136.12. *2.6*-Dimethyl-*1,5.7*-octatriene*. A terpene, d.0.799, b.$_{21mm}$74, from the oil of sweet basil *Ocimum basilicum*, and anemone leaf *Boronia dentigeroides.*

octad. An element or radical that has a valency of eight. Cf. *octet.*

octadecane*. $C_{18}H_{38}$ = 254.4. A liquid hydrocarbon, $d_{20°}$.0.7668, m.30, b.306. Cf. *anthemane.*

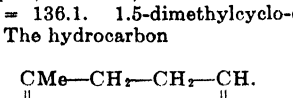
octadecanoic acid*. Stearic acid.

octadecanol*. $C_{18}H_{38}O$ = 270.30. Octadecyl alcohol, $Me(CH_2)_{16}CH_2OH$. White leaflets, d.0.8124, m.59, b.210.5, occurring in spermaceti, whale and linseed oils.

octadecenic acid. *ε-* Petroselinic acid. *θ-* Oleic acid.

octadecyl. The radical $Me(CH_2)_{17}$—. **o. alcohol.** Octadecanol*. **o. ic acid.** Stearic acid.

octadiene. C_8H_{14} = 110.11. Conylene. Colorless liquid, d.0.770, b.130. **dimethylcyclo-** $C_{10}H_{16}$ = 136.1. 1.5-dimethylcyclo-octadiene ($\Delta^{1,5}$). The hydrocarbon



It is a principal constituent of rubber. **methyl-methylene-** Myrcene.

octahedral. Pertaining to a crystal with eight surfaces. **o. iron ore.** Magnetite.

octahedrite. TiO_2. Anatase. A native titanium dioxide, which occurs in dark blue or black tetragonal crystals.

octahedron. A crystal of the isometric system with eight surfaces, each having equal intercepts on all three axes; *i.e.*, a crystal whose 8 faces are equilateral triangles.

octane*. C_8H_{18} = 114.2. Dibutyl. An oily hydrocarbon in petroleum. A colorless liquid, d.0.706, m.−56, b.125, insoluble in water. **amino-** Octylamine*. **chloro-*** Octylchloride. ***2.7*-dimethyl-*** $C_{10}H_{22}$ = 142.17. Biisoamyl. $[Me_2CH(CH_2)_2—]_2$. Colorless liquid, d.0.7264, m.−52, b.100. **iodo-*** Octyliodide.

o. carboxylic acid. Pelargonic acid. **o. dicarboxylic acid.** Sebacic acid. **o. number.** The percentage of *2.2.4*-trimethylpentane, by volume, which must be mixed with *n*-heptane to reproduce the knocking characteristics of the gasoline being tested.

octanoic acid. Caprylic acid.

octanol*. Octyl alcohol.

octanone*. **2-** Mexylmethylketone. **3-** Amylethylketone.

octavalent. Describing an element or radical having a valency of eight.

octaverine. A derivative of phenylisoquinoline, used as a spasmodic; said to be less toxic than papaverine.

octazone. N_8H_4. The hypothetical compound HN:N.NH.N:N.NH.N:NH, known in its derivatives. Cf. *hydronitrogens*.

octene. C_8H_{16} = 112.12. Octylene, caprylene. A group of alkenes, occurring in bergamot and lemon oils, as: **1-**, *n-*, or Δ^1-. $Me(CH_2)_5CH:CH_2$. A colorless liquid, d.0.722, b.123. **2-**, *i-* or Δ^2-. $Me(CH_2)_4CH:CHMe$. **3-** or Δ^3-. $Me(CH_2)_3CH:CHEt$.

octet. A group of eight valence electrons, which is chemically inert and stable. Cf. *polar bond*. **o. theory.** Lewis's theory.

octin. $C_9H_{19}N$ = 141.15. *2*-Methyl-*6*-methylamino-heptene-*2*. $Me_2C:CH.(CH_2)_2CHMe.NHMe$. White powder, used for convulsions.

octine. Octyne*.

octivalent. Octavalent.

octo- A prefix indicating eight, as octohydro-.

octodeca- A prefix indicating eighteen. **o. peptide.** An artificial protein containing nineteen amino-acids or eighteen peptide-groups, —CO.NH—. Cf. *polypeptide*.

octodecane. Octadecane.

octoic acid. Caprylic acid. **o. alcohol.** Octyl alcohol.

octoil. Ethyl hexyl phthalate, used for vacuum pumps, q.v.

octointesserakaide carbonic acid. $C_{16}H_{18}O_{16}$ = 466.2. An octocarboxylic acid, $(COOH)CH_2—(CHCOOH)_6—CH_2COOH$.

octopeptide. An artificial peptide consisting of nine combined amino-acids and having eight peptide groups, —CO.NH—.

octosan. Acetylated cane sugar. It has a bitter taste, and is used as a denaturant.

octyl. The monovalent radical, $—C_8H_{17}$ (capryl), derived from octane. **o. acetate.** $C_{10}H_{20}O_2$ = 172.15. Capryl acetate, $CH_3COOC_8H_{17}$. Colorless liquid, d.0.885, m.−38.5, b.210, **o. alcohol.** $C_8H_{17}OH$ = 130.2. Octanol*, heptyl carbinol, octoic or octylic alcohol, caprylic alcohol. There are several isomers. **n-** 1-hydroxyoctane, $Me(CH_2)_6CH_2OH$. A colorless liquid, d.0.838, m.−18, b.195.5, is soluble in water, alcohol or ether. **d-sec.** 2-hydroxyoctane, $Me(CH_2)_5CHOH.Me$. A colorless liquid, d.0.822, $b._{20mm}86$. **1-sec-** d.0.819, m.−38, b.178. **o. aldehyde.** $C_8H_{16}O$ = 128.2. Caprylic aldehyde, $C_7H_{15}CHO$. A colorless liquid, d.0.821, insoluble in water, soluble in alcohol or ether. **o. amine.** $C_8H_{17}NH_2$ = 129.3. *Normal*. A colorless liquid, b.186, slightly soluble in water, soluble in alcohol or ether. *Secondary*, $Me.CH.NH_2.C_6H_{13}$. A liquid, D.-12.65. **o. chloride.** $C_8H_{17}Cl$ = 148.64. *Normal*. A liquid, $d_{16}°0.8802$, b.180. *Secondary*. A liquid, $d_{16}°.0.8708$, b.175. **o. formate.** $HCOOC_8H_{17}$ = 158.2. The formic acid ester of octane. A colorless liquid, d.0.893, b.198, insoluble in water, soluble in alcohol or ether. **o. iodide.** $C_8H_{17}I$ = 240.0. *Secondary*—, $MeCHIC_6H_{13}$. A colorless, oily liquid, d.1.31, decomp. 200, insoluble in water, soluble in alcohol or ether.

octylene. Octene.

octylic acid. Caprylic acid. **o. alcohol.** Octyl alcohol.

octyne*. C_8H_{14} = 110.11. Octine, caprilydene, hexylacetylene; $CH:C(CH_2)_5Me$. Colorless liquid, d.0.770, b.125.

ocular. The eyepiece of an optical instrument, as a microscope, telescope, spectroscope, polariscope. **compensating-** An eyepiece that corrects the axial aberration of the objective. **Huyghenian-** q.v. **Ramsden-** An eyepiece which increases definition and consists of two plano-convex lenses, with their convex surfaces turned toward each other. **stereoscopic-** A set of two eyepieces giving a stereoscopic effect.

oculin. A glycerin extract of the corpus ciliariae of the eye.

ocymene. Ocimene.

od. Od-rays. The luminescence of living organisms. Cf. *scotography*.

odallin. A glucoside from *Cerebera odollam*. Cf. *cerberin*.

odor, odour. The volatile portion of a substance that is perceptible by the sense of smell. Six classes:

1. Spicy, like anise and clove.
   a. *aromatic:* eugenol, thymol, menthol, apiol, carvacrol, methylsalicylate.
   b. *sweet:* nitrobenzene, benzaldehyde.
   c. *citric:* citral.
2. Flowery, like geranium and heliotrope.
   a. *floral:* citronellol, terpineol, ionone, methylanthranilate.
   b. *fragrant:* coumarin, vanillin, anisaldehyde.
   c. *pungent:* heliotropine, styrone, musk, trinitroisobutyltoluene.
3. Fruity, like bergamot and acetic ether.
   a. *ethereal:* ether, alcohol, acetone, ethylacetone.
   b. *esteric:* amylacetate, ethylvalerate, ethyl acetate.
4. Resinous or balsamic, like turpentine and eucalyptus.
   a. *camphoric:* terpineol, camphor, eucalyptol.
   b. *heavy:* chloroform.
5. Burnt, like tar and pyridine.
   a. *empyreumatic:* aniline, toluidine, benzene, xylene.

b. *tarry:* phenol, cresol, guaiacol.
c. *narcotic:* pulegone, pyridine.
6. Foul, like hydrogen sulfide and mercaptans.
a. *fecal:* skatole, indole.
b. *caprylic:* valeric acid, butyric acid.
c. *fishy:* trimethylamine, cacodyl.
d. *garlic:* ethylsulfide, phosphine.

ammoniacal- An odor resembling ammonia. **aromatic-** See (1a). **balsamic-** An aromatic odor resembling balsam. **burnt-** An odor resembling tar or burnt organic matter. **camphorous-** An odor resembling camphor, see (4a). **caprylic-** See (6b). **citric-** See (1c). **delicate-** A slight and agreeable odor. **empyreumatic-** An odor resembling burnt animal or vegetable matter. **esteric-** See (5b). **ethereal-** A delicate fruity or flowery odor, see (3a). **fecal-** See (6a). **fishy-** See (6c). **floral-** See (2a). **flowery-** The odor of flowers and blossoms. **fragrant-** See (2b). **foul-** See (6). **garlic-** See (6d). **heavy-** See (4b). **narcotic-** See (5c). **pungent-** A strong odor. **resinous-** An odor resembling rosin or turpentine. **putrefactive-** The odor of decaying animal matter. **sweet-** See (1b). **spicy-** An odor resembling spices, like anise, cinnamon, cloves. **tarry-** An odor resembling tar.

o. intensity. The strength of an odor (cf. *olfacty*). Various odors are used as a warning for miners, or for the detection of leaks in pipe lines or boilers. The o. intensity is determined (cf. *olfacty*) in terms of the minimum perceptible concentration; *e.g.*,

musk	0.00004 mg. per liter air
iodoform	0.018 mg. per liter air
diamylsulfide	0.001 mg. per liter air
propylmercaptan	0.006 mg. per liter air
butyric acid	0.009 mg. per liter air
amylisovalerate	0.012 mg. per liter air
valeric acid	0.029 mg. per liter air
oil of peppermint	0.03 mg. per liter air
methylsalicylate	0.1 mg. per liter air
acetic ether	0.68 mg. per liter air
chloroform	3.3 mg. per liter air

o. permanency. The persistence of an odor, measured by placing a definite quantity of the oil on a filterpaper, exposing it to air, and comparing its odor after certain time intervals. Some of the most persistent odors, in decreasing order of permanence, are: patchouli oil, sandal wood oil, cinnamon oil, cassia oil, citronella oil, origanum oil, thyme oil, neroli oil. **o. theory.** The assumption that odor sensation is due to the combination of chemical radicals (*osmophoric* groups) of the odorous substance, with certain substances of the nasal membrane (*osmoceptors*), on analogy with Ehrlich's side chain theory of immunity. Some of the osmophoric groups are supposed to be the radicals OH, CHO, CO, and COOH.

odorator. An atomizer or nebulizer for diffusing liquid perfumes.

odoriferous. Giving off odor; fragrant.

odorimetry. Olfactometry. The measurement of the intensity and permanency of odors.

odoriphore. Osmophore.

odorometer. An apparatus for measuring the intensity of odors and stenches for industrial purposes.

odorous. Having an odor. **o. principle.** A terpene, essential oil or balsam.

oe- See *e-*.

oenanthal. Enanthaldehyde.

oenanthe. Five-finger root, water drop wort, dead tongue. The dried herb of *Oenanthe crocata*, a highly-poisonous umbelliferous plant.

oenanthic acid. Heptoic acid.

oenanthyl. Enanthyl.

oenidin, oenin. Anthocyanins from grapes.

oenotannin. A tannin in wines.

Oersted, Hans Christian. 1777–1851. A Danish physicist who discovered electromagnetism (in 1819) by passing a current of electricity through a wire in the same plane as a suspended magnetic needle.

oerstedite. Hydrated zircon containing titania.

oestradiol. $C_{18}H_{24}O_2$ = 272.2. Estradiol*, dimenformon, ovocylin, progynon-DH. The estrogen 3,17-dihydroxy-1,3,5-estratriene; in it a secondary alcohol group replaces the ketone group of oestrone (q.v.).

oestrane. $C_{18}H_{30}$ = 146.2. *2*-Methyl-*1,2*-cyclopentano-perhydro-phenanthrene. A tetracyclic hydrocarbon and parent-substance of sex-hormones. Cf. *sterols, cholane.*

oestrin. Oestrone.

oestriol. $C_{18}H_{24}O_3$ = 288.2. Estriol*, theelol, trihydroxyoestrin. A trihydric alcohol from pregnancy urine. White needles, m.218, $[\alpha]_D$ +61°, insoluble in water. Cf. *cholane.*

oestrol. Oestriol.

oestrone. $C_{18}H_{22}O_2$ = 270.2. Estrone*, theelin, emmenin, thelykinine, folliculin, progynon, menformon. The female sex hormone obtained from ovarian follicles. It is a monoatomic keto alcohol (for structure, see *cholane*). White monoclinic crystals, m.250, $[\alpha]_D$ +160°, insoluble in water, soluble in organic solvents. It occurs also in the placenta and urine of pregnant women. Cf. *androsterone.*

official. Pertaining to the United States, British or any other Pharmacopoeia. **o. compound.** A substance listed in a pharmacopoeia. **o. test.** An analytical method prescribed and listed in a pharmacopoeia.

officinal. (1) For sale in an apothecarie's shop or drug store. (2) Same as official.

O.G. Abbreviation for original gravity.

Ohm, Georg Simon. 1787–1854. A German physicist. **O.'s law.** The strength or intensity of an unvarying electric current (C) is directly proportional to the electromotive force (E), and inversely proportional to the resistance (R) of the circuit. Thus $C = E/R$.

ohm. A unit of electrical resistance, and the primary practical unit of electricity: Ω **international-** The resistance offered to an unvarying electric current by a column of mercury at 0°C., 14,4521 gm. in mass, of constant cross-section and 106.300 cm. long. 1 Int. ohm = 1.00052 absolute ohm = 10 e.m.u. = $\frac{1}{9} \times 10^{-11}$ e.s.u. = 1.01367 B.A. ohms = 1.06292 Siemens ohm. 1 B.A. ohm = 0.98651 Int. ohm. 1 Siemens ohm = 0.94080 Int. ohm. **legal-** (1884) 0.9972 international ohm. An obsolete standard. **mego-** A million ohms. **micro-** A millionth of an ohm. **reciprocal-** Mho, or ohm^{-1}. A unit of electric conductivity (q.v.); the reciprocal of the resistance. **true-** The resistance of a column of mercury 106.25 cm. long at 0°C., of 1 sq. mm. cross section. It is an experimentally-determined value, and equals 10^9 e.m.u.

ohm^{-1}. See reciprocal *ohm.*

ohmammeter. A combination ohm-meter and ampere-meter.

ohmmeter. An instrument for measuring electric resistance in ohms.

ohmoil. A mineral oil stabilized by the addition of agerite (aldol-α-naphthylamine) to prevent a decrease in electrical resistivity on prolonged heating.

oiazines. Orthodiazines. A group of heterocyclic compounds having two nitrogens in the ortho-position in the ring; as, pyridazine, cinnoline. Cf. *miazines, piazines.*

-oic. A suffix indicating the —COOH group; *e.g.*, methyloic, —COOH; ethyloic, —CH_2.COOH; propyloic, —CH_2CH_2COOH.

-oid. A suffix indicating: (1) resemblance or likeness; as, alkaloid, metalloid; (2) a preparation containing the concentrated active principles of a drug; as, echinacoid.

oil. (1) A liquid that is not miscible with water, and is generally combustible and soluble in ether. Three main groups:

A. Fixed oils, which consist of the fatty substances of vegetable and animal organisms, and contain the esters (usually glycerol esters) of fatty acids.

B. Volatile oils or essential oils, which consist of the odorous principles of vegetable organisms and contain terpenes, camphors, and related compounds.

C. Mineral oils, fuel oils and lubricants, derived from petroleum and its products, which consist of hydrocarbons.

(2) Natural oil, q.v. **aniline-** Crude aniline. **acetone-** See *acetone.* **blown-** A fixed oil that has been oxidized by a current of air. **boiled-** See *linseed oil.* **compounded-** A mixture of essential oils resembling certain flower odors and flavors used in perfumery. **crude-** Petroleum. **distilled-** Essential. **drying-** See *drying oil.* **edible-** A fixed oil, used as food or a food accessory. **essential-** The volatile or distilled oils of plants, leaves, flowers. They contain aromatic hydrocarbons, aldehydes, alcohols, ethers, acids, terpenes or camphors. **ethereal fruit-** A mixture of aromatic substances resembling fruit: banana, apples, etc. in odor. **expressed-** Fatty oil. **fatty-** The nonvolatile oils of plants and animals. They contain mixtures of fatty acids and their esters, (usually triglycerides), and are subdivided into three groups: solid (mainly stearin), semi-solid (mainly palmitin), and liquid (mainly olein). **fish-** See *fish* oils. **fixed-** Fatty. **flower-** See *essential,* or *synthetic oil.* **liquid-** A fatty oil that is liquid at room temperature. It contains chiefly olein, and can be solidified by hydrogenation. **lubricating-** A mineral oil used for lubrication. **mineral-** An oil, mainly hydrocarbons derived from inorganic matter, as petroleum, coal oil. **natural-** A mixture of hydrocarbon oils with their oxidation products; as, crude petroleum. **non-drying-** See *non-drying oil.* **quintessential-** A highly-aromatic substance derived from a natural essential oil; as, anethole from anise oil, carvol from caraway oil, eugenol from clove oil. **semisolid-** A fixed oil, melting at room temperature, and consisting chiefly of the triglyceride of palmitic acid (palmitin). **residual-** An oil which does not distil in refining processes. **solid-** An oil or fat that is solid at room temperature and consists chiefly of stearin, the triglyceride of stearic acid. **straight-cut-** A mineral oil fraction having a relatively small difference between the initial and final boiling-points. **synthetic drying-** SDO. An amber-colored, viscous liquid which polymerizes on drying to a hard, highly-resistant and chemically resistant, inflexible film. It is used as a protective coating. **volatile-** Essential oil.

o. of absinthe. Wormwood oil. **o. of ajava.** Ajowan oil. **o. of albahaca.** Tolu oil. **o. of almond, artificial.** Benzaldehyde. **o. of anthos.** Rosemary oil. **o. of ants.** Furfural. **o. of apple.** Amyl valerate. **o. of arachis.** Peanut oil. **o. of aspic.** Spike oil. **o. of badian.** Star *anise* oil. **o. of bananas.** Amyl acetate. **o. of bay.** Laurel oil. **o. of bay berry.** Myrcia oil. **o. of benne.** Sesame oil. **o. of brazil nuts.** Castanhao oil. **o. of candle nuts.** Lumbang oil. **o. of caoutchouc.** Terpene. **o. of checkerberry.** Gaultheria oil. **o. of china wood.** Tung oil. **o. of chinese beans.** Soya bean oil. **o. of chinese cinnamon.** Cassia oil. **o. of cognac.** Enanthic ether. **o. of cuscus.** Vetiveria oil. **o. of dog-fish.** Shark oil. **o. of dolphin.** Porpoise oil. **o. of earth nuts.** Peanut oil. **o. of fir.** Pine oil. **o. of flaxseed.** Linseed oil. **o. of Florence.** Olive oil. **o. of garlic.** Allyl sulfide. **o. of gingelly.** Sesame oil. **o. of glonoin.** Nitroglycerin. **o. of goosefoot.** Chenopodium oil. **o. of gourd.** Cucumber oil. **o. of ground-nuts.** Peanut oil. **o. of gynocardia.** Chaulmoogra oil. **o. of hoofs.** Neats-foot oil. **o. of illicium.** Star-*anise* oil. **o. of katchung.** Peanut oil. **o. of lemon.** Lemon oil. **o. of maize.** Corn oil. **o. of melissa.** Balm oil. (*East Indian-*) Lemongrass oil. **o. of mignonette.** Reseda oil. **o. of mirbane.** Nitrobenzene. **o. of monarda.** Horsemint oil. **o. of mosoi flowers.** Ylangylang oil. **o. of mustard, artificial.** Allyl isothiocyanate. **o. of mirbane.** Neroli oil. **o. of orange.** Orange oil. **o. of origanum.** Wild *marjoram oil.* **o. of palmarosa.** Turkish *geranium oil.* **o. of pears.** Amyl acetate. **o. of pennyroyal.** Hedeoma oil. **o. of pineapple.** Ethyl butyrate. **o. of ricinus.** Castor oil. **o. of snake root.** Asarum oil. **o. of sperm.** Whale oil. **o. of tar.** An empyreumatic oil obtained by distillation of pine tar. **o. of theobroma.** Cacao butter. **o. of verbena.** *East Indian-* Lemongrass oil. *Singapore-* Citronella oil. **o. of vitriol.** Concentrated commercial sulfuric acid. **o. of wintergreen.** Gaultheria oil. *artificial-* Methyl salicylate. *synthetic-* Methyl salicylate.

oil analysis. The identification of an oil, and the determination of its quality, purity, and constituents. It is divided into the determination of:

Physical constants:
- a. specific gravity
- b. boiling point
- c. optical rotation
- d. refractivity
- e. congealing point or melting point
- f. flash or inflammation point
- g. solubility.

Chemical properties:
- a. saponification value
- b. acetylation value } ester value
- c. formylation value }
- d. iodine value
- e. acid value.

o. bath. A metal container, similar to a water bath, filled with oil (linseed oil, rape-seed oil). It is used to heat glass apparatus to tem-

peratures of 100–200°C. **o. cake.** A by-product in the manufacture of oils. It is a compact mass of crushed seeds or nuts, from which the oil has been expressed or extracted. It contains the proteins, carbohydrates, salts, and some residual oil, and is a most valuable cattle food; also used as a basis for artificial fertilizers. The percentage composition is shown in the following table (Sadtler's Industrial Organic Chemistry):

	Water	*Fat*	*Fibers*	*Ash*	*Proteins*
earth-nut cake...	11.5	8.8	31.1	7.2	41.4
cottonseed cake..	13.0	7.5	51.0	8.5	20.0
rape-oil cake.....	10.1	9.2	41.9	6.5	31.9
colza-oil cake....	11.4	9.0	42.8	6.3	30.6
sesame-oil cake...	10.4	10.1	38.8	9.8	31.9
beech-nut cake...	11.4	8.5	49.8	5.3	24.0
linseed cake.....	10.6	9.8	44.6	6.5	28.5
camelina cake....	9.6	0.2	50.9	7.0	23.3
poppy-oil cake...	9.5	8.9	37.7	11.4	32.5
sunflower-oil cake	10.2	8.5	48.9	11.4	21.0
hempseed-oil cake	10.0	8.3	48.0	12.2	21.5
palm-nut cake...	9.5	8.4	41.0	10.6	30.4
coconut cake....	10.0	9.2	40.5	10.5	30.0

o. cloth. Linoleum. A fabric (canvas) coated with a mixture of linseed oil and pigments. **o. gas.** A group of combustible hydrocarbon gases, such as aerogene gas, Blau g., pentane g., carbo g. **o. seed cake.** O. cake. **o. shale.** A compact sedimentary rock which yields 12–60 gallons oil per ton on distillation, and contains a considerable ash (30–50 % SiO_2, 12–67 % Fe_2O_3, 0.5–33 % CaO, 0.3–8 % MgO). It occurs in Scotland, Australia, Nevada, Colorado and Wyoming. Cf. *kerogen.* **o. stone.** A fine-grained stone for sharpening knives and scalpels on which oil is used instead of water. **o. sugars.** Oleosacchara. A trituration of 2 cc. essential oil with 100 gm. sugar; used medicinally and for flavoring purposes. **o. supply.** The world-supply of o.'s (1930/31) is 26,623 Mill. pounds (weight) of which:

vegetable o.....	17.424 Mill. pds.
animal o.....	9.540 Mill. pds.
whale o.....	1.474 Mill. pds.
fish o.....	211 Mill. pds.

o. thief. An apparatus for taking samples of oil from the top, center and bottom of tank cars or storage vessels.

oildag. See *graphite, dag.*

ointment. Unguentum. A salve or fatty preparation for external or cosmetic use. **basilicon-** Resin (26 %) compounded with bees-wax, olive oil and lard. **blue-** Mercury ointment. **boric acid-** A mixture of 10 % boric acid, 85 % white petrolatum and 5 % paraffin; used as an antiseptic. **brown-** Mother's salve. A mixture of camphorated brown plaster, suet, and olive oil. **camphor-** A mixture of 22 % camphor with lard and white wax; used as an anodyne and antipyretic. **carbolized-** Phenol ointment. **iodine-** A mixture of 4 % I and 4 % KI with glycerin and benzoinated lard. **iodoform-** A mixture of 10 % iodoform with benzoinated lard. **mercury-** Mercurial ointment. An emulsion of 50 % finely-divided mercury in 10 % lard and 35 % suet. **mercury-, diluted.** Blue ointment. An emulsion of 30 % mercury in 25 % lard and 45 % suet; used as an antiparasitic. **phenol-** A simple ointment containing 2 % phenol; used as a wound antiseptic. **simple-** Unguentum. A mixture of benzoinated lard with 20 % white wax; used as an ointment base. **sulfur-** A mixture of 20 % sublimed sulfur and 10 % potassium carbonate with benzoinated lard; used as an antiparasitic. **zinc oxide-** A mixture of 20 % zinc oxide with white petrolatum or benzoinated lard; used as an antiseptic and astringent.

oiticia oil. A white, buttery fat from the nuts of the North Brazilian tree *Licania rigida*, a Rosaceae. It resembles Chinese wood oil, and contains coupeic acid.

okonite. (1) $CaH_2Si_2O_6$. A native calcium silicate in compact fibrous masses. (2) An insulating material obtained by vulcanizing a mixture of ozokerite and resin with rubber and sulfur.

-ol. A suffix, which indicates a hydroxyl group in organic compounds, as in alcohols and phenols, (cf. *-ole*).

old age theory. A theory which assumes that the stability of the elements depends on the age of the earth; *e.g.*, in the present eon the radioactive elements are the upper limit, and in eons to come elements with higher atomic weights may make their appearance. Eons ago the properties of the elements were different from those of today. The hypothesis is that the trend is a slow evolution through the periodic system as a result of the gradual slowing-down of the electronic motions of the atoms and the consequent increase in mass. Cf. *transuranium*, extinct *elements*.

-ole. A suffix denoting: (1) a substance which is not an alcohol but to which a name ending in -ol was originally given; as, indole. (2) An aromatic ether; as, anisole, estragole.

Oleaceae. Olive family, a group of trees and shrubs:

Olea europaea.....	sweet olive / olive oil
Fraxinus ornus.....	manna
Fraxinus americana.....	white ash
Fraxinus excelsior.....	fraxinin
Chionanthus virginica (fringe tree)	chionanthus
Jasminium grandiflorum.....	jasmine oil
Nyctanthes arborthristis.....	nyctanthin
Ligustrum vulgare (privet).....	syringin
Syringa vulgaris.....	syringin

oleaginous. Oily or greasy.

oleander. Nerium. A genus of subtropical, poisonous shrubs of the order Apocyanaceae, which yield essential oils, karabin, neriin, pseudocurarine and oleandrin.

oleandrin. $C_{31}H_{48}O_9$ = 270.2. A glucoside from *Nerium oleander*, an Apocyanaceae. Yellow amorphous powder, m.70–75, insoluble in water, soluble in alcohol or ether. It resembles digitoxin. Cf. *neriin*.

oleanol. $C_{29}H_{48}O$ = 412.2. Needles, m.216–230, derived from caryophyllin; sometimes used as a synonym for this compound.

oleanolic acid. Caryophyllin.

oleastene. $C_{21}H_{36}$ = 288.4. A hydrocarbon from olive oil.

oleasterol. $C_{20}H_{34}O$ = 290.26. A phytosterol from olive oil.

oleate. A compound of an alkaloid or a metal with oleic acid. Used medicinally for external applications; technically, in soaps and paints.

olefiant gas. Ethylene.

olefine. One of a series of unsaturated hydrocarbons of the type, C_nH_{2n} = ethylene series. They are distinguished by the suffix, -ene, as in ethylene, propylene, etc. See *ethylene series.* **o. acid.** A series of unsaturated hydrocarbon acids of the general type, $C_nH_{2n-1}COOH$. See *acrylic acids.* **o. alcohol.** A series of unsaturated alcohols of the general type, $C_nH_{2n-1}OH$; such as, CH_2:CH.OH, vinol, vinyl alcohol; CH_2:CH.CH_2.OH, propenol-3, allyl alcohol. **o. aldehydes.** A series of unsaturated aldehydes of the general type, $C_nH_{2n-1}CHO$, as CH_2:CHCHO, acrolein; MeCH:CH.CHO, crotonaldehyde. **o. ketones.** A series of unsaturated ketones of the general type, $C_nH_{2n}CO$; as, MeCH:CH.CO.Me, ethidene acetone; Me_2C:CH.CO.Me, mesityl oxide; Me_2C:CH.CO.CH:CMe_2, phorone.

oleic acid. $C_{17}H_{33}COOH$ = 282.4. Oleinic acid, *9*-octadecanoic acid*, red oil, $Me(CH_2)_7CH:CH(CH_2)_7COOH$. An unsaturated acid. Colorless needles, d.0.891, m.14, b.286, insoluble in water, soluble in alcohol or ether. It occurs in many (non-drying) oils, and can be hydrogenated to stearic acid (by catalysis with nickel); used in the preparation of soap. **iso-** Elaidic acid (cis-oleic acid), rapinic acid. **7-hydroxy-** Ricinoleic acid. **o. series.** Acrylic acids.

olein. $(C_{18}H_{33}O_2)_3C_3H_5$ = 885.1. (1) Triolein, glyceryl trioleate. The glyceride of oleic acid. A colorless oil, m. −6, insoluble in water, soluble in alcohol or ether. It is the main constituent of olive and many other oils. (2) Oleine. A mixture of the fatty acids obtained by steam- or vacuum-distillation of the products of acid hydrolysis of fats. (3) A glyceride of oleic acid, as, mono-olein, diolein.

oleinic acid. Oleic acid.

oleite. Sodium sulforicinoleate.

oleo- A prefix, indicating oil. **o. creosote.** Creosote oleate. **o. guaiacol.** Guaiacol oleate. **o. oil.** A yellow oil expressed from tallow, consisting of olein; used for making oleomargarine.

oleomargarine. (1) Margarine. A butter substitute made from a mixture of hydrogenated fatty oils; colored with aniline dyes. (2) The liquid fat from which margarine is made by hydrogenation.

oleometer. A hydrometer for oils.

oleoptene. See *stearoptene.*

oleoresin. (1) A natural combination of resinous substances and essential oils occurring in or exuding from plants, *e.g.,* benzoin and peru balsam. (2) A pharmaceutical preparation or ethereal extract of drugs (oleoresin capsicum, cubeb, ginger). **o. aspidium.** Oleoresina aspidii, oleoresin of male fern. A thick, olive-green liquid extracted from the male fern, which contains filicic acid; used medicinally as an anthelminthic. **o. capsicum.** Oleoresina capsica, oleoresin of red pepper, cayenne pepper. A dark brown soft mass obtained by acetone extraction of the fruit of capsicum species; used medicinally for external plasters, internally as a gastric stimulant, and as a spice for pickles. **o. cubeb.** Oleoresina cubeba. An alcohol extract from the fruits of *Piper cubeba,* insoluble in water, soluble in alcohol or ether; used medicinally as an expectorant. **o. ginger.** Oleoresina zingiberis. An acetone extract from Jamaica ginger, the rhizome of *Zingiber officinale;* used medicinally as a carminative. **o. lupulin.** An alcohol extract from the seeds of *Humulus lupulus;* used medicinally as a bitter tonic. **o. male fern.** Oleoresin aspidium. **o. parsley.** Oleoresina petroselini, liquid apiol. A dark-green semi-liquid mass obtained by alcohol extraction of parsley seeds, insoluble in water, soluble in alcohol, chloroform or ether; used medicinally as an emmenagogue. **o. pepper.** Oleoresina piperis. An acetone extract of pepper seeds, insoluble in water, soluble in alcohol or ether; used medicinally as a carminative.

oleoresina. The Latin for oleoresin. **o. aspidii.** Oleoresin aspidium. **o. capsici.** Oleoresin capsicum. **o. cubeba.** Oleoresin cubeb. **o. petroselini.** Oleoresin parsley. **o. piperis.** Oleoresin pepper. **o. zingiberis.** Oleoresin ginger.

oleosacchara. Oil sugar.

oleostearin. Beef stearin. An edible solid fat obtained from certain fatty tissues of the cow.

oleum. (1) The Latin name for oil. (2) Nordhausen acid, fuming sulfuric acid. A solution of sulfur trioxide in conc. (97–99 %) sulfuric acid, used as a reagent in chemical industry. **o. alchitri.** Juniper oil. **o. amygdalae amarae.** Bitter almond oil. **o. anisi.** Anise oil. **o. anonae.** Ylang-ylang oil. **o. anthemidis.** Chamomile oil. **o. arachis.** Peanut oil. **o. auranthii.** Orange peel oil. **o. bubulum.** Neatsfoot oil. **o. cadinum.** Cade oil. **o. cajeputi.** Cajeput oil. **o. calcis.** A solution of calcium chloride, produced by exposing the solid to air. **o. cari.** Caraway oil. **o. caryophylli.** Clove oil. **o. cassiae.** Cassia oil. **o. chaulmoograe.** Chaulmoogra oil. **o. chenopodii.** Chenopodium oil. **o. cinnamoni.** Cinnamon oil. **o. copaibae.** Copaiba oil. **o. coriandri.** Coriander oil. **o. crotonis.** Croton oil. **o. cubebae.** Cubeb oil. **o. cupressi.** Cypress oil. **o. eucalypti.** Eucalyptus oil. **o. foeniculi.** Fennel oil. **o. gaultheriae.** Wintergreen oil. **o. gossypii seminis.** Cottonseed oil. **o. graminis citrati.** Lemongrass oil. **o. juniperi.** Juniper berry oil. **o. lavendulae.** Lavender flower oil. **o. limonis.** Lemon oil. **o. lini.** Linseed oil. **o. menthae piperitae.** Peppermint oil. **o. menthae viridis.** Spearmint oil. **o. morrhuae.** Codliver oil. **o. myristicae.** Nutmeg oil. **o. olivae.** Olive oil. **o. phosphoratum.** Phosphorated oil. **o. picis liquidae.** Tar oil. **o. pimentae.** Pimenta oil. **o. pini.** Pine needle oil. **o. pini pumilionis.** Pine oil. **o. pulegii.** Pennyroyal oil. **o. ricini.** Castor oil. **o. rosae.** Rose oil. **o. rosemarini.** Rosemary oil. **o. sabinae.** Savine oil. **o, santali.** Sandalwood oil. **o. sassafras.** Sassafras oil. **o. sesami.** Sesame oil. **o. sinapis volatile.** Mustard oil. **o. terebinthinae.** Turpentine oil. **o. terbinthinae rectificatum.** Turpentine oil, rectified. **o. theobromatis.** Cacao butter. **o. thymi.** Thyme oil. **o. tiglii.** Croton oil.

oleyl. The radical, $C_{17}H_{33}CO$—, derived from oleic acid. **o. alcohol.** *9.10*-Octadecanol.

olfactometry. Odorimetry.

olfacty. A unit for expressing intensity of odor, q.v. It is the threshold value, or the minimum perceptible concentration expressed in grams per cc; this multiplied by $6.06 \times 10^{21}/M$, where M is the molecular weight, gives the number of molecules per cc; thus (cf. odor intensity):

ionone	16×10^6 molecules per cc.
ethyldisulfide	15×10^6 molecules per cc.
skatole	16×10^6 molecules per cc.
vanillin	20×10^6 molecules per cc.
valeric acid	47×10^6 molecules per cc.

olibanoresin. $C_{14}H_{22}O$ = 206.1. A neutral resin obtained from olibanum.

olibanum. Frankincense, gum thus. A gum resin obtained from incisions in the trees of various *Boswellia carteri* and other species from South Arabia and Somaliland. Yellow tears or reddish fragments; used in perfumery, as incense, and medicinally as an emmenagogue. Cf. *boswellic acid.* **o. oil.** An essential oil from olibanum containing pinene, dipentene, and phellandrene, d.0.895, insoluble in water, soluble in alcohol or ether. Used in medicine for bronchial affections.

-olid. A suffix indicating a lactone, q.v.

olifiant gas. Ethylene.

oligoclase. A silica mineral (q.v.) of the feldspar group.

oligodynamic. Small but powerful; the inhibition of fermentation or growth of bacteria due to the presence of metals (e.g., iron containers).

oligodynamics. The bactericidal action of metals, as Ag and Cu.

oligonite. $FeMn(CO_3)$. Native iron and manganese carbonate.

oligosaccharide. A carbohydrate that, in contrast to polysaccharides, yields on hydrolysis a small number of monosaccharose molecules; hence the di-, tri-, and tetra-saccharides.

olistomerism. Describing reactions in which the same substrates yield the same final products, but via different intermediate stages.

olive. The fruit of *Olea europaea*, an Oleaceae, used as food and in the manufacture of olive oil. **o. oil.** A fixed oil expressed from the olive; a pale yellow liquid, d.0.91, m. −6, insoluble in water, soluble in alcohol, ether, or chloroform. It contains olein and palmitin; impure grades are adulterated with other oils (cotton-seed oil, peanut oil). Used as a food, in pharmaceutical preparations, and in the manufacture of castile soap. **o. kernel oil.** A yellow oil extracted or expressed from the kernel of olives, d.0.918, insoluble in water, soluble in alcohol or ether; used as food, a lubricant, and in soap manufacture.

olivenite. $CuO.As_2O_5.H_2O$. Wood copper. A native copper arsenate.

olivine. (1) See *olivines.* (2) $(Mg,Fe)_2SiO_4$. Peridot, chrysolite. An orthorhombic magnesium and iron silicate, usually green crystals in many rocks; used as a gem and refractory. Cf. *chrysotile, peridotite.* **o. diabase.** A diabase containing olivine crystals.

olivines. A group of silica minerals, (q.v.) generally the sulfates of divalent metals.

Olsen's testing machine. An apparatus for determining the tensile strength of cement. It consists of an arrangement of levers and two heavy forceps, between which the specimen is placed and torn apart.

oly. The scum on molten metal.

omal. Trichlorphenol.

omega. The Greek letter ω or Ω; see under O.

-on. A little-used suffix indicating a ketonic grouping, (cf. *-one*).

ŏnanthol. Enanthol.

-one. A suffix indicating: (1) A ketone. (2) A substance related to the starches and sugars. (3) An alkone, C_nH_{2n-4}. Cf. *hydrocarbons.*

-onic. A suffix which usually denotes an acid produced by oxidation of an aldehydic group in an organic compound.

Ongstrem. The phonetic spelling of Ångström (q.v.).

onion. The edible bulb of *Allium cepa*, a Liliaceae; used as a condiment, food, and for the preparation of a syrup. **o. oil.** A light yellow oil of penetrating odor which consists mainly of allylpropyldisulfide, d.1.04, insoluble in water, soluble in alcohol or ether; used in flavoring.

onium compound. A group of organic compounds of the type RXH_y, which are isologs of ammonium and contain the element X in its highest positive valency, as

X is pentavalent:

ammonium	$-NH_4$
phosphonium	$R.PH_4$
arsonium	$R.AsH_4$
stibonium	$R.SbH_4$
X is tetravalent:	
oxonium	$R.OH_3$
sulfonium	$R.SH_3$
selenonium	$R.SeH_3$
stannonium	$R.SnH_3$
X is trivalent:	
iodonium	$R.IH_2$

They may also be considered as addition compounds, cf. *oxonium, carbonium, stibonium, -inium, -ylium.*

onocerin. $C_{28}H_{42}(OH)_2$ = 388.3. Onocol. A secondary bivalent alcohol, m.232, from the root of *Onomis spinosa;* a Leguminosae.

onocol. Onocerin.

onofrite. A native sulfo-selenide of mercury, Hg(S, Se).

ononetin. $C_{23}H_{22}O_6$ = 394.20. A split-product of ononin.

ononid. $C_{18}H_{22}O_8$ = 366.2. A neutral principle from the root of *Ononis spinosa,* a leguminous plant of Europe. A dark yellow powder, soluble in water or alcohol.

ononin. $C_{28}H_{28}O_{11}$ = 502.2. A glucoside from the root of *Ononis spinosa,* a Leguminosae of Europe. A white crystalline powder, m.201, slightly soluble in hot water or alcohol.

onychograph. A sphygmograph for recording variations in the blood pressure of the finger tips.

onyx. Calcareous sinter. A variety of agate (chalcedony quartz) in white and black alternate strata; used as a gem. **o. marble.** Mexican onyx. A calcite resembling onyx, and used as an ornamental stone.

ŏöcyanin. A blue coloring matter from certain birds' eggs.

ŏölite. Peastone. A compact limestone.

ooze. (1) The soft and slimy mud at the bottom of lakes and oceans. Cf. *oceanic sediment, diatoms.* (2) The slow exudation of a liquid.

opacifier. A substance which, when added to a transparent substance, makes it opaque; as, zirconium oxide, stannic hydroxy or arsenic and antimony compounds when added to glass.

opacity. The property of being impervious to light rays; not transparent or translucent. Cf. *opaque.*

opal. $SiO_2.xH_2O$. An amorphous form of silica containing a variable amount of water. Vitre-

ous, transparent to translucent masses of various colors, which reflect the light after refracting it so that a play of rainbow colors is produced. There are several varieties, to which specific names have been given: **agate-** An opal of agate-like structure. **cacholong-** An opaque porcelain-white, blue-white or pale yellow variety. **fire-** A red to yellow o. with fire-like reflections. **girasol-** A blue-white variety, translucent, with red reflections in strong light. **harlequin-** A variety having a variegated play of colors on a reddish background, resembling a fire opal. **hydrophan-** A white, opaque opal, that becomes transparent when immersed in water. **jasp-** A variety containing iron. **lechosos-** A variety with deep green flashes of colors. **moss-** A variety with moss-like inclusions of manganese oxide. **pearl-** An opaque, bluish-white, lustrous variety. **semi-** A native form of silica. **tabasheer-** An amorphous, opal-like silica deposited in the joints of bamboo. It resembles hydrophane. Cf. *hyalite*, *isopyre*. **wood-** A wood that has become silicified into opal.

o. flashes. The bright colors of an opal in certain positions, due to the refraction of light by thin films or layers. **o. glass.** A milky white glass. **o. jasper.** A form of silica resembling jasper.

opalescence. Milky irridescent reflected light from a mineral or from a solution, due in the latter case to the presence of a small quantity of precipitate.

opalescent. (1) Resembling an opal in appearance. (2) A milky turbidity.

opalescin. An albumin obtained from milk, it forms opalescent solutions.

opalized wood. A petrified wood resembling opal.

opaque. (1) Non-transparent; (2) non-translucent. Cf. *opacity*.

open chain. Non-cyclic. A carbon-chain that does not close and form a cyclic compound. **o. hearth.** A reverberatory furnace used in the manufacture of steel, in which hot producer gases are passed over a large open crucible containing iron ore, scrap iron and pig-iron (open-hearth process).

operation. A chemical manipulation: dissolving, precipitating, distilling, evaporating, filtering, weighing, titrating, etc.

ophelic acid. $C_{13}H_{20}O_{10}$ = 336.16. An amorphous substance in *Swertia* (*Ophelia*) *chirata*, a Gentianaceae, and split-product of chiratin; soluble in water, alcohol, or ether.

ophiolite. Serpentine containing calcium carbonate.

ophiotoxin. $C_{17}H_{26}O_{10}$ = 390.2. A poison from the venom of the East Indian cobra (*Naja tripudians*).

ophioxylin. $C_{16}H_{12}O_6$ = 301.1. A glucoside from the root of *Ophioxylon serpentinum*, an Apocynaceae of India. Yellow crystals, m.72; used medicinally as an anthelmintic and for snake bites.

ophthalin. Vitamin A.

ophthalmo- A prefix derived from the Greek, indicating "eye."

ophthalmoleukoscope. An instrument for testing color sensitiveness by means of polarized colors.

ophthalmoscope. An instrument for the examination of the interior of the eye.

opianic acid. $C_{10}H_{10}O_5$ = 210.13. 5.6-dimethoxy-phthalaldehydic acid, formyl dimethoxy benzoic acid, $C_6H_2(OMe)_2.CHO.(COOH)$. Colorless fine prisms, m.150, soluble in hot water, alcohol, or ether.

opianine. (1) Narcotine. (2) $C_{66}H_{72}O_{12}N_3$ = 938.7. An alkaloid from opium, which resembles morphine in its physiological effect.

opianyl. Meconine.

opiate. A narcotic drug.

opium. The air-dried milky juice of the unripe capsules of the poppy: *Papaver somniferum*. Brown masses, containing inert materials and a number of alkaloids (see below). Used medicinally as a narcotic, and for the preparation of opium alkaloids. See also *kusamba*, *meconine*, *meconic acid*, *chandoo*, *yenshee*, *mudat*. **o. alkaloids.** A series of alkaloids obtained from or related to opium:

(a) Morphine group: morphine
homochelidonine
chelidonine

(b) Codeine group: papaverine
codeine
laudanosine
narcotine
hydrocotarnine
sanguinarine
thebaine
laudanine
hydrastine

(c) Protopine group: protopine
cryptopine

(d) Miscellaneous group: chelerythrine
oxydimorphine
thebenine
thebaicine

Cf. *pantopone*, *holopon*, *anarcotine*, *cotarnine*, *codamine*, *gnoscopine*, *lanthopine*, *narceine*, *opianine*, *rheadine*, *tritopine*, *xanthaline*. **o. vinegar.** Black drops. A preparation containing 10 % opium.

opopanax. An oleoresin or the dried juice obtained from the roots of *Pastinaca opopanax*, an Umbelliferae of the Orient; used in incense and perfumes, and medicinally as an antispasmodic. **o. oil.** An oil, d.0.87–0.90, b.250–300 from *Commiphora katof*, a Burseraceae. Cf. *balm of Gilead*.

opsogens. See *opsonigenous substances*.

opsonic index. The ratio of the opsonins present in the blood of a diseased person to those of a normal individual.

opsonigenous substances. Aggressins, opsogens, Substances produced by the metabolism of bacteria. Cf. *endotoxin*.

opsonin. A substance of the blood-serum that renders invading microorganisms more susceptible to digestion by the phagocytes of the body. **common-** Normal-. **immune-** Specific opsonins. Substances formed in the blood by the stimulation of bacterial poisons (opsonigenous substances). **normal-** The protective substances of the blood present normally and in uninfected individuals. **specific-** Immune-.

opsonization. The increase of opsonins, or the retention of the opsonic index, produced by the inoculation of opsonins into an organism.

opsopyrrol. $C_7H_{11}N$ = 111.1. Ethyl-methyl-pyrrol.  . A decomposition product of hematin. Cf. *porphin ring*.

optical. (1) Pertaining to sight, as optical pyrometers. (2) Pertaining to light, as optical

activity. o. activity. O. rotation, opticity. The power of a substance or solution to rotate the plane of vibration of polarised light to the left or to the right. Optical activity is characteristic of compounds containing an asymmetric atom, usually a carbon atom. It is measured by means of the polariscope (q.v.) and is used in quantitative analysis; as, **sugar analysis.** Cf. *enantiomorph, birotation, mutarotation.* **o. bench.** A rail arranged with holders to carry a number of lenses and mirrors, whose distances apart may be varied and measured on a scale and whose optical axes are in the same straight line. Used for optical experiments. **o. density.** The quantity, log I_0/I, where I_0 is the intensity of an incident ray falling on a transparent or translucent medium (e.g., solution) and I the intensity of the transmitted ray. Cf. *extinction coefficient.* **o. isomerism.** See *isomery.* **o. pyrometer.** An instrument for measuring high temperatures by optical means; such as, the Mesure p. (using polarized light) or the Wanner p. (measuring intensity of light). A filament is heated by an electrical current of known strength until the glow exactly matches that of the furnace. The instrument is calibrated in terms of known temperatures:

500°C	red, just visible
700°C	dull red
900°C	cherry red
1100°C	orange
1200°C	white
1500°C	dazzling white

Cf. *leucoscope.* **o. rotation.** O. activity. **o. telephone.** A telephone, the diaphragm of the receiver of which is connected to a mirror, so that its vibrations are magnified as bands of light of varying size.

opticity. Optical activity. A term used in the sugar and brewing industries.

optics. Photics. A branch of physics that deals with visible radiations (light), their reflection, refraction, absorption, and transmission. Cf. *dioptrics.*

optimal. The most favorable, suitable, or best factor or condition.

optimum. Best, most favorable. **o. temperature.** The temperature at which enzymes show the greatest activity, or at which the growth of bacteria is most rapid.

optochine. $C_{21}H_{28}O_2N_2$ = 340.35. Numoquin, ethylhydrocupreine. A quinine alkaloid (q.v.), levo-rotatory, soluble in alcohol or ether; used as a specific for pneumococcic invasions. **o. hydrochloride.** Colorless crystals, soluble in water, used medicinally.

optophone. An instrument for enabling ordinary print to be read by the blind. It consists of a selenium cell, telephone and illuminating device, which transform the light waves into sound waves. Cf. *photophone.*

orange. (1) A color intermediate between red and yellow. (2) The edible yellow fruit of *Citrus* species, Rutaceae, q.v. (3) A group of pH indicators changing from purple or magenta (acid) to orange (alkaline). **bitter-** Curacao- or Seville- The fruit of *Citrus bigarardia.* **sweet-** China- or Portugal-. The fruit of *Citrus aurantium.*

o. blossom odor. See *indole.* **o. dye.** Tropeolin. **o. flower oil.** Neroli oil. **o. oil.** An essential oil expressed from the peel or rind of oranges. A pale yellow liquid, d.0.84–0.85, insoluble in water, soluble in alcohol, ether, or chloroform. It is used in flavoring extracts for the household and soda-water fountains, in perfumes, and in pharmaceutical preparations. *bitter-*, Curacao orange oil, Seville orange oil. The oil expressed from the rinds of orange peels of *Aurantii amara* (*Citrus vulgaris*). *sweet-* The oil expressed from sweet orange peels, *Aurantii dulcis* (*Citrus bigarardia*). **o. mineral.** Sandix. **o. peel.** The dried rinds from oranges. *bitter-* From the fruits of *Citrus vulgaris* = Seville orange, curacao orange. *sweet-* From the fruits of *Citrus bigarardia* = Portugal orange, China orange. Used in medicine and pharmacy, for flavoring, and in confectionery. **o. peel oil.** Orange oil. **o. pigments.** See *antimony orange, chrome orange,* etc. **o. red.** Sandix. **o. root.** Hydrastis.

orangite. A bright, orange-yellow, hydrated silicate of thorium; a variety of thorite.

orbit. The path of an electron moving round the atomic nucleus, according to the dynamic concept of the atom (Bohr's model). Orbits correspond with the shells of the static atom (Lewis' model), in which the electrons are assumed to oscillate around certain positions at different distances from the nucleus. The o. are described by the quantum numbers n_k, where n indicates the magnitude or *size* corresponding with different energy levels, q.v. (Cf. orbital *state*):

K level	n is 1
L level	2
M level	3
N level	4

k indicates the *form* or quantum state, which may be either circular, (k = n), or elliptical (k less than n), thus giving rise to different spectrum lines:

s orbit	k is 1
p orbit	2
d orbit	3
f orbit	4

The different quantum states for the first four energy levels are, thus (Cf. *Stoner quanta*):

ENERGY LEVEL	*Normal ORBITS* (k = n			
K	1_1			
L	2_1	2_2		
M	3_1	3_2	3_3	
N	4_1	4_2	4_3	4_4
	(s)	(p)	(d)	(f)

Excited ORBITS (k less than n)

Cf. *state* (of electrons).

orbital. Pertaining to motion around a center. **o. state.** See *state.*

orcein. $C_{28}H_{24}O_7N_2$ = 500.2. A coloring matter of orchil, synthesized from orcin and ammonia. Brownish-red crystals, insoluble in water, soluble in alcohol, acetone, acetic acid (red color) and alkalis (violet color). Used in microscope stains, as an antiseptic, and as a reagent.

Orchidaceae. Orchis family, a group of perennial herbs, some of them epiphytic, usually with showy flowers. Some of the species yielding drugs are:

Cypripedium species..... lady's slipper root
Orchis species..... salep
Vanilla planifolia..... vanilla
Corallorrhiza odontorrhiza... coral root

orchil. Archil, orseille extract, cudbear, persio. A thick reddish-purple liquid of slight ammoniacal odor. It is a coloring material obtained from various lichens by treatment with ammonia and exposure to air, and contains orcein, orcin, and litmus; used as a coloring material for pharmaceutical preparations. Cf. *orcein.*

orcin. Orcinol.

orcinaurine. Homofluorescein. A red dyestuff with a green fluorescence, obtained by the action of chloroform and alkali on orcinol; used as a fluorescent indicator for pH values of 6.5 to 8.0.

orcinol. $C_6H_3(CH_3)(OH)_2$ = 124.0. Orcin, *5*-methyl-*1.3*-benzenediol*, 3.5-dihydroxytoluene. 3.5-dihydroxy-1-methyl-benzene, dimethylresorcinol. A white crystalline powder, which becomes red with age, d.1.289, m.107, b.287, soluble in water, alcohol, or ether. It occurs in various lichen species and forms orcein with ammonia. Used medicinally as an antiseptic, as a reagent for pentoses, and as a stain. Its isomer is homopyrocatechol. **methyl-** Xylorcinol. **trinitro-** See *trinitroorcinol.*

ordeal bark. (1) The poisonous bark of various trees, used by savages in trial by ordeal. (2) Casca bark. Cf. *Erythrophloeum.* **o. bean.** The poisonous fruits of various trees used in ordeals by natives, *e.g., physostigma, tanghinia.*

order. A grade in scientific classification, particularly applied to zoology. **o. of compounds.** (1) An arrangement of types of compounds according to their complexity:

1st order = binary compounds; as, NaCl, CaO, H_2O.

2nd order = tertiary compounds; as, Na_2SO_4, $Al(OH)_3$.

3rd order = addition or co-ordinate compounds; as, $MgSO_4.6H_2O$ or $NiSO_4.6NH_3$. (2) See *Mulliken's classification.* **o. of reaction.** See *reaction.* **o. of terms.** In mixed fertilizers the o. is nitrogen first, phosphoric acid second and potassium third.

ordinal. Pertaining to a sequence or order. **o. number.** Rydberg's number, indicating position in the periodic system; now superseded by the atomic number. **o. test.** A reaction which determines qualitatively the elements of an organic compound, so that they may be placed in the "order" of Mulliken's classification (q.v.).

ordinary. Common. **o. iron.** Cast iron. **o. ray.** The ray of light normally reflected or refracted in a polariscope, as opposed to the extraordinary ray, which is not.

ordinate. The y-coordinate in the Cartesian system of graphical representation. Cf. *coordinates.*

ordination number. Atomic number.

ore. A natural mineral or mineral mixture from which useful substances are obtained; usually containing metallic compounds. See *iron, sulfur, radioactive, minerals,* etc. They are found mixed with the earthy matter (matrix or gangue) in which they have been deposited. The principal ores are oxides, carbonates, silicates, sulfides, arsenides, antimonides, and halides. Cf. *flotation, roasting, smelting.* **mock-** Sphalerite. **pay-** An o. that can be worked with profit. **positive-** q.v. **possible-** q.v. **raw-** An o. in its natural, but crushed untreated condition.

o. band. A zone of rock rich in ores; a vein. **o. bed.** A zone of ore between sedimentary deposits. **o. body.** A solid and continuous mass of ore. **o. crusher.** A machine for disintegrating ores preparatory to the stamp mill or rollers. **o. dressing.** The refining or cleaning of ore by mechanical means; as, jigging, cobbing, etc. **o. mill.** A concentrator or stamp mill. **o. pocket.** An isolated occurrence of a rich deposit of ore. **o. separator.** A mechanical device in which ore is separated from rock, as a cradle or jigging machine.

oreodaphene. A hydrocarbon oil of California laurel, *Umbellularia californica,* a Lauraceae; a colorless oil, d.0.894, b.175.

oreodaphnol. An alcohol in the oil of California laurel. A colorless liquid of pungent odor.

oreoselin. $C_{14}H_{12}O_4$ = 244.2. A crystalline split-product obtained from athamantin by hydrolysis with alkali.

oreoselon. $C_{14}H_{10}O_3$ = 226.2. An amorphous powder obtained by hydrolysis of athamanthin with sulfuric acid.

oreston. Positron. A positive electron (from *Orestes,* brother of *Electra*).

oreton. A trade name for testosterone propionate. **o-M.** Methyltestosterone.

orexin. $C_{14}H_{11}N_3$ = 207.1. Phenzoline, cedrarine, phenyldihydroquinazoline. $C_6H_4.CH_2N.CHN.C_6H_4$. A derivative of quinoline; a white, odorless powder or lustrous crystals, soluble in hot water. Used medicinally as a stomachic in cases of loss of appetite. **o. tannate.** The tannate of orexin. A yellowish powder, insoluble in water, soluble in acids; used medicinally as a stomachic stimulant.

Orfila, Mathieu Joseph Bonaventura. 1787–1853. A Spanish-born Frenchman; the founder of toxicology.

organ. Any tissue or part of an organism which has a distinct function.

organellæ. Substances within organic cells composed of lipoids.

organic. Pertaining to an organ or a substance derived from an organism. (See *organic compound.*) **o. acid.** A compound containing one or more carboxyl radicals, —COOH. According to the number of such radicals present there are:

monobasic acids; R.COOH

$C_nH_{2n+1}.COOH$ = acetic acid series.
$C_nH_{2n-1}.COOH$ = acrylic acid series.
$C_nH_{2n-3}.COOH$ = acetylene acid series.
$C_nH_{2n-7}.COOH$ = aromatic acid series.

dibasic acids; $R(COOH)_2$

$C_nH_{2n}(COOH)_2$ = oxalic acid series
$C_nH_{2n-8}(COOH)_2$ = phthalic acid series.

tribasic acids, $R(COOH)_3$
tetrabasic acids, $R(COOH)_4$
pentabasic acids, $R(COOH)_5$, etc.

The presence of other radicals is indicated by the descriptive terms: monohydroxy, dihydroxy, monoamino, diamino, monoketo, diketo, etc. **o. analysis.** The qualitative or quantitative determination of organic compounds. See *analysis.* **o. bases.** The amines and alkaloids. **o. chemistry.** That branch of chemistry

dealing with carbon compounds or the nonpolar compounds. It was assumed that compounds of organisms were the product of a vital force and could not be made artificially, but, with the synthesis of many of these compounds, this division into organic and inorganic chemistry has become invalid, and of convenience only. The elements entering into organic combinations, in order of importance, are: C, H, O, N, Cl, Br, I, F, S, P, Al, etc. Organic compounds vary greatly in stability. The largest ring compound is civetone with seventeen atoms in a ring. Rubrene bromide has the highest melting point (500°C). Maltosazone is the largest molecule which has been synthesized so far. Cf. *inorganic chemistry*. **o. combustion.** See *combustion*. **o. compound.** A nonpolar compound, which generally consists of carbon and hydrogen, with or without oxygen, nitrogen, or other elements, except those in which carbon plays no important part (*e.g.*, carbonates). Many may be classified into:

A. Aliphatic compounds, which consist of a chain of carbon-atoms: Hydrocarbons, alcohols, aliphatic acids and aldehydes, carbohydrates, peptides.

B. Aromatic compounds, which consist of a ring of carbon atoms with or without other atoms in the ring: Benzene, naphthalene, anthracene derivatives, and terpenes, glucosides, alkaloids, dyes.

A more appropriate classification of organic compounds is by CLASS and TYPE.

The CLASS (or *Division* of Beilstein, cf. *stem nucleus*) is based on the fundamental structure of the compound, thus:

	CHAIN COMPOUND	RING COMPOUND
HOMOGENEOUS.....	Class 1	Class 3
HETEROGENEOUS.....	Class 2	Class 4

Class 1—A homogeneous chain compound, in which the carbon atoms form a continuous or a branched chain (hydrocarbons, ketones, acids, alcohols). Division I of Beilstein.

Class 2—A heterogeneous chain compound, in which the carbon atoms are interrupted by the atoms of other elements (ethers, esters, peptides). No division in Beilstein.

Class 3—A homogeneous ring compound, in which the carbon atoms form a closed ring (benzene, phenols, anilines). Division II of Beilstein.

Class 4—A heterogeneous ring compound, in which the atoms of the ring consist of atoms other than of carbon. Division III of Beilstein.

Each class is subdivided into compounds containing:

a—no double or triple bonds (saturated).

b—one or more double bonds.

The TYPE (or *Functionary Class* of Beilstein, cf. *functioning group*) is based on the presence of one or more radicals to which are due the characteristic reactions of the compound; as, —OH, alcohols or phenols; $—NH_2$, amines; etc. **o. radicals.** A group of atoms that normally passes unchanged from one molecule of a carbon compound to another, *e.g.*,

acetamido..... $CH_3CONH—$
acetimido..... $CH_3C(:NH)—$
acetonyl..... $CH_3COCH_2—$
acetoxy..... $CH_3COO—$
acetyl..... $CH_3CO—$
alanyl..... $NH_2CHMeCO—$
allyl..... $CH_2:CHCH_2—$
amino, amido..... $NH_2—$
amyl..... $Me(CH_2)_4—$
anilino..... $PhNH—$
anisal..... $MeOC_6H_4CH=$
anisoyl..... $MeOC_6H_4CO—$
anisyl..... $MeOC_6H_4—$
anthranilo..... azo..... $—N:N—$
azoxy..... benzal..... $PhCH=$
benzamido..... $PhCONH—$
benzimido..... $PhC(:NH)—$
benzoxy..... $PhCOO—$
benzoyl..... $PhCO—$
benzyl..... $PhCH_2—$
butenyl, Δ^1-..... $MeCH_2CH:CH—$
butoxy..... $MeCH_2CH_2CH_2O—$
butyl..... $MeCH_2CH_2CH_2—$
butyl secondary..... $EtCHMe—$
butyl tertiary..... $Me_3C—$
carbamido..... $NH_2CONH—$
carbamyl..... $NH_2CO—$
carbony(l)..... $OC=$
carbonyldioxy..... $—O.CO.O—$
carboxyl..... $—COOH$
cinnamal..... $PhCH:CHCH=$
cinnamyl..... $PhCH:CHCO—$
crotonyl..... $MeCH:CHCO—$
cyano..... $—C:N$
ethoxy..... $EtO—$
ethyl..... Et or $CH_3CH_2—$
ethylene..... $—CH_2CH_2—$
formyl..... $H.CO—$
fural..... furyl..... glyceryl..... glycolyl..... $HOCH_2CO—$
glycyl..... $NH_2.CH_2.CO—$
glyoxyl..... $H.CO.CO—$
guanido..... $NH_2.CNH.NH—$
guanyl..... $NH_2C(:NH)—$
hydrazino..... $NH_2.NH—$
hydrazo..... $—NH.NH—$
hydrazono..... $NH_2.N=$
hydroxamino..... $HONH—$
hydroxy..... $HO—$
imido, imino..... $HN=$
isonitro..... $=NOOH$
isonitroso..... $=NOH$
isothiocyano..... $—N:C:S$
malonyl..... $—CO.CH_2.CO—$
mercapto..... $—SH$
methenyl..... $≡CH$
methoxy..... $MeO—$
methylene..... $=CH_2$
methyl..... Me or $—CH_3$
naphthoxy..... $C_{10}H_7O—$
naphthyl..... $C_{10}H_7—$
nitramino..... $O_2N.NH—$
nitrate..... $O_2NO—$

nitro	—NO_2
nitrite	—ONO
nitroso	—NO
oxalyl	—OC.CO—
oxamido	NH_2.OC.CO.NH—
phenacyl	$PhCOCH_2$—
phenethyl	$PhOCH_2CH_2$—
phenoxy	PhO—
phenyl	Ph or C_6H_5—
phthalyl	$C_6H_4\langle$ CO— / CO—
propenyl	MeCH:CH—
propionyl	$MeCH_2CO$—
propoxy	$MeCH_2CH_2O$—
propyl	$MeCH_2CH_2$—
protyl	—CH_2C:CH
salicyl	HO.C_6H_4—
salicylal	HO.C_6H_4CH=
salicylyl	HO.C_6H_4.CO—
styryl	Ph.CH:CH—
styrenyl	Ph.CH.CH_2— (with bond from CH)
succinyl	—CO.CH_2.CH_2.CO—
sulfamino	—NH.SO_2.OH
sulfamyl	—SO_2.NH_2
sulfino	—SO_2H
sulfo	—SO_2.OH or —SO_3H
sulfonamido	—SO_2.NH—
sulfonyl	—SO_2—
thiocarbonyl	=C:S
thionyl, sulfinyl	=S:O
toluino	MeC_6H_4.NH—
toluyl, alpha-	Ph.CH_2.CO—
toluyl, ortho-	Me.C_6H_4.CO—

See the "*Decennial Index*" of the Chemical Society (London) and of the American Chemical Society (Washington, D. C.); also *radicals*, *structure symbols*, *formula* and *notation*. **o. symbols.** Structure symbols.

organism. A living complex, undergoing dynamic changes, which exists in a colloidal protoplasmic medium (*protoplasm*, q.v.) and is organized in a definite pattern (histology, anatomy) with a definite function (physiology). Any animal, plant, or human body. Cf. *life.*

organoferric. Same as masked iron, (see *masked*).

organoleptic. Referring to sensation; as, smell and taste.

organolite. An organic base-exchange material (*e.g.*, certain phenol-formaldehyde plastics). They may be classified according to the C-metal linkage: (1) Ordinary covalent, *e.g.*, Et-Zn-Et. (2) Coordinate, *e.g.*, $K_4Fe(CN)_6$. (3) Ionic, *e.g.*, Ca—C≡C. (4) Metallic, *e.g.*, NbC.

organomagnesium halides. See *Grignard reagent.*

organometallic. Pertaining to the carbon-metal linkage. **o. compounds.** A class of compounds of the type R—M, where R is an alkyl or aryl radical and M a metal; *e.g.*, $PbEt_4$, tetra-ethyl lead; R—Mg—X, alkyl-magnesium-halide. Cf. *Grignard reagent, organolite.*

organosol. A sol in which the essential constituent is organic.

organotherapeutic extracts. Pharmaceutical preparations obtained from various animal organs, and used in the treatment of certain diseases.
brain—see *cerebrine.*
liver—see *hepar siccatum.*
lungs—see *pulmones sicci.*
kidney—see *renes siccum.*
spleen—see *lien siccus.*
bronchial gland—see *glandula bronchis.*
ciliary body—see *corpus ciliare.*
mammary glands—see *mammae siccatae.*
ovaries—see *corpus luteum.*
See: *leucocytes, pituitary, ductless glands, testes, prostate, fibrogen, eukinase, cardaissin.*

organotherapy. The treatment of disease by dried organs or organ extracts.

organotropic. A substance that acts specifically on an organism, and not on parasites (see *parasitotropic*).

organzine. Warp silk. The reeled-off fibers from a number of silk cocoons.

oriental agate. A translucent variety of agate, used as a gem. **o. amethyst.** A native purple alumina. **o. cashew-nut.** Semecarpus. **o. emerald.** A green variety of corundum. **o. garnet.** Garnet. **o. hyacinth.** A rose-colored corundum. **o. powder.** A mixture of gamboge with potassium nitrate, used as an explosive in day-fireworks. **o. ruby.** A red variety of corundum. **o. sapphire.** A blue variety of corundum. **o. sweet gum.** Styrax. **o. topaz.** A yellow variety of corundum.

orientation. (1) The structural arrangement of substituting radicals in a compound, compared in relation to each other and to the parent compound. (2) The determination of crystal structure. (3) The direction or position assumed by a molecule, due to an electric charge, adsorption, or other cause. Cf. *zone.*

origanum oil. (1) Spanish hop oil. An essential oil from *Origanum vulgare* (Labiatae), wild majoram; used in veterinary medicine and in liniments. (The oil of *O. marjorana* is marjoram oil.) (2) An essential oil distilled from *Thymus vulgaris*, and sold in France as o. oil.

orizabin. Jalapin.

orlean. Annatto.

Orlovius flask. A conical flask with a ground stopper and glass delivery-tubing, similar to a wash-bottle; used for drawing and handling of blood samples for bacteriological work under sterile conditions.

ormolu. Mosaic gold. An alloy of equal parts of copper and zinc, used for cheap jewelry, chandeliers and ornaments.

ormosine. An alkaloid from the seeds of *Ormosia dasycarpa*, a leguminous plant of Brazil. Colorless crystals, m.80, soluble in alcohol or chloroform; used as a hypnotic and sedative.

ormosinine. $C_{20}H_{33}N_3$ = 315.28. An isomer of ormosine, m.205.

ornithine. $C_5H_{12}O_2N_2$ = 132.11. $\alpha.\delta$-Diamino-valerianic acid, *2.5*-diaminopentanoic acid*. An amino acid (q.v.) from the excrements of birds. It yields arginine with urea. N^{α}-guanyl- Isoarginine. N^{δ}-guanyl- Arginine.

oroberol. $C_{18}H_{14}O_8$ = 358.1. A chromogen from the leaves of *Orobus tuberosus*, optically inactive, m.290.

orobol. $C_{15}H_{10}O_6$ = 286.1. A dihydroxy-tetrahydroflavone, m.270.5, obtained by hydrolysis of oroboside.

oroboside. A glucoside from the leaves of *Orobus tuberosus* (*Lathyrus*), a Leguminosae, yielding orobol. White crystals, m.250.

orogenic. The large-scale tangential compressive forces responsible for geological fractures.

oronite. A low-boiling gasoline used in special plant for generating a substitute gas for bunsen burners.

oropon. A tryptic puering material.

orotic acid. $C_5H_4N_2O_4$ = 154.05. Iso-uracyl carboxylic acid. An acid isolated from milk.

White crystals, m.-259.

oroxylin. $C_{16}H_{14}O_6$ = 338.11. A bitter principle from the bark of *Oroxylon indicum*. Yellow crystals, m.225, soluble in water.

orphol. Trade name for bismuth beta-naphtholate.

orpiment. As_2S_3. Kings' yellow, auripigment. A native arsenic trisulfide. Lemon-yellow crystalline masses, used as a pigment and depilatory. **red-** Arsenic disulfide.

Orr white. Lithopone.

orris. The dried rhizome of Florentine iris, *Iris florentina*. A creamy-white powder, insoluble in water; used in dentifrices and perfumery (sachet powders). **o. oil.** An essential oil distilled from the rhizome of *Iris florentina*. A yellowish, semi-solid oil, m.44, insoluble in water, soluble in alcohol or ether; used in cosmetics and perfumery. It contains myristic and oleic acids and esters.

Orsat apparatus. A portable gas analysis apparatus, consisting of a measuring buret and three or four gas-absorption pipets connected by a manifold.

orseille, orselle. Orchil.

orseillic acid, orseillinic acid. Orsellic acid.

orsellic acid. $C_8H_8O_4$ = 168.0. Orsellinic acid, orseillic acid, 2.4-dihydroxy-6-methylbenzoic acid, $MeC_6H_2(OH)_2COOH$. A split-product of lecanoric acid and a constituent of many lichens, m.176 (decomp.); hydrolysed to orcinol, q.v.

orsellin, orseillin. Roccellin. A constituent of orchil.

orsellinic acid. Orsellic acid.

orsudan. Sodium 3-methyl-r-acetylaminophenylarsenate. A yellow crystalline powder, used medicinally as an antisyphilitic and antiprotozoan.

Orth stain. Lithium carmine. An aqueous solution of 1 % lithium carbonate and 3 % carmine, with or without picric acid; used as nuclear stain.

orthanilic acid. $C_6H_7O_3NS$ = 173.17. o-Aminobenzenesulfonic acid, o-anilinesulfonic acid. An isomer of sulfanilic acid, used in organic synthesis.

orthene. *o*-Dichlorobenzene.

orthin. $C_6H_3(OH)COOH(NH.NH_2)$ = 168.1. 4-hydroxy-2-hydrazybenzoic acid, o-hydrazine-p-hydroxybenzoic acid. Colorless crystals, sometimes used medicinally as an antipyretic.

orthite. Allanite.

ortho- (1) A prefix indicating the neighboring or 1.2-position. Cf. *meta-*, *para-*. (2) A prefix indicating the most hydroxylated acid known in either the free state or as salts or esters, *e.g.*, *orthosilicic acid*. Cf. *meta-*, *pyro-*. (3) A prefix indicating an odd rotational quantum number; as, ortho-hydrogen. **o.-acid.** (1) An organic acid having the carboxyl group in the ortho-position. (2) An organic acid containing one additional molecule of water in chemical combination, as H.COOH = formic acid, and $HC(OH)_3$ = orthoformic acid. (3) An inorganic acid containing the normal amount of water, as: $P_2O_5 + 3H_2O = 2H_3PO_4$, orthophosphoric acid; $SiO_2 + 2H_2O = H_4SiO_4$, orthosilicic acid. **o.-compounds.** A benzene derivative containing two substitution radicals in neighboring positions. See *meta-*, *para-*. The ortho- or 1.2-compound is to be found under the name of the compound. **o.-hydrogen.** See *hydrogen molecule*. **o.-nitrogen.** See *nitrogen molecule*. **o. position.** See *o. compounds*.

orthoacetic acid. $CH_3.C(OH)_3$, known only in its esters; as $MeC(OEt)_3$, *1.1.1*-triethoxyethane* or ethylorthoacetate. A colorless liquid, d.-0.8847, b.142.

orthoaluminic acid. The tautomer of aluminum hydroxide: $Al(OH)_3 \rightleftharpoons H_3AlO_3$. It forms aluminates, M_3AlO_3.

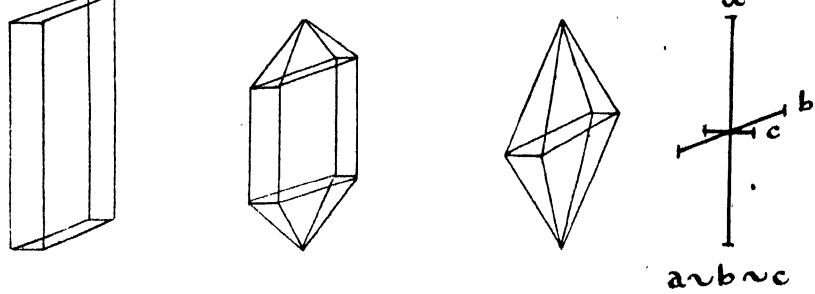
orthocarbonic acid. Tetrahydroxymethane, $C(OH)_4$ (or $H_2O.H_2CO_3$), esters of which are known; as, $C(OEt)_4$, tetraethoxymethane*, or tetraethylorthocarbonate. A colorless liquid, d.0.9197, b.159.

orthoclase. $KAlSi_3O_8$. Sunstone. A native potassium aluminum silicate, potash feldspar. It is the commonest silicate and a constituent of many rocks. It crystallizes in the monoclinic system as white, grey, or pink crystals, and often contains sodium.

orthoform. $C_6H_3(COOCH_3)OH(NH_2)$ = 167.1. Methyl-3-amido-4-hydroxybenzoate. Methyl ester of m-amido-p-hydroxybenzoic acid. A white, odorless and tasteless powder, m.142, slightly soluble in water, soluble in alcohol; used as an antiseptic and local anesthetic. **new-** Orthoform. **old-** The methyl ester of p-amido-m-hydroxybenzoic acid, or methyl-4-amido-3-hydroxybenzoate. White crystals, m.118.; used as an antiseptic.

orthoformic acid. CH_4O_3. The hypothetical acid, $HC(OH)_3$, known in the form of its esters; *e.g.*, $HC(OEt)_3$, triethoxymethane*. A colorless liquid, d.0.897, m. −76.1, b.145.9.

orthohydrogen. See *hydrogen molecule*.



Orthorhombic system.

orthokinetic coagulation. Coagulation due to the motion of particles in one direction; cf. *perikinetic.*

orthonitric acid. The hypothetical compound H_3NO_4 or $O{=}N(OH)_3$.

orthophosphate. A salt of the type M_3PO_4.

orthophosphoric acid. See *phosphoric acid.*

orthorhombic. A crystal with three unequal long axes intersecting at right angles. **o. system.** A prismatic, rhombic, or trimetric system. Crystal forms derived from a prism having three axes of different lengths intersecting at right angles (see figures).

orthosilicate. A salt containing the tetravalent SiO_4 radical.

orthosilicic acid. Silicic acid.

orthosiphonin. A glucoside from the leaves of Java tea, *Orthosiphon stamineus*, a Labiatae; used as a diuretic.

orthotaxy. Crystalline structure in the form of long parallel columns.

ortizon. $CO(NH_2)_2, H_2O_2 = 94.07$. Perhydrate. Hyperol. A compound of hydrogen peroxide and urea. Colorless and odorless crystals or sticks; used as an antiseptic, reagent and bactericide to replace hydrogen peroxide.

ortnithine. Ornithine.

oryza. Rice.

oryzamin. (1) An extract from rice bran. (2) An antineuritic vitamin from rice bran or yeast, identical with vitamin B_1, q.v.

Os. The symbol for osmium.

osage orange. The bark of *Maclura aurantiaca*, a shrub of North America. It contains a yellow coloring material and tannin; used in the textile and leather industries **o. o. wood.** The wood of *Maclura pomiferum.* Used as a yellow coloring matter and fustic substitute.

osamine. A compound derived from sugars by replacing an OH group by NH_2; *e.g.*, glucosamine.

Osann, Gottfried Wilhelm. 1797–1866. A German physical chemist noted for his work in platinum metals; he named ruthenium.

osazone. Diphenyl hydrazone. A characteristic crystalline insoluble compound obtained by heating a polyhydroxy aldehyde or ketone (aldose or ketose sugar) with phenylhydrazine hydrochloride, and sodium acetate in boiling water, *e.g.*, $R.CO + H_2NNH.Ph = R.C{:}N.NHPh + H_2O$; yellow or orange in color. **diacetyl-** A compound obtained by heating diacetone with phenylhydrazine:

$$\begin{array}{l} Me.C = N.NHPh \\ \quad\quad | \\ Me.C = N.NHPh. \end{array}$$

o. test. The microscopical examination and melting-point determination of the osazone precipitates, to distinguish different sugars.

Osborne, Thomas, Burr. 1859–1935. An American biochemist, noted for his work on vegetable proteins.

oscillation. A vibratory to-and-fro motion.

oscillograph. Oscillometer. A device for recording the wave forms of high-frequency currents. The most recent apparatus use a cathode ray discharge, and have an efficiency of 10^{-5} sec.

oscillometer. Oscillograph.

oscine. The *3.7*-anhydride of *6.7*-dihydroxytropine.

-ose. A suffix indicating: (1) a carbohydrate; (2) the substance produced by enzymic digestion of a protein, *e.g.*, an albumose.

oshaic acid. An acid obtained from the osha root, the root of *Ligusticum filicinum*, an Umbelliferae; used medicinally as an expectorant.

Oslo unit. A vitamin unit, q.v.

osmate. A salt containing the divalent OsO_4^{--} radical.

osmic. A compound of tetravalent osmium. **o. acid.** $OsO_4 = 254.9$. Osmic anhydride, osmium tetroxide, perosmic anhydride, perosmic oxide. Yellowish crystals or colorless powder, of pungent and irritating odor, d.4.91, m.20, b.100, soluble in water, alcohol or ether. Its solutions deposit black osmic hydroxide. Used as a reagent for adrenalin and indican; in microscopy for staining; in photography; and for Welsbach mantles. **o. acid anhydride.** Osmic acid. **o. anhydride.** Osmic acid. **o. hydroxide.** $Os(OH)_4 = 258.9$. A black precipitate from osmic acid solutions.

osmicate. To stain a microscopic section with osmic acid.

osmics. Pertaining to odors; the study of odors.

osmiridium. Iridosmine. An alloy of osmium (17–50 %) and iridium (77 %), with various other platinum metals. It occurs native in platinum deposits, and remains as an insoluble black powder on treating platinum ores with aqua regia. Used in the preparation of osmium and its salts, and for penpoints.

osmium. Os = 190.2. A hard, bluish-white metallic element of the platinum group, d.-22.48, m.2700, insoluble in water or acids. Atomic number 76. Used as a catalyst, in platinum alloys, for incandescent lamps, and pen-points. Osmium has valencies of 2, 3, 4, and 8:

+2 osmous, Os^{++}	green
+4 osmic, Os^{++++}	dark orange
+6 osmyl, OsO_4^{--}	orange.

It is found native as an alloy, nevyanskite.

o. chlorides: $OsCl_2$, osmium dichloride; $OsCl_3$, osmium trichloride; $OsCl_4$, osmium tetrachloride. **o. dichloride.** $OsCl_2 = 261.8$. Dark green hygroscopic needles, slightly soluble in water, alcohol or ether, soluble in sodium chloride solutions. **o. dioxide.** $OsO_2 = 222.9$. A copper-red powder, d.7.9, insoluble in water or acids. **o. disulfide.** $OsS_2 = 255.0$. A bright yellow powder, slightly soluble in water or alkalis. **o. fluoride.** $OsF_8 = 342.9$. Colorless crystals, m.34.5, b.47.3. The hexafluoride, $OsCl_6$, b.203, is also known. **o. hydroxide.** (1) $Os(OH)_3$. A dark orange, insoluble powder. (2) $Os(OH)_4$. A black, insoluble powder. **o. monoxide.** $OsO = 206.9$. A black powder, insoluble in water soluble in acids. **o. oxides:** OsO, osmium monoxide; Os_2O_3, osmium sesquioxide; OsO_2, osmium dioxide; OsO_4, osmium tetroxide or osmic acid. **o. potassium chloride.** $K_2OsCl_6 = 481.7$. Dark red octahedral crystals, soluble in water or alcohol. **o. sesquioxide.** $Os_2O_3 = 429.8$. A black powder, insoluble in water or acids. **o. sodium chloride.** $Na_2OsCl_6 = 449.5$. Red rhombic prisms, soluble in water or alcohol. **o. sulfides:** OsS_2, osmium disulfide; OsS_4, osmium tetrasulfide. **o. trichloride.** $OsCl_3 = 297.3$. A brown crystalline powder, slightly soluble in water, soluble in alkalis or acids. **o. tetrachloride.** $OsCl_4 = 332.7$. Reddish-yellow needles, slightly soluble in water, soluble in alkalis or acids. **o. tetroxide.** Osmic acid. **o. tetra-**

sulfide. OsS_4 = 319.2. A brownish-black powder, insoluble in water, soluble in nitric acid.

osmoceptor. An atomic grouping which holds an osmophore. Cf. *odor theory.*

osmometer. A device for measuring osmotic pressure.

Osmond iron. A high-grade iron made in an Osmund furnace (q.v.).

osmondite. A solid solution of iron carbide in alpha-iron.

osmophore. Odoriphore, aromatophore. Those atomic linkages in a molecule which cause odor; as, —COOR, —CHO, =CO, —CH_2OH, also sulfides, cacodyls, terpenes and pinenes. Cf. *odor theory, chromophore, pharmacophore.*

osmoscope. An osmometer, or device to demonstrate osmosis.

osmose. Osmosis.

osmosis. The diffusion of a liquid or gas through a porous wall or semi-permeable membrane, due to the attraction between a solvent and solute (*e.g.*, water and sugar) which creates the osmotic pressure, q.v.

osmotaxis. The movement of cells due to osmotic pressure.

osmotic. Pertaining to osmosis. **o. cell.** A container or compartment separated from another compartment by a semi-permeable membrane or a finely porous wall. **o. equivalent.** The ratio between the amount of water and the amount of solute passing in opposite directions through a semi-permeable membrane. **o. pressure.** The force exerted by dissolved substances on a semi-permeable membrane which separates a solution from the pure solvent; the force resulting from the molecular attraction between solute and solvent. It is proportional (a) to the number of molecules in solution (concentration), and therefore to (b) the lowering of the freezing point, and (c) the raising of the boiling point.

According to Van't Hoff's theory (q.v.) dissolved substances obey the gas-laws; hence the o. p. equals the gas pressure which the solute would exert if all the solvent were removed and the solute left in the same space in the condition of an ideal gas. Hence o. p. is defined as: the hydrostatic pressure which is necessary to bring the solution into equilibrium with the pure solvent, when the two are separated by a semi-permeable membrane.

Many phenomena are due to o.p., such as the rise of sap in the stems of plants, the tremendous expanding force of roots, which may split rocks, and the absorption and secretion of food and waste materials.

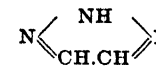
Osmund furnace. A high forge or primitive blast furnace. **O. iron.** Osmond iron.

osone. A ketonaldehyde formed from an osazone by hydrolysis with concentrated hydrochloric acid. By its reduction a ketone-alcohol is formed, so that the original aldose can be changed to an isomeric ketose by means of osazone and osone transformations.

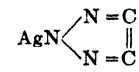
$$X.CH(OH).CHO \rightarrow X.C(:N.NHPh).CH:N.HNPh.$$
$$X.CO.CH_2OH \leftarrow X.CO.CH:O$$

osotetrazones. The derivatives of *v*-tetrazines, q.v.

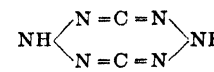
osotriazole. $C_2H_3N_3$ = 69.1. 1.2.3-triazole, pyrro(a,a')diazole. The heterocyclic compound



m.22, b.204, soluble in alcohol. **n-phenyl-,** 1-phenylosotriazole. A colorless liquid, b.224. **n-phenyl-c-amido-c-methyl-,** or 2-phenyl-5-amino-4-methylosotriazole. Colorless crystals, m.83. **o. silver.** AgC_2N_3 = 173.91.



osotriazoleazimide. $C_2N_6H_2$ = 110.08.



osram. An alloy of osmium and tungsten (wolfram). **o. lamp.** An incandescent lamp having a tungsten filament coated with osmium (trade name).

ossalin. Adeps ossium. A grayish fat with the odor of tallow, obtained from ox bone marrow; used in ointments.

ossein. Collagen. The albumenoid material (bone-marrow) which remains after treating bones with dilute hydrochloric acid; it is hydrolyzed by boiling water to glue and gelatin.

ossification. Formation of, or conversion into bone; *e.g.*, as of cartilage.

osso-albumin. A protein obtained from ossein.

ossomucin. The substance which holds bone tissue together.

osteolite. An impure apatite or calcium phosphate.

ostranite. Zircon.

ostrole. $C_{15}H_{16}O_3$ = 244.1. A substance like coumarin, m.84 from masterwort, the rhizome of *Imperatoria ostruthium.*

ostruthin. $C_{18}H_{20}O_3$ = 284.2. A crystalline substance from the root of masterwort, *Imperatoria ostruthium,* an Umbelliferae. Yellow crystals, m.119, insoluble in water, soluble in alcohol or ether. Cf. *imperatorin.*

Wilhelm Ostwald.

Ostwald, Wilhelm. 1853–1932. A German chemist and research worker in theoretical and

physical chemistry, noted for his theories of solution and color. **O. equation.** The degree of ionisation of a solution of an electrolyte at a given concentration is $\Lambda/(1a + 1c)$, where Λ is the electrical conductivity of the solution at that concentration, and 1a and 1c are the mobilities of the anion and cation, respectively, at infinite dilution. **O. law.** Dilution law. In a solution of an electrolyte the square of the number of moles ionized divided by the number of moles not ionized varies directly with the dilution. The law is derived by the application of the law of mass action to an ionization equilibrium. It must be modified to be applicable to strong electrotypes (cf. *activity, Rudolfi's equation*). **O. rule.** In the formation of a substance which can exist in more than one modification, the least stable is formed first, and changes ultimately into the more stable modification. **O. theory of indicators.** The color changes of indicators are due to their existence as weak acids or bases which follow the usual laws of ionization, one ionic radical having a different color from the undissociated molecule.

osyritin. $C_{27}H_{30}O_{17}$ = 626.23. A bright-yellow glucoside from *Osyris abyssinica*, the Cape sumach or bergbas, a Santalaceae of South Africa; used for tanning.

otavite. A native cadmium carbonate, usually hydrated.

otoba butter. Otoba wax. **o. wax.** Otoba butter, American nutmeg butter, American mace butter. The fat expressed from the fruits of *Myristica otoba* or *M. fragrans*, m.38°, containing olein, myristicin and otobite, and having a nutmeg-like odor. Cf. *mace, myristica.*

otobite. A white crystalline solid, m.133, from otoba wax.

otolith. Ear-stone. A concretion of calcium carbonate formed in the ear.

otto of roses. Attar of roses.

ouabain. $C_{30}H_{46}O_{12}.9H_2O$ = 761.4. Uabain. Crystallized strophantin, strophantin G. A glucoside from the seeds of *Acocanthera venenata* (*ouabaio*) and *Strophanthus gratus*. Colorless quadratic crystals, soluble in hot water, or alcohol, slightly soluble in ether or chloroform. Used medicinally as a digitalis substitute; constituent of Zulu arrow poison. Cf. *acocantherin, wabain.*

ounce. A measure of weight in the English system.

apothecarie's- 1 ap. oz. = ℥ = 1 troy ounce = $\frac{1}{12}$ pound = 8 drams (ʒ) = 24 scruples (℈) = 480 grains (gr.). 1 ap. oz. = **31.1034 grams.**

avoirdupois- 1 av. oz. = $\frac{1}{16}$ pound = 7.2916 drams = 18.229 pennyweights (dwt.) = 21.875 scruples = 437.5 grains. 1 av. oz. = **28.3502 grams** = 28,350.2 milligrams = 138.449 carats = 142.045 metric carats.

fluid- 1 fl. oz. = 16 pound = 0.25 gill = 480 minims (♏) = **28.3966 c.c.** = the volume of one av. oz. distilled water at 62°F.

troy- 1 oz. t. = 20 pennyweights = 480 grains = **31.10348 grams** = 1.09712 av. oz.

-ous. A suffix indicating the lower valence of an element or rădical; as, ferrous, sulfurous.

outcrop. A mineral deposit, vein, or lode that comes to the surface of the earth.

output. The total amount produced in a given time.

ouvarovite. Uvarovite.

ovalbumin. An albumin from egg-white.

ovarian substance. The dried and powdered entire ovaries of the hog, without preservative or diluent. A yellowish powder of peculiar odor, slightly soluble in water; used medicinally. Cf. *corpus luteum.*

ovarin. The dried and powdered ovaries of the cow, used medicinally.

oven. A compartment in which substances are heated, dried, roasted, baked, or annealed. Cf. *furnace.*

overcooled. Supercooled.

overgrowth. The growth of a crystal over the surface of a crystal of a different, but usually isomorphous, substance.

overheating. Superheating. (1) To heat excessively. (2) To raise the temperature of a liquid above its boiling point.

overpotential. The difference in volts between the back-potential of an electrode and that of a saturated calomel electrode at the same temperature and partial pressure, immediately after the cessation of electrolysis. Cf. *overvoltage, undervoltage.*

oversaturated. Supersaturated. Describing a solution that contains more solute than is normal for saturation at a given temperature.

Overton coefficient. Distribution coefficient.

overvoltage. (1) Overpotential. (2) Super-tension. The excess voltage above the normal reversible electrode potential of a metal electrode required to decompose the solution or cause deposition from the solution on the electrode. It depends on the nature and surface of the metal, and is important in electrolytic reactions and for the graded electrolytic deposition of metals from a mixed solution. Cf. *polarization.*

ovo. An egg. **o. flavin.** Vitamin B_2. **o. globulin.** A protein of egg-white precipitated by dialysis. **o. keratin.** The membranous lining of birds' and shark's eggs.

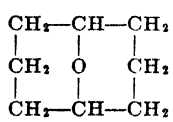
Ovoca classifier. A mechanical separator for ores, which consists of a double-screw continuous conveyor.

ovoflavin. Vitamin B_2.

ovomucin. A water-insoluble globulin from egg-white.

Owen process. A flotation process, in which the ores are agitated in water containing 2 oz. eucalyptus oil per ton.

oxa- A prefix indicating an oxygen bridge; as, oxabicyclononane:



oxacid. Oxyacid.

oxalacetic acid. $C_4H_4O_5$ = 132.03. Oxysuccinic acid, butanondiacid, oxobutanedioic acid*. A dibasic keto-acid, $COOH.CO.CH_2.COOH$. An unstable liquid whose methyl ester forms colorless crystals, m.74, b.137. **o. [ethyl] ester.** $C_8H_{12}O_5$ = 188.14. The diethyl ester of oxalacetic acid, $EtOOC.CO.CH_2.COOEt$. A colorless liquid, b.131. It can decompose in three different ways:

(a) acid decomposition, forming CH_3OH, $(COOH)_2$, and CH_3COOH.

(b) ketone decomposition, forming CO_2 and $CH_3CO.COOH$.

(c) carbon monoxide decomposition, forming CO and $EtOOC.CH_2.COOEt$.

oxalaldehyde. Glyoxal.

oxalamide. Oxamide.

oxalamidine. $C_2H_6N_4$ = 86.2. Diamidine. $NH_2.C(:NH)—C(:NH).NH_2$.

oxalanilide. Oxanilide.

oxalate. A salt of oxalic acid, or a compound containing the divalent $(COO)_2^{--}$ radical. The metallic oxalates, except those of the alkalis and magnesium, are insoluble in water. **acid-** Bioxalate. **bi-** or **acid-**, A salt containing the monovalent $HC_2O_4^-$ radical. **neutral-** Oxalate.

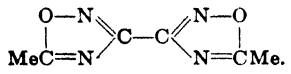
oxaldehyde. Glyoxal.

oxaldiamidoxime. $C_2H_8O_2N_4$ = 118.2. $NH_2.C(:N.OH)—C(:N.OH).NH_2$. Colorless crystals, m.196.

oxaldihydroxamic acid. $C_2H_4O_4N_2$ = 120.1. $HO.C(:NOH)—C(:NOH).OH$. Colorless crystals, m.165.

oxaldiimidedihydrazide. $C_2H_8N_6$ = 116.4. Carbohydrazidine. $H_2N.NH.C(:NH)—C(:NH)-.NH.NH_2$.

oxalenbisazoxymethenyl. The heterocyclic compound,



Colorless crystals, m.165.

oxalene. The tetravalent group:

oxalethyline. Diethyloxamide.

oxalhydrazide. $C_2H_6O_2N_4$ = 118.1. $NH_2.NH.-CO.CO.NH.NH_2$.

oxalic acid. $C_2H_2O_4.2H_2O$ = 126.1. Ethandiacid, dicarboxylic acid, ethanedioic acid*. A dibasic or dicarboxylic acid, HOOC.COOH. Colorless, monoclinic, poisonous crystals, d.-1.65, m.99, soluble in water, alcohol, or ether. It occurs in many plants; or is prepared by passing CO into concentrated NaOH, or by heating cellulose (sawdust) with NaOH. Used extensively as a reagent (for standard solutions); in the synthesis of many compounds; as a precipitant in purifying glycerin; in the dye and textile industries, as an ink eraser, in bleaching, and in photography. **diethyl-** Diethoxalic acid. **chlor-** C_2HO_4Cl = 127.5.

o. acid series. A group of dibasic organic acids containing two carboxyl radicals, $(CO-OH)_2$, and having the general formula, $C_nH_{2n-2}O_4$ or $(CH_2)_n(COOH)_2$.

oxalic acid	HOOC.COOH
malonic acid	$HOOC.CH_2.COOH$
succinic acid	$HOOC.(CH_2)_2.COOH$
glutaric acid	$HOOC.(CH_2)_3.COOH$
adipic acid	$HOOC.(CH_2)_4.COOH$
pimelic acid	$HOOC.(CH_2)_5.COOH$
suberic acid	$HOOC.(CH_2)_6.COOH$
azelaic acid	$HOOC.(CH_2)_7.COOH$
sebacic acid	$HOOC.(CH_2)_8.COOH$
brassic acid	$HOOC.(CH_2)_9.COOH$
brassylic acid	$HOOC.(CH_2)_{11}.COOH$
roccellic acid	$HOOC.(CH_2)_{15}.COOH$

o. aldehyde. Oxaldehyde. **o. dianilide.** Oxanilide. **o. monoamide.** Oxamic acid. **o. monoanilide.** Oxanilic acid. **o. monoureide.** Oxaluric acid.

oxalium. Potassium bioxalate.

oxalmethylin. $C_4H_8N_2O_2$ = 116.08. Dimethyloxamide, $(CONHMe)_2$. White crystals, m.210.

oxaluramide. $C_3H_4O_3N_2$ = 131.1. Oxalan, oxamic acid ureide. $NH_2.CO.NH.CO.CO.NH_2$, m. exceeds 310.

oxaluric acid. $C_3H_4O_4N_2$ = 132.07. Oxalic monoureide, carbamyl oxamic acid, $NH_2.CO.NH.CO.COOH$.

oxalyl. The divalent —CO.CO— radical. **o. chloride.** COCl.COCl = 126.93. Ethandioyl chloride*. A colorless liquid, m. −12, b.64 decomp. by water, or alcohol, slightly soluble in ether. **o. diacetophenone.** $PhCOCH_2CO.COCH_2COPh$ = 294.2. Colorless crystals, m.180. **o. urea.** Parabanic acid.

oxamethane. $C_4H_7O_3N$ = 117.09. Acetyloxamide, ethyloxamate, $C_2O_2NH_2(C_2H_5O)$. The ethyl ether of oxamic acid. Colorless crystals, m.115, soluble in alcohol.

oxamic acid. $C_2H_3O_3N$ = 89.1. Oxaminic acid, oxalic acid monoamide. The acid, $HOOC.-CONH_2$. Colorless crystals, decomp. 210, slightly soluble in water or alcohol. **carbamyl-** Oxaluric acid. **phenyl-** Oxanilic acid.

oxamide. $C_2H_4O_2N_2$ = 88.1. Ethanediamide*. The amide of oxalic acid, $(CONH_2)_2$. A colorless crystalline powder, d.1.476, decomp. 417, insoluble in water, alcohol, or ether.

oxamides. A group of compounds derived from oxamide by replacing the hydrogen atoms by alkyl or aryl radicals:
$(CONHMe)_2$, dimethyl oxamide, m.210.
$(CONMe_2)_2$, tetramethyl oxamide, m.80.

oxamidine. Amidoxime.

oxamido. The monovalent radical, $H_2NCO.-CONH—$.

oxaminic acid. Oxamic acid.

oxamonitrile. $C_2H_2ON_2$ = 70.1. Carbamyl cyanide. $NH_2.CO.CN$.

oxamyl. The monovalent radical, $H_2NCO.CO—$.

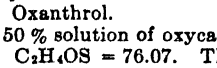
oxane. Ethylene oxide.

oxanilic acid. $C_8H_7O_3N$ = 165.1. Phenyloxamic acid, oxalic acid monoanilide. $HOOC.-CONHPh$. Colorless rhombic crystals, m.149, slightly soluble in hot water, alcohol or ether; used in organic synthesis.

oxanilide. $C_{14}H_{12}O_2N_2$ = 240.2. $(CONHPh)_2$. Colorless scales, m.245, insoluble in water or ether, soluble in hot alcohol; used in organic synthesis.

oxanthranol. $C_{14}H_{10}O_2$ = 210.1. Anthrahydroquinone, $C_6H_4(COH)_2C_6H_4$. Yellow needles, m.180.

oxanthrol. $C_{14}H_{10}O_2$ = 210.1. 5-keto-10-hydroxy-anthracene, 10-hydroxyanthrone, 5-keto-anthrol, oxanthrone.

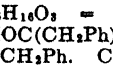


Colorless crystals, m.205.

oxanthrone. Oxanthrol.

oxaphor. A 50 % solution of oxycamphor.

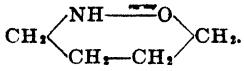
oxathietane. C_2H_4OS = 76.07. The heterocyclic compound



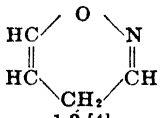
oxatollic acid. $C_{16}H_{16}O_3$ = 256.2. Dibenzylglycollic acid. $HOC(CH_2Ph)_2.COOH$ or $CH_2-Ph.C(OH)COOH.CH_2Ph$. Colorless crystals, m.156.

oxatyl. Carboxyl.

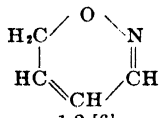
oxazidine. C_4H_9ON = 87.1. A heterocyclic compound formed by the anhydrides of gamma-aldehydes and gamma ketone-acids:



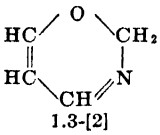
oxazine. C_4H_5ON = 83.1. A series of thirteen heterocyclic compounds, *e.g.*,



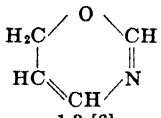
1.2-[4]



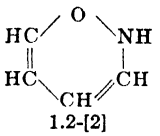
1.2-[6]



1.3-[2]



1.3-[6]



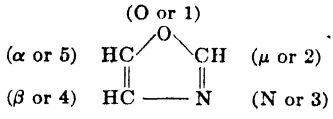
1.2-[2]

The remaining compounds are designated as 1.2-[3], 1.2-[5], 1.3-[3], 1.3-[4], 1.3-[5], 1.4-[2], 1.4-[4], and 1.4-[3]; where the first and second numeral indicates the position of O and N, and the numeral in brackets the position of the additional H (as CH_2 or NH group).

1.2-[2] is *1.2*-isoxazine.
1.3-[3] is *1.3*-isoxazine.
1.3-[4]- is also called pentoxazol.
1.4-[2]- is also called paroxazine.
1.4-[4] is *1.4*-isoxazine.
Cf. *thiazine*, *benzoxazine*, *benzoparoxazine*.

naphth- Phenoxazine. **par-** 1.4-[2]-Oxazine. **phen-** Phenoxazine.

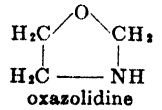
oxazole. C_3H_3ON = 69.1. Furo(b)-monazole. The heterocyclic compound,



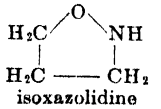
dihydro- Oxazoline. **tetrahydro-** Oxazolidine. **triphenyl-** Benzilam.

oxazoles. A series of derivatives of oxazole, formed by: (a) a condensation of halogen derivatives of ketones with an acid imide: R—CH:C(OH)Br + R′C(:NH)OH; (b) by passing HCl into a mixture of aromatic aldehydes and their cyanhydrins: R—CHO + R′—CH(OH)CN; (c) by the action of H_2SO_4 on nitriles and benzoin.

oxazolidine. C_3H_7ON = 73.1. The heterocyclic compound,

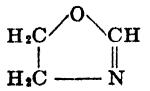


oxazolidine

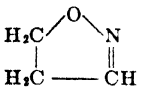


isoxazolidine

oxazoline. C_3H_5ON = 71.1. The heterocyclic compounds,



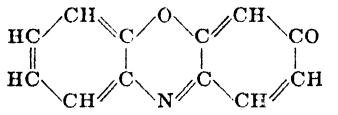
oxazoline



isoxazoline

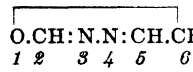
μ-amido- Ethylene urea. **μ-amido-α-methylene.** Propylene urea.

oxazone. $C_{13}H_7O_2N$ = 197.1. The heterocyclic compound,

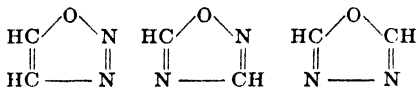


9-hydroxy- Resorufin.

oxdiazine. $C_3H_4ON_2$ = 84.047. A series of heterocyclic compounds; as, **1.3.4.6-**



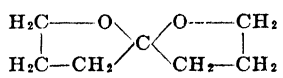
oxdiazole. $C_2H_2ON_2$ = 70.1. A series of heterocyclic compounds:



1.2.5- Furazan (furo(aa′)diazole).

oxethyl. Ethylol. The monovalent $CH_2OH.CH_2$— radical; (cf. ethoxy-, OC_2H_5).

oxetone. $C_7H_{12}O_2$ = 128.1. The heterocyclic spiro-compound,



Oxford process. The separation of nickel from copper by means of sodium sulfide. Cf. *Mond process*.

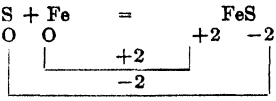
oxgall. The bile obtained from the gall bladder of oxen. Used in the textile industry, and in lithography and engraving.

oxid. Oxide.

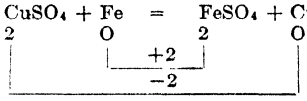
oxidase. An oxidizing enzyme in animal and vegetable tissues.

oxidation. The act of oxidizing, or the increase of the valency of an element, cf. *hydroxylation*. Originally, combining with oxygen; later the term indicated also a combination with halogens or other electronegative elements. More recently it has a broader meaning: an augmentation of the valence number of an ion or atom as the result of the loss of negative charges as electrons, thereby, making it more electropositive. See *electronation*. It is the correlative term of reduction. Cf. *redox*, *oxido-reduction*. For examples of oxidation see *nitrogen*, *heavy metals*, *chromium*. **o. process.** A process or reaction which increases the proportion of oxygen or acid-forming elements or radicals in a compound. **o. reaction.** Electronation reaction. A reaction in which the valence number of an element changes. Every oxidation must be accompanied by a correlative reduction or decrease in the valence number

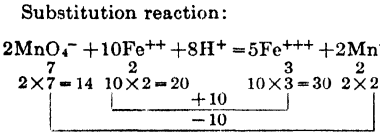
of some other element. Some types of oxidation-reduction reactions are:
Combination reactions:



The iron is oxidized 2 steps (lost 2 electrons); the sulfur is reduced 2 steps (gained 2 electrons).
Displacement reaction:



The copper is reduced (gained 2 electrons); the iron is oxidized (lost 2 electrons); the sulfate is neither oxidized nor reduced.
Substitution reaction:



which in its molecular form is:

$$2KMnO_4+10FeSO_4+8H_2SO_4=5Fe_2(SO_4)_3+2MnSO_4+K_2SO_4+8H_2O$$

Two atoms of manganese are each reduced from 7 to 2; a total gain of 10 electrons.
Ten atoms of ferrous are oxidized to ferric, a total loss of 10 electrons.
The potassium and sulfate remain unchanged.
o.-reduction indicators. See *indicators.* **o. value.** A constant of oils. The degree of oxidation (in terms of gms. of I per 100 gms. of sample) which occurs when a solution of a fat in carbon tetrachloride is oxidised by potassium dichromate in glacial acetic acid.

oxide. A binary compound of oxygen generally with a metal, M_2O (basic), or non-metal, NO_x (acid). Cf. *ethers, anhydrides.* **acid-** The oxygen compounds of non-metals, as SO_2, SO_3, P_2O_3, P_2O_5, etc. They give the oxyacids with water. **basic-** The oxygen compounds of metals, as Na_2O, K_2O, CaO, MgO, Al_2O_3. They give the bases with water. **amphoteric-** The oxygen compounds of the heavy metals, such as ZnO, Fe_2O_3, etc. They may form either weak acids or weak bases. **hydrous-** An amorphous colloidal substance, which is neither a definite hydroxide nor a definite crystalline hydrate. **inert-** Those oxygen compounds which form neither acid nor basic compounds, as CO, N_2O. **neutral-** Hydrogen oxide, or water. **per-** A binary compound containing the peroxide group, —O.O—, as H_2O_2, BaO_2. Peroxides yield hydrogen peroxides with acids, and should not be confused with dioxides, many of which do not. Thus, NO_2 is a dioxide, not a peroxide. **primary-** q.v. **prot-** The o. with the fewest oxygen atoms of a series of oxides. **sub-** An o. lower than the commonest of a series.

oxidimetry. Analytical methods in which an oxidizing agent is employed for the titration of substances.

oxidize. To unite with oxygen or to increase the proportion of electronegative elements or radicals.

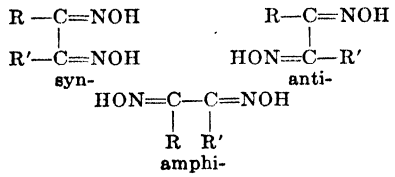
oxidizer. An oxidizing agent (q.v.) generally in the solid state; as, $NaNO_3$ or NH_4NO_3 in explosives.

oxidizing. The act of oxidation or electronation. **o. agent.** A substance that: (a) yields oxygen readily, (b) removes hydrogen from a compound, or (c) attracts negative electrons. The common oxidizing agents are: O_2, O_3, Cl_2, Br_2, $KMnO_4$, $K_2Cr_2O_7$, $KClO_3$, HNO_3, H_2O_2. **o. flame.** The outer zone of a flame containing an excess of air. (The inner cone contains more carbon and is the reducing flame.) **o. reaction.** See *oxidation, electronation.*

oxido-reduction. An oxidation reaction (q.v.) considered from both the oxidizing and reducing effects. **o. indicators.** See *indicators.* **o. potential.** r_H or rH. Reduction intensity. $r_H = \log 1/pH_2$; where pH_2 is the hydrogen gas pressure in atmospheres. Cf. *redox, rH.*

oximes. A series of compounds containing the monovalent —CH(:N.OH) radical. They are condensation products of aldehydes or ketones with hydroxylamine. (See *aldoxime, ketoxime.*) There are two isomeric types:

acet- Acetoxime. **ald-** Aldoxime. **amid-** Amidoxime. **di-** Ketoxime. A compound containing two oxime radicals. There are three types:



dimethyldi- Dimethylglyoxime. **form-** See *nitrolic acid.* **glucose-** See *glucose.* **lact-** See *lactoxime.* **pent-** See *pentoxime.*
o. group. The divalent >N.OH radical.

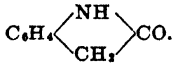
oximide. C_2HO_2N = 71.1. The imide of oxalic acid,  . Colorless prisms obtained from oxamic acid by dehydration with P_2O_5. **cyan-** See *cyanoximide.*

oximido. Isonitroso. The divalent radical, >N.OH. **o. compounds.** A series of compounds containing the monovalent —NH.CHO radical, or its derivatives.

oximinoketone. A compound of the type R.CO.C:NOH; they give a blue color with ferrous iron.

oxin(e). 8-Quinolinol.

oxindole. C_8H_7ON = 133.1. α-indolinone, 2(3)-indolone, 2-ketoindoline, 2.3-dihydro-2-ketoindole. The lactam of o-amino-phenolacetic acid, and a derivative of indole:



Colorless needles, m.126, soluble in hot water, alcohol or ether. Cf. pseudo *indoxyl.* **bi-** Indigotin. **imino-** Imesatin. **methyl-** Atrosine.

oxirane. Ethylene oxide. **methyl-** Propylene oxide.

oxirene. CH:CH.O. **methyl-** *1.2*-Epoxypropene*.

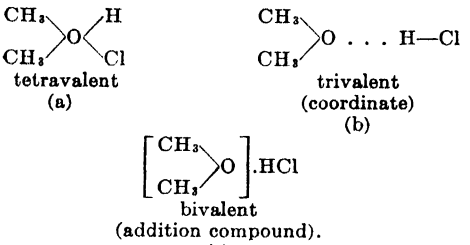
oxo- A prefix indicating the presence of the ketogroup; as oxomalonic acid, HOOC.CO.COOH. **o. compounds.** Compounds having a keto group, excluding carboxylic acids, hence: aldehydes, ketones, ketenes, quinones, lactones, etc.

oxomalonic acid. Mesoxalic acid.

oxone. "Oxygen cubes." Cubes of fused sodium peroxide with traces of CuO (as catalyst); used for making small quantities of oxygen in the laboratory by wetting the cubes. Cf. *autogenor.*

oxonite. An explosive consisting of picric acid dissolved in nitric acid.

oxonium compounds. An addition compound or double compound (c) of an organic oxide with strong acids (HCl, $HClO_3$) or their salts ($SnCl_4$). They were at first considered to contain tetravalent oxygen (as in a), and later trivalent oxygen, coordinately combined (as in b). They are analogous to ammonium salts.



tetravalent (a) trivalent (coordinate) (b) bivalent (addition compound). (c)

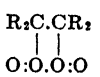
o. ion. The ion OH_3^+, which is believed to represent more accurately what is normally called the hydrogen ion (q.v.).

oxophenarsine hydrochloride. $C_6H_6AsO_2N.HCl$ = 235.49. The 3-amino-4-hydroxyphenyl-arsine oxide hydrochloride, $C_6H_3.AsO.(NH_2)(OH).HCl$. A white powder, soluble in water; it is an antisyphilitic. See *mapharsen.*

oxophenic acid. Catechol.

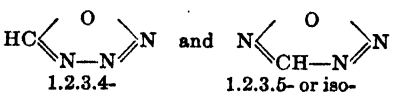
oxozone. O_4. A supposed modification of oxygen containing 4 atoms of oxygen. Cf. *ozone.*

oxozonide. A group of unstable compounds formed by the addition of 4 atoms of oxygen to the double bonds of an unsaturated organic structure:



Cf. *ozonide, isozozonide.*

oxtriazole. $CHON_3$ = 71.2. The heterocyclic compounds:



1.2.3.4- 1.2.3.5- or iso-

oxy-[1] (1) A prefix, infix or suffix indicating the presence of oxygen in a molecule. (2) A prefix for the grouping —C—O—C—. Cf. *keto-, ether.* (3) A misnomer for hydroxy, —OH. **o. acetylene.** A mixture of oxygen and acetylene gases used in a blowpipe to obtain high temperatures (6000°F.); it is used for cutting armor plates and welding. **o. hydrogen.** See *oxyhydrogen.* **o. muriatic acid.** An obsolete term for hydrochloric acid.

oxyacanthine. $C_{19}H_{21}O_3N$ = 311.17. Vinetine. An alkaloid from the root of *Berberis vulgaris,* barberry. A white crystalline powder, m.210, soluble in alcohol, ether, or chloroform. **o. hydrochloride.** $C_{19}H_{21}NO_3.HCl.2H_2O$ = 383.67. Small white needles, soluble in water.

oxyacetone. Acetol.

oxyacid. An acid containing oxygen. **inorganic-** A tertiary compound of an acid radical with hydrogen; as, $HClO_3$, H_2SO_4, H_3PO_4, H_4SiO_4. **organic-** An organic compound which contains both a —COOH radical and —OH group; as, CHOH.COOH, glycocollic acid, or MeCOH.COOH, lactic acid.

oxyalizarin. Purpurin.

oxyamides. Hydroxyamides. A series of compounds containing the $—CONH_2$ and —OH radicals; as, $CHOH.CONH_2$, glycollamide, or $MeCOH.CONH_2$, lactamide.

oxyammonia. Hydroxylamine.

oxyammonium compounds. Same as hydroxylammonium compounds (see *quaternary* amines).

oxyanthracene. Anthrol.

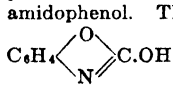
oxyazide. A compound containing the $—N_3$ and —OH radicals, *e.g.*, $HO.CH_2.CO—N{=}N_2$, glycolazide.

oxyazo- A prefix indicating the presence of the —N:N— and —OH groups. **o. benzene.** $C_{12}H_{10}ON_2$ = 198.2. The simplest oxyazo compound, $C_6H_5.N{:}N.C_6H_4OH$. An orange-red crystalline powder. **o. compounds.** An organic compound of the type, $R.N{:}N.C_6H_4OH$, obtained by the action of diazo compounds on phenols in alkaline solution. They form a class of dyes.

oxybenzene. Misnomer for phenol.

oxybenzoic. Misnomer for hydroxybenzoic or salicylic.

oxybenzoxazole. $C_7H_5O_2N$ = 135.1. Carbonylamidophenol. The heterocyclic compound,

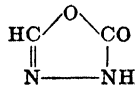


Colorless crystals, m.137.

oxybenzyl. Misnomer for hydroxybenzyl. **o. alcohol.** Misnomer for salicylic alcohol.

oxybiazole. 1.3.4-Oxydiazole.

oxybiazolone. $C_2H_2O_2N_2$ = 82.1. The heterocyclic compound,



oxybromide. (1) An organic compound containing the —OH and —Br groups. (2) The —OBr radical.

oxyburserasin. A substance obtained from myrrh, used medicinally.

oxybutyric acid. See *butyric acid.* **o. aldehyde.** Aldol.

oxycamphor. $C_{10}H_{16}O_2$ = 168.1. C_8H_{14}  .

Colorless crystals, derived from camphor, m.204, slightly soluble in water, soluble in alcohol or ether; used medicinally (see *oxaphor*).

oxycannabin. $C_{11}H_{11}O_4N$ = 221.1. A derivative of cannabinol.

oxycanthine. Oxyacanthine.

oxychloride. Describing a compound which contains the —OH and —Cl radicals; or the —OCl radical.

oxycholine. Muscarine.

oxychromatin. Linin (1).

oxyconiine. Conhydrine.

oxydase. Oxidase.

oxydation. Oxidation.

oxydizing. Oxidizing.

oxyfluorenone. $C_{13}H_8O_2$ = 196.1. o-oxyd phenylene xetone.

Colorless crystals, m.115.

oxygal. A trade name for sodium peroxide.

oxygen. O = 16.000. Oxygenium, vital air, sauerstoff. A gaseous element, atomic number 8, which exists free in the atmosphere as O_2, and combined in many substances of the solid earth-crust. It is the most abundant and most important of all chemical elements, and was Hooke's *nitre air*, first isolated Aug. 1, 1774, by J. Priestley (*dephlogisticated air*) and earlier (in 1773, but not published until 1777) by K. W. Scheele (*empyreal air*). Its rôle in nature was recognized by A. L. Lavoisier who developed the theory of combustion and oxidation. A colorless gas, $d._{(air=1)}$1.1053, m. −227, b. −182, slightly soluble in water. It occurs in three isotopic forms of masses 16, 17, and 18, in the proportions of 10.000:1:8. It is prepared either by fractional distillation of liquid air, or by electrolysis of water, and is shipped in steel cylinders. Oxygen is the basis of atomic weights (O = 16), the valency system (O = 2), and the acid and base system (cf. *ammonia system.*) It is used medicinally in pulmonary diseases and anemia; with nitrous oxide, ethylene, or other anesthetics; and with hydrogen, acetylene, or illuminating gas for producing high temperatures for welding, and melting metals. **active-** Ozone, O_3. **allotropic-** Ozone, oxozone. **hydroxyl-** The oxygen of the hydroxyl group. **ketonic-** The oxygen of the >CO group. **liquid-** See *liquid o.* **radio-** A short-lived isotope obtained by bombardment of o. with deuterons or alpha particles. See *radio elements.* **o. absorbent.** A substance that removes gaseous oxygen from a gas mixture, *e.g.*, from air. The most common are an alkaline solution of pyrogallic acid, or metallic copper in ammoniacal solution of cuprous chloride. Others are:

	Absorpt. rate
chromous sulfate reagent	100 %
cuprous chloride reagent	4 %
quinone hyposulfite	4 %
potassium pyrogallate	2.3 %

o. carrier. A catalytic substance that absorbs oxygen molecules and splits off oxygen as atoms. **o. difluoride, o. fluoride.** OF_2 = 54.00. A gas, which forms at low temperatures a yellow liquid, $d._{-190°}$1.65, m. −223.8, b. −146.5.

oxygenase. An enzyme that enables atmospheric oxygen to be utilised by the organism or in the system in which it occurs.

oxygenate. To enrich with oxygen.

oxygenated water. Water saturated with oxygen gas.

oxygenation. Saturation with oxygen.

oxygenator. Any apparatus for saturating or impregnating substances with oxygen.

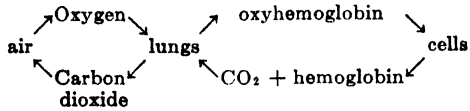
oxygenium. The Latin name for oxygen.

oxygenize. (1) Oxygenate. (2) Oxidize.

oxyhematoporphyrin. A pigment derived from oxyhemoglobin, and closely allied to urohematoporphyrin, sometimes found in urine.

oxyhemocyanin. The oxidized form of hemocyanin.

oxyhemoglobin, oxyhæmoglobin. Hematoglobulin, hematocrystallin. The red pigment of he blood corpuscles of animals; it carries the oxygen to the individual cells of the body, and emoves the carbon dioxide from them later:



Molecular weight, 16.669; it contains 1.324 cc. O_2 per gram.

oxyhydrase. An enzyme in vegetable and animal secretions that decomposes water to H^+ and OH^-.

oxyhydrazides. A series of organic compounds which contain the —OH group and the —$NHNH_2$ radical. *E.g.*, $HOCH_2.CONHNH_2$, glycolhydrazide. $HOCHMe.CONHNH_2$, lactohydrazide.

oxyhydrogen. An extremely explosive mixture of oxygen and hydrogen. **o. blowpipe.** A burner in which a jet of oxygen is inside a jet of hydrogen, thus ensuring complete combustion of the two gases and an extremely hot flame. **o. flame.** A blowpipe flame obtained by burning hydrogen with oxygen, which gives a temperature of 5000°F. **o. light.** The "lime" light produced by heating calcium oxide with the oxyhydrogen blowpipe.

oxyhydroquinone. $C_6H_3(OH)_3$ = 126.1. 1.2.4-Trihydroxybenzene, 2.4-dihydroxyphenol, a-hydroxy-hydroquinol. Colorless crystals, m.-140.

-oxyl. A suffix denoting the RO— group; as, methoxyl, MeO—; phenoxyl, PhO—. Cf. *hydroxyl.*

oxylactone. A lactone containing a —OH radical, as  , oxyvalerolactone.

oxylepidine. Dibenzoyl *stilbene.*

oxyleucotin. $C_{34}H_{32}O_{13}$ = 632.2. A crystalline principle from paracoto bark.

oxylith. A mixture of sodium peroxide and bleaching powder, used to generate oxygen for welding purposes.

oxymalonic acid. Tartronic acid.

oxymel. A medicated honey, containing: clarified honey (80 %), acetic acid (10 %) and water (10 %).

oxymethoxyallylbenzene. Eugenol.

oxymethylconiferin. Syringenin.

oxymethylcresoltannin. Cretaform.

oxymethylene. Formaldehyde. **o. diphosphoric acid.** See *diphosphoric acid.*

oxymorphine. Dehydromorphine.

oxymuriate. Chlorate.

oxymuriatic acid. Chloric acid.

oxyn. A dihydroxy peroxide glyceride; a crystalline constituent of tung oil.

oxynaphthoic acid. $C_{11}H_8O_3$ = 188.1. α-naphthol carbolic acid, $C_{10}H_6(OH)COOH$. Colorless crystals, m.186, slightly soluble in water,

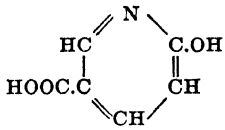
soluble in alcohol, ether, chloroform, or bicarbonate solutions; used medicinally as a disinfectant and antizymotic.

oxynaphthoxazime. Mukogen.

oxynarcotine. $C_{22}H_{23}NO_8$ = 429.14. White needles, soluble in alcohol.

oxyneurine. Betaine.

oxynicotinic acid. $C_6H_5O_3N$ = 139.1. 2-hydroxypyridine-5-carboxylic acid.



Colorless crystals, m.303. Cf. *oxypicolinic, oxyquinolinic* acid.

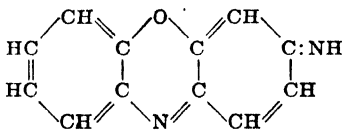
oxynitrilase. An enzyme that decomposes hydroxynitriles to aldehydes.

oxynitriles. A group of organic compounds containing the —OH and —CN radicals. *E.g.*, $HO.CH_2.CN$, ethanolnitrile, glycollic nitrile; HO.CHMe.CN, ethidene lactic nitrile.

oxynitroso. Nitrito.

oxyphenazone. Resorufin.

oxyphenoxazime. $C_{12}H_8ON_2$ = 196.1. The heterocyclic compound,



Cf. *resorufin.*

oxyphenoxazone. Resorufin.

oxyphenyl. Hydroxyphenyl, the radical, $HO.C_6H_4$—. Cf. *phenoxy.*

oxyphile. A cell structure that can be stained with acid dyes.

oxyphor. Oxycamphor.

oxyphthalic acid. α-Hydroxyphthalic acid.

oxypicolinic acid. $C_6H_5O_3N$ = 139.1. 4-hydroxy-pyridine-2-carboxylic acid. Colorless crystals, m.250 (see *oxynicotinic acid*).

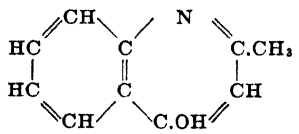
oxyproline. $C_5H_9O_3N$ = 131.1. γ-Hydroxy-α-pyrrolidine-carboxylic acid. An amino acid derived from gelatin or other proteins.

oxypurinase. An enzyme that oxidizes purine bodies.

oxypyridine. Pyridone.

oxyquercetin. Myricetin.

oxyquinaldine. $C_{10}H_9ON$ = 159.1. The heterocyclic compound,



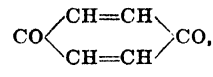
oxyquinaseptol. Diaphtherin.

oxyquinazoline. Quinazolone.

oxyquinoline. $C_9H_6N.OH$ = 146.1. A hydroxy derivative of quinoline. **o. carboxylic acid.** Kynurenic acid. **o. potassium sulfate.** Chinosol. **o. sulfate.** $(C_9H_7ON)_2H_2SO_4$ = 390.2. A yellow crystalline powder of saffron-like odor, m.175, soluble in water. Used medicinally as a disinfectant and antiseptic in eye-washes, gargles, and nasal sprays. **o. sulfonic acid.** Diaphthol.

oxyquinolinic acid. $C_6H_5O_3N$ = 139.1. 2-hydroxypyridine-5.6-dicarboxylic acid (see *oxynicotinic acid*).

oxyquinones. A group of derivatives of



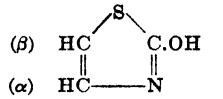
in which one or more of the hydrogen atoms are replaced by a hydroxy, methoxy, or ethoxy group.

oxysalt. A salt of an oxyacid.

oxysparteine. $C_{15}H_{24}ON_2$ = 248.4. An oxidation product of the alkaloid sparteine. Colorless crystals, m.49, soluble in water, alcohol, or ether; used medicinally as a heart stimulant.

oxysuccinic acid. Malic acid.

oxythiazole. C_3H_3ONS = 101.2. μ-Hydroxymetathiazole. The heterocyclic compound,



methyl- β-methyl-μ-oxythiazole, 5-methyl-o. Colorless crystals, m.160, soluble in water. **phenyl-** α-phenyl-μ-oxythiazole, 4-phenol-o. Colorless crystals, m.204, soluble in water.

oxy-Tobias acid. 2-Naphthol-1-sulfonic acid.

oxytocic. A drug that increases the expulsive power of the uterus, as ergot and pituitrin.

oxytocin. α-Hypophamine.

oxytoluol. Cresol.

oxytoxin. An oxidation-product of a toxin; cf. *oxytocin.*

oxytropism. The response of living cells to oxygen.

oz. Abbreviation for ounce or ounces. *ozs.* is incorrect. **oz. ap.** Abbreviation for apothecaries' ounces = ℥. **oz. av.** Abbreviation for avoirdupois ounce. **oz. fl.** Abbreviation for fluid ounce. **oz. t.** Abbreviation for troy ounce.

ozamin. Benzopurpurin. A red aniline dye.

ozocerite. Mineral wax, native paraffin, fossil wax, ozokerite. A native mixture of hydrocarbons; translucent yellow, brown to greenish masses, soluble in carbon disulfide. Used as an insulating material, for paints, leather polish, sealing wax, candles, etc. **purified-** Ceresin.

ozogen. Hydrogen peroxide.

ozokerite. Ozocerite.

ozonation. Impregnation or saturation with ozone (cf. *ozonidation*).

ozonator. Ozoniser. Any instrument or device in which ozone is generated.

ozone. O_3 = 48.000. A modification of oxygen gas produced usually by a silent electric discharge in air or oxygen. A faint blue gas of intense odor, $d._{(air=1)}$ 1.658, b. −119, decomp. 270, soluble in water, oil of turpentine or oil of cinnamon. Used as an antiseptic, bactericide and oxidizing agent; and for bleaching oils, fats, textiles, and sugar solutions. Cf. *oxozone.* **o. paper.** A filter paper impregnated with potassium iodide and starch, which turns blue on exposure to ozone; also a filter paper impregnated with indigo solution. Cf. *thallium ozone paper.*

ozonidation. To convert into an ozonide. Cf. *ozonization.*

ozonides. A series of compounds of ozone with unsaturated organic compounds containing a double bond:

They form thick oily, unstable liquids. Cf. ***oxozonide isozonide.***

ozonization. To treat with ozone. Cf. *ozonidation.*

ozonize. To sterilize with ozone, *e.g.*, drinking water.

ozonizer. (1) An apparatus for applying ozone to wounds. (2) Ozonator. Cf. *Siemens o.*

ozonolysis. The treatment of hydrocarbons with ozone.

ozotetrazone. Vicinal *tetrazine.*

P

P. (1) The symbol for phosphorus. (2) An abbreviation for pressure; P_T at constant temperature, P_V at constant volume. (3) Principal series of spectrum lines; as ^1P, ^2P. (4) The sixth shell or orbit of electrons in the atom. Cf. *periodic chain, Bohr's theory.* (5) Parachor.

p. (1) An abbreviation for *para.* (2) The electrons responsible for the principal series of lines in the spectrum. (3) Potential.

p.p.m. Parts per million.

π, Π. The Greek letter "pi." (1) An abbreviation for *peri,-* q.v. (2) The mathematical constant 3.1415. See *radius.*

ψ, Ψ. The Greek letter "psi." (1) An abbreviation for pseudo. (2) The symbol for the electric field of Schrödinger's atom.

φ, ϕ, Φ. The Greek letter "phi." An abbreviation for phenyl.

p_H, pH, P_H. A symbol for the logarithm of the reciprocal of the hydrogen-ion concentration, C_H or $[H^+]$; hence, $p_H = \log \frac{1}{C_H}$.

p-H. Para-hydrogen (see *hydrogen molecule*).

Pa. The symbol for protoactinium.

Paal's method. Reduction by hydrogen gas, with palladium as a catalyst.

pachnolite. The mineral $NaF.CaF_2.AlF_3.H_2O$.

pachyrhizid. $C_{30}H_{24}O_{10}$ = 544.22. A glucoside obtained from *Pachyrhizus angulatus.*

pacite. Arsenopyrite.

pack fong. German silver.

packing. (1) A filling material. (2) Crowding together. **atomic-** The crowding of atoms which have lost electrons from some of the shells, and hence can approach each other more closely. Such condition is assumed to exist in the interior of certain stars, which have an enormous density (up to 50,000 times that of water). Cf. *spectral classification.* **nuclear-** The crowding of hydrogen and helium nuclei and electrons within the atomic nucleus. Cf. *p. effect.*

p. effect. A loss of mass due to the crowding of protons and electrons in the atomic nuclei; as, in the hypothetical case $4H \rightarrow He$, where the atomic weight diminishes from $4 \times 1.008 = 4.032$, to 4.002. Cf. *mass-energy cycle, cosmic radiation.* **p. fraction.** An atomic constant which measures the forces holding electrons and protons together. It is the deviation per unit mass of the isotopic weight from whole numbers (in parts per 10,000).

Element	*Packing fraction* $\times 10^4$	*Isotopic weight or mass*
H	77.8	1.00778
He	5.4	4.00216
Li^6	20.0	6.012
Li^7	17.0	7.012
B^{10}	13.5	10.0135
B^{11}	10	11.0110
C	3	12.0036
N	5.7	14.008
O	0	16.0000
F	0	19.0000
Ne^{20}	0.2	20.0004
Ne^{22}	2.2	22.0048
P	−5.6	30.9825
Cl^{35}	−4.8	34.983
Cl^{37}	−5.0	36.980
A^{36}	−6.6	35.976
A^{40}	−7.3	39.971.

paddle. A straight iron tool used for mixing and stirring ores in a furnace. **p. agitator.** A stirring device for keeping solids in suspension during a reaction, or while being dissolved.

paddy. Threshed rice.

padutin. Kallikrein.

pae, pæ- See *pe-.*

paeonine. Peonine.

paeonol. Peonol.

pagodite. Pinite. The mineral $2Al_2O_3,K_2O,-3H_2O,5SiO_2$.

pail. A small bucket, sometimes graduated, for measuring liquids.

paint. A suspension of a finely-ground pigment in a vehicle, such as linseed oil, varnish, or turpentine. The basis of nearly all paint is a white pigment (white lead, zinc oxide, barytes, etc.) to which one or more colored pigments are added. Cf. *pigments.* **luminous-** A suspension of zinc sulfide or barium sulphide in nitro-cellulose lacquer. **water-** An aqueous mixture of pigment with casein or other glue.

p. mill. A grinder that grinds to 200 mesh. **p. oils.** An oil used for thinning paints; as, linseed oil, walnut oil, tung oil, poppy seed oil. **p. rock.** Ocher. **p. remover.** A preparation used to remove paint from a painted surface. **p. thinner.** Turpentine or turpentine substitutes.

paired electrons. An electron couple, or a set of two valence electrons that forms the nonpolar bond between two atoms, each atom furnishing one of the electrons in the pair. Cf. *twin electrons.*

palaeontology. Paleontology.

palau. An alloy of palladium and gold, used as a platinum substitute.

paleontology. The science that treats of prehistoric forms of life as revealed by fossil remains of plants and animals.

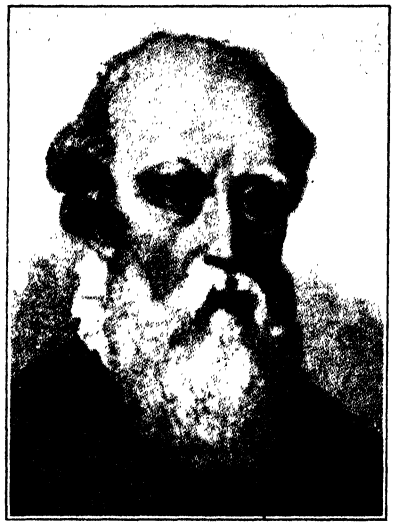
palicourine. A crystalline alkaloid from *Palicourea* species, order Rubiaceae.

Palissy, Bernard. 1499–1589. A French naturalist and leader in chemical technology and scientific thought, noted as forerunner of Boyle.

palite. $C_2H_2O_2Cl_2$ = 128.9. Chloromethylchloroformate, $ClCOOCH_2Cl$. A poison gas used during the World War. **super-** Superpalite.

palladic. Describing a compound containing tetravalent palladium; as, p. dioxide, p. disulfide.

palladichloride. A double salt of the type M_2PdCl_6 or $2MCl.PdCl_4$.



Bernard Palissy.

palladious. Palladous.

palladium. Pd = 106.7. A noble metal of the platinum group, atomic number 46, discovered in 1803 by Wollaston. A silver-white, ductile, malleable metal, d.11.4, m.1556, b.2300, insoluble in water or acids. It occurs native and alloyed with platinum metals; used in alloys with gold or platinum in dentistry and jewelry, and with copper or silver in watches, fountain pens, pencils, mirrors, and surgical instruments. Metallic palladium (as palladium black or sponge) is used as a catalyst and hydrogen absorbent. There are two series of compounds: palladous (valency 2) and palladic (valency 4). **allo-** A hexagonal or cubic variety of p_{d}, formerly confused with potarite.

p. alloys. Any alloy of palladium with another noble metal; as, gold (palau), rhodium (rhotanium). **p. asbestos.** Asbestos coated with metallic palladium; used in gas analysis for absorption of hydrogen. **p. black.** A black powder of finely-divided palladium; used as a catalyst in the hydrogenation of oils. **p. bromide.** $PdBr_2$ = 266.5. Palladous bromide. A brown powder, insoluble in water. **p. chloride.** $PdCl_2$, $2H_2O$ = 213.7. Palladous chloride. A dark-brown, hygroscopic, crystalline powder, soluble in water or acids. Used as a reagent for malic acid, cocaine or iodine; for the detection of mercury vapor; as a reagent for CO in gas analysis; medicinally, as a local germicide; in photography for toning; for porcelain prints, marking inks, and for coating instruments. **p. cyanide.** $Pd(CN)_2$ = 158.7. Palladous cyanide. A yellow solid, unstable to heat. **p. dioxide.** PdO_2 = 138.7. Palladic oxide. A black powder, decomp. 200, insoluble in water. **p. disulfide.** PdS_2 = 170.8. Palladic sulfide. A dark-brown powder; insoluble in water, soluble in nitric acid. **p. family.** The elements Ru, Rh and Pd of group 8 of the fourth period of the periodic table. **p. gold.** Porpezite. A native gold containing up to 10% palladium. **p. hydroxide.** $Pd(OH)_2$ = 140.7. Palladous hydroxide. A brown powder; insoluble in water (cf. *leptynol*). **p. iodide.** PdI_2 = 360.5. Palladous iodide. A black powder, m.100, b.360; insoluble in water, soluble in potassium iodide solution. **p. monoxide.** PdO = 122.7. A black powder, decomp. 875; insoluble in water. **p. monosulfide.** PdS = 138.8. Palladous sulfide. A black powder; insoluble in water. **p. nitrate.** $Pd(NO_3)_2$ = 230.7. Palladous nitrate. A brown, rhombic, crystalline powder; soluble in water but hydrolysed in dilute solutions; used as a reagent for ptomaines and for separating of Cl and I. **p. oxides.** See *p. monoxide, p. dioxide.* **p. potassium chloride.** See *potassium palladichloride, potassium palladochloride.* **p. sodium chloride.** Na_2PdCl_4 = 294.6. Sodium palladous chloride. A double salt; red hygroscopic crystals, soluble in water. Used as a reagent for gases (methane, carbon monoxide and iodine). **p. sponge.** A gray spongy mass of finely-divided palladium. Used in gas analysis, and as a catalyst for hydrogenation. **p. sulfate.** $Pd(SO_4)2H_2O$ = 238.8. Palladous sulfate. Brown crystals; soluble in water. **p. sub-sulfide.** Pd_2S = 245.5. An insoluble grey solid. **p. tube.** A glass tube filled with p. asbestos or p. sponge; used in gas analysis to absorb hydrogen.

pallado. Palladous.

palladous. Palladious. Describing compounds containing divalent palladium; as, palladium chloride, nitrate, or sulfate.

pallamine. Colloidal palladium.

pallas. An alloy of gold, palladium and platinum which is harder than platinum.

pallasite. A meteorite, consisting of a Ni-Fe sponge enclosing olivine.

palm. A tree of the order Palmae. **p. butter.** P. oil. **p. grease.** P. oil. **p. oil.** Oleum palmae, palm butter, palm grease. A semi-solid oil expressed from the crushed and fermented fruit of the West African oil palm, *Elaeis guineensis*, and other species. It consists of the glycerides of palmitic, oleic, and stearic acids and free palmitic acid; d.0.859–0.870, saponification value 196–205, m.33–46. Used in the manufacture of soap, candles, butter substitutes and lubricants. **p. kernel cake.** The residue which removes after expressing palm nut oil; used as a cattle food. **p. kernel oil.** Palm nut oil. **p. nut oil.** Palm kernel oil. A yellowish, fatty oil expressed from the crushed fruits of the West African oil palm, d.0.952, m.26–36, which consists of the glycerides of palmitic, oleic, and stearic acids. Used in the manufacture of soap and chocolate; in pharmacy for emulsions. **p. wax.** A yellow wax obtained from *Ceroxylon andicola*, a palm of tropical America (Ecuador); used as a substitute for bees-wax.

Palmae. Palm family, a group of tropical trees.

Areca catechu	areca nut
Serenoa serrulate	sabal
Arenga saccharifera	jaggery palm sago
Borassus flabellifer	palmyra sago
Caryo urens	toddy palm sago
Cycas circinalis	sago
Copernicia cerifera	carnauba
Ceroxylon andicola	ceroxylin, palm wax
Metroxylon species	sago
Calamus draco	dragon's blood
Elaeis guineensis	palm oil
Cocos nucifera	cocoanuts coconut oil

See also, *raffia, tagud nut, coyol, date palm, sago.*

palmarosa oil. Pamorusa oil. An essential oil d.0.885–0.896, from gingergrass, *Andropogon schoenanthus*, of South Africa; used as adulterant for oil of rose. It contains perilla alcohol, geraniol and esters.

palmellin. The red coloring material, resembling hemoglobin, from the fresh water algae, *Palmella cruenta.*

palmetto. A tannin material from sabal; the partly-dried fruit of *Serenoa serrulata*, a tree of Georgia and Florida. Used in tanning leather.

palmic. Palmitic.

palmin. A purified coconut fat used in the manufacture of butter substitutes.

palmitamide. $C_{16}H_{33}ON$ = 255.27. Palmitic acid amide, hexadecanamide*. A colorless solid, m.93.

palmitate. Hexadecanate*, cetylate. A salt of palmitic acid, which contains the monovalent $C_{15}H_{31}COO$— radical.

palmitic acid. $C_{16}H_{32}O_2$ = 256.3. Hexadecanoic acid*, *n*-hexadecoic acid, palmic acid, cetylic acid, *n*-hexadecylic acid, ethalic acid, $C_{15}H_{31}COOH$, a saturated, fatty acid which occurs in many vegetable fats and oils. Colorless needles, d.0.853, m.62, decomp. by further heat.; insoluble in water, soluble in alcohol or ether. Used in the manufacture of soap. **hydroxy-** Juniperic acid. **p. cyanide.** Palmitonitrile.

palmitin. (1) $C_{51}H_{98}O_6$ = 807.1. Tripalmitin, the tripalmitic acid ester of glycerin, $C_3H_5(C_{15}H_{31}COO)_3$, which occurs in many vegetable fats and oils. A colorless fatty mass, d.0.866, m.61; insoluble in water, soluble in alcohol, ether, chloroform, or benzene. Used in the manufacture of soap. (2) A glyceride of palmitic acid; as, monopalmitin, dipalmitin.

palmitinic acid. Palmitic acid.

palmitoleic acid. Zoomaric acid.

palmitolic acid. $C_{15}H_{27}COOH$ = 252.3. 7-Hexadecynoic acid*. An unsaturated fatty acid, in oils and Japan wax. Colorless needles, m.47; insoluble in water, soluble in alcohol or ether.

palmitone. $C_{31}H_{62}O$ = 450.65. *16*-Hentriacontanone*. The ketone of palmitic acid, obtained by distillation with lime.

palmitonitrile. $C_{15}H_{31}CN$ = 237.3. Palmitic cyanide, hexadecanenitrile*. Colorless scales d.0.832, m.30, b_{100mm}.251; insoluble in water, soluble in alcohol or ether.

palmityl. The monovalent radical, $C_{15}H_{31}CO$—, derived from palmitic acid. **p. alcohol.** Cetyl alcohol. **p. chloride.** $Me(CH_2)_{14}COCl$ = 274.70. Hexadecanoyl chloride*. Colorless liquid or crystals, m.11.

palmoil. Palm oil.

Palmquist apparatus. A portable gas analysis apparatus for the determination of carbon dioxide in the atmosphere.

palmyra. The palm, *Borassus flabellifer*, cultivated in Southern Asia. The *wood* is used for rafters; the *leaves* for thatch, writing paper, mats, baskets and brushes; the *fruits* are roasted as food; the *sap* is used in making toddy and jaggery sugar; the *fibre* from the base of the leaves is used for brushes; and the young *seedlings* are eaten or ground to a fine flour.

pamaquine. Pamaquine naphthoate. The methylene-bis-*β*-hydroxynaphthoate of 6-methoxy-8-(1-methyl-4-diethylamino)butylaminoquinoline, an antimalarial.

pamorusa. Palmarosa.

pan. (1) A cylindrical vat for crushing or amalgamating gold ore. (2) A flat iron tray for washing gold from sand and dirt. (3) A flat container or tray; as, a balance pan, incinerating pan.

pan- A prefix indicating all, or the whole.

panabase. Tetrahedrite.

panacea. A universal remedy, generally applied to a quack medicine or cure-all.

panacon. $C_{22}H_{18}O_8$ = 317.2. A colorless crystalline substance from ginseng, the roots of *Aralia* or *Panax quinquefolium.*

Panama bark. Quillaja.

panaquinol. $C_{12}H_{26}O_9$ = 313.2. A bitter principle from ginseng, the root of *Panax quinquefolium.* An amorphous yellow powder, soluble in water or alcohol. Cf. *panacon.*

panax. (1) Ginseng. (2) A genus of araliaceus plants.

panchromatic. Sensitive to light of all colors, (see *chromatic, pantachromatic*).

panclastite. An explosive; nitrogen tetroxide dissolved in a combustible liquid, such as carbon disulfide.

pancreas. A gland below the stomach of mammals; it secretes a limpid, colorless fluid for the digestion of proteins, fats and carbohydrates.

pancreatic juice. The secretions of the pancreas containing the digestive enzymes and ferments, pancreatin, trypsin, amylopsin, steapsin, rennin, and invertin in alkaline solution.

pancreatin. Pancreatinum. A mixture of the enzymes of the pancreas of warm-blooded animals. It is obtained from the fresh pancreas of the hog or ox, as a cream-colored amorphous powder of faint odor and meat-like taste, which is slowly and partly soluble in water, but insoluble in alcohol; and should convert not less than 25 times its own weight of starch into water-soluble split-products. Used medicinally, and contains amylopsin, trypsin and steapsin. Cf. *holadin.* **p. powder.** A peptonizing powder.

pandermite. $Ca_2B_6O_{11}.3H_2O$. A native calcium borate used for the manufacture of boric acid.

Paneth, Fritz. 1887– . A German physicist, noted for his work on radioactivity. **P.'s rule.** A radio-element will be adsorbed by a solid substance if its electronegative radical can form, with the adsorbing substance, a compound that is relatively insoluble.

paniculatine. $C_{29}H_{35}O_7N$ = 509.28. An alkaloid, m.263, from the seeds of *Panicularia (Glyceria)* species, Gramineae of North America.

pannic acid. $C_{11}H_{14}O_4$ = 210.1. A constituent of rhizoma pannae. Colorless crystals, m.192. Cf. *pannol.*

pannol. $C_{11}H_{14}O_4$ = 210.1. A constituent of *Aspidium athamanticum*, a Filiceae. Cf. *pannic* acid.

pansupari. A mixture of betel and areca nuts and lime, used for chewing in India.

pansy. The dried herb of *Viola tricolor;* used, as the fluid extract, as an expectorant and alterative.

pantachromatic. Existing in two or more colors; entirely achromatic, (cf. *panchromatic*).

pantachromism. The property of a compound that can exist in two or more differently-colored forms.

pantal. A corrosion-resisting aluminum alloy containing: 4.2 % copper, 0.3–0.6 % manganese, 0.5–0.9 % magnesium.

pantocaine. $C_{14}H_{21}N_2O_2$ = 249.1. The β-dimethylamino ester of 4-butylamino benzoic acid, $Me(CH_2)_3NH.C_6H_4.COO(CH_2)_2NMe$. A local and spinal anesthetic, similar to procaine.

pantochromism. Pantachromism.

pantogen. Protyl.

pantograph. A device for copying diagrams etc. to any scale. It consists of a set of adjustable levers that connect a pencil with a tracing guide or stylus.

pantomorphism. The perfect symmetry displayed by crystals.

pantopone. A mixture of the hydrochlorides of the opium alkaloids as they occur in opium. A yellowish-gray amorphous powder, soluble in water; used in medicine.

paoferro. The inner bark of the ironwood tree of Brazil; used as an antidiabetic.

paopereira. The bark of a Brazilian tree, used as a febrifuge.

papain. Papayotin, papase, caricin, carase, vegetable pepsin. A protease or digestive ferment from the fruit of the papaw, *Carica papaya*, a tree of South America. It is a grayish powder, soluble in water or glycerin, and an extremely active ferment for proteins (including fibrin) in alkaline or acid solution; used in medicine.

papase. Papain.

Papaveraceae. Poppy family, a group of herbs with a milky, narcotic juice, the source of many alkaloids:

Papaver somniferum	opium, chundoo, kusamba, mudat, poppy capsules, poppy seeds
Papaver rhoeas	rhoeadine
Argemone mexicana	argemonine
Chelidonium majus	celandine
Eschscholtzia californica	ionidine
Glaucium flavum	glaucine
Sanguinaria canadensis	sanguinaria
Stylophorum diphyllum	stylophorum

papaveraldine. $C_{20}H_{19}O_6N$ = 353.2. The ketone of papaverine.

papaveric acid. Rhoeadic acid. $C_{16}H_{13}NO_7$ = 331.11. An oxidation-product of papaverine, m.233 (decomp.).

papaverine. $C_{20}H_{21}O_4N$ = 339.3. Tetramethoxybenzylisoquinoline. An alkaloid from opium. Fine, white rhombic prisms or needles, odorless, tasteless, m.148, insoluble in cold water, slightly soluble in alcohol, ether, or chloroform; used medicinally as a narcotic. Cf. *lodal*. **p. hydrochloride.** $C_{20}H_{21}O_4N.HCl$ = 375.8. Colorless crystals, soluble in water; used in medicine.

papaverinol. $C_{20}H_{21}O_5N$ = 355.2. A hydroxypapaverine.

papaveroline. $C_{16}H_{13}O_4N$ = 283.2. Tetrahydroxybenzylisoquinoline. A derivative of papaverine, in which the methoxy groups are replaced by hydroxy groups.

papaw. (1) The edible fruit of papaya. (2) Erroneously applied to pawpaw, q.v.

papaya. Papaw, melon tree. The tropical shrub or tree, *Carica papaya*, of the order Passifloraceae, which yields a delicious fruit and milky juice containing proteolytic enzymes (papain), a milk curdling ferment, caricin, myrosin and carpain. Used by natives to make tough meat tender. Cf. *papayotin, caricin*.

papayotin. The dried milky juice of papaya that contains papain.

paper. A fabric which chiefly consists of the fibers of cellulose, *e.g.*, obtained from wood pulp, cotton, straw or esparto. **alkannin-** A filter paper dipped in alkannin solution, and used as a test paper. **art-** A paper coated on one or both sides with a mixture of a white or colored pigment (*e.g.*, satin white) and an adhesive (*e.g.*, casein), and dried and calendered to a high finish. Used for printing from fine-screen half-tone blocks. Cf. *chromo-p.* **asbestos-** A thin asbestos board or a tissue made from asbestos fibres. **azolitmin-** A filter paper dipped into a solution of azolitmin; used in place of litmus paper. **bank-, bond-** A thin strong writing paper. **blueprint-** q.v. **carbon-** q.v. **chromo-** An art paper, usually with a duller finish. **congoblue-** q.v. **coordinate-** q.v. **dahlia-** q.v. **dialyzing-** A parchment paper used for dialyzing. **drying-** An absorbent paper. **emery-** A paper coated with abrasive material. **filter-** A porous, unsized paper used as an absorbent and for filtering. **glass-** An abrasive p. coated with broken glass. **glazed-** A paper coated with a filler (*e.g.*, barytes) and highly calendered. It has a shiny surface and is used in analytical operations for transferring precipitates. **imitation art-** A paper with a high finish, obtained by addition of a high proportion of loading and calendering. Cf. *art p.* **lens-** A soft tissue paper used for wiping the lenses of microscopes. **linen-** A paper made from linen rags. **l.-faced-** A paper that has been embossed with linen, an impression of which is retained on its surface. **litmus-** A filter paper impregnated with red or blue litmus solution used as a test paper for acids and alkalis. **niter-** A paper impregnated with saltpeter. **ozone-** See *ozone*. **paraffined-** A p. saturated with hot paraffin, used for electrical insulation, waterproofing, etc. **parchment-** A paper treated with conc. sulfuric acid or zinc chloride; it is water- and grease-proof, and used in dialyzing solutions. **polarity-** q.v. **sand-** q.v. **silver nitrate-** q.v. **starch-** q.v. **test-** A filter paper impregnated with some indicator solution and generally used to determine the acid or basic character of a solution or the presence of a certain substance (see *indicators, test papers*). **tissue-** A very thin paper. **turmeric-** A filter paper dipped in turmeric solution; used to identify boric acid (red color). **varnished-** A p. treated with varnish, used for electrical insulation, or for labels. **vulcanized-** See horn *fiber*. **wax-** A paper made waterproof by treating it with paraffin wax.

p. analysis. See *Herzberg's stain*. **p. board.** (1) A thick sheet of paper pulp mixed with size and filling materials. Cf. *pasteboard, millboard*. **p. coal.** A variety of brown coal that occurs in thin layers. **p. colors.** Aniline dyes used for coloring paper. **p. filter.** A cone made of filter pulp, or a thimble made of thick filter paper. **p. pulp.** The mixture of fibres and water from which paper is deposited by drainage on wire mesh. Cf. *chemical-, mechanical-, soda-, sulfite- and sulfate-pulp, Herzberg's stain*. **p. spar.** A variety of calcite, which occurs in thin paper-like plates.

papier maché. A substance used for moulded articles, made by boiling old paper with water

and glue, and soaking the semi-dried product in linseed oil.

paprika. A finely-ground variety of red pepper used as a spice; it is rich in ascorbic acid (vitamin C).

para- A prefix: (1) derived from the Greek "beyond" or "opposite," which indicates the 1.4-position (para-compounds) of the benzene ring; (2) indicating an *even* rotational quantum number, as in *para*-hydrogen, or *para*-nitrogen; (3) to denote polymerization, as, paraformaldehyde; (4) to indicate the amount of water, as in paraperiodic acid; (5) to show a relationship, as in paracasein. **p. compounds.** See usually under the parent compounds.

Para arrowroot. Tapioca.

parabanic acid. $C_3H_2O_3N_2,H_2O$ = 132.07. Oxalylurea, imidazoletrione, the ureid of oxalic acid,  Colorless plates, m.227 (decomp.); slightly soluble in water, soluble in alcohol or ether. **dimethyl-** Cholestrophan.

parabituminous. Applied to a gas-coal having good caking properties.

parabola. A plane curve, each point of which is equidistant from a straight line (axis) and a central point (focus). Such a curve will resemble a circle at some points and a straight line at others. Cf. *elliptic.*

paraboloid. The surface traced by a parabola when its vertex is always on another parabola. **p. condenser.** A spherical mirror having an elongated focus; used on microscopes.

parabuxin. $C_{24}H_{48}ON_2$ = 380.4. An alkaloid in common garden box, *Buxus sempervirens*, an Euphorbiaceae.

paracasein. Casein digested with rennin.

paracellulose. A variety of cellulose from the pith of plants.

Paracelsus. 1493–1541. Philippus Aurelius Theophrastus Paracelsus Bombastus von Hohenheim. A Swiss physician and alchemist, the founder of pharmaceutical chemistry, and advocate of chemical as opposed to vegetable remedies. Cf. *iatrochemistry.*

parachor. The quantity $P = M\gamma^{\frac{1}{4}}(D - d)$, where γ is the surface tension, M the molecular weight and D and d the densities of a compound in the liquid and vapor state, respectively, at the same temperature. Thus the parachor is an expression of the molecular volume, and equals 0.78 × critical volume. A comparison of the parachors of liquids is equivalent to a comparison of their molecular volumes at temperatures at which they have equal surface tensions. Since the parachor is an additive constant for saturated compounds it is used to determine chemical constitution, *e.g.*,

H = 17.1			F = 25.7
C = 4.8	N = 12.5	O = 20.0	Cl = 54.3
Si = 12.0	P = 37.7	S = 48.2	Br = 69.0
			I = 91.0
double bond = 23.2		*three-ring* = 15.5	
triple bond = 46.4		*four-ring* = 11.6	
		five-ring = 9.3	
		six-ring = 7.7	

Thus the increase in parachor for a molecule is 23.2N/Z, where N is the number of hydrogen atoms needed to saturate, and Z the number of atoms in the ring.

paraconic acid. $C_5H_6O_4$ = 130.0. Itamalic acid-γ-lactone, tetrahydro-5-oxo-3-furan carboxylic acid. The heterocyclic compound,  Colorless crystals, m.158°. Cf. *citraconic acid.* **dimethyl-** Terebic acid. **phenyl-** Phenyl paraconic acid.

paraconiine. $C_8H_{15}N$ = 125.1. An alkaloid obtained by heating butyric aldehyde with ammonia; a colorless liquid with a stupefying odor, b.170.

paracoto. The dried bark of an unidentified tree of Northern Bolivia. Used as the fluid extract, as a substitute for coto bark, q.v. It contains cotoin, paracotoin, leukotine, oxyleukotine, protocotoin and essential oils.

paracotoin. $C_{12}H_8O_4$ = 216.1. An active principle derived from paracoto; yellow crystals, m.150, soluble in alcohol.

paracotoinic acid. $C_{12}H_8O.H_2O$ = 186.1. An amorphous substance obtained by boiling paracotoin with potassium hydroxide.

paracyanogen. $(CN)_6$ = 156.12. An insoluble solid, which sublimes if heated.

paradiazine. Pyrazine.

paradichlorobenzene. See *benzene.*

paradimethylaminobenzaldehyde. $C_9H_{11}ON$ = 149.1. $C_6H_4(CHO)NMe_2$. Used as a reagent for detecting indole, skatole, pyrrole, and other organic compounds.

paradioxybenzene. Hydroquinone.

paraffin. (1) See *paraffins.* (2) A white, waxy, solid substance, d.0.890, m.43–65, insoluble in water, acids or alkalis, soluble in alcohol, ether, or chloroform. P. occurs native in ozocerite, peat, and bituminous coal, and is a constituent of petroleum from which it is distilled. It consists of a mixture of hydrocarbons; used in the manufacture of candles, waxed paper, matches, lubricants, oil crayons, and for waterproofing wood and cork. (3) See *kerosene.* **liquid-** Petrolatum.

p. bath. Molten paraffin. **p. oil.** Petrolatum. **p. scale.** A crude paraffin. **p. wax.** Paraffin (2).

paraffins. (1) Alkanes. (2) A group name for the saturated aliphatic hydrocarbons of the methane series, C_nH_{2n+2}. **iso-** An aliphatic saturated hydrocarbon containing one —CHMe— group or a side chain. **neo-** An aliphatic saturated hydrocarbon containing one $—CMe_2—$ group. **normal-** An aliphatic saturated hydrocarbon containing only $CH_3—$ and $—CH_2—$ groups. **meso-** An aliphatic saturated hydrocarbon containing two $—CMe_2—$ groups; as, mesohexane, $Me_2CH—CHMe_2$.

paraffinum. Paraffin (2).

paraform. Paraformaldehyde.

paraformaldehyde. $(CH_2O)_3$ = 90.04. Paraformaldehydum, paraform, triformol, trioxymethylene, trioxin,  A colorless amorphous powder, m.150, soluble in water, insoluble in alcohol or ether; used as an antiseptic. Cf. *paraldehyde.*

parafuchsin. $C_{19}H_{18}N_3Cl$. Para rosaniline chloride, $(C_6H_4NH_2)_2{=}C{=}C_6H_4{=}NH.HCl$. A dye. Cf. *pararosaniline.*

paraglobulin. Fibroplastin, serum-globulin. A globulin from blood-serum and lymph. It is precipitated as a white amorphous substance on passing carbon dioxide through diluted blood-serum.

paragonite. $Al_3NaH_2Si_3O_{12}$. A silica mineral (q.v.) of the mica group. Cf. *muscovite.*

Paraguay tea. Maté.

parahemoglobin. A crystalline form of hemoglobin.

parahiston. A protein from thymus, rich in sulfur.

parahydrogen. See *hydrogen molecule.*

paralactic acid. Sarcolactic acid.

paralbumin. A protein from ovarian cysts.

paraldehyde. $(C_2H_4O)_3$ = 132.1. A polymer of acetaldehyde. A colorless, transparent liquid, of strong pungent odor, d.0.994, m.10, b.124, soluble in water. Used as a reagent for alkaloids and fuchsin; medicinally, as a hypnotic and sedative. Cf. *metaldehyde, aldol.*

paraldol. $C_8H_{16}O_4$ = 176.12. A polymer of aldol, m.82, of the type $(C_4H_8O_2)_2$.

paraleucaniline. $C_{19}H_{19}N_3$ = 289.28. The leuco-base corresponding with pararosaniline.

parallax. The apparent displacement of an object by a change in the position of the observer, *e.g.*, the cause of error in reading the liquid meniscus in a buret.

parallel. (1) Running side by side; always having the same direction, but separated by equal distances. (2) Electrical connections such that the like poles of a number of units are connected to one other, or to the same terminal (cf. *series*).

parallelosterism. The relationship which exists between isomorphous groups and their chemical compositions or physical properties.

paralyser. Paralyzer.

paralysol. $Me.C_6H_4.OK$. A mixture of cresol and potassium cresolate. Colorless crystals, m.146, insoluble in water, used medicinally as an antiseptic.

paralyst. Paralyzer.

paralyzant. A substance that causes paralysis.

paralyzer. An agent that prevents a chemical reaction; a catalytic poison.

param. $C_2H_4N_4$ = 84.2. Cyanoguanidine. A condensation product of cyanamide, obtained by heating it to 150, $N{\equiv}C.NHC(:NH)NH_2$; m.204, soluble in water, alcohol or ether.

paramagnetic. A substance that has magnetic properties greater than those of air; as, iron, cobalt, and nickel. Its magnetic permeability is thus greater than unity.

paramagnetism. The property of being attracted by a magnet, as opposed to diamagnetism.

paramecium. A genus of unicellular animals or protozoa, often used in biological experiments.

paramide. Mellimide.

paramorph. A crystal that has changed physically but not chemically.

paramorphine. Thebaine.

paramorphism. The physical change of a mineral from one modification to another, without a change of chemical composition; a rearrangement of molecular structure.

paramucic acid. $C_6H_{10}O_8$ = 210.1. An isomer of mucic acid.

paramucosin. $C_{12}H_{21}O_{10}N$ = 341.3. A substance from the salivary proteins.

paramyelin. $C_{35}H_{76}O_9NP$ = 720.7. A white, solid mass, isolated from brain and nerve substance.

paramylum. $C_6H_{10}O_5$ = 162.1. A carbohydrate isolated from certain protozoa.

paranaphthalene. An early name for anthracene.

paranephrine. Adrenalin.

paranitraniline. $NO_2.C_6H_4.NH_2$ = 138.2. Paranitroaniline. A yellow, crystalline powder, m.148.3, soluble in alcohol or ether. Used as a reagent for ammonia, uric acid, saccharin, lignin, and bile pigments and in the manufacture of dyes.

parapectic acid. $C_{24}H_{34}O_{23}$ = 690.3. An oxyacid developed from pectose during the ripening of fruits.

parapeptone. Syntonin.

paraplasm. (1) The more liquid portions of the protoplasm of a cell. (2) The non-living part of protoplasm.

Paraquay tea. Maté.

paraquinanisol. $C_{10}H_9ON$ = 159.1. A synthetic alkaloid used medicinally as an antipyretic.

paraquinoid. Quinoid.

parared. A red aniline dye obtained from p-nitraniline.

pararosaniline. $C_{19}H_{19}ON_3$ = 305.3. Triaminotriphenyl carbinol. $(NH_2C_6H_4)_3C.OH$. An organic base that forms brilliant red-colored salts with acids, and is used extensively as a dye. Colorless leaflets, m.188, insoluble in water, soluble in dilute acids, alcohol, or ether. **hexamethyl-** Methyl violet. **p. chloride.** Parafuchsin. **p. dyes.** A group of dyes derived from pararosolic acid; *e.g.*, pararosaniline, methyl violet, triphenylpararosaniline, etc.

pararosolic acid. Aurin.

parartrose. $C_{120}H_{192}O_{40}N_{30}S$. A proteose obtained by digestion of wheat.

parasite. Any organism that lives on and obtains its nourishment from another living animal or vegetable organism (cf. *saprophyte, epiphyte*); some cause disease. They may be grouped into *Phyto*parasites, or *vegetable* parasites, such as bacteria and fungi; and *Zoö*parasites or *animal* parasites, such as protozoa and metazoa (worms, etc.). Each of these is again divided into occasional, temporary, or obligate; and constant, stationary or facultative parasites.

parasiticide. An agent that destroys parasites, *e.g.*, sulfur, mercury, β-naphthol, kerosene.

parasitotropic. A compound that acts specifically on protozoa (see *organotropic*).

parasorbic acid. $C_6H_8O_2$ = 112.1. An acid obtained from the berries of the mountain ash, sorbus.

paratartarics. Racemic forms.

parathesin. Benzocaine.

parathyrin. The active principle of the parathyroid gland.

parathyroid. One of the small glands beside the thyroid gland. **p. gland.** The dried or desiccated exterior parathyroid gland of the ox, free from fat. A light yellow powder of peculiar odor, which is slightly soluble in water; used in medicine as a nervine.

paraxanthine. $C_7H_8O_2N_4$ = 180.2. *1.7*-Dimethylxanthine, urotheobromine, a leukomaine in urine. A colorless crystalline powder, soluble in water, used in medicine. It is an isomer of theobromine and theophylline. **amino-** Paraxine.

paraxine. $C_7H_{10}O_2N_5$ = 196.2. Dimethylamino-p-xanthine. White crystals, m.226, soluble in water, used medicinally as a diuretic.

paraxylene. See *xylene.*

parchment. A specially-prepared animal skin. **imitation-, vegetable-** P. paper.

p. paper. Vegetable parchment. A paper that has been treated with conc. sulfuric acid and is waterproof and grease resistant.

paregoric. A flavored camphorated tincture of opium, used for cough mixtures.

pareira. Perieira. The dried root of *Chondrodendron tomentosum,* a Menispermaceae of South America which contains the alkaloid bebeerine; used medicinally.

pareirine. Pereirine.

parenamine. A protein hydrolysis product used in aminoacid therapy.

parenchyma. The principal constituent of the thin cell-wall tissue of vegetable matter.

parent substance. A compound from which derivatives or substitution products can be obtained.

parhelium. A form of helium in which both electrons move in one orbit; it gives the principal spectral line, 20.528 Ångström units.

pariantite. An asphalt from the pitch lake in Trinidad.

paricine. $C_{16}H_{18}ON_2$ = 254.3. An amorphous alkaloid from cinchona bark.

paridin. $C_{16}H_{28}O_7$ = 332.3. A glucoside from *Paris quadrifolia,* a Liliaceae. Cf. *paristyphnin.*

parietic acid. Chrysophanic acid.

parietin. Physcion.

pariglin. Smilacin.

parilla. Sarsaparilla. **yellow-** Menispermum.

parillic acid. Parillin.

parillin. $C_{40}H_{70}O_{18}$ = 838.6. Parillic acid. A glucoside from the sarsaparilla root. Colorless needles or scales (cf. *smilacin*).

parinaric acid. $C_{18}H_{28}O_2$ = 276.22. An unsaturated acid from the kernel fat of *Parinarium laurinum,* a Rosaceae.

Paris black. Lamp black. **P. blue.** Ferric ferrocyanide. **P. green.** $Cu(C_2H_3O_3)_2.3Cu(AsO_2)_2$. Schweinfürter green, copper acetoarsenite. A green pigment used as an insecticide in spraying plants. **P. red.** (1) Colcothar. (2) Minium. **P. violet.** Methyl violet. **P. yellow.** Lead chromate.

parisite. A native fluoride and carbonate of the cerium metals; brownish-yellow hexagonal pyramids.

paristyphnin. $C_{38}H_{64}O_{18}$ = 808.6. A glucoside in the root of *Paris quadrifolia,* the one-berry, a common European herb. Cf. *paridin.*

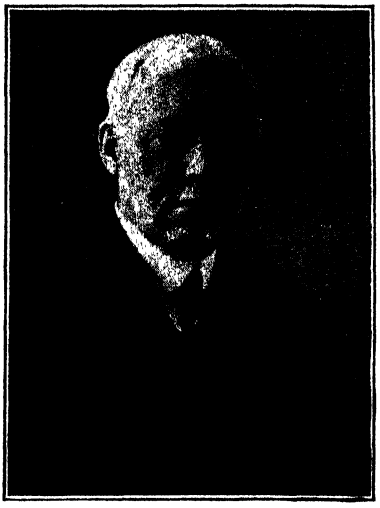
Parkes, Samuel. 1761–1825. An English technical chemist, noted for his writings and industrial methods. **P. process.** A method of refining argentiferous lead by liquation, followed by the addition of zinc to the molten mass, and skimming the surface crust which contains silver and zinc. The silver is recovered by distilling the zinc, and the lead purified by electrolysis.

parkine. An alkaloid from the seeds of *Parkia biglandalosa,* a Leguminosae of Africa (nitta tree).

Parma blue. A triphenylrosaniline dye. **p. violet.** Rosaniline violet.

paroxazine. *1.4.[2]*-Oxazine.

Parr, Samuel Wilson. 1857–1931. An American chemist noted for research in calorimetry and fuel technology. **P. apparatus.** A device for determining the total carbon in coal, coke, and other fuels by means of a calorimeter and gas burets.



Samuel Wilson Parr.

parsec. An astronomical unit of distance: the distance of a star whose annual parallax is 1 second of an arc. 1 parsec = 3.08×10^{13} km. = 19.2×10^{12} miles = 3.26 light years = 206,265 astronomical units (distance of earth to sun).

parsley. The umbelliferous plant *Carum (Apium) petroselinum* or *Petroselinum sativum.* It contains an essential oil and a camphor (apiol). Cf. *petroselinum.* **p. camphor.** Apiol. **p. fruit.** Parsely seeds. **p. leaves oil.** An essential oil from the leaves of p., d.0.900–0.925, greenish-yellow and of strong parsley odor; it contains apiol. **p. oil.** An oil distilled from parsley seeds. A colorless or pale-green liquid, d.1.07, insoluble in water, soluble in alcohol, ether, or chloroform; used in medicine, and contains apiol and pinene. **p. root.** Petroselini radix. The dried root of parsley; used medicinally as a fluid extract. **p. seeds.** Petroselinum. The seeds of parsley, used medicinally as a fluid extract, and contain apiol.

parthenicine. Parthenine.

parthenine. An alkaloid from *Chrysanthemum (Parthenium) hysterophorum,* a Compositae of the Gulf States and West Indies; used medicinally as an antipyretic.

parthenogenesis. Development of the egg without previous fertilization by a male agency. Cf. *agamy.*

partial. Fractional. A proportion of the whole. **p. pressure.** The fraction of the total pressure exerted by each constituent of a gas mixture. The sum of the partial pressures is equal to the total pressure; hence, the partial pressures are proportional to the concentrations of the individual gases in a mixture (see *Dalton's Law*). **p. valence.** An excess valence or fractional valence of a compound, responsible for the formation of addition compounds. Cf. *coordinate valence.*

particle. A small quantity of matter. **alpha-** Helium nucleus. **beta-** Electron. **colloidal-** See *colloids.* **gamma-** A misnomer for cathode rays. **nuclear-** See *subatomic p.* **subatomic-** Nuclear p. One of the "building stones" of matter, *i.e.,*

	Mass of $\frac{1}{1800}$ H	Mass of 1 H
Charge −1....	*electron (negatron)* e^- or −	*(neg. proton)*
Charge 0.....	*neutrino (photon)* ${}_0n^0$	*neutron* ${}_0n^1$
Charge +1....	*positron (oreston)* e^+ or +	*proton* p or ${}_1H^1$

Also the *deuteron (diplon)* of mass 2, and the *alpha-particle* of mass 4. Cf. *nuclear reactions.*

particle distribution. See *Perrin equation.*

parting. In assaying: the dissolution of silver from gold by means of nitric acid. **p. acids.** The nitric acids of various strengths used in the stages of the parting process.

partinium. An alloy of tungsten and aluminum.

partition. The distribution of a substance or ions between two immiscible liquids, or between a liquid and a gas. **p. coefficient.** Distribution coefficient, see *Perrin equation.* **p. law.** *Nernst's law.*

partridge berry. (1) Squaw vine. (2) Gaultheria.

Partz cell. A voltaic cell (2.06 volts), which consists of an anode of amalgamated zinc in a solution of magnesium sulfate, and a cathode of carbon in a solution of potassium dichromate.

parvoline. $C_9H_{13}N$ = 135.2. **alpha-** 2-ethyl-3.5-dimethylpyridine. A ptomaine from decaying fish or meat. An oily, amber-colored liquid, with the odor of hawthorn blossoms, b.188. **beta-** See *parvuline.*

parvuline. $C_9H_{13}N$ = 135.2. v-Tetramethylpyridine, β-parvoline. A homolog of pyridine, and an isomer of parvoline in coal tar. An amber-colored liquid, b.228.

Pascal, Blaise. 1623–1662. A French scientist and philosopher. **P.'s law.** The pressure applied to a liquid at any point is transmitted equally in all directions; the pressure in a liquid not subjected to external forces is equal at all points.

Paschen, F. A German physicist noted for his work on atomic structure. **P. galvanoscope.** A sensitive milli-amperemeter. **P. series.** The spectrum lines produced when electrons fall from an outer orbit to the third ring: $\frac{1}{\lambda} = N\left(\frac{1}{3^2} - \frac{1}{n_2{}^2}\right)$. Cf. *Balmer* and *Lyman series, energy levels, Bohr theory.*

pasque flower. Pulsatilla.

passiflora. Passion-flower.

Passiflorinae. An order of plants comprising the families: *Passifloraceae, Caricaceae, and Begoniaceae.*

passion-flower. Passiflora. The dried herb of *Passiflora incarnata,* a Passifloraceae of North America. Used medicinally as the fluid extract, as a sedative; the juice of its fruit is a beverage.

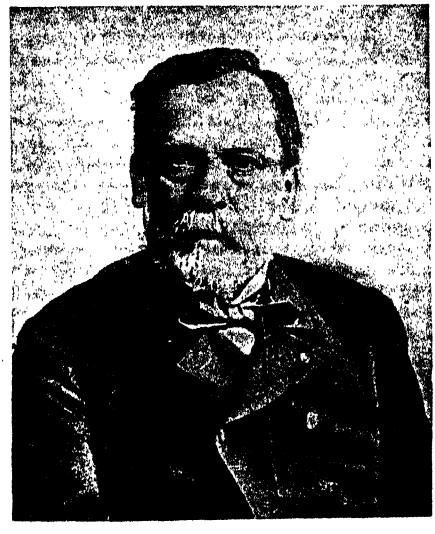
passive. Not active. **p. immunization.** The process by which the blood serum of an actively-immunized animal is injected into another animal, and protection against bacterial invasions conferred (immunization by an immune serum). **p. iron.** Iron or other metal rendered non-corrodible by treatment with heat or strong acids, *e.g.,* conc. nitric acid. This property is sometimes lost by mechanical shock. **p. state.** Passivity.

passivity. An inertness exhibited by substances under conditions in which chemical activity is to be expected; *e.g.,* certain metals will not dissolve in acids of high concentration while in the dilute acids they dissolve rapidly. The explanation is the formation of a thin layer either (a) of peroxide, (b) of oxygen, or (c) of salt, which prevents direct contact of acid and metal. Mechanical shock destroys this layer. Cf. *zone.*

paste. (1) A tenacious substance for cementing; or any viscid glue used for fastening paper on paper, boards, wood, metal, or glass. (2) A pharmaceutical preparation containing various antiseptics for external use. (3) A preparation containing poisons for exterminating vermin and rats. (4) A mixture of clay and water for making stoneware and porcelain. (5) The matrix or mineral substances in which other minerals are embedded. **dextrin-** Mix. 8 pds. of dextrin in 1 gallon cold water and let stand for 24 hours. Dissolve separately in warm water 2 oz. alum, 6 oz. glucose, 6 oz. glycerin, and add to dextrin; add ½ oz. formaldehyde and dilute the mixture to 2 gallons. **London-** A mixture of equal parts sodium hydroxide and slaked lime, moistened with alcohol. **phosphorus-** A rat poison made of phosphorus and flour. **Vienna-** A mixture of sodium hydroxide and slaked lime, moistened with water.

p. blue. Prussian blue. **p. board.** Cardboard formed by pasting fairly high-grade outer layers of paper (a pasting) on to a lower-grade middle layer or layers. It differs from an ordinary board, which is formed directly in layers on a board machine without an adhesive.

Pasteur, Louis. 1822–1895. A French chemist noted for his research on stereochemistry, fermentation and bacteria. He established



Louis Pasteur.

the connection between bacterial growth and disease, and laid the foundation of immunology. **P. filter.** See *filter.* **P. flask.** A glass flask with a neck nearly 6 times as long as the diameter of the flask. At a third of its length the neck is constricted and bent downwards (about 25°); the neck is then expanded again

for some distance, then again constricted. The end bends upward. On the opposite side from the bent neck there is a tubular outlet. It is used for bacterial cultures.

pasteuring. Pasteurizing.

pasteurization. A partial sterilization of organic fluids by heating at 65°C. for not less than thirty minutes. Cf. *Stassanization.* **flash-** Continuous p. by passing the liquid through a coil surrounded by live steam.

pasteurized milk. A milk that has been partly sterilized by heating at not less than 145°F. (63°C.) and not more than 150°F. (66°C.) for at least 30 minutes, and then immediately cooled to a temperature of not more than 55°F. (13°C.).

pasteurizer. A machine used for the process of pasteurization.

pasteurizing. The process of preserving organic fluids by the destruction of the contained ferments and fungi by heating at 60°–70°C.

pastil, pastille. A lozenge, a sugared confection, or an aromatic mass burnt as incense or fumigant.

pasting. See *pasteboard.*

patchoulene. $C_{16}H_{24}$ = 204.19. A sesquiterpene, d.0.930, b.256, from patchouli oil.

patchouli. Patchouly. The herb, *Pogostemon patchouli*, a Labiatae of India, used in perfumery; it has a very persistent odor. **p. oil.** An essential oil from the leaves of patchouli. A yellow liquid of aromatic odor, d.0.970, insoluble in water, soluble in alcohol or ether, containing cadinene, eugenol, cinnamic aldehyde, and other terpenes; used in perfumery.

patchoulin. $C_{15}H_{26}O$ = 222.2. A terpene from patchouli oil. Colorless crystals, m.59, b.296.

patchouly. Patchouli.

patent. (1) A grant conveying public lands from the Government, *e.g.*, for mining purposes. (2) Letters of patent. Any process, method, or device that has been accepted as new by the Patent Office and is, thereby, protected under the patent laws for a number of years. (3) Evident, not hidden. **provisional-** An official application for a patent, which gives temporary protection until the final patent is granted at a relatively small cost. **p. blue.** A phenylated rosaniline disulfonic acid, used as a redox indicator. **p. yellow.** $PbO.PbCl_2$. Mineral yellow. A yellow pigment, which consists of lead oxide and lead chloride.

Patera process. A method of producing silver from its ores by chloridizing, roasting and leaching with water and then with sodium hyposulfite which dissolves the silver; precipitation with sodium sulfide; and finally by heating the silver sulfide.

path. (1) Orbit. (2) The course or track along which electrons, ions, or molecules move. The fog-condensation method of C. T. R. Wilson enables the trails of α-particles, electrons from β-rays and cathode rays, and the ionization caused by the passage of x-rays to be recorded photographically. **free-** The average distance between collisions in the travel of a molecule in a gas or liquid.

pathochemistry. Chemical pathology. That branch of biochemistry which deals with the chemical changes of the living organism in a diseased condition.

pathogen. Any microorganism, bacterium, or protozoon that produces disease.

pathogenic. Describing an agent that produces disease.

pathologic. Pertaining to a diseased condition. **p. reaction.** A chemical test used in the diagnosis of disease.

pathology. A branch of medicine that deals with the nature of disease, especially with the functional (physiological) and structural (morphological) changes produced by disease. **experimental-** The study of artificially-produced disease in the animal organism. **phyto-** The study of plant diseases.

patina. The thin and often multicolored coat of oxides formed on metallic surfaces.

patronite. A native vanadium sulfide, V_2S_3.

pattern. (1) A design or arrangement of symbols or figures. (2) A model from which a cast is made. **crystal-** A space-lattice of crystal structure, q.v. **Laue-** See *Laue diagram.*

Pattinson process. A method of partly separating silver from lead, by fractional crystallization of the argentiferous lead and removal of the separated, molten, silver-free lead crystals. This method has been superseded by the Parkes process, q.v.

patulin. An antibiotic substance produced in cultures of several different fungi; it is identical with clavacin, clavatin, and claviformin.

paucine. $C_{27}H_{38}O_5N_5$ = 512.3. An alkaloid from the seeds of *Pentaclethra macrophylla*, a Leguminosae of Africa. Yellow scales, m.126, insoluble in ether or chloroform.

pauco nuts. Graine d'owala. The fruits of *Pentaclethra macrophylla*, an African Leguminosae, which contains the alkaloid paucine.

Pauli's principle. Exclusion principle. A theory which limits the number of electrons in a shell or orbit: No two electrons can have, simultaneously, all four quantum numbers the same. For the first two shells the values for the possible two and eight electrons are:

	K shell		L shell							
n	1	1	2	2	2	2	2	2	2	2
l	0	0	0	0	1	1	1	1	1	1
m_l	0	0	0	0	−1	−1	0	0	1	1
m_s	$-\frac{1}{2}$	$+\frac{1}{2}$	$-\frac{1}{2}$	$+\frac{1}{2}$	$-\frac{1}{2}$	$+\frac{1}{2}$	$-\frac{1}{2}$	$+\frac{1}{2}$	$-\frac{1}{2}$	$+\frac{1}{2}$

where:

n = principal quantum number (*energy level*).
l = azimutal quantum number (*translation*).
m_l = magnetic quantum number
m_s = equatorial quantum number (*spinning*).

Cf. *correspondence principle.* **P. rule.** The atomic nucleus has alternately odd and even numbers of alpha particles; hence the following transformation takes place by adding or subtracting:

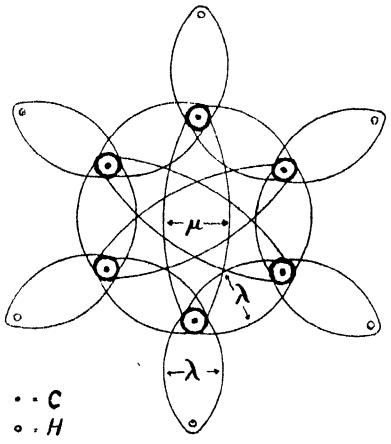
$$B^{11} \rightarrow C^{14} \text{ or } Be^{10}$$
$$B^{10} \rightarrow C^{13} \text{ or } Be^{9}$$

and the range of values is defined by

$$l = 0, \ldots, (n-1)$$
$$m_l = -l, -l-1, \ldots 0, \ldots l-1, l.$$
$$m_s = -\tfrac{1}{2} \text{ and } +\tfrac{1}{2}$$

where l is usually one unit lower than k of the old quantum theory.

Pauling, Linus C. 1901– . An American chemist noted for work on molecular and atomic structure. **P. structure.** A model of the benzene molecule based on an electronic conception of the inter-atomic bonds. Each bond results from two electrons moving in



Pauling structure of benzene.

orbits around the two nuclei of the atoms they join. In the figure each curve represents the orbits of two electrons; the smaller orbits are called λ orbits, the larger μ orbits.

paullinio tannin. $C_{38}H_{36}O_{20}$ = 800.2. Guaranatannin. White crystals from the seeds of *Paullinia cupana*, a Sapindaceae of Brazil, the seeds are used similarly to cacao.

pavemal. The phenylethylbarbiturate of papaverine; used as a hypnotic.

pavine. $C_{20}H_{23}O_4N$ = 341.2. *2.4*-dihydropapaverine. White needles m.201, soluble in chloroform, sparingly soluble in ether.

Pavy's solution. A modified Fehling's solution consisting of: (A) 4.158 gm. $CuSO_4$ in 500 cc. water, and (B) 20.4 gm. sodium potassium tartrate, 20.4 gm. KOH, 300 cc. strong NH_4OH, and water to make 500 cc. Mix in equal parts. Used for determining sugars, a solution of which is titrated into the boiling Pavy solution till the blue color vanishes. Cuprous oxide is not precipitated as with ordinary Fehling's solution, q.v.

pawpaw. The seeds of the edible fruit of *Asimina triloba*, an Anonaceae of the eastern United States; used as an emetic; cf. *papaw*.

pay ore. An ore, rock, earth, or gravel that can be worked with profit.

Payen, Anselme. 1795–1871. A French chemist noted for industrial processes (decolorizing with charcoal) and writings (*Course de Chimie*).

Payne's process. Paynization. A method of making wood fire-proof by successive treatments with ferrous sulfate and calcium chloride baths.

paynize. To treat wood according to Payne's process.

payta. Krameria.

paytine. $C_{21}H_{24}ON_2$ = 320.2. An alkaloid, m.156, from cinchona bark.

Pb. The symbol for lead.

Pd. The symbol for palladium.

pe- A syllable in the names of chemical compounds which indicates a higher degree of saturation or of hydrogenation; as, collidine and co*pe*llidine, pyridine and p*ip*eridine.

peach. The fruit of *Prunus persica*, a Rosaceae, used as food. **p. aldehyde.** γ-Undecalactone. **p. bark.** The bark of p., used as a sedative. **p. kernel oil.** The expressed oil of peach kernels. A yellow liquid, d.0.915, m.−15 saponification value 189–192, iodine value 93.5, insoluble in water, soluble in alcohol, ether, or chloroform. Used as an adulterant for almond oil, and for flavoring. **p. leaves.** The dried leaves of the p. tree, used as a diuretic and stimulant.

peacock copper. Bornite.

peanut. The edible seeds of *Arachis hypogaea*, a leguminous plant of the temperate zones. **p. hull meal.** Ground p. shells used as fertilizer, 1.5–2.5 % nitrogen. **p. oil.** Arachis oil, ground-nut oil, earth-nut oil, oil of katchung. A yellow oil expressed from peanuts, d.0.916, saponification value 188–196, iodine value 103–104, insoluble in water, soluble in alcohol, ether, chloroform or benzene. Used as a substitute and adulterant of olive oil, and in the poorer grades of soap. Cf. *Bellier's test*, *hypogaeic acid*. **p. ore.** Wolframite.

pear oil. An alcoholic solution of amyl acetate, used in flavoring.

pearl. A calcareous secretion from various species of mollusks, chiefly the oyster. **artificial-** (1) Culture p. (2) Synthetic p. **culture-** A natural pearl produced by artificial stimulation of the oyster; as, the insertion of a small grain of sand, watermite or worm. **imitation-** An imitation of natural pearls that does not aim to produce the natural structure and composition, but only the outside appearance; as, alabaster coated with p. essence. **synthetic-** A pearl that has been made synthetically by slow precipitation from a gelatinous or albuminous solution of certain salts.

p. alum. A specially prepared aluminum sulfate for paper manufacture. **p. ash.** An impure calcined potassium carbonate. **p. essence.** A product obtained from fish scales, *e.g.*, of European minnow or herring, used to obtain a highly lustrous coating; as, on imitation pearls. **p. hardening.** Gypsum used as a paper "filler." **p. mica.** Margarite. **p. opal.** An opaque, bluish-white, lustrous variety of opal. **p. powder.** A form of bismuth oxychloride, used as a cosmetic. **p. sinter.** A modification of silica. **p. spar.** Brown spar. A dolomite with pearly luster. **p. stone.** Perlite. **p. white.** (1) Lithopone. (2) Calcium sulfate for use in the paper industry. (3) A form of bismuth subnitrate, $Bi(OH)_2.NO_3$, used medicinally, and formerly as a cosmetic.

pearlite. Perlite.

pearly. Pearl like; having the appearance or luster of pearls.

peastone. Oolite.

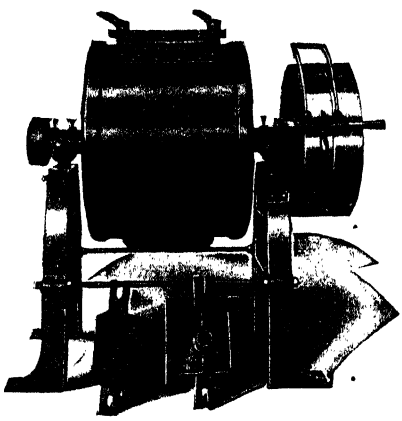
peat. A dark, brown, amorphous soil produced by the decomposition of plants in moist places, especially in swamps. It consists of carbon, hydrogen, and oxygen; used as fuel, and medicinally as a mud-bath, also as fertilizer. Partly dried peat contains:

Water	25 %
Ash	3 %
Woody fiber	50 %
Humus acids	22 %
Nitrogen	1.5-2.5 %

Cf. *dopplerite, ulmic acid, ulmin.* **p. coal.** A substance intermediate between peat and lignite; soft coal. **p. coke.** A carbonized peat, or peat charcoal produced by destructive distillation. **p. gas.** A hydrocarbon gas obtained by distillation of peat. **p. tar.** A tar obtained during the distillation of peat. **p. wax.** Mona wax. A black wax extracted by benzol or alcohol from peat; used as a substitute for montan wax in polishes.

pebble. A very small stone, worn round by the action of water. **Brazilian-** A rock-crystal or quartz, from which lenses are sometimes cut.

p. mill. A power-driven steel cylinder with a lining of porcelain, burr stone, iron or steel, and



Pebble mill.

filled a little less than half full with flint pebbles, porcelain or metal balls for pulverizing or mixing materials. Cf. *ball mill, mixer, agate mill.* **p. powder.** A gunpowder (see illustration) pressed into large cubical grains.

PeCe. A German trade name for the substance corresponding with nylon.

peck. Pk. A dry measure or unit of capacity in the British and United States systems: 1 peck = 0.25 bushel = 2 gallons.

pectase. A nitrogeneous ferment, occurring with pectose in fruits, that converts pectin into pectic acid; used to clarify fruit juices.

pectate. A salt of pectic acid.

pectenine. An alkaloid from the cactus, *Cereus poespitosus* or *Cereus pecten*, of Mexico. It is a tetanic poison.

pectic acid. $C_{17}H_{24}O_{16}$ = 484.2. A dibasic acid obtained from ripe fruits and vegetables. It forms a jelly with calcium salts, and the setting of jams and fruit preserves depends on this property. Pectic acid is formed from pectins by various enzymes, or by long boiling with dilute alkali. **para-** See *parapectic acid.*

pectinase. An enzyme that coagulates pectins by converting them to pectic acid.

pectinol. A commercial brand of pectase.

pectinose. Arabinose.

pectins. A group of compounds, formed from the protopectin of unripe fruits; its function in ripe fruits is for the cementation of individual cells. On hydrolysis it forms pectic acid in overripe fruits, which, in turn, gives the fruit juices the property of jelling.

pectization. Gelatinization or jellification.

pectize. To gelatinize.

pectocellulose. A substance from raw flax, which yields pectic acid and cellulose.

pectograph. The pattern obtained by the drying of colloidal solutions in a film on a glass plate.

pectography. The study of pectographs.

pectolinarigenin. $C_{13}H_{14}O_6$ = 314.1. *5.7*-dihydroxy-6.4'-dimethoxyflavone. Yellow needles, m.215, slightly soluble in alcohol. Cf. *pectolinarin.*

pectolinarin. $C_{28}H_{34}O_{15}$ = 622.3. A glucoside from the flowers of *Linaria vulgaris*, Linn., m.240 (decomp.), hydrolysed by acid to glucose, rhamnose and pectolinarigenin.

pectolite. $4CaO.Na_2O.6SiO_2$, H_2O. Ratholite. A hydrated acid silicate of calcium and sodium.

pectolysis. The clearing of fruit juices by the decomposition of pectin by pectase.

pectosase. An enzyme which separates the middle lamella of plants from the cell walls; cf. *pectase.*

pectose. A polysaccharide; the pulp of unripe fruits and vegetables, from which pectins are derived on ripening.

pectosinic acid. $C_{32}H_{52}O_{31}$ = 903.2. An amorphous acid substance derived from pectose by treatment with alkalis. It forms jelly-like amorphous salts, soluble in dilute acids.

pedesis. Brownian movement.

pedology. The science of the soil.

peganine. Vasicine.

peganite. Variscite.

Peganum harmala. The commonest weed of the Russian and Siberian steppes. Its seeds contain the two alkaloids, harmaline and harmine, which are used in the Orient in the preparation of a red dye, turkey-red.

pegmatite. Giant granite. An igneous rock which consists of coarse-grained mixtures of quartz, feldspar, muscovite, tourmaline, biotite, and other minerals. Some pegmatites contain lithia minerals, rare earth, tin, tungsten, tantalum, or uranium minerals, and are used as a source of these.

pegnin. A mixture of milk sugar and rennet; used medicinally in stomachic disturbances.

pegu catechu. Catechu.

pelagic. Pertaining to the deep sea; as, a pelagic deposit formed far from land at the bottom of the ocean. (Opposed to littoral.)

pelagite. The mineral, $xMnO_2,yFe_2O_3.2H_2O$.

pelargonaldehyde. $C_9H_{18}O$ = 142.1. Nonanal*, n-nonylicaldehyde, $C_8H_{17}CHO$, in citron oil; used in synthetic perfumes.

pelargone. *9*-Heptadecanone*.

pelargonic acid. $C_9H_{18}O_2$ = 158.2. Nonanoic acid*, n-nonoic acid, nondecylic acid, octane carboxylic acid, n-nonylic acid, $C_8H_{17}COOH$. An oxidation-product of oleic acid, and a constituent of oil of *Pelargonium roseum.* Colorless leaflets, d.0.91, m.12, b.253, soluble in water, alcohol or other; used as a flavoring.

pelargonidin. $C_{15}H_{10}O_5.HCl$ = 306.53. An anthocyanidin (q.v.) from the flowers of *Pelargonium* species (Geraniaceae.)

pelargonin. Pelargonidin glucoside. An anthocyan from dahlia, geranium and other flowers. **p. chloride.** $C_{27}H_{31}O_{15}Cl.4H_2O$ = 702.7. A pigment closely allied to that from scarlet pelargonium.

pelargononitrile. Nonane nitrile*.

pelargonyl. Nonanoyl*. The radical $C_8H_{17}CO$—, from pelargonic acid. **p. chloride.** Nonanoyl chloride*.

pelidisi. The ratio: $10W/cm.^2$, where W is the weight in grams and cm. the sitting height of a person. It is used in the calculation of normal diets.

Péligot, Eugène Melchior. 1811–1872. A French chemist noted for work on alcohols, sugars, uranium and chromium. **P. blue.** A hydrated copper oxide, used as a pigment. **P. salt.** Probably the potassium salt of the unknown chlorochromic acid, $K(CrO_3Cl)$, obtained by heating potassium dichromate with conc. hydrochloric acid. **P. tube.** A calcium chloride tube or U-tube with three bulbs, one in each arm, and one in the bend.

pelitic. Applied to rocks such as are, or were originally, composed essentially of clay (*e.g.*, slate).

pellagra. Lesions of the mucous membrane resulting from a deficiency of certain vitamins (q.v.).

Pelletan, Pierre. 1782–1845. A French chemist noted for his *Dictionnaire de Chimie* (1821–1824).

Pelletier, Pierre Joseph. 1788–1842. A French pharmacist who discovered toluene and several alkaloids (with Caventou). Cf. *Peltier.*

pelletierine. $C_8H_{15}ON$ = 141.1. Punicine. A pyrrolidine alkaloid obtained from the root bark of pomegranate, *Punica granatum.* A brown, oily liquid, insoluble in water, soluble in alcohol or ether; used as anthelmintic. **iso-** An alkaloid which occurs with pelletierine in the root bark of pomegranate. **pseudo-** $C_9H_{15}ON$ = 153.2. Yellow crystals, soluble in water or alcohol.

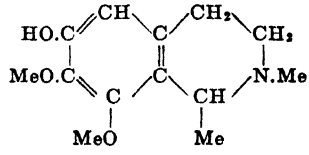
p. hydrochloride. A brown syrup, soluble in water; used medicinally. **p. sulfate.** A brown syrupy liquid, soluble in water or alcohol; used as a teniacide. **p. tannate.** A yellow-brown mass, slightly soluble in water; used as an anthelmintic.

pellicle. (1) A scum or thin skin; as, on the surface of a bacterial growth or the cortical layer of plants. (2) The crust which forms over the surface of a saturated solution during evaporation.

pellitory root. Pyrethrum.

pellote. (Mex. peyotl.) Mescal buttons.

pellotine. $C_{13}H_{19}O_3N$ = 237.2. An alkaloid from pellote, the dried cactus ***Anhalonium williamsi*** of Mexico. Colorless crystals, m.110, slightly soluble in water; used medicinally as a hypnotic.



Cf. *mescaline.* **p. hydrochloride.** $C_{11}H_{15}ON(OMe)_3.HCl$ = 273.6. The hydrochloride of pellotine. Colorless crystals, soluble in water; used as a hypnotic.

pelopium. A supposed element, isolated by Rose in 1846 from tantalite, and probably impure niobium.

peloponium. Columbium.

pelosine. Bebeerine.

pelotherapy. Treatment by the external application of natural products; as, mud, peat, etc.

Peltier, Jean Charles Athanase. 1785–1845. A French watch-maker and experimenter. **P. effect.** If a current is sent through a circuit containing a thermocouple, heat is given out at one junction, and absorbed at the other junction. Thus it is the reverse of the thermo-electric current (cf. *Kelvin-* and *Joule-effect*). **coefficient of-** The ratio of the quantity of heat applied to the quantity of electricity obtained from a thermocouple. (Cf. *Pelletier*).

pemphigus alcohol. $C_{34}H_{70}O_2$ = 510.5. A solid, m.100–105, from the wax of the insect, *Pemphigus xylostei.*

pemphygic acid. $C_{34}H_{68}O_3$ = 524.5. An oxyacid, $C_{33}H_{66}(OH)COOH$, m.101, from the wax of the insect, *Pemphigus xylostei.*

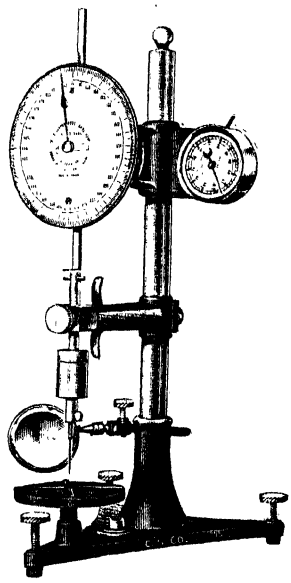
penatin. Notatin.

pencil. (1) A roll or stick that contains some substance in its center; as, a litmus p., vaseline p., wax p., or menthol p. (2) An aggregation of rays of light meeting in a point.

pencilstone. Pyrophyllite.

pendulum. A suspended disk or weight that moves to and fro, at a rate depending on fixed laws; used as a measure of time.

penetration. (1) The act of entering or piercing. (2) The distance in 0.1 mm., that a standard needle enters into a solid, like wax, paraffin etc. (3) The consistency of a material expressed as the distance that a standard needle passes vertically into a material under conditions of loading (100 gm.), time (5 sec.) and temperature (25°C.). (4) The focal distance or depth of a lens. (5) The passage of radiations through materials; as, x-rays.



Penetrometer.

penetrometer. (1) A device for measuring the hardness of a substance from the depth of penetration of a standard needle into the material to be tested, under a given load at definite temperature and in a certain time (see figure). (2) A device for measuring the penetrating powers of x-rays.

penicidin. An antibiotic substance isolated from a species of *Penicillium.*

penicillamine. $C_5H_{11}O_4N.HCl$ (?). An optically-inactive degradation-product of penicillin.

penicillic acid. $C_6H_{10}O_4$ = 170.1. The γ-keto-β-methoxy-δ-methylene-Δ-α-hexenoic acid, an antibacterial substance isolated from *Penicillium puberulum.*

penicillin. The active principle of the mold *Penicillium notatum.* It has a selective bacteriostatic effect on certain Gram + bacteria in high dilutions. **p.-B.** Notatin.

penicillinase. A substance, believed to be an enzyme, that destroys the growth-inhibiting property of penicillin.

penicilliopsin. $C_{30}H_{24}O_8$ = 512.2. Mycoporphyrin. A pigment obtained in orange needles, m.330, from the mycelia of molds.

Penicillium. A genus of Ascomycetes, fungi of the mildew group. **p. glaucum.** Blue mould. The common mould (*e.g.*, of bread). It excites alcoholic fermentation, and is used to effect a separation of d- and l-tartrates from racemic mixtures, since the d-isomer is acted on faster than the l-.

penillic acid. A dextrorotatory substance having a pale bluish fluorescence, obtained by keeping penicillin in aqueous solution at pH 2.

pennine. Penninite.

penninite. Pennine. A green crystalline chlorite from the Pennines.

pennone. $C_9H_{18}O$ = 142.1. Tetramethyl pentanone. $CMe_3.CMe_2.CO.Me$. Colorless crystals, m.63, b.167.

pennyroyal. A popular name for: (1) *Hedeoma pulegoides* of North America; (2) *Mentha pulegium* of Europe. **p. oil. American-** The essential oil of *Hedeoma* species (Labiatae), d.0.920–0.935, containing pulegone and hedeomol. **European-** The essential oil of *Mentha pulegium*, d.0.930–0.960.

pennyweight. (dwt.). A unit of weight in the English system, 1 pennyweight = 24 grains = 0.05 troy ounce = 1.5552 grams. 1 pennyweight of 24 k. gold normally has a value of $1.0335 or 4.25 shillings (4^s 3^d).

Pensky-Martens apparatus. An instrument for determining flash-points.

pent(a)- A prefix derived from the Greek, indicating five.

penta-amino- A prefix indicating the presence of five amino groups in an organic compound. See *pentamino-*.

penta-atomic. Pentatomic.

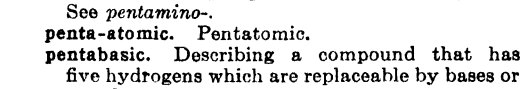
pentabasic. Describing a compound that has five hydrogens which are replaceable by bases or metals.

pentabromo- Describing a compound that has five bromine atoms in its molecule. **p. benzene.** C_6HBr_5 = 472.6. Colorless needles, m.159; insoluble in water, soluble in alcohol or ether.

pentaborane. B_5H_9 or B_5H_{11}. Cf. *boron hydrides*.

pentacarboxylic. Describing a compound that has five carboxyl groups in its molecule; as, propinyl pentacarboxylic acid, $C_3H_3(COOH)_5$.

pentacene. $C_{22}H_{14}$ = 278.11. Benzo-[β]-naphthacene, β-*i*-dibenzoanthracene. The hydrocarbon



pentacetate. A mixture of amyl alcohol and amyl acetate (80 %), b.128–148.

pentachloro. Indicating a compound that has five chlorine atoms in its molecule. **p. aniline.** $C_6Cl_5NH_2$ = 265.33. Colorless needles, m.232; soluble in alcohol or ether. **p. benzene.** C_6HCl_5 = 250.3. Colorless needles, d.0.769, m.85, b.275; insoluble in water, soluble in ether or alcohol. **p. ethane.** CCl_3CHCl_2 = 202.3. A colorless liquid, d.1.834, m.−22, b.161, insoluble in water, soluble in alcohol or ether; used as a solvent.

pentacosane. $C_{25}H_{52}$ = 352.4. A hydrocarbon from beeswax, m.54, insoluble in water.

pentacosamic acid. Cerebronic acid.

pentacyclic. Describing a molecule possessing five atomic rings, or a ring of five atoms.

pentad. Any element or radical having a valency of five.

pentadecane*. $C_{15}H_{32}$ = 212.3. Normal pentadecane. A saturated aliphatic hydrocarbon. A colorless liquid, d.0.769, m.10, b.270; insoluble in water, soluble in alcohol or ether. It occurs in the oil from the rhizomes of *Kampheria galanga*. **p. carboxylic acid.** Palmitic acid.

pentadecanoic acid. $C_{15}H_{30}O_2$ = 242.23. Isocetic acid, n-pentadecoic acid, n-pentadecylic acid, $C_{14}H_{29}COOH$. A colorless solid, m.54, $d._{100mm}$ 257, occurring in agaricus.

pentadecanol*. $C_{15}H_{31}OH$ = 228.25. Pentadecyl alcohol. Colorless crystals, m.44.

pentadecanone*. $C_{15}H_{30}O$ = 226.23. A group of ketones, as: **2-** or methyl tridecyl ketone. **3-** or ethyl dodecyl ketone. **8-** Diheptyl ketone, caprylone, $[Me(CH_2)_6]_2CO$. Colorless crystals, m.40, b.178, soluble in alcohol.

pentadecyl. The monovalent $C_{15}H_{31}$— radical derived from pentadecane. **p. alcohol.** Pentadecanone.

pentadiene*. C_5H_8 = 68.06. **1.2-** Ethylallene, $CH_2:C:CH.CH_2.CH_3$. Colorless liquid, b.45. **1.3-** α-methyl bivinyl, piperylene, $CH_3:CH.CH:CH.CH_3$. Colorless liquid, d.0.696, b.43. **1.4-** $(CH_2:CH)_2CH_2$. Colorless liquid, d.0.6594, b.26. Cf. *pentinene*. **p. carboxylic acid.** Sorbic acid.

pentadienone. C_5H_6O = 82.05. Divinyl ketone, $(CH_2:CH)_2CO$. **diphenyl-** Styryl ketone.

pentadigalloyl-glucose. $C_{76}H_{52}O_{46}$ = 1700.4. A tannin from Chinese nut galls. α- Light brown mass, soluble in water; β- less soluble in water.

pentadiine. C_5H_4 = 64.03. The diacetylene, $HC:C.CH_2.C:CH$.

pentaerythrite. $C(CH_2OH)_4$ = 136.12. A liquid, m. below −18, b.160.5.

pentaerythritol. $C_5H_{12}O_4$ = 136.12. An isomer of pentaerythrite; a colorless solid, m.253.

pentaethylbenzene. $C_{16}H_{26}$ = 218.2. C_6HEt_5. A colorless liquid, d.0.89, m.−20, b.277, insoluble in water.

pentagalloyl glucose. $C_{41}H_{32}O_{26}$ = 940.2. A tannin occurring as a yellow mass, soluble in water.

pentaglucose. Pentose.

pentaglycol. $Me_2C.(CH_2OH)_2$ = 104.12. A solid, m.129, b.206, soluble in water.

pentahydro- A prefix indicating the presence of five hydrogen atoms, or five additional hydrogen atoms; as, pentahydropyrane.

pentahydroxy- A prefix indicating the presence of five hydroxy groups. **p. benzene.** $C_6H_6O_5$ = 158.0. The aromatic penta-atomic phenol, $C_6H(OH)_5$. **p. pentane.** $C_5H_7(OH)_5$ = 152.12. A liquid, b.102.

pentaiodo- A prefix indicating the presence of five iodine atoms in the molecule; as, pentaiodobenzene, C_6HI_5.

pental. C_5H_{10} = 70.1. Trimethylethylene, β-isoamylene, the unsaturated hydrocarbon, $Me_2C{=}CHMe$. A colorless liquid, d.0.678, b.38, insoluble in water, soluble in alcohol, ether or chloroform. Used medicinally as a hypnotic and anesthetic; and in the manufacture of tert. amyl alcohol.

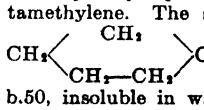
pentaline. Pentachloroethane.

pentamethyl- A prefix indicating the presence of five methyl groups in molecule. **p. benzene.** $C_{11}H_{16}$ = 148.0. The aromatic hydrocarbon,

C_6HMe_5. Colorless crystals, m.56, b.230; insoluble in water. **p. benzoic acid.** Me_5C_6COOH = 192.2. Colorless needles, m.210; soluble in water, alcohol, or ether. **p. phenol.** Me_5C_6OH = 164.1. Colorless needles, m.125, b.267; insoluble in water, soluble in alcohol.

pentamethylen- A prefix indicating the presence of five methylene groups in a molecule.

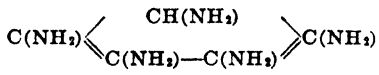
pentamethylene. (1) The bivalent radical; $-CH_2(CH_2)_3CH_2-$. (2) C_5H_{10} = 70.1. Tetrahydrocyclopenten, cyclopentane, cyclopentamethylene. The saturated ring compound,



A colorless liquid, b.50, insoluble in water, soluble in alcohol or ether. It is a constituent of Russian and Caucasian petroleums. **hydroxy-** Cyclopentanol*. **keto-** Cyclopentanol*.

p. amine. Piperidine. **p. bromide.** *1.5*-Dibromopentane. **p. diamine.** Cadaverine. **p. oxide.** Tetrahydropyran.

pentamino- A prefix indicating the presence of five amino groups in the molecule. **p. benzene.** $C_6H(NH_2)_5$ = 153.1. Colorless needles, soluble in water, insoluble in alcohol or ether. **p. pentol.** $C_5H_{11}N_5$ = 141.1. Pentamino-cyclopentadien.



pentamul. Trade name for a group of emulsifiers.

pentane*. C_5H_{12} = 72.12. Amylhydride. A saturated hydrocarbon of the methane series. A colorless liquid, d.0.634, b.36.2, insoluble in water, soluble in alcohol or ether. Used as an anesthetic, in refrigeration, and for filling thermometers. **iso-** Secondary-. Dimethyl ethyl methane, *1.1.2*-trimethyl ethane, Me_2CHCH_2Me. A colorless liquid, b.30, d.-0.622. **normal-** Pentane. **secondary-** Iso-. **tertiary-** CMe_4, tetramethylmethane. A colorless liquid or gas, b.10, a constituent of coal oil and gas. **amino-** Amylamine. **bromo-*** Amyl bromide. **chloro-*** Amyl chloride. **ethoxy-*** Amyl ethyl ether. **iodo-*** Amyl iodide. **methoxy-*** Amyl methyl ether. **tetrahydro-** Cyclopentane.

p. carboxylic acid. Caproic acid. **p.-diamine, 1.5-** Cadaverine. **p. dicarboxylic acid*.** Pimelic acid. **p. dioic acid*.** Glutaric acid. **p. dioic acid.** Glutaric acid. **p. dione*.** Acetylacetone. **p. lamp.** A source of illumination in photometric work. Cf. *Harcourt lamp*. **p. thermometer.** A capillary filled with colored pentane, used as a thermometer for low temperatures.

pentanediol*. $C_5H_{12}O_2$ = 104.09. **1.2-** α-n-Amylene glycol, $Me(CH_2)_2CHOH.CH_2OH$. Colorless liquid, d.0.980, b.212. **1.4-** γ-Pentyleneglycol, $MeCHOH(CH_2)_2CH_2OH$. Colorless liquid, d.0.9954, $b._{20mm}$131. **1.5-** Pentamethylene glycol. $CH_2OH(CH_2)_3CH_2OH$. An oily liquid, d.0.994, b.239. **2.3-** Methyl ethylethylene glycol, β-n-amylene glycol, $MeCH_2-(CHOH)_2Me$. Colorless liquid, d.0.9945, b.187.

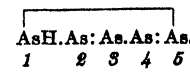
pentanethiol*. $C_5H_{12}S$ = 104.15. Amylmercaptan, $Me(CH_2)_4SH$. A colorless liquid, d.0.857, m.−76, b.126, insoluble in water.

pentanoic acid*. Valeric acid. **γ-keto-** Levulinic acid.

pentanol*. Amyl alcohol

pentanone*. A ketone derived from pentane; as: 2-pentanone (*methyl propyl ketone*), 3-pentanone (*diethylketone*). **phenyl-** Butylphenylketone. **tetramethyl-** Pennone.

pentarsenole. As_5H = 375.9.



pentase. An enzyme that ferments pentoses.

pentasol. A mixture of amyl alcohols, b.116–136.

pentasulfide. A compound containing five atoms of sulfur in the molecule, as, K_2S_5 or Et_2S_5.

pentatomic. Describing: (1) A molecule that consists of five atoms. (2) A ring compound that has five atoms in the ring; as, cyclopentane. (3) An acid that has five replaceable hydrogen atoms. (4) A base, alcohol, or phenol that has five hydroxyl groups.

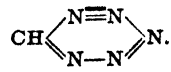
pentatriacontane*. $C_{35}H_{72}$ = 492.56. The hydrocarbon $Me(CH_2)_{33}Me$. White crystals, d.-0.782, m.75, $b._{15mm}$331.

pentavalent. An atom or group of atoms that has a valency of five.

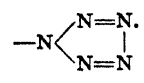
pentazane. Pyrrolidine.

pentazdiene. A compound derived from HN:N.-NH.N:NH.

pentazine. CHN_5 = 83.3. The heterocyclic compound,



pentazyl. The monovalent radical,



pentene*. (1) Amylene. (2) Cyclopentane.

pentenedioic acid. Glutaconic acid.

pentenic acid. $C_5H_8O_2$ = 100.06. Pentenoic acid*. **1.2-** or α-. Propilideneacetic acid, γ-methylcrotonic acid, $EtCH:CHCOOH$. A colorless liquid, d.0.990, m.10, b.201. **2.3-** or β-. Ethylidenepropionic acid, $MeCH:CH.CH_2COOH$. A colorless liquid, d.0.987, b.194. **3.4-** or γ-. Allylacetic acid, $CH_2:CH(CH_2)_2COOH$. A colorless liquid, d.0.984, m.−18, b.189. **i-** See *angelic*, *senecioic* and *tiglic* acid. **dimethyl-** *Teracrylic acid*. **methyl-** See *pyroterebic acid*.

pentenoic acid*. Pentenic acid.

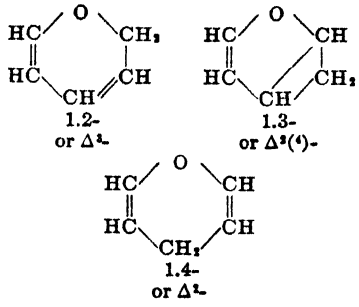
pentenol*. $C_5H_{10}O$ = 86.06. A group of unsaturated alcohols. **1-p.-3.** *1*-Penten-*3*-ol, ethylvinylcarbinol, $CH_2:CH.CHOH.CH_2.Me$. Colorless liquid, d.0.840, b.114. **3-p.-2.** Dimethylpropenylcarbinol, $Me.CHOH.CH:CH\cdot Me$. Colorless liquid, d.0.834, b.112. **4-p.-1.** β-Allylethylalcohol, $CH_2OH(CH_2)_2CH:CH_2$. A liquid, d.0.863, b.140. **4-p.-2.** Allylmethylcarbinol, $Me.CHOH.CH_2.CH:CH_2$. A liquid, d.0.834, b.116.

pentenyl. Describing a series of radicals derived from amylene; as,

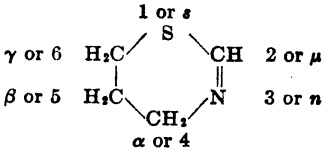
Δ^1- $—CH:CH(CH_2)_2Me$.
Δ^2- $—CH_2CH:CHCH_2Me$.

pentevalent. Pentavalent.

pentfurane. C_5H_6O = 81.1. The heterocyclic compounds:

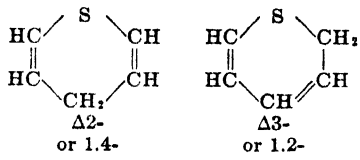


penthiazoline. C_4H_7SN = 101.1. The heterocyclic compound,



penthiofurane. Penthiophene.

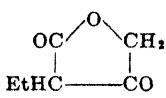
penthiophene. C_5H_6S = 98.0. Penthiofurane. The heterocyclic compounds:



pentine. Pentyne*. **p. dioic acid.** Glutinic acid.

pentinene. C_5H_8 = 68.07. A diolefine, $Me_2C{:}C{:}CH_2$, isomeric with valerylene, piperylene and pentadiene.

pentinic acid. $C_5H_8O_2$ = 128.1. α-ethyltetronic acid.



Colorless crystals, m.128.

pentinoic acid. $C_5H_6O_2$ = 98.1. $MeCH_2C{:}CCOOH$.

pentite. Pentitol.

pentitol. Pentite. A series of five pentatomic alcohols: $CH_2OH(CHOH)_3CH_2OH$, derived from the pentoses; two are optically-active. See *adonite, arabite, xylite.* **methyl-** Rhamnite.

pentlandite. A native iron and nickel sulfide, (Fe,Ni)S.

pentobarbital. $C_{11}H_{18}N_2O_3$ = 226.1. Nembutal, ethyl-*1*-methylbutyl-barbituric acid. White crystals, m.128–130; used as a hypnotic.

pentoic acid. Valeric acid.

pentol. Cyclopentadiene.

pentonic acid. A series of pentavalent monobasic acids of the type, $CH_2OH(CHOH)_3COOH$. See *arabonic, ribonic, xylonic acids.*

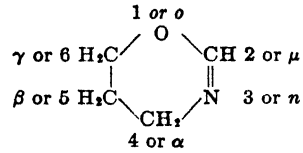
pentosans. A group of gums or resins (*hemi-* or *pseudocelluloses*) which are hydrolysed to pentoses; as, araban, xylan. They are constituents of cell membranes of plants, and occur in straw, wood, coffee and chocolate. **methyl-** Gums which yield methylpentoses on hydrolysis.

pentose. Pentaglucose. A monosaccharide or sugar containing five carbon atoms, $C_5H_{10}O_5$. They are not fermented by yeast. See *arabinose, lyxose, ribose, xylose.* **methyl-** See *rhamnose, rhodeose, fucose.*

pentoside. A nuclein in some proteins of the general composition: $A.OP(OH)O_2.B$, where *A* is a purine body and *B* a pentose; e.g., guanosin.

pentoxazol. 1.3[4]-Oxazine.

pentoxazoline. C_4H_7ON = 85.1. The heterocyclic ring compound,



phen- Phenpentoxazoline.

pentoxide. A binary compound which contains five atoms of oxygen, as nitrogen pentoxide, N_2O_5.

pentoxime. $C_5H_5O_5N_5$ = 215.2. A homolog of fulminuric acid, the cyclic compound, $C{:}NOH{-}C{:}NOH{-}C{:}NOH{-}C{:}NOH$; it contains five oxime groups.

pentrite. $C_5H_8N_4O_{12}$ = 316.0. Tetranitroerythrite, $C(CH_2O.NO_2)_4$. A high explosive.

penturonic acid. $C_5H_8O_6$ = 164.0. Any trihydroxy aldehyde acid, $CHO(CHOH)_3COOH$, derived from pentoses. Cf. *uronic acids.*

pentyl. Amyl. **p. acetate.** Amyl acetate. **p. amine.** Amylamine.

pentylene. Pentadiene.

pentylidene. Amylidene.

pentyne*. C_5H_8 = 68.06. **1-** *n*-Pentine, propylacetylene, $HC{:}C(CH_2)_2Me$. A colorless liquid, d.0.722, m. −95, b.40. **2-** Ethylmethylacetylene, 2-pentine, $Me.C{:}C.Et$. A liquid, d.0.687, m. −101, b.56. **p. dioic acid.** Glutinic acid.

Penzold's reagent. A solution of diazobenzosulfuric acid and potassium hydroxide, used as a reagent for sugar in urine.

peonin. Aurine.

peonine. An alkaloid from the rhizome of peony, *Paeonia officinalis*, a Ranunculaceae; used medicinally as an antispasmodic.

peonol. $C_9H_{10}O_3$ = 166.1. An aromatic ketone from the root of *Paeonia montana*, a Japanese plant; colorless, long needles, of pleasant aromatic odor, m.50.

pepo. Pumpkin-seed.

pepper. Piper. The dried fruit of *Piper* species. **black-** The dried unripe fruits of *Piper nigrum*, a Piperaceae of tropical countries. It contains piperine, chavicine, essential oils and a resin, and is used as a condiment and in the manufacture of pepper oil. **cayenne-** Red p. **long-** The dried, unripe fruit of *P. longum*, used as carminative and stimulant. **Jamaica-** Pimenta. **red-** The dried and ground unripe fruits of *Capsicum frutescens*, a Solanaceae. It contains an oleoresin; used as a condiment and medicinally. **Spanish-** Red p. **white-** A black pepper that has been deprived of the black outer skin of the seeds; it is milder than black pepper. **wild-** Mezereon.

p. oil. An oil extracted from the fruits of *Piper nigrum*. A pale yellow liquid, d.0.87–0.91, insoluble in water, soluble in alcohol or ether. It contains cadinene, phellandrene, and dipentene.

peppermint. Mentha piperita. The dried leaves and flowering tops of *Mentha piperita*, a Labiatae of temperate zones. Used medicinally as the fluid extract, for flavoring, and in the manufacture of peppermint oil and menthol. **p. camphor.** Menthol. **p. oil.** An essential oil obtained by distilling peppermint. A colorless liquid of strong agreeable odor, d.0.91; insoluble in water soluble in alcohol, ether, or chloroform. It contains 50–90 % menthol. Grades: American, Chinese, English, Italian, Japanese, and Spanish; used for flavoring, medicinally as a stimulant and antispasmodic, and in perfumery.

pepsase. Pepsin.

pepsin. Pepsase. Acid-proteinase. An enzyme of gastric juice that hydrolyses proteins to proteases, peptones, and peptides, preferably in acid (HCl) solution. It is obtained from the fresh stomachs of healthy pigs, as fine, amorphous, white powder or grains, slightly hygroscopic and partly soluble in water, soluble in very dilute HCl, insoluble in alcohol. One part of pepsin should be able to digest not less than 3000 parts of freshly-coagulated egg-albumen; used medicinally as a digestive. **vegetable-** Papain.

pepsinate. To mix with pepsin.

pepsinogen. The mother substance or zymogen of pepsin in the cells of the stomach glands.

peptide. A compound of aminoacids, see *polypeptide*. **p. group.** The bivalent radical —CO.NH—.

peptization. The liquefaction of a gel to a sol; the change from a jelly to a liquid.

peptizator. An agent that causes the liquefaction of a gel.

peptize. To dissolve or liquefy a jelly or gel.

peptolysis. The hydrolysis of peptone to aminoacids.

peptolytic. An agent that splits peptones.

peptone. A group of simple proteins, soluble in water and able to diffuse through parchment. They are not coagulated by heat, and are formed by the action of pepsin on albuminous bodies. Cf. *gastric digestion*. Chemically the peptones are a mixture of proteoses and amino acids which resemble polypeptides. **beef-** Meat p. **casein-** Milk p. **gelatin-** A peptone obtained by digestion of gelatin. **meta-** A digestion-product of peptones. **milk-** A light-brown powder obtained by digestion of casein, soluble in water, and used as nutrient for convalescents. **meat-** An extract made from fresh, lean beef and treated with the digestive juices of the pancreas. 1 gm. represents 10 gm. of lean beef. A brown powder, soluble in water, used as a nutrient and in bacteriology for culture media. **para-** Syntonin. **silk-** A peptone obtained from silk, and used in biochemical tests. **true-** Tryptone.

peptonization. The process of converting proteins into peptones.

peptonize. To change into peptone.

peptonizing powder. Pancreatin powder. **p. tube.** A parchment tube used for dialyzing proteins.

peptotoxine. A ptomaine from decomposing proteins.

per- A prefix derived from the Latin "per" meaning through, and indicating (1) "very" or more than ordinary, as, peracidity; (2) "above" or "beyond," as, permanganate. It denotes an indefinitely large amount of the substance or radical to which it refers.

peracetic acid. $C_2H_4O_3$ = 76.03. Me.CO.O.OH, an isomer of methyl acid carbonate, $MeHCO_3$.

peracid, per- -acid. (1) A member of a group of inorganic acids containing oxygen in the form of peroxide, or an element in its highest valency; as, perboric acid, persulfuric acid, perchloric acid, permanganic acid. (2) Organic peracids. Organic acids in which the radical, —CO.O.OH, is assumed to exist. True peracids give H_2O_2 with dilute sulfuric acid, and sometimes ozone with concentrated sulfuric acid. They are sometimes confused with acids containing "hydrogen peroxide of crystallization." Cf. *peri-acid*.

peracidity. Excessive acidity.

peractivin. Trade name for p-toluene sulfomonochloride; used as mild oxidant in textile bleaching.

perborate. A salt of a perboric acid containing the BO_3^- or $B_4O_8^=$ radicals. In general they are oxidizing agents resembling hydrogen peroxide, and are used for bleaching, cleaning, and disinfecting. **meta p.** A salt of the type MBO_3.

perboric acid. The hypothetical acid, HBO_3, from which perborates are derived. This is actually meta perboric acid, perboric acid being the acid of the salt $Na_2B_4O_8,10H_2O$.

perbunan. Trade name for a co-polymer of butadiene and styrene, related to buna, q.v.

perbutan. Trade name for a co-polymer of butadiene and acrylic nitrile, related to buna, q.v.

percaine. $C_{19}H_{28}O_2N_2$ = 330.22. α-butyl-oxy-cinchoninic acid, diethyl-ethylenediamide, nupercaine. Colorless crystals, m.97, soluble in water or alcohol, used as a spinal analgesic.

percarbide. A binary compound of carbon containing an excess of carbon.

percarbonate. A salt of the hypothetical percarbonic acid containing the divalent radical, $C_2O_6^=$. They decompose in aqueous solution to hydrogen peroxide and carbonates.

percarbonic acid. The hypothetical acid, $H_2C_2O_6$, from which the percarbonates are derived.

percentage. Parts in a hundred parts; as, 6 % means 6 parts in 100 parts, 6 grams in 100 grams, or 6 pounds in 100 pounds. The percentages of the constituents of a compound can be calculated from the formula of the compound. Let the symbols represent the atomic weights, and M, the molecular weights, then the percentage can be found for NaCl by: Na + Cl = M, 23 + 35.5 = 58.5. Hence, in 58.5 parts of salt there are 23 parts of sodium and 35.5 parts of chlorine. In 100 parts therefore:
58.5:23::100:x (x % Na = 39.4 %)
58.5:35.5::100:y (y % Cl = 60.6 %)

perch. Rod.

perchlorate. A salt of perchloric acid containing the ClO_4^- radical.

perchlorethane. Hexachlorethane.

perchlorether. $(C_2Cl_5)_2O$ = 418.6. Decachlorethylether. Colorless scales, d.1.90, m.69, decomp. by heat.

perchlorethylene. Tetrachlorethylene.

perchloric acid. $HClO_4$ = 100.5. A monobasic acid of heptavalent chlorine, its highest state of oxidation, $d_{22°}$.1.76, m.−35, b.60mm.39. A colorless liquid, d.1.12, which contains 20 % $HClO_4$ in water. Used as an oxidizing agent, in electro-analysis, for the destruction of organic material, and as a reagent for potassium. **p. anhydride.** Chlorine heptoxide, Cl_2O_7. **p. ether.** Ethylperchlorate. **p. hydrate.** $HClO_4, H_2O$ = 118.49. An explosive solid, m.50. **p. dihydrate.** $HClO_4, 2H_2O$ = 136.51. A liquid, b.203; used as an oxidizing agent (72.4 % p. acid).

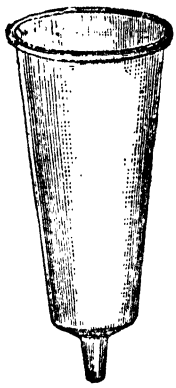
perchloride. A chloride that contains more chlorine than the corresponding normal chloride.

perchromate. One of the intensely colored salts derived from perchromic acid. There are two series of salts of the general types $MCrO_5$ (deep blue) and M_3CrO_8 (deep orange-brown). They are rapidly decomposed in aqueous solution, but more stable in ether.

perchromic acid. $HCrO_3$ = 101.1 and H_3CrO_8, $2H_2O$, or $(OH)_4Cr(O.OH)_3$ = 219.06. Two acids containing heptavalent chromium, formed by the addition of hydrogen peroxide to a chromate solution (blue color); decomp. rapidly. Below −15°C the H_3CrO_8 forms deep blue crystals.

percin. A ptomaine from perch and pike, containing 78 % arginine.

percolate. (1) To strain or pass through fine interstices; as, water percolates through stone. To extract the soluble matter from drugs by the passage of water through the powdered drug. (2) The solution obtained by percolation.



Percolator.

percolater. Percolator.

percolation. The process of extracting the soluble constituents of a substance by a slow stream of solvent. Generally used in the extraction of drugs that are ground and packed into the percolator; the height of the powder should be three times its diameter.

percolator. A conical, long glass vessel, with tubulated bottom used for the extraction of drugs. **p. bottle.** A wide-mouthed graduated bottle in which the percolate is collected.

percrystallization. The crystallization of a solute from a solution dialyzing through a membrane (such as collodion).

percussion. The act of striking a sharp blow. **p. cap.** A detonator or primer. **p. figure.** Strike figure. The radiating lines formed in certain minerals by striking them with a sharp hammer. **p. powder.** Fulminating powder. An explosive that ignites by percussion.

perdistillation. Distillation through a dialyzing membrane. Cf. *pervaporation.*

pereira. Pareira.

pereirine. $C_{19}H_{24}ON_2$ = 296.2. Pareirine. An alkaloid from the root of *Geissospermum laeve*, a tree of tropical America that yields the pereiro bark. A brown amorphous powder, m.119, insoluble in water, soluble in alcohol or ether; used as a quinine substitute. Cf. *geissine, vellosine.*

pereiro bark. The bark of *Geissospermum laeve*, a tree of tropical America; used medicinally as a tonic and antipyretic.

perezol. A 0.5 % alcoholic solution of pipitzahoic acid. Used as an indicator in volumetric analysis; acids, colorless; alkalis, deep orange.

perezon. Pipitzahoic acid.

perferrate. (1) A misnomer for ferrate, M_2FeO_4. (2) An intensely green-colored unstable compound of hepta- or octa-valent iron, $MFeO_4$.

perforated plate. A porcelain plate with small holes, usually inserted in a funnel and covered with filter paper for the rapid filtration of solutions.

perfringen. The gas-gangrene antitoxin.

perfume. A volatile fragrant substance resembling in odor a flower, blossom, herb, or other odoriferous substance. It may be classified as: (a) *natural*, if obtained by extraction of flower, blossom, or plant; (b) *artificial*, if a mixture of natural oils or oil constituents; (c) *synthetic*, if a mixture of synthetically produced substances. Cp. *essential oils, odors, terpenes, flavors.*

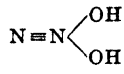
perfusion. The passage of a fluid through spaces.

pergamyn. An artificial parchment paper (German).

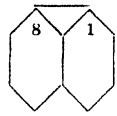
pergenol. Solid hydrogen peroxide. A mixture of sodium perborate and bitartrate which, with water, gives hydrogen peroxide.

perhydrate. (1) Ortizon. (2) Peroxy-hydrate.

perhydrol. (1) A 30 % solution of hydrogen peroxide, ten times stronger than the ordinary solution. It is known as "100 volumes" or (inaccurately) as "100 %" hydrogen peroxide (q.v.), because it evolves 100 times its volume of O_2. (2) A supposed combination of two hydroxyl groups with an inert element or compound; as,



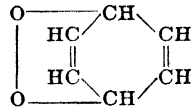
peri- *π*. A prefix derived from the Greek "about" or "around," meaning around. **p. acid.** *1*-Naphthylamine-*8*-sulfonic acid. **p. bridge.** A bond between the first and eighth carbon atom of naphthalene. **p. position.** The *1.8*-position of the naphthalene ring.



periclase. A native magnesium oxide, MgO, which occurs in aggregates of small cubes.

pericline. Albite.

pericyclo. A bond or valency that extends partly around a ring; as,



peridote. A variety of olivine used as a gem.

peridotites. A group of crystalline, igneous rocks, of which olivine is the chief constituent.

perigee. The point in the moon's orbit at which it is nearest the earth, (cf. *apogee*).

perihelion. The point of the orbit of a heavenly body at which it is nearest to the sun, cf. *aphelion.* Applied to the electron in its relation to the nucleus.

perikinetic. Concerning Brownian motion. Cf. *orthokinetic.*

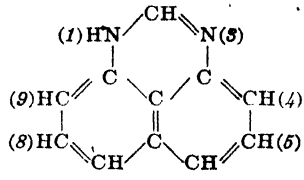
perilla alcohol. $C_{10}H_{16}O_4$ = 200.12. A colorless solid from palmarosa and naal oils. Cf. *parilla.*

perillaldehyde. $C_{10}H_{14}O$ = 150.0. $C_6H_8.CMe.CH_2.CHO$. Cf. *peryllartine.*

perilogic series. The allologic series of pyrene $C_{10}H_8$, $C_{16}H_{10}$, $C_{22}H_{12}$, etc.

perimeter. The sum of the lengths of the bounding lines of a figure.

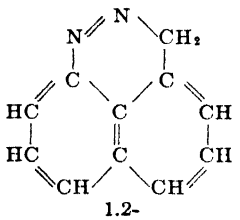
perimidine. $C_{11}H_8N_2$ = 168.1. The heterocyclic compound,



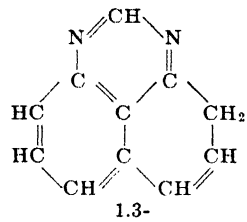
perimidyl. A group of eight isomeric radicals, $C_{11}H_7N_2$—, derived from perimidine.

perimorph. A mineral that encloses another mineral. The antonym of *endomorph.*

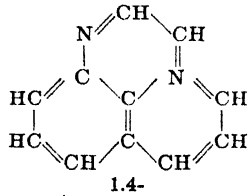
perinaphthodiazine. $C_{12}H_8N_2$ = 180.1. N-naphthodiazine. A group of isomers of naphthodiazine and naphthisodiazine:



1.2-

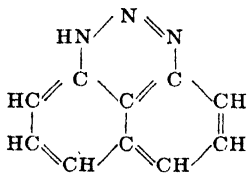


1.3-

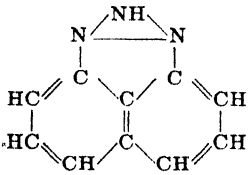


1.4-

perinaphthotriazole. $C_{10}H_7N_3$ = 169.2. π-Naphthotriazole. A series of compounds isomeric with naphthotriazole and naphthisotriazole.



α- or 1.2.3-



β- or 2.1.3-

period. (1) A regular interval or division, (as a period of time) elapsing between a regularly-recurring phenomenon. (2) A period of elements in the periodic system, q.v. (3) A family of closely-related elements with consecutive atomic numbers; as, 24 Cr — 29 Cu; or 59 Pr — 71 Lu. (4) A geologic measure. See *geologic era.* **damping-** See *damping-.* **decay-** See *period of decay.* **gold-** The elements Os, Ir, Pt, Au. **half-, half life-** See *p. of decay.* **incubating-** The time necessary for the full development of a bacterial culture. **iron-** Iron family. The elements Mn, Fe, Co, Ni, forming the central portion of the third period of the periodic system. **life-** (1) Period of decay. (2) The time during which an atom or molecule is in the activated or excited state. See *damping p., lingering p.* **long-** The 3rd, 4th, or 5th p. of the periodic system. **platinum-** The elements Os, Ir, Pt, Au, and Hg, form a part of the fifth period of the periodic system. **rare earth-** The elements with atomic numbers 58–72, cerium to hafnium, form the central part of the fifth period of the periodic system. **short-** Either of the 1st or 2nd p. of the periodic system. **silver-** The elements Ru, Rh, Pd, Ag, and Cd form the central part of the fourth period of the periodic system. **transitional-** (1) One of the trios of transitional elements, q.v., of the eighth periodic group. (2) One of the three series of elements from Ti to Ni, Zr to Pd or Hf to Au. **uranium-** The sixth period of the periodic system, which consists of the radioactive elements.

period of decay. The time required for the disintegration of one-half of a quantity of a radioactive element into its next transmutation product; see *radioactive element* (table).

periodate. A salt of periodic acid, which contains the IO_4^- radical.

periodic. (1) Pertaining to a regularly-recurring event, phenomenon, or characteristic. (2) Pertaining to the highest valency of iodine, as *p. acid.* **p. acid.** $HIO_4.2H_2O$ or H_5IO_6 = 228.0. Colorless monoclinic crystals, m.130, decomp. 140, soluble in water. Its salts are the periodates. **p. chain.** An arrangement of the chemical elements according to increasing atomic weights or numbers in a continuous sequence. It can be divided into six sections (periods), and each of these again subdivided (sub-periods). If the valencies of each element are plotted, against the atomic weights a characteristic curve is produced. In the table shown this arrangement is used to indicate the electronic structure of the atoms. Cf. *ionic number.* **p. law.** (1) Mendeleeff law. The properties of the elements change periodically when the elements are arranged in increasing order of atomic numbers. (2) Moseley's law. The properties of the elements are a periodic function of their atomic numbers as illustrated in the p. chain, p. spiral, p. system, and p. table. **p. precipitation.** *Liesegang rings.* **p. properties.** Those properties of elements, which when plotted against their atomic weights show the relationship of the elements as exemplified in the periodic table. They include, valency, atomic volumes, atomic heats, wavelengths of x-ray spectra, compressibilities. **p. spiral.** Helix Chemica. A graphical representation of the periodic system in the form of a curve, which illustrates the relationship of elements (see figure). **p. system.** A natural classification of all elements into one system, from which their properties can be deduced and unknown elements and their properties predicted. There are 92 elements from hydrogen to uranium (inclusive). The periodic system can be represented in various ways: uni-dimensionally, in the form of a chain (see *periodic chain*); two-dimensionally, as a spiral or helix in which the chain is bent so that elements with similar properties come together; three-dimensionally, as a spatial model. Besides these graphical representations there are various tables and charts which express one or more of the features of the periodic system. **p. table.** An arrangement of the periodic system as a table, which was developed independently in 1869 by D. Mendeleeff and in 1870, by Lothar Meyer and, in a crude form, by Newlands, q.v.

periodicity. (1) The occurrence of a phenomenon at regularly-recurring intervals, as of time. See *periodic properties.* (2) The occurrence of similar properties in a group of chemical elements in the periodic system.

peripheral. Situated near or at the surface, or on the circumference of a curvilinear figure.

periphery. The surface or outer part; in particular, the circumference.

periplocin. $C_{30}H_{48}O_{12}$ = 600.5. A glucoside from the bark of *Periploca graeca,* an Asclepiadaceae. A yellow amorphous powder, m.205, soluble in water or alcohol; used medicinally as a heart tonic.

periplogenin. $C_{23}H_{34}O_6$ = 390.2. The aglucone of periplocin similar in structure to strophanthidin, but having a CH_3 group instead of CHO. See *cholane derivatives.*

periscope. Altiscope. An arrangement of lenses and mirrors which enables an observer to see over intervening obstacles without being seen himself.

periscopic. Applied to lenses having a concave-convex surface, like a meniscus.

perisphere. The "atmosphere" surrounding a molecule, ion, or radical in which it makes its influence felt. Cf. *molecular diagram.*

peristalsis. The rhythmic contractions of the intestines by which their contents are propelled through, mixed with digestive enzymes, and partly absorbed.

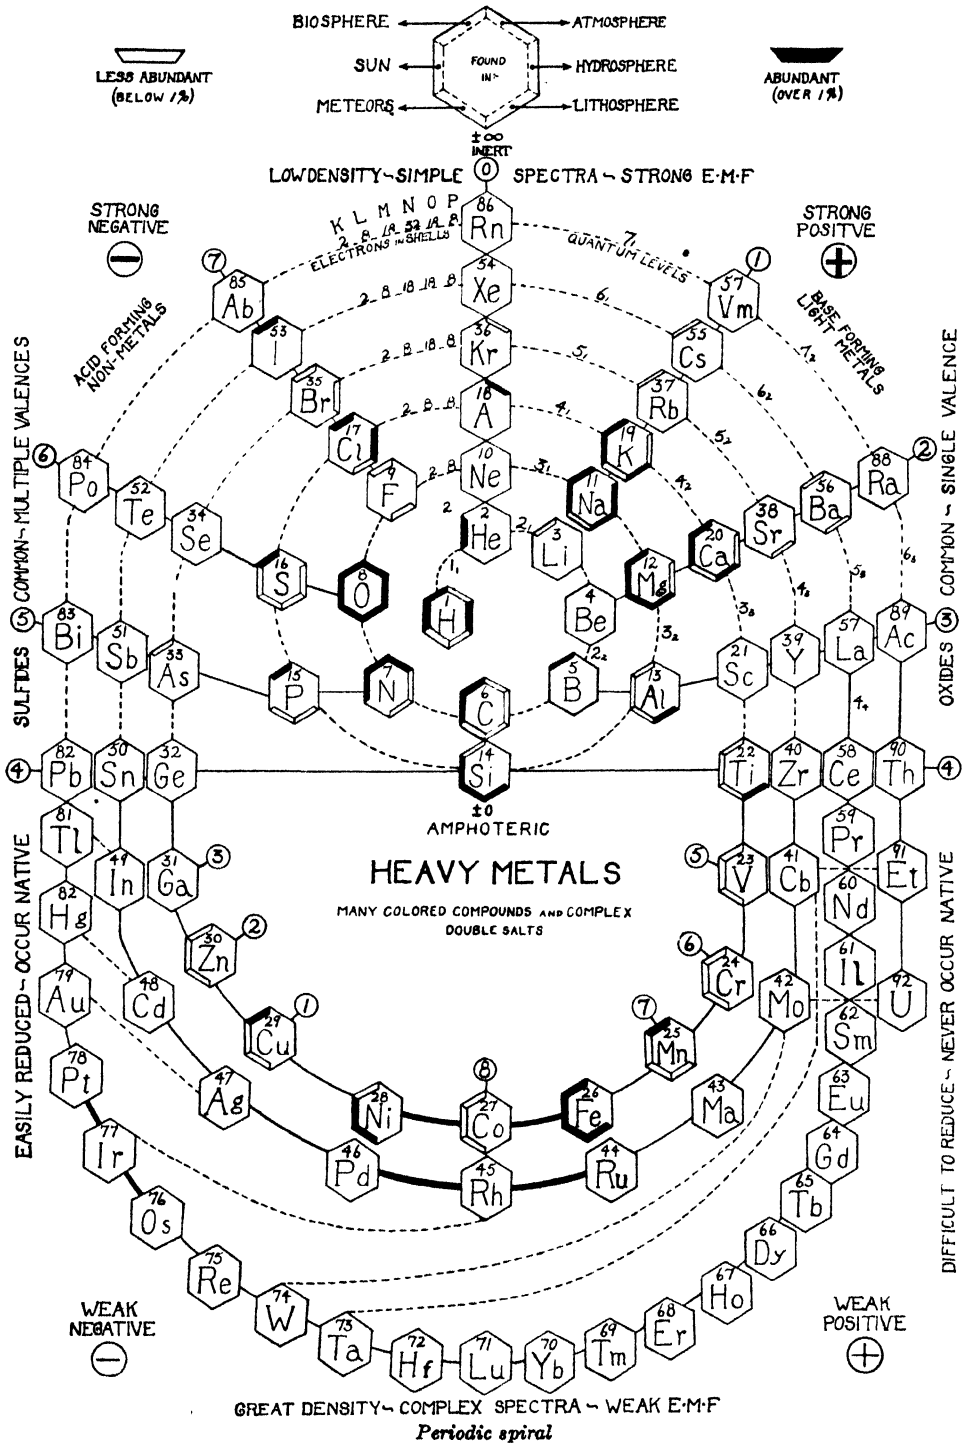
(1) *The Roman numerals indicate the period or the number of orbits of the atoms. The small letters indicate the sub-periods; thus, a—the electropositive elements* (light metals); *and b—the electronegative elements* (non-metals); *T indicates the terminals of a period* (noble gases); *and, t, the transitional elements* (carbon group); *′—the* heavy metals and *″—the* rare earth metals.

(2) *and* (3) *Show the atomic number and the name of the element.*

(4) *Indicates the distribution of the electrons in the K, L, M, N, O, P, and Q orbits. A change of an electron from one of these orbits gives rise to the corresponding radiations.*

(5) *Indicates the valency or polar numbers of the elements. The numbers to the left of the symbol indicate the number of electrons which that particular atom captures to form the octet. The number to the right of the symbol indicates the number of electrons which the atom can give up. The numbers with asterisks are the principal valencies.*

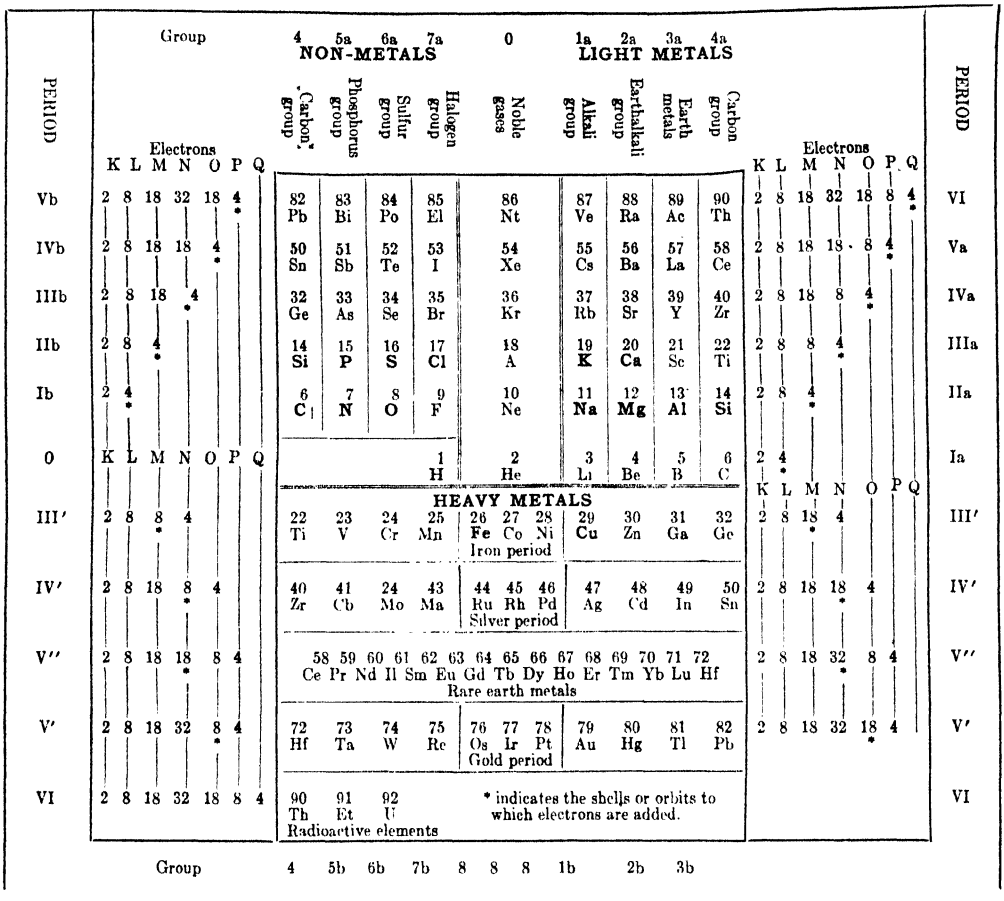


Periodic spiral

which illustrates the relationship between the chemical and physical properties and the occurrence of the elements; thus: (*see next page*)

In the upper half of the diagram: *All elements have low density (below 4.0), simple spectra, strong e.m.f., and generally a single valence.* Upper left: *Elements are acid-forming and negative, e.g., attract additional electrons.* Upper center: *Elements are inert, e.g., have a complete octet.* Upper right: *Elements are base-forming or positive, e.g., give up their valence electrons.*

In the lower half of the diagram: *All elements have greater density (above 4.0), complex spectra, weak e.m.f., and generally many valencies; they are amphoteric and may gain or lose electrons.* The abundance of the elements is shown by the hexagons as indicated at the top of the table.



Periodic system.

This new form of table is derived from the periodic spiral and indicates atomic structure, group and period relationship and the classification of the elements; thus:

In the upper half of the table: *All elements in the vertical direction are related to each other.* Group relation *predominates, and additional electrons are added to the outermost orbit; hence valence and physical and chemical properties change rapidly in passing to succeeding atomic numbers.*

In the lower half of the table: *All elements are related in the horizontal direction.* Period relation *predominates, and additional electrons are added to the second or third inner orbit; hence valence and properties do not change greatly in passing to succeeding atomic numbers.*

peristaltics. An agent or drug that increases the intestinal movements.

peristaltin. $C_{14}H_{18}O_8 = 314.2$. A glucoside from the bark of *Rhamnus purshiana*, (cascara sagrada). A yellow-brown, hygroscopic, crystalline powder; soluble in water or alcohol; used medicinally as a peristaltic.

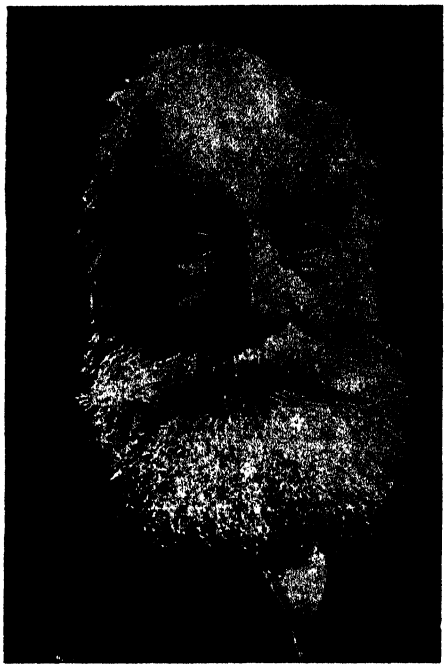
periston. A colloidal solution containing polymerised vinyl pyrrolidone (hemodyn) and inorganic salts; used to raise blood pressure temporarily, and (in Germany during World War II) as a stable blood substitute.

Perkin, Sir William Henry. 1838–1907. An English chemist noted for his work in the synthesis organic of dyes. He made the first synthetic dye, mauvein in 1856. **P.'s reaction.** The formation of unsaturated acids of the cinnamic type by the condensation of aromatic aldehydes with fatty acids in the presence of acetic anhydride; as,

$$Ar.CHO + CH_3COONa = Ar.CH{=}CH.COONa + H_2O.$$

P.'s violet. Mauvein.

perlite. Pearlite. (1) A volcanic glass. (2) A eutectic mixture of soft α-ferrite (87 %) and hard cementite (13 %) containing 0.9 % carbon, formed during the slow cooling of molten steel.



Sir William Perkin.

(From Moore, "History of Chemistry." McGraw-Hill Book Company, New York, N. Y.)

The mass contains the phases α-ferrite, cementite and graphite.

perloline. $C_{36}H_{22}O_3N_4$ = 730.3. An alkaloid from perennial ryegrass (*Lolium perenne* L.), soluble in alcohol or chloroform, slightly soluble in acetone, ether or water. Solutions in chloroform are golden-yellow, with a green fluorescence which is visible in concentrations of $1:5 \times 10^6$.

permalloy. A magnetic alloy of nickel (30–80 %) and iron.

permanent. Everlasting, fixed, and enduring. **p. gas.** A gas that cannot be liquefied or condensed by pressure alone. **p. white.** Precipitated barium sulfate.

permanganate. A salt of permanganic acid of the type, $MMnO_4$. They are dark purple in color, good oxidizing agents and many are disinfectants. **p. ion.** The negatively charged MnO_4^- radical, which imparts a purple color to a solution.

permanganic acid. $HMnO_4$ = 120.0. An acid derived from heptavalent manganese, stable only in dilute solutions; decomp. to manganese dioxide and oxygen.

permanganyl. The monovalent MnO_3^- radical. **p. chloride.** MnO_3Cl = 138.39. A green-brown liquid which emits purple fumes in moist air and explodes if heated. It is the acid chloride of permanganic acid. **p. fluoride.** MnO_3F = 121.93.

permeability. (1) The ability to pass or penetrate a substance or membrane. (2) The quantity of air flowing through a body in unit time under standard conditions of area, thickness and pressure. Cf. *porosity*, *osmosis*. **magnetic-** See *magnetic permeability*.

permeable. Pervious or porous. **semi-** Allowing the passage of some substances but not of other substances; as, a semi-permeable membrane.

permeate. To penetrate or pass through the pores of a body without rupture of its parts.

perminal. A trade name for a sodium alkylnaphthalene sulfonate; used as a wetting agent.

permissible explosive. See *explosive*.

permittivity. Dielectric constant.

permivar. An alloy of 45 % Ni, 25 % Co and 30 % Fe which has a high magnetic permeability and a low hysteresis loss; used in the cores of loading coils for telephone circuits.

permutation. (1) Substitution, *e.g.*, of radicals. (2) Transmutation.

permutite. $Na_2Al_2H_6Si_2O_8$. An artificial sodium aluminum silicate, (zeolite), obtained by melting aluminum silicate, sodium carbonate and sand together. A granular powder, used for softening water, as the sodium can be replaced by calcium, magnesium, iron, or manganese. It can be regenerated by a strong solution of sodium chloride: (a) hard water + Na-permutite = soft water + Ca-permutite. (b) Ca-permutite + NaCl = $CaCl_2$-solution + Na-permutite. **natural-** A zeolite mineral, boronite or refinite, used for water softening. Cf. *regeneration*. Also used for estimating ammonia in blood and urine.

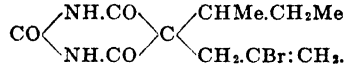
permutoid reaction. A reaction analogous to the permutite process for softening water; *i.e.*, double decomposition between a soluble and insoluble substance.

pernambuco. Lima wood, Nicaragua wood. The red wood from *Caesalpinia echinata*, a Leguminosae, used in dyeing.

pernitric acid. HNO_4. An acid of doubtful existence.

pernocton. Pernoston.

pernoston. $C_{11}H_{15}O_3N_2Br$ = 303.03. β-bromoallyl-*sec.* butylbarbituric acid, pernocton.



A colorless solid, m.132, soluble in alcohol, and used as a hypnotic preanesthetic.

Pernot furnace. A reverberatory puddling furnace with a circular inclined hearth, used in making steel.

peronine. $C_{24}H_{25}O_3N.HCl$ = 411.8. Benzylmorphine hydrochloride. A colorless, odorless powder, slightly soluble in water, soluble in alcohol; used as a narcotic.

perosis. Displacement of the ankle-joint of chickens, due to manganese deficiency.

perosmic. A compound of octavalent osmium. **p. acid.** See *osmic acid*.

Pérot lamp. A mercury-vapor lamp; used as a light source for polariscopes, spectroscopes and other optical measuring instruments.

peroffskite. The mineral $CaTiO_3$.

peroxidase. (1) An enzyme of vegetable origin that splits hydrogen peroxide into water or metal peroxides into the corresponding oxide and oxygen. (2) A substance which activates peroxides. Cf. *catalase*.

peroxide. (1) Superoxide. A derivative of hydrogen peroxide or a compound containing the bivalent —O—O— or $=O_2$ group, in which two oxygen atoms are singly linked. They liberate hydrogen peroxide with acids and are strong oxidizing agents; as H_2O_2, Na_2O_2, or BaO_2. (2) Used loosely for dioxides (q.v.) which liberate oxygen with acids. **acid-** A compound of the type $(RCO)_2O_2$. **p. of hydrogen.** Hydrogen peroxide.

peroxy- A prefix indicating an acid or its salt derived by substitution from hydrogen peroxide.

peroxydisulfuric acid. Persulfuric acid.

peroxydol. Sodium perborate.

perparaldehyde. $C_6H_{12}O_4$ = 148.1.

A thin oil, m.9°C, b.$_{12mm}$45, insoluble in water, soluble in organic solvents.

perpetuum mobile. Perpetual motion. A device that is supposed to run without power.

perphosphoric acid. $H_4P_2O_8$ = 194.03. A crystalline solid.

perrhenate. A compound of the type $MReO_4$; colorless, and except those of Ag, Tl, K, Rb and Cs, soluble in water.

perrhenic acid. $HReO_4$ = 251.32. A colorless, stable powder.

Perrin Jean. –1942. A French chemist and physicist noted for his researches in colloidal chemistry and atomic structure. **P. equation.** A mathematical equation which connects the gas laws with the distribution of particles in a colloidal system, such as an emulsion or suspension:

$$\frac{4}{3}\pi r^3 g\,(D - d)h = \frac{RT}{N}\ln\frac{n_1}{n_2}$$

where r is the radius of the particles, D their density and d the density of the medium; g, gravitational acceleration; n_1 and n_2 the number of particles per unit volume in two layers of liquid which are a distance, h, apart; N, Avogadro's number; R the gas constant; and T, the absolute temperature.

perry. A fermented beverage made from pear juice, analogous to cider from apple juice.

persalt. A salt having the highest valence number of an acid-forming element; as, perchromate, permanganate, perchlorate.

perseite. Perseitol.

perseitol. $C_7H_{16}O_7$ = 212.2. Perseite. A heptavalent alcohol, $CH_2OH(CHOH)_5CH_2OH$, from the leaves and fruits of *Laurus persea*, Lauraceae, a tropical tree. Colorless needles, m.188, slightly soluble in water or alcohol. It occurs as l- and d- optically active compounds.

perseulose. $C_7H_{14}O_7$ = 210.11. A keto-heptose, m.110, produced by sorbose bacteria from perseitol.

Pershbecker furnace. A rotating furnace, heated by wood, for roasting mercury ores.

Persian red. Indian red.

persilicic. An acid or acidic rock that contains more than 60 % of silica.

persimmon. The fruit-bearing trees *Diospyros virginiana* of North America and *D. kaki* of China and Japan (Ebenaceae).

persio. Orchil.

personal equation. The differences in reading scientific measuring instruments or in the findings of chemical operations, that are due to temperamental or other inherent qualities or habits of the observers.

persorption. The intimate and almost molecular mixture of a gas and solid due to absorption; *e.g.*, nitrogen on charcoal. Cf. *sorption.*

Persoz, Jean François. 1805–1868. A French technical chemist and noted author. **P.'s solution.** A solution of basic zinc chloride (10 gm $ZnCl_2$, 10 cc. H_2O, 2 gm ZnO) able to dissolve silk but not wool.

perspex. Trade name for a transparent polymerised methyl acrylate plastic, n_D.1.4949–1.4986.

perstoff. Diphosgene.

persulfate. A salt derived from persulfuric acid, which contains the $=S_2O_8$ radical; made by the electrolysis of sulfate solutions:

$$Na_2SO_4 + SO_4^{--} = Na_2S_2O_8 + 2(-).$$

persulfide. A sulfide that contains more sulfur than is required by the normal valency of the element; as, Na_2S_2.

persulfuric acid. $H_2S_2O_8$ = 194.14. An acid obtained by electrolyzing sulfuric acid, $(HO.SO_2.O)_2$. It occurs in lead accumulators, and is a strong oxidizing agent.

perthio. The divalent radical =S=S.

perthiocarbonates. Salts of the type Na_2CS_4 formed from a solution of carbon disulfide in alkali disulfides.

pertusarene. $C_{60}H_{100}$ = 820.78. A solid hydrocarbon from the lichen, *Pertusaria communis.*

Peru apple. Stramonium. **P. balsam.** Indian balsam. A reddish brown balsam from *Myroxylon (Toluifera) pereirae*, a Leguminosae of tropical America; used medicinally and contains 60 % cinnamein.

peruol. Benzyl benzoate.

peruscabin. Benzyl benzoate.

peruvian balsam. Peru balsam. **p. bark.** Cinchona.

peruvin. Cinnamic alcohol.

peruviol. Nerolidol.

pervaporation. The evaporation of a liquid through a dialyzing membrane, such as collodion or parchment.

pervesterol. A sterol (q.v.) isolated from the fat of algae.

pervious. Allowing the passage of fluids. Permeable; passable.

pervitine. Desoxyephedrine (q.v.).

perylene. $C_{20}H_{12}$ = 252.2. The pentacyclic hydrocarbon $C_{10}H_6{=}C_{10}H_6$, $\alpha\alpha\alpha'\alpha'$-dinaphthylene; m.274.

peryllartine. $C_{10}H_{15}ON$ = 165.1. Perillaldehyde-α-antialdoxime, $C_6H_8.CMe.CH_2.CHNOH$. A compound which is 2000 times sweeter than sugar. Cf. *perillaldehyde.*

pestle. A blunt, rounded instrument, for pounding drugs or chemicals in a mortar or ores in a stamp mill.

petalite. $LiAl(Si_2O_5)_2$. A native lithium aluminum silicate.

petalon. The hypothetical disk-shaped nucleus of helium.

pethidine. The ethyl-hydrochloride of 1-methyl-4-phenyl piperidine-4-carboxylic acid. An aspirin substitute.

Petit, Alexis Therese. 1791–1820. A French physicist, noted as an investigator of specific heats. Cf. *Dulong-Petit law.*

petitgrain oil. An essential oil distilled from the leaves and fruits of *Citrus bigardia.* A yellowish liquid resembling neroli oil, d.0.887–0.90; insoluble in water, soluble in alcohol or ether. Used in perfumery to adulterate neroli oil; contains linalool, limonene and esters. **p. citronier oil.** The essential oil from the unripe fruits of *Citrus medica*, d.0.869–0.878; it contains citral, and esters of linalool.

Petri dish. A flat, shallow, circular glass dish, used for bacterial cultures.

petrifaction. Mineralisation, silification. The process of changing organic matter into stone or stone-like substances by the gradual infiltration and replacement of the tissues by mineral matter.

petrified wood. Fossil wood that has been gradually changed into stone by the slow infiltration of silica, the minutest details of its organic structure being preserved.

petrify. To convert into stone.

Petroff reagent. A sulfonic-acid of non-paraffinic hydrocarbons. A by-product obtained in the refining of petroleum oils with fuming H_2SO_4; used as a catalyst in the manufacture of fats by Twitchell's method.

petrographical. Pertaining to the description of rocks and stones.

petrography. The branch of science that deals with rocks and stones as aggregates of minerals, and their chemical and physical examination and description. Cf. *petrology*.

petrohol. Isopropyl alcohol synthesized by hydration of propylene from petroleum cracking stills.

petrol. (1) Motor spirit or gasoline. The fraction of crude petroleum distilling between 40–150°C. It consists chiefly of C_6H_{14}, C_7H_{16}, and C_8H_{18}. (2) Petroleum ether.

petrolate. A general term for products derived from petroleum, q.v.

petrolatum. Petroleum jelly, vaselin, paraffin ointment, cosmolin, fossolin, adeps mineralis, yellow petrolatum. A purified mixture of semi-solid hydrocarbons obtained from petroleum as a yellow jelly-like mass, d.0.82–0.85, m.34–54, soluble in alcohol, ether, or chloroform. Used externally as an ointment base, for lubricating, for cleaning compounds, greasing materials, rust prevention and leather dressing. **liquid-** A colorless, non-fluorescent, odorless, and tasteless mixture of liquid hydrocarbons from petroleum, d.0.88–0.89. Used medicinally under various trade-names as an internal lubricant. **yellow-** Petrolatum. **white-** Albolene. A decolorized petrolatum used as an ointment base.

p. album. Petrolatum, white. **p. jelly.** Petrolatum. **p. liquidum.** Liquid p.

petrolene. (1) Asphalt. (2) Malthene. Those oily or soft constituents of bitumen which are soluble in petroleum spirit.

petroleum. (1) Mineral oil, rock oil, coal oil, earth oil, seneca oil, crude oil, naphtha. A native mixture of a solution of gaseous, liquid and solid hydrocarbons, forming a thick, brown or yellow oil, obtained from wells, springs, and lakes, d.0.78–0.97 (extreme limits 0.65–1.07); insoluble in water, soluble in alcohol, ether, or chloroform. (2) The fraction of crude petroleum distilling at 150–300°C. **p. asphalt.** The residues from Trinidad petroleum. **p. coke.** The residue from the distillation of petroleum; used in metallurgical processes, in carbon pencils, and in making dry batteries. It may contain vaselin or paraffin wax. **p. ether.** See *petroleum fractions*. **p. fractions.** The products obtained by the fractional distillation of petroleum:

B.P.	*Composition*
0°C, cymogen	C_4H_{10}
18–21°C, rhigolene	C_4H_{10}; C_5H_{12}
40–60°C, petroleum ether	C_5H_{12}—C_6H_{14}
60–200°C, gasolene	C_6H_{14}—$C_{10}H_{22}$
70–90°C, naphtha	C_6H_{14}—C_7H_{16}
90–120°C, ligroin	C_7H_{16}—C_8H_{18}
120–150°C, benzine	C_8H_{18}—C_9H_{20}
150–300°C, kerosene, coal oil, photogene	C_9H_{20}—$C_{16}H_{34}$
over 300°C, lubricating oils:	
light	C_{12} to C_{20}
medium	C_{16} to C_{22}
heavy	C_{18} to C_{24}
300°C, paraffin oil, liquid petrolatum, albolene, stanolax, nujol, etc.	C_{10} to C_{18}
M.P.	
38–50°C, vaselin, petrolatum, petroleum jelly	C_{20} to C_{22}
45–65°C, paraffin, parowax, cerolene	C_{23} to C_{25}
50–80°C, paraffin wax	C_{27} to C_{30}

In practice, however, the various fractions or "cuts" are:

(1) below 200°F. at 1 atm., gasolene or naphtha	2–80 %
(2) from 200–275°F. at 1 atm., kerosene or coal oil	3–25 %
(3) all vacuum fractions to 40 mm., gas oil (η below 50 sec.)	7–50 %
(4) light lubricating oil (η = 50–99)	2–15 %
(5) medium lubricating oil (η = 100–199)	3–20 %
(6) viscous lubricating oil (η exceeds 199)	0–22 %

where η is the Saybolt viscosity in seconds. **p. furnace.** An oil burner. **p. jelly.** Petrolatum. **p. naphtha.** Benzine. **p. ointment.** Petrolatum. **p. pitch.** Asphalt. **p. refining.** The industrial processes concerned with the separation of the many constituents of petroleum, including cracking, decolorizing, distilling, filtering, and skimming of the various products. **p. spirit.** Ligroin.

PETROLEUM

(Approximate typical composition)

A. Paraffin base: mainly C_nH_{2n+2} (from C_4H_{10} to $C_{35}H_{72}$); small amounts of C_nH_{2n} ($C_{31}H_{62}$ to $C_{26}H_{52}$) and C_nH_{2-x}. Sulfur occurs as thiophanes, $C_nH_{2n}S$.

	%C	%H	%N	%O	%S
Pennsylvania[1]	85	14	0.05	1.4	1.0
Midcontinent[6]	84	13	0.8	0.04	0.8

[1] rich in paraffins; [2] rich in olefines; [3] rich in asphalts; [4] rich in naphthenes; [5] rich in aromatic hydrocarbons; [6] contains both, paraffins and naphthenes.

amounts of C_nH_{2n-x}, where x is 2, 4, 6, 8, etc. up to 20; also some aromatic hydrocarbons, little or no C_nH_{n-2}.

The World output in 1940 was 278 million tons, chiefly from U. S. > Venezuela > Russia > Roumania > Iraq > Dutch East Indies > Mexico.

petroline. A paraffin obtained by distillation of Indian petroleum.

petrology. Lithology. A branch of science that deals with the origin, (petrogeny) structure, and composition (petrography) of rocks and stones.

petromortis. Garage poison.

petroselic acid. Petroselinic acid.

petroselinic acid. $C_{18}H_{34}O_2$ = 282.37. ϵ-Octadecenic acid, $Me(CH_2)_{10}CH:CH(CH_2)_4COOH$. An unsaturated fatty acid and isomer of oleic acid, in parsley seeds.

petroselinum. (1) Parsley. The dried herb of *Petroselinum sativum*, an umbelliferous plant; used medicinally and in cooking. (2) Parsley seeds, q.v.

petrosilane. $C_{20}H_{42}$ = 282.5. A saturated hydrocarbon, m.69, in the unsaponifiable matter of parsley oil.

petrosilex. Chert. A hard siliceous rock or flint stone; used for grinding pottery materials.

petrous. Hard or stone-like.

petrox. Petroxolin.

petroxolin. Petroxolinum liquidum, liquid petrox, petrolatum saponatum liquidum. A paraffin oil that has been saponified with ammonium oleate. A yellowish-brown liquid, insoluble in water; miscible with alcohol, ether, or chloroform; used medicinally in external preparations.

Pettenkofer, Max von. 1818–1901. A German chemist, noted for his research in medical chemistry and hygiene. **P. test.** (1) A test for bile acids in urine made by dropping the material into a mixture of sugar and sulfuric acid. A crimson color indicates the presence of bile acids. (2) The determination of carbon dioxide in air by absorption in a known volume of standard baryta solution, and titration of the excess with alkali.

petzite. A native silver and gold telluride, $(Ag, Au)_2Te$.

peucedanin. $C_{16}H_{16}O_4$ = 272.1. Imperatorin. A principle derived from the root of *Peucedanum officinale*, an umbelliferous plant (hog fennel); used medicinally as a diuretic.

pewter. An alloy 83–75 % tin and 0–20 % lead; with 0–7 % antimony and 0–4 % copper, that was used extensively for household utensils; it contains no lead.

P.F. Abbreviation for phenol-formaldehyde plastic.

Pfeilring reagent. A fat-splitting catalyst made by the action of sulfuric acid on aromatic hydrocarbons and castor oil. Cf. *Twitchell.*

Pfeufer's green. A bluish-green dye obtained from the fungus, *Chlorospenium aeruginosum*, by extraction with chloroform.

pfund. German for pound.

pH, p_H. The symbol for the logarithm of the reciprocal of the hydrogen ion concentration: $pH = \log 1/C_{H^+}$.

Ph. Abbreviation for phenyl, C_6H_5—.

Ph.B. Abbreviation for British Pharmacopoeia. (B.P.)

Ph.C. Abbreviation for Pharmaceutical Chemist.

Ph.D. Abbreviation for Doctor of Philosophy.

Ph.G. Abbreviation for Graduate of Pharmacy.

phacolite. Chabazite.

phacometer. An instrument used for measuring the refractive index of a lens.

phaeo-, phæo-. See *pheo-*.

phagocytes. The cells of an organism which envelop and digest any invading microorganism or harmful cells; two types: **fixed-** those located in the connective tissue (endothelial cells); and **motile-** those that move in the blood and lymph (leukocytes).

phagocytolysis. The destruction of phagocytes by bacteria or other microorganisms.

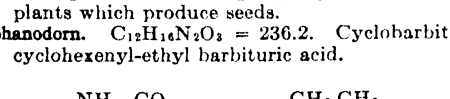
phagocytosis. The destruction of microorganisms, as bacteria or protozoa, by the phagocytes or scavengers of the body. Cf. *Metshnikoff.*

phagolysis. The destruction or dissolution of phagocytes.

phallin. A toxic protein from *Amanita phalloides*, a poisonous mushroom; it causes hemolysis.

phanerogamia. The large group of flowering plants which produce seeds.

phanodorm. $C_{12}H_{16}N_2O_3$ = 236.2. Cyclobarbital, cyclohexenyl-ethyl barbituric acid.



A white crystalline powder, m.171–174, slightly soluble in water, soluble in alcohol; used as a hypnotic.

Phar. D. Abbreviation for Doctor of Pharmacy.

Phar. M. Abbreviation for Master of Pharmacy.

pharaoh's serpents. A stick of mercuric thiocyanate, q.v. When ignited it glows and swells to a voluminous ash that resembles a moving worm or serpent, during its formation. It liberates N_2, CS_2 and Hg-vapor and leaves a gray residue of *mellon*, q.v.

pharmaceutic. Pertaining to drugs. **p. chemistry.** The analysis of drugs, microscopically and chemically; and the isolation of their active constituents.

pharmacist. An apothecary or druggist.

pharmacodynamics. A branch of science that deals with the effects of drugs on living organisms.

pharmacognosy. A branch of science that deals with the identification, physical properties and quality of crude drugs.

pharmacolite. A native calcium arsenate, $CaHAsO_4.2H_2O$.

pharmacologist. One who studies drugs and their effects on living organisms.

pharmacology. That branch of science dealing with drugs, their origin and composition (*pharmacy*), identification (*pharmacognosy*), and effects on living organisms (*pharmacodynamics*).

pharmacopeia, pharmacopœia. Lists of drugs and chemicals issued by the governments of many countries. It contains a description of each drug, its composition, tests for identification and purity, and its medicinal doses. Substances listed are called "official" or "officinal," and must have the specified degree of purity if intended for medical use.

Ph. Arg. = Farmacopoeia Nacional Argentina.
Ph. Austr. = Pharmacopoeia Austriaca.
Ph. Belg. = Pharmacopoeia Belgica.
Ph. Brit. = British Pharmacopoeia. B.P.
Ph. Chil. = Farmacopea Chilena.
Ph. Dan. = Pharmacopoeia Danica.
Ph. Españ. = Farmacopea official Española.
Ph. Fenn. = Pharmacopoeia Fennica.

Ph. Fr. = Codex Medicamentarius Gallicus.
Ph. Germ. = Deutsches Arzneibuch. D.A.
Ph. Graec. = Pharmacopoeia Graeca.
Ph. Helv. = Pharmacopoeia Helvetica.
Ph. Hisp. = Farmacopoeia official Española.
Ph. Hung. = Pharmacopoeia Hungaria.
Ph. Ital. = Farmacopoeia ufficiale del regno d'Italia.
Ph. Japon. = Pharmacopoeia Japonica.
Ph. Mex. = Nueva Farmacopoeia Mexicana.
Ph. Ndl. = Pharmacopoeia Nederlandica.
Ph. Norw. = Pharmacopoeia Norvegica.
Ph. Pol. = Polish Pharmacopoeia.
Ph. Port. = Pharmacopoeia Portuguezá.
Ph. Rom. = Pharmacopoeia Romana.
Ph. Ross. = Pharmacopoeia Rossica.
Ph. Serv. = Pharmacopoeia Servica.
Ph. Svec. = Svenska Farmacopen.
Ph. Ven. = Pharmacopoeia Venezolana.
U.S.P. = United States Pharmacopoeia.

In addition to these official lists there are in use:
N.F. = National Formulary (U. S. A.).
N.N.R. = New and Non-official remedies, (American Medical Association).
B.P.C. = British Pharmaceutical Codex.
E.P. = The Extra Pharmacopoeia (British).

The pharmacopoeias in use in different countries besides those mentioned above are:
Brazil = Ph.Fr., Ph.Port. and Ph.Hisp.
Central America = Ph.Fr., Ph.Hisp., and Ph. Mex.
China = Native druggists use the old encyclopedia, Pen-tsao-kang-mu; and foreign druggists their home-country pharmacopoeia.
Cuba = Ph.Fr., U.S.P.
Peru = Ph.Fr., U.S.P., and Ph.Hisp.
Turkey = Ph.Fr., and Ph.Germ.

Cf. *dispensatory, formulary.*

pharmacophore. An organic radical supposed to be the active group of a drug and to combine with a group of the protoplasm. (See *glucophore, osmophore, chromophore.*)

pharmacosiderite. A native arsenate of iron.

pharmacotherapy. The treatment of diseases with drugs.

pharmacy. The art of preparing drugs for medicinal use.

phase. (1) A solid, liquid or gaseous homogeneous substance, that exists as a distinct and mechanically-separate portion in a heterogeneous system; hence, any homogeneous parts of a system that are separated from one another by definite physical boundaries:

gaseous mixture	single phase
liquid solution	single phase
solid solution	single phase
two immiscible liquids	two phases
each solid	one phase.

Cf. *colloid, zones, micelle.* (2) The succession of electrical impulses of an alternating current. (3) A stage in the growth of microorganisms. (4) A subdivision of the changes occurring in protoplasm during karyokinesis, q.v. **activatory-** The active stage or the rapid growth of an organism, especially bacteria. **continuous-** External or enclosing phase. The surrounding or dispersion medium in a heterogeneous mixture. (See *colloids.*) **discontinuous-** Dispersed. **dispersed-** Internal or enclosed phase. The solute or insoluble part of a colloidal solution, as distinct from the solvent. **dispersion-** Continuous-. **enclosed-** The discontinuous or separated medium in a heterogeneous mixture. **enclosing-** Continuous-. **inhibitory-** The passive stage or slow growth of an organism. **oriented-** A misnomer for zone, q.v. **suspended-** Enclosed p.

p. converter. A device for changing the phases of an alternating electric current. **p. reversal.** The change of the components of an emulsion; thus, an emulsion of oil in water, under certain conditions, may be converted into an emulsion of water in oil. **p. rule.** Gibbs phase-rule. A mathematical generalization of the relations existing between systems in equilibrium: $P + V = C + 2$. The sum of the number of phases, P, and the variance or degrees of freedom, V, is equal to the number of components, C, plus 2. From this it follows that the degree of variability or of freedom (the variance) is $V = C + 2 - P$. The possibilities are:

V is 0 = nonvariant (a *point* on a diagram)
s ⇆ l ⇆ g
V is 1 = monovariant (a *line* on a diagram)
s ⇆ l; l ⇆ g or s ⇆ g.
V is 2 = divariant (an *area* on a diagram)
s alone; l alone or g alone.

Thus, for water:

liquid ⇆ vapor	C = 1, P = 2, and V = 1.
solid ⇆ vapor	C = 1, P = 2, and V = 1.
solid ⇆ liquid	C = 1, P = 2, and V = 1.
solid⇆liquid⇆vapor	C = 1, P = 3, and V = 0.
salt(dissolved)⇆salt (solid)	C = 2, P = 2, V = 2.

phaselin. An enzyme derived from the bean of *Dilkas mexicana*, resembling papain in action.

phaseolin. The chief protein of the navy bean, *Phaseolus vulgaris.*

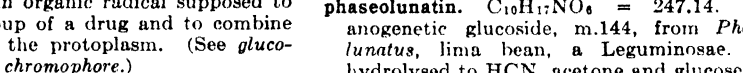
phaseoline. An alkaloid obtained from string beans, *Phaseolus vulgaris.*

phaseolunatin. $C_{10}H_{17}NO_6$ = 247.14. A cyanogenetic glucoside, m.144, from *Phaseolus lunatus*, lima bean, a Leguminosae. It is hydrolysed to HCN, acetone and glucose.

phaseomannite. Inositol.

phasine. A group of vegetable proteins derived from seeds, that agglutinate the red blood corpuscles.

phasotropy. A form of dynamic isomerism in which the hydrogen atom of azoamino compounds, amidines, and formazyl derivatives oscillates from one nitrogen to the other:



phellandrene. $C_{10}H_{16}$ = 136.1. $\Delta^{1,5}$-*p*-menthadiene, 1(7).2-p-menthadiene, *3*-iso-propyl-*6*-methylene cyclohexene. A terpene from the seeds of *Phellandrium aquitanium* (water fennel) an Umbelliferae, and a constituent of certain eucalyptus oils, elemi oil, and the oil of water hemlock. A colorless liquid, optically active, b.176.

phellonic acid. $C_{22}H_{42}O_3$ = 354.3. A constituent of cork.

phemerol. The *p-tert*-octylphenoxyethoxyethyl-dimethylbenzyl-ammonium chloride, a cationic detergent and antiseptic.

phemitone. Mebaral, mephobarbital, prominal. N-methyl-5-phenyl-5-ethylbarbituric acid; used in the treatment of epilepsy.

phen- (1) A prefix derived from "phenol" and indicating a derivation from benzene. (2) A suffix. See *-fen.*

phenacaine. Holocaine.

phenacetein. Phenacetolin.

phenacethydrazine. Pyrodin.

phenacetin. The British term for acetophenetide, q.v. **methyl-** $C_{11}H_{15}O_2N$ = 193.1. Colorless crystals, soluble in alcohol or ether; used medicinally as an antipyretic. **p. urethane.** Thermodin. Cf. *phenocoll, phesin.*

phenacetol. Phenoxy acetone.

phenacetolin. $C_{16}H_{12}O_2$ = 236.1. Phenacetein. A red powder, used as an indicator in acidimetry; yellow with acids, red with alkalis.

phenacite. Be_2SiO_4. A native silicate of beryllium, sometimes used as a gem.

phenacyl. The monovalent radical, $PhCOCH_2$—. **p. alcohol.** See *hydroxyacetophenone.* **p. bromide.** $PhCOCH_2Br$. A white powder, used as a reagent for hydroxy compounds.

phenacylidene. The divalent radical, PhCOCH=.

phenacylidin. $C_{15}H_{15}O_2N$ = 241.2. C_6H_4-(OMe)NH.CH_2COPh. A colorless powder, insoluble in water; used as an antipyretic in veterinary medicine.

phenakitiscope. An early name for the cinematograph.

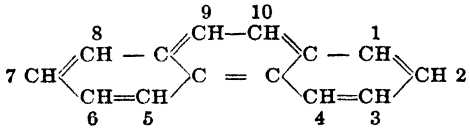
phenalgin. $C_6H_8NH_3$ = 94.1. Ammoniophenylacetanilide. Colorless crystals, soluble in alcohol; used medicinally as an antipyretic.

phenamine. Phenocoll.

phenanthrahydroquinone. (9:10)$C_{14}H_8(OH)_2$ = 210.15. *9.10*-Dihydrophenanthrene. A solid, soluble in alcohol, ether or water, m.146.

phenanthraquinone. Phenanthrenequinone.

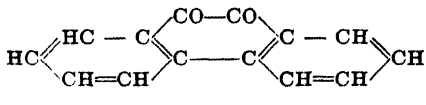
phenanthrene. $C_{14}H_{10}$ = 178.1. Phenanthrine. An isomer of anthracene obtained from coal tar:



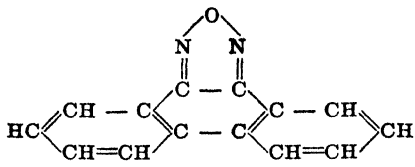
Colorless, shining scales or leaflets, d.1.063, m.99, b.340, insoluble in water, soluble in alcohol or ether; used in the synthesis of dyes and drugs. **benzo-** Chrysene. **dihydroxy-** Phenanthrahydroquinone. **hydroxy-** Phenanthrol. **methyl-*i*-propyl-** Retene. **tetrahydro-** Tetranthrene.

p. dione. Phenanthrenequinone. **p. hydroquinone.** Phenanthrenequinone.

phenanthrenequinone. $C_{14}H_8O_2$ = 208.1. Phenanthrene hydroquinone, phenanthraquinone, dioxyphenanthrene. An oxidation-product of phenanthrene. Orange yellow needles, m.205, insoluble in water, but soluble in alcohol, ether, or chloroform.



p. monoxime. $C_{14}H_9O_2N$ = 223.1. A compound derived from phenanthrenequinone by the replacement of one =CO group by =C=N.OH. Colorless crystals, m.158; used in organic synthesis. **p. dioxime.** $C_{14}H_{10}O_2N_2$ = 238.2. A compound derived from phenanthraquinone by the replacement of the two =C=O groups by two =C=N.OH radicals. **p. dioxime anhydride.** $C_{14}H_8ON_2$ = 220.1. A furazane derivative

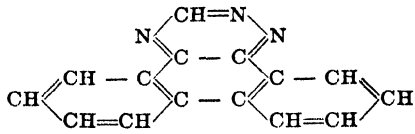


Colorless crystals, m.181.

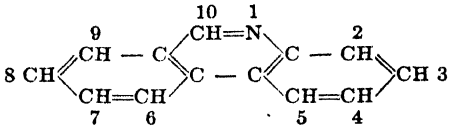
phenanthrenol. Phenanthrol.

phenanthrenone. Phenanthrone.

phenanthriazine. $C_{15}H_9N_3$ = 231.2. The hetero cyclic compound,

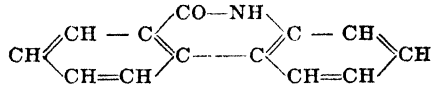


phenanthridine. $C_{13}H_9N$ = 179.1. The heterocycle compound, 3.4-benzoquinoline.



Colorless crystals, m.104, b.365; soluble in alcohol. The derivatives are sometimes designated as: 1 = n (nitrogen), 2 = α, 3 = β, 4 = γ, 5 = δ, 6 = δ', 7 = γ', 8 = β', 9 = α', 10 = μ (meso). **dihydroketo-** Phenanthridone.

phenanthridone. $C_{13}H_9ON$ = 195.07. The heterocyclic compound, dihydroketophenanthridine,



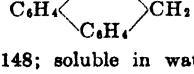
Colorless crystals, m.293; soluble in alcohol; used in organic synthesis.

phenanthrine. Phenanthrene.

phenanthrol. $C_{14}H_9OH$ = 194.1. Hydroxyphenanthrene. Colorless crystals, m.112, slightly soluble in water, soluble in alcohol or ether; used in organic synthesis.

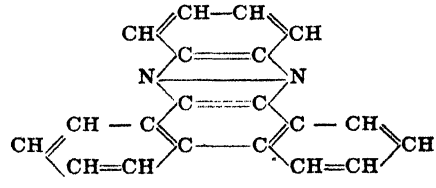
phenanthrolines. $C_{12}H_8N_2$ = 180.2. A series of heterocyclic compounds derived from phenanthrene by substituting two nitrogen atoms for two CH groups in the ring. **ortho-** or *1.10*-compound. Used as an oxidation-reduction indicator. **meta-** or pseudo- or *2,9*-compound. **iso-** or para- or *3,8*-compound.

phenanthrone. $C_{14}H_{10}O$ = 194.15.



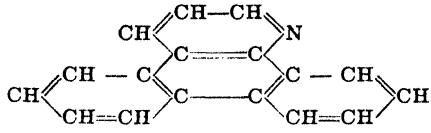
A solid, m.148; soluble in water, alcohol or ether.

phenanthrophenazine. $C_{20}H_{12}N_2$ = 280.10. The heterocyclic compound $\alpha\gamma$-dibenzophenazine, phenophenanthrazine,

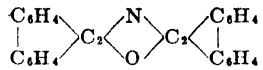


Colorless crystals, m.217, soluble in alcohol; used in organic synthesis.

phenanthroquinoline. $C_{17}H_{11}N$ = 229.1. Dibenzoquinoline. The heterocyclic compound,



phenanthroxazine. $C_{28}H_{16}ON$ = 382.1. The heterocyclic compound,

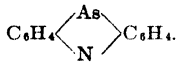


phenanthryl. Describing a group of five isomeric radicals, $C_{14}H_9$—, derived from phenanthrene.

phenanthrylene. The bivalent radical, $C_{14}H_8$—, derived from phenanthrene.

phenaphthacridone. Phenonaphthacridone.

phenarsazine. $C_{12}H_8AsN$ = 240.92. The heterocyclic compound



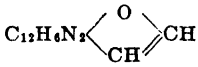
phenarsen. Dichlorophenarsine hydrochloride (q.v.).

phenate. Phenoxide, carbolate. A derivative of phenol of the type, C_6H_5OM, in which M is a monovalent metal; as, sodium, potassium.

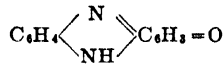
phenazine. $C_{12}H_8N_2$ = 180.1. Dibenzoparadiazine, azophenylen, *5.6*-naphthodiazine.

Yellow needles, m.170, b.360, soluble in water, alcohol, or ether; used in organic synthesis and in the manufacture of dyes. **benzo-** See *benzophenazine.* **dibenzo-** Phenanthrophenazine. **dibenzyl-** See *dibenzophenazine.* **naphtho-** Benzophenazine. **phenanthro-** See *phenanthrophenazine.*

phenazinfurane. $C_{14}H_8ON_2$ = 220.2. The heterocyclic compound derived from phenazine,



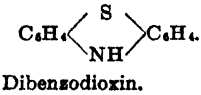
phenazone. (1) $C_{13}H_8N_2O$ = 196.2. The heterocyclic compound,



Light-green, prismatic crystals, m.156, b.360; soluble in alcohol or ether. (2) The name for antipyrine in the British Pharmacopeia.

phenazonium. Derivatives of phenazone in which one of the nitrogen atoms is pentavalent. Cf. *flavinduline.*

phenazothionium. $C_{12}H_9NS$ = 199.1. The heterocyclic compound.



phendioxin. Dibenzodioxin.

phene*. A synonym for the benzene* ring.

phenedin. Phenacetin.

phenegol. $C_{12}H_{10}O_{12}N_2S_2HgK_2$. Mercury potassium nitro-p-phenolsulfate, $Hg(PhONO_2.SO_3K)_2$. A reddish-brown powder, used medicinally as an antiseptic. See *egol.*

phenenyl. The trivalent radical, $C_6H_3\equiv$.

phenethyl. The monovalent $PhCH_2CH_2$— radical. Cf. *phenetyl.* **p. alcohol.** Benzyl carbinol.

phenethylamine. $C_8H_{11}N$ = 121.14. The amine, $PhCH_2CH_2NH_2$. **alpha-** A colorless liquid, d.0.9395, b.182; insoluble in water, alcohol, or ether. **beta-** A colorless liquid, d.0.9580, b.198; soluble in alcohol, ether, or water. Both are used as a local anesthetic and narcotic. **p-hydroxy-** Tyramine. **p-hydroxy-N-dimethyl-** Nordenine.

phenethylbenzylketone. $C_{16}H_{16}O$ = 224.2. $PhCH_2CH_2.CO.CH_2Ph$. A colorless liquid, b. 324; soluble in alcohol or ether.

phenethylene. Styrene.

phenetidine. $C_8H_{11}ON$ = 137.14. Aminoethoxybenzene, ethoxyaniline, amino-phenetole, *p*-aminophenol ethyl ether, $NH_2.C_6H_4OEt$. **ortho-** A colorless liquid, b.228; soluble in water. **meta-** A colorless liquid, b.$_{(100mm)}$ 180; soluble in water. **para-** A colorless solid, m.2.4, b.244; soluble in water. The para-compound is used in the manufacture of phenacetin and other synthetic drugs, *e.g.*, citrophen. **aceto-** Phenacetin. **acetophenone-** Malarin. **N-acetyl-** Phenacetin. **aconityl-** Apolysin. **ethylcarbonate-** Eupyrine. **methoxyacet-** Kryofine. **monocitryl-** Apolysin. **phenylglycol-** Amygdophenin. **propionyl-** Triphenin. **salicyl-** Saliphen. **salicylal-** Malakin. **valeryl-** Valeridin.

p. camphorate. Colorless crystals, used medicinally as a febrifuge. **p. salicylate.** Phenosal. **p. tartrate.** Vinopyrine.

phenetidines. A group of synthetic drugs derived from phenetidine.

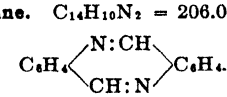
phenetidino. The monovalent radical, $EtOC_6H_4NH$—.

phenetole. $C_8H_{10}O$ = 122.1. Phenylethylether, ethoxybenzene*, Ph.O.Et. A colorless liquid, d.0.892, m.−34, b.172; insoluble in water, soluble in alcohol or ether. **acetamido-, acetylamino-** Phenacetin. **amino-** Phenetidine. **azo-** See *azophenetole.*

phenetyl. Ethoxyphenyl. The monovalent radical, $EtOC_6H_4$—. Cf. *phenyl.* **p. urea.** Sucrol.

phengite. Muscovite.

phenhomazine. $C_{14}H_{10}N_2$ = 206.09.



phenic acid. Phenol. **di-** See *diphenic acid.*

phenicate. (1) Phenate. (2) To sterilize or disinfect with phenol.

phenidine. Phenacetin.

phenil. Phenyl.

phenin. Phenacetin.

phenixin. Carbon tetrachloride.

phenmethyl. The monovalent radical, $PhCH_2$—.

phenmethyltriazine. $C_8H_7N_3$ = 145.2. The heterocyclic compound, 
Colorless crystals, m.89, b.252; soluble in alcohol or ether.

phenmiazin. Quinazoline.

phenobarbital. Luminal.

phenobarbitone. Luminal.

phenocoll. $C_{10}H_{14}O_2N_2$ = 194.12. Phenamine, amidoaceto-p-phenetidine, aminoacetyl-p-phe-

netidine, **glycocoll-p-phenetidine**, $C_6H_4(OEt)$-$NH.CO.CH_2NH_2$. Colorless needles, m.100, slightly soluble in water, soluble in alcohol or ether; used medicinally as an antipyretic. **p. salicylate.** Salocoll.

phenodin. Hematin.

phenoiazine. alpha- Cinnoline. **beta-** Phthalazine.

phenol. (1) See also *phenols*. (2) C_6H_6O = 94.1. Carbolic acid, hydroxybenzene, phenylhydroxide, PhOH, phenic acid, phenylic acid, phenylic alcohol. Colorless needles, d.1.072, m.42, b.182; slightly soluble in water, soluble in alcohol, ether, or glycerol. Used extensively as an antiseptic and disinfectant, and in the manufacture of many dyes and synthetic drugs, plastics and insulating materials. **acetamino-** q.v. **aceto-** Hydroxyacetophenone. **allyl-** Chavicol. **allylmethoxy-** Eugenol. **amino-** See *aminophenols*. **aminodinitro-** Picramic acid. **aminoethyl-** Tyramine. **amyl-** See *amylphenol*. **arsenobis-** Arsenophenol. **benzoylamino-** Hydroxy*benzanilide*. **betel-** Chavicol. **bromo-** See *bromphenols*. **chloro-** A halogenated derivative of phenol. There are many isomers; as,

Chlorophenic acid, $HO.C_6H_4.Cl$	
o-monochlorophenol	m.7, b.173.
m-monochlorophenol	m.33, b.214.
p-monochlorophenol	m.37, b.217.
Chlorophenesic acid, $HO.C_6H_3.Cl_2$	
2.3-dichlorophenol	m.57
2.4-dichlorophenol	m.45, b.210.
2.5-dichlorophenol	m.58, b.212.
2.6-dichlorophenol	m.67, b.220.
3.4-dichlorophenol	m.68, b.253.
3.5-dichlorophenol	m.68, b.233.
Chlorophenisic acid, $HO.C_6H_2.Cl_3$	
2.3.5-trichlorophenol	m.53, b.253.
2.4.6-trichlorophenol	m.68, b.244.
Chlorophenosic acid, $HO.C_6H.Cl_4$	
2.3.4.6-tetrachlorophenol	m.69, $b._{23mm}$164.
2.3.5.6-tetrachlorophenol	m.65.
Chlorophenasic acid, $HO.C_6Cl_5$	
pentachlorophenol	m.188, b.310.

diamino- See *aminophenols*. **dichloro-** See *chloro-*. **dimethyl-** Xylenol. **dimethylaminoethyl-** Hordenine. **dinitro-** Dinitrophenol. **ethyl-** Phlorol. **hexahydro-** Cyclohexanol. **hydroxy-** Dihydroxy*benzene*. **iodo-** See *iodophenol*. **iodized-** A mixture of 20 % iodine, 60 % phenol, and 20 % glycerol, used as an antiseptic. **iodo-** A group of iodized derivatives; as

Iodophenic acid, $HO.C_6H_4.I$	
o-monoiodophenol	d.1.876, m.40.4, $b._{160mm}$187.
m-monoiodophenol	m.40.
p-monoiodophenol	m.94.
Iodophenesic acid, $HO.C_6H_3.I_2$	
2.4-diiodophenol	m.72, b.100.
2.6-diiodophenol	m.68.
3.4-diiodophenol	m.83.
3.5-diiodophenol	m.104.
Iodophenisic acid, $HO.C_6H_2I_3$	
2.4.6-triiodophenol	m.156.

isopropylmethyl- Thymol. **liquefied-** Liquefied carbolic acid. Phenol kept liquid at ordinary temperature by the addition of 13 parts distilled water. **methenylamido-** Benzoxazole. **methoxy-** Guaiacol. **methoxymethyl-** Creosol. **methyl-** Cresol. **methylallyl-** Anethol. **methyl-p-amino-** Metol. **monobrom-** C_6H_4BrOH = 173.1. A brown, oily liquid used as an antiseptic. **monochlor-** C_6H_4ClOH = 128.6. A colorless liquid, used as an antiseptic. **nitro-** See *nitrophenol*. **nitroso-** Quinone monoxime. **propenyl-p.** Anol. **propyl-** Thymol. **seleno-** Selenophenol. **sulfo-** Aseptol. **tetrahydro-** Cyclohexanol. **thio-** See *thio-*. **triamino-** See *aminophenols*. **trichloro-** See *chloro-*. **trimethyl-** (2.3.5-) Isopseudocuminol. (2.4.6-) Mesitol. **trinitro-** Picric acid. **vinyl-enebis-** Stilbenediol.

p. acids. A group of organic compounds that contain both, a hydroxy group attached to a ring, and a carboxyl group:

Monobasic phenol acids.	
hydroxybenzoic acids, salicylic acid	$HO.C_6H_4.COOH$
hydroxytoluic acids	$HO.C_6H_3Me.COOH$
hydroxyphenylacetic acid	$HO.C_6H_4.CH_2.COOH$
hydroxymesitylinic acids	$HO.C_6H_2Me_2.COOH$
hydroxyphenylpropionic acid	$HO.C_6H_4.CH_2CH_2COOH$
dihydroxybenzoic acid	$(HO)_2C_6H_3.COOH$
dihydroxytoluic acids	$(HO)_2.C_6H_2Me.COOH$
dihydroxyphenylacetic acid	$(HO)_2.C_6H_3.CH_2COOH$
trihydroxybenzoic acid, gallic acid	$(HO)_3.C_6H_2.COOH$
Dibasic phenol acids.	
hydroxyphthalic acids	$HO.C_6H_3(COOH)_2$
hydroxyuvitic acids	$HO.C_6H_2Me(COOH)_2$
dihydroxyphthalic acids	$(HO)_2C_6H_2(COOH)_2$

p. bismuth. Bismuth carbolate. **p. blue.** $C_{14}H_{14}N_2O$ = 226.13. Dimethyl amino phenylimide. A blue dye, used as an indicator. **p. camphor.** A mixture of phenol and camphor, used as a germicide. **p. coefficient.** The antiseptic power of a substance compared with phenol as unity; *e.g.*, a disinfectant three times as active as phenol has a phenol coefficient of three. (Cf. *Rideal-Walker test*.) **p. derivatives.** See *phenols*. **p. ethers.** A series of compounds of the general type, Ph—O—R. **p. phthalein.** Phenolphthalein. **p. red.** Phenolsulfonephthalein. **p. sulfophthalein.** Phenol*sulfonphthalein*. **p. tricarboxylic acid.** $OH.C_6H_2.(COOH)_3$ = 226.09. A solid, decomp. 245.

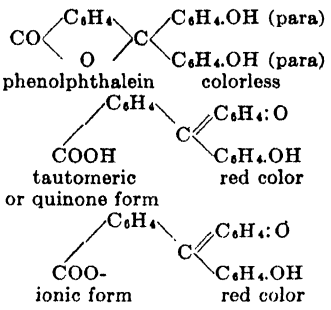
phenolase. An enzyme that oxidizes phenols.

phenolate. (1) To disinfect with phenol, or sterilize a solution by adding phenol. (2) Phenate.

phenolic. Pertaining to phenol.

phenology. The study of bird migrations, with special reference to the influence of climate.

phenolphthalein, phenothalin. $C_{20}H_{14}O_4$ = 318.2. Dihydroxydiphenylphthalide, dioxydiphenylphthalide, p_s-phthalein, phenolax, dioxytriphenylcarbinol carboxylic acid anhydride. White, odorless small triclinic crystals, d.-1.276, m.250, slightly soluble in water, soluble in alcohol or ether, used as an indicator in titrating most acids (colorless with acids, deep red with alkalis); medicinally, as a purgative; and technically, in the synthesis of dyes. The change of color is thought to be due to the formation of a colored ion:



Cf. *phenolphthaline, phthalein, phenolsulfonphthalein, indicators.* **bismuthtetraiodo-** Eudoxine. **mercurytetraiodo-** Apagallin. **sodiumtetraiodo-** Antinosin. **tetrabromo-** An indicator. **tetraiodo-** Nosophen.

phenolphthalide. A compound which contains the Ph.CO.OCR$_2$ group, in which R is an aromatic radical. Compare *fluoran, fluorescein, eosin.*

phenolphthaline. $C_{20}H_{16}O_4$ = 320.23. The water-soluble compound $(C_6H_4OH)_2$:CH.C_6H_4.COOH, m.225, used as a reagent for copper and blood. Cf. *phenolphthalein.*

phenolquinine. Quinine carbolate.

phenols. (1) Arylhydroxides, such as phenol, anethol, phenanthrol and their derivatives, particularly (2) hydroxybenzenes. A group of organic compounds which contains one or more hydroxyl group attached to an aromatic or carbon ring. They may be grouped into:

I. Monoatomic. (Hydroxybenzenes.)
phenol, phenylhydroxide. C_6H_5OH or PhOH
cresols, toluylhydroxide.. $C_6H_4(OH)Me$
xylenols, dimethylhydroxybenzene $C_6H_3(OH)Me_2$
mesitol, trimethylhydroxybenzene $C_6H_2(OH)Me_3$
durenol, tetramethylhydroxybenzene $C_6H(OH)Me_4$
thymol, carvacrol..... $C_6H_3(OH)MePr$
pentamethylphenol..... C_6Me_5OH

II. Diatomic. (Diphenols, or Dihydroxybenzenes.)
catechol, resorcinol, quinol $C_6H_4(OH)_2$
orcinol, homopyrocatechol $C_6H_3Me(OH)_2$
dihydroxyxylol..... $C_6H_2Me_2(OH)_2$
mesorcinol..... $C_6HMe_3(OH)_2$
thymoquinol..... $C_6H_2MePr(OH)_2$

III. Triatomic. (Triphenols, or Trihydroxybenzenes.)
pyrogallol, phloroglucinol. $C_6H_3(OH)_3$
methylpyrogallol..... $C_6H_2Me(OH)_3$

IV. Polyatomic. (Polyphenols, or Polyhydroxybenzenes.)
tetrahydroxybenzene.... $C_6H_2(OH)_4$
pentahydroxybenzene, quercitol $C_6H(OH)_5$
hexahydroxybenzene, inositol $C_6(OH)_6$

Cf. *naphthol, anthrol, aminophenols, phenol acids.* **di-** A p. containing two —OH groups. **poly-** A p. containing four or more —OH groups. **sulfurized-** Syntans. **tri-** A p. containing three —OH groups.

phenolsulfonate. Sulfophenylate, sulfocarbolate. A salt of phenolsulfonic acid, HO.C_6H_4.SO_3M.

phenolsulfonephthalein. $C_{19}H_{14}O_5S$ = 354.2. Phenolred. A sulfuric acid derivative of phenolphthalein, $(OHC_6H_4)_2{=}C\langle^{C_6H_4}_{O}\rangle SO_2$, generally marketed as the monosodium salt. A bright red crystalline powder; slightly soluble in water. Used in pathology as a test for the secreting power of the kidneys; and as a pH indicator changing at 7.7 from yellow (acid) to red (alkaline).

phenolsulfonic acid. $C_6H_4(OH)SO_3H$ = 174.14. A group of three isomeric acids, soluble in alcohol or water, obtained by heating phenol with concentrated sulfuric acid. **ortho-** Aseptol.

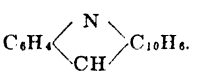
phenolsulfuric acid. Phenyl sulfuric acid.

phenomena. The plural of *phenomenon.*

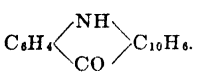
phenomenon. An event or manifestation; that which is apparent, as distinct from that which merely exists.

phenomorpholine. C_8H_9ON = 135.08. Dihydro-*1.4*-benzoxazin. The heterocyclic compound, $O\langle^{C_6H_4}_{CH_2.CH_2}\rangle NH$.

phenonaphthacridine. $C_{17}H_{11}N$ = 229.1. Benzacridine. The heterocyclic compound:



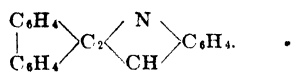
phenonaphthacridone. $C_{17}H_{11}ON$ = 245.1. Phenaphthacridone. The heterocyclic compound:



phenonaphthazine. Benzophenazine.

phenones. A series of ketones of the general type, Ph.CO.R; as, propiophenone, Ph.CO.Et; butyrophenone, Ph.CO.Pr.

phenophenanthracridine. $C_{21}H_{13}N$ = 279.1. The heterocyclic compound:



phenophenanthrazine. Dibenzophenazine.

phenopiazine. Quinoxaline.

phenoprene. $C_{10}H_{11}$ = 131.01. *2*-Phenylbutadiene-*1.4*. The unsaturated hydrocarbon CH_2:CPh.CH:CH_2.

phenopyrine. Antipyrine carbolate, antipyrine phenate. A colorless, oily liquid; insoluble in water, soluble in alcohol or ether. Used medicinally, internally as an antipyretic, externally as an analgesic.

phenoquinone. $C_6H_4O_2.2C_6H_6O$ = 296.22. A solid, m.71, soluble in water, alcohol, or ether.

phenoresorcin. Resorcinol carbolate, resorcin phenate. A mixture of phenol and resorcinol, used medicinally in skin diseases.

phenosafranine. $C_{18}H_{15}N_4Cl$ = 322.62. *3.6*-Diaminophenylphenazine chloride. An aniline dye used in photography to prevent fogging of plates. Green needles of metallic luster, soluble in water or alcohol with a red color; used as an oxidation-reduction indicator. Cf. *aposafranine.*

phenosal. $C_{17}H_{17}O_5N$ = 315.2. Phenetidine salicylate, EtO—C_6H_4—NH.CO.CH_2O—C_6H_4.COOH. Colorless crystals, slightly soluble in water, used medicinally as an antirheumatic.

phenosalyl. A mixture of phenol, salicylic acid, menthol, and lactic acid; used as an antiseptic.

phenose. $C_6H_6(OH)_6$ = 180.1. Hexahydroxyhexahydrobenzene. A colorless, amorphous, deliquescent powder; soluble in water. Cf. *inositol.*

phenoselenazine. $C_{12}H_9NSe$ = 246.28. Selenodiphenylamine. $C_6H_4\langle Se, NH\rangle C_6H_4$.

phenostal. $C_{14}H_{10}O_4$ = 242.1. Diphenyloxalate, diphenyloxalic ester, $(COOPh)_2$; used as a germicide and disinfectant.

phenosuccin. Pyrantin.

phenothalin. Phenolphthalein.

phenothiazine. $C_{12}H_9NS$ = 199.1. Thiodiphenylamine, phenthiazine. The heterocyclic compound: $C_6H_4\langle S, NH\rangle C_6H_4$. Colorless rhombic crystals, m.180, b.371, soluble in water, alcohol, ether or benzene; used in the manufacture of dyes (*e.g.*, methylene blue), and as an insecticide.

phenothiazone. $C_{12}H_7NOS$ = 213.1.

$$C_6H_4\langle S, N \rangle C_6H_3{:}O.$$

It is a very efficient insecticide for spraying orchards.

phenothioxin. $C_{12}H_8OS$ = 201.1. Phenoxthine, dibenzothioxine. The heterocyclic compound,

$$C_6H_4\langle O, S\rangle C_6H_4.$$

phenoxarsine. $C_{12}H_9AsO$ = 243.9. A compound similar to phenoxazine, but with AsH in place of NH.

phenoxaselenin. $C_{12}H_8OSe$ = 238.3. A compound analogous to phenothioxin, with Se in place of S.

phenoxatellurin. $C_{12}H_8OTe$ = 296.6. A compound analogous to phenothioxin, with Te in place of S.

phenoxazine. $C_{12}H_9ON$ = 183.1. Naphthoxazine. The heterocyclic compound,

$$C_6H_4\langle O, NH\rangle C_6H_4.$$

Colorless leaflets, m.150, soluble in alcohol or ether. Used in the synthesis of many dyes.

phenoxides. Phenates.

phenoxin. Carbon tetrachloride.

phenoxthine. Phenothioxin.

phenoxy*. The monovalent radical, PhO—, derived from phenol. Cf. *oxyphenyl.* **p. acetaldehyde.** $PhOCH_2CHO$. **p. acetone.** Phenacetol. $PhOCH_2COMe$. **p. benzene*.** Phenyl ether. **p. caffeine.** $C_{14}H_{14}O_3N_4$ = 286.11. $C_8H_9O_2N_4(OPh)$. Colorless crystals, m.145, soluble in water; used medicinally as an analgesic. **p. propandiol.** $C_9H_{12}O_3$ = 168.1. Antodyne, glycerinmonophenyl ether. $CH_2.OPh.CHOH.CH_2OH$. Colorless crystals, m.69, soluble in water or alcohol; used medicinally as an analgesic.

phenpentoxazoline. C_8H_7ON = 133.1. The heterocyclic compound, $C_6H_4\langle N{=}CH, CH_2\rangle O$.

phenphenyltriazine. $C_{15}H_9H_3$ = 207.2. 3-phenyl-phentriazine, derived from phentriazine.

phenpiazine. Quinoxaline.

phenthiazine. Phenothiazine.

phentetrol. Apionol.

phenthiazone. $C_{12}H_7NSO$ = 213.1. The heterocyclic compound, $C_6H_4\langle N, S\rangle C_6H_3{:}O$.

phenthiol. Thiophenol.

phentriazine. $C_7H_5N_3$ = 131.2. 1.2.3-benzotriazine. The heterocyclic compound,

$$C_6H_4\langle N{=}N, CH\rangle N.$$

Colorless crystals, m.75, b.238, soluble in alcohol; used in organic synthesis. **phenyl-Phenphenyltriazine.**

phenyl. Ph. The monovalent radical, C_6H_5—, derived from benzene, C_6H_6, or phenol, C_6H_5OH. **hydroxy-** The radical —C_6H_4OH from phenol. Cf. *phenoxy.*

phenylacetaldehyde. C_8H_8O = 120.1. $PhCH_2CHO$. A colorless liquid, d.1.032, b.205, slightly soluble in water, soluble in alcohol or ether. Used in perfumery for its hyacinth-like odor.

phenylacetamide. Acetanilide.

phenylacetanilide. See *acetanilide.*

phenylacetate. $C_8H_8O_2$ = 136.1. Me.COOPh. A colorless liquid, d.1.093, b.196, slightly soluble in water, soluble in alcohol or ether; used in organic synthesis.

phenylacetic acid. α-Toluic acid. **p. anhydride.** $(C_6H_5CH_2CO)_2{:}O$ = 254.2. A solid, m.72.5. **p. nitrile.** Benzylcyanide.

phenylacetylchloride. C_8H_7OCl = 154.6. A colorless fuming liquid.

phenylacetylene. C_8H_6 = 102.19. PhC:CH. A colorless liquid, d.0.937, b.139; insoluble in water, soluble in alcohol or ether.

phenylalanine. $C_9H_{11}O_2N$ = 153.10. Aminohydrocinnamic acid. An aminoacid constituent of proteins.

phenylaldehyde. Benzaldehyde.

phenylamine. Aniline.

phenylamines. A group of aromatic amino compounds:

Primary phenylamines, $Ar.NH_2$:
- aniline (1 compound)
- toluidine (3 isomers)
- xylidene (6 isomers)

Secondary phenylamines: Ar_2NH:
- diphenylamine (1 compound)
- ditolylamine (9 isomers)

Tertiary phenylamines, Ar_3N:
- triphenylamine (1 compound)
- tritolylamine (27 isomers)

phenylaniline. **N-** Diphenylamine. **ar-** Biphenylamine.

phenylarsonic acid. Benzene arsonic acid.

phenylate. (1) Phenate. (2) A compound of a metal and phenol, of the type, MOPh.

phenylation. The introduction of the phenyl group into a molecule.

phenylazide. $C_6H_5N_3$ = 119.06. Triazobenzene. A colorless liquid, d.1.098, $b._{24mm}$73.5.

phenylazo. The monovalent radical, PhN:N—. **p. aniline.** See *aminoazobenzene.*

phenylbenzamide. Benzanilide.

phenylbenzene. Diphenyl.

phenylbenzhydryl. The monovalent radical, $Ph.C_6H_4.CHOH$—.

phenylbenzoate. $C_{13}H_{10}O_2$ = 198.1. Benzophenid, phenol benzoate, benzocarbolic acid. PhCOOPh. Colorless monoclinic crystals, m.-68, b.314; slightly soluble in water, soluble in alcohol or ether.

phenylbenzoyl. The monovalent radical Ph.C_6H_4CO—. **p. benzoic acid.** $C_{20}H_{14}O_3$ = 302.11. Diphenylphthaloic acid, 4-phenylbenzophenone-2-carboxylic acid, $PhC_6H_4COC_6H_4$-COOH; used in the synthesis of dyes. **p. carbinol.** Benzoin.

phenylbenzyl. The monovalent radical Ph.$C_6H_4.CH_2$—. **p. amine.** $C_{13}H_{13}N$ = 183.2. $PhNHCH_2Ph$. Colorless crystals, m.32, b.298, soluble in alcohol; used in organic synthesis. **p. ketone.** See phenyl*propiophenone*. **p. tin chloride.** $Ph.C_6H_4CH_2SnCl_2$ = 357.71. Colorless needles, m.83.

phenylborine. C_6H_7B = 89.8. $PhBH_2$, an isolog of aniline.

phenylbromide. C_6H_5Br = 156.96. Bromobenzene,* PhBr. A colorless liquid, d.1.497, m.−30.6, b.156.2.

phenylbutyric acid. $C_{10}H_{12}O_2$ = 164.1. **alpha-** $Ph(CH_2)_3COOH$. Colorless crystals; m.42, b.-270, soluble in water. **beta-** $MeCHPh.CH_2$.-COOH. A colorless, crystalline acid; three isomeric forms: d- (m.156); l- (m.157); and r-(m.270); soluble in water. Used in organic synthesis.

phenylcarbamate. $C_7H_7O_2N$ = 137.1. The amide of benzoic acid, $PhCOONH_2$. Colorless leaflets, m.141; slightly soluble in water, soluble in alcohol or ether.

phenylcarbamido. The monovalent radical, Ph-NHCONH—.

phenylcarbinol. Benzyl alcohol.

phenylcarbylamine. Phenylisocyanide.

phenylchinaldine. $C_{16}H_{13}N$ = 219.1. Phenylquinaldine, methylquinol. Colorless crystals; soluble in water; used medicinally as an antimalarial.

phenylchinoline. Phenylquinoline.

phenylchloride. C_6H_5Cl = 112.50. Chlorobenzene,* PhCl. A colorless liquid, d.1.107, m.−45.2, b.132.1.

phenylchloroform. $C_6H_5CCl_3$ = 195.4. Benzotrichloride. A colorless liquid with a penetrating odor.

phenylcinchoninic acid. Atophan.

phenylcyanamide. $PhNH.NC$ = 118.1. Cyananilide. A solid, m.47, soluble in water, alcohol or ether.

phenylcyanate. C_7H_5ON = 119.1. Ph.CNO.

phenylcyanide. Benzonitrile.

phenyldicarbinol. Xylyl alcohol.

phenyldiethylaminoethylnitrobenzoate. A precipitant for nitrates and perchlorates.

phenyldihydrochinazolin. Orexin.

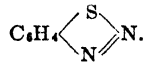
phenyldihydronaphthalene. Atronene.

phenyldimethylpyrazolone. Antipyrine.

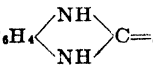
phenyldiphenylcarbinol. Benzaurine.

phenyldisulfide. $C_{12}H_{10}S_2$ = 218.3. Phenyldithiobenzene*. Ph.S.S.Ph. Colorless needles, m.60, b.310, insoluble in water, soluble in alcohol or ether.

phenylene. The bivalent radical, C_6H_4=, derived from benzene by replacement of two hydrogen atoms. Its compounds yield three isomeric derivatives: ortho-, meta-, and para-compounds. **p. blue.** Indamine. **p. diacetic acid.** $C_{10}H_{10}O_4$ = 194.1. The dibasic acids $C_6H_4(CH_2COOH)_2$; *ortho-* (m.150), *meta-* (m.-190), and *para-* (m.244). **p. diamine.** $C_6H_8N_2$ = 108.08. Diaminobenzene, benzenediamine*. $C_6H_4(NH_2)_2$. **o-** or *1.2-* m.103.8, b.252. **m-** or *1.3-* $d._{57°}$1.107, m.62.8, b.287. **p-** or *1.4-* Ursol. m.139.7, b.267. Used as a dye for hairs and furs, as an indicator, and reagent for nitrogen. *methyl-* Tolylenediamine. *phenylazo-* Chrysoidine. **p. diazosulfide.** $C_6H_4N_2S$ = 136.1. The heterocyclic compound:



Colorless crystals, m.35, b.129; soluble in alcohol. **p. dimercaptan.** $C_6H_6S_2$ = 142.18. Benzenedithiol, $C_6H_4(SH)_2$. **m-** or 1.3- Dithioresorcinol. Colorless crystals, m.27, b.243. **p-** or **1.4-** Dithiohydroquinone. Colorless crystals, m.98. **p. disazo.** The bivalent radical, —N:NC_6H_4N:N—. **p. sulfourea.** $C_7H_6N_2S$ = 150.2. Thiobenzimidazoline, p. thiourea. The heterocyclic compound,



Colorless crystals, m.298, soluble in alcohol; used in organic synthesis.

phenylethane. Ethyl *benzene*.

phenylethanol. Benzylcarbinol. **p. amine.** $C_8H_{11}NO$ = 137.10. A white powder related to and similar in action to adrenalin.

phenylether. $C_{12}H_{10}O$ = 170.1. Phenoxybenzene*. The aromatic oxide, Ph_2O. Diphenyloxide. Colorless monoclinic crystals, or an oily liquid, d.1.073 m.28, b.255, nearly insoluble in water, soluble in alcohol or ether. Used as a heat transfer agent instead of water or steam.

phenylethyl alcohol. Benzyl carbinol. **p. barbituric acid.** Luminal. **p. ether.** Phenetole. **p. hydantoin.** Nirvanol. **p. ketone.** Ethylphenylketone.

phenylethylamine. $C_8H_{11}N$ = 121.1. A secondary amine, PhNHEt, formed from amino acids.

phenylethylene. Styrene.

phenylformamide. Formanilide.

phenylformic acid. Benzoic acid.

phenylgamma acid. *2*-Phenylamino-*8*-naphthol-*6*-sulfonic acid.

phenylglucosazone. $C_{18}H_{22}O_4N_4$ = 358.3. A condensation product of phenylhydrazine and glucose. Thin yellow needles, slightly soluble in water, soluble in alcohol or ether. **alpha-** m.205. **beta-** m.145.

phenylglycine. $C_8H_9O_2N$ = 151.2. Phenylglycocoll. A phenylated aminoacetic acid, $PhNHCH_2COOH$, m.127, soluble in water, alcohol or ether; used in the synthesis of indigo.

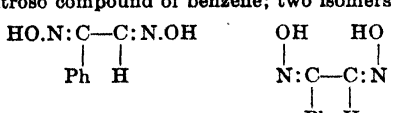
phenylglycocoll. Phenylglycine.

phenylglycocollic acid. Mandelic acid.

phenylglycol. Cinnamic alcohol.

phenylglyoxal. Benzoyl formaldehyde.

phenylglyoxime. $C_8H_8O_2N_2$ = 164.08. A diisonitroso compound of benzene; two isomers:

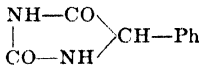


anti- m.180 amphi- m.168

phenylglyoxylic acid. Benzoyl formic acid.

phenyl-group. The monovalent C_6H_5— or Ph radical, derived from benzene.

phenylhydantoin. $C_9H_8O_2N_2$ = 176.2. The heterocyclic compound,



phenylhydrate. Phenol.

phenylhydrazide. A derivative of phenylhydrazine of the type,

Ph.NH.NH.COR or Ph.N(COR)NH_2.

beta- (symmetric) or alpha- (asymmetric). *e.g.* Ph.NH.NH.COH = formylphenylhydrazide. Ph.NH.NH.COMe = acetophenylhydrazide.

phenylhydrazine. $C_6H_8N_2$ = 108.1. Hydrazobenzene. $PhNHNH_2.\frac{1}{2}H_2O$. A colorless or pale yellow liquid, d.1.097, m.19, b.243; slightly soluble in water, soluble in alcohol or ether; used as a reagent for aldehydes and ketones, and in organic synthesis. **acetyl-** Pyrodin. **ethyl-** See *ethylphenylhydrazine*. **phthalyl-** Phthalylphenylhydrazine. **salicyl-α-methyl-** Agathin.

p. hydrochloride. Ph.NH.NH_2.HCl = 144.6. Colorless crystals, m.200, soluble in water; used as a reagent for glucose, formaldehyde, and urea. **p. levulinic acid.** Antithermin. **p. sulfonic acid.** $C_6H_8O_3N_2S$ = 188.1. Ph.NH.NH.SO_2.OH. **p. urea.** Diphenylcarbazide.

phenylhydrazone. $C_7H_8N_2$ = 120.1. Ph.NH.N:CH_2. **acetone-** See *acetone phenyl hydrazone*. **thionyl-** $C_6H_6N_2SO$ = 154.2. Ph.NH.N:S:O.

phenylhydrazones. Compounds of the type, Ph.NH.N:CHR or Ph.NH.N:CR_2, formed by the action of phenylhydrazine on aldehydes or ketones; as, benzaldehyde, p., acetone p.

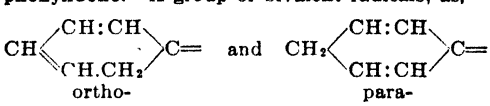
phenylhydroxide. Phenol.

phenylhydroxylamine. C_6H_7ON = 109.1. PhNHOH. Colorless needles, slightly soluble in water, soluble in alcohol or ether, m.80; used in organic synthesis.

phenylic. Pertaining to phenol or the phenyl radical. **p. acid.** Phenol. **p. alcohol.** Phenol.

phenylid. Aniline.

phenylidene. A group of bivalent radicals; as,



ortho- para-

phenylindazole. See *indazole*.

phenylisocyanate. C_7H_5ON = 119.1. PhNCO, m.163, used as reagent for hydroxy and amino compounds.

phenylisocyanide. PhNC = 103.1. Phenylcarbylamine isocyanobenzene. A colorless liquid, d.0.978, b.165, decomp. by water.

phenylisonitramine. Nitranilide.

phenylketone. Benzophenone.

phenyllactazam. $C_{20}H_{14}ON_2$ = 298.2. The heterocylic compound, C_6H_4  NPh.

Colorless crystals, m.181, soluble in alcohol.

phenylmercaptan. Thiophenol.

phenylmercuric. The radical C_6H_5Hg— or PhHg—. **p. acetate.** $CH_3COOHgPh$ = 336.67. Rhombic colorless crystals, m.149. **p. chloride.** PhHgCl = 313.11. Satiny leaflets, m.251. **p. cyanide.** PhHgCN = 303.66. White rhombic prisms, m.204. **p. nitrate.** $PhHgNO_3$ = 339.66. Rhombic scales, m.180, slightly soluble in water.

phenylmethane. Toluene.

phenylmethylether. Anisole.

phenylmethylketone. Acetophenone.

phenylmustard oil. C_6H_5NCS = 135.1. Phenylisothiocyanate, thiocarbanil, phenylthiocarbonimide. A colorless liquid, d.1.138, m.−21, b.221, insoluble in water, soluble in alcohol or ether; used in organic synthesis.

phenylnaphthalene. $C_{16}H_{12}$ = 204.2. $C_{10}H_7Ph$. **alpha-** A colorless liquid, m.0, b.324; soluble in alcohol or ether. **beta-** Colorless scales, m.102, b.345; soluble in alcohol or ether.

phenylnaphthylamine. $C_{16}H_{13}N$ = 219.2. An aromatic secondary amine, $C_{10}H_7$.NH.Ph. **alpha-** Colorless needles, m.60, $b._{260mm}$.335, insoluble in water, soluble in alcohol, ether, or benzene; used in organic synthesis. **beta-** Colorless leaflets, m.107, b.395, insoluble in water, soluble in alcohol, ether, or chloroform; used as an anti-aging agent for rubber.

phenylnaphthylcarbazole. Benzonaphthindole.

phenylnaphthylketone. $C_{17}H_{12}O$ = 232.2. An aromatic ketone, $C_{10}H_7$.CO.Ph. **alpha-** Colorless rhombic crystals, m.76, b.385; insoluble in water, soluble in alcohol; used in organic synthesis. **beta-** White needles, m.82; insoluble in water, soluble in alcohol or ether.

phenylnitramine. $C_6H_6O_2N_2$ = 138.1. An aromatic nitramine: Ph.$NH.NO_2$ and isomer of diazoic acid. Colorless leaflets, m.46, explodes 98, soluble in water, alcohol or ether.

phenylnitrate. $C_6H_5NO_3$ = 135.09. $PhONO_2$.

phenylnitrone. Ph_2C:NOPh.

phenylo. Phenyl. **p. boric acid.** $C_6H_5B(OH)_2$ = 121.9. A white powder, sparingly soluble in water; used as a germicide. Cf. *borophenylic acid*. **p. salicylic acid.** $C_{13}H_{10}O_3$ = 214.2. Hydroxydiphenylcarboxylic acid, o-oxy-diphenylcarboxylic acid, $C_6H_4(OH)$—C_6H_4COOH. A white powder, soluble in water or alcohol; used as a germicide.

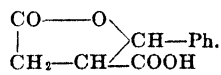
phenylogic series. The hydrocarbon series, C_6H_6, $C_{12}H_{10}$, $C_{18}H_{24}$ (diphenyl series).

phenylon. Antipyrine.

phenyloxalate. Diphenyl oxalate.

phenyloxydisulfide. $Ph_2S_2O_2$ = 250.26. A solid, soluble in ether, m.45.

phenylparaconic acid. $C_{11}H_{10}O_4$ = 206.2. An aromatic lactone:



Colorless crystals, m.109; soluble in alcohol.

phenylparaffin alcohols. A group of aromatic alcohols in which the —OH radical is situated in the side chain: as,

Ph.CH_2OH = benzyl alcohol or phenylmethylol.

$C_6H_4Me.CH_2.OH$ = tolycarbinol (three isomers).

$C_6H_3Me_2.CH_2OH$ = mesityl alcohol.

$C_6H_2Me_3.CH_2OH$ = cumobenzyl alcohol.

$C_6HMe_4.CH_2OH$ = mellityl alcohol.

phenyl-peri acid. Phenyl-*1*-naphthylamine-*8*-sulfonic acid.

phenylphenol. $C_{12}H_{10}O$ = 170.08. Ph.C_6H_4.OH. **ortho-** White crystals, m.56, b.275, soluble in water; phenol coefficient, 38. Used as sodium-o-phenyl phenate as a preservative for glues. **meta-** m.78, b.300. **para-** m.165, b.308.

phenylphosphine. C_6H_7P = 110.0. $PhPH_2$, phosphaniline. A colorless liquid, b.160, obtained by the action of hydriodic acid and phosphorus on phenyl chloride.

phenylphosphinic acid. $C_6H_7O_2P$ = 158.13. $Ph.PO.(OH)_2$. A water-soluble solid, m.158.

phenylphosphonic acid. $C_6H_7O_3P$ = 158.03. Ph-O.P(OH)$_2$.

phenylpropiolic acid. $C_9H_6O_2$ = 146.1. The unsaturated, monobasic acid, PhC:C.COOH. Colorless, long needles, m.136, slightly soluble in water, soluble in alcohol or ether; used in organic synthesis.

phenylpropionate. $C_9H_{10}O_2$ = 150.1. $CH_3.CH_2.$-COOPh.

phenylpropionic acid. α- Hydratropic acid. β-Hydrocinnamic acid.

phenylpropiophenone. See phenyl *propiophenone.*

phenylpropylketone. Butyrophenone.

phenylpyridine. $C_6H_5.C_5H_4N$ = 155.14. **alpha-** A colorless liquid, b.269, insoluble in water, soluble in alcohol or ether. **beta-** A colorless oily liquid, b.270; insoluble in water, soluble in alcohol or ether. **gamma-** Colorless scales, m.77, b.274; slightly soluble in water, soluble in alcohol or ether.

phenylquinaldine. Phenylchinaldine.

phenylquinoline. $C_{15}H_{11}N$ = 205.2. Phenylchinoline. A phenyl derivative of quinoline. **alpha-** White needles, m.84, b.360, slightly soluble in water, soluble in alcohol or ether; used medicinally for malaria. Its isomers are:

2-(alpha)	m.84, b.360.
3-	m.42, b.274.
4-	m.61.
6-	b.$_{77mm}$260.
8-	m.110, b.$_{187mm}$283.

phenylsalicylate. $C_{13}H_{10}O_3$ = 214.14. Salol, phenylis salicylas, $C_6H_4(OH)COOPh$. A colorless crystalline powder of slight aromatic odor, d.1.261, m.42, slightly soluble in water, soluble in alcohol or ether; used medicinally as an intestinal antiseptic.

phenylsalicylic acid. $C_{13}H_{10}O_3$ = 214.14. The isomer of salol, $Ph.C_6H_3(OH).COOH$. An insoluble solid, m.160.

phenylsemicarbazide. $C_7H_9ON_3$ = 151.1. Ph.-NH.NH.CO.NH$_2$. White scales, m.172, slightly soluble in water, soluble in alcohol or ether; used in organic synthesis.

phenylstannane. An organic compound of tervalent tin of the general type, Sn_nPh_{2n+2}; as, Sn_5Ph_{12}, or $Sn(SnPh_3)_4$.

phenylsulfate. A salt of phenylsulfuric acid of the general type, $PhOSO_3M$; as, potassium phenylsulfate.

phenylsulfhydrate. Thiophenol.

phenylsulfide. $C_{12}H_{10}S$ = 186.2. Phenylthiobenzene*, diphenyl sulfide. The aromatic sulfide, Ph_2S. A colorless liquid, d.1.119, b.296, insoluble in water, soluble in alcohol or ether.

phenylsulfone. $C_{12}H_{10}SO_2$ = 218.14. Phenylsulfonylbenzene*, diphenyl sulfone, Ph_2SO_2. White needles, d.1.248, m.128, b.378.

phenylsulfonyl*. The radical $PhSO_2$—. **p. benzene*.** Phenylsulfone.

phenylsulfuric acid. $C_6H_6OSO_3H$ = 174.1. A phenolester of sulfuric acid. An unstable acid whose salts are sometimes found in urine.

phenyltetrazole. $C_7H_6N_4$ = 146.2. Benzenyltetrazoic acid.  . Colorless crystals, m.219.

phenylthiocarbonimide. Phenyl mustard oil.

phenylthiohydantoic acid. $C_9H_{10}N_2O_2S$ = 210.1. Phenyliminocarbamin thioglycollic acid. PhN:-C(NH$_2$)S.CH$_2$.COOH. White powder, m.150, insoluble in cold, soluble in hot water; used as a reagent for copper and cobalt. **ortho-** PhNH.C(:NH)S.CH$_2$.COOH. Insoluble in water or alcohol.

phenylthioisocyanate. Phenylmustard oil.

phenylthiourea. $C_7H_8N_2S$ = 152.18. $CSNH_2$-(NH).Ph, m.154, slightly soluble in water.

phenyl tin. The radical $C_6H_5Sn\equiv$ or $PhSn\equiv$. **p. bromide.** $PhSnBr_3$ = 435.49. Colorless liquid, b.$_{25mm}$185. **p. chloride.** $PhSnCl_3$ = 302.11. Colorless liquid, b.$_{25mm}$143. **p. tribenzyl.** Ph-Sn(CH$_2$Ph)$_3$ = 468.90. A colorless liquid, b.$_{6mm}$290; soluble in organic solvents, except alcohol.

phenyltoluene. $C_{13}H_{12}$ = 168.1. Diphenylenmethane, phenyltolyl. The three isomeric aromatic hydrocarbons, $Ph.C_6H_4.Me$: **ortho-** A colorless liquid, m.258; insoluble in water, soluble in alcohol or ether. **meta-** A colorless liquid, d.1.031, b.272; insoluble in water, soluble in alcohol or ether. **para-** A colorless liquid, d.1.015, m.−2, b.263; insoluble in water, soluble in alcohol or ether.

phenyltolyl. Phenyl toluene.

phenyltolylketone. $C_{14}H_{12}O$ = 196.2. Tolylphenylketone. An aromatic ketone, Ph.CO.-C_6H_4.Me. **ortho-** A colorless liquid, m.−18, b.315; soluble in alcohol or ether. **meta-** A colorless liquid, d.1.088, b.314, insoluble in water, soluble in alcohol, ether or benzene; used in organic synthesis. **para-** Colorless monoclinic crystals, m.59, b.326; insoluble in water, soluble in alcohol or ether.

phenylurea. $C_7H_8ON_2$ = 136.2. The phenylated urea, $PhNH.CO.NH_2$. Colorless monoclinic crystals, m.146; slightly soluble in water, soluble in alcohol or ether; used in organic synthesis.

phenylureido. Phenylcarbamido.

phenylurethane. $C_9H_{11}O_2N$ = 165.1. Euphorin, ethylphenylcarbamate, carbamilic ether. The ethyl ester of phenylcarbamic acid, Ph.NH.-COO.Et. A white crystalline powder of clove-like odor and taste, m.51, b.237, slightly soluble in water, soluble in alcohol or ether; used medicinally as an antirheumatic.

phenylvinylketone. Acrylophenone.

phenzoline. Orexin.

pheochrome. Cellular or structural parts of a tissue stained dark by chromium salts.

pheophorbide. $C_{35}H_{36}O_6N_4$ = 608.6. A split-product of chlorophyll obtained by saponification of pheophytin, $C_{31}H_{31}N_4(COOH)_2COOMe$.

pheophytin. $C_{55}H_{74}O_5N_4$ = 870.6. A split-product of chlorophyll obtained by treatment with oxalic acid, $C_{31}H_{31}N_4(COOH)COOMe(COOC_{20}-H_{39})$. Cf. *pheophorbide.*

pheoretin. $C_{14}H_8O_7$ = 288.1. A resinous principle extracted from rhubarb root. A yellowish-brown powder, soluble in alcohol and alkalis.

pheron. The colloidal carrier of an enzyme. It is responsible for catalytic activity. Cf. *agon.*

phesin. $C_{10}H_{10}O_5NSNa$ = 259.2. Acetphenetidine sodium sulfonate. A sulfo-derivative of phenacetin, $C_6H_3(OC_2H_5)SO_3Na(NH.COCH_3)$. A pale reddish-brown, amorphous powder, soluble in water; used as an antipyretic.

phi. φ, ϕ, Φ. The Greek letter ph. (1) An abbreviation for phenyl. A symbol denoting: (2) fluidity; (3) amphi-position in the naphthalene ring; (4) the benzene ring in indone; (5) phlogiston.

phial. A vial, or small bottle.

Philip, James Charles. 1873–1941. A British physical chemist.

philippium. A supposed rare earth metal obtained from samarskite, that proved to be a mixture of terbium and yttrium.

phillipite. A native copper and iron sulfate, $Fe_2Cu(SO_4)_4.12H_2O$; blue masses.

phillipsite. A complex clay containing Na, K and Ca.

phillygenin. $C_{21}H_{24}O_6$ = 372.19. A split-product of phillyrin.

phillyrin. $C_{27}H_{34}O_{11}$ = 534.2. A glucoside from the bark and leaves of various *Phillyrea* species. Colorless crystals, used medicinally as an antipyretic.

philosopher's stone. An imaginary substance supposed by the alchemists to transform base metals into gold, and, if taken internally, to prolong life. It is identical with the "elixir" of the iatrochemists, and the alkahest. **p. wool.** Zinc oxide.

philosophy. An appreciation of the many branches of science into one system of correlated and generalized knowledge. It differs from true science (q.v.) in its more imaginary and visionary viewpoint, and a tendency to bridge the gaps existing in our present knowledge by speculation. Thus all phenomena of nature and life may be classed into two large groups dealing with the material and mental categories in an ascending series of complexity:

Material group (objective)		*Mental group (subjective)*
ether	1st category	consciousness
electron	2nd category	perception (senses)
atom	3rd category	coordination (ideas)
molecule	4th category	thought
masses	5th category	will
organization	6th category	action (deed)

The various branches of science fall into one or the other of these categories. Those of the first group are governed by unchangeable "natural" laws; those of the second are subject to evolutionary progress, and accordingly to the changeable "human" laws governing society.

phlobabene. $C_{50}H_{46}O_{25}$ = 1046.4. A glucoside derived from various tree barks and hops that yields glucose and hopred on hydrolysis.

phlobaphene. A series of resinous oxidation-products of tannin materials, formed by boiling with acids. They are yellowish or brown substances, soluble in dilute ammonium hydroxide.

phlobatannin. Catechol tannin. The coloring matter in the rinds of many fruits.

phlogistic. (1) Inflammatory. (2) Pertaining to burning or fire.

phlogisticated air. Priestley's term for nitrogen. **de-** Oxygen.

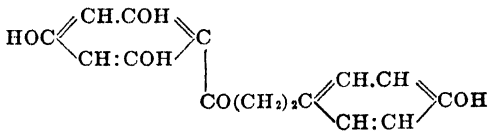
phlogiston. ϕ. The hypothetical component of inflammable substances. **p. theory.** A theory that was current shortly before the birth of modern chemistry (as marked by the work of Lavoisier and the discovery of oxygen). A mystical, all-pervading substance, phlogiston, was supposed to be the combustible principle and to escape during combustion or oxidation of a substance in the form of heat and smoke; by its presence any substance was made combustible. The name was due to Stahl, and the theory to Becher (1669). In the reduction of an oxide, phlogiston (ϕ) was replaced. Thus "calx of zinc + ϕ = zinc." Cf. *antiphlogistic theory, phlogisticated.*

phlogopite. Rhombic mica. A complex hydrated silicate containing K, Mg, Fe, and Al, belonging to the mica group of silica minerals, q.v.

phlogosine. A ptomaine in cultures of staphylococcus.

phloretic acid. $C_9H_{10}O_3$ = 166.13. *S-p*-hydroxyphenylpropionic acid, *p*-hydroxyhydrocinnamic acid, α-β-dihydrocoumaric acid. An oxidation-product of phloretin, $C_6H_4OHCHMeCOOH$, m.128, soluble in alcohol or ether.

phloretin. $C_{15}H_{14}O_5$ = 274.2. A colorless crystalline split-product of phlorizin, m.253 (de-



comp.), soluble in ether, and hydrolysed to phloroglucinol and phloretic acid.

phlorhizin. Phlorizin.

phloridzin. Phlorizin.

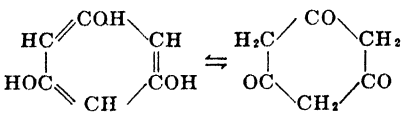
phlorizein. $C_{21}H_{30}O_{13}$ = 490.3. A red coloring matter formed by oxidation of phlorizin.

phlorizin. $C_{21}H_{24}O_{10}.2H_2O$ = 472.3. Phlorhizin, phloridzin. A glucoside derived from the bark and root of apple, cherry, pear, and other trees. It forms white silky needles, m.110, soluble in water or alcohol, and decomp. on hydrolysis into glucose and phloretin. Used medicinally as an antimalarial and tonic. Cf. *rufin.*

phlorobenzophenone. Benzophloroglucinol.

phloroglucin(e). Phloroglucinol.

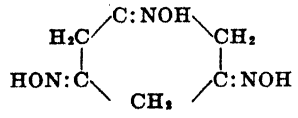
phloroglucinol. $C_6H_6O_3.2H_2O$ = 162.11. Phloroglucin, 1.3.5-trihydroxybenzene, $C_6H_3(OH)_3$, *1.3.5*-benzenetriol*, 3.5-dihydroxyphenol. White or yellowish crystals, m.217, soluble in water, alcohol or ether. Used as a reagent for HCl in gastric juice, for pentoses, lignin and pentosans, for hydrated chloral, etc. and in detecting groundwood fibre. Two tautomeric forms:



phenol form ketone form

benzo- See *benzophloroglucinol.* **hexahydro-** Phloroglucitol. **triamido-** $C_6H_9O_3N_3$ = 171.2. 2.4.6-triamino-1.3.5-trihydroxybenzene. **trinitro-** $C_6H_3O_9N_3$ = 261.1. 2.4.6-trinitro-1.3.5-trihydroxybenzene. **p. phthalein.** Gallein.

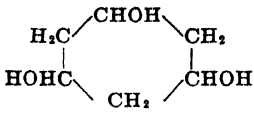
p. test. A test for pentoses: add hydrochloric acid and a small fragment of phloroglucinol. On heating a cherry-red color develops and a precipitate forms. Lignified fibers behave similarly. **p. trioxime.** $C_6H_9O_3N_3$ = 171.13.



an isomer of triamido phloroglucinol. Decomp. 140.

phloroglucite. Phloroglucitol.

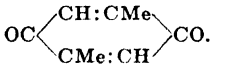
phloroglucitol. $C_6H_{12}O_3$ = 132.1. Methylene triol, cyclohexan-1.3.5-triol, hexahydrophloroglucinol, phloroglucite. The saturated compound,



Colorless crystals, m.184; soluble in water or alcohol.

phlorol. $C_8H_{10}O$ = 122.1. o-ethylphenol, C_6H_4-(OH)Et. A colorless oily liquid obtained from cresols, b.211; soluble in alcohol or ether.

phlorone. $C_8H_8O_2$ = 136.06. p-xyloquinone.



Colorless crystals, m.125. Cf. *phorone.*

phlorose. α-Glucose.

phloxin. Tetrabrom-dichloro-fluorescein. A purple aniline dye similar to eosin, used as pH indicator changing at 3.5 from colorless (acid) to magenta (alkaline).

phocenic acid. Valeric acid.

phocenin. $C_{18}H_{32}O_6$ = 324.2. Trivalerin, the valeric acid ester of glycerol. $C_3H_5(OOC.C_4H_9)_3$.

phœ- See *pho-*.

phoenicochroite. A native lead chromate, $PbCrO_4$.

phon. The International unit of loudness. When a sound is n decibels greater than corresponds with 10^{-6} watts per sq. cm., then the loudness is n phons.

phonene. A group of similar sounds.

phonic. Pertaining to sound. **infra-** The inaudible air-vibrations of wave-lengths greater than that of sound. **ultra-** The inaudible air-vibrations shorter in wavelength than sound.

phonochemical. A reaction induced or produced by sound; as, the evolution of gases from solutions.

phonodeik. An apparatus for the study of the shapes and speeds of sound waves.

phonolite. A variety of feldspar.

phonometer. Sonometer.

phonosensitive. Affected by sound.

-phore. A suffix indicating "to carry, bear or bring forth"; as, in

chromo- (chromogen)	color
gluco- (dulcigen)	sweetness
pharmaco-	pharmacologic action
osmo- (odoriphore)	odor.

phoretic. See *electron.*

phorone. $C_9H_{14}O$ = 138.2. An unsaturated ketone; di-iso-propilidene-acetone, $Me_2C:CH.CO.CH:C:Me_2$. A pale yellow liquid or yellow prisms, d.0.885, m.28, b.196, insoluble in water, soluble in alcohol or ether; used in organic synthesis. Cf. *phlorone.*

phoronomy. A formal branch of science (q.v.), dealing with motion, time and relativity.

phosgene. Carbonyl chloride. **di-** Trichloromethyl-chloroformate. **thio-** Thiophosgene.

phosgenite. $PbCl_2.PbCO_3$. Horn lead. A native carbonate and chloride of lead.

phosphagen. Guanidinophosphoric acid, phosphocreatinine. A compound of phosphorus and creatinine, which plays a part in the chemical phenomena of muscle contraction.

phospham. PN_2H = 60.0. An infusible phosphorazide; a white powder obtained by the action of ammonia on PCl_5.

phosphamic acid. Amidophosphoric acid.

phosphamide. $PO.NH.NH_2$ = 78.07. A white powder, insoluble in water, dilute acids or alkalis.

phosphaniline. Phenylphosphine.

phosphatase. An enzyme from body-organs or -fluids that splits carbohydrate-phosphate combinations. **p. test.** A test for raw milk in heated milk which depends on the presence of the active phosphatase in the former. This liberates phenol from sodium diphenyl phosphate, and the former is determined colorimetrically.

phosphate. (1) A salt of phosphoric acid containing the trivalent $PO\equiv_4$ radical; as,

M_3PO_4 = normal or tertiary phosphate
M_2HPO_4 = monoacid, monohydric, dibasic or secondary phosphate
MH_2PO_4 = diacid, dihydric, monobasic or primary phosphate
$(M, M')PO_4$ = double phosphate
$(M, M', M'')PO_4$ = triple phosphate

(2) A salt of one of the phosphoric acids; as

$M_4P_2O_6$	*hypo*phosphate
M_3PO_4	*ortho*phosphate
MPO_3	*meta*phosphate
$M_4P_2O_7$	*pyro*phosphate

acid- A mono- or dihydric phosphate; as, M_2HPO_4, MH_2PO_4, or $M_2H_2P_2O_7$. **alkaline-** A phosphate of sodium or potassium. **bone-** Calcium phosphate, $Ca_3(PO_4)_2$. **dibasic-** A compound of the type, M_2HPO_4. **dihydric-** A compound of the type, MH_2PO_4. **disodic-** Sodium acid phosphate, Na_2HPO_4. **earthy-** A phosphate of the alkaline earth metals; as, Mg or Ca. **hypo-** A salt of hypophosphoric acid of the type, $M_4P_2O_6$. **meta-** A salt of metaphosphoric acid, MPO_3. **monobasic-** An acid phosphate of the type MH_2PO_4. **monohydric-** An acid phosphate of the type M_2HPO_4. **normal-** A salt in which all hydrogen atoms of the acid have been displaced; as, Na_3PO_4, $NaPO_3$, or $Na_4P_2O_7$. **ortho-** A salt of orthophosphoric acid, M_3PO_4. **pyro-** A salt of pyrophosphoric acid, $M_4P_2O_7$. **stellar-** Calcium phosphate occurring in star-shaped crystals. **super-** See *superphosphate.* **triple-** (1) A salt of the type $MM'M''PO_4$; as, NH_4KNaPO_4. (2) A calcium, magnesium and ammonium phosphate sometimes occurring in urine.

p. of lime. Apatite. **p. rock.** A sedimentary rock containing calcium phosphate.

phosphated. Containing phosphates, as, phosphated water.

phosphatic. Pertaining to or containing phosphates; as, phosphatic slag.

phosphatides. Phospholipins. Phospholipids. A group of lipoid substances which occur in cellular structures and contain esters of phosphoric acid; as, cephalin, lecithins, etc. **amino-** Lecithins.

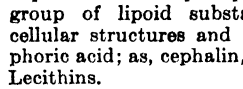
phosphatins. A group of organic phosphates in animal tissues.

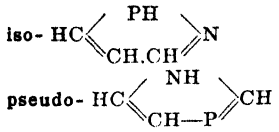
phosphazide. A compound of the type, $R_3P:N.N:NR$.

phosphazine. A compound of the type, $R_3P:N.N:CR_2$.

phosphazo. The divalent radical, —N:P—.

phosphazol. C_3H_4NP = 85.1. The heterocyclic compound





phosphazote. Phosphonitrogen.

phosphene. C_4H_5P = 84.1. Phosphurane. The heterocyclic compound  . Cf. *pyrrole.*

phosphenyl. The divalent radical $>PC_6H_5$. **p. chloride.** $C_6H_5PCl_2$ = 179.03. An unstable liquid, d.1.319, b.224.6. **p. oxychloride.** $C_6H_5OPCl_2$ = 194.98. A liquid, d.1.375, b.258.

phosphenylic acid. $C_6H_5.H_2PO_3$ = 158.1. Phenylphosphorous acid. A crystalline solid, m.158, decomp. on further heating, soluble in alcohol or ether.

phosphide. A binary compound of phosphorus which contains trivalent P; as, Na_3P or Ca_3P_2. **hydrogen-** Phosphorus hydrides.

phosphine. PH_3 = 34.1. See *phosphorus hydrides.* **p. oxide.** An organic derivative which contains the trivalent ≡PO group; as, Et_3PO, triethylphosphine oxide, m.53, b.243. **p. sulfide.** An organic derivative which contains the trivalent ≡PS group; as, Et_3PS, triethylphosphine sulfide, m.94.

phosphines. A group of organic compounds derived from phosphine by the replacement of one or more hydrogen atoms:

RPH_2 = primary phosphines:
- $MePH_2$ = methylphosphine, b. −14.
- $EtPH_2$ = ethylphosphine, b.25.
- $PhPH_2$ = phenylphosphine, b.160.

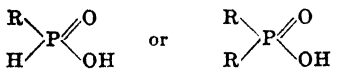
R_2PH = secondary phosphines:
- Me_2PH = dimethylphosphine, b.25.
- Et_2PH = diethylphosphine, b.85.
- Ph_2PH = diphenylphosphine, m.75, b.360.

R_3P = tertiary phosphines:
- Me_3P = trimethylphosphine, b.40.
- Et_3P = triethylphosphine, b.128.
- Ph_3P = triphenylphosphine.

R_4POH = quaternary phosphines:

See *phosphonium compounds, amines, arsines, stibine, bismuthine.*

phosphinic acid. An organic derivative of hypophosphorous acid which contains either the monovalent $—H_2PO_2$ radical, or the divalent $=HPO_2$ radical; as,



Me.HPO.OH, methylphosphinic acid.

Me_2:PO.OH, dimethylphosphinic acid, m.76.

Cf. *phosphonic acid, phospho acid.*

phosphinimine. A compound of the type, R_3P:NR.

phosphite. Any salt of phosphorous acid which contains the trivalent $=PO_3$ radical. *E.g.*, Na_2PO_3, *normal* sodium phosphite; Na_2HPO_3, *acid* sodium phosphite; NaH_2PO_3, *diacid* sodium phosphite.

phospho- Indicating the presence of phosphorus.

p. acid. An organic derivative of asymmetric phosphorous acid:

$P(OH)_3$ = $H—P:O(OH)_2$
symmetric asymmetric

which contains the monovalent $—PO(OH)_2$ radical; as,  . Cf. *phosphonic, phosphinic acid.*

$MePO(OH)_2$ = methylphospho-acid, m.105.

$EtPO(OH)_2$ = ethylphospho-acid, m.44.

p.-albumin. An albuminous substance which contains phosphorus. **p.-globulin.** Nucleoalbumin. **p.-lipin.** An ester of a fatty acid containing nitrogen and phosphorus radicals. **p.-nitrogen.** Phosphazote. A fertilizer obtained from urea solution and phosphate rocks. **p.-protein.** See *phosphoprotein.*

phosphoaminolipid. A complex lipid which contains phosphorus and amino-nitrogen. Cf. *phospholipid.*

phosphobenzene. Phosphorobenzene.

phosphocalcite. Pseudo*malachite.*

phosphocarnic acid. Nucleol.

phosphocerite. Rhabdophane.

phosphochalcite. Pseudo*malachite.*

phosphoglobulin. Nucleoalbumin.

phosphogypsum. A gypsum produced in the manufacture of phosphoric acid and used in cement.

phospholeum. A mixture of a phosphate or a phosphoric acid with soap, used to prevent precipitation of the latter in hard water.

phospholipid. A proposed name for phosphatide, *q.v.* Cf. *phosphoaminolipid.*

phospholipin, -lipoid. Phosphatide.

phosphomolybdic acid. $H_3PO_4.12MoO_3.12H_2O$ = 2042.3. A yellow solid used as a reagent.

phosphonic acid. A group of organic compounds of the type, $RO.P.(OH)_2$; as $C_6H_5O.P(OH)_2$, phenyl phosphonic acid. Cf. *phosphinic acid, phospho acid.*

phosphonitrogen. See *phospho-.*

phosphonitryl. The radical =PN. **p. bromide.** Phosphorus bromonitride. **p. chloride.** $PNCl_2$ = 115.9. A substance formed by the action of NH_4Cl on PCl_5. It readily polymerises at 260°C., to a substance closely resembling rubber.

phosphonium. The monovalent radical, $PH_4—$, analogous to ammonium, $NH_4—$. Cf. *-onium.* **p. bromide.** Bromophosphonium. PH_4Br. **p. compounds.** Quaternary phosphines. A group of organic compounds derived from phosphonium hydroxide, PH_4OH, by replacement of its hydrogen atoms. *E.g.*, $R_4P(OH)$, tetra-R-phosphonium hydroxide; R_4PI, tetra-R-phosphonium iodide. The halides easily dissociate. **p. chloride.** Chlorophosphonium. PH_4Cl. **p. hydroxide.** PH_4OH. **p. iodide.** Iodophosphonium, PH_4I.

phospho. The monovalent radical, $(HO)_2PO—$. Cf. *phosphonic acid.*

phosphoprotein. A group of conjugated proteins consisting of a simple protein combined with an unidentified phosphorous compound other than nucleic acid or lecithin.

phosphor. (1) The German for phosphorus. (2) A substance which phosphoresces. **p. bronze.** A hard alloy of copper (82–94 %), tin (9.5–10.8 %), zinc (1.0–2.0 %), phosphorus (0.01–0.1 %), and impurities (0.30 %). Used for suspension threads for galvanometer mirrors on account of its resistance to torque. **p. hydrogen compounds.** See *phosphorus hydrides.* **p. salt.** Microcosmic salt. **p. tin.** A white metallic alloy of phosphorus and tin, m.370.

phosphorate. An organic compound, analogous to a nitrosate, which contains the bivalent

$=P_2O_4$ radical; as, $C_6H_{10}P_2O_4$, cyclohexane phosphorate.

phosphorated. Containing phosphorus; as, p. oil.

phosphorescence. (1) The continuous emission of light from a substance without any apparent rise in temperature, produced after exposure to heat, light, or electric discharges. (2) The luminosity of a living organism; as, glow-worms or deep-sea fishes. (3) In particular, the faint green glow of white, phosphorus exposed to air, due to its slow oxidation. Cf. *luminescence, fluorescence, scattering.*

phosphorescent paint. A luminous paint.

phosphoretted hydrogen. (1) Phosphorus hydrides. (2) Phosphine.

phosphoric. Containing penta-valent phosphorus. **p. acid.** $H_3PO_4 = 98.1$. Orthophosphoric acid, the normal tribasic acid of pentavalent phosphorus. Colorless crystals, d.1.884, m.38, decomp. 213; soluble in alcohol or water. It is marketed as various aqueous solutions: 85 %—Colorless oily liquid, d.1.7, miscible with water or alcohol. 10 %—Dilute phosphoric acid. A clear colorless liquid, d.1.057. Used as a reagent. **di-** Pyro p. **hypo-** See *hypophosphoric acid.* **meta-** $HPO_3 = 80.1$. A clear, very viscous liquid. The reagent sold as "Glacial Metaphosphoric Acid, Sticks" contains 17–18 % Na_2O. **ortho-** Phosphoric acid. **pyro-** $H_4P_2O_7 = 178.11$. A colorless crystalline powder, m.61, soluble in water, alcohol, or ether. All of the above acids are derived from P_2O_5 by the addition of various amounts of water:

$P_2O_5 + H_2O = 2HPO_3$, metaphosphoric acid.
$P_2O_5 + 2H_2O = H_4P_2O_7$, pyrophosphoric acid.
$P_2O_5 + 3H_2O = 2H_3PO_4$, orthophosphoric acid.

p. anhydride. Phosphorus pentoxide.

phosphorite. (1) Apatite. (2) An organic compound analogous to a nitrosite, which contains the divalent $=P_2O_3$ radical; as, $C_6H_{10}P_2O_3$, cyclohexane phosphorite.

phosphorobenzene. $C_{12}H_{10}P_2 = 216.12$. Phosphobenzene; PhP:PPh. A pale yellow powder, m.149, insoluble in water.

phosphorometer. An optical instrument, in which the duration of a phosphorescence phenomenon is measured in terms of the rate of rotation of radiometer vanes.

phosphorous. (1) Phosphorescent. (2) Describing a compound of trivalent phosphorus. **p. acid.** $H_3PO_3 = 82.1$. Orthophosphorous acid. Yellow crystals, d.1.651, m.70, decomp. 200; soluble in water, alcohol or ether. Used as a reagent and reducing agent. **ethyl-** Ethylphosphite. **hypo-** $H_3PO_2 = 66.1$. A colorless liquid, d.1.493, m.27, decomp. by heat, slightly soluble in water. Its salts are the hypophosphites.

phosphorus. P = 30.98 and $P_4 = 123.92$. A non-metallic element of the nitrogen group, atomic number 15, with several allotropic modifications:

(1) *Ordinary, yellow, white* or *regular* p. Regular white crystals, usually compressed into yellow wax-like sticks, d.1.82, m.44, b.200, insoluble in water, and stored under water and protected from light (which changes it into the red form). Three forms of yellow p. are known, α-, β, and γ- respectively; γ- m.46.

(2) *Red, "amorphous"* p. A brownish red powder of rhombohedral crystals, d.2.2, m.72, b.350; insoluble in water or carbon disulfide. Formed by heating yellow p. to 240°C; non-poisonous and non-luminous.

(3) *Violet* p. A crystalline solid, d.2.4, m.590.

(4) *Metallic, rhombohedral* or *α-black* p. A black powder d.2.34, obtained by heating P in a sealed tube with molten lead. It is a non-conductor of electricity.

(5) *Black*, or *β*-black p. A black powder, d.2.7, m.588; it is a fairly good electrical conductor.

P. was discovered in 1669 by the alchemist H. Brandt of Hamburg, and was prepared independently by Boyle and Kunkel. It forms 3 main series of compounds, derived from tri- and penta-valent P:

valency:	
−3 PH_3, phosphine;	PH_4X, phosphonium.
+1 P_2O, p. monoxide;	H_3PO_2, hypophosphorous acid.
	M_3PO_2, hypophosphites.
+3 P_2O_3, p. trioxide;	H_3PO_3, phosphorous acid.
	M_3PO_3, phosphite.
PX_3, phosphorous-;	HPO_2, metaphosphorous acid.
	MPO_2, metaphosphite.
+4 P_2O_4, p. tetroxide;	$H_4P_2O_6$ or H_2PO_3, hypophosphoric acid.
	$M_4P_2O_6$ or M_2PO_3, hypophosphate.
+5 P_2O_5, p. pentoxide;	H_3PO_4, phosphoric acid.
PX_5, phosphoric-;	HPO_3, metaphosphoric acid.
POX_3, phosphoryl-;	$H_4P_2O_7$, pyrophosphoric acid.
	M_3PO_4, phosphate.
	MPO_3, metaphosphate
	$M_4P_2O_7$, pyrophosphate.

amorphous- See (2). **Baldwin's-** A phosphorescent form of commercial fused calcium nitrate. **black-** (1) See (4). (2) See (5). **Bologna-** A luminescent barium sulfide. **Canton-** q.v. **Homberg's-** Phosphorescent calcium chloride, made by heating lime and ammonium chloride. **metallic-** See (4). **ordinary-** See (1). **radio-** The isotope of mass 30. Cf. *radio elements.* **red-** See (2). **regular-** See (1). **rhombohedral-** See (4). **salt of-** The acid sodium ammonium phosphate, $NaNH_4HPO_4$, used for bead tests. **scarlet-** A scarlet powder, intermediate in activity between red and yellow p.; used for matches. **violet-** See (3). **vitreous-** See (1). **white-** See (1). **yellow-** See (1).

p. bromides. PBr_3, p. tribromide; PBr_4, p. tetrabromide; PBr_5, p. pentabromide. **p. bromonitride.** $PNBr_2 = 204.86$. Phosphonitrile bromide. Rhombic crystals, m.190. **p. chloride.** See *p. dichloride, trichloride, pentachloride.* **p. dichloride.** $P_2Cl_4 = 203.85$. An oily fuming liquid, decomp. by water. **p. diiodide.** $P_2I_4 = 569.76$. A yellow-reddish solid, m.110; soluble in carbon disulfide. **p. group.** The sixth group of the periodic system, composed of the elements N, P, As, Sb, and Bi. **p. halides.** The halogen compounds of p. **p. hydrides.** (1) *gaseous-* $PH_3 = 34.1$. Phosphine, phosphoretted hydrogen, hydrogen phosphide. A colorless gas of characteristic odor, poisonous, d.1.17, m. −133, b. −86; slightly soluble in water, readily soluble in alcohol or ether. (2) *liquid-* $P_2H_4 = 66.1$. A colorless liquid, d.1.01, m. −10, b.51; insoluble in water. (3) *solid-* $P_{12}H_6 = 378.5$. Colorless crystals, decomp. by heat, d.1.83; insoluble in water or

alcohol. **p. monoxide.** P_2O = 78.05. A white solid. **p. oxides.** P_2O, p. monoxide; P_2O_3, p. trioxide; P_2O_4, p. tetroxide; P_2O_5, p. pentoxide; P_4O, p. suboxide (doubtful). **p. oxychloride.** Phosphoryl chloride. **p. pentabromide.** PBr_5 = 430.6. A yellowish crystalline mass, m.100, b.106, decomp. by water; used in organic synthesis. **p. pentachloride.** PCl_5 = 208.34. Yellow rhombic crystals, fuming on exposure to air, d.3.6, m.148 (under pressure), b.160 (sublimes), decomp. by water, soluble in carbon disulfide. Used as a reagent; and in organic synthesis, as a chlorinating agent. **p. pentafluoride.** PF_5 = 126.1. A colorless irritant gas, m. −83, b. −75. **p. pentaselenide.** P_2Se_5 = 458.08. A black solid, decomp. by heat. **p. pentasulfide.** P_2O_5 = 222.4. Bright yellow or gray crystalline masses, d.2.09, m.270, b.535, decomp. by water; soluble in carbon disulfide. Used in organic synthesis. **p. pentoxide.** P_2O_5 = 142.1. An amorphous white powder, d.2.38; soluble in water with liberation of heat and formation of metaphosphoric acid. Used as a dehydrating agent for drying gases, and as a reagent. **p. suboxide.** P_4O. Probably a mixture of red phosphorus and $P_{12}H_6$. **p. tetroxide.** P_2O_4 = 126.1. Colorless orthorhombic crystals, d.2.537, m.100, b.180; soluble in water. **p. tribromide.** PBr_3 = 270.8. A colorless fuming liquid, d.2.88, m. −41, b.175, decomp. by water, soluble in ether or carbon disulfide; used in organic synthesis. **p. trichloride.** PCl_3 = 137.4. A clear fuming liquid, d.1.613, m. −112, b.76, decomp. by water, soluble in ether or carbon disulfide. Its vapors are very poisonous; used in organic synthesis. **p. triiodide.** PI_3 = 411.8. Red prisms, m.61, decomp. by heat or water; soluble in carbon disulfide. Used in organic synthesis. **p. trioxide.** P_2O_3 = 110.1. Phosphorous anhydride. Colorless monoclinic crystals, d.2.135, m.22.5, b.173; soluble in water, ether or carbon disulfide. **p. trisulfide.** P_2S_3 = 158.3. A crystalline, grayish-yellow mass, m.290, b.490, decomp. by water; soluble in alcohol, ether or alkalis. Used in organic chemistry as a reagent.

phosphoryl. The trivalent ≡P:O radical. **thio-** The radical ≡PS. **p. bromide.** $POBr_3$ = 286.8. A crystalline solid, d.0.822, decomp. by water, m.55, b.195. **p. chloride.** $POCl_3$ = 153.42. Phosphorous oxychloride. A colorless fuming liquid, d.1.711, m. −1.5, b.110. Used as a reagent and catalyst in chlorination and dehydration. **p. fluoride.** POF_3 = 104.03. A colorless, fuming liquid, b. −40. **p. nitride.** PON = 61.05. An insoluble white solid. **p. triamide.** $PO(NH_2)_3$ = 95.12. An insoluble white solid, decomp. by heat.

phosphotungstate. Phosphowolframate. A salt of phosphotungstic acid.

phosphotungstic acid. $WO_3.2H_3PO_4$ = 428.2. Phosphowolframic acid. Green crystals, soluble in water, alcohol or ether; used as a reagent for alkaloids (Scheibler's reagent) and for albumin (Salkowski's reagent).

phosphowolframate. Phosphotungstate.

phosphowolframic acid. Phosphotungstic acid.

phosphurane. Phosphene.

phosphuranolite. The mineral $(UPb)O.P_2O_5$, xH_2O.

phosphuretted. Containing phosphorus in its lowest stage of oxidation. **p. hydrogen.** (1) See *phosphorus hydrides*. (2) Phosphine.

phostonic acid. A compound of the type

phot. A unit of intensity of illumination: 1 phot = 1 lumen per square centimeter = 10,000 lux = 1000 milliphots. Cf. *photometric, lux, lumen.*

photic. Pertaining to radiations.

photics. A synonym for optics.

photo- Pertaining to light.

photo-actinic. The emission of visible and ultraviolet rays having photo-chemical activity.

photobacteria. Any light-producing or phosphorescent vegetable microorganism.

photobiotic. Pertaining to organisms that live habitually in the light.

photocatalysis. The acceleration of certain reactions when exposed to light.

photocatalyst. A substance that aids photochemical reactions; as, chlorophyll in photosynthesis.

photochemical. Pertaining to the chemical effects of light. **p. activation.** See *irradiation.* **p. catalysis.** The acceleration of a reaction by light. Cf. *p. reaction.* **p. dissociation.** The splitting of a molecule into its component atoms at low pressure and low temperature by the influence of light; as, $H_2 \rightarrow 2H$. Cf. *p. excitation.* **p. effect.** The chemical changes produced by the influence of light; as, polymerization, allotropic changes, isotropic changes, hydrolysis, oxidation, reduction, synthesis and dissociation. **p. equivalent.** The one quantum of energy, $h\nu$, absorbed by one molecule; it will activiate or excite one molecule. Hence, by measuring the total radiation, E, the number of activated molecules, n, is obtained by the simple relation $E = nh\nu$. **p. excitation.** Dissociation of excited atoms; as, $H_2 \rightarrow 2H^*$. Cf. *p. dissociation.* **p. induction.** Draper effect. The period which elapses between the exposure of reactants to light and the p. reaction which occurs as a consequence. **p. processes.** A reaction in which light energy is stored as chemical energy; as, in photosynthesis. **p. reaction.** A reaction induced, or whose speed is influenced, by light.

photochemistry. A branch of science that studies the relations between light and chemical action, particularly the transformation of radiant energy into chemical energy and the reverse. Cf. *photosynthesis, irradiation, luminescence.*

photoconductivity. The property of a substance of conducting electricity when illuminated.

photodynamic. Describing a substance that is fluorescent in light; as, chlorophyll, hemoglobin, acridine.

photoelectric cell. A generic term for a device which produces changes in an electric circuit by the action of light. There are 3 main types: (1) Photoconductive (*e.g.*, the selenium cell, q.v.). (2) Photo-emissive (*e.g.*, the alkali cell) in which an emission of electrons occurs in a vacuum or across a gas-filled space. (3) Photovoltaic (*e.g.*, the rectifier cell) which depends on contact between a metal and a semi-conductor (such as selenium). **p. effect.** Hallwach's effect. The discharge of electrons from the surface of a metal under the influence of light, leaving the metal positively charged. Cf. *excitation, Edison effect.*

photoelectricity. The transformation of light into electricity; as, in the photoelectric effect.

photoelectrometer. Photogalvanometer.

photoelectrons. The electrons emitted from the surface of a medium under the influence of light.

photoflavins. A group of 9-alkylated alloxazins.

photofluoroscope. A fluorescent screen used to make x-rays visible.

photogalvanometer. An electroscope whose swinging mirror reflects a beam of light, which can be recorded on a film. Used to measure minute quantities of light falling on a photosensitive cell, the current of which is recorded by the electroscope. Cf. *microphotometer.*

photogen. Boghead naphtha. A constituent of vegetable or animal organisms that causes their luminescence.

photograph. A picture or image produced and fixed on a chemically-sensitive surface. **micro-** An enlargement of small objects made by means of the microscope and camera. **microscopic-** A p. which shows the object in a size much less than normal.

photographic. Pertaining to methods of recording or reproducing images by the action of light on light-sensitive surfaces. **p. brightness.** See *spectral classification.* **p. chemicals.** The substances used for developing, fixing, toning and sensitizing. **p. developer.** An organic reducing agent, such as pyrocatechol or metol, used to develop an image by the reduction of the light-exposed silver salts to metallic silver. **p. film.** A transparent and flexible sheet of cellulose coated with a light-sensitive emulsion. **p. filter.** See *color filter.* **p. intensifier.** A substance by which an image is intensified, as mercuric chloride. **p. negative.** An image in which the light-values are inverted; *e.g.*, black appears white, and white appears black. **p. paper.** A paper coated with a light-sensitive chemical, as silver salts or ferrocyanides. **p. plate.** A glass plate coated with a light-sensitive emulsion (see *chromatic*). **p. positive.** An image copied from a p. negative, in which the light values appear in their true shades. **p. reducer.** A substance that reduces or bleaches the density of an image; as, ferrocyanides. **p. screens.** See *color filter.* **p. sensitizer.** A dye which, when added to the light-sensitive surface of a p. plate, film or paper, increases its sensitivity toward certain wavelengths of light (see *photosensitizer*). **p. spectrum.** The range of wavelengths (in 0.1 A.U.) which can be recorded by photography. The *ordinary* range for glass lenses and ordinary plates or films extends from ultraviolet (300) to yellow (550); the *extended* range, for quartz lenses and plates or films sensitized by dyes, extends from extreme ultraviolet (210) to infrared (920) (see illustration).

photography. The art and technic of recording visible objects by light-sensitive plates or films, and copying them on light-sensitive papers or other media. **color-** The production of colored images by physical or chemical technic other than hand-coloring.

photogravure. See *gravure.*

photohalide. A halogen salt that is sensitive to light.

photohyalography. Etching glass by a photomechanical process.

photoisomeric change. The transformation of one isomer into another by the action of light.

photolysis. Decomposition or chemical action effected by the action of light on a substance in solution. Two types:

(a) photolyte alone is active; *e.g.*, decomposition of H_2S in hexane.

(b) photolyte reacts with solvent; *e.g.*, decomposition of H_2S in water.

photolyte. A substance that is decomposed by light.

photolytic. Pertaining to the decomposition or dissociation of a substance by means of radiant energy.

photomacrograph. Macrograph. A photographic enlargement.

photomagnetism. Describing magnetic phenomena produced by the influence of light.

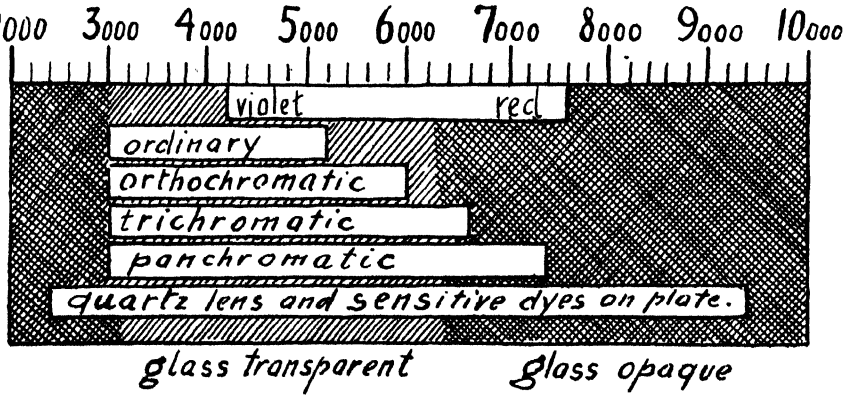
photometer. A device for measuring the intensity of light; used for the accurate determination and comparison with standards of illuminants or sources of illumination. Cf. *turbidimeter, nephelometer, dispersimeter, colorimeter, exposure meter, actinometer, leucoscope.* **micro-** See *microphotometer.* **spectro-** A device for measuring the intensity of spectral lines, generally by comparison of the densities of their photographic images.

photometric. Pertaining to the measurement of the intensity of light. **p. curve.** See *photomicrograph.* **p. standards.** The intensity of light is measured by:

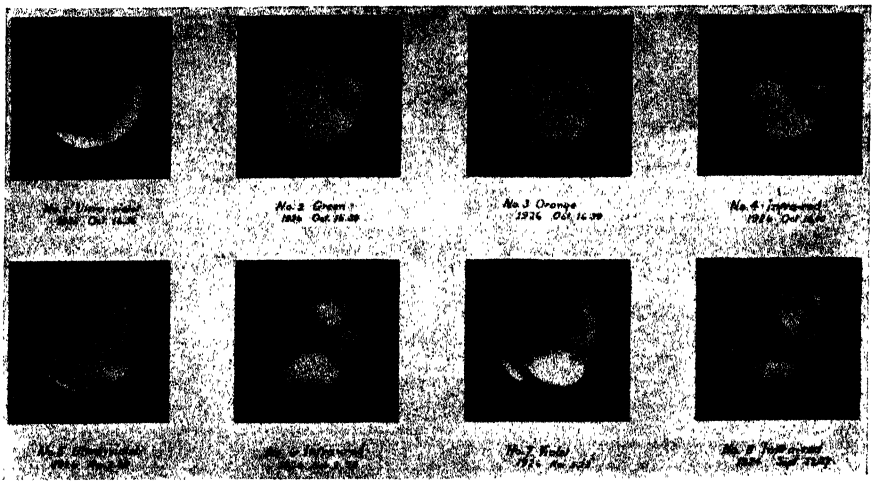
1 standard English sperm candle = 1 candle.

Standard Hefner lamp, burning amyl acetate, = 0.9 candle.

Standard Carcel lamp, burning colza oil = 9.6 candles.



Photographic spectrum.



Photosensitizers.

Application to photography through the atmosphere of a planet. Mars taken with lights of different colors by W. H. Wright at Lick Observatory.

Standard pentane lamp, burning pentane (International candle) = 10.0 candles.

For scientific work the "phot" is used for intensity, and the "lumen" for luminosity.

photometry. (1) A branch of physics dealing with the measurement of the intensity of light. (For the quality of light, see *spectroscopy, polarimetry;* for general properties of light, see *optics, radiations.*) (2) The measurement of the density of photographic images for the purpose of finding the brightness of a light source.

photomicrograph. (1) Micrograph. The magnified photograph of a microscopic object obtained by means of a microscope attached to the camera. (2) Photometric curve. The line made by a beam of light reflected from the mirror of an electroscope, and falling on a photosensitive surface; as in a polarograph or spectrophotometer.

photon. (1) A corpuscle or particle of light analogous to the electron and magneton. Light or x-rays consists of a stream of energy quanta, each quantum having energy, $h\nu$, and momentum, $h\nu/c$. (2) A structure in which the electron revolves around the proton at a distance equal to the electron radius; photon (*quantum*) = (proton + electron). Cf. *neutron, neutrino.*

photoperiodism. The rhythmic changes in the composition of the cell sap of living plants, due to the effect of light.

photophone. An instrument that transforms radiant energy into sound waves by means of selenium which alters in electrical resistance on exposure to light. Cf. *optophone.*

photophoresis. The motion of small particles under the influence of light; it is either towards (positive) or away from (negative) the light source. Cf. *radiation pressure.*

photopic. See p. *spectrum.*

photopolymerization. A condensation reaction of two or more molecules of a substance under the influence of light.

photoproduct. A substance synthesized in a living organism by the action of light; cf. precursor.

photoreaction. A chemical reaction that occurs under the influence of light.

photosensitivity. (1) The capacity of an organ or organism to be stimulated to activity by light. (2) The absorption of a certain portion of the spectrum by a chemical system. Cf. *irradiation.*

photosensitizer. A dyestuff (as aurine) which, when added to the substance of a photographic plate, increases the plate sensitiveness by absorbing the light of the wavelengths to which it best responds. Two groups:

A. halogenated fluoresceins, as
- eosin..... sensitizes for yellow-green
- erythrosin..... sensitizes for yellow-green

B. Derivatives of pyridine, quinoline and acridine,

1. *Isocyanins:*
   - pinaflavole..... green
   - orthochrome T... green
   - pinaverdol..... orange
   - pinachrome..... orange
   - acridine orange... orange
   - ethylred..... orange red, λ6500 Å.U.
2. *Carbocyanins:*
   - pinacyanole..... red λ6800
   - naphthocyanole..... deep red λ7500
   - dicyanin..... infrared λ9000
   - kryptocyanin ..... extreme red λ8000
   - mesocyanin..... infrared λ9000
   - neocyanin..... infrared λ10000
   - xenocyanin..... infrared λ10000

Cf. *photographic spectrum, chromatic plates, cyanin.* See illustration.

photosphere. The outer or radiating surface of the sun, which is probably composed of incandescent clouds in a less luminous medium (cf. *chromosphere*), and is the source of the luminous portion of the solar spectrum.

photostable. Describing a substance that is not changed by light.

photosynthesis. (1) Synthesis caused by light. (2) The most important reaction of all green plants in synthesizing glucose from carbon dioxide and water by the catalytic action of chlorophyll and absorption of light and heat:

$$6CO_2 + 5H_2O + 671{,}000 \text{ calories} = C_6H_{10}O_6 + 6O_2.$$

This is followed by the polymerization of glucose to starch.

photosyntometer. A device to demonstrate photosynthesis of plants.

phototaxis. Phototropism. The response of cells or organisms to light; as, phototropism.

phototropism. The movement of living cells or organs toward the light.

phototropy. (1) A reversible change of color induced by colored light; as, in fulgides. (2) The change in or loss of color of dyestuffs in light of a specific wave-length.

photovoltaic effect. A change in potential of an electrode due to exposure to light.

photronic cell. Photoelectric cell.

phrenosin. $C_{48}H_{93}NO_9$ = 827.72. A cerebroside isolated from brain substance; it is hydrolysed to sphingosine, phrenosinic acid and galactose.

phrenosinic acid. $C_{24}H_{48}O_3$ = 384.38. Cerebronic acid, neuro stearic acid, $Me(CH_2)_{21}$.CHOH.COOH. A hydroxy acid found in phrenosin, which combines with bacterial toxins.

phrynin. A poisonous protein obtained from the skin secretions of toads. (See *bufonin.*)

phthalal. The tetravalent radical, $=CH.C_6H_4.CH=$.

phthalaldehyde. Phthalic aldehyde.

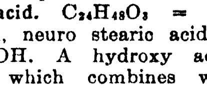
phthalaldehydic acid. $C_8H_6O_3$ = 150.1. Orthoaldehyde benzoic acid, o-formylbenzioc acid, $C_6H_4(CHO)COOH$. Colorless crystals, m,97; used in organic synthesis. **5.6-dimethoxy-** Opianic acid. **5.6-dioxy-** Noropianic acid.

phthalamic acid. $C_8H_7O_3N$ = 165.1. Phthalaldehyde acidamide, o-carbamylbenzoic acid.

$C_6H_4(CONH_2)COOH$ or 
Colorless crystals, m.148; soluble in alcohol. **phenyl-** Diphenamic acid.

phthalamide. Phthaldiamide.

phthalanil. $C_{14}H_9O_2N$ = 223.1. *N*-phenylphthalimide.

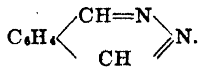


sym.- A colorless crystalline powder, m.220; soluble in alcohol or ether. **asym.-** m.208 (sublimes).

phthalanone. Phthalide.

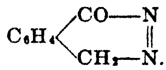
phthalate. A salt of phthalic acid containing the divalent $C_6H_4(COO)_2=$ radical; used for buffers (q.v.), standard solutions and in vacuum pumps (q.v.). **diamyl-** $C_{18}H_{26}O_4$ = 306.2. $C_6H_4(COOC_5H_{11})_2$. A colorless liquid, d.1.023, b.340; used as plasticizer. **dibutyl-** $C_{16}H_{22}O_4$ = 278.2. A colorless liquid, d.1.046; m. −35, b.340. Used as plasticizer. **diethyl-** $C_{12}H_{14}O_4$ = 222.2. A colorless liquid, d.1.119, b.290; used as plasticizer.

phthalazine. $C_8H_6N_2$ = 130.1. β-benzo-o-diazine, β-phenodiazine, 2.3-benzodiazine.



Colorless crystals, m.91, b.316, soluble in alcohol or ether. **benzo-** See *benzophthalazine.* **dihydroketo-** Phthalazone. **oxy-** Phthalazone. **tetrahydro-** $C_8H_{10}N_2$ = 134.1. The 1.2.3.4-tetrahydro derivative of phthalazine.

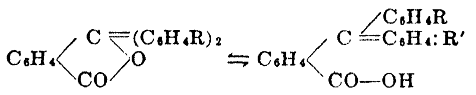
phthalazone. $C_8H_6ON_2$ = 146.06. 1-oxyphthalazine, dihydroketophthalazine.



Colorless crystals, m.183, b.337, soluble in alcohol or ether; used in organic synthesis. **benzyl-** Benzylphthalazone.

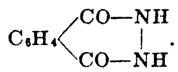
phthaldiamide. $C_8H_8O_2N_2$ = 164.2. Phthalamide, phthalic diamide. $C_6H_4(CONH_2)_2$. A crystalline powder, m.220 (decomp.); insoluble in water, soluble in alcohol.

phthaleins. A group of intensely-colored organic compounds and dyes derived from phthalophenone by the substitution of its hydrogen atoms by hydroxyl or amino groups. They are prepared by fusing phthalic anhydride with phenols, and are related to the colorless leuko-compounds (phthalines). (See *phthalein indicators, phenolphthalein, fluorescein.*)



where R is OH or NH_2, and R′ is =O or =NH in the para position. Cf. *indicators.* **cresolsulfon-** See *cresol red, cresol purple.* **phenol-** See *phenolphthalein.* **phenolsulfon-** Phenol red. **phloroglucinol-** Gallein. **resorcinol-** Fluorescin. **thymolsulfon-** Thymol blue.

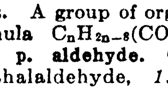
phthalhydrazide. $C_8H_6N_2O_2$ = 162.05.



3-**amino-** Luminol.

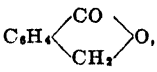
phthalic acid. $C_8H_6O_4$ = 166.1. Alizarinic acid, *1.2*-benzenedicarboxylic acid*, orthobenzene-dicarboxylic acid, $C_6H_4(COOH)_2$. Colorless rhombic crystals, d.1.58, m.213, slightly soluble in water, soluble in alcohol or ether; used in organic synthesis and in the manufacture of dyes. **iso-** Meta-. Colorless needles, m.300 (sublimes). **meta-** Isophthalic acid. **ortho-** Ordinary phthalic acid. **para-** Terephthalic acid. **tere-** or para- Terephthalic acid. **dimethoxy-** Hemipinic acid. **dimethyl-** Cumidic acid. **homo-** See *homophthalic acid.* **hydroxy-** See *hydroxyphthalic acid.* **hydroxymethyl-** Coccinic acid. **methyl-** See *xylidic* and *uvitic acid.*

p. a. series. A group of organic acids of the general formula $C_nH_{2n-8}(COOH)_2$. Cf. *aromatic acids.* **p. aldehyde.** $C_6H_4(CHO)_2$ = 134.09. Phthalaldehyde, *1.2*-benzenedicarbonal*. It exists in forms corresponding with those of phthalic acid. *ortho-* m.52. *iso-* m.89. *tere-* m.116. **p. anhydride.** $C_8H_4O_3$ = 148.07. Phthalandione.



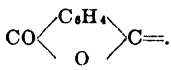
obtained by heating phthalic acid. Large white prisms, d.1.527, m.128, b.284, slightly soluble in water, soluble in alcohol or ether; used extensively in organic synthesis. *dimethoxy-* Hemipinic anhydride. **p. amide.** Phthaldiamide. **p. diamide.** Phthaldiamide. **p. nitrile.** Phthalonitrile.

phthalide. $C_8H_6O_2$ = 134.09. Isobenzofuranone, *1*-phthalanone. The heterocyclic compound,

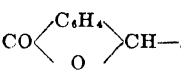


and anhydride of o-hydroxy-methylbenzoic acid. Colorless crystals, m.68, b.290; soluble in alcohol or ether. **acetoxy-** See *acetoxyphthalide*. **benzal-** See *benzalphthalide*. **benzilidene-** Benzalphthalide. **bisbihydroxyphenyl-** Phenolphthalein. **bisbihydroxytolyl-** Cresolphthalein. **diindyl-** Indophthalein. **dimethoxy-** Meconin. **xanthilidene-** Fluoran.

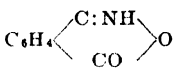
phthalidene. The bivalent radical,



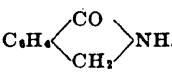
phthalidyl. The monovalent radical,



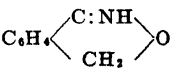
phthalimide. $C_8H_5O_2N$ = 147.1. *o*-Phthalic imide, *1.3*-isoindoledione. The heterocyclic compound,  , obtained by treating phthalic anhydride with ammonia. Colorless crystals, m.228 (sublimes); used in organic synthesis. **iso-** A tautomer of phthalamide,



phthalimidine. C_8H_7ON = 133.1. *1*-Isoindolinone. The heterocyclic compound,

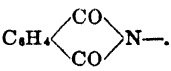


Colorless crystals, m.150, b.337, soluble in alcohol or ether; used in organic synthesis. **pseudo-** The heterocyclic compound:

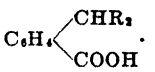


benzyl- See *benzylphthalimidine*.

phthalimido. The monovalent radical,



phthalines. A series of colorless compounds which, on reduction, form phthaleins.



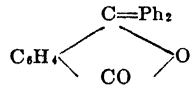
phthalizine. Phthalazine.

phthalocyanins. A group of colored compounds related to the porphyrins, (q.v.), containing 4 isoindole rings linked in a 16-membered ring of alternate C and N atoms around a central atom, usually a metal (Cu or Fe). Cf. *porphin, monastral blue*.

phthalonic acid. $C_9H_6O_8$ = 194.1. Carbobenzoylformic acid, *o*-carboxyphenyl glyoxylic acid. $COOH.C_6H_4CO.COOH.2H_2O$. White crystals, m.140, soluble in water, alcohol and ether. Cf. *terephthalonic acid*. **p. anhydride.** $C_9H_4O_4$ = 176.03.  . A solid, m.186.

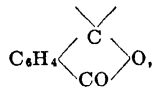
phthalonitrile. $C_8H_4N_2$ = 128.05. Dicyanobenzene, $C_6H_4(CN)_2$. **m-.** Isophthalic nitrile. Colorless crystals, m.161. **p-.** Terephthalic nitrile. Colorless crystals, m.222. **homo-** Cyanobenzyl cyanide. **iso-** m-. **tere-** p-.

phthalophenone. $C_{20}H_{14}O_2$ = 286.21. Benzoylbenzophenone, diphenylphthalein. The anhydride of the hypothetical triphenyl-carbinol-o-carboxylic acid, and parent substance of the phthaleins and phthalins:



Colorless leaflets, m.115, slightly soluble in water, soluble in alcohol or ether; used in organic synthesis. **dihydroxy-** Phenolphthalein.

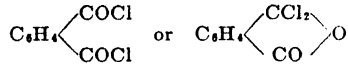
phthaloyl. The bivalent radical,



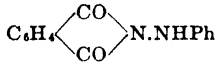
derived from phthaleins or phthalophenone.

phthaluric acid. $C_{10}H_7O_4N$ = 205.1. A colorless crystalline substance, m.192.

phthalyl. The bivalent radical, $C_6H_4(CO)_2$=, derived from phthalic acid. **di-** See *diphthalyl*. **p. alcohol.** *1.2*-Xylenediol. **p. chloride.** $C_8H_4O_2Cl_2$ = 202.99. *1.2*-Benzenedicarbonyl chloride*. *ortho-* A colorless oily liquid, b.276, soluble in ether; either:



meta- m.41, b.275; *para-* m.77, b.260. **p. hydrazine.** $C_8H_6O_2N_2$ = 162.1. The heterocyclic compound,  . Colorless crystals, m.200. **p. phenylhydrazide.** $C_{20}H_{18}O_2N_4$ = 346.3. $C_6H_4(CO.NH.NHPh)_2$. Colorless crystals, m.161, used in organic synthesis. **p. phenylhydrazine.** $C_{14}H_{10}O_2N_2$ = 238.10. *alpha-*



Colorless crystals, m.178; soluble in alcohol. *beta-*  . Colorless crystals, m.210. **p. hydroxamic acid.** $C_8H_6O_3N$ = 163.05. The heterocyclic compound,  .

Colorless crystals, m.230; slightly soluble in water, soluble in alcohol or ether.

phthioic acid. $C_{26}H_{52}O_2$ = 396.35. A saturated fatty acid, m.48, from human and avian tubercle bacilli; an isomer of cerotic acid.

phthoric acid. An obsolete name for hydrofluoric acid.

phtiocol. A pigment associated with carotene, q.v.

phycinic acid. An acid obtained from the alga *Protococcus vulgaris*. White, needles, m.136; insoluble in water, soluble in alcohol.

phycite. Erythritol.

phycocerythrin. A globulin.

phycochrome. A bluish-green, chlorophyll-like pigment in various fresh water algae.

phycocyanin. A blue pigment in the Cyanophyceae, or blue-green algae; active in photosynthesis.

phycoerythrin. The red pigment of the Florideae, or brown algae; active in photosynthesis.

phycology. A branch of botany dealing with seaweeds or algae.

Phycomycetes. An order of thallophytes (q.v.); algal fungi.

phycophaein. The brown pigment of certain algae.

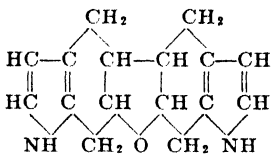
phyllanthin. $C_{30}H_{37}O_8$ = 525.3. A glucoside from *Phyllanthus niruri*, an Euphorbiaceae. Colorless needles, insoluble in water, soluble in alcohol or ether.

phyllins. The derivatives of chlorophyll.

phyllite. Chloritoid.

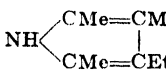
phylloerythrin. A split-product of chlorophyll occurring in the stomachs of herbiverous animals, and identical with the porphyrin of human feces. Cf. *chlorophyll-a*, *porphin ring*.

phylloporphyrin. $C_{16}H_{18}ON_2$ = 254.2. A split-product of chlorophyll:



See *porphyrin*, *porphin ring*.

phyllopyrrole. $C_9H_{15}N$ = 137.1. A pyrrole fragment of the porphin ring, q.v.,



White plates, m.69, b.87.

phylloquinones. See *vitamin K*.

phyllyrin. $C_{24}H_{34}O_{11}$ = 498.3. Colorless shining leaflets, used as an antipyretic.

phylo- See *phyllo-*.

phylum. One of the primary divisions of the animal or plant kingdom. The animal kingdom is divided into twelve, and the plant kingdom into four phyla.

physalin. $C_{72}H_{116}O_4$ = 1045.0. A carotinoid pigment found in the sepals of *Physalis alkekengi* and *Ph. franchetti*, winter cherry, and in the berries of *Lysium halmifolium*, goats thorn. A yellowish powder; slightly soluble in water, soluble in alcohol or ether.

physalite. The mineral Al_2O_3, SiO_2.

physcic acid. Physcion.

physcion. $C_{16}H_{12}O_5$ = 284.09. Physcic acid, chrysophyscin, parietin. A crystalline principle, m.207, from the lichen, *Parmelia* (*Physcia*) *parietina*.

physeteric acid. $C_{14}H_{26}O_2$ = 226.2. *5.6*-Tetradecenoic acid*, $Me(CH_2)_7CH:CH(CH_2)_3COOH$. A constituent of sardine and whale oils.

physetoleic acid. $C_{16}H_{30}O_2$ = 254.24. Hypogaeic acid. An unsaturated acid of the oleic acid series, $C_{15}H_{29}COOH$, and a constituent of tallow. A white waxy mass, m.30; insoluble in water, soluble in alcohol.

physic. (1) Medicine. (2) Cathartic. Purgative. (3) Puddling or working molten iron in order to remove impurities.

physical. Pertaining to physics or the energy-relations of substances. **p. analysis.** Testing or determining the physical properties of a material. **p. chemistry.** A branch of science that deals with the physical properties of substances and employs physical methods, either experimental or theoretical, to solve chemical problems. It is subdivided into electro-chemistry, thermo-chemistry and thermodynamics, optical methods, radiochemistry and photochemistry. **p. properties.** Properties which can change without involving a change in chemical composition; as, melting point, boiling point, density, atomic weight, atomic distance, optical refractivity, conductivity, compressibility, etc. **p. solution.** A solution from which the solute can be recovered chemically unchanged. **p. test.** A mechanical test to determine mechanical properties; as, hardness, compressibility.

physicochemical. Pertaining to physical chemistry.

physics. The science of energy. A branch of science that deals with the phenomena produced by forces acting upon matter, and the changes and transformations occurring in Nature that do not involve a change in the composition of the material. Thus, in its broadest sense it deals with the fundamental laws of the material universe. Physics is conventionally subdivided into mechanics, heat, electricity, magnetism, light, and radioactivity. A more elaborate classification is:

Theoretical Physics

The doctrine of the *cause* of physical phenomena, or the purely abstract aspect of force and motion:

1. Dynamics—The motion of bodies.
   a. kinematics, or the types of possible motions without consideration as to cause.
   b. kinetics, or the relation of motion to force.
   c. statics, or forces that produce equilibrium.
   d. energetics, or the transmission of forces.
2. Mass-Physics—The mechanics of bodies, as work and energy, gravitation, vibrations (sound).
3. Molecular-Physics—The motion of molecules as shown in the phenomena of temperature and states of aggregations.
4. Atomic-Physics—The motion of atoms, their disintegration and structure.
5. Ether-Physics:
   a. ether vibrations—radiant energy
   b. ether stress—electro-statics
   c. ether vortices—magnetism
   d. ether flow—electro-kinetics
   e. ether radiation—electric and heat waves.
6. Astro-physics: The interpretation of stellar spectra and the measurement of stellar radiations.

Practical Physics

The doctrine of the *appearance* of physical phenomena, or the experimental basis of our physical knowledge:

1. Mechanics—the relation of matter to force.
   a. dynamics—the action of forces on bodies in general.
   b. hydraulics—the forces acting on and in liquids.
   c. pneumatics—the action of forces on gases.
   d. acoustics—the production and transmission of sound waves.
2. Optics—the nature and properties of light.

3. Thermodynamics—the relationships of heat and energy.
4. Electrostatics—static or stationary electric charges.
5. Electrodynamics—moving charges, or an electric current.

Applied Physics

The study of the *effects* of physical phenomena on or their application to the welfare and comfort of man.

1. Engineering concerned with the direct welfare of man:
   a. Structural E.—the construction of buildings.
   b. Sanitary E.—The disposal of waste and refuse.
   c. Agricultural E.—the methods of increasing crops by irrigation, rapid harvesting, etc.
2. Engineering concerned with the production of objects:
   a. Mechanical E.—the construction of machines and labor-saving devices.
   b. Mining E.—the excavation of mines and the treatment of ores.
   c. Chemical E.—The production of chemicals and useful substances.
3. Engineering applied to transport and transmission:
   a. Civil E.—the construction of roads and bridges.
   b. Hydraulic E.—the utilization of water power.
   c. Steam E.—the construction and operation of steam engines and heating plants.
   d. Electrical E.—the construction and operation of electrical machines and transmissions.
   e. Railroad E.—The construction and operation of railroads and terminals.
   f. Marine E.—The construction and operation of ships and wharves.
   g. Aerial E.—The construction and operation of airships and aeroplanes, hangars and landing-fields.

classical- The branch of p. dealing with the mechanical, thermal, optical and electrical properties of matter. **modern-** The branch of p. dealing with the relations among atoms, electrons, photons, quanta and radiation.

physiochemical. Biochemical.

physiography. Physical geography. The study of the general properties of our earth and atmosphere.

physiological. Pertaining to the functions and activity of living organisms (plants, animal and man), especially in their normal condition, as opposed to their diseased (pathological) state. **p. action.** The effect of a substance on living organisms. **p. chemistry.** A branch of science that studies the chemical changes in normal living organisms (plant, animal or man); especially the chemical activity of the normal protoplasm. **p. salt solution.** (1) Normal saline. An isotonic solution of sodium chloride in water, usually 9 grams per liter. (2) A solution of salts in water resembling the salts of normal blood serum and consisting of:

0.25 gm. calcium chloride,
0.10 gm. potassium chloride,
9.00 gm. sodium chloride,
1000.00 cc. water.

physiology. A branch of science that deals with the functions and biological activities of living organisms; such as, respiration, metabolism, reproduction and growth. **animal-** The functions of the animal organism and its parts. **human-** The functions of the human organism, apart from its mental aspect. **plant-** The functions of plants and their organs. **phyto-** Plant p. **zoo-** Animal p.

physite. Erythrol.

physostigma. Calabar bean. The dried ripe seeds of *Physostigma venenosum*, a Leguminosae of Africa, which contains the alkaloids, physostigmine, eseridine and calabarine. Used in medicine as the fluid extract, as an antineuralgic and antitetanic.

physostigmine. $C_{15}H_{21}O_2N_3$ = 275.3. Eserine. An alkaloid from the seeds of *Physostigma*, q.v. Colorless crystals, m.106, darkening with age; slightly soluble in water, soluble in alcohol, ether or chloroform. Used medicinally as an antitetanic and peristaltic; also in ophthalmology and veterinary medicine. **p. benzoate.** $C_{22}H_{27}O_4N_3$ = 441.4. Eserine benzoate. Hard, white crystalline masses; soluble in water or alcohol. **p. borate.** Eserine borate. White crystalline powder; soluble in water or alcohol; used in ophthalmology. **p. citrate.** $(C_{15}H_{21}O_2N_3)_2.C_6H_8O_7$ = 1017.66. Eserine citrate. White crystalline powder; soluble in water or alcohol. **p. hydrochloride.** $C_{15}H_{21}O_2N_3.HCl$ = 311.8. Eserine hydrochloride. Colorless powder; soluble in water or alcohol. **p. salicylate.** $C_{15}H_{21}O_2N_3.C_7H_6O_3$ = 413.3. Eserine salicylate. The most frequently-used form of physostigmine. Colorless or pale yellow, shining crystals, m.178, soluble in water, or alcohol; used medicinally as a miotic, antitetanic and peristaltic. **p. sulfate.** $(C_{15}H_{21}O_2N_3)_2.H_2SO_4$ = 648.6. Eserine sulfate, physostigminae sulfas. White or pale yellow, crystalline deliquescent powder, m.140, soluble in water, alcohol, or chloroform; used medicinally as a myotic.

phyt-, phyto- A prefix derived from the Greek, indicating "plant" or "vegetable."

phytalbumin. A vegetable albumin.

phytane. $C_{20}H_{42}$ = 282.28. A saturated hydrocarbon obtained by reduction of phytol. A colorless, mobile liquid, $b._{10mm}$169, insoluble in water.

phytase. An enzyme derived from rice bran or barley that hydrolyses phytin to inositol and phosphoric acid.

phytelephas. The negrito palm, *P. macrocarpa*, of Eucador whose fruit yields corajo or vegetable ivory. Cf. *tagud nut.*

phyterythrin. The red coloring matter of plants, especially of leaves in autumn.

phytic acid. $C_6H_6O_6(H_2PO_3)_6$ = 660.42. Inositol hexaphosphoric acid. An amorphous powder, d.1.175, m.214, slightly soluble in water. It is widely distributed in plant seeds.

phytin. The calcium salt of phytic acid: (calcium inositol hexaphosphoric ester) derived from numerous seeds (hemp, sunflower, peas, beans); used as the calcium or magnesium salt as a nutrient in rickets, anemia, and tuberculosis.

phytochemistry. A branch of science that deals with chemical changes occurring in vegetable organisms or plants.

phytochrome. The general name for the coloring materials of plants necessary for their synthetic metabolism; as, chlorophyll.

phytol. $C_{20}H_{39}OH$ = 296.3. *3.7.11.15*-Tetramethyl-*2*-hexadecen-*1*-ol*. An unsaturated alcohol derived from chlorophyll, $Me[CHMe(CH_2)_3]_3CMe{:}CH.CH_2OH$. A colorless oil, d.-0.864, $b._{10mm}$203, and a polymer of isoprene.

phytolacca. Poke root. The dried root of *P. decandra*, a Phytolaccaceae; used as the fluid extract, as an alterative and emetic. **p. berries.** Poke berries.

phytolaccic acid. An acid derived from poke berries. A yellowish-brown, amorphous, gummy mass; soluble in water or alcohol, slightly soluble in ether.

phytolaccin. A neutral principle obtained from the seeds of *Phytolacca* species. Lustrous silky needles, insoluble in water, soluble in alcohol or ether; used medicinally as an alterative and laxative.

phytolaccine. An alkaloid obtained from the roots of *Phytolacca* species.

phytolaccotoxin. $C_{24}H_{38}O_8$ = 454.29. A toxic principle from *Phytolacca americana* of South Africa and America, and from the Japanese *Phytolacca acinosa*.

phytopathology. The study of the diseased conditions of plants.

phytopharmacy. The study of fungicides and insecticides.

phytopyrrole. See *chlorophyll*.

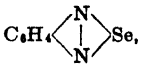
phytosterin. Phytosterol.

phytosterol. (1) $C_{26}H_{44}O.H_2O$ = 390.37. Phytosterin. An isomer of cholesterol, m.135–144 in all vegetable fats (0.5–1 %). Its presence distinguishes vegetable from animal fats which contain cholesterol. (2) Any sterol derived from plants, see *cholane derivatives*. **p. test.** A test to distinguish vegetable fats from animal fats. The saponified fats are extracted with ether, and the ether extract treated with glacial acetic acid. The melting point of the acetates formed are: phytosterol acetate, m.125–127 (vegetable fat); cholesterol acetate, m.114 (animal fat).

phytosterolin. $C_{34}H_{56}O_6$ = 560.0. A glucoside, m.275–288, that yields phytosterol on hydrolysis.

pi. π. (1) A mathematical constant which expresses the ratio of the circumference of a circle to its diameter, 3.1416; see *Ludolf's number*. (2) A symbol for peri-, q.v.

piaselenole. $C_6H_4N_2Se$ = 183.3. Isobenzoselenodiazole. The heterocyclic compound,



m.76. **iso-** Benzoselenodiazole. **tolu-** Tolupiaselenole.

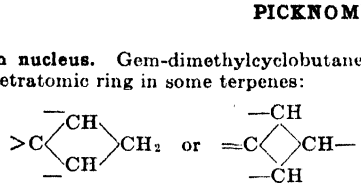
piassaba. A tough fiber obtained from *Leopoldina piassoaba* of Brazil; used for ropes. **Bahia-** A fiber from *Attalea funifera* of Brazil.

piazines. Para-diazines. A group of heterocyclic compounds having two N atoms in the para-position; as, pyrazine. Cf. *miazines, oiazines*.

piazothiole. $C_6H_4N_2S$ = 136.2. The heterocyclic thiodiazole C_6H_4  S. A colorless crystalline mass, m.44, b.206. **iso-** Benzothiodiazole.

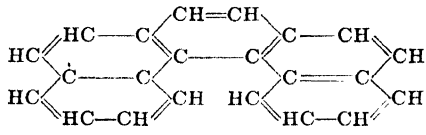
picamar. $C_{11}H_{16}O_3$ = 196.13. Propylpyrogallol-dimethylether, $C_6H_2(OMe)_2(OH)(C_3H_7)$, 1-propyl-2-hydroxy-3.4-dimethoxybenzene. A colorless liquid, b.245, used in perfumery.

picean nucleus. Gem-dimethylcyclobutane ring. A tetratomic ring in some terpenes:



picein. $C_{14}H_{18}O_7$ = 298.2. A glucoside from the leaves of the Norway spruce, *Picea excelsa*, and the bark of *Salix nigra*, willow, a Salicaceae. It is the β-glucoside of *p*-hydroxyacetophenone. White powder, m.194; soluble in water. Cf. *piceoside*.

picene. $C_{22}H_{14}$ = 278.2. Dibenzo[ai]-phenanthrene. An aromatic and high-melting hydrocarbon obtained from coal tar.



Blue fluorescent leaflets, m.364, b.519; insoluble in water or alcohol, soluble in cumene.

picenefluorene. $C_{21}H_{14}$ = 266.2. Dinaphthylenemethane, pycylenmethane.

An aromatic hydrocarbon:

piceneketone. $C_{21}H_{12}O$ = 280.1. The aromatic ketone, $C_{10}H_6$  .

piceneperhydride. $C_{22}H_{36}$ = 300.3. The saturated aromatic hydrocarbon do-eikosin-hydropicene (=22 hydrogen-picene),

Colorless crystals, m.175; insoluble in water, soluble in alcohol.

picenic acid. $C_{21}H_{14}O_2$ = 298.11. A colorless solid, m.201.

picenoquinone. $C_{22}H_{12}O_2$ = 308.1. The ketone,

piceoside. Salinigrin ameliaroside. A glucoside of *p*-hydroxyacetophenone occurring in species of *Coniferae, Rosaceae* and *Salicaceae*. Cf. *picein*.

pichi. The woody and resinous branches of *Fabiana imbricata*, a Solanaceae of Chile. Used as the fluid extract, as a tonic and diuretic. Cf. *fabiana*.

pichurim beans. Sassafras nuts. The seeds of *Nectandra puchury*, a Lauraceae of Brazil and Venezuela; used as an aromatic. **p. camphor.** $C_{12}H_{24}O_2$ = 200.2. An aromatic substance obtained from p. beans, resembling laurel camphor. **p. fat.** The fatty matter of p. beans, containing 30 % laurostearin and p. camphor; used in flavoring extracts.

pickeringite. A native magnesia alum, $MgAl_2(SO_4)_4.22H_2O$; long fibrous masses.

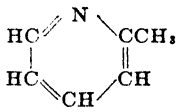
pickle. (1) A bath of dilute acids, used to remove oxides, carbonates or other scales from metals. (2) A fruit or vegetable preserved in spiced vinegar. **p. inhibitor.** A substance added to a p. (1) to restrain its corrosive action.

pickling. To clean sheet iron or metallic utensils by immersion in (usually sulfuric or nitric) acid.

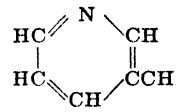
picknometer, picnometer. Pyknometer.

picoampere. 0.001 milliampere.

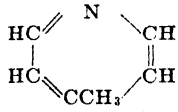
picoline. C_6H_7N = 93.1. Methylpyridine. A series of homologs of pyridine: $C_5H_4N.Me$, obtained by the dry distillation of bones and coal. **alpha-** A colorless liquid, d.0.952, m. −69, b.128,



alpha- or 2-
2-methylpyridine



beta- or 3-
3-methylpyridine



gamma- or 4-
4-methylpyridine

soluble in water or alcohol; used medicinally as a nerve sedative. Cf. *picolinic acid*, *uvitonic acid*. **beta-** A colorless liquid, d.0.977, b.144; soluble in alcohol. **gamma-** A colorless liquid, d.0.974, b.147; soluble in water. **tetrahydro-** The saturated compound, $C_5H_9N.CH_3$ = 97.1. A colorless liquid, b.132. Cf. *uvitonic acid*.

picolinic acid. $C_5H_4N.COOH$ = 123.1. Pyridine carboxylic acid*. Colorless needles, m.136; soluble in water, alcohol or ether.

picolyl. The monovalent radical, $C_5H_4NCH_2$—, derived from picoline.

picotite. The mineral MgO,Al_2O_3, with Fe and 7 % CrO_3.

picraconitine. Picroaconitine.

picradonidin. A glucoside obtained from *Adonis* species, Ranunculaceae; it has a digitalis-like action.

picramic acid. $C_6H_5O_5N_3$ = 199.1. Dinitrophenamic acid, *2*-amino-*4.6*-dinitrophenol*, 4.6.-2-picramic acid, 4.6.2.1-dinitroaminophenol, $(NO_2)_2(NH_2)C_6H_2(OH)$, 1-hydroxy-2-amino-4.6-dinitrobenzene. Colorless monoclinic crystals, m.168, insoluble in water but soluble in alcohol or ether; used in organic synthesis.

picramide. $C_6H_4N_6O_4$ = 228.1. 1.2.4.6-trinitroaniline, picrylamine, $C_6H_2(NH_2)(NO_2)_3$. Yellowish leaflets, m.186, insoluble in water or alcohol, soluble in acetic acid. **methylnitro-** Tetryl.

picramnine. An alkaloid from the bark of *Picramnia antidesma*, a Simarubaceae (Honduras bark).

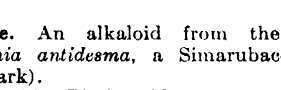
picranisic acid. Picric acid.

picrasmine. $C_{35}H_{46}O_{10}$ = 626.5. A principle from the wood of *Picrasma quassioides*, a simarubaceous tree of the Himalayas.

picrate. Carbazotate. A highly-explosive salt of picric acid, of the type $(NO_2)_3C_6H_2OM$.

picratol. Silver picrate.

picric acid. $C_6H_3O_7N_3$ = 229.1. 2.4.6-Trinitrophenol*, picranisic acid, picronitric acid,



chrysolepic acid. Lemon-colored leaflets, d.-1.767, m.122, which explode on further heating; slightly soluble in water, soluble in alcohol or ether. Used as a reagent in analytical chemistry and microscopy; to precipitate proteins; and in the manufacture of explosives and dyes. Cf. *lyddite*.

picrin. A bitter principle obtained from *Digitalis purpurea*, a Scrophylariaceae. **bromo-** Nitrobromoform.

picro- A prefix derived from the Greek, indicating "bitter."

picroaconitine. $C_{31}H_{45}O_{10}N$ = 591.4. Picraconitine. An amorphous bitter principle from the bulbs of *Aconitum napellus*, a Ranunculaceae.

picroadonidine. A bitter principle from *Adonis* species.

picrocarmine. A stain for microscopic specimens: 1 pt. carmine, 5 pts. ammonia, 50 pts. water, and 50 pts. saturated solution of picric acid.

picrocrocin. (1) $C_{38}H_{66}O_{17}$ = 794.49. Saffron bitter. A glucoside from saffron. (2) $C_{10}H_{14}O$ = 150.11. A ketone, b.209, from saffron. Cf. *pikrococin*.

picroerythrin. $C_{12}H_{16}O_7.3H_2O$ = 344.2. A crystalline bitter substance, m.158; soluble in water, insoluble in alcohol.

picrol. $C_6H_3O_2I_2SO_3K$ = 479.7. Di-iodoresorcin potassium monosulfonate. A colorless crystalline powder, soluble in water, alcohol or ether; used as an antiseptic.

picrolonic acid. $C_{10}H_8N_4O_5$ = 264.1. *3*-methyl-*4*-nitro-*1*-*p*-nitrophenyl-*5*-pyrazolone.

A microreagent for calcium, with which it produces rectangular crystals.

picromerite. The mineral $(K_2Mg)SO_4.xH_2O$.

picronigrosin(e). An alcoholic solution of picric acid and nigrosine. Used as a microscopic stain.

picronitric acid. Picric acid.

picropodophyllin. A crystalline principle from the *Podophyllum* species. Cf. *podophyllin*.

picroroccellin. $C_{27}H_{29}O_5N_3$ = 475.3. A crystalline bitter principle from *Rocella tinctoria* and other species.

picrosclerotine. An alkaloid from ergot.

picrotin. $C_{15}H_{18}O_7$ = 310.1. A decomposition-product of picrotoxin, m.240.

picrotone. $C_{14}H_{16}O_3$ = 232.1. A ketone derived from picrotoxin.

picrotonol. $C_{14}H_{16}O_4$ = 248.1. An α-ketol, and degradation-product of picrotoxin.

picrotoxin. $C_{30}H_{34}O_{13}$ = 602.3. A neutral principle from the fruit of *Anamirta paniculata* (or *Cocculus indicus*, fishberries) resembling strychnine in its action. White, flexible, shining needles, m.200, soluble in alcohol, water, or ether, hydrolyzed to picrotin and picrotoxinin; used in medicine.

picrotoxinin. $C_{15}H_{16}O_6.H_2O$ = 310.2. A decomposition-product of picrotoxin. Colorless crystals, m.201; soluble in water.

picryl. The monovalent radical, $C_6H_2(NO_2)_3$—, derived from picric acid. **p. amine.** Picramide. **p. chloride.** $ClC_6H_2(NO_2)_3$ = 247.54. (1) *1*-chloro-*3.5.2*-trinitro-benzene. Yellow prismatic crystals, m.81, insoluble in water, soluble in alcohol or ether; used in the manufacture of explosives. (2) *1*-chloro-*2.4.5*-trinitrobenzene, m.113.

Pictet, Amé. 1857–1937. A Swiss chemist noted for his work on vegetable alkaloids. **P. crystals.** White crystals formed when liquid sulfur dioxide evaporates, and supposed to be $SO_2.xH_2O$. **P., Raoul.** 1842– . A Swiss chemist who liquefied O, N. H and CO_2 at −140°C.

pictol. Metol.

picylene. Picenefluoren

piedmontite. The mineral, $4CaO,3(AlMn)_2O_3,6SiO_2,H_2O$.

pieso- Piezo-.

piezo- A prefix derived from the Greek, indicating "pressure."

piezochemistry. The study of chemical reactions under high pressure.

piezocontrol. The maintenance of a definite radio frequency with a quartz oscillator. Cf. *piezoelectricity.*

piezocrystallization. Crystallization under great pressure; as, in certain rocks.

piezoelectricity. A phenomenon in which an electric current is produced as the result of pressure exerted on certain crystals; such as, quartz, mica, tourmaline, and calcite. It is the reverse effect of electrostriction. Cf. *quartz oscillator.*

piezoelectron. A supposedly disk-shaped electron pressed between two petalons.

piezometer. An instrument for determining the compressibility of a substance.

pig. A cast bar or brick made of metal. **p. iron.** A crude, cast iron, molded in sand. **p. lead.** A cast bar of lead. **p. tin.** A cast bar of tin.

pigment. (1) A finely-powdered, insoluble white, black or colored material; used, suspended in a vehicle, as a paint, or ink. Classification: (a) according to source:

mineral pigments, as ochre;
animal pigments, as carmine;
vegetable pigments, as madder-lake;
synthetic or artificial pigments, *e.g.*, monastral blue.

(b) according to their chemical composition:

1. elements, as carbon black
2. oxides, as ferric oxide
3. sulfides, as cinnabar
4. hydroxides, as ferric hydroxide
5. carbonates, as lead carbonate
6. silicates, as manganese silicate
7. chromates, as lead chromate
8. sulfates, arsenates, and other inorganic salts
9. organic compounds, as prussian blue, or gamboge.

(c) according to color. (2) A coloring matter in the tissues of plants or animals; as, the chromoproteins. Cf. *cytochrome, lipochrome, bilepigments, flavones, anthocyanins.* **carotenoid-** See *carotenoids.* **p. dye.** An insoluble dye, which does not form lakes. **p. green.** A green color prepared from an iron salt and nitroso-β-naphthol.

pigmentation. The coloration or discoloration of part of a living organism by a deposit of coloring matter.

pigmented. Describing an organ or part of an organism, stained by a deposit of pigment.

pigmentolysis. The dissolution or destruction of a coloring matter in an organism.

pikrococin. $C_{16}H_{28}O_6$ = 313.2. A glucoside of safranal in saffron,

$$(C_6H_{10}O_5).CH.CH_2.CMe_2.C(CHO):CMe.CH_2.$$

Cf. *picrocrocin.*

pilchardine. A commercial blend of oils from pilchard, sardine and grey-fish.

pile. A bundle or stack. **galvanic-** Voltaic p. **thermo-** A number of sheets or bars, composed of two or more metals, that produce an electric current when heated at their junctions of contact. **voltaic-** A series of metallic disks, forming a galvanic battery.

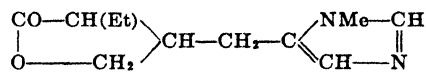
pilewort. Lesser celandine, *Ranunculus ficaria,* used as ointment.

piliganine. $C_{18}H_{24}ON_2$ = 248.3. An alkaloid from piligan, *Lycopodium saururus,* a South American club moss. A yellow amorphous powder; insoluble in water.

pill. (1) A small uncoated or coated round mass, consisting of a mixture of an active drug and inert material; used in medicine. It differs from tablets, which are compressed and disk shaped. (2) A pellet of cesium, which is introduced into a vacuum tube and "flashed" to remove all oxygen.

pilocarpidine. $C_{10}H_{14}N_2O_2$ = 194.2. An alkaloid obtained from the leaves of *Pilocarpus.* Dihydroxylnicotine, $C_5H_4N.CMe(NMe_2).COOH$. A colorless syrup-like liquid or colorless crystals; insoluble in water. **p. nitrate.** $C_{10}H_{14}N_2O_2.HNO_3$ = 257.2. Colorless crystals; soluble in water.

pilocarpine. $C_{11}H_{16}O_2N_2$ = 208.2. An alkaloid from the leaves and stalks of jaborandi (see *pilocarpus*).



Colorless needles, m.34, slightly soluble in water, soluble in alcohol. Used as its salts in medicine, as it increases saliva and sweat, constricts pupils and decreases intraocular tension. **p. hydrochloride.** $C_{11}H_{16}O_2N_2.HCl$ = 244.67. Colorless, hygroscopic needles, m.194; soluble in water or alcohol. **p. nitrate.** $C_{11}H_{16}O_2N_2.HNO_3$ = 271.2. Pilocarpinae nitras. Colorless crystals, m.178, soluble in water or alcohol, insoluble in ether; used in medicine. **p. phenate.** $C_{11}H_{16}O_2N_2.C_6H_5OH$ = 302.2. Aseptolin. A colorless oily liquid; soluble in water or alcohol. **p. salicylate.** $C_{11}H_{16}N_2O_2.C_7H_6O_3$ = 346.20. White crystals, m.120, soluble in water. **p. sulfate.** $(C_{11}H_{16}N_2O_2)_2.H_2SO_4$ = 514.33. Colorless crystals, m.133.

pilocarpus. Jaborandi. The dried leaflets of *Pilocarpus pennatifolius,* and other species, a rutaceous shrub of tropical America. It contains 0.6 % alkaloids, and is used as the fluid extract, as a diaphoretic.

pilocereine. Pilocerine.

pilocerine. $C_{30}H_{44}O_4N_2$ = 496.5. An alkaloid from a cactus, *Cereus pilocereus.*

pilosine. $C_{16}H_{18}N_2O_2$ = 286.16. An alkaloid from pilocarpus. $MeN.CH:N.CH:C.CH_2.CH.CH_2.O.CO.CH.CHOH.Ph$. White crystals, d.1.168, m.187.

pilosinine. $C_9H_{12}N_2O_2$ = 180.11. An alkaloid from pilocarpus:

$$MeN.CH:N.CH:C.CH_2.CH.CH_2.O.CO.CH_2.$$

White crystals, m.79, $b._{25mm}$300.

pilot burner. A small burner that is kept permanently alight, and is attached to a larger burner for relighting purposes.

pilot flame. The small flame of the pilot burner.

pilot plant. An experimental assembly of manufacturing equipment to try out a new process on the semi-large scale.

pimanthrene. $C_{16}H_{14}$ = 206.1. *1.7*-Dimethylphenanthrene. A hydrocarbon from copal and pimaric acid.

pimaric acid. $C_{20}H_{30}O_2$ = 302.3. An optically-active acid from burgundy pitch and galipot resin. A crystalline mass, m.148 (inactive); soluble in hot alcohol or ether (see *abietic acid*). **dextro-** m. 210. **laevo-** m.145.

pimelic acid. $C_7H_{12}O_4$ = 160.12. 1.5-pentane dicarboxylic acid, heptanedioic acid*. The sixth member of the oxalic acid series, $CH_2(CH_2CH_2COOH)_2$. A solid, m.105, b.$_{100mm}$272, soluble in alcohol or ether.

pimelinketone. Cyclohexanone*.

pimelite. A native green nickel-iron silicate, similar to meerschaum.

pimenta. Allspice, Jamaica pepper. The dried, fully grown, unripe and powdered fruit of *Pimenta officinalis*, a Myrtaceae of the tropics. Used as a condiment, for flavoring, and medicinally as an aromatic stimulant. **p. oil.** Allspice oil. A pale yellow oil distilled from the pimenta of the West Indies, d.1.05, insoluble in water, soluble in alcohol or ether. Used in perfumery and for flavoring extracts.

pimpinella. The dried roots and rhizomes of *Pimpinella saxifraga* or other species, an umbelliferous plant; used medicinally, as the fluid extract, as a diuretic.

pimpinellin. $C_{13}H_{10}O_5$ = 246.1. A bitter crystalline principle from pimpinella. Colorless needles; insoluble in water, soluble in alcohol.

Pinaceae. Pine family, a group of trees and shrubs with a resinous juice and awl- or needle-shaped leaves. The following plants of this family yield drugs:

Abies balsamea (Canada fir) ...	Canada balsam
Abies (*Tsuga*) *canadensis* (hemlock spruce)	Canada pitch
Abies (*Picea*) *excelsa* (Norway spruce)	Burgundy pitch
Agathis dammara	kauri gum
Dammara orientalis	dammar gum
Callitris quadrivalvis	sandarac
Juniperus sabina (sabina).....	savine
	oil of savine
Juniperus communis (juniper).	juniper berries
	juniper oil
Juniperus oxycedrus	cade oil
Larix laricina (hackmetack)..	tamarac
Pinus alba (white pine).....	white pine bark
	fluid extract
Pinus pumeliv (dwarf pine)...	dwarf pine needles
	oleum pini pumilionis
Pinus sylvestris (Scotch fir)...	wood tar
Pinus palustris (common pine)	turpentine
	colophony
	tar
	tar oil
Thuja occidentalis (arbor vitae)	thuja
	fluid extract

Cf. *Abies, Agathis, abietene, cedar oil, cypress oil, larixine.*

pinachrome. $C_{26}H_{29}IN_2O_2$ = 528.2. p-ethoxy quinaldine-p-ethoxy-quinoline-ethyl-cyanine. An indicator from pH 5.8 to 7.8; colorless in acid, red-violet in alkaline solutions.

pinacoid. See *pinakoid.*

pinacol. $C_6H_{14}O_2$ = 118.14. Tetramethylethyleneglycol, pinacone, 2.3-dimethyl-2.3-butanediol*, $Me_2C(OH)—C(OH)Me_2$. Colorless crystals, m.38, b.172, slightly soluble in water, soluble in alcohol. **p. condensation.** An organic reaction in which two aldehydes or two ketones are reduced and linked together, as in the formation of pinacol from acetone:

$$2Me_2CO + H_2O = Me_2COH—COHMe_2$$

p. conversion. An intramolecular transfer of a methyl group from one carbon to another carbon atom, as in the change from pinacol to pinacoline (glycol to ketone)

$$Me_2C(OH)—C(OH)Me_2 \rightarrow Me_3C.COCH_3.$$

pinacolin. $C_6H_{12}O$ = 100.1. tert.-butylmethylketone, *3.3*-dimethyl-*2*-butanone*, $Me.CO.CMe_3$. A colorless oily liquid of peppermint-like odor, b.106; very slightly soluble in water, soluble in alcohol or ether.

pinacolines. A group of ketones, which contain a tertiary alkyl group, of the type, $R.CO.CR_3$.

pinacolone. Pinacolin.

pinacols. A group of diatomic alcohols or glycols, of type $R_2C(OH).C(OH)R_2$.

pinacolyl alcohol. $C_6H_{14}O$ = 102.11. *3.3*-Dimethyl-*2*-butanol*, methyl-*tert.*-butylcarbinol, $CMe_3.CHOH.Me$. A colorless liquid, d.0.812, m.5.5, b.121, slightly soluble in water.

pinacone. Pinacol.

pinacones. See *pinacols.* **p. rearrangement.** See *pinacol conversion.*

pinacyanol. $C_{25}H_{25}N_2I$ = 480.9. A carbocyanin dye, used for sensitizing photographic plates to red, and as histological stain.

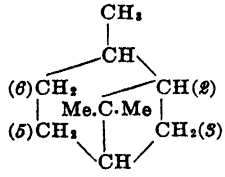
pinaflavole. An isocyanin dye, used as photosensitizer for green.

pinakoid. A prism crystal face intersecting one axis of the system, and parallel to the other two. **brachy-** A pinakoid intersecting the brachy (broad) axis. **macro-** A pinakoid intersecting the macro (long) axis.

pinakryptol. A green dye, used as a photographic desensitizer.

pinalic acid. Valeric acid.

pinan(e). $C_{10}H_{18}$ = 138.2. Bicyclo-(2:4)-heptane. The terpene hydrocarbon,



which occurs in many essential oils. Cf. *pinene.*

pinang. *Areca* nut.

pinaverdol. $C_{22}H_{21}IN_2$ = 440.0. *1.6.1'*-Trimethylisocyanin iodide. An isocyanin dye used in photography for sensitizing plates for the orange portion of the spectrum.

pinch. An approximate measure of 1 or 2 grams.

pinchbeck. A yellow alloy of copper (83 %) and zinc, (17 %), used as an imitation gold for jewellery.

pinckneyin. A glucoside from the bark of *Pinckneya pubens*, a Rubiaceae.

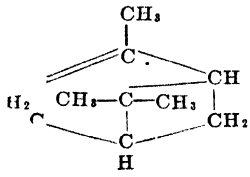
pine. A general name for coniferous trees that yield turpentine, resin, tar, and pitch. **p. camphor.** Pinol. **p. oil.** A crude turpentine obtained by distillation of pine wood. **p. cone oil.** Turpentine. **p. leaf oil.** An essential oil distilled from pine needles. **p. needle oil.** Oleum pini. An essential oil distilled from fresh pine needles, the leaves of *Pinus pumilio.*

A colorless or faintly yellow liquid of pleasant odor, d.0.865–0.875, b.165, containing pinene, limonene and bornyl acetate; used medicinally as an inhalant. **p. tar.** Wood tar. **p. tar oil.** A reddish distillate from pine tar, d.0.97, insoluble in water; used in ore flotation.

pineal gland. A conical-shaped gland in the brain. The dried and powdered glands of young cattle (1 gm. of which is equal to 7 gm. of fresh glands); used medicinally.

pineapple. The fruit of *Ananas sativus*, a Bromeliaceae; q.v. Cf. *bromelin.*

pinene. $C_{10}H_{16}$ = 136.2. Australene, laurene. 2.7.7-trimethyl-Δ^2-bicyclo [1.1.3] heptene. A terpene or hydrocarbon in many essential oils, a chief constituent in oil of turpentine, savine, and fir. A colorless aromatic liquid, d.0.859, m.−50, b.155; slightly soluble in water, soluble in alcohol or ether. **beta-** Nopinene



p. hydrochloride. $C_{10}H_{16}HCl$ = 172.65. An insoluble solid, m.134, b.210.

pinguin. Alantol.

pinicortannic acid. $(C_{16}H_{18}O_{11})_2.H_2O$. A tannin from the bark of Scotch fir, *Pinus sylvestris;* a reddish brown powder. Cf. *cortepinitannic acid.*

pinipicrin. $C_{22}H_{36}O_{11}$ = 476.4. A bitter principle from the needles or leaves of *Thuja occidentalis* and *Pinus sylvestris*, Pinaceae.

pini-pini. The dried bark of *Jatropha urens*, an Euphorbiaceae of Brazil, used medicinally.

pinitannic acid. $C_{14}H_{16}O_8$ = 312.2. A yellowish-red tannic acid obtained from the wood of *Pinus sylvestris.*

pinite. (1) $C_6H_{12}O_5$ = 164.1. Hexahydropentahydroxybenzene. A colorless substance, m.150, in the resin from *Pinus lambertiana.* Cf. *quercitol.* (2) **Pagodite. methoxy-** Quebrachitol.

pinking. See *knock.*

pinkroot. Spigelia.

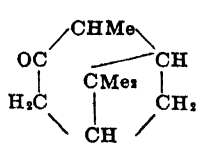
pinksalt. $(NH_4)_2SnCl_6$ = 367.5. Tin-ammonium chloride, ammonium hexachlorostannate. A pink crystalline mass, used in the textile industry as a mordant.

pinnoite. A native magnesium borate, MgB_2O_4.

pinol. $C_{10}H_{16}O$ = 152.13. Sobrerone, pine camphor, *6(8)*-methoxy-*1-p*-menthene. A terpene, from pine needles which occurs in d- and l-forms. A colorless liquid, d.0.952, b.183; insoluble in water, soluble in alcohol or ether. **p. hydrate.** $C_{10}H_{16}O.H_2O$ = 170.14. Sobrerol. The terpene Δ^6-para-menthane-diol-2.8. Acids dehydrate it to pinol; m.150, b.270, soluble in water, alcohol or ether.

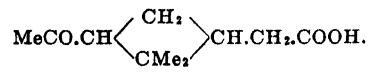
pinoline. Rosin spirit.

pinone. $C_{10}H_{16}O$ = 152.2. 6-oxypinol. The terpene ketone:



It is a constituent of many essential oils, and an isomer of α-thujone, camphor, fenchone and carone.

pinonic acid. $C_{10}H_{16}O_3$ = 184.12. An oxidation-product of pinene:



d(l)- m.99, $b._{12mm}$180. *dl*- m.105. Cf. *umbellonic acid, nopinic acid.*

pinosylvin. $C_{14}H_{12}O_2$ = 212.1. *3.5*-D.hydroxy stilbene, m.p.155. A constituent of the heartwood of the tree *Pinus sylvestris.*

pint. A measure of volume, dry and liquid. **United States-**

1 pt. = 0.5 quart = 0.125 gallon = 4 gills = 16 fl. oz.
= 28.875 $in.^3$ = 128 fl. dr. = 7680 minims.
1 pt. = 0.473167 liter = 473.17 cc.

British- Imperial-. dry- 1 dry pt. = 0.5506 cc. **imperial- British-.** 1 pt. = 20 fl. oz. = 34.6593 $in.^3$ = 568.25 cc. **Scotch-** 1 Sc. pt. = 3.0065 imp. pts.

Pintsch gas. A fuel gas made by spraying oil into a hot retort.

Pinus. An important genus of Coniferae (q.v.) which yield turpentine, galipot resin, pitch, tar, combopinic acid, ceropic acid, pinite, pinipicrin. Cf. *Pinaceae, Abies.*

Piobert effect. The surface markings which appear on polycrystalline specimens of iron and soft steel at or near the yield-point.

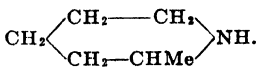
pioscope. A device for estimating colorimetrically the fat-content of milk.

pipeclay. A fine grayish-white grade of clay, similar to kaolin, used for heat-resisting apparatus, and in the plastic state, as a whitening.

pipecoline. $C_6H_{13}N$ = 99.1. Methylpiperidine.

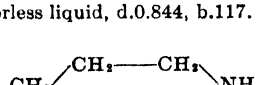
N- or 1-.  A colorless liquid, d.0.818, b.107.

α- or **2-.**



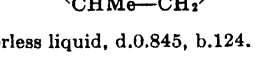
A colorless liquid, d.0.844, b.117.

β- or **3-.**



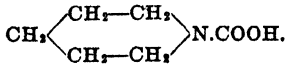
A colorless liquid, d.0.845, b.124.

γ- or **4-.**



A colorless liquid, d.0.867, b.127.

pipecolinic acid. $C_6H_{11}NO_2$ = 131.2. Piperidine-N-carboxylic acid,



Colorless crystals, m.261, soluble in alcohol.

piper. (1) Pepper. (2) A genus of Piperaceae, q.v.

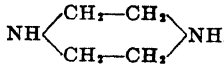
Piperaceae. The pepper family, a group of shrubs, or climbing tropical plants, all of which contain aromatic substances.

Piper betle	betel leaf
Piper cubeba	cubebs
	cubeb oil
Piper nigrum	black pepper
	white pepper
Piper longum	long pepper
Piper angustifolium	matico
Piper jaborandi	jambu
Piper methysticum	kava
Piper ovatum	piperovatine
Houttuynia californica	yerba mansa

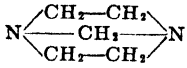
piperamide. $C_{12}H_{11}NO_3$ = 217.1. The amide of piperic acid.

piperazidine. Piperazine.

piperazine. $C_4H_{10}N_2$ = 86.2. Diethylenediamine, piperazidine, hexahydropyrazine, arthriticine, dispermin(e), ethylenimine.

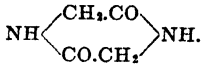


Glassy lustrous leaflets, m.105, b.145, soluble in water, alcohol or ether; used in medicine. **dimethyl-** Lupetazin. **methenyl-** $C_5H_{10}N_2$ = 98.2.



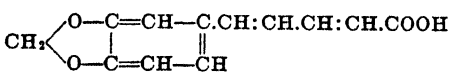
methyl- $C_5H_{12}N_2$ = 100.2. $C_4H_9N_2.CH_3$.

p. dione. $C_4H_6N_2O_2$ = 114.06. Diketopiperazine, glycine anhydride,



The anhydride of the dipeptide glycylglycine, which occurs in fibroin of silk. **p. quinate.** Sidonal. White crystals, soluble in water; used medicinally for gout and neurasthenia.

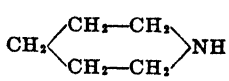
piperic acid. $C_{12}H_{10}O_4$ = 218.14. Piperinic acid, *5-(3.4*-methylenedioxyphenyl)-*2.4*-pentadienoic acid*, piperonilidene crotonic acid, *β-(3.4*-methylenedioxystyryl)acrylic acid. An unsaturated monobasic acid, derived from piperonal.



Yellow needles, m.216; slightly soluble in water, soluble in alcohol or ether.

piperidic acid. $C_6H_9O_2N$ = 103.1. γ-aminobutyric acid, $NH_2(CH_2)_3COOH$. Colorless crystals, m.183; soluble in water or alcohol. **homo-** $C_6H_{11}O_2N$ = 117.1. δ-aminovaleric acid, $NH_2(CH_2)_4COOH$. Colorless crystals, m.158; soluble in alcohol or water.

piperidine. $C_5H_{11}N$ = 85.1. Hexahydropyridine. Pentamethylene imine. A saturated heterocyclic hydrocarbon,

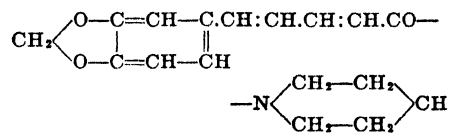


A colorless liquid, d.0.862, m.−17, b.106; soluble in alcohol, water, or ether. It is a vasodilator and a part of the structure of many alkaloids. **dimethyl-** Lupetidine. **ethylmethyl-** Copellidine. **methyl-** Pipecoline. **piperyl-** Piperine. **propyl-** Conine. **tetramethyl-N-methylbenzoxy-** Eucaine. **vinyl-** Meroquinene. **p. carboxylic acid.** Nipecotic acid. **p. dione.** Glutarimide.

piperidinium. The radical $C_5H_{10}NH_2$— derived from piperidine, with pentavalent N; as, C_5H_{10}-NH.HCl. **p. compounds.** Derivatives of p.; as, $C_5H_{10}NH(CH_3)I$.

piperidyl. The monovalent radical, $C_5H_{10}N$—, derived from piperidine. **p. urethane.** C_8H_{15}-O_2N = 157.2. $C_5H_{10}N.CO.OC_2H_5$. A colorless liquid, b.211.

piperine. $C_{17}H_{19}O_3N$ = 285.3. Piperyl-piperidine,



An alkaloid from black pepper. Colorless, monoclinic crystals, m.129, slightly soluble in water, soluble in alcohol or ether. Used medicinally as an antipyretic.

piperinic acid. See *piperic acid.*

piperitone. $C_{10}H_{16}O$ = 152.1. A ketone from eucalyptus oil.

piperolidine. $C_8H_{15}N$ = 125.13. Octahydropyrrocoline, δ-coniceine. A colorless liquid, d.0.904, *dl-* b.161. *l-* b.158.

piperonal. $C_8H_6O_3$ = 150.1. Heliotropin, 3.4-methylenedioxybenzaldehyde, piperonyl aldehyde. An aldehyde, obtained from piperine, having an intense heliotrope-like odor. CH_2:-O_2:C_6H_3.CHO. Colorless needles, m.37, b.-263; slightly soluble in water, soluble in alcohol or ether.

piperonilidene. The bivalent radical, (CH_2O_2)-C_6H_3.CH=, from piperonal. Cf. *piperic acid.*

piperonyl. The monovalent radical, $(CH_2O_2)C_6$-$H_3.CH_2$—, derived from piperine. **homo-** See *homopiperonyl.* **p. alcohol.** $C_8H_8O_3$ = 152.10. *3.4*-methylenedioxybenzyl alcohol. A solid, m.51; slightly soluble in water, soluble in alcohol or ether. **p. aldehyde.** Piperonal.

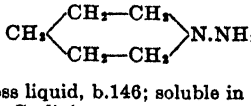
piperonylic acid. $C_8H_6O_4$ = 166.1. Methylene protocatechuic acid, methylene dioxybenzoic acid, heliotropic acid. A monobasic acid from paracoto bark, m.228.

piperovatine. $C_{16}H_{21}O_2N$ = 259.3. An alkaloid from the fruits of *Piper ovatum*, a Piperaceae of Trinidad. Colorless crystals, insoluble in water, soluble in alcohol; used medicinally.

piperyl. The monovalent radical, CH_2:O_2:-C_6H_3.CH:CH.CH:CH.CO—, derived from piperic acid.

piperylene. C_5H_8 = 68.1. Pentadiene*, Δ1.3-amenylene. The unsaturated hydrocarbon, CH_2:CH.CH:CH.CH_3, derived from piperidine. A liquid, b.40.

piperylhydrazine. $C_5H_{12}N_2$ = 100.2. Piperidylamine.



A colorless liquid, b.146; soluble in alcohol.

pipestone. Catlinite.

pipet. A graduated open glass tube used for measuring or transferring definite quantities of liquids. See *automatic, Babcock, capillary, counting, Dudley, gas, Mischer, Mohr* **p. auswaschen-** A micro-p. which *contains* a specified volume of liquid, as distinct from *delivering* it.

In order to obtain the whole of the contents therefore, the pipette must be washed out with water after it has drained.

pipette. Pipet.

pipi root. The dried root of *Petiveria alliacea*, a Phytolaccaceae. Used medicinally as a stimulant, expectorant, and diaphoretic.

pipitzahoac. The dried roots of *Perezia* species, a Mexican Compositae.

pipitzahoic acid. $C_{15}H_{20}O_3$ = 248.2. Perezon. Golden yellow needles from pipitzahoac, m.103; soluble in water, alcohol, (see *perezol*), or ether.

pipitzahoin. A colored principle from the roots of *Perezia adnate*, a Compositae, used as an indicator.

pipsissewa. Chimaphila.

piquia fat. A fat from the kernels of *Caryocar villosum*, a Caryocaraceae of Brazil (souari or butter nut); it resembles palm oil.

pisang. Malay for banana. **p. wax.** A wax from the leaves of the Java banana tree; *Musa paradisiaca*, a Musaceae, containing pisangceryl alcohol and pisangcerylic acid.

pisangceric acid. Pisangcerylic acid.

pisangceryl alcohol. $C_{31}H_{32}O$ = 200.2. A saturated alcohol, m.78.

pisangcerylic acid. $C_{24}H_{48}O_2$ = 368.37. A monobasic acid, m.71, from pisang wax.

pisanite. A native iron-copper sulfate, (Fe, Cu)$SO_4.7H_2O$.

piscidia. Jamaica dogwood. The dried bark of *P. erythrina*, used in the West Indies as a fish poison, and medicinally as a narcotic analgesic.

piscidic acid. $C_{11}H_{10}O_7$ = 254.2. A dibasic acid obtained from piscidia. Colorless needles, m.183; soluble in water, insoluble in alcohol, chloroform or benzene.

piscidin. $C_{29}H_{24}O_8$ = 500.3. A neutral principle from piscidia (dogwood); used as an anodyne.

piscose. Allulose.

pisolite. A hard compact form of aragonite.

pistacite. Epidote.

pistil. A modified leaf or leaves forming the central part of a flower.

pistomesite. $MgCO_3.FeCO_3$. A native carbonate.

pitayamine. An alkaloid from the bark of *Cinchona pitayensis*, a Rubiaceae.

pitch. (1) A heavy liquid or dark residue obtained by distillation of tar; as, pine pitch, Burgundy pitch, coal tar pitch. It forms a lustrous brittle mass when cold, and a semi-solid to syrupy mass according to the degree of heat to which it is subjected. It consists of many organic compounds which differ according to its origin. See *rosin*. (2) (verb.) To add yeast, with or without sugar, in order to start fermentation. **black-** Naval p. **Burgundy-** An aromatic oily resin, obtained by distillation of Norway spruce, *Picea excelsa*. **Canada-** The resin from *Tsuga* species. **earth-** Asphalt. **Jews-** Asphalt. **mineral-** (1) Asphalt. (2) Bitumen. **naval-** The dark solid residue from the distillation of various tars. **petroleum-** Asphalt. **Trinidad-** Asphalt.

p. blende. An impure uranite (q.v.), in which radium was discovered. Cf. *bröggerite*. **p. coal.** Specular coal. **p. stone.** A dark-colored igneous rock, similar to obsidian.

pithecolobine. An alkaloid from the bark of *Pithecolobium saman*, a leguminous tree of the East Indies. A brown oily liquid, insoluble in water.

pitocin. Hypophamine.

Pitot tube. A vertical U-tube with a moveable scale, closed at one end and containing a liquid which is used to record differences in pressure; it is often used as an anemometer.

pitressin. β-Hypophamine.

Pitrowsky test. Biuret reaction.

pittacol. Eupittonic acid.

pitticite. Scorodite.

pituitary. Hypophysis sicca. The dried cleaned, and powdered posterior lobe of the pituitary gland of the ox. A light, yellowish-gray powder, used in medicine. **p. liquid.** A standardized solution of the active principle of the anterior or the posterior lobe of the pituitary gland (hypophysis cerebri) of the ox. See *hypophamine*.

pituitrin. An extract of the pituitary, containing pitocin and pitressin; used as a vasoconstrictor. Cf. *hypophamine*.

pituri. The powdered leaves and twigs of the pituri plant, *Duboisia hopwoodii*, a Solanaceae of Australia. Used by the natives of Central Australia as a narcotic stimulant.

piturine. $C_{10}H_{16}N_2$ = 164.2. An alkaloid from pituri. An oily brown liquid resembling nicotine.

piuri. Indian yellow.

pivalaldehyde. $C_5H_{10}O$ = 86.08. Trimethylacetaldehyde, *2.2*-dimethylpropanal*, CMe_3CHO. A colorless liquid, d.0.793, m.3, b.75; used in organic synthesis.

pivalic acid. $C_5H_{10}O_2$ = 102.1. Trimethylacetic acid, *2.2*-dimethylpropanoic acid*, CMe_3COOH. Colorless crystals, $d._{50}$0.90, m.35, b.164; soluble in water, alcohol or ether. Cf. *valeric acid*.

pivalyl. The monovalent radical, $CMe_3.CO—$. **p. chloride.** CMe_3COCl, trimethylacetylchloride.

pix. The Latin name for pitch; as, **pix burgundica** (Burgundy pitch), **pix canadensis** (Canada pitch). **p. liquida.** Wood tar.

pk. (1) An abbreviation for peck. (2) The symbol for the logarithm of the reciprocal of the dissociation constant of an electrolyte (cf. pH). $pk = \log 1/k$.

place isomerism. The phenomenon exhibited by chemical substances of similar compositions, which differ in structure by the positions of radicals; as, ortho-, meta-, and para-positions of a compound.

placentin. An extract from the placenta, used in Abderhalden's test.

placer. Any alluvial or glacial deposit of sand or gravel containing gold nuggets. **p. deposit.** A gravel or sand containing gold or other precious minerals and metals. **p. mining.** The extraction of gold or other precious metals from gravel and sand by washing.

plagioclase. A general name for triclinic feldspars. Cf. *gabbro*.

plagionite. The mineral $5PbS,4Sb_2S_3$. Cf. *lead minerals*.

Planck, Max. 1858– . A German physicist, noted for his development of the quantum theory. **P. constant.** The universal constant, $h = 6.547 \pm 0.008 \times 10^{-27}$ erg-seconds, (see *quantum theory*). It connects the wave and corpuscle theory of radiations by the equations: $E = h\nu$, and $P = h\sigma$, where E is energy, P

is momentum, ν the frequency and σ the wave number.

Derived from:	
Rydberg's constant	6.547 ± *0.011*
Ionization potential	6.560 ± *0.015*
X-rays	6.550 ± *0.009*
Photoelectric effect	6.543 ± *0.010*
Wien's law	6.548 ± *0.015*
Stefan-Boltzmann law	6.539 ± *0.010*

P.'s element of action. Planck's constant. **P.'s formula.** The energy radiated from a black body is,

$$E_\lambda = C_1.\lambda^{-5}[e^{c_2/\lambda T}-1],$$

where E_λ is the intensity of energy (emissive power) at the wavelength λ expressed (in microns); e, the base of Naperian logarithms; C_1, a constant (9.226×10^3 when E is expressed in gram calories/sec./cm.,^{2} and 3.86×10^4 when E is expressed in watts/cm.^{2}), and c_2, a constant equal to 14,350; T the absolute temperature. **P.'s unit.** Planck's constant.

plane. Any surface, imaginary or real, which is flat or level with itself in all directions. **p. of symmetry.** An imaginary plane passing through a crystal so that, for each face or angle of the crystal, there is a similar face or angle on the opposite side of the plane, a line joining the two faces being perpendicular to the plane. **p. symmetric-** The cis- or maleinoid form of a geometric isomerism. **p. symmetric isomerism.** Geometrical *isomerism*.

planet. A celestial body moving around the sun in a nearly circular orbit. Cf. *meteoric*.

planetary. Pertaining to a planet. **p. atmosphere.** The gases surrounding a planet. They are chiefly:

Mercury	none
Venus	CO_2
Earth	N_2
Mars	H_2O
Jupiter	H_2
Saturn	NH_3, CH_4, H_2
Uranus	H_2, CH_4
Neptune	H_2, CH_4
Pluto	?

plant. (1) The machinery and implements used in manufacturing processes. (2) A living organism of the vegetable kingdom, which generally contains chlorophyll and photosynthesizes food; hence (unless a parasite or saprophyte) it requires only inorganic substances. Cf. *animal*. P. are grouped into four phyla or branches. Each plant generally consists of two systems:

A. Protective system
   1. of the surface: epidermis, cork, bark.
   2. of the skeleton: bast fibres, collenchyma, sclerotic parenchyma.

B. Nutritive system
   1. absorbing tissues: epithelium of roots, root hairs, etc.
   2. assimilating tissue: chlorophyll parenchyma.
   3. conducting tissue: conducting parenchyma, vascular bundles, latex cells.
   4. storage tissue: reserve tissue of seeds, bulbs, tubers, and water tissues.
   5. aerating system: intercellular spaces, stomata, and lenticels.
   6. receptacles for secretions and excretions: glands, oil, resin and mucus canals, crystal sacs.

p. acids. The organic acids in vegetable organisms; as, citric acid (lemons), tartaric acid (grapes), cinnamic acid (cinnamon), tannic acid (barks). **p. elements.** The elements known to be essential to plant growth: C, H, O, N, S, P, K, Ca, and Mg. In addition traces of Fe, Na, Si, Al, Cl, Mn, Zn, B, and F may be essential. **p. food.** Any artificial fertilizer containing the carbonates, nitrates, phosphates or sulfates of potassium, calcium magnesium, or iron. **p. pigments.** The coloring matter of plants, chiefly:

1. chlorophyll pigments; the green and reddish colors of leaves. Cf. *porphin ring*.
2. carotenoids (q.v.); the lipochromes or fatty pigments of plants.
3. flavones and flavanols (q.v.); the fairly soluble pigments of blossoms and fruits.

plantain. (1) The dried leaves of *Plansago major*, a Plantagineae; used as the fluid extract, as a diuretic. (2) The herbaceous tree *Musa sapientum paradisiaea*, a Scitaminaceae; its fruit is the Adams apple. Cf. *banana*.

plantose. An albuminous substance from rape seeds.

plaskon. Trade name for a urea- or melamine-formaldehyde plastic.

plasma. (1) The liquid part of the blood, containing fibrinogen; used in the preparation of antitoxins. (2) A green mottled variety of chalcedony. **proto-** Protoplasm.

plasmochin. $C_{19}H_{28}N_2O$ = 300.2. Aminoquin, pamaquin, plasmoquine, *8*-dimethylaminoisoamyl-*6*-methoxyquinoline. Yellow powder, insoluble in water, soluble in alcohol; used as an antimalarial.

plasmolysis. The dissolution of the protoplasm of a cell by bathing it in water or salt solutions. See *hypertonic*, *isotonic*, *hypotonic*.

plasmoquine. Plasmochin.

plaster. A paste for coating the surface of a body or substance; a material for making molds. **ahdesive-** A mixture of rosin and wax, used for coating paper or textiles. **hard burnt-** An insoluble form of anhydrite. **lead-** See *lead*. **p. of paris.** $2CaSO_4.H_2O$. The hemihydrated calcium sulfate, made by heating gypsum. It quickly solidifies in the presence of water, and is used to make molds for taking impressions of objects.

plastic. Soft or moldable, pliable. Cf. *plastics*.

plasticity. The property of being soft and tenacious, and able to be formed or shaped in any desired way.

plasticizer. A compound which keeps a substance soft and viscous and prevents the cracking of films. For lacquers the p. are the phthalates (q.v.) and trioresyl phosphate. Cf. *lacquer solvents*.

plastics. A group of synthetic or natural materials which can be shaped when soft and hardened afterwards. **casein-** P. materials made from milk; as, galalith. **cellulose-** P. materials made from nitrocellulose and camphor; as, celluloid. **phenol-** P. made by gradual condensation of phenol and formaldehyde; as, bakelite. **rosin-** Phenol-. **thermoplastic-** A p. which becomes soft and moldable when heated; as, cellulose, vinyl polymers and styrol resins. **thermosetting-** A p. which hardens when heated; as, vulcanite (rubber), phenol-aldehyde (bake-

lite) and glycerol-phthalic anhydride (glyptal) resins.

SYNTHETIC PLASTICS

1. *Phenol-aldehyde Resinoids and Resins.* Heat-hardening resins, or resinoids, used as heat-hardening plastics and heat-hardening coatings. Also oil-soluble resins and resin mixtures, used with drying oils in making varnishes, enamels, paints and nitrocellulose lacquers.
   Albertol, Amberol, Bakelite, Beckacite, Carboloid, Catalin, Celoron, Colasta, Coltrock, Condensite, Crystillin, Damarda, Dekorit, Dilecto, Duranoid, Dures, Durite, Durium, Endolac, Fibroc, Formalite, Formica, Formite, Haveg, Indur, Indurite, Juvelith, Karbolite, Leukorit, Makalot, Marblette, Micarta, Monolite, Mouldensite, Panelyte, Paranol, Phenolic, Phenolite, Mouldrite, Neolith, Neoresit, Nestorite, Redmanol, Resinit, Resinox, Spauldite, Synthane, Texolite, Vigorit.
2. *Polyalcohol-phthalic anhydride Esters (Resinoids, Resins, and Resin Mixtures).* Used in hardened forms, principally for electric insulation, but also as cements.
   Glyptal, Rezyl, Teglac.
3. *Urea-formaldehyde Resinoids, Thio urea-formaldehyde Resinoids, or Mixtures of these.* Employed in heat-hardening molding materials.
   Aldur, Bandalasta, Beatl, Beetle, Beetleware, Crystalite, Melamac, Plaskon, Plass, Prystal, Pollopas, Untye.
4. *Coumarone-indene Polymers.*
   Brofo.
5. *Vinyl Polymers.* Used for dentures, phonograph records, synthetic rubber.
   Monilith, Resovin, Vydon, Vinylite, Chloroprene, Duprene, Vinyon.
6. *Sulfonamid-aldehyde Resins.*
   Santolite.
7. *Cyclohexanone-formaldehyde Resins.*
   No trade name.
8. *Aniline-formaldehyde Resin.*
   Ciba. Head-hardening plastic.
9. *Styrol Resins.*
   Victron, Waterlite. Hot molding material.
10. *Terpene Polymers.*
    Rezinel.
11. *Sugar Resin.*
    Sakaloid.
12. *Cellulose derivatives.*
    Celluloids.
13. *Casein Materials.*
    Galaliths, etc. used for billard balls and artificial ivory.
14. *Superpolyamides.*
    Nylon.
15. *Acrylate Polymers*, for glass substitutes.
    Lucite. Perspex.

plastometer. A device for measuring the plasticity of a material by timing its flow through successive increments of length of a capillary tube.

plate. A thin sheet of metal, glass, etc. with a flat surface, *e.g.*, silver-, tin- or plate glass. **black-** Plate used for tinning, in the untinned state. **photographic-** A glass sheet covered with an emulsion containing light-sensitive silver salts. Cf. *chromatic* p. **p. amalgamation.** A method of extracting gold from finely-crushed ore by floating it over a copper surface coated with mercury.

platina. A native form of platinum, which often contains Ir, Rh, Ru, Os, Au and Ag.

platinammines. Compounds of tetravalent platinum, which contain four molecules of ammonia.

platinammonium. The tetravalent radical $Pt(NH_3)_2\equiv$. **p. chloride.** $Pt(NH_3)_2Cl_4$.

plating. (1) A process or method by which a surface is coated with a metal; as, *silver*-plating, *nickel*-plating. (2) Infecting a culture-media with a bacterial suspension. **close-** A non-electrolytic process in which sheets of metal are soldered on to the surface to be plated. **electro-** The coating of a surface with a metal by electro-deposition.

platinibromide. Bromo-platinate. A salt containing the $PtBr_6=$ radical.

platinic. A substance containing quadrivalent platinum; as, platinic chloride, $PtCl_4$. **p. acid.** H_2PtO_3 = 245.2. A white powder; soluble in alkalis (forming platinates) and acids (forming platinic compounds). *chloro-*$H_2PtCl_6.6H_2O$ = 518.1. A reddish-brown crystalline mass; soluble in water. Used as a reagent for separation of potassium from sodium; technically, for platinization; in photography, for toning; in ceramics, for metallic lusters; and in the manufacture of platinized asbestos catalysts (q.v.). **p. bromide.** $PtBr_4$ = 514.9. Platinum tetrabromide. A dark brown crystalline mass; soluble in water or alcohol. **p. chloride.** (1) Chloro-*platinic acid.* (2) $PtCl_4$ = 336.6. A reddish-brown crystalline mass; soluble in water, alcohol or ether. **p. hydroxide.** $Pt(OH)_4$ = 263.2. A red-brown powder, decomp. by heat; insoluble in water, soluble in acids or alkalis. **p. iodide.** PtI_4 = 702.9. Platinum tetraiodide. An amorphous, brownish-black powder; insoluble in water, soluble in iodide solutions, acids, or alkalis. **p. oxide.** PtO_2 = 227.2. Platinum dioxide. A black powder, m.430, decomp. by further heat; insoluble in water, soluble in acids. **p. sodium chloride.** Sodium platinichloride. **p. sulfate.** $Pt(SO_4)_2$ = 387.2. Platinum sulfate. A greenish-black, deliquescent, crystalline mass, soluble in water; used as a reagent in microchemical analysis. **p. sulfide.** PtS_2 = 259.3. Platinum disulfide. Black needles, d.5.27, decomp. by heat; insoluble in water, soluble in ammonium sulfide solution.

platinichloride. Chloroplatinate. A salt of chloroplatinic acid containing the divalent $PtCl_6=$ radical. They are double salts of platinic chloride and another chloride.

platiniferous. An ore or substance containing platinum.

platiniridium. A native alloy of platinum and iridium, often containing Rh, Ru and Cu.

platinization. A process in which a surface is coated with platinum.

platinize. To coat with metallic platinum. **p-d. asbestos.** Asbestos impregnated with a solution of a platinum salt and ignited, so that the metal is produced; used as a catalyst.

platinochloride. Chloroplatinite. A salt of chloroplatinous acid containing the divalent $PtCl_4=$ radical. They are double salts of platinous chloride and another chloride.

platinocyanide. Cyanoplatinite. A double salt of platinous cyanide and another cyanide, as

$K_2Pt(CN)_4$ or $BaPt(CN)_4$. Used in photography and for fluorescent x-ray screens.

platinoid. The alloy Cu (61 %), Zn (24 %), Ni (14 %) and W (1–2 %); used for electrical resistance coils.

platinous. Describing a compound containing divalent platinum, Pt=. **p. bromide.** $PtBr_2$ = 355.0. Platinum dibromide. A brown crystalline deliquescent mass, decomp. 200; insoluble in water. **p. chloride.** $PtCl_2$ = 266.1. Platinum dichloride. A brown crystalline mass, d.5.87; insoluble in water, soluble in hydrochloric acid or chloride solutions. **p. cyanide.** $Pt(CN)_2$ = 247.22. Platinum dicyanide. A yellow powder; insoluble in water, soluble in cyanide solutions. **p. hydroxide.** $Pt(OH)_2$ = 229.2. A black powder, decomp. by heat; insoluble in water, soluble in acids or alkalis. **p. iodide.** PtI_2 = 449.0. Platinum diiodide. A black powder, decomp. 325; insoluble in water, soluble in acids. **p. oxide.** PtO = 211.1. Platinum monoxide. A violet to black powder, decomp. by heat; insoluble in water, soluble in acids. **p. sodium chloride.** Sodium platinochloride. **p. sulfide.** PtS = 227.3 Platinum monosulfide. A black powder, d.8.89, decomp. by heat; insoluble in water, soluble in ammonium sulfide solution.

platinum. Pt = 195.23. A noble metal of the fourth period, atomic number 78, discovered or described in 1741 by Wood. It is a silver-gray metal, d.21.37, m.1755, b.4530, insoluble in water, alcohol, acids or bases, soluble in aqua regia. Used in chemistry as a catalyst; as a material for acid-proof containers (crucibles, dishes, foils), wires (for flame tests), and electrodes; and for jewelry. World production (1941) 450,000 oz. troy; U.S.S.R. 170,000, Canada 149,000, S. Africa 40,000, U.S.A. 38,000. It is shaped as foil, wire, powder (platinum black) or gray spongy mass (platinum sponge), and forms two series of compounds: platinous (valency 2) and platinic (valency 4). Each series forms many double salts. **p. alloy.** An alloy of platinum with some other noble metal; as, gold, iridium or rhodium. **p. black.** A black powder, consisting of finely-divided platinum; used in organic synthesis as a catalyst. **p. chloride.** (1) Commercial chloroplatinic acid (see *platinic acid*). (2) Platinic chloride. (3) Platinous chloride. **p. dibromide.** Platinous bromide. **p. dichloride.** Platinous chloride. **p. dicyanide.** Platinous cyanide. **p. diiodide.** Platinous iodide. **p. dioxide.** Platinic oxide. **p. disulfide.** Platinic sulfide. **p. iridium.** An alloy of 90 % platinum and 10 % iridium. **p. metals.** A group of noble metals which occur together in nature (see table), and form two groups of the periodic system. They are all catalysts in many oxidizing and reducing reactions. **p. monosulfide.** Platinous sulfide. **p. monoxide.** Platinous oxide. **p. minerals.** Platinum occurs in nature always associated with the other metals of the group, and generally in the uncombined state.

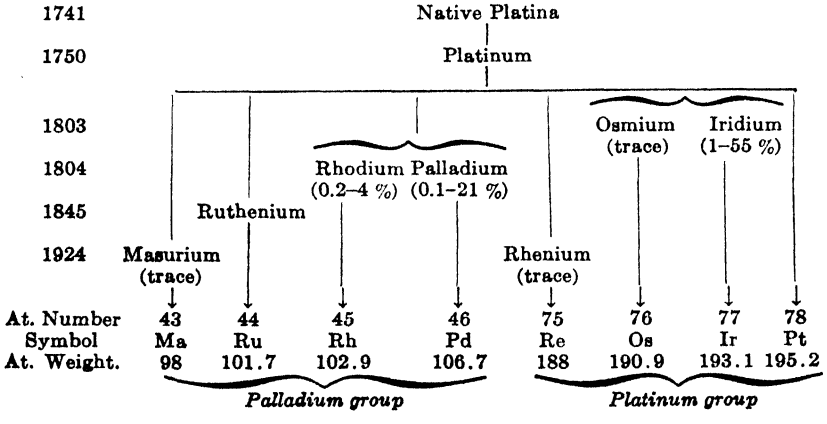
native platinum	Pt
platiniridium	(Pt,Ir)
platinum arsenide	$PtAs_2$

See also *cooperite, platina.* **p. sponge.** Metallic platinum in the form of a gray, spongy, porous mass, obtained by reduction of chloroplatinic acid. Used as a catalyst in organic reactions. **p. sulfide.** Platinic sulfate. **p. tetrachloride.** Platinic chloride. **p. yellow.** A barium chloroplatinate or other alkaline chloroplatinate, used as a coating for fluorescent screens in x-ray work.

platinum-cladding. The bonding of a layer of platinum to a thicker bar of some other metal, and working the two down to a desired thickness; used for laboratory ware.

platize. Platinize.

THE PLATINUM METALS



Plato unit. A measure of the specific gravity of wort; the number of grams of wort-solids per 100 grams of wort.

platosammine. A compound of divalent platinum, which contains two molecules of ammonia, $Pt(NH_3)_2X_2$ or $PtX_2.2NH_3$.

Plattner, Karl Friedrich. 1800–1858. A German mineralogist noted for analytical blowpipe methods. **P.'s anvil.** A small anvil used in blowpipe analysis. **P.'s process.** A method of extracting gold as gold trichloride by passing chlorine gas through the gold-bearing pulp.

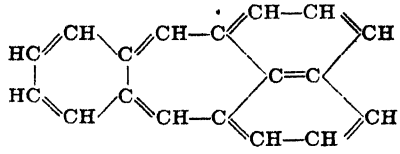
plattnerite. A native lead oxide, PbO_2.

Plausen mill. A colloid mill.

plazolite. $3CaO.Al_2O_3.2(SiO_2.CO_2).2H_2O$. A Californian calcium aluminum silicate; colorless crystals.

pleiad. A group of isotopes.

pleiadene. $C_{18}H_{12}$ = 228.1. A tetracyclic hydrocarbon with a hepta-atomic ring:



Derivatives of this compound are formed by the condensation of phthalic acid with β-naphthol.

pleio- See *pleo.*

pleochroic. Pleochromatic.

pleochroism. Pleochromatism.

pleochromatic. Pleochroic. The capacity of a substance to show more than one color; as, a fluorescent solution.

pleochromatism. Pleochroism. The capacity of certain optically-biaxial crystals to transmit polarized light, so that a complementary color is seen at right angles to the direction of the ray. This is due to absorption of the light to different extents along the several axes of the crystal. (Cf. *dichroism*—a particular case dealing with only two colors.)

pleomorphic. Occurring in more than one form.

pleomorphism. The capacity of certain crystals to crystallize in two or more different crystal systems.

pleonast. The mineral $(Mg.Fe)O.(Al.Fe)_2O_3$.

plessite. Gersdorffite.

Plessy's green. Chromic phosphate.

pleurisy foot. Asclepias.

plevacol. A compound of aminobenzoyl-eugenol-tricresol and formalin. Yellow crystals, m.-155, soluble in acetone, benzene or alcohol; used in dentistry for filling root canals.

plexiglas. Trade name for a methyl acrylate plastic.

pliers. Pincers with long jaws for holding, bending or cutting. **button-** A circular disk with a round hole, used to hold assay buttons during polishing.

Pliny the Elder. Cajus Secundus Plinius, 23–79. A Roman soldier noted for his scientific observations (Vesuvius eruption) and writings (*Historia naturalis*).

pliofilm. A transparent film made from chlorinated rubber.

pliolite. Trade name of a group of resinous materials obtained when rubber is cyclized with agents such as tin tetrachloride.

plodding. A term used in soap manufacture for the compression of the warm soap into shape in a screw compressor.

Plotnikow effect. The longitudinal scattering of (especially infra-red) rays by solid objects or fluids. Cf. *Raman effect.*

plotting. To make a graph or chart representing a relationship between two unknowns, by determining a number of pairs of values which satisfy the relation, and representing them in terms of the lengths of two lines at right angles (the coordinates), each of which represents and is graduated to correspond with one unknown.

Plucker tube. An evacuated glass tube with two electrodes, containing a gas under reduced pressure. Used in spectroscopy.

plumbagin(e). $C_{11}H_8O_3$ = 188.1. Methyljuglone, *5*-hydroxy-*2*-methyl-*1.4*-naphthoquinone. Yellow crystals, m.78–79, from the root of *Plumbago europea, P. zeylonica* and *P. rosea,* a Plumbaginaceae.

plumbago. Native graphite. Blacklead. Used in the manufacture of "lead" pencils, crucibles, and other utensils, and as a lubricant. See *-dag.*

plumbane. (1) An organic compound of lead of the type, PbR_4; as,

tetramethyl-	$PbMe_4$
tetraethyl-	$PbEt_4$
tetraphenyl-	$PbPh_4$

(2) $Pb(C_2H_5)_4$ = 323.2. Tetraethyl lead*, lead tetraethide. A colorless liquid used as an antiknock compound in gasoline. Cf. *ethyl gasoline, stannanes.*

plumbates. A series of salts derived from lead hydroxide, $Pb(OH)_4 \rightleftharpoons H_4PbO_4$, of the types: M_2PbO_3, meta-plumbates; M_4PbO_4, ortho-plumbates.

plumbic. Describing a compound of tetravalent lead. **p. ocher.** Brown *lead oxide.*

plumbiferous. An ore or material containing lead.

plumbism. Poisoning by lead.

plumbite. A salt derived from lead hydroxide, $Pb(OH)_2$, of the types, $MHPbO_2$ or M_2PbO_2.

plumbocalcite. Lead containing calcite.

plumbogummite. A native aluminum and lead phosphate.

plumbo-solvency. The degree of solubility of lead in a liquid.

plumbous. Describing a compound of divalent lead. **p. compounds.** See *lead.*

plumbum. The Latin name for lead. **p. candidum.** A former name for tin. **p. cinereum.** A former name for bismuth. **p. nigrum.** A former name for lead.

plumiera. Sucuuba bark. The dried bark of *Plumiera sucuuba,* an Apocynaceae; used medicinally as anthelminthic.

plumieric acid. $C_{20}H_{24}O_{12}$ = 456 2. A crystalline principle from plumiera.

plumierin. $C_{21}H_{28}O_{12}.H_2O$ = 488.3. Agoniadin, asonidin. A glucoside from the bark of *Plumiera* species. A white crystalline powder, m. 155 (decomp.); soluble in water.

plumose. Having a fleecy or feathery appearance. **p. growth.** A fleecy, feathery growth of bacteria on the culture medium. **p. mica.** A variety of muscovite resembling asbestos.

plural gel. A gel formed by the simultaneous gelification of a mixture of two or more sols.

pluranium. An alleged new element discovered by Osann in 1828 in a platinum ore, and probably a mixture of TiO_2, SiO_2 and ZrO_2.

plutonic. Igneous. A general name for rocks that have crystallized below the earth's surface; as, granite.

plutonium. (1) An element of atomic number 94, and atomic weight 239, obtained by bombarding ordinary uranium with neutrons. It is a transformation product of neptunium, q.v. (2) A name proposed for barium, but never adopted.

pluviometer. Rain gauge. An instrument for measuring rainfall.

pneumatic. (1) Pertaining to air. (2) Pertaining to gases. Cf. *aerodynamics.* **p. drill.** A drill operated by compressed air. **p. jig.** A device for separating minerals by an air blast. **p. trough.** A container of water in which an inverted cylinder, filled with water, is placed for the collection of gases.

pneumatics. A branch of physics dealing with the mechanical properties of gases.

pneumatology. (1) The science of respiration. (2) The science of gases.

pneumatolysis. The process by which many ore deposits were produced as a result of the liberation of gases or vapors during solidification of igneous rocks.

pneumin. Methylene creosote. A yellow, odorless, powder, insoluble in water, soluble in alcohol or ether; used medicinally.

pneumonokoniosis. A form of pneumonia produced by the inhalation of certain industrial dusts, especially coal.

pockeling. The development and expansion of circular patches on fresh surfaces of certain solutions, *e.g.*, of soap.

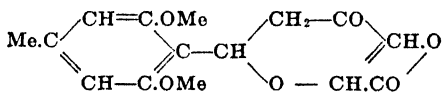
pocket. (1) A sac-shaped cavity or hole. (2) A small body of ore. (3) An enlargement of an ore-vein. (4) A unit of measure for certain commodities (as hops).

poco oil. The essential oil from *Mentha aquatica*, which is rich in linalool acetate.

podophyllic acid. $C_{15}H_{16}O_7 = 308.13$. A monobasic acid derived from podophyllin by hydrolysis.

podophyllin. A resin obtained from podophyllum which contains podophyllic acid, podophyllotoxin, and picropodophyllin. A yellow powder, insoluble in water, slightly soluble in ammonia or alcohol; used medicinally as a purgative. **picro-** $C_{12}H_{14}O_6$. An isomer of podophyllotoxin; an internal or monomolecular anhydride of podophyllic acid.

podophyllotoxin. $C_{15}H_{16}O_6 = 290.1$. The active principle of podophyllin:



A yellow powder, insoluble in water, soluble in alcohol; used medicinally.

podophyllum. Mandrake, May apple. The dried rhizome of *Podophyllum peltatum*, a Berberidaceae, which contains 3 % podophyllin. Used medicinally as the fluid extract.

podzolisation. The division of soil into 3 layers by continual leaching with rain-water. The top layer contains decaying organic matter; the centre layer the material out of which silica, iron oxide and alumina have been washed; and the bottom layer re-deposited extractives.

Poggendorff, Johann Christian. 1796–1877. A German physicist who founded scientific periodicals, and was noted for magnetic and electrical research. **P. cell.** An electrical element, which consists of an amalgamated zinc anode and carbon cathode in a solution of 12 pts. potassium dichromate, 25 pts. sulfuric acid, and 100 pts. water; E.M.F. 2.01 volts. **P. compensation method.** The determination of the potential of a cell by comparing the potential required to balance it with that required to balance a standard, in terms of the length of a resistance wire, analogously to the Wheatstone bridge, q.v.

Pohl's commutator. An electrical contact key that enables the direction of current to be reversed instantaneously; used in physiological experimental work.

poi. See *taro*.

poikilothermism. The ability of living organisms, especially lower forms of life, to adapt themselves to various temperatures.

poidometer. A rapid-action industrial weighing machine.

point. (1) That which has position but not magnitude. (2) A minute spot. (3) A numerical value on a scale. **boiling-** The minimum degree of temperature at which a liquid changes rapidly to the vapor state. **condensation-** The maximum degree of temperature at which a vapor changes to the liquid state. **critical-** The degree of temperature above which a gas cannot be liquefied by pressure only. **dew-** The degree of temperature at which the moisture of the air condenses. **end-** In titration: the stage at which a single drop of solution completes the reaction. **freezing-** The maximum degree of temperature at which a liquid changes to the solid state. **isoelectric-** See *isoelectric point*. **melting-** The minimum degree of temperature at which a solid becomes liquid. **liquefaction-** (1) Melting point. (2) Condensation point. (3) Critical point. **quadruple-** The degree of temperature at which all four phases in a two-component system can exist. **refraction-** The spot on a surface at which a ray of light is refracted. **triple-** See *triple point*.

poise. (1) The C.G.S. unit of viscosity, q.v. It equals 1 dyne per sec. per sq. cm.; or, 1.45×10^{-5} lb.-sec. per sq. ft. Cf. *Poiseuille's Law*. (2) To balance or maintain an oxidation-reduction equilibrium; as, a poising agent.

poiser. A poising agent, q.v.

Poiseuille's Law. See *viscosity*.

poising agent. Poiser. A substance which stabilizes an oxidation-reduction equilibrium; analogous to a buffer maintaining an acid-base equilibrium.

poison. (1) A substance that causes the disturbance, disease, or death of a living organism. Classifications:

A. CHEMICAL (according to composition)
  1. Inorganic poisons
    a. mineral alkalis
    b. mineral acids
    c. metallic poisons
    d. volatile non-metallic poisons (see table)
  2. Organic poisons
    a. organic acids
    b. glucosides
    c. alkaloids
    d. volatile organic poisons (see table)
    e. bacterial poisons
    f. animal poisons
B. PHYSIOLOGICAL (according to effect)
  1. Irritants
    a. true irritants
    b. corrosives
  2. Neurotics
    (cerebro-)
    a. narcotics
    (spinal-)
    b. tetanics
    (cerebro-spinal-)
    c. depressants
    d. deliriants
    e. asthenics

(2) A substance which, added to a metal or alloy, injures its quality. (3) A substance which destroys or diminishes the action of a catalyst or an enzyme. **acrid-** Irritant. **arrow-** A poisonous substance used by savages on their arrows. **bacterial-** P. produced by bacteria; as, toxins, ptomaines, food poison, q.v. **corrosive-** A substance that causes a local destruction of tissue; as, acids, alkalis.

silver nitrate. **cumulative-** A poisonous substance that is retained in the body and gradually accumulates. **fish-** A substance used by natives to stupefy fish. **narcotic-** A substance that produces a stupor or delirium. **true-** A poisonous substance that is absorbed and causes disease or death. See *arrow-*.

p. ash. Chionanthus. **p. effect.** See *M.-W.E.* and table. **p. gas.** See *p. vapor gas.* **p. ivy.** *Rhus toxicodendron.* **p. nut.** Nux vomica. **p. oak.** (1) The fresh leaflets of *Rhus toxicodendron*, an Anacardiaceae of the Atlantic States. Cf. *poison ivy.* Used medicinally as the fluid extract. (2) *Rhus diversiloba* of the Pacific Coast. Both produce highly-irritating skin inflammations, which may be avoided by alcohol rubs and ferrous sulfate applications immediately after exposure. **p. vine.** Same as *Rhus toxicodendron.* **p. vapors.**

	(1) Fatal Per cent	(2) Tolerated Per cent
acrolein	†0.001	0.00033

(1) † Percentage in air which is fatal in 30 minutes or less; others, dangerous after 30 minutes.

(2) Maximum safe concentration in air for humans; the percentage that can be borne for one hour.

* Exposure for 2–3 months causes poisoning.

poisoning. The diseased condition produced by a poison. **acute-** A morbid condition caused by a single excessive dose of poison. **chronic-** A morbid condition caused by many small doses of poison. **garage-** A morbid condition caused by inhalation of carbon monoxide, which accumulates in poorly-ventilated rooms in which a combustion motor is running.

poisonous dose. The amount that produces marked pathological conditions.

Poisson's ratio. The ratio of the lateral contraction to the longitudinal extension for a bar under a stress parallel to its own length.

poivrette. Ground olive stones, used as an adulterant for pepper.

poke. Phytolacca. **Indian-** Veratrum. **p. berries.** The fresh fruits of *Phytolacca decandra.* Used medicinally, as the fluid extract, as an emetic and narcotic; also as an indicator. **p. root.** Phytolacca.

Polaises reaction. See *Grignard reaction.*

polar. Pertaining to a pole. **p. bond.** The electrostatic union of two atoms established by the passage of one or more electrons from one atom to the other. *E.g.*, in NaCl one electron passes from Na to Cl and, accordingly, the charge of the sodium becomes positive and that of the chlorine negative:

(a) $Na\cdot \rightarrow .\ddot{Cl}:$

(b) $Na\ :\ddot{Cl}:$

(c) $Na^+\ \ddot{Cl}^-$

non- The electromagnetic union of two atoms established by sharing in common one or more pairs of electrons; thus, in CO_2 the two double bonds each consists of a pair of electrons.

(a) $:\ddot{O}:\leftarrow :\dot{C}:\rightarrow :\ddot{O}:$

(b) $:\ddot{O}::\dot{C}::\ddot{O}:$

(c) $O\rightleftarrows C\rightleftarrows O$

p. compound. An electrolyte, or any compound that can ionize when dissolved or fused. In general all inorganic acids, bases, and salts belong to this group, in which the atoms are supposed to be held in electrostatic union. **nonpolar-** A non-electrolyte; in general, an organic compound the atoms of which are supposed to be held in electromagnetic union by sharing a common pair of electrons. **p. formula.** See *formula.* **p. number.** See *polar-number.* **p. zone.** See *zone.*

polarimeter. Polariscope.

polarimetry. Polariscopy. The measurement of the rotation of polarized light by means of the polariscope.

polarisation. Polarization.

polariscope. Polarimeter. A device for measuring the rotation of polarized light. It consists of two Nicol prisms between which is placed a column of polarizing liquid. By rotating the Nicol prism nearest to the eye until the intensity of the light passing through the liquid equals the intensity of the comparison field, the new plane of vibration of the light can be read from the scale in degrees. See *rotation* (and illustration).

polariscopy. Polarimetry.

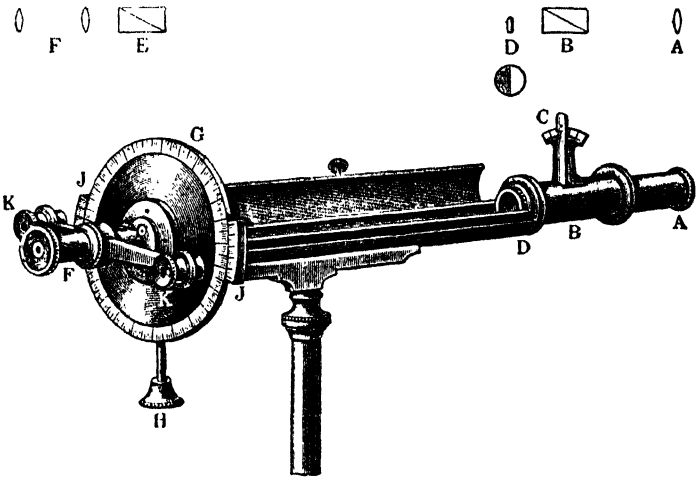
polariser. Polarizer.

polarising. Polarizing.

polarity. Describing a body having two poles, or different properties at terminal points. **atomic-** The loss or gain of one or more electrons by an atom (see *polar bond*). **chemical-** Describing a molecule that has an acid and a basic radical; as, an aminoacid, $NH_2—R—COOH$. **electrical-** The positive and negative terminal, pole, or electrode of an electrical device. **magnetic-** The north or south pole of a magnet. **molecular-** The distribution of electric charges in a molecule. See *polarization* (3).

p. formula. A formula which indicates the distribution of electric charges within the

molecule. Cf. *formula, molecular diagram, structure symbols.* **p. paper.** A filter paper impregnated with an indicator and salt that is moistened and used to distinguish the positive and negative poles of a direct electric current. *E.g.*, if on a filter paper saturated with sodium chloride and phenolphthalein solutions two (D.C.) wires are placed at a little distance apart, electrolysis takes place and the hydroxyl ion will color the phenolphthalein red; hence, the corresponding wire is the positive electrode.



Polariscope.

A. Objective facing a source of monochromatic light.
B. Nicol prism to polarize the light.
C. Adjustment for polarizer (B).
D. Diaphragm.
E. Nicol prism to analyze the light.
F. Eye-piece.
G. Scale.
H. Screw to rotate analyzer (E).
J. Movable scale
K. Magnifier to read scale.

polarization. (1) The property of certain substances to polarize light passing through them. (2) The stoppage or reversal of the voltaic current from an electrolytic cell due to the accumulation of dissociation products at the electrodes (see *overvoltage*). Cf. *Clausius-Mosotti equation, p. potential.* (3) The orientation of a molecule in an electric field (*e.g.*, the positive nucleus toward the negative pole, the electron cloud toward the positive pole); hence a distortion of the polarity. Polarization, α, is related to molecular refractivity, R, by $\alpha = 3R/4N$, where N is Avogadro's number; it is measured by $\alpha = el/I$, where e is the charge, l the distance and I the intensity of the field. Cf. *molecular refractivity, collinsics.* **cell-** The accumulation of hydrogen bubbles on the negative electrode of a battery. **circular-** Polarized light consisting of circular vibrations. **elliptic-** Polarized light, the vibrations of which are elliptical. **plane-** Polarized light, the vibrations of which are all parallel and in one plane.

p. curve. (1) The current-voltage curve obtained when the intensity of an electrolytic current is plotted against the polarizing electromotive force. (2) A polarogram q.v. **p. potential.** The reverse potential of an electrolytic cell, tending to oppose the direct potential of a battery which is effecting electrolytic decomposition in the cell. It is due to the accumulation of the dissociation products on the electrodes. Cf. *overvoltage.*

polarize. To produce polarization.

polarized light. It is assumed that polarized light consists of unilateral vibrations, swinging parallel to one another either in the same plane, ellipse or circle; whereas, non-polarized light vibrates in a number of planes (see *polarizer*). A polarized ray is thus made up of 2 rays, which are complementary in the sense that the vibrations occur in directions at right angles (the ordinary and extraordinary rays). The ordinary ray is "lost" in the polarimeter by total reflection, and the extraordinary ray emerges as light polarized in one plane only. Optically-active substances rotate this plane. Cf. *radiation, Verdet.*

polarizer. A device for polarizing light; as, a Nicol prism through which only light vibrating in one definite plane passes. The polarizer acts a filter by transmitting only parallel vibrations, thus ||||, which, on passing through an optically-active substance, are rotated either ///// or \\\\. Cf. *analyzer.*

polarizing. Causing polarization. **p. angle.** See *Brewster's law.* **p. disk.** Polaroid. A specially-prepared cellulose film containing oriented iodoquinine sulfate crystals, mounted between two glass plates. Used as a substitute for nicol prisms, in polariscopes, and for microscopes, reading glasses and windshields to avoid glare.

polar-number. Valence number. The mathematical expression of valence by assigning to each atom in a compound a positive or negative integer, so that their sum is zero. Hydrogen is 1, oxygen −2 and free elements are zero. Cf. *oxidation, reduction, valence.*

polarogram. Polarization curve. The current-voltage curve produced by a beam of light on photographic paper rotating in the polarograph. It indicates the quantity and purity of substances electrolytically reduced at specific cathodic potentials.

polarograph. An instrument which records the movements of a galvanometer by means of the image produced (on a revolving drum of light-sensitive paper) by a beam of light reflected from a mirror attached to the galvanometer needle. It records photographically, minute changes in the intensity of a current resulting from a gradually-increasing applied voltage, in electrolysis, with a dropping mercury cathode. It is used to measure cathodic electrode processes (*e.g.*, deposition or reduction of cations and

anions); reduction and hydrogenation of organic compounds; overvoltages; complexity of ions, and ionic equilibria; solubility; simultaneous qualitative and quantitative microanalysis for several constituents. It was devised by Heyrovsky, q.v.

polaroid. A polarizing disk, q.v.

pole. (1) Rod. (2) The opposite points at the ends of an axis; a pair of points that have opposite physical properties. **negative-** The cathode; an electric terminal charged with electrons. (**magnetic**) **north-** That point toward which a magnetic needle, freely suspended, will point. **positive-** The anode or electric terminal that is positively charged as a result of loss of electrons.

Polenské number. The number of cc. of 0.1 normal alkali (less the blank) to neutralize an alcoholic solution of the water-insoluble volatile fatty acids liberated on acidification of the soap made by saponification of 5 grams of a fat. (Cf. *Reichert number.*)

polianite. Pyrolusite.

policeman. A device for removing precipitates from the walls of glass vessels in quantitative analysis. **platinum-** A platinum-iridium alloy claw that fits over a glass rod, and is used to hold a quantitative filter during ignition. **rubber-** A small piece of rubber tubing fitting snugly over a glass rod. It is used to rub the precipitates off the walls of glass vessels.

polish. A preparation that is used to clean metal surfaces and make them bright and lustrous.

polishing. The act of rubbing or smoothing metal or glass surfaces. **electrolytic-** The smoothing of a metal surface by making it the anode in a suitable electrolyte (usually phosphoric acid and glycerin). The high current-density produced on the small projecting portions results in their preferential dissolution.

polishing slate. A gray or yellow slate used for polishing.

Pollack's cement. A mixture of equal weights of red lead and litharge, made into a stiff paste with gelatin. It is used for jointing metal and/or glass, and although slow-setting, has great strength.

pollantin. An antitoxin obtained by inoculating horses with pollen extract; used medicinally for immunization.

pollen. The male sex-cells or fertilizing grains of a flowering plant, which contain glucosides; *e.g.*,

ragweed p.	quercitin, isorhamnetin
bulrush p. (*Typha angustata*)	isorhamnetin
orchard grass p. (*Dactylis glomerata*)	dactylin
timothy p. (*Phleum pratense*)	dactylin

Cf. *stamen, pollantin.* **p. extract.** A solution of proteins obtained from the pollens of various plants that are believed to be the cause of hay fever; used medicinally for immunization. **fall-** An aqueous liquid obtained by the extraction of the proteins of ragweed, goldenrod, and maize. **spring-** An aqueous liquid obtained by extracting the proteins of rye, timothy, orchard grass, redtop grass, and sweet vernal grass; used for immunizing to hay fever.

pollopas. A glass-like transparent plastic, (q.v.); used as a substitute for glass.

pollucite. $Cs_2O.Al_2O_3.5SiO_2.H_2O$. Pollux. A rare native hydrated cesium aluminum silicate, which occurs in the pegmatite of the Island of Elba.

pollution. (1) Contamination. (2) The introduction of a deleterious substance into a water supply.

pollux. Pollucite.

polonium. Po = 218.2. Radio telurium, dvitellurium. The radioactive element, Ra*F*, atomic number 84, formed by disintegration of radium, and belonging to the sixth group of the periodic system. It was the first radioactive decomposition-product discovered by Madame Curie (1898).

poly-. A prefix derived from the Greek, meaning "many." (Latin: multi.)

polyamide. A polymerisation product of a carboxylic acid (*e.g.*, adipic acid) and its aminated derivative; see *nylon.*

polyacid base. A compound that yields two or more hydroxyl ions; as, $Ca(OH)_2$, $Al(OH)_3$.

polyad. Any element or radical with a valency greater than two, *e.g.*, from triad to octad.

polyadelphite. A brownish-yellow to green manganese garnet.

polyargyrite. A native silver, antimony sulfide.

polyatomic. (1) Describing a molecule which consists of three or more atoms. (2) Polybasic. (3) Polyacidic. (4) Describing an organic compound containing two or more hydroxyl groups; as, certain alcohols and sugars (glycerol, glucose).

polybasic acid. A compound that yields two or more hydrogen ions per molecule in aqueous solution; as, H_2SO_4, H_3PO_4.

polybasite. Ag_9SbS_6. A native silver and antimony sulfide, containing copper.

Polycarpeae. A group of families of Phanerogams comprising: Nymphaeaceæ Ranunculaceae, Magnoliaceae, Myristicaceae, Menispermaceae, Berberidaceae, Lauraceae.

polyceptor. An amboceptor that binds different complements.

polychloral. Hydronal.

polychrom. Esculin.

polychromatic. Showing more than one color, particularly if viewed by polarized light. **pseudo-** Pseudodichromatic, pseudodichroic. Showing more than one color when viewed by polarized light, but otherwise colorless.

polychromatophile. A cell or tissue that can be stained differentially with dyes.

polycrase. Euxenite.

polycyclic. Polynucleated. Describing a molecule that contains two or more atomic rings: as, naphthalene, phenanthrene. Cf. *ring systems.*

polydymite. A native nickel cobalt sulfide, $(Ni, Co)_4S_5$.

polyene. A compound containing many double bonds; as, the carotenoids. **p. grouping.** A system of double bonds which are associated with color reactions; as, in carotene.

polyethylene glycols. A polyglycol derived from ethylene glycol.

polygalic acid. Polygalin.

polygalin. $C_{32}H_{54}O_{18}$ = 726.6. Polygalic acid. An active principle obtained from *Polygala senega.* Cf. *senega.*

polygamarin. A crystalline bitter principle from *Polygala amara*, a Polygalaceae.

polygen. An element that has two or more valencies, and thus forms two or more series

of compounds; as, iron (ferrous and ferric), or chlorine (chlorides, chlorites, and chlorates). Cf. *periodic chain.*

polygenetic. Producing more than one phenomenon. **p. dye.** A coloring material that gives two or more different shades with different mordants. Cf. *monogenetic.*

polyglycols. A dihydroxyether formed from two or more glycol molecules by dehydration. *E.g.*, $(CH_2OH.CH_2)_2O$, diethylene glycol; $CH_2OH.CH_2$ / $MeCHOHCH_2$ >O, ethylene-2-propylene glycol.

polygon. A plane figure bounded by 3 or more sides.

Polygonaceae. The buckwheat family, a group of herbs or woody plants, some of which are used as drugs:

Rheum species	rhubarb
Rumex crispus	rumex
Rumex hymenosepalus	canaigre
Rumex acetosella	sheeps sorrel
Polygonum hydropiper	water pepper
Polygonum bistorta	bistort
Polygonum erectum	knot grass

Cf. *lepathinic acid, nepalin, nepodin, polygonin.*

polygonatum. Solomon's seal.

polygonin. $C_{21}H_{20}O_{10}$ = 432.15. A glucoside from *Polygonatum cuspidatum*, a liliaceous plant of Japan and China.

polygraph. A device for recording the arterial and venous pulse waves, and other pulsations of the body surface, simultaneously. Used as a "lie-detector."

polyhalite. $K_2SO_4.MgSO_4.2CaSO_4.2H_2O$. A native hydrated sulfate of calcium, magnesium and potassium from Stassfurt.

polyhydrate. A compound that contains more than two molecules of water.

polyhydric. A compound that contains more than two hydroxyl groups.

polyhydrone. $(H_2O)_x$. A polymer of hydrone (q.v.).

polymer(e). A member of a series of polymeric compounds.

polymeric. Related molecularly to an isomeric compound, but having a multiple of its molecular weight; as, acetylene and benzene, formaldehyde and paraformaldehyde. See *polymerism.*

polymericular weight. The molecular weight of a polymerized molecule of an element.

polymeride. A member of a series of polymeric compounds; a polymer.

polymerisation. Polymerization.

polymerism. The phenomenon exhibited by certain organic compounds having the same percentage composition, but different molecular weights, the heavier being multiples of the lighter. In such compounds the same elements are present in the same percentages, but the number of atoms and sometimes the structures are different; thus, C_2H_2, C_4H_4, C_6H_6, C_8H_8 are polymeric compounds. See *polymerization.*

polymerization. (1) A reaction in which two or more molecules of the same substance combine to form a compound, from which the original substance may or may not be regenerated (as, $3CH_2CHO = (CH_2)_3C_3H_3O_3$), the new molecular weight being a multiple of that of the original compound. Cf. *molecular association, hydrone.* **aromatic-** The formation of an aromatic compound from two or more molecules of an aliphatic compound; as, benzene from acetylene, or hexamethylbenzene from crotonylene. **carbohydrate-** The formation of monosaccharides from formaldehyde: $6HCHO = C_6H_{12}O_6$ (see *photosynthesis*). **co-** The structural arrangement (*e.g.*, of rubber) in which 2 or more different monomers or types of group are present in alternate sequence in a chain. **condensed-** A polymerization in which atomic displacement occurs to some extent, as in aldol polymerization and benzoin formation. **photo-** See *photopolymerization.* **true-** A union of two or more similar molecules in which the atoms remain in similar relative positions; as, hexaphenylethane from triphenylmethyl.

polymerize. To cause or undergo polymerization

polymers. (1) A series of compounds having the same percentage composition, and containing different numbers of the same atoms. (2) Compounds formed from two or more similar molecules; as, dimer, trimer, tetramer.

polymeter. (1) A measuring device that measures two or more different physical properties simultaneously. (2) A hygrometer, thermometer and barometer mounted on the same board.

polymethylene. See *cycloparaffins.* **p. glycols.** A polyglycol derived from methylene glycol, $CH_2(OH)_2$ or from its anhydride (formaldehyde); thus; $CH_2OH.O.CH_2OH$ dimethyleneglycol, $CH_2OH.(O.CH_2)_2CH_2OH$ trimethyleneglycol. **p. tetra sulfide.** Thiokol.

polymignite. A native lime-niobium oxide containing numerous metallic oxides.

polymorph. A substance which occurs in two or more different forms.

polymorphism. The property of certain substances of crystallizing in two or more different systems. *E.g.: dimorphism*, crystallizing in two systems, as carbon (diamond-isometric, graphite-hexagonal); *trimorphism*, crystallizing in three systems, as sulfur; *tetramorphism*, crystallizing in four systems, as phosphorus. See *isomorphism.*

polynucleated. Polycyclic.

polyoxy- A prefix indicating more than three oxygen atoms. **p. methylene.** A condensation-product of formaldehyde, $(CH_2O)_x$. Cf. *paraformaldehyde.*

polypeptides. Compounds of two or more amino-acids, which contains one or more peptide groups, —CO.NH—. *E.g.:*

dipeptides: NH_2—R—CO.NH—R—COOH; as, anserine, carnosine, glycylglycine, alanylglycine.
tripeptides: NH_2—R—CO.NH—R—CO.NH—R—COOH; as, glutathione, diglycylglycine, glutamylcysteylglycine.
tetrapeptides: NH_2—R—CO.NH—R—CO.NH—R—CO.NH—R—COOH; as, triglycylglycine, alanyl-glycyl-leucyl-glycine.

The higher polypeptides resemble the peptones and proteins. An artificial octo-decapeptide (a synthetic protein with 18 molecules of amino acids) has been prepared; the number of different octo-decapeptides, by changing the sequence of the amino acids only, has been calculated to be 6,402,373,705,728,000. This does not include the many additional possibilities due to optical activity; hence, it is possible that each living organism has its own particular type of proteins, q.v.

polyphase. Having more than one phase; as, an alternating electric current.

polyphosphides. Compounds of monovalent metals having the formula M_2P_n; as, K_2P_n.

Polyporaceae. A genus of spore-forming fungi, consisting of 2000 species, among which are the edible *Boletus*.

polypyknotic. Consisting of two independent components of different densities.

polyquinoyl compound. An organic compound containing four or more =CO groups. *E.g.*, diquinoyl, $C_2H_2(CO)_4$; triquinoyl, $(CO)_6$.

polysaccharides. Polysaccharoses. A group of carbohydrates containing more than three molecules of simple sugars. The general formula is: $(C_6H_{10}O_5)_x$ for polyhexoses, and $(C_5H_8O_4)_x$ for polypentoses. They are theoretically derived from mono-, di- or trisaccharides by abstraction of water. To this group belong starch, dextrin, glycogen and inulin, which hydrolyse to monosaccharides in a series of steps (staircase reaction). See *sugars, carbohydrate.*

polysaccharose. Polysaccharide.

polysilicate. See *silicate.*

polystichalbin. $C_{22}H_{26}O_9$ = 434.3. A constituent of filix extract, insoluble in water, soluble in hot alcohol.

polystichin. $C_{22}H_{24}O_9$ = 432.3. An acid obtained from the roots of *Aspidium* or *Polystichum* species (Filices).

polystichinin. $C_{18}H_{22}O_6$ = 366.2. A constituent of aspidium extract.

polystichinol. $C_{21}H_{30}O_9$ = 426.3. A constituent of aspidium extract.

polystichocitrin. $C_{15}H_{22}O_9$ = 346.2. A constituent of aspidium extract.

polystichoflavin. $C_{24}H_{30}O_{11}$ = 494.2. A constituent of the rhizome of *Aspidium spinulosum.* Cf. *polystichum.*

polystichum. The dried roots of *Polystichum* (*Aspidium*) *spinulosum* and *Filix mas* (male fern); used medicinally, as the fluid extract, as an anthelmintic.

polystyrene. Polymerized styrene (q.v.) derived from petroleum; used as a basis for synthetic rubber and as an insulator.

polysulfide. A binary compound of sulfur, which contains more sulfur than is required by the normal valency of the metal; Na_2S is the normal sulfide, and Na_2S_2, Na_2S_3, Na_2S_4, and Na_2S_5, the polysulfides of sodium. They are considered coordination compounds of neutral sulfur atoms attached to the sulfur ion. **p. ion.** An electrically-charged group of atoms which contain two or more sulfur atoms; as, AsS_2^-, AsS_3^-, AsS_4^{---}, AsS_4^{---}.

polyterpenes. A group of compounds which contain two or more terpene molecules of the general type, $(C_{10}H_{16})_x$.

polythionate. A salt of a polythionic acid (q.v.) of the general type, $M_2S_xO_6$, in which x is 2, 3, 4 or 5.

polythionic acid. Thionic acids. A group of sulfur acids of the general type, $H_2S_xO_6$, where x is 2, 3, 4, 5 or 6. *E.g.*,

$H_2S_2O_6$ = dithionic acid, $HO.SO_2.SO_2.OH$

$H_2S_3O_6$ = trithionic acid, $HO.SO_2.S.SO_2.OH$

$H_2S_4O_6$ = tetrathionic acid, $HO.SO_2.S.S.SO_2.OH$

$H_2S_5O_6$ = pentathionic acid, $HO.SO_2.S.S.S.SO_2.OH$

$H_2S_6O_6$ = hexathionic acid, $HO.SO_2.S.S.S.S.SO_2.OH$.

polytrophic. A bacterium or microorganism that produces two or more different types of fermentation.

polytropy. A form of polymorphism, q.v.

polyuronide. A substance which yields a uronic acid or acids on hydrolysis.

polyvalent. Describing an element that has more than one valency. Cf. *multivalent, polygen.* **p. vaccine.** A suspension of two or more species of the same microorganism in a liquid.

polyvinyl. Describing a compound containing a number of vinyl, $—CH:CH_2$, groups in a polymerised form. **p. acetate.** $(CH_2.CHOOC.Me)_n$. A transparent thermoplastic solid, insoluble in water or mineral oils, soluble in most organic solvents; used as a heat-sealable adhesive, binder, plastic and size. **p. alcohol.** $(CH_2:CHOH)_n$. A cream-colored powder, soluble in water, insoluble in most organic solvents; used as an adhesive, emulsifier and sizing agent for paper.

polyzime. A malt extract containing the enzyme constituents in an active or activated state.

pomace. The pressed residue from the extraction of apple juice in cider manufacture; used as a cattle-food.

pomade. A perfumed ointment, especially for the hair.

pomegranate. Granatum. The dried bark of the stems and roots of *Punica granatum*, a Punicaceae. It contains the alkaloids pelletierine, isopelletierine, and pseudopelletierine; used as the fluid extract, as an anthelmintic and teniafuge. Cf. *coccon, granatine, granatotannic acid.* **p. tannin.** Ellagitannic acid.

Pompey red. Ferric oxide.

Ponder's stain. A solution of 0.02 gm. toluidine blue in 1 cc glacial acetic acid, 2 cc absolute alcohol and 97 cc water.

ponite. A form of rhodocrosite containing iron.

pontianac. A resin of the copal type, used in the paint industry. Cf. *jelutong.*

pontocaine. Brand of tetracaine hydrochloride.

pontol. A mixture of secondary and tertiary alcohols, used as denaturant for ethanol.

poonahlite. A hydrated calcium aluminum silicate from Poonah, India.

poor gas. A group of combustible gases from the blast furnace (Siemen's and Martin's furnace); also Mond gas and regenerator gas.

Pope, Sir William Jackson. 1870–1939. An English chemist noted for his work on crystallography and organic chemistry.

poplar buds. Balm of Gilead buds. The air-dried, winter-leaf buds of *Populus nigra*, a Salicaceae, which have a pleasant aromatic odor; used medicinally as the fluid extract. **p. b. oil.** An essential oil from p., d.0.895–0.905, b.255–265, soluble in alcohol and containing humulene, sesquiterpenes and a paraffin.

poplox. A sodium silicate; see *intumescence.*

poppy. Mawseed. The plant *Papaver somniferum*, a Papaveraceae. **California-** Eschscholtzia. **red-** Corn poppy, corn rose. The flower-petals of *Papaver rhoeas*, used as an anodyne expectorant. **p. capsules.** Papaveris fructus. The dried, fully grown, unripe fruit of *Papaver somniferum*, a Papaveraceae; used medicinally. **p. seed oil.** A pale, yellow fixed oil from the seeds of *Papaver* species, m.5; insoluble in water, soluble in alcohol. Used as a lubricant for fine machinery.

populin. $C_{20}H_{22}O_8.2H_2O$ = 426.3. Benzoyl salicin, $C_{13}H_{17}O_7.C_7H_6O$. A glucoside from the bark of aspen species. A light white powder, m.180, soluble in water, alcohol or ether, which yields benzoic acid and salicin on hydrolysis. Used medicinally as an antipyretic.

populoid. The combined principles from the bark of *Populus tremuloides* (American aspen) or *P. tremula* (European aspen). Used medicinally as a bitter tonic, astringent and mild antipyretic.

porcelain. A white, semiopaque, dense, waterproof substance obtained by strongly heating and sintering a mixture of kaolin, feldspar and quartz; m. 850–1400. Used for many utensils (dishes, crucibles, etc.), as well as for objects of art (ceramics) and in dentistry (teeth). Cf. *sillimanite.* **high fusing-** m.1340 (2440°F). **low fusing-** m.930 (1700°F). **medium fusing-** m.1260 (2300°F). All melting points are approximate. **p. burner.** A bunsen burner made of porcelain. **p. clay.** Kaolin. **p. color.** A pigment used to color porcelain, especially a metallic oxide. **p. glaze.** See *glaze.* **p. jasper.** *Porcellanite.* **p. mill.** A grinding machine made of porcelain, for either wet or drying grinding. **p. utensils.** See *casserole, crucible, combustion boat, evaporating dish, funnel, mortar, retort, spatula.*

porcellanite. Porcelain jasper. A fused or sintered clay and shale, which occurs at the borders of burned coal seams.

pore. A minute opening on a surface.

porosimeter. An instrument for the determination of the porosity of a substance, as a brick. It measures the volume of liquid absorbed, or of air transmitted in a given time.

porosity. A condition in which a solid body is penetrated by minute open spaces filled with either liquids or gases. P. is expressed as the percentage of open-space volume with respect to the total volume. Cf. *permeability.* **apparent-** The volume of open pore space per unit total volume. **true-** The volume of both open and sealed pore spaces per unit total volume.

porous. Having interstices or minute cavities; penetrated by small open spaces.

porpezite. Palladium gold.

porphin ring. A heterocyclic structure consisting of 4 pyrrole rings united by methylene groups, in the center of which may or may not be a metal (Fe or Mg). It is a structural part of chlorophyll and hemoglobin, and is probably a flat molecule in which a slight oscillation of the metal will cause a rhythmic shift of all double bonds, thus making it a dynamic molecule. See diagrams drawn to scale, using Pauling's atomic distances. **aza-** See *tetra-aryl-.*

porphyric acid. Euxanthone.

porphyrin. An iron-free decomposition-product of hematin, as, hemoporphyrin $C_{16}H_{18}N_2O_3$; or a magnesium-free decomposition-product of chlorophyll; as, phylloporphyrin, $C_{16}H_{18}N_2O$ (q.v.).

porphyrine. $C_{21}H_{25}O_2N_3$ = 351.2. An alkaloid from the bark of *Alstonia constricta,* an Apocynaceae. A colorless substance, m.97, soluble in acids (blue fluorescent solution). Cf. *alstonine.*

porphyrite. A coarse-grained igneous rock.

porphyrization. Reduction to a fine powder; pulverization.

porphyropsin. The pigment of the eyes of freshwater fish.

porphyroxine. $C_{19}H_{23}O_4N$ = 329.19. An alkaloid of opium, m.135.

porphyry. An igneous rock in which relatively large, bright red crystals are set in a finer grained or glassy dark red ground-mass.

porpoise oil. A yellow fixed oil from porpoises.

porporino. (1) Hematoporphyrin. (2) A decorative imitation of gold, which consists of an alloy of mercury, tin, and sulfur.

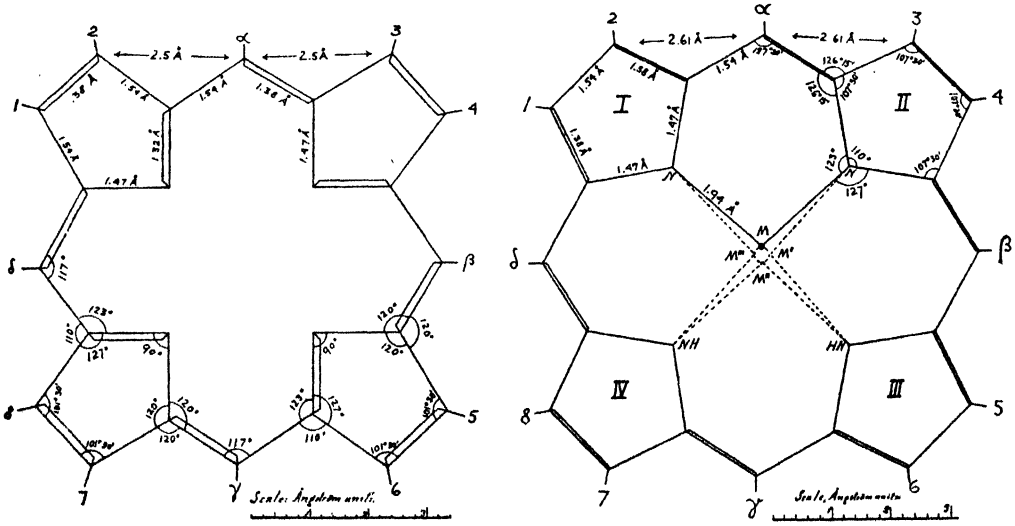
portland cement. A hydraulic cement, obtained by burning a mixture of lime and clay and pulverizing the resulting clinker. A greenish-gray powder which consists of basic calcium silicates, calcium aluminates, and calcium ferrites. If mixed with water it solidifies to an artificial rock. It derives its name from its similarity to Portland stone. See *cement.*

Portland stone. A yellowish-white limestone from the Isle of Portland.

Portsmouth accelerator. P.O.T.G. Phenyl-*o*-tolyl guanidine, used as an accelerator in the vulcanization of rubber.

posion. A proposed name for anion. Cf. *negion.*

positive. (1) Not negative. (2) Greater than zero. **p. crystal.** A crystal whose refractive



Porphin ring drawn to scale.
Left: With 12 double bonds. Right: With 10 double bonds and central metal.

index for the extraordinary ray is greater than that for the ordinary ray. **p. electron.** A positron, q.v. **p. element.** A light-metal or the element of the upper right and lower left of the new periodic table. An element that will yield its valence electrons to another element and thereby, become positively charged. An element which has, in general, less than four electrons in its outer valency shell. **p. group.** A radical or group of atoms that is positively charged and base-forming; as, NH_4^+. **p. nucleus.** The center of an atom. It is assumed to be extremely small in comparison with the sphere occupied by the electrons surrounding it, and to be composed either of tightly-packed electrons, hydrogen and helium kernels or made up of (*1Z*) neutrons, (*2Z*) protons and (*Z*) electrons, where *I* is the isotopic weight and *Z* the atomic number. The positive nucleus of the atom is thought to be responsible for the atomic weight, atomic number, and radioactive properties of the element. Suggested names: *proton* (Rutherford), *hydrion* (Soddy), *centron* (Lodge), *ambron, merron, uron, prime, hylon,* and *prouton.* **p. ore.** An ore that has been exposed and properly worked on four sides. (Cf. *possible ore.*) **p. radical.** An atom or group of atoms that has lost one or more electrons and becomes positively charged. **p. rays.** A stream of positively-charged molecules shooting from the anode toward the cathode in a discharge tube. If the cathode is perforated, these rays can be made visible behind it by means of a fluorescent screen. See *canal rays.* **p. ray analysis.** See *mass spectrograph.* **p. reaction.** A reaction which produces the effect sought.

positron. Oreston, positive electron. A subatomic particle or fundamental "building stone" of matter, having a positive charge and a mass of $\frac{1}{1800}$ of a hydrogen atom. Cf. *particle, nucleus.*

posode. A proposed name for anode. Cf. *negods.*

posologic. Pertaining to medicinal doses.

posology. A branch of medicine and pharmacology that deals with the dosage of drugs; viz., the form, quantity and frequency of administering medicines.

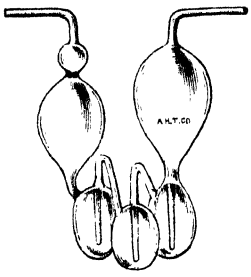
possible ore. An ore that may exist out of sight, or below the lowest workings of a mine. (Cf. *positive ore.*)

postulate. An assumption, not capable of proof: (1) An indisputable pre-requisite; (2) stipulated condition; (3) a demand. Cf. *axiom.*

potable. That which is drinkable without injury to health.

potarite. A native compound of palladium and mercury, erroneously known as allo-palladium (q.v.).

potash. (1) Potassium hydroxide. (2) Potassium carbonate. **black-** A commercial grade of caustic *soda*, containing 5 % NaOH with iron oxide and sodium carbonate as impurities. **caustic-** Potassium hydroxide. **salvosal-** Potassium salol ortho-phosphite.



Potash bulb

p. alum. Kalinite. **p. bulb.** A glass apparatus which consists of three or more variously-shaped bulbs, filled with potassium hydroxide solution (see illustration). Used for the absorption of carbon dioxide in organic elementary analysis. **p. feldspar.** Orthoclase. **p. glass.** See *glass*. **p. mica.** Muscovite. **p. water.** Potassic water. **p. waterglass.** See water*glass*.

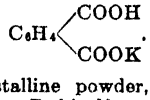
potassa. Potassium hydroxide. **p. sulfurata.** Potassium sulfide.

potassamide. NH_2K = 55.2. A substitution compound of ammonia; a white solid (if pure) or, if impure, yellowish-brown inflammable substance, m.271, sublimes 400.

potassic. Containing potassium. **p. water.** Potash water. An aerated mineral water in which the potassium ions are in excess of the sodium ions.

potassii. The Latin for "of potash."

potassium. K = 39.096. Kalium. An alkali metal and element, atomic number 19. A silver-white, soft, wax-like substance, d.0.87, m.62, b.720, which reacts violently with water. Since it rapidly oxidizes in air, it is always stored under a layer of coal oil. Potassium occurs abundantly in its salts, as sylvenite, kainite and carnallite in Stassfurt (Germany) and Alsace. It is widely distributed in smaller quantities in feldspars, rocks and soils, and was first prepared electrolytically in 1807 by Davy. Its salts are all soluble in water and yield the colorless potassium ion, K^+. Potassium is typical of the alkali-metals, and forms only one series of compounds, valency of one. It is prepared by electrolysis and is used as a reagent and reducing agent in many chemical reactions. It is slightly radioactive in the metallic state, and emits a weak β-radiation. **p. acetate.** $KC_2H_3O_2$ = 98.1. Potassii acetas, diuretic salt. CH_3COOK. White, deliquescent powder, d.1.8, m.292, soluble in water or alcohol, insoluble in ether; used as a reagent, in buffer solutions, and medicinally. *acid-* $KH(C_2H_3O_2)_2$ = 158.2. Colorless needles, m.148, decomp. 200. **p. acetotungstate.** A double salt of potassium acetate and tungstate used in photographic toning solutions. **p. acetylsalicylate.** $KC_9H_7O_4.2H_2O$ = 254.19. White crystals, m.65. **p. acid carbonate.** P. bicarbonate. **p. acid chromate.** P. dichromate. **p. acid phthalate.** $KHC_8H_4O_4$ = 204.15. P. phthalate,



A white crystalline powder, used as buffer. **p acid sulfate.** P. bisulfate. **p. acid tartrate.** P. bitartrate. **p. alloys.** The liquid or semi-solid mixtures of potassium with sodium:

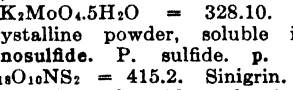
90 %K 10 %Na	80 %K 20 %Na	70 %K 30 %Na	60 %K 40 %Na	50 %K 50 %Na
m.17°C	−10°C	−3°C	5°C	11°C

p. aluminate. $K_2Al_2O_4.3H_2O$ = 250.5. A colorless crystalline powder, soluble in water, insoluble in alcohol. **p. aluminum sulfate.** $KAl(SO_4)_2.12H_2O$ = 474.4. Potash alum. kalinite. A double salt of potassium and aluminum sulfate; large rhombic, colorless crystals, readily soluble in water. Used extensively as a mordant. **p. amino chromate.** $CrO_2(OK).NH_2$ = 155.13. Stable red crystals. **p. aminonaphthol.** Helthin. **p. ammonium tartrate.** $KNH_4C_4H_4O_6$ = 205.17. A white powder, very soluble in water. **p. amyl sulfate.** $KC_5H_{11}SO_4$ = 206.2. A mixed ester or salt. A white granular mass, soluble in water, slightly soluble in alcohol. **p. anthranilate.** $KC_7H_6O_2N$ = 175.2. The p. ester of anthranilic acid, $C_6H_4(NH_2)COOK$. A white crystalline powder; soluble in water. **p. antimonate.** $KSbO_3$ = 207.3. P. stibnate. A white crystalline powder, slightly soluble in water, soluble in alkalis. *pyro-* See *p. stibnate*. **p. antimonyltartrate.** $KSbOC_4H_4O_6.\frac{1}{2}H_2O$ = 332.3. Tartar emetic. Colorless octahedral crystals, d.2.6; slightly soluble in water. **p. argentocyanide.** $KAg(CN)_2$ = 199.00. A substance which occurs in solutions of silver cyanide in potassium cyanide solution, used as a silver-plating solution. **p. arsenate.** K_3AsO_4 = 256.3. Normal p. arsenate. Colorless crystals, soluble in water or alcohol; used as a reagent for detecting tannic acid and opium alkaloids. *acid-* KH_2AsO_4 = 180.1. Colorless crystals, d.2.851, m.228, soluble in water, insoluble in alcohol; used in medicine as an alterative and reconstructive. **p. arsenite.** $KAsO_2$ = 146.1. A grayish-white powder; soluble in water. Used as a reagent, for detecting Ceylon cinnamon oil; medicinally, as a tonic and stomachic; and as a reducing agent, in the manufacture of mirrors. **p. aurate.** $AuO.OK,3H_2O$ = 322.4. Soluble yellow needles. **p. aurichloride.** $AuCl_3,KCl,2H_2O$ = 414.2. Soluble plates. **p. auricyanide.** $Au(CN)_3KCN, H_2O$ = 358.4. A soluble colorless solid. **p. aurocyanide.** AuCN.KCN = 288.3. Colorless plates. **p. benzoate.** $KC_7H_5O_2.3H_2O$ 214.2. The p. salt of benzoic acid, Ph.COOK. A white crystalline powder, soluble in water or alcohol; used medicinally as a mild antiseptic. **p. benzodisulfonate.** $K_2C_6H_4(SO_3)_2$ = 314.3. The p. salt of benzene disulfonic acid, $C_6H_4(SO_3K)_2$. Small colorless crystals, soluble in water, used in organic synthesis. **p. biborate.** P. tetraborate. **p. bicarbonate.** $KHCO_3$ = 100.1. Acid p. carbonate, potassii bicarbonas, saleratus (*sal aeratus*). Colorless, transparent, monoclinic crystals, d.2.17; decomp. by heat, soluble in water. Used as a reagent in titrating arsenous and antimonous oxides; in the manufacture of potassium salts and inorganic synthesis; and in medicine. **p. bichromate.** P. dichromate. **p. bifluoride.** See *p. fluoride. acid-*. **p. biiodate.** See *p. iodate, acid-*. **p,**

binoxalate. P. bioxalate. **p. bioxalate.** KHC_2O_4 = 96.1. P. binoxalate, salt of sorrel, salt of lemons, salt acetosella. White crystals or monoclinic prisms; soluble in water. Used as a reagent, in medicine, in the manufacture of ink and stain removers, in photography, and for cleaning wood and metal. **p. biphosphate.** See *p. phosphate.* **p. bisaccharate.** $KC_6H_9O_8$ = 248.1. The mono-p. salt of saccharic acid. $(CHOH)_4(COOH)COOK$. Yellowish crystals, soluble in water; used in medicine. **p. bismuth tartrate.** $KBi_3C_4H_2O_9.4H_2O$. A granular white powder, soluble in water and used as antiluetic. **p. bisulfate.** $KHSO_4$ = 136.2. Potassii bisulfas, p. acid sulfate, sal enixum. Colorless crystals, m.197 (decomp.), and soluble in water; used as a reagent and in the manufacture of effervescent drinks. **p. bisulfite.** $KHSO_3$ = 120.17. P. acid sulfite. A white crystalline powder, decomp. 190, soluble in water; used as an antiseptic and disinfectant. **p. bitartrate.** $KHC_4H_4O_6$ = 188.1. Potassii bitartras, cream of tartar, depurated tartar. A colorless crystalline powder; slightly soluble in water. Used in volumetric analysis, as a reagent, and medicinally as a refrigerant and diuretic. **p. black.** Suint ash. **p. borates:** $K_2B_2O_4$, p. metaborate; $K_2B_4O_7$, p. tetraborate. **p. borofluoride.** KBF_4 = 126.0. White crystals, soluble in alcohol. **p. borotartrate.** A mixture of p. metaborate and p. bitartrate. A white crystalline powder, d.1.832, slightly soluble in water. Used medicinally as an antiseptic, and in photography to retard the action of developers. **p. bromate.** $KBrO_3$ = 167.0. Colorless rhombohedral crystals, d.3.24, m.434, decomp. 703; soluble in water, alcohol or ether. Used as a reagent (Koppeschaar solution) for titrating phenol and oxalic acid, and as a standard in iodometry. **p. bromide.** KBr = 119.0. Potassii bromidum. White regular crystals, $d._{15}$°2.68, m.740; soluble in water or alcohol. Used as a reagent, in photography, and medicinally as a nerve sedative and antispasmodic. **p. bromo-o-oxybenzoate.** P. bromosalicylate. **p. bromosalicylate.** $KC_7H_4O_3Br$ = 255.1. P. bromo-o-oxybenzoate, $C_6H_3Br(OH)COOK$. White crystals, soluble in water; used medicinally as a hypnotic and antirheumatic. **p. butyrate.** $KC_4H_7O_2$ = 126.1. C_3H_7COOK. A white deliquescent crystalline powder, soluble in water. **p. cacodylate.** $KC_2H_6O_2As.H_2O$ = 194.1. The p. salt of cacodylic acid, Me_2AsO_2K. Small white crystals, soluble in water; used medicinally as a tonic. **p. camphorate.** $K_2C_{10}H_{14}O_4$ = 276.3. Colorless deliquescent crystals, soluble in water; used medicinally as an antiseptic. **p. carbonate.** K_2CO_3 = 138.2. Potassii carbonas, sal tartar, potash. Colorless monoclinic crystals or hygroscopic powder, d.2.2, m.900 (decomp.), soluble in water, insoluble in alcohol. Used as a reagent, as a flux for silicates and insoluble sulfates, as a neutralizing agent, in photography, and in medicine as an antiacid and mild caustic. *acid-* See *p. bicarbonate.* **p. carbonyl.** $K_6(CO)_6$ = 402.63. Grey or red explosive crystals. **p. chlorate.** $KClO_3$ = 122.6. Potassii chloras, p. oxymuriate. Colorless monoclinic crystals, d.2.34, m.357, decomp. 400; soluble in water, slightly soluble in alcohol. Used as a reagent for alkaloids, phenols, indican; as an oxidizing agent; in forensic and ultimate analysis; medicinally as a diuretic and cardiac stimulant; pharmaceutically in the manufacture of mouth washes and tooth pastes; and commercially in the manufacture of explosives, fulminators, and pyrotechnics. **p. chloraurate.** $KAuCl_4,2H_2O$ = 774.3. **p. chloraurite.** $KAuCl_2$ = 307.3. **p. chloride.** KCl = 74.6. Potassii chloridum. White, regular crystals, d.1.984, m.776 (sublimes); soluble in water, alcohol or ether. Used as a reagent, in the determination of fluosilicic acid, as a constituent of fertilizers and in explosives. **p. chlorochromate.** $KClCrO_3$ = 174.7. Red crystals, decomp. by water; used as an oxidizing agent. **p. chloroplatinate.** K_2PtCl_6 = 486.2. Platinic potassium chloride. Yellow regular crystals, d.3.291, decomp. by heat, slightly soluble in water; used as a reagent. **p. chloroplatinite.** K_2PtCl_4 = 415.24. Platinous potassium chloride. Red crystals, soluble in water. **p. chromate.** K_2CrO_4 = 194.2. Yellow, rhombohedral crystals, d.2.732, m.971, soluble in water, insoluble in alcohol. Used as a reagent and indicator in volumetric analysis, as a mordant, and as an oxidizing agent in organic synthesis. *acid-* P. dichromate. *chloro-* Potassium chloro-chromate. **p. chromic sulfate.** $KCr(SO_4)_2.12H_2O$ = 499.42. Chrome alum, chromium p. sulfate. Red or green, cubic or octahedral crystals, d.1.83, m.89, soluble in water; used as mordant. **p. chromicyanide.** $K_3Cr(CN)_6$ = 325.4. A yellow insoluble solid. **p. cinnamate.** $KC_9H_7O_2$ = 186.1. A white crystalline powder, soluble in water. **p. citrate.** $K_3C_6H_5O_7.H_2O$ = 325.27. Potassii citras. Colorless crystals, d.1.198, decomp. 230, soluble in water or alcohol; used medicinally as a diaphoretic and diuretic. *monobasic-* $KH_2(C_6H_5O_7)$ = 230.15. White crystals, soluble in water. **p. cobalticyanide.** $K_3Co(CN)_6$ = 332.36. A solid, d.1.906, soluble in water, decomp. by heat. **p. cobaltinitrite.** $K_3Co(NO_2)_6$ = 452.33. Cobaltic p. nitrite. Yellow tetragonal crystals, decomp. 200, slightly soluble in water, insoluble in alcohol or ether; used as a reagent. **p. cobalt malonate.** $KCo(C_3H_2O_4)_2$ = 341.17. Pink crystals, d.2.234, soluble in water. **p. cobalt sulfate.** $K_2SO_4.CoSO_4, 6H_2O$ = 437.4. Soluble plates. **p. copper lead nitrite.** $K_2CuPb(NO_2)_6$ = 645.00. Square or rectangular black crystals, produced by the triple nitrite reaction for potassium. **p. cuprocyanide.** $KCu(CN)_2$ = 154.69. A solution of copper cyanide in potassium cyanide solution, used for copper plating. **p. cyanate.** KCNO = 81.12. Colorless needles, d.2.048, soluble in water or alcohol; used in organic synthesis. **p. cyanide.** KCN = 65.12. White regular crystals or sticks, d.1.52, soluble in water or alcohol. Used as a reagent, in metallurgy for the extraction of gold (*cyanide process*), in photography, in medicine, and as an insecticide. **p. dichromate.** $K_2Cr_2O_7$ = 294.2. P. bichromate, p. acid chromate. Yellowish-red triclinic or monoclinic crystals, d.2.692, m.396 (decomp.), soluble in water, insoluble in alcohol. Used as a reagent for alkaloids, for standardizing volumetric solutions, as a general oxidizing agent, in cleansing solutions (with H_2SO_4), in electric batteries, medicinally as a bactericide, caustic and astringent, in photography, and in the dye, textile, tanning, printing, bleaching and oil industries. **p. dihydrogen phosphate**

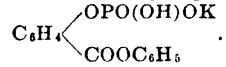
KH_2PO_4. See *p. phosphates.* **p. disulfate.** $K_2S_2O_7$ = 254.32. White needles, d.2.27, m.210 (decomp.) soluble in water. **p. dithionate.** P. hyposulfate. **p. dithio oxalate.** $K_2C_2O_2S_2$ = 198.32. A solid, used as reagent for nickel. **p. ethyl sulfate.** $KC_2H_5SO_4$ = 164.1. Monoclinic white crystals, d.1.843, soluble in water or alcohol. **p. ethyl xanthate.** $KC_3H_5OS_2$ = 160.28. A white powder, used as a collector in flotation. **p. ferrate.** K_2FeO_4 = 198.05. P. perferrate. A purple solid, stable in alkaline solution, rapidly decomposed in acid solution. **p. ferric ferrocyanide.** $KFe'''Fe''(CN)_6.H_2O$. Prussian blue. A blue, insoluble precipitate from ferric ion and ferrocyanide. **p. ferric oxalate.** $K_3Fe(C_2O_4)_3.3H_2O$ = 491.19. Brown crystals, decomp. 230, slightly soluble in water. **p. ferric sulfate.** $K_2SO_4,Fe_2(SO_4)_3,24H_2O$ = 1006.60. Iron alum. Soluble violet crystals. **p. ferricyanide.** $K_3Fe(CN)_6$ = 329.1. Red prussiate of potash, ferric potassium cyanide. Ruby-red, monoclinic crystals, d.1.81, decomp. by heat; soluble in water or alcohol. Used as a reagent for ferrous salts, as a reducing agent and indicator in volumetric analysis, as a reagent in organic chemistry and synthesis, in the manufacture of prussian blue, in the textile industry, and in photography for blueprint paper and other light-sensitive papers. **p. ferrite.** $K_2Fe_2O_4$ = 253.90. A yellow solid. **p. ferrocyanide.** $K_4Fe(CN)_6.3H_2O$ = 422.4. Yellow prussiate of potash, ferrous p. cyanide. Yellow monoclinic crystals, d.1.853, soluble in water, insoluble in alcohol. Used as a reagent for ferric ion, copper, and other metals, in quantitative analysis, in organic chemistry, in electro-plating in the textile industry, in the manufacture of prussian blue, for hardening steel, and in photography. **p. ferrous ferricyanide.** $K_2Fe''Fe'''(CN)_6$ = 357.9. A white precipitate produced by the addition of ferrous sulfate to a cold neutral solution of p. ferrocyanide. It is oxidized to β-soluble prussian blue. **p. fluorescein.** $K_2C_{20}H_{10}O_5$ = 408.3. The p. salt of fluorescein. A yellowish-red powder; soluble in water to form a pink solution with a green fluorescence. **p. fluoride.** KF = 58.1. A colorless crystalline, hygroscopic powder, $KF.2H_2O$, d.2.481, m.860, soluble in water. Used as a preservative, in ant powders, as a disinfectant, and in etching glass. *acid-* KF.HF = 78.1. P. bifluoride, Fremy's salt. Colorless crystals, soluble in water; used as an antiseptic and antizymotic, and in the etching of glass. **p. fluosilicate.** K_2SiF_6 = 220.5. Colorless hexagonal crystals, d.2.665, insoluble in water, soluble in hydrochloric acid. **p. formate.** $KCHO_2$ = 84.2. The p. salt of formic acid, H.COOK. Colorless deliquescent crystals, d.1.91, m.197, soluble in water. **p. glycerinate.** $KC_3H_5O_4$ = 144.1. A white deliquescent powder, soluble in water. **p. glycerophosphate.** $K_2C_3H_7O_3PO_3$ = 264.4. Hygroscopic white crystals, soluble in water. It is sold as a 50–75 % solution; used medicinally as a nerve tonic, and as a reagent. **p. hippurate.** $KC_9H_8O_3N.H_2O$ = 235.2. Colorless crystals, slightly soluble in water, soluble in alcohol. **p. hydrate.** P. hydroxide. **p. hydride.** KH = 40.11. White volatile needles, formed when potassium is heated in a stream of hydrogen gas. **p. hydrogen phosphate.** K_2HPO_4 = 174.25. Large crystals, used as a buffer. See *p. phosphates.* **p. h. sulfide.** P. hydrosulfide. **p. hydroxide.** KOH = 56.11. Potassii hydroxidum, potash, p. hydrate, caustic potash, kalilauge. White rhombohedral crystals or deliquescent sticks, d.2.044, m.360 (sublimes), soluble in water, alcohol or ether. It absorbs carbon dioxide from the air and must be kept in tight containers. Used as a reagent in analysis, for neutralization, and in large quantities in the manufacture of soft soap, oxalic acid and glass. Cf. *lapis causticus, vienna caustic.* **p. hydrosulfide.** KSH = 72.1. P. hydrogen sulfide. Colorless hygroscopic crystals m.455, soluble in water. **p. hydrotartrate.** P. bitartrate. **p. hypochlorite.** KClO = 90.6. Colorless crystals, decomp. by heat; soluble in water. Cf. *Eau de Javelle.* **p. hypophosphite.** KH_2PO_2 = 104.1. Potassii hypophosphis, diacid potassium phosphate. White, opaque plates or deliquescent powder; soluble in water or alcohol, insoluble in ether. Used as a nerve tonic. **p. hyposulfate.** $K_2S_2O_6$ = 238.3. P. dithionate. Colorless crystals, d.2.28, soluble in water, decomp. by heat. **p. hyposulfite.** $K_2S_2O_3$ = 190.3. P. thiosulfate. Colorless hygroscopic crystals, soluble in water. **p. indigosulfate.** $K_2C_{16}H_8O_8N_2(SO_3)_2$. A dark-blue powder, soluble in water; used in dyeing textiles. **p. indigosulfonate.** P. indigosulfate. **p. indoxylsulfonate.** Indican (2). **p. iodate.** KIO_3 = 214.02. Colorless, regular, deliquescent crystals, d.3.975, m.560 (decomp.), soluble in water, insoluble in alcohol; used as a reagent for volumetry, and medicinally as an antiseptic. *acid-* KHI_2O_6 = 389.8. P. biiodate. Colorless crystals, slightly soluble in water, soluble in dilute acids; used in volumetric analysis. **p. iodide.** KI = 166.02. Potassii iodidum. Colorless regular crystals, d.3.115, m.680, b.723, soluble in water, alcohol, or ether. Used as a reagent, in volumetric analysis, as a solvent for iodine and iodides, medicinally as an antiseptic and alterative, and in photography. *tri-* See *p. triiodide.* **p. iodohydrargyrate.** Mercuric p. iodide. **p. iodotetrachloride.** $KICL_4$ = 307.86. **p. ion.** The positively-charged potassium atom, K^+; a potassium atom that has lost one negative electron. **p. isovalerate.** $KC_5H_9O_2$ = 140.17. White or yellowish hygroscopic crystals, very soluble in water. **p. lactate.** $KC_3H_5O_3$ = 128.2. A colorless or yellowish syrupy liquid; soluble in water. **p. lithium tartrate.** $KLi(C_4H_4O_6).H_2O$ = 221.09. White monoclinic crystals, d.1.610, soluble in water; used as an antirheumatic. **p. malate.** $K_2C_4H_4O_5$ = 210.3. A colorless syrupy liquid; soluble in water. **p. magnesium chloride.** $KCl, MgCl_2, 6H_2O$ = 277.90. A colorless solid, decomp. by heat. **p. manganate.** K_2MnO_4 = 197.13. Dark-green, rhombohedral crystals, decomp. 190, soluble in water. *per-* See *p. permanganate.* **p. manganic sulfate.** $K_2SO_4.Mn_2(SO_4)_3, 24H_2O$ = 1004.8. Mangan alum. Green crystals, soluble in water. **p. manganicyanide.** $K_6Mn_2(CN)_{12}$ = 656.6. A soluble red solid. **p. manganocyanide.** $K_4Mn_2(CN)_{12}, 6H_2O$ = 842.9. A soluble red solid. **p. mercuric iodide.** Mercuric p. iodide. **p. mercuric thiosulfate.** Mercuric p. thiosulfate. **p. metabisulfite.** $K_2S_2O_5$ = 222.32. P. pyrosulfite. White soluble plates, decomp. by heat. **p. metaborate.** $K_2B_2O_4$ = 163.8. P. borate. A white powder, soluble in water.

p. metaphosphate. KPO_3. See *p. phosphates.* **p. metasilicate.** K_2SiO_3. See *p. silicates.* **p. methane disulfonate.** $(KSO_3)_2CH_2$ = 252.34. Monoclinic crystals, d.2.376, soluble in water. **p. methylsulfate.** $KMeSO_4$ = 150.2. P. methyl sulfuric ester. A white crystalline powder; soluble in water or alcohol. **p. molybdate.** $K_2MoO_4.5H_2O$ = 328.10. A white, microcrystalline powder, soluble in water. **p. monosulfide.** P. sulfide. **p. myronate.** $KC_{10}H_{18}O_{10}NS_2$ = 415.2. Sinigrin. A colorless crystalline glucoside salt from black mustard seeds. Soluble in water or alcohol, and decomposed by myrosin into glucose, potassium bisulphate and allyl thiocyanate. **p. naphthalene-*1,5*-disulfonate.** $K_2C_{10}H_6O_2S_2.2H_2O$ = 336.40. White powder, d.1.797, soluble in water. **p. nickel sulfate.** $K_2SO_4,NiSO_4,6H_2O$ = 437.10. A blue solid, d.2.12. **p. nitranilate.** $K_2C_6O_8N_2$ = 306.22.



potassium dinitro dihydroxy benzoquinone. A greenish-yellow crystalline powder, slightly soluble in water, soluble in alcohol. **p. nitrate.** KNO_3 = 101.1. Saltpeter, potassii nitras, nitre, sal prunella. Colorless prismatic or rhombohedral crystals, d.2.109, m.337 (decomp.), soluble in water, insoluble in alcohol or ether. Used as a reagent, as an oxidizing flux, as an oxidizing agent, medicinally as a diaphoretic and diuretic, and in pyrotechnics, gunpowder, fertilizers and preservatives. **p. nitrite.** KNO_2 = 85.1. Colorless, deliquescent prismatic crystals or sticks, d.1.915; soluble in water or alcohol. Used as a reagent for cobalt, amino-acids, phenols, iodine, and many other organic compounds; as a reducing agent and in organic synthesis; in the manufacture of aniline dyes, diazo dyes, and other dyes; and medicinally, as a heart tonic. Cf. *Indian yellow.* **p. nitroso hydroxylamine sulfonate.** $K_2SO_3N(OH)NO$ = 218.24. **p. oleate.** $KC_{18}H_{33}O_2$ = 320.5. A yellow mass, soluble in water or alcohol; used medicinally as a soap. **p. osmate.** $K_2OsO_4.2H_2O$ = 369.3. P. perosmate. Dark purple or garnet-red crystals, soluble in water. They decompose in a warm and moist atmosphere; used as a reagent for nitrogen, and medicinally as a sedative. **p. oxalate.** $K_2C_2O_4.H_2O$ = 184.2. Colorless monoclinic crystals, d.2.08, decomp. by heat, soluble in water. Used as a reagent, in photography, and in the manufacture of stain- and ink-removers. *acid-* KHC_2O_4 = 128.11. Monoclinic crystals, d.2.0, slightly soluble in water. *acid- (hemihydrate)* $KHC_2H_4.\frac{1}{2}H_2O$ = 137.12. Trimetric crystals. *acid- (monohydrate)* $KHC_2H_4.H_2O$ = 146.2. Rhombic crystals. *tetra-acid-* $KH_3(C_2O_4)_2.2H_2O$ = 254.15. Triclinic crystals, d.1.836. **p. oxide.** K_2O = 94.2. Burnt potash, calcined potash. Colorless octahedral crystals, or grayish powder, d.2.656; soluble in water. Used extensively as a reagent, and in the manufacture of potassium salts. Cf. *p. peroxide.* **p. oxymuriate.** P. chlorate. **p. palladichloride.** K_2PdCl_4 = 397.7. Palladio p. chloride. A red, soluble solid, decomp. by heat. **p. palladochloride.** K_2PdCl_4 = 326.7. Palladous p. chloride. Greenish-brown prisms, soluble in water, decomp. by heat. **p. parawolframate.** P. tungstate. **p. pentasulfide.** K_2S_5 = 238.50. A yellowish granular mass, soluble in water, m.220. **p. perborate.** KBO_3 = 98.0. A soluble solid. **p. percarbonate.** $K_2C_2O_6.H_2O$ = 216.3. A colorless powder, decomp. by water (forming bicarbonate and oxygen) and acids (forming hydrogen peroxide and carbon dioxide). Used as a reagent, in microscopy, in photography (antihypo), and as a bleaching agent. **p. perchlorate.** $KClO_4$ = 138.6. Colorless rhombic crystals, d.2.524, m.610, slightly soluble in water, insoluble in alcohol. Used as a reagent and oxidizing agent, in pyrotechnics, medicinally as an antipyretic and sedative, and as a source of oxygen. **p. perferrate.** P. ferrate. **p. periodate.** KIO_4 = 230.0. A colorless, rhombic, crystalline powder, d.3.168, m.582, slightly soluble in water; used as a color reagent for manganese **p. permanganate.** $KMnO_4$ = 158.0. Potassii permanganas, p. hypermanganate. Deep purple, lustrous, rhombic needles, d.2.703, decomp. 240, soluble in water. Used as a reagent in volumetric analysis, as an oxidizing agent, in bleaching and disinfecting, for mordants, in the synthesis of dyes, and in photography; medicinally, as an external antiseptic and disinfectant, and for external application to snake bites. **p. perosmate.** P. osmate. **p. peroxide.** K_2O_2 = 110.2 or K_2O_4 = 142.2. A yellow powder, rapidly decomp. when exposed to air and moisture, soluble in alcohol; used as a strong oxidizing agent and oxidizing flux. **p. perruthenate.** $KRuO_4$ = 204.8. Black crystals; slightly soluble in water. **p. persulfate.** KSO_4 = 135.2 or $K_2S_2O_8$ = 270.4. Anthion. Colorless prismatic crystals, decomp. by heat, slightly soluble in water. Used as a strong oxidizing agent, in photography (anthion), and medicinally as a disinfectant. **p. phenolsulfonate.** $KC_6H_4(OH)SO_3.H_2O$ = 230.2. P. sulfocarbolate. *ortho-* Colorless crystals, d.1.734, m.400, soluble in water or alcohol; used medicinally as an intestinal antiseptic. *para-* Rhombic crystals, d.1.87. **p. phenylate.** PhOK = 132.1. P. phenate. Colorless crystals, soluble in water; used as an antiseptic. **p. phosphates.** (1) K_3PO_4 = 212.3. Normal ortho- or tribasic p. phosphate. Colorless rhombic crystals; slightly soluble in water, insoluble in alcohol. (2) K_2HPO_4 = 174.3. P. hydrophosphate, dipotassium phosphate, monoacid phosphate. Colorless crystals; soluble in water. (3) KH_2PO_4 = 136.2. Monobasic p. phosphate, dihydrophosphate, Sörensen's potassium phosphate. Colorless tetragonal crystals, d.2.338, m.96, decomp. by heat, soluble in water, insoluble in alcohol. Used as a reagent, and in the preparation of buffer solutions for *p*H determinations. (4) $K_2P_2O_7.3H_2O$ = 306.27. P. pyrophosphate. Colorless crystals, d.2.33; soluble in water. (5) KPO_3 = 118.14. P. metaphosphate. Colorless crystals, insoluble in water. **p. phosphide.** K_3P_5 = 233.2. An unstable yellow solid. **p. phosphite.** (1) K_2HPO_3 = 158.0. White powder, decomp. by heat; soluble in water, insoluble in alcohol. (2) K_3PO_3, normal phosphite. (3) KH_2PO_3, monobasic or dihydrophosphite. **p. phthalate.** (1) $C_6H_4(COOK)_2$. (2) See *p. acid phthalate.* **p. picraminate.** $KC_6H_4O_5N_3$ = 223.2. P. dinitroaminophenate, $C_6H_2(OK)(NH_2)(NO_2)_2$. A dark brown crystalline powder; soluble in

water, insoluble in alcohol. **p. picrate.** $KC_6H_2O_7N_3$ = 267.1. Potassium trinitrophenate, $C_6H_2(NO_2)_3OK$. Yellow crystals, d.1.852, slightly soluble in water, insoluble in alcohol; used in explosives. **p. piperinate.** $KC_{12}H_9O_4$ = 256.2. A yellow powder, slightly soluble in water. **p. platinibromide.** K_2PtBr_6 = 752.9. **p. platinichloride.** P. chloroplatinate. **p. platinobromide.** K_2PtBr_4 = 593.0. An unstable solid. **p. platinochloride.** P. chloroplatinite. **p. platinocyanide.** $K_2Pt(CN)_4.3H_2O$ = 431.5. An unstable solid. **p. plumbate.** $K_2PbO_3.3H_2O$ = 387.45. Colorless crystals; soluble in water. **p. plumbite.** K_2PbO_2 = 317.3 or $KHPbO_2$ = 279.21. **p. propionate.** $KC_3H_5O_2$ = 112.2. Small colorless crystals; soluble in water. **p. pyroantimonate.** P. stibnate. **p. pyroborate.** P. tetraborate. **p. pyroborate.** P. tetraborate. **p. pyrophosphate.** See *p. phosphates* (4). **p. pyrosulfate.** $K_2S_2O_7$ = 254.3. A white crystalline powder, d.2.27; soluble in water. **p. pyrosulfite.** P. metabisulfite. **p. rhodanate.** Potassium thiocyanate. **p. ruthenate.** K_2RuO_4 = 244.0. A brownish-black powder, soluble in water. *per-* See *p. perruthenate.* **p. salicylate.** $KC_7H_5O_3$ = 176.2. A white crystalline powder, soluble in water or alcohol; used medicinally as an antirheumatic and antipyretic. **p. salol orthophosphite.** Salvosal potash. The potassium salt of salol-o-phosphorous acid:



. Colorless crystals, soluble in cold water; it is used medicinally for influenza and gout. **p. santonate.** $KC_{15}H_{19}O_4$. H_2O = 320.3. Colorless syrupy liquid; soluble in water. **p. selenate.** K_2SeO_4 = 221.4. A colorless crystalline powder, soluble in water. **p. silicate.** K_2SiO_3 = 154.5 or $K_2Si_2O_5$ = 214.3. Potash-waterglass. Transparent glass-like masses, soluble in water, insoluble in alcohol. See also *p. tetrasilicate.* **p. silicate solution.** Potash-waterglass. An aqueous, syrup-like solution of potassium silicate, 30–38°Bé; miscible with water in all proportions. Used for fire-proofing textiles, wood, and cardboard; as a cement and glue; in bleaching; and in the manufacture of soap. **p. silicofluoride.** K_2SiF_6 = 220.5. A white powder, soluble in water; used in the manufacture of metallic silicon. **p. silver cyanide.** $KAg(CN)_2$ = 199.0. Colorless regular crystals, soluble in water or alcohol. **p. sodium antimonyl tartrate.** $KNa(SbO)C_4H_3O_6$ = 346.88. White powder, soluble in water. **p. sodium carbonate.** $KNaCO_3(H_2O)$ = 230.20. A white solid, readily soluble in water. **p. sodium tartrate.** $KNaC_4H_4O_6$ = 210.1. $+4H_2O$ = Rochelle salt. $+3H_2O$ = Seignette salt. A colorless crystalline double salt, soluble in water. Used as a reagent (in Fehling's solution), as a depilatory, and medicinally. **p. sozoiodol.** $C_6H_2I_2(SOH)OK$ = 431.8. P. diiodo-p-sulfonic acid phenate. Used medicinally, as a desiccant for eczema. **p. sozoiodolate.** $C_6H_2I_2(SOK)OH$ = 431.8. P. diiodo-p-phenolsulfonate. A colorless, odorless, crystalline powder, soluble in water; used medicinally as a dusting powder for skin diseases. **p. stannate.** K_2SnO_3 = 244.9. Colorless crystals, soluble in water; used in the textile industry as a mordant. **p. stannosulfate.** $K_2Sn(SO_4)_2$ = 388.8. P. stannous sulfate, Marignac salt. Colorless crystals, soluble in water; used as a reagent for mercury and bismuth salts, and in volumetric analysis. **p. stearate.** $KC_{18}H_{35}O_2$ = 322.5. A white crystalline powder, soluble in hot water or alcohol. **p. stibnate.** (1) $K_2H_2Sb_2O_7.6H_2O$ = 543.8. P. pyroantimonate. A granular, white powder, slightly soluble in water; used as a reagent for sodium salts. (2) P. antimonate. **p. succinate.** $K_2C_4H_4O_4$ = 194.3. A white powder, soluble in water; used medicinally. **p. sulfate.** K_2SO_4 = 174.3. Potassii sulfas, normal p. sulfate, tarcanum, sal de duobus, tartarus vitriolatus. White rhombic or hexagonal crystals, d.2.663, m.1076 (sublimes), soluble in water, insoluble in alcohol. Used as a reagent, medicinally in place of saline, in fertilizers, and in the manufacture of artificial mineral waters and baths. *acid-* $KHSO_4$ = 136.2. Monobasic or monoacid p. sulfate. Colorless monoclinic or rhombic crystals, d.2.24, m.200, soluble in water. *pyro-* See *p. pyrosulfate.* **p. sulfide.** K_2S = 110.3. P. monosulfide. Brown crystals, d.2.13, soluble in water or alcohol. **p. sulfides:** K_2S, K_2S_2, K_2S_3, K_2S_4, K_2S_5. Commercial "p. sulfide" is usually a mixture of some or all of these. **p. sulfite.** $K_2SO_3.2H_2O$ = 194.3. A white crystalline powder, decomp. by heat, soluble in water. Used as a reagent, in the textile industry as a mordant, and medicinally, as an antiseptic and laxative. *acid-* $KHSO_3$ = 120.2. P. bisulfite. Colorless needles, decomp. by heat; soluble in water. **p. sulfocarbolate.** P. phenylsulfonate. **p. sulfocarbonate.** K_2CS_3 = 186.2. Orange, hygroscopic crystals, soluble in water; used medicinally in skin diseases. **p. sulfocyanate.** P. thiocyanate. **p. sulfocyanide.** P. thiocyanate. **p. sulfophenylate.** P. phenylsulfonate. **p. tannate.** $KC_{14}H_9O_9$ = 360.1. A brown powder, soluble in water. **p. tartrate.** *d-* $K_2C_4H_4O_6.\frac{1}{2}H_2O$ = 235.3. Tartarus, soluble tartar, sal vegetal, normal p. tartrate. Colorless monoclinic crystals, d.1.9715, soluble in water; used as a reagent, and medicinally as a refrigerant and laxative. *sodium-* P. sodium tartrate. *dl-* $K_2C_4H_4O_6$ = 226.23. Monoclinic crystals, d.1.984. *d-acid-* $KHC_4H_4O_6$ = 188.14. Rhombic crystals, d.1.956. *dl-acid-* Monoclinic crystals, d.1.954. **p. tellurate.** $K_2TeO_4.5H_2O$ = 359.7. Colorless crystals, soluble in water; used medicinally. *acid-* $KHTeO_4$ = 231.6. Colorless crystals; soluble in water. **p. tellurite.** K_2TeO_3 = 253.3. A colorless amorphous powder, soluble in water. **p. tetraborate.** $K_2B_4O_7.5H_2O$ = 324.3. Potassium borate. Colorless hexagonal prisms; soluble in water. **p. tetraoxalate.** $KH_3C_4O_8.2H_2O$ = 254.1. A double salt of oxalic acid and monoacid p. oxalate, $(COOH)_3COOK$. Colorless monoclinic prisms, soluble in water; used as a standard in volumetric analysis. **p. tetrasilicate.** $K_2Si_4O_9$ = 334.6. A solid, soluble in water, insoluble in alcohol. **p. thiocyanate.** KCNS = 97.2. P. sulfocyanide, p. sulfocyanate, p. rhodanate. Colorless deliquescent prisms, d.1.906, m.162, soluble in water or alcohol. Used as a reagent for ferric salts (red), copper (blue) and silver (white) salts, and other compounds. **p. thiocyanide.** P. thiocyanate. **p. thiosulfate.** $K_2S_2O_3.H_2O$ = 208.36. Very soluble prisms, insoluble in alcohol. **p. triiodide.** KI_3 = 419.86. Prismatic crystals

d.3.50, m.45 (decomp.); soluble in a solution of p. iodide. **p. tungstate.** $K_6W_7O_{24}.6H_2O$ = 2015.0. P. parawolframate, $3K_2O.7WO_3.6H_2O$. White crystalline powder; soluble in water. **p. uranium oxalate.** $K_4U(C_2O_4)_4.5H_2O$ = 836.62. Yellow monoclinic crystals, d.2.563. **p. urate.** $K_2C_5H_2O_3N_4$ = 244.5. A white powder, soluble in water. **p. valerate.** $KC_5H_9O_2$. = 140.2. A white crystalline powder, soluble in water; used medicinally as a nerve sedative. **p. wolframate.** $K_2WO_4.5H_2O$ = 416.4. A white, hygroscopic, crystalline powder, soluble in water, insoluble in alcohol: used in preparing bronzing solutions. **p. xanthate.** KS_2COEt = 160.28. A salt decomposed by acid into alcohol and carbon disulfide; hence the structure $SC\begin{matrix}SK\\OEt\end{matrix}$. Light yellow prisms, d.-1.558, decomp. 200, very soluble in water. Used as a flotation agent, as a soil fumigant, and as a chemical reagent in the separation of nickel and cobalt. **p. zincate.** K_2ZnO_2 = 175.7. A colorless amorphous powder, soluble in alkalis.

potato. The rhizome of *Solanum tuberosum.* **sweet-** The rhizome of *Ipoemoea batatus.* **p. culture.** A slice of potato used as culture medium for bacteria. **p. gum.** Euphorbia. gum. **p. spirit.** Fusel oil. **p. starch.** See *starch.*

potency. (1) mathematical: Power; the magnitude or dimension, or the number of times a number is multiplied by itself. *Eg.*,

10^{11} = 100,000,000,000
10^{10} = 10,000,000,000

and so on, to:—

10^{-1} = 0.1
10^{-2} = 0.01
10^{-3} = 0.001 and so on.

(2) therapeutic: The strength or power of activity of a drug. (3) homeopathic: The dilution of a remedy in a neutral medium corresponding with the mathematical potency.

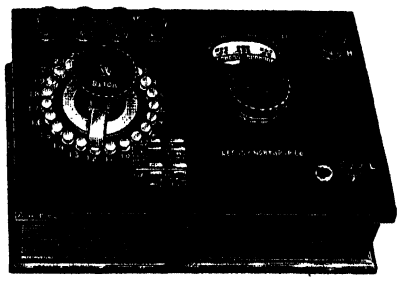
potential. (1) Stored-up energy or power capable of performing work. (2) Voltage:

low-	less than 301 volts.
medium-	from 301–651 volts.
high-	greater than 651 volts.

absolute- See *mercury cathode.* **electric-** Electromotive force. **electrolytic-** See *electroaffinity.* **hydrogen-** See p_H. **ionic-** See *ionic.* **magnetic-** Magnetomotive force. **oxido-reduction-** See r_H. **pseudo-** The electrokinetic potential set up between ions adsorbed on the surface of a solid immersed in a liquid, and those in the bulk of the liquid. **super-** Overvoltage.

p. difference. The difference in voltage between the electrodes of a battery, vacuum tube or thermocouple. With an electrical cell it is the difference between the electrode potentials of the electrodes. **p. energy.** (1) The heat capacity of a compound. (2) The energy of a body due to its position (as a lifted weight, or water in a high storage tank). **p. mediator.** A substance used to accelerate the establishment of an equilibrium in measurements of oxidation-reduction potentials. Cf. *poiser.*

potentiometer. A low-resistance instrument for the accurate determination of small differences in electric potentials by Poggendorff's method q.v. Cf. *galvanometer, hydrogen-ion recorder.*



Potentiometer.

potentiometric titration. A method of quantitative analysis in which the electric potential of an electrode immersed in the solution to be titrated is continually determined until a rapid change corresponding with the end of the reaction is reached. Cf. *hydrogen-ion determination, Hildebrand electrode, conductometric analysis.*

P.O.T.G. Portsmouth accelerator.

pothole. A natural cavity in the earth surface that is usually more deep than wide, and is often filled with a deposit of salts; as, sodium carbonate. It may be formed by the grinding action of pebbles carried in a stream of water.

potstone. Talc.

potters' clay. A pure, plastic clay, free from iron, (see *pipeclay*). **p. lead.** Alquifou. **p. ore.** Alquifou.

pottery. Ware made from clay, molded while soft and moist, baked and hardened by heat. *E.g.*,

earthenware: relatively soft and fusible, and: (a) unglazed, (b) glazed, (c) lustrous, (d) enameled;

stoneware: hard, infusible and containing more silica. (See *porcelain.*)

pounce. Powdered cuttlefish bones; formerly used for drying ink.

pound. lb., #. A unit of weight in the English system. The weight in vacuo of a platinum cylinder known as the Imperial Standard Pound. Cf. *pfund.* **apothecaries'** = 12 oz. = 96 drams = 288 scruples = 5760 grains = 0.37 kg. or 373.24177 grams. **avoirdupois-** = 16 oz. = 7000 grains = 0.453 kg. or 453.592338 grams = 16 fluid oz. **gee-** Slug. **troy-** (for gold and silver etc.) = 5760 grains = 16 oz.

pound per square inch. A unit of pressure (see *atmosphere*).

pound-mol. The number of pounds of a gas numerically equal to its molecular weight. Its volume is 359 cubic ft.

poundal. The British unit of force. F.P.S. system (cf. *C.G.S.* and *M.K.S. systems*). The force that will impart, in one second, a velocity of one foot per second to a mass of one pound; 1 poundal = 1 pound accelerated 1 foot per second each second = 13825.5 dynes.

pour. The flow of a liquid under gravity. **p. point.** (1) The lowest temperature at which an oil will flow under standard conditions. (2) The temperature at which an alloy is cast.

powder. (1) An aggregation of ground, loose material in small solid particles. (2) Any explosive used in blasting and gunnery. **algaroth-** Precipitated antimonous oxychloride.

antiseptic- A finely-ground antiseptic substance, for external application to wounds. **baking-** See *baking powder*. **bleaching-** See *bleaching*. **dusting-** See *dusting*. **effervescent-** A mixture of salts that develops carbon dioxide when dissolved in water. **flameless-** An explosive that produces little or no muzzle-flash. **insect-** (1) See *insect powder*. (2) A mixture of drugs used as an insecticide. **Seidlitz-** A mixture of Rochelle salt, sodium bicarbonate and tartaric acid, used to make an effervescent saline water. **smokeless-** Any explosive with little or no smoke-formation when burning.

powellite. $CaMoO_4.CaWO_4$. A native calcium molybdate and tungstate; small yellow tetragonal prisms.

powellizing. Hardening wood by impregnating with a saccharin solution.

power. (1) Potency. (2) The time-rate of doing work: $P = dW/dT$, or $P = WT^{-1} = ML^2T^{-3}$; where W = work, T = time, M and L are the absolute units of mass and length respectively. (3) See *diopter*.

power transmission. Methods: (1) mechanical or direct; (2) hydraulic or by water columns; (3) pneumatic or compressed air; (4) steam in pipes; (5) electricity, through wires.

power units. See *watt, kilowatt, horsepower*.

pozzolana. (1) Puzzolane, q.v. (2) A substance which is mixed with lime mortar in addition to, or in partial substitution for, sand, in order to increase its strength. **artificial-** Burnt clay, granulated slag, certain clinkers and burnt oil-shale. **natural-** Volcanic ash and celite.

pozzolanic action. Chemical actions, as the result of which insoluble compounds are formed in cement.

P.P. Abbreviation for the pellagra-preventing factor of vitamin B, q.v.

P.P.D. Piperidine pentamethylene dithiocarbonate; used as an accelerator in the vulcanization of rubber

p.p.m. Abbreviation for parts per million. Cf. *e.p.m.*

Pr. (1) Symbol for praseodymium. (2) Abbreviation for propyl: Pr^{α}, n-Pr—alphapropyl (normal propyl). Pr^{β}, i-Pr—betapropyl (isopropyl).

Prager-Jacobson classification. The system of grouping organic compounds in 4877 divisions, employed in Beilstein's Handbuch.

pragmoline. Acetylcholine bromide.

Prandtl number. An expression of the temperature distribution in a fluid. It equals the specific heat at constant pressure × kinematic viscosity/thermal conductivity. (Cf. *Reynolds number*.)

prase. (1) Greenish. (2) A gray-green chalcedony.

praseodymia. The earth corresponding with the element praseodymium.

praseodymium. Pr = 140.92. A rare earth metal, atomic number 59. A greenish-yellow, metallic element, d.6.48, m.940, slowly decomp. in water. It was separated in 1885 by Auer von Welsbach from the earth didymia, and it occurs in cerite and other rare earth minerals. The principal valency is three, and its salts are generally green in color. **p. acetate.** $Pr(C_2H_3O_2)_3.3H_2O$ = 372.04. Green needles, very soluble in water. **p. chloride.** $PrCl_3$ = 247.3. Green needles, d.4.017, m.818; slightly soluble in water. **p. oxalate.** $Pr_2(C_2O_4)_3.10H_2O$ = 726.00. Light green crystals, insoluble in water. **p. oxides:** (1) Pr_2O_3 = 329.8. Praseodymium trioxide. A yellowish-green amorphous powder, d.7.07. (2) Pr_2O_4 = 345.8. Praseodymium tetroxide. A black powder, d.5.98. (3) Pr_2O_5 = 361.8. Praseodymium peroxide. **p. peroxide.** P. oxide (3). **p. phosphate.** $PrPO_4$ = 235.9. A green powder, used as green coloring in ceramics. **p. sulfate.** $Pr_2(SO_4)_3$ = 570.0 and $Pr_2(SO_4)_3.8H_2O$ = 714.2. A green crystalline powder; soluble in water. **p. sulfide.** Pr_2S_3 = 378.0. A brown amorphous powder, d.5.402, decomp. by heat, insoluble in water.

praseolite. A green alteration-product of iolite.

Prechtl, Johann, Joseph Ritter von. 1778–1854. An Austrian technologist and chemist, noted as author of a technical encyclopedia. Cf. *Pregl*.

precious. Valuable, rare. **p. garnet.** Almandite. **p. metals.** The noble metals, gold, platinum and silver. **p. opal.** An opal exhibiting a play of delicate colors. **p. stone.** A mineral used as a gem.

precipitable. Describing a soluble ion that can be made insoluble by the presence in solution of some other ion.

precipitant. A substance or reagent which, when added to a solution, causes the formation of an insoluble substance. **group-** A reagent that will precipitate several related substances; as, H_2S or NH_4OH. (See *qualitative analysis*.)

precipitate. (1) To cause a substance to become insoluble, and settle from a solution. (2) The deposit of an insoluble substance from a solution after the addition of a precipitating reagent, as a result of a chemical reaction. Cf. *policeman, schwellenwert*. **banded-** Periodic precipitation. **black-** Mercurous oxide. **group-** The sediment formed after the addition of a group precipitant: it may consist of a number of substances having related properties. (See *qualitative analysis*.) **periodic-** See *periodic precipitate*. **red-** Red *mercuric oxide*. **white-** Ammoniated *mercury*, NH_2HgCl. **yellow-** Yellow *mercuric oxide*.

precipitated. Settled out; caused to become insoluble. **p. bone.** A by-product in the manufacture of glue from bones, consisting chiefly of dicalcium phosphate. **p. chalk.** Calcium carbonate produced by precipitation. **p. phosphate.** Dicalcium phosphate obtained from phosphate rock or processed bone. **p. vapor.** The settlement of solid particles from gases or vapors on the walls of a container (see *rhythmic deposition*).

precipitation. The process of making certain soluble substances (ions or salts) insoluble by the addition of a reagent, evaporation, freezing, or electrolysis. **co-** The simultaneous settling out of more than one compound; as in gravimetric analysis, the contamination of calcium oxalate with magnesium oxalate. **electrostatic-** The use of an electric potential to cause the settlement of the charged moisture globules which constitute a fog, or the dust particles which constitute a smoke (see *Lodge-Cottrell process*). **fractional-** The separation of substances by precipitating them in increasing order of solubility. **group-** Making a series of substances of similar properties insoluble, by the addition of a single reagent, usually in excess.

precipitin. An immunizing substance formed in the blood-serum of animals or humans, that is capable of precipitating the bacteria whose cultures have been employed in the immunizing treatment. See *Ehrlich's side-chain theory*.

precipitinogen. A substance which, on injection into animals or humans, will cause the formation of precipitins.

precipitum. The deposit of bacteria formed by the action of precipitins.

precision instrument. An accurately-graduated glass or other measuring instrument, certified by the manufacturer, but not tested at a government bureau. They differ from certified instruments. See also *standardized* buret, flask, pipet and thermometer.

precursor. (1) A substance synthesized in the dark by an organism, and differing from a photoproduct in that it is decomposed by light. (2) A substance that forms the raw material for the synthesis of protoplasm in the living animal body. (3) A substance which precedes the formation of another compound; cf. *provitamin.*

prefixes. Syllables placed before a name to indicate certain atoms, structures or properties. **order of-** In branched hydrocarbons the p. may be arranged either alphabetically or according to complexity. The former is the more usual.

Pregl, Fritz. 1868–1930. An Austrian chemist, noted for his development of quantitative microanalysis and spot tests. Nobel prize winner in 1923.

pregnane. $C_{21}H_{36}$ = 288.2. A tetracyclic hydrocarbon and cholane derivative, q.v. **p. diol.** $C_{21}H_{36}O_2$ = 320.2. A sterol, m.233, from urine of pregnant women. **p. dione.** $C_{21}H_{32}O_2$ = 316.2. A ketone derivative of p. diol.

pregnanolone. $C_{21}H_{34}O_2$ = 318.2. A corpus luteum hormone. Cf. *cholane derivatives.*

pregnene. $C_{21}H_{34}$ = 286.2. $\Delta^{5:6}$-pregnane. A cholane derivative, q.v. **p. diol** $C_{21}H_{32}O_2$ = 316.2. A corpus luteum hormone.

pregrattite. A variety of muscovite from Pregratten, Tyrol.

prehnite. A hydrous silicate of calcium and aluminum, $H_2Ca_2Al_2(SiO_4)_3$.

prehnitene. $C_{10}H_{14}$ = 134.2. Prenitol, 1.2.3.4-tetramethylbenzene.* An isomer of durene. A colorless liquid, d.0.901, m. −4, b.204; insoluble in water.

prehnitic acid. $C_{10}H_6O_8$ = 254.05. 1.2.3.4-benzene tetracarboxylic acid.* Colorless crystals, decomp. 237. Cf. *mellophanic acid.*

prehnitilic acid. *2.3.4*-Trimethyl benzoic acid.*

preignition. See *knock.*

premier alloy. A heat-resisting alloy of 61 % Ni, 25 % Fe, 11 % Cr and 3 % Mn.

premier jus. The edible oils obtained by rendering the tissues surrounding the kidneys of the cow.

prenitic acid. Prehnitic acid.

prenitol. Prehnitene.

preparation. (1) A chemical process for the production of a chemical compound. (2) A chemical compound. (3) The treatment of ores; as, ore concentration or ore dressing. (4) A pharmaceutical product or mixture of drugs. **p. dish.** A glass dish with glass cover, used as a receptacle for microscope slides or cover glasses. **p. jar.** A large glass jar with glass cover, used as a receptacle for museum specimens. **p. of salts.** See *salts.*

prescription. A written direction for compounding or administering a drug. **p. balance.** A delicate scale used in the weighing of small quantities, but less sensitive than an analytical balance.

preservative. A substance that prevents decay and decomposition of organic liquids or foods. They include sulfites, fluorides, benzoates, salicylates, borates and formaldehyde, but their use is limited or prohibited in many countries. **histological-** P. used for biological specimens; as, Bouin's, Carl's, Flemming's, Kahle's and Zenker's solution. **wood-** P. used for lumber; as, creosote, tar, aczol.

press. A device which applies pressure. **cork-** A corrugated wheel rotating in a corrugated elliptical frame, used for softening corks by pressure. **filter-** See *filter.* **plant-** A device which consists essentially of a piston in a perforated cylinder; used to express juices from plant materials.

pressing paper. A coarse filter paper, used for drying specimens.

presspahn. Wall-boards, made by hydraulic pressure from wood pulp.

pressure. Strain or stress produced by the meeting of opposite forces; such as, pushing, thrust or compression. **atmospheric-** The weight of the atmosphere; the pressure exerted by the gaseous envelope on the earth surface. It is measured in atmospheres. 1 atm. = 14.7 pounds per in.^{2} = 1,012,630 dynes per cm.^{2} = 760 mm. column of mercury. **critical-** The pressure required to condense a gas at the critical temperature. **disruptive-** See *disruption.* **electrical-** Electromotive force. **fugitive-** The variations at atmospheric pressure in the vicinity of explosions. **high-** A p. above one atmosphere. **low-** A p. below one atmosphere. **negative-** A pressure that is less than one atmosphere, *i.e.*, a suction. **normal-** One atmosphere = 760 mm. Hg. **osmotic-** See *osmosis.* **partial-** The pressure exerted by a single gaseous constituent in a gas mixture. (See *Dalton's Law.*) **radiation-** See *radiation.* **solution-** The molecular force of a solid that tends to go into solution; hence, a measure of the attractive forces (coordinate bonds) between the molecules of solute and solvent. **standard-** See *normal-.* **total-** The sum of the partial pressures of the constituents of a gas mixture.

p. blower. Any device used to produce an air blast or current of air. **p. bottle.** A heavy-walled glass container. **p. filter.** (1) A filtering device, which consists of a porous porcelain cylinder through which the solution to be filtered is pumped. (2) A filterpress. **p. gauge.** A device for measuring the pressure of gases or liquids. They include, principally, mechanical instruments (coiled tubes or diaphragms) or hydrostatic devices (mercury columns). Cf. *manometer.* **p. tubing.** Thick-walled rubber tubing used for vacuum pumps.

prest-o-lite. A commercial brand of acetylene gas, compressed in small cylinders.

prestone. A registered trade-mark for ethylene glycol anti-freeze.

preventol. A chlorinated phenol, used as a preservative for adhesives.

prezymogen. The cell substance of a living cell, that forms the zymogens.

pribramite. (1) A variety of sphalerite from Pribram, Bohemia. (2) A variety of göthite.

priceite. A mineral, $3CaO,4BO_3,6H_2O$.

prickly ash bark. Xanthoxylum.

prickly ash berries. Xanthoxyli fructus. The dried fruits of *Xanthoxylum* species, a Rutaceae; used as a carminative and alterative.

prickly-pear. Opuntia, Indian fig. The edible dried fruit of a cactus species (*Opuntia*); used as a source of alcohol for motor fuel.

Priest photometer. An optical device for grading the colors of oils.

Priestley, Joseph. 1733–1804. An English-born American chemist, noted for his discovery of oxygen, gas experiments, and writings.

Joseph Priestley.

prill. Small particles of metal found in assay work.

primary. The first or simplest form. **p. alcohol.** An organic compound characterized by the $-CH_2OH$ group. **p. amine.** An organic compound characterized by the $-CH_2NH_2$ group. **p. battery.** A combination of substances constituting a voltaic cell, that produces a potential by the chemical changes undergone by its constituents. **p. carbon atom.** A carbon atom at the end of a carbon-carbon chain; or a carbon atom attached to one other carbon atom only. **p. color.** One of a number of simple colors, combinations of which are supposed to produce all the other possible shades of color (see *Helmholtz's theory*). **p. current.** The inducing current of an induction coil, q.v. **p. nucleus.** An organic cyclic compound which has only hydrogen atoms attached to the ring. **p. oxide.** A hypothetical unstable oxide formed during an oxidation reaction, and having the characteristics of a peroxide which loses oxygen. See *induced reactions*. **p. reaction.** The principal or fastest reaction in a composite system of reactions. **p. valence.** See principal *valence*.

prime. A proposed name for the positive nucleus.

primer. (1) Detonator, percussion cap. (2) An explosive cartridge containing the detonator.

primeverose. $C_{11}H_{20}O_{10}$ = 312.15. A disaccharide, hydrolysing to glucose and xylose, from the glucosides of cowslips and primrose.

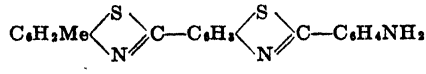
primeverosidase. An enzyme which hydrolyzes primrose glucoside to primeverose.

priming. (1) The escape into the condenser as a result of splashing, bumping etc. of a liquid being distilled. The distillate is thus contaminated with it. (2) P. sugar. **p. powder.** Fulminating powder. **p. sugar.** A sugar added to a finished beerto- impart body or briskness as a result of after fermentation. Glucose or invert sugar is used. **p. tube.** Primer.

primula. Cowslip. The dried herb of *Primula officinalis*, a Primulaceae.

primulaverin. A glucoside from the root of primula. Cf. *primverin*.

primulin. (1) A crystalline substance from the root of *Primula officinalis*. (2) A primrose-colored azo dye, which consists of the alkali salts of primulin bases. **p. bases.** A group of sulfur dyes obtained by heating p-toluidine and sulfur with amines. They contain the ring structure:



primulite. A crystalline sugar from the roots of *Primula officinalis* and identical with volemitol.

primverase. An enzyme from the root of *Primula officinalis*.

primverin. A glucoside from the root of *Primula grandiflora*. Cf. *primulaverin*.

Prince Rupert drops. Pear-shaped droplets of glass, obtained by allowing molten glass to fall into water. On breaking off the tip, they shatter explosively into a fine powder.

Prince's metal. A brass consisting of zinc (25 %) and copper (75 %).

principal. The main or chief function, leading or first; as, p. quantum number, p. valence. Cf. *principle*. **p. axis.** (1) The optical axis of a crystal. (2) The longest axis of a crystal. **p. series.** A type of spectrum in which the lines are related by:

$$\frac{1}{\lambda} = n = N\left[\frac{1}{(1+S)^2} - \frac{1}{(m+P)^2}\right],$$

and which generally contains the strongest lines. See *Rydberg equation, sharp and diffuse series, Bohr's atom*. **p. valence.** That valence of an element in which it has the largest number of stable compounds.

principle. (1) A theory or assumption; a fundamental concept; as, the p. of Chatelier, p. of Pauli, p. of valency. Cf. *principal*. (2) A substance on which the characteristic effect of a vegetable drug or mixture depends. **acid-** The organic acids of a vegetable drug. **active-** The substance on which the physiological effect of a drug depends, as *e.g.*, alkaloids, glucosides, tannins. **basic-** Alkaloid. **bitter-** Amaroids. **neutral-** A glucoside, salt, ester, or essential oil. **odorous-** Essential oil. **proximate-** Active p. **resinous-** Resin. **sweet-** Glucoside. **toxic-** The poisonous constituent of a drug.

printer's ink. See *ink*.

printer's liquor. A solution of ferrous acetate.

printing. The mechanical reproduction of reading matter or designs. See *letterpress, lithography, gravure*.

prism. (1) A crystal or solid figure whose faces are parallelograms parallel to the axis, and whose ends are triangular or polygonal faces parallel and similar to one another. They may belong either to the tetragonal, hexagonal, orthorhombic, monoclinic, or triclinic systems. (2) A triangular glass rod or hollow glass vessel, used to produce a spectrum. **Nicol-** Two similar triangular pieces of Iceland spar cemented together to form a prism. It splits a ray of light into two portions, polarized and reflected, and is used in polariscopes to obtain polarized light. **spectrum-** A polished triangular glass rod used in spectroscopes.

prismatic. Formed or shaped like a prism. **p. colors.** Rainbow colors. The monochromatic tints produced by the unequal refraction of the constituent rays of light when passing through a prism. See *spectrum*.

pristane. $C_{18}H_{38}$ = 254.3. Iso-octadecane. A hydrocarbon from the liver oil of sharks.

privine. The 2-(1-naphthylmethyl)-imidazoline; its hydrochloride is used as a vasoconstrictor.

proactinomycin. An antibiotic substance from *Nocardia gardneri*, a species of actinomycetes.

proagglutinoid. An agglutinoid that has greater attraction for the agglutinogen than the agglutinin.

probability. A mathematical treatment of a series of numbers or observations, to find the limits of error or the degree of approximation to the truth. Let M be the total number of cases in a series; m, the number of cases in one group; and n, the number of cases in another group, then $n + m = M$ and $\frac{m}{M} : \frac{n}{M}$ is the proportion of the parts to the whole. The probability is $\frac{m}{M} + 2\sqrt{\frac{2mn}{M^3}}$ or $\frac{m}{M} - 2\sqrt{\frac{2mn}{M^3}}$. This means that if in 100 observed cases (M), there were 25 cases (m) of one type, and 75 (n) cases of the other type, then in any other series of similar experiments there may be observed as many as $\frac{25}{100} + 2\sqrt{\frac{2 \times 25 \times 75}{100^3}} = 0.25 + 0.1225 = 0.3735$; hence 37 *cases of m* (as MAXIMUM), and as few as $\frac{25}{100} - 2\sqrt{\frac{2 \times 25 \times 75}{100^3}} = 0.25 - 0.1225 = 0.1275$; that is 13 *cases of m*, (as MINIMUM). Correspondingly, there will be 63 to 87 cases of n.

procaine. $C_{13}H_{20}O_2N_2.HCl$ = 272.7. Novocaine, p-aminobenzoyl-diethylaminoethanol hydrochloride, ethocaine, kerocaine, syncaine, neocaine, $NH_2.C_6H_4.COOCH_2CH_2.NEt_2.HCl$. Colorless, odorless crystals, m.154, soluble in water or alcohol; used medicinally as a local anesthetic. Cf. *percaine*. **p. base.** $C_{13}H_{20}N_2O_2$ = 236.7. Novocaine base, *β*-diethylaminoethyl-*p*-amino-benzoate, *p*-aminobenzoxydiethylamino ethane. A white granular powder, m.61, insoluble in water, soluble in alcohol, ether or benzene. **p. hydrochloride.** Procaine. **p. nitrate.** Colorless crystals, m.100, soluble in water.

procellose. $C_{18}H_{32}O_{16}$ = 504.25. A trisaccharide from cellulose, m.210, hydrolyzed to glucose.

process. A method used in the manufacture or treatment of substances. **type-** The principal operations involved in a chemical plant; as, conditioning, energizing and reacting. **unit-** (1) A chemical operation carried out on a non-laboratory scale. (2) The successive individual operations necessary for the production of a definite compound; as, crushing, grinding, separating, leaching, dissolving, concentrating, evaporating, distilling, mixing. *E.g.*,

TRANSPORTING of solids—rail, cable, conveyors, elevators, chutes.
of liquids—pipes, ditches, canals, flumes.
of gases—pipes, flues, chutes.
SEPARATING solids from solids—Screens, graders, jigs, concentration tables, flotators, magnetic separators.
solids from liquids—Filters, driers, centrifuges, settlers, classifiers, presses, thickeners.
solids from gases—Dust chambers, filter bags, precipitators.
liquids from liquids—Thickeners, centrifuges, stills.
liquids from gases—Separators, condensers.
gases from gases—Diffusers, compressors, stills.
CONDITIONING—Crushers, grinders, mixers, kneaders, digesters, sprayers, compressors, gasifiers, driers.
ENERGIZING—Power plant (water, coal, gas, oil, electricity). Heating equipment. Cooling equipment. Electrical equipment.
REACTING—Vats, Tanks, Retorts, Stills, Roasters, Towers, Furnaces, Chambers.

p. tankage. A fertilizer made from nitrogenous waste material by the action of acid or alkali and pressure. Cf. *nitrogenous tankage*.

prochlorite. A mineral containing pennine and chlorite.

prodag. A semi-colloidal suspension of graphite in water, used as a mould wash in metal casting and in rubber curing. Cf. *aquadag*.

prodorite. An acid-resisting concrete which contains pitch.

producer. An apparatus for the manufacture of illuminating and fuel gas, by passing air over red-hot coke. **p. gas.** A combustible gas; a mixture of nitrogen, carbon monoxide, and small quantities of CO_2, H_2, and CH_4 obtained by passing steam and air over coal at 1000°C.

product. The substance manufactured. **reaction-** Reactant. The compound formed by a reaction. **substitution-** A derivative, q.v. **split-** A decomposition product.

proenzyme. The substance of the living cell that produces the enzymes.

proferment. The substance of the living cell that produces the ferments (see *zymogen*).

profile paper. Coordinate paper.

proflavine. $C_{13}H_{11}N_3SO_4$ = 307.1. Trade name for *2.8*-diamino acridine. A reddish-brown crystalline powder, soluble (with fluorescence) in water or alcohol; used as an antiseptic and for sleeping sickness.

progesterone. $C_{21}H_{30}O_2$ = 314.2. Progestin, lutoosterone C, luteal hormone. A hormone from corpus luteum, white crystals, occurring in two isomeric forms: *alpha-* m.128, *beta-* m.121, They produce progestational changes in the uterus. For structure see *cholane*.

progestin. *α-* and *β*-Progesterone, secreted by the corpus luteum; injected intramuscularly for disorders of pregnancy and menstruation.

progression. Series. Any series of related increasing or decreasing numbers. *E.g.*, arithmetic- (1.2.3.4 . . .); geometric- (1.2.4.8 . . .); harmonic ($\frac{1}{2}$ $\frac{1}{3}$ $\frac{1}{4}$ . . .) progressions (q.v.).

progynon. German for theelin.

proidonite. The mineral, SiF_4.

projection nucleus. See *nucleus*.

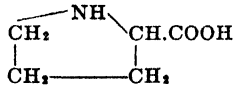
pro-knock. A substance which induces knocking in an internal combustion engine. Antonym: anti-knock, q.v.

prolactin. A hormone from the anterior pituitary, which causes mammary glands of mammals and crop glands of pigeons to secrete milk.

prolamine. A group of proteins from cereals; soluble in dilute alcohol, insoluble in water or absolute alcohol. **p. from oats.** Contains cystidine and histidine. **p. from sorghum.** Contains no tryptophane.

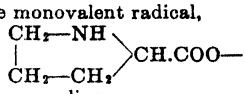
prolan. A hormone from the anterior pituitary gland.

proline. $C_5H_9O_2N$ = 115.1. Alpha- or 2-pyrrolidine carboxylic acid.



An amino-acid and protein split-product, which does not react with nitrous acid or ninhydrin.

prolyl. The monovalent radical,



derived from proline.

promin. The soluble didextrose sulfonate of 4′.4 diaminodiphenyl sulfone. It is said to be active against tubercle bacilli in guinea pigs.

promizole. 4,2′-Diamino-phenyl-5′-thiazole sulfone, a possible remedy for human tuberculosis.

promoter. (1) Catalyst accelerator. A substance which, when added to a catalyst will hasten its effect on a reaction (opposed to catalyst poison). (2) In flotation: see *collector*.

proof spirit. A dilute alcohol, d.0.91984 at 60°F., which consists of 49.24 % by weight of absolute alcohol in distilled water. **over-proof-** A spirit which is x over-proof contains in 100 volumes (100 − x) volumes of proof spirit. **under-proof-** x under-proof means that 100 volumes of the spirit mixed with sufficient water will yield 125 volumes of proof spirit.

propadiene*. C_3H_4 = 40.0. Allene, dimethylene methane. A dialkene or diolefine containing two double bonds, $H_2C{=}C{=}CH_2$. **dioxo-** Carbon suboxide.

propaesin, propæsin. $C_{10}H_{13}O_2N$ = 179.11. Propesin, propyl-p-aminobenzoate, $NH_2C_6H_4{\cdot}COOC_3H_7$. A white crystalline powder, m.76, slightly soluble in water, soluble in alcohol or ether; used medicinally as a sedative.

propalanine. Aminobutyric acid.

propaldehyde. Propion aldehyde.

propamidine. The 4:4′-diamidino 1:3-diphenoxypropane, $NH{:}C(NH_2).C_6H_4.O.(CH_2)_3.O.C_6H_4.(NH_2)C{:}NH$. It is used as a surgical antiseptic.

propanal*. Propion-aldehyde. Cf. *propenal, proponal*. *2.2*-**dimethyl-*** Pivaldehyde. *2*-**methyl-*** Isobutyraldehyde.

propanamide*. Propionamide. *2*-**hydroxy-*.** Lactamide.

propane*. C_3H_8 = 44.1. The third member of the methane series. A colorless gas, $d_{(air=1)}$ 1.558, m. −195, b. −39, slightly soluble in water, soluble in alcohol or ether. **acetyl-** Propylmethylketone. **bromo-*** Propyl bromide, **chloro-*** Propyl chloride. **diamino-** P. diamine*. **dihydroxy-*** Propanediol. **epoxy-*** Propylene oxide. **hydroxy-** Propanol. **imino-** Propylenimine. **iodo-*** Propyl iodide. **methoxy-*** Methylpropyl ether. **nitronitroso-** Propyl pseudonitrol. **phenyl-** Cumene. **trichloro-*** Trichlorohydrin. **trihydroxy-** Glycerol.

p. carboxylic acid. Butyric acid. **p. diamide*.** Malonamide. **p. diamine*.** $C_3H_{10}N_2$ = 74.09. Trimethylenediamine, propylene diamine, $NH_2(CH_2)_3NH_2$. A ptomaine from beef-broth cultures of coma bacillus. A colorless liquid, b.135.5, used as reagent for mercury. **p. dicarboxylic acid.** Glutaric acid. **p. dinitrile*.** Malononitrile. **p. dioic acid*.** Malonic acid. **p. tricarboxylic acid.** Tricarballylic acid.

propanediol*. $C_3H_8O_2$ = 76.1. Dihydroxypropane. **1.2-** or *α*- Propyleneglycol, $MeCHOH.CH_2OH$. A colorless liquid, d.1.051, b.188. **1.3-** or *β*-. Trimethyleneglycol, $CH_2OH.CH_2.CH_2OH$. A liquid, d.1.053, b.215, soluble in water, alcohol or ether. **3-chloro-*** *α*-Chlorohydrin.

propanedione*. 1.2-Pyruvaldehyde.

propanetriol*. Glycerol.

propanoic acid*. Propionic acid.

propanol*. C_3H_8O = 60.1. **normal-** 1-Propyl alcohol. $CH_3.CH_2.CH_2OH$. A colorless liquid, d.0.799, b.97; soluble in water. **iso-** or 2-propyl alcohol. $CH_3.CHOH.CH_3$. A colorless liquid, d.0.780, b.82; soluble in water, alcohol or ether. **chloro-*** Propylene chlorhydrin. **diethoxy-*** See *diethylglycerol, diethyline*. **diiodo-*** Iothion. **epoxy-*** Glycidol. **methyl-** Butyl alcohol. **phenyl-** Phenetyl alcohol. **trichloromethyl-** Chloretone.

propanolon acid. $C_3H_4O_4$ = 104.1. Oxypyroracemic acid. A hydroxyketo acid, $CH_2OH.CO.COOH$.

propanone*. Acetone. **dihydroxy-** Dihydroxyacetone. **diphenyl-** Benzylketone. **hydroxy-** Acetol.

propargyl. The monovalent radical, $HC{\equiv}C.CH_2{-}$, derived from propargyl alcohol. **bi-** or **di-** Bipropargyl.

propargylacetate. $C_5H_6O_2$ = 98.1. The propargyl ester of acetic acid, $MeCOOC_3H_3$. A colorless liquid, d.1.005, b.124; soluble in alcohol or ether.

propargylalcohol. C_3H_4O = 56.1. Propinol. The unsaturated alcohol, $CH{\equiv}C.CH_2OH$. A colorless liquid, d.0.972, b.114; soluble in water, alcohol or ether.

propargylic acid. Propiolic acid.

propäsin. Propaesin.

propenal. Acrolein. Cf. *propanal, proponal*.

propene*. C_3H_6 = 42.1. **1,2-** or $\Delta^{1(2)}$- Propylene. **1,3-** or $\Delta^{1(3)}$- Cyclopropane. **bromo-*** Allyl bromide. **chloro-*** Allyl chloride. **dichloro-*** Allylene dichloride.

p. dicarboxylic acid. Glutaconic acid. **p. oxide.** Propylene oxide. **p. thiol*.** Allyl mercaptan. **p. tricarboxylic acid.** Aconitic acid.

propenol. Allyl alcohol. **phenyl-** Cinnamic alcohol.

propenyl. (1) The monovalent group, $CH_3.CH{:}CH{-}$, derived from propylene. (2) Glyceryl. **p. benzene.** Allyl benzene. **p. hydrate.** Glycerol. **p. phenol.** Anol. **p. trinitrate.** Nitroglycerin.

propenylidene. The bivalent radical, $CH_3.CH{:}C{=}$, derived from propylene.

propeptone. Hemialbumose.

properties. The characteristics of a substance. **additive-** (1) P. which depend on the quantity of matter; as, mass, volume, heat capacity. (2) P. of a molecule which can be calculated from constituent atoms; as, molecular weight. Cf. *constitutive-*. **atomic-** P. which depend on a characteristic of the atom; as, spectrum lines. Cf. *molecular-, molar-*. **chemical-** The chemical behavior of a substance; as, its reactions. Cf. *physical-*. **constitutive-** (1) P. which depend upon the quality of matter; as, melting point, atomic weight. (2) P. which cannot be calculated from constituent atomic types, but which are due to constitution; as, optical rotatory power. Cf. *additive-*. **electric-** The electrical phenomena exhibited by a substance. **extensive-** P. depending on quantity, as, inertia, momentum, electric capacity, heat capacity. Cf. *intensive-*. **general-** P. which are inherent in all matter; as, elasticity, gravity, capacity for energy. Cf. *special-*. **intensive-** P. depending on quality; as, crystalline form,

solubility, atomic weight, boiling point. Cf. *extensive-*. **magnetic-** The magnetic phenomena exhibited by a substance. **mechanical-** The general physical properties of a substance; as, density, weight, hardness, strength. **molal-** P. depending upon the amount of substance; as, m. boiling point elevation and m. freezing point depression. **molar-** P. depending on size, form, or weight of a substance; as, mechanical p. Cf. *atomic-, molecular-*. **molecular-** P. depending on molecules; as, isomerism, physiological effect. Cf. *atomic-, molar-*. **physical-** Physical phenomena (q.v.) shown by a substance, which remains unchanged so long as there is no change in molecular composition; *e.g.*, mechanical, thermal, electrical, magnetical and radiant properties. **radiant-** The light and color characteristics of a substance. **special-** P. exhibited to varying extents by some matter, but not by all matter; as color, transparency, hardness, solubility, acidity. Cf. *general-*. **thermal-** The phenomena of a substance due to absorption or liberation of heat; such as, melting and freezing, boiling and condensing.

prophetin. $C_{20}H_{36}O_7$ = 388.4. A glucoside from *Ecballium officinale* and *Cucumis prophetarum*, Cucurbitaceae; slightly soluble in water, soluble in alcohol or ether.

prophoretin. $C_{20}H_{36}O_4$. An amorphous, resin-like split-product of prophetin.

prophylactic. Anything that prevents or contributes to the prevention of disease; a preventive.

prophylaxis. Preventive treatment.

propilidene. Propylidene.

propine. Allylene. **p. dicarboxylic acid.** Glutinic acid.

propinol. Propargyl alcohol.

propinyl. The monovalent radical, $—C_3H_3$.

propiolaldehyde. C_3H_2O = 54.0. Propynal*. An unsaturated aldehyde, CH:C.CHO. An oily liquid, b.61.

propiolic acid. $C_3H_2O_2$ = 70.0. Carboxy-acetylene, propargylic acid, acetylene carboxylic acid, propynoic acid*, CH:C.COOH. A colorless liquid, m.6, b.144, soluble in water, alcohol or ether. **methyl-** Tetrolic acid. **phenyl-** Ph.C:C.COOH. Colorless crystals, m.136; soluble in water or alcohol.

p. acid series. See *acetylene acids*. **p. alcohol.** C_3H_4O = 56.05. *2*-Propyn-*1*-ol. A liquid, CH:C.CH_2OH, $d_{21°}$.0.963, m. −17, b.-114. Soluble in water.

propiolyl. The monovalent radical, HC:C.CO—, derived from propiolic acid.

propion. (1) Propione. (2) Propionyl. **p. aldoxime.** C_3H_7ON = 73.1. Propionic aldoxime, EtCH:NOH. Colorless crystals, d.-0.926, m.21, b.131. **p. amide.** C_3H_7ON = 73.1. Propionic amide, propionyl amine, propanamide*, $EtCONH_2$. Colorless leaflets, d.-1.0335, m.79, b.213; soluble in water, alcohol or ether. **p. anilide.** $C_9H_{11}ON$ = 149.1. Propionyl aniline. EtCONHPh. Colorless leaflets, m.104; slightly soluble in water soluble in alcohol or ether.

propionaldehyde. C_3H_6O = 58.1. Propanal*, propaldehyde, propyl aldehyde, propionic aldehyde. The saturated aldehyde, $MeCH_2CHO$. A colorless liquid, d.0.807, m. −81, b.48; soluble in water, alcohol, or ether. **dihydroxy-** Glyceraldehyde. **dimethyl-** Pivaldehyde.

propionamide. Propion.

propionate. (1) A salt of propionic acid of the general type C_2H_5COOM. (2) An ester of the general type C_2H_5COOR.

propione. $C_5H_{10}O$ = 86.1. Propion, *3*-pentanone*, diethylketone. EtCOEt. A colorless liquid, b.101, soluble in water, alcohol or ether; used medicinally as a hypnotic.

propionic acid. $C_3H_6O_2$ = 74.1. Carboxy-ethane, propanoic acid*, pseudacetic acid. The saturated fatty acid, $MeCH_2COOH$. A colorless liquid, d.0.987, m. −20, b.141; slightly soluble in water, soluble in alcohol or ether; **acetyl-** Levulinic acid. **amino-** Alanine. **aminohydroxy-** Serine. **aminohydroxyphenyl-** Tyrosine. **aminoindyl-** Tryptophane. **benzoyl-** Benzoyl propionic acid. **carbamyl-** Succinamic acid. **dihydroxy-** Glyceric acid. **dimethyl-** Pivalic acid. **dioxyphenyl-** Hydrocaffeic acid. **epoxy-*** Glycidic acid. **hydroxy-** (1) Lactic acid. (2) Hydracrylic acid. **keto-** Pyruvic acid. **phenol-** Hydrocoumaric acid. **phenyl-** (1) Hydratropic acid. (2) Hydrocinnamic acid.

p. aldehyde. Propionaldehyde. **p. anhydride.** $C_6H_{10}O_3$ = 130.11. Propionyl oxide, propanoic anhydride*. $(MeCH_2CO)_2O$. A colorless liquid, d.1.017, b.168, decomp. by water or alcohol.

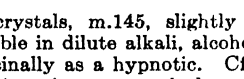
propionitrile. Ethylcyanide.

propiono. Propionyl.

propionyl. Propiono. The monovalent radical, $MeCH_2CO—$, derived from propionic acid. **p. chloride.** C_3H_5OCl = 92.52. Propanoyl chloride*. A liquid, $C_2H_5.COCl$, $d._{20°}$1.065, b.80. **p. phenetidine.** Triphenin. **p. salicylic acid.** $C_{10}H_{10}O_4$ = 194.1. C_6H_4(O—OC.CH_2-Me)COOH. White shining scales, m.95, insoluble in water, soluble in alcohol or ether; used medicinally as an antirheumatic.

propiophenone. $C_9H_{10}O$ = 134.1. $MeCH_2COPh$. **β-phenyl-** $C_{14}H_{12}O$ = 196.09. Phenylbenzyl-ketone, α-benzylacetophenone, $PhCH_2COPh$. A colorless solid, m.60, b.322, used in organic synthesis.

proponal. $C_{10}H_{16}O_3N_2$ = 212.2. Di-*iso*-propyl-barbituric acid.



Colorless crystals, m.145, slightly soluble in water, soluble in dilute alkali, alcohol or ether; used medicinally as a hypnotic. Cf. *propanol*.

proportion. A ratio; a numerical comparison of a part to the whole. **definite-** Proust's law, law of definite proportions: The same compound always consists of the same elements combined together in the same proportions by weight; hence, in any one compound the percentage of its constituents is unalterably fixed. **equivalent-** Compounds of the elements A and C must be formed according to the scheme: m atoms A, n atoms C. Compounds of the elements B and C must be composed of: x atoms B, y atoms C. Compounds of the elements A and B must contain p atoms A, q atoms B. But x, y, m, n, p, q, are whole numbers, usually small. Hence p, q, are either the same as m, x, or whole multiples of them, usually small. **multiple-** Law of multiple proportions. If two elements combine in more than one p., the molecules of one compound must be formed by adding a whole number of atoms of one or

both elements to one or more molecules of the other compound.

p. limit. The least proportion of a substance which can be detected in another specified substance.

propoxy. The monovalent radical, $MeCH_2CH_2O$—, derived from propanol.

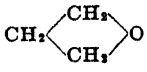
propyl. Pr or C_3H_7—. The monovalent radical, $MeCH_2CH_2$—, derived from propane. Alpha-propyl (Pr^{α}), normal propyl, (n-Pr). *iso-* The monovalent radical, Me_2CH—, derived from isopropane. Beta-propyl (Pr^{β}). Isomeric propyl, (i-Pr).

p. acetate. $C_5H_{10}O_2$ = 102.1. The propyl ester of acetic acid, MeCOOPr. A colorless liquid, d.0.891, b.102; slightly soluble in water, soluble in alcohol or ether. **p. acetylene.** C_5H_8 = 68.1. The unsaturated alkaline or acetylene hydrocarbon, PrC:CH. A colorless liquid, b.48; insoluble in water, soluble in alcohol or ether. **p. alcohol.** Propanol.* **p. aldehyde.** Propionic aldehyde. **p. amine.** C_3H_9N = 59.1. *normal-* Aminopropane, propaneamine*, $PrNH_2$. A colorless, refractive liquid, d.0.719, b.49, soluble in water; used medicinally as a sedative. *iso-* A liquid, soluble in water, Me_2CHNH_2, b.32. **p. amine hydrochloride.** $PrNH_2.HCl$ = 95.6. Colorless deliquescent crystals, soluble in water; used medicinally. **p. amine sulfate.** $(PrNH_2)_2.H_2SO_4$ = 216.2. Colorless crystals, soluble in water; used in medicine. **p. aniline.** $C_9H_{13}N$ = 135.2. The secondary amine PhNHPr. A colorless liquid, d.0.949, b.222; soluble in alcohol or water. **p. benzene.** C_9H_{12} = 120.14. The aromatic hydrocarbon, PhPr, phenylpropane. A colorless liquid, d.0.862, b.158; insoluble in water, soluble in alcohol or ether. **p. benzoate.** $C_{10}H_{12}O_2$ = 164.2. The propyl ester of benzoic acid, PhCOOPr. A colorless liquid, d.1.032, b.229; sparingly soluble in water, soluble in alcohol or ether. **p. benzoic acid.** $C_{10}H_{12}O_2$ = 164.2. $C_6H_4PrCOOH$. *ortho-* Colorless leaflets, m.58, b.272; soluble in water, alcohol or ether. *para-* Colorless crystals, b.140; slightly soluble in water, soluble in alcohol or ether. **p. bromide.** C_3H_7Br = 123.0. Bromopropane*. A colorless liquid, d.1.364, b.71; slightly soluble in water, soluble in alcohol. **p. butyrate.** $C_7H_{14}O_2$ = 130.2. The propylester of butyric acid, PrCOOPr. A colorless liquid, d.0.879, b.143; soluble in alcohol or ether. **p. carbamate.** $C_4H_9O_2N$ = 103.1. The propylester of carbamic acid, NH_2COOPr. Colorless prisms, m.53, b.194; very soluble in water, alcohol or ether. **p. carbinol.** *1-*Butanol*. **p. carbylamine.** iso-Me_2CHNC = 69.09. A liquid, b.87. **p. chloride.** C_3H_7Cl = 78.53. *normal-* $MeCH_2CH_2Cl$. 1-chloropropane*. A colorless liquid, d.0.895, b.46; slightly soluble in water, soluble in alcohol or ether. *iso-* MeCHClMe. 2-chloropropane, secondary, or propyl-2-chloride. A colorless liquid, d.0.859, b.37; slightly soluble in water, soluble in alcohol or ether. **p. cyanide.** C_4H_7N = 69.1. *normal-*Butyronitrile. PrCN. A colorless liquid, d.0.794, b.118; soluble in water, alcohol or ether. *iso-* Me_2CHCN = 69.1. A liquid, b.107. **p. ether.** $C_6H_{14}O$ = 102.1. Propyloxide, propoxypropane*. Pr_2O. A colorless liquid, d.0.744, b.90.7, soluble in water, alcohol or ether. iso- Isopropyl oxide. A colorless liquid, $d_{15°}$0.7247, m. −60, b.67.5, insoluble in water, soluble in all other liquids; used as solvent for gums, waxes, and asphalt. **p. formate.** $C_4H_8O_2$ = 88.1. The propyl ester of formic acid, HCOOPr. A colorless liquid, d.0.901, b.81, slightly soluble in water, soluble in alcohol or ether. **p. hydroxylamine.** C_3H_9ON = 75.1. *β-* PrNHOH. *α-* $PrONH_2$. **p. iodide.** C_3H_7I = 170.0. 1-iodopropane*, PrI. A colorless liquid, d.1.748, b.102; sparingly soluble in water, soluble in alcohol or ether; used in organic synthesis. **p. isocyanide.** *normal-* PrNC. *iso-* Me_2CHNC. **p. ketone.** Butyrone. **p. mercaptan.** C_3H_8S = 76.1. Hydrosulfopropane, propyl hydrosulfide, PrSH. A colorless liquid, b.67; slightly soluble in water, soluble in alcohol or ether. **p. nitramine.** $C_3H_8O_2N_2$ = 104.1. $PrNHNO_2$. A colorless liquid, d.1.103, m. −21, b.130; slightly soluble in water, soluble in alcohol or ether. **p. nitrate.** $C_3H_7NO_3$ = 105.1. A colorless liquid, d.1.063, b.119, soluble in alcohol or ether. **p. nitrite.** $C_3H_7NO_2$ = 89.1. A colorless liquid. d.0.935, b.57; soluble in alcohol or ether. **p. nitrolic acid.** $C_3H_6O_3N_2$ = 118.08. The solid, $MeCH_2C(NO_2).NOH$, m.74, soluble in water, alcohol ether. **p. phenyl ketone.** Butyrophenone. **p. pseudonitrol.** $C_3H_6N_2O_3$ = 118.0. Nitronitrosopropane. $Me_2C.(NO)NO_2$. **p. pyridine.** $C_3H_7.C_5H_4N$ = 121.14. *alpha-* A liquid, b.166, *beta-* A liquid b.158. *gamma-* A liquid, b.177. **p. sulfide.** $(C_3H_7)_2S$ = 118.2. Propylthioether, *1-*propylthiopropane*, Pr_2S. A colorless liquid, d.0.814, b.141; insoluble in water, soluble in alcohol or ether. **p. thiocyanate.** (*iso-*) C_3H_7NCS = 101.15. P. mustard oil. A liquid, b.137. **p. thioether.** See *p. sulfide.* **p. urea.** $C_4H_{10}ON_2$ = 102.1. $NH_2.CO.NHPr$. A colorless crystalline powder, m.107; soluble in water.

propylen. The monovalent radical, $CH_3CH:CH$—, derived from propylene. **p. aldehyde.** Acetonic aldehyde.

propylene. C_3H_6 = 42.1. (1) Propene*. The unsaturated hydrocarbon, $MeCH:CH_2$, a homolog of ethylene and isomer of cyclopropene. A colorless gas, $d_{(air=1)}$1.498. b. −37; soluble in water, alcohol or ether. (2) The bivalent radical, —CHMe.CH_2—. Cf. *propylidene.* (3) The monovalent radical $CH_2.CH:CH$—. Cf. *propylen.*

p. aldehyde. Crotonaldehyde. **p. bromide.** $C_3H_6Br_2$ = 201.89. 1.2-Dibrompropane*. A colorless liquid, d.1.931, b.131; slightly soluble in water, soluble in alcohol or ether. **p. chlorohydrin.** C_3H_7ClO = 94.52. (1) Chloro*iso*propyl alcohol, *1-*chloro-*2-*propanol*, Me.CHOH.CH_2Cl. A colorless liquid, d.1.115, b.126. (2) *2-*Chloropropyl alcohol, Me.CHCl.CH_2OH. A colorless liquid, d.1.103, b.134. **p. chloride.** $C_3H_6Cl_2$ = 113.0. 1.2-dichloropropane*. A colorless liquid, d.1.166, b.97, slightly soluble in water, soluble in alcohol or ether; used alone or with carbon dioxide as an insecticidal fumigant for food-stuffs. **p. dichloride.** P. chloride. **p. diamine.** Propane diamine*. **p. ether.** C_6H_6O = 58.06. A liquid, b.35, soluble in water alcohol, or ether. **p. glycol.** Propanediol. **p. oxide.** C_3H_6O = 58.1. Propeneoxide. **1.2-** Epoxypropane*. The heterocyclic compound, Me.CH—CH_2 (with O bridging) A colorless liquid, d.0.859, m.35; soluble in water, alcohol or ether. **1.3-** Trimethyleneoxide. The heterocyclic compound,



p. sulfide. C_3H_6S = 74.10. The heterocyclic compound,  . Trimethylene sulfide.

propylenimine. C_3H_7N = 57.1. Iminopropane, $MeCH_2CH{:}NH$.

propylidene. Propilidene. The divalent radical, $MeCH_2CH{=}$, derived from propane. **p. bromide.** 1.1-Dibromopropane*. **p. chloride.** 1.1-Dichloropropane*.

propyloic- A prefix indicating the radical $—CH_2.CH_2.COOH$ on a side-chain. Cf. *methyloic.*

propynal*. Propiolaldehyde.

propyne*. Allylene. **bromo-*** Propargyl bromide.

propynoic acid*. Propiolic acid.

propynol*. Propargyl alcohol.

propyrin. Pyrenol.

propytal. *5.5*-Propylbarbituric acid.

prorennin. Rennase.

pros- A prefix derived from the Greek, indicating "by," "near" or "at." **p. position.** The 2.3-position of the naphthalene ring.

prosapogenin. $C_{50}H_{80}O_{14}$ (?). A non-sugar hydrolytic product of saponin, decomp. 208, and hydrolysing to endosapogenin and $C_6H_{10}O_7$.

prosopite. A native, hydrated calcium aluminum fluoride.

prospecting. Searching for or exploring new ore deposits.

prostate. A gland at the neck of the bladder in male animals. **p. powder.** The dried and powdered glands of animals.

prosthesis. Replacement or substitution.

prosthetic group. (1) The group formed by a substance that is combined with a simple protein to form a complex protein; as, the chromophoric group in chromoproteins. (2) The group formed by an organic radical not derived from an amino-acid, that enters into the complex molecule of a conjugated protein, q.v.

protactinium. Pa = 230. Proto-actinium. A radioactive disintegration-product between uranium and actinium and an isotope of ekatantalum; atomic number 91. It is the genetic link between the uranium and actinium series, and was discovered in 1918 by Hahn and Meitner. It has a half-life value of 32,000 years.

protagon. $C_{160}H_{303}O_{35}N_5P$. A crystalline substance obtained from red blood corpuscles and brain matter. Cf. *pseudocerebrin.*

protamin. A group of simple proteins occurring in the sex cells of fishes; such as, salmine and sturine. Cf. *protein.*

protamine. $C_{16}H_{32}O_2N_9$ = 382.35. An amine isolated from spermatozoa and fish spawn.

protan. A compound of casein and tannic acid. A brown powder, insoluble in water; used as an intestinal astringent.

protargol. A compound of silver and albumin; a bulky, light brown powder (8.3 % Ag), soluble in water or glycerin; used as a bactericide.

protargyl. Protyle.

proteacin. Leucodrin.

protean. A group of derived proteins, q.v.

protease. A proteolytic enzyme that splits proteins to proteoses and peptones. **gastric-** Pepsin. **pancreatic-** Erepsin. Trypsin. **vegetable-** Bromelin. Papain.

protective colloid. A substance that forms a covering envelope for colloidal particles, and stabilizes them towards the coagulating effects of electrolytes. Cf. *cone.*

proteid. An obsolete term for protein.

proteidin. An immunizing substance developed in the organism from complex proteins and bacteriolytic enzymes, which dissolves bacteria.

protein. One of a group of nitrogenous organic compounds of high molecular weight that ranges between 34,000 and 200,000, (generally multiples of 16–17,000), and which occur in vegetable and animal matter. They yield several aminoacids on hydrolysis and are formed by the activity of plants. They serve as food for animal and man, and are assimilated in the form of aminoacids and reconstructed in the protoplasm. Cf. *polypeptide, isoelectric point, proteinate, protein salt.*

MOLECULAR WEIGHTS OF PROTEINS

	From chemical data	Osmotic pressure	Ultra centrifuge
casein	12,800	33,600	98,000
edestin	29,000	49,500	212,000
hemoglobin	16,660	34,300	67,000
egg albumin	33,800	36,000	34,000
serum albumin	78,000	73,000	75,000

alcohol-soluble- Prolamines. Gliadins. **bacterial-** A toxic protein formed by bacteria. **coagulated-** A simple protein that has been so altered by heat or chemical agents as to become insoluble. **compound-** Conjugated protein. **conjugated-** A group of complex proteins consisting of a protein-molecule and a non-protein molecule. **defensive-** A protein formed in an organism as a protection against bacterial invasion. (See *alexin, immunity.*) **derived-** A decomposition product of proteins that is intermediate in complexity of structure between proteins and aminoacids. **synthetic-** See *polypeptide.*

CLASSIFICATION OF PROTEINS

[A] (Adopted by the American Physiological Society and the American Society of Biological Chemists)

I. SIMPLE PROTEINS.—Substances that yield only α-aminoacids or their derivatives on hydrolysis.

a. albumins—Soluble in water or dilute salt solution, and coagulable by heat.
- ovalbumin..... from egg white
- serum albumin..... from blood serum
- lactalbumin..... from milk
- vegetable albumin.... from plant tissues

b. globulins—Insoluble in water, soluble in salt solutions, and coagulated by heat.
- ovoglobulin..... from eggs
- serum globulin..... from blood serum
- edestin..... from hemp seed
- amandin..... from fruit kernels

c. glutelins—Insoluble in neutral solvents, soluble in dilute acids or bases, and coagulated by heat.
- glutenin..... from wheat

d. prolamines (or gliadins)—Soluble in 80 % alcohol, insoluble in water, absolute alcohol, or neutral solvents.
zein..... from corn
gliadin..... from wheat
hordein..... from rye
bynin..... from malt
e. albuminoids—Insoluble in all neutral solvents.
elastin..... from ligament
collagen..... from tendon
keratin..... from horn and hoofs
f. histones—Soluble in water, or dilute acids, precipitated by or insoluble in ammonia, not coagulated by heat.
globin..... from hemoglobin
scombrone..... from mackerel sperm
thymus histone.... from thymus gland
g. protamines—Soluble in water, uncoagulable by heat. Simplest proteins or polypeptides.
salmine..... from salmon sperm
sturine..... from sturgeon sperm
clupeine..... from herring sperm

II. CONJUGATED PROTEINS.—Substances that consist of protein combined with some other substance (the prosthetic group or molecule).
a. nucleoproteins—Compounds of one or more proteins with a nucleic acid.
cytoglobulins..... from cytoplasm
nucleohistones..... from cell nuclei
b. glycoproteins—Compounds of protein with carbohydrates.
mucins..... from mucus
osseomucoids..... from bones
tendomucoids..... from tendon
ichthulins..... from carp eggs
helicoproteins..... from snails
c. phosphoproteins—Compounds of proteins with a phosphorus compound other than lecithin or nucleic acids.
caseins..... from milk
ovivitellins..... from egg yolk
d. chromoproteins (hemoglobins)—Compounds of proteins with a chromophoric group (Cf. *pigments*)
hemoglobins... from mammalian blood
hemocyanins... from invertebrate blood
chlorophylls... from green plants
e. lecithoproteins—Compounds of proteins with lecithins.
f. lipoproteins—Compounds of proteins with fatty acids.

III. DERIVED PROTEINS—Primary and secondary split-products of proteins.
a. proteans—Insoluble products due to the action of water or enzymes.
myosan..... from myosin
edestan..... from edestin
b. metaproteins—Products resulting from the action of acids or bases.
c. coagulated proteins—Resulting from the action of heat or alcohol on proteins.
d. proteoses—Products resulting from further hydrolysis. They are soluble in water, and not coagulated by heat, and are precipitated by saturating their solutions with ammonium or zinc sulfate.
e. peptones—Soluble in water, non-coagulable by heat, not precipitated by saturating their solutions with ammonium sulfate.
f. peptides—A compound of two or more amino-acids possessing one or more —CO.NH— or peptide groups.

[B] (Adopted by the chemical and physiological societies of England)
I. Simple proteins:
1. protamins (same as American I.g)
2. histones (same as I.f)
3. albumins (same as I.a)
4. globulins (same as I.b)
5. glutelins (same as I.c)
6. alcohol-soluble proteins (same as I.d)
7. scleroproteins (same as I.e)
8. phosphoproteins (same as II.C)
II. Conjugated proteins:
1. glucoproteins (same as II.b)
2. nucleoproteins (same as II.a)
3. chromoproteins (same as II.d)
III. Hydrolysis products:
1. infraproteins (same as III.b)
2. proteoses (same as III.d)
3. peptones (same as III.e)
4. polypeptides (same as III.f)

proteinase. An enzyme that hydrolyses proteins. **acid-** Pepsin. **alkali-** Trypsin.

proteinate. A compound formed from a protein and a base, Prot. COOM; as, sodium caseinate. Cf. *isoelectric point, protein-salt.*

protein-salt. A compound of a protein with an acid, $X.NH_2Prot.$; as, casein hydrochloride. Cf. *proteinate.*

proteoclastic. Proteolytic. Protein-splitting, or hydrolyzing proteins.

proteolysis. The conversion of proteins into soluble peptones by decomposition or hydrolysis of the protein molecule.

proteolytic. Proteoclastic.

proteose. A group of derived proteins, q.v.

protheite. A variety of pyroxene.

protiodide. An iodide which contains the minimum amount of iodine; an *-ous* compound; cf. *biniodide.*

protista. The lowest and most primitive forms of life, which consist of single-cell organisms, part plant, part animal in nature.

protistology. A branch of science that deals with unicellular organisms.

protium. The hydrogen isotope of mass 1.0, as compared with deuterium and tritium.

proto- A prefix derived from the Greek, indicating "first." **p. salt.** An obsolete term for a compound that contains the smallest amount of the negative radicals or atoms of the same positive element; as, HgI, mercurous iodide or mercury protiodide; and HgI_2, mercuric iodide or mercury biniodide.

protoactinium. Protactinium.

protobastite. A variety of enstatite.

protobitumen. A partially-reduced carbohydrate, which on further reduction yields oil; as, algarose (synthetic) and algarite (natural). It is formed by the oxidation of mineral oil.

protocatechol. (1) Catechol. (2) Pyrocatechol.

protocatechualdehyde. $C_7H_6O_3$ = 138.1. 3.4-Dihydroxybenzaldehyde, dihydroxybenzenecarbonal,* protocatechoic aldehyde. $C_6H_3(OH)_2CHO$. Colorless leaflets, m.153, slightly soluble in water, soluble in alcohol or ether. **methyl-** Vanillin. **methylene-** Piperonylic acid.

protocatechuic acid. $C_7H_6O_4$ = 154.03. 3.4-Dihydroxybenzoic acid. $C_6H_3(OH)_2COOH$. Colorless crystals, d.1.542, decomp. 199, soluble in water, alcohol or ether; used as a developer in

photography. It occurs in the oil of shepherd's-purse. **p. alcohol.** Protocatechuyl alcohol. **p. aldehyde.** Protocatechualdehyde.

protocatechuyl alcohol. $C_7H_8O_3$ = 140.06. Protocatechuic alcohol, 3.4-dihydroxybenzylalcohol, $C_6H_3(OH)_2.CH_2OH$. **methylaminomethyl-** Adrenalin.

protochloride. An obsolete term to indicate the compound containing less chlorine than the normal chloride of the same element.

protocotoin. $C_{16}H_{14}O_6$ = 302.2. A principle from paracoto bark. Cf. *cotein.*

protocurarine. An alkaloid derived from curare.

protofluorine. A hypothetical element of atomic weight 2.1, assumed to exist in certain nebulae, and placed between hydrogen and helium in the periodic table. Cf. *coronium, nebulium.*

protohydrogen. A hypothetical element, assumed to exist in certain bright stars and nebulae, and to have an atomic weight of 0.081, *i.e.*, less than that of hydrogen.

protolysis. A reaction in which a proton is transferred from an acid to a base.

proton. Prouton, uron. (1) Originally the positive nucleus, q.v., of an atom (Rutherford, Bohr). (2) The nucleus of the hydrogen atom, *e.g.*, the hydrogen-ion, H^+. (3) A particle of mass one and one positive charge, considered to be a "building stone" of atomic nuclei; thus, a *proton* and *electron* in immediate contact make a *neutron;* if at a distance equal to that of the electron radius, a *photon.*

p. acceptor. A substance which gains a hydrogen ion; as, a base. **p. bombardment.** The transmutation caused by fast-moving protons:

$$C^{12} + H^1 \rightarrow (N^{13})^* \xrightarrow{\gamma} N^{13} \quad \textit{10 min.}$$

$$B^{11} + H^1 \rightarrow (C^{12})^* \xrightarrow{\gamma} C^{12} \quad 10^{-18}\ \textit{sec.}$$

where an excited isotope is formed which yields γ-rays. Cf. *radioelements, radioactivity.* **p. donor.** A substance yielding a hydrogen ion; as an acid. **p. number.** The whole-numbered isotopic weight, which may be assumed to be the number of hydrogen nuclei or protons and neutrons. Cf. *atomic structure.* **p. reaction.** (1) Neutralization. Cf. *prototropy.* (2) Nuclear reactions.

protones. A group of hydrolyzed products of protamines.

protophile. A weak base which unites with a proton. Cf. *acid* (3).

protophilia. Hydrophilia. The tendency of a molecule to unite with hydrogen-ions (protons). See *hydrogenium ions.*

protophyllin. A colorless substance, chlorophyll hydride, that changes to green chlorophyll by the action of carbon dioxide.

protophyta. A single-celled plant; such as, the bacteria, yeasts, and single-celled algae. Cf. *diatoms, protozoon.*

protopine. $C_{20}H_{19}O_5N$ = 353.2. Macleyine, fumarine. An alkaloid obtained from opium, chelidonium, and corydalis species. Colorless crystals, m.207.

protoplasm. Protoplasma bioplasm. A viscid colloidal material, the physical basis of all life, q.v., it consists, in the living condition, of a dynamic system of proteins, fats, and carbohydrates, reacting with each other. It forms a jelly-like material with water as the continuous phase, in which various structural elements can be observed under the microscope: a network (spongioplasm) and in the more fluid portion (hyaloplasm), a nucleus with nucleoplasm, chromatin, and linin (see *cell, micelle, zone*).

P. is assumed to be alive as long as its balance of internal reactions within and between the structural elements is maintained. Any outside matter that tends to react with the atomic group (side chains, as, $—NH_2$ or —COOH of proteins; —CHO or $—CH_2OH$ of carbohydrates, etc.) will disturb the equilibrium of reactions; the p. is now less reactive, and becomes paraplasm and finally, dead matter.

protoplasma. Protoplasm.

protoporphyrin. A constituent of hemoglobin and of the brown pigment of egg-shells. It occurs widely, but in small quantities in nature, and has been synthesized. It contains a nucleus of four pyrrole rings. Cf. *phylloporphyrin.*

protosal. $C_{11}H_{12}O_6$ = 240.1. Glycerin salicylic formic ester, $CH_2—OOC.C_6H_4OH$. A colorless

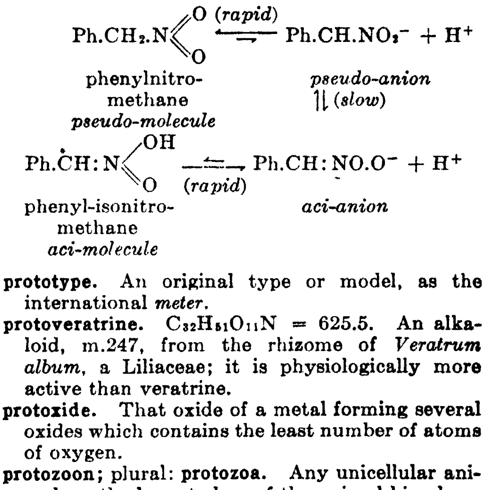
```
CH2—OOC.C6H4OH
|
CH—OOC.H
|
CH2OH
```

oily liquid, d.1.344; insoluble in water, soluble in alcohol or ether. Used medicinally as an antirheumatic.

protosulfate. The sulfate of a series of sulfates that contains the smallest amount of SO_4 radical.

prototropic. Pertaining to reactions which are influenced by H^+ or protons.

prototropy. Pseudoacidity, mobile H-tautomerism, mobile proton tautomerism. A case of ionotropy (q.v.) in which a detached H atom causes a molecule to exist as tautomeric ions. Cf. *anionotropy, e.g.,*



prototype. An original type or model, as the international *meter.*

protoveratrine. $C_{32}H_{51}O_{11}N$ = 625.5. An alkaloid, m.247, from the rhizome of *Veratrum album,* a Liliaceae; it is physiologically more active than veratrine.

protoxide. That oxide of a metal forming several oxides which contains the least number of atoms of oxygen.

protozoon; plural: **protozoa.** Any unicellular animal, or the lowest class of the animal kingdom; as, ameba, infusoria, and paramecia. Cf. *protophyta.*

protractor. An instrument for measuring angles.

protuberance. A projecting part. **solar-** The giant streamers of incandescent gases on the sun's surface. Cf. *coronium, corona.*

protyl. Propargyl. The monovalent radical, $—CH_2.C⋮CH$.

protyle. Archyl, protargyl, pantogen, or urstoff. The hypothetical substance from which all chemical elements are derived. Cf. *hydrogen.*

Proust, Louis Joseph. 1755–1826. A French chemist, noted for the law of definite propor-

tions. **P.'s law.** The law of constant proportions q.v.

proustite. Ag_3AsS_3. Ruby silver. A native silver sulfarsenite; hexagonal ruby-red crystals.

Prout, William. 1785–1850. An English physician, noted for his hypothesis. **P. hypothesis** (1815). All elements are multiples of a protyle or of hydrogen. (See *atomic structure.*) This speculative view of over a century ago has attained importance by a more recent ratification of the theory, based on: (a) natural disintegration, as shown by radioactive elements yielding helium; and (b) artificial disintegration, as by the yields of hydrogen and other products on electron bombardment. Cf. *radioelements.*

prouton. A suggested name for proton.

provitamin. A precursor to a vitamin. *E.g.*, p.A. Carotene. p.D. Sterols. (*e.g.*, ergosterol, epiergosterol, dihydrocholesterol) which are converted into vitamin D (q.v.) by exposure to ultra-violet or cathode rays. Cf. *β-carotene.*

proximate. The ultimate or nearest approach. **p. analysis.** Quantitative analysis (q.v.), rationally interpreted. (Cf. *water* analysis.) **p. principle.** The active principle of a drug; as an alkaloid or glucoside.

prozane. Triazane(2).

prulaurasin. $C_{14}H_{17}NO_6$ = 295.19. A racemic mandelonitrile glucoside, m.122, from cherry laurel, *Prunus leurocerasus.*

prunasin. $C_{14}H_{17}NO_6$ = 295.19. A *d*-mandelonitrile glucoside, m.147, from *Prunus padus.*

prune. Prunus. The partly dried fruit of *Prunus domestica*, a Rosaceae; used as a food, and medicinally, as a mild laxative.

prunetol. Genistein.

prunol. Ursolic acid.

prunus. Prune. **p. amygdalus.** Almond. **p. domestica.** Prune. **p. spinosa.** Blackthorn. **p. virginiana.** Wild cherry.

prussian blue. A group of complex salts formed by oxidation of the white precipitate obtained from a solution of ferrous sulfate and potassium ferrocyanide. Used as dyes in inks and cotton printing, and for paper, but now largely superseded by aniline dyes. **insoluble-** Turnbull's blue. **native-** Vivianite. **α-soluble-** True prussian blue, alpha-potassium ferric ferrocyanide, $4FeK[Fe(CN)_6].7H_2O$. A deep blue powder, giving a blue colloidal solution with water. **β-soluble-** beta-potassium ferric ferrocyanide. $FeK[Fe(CN)_6].H_2O$. **x-soluble-** A more stable variety of the β-form. Cf. *milori blue.*

prussian red. Colcothar.

prussiate. (1) Cyanide. (2) Ferrocyanide. (3) Ferricyanide. **red-** Potassium ferricyanide. **yellow-** Potassium ferrocyanide.

prussic acid. Hydrocyanic acid.

prussine. Cyanogen.

ps. Abbreviation for pseudo.

ψ. (1) The Greek letter "psi." (2) Abbreviation for pseudo.

pseud-, pseudo-, *ps-*, or ψ- A prefix derived from the Greek indicating "false" or "similar to." This prefix was proposed by Baeyer to designate substances derived from a hypothetical parent-substance or a tautomeric form.

pseudacetic acid. Propionic acid.

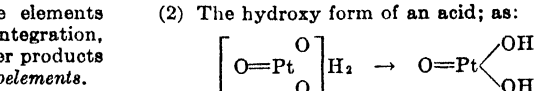
pseudaconine. $C_{27}H_{41}O_8N$ = 523.4. A decomposition product of pseudaconitine.

pseudaconitine. $C_{36}H_{51}O_{12}N$ = 689.4. Acetylveratryl-ψ-aconine, ψ-aconitine. A crystalline alkaloid, m.211, derived from *Aconitum ferox.*

pseudoacid. (1) An organic compound which has acidic properties and forms salts, but which does not contain the carboxyl radical, —COOH. The acid character of ψ-acids is due to a —OH group attached to a nitrogen atom, as in the iso-nitroso compounds:

$$\underset{\text{nitro-}}{R.CH_2NO_2} \rightarrow \underset{\text{isonitroso}}{R.CHN(:O)OH} \rightarrow \underset{\text{isonitroso ion}}{R.CHN(:O)O^-} + H^+.$$

(2) The hydroxy form of an acid; as:



true acid pseudo acid

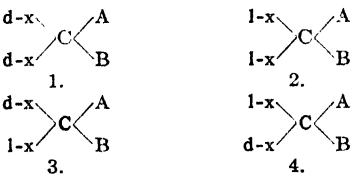
Cf. *prototropy.*

pseudoaconitine. Pseudaconitine.

pseudoallyl. Isopropenyl.

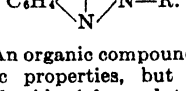
pseudoalum. A group of double sulfates of aluminum and a divalent metal, $MAl_2(SO_4)_4.24H_2O$, in which M may be manganese, ferrous, magnesium, zinc or copper. Cf. true *alum*, $M_2Al_2(SO_4)_4.24H_2O$, where M is a monovalent metal.

pseudoasymmetry. A form of optical isomerism in which a non-asymmetric carbon atom becomes asymmetric owing to the presence of d- and l-asymmetric groups; as,



where (*d*-X) and (*l*-X) represent a similar optically-active dextro- and levo-radical; as, —CH(OH)COOH. In 1 and 2 the central carbon atom is not asymmetric, as the optical rotations of the two radicals are alike; in 3 and 4 the carbon atom is pseudo-asymmetric, for the two radicals have different rotations.

pseudoazimides. Indodiazoles, q.v. A group of organic compounds of the type,



pseudobase. An organic compound that normally has no basic properties, but becomes basic in presence of acids, (cf. *amphoteric*).

pseudobrookite. The vitreous mineral $2Fe_2O_3.3TiO_2$.

pseudobutylene. *ε*-Butene*.

pseudocellulose. Hemicellulose.

pseudocerebrin. $C_{44}H_{92}O_8N$ = 762.9. A compound formed by hydrolysis of protagon by alkali.

pseudocholestene. $C_{27}H_{46}$ = 370.4. The hydrocarbon corresponding with allocholesterol. Cf. *cholane derivatives.*

pseudocodein. $C_{18}H_{21}O_3N$ = 299.2. An alkaloid resembling codein.

pseudoconhydrine. See *conhydrine.*

pseudocumene. C_9H_{12} = 120.14. Cumol, *as*- or 1.2.4-trimethylbenzene, $C_6H_3Me_3$. A colorless liquid, d.0.879, m. −57, b.170; insoluble in water. **hexahydro-** See *hexahydro cumene.*

pseudocumidine. $C_9H_{13}N$ = 135.2. 2.4.5-trimethylaniline, $C_6H_2(NH_2)Me_3$. 1-amino-2.4.5-

trimethylbenzene. Colorless needles, m.66, b.-234; soluble in water.

pseudocumyl. A monovalent radical, $Me_3C_6H_2$—, derived from pseudocumene; as, **a-** or 2, 3, 5-; **s-** or 2, 4, 5-; and **v-** or 2, 3, 6-.

pseudocurarine. A non-poisonous alkaloid found in *Nerium oleander*, an Apocynaceae.

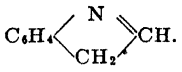
pseudocyanate. A compound having the —ONC radical. Cf. *fulminate.*

pseudocyanic acid. The acid HONC. Cf. *fulmic acid, pseudoisocyanic acid.*

pseudodichroism. Pseudopolychroism.

pseudogalena. Sphalerite.

pseudoindole. C_8H_7N = 117.1. Indolenine, 1-isobenzazole. The heterocyclic compound,



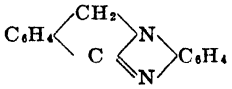
pseudoindoxyl. See *indoxyl.*

pseudoindyl. A group of seven isomeric, monovalent, radicals, C_8H_6N—, derived from pseudoindole.

pseudoisatin. Isatin.

pseudoisocyanic acid. The acid, HOCN. Cf. *pseudocyanic acid.*

pseudoisoindole. C_8H_7N = 117.11. Isoindolenine, 2-isobenzazole.  Cf. *pseudoindole.* **p. benzimidazole.** $C_{14}H_{10}N_2$ = 316.1. Benzylenebenzimidazole. The heterocyclic compound,



pseudoisomerism. Isomerism between two molecules containing the same number and same kind of atoms, but having different linkages between the atoms due to a different valency of one of them; as, cyanide and isocyanide. See *isomerism.*

pseudoisotope. A radioactive element resembling an isotope in its reactions, but having a different atomic number.

pseudomalachite. See *malachite.*

pseudomerism. Dynamic isomerism in which a molecule reacts, under given conditions, according to one structure; and under different conditions according to an isomeric structure.

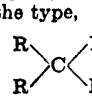
pseudomonotropy. A form of allotropy in which the transition temperature from one allotropic form to the other is below the melting point of the substance.

pseudomorph. A crystal that appears in general outline to belong to one system, but actually consists of an aggregate of minute crystals which belong to another crystal system.

pseudomorphy. A phenomenon exhibited by some crystals of appearing outwardly of one system, but possessing a different structure internally. **chemical-** Pseudomorphism caused by chemical substitution or alteration. **physical-** Pseudomorphism caused by a change in allotropic form.

pseudonarcissine. An alkaloid from the bulbs of *Narcissus pseudonarcissus*, an Amarylladaceae.

pseudonitrol. A group of organic nitro-nitroso compounds of the type,

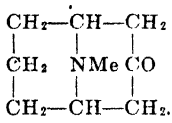


as, propylpseudonitrol or nitro-nitrosopropane, $Me_2C(NO)NO_2$.

pseudonitrosite. A group of organic nitro-nitroso compounds in which the two radicals are attached to different carbon atoms, —C(NO)—C(NO_2)—. Cf. *nitrols.*

pseudonuclein. Nucleoalbumin.

pseudopelletierine. $C_9H_{15}NO.2H_2O$ = 189.16. N-methyl granatanine,



An alkaloid from the root-bark of the pomegranate. Prismatic plates, m.48, b.246, soluble in water or alcohol. Cf. *pelletierine.*

pseudophenanthroline. *4,7*-Naphthisodiazine.

pseudophysostigmine. $C_{15}H_{21}O_2N_2$ = 277.19. An alkaloid from calinuts or false calabar beans. A white crystalline powder; soluble in alcohol or ether.

pseudopolychroism. See *polychromatic.*

pseudoraceme. A crystal of an organic compound composed of equal mixtures of the dextro- and levo-compounds.

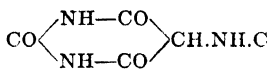
pseudosolution. A colloidal suspension or emulsion.

pseudotannin. A group of tannin split-products that have lost the capacity to convert hide into leather.

pseudotropine. See *tropine.*

pseudourea. CH_4N_2O = 60.1. Isourea. NH_2-C(:NH).OH.

pseudouric acid. $C_5H_6N_4O_4$ = 186.1. *5*-Carbamidobarbituric acid.



pseudoxanthine. (1) An isomer of xanthine, q.v. (2) A leukomaine from muscle tissue resembling xanthine in its properties but not in its composition.

pseudozoogloea. A clump of living bacteria that resembles a primitive animal, protozoon, under the microscope.

psi- The Greek letter ψ, Ψ. A symbol for: (1) pseudo-; (2) specific function, or the electric field in Schrödinger's atom; (3) lbs. per sq. in.

psicaine. $C_{21}H_{27}NO_{10}$ = 453.23. d-ψ-cocaine bitartrate. $(COOH.CHOH)_2NMe.C_7H_{10}(COOMe)O.COPh$. White crystals, soluble in water, used as a local anesthetic.

psilomelane. A hydrated pyrolusite, or native manganic hydroxide, $Mn(OH)_3$.

psoraline. Caffeine.

PSP. Phenolsulfonephthalein.

psychotrine. $C_{28}H_{36}O_4N_2$ = 464.4. An alkaloid in ipecac.

psychrometer. See *hygrometer.* **sling-** A whirling hygrometer (q.v.) in a metal frame with a leather strap.

psychrometric chart. A chart on which the temperature of drying is plotted against the weight of water-vapor removed per unit weight of dry air. It gives the weights of water-vapor required to saturate unit weight of dry air to various extents at various temperatures.

psylla alcohol. Psyllic alcohol. **p. wax.** A solid wax obtained from the leaf louse, *Psylla alni.*

psyllic acid. $C_{32}H_{65}COOH$ = 492.51. Psyllostearylic acid. A fatty acid, m.95, from psylla wax. Cf. *lacceroic acid.* **p. alcohol.** $C_{32}H_{67}OH$ = 480.53. Psyllostearyl alcohol. A solid, m.69.5, from psylla and bees-wax.

psyllostearyl alcohol. Psyllic alcohol.

psyllostearylic acid. Psyllic acid.

pt. Abbreviation for: (1) pint; (2) part.

Pteridophyta. A main division of Cryptogamia, which includes Filices (ferns), Equisetaceae (horsetails) and Lycopodiaceae (club mosses).

pterin. A yellow purine-type pigment from mammalian tissues. Cf. *rhodopterin.*

pterocarpine. An alkaloid from red sandalwood, *Pterocarpus santalidus*, a Leguminosae.

ptomaine. Animal alkaloid, cadaveric or putrefactive alkaloid. A group of amino compounds which result from the decomposition of proteins or dead animal matter by microorganisms. *E.g.*,

Name	*Occurrence*
aminovaleric acid	putrefying fibrin and meat
amylamine	codliver oil, putrid yeast
anthracine	anthrax bacillus
aselline	codliver oil
betaine	mussel, human urine
butylamine	codliver oil
cadaverine	putrefying animal tissues and bacterial cultures
cancerine	pathological urine
caproylamine	putrid yeast
choline	decomposing animal tissues and bacterial cultures
collidine	putrid pancreas
diethylamine	putrefying fish
dihydrolutidine	codliver oil
eczemine	
ethylamine	putrefying yeast, wheat flour
ethylidendiamine	putrefying fish (haddock)
gadinine	putrefying fish (haddock)
hexylamine	putrid yeast
hydrocollidine	putrefying fish and animal tissues
hydrocoridine	agar culture of bacterium album
kreotoxine	meat
methylamine	putrefying fish
methylguanidine	putrefying horse flesh
morrhuic acid	codliver oil
morrhuine	codliver oil
muscarine	decomposing haddock
mydaleine	putrefying human organs
mydatoxine	putrefying human organs
mydine	putrid human tissues
mydilotoxine	poisonous mussel
neuridine	putrefying flesh
neurine	putrefied flesh
parvoline	putrefying mackerel and horse flesh
peptotoxine	decomposing proteins
phlogosine	cultures of staphylococcus
propylamine	cultures of human feces
putrescine	putrefying fish
pyocyanine	cultures of bacillus pyocyanus
saprine	putrefying liver and spleen
sepsine	decaying yeast
spasmotoxine	cultures of tetanus bacillus
susotoxine	cultures of hog-cholera bacillus
tetanine	cultures of tetanus bacillus
tetanotoxine	cultures of tetanus bacillus
triethylamine	putrefying fish
trimethylamine	herring-brine
trimethylenediamine	beef-broth cultures of comma bacillus
typhotoxine	cultures of Eberth's bacillus
tyrotoxicone	poisonous cheese, cream and milk

ptyalase. Ptyalin, salivary amylase, salivin. The enzyme of the saliva, that hydrolyzes starch to dextrin, maltose, and glucose; and sucrose to dextrose and levulose. Cf. *amylase, diastase.* **p. unit.** The quantity of p. that will digest 1 gm. starch under standard conditions; as, 37°C., 30 minutes, pH 6.7, in presence of 0.05 % NaCl.

ptyalin. Ptyalase.

puberonic acid. Puberulonic acid.

puberulic acid. $C_8H_6O_6$ = 198.0. A metabolic product of molds, *e.g.*, *Penicillium puberulum.* Almost colorless crystals, m.317. It is toxic to certain bacteria.

puberulonic acid. $C_8H_4O_6$ = 196.0. A metabolic product of molds, *e.g.*, *Penicillium puberulum.* Bright yellow prisms, m.298. It has some of the properties of a pseudo-acid, and is toxic to certain bacteria.

pucherite. A native bismuth vanadate, $BiVO_4$.

puddle, puddling. (1) The conversion of cast iron into wrought iron by fusion in a reverberatory furnace, with constant stirring to bring it in to contact with the haematite lining of the furnace, where oxidation of the carbon to carbon monoxide takes place, the gas rising through the molten iron. (2) Clay, moistened and well-worked.

puering. Bating. The cleaning of depilated hides in the leather industry.

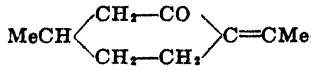
Pukall filter. A hollow cylinder of porous unglazed clay; used to filter solutions or water and render them sterile from microorganisms. Cf. *Berkefeld filter.*

pukateine. $C_{17}H_{17}O_3N$ = 283.3. An aporphine alkaloid found in a New Zealand laurel, *Laurelia Novæ Zealandiæ.* Cf. *laureline, corytuberine.*

pulegium. The Labiatae *Hedeoma pulegoides* (American p.) and *Menthae pulegium* (European p.).

pulegol. $C_{10}H_{18}O$ = 154.2. 3-menthenol. An aromatic alcohol contained in the essential oils of *Mentha pulegium*, a Labiatae.

pulegone. $C_{10}H_{16}O$ = 152.2. 3-$\Delta^{4(8)}$-menthenone. An aromatic ketone in oil of hedeoma.



A colorless liquid, d.0.932, b.221, insoluble in water, miscible with alcohol or ether. It

causes fatty infiltration of liver, heart and kidney.

Pulfrich refractometer. An optical device for measuring the refractive index, especially of oils and fats.

pulmoform. $C_{15}H_{16}O_4$ = 260.0. Methylene diguaiacol, $CH_2(C_6H_3.OMe.OH)_2$. A yellow tasteless powder, insoluble in water. Used medicinally as an antiseptic.

pulmones sicci. The dried and powdered lungs of animals, used medicinally.

pulp. Any soft or semi-liquid mixture of solid particles and liquids; as, the finely-divided wood fibres suspended in water used for making paper. See *paper pulp.*

pulpwood. The raw material for paper manufacture, generally the trunks of spruce, hemlock and balsam fir (cf. *wood pulp*).

pulque. The fermented sap of an *Agave* species, which is a moderately intoxicating drink, popular in Mexico. Cf. *mescal.*

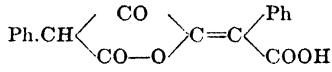
pulsatilla. Pasque flower. The dried herb of *Anemone pulsatilla* and other species, a ranunculaceous plant; used medicinally as the fluid extract, as an alterative and sedative.

pulse. The edible seeds of leguminous plants; as, peas.

pulverization. The reduction of a substance to a powder.

pulverizing. Powdering.

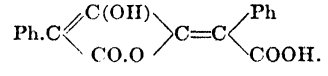
pulvic acid. $C_{18}H_{12}O_5$ = 308.1. The monolactone of diphenylketipic acid:



Colorless crystals, m.214. Cf. *pulvinic acid.*

pulvinate. (1) Convex- or cushion-shaped; as a colony of bacteria. (2) A salt of pulvinic acid.

pulvinic acid. $C_{18}H_{12}O_5$ = 308.1. 2.3-dihydroxy-1.4-diphenylmuconic acid-γ-lactone,

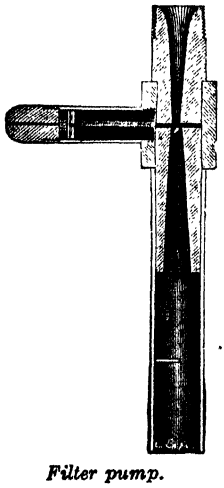


Cf. *pulvic acid.* ***p.p'*-dihydroxy-** Atromentin.

pulvis. The Latin term for powder.

pumice. Pumice stone. A light porous stone of volcanic origin, which consists o the silicates of aluminum, sodium, and potassium; used as an abrasive, and as a base for catalysts.

pump. A machine for drawing or forcing liquids or gases from one container into another. **acid-** See *acid.* **air-** See *air.* **backing-** A low-power pump used to produce a partial vacuum in preparation for a high-power pump. **filter-** A device attached to a water faucet at A, which is used to produce a partial vacuum or suction (through B) during filtration. **Hickmann-** See *vacuum p.* **mercury-** See *Sprengel p.* **suction-** Filter p. **Töpler-** A mercury pump, which removes air by entrainment between drops of mercury falling in a tube. **vacuum-** See *vacuum.*



Filter pump.

pumpkin seed. Pepo. The dried ripe seeds of several varieties of *Cucurbita pepo.* Used medicinally as the fluid extract as an anthelmintic; it contains a resin.

punctiform. A minute bacterial colony, near the limit of natural vision.

pungent. Sharp or biting, as a pungent odor or pungent taste.

punicic acid. $C_{18}H_{32}O_2$ = 280.27. An isomer of eleostearic acid, m.43.5, from the seed oil of *Punica granatium* (pomegranate) a Punicaceae.

punicine. (1) Pelletierine. (2) A purple coloring matter obtained by oxidation of the colorless juices of shell-fish.

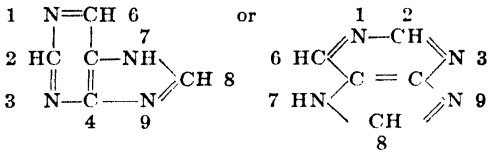
pure. Free from contamination; as, **bacteriologically-** Contains no live bacteria. **chemically-** Containing no other substance. Cf. *chemicals.*

purgatin. Purgatol.

purgative. An agent that causes the evacuation of the bowels; as, magnesium sulfate, castor oil.

purgatol. $C_{18}H_{12}O_7$ = 340.1. Purgatin, anthrapurpurin diacetate, $C_{14}H_5O_2(OH)(C_2H_3O_2)_2$. An orange, crystalline powder, m.177; insoluble in water, soluble in dilute alkalis. Used medicinally as a purgative.

purine. $C_5H_4N_4$ = 120.1. The heterocyclic compound



Colorless monoclinic needles, m.212, soluble in water, alcohol, ether or toluene. **endogenous-** q.v. **exogenous-** q.v. **p. alkaloids.** Purine bases. **p. bases.** The alkaloids derived from purine; as theobromine, theophylline, caffeine, adenine. **p. bodies.** A compound that contains the purine-ring; a compound derived from purine by the substitution of its hydrogen atoms; as,

6-oxypurine	hypoxanthine or sarcine
2,6-dioxypurine	xanthine
6-aminopurine	adenine
2-amino-6-oxypurine	guanine
2,6,8-trioxypurine	uric acid
3.7-dimethyl xanthine	theobromine.

Many of these purine bodies are found as hydrolytic products of nucleoproteins, and they occur in animal waste-products. **p. dione.** Xanthine. **p. ring.** The heterocyclic arrangement of the atoms in the molecule of purine, q.v. **p. skeleton** The p. ring **p. trione.** Uric acid.

purinometer. A device for estimating the purine bodies in urine; a small buret with a glass stop-cock having a closed bore which forms a small compartment.

purinone. Hypoxanthine.

Purkinje, Johannes Evangelista. 1787–1850. A Hungarian physiologist noted for his studies or color. **P. effect.** Optical sensation in-

creases with increasing intensity of light more rapidly for the red than for the other spectral colors. **P. shift.** The shift in the maximum of the luminosity curve of the spectrum visible to the light-adapted human eye, as compared with the dark-adapted eye.

purone. $C_5H_8O_2N_4$ = 156.1. 2.8-Dioxy-1.4.5.6-tetrahydropurine. A reduction-product of uric acid produced by electrolysis.

purple. (1) A mixed color comprising red and blue rays, with an excess of red. (2) A red coloring matter of the purple snail. **visual-** The photosensitive material of the retinal rods of the eye. It sensitises the eye to dim light, and contains vitamin A. Cf. *rhodopsin*. **p. carmine.** Murexide. **p. of cassius.** A red colored substance obtained by adding alkali to a mixture of solutions of stannous, stannic and gold chlorides; a colloidal form of tin oxide with adsorbed gold. Used in the manufacture of ruby glass and red enamels for porcelains. **p. copper.** Bornite.

purpureo. Describing a group of metal ammines of tetra-, tri-, or bivalent metals with NH_3-molecules and negative radicals; as, (a) $[Co(NH_3)_5X]X_2$; (b) $[Co(NH_3)_4X_2]X$; X is a halogen or other negative radical, as NO_3. Group, (a), is termed chloro-pentammine; (b), chloro-tetrammine; as, $[Co(NH_3)_5Cl]Cl_2$—chloropentammine cobaltichloride (purpureo cobaltichloride), or $[Co(NH_3)_4Cl_2]Cl$—chlorotetrammine cobaltichloride. There are also double salts; as, $[Co_2(NH_3)_{10}Cl_2](NO_3)_4$—chloropentammine cobaltinitrate.

pupuric acid. $C_5H_4N_5O_6$ = 266.2. An oxidation-product of uric acid, related to alloxantin. Cf. *murexide*.

purpurin. $C_{14}H_8O_5$ = 256.1. Trihydrooxyanthraquinone, oxyalizarin 6, 1.2.4-trihydroxy-5.10-dioxyanthracene. A red coloring matter, obtained from the glucoside of madder or synthetically. Red needles, m.256, decomp. by further heat, soluble in water, alcohol or ether. **anthra-** See *anthrapurpurin*. **flavo-** See *flavopurpurin*.

purpuroxanthene. Xanthopurpurin.

purpuroxanthic acid. $C_{15}H_8O_6$. A substance in madder.

purree. *Indian* yellow.

purreic acid. (1) $C_{19}H_{16}O_{10}.3H_2O$ = 458.2. A monobasic acid from Indian yellow. Small, light yellow crystals of first sweet, later bitter, taste; slightly soluble in water, soluble in alcohol or ether. (2) Euxanthic acid.

purrenone. Euxanthone.

purrone. Euxanthone.

pus. A liquid product of inflammation of infected wounds, which consists of leukocytes with microorganisms and serum. **blue-** A blue pus produced by the *Bacillus pyocyaneus*. Cf. *cyopin, pyocyanin*.

pustulant. An agent that produces pustules or small inflammations of the skin; as, croton oil. Cf. *vesicant*.

putrefaction. The progressive chemical decomposition of organic matter, especially proteins, produced generally by anaerobic bacteria. See *decay*.

putrefactive alkaloids. Ptomaines.

putrescence. Partial or complete rottenness or putrefaction.

putrescent. Having an offensive and stupefying odor; as, a material that is undergoing putrefaction.

putrescine. $C_4H_{12}N_2$ = 88.1. Tetramethylenediamine, butylenediamine, 1.4-butanediamine*, $NH_2CH_2.CH_2.CH_2.CH_2NH_2$. A ptomaine which results from the decay of animal tissues and the action of certain bacteria; a colorless, ill-smelling liquid.

putrid. Rotten or putrefactive.

putrine. $C_{10}H_{21}N_3O_3$ = 234.2. A base in putrid pancreas.

putty. A mixture of 11 parts chalk and 3 parts of raw linseed oil with or without 5 parts of basic lead carbonate; used for setting glass and filling holes and cracks. **iron-** See *iron*. **p. powder.** A powder made by heating tin in air, removing the dross, and igniting the product of the action of nitric acid on the residue; used as a polishing powder, and in white enamel and opal glass.

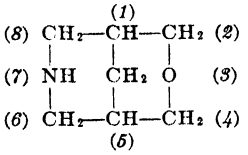
puzzolane. A silicate-rich but lime-poor cement which occurs native in Puzzuoli (Italy). It was used by the Romans. Cf. *pozzolana*.

P.V.A. Abbreviation for polyvinyl alcohol plastics.

Py. An abbreviation for the pyridine ring.

pycnometer. Pyknometer.

pydine. $C_7H_{13}NO$ = 127.1. A bicyclic compound consisting of a combined piperidine and pyrane ring:



pyelography. A branch of radiography in which certain organs (as, kidney) are made opaque to x-rays by previous administration of a suitable compound; as, iopax.

pyknometer. A small graduated glass vessel of definite volume with a glass stopcock, with or without a thermometer, used to weigh a definite volume of liquid in order to determine its specific gravity: W/V = D, where W = weight, V = volume and D = density or specific gravity.

Pyknometer.

pyo- A prefix derived from the Greek, indicating "pus."

pyoctanin. Pyoktanin.

pyocyanase. An antibiotic substance produced by *Pseudomonas aeruginosa*, a non-spore-forming bacterium.

pyocyanin. A blue, antibiotic pigment from *Pseudomonas aeruginosa*.

pyogenic. A microorganism that produces, pus especially in wounds.

pyogenin. A substance derived from pus cells, to which the formula $C_{16}H_{128}O_{19}N_2$ has been ascribed.

pyoktanin. Dahlia violet. Methyl violet or methyl-aniline violet used as an antiseptic. **p. blue.** Methyl violet. **p. yellow.** Auramine.

pyoluene. $C_5H_9O_2SN$ = 133.2. Oxymethylallyl-sulfocarbamide; used medicinally as a bactericide.

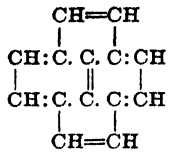
pyosin. $C_{57}H_{116}O_{15}N_2$ (?). A protein derived from pus cells, m.238.

pyoxanthin. A brown pigment derived from pyocyanin.

pyoxanthose. A yellow pigment derived from pyocyanin by oxidation.

pyr- See *pyro-*.

pyracene. $C_{14}H_8$ = 176.1. The hydrocarbon

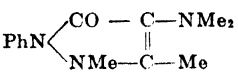


pyracetic acid. Pyroligneous acid.

pyraconitine. $C_{32}H_{41}NO_9$ = 583.32. An alkaloid, m.171, from aconite.

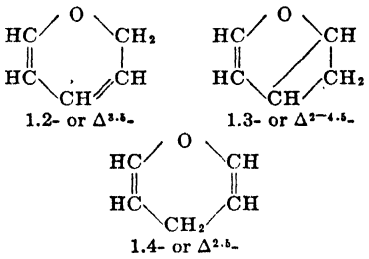
pyramid. A polyhedron whose base is a polygon and whose faces are triangles, with a common vertex, and the sides of the polygon as bases. Cf. *crystal systems.*

pyramidon. $C_{13}H_{17}ON_3$ = 217.2. Dimethylaminoantipyrine, 1-phenyl-2.3-dimethyl-4-dimethylamino-5-pyrazolone, amidopyrine.



Small colorless crystals, m.108, sparingly soluble in water, soluble in alcohol, ether, or benzene; used medicinally as an antipyretic. It exists in the α- and β-forms, which have different solubilities.

pyran. C_5H_6O = 82.1. A group of heterocyclic compounds,



1.2- or $\Delta^{3,5}$- 1.3- or $\Delta^{2,4,5}$-

1.4- or $\Delta^{2,5}$-

benzo- See *benzopyran.* **dibenzo-** See *dibenzopyran.* **diketo-** Glutaconic anhydride. **keto-** Pyrone. **naphtho-** See *naphthopyrane.*

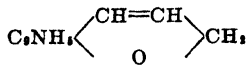
p. dione. Glutaconic anhydride.

pyranil black. A black sulphur dye.

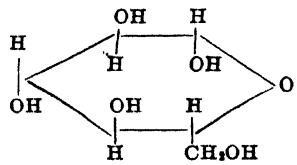
pyranol. (1) Sodium acetyl salicylate. (2) Chlorinated diphenyl.

pyranone. Pyrone.

pyranoquinoline. $C_{12}H_9ON$ = 182.1. The heterocyclic compound

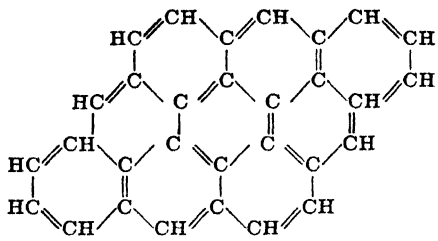


pyranose. The cyclic form of glucose; *e.g.*,



pyranoside. A glucoside having a pyran ring; as, adenosine. Cf. *furanoside.*

pyranthrene. $C_{30}H_{16}$ = 376.2. The hydrocarbon:



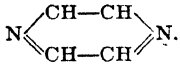
pyranthrone. $C_{30}H_{14}O_2$ = 706.1. Dibenzoanthrone, dioxypyranthrene. White solid.

pyrantin. $C_{12}H_{13}O_3N$ = 219.2. p-ethoxyphenylsuccinimide, phenosuccin, $EtO.C_6H_4.N(COCH_2)_2$. Colorless needles, m.155, slightly soluble in water, insoluble in ether; used as an antipyretic.

pyranyl. A group of monovalent radicals, C_5H_5O—, derived from pyran.

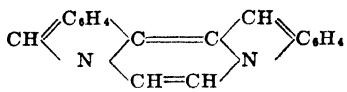
pyrargyrite. $3Ag_2S.Sb_2S_3$. Acrosite, aerosite. A dark red silver ore.

pyrazine. $C_4H_4N_2$ = 80.1. Paradiazine, piazine, 1.4-diazine, q.v.,

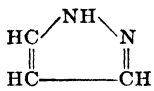


An isomer of pyrimidine and pyridazine. Colorless crystals, m.47, b.118, soluble in water, alcohol or ether. Cf. *phenazine, benzophenazine, antipyrine.* **dimethyl-** Ketine. **hexahydro-** Piperazine. **tetraphenyl-** Amaron.

pyrazinodiisoindole. $C_{18}H_{12}N_2$ = 256.1. The pentacyclic compound,

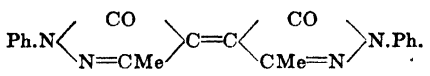


pyrazole. $C_3H_4N_2$ = 68.1. α-pyrromonazole-1.2.diazole

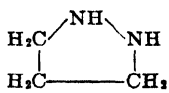


Colorless needles, m.70, b.187, soluble in water, alcohol or ether. **dihydro-** Pyrazoline. **iso-** *1.2*-Isodiazole. **tetrahydro-** Pyrazolidine.

p. blue.

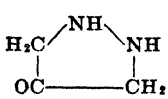


pyrazolidine. $C_3H_8N_2$ = 72.1. Tetrahydropyrazole,

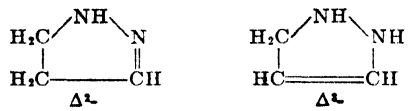


A diazine which does not occur in the free state. **keto-** Pyrazolidine. **phenyl-** N-phenylpyrazolidine. A colorless liquid, b.160.

pyrazolidone. $C_3H_6ON_2$ = 86.1. Ketopyrazolidine. The heterocyclic compound



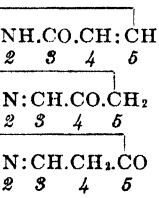
pyrazoline. (1) $C_3H_6N_2$ = 70.1. Dihydropyrazole.



A colorless liquid, b.144, soluble in water or alcohol. (2) Antipyrine. **keto-** Pyrazolone.

pyrazolinium. A pyrazoline with pentavalent nitrogen. Cf. *piperidinium.*

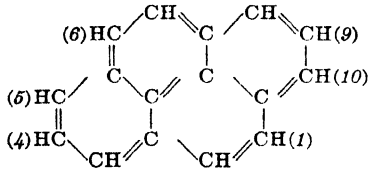
pyrazolone. $C_3H_6ON_2$ = 84.13. Ketopyrazolines. The heterocyclic compounds:



A solid, m.165 (sublimes), soluble in water alcohol or ether. **iodomethylphenyl-** Midrol. **3-methyl-** Butyrolactazam. **phenyldimethyl-** Antipyrine. **phenyldimethyl-5-salicylate.** Salipyrine. **phenyldimethyl-4-amidomethane sulfonate.** Melubrin. **phenyldimethylamino-** Pyramidone.

pyrazolyl. The monovalent radical, $C_3H_3N_2$—, derived from pyrazole. There are four isomers.

pyrene. (1) $C_{16}H_{10}$ = 202.2. Benzo[def]-phenanthrene. A tetracyclic hydrocarbon from coal tar,



Colorless monoclinic crystals, m.148, b. exceeds 360; insoluble in water, slightly soluble in alcohol, soluble in ether. (2) Trade name for carbon tetrachloride used as a fire extinguisher. Cf. *pyrex.*

pyreneite. A grayish-black andralite (iron garnet, q.v.).

pyrenol. Pyrenum, propyrin, sodium thymol benzoate. A mixture of thymol and sodium benzoate and salicylate. A white crystalline powder, soluble in water or alcohol; used medicinally as an expectorant, antispasmodic, antipyretic and antineuralgic.

pyrenum. Pyrenol.

pyrethrin. The active principle of pyrethrum.

pyrethrol. $C_{21}H_{34}O$ = 302.3. Pyretol. An alcohol from the leaves of *Chrysanthemum cinerariaefolium* (insect powder). Silky white lustrous needles, m.222; insoluble in water, slightly soluble in alcohol, soluble in ether.

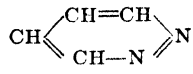
pyrethrone. A ketone from pyrethrum, that forms pyrethrol.

pyrethrum. (1) Insect powder. (2) Pellitory root. The dried root of *Anacyclus pyrethrum*, a Compositae, used as local irritant. **p. camphor.** $C_{10}H_{16}O$ = 152.1. A terpene from the essential oil of *Chrysanthemum parthenium*, a Compositeae.

pyretol. Pyrethrol.

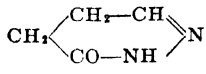
pyrex. (1) A heat-resistant glass used for chemical utensils and household dishes. (2) A trade name for carbon tetrachloride, used as a fire extinguisher. Cf. *pyrene.*

pyridazine. $C_4H_4N_2$ = 80.047. 1.2- or *o*-diazine, q.v.,



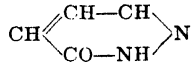
A colorless liquid, d.1.111, m.−8, b.206; soluble in water, alcohol or ether.

pyridazinone. $C_4H_6ON_2$ = 98.1. A dihydroketopyridazine,



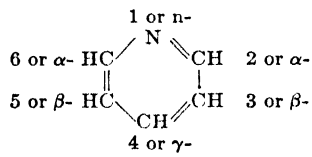
A colorless liquid, b.170; soluble in alcohol.

pyridazone. $C_4H_4ON_2$ = 96.1. 3-ketopyridazine.



pyridindole. $C_{11}H_8N_2$ = 168.1. A group of heterocyclic compounds:

pyridine. C_5H_5N = 79.1. The heterocyclic compound,



It occurs in coal tar, bone oil and many vegetable distillation products, including tobacco smoke. A colorless liquid, $d._{15}^{0}$0.9893, m.−42, b.115; soluble in water, alcohol or ether. Used medicinally as an antiseptic, as a denaturant for alcohol, as a solvent for rubber and paint, and chemically, as a reagent for acetone and blood. **allyl-** See *allylpyridine.* **benzyl-** See *benzylpyridine.* **dihydroketo-** Pyridone. **dimethyl-** Lutidine. **ethyldimethyl-** Parvoline. **ethylmethyl-** (1) Aldehydine. (2) Collidine. **hexahydro-** Piperidine. **hydroxy-** See *oxynicotinic acid.* **methyl-** Picoline. **methylethyl-** Aldehydine. **oxy-** Pyridone. **propyl-** Conyrine. **tetramethyl-** Parvoline. **trimethyl-** Collidine.

p. bases. The homologs of pyridine, $C_nH_{2n-5}N$:

C_6H_7N	methyl-p.....	picolines
C_7H_9N	dimethyl p.....	β-lutidines
	ethyl p.....	α-lutidines
$C_8H_{11}N$	trimethyl p.....	γ-collidines
	ethylmethyl p.....	α, β-collidines, aldehydine
	propyl p.....	conyrine
$C_9H_{13}N$	tetramethyl p.....	parvulines
	ethyldimethyl p.....	parvolines
$C_{10}H_{15}N$	diethyldimethyl p.....	ethylcollidine, coridine
$C_{11}H_{17}N$.....		rubidine
$C_{12}H_{19}N$.....		viridine

p. carboxylic acid. 1- or **alpha-** Picolinic acid. **2-** or **beta-** Nicotinic acid. **3-** or **gamma-** Isonicotinic acid. **p. dicarboxylic acid. 1.2-** Quinolinic acid. **1.3-** Lutidinic
