HACKH'S
CHEMICAL DICTIONARY

Hackh's Chemical Dictionary

[AMERICAN AND BRITISH USAGE]

Containing the Words Generally Used in Chemistry, and Many of the Terms Used in the Related Sciences of Physics, Astrophysics, Mineralogy, Pharmacy, Agriculture, Biology, Medicine, Engineering, etc.

BASED ON RECENT CHEMICAL LITERATURE WITH NUMEROUS TABLES, DIAGRAMS, PORTRAITS AND OTHER ILLUSTRATIONS

THIRD EDITION

COMPLETELY REVISED AND EDITED

BY

JULIUS GRANT, M.Sc., PH.D., F.R.I.C.

AUTHOR OF "BOOKS AND DOCUMENTS, DATING, PERMANENCE AND PRESERVATION," "SCIENCE FOR THE PROSECUTION," "WOOD PULP," "FLUORESCENCE ANALYSIS IN ULTRA-VIOLET LIGHT," "LABORATORY HANDBOOK OF PULP AND PAPER MANUFACTURE," ETC

PORTMAN SQUARE

1946

THIRD EDITION

1946 PRINTING WITH CHANGES AND ADDITIONS

PRINTED IN U. S. A.
BY THE MAPLE PRESS COMPANY, YORK, PA.

PREFACE TO THE THIRD EDITION

It is my sad duty to record the sudden death of Ingo Hackh on 18th October, 1938, and to pay tribute to the bold imagination which conceived this Dictionary, and to the untiring energy which secured for it an established place in chemical literature on both sides of the Atlantic.

Having collaborated closely with Hackh in the earlier editions it falls to my lot to continue the work in the way he would have desired. The objects and scope of the Dictionary are stated clearly in the Prefaces to the earlier editions, and there has been no important departure from them except in one respect. This is the omission of the pronunciations, which it has been felt, can be of little real use while every chemist remains a law unto himself on such matters. This omission and certain other modifications have however, enabled substantial economies in space to be made without detriment in any way to the completeness of the Dictionary or the clarity of the definitions, so that although a considerable number of additions have been made, the book has not increased in bulk to anything like a proportional extent.

In addition the whole Dictionary has been completely revised and brought up-to-date in every respect, special care being taken to balance the treatment from the American and British points of view. The desirability for this has always been felt strongly in the past, but in a post-war world every line of approach to community of thought between the English-speaking nations has an added significance.

The writer hopes that this third edition will maintain the present status of the Dictionary in chemical literature, which he believes to be unique by reason of the number of definitions it contains (now totalling over 57,000) and its many points of contact with other spheres of scientific activity. He hopes, too, that future editions will benefit in the same way as this edition from readers' suggested additions, deletions and corrections.

Finally, he feels that he owes a special acknowledgment to the publishers for their general collaboration, but in particular for their assistance in smoothing out the inevitable difficulties of communicating across the Atlantic in War time.

JULIUS GRANT.

LONDON, ENGLAND.

PREFACE TO THE SECOND EDITION

The words of Berzelius a hundred years ago hold true today; namely that "the devil should write books on chemistry, for every few years the science changes."

During the seven years which have elapsed since the first edition of this work appeared, there have come revolutionary discoveries and many other changes in chemistry. Nothing was known of heavy hydrogen and its series of deuterium compounds; nothing was known of artificial radioactivity with its radioelements. The neutron, neutrino and positron were not yet discovered and little of the chemical nature of vitamins and hormones was revealed (today some of them are even synthesized in industrial quantities). There was little known of molecular structure or of nuclear reactions. This edition contains information on these developments. It also offers some new and original tables on porphin derivatives in which are shown the relationship of chlorophyll and hemoglobin pigments; on cholane derivatives, which brings together vitamins, bile acids, sex hormones, toad poisons and aglycones; also on carotenes; on quantum relations; on plastics and many other topics. Thus this edition is a witness of the coming coordination and systematization of our knowledge, for it assembles apparently unrelated and widely different substances and concepts.

The first edition witnessed the completion of the periodic system, the formulation of the quantum theory, the recognition of isotopes and the spectral classification of stars. The second edition gives an indication of future developments in molecular structure with its concepts of atomic distances; ionic radii and space lattices; of catalysis and adsorption; and of nuclear structure and its interesting reactions. All these will become of increasing importance not only for industrial purposes, but also for modern pharmacology, which is the basis of modern scientific medicine.

A dictionary to be a good companion should be like a wife or bosom friend, *above reproach.* I feel intensely the great responsibility inherent in my task and am aware of human limitations. The book was started twenty years ago under circumstances arising through war-time conditions. It has become a hobby now, also an "old man of the sea." The inaccuracies which crept into the first edition have been eliminated and the inconsistencies corrected by the truly helpful work of Mr. C. J. Saunders. But despite even the most diligent and constant efforts exerted ever since the first edition appeared, I am conscious that the ideal has not been reached. It will be found that the book is not a mere compilation of revamped definitions or descriptions, but a compendious presentation of specialized knowledge.

The dictionary writer must, above all, *record usage* of the terms he defines, regardless of his personal opinion as to appropriate derivation, spelling or definition. Thus there may be some who will demur at the simplified spelling of *sulfur* (adopted by the American Chemical Society and the United States Pharmacopoeia XI) and other words—may even be ready to protest that such spelling vitiates the etymology. Before protesting, such persons will do well to consider deeply what defence they can offer in regard to oeconomy, gangraene, aether, aeternal, paenalty and many other words which are not spelled with the diphthong in England or elsewhere.

In respecting customary usage I have still retained phosphorus and oestrone, which are the favored spellings of today. But the good work of simplification will continue, regardless of the Greco-Latinists who, enmantled in their academic environment, are becoming ghostly in the gloom of desuetude.

I am extremely grateful for the general reception which the first edition was accorded, also for the many helpful and suggestive criticisms of the reviewers which have been followed in practically all cases. Mr. C. J. Saunders, of Barcombe Mills (Sussex, England) rendered great service by voluntarily checking all cross references and suggesting many new definitions. Professor J. F. Snell of McDonald College (Montreal, Canada) frequently sent long lists of new compounds and definitions. Dr. Willis A. Boughton (Harvard) suggested a number of terms, so did Dr. J. A. Jacobson (West Virginia). Frequent correspondence with Dr. Austin M. Patterson and Dr. E. J. Crane (both of the Nomenclature, Spelling and Pronunciation Committee of the American Chemical Society) has greatly helped in obtaining accepted and preferred nomenclature. My collaborator, Dr. Julius Grant (London) contributed several hundreds of words which reflect British usage.

Valuable information also came from the following, to whom I offer my sincere thanks for their interest: Jerome Alexander (New York); E. F. Barringer (General Electric Co.); Hermann Becks (California); H. L. Bender (Bakelite Corp.); M. S. Biskind (Committee on Nomenclature, A. M. A.); Charles W. Boxton (Coll. Phys. Surgeons); W. L. Caldwell (Am. Rubber Prod. Co.); E. H. Carus (La Salle); Leon W. Cook (Bayonne); N. C. Cooper (Roessler Hasslacher Co.); D. S. Davis (Mead Corp.); W. E. Deming (U. S. Bureau of Chemistry and Soils); J. G. F. Druce (London); E. G. Eberle (Baltimore); A. A. Elston (Editor Double-Bond); E. E. Enck (Foote Mineral Co.); John Field II (Stanford); L. F. Fieser (Harvard); D. K. French (Dearborn Chemical Co.); H. Groll (Shell Development Co.); J. Heyrovsky (Prague); H. E. Howe (Ind. Eng. Chem.); David Katz (Milwaukee); A. B. Lamb (Harvard); Paul Logue (St. Louis); F. H. Loring (London); H. J. Lucas (California Tech.); G. Lutz (Cleveland); Chas. G. Maier (U. S. Bureau of Mines); P. R. Mallory (Carboloy Corp.); J. W. McBain (Stanford); E. V. McCollum (Johns Hopkins); Jas B. McNair (Field Museum, Chicago); E. C. Moffat (Am. Cyanamid Co.); A. V. H. Mory (Bakelite Corp.); Jos. N. Nielson (Bakelite Corp.); Maximilian Nierenstein (Bristol, Eng.); Arne Olander (California); Kurth Passoth (New York); Linus Pauling (California Tech); John Read (St. Andrews, Edinburgh); P. Rothemund (Kettering Foundation); Pierre van Rysselberghe (Stanford); John H. Schmidt (Bakelite Corp.); Kurt Schuette (San Francisco); E. Schultz (Stanford); Wilhelm Segerblom (Exeter, Pennsylvania); G. Frederick Smith (Illinois); Wm. Steinschneider (Zinsser and Co.); M. L. Tainter (Stanford); J. S. Vanick (International Nickel Corp.); E. A. Vuilleumier (Dickinson); Frank B. Wade (Indianapolis); Willis Wagener (Palo Alto); J. M. Watt (Univ. Witwatersrand, South Africa); C. E. Weinland (John Mansville Corp.); Clarence J. West (Nat. Research Council); E. H. Westling (San Francisco); Frank C. Whitmore (Pennsylvania State Coll.); E. C. Williams (Shell Development Co.); and John K. Young (Stanford).

For various drawings I am indebted to Paul Brown (*radiations*) E. H. Westling (*porphin ring*); Harold Rosenthal (*molecular diagrams* and *isotopes*); E. C. Pozzi (*periodic spiral*); G. W. Ekins (*cholane ring*); and to "Contact Point," in which these and other illustrations appeared for the first time. I also thank Dr. Otto Reinmuth and the "Journal of Chemical Education" for the use of several portraits. Illustrations have also been received from Paul O. Abbe, Inc.; Bausch and Lomb;

Buffalo Foundry and Machine Co.; Baker Chemical Co.; Fisher Scientific Co.; Kipp and Zonen; and, Scientific Materials Co. To all these I tender my appreciation for their courtesy.

Between the manuscript and the finished book there is many a slip despite the careful work of the craftsmen. My thanks go to the compositors, the proof readers, and the make-up men for their intelligent work. The reading of the galleys and pages was done faithfully by my wife and sister; while Mr. C. V. Brownlow, the editor of P. Blakiston's Son and Co., corrected many pronunciations; all of this is gratefully acknowledged. In closing, I hope that it may still be said of this book: "the more it is used, the more it is valued."

INGO W. D. HACKH.

SAN FRANCISCO, CALIFORNIA.

PREFACE TO THE FIRST EDITION

Progress in chemistry has been so rapid that even the most expert have been unable to keep pace with its development. Consequently, a more and more intensified specialization has resulted, which reflects itself in the modern, growing, and fluctuating terminology. New ideas require new words and both are multiplying rapidly as the entire province of physical science, which now reaches from the gigantic island universes down to the sub-atomic microcosmos, is being developed. Hence the need for a dictionary which records the old and new phenomena in the terms of our new concepts of matter and energy.

Crane and Patterson in their book "A Guide to the Literature of Chemistry," state that "*There has been, in modern times, no adequate general dictionary or word-book of chemistry . . . a book which gives the meanings of the large and increasing number of technical words.*" My work on this dictionary was begun many years before I read that passage and my aim has been not to make a mere compilation or collection of facts, but to re-state and re-define in simple modern terms the phenomena of science, and to connect these phenomena with each other . . . . . Imperfections will creep into a pioneer work of this nature, a work in which typographical and other mistakes such as errors of fact, omissions, etc., are least tolerated, especially by those who cannot realize the drudgery (fitful though it be), and the weariness of a task long drawn out that overcome one despite the promptings of enthusiasm and the spur toward achievement. I hope that my readers will let me know what additions, deletions and corrections should be made to render the volume a more helpful guide for the worker in science.

A chemical dictionary should state clearly and precisely the theories, laws and rules; describe accurately the elements, compounds, minerals, drugs, vegetable and animal products; list concisely the important reactions, processes, and methods; mention briefly the chemical apparatus, equipment and instruments; and, finally, should note the names of the investigators who have built up the science. As chemistry reaches into nearly every branch of human endeavor it should not forget to bring in the collateral vocabulary of physics, astrophysics, geology, mineralogy, botany, zoology, medicine and pharmacy and, also, the pertinent jargon of industry, mining, and commerce. Competent chemists will know how near I have measured up to these postulates . . . . . .

INGO W. D. HACKH.

EXPLANATORY NOTES

Capital initial letters for the words defined are used according to established custom. Thus, "Acacia" the plant, "acacia" the gum; "Bunsen law," but "bunsen burner."

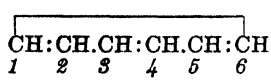
Capitals are always used in the definitions for the initial letter of the first word of a sentence.

Nomenclature and spelling generally, follow the system adopted in the American Chemical Society publications, but British renderings are also included in all instances, and cross-references are given where necessary.

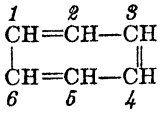
Nomenclature recommended by the International Union of Chemistry is asterisked thus (*); *e.g.*, "dipicolinic acid" is either, "1.5-" or "2.6-pyridinedicarboxylic acid*." However, absence of an asterisk does not indicate that the rendering given is unacceptable.

Ring systems are represented by one of the three following methods, and are numbered as shown.

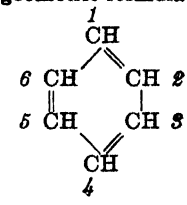
line-formula

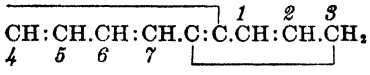


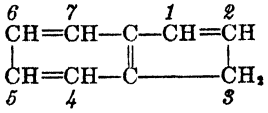
square-formula

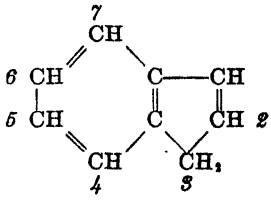


geometric formula









Synonyms are given under each definition in order of approximate importance. Most of them are also listed separately in the dictionary, with a cross-reference to the word under which the actual definition is to be found in the form of the word itself only. Thus, "brassil. Pyrite" means "for 'brassil,' 'see pyrite' " or "same as 'pyrite' ".

Commercial names are referred to the scientific synonym, unless the compound is of special commercial importance. *E.g.*, "soda ash" is defined under that heading.

In the case of a few complex organic compounds having abbreviated or trade names for which a full definition is not justified or is unobtainable, the only definition given under the shorter name is the full chemical name. Thus, "hydrargyrol. Mercuric phenyl thionate."

Italics are not used for the words defined. They are used in the definitions as follows: (*a*) according to custom (thus "*Acacia*" the plant, but "acacia" the gum); (*b*) for cross-reference (*e.g.*, "acaricide. A mite killer. Cf. *insecticide*"); (*c*) for the titles of publications, etc.; (*d*) for some sub-headings of the definitions.

Where a cross-reference consists of a double word, the portion of the word under which the definition is to be found is italicized if it is not the first portion. This applies also to synonym cross-references. *E.g.*, "seekay. C.K. *wax*"; and "chromone, 3-phenyl. Iso*flavone*."

Compound words are usually defined under the heading of the first of the words, and should be sought under this heading in the first instance. Thus "soda ash" is to be found under "soda," and not under "ash." Cross-references are however, usually given under the second word, and in some cases where importance and general custom demands the actual definition will be found under the latter, and a cross-reference under the former. Thus, "high-speed ferrotungsten" is defined under "ferrotungsten" with a cross-reference under "high-speed."

Hyphens are used only when necessary to avoid errors. Thus, "diphenylmethane" may mean either "diphenyl-methane, Ph_2CH_2"; or "di-phenylmethane, $MeC_6H_4.C_6H_4Me$."

Water of Crystallization is shown in the usual way; *e.g.*, $Na_2SO_4.10H_2O$. For didactic reason the method recommended by the Committee on Chemical Education; *e.g.*, $Na_2SO_4(H_2O)_{10}$, may be preferred.

Ambiguous terms and spelling are avoided; thus "bromethane" may mean either "bromo-methane" or "bromo-ethane."

Derivatives of organic compounds are to be found under the parent compound; thus, "p-nitrophenol" is under "phenol." The letters, o-, m-, p-, etc., have been ignored in the alphabetical arrangement, and are listed in the above order; thus, for "orthoanisidine" see "anisidine. o-". Similarly α-, β-, γ-, etc. are listed under the compound referred to; thus, for "α-naphthol" or "alphanaphthol", see "naphthol, α-."

The usual order of presenting or describing a compound is:

Name. Formula = Molecular weight. Synonyms. Occurrence, preparation or type of substance. Appearance, (crystalline form, color), density, melting-point, boiling-point; and solubility in water, alcohol or ether. Chemical, industrial, and medicinal uses.

Abbreviations commonly used are:

Å.U., or Å. for Ångstrom units.

α for specific rotation. *E.g.*, $[\alpha]_D^{20}$ is the value of α for the D-line at 20°C.

Ac for acetyl, CH_3CO—. *E.g.*, AcOH is acetic acid.

Am for ammonium, NH_4—. *E.g.*, AmCl is ammonium chloride. (Sometimes Am for amyl, C_5H_{11}—. i-Am for isoamyl.)

at. for atomic. *E.g.*, at.wt., at.no.

b. for boiling-point in °C. *E.g.*, $b._{600mm}$. 60 means, boils at 60°C. under a pressure of 600 mm. of mercury.

Bu for butyl, C_4H_9—, i-Bu for isobutyl.

Bz for benzoyl, $PhCO^-$. *E.g.*, BzOH is benzoic acid.

Cf. for compare.

cryst. for crystalline or crystallizing.

d. for density at room temperature. $d._0°$ for density at 0°C. $d._{air=1}$ for density compared to air.

decomp. for decompose, -osing, -oses, or -osed. *E.g.*, decomp. 20, means decomposed at 20°C.

Et for ethyl, $C_2H_5^-$. *E.g.*, EtOH is ethyl alcohol.

m. for melting-point in °C. (used similarly to b., boiling-point).

M for any monovalent metal.

Me for methyl, CH_3^-. *E.g.*, MeOH is methyl alcohol.

mol. for molecule. *E.g.*, mol. wt.

n. for refractive index. *E.g.*, $[n]_D^{20}$ is the value for the D-line at 20°C.

no. for number. *E.g.*, at. no.

Ph for phenyl, $C_6H_5^-$. *E.g.*, PhH is benzene.

pl. for plural.

Pr for propyl, $C_3H_7^-$. i-Pr for isopropyl.

q.v. for (1) which see (in cross-references);
(2) as much as desired (in prescriptions, etc.).

R for any monovalent radical.

sapon. for saponification. *E.g.*, sapon. val.

unsap. for unsaponifiable. *E.g.*, unsap. matter.

val. for value. *E.g.*, iodine val.

vol. for volume.

X for any halogen or monovalent anion.

Symbols are defined in the appropriate places (see especially the first entries under each letter), and under *constants, notation, nomenclature,* and *symbols;* they follow the commonly-accepted conventions.

Where the word defined is continuously repeated in its main definition or sub-definitions, it is represented by its initial letter followed by a stop so long as the meaning is not thereby obscured.

A CHEMICAL DICTIONARY

A

A. (a) Symbol for *argon*. (b) Abbreviation for (1) *ampère*, (2) *anode*, (3) *alternate*, (4) *year*, (5) *atomic weight*. **A acid.** 1.7-Dihydroxynaphthalene-3.6-disulfonic acid. **A.C.** Alternating current. **A.U.** Ångström unit. Atom unit.

°A. The symbol for "*degree Absolute.*"

Ä. See æ (German).

Å. Abbreviation for *Ångström* unit.

a. Abbreviation for (1) *asymmetric*, (2) *ana*-position, (3) *area*. **a-, an-** Prefix indicating "without" or "not," as in abiosis, anhydrous.

a. A constant in van der Waal's equation (q.v.) [*a*]. Symbol for specific rotation; $[a]_D$ measured with the D line; $[a]^t_D$ and at the temperature, *t*.

A_n. Abbreviation for normal atmosphere. 760 mm. Hg (d.13.59509), or 1.013249×10^6 dyne/cm².

α. The first letter of the Greek alphabet, *alpha*, which is used as an abbreviation for: (1) *alpha*-position (2) *alpha*-particles, (3) A mutation isomer of a sugar; as, α-glucose. [α]. See [*a*]. **α-acid.** 2.8-Naphthylamine sulfonic acid.

abaca. Manila hemp. A native name for the inner fiber of *Musa textilis*, a banana species of the Philippine Islands.

abasin. A brand of acetylcarbromal.

abati drying oven. A constant temperature oven with a xylene bath for maintaining temperatures at 100–200°C.

abaxial. Not in the line of axis.

Abbé, Ernst. 1840–1905. A German physicist. **A. apertometer.** A device for measuring microscope apertures. **A. camera lucida.** An optical device for drawing microscopical objects attached to the eye-piece of a microscope. **A. condenser.** An arrangement of lenses that increases the illumination of an object under the microscope. **A. refractometer.** A device for rapid, direct determination of refractive index, extensively used in analytical chemistry. **A. theory.** The limit of microscopic visibility is determined by $w = \lambda/2n \cdot \sin \mu$, where w is the width of the object, $n \cdot \sin \mu$ the aperture, and λ the wave-length of the light. With an oil-immersion lens ($n \cdot \sin \mu = 1.4$) and extreme violet light ($\lambda = 0.4\mu$) the smallest visible thread has a width of 0.15μ.

abbreviations. See *atomic weight, electrical units, notation, quantum, radical*, etc.

Abderhalden, Emil. 1877– . A Dutch-born German chemist, noted for physiological and pathological research. **A. dialysator.** An apparatus used in sero-diagnosis for separating proteins by dialysis. **A. reaction.** A. test. **A. test.** A serum reaction used for diagnostic purposes, as in pregnancy. Cf. *complement fixation, ninhydrin, placentin.*

Abegg, Richard. 1869–1910. A German chemist noted for his theory of valence.

Abel, Sir Frederick Augustus. 1827–1902. An English chemist noted for research on explosives and petroleum. **A. fuse.** See *fuse*. **A. reagent.** A 10 % solution of CrO_3 used for etching steel in microanalysis. **A. tester.** An apparatus for the determination of the flash point of petroleum and other oils.

abelmoschus. See *musk* seed.

aberration. Deviation from the normal. **astronomical-** The apparent angular displacement of light from a star. **chromatic-** The unequal refraction of white or multi-colored light. The index of refraction is slightly different for each color, which cannot therefore be brought to a single focus by a simple lens; consequently a series of tinted images is produced. **spherical-** The deviation of light passing through a lens, or reflected from a mirror, caused by the inequality in the degree of convergence; hence, the image appears distorted, especially at the outer portions. See aplanatic *focus*.

abienic acid. Abieninic acid.

abieninic acid. $C_{18}H_{30}O_2$ = 208.2. Abienic acid. An acid resin from *Abies pectinata* the European silver fir.

Abies. A genus of evergreen trees, the Coniferae (Pinaceae) or firs, which yield turpentine, resin and pitch, as:

A. balsamea	Silver fir
A (Tsuga) canadensis	Hemlock spruce
A. excelsa	Norway spruce
A. pectinata	European silver fir.

abietene. $C_{19}H_{30}$ = 258.3. Diterebentyl. A liquid hydrocarbon, d.0.99, b.340–345, distilled from the resin of *Pinus sabiniana*. Cf. *colophene*. **a. sulfonic acid.** A black paste produced by the slow action of sulfuric acid on a. at 10°C.; used as a wetting agent in the textile industry.

abietic acid. $C_{19}H_{29}COOH$ = 302.32. Sylvic acid. An acid from the resin of pine species (colophony). Yellow crystalline leaflets, m.161; insoluble in water but soluble in alcohol or ether. It is used in varnishes and dryers. Cf. *pimaric acid*. **a. anhydride.** $C_{44}H_{36}O_4$ = 654.6. The anhydride (?) of abietic acid and the chief constituent of colophony.

abietin. (1) $C_{51}H_{76}O_9$ = 841.8. A crystalline resinous compound from the pitch of the European silver fir. (2) Abietene. (3) Coniferin.

abietinic acid. $C_{19}H_{28}O_2$ = 288.3. A crystalline acid derived from rosin, which occurs in 3 isomeric forms.

abietinolic acid. $C_{16}H_{24}O_2$ = 248.2. An acid resin from the pitch of the European silver fir, which occurs in 2 isomeric forms.

abietite. $C_4H_8O_4$ = 152.1. A tetrose sugar from the needles of the European silver fir.

abiogenesis. Autogenesis. The spontaneous generation of life from inanimate or lifeless matter. It is opposed to the generally accepted theory of biogenesis.

abiophysiology. The study based on the theory that life phenomena are purely dynamic and chemical processes.

abiosis. Absence of life.

Abney clinometer. A reflecting level or pocket altimeter for measuring the heights of trees, buildings, etc. or fixing the slopes of drainage ditches, roads, etc.

abnormal. Irregular, or different from the normal.

abradant. Abrasive.

Abraham consistometer. A device for determining the hardness of bituminous materials or substances, from soft semi-liquids to hard brittle materials.

abrasion. Mechanical grinding or wearing away.

abrasive. Any grinding or polishing material; as burstone, corundum, emery, garnet, infusorial earth, pumice, silicon carbide, etc.

abrastol. $Ca(SO_3C_{10}H_6OH)_2,3H_2O$ = 540.3. Asaprol, calcium β-naphthol-α-monosulfonate. A white or pinkish scaly powder, decomp. 50, soluble in water or alcohol; darkens on exposure to light; has a bitter-sweet taste and is a germicide, preservative antipyretic, and antirheumatic.

abraum salts. (Ger. abräumen—to put away). The potash salts of Stassfurt, carnallite, kainite, boracite, sylvine etc., which used to accumulate near the salt mines as valueless minerals before their great value as fertilizer material was recognized. See *Stassfurt* salts.

abrazite. Gismondite.

abriachanite. An amorphous earthy form of blue asbestos.

abric acid. $C_{31}H_{34}NO_3$ = 334.3. An acid obtained from the abrus seeds or prayer beads, the seeds of *Abrus precatorius*.

abrin. Jequiritin. A poisonous mixture of albumose and paraglobulin from abrus seeds which resembles snake venoms in its physiological action; an ophthalmic irritant.

abrodil. Sodium mono-iodomethane sulfonate. A compound containing 52 % I used for intravenous injections (15–20 gm.) to obtain x-ray pictures of the body.

abrotanum. Southern wood. A garden plant whose leaves are used as an aromatic, formerly for medicinal purposes.

abrotine. $C_{31}H_{33}NO_3$ = 318.19. An alkaloid from Southern wood, *Artemisia abrotanum*, a Compositae.

abrus root. Indian licorice. The roots of *A. precatorius*, a Leguminosae of India, tropical Africa and Brazil, used as licorice substitute. **a. seeds.** Jequirity, prayer or jumble beads, love peas, crab's eye. Red seeds with black tips, of *A. precatorius*, containing abrin and resin. Used in ophthalmology, and in India as a weight (rati).

abscess. An inflammation or collection of pus in the tissues of the body.

abscissa. The distance of any point measured perpendicularly to a horizontal scale (the ordinate); *x*-axis. See *co-ordinates*.

absinthe. (1) Absinthium. (2) A strong alcoholic beverage containing anise and wormwood oil. **a. oil.** Wormwood oil.

absinthic acid. An acid of unknown composition, found in wormseed and supposed to be succinic acid.

absinthiin. $C_{15}H_{20}O_4$ = 264.15. A crystalline, poisonous, principle, m.68, from absinthium.

absinthin, absynthin. $C_{40}H_{56}O_8,H_2O$ = 682.6. A glucoside from the dried leaves and flowering tops of *Artemisia absinthium*, wormwood. A yellowish-brown amorphous powder, m.120–125; insoluble in water, soluble in alcohol or chloroform.

absinthium. Vermouth, wormseed, matterwood. The dried leaves and flowering tops of *Artemisia absinthium*, a Compositae of the United States and Europe. Used as a bitter tonic. **oil of-** Wormwood oil.

absinthol. Thujol.

absolute. (1) An actual condition, independent, unrestrained, and non-relative. (2) Pure, refined. **a. alcohol.** Ethanol(100 %). **a. boiling point.** Critical temperature. The temperature above which the liquid phase cannot exist, even under great pressure. **a. density.** The density or specific gravity reduced to standard conditions. In the case of gases, *e.g.*, 760 mm. pressure and 0°C. **a. humidity.** The water vapor content of the atmosphere in grams per cubic meter. **a. temperature. °A.** The degree of heat based upon the standard temperature scale which begins with absolute zero = −273°C. Indicated by K. (abbreviation for Kelvin). **a. units.** Ultimate rational units. The three simplest and fundamental units of all measurements, viz., the centimeter, gram, and second in the C.G.S. system, or the foot, pound, and second in the F.P.S. system. **a. zero.** The temperature at which a substance is entirely devoid of heat, and at which all molecular movement ceases; hence, all gases and liquids are solidified. Absolute zero, 0°K. (also *T.*) or 0°A. = −273.-09°C. = −459.4°F. = −219°R.

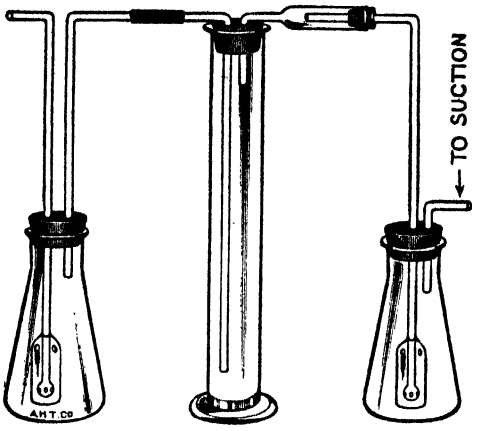
absorbent. (1) Able to take up gases or liquids. (2) Any agent which imbibes or attracts moisture, gases, or wound secretions, and renders them inert or inactive; *e.g.*, absorbent cotton. **gas-** A substance capable of absorbing gases; *e.g.*, for oxygen, potassium pyrogallate or phosphorus; for carbon monoxide, ammoniacal Cu_2Cl_2; for carbon dioxide, soda lime or KOH; **light-** Any transparent material solid, liquid or gaseous, which retains certain radiations when these fall on it. **medicinal-.** A purified fat-free cotton.

absorbing power. See *absorption* coefficient.

absorptiometer. (1) An apparatus devised by Bunsen for measuring the absorption of a gas by a liquid. It consists essentially of a glass vessel containing the gas and the liquid, which is connected with a mercury reservoir thereby enabling variations of pressure to be obtained. (2) A device for regulating the thickness of a liquid used in spectrophotometry.

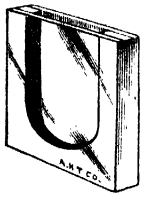
absorption. The apparent disappearance of one or more substances or forces by being taken into another substance or transformed into another form of energy. Generally absorption implies physical transformation. Cf. *adsorption*. (1) *Chemical.* Holding by cohesion or capillary action in the pores of a solid; *e.g.*, condensation of gases or imbibition of liquids by platinum sponge or charcoal; or gaseous molecules held between the molecules of a liquid. (2) *Physical.*

Retaining of characteristic waves (*e.g.*, heat or light radiations) by a solid, liquid or gas. The



Absorption apparatus.

radiations may be transformed into either: (*a*) kinetic energy or greater molecular vibrations, when the temperature of the absorbing substance rises; (*b*) excited atoms or molecules, when the substance becomes fluorescent. (3) *Physiological.* The transformation of non-living into living matter, *i.e.*, the change from food to protoplasm; *e.g.*, the imbibition of nutritive materials into the circulation. Also the process of taking up waste products from tissues. (4) *Therapeutic.* The time interval between the administration of a drug and the first signs of the effect. **heat of** The number of calories evolved when a gas is absorbed by a liquid.

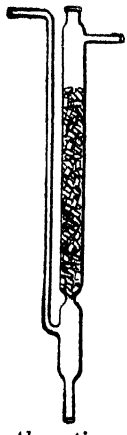


Absorption cell.

a. apparatus. An absorptiometer or other device for the absorption of gases or vapors, used in the laboratory or manufacturing plants (*e.g.*, Gay-Lussac tower). **a. band.** A group of light waves which are absorbed by molecules. Cf. *a. spectrum.* **a. cell.** A small glass cup with parallel walls which is filled with a colored solution and used, for the production of absorption spectra. **a. coefficient.** (1) *Chemical:* The amount, x, of a gas at standard temperature and pressure, which will saturate a quantity, q, of a liquid solvent. According to the units selected, there are:

Bunsen a.c.	x cc.	in	1 cc.
Kuenen a.c.	x cc.	in	1 gm.
Raoult a.c.	x gm.	in	100 cc.

Ostwald a.c. . . . Ratio of the concentration of a gas in the liquid to its concentration in the gas phase. (2) *Light:* The constant, k, in the equation $I = I_0 e^{-kcd}$, where I_0 and I are the intensities of the incident and transmitted lights, respectively, c the concentration and d, the thickness of the solution, and e the base of natural logarithms. (3) *X-rays:* The constant k in the formula $I = I_0 e^{-kd}$. **a. law.** See *Beer's law, Dalton's law* (3), *Henry's law* and *Draper's law.* **a. of food.** See *metabolism* or *absorption* (3). **a. of gases.** See *absorption* (1). **a. of light.** See *absorption* (2). **a. lines.** The wavelengths of light absorbed by atoms. Cf. *a spectrum.* **a. paper.** A fat-free filter paper used for the determination of fat in milk according to Adams' method, or for similar methods of fat or resin determination. **a. ray.** A light ray transformed into heat by passing through matter. **a. spectrum.** The visible or invisible (*e.g.*, ultraviolet) image produced by rays when passing in series through an absorbing medium and a spectroscope. In the passage of light through gases, liquids or solids, some light waves may be converted into heat and thereby partially or totally retained in the interposing substance; *e.g.*, a green solution retains the red waves in white light, and therefore the passing light appears green. In general, *molecules* absorb groups of wavelengths, giving *bands*, while *atoms* absorb single wavelengths, giving *lines.* See also *spectrum.* **a. tube.** Glass apparatus used in the laboratory for the absorption of gases by liquids or solids—*e.g.*, potash bulbs, etc. **a. value.** Iodine value.



Absorption tube.

absorptive power. The capacity to absorb expressed numerically.

abstergent. Detergent.

abstract. A summary of essential features.

absynthin. Absinthin.

abundance of elements. The estimated relative proportions of chemical elements in the earth.

ABUNDANCE OF RARER ELEMENTS

		Lithosphere	Coal ash (max.)
1	Zr	0.023	0.5
2	Ni	0.018	0.8
3	Zn	0.017	1.0
4	Sn	0.005	0.05
5	Co	0.004	0.15
6	Pb	0.0016	0.1
7	Mo	0.0015	0.05
8	Ga	0.0012	0.04
9	Y	0.001	0.08
10	Be	0.0007	0.1
11	Ge	0.0006	1.0
12	As	0.0005	0.8
13	Sc	0.0005	0.04
14	B	0.0003	0.3
15	Sb	?	0.1
16	Bi	.0002	0.003
17	Ag	.000006	0.001
18	Pt	.000005	0.00007
19	Au	.000005	0.00005
20	Pd	?	0.00002
21	Rh	?	0.000002

The tables show the percentage distribution in the solid (lithosphere), liquid (hydrosphere), and gaseous (atmosphere) portions of the earth, and the probable order of abundance; also that of the rarer elements in the lithosphere and coal ash (biosphere).

A.C. Abbreviation for alternating current.

Ac. (1) Symbol for actinium. (2) Abbreviation for: (1) acetyl, (2) acetate, (3) acyl radical.

ac- A prefix which indicates substitution in an *alicyclic* nucleus. Cf. *ar-*.

The data of Colums 2, 3, and 4 are taken from F. W. Clarke, U. S. Geol. Survey, Bull. 770, 1924. Those of Column 5 from Farrington, O. C., (*Field Museum Nat. History, Publication* 120, 1907; *Publication* 151, 1911), whose report contains analyes of 318 iron and 125 stone meteorites. Col. 6 from Merrill, *Mem. Nat. Acad. Sc.* 14, p. 28, 1916.

acacatechin. $C_{15}H_{14}O_6$ = 290.11. 4-catechol-3.5.7-trihydroxychroman. A constituent of *catechu*.

acacia. Gum arabic. The dried, gummy exudation of *Acacia senegal*, etc., a Leguminosae. Cf. *babool, catechu*. Oval beads used extensively in pharmacy for making suspensions, emulsions, tablets, or pills; also used in glues and pastes.

acacipetalin. $C_{11}H_{19}NO_6$ = 261.16. A cyanogetic glucoside, m.176, $[a]_D$ − 36.6°, from *Acacia* species.

acadialite. A variety of chabazite.

acajou. The fragrant heart wood of *Cedrela brasiliensis* (mahogany). **a. balsam.** An extract of the seeds of *Anacardium occidentale* (mahogany nuts) containing chiefly cardol and used as a blistering agent. **a. nut.** Semecarpus.

acalypha. The Indian herb *A. indica*, which is used as a substitute for ipecac.

Acanthaceae. A family of tropical plants comprising 175 genera and 1400 species. Cf. *adhatotic acid, ibogaine*.

acanthite. A native silver sulfide, Ag_2S, occurring in black, slender, prismatic needles, but rarer than the isomeric argentite, d.7.2 to 7.3.

acari. A mite which flourishes on flour, grain, etc. and has four pairs of walking legs.

acaricide. A mite killer. Cf. *insecticide*.

acaroid resin. Earth shellac, yellow resin, grass tree gum, botany bay gum, accroides gum, yacca gum. The exudation of the stems of *Xanthorrhoea hastilis*, a Liliaceae of Australia.

accelerated. Increased in speed, motion, or force. **a. motion.** The increase in the velocity of a body due to gravitation or other force.

acceleration. (1) *Chemical.* A change in the speed of a chemical reaction, cf. *catalysis*. The a. is *positive* if the reaction increases in speed, and *negative* if the reaction decreases in speed. (2) *Physical.* The increase in velocity per second, measured in cm. per sec. per sec. for terrestial objects, and in m. per sec. per sec. for astronomical objects. Cf. *force*.

accelerator. A substance which hastens or increases the speed of a chemical reaction. Cf. as a *catalyst, retarder*. **catalyst-** Promoter. **impregnation-** Introfier. **rubber-** A compound which hastens and improves the curing of rubber, *e.g.*, thiocarbanilide, hexamethylenetetramine, diphenylguanidine, and triphenylguanidine. Cf. *vulcanization*. **super-** A quick-acting vulcanizing agent, *e.g.*, thiuram and thiocarbamic acid derivatives. **ultra-** Super-.

acceptable explosives. A group of unstable chemicals and mixtures which may be transported on railways and steamers subject to certain restrictions by the Bureau of Explosives.

acceptor. See *induced* reactions.

accessory. Supplementary in function. **a. food factors.** Vitamins.

accretion. The increase in size of a body or mass by external addition, by the formation of additional deposits, or by adhesion, or inclusion.

accroides gum. Acaroid resin.

accumulator. A device for storing electricity; a storage or secondary battery or cell, as the lead accumulator, Edison, or Regnier cell, the action of which is based on a reversible chemical reaction. **steam-** An iron vessel, similar to a boiler, in which steam is stored under pressure in contact with hot water.

a. metal. An alloy containing 0.75 % Sb, 9.25 % Sn and 90 % Pb, used for a.

ace- (1). A prefix indicating relationship to acetylene (or the ethylene radical). (2). The group, —C—C—, attached to a bicyclic system; as the carbon atoms 7 and 8 in acenaphthene. Cf. *aci-*.

acecoline. A brand of acetylcholine hydrochloride.

acedicon. An alkaloidal isomer of acetylated codeine, in which the double bond is attached to the same C atoms as the acetylated enolic group, m.152–153.

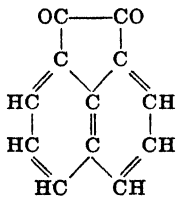
acele. Trade-mark for cellulose acetate rayon yarn and staple.

acenaphthene. $C_{12}H_{10}$ = 154.1. Ethylene naphthalene, ethylene naphthene, 7.8-dihydroacenaphthylene. $C_{10}H_6(CH_2)_2$. A hydrocarbon from coal tar distillates.

Colorless needles, m.95, b.227°, d.1.0678; insoluble in water, and soluble in hot alcohol. It is used in organic synthesis and the manufacture of dyes. **bi-** Same as biacene. **7, 8-diketo-** Acenaphthenequinone.

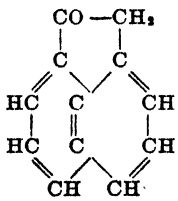
a. dione. Acenaphthenequinone.

acenaphthenequinone. $C_{12}H_6O_2$ = 182.2. Diketoacenaphthene, acenaphthenedione, 7.8-diketoacenaphthene. The compound,



derived from acenaphthene. Colorless crystals, m. 261°; soluble in alcohol.

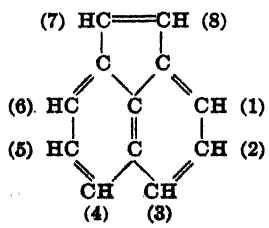
acenaphthenone. $C_{12}H_8O$ = 168.2. The compound,



derived from acenaphthene. Colorless crystals, m.121, and soluble in alcohol.

acenaphthenyl. The monovalent radical, $C_{12}H_9$—, derived from acenaphthene.

acenaphthylene. $C_{12}H_8$ = 152.1.



An unsaturated hydrocarbon obtained from acenaphthene. Colorless crystals, m.92, b.270; insoluble in water, but soluble in alcohol. **7, 8-dihydro-** Acenaphthene.

Acer. The maples. **A. saccharum.** The sugar maple.

acerdese. Manganite.

acerdol. Calcium permanganate.

aceric acid. An acid from the sap of the maple (*Acer rubrum*), supposed to be identical with malic acid.

aceroides gum. A misnomer for *acaroid resin*.

acet. (1) The trivalent radical, $CH_3C\equiv$ or $MeC\equiv$; as in *acetals*, $MeCH(OR)_2$. (2) The monovalent radical, Me.CO—, derived from acetic acid (aceto).

acetal (*as'-e-tal*) $C_6H_{14}O_2$ = 118.14. Diethylacetal, 1,1-diethoxyethane*, acetol, ethylidene diethyl ether, diethylaldehyde, ethidene diethylic ether. The compound, $MeCH(OEt)_2$. A volatile, colorless liquid, b.103, d.0.831; slightly soluble in water but soluble in alcohol or ether. It is formed by imperfect oxidation of alcohol and is used medicinally as a hypnotic and as a solvent. (Cf. *acetals, hydrins.*) **amino-** Aminoacetal. **dichloro-** Dichloracetal. **trichloro-** Trichloroacetal.

acetaldehyde. C_2H_4O = 44.04. Ethanal*, aldehyde, ethyl aldehyde, acetic aldehyde, Me.CHO. A volatile colorless liquid of aromatic odor m. −123.5, b.20.8, d.0.806; soluble in water, alcohol or ether. It is used commercially as solvent; industrially as a reducing agent, (silvering mirrors); and in the manufacture of dyestuffs and organic compounds. **m-** Metaldehyde. **p-** Paraldehyde. **amino-** Glycinaldehyde. **amyl-** Heptaldehyde. **benzal-** Cinnamaldehyde. **benzol-** Benzoyl. **hydroxy-** Glycolaldehyde. **keto-** Pyruvic aldehyde. **met-** Metaldehyde. **phenyl-** α-Tolualdehyde. **tribromo-** Bromal. **trichloro-** Chloral. **trimethyl-** Pivaldehyde.

a. ammonia. C_2H_7ON = 61.08. *1*-Aminoethanol, α-aminoethyl alcohol. An addition compound of aldehyde and ammonia, $CH_3.CHOH.NH_2$. A colorless solid, m.97, b.100, soluble in water. **a. cyanohydrin.** C_3H_5OH = 71.06. The addition compound, $CH_3.CHOH.CN$. A liquid, b.183 (decomp.), soluble in water or alcohol. **a. semicarbazone.** $C_3H_7N_3O$ = 101.1. The addition compound $MeCH:N.NHCONH_2$. A colorless solid, d.1.030, m.162.

acetaldol. Aldol.

acetaldoxime. Aldoxime.

acetaldoxine. Me.CHNO = 58.05. Colorless crystals or a liquid, d.0.9645, m.13 or 47, b.114; soluble in alcohol.

acetals. (1) Dialkyl ethers of the hypothetical ethylidene glycol. They are named as *1.1*-dialkoxy alkanes; i.e., $CH_3.CH(OR)_2$ = *1.1*-diethoxyethane (acetal). (2) Analogous ethers of higher or lower glycols, as, formal. Cf. *hydrins*. **ketone-** Ketals.

acetalphanaphthylamine. Acetnaphthalide.

acetamide. C_2H_5NO = 59.05. Ethanamide*. The amide of acetic acid, $Me.CO.NH_2$. Colorless crystals, m.82, b.222, d.1.139; readily soluble in water or alcohol. Used in organic synthesis. **acetyl-** Diacetamide. **benzal-** Cinnamamide. **benzyl-** α- is hydrocinnamamide; N- is benzylacetamide. **bromo-** Acetbromamide. **bromodiethyl-** Neuronal. **cyan-** $CN.CH_2.CO.NH_2$ = 84.1. Colorless crystals,

m.118. **di-** Diacetamide. **dichloro-** $CHCl_2.CO.NH_2$ = 127.98. Colorless, monoclinic crystals, m.98, b.233; soluble in alcohol, water or ether. **hydroxy-** Glycolamide. **methylphenyl-** Exalgin. **N-phenyl-** Acetanilide. **α-phenyl-α-**Toluamide.

a. chloride. $Me.CCl_2.NH_2$ = 113.0, b.90. **a. nitrate.** $C_2H_5N_3O_4$ or $MeCO.NH_2.ONO_2$ = 121.1. Colorless crystals, formed by the action of nitric acid on acetamide.

acetamidine. $C_2H_6N_2$ = 58.1. Ethanamidine*, ethenylamidine. The amidine of acetic acid, $Me.C(:NH)NH_2$., m.166.

acetamido. Acetamino. **a. ethyl salicylic acid.** Benzacetin. **a. phenetol.** Phenacetin.

acetamino. Acetamido. A compound containing the monovalent $CH_3.CO.NH$— or $MeCONH$— radical. **a. naphthol.** $C_{12}H_{11}NO_2$ = 201.16. 1.2- White crystalline leaflets, m.235; insoluble in water and soluble in alcohol. **1.4-** White crystalline needles, m.187; soluble in alcohol. **a. phenol.** $C_8H_9O_2N$ = 151.12. The compound, $C_6H_4(OH).NH.CO.Me$. **1.2-** White leaflets, m.201; soluble in hot water. **1.3-** Colorless needles, m.149; soluble in water or alcohol. **1.4-** Colorless monoclinic crystals. d.1.293, m.168; soluble in water or alcohol. **a. salol.** Same as salophen.

acetanilide. C_8H_9ON = 135.12. Acetylaminobenzene; antifebrin, acetanil, phenylacetamide- The acetyl derivative of aniline, $PhNH.CO.Me$. Colorless shining leaflets, m.114.2, b.303.8, d.1.211; soluble in water or alcohol. Extensively used in medicine as an antipyretic, anodyne, antirheumatic and cardiac and also as a preservative (*e.g.*, for hydrogen peroxide solution) and in lacquers. **aceto-** $MeCOCH_2CONHPh$ = 177.15. Colorless crystals, m.85; sparingly soluble in water or alcohol. **acetyl-** Diacetanilide. **amino-** $NH_2C_6H_4.NH.CO.Me$ = 150.14. **p-** Colorless crystals, m.160; soluble in water, alcohol or ether. Used in organic synthesis. **brom-** Same as acetbromanilide. **di-** $PhN(MeCO)_2$ = 177.1. Colorless leaflets, m.37, $b._{11mm}142$. ***ar*-ethoxy-** Acetphenetide. ***p*-ethoxy-** Phenacetin. ***ar*-methoxy-** Acetaniside. ***N*-methyl-** Exalgin. ***ar*-methyl-** Acetotoluide. **oxymethyl-** Methacetin. **α-phenyl-α-**Toluanilide.

a. bromide. Antisepsin.

acetaniside. $C_9H_{11}O_2N$ = 165.14. Methoxyacetanilide, $C_6H_4(OMe)NH.COMe$. **ortho-** Colorless crystals, m.80, b.304; soluble in water. **meta-** Methacetin.

acetannin. $C_{14}H_8(COCH_3)_2O_9$ = 406.2. Diacetyltannin, tannylacetate, tannigen. The acetic acid ester of tannin, a light, creamy-white, odorless, tasteless powder, m.160; used in treatment of diarrhea.

acetarsone. $C_8H_{10}O_5NAs$ = 275.05. Stovarsol, acetylaminohydroxyphenylarsonic acid, *N*-acetyl-4-hydroxy-*m*-arsanilic acid.

A white powder, slightly soluble in water or alcohol, readily in alkalis. It is used in amebic dysentery and Vincent's infection. Cf. *carbarsone, tryparsamide.*

acetate. A salt of acetic acid containing the monovalent MeCOO— or CH_3COO— radical, abbreviated Ac. Most normal acetates are freely soluble; the least soluble are those of U, Hg and Ag. Acetates are readily decomposed by strong acids or by heat.

acetbromamide. $CH_2Br.CONH_2$ = 138.0. Bromacetamide. Colorless leaflets, m.108; soluble in ether. **N-** $CH_3CONHBr$. **diethyl-** Neuronal.

acetbromanilide. $BrC_6H_4NHCOCH_3$ = 214.0. **para-** p-bromacetanilide, antisepsin, asepsin, acetanilide bromide. Colorless needles, m.165.5; sparingly soluble in water. An antipyretic and antiseptic.

acetene. Ethylene.

acetenyl. Ethinyl. The monovalent radical, HC:C—, derived from acetylene; *e.g.*, acetenylbenzene, $Ph.C_2H$.

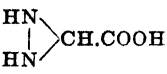
acet extract. See *extract.*

acethydrazide. A compound containing the monovalent $NH_2.NH.CO.CH_3$— radical. Cf. *hydrazide.*

acetic. Compounds containing acetyl, CH_3CO—. **a. acid.** Acetic acid. **a. aldehyde.** Acetaldehyde. **a. anhydride.** Acetic acid anhydride. **a. ester, a. ether.** Ethylacetate. **a. peracid.** Peracetic acid. **a. peroxide.** $(CH_3CO)_2O_2$. An explosive derivative of a. anhydride.

acetic acid. $C_2H_4O_2$ = 60.04. Ethanoic acid*, ethylic acid, vinegar acid, acetone carboxylic acid, CH_3COOH (or MeCOOH or AcOH or incorrectly, HAc). A saturated fatty acid, *q.v.* (1) 99.5 % or glacial-. A clear, colorless liquid or crystalline mass miscible with water or alcohol, d.1.048, m.16, b.118. It is used as a reagent, as a solvent for essential oils, resins and gums; as a precipitant for albumin; and as a general neutralizing and acidifying agent. (2) 36 % or common-. A clear colorless liquid, d.1.049, miscible with water or alcohol. (3) 6 % or dilute-. An aqueous solution containing not less than 5.7 % nor more than 6.3 % of a. a. It is used as above and is an official test solution of the U.S.P. It is produced by the oxidation of alcohol (vinegar), and in the pyroligneous acid resulting from the destructive distillation of wood. **aceto-** Acetoacetic acid. **acetyl-** Acetoacetic acid. **allyl-** γ-Pentenoic acid. **m-amidophenyl-** $NH_2.C_6H_4.CH_2.COOH$. Colorless crystals m.149. **amino-** Glycine. **aminobutyl-** Norleucine. **benzal-** Cinnamic acid. **benzamino-** Hippuric acid. **benzoyl-** $C_9H_8O_3$ = 164.06. β-Ketohydrocinnamic acid, *3*-oxo-*3*-phenylpropanoic acid, $PhCOCH_2COOH$. Colorless needles, m.103. **benzyl-** Hydrocinnamic acid. **bromo-** $C_2H_3O_2Br$ = 139.0. Bromoethanoic acid*. Colorless hexagonal crystals, d.1.011, m.50, b.208; soluble in water, alcohol or ether. **butyl-** Caproic acid. **carbamido-** Hydantoic acid. **carbazyl-** Carbazolacetic acid. **chloro-** $C_2H_3O_2Cl$ = 94.5. Chloroethanoic acid*. Colorless, rhombic crystals, d.1.398, m.51, b.189.5; soluble in water, alcohol or ether. **cyano-** Cyanacetic acid. **di-** (1) Acetoacetic acid. (2) Diacetic acid. **diacetyl-** Diacetic acid. **dibromo-** $C_2H_2O_2Br_2$ = 217.9. Dibromoethanoic acid*. Colorless crystals, m.48, b.232; soluble in water, alcohol, or ether. **dichloro-** $C_2H_2O_2Cl_2$ = 128.9. Dichloroethanoic acid*. A colorless liquid, d.1.572, m. −4, b.190; soluble in water, alcohol, or ether. **dicarbamido-** Allantoic acid. **diethyl-** $C_6H_{12}O_2$ = 116.1. 3-carboxy-pentane, $Et_2CH.COOH$. A colorless liquid, d.0.920, b.190; slightly soluble in water. **dihydroxy-** Glyoxylic acid. **diiodo-** $C_2H_2O_2I_2$ = 311.97. Diiodoethanoic acid*.

Yellowish crystals, m.110; slightly soluble in water. **dimethyl-** Isobutyric acid. **dimethylethyl-** $C_6H_{12}O_2$ = 116.13. The aliphatic acid $EtCMe_2.COOH$. A colorless liquid, m. −14, b.187; slightly soluble in water, soluble in alcohol or ether. It is an isomer of caproic acid. **dioctyl-** Isostearic acid. **diphenyl-** $C_{14}H_{12}O_2$ = 212.17. $Ph_2CHCOOH$. Colorless needles, m.148; soluble in water, alcohol, or ether. **diphenylene-** Fluorene carboxylic acid. **ethoxy-** Ethylglycollic acid. **ethyl-** Butyric acid. **formyl-** Malonaldehydic acid. **furfuryl-** Furoric acid. **guanido-** Glycocyamine. **hydrazi-** $C_2H_6O_2N_2$ = 88.0. The compound



hydroxy- Glycollic acid. **imino-** $NH(CH_2COOH)_2$ = 133.1. Colorless rhombic crystals, m.227, insoluble in water and soluble in alcohol or ether. **iodo-** $C_2H_3O_2I$ = 185.9. Iodoethanoic acid. Yellow crystals, m.82, insoluble in water, soluble in alcohol or ether. **isoamyl-** $C_7H_{14}O_2$ = 130.1. A colorless liquid, d.0.910, b.209, slightly soluble in water and soluble in alcohol. **isobutyl-** *i*-Caproic acid. **isopropyl-** Isovaleric acid. **isopropylidene-** Senecioic acid. **keto-** Pyruvic acid. **mercapto-** $C_2H_4O_2S$ = 92.09. *2*-Mercaptoethanoic acid*, thioglycollic acid, $HS.CH_2.COOH$. A colorless liquid, d.1.3253, m. −16.5, b_{6mm}101. **methoxy-** $C_3H_6O_3$ = 90.05. Methylethanoic acid*, methylglycolic acid, $MeOCH_2COOH$. Colorless liquid, d.1.1768, b_{7mm}90. **methyl-** Propionic acid. **methylamino-** Sarcosine. **nitro-** See *nitro acids*. **oxybis-** Diglycollic acid. **per-** Peracetic acid. **phenyl-** Toluic acid. **pyro-** Pyroligneous acid. **sulfo-** $C_2H_4O_5S$ = 140.1. Sulfoethanoic acid*. The compound $HSO_3.CH_2.COOH$. Colorless crystals, m.86, soluble in water. **thiol-** C_2H_4OS = 76.09. Ethanethiolic acid*, thioacetic acid, methanecarbothiolic acid, MeCOSH. A colorless liquid, d.1.074, m. −17°C, b.93, soluble in water. **trimethyl-** Pivalic acid. **triphenyl-** $C_{20}H_{16}O_2$ = 240.2. The compound $Ph_3C.COOH$. Colorless crystals, m.264. **ureido-** Hydantoic acid. **vinyl-** β-Butenic acid.

a. acid. amide. Acetamide. **a. acid amine.** Acetamide. **a. aldehyde.** Acetaldehyde. **a. anhydride.** $C_4H_6O_3$ = 102.05. Acetic acid anhydride, acetyl oxide, Ac_2O, acetic oxide, ethanoic anhydride*. The compound $(MeCO)_2O$. A colorless liquid with pungent odor, d.1.081, m. −73, b.137; soluble in alcohol or ether, decomp. by water to acetic acid. Used as a reagent in organic synthesis and analysis, for acetylation and in the examination of fats. **a. ester.** Ethyl acetate. **a. ether.** Ethyl acetate. **a. oxide.** A. anhydride. **a. peracid.** Peracetic acid.

acetidin. Ethyl acetate.

acetifier. An apparatus for hastening the process of acetification, or the production of vinegar from fermented liquids by atmospheric oxidation.

acetimeter. An obsolete term for a hydrometer.

acetimetry. The determination of acetic acid in vinegar by titration with alkali.

acetimido. The monovalent radical MeC(:NH)—.

acetin. Esters obtained by reaction of glycerol and acetic acid; *e.g.*, **mono-** Acetin, $C_3H_5(OH)_2(O.COMe)$ = 134.11. A colorless liquid, d.1.2212, b.240. It is used in the manufacture of explosives (smokeless powder, dynamite), and as a solvent for dyes. **di-** See *diacetin*. **tri-** See *triacetin*.

acetnaphthalide. $C_{12}H_{11}ON$ = 185.16. The compound, $MeCONHC_{10}H_7$. **1-**Acet-α-naphthylamine. Colorless or slightly pinkish crystals, b.159; soluble in hot water or alcohol. **2-**Acet-β-naphthylamine. Colorless leaflets, m. 132; soluble in hot water or alcohol.

aceto. Acet.

acetoacetate. A salt containing the monovalent $MeCOCH_2COO$— radical derived from acetoacetic acid.

acetoacetic acid. $C_4H_6O_3$ = 102.07. Acetylacetic acid, diacetic acid, butanone acid, $Me.CO.CH_2.COOH$. A colorless liquid, decomposed by heat at 100, into acetone and carbonic acid, and miscible with water or alcohol. It is derived from β-hydroxybutyric acid in the body and increases in amount during diabetes. Cf. *acetone*. **a. ester.** (1) Acetoacetic ether. (2) A group of compounds derived from acetoacetic acid by replacing the acid hydrogen by an organic radical. They are of the general type, $R—C_3H_4O.COO—R$, and occur in two isomeric forms: enolic-form, $R—CH_2.CO.CH_2.COO—R$, and ketonic-form, $R—CH_2.C(OH):CH.COO—R$. **a. ester condensation.** The formation of acetoacetic esters by means of metallic sodium from the corresponding alkyl esters. **a. ester decomposition.** The decomposition of acetoacetic esters, which may occur in two ways. Strong acids or weak alkalis will split the ester to a ketone alcohol and carbon dioxide. Strong bases will decompose it to acids (acetic acid, etc.). **a. ester synthesis.** The formation of organic compounds by hydrolyzing their a. esters. **a. ether.** $C_8H_{10}O_3$ = 130.11. Ethyl-aceto-acetate, ethyl-*3*-oxobutanoate*, ethyl-acetoacetic ester ($MeCOCH_2COOEt$). A colorless liquid, $d_{20°}$.1.0284, m. −80, b.181, miscible water, alcohol, or ether. It is used in organic synthesis; cf. *a. ester condensation decomposition*.

acetoamidophenol. Acetaminophenol.

acetbenzoic anhydride. Benzoyl acetate.

acetobrom-. Acetbrom-.

acetocaustin. Trichloracetic acid.

acetochloral. Chloral.

acetocinnamene. Benzylidene *acetone*.

acetoglyceral. $C_5H_{10}O_3$ = 118.08. Glycerol-ethylidene ether, $HO.C_3H_5\begin{matrix}O—CH_2\\|\\O—CH\end{matrix}$ A colorless liquid, d.1.081, b.184.

acetoin. $C_4H_8O_2$ = 98.1. 3-hydroxy-2-butanone*, methylacetylcarbinol. $MeCO.CHOH.Me$ or $Ac.CHOH.Me$, a condensation product of two molecules of acetic acid. A colorless liquid, d.1.002, m.15, b.142.

acetol. $C_3H_6O_2$ = 74.06. Acetyl carbinol, 1-hydroxy-2-propanone;* propanolon, $MeCOCH_2OH$. A colorless liquid, d.1.082; m. −17, b.145; it is soluble in water, alcohol or ether. Used as a reducing agent in organic synthesis.

acetoluide. Acetotoluide.

acetolysis. The breaking up of an organic molecule by acetic anhydride or acetic acid.

acetomenaphthone. Menadiol diacetate; methyl-1, 4-naphthohydroquinone-diacetate. Used medicinally for its vitamin K effect.

aceton acid. Acetonic acid.

acetonamine. A group of organic compounds containing both the NH_2— and CO— radicals. **di-** $NH_2.CMe_2.CH_2.CO.Me$.

acetonaphthone. Naphthylmethyl ketone. **1-hydroxy-2-.** $C_{12}H_{10}O_2$ = 186.08. *1*-Hydroxy-*2*-naphthylmethylketone, *2*-acetyl-*1*-naphthol, $MeCOC_{10}H_6OH$. Yellow needles, m.100, b.325.

acetone. C_3H_6O = 58.06. Dimethylketone, 2-propanone*, methylacetal, ketopropane, dimethylketal, $CO.Me_2$. A clear, colorless, inflammable liquid of characteristic ethereal empyreumatic odor, d.0.792, m. −94.3, b.56.5; miscible with water, alcohol or ether. It is a constituent of wood spirit, and is formed in the body during diabetes by decarboxylation of acetoacetic acid. Used as a solvent for oils, fats, resins, cellulose nitrate; as a precipitant for albumin; as reagent for aniline dyes, cuprous and silver salts, alkaloids and blood; and medicinally as an anthelminthic and tonic. **acetonyl-** See *acetonyl*. **acetyl-** Acetylacetone. **allyl-** Allylacetone. **amido-** Aminoacetone. **benzal-** $C_{10}H_{10}O$ = 146.08. *4*-Phenyl-*3*-butene-*2*-one*, benzylidene acetone, cinnamyl methyl ketone, acetocinnamene, methyl styryl ketone, cinnamyl methyl ketone. The compound, PhCH:CH.COMe. Colorless crystals, m.41, b.262; insoluble in water, soluble in alcohol, ether or chloroform. Used in organic synthesis. **benzylidene-** Benzal a. **bromo-** Monobromacetone. $CH_2Br.CO.Me$ = 136.98. A colorless liquid, b.140, soluble in alcohol. **chloro-** Monochloracetone. $CH_2Cl.CO.Me$ = 92.51. A colorless liquid, d.1.162, b.119; slightly soluble in water, but miscible with alcohol or ether. **diamido-** $CO(CH_2NH_2)_2$ = 88.1. **dibenzal-** Styryl ketone. **dichloro-** (alpha-) $CHCl_2.CO.CH_3$ = 126.95. A colorless liquid, d.1.572, m. −4, b.190; soluble in water, alcohol or ether. (beta-) $CH_2Cl.CO.CH_2Cl$ = 126.95. A colorless liquid, d.1.236, b.120; soluble in water, alcohol or ether. **diethoxy-** $CO(CH_2OEt)_2$. **diisonitroso-** $CO(CH:NOH)_2$. Colorless crystals, m.144, **dimethoxy-** $CO(CH_2OMe)_2$. **dioxy-** $CO(CH_2OH)_2$. **ethoxy-** See *ethoxyacetone*. **ethylidene** *3*-Penten-*2*-one.* **hydroxy-** Acetol. **meta-** Diethyl ketone. **monobromo-** See *bromo-*. **monochloro-** See *chloro-*. **oxalyldi-**, $Me.CO.CH_2.CO.CO.CH_2.CO.Me$. Colorless crystals, m.120; insoluble in water but soluble in alcohol. **sulfocyan-** $MeCO.CH_2.SCN$. A colorless liquid, d.1.180; soluble in water or alcohol.

a. acid. Acetonic acid. **a. alcohol.** Acetol. **a. bodies.** The aliphatic ketones and hydroxyketones found in blood and urine. **a. bromoform.** $C_4H_7OBr_3$ = 331.1. Brometone, 1, 1, 1-tribrom-2-methyl-propan-2-ol, tribrom-tert.-butanol. $CBr_3.COHMe_2$. Colorless crystals, used medicinally as a sedative. **a. carboxylic acid.** Acetic acid. **a. chloride.** $C_3H_6Cl_2$ = 112.98. *2.3*-Dichloropropane*. $MeCCl_2Me$; d.-1.83 at 16°C, m. −35, b.69. **a. chloroform.** $C_4H_7OCl_3$ = 177.1. Chloretone, chlorbutanol, 1,1,1-trichlor-2-methyl-propan-2-ol, trichlor-tert.-butylalcohol, aneson, anesin, $CCl_3.CMe_2OH$. Colorless crystals, m.80; slightly soluble in water, but more soluble in alcohol, glycerol or oils. Used in hypodermic solutions as an antiseptic, hypnotic and anesthetic. **a. collodium.** Collodion. **a. cyanhydrin.** $Me_2C.OH.CN$ = 85.1. m. −20; b.120. **a. diacetic acid.** Hydrochelidonic acid. **a. dicarboxylic acid.** $C_5H_6O_5$ = 146.1. *β*-ketoglutaric acid, *β*-oxyglutaric acid, pentanone diacid, *3*-oxo-pentanedioic acid*. The dibasic acid, $CO(CH_2COOH)_2$, which occurs in colorless crystals, m.130, decomp. 250. **a. oil.** The oily residue from the distillation of crude acetone. Used as a solvent, a denaturating agent and in the purification of anthracene. **a. phenyl hydrazone.** $C_9H_{12}N_2$ = 148.2. The crystalline compound $Me_2:C:N.NPh$, m.16; b.165 (90 mm.) **a. semicarbazone.** $C_4H_9ON_3$ = 115.12. The crystalline compound $Me_2:C:N.NH.CONH_2$, m.190. **a. sodium bisulfite.** $NaSO_3.CMe_2OH$. Colorless crystals which are soluble in water. **a. sugar.** Isopropylidine sugar. A condensation compound of sugar and a. containing a —$O.CMe_2.O$— group.

acetonic acid. $C_4H_8O_3$ = 104.1. Acetone acid, butyl-lactic acid, *α*-hydroxyisobutyric acid. $Me_2C(OH)COOH$. Colorless crystals, m.79, b.212; soluble in water, alcohol or ether.

acetonitrile. C_2H_3N = 41.1. Methylcyanide, ethanenitrile*, cyanomethane. The nitrile of acetic acid, Me.CN, which occurs in coal tar and the residue of molasses. A colorless liquid, d.0.783, m. −44, b.81; soluble in water or alcohol. Used in organic synthesis and perfumery. **allyl-** See *allyl*. **amino-** Glycinonitrile. **benzoyl-** C_9H_7ON = 145.06. Cyanoacetophenone, *β*-ketohydrocinnamonitrile, $PhCOCH_2CN$. White leaflets, m.80. **phenyl-** Is *α*-tolunitrile. **triethoxy-** Cyanoformic ester, oxalnitrilic ethyl ester. The compound, $(EtO)_3C.CN$. A colorless liquid, b.160. **trinitro-** $(NO_2)_3C.CN$. Colorless crystals, m.41. **trinitro-** $C_2N_4O_6$ = 176.03. Trinitroethanenitrile*, $CN.C(NO_2)_3$. White waxy leaflets, m.41.5, exploding on further heating. **vinyl-** Allylcyanide.

acetonitrolic acid. $C_2H_4N_2O_3$ = 104.05. Ethylnitrolic acid, $Me(NO_2)C:NOH$. Yellow rhombic crystals, m.88 (decomp.); soluble in water.

acetonuramic acid. $MeCO.CH_2.NH.CH_2.COONH_2$ = 146.2.

acetonyl. The monovalent radical, $CH_3.CO.CH_2-$ or $MeCOCH_2-$. **a. acetone.** $C_6H_{10}O_2$ = 114.1. Hexan-2, 5-dione, g-diketohexane, *2*, *5*-hexane dione*, γ-diketo-hexane. The diketone, $Me.CO.CH_2CH_2.CO.Me$. A colorless liquid of pleasant odor, b.188 used as a solvent. **a. amine.** *1*-Amino-*2*-propanone. **a. urea.** $C_5H_8O_2N_2$ = 123.1, m. −41, b.175, very soluble in water, alcohol or ether.

acetonylidene. The divalent radical, $MeCOCH=$.

acetophenetide. $C_{10}H_{13}O_2N$ = 179.16. **p-** Phenacetin, p-ethoxyacetanilide, acetphenetidine, oxyethylacetanilide. $1,4\text{-}EtO.C_6H_4.NH.COMe$. A colorless, crystalline powder, m.134; soluble in 1500 pts. water, 16 pts. alcohol or 90 pts. ether. Used medicinally as an antipyretic, analgesic and antirheumatic. **o-.** *N*-acetyl-*o*-phenetidine. Colorless leaflets, m.79. **amino-** Phenocoll.

acetophenine. $C_{24}H_{19}N$ = 321.3. Colorless crystals, m.135; slightly soluble in alcohol.

acetophenetidin. The U.S.P. XI name for *acetophenetide*.

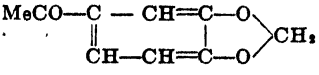
acetophenone. C_8H_8O = 120.1. Phenylmethylketone, benzoyl hydride, acetyl benzene, hypnone. $Me.CO.Ph$. A colorless liquid or transparent crystals, m.20.5, b.202, d.1.0285; insoluble in water, but soluble in alcohol, ether, chloroform or oils. Used medicinally as a hypnotic, and also in perfumes (orange blossoms). **allyl-** The compound, $Ph.CO.CH_2.CH_2.CH:CH_2$. A colorless liquid, b.236; soluble in alcohol. **amido-** Amidoacetophenone. **benzal-** Chalcone. **benzyl-** *phenyl* propiophenone. **chloro-** See *tear gases*. **cyano-**

Benzoyl acetonitrile. *ar*-hydroxy- See *hydroxy*. *ω*-hydroxy- $PhCOCH_2.OH$. Phenacyl alcohol. Colorless crystals, d.1.013, m.86. nitroso- Benzoylformoxime. phenyl- Acetophenone acetone.

a. acetone. $C_{11}H_{12}O_2$ = 176.1. Phenyl acetyl acetone, $PhCO.CH_2.CH_2.COMe$. a. carboxylic acid. Acetyl benzoic acid. a. oxime. $Me.C(NOH).Ph$ = 135.2. Colorless crystals, m.59.

acetophenones. The homologs of acetophenone: $PhCOCH_2$—R . . . acidulated benzenes. Ph—R—COMe . . . phenylated fatty ketones. R—C_6H_4.COMe . . . nucleus substituted phenones.

acetopiperone. $C_9H_8O_3$ = 164.1. 3.4-methylenedioxy-1-methylketo-benzene.



Colorless crystals, m.87.

acetopyrine. $C_{11}H_{12}N_2O.C_7H_7OOC_6H_4COOH$. Acopyrin. A combination of antipyrine and acetyl salicylic acid, used for fevers and rheumatism.

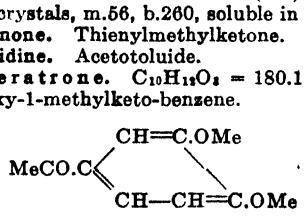
acetosalicylic acid. Acetylsalicylic acid.

acetotoluide. $C_9H_{11}ON$ = 149.09. Acetotoluidine, *ar*-methylacetanilide, *N*-acetyl-*o*-toluidine, $Me.C_6H_4.NHCOMe$. ortho- Colorless crystals, m.107, b.296°; slightly soluble in water and soluble in alcohol or ether. Used medicinally as an antipyretic, and said to be less toxic than acetanilide. meta- Colorless crystals, m.65, b.303. para- Colorless needles, m.151, b.307; slightly soluble in water or alcohol. Used medicinally as an antipyretic. Cf. *exalgin*. *N*-methyl- $C_{10}H_{13}NO$ = 163.11. *N*-acetyl-*N*-methyl-*o*-toluidine. $MeCON(Me).C_6H_4Me$. White crystals, m.56, b.260, soluble in alcohol.

acetothienone. Thienylmethylketone.

acetotoluidine. Acetotoluide.

acetoveratrone. $C_{10}H_{12}O_3$ = 180.1. 3.4-dimethoxy-1-methylketo-benzene.



Colorless crystals, m.48; soluble in alcohol. Used in perfumery.

acetoxime. C_3H_7ON = 73.08. Propanoxime, *2*-propanone oxime*, acetone oxime. The simplest ketoxime which occurs in two isomeric forms; as, the compound, $Me_2C{:}NOH$. Colorless prisms, d.0.887, m.58, b.135; soluble in water, alcohol or ether.

acetoximes. A group of ketoximes derived from acetoximes and occurring in two isomeric forms; as,

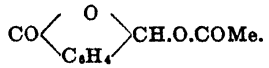
anti- syn-

where *R'* is a radical of greater radical weight than R.

acetoxy. The monovalent radical AcO—, or MeCOO— or $CH_3.COO$—.

acetoxylide. $C_{10}H_{13}NO$ = 163.11. Aceto-*as*-*m*-xylidide, *2,4*-dimethylacetanilide, $MeCONHC_6H_3Me_2$. White needles, m.129.

acetoxyphthalide. The compound,



acetozone. Acetylbenzoyl peroxide. An unstable compound, which is slightly soluble in water or ether and is marketed as a 50% mixture of an inert substance as a disinfectant and antiseptic.

acetphenetid. Acetophenetide.

acet-theocin sodium. Acet-theophylline sodium, soluble theocine, theophylline sodium acetate. A white powder which is soluble in water but insoluble in alcohol or ether. Used medicinally as a diuretic.

acettoluide. Acetotoluide.

acetum. Latin for vinegar.

aceturic acid. Acetyl glycine.

acetyl. Symbol: Ac. The monovalent acyl radical, MeCO- or CH_3CO-, of which acetic acid and acetyl chloride are the hydroxide and chloride, respectively. a. hydrate. Acetic acid. a. number. A measure of the amount of oxyacids and alcohols in a vegetable or animal fat. It is the number of milligrams of potassium hydroxide required to neutralize the acetic acid obtained by saponification of one gram of a fat wax which has been acetylated with acetic anhydride. Cf. *Cook formula*. a. value. Same as a. number.

acetylacetonate. A compound of acetylacetone with aluminum beryllium or rare earth, of the type, $M[CH\text{-}(COMe)_2]_3$.

acetylacetone. $C_5H_8O_2$ = 100.09. Pentane-2.4-dione, *2.4*-pentane dione*. The diketone, $MeCO.CH_2.COMe$. A colorless liquid, d.0.987, b.137; slightly soluble in water but miscible with alcohol or ether. Used in organic synthesis.

acetylamine. (1) The monovalent radical, MeCONH- or $CH_3.CO.NH$-, derived from acetamide. (2) Acetamide.

acetylamino. Acetylamine. a. acetic acid. Acetyl glycine. a. benzoic acid. $MeCONH—C_6H_4—COOH$ = 179.13. ortho- Colorless needles, m.185; slightly soluble in water, and soluble in alcohol or ether. meta- Colorless crystals, m.243, decomp.; slightly soluble in water, alcoholor ether. para- Colorless needles, m.250; slightly soluble in water or ether but soluble in alcohol. a. phenetole. Acetphenetid. a. salol. Salophen.

acetylate. To introduce an acetyl radical into an organic compound.

acetylation. The process of introducing an acetyl radical into an organic molecule; *e.g.*, by boiling the compound with glacial acetic acid or acetyl-chloride.

acetylbenzene. Acetophenone.

acetylbenzoate. Benzoyl acetate.

acetylbenzoic acid. Acetophenone carboxylic acid. $C_9H_8O_3$ = 164.11. The compounds $MeCO.C_6H_4COOH$. ortho- Crystals, m.114; soluble in hot water. para- Crystals, m.205 (subliming), and slightly soluble in water, alcohol or ether.

acetylbiuret. $MeCO.NH.CO.NH.CO.NH_2$ = 145.11. Colorless needles, m.193; soluble in water, alcohol or ether.

acetylbromide. C_2H_3OBr = 122.95. Ethanoyl bromide*. The compound, Me.COBr. A colorless fuming liquid, m. −96.5, b.76.7; decomposes in water or alcohol but is soluble in

ether. Used as a reagent in analysis and organic synthesis. **bromo-** $C_2H_2Br_2O$ = 201.85. Bromoethanoyl bromide*, $CH_2Br.COBr$. Colorless liquid, b.148, decomposed by water.

acetylcannabinol. The compound, $MeCO.O.C_{21}H_{29}O$, obtained by heating cannabinol with acetic acid anhydride.

acetylcarbamide. Acetylurea.

acetylcarbazole. $C_{12}H_8N.COCH_3$ = 209.2. A crystalline solid, m.70, b.360, slightly soluble in water, very soluble in alcohol or ether.

acetylcarbinol. Acetol.

acetylcarbromal. $C_8H_{13}N_2O_3Br$ = 279.03. Abasin, acetylbrom-diethyl-acetyl-carbamid, $BrCEt_2.CO.NH.CO.NH.COMe$. White crystals, slightly soluble in water, readily in alcohol. Used as sedative.

acetylchloride. C_2H_3OCl = 78.49. Ethanoyl chloride*. Me.COCl. A colorless fuming liquid, d.1.105, m. −112, b.55; decomposes in water or alcohol but is soluble in ether. Used as a reagent in analysis and in organic synthesis. **chloro-** $C_2H_2Cl_2O$ = 112.93. Chloroethanoyl chloride*, $CH_2Cl.COCl$. A colorless liquid, b.107, d.1.495; decomposes in water or alcohol. **dichloro-** $CHCl_2.COCl$ = 147.37. Dichloroethanoyl chloride*. A colorless liquid b.105; decomposes in water or alcohol. Used in organic synthesis. **trichloro-** CCl_3COCl = 181.83. Colorless liquid, d.1.629, b.118, decomposed by water. **trimethyl-** Pivalyl chloride.

acetylcholine. $C_7H_{17}O_3N$ = 163.2. Acetylethanol-trimethyl-ammonium hydroxide. $CH_3.CO.OCH_2.CH_2.NMe_3.OH$. An alkaloid from ergot which lowers the blood-pressure and increases peristalsis. **a. hydrochloride.** $Me_3NClC_2H_4COOMe$. Acecoline. White hygroscopic crystals of characteristic odor. Used as vasodilator.

acetylcyanide. C_3H_3ON = 69.1. Pyruvonitrile. Me.COCN. A colorless liquid, b.93.

acetylene. (1) A member of the acetylene series. (2) C_2H_2 = 26.03. Ethine, ethyne*. An unsaturated hydrocarbon and the simplest compound containing a triple bond, HC≡CH. A colorless gas with garlic odor, d.0.91, $m._{895mm.}$ −85, b. −83; slightly soluble in water but soluble in alcohol. It is used as a general anesthetic; technically for oxy-acetylene welding, and cutting of metals; in organic synthesis; and as an illuminant. It is produced by the action of water on calcium carbide and is shipped in steel cylinders (red label). (3) The tetravalent radical, =CH.CH=. **butyl-** Hexyne*. **carboxy-** Propiolic acid. **di-** Diacetylene. **dimethyl-** Crotonylene. **diphenyl-** Tolane. **ethyl-** Butyne*. **hexyl-** Caprilidene. **methyl-** Allylene. **pentyl-** Heptyne*. **phenyl-** Acetenylbenzene. PhC≡CH. A colorless liquid, b.139, soluble in alcohol. **phenylmethyl-** Phenylallylene. PhC≡CMe. A colorless liquid, b.185; soluble in alcohol. **propyl-** Pentine. **vinyl-** Vinylacetylene.

a. acids. Tetrolic acids. A series of organic acids of the general formula $C_nH_{2n-3}COOH$, which contain the bivalent —C:C— group; as,

propiolic acid, propynoic acid*	HC:C.COOH
tetrolic acid, *2*-butynoic acid*	MeC:C.COOH
pentinoic acid, *2*-pentynoic acid*	EtC:C.COOH
amylpropiolic acid	C_5H_7C:CCOOH
palmitolic acid	$C_{14}H_{27}C$:COOH
stearolic acid	$C_{17}H_{31}C$:CCOOH
behenolic acid	$C_{21}H_{39}C$:CCOOH

a. alcohols. A group of organic compounds which contain both an OH- and —C:C— group; as,

propin-3-ol, *2*-propyn-*1*-ol*	HC:C.CH_2OH
butin-3-ol, *2*-butyn-*1*-ol*	MeC:C.CH_2OH

a. carboxylic acid. Propiolic acid. **a. dicarboxylic acid.** $C_4H_2O_4$ = 114.0. Butynedioic acid*. HOOC.C:C.COOH. Colorless crystals, m.178; insoluble in water. Cf. glutinic acid, muconic acid. **di-** Diacetylene dicarbonic acid. HOOC.C:C.C:C.COOH. **tetra-** Tetracetyl dicarbonic acid. $HOOC.(C:C)_4.COOH$. **a. dichloride.** $C_2H_2Cl_2$ = 96.95. Dioform, dichloroethylene, CHCl = CHCl. *cis*-d.1.269, m. −50°C, b.48.4. *trans*-d.1.291, m. −80.5, b.60.3. Colorless liquids, immiscible with water but miscible with alcohol or ether. **a. dinitrile.** C_4N_2 = 76.0. Carbon subnitride. NC.C:C.CN. **a. diurein.** Glycoluril. **a. series.** Alkines, ethines. A group of unsaturated hydrocarbons of the general formula C_nH_{2n-2} which contain a triple bond, —C:C—.

C_2H_2....	ethyne*, ethine, acetylene
C_3H_4....	propyne*, propine, allylene
C_4H_6....	butyne*, butine, crotonylene
C_5H_8....	pentyne*, pentine, valerylene
C_6H_{10}...	hexyne*, hexine, hexoylene
C_7H_{12}...	heptyne*, heptine, oenanthylidene
C_8H_{14}...	octyne*, octine, caprylidene
$C_{10}H_{18}$...	decyne*, decine, menthene
$C_{12}H_{22}$...	dodecyne*, dodecylidene
$C_{13}H_{24}$...	tridecyne*, tridecylidene
$C_{14}H_{26}$...	tetradecyne*, tetradecylidene
$C_{15}H_{28}$...	pentadecyne*, pentadecine, benylene
$C_{16}H_{30}$...	hexadecyne*, hexadecine, cetenylene
$C_{18}H_{34}$...	octodecyne*, octadecylidene

a. stones. Acetylith. **a. tetrabromide.** $C_2H_2Br_4$ = 345.71. Tetrabromoethane, Muthmann's liquid. $CHBr_2.CHBr_2$. A yellow oily liquid, d.2.973, b.136 (36 mm.); insoluble in water and miscible with alcohol or ether. Used for the separation of mineral mixtures and in microscopy. **a. tetrachloride.** Tetrachloroethane. **a. urea.** $C_2H_2(CON_2H_2)_2$ = 142.11. A liquid, decomp. 300°C.

acetylfluoride. C_2H_3OF = 62.03. Ethanoyl fluoride*. MeCOF. A colorless liquid, d.-1.0369, m. −55, b.10; miscible with ether and decomposing in alcohol or water. Used in organic synthesis.

acetylformic acid. Pyruvic acid.

acetylglycine. $C_4H_7O_3N$ = 117.09. Acetylaminoacetic acid, aceturic acid. $MeCO.NH.CH_2.COOH$. Colorless crystals, m.206, decomp. 130; soluble in water or alcohol but insoluble in ether.

acetylide. A derivative of acetylene in which the hydrogen atoms are replaced by metals; as,

cuprous acetylide	Cu_2C_2
cobalt acetylide	CoC_2
silver acetylide	Ag_2C_2

acetylidene. The hypothetical isomer of acetylene, C=CH_2, in which it is assumed that one carbon atom is divalent.

acetyliodide. C_2H_3OI = 169.16. Ethanoyl iodide*. MeCOI. A brown fuming liquid, d.-

1.98, b.107. It is used for acetylation in organic synthesis.

acetylith. Acetylene stones. Sugar-coated granules of calcium carbide used for the generation of acetylene.

acetylization. Acetylation.

acetylize. Acetylate.

acetylperoxide. $C_4H_6O_4$ = 118.07. Ethanoyl peroxide*. $(MeCO)_2O_2$. Colorless leaflets, m.-30, b.63; slightly soluble in water and soluble in alcohol or ether.

acetylphenol. $C_8H_8O_2$ = 136.10. $PhO.COCH_3$. A colorless liquid, d.1.092 at 0, b.193.

acetylphenylene diamine (p). $C_8H_{10}ON_2$ = 150.14. Amino-acetanilide. $Me.CO.NH.C_6H_4.NH_2$. Colorless needles, m.159; slightly soluble in water, and very soluble in alcohol or ether. Used medicinally and in organic synthesis.

acetylphenylhydrazine. Pyrodin.

acetylpropyl alcohol. $C_5H_{10}O_2$ = 102.11. The hydroxy ketone, $MeCO.CH_2.CH_2.CH_2OH$. A colorless liquid, d.1.0159, b.208; miscible with water, alcohol or ether, and used as a solvent.

acetylrosaniline. $C_{20}H_{18}N_3COMe$ = 343.3. Red crystals, m.218, soluble in alcohol, carbon disulfide or chloroform, insoluble in water or ether.

acetylsalicylate. A compound containing the monovalent $MeCO.C_6H_4.COO$—radical, derived from acetylsalicylic acid.

acetylsalicylic acid. $C_9H_8O_4$ = 180.06. Aspirin, xaxa, acid aceticosalicylas, acetosal, acetosalic acid, acetophen, salacetin. The acetate derivative of salicylic acid, $MeCOO.C_6H_4.COOH$ (1:2). A colorless crystalline powder, m.135; slightly soluble in water and soluble in alcohol or ether and, with decomposition, in alkaline solutions. Used extensively in the manufacture of tablets, as an antirheumatic and antipyretic. **a. methyl ester.** Methyl acetylsalicylate.

acetylsalol. Spiroform.

acetyltannin. Tannigen.

acetylthymol. $C_{12}H_{16}O_2$ = 192.1. Thymylacetate. A slightly yellow liquid, d.1.009, b.244, used medicinally as an antiseptic.

acetyltropeine. $C_{10}H_{17}O_2N$ = 183.2. $MeCO.C_8H_{14}ON$. A syrupy liquid, b.236; soluble in water, alcohol or ether.

acetylurea. $C_3H_6O_2N_2$ = 102.08. Acetylcarbamide. $MeCO.NH.CONH_2$. Colorless crystals, m.218°C; slightly soluble in water or alcohol.

Achard, Franz Karl. 1753–1821. A German chemist, and pioneer in the manufacture of sugar from beets.

achilleic acid. An acid obtained from *Achillea millefolium*, identical with aconitic acid.

achilleine. $C_{20}H_{38}O_{15}N_2$ = 546.4. An alkaloid from *Achillea millefolium*, yarrow, or milfoil. Brownish-red masses of bitter taste; soluble in water. Sometimes used as an antipyretic.

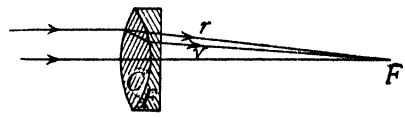
achilletin. $C_{11}H_{17}O_4N$ = 227.0. A split-product obtained from achilleine by the action of sulfuric acid.

achmatite, achmite. An epidote from the Ural Mountains.

achrodextrins. Achroodextrins.

achroite. A colorless tourmaline from Elba.

achromatic. Transmitting white light without breaking it up into colored rays. Cf. *apochromatic, chromatic, pantachromatic.* **a. lens.** A combination of lenses of different refractive indices with which chromatic aberration is corrected by bringing two spectral color rays to a common focus. A combination of a convex lens of crown glass with a concave lens of flint glass. **a. objectives.** Any system of lenses which brings light of different wave-lengths to a common focus; *i.e.*, avoids chromatic aberration. **a. substage.** A device for microscopes which corrects chromatic aberration. **a. system.** Any combination of prisms or lenses with a common focus for different colors; *e.g.*, an achromatic lens.



Achromatic lens.

C = crown glass *r = red ray*
F = flint glass *v = violet ray*
F = *focus*

achromic. Without color. **a. method.** The evaluation of diastase preparations by means of the a. period. **a. period.** The time needed for a 1 % starch solution to reach the a. point; *i.e.*, become transformed into achroodextrin. **a. point.** That point in the hydrolysis of starch by enzymes when iodine no longer produces a blue color.

achromobacteria. Small Gram-negative bacteria, usually motile. They produce no pigment or gas on gelatin, but a brown color on potato.

achroodextrins. $C_{36}H_{62}O_{31}$ = 990.7. A series of intermediate split products that are formed after erythrodextrin by the hydrolysis of starch or dextrin, termed alpha-, beta-, etc. They are not colored blue by iodine, and are converted into glucose by boiling with dilute acid.

aci. A prefix that indicates acid character, as in aci-phenylnitromethane, $PHCH:NO(OH)$, which differs from α-phenyl nitromethane, $PhCH_2.NO_2$. Cf. *ace.*

acicular. Slender, needle-like or hair-like in shape, as crystals or bacteria. **a. oxylepidine.** Di-benzoyl *stilbene.*

acid. (1) A chemical compound which yields hydrogen ions when dissolved in water; whose hydrogen can be replaced by metals or basic radicals; or which reacts with bases to form salts and water (neutralization). Antonym: base. (2) An extension of the term includes substances dissolved in media other than water. Cf. *base, ammonia system.* (3) Any substance which gives up protons (*proton donor*) or which reacts as $A \rightleftharpoons B + H^+$, where A is acid and B is base (Brönsted, Lowry, etc.) *e.g.*,

$$HAc \rightleftharpoons Ac^- + H^+$$
$$H_2O \rightleftharpoons OH^- + H^+$$
$$H_3O^+ \rightleftharpoons H_2O + H^+$$
$$HSO_4^- \rightleftharpoons SO_4^{--} + H^+$$
$$NH_4^+ \rightleftharpoons NH_3 + H^+$$

NH_4^+ and H_2O are acids, while Ac^{--} and SO_4^- are bases. Cf. *protophilia.*

A-, α-, β-. See *A* and *sulfonic acids.* **acrylic-** An organic a. of the general type, $C_nH_{2n-2}O_2$. **alcohol-** See *alcohol.* **aldehyde-** An organic a. containing aldehyde and carboxyl radicals. **aliphatic-** An a. derived from chain-compounds; *e.g.*, acrylic and fatty acids. **amic-** Amido acid. **amido-** An organic acid containing the monovalent —$CONH_2$ group and the carboxyl radical. **amino-** An organic a. containing the monovalent

—NH_2 and —COOH groups. **aromatic-** An organic compound containing a closed chain (*e.g.*, benzene ring) and the carboxyl group. **battery-** Electrolyte a. Sulfuric acid of d.1.150–1.835. **bromo-** An organic a. containing bromine. **carboxylic-** See organic acids. **carbylic-** See carbylic acids. **chloro-** An organic a. containing chlorine. **diatomic-** An a. containing two hydrogen atoms which are replaceable by metals or basic radicals. Cf. oxalic acids, fumaric acids. **dibasic-** Same as diatomic. **dihydric-** Same as diatomic. **dihydroxy-** An organic a. containing two hydroxy groups and one or more carboxyl groups. **effective-** See acidity. **electrolyte-** Battery a. **fatty-** An organic a. of the general type, $C_nH_{2n}O_2$. **halogen-** An inorganic a. containing a halogen: as, HCl, $HClO_3$. **haloid-** An inorganic a. containing a halogen element and no oxygen: *e.g.*, HCl, HBr. **hexabasic-** Hexatomic. **hexatomic-** An a. containing six hydrogens replaceable by metals or basic radicals. **hydrogen-** Hydracid. **hydroxy-** An organic a. containing one hydroxy group and one or more carboxyl groups. Cf. *phenol* acids. **inorganic-** A compound of hydrogen with a nonmetal other than carbon, or an acid radical containing no carbon. **labile-** A grouping such as the —SO_3H or —OSO_2H groups the acidic properties of which are unstable and depend on the other groups present. **meta-** (1) An inorganic a. of a trivalent nonmetal containing one replaceable hydrogen; *e.g.*, HPO_2, HBO_2, etc. (2) An organic, aromatic a. with radicals in the meta-position. **mineral-** Inorganic a. **mixed-** A mixture of nitric acid and sulfuric acid used for nitration. **monamino-** An organic a. containing one amino group and one or more carboxyl groups. **monatomic-** An a. having only one hydrogen atom which can be replaced by metals or basic radicals. **mono- amino-** Monamino a. **monoatomic-, monobasic-, monohydric-** Monatomic. **monohydroxy-** An organic a. containing one hydroxy group and one or more carboxyl groups. **nitro-** See nitro acid, nitroic acid, etc. **normal-** (1) Inorganic ortho- a. (2) A straight chain fatty a.; as, *n*-valeric acid. (3) A solution containing one gram-equivalent a. per liter; as, *N*-HCl. **organic-** Any carbon compound containing one or more carboxyl groups —COOH. This radical is indicated by the *prefix:* carboxy, or the *suffixes:* carboxylic, carbonyl or simply -oic or -oyl. For classification, see *acids*. **ortho-** (1) An inorganic a. of trivalent elements containing three hydrogen atoms replaceable by basic radicals; *e.g.*, H_3PO_4. (2) An organic a. containing a closed chain (*e.g.*, benzene ring) and radicals in the ortho position. **oxy-** (1) An inorganic a. containing oxygen, thereby differing from the haloid or hydrogen acids. Those of the type having least oxygen have the suffix *-ous;* those having most oxygen, the suffix *-ic*. (2) An organic a. containing an ether or oxy group in addition to the carboxyl

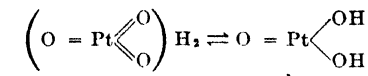
COMMON ACIDS, RADICALS AND SALTS

Acid	*Radical or ion*	*Salt*
acetic	CH_3COO—	acetate
adipic	—$OOC(CH_2)_4COO$—	adipate
anisic	$C_6H_4.OCH_3.COO$—	anisate
arsenic	$AsO_4\equiv$	ortho-arsenate
	AsO_3—	meta-arsenate
arsenous	$AsO_3\equiv$	ortho-arsenite
	AsO_2—	meta-arsenite
	$As_2O_5\equiv$	pyro-arsenite
benzoic	$PhCOO$—	benzoate
boric	$BO_3\equiv$	ortho-borate
	$B_4O_7=$	pyro-borate
	$BO_2=$	meta-borate
	BO_3—	perborate
bromic	BrO_3—	bromate
bromous	BrO_2—	bromite
butyric (n)	$Me(CH_2)_2COO$—	butyrate
camphoric	$C_8H_{14}(COO)_2=$	camphorate
capric	$Me(CH_2)_8COO$—	caprate
caproic (n)	$C_5H_{11}COO$—	caproate
carbolic	same as phenol	
carbonic	$CO_3=$	carbonate
	HCO_3—	bicarbonate
cerotic	$C_{25}H_{51}COO$—	cerotinate
chloric	ClO_3—	chlorate
chlorous	ClO_2—	chlorite
chromic	$CrO_4=$	chromate
	$Cr_2O_7=$	dichromate
chromous	$CrO_3=$	chromite
cinnamic	$PhCH:CHCOO$—	cinnamate
citraconic	—$OOCMeC:CHCOO$—	citraconate
citric	$C_3H_4(OH)(COO)_3\equiv$	citrate
cresotinic	$C_6H_3(OH)MeCOO$—	cresotinate
cresylic	Same as cresol	
cyanacetic	$NC.CH_2.COO$—	cyanacetate
cyanic	CNO—	cyanate
elaidic	$C_{14}H_{29}CH:CHCH_2COO$—	elaidinate
ferricyanic	$Fe(CN)_6\equiv$	ferricyanide
ferrocyanic	$Fe(CN)_6\equiv$	ferrocyanide
fluosilicic	$SiF_6=$	fluosilicate

COMMON ACIDS, RADICALS AND SALTS—(*Continued*)

Acid	*Radical or ion*	*Salt*
formic	$HCOO-$	formate
fumaric	$-OOCCH:CHCOO-$	fumarate
gallic	$C_6H_2(OH)_3COO-$	gallate
glutaric	$-OOC(CH_2)_3COO-$	glutarate
glycollic	$HOCH_2COO-$	glycolate
hippuric	$PhCONHCH_2COO-$	hippurate
hydrobromic	$Br-$	bromide
hydrochloric	$Cl-$	chloride
hydrocyanic	$CN-$	cyanide
hydrofluoric	$F-$	fluoride
hydroiodic	$I-$	iodide
hypochloric	$ClO-$	hypochlorite
iodic	IO_3-	iodate
iodous	IO_2-	iodite
lactic	$MeCH(OH)COO-$	lactate
levulinic	$MeCO(CH_2)_2COO-$	levulinate
lauric	$C_{11}H_{23}COO-$	laurate
maleic	$-OOCCH:CHCOO-$	maleate
malic	$-OOCCH_2CHOHCOO-$	malate
malonic	$-OOC.CH_2.COO-$	malonate
mellitic	$C_6(COO)_6\equiv$	mellitate
molybdic	$MoO_4=$	molybdate
nitric	NO_3-	nitrate
nitrous	NO_2-	nitrite
oleic	$C_{17}H_{33}COO-$	oleate
oxalic	$-OOC.COO-$	oxalate
	$HOOC.COO-$	bioxalate
oxaminic	$NH_2COCOO-$	oxaminate
oxybenzoic	HOC_6H_4COO-	oxybenzoate
palmitic	$C_{15}H_{31}COO-$	palmitate
perchloric	ClO_4-	perchlorate
periodic	IO_4-	periodate
phosphoric	$PO_4\equiv$	ortho-phosphate (triphosphate)
	PO_3-	meta-phosphate
	$P_2O_7=$	pyro-phosphate
	H_2PO_4-	acid phosphate
	$HPO_4=$	phosphate
	$P_2O_7\equiv$	pyrophosphate
phosphorous	$PO_3\equiv$	ortho-phosphite
	PO_2-	meta-phosphite
	$P_2O_5\equiv$	pyro-phosphite
phthalic	$C_6H_4(COO)_2=$	phthalate
picric	Same as trinitrophenol	
propionic	C_2H_5COO-	propionate
pyrogallic	Same as trihydroxybenzene	
pyruvic	$MeCO.COO-$	pyruvate
salicylic	HOC_6H_4COO-	salicylate
selenic	$SeO_4=$	selenate
selenious	$SeO_3=$	selenite
silicic	$SiO_4\equiv$	ortho-silicate
	$SiO_3=$	meta-silicate
stearic	$C_{17}H_{35}COO-$	stearate
suberic	$C_6H_{12}(COO)_2=$	suberate
succinic	$-OOC.CH_2CH_2.COO-$	succinate
sulfonic acid	$-SO_2OH$	(see sulfonic acids)
sulfanilic	$NH_2C_6H_4SO_3-$	sulfanilate
sulfuric	$SO_4=$	sulfate
	HSO_4-	bisulfate
sulfurous	$SO_3=$	sulfite
	HSO_3-	bisulfite
tannic	$C_{14}H_9O_9-$	tannate
tartaric	$(CHOH)_2-(COO)_2=$	tartrate
	$C_2H_2(OH)_2COOH.COO-$	bitartrate
	$-OOC.CHMe.CH_2.COO-$	pyrotartrate
tartronic	$-OOC.CHOH.COO-$	tartronate
telluric	$TeO_6\equiv$ and $TeO_4=$	tellurate
tellurous	$TeO_3=$	tellurite
thioacetic	$MeCOS-$	thioacetate
thiocyanic	$SCN-$	thiocyanate
titanic	$TiO_3=$	titanate
toluylic	$C_6H_4MeCOO-$	toluylate
tungstic	$W_2O_7=$ or $WO_4=$	tungstate
wolframic	Same as tungstic	

radical. **oxygen-** Oxy a. (inorganic). **oxyhalogen-** An a. containing oxygen and a halogen; as, $HClO_3$. **para-** An organic a. derived from aromatic hydrocarbons and containing the radicals in the para-position. **pentatomic-** An a. containing five hydrogen atoms which can be replaced by metals or basic radicals. **pentabasic-** Pentatomic. **phenol-** Phenol acids. **plant-** Those derived from vegetable sources. **polyatomic-** An a. containing more than one hydrogen atom which can be replaced by metals or basic radicals. **polybasic-** Polyatomic. **pseudo-** (1) A tautomeric form of an organic a. (2) An a. containing hydroxyl radicals:



true a. pseudo a.

pyro- An acid derived by the action of heat; usually an intermediate compound between acids and acid anhydrides. **racemic-** An organic acid consisting of a molecular mixture of optically active dextro- and levo- compounds. Cf. *tartaric acid*. **resin-** Acids derived from resins, *q.v.* **soldering-** Hydrochloric a. of varying strength used for soldering. **Spekker-** A mixture of equal volumes of sulphuric acid (d.1.84) and phosphoric acid (d.1.75) used to dissolve iron alloys in preparation for analysis, particularly with the Spekker photoelectric absorptiometer. **sulfinic-** An acidic organic compound in which an H atom is replaced by the SO_2H group. They are named from the hydrocarbon; as, ethanesulfinic acid*, $EtSO_2H$. **sulfo-** An organic acid in which sulfur replaces the carbon atom of the carboxyl group. Cf. *thioacids*. **sulfonic-** An acidic organic compound in which a H atom is replaced by the SO_2OH group. They are named from the hydrocarbon; as, ethanesulfonic acid*, $EtSO_3H$. **tetrabasic-** Tetratomic. **tetrahydric-** Tetratomic. **tetrahydroxy-** An organic acid containing four hydroxy groups and one or more carboxyl groups. **tetratomic-** An acid containing four hydrogen atoms which can be replaced by a metal or basic radical. **thio-** An acid in which one or more sulfur atoms replaces the oxygen of the acid radical; *e.g.*, thiosulfuric, thiolic, thionic acid, etc. Cf. *sulfo-acids*.

a. of air. Carbon dioxide. **a. albuminate.** A metaprotein soluble in weak alkali. **a. of amber.** Succinic acid. **a. amide.** An organic compound containing the monovalent formamyl radical, $—CONH_2$. Cf. *a. imide*. **a. anhydride.** An acid from which one or more molecules of water have been removed; *e.g.*, SO_3 is the anhydride of H_2SO_4, MeCO.O.OCMe is the anhydride of MeCOOH. **a. of ants.** Formic acid. **a. of apples.** Malic acid. **a. of benzoin.** Benzoic acid. **a. bordeaux.** Bordeaux B. **a. brown.** Naphthylamine brown. **a. capacity.** The number of OH^- ions which a molecule of a base yields in an aqueous solution; thus, NaOH is monoacid, $Ca(OH)_2$ is diacid and, hence, have an **a. capacity** of one, two, respectively. **a. chloride.** A compound containing the monovalent —COCl radical; *e.g.*, acetyl chloride, MeCOCl. **a. dyes.** Any coloring matter for wool or silk which acts as a base and is used as a dye in an acid bath. **a. egg.** An earthenware jar used for storing acids. **a. esters.** The derivatives of polyvalent organic acids in which some of the acid hydrogen atoms are and some are not replaced by a radical (R); hence, compounds that contain both the COOH and COOR groups. **a. fuchsin.** Acid magenta II, acid rosein. The di- and tri-sulfonic acids of rosaniline and pararosaniline which are used as a stain and indicator. **a. function.** Hydrogen ion. **a. group.** The monovalent carboxyl radical, —COOH, which is present in all organic acids. **a. halide.** An organic compound containing the monovalent —COX radical in which X is a halogen (Cl, Br, I, or F), as,

acid bromides, R-oyl bromide*.....	R—COBr
acid chlorides, R-oyl chloride*.....	R—COC
acid fluorides, R-oyl fluoride*.....	R—COF
acid iodides, R-oyl iodide*.....	R—COI

a. hydrazide. An organic compound containing the monovalent $—CONHNH_2$ radical; as, acethydrazide $MeCONHNH_2$. **a. hydrogen.** The hydrogen of the —COOH group in organic compounds which can be replaced by metals, alkyls, aryls or basic radicals. **a. ions.** A negatively charged atom (*e.g.*, Cl^-) or radical (*e.g.*, SO_4^{--}). See the table of acid radicals. **a. amide.** A compound containing the —C(:NH)OH radical. Cf. *a. amide*. **a. infraprotein.** An acid metaprotein. **a. of lemon.** Citric acid. **a. of milk.** Lactic acid. **a. mordant dyes.** An acid dye requiring a mordant for its fixation upon fibres. **a. number.** A measure of free fatty acids in animal and vegetable fats. It is the number of mg. KOH necessary to neutralize the free fatty acids in one gram of fat. **a. nitriles.** Nitriles. **a. peroxides.** An organic compound containing the bivalent —CO.O—O.CO— radical; *e.g.*, acetyl peroxide $(C_2H_3O)_2O_2$. Cf. *a. anhydride*. **a. proof material.** Any substance resisting the corroding effect of a.; as, stoneware or certain alloys. **a. proof stain.** See *table* top impregnation. **a. pump.** A pressure pump used for drawing a. or ammonia from carboys. **a. radicals.** (1) A mono- or polyvalent radical derived from a mono- or polyvalent a. by subtracting one or more hydrogen atoms. See the table. (2) In organic chemistry the acyl radical is sometimes known as the acid radical and has the suffix carbonyl or -oyl; as, benzoyl, PhCO—. **a. rock.** A rock containing more than 60 % Si. **a. salt.** A compound derived from a. and bases in which only a part of the hydrogen of the a. is replaced by a basic radical; *e.g.*, an acid sulfate $NaHSO_4$ or an acid carbonate, $NaHCO_3$. They are usually designated with the prefix, bi-; *e.g.*, bisulfate, bicarbonate, etc. **a. solution.** An aqueous solution containing more hydrogen ions than hydroxyl ions (see *hydrogen-ion concentration*). **a. of sugar.** Oxalic acid. **a. sulfate.** Bisulfate, disulfate. An inorganic compound containing the monovalent $—HSO_4$ radical derived from sulfuric acid. **a. value.** (1) Acidity expressed in terms of normality. (2) A. number.

acidamide. An organic compound containing the radical $—CONH_2$. Cf. *acid imide*.

acidation. (1) Acidylation. Conversion into an acid. (2) Acidification, or making a solution acidic.

acidify. To add an acid to a solution until the pH value falls below 7.0.

acidimeter. Obsolete term for hydrometer.

acidimetry. The titration of an acid with a standard alkali solution (see *quantitative analysis*).

acidity. (1) Sourness. See *taste.* (2) An excess of hydrogen ions in aqueous solution, which is measured in two ways: (*a*) the intensity of action (*=degree* of acidity) expressed as pH value (where 10^{-7} gm. H^+ per liter is neutral) and (*b*) the amount of action (*=amount* of acidity) expressed as normality (gram-equivalent per liter). Antonym: Alkalinity. (3) The power of a base to unite with one or more equivalents of an acid. Antonym: Basicity. **amount of-** The normality or percentage of an acid as determined by titration (effective acid). **degree of-** The strength of an acid expressed by its hydrogen ion concentration (free acid). Cf. pH.

acidol. $C_5H_{11}O_2N.HCl$ = 153.6. Betaine hydrochloride. Colorless crystals; soluble in water. It is used as substitute for HCl in digestive disturbances.

acids. See the tables:

R.COOH	
$C_nH_{2n+1}COOH$	fatty acids
$C_nH_{2n-1}COOH$	acrylic acids, alicyclic acids
$C_nH_{2n-3}COOH$	acetylene acids, fatty acids (C).
$C_nH_{2n-7}COOH$	aromatic acids (1).
$R(COOH)_2$	
$C_nH_{2n}(COOH)_2$	oxalic acids
$C_nH_{2n-2}(COOH)_2$	fumaric acids
$C_nH_{2n-4}(COOH)_2$	acetylenedicarboxylic acids
$C_nH_{2n-8}(COOH)_2$	aromatic acids (2).
HO.R.COOH	alcohol acids, phenol acids
R(CO)COOH	ketone acids
NH_2.R.COOH	amino acids
$R.SO_3H$	sulfonic acids
$H_xS_yO_z$	sulfuric acids
R.COSH	thiocarbonic acids

acidulation. Acidation.

acidulate. Acidify.

acidulin. A brand of glutamic acid hydrochloride.

acidum. The Latin for acid; *e.g.*, **a. aceticum.** See *acetic acid;* **a. benzoicum.** See *benzoic acid;* etc.

acidylate. Acylate. The introduction of an acid radical into an organic compound; as, *acetylate, benzoylate*

acidylation. Acylation. The process of introducing an acid radical into an organic compound; *e.g.*, acetylation (acetyl radical), benzoylation (benzoyl radical), formylation (formyl radical), etc.

acieral. An aluminum alloy containing 3–6 % Cu, 0.1–1.4 % Fe, 0–1.5 % Mn, 0.5 %–0.9 % Mg and 0–0.4 % Si. Cf. *aerometal.*

acinitro compound. A colored isomer of a nitro compound which contains a monovalent —OR and monovalent —NO group. They are derived from nitro-compounds by a metatenomeric change.

acitrin. $C_{18}H_{15}O_2N$ = 277.1. 2-Phenylcinchonic acid ethyl ester, ethyl phenylcinchonate. A pale yellow, crystalline powder, odorless, tasteless, m.61; soluble in water or alcohol. Used medicinally in gout and rheumatism.

acivinil alcohols. Unsaturated *ketols.*

Acker process. The manufacture of sodium hydroxide by electrolysis of molten salt using molten lead as cathode and steam as reagent.

Ackermann automatic reckoner. A calculating device consisting of two circular disks with scales and pointer, used for determining the dry substance of milk from its specific gravity and fat content.

acme burner. A bunsen burner with regulators for gas and air, constructed so that the flame cannot strike-back.

acmite. $NaFeSi_2O_6$. Aegirite. A rock-forming monoclinic pyroxene, d.3.53, hardness 6–6.5, Mol. Vol. 65.5, which occurs as a brownish, greenish or black *silica* mineral, *q.v.*

acne bacillus vaccine. A vaccine containing the acne bacillus, used in the treatment of mild forms of acne.

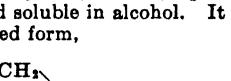
acocantherin. A crystalline glucoside from *Acocanthera abyssinica.* It is the active principle of the shashi arrow poison used by the natives of Eastern Africa, and is supposed to be identical with ouabain.

acoin. Di-p-anisyl-phenetyl-guanidin-chlorhydrate. A white crystalline powder, m.176; soluble in water. Used as a local anesthetic.

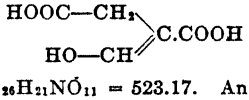
acolytine. Lyaconine. An alkaloid of *Aconitum.*

aconic acid. $C_5H_4O_4$ = 128.06. Formylsuccinic acid lactone, *4.5*-dihydro-5-keto-3-furan carboxylic acid.

The monobasic acid,



Colorless, triclinic crystals, m.164; sparingly soluble in water and soluble in alcohol. It also exists in the hydrated form,



aconine. $C_{26}H_{21}NO_{11}$ = 523.17. An amorphous alkaloid from the root of aconite. **acetylbenzoyl-** Aconitine. **pseudo-** Pseudaconine.

aconite. Aconitum, monkshood, wolf's bane, blue rocket, friar's cowl. The ranunculaceous plant *Aconitum napellus,* whose root and leaves are used medicinally as a fluid extract. **a. alkaloids.** A number of alkaloids occurring in *Aconitum* species, *e.g.*,

aconine	$C_{26}H_{21}O_{11}N$
lycoctonine	$C_{27}H_{41}O_9N$
indaconine	$C_{27}H_{47}O_9N$
neopelline	$C_{32}H_{45}O_8N$
pyraconitine	$C_{32}H_{41}O_9N$
lappaconitine	$C_{32}H_{43}O_9N_2$
aconitine	$C_{34}H_{47}O_{11}N$
japaconitine	$C_{34}H_{49}O_{11}N$
indaconitine	$C_{34}H_{47}O_{10}N$
cynoctonine	$C_{36}H_{34}O_{12}N_2$
pseudaconitine	$C_{36}H_{51}O_{12}N$
bikhaconitine	$C_{36}H_{51}O_{11}N$
jesaconitine	$C_{40}H_{51}O_{12}N$

a. leaves. The dried leaves of *A. napellus*, used similarly to a. *root*. **a. root.** The dried tuberous roots of aconite, containing not less than 0.5% alkaloids. Used as an antineuralgic, sudorific and sedative.

aconitic acid. $C_6H_6O_6$ = 174.1. Citridic acid, equisetic acid, 1-trans-tricarballylic acid, achilleic acid, adonic acid, 1.2.3-propene tricarboxylic acid*. The tribasic acid $COOH.CH_2.C(COOH):CH.COOH$. Colorless crystalline leaflets, m.190, obtained from *Aconitum, Equisetum* (horsetail), *Adonis* and *Achillea* species, or made from citric acid. It occurs also in beets and sugar cane.

aconitine. $C_{34}H_{47}O_{11}N$ = 645.4. Acetyl-benzoyl-aconine. An extremely poisonous alkaloid from the root of *Aconitum napellus*. Colorless, rhombic prisms, or an amorphous powder, m.195; slightly soluble in water, readily soluble in alcohol or ether. Used as a circulatory sedative. Cf. *benzaconine, aconite alkaloids*. **pseudo-** Pseudaconitine. **a. arsenate.** Colorless crystals, soluble in water or alcohol. **a. hydrobromide.** $C_{34}H_{47}O_{11}N.HBr.2\frac{1}{2}H_2O$ = 771.5. Colorless crystals, m.163, soluble in water or alcohol. Used as a cardiac, respiratory or spinal sedative, vasodilator, diuretic, antipyretic and diaphoretic. **a. hydrochloride.** $C_{34}H_{47}O_{11}N.HCl.3H_2O$ = 736.1. Colorless l-rotatory crystals, soluble in water or alcohol and used as the hydrobromide. **a. nitrate.** $C_{34}H_{47}O_{11}N.HNO_3.5H_2O$ = 798.65. Colorless, l-rotatory crystals, which are soluble in water or alcohol. Used instead of the hydrobromide for hypodermic medication. **a. phosphate.** $C_{34}H_{47}O_{11}N.H_3PO_4$ = 743.4. A white crystalline powder which is soluble in water or alcohol. **a. salicylate.** $C_{34}H_{47}O_{11}N.C_7H_6O_3$ = 783.5. White crystals, soluble in water or alcohol. **a. sulfate.** $(C_{34}H_{47}O_{11}N)_2.H_2SO_4$ = 1389.02. Colorless l-rotatory crystals, soluble in water or alcohol.

Aconitum. A genus of poisonous plants of the Ranunculaceae family. See *aconite*.

aconityl phenetidine. Apolysin.

acopyrin. Acetopyrin.

acoretin. A neutral resin obtained by the oxidation of the aqueous extract of sweet flag root, *Acorus calamus*.

acorin. $C_{36}H_{60}O_6$ = 588.6. A glucoside from calamus; the rhizome of *Acorus calamus* (sweet flag), (Araceae); used in perfumery.

acorn. The fruit of the oak, *Quercus robur*, used as astringent in diarrhea. **a. flour.** Racahout. **a. sugar.** Quercitol. **a. tube.** A small thermionic valve.

acoustics. A branch of science dealing with sound, and its effects.

acqua. The Italian word for water.

acquired immunity. The resistance of an organism resulting from an attack by an infectious disease. It can also be artificially produced by treatment with a vaccine, serum, etc.

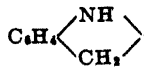
acraldehyde. Acrolein.

acre. A surface measure, 1 acre = 0.4047 hectare = 4 rods = 160 poles = $\frac{1}{640}$ sq. mile.

Acree-Rosenheim reaction. A test for proteins and tryptophane. When the solution plus dilute formaldehyde is layered on concentrated sulfuric acid, a purple ring indicates proteins.

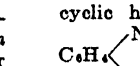
acrid. Pungent, bitter, burning or irritating; as, a drug, or sensation.

acridan. $C_{13}H_{11}N$ = 181.15. 5,10-dihydroacridine. The compound



acridic acid. $C_{11}H_7O_4N$ = 217.0. Acridinic acid, α,β- or 2.3-quinoline dicarboxylic acid, $C_9H_5N(COOH)_2$. Colorless crystals which decompose at 130. It is an oxidation product of acridine.

acridine. $C_{13}H_9N$ = 179.15. A tricyclic, heterocyclic hydrocarbon obtained from coal tar.



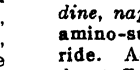
Colorless leaflets, m.109, b.346; soluble in water or alcohol. Used in the synthesis of dyes and drugs and the treatment of trypanosomiasis. Cf. *benzacridine, naphthacridine, chrysaniline, rivanol*. **diamino-sulfate.** Proflavine. **diamino- -chloride.** Acriflavine. **diaminodimethyl-** A yellow dyestuff. **dihydro-** Acridan. **dihydroketo-** Acridone. **diphenanth-** Diphenanthacridine.

a.-dye. Any dyestuff derived from acridine; as, *acriflavine*. They are characterized by fluorescent solutions.

acridinic acid. Acridic acid.

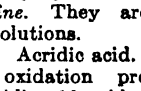
acridol. An oxidation product of acridine, probably acridine-10-oxide.

acridone. $C_{13}H_9ON$ = 195.08. Ketodihydroacridine,



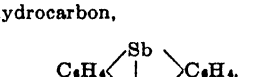
Colorless crystals, m.354; insoluble in water and slightly soluble in alcohol or ether.

acridostibine. $C_{13}H_9Sb$ = 286.92. The heterocyclic hydrocarbon,



acridyl. The monovalent radical $C_{13}H_8N$—, derived from acridine.

acriflavine. $C_{14}H_{14}N_3Cl$ = 261.8. 4,8-diamino-1-methylacridine chloride, trypaflavine



A brownish-red, crystalline powder, soluble in water or alcohol giving a fluorescent solution. An antiseptic and disinfectant. **a. hydrochloride.** A more soluble form containing 1 mol. HCl. **a. neutral.** The less soluble form, without HCl.

acrimonious. Bitter, caustic, sharp; as, a taste.

acrinyl. p-hydroxybenzyl. The monovalent C_7H_7O— radical. ($HO.C_6H_4.CH_2$—). **a. isothiocyanate.** C_8H_7ONS = 165.1. The compound, $C_7H_7O.NCS$, which occurs in white mustard oil and is a splitproduct of sinalbin. **a. sulfocyanate.** $C_7H_7O.CNS$ = 165.13. An oily, colorless liquid found in white mustard oil, which is insoluble in water.

Acrocomia. The coyol palm of Central and South America. An oil is extracted from the nuts.

acro-dextrin. Achroodextrin.

acrol. The divalent $CH_2:CH.CH=$ radical derived from acrolein, (cf. *acryl*).

acrolactic acid. Glucic acid.

acroleic acid. Acrylic acid.

acrolein. C_3H_4O = 56.05. Acrylic aldehyde, propenal*, allyl aldehyde, ethylene aldehyde, $CH_2:CH.CHO$. A decomposition product of

glycerol and glycerides. A yellow or colorless liquid with pungent odor, d.0.84, b.52.4; soluble in water, alcohol or ether. Used in chemical warfare as an irritant, and also in organic synthesis. Inflammable. Cf. *acrol, acryl.* **di-methyl-** Tiglaldehyde. **furfur-** *Furfuracrolein.* **met-** See *metacrolein.* **methyl-** Crotonaldehyde. **2-naphthyl-** $C_{13}H_{10}O$ = 182.1. Pale yellow needles, m.48, $b._{0.4mm}$160–170. **phenyl-** Cinnamaldehyde.

acrolite. A synthetic resin from phenol and glycerol.

acromelin. $C_{17}H_{16}O_9$ = 364.12. A lactone obtained from *Physcia acromela.*

acrometer. A hydrometer for determining the specific gravity of oils.

acronarcotic. A drug which is acrid and narcotic; as, aconite, sanguinaria or veratrum.

acronol. A trade name for basic dyestuffs.

acropeptides. Complex amino acids produced by the action of hot glycerol on gelatin.

acrose. $C_6H_{12}O_6$ = 180.09. A synthetic carbohydrate obtained by the action of dilute NaOH on glycerose. *α-* Same as *i*-fructose.

acrosite. Pyrargyrite.

acryl. The organic, monovalent radical C_3H_3O— derived from acrolein. **alpha-** The monovalent radical $CH_2{:}C(CHO)$— **beta-** A monovalent radical occurring in two isomeric forms:

HC.CHO	HC.CHO
‖	‖
HC—	—CH
cis-	trans-

acrylaldehyde. Acrolein.

acrylate. A salt of acrylic acid containing the monovalent $C_3H_3O_2$- radical.

acrylic acid. $C_3H_4O_2$ = 72.05. Acroleic acid, propenoic acid*, propene acid, ethylenecarboxylic acid, $CH_2{:}CH.COOH$. An oxidation product of acrolein. A colorless liquid with pungent odor, m.10, b.140, $d._{16}$ = 1.062; soluble in water. *α,β-*dimethyl- See *angelic* and *tiglic* acid. *β,β-*dimethyl- Senecioic acid. *β-*ethyl- *α-*Pentenic acid. *α-*hydroxy- Pyruvic acid. imidoazole- Urocanic acid. *α-*methyl- $CH_2{:}$-$CMe.COOH$ = 80.046. Methacrylic acid. An isomer of butenic acid, d.1.015, m.16, b.160.5. *β-*methyl- See *crotonic* and *isocrotonic acid.* *α-*phenyl- Atropic acid. *β-*phenyl- Cinnamic acid. propyl- Hexenoic acid*.

a. acids. Olefine acids. A series of unsaturated aliphatic acids of the general formula, $C_nH_{2n-2}O_2$; as:

acrylic acid	$C_2H_3.COOH$
butenic acids (crotonic, isocrotonic, vinylacetic and methylacrylic acid).	$C_3H_5.COOH$
pentenic acids (tiglic, angelic and senecioic acid).	$C_4H_7.COOH$
hexenic acids	$C_5H_9.COOH$
teracrylic acid	$C_6H_{11}.COOH$
hypogeic acid	$C_{15}H_{29}.COOH$
oleic, elaidic acid	$C_{17}H_{33}.COOH$
erucic, brassidic and behenic acid	$C_{21}H_{41}.COOH$

a. aldehyde. Acrolein.

acrylonitrile. Vinylcyanide.

acrylophenone. C_9H_8O = 132.06. Phenylvinyl ketone, $CH_2{:}CH.COPh$. An isomer of cinnamaldehyde. *β-*phenyl- Chalcone.

acrylyl. The monovalent radical $CH_2{:}CH.CO$—, derived from acrylic acid.

Actæa. A genus of ranunculaceous herbs:

acterol. An irradiated *ergosterol,* q.v.; 1 cc. = vitamin D of 100 cc. cod liver oil.

actiniasterol. A sterol, m.145, from sea anemone, *Anemonia sulcata.*

actinic. Pertaining to radiations; especially light that produces a chemical change. **a. rays.** Those rays of the spectrum which produce chemical changes; they occur in the violet and ultra violet regions. Cf., *irradiation, activation, ultraviolet, quantum efficiency.*

actinine. $C_{13}H_{24}O_5N_2$ = 288.3. An alkaloid from *Actinea equina.*

actinism. The study of chemical changes produced by radiations. Cf. *photochemistry, irradiation, excitation, activation.*

actinium. Ac = 227. A radioactive element, atomic number 89. It was discovered in 1899 by DeBierne in pitchblende, and is identical with the anemium of Giesel (1902). It is trivalent, an isotope of mesothorium 2, and the predecessor of the actinium series. See *radioactive substances.* **a. emanation.** Actinon. **a. series.** A series of radioactive disintegration products derived from uranium 2.

actinodaphnine. $C_{19}H_{19}NO_4$ = 325.15. An alkaloid from *Actinodaphne* species, Lauraceae, resembling laurotetanine, *q.v.* Cf. *bulbocapnine.*

actinolite. A green, rock-forming calcium, magnesium and iron amphibole resembling tremolite, $Ca(MgFe)(SiO_4)_3$, d. 3–3.5; its fibrous variety is asbestos.

actinometer. (1) A screen which fluoresces under the influence of radioactive rays and is used as a photometer. (2) A device for measuring the power of actinic rays. Cf. *uroxameter.*

actinomycetin. An antibiotic substance obtained from cultures of *Streptomyces albus.*

actinomycin. An antibiotic substance found in cultures of *Streptomyces antibioticus;* it consists of two fractions, A and B.

actinon. An = 222. Actinium emanation, Act-Em, an isotope of niton, Nt, atomic number 86. It is the gaseous disintegration product of actinium. Cf. *radioactive series.*

actinouranium. An isotope of uranium and a primary radio-element of At. No. 92. Cf. *radioactive series.*

actinozoa. A class of animals of the phylum Coelenterata, or jelly-fishes, which are characterized by star-like structures.

action. The physical concept of activity or work performed in unit time; hence: *action = energy × time* or *momentum × distance;* hence, a = mv^2t = mvs, where m is the mass, v the velocity, t the time and s the distance traversed. **chemical-** Any reaction, q.v., or a change in which the atoms of a molecule or molecules are rearranged. **electronic-** The change of an electron from one to another energy level, q.v. Cf. *excitation.* **physical-** Any transformation of matter which does not affect molecular structure.

activated. Rendered active, reactive, or excited. **a. atom.** See *atom*. **a. carbon.** Charcoal produced by the destructive distillation of vegetable matter; as, wood, rice-hulls, nut-shells, etc., with or without the addition of chemicals. It is used in powdered form for decolorizing sugar solutions, oils, fats, etc., or in granular form as an adsorbent in gas-masks and for the recovery of solvent vapors. Cf. *norit, boneblack, revivification*. **a. molecule.** A molecule with one or more excited atoms. Cf. *irradiation, excitation*. **a. sludge.** The oxidized and flocculent sediment of sewage which contains different types of bacteria. **a. s. process.** A method of sewage disposal in which the sewage is agitated in contact with air, causing thereby oxidation and flocculation by bacterial action; it is left to settle in separation tanks, and yields a harmless and clear effluent.

activation. (1) Any method by which a metallic catalyst is rendered active or is regenerated; as, heating platinum sponge. Cf. *revivification*. (2) The transformation of an inactive enzyme (zymogen) into an active enzyme by a third substance (kinase); *e.g.*, pepsinogen (the *zymogen*) is transformed by HCl (the *kinase*) into pepsin (the *active enzyme*). (3) Excitation. (4) Irradiation. (5) A. of carbon, *e.g.*, by heating with chlorine, steam, carbon dioxide, or sulfuric acid.

activator. (1) A catalyst. (2) A substance used in flotation to produce a coating having metallic properties; as, sodium sulfide for lead carbonate ores; or copper sulfate for sphalerite.

activatory. See *phase*.

active. (1) Dynamic or working, as opposed to static or inert. (2) Having optical properties, as an asymmetric carbon atom. Cf. *optical activity*. **a. deposit.** The formation of a radioactive layer on a substance which is exposed to the emanation of radio-elements. **a. immunity.** The stimulation of an organism which produces protective substances against infection by bacteria. **a. immunization.** The processes by which the protective agencies of an organism are caused to resist a bacterial invasion. **a. mass.** The number of moles (gram-molecules) in a unit volume (1 liter). **a. oxygen test.** A test for rancidity in fats, by the liberation of iodine from potassium iodide in acetic acid. **a. principle.** The substance which is the cause of the physiological action of a drug: *e.g.*, an alkaloid, glucoside, or essential oil.

activin. An organic iodine compound of casein used medicinally.

activity. (1) The rate at which an agent works. Compare *action*. It is measured in watts. (2) The ratio of the escaping tendency (*fugacity*) of two phases at the same temperature: $a = f_1/f_1^\circ = p_1/p_1^\circ$; one phase taken as standard. A correction applied to the actual concentration (c) of a strong electrolyte, which enables it to satisfy Ostwald's dilution law (q.v.). (3) A measure of interionic forces. Cf. *a. coefficient*. **a. of activated carbon.** The percentage of carbon disulfide vapor absorbed by carbon (generally 50 %). **amylolytic-** The digestive power of amylase. **enzyme-** The rate at which an enzyme works. **excited-** Active deposit. **ionic-** Thermodynamic concentration. In a dilute solution which obeys the gas laws, the i.a. equals the concentration; in other solutions it is that value, which with the fugacity (q.v.), ensures that the gas laws still hold. **optical-** The capacity of a substance to rotate the plane of polarized light. This depends on the presence of, at least, one asymmetric carbon atom in the structure of the compound. **peptic-** The digestive power of pepsin. **radio-** See *radioactivity*. **tryptic-** Digestive power of trypsin.

a. coefficient. The ratio, a/c; see activity (2).

actol. Silver lactate.

acton. Ethyl orthoformate.

actor. A compound which takes part in both primary and secondary reactions. See *induced reactions*.

acute. Quick, short or sharp. Cf. *chronic*. **a. poisoning.** See under *poisoning*.

acyclic. The structure of organic compounds which contain no ring-system, as in the methane series. Synonym: Aliphatic or chains. Antonym: Cyclic, aromatic or rings.

acyl. An organic radical derived from an organic acid by the removal of the hydroxyl group; hence, R.CO—is the a. radical of R.CO.OH, $R.SO_2$—is the a. radical of $R.SO_2.OH$. It is also known as the acid radical. See *acetyl, benzenesulfonyl, benzoyl*, etc. **a. derivatives.** Any organic compound containing an a. radical, such as amides, $R.CO.NH_2$, acyl chlorides, R.CO.Cl. **a. radical.** Acyl.

acylation. Acidylation. The formation or introduction of an acyl radical in or into an organic compound.

acyloin. An organic compound of the type R.CO.CHOH.R, formed by condensation of aldehydes, which readily oxidizes to diketones; as, Ph.CO.CHOH.Ph, benzoin.

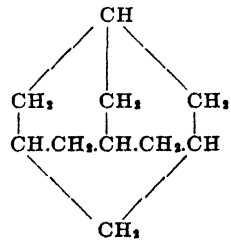
aczol. An ammoniacal solution of zinc and copper phenolates used as a wood preservative.

adaline. $C_7H_{13}O_2N_2Br = 237.1$. Carbromal, bromodiethyl-acetyl-carbamide, α-bromo-α-ethyl-butyryl urea, $Et_2CBr.CO.NH.CO.NH_2$. A white, odorless, crystalline powder, m.116°; slightly soluble in water and soluble in alcohol. Used medicinally as a hypnotic and sedative.

Adam galactometer. A graduated burette with two glass bulbs, used in milk analysis.

adamant. A hard mineral or substance; as, diamond.

adamantane. $C_{10}H_{16} = 136.2$. Tricyclodecane. The hydrocarbon



adamantine. Diamond. **a. boron.** See *boron*. **a. spar.** A dark-grayish, smoky variety of corundum from India; it is green in transmitted light.

adamellose. An igneous rock of the andesite-diorite series, containing hornblende, feldspar, quartz, chlorite, agnetite, apatite, and rutile. It is found at Pigeon Point, Minnesota.

Adami's theory. The lateral chain theory of heredity expressed in terms of biophoric molecules.

adamine. Adamite.

adamite. Zn_2HAsO_5. Adamine. A native zinc arsenate, which occurs in yellow orthorhombic crystals in Chile, Greece, France.

Adamkiewicz reaction. A test for proteins made by layering on glacial acetic acid and concentrated sulfuric acid; proteins give a violet ring.

adamon. Dibromo-dihydro-cinnamic acid ester of borneol. Used medicinally as a sedative and anaphrodisiac.

Adam's apple. (1) The fruit of the plantain tree, *Musa paradisiaca*. (2) The projection of the thyroid cartilage of the larynx. **A's. needle.** Yucca.

adamsite. (1) A greenish-black variety of mica. (2) Diphenylamine chlorarsine.

Adansonia. A genus of trees of the Bombacaceae. *Adansonia digitata*, the baobab tree of Africa, yields boui or monkey bread which is used by natives as food. The bark is used as emollient, the dried leaves, lalo, are used by the natives as an antipyretic; the fibers are used for paper.

adansonine. An alkaloid from the bark and leaves of *Adansonia baobab* or *A. digitata* of Africa and India. Colorless white crystals, used medicinally as a febrifuge.

adaptation. The advantageous adjustment of an organisms to a change in its surrounding.

adapter. A tapered glass tube which is used to connect a retort or condenser with the receiving vessel.

adatom. An atom adsorbed on a surface in such a way that it will migrate over the surface like a two-dimensional gas (at certain temperature). Cf. *adion*.

addition. A chemical reaction which involves no change of valency; usually the union of two binary molecules to form a more complex compound; as, $HCl + NH_3 = NH_4Cl$. **a. compound.** An inorganic compound formed by addition; *e.g.*, NH_4Cl.

additive. Added to. **a. compound.** An organic compound formed by the saturation of an unsaturated compound containing one or more double or triple bonds. *E.g.*, benzene dichloride, $C_6H_6Cl_2$ is an additive compound of benzene, C_6H_6. It differs from substituted compounds, *e.g.*, dichlorobenzene, $C_6H_4Cl_2$. **a. properties.** A property of a molecule which is the sum of the individual properties of the atoms or linkages composing it. Thus, in absence of molecular association, the molecular refractivity of a molecule is given by the sum of the atomic refractivities of its atoms, due allowance being made for the types of linkage which bind them.

adduction. Oxidation.

adelite. $MgCaHAsO_5$. A native calcium magnesium arsenate of the wagnerite group, which occurs in monoclinic gray crystals.

adelomorphic cell. Any living cell of uncertain or indefinite shape; *e.g.*, an ameba.

adenantherine. A crystalline alkaloid resembling physostigmine, obtained from *Adenanthera pavonia*, order *Leguminosae*.

adenase. A deamidizing enzyme in animal tissues which hydrolyses adenine to hypoxanthine.

adenine. $C_5H_5N_5$ = 135.12. 6-aminopurine. A purine base derived from nucleic acid and found in the pancreas, spleen and other glands. White needles, m.360; slightly soluble in water or alcohol. **a. nucleotide.** Adenosin triphosphoric acid, adenylpyrophosphoric acid. The compound: $H_4P_2O_7[(C_5H_4N_5)$-$CH.(CHOH)_2CH.CH_2OPO_3H_2]$, the primary

constituent of resting muscle.

adenoid. Resembling a gland or pertaining to glands.

adenos. A fine quality of cotton from Aden, Asia Minor.

adenosin. $C_{10}H_{13}N_5O_4$ = 267.1. Adenine riboside. A glucoside from nucleic acid consisting of adenine and d-ribose. Colorless needles, m.229°, soluble in water. **a. phosphoric acid.** Adenylic acid. **a. triphosphoric acid.** Adenine nucleotide.

adenylic acid. $C_{10}H_{13}N_5O_4.HPO_3$ = 347.18. Adenine-ribose phosphate, adenosin phosphoric acid. A nucleotide from red blood corpuscles, muscle, yeast, etc. consisting of adenine, ribose and phosphoric acid. White needles, m.197. It lowers the blood pressure and intestinal motion. Cf. *adenine nucleotide, inosinic acid, guanylic acid*.

adeps. Any animal grease or fat, *e.g.*, lard. **a. lanae.** Lanolin. **a. mineralis.** Vaselin.

adermin. The anti-dermatitic vitamin B_6, obtained from yeast extract by dialysis.

adfluxion. Affluxion.

adglutinate. Agglutinate.

adhatotic acid. An organic acid from the leaves of *Adhatoda vasica*, an Acanthaceae. Cf. *vasicine*.

adhere. To be attached to or to stick to a different substance. Cf. *cohere*.

adhesion. The attraction or force which holds unlike molecules together. Cf. *cohesion, wetting, adsorption*.

adhesive. Any substance that sticks or binds materials together; as, adhesive plaster or paste. **a. meter.** An apparatus to determine the relative viscosity of materials; chiefly asphalts and road materials.

adiabatic. A change occurring without a loss or gain of heat. Cf. *Reech's theorem*. **a. calorimeter.** An instrument for the study of reactions in which there is a minimum loss of heat; *e.g.*, *Riehe calorimeter*. **a. elasticity.** The modulus of elasticity of a gas undergoing a change in volume without transference of heat; *e.g.*, in explosions. **a. expansion.** The expansion of a gas considered without the production of a cooling effect. **a. processes.** Any experiment carried out under such conditions that no heat can leave or enter the system.

adiactinic. A substance which does not transmit photo-chemically active radiations.

adicity. Valency.

adinole. A mineral consisting of metallic silver and albite.

adion. An adsorbed ion. Cf. *adatom*.

adipaldehyde. $C_6H_{10}O_2$ = 114.08. Hexanedial*, adipic dialdehyde, $CHO(CH_2)_4CHO$. An oily liquid, b.94.

adipamide. $C_6H_{12}O_2N_2$ = 144.11. Adipic diamide 1.4-butanedicarboxamide, hexanediamide*, $NH_2CO(CH_2)_4CONH_2$. An isolog of succinamide, m.220.

adipic acid. $C_6H_{10}O_4$ = 146.11. Adipinic acid, butane dicarboxylic acid, hexanedioic acid*. The dibasic acid, $COOH(CH_2)_4COOH$. Colorless or yellowish needles, m.149, b.265; sparingly soluble in water and soluble in alcohol or ether. It is formed during the oxidation of C_6H_{12}, or by the treatment of oleic acid and other fats with nitric acid. **tetrahydroxy-** See

saccharic acids. **a. dialdehyde.** Adipaldehyde. **a. diamide.** Adipamide. **a. ketone.** Cyclopentanone*.

adipinic acid. Adipic acid.

adipoin. $C_6H_{10}O_2$ = 114.08. β-Hydroxy cyclo hexanone. White powder, m.91, very slightly soluble in water.

adipyl. The divalent radical —OC$(CH_2)_4$CO—, derived from adipic acid. **a. chloride.** $C_6H_8O_2Cl_2$ = 192.98. Hexanedioyl chloride*. A colorless liquid, b_{10mm}113.

adjacent position. Adjoining, near. The consecutive arrangement of radicals in an organic ring compound; as, the 1.2- or 1.2.3.-position in the benzene ring (ortho- or adjacent position).

adjective. Supplemental or accessory. **a. dyes.** Those dyes which require a mordant, *q.v.*

adjoining. Adjacent.

adjuvant. An auxiliary drug, which assists the action of another drug.

Adler benzidine reaction. A sensitive test for blood in urine. Cf. *benzidine test.*

adlumine. $C_{21}H_{21}NO_6$ = 383.17. An alkaloid from *Adlumia fungosa*, a Papaveraceae. Cf. bicuculline.

adnephrine. Adrenaline.

adnic. Admirality nickel. An alloy of 70 % Cu, 29 % Ni and 1 % Sn.

adobe. A soil of arid regions, formed by the disintegration of rocks and deposited in microscopic particles consisting essentially of CaO, SiO_2, CO_2, and Fe_2O_3. Brown, clay-like masses used by the natives of Egypt and New Mexico for buildings, bricks and potteries.

adonic acid. $C_5H_3(CO_2H)_3$ = 174.2. An acid occurring in *Adonis vernalis* and supposedly identical with aconitic acid.

adonidin. $C_{24}H_{42}O_9$ = 474.3. A glucoside from *Adonis vernalis*. A hygroscopic, canary-yellow powder of intensely bitter taste; soluble in water or alcohol, but insoluble in ether or chloroform. Used as a heart stimulant and diuretic. Cf. *picroadonidin.*

adonidulcite. A carbohydrate of unknown composition from *Adonis vernalis.*

adonin. $C_{24}H_{40}O_9$ = 472.3. A glucoside from *Adonis vernalis*, used as a heart stimulant and resembling digitalin in its action.

adonis. False hellebore, pheasant's eye. The dried over-ground leaves and stems of *A. vernalis*, (Ranunculaceae) of America and Europe. Used as a fluid extract as a heart stimulant.

adonite. $C_5H_{12}O_5$ = 152.12. Adonitol. A pentatomic alcohol, obtained from *Adonis vernalis.* Colorless needle-like prisms, m.102; soluble in water or alcohol. It changes on oxidation to ribose.

adonitol. Adonite.

adrenal gland. A small gland above each kidney.

adrenalin. $C_9H_{13}O_3N$ = 183.1. Adrenaline, adrenine, adrine, adrenamine, adnephrine, chelafrin, epirenan, epinephrine, hemisin, hemostatin, paranehrin, suprarenine, suprarenaline, supracapsuline, supranephrane, *l*-methylaminoethanol catechol, o-dioxyphenylethanol-methylamine. $C_6H_3(OH)_2.CHOH.CH_2.NHMe$. A light-brown microcrystalline powder, m.205; slightly soluble in water and insoluble in alcohol. It combines with acids to form water-soluble compounds and is decomp. when heated above 210°C. It is obtained from the suprarenal glands of animals and is used for intravenous injections to raise the blood pressure, and as an astringent, hemostatic and heart tonic. **d-.** Dextro-. Is one-fifteenth as active as the l-. **i-.** Inactive-. Is one-half as active as the l-. **l-.** Levo-. The natural or synthetic, physiologically active compound (see above). **a. hydrochloride.** The epinephrine of the trade which is used as adrenalin. **a. bitartrate.** The suprarenine of the trade.

adrenalone. $C_9H_{11}O_3N$ = 181.1. Methylaminoacetocatechol. The ketone of adrenalin, $C_6H_3(OH)_2.CO.CH_2.NHMe$.

adrenine. Adrenaline.

adsorbate. That which is adsorbed.

adsorbent. A substance that adsorbs; as, carbon, charcoal, clay, silica, etc. Cf. *absorbent.* **crystallogenetic-** A crystalline substance which can be dehydrated without loosing its shape. Its structure becomes porous and thus, absorbent; as, chabazite.

adsorption. The ability of a substance (*adsorbent*) to hold or concentrate gases, liquids or dissolved substances (*adsorbate*) upon its surface, a property due to *adhesion*, *q.v.*; hence, producing a change of concentration of the adsorbate on the surface of the adsorbent with respect to the interior concentration of the adsorbate. Cf. *sorption, absorption, desorption, persorption, wetting.* **anomal-** a. which does not follow the a. isotherm; as, with certain colloidal dyes. **apolar-** Nonpolar a. **co-** a. in which two substances are held on a surface, on which neither is adsorbed alone. **differential-** See *differential* a. **heat of-** The calories liberated during a. **negative-** a. in which the surface concentration of the adsorbate is lowered because of preferential a. of the liquid. **nonpolar-.** Apolar-. a. in which nonelectrolytes or equivalent ions of electrolytes are held on a surface. **oriented-** a. in which the molecules are grouped on the surface in a definite direction. Cf. *mono*-molecular film. **polar-** a. in which definite anions or cations are held in nonequivalent amounts. **positive-** a. in which the surface concentration of the adsorbate is higher. **preferential-** Pronounced a. of one substance compared with another of similar physical properties; called *chemo-sorption* in extreme cases. **specific-** (1) Preferential-. (2) The quantity of adsorbate on 1 cm.^{2} surface. **water of-** The water of crystallization of precipitates, which can be driven off below 100°C.

a. analysis. Separation of mixtures by means of the different absorbability of the components. Cf. *capillary* and *chromatographic analysis.* **a. catalysis.** A chemical reaction in which the adsorbent acts as a catalyst, *q.v.* **a. coefficient.** The quantity x of the *a. isotherm.* **a. displacement.** The replacement of one adsorbate on a surface by another. **a. equilibrium.** The distribution of molecules on a surface and in the surrounding medium as expressed by the *a. isotherm.* **a. exponent.** The quantity 1/n of the a. isotherm; its value at constant temperature varies between 1 and 0.1 or less. **a. isotherm.** The approximate, empirical relationship existing between the concentration x, held upon the surface and the amount, c, which is not adsorbed: $x/m = \alpha . c^{1/n}$, where m is the amount of adsorbent and α, 1/n are experimental constants. **a. potential.** The work obtainable when an adsorbate is brought into the *a. space.* **a. space.** The zone between the surface of the adsorbent and

the limit of the adsorbent; the limit of the adsorptive layer.

adsorptive. Adsorbate.

adstringent. Astringent.

adubiri. A fish poison obtained from *Paulowilhelmia speciosa*, used by the natives of the Gold Coast.

adularia. A variety of *orthoclase*.

adulterant. A substance of cheaper or inferior quality, sometimes harmful, which is added to an article, compound or food.

adulteration. (1) The fraudulent addition of a foreign substance, especially harmful preservatives, to food products. (2) The removal of an essential constituent of a substance, as the skimming of milk.

adurol. A hydroquinone derivative, used as a photographic developer.

advection. Heating or cooling effects due to horizontal currents in air or water. Cf. *convection*.

adventitious. Not typical or normal; accidental.

advitant. A proposed name for *vitamin*.

Æ- see also under E.

aegerite. Wurtzite.

aegirite. Acmite.

aenigmatite. A triclinic amphibole, consisting of a mètasilicate of sodium and ferrous iron, which contains some Ti instead of Si. It occurs in black masses of sp. gr. 3.8.

aeolotropic. Anistropic.

aeonite. Wurtzite.

aequum. The amount of food which is just sufficient to support an organism doing work.

aer. Atmos.

aerated water. A water artificially impregnated with oxygen or carbon dioxide; as, soda water.

aerobe. An organism that requires an atmosphere of oxygen for respiration. Cf. *aerobic bacteria*, *anaerobe*.

aerobic bacteria. Certain protophyta which require gaseous oxygen for the maintenance of their vitality. Cf. *anerobic*.

aerobioscope. A device for determining the number of bacteria in air.

aerobiosis. Life sustained in an atmosphere containing oxygen.

aerodynamics. Pneumatics. The study of the motion of gases.

aerofloat. The trade name for flotation agents of the dithiophosphoric acid type.

aeroklinoscope. An air-cell used to float algae upon water.

aerolite. Meteoric stone. A meteorite consisting of a stony mass of silicates. Cf. *siderolite*.

aerometal. An aluminum alloy containing 0.2–4 % Cu, 0.3–1.3 % Fe, 0–0.2 % Mn, 0–3 % Mg, 0–3 % Zn and 0.5–1.0 % Si. Cf. *acieral*.

aerometer. An instrument for determining the density of gases.

aeron. An aluminum alloy containing 1.5–2.0 % Cu, 1.0 % Si and 0.75 % Mn.

aeronautics. The art and science of flying and navigation in the air.

aeroplankton. The organisms (pollen, bacteria, etc.) carried by air.

aerophone. An apparatus to amplify sound waves.

aeroscope. A glass apparatus used to obtain bacteria from air.

aerosiderite. An iron meteorite. Cf. *siderite*.

aerosite. Pyrargyrite.

aerosol. (1) A colloidal system *q.v.* with gas as the surrounding medium; as, smokes and fogs. (2) A trade name for a powerful wetting agent of the sulphonated bicarboxyacid ester type.

aerosphere. Atmosphere.

aerostatics. The branch of physics which deals with gases in mechanical equilibrium. Cf. *hydrostatics*.

aerotherapeutics. The treatment of disease by varying the pressure or composition of the atmosphere in which the patient lives.

aerotonometer. An instrument for determining the pressure of gases in blood.

aerotropic. Attracted by air; as an organism, organ or cell.

ærugo. (1) Cupric subacetate. (2) The oxide or rust of a metal.

æchynite. A resinous, black, orthorhombic mineral which consists of the columbates of calcium, iron, cerium, lanthanum, titanium and thorium.

æscigenin. $C_{12}H_{20}O_2$ = 196.2. A glucoside from the horse chestnut or *Aesculus hippocastanum*.

æscinic acid. $C_{24}H_{40}O_2$ = 360.32. Capsuloesic acid. A monobasic acid obtained from the seeds of *Aesculus hippocastanum*, horse chestnut.

æscorcin. $C_9H_8O_4$ = 180.1. Escorcin. A split-product of aesculin. A brown powder which is soluble in alkalis. A 10–20 % aqueous solution is used in ophthalmology for the detection of defects in the cornea.

æsculetin, aesculetin. Esculetin.

æsculetinic acid. Esculetinic acid.

æsculin, aesculin. Esculin.

æsculinic acid. Esculin.

æthan. German for ethane.

æther. (1) The official Latin; also German, for *ether*, (q.v.), formerly also for ester. (2) The hypothetical universal medium through which electromagnetic waves (*e.g.*, light and heat) are propagated.

ætherische oel. German for essential oil.

aethusine. A volatile alkaloid from *Aethusa cynapium*, which appears to be identical with coniine.

æthyl. German for ethyl.

æthyleni. Official Latin for ethylene.

æthylis. Official Latin for ethyl.

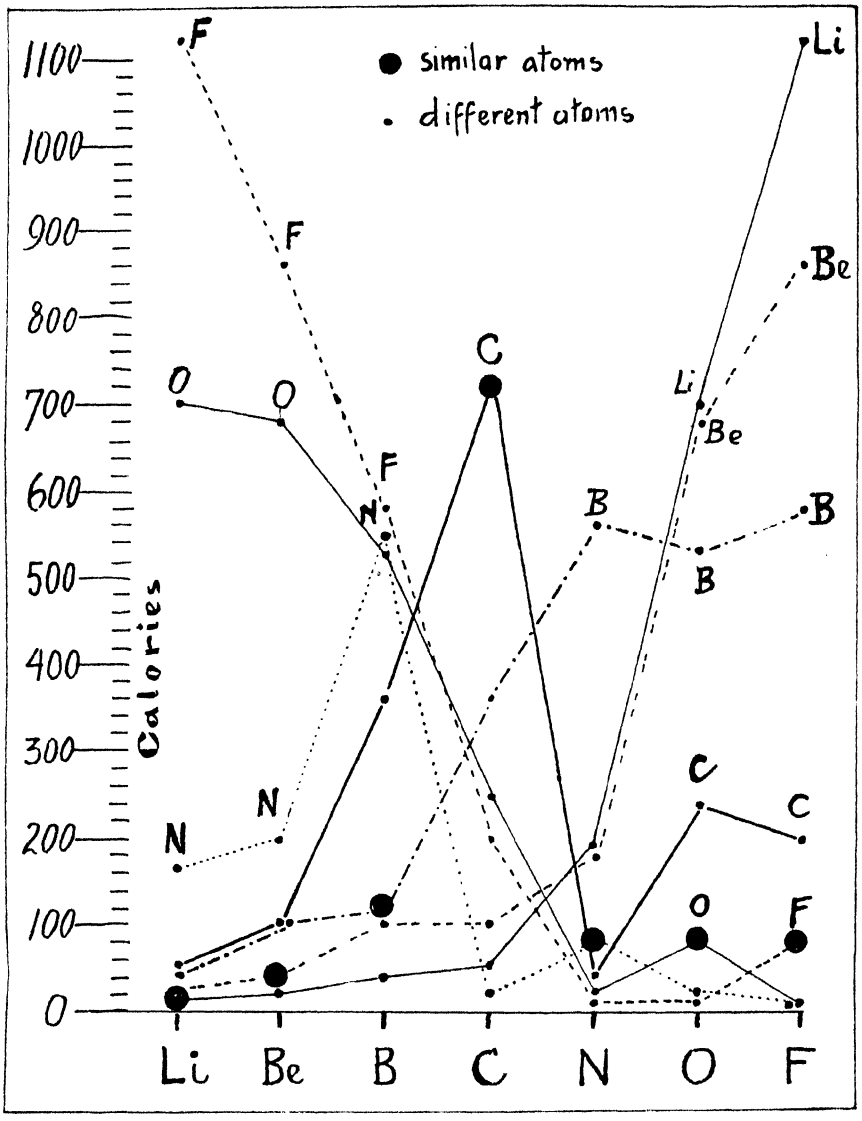
ætioporphyrin. $C_{31}H_{36}N_4$ = 464.5. A split product of hemoglobin and of chlorophyll.

afenil. A brand of calcium chloride urea, $CaCl_2 \cdot 4(NH_2)_2CO$, used in calcium therapy.

affination. A centrifugal filtration process in which a large proportion of the molasses contaminating the raw sugars obtained by the initial concentration of sugar liquors are removed from the sugar crystals.

affinity. The selective tendency of elements to combine with one, rather than another element, when physico-chemical conditions are equal or slightly in favor of the "rejected" element. It is expressed thermodynamically by the *reaction isotherm* (q.v.). See *affinity curve*. **electro-.** See *electro affinity*. **electron-.** See *electron*. **residual-.** See *residual bond*.

a. bond. See *bond*. **a. constant.** The ratio, F_a/F_b, where F_a is the intrinsic tendency of substance *a* to decompose, and F_b the tendency of substance *b* to combine (see *equilibrium* and *dissociation constant*). **a. curve.** A graph obtained when the heat of formation is plotted against the types of combining atoms. It is an expression of the respective electromotive forces and the affinities. In the diagram the first period of the elements is shown. The peak



Affinity curve.

shown by Li:F and F:Li is caused mainly by the electromotive force, whereas the peak shown by C:C is considered to be due to affinity and thus explains the many carbon compounds.

affluxion. Adfluxion. Flowing or coming together.

African kino. Kino. **A. pepper.** Capsicum. **A. saffron.** Carthamus.

afridol. $C_8H_7O_2Hg$ = 351.7. Sodium mercuric hydroxy toluylate, $Hg(OH).C_6H_3Me.COONa$. An odorless, tasteless, white powder, used in the treatment of parasitic skin diseases.

afsal. Urasol.

after. Behind, following in point of time. **a. contraction, a. expansion.** The percentage difference in length of a brick or refractory maintained at high temperature in service. In testing the brick is measured before and after being heated to 1410°C for two hours.

Ag. The symbol for silver (argentum).

agalmatolite. Pyrophyllite.

agamy. Agamogenesis. Asexual reproduction, as opposed to gamogenesis or sexual reproduction.

agaphite. A Persian turquoise.

agar-agar. Agal-agal, Bengal isinglass, Japanese gelatin, Japanese isinglass. The dried mucilaginous substance extracted from marine algae or sea weeds such as, *Gelidium corneum*, *Gracilaria lichenoides* or *Gigartina speciosa*. (Class Rhodophyceae.) It occurs in bundles of thin, transparent membranes, or yellowish-white shreds which are insoluble in cold water, and slowly swelling and soluble in hot water. It is used extensively as a culture medium

in bacteriology; as a glue; and for making silk and paper transparent. **glucose-** See *glucose*-agar. **glycerin-** See *glycerin*-agar. **lactose-** See *lactose*-agar. **litmus-** See *litmus*-agar. **plain-** A culture medium which consists of 15 gm. agar-agar, 10 gm. peptone, 5 gm. sodium chloride, and 1000 cc. of bouillon stock solution, neutralized with sodium hydroxide, and filtered through a heated filter.

agar hanging block. A small cube of nutrient agar placed over a culture on the surface of a cover-slip glass. It is examined under the microscope in the same way as a hanging drop; *i.e.*, upside down.

agaric. *Agaricus albus*, touchwood, spunk, tinder. The dried fruit body of the fungus, *Polyporus officinalis*, a Polyponaceae, which grows on the *Larix* species. **fly-.** See *Amanita*. **surgeon's-.** Amadonu. **white-.** Agaric.

a. acid, $C_{19}H_{36}(OH)(COOH)_3.1\frac{1}{2}H_2O$ = 443.45. Laricic acid, agaricic acid, agaricinum. A tribasic acid from agaric. An odorless, colorless, tasteless, glistening, microcrystalline powder, m.140; slightly soluble in water. It is supposed to be the active principle of agaric, and is used as a local irritant. **a. mineral.** Rockmilk. A soft, white deposit of calcite occurring as microscopic crystals.

Agaricaceae. The mushrooms or toadstools, which comprise 4600 species of plants; some are poisonous (*Amanita*), others edible (*Agaricus*, *Cantharellus*).

agaricic acid. Agaric acid.

agaricin. An alcoholic extract of white *Agaric* or *Polyporus officinalis*. A brownish powder, soluble in water or alcohol and containing impure agaric acid. It is used as a purgative and to arrest perspiration.

agaricinum. Agaric acid.

agaricol. $C_{10}H_{16}O$ = 152.1. A monoatomic alcohol in white agaric. It is a colorless powder, m.223.

agarythrine. An alkaloid obtained by ether extraction from the fungus *Agaricus rubra*. A yellow, bitter substance, which on oxidation yields the red coloring matter of fungi.

agate. A cryptocrystalline quartz or chalcedony, SiO_2, composed of colored layers or clouds. It is used as a semi-precious stone, for ornaments, for pebbles in ball mills, and for the knife-edges of chemical balances. **blood-** Hemachate. **Iceland-** An obsidian. **oriental-** A translucent variety used as a gem. **white-** Chalcedony.

agathin. $C_{14}H_{14}ON_2$ = 226.2. Cosmin. Salicyl-α-methyl-phenylhydrazine, $HO.C_6H_4.CH:N.NMe.Ph$. A yellow, odorless, tasteless crystalline powder; m.74; insoluble in water, but soluble in alcohol or ether. Used medicinally in neuralgia and rheumatism.

Agathis. A conifer of Australia and Malaya which furnishes the kauri resin.

Agave. American aloe. A genus of Central American plants of the order Amaryllidaceae. The fibres are used for threads and ropes, while the leaves and juice are used as a diuretic. The fermented juice (pulque) is a moderately stimulating drink which is popular in Mexico; from it is distilled a spirit (mescal). Cf. *henequen*, *sisal*.

agedoite. Asparagine.

ageing. Aging.

Agene process. The bleaching of flour with nitrogen trichloride.

agent. A substance or force that effects a change. Cf. *reagent*. **balancing-** See *buffer* and *poiser*. **catalytic-** See *catalyst*. **emulsifying-** See *emulsifier*. **freezing-** See *freezing mixtures*. **frothing-** See *frother*. **oxidizing-** See *oxidizing* agent. **reducing-** See *reducing* agent. **refrigerating-** The gases, NH_3, SO_2 or MeCl, which are used in refrigerators. **refining-** Substances *e.g.*, H_2SO_4 or NaOH, used to purify organic compounds. **vulcanizing-** See *vulcanization*. **warning-** An odorous substance used to indicate danger in mines, or to detect leakage in pipes.

agerite. Aldo-α-naphthylamine; an anti-aging agent for rubber. Cf. *ohmoil*.

Agfa. A trade name for dyes, fine chemicals, etc. (Aktien Gesellschaft für Anilin farben). **A. silk.** A viscose rayon.

agglomeration. A clustering together or accumulation of particles or substances.

agglutinant. A substance which causes agglomeration or agglutination of cells.

agglutinate. (1) To cause agglutination. (2) The product of agglutination.

agglutination. The clumping together of cells or bacteria which results from the interaction of bacteria and the corresponding immune serum. It is used in serodiagnosis.

agglutinins. A group of substances formed in the blood as a result of bacterial infection or inoculation which cause the clumping together of the bacteria. Cf. *conglutinin*, *hemaglutinin*.

agglutinogen. A substance present in bacteria which stimulates the production of agglutinins in animals.

aggregation. The gathering of units into a whole, or the crowding or clustering together of particles. **state of-** The physical form of matter; as, solid, liquid, gaseous, or colloidal.

aggresin. Any toxic substance given off by an infecting organism (bacteria) that inhibits the defensive reactions of the host; *e.g.*, substances which protect micro-organisms from phagocytosis.

aging, ageing. Natural, or, artificial maturing or ripening; as of cheese, wine, or rubber. **a. test.** A test involving exaggerated conditions of a., the object of which is to determine rapidly how a material will behave over a period of time.

agitator. A device to keep liquids in motion; as, a stirrer.

aglucone. The non-sugar part of a glucoside.

aglycone. That component of a glycoside, *e.g.* plant pigment, which is not a sugar. Cf. *crocetin*, *cyclamiretin*, etc.

agmatine. $C_5H_{14}N_4$ = 130.2. Aminobutyl guanidine, $NH_2C(NH).NH(CH_2)_4NH_2$. An amine isolated from herring spawn and ergot. Cf. *synthalin*.

agnetite. A mineral constituent of adamellose.

agnin. Lanolin.

agon. The active radical of an enzyme. Cf. *pheron*.

agoniadin. $C_{21}H_{26}O_{12}$ = 470.2. Plumierin. The active principle of the bark of *Plumeria succuba*, or pagoda tree. Used medicinally as an antipyretic, anthelminthic and emmenagogue.

Agricola, Georg Bauer. 1490–1555. A German physician and alchemist.

agriculture. The science and art of the cultivation of the soil.

agrimonia oil. The volatile oil of agrimony.

agrimony. A rosaceous plant, *Agrimonia eupatoria*, used medicinally in the form of a fluid extract as a tonic and astringent.

agrinite. A trade name for a tankage (q.v.) containing 8¼ % nitrogen.

agrostemma. Corncockle. The plant, *A. githago*, a Caryophyllaceae, poisonous to animals and man. **a. saponin.** $C_{35}H_{54}O_{10}$ (*Brandl*) or $C_{29}H_{44}O_4$ (*Wedekind & Schicke*). A hemolytic substance, m.286. It causes paralysis.

agucarina. Saccharin.

ague tree. Sassafras.

aguilarite. Ag_4SSe. A sulfoselenide of silver, occurring as a black mineral.

aguirin. Theobromine sodium acetate.

Agulhon's reagent. A 0.1 N-solution of chromic acid in dilute nitric acid, used to titrate primary alcohols.

agurin. Aguirin.

Aich's metal. An alloy containing 56 pts. copper, 42 pts. zinc and 1 pt. iron which is very malleable at red heat.

aikinite. $CuPbBiS_3$. Aikenite. A black, orthorhombic, copper lead bismuth sulfide.

ailanthic acid. A bitter, nitrogenous acid from the bark of *Ailanthus excelsa* or "tree of heaven," a Simarubaceae.

air. The mixture of gases that forms the atmosphere, q.v. **alkaline-** Ammonia. **azotic-** Nitrogen. **dephlogisticated-** An obsolete term for oxygen. **enriched-** a. to which oxygen has been added. **expired-** The warm a. coming from the lungs having less oxygen and more carbon dioxide and moisture than normal a. **fixed-** An obsolete term for carbon dioxide. **inspired-** The air which is taken into the lungs. **liquid-** A clear water-like liquid obtained by alternate compression and expansion of air in a refrigeration machine; b. −181. Used commercially for manufacturing oxygen, in the production of low temperatures, and applied externally as a cure for poison ivy or poison oak inflammations. **mephitic-** An obsolete term for carbon dioxide. **phlogisticated-** An obsolete term for nitrogen or air from which oxygen has been removed by a burning substance. **reserve-** The air that can still be exhaled after an ordinary expiration. **residual-** (1) The air that remains in the lungs after the most complete expiration possible. (2) The air that remains in an evacuated container, *e.g.*, an incandescent lamp bulb or vacuum tube. **tidal-** The air that is taken in and given out at each respiration. **vital-** Oxygen.

a. bath. A drying oven utilizing a current of heated air for maintaining a certain temperature. **a. compressor.** A pump which compresses the atmosphere. **a. conditioning.** The control of humidity and temperature of air by filtering and washing with water of definite temperature, either for human comfort (45–55 % humidity) or for industries (viscose, textile, candy, paper, etc.). **a. dry.** To expose to air without heating. **a. gas.** Producer gas. **a. liquefying apparatus.** An arrangement of high pressure pump, valves, and expansion orifices for the liquefaction of air. **a. melting oven.** A cylindrical copper box with mica windows which is used for melting pitch in a current of hot air. **a. meter.** Anemometer. **a. pump.** A mechanical device for compressing or withdrawing air, *e.g.*, blowers, blast apparatus, filter pumps, vacuum pumps, or compressors. **a. proof.** Hermetically sealed, or gas-tight. **a. sampler.** A device for taking samples of dust and bacteria from the air. **a. tester.** An instrument to determine the CO_2 content of the atmosphere.

airoform. Airol.

airol. A registered trade-mark for a bismuth oxyiodide-subgallate compound. It is a greenish-gray powder, used as an antiseptic for local application.

airosol. Aerosol.

ajacine. $C_{18}H_{21}O_4N$ = 279.17. A crystalline alkaloid, m.143, from larkspur, *Delphinium ajacis*. **a. hydrochloride.** $C_{18}H_{21}O_4N.HCl$ = 315.64. Colorless crystals, m.93, soluble in water.

ajakol, ajacol. Thanatol.

ajava. The ripe fruit of *Ammi* or *Carum copticum*, (Umbelliferae) of India; used as a carminative.

Ajax metal. A bearing alloy consisting of 25–50 % Ni, 70–30 % Fe and 5–20 % Cu.

aji-no-moto. Sodium glutamate made by acid hydrolysis from gluten of wheat. It is a white powder of cheesy odor and meaty taste, used as a condiment.

ajowan. Ajava. **a. oil.** The essential oil from the seeds of *Carum copticum* or ajava. It resembles caraway seed oil, d.0.900–0.930, $[\alpha]_D$ + 1.3, and contains thymol and cymene as chief constituents.

akazgine. An alkaloid from the bark and leaves of *Strychnos akazga*, a Loganiaceae of Africa. Colorless crystals resembling strychnine in therapeutic effect.

akcethin. Thioacetin.

akee oil. A non-drying, yellow, butter-like fat from *Blighia sapida*, (Sapindaceae) from Jamaica and the Guineas.

åkermanite. A melilite, $4CaO.3SiO_2$.

akuammine. $C_{22}H_{28}O_4N_2$ = 382.23. An alkaloid from the seeds of *Picralima kleincana* an Apocynaceae of Gaboon. Cf. *ditaine*.

akundarol. $C_{28}H_{51}O.OH$ = 550.5. A sterol from akanda, *Calotropis gigantea*, an Asclepiadaceae. Cf. *calotropin, mudaric acid*.

Al. (1) The symbol for aluminum. (2) Alkyl radical.

-al. A suffix indicating an aldehyde structure.

alabamine. Ab = 221. Ekaiodine. The element No. 85 discovered in monazites and by the magneto-optic method by Allison, et al. (1931). It is a homotope of iodine, but its existence has not been verified. Cf. *anglohelvetium*.

alabandite. Manganblende. A black, isometric, native manganous sulfide, MnS.

alabaster. A fine grained, colorless, compact gypsum, $CaSO_4$, $2H_2O$. See *selenite*.

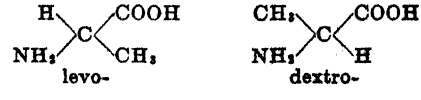
alabastrine. Naphthalene.

alacreatine. $C_4H_9O_2N_3$ = 131.2. Lactyl guanidine. Guanidopropionic acid. An isomer of creatine, which is formed by the union of alanine and cyanamide.

alamandite. Almandite.

alangine. An alkaloid from the bark of *Alangium lamarckii*, (Cornaceae) of India, used as a febrifuge and emetic.

alanine. $C_3H_7O_2N$ = 89.08. α-Aminopropionic acid, propionic glycocol, lactamine, 2-aminopropanoic acid*, lactamic acid. White crystals, dl- or i-. m.295. d- m.297, l- 295°C, subl. 200; soluble in water or alcohol; insoluble in ether. It is prepared synthetically from acetaldehyde, ammonia and HCl or HCN and occurs as a constituent of many proteins. (See *polypeptides*.) It forms two stereoisomers:



β- or *beta-* *β*-Aminopropanoic acid*. ***N*-benzoyl-** $C_{10}H_{11}NO_3$ = 193.09. *α*-Benzamidopropionic acid, PhCONH.CHMe.COOH. Colorless crystals, m.163; soluble in water. **dithiobis-** Cystine. **hydroxy-** Serine. **hydroxyphenyl-** Tyrosine. **imidazolyl-** Histidine. **indyl-** Tryptophane. **mercapto-** Cysteine. **phenyl-** Phenylalanine. **salicyl-** *o*-Tyrosine. **sulfo-** Cysteic acid.

alant acid anhydride. See *helenin*. **a. camphor.** Helenin. **a. root.** Inula. **a. starch.** Inulin.

alantic acid. $C_{15}H_{22}O_3$ = 250.2. Inulic acid. A monobasic acid from the roots of *Inula elecampane*. **a. anhydride.** $C_{15}H_{20}O_2$ = 232.2. Colorless crystals from the roots of *Inula elecampane*. It is sometimes found as an incrustation on roots kept for some time.

alantin. Inulin.

alantol. $C_{10}H_{16}O$ = 152.1. Pinguin. A yellowish-brown oily liquid, b.200; soluble in alcohol, ether, or chloroform. It is obtained from the roots of *Inula elecampane* and is used as an internal antiseptic.

alantolactone. See *helenin*.

alanyl. (1) The monovalent radical Me.CHNH$_2$.CO—. (2) The divalent radical —NH.CHMe.CO—, derived from alanine. **a. alanine.** $C_6H_{12}N_2O_3$ = 160.11. A dipeptide. White needles, m.276, slightly soluble in water.

alaskite. An igneous rock of the rhyolite-granite group containing quartz and feldspar (aplite).

alaskose. A rhyolite containing phenocrysts of quartz and feldspar.

alaterite. Mineral caoutchouc.

albahaca oil. See *tolu* oil.

albamine. Alabamine.

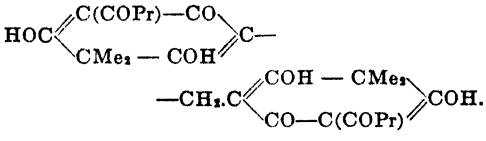
albane. $C_{10}H_{16}O$ = 152.1. A crystalline resinous product obtained by boiling gutta-percha in alcohol. It is soluble in ether, chloroform or carbon disulfide.

albanose. A leucite rock containing leucite, melilite, diopside, and magnetite.

albargin. Silver gelatose. A colloidal silver preparation used medicinally.

albarium. A white lime obtained by burning marble. It is used for stucco.

albaspidin. $C_{25}H_{32}O_8$ = 460.2.



A crystalline principle occurring in *Aspidium* and resembling *albopannin*.

albata. A white alloy of Cu, Ni and Zn. A German silver.

albedo. The degree of whiteness of a reflecting surface. It is expressed as the ratio of the reflected light to the incident light: *e.g.*,

black velvet	0.004
moist earth	0.08
blue paper	0.26
pinewood	0.40
white paper	0.60
snow	0.78

albene. An insoluble white precipitate obtained by boiling melam in water.

alberene. A fine grade of soapstone used for electrical insulation.

albertite. Albert coal. A black, brittle, asphaltum-like hydrocarbon with conchoidal fracture, d.1.1. It is used as fuel.

albertol. A plastic q.v., of the phenolformaldehyde type. Cf. *bakelite*.

Albertus, Magnus. 1203–1280. Albrecht Graf von Bollstädt. A German alchemist noted for his writings.

albite. $NaAlSi_3O_8$. Pericline. A white, triclinic soda-feldspar which is a common constituent of granite and many other rocks. d.2.605. Hardness 6–6.5, Mol. Vol. 101.1. Cf. *anemonsite*.

albocarbon. Naphthalene.

alboferrin. Phospho-albuminate of iron. A light-brown, odorless powder, used as a ferruginous tonic.

albolene. A brand of medicinal Russian mineral oil. Cf. *petrolatum*.

albopannin. $C_{21}H_{24}O_7$ = 388.2. Silky white, crystalline needles, m.147, obtained from the rhizome of *Aspidium* or male fern.

albumate. Albuminate. **tannin-** Tannalbin.

albumen. White of egg. The liquid white of fresh eggs, consisting chiefly of albumin.

albumin. (1) $C_{72}H_{112}N_{18}O_{22}S$. A protein found in the white of egg, and occurring in blood, lymph, chyle, and many other animal and vegetable tissues and fluids. It is soluble in water, coagulates on heating, and is hydrolyzed to a number of amino acids. It occurs in commerce as white or yellowish scales. (2) A simple *protein*, q.v., which is insoluble in pure water or dilute salt solution and is coagulable by heat. Cf. *globulin*. **blood-** Serum a. A. prepared from blood and used in the manufacture of photographic papers, in textile printing, leather industry and as a clarifying agent. **egg-** Ovalbumin. A. prepared from eggs. It is used in food stuffs and as a clarifying agent. **milk-** Wheyalbumin A. prepared from milk by coagulating the casein. It is used in the manufacture of adhesives, varnishes and ivory substitutes. **nucleo-** See *nucleo*albumin. **osso-** A protein from ossein. **ov-** Egg a. **phospho-** Any albuminous substance which contains phosphorus. **serum-** Blood a. **whey-** Milk a. **a. tannate.** Tannalbin.

albuminate. A compound of albumin with some other substance, often of a basic character; as, metals (bismuth, iron, manganese, mercury) or creosote, ichthyol, quinine, tannin, etc. **acid-** A metaprotein soluble in weak alkali. **alkali-** A compound of albumin and alkali metals.

albuminoid. (1) Resembling or like albumin. (2) Scleroproteins. A class of simple proteins, q.v., which are insoluble in all neutral solvents. *e.g.* collagen, gelatin, kelatin, chitin.

albuminometer. A graduated glass tube for the quantitative determination of albumin in urine. Cf. *Esbach's a. horismascope*.

albuminose. A decomposition product of fibrin.

albuminuria. The presence of albumin in the urine, and the resulting pathological condition of the human body.

albumoscope. A U-shaped glass tube for the detection of albumin in urine. One arm is filled with nitric acid and the other with urine, and at the point of contact a white ring forms in presence of albumin.

albumose. A cleavage product of albumin formed during its hydrolysis. Cf. *artose*, *dysalbumose*, *heteroartrose*, *syntonin*.

albumosease. An enzyme from the stomachic secretions which hydrolyzes albumin to albumose.

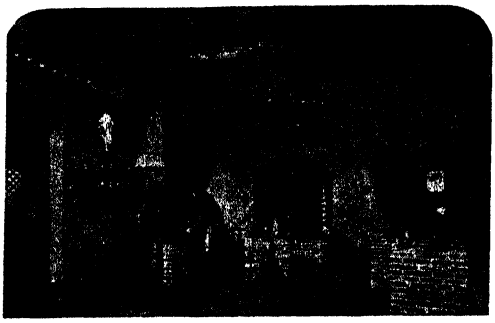
alburnitas. A disease of trees, which hinders the transformation of sapwood into hardwood.

alburnum. The sapwood of a tree.

alcahest. Alkahest.

alcamines. Alkamines.

alcarraza. An unglazed bottle used in the Mediterranean countries for cooling water by evaporation.



Alchemical laboratory.

alchemical. Pertaining to alchemy; alchemistic. **a. laboratory.** The alchemist workshop. **a. symbols.** See *alchemistic* symbols.

alchemistic period. The time period extending from about 300 to 1550 A.D. **a. symbols.** The characters or ideographs used by the alchemists. They indicate the relationship of astrological and alchemical speculations. In the development of chemistry the conception of the atomic theory can be followed by comparing a few of the alchemical symbols of elements and noting the transitional Dalton symbols. See figure.

alchemy. The empirical stage of chemical knowledge, which was characterized by many attempts to impose the speculative theories formed by philosophical imaginations. The chief aim of alchemy during the Middle Ages was the transmutation of base metals into gold, and the search for the alkahest or philosopher's stone which was supposed to confer eternal youth and health. During this period much chemical knowledge accumulated which led to a change of attack, namely to the experimental and deductive method of modern science.

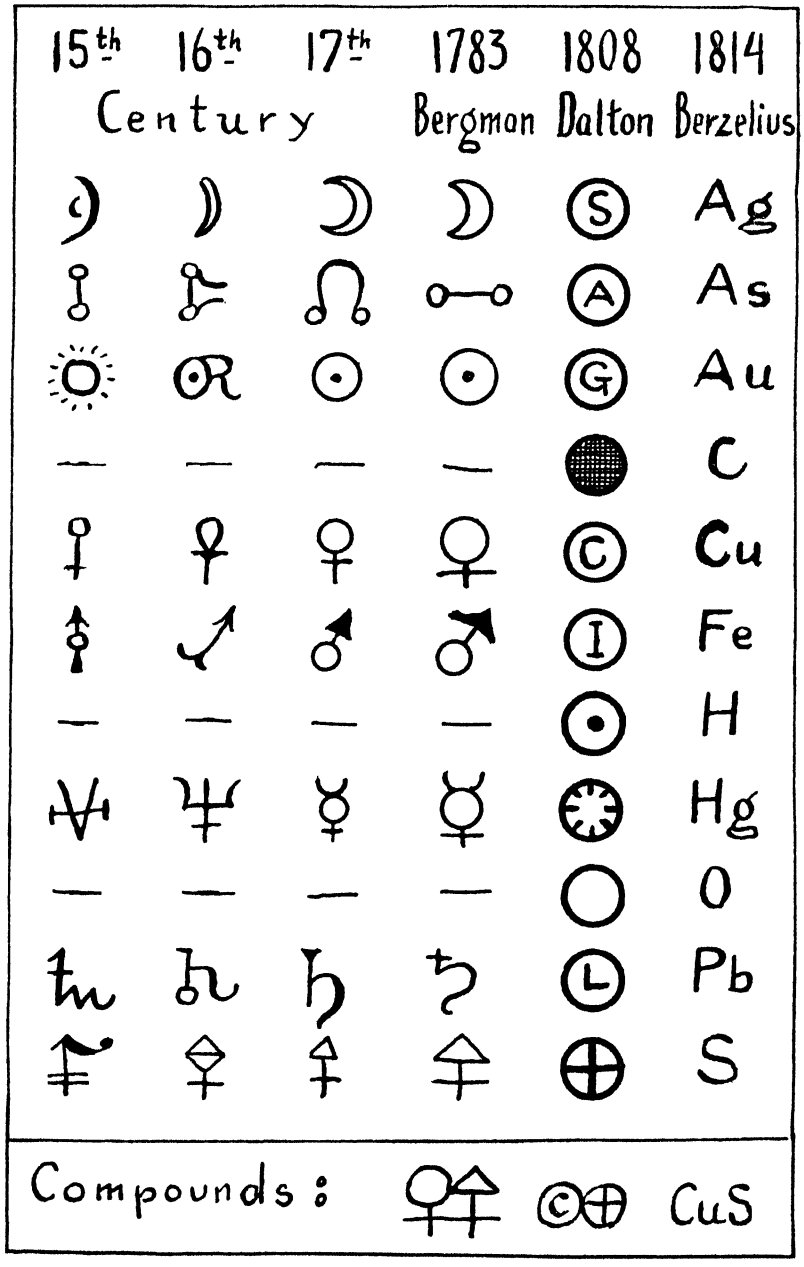
alclad. A strong, light aluminum alloy which is coated with pure aluminum to resist corrosion.

alcohol. (1) Ethanol or ethyl alcohol. (2) See *alcohols*. **absolute-** See ethanol, 100 %. **acetone-** See *acetol*. **allyl-** See *allyl* alcohol. **amyl-** See *amyl* alcohol. **benzyl-** See *benzyl* alcohol. **butyl-** See *butanol*. **butyric-** See *butanol*. **capryl-** See *octyl* alcohol. **cetyl-** See *cetyl* alcohol. **cinnamyl-** See *cinnamic* alcohol. **dehydrated-** See *ethanol*, 100 %. **denatured-** See *ethanol*. **ethyl-** See *ethanol*. **ethylene-** See *glycol*. **ethylic-** See *ethanol*. **glycyl-** See *glycerol*. **grain-** See *ethanol*, 95 %. **hexadecatylic-** See *cetyl* alcohol. **isobutyl-** See *isobutanol*. **isopentylic-** See *amyl* alcohol. **isopropyl-** See *i-propanol*. **methyl-** See *methanol*. **octoic-** See *caprylic*. **octylic-** See *caprylic* alcohol. **palmityl-** See *cetyl* alcohol. **phenylallyl-** See *cinnamic* **a. solid-** A gelatinous mixture of ethanol with solid fatty acids or with soaps. Used as household fuel for chafing dishes. **sulfur-** See *carbon* disulfide. **wood-** See *methanol*.

a. acid. A group of organic compounds which contain the carboxyl and the hydroxyl radicals. See table. **a. aldehyde.** A compound of the type HO.R.CHO; as, aldol. **a. amide.** Hydroxy amide. A compound of the type HO.R.CONH$_2$; as, glycolamide. **a. amine.** Hydroxyamine. A compound of the type, HO.R.NH$_2$; as, ethoxyamine **a. ether.** Hydroxyether. A compound of the type R.O.R.-OH; as, diethyline, cellosolve. Cf. *lacquer*

ALCOHOL ACIDS

(1) *Aliphatic, monohydroxy, monobasic acids*	
carbonic acid, hydroxyformic acid	HO.COOH
glycolic acid, hydroxyacetic acid	HO.CH$_2$.COOH
lactic acid, 1-hydroxypropionic acid	Me.CHOH.COOH
hydracrylic acid, 2-hydroxypropionic acid	HO.CH$_2$.CH$_2$.COOH
3-hydroxybutyric acid	HO.CH$_2$CH$_2$CH$_2$.COOH
2-hydroxybutyric acid	Me.CHOH.CH$_2$.COOH
1-hydroxybutyric acid	Et.CHOH.COOH
(2) *Aliphatic, dihydroxy, monobasic acids*	
glyoxylic acid, dihydroxyacetic acid	(HO)$_2$CH.COOH
glyceric acid, 1-2, dihydroxypropionic acid	CH$_2$OH.CHOH.COOH
(3) *Aliphatic, polyhydroxy, monobasic acids*	
erythric acid	CH$_2$OH(CHOH)$_2$COOH
arabitic acid	CH$_2$OH(CHOH)$_3$COOH
mannitic acid	CH$_2$OH(CHOH)$_4$COOH
(4) *Aliphatic, monohydroxy, dibasic acids*	
tartronic acid, hydroxymalonic acid	HOOC.CHOH.COOH
malic acid, hydroxysuccinic acid	HOOC.CH$_2$CHOH.COOH
(5) *Aliphatic, dihydroxy, dibasic acids*	
tartaric acid, dihydroxysuccinic acid	HOOC.(CHOH)$_2$COOH
(6) *Aliphatic, polyhydroxy, dibasic acids*	
trihydroxyglutaric acid	HOOC(CHOH)$_3$COOH
saccharic acid, tetrahydroxyadipic acid	HOOC(CHOH)$_4$COOH
(7) *Aliphatic, monohydroxy, tribasic acids*	
citric acid	$\begin{matrix} HO \\ HOOC \end{matrix}>C<\begin{matrix} CH_2COOH \\ CH_2COOH \end{matrix}$
(8) *Aromatic, monohydroxy, monobasic acids*	
mandelic acid	PhCHOHCOOH
phenyl-lactic acid	PhCH$_2$.CHOH.COOH
tropic acid	Ph.CH(COOH).CH$_2$OH



Alchemical and chemical symbols.

The first one to *join* symbols in order to represents compounds was Bergman. Next Dalton simplified the symbols by using circles and letters and Berzelius introduced our present notation.

solvents. a. fuel. A blend of ethyl, methyl or butyl alcohol with benzol, petrol, acetone and/or ether. **a. ketone.** Hydroxyketone. A compound of the type R.CO.R.OH; as, ketol **a. phenols.** ar-Hydroxyphenols. A group of organic compounds that contain hydroxy groups attached both to a ring and to a side-chain, as;

o-hydroxybenzyl alcohol,
salicyl alcohol..... $C_6H_4OH.CH_2OH$

dihydroxybenzyl alcohol,
pyrocatechuic alcohol... $C_6H_3(OH)_2.CH_2OH$
trihydroxybenzyl alcohol,
pyrogallic alcohol..... $C_6H_2(OH)_3.CH_2OH$

alcoholic. (1) A preparation containing an alcohol (usually ethanol); as, a. extract, a. solution. (2) Leading to the formation of alcohol; e.g. a. fermentation. (3) Dissolved in alcohol; as, a. potash.

alcoholate. A compound derived from an alcohol by replacing the hydroxyl hydrogen by a base; as, sodium ethylate or alcoholate, EtONa.

alcoholometer. An apparatus for estimating the alcohol content of a liquid; a hydrometer, or apparatus for determining the b.p. of an alcohol-water mixture.

alcohols. Alkyloxides. A group of organic alkyl-compounds containing a hydroxyl group. R.OH. A: are classified: (1) according to the relation of the carbon atom, as

primary a	$R.CH_2OH$
secondary a	R_2CHOH
tertiary a	R_3COH

(2) according to the number of OH groups; as,

		prefix		*suffix*
R.OH	mono-	-hydroxy*		ol*
$R.(OH)_2$	di-	-atomic	a. or	diol*
$R(OH)_3$	tri-	-basic		triol*
$R(OH)_4$	tetra-	-hydric		tetrol*
$R(OH)_5$	penta-	-valent		pentol*
$R(OH)_x$	poly-			—

(See also aromatic *alcohol*, *alcohol* phenol and *alcohol* acid.)

(1) *Monatomic aliphatic alcohols*, $C_nH_{2n+1}OH$

methyl alcohol, methanol	CH_3OH or MeOH
ethyl alcohol, ethanol	C_2H_5OH or EtOH
propyl alcohol, propanol	C_3H_7OH or PrOH
butyl alcohol, butanol	C_4H_9OH or BuOH
amyl alcohol, pentanol	$C_5H_{11}OH$
hexyl alcohol, hexanol	$C_6H_{13}OH$
heptyl alcohol, heptanol	$C_7H_{15}OH$
octyl alcohol, octanol	$C_8H_{17}OH$
nonyl alcohol, nonanol	$C_9H_{19}OH$
decyl alcohol, decanol	$C_{10}H_{21}OH$
dodecyl alcohol, dodecanol	$C_{12}H_{25}OH$
tetradecyl alcohol	$C_{14}H_{29}OH$
cetyl alcohol	$C_{16}H_{33}OH$
carnaubyl alcohol	$C_{24}H_{49}OH$
ceryl alcohol	$C_{26}H_{53}OH$
melissyl alcohol	$C_{30}H_{61}OH$
tarchonyl alcohol	$C_{50}H_{101}OH$

(2) *Diatomic aliphatic alcohols*

glycols, *e.g.*, glycol	$C_2H_4(OH)_2$
pinacols, *e.g.*, pinacone	$C_6H_{12}(OH)_2$

(3) *Triatomic aliphatic alcohols*

glycerol	$C_3H_5(OH)_3$

(4) *Polyatomic aliphatic alcohols*

tetritol, *e.g.*, erythrol	$C_4H_6(OH)_4$
pentitol, *e.g.*, arabitol	$C_5H_7(OH)_5$
hexitol, *e.g.*, mannitol	$C_6H_8(OH)_6$
heptitol, *e.g.*, perseite	$C_7H_9(OH)_7$

Cf. *Agulhon's* reagent.

aldehyde- A compound containing both, the —CHO and —OH groups. **aromatic-** A cyclic compound containing the —OH group in a side chain; cf. the *phenols*. **diatomic-** or **dihydric-** An aliphatic compound containing two —OH groups (see *glycol*). **hexatomic-** or **hexahydric-** An aliphatic compound containing six —OH group derived from hexoses. **keto-** A compound containing both, the =CO and —OH groups. **monatomic-, monobasic-,** or **monohydric-** A compound containing one —OH group. **nitrated-** A compound containing the $—ONO_2$ group. **pentatomic-, pentabasic-,** or **pentahydric-** A compound containing five —OH groups. **primary-** A compound containing the monovalent carbinol group, $—CH_2OH$. **secondary-** A compound containing the divalent =CHOH group. **tertiary-** A compound containing the trivalent ≡COH group. **triatomic-, tribasic-** or **trihydric-** A compound containing three —OH groups, (see *glycerol*).

a. of crystallization. The alcohol contained in a crystalline salt in a molecule; *e.g.* $KOH.2C_2H_6O$.

alcoholysis. The cleavage of a C—C bond by the addition of an alcohol: $R.CH_2.R' + R''OH \rightarrow R''OCH_2R + R'H$. Cf. *hydrolysis*.

alcosol. A sol in alcohol.

alcumite. A steel-like and corrosion resistant alloy of 88–90 % Cu, 7.5 % Al, 2.8–3.5 % Fe and 1 % Ni.

alcyl. Alicyclic. An aliphatic-cyclic radical; a saturated aromatic radical.

aldalcoketose. A carbohydrate containing the aldehyde (—CHO), alcohol (—OH), and ketone (=CO) radicals.

aldarsone. Phenarsone sulfoxylate. Sodium 3-amino-4-hydroxyphenylarsonate-N-methanal sulfoxylate; used in treating Trichomonas vaginalis vaginitis and central nervous system syphilis.

aldebaranium. Ad = 173.60. A rare earth metal, isolated in 1907 by Auer von Welsbach and identical with thulium, q.v.

aldehydase. An oxydase (cf. *enzymes*) which forms acids from aldehydes.

aldehyde. (1) Acetic aldehyde or acetaldehyde. (2) See *aldehydes*. **acetic-** Acetaldehyde. **anisic-** Anisaldehyde. **cinnamic-** Cinnamaldehyde. **cuminic-** Cumic aldehyde. **heptylic-** Oenanthal. **meta-** Metaldehyde. **oenanthic-** Oenanthal. **para-** See *paraldehyde*. **propionic-** Propionic aldehyde. **pyromucic-** Furfural. **salicylic-** Salicylaldehyde.

a. ammonia. (1) A member of a class of compounds formed by the combination of an aldehyde and ammonia. They are crystalline and decompose on warming with dilute acid, and are consequently used for the purification of aldehydes. (2) $(CH_3.CHO,NH_3)_3 = 183.24$. Colorless crystals, m.70–80, b.100; soluble in water, alcohol or ether. **a. condensation** See *aldol* condensation. **a. group.** The monovalent —CHO radical, in which the H is not replaceable by a positive radical, but can be replaced by negative atoms or groups (Cl_2, etc.) Cf. *aldehydes*. **a. ketone.** Ketoaldehyde. A compound of the type, R.CO.R.CHO.

aldehydes. Organic compounds containing the monovalent —CHO radical. They are oxidized to acids and reduced to alcohols. They are indicated by the *prefix* oxo-, aldo- (for O of CO) or formyl- (for CHO); or by the *suffix* -al*, -dial*, -trial*, etc. **amido-** Compounds containing both, the amido and aldehyde groups. **di-** Compounds containing two aldehyde groups. **olefine-** Compounds containing a double bond and the aldehyde group. **paraffin-** Compounds containing the aldehyde group attached to a saturated aliphatic chain. **thio-** Compounds containing the —CHS group, *i.e.*, an aldehyde group in which the oxygen is replaced by sulfur.

ALDEHYDES

a. aliphatic and saturated:

formaldehyde	H.CHO
acetaldehyde	Me.CHO
propionaldehyde	Et.CHO
butyraldehyde	$Me(CH_2)_2$.CHO
i-butyraldehyde	Me_2CH.CHO
valeraldehyde	$Me(CH_2)_3$.CHO
i-valeraldehyde	$Me_2CH.CH_2$.CHO
caproaldehyde	$Me(CH_2)_4$.CHO
enanthaldehyde	$Me(CH_2)_5$.CHO
nonaldehyde	$Me(CH_2)_7$.CHO
palmitic aldehyde	$Me(CH_2)_{14}$.CHO

b. aliphatic and unsaturated:

acrolein	CH_2:CH.CHO
crotonaldehyde	MeCH:CH.CHO
tiglic aldehyde	MeCH:CMe.CHO
citral, geranial	C_9H_{15}.CHO
propiolaldehyde	CH:C.CHO

c. aliphatic dialdehydes:

glyoxal	CHO.CHO
succinaldehyde	$CHO(CH_2)_2$.CHO
adipaldehyde	$CHO(CH_2)_4$.CHO

d. aromatic aldehydes:

benzaldehyde	Ph.CHO
tolualdehyde	$Me.C_6H_4$.CHO
α-tolualdehyde	$Ph.CH_2$.CHO
cinnamaldehyde	Ph.CH:CH.CHO
salicylaldehyde	$HO.C_6H_4$.CHO
anisaldehyde	$MeO.C_6H_4$.CHO
naphthaldehyde	$C_{10}H_7$.CHO
anthraldehyde	$C_{14}H_7$.CHO

aldehydene. Acetylene.

aldehydic hydrogen. The hydrogen atom of the aldehyde group which is not readily replaced by metals.

aldehydine. $C_8H_{11}N$ = 121.14. *2*-Ethyl-*5*-methyl pyridine C_5H_3NMeEt. A colorless liquid, $d._{23°}$0.9918, b.173; insoluble in water, and soluble in alcohol or ether.

aldime. An acid imide of the type, R—CH(:NH) derived from an aldehyde.

aldobionic acids. A group of oxidized trisaccharides; as, gluco-β-glycuronic acid, found in bacteria, or obtained by the hydrolysis of flaxseed mucilage.

aldohexose. A hexose containing the aldehyde group; as glucose or galactose, cf. *ketohexose, sugars.*

aldoketens. A group of homologs of ketene, RHC:CO, (see *keto*ketene). It comprises ketene, and monoalkylated derivatives of carbon suboxide. They are colorless and are polymerized by pyridine.

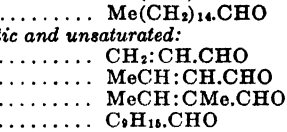
aldol. $C_4H_8O_2$ = 88.08. (1) β-Hydroxy-butyric aldehyde, *3*-hydroxybutanal*, acetaldol oxybutanol, $Me.CHOH.CH_2.CHO$. A condensation product or dimer of acetaldehyde. A clear colorless liquid, d.1.109; soluble in hot water or alcohol. Its solution leaves a polymerized product, paraldol, on evaporation. It is used medicinally as a hypnotic and sedative. Cf. *paraldehyde* (trimer), *metaldehyde* (tetramer), *paraldol.* (2) One of a class of condensation products formed from an aldehyde.

a. condensation. The polymerization of an aldehyde in presence of dilute acid or alkali, *e.g.*, the formation of aldol. The aldol polymer differs from the meta- and para-polymers by reason of its stability. There are three types: (1) true aldol condensation $R_2CO + H.CH_2COR \rightarrow R_2C(OH).CH_2.COR \rightarrow R_2C{=}CH.COR$. (2) Cannizzaro reaction: $2R.CHO \rightarrow R.COOCH_2R + R.COOCH_2R + H_2O \rightarrow R.COOH + R.CH_2OH$. (3) Claisen condensation: $2R.COOR' \rightarrow RC(OH):CH.COOR' + R'OH$.

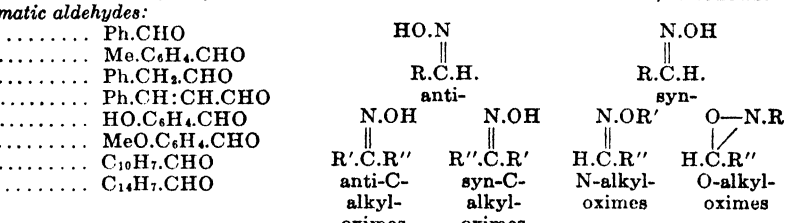
aldopentose. A pentose containing the aldehyde group; as arabinose.

aldose. Any carbohydrate (pentose, hexose, etc.) which contains the aldehyde group. Cf. *ketose, sugars.*

aldoxime. C_2H_5ON = 59.05. Acetaldoxime. A colorless liquid, m.45, b.115, d.0.965, soluble in water, alcohol or ether. It is used in organic synthesis and occurs in two isomeric forms:



aldoximes. A group of organic compounds containing the monovalent —CHNOH, or the divalent $\rangle C.NOH$ group, from which different stereo-isomeric forms are derived, as follows:



N.B. In the formula the alkyl is replaceable by aryl.

aldrey. A non-corroding aluminum alloy, used for transmission lines. It contains 0.4 % Mg, 0.6 % Si, and 0.3 % Fe.

alembic. A retort. Figuratively, anything that purifies.

aletris. False unicorn, starwort, blazing star, colic root, star grass, bitter grass, devil's bit. The dried rhizomes of *Aletris farinosa* (Haemodoraceae) of the United States. Used medicinally as a tonic. Cf. *helonoid.*

aletroid. Aletrin. A resinoid from the rhizome of *Aletris farinosa.* Used as a uterine stimulant.

Aleurites. (1) The Chinese wood or tung oil plant. (2) A genus of trees, Euphorbiaceae, of the warmer zones of Asia which yield important oils:

A. ambina	bancoul nut oil
A. cordata	tung oil
A. mollucana	lumbang oil
A. triloba	wood oil

aleutric acid. $C_{16}H_{32}O_5$ = 304.3. A trihydroxy-palmitic acid, m.102, from the shellac of *Aleurites montana.*

aleurometer. A baking cylinder for testing the baking capacity of flour by measuring the expansion of its gluten.

aleuronate. A vegetable protein used as food for diabetics. It is a tasteless, yellowish powder.

a. powder. A baked flour mixed with cooked starch used for injection into the pleural cavity of animals (rabbits) to stimulate the production of leucocytes. Cf. *leucocyte* extract.

aleurone. Protein grains in the endosperm of ripe seeds.

Alexander tester. An apparatus for determining the gel-strength of glue and gelatin.

alexandrite. An emerald green variety of chrysoberyl with ruby-red fluorescence. Used as a gem.

alexandrolite. A clay-like silicate containing chromium.

alexin. Complement, cytase. A defense protein of body fluids that partly destroys pathogenic microorganisms. It is thermo-labile, non-specific, not increased by immunization and present in leucocytes and serum. It has also the property of combining with the antigen-antibody. See *immunity, Ehrlich's theory, antilysin.*

alfa. Halfa. A variety of esparto grass grown in Algeria and Tunis. Paper is made from its bast fibers.

alfalfa. Lucerne. The plant *Medicago sativa*, a Leguminosae; used as fodder.

alfalfone. $C_{21}H_{42}O$ = 310.3. A ketone from alfalfa.

alferric. Containing alumina and ferric oxide. **a. minerals.** A groupof igneous rocks which contain aluminum and iron; intermediate between the salic and femic groups.

alga. pl. **algae.** A group of unicellular or polycellular plants of the order Thallophytae, a class of cryptograms, which live in fresh or salt water and are distinguished from other microorganism (fungi) by the presence of chlorophyll and response to photosynthesis. Cf. *lichens.* They include the sea weeds, kelps, chondrus, agar-agar, diatoms and spirogyra and are classified into

Cyanophyceae..... *blue-green* or *fission* a.
Phaeophyceae..... *brown* a.
Chlorophyceae..... *green* a.
Rhodophyceae..... *red* a.

calcareous- A. containing Ca, as *Lithothamnium*, whose skeletons consist of 95 % $CaCO_3$ and 5 % $MgCO_3$, and whose deposits are limestone. **siliceous-** The slimy ooze at the bottom of oceans, consisting of 77 % silica; it is formed by diatoms and radiolarians, and includes the skeletons of algae. Cf. *oceanic* sediments.

algarites. The naturally occurring protobitumens formed during the acid hydrolysis of algae. They consist of algarose with metallic salts, sulfur and nitrogen derivatives.

algaroba. Algarobilla. The sweet pods of *Prosopsis dulcis*, a herb of South America. It contains 45 % tannin and is used for tanning, and in the preparation of a gum.

algarose. A protobitumen formed by acid hydrolysis of carbohydrates; it reduces Fehling's solution.

algaroth. Antimony oxychloride. A white powder, used as a purgative and emetic.

algin. Alginic acid, norgine. A protein of marine algae, obtained as by-product in the preparation of iodine from kelps, principally from *Laminaria digitata.* It is used as a fabric dressing and for thickening jellies. Its solution in sodium carbonate is used as a mucilage.

alginate. Any of the salts of algin, as the iron or sodium alginate. They are used as protective colloids, for thickening solutions; for forming films on drying, and for textile dressing.

alginic acid. Algin.

algiron. Iron alginate. A preparation used medicinally in anemia.

algodonite. Cu_6As. A silver-white to steel-gray native copper arsenide.

algulose. The almost pure cellulose obtained, to the extent of 15 %, in the extraction of iodine from kelp. Used in paper making.

alibate. To cover with a protective layer of aluminum.

alicyclic. Aliphatic-cyclic. The group of cyclic organic compounds derived from the corresponding aliphatic compounds by ring-formation; those compounds having a saturated ring; as, the cyclo-paraffins and naphthenes. **a. acids.** A group of acids whose molecules contain a saturated ring; as:

Cyclopropanoic acid 
Cyclobutanoic acid 
Cyclopentanoic acid 
Hexahydrobenzoic acid 
Cycloheptanoic acid 
Other a. acids of interest are chaulmoogric acid, norpinic acid, pinic acid, camphoric acid, truxillic acid, etc. **a. compounds.** A compound containing a carbon ring, whose properties are aliphatic rather than aromatic (Bamberger).

alignment chart. Nomograph.

aliphatic. Acyclic. Pertaining to an open chain carbon compound; as, paraffins or olefines. Cf. *aromatic, alicyclic.* **a. acids.** Fatty acids. The organic acids derived from the a. hydrocarbons. See *acids.* **a. amino group.** The NH_2 radical, when attached to a chain. **a. amino group apparatus.** Van Slyke apparatus. **a. compounds.** See *organic* compounds. **a. hydrocarbon.** Any compound of carbon and hydrogen having an open chain, as in the methane, ethylene, or acetylene series. See *hydrocarbons, nomenclature,* and *organic compounds.*

alipin. Alypine.

alipite. A nickel mineral of uncertain composition, which contains nickel silicates, magnesium and free silica.

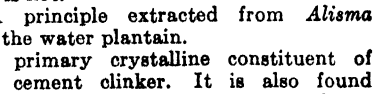
aliquot. A divisible part of a whole; *i.e.*, a part which, when multiplied makes a whole without leaving any remainder; thus 4 is an a. of 12 and 20, but 7 is not.

alismin. A principle extracted from *Alisma plantago*, the water plantain.

alite. The primary crystalline constituent of Portland cement clinker. It is also found native, and has the probable formula, $8CaO.SiO_2.Al_2O_3$. Cf. *belite.*

alival. $C_3H_7O_2I$ = 202.3. Iodopropyleneglycol, 3-iodopropan-1.2-ol, 3-iodo-1.2-dihydroxypropane, $CH_2I.CHOH.CH_2OH$. A colorless powder, used medicinally as an iodoform substitute.

alizaramide. $C_{14}H_9O_3N$ = 239.1 Amidoxyanthraquinone, 1-amino-2-hydroxy-anthraquinone.

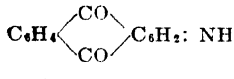


A substance derived from alizarin by heating with ammonia water. Brown needles, subliming at 150, insoluble in water, but soluble in alcohol or ether.

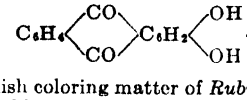
alizarate. (1). A derivative of alizarin in which the H of both OH groups is replaced by a metal. Cf. *lake.* (2) Phthalate.

alizaric acid. Phthalic acid.

alizarimide. $C_{14}H_7O_2N$ = 221.1. Alizarinimide, 1, 2-iminoanthraquinone.



alizarin. $C_{14}H_8O_4$ = 240.13. Anthraquinonic acid, 1.2-dihydrozyanthraquinone.



The reddish coloring matter of *Rubia tinctorium,* dyers' madder. It is also synthetically prepared from anthracene and the hydrolysis of ruberythric acid. Orange-red crystals, m.290, b.430, insoluble in cold water, but soluble in alcohol or ether. It is used in dyeing wool, cotton, and silk and in the manufacture of dyestuffs; also as a reagent and indicator as a 0.5 % alcoholic solution (alkalis—red, acids—yellow) and pH indicator (changing at pH 9.5). **a. black.** Naphthazarine. A black dye, the alizarin of the naphthalene series made by the reduction of α-dinitro-naphthalene. It behaves like an alizarin. **a. blue** $C_{17}H_9O_4N$ = 291.1. Anthracene blue, dihydroxyanthraquinonequinoline. Brownish-violet needles of metallic luster, m.270; soluble in alcohol. Used as a blue coloring matter and dye and pH indicator (acids—green, alkalis—blue) changing at pH 12. **a. blue amide.** $C_{17}H_{10}O_2N_2$ = 290.1. Amino-hydroxy-anthraquinone quinoline. A derivative of alizarin blue in which one —OH group is replaced by a NH_2- group. Used as a dye. **a. bordeaux, a. brown.** See *a.* dyes. **a. carboxylic acid** $C_{14}H_7O_4.COOH$ = 284.14. 2-Carboxyl-alizarin. Red triclinic crystals, m.305; soluble in water, alcohol, or ether. Used in the manufacture of dyestuffs. **a. carmine.** Sodium alizarin sulfonate. **a. dyes.** A group of dyes derived from anthraquinone (see table). They are used as sodium salts of their sulfonic acids and employed largely in the textile industry. **a. red.** Sodium sulfalizarate, alizarin sodium monosulfonate. A brown powder, readily soluble in water. It is used as an indicator in titrating acids (yellow) and bases (red) and is superior to methyl orange. It changes at pH 5.5. **a. sulfonate.** Any salt of a. sulfonic acid. **a. sulfonic acid.** $C_{14}H_7O_4.SO_2H$ = 320.1. 1.2-Dihydroxy-7-sulfonic-anthraquinone. Orange crystals; soluble in water or alcohol; insoluble in ether. Used in the manufacture of dyes. **a. yellow.** Sodium p-nitraniline salicylate. A 0.1 % aqueous solution; used as pH indicator changing at pH 11.1 from yellow (acid) to purple (basic).

alizarinic acid. Phthalic *acid.*

alkahest. See *alchemy.*

alkalamides. A group of organic compounds derived from ammonia by replacing two or more hydrogen atoms by acid or basic radicals.

alkalescent. Slightly alkaline.

Alk. Abbreviation for (1) alkaloid, (2) alkyl.

alkali. Essentially a hydroxide of lithium, sodium, potassium, rubidium or cesium; but the carbonates of these metals and of ammonia, also the amines are often included. **mineral-** An inorganic base. **vegetable-** An organic base. **volatile-** Ammonia.

a. albuminate. A compound of albumin and an alkali metal. A water-soluble, alkaline powder used for culture media (cholera and diphtheria bacillus). **a. blue.** The sodium salt of a triphenylrosaniline sulfonic acid, which is used as pH indicator changing at pH 12.5 from blue (acid) to red (basic) and in dyeing wool. **a. cell.** See *photo-electric* cell. **a. earth metals.** The divalent elements, Ca, Sr, Ba, of the second group in the periodic system. **a. earths.** The oxides of Ca and Ba (lime, baryta). **a. metals.** The monovalent element of the first group of the periodic system: Li, Na, K, Rb,

ALIZARIN DYES (ANTHRAQUINONES)

alizarin	1.2-dihydroxy-anthraquinone
quinizarin	1.4-dihydroxy-anthraquinone
anthrarufin	1.5-dihydroxy anthraquinone
chrysazin	1.8-dihydroxy-anthraquinone
hystazarin	2.3-dihydroxy-anthraquinone
anthraflavin	2.6-dihydroxy-anthraquinone
isoanthraflavin	2.7-dihydroxy-anthraquinone
alizarin OR and OG	2-hydroxy-3-nitro-anthraquinone
alizarin RG	1.2.7-trihydroxy-anthraquinone
alizarin SG	1.2.9-trihydroxy-anthraquinone
anthragallol	1.2.3-trihydroxy-anthraquinone
purpurin	1.2.4-trihydroxy-anthraquinone
brilliant bordeaux	1.2.5-trihydroxy-anthraquinone
anthrapurpurin	1.2.9-trihydroxy-anthraquinone
flavopurin	1.2.6-trihydroxy-anthraquinone
quinalizarin	1.2.5.8-tetrahydroxy-anthraquinone
anthrachrysone	1.3.5.7-tetrahydroxy-anthraquinone
alizarin cyanin	1.2.4.5.8-pentahydroxy-anthraquinone
alizarin bordeaux	1.2.5.8-tetrahydroxy-anthraquinone
alizarin brown (anthragallol)	1.2.3-trihydroxy-anthraquinone
alizarin cyanin	1.2.4.5.8-pentahydroxy-anthraquinone
alizarin garnet	1.2-dihydroxy-4-amino-anthraquinone
alizarin maroon	1.2.3-trihydroxy-3-amino-anthraquinone
alizarin orange	2-hydroxy-3-nitro-anthraquinone
rufigallol	1.2.3.6.7.9-hexahydroxy-anthraquinone

Cs. All are strongly electro-positive, have a low specific gravity, a low melting point, are silver-white and ductile, and react vigorously with water, liberating hydrogen and forming hydroxides. **a. metaprotein.** A protein cleavage product that is soluble in alkalis. **a. reaction.** Basic reaction. See *alkaline* reaction. **a. series.** See *quantum* numbers. **a. waste.** The waste calcium sulfide from the LeBlanc process.

alkalimeter. An apparatus for the determination of carbon dioxide in carbonates, *e.g.*, Schrötter's apparatus.

alkaline. Producing hydroxyl ions in an aqueous solution; as, any base. **a. reaction.** The color changes caused by alkalis, or the hydroxyl ion, as, red litmus turning blue, blue congo red turning red, colorless phenolphthalein turning red. (See *indicators*.) **a. solution.** A solution containing more hydroxyl ions than hydrogen ions; a solution reacting alkaline. (See *hydrogen-ion* concentration.) **a. tide.** The reduced acidity of tissue fluids and urine which follows eating.

alkalinity. An excess of hydroxyl ions in an aqueous solution; the reverse condition of acidity in which the hydrogen ion concentration is less than the hydroxyl ion concentration. See also *bases*, *acidity* and *hydrogen ion*.

alkalize. To make alkaline or basic. Antonym: acidify, q.v.

alkaloid. An organic nitrogenous base. Many alkaloids are of great medical importance; as, morphine, strychnine, atropine, cocaine, quinine. They occur in the animal and vegetable kingdoms, and some have been synthesized.

CHEMICAL CLASSIFICATION OF ALKALOIDS

	Derivatives of	*Example*	*Occurring in*
1.	Pyridine	piperine	pepper
		coniine, trigonelline	hemlock
		arecoline, arecaidine	areca-nut
		nicotine	tobacco
2.	Pyrrolidine	atropine, hyoscyamine, sparteine	Solanaceae
		cocaine	coca-nut
		pelletierine	pomegranate
3.	Quinoline	quinine, cinchonine, quinidine, cinchonidine	cinchona
		strychnine, brucine	nux vomica
4.	Isoquinoline	papaverine, morphine, codeine, thebaine	morphium
		narcotine, hydrastine	hydrastis
		corydaline, berberine	corydalis
		laudanosine	opium
5.	Purine	caffeine, theobromine, theophylline, xanthine, adenine	coffee, tea, beets, bamboo shoots
6.	Glyoxaline	pilocarpine, ergotoxine, ergometrine	jaborandus, ergot
7.	Amines	aspargine, leucine	
		muscarine, betaine, sinapine, choline	
8.	Glucosides	solanine	
9.	Unknown constitution	aconitine, veratrine, yohimbine	

Cf. tables for aconite, areca, opium, quinine, solanaceae, spartium and staphisagrine alkaloids.

animal- A base derived from animals; as, xanthine, adenine, etc. **cadaveric-** A cleavage product of animal tissues which results from putrefaction; as, betaine, muscarine. (See *ptomaines*.) **putrefactive-** Cadaveric a. **vegetable-** An alkaloid obtained from vegetable tissues; such as, roots, stems, leaves, barks and flowers of plants.

alkaloidal. Pertaining to alkaloids.

alkalometry. (1) The medication of alkaloids for therapeutic purposes. (2) The determination of alkaloids.

alkamine. Amino alcohol. An organic compound containing both the amino and alcohol groups (amino-alcohols). **a. esters.** An organic compound formed by the esterification of an acid with an alcohol containing the amino group.

alkanes. A group of aliphatic hydrocarbons, C_nH_{2n+2}; cf. the *methane series*.

alkanet. Alkanna root. The root of *Alkanna tinctoria*, a Boraginaceae. Used as a red color for oils or fats.

alkanisation. The combination of isobutane and butenes from petroleum, in presence of sulfuric acid, to form iso-octane and trimethyl butene.

alkannic acid. An organic acid extracted by alcohol and ether from alkanet.

alkannin. $C_{15}H_{14}O_4 = 258.19$. Anchusin. A red amorphous powder, softening at 100; insoluble in water and soluble in alcohol or acetone. Used as color for fats or oils and as an indicator. **a. extract.** Extract alkanet. A crude a. **a. paper.** Boettger's paper. A filterpaper stained with a. and used as test for alkalis (green), carbonates (blue) and acids (red).

alkanol. Trade name of a group of wetting agents.

alkargen. Cacodylic acid.

alkarsin. A mixture of cacodyl and its oxidation products.

alkasal. A mixture of aluminum salicylate and potassium acetate.

alkenes. A group of aliphatic unsaturated hydrocarbons of the general type, C_nH_{2n}, which contain double bonds; the *ethylene series*, q.v.

alkenyl. A generic term for trivalent aliphatic radicals.

alkines. A group of aliphatic, unsaturated hydrocarbons of the general type, C_nH_{2n-2}, which contain triple bonds; the *acetylene series*, q.v.

alkone. A hydrocarbon of the type C_nH_{2n-4}. See *hydrocarbon* series.

alkoxides. A group of organic compounds in which the hydrogen atom of the hydroxyl group is replaced by a metal; as, in alcoholates and phenates.

alkoxy. Any alkyl radical which is attached to the remainder of the molecule by oxygen; hence the monovalent radical RO—; as, methoxy, ethoxy.

alkyd resin. A group of tacky and adhesive resins made from unsaturated fatty acids (phthalic anhydride) and glycerol. Used as bonding materials.

alkyl. Alphyl, aphyl. A monovalent radical derived from an aliphatic hydrocarbon by removal of one hydrogen atom, as methyl-, ethyl-, or propyl-. Their general formula is C_nH_{2n+1}—. Cf. *alkyle, alkylene.* **a. halide.** A compound of the type R.Cl. **a. nitrite.** A compound of the type $R.NO_2$. **a. oxide.** See *ethers.* **a. sulfide.** See *mercaptan.*

alkylamine. An organic compound containing the $—NH_2$ group and an unsaturated hydrocarbon.

alkylation. The substitution of an aliphatic hydrocarbon radical for a hydrogen atom in a cyclic compound; as, the introduction of a side chain into an aromatic compound. **acid-** or **hot-** To introduce the alkyl into the amino- or hydroxy- group by heating under pressure with alcohol in presence of mineral acid. **basic-** or **cold-** Treatment with alkyl sulfate in the presence of sodium hydroxide.

alkylbenzaldoxime. A series of compounds derived from benzaldoxime by replacing one hydrogen atom of the aldoxime group by another radical. There are four series of isomeric compounds and eight stereoisomers:

anti-C-alkylbenzaldoxime.....	PhCHON—R
syn-C-alkylbenzaldoxime.....	PhCHON—R
N-alkylbenzaldoxime.....	PhCHON—R
O-alkylbenzaldoxime.....	PhCHNO—R

Ph is phenyl, and R a radical. The other isom rs are derived by exchanging the positions of Ph and R. Cf. *aldoxime.*

alkyle. (1) The unsaturated hydrocarbons of the general formula C_nH_{2n+1}. (2) Alkylide. A compound of a metal (Al, Pb, Hg, Zn, etc.) and an alkyl radical; as, tetraethyl lead.

alkylene. An organic radical derived from an unsaturated aliphatic hydrocarbon; as, ethylene-, propylene-. Their general formula is, C_nH_{2n}—. **a. oxides.** (1) Alcohol ethers. The aliphatic compounds that contain both the carbinol and ether groups; as, diethyline. (2) Epihydrins. Alicyclic compounds which are the inner anhydrides (ethers) of glycols; as, ethylene oxide, butylene oxide.

alkylhalides. Alkylogen. A combination of an alkyl and halogen grouping of the type $C_nH_{2n+1}X$.

alkylide. See *alkyle* (2).

alkylidene. A divalent organic radical derived from an aliphatic hydrocarbon; as, ethylidene or propylidene, in which two hydrogen atoms are taken from the same carbon atom. Their general formula is C_nH_{2n}—.

alkylogens. Alkyl halides.

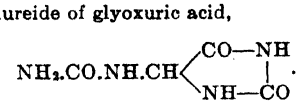
alkyls. See (1) *alkyl,* (2) *alkyle.*

allanic acid. $C_4H_5O_5N_5 = 203.2$. A monobasic crystalline acid obtained by the oxidation of allantoin with nitric acid.

allanite. Bagrationite. Orthite. A monoclinic, brown to black, orthite of the zoisite group which resembles epidote, but in which a rare earth metal partly replaces the aluminum and iron; d.3.5–4.2, hardness 5.5–6.

allantoic acid. $C_4H_8O_4N_4 = 176.2$. Dicarbamidoacetic acid, $(NH_2CONH)_2CHCOOH$. A crystalline monobasic acid obtained by boiling allantoin in alkaline solution.

allantoin. $C_4H_6O_3N_4 = 158.11$. Glyoxyl diureide, *5*-carbamidohydantoin, *5*-ureido hydantoin. The diureide of glyoxuric acid,

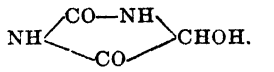


Colorless crystals, m.227 (partial decomp.); soluble in hot water. It is produced by the oxidation of uric acid and is widely distributed in nature, occurring in the urine of animals and the seeds and roots of plants. It hastens epithelial formation.

allantoxaidine. $C_3H_3O_2N_3 = 113.1$. A crystalline compound derived from allantoxanic acid.

allantoxanic acid. $C_3H_3O_4N = 117.0$. Colorless crystals obtained by the action of potassium ferricyanide on allantoin.

allanturic acid. $C_3H_4O_3N_2 = 116.1$. *5*-Hydroxy-*2.4*-imideazole-dione, glyoxalylurea. A pentacyclic and heterocyclic compound obtained by hydrolyzing allantoin,



On reduction it yields hydantoin, which when hydrolyzed, gives hydantoic acid and finally glycine and ammonium carbonate.

allelomorph. (1) One of a mixture of isomers in a solution which will first separate or crystallize out. (2) One of the many character units existing in the germ-plasm of hybrids and which may, consequently, appear in their offspring.

allelomorphism. Desmotropism.

allelotrope. A member of a system of two isomeric or desmotropic substances in equilibrium with one another; hence the substance may react according to one or the other molecular structure.

allelotropism. The phenomenon of two isomeric or desmotropic substances existing in an unstable equilibrium, so that either one or the other rearrangement of the atoms may take place.

allemontite. $SbAs_3$. A native antimony arsenide, occurring as a rhombohedric, gray or reddish mineral.

Allen's test. A modification of Fehling's test for sugar in urine.

allene. Propadiene*. **ethyl-** *1.2*-Pentadiene*. **methyl-** *1.2*-Butadiene*.

allergen. Anaphylactin. A toxic substance which causes anaphylaxis.

allergia. The hypersensitivity of an organism toward a later re-injection of the same serum. This condition is known as *anaphylaxis,* q.v.

allergic protein. An extract prepared from various vegetable or animal substances, which is used for diagnosis or desensitization; e.g. pollen extract in hay fever.

allergy. The hypersusceptibility or increased resistance of an organism to a certain antigen, demonstrable by a local reaction.

alligation. If two substances when mixed retain their specific values (A and B) of a property, the value for the mixture can be calculated from the equation $\frac{aA + bB}{a + b}$, where a and b are the proportions. Cf. *additive.*

Allihn condenser. A condenser in which the condensing surface consists of a series of glass bulbs.

Allium. A group of liliaceous plants which contain a pungent, volatile oil (allyl sulfide).

Their bulbs are used as a food, condiment and aid to digestion.

A. cepa..... common **onion**
A. porrum..... leek
A. sativum..... garlic (q.v.)

allo- Prefix from the Greek "other," and applied to the more stable form of 2 isomers.

allochroite. A light green to black manganese *garnet*, q.v.

allochromy. A *phosphorescence* or radiation effect, q.v., in which the wavelength of the emitted light differs from that of the incident light.

allocinnamic acid. $C_9H_8O_2 = 148.11$. White crystals, d.0.845, $b._{19mm}125$, existing in three allotropic forms, m.42, 58 and 68, respectively.

alloclasite. A steel-gray mineral, which consists of the sulfides of cobalt, bismuth and arsenic with some iron. It is similar to glaucodot.

allocyanine. Neocyanine.

alloisomerism. Stereo-isomerism.

allomaleic acid. Fumaric acid.

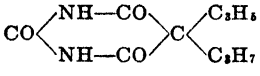
allomerism. A similarity of crystalline form with a difference of chemical composition; as, $KClO_4$ and $KMnO_4$.

allomerization. The dehydrogenation of chlorophyll in alcoholic solution by the action of atmospheric oxygen, which occurs on standing.

allomorphism. A similarity of chemical composition but a difference in crystalline form, especially of minerals; as $CaCO_3$ in calcite and aragonite.

allomucic. $C_6H_{10}O_8 = 200.1$. The optically inactive, dibasic acid, $HOOC(CHOH)_4COOH$, derived from *d-* and *l-* allose, m.166–171; soluble in hot water or alcohol.

allonal. $C_{10}H_{14}O_3N_2 = 210.12$. Registered trade mark for 5-allyl-5-isopropylbarbiturate of phenyldimethyl-dimethylamino pyrazolon.



Used as a soporific. Cf. *barbital*.

allo-palladium. See *palladium*.

allophanamide. Biuret.

allophane. An amorphous native hydrated calcium silicate.

allophanic acid. $C_2H_4O_3N_2 = 104.1$. Ureacarbonic acid, carbamyl carbamic acid. $NH_2.CO.NH.COOH$. A hypothetical acid known as its esters; ethyl allophanate, $EtOOC.NH.CO.NH_2$. **a. amide.** Biuret.

allose. $C_6H_{12}O_6 = 180.15$. A synthetic hexose, isomeric with glucose.

allotelluric acid. See *telluric* acid (anhydrous).

allotoxin. A substance formed by living tissue, which tends to counteract the harmful effect of bacterial toxins on an organism.

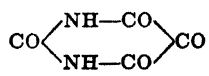
allotrope. One of two or more isomeric forms of an element; as, red and white phosphorus.

allotropic. Occurring in two or more isomeric forms; *e.g.*, carbon as graphite, diamond, or charcoal. **a. modification.** Allotrope.

allotropism. Allotropy.

allotropy. Allotropism. A change in the properties of an element without a change of state, q.v.; isomerism of a chemical element which occurs in different amorphous and crystalline forms; as, with sulfur, phosphorus or carbon. Cf. *monotropy*, *pseudomonotropy*. **dynamic-** Tautomerism.

alloxan. $C_4H_2O_4N_2 = 142.1$. Mesoxyalylurea, hexahydrotetraketo pyrimidine, pyrimidinetetrone, the "erythric acid" of Brugnatelli.



It occurs in two crystalline forms, with 1 mol. H_2O as small colorless crystals, and with 4 mol. H_2O as large, colorless, efflorescent prisms. It decomposes at about 170, and is soluble in water or alcohol. It appears in the intestinal mucus during diarrhea. If bottled it sometimes explodes. **oxime-** Violuric acid.

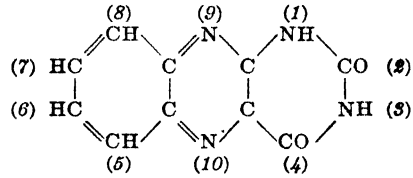
alloxanic acid. $C_4H_4O_5N_2 = 160.1$. Tetrahydro-*4*-hydroxy-*2.5*-diketo-*4*-imidazole-carboxylic acid. The compound, $NH_2.CO.NH.CO.CO.COOH$ or its ring form

Colorless crystals obtained from alloxan by treatment with alkalis. They decompose if heated.

alloxanthin. Alloxantin.

alloxantin. $C_8H_4O_7N_4 = 286.2$. A purine base occurring in colorless, small prisms, or rhombic crystals, soluble in water, alcohol or ether. **tetramethyl-** Amalinic acid.

alloxazin. $C_{10}H_6N_4O_2 = 214.12$.
The heterocyclic compound



which occurs in some plant pigments. **iso-** Flavin.

alloxuric bodies. Purine bases.

alloy. A mixture of two or more metallic elements (or non-metals, as C, Te, P) which has a metallic appearance and which is either:

1. A molecular mixture, microscopically homogeneous; as,

(*a*) a solid solution of A-in-B or B-in-A, in which case the properties are intermediate between those of A and B; or

(*b*) a metallic compound, A_xB_y, with properties differing from A and B; or

(*c*) a combination of (*a*) and (*b*); as, A-in-A_xB_y.

2. A colloidal mixture, microscopically heterogeneous; as, two or more phases, [—], consisting of crystals:

(*d*) of metallic elements, [A] + [B]

(*e*) of metallic compounds, $[A_xB_y] + [AB_z]$

(*f*) of solid solutions [A-in-B] + [B-in-A]

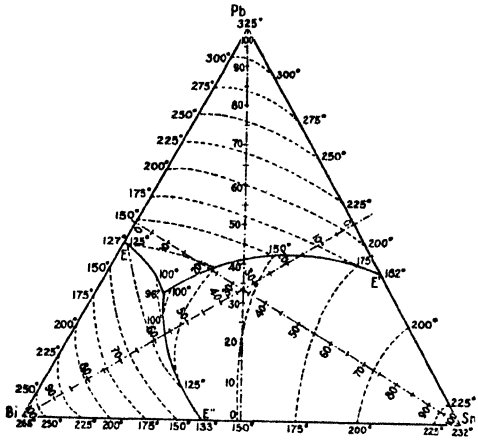
(*g*) of combinations of *d*, *e*, and *f*; as, [A] + $[A_xB_y]$ + [A-in-B], etc.

Generally the fusing point of an alloy is lower than the fusing point of its highest-melting constituent; in some cases it is lower than that of any or all constituents. Each set of metals has its own particular system, (see *diagram*), and with 3 metallic elements, there are possible:

666 binary systems (two components)
7770 ternary systems (three components)
66054 quarternary systems (four components)

See *steel* and each metallic element.

antifriction- A. which are sufficiently plastic to fit themselves to the shape of a shaft. They contain generally, tin or lead alloyed with copper or antimony. **coinage-** A. used for coins. Cf. *gold* a., *silver* a. **eutectic-** An a. which has the



Alloys of Pb, Bi, and Sn. (Molinari.) Showing the fusing points of a ternary system (for explanation of this graph see *diagram*).

lowest constant melting point; *i.e.*, whose constituents are present in such proportions that it solidifies completely at the *eutectic* temperature, q.v. **fusible.** Low-fusing a. **heavy-** An a. of 90 % W, 7.5 % Ni and 2.5 % Cu. It has a high density (16.5–17.0 grm./cc.), a tensile strength equal to that of steel, and good machining properties. **Heussler's.** A group of magnetic a. which do not contain iron but metals which are separately nonmagnetic; as, 60 pts. Cu, 20 pts. Mn and 14 pts. Al. **light-** An alloy containing aluminum as distinct from magnesium. Cf. *ultra-light* a. **low-** An alloy containing a large proportion of one constituent. **low-fusing-Fusible** a. An a. melting below the m. of tin. The lowest melting a. (15°C) consists of 88 % Ga and 12 % Sn. Others are: Newton's 8 Bi, 5 Pb, 3 Sn (m.94°C); Lipowitz' 5 Bi, 2.7 Pb, 1.3 Sn, 1.0 Cd (m.65°C). Cf. *D'Arcet* metal a., *Wood's* a., *Rose* metal. **master-** An alloy containing a known amount of a particular metal, which is used instead of the pure metal for making up finished alloys. **mercury-** Amalgam. **pyrophoric-** Iron-cerium alloys which spark when rubbed with a coarse file. **ultra-light-** An alloy containing magnesium, as distinct from aluminum. Cf. *light* a.

alloying. To produce an alloy by fusing metals together.

allspice. Pimenta.

allulose. $C_6H_{12}O_6$ = 180.0. d-Ribo-2-ketoheose, d-pseudo-fructose, d-piscose. $CH_2OH.CO.(CHOH)_3.CH_2OH$, an epimer of d-fructose. A reducing, non-fermentable constituent of cane sugar molasses, cf. *glutose.*

alluvium. The deposit of sand, earth etc., carried down by a river.

allyl. The monovalent radical, $—C_3H_5$, which contains a double bond, α- or Δ^2- $—CH_2.CH:CH_2$, β- or Δ^1-iso-, (propenyl), $—C(CH_3):CH_2$, γ- or Δ^1-, (isopropenyl), $—CH:CH.CH_3$. **a. acetate.** $C_5H_8O_2$ = 100.09. The ester, $MeCOOC_3H_5$. A colorless liquid, d.0.938, b.103; slightly soluble in water and miscible with alcohol or ether. **a. acetic acid.** $C_5H_8O_2$ = 100.09. The monobasic acid $C_3H_5.CH_2.COOH$. A colorless liquid, d.0.984, b.187, slightly soluble in water, and miscible with alcohol or ether. **a. acetone.** $C_3H_5.CH_2.CO.CH_3$ = 98.11. *5*-Henene-*2*-one*. A colorless liquid, $d_{27°}$.0.834, b.129; insoluble in water. **a. acetonitrile.** $C_3H_5CH_2CN$ = 81.09. A colorless liquid, d.1.184, b.140; insoluble in water. **a. alcohol.** $CH_2:CH.CH_2OH$ = 58.06. Propenol, propenyl alcohol, *-2*-propen-*1*-ol*. A colorless liquid, d.0.849, m. −129, b.96, insoluble in water and miscible with alcohol or ether. Used in organic synthesis, in chemical warfare, and as antiseptic in 0.5 % solution. **a. aldehyde.** Acrolein. **a. amine.** $CH_2:CH.CH_2NH_2$ = 57.08. *2*-Propenylamine*. A yellowish, oily liquid, d.0.761, b.53.2; miscible with water, alcohol or ether. It is prepared from mustard oil. (*methyl-*) $C_3H_5.NH.CH_3$ = 71.10. A colorless liquid, b.65; miscible with water, alcohol or ether. (*phenyl-*) Allyl aniline. **a. aniline.** $C_3H_5.NH.C_6H_5$ = 133.14. Phenyl allyl-amine. A colorless liquid, d.0.982, b.208; slightly soluble in water and soluble in alcohol. **a. benzene.** $CH_3.CH:CH.C_6H_5$ = 118.13. **n-,** Phenyl propine, phenyl allylene. A colorless liquid, d.0.914, b.160; soluble in alcohol. *iso-* Benzylethylene, $BzCH:CH_2$. A colorless liquid, d.0.909, b.155. **a. benzoate.** $C_6H_5.COOC_3H_5$ = 162.13. A colorless liquid, d.-1.059, b.228. **a. bromide.** $CH_2:CH.CH_2Br$ = 120.98. Bromallylene, γ-monobromopropylene, 3-bromo-1-propine, 3-bromopropene*. A colorless liquid, d.1.436, b.70.5; insoluble in water and miscible with alcohol or ether. **a. butyrate.** $CH_3(CH_2)_2COOC_3H_5$ = 128.13. A colorless liquid, b.142, miscible with alcohol. **a. carbinol.** $CH_2:CH.CH_2.CH_2OH$ = 72.1. A colorless liquid. *methyl-* $CH_2:CH.CH_2.CH(OH)CH_3$ = 86.11. A colorless liquid, $d_{20°}$.0.834, b.115; soluble in 8 pts. water and miscible with alcohol or ether. **a. chloride.** $CH_2:CH.CH_2Cl$ = 76.52. Chlorallylene, *3*-chloropropene*, α.-monochlorpropylene. A colorless liquid, d.0.937, b.46; insoluble in water and miscible with alcohol or ether. **a. cinnamate.** $C_6H_5.CH:CH.COOC_3H_5$ = 188.16. Colorless crystals, $d_{20°}$.1.052, b.285; insoluble in water, and soluble in alcohol or ether. **a. cyanamide.** Sinamin. **a. cyanide.** C_4H_5N = 67.07. *3*-Butanenitrile*, vinylacetonitrile, β-butenonitrile, $CH_2:CH.CH_2CN$. A colorless liquid, d.0.835, b.119; soluble in alcohol or ether. **a. disulfide.** $C_3H_5.S.S.C_3H_5$ = 146.02. Colorless liquid, d.0.9, b.138; it occurs in garlic. **a. ether.** $C_6H_{10}O$ = 98.11. Diallyloxide, *3*-(2-propenoxy)propene*. $(CH_2:CH.CH_2)_2O$. A colorless liquid, $d_{15°}$.0.805, b.94.3; slightly soluble in water and miscible with alcohol or ether. *methyl-* $CH_2:CH.CH_2.O.CH_3$ = 72.08. A colorless liquid, d.0.773, b.46; slightly soluble in water, and miscible with alcohol or ether. **a. ethyl ether.** $C_5H_{10}O$ = 86.11. The mixed ether $C_3H_5.O.C_2H_5$. A colorless liquid, b.64. **a. fluoride.** $CH_2:CH.CH_2F$ = 60.04. *3*-Fluoropropene*. Colorless gas, b. −10, slightly soluble in water. **a. formate.** $HCOOC_3H_5$ = 86.07. A colorless liquid, d.0.932, b.82; insoluble in water and soluble in alcohol. **a. iodide.** $CH_2:CH.CH_2I$ = 167.98. *3*-Iodopropene*. A yellow liquid, $d_{15°}$.1.890, b.101; insoluble in water, and miscible with alcohol or ether. **a. isoamyl**

ether. $C_8H_{16}O$ = 128.17. Allyl-i-amyl oxide. $C_3H_5.O.C_5H_{11}$. A colorless liquid, b.120; slightly soluble in water and miscible with alcohol or ether. **a. isocyanide.** $CH_2:CH.CH_2NC$ = 67.07. A colorless liquid, $d_{17°}$.0.794, b.100; slightly soluble in water and miscible with alcohol or ether. **a. isothiocyanate. a. mustard oil. a. malonic acid.** $C_6H_8O_4$ = 144.09. The compound $C_3H_5.CH:(COOH)_2$. Colorless crystals, m.103, (decomp.), and soluble in water, alcohol or ether. **a. mercaptan.** $CH_2:CH.CH_2SH$ = 74.12. Allyl sulfhydrate, *2*-propene-*2*-thiol*. A slightly yellow liquid, b.90; miscible with alcohol or ether. **a. mustard oil.** $CH_2:CH.CH_2NCS$ = 99.13. A. isosulfocyanic ester, a. isothiocyanate, a. thiocarbimide. A colorless liquid, $d_{10°}$.1.017, b.151; slightly soluble in water and miscible with alcohol or ether. It occurs in mustard seeds (*Sinapis nigra*) as *potassium* myronate, q.v., combined in the form of glucoside, and in horseradish. Used as a vesicant poison gas. **a. oxalate.** $(COOC_3H_5)_2$ = 170.12. A colorless liquid, d.1.055, b.217; insoluble in water, soluble in alcohol. **a. phenyl cinchonine ester.** Antiquinol. **a. phenyl ether.** $C_6H_5.O.C_3H_5$ = 134.13. A colorless liquid, d.0.986, b.192; insoluble in water. **a. phenylmethyl ether.** Anethol. **a. phenyl urea.** $C_{10}H_{12}ON_2$ = 176.16. The urea derivative $Ph.NH.CO.NH.C_3H_5$. Colorless crystals, m.115. **a. pyridine.** $C_5H_4N.C_3H_5$ = 119.12. A colorless liquid, $d_{0°}$.0.959, b.190. **a. pyrocatechol methylene ester.** Safrol. **a. sulfhydrate.** a. mercaptan. **a. sulfide.** $(C_3H_5)_2S$ = 114.17. Thioallyl ether, a. thioether, *3*-(*2*-propenylthio)-propene*, *2*-propenylsulfide*, diallyl sulfide. A colorless or slightly yellowish liquid, $d_{27°}$.0.888, b.138; slightly soluble in water and miscible with alcohol or ether. It is a constituent of garlic, and is used hypodermically in tuberculosis and cholera. **a. sulfocarbamide.** $C_3H_5.NH.CS.NH_2$ = 116.16. Thiosinamine rhodalline, a. thiourea, a. sulfourea. Colorless monoclinic crystals of slight garlic-like odor, m.74; soluble in water, alcohol, or ether. Used medicinally in the treatment of scar tissue in photography, and as a reagent in the analysis of feces. (Cf. *a.* mustard oil). **a. sulfocyanide.** $CH_2:CH.CH_2SCN$ = 99.13. a. thiocyanate. A colorless liquid, d.1.056, b.161, insoluble in water. **a. sulfourea.** a. sulfocarbamide. **a. thiocarbimide.** a. mustard oil. **a. thiocyanate.** a. sulfocyanide. **a.-i-thiocyanate.** a. mustard oil. **a. thioether.** a. sulfide. **a. thiourea.** a. sulfocarbamide. **a. tribromide.** $C_3H_5Br_3$ = 280.9. Tribromallylene, *1.2.3*-tribromopropane*, tribromopropylene, propargyltribromide, tribromhydrin, $CH_2Br.CHBr.CH_2Br$. Colorless crystals, or oil, d.2.436, m.18, b.219; soluble in alcohol or ether. Used as an antispasmodic and sedative in hysteria, asthma and whooping cough. **a. trisulfide.** $(C_3H_5)_2S_3$ = 178.26. Diallyl trisulfide. Colorless liquid, d.1.085, b.140, insoluble in water.

allylene. $CH_3.C:CH$ = 40.05. Propyne*, propine, methyl acetylene. A colorless gas, m. −110, b. −23.5, and soluble in ether. Cf. *propadiene.* **dimethyl-** Methyl butine. **methyl-** Butine. **phenyl-** See *phenylmethyl* acetylene.

a. dichloride. $C_3H_4Cl_2$ = 110.97. *1.2*-Dichloropropene*. The compound $CH_3.CCl:CHCl$. A liquid, $d_{27°}$.1.23, b.55. **a. oxide.** $(CH_3.C:CH)_2O$ = 56.05. *1.2*-Epoxypropene*. A colorless liquid, b.62, slightly soluble in water.

allylin. $C_6H_{12}O_3$ = 132.1. Allyloxy-glycerol. The compound $CH_2:CH.CH_2.O.CH_2.CHOH.CH_2OH$. A heavy liquid, b.230, formed on heating glycerol with oxalic acid.

almadina. Euphorbia gum.

almandine. Almandite.

almandite. (1) Almandine. $Fe_3Al_2Si_3O_{12}$. An isometric, reddish-brown to black garnet, d.3.9–4.2, Mol.W.499.1, Mol.Vol.118.0, used as a gem. (2) A violet variety of *spinel*, q.v.

Almen test. The detection of carbohydrates by the reduction of alkaline bismuth ions.

almond. The dried ripe seeds of *Prunus amygdalus* (*communis*), a Rosaceae of Southern Europe and California; 2 varieties: **bitter-** the seeds of variety *amara*, used in the manufacture of a. oil, amygdalin and for flavoring; **sweet-** the seeds of variety *dulcis*, used in the manufacture of oil.

a. cake. The crude remains of a. after the expression of oil; used for a. meal. **a. camphor.** Benzoin. **a. furnace.** A remelting furnace of the *reverberatory* type, q.v. **a. meal.** The residue remaining after the expression of oil from almonds. It is used in cosmetics, cooking, confectionery and as a perfume base. **a. oil, (artificial-)** Benzaldehyde. **(artificial bitter-)** Nitrobenzene. **(bitter-)** An oil obtained from bitter a. by macerating with water and distilling. A colorless liquid, d.1.045–1.060, b.180; soluble in water, alcohol, or ether. Used for flavoring **(sweet-)** An oil obtained by expressing sweet a. A yellow liquid, d.0.915–0.920; soluble in alcohol, ether, chloroform or benzene. Used as a perfume, and as a lubricant for delicate mechanisms such as watches. **bitter almond water.** A solution containing hydrocyanic acid, ammonium cyanide and mandelic acid nitrile.

alneon. An alloy of aluminum with zinc (10–20 %) and small amounts of copper and nickel; Used for castings.

alnuoid. An extract from the bark of *Alnus serrulata* or American alder. Used as a tonic.

Alnus. Alnus bark. The bark of the American alder, *A. serrulata*, a Betulaceae, which contains tannic acid; used as astringent.

alochrysine. $C_{15}H_8O_5$ = 268.1. A decomposition product of barbaloin obtained by oxidation with chromic acid mixture.

aloe. (1) A genus of liliaceous plants; the juices are the aloes of commerce and the fibres are used for cords and nets. (2) An extremely bitter, black, shining resin from the juice of the leaves of several aloe species. Used medicinally as a cathartic. **American-** Agave. **Barbados-** The resin from *Aloe vulgaris* of Jamaica and Barbados. **Cape-** The resin from *Aloe ferox* and other species of South Africa. Used in the manufacture of a brown dye. **hepatic-** The resin from *Aloe chinensis* and other species from the Dutch Indies. **Socotrine-** The resin from *Aloe perryi* from Socotra.

a. emodin. $C_{15}H_{10}O_5$ = 270.1. A crystalline constituent of all aloes which is also found in cascara sagrada, frangula and senna leaves. Yellowish crystals, m.224. Used medicinally as a cathartic.

aloeresic acid. $C_{30}H_{22}O_{14}$ = 616.3. A yellowish-brown, micro-crystalline powder obtained from Cape aloes.

aloe-wood. Eagle wood, lignum, aloe. A fragrant resinous heart-wood from *Aquilaria agallocha*, a tree of tropical Asia. Used by the Chinese as a tonic, stimulant and diuretic, and as a constituent of incense and perfumery.

aloetic acid. $C_{14}H_4O_{10}N_4$ = 388.2. Tetranitroanthraquinone. An orange-red amorphous powder obtained by treating aloin with nitric acid.

aloin. $C_{30}H_{18}O_9$ = 402.14. A neutral, bitter principle of aloes. Yellow, prismatic needles, m.147, soluble in water, alcohol or bases. It is considered to be the strong purgative glucoside of aloes and is named according to its origin: barbaloin, nataloin, socaloin or zanaloin.

alonigrin. $C_{22}H_{18}O_8$ = 410.2. An amorphous principle obtained from Barbados aloes.

aloxite. The registered trade-mark for certain artificial aluminum oxide products made by fusing materials high in alumina (as bauxite) in an electric furnace. White to dark red crystalline masses result; these are used as abrasives, filters and refractories. Cf. *alundum*.

alpaca. The long, silky, lustrous wool from the alpaca, a type of llama (Auchenia paco).

alpax. A light aluminum-silicon eutectic alloy which contains 13 % Si. It is used for moulded articles, as it has a low shrinkage when quenched.

alpha. α = The first letter of the Greek alphabet. **a. acid.** 2.8-Naphthylamine sulfonic acid. **a. derivatives.** (1) Substitution products of straight chain compounds in which the substituting atom or radical is attached to the carbon atom to which the principal group is also attached; *e.g.*, α-hydroxy propionic acid: $CH_3.CHOH.COOH$. (2) A substitution product of a polycyclic compound, in which the substituting atoms or radicals are attached to the carbon atom which is closest to the carbon atom shared by both rings; *e.g.*, in naphthalene, the 1, 4, 5, or 8 position. (3) Substitution products of heterocyclic compounds in which the substituting atom or radical is attached to the carbon atom which is closest to the heterocyclic atom; *e.g.*, in pyridine the 2, or 6 position. (4) The first of a series of derivatives to be discovered. This usage has no logical structural significance. (5) An even rotational quantum number; as,

α-hydrogen (or para-H)	0.2.4...
β-hydrogen (or ortho-H)	1.3.5...

(6) A stereoisomer of a sugar; as, α-glucoside. *Note.* For compounds beginning with alpha see under the main heading; thus for alphanaphthol see *α-naphthol*. **a. particles.** Positively-charged helium nuclei emitted from radio-active substances with a speed of 20,000 miles/second. (1.922×10^9 cm./sec.). They have a mass equal to that of a helium atom; when their charge is neutralized by the capture of two negative electrons, they form helium atoms. Cf. *alphatopic* change. **a. position.** See a. derivatives. **a. rays.** a particles.

alphatopic. Pertaining to 2 radioactive elements or isotopes which differ by an alpha particle and an atomic weight of 4.00. **a. change.** The spontaneous disintegration of certain radio-active elements in which an alpha particle is emitted and the element, thereby, changes its position in the periodic table by moving two places lower. See *radio-active* elements.

alphazurine. An indicator changing at pH 6.0 from purple (acid) to green (alkaline), used for improving the end-point of methyl red.

alphol. $C_{17}H_{12}O_2$ = 264.09. α-naphthyl salicylate. A white powder, m.83, insoluble in water; used medicinally. Cf. *betol*.

alphozone. A brand of succinic peroxide.

alphyl. Alkyl-phenyl. A radical having both aromatic and aliphatic structures; as, benzyl, phenylhexyl-, etc. Cf. *aralkyl*.

alpinin. $C_{17}H_{12}O_6$ = 312.1. A crystalline constituent of galangal, the rhizome of *Alpinia officinarum* (Zingiberaceae).

alquifou. Potters' lead. Black lead ore. A mineral zinc sulfide used to produce a green glaze on pottery.

Alsace gum. Dextrin.

alsol. Aluminum acetotartrate.

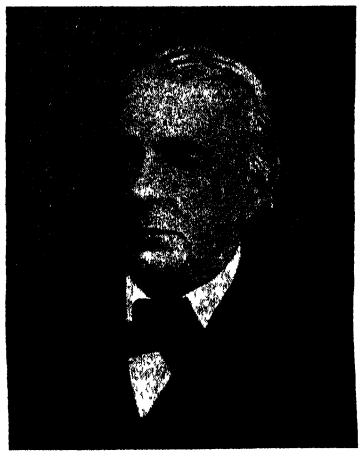
Alsop drying oven. A steam-chamber for holding crystallizing dishes, devised specially for tanning laboratories.

Alstonia. A genus of Apocynaceae of India and Malaya which yield *dita* bark, q.v.

alstonine. $C_{21}H_{20}N_2O_4.3\frac{1}{2}H_2O$ = 427.4. Chlorogenine. An alkaloid from the bark of *Alstonia constricta*, an Apocynaceae of Asia. Colorless crystals, m.195; insoluble in water, soluble in alcohol or ether. It is used as an antipyretic and antiperiotic. Cf. ditaine, porphyrine.

alstonite. Neotype. Baryto-calcite. Bromlite. The mineral $BaCO_3,CaCO_3$.

altaite. PbTe. A native lead telluride, a rare mineral occurring in tin ores as white isometric crystals. It is found in the Altai mountains of Central Asia.



David Alter.

Alter, David. 1807–1881. An American physician noted as the discoverer of spectrum analysis (1854).

alterative. A drug which stimulates the nutritive functions of the body without exerting an obvious influence upon any particular organ.

alternating current. A.C. An electric, pulsating current, in which the direction of the flow is rapidly changed so that a terminal becomes in rapid succession positive then negative. Cf. *alternator*, *commutator*, *rectifier*. **pure-** An A.C. which is constant in frequency and output, and which gives a correct sine-wave curve. It is obtained by the use of a double mercury-arc oscillator.

alternation. A series of changes following each other periodically or in turn. **a. of generations.**

The successive change from asexual to sexua reproduction and back again; a biological phenomenon observed in some lower forms of animals and plants (*e.g.*, mosses, ascidians). **a. law.** The arc spectra of the elements have alternately odd and even multiplicities when passing from the first to the higher groups of the periodic table. **a. rule.** Pauli's principle.

alternator. A dynamo with a large number of poles producing 120 or more alternations or cycles of current per second.

althea althæa. Marshmallow, hollyhock, q.v. The dried roots, flowers and leaves of *Altheae officinalis*, a Malvaceae. Used medicinally as an emollient and demulcent.

altheine. Aspargine.

althionic acid. Ethylsulfuric acid.

altimeter. An instrument for measuring the heights of objects; *e.g.*, trees, buildings, hills.

altiscope. Periscope.

altitude. The vertical elevation above any given point, cf. *co-ordinates;* in particular the height or distance above sea level. **a. gage.** A barometer used for determining altitude.

altrose. $C_6H_{12}O_6$ = 180.10. A hexose that is isomeric with glucose, talose and allose.

alucol. A colloidal aluminum hydroxide used as antacid.

aludel. A pear-shaped vessel open at both ends, used to connect other vessels. **a. furnace.** A furnace used for the reduction of mercurial ores.

alum. (1) A generic name for a group of double salts of the general formula $M_2'SO_4.M_2'''(SO_4)_3.24H_2O$, or $M'M'''(SO_4)_2.12H_2O$. M' is monovalent and may be Na, K, Rb, Cs, NH_4, Tl, Ag, hydroxylamine, or the radical of an organic quarternary base, (*e.g.* NMe_4). M''' is trivalent and may be Fe, Cr, Al, Mn, In, Tl, Ga, V, Co, Ti, Rh etc. SeO_4 or TeO_4 may replace SO_4. (2) A name applied to double salts of aluminum sulphate and the sulphate of a monovalent metal (M'), hence: $M_2'SO_4.Al_2(SO_4)_3.24H_2O$. (3) The original name of ammonium alum, $(NH_4)_2SO_4.Al_2(SO_4)_3.24H_2O$. See also pseudo*alum*. (4) Erroneously applied to aluminum sulfate; as, papermaker's a. (5) Generally applied to potassium aluminum sulfate. **ammonium-** Ammonium aluminum sulfate. **ammonium chrome-** Ammonium chromic sulfate. **ammonium iron-** Ferri ammonium sulfate. **burnt-** Aluminum potassium sulfate, calcined at 200° so as to lose its water. **cesium-** Aluminum cesium sulfate. **chrome-** Sodium chromic sulfate. **common-** Aluminum potassium sulfate. **copper-** Cupric aluminate. **iron-** A native ferric potassium sulfate. **manganese-** Manganous ammonium sulfate. **neutral-** Alunite. **official-** Either ammonium (U.S.P.) or potassium (B.P.) alum. **pearl-** A specially-prepared alum for paper manufacture. **pickle-** An alum prepared for canneries, packers, etc. **porous-** Aluminum sodium sulfate. **potassium-** Aluminum potassium sulfate. **potassium chrome-** Chromic potassium sulfate. **potassium manganese.** Potassium manganic sulfate. **pseudo-** Alums containing a divalent in place of the univalent metallic sulphate, as $MnSO_4.Al_2(SO_4)_3.24H_2O$. They are not isomorphous with the alums. **roman-** A native aluminum and iron sulfate from Tolfar, Italy. **rubidium-** Aluminum rubidium sulfate. **sodium-** Aluminum sodium sulfate. **thallium-** Aluminum thallium sulfate. **true-** a. containing aluminum **a. flour.** Aluminum potassium sulfate. **a. hematoxylin solution.** A staining solution containing 1 pt. hematoxylin, 100 pts. saturated aqueous solution of ammonium alum, 0.5 pt. thymol and 300 pts. water. **a. meal.** Aluminum potassium sulfate. **a. root.** The root of *Heuchera americana*, which contains gallic and tannic acids and is used as an astringent. **a. shale.** A clay containing iron pyrites and aluminum silicate. It is the source of ammonium alum. **a. stone.** Alunite.

alumel. An alloy of 94 % Ni, 2 % Al, 2.5 % Mn, 1 % Si and 0.5 % Fe, used in thermocouples.

alumian. $Al_2O(SO_4)_2$. A white, native, basic aluminum sulfate.

alumina. Aluminum oxide, Al_2O_3. α-Corundum. **ferric-** A colloidal solution of $Al(OH)_3$ and $FeCl_3$, used as a coagulant in water purification. **lime-** Essonite. **natural-** Corundum. Cf. *ruby, sapphire.* **a. cream.** The hydroxides of aluminum. It is a clarifying agent, used in optical experiments. **a. mordants.** A fixing agent used in dyeing; usually aluminum sulfate, alums, sodium aluminate or aluminum acetate. **a. white.** Soluble alumina, transparent alumina, alumina hydrate. A form of aluminum hydroxide used as a white pigment in paints and inks.

aluminate. (1) *ortho-* A salt of *aluminic* acid, q.v., or a compound of the type M_3AlO_3, (derived from $Al(OH)_3$); as, Na_3AlO_3, sodium aluminate. (2) *meta-* Salts of the type $MAlO_2$ which exist only in solution; as AlO_2^- ion. (3) A combination of Al_2O_3 with a metallic oxide; as, $MgAl_2O_4$, spinel.

aluminic acid. H_3AlO_3. A tautomeric form of aluminum hydroxide, $Al(OH)_3 \rightleftharpoons H_3AlO_3$. Aluminum hydroxide reacts as acid toward an alkaline solution.

aluminiferous. A rock yielding or containing aluminum.

aluminite. $Al_2(SO_4)(OH)_4.7H_2O$. A native, soft, white, hydrous aluminum sulfate occurring in monoclinic crystals. Cf. *websterite.*

aluminium. Aluminum.

alumino-ferric. A mixture of aluminum sulphate and a ferrous salt, used in the coagulation of sewage.

aluminon. $C_{22}H_{23}N_3O_9$ = 473.5. The dye, aurine tricarboxylic acid, used as a test for the aluminum ion with which it gives a bright red lake. It will detect 10^{-6} moles.

aluminothermy. A method of using finely powdered aluminum mixed with a metal-oxide and ignited by a cartridge, for the reduction of a metal oxide to metal or for obtaining a high temperature. (See *e.g., thermite,* and thermite process of welding.)

aluminum. Al = 26.96. Aluminium. An earth metal and element of atomic number 13. It is one of the most abundant metals, and was isolated by Wöhler (1817) from sodium and $AlCl_3$. A silver-white, light, ductile metal, $d_{20°}$.2.70, m.658.5, b.1800; soluble in acids or alkalis. It is readily oxidized and covered with a fine film of resistant aluminum oxide which prevents further oxidation. Finely-powdered aluminum mixed with iron oxide and ignited with a magnesium ribbon will react violently and produce a temperature of about 3000°C, in which the iron melts and can be used for welding (*thermite*). Because of its lightness and resistance aluminum is used extensively for cooking utensils, airships, aeroplanes, boats,

automobiles. Aluminum foil is used as a substitute for silver foil in the printing and glass industry. Aluminum alloys with practically every other metal, and many of these alloys are of great importance; as, *magnalium, electron, duralumin* etc. Aluminum has a valency of three and forms only one series of compounds. Aluminates are derived from aluminum hydroxide in which the aluminum has a valency of three. Its ions and compounds are:

aluminum ion..... Al^{+++}
ortho-aluminate ion..... AlO_3'''
meta-aluminate ion..... AlO_2''
alums..... $M_2'Al_2(SO_4)_4.24H_2O$

a. acetate. $(CH_3COO)_3Al$ = 204.17. Normal acetate of alumina. An amorphous white powder that decomposes when heated and is soluble in water. (*-solution.*) A 5 % aqueous solution used medicinally as a gargle, astringent or antiseptic. **a. acetate, basic.** $Al(C_2H_3O_2)_2OH$ = 162.1. A white, crystalline powder, used as a mordant and disinfectant and also in embalming fluids. **a. aceto-glycerinate.** A white powder, used as an antiseptic. **a. aceto-tartrate.** Aluminum aceto-tartrate, alsol, $AlC_2H_3O_2.C_4H_4O_6$. White crystals, soluble in water but insoluble in alcohol or ether. A 50 % solution is used as a disinfectant and antiseptic. **a. ammonium sulfate.** $Al_2(NH_4)_2(SO_4)_4.24H_2O$ = 906. Ammonium alum. **a. alkyls.** A group of compounds of aluminum and alkyl radicals; *e.g.*, aluminum trimethyl, aluminum triethyl. **a. alloys.** Alloys of aluminum and other metals; as, aldrey, alnon, alpax, duralium, electron, magnalium, partinium, romanium, skleron, etc. The melting points of some alloys (in °C) are:

With	90 % Al 10 %	80 % Al 20 %	70 % Al 30 %	60 % Al 40 %	50 % Al 50 %
Ag	625	615	600	590	580
Au	675	740	800	855	915
Cu	630	600	560	540	580
Fe	860	1015	1110	1145	1145
Sb	750	840	925	945	950
Su	645	635	625	620	605

a. arsenate. $AlAsO_4$ = 166.02. A white powder, insoluble in water but soluble in acids. **a. benzoate.** $Al(C_7H_5O_2)_3$ = 390.15. A white crystalline powder, slightly soluble in water. **a. beta naphthol sulfonate.** Alumnol. **a. bifluoride.** $(Al_2F_6)_3(HF)_4.10H_2O$. Aluminum acid fluoride. A white crystalline powder, slightly soluble in water. **a. borate.** $2Al_2O_3.B_2O_3.3H_2O$ = 338.4. A granular, white powder which is soluble in water, used in the glass and porcelain industry. **a. boroformate.** $Al_2O_3B(OH)_3H_2CO_3.5H_2O$ = 316.2. Transparent white crystals, soluble in water or dilute alcohol; used as an antiseptic, astringent and disinfectant, in gargles. **a. borotannate.** Cutal, lutol. A brownish powder, used as a disinfecting dusting powder. **a. borotartrate.** Boral. Colorless crystals, soluble in water and used as an astringent. **a. bromate.** $Al(BrO_3)_3.9H_2O$ = 573.00. Colorless hygroscopic crystals, m.62.3 which decomp. at 100; soluble in water. **a. bromide.** $AlBr_3.6H_2O$ = 374.96. Colorless or slightly yellow hygroscopic crystals, m.93, b.165, d.2.54; soluble in water, alcohol or carbon disulfide. It is used in organic syntheses. *anhydrous-* $AlBr_3$ = 266.86. Yellowish scales that fume in air; used in organic syntheses. **a. bronze.** An alloy of 90 pts. copper, 10 pts. aluminum, d.7.6, m.1050. **a. butoxide.** $Al(OC_4H_9)_3$ = 246.18. A white powder, d.1.025, m.102, b.284.5, decomp. in water. **a. carbide.** Al_4C_3 = 144.4. Yellow hexagonal crystals, d.2.36, which decomp. with water and form methane, CH_4; used for generating methane. **a. carbonate.** $Al_2(CO_3)_3$ = 234.2. Chalk-like, brittle, white lumps, insoluble in water, and used as a mild antiseptic. **a. caseinate.** A yellowish-white, tasteless powder, insoluble in water. **a. cesium sulfate.** $AlCs(SO_4)_2.12H_2O$ = 568.2. Cesium alum. Colorless crystals, d.2.115, m.117; slightly soluble in water. **a. chloride.** $AlCl_3.6H_2O$ = 231.54. Colorless crystals, soluble in water, alcohol or ether. *anhydrous-*$AlCl_3$ = 133.48. Yellow crystalline masses, m.180; soluble in water, chloroform, carbon disulfide, ether, or carbon tetrachloride. It is used in organic synthesis (Friedel-Craft reaction); medicinally in locomotor ataxia; industrially as a catalytic agent and in refining petroleum; and as a reagent for naphthalene. **a. dichromate.** $Al_2(Cr_2O_7)_3$ = 702.2. Red crystals which are soluble in water. **a. dish.** (1) A flat, shallow vessel of aluminum, used in milk analysis. (2) A deep, hollow container of aluminum used for weighing powders. **a. ethoxide.** $Al(OC_2H_5)_3$ = 162.09. Triethoxyaluminum. White powder, d.1.142, m.134, b.205, soluble in hot water or alcohol; used as a reagent for water. **a. ethyl.** $Al(C_2H_5)_3$ = 114.2. Triethylaluminum. A colorless liquid, m. −18, b.190, decomp. explosively in water. **a. fluoride.** $AlF_3.3\frac{1}{2}H_2O$ = 147.2. Colorless crystals soluble in water and losing two mol. H_2O at 120. *anhydrous-* AlF_3 = 84.1. A white powder, d.3.1; soluble in water, acids, alkalis or alcohol; used in the glass industry for the manufacture of porcelain ware. **a. fluosilicate.** $Al_2(SiF_6)_3$ = 480.12. A. silicofluoride. White powder, insoluble in water; used in the glass industry and in the manufacture of enamels and artificial stones. **a. gallate.** Gallal. **a. gluconate.** See *gluconate.* **a. hydrate.** a. hydroxide. **a. hydroxide.** $Al(OH)_3$ = 78.0. An amorphous, white powder, d.2.3; insoluble in water and decomp. by acids or alkalis. It occurs native as gibbsite, hydrargylite and zirlite. With bases it forms salts, see *aluminic* acid. Used medicinally as an astringent and externally as a dusting powder; commercially as a mordant and in the preparation of lakes and colors; also as a filter aid and neutralizing agent. *basic-* There are various basic compounds: AlO(OH), e.g., *boehmite,* and $Al_2O(OH)_4$, e.g. *bauxite;* also mixtures with the normal hydroxide. **a. hypophosphite.** $Al(H_2PO_2)_3$ = 223.2. Colorless crystals, soluble in water. **a. iodide.** $AlI_3.6H_2O$ = 515.9. White crystals, soluble in water, alcohol, or carbon disulfide. *anhydrous-* AlI_3 = 407.9. A brown crystalline mass, soluble in water, d.2.63, m.180, b.360; used in organic synthesis. **a. lactate.** $Al(C_3H_5O_3)_3$ = 294.09. A yellowish powder, soluble in water. **a. methyl.** $Al(CH_3)_3$ = 72.1. Aluminum methide, trimethylaluminum. Al-Me_3. A colorless liquid, m.9, b.130; decomp.

by water. **a. naphtholsulfonate.** Alumnol. **a. nitrate.** $Al(NO_3)_3.9H_2O$ = 375.3. Colorless, rhombic crystals, m.73, decomp. at 150; soluble in water or alcohol, and used medicinally as an astringent. *anhydrous-* $Al(NO_3)_3$ = 213.1. A white powder, soluble in water, and used in the textile and leather industry. **a. minerals.** Aluminum is the most abundant metal and is an essential constituent of all rocks, except the limestones and sandstones. It is found chiefly in silicates, such as feldspar, clays, micas, sillimanite, andalusite, cyanite, but the principal ores are:

corundum	Al_2O_3
bauxite	Al_2O_3, $2H_2O$
cryolite	AlF_3, $3NaF$

a. nitride. AlN = 41.1. Yellow crystals, m.-2150; soluble in alkalis and slowly decomp. by water. **a. oleate.** $Al(C_{18}H_{33}O_2)_3$ = 870.8. A white powder; soluble in alcohol or ether and obtained by treating sodium oleate with alum. It is used as an antiseptic in skin diseases; commercially in the manufacture of waterproofing materials and as a dryer for paints. **a. oxalate.** $Al_2(COO)_6$ = 318.2. A white powder which is insoluble in water, alcohol, or ether, but soluble in strong acids. **a. oxide.** Al_2O_3 = 102. Alumina, corundum. An amorphous white powder, or colorless, hexagonal crystals, d.3.75, m.2020; insoluble in water, acids or alkalis, but soluble in conc. sulfuric acid. It occurs in 4 crystalline forms: α- or artificial corundum (the common form); β-, made by heating the hydroxide to 500–1000°C; γ-, by heating to 900–1100°C, and ζ-, by heating in molten Li_2O. It is used as an abrasive, as a refractory and filtering material and is the chief constituent of materials such as alundum, borolon, etc. **a. palmitate.** $Al(C_{16}H_{31}O_2)_3$ = 789.9. The salt of palmitic acid obtained from palm oil. A granular white powder, insoluble in water, alcohol, or ether, but miscible and turpentine or coal oil; used in lubricants and waterproofing materials. **a. phenolate.** $Al(OC_6H_5)_3$ = 306.09. A. phenoxide. Colorless powder, d.1.23, m.265, decomp. in water and used as antiseptic. **a. *p*-phenolsulfonate.** $Al(C_6H_4(OH)SO_3)_3$. Aluminum sulfophenylate, sozal. A pinkish powder, soluble in water or alcohol, and used medicinally as an antiseptic dusting powder for wounds. **a. phosphate.** $AlPO_4$ = 122.1. Colorless, hexagonal crystals or an amorphous, white powder; insoluble in water, but soluble in acids or alkalis; native as variscite, evansite, lucinite, sphaerite and turquoise. Used as a cement when mixed with gypsum and waterglass, and also in ceramics. **a. potassium chloride.** $AlCl_3.KCl$ = 208.0. A white, crystalline powder, soluble in water. **a. potassium phenolsulfonate.** $AlK(C_6H_4.OH.SO_3)_4$. A white or pinkish crystalline powder, soluble in water and used medicinally as an astringent, antiseptic, styptic and gargle. **a. potassium sulfate.** $Al_2K_2(SO_4)_4.24H_2O$ = 948.74. Potassium alum, potash alum, common alum, kalinite. A white powder or transparent, cubical crystals, d.1.757, m.84; soluble in water. It is used extensively in industry as a mordant, in the manufacture of lakes, colors, paper, glue and cements; medicinally as an astringent, emetic or styptic. **a. potassium tartrate.** $KAl(C_4H_4O_6)_2$ = 362.13. A white powder soluble in water. **a. propoxide.** $Al(OC_3H_9)_3$ = 204.13. A white powder, d.-1.0578, m.106, b.248 decomp. in water. **a. resinate.** $Al(C_{44}H_{63}O_5)_3$ = 2041.5. A brown soft mass, insoluble in water and used as a dryer in varnish and for water-proofing materials. **a. rectifier.** An apparatus which converts an alternating current into a pulsating direct current when the former is connected to two aluminum plates immersed in sodium bicarbonate solution. **a. rhodanate.** $Al(CNS)_3$ = 201.4. Aluminum sulfocyanide, rhodanide or thiocyanate. A yellowish powder, slightly soluble in water; used in the textile industry. **a. rubidium sulfate.** $AlRb(SO_4)_2.12H_2O$ = 520.85. Rubidium alum. Colorless crystals, d.1.87, m.99; slightly soluble in water. **a. salicylate.** $Al(C_6H_4OH.COO)_3$ = 438.2. Salumin. A faintly pink powder, insoluble in water, alcohol or ether but soluble in ammonium hydroxide or alkalis; used as an antiseptic in the treatment of nose and throat diseases. **a. screen.** A canvas covered with aluminum, used for projection of slides or films. **a. silicate.** $Al_2(SiO_3)_3$ = 282.4. White masses, insoluble in water or acids and used in the glass industry as a refractory lining for tanks and pots. Native as:

cyanite	d.3.60, decomp. 1325°C
andalusite	d.3.20, decomp. 1350°C
sillimanite	d.3.23, decomp. 1530°C
mullite	d.3.18, decomp. 1810°C

Cf. *kaolin.* **a. silico-fluoride.** $Al(SiF_3)_3$ = 283.3. A white powder, insoluble in water; used in the glass industry and in manufacturing enamels and artificial stones. **a. sodium chloride.** $AlCl_3.NaF$ = 191.94. Colorless crystals, m.183; soluble in water. **a. sodium fluoride.** $AlF_3.3NaF$ = 210.10. Colorless crystals, d.2.9–3.08; sparingly soluble in water. **a. sodium sulfate.** $AlNa(SO_4)_2.12H_2O$ = 458.42. Sodium alum, soda alum. Colorless rhombic crystals, $d_{20°}$.1.675, m.61; soluble in water and insoluble in alcohol. It is used for water purification, in dye, paper and the textile industries. **a. stearate.** $Al(C_{18}H_{35}O_2)_3$ = 877.2. The aluminum salt of stearic acid, obtained by saponifying tallow or animal fat and treatment of the soap with alum. A grayish-white powder or yellowish masses; soluble in warm water. Used in lubricating and water-proofing compounds. **a. sulfate.** $Al_2(SO_4)_3.18H_2O$ = 666.5. Colorless monoclinic crystals, d.1.62, which decomp. when heated; soluble in water. It is used similarly to alum. *anhydrous-* $Al_2(SO_4)_3$ = 342.4. White crystals or powder, d.2.59, decomp. 77; soluble in water. Used as a reagent for dyes, in wine, as an antiseptic, caustic or astringent for external use; and in the leather paper, and dye industries. **a. sulfide.** Al_2S_3 = 150.4. Yellow crystals, d.2.37, m.1100, decomp in water or acids. **a. sulfocyanate.** a. rhodanate. **a. sulfocyanide.** a. rhodanate. **a. sulfophenylate.** a. phenylsulfonate. **a. tannate.** Tannal. A light brown powder used as an antiseptic, astringent or styptic. **a. tartrate.** $Al_2(C_4H_4O_6)_3$ = 498.2. A white powder insoluble in water, but soluble in ammonia or acids. **a. thallium sulfate.** $AlTl(SO_4)_2.12H_2O$ = 639.4. Thallium alum. Colorless crystals, d.2.32; slightly soluble in water. **a. triethide.** $AlEt_3$ = 114.09. Triethyl a. Colorless liquid, decomp. by water to ethane and a. hydroxide. **a. trimethide.** $AlMe_3$ = 72.04. Trimethyl a.

Colorless liquid, decomp. in water to methane and a. hydroxide. **a. zinc sulfate.** $Al_2Zn(SO_4)_4$ = 503.8. Zinc alum. Colorless crystals, powder or sticks; soluble in water. Used as a caustic.

alumite. Alunite.

alumnol. Aluminum β-naphtholsulfonate. $Al_2[C_{10}H_6OH(SO_3)_2]_3$. A white powder, soluble in water; used externally as astringent, and as an antiseptic in the treatment of abscesses, as a gargle and for tonsilitis.

Alums. See *alum*.

alundum. A pure crystalline aluminum oxide in granular form, d.3.9–4.0 m.2050. It is used as reagent for the determination of carbon in steel, as an abrasive, a basic refractory, filtering material and for chemical apparatus. **a. boat.** A combustion tube made of alundum. **a. cement.** A carrier for catalysts prepared by heating 90 pts. Al_2O_3, 5 pts. SiO_2 and 5 pts. CaO. **a. crucible.** (1) A highly-refractive crucible for the electric furnace, used for melting platinum. (2) A porous filtering crucible. **a. dish.** A shallow dish used for incinerations. **a. filter cone.** An alundum filter cone which fits into a funnel. **a. filter dish.** A shallow filter dish that fits into a glass funnel. **a. muffle.** A muffle made of alundum and used in the assay of metals. **a. pyrometer tube.** A long thin tube made of alundum and used in pyrometers.

alunite. Probably $K_2SO_4.Al_2(SO_4)_3.4Al(OH)_3$. Alumite. Neutral alum. Alum stone. A native, white, hydrous potassium aluminum sulfate, d.2.83, hardness 3.5–4.0, which occurs in rhombic hexagonal crystals; sparingly soluble in water.

alunogen. $Al_2(SO_4)_3.18H_2O$. A native, silky-white, hydrous aluminum sulfate which occurs in monoclinic crystals.

alurate. A brand of allyl-isopropyl-barbituric acid.

alva marina. A prepared seaweed used for stuffing mattresses or chairs.

alveolar air. Respired air.

alvite. The mineral, $(ZnHfTh)SiO_4$.

alypine. $C_{15}H_{26}O_2.N_2HCl$ = 302.6. 2-benzoxy-2-dimethylaminomethyl-1-dimethylamino-butane hydrochloride. White hygroscopic crystals m.169; soluble in water. Used medicinally as a local anesthetic.

Am. An abbreviation for (1) NH_4 group (ammonium); (2) C_5H_{11} radical, (amyl).

am. The symbol for *atom-meter*, a proposed name for *Ångström* unit.

amadou. Surgeons' agaric, punk, tinder. The fungus *Boletus igniarius*, found on old tree trunks; used as tinder, for surgical pads and as a styptic.

amalgam. (1) An alloy of mercury, generally solid or semiliquid; as, ammonium a., gold a., silver a., sodium a. (2) An alloy of silver and mercury. **native-** An alloy of mercury with silver or gold; *e.g.*, $AuHg_3$, Hg_3Ag_2, etc., occurring as minerals as *arquerite*.

amalgamation. The formation of an alloy of a metal with mercury. **a. process.** A method of extracting noble metals, especially gold, from ores by alloying them with mercury.

amalgamator. An apparatus used in mines for extracting gold from ores.

amalic acid. Amalinic acid.

amalinic acid. $C_{12}H_{12}O_7N_4$ = 324.3. Amalic acid, tetramethyl alloxantine. Colorless crystals; m.245°, soluble in hot water, alcohol or ether.

amandin. A globulin from fruit kernels, e.g., peach seeds and sweet almonds.

Amanita. A genus of fungi (mushrooms), many of which are poisonous; as, *A. phalloides*, Death head fungus, death cup, containing *phallin*, q.v.; *A. muscaria*, fly agaric, fly amanita, containing muscarufin; *A. verna*, the "destroying angel." **a.-toxin.** A protein from *A. phalloides*, death-head fungus. It is the cause of many cases of mushroom poisoning.

amanitine. $C_5H_{15}O_2N$ = 121.1. (1) The tertiary amine $Me_2N(OH)CHOH.Me$. An alkaloid of Amanita species; as, *A. pantherina* and *A. muscaria*, identical with neurine. (2) $C_5H_{15}O_2N$ = 121.1. Isocholine. The tertiary amine, $Me_3N(OH)CH_2CH_2OH$. An alkaloid from mushrooms (*Agaricus muscari*) which is oxidized to muscarine. Cf. *choline*.

amaranth. A deep-red aniline dye, $NaSO_3.C_{10}H_6.N:N.C_{10}H_4(SO_3Na)_2OH$, used as a food-color.

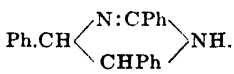
Amaranthaceae. A family of plants comprising 40 genera and 500 species of weeds, pot-plants, and fodder plants.

amaranthus. The fresh root of the shrub *A. spinosa*, used in India as a specific for gonorrhea.

amarbital. A brand of phenyl-ethyl-barbituric acid.

amargosa bark. The root bark of the goatbush, *Castela nicholsoni*, a Simarubaceae; it is a source of castelamarin.

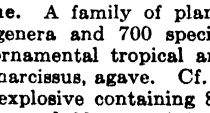
amarine. $C_{21}H_{18}N_2.\frac{1}{2}H_2O$ = 307.28. Triphenyl-dihydro-glyoxalin, 4.5-dihydro-2.4.5-triphenyl-imidazole,



Bitter, colorless prisms, anhydrous at 130; soluble in alcohol or ether, and insoluble in water. It is formed by the action of ammonia upon benzoic acid, and occurs in oil of bitter almonds.

amaroid. Bitter principles, other than alkaloids, glucosides, or tannins, which occur in plants; as, quassin, chamomillin.

amaron. $C_{28}H_{20}N_2$ = 384.32. Tetraphenyl-p-pyrimidine, benzoin imide, ditolanazotide, tetraphenyl pyrazine.



Small, colorless needles, m.245; insoluble in water, soluble in alcohol or ether.

Amaryllidaceae. A family of plants comprising about 75 genera and 700 species. Many of them are ornamental tropical and subtropical plants; as, narcissus, agave. Cf. *lycorine*.

amatol. An explosive containing 80 pts. ammonium nitrate and 20 pts. trinitrotoluene, used in coal-mines.

amazonite. Amazon stone, microcline. A bright green potassium aluminum silicate, used as a precious stone.

amber. $C_{10}H_{16}O$ (?). Electrum, succinum. A fossilized, bituminous resin, d.1.1, which occurs as hard, brittle and transparent masses of yellow to brown color. It is used as a precious stone and in experiments on static electricity. It occurs as succinite and gedanite. **artificial-** Colophony. **Baltic-** Succinite. **Cana-**

dian- Chernawinite. **synthetic-** A formal dehyde-phenol or -urea resin.

a. acid. Succinic acid. Cf. *ambreic* acid. **a. oil.** A brown essential oil of empyreumatic and balsamic odor distilled from amber, d.0.915–0.975; miscible with alcohol. **a. seed.** Musk seed.

Amberg swimming cup. A perforated porcelain tumbler with cork stopper, used for washing microscope specimens by floating them in a solvent.

ambergris. The opaque, grayish, waxy masses formed in the intestines of the sperm whale. d.0.7–0.92, m.60, b.100, soluble in alcohol or ether; used in perfumery. Cf. *ambrein*, *spermaceti*.

amberite. (1) A smokeless powder composed of guncotton, paraffin and barium nitrate. (2) Compressed amber scrap used for electrical insulation.

amberlite. The trade-mark for certain ion exchange resins.

amblygonite. $LiAlFPO_4$. A native lithium aluminum fluorspar occurring in California, as pale-green triclinic crystals.

amblystegite. Enstatite.

amboceptor. Fixator. A heat-resisting substance in blood which has two haptaphore groups (cytophile and complementophile); it unites the cell-body with the complement. Cf. *polyceptor*, *complement* fixation, immunity, and *Ehrlich's* side chain theory.

amboyna wood. An Indian wood from *Pterospernum indicum*, used in East India for inlay work.

ambreic acid. A yellowish-white substance derived from amber and probably identical with cholesteric acid.

ambrein. A cholesterin obtained from ambergris.

ambrette. Musk seed.

ambrettolic acid. $C_{16}H_{30}O_3$ = 270.25. ζ-hydroxy-ζ-hexadecenic acid. $Me(CH_2)_7CH:COH(CH_2)_5COOH$. **dihydro-** Juniperic acid.

ambrion. An insulating material consisting of asbestos impregnated with pitch or rosin.

ambrite. A fossilized resin found in New Zealand as greasy, yellowish-gray masses, sometimes used for semi-precious stones.

ambron. A proposed term for the positive nucleus of an atom.

Ambrosia. A genus of composite-flowered herbs, whose pollen causes of hay fever, as *A. artemisiifolia*, or rag-weed.

ameba. Amoeba. A unicellular animal without definite shape, resembling a mass of moving jelly, and exhibiting all the features of life; *e.g.*, growth, reproduction, metabolism, locomotion, etc.

amebicide. An agent that destroys ameba.

ameboid. Assuming various shapes, like a moving ameba.

ameliaroside. Piceoside. A glucoside from *Amelancher vulgaris*, a Rosaceae.

American Chemical Society. Organized in 1876, Publishers of the Journal of the Am. Chem. Soc., Chemical Abstracts, and the Journal of Industrial and Engineering Chemistry. Secretary, 1155, 16th. St., N. W., Washington, D. C.

American aloe. Agave. **A. colombe.** Fraserin. **A. ginseng.** Ginseng. **A. hellebore.** Veratrum. **A. ipecac.** Gillenia. **A. saffron.** Carthamus. **A. valerian.** See Cypripedium. **A. veratrum.** Veratrum. **A. wormseed oil.** Chenopodium oil.

Ames moisture tester. An apparatus for the determination of moisture in butter. It consists of a paraffin-jacketed container in which the butter, in an aluminum cup, is placed.

amesite. A ferromagnesium aluminum silicate of variable composition.

amethyst. A purple or bluish-violet quartz found in India, Ceylon, Brazil, etc., used as a precious stone for seals and ornaments. **oriental-** A purple, native alumina, Al_2O_3. **true-Oriental-.**

amianthus. Earth flax, mountain flax. A fine, silky variety of asbestos.

amicron. A particle whose diameter is less than 5mμ. See *micron*. It is invisible under the ultra-microscope.

amidase. A hydrolytic enzyme which splits ammonia from urea.

amidation. The process of forming an amide; *e.g.*, (a) heating the corresponding ammonium salt:

$$R.COONH_4 \rightarrow R.CONH_2 + H_2O$$

(b) reaction of NH_3 on an acid chloride:

$$R.COCl + 2NH_3 \rightarrow R.CONH_2 + NH_4Cl$$

(c) reaction of NH_3 with an ester:

$$R.COOR' + NH_3 \rightarrow R.CONH_2 + R'OH$$

Cf. *amination*.

amide. (1) An organic compound containing the monovalent —$CO.NH_2$ radical; as,

formamide	$H.CO.NH_2$
acetamide	$Me.CO.NH_2$
benzamide	$Ph.CO.NH_2$
oxamide	$(CONH_2)_2$

They are derived from acids by replacing the —OH group by —NH_2; as, —COOH → —$CONH_2$; or from ammonia by the replacement of a hydrogen by an acyl group: $NH_3 \rightarrow NH_2.OCR$. (2) Ammonobases. Compounds in which one H of NH_3 is replaced by a metal; as,

sodamide	$NaNH_2$
zincamide	$Zn(NH_2)_2$

alkyl- A group of compounds obtained by treating an acid chloride or acid anhydride with an amine and sodium hydroxide. They have the general formula $R.C\langle^{O}_{NHR}$. Cf. *anilide*.

keto- A compound containing the monovalent radical —$CO.CONH_2$. **oxy-** A compound containing both, the —OH and —$CONH_2$ groups. **thio-** A compound containing the —$CSNH_2$ group.

a. chloride. A chlorinated amide, $R.C\langle^{NR_2}_{Cl_2}$ derived from an alkyl a. The compound $R.C\langle^{NH_2}_{Cl_2}$ passes readily into the imide chloride $R.C\langle^{NH}_{Cl}$. **a. group.** The monovalent formamyl group, —$CO.NH_2$ which confers weakly basic properties.

amidin. A transparent solution of starch in water.

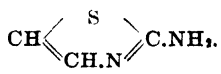
amidine. Any compound containing the monovalent radical —C(=NH)NH₂; as

formamidine..... H.C(:NH)NH₂
acetamidine..... Me.C(:NH)NH₂
cyanamidine..... NC.C(:NH)NH₂

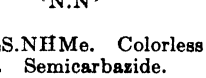
They are derived from the amides by the replacement of oxygen by the divalent amido residue, >NH or >NR. Cf. *benzimidazole, phasotropy.*

di- A compound containing two amidine groups; *e.g.*, oxalamidine, NH₂(HN:)C—C(:NH)NH₂.

amido. The monovalent —NH₂ radical when present in a compound with the —CO radical; otherwise it is termed "*amino.*" **a. acetophenone.** C₆H₄NH₂.COMe. Colorless crystals, m.106; soluble in water, alcohol or ether; used as a reagent in Ehrlich's diazo reaction. **a. aldehyde.** Any compound containing both the amino and aldehyde radical; as, NH₂—CH₂—CHO, a. acetaldehyde. **a. benzoyl formic acid.** Isatinic acid. **a. F. acid.** β- Naphthylamine-7-sulfonic acid. **a. ketone.** A compound containing both the amino and keto groups; as, NH₂.CH₂COMe, amido acetone; and NH₂.CHEt.COMe, amido propyl ketone. **a. mandelic acid.** Hydrindic acid. **a. mandelic acid lactame.** Dioxindole. **a. naphthol disulfonic acid.** H-acid. **a. oximes.** Amidoximes. **a. phosphoric acid.** Phosphamic acid. The compound, PO(NH₂)O₂. **a. pyrine.** Pyramidone. **a. thiazole.** C₃H₄N₂S = 100.1. The heterocyclic compound



α-methyl- NH₂.C₄HNS.Me. A colorless crystalline substance, m.42, b.136. **a. triazulfole.** CH₂N₄S = 102.2. Amidotriazosulfole. The heterocyclic compound



methyl- CN₂S.NHMe. Colorless crystals m.-96. **a. urea.** Semicarbazide.

amidogen. Amido.

amidol. $C_6H_8ON_2.HCl$ = 160.5. 3,4-diaminophenol hydrochloride. $(NH_2)_2C_6H_3OH.HCl$. Colorless crystals, slightly soluble in water; used as a photographic developer.

amidopyrine. $C_{13}H_{17}ON_3$ = 231.16. (U.S.P., XI.) Dimethylaminoantipyrine, ampydin, dimethylaminophenyl-dimethyl pyrazolone. White crystalline powder, m.108, soluble in water; used as an analgesic.

amidoxalyl. Oxamyl.

amidoxime. Oxamidine. A compound containing the monovalent amidoxime group, —C(:NOH)NH₂. *E.g.*, methenyl- or formamidoxime, HC(NOH)NH₂, ethenyl- or acetamidoxime $CH_3C(NOH)NH_2$.

amidoxyl. Hydroxylamino. A compound containing the monovalent amidoxyl group, —NHOH derived from hydroxylamine. *E.g.*, amidoxyl acetic acid, HONH.CH₂.COOH.

amidrazone. A compound containing the monovalent $C_6H_5.NH.N:C(NH_2)$-radical; *e.g.*, methyl-$C_6H_5.NH.N:C(NH_2).CH_3$. (See *hydrazidines.*)

amigen. A protein hydrolysis product used in aminoacid therapy.

amination. The formation of an amine; *e.g.*,

(a) reduction of a nitro compound:

$$R.NO_2 + 6H \rightarrow R.NH_2 + 2H_2O$$

(b) reduction of a cyanide:

$$R.CN + 4H \rightarrow R.CH_2.NH_2$$

(c) oxidation of an amide:

$$R.CONH_2 + NaOBr + NaOH \rightarrow R.NH_2 + NaBr + Na_2CO_3 + H_2O$$

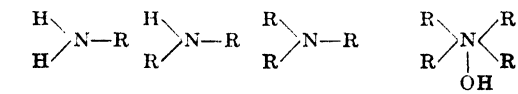
(d) treating isocyanate with alkali:

$$R.NCO + 2KOH \rightarrow R.NH_2 + K_2CO_3$$

Cf. *amidation.*

amine. (1) See *amines.* (2) A suffix indicating an —NH₂ group.

amines. A group of compounds derived from ammonia by substituting organic radicals for the hydrogens; as,



primary- secondary- tertiary- quarternary- (amines) (imines) (nitriles) (ammonium). Cf. *amino, amide, arsine, phosphine.* **di- a.** containing two NH₂-groups. **metallic-** An *amide* (2), q.v. **primary-** Amino-bases. Compounds in which one hydrogen is replaced by a radical; *e.g.*, NH_2CH_3. **quarternary-** Tetraalkyl ammonium bases. Compounds derived from ammonium hydroxide containing four radicals; *e.g.*, $N(CH_3)_4OH$. **secondary-** Imino bases. Compounds in which two hydrogens are replaced by a radical; *e.g.*, $NH(CH_3)_2$. **tertiary-** Nitrile bases. Compounds in which three hydrogens are replaced by radicals; *e.g.*, $N(CH_3)_3$. **thionyl-** A compound containing the —N:SO radical. **tri-** A compound containing three NH₂ groups; cf. *semidines.*

aminic acid. Formic acid.

amino. The monovalent basic —NH₂ group indicated by the *prefix* amino* or *suffix* amine*; as, aminomethane or methylamine. **a. acetal.** $C_6H_{15}O_2N$ = 133.16. The compound $NH_2.CH_2.CH(OEt)_2$. Colorless needles m.163 soluble in water, alcohol or ether. Cf. *glycinaldehyde.* **a. acetanilide.** $C_8H_{10}ON_2$ = 150.-14. Acetylphenylenediamine. The compound $NH_2.C_6H_4.NHCOMe$. Colorless needles, *ortho-* m.165, *meta-* m.90, *para-* m.160; slightly soluble in water and soluble in alcohol or ether. **a. acetic acid.** Glycine. **a. acetone.** NH_2CH_2COMe = 73.08. Colorless needles, m. (decomp.) 188; soluble in water or alcohol. **a. acetphenetidine.** See Phenocoll. **a. acetophenone.** C_8H_9ON = 135.1. p-aminophenylmethyl ketone $NH_2.C_6H_4.COMe$. A yellow powder, m.105, slightly soluble in water, soluble in alcohol or ether. *ortho-* a liquid, b.251. **a. acid.** See *amino-acids.* **a. alcohols.** Alkamines. **a. anthraquinone.** See *anthraquinone.* **a. azobenzene.** $C_{12}H_{11}N_3$ = 197.2. Aniline yellow. $PhN:NC_6H_4NH_2$. Yellow needles, m.-125, b.360; slightly soluble in water, soluble in alcohol or ether. An intermediate product in the preparation of dyes and medicinals, as acid

yellow and inulin, and is used as indicator changing at pH 2.5 from orange (acid) to yellow (alkaline). **a. azobenzene chlorhydrate.** $C_{12}H_{11}N_3.HCl$. Pale-blue needles, slightly soluble in water and soluble in alcohol; used in dye manufacture. **a. azobenzene-β-naphthol.** Sudan red III. **a. azonaphthalene.** $C_{20}H_{16}N_2$ = 297.25. The compound $C_{10}H_7N:NC_{10}H_6NH_2$. *alpha-* Red needles, m.174; slightly soluble in alcohol or ether. *beta-* Red needles, m.159. **a. azotoluene.** The compound $MeC_6H_4N:NC_6H_3(NH_2)Me$. Red crystals, m.100, insoluble in water, but soluble in alcohol; used medicinally in the treatment of ulcers. **a. azotoluene hydrochloride.** The compound $MeC_6H_4N:NC_6H_3(NH_2)Me.HCl$. Colorless crystals; soluble in water or alcohol. It exists in 4 isomeric forms, and is used in organic synthesis. **a. barbituric acid.** Uramil. **a. benzaldehyde.** See *benzaldehyde*. **a. benzamide.** See *benzamide*. **a. benzene.** Aniline. **a. benzene sulfonic acid.** *o-* Orthanilic acid. *m-* Metanilic acid. *p-* Sulfanilic acid. **a. benzoic acids.** See *benzoic acid*. **a. caproic acid.** Leucine. **a. dracilic acid.** See p-amino-*benzoic acid*. **a. diphenyl.** Xenylamine. **a. ethanol.** Ethanolamine. **a. ethionic acid.** Taurine. **a. formic acid.** See *formic acid*. **a. G-acid.** *2*-naphthylamine-*6.8*-disulfonic acid. **a. glutaric acid.** See *glutaric acid*. **a. guanidine.** See *guanidine*. **a. phenol.** C_6H_7ON = 109.1. A group of compounds of the type $NH_2.C_6H_4OH$. **1.2-,** or *ortho-* Aminophenol base. Colorless rhombic crystals, m.179; slightly soluble in water or alcohol, soluble in ether. **1.3-,** or *meta-* Colorless crystals, m.123; slightly soluble in water, very soluble in alcohol or ether. **1.4-,** or *para-* Rodinol. Colorless leaflets, m.-(decomp.) 184; slightly soluble in water, alcohol or ether. Used as a developer in photography and as a reducing agent in the dye industry. **a. propionic acid.** Alanine. **a. phthalhydrazide.** Luminol. **a. purine.** Adenine. **a. quinoline.** $C_9H_9N_3$ = 144.13. The crystalline compounds $C_9H_6N.NH_2$. *alpha-* Colorless crystals, m.125, soluble in ether, slightly soluble in water or alcohol. *beta-* Colorless crystals. decom. 280, insoluble in water or alcohol. **a, R-acid.** *2*-Naphthylamine-*3.6*-disulfonic acid. **a. sulfonic acid.** Sulfamic acid. **a. succinamic acid.** Aspargine. **a. thiophen.** Thiophenine. **a. toluene.** Toludine. **a. xylol.** Xylidine.

aminoacids. A group of organic compounds of the general type,

$$NH_2—R—COOH,$$

in which R is an aliphatic radical. They have both basic and acidic properties and form the units of peptides and proteins. **alpha-** or **primary-** General formula, $NH_2.CHR.COOH$, and are the commoner aminoacids. **beta-** or **secondary-** General formula, $NH_2.CHR.CH_2.COOH$. **gamma-** or **tertiary-** General formula, $NH_2.CHR.CH_2.CH_2.COOH$. **delta-** or **quarternary-** General formula, $NH_2.CHR.CH_2.CH_2.CH_2.COOH$.

AMINOACIDS

1. *Monoamino-monocarboxylic acids: $NH_2—R—COOH$*

carbamic acid	$NH_2.COOH$
glycine aminoacetic acid. Glycocol.	$NH_2.CH_2.COOH$
glycin (photographic developer) α-amino-β-*p*-hydroxyphenyl acetic acid	$NH_2.CH(C_6H_6OH).COOH$
alanine α-aminopropionic acid	$NH_2.CHMe.COOH$
aline α-amino-isovaleric acid	$NH_2.CH(CHMe_2).COOH$
norvaline α-aminovaleric acid	$NH_2.CH(CH_2.CH_2.Me).COOH$
leucine α-amino-isocaproic acid	$NH_2.CH(CH_2.CHMe_2).COOH$
norleucine α-amino-caproic acid	$NH_2.CH(CH_2.CH_2.CH_2.Me).COOH$
isoleucine α-amino-β-methylethyl-propionic acid	$NH_2.CH(CHMeEt).COOH$
isovaline α-amino-α-methylbutyric acid	$NH_2.CMe(CH_2Me).COOH$
phenylalanine α-amino-β-phenylpropionic acid	$NH_2.CH(CH_2Ph).COOH$
tyrosine α-amino-β-parahydroxyphenyl propionic acid	$NH_2.CH(CH_2.C_6H_4OH).COOH$
serine α-amino-β-hydroxypropionic acid	$NH_2.CH(CH_2OH).COOH$
α-amino-β-hydroxybutyric acid	$NH_2.CH(CHOH.CH_3).COOH$

AMINOACIDS—(*Continued*)

cysteine..... $NH_2.CH.COOH$
CH_2SH
α-amino-β-thiopropionic acid

methionine..... $NH_2.CH.COOH$
$CH_2.CH_2.SMe$
α-amino-γ-methylthio-butyric acid

thyroxine..... $NH_2.CH.COOH$
$CH_2.C_6H_2I_2.O.C_6H_2I_2OH$

2. *Monoamino-dicarboxylic acids:* $NH_2.R(COOH)_2$

aspartic acid..... $NH_2.CH.COOH$
$CH_2.COOH$
α-aminosuccinic acid

glutamic acid..... $NH_2.CH.COOH$
$CH_2.CH_2.COOH$
α-aminoglutaric acid

3. *Diamino-monocarboxylic acids:* $(NH_2)_2R.COOH$

arginine..... $NH_2.CH.COOH$
$CH_2.CH_2.CH_2.NH.CNH.NH_2$
α-amino-δ-guanidine valeric acid

lysine..... $NH_2.CH.COOH$
$CH_2.CH_2.CH_2.CH_2.NH_2$
α, ε-diaminocaproic acid

ornithine..... $NH_2.CH.COOH$
$CH_2.CH_2.CH_2.NH_2$
α-δ-diaminovaleric acid

asparagine..... $NH_2.CH.COOH$
$CH_2.CONH_2$
α-aminosuccinamic acid

citrulline..... $NH_2.CH.COOH$
$(CH_2)_3NH.CO.NH_2$
α-amino-δ-ureylvaleric acid

4. *Heterocylic amino acids:*

histidine..... $NH_2.CH.COOH$
$CH_2—(C_3H_3N_2)$
α-amino-β-imidazolepropionic acid

tryptophane..... $NH_2.CH.COOH$
$CH_2—C(CH)(C_6H_4)NH$
α-amino-β-indolepropionic acid

proline..... $NH—CH.COOH$
$CH_2\ CH_2$
CH_2
α-pyrrolidine carboxylic acid

hydrooxyproline..... $NH—CH.COOH$
$CH_2\ CHOH$
CH_2
γ-hydroxy-α-pyrrolidine carboxylic acid

aminoids. A protein hydrolysis product used in aminoacid therapy.

aminoketones. A group of aromatic compounds containing the monovalent —NHCHO radical; *e.g.*, formanilide, $C_6H_5.NHCHO$; or the divalent —NH.CO— radical. Cf. *peptides*.

aminophenols. A group of aromatic compounds containing both, the —OH and $—NH_2$ groups attached to the benzene ring; *e.g.*,

aminophenol.....	$HO.C_6H_4.NH_2$
diaminophenol.....	$HO.C_6H_3.(NH_2)_2$
triaminophenol.....	$HO.C_6H_2.(NH_2)_3$

aminopherases. A group of intracellular enzymes of the desmolase type, which produce transamination (q.v.).

aminophyllin. A brand of theophylline ethylenediamine used as a diuretic and cardiotonic.

amiodoxyl benzoate. $C_6H_4(IO_2)COONH_4$ = 305.1. Ammonium *o*-iodoxy-benzoate. Crystals, soluble in water; an antiarthritic.

amitosis. Cell-division, which differs from mitosis in that there is no apparent change in the structure of the cell nucleus; hence, it is also known as cell-cleavage or direct cell division.

ammate. Trade-mark for weed killer based on ammonium sulfamate.

ammelide. $C_3H_4O_2N_4$ = 128.1. Cyanin monamide, aminocyanuric acid, cyanuramide, *6*-amino-*s*-triazine-*2.4*-diol. The heterocyclic compound, $N(COH{=}N)(COH{—}N)C.NH_2$. A colorless powder, decomp. if heated, insoluble in water or alcohol and soluble in acids. **iso-** See *isocyanurimide*.

ammeline. $C_3H_5ON_5$ = 127.1. Diaminocyanuric acid, cyanuro diamide, cyanin, diamide, *4.6*-diamino-*s*-triazin-*2*-ol. The heterocyclic compound, $N(CNH_2{=}N)(CNH_2{—}N)C.OH$. Colorless, deliquescent needles, formed by boiling melam with hydrochloric acid; insoluble in water or

alcohol and soluble in bases, but decomp. by heating. **ethyl-** See *ethyl*. **iso-** Isocyanurimide.

ammeter. *Ampere* meter.

ammines. Ammoniates, ammonates, ammino compounds, metal ammines, ammono. A group of complex inorganic metal-ammonia compounds which may be regarded as metal salts with ammonia in a rôle analogous to that of "water" of crystallization; as, $CoCl_3.6NH_3$ which is written $[CO(NH_3)_6]Cl_3$, or $[Fe(NH_3)_6]_2(SO_4)_3$ can be regarded as $Fe_2(SO_4)_3.12NH_3$. Cf. *aquo* ions, *ammonia* system, *crystal* ammonia, tetrammines.

ammino. A prefix indicating the presence of NH_3 in a coordinate compound; as in *ammines*.

ammiolite. A native antimonate of mercury.

ammite. A sandstone or oolite.

ammonate. See *crystal* ammonia.

ammonchelidonic acid. Chelidamic acid.

ammonia. NH_3 = 17.01. A colorless gas, $d_{air=1}$ 0.5971, m. −77.7, b. −35.5; very soluble in water, forming ammonium hydroxide. It has a strong characteristic odor and is used in ice-machines as a refrigerant, as a fertilizer applied directly to irrigation water, and as a reagent in the chemical industries. **anhydrous-** Liquid a. A colorless liquid, $d_{-33°}$ 0.6382 m. −77.56, b. −33.3, which is compressed in steel cylinders and used in organic synthesis, as a solvent, and in refrigeration. **crystal-** See *crystal*. **hydroxy-** Hydroxylamine. **liquid-** Anhydrous a. **substituted-** See *amine*, *amide*, *ammine*, *amino*, *ammonium*.

a. absorption apparatus. A device for absorbing a.; as Folin's, Cumming's or Referees' tubes. **a. amalgam.** An amalgam of mercury and ammonium, made from sodium amalgam and ammonium chloride. **a. liquor.** Gas liquor. A by-product of gas and coke plants which is obtained by scrubbing the gases with water; it is used in the *Solvay* process, q.v., and in the manufacture of a. and ammonium salts. **a. nitrogen.** The nitrogen in an organic compound, especially proteins, which is in the form of a $—NH_2$ or $>NH$ radical (a. or imino nitrogen, respectively). **a. soda process.** A process introduced by Brunner and Mond in 1874 for the manufacture of sodium carbonate from salt, ammonia, limestone, and coke. Cf. *Solvay* process. **a. system.** A system of acids, bases and salts with liquid a. as solvent instead of water. Thus; in the *water* system:

$$MOH + HX \underset{\text{hydrolysis}}{\overset{\text{neutralization}}{\rightleftharpoons}} MX + HOH$$

aquo-base aquo-acid aquo-salt

and in the *ammonia* system:

$$M.NH_2 + HX \underset{\text{ammonolysis}}{\overset{\text{neutralization}}{\rightleftharpoons}} MX + H.NH_2$$

ammonio-base ammonio-acid ammonio-salt

a. tube. Faraday tube. **a. water.** Ammonium hydroxide, spirits of hartshorn, NH_4OH = 35.1. An aqueous solution of ammonia. (1) 35 %. *Concentrated* ammonium hydroxide. A clear colorless liquid, d.0.880, of strong, characteristic odor and alkaline reaction. Used extensively as a reagent, solvent, precipitant and neutralizing agent. (2) 28 %. d.0.900; used as above. (3) 20 %. d.0.925; it is used as above. (4) 10 %. *Dilute ammonium hydroxide.*, d.0.960. The test solution of the U.S.P., and a common reagent; used as above.

ammoniac. Ammoniacum. **sal-** Ammonium chloride. **a. oil.** A dark, yellow essential oil from ammoniacum, d.0.891; b.250–290; slightly dextro-rotatory.

ammoniacal. Pertaining to ammonia; as, its odor.

ammoniacum. Gum ammoniac. A resinous gum from *Dorema ammoniacum*, an Umbelliferae of Persia and Northern India. Used as a sedative and tonic in hysteria and externally in plasters; also as a cement for porcelain.

ammoniate. (1) Ammine. (2) An organic nitrogen compound, used as a fertilizer.

ammoniated iron. Ferric ammonium chloride. **a. mercury.** See *mercury*. **a. superphosphate.** A superphosphate treated with (1) ammonia or (2) dissolved bone and nitrogenous compounds; used as fertilizer.

ammonification. The enrichment of the soil with ammonia or ammonium compounds; *e.g.*, the production of NH_3 from proteins and decaying organic matter by the activity of soil bacteria.

ammonifying. (1) Producing or (2) adding ammonia.

ammonio. (1) Ammono. (2) A prefix indicating a double salt of ammonium and a metal; as, a. cupric chloride (see *cupric*).

ammonite. A fossil shell.

ammonium. Am. The monovalent radical, $—NH_4$, which has basic properties and resembles an alkali metal radical. Cf. *ammono*, *ferriammonium*, *tetraethyl ammonium*.

a. acetate. CH_3COONH_4 = 77.08. Colorless hygroscopic crystals, d.1.073, m.89, b.148; very soluble in water. Used as an antipyretic and diaphoretic, as antidote in formaldehyde poisoning, as a reagent in determining iron and lead and in separating Pb, Ca, Ba, and Sr sulfates. **a. aldehyde.** See *aldehyde a.* **a. aluminum sulfate.** a. alum. **a. alum.** $Al_2(NH_4)_2(SO_4)_4.24H_2O$ = 906.90. Aluminum ammonium sulfate. Colorless, regular crystals, d.1.645, m.94.5; soluble in water. Used for the purification of drinking water, as a constituent of baking powder and foam fire extinguishers, and in electroplating; also medicinally as an astringent, diuretic, emetic and purgative. **a. amino sulfonate.** $NH_4SO_3NH_2$ = 114.2. Deliquescent crystals, soluble in water. **a. anacardate.** A brown, syrupy liquid, used for coloring hair. **a. antimoniate.** $NH_4SbO_3.2H_2O$ = 222.27. Colorless crystals, decomp. when heated; soluble in water. **a. arsenate.** $(NH_4)_2AsO_4.3H_2O$ = 247.2. Colorless crystals, soluble in water. *acid-* $(NH_4)_2HAsO_4$ = 176.0. White crystals; soluble in water and used internally for the treatment of skin diseases. **a. arsenite.** NH_4AsO_2 = 125.0. Colorless prisms, or white powder soluble in water or alkalis. **a. atreolate.** Atreol. **a. aurichloride.** NH_4AuCl_4 = 357.10. Yellow plates, decomp. 100; soluble in water. **a. auricyanide.** $NH_4Au(CN)_4.H_2O$ = 337.32. Yellowish plates, decomp. 200; soluble in water or alcohol. **a. aurocyanide.** $NH_4Au(CN)_2$ = 293.3. Colorless plates, decomp. 150; soluble in water. **a. benzoate.** $NH_4.C_7H_5O_2$ = 139.1. White crystals, d.1.260, decomp. 198; soluble in alcohol or water. Used as an antipyretic, diuretic or alterative. **a. biarsenate.** a. arsenate, acid-.

a. biborate. $NH_4HB_2O_4.1\frac{1}{2}H_2O$ = 132.1. Colorless crystals, soluble in water. **a. bicarbonate.** NH_4HCO_3 = 79.1. Rhombic or monoclinic colorless crystals, d.1.586, decomp. 40–60; soluble in water or alcohol. Used to neutralize hyperacidity of the stomach, and in manufacturing ammonium salts. **a. bichromate.** $(NH_4)_2Cr_2O_7$ = 252.2. Orange crystals, d.2.367, decomp. when heated; soluble in water. Used as a reagent, and in the manufacture of inks, glass, leather and fireworks. **a. bifluoride.** $NH_4F.HF$ = 57.1. A. acid fluoride, matt salt, a. hydrogen fluoride. Colorless hexagonal crystals, $d_{12°}$ = 1.211; soluble in water. Used in the analysis of silicates, in the glass and porcelain industry for etching and as a preservative in breweries, wineries and dairies. **a. bimalate.** $NH_4H(C_4H_4O_5)$ = 131.1. White crystals, soluble in water. **a. bioxalate.** $HOOC.COONH_4$ = 107.1. Ammonium acid oxalate, ammonium binoxalate. Colorless crystals, d.1.556; soluble in water; used as an ink eraser and reagent. **a. biphosphate.** $NH_4H_2PO_4$ = 115.1. Monoammonium phosphate, diacid a. phosphate. Colorless tetragonal crystals, d.1.803; soluble in water. Used as a reagent, and (mixed with sodium bicarbonate) in baking powder. **a. bisulfate.** NH_4HSO_4 = 115.11. Mono-ammonium sulfate. Ammonium acid sulfate. Colorless crystals, d.1.787; soluble in water; used as a reagent. **a. bisulfite.** NH_4HSO_3 = 99.11. Mono-ammonium sulfite, sulfite acid. Colorless crystals, soluble in water and used as a preservative. **a. bitartrate.** $NH_4HC_4H_4O_6$ = 167.1. Mono-ammonium tartrate, a. acid tartrate. Colorless crystals, d.1.680; soluble in water. Used for the detection of calcium, and also in baking powders. **a. borate.** $(NH_4)_3BO_3$ = 113.1. Colorless crystals, d.2.38–2.95; soluble in water. **a. boro-benzoate.** A white powder, soluble in water, and used as an antiseptic for preservation of foods. **a. borofluoride.** NH_4BF_4 = 105.04. Colorless regular crystals, $d_{17°}$ = 1.851; soluble in alkali, water, alcohol or ether. **a. boro-citrate.** A white powder, soluble in water and used as an antiseptic. **a. bromide.** NH_4Br = 97.96. Colorless, regular crystals or white powder, d.2.327 sublimes on heating, and is soluble in water, alcohol or ether; used as a reagent and in the treatment of epilepsy, neuralgia, etc., also in the manufacture of photographic plates. **a. bromoplatinate.** a. platinic bromide. **a. camphorate.** $NH_4C_{10}H_{15}O_4.3H_2O$ = 271. A colorless crystalline powder, soluble in water; used as a sedative. **a. carbamate.** $NH_2.COONH_4$ = 78.1. A. carbaminate. A white crystalline powder, soluble in water, and used as a stimulant. It forms urea on dehydration. Cf. *a. carbonate carbamate.* **a. carbazotate.** a. picrate. **a. carbonate.** $(NH_4)_2CO_3.H_2O$ = 114.1. Colorless plates, decomp. 85, soluble in water, alcohol, or ether; used as a reagent. **a. carbonate acid.** a. bicarbonate. **a. carbonate carbamate.** $NH_4HCO_3.NH_4NH_2CO_2$ = 157.1. Hartshorn salt. The ammonium carbonate of commerce. White hard lumps or colorless crystals, m.85 (sublimes); soluble in 5 pts. of water and slightly soluble in alcohol. It should contain not less than 30 % and not more than 32 % ammonia. Used as a reagent in separating the alkali earth metals from magnesium (separating antimony and arsenic and Cl, Br, and I), and also as a heart stimulant in the treatment of pneumonia and phthisis; also externally as lotions, and in the manufacture of cocoa, baking powder, rubber goods and in the dye industry. **a. caseinate.** Eucasin. A white powder, soluble in water; either *mono-* or *di-* (0.011 % or 0.022 % NH_3, respectively). **a. chloraurate.** a. aurichloride. **a. chlorate.** NH_4ClO_3 = 101.50. Colorless, monoclinic crystals, $d_{17°}$ = 1.520, soluble in water or alcohol. It is explosive. **a. chloride.** NH_4Cl = 53.5. Sal ammoniac, salmiac, ammoniak. Colorless, regular or tetragonal crystals, or a white granular powder, d.1.52. It dissociates at 350 and sublimes without melting; soluble in water or alcohol. Used as a reagent in qualitative analysis for separation and precipitation, and for the determination of uric acid; medicinally as an expectorant, stimulant, diuretic or diaphoretic, and externally, as a cooling and stimulating wash for contusions; also for filling dry batteries, for soldering flux and in textile printing. **a. chloroiridate.** a. iridichloride. **a. chloropalladate.** $(NH_2)_2PdCl_6$ = 355.54. Ammonium palladic chloride. Brown crystals, d.2.418, decomp. when heated, sparingly soluble in water. **a. chloropalladite.** $(NH_4)_2PdCl_4$ = 284.62. Ammonium palladous chloride. Bright red crystals; soluble in water. **a. chloroplatinate.** $(NH_4)_2PtCl_6$ = 444.1. Yellow regular crystals, d.3.034, decomp. when heated; nearly insoluble in water, and used as reagent. **a. chloroplatinite.** $(NH_4)_2PtCl_4$ = 373.12. Yellow, regular crystals, nearly insoluble in water or alcohol. **a. chlorostannate.** $(NH_4)_2SnCl_6$ = 367.5. White crystals, soluble in water. **a. chromate.** $(NH_4)_2CrO_4$ = 152.1. Yellow, monoclinic crystals or needles, d.1.866, decomp. 185; soluble in water. Used as a reagent and as mordant in dyeing. *acid-* see ammonium bichromate. **a. chromic sulfate.** $Cr_2(SO_4)_3(NH_4)_2SO_4, 24H_2O$ = 956.71. Green octagonal crystals, soluble in water. **a. citrate.** $(NH_4)_3C_6H_5O_7$ = 243.2. White deliquescent powder; soluble in water; used as reagent and for determining phosphates in fertilizers. **a. crystals.** a. carbonate carbamate. **a. cuprate.** A deep blue ammoniacal solution of cupric hydroxide, used for waterproofing fabrics. **a. cyanate.** NH_4CNO = 60.1. Colorless crystals; soluble in cold water and decomp. in hot water. **a. cyanide.** NH_4CN = 44.1. Colorless, regular crystals, decomp. 37; soluble in water or alcohol. **a. dichromate.** a. bichromate. **a. dithiocarbamate.** $NH_2.CS.CNH_4$ = 90.1. Yellow prisms, soluble in water. **a. dithiocarbonate.** $NH_4S.CO.SH$ = 111.1. Yellowish crystals, used as a substitute for hydrogen sulfide in qualitative analysis. **a. dithionate.** $(NH_4)_2S_2O_6$ = 196.20. Colorless, monoclinic crystals, d.1.704; soluble in water and insoluble in alcohol. **a. embeliate.** $NH_4C_9H_{13}O_3$ = 187.1. A violet-gray powder, soluble in water or dilute alcohol and used as a taeniacide. **a. ethyl sulfate.** $(NH_4)(C_2H_5)SO_4$ = 143.1. Colorless crystals, m.99; soluble in water, alcohol or ether. **a. ferrichloride.** Ferric a. chloride. **a. ferricitrate.** Ferric a. citrate. **a. ferric oxalate.** $(NH_4)_3Fe(C_2O_4)_3.4H_2O$ = 446.06. Light gray crystals, d.1.778 decompose 165; soluble in alcohol or water. **a. ferricyanide.** $2(NH_4)_3Fe(CN)_6.H_2O$ = 550.05. Red crystals, soluble in water, and used as a reagent. **a. ferrocyanide.** $(NH_4)_4Fe(CN)_6.3H_2O$ = 338.20. Greenish-yellow crystals, soluble in water and used as a

reagent. **a. fluoride.** NH_4F = 37.0. Malt salt. Colorless, hexagonal crystals which sublime if heated and are readily soluble in water or alcohol. Used as a reagent in the analysis of silicates; medicinally as an alterative or antiperiodic; and for etching glass. **a. fluoride acid.** Ammonium bifluoride. **a. fluosilicate.** $(NH_4)_2SiF_6$ = 158.18. Colorless rhombic crystals, d.1.970, soluble in water. **a. formate.** $H.COONH_4$ = 63.06. Colorless crystals, d.1.266, m.116 decomp. 180; soluble in water and used as an antiseptic. **a. gallate.** $NH_4C_7H_5O_5.H_2O$ = 205.13. A yellowish crystalline powder, soluble in water. **a. glycerophosphate.** $(NH_4)_2PO_4C_3H_5(OH)_2$ = 206. Colorless crystals, soluble in water and used for treating influenza. **a. hepta molybdate.** a. molybdate basic. **a. hippurate.** $NH_4H(C_9H_8O_3N)_2.H_2O$ = 393.3. Colorless crystals, soluble in alcohol or water. **a. hydrogen fluoride.** a. bifluoride. **a. hydrogen phosphate.** a. phosphate. **a. hydrosulfide.** NH_4HS = 51.1. Colorless crystals soluble in water; used in solution as a reagent for metals. **a. hydrosulfide solution.** A solution prepared by passing H_2S through ammonium hydroxide. A colorless or slightly yellow liquid of alkaline reaction, used as a reagent. **a. hydroxide.** NH_4OH = 35.1. A hydrate of ammonia, crystalline below −79, otherwise only known in solution as *ammonia water*, q.v. Cf. *quarternary amines, hydroxylammonium compounds*. **a. hypophosphite.** $NH_4H_2PO_2$ = 83.10. White rhombic crystals, d.2.515, m.100, decomp. 240; soluble in water or alcohol, and used as nerve tonic. **a. hyposulfide.** a. thiosulfite. **a. hyposulfite.** $(NH_4)_2S_2O_3$ = 148.2 Ammonium thiosulfate. Colorless crystals, soluble in water or alcohol and used as an antiseptic. **a. ichthyolsulfonate.** Ichthyol. **a. iodoxyl benzoate.** Amiodoxyl benzoate. **a. iron chloride.** An orange powder, soluble in water; consists of a mixture of 2.5 % $FeCl_3$ and 97.5 % NH_4Cl. Used in anemia, chlorosis and scrofulosis. **a. iodate.** NH_4IO_3 = 192.96. Colorless, rhombic crystals, decomp. 125; soluble in water or alcohol. **a. iodide.** NH_4I = 144.96. Colorless regular crystals or powder, d.2.505, sublimes when heated, soluble in water or alcohol. It is a reagent for acetone and used in the treatment of syphilis, rheumatism, scrofula, and leprosy; also in photography. **a. iridichloride.** $(NH_4)_2IrCl_6$ = 441.9. a. chloroiridate, a. iridic chloride. A red powder, d.2.856, slightly soluble in water. **a. lactate** $NH_4C_3H_5O_3$ = 107.1. A colorless syrupy liquid, d.1.19, miscible with water or alcohol. **a. linoleate.** $C_{17}H_{31}COONH_4$ = 297.2. A soft mass used as an emulsifier for fats and waxes, for waterproofing, glazing and polishing. **a. magnesium arsenate.** $MgNH_4AsO_4.6H_2O$ = 289.4. Colorless tetragonal crystals, d.1.65, decomp. if heated; slightly soluble in water or acids, but insoluble in alcohol. **a. magnesium phosphate.** $MgNH_4PO_4$, $6H_2O$ = 245.6. Colorless tetragonal crystals, d.1.65, slightly soluble in water. **a. malate.** $NH_4C_4H_5O_5$ = 151.08. Rhombic crystals d.1.5, m.161, soluble in water. **a. mono-magnesium phosphate.** $Mg(NH_4)_4(PO_4)_2$ = 286.3. **a. mellitate.** $C_6(COONH_4)_6.9H_2O$ = 606. Colorless crystals, soluble in water. Used as an emulsifier for fats and waxes; in waterproofing, glazing and polishing. **a. metaborate.** a. biborate. **a. meta phosphate.** See *a. phosphate*. **a. meta vanadate.** a. vanadate. **a. molybdate.** $(NH_4)_2MoO_4$ = 196.1. Colorless monoclinic crystals, d.2.60, decomp. by water; insoluble in alcohol and soluble in acids. Used as a reagent, and in the manufacture of pigments. *basic-* $(NH_4)_6Mo_7O_{24}.4H_2O$ = 1236.6. Ammonium heptamolybdate. Greenish-yellow crystals, d.2.498, decomp. if heated; soluble in ammonium chloride solution. Used as a reagent and in the preparation of pigments. **a. molybdate solution** (6 %). A clear colorless or slightly yellow liquid, with strong acid reaction and slight odor of HNO_3; used as a reagent for orthophosphates and arsenates. **a. mucinate.** $(NH_4)_2C_6H_8O_8$ = 244. Colorless crystals, soluble in water. **a. muriate.** a. chloride. **a. nickel sulfate.** Nickel ammonium sulfate. **a. nitrate.** NH_4NO_3 = 80.1. German saltpeter, Norway saltpeter. Colorless tetragonal crystals or granular powder, d.1.725, m.170, decomp. 200; very soluble in water and slightly soluble in alcohol. Used as an oxidizing agent, as a flux for metals, in the preparation of laughing gas, in freezing mixtures and in explosives. **a. nitrite.** NH_4NO_2 = 64.1. Colorless crystals, d.1.69, decomp. when heated, into water and nitrogen; soluble in water or alcohol. **a. nitrosophenyl hydroxylamine.** Cupferron. **a. oleate.** $(NH_4)_2C_{18}H_{33}O_2$ = 317. Ammonia soap. A jelly-like colorless mass, soluble in alcohol or ether and used as a cleanser. **a. oxalate.** $(COONH_4)_2.H_2O$ = 142.1. Colorless prisms, d.1.502; soluble in 25 parts water; used as a reagent in the separation of Ca, Ce, Zr, Th, Sr, as a precipitant for Ba, Zn, Pb, and in determination of quinine. **a. oxalate acid.** a. bioxalate. **a. oxalurate.** $NH_4C_3H_3N_2O_4$ = 149. Pale yellow crystals, soluble in hot water. **a. oxaminate.** $NH_2.CO.COONH_4$ = 106.1. Colorless crystals, soluble in water. **a. pallidichloride.** a. chloropalladate. **a. palmitate.** $NH_4C_{16}H_{31}O_2$ = 274. Soft masses, soluble in alcohol or water; used as a cleanser. **a. perchlorate.** NH_4ClO_4 = 117.5. White rhombic prisms, d.1.95, decomp. when heated; soluble in water. It is a constituent of explosives. **a. perchromate.** $(NH_4)_2CrO_8$ = 234.13. Yellow rhombic crystals, decomp. 50; soluble in water. **a. permanganate.** NH_4MnO_4 = 137.1. Purple, rhombic crystals, d.2.207, decomp. when heated; slightly soluble in water. Used in pyrotechnics. **a. persulfate.** $(NH_4)_2S_2O_8$ = 228.2. Colorless monoclinic crystals or a white granular powder, decomp. when heated; soluble in water. Used as a disinfectant, deodorant, in gargles, for the preservation of foods; as a reagent for albumen and indican, as an oxidizing agent in analysis for removal of organic matter, in the analysis of steel, in the separation of metals; in photography, as a reducer; and in electroplating. **a. phenolsulfonate.** $C_6H_4(OH)SO_3.NH_4$ = 191.14. White crystals, soluble in water. **a. phenylate.** $C_6H_5O.NH_4$ = 111.1. White crystals soluble in water and used as an antiseptic and antipyretic. **a. phosphate.** $(NH_4)_2HPO_4$ = 132.2. Diammonium-ortho-phosphate, ammonium diphosphate. Colorless monoclinic crystals or white powder, d.1.619; soluble in 4 pts. water. It is a precipitant for Mg, Zn, Ni and U; used medicinally an antirheumatic; also as fertilizer and for fireproofing materials. *mono-* a. biphosphate; *tri-* a. phosphate, tribasic. *meta-* NH_4PO_3 = 97.8. Ammonium metaphosphate. Colorless crystals; soluble in water. **a. phosphate monobasic.** $NH_4H_2PO_4$ = 115.2.

Monoammonium phosphate, ammo-phos. Colorless powder, d.1.803, soluble in water; used as fertilizer. **a. phosphate tribasic.** $(NH_4)_3PO_4$ = 149.1. Triammoniumphosphate. Colorless crystals, soluble in water; used as a culture medium for spores and fungi. **a. phosphite.** (1) *mono-* $NH_4H_2PO_3$ = 99.10. Colorless crystals, m.123, decomp. 150; soluble in water. (2) *di-* $(NH_4)_2HPO_3$ = 116.1. Diammonium phosphite. Colorless crystals, soluble in water; used as a reducing agent. **a. phosphomolybdate.** $(NH_4)_3PO_4.12MoO_3.3H_2O$ = 1931.2. Yellow crystals or powder slightly soluble in water, but soluble in alkalis or aqua regia; used as a reagent for alkaloids. **a. phosphotungstate, a. phosphowolframate.** $(NH_4)_3PO_4.12WO_3.3H_2O$ = 2795. A white powder, soluble in water, and used as a reagent. **a. phthalate.** $C_6H_4(COONH_4)_2$ = 200.2. Colorless crystals, soluble in water. **a. picramate.** $C_6H_2NH_2(NO_2)_2.ONH_4$ = 216.09. Reddish-yellow crystals, soluble in water and used in bacteriology. **a. picrate.** $NH_4C_6H_2O(NO_2)_3$ = 246. Ammonium carbasotate, ammonium picronitrate. Yellow, explosive crystals, d.1.719, decomp. if heated; soluble in water or alcohol, and used for explosives **a. picrocarminate solution.** A dark red staining solution used for the differentiation of the nucleus and cytoplasm of cells. **a. picro nitrate.** a. picrate. **a. platinic bromide.** $(NH_4)_2PtBr_6$ = 710.80. Ammonium bromoplatinate. Red, regular crystals, decomp. when heated; slightly soluble in water. **a. platinic chloride.** $(NH_4)_2PtCl_6$ = 444.0. Yellow hygroscopic crystals, soluble in water and used as reagent. **a. purpurate.** Murexide. **a. pyrophosphate.** $(NH_4)_4P_2O_7$ = 246.3. White crystals soluble in water. **a. rhodanate.** a. thiocyanate. **a. salicylate.** $NH_4C_7H_5O_3$ = 155.1. White monoclinic crystals, soluble in water or alcohol and used as an antirheumatic, antipyretic, expectorant and bactericide. **a. selenate (acid).** NH_4HSeO_4 = 162.2. Colorless crystals, soluble in water. **a. selenate (normal).** $(NH_4)_2SeO_4$ = 179.28. White crystalline masses, soluble in water. **a. selenite.** $(NH_4)_2SeO_3$ = 163.2. White crystals, soluble in water, and used as a reagent for alkaloids and for producing red glass. **a. sesquicarbonate.** $2NH_4CO_3(NH_4)_2CO_3H_2O$ = 272.2. White crystals, decomp. if heated. **a. silicofluoride.** $(NH_4)_2SiF_6$ = 178.07. Colorless crystals or white powder, soluble in water; used as an antiseptic. **a. silvinate.** $NH_4C_{20}H_{29}O_2$ = 319. A yellow microcrystalline powder, slightly soluble in water or alcohol. **a. sozoiodate.** Colorless crystals, soluble in water. **a. stannic chloride.** a. chlorostannate. **a. stearate.** $C_{17}H_{35}.COONH_4$ = 301. A soft, white soap-like mass, soluble in hot alcohol. **a. succinate.** $C_2H_4(COONH_4)_2$ = 152.2. Colorless crystals, soluble in water and used in gynecology. **a. sulfate.** $(NH_4)_2SO_4$ = 132.2. Colorless rhombic crystals or white granular powder, d.1.77, m.140, decomp. at 280, and soluble in 2 pts. of water but insoluble in alcohol. Used as a precipitant for proteins, for the separation of Ca and Sr, and in the manufacture of fertilizers. *acid-* a. bisulfate. **a. sulfhydrate.** a. hydrosulfide. **a. sulfide.** $(NH_4)_2S$ = 68.2. White crystals, decomp. when heated, and soluble in water but insoluble in alcohol; used as a reagent. **a. sulfide solution.** An aqueous solution of a. hydrosulfide. **a. sulfite.** $(NH_4)_2SO_3.H_2O$ = 134.2. White monoclinic crystals, decomp. when heated, and soluble in water. Used as an antiseptic in dispepsia and skin diseases. *acid-* a. bisulfite. **a. sulfocarbonate solution.** A liquid prepared from ammonium carbonate and carbon disulfide; used as an insecticide and parasiticide. **a. sulfocyanate.** a. thiocyanate. **a. sultoichthyolate.** Ichthyol. **a. sulfophenylate.** $C_6H_4OH.SO_3NH_4$ = 191. A sulfocarbolate. Colorless crystals; soluble in water, and used as an antiseptic. **a. sulphate.** a. sulfate. **a. tartrate.** $C_2H_4O_2(COONH_4)_2$ = 184. Colorless monoclinic crystals, d.1.601, occurring in two forms having refractive index: α = 1.55 and β = 1.581; soluble in water. Used as an expectorant, and in the textile industry. *acid-* a. bitartrate, a. hydrogen tartrate, $NH_4HC_4H_4O_6$ = 167.08. Monoclinic prisms, d.1.636, having refractive indices of 1.519, 1.561 and 1.591, soluble in water. **a. tellurate.** $(NH_4)_2TeO_4$ = 227.2. A white powder, soluble in acids; a reagent for glucosides and alkaloids. **a. thioacetate.** CH_3COSNH_4 = 93.2. Slightly yellow crystalline masses, soluble in water and used as a reagent. **a. thioacetate solution.** A 30 % aqueous solution, used as a reagent in organic analysis and as a substitute for hydrogen sulfide. **a. thiocarbonate.** $(NH_4)_2CS_3$ = 144.27. Yellow crystals; soluble in water and insoluble in alcohol or ether. **a. thiocyanate, -ide.** NH_4CNS = 76.1. a. rhodanate. Colorless deliquescent, monoclinic crystals, d.1.3057, m.159; at 170 it changes into thiourea; soluble in water or alcohol. It is a reagent for Fe As, Sb, Hg, Ag, Cu, and the halogens, and is also used in the dye and textile industry. **a. thionurate.** $(NH_4)_2C_4H_3N_3SO_6$ = 257. White crystals, soluble in water. **a. thiostannate.** $(NH_4)_2SnS_3$ = 251. **a. thiosulfate.** $(NH_4)_2S_2O_3$ = 148.21. a. hyposulfite. Colorless rhombic crystals, decomp. 150; soluble in water, insoluble in alcohol or ether. **a. triborate.** $NH_4H(BO_2)_2$ = 105.1. Ammonium acid borate. Colorless crystals, soluble in water. **a. tungstate.** $(NH_4)_2WO_4$ = 284.1. a. wolframaet. Colorless crystals; soluble in water, but insolubl4 in alcohol. *meta-* $(NH_4)_2W_4O_{13}.8H_2O$ = 1204. e a. metawolframate. Colorless, octahedral crystals, which lose 7 mol. water at 100°C; soluble in water. *ortho-* $(NH_4)_2W_3O_{10}.8H_2O$ = 3276.2. a. orthowolframate. Colorless crystals; soluble in water. *para-* $(NH_4)_6W_7O_{24}.6H_2O$ = 1888 3. a. parawolframate. Colorless, rhombic crystals, which lose 4 mol. water at 100°C; slightly soluble in water. The ammonium tungstates are used in the preparation of ammonium phosphotungstate. **a. uranate.** $(NH_4)_2U_2O_7$ = 627.2. A yellowish-red amorphous powder, soluble in acids and used in ceramics for coloring porcelain. **a. uranylcarbonate.** *Uranyl* ammonium carbonate. **a. uranylfluoride.** *Uranyl* ammonium fluoride. **a. urate.** $(NH_4)C_5H_3N_4O_3$ = 185.1. Colorless crystals or white powder, soluble in water and used as an antiseptic. **a. valerate.** $C_4H_9.COONH_4$ = 119.1. Colorless, hygroscopic crystals, soluble in water, alcohol, or ether; used as a hypnotic, sedative and tonic. **a. valerianate.** a. valerate. **a. vanadate.** NH_4VO_3 = 155.2. A colorless powder, soluble in water and used in the textile industry, in the manufacture of vanadium catalysts, blue or green photographic dyes, indelible ink, and in ceramics. **a. wolframate.** a. tungstate.

ammono. Pertaining to the *ammonia* system, q.v. **a. base.** An inorganic amide, MNH_2. Cf. *base, ammonio.* **a. salt.** Cf. *ammonia* system.

ammonocarbonous acid. Hydrocyanic acid.

ammonolysis. (1) A reaction in the ammonia system which corresponds with the hydrolytic dissociation: $NH_3 \rightarrow H^+ + NH_2^-$. (2) The cleavage of a bond by the addition of ammonia; $R—R' + NH_3 \rightarrow RNH_2 + HR$. (3) Treatment (e.g. of oils) with hot ammonia gas under pressure.

ammo-phos. A commercial ammonium phosphate containing 13 % NH_3 and 48 % available P_2O_5; used as fertilizer.

amniotin. Oestrone.

amœba, amoeba. Ameba.

amoeboid. Resembling an ameba. **a. cell.** A leucocyte. **a. movement.** The motion of a unicellular organism consisting of a streaming or rolling movement of the protoplasmic jelly.

amoil. Amylphthalate used for high-vacuum pumps.

amorphism. The non-crystalline condition of a solid substance; due to an irregular molecular assembly.

amorphous. Unorganized. The property of a solid substance which does not crystallize and is without any definite geometrical shape. In bacteriology, any bacteria without visible differentiation in structure.

amosite. A long-fibred variety of asbestos, from the Transvaal.

amoxy. Amyloxy. The monovalent radical, $Me-(CH_2)_4O—$ derived from amyl alcohol.

ampelite. A sulfur-containing earth.

Ampère, André Marie. 1775–1836. A French physicist and mathematician, noted for the development of molecular theory.

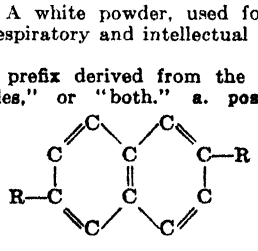
ampere. The practical unit of amount of electricity and current. One ampere is the strength of a current which, on passing through silver nitrate solution, will deposit 0.001118 gram of silver per·second; or, the strength of a current with an electromotive force of one volt passing through a resistance wire (or solution) of one ohm. 1 ampere = 1 coulomb per second = 1 volt through 1 ohm = 10^{-1} E.M.U.(C.G.S.) = 3×10^9 E.S.U. **international-** 1 Int. a. = 0.9999 absolute a. **micro-** One-millionth of an a. **milli-** One-thousandth of an a. **a. meter.** Ammeter. An instrument for measuring electric current. Cf. *voltammeter, ohmammeter.* **a. turn.** An ampere of electricity flowing through one turn of a coil. **a. volt.** A volt-ampere or a watt.

amperometer. Ampere meter.

amperometry. Chemical analysis by methods which involve measurements of electric currents, e.g. conductometric analysis, q.v. Cf. *polarography, potentiometry.*

amphetamine. Benzedrine. Racemic 1-phenyl-2-aminopropane, a colorless liquid. Its vapors shrink nasal mucosa. **a. sulfate.** Benzedrine sulfate. A white powder, used for its vasomotor, respiratory and intellectual stimulatory effects.

amphi. A prefix derived from the Greek "on both sides," or "both." **a. position.** The



positions of the hydrogen atoms in the 2.6-position of two condensed hexatomic rings (*e.g.*, naphthalene ring).

amphiboles. A group of rock-forming minerals, which contain occluded water, of the general type, $M_x(SiO_3)_y$, in which M is Ca, Mg, Fe, or the alkali metals (hornblende, tremolite, anthophyllite, crocidolite, etc.). They occur in elongated fibrous form, as black or dark green crystals. Cf. *silica* minerals.

amphibolites. A group of metamorphic rocks derived from argillaceous limestones and related to the glaucophane schists.

amphichroic, amphichromatic. A mixture of indicators whose color changes neutralise one another; *e.g.*, litmus and congo red.

amphigene. Leucite.

amphiprotic. Having the ability either to lose or gain a proton. Cf. *acid, base.*

ampholyte. Amphoteric electrolyte. A substance which in solution yields H^+ or OH^-, according to the pH value of the solvent. Cf. *isoelectric point, zwitterion.*

ampholytoid. Amphoteric colloid. A particle which, when in suspension, is capable of adsorbing either H^+ or OH^-, depending upon the pH value of the suspending media. At the isoelectric point the particles are electrically neutral.

amphoteric. A substance having both, acid and basic properties. Thus it may act either as a weak acid or as a weak base; as, aluminum hydroxide, $Al(OH)_3 \rightleftharpoons H_3AlO_3$, or the amino-acids, $NH_2.R.COOH$. **a. hydroxides.** The hydroxides of some metals which may dissociate to H^+ or OH^- ions; as, $2Al(OH)_3 \rightleftharpoons \begin{cases} H^+ + AlO_3 + H_2O \text{ (acid)} \\ Al^{+++} + 3OH^- \text{ (base).} \end{cases}$ **a. sulfides.** The sulfides of the metallic nonmetals, which may react as weak acids or weak bases; *e.g.*, $H_3AsS_3 \rightleftharpoons As(SH)_3$.

amphotropine. $[(CH_2)_6N_4]_2.C_8H_{14}(COOH)_2 = 480$. Hexamethylenamine camphorate. A colorless crystalline powder.

amplification. An increase or enlargement *e.g.*, of the visual area (microscope) or of sound (telephone).

amplifier. (1) A magnifier. (2) A vacuum tube acting as an electric valve, by which weak electric impulses are strengthened; as in radio transmission or reception.

amplitude. The maximum displacement of an oscillation, vibration or wave.

ampoule, ampul. The small, sealed, glass vial that contains a sterilized solution for hypodermic injections.

amrad gum. A gummy exudation from elephant apple, *Feronia Elephantum*, a Rutaceae of India and Java.

amyctic. An irritating stimulant, used especially on the skin.

amygdala. The seeds of *Prunus amygdalus*, containing emulsin and amygdalin. **a. amara.** See bitter *almond.* **a. dulcis.** See sweet *almond.*

amygdalic acid. (1) Mandelic acid. (2) $C_{20}H_{28}O_{18} = 476.22$. Gentiobioside. A glucoside from almonds.

amygdalin. $C_{20}H_{27}O_{11}N.3H_2O = 511.37$. *d*-Mandelonitrile glucoside; amygdaloside. A glucoside from bitter almonds, wild cherry bark, and other drugs. Colorless, odorless, tasteless crystals, m.210; soluble in water,

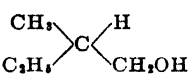
slightly soluble in alcohol and insoluble in ether. It hydrolyses to 2 mol. glucose, HCN and Ph.CHO, and is used as an expectorant; it is a source of oil of bitter almonds.

amygdalinic acid. Mandelic acid.

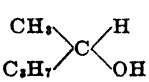
amygdaloid. Shaped like an almond.

amygdophenin. $C_{16}H_{17}O_3N$ = 271.2. Phenetidine amygdalate, phenyl-glycol-phenetidine $C_6H_4O.C_2H_5NH.CO.CHOH.C_6H_5$. A grayish-white, light, crystalline powder; used medicinally as an analgesic.

amyl. Am. Pentyl. The monovalent $-C_5H_{11}$ radical derived from pentane. **iso-** i-Am. The monovalent $-C_5H_{11}$ radical derived from isopentane. **tert-** The monovalent radical  , derived from pentane. **a. acetate.** $MeCOOC_5H_{11}$ = 130.13. Isoamyl acetate, i-amylacetic ester, banana oil, pear oil, pentylacetate, amylacetic ester. A colorless, inflammable liquid, d.0.8659, b.148; sparingly soluble in water and miscible with alcohol or ether. Used in making fruit ethers for the soda fountain and as a solvent for nitrocellulose, for varnishes and lacquers, for waterproofing materials, metallic paints, and liquid bronzes; also used as fuel for the Hefner standard candle. **a. acetic ether.** Amyl acetate. **a. alcohol.** $C_5H_{11}OH$ = 88.11. Fused oil, grain oil, potato spirit, fermentation amyl alcohol, amyl hydroxide, $CH_3(CH_2)_4OH$. A colorless liquid, d.0.870, m. −134, b.137.5, miscible with alcohol. It is a mixture of several isomeric alcohols (see table) and is used as a solvent and reagent in the preparation of chemicals and pharmaceuticals, artificial silk, varnishes, lacquers, mercury fulminate, and in photography. *active-* See iso- or secondary- *alpha-* See secondary-. *beta-* See tertiary-. *dextro-* See iso- or secondary-. *iso-* $CH_3.CH_2.CH(CH_3)CH_2OH$. Isobutyl-carbinol, 2-methyl-butyl-alcohol, 2-methyl-butanol, active amyl alcohol. It occurs in two stereoisomeric forms: dextro- and levo-



A colorless liquid, d.0.825, m. −117 b.131.6, the chief constituent of fusel oil or fermentation amyl alcohol. *levo-* See iso- or secondary-. *normal-* See primary-. *primary-* Butyl carbinol, normal amyl alcohol, *1*-pentanol*. A colorless liquid, d.0.817, m. −78 b.137–138; soluble in water, alcohol or ether. *secondary-* Alpha-amyl alcohol, secondary butyl carbinol, 1-methyl-butanol*, 1-methyl-butyl alcohol, *2*-pentanol*. It occurs in a dextro-, and levo-form.



A colorless inflammable liquid, d.0.8169, b.-118, miscible with water, alcohol or ether; used in organic synthesis and as a solvent. *tertiary-* Amylene hydrate, dimethyl-ethyl-carbinol, 1-dimethyl-propyl-alcohol. A colorless, inflammable liquid, d.0.8144, m. −12 b.102; soluble in water, alcohol or ether; used in organic synthesis and in the preparation of fruit ethers. **a. aldehyde.** Valeraldehyde. **a. amine.** $C_5H_{11}NH_2$ = 87.14. **n-** Normal amylamine, pentylamine*, *1*-aminopentane. A colorless liquid, d.0.766, b.104 miscible with water, alcohol or ether. **iso-** A colorless liquid, d.0.750, b.95; soluble in water, alcohol or ether. Used as an emulsifying agent and in dye manufacture. Cf. *diamyl-*amine, *triamyl*amine. *methyl-* Iso*hexylamine*. **a. amine hydrochloride.** $C_5H_{11}NH_2.HCl$ = 123.5. Colorless crystals, soluble in water and used as an antipyretic. **a. aniline** (iso). $PhNHC_5H_{11}$ = 163.20. A liquid, $d_{15°}$.0.928, b.260. **a. benzene.** $C_5H_{11}.C_6H_5$ = 148.18. Phenyl-pentane. A colorless liquid d.0.860, b.201; soluble in alcohol. **a. benzoate.** $C_6H_5COOC_5H_{11}$ = 192.19. **n-** A colorless liquid, d.1.004, b.260; soluble in alcohol. **iso-** A colorless liquid, d.0.993, b.262; insoluble in water and soluble in alcohol. **a. bromide.** $C_5H_{11}Br$ = 151.03. **n-** α-bromopentane, *1*-bromopentane*. A colorless liquid $d_{20°}$ = 1.223, $b._{740mm}$ = 128.7; soluble in alcohol. **i-** β-brompentane. A colorless liquid, d.1.219, b.120; insoluble in water and soluble in alcohol and used as an antiseptic. **a. butyrate.** $C_3H_7COOC_5H_{11}$ = 158.19. *i-amyl-n-butyrate* i-amyl butyric ester. A colorless liquid, $d_{0°}$ = 0.882, b.178.5; slightly soluble in water and soluble in alcohol or ether. It is used in fruit ethers. *n-amyl-i-butyrate.* A colorless liquid, d.0.859, b.154, slightly soluble in water, miscible with alcohol or ether. It is used in organic synthesis and in the preparation of artificial fruit essences. *i-amyl-i-butyrate.* A colorless liquid, $d_{0°}$ =0.876, b.168.8, miscible with alcohol or ether. **a. carbamate.** $C_5H_{11}CO_2NH_2$ = 131. Amyl-carbamic ester, amyl urethane. Colorless crystals, m.60, b.220; soluble in alcohol or ether. Cf. *aponal*, *hedonal.* **a. carbinol.** Hexyl alcohol. **a. carbylamine.** $C_5H_{11}NC$ = 97.13. A liquid, b.137, soluble in alcohol but insoluble in water. **a. chlorcarbonate.** $ClCOOC_5H_{11}$ = 150.58. **iso-** A colorless liquid, $d_{25°}$ = 1.024, b.100; insoluble in water, miscible with alcohol or ether. **a. chloride.** $C_5H_{11}Cl$ = 106.57. **n-** α-chloropentane, *1*-chloropentane*. A colorless liquid, $d_{20°}$ = 0.883, $b._{740mm}$ = 106.5; miscible with alcohol. **iso-** β-chloropentane. A colorless liquid, d.0.880, b.100; insoluble in water and miscible with alcohol or ether. **a. cyanide.** $C_5H_{11}CN$ = 97.13. Capronitrile. A colorless liquid, d.0.807, b.163; insoluble in water and miscible with alcohol or ether. **iso-** Isocapronitrile. A colorless liquid, d.0.806, m −51, b.155. **a. ether.** $(C_5H_{11})_2O$ = 158.23. **n-** α-amyl oxide, pentyloxypentane*, di-*n*-amylether, pentyloxide. A yellowish liquid, $d_{25°}$ = 0.775, b.169; insoluble in water and miscible with alcohol or ether. **iso-** i-amyl oxide. A colorless liquid, d.0.781, b.173; insoluble in water but miscible with ether. Used as a solvent. **a. ethyl ketone.** $C_2H_5COC_5H_{11}$ = 128.17. 3-octanone. A liquid, $d_{0°}$.0.8502, b.164. **a. formate.** $HCOOC_5H_{11}$ = 116.13. **n-** n-amyl formic ester. A colorless liquid, $d_{0°}$. = 0.894, b.123.2; slightly soluble in water but miscible with alcohol or ether. **iso-** i-amyl formic ester. A colorless liquid, d.0.9018, b.130; slightly soluble in water and miscible with alcohol or ether. It is used in fruit essences and syrups. **a. furoate.** $C_4H_3O.COOC_5H_{11}$ = 182.11. **n-** A colorless liquid, d.1.0335, b.233, used in perfumery and lacquers. **i-** $b._{25mm}$136. **a. hydrate.** See *amyl* alcohols. **a. hydride.** Pentane. **a. hydrosulfide.** Amyl mercaptan. **a. iodide.** $C_5H_{11}I$ =

AMYL ALCOHOLS

(The asymmetric C atom of No. 3 and 7 is in heavier type)

A. Primary:

(1) 1-pentanol*..... $CH_3.CH_2.CH_2.CH_2.CH_2OH$
d.0.817, m. −78.5 b.137.9
normal amyl alcohol, butylcarbinol, pentan-1-ol.

(2) 3-methyl-1-butanol*..... $CH_3CHMe.CH_2.CH_2OH$
d.0.812, m. −117.2, b.130.5
iso-amyl alcohol, prim. isobutylcarbinol, 2-methyl-butan-4-ol, 3-methyl-butan-1-ol

(3) 2-methyl-1-butanol*..... $CH_3.CH_2.CHMe.CH_2OH$
d.0.816, m.128
d-amyl alcohol, sec. butylcarbinol, 2-methyl-butan-1-ol

(4) 2.2-dimethylpropanol*..... $CH_3.CMe_2.CH_2OH$
m.53, b.114
isobutylcarbinol, tert. butylcarbinol,

B. Secondary:

(5) 2-pentanol*..... $CH_3.CH_2.CH_2.CHMeOH$
d.0.809, b.119
sec. amyl alcohol, methylpropylcarbinol, 1-methyl-1-butanol, pentan-2-ol

(6) 3-pentanol*..... $CH_3.CH_2.CHOH.CH_2.CH_3$
d.0.815, b.115.6
diethylcarbinol, 1-ethyl-1-propanol, pentan-3-ol

(7) 3-methyl-2-butanol*..... $CH_3.CHMe.CHMeOH$
d.0.819, b.114
methylisopropylcarbinol, 1.2-dimethyl-1-propanol, 3-methyl-butan-2-ol.

C. Tertiary:

(8) 2-methyl-2-butanol*..... $CH_3CH_2.CMe_2OH$
d.0.809, m. −11.9, b.101.8
tertiary amyl alcohol, dimethylethylcarbinol, amylene hydrate, 1.1-dimethyl-1-propanol, 2-methyl-butan-2-ol

198.03. **n-** n-iodopentane, *1*-iodopentane*. A colorless liquid, $d_{20°}$ = 1.517, b_{739mm} = 155.4; miscible with alcohol. **iso-** i-iodopentane. A colorless liquid, $d_{20°}$1.473, b.148.2, insoluble in water and miscible with alcohol or ether; used as a sedative and antiseptic, and for inhalations. **a. isobutyrate.** Amyl-i-butyrate. **a. isocyanide.** C_5H_{11} =97.09. Pentylcarbylamine*, $Me(CH_2)_4CN$. Colorless liquid, d.0.806, m. −51, b.155. **a. ketone.** 6-Hendecanone. **a. mercaptan.** $C_5H_{11}SH$ = 104.14. 1-Pentanethiol*. A liquid $d_{0°}$.0.8548, b.116; used as an odorant for natural gas and in organic synthesis. Cf. *diamyl* sulfide. **a. methyl ether.** $C_5H_{11}OCH_3$ = 102.14. A liquid, d.0.7807, b.92. **a. mustard oil.** $C_5H_{11}NCS$ = 129.21. **i-** i-amyl-i-thiocyanate. A colorless liquid, d.0.942, b.184; sparingly soluble in water and miscible with alcohol or ether. **a. nitrate.** $C_5H_{11}NO_3$ = 133.16. **iso-** A colorless liquid, $d_{7°}$ = 1.000, b.147; slightly soluble in water and miscible with alcohol or ether. It is used as an antimalarial. **a. nitris.** Amyl nitrite. **a. nitrite.** $C_5H_{11}NO_2$ = 117.10. Pentylnitrite*. **n-** A pale yellow, inflammable liquid, d.0.870, b.96; insoluble in water. **iso-** A colorless liquid, d.0.880, b.94; slightly soluble in water, but miscible with alcohol or ether. Used as an antispasmodic and as a reagent for phenols and wormseed oil; also in the manufacture of perfumes. **a. oxide.** Amyl ether. **a. oxyhydrate.** Amyl alcohol. **a. phenol.** $C_5H_{11}.C_6H_4OH$ = 164.18. i-amyl-p-phenol, 1-amyl-4-hydroxy-benzene. White needles, m.94, b.265, slightly soluble in water but soluble in alcohol or ether; used in the manufacture of synthetic resins, and for varnishes and antiseptic emulsions. **a. phenyl hydrazine.** $NH_2.NPhC_5H_{11}$ = 178.16. Colorless liquid, b.175, used as reagent for aldehydes. **a. phenyl ketone.** $C_5H_{11}COC_6H_5$ = 176.19. A colorless liquid, b.242; insoluble in water but miscible with alcohol or ether. **a. phthalate.** $C_6H_4(COOC_5H_{11})_2$ = 306.46. Amoil. Colorless crystals, b_{11mm} = 205, used in *vacuum* pumps, q.v., instead of mercury. **a. propionate.** $C_2H_5COOC_5H_{11}$ = 144.17. A colorless liquid, $d_{0°}$ = 0.888, b.160, sparingly soluble in water but miscible with alcohol or ether. **a. rhodanate.** a. thiocyanate **a. salicylate.** $C_6H_4(OH)COOC_5H_{11}$ = 208.19. **n-** A colorless liquid, d.1.052, b.276.5; soluble in water. **iso-** A colorless liquid $d_{25°}$ = 1.045 b.270; insoluble in water, but miscible with alcohol, ether, or chloroform. Used as an antirheumatic, and commercially in fruit essences. **a. sulfate.** $(C_5H_{11})_2SO_4$ = 238.23. Pentylsulfate, di-*n*-amylsulfate. Colorless liquid, d.1.026, $b_{2.5mm}$ 117, decomposed by water. **a. sulfocyanate.** a. thiocyanate. **iso-** amyl rhodanate. A colorless liquid, $d_{20°}$ = 0.905, b.197; miscible with alcohol or ether. **a. sulfide.** $(C_5H_{11})_2S$ = 174.18. **n-** A colorless liquid, d.0.881, b.203.7. **iso-** A colorless liquid, $d_{20°}$ = 0.843, b.215; insoluble in water and miscible with alcohol or ether. **a. thiocyanate.** a. mustard oil. $C_5H_{11}CNS$ = 129.21. **a. urea.** $NH_2CONHC_5H_{11}$ = 130.16. A white crystalline mass, m.90; slightly soluble in water. **a. urethane.** $C_5H_{11}.OCONH_2$ = 131.14. a. carbamate, a. carbamic ester. A crystalline solid, m.65, b.220, soluble in water, alcohol or ether. **a. valerate.** $C_4H_9COOC_5H_{11}$ = 172. **iso-** i-amyl-valeric ester, apple essence, apple oil. A colorless liquid, d.0.8812, b.196; insoluble in water, miscible with alcohol or ether. Used in the manufacture

of fruit ethers for soda water fountains, and medicinally as a sedative. **a. xanthate.** The amyl ester of xanthic acid; used as a flotation reagent.

amylan. A laevo-rotatory gum in malt and barley. $[\alpha]_D = -137.7$. It does not reduce Fehling's solution.

amylase. A starch-splitting or amylolytic enzyme in blood, hempseed or malt which hydrolyses polysaccharides to glucose. **pancreatic-** Amylopsin. **salivary-** Ptyalin. **vegetable-** Diastase.

amylate. A compound of starch.

amylene. $C_5H_{10} = 70.11$. **n-** or **1-** Propyl ethylene, ethyl propylene, Δ^1-pentene, Δ^1-valerene, *1*-pentene*, $MeCH_2CH_2CH{:}CH_2$. A colorless inflammable liquid, b.40; insoluble in water and soluble in alcohol or ether. **i-** or **2-** Ethyl-methyl-ethylene, Δ^2-pentene, Δ^2-valerene, *2*-pentene*. A colorless inflammable liquid, b.36.5; insoluble in water and soluble in alcohol or ether. There are three forms:

Et.CH	Et.CH	Et.C.Me
‖	‖	‖
HC.Me	Me.CH	HCH
trans-	*cis-*	*asymmetric*

β-iso- Pental.

a. alcohol. a. alcohol, tertiary-. **a. carbamate.** Aponal. **a. bromide.** $C_5H_9Br = 149.0$. A pale yellow liquid, d.1.550, b.105 (decomp.). **a. chloral.** Dormiol. **a. diamine.** Cadaverine. **a. ether.** a. oxide. **a. glycol.** Pentanediol. **a. hydrate.** See *amyl* alcohol. **a. hydride.** Amylene. **a. iodide.** $C_5H_9I = 196.00$. A yellow liquid, b.132 (decomp). **a. oxide.** (1) a. ether. The compound $(C_5H_9)_2O$. (2) Pentamethylene oxide, pentahydropyran. The ring compound, $C_5H_{10}O$, b.82. **a. o. linkage.** In sugars and related compounds the formation of a ring by an O atom connecting the first and fifth carbon atom. Cf. *pyranose.*

amylenum. The official Latin for amylene.

amyl hydride. Pentane.

amyl hydrate. Amyl alcohol.

amylic alcohol. Amyl alcohol.

amylidene. The divalent radical, pentylidene, $Me(CH_2)_3CH{=}$, derived from pentane.

amyline. The cellulose membrane of starch granules.

amylis. The official Latin for amyl.

amylit. A diastatic enzyme of malt, used in the textile industry.

amylo-. Pertaining to starch. (Gr. amylum.)

amylobacter. A bacillus acting on starch and causing butyric acid fermentation.

amylo-cellulose. A starch-cellulose complex which encloses the starch granulose of plants.

amyloclastic. Amylolytic.

amylodextrin. Soluble *starch.*

amyloform. An antiseptic powder, used like iodoform; it is a mixture of starch and formaldehyde.

amylogen. A soluble starch.

amylograph. An instrument which measures the baking quality of starch in terms of its viscosity at various temperatures.

amyloid. (1) $(C_6H_{10}O_5)x = (162.11)x$. An explosive, m.42, slightly soluble in water. (2) Parchment paper formed by the action of sulfuric acid on cellulose. (3) A substance produced in woody tissues as an intermediate stage in the process of lignification.

amyloin. Malto-dextrin.

amylolysis. The conversion of starch into sugar either by boiling with dilute acids (hydrolysis), or by the action of enzymes.

amylolytic. Amyloclastic. Capable of transforming starch into sugar. **a. activity.** The digestive power of amylase. **a. enzyme.** Amylase. **a. fermentation.** See *fermentation.*

amylopectin. The gel constituent of starch paste. Cf. *amylose.*

amylopsase. See *amylopsin.*

amylopsin, amylopsase. An amylase of the pancreatic juice, splitting starch to glucose (*i.e.*, similar to diastase).

amylose. (1) The sol constituent of starch paste. Cf. *amylopectin.* (2) Polysaccharide. **α-, β-** See *starch.*

amylum. (1) The Latin name for starch. (2) Corn starch. Cf. *paramylum.*

amyrin. $C_{24}H_{39}O = 343.4$. A crystalline resinous substance occurring in elemi and other gums. **α-** $C_{30}H_{50}O$. Ilicic alcohol.

Amyris. A genus of tropical trees and shrubs producing fragrant resins and gums, *e.g.*, *A. elemifera* (elemi) of Mexico.

amytal. $C_{11}H_{18}O_3N_2 = 226.16$. 5-ethyl-5-iso-amylbarbituric acid. Colorless crystals, m.156, used as anesthetic and sedative. Cf. *barbital.*

amythin. The ammonium salt of a mixture of sulfonated hydrocarbons.

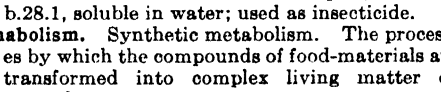
an- A prefix indicating, without or not.

-an. A suffix which indicates a sugar-body, glucoside or gum.

An. The symbol for *actinon.*

ana- A prefix derived from the Greek which indicates, again, along, over, through, without, or against. **a.-position.** The 1.5-position of the naphthalene ring; or the positions of the two hydrogen atoms attached to the first and fifth carbon atom of two condensed hexatomic rings; as, naphthalene, quinoline, etc.

anabasine. $C_{10}H_{14}N_2 = 162.12$. Neonicotine. *1-2-*(*3*-pyridyl)piperidine. An isomer of nicotine:



from *Anabasis aphylla*, a Chenopodiaceae of Central Africa. A colorless liquid, d.1.048, b.28.1, soluble in water; used as insecticide.

anabolism. Synthetic metabolism. The processes by which the compounds of food-materials are transformed into complex living matter or protoplasm.

Anacardiaceae. The cashew family, consisting of 60 genera and 500 species of trees or shrubs with gummy, milky, or resinous juices that are often poisonous; *e.g.*,

Rhus toxicodendron.....	poison ivy, poison oak
Rhus glabra.....	sumac
Rhus aromatica.....	sweet sumac
Pistacia lentiscus.....	mastic
Pistacia terebinthus.....	Chinese turpentine
Anacardium occidentale.	cashew nuts
Semecarpus anacardium.	oriental cashew nut

See also *Rhus, quebracho, mangiferin.*

anacardic acid. $C_{22}H_{32}O_3 = 344.3$. An acid from the seeds of *Anacardium occidentale.* A brown crystalline mass, m.26, soluble in alcohol or ether; used as an anthelmintic.

anacardium. Cashew nut, caje nut. The dried fruit of *A. occidentale*, a large shrub of tropical

America; used as a refreshing food. Cf. *acajou* balsam, *cardol*.

anaclastic. Having refracting powers.

anæ. See *anae* and *ane*.

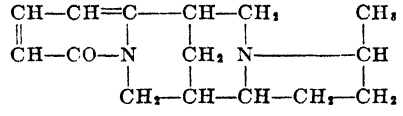
anaerobe. A bacterium which can grow in an oxygen-free atmosphere and which derives the oxygen necessary for its metabolism from solid or liquid compounds. **facultative-** A bacterium which prefers an atmosphere containing oxygen, but which is not dependent on gaseous oxygen for its metabolism. **obligatory-** A bacterium which cannot live in an atmosphere containing oxygen.

anaerobic. Growing in an oxygen-free atmosphere. **a. culture apparatus.** A glass container used for growing bacteria, from which the atmospheric oxygen is removed by chemicals, *e.g.*, pyrogallic acid.

anaesthesia. Anesthesia.

anaesthesin(e). Benzocaine.

anagyrine. $C_{15}H_{18}ON_2$ = 242.2. An alkaloid from the seeds of *Anagyris foetida*, a Leguminosae. A brittle, resin-like mass, b.245. It resembles cytisine and sparteine in structure:



a. hydrobromide. $C_{15}H_{18}ON_2.HBr$ = 323.3. Colorless or slightly yellow crystals, m.265; soluble in water or alcohol; used as a heart stimulant.

anahemin. A polypeptide from the liver, which is responsible for the maturation of the red blood cells in the bone marrow.

analcime. Analcite.

analcite. $NaAlH_2Si_2O_7$. Analcime. A native sodium aluminum silicate; a white isometric zeolite. It is also deposited in high-pressure boilers.

analeptic. A drug which restores health.

analgen(e). (1) $C_{18}H_{16}O_2N_2$ = 292.24. *5*-Benzamido-*8*-ethoxy-quinoline, o-ethoxy-mono-benzoyl-amidoquinoline, benzanalgen, quinalgene, labordin, $C_7H_5O.NHC_6H_3(OEt):C_2H_3N$. Colorless crystals, m.208; insoluble in water but soluble in hot alcohol; used as an antipyretic, antirheumatic and analgesic. (2) $C_{13}H_{14}O_2N_2$ = 230.12. 5-acetylamino-8-ethoxy-quinoline. Colorless crystals, m.155

analgesic. A drug that relieves pain either by direct action on nerve centers (brain), or by diminishing the conductivity of the sensory nerve fibers.

analgesine. Antipyrine.

analgic. Painless.

analgin. Creolin.

anallachrom. Esculin.

analogs, analogues. Analogous series. A group of compounds with similar electronic structures but different atoms; as, *isosteres* and *isologs*.

analogy. A similarity or a likeness in properties. Cf. *homology, isology*.

analoids. A patented group of tablets containing the exact quantities of reagents used in the analysis of iron, steel, ores and slags. Cf. *fixanal*.

analyser. Analyzer.

analysis. (1) Assay. The determination, detection, or examination of a substance. (2) The breaking down or splitting of a molecule into simpler constituents. (3) The reverse phenomena of synthesis. **bio-** (1) The detection of substances with the aid of microorganism; *e.g.*, by the selective action of yeasts on sugars. (2) The determination of the strength of substances, *e.g.*, hormones, by means of their effects on animals. **biochemical-** The chemical examination of biological material. **blowpipe-** The detection of metallic elements and acid radicals by means of the blowpipe. **clinical-** The examination of body fluids and tissues for the diagnosis of diseases. **colorimetric-** The quantitative determination of substances by means of the color intensity of their reaction products. **conductometric-** See *conductometric analysis*. **diffusion-** See *diffusion*. **dry-** A. without the use of solutions. **electro-** See *electrodeposition* analysis. **elementary-** The determination of the constituents of an organic compound by combustion; *e.g.*, C is determined as CO_2, H as H_2O. **gas-** Determination of gaseous mixtures by measuring the volumes before and after treatment with a selective absorbing agent. **gravimetric-** The determination of the percentage composition of a substance by weighing its constituents directly or indirectly. **iodimetric-** The titration of oxidizing substances with a standardized sodium thiosulfate and acid potassium iodide solutions. **mechanical-** See *mechanical*. **micro-** (1) The examination of substances with the microscope for the identification of

CLASSIFICATION OF COMMON TYPES OF ANALYSIS

QUALITATIVE (*detection* of the kind of substances present)	(chemical)		Precipitation or wet method.
	(thermal)		Flame tests and blowpipe analysis.
	(optical)		Spectroscopic and crystal structure.
	(electrical)		Electrolysis. High frequency spectra.
	(mechanical)		Microscope analysis. Spec. gravity, hydrometers.
	(biochemical)		By means of microorganisms (bacteria, yeasts).
QUANTITATIVE (*determination* of the amount of substances present)	(mechanical)	Gravimetric methods	(weighing the amount)
		Volumetric methods	(titrating the amount)
		Gas-volumetric methods	(measuring the quantity of gas)
	(thermal)		Combustion, and the absorption of the combustion gases.
	(electrical)		Conductometry, potentiometry, polarography. Mass-spectra.
	(optical)		Colorimetry, nephelometry. Fluoroscopy.

certain constituents; *e.g.*, starch. (2) The observation of characteristic reactions (precipitates, crystals) with the microscope for the detection of certain constituents. (3) Micro-modifications on the small scale of the ordinary processes of quantitative analysis, for use with small quantities of materials. **nephelometric-** The optical methods used to measure turbidity and thus determine the amounts of precipitates. **organic-** *Elementary* analysis. **proximate-** The determination of the chemical nature of the active constituents of a sample; *e.g.*, the carbohydrates, fats, proteins, alkaloids, glucosides, etc. in drugs. **qualitative-** The detection of the kind or nature of an element or compound in a substance. **quantitative-** The determination of the amount or quantity of an element or compound in a substance. **rational-** See rational analysis. **screen-** See *screen*. **spectroscopic-** See *spectroscopic*. **spectrum-** The detection of elements and binary compounds by their characteristic radiations as observed through the spectroscope. This method applies also to chemical analysis of celestial bodies; *e.g.*, stars, comets, etc. **spot-** See *spot*. **technical-** Practical methods used in industry for the evaluation of materials; they may be gravimetric, volumetric, conductometric, electrolytic, etc. **ultimate-** Elementary a. **volumetric-** The determination of elements and compounds in a substance by titration with standard solutions. **wet-** An a. made with solutions. (*See also bead tests, calorimetry, colorimetry, electrolysis, flame tests, reactions, spectroscopy, titration*, etc.; and table.)

analytical. Pertaining to the analysis or breaking down of a molecule. **a. balance.** See *balance*. **a. chemistry.** See *chemistry*. **a. metabolism.** Catabolism. **a. reactions.** The characteristic reactions of elements or ions, which are utilized for their identification or determination; *e.g.*, precipitate formation, color changes, etc. **a. weights.** The standardized weights used on an analytical balance.

analyzer. (1) A device which indicates a certain condition, change or phenomenon. (2) The Nicol prism of a polariscope nearest to the eyepiece. (3) The first tower of a coffee still. **curve-** A device for determining the slope of a graph. **gas-** An apparatus for the determination of the composition of gases; *e.g.*, flue gases. **micropolar-** An optical attachment for a microscope for the determination of polarization (q.v.) in crystals. **polarization-** The Nicol prism in a polariscope nearest to the eye, cf. *polarizer*.

anamirtin. (1) $C_{10}H_{26}O_{10}$. A glucoside from the fruits of *Anamirta paniculata*. (2) $C_{19}H_{24}O_{10}$. A glyceride from fishberries, *Cocculus indicus*. Cf. *cocculin*.

anamorphism. The change caused by the action of pressure, water or heat on rock; *e.g.*, the more compact portions of the lower geologic zone of the lithosphere. Cf. *catamorphism*.

anamorphoscope. A mirror which corrects distorted images.

anamorphosis. The distortion of objects by mirrors.

anaphase. A stage of cell division which follows the division of the nucleus.

anaphrodisiac. A drug which diminishes sexual desire.

anaphoresis. The antonym of *cataphoresis*, q.v.

anaphylactin. Allergen.

anaphylatoxin. A poisonous substance produced in anaphylaxis caused by the injection of proteins.

anaphylaxis. The increased sensitiveness of an organism to second and subsequent protein injections. The opposite of immunity. Cf. *allergia*.

anarcotine. An alkaloid found in Indian opium. It is not narcotic.

anasthol. A mixture of methyl chloride and ethyl chloride, used as a local anesthetic in dentistry.

anatase. TiO_2, Octahedrite. A native titanium oxide.

Anaxagoras. 500–428 B.C. The first Greek scientist. He distinguished physical from psychical phenomena, and assumed indivisible parts of matter.

anayodin. $HI.OH.C_9H_7N.HSO_3$. Iodoxy-quinoline sulfonic acid. Light yellow powder, soluble in water; used as an amebicide.

anchietine. An alkaloid from the root of *Anchietea salutaris* (Violaceae).

anchoic acid. Azelaic acid.

anchored compound. An organic compound which is attached to certain cells by a characteristic radical. See *chemotherapy*.

anchoring group. (1) An organic radical which combines with cell substance and connects the compound to which it belongs with the tissue material. (2) The salt-forming radical of a dyestuff.

anchovy. A small fish of the herring family, used in the preparation of savouries. **a. pear.** The fruit of a Jamaican tree used in the manufacture of pickles.

anchusic acid. An acid from the root of *Alkanna tinctoria* (Boraginaceae).

anchusin. $C_{33}H_{40}O_8$ = 588.4. A red coloring matter from the root of *Alkanna tinctoria*, a Boraginaceae. Cf. *alkanet, alkannin*.

andalusite. Al_2SiO_5. A native aluminum silicate, found in gray or pink rhombic prisms; used for gems. Cf. *silica*. It begins to decompose at 1410°C. to give mullite.

andesine. $NaCaAl_3Si_5O_{16}$. A native sodium, calcium, aluminum silicate that belongs to the triclinic feldspars. Cf. *andose*.

andesite. A rock-forming mineral consisting of andesine with hornblende and mica.

andirin. (1) $C_{40}H_{43}O_3N$ = 585.5. A yellow coloring matter from the bark of the cabbage tree (*Andira inermis*). (2) Rhatanin. Cf. *yaba* bark, *goa*.

andorite. $AgPbSb_3S_6$. A native, orthorhombic sulfostibide of silver and lead.

andose. A volcanic rock consisting of andesite with diorite.

andradite. An iron *garnet*, q.v.

Andrews, Thomas 1813–1885. An Irish chemist and physicist noted for his research on the critical temperature and pressure of gases.

androkin. Androsterone.

andromedotoxin. A poisonous principle of mountain laurel, *Kalmia latifolia*, an Ericaceae.

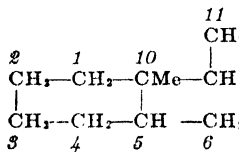
andrometoxin. A poisonous principle from *Andromeda, Azalea* and *Rhododendron* species. Colorless crystals, m.228; soluble in alcohol, ether, benzene or chloroform.

Andropogon. A genus of grasses, some of which yield essential oils used in perfumery; *e.g.*,

A. (or *Cymbopogon*) *citratus*.... lemongrass oil
A. (or *Cymbopogon*) *nardus*..... citronella oil

A. (or *Cymbopogon*) *odoratus*....	gingergrass oil
A. (*Cymbopogon*) *martini*.....	palmarosa oil
Cymbopogon caessius.....	inchigrass oil
Cymbopogon nervatus.....	naal oil
A. sorghum.....	sorghum

androstane. $C_{19}H_{32}$ = 260.0. A solid hydrocarbon and parent substance of sex-hormones, bile acids, sterols, etc. See *cholane* derivatives. **a. ring.** The saturated four-ring complex:



It occurs in many important biochemical compounds. See *cholane* derivatives.

androsterone. $C_{19}H_{30}O_2$ = 290.13. Androtin, androkin, *3-cis*-hydroxy-*17*-ketoandrostane. The male sex hormone, from urine, testes, plants or synthetically prepared. Colorless crystals, m.178, soluble in benzene Cf. *theelin*, *cholane* ring. **dehydro-** $C_{19}H_{28}O_2$ = 288.13. A male hormone from urine, or synthetically prepared. Colorless crystals, m.148, soluble in water.

androtin. Androsterone.

-ane. (1) A suffix which indicates a saturated hydrocarbon of the methane series. (2) A desoxy compound; as, quinane, cholesterane.

anemium. Actinium.

anemometer. An apparatus for measuring wind-velocity or pressure. Cf. *pitot* tube.

anemone camphor. A principle from pulsatilla (*Anemone pulsatilla*), which splits into anemonin and anemonic acid.

anemonic acid. $C_{10}H_{10}O_5$ = 210.1. Yellowish crystals obtained from anemone camphor; insoluble in water and decomposed by alkalis to anemoninic acid.

anemonin. $C_{10}H_8O_4$ = 192.1. Pulsatilla camphor. Yellowish crystals m.152 (decomp.); insoluble in water but soluble in hot alcohol. Used as an antispasmodic, sedative and anodyne. **hydro-** $C_{10}H_{12}O_4$ = 196.1. Large, colorless, scales, m.78 b_{10mm}.210.

anemoninic acid. $C_{10}H_{12}O_6$ = 228.1. Colorless crystals derived from anemonic acid, m.189, soluble in water.

anemosite. A mixed feldspar consisting of sodium anorthite associated with albite.

aneroid. See *barometer*. **a. battery.** Dry cell.

aneson. *Acetone* chloroform.

anesthesia. The loss of sensation. **local-** The loss of feeling at a definite part of the body.

anesthesin. Benzocaine.

anesthesiophore radical. The benzoyl group, $PhCO^-$, which produces anesthetic effects.

anesthetic, anæsthetic. A drug which causes the loss of sensation. **general-** A. which affect consciousness, hence deaden the sensations of the whole organism; such as, ether, chloroform, nitrous oxide, etc. **local-** A. which affect only a particular part of the body; *e.g.*, cocaine, ethyl chloride, novocaine, stovaine, quinine and urea hydrochloride. **a. gas.** Nitrous oxide.

anesthetizing valve. A device for mixing an anesthetic with air for respiration in animal experiments.

anethol. $C_{10}H_{12}O$ = 148.15. Anethole, p-allylphenylmethyl ether, anise camphor, p-methoxypropenyl benzene, methylallyl phenol, 1-methoxy-4-allyl-benzene, p-allyl-phenylic-methylic ester, *p*-propenylanisole, $MeO.C_6H_4.CH:CHMe$. A constituent of anise and fennel oils. Colorless leaflets or an aromatic liquid with fragrant odor, d.0.994, m.21.6, b.223; very slightly soluble in water, and soluble in alcohol or ether. Used as a reagent for the detection of lignin, as a flavoring agent in perfumery, medicinally as a carminative and antiseptic, and also in microscopy and for the preparation of anisaldehyde.

anethoquinine. Quinine anisate.

anethum. Garden dill, dill seeds. The fruits of *Paucedanum* (*Anethum*) *graveolens*, an Umbelliferae; used medicinally as carminative, and as a spice or condiment.

aneurin(e). Vitamin B_1.

angelic acid. $C_5H_8O_2$ = 100.08. Angelicic acid, *α*-methylisocrotonic acid, *cis-2*-methyl-*2*-butenoic acid*, $MeCH:CMeCOOH$. Colorless monoclinic crystals of spicy odor, $d_{76°}$.0.954, m.45.5, b.185; sparingly soluble in water, but soluble in alcohol or ether. It is a constituent of *Angelica*, *Chamomile*, and *Arnica* species, and is used as a flavoring agent. Its isomer is *tiglic* acid (q.v.). **cinnamenyl-** See *cinnamenyl*. **hydro-** *α*-Methylbutyric acid. **iso-** Tiglic acid.

angelica. The dried herb of *A.* or *Archongelica officinalis*, an Umbelliferae.

a. lactone. $C_5H_8O_2$ = 98.1. *alpha-* Colorless crystals, m.18, or a colorless liquid, b.167. *beta-* A colorless liquid, m. −10 b.83; used in flavoring extracts. **a. root.** The rhizomes and roots of *Angelica* species, used medicinally as a fluid extract, as a diuretic, diaphoretic and stimulant. **a. root oil.** A colorless, essential oil which is sometimes pale yellow, d.0.855–0.918, $[\alpha]_D$ + 16° to +32°, b.60–70, refractive index (20°C) 1.4800. Its chief constituents are phellandrene and valeric acid; soluble in alcohol, ether, benzene or chloroform. Used for flavoring. *Japanese-* Colorless crystals, d.0.915 m.62, b.300; soluble in alcohol, ether, chloroform or benzene, and used for flavoring. **a. seeds.** The ripe, dried fruits of *Angelica* species, used medicinally as a carminative, stimulant or aromatic as a fluid extract or oil. **a. seed oil.** An essential oil from angelica seeds. A pale-yellow liquid which darkens with age, d.0.856–0.890, $[\alpha]_D$ + 11° to +12°; miscible with alcohol, ether, benzene, or chloroform. Its chief constituents are phellandrene and valeric acid; used for flavoring. **a. tree.** The shrub or tree, *Xanthoxylum americanum*, a Rutaceae found in the United States. The crushed bark smells like angelica and is used as a purgative and emetic.

angelicic acid. Angelic acid.

angelicin. $C_{18}H_{10}O$ = 262.3. A constituent of the roots of *Angelica officinalis*. Colorless crystals, m.126.5, insoluble in water, but soluble in alcohol or ether.

angelin. Rhatanin.

Angelus still. A distillation apparatus that can be fixed to a wall.

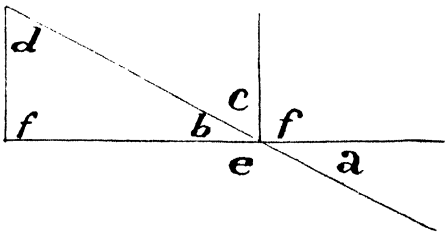
angico gum. Brazilian gum, Para gum. A mucilaginous secretion of *Piptadenia rigida*, a Leguminosae of Brazil; used similarly to gum arabic. Cf. *cebil* gum.

angiology. The science of blood and lymph vessels.

angioneurosin. *Nitro-*glycerin.

angiosperm. A flowering plant which has seeds enclosed in a fruit; *e.g.*, the pea-pod. Cf. *gymnosperm*.

angle. The difference in direction of any two lines; the figure formed by two converging lines when they meet; the vertex of the two lines. **acute-** An a. less than 90°, (a). **adjacent-** An a. which has one line common with another angle, (b). **complementary-** The complement of an a. (c) is 90° less the a.—*i.e.*, (b). **critical-** See *critical*. **meter-** See *meter*. **oblique-** An a. opposite to a right a., (d). **obtuse-** An a. greater



than 90°, (e). **right-** An a. of 90° (f). **supplementary-** The supplement of an a. (a) is 180° less the a.—*i.e.*, (e). **a. thermometer.** An L-shaped thermometer.

anglesite. A native lead sulfate, $PbSO_4$, which crystallizes in variously colored orthohombic crystals. Cf. sardinianite.

anglo-helvetium. Alabamine. The name proposed by Leigh-Smith and Minder for element No. 85 discovered by them in 1940, and isolated in 1943 from monazite sand.

angora. A breed of goats with long, silky, curly coats of valuable wool.

angostura. A South American tree, *Galipea cusparia* (*Cusparia febrifuga*). A Rutaceae. **a. alkaloids.** The alkaloids of a.; as, angosturine, cusparine, cusparidine, galipein, galipidine, etc. **a. bark.** Cusparia bark, carony bark. The bark of angostura, used as a bitter tonic and stimulant. **a. oil.** An essential oil from the bark of angostura. A yellow liquid of aromatic odor, d.0.930–0.960, $[\alpha]_D$ = −36° to −50°, soluble in alcohol, ether, chloroform, or benzene. Its constituents are galipene, galipol, cadinene and pinene; used in flavoring extracts.

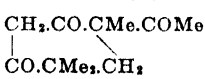
angosturine. $C_{10}H_{40}O_{14}N$ = 398.4. An alkaloid from angostura bark. Colorless crystals, m.85°; used as a tonic.

Angström, A. J. 1814–1874. A Swedish physicist, noted for optical research.

ångström. å, Å or A.U. A unit of wave length: 1å = 10^{-7} mm. = 10^{-10} m. = 0.000,000,0001 meter = 1 am (atom meter). Also 10å = 1$\mu\mu$ = 10^{-6} mm. *International* Å. I.Å. The wave length of the red line of cadmium which = 6438.4696 I.A. in air at 15°C. Thence the I.Å. = 10^{-10} m. Cf. λ (*lambda*).

angular. Pointed, having sharp cornered angles. **a. acceleration.** Angular acceleration, a, = $(v_t - v_0)/t$ where v_t is the velocity after time t, and v_0, the initial velocity. The unit is one radian per second per second. **a. aperture.** The largest angle subtended by a wave surface transmitted by an objective. **a. momentum.** Spin. The product of the a. velocity and moment of inertia of a body; hence, the mass of angular motion expressed in grams per cm.-second. **a. motion.** The motion of a line, fixed at one end in one plane, relative to a straight line through the center of rotation; as the hand of a clock. **a. velocity.** The ratio of the angle described in a given time to that time: v = θ/t, where θ is the angle traversed in the time, t. The unit is one radian per second.

angustione. $C_{11}H_{16}O_3$ = 196.11. A cyclohexane triketone isolated from the oil of *Backhousia*

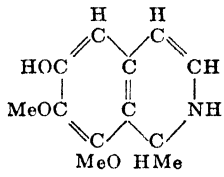


angustifolia, a Myrtaceae. A colorless liquid, d.1.089, b_{15mm}.129, $[\alpha]_D$ − 5.56°.

anhalamine. $C_9H_7(OCH_3)_2OH.NH$ = 209.1. An alkaloid from *mescal* buttons (q.v.).

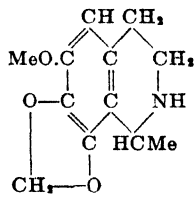
anhaline. $C_{10}H_{17}ON$ = 167.15. An alkaloid from *Anhalonium fissuratum*. It crystallizes in large crystals from sulfuric acid solution.

anhalonidine. $C_{12}H_{15}O_3N$ = 221.19. *1.2*-Dihydro-*6*-hydroxy-*7.8*-methoxy-*1*-methyl quinoline. An alkaloid from mescal buttons. Colorless octahedric crystals, m.-154, optically inactive;



soluble in water, alcohol or ether.

anhalonine. $C_{12}H_{15}O_3N$ = 221.19. *1.2.3.4*-Tetrahydro-*6*-methoxy-*1*-methyl-*7.8*-methylenedioxyquinoline. An alkaloid from *Anhalonium* species (Cactaceae). Colorless needles, m.254, extremely poisonous, optically inactive; soluble



in water, alcohol or ether. **methoxy-** Iopophorine.

a. hydrochloride. $C_{12}H_{15}O_3N.HCl$ = 257.7. Colorless crystals, soluble in water, and sparingly soluble in alcohol; used as a heart tonic.

Anhalonium. A Mexican cactus species, *A. lewinii* (peyotl), used for narcotic and intoxicating drinks by the natives. The cactus contains a number of alkaloids. Cf. *mescal* buttons. **a. alkaloids.** See *anhalamine*, *anhalonine*, *lophophorine*, *mexaline*, *pellotine*, etc.

anhidrotic. Antihidrotic. A drug which lessens perspiration.

anhydride. A compound (usually an acid) from which water has been removed; as, H_2XO_3 − H_2O = XO_2. **acid-** The oxides of nonmetals, which form acids with water. **basic-** The oxides of metals, which yield bases with water. **inner-** A ring compound formed by the abstraction of water; as, lactones, phthalic anhydride, etc. (See also *acetic-*, *chromic-*, *osmic-*, etc.)

anhydrite. $CaSO_4$. A native anhydrous calcium sulfate occurring in white or gray orthorhombic masses. Cf. *muriacite*, *tripestone*, *vulpinite*.

anhydro- A prefix to compounds from which one or more molecules of hydrogen have been extracted. They are, therefore, less saturated. Cf. *anhydrous*

anhydroecgonine. $C_9H_{13}O_2N$ = 167.55. Ecgonidine. Colorless crystals, m.235; soluble in water, alcohol or ether. **a. hydrochloride.** $C_9H_{13}O_2N.HCl$ = 203.63. It is derived from ecgonine. Colorless rhombic needles, m.241 $[\alpha]_D$ − 61.5°; soluble in water or alcohol.

anhydroformaldehyde aniline. $PhN:CH_2$ = 105.01. A solid, m.120, insoluble in water and soluble in alcohol or ether.

anhydroglycochloral. Chloralose.

anhydrone. Trade name for anhydrous, magnesium perchlorate prepared by igniting the trihydrate. It is a powerful desiccant.

anhydrosynthesis. The theoretical coupling of a functioning *group* q.v., with another compound, with the subsequent elimination of water. Cf. *derivative.*

anhydrotimboine. Timbonine.

anhydrous. A compound which has lost all its water; in particular water of crystallization. Cf. *anhydro-.*

anilides. (1) A group of compounds containing the monovalent C_6H_5NH—radical derived from aniline, *e.g.*,

benzanilide	Ph.NH.CO.Ph
acetanilide	Ph.NH.CO.Me
diacetanilide	$PhN(OCMe)_2$
cyananilide	PhNCN

(2) Sometimes applied to compounds containing the $NH_2C_6H_4$— group (anilinate); as, arsenic acid anilide (= arsanilic acid). **acet-** Acetanilide. **form-** $C_6H_5NH.CHO$. Colorless crystals, m.46, b.284. **methylacet-** Exalgin.

anilidothiobiazole. 1.2.3-Thiodiazole.

anilinate. A compound of aniline and a metal, $NH_2C_6H_4M$; as, mercury anilinate. Cf. *anilide.*

aniline. $C_6H_5NH_2$ = 93.10. Phenylamine, aminobenzene, phenylid, cyanol, aniline oil, benzidam, $PhNH_2$. A colorless or slightly brown liquid, darkening with age, $d_{20°}$.1.022, m. −6, b.184.4; soluble in 35 pts. water, and miscible with alcohol or ether. Used as a reagent, for aldehydes, chloroform, fusel oil, phenols, etc.; in bacteriology, for preparing staining solutions; in medicine, as an antiseptic; and extensively in the dye and rubber industries for organic synthesis and in the manufacture of resins, varnishes, and bakelite. Cf. *anilide, anilinate, nitrobenzene* reduction. **acetyl-** Acetanilide. **allyl-** See *allyl.* **amino-** Phenylenediamine. **aminodimethyl-** Dimethylphenylenediamine. **benzal-** Benzalaniline. **benzilidene-** See *benzalaniline.* **benzoyl-** Benzanilide. **benzyl-** See *benzyl.* **bi-** Benzidine. **bromo-** $NH_2C_6H_4Br$ = 172.0. Aminobromo benzene, bromophenylamine. **o-** Colorless crystals, m.31, b.150; soluble in alcohol. **m-** Colorless crystals, $d_{21°}$1.582, m.18, b.251; soluble in alcohol. **p-** Colorless rhombic crystals, m.66 (decomp.); insoluble in water, soluble in alcohol or ether. **chloro-** $NH_2C_6H_4Cl$ = 127.57. Aminochlorobenzene, chlorophenylamine. **o-** A colorless liquid, $d_{20°}$1.213, b.207; soluble in water or ether. **m-** A colorless liquid, $d_{20°}$1.216, b.230. **p-** Rhombic crystals, $d_{15°}$1.340; m.70, b.230; soluble in hot water, alcohol or ether. **cyano-** Cyananilide. **diacetyl-** Diacetanilide. **dibenzyl-** See *benzyl.* **dichloro-** $NH_2C_6H_3Cl_2$ = 162.01. Aminodichlorobenzene, dichlorophenylamine. **2.4-** Colorless needles, m.63, b.245; soluble in alcohol. **3.4-** Colorless needles, m.71.5, b.272; soluble in alcohol. **3.5-** Colorless needles, m.50.5, b.260; soluble in alcohol. **diethyl-** $C_6H_5N(C_2H_5)_2$ = 149.21. A yellow liquid, d.0.936, m.38, b.213.5; sparingly soluble in water, soluble in alcohol or ether. **dimethyl-** $C_6H_5N(CH_3)_2$ = 121.17. A yellow liquid, $d_{20°}$0.958, m.2.5, b.194; slightly soluble in water, but miscible with alcohol or ether. **dimethyl-** *ar-*Xylidine. *N-* See *dimethyl.* **dimethylamino-** Dimethylphenylenediamine. **dinitro-** Dinitraniline. **diphenyl-** Triphenylamine. **ethoxy-** Phenetidine. **ethyl-** $C_6H_5NH(C_2H_5)$ = 121.17. A colorless liquid, $d_{20°}$.0.963, *m.* −80, b.205; sparingly soluble in water and miscible with alcohol or ether. **formyl-** Formanilide. **hexahydro-** Cyclohexylamine. **hydroxy-** *ar-* Aminophenol. *N-* Phenylhydroxylamine. **iodo-** $NH_2C_6H_4I$ = 219.01. Aminoiodobenzene, iodophenylamine. **o-** Colorless needles, m.60; sparingly soluble in water, soluble in alcohol. **m-** Colorless leaflets, m.26; insoluble in water, soluble in alcohol. **p-** Colorless prisms or needles, m.63; insoluble in water, soluble in alcohol. **isopropyl-** Cumidine. **methenyltri-** Leucaniline. **methoxy-** Anisidine. **N-methyl-** $C_6H_5NHCH_3$ = 107.12. A yellow liquid, $d_{25°}$.0.987, m.195.5; slightly soluble in water, miscible with alcohol or ether. **ar-methyl-** Toluidine. **nitro-** $NH_2.C_6H_4.NO_2$ = 138.06. Aminonitrobenzene, nitrophenylamine. **o-** or **1.2-** Yellow rhombic needles, d.1.442, m.71.5, b.284. **m-** or **1.3-** Yellow needles, d.1.430, m.111.8, b.286, **p-** or **1.4-** Yellow monoclinic needles, d.1.424, *m.*147, b.331.7. **N-** Phenylnitramine, nitranilide, diazobenzolic acid, $Ph.NH.NO_2$ or $Ph.N:NOOH$. Pale yellow crystals, m.46, exploding at 98; soluble in water. **nitroso-** $NH_2C_6H_4NO$ = 122.10. **p-** Steel-blue needles, m.173; soluble in alcohol or benzene. **p-nitrosodiethyl-** $(C_2H_5)_2N.C_6H_4NO$ = 178.18. Colorless needles, m.84 slightly soluble in water, soluble in alcohol. **p-nitrosodimethyl-** $(CH_3)_2N.C_6H_4NO$ = 150.14. Green scales, m.87.8; slightly soluble in water, soluble in alcohol or ether. **pentachlor-** $NH_2C_6Cl_5$ = 265.36. Colorless needles, m.232; soluble in alcohol or ether. **phenyl-** *N-* Diphenylamine. *ar-* Biphenylamine. *p-* Xenylamine. **propionyl-** Propioanilide. **thio-** Thioaniline. **thionyl-** Thionylaniline. **tribromo-** Tribromoaniline. **trimethyl-** See *mesidine, pseudocumidine.* **trinitro-** Picramide.

a. acetate $C_6H_5NH_2.CH_3COOH$ = 153.1. A colorless liquid which readily freezes; soluble in water or alcohol. It is a reagent for furfural. **a. azo-β-naphthol.** *Sudan* yellow. **a. black.** Nigrosine. **a. blue.** A mixture of the salts of triphenylrosaniline sulfonic acids. A blue powder, soluble in water and used as a dye for cotton and silk. **a. brown.** Triaminoazobenzene. **a. camphorate** $(C_6H_5NH_2)_2.C_{10}H_{16}O_4$ = 386.3. Yellow crystals, sparingly soluble in water or glycerin; used as an antispasmodic. **a. chloride.** a. hydrochloride. **a. colors.** a. dyes. **a. dyes.** (1) Artificial or synthetic coloring matters. (2) Those derived from benzene or aniline. **a. fluoride.** a. hydrofluoride. **a. hydrobromide** $C_6H_5NH_2.HBr$ = 174. Gray or yellow crystals; soluble in water or alcohol. **a. hydrochloride** $C_6H_5NH_2.HCl$ = 129.6. Aniline salt, aniline chloride. Colorless crystals, d.1.2215, m.198, b.241, soluble in water or alcohol. Used as reagent for chlorates, and in organic synthesis mainly for preparation of dyestuffs. **a. hydrofluoride** $C_6H_5NH_2.HF$ =

113.1. Colorless crystals; soluble in water. **a. hydroiodide** $C_6H_5NH_2.HI$ = 221.07. Yellow crystals; soluble in water. **a. hydrosilicofluoride** $(C_6H_5NH_2)_2.H_2SiF_6$ = 330.1. Colorless crystalline powder; soluble in water or alcohol; used as a reagent. **a. nitrate** $C_6H_5NH_2.HNO_3$ = 156.1. Colorless or slightly yellow crystals, decomp. at 190; soluble in water or alcohol. **a. oil.** Crude aniline. **a. orange.** *Victoria* **orange. a. oxalate** $(C_6H_5NH_2)_2.C_2H_2O_4$ = 276.1. Colorless crystals; soluble in water. **a. point.** The critical solution temperature of a mixture of a. and a water-insoluble liquid. It is used for the determination of petroleum in mixtures by comparing their a. points with those of mixtures of known compositions. **a. purple.** Mauvein. The first aniline dye, discovered in 1856 by W. H. Perkin. **a. red.** Fuchsin. **a. salt.** a. hydrochloride. **a. sulfate** $(C_6H_5NH_2)_2.H_2SO_4$ = 294.1. White crystals; soluble in water or alcohol; used as a stimulant in epilepsy and chorea. **a. sulfonic acid. o-** Orthanilic acid. **m-** Metanilic acid. **p-** Sulfanilic acid. **a. tribromide.** Tribromoaniline. **a. yellow.** (1) Spirit yellow, amidoazobenzene hydrochloride. Steel-blue needles soluble in water and used for coloring lacquers. (2) The dye uranine yellow II.

anilino. The monovalent radical PhNH— or C_6H_5NH—, derived from aniline.

anilipyrine. A compound of acetanilide and antipyrine. Colorless crystals, m.75, soluble in water; used as an antipyretic and antineuralgic.

anilism. A form of poisoning produced by aniline vapors. The term now also includes cyanotic T.N.T. poisoning.

aniluvitonic acid. $C_{11}H_9O_2N$ = 187.08. Methylcinchoninic acid. Colorless crystals, m.241.

animal. A living organism, capable of locomotion and requiring organic food. Animal metabolism is analytic, destructive or energy-releasing, whilst that of plants is synthetic, constructive or energy-binding. **a. alkaloids.** A group of basic, organic compounds which are formed by the decomposition of animal matter; see *leucomaine, ptomaine.* **a. charcoal.** See *charcoal.* **a. dyes.** A coloring matter derived from the

Secretions

Animal	*Drug*
Astacus flaviatus	crab stones
Acipenser (sturgeon)	isinglass
Physeter (whale)	ambergris, spermaceti
Gadus morrhua (codfish)	cod liver oil
Apis (bee)	honey, bees' wax
Moschus (musk deer)	musk
Bos taurus (ox)	ox gall
Bos taurus (cow)	cows' milk, milk sugar
Ovis aries (sheep)	mutton suet, adrenal extract, lanolin
Sus scrofa (hog)	lard, pepsin, pancreatin
Castor fiber (beaver)	castoreum
Viverra zibetha	civet

Structural tissues

Spongia officinalis	sponge
Oculina virginea	coral
Ostrea species	oyster shell
Sepia officinalis	cuttlefish bone

animal world; as cochineal, kermes, Indian yellow, and sepia. **a. fibres.** A textile fiber derived from animals; as silk or wool. **a. holder.** A block of metal or wood with a cylindrical iron screen for holding small animals during injection. **a. oil.** (1) A fat or oil of animal origin. (2) Bone oil. **a. poisons.** A toxic substance of animal origin; as the animal alkaloids or the toxins from bees, wasps, hornets, toads, or snakes. **a. products.** A group of drugs or substances derived from animal species; *e.g.*, **a. secretions.** Animal products. **a. starch.** Glycogen. **a. tissues.** See *animal* products.

animalcule. A protozoon or microscopically small animal occurring in ponds or stagnant water. Cf. *ameba, paramecia.*

anime. *Animi* resin.

animi resin. A fossil copal from Zanzibar, Madagascar and the East Coast of Africa, used for varnishes and lacquers.

animikite. A native silver antimonide, Ag_9Sb, occurring in the Lake Superior region.

aninsulin. An antigenic, non-hypoglycemic substance made by heating insulin with formaldehyde.

anion. The negatively charged atom or radical liberated at the anode during electrolysis; as, Cl^-, NO_3^-, SO_4^{--}. Cf. *cation.*

anionotropy. A case of *ionotropy*, q.v., in which a OH^- or X^- group breaks off from a molecule and leaves a positive ion in a state of dynamic equilibrium. Cf. *prototropy.*

anisacetone. $C_{10}H_{12}O_6$ = 164.09. *p*-Methoxyphenylacetone, $MeO.C_6H_4CH_2COMe$. A constituent of anise oil.

anisal. Anisylidene. The divalent radical $MeO.C_6H_4.CH=$, derived from anisaldehyde.

anisalcohol. $C_8H_{10}O_2$ = 138.1. Anisyl-alcohol, p-methoxy-benzalcohol, $MeO.C_6H_4.CH_2OH$. Colorless needles, d.1.113, m.45, b.259; insoluble in water, but soluble in alcohol or ether.

anisaldehyde. $C_8H_8O_2$ = 136.1. Anisyl aldehyde, p-methoxy-benzaldehyde, para-anisic aldehyde, aubepine, $MeO.C_6H_4.CHO$. A colorless liquid, d.1.126, m. −2, b.245; sparingly soluble in water, but miscible with alcohol or ether. It occurs in Tahiti vanilla, and is used in perfumery. **3-hydroxy-** Isovanillin. **ortho-** o-Methoxybenzaldehyde.

anisaldoxime. $C_8H_9O_2N$ = 151.1. p-Methoxybenzaldoxime, $MeO.C_6H_4.CH:NOH$. *α*- Colorless crystals, m.64. *β*- Colorless crystals, m.133.

anisate. Any salt of anisic acid, or a compound of the type $MeO.C_6H_4.COOM$.

anise. Aniseed, anise fruit. The dried ripe fruit of *Pimpinella anisum*, an Umbelliferae. It is used as a condiment, and medicinally as an expectorant and aromatic carminative. **star-** The seeds of *Illicium verum*, a magnoliaceous tree, the source of anise oil.

a. bark oil. An essential oil from the bark of a Madagascar tree. A light-yellow oil of spicy taste, d.0.969; soluble in alcohol, ether, chloroform or benzene. Its chief constituent is methyl-chavicol. **a. camphor.** Anethol **a. fruit.** Anise. **a. oil.** The essential oil from the seeds of *Pimpinella anisum*, an Umbelliferae. A pale-yellow liquid or colorless crystalline masses of characteristic odor and aromatic, sweet taste, d.0.978–988, m.15, b.210; soluble in alcohol. Used as a flavoring agent, and medicinally as an aromatic carminative. Its constituents are anethol and methyl-chavicol. ***star-*** Illicium oil. An essential oil from the

seeds of *Illicium verum*, an evergreen magnolaceous tree. A colorless liquid, d.0.980–0.990, m.14–18; soluble in alcohol. It is used as a flavoring similar to a. oil, and contains anethol and methyl chavicol. **a. seed oil.** Anise oil. **a. water.** Aqua anisi. A saturated solution of a. oil in distilled water.

anisic acid. $C_8H_8O_3$ = 152.1. p-Methoxy-benzoic acid, umbellic acid, draconic acid, methyl-p-oxybenzoic acid, $MeO.C_6H_4.COOH$. Colorless monoclinic crystals, d.1.364, m.184, b.275; slightly soluble in water, soluble in alcohol or ether; used as an antiseptic and antipyretic. **4-hydroxy-** Vanillic acid. **hydroxymethyl-** Everninic acid. **3-methoxy-** Veratric acid.

a. alcohol. Anisalcohol. **a. aldehyde.** Ansaldehyde.

anisidine. C_7H_9ON = 123.1. Methoxy-aniline, aminophenolmethyl ether, $NH_2C_6H_4OMe$, methoxy-aminobenzene, methyloxyaniline. **o- ortho-** A brown oily liquid, d.1.098, m.6, b.224; slightly soluble in water. **m- meta-** A volatile liquid, b.251. **p- para-** Colorless needles, d.1.071, m.58, b.245; soluble in alcohol. **acet-** Methacetin. **di-** Dianisidine.

anisil. $C_{16}H_{14}O_4$ = 270.1. Bianisaldehyde, p,p'-dimethoxybenzil, dianisoyl, $MeOC_6H_4CO.COC_6H_4OMe$. Colorless crystals, m.133.

anisoin. $C_{16}H_{16}O_4$ = 272.1. Dimethoxybenzoin. The compound $MeOC_6H_4CO.CHOH.C_6H_4OMe$.

anisole. C_7H_8O = 108.1. Methoxybenzene*, methylphenyl ether, methylphenate, MeOPh. A colorless liquid, d.0.988, m. −38, b.155; insoluble in water, soluble in alcohol or ether. It is used in perfumery and to kill lice. **acetamido-** Acetaniside. ***p*-allyl-** Estragole. **amino-** Anisidine. **azoxy-** Azoxyanisole. **bromo-** $Br-C_6H_4OMe$ = 186.97. Bromomethoxybenzene*, bromophenylmethyl ether. **o-** or **1.2-** An oily liquid, d.1.573, b.222. **p-** or **1.4-** Colorless crystals, d.1.494, m.11, b.215. **dinitro-** $(NO_2)_2-C_6H_4OMe$ = 198.06. Dinitromethoxybenzene, *2.4*-dinitrophenylmethyl ether. Yellow leaflets, m.89. **hydroxy-** Guaiacol. **iodo-** Iodanisole. **methoxy-** Veratrole. **nitro-** Nitroanisole. **propenyl-** Anethole. **trinitro-** $C_7H_5N_3O_7$ = 243.06. Methyl picrate, methoxypicric acid, $(NO_2)_3-C_6H_4OMe$. Yellow crystals, d.1.408, m.68.4, insoluble in water; used as explosive. **vinyl-** $C_9H_{10}O$ = 134.08. Methoxystyrene, $CH_2:CH.-C_6H_4.OMe$. **o-** or **1.2-** Colorless liquid, d.1.0095, b.195. **m-** or **1.3-** An oily liquid b.90. **p-** or **1.4-** Colorless liquid, b.204, insoluble in water.

anisomeric. Not isomeric.

anisonitrile. C_8H_7ON = 133.06. Methoxybenzonitrile. $MeO.C_6H_4.CN$. **1.4-** or **p-.** Colorless crystals, m.60, b.256.

anisotonic. Not isotonic.

anisotropic. (1) Having different physical properties in different directions, as crystals. (2) A doubly-refractive substance is anisotropic. When viewed through a Nicol prism it shows prominent crosses, indicating that it has more than one index of refraction and therefore, is not optically homogeneous. Antonym: isotropic. **a. liquid.** *Liquid* crystal.

anisoyl. The monovalent radical $MeO.C_6H_4.CO—$, derived from anisic acid. **di-** Anisil. **a. chloride.** $C_8H_7O_2Cl$ = 170.6. Anisyl chloride, *p*-methoxybenzoyl chloride. The compound $MeO.C_6H_4.COCl$. Small colorless needles, m.26; insoluble in water or alcohol, and soluble in ether.

anisum. Anise.

anisyl. The monovalent radical $MeO.C_6H_4—$, derived from methoxybenzene or anethole. There are three isomeric forms; as, ortho- (-guaiacyl), meta-, and para-. **a. alcohol.** Anisalcohol. **a. amine.** Anisidine. **a. chloride.** Anisoyl chloride.

anisylidene. Anisal.

anitin. Anytin.

anitol. Anytol.

ankerite. A native carbonate of calcium, magnesium, iron, and manganese. $(CaMgFeMn)CO_3$.

annabergite. Nickel-bloom, nickel ocher. A native nickelous arsenate, $Ni_3As_2O_8.8H_2O$, which occurs in green, monoclinic crystals in Nevada.

annatto. Annotto, annotta, arnotta, orleana, roucou. The orange coloring matter from the pulp of the seeds in the fruits of the evergreen *Bixa orellana*, a Bixaceae. The active principle is supposed to be bixin. It is used for coloring cheese, cream and milk, and as a dyestuff for silk, wool and cotton. It is often adulterated with flour, chalk, soap, etc.

anneal. To temper by heating.

annealing. The tempering of glass or metals by heating then cooling, thus rendering them less brittle. See *tempering*. **a. color.** The tints of steel during annealing. **a. cup.** A small crucible of fine clay, used for silica fusions.

annerodite. A native uranium and yttrium columbate occurring in black orthorhombic crystals.

annidalin. *Thymol* iodide.

annotto. Annatto.

annular. A ring-shaped enclosed space.

anode. (1) Posode. The positive pole or electrode of a battery, vacuum tube, or electrolysing circuit. Usually made of carbon or platinum, according to the purpose for which it is to be used. **carbon-** A rod-shaped electrode for batteries or electrolytic cells. **platinum-** (1) A spiral shaped electrode for electrolysis. (2) A platinum wire fused in the glass of a vacuum tube.

anodic. Pertaining to the anode. **a. oxidation.** The protecting of metals, as aluminum, against corrosion by producing a thin film of oxide on the surface by making them the anode in a chromic acid bath.

anodyne. A drug which relieves pain; as, opium, belladonna or bromides.

anodynin. Antipyrine.

anodynon. Ethyl chloride.

anogen. Mercurous iodobenzene-p-sulfonate.

anol. $C_9H_{10}O$ = 134.08. Propenyl phenol(**para**), $MeCH:CH.C_6H_4.OH$. A crystalline solid, m.-98, b.250 (decomp.); a constituent of essential oils.

anolyte. The liquid in the immediate neighborhood of the anode during electrolysis. Cf. *catholyte*.

anomaly. An abnormal or irregular type or form.

anomite. A variety of the mineral, biotite, containing lithium.

anonaceine. An alkaloid from *Hylopeia aethiopica* an Anonaceae.

anorganic. Inorganic.

anorthic. Triclinic.

anorthite. $CaAl_2Si_2O_8$. A white, grayish or reddish triclinic feldspar. **sodium-** a. containing albite. Cf. *silica, anemonsite*.

anorthoclase. A triclinic sodium-potassium feldspar.

anorthosite. An igneous gabbro rock composed mainly of feldspar.

anoxemia. A pathological condition characterized by the lack of oxygen in the blood, as mountain sickness, balloon sickness.

anoxyscope. A glass apparatus for demonstrating the necessity for oxygen for plant growth.

Anschütz thermometers. A German make of standard thermometers.

anserine. $C_{10}H_{16}O_3N_4$ = 240.14. N-β-alanyl-1-methylhistidine. A dipeptide found in the muscles of birds, reptiles and fishes, m.238; a homolog of carnosine.

ant oil. Furfural.

antacid. A drug which neutralizes acids or relieves acidity; *e.g.*, lime water, milk of magnesia, carbonates.

antacidin. Calcium saccharate.

antagonism. Counter-action or opposition. **biological-** The inhibition of the toxic effect of certain substances by the action of other substances; *e.g.*, certain ions.

antagonist. Physiological *antidote.*

antagonistic. A drug which counteracts the physiological effect of another drug.

antalkaline. A drug which neutralizes alkalis or relieves alkalinity; *e.g.*, acetic acid, weak hydrochloric acid.

anthranthrene. $C_{28}H_{16}$ = 328.11. A group of hexacyclic hydrocarbons consisting of two fused anthracene rings.

anthelmintic. Helminthic. A drug which causes the expulsion of intestinal worms. Cf. *vermicide.*

anthemane. $C_{18}H_{38}$ = 254.4. Octodecane, a paraffin found in chamomile flowers.

anthemene. $C_{18}H_{36}$ = 252.4. Octadecylene. A hydrocarbon, d.0.791, m.18, b.179, from *anthemis*, q.v.

anthemidine. An alkaloid from mayweed (*Anthemis cotula*); used as an antispasmodic.

anthemis. Roman chamomile or ground apple. The flower heads of *Anthemis nobilis*, (Compositae). Used medicinally in the form of a fluid extract as a tonic and antispasmodic.

anthemol. $C_{10}H_{16}O$ = 152.1. Chamomile camphor. A constituent of anthemis.

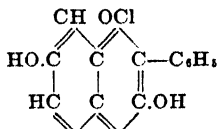
anther. The pollen-bearing part of a flower.

antheraxanthin. $C_{20}H_{28}O_3$(?). A carotenoid (q.v.), m.211, from the anthers of *Lilium tigrinum*, a Liliaceae.

anthion. Potassium persulfate.

antho- a prefix derived from the Greek "flower"; it indicates a relationship to flowers.

anthocyanidins. Vegetable principles occurring in the red, blue and purple coloring matter of flowers. They are derivatives of 3, 5, 7-trihydroxyflavylium chloride:



by the substitution of hydroxyl groups in the phenyl radical; thus:

—C_6H_4OH	Pelargonidin chloride
—$C_6H_3(OH)_2$	Cyanidin chloride
—$C_6H_2(OH)_3$	Delphinidin chloride.

Cf. *flavones.*

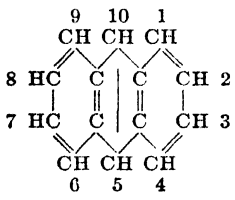
anthocyanins. Glucosides comprising the soluble coloring matter of blue, red and violet flowers; as, cyanin, delphinin, pelargonin, rutin. Cf. *flavylium.*

anthocyans. A group of red, blue and violet coloring materials of plants.

anthophyllite. $MgFe(SiO_3)$. A brownish-gray, orthorhombic amphibole.

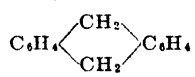
anthoxanthins. A group of glucosides comprising the coloring matter of yellow flowers; as, quercetin, lotusin, luteolin; they yield either flavone or xanthone derivatives on hydrolysis.

anthracene. $C_{14}H_{10}$ = 178.15. Anthracin, p-naphthalene, anthracene oil. A hydrocarbon

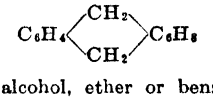


Another numbering is:
5- is *10-* or γ or *ms-*
6- is *5-* or α
7- is *6-* or β
8- is *7-* or β
9- is *8-* or α
10- is *9-* or γ or *ms-*

from coal tar distillation. Colorless, blue fluorescent needles, d.1.147, m.216.5, b.351; insoluble in water, soluble in benzene, alcohol or ether. Used in the manufacture of alizarin dyes. Anthracene oil of commercial grade contains also carbazole and phenanthrene. **amino-** Anthramine. **diamino-** Anthradiamine. **dibromo*-** $C_6H_4.C_2Br_2C_6H_4$ = 335.97. *9.10-* or *ms-* Yellow crystals, m.221; insoluble in water, sparingly soluble in alcohol or ether, soluble in chloroform. **dichloro*-** $C_6H_4.C_2Cl_2.C_6H_4$ = 247.05. *9.10-* or *ms-* Yellow needles, m.209; insoluble in water, soluble in benzene, sparingly soluble in alcohol or ether. **dihydro*-** $C_6H_4(CH_2)_2C_6H_4$ = 180.17. Hydroanthracene, diphenylene dimethylene. Colorless triclinic cry-



stals, m.108.5, b.313; insoluble in water and soluble in alcohol or ether. **dihydrodiketo-** Anthraquinone. **dihydroketo-** Anthranone. **dihydroxy-** See *anthradiol, rufol, flavol, chrysazol.* **dimethyl-** $C_{14}H_8(CH_3)_2$ = 206.20. **2.3-** Colorless leaflets, m.246; soluble in benzene. **2.4-** Colorless needles, m.71; soluble in ether or benzene. **ethyl*-** $C_{16}H_{14}$ = 206.11. *9-* or *ms-* Colorless leaflets, d.1.041, m.59, insoluble in water. **hexahydro-** $C_{14}H_{16}$ = 184.20. Colorless leaflets, m.63, b.290; insoluble in water,



soluble in alcohol, ether or benzene. **hydro-** Dihydro-. **hydroxy-** See *anthranol, anthrol.* **ketohydroxy-** Oxanthrol. **methyl-** $C_{14}H_9CH_3$ = 192.17. *alpha-* Colorless scales, m.200; soluble in alcohol, ether and benzene. *beta-* White crystals, m.24.5, d.1.168; slightly soluble in water, soluble in alcohol or ether. **nitro-** $C_{14}H_9NO_2$ = 223.15. α-Nitrosoanthrone. Yellow needles, m.146; insoluble in water and alcohol, soluble in benzene or carbon disulfide. **peri-** Chrysazol. **tetradecahydro-** a. perhydride. **tetrahydroxy-** Anthratetrol. **trihydroxy-** See anthratriol, *anthrarobin.*

a. blue. Alizarin blue. **a. carbinol.** Anthryl carbinol, $C_{14}H_9.CH_2OH$. **a. carboxylic**

acid. Anthroic acid. **a. diol.*** Anthradiol. **a. dione.** Anthraquinone. **a. oil.** A product of coal tar distillation (above 270°C) containing a. with carbazole, phenanthrene, etc. **a. perhydride.** $C_{14}H_{24}$ = 192.2. Saturated anthracene.  Colorless needles, m.88, b.270; soluble in alcohol. **a. sulfonic acid.** Anthraquinone sulfonic acid. **a. tetrol.** Anthratetrol. **a. tetrone.** Anthradiquinone. A group of ketone derivatives containing four oxygen atoms attached to the a. ring; there are 1, 4, 9, 10- and 1, 4, 5, 9-. **a. triol.** Anthratriol. **a. violet.** Gallein.

anthracenol. Anthrol.

anthracenone. Anthrone.

anthrachrysone. $C_{14}H_8O_6$ = 272.13. Anthraquinone-1.3.5.7-tetrol, 1.3.5.7-tetrahydroxyanthraquinone, anthrachrysazin. Orange red crystals, m.360; insoluble in water or ether, but soluble in alcohol.

anthracine. (1) A ptomaine produced by the anthrax bacillus. (2) Anthracene. Cf. *anthrazine.*

anthracite. Stone coal. A bright, lustrous, hard, brittle, mineral coal, q.v., containing 2–8 % of volatile carbon on a mineral-free basis; d.1.3–1.8. In a. the mineralization of wood has been carried a stage farther than in coal. **meta-** Contains less than 2 % of volatiles. **semi-** Contains 8–14 % of volatiles.

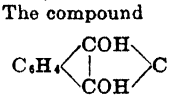
anthracometer. A device for determining the amount of CO_2 in gas mixtures.

anthraconite. Stinkstone. An earthy amorphous form of calcium carbonate containing bituminous matter.

anthracyl. The monovalent $C_{14}H_7$—radical derived from anthracene. There are the three isomers: α-, β-, and γ-.

anthradiamine. $C_{14}H_{12}N_2$ = 208.11. Anthracenediamine*, $C_{14}H_8(NH_2)_2$. Pale yellow needles, m.160.

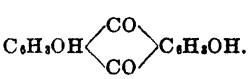
anthradiol. $C_{14}H_{10}O_2$ = 210 15. Anthrahydroquinone, anthra-quinol, oxanthranol, *9.10*-anthracenediol*, 5.10- or *9.10*-dihydroxyanthracene. The compound



Yellowish needles, m.180, insoluble in water. 1.6- or *1.5*- Rufol. 1.9- or *1.8*- Chrysazol. *2.6*- Flavol. **1.2-** *1.2*-Anthracenediol*. Green leaflets, m.160

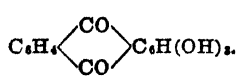
anthradiquinone. Anthracene tetrone.

anthraflavic acid. $C_{14}H_8O_4$ = 240.13. *2.6*- or 2.7-dihydroxyanthraquinone.



Yellow needles, m.330; insoluble in water or ether. **iso-** See *isoanthraflavic* acid.

anthragallol. $C_{14}H_8O_5$ = 256.03. 1.2.3-trihydroxanthraquinone, alizarin brown.



Brown needles, m.310; soluble in alcohol or ether, and in alkalis (green color). Used as a dye, and in the manufacture of dyes.

anthraglucorhein. A glucoside from *Rheum* species. It is a brown powder, soluble in alcohol, used as a cathartic.

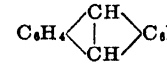
anthraglucosagradin. A glucoside from *Cascara sagrada.* A brown powder, soluble in alcohol, used medicinally as a cathartic.

anthraglucosennin. A glucoside from *Cassia angustifolia.* A dark-brown powder, soluble in alcohol; used as a cathartic.

anthrahydroquinone. Anthradiol.

anthraldehyde. $C_{14}H_9.CHO$ = 208.08.

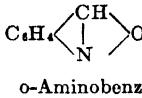
anthramine. $C_{14}H_{11}N$ = 193.17. Aminoanthracene, anthrylamine,



β- or **2-** Yellow needles, m.237; sparingly soluble in water, readily soluble in alcohol or ether. *γ*- or **5-** or **ms-** Yellow crystals, m.146; soluble in alcohol. Used in the manufacture of dyes.

anthranil. C_7H_5ON = 119.09. Anthroxan, o-aminobenzoic acid lactam, anthranilic acid lactam, benzo-*ψ*-oxazole, *β,γ*-benzisoxazole.

 Colorless crystals or liquid, d.1.189, m.18, b.210; slightly soluble in alcohol, soluble in alkalis. **iso-** i-o-aminobenzoic acid lactam.

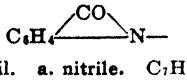


a. aldehyde. o-Aminobenzaldehyde. **a. carbonic acid.** Isatoic acid.

anthranilate. A salt of anthranilic acid, $NH_2.C_6H_4.COOM$.

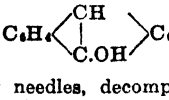
anthranilic acid. $C_7H_7O_2N$ = 137.1. o-Aminobenzoic acid, $NH_2.C_6H_4.COOH$. Yellow crystals, m.144; soluble in water, alcohol or ether, used in the manufacture of dyes and perfumes. Cf. *anthranoyl.* ***N*-carboxy-** Isatoic acid. **dinitro-** See *chrysalic* acid, *chrysanisic* acid. **a. di-*n*-propylaniline.** An indicator changing at pH 5.5 from red (acid) to yellow (basic). **oxalyl-** Kynuric acid.

anthranilo. The monovalent radical

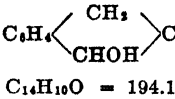


from anthranil. **a. nitrile.** $C_7H_6N_2$ = 118.08. *o*-Aminophenylcyanide, o-aminobenzonitrile, $NH_2.C_6H_4.CN$. Yellowish prisms, m.50, b.264.

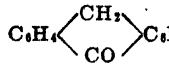
anthranol. $C_{14}H_{10}O$ = 194.15. *9*-Hydroxyanthracene*, *γ*-hydroxyanthracene, 5-anthrol, ms-oxyanthracene.



Pale yellow needles, decomp. 160; soluble in ether. Cf. *anthrone.* **dioxy-** Anthrarobin. **hydro-** $C_{14}H_{12}O$ = 196.15. The compound



anthranone. $C_{14}H_{10}O$ = 194.15. Anthrone, dihydroketoanthracene. An isomer of anthranol:

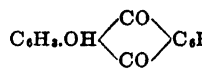


10-hydroxy- Oxanthrone. **nitroso-** Nitro-*anthracene*

anthranoyl. The monovalent radical $H_2N.C_6H_4.CO$—, from anthranilic acid.

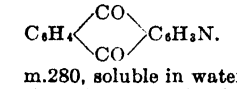
anthranylamine. Anthramine.

anthrapurpurin. $C_{14}H_8O_5$ = 256.13. *1.2.7-* or 1.2.8-trihydroxyanthraquinone.



Orange needles, m.325; slightly soluble in water or ether, soluble in alcohol. Used in the manufacture of dyes. **a. diacetate.** Purgatol.

anthrapyridine. alpha- 6.7-Benzoquinoline. **beta-** 6.7-Benzo-*i*-quinoline. **a.-quinone.** $C_{11}H_7O_2N$ = 185.1. The heterocyclic ketone

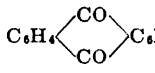


beta- Colorless crystals, m.280, soluble in water or alcohol.

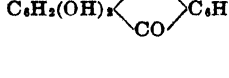
anthraquinol. Anthradiol.

anthraquinoline. $C_{17}H_{11}N$ = 229.2. Naphthoquinoline. Colorless crystals, m.170, b.446; insoluble in water, soluble in alcohol or ether.

anthraquinone. $C_{14}H_8O_2$ = 208.1. Dihydrodiketo-anthracene. The compound

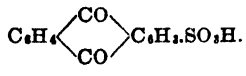


Pale yellow needles, d.1.410–1.438, m.285, b.380; insoluble in water, soluble in alcohol or ether. It is a constituent of *Cassia*, *Aloe*, *Mirabilis* and *Rumex* species, and is manufactured by oxidation of anthracene. Used in the manufacture of alizarin and other dyestuffs. **amino-** $C_{14}H_7O_2NH_2$ = 223.15. Anthraquinoylamine. **1-** or *α-*. Red, iridescent needles, m.242; insoluble in water, soluble in alcohol or ether. Used in organic synthesis for the preparation of alizarin-blue, cyananthrol, and other dyes. **2-** or *β-*. Red needles, m.302; insoluble in water, soluble in alcohol or ether. Used in organic synthesis in the preparation of indanthrene, flavanthrene and other dyes. *2*-**amino**-*1*-**hydroxy-** $C_{14}H_9NO$ = 239.08. *β*-Alizarinamide, $NH_2.C_{14}H_6O_2.OH$. Brown needles, m.226. **bromo-** $C_{14}H_6O_2Br$ = 286.97. Yellow crystals. **1-** m.188. **2-** m.204. **chloro-** $C_{14}H_6O_2Cl$ = 242.51. Pale yellow needles, **1-** m.162. **2-** m.211, insoluble in water. **dihydroxy-** 1:2- Alizarin. 1.3- Xanthopurpurin. 1.4- Quinizarin. *1.5* or 1.6- Anthrarufin. *1.8-* or 1.9- Chrysazin. 2.3- Hystazarin. *2.6-* or 2.7- Anthraflavic acid. *2.7-* or 2.8- See Isoanthraflavic acid. **dihydroxy-methyl-** 4.6.2- Chrysophanic acid. **dioxy-** *Alizarin* blue. **hexahydroxy-** Rufigallic acid. **hydroxy-** $C_{14}H_7O_3.OH$ = 224.1. Yellow leaflets, m.302; very soluble in water, alcohol, or ether. **methyl-** $C_{14}H_7O_2Me$ = 222.2. Yellow crystals, m.177; soluble in alcohol, ether or benzene. **nitro-** $C_{14}H_7O_3.NO_2$ = 253.1. Yellow needles, m.228, insoluble in water, soluble in alcohol or ether. **pentahydroxy-** Alizarin cyanine. **tetrahydroxy-** The compounds. *1.2.-5.6-* or *rufiopin*. *1.2.5.8-* or *quinalizarin*. *1.3.5.7-* or *anthrachrysone*.



tetrahydroxy-methyl- Fisetin. **trihydroxy-** 1.-2.3.- Anthragallol. 1.2.4- See Purpurin. *1.2.-6-* or 1.2.7- Flavopurpurin. *1.2.7-* or 1.-2.8- Anthrapurpurin. **trihydroxymethyl-** See *morin* and *emodin*. **trioxy-** Trihydroxy-.

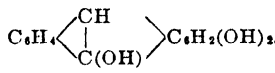
a. acridine. Naphthacridine-dione. **a. acridone.** Naphthacridine-trione. **a. aldehyde.** 5.10-dihydro-5.10-diketo-anthraldehyde. **a. methide.** 5-methylene-anthrone. **a. sulfonic acid.** *β*-acid, alizarin sulfonic acid.



An intermediate in the manufacture of alizarin. It is obtained by heating anthraquinone with conc. H_2SO_4 at 200-260°C. Cf. *silver* salt. **a. tetrol.** Tetrahydroxy a. **a. triol.** Trihydroxy a.

anthraquinonic acid. Alizarin.

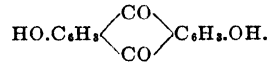
anthrarobin. $C_{14}H_{10}O_3$ = 226.1. Dioxyanthranol, 2.3.9-anthratriol, 2, 3, 9-trioxyanthracene, leuko-alizarin, desoxyalizarin,



A yellowish, granular powder; insoluble in water, soluble in hot alcohol. Used in the treatment of skin diseases, and as a substitute for chrysarobin.

anthrarobinate. A salt of anthrarobin.

anthrarufin. $C_{14}H_8O_4$ = 240.1. *1.5-* or 1.6-dihydroxyanthraquinone,

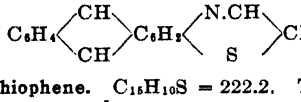


Yellow leaflets, m.280; soluble in water or benzene.

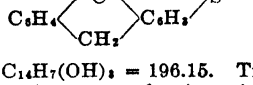
anthrasol. A colorless coal tar which is used medicinally in ointments.

anthratetrol. $C_{14}H_6(OH)_4$ = 242.15. Tetrahydroxyanthracene. A group of tetraatomic hydroxy derivatives of anthracene.

anthrathiazine. $C_{16}H_{11}NS$ = 249.2.



anthrathiophene. $C_{16}H_{10}S$ = 222.2. The heterocyclic compound

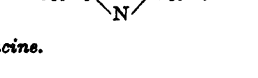


anthratriol. $C_{14}H_7(OH)_3$ = 196.15. Trihydroxyanthracene. A group of triatomic hydroxy derivatives of anthracene; as, anthrarobin.

anthraxolite. A metamorphic coal resembling anthracite. It is the end-product in the metamorphosis of petroleum.

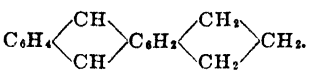
anthraxylon. A layer formation in coal of botanical origin. See vitrain (*coal*).

anthrazine. $C_{28}H_{16}N_2$ = 380.2. Anthracene diazine. The compound

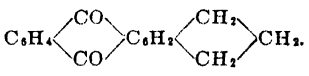


Cf. *anthracine*.

anthrindan. $C_{17}H_{14}$ = 218.2. The aromatic hydrocarbon



anthrindandione. $C_{17}H_{12}O_2$ = 248.2. The quinone of anthrindan, which corresponds with anthraquinone:

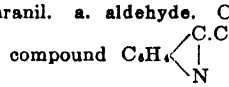


anthroic acid. $C_{15}H_{10}O_2$ = 226.16. Anthracene carboxylic acid*. $C_{15}H_{10}O_2$ = 226.16. The compound $C_{14}H_9.COOH$. **α-** or **1-** Yellow needles, m.260 (sublimes), insoluble in water, soluble in alcohol or ether. **β-** or **2-** Small yellow leaflets, m.280 (sublimes); insoluble in water, soluble in alcohol or ether. **γ-** or **5-** Yellow needles, decomp. 206; soluble in water or alcohol. These acids are used in organic synthesis and in the manufacture of dyes.

anthrol. $C_{14}H_{10}O$ = 194.15. Hydroxy-anthracene. **1-** Colorless needles, m.153. **3-** or **2-** Colorless needles decomp. 200; soluble in alcohol, ether, or acetone. **γ-** or **5-** (or **9-**). Anthranol.

anthrone. Anthranone.

anthroxan. Anthranil. **a. aldehyde.** $C_8H_5O_2N$ = 147.1. The compound



Colorless crystals m.72. Cf. *anthranilaldehyde.*

anthryl. The monovalent radicals $C_{14}H_9$—, derived from anthracene. There are five isomers. **a. amine.** Anthramine. **a. carbinol.** Anthracenecarbinol.

anthrylene. The divalent radicals —$C_{14}H_8$—, derived from anthracene. There are eleven isomers.

anti. A prefix derived from the Greek indicating (1) against or opposed, (2) antiposition. **a. position.** Opposite to the *syn*-position, q.v. Cf. *stereoisomerism.*

antiabrin. A substance formed in the blood after the injection of abrin.

antiagglutinin. A substance of the blood which prevents agglutination.

antiaggressin. A substance ormed in t he body counteracting the action of aggressins.

antialbumid. A decomposition product of albumin formed during gastric and pancreatic digestion.

antialbuminate. Antialbumate, parapeptone. An incompletely digested albumin. Cf. *syntonin.*

antialexin. A substance in the blood opposing the action of alexin.

antiamboceptor. A substance given off by protoplasm in order to combine with the cytophilic group of an amboceptor. Cf. *Ehrlich* side-chain theory.

antianaphylactin. A substance counteracting anaphylactin. Cf. allergen.

antiantibody. A substance formed in the blood of an organism after the injection of an antibody. Cf. *antiimmune.*

antiantidote. A substance which opposes the action of an antidote.

antiantienzyme. A substance which opposes the action of an antienzyme.

antiar. The milky juice of the upas (Javanese) or ipoh (Malayan) tree, *Antiaris toxicaria*, found in Malacca and Java, and used as an arrow poison.

antiarin. (1) $C_{14}H_{20}O_5$ = 268.16. A glucoside of antiar. It is a muscle poison and the active constituent of an arrow poison used by East Indian tribes. (2) $C_{14}H_{20}O_5.2H_2O$ = 304.2. The active principle of antiar.

antiarthrin. A condensation-product of gallic acid and saligenin. A brown powder, soluble in alcohol and alkalis, and used in uric acid diathesis.

antiarthritic. A drug that prevents or relieves arthritis; as, atophan, colchicum. Cf. *antipodagric.*

antiasthmatic. A drug relieving asthma; *e.g.*, atropine, chloroform, morphine, papaverine.

antibacterial. A substance which checks the growth of bacteria. Cf. *antiseptic, antimycotic, disinfectant.*

antiberberin. A black liquid prepared from rice and used to treat beri-beri.

antiberiberi. Is vitamin B.

antibilious. A drug that relieves a bilious condition.

antibiotic. (1) A substance destructive to life; a poison. (2) A naturally-produced, chemical inhibitor of the growth of organisms (e.g., *penicillin*).

antiblennorrhagic. A drug used in preventing or treating gonorrhea; *e.g.*, methylene blue, potassium permanganate, silver salts.

antibody. A substance in the body fluids of animals, which is formed after an injection and counteracts the effects of the injected substance. Antibodies consist of agglutinins, amboceptors, antienzymes, antitoxins, bacteriolysins, cytolysins, hemolysins, opsonins and precipitins, (see *Ehrlich's* theory).

anticachectic. A drug used in the treatment of malnutrition.

anticatalase. A substance opposing the action of a catalase.

anticatalyzer. A substance that inhibits the action of a catalyst.

anticatarrhals. Any drug subduing the inflammation of mucous membranes (bladder, bronchis, nose).

anticathode. Target. An electrode in a vacuum tube placed in such a position relative to the cathode that the rays from the latter impinge on or are reflected from it. See vacuum *tubes, X-ray* tube.

antichlor. A chemical used to remove Cl after bleaching; as, $Na_2S_2O_3$.

anticholerin. A substance derived from cultures of cholera bacillus and used in the treatment of cholera.

anticoagulin. A substance that prevents the coagulation of blood or milk.

anticol. A colloidal antimony solution used as parasiticide.

anticomplement. A substance formed by using cells to combine with the haptophore group of the complement. See *Ehrlich* side-chain theory.

anticrotin. The antitoxin of crotonallin.

anticytolisis. *Complement* fixation.

anticytotoxin. A substance opposing the action of cytotoxins.

antidiabetic. A drug used in the treatment of diabetes.

antidimmer. A preparation which prevents moisture from accumulating on glass.

antidolorin. A proprietary brand of ethyl chloride.

antidote. An agent counteracting or neutralizing the action of a poison on an organism. **chemical-** A substance which precipitates or alters the poison; as, oils, soaps, white of egg, iron salts, etc. **mechanical-** A means of removing the poison from the system; *e.g.*, stomach pump. **physiological-** A drug which counteracts the poison by having an opposite effect. **universal-** (1) A solution of 2 pts. magnesia and 1 pt. iron sulfate in water. (2) A mixture of 2 pts. charcoal, 1 pt. magnesium oxide and 1 pt. tannic acid in water. A tablespoon-full is given for an unknown poison.

antidysenteric. A drug which checks or prevents diarrhea; *e.g.*, bismuth salts, emetin, tannin.

antiemetic. A drug which prevents vomiting; *e.g.*, bismuth subnitrate, cerium oxalate.

antienzyme. Any substance that inhibits the actions of enzymes.

antierrhine. A drug which diminishes nasal discharges.

antifebrin. A proprietary brand of acetanilide.

antiformin. Hychlorite. A strongly alkaline solution of sodium hypochlorite, used as a disinfectant and in bacteriology.

antifreeze. Any substance which is added to the radiator water of automobiles or aeroplanes to prevent freezing, without injuring the metal parts or deteriorating after continued use, *e.g.*, alcohol or ethylene glycol.

antifriction alloy. An alloy used for bearings to reduce the friction of an axle.

antifungin. Magnesium borate; used as a gargle in diphtheria.

antigalactic. A drug that diminishes the secretion of milk; *e.g.*, atropine, camphor.

antigen. A substance which, when injected into an organism, causes the formation of antibodies. Antigens are either (1) *toxins:* (a) bacterial (diphtheria, tetanus), (b) vegetable (ricin, abrin); (c) animal (snake, spider, toad venoms); (2) *ferments* or *enzymes* (lipase, rennin, etc.); (3) *precipitinogens* (vegetable and animal proteins); (4) *agglutinogens* (bacteria erythrocytes); (5) *opsogens* (aggresins or bacterial endotoxins); (6) *lysogens* (vegetable or animal cells). See *Ehrlich's* theory.

antiglobulin. A precipitin that coagulates globulin.

antiglyoxalase. A substance which counteracts the action of glyoxalase.

antihemolysin. A substance which opposes the effect of a hemolysin.

antihemolytic. An agent that prevents hemolysis.

antihidrotic. Anhidrotic.

antihypo. Potassium percarbonate, used in photography.

antiimmune. A substance or agent that prevents immunity; *e.g.*, an anti-antibody.

antikinase. A substance which opposes the action of kinase.

antiknock. An agent that prevents *knock*, q.v., in the internal combustion engine; *e.g.*, lead tetraethyl.

antilab. Antirennin.

antilactase. An enzyme that counteracts the action of lactase.

antilipase. A substance which opposes the action of a lipase.

antilithic. A drug which prevents the formation of urinary stones; *e.g.*, colchicine, salicylates.

antiluetic. Anti-syphilitic.

antiluetin. Potassium ammonium antimonic bitartrate. $SbO(C_4H_4O_6)_2K(NH_4)_2.H_2O$; used in the treatment of syphilis.

antilysin. A substance formed in the blood of an organism which destroys the lysins of the bacteria; *e.g.*, the alexins can destroy bacteria.

antilyssic. A drug used in the treatment of rabies.

antimalarial. A drug relieving or preventing malaria; *e.g.*, quinine.

antimalum. A mixture of essential oils, chiefly camphor oil used externally for treating rheumatism.

antimellin. A glucoside from the bark of *Eugenia jambolana*, a Myrtaceae, used in treating diabetes.

antimers. Enantiomers, optical antipodes. A pair of isomers differing in structure like an object and its mirror image; they are identical in all properties, except those which can be described as right and left (+ and −), *e.g.*, hemihedral crystal form and direction of rotation of the plane of polarized light.

antimicrobin. A substance of the blood which destroys the bacteria present.

antimonate. Antimoniate, stibnate, stibiate, stibate. A salt of antimonic acids, (q.v.), viz.:

ortho-antimonate.....	M_3SbO_4
meta-.....	$M_4Sb_2O_6$ or $MSbO_3$
pyro-.....	$M_4Sb_2O_7$

antimonial glass. Antimonous sulfide. **a. lead.** Hard lead. An alloy of 15 parts of antimony and 85 parts of lead, which is resistant to sulphuric acid. **a. nickel sulfide.** Ullmannite. **a. silver.** Dyscrasite. The native silver antimonide, Ag_3Sb. **a. saffron.** Antimonous oxysulfide.

antimoniate. Antimonate.

antimonic. A compound of pentavalent antimony, $=Sb\equiv$. **a. acid.** *ortho-* H_3SbO_4 = 187.2. A white powder, d.6.6; decomp. when heated; slightly soluble in water or alcohol, soluble in acids. *meta-* $HSbO_3$ = 169.21. A white powder; sparingly soluble in water. *pyro-* $H_4Sb_2O_7$ = 356.43. A colorless powder; slightly soluble in water, soluble in alkalis. **a. chloride.** $SbCl_5$ = 295.5. Antimony pentachloride. A fuming yellowish liquid, $d_{20°}$.2.346, m.−6, $b._{30mm}$92, decomp. in water or alcohol; soluble in acids. It is a reagent for alkaloids. **a. fluoride.** SbF_5 = 215.2. Antimony pentafluoride. An oily liquid, $d_{22°}$.2.99; soluble in water. **a. oxide.** Sb_2O_5 = 320.4. Antimonic acid anhydride, antimony pentaoxide, antimony peroxide. A colorless or yellowish powder, d.3.78; insoluble in water or alcohol, and soluble in acids, bases or potassium iodide solution. **a. oxychloride.** $SbOCl_3$ = 243.28. A yellow powder decomp. when heated; insoluble in water, soluble in alcohol. **a. sulfide.** Sb_2S_5 = 400.8. Antimony pentasulfide, antimony persulfide. Orange-yellow powder, $d_{0°}$.4.120; insoluble in water, alcohol, or ether, soluble in alkalis and acids. It is a diaphoretic, emetic and expectorant.

antimonide. Stibide. A binary compound of antimony, analogous to arsenides, bismuthides, etc.

antimonii. The official Latin for "of antimony," antimonic or antimonous compounds.

antimonine. *Antimony* lactate.

antimonious. Antimonous.

antimonite. (1) A salt of antimonous acids, (q.v.); as, Na_3SbO_3. (2) Antimony glance. **sulf-** A salt of sulfantimonous acid containing the trivalent radical, $\equiv SbS_2$; as, $(NH_4)_3SbS_3$.

antimonium. Antimony.

antimonous. Stibous, stibious, stibnous, antimonious. A compound of trivalent antimony, Sb≡. **a. acid.** *ortho-* H_3SbO_3 = 171. *meta-* $HSbO_2$ = 153.21. This acid is hypothetical but forms salts. *pyro-* $H_4Sb_2O_5$ = 327.5. A white precipitate, which forms the trioxide when heated. **a. arsenate.** A mixture of a. oxide and arsenic acid, used in skin diseases. **a. arsenite.** A mixture of a. oxide and arsenous acid, used in skin diseases. **a. basic chloride.** Same as a. oxychloride. **a. bromide.** $SbBr_3$ = 361.3. Antimony tribromide. Yellow rhombic crystals, $d_{23°}$4.148, m.94.2, b.280, hydrolyzes in water, and soluble in acids, carbon disulfide, or alkalis. **a. chloride.** $SbCl_3$ = 228.3. A. trichloride, butter of antimony. White rhombic crystals, $d_{25°}$3.064, m.73.2, b.223.5; sparingly soluble in water, and soluble in alcohol, carbon disulfide, alkalis or acids. Antimony butter is a clear, acid, fuming solution, d.1.35. Used externally as a caustic, as a mordant, for manufacturing antimony salts, and for staining iron and copper articles. **a. fluoride.** SbF_3 = 178.97. Antimony trifluoride. Grayish-white octahedral crystals, d.4.379, m.292; soluble in water. It is a constituent of DeHaën's salt (q.v.); used in ceramics and as a mordant. **a. fluoride and ammonium sulfate.** DeHaën's salt. **a. hydride.** SbH_3 = 124.79. Stibine. A colorless, poisonous gas, $d._{(air=1)}$ 4.344, m. −91, b. −18; sparingly soluble in water, soluble in alcohol or carbon disulfide. **a. iodide.** SbI_3 = 502.97. Antimony triiodide. It occurs in three allotropic forms. (1) Red *hexagonal* crystals, $d_{20°}$4.848, (2) red *monoclinic* crystals, $d_{22°}$4.768, (3) yellow *rhombic* crystals, m.170.8, b.401°. It decomp. in water; soluble in alcohol, carbon disulfide, hydrochloric acid or potassium iodide solution. Used medicinally as an alterative, and externally in ointments for skin diseases. **a. nickel.** The native alloy NiSb. **a. oxalate.** $SbO.(C_2O_4)_2$ = 313.77. Antimonyl oxalate. A white powder, soluble in acids, and used as a mordant, especially as the potassium salt. **a. oxide.** Sb_2O_3 = 291.24. Antimony trioxide, antimonous acid anhydride, valentinite, antimony bloom, a. glass Sb_4O_6. Rhombic, colorless crystals, d.5.6, m.655, b.1560, insoluble in water, soluble in acids or tartaric acid. It is a powerful reducing agent; used medicinally as an expectorant and emetic. **a. oxychloride.** SbOCl = 173.47. Algaroth, mercurius vitae, basic antimony chloride. White regular crystals, insoluble in water, soluble in acids, carbon disulfide or alcohol. Used in the manufacture of tartar emetic and as an emetic and purgative. **a. oxyiodide.** SbOI = 262.8. A yellow crystalline powder, insoluble in water. **a. oxysulfide.** $Sb_2S_3.Sb_2O_3$ = 630.6. Antimony flowers, a. red. a. vermilion, antimonial saffron. A double salt of antimonous sulfide and oxide, of varying composition, containing some $SbOS_2$ (crocus metallorum). A gray-brown powder, soluble in hydrochloric acid and used in the vulcanization of rubber. **a. sulfate.** $Sb_2(SO_4)_3$ = 528.0. A white powder, soluble in acids. **a. sulfide.** Sb_2S_3 = 340.0. Antimony trisulfide. Stibnite, antimony red, black antimony sulfide. A gray-black powder or red crystals, d.4.62, m.555; insoluble in water, soluble in acids and alkali sulfide solutions. Used as a diaphoretic or alterative; as a pigment in the manufacture of safety matches, Bengal fire, torpedoes, cartridges, etc.; in enameled iron ware; and as an *opacifier*, q.v.

antimony. Sb = 121.76. Stibium. A metal of the arsenic or nitrogen family and element atomic number 51. A rhombohedric, bluish-white, brittle substance of lustrous, metallic appearance, d.6.62, m.630 b.1440; insoluble in water, dilute acids or alcohol, soluble in concentrated sulfuric acid or aqua regia. Basilius Valentinus described its preparation and properties in 1450. It is found native, but more frequently as sulfide (stibnite), and as antimonides and sulfantimonides of the heavy metals. Antimony occurs in three allotropic modifications: (a) ordinary metallic or β-antimony, Sb_1; (b) an unstable, yellow or α-antimony, Sb_4; and (c) amorphous, black antimony, Sb_2, d. 5.3, which on heating changes to the metallic modification. Antimony is tri- and penta-valent, and resembles arsenic and phosphorus in its chemical behavior; it forms the following series of compounds:

Derived from trivalent antimony—

antimonous (stibnous)	Sb^{+++}
stibines	SbR_3
antimonites	SbO_2^-
antimonyl	SbO^+

Derived from pentavalent antimony—

antimonic (stibnic)	Sb^{+++++}
stibonium	R_4SbX
meta-antimonate	SbO_3^-
ortho-antimonate	SbO_4^{---}

Antimony is used extensively as a constituent of important alloys, (Britannia metal, type metal, pewter), and in the preparation of antimony compounds, which are used in medicine and as pigments. **black-** Antimonous sulfide. **butter of-** Antimonous chloride. **flowers of-** Antimonous oxysulfide. **gray-a. glance. red-** (1) Kermesite. (2) Antimonous oxysulfide. **white-** Valentinite.

a. anhydride. See *antimonous* or *antimonic* oxide. **a. arsenide.** Allemontite. **a. ash.** See *antimony* oxides. **a. black.** Antimonous sulfide. **a. blende.** Antimony glance. **a. butter.** Antimonous chloride. **a. bloom.** Antimonous oxide. **a. chlorides.** See *antimonous-(ic)* chloride and oxychloride. **a. crocus.** An antimonous oxysulfide formed by the deflagration of equal parts of antimonous sulfide and saltpeter. **a. fluoride.** See *antimonous(ic)* fluoride. **a. flowers.** Antimonous oxysulfide. **a. glance.** Antimonite, stibnite, antimony blende, grey antimony. A native antimonous sulfide. **a. glass.** Antimonous oxide. **a. lactate** $Sb(C_3H_5O_3)_3$ = 389.97. Antimonine. Yellow crystals, soluble in water; used as a mordant in the dye industry. **a. minerals.** Antimony occurs in nature closely associated with arsenic and bismuth minerals; in addition to the antimonides and sulfantimonides of the heavy metals, it is found as:

native antimony	Sb
stibnite (a. glance)	Sb_2S_3
kermesite (q.v.)	Sb_2S_2O
senarmontite (valentinite, q.v.)	Sb_2O_3
cervantite	Sb_2O_4

Cf. *plagionite*, *antimonous* nickel. **a. mordants.** See *antimonous* fluoride, a. lactate and a. potassium tartrate. **a. needles.** Antimonous sulfide. **a. ochre.** Stibiconite. **a. oxides.** There are three oxides:

Sb_2O_3—antimony trioxide. See *antimonous* oxide.
Sb_2O_4—antimony tetroxide, q.v.
Sb_2O_5—antimony pentoxide. See *antimonic* oxide.

a. pentachloride. Antimonic chloride. **a. pentafluoride.** Antimonic fluoride. **a. pentamethyl.** $Sb(CH_3)_5$ = 197.17. Pentamethyl stibine. A colorless liquid, b.97; insoluble in water. **a. pentasulfide.** Antimonic sulfide. **a. pentoxide.** Antimonic oxide. **a. peroxide.** Antimonic oxide. **a. persulfide.** Antimonic sulfide. **a. potassium oxalate.** $SbK_3(C_2O_4)_3.6H_2O$ = 611.97. A white powder; soluble in water, and used as a mordant in the dye industry. **a. potassium tartrate.** $[SbOK(C_4H_4O_6)]_2.H_2O$ = 667.82. Tartar emetic, antimonyl potassium tartrate, tartar stibiatus. Colorless octahedral crystals, d.2.6; soluble in water or alcohol. Used medicinally as an emetic, expectorant and diaphoretic; in the dye industry as a mordant for textiles and leather; also as a reagent in qualitative analysis. **a. red.** Antimonous oxysulfide. **a. regulus.** Metallic antimony. **a. salt.** DeHaën's salt. **a. sulfate.** Antimonous sulfate. **a. sulfuret.** Antimonous sulfide. **a. sodium sulfate.** a. trifluoride sodium sulfate. $SbF_3.Na_2SO_4$. **a. sodium thioglycollate.** A white powder used as a trypanosomicide. **a. sulfide.** See *antimonous(ic)* sulfide. **a. tetroxide.** Sb_2O_4 = 307.54. Cervantite. A colorless powder, d.4.07; insoluble in water, soluble in alkalis or acids. **a. thioglycollamide.** $Sb(S.CH_2CONH_2)_3$ = 392.06. White crystals, m.139, slightly soluble in water; used as trypanosomicide. **a. tribromide.** Antimonous bromide. **a. trichloride.** Antimonous chloride. **a. triethyl.** $Sb(C_2H_5)_3$ = 209.12. Triethylstibine. A colorless liquid, $d_{15°}$.1.324, b.158.5; insoluble in water and miscible with alcohol or ether. **a. trifluoride.** Antimonous fluoride. **a. trifluoride sodium sulfate.** $SbF_3.Na_2SO_4$ = 320.8. A white crystalline solid, soluble in water. **a. trimethyl.** $Sb(CH_3)_3$ = 167.00. Trimethylstibine. A colorless liquid, $d_{15°}$.1.523, b.80.6; insoluble in water and miscible with alcohol or ether. **a. trioxide.** Antimonous oxide. **a. triphenyl.** Triphenyl *stibine*. **a. trisulfate.** Antimonous sulfate. **a. trisulfide.** Antimonous sulfide. **a. vermilion.** Antimonous oxysulfide. **a. white.** Antimonous oxide. **a. yellow.** Basic *lead* antimonate.

antimonyl. The monovalent radical, SbO—. **a. aniline tartrate.** A yellow crystalline compound used to treat trypanosomiasis. **a. compound.** A basic substance containing the antimonyl radical. **a. oxalate.** Antimonous oxalate. **a. potassium tartrate.** Antimony potassium tartrate. **a. sulfate.** $(SbO)_2SO_4$ = 375.27. A white amorphous powder. *basic*-$(SbO)_2SO_4.Sb_2(OH)_4$ = 676.89. A colorless powder.

antimosan. Potassium antimonyl pyrocatechol disulfonate. A white powder used in the treatment of schistosomiasis.

antimycotic. Antibacterial.

antinarcotic. A drug which opposes the action of narcotics.

antineuralgic. A drug used in the treatment of neuralgia; *e.g.*, acetanilide, opium, phenacetin, quinine, salicylates.

antineuritic vitamin. Vitamin B.

antinonnin. $C_6H_2(NO_2)_2CH_3ONa$. Sodium-o-dinitro cresolate. Victoria yellow. A yellow, odorless paste, used as a germicide and plant spray.

antinosin. $C_6H_2I_2ONa_2.CO.C_6H_4O$. Sodium tetraiodo phenolphthalein. Nosophen sodium. A dark blue amorphous powder; soluble in water. Used as an iodoform, antiseptic substitute, and for rendering visible the gallbladder by means of x-rays.

antioxidant. Age-resistor. A substance which retards the deterioration of rubber, such as tannic acid, hydroquinone or aniline.

antiparasite. Antiparasitic.

antiparasitic. A drug which inhibits the growth of vegetable and animal parasites.

antipepsin. A substance which prevents the action of pepsin.

antiperiodic. A drug used to treat malaria; *e.g.*, cinchona, quinine.

antiphlogistic. A drug which inhibits the progress of inflammation; *e.g.*, aconite, veratrum, mercury used internally, and glycerin used locally. **a. theory.** A theory proposed by Lavoisier which was in direct contradiction to the older phlogiston theory (q.v.).

antipodagric. A drug used in the treatment of gout; *e.g.*, colchicum, salicylates.

antipode. An antimer, q.v.

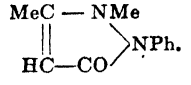
antipyonin. Sodium tetraborate.

antipyrene. Antipyrine.

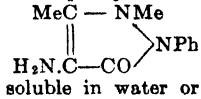
antipyretic. A drug relieving fever; as, aconite, acetanilide, antipyrine, cinchona.

antipyreticin. Resalgin.

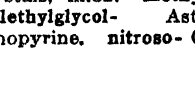
antipyrine. $C_{11}H_{12}ON_2$ = 188.17. Antipyrene, analgesine, phenazone, 2.3-dimethyl-1-phenyl-5(2)-pyrazolone, dimethyloxy-chinozine, phenyl dimethyl pyrazolone, pyrazole, anodynin, sedatine, methozan, parodyn, phenylon, oxydimethyl quinizine, dimethyloxyquinizine, pyrazin, metozine.



White leaflets or powder, $d_{20°}$.1.19, m.113; soluble in water, alcohol, or ether. It is an antipyretic, sedative, antineuralgic, antirheumatic and a reagent for nitrous and nitric acid, and for the determination of iodine number. **amido-** $C_{11}H_{13}ON_3$ = 203.2. 1.phenyl-2.3-dimethyl-4-aminopyrazolone.

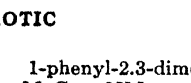


Colorless crystals, m.109; soluble in water or alcohol. **chloral-** Hypnal. **dimethylamino-** Pyramidon. **homo-** *Homo*antipyrine. **methyl-** $C_{12}N_{14}ON_2$ = 202.2. 1-phenyl-2.3.4-trimethyl pyrazolone.



Colorless crystals, m.82. **methylenedi-** Salubrol. **methylethylglycol-** Astrolin. **monobromo-** Bromopyrine. **nitroso-** $C_{11}H_{11}O_2N_3$ =

217.2. 1-phenyl-2.3-dimethyl-4-nitrosopyrazolone.



a. benzoate. Benzopyrine. **a. camphorate.** A compound of antipyrine and camphor. **a. carbolate.** Phenopyrine. **a. mandelate.** Tussol. **a. monobromide.** Bromopyrine. **a. phenate.** Phenopyrine. **a. resorcylate.** Resalgin. **a. salicylate.** Salipyrine. **a. tannate.** A compound of antipyrine and tannic acid. A yellowish powder; insoluble in water.

antipyrotic. A drug is used in the treatment of burns.

antipyryl. The monovalent radical,

derived from antipyrine.

antiquinol. Allylphenyl cinchonine ester. A yellow crystalline substance, m.30, insoluble in water, soluble in alcohol or ether; used as an antiseptic and analgesic.

antirachitic. Effective against rickets; as, cod liver oil, calciferol.

antirennin. A substance found in blood serum which prevents the enzymic action of rennin.

antirheumatic. A compound which relieves rheumatism; *e.g.*, colchicine, lithium salts and salicylates.

antirheumatin. A compound of sodium salicylate and methylene blue. Blue crystals, soluble in water and used as an antirheumatic.

antiricin. The substance which is formed in the blood of animals after the injection of ricin.

antirobin. The substance which is formed in the blood after the injection of robin.

antiscorbutic. A compound which is effective against scurvy by virtue of its ascorbic acid content; *e.g.*, lime or lemon juice.

antisepsin. C_8H_8ONBr = 213.99. Asepsin, acetanilide bromide, acetbromanilide. Colorless crystals, used as an antipyretic and antiseptic.

antiseptic. A substance that opposes sepsis, putrefaction or decay by arresting the growth of micro-organisms, either by inhibiting their activity or by destroying them; *e.g.*, alcohol, boric acid, chlorine, creosote, mercuric chloride, phenol, thymol, eucalyptol, iodoform. Cf. *disinfectant, germicide.*

antiseptin. A mixture of boric acid, zinc iodide and thymol, used as a dusting powder.

antiseptol. Cinchonine iodosulfate. A reddish powder, used as a dusting powder in skin diseases.

antispasmin. $C_{33}H_{32}O_9NNa.3NaC_7H_5O_3$. Narcein sodium salicylate. Narcein sodium and sodium salicylate. A white hygroscopic powder used as an antispasmodic, sedative, and hypnotic. Decomp. in air.

antispasmodic. A drug relieving convulsions or spasms; *e.g.*, camphor, chloroform chloral, valerian, bromides.

antisudorific. A drug that prevents excessive perspiration. Cf. *anhidrotic.*

antisyphilitic. Antiluetic. A drug used in the treatment of syphilis; *e.g.*, arsenic (cacodylates), mercury, iodides.

antitetrazin. A quinine derivative used as an antineuralgic.

antithermin. $C_{11}H_{14}O_3N_2$ = 206.2. Phenylhydrazine levulinic acid. Colorless crystals, m.108; insoluble in water and soluble in alcohol or ether. Used medicinally as an analgesic, antipyretic or antiseptic.

antithrombin. The substances of the blood which prevent coagulation.

antitode. A mixture of equal parts of magnesia, charcoal, and ferric hydroxide, used as an antidote in cases where the poison is unknown. Cf. *antidote.*

antitoxic. Antidote.

antitoxin. A protein antibody developed in the blood after the injection of a poison; a defensive protein derived from animals inoculated with a specific disease. **diphtheria-** A preparation from the blood serum of animals infected with diphtheria. **streptococcus-** A preparation from the serum of animals infected with streptococcus bacillus. **tetanus-** A preparation from the serum of animals infected with tetanus. Cf. *antigen, antibody.*

antitussin. $(C_6H_4F)_2$ = 190.1. Difluordiphenyl. Colorless crystals, m.87, used as an ointment in whooping cough.

antivenom. An antitoxin against snake venom.

antodyne. *Phenoxy* propandiol.

antozone. Mono-atomic oxygen.

anysin. Ichthyol.

anytin. Anitin. A sulfurated hydrocarbon derived from ichthyol. A brownish-black powder used as a germicide.

anytol. Anitol. A compound of anitin and aromatic phenols and alcohols. **cresol-** Metasol, meta-cresolanytol, used as a germicide, **eucalyptol-** Eucasol. Used as a germicide and disinfectant.

A.O.A.C. Association of Official Agricultural Chemists.

apa- Apo-.

apaconitine. An alkaloid derived from aconitine.

apagallin. Mercury tetraiodophenolphthalein, used as an antiseptic and indicator. Cf. *mercurochrome.*

apatite. $3Ca_3(PO_4)_2CaF_2$. A native calcium fluophosphate occurring in various colored, hexagonal crystals. Exported as fertilizer from Norway and Canada. Cf. *phosphorite, fluorapatite, osteolite, pyromorphite.*

apatropine. Apoatropine.

aperient. A laxative or mild purgative.

apertometer. See *Abbé* apertometer.

aperture. An opening into or through a body. The diameter of the open part of an objective or lens.

apex. The top, highest or farthest point of a cone, curve or orbit.

aphalerite. A native zinc sulphide, similar to wurtzite.

aphanesite. The native copper arsenate, $2CuO, As_2O_3, 4H_2O$.

aphanin. A biologically-active carotenoid from blue algae.

aphelion. (1) The position of a celestial body when farthest away from the sun, as opposed to perihelion. (2) Figuratively, the position of an electron in an elliptical orbit when farthest away from the nucleus. Cf. *apogee.*

aphicide. A substance that kills *Aphis.* Cf. *insecticide.*

aphrite. Earth foam, foamspar. A white pearl-like variety of calcite.

aphrizite. Black *tourmaline,* q.v.

aphrodine. Yohimbine.

aphrodisiac. A drug which arouses sexual desires; *e.g.*, nux vomica, phosphates, damiana.

aphrodite. $4MgO.SiO_{10}H_6$. A native basic magnesium silicate, which occurs in meerschaum-like masses.

aphrosiderite. $(Fe, Al)Si_4O_{20}.5H_2O$. Dark, olive-green, soft, hexagonal scales of an iron aluminum silicate.

aphthitalite. $NaKSO_4$. A native sodium potassium sulfate, which forms colorless, hexagonal crystals. Cf. *glaserite.*

aphthonite. A steel-gray silver ore which consists mainly of tetrahedrite.

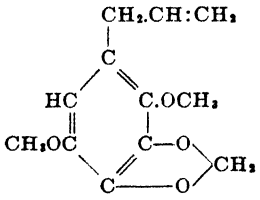
aphyl. Alkyl.

apigenin. $C_{15}H_{10}O_5$ = 270.08. 4'.5.7-trihydroxyflavone. A flavone, q.v., from many flowers and plants, e.g., parsley, and formed by hydrolysis of apiin.

apiin. $C_{27}H_{32}O_{16}$ = 612.3. A glucoside from the seeds of *Apium petroselinum.* A yellowish crystalline powder, m.228, soluble in hot water or alcohol.

apinol. $C_{10}H_{18}O$ = 154.14. Apinolum, levomenthone. A clear, amber-colored oil of pine-like odor obtained by the distillation of pine wood; d.0.946, b.182; insoluble in water, soluble in alcohol. Used as an antiseptic, germicide, and local anesthetic.

apiole. $C_{12}H_{14}O_4$ = 222.2. Parsley camphor, *2.5*-dimethoxysafrole, 2,5-dimethoxy-3,4-methenedioxy-1^2-propenylbenzene,

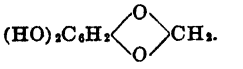


An aromatic ether occurring in the seeds of *Petroselinum* (parsley) and *Apium* (celery). Colorless, long needles of parsley odor, d.1.015, m.30, b.294; insoluble in water, soluble in alcohol. Used medicinally as an emmenagogue and antiperiodic. **iso-** Colorless crystals, d.1.197, m.56, b.304. **liquid-** The oleoresin of parsley seeds. A green oily liquid; soluble in alcohol, chloroform or ether. Used for the same purpose as apiol.

apiolic acid. $C_{10}H_{10}O_6$ = 226.08. Colorless crystals, m.175.

apionol. $C_6H_6O_4$ = 142.1. Phentetrol, v-tetrahydroxybenzene, $C_6H_2(OH)_4$. Colorless crystals, m.161. **dimethyl-** $C_6H_2(OH)_2(OMe)_2$ = 170.1. 1.2-dimethoxy-3,4-dihydroxybenzene. Colorless crystals, m.106, b.298°C; soluble in alcohol. **tetramethyl-** $C_6H_2(OMe)_4$ = 198.2. v-tetramethoxybenzene. Colorless crystals, m.81.

apionone. $C_7H_6O_4$ = 154.1. 1,2-methenedioxy-3, 4-dihydroxybenzene,



Colorless crystals m.69.

apiose. $C_5H_{10}O_5$ = 150.07. A methyl tetrose from the glucoside of celery and parsley leaves.

aplite. (1) A pink or red cobalt-silver ore from Canada. See *alaskite.* (2) A ceramic material mined in Virginia and composed chiefly of plagioclase with small amounts of microcline feldspar and sericite. Composition: $SiO_2$60, $Al_2O_3$24, CaO6, Na_2O6, K_2O3, $Fe_2O_3$0.2 %.

aplome. A yellowish green manganese garnet, q.v.

apo-, apa- A prefix derived from the Greek "from" and indicating a derived compound; as, apomorphine—derived from morphine.

apoatropine. $C_{17}H_{21}O_2N$ = 271.3. Apatropine, atropamine. An alkaloid derived from atropine by the action of nitric acid. Colorless prisms, m.61; insoluble in water, soluble in alcohol, ether, or chloroform. **a. hydrochloride.** $C_{17}H_{21}O_2N.HCl$ = 307.7. White leaflets, m.238; soluble in water, alcohol, or ether. **a. sulfate.** $(C_{17}H_{21}O_2N)_2.H_2SO_4$ = 640.5. Colorless crystals, soluble in water.

apobiotic. Decreasing vital activity.

apocamphoric acid. Campho acid.

apocholic acid. $C_{24}H_{38}O_4$ = 390.27. A dehydration product of cholic acid.

apochromatic. A lens combination in which chromatic aberration is corrected by bringing to a common focus three spectral color rays. Cf. *achromatic.*

apocodeine. $C_{18}H_{19}O_2N$ = 281.3. An alkaloid derived from codeine as a colorless, amorphous, gummy mass; sparingly soluble in water, soluble in alcohol or ether. **a. hydrochloride.** $C_{18}H_{19}O_2N.HCl$ = 317.7. A yellowish-gray, hygroscopic amorphous powder, soluble in water; used as an expectorant, sedative, hypnotic and emetic.

apocrenic acid. $C_{24}H_{12}O_{12}$ = 492.1. A brown amorphous substance derived from humus or crenic acid by oxidation, and also found in some mineral waters.

apocyanines. A group of cyanine dyes, q.v., the nitrogen rings of which are directly united; as, **erythro-** with 3:4' attachment, **xantho-** with 3:2' attachment.

Apocynaceae. The dogbane family. A group of tropical and sub-tropical plants with a milky juice that is often poisonous. There are 103 genera and 900 species of which the following yield drugs:

roots:

Apocynum cannabinum..... Canadian hemp
Apocynum androsaemifolium dogbane
Carissa schimperi..... wabain

barks:

Aspidosperma quebracho blanco.... quebracho
Alstonia constricta... Australian fever bark
Alstonia scholaris..... ditaine, chlorogenin
Holarrhena antidysenterica... conessiine, kurchi
Melouetia nitida..... guamachacine
Parameria vulneraria..... tagulaway
Plumiera species..... plumierine
Wrightia zeylanica..... conessine

leaves:

Nerium odorum..... karabin neriantin
Geissospermum species..... geissine, pereirine, velosine
Urechites suberecta..... urechitine

seeds:

Strophanthus kombe..... strophanthus strophanthine, etc.
Acocanthera venenata..... ouabain, acocantherin
Thevetia species..... thevetin, cerberin, cerberidin
Tanghinia venenifera..... tanghinine

apocynamarin. $C_{14}H_{18}O_3$ = 234.1. A glucoside from the rhizome of *Apocynum cannabinum*, or Canadian hemp. It is used as a cardiac tonic. Cf. *cynotoxin, cymarigenin.*

apocynein. An active constituent, probably a glucoside, of *Apocynum cannabinum*, Canadian hemp. White crystals soluble in alcohol. Cf. *apocynin.*

apocynin. A resinoid from *Apocynum cannabinum*, Canadian hemp, which occurs as a brown, amorphous powder and contains apocynein.

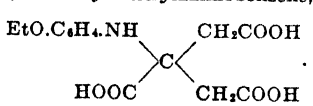
apocynoid. The combined active principles of *Apocynum cannabinum*, Canadian hemp; used medicinally as a tonic, emetic, and cathartic.

apocynum. Canadian hemp, black Indian hemp, Indian physic, dogbane. The dried rhizome and roots of *Apocynum cannabinum.* It is a heart tonic resembling digitalis and is used as a fluid extract.

apogee. (1) The point in its orbit at which the moon is farthest from the earth, as opposed to *perigee* (q.v.). (2) Analogously the point in the orbit of an electron farthest from the nucleus. Cf. *aphelion.*

Apollinaris water. A mineral water from Remage, Germany.

apolysin. $C_{14}H_{17}O_7N$ = 311.2. Phenetidin citric acid, aconityl-phenetidine, monocitryl-p-phenetidin, 1-ethoxy-4-citrylaminobenzene,



A white, crystalline powder, m.72; soluble in hot water, alcohol, glycerol or ether. Used as an antipyretic, antineuralgic and antiseptic.

apomorphine. $C_{17}H_{17}O_2N$ = 267.23. An alkaloid derived from morphine by the removal of one molecule of water. A colorless, amorphous mass becoming green on exposure to air; sparingly soluble in water, soluble in alcohol or ether. Used medicinally as an expectorant and emetic. **a. hydrochloride.** $C_{17}H_{17}O_2N.HCl$ = 303.71. Colorless or grayish monoclinic prisms, m.270; soluble in water or alcohol. Used as an hypnotic, emetic and expectorant, and also hypodermically in cases of poisoning.

apomyelin. A compound prepared from brain matter; it is a phosphatide but contains no glycerol.

apophyllite. A native, calcium potassium fluosilicate, $KCa_4H_{16}Si_8O_{28}$, occurring in white or pinkish octahedral crystals.

apopinol. Apiole.

apoquinamine. $C_{19}H_{22}ON_2$ = 294.4. An alkaloid derived from quinamine by the removal of a molecule of water.

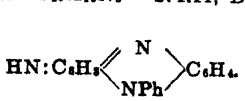
apoquinine. Homoquinine.

aporetin. A resin from the roots of rhubarb. A grayish-brown powder, insoluble in ether, but soluble in alkalis producing a dark-brown color.

aporphine. $C_{17}H_{17}N$ = 235.12. A derivative of morphine.

aporrhegma. The fragments of the aminoacids formed in the cells during the life of a plant or animal.

aposafranine. $C_{18}H_{13}N_3$ = 271.11, Benzeneinduline.



aposafranone. $C_{18}H_{12}ON_2$ = 272.11. Benzene indone, 3-aminophenylphenazine. A red crystalline powder, m.242; soluble in water, alcohol or benzene. Used as a dye.

apothecaries' weight. A system of weights and measures used in compounding medicines. The troy pound of 5760 grains is the standard, and is subdivided into 12 ounces; the ounce into eight drams; the dram into 20 grains. For fluid measure the quart of 42 fluid ounces is subdivided into 2 pints; the pint into 16 fl. oz., the fl. oz. into eight drams, and the dram into 60 minims. The following abbreviations are used:

♏.....	minim = 0.0616 cc.
gtt.....	gutta, a drop
℈.....	scruple = 20 grains = 1.296 grams
ʒ.....	dram = 60 grains = 3.888 grams
℥.....	ounce = 480 grains = 31.103 grams = 8 drams = 29.573 cc.
lb.....	libra, a pound = 5760 grains = 373.2417 grams
O.....	octarius, a pint = 7680 minims = 473.16 cc.

See *weights, conversion factors.*

apothesine. $C_{18}H_{23}O_2N.HCl$ = 297.74 γ-di-ethylaminopropylcinnamate hydrochloride, $Ph\text{-}CH{:}CHCOO(CH_2)_4NEt_2.HCl$. Colorless crystals, m.136, soluble in water or alcohol; used as a local anesthetic.

apotoxicarol. $C_{18}H_{16}O$ = 248.12. A colorless, phenolic hydrolysis product, m.247, derived from toxicarol.

apparatus. An instrument or device used for experiments, operations or manufacture, made of glass, metal, wood, etc. **laboratory-** Includes glass ware, devices for heating, cooling, shaking and other operations.

apple acid. Malic acid. **a. oil.** Amyl valerate.

applicator. A device for the local administration of a remedy; *e.g.*, a radium applicator.

approximate. Near or approaching; not exact and accurate.

aprotic. Not yielding or accepting a proton. **a. solvent.** One which neither yields a proton to the solute, nor gains one from it. **a. substance.** One which acts neither as an acid nor a base. Cf. *acid, base.*

apyonin. Auramine.

apyron. Lithium acetyl salicylate.

aqua. The Latin for water. Cf. *aquo.* Used to denote (1) water, (2) an aqueous solution or infusion, (3) in formulae (+ *aqua*) a variable amount of water, (4) water of crystallization. **a. ammonia.** See *ammonia* water. **a. anethi.** See *dill* water. **a. anisi.** See *anise* water. **a. carui.** See *caraway* water. **a. chlori.** *Chlorine* water. **a. compound.** Hydrate. **a. destillata.** Distilled *water.* **a. fervens.** Hot water. **a. fluvialis.** River water. **a. fontana.** Spring or well water. **a. fortis.** Nitric acid. **a. laurocerasi.** *Cherry-laurel* water. **a. marina.** Sea water. **a. nivialis.** Snow-water. **a. pluvialis.** Rain-water. **a. pura.** Pure water. **a. regia.** Nitro-hydrochloric acid. A mixture of 3 pts. HCl and 1 pt. HNO_3, used as a solvent for noble metals, *e.g.*, platinum or gold. **a. tepida.** Warm water. **a. vitae.** Brandy or whisky.

aquadag. A colloidal suspension of graphite in water used as a lubricant.

aquamarine. A beryl of sea-green color, used as a semi-precious stone.

aquation. The formation of aquo ions. Cf. *hydration, solvation.*

aquatone. A printing process similar to collotype, q.v., in which bichromated gelatin coated on thin zinc plates is the sensitive medium.

aqueous. Watery. **a. solution.** A solution prepared with water as the solvent.

aquinite. Chloropicrin.

aquo. Pertaining to water. **a. ions.** A complex ion which contains several molecules of water; as, $[M(H_2O)_8]^{++}$, $[M(H_2O)_6]^{++}$, $[M(H_2O)_4]^{++}$ or $[M(H_2O)_2]^{++}$, where M may be a divalent metal. Cf. *hydration.* **a. system.** The reactions taking place in water, including the concept of H^+ and OH^-. Cf. *ammonia system, hydrogen ion, base.*

A.R. Abbreviation for analytical reagent.

Ar. An alternative symbol for argon, A.

ar- A prefix which indicates substitution in the *aromatic* nucleus. Cf. *ac-.*

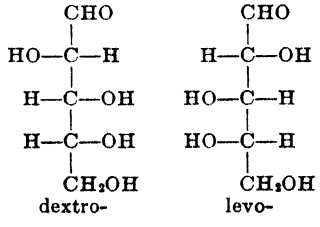
araban. $(C_5H_{10}O_5)n = 150.11n$. An arabinose polysaccharide occurring in the mucilage of Malvaceae and in acacia.

arabate. A salt of arabic acid.

arabic acid. $C_5H_{10}O_6.H_2O = 184.2$. Arabitic acid, d-tetrahydroxyvaleric acid. A white amorphous powder precipitated from gum arabic solution by alcohol; soluble in water.

arabin. $C_{10}H_{18}O_9 = 282.19$. An amorphous powder, soluble in water and insoluble in alcohol; a constituent of gums. **a. water.** A solution of the water-soluble constituents of gums in hydnocarpus oil.

arabinose. $C_5H_{10}O_5 = 150.11$. Pectin sugar, pectinose, gum sugar. The pentoses obtained by hydrolysis of acacia:



d- White, rhombic crystals, m.160; soluble in water, alcohol, or glycerol, insoluble in ether. It is prepared from arabic acid by boiling with HCl, and is used as a culture medium for certain bacteria.

arabinulose. $C_5H_{10}O_5 = 150.11$. The keto-pentose corresponding with arabinose.

arabite. Arabitol.

arabitic acid. Arabic acid.

arabitol. $C_5H_{12}O_5 = 152.13$. Arabite. The pentatomic alcohol $CH_2OH.(CHOH)_3.CH_2OH$ derived from arabinose. Colorless, sweet crystals or granules, m.102; soluble in water or alcohol. It exists in the d- and l-form, and is found in silage liquor.

arabonic acid. $C_5H_{10}O_6 = 166.11$. The tetrahydroxy acid, $CH_2OH.(CHOH)_3.COOH$, derived from arabinose. Colorless crystals, m.89; soluble in water.

araceae. Aroideae.

arachic acid. $C_{20}H_{40}O_2 = 312.42$. Arachidic acid, eicosanoic acid*, *n*-eicosoic acid. The twentieth member of the fatty acid series, $Me(CH_2)_{18}COOH$. White leaflets, m.77.5, b.328; insoluble in water, soluble in alcohol or ether. It is a constituent of arachis oil, butter and other fats.

arachidic acid. Arachic acid. **a. alcohol.** Eicosyl alcohol.

arachidonic acid. $C_{20}H_{32}O_2 = 304.25$. A liquid, unsaturated acid, b.245, occurring in lard and the fat of mammals.

arachin. A globulin obtained from peanuts, *Arachis hypogaea.*

arachis. See *peanuts.* **a. oil.** Peanut oil, groundnut oil. A fixed oil expressed fractionally from peanuts, $d_{25}°$.0.913. See *Bellier's test.*

arachnolysin. A hemolytic principle in the poison of the spider.

arack. Arrack.

araeometer. Areometer (see *hydrometer*).

aragonite. Pisolite. Needle spar. A dimorphic, orthorhombic native calcium carbonate, $CaCO_3$. Cf. *calcite, nicholsonite.*

aralac. A fibrous product made from skim milk casein. Cf. *lanital.*

aralia. Nard, American spikenard. The dried rhizomes and roots of *A. racemosa* (Araliaceae). It is used as a fluid extract as an alterative and diaphoretic.

Araliaceae. The Ginseng family, a group of aromatic plants which yield the following drugs:

Panax quinquefolium	ginseng
Aralia nudicaulis	false sarsaparilla
Aralia racemosa	American spikenard
Aralia hispida	dwarf elder
Fatsia Japonica	fatsin

aralin. A glucoside from the fresh leaves of *Aralia* species.

aralkyl. Arylated alkyl. A radical in which an aryl group is substituted for a hydrogen atom of an alkyl. Cf. *alphyl.*

aranein. A liquid obtained from the abdomen of spiders; used in homeopathic preparations.

araphite. A magnetic basalt from Colorado.

araroba. *Goa* powder.

arasan. Trade-mark for tetramethyl-thiuramdisulfide, used as a seed disinfectant.

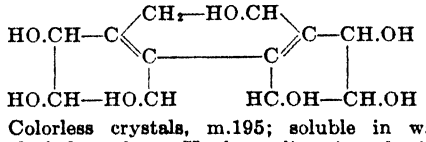
arbacin. A protein in the sperm of the sea urchin, (*Arbacia*).

arbor. The official Latin for tree. **a. Dianae.** Silver tree. The arborescent precipitate of silver formed on adding mercury to a silver salt solution. **a. Saturni.** Lead-tree. The arborescent precipitate of lead formed on adding zinc to a lead salt solution. **a. vitae.** Thuja.

arborescent. A branched, tree-like growth of bacteria or crystals.

arbusterol. A fat obtained from *Arbutus* species.

arbutin. $[C_{12}H_{16}O_7]_2.H_2O = 562.4$. Ursin, arbutoside. A glucoside from the leaves of *Arbutus* or *Arctostaphylos uva-ursi, Chimaphila umbellata,* and other Ericaceae and Pyrolaceae; it is hydrolyzed to hydroquinone and glucose.



Colorless crystals, m.195; soluble in water, alcohol or ether. Used as a diuretic and urinary disinfectant. **monobenzoyl-** Cellotropin.

Arbutus. A genus of ericaceous shrubs and trees:

A. menziesii	madrone
A. unedo	European arbutus
A. or *Arctostaphylos uva-ursi*	bearberry, arbutin.
Epigaea repens	trailing arbutus.

arc. (1) A portion of any curved line. (2) **a. lamp. electric-** The discharge of an electric current between electrodes. **mercury-** An electric discharge through mercury vapor. **oscillating-** A discharge which changes its position; *e.g.*, around the periphery of a disk. **voltaic-** The curved flame between two electrodes.

a. furnace. See *furnace*. **a. lamp.** A source of illumination in which a discharge passes between two electrodes. **a. spectrum.** The spectrum produced by arcing between electrodes of the element under investigation. Cf. spark *spectrum, alternation* law.

arcadian nitrate. Sodium nitrate made from synthetic ammonia and soda; used as a fertilizer. **a. sulfate.** Ammonium sulfate used as fertilizer.

arcaine. $C_6H_{16}N_6$ = 172.14. Tetramethylene diguanidine, $NH_2.C(:NH)NH.(CH_2)_4.NH.C(:NH).NH_2$. An animal base from the mussel Noah's Ark (*Areca Noae*), which lowers the sugar content of the blood.

arcanite. Glaserite.

arcanum. (1) A nostrum or secret medicine. (2) Potassium sulfate.

arceine. Arecoline hydrobromide.

archil. Orchil.

Archimedes. A famous Greek mathematician who lived in the 3rd century B.C. in Syracuse. **A. bridge.** A wooden platform across the pan of a balance, without touching it, which is used for weighing solids immersed in a liquid. **A. principle.** A body immersed in a liquid will lose weight equal to that of the liquid it displaces. It is applied in the determination of the specific gravity of dense, irregular bodies.

archon. The poisonous radical of proteins.

archyl. Protyl.

arciform. Curved or bow-shaped.

arcilla. Argol.

arcing. The conversion of electrical energy into light by means of a current flowing in air or a gas between two electrodes. It differs from sparking in that it depends on ionization of the vapor of the electrodes, while sparking depends on that of the air or gas between them.

arconium. A hypothetical element of atomic weight 2.9, similar to *nebulium* and *coronium*, q.v.

arcual. Arc-shaped or arched.

ardennite. A native manganese and aluminum vanadosilicate, $M_4Al_4H_5VSi_4O_{22}$, which occurs in yellowish or brownish orthorhombic crystals.

ardometer. An optical *pyrometer*, q.v.

are. (1) Latin for area. (2) The unit of surface measurement in the metric system: 1 are = 100 m^2. (square-meters) = 119.6 $yds.^2$ (square-yards).

area. Any region or surface, S, enclosed by boundaries. $S = CL^2$, where C is a constant depending on the contour of the surface (1, if square; $\pi/4$, if round) and L its length (or diameter, if circular).

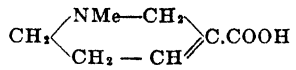
areametric. Pertaining to the measurement of areas. **a. analysis.** Chemical analysis by forming precipitates in definite areas, which are matched with precipitates similarly produced from standards.

Areca. A genus of Asiatic and Australasian palms, as *A. catechu pinang*, the areca-nut, betel-nut or catechu palm. **a. alkaloid.** Betel-nut alkaloids:

arecoline	$C_8H_{13}O_2N$
homoarecoline	$C_9H_{15}O_2N$
arecaine	$C_7H_{11}O_2N.H_2O$
arecaidine	$C_7H_{11}O_2N.H_2O$
guvacine	$C_6H_9O_2N$
guvacoline	$C_7H_{11}O_2N$
coniine, conicine	$C_8H_{17}N$

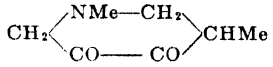
a. nut. Pinang, betel-nut (q.v.). The dried seeds of *A. catechu*, an East Indian palm. It is tonic, astringent and anthelminthic, and contains several alkaloids and an orange coloring matter (arecin) and chavicol. **a. red.** Arecin.

arecaidine. $C_7H_{11}O_2N$ = 141.1. *N*-Methyltetrahydro-nicotinic acid.



An alkaloid formed from arecoline. Colorless scales, m.223; soluble in water or alcohol, insoluble in ether or chloroform. Cf. *arecoline*.

arecaine. $C_7H_{11}O_2N$ = 141.1. *N*-Methylguvacine. An alkaloid,



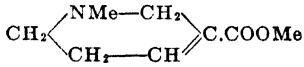
from the seeds of *Areca catechu* (betel nuts). Colorless crystals, m.213; soluble in water and insoluble in ether, alcohol or chloroform. Used as an anthelmintic.

arecaline. Arecoline.

arecane. Arecoline.

arecin. $C_{23}H_{26}ON_2$ = 346.3. Areca red. A red coloring matter from betel nuts. Cf. *aricine*.

arecoline. $C_8H_{13}O_2N$ = 155.1. Arekane, arecaline. An alkaloid in betel nuts. It is the methyl ester of methyltetrahydro-nicotinic acid (arecaidine). A yellowish oily liquid, d.2.02;



insoluble in water and used as an anthelmintic. **homo-** See *homo*.

a. hydrobromide. $C_8H_{13}O_2N.HBr$ = 236.08. Arceine. Colorless prisms, m.167; soluble in water or alcohol, and used as an anthelmintic and miotic. **a. hydrochloride.** $C_8H_{13}O_2N.HCl$ = 191.5. Colorless crystals, m.158°C; soluble in water or alcohol and used as an anthelmintic and miotic.

arecolineserine. A mixture of arecoline hydrobromide and eserine sulfate. Used for hypodermic injections and in ophthalmology.

arekane. Arecoline.

arendalite. A microcrystalline epidote.

arenolite. An artificial stone.

areometer. Hydrometer. **a. scales.** See *hydrometer* scales.

areometry. Hydrometry.

arepycnometer. A pycnometer for viscous liquids.

Arfvedson, Johann August. Afzelius. 1792–1841. A Swedish chemist and mineralogist, noted for the discovery of lithium (1817).

arfvedsonite. A black sodium amphibole containing soda.

Argand, Aimé. 1755–1803. A Swiss physicist, noted for his design of heating devices. **a. burner.** A gas or oil burner with a chimney and regulated air supply.

argatoxyl. Silver p-aminophenyl-arsenate, silver atoxylate. The compound $C_6H_7O_3NAg$, used medicinally.

argein. A colloidal silver protein, used to treat gonorrhea.

argemonine. An alkaloid of prickly poppy (*Argemone mexicana*), probably identical with protopine.

argenol. Argyrol.

argentamine. A colorless solution of 8 % silver phosphate and 15 % ethylene-diamine; used as an antiseptic, astringent, and disinfectant.

argenti. The official Latin for "of silver."

argentic. A compound containing silver.

argentiferous. Containing silver. **a. lead.** (1) An alloy of Ag and Pb. (2) A lead-silver sulfide.

argentiform. Silver hexamethylenamine. A snow-white powder used as antiseptic.

argentine. A finely-divided tin sponge obtained by precipitation of a tin salt solution with zinc; used in printing.

argentite. Ag_2S. Silver glance, argyrite, vitrous silver ore. A native vitreous silver sulfide, occurring in black or grayish isometric crystals. Cf. *acanthite*.

argentol. $C_9N_5N.OH.SO_3Ag$ = 231.94. Silver quinaseptol, silver oxyquinoline sulfonate. An antiseptic and astringent; used for treating venereal diseases.

argentometer. A hydrometer used for determining the silver content of photographic solutions.

argentometry. Volumetric analysis involving the use of silver salt solutions and the precipitation of insoluble silver salts; as chlorides, chromates.

argentopyrites. The native sulfide of silver and iron, $3FeS.3FeS_2.Ag_2S$.

argentous. A compound containing monovalent silver. See *silver*.

argentum. Latin for silver. **a. cornu.** Horn silver, chlorargyrite, cevargyrite. A native form of silver chloride. **a. virum.** Native mercury (Pliny).

argil. Argol

argilla. Kaolin.

argillaceus. Containing clay.

arginase. An enzyme of the mucus (intestine, liver, kidney, spleen) which transforms arginine to ornithine and urea.

arginine. $C_6H_{14}O_2N_4$ = 174.3. An amino acid from animal and vegetable proteins (albumin and seeds). $NH_2.CH(COOH).CH_2.CH_2.CH_2.NH.C:NH.NH_2$. Colorless crystals, m.238, soluble in water, and essential in nutrition. Cf. *arginase, hexone bases, lupine alkaloids*.

argochrome. A compound of methylene blue and silver, used medicinally as a bactericide.

argoflavine. The silver salt of acriflavine, used medicinally as a bactericide.

argol. $KH(C_4H_4O_6)$. Argil, arcilla. Crude potassium acid tartrate in the form of a fine crystalline crust deposited by grape-juice during fermentation. It is exported from Portugal, and used as raw-material for the manufacture of tartaric acid; as a reducing agent; and as a flux in assay processes.

argon. A = 39.944. A gaseous element, atomic number 18, which occurs in the atmosphere and was discovered in 1894 by Ramsay and Rayleigh. **gaseous-** $D_{(air=1)}$ 1.38, m. −189, b.-−186.1. **liquid-** $d_{(-186°C)}$ 1.405. A. occurs also in fumaroles and spring water and exists in two isotopic forms, A^{36} and A^{40}. It is absolutely inert, so possesses no valency and belongs to the zero-group of the periodic system. It is obtained by fractionation of liquid oxygen, and is shipped in steel cylinders. Used for filling incandescent lamps, rectifiers, radio audions and vacuum tubes.

argonin. Silver caseinate. A white amorphous powder; soluble in water. Used as an antiseptic in ophthalmology.

argyria. Poisoning by silver or its compounds.

argyrine. An alkaloid from horse chestnuts.

argyrite. Argentite.

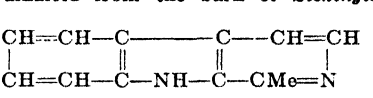
argyrodite. A native, monoclinic, steel-gray germanium silver sulfide, $4Ag_2S.GeS_2$.

argyrol. Vitellin silver, argenol. A trade brand of silver-protein (20 % Ag). Brownish-black, glistening, hygroscopic scales; freely soluble in water or glycerol, insoluble in alcohol or oils. Used as an antiseptic in the treatment of inflamed mucous membranes.

arheol. $C_{15}H_{24}O$ = 220.2. Santalol. A sesquiterpene alcohol from the oil of sandalwood. A colorless, oily liquid, d.0.979, b.300; insoluble in water, soluble in alcohol. Used as a urinary antiseptic.

arhovin. A compound of thymolbenzoic acid ester and diphenylamine used in the treatment of gonorrhea.

aribine. $C_{12}H_{10}N_2$ = 182.09. Harman, loturine. An alkaloid from the bark of *Sickingia* (or



Arariba) *rubra*, a Rubiaceae, and the seeds of *Peganum harmala*, a Rutaceae. Colorless crystals, m.237.

aricine. $C_{23}H_{26}O_4N_2$ = 394.22. Cusconine, cinchovatine. An alkaloid from the barks of *cusco* and *Cinchona cuprea*. Colorless crystals, m.188 insoluble in water, soluble in alcohol or ether; used medicinally as an anti-malarial. Cf. *arisin*.

aristin. A constituent of various *Aristolochia* species.

aristochin. Aristoquin, diquinine carbonic ester. A white, odorless, tasteless powder; insoluble in water; sparingly soluble in alcohol or ether; soluble in chloroform.

aristol. A brand of thymol iodide.

Aristolochia. A genus of plants of the birthwort family (*Aristolochiaceae*). See *serpentaria, guacine, aristolochine, clematidin* and *asarum*. **a. yellow.** The coloring matter of the roots and seeds of *A.* species; *e.g., A. clematitis, A. rotunda*.

aristolochine. $C_{32}H_{22}O_{13}N_2$ = 642. An alkaloid from the roots or seeds of *A.* species (*A. serpentaria* and *Bragantia wallichii*). It is a kidney poison, abortive and general toxic.

aristoquin. Aristochin.

arithmetical mean. Half the sum of two quantities. **a. progression.** A series of numbers in which the differences, d, between consecutive terms are equal. Let a be the first and l the last term, d the difference and n the number of terms, then $l = a + (n - 1)d$, while the sum, s, of n terms is $s = n(a + l)/2$.

arkansite. Brookite.

arkite. An igneous rock belonging to the leucite-syenite group.

arksutite. Chiolite.

armature. The rotating part of a dynamo which consists of the coil and core.

armoracia. The fresh root of *Cochlearia armoracia*, horse radish, used as a condiment.

armored thermometer. A thermometer enclosed in a metal case.

Armstrong, Henry Edward. 1847–1937. An English chemist noted for his research in organic chemistry and work on chemical education. **A. acid.** (1) Same as Schäffer's acid. (2) Naphthalene-1.5-disulfonic acid. **A. metal.** An alloy containing Mn 4–6, C 0.10, Ni 80, Cr 17.5, and Cu 2.9 %; used for corrosion-resisting drawn or pressed shapes.

arnatto. Annatto.

Arnaudon's green. Chromic phosphate.

Arndt tube. A bent glass tube with four bulbs used for the determination of hydrogen. **A. Schulz rule.** *Weak* stimuli greatly accelerate life processes; *moderate* stimuli promote them; *strong* stimuli inhibit them and the *strongest* destroy them. Cf. *Kötschau* hypothesis.

Arnica. A genus of the composite flowered plants, the aster family. **a. flowers.** The dried flower heads of *Arnica montana*, leopard's bane, wolf's bane, or mountain tobacco. It is used as a tincture and a fluid extract is a depressant and feeble rubefacient. **a. oil.** An essential oil distilled from arnica flowers. A yellow liquid of strong aromatic odor, d.0.906, acid value 75.1, sap. v.29.9; soluble in alcohol, ether, benzene, or chloroform. Used in liniments. **a. root.** The roots of *Arnica montana*. Used as fluid extract. **a. root oil.** Yellow oil from arnica root, d.0.990, $[\alpha]_D$ − 2; its chief constituent is thymoquinol-dimethylester.

arnicin. $C_{20}H_{30}O_4$ = 334.3. A glucoside from arnica roots and flowers. A yellow, bitter, amorphous powder.

arnicine. $C_{35}H_{54}O_7$ = 586.43. A resinous, basic principle from arnica flowers.

arnotta. Annatto.

arochlors. (1) The polychlorine derivatives of biphenyl; used as lubricants. (2) The chlorobiphenyl resins, which are odorless and resistant to light and flame.

Aroideae. Arum family, a group of herbs with an acrid, colorless, juice and fleshy corm or rhizome. Their fruit is a berry. The following species yield drugs:

Acorus calamus (sweet flag)	calamus
Symplocarpus foetidus (skunk cabbage)	symplocarpus
Arisaema triphyllum (Indian turnip)	arum
Colocasia esculenta	taro or poi

aromadendral. An aldehydic product from *Eucalyptus* species; a mixture of cuminaldehyde, phellandral and *l*-cryptal.

aromatic. (1) A spicy, fragrant, agreeable odor or taste. (2) A derivative of benzene or a carbon compound whose molecule contains one or more carbon rings. **a. acids.** A group of aromatic organic compounds which contain one or more carboxyl groups:

(1) *Monobasic acids*—

benzoic acid	PhCOOH
phenylacetic acid	$PhCH_2COOH$
toluic acids	$C_6H_4Me.COOH$
β-phenylpropionic acid	$PhCH_2CH_2COOH$
mesitylic, xylic acids	$C_6H_3Me_2.COOH$
ethylbenzoic acids	$C_6H_4Et.COOH$
γ-phenylbutyric acid	$PhCH_2CH_2CH_2COOH$
cuminic acids	$C_6H_4Pr.COOH$
trimethylbenzoic acids	$C_6H_2Me_3.COOH$

(2) *Dibasic acids*—

phthalic acids	$C_6H_4(COOH)_2$
uvitic, xylidinic acids	$C_6H_3Me(COOH)_2$
cumidinic acid	$C_6H_2Me_2(COOH)_2$

(3) *Polybasic acids*—

trimesinic, trimellitic acids	$C_6H_3(COOH)_3$
pyromellitic, prehnitic acids	$C_6H_2(COOH)_4$
benzenepentacarboxylic acid	$C_6H(COOH)_5$
mellitic acid	$C_6(COOH)_6$

a. alcohols. A group of aromatic organic compounds which contain an hydroxyl group in a side-chain:

C_7H_8O

benzylalcohol, phenylcarbinol	BzOH or $PhCH_2OH$

$C_8H_{10}O$

tolyl alcohol, methylphenylcarbinol	$C_6H_4Me.CH_2OH$
phenylethylalcohol, benzylcarbinol	$PhCH_2CH_2OH$

$C_9H_{12}O$

xylylalcohol, dimethylphenylcarbinol	$C_6H_3Me_2.CH_2OH$
phenylpropylalcohol	$PhCH_2CH_2CH_2OH$
tolylcarbinol	$C_2H_4Me.CH_2CH_2OH$

$C_{10}H_{14}O$

pseudocumene alcohol, trimethylphenylcarbinol	$C_6H_2Me_3.CH_2OH$
xylylcarbinol	$C_6H_3Me_2.CH_2CH_2OH$
cuminealcohol, propylphenylcarbinol	$C_6H_4Pr.CH_2OH$
unsaturated alcohols: cinnamyl alcohol	$Ph.CH:CH.CH_2OH$
diatomic alcohols: xylylenalcohols, phenylendicarbinols	$C_6H_4(CH_2OH)_2$.

$C_{11}H_{16}O$

mellityl alcohol	$C_6HMe_4.CH_2OH$

a. compound. A organic compound containing a closed and saturated ring, either homocylic or heterocyclic. See *organic* compounds and *aromatic*. **a. hydrocarbon.** A compound of carbon and hydrogen that contains in its molecular structure a closed and saturated ring of carbon atoms; *e.g.*, benzene, naphthalene, anthracene etc. **a. series.** A series of aromatic compounds. **a. tincture.** An alcoholic solution of cinnamon, ginger, cardamon, cloves and galangal, used as an aromatic and carminative. **a. vinegar.** A refreshing smelling mixture of acetic acid and essential oils, used to relieve headache.

aromatics. Spicy, fragrant, and stimulating drugs, with agreeable taste which is usually due to a small amount of an essential oil.

aromatin. A substitute for hops, prepared from gentian root.

Arons chromoscope. An instrument for measuring colors of industrial products (*e.g.*, paper, leather, yarns, textiles), and for physiological work.

aroxylamines. α-Hydroxylamines.

aroyl. A radical of the type R.CO—, where R is an aromatic radical (benzoyl, naphthoyl).

arphoalin. An albumin preparation containing arsenic and phosphorus.

arquerite. A native silver amalgam, $Ag_{12}Hg$, from Arqueros, Chile, which occurs in isomeric crystals.

arrack. A liquor distilled from malted rice.

arrhenal. *Sodium* methylarsenite.

arrhenate. A salt of arrhenic acid of the type MeHAsO.OM; used in medicine instead of *cacodylates.*

arrhenic acid. CH_5O_2As = 123.98. Monomethylarsenic acid. The compound

Used in organic synthesis and in the manufacture of arrhenates. *Cf. cacodylic acid.*

Arrhenius, Svante August. 1859–1927. A Swedish chemist and physicist noted for developing the theory of ions and ionization (1883) and for cosmic theories. **A. law.** A solution of high osmotic pressure conducts an electric current. **A. theory.** When an electrolyte dissolves it

Svante August Arrhenius.

(From McPherson & Henderson's "First Course in Chemistry." Courtesy of Ginn & Company.)

splits up into ions (ionization) to an extent which increases with a decrease in the concentration, and is indicated by the deviation of the solution from the Van't Hoff laws. The degree of ionisation (q.v.) can be calculated from conductivity measurements. **A. viscosity formula.** The relationship of the viscosity, x, of a solution to the volume c of the suspended particles present is $\log x = \theta c$, where θ is a constant.

arrow-poison. A poisonous plant juice (*e.g.* curare, q.v.) or venom of an animal (*e.g.*, snake, etc.) used by native tribes or primitive hunters in poisoning arrow-heads. See *acocantherin, antiar, batracin bufagin, calotropin, derrid, ipoh, guachamacine, nicoulin, upas, wagofo, muava, ibogaine.*

arrow-wood. (1) Frangula. (2) Euonymus.

arrowroot. Maranta. The starch from the rhizomes of the arrowroot plant, *Maranta arundinaceae*, Family Marantaceae. A light white powder which is used as a non-irritating food in fever, commercially as an adhesive, and in laundries. It is exported from Bermuda. **Bahia-, Para-, Rio-.** Tapioca.

arsabenzol. Arsphenamine.

arsacetin. Acetylatoxyl, sodium p-acetylaminophenylarsonate. Colorless crystals used as a syphilitic.

arsamin. Atoxyl.

arsaminol. A Japanese brand of arsphenamine.

arsan. Arsenglidin. A yellowish-gray powder; insoluble in water, soluble in alkalis.

arsanilate. Atoxylate. A salt of arsanilic acid of the type $M_2(C_6H_8O_3NAs)$.

arsanilic acid. $C_6H_8O_3NAs$ = 217.2. Atoxylic acid, p-aminobenzenearsonic acid, *p*-aminophenylarsinic acid. $NH_2.C_6H_4.AsO(OH)_2$, arsenic acid anilide, meta-arsenous acid anilide. Colorless crystals, m.232; soluble in ether, amyl alcohol, or alkalis; slightly soluble in alcohol. Used in organic synthesis. The m- and o-acids are also known. **acetyl hydroxy-** Stovarsol. *N*-**carbamyl-** Carbarsone. *N*-**carbamylmethyl-** Its sodium salt is tryparsamide (q.v.).

Arsem furnace. An electric vacuum furnace.

arsenate. A salt of arsenic acid containing the trivalent AsO_4 ≡ radical; as, Na_3AsO_4. **acid-** An a. containing hydrogen, as the monoacid or diacid arsenate. **basic-** An a. containing a metal oxide or hydroxide. **diacid-** A salt containing the monovalent radical H_2AsO_4—. **dihydric-** Diacid a. **meta-** An a. containing the AsO_3^- radical. **monoacid-** A salt containing the divalent radical, $HAsO_4$=. **monohydric-** Monoacid a. **pyro-** An a. derived from $H_4As_2O_7$. **triethyl-** $C_6H_{15}AsO_4$ = 226.08. The compound $(EtO)_3.AsO$. A colorless liquid, d.1.326, b.238.

arsenglidin. Arsan.

arsenhemol. A compound of arsenic and hemol which occurs as a brown, amorphous powder; used medicinally as an alterative and hematinic.

arsenic. As = 74.91. An element of the phosphorus group, atomic number 33. A rhombohedric, grayish-black brittle, nonmetal of metallic character, d_{14}°.5.727, m. (under pressure) 450 (sublimes), b.450; insoluble in water, alcohol or acids. It is found native as the sulfide, arsenide, and sulfarsenides of the heavy metals and is widely diffused through nature, even in organic matter. Arsenic occurs in a number of allotropic modifications analogous to those of phosphorus:

(a) Metallic arsenic, γ-As, d.5.727. The stable ordinary form.

(b) Gray or black arsenic, β-As, d.4.64, which changes at 303 to γ-As.

(c) Yellow arsenic, α-As_4, d.3.7, which represents the non-metallic form of arsenic and is formed at 500 by rapid condensation of arsenic vapor. It is soluble in carbon disulfide, resembles phosphorus, is photo-sensitive, and unstable, and changes to gray arsenic on exposure to light.

(d) Brown arsenic, As_8, d.2.03, an allotropic form of the non-metallic arsenic deposited from yellow arsenic solutions; it changes at 180 to gray arsenic. Arsenic may be tri- and pentavalent, and gives three series of compounds:

Derived from trivalent, negative As:

arsenides	M_3As
arsines	AsR_3
arsonium	AsH_4R

Derived from trivalent, positive As:

arsenous	As^{+++}
arsenite	AsO_2^- or AsO_3^{---}
arsinic acid	R_2AsO_2

Derived from pentavalent, positive As:

arsenic	As^{+++++}
arsenate	AsO_3^- or AsO_4^{---}
arsonic acid	R_2AsO_3

Orpiment or arsenic sulfide was known to the ancients. Theophrastus mentions it as arsenicon, meaning the "masculine one," as it was used to paint the sunburnt faces of men. Arsenic is used in medicine, especially in the form of cacodylates, and arsenic compounds are employed as germicides, insecticides, for certain pigments, and the preparation of arsenic salts. **butter of-** Arsenous chloride. **dimethyl-** Cacodyl. **flowers of-** Arsenous oxide. **red-, ruby-** Realgar. **triethyl-** Triethyl*arsine*. **white-** Arsenolite, arsenite. A native arsenous oxide. **yellow-** Is orpiment.

a. acid. (1) ortho- $H_3AsO_4.\frac{1}{2}H_2O$ = 151.0. Colorless crystals, d.2.0–2.5, m.35.5, soluble in water; used in the manufacture of arsenates. (2) meta- $HAsO_2$ = 124.0. A white powder, soluble in water with the formation of ortho- a. acid. (3) pyro- $H_4As_2O_7$ = 264.89. A colorless powder, decomp. 208, and soluble in water, forming ortho- a. acid. **a. apparatus.** See *Marsh* test. **a. bromide.** Arsenous bromide. **a. butter.** Arsenous chloride. **a. chloride.** Arsenous chloride. **a. diethyl.** $AsEt_2$ = 133.06. A heavy liquid, b.186; insoluble in water, soluble in alcohol or ether. **a. diiodide.** AsI_2 = 328.80. White crystals, decomp. 136. **a. dimethyl.** $AsMe_2$ = 105.02. A colorless liquid, d.1.15, b.150, insoluble in water, soluble in alcohol or ether. **a. disulfide.** As_2S_2 = 214.1. Realgar, red a. sulfide, red orpiment, a. ruby, red a. glass, A brownish-red powder or monoclinic crystals, d.3.55, m.307, b.565; insoluble in water, soluble in alkalis, alkali-carbonates and sulfides. Used as a pigment, in textile printing, in pyrotechnics, in tanneries and in the manufacture of shots. **a. fluoride** AsF_5 = 169.96. A colorless, poisonous gas, d.(H_{2-1}) 5.964, m.–80, b.–53; soluble in water. **a. glass.** (1) An indefinite term for a. compounds; *e.g.*, a. sulfides. (2) Arsenous oxide. **a. hydride.** (1) Arsenous hydride. (2) An ill-defined solid hydride, As_4H_2, AsH_2 or (AsH)x, formed from water and sodium arsenide. **a. iodide.** (1) a. diiodide. (2) arsenous iodide. **a. minerals.** Arsenic is usually associated with antimony and bismuth minerals and occurs in many sulfide minerals, *e.g.*,

native arsenic	As
realgar	As_2S_2
orpiment	As_2S_3
allemontite	$SbAs_3$
arsenolite, arsenite	As_2O_3

also the arsenides and sulfoarsenides of the heavy metals.

a. oxide. (1) As_2O_5 = 229.9. A. pentoxide, a. acid anhydride. A colorless amorphous powder, d.4.086, decomp. on heating, and soluble in water or alcohol. (2) See *arsenous* oxide. **a. oxychloride.** See *arsenous* oxychloride. **a. pentafluoride.** a. fluoride. **a. pentasulfide.** a. sulfide. **a. pentoxide.** a. oxide. **a. phosphide.** Arsenous phosphide. **a. ruby.** a. disulfide. **a. selenide.** Arsenous selenide. **a. sulfide.** (1) As_2S_5 = 310.4. A. pentasulfide. Yellow crystals, insoluble in water used as a pigment. (2) See a. disulfide. (3) Arsenous sulfide. **a. thiocyanate.** $As(SCN_3)$ = 249.0. **a. tribromide.** Arsenous bromide. **a. trichloride.** Arsenous chloride. **a. trifluoride.** Arsenous fluoride. **a. triethide.** Triethyl-*arsine*. **a. triiodide.** Arsenous iodide. **a. trimethyl.** Trimethyl-*arsine*. **a. trioxide.** Arsenous oxide. **a. trisulfide.** Arsenous sulfide.

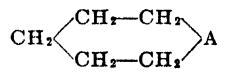
arsenical. Pertaining to As. **a. nickel.** Niccolite. **a. pyrites.** Mispickel.

arsenicals. A group of drugs, fungicides, or insecticides whose effects depend on their arsenic content; *e.g.*, cacodylates, salvarsan, paris green.

arsenicum. Latin for arsenic.

arsenide. A binary compound of arsenic, in which As is the negative element, As^{---}; *e.g.*, H_3As, Ag_3As, Zn_3As_2. Cf. *speise*.

arsenidine. $C_5H_{11}As$ = 146.0. Arsepidine. The heterocyclic compound and analog of piperidine:



arsenii. The official Latin for arsenic.

arsenious. Arsenous.

arsenite. (1) A salt of an arsenous acid.

ortho-arsenites	K_3AsO_3.
meta-arsenites	$KAsO_2$.
pyro-arsenites	$Ca_2As_2O_5$.

The acids from which these are derived are hypothetical. (2) White *arsenic*.

triethyl- $C_6H_{15}AsO_3$ = 210.08. $(EtO)_3As$. A colorless liquid, d.1.224, b.166.

arsenium. The element, arsenic.

arseniuretted hydrogen. Arsine.

arsenius. See *arsenous*.

arseno. The bivalent group—As:As—which is isologous with the azo group.

arsenobenzene. PhAs:AsPh. An analog of azobenzene.

arsenobenzol. A French brand of arsphenamine.

arsenoferratin. An iron albuminate containing arsenic.

arsenofuran. C_4H_5As. Arsenophen. An analog of pyrrole,  .

arsenogen. A compound of iron, phosphorus, arsenic and paranucleic acid.

arsenohemol. Arsenhemol.

arsenolite. White arsenic.

arsenophen. Arsenofuran.

arsenophenol. $C_{12}H_{10}O_2As_2$ = 336.00. Dihydroxyarsenobenzene, $HO.C_6H_4.As:As.C_6H_4.OH$. **diamino-** Arsphenamine.

arsenopyrite. FeAsS. Mispickel. A native iron sulfarsenide.

arsenous. A compound of trivalent arsenic, As≡. **a. acid.** H_3AsO_3 or $HAsO_2$. A monobasic acid, from which the arsenites are derived. See *arsenites*. Ordinarily the name applies to arsenous oxide, As_2O_3. **a. acid anhydride.** a. oxide. **a. bromide.** $AsBr_3$ = 314.72. Arsenic tribromide. Yellowish-white crystals, d.3.66, m.31, b.220; soluble in water. Used in diabetes

and as a reagent in analytical chemistry. **a. chloride.** $AsCl_3$ = 181.3. Arsenic trichloride, arsenic butter. Yellowish liquid or needles, d.2.205, m. −18, b.130.2, soluble in water, alcohol, ether, or oils. **a. fluoride.** AsF_3 = 131.96. A pale yellow liquid, d.2.73, m. −8.5, b.63; decomp. by water, and soluble in alcohol or ether. **a. hydride.** AsH_3 = 78.0. Arsine. Hydrogen arsenide. A poisonous gas with strong garlic odor. $d_{(air=1)}$2.695, m. −113.5, b. −54.8; soluble in water or alkalis. It is shipped in steel cylinders and used in organic synthesis and in chemical warfare. **a. iodide.** AsI_3 = 455.72. Arsenic triiodide. Arsenic iodide. Orange-red crystalline masses, d.4.39, m.146, (sublimes), b. circ. 400; soluble in water and used as an antiseptic, externally in skin diseases or internally as a constituent of Donovan's solution. **a. oxide.** As_4O_6 or As_2O_3 = 197.9. Arsenic trioxide, "arsenic," arsenous acid anhydride, white arsenic. White, octahedral or rhombic crystals (d.3.7 and 3.79 respectively), or white, amorphous, glassy masses, d.3.65–4.15, subliming at 218, slightly soluble in water, and soluble in alkalis or acids. Used medicinally as an antiperiodic, alterant or antiseptic, and in the glass, leather, and pigment industries; also as an antiseptic and preservative of dead animals, poison for noxious animals and plants, in the manufacture of shots and arsenic salts. Antidotes: Stomach pump, emetics, iron hydroxide. **a. oxychloride.** AsOCl = 126.42. Brown masses, decomp. in water or if heated. **a. phosphide.** AsP = 106.0. Reddish-brown fragments which are soluble in carbon disulfide, and are decomp. by water or by heat. **a. selenide.** As_2Se_3 = 386.52. Arsenic triselenide. Brown crystals, d.4.75, m.360; insoluble in water, soluble in alkalis. **a. sulfide.** As_2S_3 = 246.1. Arsenic trisulfide, yellow arsenic sulfide, orpiment, auripigment, king's yellow. Yellowish-red monoclinic crystals or a yellow amorphous powder, d.3.46, m.310, b.700; insoluble in water and soluble in alkalis or acids. Used as a pigment.

arsenyl. Sodium methylarsenate.

arsepidine. Arsenidine.

arsindole. C_8H_7As = 178.02. The heterocyclic compound C_6H_4  .

arsine. (1) AsH_3 = 78.0. See *arsenous* hydride, *arsyl* and *arsylene*. (2) See *arsines*. **alk-** $Me_2As.O.AsMe_2$. Cacodylic oxide. A colorless liquid, d.1.462, m. −25, b.120. See also *alkarsine*. **diethyl-** (1) Et_2AsH or $C_4H_{11}As$ = 134.05. (2) Tetraethylarsine. **dimethyl-** Me_2AsH = 106.07. Cacodylhydride. A colorless liquid, d.1.213, b.36, miscible with alcohol, ether or chloroform. **diphenylene-** Dibenzoarsenole. **ethyl-** C_2H_5As = 105.98. Arsinoethane, $EtAsH_2$; a colorless liquid, d.1.217, b.36. **methyl-** CH_5As = 91.97. Arsinomethane, $MeAsH_2$. A colorless liquid or gas, b.2, soluble in alcohol. **methyldichloro-** CH_3Cl_2As = 160.87. Methylarsenic dichloride, $MeAsCl_2$. A colorless liquid, d.1.838, m. −59, b.133. **mono-R-** A compound of the type $RAsH_2$. **tetraethyl-** $Et_2As.AsEt_2$. Ethylcacodyl. A colorless liquid, b.188. **tetramethyl-** Cacodyl. **tri-R-** A compound of the type R_3As. **triethyl-** $C_6H_{15}As$ = 162.08. Arsenic triethyl, $AsEt_3$. A colorless liquid d.1.150, decomp. 141. **trimethyl-** C_3H_9As = 120.03. Arsenic trimethyl, arsenous methide, $AsMe_3$. A colorless liquid, d.1.124, b.52.8, soluble in water.

arsines. Derivatives of arsine in which the hydrogen is replaced by a hydrocarbon radical, as

$RAsH_2$	mono-alkyl arsine
R_2AsH	dialkyl arsine
R_3As	trialkyl arsine

They are analogs of amines, phosphines, stibines.

arsinic acid. (1) An organic compound derived from trivalent arsenic of the type

$RAsO_2H_2$	monoaryl or monoalkyl a. acid
R_2AsO_2H	diaryl or dialkyl a. acid
R_3AsO_2	triaryl or trialkly a. acid

(2) In British terminology an "arsinic" acid, as well as an "arsonic" acid of the American terminology. **aminophenyl-** Arsanilic acid. **dimethyl-** Cacodylic acid. **methyl-** Methanearsonic acid.

arsino- (1) A prefix indicating the presence of the divalent —As:As— group. (2) The divalent radical (OH)OAs =, derived from arsinic acid. **a. salicylic acid.** Colorless crystals, used in the same way as atoxyl.

arsinoline. C_9H_7As = 190.1. The heterocyclic compound C_6H_4  .

arsinoso. The monovalent radical O:As—, isologous with nitroso.

arsonate. A salt of arsonic acid containing the $RAsO_2$—radical.

arsonic acid. An organic compound derived from pentavalent arsenic of the type

$RAsO(OH)_2$	monoaryl or monoalkyl a. acid
$R_2AsO_2(OH)$	diaryl or dialkyl a. acid
R_3AsO_3	triaryl or trialkyl a. acid

p-**carbaminophenyl-** Carbasone. **phenyl-** Benzenearsonic acid.

arsonium. The univalent radical, AsH_4—, an isolog of ammonium and phosphonium.

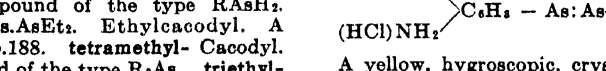
a. compounds. A group of addition compounds derived from arsine; they are of the general type, $AsH_3.HX$, or AsH_4X. **a. hydroxide.** AsH_4OH. An isolog of ammonium hydroxide and parent substance of a number of organic derivatives, *e.g.*,

R_4AsOH	tetra-R-arsonium hydroxide.

arsono. The monovalent radical $(HO)_2OAs$—, derived from arsonic acid.

Arsonval, A. d'. (1851– .) A French physicist, a pioneer in the application of high-frequency, interrupted electric currents for therapeutic purposes.

arsphenamine. $C_{12}H_{12}O_2N_2As_2.2HCl$ = 437.2. Salvarsan, diarsenol, arsphenolamine hydrochloride, arsaminol, arsenobenzol, 3-diamino-4-dihydroxyl-arsenobenzene, kharsivan, Ehrlich 606, six hundred six, six-o-six, S.O.S.



A yellow, hygroscopic, crystalline powder, unstable in air and soluble in water with acid reaction; used as a specific in syphilis and relapsing fever. **neo-** *Neo*arsphenamine.

arsycodile. Sodium cacodylate.

arsyl. The monovalent radical, H_2As—, derived from arsine.

arsylene. The divalent radical, HAs=, derived from arsine.

arsynal. Sodium methyl arsenite.

artabotrine. $C_{36}H_{55}O_6N$ = 597.42. An alkaloid, m.187, from the stems and roots of *Artabotrys suaveolens*, an Anonaceae.

artarine. $C_{21}H_{23}O_4N$ = 353.2. An alkaloid from artar root. It is a heart stimulant similar to veratrine.

artar root. A drug from West Africa, probably the root of *Zanthoxylum senegalense*, a Rutaceae.

Artemisia. A genus of plants belonging to the aster family (*Compositae*):

A. abrotanum	Southern wood
A. absinthium	worm wood
A. frigida	wild sage
A. maritima	worm seed, santonica
A. pontica	Roman worm wood
A. tridentata	sage brush
A. vulgaris	mug wort

a. oil. Wormwood oil.

artemisin. $C_{15}H_{18}O_4$ = 262.2. Oxysantonin. A constituent of the seeds of *Artemisia* species. White crystals, m.200, soluble in hot water, hot alcohol or chloroform; used as a gastric stimulant.

arterin. A red blood pigment of arterial blood. Cf. *oxyhemoglobin.*

arteriograph. An instrument for tracing and recording the pulse.

arteriosclerosis. An abnormal hardening of the walls of the arteries.

artery. Arteries. The blood vessels in which the blood passes from the heart to the organs of the body, as opposed to veins.

arthranitin. $C_{20}H_{34}O_{10}$ = 434.3. Cyclamin. A glucoside from arthanite (*Cyclamen europaeum*). A white, amorphous powder; soluble in water; it splits into glucose and cyclamiretin on boiling. A purgative and emetic.

arthriticin. (1) $(C_2H_5O)C_6H_4.N(CH_3).NH.CH_2.CO.NH_2$. A disinfectant used in arthritis. (2) Piperazine.

arthropods. A group of invertebrate animals with jointed limbs, *e.g.*, the spiders and crustaceans.

artiad (obsolete). An element having an even valency; *e.g.*, a diad, tetrad, hexad.

artic. Trade name for methylchloride used in refrigerators.

artificial. Made by man as opposed to natural; as artificial indigo or camphor. Cf. *synthetic.*

artolinantipeptone. Artose.

artose. $C_{185}H_{288}O_{88}N_{50}S$ = 4036.5. A water-soluble albumose produced by digestion of gliadin from wheat. Cf. *deutero*artrose, *hetero*artrose.

artotype. Collotype.

aruba acid. A naphthenic acid extracted from Columbian gas oil by alkali; d.0.961, acid val. 202.

arum. (1) A genus of plants (Aroidae) whose corms yield starchy products; *e.g.*, sago from *A. maculatum.* (2) A starch similar to sago from *A. maculatum* (Southern Europe), used as food.

aryl. A organic radical derived from an aromatic hydrocarbon by the removal of one hydrogen atom; *e.g.*, phenyl from benzene, tolyl from toluene, salicyl from salicylic acid. Cf. *alkyl.*

arylarsonate. A compound of arsenic containing aryl radicals; *e.g.*, salvarsan, arsphenamin, atoxyl.

aryle, arylide. A compound of a metal containing an aryl radical; as, PbR_4, HgR_2, etc.

arznei. The German term for drugs.

as- Abbreviation for asymmetric.

As. The symbol for arsenic.

asafetida. Asafoetida. A gum resin obtained by incising the roots or rhizomes of *Ferula asafetida* and other *Ferula* species (Umbelliferae). A soft mass of garlic-like odor, acrid, bitter taste, emulsifies with water; slightly soluble in alcohol. It is a carminative and sedative, and is used as fluid extract, and a tincture. Cf. *ferulic* acid. **milk of-** See *milk.*

a. oil. A light yellow, volatile oil distilled from asafetida, d.0.975–0.990, $[\alpha]_D$ + 13° — + 19; soluble in alcohol, ether, chloroform or benzene.

asalob. A beverage produced in Sudan by the fermentation of honey, containing about 9 % of alcohol.

asaprol. Abrastol.

asarin. Asarone.

asarite. Crude asarone.

asarol. $C_{10}H_{14}O$ = 154.2. An alcohol from *Asarum* species.

asarone. $C_{12}H_{16}O_3$ = 208.1. Asarum camphor, asarin, propenyl-2.4.5-trimethoxy benzene, $(MeO)_3C_6H_2.CH:CHMe$. A constituent of the roots of *A. europæum.* Colorless crystals, m.67, b.296, soluble in alcohol or ether. A tonic and antiseptic. Cf. *calamus* oil.

asaronic acid. $C_{10}H_{12}O_5$ = 212.09. *2.4.5*-Trimethoxybenzoic acid. $(MeO)_3C_6H_2COOH$. Colorless crystals, m.144, b.300.

Asarum. (1) A genus of plants of the birthwort family (Aristolochiaceae). (2) Canada snakeroot, wild ginger. The dried rhizomes and roots of *A. canadense.* It is a carminative and flavoring agent and is used as the fluid extract. **a. camphor.** Asarone. **a. oil.** An essential oil from asarum species. *Canadian-* From the roots of *A. canadense.* A colorless liquid, d.0.930–0.960, $[\alpha]_D$ — 3.5; soluble in alcohol, ether, chloroform or benzene. The chief constituents are asarol and methyleugenol; used in perfumery. *European-* From the roots of *A. europaeum*, d.1.015–1.068; soluble in alcohol, ether or benzene.

asaryl. The monovalent radical, $(MeO)_3C_6H_2$—, derived from asarone.

asbestos. Amianthus, earth-flax, mountain cork, stone flax. A fibrous form of actinolite; a native, fibrous, magnesium, calcium silicate which occurs in white, grayish or greenish masses either compact or as long, silky, flax-like readily-separated fibers. It is acid- and heat-resisting, and may be spun or woven; used for Gooch filters, fireproof objects (clothing, curtains, packings, etc.). See also *erocidolite, chrysotile, hornblende.* **blue-** Abriachanite. **Canadian-** Chrysotile.

a. board. Sheets of asbestos fibers, pressed to various thicknesses; used for fireproofing or insulating apparatus, to protect wood work and table tops. **a. cord.** A string made of asbestos, to support crucibles or retorts. **a. filter.** A Gooch crucible with a. fibers in its bottom, through which precipitates are filtered in analytical work. **a. gloves.** Asbestos gloves,

to protect the hands of workers from burns. **a. magnesia mixture.** A mixture of a. and magnesia used for steam packings. **a. sponge.** a. impregnated with platinum salt solution and ignited; used as a catalyzer. **a. stopper-** A stopper made from asbestos magnesia mixture, used for high temperatures and corrosive chemicals.

asbolane. Asbolite.

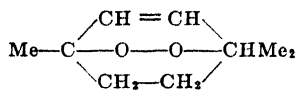
asbolin. A yellow oil from the distillation of pine roots, which contains pyrocatechin; used in tuberculosis.

asbolite. Asbolane, earthy cobalt. An earthy psilomelane or wad (q.v.) containing cobalt oxide.

ascaricide. A drug which destroys *Ascaris* parasites (intestinal worms).

ascaridic acid. Ascaridolic acid.

ascaridol. $C_{10}H_{16}O_2$ = 168.1. A terpene peroxide and the active constituent of chenopodium oil.



An explosive liquid, $d_{21°}$0.9985, $b._{8mm}$97. **a. glycol.** $C_{10}H_{18}O_3$ = 186.1. Colorless crystals, m.63, b.272.

ascaridolic acid. $C_{10}H_{16}O_5$ = 216.2. Cineolic acid, ascaridic acid. The oxidation product of ascaridol glycol, m.187. It exists in *d-* and *l-* forms, m.130, and as *dl-*, m.117.

Ascaris. A genus of round worms, some of which are intestinal parasites.

ascarite. A solid absorbent for CO_2 made from NaOH and asbestos. It changes from white to gray, thus indicating the need for recharging or regenerating the absorption tube.

ascaryl alcohol. $C_{33}H_{68}O_4$ = 528.48. A dihydric alcohol, m.84, from the fat of *Ascaris* species.

ascharite. $3MgB_2O_3.H_2O$. A native magnesium borate, found in saline deposits (*e.g.*, at Stassfurt).

aschistic process. A process in which work is converted directly into heat.

Asclepiadaceae. The milk-weed family. A group of herbs usually with a milky juice which contains caoutchouc.

Asclepias tuberosa	asclepias root
Asclepias cornuti	common silkweed
Asclepias incarnata	swamp milkweed
Asclepias curassavica	blood flower
Calotropis species	calotropin, mudaric acid, akundarol
Hemidesmus indicus	Indian sarsaparilla
Gonolobus condurango	condurango bark
Periploca graeca	periplocin
Tylophora astamatica	tylophorine

asclepiadin. A bitter principle of asclepias.

asclepias. Pleurisy root. The dried roots of *A. tuberosa* (Asclepiadaceae). It is a diaphoretic, diuretic, expectorant and tonic and is used as a fluid extract.

asclepidin. A concentration of asclepias principles, used medicinally.

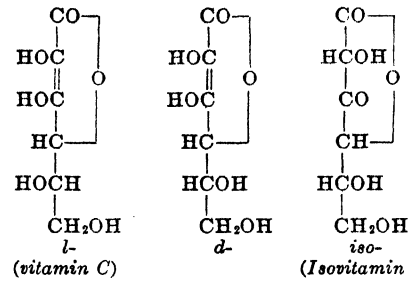
asclepidoid. The combined principles of asclepias.

asclepin. A resinoid from asclepias, used medicinally as a cathartic and diaphoretic.

asclepion. $C_{20}H_{34}O_3$ = 322.3. A camphor-like principle of *A. syriaca.*

Ascomycetes. A group of fungi (molds) *e.g.*, Aspergillus, Penicillium, etc.

ascorbic acid. $C_6H_8O_6$ = 176.05. Cevitamic acid, hexuronic acid, *3*-keto-*l*-gulonolactone, antiscorbutin, vitamin C, antiscorbutic principle. The *l-* form of the *δ*-lactone of *2.4.5.6*-tetrahydroxy-*3*-ketohexanoic acid. **d-** Has no vitamin effect. **iso-** Isovitamin C. Has a weak vitamin effect.



-ase. A suffix indicating, (1) an enzyme, or non-organized ferment, *e.g.*, diastase. This termination is at present restricted generally to enzymes of vegetable origin, but it should also be used for animal enzymes—which, however, usually end in "in"; thus pepsase and trypsase, rather than pepsin and trypsin; (2) certain ores, *e.g.*, orthoclase.

asebotin. A glucoside from the leaves of mountain laurel (*Kalmia latifolia*).

asebotoxin. A glucoside from *Andromeda japonica*, an Ericaceae.

asellin. $C_{25}H_{32}N_4$ = 388.5. An alkaloid from cod liver oil.

asepsin. Bromoacetanilide.

asepsis. Absence of or freedom from infection.

aseptic technic. The methods used to prevent infection; *e.g.*, sterilizing, disinfecting etc.

aseptol. $C_6H_4.OH.HSO_3$ = 174. o-phenol sulfonic acid, sulfophenol, sozolic acid, o-sulfocarbolic acid. A reddish oil, used as 33 % solution, d.1.55; soluble in water or alcohol. Used as an antiseptic or disinfectant, and a reagent for albumin, bile pigments, nitrites and nitrates.

aseptoline. Pilocarpine.

asexual. Without sex; as the lower forms of plants and animals.

asferryl. Iron arsenotartrate. A greenish-yellow powder, used in the treatment of anemia and chlorosis.

ash. (1) The mineral matter or incombustible residue remaining after a substance has been incinerated. (2) See *Fraxinus.* **caustic-** Sodium carbonate. **causticized-** A mixture of Na_2CO_3 and NaOH. **poison-** Ischionanthus. **pot-** Potash. **prickly-** Xanthoxylum. **soda-** Commercial sodium carbonate.

Ashcroft paper tester. A device to determine the bursting strength of paper.

ashing. The process of burning organic matter, especially in analysis.

ashphalt. Asphalt.

asiminine. An alkaloid from the seeds of papaw, *Asimina triloba*, an Anonaceae. It is a narcotic.

asiphyl. Mercuric atoxylate.

asonidin. Plumierin.

asparacemic acid. *dl* Aspartic acid.

asparagic acid. Aspartic acid.

asparagine. $C_4H_8O_3N_2.H_2O$ = 150.10. Asparagine, asparamide, agedoite, altheine, aminosuc-

cinic acidamide, α-amino-succinamic acid, aspartamic acid.

An alkaloid found in the sprouts of dicotyledons and in many seeds. White rhombic crystals, d.1.543, m.230; soluble in hot water, insoluble in alcohol or ether. It is a constituent of many proteins, and an isomer of malamide. **a. hydrargyrate.** A mercury compound of aspargine, which is used as a diuretic in syphilis. **a. sulfate.** $C_4H_8O_3N_2.H_2SO_4$ = 230.1. A white powder, soluble in water.

asparaginic acid. Aspartic acid.

asparagus. The root of *Asparagus officinalis*, a Liliaceae. It is used as fluid extract as an aperient and diuretic. Cf. *asparol, chrysoidin.*

asparagyl. The monovalent radical, $NH_2.CO.CH_2.CHNH_2.CO—$, derived from aspargine.

asparamide. Aspargine.

aspargine. Asparagine.

aspartamic acid. Asparagine.

aspartic acid. $C_4H_7O_4N$ = 133.09. Aminosuc-

cinic acid, asparaginic acid, asparagic acid. **dl-** Asparacemic acid. White monoclinic prisms, d.1.663, m.278. **d-** Colorless leaflets m.251. **l-** Rhombic leaflets, d.1.661, m.270, slightly soluble in water, insoluble in alcohol, or ether; used in organic synthesis.

aspartyl. The divalent radical, $—CO.CH_2.CHNH_2.CO—$, derived from aspartic acid.

aspasiolite. A partly decomposed iolite.

aspergillic acid. An antibiotic substance produced by *Aspergillus flavus.*

aspergillin. Vegetable hematin. The black coloring matter of the spores of various *Aspergillus* species (molds).

Aspergillus. A genus of molds, many of which are parasitic. Cf. *mycogalactan, tané*-koji.

asphalt. Jews' pitch, petrolene, mineral pitch, earth pitch, Trinidad pitch, petroleum pitch. A native mixture of hydrocarbons which occurs as amorphous, solid or semi-solid, brownish-black pitch or bitumen, produced from the higher boiling-point mineral oils by the action of oxygen. They are divided into *asphaltenes* and *carbenes*, q.v. Used for pavements, roofing and waterproofing materials. Cf. *parintite.* **a. base.** See *petroleum.* **a. sludge.** A non-conducting sludge found in electrical transformers. It consists mainly of oxygenated bodies of high molecular weight. **a. stone.** Natural a. A limestone naturally impregnated with bitumen. **a. testing apparatus.** See *penetrometer, viscosimeter, adhesive* meter. **a. thermometer.** An armored thermometer graduated from 200° to 450°F.

asphaltenes. That portion of asphalt or bitumen which is soluble in CS_2 but insoluble in paraffin oils or in ether. Cf. *carbenes, kerotenes.*

asphaltic bitumen. A more accurate term for *asphalt.*

asphyxia. The suffocation caused by a deficiency of oxygen for respiration.

aspidin. $C_{33}H_{32}O_7$ = 420.3. A poisonous constituent of male fern, *Aspidium.*

aspidinol. $C_{12}H_{16}O_4$ = 224.2. An alcohol, m.-161, obtained from aspidium.

Aspidium. (1) A genus of ferns. *Filices.* (2) Male fern, the dried rhizome of *A. filix-mas*, a Poldiaceae. Used poymedicinally, as the fluid extract or oleoresin, as an anthelminthic and teniacide. It contains filicic acid, filmaron, aspidin, albopannin, flavaspidic acid, etc. Cf. *pannol, filix, fustin.*

aspidosamine. $C_{22}H_{28}O_2N_2$ = 352.4. An alkaloid from quebracho bark. A brownish powder, m.100, soluble in alcohol, ether, chloroform or benzene. Used medicinally as an emetic. **a. hydrochloride.** $C_{22}H_{28}O_2N_2.HCl$ = 387.8. A brown powder, soluble in water, alcohol or ether; used as an emetic.

aspidosperma. Quebracho. The bark of *Aspidosperma quebracho,* (Apocynaceae) a South American tree. It contains aspidospermine, aspidosamine, quebrachine and other alkaloids, and is used medicinally as an antiperiodic and respiratory tonic.

aspidospermine. $C_{22}H_{30}O_2N_2$ = 354.26. (1) An alkaloid from the bark of *Aspidosperma quebracho.* White needles or prisms, m.206; soluble in alcohol, ether or chloroform. Used in the treatment of dyspnea, asthma. (2) An amorphous brownish-yellow powder, which consists of a mixture of aspidospermine, quebrachine and other quebracho alkaloids. **a. citrate** $C_{22}H_{30}O_2N_2.C_6H_8O_7$ = 546.32. An amorphous, orange powder, soluble in water or alcohol; it consists of the citrates of quebracho alkaloids. **a. hydrochloride** $C_{22}H_{30}O_2N_2.HCl$ = 390.82. An amorphous orange powder; soluble in water or alcohol. **a. sulfate** $(C_{22}H_{30}O_2N_2)_2.H_2SO_4$ = 806.61. Colorless crystals, soluble in water or alcohol; used to treat typhoid fever and dyspnea. **a. sulfate, amorphous.** The sulfate of quebracho alkaloids. An orange-yellow amorphous powder; soluble in water or alcohol.

aspirator. A suction apparatus. **a. bottle.** A glass vessel with outlets leading to the top and bottom.

aspirin. *Acetyl* salicylic acid. **methyl-** See *methyl*acetyl salicylate.

aspirochyl. Mercuric atoxylate.

assafetida. Same as asafetida.

assay. Originally the analysis of ores or alloys. Now applied to analysis in general; the analysis of pharmaceutical and official drugs in particular. **dry-.** Assaying by dry methods. **wet-.** Assaying by wet methods.

a. balance. An analytical balance. **a. combination furnace.** A combination of three furnaces for roasting sulfides, fusing in a crucible, and cupellation. **a. crucibles.** Fireclay crucibles used in the analysis of ores and alloys. **a. flasks.** A glass vessel of shape intermediate between that of a tall beaker and an Erlenmeyer flask. **a. mill.** A small crusher or grinding device for pulverizing ores. **a. ton.** A.T. = 29.1667 grams. **a. ton system.** In the analysis of gold and silver ores, the number of mg. of gold and silver obtained from an assay ton represent the same number of ounces per short ton of 2000 pounds of ore. For a ton of 2240 lbs. A.T. = 32.6667 grams. **a. ton weights.** A set of weights (4 A.T. to $\frac{1}{20}$ A.T.) used in mineralogical analysis and gold assay.

asselline. A leucomaine from codliver oil.

assimilation. Constructive metabolism, or the transformation of non-living matter (food) into living matter (tissues).

associating. Forming complexes, *e.g.*, by polar molecules. Cf. *solvent.* **non-** Describing non-polar molecules which do not form complexes.

association. The combination, connection or correlation of substances or functions. **molecular-** The aggregation of similar molecules, especially in solutions; as, $(H_2O)_2$ and $(H_2O)_3$; or of gases, as, NO_2 and N_2O_4. Cf. coordinate bonds, *dissociation, liquids.*

astacin, astacene. $C_{40}H_{48}O_4$ = 592.34. A carotenoid produced by the oxidation of astoxanthin (q.v.); a pigment from the lobster, *Astacus gammarus;* sea spider, *Maja squinado;* and starfish, *Ophidiaster ophidianus.*

astatic. Forces in equilibrium. **a. couple.** See *astatic* galvanometer. **a. current.** An electric circuit arranged in such a way as to be unaffected by the electric field of the earth. **a. galvanometer.** A galvanometer in which an astatic couple effect is produced by two equally strong magnets. **a. needle.** Two magnetic needles placed above one another with reversed poles (N over S).

astaxanthin. $C_{40}H_{52}O_4$ = 596.4. See *astacene.*

asteriasterol. A sterol, m.70, from starfish.

asterium. A supposed element occurring in the hottest stars. Cf. *nebulium.*

asterubin. $C_6H_{13}N_3O_3S$ = 195.2. A guanidine derivative, $Me_2NC(:NH).NH.(CH_2)_2SO_3H$, from the starfish, *Aster rubens* and *A. glacialis.*

asthenics. Cerebro-spinal neurotics. A drug which produces weakness of muscular power; *e.g.*, aconite, conium, curare, physostigmine, gelsemium, veratrum.

astigmatism. The inability of the eye to focus light rays from different meridians on the same point.

A.S.T.M. American Society for Testing Materials. An organization which issues specifications and methods of testing for various materials. Cf. B.S.I.

Aston, Francis William. 1877–. An English physicist noted for the development of mass-spectra and Nobel Prize Winner (1922). **A. rule.** Not more than two isotopes are known for any element of odd atomic number, except among the radioactive elements. **A. spectrum.** A mass-spectrum, from which the isotopic weights of an element are determined.

astrakanite, astrochanite. $MgSO_4.Na_2SO_4.4H_2O$. Blödite. A native, magnesium, sodium sulfate, found at Stassfurt.

astral oil. Same as kerosene.

astringency. Sourness of taste combined with contracting power, as in tannins.

astringent. A drug which contracts tissues, and thereby lessens secretions. Used in diarrhea and also externally in wounds to check bleeding; *e.g.*, alum, tannin, silver nitrate, zinc sulfate.

astrolin. $C_{16}H_{22}O_4N_2$ = 306.2. Methylethylglycolic antipyrine. $C_5H_{10}O_3.C_{11}H_{12}ON_2$. A colorless crystalline powder with pleasant acid taste, m.64; soluble in water or alcohol. Used to relieve neuralgic headaches.

astronautics. The study of the physical possibilities of voyaging through space to other celestial bodies.

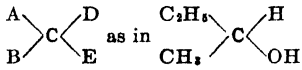
astronomical unit. (1) The mean distance from the sun to the earth, 149,500,000 km. (2) See *parsec, light year* and *magnitudes.*

astronomy. A branch of science dealing with the study of the cosmos, and the correlation, motions, and characteristics of celestial bodies.

astrophyllite. $H_4(K,Na)_2(Fe,Mn)_5(SiTiZr)_7O_{22}$. A native silicate, occurring in bronze-yellow orthorhombic crystals.

astrophysics. A branch of science dealing with the interpretation of spectral lines which indicate the movement, velocity, composition, temperature, and other characteristics of a celestial body (star, comet, etc.).

asymmetric. (1) Unsymmetric; *e.g.*, the 1.2.4-position of benzene. (2) Pertaining to an asymmetric atom. (3) Triclinic. **a. atom.** An atom which has each of its bonds satisfied or united to a different atom or radical. Thus an asymmetric N-atom has three different radicals, and an asymmetric carbon atom (q.v.). **a. carbon.** Any carbon atom of an organic compound which has four different radicals or atoms attached to it:



Compounds containing one or more a. carbon atoms are optically active. **a. compound.** A compound which contains one or more asymmetric atoms. Cf. *stereoisomerism.* **a. molecule.** See *asymmetric.*

asymmetry. A dissimilarity or absence of symmetry, as, an unequal distribution of radicals around a ring or atom.

asymptotes. Rectilinear or curvilinear lines which continually approach a curve without touching it.

A.T. See *assay* ton.

atabrine. Chinacrin. Trade-name for the dihydrochloride of methoxy chlorodiethyl amino pentylamino acridine used as anti-malarial. Cf. *atebrin.*

atacamite, atakamite. $CuOCl.Cu(OH)_2$. Remolinite. A native, dark-green hydrous copper oxychloride.

atalpo clay. A Cornish colloidal china clay, used as a soap filler and as a catalyst.

-ate. A suffix for compounds, (1) which contain a nonmetal in its higher positive valence (cf. *-ite);* (2) which are formed from an acid and base (salts).

atebrin. $C_6H_3(NH_2)_2Me$ = 122.1. Mecaprine hydrochloride. An antimalarial similar to plasmoquin, q.v. Cf. *atabrine.*

athamantin. $C_{24}H_{30}O_7$ = 430.3. A bitter principle from the roots and seeds of *Athamanta oreoselinum,* an Umbelliferae.

athermal. A cool spring or mineral water with a temperature below 15°C.

atherospermine. $C_{30}H_{20}O_5N$ = 474.2. An alkaloid from the bark of *Atherosperma moschatum,* the Australian sassafras, a Monimiaceae of Tasmania and Victoria; sometimes used as tea and, by the natives, as an anti-rheumatic and in secondary syphilis.

atisine. $C_{22}H_{31}NO_2$ = 341.25. Colorless powder, m.85, slightly soluble in water.

Atkinson hemin test. A method of preparing blood crystals (hemin) for microscopical examination and identification.

atm. Abbreviation for *atmosphere.*

atmolysis. The separation of gases by diffusion through porous walls; see *Graham's* law. **fractional-** A method for continuous diffusion of a gas, used in the separation of isotopes; *e.g.*, of chlorine.

atmometer. An instrument for the determination of the amount of water passing into the air by evaporation.

atmos. Aer. A unit of air pressure on one square centimeter; equal to a column of 760 mm. of mercury.

atmosphere. (1) The air or the gases surrounding the earth. (2) The pressure exerted by the air at sea-level. (3) A unit of pressure; *e.g.*, the pressure which equals the weight of mercury, d.13.5951, 760 mm. high = 29.922 inches = a pressure of 14.6974 pounds per square inch, or 1.0333 kg. per sq. cm. = 1,013,249 dynes $cm.^{-2}$.

atmospheric gases. The carbon dioxide varies in quantity (approx. 0.03 % by vol.), and the percentage volumes of the other gases (on the moisture- and carbon dioxide-free air) are:—

nitrogen	78.03
oxygen	20.99
argon	0.94
neon	0.0012
helium	0.0004
krypton	0.0001
xenon	0.00001

atmotherapy. The treatment of diseases with vaporized substances; *e.g.*, the application of atomizers in respiratory disorders.

atom. A chemical unit; the smallest part of an element which remains unchanged during any chemical reaction, and is thus chemically indestructible and indivisible; yet it may undergo physical changes, as, excitation, disintegration and transformation to other atoms. Cf. *radioactive* elements, *matter*. Evidence for the reality of a. is the seven different methods of determining Avogadro's number, by observing through a spinthariscope, by photographing Wilson tracks and by crystallograms. An a. has three fundamental numbers:

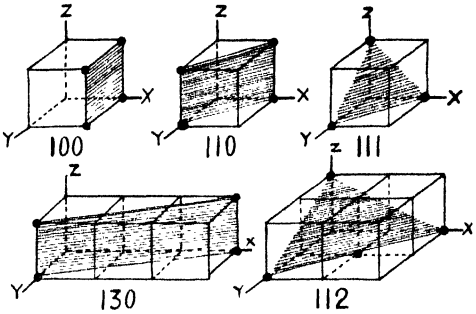
1. Mass number, giving the number of protons and neutrons. (=*isotopic weight*).
2. Atomic number, giving the number of extranuclear electrons.
3. Packing fraction, which is an indication of the forces binding nuclear particles together.

See also *atomic* structure. **activated-** Excited. **asymmetric-** See *asymmetric a.* **Bohr-** The concept of a dynamic atom derived from phenomena of radiations. Cf. *atomic* structure 5. **charged-** An electrically charged a.; an *ion*. **chemist's-** Lewis-. **cubical-** Lewis-. **dark-** An a. that does not emit radiations. **dynamic-** Bohr-. **excited-** Activated-. An a. in which the electrons are moving in elliptical orbits or on a higher *energy level*, q.v. Such a. are found in sun and stars, and are produced in the laboratory by exposing vapors and gases to strong electric fields or radiations. The chemical symbol plus asterisk differentiates the excited from non-excited a.; thus: $K \rightarrow K^*$, or $Cl_2 + h\nu = Cl^* + Cl$. **exploding-** An atom which undergoes rapid disintegration with the release of a large amount of energy. Cf. *a. disintegration*. **fluctuating.** Schrödinger-. **giant-** An entity so large in size and fixed in form as to surround all matter. It is supposed to fill and create space. **ionized-** An a. from which some of the valence electrons are removed (positive ion), or which has captured additional electrons (negative ion). **irradiated-** See *irradiation*. **kinetic-** Bohr-. **labelled-** *Radioactive* indication. **Langmuir-** An elaborated concept of Lewis-. Cf. *atomic* structure 4. **Lewis-** The concept of a static a. as derived from the phenomena of crystal structure and chemical bonds. Cf. *atomic* structures 3 and 4. **neutral-** An a. in which the positive nuclear charge is balanced by the negative electrons; the latter may be either in the normal or excited state and thereby differ from the stripped a. (q.v.) and ionized a. **normal-** An a. which is neither excited nor ionized, in which the electrons are supposed to be in their lowest energy levels. **nuclear-** Stripped-. **physicist's-** Bohr-. **planetary-** Rutherford's-. **pulsating-** Schrödinger-. **radiating-** An a. in which the electrons are passing from a higher to a lower energy level and which thereby, emits radiations. Cf. *quantum*. **recoil-** An a. from which an alpha particle is being thrown off and which thereby, recoils with a speed corresponding with its mass. Cf. *radioactivity*. **Rutherford's-** The original concept (1911) of a planetary a. which resembles a solar system. Cf. *atomic* structure 1. **Schrödinger-** The concept of a pulsating a. consisting of an electric field of different intensities. Cf. *atomic* structure 6. **static-** Lewis-. **stripped-** An a. whose electrons have been removed by strong electric fields or extremely high temperature. They are supposed to exist in the interior of stars, and to account for the extreme densities of some celestial objects. Cf. *spectral* classification. **tetrahedral-** An a. in which pairs of electrons are supposed to oscillate around centers located like the four corners of a tetrahedron. It is a later modification of Lewis a. Cf. *atomic* structure 4.

a. annihilation, The destruction of matter by its complete transformation into radiation, $Mc^2 = E$, where M is the mass in grams, c the velocity of light in cm. per sec., and E the energy in ergs. This is assumed to occur inside stars where pressure, temperature and density are extremely high, and it is the source of stellar energy. **a. building.** The formation of atoms from + and − electrons, especially the formation of He, O, Si, and Fe from H. This process is assumed to occur in interstellar space, where pressure, temperature and density are extremely low. It generates the highly penetrating cosmic rays; $\delta E/c^2 = \delta M$. **a. creation.** The creation of matter by the complete transformation of energy: $E/c^2 = M$, into positive and negative electrons, hydrogen atoms. This process is as yet hypothetical, but a necessary link in the mass-energy cycle. **a. disintegration.** The disintegration of atoms, either naturally, as in natural radioactivity, or artificially, as by the bombardment of atomic nuclei with protons, deuterons, alpha particles, neutrons or photons, whereby new atoms are formed and more or less energy is liberated. Very often the new atoms are unstable and undergo further disintegration. Practically all elements have been disintegrated by artificial means. Generally the product differs only slightly from the original but some atoms, as uranium 235, undergo fission into two atoms of approximately equal weight with release of much energy. **a. fragment.** The disintegration product of an atom that has been split by an α-particle; as observed by the *Wilson* method, q.v. **a meter.** *Ångström* unit. **a. model.** (1) Atomic model. (2) One of several

kinds of models, generally made of wooden component parts, by means of which certain properties of atoms, especially valency and isomerism, may be depicted. (3) An electrical or magnetic device which illustrates the structure of the a. or some of its properties. **a. of electricity.** Electron.

atomic. Pertaining to the ultimate electrical unit of an element. **a. bomb.** A military bomb utilizing the great energy liberated in the explosive disintegration of atoms of the type of neptunium, plutonium, and uranium 235; its destructive power exceeds that of any other military bomb. **a. diameter.** The imaginary line connecting the extreme electron orbits through the center of the a. **a. disintegration.** See *atom d.* **a. distance.** The average or equilibrium length between the centers of two atoms expressed in Ångström units. They are determined from crystal structure and band spectra data, and may be calculated from a. radii. **a. domain.** The imaginary sphere occupied by the a. structure. **a. energy.** The force which holds the a. together, or the amount of energy liberated when an atom disintegrates or is transformed. 1 gm. radium is equivalent to 2 billion calories. Cf. *packing* effect. **a. excitation.** See excited *atom, excitation.* **a. evolution.** Cf. *spectral* classification, "*old* age" theory. **a. field.** The space around an atom which cannot normally be penetrated by other atoms. See *molecular* diagram, *magnetic* field. **a. fragment.** Cf. *atom* fragment. **a. frequency.** Characteristic K radiations. Cf. Moseley *spectrum* and a. number. **a. group.** Radical. **a. heat.** The amount of heat required to raise the temperature of one gram atom of an element one °C; hence, the product of the specific heat, H, and the atomic weight, A, of an element: $H \times A = 6.4$. Cf. *heat* capacity. **a. kernel.** An atom stripped of its valence electrons; it differs from the a. nucleus. **a. mass.** The quantity of matter, q.v., contained in an atom. This has been measured for hydrogen by determining the ratio $m/e = 1.04 \times 10^{-4}$, where m is the mass of H atom and e the electric charge; hence, if $e = 1.57 \times 10^{-20}$, the mass of H is 1.64×10^{-24} gram, and the mass of any other atom is its a. weight multiplied by this quantity. **a. meter.** Ångström unit. **a. migration.** *Molecular* rearrangement. **a. model.** The concept of a. structure; as, Bohr's, Lewis', and Schrödinger's atoms. **a. nucleus.** The central, positively-charged part of an atom consisting of I positive charges and (I-N) negative charges, where I is the isotopic weight and N the atomic number. Cf. *neutron, proton, kernel.* **a. number.** Ordination number, N or Z (zahl). An integer which indicates the order of the elements in the periodic system, and which is assumed to represent the number of negative electrons located outside the a. nucleus. It is related to the frequency, ν, and wavelength, λ, of the x-ray spectrum of an element by $c/\lambda = \nu = C(A - b)^2$, where C and b are constants. A the a. number, and c the velocity of light. For the K radiations the equation becomes $\sqrt{\nu} = \frac{3}{4}R(A - 1)$; and for the L series $\sqrt{\nu} = \frac{5}{9}R(A - 7.5)$, where R is Rydberg's constant. **a. oscillations.** The vibrations of a. nuclei or atoms within a molecule. Cf. *activated* molecule. **a. percentage.** The percentage by weight of a mixture, or system of compounds divided by the atomic weight; hence, the relative abundance or number of atoms in 100 parts; thus, NaCl = 50 % Na-atoms, 50 % Cl-atoms; HNO_3 = 20 % H-atoms, 20 % N-atoms, 60 % O-atoms. **a. plane.** The imaginary surface which passes through a set of atoms in a space lattice, and indicated by the Miller indices 100, 110, 111, etc. (see figure). **a.**



Atomic planes.

potential. *Ionization* potential. **a. properties.** Those characteristics of an element which depend on a. structure (q.v.), as opposed to those properties due to molecular structure and molar states. **a. radius.** (1) The distance from the a. nucleus to the valence electrons. (2) The half-way distance between like atoms; it is relatively constant and depends on the type of bond between the atoms. By

ATOMIC RADII
(Ångström units)
Single bond radii

B	C	N	O	F
0.89	0.77	0.70	0.66	0.64
	Si	P	S	Cl
	1.17	1.10	1.04	0.99
	Ge	As	Se	Br
	1.22	1.21	1.17	1.14
	Sn	Sb	Te	I
	1.40	1.41	1.37	1.33

Double bond radii

B	C	N	O
0.80	0.69	0.63	0.59

Triple bond radii

C	N	O
0.61	0.55	0.52

adding the radii of different unlike atoms their distances can be found; thus the a. r. for the single bond C is 0.77; for single bond N is 0.70; hence the distance C—C is 1.54, C—N is 1.47 and N—N is 1.40. **a. refraction.** The product of the specific refraction and the a. weight of an element. **a. species.** (1) Any one of the atoms of the 92 elements. (2) Isotopic species. Any of the many types of a. structures characteristic of each isotope. Thus the element chlorine consists of the a. species Cl^{35} and Cl^{37}, or isotopes with isotopic weights of 35 and 37. **a. structure.** Theories of the composition or constitution of atoms, based upon a speculative interpretation of chemical and physical properties of the elements. Some of the

TABLE OF ELEMENTS
ATOMIC NUMBERS AND ATOMIC WEIGHTS (1943)

The *atomic weights* are those accepted by the International Committee; where none is given it indicates that no actual determinations have been made, but theoretical values can be obtained from the *periodic* system, q.v. *Synonyms* of elements are given where a symbol has been derived from them.

Element	Symbol	At. number	At. weight
actinium	Ac	89	
actinon	An	86	
alabamine	Am	85	
aldebaranium, Ad, is *thulium*			
aluminum	Al	13	26.97
anglo-helvetium, is *alabamine*			
antimony	Sb	51	121.76
argentum is *silver*			
argon	A	18	39.944
arsenic	As	33	74.91
aurum is *gold*			
azote, Az, is *nitrogen*			
barium	Ba	56	137.36
beryllium	Be	4	9.02

properties accounted for by the composition of a. nucleus and the arrangement of electrons are, classified:

ATOMIC STRUCTURE

Nucleus (*H, He,* ϵ)	Electrons (ϵ, *quanta*)	
	static, in shells	dynamic, in orbits.
atomic weight	valency	gaseous ionization
isotopic weight	polar and non-polar bonds	excitation
mass spectra	ionization	radiation
atomic number	crystal structure	luminescence
atomic frequency	oxidation-reduction	spectrum and spectral lines
radioactivity	density	irradiation
abundance		

(1) The atom consists of an extremely small, positively-charged nucleus containing the mass of the atom, surrounded by a number of electrons sufficient in number to neutralize the electric charge. The number of positive charges on the nucleus varies from 1 to 92 and corresponds with the a. number; the number of total charges varies from 1 to 238, and corresponds with the isotopic weight. Thus, in the case of uranium the nucleus contains 238 positive and 146 negative electrons, leaving a positive charge of 92, which is neutralized in the normal atom by 92 electrons arranged in a definite order, the outermost being the valence electrons. (*Rutherford, et al.*) Cf. *periodic* system.

(2) The nucleus itself, 10^{-12} cm. in diameter, consists of α-particles, (=He nuclei), protons (=H nuclei) and electrons, which are closely packed together. (*Prout, Harkins.*) Cf. *packing* effect, *isotopes.*

(3) The electrons are distributed in successive layers of 2, 8, 8, 18, 32, and 18 electrons, respectively. (*Kossel, Lewis.*) Cf. *orbits, shells, periodic* system, *Stoner* quanta, *Pauli's* principle.

(4) The electrons oscillate in shells, usually pairs, around centers corresponding with the corners of a cube or tetrahedron; as, in crystals, solids and liquid compounds. (*Lewis, Langmuir.*) Cf. *octet, kernel, valency.*

(5) The electrons rotate in orbits, which may be circular or elliptical and at different energy levels; as, in luminous gases and excited molecules. (*Bohr, Sommerfeld.*) Cf. *orbits, quantum, excitation.*

(6) The atom as a whole comprises electric fields of various intensities, which may pulsate or fluctuate in definite modes which corresponding with the various energy levels (*Schrödinger*). Cf. wave mechanics.

a. theory. (1) The modern concept of a. structure. (2) The idea of finite particles of matter, as conceived by Democritus (400 B.C.) Xenophanes, Lucretius, and others, and established by Dalton (1808) and others. Cf. *kinetic* theory. **a. transformation.** The building up of atoms of higher a. weight from those of lower a. weight. **a. transmutation.** An artificial process for changing one atom into another; as, in artificial disintegration. Cf. *nuclear* chemistry. **a. volume.** The space, AV, occupied by one gram atom of an element. It is obtained by dividing the atomic weight, AW, by the density, D, of the solid or liquid element: hence, AV = AW/D. **a. weight.** A number indicating the relative weight of an element as compared with hydrogen (=1.0080) or oxygen (=16.000). It is the mean value of the isotopic weights of an element. Its accuracy is indicated by the number of significant figures following the decimal point. From the most accurate determinations the most reliable are selected and published annually by an international committee. *absolute-* The actual weight of an atom. *chemical-* The a. w. determined by chemical methods and *weight* relations; they are based on oxygen gas = 16.000, the O_2 being a mixture of isotopes 16, 17, 18. *physical-* The a. w. determined by physical methods and *mass* relations. Thus *Chem. A.W.* = *Phys. A.W.*/1.00022.

* × 10^{-24} gm.
** × 10^{-28} gm.

rational- The a. w. referred to weighings in vacuo, corrected for buoyancy in air. These weights should be used in accurate analytical work.

atomicity. Valency.

atomization. Breaking up a liquid into a fine spray.

atomizer. A device for breaking a liquid into a spray or fog; a nebulizer.

atom-meter. Ångström unit.

atomology. The study of atoms and their structure.

atophan. $C_{16}H_{11}NO_2$ = 249.1. Phenylquinoline carboxylic acid, phenylcinchoninic acid, quinophen, agotan, cinchophen, $Ph.C_9H_5N.COOH$. Colorless crystals subliming at 200, used as an antirheumatic and in gout. Cf. *acitrin.*

atopite. $Ca_2Sb_2O_7$. A native calcium antimonite, which occurs in yellow or brownish isometric masses.

atoquinol. $C_{16}H_{15}O_2N$ = 289.1. Phenyl cinchoninic acid, a yellow powder insoluble in water; used as antirheumatic.

atoxyl. $NaC_6H_7O_3NAs$ = 239.1. Sodium-m-arsenite-anilide, arsamin, sodium arsanilate. A white odorless powder, used in hypodermic medication. Cf. *maretin.* **acetyl-** Arsacetin. **a. mercury.** Mercuric atoxylate.

atoxylate. Arsanilate. A salt of arsanilic acid which contains the divalent $MH_2.C_6H_4AsO_3$ = radical.

atoxylic acid. Arsanilic acid.

atractylene. $C_{15}H_{24}$ = 204.19. A sesquiterpene, d.0.927, b_{14mm}.141, from the essential oil of *Atractylis*, a Compositae of Asia.

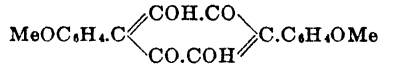
atractylol. $C_{15}H_{26}O$ = 222.2. A solid alcohol, d.1.511, m.59, b.292, from the essential oil of *Atractylis.*

atreol. Ammonium atreolate. An aqueous solution of a mixture of ammonium salts derived from organic acids, in which the N is in the sulfonic radical. A black, sirupy liquid; soluble in water, and used as mild antiseptic.

roglyceric acid. $C_9H_{10}O_4$ = 182.1. α-phenylglyceric acid, $CH_2OH.C(OH)Ph.COOH$. White crystals, m.146.

atrolactic acid. $C_9H_{10}O_3$ = 166.1. α-phenyl lactic acid, α-methyl mandelic acid, hydroxyhydratropic acid, atrolactinic acid, $Me.C(OH)Ph.COOH$, H_2O. Colorless crystals, m.90, soluble in water.

atromentin. $C_{20}H_{16}O_6$ = 352.12. *2.5*-Dihydroxy-*3.6*-bis (p-methoxy phenyl) quinone. A plant pigment having the formula:



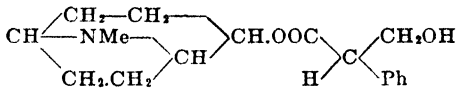
atronene. $C_{16}H_{14}$ = 206.11. Atronol, phenyldihydronaphthalene. A colorless hydrocarbon, m.326, insoluble in water.

atronic acid. $C_{17}H_{14}O_2$ = 250.21. Colorless prisms, m.164, soluble in water or alcohol.

atropamine. Apoatropine.

atropic acid. $C_9H_8O_2$ = 148.1. α-phenylacrylic acid, α-methylene-α-toluic acid, $CH_2:CPh.COOH$. Colorless, monoclinic scales, m.106, b.267 decomp.; sparingly soluble in water, soluble in alcohol or carbon disulfide. It is obtained from atropine by boiling with alkali. **iso-** Isatropic acid. **methyl-** $C_6H_5.C(NCH.CH_3)COOH$ = 176.1. Colorless crystals, m.135.

atropine. $C_{17}H_{23}O_3N$ = 289.28. Coromegine, daturine, i-tropine, tropyl tropate, tropin tropic ester, *dl*-hyoscyamine. The alkaloid



from *Atropa belladonna*, deadly nightshade, or *Datura stramonium*. Colorless needles, m.115; slightly soluble in water, alcohol, or ether. It is an antispasmodic, mydriatic and antidote for morphine, pilocarpine and prussic acid. The antidotes of atropine are emetics, stomach pump, pilocarpine, morphine. **a. arsenate** $(C_{17}H_{23}O_3N)_2H_3AsO_4$ = 720.56. Colorless crystals; soluble in water or alcohol. **a. borate** $(C_{17}H_{23}O_3N)_2B_4O_7$ = 733.6. White crystals; soluble in water or alcohol. **a. gold hydrochloride** $C_{17}H_{23}O_3N.HAuCl_4$ = 629.33. Yellow leaflets, m.136; slightly soluble in water. **a. hydrobromide** $C_{17}H_{23}O_3N.HBr$ = 370.2. Colorless crystals; soluble in water. **a. hydrochloride** $C_{17}H_{23}O_3NHCl$ = 325.78. White crystals; soluble in water or alcohol. **a. hydroiodate** $C_{17}H_{23}O_3N.HIO_3$. Colorless crystals, soluble in water. **a. iodate** $C_{17}H_{23}O_3N.HIO_3$ = 465.21. Colorless crystals; soluble in water. **a. methylbromide** $C_{16}H_{20}O_3N(CH_3)_2Br$ = 384.1. White crystals, m.222; soluble in water or alcohol. **a. methylnitrate** $C_{16}H_{20}O_3N(CH_3)_2NO_3$ = 366.1. Eumydrine. White crystals, which are odorless and soluble in water or alcohol. **a. nitrate** $C_{17}H_{23}O_3N.HNO_3$ = 352.28. Colorless crystals; soluble in water or alcohol. **a. salicylate** $C_{17}H_{23}O_3N.C_7H_6O_3$ = 410.3. Colorless, deliquescent powder; soluble in alcohol or water. **a. santonate** $C_{17}H_{23}O_3N.C_{15}H_{20}O_4$ = 553.3. Colorless crystals; soluble in water. **a. stearate** $C_{17}H_{23}O_3N.C_{18}H_{36}O_2$ = 573.3. A colorless powder, used in ointments. **a. sulfate** $C_{17}H_{23}O_3N.H_2SO_4$ = 387.36. Colorless crystals, m.192; soluble in water, alcohol or ether. It is extensively used in ophthalmology. **a. valerate** $C_{17}H_{23}O_3N.C_5H_{10}O_2.\frac{1}{2}H_2O$ = 400.33. Colorless crystals, m.42; soluble in water, alcohol or ether.

atroscin. Hyoscine hydrobromide.

atroscine. $C_{17}H_{21}O_4N.H_2O$ = 321.27. *i*-Hyoscine, *i*-scopolamine. An alkaloid from *Scopolia atropoides*, a Solanaceae. Transparent crystals; soluble in water, alcohol or ether.

atroxindole. C_9H_9ON = 147.1. Methyl-oxindole. Colorless crystals, m. 119.

attar of roses. An essential oil from damascene and cabbage roses, used in perfumery.

attemperator. A pipe through which water flows at a constant temperature. It is used to control the temperature of a vessel in which it is immersed.

attenuation. (1) The process of making less virulent or weakening the toxicity of a microorganism or virus. (2) The extent to which the specific gravity of a liquid has been lowered by alcoholic fermentation.

attraction. The force which holds the molecules of a solid or liquid together. **chemical-** Affinity. **capillary-** The forcing between dissimilar molecules of a fluid which raises or depresses the fluid in a capillary tube. **electric-** The force by which electrically oppositely-charged bodies are drawn together. **electron-** The force exerted by an atomic nucleus on the electron pair; it constitutes a *bond*. **gravitational-** Gravitation. **magnetic-** The action of a magnet in holding iron particles. **mechanical-** See *adhesion* and *cohesion*. **radiant-** See *relativity* (general).

attraxin. The radical of a compound which has a chemotactic effect on epithelial tissue.

attritus. A constituent of coal of botanical origin.

Atwater calorimeter. A bomb calorimeter for determining the heating value of foods, fats and oils, coal, etc.

Au. The symbol for gold (aurum).

aubepine. Anisaldehyde.

aucubin. A glucoside from greater plantain, *Plantago major*. White needles, m.180, soluble in water or alcohol.

audiometer. An apparatus for testing the hearing. Cf. *eudiometer*.

audion. *Electric* valve.

audiphone. A device for increasing the volume of sounds.

Auer metal. A mixture of 65 % mischmetal and 35 % Fe, used as pyrophoric alloy in gas lighters and for tracer bullets.

Auer von Welsbach. Welsbach.

auerbachite. A native, amorphous earthy zirconium silicate.

auerlite. A native thorium silico-phosphate from North Carolina. Cf. *monazite*.

augelite. A natural, basic aluminum phosphate.

augite. $CaMg_2Al_2Si_3O_{10}$. Malacolite. A dark aluminum pyroxene, which occurs in basalt. Cf. *sahlite*.

augmentation. (1) A proposed term for oxidation. (2) Opposed to diminution. Cf. *electronation*.

augustione. Angustione.

aura. (1) The current of air or breeze produced by the discharge of static electricity from a point. (2) A peculiar radiation said to emanate from living organisms, which can be photographed by the use of a fluorescent screen prepared from dicyanine solution. Cf. *scotography*.

auramine. $C_{17}H_{21}N_3$ = 267.28. Tetramethyl-p₂-diamidoimido benzophenone, yellow pyoktannin. Yellow scales, m.136; insoluble in water, soluble in alcohol. Used as a dye for silk, wool, paper and leather. **a. hydrochloride.** $Me_2N.C_6H_4.C(NH_2):C_6H_4:NMe_2Cl$. The auramine of commerce. A sulfur-yellow powder; soluble in alcohol, ether or water. Used to color foods, textiles, leather and paper; also as antiseptic.

aurantia. An orange nitramine aniline dye; used in foodstuffs, for light filters and as a biological stain.

Aurantiaceae. The orange family, a group of trees and shrubs with a juicy fruit with a leathery skin and contain a fragrant essential oil. See *Citrus*.

aurantiin. Naringin.

aurantine. An orange extract.

aurantium. The Latin term for orange.

aurate. A salt of auric acid containing the trivalent AuO_3 ≡ radical.

aureolin. Primulin.

auri. The official Latin for gold.

auribromhydric acid. $HAuBr_4.5H_2O$ = 607.96. A yellow crystalline mass, m.27, soluble in water.

auribromide. Bromaurate. A salt of the type $MAuBr_4$.

auric. A compound of trivalent gold, Au ≡. **a. acid** H_3AuO_3 = 248.2. Auric hydroxide. A yellow-brown powder, decomp. 150; insoluble in water, soluble in alkalis with the formation of aurates. **a. bromide** $AuBr_3$ = 436.96. Gold tribromide. A dark brown to black powder; soluble in water, ether or alcohol. It is an antiepileptic, nervine and anodyne. **a. chloride** $AuCl_3$ = 303.58. Gold trichloride. Red leaflets, d.3.9; soluble in water, alcohol or ether; used in photography. It sublimes if heated, and decomp. at 180. **a. chloride acid** $AuCl_3.HCl.4H_2O$ = 412.11. Aurochlorohydric acid. Yellow crystals; soluble in water, alcohol or ether. It contains 49 % gold. **a. chloride cryst.** $AuCl_3.2H_2O$ = 339.61. Cryst. gold trichloride. Orange-yellow leaflets; soluble in water. **a. chloride fused** $AuCl_3.HCl.xH_2O$. Brown masses, soluble in water, alcohol or ether. Used in photography and electroplating etc.; and medicinally, as an antituberculosis and alterant. It contains 50–51 % gold. **a. cyanide** $Au(CN)_3.6H_2O$ = 383.33. Gold tricyanide, gold cyanide. White hygroscopic crystals; soluble in water or alcohol. Used in the treatment of tuberculosis. **a. hydroxide** $Au(OH)_3$ = 248.22. Gold hydroxide, auric acid. Yellowish-brown powder, decomp. 150; insoluble in water, soluble in alkalis with the formation of aurates. **a. iodide** AuI_3 = 577.96. Gold triiodide. A dark green powder, decomp. when heated, and insoluble in water. **a. nitrate acid** $Au(NO_3)_3.HNO_3.3H_2O$ = 500.30. Gold hydrogen nitrate. Yellow triclinic crystals, decomp. on heating; soluble in water. **a. oxide** Au_2O_3 = 442.2. Gold oxide, gold trioxide. A black powder which loses oxygen on heating and is insoluble in water. **a. potassium bromide** $KAuBr_4.2H_2O$ = 592.4. Gold potassium bromide, Potassium auric bromide, potassium bromaurate. Yellow needles; soluble in water. Used as an antiepileptic. **a. potassium chloride** $KAuCl_4.2H_2O$ = 414.4. Gold potassium chloride, potassium auric chloride, potassium chloraurate. Yellow needles; soluble in water; used in photography and as a ceramic pigment. **a. potassium cyanide** $KAu(CN)_4.2H_2O$ = 376.5. Potassium auric cyanide. Yellowish crystals; soluble in water. **a. potassium iodide** $KAuI_4$ = 743.8. Gold potassium iodide, potassium auric iodide, potassium iodo aurate. Shining black crystals, which decomp. when heated; soluble in water. **a. sodium bromide** $NaAuBr_4.2H_2O$ = 576.2. Gold sodium bromide, sodium auric bromide, sodium bromaurate. Black crystals; soluble in water. An antiepileptic, used in 2 % solution for hypodermic medication. **a. sodium chloride** $NaAuCl_4$ = 362.2. Gold sodium chloride, sodium auric chloride, sodium chloraurate. Yellow crystals, soluble in water; used as a nervine and alterant. **a. sulfate** $Au_2O_3.2SO_3.H_2O$ = 620.54. Gold sulfate. Yellowish deliquescent crystals, decomp. on heating; soluble in water. **a. sulfide** Au_2S_3 = 490.58. Gold trisulfide. A brown powder, insoluble in water, soluble in alkali sulfide solutions.

aurichalcite. The native $2(ZnCu)CO_3$, $3(ZnCu)(OH)_2$.

aurichloride. A salt containing the monovalent $AuCl_4$—radical.

aurichlorohydric acid. *Auric* chloride acid.

auricome. *Hydrogen* peroxide.

auricyanhydric acid. $HAu(CN)_4$ = 302.24. Auric cyanide acid. Gold hydrocyanic acid. Colorless crystals; soluble in water.

auricyanide. A double cyanide containing the monovalent $Au(CN)_4$— radical; *e.g.*, potassium auricyanide.

auriferous. Containing gold, *e.g.*, an ore.

auriiodide. A compound containing the monovalent —AuI_4 radical.

aurin. $C_{19}H_{14}O_3$ = 290.22. Pararosolic acid. Coralline. A triphenylmethane dye obtained by diazotizing p-rosaniline $(HO.C_6H_4)_2 = C = C_6H_4:O$. Red needles, m.220 (decomp.); insoluble in water, soluble in alcohol, ether or alkalis. Used as a dye in textile printing, and in wall-paper manufacture; also as indicator, which changes at pH 7.5 from yellow (acid) to magenta (basic). Cf. *rosolic acid*. **a. carboxylic acid.** Aluminon.

auripigment. Arsenous sulphide.

auro. Aurous.

auroauric. A compound containing divalent gold or one atom each of mono- and trivalent gold. **a. bromide** $AuBr_2$ = 357.04 or Au_2Br_4 = 714.08. A black powder; insoluble in water. **a. chloride** $AuCl_2$ = 268.12, Au_2Cl_4 = 536.24. Gold dichloride. Dark red crystals, insoluble in water. **a. oxide** AuO = 213.2. An olive-brown powder, insoluble in water. **a. sulfide** Au_2S_2 = 458.5. A black powder, insoluble in water and decomp. by heat.

aurochin. Quinine p-amido-benzoate.

aurobromide. Bromaurite. A salt of the type $MAuBr_2$.

aurochloride. A double chloride containing the monovalent $AuCl_2$— radical; *e.g.*, sodium aurochloride, $NaAuCl_2$.

aurocyanide. A double cyanide containing the monovalent $Au(CN)_2$— radical; *e.g.*, potassium aurocyanide, $KAu(CN)_2$.

aurodiamine. $AuHN.NH_2$ = 228.3. Fulminating gold. A dirty olive-green powder prepared by digesting precipitated auric hydroxide with ammonia. When dry it explodes with great violence if struck or heated.

auroglaucine. $C_{19}H_{22}O_3$ = 298.1. A pigment produced on textiles by the action of *Aspergillus glaucus*.

auromine. $C_{17}H_{22}N_3$ = 269.30. Rose colored needles, m.96; soluble in alcohol or benzene, and insoluble in water.

aurora. Aurora Borealis. A display of variously-colored lights in the upper atmosphere, above 87 km. The spectrum shows a conspicuous green line, 5577.3Å., due to oxygen, and other lines due to nitrogen. In rare cases the aurora has been observed in the lower strata of the atmosphere. **a. tube.** A vacuum tube of uranium glass used for electric discharges.

aurorium. A hypothetical element said to produce the characteristic lines of the aurora, which are apparently due to ionized N and O atoms. Cf. *nebulium*.

aurosulfide. A salt containing the AuS— group.

aurous. A compound of monovalent gold, Au—. They resemble monovalent silver and copper compounds. **a. bromide** AuBr = 277.14. Gold monobromide. Green or grayish-yellow powder, decomp. 115; insoluble in water. **a. bromide acid** $AuBr.HBr.5H_2O$ = 448.2. Aurobromhydric acid. Red crystals, soluble in water. **a. chloride** AuCl = 232.66. Gold monochloride. Yellow crystals, decomp. on heating and in water. **a. cyanide** AuCN = 223.22. Gold monocyanide. Yellow crystals, decomp. on heating; insoluble in water, soluble in KCN solutions. Used to treat tuberculosis. **a. hydroxide** AuOH = 214.2. Brown crystals, decomp. 250. **a. iodide** AuI = 324.12. Gold monoiodide. A greenish-yellow powder, decomp. 120; slightly soluble in water. It is an alterant. **a. oxide** Au_2O = 410.4. A violet powder, decomp. 250, is insoluble in water or alcohol. **a. potassium cyanide** $KAu(CN)_2$ = 288.4. Gold potassium cyanide, potassium aurous cyanide, potassium cyanaurite, potassium aurocyanide. A white crystalline powder, soluble in water and used as an antiseptic and in electroplating. **a. sodium cyanide** $NaAu(CN)_2$ = 272.2. Gold sodium cyanide, sodium aurous cyanide, sodium cyanaurite. White crystals, soluble in water and used in electroplating. **a. sulfide** Au_2S = 426.46. A brownish-black powder, insoluble in water, soluble in alkali sulfide solutions.

aurum. Latin for gold. **a. vegetabile.** Pipitzahoic acid.

ausonium. See *ekarhenium* and *esperium*.

austenite. A carbon-iron compound formed in highly carbonized steel; it is γ-ferrite with Fe_3C formed by quenching. Cf. *martensite*.

australene. Pinene.

austrium. A supposed element, discovered (1900) by Przibram, which was shown to be gallium.

auto- A prefix from the Greek "self."

auto-activation. Activation of a gland by its own secretions.

autoantibiosis. The self-inhibition of a culture medium as a result of the previous growth of the organism in the medium.

autocatalysis. Catalysis produced by the products of a catalytic reaction.

autoclave. An apparatus for heating liquids, or sterilizing under high steam pressure.

autocoid. An early term for hormone.

autocollimation spectroscope. A spectroscope for comparing spectra.

autocytolysis. Autolysis.

autocytotoxin. A toxin formed in the body by the absorption of degenerated cells.

autodecomposition. A decomposition autocatalysis (q.v.).

autogenesis. Abiogenesis.

autogenor. A gas generator which produces oxygen automatically from "oxone" cartridges or cubes (q.v.).

auto-ignition. The temperature at which a compound ignites spontaneously. Cf. *flashpoint*.

autolysate. The liquid obtained by the self-liquefaction of organic cells or tissues.

autolyse. The act of liquefaction of organic cells.

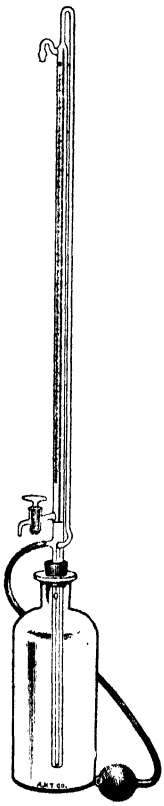
autolysis. The self-decomposition or self-disintegration of the tissue cells; or the dissolving of cells by their own serum. Cf. *heterolysis*.

autolyzate, autolyze. See *autolysate, autolyse*.

automatic. Self-working or self-regulating. **a. buret.** A buret provided with an overflow at the zero point. **a. pipet.** A pipet with an overflow at its mark used for rapidly measuring liquids. **a. respirator.** A gas mask.

automolite. Gahnite.

autooxidation. (1) The oxidation of substances by the atmosphere without the aid of other oxidizing agents. (2) An oxidation reaction which requires the presence of an inductor in order to take pla'ce. See induced *reaction*.



Automatic buret.

autophytes. Plants which can live on inorganic matter, as opposed to saprophytes, q.v.

autoprotolysis. Transfer of a proton from one molecule of a substance to another of the same substance, as $2H_2O \rightarrow H_3O^+ + OH^-$.

autotrophic. Describing an organism that is able to derive its energy by oxidation of inorganic substances, *e.g.*, sulfur, and does not depend on organic substances for its life; *e.g.*, certain bacteria.

autoxidation. Autooxidation.

autunite. $CaU_2P_2O_{20}H_{16}$ = 915.1. A native, yellow, calcium, uranium phosphate, forming orthorhombic crystals; found in Utah and South Dakota ($CaO.2UO_3.P_2O_5.8H_2O$).

auvergnose. A diorite from Mitchell County, North Carolina.

auximone. An agent that stimulates the growth of seedlings and plants; as, pantothenic acid, auxin, etc.

auxin. A. $C_{18}H_{32}O_5$ = 328.25. A plant hormone from *Avena*, m.196, which stimulates the growth of seedlings. **a.B.** $C_{18}H_{30}O_4$ = 310.23. A plant hormone from maize germ.

auxiometer. A device for measuring the magnifying power of lenses.

auxochrome. A group of atoms as $—NH_2$ or —OH, that intensifies the color of a chromophore, develops a color from a chromogen, or enhances the shade of a compound toward the violet, as > CO. Cf. *bathochrome*.

auxogluc. Any atom or radical which combined with glucophores yields compounds of sweet taste; examples —H, —CH_2OH and the lower alkyls.

auxograph. A device for recording the rate of growth of plants.

auxotox radical. The methylimine group = $N.CH_3$. It causes degeneration of the liver when a drug containing it is administered.

av. Avoirdupois.

ava. Kava.

available. That which can be utilized; **a. acidity.** Hydrogen ion concentration; **a. nitrogen.** The soluble N of fertilizers.

avalite. A clay-like silicate containing chromium.

Avena. A genus of grasses which yield important cereals; as, *A. sativa* (common oat).

avenalin. A globulin from oats.

avenin. Legumin. A protein from *Avena sativa*, oats, probably identical with gluten casein. A yellowish powder, used medicinally as a general stimulant and tonic.

avenine. $C_{56}H_{21}O_{18}N$ = 995.4. An alkaloid from oats, used as a nerve stimulant.

aventurine. (1) A brown glass with imbedded brass filings which is made in Venice. (2) A variety of feldspar containing iron. **a. quartz.** A variety of quartz from the Ural Mountains, which contains mica. Cf. *imperial* jade.

avenyl. 2-Myristo-oxy-mercury-3-oxy-benzaldehyde. A constituent of hydnocarpus oil, used for leprosy.

average. Mean.

avertin. $C_2H_3Br_3O$ = 282.77. Bromatol, tribromoethanol, ethobrome, CBr_3CH_2OH. Colorless crystals, m.80, b.$_{11mm}$94; used as rectal anesthetic.

Avicenna. 980–1037. Abu Ali en Hosein Ben Abdallah. A Persian mathematician and alchemist noted for his writings, which were translated into Latin.

avidin. A constituent of egg-white, which inactivates the biotin present and so injures the white.

Amadeo Avogadro.

(From Brownlee, Fuller and Hancock "Elementary Chemistry." Courtesy of Allyn & Bacon.)

avidity. An obsolete term for *affinity* or *activity*.

avitaminosis. A deficiency disease due to lack of a vitamin in the diet; as, beriberi and scurvy. Cf. *hypovitaminosis*.

avocado. The fruit of *Persea gratissima*, avocado or alligator pear, which is used as a delicacy in the United States, but as a staple food in Latin America. The seed yields a black, indelible ink. **a. oil.** An oil expressed from a. It contains vitamins A, D and E, phytosterol and lecithin; used as skin food and emollient. **a. sugar.** A mannoketoheptose isolated from avocado. Cf. *sugars*.

Avogadro, Amadeo (Conte di Quaregna). 1776–1856. An Italian chemist and physicist, who formulated the gas laws. **A. constant.** A. number. **A. hypothesis.** A. law. **A. law.** Equal volumes of all gases contain at the same pressure and temperature, the same number of molecules. **A. number.** A. constant, N. The number of molecules contained in one mole (gram-molecule).

$$N = (6.062 \pm 0.006) \times 10^{23}$$

Values of $N \times 10^{23}$ determined by various methods are:

kinetic theory (*Loschmidt*, 1865)	5.95–6.8
atmospheric diffusion (*Lord Rayleigh*, 1899)	6.04–6.4
heat radiation (*Planck*, 1900)	6.05
fog droplets (*J. J. Thomson*, 1903)	6.062
α-particle count (*Regener*, 1908)	6.04
Brownian motion (*Perrin*, 1909)	6.09
spectral line structure (*Sommerfeld*, 1916)	6.08

A. theory. A. law.

avoirdupois. The English system of weights and measures. See *weights*.

axerophtol. $C_{20}H_{29}.OH$ = 286.2. Vitamin A alcohol. The alcohol of which vitamin A is the fatty acid ester; it is the hydrolysis product of B-carotene.

axestone. A hard variety of jade found in Cornwall.

axinite. The plum-colored mineral $H_2(Ca,Fe,Mn)_4(BO)_2Al_2(SiO_4)_5$.

A. W. Abbreviation for atomic weight.

awaruite. A native nickel-iron containing 67 % Ni and 31 % Fe.

Awn hygrometer. An instrument that indicates the loss of moisture from a leaf surface.

axial. Pertaining to an axis. **a. angle apparatus.** Goniometer. **a. symmetry.** The trans-form of an organic compound: *e.g.*, fumaric acid. See *stereoisomerism*.

axin. A varnish-like fat from the Mexican cochineal (*Lacus axinus*), containing lauric and axinic acids; used as a vulnerary and as varnish.

axinic acid. $C_{18}H_{28}O_2$ = 276.3. A brown, oily acid from axin.

axinite. A native, brown, transparent, aluminum borosilicate containing Ca, Mn, Fe. It is sometimes used as a gem.

axiom. A self-evident proposition that requires no proof. Cf. *postulate*.

axis. A line, imaginary or real, passing through an object, around which all parts of the object may be arranged symmetrically. Cf. *coordinate*, *crystal system*, *pinakoids*. **electric-** The direction of a crystal which offers least resistance to the passage of an electric current. **principal-** See *principal*. **optic-** An imaginary line passing

through the center of any system of lenses. **x-, y-, z-.** See *coordinates*.

axonometry. Measurement of the axes in crystals and minerals.

Az. The French symbol for nitrogen (azote).

aza- See *tetra-arylaza*.

azacyclo- A prefix indicating the presence of an NH group in a saturated carbon ring; as **a. hexadecanine.** $NH(CH_2)_{15}CH_2$.

azadarach. Azadarichta, margosa bark, neem bark. The bark of the Indian lilac tree or bead tree, *Melia azadarichta*, a Meliaceae of Asia. It contains margosine, margosinic acid and neem oil; used as an anthelmintic, purgative and emetic.

azaleine. Fuchsin.

azarin. $C_{16}H_{17}O_4N_3S$ = 347.3. A nonpoisonous, bright red aniline dye for cotton.

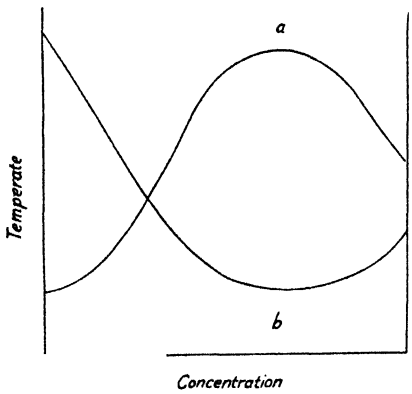
azafrin. $C_{28}H_{40}O_4$ = 440.28. A carotenoid pigment, m.212, from the roots of azafranilla, *Escobedia scrabifolia*, a Scrophulariaceae of tropical America.

azedarine. An alkaloid from the roots of *Melia azedarach*, an Asiatic tree. See *margosine*.

azelaic acid. $C_9H_{16}O_4$ = 188.17. Anchoic acid, lepargylic acid, 1:7 -heptane dicarboxylic acid, nonanedioic acid, $HOOC(CH_2)_7COOH$. An oxidation product of oleic acid. Colorless crystals or leaflets, m.106, b.360; soluble in water, alcohol, or ether. **a. acid value.** A chemical constant used in the analysis of fats; a measure of the potassium salts of the azelaic glycerides formed.

azelain. The glyceride of azelaic acid.

azeotropes. Any one of two or more compounds which form mixtures of constant boiling point; as, 0.6 mole carbon disulfide and 0.4 mole acetone. **negative-** A. with minimum boiling mixtures; as benzene-methanol or carbontetrachloride-methanol. **positive-** A. with maximum boiling mixtures; as, chloroform-acetone or chloroform-methylacetate.



Azeotropes.

a—positive azeotrope of A and B.
b—negative azeotrope of A and B.

azeotropy. The property of certain liquid mixtures of constant boiling-points to yield distillates having the same composition as the original mixture; Cf. *hylotropy*.

azerins. The digestive enzymes of insectiverous plants; as the ensyme of *Drosera rotundifolia*.

azete. C_3H_3N = 53.1. The heterocyclic compound $CH{=}N{-}CH{=}CH$. **dihydro-** Azetine. **tetrahydro-** Azetidine.

azetine. C_3H_5N = 55.1. Dihydroazete. The heterocyclic compound $CH_2{-}NH{-}CH{=}CH$.

azide. (1) A compound containing the monovalent $-N_3$ group; as benzyl a., silver a. (2) Triazo. **oxy-** Oxyazide.

azidinblue. Trypan blue.

azido. Triazo.

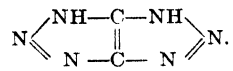
aziethane. Diazoethane.

aziethylene. Diazoethane.

azimethane. Diazomethane.

azimethylene. Diazomethane.

azimid. $C_2H_3N_6$ = 110.08. Osotriazol. The heterocyclic compound



azimide. Benzoylazide.

azimido. Azimino. The bivalent = HN_3 group, $-NH.N{:}N-$. **a. benzene.** Benzotriazole.

azimino. Azimido.

azimuth. The angle between the meridian and the vertical plane through an object; as, the angle of a star above the horizon. Cf. *coordinates*.

azine. Pyridine.

azino. The tetravalent radical $=N.N=$. **a. dyes.** Dyes containing the azo group.

azirane. Ethylenimine.

azo- A prefix which indicates the presence of the divalent radical $-N{:}N-$; derived from the French azote, nitrogen. **a. color.** A colored compound containing the azo group; as, methyl orange, congo red, bismarck brown. **a. compound.** An organic compound containing the $-N{:}N-$ radical; as azo-benzene. **a. group.** The divalent $-N{:}N-$ radical. Cf. *azino, diazo, trisazo, tetrazo, hydrazo, oxyazo*.

Azobacter. A group of aerobic bacteria of the soil that oxidize the nitrogen of the atmosphere. See *azotobacter*.

azobenzene. $C_{12}H_{10}N_2$ = 182.08. Azobenzide, azobenzol, azophenylenbenzene; benzene azobenzene, nitrogen benzide, diphenyldiimide. $PhN{:}NPh$. Orange leaflets, d.1.203 m.68, b.297.4; insoluble in water, soluble in alcohol or ether. Used in organic synthesis. **p-amino-** $C_{12}H_9N_2.NH_2$ = 197.2. Phenylazoaniline, benzene azoaniline. **o-** or **2-** Golden crystals, m.123, b.360. Its hydrochloride is spirit yellow (aniline yellow). **m-** or **3-** Orange needles, m.57. **p-** or **4-** Yellow monoclinic crystals, m.126. **p-diamino-** $C_{12}H_8N_2(NH_2)_2$ = 212.2. Colorless crystals, m.241, used in organic synthesis. The hydrochloride is chrysoidine. **dihydroxy-** Azophenol. **dimethyl-** Azotoluene. **diphenyl-** *Coupier's* blue. **hydroxy-** See *benzene*.

azobenzide. Azobenzene.

azobenzil. $C_{14}H_{10}ON_2$ = 222.2. $Ph.CO.C(:N_2)$-Ph.

azobenzoic acid. $(:N.C_6H_4.COOH)_2''$ = 270.23. Azobenzenedicarboxylic acid. **o-** Dark yellow needles, decomp. 237; sparingly soluble in water, soluble in alcohol or ether. **m-** Amorphous powder decomp. on heating; soluble in water, alcohol or ether. **p-** A red amorphous powder, decomp. on heating; insoluble in water, alcohol or ether.

azobenzol. Azobenzene.

azoblue. A blue azo color for cotton, wool or silk.

azochloramid. *N.N*-Dichloro azodicarbonamidine. A bactericide and antiseptic, soluble in water.

azocyanide. A compound containing the monovalent —N:N.CN radical; *e.g.*, benzene azocyanide, $C_6H_5N_2CN$.

azodermine. Acetyl-amidoazo-toluene. A reddish powder that stimulates epithelial growth.

azodicarbonamide. $C_2H_4O_2N_4$ = 116.08. Azoformamide. The compound, $NH_2.CO.N_2.CO.NH_2$. soluble in water, insoluble in alcohol, decomp. 180.

azodicarbon-diamidine. $NH_2C(NH).N:N.C(NH).NH_2$ = 114.11. **hydr-** $NH_2C(NH)NH.NH(NH)C.NH_2$ = 116.03.

azodiphenyl. *Coupier's* blue.

azo-dyes. A large group of organic synthetic coloring materials derived from azobenzene.

azofication. *Nitrogen* fixation.

azoflavin. Azoacid yellow, Indian yellow. A mixture of nitrated diphenylamine orange and nitrodiphenylamine. A brownish-yellow powder; soluble in hot water. Used as a dye for wool and silk.

azoformamide. Azodicarbonamide, $NH_2CO.N:N.CO.NH_2$.

azoformic acid. $C_2H_2O_4N_2$ = 118.1. Azodicarbonic acid, COOH.N:N.COOH.

azoic. An obsolete term for the earliest geological (Pre-Cambrian) formations.

azoimide. Hydrazoic acid. **methyl-** Methylenimine.

azoisobutyronitrile. $C_8H_{12}N_4$ = 164.2. $CN.CMe_2.N:N.CMe_2.CN$. Colorless crystals, m.105.

azole. Pyrrole.

azoles. A group of pentatomic heterocyclic ring compounds; *e.g.*, pyrrole, furfurane, isoxazole, oxazole, **diazoles.**

azolitmin. $C_7H_7O_4N$ = 169.1. The coloring matter of litmus. Dark violet scales, soluble in water, insoluble in alcohol, and very soluble in alkalis; is used as an indicator (acids = red, akalis = blue).

azomethin. Methylenimine.

azonaphthalene. $C_{10}H_7.N:N.C_{10}H_7$ = 282.30. Naphthyldiimide. **α-** or **1.1′-**Red needles, m.190; insoluble in water, slightly soluble in alcohol, soluble in benzene. **β-** or **2.2′-** m.204. **αβ-** or **1.2′-** m.136.

azonium. A compound of the type R_3N_2X; as, ethyl methyl phenyl azonium chloride.

azophenetole. $C_{16}H_{18}O_2N_2$ = 270.16. Diethoxyazobenzene. $(C_6H_4OEt)_2N_2$. **ortho-** m.131, decomp. at 240, insoluble in water, soluble in alcohol, ether or chloroform. **para-** m.167. Insoluble in water or alcohol, soluble in ether.

azophenol. $C_{12}H_{10}O_2N_2$ = 214.22. Dihydroxyazobenzene, azodiphenol. The compound $HO.C_6H_4.N:N.C_6H_4.OH$. **o-** or 2.2′ dihydroxyazobenzene. Yellow leaflets, m.171 (sublimes); insoluble in water, slightly soluble in alcohol or ether. **m-** or 3.3′-dihydroxyazobenzene. Brown scales, m.205; sparingly soluble in water, soluble in alcohol. **p-** or 4.4′-dihydroxyazobenzene. Brown, triclinic crystals, decomp. 216; slightly soluble in water, soluble in alcohol or ether. The azophenols are intermediates in the manufacture of dyes.

azophenyl. The monovalent PhN:N-group. Cf. *phenylazo, oxyazo* compounds. **a. ethane** $C_8H_{10}N_2$ = 133.2. Benzene azoethane, PhN:NEt. A colorless liquid, b.280. **a. methane** $C_7H_7N_2$ = 119.2. Benzene azomethane. PhN:NMe. A colorless liquid, b.150.

azophenylene. Phenazine.

azophosphin. A yellow azo-dye, $C_6H_3(OH)_2.N:N.C_6H_4.NMe_3Cl$.

azorite. $ZrSiO_4$. A native zirconium silicate.

azosulfime. 1.2.4-Thiodiazole.

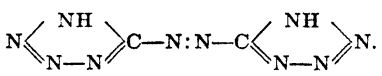
azosulfine. Thiodiazole.

azosulfonic acid. A compound containing the monovalent —N:N.SO_3H radical; as, $Ph.N_2.SO_3H$— benzene azosulfonic acid.

azotate. Nitrate.

azote. French for nitrogen, Az.

azotetrazole. $C_2H_2N_{10}$ = 166.12. The heterocyclic compound



azotic acid. Nitric acid.

azotized. (1) Nitrogenous. (2) Nitrogenized or changed to an azo-compound.

azotobacter. A group of soil bacteria, as, chroococcum, which convert atmospheric nitrogen to nitrates. Cf. *azobacter.*

azotoluene. $C_{14}H_{14}N_2$ = 210.27. Dimethylazobenzene, tolulazotoluene, ditolyldiimide, $MeC_6H_4N:N.C_6H_4Me$. **oo-** or **2.2′-** Red prisms, m.55; insoluble in water, sparingly soluble in alcohol, soluble in ether. **mm-** or **3.3′-** Orange colored, rhombic crystals, m.54; insoluble in water, soluble in alcohol or ether. **pp-** or **4.4′-** Yellow needles, m.114; insoluble in water, soluble in alcohol or ether. **amino-** Aminoazotoluene. **diacetylamino-** Dimazon. **diamino-** See *diamino.*

azotometer. An apparatus for determining the nitrogen content of compounds in solution gasometrically.

azoxazole. Furazan.

azoxime. 1.2.4-Oxdiazole.

azoxy. Divalent —NON— radical.

azoxyanisole. $C_{14}H_{14}O_3N_2$ = 258.20. $p(MeO.C_6H_4N)_2O$. White crystals, m.117, soluble in alcohol.

azoxybenzene. $C_{12}H_{10}ON_2$ = 198 22. Zinin, azoxybenzide. The compound Ph.NON.Ph. Yellow needles, d.1.248, m.36, decomp. on further heating; insoluble in water, soluble in alcohol or ether.

azoxybenzoic acid. $C_{14}H_{10}O_5N_2$ = 286.23. Azoxydibenzoic acid, azoxybenzenedicarboxylic acid. The compound $(C_6H_4COOH)_2NON$. **o-** or 1.1′-. Pale yellow leaflets, m.248, decomp. on further heating, sparingly soluble in water, alcohol, or ether. **m-** or 2.2′-.. Pale yellow needles, decomp. 320; insoluble in water, slightly soluble in alcohol, or ether. **p-** or 3.3′-. A yellow amorphous powder, decomp. 240; insoluble in alcohol, water, or ether.

azoxynaphthalene. $C_{10}H_7.NON.C_{10}H_7$ = 298.23. Azoxydinaphthalene. **1.1′** or **alpha-** Red rhombic crystals, m.127; insoluble in water, soluble in alcohol or concentrated H_2SO_4. **2.2′** or **beta-** m.167, insoluble in water.

azoxytoluidine. Diaminoazotoluene.

azulene. $C_{16}H_{26}O$ = 234.3. The blue coloring matter of chamomile, wormwood, and other essential oils; see also *cerulein.* An oily liquid, d.0.987, b.170, insoluble in water. It is a dehydrogenated azulogen.

azulin. A blue aniline dye formed by heating aniline with corallin.

azulmic acid. Azulmin.

azulmin. $C_4H_5ON_5$ = 139.2. A dark brown compound formed by the decomposition of cyanogen.

azulogens. A group of sesquiterpenes occurring in many essential oils. They give a blue color with bromine in chloroform, owing to the formation of azulene.

azurine. (1) Theobromine sodium acetate, used medicinally as a diuretic. (2) A bluish-black aniline dye.

azurite. $Cu_3H_2C_2O_8$ or $CuCO_3.Cu(OH)_2$. Chessylite, lazulite, lapis lazuli. Native copper carbonate. Blue malachite, an azure blue monoclinic mineral formerly used as a gem, now in paints and in ceramics. Cf. *malachite.*

azur malachite. A bluish-green malachite from Arizona.

azylase. A diastatic enzyme which degrades the amides of substituted acids, but does not attack true peptides.

azymic. (1) A reaction not caused by fermentation. (2) Describing an enzyme that does not cause fermentation.

azymous. Unfermented.

B

B The symbol for boron.

°B The symbol for degree of density on the *Beaumé* scale (q.v.).

b. An abbreviation for "boils at." b_{15mm}. **x.** Boils at x°C. under 15 mm. pressure.

b. A constant of van der Waal's equation: the co-volume or volume occupied by the molecules. See *equation* of state.

β. The Greek letter "beta." (1) A symbol for the specific heat constant. (2) In chemical names: substitution at the *second* carbon atom, or that following the *α*-carbon atom. See *beta*-position. **β acid.** Anthraquinone-2-sulfonic acid. **β particle.** See *beta*. **β position.** See *beta*. **β rays.** See *beta*.

b.p. Abbreviation for boiling point.

B.t.u. Abbreviation for British thermal unit (American usage). See *B.Th.U.*

B.T.U. Abbreviation for Board of Trade unit. (British usage.)

B.Th.U. Abbreviation for British thermal unit (British usage).

Ba. The symbol for barium.

bababudanite. $4NaFe(SiO_3)_2.2FeSiO_3.3MgSiO_3$. A soda amphibole from Mysore (India).

babassu oil. An oil from the fruit kernel of the Brazilian palm tree, *Orbignya martiana*, a Palmae. It resembles coconut oil.

babbitt. Babbitt metal. An alloy of about 65–95 pts. tin, 8–12 pts. antimony, and 1 pt. copper; used for bearings.

Babcock, Stephen Moulton. 1843–1931. An American chemist noted for work on milk analysis. **b. bottle.** A graduated glass flask used for the determination of fat in milk. **B. milk tester.** A centrifuge used in milk-fat analysis. **B. pipet.** A pipet which delivers 17.6 cc. in 5 to 8 seconds at 20°C; used in milk analysis.

babingtonite. A native pyroxene, (Ca,Fe,Mn)-$6Fe_2Si_5O_{27}$, which occurs in vitreous, greenish-black, triclinic masses.

babitt. Babbitt.

Babo, Clement Heinrich Lambert Freiherr von. 1818– . A German chemist who determined the vapor pressure of water (1847). **B. absorption tube.** A glass cylinder filled with glass beads, used for the absorption of gases by liquids. **B's law.** The relative lowering of the vapor pressure of a solvent, due to a substance in solution, is the same at all temperatures.

babool. An East Indian name for *Acacia arabica*. Its bark is used for tanning, and its gum is *gum arabic*.

babul. Babool.

bacca. Latin for berry.

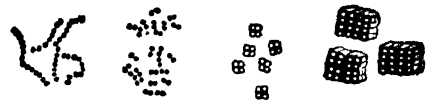
baccarine. An alkaloid from mio-mio, *Baccharis cordifolia*, a Compositae of South America.

bacciform. Berry-shaped.

Bachoune, Arnold. 1235–1315. Villanovanus. A French alchemist who noted the dangers of putrefaction and of copper utensils in cooking; author of twenty books.

bacillus. A non-sporing rod-shaped bacterium, a genus of Bacteriaceae. Cf. *bulgara, lactobacillus, ropiness, syncyanin, tetanus*.

Bacon, Roger. 1214–1294. An English alchemist and mathematician who wrote about gunpowder and the extinction of fire by removal of air. **B., Francis** [Baron Verulam, 1561–1626]. An English philosopher and exponent of the inductive method in science.



Streptococci Diplococci Tetrads Sarcina
Round Bacteria—cocci.

Rod-shaped bacteria—bacilli.

Spiral-shaped bacteria—spirillae.

bacteria. (Sing. bacterium.) A group of small, microscopical unicellular plants (Schizomycetes) belonging to the fungi. They contain 8–15 % proteins, 0.5–4 % fats, 0.5–3 % ash, and 80–85 % water. **acetic acid-** Bacillus aceti. A b. that oxidizes alcohol to acetic acid. **ammonifying-** A soil b. which reduces N to ammonia. **butyric acid-** Bacillus butyricus. A b. found in milk, water, dust, etc. that produces butyric acid from fats. **chromogenic-** A b. producing colored products. **denitrifying-** A soil b. that oxidizes ammonia to nitrogen. **lactic acid-** A b. occurring in air and sour milk that produces lactic acid. **nitrifying-** A soil b. that oxidizes N to nitrites and nitrates. **photo-** A b. that causes phosphorescence; as in decaying fish or wood. **soil-** B. essential for plant growth.

b. grinder. A device for powderizing bacteria, used in making vaccines and toxins. **b. membrane.** A scum or pellicle, which consists of bacteria. Cf. *bacterial* membrane.

GROUP NUMBERS OF BACTERIA

100.	Endospores produced
200.	Endospores not produced
10.	Aerobic (strictly)
20.	Facultative anaerobic
30.	Anaerobic (strictly)
1.	Gelatin liquefied
2.	Gelatin not liquefied
.1	Acid and gas from dextrose
.2	Acid without gas from dextrose

.3	No acid from dextrose
.4	No growth with dextrose
.01	Acid and gas from lactose
.02	Acid without gas from lactose
.03	No acid from lactose
.04	No growth with lactose
.001	Acid and gas from saccharose
.002	Acid without gas from saccharose
.003	No acid from saccharose
.004	No growth with saccharose
.0001	Nitrates reduced with evolution of gas
.0002	Nitrates not reduced
.0003	Nitrates reduced without gas formation
.00001	Fluorescent
.00002	Violet chromogens
.00003	Blue chromogens
.00004	Green chromogens
.00005	Yellow chromogens
.00006	Orange chromogens
.00007	Red chromogens
.00008	Brown chromogens
.00009	Pink chromogens
.00000	Non-chromogenic
.000001	Diastasic action on potato starch strong
.000002	Diastasic action on potato starch feeble
.000003	Diastasic action on potato starch absent
.0000001	Acid and gas from glycerin
.0000002	Acid without gas from glycerin
.0000003	No acid from glycerin
.0000004	No growth with glycerin.

E.g. the group number of *Bacillus coli* (Esch) is 222.111102, which means that the bacillus produces no endospores, is facultative anaerobic, does not liquefy gelatin, develops acid and gas from dextrose, lactose, saccharose, reduces nitrates with evolution of gas, is non-chromogenic, and has a feeble diastasic action on potato starch.

Bacteriaceae. A family of plants (Schizomycetes), which consists of unicellular organisms. Cf. *bacteria.*

bacterial. Pertaining to bacteria. **b. action.** The effect of bacteria or their metabolism on proteins; *e.g.*, hydrolizing, deaminizing, decarboxylating, toxin-forming, etc. **b. decomposition.** See *bacterial action.* **b. forms.** The shapes of bacteria; *e.g.*, round, short rods, long rods, short chains, long chains, filaments, "commas," short spirals, long spirals, clostridium, cuneate, clavate, curved, etc. (see figure). **b. membrane.** The cell wall of a bacterium. Cf. *bacteria* membrane. **b. poisons.** See *poison; e.g.*, food poisons, ptomaines, toxins, septic poisons. **b. precipitation.** (1) Precipitins. (2) Deposition of inorganic salts (*e.g.* calcium carbonate) caused by the action of bacteria.

bactericide. An agent that destroys or kills bacteria.

bactericidin. An antibody of the blood serum, which kills bacteria.

bacterin. Bacterial vaccine. A sterile suspension of dead pathogenic bacteria in physiological salt solution. Usually standardized in terms of a definite number of bacteria per cubic centimeter; used for hypodermic medication, to produce active immunity by stimulating the production of specific antibodies.

bacteriofluorescin. Fluorescent coloring matters produced by some bacteria.

bacteriological. Pertaining to bacteriology. **b. fermentation tube.** A U-shaped glass tube for bacteriological work, with a closed arm for the collection of carbon dioxide or other gases formed by the action of certain types of bacteria. **b. filter apparatus.** A device for filtering solutions that contain bacteria, thus rendering the solution sterile. See *Berkefeld* f. **b. incubator.** A closet which can be kept at a definite temperature, in which the cultures of bacteria are grown.

bacteriology. The science dealing with bacteria, their identification, culture and properties.

bacteriolysin. An antibody formed in the blood, which promotes the disintegration and dissolution of bacteria.

bacteriolysis. The destruction of bacteria by dissolution.

bacteriophage. An ultramicroscopic, transmissible, filter-passing and lytic agent of bacteria, the exact nature of which is undetermined. Their action is specific and bacteriolytic; used therapeutically.

bacteriophagy. (1) The experimental study of ultramicroscopic organisms. (2) The application of bacteriophages to the treatment of disease.

bacteriopurpurin. A purple coloring matter produced by bacteria; *e.g., Beggiatoa roseopersicina.*

bacteriostatic. An antibiotic (q.v.) which inhibits bacterial growth, as distinct from killing the organism.

bacterium. Latin (sing.) for bacteria. **b. aceti.** B. causing acetic acid fermentation. **b. lactis.** B. causing lactic acid fermentation.

baddeckite. A muscovite containing ferric iron.

baddeleyite. ZrO_2. Brazilite. A native zirconium oxide of Ceylon and Brazil.

baden acid. 2.8.-Naphthylamine sulfonic acid.

badische acid. 2.8-Naphthylamine sulfonic acid.

Badouin's reagent. See *Baudouin.*

Baekeland, Leo Hendrik. 1863–1944. A Belgian-born American chemist noted for development of synthetic resins (bakelite) and photographic processes.

bael. Bengal quince, Indian bel. The fresh unripe fruit of *Aegle marmelos,* a Rutaceae; used as specific for diarrhea and dysentery.

baeumlerite. $KCl.CaCl_2$. A native calcium-potassium chloride from Germany.

Baeyer, J. F. W. Adolf von. 1835–1917. A German chemist and pioneer in the organic synthesis of arsenicals, indigo, pyridine bases, phthaleins, and other compounds. **B. acid.** *Bayer* acid. **B. Strain Theory.** A theory which explains the relative stabilities of penta- and hexamethylene ring compounds in terms of the angles between the carbon atom valencies.

baffle. An obstruction in the path of a gas, fluid, sound, etc.

bagasscocis, bagassosis. A respiratory disease produced by the dust from dried bagasse used for board manufacture.

bagasse. The dried sugar-cane from which the juice has been extracted; used as a fuel, fertilizer, and for paper pulp. **b. cutter.** A revolving knife used for cutting bagasse and other dried material. **b. fiber.** A by-product of sugar manufacture, used for wallboards (as, celotex); or as a source of cellulose.

bagrationite. Allanite.

bahama white wood. Canella.

Bahia arrowroot. Tapioca.

baicalein. $C_{15}H_{10}O_5 = 270.08$. *5,6,7*-Trihydroxyflavone. A flavone from baicalin.

baicalin. A glucoside from the roots of *Scutellaria baicalensis*, a Labiatae; it yields glycuronic acid and baicalein.

Baier thermometer. A special thermometer for refractometers.

baikalite. Diopside. A silicate of calcium and magnesium, $MgO,CaO,2SiO_2$.

Bailey crucible holder. A rubber ring for holding a Gooch crucible in a funnel.

Bailey-Walker extraction apparatus. A glass flask, metal condenser, and glass syphon for continuous extraction.

Bain washing apparatus. A device of washing microscopic specimens.

baits. Chemicals used in traps to catch insects, *e.g.*, geraniol for Japanese beetle, and methyl cinnamate for fruit moth.

bakelite. A synthetic resin obtained by the condensation of formaldehyde with phenols. Used as plastic for insulation and lacquers; also as a substitute for vulcanite. Cf. *Baekeland*.

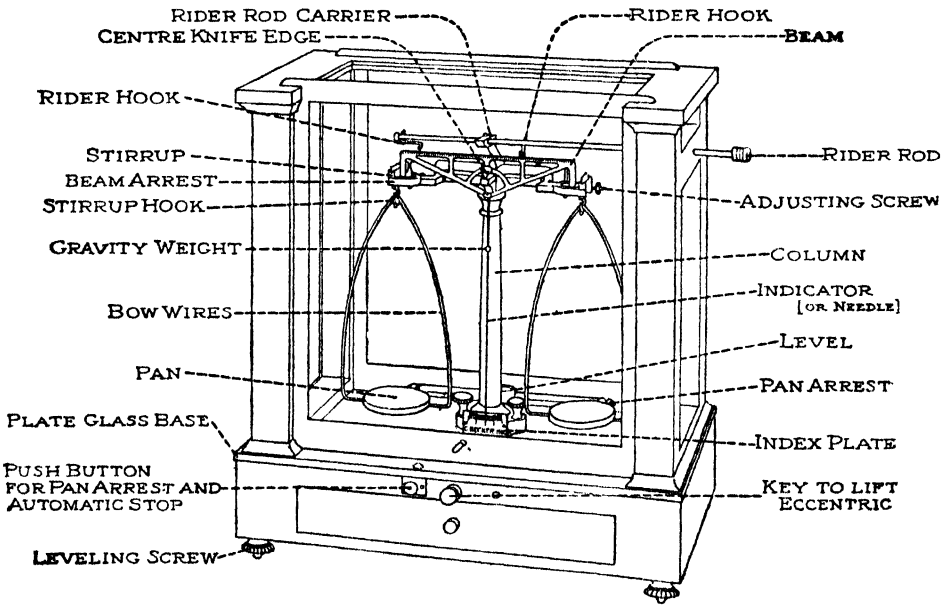
Baker, Herbert Brereton. 1862–1935. An English chemist noted as an educationalist, and for his work on the effect of intensive drying on chemical reactions.

bakerite. $8CaO.5B_2O_3.6SiO_2$. A native calcium boro-silicate found in the Mohave Desert.

baking powder. A powder containing sodium bicarbonate and tartaric acid (or other acid), with starch as a filler; used as a substitute for yeast in the production of carbon dioxide in bread-making. **b. soda.** *Sodium* bicarbonate.

balaban. The hydrocarbon of chicle.

balance. (1) A device for weighing. (2) The harmonious adjustment of related parts; as *nitrogen* balance. **alloy-** A b. adapted for metallurgical laboratories. **analytical-** A pair of highly-sensitive scales, used for quantitative analysis; sensitiveness, 0.1–0.01 mg. **assay-** An analytical b. for metallurgical work. **chain-** A b. in which the effects of weights of 100 mg. or less are produced by altering the length of a fine metal chain hanging from one of the beams; this length being measured by a pointer on a calibrated vertical scale. **chainomatic-** q.v. **chemical-** Analytical b. **cloth testing-** A specially constructed torsion b. for weighing textiles. **counter-** A b. of average sensitiveness. **cream test-** A torsion b. adapted for milk testing. **coin-** A sensitive b. used in mints. **damped-** A b. in which the equilibrium position is rapidly attained as a result of the damping action of a piston which fits closely and slides in a cylinder. **decimal-** An analytical b. designed for industrial laboratories, where a large number of consecutive equal weighings are made. **dispensing-** A small b. for prescription work. **gas-** A device for determining the specific gravity of gases. **hand-** A polished brass beam with silk cords and horn pans. **Jolly spiral spring-** A torsion b. for industrial laboratories. **lecture table-** A large b. for lecture experiments. **magnalium-** A b. made of magnalium. **micro-** A highly sensitive b. for weighing small quantities, *e.g.*, as indicated by the torsion of a quartz fibre; sensitiveness ranges from 0.001–0.000004 mg. **mohr-** A b. for measuring specific gravities of solids; similar to a Westphal b. **moisture-** A pair of scales for determining the moisture in ores and other samples. The b.-beam is divided into moisture percentages. **prescription-** A sensitive beam b. used in pharmaceutical laboratories. **projection-** A b. in which the movement of the beam pointer is magnified by means of an optical projector. **pulp-** A large beam b. mounted on a marble top for use in industrial laboratories. **soil-** A torsion b. used in soil analysis. **specific gravity-** Westphal b. **spring-** A pan suspended by a vertical coil of wire in a metal case with a pointer scale to indicate the strain on the pan. **torsion-** A balance which measures the twisting force



Analytical balance.
(Popoff, "Quantitative Analysis.")

necessary to turn a suspension thread or wire through a given angle. **transpiration-** A sensitive beam b. for measuring transpiration. **Westphal-** See *Westphal.*

b. cover. A rubber sheet for protecting balances. **b. pans.** Pairs of counterpoised watch glasses with handles for weighing powders. **b. reading glass.** A lens for reading the scale of an analytical b. **b. rest.** A glass or metal block for supporting b. pans. **b. rider.** A small platinum wire which is bent U-shaped with a hook, usually weighing 1 mg., and sliding along the beam of analytical b. **b. weights.** A set of accurately standardized weights which are either brass or aluminum, nickel-plated or gold-plated.

balanced. In a state of equilibrium. **b. reaction.** A reaction which can be made to proceed in either direction by variation of either temperature, pressure or concentration of the reactants. Cf. *equilibrium.*

Balard, Antoine Jerôme. 1802–1876. A French chemist, who discovered bromine (1826) and the nature of bleaching powder.

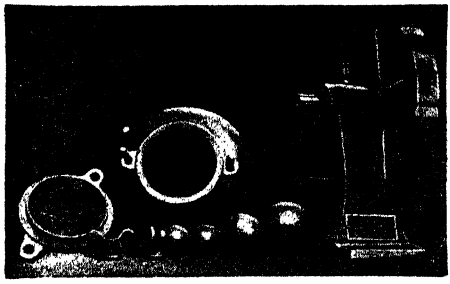
balas ruby. Spinel. Cf. *ballas.*

balata. (1) The dried juice of *Mimusops globosa,* a Spotaceae, a tree of the West Indies. Used for insulating as a substitute for guttapercha, and coated on canvas for driving-belts. Cf. *chicle.* (2) The hard dense, heart-wood of the bully tree, *Bumelia retusa,* a Sapotaceae.

baleen. *Whale* bone.

ball clay. A white or light cream burning clay of high plasticity, originally mined in balls of 30–35 lb. **b. mill.** A spherical container with balls of iron or quartz for grinding materials to a fine powder.

ball mill. A bowl of metal or porcelain containing metal balls of various sizes, which are used to crush materials. See figure. Cf. *pebble* mill.



Ball mill.

ballas. A variety of diamond intermediate between carbons and diamond. Cf. *balas.*

Balling, Carl Joseph Napoleon. A German professor noted for his work in fermentation chemistry. **B. degree.** A specific gravity scale. (1) x° Balling is equivalent to a specific gravity of $\frac{200}{200 \pm x}$ at 17.5°C. x is + or − according as the liquid is heavier or lighter than water, respectively. (2) Brix degree. See *hydrometers.*

ballistic galvanometer. A device which indicates small or intermittent currents. It depends on the accumulation of a charge of static electricity, which is suddenly released from a condenser to deflect a needle to an extent which is proportional to the amount of electricity present.

ballistite. A gelatinized nitroglycerin and nitrocellulose, used in smokeless powders.

balloelectric. Pertaining to the electrical charge of an atomized spray of a liquid.

ballometer. An instrument for measuring the electric charges conveyed by an atomized spray. It consists essentially of a metal plate connected to a quadrant electrometer.

balloons. See *gas* balloons.

balm. (1) Melissa, (2) Balsam. **bee-** Monarda. **Indian-** Trillium.

b. of Gilead or b. of Mecca. (1) Poplar buds. (2) The exudation of *Commiphera* (*Balsamodendron*) *opobalsamum,* a Burseraceae. **b. oil.** Melissa oil, lemon. A yellow essential oil, d.0.89–0.92; soluble in alcohol and obtained from the leaves and flowering tops of *Melissa officinalis.* Used in flavoring extracts.

Balmer formula. The wave-length, λ, and its reciprocal frequency $(1/\lambda)$ or wave-number, ν, of the lines in the hydrogen spectrum can be expressed by $\lambda = 3616.14 \frac{m^2}{m^2 - 4}$ or $\nu = 27{,}418.75 = \frac{109{,}675}{m^2}$, where m is any integer from 3 to 16. **B. series.** A series of lines in the spectrum of hydrogen which are related by $\nu = N(1/n_1^2 - 1/n_2^2)$, and which can be deduced from the quantum theory. The lines are called $H\alpha$, $H\beta$, $H\gamma$ etc. and correspond with an electron transition from an outer to the second orbit. Cf. *energy* levels, *Lyman* series, *Paschen* series, *quantum* number.

balneology. The study of the therapeutic properties of natural waters.

balopticon. Stereopticon.

balsam. A resinous or oleoresinous, fragrant juice or exudate from plants, which consists of a mixture of resins, essential oils, cinnamic and benzoic acid. *E.g.,* Canada b., cativo b., cebur b., copaiva, b., fir b., gilead b., gurjun b., lagam b., etc. The U. S. official balsams are Peru balsam, storax and tolu balsam. **b. apple.** The fruit of *Momordica balsamina,* a Cucurbitaceae. It contains elaterin. **b. bottle.** A wide-necked glass bottle with a loosely fitting cup-shaped cover and glass rod. **b. of Peru.** *Peru* balsam. **b. tree.** Mastic.

baltimoriase. A silicate of calcium, aluminum, and magnesium from Baltimore County, Md.

baltimorose. A pyroxenite of Baltimore County, Md.

Baly, Edwin Charles Cyril. 1871– . An English physicist, noted for spectroscopic and photochemical work. **B. spectrum tube.** A graduated tube in which slides another tube. The intermediate adjustable space is filled with the solution whose absorption spectrum is to be examined.

bamboo. (1) A tropical genus of tree-like grasses, with woody, light sectional stems, growing in clumps. (2) The hollow, siliceous, coated stems of bamboo species, used as a building material, for fishing rods. Cf. *tabashis.* **sacred-** *Nandina domestica* of Japan; it yields domesticine and nandinine.

b. oil. Vinifera palm oil. An oil from the fruit of *Gentiliana raphia;* used to soften leather.

bambuk. A vegetable butter.

banana. The fruit of *Musa sapientum* (banana plant) which is imported green from the West Indies and Honolulu and ripened in steam heated chambers. Cf. *plantain, pisang* **wax. b. oil.** An alcoholic solution of amyl acetate.

banana-oil. Amyl acetate.

bancoul nuts. The seeds of *Aleurites ambina* from which it expressed a tasteless oil resembling castor oil. Cf. *tung* oil.

Bancroft, Wilder Dwight. 1867– . An American chemist noted for research on colloids and the phase-rule.

band. A compact series of spectral lines due to molecules. **b. head.** The wavelength of the sharpest edge of a spectral b. **b. spectrum.** See *spectrum*.

bandoline. A gummy liquid made from tragacanth and quince seeds, and used for glossing the hair.

bandose. A quartz-mica-hornblende diorite from Cecil County, Md.

Bandrowski's base. $C_{19}H_{18}N_4$ = 290.1. Bis-diaminophenyl-*p*-phenylenediamine. The compound $(NH_2)_2C_6H_3.N.C_6H_4.N.C_6H_3(NH_2)_2$; used in organic synthesis.

bane. A pest or poison; *e.g.*, dogbane, wolfsbane, etc.

Bang method. The determination of glucose in urine by titration with alkaline cupric thiocyanate solution. Codliver oil.

banisterine. $C_{13}H_{12}ON_2$ = 212.1. An alkaloid, m.257 from *Banisteria* species, a Malpighiaceae of South America. It stimulates respiration and is similar in properties to harmine.

Banting, Sir Frederick. 1891–1941. A Canadian biochemist, noted for medical research, particularly in connection with the discovery of insulin.

baobab. A large tree of West Africa, the leaves of which are used in diarrhea, the bark for paper pulp and the fibres of the stem for ropes. See *adansonia*.

baphiin. $C_{12}H_{10}O_4$ = 218.08. Colorless crystals, decomp. on heating.

baptisia. Wild indigo. The dried roots of *Baptisia tinctoria* (Leguminosae); used as fluid extract as an astringent.

baptisin. $C_{26}H_{32}O_{14}$ = 540.3. A glucoside, m.240, from the roots of *Baptisia tinctoria*. A brownish powder; soluble in alcohol, used as a purgative. Cf. *rhamnomannoside*.

baptisoid. The total active principles of baptisia. It is a cholagogue, laxative, and cathartic.

baptitoxine. (1) An alkaloid from the root of *Baptisia tinctoria*. (2) Cytisine.

bar. The international unit of pressure. Cf. *barye*. 1 bar = 10^6 dyne/cm.^{2} = 1.013 kg./cm.^{2} = 0.987 atm.

bar magnet. A magnetized flat rod of iron.

baras camphor. Borneol.

barbados aloes. Aloes from Barbados.

barbados nuts. Purging nuts. The poisonous seeds of *Jatropha curcas* (Euphorbiaceae), a native of the West Indies and Brazil. See *curcin*.

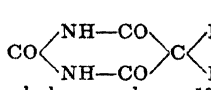
barbaloin. $C_{16}H_{18}O_7$ = 322.1. A constituent of Barbados aloes m.148.

barbatic acid. $C_{19}H_{20}O_7$ = 360.14. A depside from Usnea lichens, especially *Usnea barbata*. Colorless prisms, m.186.

barberry. The fruit of *Berberis vulgaris:* used for preserves and pickles. See *berberis, berberine, oxyacanthine*.

barbierite. A soda orthoclase from Norway.

barbital. $C_8H_{12}O_3N_2$ = 184.1. Diethylbarbituric acid, 2,4,6-trioxy-5-diethyl-pyrimidine, veronal, malonurea, diethyl malonyl urea, barbitone.

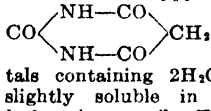


A white crystalline, odorless powder, m.191; soluble in 150 pts. cold water, 12 pts. hot water, ether or chloroform. Used medicinally as a hypnotic. **soluble b.** B. sodium.

b. sodium. Calmine, veronal sodium, sodium diethyl-barbiturate. A white powder; soluble in 5 pts. water; used as a hypnotic.

barbitone. Barbital.

barbituric acid. $C_4H_4O_3N_2$ = 128.09. Malonyl urea, 2,4,6-trioxypyrimidine, pyrimidinetrione.



Colorless rhombic crystals containing $2H_2O$, m.245, decomp. 260; slightly soluble in water or alcohol. Cf. *hydantoin, uramil*. There are over 100 different 5.5-disubstituted derivatives; among them are:

5-allyl-5-isobutyl-	sandoptal
5-allyl-5-isopropyl-	allonal
5-butyl-5-ethyl-	neonal
5.5-diallyl-	dial
5.5-dibromo-	dibromin
5.5-diethyl-	barbital
5.5-dipropyl-	propanal
5-ethyl-5-isoamyl-	amytal
5-ethyl-5-phenyl-	luminal
5-hydroxy-	dialuric acid
5-isonitroso-	violuric acid
5.5-sulfamido-	thionuric acid
5-ethyl-5(1-methylbutyl)-	embutal
5,β-bromoallyl-5.*sec*-butyl-	pernocton

barcenite. A native mercury antimonite.

Bardach reaction. Acetone and iodopotassium iodide give canary yellow needles, (instead of the hexagonal crystals of iodoform) in presence of proteins.

bardana. Lappa.

bardane oil. A semi-solid oil from the seeds of burdock, *Arctium lappa*.

Bardeen microtome. An attachment for carbon dioxide cylinders which facilitates the freezing and cutting of tissues for microscopical examination.

Barff boroglycerin. A saturated solution of boric acid in glycerin, used for the preservation of animal and vegetable specimens.

Barfoed, Christian Theodor. 1816–1889. A Danish analytical chemist. **B. solution.** A solution of 13.3 gm. cupric acetate in 200 cc. dist. water and 5 cc. 38 % acetic acid. **B. test.** A test for dextrose, (in presence of maltose), which is reduced by B. solution.

baric. An obsolete term for barium in a compound.

barilla. The fused ash of various plants (seaweeds, glasswort) which consists of sodium carbonate and sulfate. It was formerly used in the Mediterranean areas for making soaps, glass, etc. Cf. *kelp* ash. **b. de cobre.** Nodules of native copper in ores.

barite. $BaSO_4$. Barytes, cawk, heavy spar. A native crystalline barium sulfate, which occurs in snow white crystalline masses, or grayish, reddish, and greenish ores. Used in the manufacture of pigments, lithopones and as fillers for paper, inks, etc.

barium. Ba = 137.36. An element of the calcium family, atomic number, 56. Baryum plutonium. A white, soft, metal, d.3.46, m.850, b.950; readily soluble in water, forming barium hydroxide, and readily soluble in acids and

alkalis; insoluble in benzene and hydrocarbons. It is found widely-distributed in small quantities in feldspars and micas, and in deposits as sulfate (barytes) and carbonates (witherite); it never occurs native but always in oxy-compounds. Barium is divalent and forms only one series of compounds; the soluble compounds are poisonous. It was discovered in 1774 by Scheele in barytes, and was isolated in 1808 by Davy. Metallic b. is not used industrially at present. **b. acetate.** $Ba(C_2H_3O_2)_2.H_2O$ = 273.4. White prisms, d.2.02, decomp. on heating; soluble in water or alcohol. Used as a reagent for precipitating sulfates and chromates. **b. aluminate.** A white powder, used as water softener for steam boilers. **b. amylsulfate** $Ba(C_5H_{11}SO_4)_2.2H_2O$ = 507.5. Colorless crystals, soluble in water. **b. arsenate** $Ba_3(AsO_4)_2$ = 690.1. A black powder; insoluble in water and soluble in acids or ammonium chloride. (acid-), $BaHAsO_4.H_2O$ = 295.35. Barium biarsenate. Opaque crystalline masses, anhydrous at 150. **b. benzoate** $Ba(C_7H_5O_2)_2.2H_2O$ = 415.4. Colorless leaflets, soluble in water. **b. benzosulfonate** $Ba(C_6H_5SO_3)_2.H_2O$ = 487.1. Colorless crystals, soluble in water or alcohol. **b. biarsenate.** B. arsenate (acid). **b. bichromate** $BaCr_2O_7$ = 353.57. Red monoclinic prisms, soluble in water. (Crystalline) $BaCr_2O_7.2H_2O$ = 389.58. Orange crystalline needles; soluble in dilute acid. **b. binoxalate.** B. bioxalate. **b. binoxide.** B. peroxide. **b. bioxalate** $Ba(HC_2O_4)_2.2H_2O$ = 351.4. Barium dioxalate, acid barium oxalate. Colorless crystals; sparingly soluble in water. **b. bioxide.** B. peroxide. **b. bisulfate.** B. sulfate (acid). **b. borate** $BaB_2O_4.7H_2O$ = 349.5. A white powder, soluble in water. **b. boride** BaB_6 = 203.37. Black, regular crystals, $d_{15°}$.4.36; insoluble in water, soluble in acids. **b. borotungstate** $2BaO.B_2O_3.9WO_3.18H_2O$ = 2788.74. B. borowolframate, colorless crystals, soluble in water. **b. bromate** $Ba(BrO_3)_7(H_2O)$ = 411.2. Monoclinic colorless crystals, $d_{17°}$.4.04, decomp. 260; slightly soluble in alcohol or water. **b. bromide** $BaBr_2$ = 297.21. Colorless crystals, d.4.781, m.880; soluble in water or alcohol. (Cryst.) $BaBr_2.2H_2O$ = 333.24. Monoclinic white crystals, $d_{24°}$.3.852, m.880; soluble in alcohol or water. **b. butyrate** $Ba(C_4H_7O_2)_2.2H_2O$ = 347.55. A colorless powder, soluble in water. **b. carbide** BaC_2 = 161.38. Grayish, crystalline masses, d.3.75, decomp. by water or acids yielding acetylene. **b. carbonate** $BaCO_3$ = 197.4. Colorless rhombic crystals or a white powder, d.4.275, m.795, decomp. 1450; insoluble in water or alcohol, soluble in acids and ammonium chloride solution. It occurs native as witherite. Used as a reagent, as rat poison, in water purification, sugar refining, case hardening, manufacture of glass and enamel ware, and in ceramics. **b. chlorate** $Ba(ClO_3)_2.H_2O$ = 322.3. White monoclinic crystals, d.3.179, m.414; soluble in water or alcohol. Used as a reagent, and in pyrotechnics for green fires. **b. chloride** $BaCl_2.2H_2O$ = 244.32. White rhombic crystals, $d_{24°}$.3.097, m.960; soluble in water, insoluble in alcohol. It is a reagent for the detection and determination of sulfuric acid. Used in veterinary medicine; in the manufacture of barium salts; as poison for rats and mice; and for the purification or softening of water. **b. chloroplatinate** $BaPtCl_6.4H_2O$ = 617.4. Platinic b. chloride. Red monoclinic crystals, d.2.86; soluble in water, decomp. by acids. **b. chloroplatinite** $BaPtCl_4.3H_2O$ = 528.46. Platinous b. chloride. Orange-yellow, rhombic crystals, d.2.868; sparingly soluble in water. **b. chromate** $BaCrO_4$ = 253.5. Yellow ultramarine, lemon yellow. Heavy, yellow, rhombic scales, $d_{15°}$.4.498; insoluble in water, soluble in acids. Used as a pigment and in safety matches. **b. citrate** $Ba_3(C_6H_5O_7)_2.7H_2O$ = 918.23. A colorless powder, soluble in water. **b. cyanate** $Ba(CNO)_2$ = 221.40. Colorless crystals, sparingly soluble in water. **b. cyanide** $Ba(CN)_2$ = 189.40. Colorless crystals, soluble in water or alcohol, and used in metallurgy. **b. cyanoplatinite** $BaPt(CN)_4.4H_2O$ = 508.69. Platinous b. cyanide, b. platino-cyanide. Platinum b. cyanide. Yellowish-green crystals with bluish fluorescence, d.3.054; soluble in water; used in X-ray screens. **b. dichromate.** B. bichromate. **b. dioxalate.** B. bioxalate. **b. dioxide.** B. peroxide. **b. diphenylamine sulfonate.** An oxidation-reduction indicator. **b. diphosphate.** See *b. phosphates*. **b. dithionate** $BaS_2O_6.2H_2O$ = 333.52. B. hyposulfate. White, rhombic crystals, d.5.6; soluble in water. **b. ethylsulfate** $Ba(C_2H_5SO_4)_2.2H_2O$ = 423.5. Colorless crystals; soluble in water or alcohol, and used in organic synthesis. **b. ferrate** $BaFeO_4$ = 257.4. A purple colored powder, insoluble in water and decomp. in acid solutions. **b. ferrocyanide** $Ba_2Fe(CN)_6.6H_2O$ = 594.77. Yellow prisms; slightly soluble in water. **b. fluobromide** $BaBr_2.BaF_2$ = 472.58. White plates, d.4.96, decomp. by water; insoluble in alcohol, soluble in HCl. **b. fluochloride** $BaCl_2.BaF_2$ = 383.66. White plates, d.4.51, decomp. by water; insoluble in alcohol, soluble in HCl. **b. fluoiodide** $BaI_2.BaF_2$ = 566.68. Colorless plates, d.5.21 decomp. by water; insoluble in alcohol, soluble in acids. **b. fluoride** BaF_2 = 175.4. A white, heavy, amorphous powder, d.4.828, m.1280; insoluble in water, soluble in acids or ammonium chloride solution. It is a strong antiseptic; used for embalming and in enamels. **b. fluosilicate** $BaSiF_6$ = 279.67. A white powder, d.4.28; insoluble in water or alcohol, slightly soluble in acids or ammonium salt solutions; used as an insecticide in apple orchards. **b. formate** $Ba(HCOO)_2$ = 227.4. Barium formiate. Colorless crystals, d.3.21; soluble in water. **b. hexanitride** $BaN_6.H_2O$ = 239.45. White crystals which explode when heated; soluble in water. **b. hydrate.** B. hydroxide. **b. hydride** BaH_2 = 139.39. White, volatile crystals, d_0.4.21, m.1200, b.1400, decomp. by water. **b. hydrogen phosphate.** B. phosphate (acid). **b. hydrogen sulfide.** B. sulfhydrate. **b. hydroxide** $Ba(OH)_2.8H_2O$ = 315.5. Baria hydride, caustic baryta, hydrated barium. Colorless tetragonal crystals, d.1.656, m.78, b.103; soluble in water, alcohol or acids. It is a reagent, precipitant and alkaline reagent; used for fusing silicates, saponifying fats, refining vegetable and animal oils, and for neutralizing acids in sugar manufacture. **b. hydroxide solution.** A saturated solution of $Ba(OH)_2$ which contains about 3.5 % barium hydroxide; used as a reagent. **b. hypophosphate** $Ba_2P_2O_6$ = 432.82. White needles, soluble in water or alcohol. **b. hypophosphite** $Ba(H_2PO_2)_2.H_2O$ = 285.50. Colorless crystals, d.2.875; soluble in water, decomp. when heated. **b. hyposulfate.** B. dithionate. **b.**

hyposulfite. B. thiosulfate. **b. iodate** $Ba(IO_3)_2.H_2O$ = 505.2. White crystals, d.5.28, which lose water at 130 and are sparingly soluble in hot water or alcohol, but soluble in acids; decomp. when heated. **b. iodide** $BaI_2.2H_2O$ = 427.24. Heavy rhombic crystals, $d_{25°}$.5.150, m.740; soluble in water or alcohol. Used medicinally as an alterant. **b. lactate** $Ba(C_3H_5O_3)_2$ = 315.5. Colorless crystals, soluble in water or dilute alcohol. **b. malate** $BaC_4H_4O_5$ = 269.42. A white powder; slightly soluble in water. **b. malonate** $BaC_3H_2O_4.H_2O$ = 257.42. A white powder; slightly soluble in water. **b. manganate** $BaMnO_4$ = 256.4. Mangan green, Casseler green, Rosenstiel green. A green powder used as a non-poisonous pigment. **b. mercuryiodide.** See *Rohrbach's* solution. **b. metasilicate.** B. silicate. **b. metatungstate** $BaW_4O_{13}.9H_2O$ = 1243.5. White tetragonal crystals, d.4.298; soluble in water. **b. methylsulfate** $Ba(CH_3SO_4)_2.2H_2O$ = 401.5. Colorless crystals, soluble in water or alcohol. **b. minerals.** Barium is widely distributed in small quantities in many rocks, feldspars and micas. Its principal ores are barite, $BaSO_4$; witherite, $BaCO_3$. **b. molybdate** $BaMoO_4$ = 297.4. A white powder, insoluble in water or alcohol, and sparingly soluble in acids. **b. monophosphate.** See *b. phosphate.* **b. monosulfide.** B. sulfide. **b. monoxide.** B. oxide. **b. nitrate** $Ba(NO_3)_2$ = 261.4. White regular crystals, $d_{23°}$.3.244, m.575, decomp. on further heating; soluble in water, insoluble in alcohol. It occurs native as nitrobarite. Used as a reagent and precipitant, for standardizing soap solutions and also in pyrotechnics for green lights (*e.g.*, railroad torches, signal rockets, etc.). **b. nitrite** $Ba(NO_2)_2.H_2O$ = 247.4. Colorless hexagonal needles, $d_{29°}$.3.173, decomp. 115; soluble in water, alcohol, acids or alkalis. **b. oleate** $Ba(C_{18}H_{33}O_2)_2$ = 700.1. Granular white masses, insoluble in water, soluble in alcohol or ether. **b. oxalate** $Ba(C_2O_4).H_2O$ = 243.4. A white powder, d.2.658; insoluble in water or alcohol, soluble in acids or ammonium chloride solution. **b. oxide** BaO = 153.4. Baryta. b. monoxide, b. protoxide. A white or yellowish amorphous powder or crystals, d.4.73–5.74, m.1923, soluble in water, alcohol or acids. Used in the glass industry, and in the manufacture of barium salts. **b. perchlorate.** (1) *anhydrous-* $Ba(ClO_4)_2$. Desiccant. (2) *tetrahydrate,* $Ba(ClO_4)_2.4H_2O$ = 408.35. Colorless hexagonal crystals, m.505; soluble in water, alcohol or alkalis. The anhydrous salt, $Ba(ClO_4)_2$, is used in pyrotechnics. **b. periodate** $Ba_5(IO_6)_2$ = 1132.6. A white powder, insoluble in water, soluble in acids. **b. permanganate** $Ba(MnO_4)_2$ = 375.3. Brownish-violet crystals; soluble in water. Used in the manufacture of permanganates. **b. peroxide** BaO_2 = 169.4. B. dioxide, b. superoxide, b. binoxide. A white or grayish amorphous powder containing from 89–90 % BaO_2, d.4.958; insoluble in water, decomp. in acidulated water with the formation of hydrogen peroxide. Used in the manufacture of hydrogen peroxide, and formerly in the preparation of oxygen gas (Brin's method); as a bleaching agent for animal substances and plant fibres; as reagent for the detection of iodine and indican in urine; and in the glass industry. (Cryst.) $BaO_2.8H_2O$ = 313.45. Colorless crystals; insoluble in water, soluble in acids. **b. persulfate** $Ba(SO_4)_2$, $4H_2O$ = 401.55. White crystals decomp. by water. **b. phosphate** (di-) $BaHPO_4$ = 233.4. Acid b. phosphate. B. hydrogen phosphate. Colorless rhombic needles, $d_{15°}$.4.165; insoluble in water, soluble in acids or ammonium salt solutions. (mono-) $BaH_4(PO_4)_2$ = 331.5. Colorless triclinic crystals, $d_{4°}$.2.9, decomp. by water. (pyro-) $Ba_2P_2O_7$ = 448.8. White rhombic crystals, $d_{20°}$.3.9; insoluble in water, soluble in acids or ammonium salt solutions. (tri-) $Ba_3(PO_4)_2$ = 602.2. Colorless crystals, d.4.1; insoluble in water, soluble in acids. **b. phosphide** BaP_2 = 199.4. Grayish masses or powder, decomp. by water with the evolution of PH_3 gas. **b. phosphite** $BaHPO_3.1\frac{1}{2}H_2O$ = 244.4. A colorless powder, soluble in hot water. **b. platinic chloride.** B. chloroplatinate. **b. platinic rhodanate** $BaPt(CNS)_6$ = 680.8. B. platin rhodanide, b. platinum sulfocyanide, platinic b. thiocyanate. Red needles, soluble in water or alcohol. **b. platinocyanide.** B. cyanoplatinite. **b. platinous chloride.** B. chloroplatinite. **b. platinous cyanide.** B. cyanoplatinite. **b. potassium chlorate** $BaK(ClO_3)_3$ = 426.8. Colorless crystals, soluble in water; used in pyrotechnics. **b. propionate** $Ba(C_3H_5O_2)_2.H_2O$ = 301.50. A colorless powder, soluble in water. **b. protoxide.** B. oxide. **b. pyrophosphate.** See *b. phosphates.* (3). **b. rhodanate, b. rhodanide.** B. thiocyanate. **b. salicylate.** $Ba(C_7H_5O_3)_2.H_2O$ = 429.6. Colorless needles, soluble in water. **b. selenate.** $BaSeO_4$ = 280.57. A white amorphous powder, d.4.75, insoluble in water, decomp. by acids. **b. selenite.** $BaSeO_3$ = 264.57. White powder, used in the glass industry as decolorizer and for ruby glass. **b. silicate.** $BaSiO_3$ = 213.67. B. metasilicate. Colorless, rhombic crystals, $d_{.15°}$.4.44, m.1470, soluble in water or acids. **b. silicofluoride,** $BaSiF_6$ = 279.5. A white powder d.4.29, slightly soluble in water. **b. stearate** $Ba(C_{18}H_{35}O_2)$ = 704.12. A white, unctuous mass used as packing material for bearings in pumps handling alkaline solutions. **b. succinate.** $BaC_4H_4O_4$ = 253.5. Colorless crystals, slightly soluble in water, insoluble in alcohol. **b. sulfate.** $BaSO_4$ = 233.4. Artificial barytes, synthetic blanc fix. A rhombic microcrystalline powder, d.4.25–4.5, decomp. 1580, insoluble in water, alcohol, or dilute acids, but soluble in conc. sulfuric acid or ammonium nitrate solution. It is a reagent for detecting colloidal metals, a constituent of meals given before taking X-ray pictures of the stomach and intestines, used commercially (as "blanc fixe") as a white pigment, as a body for printing inks, etc. and similarly to barytes. Cf. *lithopone.* (acid-) $Ba(HSO_4)_2$ = 331.51. B. bisulfate. A white powder. **b. sulfhydrate** $Ba(SH)_2$ = 203.51. B. hydrosulfide. A yellowish or white powder, soluble in water; decomp. 250. **b. sulfide** (mono-) BaS = 169.4. Colorless rhombic crystals or an amorphous, yellow, phosphorescent powder, $d_{15°}$.4.25, decomp. if heated or by acids, with evolution of H_2S. Used as a depilatory and alterant, for the preparation of arsenic-free hydrogen sulfide gas and in making luminous paint; cf. *Bologna* phosphorus. (tri-), BaS_3 = 233.55. Yellowish-green crystals; soluble in water. (tetra-) BaS_4 = 265.61. Red rhombic crystals, d.2.987 soluble in water, insoluble in alcohol. **b. sulfite** $BaSO_3$ = 217.43. A white powder, insoluble in water, soluble in dilute acids. **b. sulfocyanate, b. sulfocyanide.**

Same as b. thiocyanate. **b. sulfophenylate** $Ba(C_6H_5SO_4)_2$ = 483.1. B. phenylsulfate. White crystals, soluble in water; used as an antiseptic. **b. sulfovinate.** B. ethylsulfate. **b. tannate.** A yellowish powder, soluble in water. **b. tartrate** $BaC_4H_4O_6.H_2O$ = 303.41. White powder, d.2.980, very slightly soluble in water. **b. tetrasulfide.** B. sulfide. **b. thiocyanate.** $Ba(CNS)_2.2H_2O$ = 289.55. B. thiocyanide, b. sulfocyanide. Colorless crystals soluble in water or alcohol; used in photography and the dye industry. **b. thiosulfate** $BaS_2O_3.H_2O$ = 267.51. A white powder, d.3.447; slightly soluble in water, insoluble in alcohol. **b. titanate.** $BaTiO_3$ = 233.5. A white powder, used in the manufacture of pigments. **b. triphosphate.** See *b. phosphates.* **b. trisulfide.** See *b. sulfides.* **b. trithionate** $BaS_3O_6.2H_2O$ = 365.6. Colorless shining scales, soluble in water. **b. tungstate** $BaWO_4$ = 385.4. B. wolframate, tungsten white. A white powder, insoluble in water, used as a pigment. **b. value.** The equivalent of the saponification value of an oil or fat, expressed as BaO. **b. white.** B. sulfate. **b. wolframate.** B. tungstate.

bark. Any portion of a stem or root of a tree outside the cambium circle. The following barks are official (U.S.P.):

Aspidosperma	Mezereum
Cascara sagrada	Pomegranate
Cascarilla	Quillaja
Cassia cinnamon	Rubus
Ceylon cinnamon	Saigon cinnamon
Cinchona	Sassafras
Cotton root bark	Viburnum opulus
Elm	Viburnum prunifolium
Euonymus	White oak
Frangula	Wild cherry
Juglans	Xanthoxylum

barkevite. Berkevilite. A black amphibole intermediate between hornblende and arfvedsonite, d.3.43.

Barkhausen effect. The magnetization changes *discontinuously* when the magnetic field-strength acting on a ferromagnetic material is changed.

barkometer. A hydrometer for tanning liquids, graduated from 0 to 60 degrees Baumé.

barley. The seeds of *Hordeum distichum*, a cultivated grass. **hulled-** B. grain deprived of its husk. **Indian-** Sabadilla. **pearl-** the polished and rounded b. seed which is rich in starch but devoid of hordein.

b. gum. A substance consisting mainly of pentosans, isolated from barley or malt.

barm. A suspension of yeast in a fermenting liquid.

barmagnet. See *magnet.*

barograph. A self-registering barometer. **b. chart.** The record produced by a barograph.

barometer. An apparatus that indicates the air-pressure. **aneroid-** A b. containing no mercury or other liquid. **alcohol-** A b. using colored alcohol. **Fortin-** A common type of mercury barometer in which the starting-point of the scale is the point of an ivory pin adjusted so as just to touch the surface of the mercury in the cistern. **glycerin-** A b. utilizing colored glycerin. **mercury-** A b. using mercury.

b. tube. A narrow tube closed at one end and more than 32 inches (760 mm) long.

barometrograph. A device for photographing on a moving film the changes in pressure shown by a baroscope.

barophoresis. Intertraction. Diffusion at a speed that is dependent upon extraneous forces; such as, density of adjacent phase, gravity etc. Thus in agar gels the upward and downward diffusions of methylene blue are unequal.

baroscope. A U-tube filled with a liquid and connected to the system the pressure changes of which are to be made visible.

Barosma. A genus of South African evergreen plants of the Rutaceae family. **B. betulina.** The source of *buchu.*

barosmin. (1) A concentration from *Barosma betulina* or *B. crenulata*, used medicinally as a diuretic. (2) $C_{27}H_{32}O_{16}$ = 612.2. Rutin, rutoside, eldrin. A rhamnoglucoside from buchu, m.183. Cf. *sophorin.*

barosmoid. The total principles from the leaves of *Barosma betulina;* used as a diuretic and stimulant tonic.

barotaxis. Stimulation of living cells caused by pressure.

barotropism. The reaction of living cells to changes in pressure.

barra. Burra gokero.

barrandite. A native iron phosphate.

barrel. (1) A unit of weight or volume whose magnitude varies according to the particular commodity for which it is employed, *e.g.,*

Wine	31 gallons
Ale	36 gallons
Petroleum	42 gallons
Rosin	180 pounds
Flour	196 pounds
Butter	224 pounds
Pork, Beef	200 pounds
Cement	376 pounds

(2) A cylindrical container of wood- or sheet-metal, for the shipment or storage of large quantities of solids or liquids.

barreter lamp. An electrical device used to smooth out fluctuating voltages; e.g. in a mains supply.

barringtonin. $C_{18}H_{28}O_{10}$ = 404.2. A colorless amorphous glucoside from *Barringtonia speciosa;* a Myrtaceae. It is a cardiac poison.

baru. The seeds of *Hibiscus tiliaceus*, a Malayan Malvaceae; a musk seed substitute.

barutin. A compound of theobromine and barium sodium salicylate.

barye. The cgs-unit of pressure; 1 barye = 1 dyne/cm.^{2}. Cf. *bar.*

barylite. The native barium silicate, $2BaO, SiO_2$.

barysilite. A native lead silicate, $Pb_3Si_2O_7$, which occurs in white hexagonal crystals.

baryta. Barium oxide. **calcined-** Barium oxide. **caustic-** Barium hydroxide. **hydrated-** Barium hydroxide. **b. mixture.** One part of saturated $Ba(NO_3)_2$ and two parts of saturated $Ba(OH)_2$ solutions; used in urine analysis. **b. water.** A saturated solution of barium hydroxide (3.5 %); it is alkaline, absorbs CO_2 from air; used as a reagent.

barytes. Barite.

baryto. A prefix indicating the presence of barium in a mineral. **b. calcite.** Alstonite.

baryum. Barium.

basalt. A compact, black, greenish or brownish igneous rock composed of particles of feldspar, augite and iron minerals. Cf. *diabase.*

basanite. A form of jasper used in the streak test for gold. Cf. *touchstone.*

base. (1) A compound which yields hydroxyl-ions in aqueous solution; or, a compound which reacts with an acid to form water and salt. (2) An extension of the term "base" covers substances dissolved in media other than water:

WATER SYSTEM (aquo system)

$$Ca^{+}{}_{+}{}^{-OH}_{-OH} + 2H^{+}{}^{-}Cl = H^{+}{}_{+}{}^{-}O + CaCl_2$$

$$K^{+}{}^{-}OH + MeCO.OH = H^{+}{}_{+}{}^{-}O + MeCO.OK$$

aquo-base *aquo-acid* *aquo-salt*

AMMONIA SYSTEM

$$Ca^{+}{}_{+}{}^{-NH_2}_{-NH_2} + HCl = NH_3 + Ca^{+}{}_{+}{}^{-NH_2}_{-Cl}$$

ammono-base *ammono-basic-salt*

$$K^{+}{}^{-}NH_2 + MeCO.NH_2 = NH_3 + MeCO.NHK$$

ammono-base *ammono-acid* *ammono-salt*

HYDROCARBON SYSTEM

$$Ca^{+}{}_{+}{}^{-CH_3}_{-CH_3} + HCl = CH_4 + Ca^{+}{}_{+}{}^{-CH_3}_{-Cl}$$

hydrocarbo-base *hydrocarbo-basic-salt*

(3) A proton acceptor, *i.e.*, a substance whose molecules are capable of taking up protons. **ammono-** A metallic amine which yields NH_2^- ion in liquid ammonia. **aquo-** A compound that ionizes in water to OH^- ions. **hydrocarbo-** Any metallic aryl- or alkyl compound which dissociates in hydrocarbons. **inorganic-** The hydroxide of a metal. **leuco-** Leucobase. **nitrogenous-** An amine, characterized by the ending *-ine*. Cf. diamine, triamine. **organic-** A carbon compound containing trivalent nitrogen. **primary-** See primary *amine*. Cf. *amines, alkaloids, ptomaines*. **secondary-** See secondary *amine*. **tertiary-** See tertiary *amine*.

b. exchange. The replacement of one cation adsorbed on a colloidal particle (e.g. soil) by another. **b. goods.** A mixture of fertilizer materials, usually superphosphates and nitrogenous materials. **b. metal.** (1) A metal whose hydroxide is soluble in water. (2) A metal which oxidizes rapidly as opposed to a noble metal.

basic. Having properties of a base. **di-** A base having *two;* **mono-** *one;* **tetra-** *four;* **tri-***three* replaceable hydrogen atoms.

b. anhydride. The oxide of a metal. **b. capacity.** Basicity. The property of an acid of yielding one or more hydrogen ions per molecule; hence, the number of hydrogen-atoms in an acid which can be replaced by a monovalent metal; as, HCl—monobasic, H_2SO_4—dibasic. **b. dyes.** A group of aniline colors used for dyeing mordanted cotton and silk. They are the salts of colorless bases with acetic, oxalic, nitric, sulfuric or hydrochloric acid, which decompose during the dyeing process. The free base combines with the acid constituent of the animal fibre or the acid constituent of the mordant in the case of vegetable fibres, thereby fixing the color in the fibre. **b. hearth.** See Thomas process. **b. lime phosphate.** A superphosphate neutralized with an excess of 6 % calcium carbonate. **b. nitrogen.** The nitrogen of a protein due to the basic amino acids and cystine precipitable by phosphotungstic acid. **b. phosphate slag.** B. slag. **b. principle.** An alkaloid. **b. rocks.** A class of igneous rocks which consist of free basic oxides; *e.g.*, corundum, magnetite, and some of the titaniferous iron ores. **b. salt.** A compound of bases and acids in which not all of the hydroxide of the base has been replaced by an acid radical; *e.g.*, bases that are not completely neutralized; *e.g.*, $Bi(OH)_2Cl$ and $Bi(OH)Cl_2$. **b. slag.** Thomas slag; Thomas phosphate. A finely-ground by-product of steel manufacture which contains 12–25 % P_2O_5, 40–50 % CaO and 5–15 % SiO_2; 80 % of the phosphoric acid should be soluble in 2 % citric acid.

basichromatin. The basic portion of the chromatin molecule.

basicity. (1) Basic capacity. (2) The reciprocal of acidity, measured either as (a) hydroxyl ion concentration (effective alkalinity or intensity of action) or (b) normality (free alkalinity or amount of action). Cf. *acidity*.

basil. (1) Sweet basil. The plant *Ocimum basilicum*, a Labiatae, used as flavoring in cooking, a carminative and an aromatic. (2) A tanned sheepskin. **b. oil.** The essential oil from the leaves of *Ocimum basilicum*. A yellow, aromatic liquid, d.0.945–0.987, $[\alpha]_D$ = +7° to +12°, soluble in alcohol. The chief constituents are cineol, chavicol, linalool; used for flavoring.

Basil Valentine. A Benedictine monk of Erfurt (Germany) and alchemist noted for his description of antimony salts and his recognition of the nitrates of bismuth, tin, mercury; the preparation of hydrochloric acid, sugar of lead; the discovery of methods for the manufacture of sulfuric acid and ammonia. His works are dated the 15th century but are supposed by some to date from the 17th century.

basophil. Capable of being stained by basic dyestuffs (*e.g.*, cells).

bass. Bast. **b. wood.** Linden.

bassisterol. $C_{27}H_{46}O$ = 383.3. An alcohol occurring in the unsaponifiable part of illipé *butter*, q.v.

bassora gum. A mixture of highly colored gums of the tragacanth type, from India; partly soluble in water.

bassorin. $C_6H_{10}O_5$ = 262.1. Tragacanthose. A carbohydrate from tragacanth and other gums. A colorless tasteless powder; soluble in alkalis, it produces a stiff gel and then a viscous paste with water.

bast. Bass. The fibrous inner part of *Calotropis gigantea*, an Asclepiadaceae, from Russia; used for ropes, mats and shoes. **b. fiber.** See *fiber*.

bastite. An altered pyroxene, resembling serpentine.

bastnasite. Hamartite. A rare earth carbonate [(Ce, La, Di)F]CO_3.

bastose. The cellulose of jute.

basylous. An obsolete term for basic.

bat guano. The droppings, dead bodies, etc. of bats, deposited in caves or in arid areas; used as fertilizer.

Bates polariscope. A polariscope with adjustable brightness of illumination, used in sugar refineries. **b. tube.** A metallic tube for the Bates polariscope.

bath. A vessel or device for keeping objects at a definite or varying temperature. **air-** A b. in which the object is surrounded by air of definite temperature. **metal-** A b. in which the object is suspended in a molten metal. **oil, paraffin-** A b. containing molten paraffin. **sand-** A shallow dish filled with sand. **steam-**

A device by which an object is heated by means of steam. **water-** A metallic container of varied design for keeping water heated to a certain temperature. Cf. *thermostat*.

bathochrome. A organic radical which, when introduced into an organic molecule, causes a shift in the absorption spectrum toward the red. Cf. *auxochrome*.

batholite. A molten granite having permeated sedimentary layers.

bating. Puering.

batrachiolin. A vitellin from frogs' eggs.

batracin. An arrow-poison of South American natives, prepared from the skin of an amphibian, *Phyllobates chocoensis*.

Battersea. A brand of crucibles, muffles, roasting dishes and scorifiers.

battery. Any two or more electrical cells, dynamos, or couples connected so that they behave as a single supply of electricity. **dry-** A number of dry cells, usually three, used for electrical pocket lights, etc. and other machines. **storage-** Accumulator.

batyl alcohol. $C_{21}H_{44}O_3$ = 344.3. The glyceryl ether $C_{18}H_{37}O—C_3H_5(OH)_2$ from shark liver oils; lustrous crystals, m.69. Cf. *chimyl* and *selachyl* alcohols.

Baudouin test. A test for sesame oil: cane sugar or an alcoholic solution of furfural is added to boiling HCl, and the oil gives a red color.

Baumann, Eugen. 1846–1896. A German chemist. **B.- Schotten reaction.** A reaction between alcohols and acid chlorides in alkaline solution to give an ester: $R.OH + R'.COCl + NaOH \rightarrow R'.COOR + NaCl + H_2O$.

Baumé, Antoine. 1728–1804. A French pharmacist who devised a hydrometer scale. **B. hydrometer.** A hydrometer with B.'s scale. See *hydrometers*. **B. scale.** A hydrometer scale for the determination of the densities of liquids.

bausteine. German for building stone. The amino acids of the proteins which are necessary as the "building stones" of the protoplasm of an organism. Cf. *polypeptides*.

bauxite. Beauxite. A native aluminum hydroxide, $Al_2O(OH)_4$, forming a white, grayish or reddish clay-like mineral which often contains iron; used in the manufacture of alum, aluminum and fire-bricks. See also *boehmite*, *alexite*.

bay. The sweet bay or laurel tree: *Laurus nobilis*, a Lauraceae. **indian-** *Laurus indica* (Lauraceae). **red-** *Persea carolinensis* (Lauraceae). Cf. *Bayberry*.

b. leaves oil. The essential oil distilled from bay leaves, *Laurus nobilis*. **b. oil.** Myrcia oil. An essential oil from *pimenta acris*. A pale, yellow liquid, d.0.965–0.995. The chief constituents are chavicol, eugenol and myrcene. **b. rum.** See *bay-rum*. **b. salt.** Crude sodium chloride, obtained by evaporating sea water in shallow pits. **b. wood.** A mahogany from Honduras (Campeche bay).

bayberry. (1) The fruit of *Laurus nobilis*, European laurel or sweet bay. (2) The fruit of *Myrica cerifera*, wax myrtle. (3) The fruit of *Pimenta acris*, allspice or pimenta. **b. bark.** Myrica, candleberry, waxberry. The dried bark of the root of *Myrica cerifera*, a Myricacea. It is used as a fluid extract as a digestive, carminative or nerve stimulant. **b. wax.** Myrtle wax, laurel wax, bayberry tallow. A green, wax-like mixture of fats, chiefly palmitin, derived from the fruits of myrica.

baycurine. An alkaloid from the roots of *Statice braziliensis* (baycuru root), a Plumbaginaceae of Brazil.

baycuru root. The roots of *Statice braziliensis* (Plumbaginaceae). It is one of the most powerful astringents known, and is used in the form of fluid extract.

Bayer acid. (1) *2.8-* or 2.7-Naphthylaminesulfonic acid. (2) Also applied to *β*-Naphthol sulfonic acid. **B. 205.** Germanin.

bayerite. A native aluminum hydroxide, $Al(OH)_3$, similar to boehmite.

bayldonite. A native lead vanadate.

bay-rum. Bay rum, spiritus myrciae. An aromatic liquid containing 8 cc. bay oil, 0.5 cc. orange oil, 0.5 cc. pimenta oil, 610 cc. alcohol, 320 cc. water per liter. Used as refreshing ablution, in cosmetics and perfumery.

B.B.C. Brombenzyl cyanide.

bbl. An abbreviation for *barrel(s)*.

bdella. Hirudo.

bdellium. An aromatic gum-resin from various sources; as, *Balsamodendron africanum*, *Balsamodendron mukul*. Cf. *Burseraceae*.

Be The symbol for beryllium, sometimes called glucinum, Gl.

Bé. Abbreviation for Baumé.

bead test. A qualitative flame test, made by placing a crystal of microcosmic salt or borax in the loop of a platinum wire, melting it to a bead in the bunsen flame, dipping it into the substance to be analysed and again holding it in the bunsen or blow-pipe flame, exposing it either to the oxidizing (OF), or reducing (RF) part of the flame. The color of the clear flux indicates the presence of metals as follows:

	Microcosmic salt		*Borax*	
	O.F.	R.F.	O.F.	R.F.
Cr	green	green	green	green
Co	blue	blue	blue	blue
Cu	blue	red	greenish-blue	red
Fe	brown	colorless or gray	yellow	green
Mn	violet	colorless	violet	colorless
Mo	colorless	green	colorless	brown
Ni	yellow	yellow	brown	gray
Ti	colorless	violet	colorless	yellow
W	colorless	blue	colorless	brown
U	green	green	red	green
V	yellow	green	colorless	green

beaded. Like a string of beads; as, disjointed colonies of bacteria along the line of inoculation.

beading. The production of bead-shaped drops *e.g.*, by condensing alcohol vapor.

beading oil. A mixture of sweet almond oil and ammonium sulfate, used for the production of artificial beading in distilled liquids.

beaker. A cup-shaped vessel made of glass, quartz, porcelain, aluminum or copper, used in laboratories for heating liquids. **b. flask.** A wide-lipped conical beaker or flask.

Beale's stain. An aqueous carmine solution containing some alcohol, ammonium and glycerin, used for staining nerve and connective tissue.

bean. (1) The seeds of Leguminosae or plants of the bean family. (2) Any other similarly shaped seed or seed pod. **bog-, buck-** Menyanthes. **broad-, common-** The seeds of

Vicia (Faba) vulgaris. **calabar-** Physostigma. **castor-** See *castor.* **French-, kidney-, navy-** The seeds of *Phaseolus vulgaris.* **Lima-** The seeds of *Phaseolus lunatus.* **ordeal-** Physostigma. **soja-, soya-** See *soy.* **St. Ignatius-** Strychnos. **vanilla-** See *vanilla.*

bearberry. Uva ursi. **b. bark.** Cascara sagrada.

bearing. The socket of an axle or rotating shaft. **b. metal solution.** A mixture of 400 cc. conc. HCl, 200 cc. conc. HNO_3, 40 gm. KCl and 1 l. of water.

bearsfoot. The root of *Polymnia uvedalia,* a Compositae of North America; used as fluid extract as a tonic or alterative. **English-** The plant *Helleborus foetidus,* a Ranunculaceae.

bearsweed. Eriodictyon.

bearwood. Cascara sagrada.

beater. An oval shaped vessel used in paper making. It contains a roll provided with blunt knives which circulates the pulp and cuts, fibrillates and hydrates it.

Beaudouin's Reagent. See *Baudouin.*

Beaumé. See *Baumé.*

beauxite. Bauxite.

beaverite. A highly-hydrated lead sulfate, from Beaver County, Utah, U. S. A.

bebeerine. $C_{18}H_{21}O_3N$ = 299.30. Bauxine, bebirine, cissampeline, pelosine. An alkaloid from bebeeru, the bark of *Nectandra rodiaei,* A Lauraceae of Guiana, and *Cissampelos pareira,* a Menispermaceae of S. Africa. A white amorphous powder, m.214, $[\alpha]_D$ −298°, soluble in alcohol or ether. It is an antipyretic and tonic similar to quinine. **b. hydrochloride.** $C_{18}H_{21}O_3N.HCl$ = 335.76. Reddish scales, m.259, soluble in water or alcohol. **b. sulfate.** $(C_{18}H_{21}O_3N)_2.H_2SO_4$ = 696.6. Brownish crystals, soluble in water.

bebeeru. The bark of the green-heart tree, *Nectandra rodiaei,* a Lauraceae of tropical America; used like cinchona bark. Cf. *chondroine.*

bebirine. Bebeerine.

beccarite. An olive-green, vitreous, native zirconium oxide, ZrO_2.

beche-de-mer. Trepang. A marine slug of the Pacific coral reefs, which is eaten as a delicacy by the Chinese.

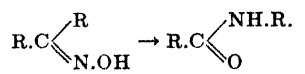
Becher, Johann Joachim. 1635–1682. A German physician, adventurer and alchemical writer, noted as the founder of the phlogiston theory.

Bechhold filter. An ultra-filtration apparatus for the separation of colloids by means of disks impregnated with nitrocellulose.

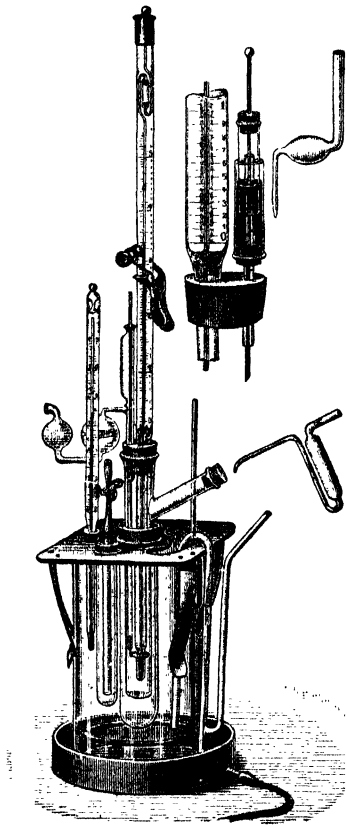
bechilite. Borocalcite.

beckelite. A calcium silicate containing cerium, lanthanum and didymium.

Beckmann, Ernst. 1853–1923. A German organic chemist noted for molecular weight determinations, and work on isomerism and hydroxylamine. **B. apparatus.** A glass apparatus for the determination of the molecular weight by (a) the lowering of the freezing point, or (b) raising of the boiling point of a solution. See figure. **B. burner.** A glass tube used as a burner and supported over a dish in which vapors or gases are evolved; it is used for producing colored flames. **B. reaction. B. rearrangement.** An intramolecular rearrangement, during which a ketoxime forms its isomeric amide, when treated with phosphorus pentachloride:



B. thermometer. Ultrathermometer. A thermometer used in the B. apparatus to read temperatures accurately to 0.01°C over any desired small range (about 6°C). The amount of mercury in the bulb, and therefore the temperature at which the thermometer is used, may be altered at will.



Beckmann apparatus.

Becquerel, Antoine Henri. 1852–1908. A French physicist and discoverer of radioactive radiations. **B. rays.** The radiations emitted from uranium and similar substances which affect the photographic plate. Cf. *radioactive* rays.

becquerelite. $2UO_3.3H_2O$. A hydrous, radioactive mineral of the Belgian Congo; it contains 70 % uranium, and is the most radioactive mineral.

beda nuts. The dried ripe seeds of *Terminalia belerica* (cf. *myrobalan*), exported from India; used for tanning and in the preparation of a black dye.

bee balm. Monarda.

beech. A genus of trees, *Fagus sylvatica.* Cf. *fagine.* **b. nut.** The seeds of b. used for expression of oil and for b. nut cake. **b. wood creosote.** The distillation product of b. wood, used as antiseptic and preservative.

beef extract. An aqueous extract of lean beef, partly desiccated, which contains the soluble

fibrin and proteins; it is used as a nutrient and in the preparation of culture media.

beegerite. A native lead sulfobismuthide, $Pb_6Bi_2S_9$ or $6PbS,Bi_2S_3$; d.7.2.

beehive. A small circular glass shelf with a hole in the top, used for collecting gases in pneumatic troughs.

beemerose. A nephelite rock or elaeolite syenite from New Jersey.

beer. A beverage containing from 3 to 7 % alcohol; a fermented infusion or decoction of malted barley with hops. Cf. *brewing wort.* **near-** One containing less than 0.5 % alcohol, in use during prohibition in U.S.

Beer's law. The intensity of a color or of an emergent ray of light is inversely proportional to the depth of liquid through which it travels; hence the absorption depends on the number of molecules present. Cf. *Lambert's* law.

beerbachose. A diorite rock from Butte County, California.

beeswax. (1) Wax from the honeycomb of bees. It contains cerolein, cerotic acid, myricyl alcohol, melissic acid and the alkanes: $C_{25}H_{52}$, $C_{27}H_{56}$, $C_{29}H_{60}$, $C_{31}H_{64}$. (2) White wax, cera alba. The bleached wax from the honeycomb of bees, d.0.965–0.969, m.63; used in pharmacy and industry.

beet. The plant *Beta vulgaris*, a Chenopodiaceae, cultivated for its root (sugar beet) containing up to 20 % sugar. **b. slop.** The liquid product remaining after extraction of b. sugar. It contains from 3–4 % N, and 8–10 % K; used as fertilizer. **b. sugar.** Sugar obtained from the beet by a process of liquid extraction. See *sucrose.*

Beggiatoaceae. A family of bacteria, which consist of motile cells in sheathless threads containing sulfur granules.

behenic acid. $C_{22}H_{44}O_2$ = 340.44. Docosanoic acid*, *n*-docosoic acid, $Me(CH_2)_{20}COOH$. A constituent of ben oil and the roots of *Centaurea behen.* Colorless needles, m.84, b.306, insoluble in water, sparingly soluble in alcohol or ether.

behenolic acid. $C_{22}H_{40}O_2$ = 336.43. T*-docosanoic acid, *13*-docosynoic acid*, $Me(CH_2)_7C{:}C(CH_2)_{11}COOH$. White needles, m.57.5; insoluble in water, soluble in alcohol or chloroform.

behenolyl. The monovalent radical, $C_{21}H_{39}CO$—, derived from behenolic acid. **b. amide.** $C_{22}H_{41}ON$ = 335.3. Colorless crystals, m.90. **b. chloride.** $C_{22}H_{39}OCl$ = 342.3. Colorless crystals, m.29.

Behr, Arno. An American chemist; a pioneer in the corn-products industry.

beidellite. A clay mineral from Beidell, Colo., inactive in base exchange. $Al_2O_3.3SiO_2.4H_2O$.

Beilby layer. The amorphous atomic layer formed on the surface of a metal when it is polished, or when two crystal surfaces are rubbed together.

Beilstein, Friedrich Konrad. 1838–1906. A Russian-born German chemist noted as compiler of **B.'s Handbuch.** A general reference book of 18 volumes describing 200,000 organic compounds. Cf. *Prager*-Jacobson classification.

bel. A unit of comparative loudness (not intensity) of sound. The log of the ratio of the intensities of two sounds. The smallest change in the loudness that the ear can detect. Cf. *sound, loudness.*

belcherose. A pyroxenite rock from Massachusetts.

beldongrite. A native manganese iron oxide.

belite. A crystalline constituent of portland cement clinker, probably $2CaO.SiO_2$. Cf. *alite.*

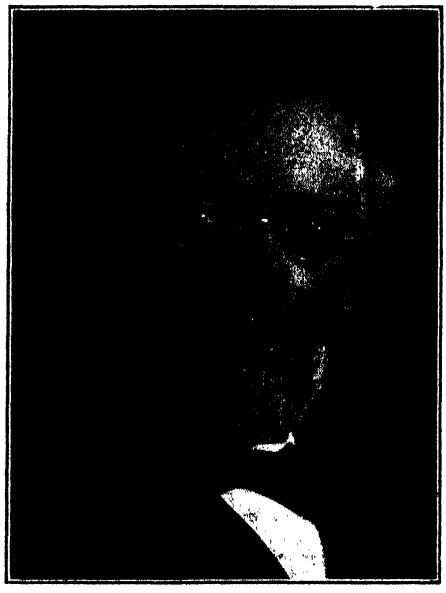
Bell, Jacob. 1810–1859. A British pharmaceutical chemist noted as the founder of the Pharmaceutical Society of Great Britain and the Pharmaceutical Journal.

bell. A hollow cup-shaped vessel. **b. glass.** Bell jars. A glass b. with or without tubulations, used to cover specimens and for experiments in a vacuum. **b. metal.** An alloy of 4 parts copper and 1 part tin, d.8.7; m.890, used for bells. **b. metal ore.** Stannite.

belladonna. Deadly nightshade, bane wort, poison cherry, death's herb. The European herb, *Atropa belladonna*, a Solanaceae whose leaves and roots are used in medicine. **b. leaves.** The dried leaves of *Atropa belladonna.* Used as fluid extract or tincture, as a narcotic, antihydriotic, antispasmodic or anodyne. **b. roots.** The roots of *Atropa belladonna;* used as fluid extract, as an antispasmodic.

belladonnine. $C_{17}H_{21}O_2N$ = 271.26. An alkaloid from belladonna. Cf. *atropine.*

Bellier's Test. A means of detecting upwards of 2 % of arachis oil in a saponified oil, by the formation of arachidic acid (q.v.).



Arno Behr.

belonesite. A molybdenum ore, $MgO.MoO_3$, occurring in needle-shaped crystals.

belonites. The small needle-shaped crystals found in volcanic rocks.

Bemberg silk. An artificial silk made by a cuprammonium process.

ben oil. The expressed oil from the seeds of *Moringa pterygosperma* and *M. oleifera*, a Moringaceae. It is a laxative and bland, and is used for extracting odors. Cf. *benne* oil.

Bence-Jones protein. A protein in the urine of patients with myeloma; it coagulates at 60 and redissolves at 100.

Benedict, Stanley Rossiter. 1884–1936. An American biochemist noted for analytical research. **B's. solution.** Dissolve 173 gm. Na-K tartrate and 200 gm. Na_2CO_3 in 800 cc.

boiling water, filter, add 17.3 gm. $CuSO_4$ in 100 cc. and dilute to 1 liter. **quantitative.** For direct determination of reducing sugars, 25 cc. reduce 50 mg. glucose. Use 18.0 gm. $CuSO_4$, 200 gm. Na or K citrate, 200 gm. $Na_2CO_3.10H_2O$, 125 gm. KCNS and 5 cc. 5% potassium ferrocyanide solution per liter. **B. test.** A test for glucose. Add 5 cc. of B. solution to about 8–10 drops of the sample, heat; if glucose is present a red or yellowish precipitate forms.

Bengal isinglass. Agar. **b. kino.** *Butea* gum. **b. lights.** A mixture of sulfur, sugar, and potassium nitrate to which either barium or strontium salts are added. This gives a green or red light, used in pyrotechnics.

benjamin. *Benzoin* gum.

benne oil. Sesame oil.

Bennert manometer. A U-shaped, graduated glass tube mounted on a board and used as a manometer.

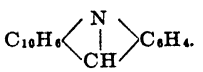
bentonite. Sodium montmorillonite. A clay of the Pacific Coast States, which swells when wetted, and has strong adsorbing properties.

benz. Benzo-.

benzacetin. (1) $C_{11}H_{13}O_4N$ = 223.11. Acetamido-ethylsalicylic acid. Colorless crystals, m.190. Cf. *phenacetin.* (2) $C_{10}H_{11}O_4N$ = 209.09. Acetamido-methyl-salicylic acid. Colorless crystals, m.205.

benzaconine. $C_{32}H_{43}O_{10}N$ = 601.1. Benzoylconine, picraconitine, napelline. An alkaloid produced by the partial hydrolysis of aconitine, m.130.

benzacridine. $C_{17}H_{11}N$ = 229.1. Phenonaphthacridine. The heterocyclic compound



dihydro- b. carboxylic acid. Tetrophan.

benzal. Benzilidene, benzenyl. The divalent radical, Ph.CH<, derived from toluene. Cf. *benzylidene, benzenyl.*

benzalacetone. $C_{10}H_{10}O$ = 146.1. Benzylidene acetone, cinnamyl methyl ketone, acetocinnamone, methyl styryl ketone, PhCH:CH.CO.Me. Colorless crystals, m.41, b.262. It has coumarin-like odor, is soluble in alcohol or ether; used in organic synthesis.

benzalacetophenone. $C_{15}H_{12}O$ = 208.17. Cinnamyl phenyl ketone, PhCH:CH.CO.Ph. Colorless crystals, m.62, b.346; insoluble in water, soluble in alcohol or ether.

benzalagen. Analgen.

benzalaniline. $C_{13}H_{11}N$ = 181.1. Benzilidene aniline. PhCH:NPh. Colorless crystals, m.45; used in organic synthesis.

benzalazine. $C_{14}H_{12}N_2$ = 208.1. Benzilideneazine, benzaldehyde azine, dibenzalhydrazine. PhCH:N.N:CHPh. Yellow prisms, m.93, decomp.; insoluble in water, soluble in hot alcohol, ether or chloroform.

benzalbromide. $C_7H_6Br_2$ = 249.87. Benzylidene bromide, α-dibromotoluene, $PhCHBr_2$. A fuming oily liquid, d.1.51, b.140.

benzalchloride. $C_7H_6Cl_2$ = 160.99. Benzylidene chloride, benzyl bichloride, benzylene chloride, chlorobenzal, α,α′ dichlorotoluene, bitter almond oil chloride, $PhCHCl_2$. A colorless liquid, d.1.2577, m. −16, b.206; insoluble in water, miscible with alcohol or ether. Used in chemical warfare and in the manufacture of dyes.

benzalcohol. Benzyl alcohol.

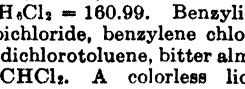
benzalcyanhydrin. C_8H_7ON = 133.11. Benzaldehyde cyanohydrin, mandelonitrile. The additive compound PhCH(OH)CN, formed from benzaldehyde and hydrocyanic acid. A colorless liquid, d.1.121, m. −10, decomp. 170; insoluble in water, soluble in alcohol or ether.

benzaldehyde (*ben-zal′-de-hid*) C_7H_6O = 106.09. Phenylaldehyde, benzene carbonal*, benzene methylal, benzoylhydride, artificial almond oil, Ph.CHO. A colorless liquid of bitter almond odor, d.1.0504, m. −13.5, b.179; sparingly soluble in water, miscible with alcohol, ether or chloroform. Used in the manufacture of dyes, perfumes, and drugs; also as a reagent for detecting alkaloids and fusel oil. **o-amino-** $NH_2.C_6H_4CHO$ = 121.1. Anthranilaldehyde. Colorless leaflets, m.39, decomp. on further heating; slightly soluble in water, readily soluble in alcohol or ether. **m-amino-** A yellow amorphous powder. **p-amino-** Colorless scales, m.70; soluble in water. **α-bromo-** Benzoylbromide. **α-chloro-** Benzoylchloride. **cyano-** Benzoylcyanide. **diethylamino-** See *diethyl-*, **dihydroxy-** *2.3-* Pyrocatechualdehyde. *2.4-* β-Resorcylaldehyde. *2.5-* Gentisaldehyde. *3.4-* Protocatechuic aldehyde. **dimethoxy-** Veratraldehyde. **dinitro-** $(NO_2)_2C_6H_4CHO$ = 196.05. Dinitrobenzene carbonal*. Yellow crystals **2.4-** m.72 $b._{10mm}$195. **2.6-** m.123. Slightly soluble in water. *3-***ethoxy-***4-***hydroxy-** Bourbonal. **ethoxy-methoxy-** Vanillin ethyl ether. **hexahydro-** Cyclohexane aldehyde. **o-hydroxy-** Salicylaldehyde. **m-hydroxy-** Colorless needles, m.104, b.240; soluble in water, alcohol or ether. **p-hydroxy-** Colorless needles, m.115, sublimes on further heating, sparingly soluble in water, soluble in alcohol or ether. **hydroxy-methoxy-** Vanillin. **isopropyl-** Cumaldehyde. **p-methoxy-** Anisaldehyde. **methyl-** Tolylaldehyde. **methylenedioxy-** Piperonal. **o-nitro-** $NO_2.C_6H_4CHO$ = 151.09. Yellow needles, m.44, $b._{22mm}$153; slightly soluble in water, soluble in alcohol or ether. **m-nitro-** Colorless needles, m.58, $b._{22mm}$ 164; very slightly soluble in water, soluble in alcohol or ether. **p-nitro-** Colorless prisms, m.106 insoluble in water, soluble in alcohol or ether. **trihydroxy-** *3.4.5-* Gallaldehyde. **trimethyl-** Durylaldehyde. **trinitro-** $(NO_2)_3C_6H_2CHO$ = 241.05. Trinitrobenzene carbonal*. **2.4.6-** Yellow scales, m.119, insoluble in water.

b. azine. Benzalazine. **b. cyanhydrin.** See *benzalcyanhydrin.* **b. green.** Malachite green. **b. hydrazone.** Benzalhydrazine. **b. oxime.** Benzaldoxime. **b. phenylhydrazone.** $C_{13}H_{12}N_2$ = 196.18. Benzalphenylhydrazone, benzilidenephenylhydrazine, PhCH:N.NHPh. Colorless crystals, m.155, $b._{15mm}$236; slightly soluble in ether.

benzaldiphenyl maleid. $PhCH:(C_2O_2)Ph_2$ = 312.08.

benzaldoxime. C_7H_7ON = 121.10. Benzaldehydeoxime. The compound PhCH:NOH, which occurs in several isomeric forms, each giving two series of derivatives:



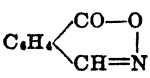
alpha- Benzantialdoxime, antibenzaldoxime. Colorless leaflets, d.1.11, m.35, $b._{6mm}$117. **beta-**

Benzsynaldoxime, **synbenzaldoxime, isobenzaldoxime.** Colorless needles, m.125, insoluble in water, slightly soluble in benzene or ether. The substitution products and their terminology are:

N—OR	N—OR	R—N:O	R—N:O
HCPh	PhCH	HCPh	PhCH
O-syn-	*O-anti-*	*N-syn-*	*N-anti-*
β-O	*α*-O	*β*-N	*β*-N

p-**methoxy-** PhCHOHMe = 135.08. Anisaldoxime. Colorless crystals, m.45. **N-methyl-** Benzantialdoxime-N-methylether. **O-methyl-** (1) Benzantialdoxime-O-methylether, PhCN:NOMe = 135.08. Colorless liquid, b.191. (2) Benzsynaldoxime-O-methylether. Colorless crystals, m.82. **N-phenyl-** Antibenzaldoxime-N-phenylether, PhCH:NOPh = 197.08. Colorless crystals, m.109. **m-nitro-alpha-** Colorless crystals, m.117. **p-nitro-alpha-** Colorless crystals, m.129. **o-nitro-beta-** Colorless crystals, m.136. **m-nitro-beta-** Colorless crystals, m.118. **p-nitro-beta-** Colorless crystals, m. 174.

b. acetate. $PhCH:NO.COCH_3$ = 163.08. **anti-** Colorless crystals or liquid, m.15; soluble in water. **b. acetic acid, anti-O-acetic acid.** $PhCH:NO.CH_2COOH$ = 179.09. Colorless crystals, m.98. **anti-N-acetic acid.** $PhCH(ON)CH_2COOH$ = 179.09. Colorless crystals, m.183. **b. carboxylic anhydride.** $C_8H_5O_2N$ = 147.09. The ring compound



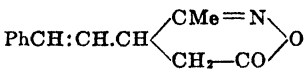
which, at 145°C, becomes $C_6H_4(CN)COOH$.

benzalethylamine. $C_9H_{11}N$ = 133.1. $PhCH:NC_2H_5$. Colorless liquid, b.195.

benzal green. Malachite green.

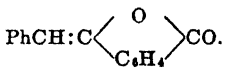
benzalhydrazine. $C_7H_8N_2$ = 120.1. Benzylidene hydrazine, benzaldehyde hydrazone, $PhCH:N.NH_2$. Colorless crystals or liquid, m.16, $b._{14mm}140$.

benzallevoxime. $C_{12}H_{13}O_2N$ = 203.1. The heterocyclic compound,



benzalphenylhydrazone. Benzaldehyde phenylhydrazone.

benzalphthalide. $C_{15}H_{10}O_2$ = 222.1. Benzylidene phthalide. Colorless crystals, m.99,



benzamarone. $C_{35}H_{28}O_2$ = 480.7. *α*-Benzalbisdesoxybenzoin, *1.2.3.4.5*-pentaphenyl-*1.5*-pentanedione*. $PhCH(CHPh.COPh)_2$. Colorless crystals, m.219; slightly soluble in hot water.

benzamide. C_7H_7ON = 121.14. Benzoylamide, benzene carbon amide*, benzoic amide. The amide. $PhCONH_2$. Colorless monoclinic tables, $d_4°$1.341, m.128, b.290; slightly soluble in water, soluble in alcohol, ether or ammonia. **o-amino-** Aminobenzene carbon amide*. $NH_2.C_6H_4.CONH_2$ = 136.12. Colorless leaflets, m.108; soluble in water, alcohol or ether. **m-amino-** Yellow leaflets, m.79, b.298; slightly soluble in water, soluble in alcohol or ether. **p-amino-** Yellow crystals, m.179; slightly soluble in water. **benzoyl-** Dibenzamide. **bromo-** C_7H_6NOBr = 199.97. Colorless crystals, *o-* m.156; *m-* m.150; *p-* m.190. **chloral-** See *chloral*. **choro-** C_7H_6NOCl = 155.56. Chlorobenzene carbon amide*. Colorless crystals, *o-* m.141; *m-* m.135.4; *p-* m.178.3. **di-** Dibenzamide. **fluoro-** C_7H_6NOF = 139.05. Colorless crystals, *o-* m.116; *m-* m.130; *p-* m.154.5. **hydro-** See *hydrobenzamide*. **o-hydroxy-** $HO.C_6H_4CONH_2$ = 137.10. Salicylamide. Yellow leaflets, m.140, decomp. 270; soluble in water. **m-hydroxy-** Colorless leaflets, m.170; soluble in water, alcohol or ether. **p-hydroxy-** Colorless needles, m.158; sparingly soluble in water, soluble in alcohol or ether. **hydro-** $(PhCH)_3N_2$ = 298.17. Tribenzalamine. Colorless needles, m.101; insoluble in water, soluble in alcohol or ether. **iodo-** C_7H_6NOI = 246.99. Colorless crystals, *o-* m.183.6; *m-* m.186.5; *p-* m.217.6. **methyl-** Toluamide. **o-nitro-** $NO_2C_6H_4CONH_2$ = 166.10. White needles, m.174, b.317°C; soluble in water, alcohol or ether. **m-nitro-** Yellow needles, m.141, b.315; sparingly soluble in water, soluble in alcohol or ether. **p-nitro-** Colorless needles, m.153; sparingly soluble in water, soluble in alcohol or ether. **n-phenyl-** Benzanilide. ***m*-semicarbazido-** Cryogenin. **silver-** $PhCONHAg$ or $PhC(:NH)OAg$ = 227.94. **sodium-** $PhCONHNa$ or $PhC(:NH)ONa$ = 143.06. **tri-** $(PhCO)_3N$ = 329.13. Tribenzalamine. Colorless crystals, m.202. **thio-** See *thiobenzamide*.

b. oxime. Benzamidoxime.

benzamidine. $C_7H_8N_2$ = 120.14. Benzenylamidine, iminobenzylamine, benzene carbonamidine*, $PhC(NH_2):NH$. Colorless crystals, m.75; soluble in water, alcohol or ether. **b. urethane.** $PhC(:NH)NHCO.OC_2H_5$ = 192.12. Colorless crystals, m.38.

benzamido. The monovalent radical, $PhCONH—$, derived from benzamide.

benzamidoxime. $C_7H_8N_2O$ = 136.08. Benzenylamine oxime, benzamide oxime, $PhC(:NOH)NH_2$. White crystals, m.80, slightly soluble in water.

benzamine. *β*-Eucaine. **b. lactate.** $C_{15}H_{21}O_3N.C_3H_6O_3$ = 337.24. Benzoyl vinyl diacetone alkamine lactate. Colorless crystals; soluble in water or alcohol and used for the synthesis of eucaine.

benzaminic acid. *m*-Amino *benzoic acid*.

benzamino acids. Amino-*benzoic acids*. **b. acetic acid.** Hippuric acid.

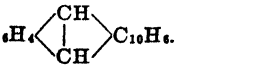
benzanalgen. Analgen.

benzanilide. $C_{13}H_{11}ON$ = 197.2. Phenylbenzamide, benzoylaniline, Ph.CO.NH.Ph. White or pinkish crystals, d.1.32, m.160; insoluble in water, slightly soluble in alcohol or ether; used as an antipyretic. **ethoxy-** Benzophenetide. **hydroxy-** $C_7H_7O_2N$ = 137.06. Benzoylaminophenol, $HO.C_6H_4.CONH_2$. Colorless crystals, *o-*m.140; *m-* m.170.5; *p-* m.162; used in organic synthesis. **methoxy-** Benzaniside. **methyl-** Benzotoluide. **nitro-** See *nitrobenzanilide*. **thio-** See *thiobenzamide*.

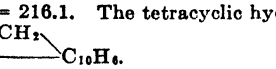
benzaniside. $C_{14}H_{13}O_2N$ = 232.3. Methoxybenzanilide. $MeO.C_6H_4.CONHPh$.

benzanthracenes. $C_{18}H_{11}$ = 227.1. A group of hydrocarbons in which a benzene and anthracene ring have a double bond in common. Many of them are carcinogenic. Cf. *benzpyrene*.

benzanthrene. $C_{18}H_{12}$ = 228.1. Naphthanthracene. The tetracyclic hydrocarbon



meso- $C_{17}H_{12}$ = 216.1. The tetracyclic hydrocarbon



benzanthrenone. $C_{17}H_{10}O$ = 230.1. The tetracyclic ketone.

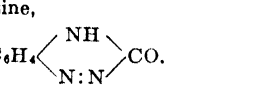
benzantialdoxime. See *benzaldoxime.*

benzaurine. $C_{19}H_{16}O_2$ = 274.21. Phenyldiphenylcarbinol. The compound $PhC:C_6H_4:O.C_6H_4OH$. Yellow crystals, m.100, insoluble in water, soluble in alcohol or ether.

benzazete. C_7H_5N = 103.1. The heterocyclic compound

benzazide. Benzoylazide.

benzazimide. $C_7H_5ON_3$ = 147.1. Phenketodihydro-β-triazine,



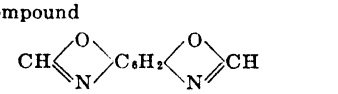
Colorless crystals, m.212.

benzazine. (1) Quinoline. (2) *Iso*quinoline.

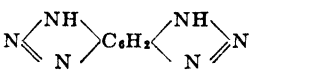
benzazole. 1- Indole. 2- *Iso*indole. **iso-** Indolenine.

benzb . . . See also *benzob . . .*

benzbioxazole. $C_8H_4O_2N_2$ = 160.1. The heterocyclic compound



benzbitriazole. $C_6H_2N_6$ = 158.3. The heterocyclic compound



benzdiazine. Benzodiazine.

benzdifuran. Benzodifuran.

benzdioxazine. Benzodioxazine.

benzedrine. A brand of amphetamine; racemic 1-phenyl-2-aminopropane, $C_6H_5.CH_2.CHNH_2.CH_3$, a colorless liquid, slightly soluble in water. **b. sulfate.** A white powder, freely soluble in water.

benzene. C_6H_6 or PhH = 78.08. Benzol (Ger.), benzole (Fr.), phenylhydride, cyclohexatriene, phene*. A colorless liquid or crystals, $d_{20°}$.0.879, m.5.4°, b.80.3°; insoluble in water, miscible with alcohol, ether, acetone or glacial acetic acid. It is a solvent for alkaloids, fats, rubber, and resins and is used in organic synthesis, in the manufacture of dyes, in photography, as a motor fuel and in electrotechnics. Medicinally it is a narcotic and destroys leucocytes. Cf. *b. structure.* **acetenyl-** Phenyl*acetylene.* **acetyl-** Acetophenone. **allyl-** See *allyl.* **amino-** Aniline. **aminoethoxy-** Phenetidine. **aminoethyl-** $C_6H_4NH_2C_2H_6$ = 121.14. **o-** A colorless liquid, $d_{22°}$.0.983, b.215, **m-** A colorless liquid, $d_{0°}$.0.990, m.214, **p-** White leaflets, $d_{22°}$.0.995, m.5, b.260. **amyl-** PhC_5H_{11} = 148.18. Phenyl pentane, n-amylbenzene. A colorless liquid, $d_{20°}$.1.223, b.129; soluble in alcohol. **anilino-** Diphenylamine*. **arsenobis-** Arsenobenzene. **azimino-** Benzotriazole. **azo-** Azobenzene. **azoxy-** Azoxybenzene. **benzoyl-** Benzophenone. **benzyl-** Diphenylmethane. **bromo-*** Phenyl bromide. **bromo-chloro-*** BrC_6H_4Cl = 191.40. **1.3-** or **m-** A colorless liquid, d.1.6302, m.−21, b.196. **1.4-** or **p-** White prisms, m.67.4, b.196.3. **bromo-fluoro-*** BrC_6H_4F = 174.95. **1.4-** or **p-** A colorless liquid, b.153. **bromo-iodo-*** BrC_6H_4I = 282.86. **1.2-** or **o-** Colorless liquid, d.2.257, m.2.1, b.258. **1.3-** or **m-** An oily liquid, m.−9.3, b.252. **1.4-** or **p-** White needles, m.92, b.251. **bromo-nitro-*** $Br.C_6H_4.NO_2$ = 201.96. **o-** Colorless crystals, m.38, b.264; insoluble in water, soluble in alcohol or ether. **m-** Colorless crystals, d.1.704, m.52.6, b.257.5; insoluble in water, soluble in alcohol or ether. **p-** White monoclinic crystals, $d_{22°}$.1.934, m.125, b.259; insoluble in water, soluble in alcohol. **chloramido-** Chloraniline. **chloro-*** Phenyl chloride. **chloronitro-*** $ClC_6H_4NO_2$ = 157.55. **o-** Colorless needles, $d_{22°}$.1.368, m.32.5, b.246; insoluble in water, soluble in alcohol or ether. **m-** Colorless rhombic needles, d.1.534, m.44.2, b.235.6; insoluble in water, soluble in alcohol, ether, or benzene. **p-** White monoclinic prisms, $d_{18°}$.1.520, m.83, b.240; insoluble in water, soluble in alcohol. **chlorotrinitro-*** Picrylchloride. **cyano-** Benzonitrile. **diamino-** Phenylenediamine. **diaminoazo-** $(NH_2)_2C_6H_3.N:NPh$ = 212.20. **2.4-** Yellow needles, m.117.5; slightly soluble in water, soluble in alcohol or ether. The hydrochloride is chrysoidine orange. **diazo-** See *diazo.* **diazoamino-** $PhN:N.NHPh$ = 197.27. Yellow leaflets, m.96; insoluble in water, soluble in alcohol or ether. **dibromo-*** $C_6H_4Br_2$ = 235.98. Benzene dibromide. **o-** Colorless needles. $d_{18°}$.1.977, m.−1, b.224; insoluble in water, soluble in alcohol or ether. **m-** Colorless crystals, $d_{19°}$.1.955, m.1, b.219.5; insoluble in water, soluble in alcohol or ether. **p-** White monoclinic crystals, d.2.22, m.89, b.219; insoluble in water, sparingly soluble in alcohol. **dichloro-*** $C_6H_4Cl_2$ = 146.96. Benzene dichloride. **o-** A colorless liquid, $d_{0°}$.1.325, m.−17.6, b.179; insoluble in water, soluble in alcohol. Used as solvent, insecticide, spray, metal polish and sweeping compound. **m-** A colorless liquid, $d_{0°}$.1.307, m.−24.8, b.173; insoluble in water, soluble in alcohol or ether. **p-** Paradow. White needles, $d_{18°}$.1.268, m.53, b.174; insoluble in water, soluble in alcohol or ether. Used as antiparasitic; in herbarium collections and museums as a deodorant; and in eliminating the peach tree borer. **o-dicyano-** Phthalonitrile. **m-** *m-* Phthalonitrile. **p-** Terephthalicnitrile. **diethoxy-*** $C_6H_4(OCH_3)_2$ = 166.11. **1.2-** Pyrocatechol diethyl ether. White crystals, m.166.1. **1.3-** Resorcinol diethyl ether. White prisms, m.12, b.235. **1.4-** Hydroquinone diethyl ether. White scales, m.71, b.246, **diethyl-*** $C_6H_4(C_2H_5)_2$ = 134.17. **o-** A colorless liquid, $d_{18°}$.0.866, b.185; insoluble in water miscible with alcohol or ether. **m-** A colorless liquid, $d_{20°}$.0.860, b.181; miscible with alcohol or ether. **p-** A colorless liquid, $d_{18°}$.0.862, b.183; insoluble in water, miscible with alcohol or ether. **difluoro-*** $C_6H_8F_2$ = 114.03. **p-** Colorless liquid, d.1.164, m.−23.7, b.88.9, insoluble in water, soluble in alcohol or ether. **dihydro-** Cyclohexadiene*. **dihydrodiketo-** Quinine. **dihydroimino-** Benzenimine. **dihydroketo-** Benzenone. **dihydroxy-** $C_6H_4(OH)_2$. **1.2-** or **o-.** Catechol. **1.3-** or **m-.** Resorcinol. **1.3-** or **p-.** Hydroquinol. **diiodo-*** $C_6H_4I_2$ =

330.01. **1.2-** or **o-**. Colorless prisms, m.23.4, b.286.5; insoluble in water, soluble in alcohol or ether. **1.3-** or **m-** White rhombic prisms, m.34.2, b.285; insoluble in water, soluble in alcohol. **1.4-** or **p-** White leaflets, m.129.4, b.285, insoluble in water, soluble in alcohol. **dimethoxy-*** **1.2-** Veratrole. **1.4-** Hydroquinoldimethyl ether. **dimethyl-*** Xylene. **dimethylethyl-*** $C_6H_3(CH_3)_2C_2H_5$ = 134.17. *1-ethyl-3.4-dimethyl-* A colorless liquid, d_{20}°.0.878, b.183.4; insoluble in water. *2-ethyl-2.4-dimethyl.* A colorless liquid, d_{20}°.0.861, b.185; insoluble in water. **dinitro-*** $C_7H_4(NO_2)_2$ = 168.14. **1.2-**, or **o-** Colorless scales, d_{16}°.1.565, m.117, b.319; sparingly soluble in water, slightly soluble in alcohol, soluble in benzene. **1.3-** or **m-** Yellowish needles, d_{17}°.1.546, m.90 b.297; sparingly soluble in water, soluble in alcohol, ether, or benzene. Used in the manufacture of phenylendiamine and explosives. **1.4-**, or **p-** White needles, d_{17}°.1.587, m.171, b.298.2; sparingly soluble in water or alcohol, soluble in benzene. **diphenyl-** $C_6H_4Ph_2$ = 230.21. **para-**Terphenyl. White leaflets, m.205, b.383; insoluble in water, soluble in alcohol, ether or benzene. **ethenyl-*** Styrolene. **ethoxy-*** Phenetole. **ethyl-*** PhC_2H_5 = 106.12. Phenylethane. A colorless liquid, d_{14}°.0.874, m. −94, b.136.5; insoluble in water soluble in alcohol or ether. **ethylmethyl-*** MeC_6H_4Et = 120.1. **1.2-**or **o-** A colorless liquid, d.0.8731, b.159, **1.3-** or **m-** A colorless liquid, d.0.8690, b.159, **1.4-** or **p-** A colorless liquid, d.0.8652, b.162. **fluoro-*** See *fluobenzene.* **formamido-**Formanilide. **hexachloro-*** C_6Cl_6 = 284.73. White monoclinic crystals, d_{23}°.2.044, m. 229, b.326; insoluble in water, sparingly soluble in alcohol or ether. It differs from b. hexachloride. **hexaethyl-*** $C_6(C_2H_5)_6$ = 246.33. Colorless monoclinic crystals, d_{20}°.0.831, m.129, b.298; insoluble in water, soluble in alcohol or ether. **hexahydro-** Cyclohexane. **hexahydrohexahydroxy-** Inosite. **hexahydropentahydroxy-** Pinite. **hexahydroxy-** $C_6(OH)_6$ = 174.13. B. hexol*. Colorless needles, decomp. 200, slightly soluble in water, alcohol or ether. **hexaiodo-*** C_6I_6 = 833.55. Red-brown needles, decomp. 150. **hexamethyl-*** $C_6(CH_3)_6$ = 162.21. Mellitene. White rhombic crystals, m.164, b.264, slightly soluble in alcohol. **hexaoxy-** See *triquinoyls.* **hydrazino-**Phenylhydrazine. **hydrazo-** PhNH.NHPh = 184.24. Diphenylhydrazine. Colorless crystals, d.1.158, m.131; sparingly soluble in water or alcohol, soluble in ether. **hydroxy-** Phenol. **hydroxyazo-** $HO.C_6H_4N:NPh$ = 198.16. **1.2-** or **o-** White needles, m.82.5; slightly soluble in water, soluble in alcohol, ether or alkalis. **1.4-** or **p-** White

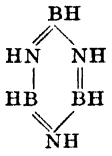
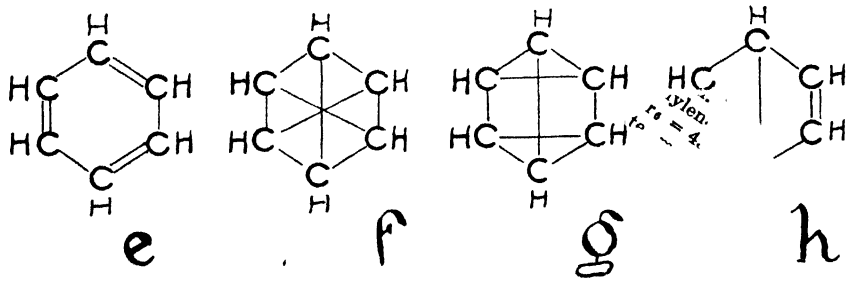
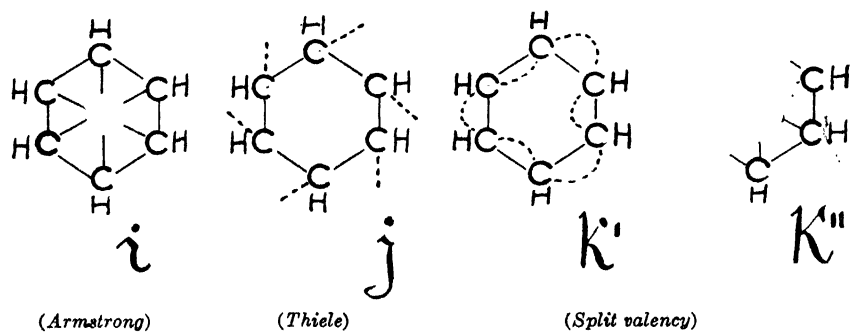
propylethylmethylbenzene	14	$C_6H_3PrEtMe$
dipropylbenzene	9	$C_6H_4Pr_2$

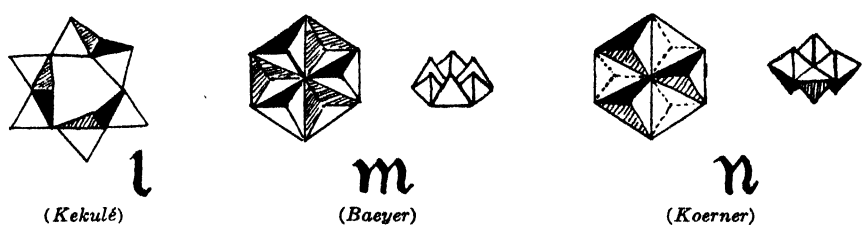
prisms, m.152; slightly soluble in water, soluble in alcohol or ether. **inorganic-** The substance formed by the action of ammonia on borane. It is a colorless and transparent liquid, and resembles benzene in its physical properties.



iodo-* PhI = 203.99. A colorless liquid, m. −28.5, b.188.2; insoluble in water, miscible with alcohol or ether. **iodoso-** $PhIO$ = 219.99. A white amorphous powder which explodes at 210; soluble in water, alcohol or benzene. **iodoxy-** $PhIO_2$ = 235.99. Colorless needles which explode at about 230; sparingly soluble in water, soluble in alcohol, ether, chloroform or benzene. **isocyano-** Phenylisocyanide. **isopropyl-** Cumene. **isopropylmethyl-** Cymene. **methoxy-*** Anisole. **methoxypropenyl-** Anethole. **methyl-*** Toluene. **methylethyl-*** See *b. ethylmethyl-*. **methyl-i-propyl-** Cymene. **nitro-** $PhNO_2$ = 123.08. A yellow liquid, m.5.4, b.210, with the odor of almonds; very slightly soluble in water, soluble in alcohol or ether. It occurs in two tautomeric forms: $PhNO_2$ and $PhONO$. **nitroso-*** PhNO = 107.08. Colorless monoclinic prisms, m.67.5; insoluble in water, soluble in alcohol or ether. **nitroxy-** $PhNO_3$. Phenyl nitrate. **penta amino-** See *pentamino-*. **pentabromo-*** C_6HBr_5 = 472.64. Colorless needles, m.160; insoluble in water, slightly soluble in alcohol or ether, soluble in benzene. **pentachloro-*** C_6HCl_5 = 250.34. Colorless needles, $d_{21°}$.0.769, m.85, b.275; insoluble in water, slightly soluble in alcohol, soluble in ether or benzene. **pentaethyl-*** $C_6H(C_2H_5)_5$ = 218.21. A colorless liquid, $d_{19°}$.0.899, m. −20, b.277; insoluble in water. **pentamethyl-*** $C_6H(CH_3)_5$ = 148.21. White crystals, m.53, b.230; insoluble in water. **pentamino-** $C_6H(NH_2)_5$ = 153.17. Colorless needles; soluble in water, insoluble in alcohol or ether. **phenyl-** Biphenyl. **propenyl-** Allyl b. **tetrahydro-** Cyclohexene. **tetrahydroxy-** Apionol. **tetramethyl-*** $C_6H_2Me_4$ = 134.3. **1.2.3.4-** Prehnitene. **1.2.3.5-** Isodurene. **1.2.4.5-** Durene. **trihydroxy-** $C_6H_3(OH)_3$ = 126.2. **1.2.3-** Pyrogallol. **1.2.4-** Benzenetriol. **1.2.5-** Phloroglucinol. **trimethyl-*** $C_6H_3Me_3$. **1.2.3-** Hemimellitene. **1.2.4-** Pseudocumene. **1.3.5-** Mesitylene. **trinitro-** See *trinitrob.* **trinitro-triazido-** $C_6(NO_2)_3(N_3)_3$ = 336.09. Greenish-yellow solid, m.131, insoluble in water, soluble in acetone; used as a detonator and substitute for mercury fulminate. **vinyl-** Styrene.







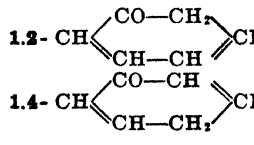
Benzene structure

b. arsonic acid. $C_6H_7O_3As$ = 201.01. Phenyl- arsonic acid. $PhAsO(OH)_2$. Used as a reagent for Sn, Zr and Th. ***amino-*** Arsanilic acid. **b. aizmide.** See *benzotriazole.* **b. azoaniline.** See *diazoamino benzene.* **b. azobenzene.** See *azobenzene.* **b. azo-α-naphthylamine.** $C_{16}H_{13}N_3$ = 247.21. $PhN:NC_{10}H_6NH_2$. Red needles, m.123; soluble in alcohol, ether, or benzene. Used in organic synthesis. **b. carbinol.** Benzyl alcohol. **b. carbonal*.** Benzaldehyde. **b. carbonamidine*.** Benzamidine. **b. carbonitrile*.** Benzonitrile. **b. carboxylic acid*.** Benzoic acid. **b. diamine.** Phenylenediamine. **b. diazonium chloride.** Ph.NClN. A product formed by diazotizing aniline with nitrous acid in a strongly acid solution. It hydrolyzes to b. diazonium hydroxide, and is explosive when dry. **b. diazonium hydroxide.** PhN:N.OH. An intermediate in the formation of diazoaminobenzene from aniline. **b. dibromide.** See *dibromo-b.* **b. dicarbinol.** Xylenediol. **b. dicarbonal*.** Phthalaldehyde. **b. dicarbonitrile*.** Phthalonitrile. **b. dicarboxylic acid*** $C_6H_4(COOH)_2$. **1.2-** or **o-** Phthalic acid. **1.3-** or **m-** Isophthalic acid. **1.4-** or **p-** Terephthalic acid. **b. dichloride.** Dichloro b. **b. diol*** $C_6H_4(OH)_2$. **1.2-** or **o-** Pyrocatechol. **1.3-** or **m-** Same as Resorcinol. **1.4-** or **p-** Hydroquinol. **b. disulfochloride** $C_6H_4(SO_2Cl)_2$ = 275.10. A colorless, viscous liquid, d.0.8791, m.5, b.80.2; slightly soluble in water, soluble in alcohol or ether. Used in the manufacture of dyes. **b. disulfonic acid** $C_6H_4(SO_3H)_2$. A group of three isomeric acids, used in organic synthesis. **b. disulfoxide** $C_{12}H_{10}O_2S_2$ = 250.1. PhSO.SOPh Colorless crystals, m.45. **b. dithiol.** Phe e dimercaptan. **b. hexabromide** C_6H_6B 57.84. Hexabromocyclohexane*. Whi oclinic crystals, m.212; slightly solubl ol or ether. Cf. *hexabromo* b. **b.** xylic acid $C_6(COOH)_6$. Mellitic ac xachloride $C_6A_6Cl_6$ = 290.78. Hex lohexane*. Colorless monoclinic pr 7, m.157, b.$_{345mm}$218; soluble in wate ether. Cf. *hexachloro b.* **b. hexaiod** = 839.58. Hexaiodocyclohexane*. ystals. Cf. *hexaiodo b.* **b. indon** none. **b. induline.** Aposafranin al. **Benzaldehyde. b. monosulfo** lfonic acid. **b. nucleus.** See *t* itacarboxylic acid* $C_6H(COOH)_6$ lorless crystals, decomp. 238; solu r. **b. pentamine*** $C_6H(NH_2)_5$ = 153.1. Pentaaminobenzene. Colorless needles, very soluble in water. **b. positions.** See *b. ring.* **b. ring.** The graphical representation of the benzene structure, which is generally a hexagon with numbers representing the carbon atoms, as in fig. a; illustrating the double bonds, as in fig. b; indicating the double bonds by heavier lines, as in fig. c; or in the more explicit structure symbol, fig. d. **b. series.** A group of aromatic hydrocarbons and homologues of benzene of the general formula C_nH_{2n-6}. **b. siliconic acid*** C_6H_5SiOOH = 138.11. Silicobenzoic acid. Glassy scales, m.92, insoluble in water. **b. structure.** The theories of the arrangement of the carbon atoms in the benzene molecule are: fig. e—the plane formula of Kekulé (1865); fig. f—the diagonal formula of Claus (1867); fig. g—the prism formula of Ladenburg (1869); fig. h—the bridge formula of Claus (1870); fig. i—the centric formula of Armstrong, developed by Baeyer (1892); and fig. j—the partial valence formula of Thiele (1899). One modern conception is that of a dynamic formula, as in fig. k, in which the carbon atoms are joined by one bond and a shifting bond, or each pair of carbon atoms possesses a doublet of electrons and a shifting doublet of electrons, the later oscillating or rotating around the ring from atom to atom. See *Pauling* structure. **(geometrical-)** An arrangement of tetrahedra which illustrates the arrangement of the atoms in the benzene molecule, as fig. l—Kekulé's, fig. m—Baeyer's, and fig. n—Koerner's centroid arrangement. **b. sulfamide.** See *b. sulfonic* amide. **b. sulfide.** Phenyl sulfide. **b. sulfinic acid** $C_6H_6O_2S$ = 142.1. PhSO.OH, which is isomeric with b. sulfonyl. Colorless prisms, m.83, decomp. 100; soluble in water, alcohol or ether. **b. sulfochloride.** B. sulfonic chloride. **b. sulfonanilide.** $C_{12}H_{11}O_2NS$ = 233.2. $Ph.SO_2.NH.Ph$. **b. sulfone amide*.** See *b. sulfonic amide.* **b. sulfone chloride.** See *b. sulfonic chloride.* **b. sulfonic acid*** $C_6H_6O_3S.1\frac{1}{2}H_2O$ = 185.2. $PhSO_2.OH$. Colorless leaflets, m.65, b.135; soluble in water or alcohol, insoluble in ether. **b. sulfonic amide** $PhSO_2NH_2$ = 157.2. B. sulfamide, b. sulfoneamide. White lustrous plates, m.156 (decomp); soluble in water, alcohol, or ether. **b. sulfonic chloride** $PhSO_2Cl$ = 176.6. B. sulfone chloride, b. sulfonylchloride*. A colorless, oily liquid, d.1.384, m.14, b.251; insoluble in water, miscible with alcohol or ether. Used as a reagent for amines. **b. sulfonic hydroxamide** $PhSO_2NHOH$ = 173.2. Benzsulf-hydroxamic acid. Colorless crystals, m.126. **b. sulfonitramide** $C_6H_6O_4N_2S$ = 202.2. The compound $PhSO_2NHNO_2$. **b. sulfonyl.** The monovalent acyl radical derived from b. sulfonic acid: $Ph.SO_2$-. The isomer of b. sulfinic acid. **b. sulfoxide** $C_{12}H_{10}O_2S$ = 218.14. Ph_2SO_2. Colorless crystals, m.128; insoluble in water, soluble in alcohol or ether. **b. tetracarboxylic acid*** $C_6H_2(COOH)_4$. **1.2.3.4-** or **v-** Prehnitic acid. **1.2.3.5-** or **a-** Mellophanic acid. **1.2.4.5-** or **s-** Pyromellitic acid. **b. tetrol.** Tetrahydroxy b. **b. tricarboxylic acid*** $C_6H_3(COOH)_3$. **1.2.3-** or **v-** Hemimellitic acid. **1.2.4-** or **a-** Trimellitic acid. **1.3.5-** or **s-** Trimesic acid. **b. triol*** $C_6H_3(OH)_3$ = 126.2. Hydroxyquinol, hydroxyhydroquinone. **1.2.4-** Colorless crystals, m.140.5. **1.2.3-** or **v-** Pyrogallol. **1.3.5-** or **s-** Phloroglucinol. **b. trisulfonic acid*** $C_6H_6O_9S_3$ = 318.3. $C_6H_3(SO_3OH)_3$. Colorless, deliquescent crystals, used in organic synthesis.

benzenimine. C_6H_7N = 93.3 Dihydroiminobenzene.

benzenoid. (1) Related structurally to benzene. (2) A suggested structure for benzene involving 6 carbonoids, q.v.

benzenone. C_6H_6O = 94.05. Dihydroketobenzene.



hydroxy- Quinol. **imino-** Quinonimine. **methyl-** Toluenone.

benzenyl. The trivalent radical, PhC≡, derived from toluene.

benzenylamidine. Benzamidine.

benzenylamidothiophenol. $C_{13}H_9NS$ = 211.1. Benzenylaminothiophenol, *μ*-phenylbenzothiazole. Ph.C(N)(S)C$_6$H$_4$. Yellow needles, with a pleasant rose-like odor, m.115, b.360; soluble in alcohol or ether. Used in perfumery.

benzenylamidoxime. $C_7H_8ON_2$ = 136.20. Benzamideoxime, $PhC(NH_2):NOH$, which occurs in two isomeric forms:

N.OH ‖ NH$_2$.C.Ph (anti-) and HO.N ‖ NH$_2$.C.Ph (syn-)

Colorless crystals, m.89. **acetyl-** $PhC(NH_2):NO.COMe$. A colorless liquid or crystalline masses, m.16.

benzenylamino- See *benzenylamido-*

benzenylazoxime. $C_8H_6ON_2$ = 146.20. *3*-Phenyl-*1.2.4*-oxdiazole. The heterocyclic compound

Ph.C(=N—O—N=)CH.

b. ketone. $C_8H_6O_2N_2$ = 162.20. Benzenylcarbonyl azoxime,

Ph.C(=N—O—NH=)CO.

Colorless crystals, m.198. **b. thiocarbino.** $C_8H_6ON_2S$ = 178.14. Benzenylthiocarbonyl azoxime,

Ph.C(=N—O—N=)C.SH.

Colorless crystals, m.131.

benzenylcarbonylazoxime. Benzenylazoxime ketone.

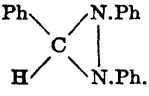
benzenylhydrazidine. $C_7H_9N_3$ = 135.10. Amidrazone, $PhC:NH(NHNH_2)$.

benzenyltetrazoic acid. Phenyltetrazole.

benzenyltrichloride. Benzotrichloride.

benzerythrene. $C_{24}H_{18}$ = 306.1. 4-*pp'*-Diphenylbiphenyl. The hydrocarbon, $PhC_6H_4.C_6H_4.Ph$.

benzhydrazoin. $C_{19}H_{16}N_2$ = 272.2.



Colorless crystals, m.55.

benzhydrol. Benzohydrol. **b. ether.** $C_{26}H_{22}O$ = 350.31. $(Ph_2CH)_2O$. Colorless crystals, m.109, b.$_{15mm}$ 267; sparingly soluble in water, soluble in alcohol or ether.

benzhydroxamic. See *benzohydroxamic.*

benzidam. Aniline.

benzidine. $C_{12}H_{12}N_2$ = 184.1. Bianiline, benzidine base, p-diamino-diphenyl, *pp'*-bianiline. The compound $NH_2C_6H_4.C_6H_4NH_2$. White or slightly grayish scales, or a crystalline powder, m.133, b.401; slightly soluble in water, soluble in alcohol, ether or boiling water. Used as a reagent for detecting sulfates in water analysis and the identification of blood, and a delicate reagent for metals in their higher valencies; also in organic synthesis. **dimethoxy-** Dianisidine. **dimethyl-** Tolidine.

b. conversion. The formation of b. from hydrazobenzene by boiling with mineral acids. **b. dicarboxylic acid.** Diaminophenic acid. **b. sulfate** $C_{12}H_{12}N_2.H_2SO_4$ = 282.3. A white crystalline powder, soluble in water or alcohol. It has similar uses to benzidine. **b. sulfone** $C_{12}H_{12}N_2SO_2$ = 246.22. Dibenzothiophene-2.7-diamine-9-dioxide, $(NH_2C_6H_3)_2SO_2$. Colorless crystals, m.350, insoluble in water, alcohol, or ether. **b. test.** Adler's reaction, for the detection of blood pigment. Add 1 cc. glacial acetic acid to 10 cc. suspected liquid, and shake with 4 cc. of ether. Transfer the ether to another test tube containing 0.5 cc. benzidine solution in glacial acetic acid and 2 cc. hydrogen peroxide. If blood is present, a green or bluish color will develop which turns to a dirty purple in a few minutes. Metallic iron, lead oxides and many other substances also give this test.

benzidino. The monovalent radical, $NH_2.C_6H_4.C_6H_4.NH$—, derived from benzidine.

benzil. $C_{14}H_{10}O_2$ = 210.15. Dibenzoyl, diphenylglyoxal, bibenzoyl, diphenyldiketone, PhCO.COPh. Yellow needles, d.1.521, m.95.2, b.348; insoluble in water, soluble in alcohol or ether. Used as a reagent, and in organic synthesis. **bisazo-** See *bisazobenzil.* **bishydrazi-** See *bishydrazibenzil.* **dimethoxy-** Anisil. **dimethyl-** Tolil.

benzilam. $C_{21}H_{15}ON$ = 297.2. Triphenyloxazol. The heterocyclic compound

O(CPh=CPh—N=)CPh

benzilamphioxime. Benzi amma-.

benzilaniline. Benzylanil

benzilantioxime. Benzil a-.

benzildianil. $C_{26}H_{20}N_2$ iC:N(Ph).-(Ph)N:CPh. Colorle .142.

benzildioxime. $C_{14}H_{12}C$. The compounds,

HO.N ‖ Ph.C.C.Ph ‖ N.OH — α- or *b. anti-dioxime* m.237

Ph. HO. — β *b. sy* ›

N.OH ‖ Ph.C.C.Ph ‖ N.OH — γ- or *amphidioxime* m.165

Crystalline solids, ı ›le in water, soluble in alcohol or ether; decomp. by heat. It is a delicate reagent for nickel. **b. peroxide.** $C_{14}H_{10}O_2N_2$ = 238.2. $Ph_2C_2N_2O_2$. Colorless crystals, m.114.

benzilic acid. $C_{14}H_{12}O_3$ = 228.17. Diphenylglycolic acid, *α*-phenylmandelic acid. The monobasic hydroxyacid: $Ph_2C(OH)COOH$. White monoclinic crystals, m.150; slightly soluble in water, soluble in alcohol or ether.

benzilidene. Benzal. **b. acetophenone** $C_{15}H_{12}O$ = 208.1. $PhCH:CH.COPh$. Colorless crystals, m.58, b.346. **b. aniline.** Benzalaniline. **b. hydrazine.** Benzal hydrazine. **b. phthalide.** Benzal phthalide.

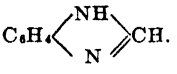
benzilmonoxime. $C_{14}H_{10}N_2O$ = 225.17. The compound

N(=C(Ph)—C(Ph)=O)N.

A crystalline substance, which occurs in two isomeric forms: *alpha*, m.137, *beta*, m.114. Both are insoluble in water and soluble in alcohol or ether.

benzilsynoxime. Benzildioxime, beta-.

benzimidazole. $C_7H_6N_2$ = 118.2; 1.3-benzodiazole, o-phenylene formamidine, benzoglyoxaline. The heterocyclic compound:

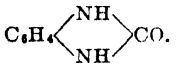


Colorless crystals, m.167. Cf. *naphthimidazole.*

benzylene- Pseudo isoindolebenzimideazole.

methyl- $C_7H_5N_2.CH_3$ = 132.1. o-phenyleneacetamidine, mesomethylbenzimidazole. Colorless crystals, m.176.

benzimidazolone. $C_7H_6ON_2$ = 134.2. o-phenylene-urea.



Colorless crystals, m.308. **thio-** Phenylenesulfone.

benzimidazolyl. The monovalent radical, $C_7H_5N_2$—, derived from benzimidazole.

benzimido. The monovalent radical, PhC(:NH)—.

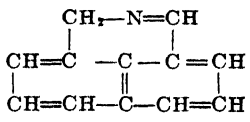
benzin, benzine. Benzoline, gasoline, petroleum benzin. A mixture of hydrocarbons obtained from the second distillate in the fractional distillation of crude petroleum; it consists of the fraction b.70–90. A clear colorless liquid, d.0.640–0.675; insoluble in water, miscible with alcohol, ethe carbon disulfide. Used as a solvent oils, resins, alkaloids and rubber; as agent for textiles; and as a motor fue *ne.*

benzindulin nine.

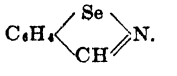
benzisodiaz = 118.2. **1.2-** Indiazene. Th compound

1.3- The co

benzisoquinoline. = 167.05. The heterocyclic compound:

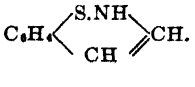


benzisoselenazole. C_7H_5NSe = 182.3. The heterocyclic compound

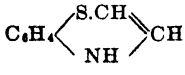


benzisosulfonazole. Saccharin.

benzisothiazine. C_8H_7NS = 149.1. **1.2-** The heterocyclic compound

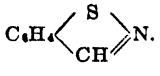


1.4- The heterocyclic compound

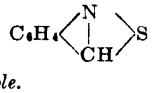


Cf. *benzothiazine.*

benzisothiazole. C_7H_5NS = 135.1. Benzo-*i*-thiazole. The heterocyclic compound

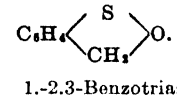


pseudo- Benziso-ψ-thiazole. The heterocyclic compound



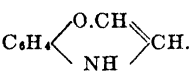
Cf. *benzothiazole.*

benzisothioxole. C_7H_6OS = 138.2. The heterocyclic compound

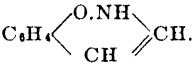


benzisotriazole. 1.-2.3-Benzotriazole.

benzisoxazine. C_8H_7ON = 133.1. **1.4-** The heterocyclic compound

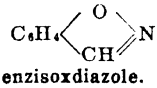


1.2- The heterocyclic compound



Cf. *benzoxazine.*

benzisoxazole. C_7H_5ON = 119.1. Indoxazene, isoindoxazene. The heterocyclic compound



$\beta.\gamma$- Anthranil.

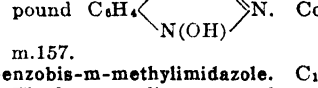
benzisoxdiazole. Benzofurazan.

benzo- A prefix indicating the divalent radical C_6H_4=, derived from benzene.

benzoate. A salt of benzoic acid; an organic compound of the type PhCOOR or PhCOOM.

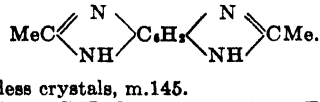
b. of soda. See *sodium benzoate.*

benzo-azimidole. $C_6H_5ON_3$ = 135.1. The compound



Colorless crystals m.157.

benzobis-m-methylimidazole. $C_{10}H_{10}N_4$ = 186.3. The heterocyclic compound



Colorless crystals, m.145.

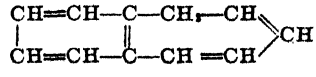
benzocaine. $C_9H_{11}O_2N$ = 165.2. Ethyl *p*-aminobenzoate, anesthesin, $NH_2C_6H_4COOEt$. Colorless, odorless, tasteless, crystals, m.90, insoluble in water, soluble in alcohol, benzene or acids; used as a local anesthetic.

benzocarbolic acid. Phenylbenzoate.

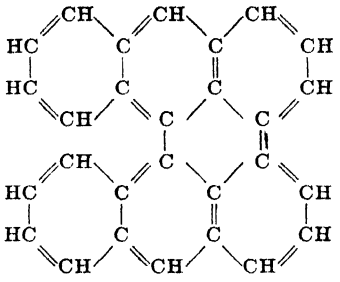
benzocinnoline. *5.6*-Naphthisodiazine.

benzocoumaran. Naphthofuran.

benzocycloheptadiene. $C_{11}H_{10}$ = 142.07. The hydrocarbon.



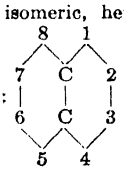
benzodianthrene. $C_{28}H_{16}$ = 352.2. The aromatic hydrocarbon



Cf. *naphthodianthrene.*

benzodianthrone. Helianthin.

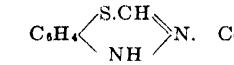
benzodiazine. $C_8H_6N_2$ = 130.06. Benzdiazine. A group of nine isomeric, heterocyclic compounds of the type:



They contain 2N atoms in the following positions: **1.2-** Cinnoline. **1.3-** Quinazoline. **1.4-** Quinoxaline. **1.5-** Pyridopyridine. **1.8-** Naphthyridine. **2.3-** Phthalazine. **alpha-** Cinnoline. **beta-** Phthalazine. **para-** Quinoxaline.

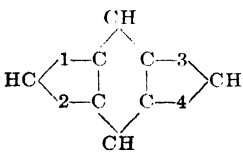
benzodiazole. $C_7H_6N_2$ = 118.1. **1.2-** Isoindazole. **2.1-** Indazole. **1.3-** Benzimidazole.

benzodiazthine. $C_7H_6N_2S$ = 150.1. Phenylsulfocarbizine. The heterocyclic compound

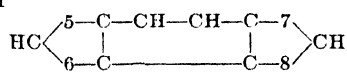


Colorless crystals, m.129.

benzodifuran. $C_{10}H_6O_2$ = 158.0. A group of

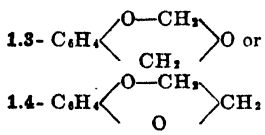


and



five isomeric, heterocyclic compounds of the types shown, in which the numerals indicate the position of two oxygen atoms and two CH-groups as follows: **o-alpha-** Oxygen at 6 and 8, CH-groups at 5 and 7. **m-alpha-** Oxygen at 1 and 3, CH-groups at 2 and 4. **m-beta-** Oxygen at 5 and 7, CH-groups at 6 and 8. **p-alpha-** Oxygen at 6 and 7, CH-groups at 5 and 8. **p-beta-** Oxygen at 2 and 3, CH- groups at 1 and 4.

benzodioxane, -an. $C_8H_8O_2$ = 136.06. A group of compounds; as,

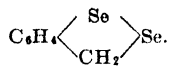


benzodioxazine. $C_7H_5O_2N$ = 135.1. A group of heterocyclic compounds of the benzodiazine type, but containing two oxygen atoms and one nitrogen atom; as, **1.2.3-** Oxygen at position 1 and 2, nitrogen at 3. **1.2.4-** Oxygen at position 1 and 2, nitrogen at 4. **1.4.2-** Oxygen at position 1 and 4, nitrogen at 2.

benzodioxdiazine. $C_6H_4N_2O_2$ = 136.1. A group of heterocyclic compounds, similar to benzodiazine, but which contain two oxygen atoms and two nitrogen atoms; as, **1.2.3.4-** Oxygen at position 1 and 2, nitrogen at 3 and 4. **1.4.2.3-** Oxygen at position 1 and 4, nitrogen at 2 and 3. **2.4.1.3-** Oxygen at position 2 and 4, nitrogen at 1 and 3.

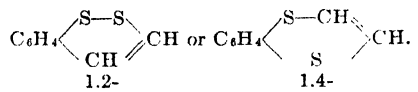
benzodioxtriazine. $C_6H_3O_2N_3$ = 137.1. A group of heterocyclic compounds, similar to benzodiazine, but which contain two oxygen and three nitrogen atoms; as, **1.2.3.4.5-** Oxygen at position 1 and 2, nitrogen at 3, 4, and 5. **1.2.3.4.8-** Oxygen at position 1 and 2, nitrogen at 3, 4, and 8. **1.2.4.5.8-** Oxygen at position 1 and 2, nitrogen at 4, 5, and 8.

benzodiselenole. $C_7H_6Se_2$ = 248.4. The heterocyclic compound

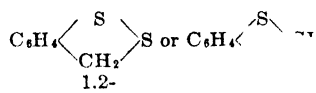


benzodisulfole. Benzodithiole.

benzodithiin. $C_8H_8S_2$ = 168.2. The heterocyclic compounds:



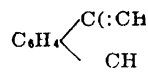
benzodithiole. $C_7H_6S_2$ = 154.2. Benzodisulfole. The heterocyclic compounds



benzofluorene. $C_{17}H_{12}$ = 21 › of aromatic hydrocarbons of th

1.2- Chrysofluorene.

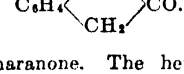
benzofulvene. $C_{10}H_8$ = thylene-indene. The aromatic h



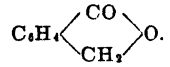
benzofuran. Coumarone. ·· Coumaran. **dihydroketo-** Benzofura:

benzofurancarboxylic acid. Co arilic acid.

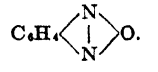
benzofuranone. $C_8H_6O_2$ = 134.1. **1(2)-** The heterocyclic compound



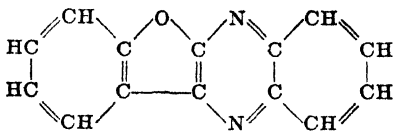
2(1)- Coumaranone. The heterocyclic compound



benzofurazan. $C_6H_4ON_2$ = 120.1. Benzisoxdiazole. The heterocyclic compound



benzofuroquinoxaline. $C_{14}H_7ON_2$ = 219.1. The heterocyclic compound



benzofuryl. The monovalent radical, C_8H_5O—, derived from coumarone.

benzoglycollic acid. Amygdalic acid.

benzoglyoxaline. Benzimidazole.

benzohydrol. $C_{13}H_{12}O$ = 184.09. Diphenylcarbinol, Ph_2CHOH. Colorless needles, m.68, b.298.5; insoluble in water, soluble in alcohol or ether. **tetramethyl diamino-** *Michler's* hydrol.

benzohydroxamic acid. $C_7H_7NO_2$ = 137.11. A compound existing in two isomeric types: *anti-* or *alpha-* N.OH ‖ HO.C.Ph and *syn-* or *beta-* HO.N ‖ HO.C.Ph *Syn-* m.124.

benzohydryl. The monovalent radical, $(C_6H_5)_2$-CH— or Ph_2CH—, derived from diphenylmethane. **b. amine.** $C_{13}H_{13}N$ = 183.18. Ph_2-$CH.NH_2$. Colorless liquid, b.288. **b. benzoic acid.** $C_{14}H_{12}O_2$ = 288.2. $Ph.CHOH.C_6H_4CO$-OH. A crystalline solid, m.164, decomp. if further heated; slightly soluble in water, soluble in alcohol or ether. **b. hydrazine.** Ph_2CHNH-NH_2. **b. hydroxylamine** $C_{13}H_{14}N_2O$ = 214.11. $Ph_2CH.NH.NHOH$. Colorless crystals, m.78.

benzohydrylidene. Diphenylmethane.

benzoic acid. $C_7H_6O_2$ = 122.09. Phenylformic acid, benz- arboxylic acid*. The mono- bas- OOH. White needles, d.1.266, m. 3; sparingly soluble in water, so- hol or ether. It occurs in be- nberries, and is poisonous to m- ntipyretic, antiseptic or expec- tor- calico printing and in the ma- aniline dyes. **acetylamino-** CH_3- OOH = 179.13. Acetamido b. o- dles, m.185; slightly soluble in w- hol. **m-** White crystals, decom- y soluble in alcohol, water or et- ss needles, decomp. 250; slight- water, alcohol or ether. **alde-** C_6H_4COOH = 150.09. **o-** White n- 04, m.97.2, b.191; soluble in water, a- ether. **m-** White needles, m.164, **p-** Co- needles, m.246; soluble in water, alcoh- r ether. **amino-** $NH_2.C_6H_4$-$COOH$ = 137.09. **o-** Anthranilic acid. Yellow leaflets, m.144; slightly soluble in water, soluble in alcohol or ether. **m-** Benzaminic acid. Yellow crystals, m.174, slightly soluble in water, alcohol or ether. **p-**Dracilic acid, vitamin B_x, anticanitic factor, growth factor for bacteria. It is part of the vitamin B complex (q.v.), and occurs in yeast; a deficiency of it causes prematurely grey hair. Yellow crystals, m.186; slightly soluble in alcohol, water or ether. **4-amino-3.5-dinitro-** Chrysanisic acid. **azo-** See *azo.* **azodi-** Azobenzoic acid. **azoxy-** See *azoxy-* b. **bromo-** BrC_6H_4COOH = 201.04. **o-** Colorless needles, m.150; slightly soluble in water, soluble in alcohol or ether. **m-** White needles, m.155, sparingly soluble in water, soluble in alcohol or ether. **p-** Colorless monoclinic prisms, m.251; slightly soluble in water, soluble in alcohol or ether. **carbamyl-** Phthalamic acid. **carbamylphenyl-** Diphenamic acid. **carboxyformyl-** Phthalonic acid, terephthalonic acid. **chloro-** ClC_6H_4-$COOH$ = 156.53. **o-** Colorless, rhombic crystals, d.1.540, m.137; sparingly soluble in water, soluble in alcohol or ether. **m-** White crystals, m.153°C; slightly soluble in water and soluble in alcohol and ether. **p-** Colorless monoclinic crystals, $d_{24°}$1.541, m.236; slightly soluble in water, soluble in alcohol or ether. **dichloro-** $Cl_2C_6H_3COOH$ = 190.97. **a-** or **2.5-** Colorless needles, m.156, b.301; slightly soluble in water, soluble in alcohol or alkalis. **v-** or **2.6-** White needles, m.126.5; soluble in alcohol or alkalis. **s-** or **3.4-.** White needles, m.203; sparingly soluble in water or alcohol, soluble in alkalis. **dihydroxy-** $(OH)_2C_6H_3COOH$ = 154.09. **2.3-** Pyrocatechoic acid. ($+2H_2O$ = 190.12). Colorless needles, m.204; soluble in water. **2.4-** ($+3H_2O$ = 208.14). *β*-Resorcylic acid. White needles, m.206; slightly soluble in water, soluble in alcohol or ether. **3.5-** ($+1\frac{1}{2}H_2O$ = 181.12) *α*-Resorcylic acid. Colorless prisms, m.232; soluble in water, alcohol or ether. **2.5-** Gentisic acid. Colorless needles, m.199; soluble in water, alcohol or ether. **3.4-** Protocatechuic acid. **2.6-** *γ*-Resorcylic acid. Colorless needles, m.167. **dihydroxymethyl-** Orsellic acid. **dimethoxy-** Veratric acid. **dimethoxyformyl-** Opianic acid. **dimethoxyhydroxy-** Syringic acid. **dimethyl-** $Me_2C_6H_3COOH$ = 150.13. **2.3-** *v*-Xylic acid. Colorless prisms, m.144, soluble in water or alcohol. **2.4-** Xylic acid. Colorless monoclinic crystals, m.126, b.268; insoluble in water, soluble in alcohol or ether. **2.5-** Isoxylic acid. White needles, m.132, b.268; insoluble in water, soluble in alcohol. **2.6-** White needles, m.116, b.274.5; slightly soluble in water, soluble in alcohol or ether. **3.4-** White prisms, m.163; slightly soluble in water or alcohol. **3.5-** 1.3.5-mesitylinic acid. White monoclinic crystals, m.166; very slightly soluble in water, soluble in alcohol or ether. **dinitro-** $(NO_2)_2$-C_6H_3COOH = 212.15. **2.3-** Colorless crystals, m.201. **2.4-** Colorless prisms, m.179; sparingly soluble in water, soluble in alcohol. **2.5-** Colorless needles, m.177, slightly soluble in hot water. **2.6-** Colorless needles, m.202, soluble in hot water. **3.4-** Colorless needles, m.163; slightly soluble in water, soluble in alcohol or ether. **3.5-** Colorless crystals, m.-203°C; soluble in alcohol or water. **ethoxy-** Et-$O.C_6H_4.COOH$ = 166.13. **o-** A colorless liquid or crystals, m.19; slightly soluble in water. **m-** Colorless needles, m.137; soluble in water, alcohol or ether. **p-** Colorless needles, m.195; very slightly soluble in hot water. **ethyl-** EtC_6H_4COOH = 150.13. **o-** Colorless needles, m.68, b.259; sparingly soluble in water, soluble in alcohol or ether. **m-** Colorless needles, m.47; very slightly soluble in water. **p-** Colorless leaflets, m.112; soluble in hot water, alcohol or ether. **formyl-** Phthalaldehydic acid. **formyl-dimethoxy-** Opianic acid. **disulfo-** Dithiobenzoic acid. **fluoro-** Fluobenzoic acid. **hexahydro-** $C_6H_{11}COOH$ = 128.14. Naphthenic acid, cyclohexane carboxylic acid. Colorless monoclinic crystals, d.1.048, m.30, b.233; slightly soluble in water, soluble in alcohol or ether. **hydrazinehydroxy-** Orthin. **hydrazino-** $NH_2NH.C_6H_4COOH$ = 152.08. **o-** Colorless crystals, m.155. **m-** Colorless crystals, m.231, **p-** Colorless needles, m.258; soluble

in alcohol. **hydrazo-** $(NH.C_6H_4COOH)_2$ = 272.25. **o-** Colorless leaflets, m.205; insoluble in water and soluble in alcohol or ether. **hydroxy-** $HO.C_6H_4COOH$ = 138.08. **o-** Salicylic acid. **m-** Colorless rhombic crystals, m.201.03; slightly soluble in water, soluble in ether. **p-** Colorless monoclinic crystals, $d_{22°}$.1.404, m.213; insoluble in water, slightly soluble in alcohol or ether. **hydroxydimethoxy-** Syringic acid. **hydroxy-methoxy-** Vanillic acid. **hydroxymethyl-** Cresotic acid. **isopropyl-** Cumic acid. **methoxy-** $MeO.C_6H_4COOH$ = 152.10. **o-** White monoclinic leaflets, d.1.180, m.98.5, b.200; sparingly soluble in water. **m-** White needles, m.102, b.245; soluble in water or alcohol. **p-** Anisic acid. **methyl-** Toluic acid. **methylene dioxy-** Piperonylic acid. **nitro-** $NO_2C_6H_4COOH$ = 167.08. **o-** Colorless needles, d.1.575, m.147.5; slightly soluble in water, soluble in alcohol or ether. **m-** Silky needles, d.1.494, m.141.4; sparingly soluble in water, soluble in alcohol or ether. **p-** White scales, d.1.550, m.242.4; sparingly soluble in water or alcohol, soluble in ether or chloroform. **pentamethyl-** C_6Me_5COOH = 192.19. Colorless needles m.210; slightly soluble in water, soluble in alcohol. **phenyl-** PhC_6H_4COOH = 198.15. **o-** Colorless needles, m.111, b.343; sparingly soluble in water, soluble in alcohol. **m-** White leaflets, m.160; slightly soluble in water, soluble in alcohol or ether. **p-** White needles, m.219; insoluble in water, soluble in alcohol or ether. **sulfamine-** $NH_2SO_2C_6H_4COOH$ = 201.1. **o-** Colorless crystals, m.167. The anhydride is saccharin. **m-** Colorless crystals, m.238. **p-** Colorless crystals, decomp. 280. **sulfo-** $HOSO_2.C_6H_4COOH,3H_2O$ = 256.18. **o-** Colorless crystals, m.250; soluble in water or alcohol, insoluble in ether. **m-** (+$2H_2O$ = 236.16). Colorless crystals, m.141. **p-** Colorless needles, m.259; soluble in water, alcohol or ether. **tetrahydro-** C_6H_9COOH = 126.08. A solid, d.1.072. **tetramethyl-** Me_4C_6HCOOH = 178.1. **2.3.4.5-** Colorless crystals, m.165. **2.3.5.6-** Colorless crystals, m.127. **trihydroxy-** **2.3.4.-** See *trihydroxy*. **3.4.5-** Gallic acid. **trimethoxy-** Asaronic acid. **trimethyl-** $Me_3C_6H_2COOH$ = 164.1. **2.3.4-** Prehnitilic acid. Colorless crystals, m.167. **3.4.5-** alpha-i-durylic acid. Colorless crystals, m.215. **2.3.5-** gamma-i-durylic acid. Colorless crystals, m.127. **2.4.5-** Durylic acid. Colorless crystals, m.150. **2.4.6-** beta-i-durylic acid, mesitylene carboxylic acid. Colorless crystals, m.152.

b. acid anhydride. $PhCO.O.COPh$ = 226.14. Colorless crystals, d.1.199, m.42, b.360; soluble in alcohol or ether. It is a strong antiseptic. **b. alcohol.** Benzyl alcohol. **b. aldehyde.** Benzaldehyde. **b. amide.** Benzamide. **b. anhydride.** Benzoic acid anhydride. **b. ether.** Ethylbenzoate. **b. sulfimide, b. sulfinide.** Saccharin. **b. trichloride.** Benzotrichloride.

benzoin. (1) $C_{14}H_{12}O_2$ = 212.17. Oxyphenyl benzoyl ketone, (ω)-benzyl alcoholphenyl ketone, phenyl benzoyl carbinol, bitter almond oil camphor. $PhCO.CH(OH)Ph$. White hexagonal crystals, m.132, b.343 soluble in hot water, alcohol or ether. It does not occur in gum benzoin. It is an antiseptic; used in ointments. (2) Benzoinum, gum benzoin. The balsamic resin *Styrax* species. See *b. gum*. **diisopropyl-** Cuminoin. **dimethoxy-** Anisoin. **hydro-** $PhCH(OH)CH(OH)Ph$ = 214.19. White leaflets, m.138, b.302, sparingly soluble in water, soluble in alcohol. **i-hydro-** Colorless monoclinic crystals m.119.5; soluble in alcohol or ether.

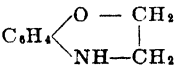
b. condensation. A reaction between two aromatic aldehydes under the influence of KCN, to form water and a compound $X.CH(OH).CO.X$. With benzaldehyde X is Ph, and the resulting compound in benzoin. Cf. *aldol* condensation. **b. gum.** Benjamin gum benzoinam, kemenian (Malay), luban jawi (Arabic). *Siam-* The resin from *Styrax benzoin* and other species. The chief constituents are benzoic acid, an essential oil and vanillin; used in perfumery and cosmetics. *Sumatra-* The resin from *Styrax* species. The chief constituents are cinnamic and benzoic acids; used for varnishes and in the manufacture of cinnamic acid. **b. oxime** $C_{14}H_{13}NO_2$ = 227.2. Phenyl-α-oxybenzyl ketoxime, $Ph.CHOH.C(:NOH).Ph$. (1) *d-* Colorless needles, m.132, $[\alpha]_D$ + 120.5. (2) *l-* White powder, m.174, $[\alpha]_D$ − 3.2. (3) *syn-d, l-* or β-crystals, m.99. (4) *anti-d, l-* or α- crystals, m.152; a very sensitive reagent for copper or molybdenum.

benzoiodohydrin. $C_{10}H_{10}O_2ClI$ = 324.4. Chloriodoglycerin benzoic ether, $PhCOOC_3H_5ClI$. A brownish fatty mass, soluble in alcohol, ether or benzene.

benzol. See *benzene*. **b. bichloride.** See *benzene* dichloro-. **b. bromide.** See *benzene*, bromo-. **b. chloride.** See *benzene, chloro-*.

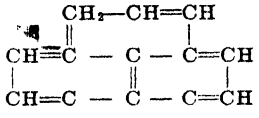
benzoline. Benzine.

benzomorpholine. C_8H_9ON = 135.1. A colorless oily liquid, b.268.



benzonaphthacene. α- Dibenzanthracene. β- Pentacene.

benzonaphthene. $C_{13}H_{10}$ = 166.07. The hydrocarbon



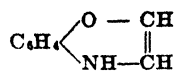
benzo-α-naphthindole. $C_{16}H_{11}N$ = 217.1. Phenyl-α-naphthylcarbazole. A heterocyclic system, isomeric with hydrindochroman.

benzonaphthol. Naphthol-benzoate.

benzonitrile. C_7H_5N = 103.08. Phenylcyanide, cyano-benzene, benzenecarbonitrile*, PhCN. A colorless liquid, d.1.008, m.−13, b.191, miscible with alcohol or ether. It resembles bitter almond oil in odor; used in the synthesis of dyes and drugs. **amino-** $NH_2C_6H_4CN$ = 118.10. Anthranilo nitrile. **m-** Colorless needles, m.53, b.289; slightly soluble in water, soluble in alcohol or ether. **p-** Colorless needles, m.86; soluble in alcohol, water or ether. **dimethyl-** Xylonitrile. **hydroxy-** Salicylonitrile. **methoxy-** Anisonitrile. **methyl-** Tolunitrile. **nitro-** $NO_2C_6H_4CN$ = 148.09. **o-** White silky needles, m.109; soluble in hot water, alcohol or ether. **m-** Colorless needles, m.117; sparingly soluble in water, soluble in alcohol or ether. **p-** White leaflets, m.147; slightly soluble in alcohol or water, soluble in ether or chloroform.

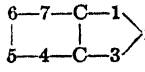
benzoparadiazine. Quinoxaline.

benzoparoxazine. C_8H_7ON = 133.1. The heterocyclic system



2-phenyl- Colorless crystals, m.103.

benzopentazole. $C_4H_3N_5$ = 79.1. A group of heterocyclic compounds of the type:



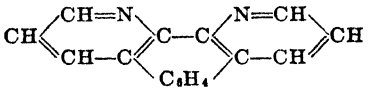
which contain five nitrogen atoms in the two rings. The position of a NH group is indicated by the initial numeral, thus **1.2.3.4.7-** NH at 1, N at 2.3.4. and 7; or **2.1.3.4.7-** NH at 2, and N at 1, 3, 4 and 7.

benzoperoxide. Commercial benzoyl peroxide.

benzophenanthrazine. Dibenzophenazine.

benzophenanthrene. (*a*-) Chrysene. (*def*-) Pyrene. (*l*) Triphenylene.

benzophenanthroline. $C_{16}H_{10}N_2$ = 230.2. The heterocyclic hydrocarbon



benzophenazine. $C_{16}H_{10}N_2$ = 230.2. Naphthophenazine, phenonaphthazine. The heterocyclic compound $C_{10}H_6\langle{}^{N}_{N}\rangle C_6H_4$. Yellow needles, m.142.5, insoluble in water.

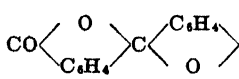
benzophenetide. $C_{15}H_{20}O_2N$ = 246.5. ar'-ethoxybenzanilide, PhNH.CO.C_6H_4.OEt.

benzophenid. Phenylbenzoate.

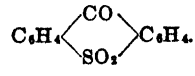
benzophenol. Phenyl benzoate.

benzophenone. $C_{13}H_{10}O$ = 182.12. Diphenylketone, *α*-oxodiphenylmethane, benzoylbenzene, Ph.CO.Ph. Colorless, rhombic, prisms, occurring in four allotropic forms: *α*- d.1.083, m.48.5, b.305; *β*- d.1.108, m.26.5, b.306; *γ*- m.46; *δ*- m. −51. Insoluble in water, soluble in alcohol or ether. It is a mild hypnotic; used in organic synthesis. **benzoyl-** Phthalophenone. **diamino-, dihydroxy-** See *di-*. **nitro-** $NO_2.C_6H_4COPh$ = 227.15. **o-** Orthonitrobenzophenone. Colorless crystals, m.105; slightly soluble in alcohol. **m-** Metanitrobenzophenone. Colorless needles, m.94; soluble in alcohol. **p-** Paranitrobenzophenone. White leaflets, m.138; soluble in alcohol. **pentahydroxy-** Maclurin. **tetramethyldiamino-** *Michler's* ketone. **thio-** Thiobenzophenone. **trihydroxy-** $C_{13}H_{10}O_4$ = 230.08. Benzophloroglucinol. *2.6.2'-*. A white solid, m.133.

b. carboxylic acid. Benzoylbenzoic acid. **b. dicarboxylic acid.** $C_{15}H_{10}O_5$ = 270.16. The dibasic keto-acid, $C_6H_4COOH.CO.C_6H_4$. **2.2-** or **o.o-** Ortho-ortho-b. Colorless crystals, m.150–200; sparingly soluble in water, soluble in alcohol or ether. **b. dicarboxylicdilactone.** $C_{15}H_8O_4$ = 252.1. The spiro-compound



Colorless crystals m.212. **b. oxime.** Benzophenoxime. **b. sulfide.** Thioxanthone. **b. sulfone.** $C_{13}H_8O_3S$. The heterocyclic compound



benzophenothiazine. $C_{16}H_{11}NS$ = 248.15. Naphthophenothiazine, thiophenylnaphthylamine. The heterocyclic compound $C_{10}H_7\langle{}^{S}_{N}\rangle C_6H_4$.

benzophenothioxine. $C_{16}H_{10}OS$ = 250.15. The heterocyclic compound $C_{10}H_6\langle{}^{S}_{O}\rangle C_6H_4$.

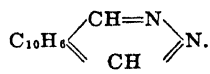
benzophenoxazine. $C_{16}H_{11}ON$ = 233.2. Naphthophenoxazine. $C_{10}H_6\langle{}^{O}_{NH}\rangle C_6H_4$. **iso-** $C_{16}H_{10}ON$ = 232.2. $C_{10}H_7\langle{}^{O}_{N}\rangle C_6H_4$.

benzophenoxime. $C_{13}H_{11}ON$ = 197.16. Benzophenone oxime, $Ph_2C{:}N.OH$. White crystals, m.140; insoluble in water, soluble in alcohol.

benzophloroglucinol. $C_{13}H_{10}O_4$ = 230.12. **2.4.6-** trihydroxy benzophenone. $Ph.CO.C_6H_2(OH)_3$.

benzophosphinic acid. $C_7H_7O_5P$ = 202.13. $HOOC.C_6H_4PO(OH)_2$. Colorless crystals, m.300; soluble in water.

benzophthalazine. $C_{12}H_8N_2$ = 180.1.

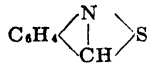


benzopinacol. $C_{26}H_{22}O_2$ = 366.31. Tetraphenylethylglycol, benzopinacone, *α.α'*-bibenzohydrol, tetraphenyl-1.2-ethanediol. $Ph_2COH.COH.Ph_2$. Colorless crystals, m.185; used in organic synthesis.

benzopinacone. Benzopinacol.

benzo-pseudoselenazol. C_7H_5NSe = 182.1. The heterocyclic compound, $C_6H_4\langle{}^{N}_{CH}\rangle Se$.

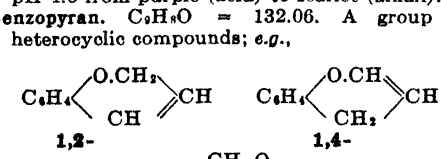
benzo-pseudo-thiazole. C_7H_5NS = 135.1. The heterocyclic compound



benzo-pseudoxazole. Anthranil.

benzopurpurin. Ozamin 4B. A red aniline dye, soluble in water; used for dyeing cotton. It is the sodium salt of o-toluidinedisazo-binaphthylamine-sulfonic acid, and is used as biological stain and indicator, changing at pH 4.0 from purple (acid) to scarlet (alkali).

benzopyran. C_9H_8O = 132.06. A group of heterocyclic compounds; *e.g.*,

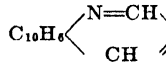


1,2- **1,4-**

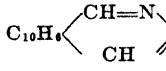
2,1-

dihydro- Chroman. **keto-**Coumarin (1,2), or chromone (1,4).

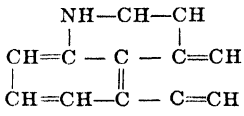
benzopyranyl. The monovalent radical, C_9H_7O—, derived from benzopyran.
benzopyrazine. Quinoxaline.
benzopyrazole. Isoindazole.
benzopyrazolon(e). Indazolone.
benzopyrene. $C_{20}H_{11}$ = 251.1. A hydrocarbon consisting of an anthracene ring with a naphthalene ring attached in the 1:2 position. It is the principal carcinogen in coal tar pitch. Cf. *benzanthracene, benzopyrine.*
benzopyridine. Quinoline.
benzopyrilium. A group of compounds derived from benzopyran, the oxygen of which is assumed to be tetravalent.
benzopyrine. $C_{15}H_{18}O_3N_2$ = 310.16. Antipyrine benzoate. $Ph.COOH.C_{11}H_{12}ON_2$. Cf. *salipyrine, benzopyrene.*
benzopyrone. 1.2- Coumarin. **1.4-** Chromone. **2.1-** Isocoumarin. **dihydro-phenyl-** Flavonone. **phenyl-** Flavone.
benzopyrrole. Indole.
benzopyrylium. Benzopyrilium.
benzoquinol. Quinol.
benzoquinoline. $C_{13}H_9N$ = 179.2. **6.7-** α-anthrapyridine. The heterocyclic compound



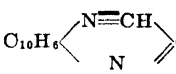
Colorless crystals, m.275, soluble in alcohol. **6.7-iso-** β-anthrapyridine.



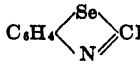
Colorless crystals, m.166, soluble in alcohol. **4.5-** or meso- $C_{12}H_9N$ = 167.2.



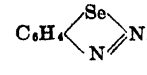
3.4- Phenanthridine.
benzoquinone. Quinone.
benzoquinoxaline. $C_{12}H_8N_2$ = 180.2. Naphthopyrazine. The heterocyclic compound



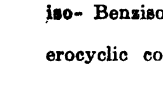
benzosalin. $C_{15}H_{12}O_4$ = 256.1. Methyl benzoyl salicylate, benzoyl salicylic acid methyl ester, $C_6H_4(OMe)COO(PhCO)$. Fine white, crystalline powder of faintly aromatic odor, m.85; slightly soluble in water. Used as an antiseptic.
benzoselenazole. C_7H_5NSe = 182.1. The heterocyclic compound



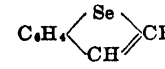
iso- Benzisoselenazole. **pseudo-** Benzopseudoselenazole.
benzoselenodiazole. $C_6H_4N_2Se$ = 183.1. Isopiaselenol. The heterocyclic compound



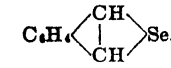
iso- Benzisoselendiazole, piaselenol. The heterocyclic compound



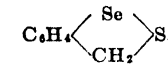
crystals, m.76.
benzoselenofuran. C_8H_6Se = 181.1. Selenonaphthene. The heterocyclic compound



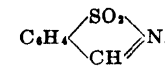
iso- Benzo-*i*-selenofuran. The ring structure



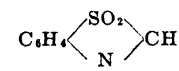
benzoselenothiole. C_7H_6SSe = 201.1. The heterocyclic compound



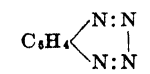
benzosol. $C_{14}H_{12}O_3$ = 228.09. Guiacol benzoate, $PhCOOC_6H_4OMe$. A colorless solid, m.61; used as disinfectant.
benzosulfinide. Saccharin.
benzosulfonazole. $C_7H_5O_2NS$ = 167.1. **1-** The heterocyclic compound



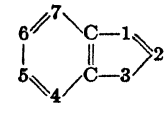
2- Benzisosulfonazole.



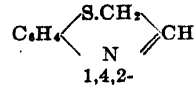
benzosulfonazolone. Saccharin.
benzotetrazine. $C_6H_4N_4$ = 132.2. The heterocyclic compound



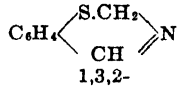
benzotetrazole. $C_6H_4N_4$ = 120.2. A group of heterocyclic compounds of the type containing



four nitrogen atoms, one of which is NH. The 1,3,4,6-compound is identical with purine (q.v.), in which, according to Fisher's notation, the atoms are numbered differently.
benzothiazine. C_8H_7NS = 149.2. A group of heterocyclic compounds; as

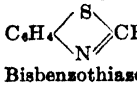


1,4,2-



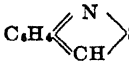
1,3,2-

Cf. *benzoisothiazine.*
benzothiazole. C_7H_5NS = 135.1. Methenylamidothiophenol. The heterocyclic compound

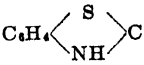


A colorless liquid, b.234. **bis-** Bisbenzothiazole. **dihydro-** Benzothiazoline. **iso-, iso-pseudo-** Benzisothiazole. **phenyl-** Ben-

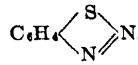
senylamidothiophenol. pseudo- Benzopseudothiazole. The heterocyclic compound



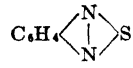
benzothiazoline. C_7H_7NS = 137.1. 1,2-dihydrobenzothiazole. The heterocyclic compound



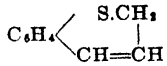
benzothiodiazole. $C_6H_4N_2S$ = 136.1. Isopiazthiole, diazosulfide, phenylenediazosulfide, i-piazothiole. The heterocyclic compound



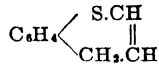
iso- Benzisothiodiazole, piazthiole. The heterocyclic compound



benzothiofuran. Thionaphthene.
benzothiophene. Thionaphthene.
benzothiopyran. C_9H_8S = 148.1. A group of heterocyclic compounds, *e.g.*,

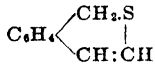


1,2-



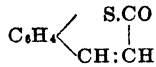
1,4

(Thiochromene)

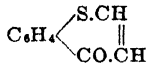


2,1-

dihydro- Thiochroman. **2-keto-** Thiocoumarin. **4-keto-** Thiochromone.
benzothiopyrone. C_9H_6OS = 162.1. Thiochromone. A group of heterocyclic compounds; as,

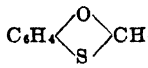


1,2-
thiocoumarin, q.v.

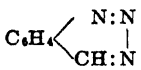


1,4-
thiochromone, q.v.

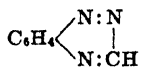
hydroxy- Thiochromonol. **phenyl-** Thioflavol.
benzothioxole. C_7H_6OS = 138.11. The heterocyclic compound



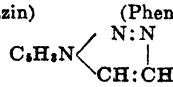
benzotoluide. $C_{14}H_{13}ON$ = 211.3. Methylbenzanilide, *N*-benzoyltoluidine. The compound $PhCONH.C_6H_4Me$. **o-** Rhombic needles, d.-1.205, m.146. **m-** Monoclinic prisms d.1.170, m.125. **p-** Rhombic needles, d.1.202, m.158, b.232, insoluble in water, soluble in alcohol.
benzotriazine. $C_7H_5N_3$ = 131.2. A group of heterocyclic compounds; as,



1,2,3-
(Phentriazin)

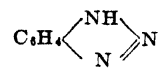


1,2,4-
(Phenpyrrodiazole)

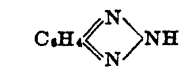


1,2,6-

benzotriazole. $C_6H_5N_3$ = 119.2. A group of heterocyclic compounds; as

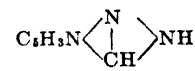


1,2,3-
benzisotriazole



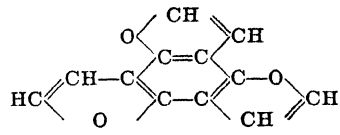
2,1,3-
ψ-azimidobenzene

(azimidobenzene, q.v.)

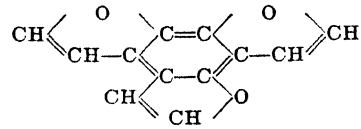


2,1,5-

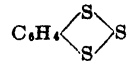
1.2.3- Colorless crystals, m.99, d.1.2, soluble in alcohol or benzene.
benzotrichloride. $C_7H_5Cl_3$ = 195.4. Toluene trichloride, *α*-trichloro toluene, phenyl-chloroform, benzoic trichloride, benzenyl chloride, $PhCCl_3$. A colorless or yellowish liquid of penetrating odor, d.1.38, m. −21, b.214, decomp. in water; used in the synthesis of aniline dyes.
benzotrifuran. $C_{12}H_6O_3$ = 198.04. **1.3.5-** The heterocyclic compound:



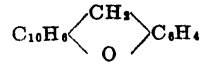
1.2.4- The heterocyclic compound:



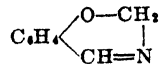
benzotrisulfole. $C_6H_4S_3$ = 172.4. The heterocyclic compound



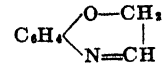
benzoxanthene. $C_{17}H_{12}O$ = 232.1. Naphthoxanthene, phenonaphthoxanthene. The heterocyclic compound;



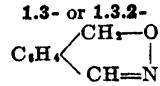
Cf. *naphthoxanthine*.
benzoxazine. C_8H_7ON = 133.1. A group of heterocyclic compounds:



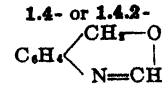
1.3- or 1.3.2-



1.4- or 1.4.2-



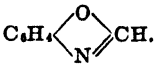
2.3- or 2.3.1-



2.4- or 2.4.1-

dihydro- Phenomorpholine. **b. dione.** Isatoic anhydride.

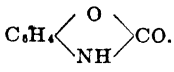
benzoxazole. C_7H_5ON = 119.09. Methenylamidophenol.



Colorless crystals, m.32, b.183. Cf. *benzisoxazole.* **amino-** $C_7H_6ON_2$ = 134.1. Colorless crystals, m.130. It occurs in two isomeric forms.

 and 
anilido- $C_7H_4ON.NHPh$ = 210.13. Colorless crystals, m.137. **methyl-** Ethenylamidophenol. **phenyl-** $C_7H_4ON.Ph$ = 195.1. Colorless crystals, m.103. **thio-** Thiobenzoxazole.

benzoxazolon(e). $C_7H_5O_2N$ = 135.05. The heterocyclic compound,



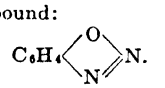
N-ethyl- $C_7H_4EtO_2N$ = 163.07. Colorless crystals, m.29.

benzoxazolyl. The monovalent radical, C_7H_4ON—, derived from benzoxazole.

benzoxdiazine. $C_7H_6ON_2$ = 134.07. A group of heterocyclic compounds, similar to benzodiazine, but which contain one oxygen and two nitrogen atoms in the ring, as:

1.2.3- Oxygen at position 1, nitrogen at 2 and 3.
2.3.4- Oxygen at position 2, nitrogen at 3 and 4.
3.1.2- Oxygen at position 3, nitrogen at 1 and 2.

benzoxdiazole. $C_6H_4ON_2$ = 120.05. The heterocyclic compound:

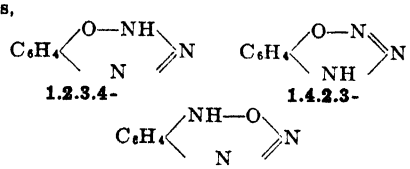


Cf. *naphthoxdiazole.*

benzoxtetrazine. $C_6H_4ON_4$ = 136.07. A group of heterocyclic compounds, similar to benzodiazine, but which contain one oxygen and four nitrogen atoms in the ring; as,

1.2.3.4.6- Oxygen at 1, NH at 2, N at 3.4. and 6.
1.4.3.2.6- Oxygen at 1, NH at 4, N at 3.2. and 6.
2.1.3.2.7- Oxygen at 2, NH at 1, N at 3.2. and 7.

benzoxtriazine. $C_6H_5ON_3$ = 135.07. A group of heterocyclic compounds containing one oxygen and three nitrogen atoms in the ring; as,

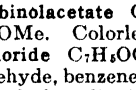


1.2.3.4- **1.4.2.3-**

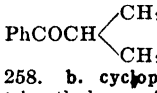
2.1.3.4-

benzoxy. The monovalent radical, C_6H_5COO— or PhCOO—, derived from benzoic acid.

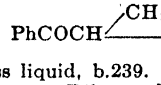
benzoyl. The monovalent aryl radical, C_6H_5CO— or PhCO— or Bz, derived from benzoic acid. Cf. *chlorobenzoyl, nitrobenzoyl.* **b. acetaldehyde** $C_9H_8O_2$ = 148.11, $PhCOCH_2.CHO$. Colorless crystals. **b. acetate** $C_9H_8O_3$ = 164.06. Acetylbenzoate, acetobenzoic acid anhydride, PhCO.O.OCMe. **b. acetic acid** $C_9H_8O_3$ = 164.11. Phenylketoacetic acid, $Ph.CO.CH_2.COOH$. Colorless needles m.61 decomp. 103; slightly soluble in water, soluble in alcohol or ether. Used in organic synthesis. **b. acetic ethyl ester.** $Ph.CO.CH_2.COOEt$ = 192.10. An oily liquid, b.148. **b. acetone** $C_{10}H_{10}O_2$ = 162.13. Acetylacetophenone. A homolog of benzoylacetaldehyde, $Ph.CO.CH_2.CO.Me$. Colorless liquid, d.1.570, m.80, b.260; very slightly soluble in water, soluble in alcohol or ether. Used in organic synthesis. **b. acetonitrile** C_9H_7ON = 145.1. Cyanacetophenone, $Ph.CO.CH_2.CN$. Colorless crystals, m.80; soluble in alcohol or ether. **b. acetyl** $C_9H_8O_2$ = 148.1. The diketone, Ph.CO.CO.Me. A colorless oily liquid, b.214. **b. amide.** Benzamide. **b. aniline.** Benzanilide. **b. anthraquinone** $C_{21}H_{12}O_3$ = 312.20, $C_6H_4(CO)_2:C_6H_3COPh$. White crystals, m.182; insoluble in water, soluble in alcohol or ether. **b. azide** $C_7H_5ON_3$ = 147.2. Azimide, benzazide, benzoylnitride.



Colorless crystals m.20, or a liquid. **b. benzoic acid.** $C_{14}H_{10}O_3$ = 226.08. Benzophenone carboxylic acid, $PhCOC_6H_4COOH$. Colorless crystals, *o-* m.127; *m-* m.162; *p-* m.194. **b. benzylamine** $C_{14}H_{13}ON$ = 211.11. $Ph.CO.NHCH_2.Ph$. Colorless crystals, m.105. **b. bromide** C_7H_5Br = 185.04. α-Bromobenzaldehyde, benzene carbonylbromide*, PhCOBr. A colorless liquid, d.1.57, m.0, b.218; decomp. in water, soluble in ether. **b. butylcarbinol** $C_{11}H_{14}O_2$ = 178.11. The compound $PhCO(CH_2)_4OH$. Colorless crystals, m.49. **b. carbinol** $C_8H_8O_2$ = 136.06. $PhCOCH_2OH$. Colorless crystals, m.83. **b. carbinolacetate** $C_{10}H_{10}O_3$ = 178.08. $PhCOCH_2O.COMe$. Colorless crystals, m.49, b.270. **b. chloride** C_7H_5OCl = 140.53. α-Chlorobenzaldehyde, benzenecarbonyl chloride*, PhCOCl. A colorless liquid, d.1.219, m. −1, b.198; decomp. with water or alcohol, but soluble in ether or chloroform; used as a reagent for alcohol and lysidine, in organic synthesis and in the manufacture of dyes. **b. cyanide** C_8H_5ON = 131.12. α-Cyanobenzaldehyde, PhCOCN. Colorless scales, m.32, b.207; insoluble in water. **b. cyclobutane** $C_{11}H_{12}O$ = 160.15.



A colorless liquid, b.258. **b. cyclopropane** $C_{10}H_{10}O$ = 146.13. B. trimethylene. The ring-compound

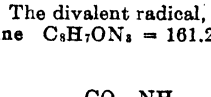


A colorless liquid, b.239. **b. disulfide** $C_{14}H_{10}O_4S_2$ = 274.21. Dibenzoyl-disulfide. The compound, PhCOSSCOPh. Colorless prisms, m.128, decomp. on further heating, insoluble in water, slightly soluble in alcohol. **b. ecgonine.** Cocaine. **b. fluoride** C_7H_5OF = 128.08. Benzene carbonyl fluoride*, PhCOF. A colorless liquid, b.161.5; insoluble in water. **b. formaldehyde** $C_8H_6O_2$ = 134.1. (1) *anhydrous.* $PhCO.CHO$, phenylglyoxal. A colorless liquid, $b._{125mm}142$. (2) *hydrated.* $PhCO.CH(OH)_2$. Colorless crystals, m.73. **b. formic acid** $C_8H_6O_3$ = 150.1. Phenyl-glyoxylic acid, PhCO.COOH. Colorless crystals, m.65; soluble in water, alcohol, or ether. **b. formoxine** $C_8H_7O_3N$ = 149.1. Isonitrosoacetophenone. $Ph.CO.CH:NOH$. Colorless crystals, m.127, used

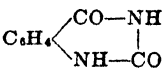
as a reagent for ferrous salts. **b. glycine.** Hippuric acid. **b. glycocoll.** Hippuric acid. **b. glycolic acid** $C_9H_8O_4$ = 180.1. PhCO.OCH$_2$.COOH. Colorless large prisms, slightly soluble in water, soluble in alcohol or ether. **b. hydrazine** $C_7H_8ON_2$ = 136.1. PhCONHNH$_2$, α-hydrazinobenzaldehyde. Colorless crystals, m.112, b.267, soluble in water, alcohol or ether. (2) *di-* Dibenzoyl hydrazine, $(PhCONH)_2$ = 270.3. Colorless crystals, m.233. **b. hydride.** Benzaldehyde. **b. hydrogen peroxide** $C_7H_6O_3$ = 138.05. PhCO.O$_2$H. Colorless crystals, m.41, b.97; insoluble in water, soluble in alcohol or ether. **b. hydroxide.** Benzoic acid. **b. iodide** C_7H_5OI = 231.95. Benzenecarbonyliodide*, α-iodobenzaldehyde. PhCOI. Colorless leaflets, m.3 (decomp.), decomp. in water, soluble in alcohol or ether. **b. methane.** Acetophenone. **b. naphthol.** Naphthol benzoate. **b. oxide.** Benzoic anhydride. **b. peroxide** $C_{14}H_{10}O_4$ = 242.15. Benzoperoxide, luzidol, $(PhCO)_2O_2$. Colorless rhombic crystals, m.103; insoluble in water, soluble in alcohol, ether, or benzene. Used as a flour "improver," and as a bleaching agent. **b. phenylhydrazine** $C_{13}H_{12}ON_2$ = 212.17. PhCONHNHPh. Colorless crystals, m.145; soluble in hot water, alcohol, ether, or chloroform. Used as an antiseptic. **b. propionaldehyde** $C_{10}H_{10}O_2$ = 162.1. $PhCO(CH_2)_2CHO$. A colorless liquid, b.245. **b. propionic acid** $C_{10}H_{10}O_3$ = 178.1. $PhCO.(CH_2)_2COOH$. Colorless needles, m.116; soluble in hot water or alcohol. **b. pseudotropeine.** Tropacocaine. **b. pyrocatechol.** *Dihydroxy*-benzophenone. **b. salicin.** Populin. **b. sulfide** $C_{14}H_{10}O_2S$ = 242.1. PhCO.S.COPh. Colorless crystals, m.48. **b. sulfonic imide.** Saccharin. **b. thiourea** $C_8H_9ON_2S$ = 180.14. $PhCONH.CS.NH_2$. Small colorless prisms, m.170; soluble in water or alcohol, insoluble in ether. **b. trimethylene.** B. cyclopropane. **b. urea** $C_8H_8O_2N_2$ = 164.12. $PhCONH.CO.NH_2$. A crystalline solid, m.215.

benzoylation. The introduction of the PhCO— radical into a molecule.

benzoylene. The divalent radical, —C_6H_4.CO—. **b. guanidine** $C_8H_7ON_3$ = 161.2. Benzglycocyanidine.



b. urea. $C_8H_6O_2N_2$ = 162.2. Diketotetrahydroquinazoline.



benzoyles. A group of organic aromatic compounds containing the benzoylene radical, *e.g.*, benzoylene guanidine.

benzpinacone. Benzopinacol.

benzpyrazole. Isoindazole.

benzpyrene. Benzopyrene.

benz-seleno. See *benzo-seleno-*.

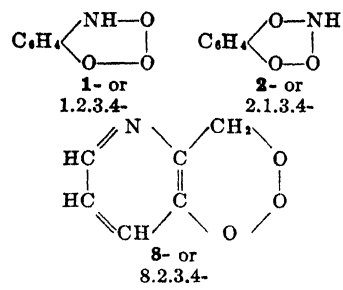
benzsulfhydroxamic acid. Benzene sulfonic hydroxamide.

benz-sulfo-. See *benzosulfo-*.

benz-syn-aldoxime. Benzaldoxime.

benzthiophen. Thionaphthene.

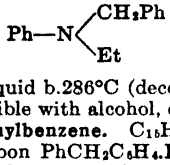
benztrioxazine. $C_6H_5O_3N$ = 139.1. A group of heterocyclic compounds which contain three oxygen atoms and one nitrogen atom in the ring; as,



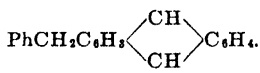
1- or 1.2.3.4- **2-** or 2.1.3.4- **8-** or 8.2.3.4-

benzyl. The monovalent aryl radical, C_7H_7—, $PhCH_2$— or $C_6H_5CH_2$—, derived from toluene. **b. acetamide** $C_9H_{11}ON$ = 149.01. **N-** $PhCH_2NHCOMe$. Colorless crystals, m.60, b.300; soluble in ether. **α-** Hydrocinnamamide. **b. acetate** $C_9H_{10}O_2$ or $MeCOOCH_2Ph$ = 150.13. A colorless liquid, d_{16}°1.057, b.206, very slightly soluble in water, soluble in hot alcohol or ether. Cf. *methylbenzoate*. **b., acetoacetic ether** $C_{13}H_{16}O_3$ or $C_2H_3O.CHCH_2Ph.COOEt$ = 220.20. A colorless liquid, d_{25}°1.061, b.287; insoluble in water, miscible with alcohol or ether. **b. acetophenone.** Propiophenone. **b. acrylic acid.** $C_{10}H_{10}O_2$ = 162.08. Methylene hydrocinnamic acid, $CH_2:C(PhCH_2)_2COOH$. Colorless crystals, m.69. **b. alcohol** C_7H_8O or $PhCH_2OH$ = 108.10. Phenyl carbinol, benzalcohol, phenmethylol, α-hydroxytoluene, $PhCH_2OH$. A colorless liquid with an aromatic odor and a sharp burning taste, d.1.045, b.204.7, slightly soluble in water, soluble in alcohol or ether. Used as a local anesthetic and in perfumery. **(hydroxy-)** $C_6H_4(OH)CH_2OH$ = 124.10. **o-** Saligenin. **m-** m-oxybenzyl-alcohol. Colorless needles, m.67, decomp. 300; soluble in hot water, alcohol or ether. **p-** Colorless needles, m.110; soluble in water, alcohol or ether. **(hydroxy methoxy-)** Vanillic alcohol. **(isopropyl-)** Cuminol. **(methoxy-)** Anisyl alcohol. **(methyl-)** Homosaligenin. **(methylaminoethyl-)** Ephedrine. **(methylenedioxy-)** Piperonyl alcohol. **(methyl-isopropyl-)** Thymotic alcohol. **(nitro-)** $NO_2C_6H_4CH_2OH$ = 153.10. **o-** Colorless needles, m.74; soluble in alcohol, water or ether. **m-** White rhombic crystals, m.27. **p-** Colorless needles, m.93, b.179; soluble in water, alcohol or ether. **(oxy-)** See *hydroxy-b. alcohol*. **b. amine** C_7H_9N or $PhCH_2NH_2$ = 107.15. Phenylmethylamine. Colorless liquid d_{20}°0.980, b.184; miscible with water, alcohol or ether. Used in organic synthesis. **(di-)** $(PhCH_2)_2NH$ = 197.13. Diphenylmethylimine. A colorless liquid, b.300; soluble in alcohol. **(imino-)** Benzamidine. **(tri-)** $(PhCH_2)_3N$ = 287.17. Colorless crystals, m.91. **b. aniline** $C_{13}H_{13}N$ = 183.2. The aromatic diamine, $PhCH_2NHPh$. Colorless prisms, m.32, b.310; insoluble in water, soluble in alcohol or ether, used in organic synthesis. **(di-)** $C_{21}H_{19}N$ = 285.3. The aromatic triamine, $(PhCH_2)_2NPh$. Colorless crystals, m.67. **b. azide** $C_7H_7N_3$ or $PhCH_2N_3$ = 133.12. A liquid, $b._{25mm}$108, insoluble in water. **b. benzene.** Diphenylmethane, $PhCH_2Ph$. **b. benzoate** $C_{14}H_{12}O_2$ or $PhCOOCH_2Ph$ = 212.17. A colorless oily liquid with faint aromatic odor and sharp burning taste, d_{19}°1.114, m.18.5, b.321; insoluble

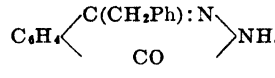
in water or glycerin, soluble in alcohol, ether or chloroform. Used medicinally as an antispasmodic. **b. benzoic acid.** Diphenylmethane carboxylic acid. **b. bichloride.** Benzalchloride. **b. bromide** C_7H_7Br = 171.06. α-bromotoluene, $PhCH_2Br$. A colorless liquid, d_{22}°1.438, m.-3.9, b.198.5; insoluble in water, miscible with alcohol or ether. Used as a poison gas in chemical warfare. **b. carbamate.** $C_8H_9O_2N$ = 151.12. $PhCH_2O.CO.NH_2$. A colorless liquid, b.197, insoluble in water, miscible with alcohol or ether. **b. carbamide.** B. urea. **b. carbinol.** $C_8H_{10}O$ = 122.10. Phenylethyl alcohol, phenylethanol, α-hydroxy-β-phenyl ether, $PhCH_2CH_2OH$. A colorless liquid, d.1.024, b.212; slightly soluble in water, soluble in alcohol or ether. It is a constituent of oil of rose, geranium, etc.; used in artificial flower oils. (iso-) Phenylmethylcarbinol, $PhCHMeOH$. A colorless liquid, b.203. **b. carbonimide.** $PhCH_2NC$, isomeric with b. cyanide. **b. chloride** C_7H_7Cl = 126.55. α-Chlorotoluene, $PhCH_2Cl$. A colorless liquid, d.1.103, m.-41, b.178; insoluble in water, miscible with alcohol or ether. Used in the synthesis of bitter almond oil and aniline dyes. **b. cinnamate** $C_{16}H_{14}O_2$ = 238.11. Cinnamein. The ester $C_8H_7COOCH_2Ph$. Colorless prisms, m.39; used in perfumery. **b. cyanamide.** $C_8H_8N_2$ = 132.12. The compound $PhCH_2NHCN$. A crystalline solid, m.33; insoluble in water, soluble in alcohol or ether. **b. cyanide.** C_8H_7N = 117.15. Phenylacetonitrile, α-tolunitrile, α-cyano-toluene, $PhCH_2CN$. A colorless liquid, d.1.0146, m.-24.6, b.233.5; insoluble in water, soluble in alcohol or ether. Used in organic synthesis. (iso-) B. carbonimide. (nitro-) $NO_2.C_6H_4.CH_2CN$ = 162.11. o- Colorless needles, m.83, soluble in hot water. p- Colorless prisms, m.115, insoluble in water, soluble in alcohol or ether. **b. fumarate.** $C_{18}H_{16}O_4$ = 326.14. Dibenzyl fumarate, $(PhCH_2OOC.CH=)_2$. A white odorless solid, insoluble in water; used as antispasmodic. Cf. *b. succinate.* **b. dichloride.** Benzalchloride. **b. diphenyl.** $C_{19}H_{16}$ = 244.15. The hydrocarbon $PhCH_2.C_6H_4Ph$. o- Monoclinic needles, m.54, $b._{650mm}$283; soluble in alcohol or ether. p- Colorless leaflets, m.85, b.285, soluble in alcohol or ether. **b. diphenylamine.** $C_{19}H_{17}N$ = 259.15. $PhCH_2.NPh_2$. Colorless crystals, m.87. **b. disulfide.** $C_{14}H_{14}S_2$ = 246.30. $PhCH_2S.SCH_2Ph$. Colorless leaflets, m.71; soluble in alcohol, ether or benzene. **b. ether** $C_{14}H_{14}O$ = 198.19. Benzyloxide, $(PhCH_2)_2O$. A colorless oily liquid, d.1.036, b.297; miscible with alcohol or ether. **b. ethylaniline.** $C_{15}H_{14}N$ = 208.2. The tertiary amine



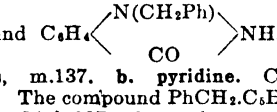
A yellowish liquid b.286°C (decomp.); insoluble in water, miscible with alcohol, ether, or chloroform. **b. ethylbenzene.** $C_{15}H_{16}$ = 196.20. The hydrocarbon $PhCH_2C_6H_4.Et$. A colorless liquid, d.0.985, b.194; soluble in ether, alcohol or chloroform. **b. formamide.** C_8H_9ON = 135.1. $PhCH_2.NH.CHO$. (o-nitro-) $NO_2.C_6H_4.CH_2.NHCHO$ = 181.10. Colorless crystals, m.89. **b. hydrazine.** $C_7H_{10}N_2$ = 122.2. $PhCH_2NHNH_2$. A colorless liquid, $b._{33mm}$135. (di-) $C_{14}H_{14}N_2$ = 212.3. The compound $PhCH_2NHNHCH_2Ph$. Colorless crystals, m.65; used in organic synthesis. **b. hydroxylamine.** C_7H_9ON = 123.09. α- $PhCH_2ONH_2$. A colorless liquid, b.123. β- The compound $PhCH_2NHOH$. Colorless crystals, m.57. (di-) The compound $PhCH_2NHOCH_2Ph$ = 213.14. (tri-) The compound $(PhCH_2)_2NOCH_2Ph$ = 303.19. **b. idene.** Benzylidene. **b. iodide** C_7H_7I = 218.08. α-Iodotoluene, or $PhCH_2I$. A colorless liquid, d.1.734, m.24, decomp. on further heating; soluble in alcohol, ether, or carbon disulfide. Used in organic synthesis and in the manufacture of drugs and dyes. **b. isocyanide.** B. carbimide. **b. isosulfocyanide.** B. sulfocyanide. **b. isothiocyanate.** B. mustard oil. **b. ketone.** $C_{15}H_{14}O$ = 210.19. The ketone $(PhCH_2)_2CO$. White crystals, m.34, b.330; insoluble in water, soluble in alcohol or ether. **b. mercaptan** C_7H_8S = 124.16. B. sulfhydrate, b. thiol, $PhCH_2SH$. A colorless liquid, d.1.058, b.196. **b. morphine.** Peronine. **b. mustard oil** C_8H_7SN = 149.19. Benzylisothiocyanate, $PhCH_2NCS$. A colorless liquid, b.243, insoluble in water, miscible with alcohol or ether. **b. naphthalene.** $C_{17}H_{14}$ = 218.20. The hydrocarbon $C_{10}H_7CH_2Ph$. α- Monoclinic prisms, m.58.6, b.350. β- Monoclinic prisms m.35, b.345. **b. naphthylketone.** $C_{18}H_{14}O$ = 246.11. $PhCH_2COC_{10}H_7$. Colorless scales, m.57; soluble in alcohol or ether. **b. nitrile.** B. cyanide. **b. oxethylamine.** $C_9H_{13}ON$ = 151.2. Picrate. Colorless crystals, m.136. **b. phenanthracene.** $C_{21}H_{16}$ = 268.13. The hydrocarbon



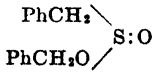
Colorless needles, m.155; insoluble in water, soluble in alcohol or ether. **b. phenol.** $C_{13}H_{12}O$ = 184.1. $PhCH_2C_6H_4OH$. p- Colorless crystals, m.84, b.325; soluble in water or alcohol. **b. phenylamine.** B. aniline. **b. phthalazone** $C_{15}H_{12}ON_2$ = 236.2. The compound



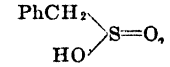
b. phthalimidine. $C_{14}H_{12}ON_2$ = 224.1. The compound



Colorless crystals, m.137. **b. pyridine.** $C_{13}H_{11}N$ = 169.11. The compound $PhCH_2.C_5H_4N$. α- b.276, β- m.34, b.287. **b. succinate.** $C_{18}H_{18}O_4$ = 328.14. Dibenzylsuccinate, $(PhCH_2OOC.CH_2—)_2$. White odorless powder, insoluble in water, soluble in alcohol, used as antispasmodic. Cf. *b. fumarate.* **b. sulfhydrate.** B. mercaptan: **b. sulfide.** $C_{14}H_{14}S$ = 214.22. B. thioether, $(PhCH_2)_2S$. Colorless scales, d.1.071, m.49, $b._{13mm}$180; insoluble in water, soluble in alcohol or ether. Used in organic synthesis. **b. sulfine.** $C_{14}H_{14}O_2S$ = 246.24.

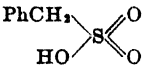


an isomer of b. sulfone. **b. sulfinic acid.** $C_7H_8O_2$ = 124.12.

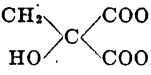


, or $PhCH_2.SO.OH$. **b. sulfocyanide.** C_8H_7NS = 149.19. B. rhodanide, b. thicyanate, $PhCH_2CNS$. Colorless prisms, m.41, b.230; insoluble in

water, soluble in alcohol or ether. (iso-) B. isorhodanide, b. isothiocyanate. $PhCH_2NCS$. Colorless liquid, b.240. **b. sulfone.** $C_{14}H_{14}O_2S = 246.24$. Colorless, flat, needles, m.150; soluble in alcohol, ether, acetone or benzene. **b. sulfonic acid.** $C_7H_8O_3S = 172.1$.



or $PhCH_2.SO_2.OH$. **b. sulfoxide.** $C_{14}H_{14}OS = 230.21$.  Colorless leaflets, m.132; soluble in hot water, alcohol, or ether. **b. tartronic acid.** $C_{10}H_{10}O_5 = 210.1$.

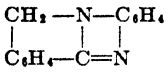


Colorless crystals, m.143, decomp. on further heating; soluble in water, alcohol or ether. **b. thiourea.** $C_8H_{10}N_2S = 166.2$. B. sulfocarbamide. $PhCH_2NH.CS.NH_2$. Colorless crystals, m.162; soluble in water. **b. thiocyanate.** B. sulfocyanide. **b. urea.** $C_8H_{10}ON_2 = 150.20$. B. carbamide, $PhCH_2NH.CO.NH_2$. Colorless needles, m.147 (decomp.); slightly soluble in water, soluble in alcohol or ether.

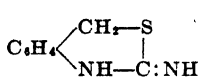
benzylation. The introduction of the benzyl radical into an organic molecule; or conversion into benzyl derivatives.

benzylcarbamide. See *benzyl.*

benzylene. The divalent radical, $-C_6H_4CH_2-$, which usually occurs in bicyclic compounds. **b. benzimidazole.** The tetraheterocyclic system:



b. chloride. Benzalchloride. **b. glycol.** Hydrobenzoin. **b. pseudothioures.** Coumothiazone, imido-. **b. pseudo-thiurea.** The heterocyclic system.



b. ψ-thiourea. Coumothiazone, imido-. **b. thiurea.** B. pseudo-thiurea.

benzylidene. The divalent $PhCH=$ or $C_7H_6=$ radical, in which the two valencies are usually attached to one atom of another radical, thus forming a double bond. Cf. *benzal.*

b. acetone. $C_{10}H_{10}O = 146.1$. Benzalacetone, methylcinnamyl ketone, acetocinnamone, methyl styryl ketone, $PhCH:CHCOMe$. Colorless crystals with odor like coumarin, m.42; soluble in alcohol or ether. Used in organic synthesis. *di-* Styryl ketone. **b. bromide.** $C_7H_6Br_2$ or $PhCHBr_2 = 249.94$. A liquid, $b._{20mm}130$. **b. chloride.** Benzalchloride.

benzylmorphine. Peronine.

benzylphenylamine. Benzyl aniline.

beraunite. A native iron phosphate.

Berberidaceae. The barberry family. A group of herbs, shrubs or trees with a watery juice. Several of them yield drugs:

Caulophyllum thalictroides	blue cohosh
Podophyllum peltatum	may apple, podophyllin
Berberis vulgaris	barberry
Jeffersonia diphylla	twin leaf
Nandina domestica	nandinine, domesticine

berberine. $C_{20}H_{17}O_4N.6H_2O = 443.34$. An alkaloid from the roots of *Hydrastis canadensis* (golden seal), *Berberis vulgaris*, and other Ranunculaceae. Orange or yellowish crystals, m.145; soluble in water or alcohol, slightly soluble in ether. Used as hydrochloride or sulfate. Cf. *bebeerine.* **b. bisulfate.** Is b. sulfate. **b. carbonate.** $C_{20}H_{17}N.H_2CO_3.2H_2O = 395.15$. Yellow crystals; soluble in hot water or alcohol. **b. hydrochloride.** $C_{20}H_{17}O_4N.HCl.2H_2O = 407.61$. Yellow crystals or amorphous powder, d.1.397; soluble in water or alcohol. It is a general tonic, stomachic and gentle laxative. **b. sulfate.** $C_{20}H_{17}O_4N.H_2SO_4 = 433.32$. Orange-yellow needles; soluble in water or alcohol. It is an antiperiodic, stomachic, and tonic.

berberis. The dried stems of *Berberis aristata* or *vulgaris*, used as a fluid-extract as a tonic and purgative. See *barberry.*

berberonic acid. $C_8H_8O_6N.2H_2O = 250.1$. 2.-4.5-pyridine tricarboxylic acid*, $C_5H_5N(CO-OH)_3$. Colorless, triclinic crystals, decomp. 235; slightly soluble in water or alcohol, soluble in ether.

berengelite. A Peruvian, pitchlike mineral, used for caulking.

beresovite. A native mixed chromate and carbonate of lead.

bergamot oil. A yellowish green, volatile essential oil from the rind of *Citrus bergamia*, a Rutaceae, d.0.880–0.885; insoluble in water, soluble in alcohol, ether, chloroform, or benzene. It contains linalyl acetate, limonene and linalol; used in perfumery, and as a histological clearing agent.

bergblau. A native copper carbonate.

bergenine. $C_6H_3O_3.H_2O = 141.1$. A bitter principle from *Saxifraga crassifolia;* m.140; soluble in water or alcohol.

bergenose. An ilmenite-norite from Norway.

berginization. See Bergius process (1).

Bergius, Friedrich. A German chemist noted for his industrial processes. **B. process.** (1) Berginization. The production of motor fuels by the hydrogenation and liquefaction of coal, which is pulverized and subjected at 400–450°C to an atmosphere of hydrogen under a pressure of 120–200 atmospheres, which transforms it into a black tarry liquid. This yields 50 % crude oil and other products (bergin products). (2) A method of manufacturing sugar from wood by treating sawdust with 40 % HCl and removing the acid by vapors from hot mineral oil.

Bergman, Torbern Olof. 1735–1784. A Swedish chemist and pioneer in devising symbols for chemical elements. In his *Opuscula physica et chemica* (1783) he adapted the alchemical symbols consisting of circles and arcs, and represented compounds by joining them together. He also devised analytical methods, and developed chemical industry.

beriberi. A disease due to a deficiency of vitamin B.

Berkefeld filter. A porous porcelain cylinder for the filtration of toxins and sera or the preparation of sterile solutions.

berkevilite. Barkevite.

Berkshire sand. A purified sea-sand used for filtration, and in the Sedgwick rafter funnel, which is used in water analysis.

Berlin blue. Ferric-ferrocyanide.

bernstein. Amber. **b. säure.** Succinic acid.

Berthelot, Marcellin Pierre Eugène. 1827–1907. A French statesman, chemist and pioneer in physical chemistry: "All chemical reactions are dependent upon physical forces." He also worked on the history of chemistry. Cf. *Berthollet.*

berthierine. An iron ore from Alsace, consisting of magnetite and chamosite.

berthierite. $FeSb_2S_4$. A native iron sulfantimonide, which occurs in dark-gray metallic prisms.

Berthollet, Count Claude Louis. 1748–1822. A French chemist and contemporary of Lavoisier. He discovered the compositions of ammonia and hydrogen sulfide and developed industrial chemistry; *e.g.*, dyeing. Cf. *Berthelot.*

berthollide. Proposed name for an alloy. Cf. *daltonide.*

bertrandite. $H_2Be_4Si_2O_9$. A native beryllium silicate which occurs in colorless, transparent, orthorhombic crystals.

beryl. $Al_2Be_2Si_6O_{18}$. A native beryllium, aluminum silicate, found as hexagonal, colorless, green, blue or brownish crystals. MW.539.9, d.2.7, MV.200, hardness, 7.5–8. The transparent varieties are used as gems; *e.g., aquamarine, smaragd, rosterite, emerald.*

beryllia. Beryllium oxide.

beryllium. Be = 9.02, or glucinum Gl. An element of the magnesium group, atomic number **4**. A hard, non-corrodible, grayish-black metal in hexagonal crystals, $d_{20°}$.1.85, m.1285; soluble in acids or alkalis. Beryllium ores are generally found in granite rocks; *e.g.*, beryl, chrysoberyl, euclase, helvite, and phenacite. Beryllium is divalent and forms only one series of compounds. It was discovered in 1797 by Vauquelin in beryl, and isolated in 1828 by Bussy and Woehler. The metal and its compounds are at present of little industrial importance, but it may become valuable for aircraft as it imparts strength and hardness to aluminum alloys; with silver it forms untarnishable alloys. It is also used for windows in x-ray tubes. **b. acetate.** $(CH_3COO)_2Be$ = 127.07. Colorless plates, decomp. 285. *basic-* $BeO.3Be(C_2H_3O_2)_2$ = 406.22. White octahedric crystals, d.1.364, m.284, b.331, decomp. in water. **b. acetylacetonate** $Be(C_5H_7O_2)_2$ = 207.13. Monoclinic crystals, d.1.168, m.108, b.270, slightly soluble in water. **b. alkyls.** The organic compounds of beryllium, containing aliphatic radicals; *e.g. b. ethide.* **b. bromide** $BeBr_2$ = 168.94. White, hygroscopic needles, m.601; soluble in water. **b. carbide** Be_2C = 30.21. Yellow, hexagonal crystals, $d_{15°}$.1.9, decomp. by water. **b. carbonate** $BeCO_3.4H_2O$ = 141.2. Glucinum carbonate. A white powder; insoluble in water, decomp. by acids. It occurs also in basic salts of variable composition. (basic-) $(BeO)_4CO_2.5H_2O$ = 259.59. A white powder; insoluble in water, decomp. by acids, soluble in alkalis. **b. chloride** $BeCl_2$ = 80 9. Glucinum chloride. White deliquescent needles, m.400, b.500; soluble in water, alkalis or acids. (liquid) $BeCl_2.4H_2O$. A slightly yellowish, sirupy liquid, miscible with water or alcohol. **b. ethide, b. ethyl** $BeEt_2$ = 67.20. Glucinum ethide. A colorless liquid, b.185–188. **b. fluoride** BeF_2 = 47.1. A white powder, $d_{15°}$. 2.1, m.800; soluble in water, alcohol or acids. **b. hydroxide** $Be(OH)_2$ = 43.1. Glucinum hydroxide. A white powder, decomp. on heating, insoluble in water, soluble in alkalis, carbonates or alcohol. **b. iodide** BeI_2 = 262.92. White needles, $d_{15°}$.4.20, m.510, b.590, decomp. by water, soluble in alcohol, ether or chloroform. **b. nitrate** $Be(NO_3)_2.3H_2O$ = 187.2. Glucinum nitrate. Colorless or slightly yellow deliquescent crystals, soluble in water or alcohol; used as a reagent, also as a hardener in gas mantles. **b. oxalate** $Be(C_2O_4).3H_2O$ = 151.07. Rhombic crystals, d.1.478, m.$(-2H_2O)$100, $(-H_2O)$220. **b. oxide** BeO = 25.1. Beryllia, glucinum oxide. An amorphous white powder, $d_{0°}$.3.016; infusible, insoluble in water, soluble in alkalis or acids. Used in the manufacture of beryllium salts, and as a refractory. **b. oxychloride** Be_2OCl_2 = 105.12. Glucinum oxychloride. White hexagonal crystals, $d_{0°}$.3.016; infusible, insoluble in water, soluble in acids or alkalis. **b. phosphate.** Beryllonite. **b. potassium fluoride** $BeF_2.2KF$ = 163.30. Glucinum potassium fluoride. White crystals, slightly soluble in water. **b. silicate** Be_2SiO_4. A white powder used as refractory, for sparking plug porcelain and in making Be compounds. Cf. *beryl.* **b. sodium fluoride** $BeF_2.2NaF$ = 131.10. Glucinum sodium fluoride. A white or grayish crystalline powder; soluble in water, used in preparing metallic beryllium. **b. sulfate** (1) $BeSO_4.4H_2O$ = 177.2. Glucinum sulfate. White tetragonal crystals, $d_{10°}$.1.712. It loses two molecules of water on heating to 100; decomp. on further heating. Soluble in water, insoluble in alcohol. (2) $BeSO_4.7H_2O$ = 231.28. White monoclinic crystals.

beryllonite. A native phosphate of beryllium, $NaBePO_4$. Yellowish transparent crystals, d.-2.845, hardness, 5.5-6.

berzelianite. Cu_2Se. A native copper selenide, which occurs in thin white crusts. Cf. *crookesite, umangite.*

berzeliite. $(Mg, Ca, Mn)_3As_2O_8$. A native arsenate of magnesium, calcium and manganese, which occurs in red waxy masses.

berzelium. A supposed element of atomic weight 212, found by Baskerville in thorium salts.

Berzelius, Jöns Jakob, Baron. 1779–1848. A Swedish chemist, the investigator of atomic weights, using oxygen as standard, and a prolific author. He also worked on electrochemical analysis, isomerism, and the gas laws. He discovered selenium and thorium, and isolated silicon.

Bessemer, Sir Henry. 1813–1898. An English metallurgist who patented the process of making steel in 1856. **b. converter.** A large egg-shaped retort used in steel and iron manufacture. **b. iron.** An iron manufactured by the Bessemer process. **b. process.** A method of making steel by pouring the molten cast iron in a specially designed container (converter), and passing a stream of air through

the molten mass to oxidize metals such as manganese, silicon and carbon.

Bestuscheff's tincture. An ethereal tincture of iron chloride.

beta. The second letter of the Greek alphabet, β. Compare *alpha*. **b. acid.** Same as 2.6-naphthylamine sulfonic acid. **b. chlora process.** A method of bleaching flour with nitrosyl chloride and chlorine. **b. eucaine.** Betaeucaine. **b. hydrogen.** See *hydrogen molecule*. **b. position.** The substitution of the 2nd., 3rd., 6th., or 7th. hydrogen atom of a dicyclic compound, or of the hydrogen atom attached to the carbon atom next but one to the principal group of a straight chain compound; *e.g.*, β-hydroxy propionic acid, $CH_2OH.CH_2.COOH$. Cf. *alpha* position. **b. particles.** A stream of negatively charged particles (electrons) emitted from radioactive substances with the velocity of light (87,000 miles per second). **b. ray.** See *b. particles*.

Jöns Jakob Berzelius.

Beta. A genus of plants, Chenopodiaceae, the beets. The juice of *B. vulgaris* yields sugar (q.v.); also betaine and an indicator.

betacaine. Betaeucaine.

betaeucaine. $C_{15}H_{21}NO_2$ = 247.2. Trimethyl-benzoyl-oxypiperidine. Benzoylvinyl-diacetonalkylamine. A synthetic drug used as its hydrochloride as a local anesthetic. **b. hydrochloride.** $C_{15}H_{21}O_2N.HCl$ = 283.65. A white odorless powder; soluble in water, alcohol, or chloroform. Used as a local anesthetic.

betaimidazolethylamine. Histamine.

betaimine-azolyl-ethylamine. Ergamine.

betaine. $C_5H_{11}O_2N(+H_2O)$ = 117.11. The compound $MeN\langle_{CH_2}^{CO}\rangle O$. Lycine, oxyneurine, dimethylsarcosine, trimethylglycocoll. An alkaloid, prepared from beets or synthetically. Colorless monoclinic crystals, m.293 (decomp.); soluble in water or alcohol. **nicotine methyl-** Trigonelline. **pyridine-** The heterocyclic compound, $HC\langle_{CH-CH}^{CH=CH}\rangle N\langle_{CH_2}^{CO}\rangle O$. **thio-** Thetine. **trimethyloxybutyn-** Carnitine. **trimethylphosphor-** The heterocyclic compound,

$$Me_3P\langle_{CH_2}^{CO}\rangle O.$$

b. hydrochloride $C_{15}H_{11}O_2N.HCl$ = 153.57. Acidol. Colorless crystals, m.235; soluble in water. Used for administration of HCl, and the neutralization of tetanus toxin.

betaines. A group of organic bases characterized by the $=NMe_3$ group.

glycine betaine.... $Me_3N.CH_2.CO$ (—O—)

γ-butyro betaine.. $Me_3N.(CH_2)_3.CO$ (—O—)

carnitine..... $Me_3N.CH_2.CHOH.CH_2.CO$ (—O—)

croton betaine.... $Me_3N.CH_2.CH:CH.CO$ (—O—)

Cf. *stachydrine, trigonelline*.

betaisoamylene. Amylene.

betamethyl-ethylpyridine. Collidine.

betamethyl-indole. Skatole.

betanaphthol. See *naphthol*. **b. benzoate.** See *β-naphthol benzoate*. **b. orange.** Tropaeolin. **b. salicylate.** Betol.

betanaphthyl. Naphthyl. **b. amine.** β-Naphthylamine. **b. benzoate.** β-Naphtholbenzoate. **b. salicylate.** Betol.

beta-oxybutyric acid. β-Oxybutyric acid.

betaquinine. Quinidine.

betaterpineol. β-Terpineol.

betatopic. Pertaining to a radio-active substance which differs from one of its isotopes by one orbital electron and one integer in atomic number (cf. *alphatopic*). **b. change.** The transformation of a radioactive substance, in which it loses an orbital electron, and thereby becomes an isotope of an element with an atomic number higher by 1.

betaxin. Vitamin B_1.

betel. (1) Originally the betel vine. Cf. *betel leaf*. (2) An East Indian chewing substance, which consists of a fragment of betel-nut rolled up in a betel leaf, with some lime, gambir or other substance. It is a tonic and stimulant. (3) Pinang. The Areca or catechu palm of the East Indies. **b.-leaf.** The dried leaves of *Piper Betle*, a Piperaceae. **b.-nut.** Areca nut, buyo, semen arecae. The dried seed of *Areca catechu*, an East Indian palm. It contains many alkaloids; *e.g.*, arecoline, arecaine, guvacine. Used as an astringent, anthelminthic, tonic, and stimulant. See also *areca* nut. **b. phenol.** Chavibetol.

beth root. Trillium.

betol. $C_{17}H_{12}O_3$ = 264.2. Salinaphthol, naphthalol, betanaphthyl-salicylate. Salicylic-β-naphthyl ether. $C_{10}H_7COO.C_6H_4OH$. A white amorphous powder; insoluble in water, soluble in alcohol, m.95. It is an intestinal antiseptic, antirheumatic, and antizymotic. Cf. *alphol*.

Bettendorf test. The official U.S.P. test for arsenic in the presence of bismuth and antimony compounds. A freshly prepared $SnCl_2$ solution is added to the sample: A brownish tint indicates arsenic.

Betts' process. A method of refining lead by using the fluosilicate with a little gelatin as an electrolyte.

betula. A genus of trees of the oak family, Cupuliferae. See *birch*. **b. camphor.** Betulinol. **b. oil.** See *birch oil*.

betulin. Betulinol. **b. amaric acid.** $C_{36}H_{52}O_{16}$ = 740.5. An oxidation product of betulinol.

betulinic acid. $C_{30}H_{54}O_6$ = 582.6. A dibasic acid, m.195, formed by oxidation of betulin.

betulinol. $C_{24}H_{40}O_2$ = 360.4. Betula camphor, betulin. A diatomic alcohol from the bark of betula species (*e.g.*, white birch). Colorless crystals, m.258, insoluble in water.

beudantite. Biereite, corkite. A native sulfate and phosphate of iron and lead which occurs in dark green or black rhombohedrons.

Beutel buret float. A hydrometer-like closed glass tube, used in burets to facilitate the readings.

beyrichite. Ni_3S_4. A native nickel sulfide, which occurs in metallic, grayish hexagonal crystals.

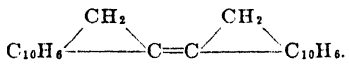
bhang. An intoxicating preparation made from the flowering tops of hemp. Cf. *hashish*.

Bi The symbol for bismuth. **BiO-** Bismuthyl.

bi- (1) Prefix indicating two or double. Cf. *di-* and *bis-*. (2) Misnomer for acid salt; as, bisulfate.

biacenaphthylidene. Biacene.

biacene. $C_{24}H_{16}$ = 304.2. $\Delta^{1,1'}$ biacenaphthylidene. The hydrocarbon



Reddish-yellow crystals, m.271, which show distinct dichroism when dissolved in conc. H_2SO_4; indigo-blue in transmitted light, red in incident light.

biacetyl. $C_4H_6O_2$ = 86.05. *2.3*-butane-dione*, diacetyl. The simplest diketone: MeCO.COMe. A colorless liquid of pungent, sweet odor, d.0.9793, b.88, slightly soluble in water, soluble in alcohol or ether. **b. dioxime.** Dimethylglyoxime. **b. monoxime.** MeCO.C(NOH)Me.

biacetylene. C_4H_2 = 50.0 Butadiine, butadiyne*, HC≡C—C≡CH.

Bial's reagent. A solution of 1 gm. orcin in 500 cc. 30 % HCl and 25 drops of $FeCl_3$ solution; used for the detection of pentoses in urine, in absence of dextrose.

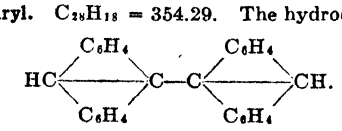
biallyl. Diallyl.

bianiline. N- Hydrazobenzene. **p-** Benzidine.

bianisaldehyde. Anisil.

bianisidine. Dianisidine.

bianthryl. $C_{28}H_{18}$ = 354.29. The hydrocarbon



Colorless leaflets, m.300.

biarsine. As_2H_4 = 153.94. Diarsine, diarsyl. The compound $H_2As—AsH_2$. Cf. *arsines*. **tetraethyl-** As_2Et_4 = 266.03. Ethylcacodyl. A colorless liquid, igniting in air, d.1.1388, b.187, insoluble in water. **tetramethyl-** Cacodyl.

biaxial. Having two axes. **b. crystals.** A crystal with two optical axes.

bibasic. Dibasic; having two hydrogen atoms which can be replaced by metals.

bibenzal. Stilbene.

bibenzenone. Diphenoquinone.

bibenzenyl. Tolane.

bibenzil. (1) Dibenzil, (2) Dibenzyl.

bibenzohydrol. Benzopinacol.

bibenzoic acid. Diphenic acid.

bibenzoyl. (1) Benzil. (2) Dibenzoyl; a prefix indicating the presence of two benzoyl radicals.

bibenzyl. $C_{14}H_{14}$ = 182.19. Dibenzyl. **asymmetric-** $Me.CHPh_2$. A colorless liquid, b.209. **symmetric-.** Diphenylethane, $PhCH_2.CH_2Ph$. Colorless, monoclinic needles, m.52, b.284, slightly soluble in alcohol, soluble in ether or chloroform. **b. alcohol.** Hydrobenzoin.

biberine. Bebeerine.

biborate. An acid borate; as, $NaHBO_2$. Cf. *diborate*.

bibulous. Absorbing moisture. **b. paper.** Blotting or filter paper.

bicarbonate. Dicarbonate, acid carbonate. A salt containing the monovalent —HCO_3 radical. **b. of potash.** Potassium b. **b. of soda.** Sodium b.

bicarburetted hydrogen. An obsolete name for ethylene.

bichloride. A salt containing two atoms of chlorine; *e.g.*, mercury bichloride.

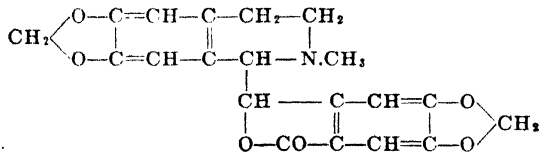
bichromate. Dichromate, acid chromate. A salt containing the divalent =Cr_2O_7 radical; as, sodium b., $Na_2Cr_2O_7$. **b. cell.** See *cell*.

bichrome. Potassium dichromate.

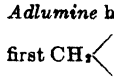
biconcave. See concave *lens*.

biconvex. See convex *lens*.

bicuculline. $C_{22}H_{17}O_6N$ = 367.15. An alkaloid from *Dicentra cucullaria*, *Corydalis sempervirens* and *Adlumia fungosa*, (Fumaraceae). Dimorphic crystals, m.177 and 196.



Adlumine has two CH_3O—groups instead of the



bicyclic. Containing two rings; as, naphthalene.

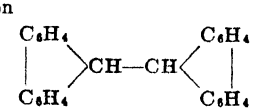
bicyclodecane. Dekalin.

bicycloheptane. 1.1.3- Norpinane. **1.2.2-** Norcamphane. **0.1.4-** Carane. **2:4-** Pinane.

bicycloheptene. 0.1.4- Carene. **1.1.4-** Norcarene. **1.1.3-** Pinene.

bidesyl. $C_{28}H_{22}O_2$ = 390.2. Dibenzoyldibenzyl. PhCO.CHPh.CHPh.COPh. Colorless crystals, m.255.

bidiphenyleneethane. $C_{26}H_{18}$ = 330.2. The hydrocarbon



Colorless crystals, m.246. Cf. *tetraphenylene*. **b. ethylene.** Bifluorene.

bieberite. $CoSO_4.7H_2O$. A native cobaltous sulfate; red monoclinic crystals.

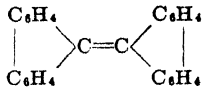
Biebrich red. Scarlet R.

biethylene. *1.3*-Butadiene*.

Biffi-Brooks coagulometer. A device for determining the temperature of coagulation of proteins.

biguanide. Guanylguanidine.

bifluorene. $C_{26}H_{16}$ = 328.2. Bidiphenylene ethylene. The hydrocarbon



Red needles, m.188.

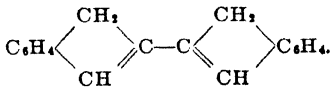
biformyl. Glyoxal.

bihexyl. Dodecane*.

bihydrazine. N_4H_6 = 62.2. Buzane, dihydrobuzylene, tetrazane, $NH_2.NH.NH.NH_2$. Cf. *tetrazanes*.

biindoxyl. Indigo white.

biindyl. $C_{18}H_{14}$ = 230.1. The hydrocarbon

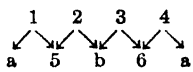


Cf. *diindyl*.

bikhaconitine. $C_{36}H_{51}O_{11}N$ = 673.40. An alkaloid from the root of *Aconitum ferox*, m.113. It is the bikh poison of Nepal.

bilateral. Pertaining to two or both sides.

bile. Gall, chola. The yellow, brown, or greenish secretion of the liver, containing 14 % solids and 86 % water, d.1.026–1.032. **b. acids.** A group of acids found in bile, and related to hematin and cholane. See *porphin, cholane*. Their sodium salts aid digestion. The principal acids are related as follows



where:

1. glycocholic acid	$C_{26}H_{43}O_6N$
2. taurocholic acid	$C_{26}H_{45}O_7NS$
3. taurocholeic acid	$C_{27}H_{47}O_6NS$
4. glycocholeic acid	$C_{27}H_{45}O_5N$

and the split products are:

5. cholic acid	$C_{24}H_{40}O_5$
6. choleic acid	$C_{24}H_{42}O_4$

a. glycine (NH_2CH_2COOH)
b. taurine ($NH_2(CH_2)_2SO_3H$).

b. pigments. The coloring matter of b.; as,

red	bilirubin, XO_6
green	biliverdin, XO_8
blue	bilicyanin, XO_9
purple	bilipurpurin, XO_{10}
brown	bilixanthin, XO_{12}

where X is $C_{32}H_{36}N_4$.

b. salts. The sodium salts of taurocholic and glycocholic acids, which occur normally in the bile.

bilein. A mixture of the alkali salts of the bile acids, obtained from oxgall.

bilicyanin. $C_{32}H_{36}O_9N_4$ = 620.3. A blue pigment obtained by oxidation of biliverdin.

biliflavin. A yellow pigment derived from biliverdin.

bilifulvin. Bilirubin.

bilifuscin. $C_{16}H_{20}O_4N_2$ = 304.6. A dark-brown powder obtained from bile pigments; insoluble in water, soluble in alcohol, acetic acid or alkalis; used as a reagent.

bilin. A mixture of sodium taurocholate and sodium glycocholate; the main constituent of bile.

bilineurine. Choline.

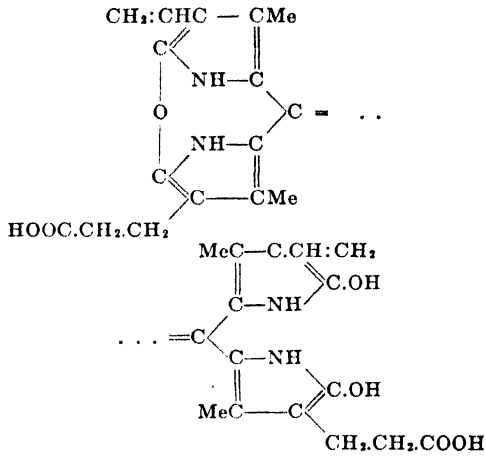
bilinigrin. A black oxidation product of bilirubin.

biliphain. Bilirubin.

biliprasin. A green pigment derived from biliverdin.

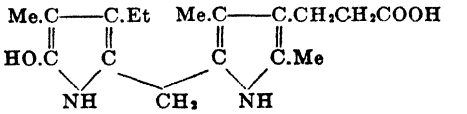
bilipurpurin. Cholohematin. A purple bile pigment.

bilirubin. $C_{32}H_{36}O_6N_4$ = 572.5. Bilifulvin, biliphain, cholepyrrhin, hematoidin. The red coloring matter of bile which is structurally related to hematoporphyrin and hematin; it is derived from hemoglobin and causes coloring of the eyes in jaundice. Reddish yellow needles, or an orange powder, m.192; insoluble in water, soluble in alkalis, acids or chloroform.



Cf. *porphin ring, cholothallin*. hydro- Urobilin.

bilirubinic acid. $C_{17}H_{24}O_3N_2$ = 304.16. A monobasic acid containing two attached pyrrole rings. It is formed from bilirubin and from hemin by reduction with hydriodic acid in glacial acetic acid. Fischer's formula is:



bilisoidanic acid. $C_{24}H_{32}O_9$ = 464.6. An acid obtained from bile by treatment with nitric acid.

biliverdic acid. $C_8H_9O_4N$ = 183.08. A crystalline solid, m.114.

biliverdin. $C_{32}H_{36}O_8N_4$ = 604.5. An oxidation product of bilirubin. A green amorphous powder; soluble in alcohol or glacial acetic acid. It yields choletelin and the pigments biliflavin and biliprasin.

bilixanthin. $C_{32}H_{36}O_{12}N_4$ = 668.3. A yellowish brown oxidation product of bile pigments, q.v.

billion. (1) A million millions; 10^{12} (British and German usage). (2) A thousand millions; 10^9 (Continental Europe and U.S.A. usage).

Billroth's mixture. An anesthetic consisting of 3 p ts. chloroform, 1 pt. alcohol and 1 pt. ether

biloidanic acid. $C_{23}H_{32}O_{12}$ = 488.25. Norsolanellic acid. An acid obtained by the oxidation of bile.

bimetal. A metal sheet made up of two layers and having special properties; as, corrosion resistance.

bimolecular. Pertaining to two molecules. **b. reaction.** See *reactions, 2nd. order.*

binaphthalene. $C_{20}H_{14}$ = 254.22. Naphthyl naphthalene, $C_{10}H_7—C_{10}H_7$. A group of hydrocarbons; as,

$\alpha.\alpha'$- or alpha-	m.160, b.365
$\beta.\beta'$- or beta-	m.187, b.452
$\alpha.\beta'$- or gamma-	m.70

They form colorless crystals, insoluble in water, soluble in alcohol or ether.

binaphthyl. (1) The monovalent radical,—$C_{20}H_{13}$, derived from binaphthalene. (2) Dinaphthyl.

binarite. Marcasite.

binary compound. A compound containing only two elements. It may have two or more atoms; *e.g.*, NaCl, $FeCl_2$, $FeCl_3$, $SiCl_4$. **b. mixture.** A mixture of any two substances. **b. salt.** A salt containing two bases, as $NaKSO_4$. **b. system.** Any combination possible with two metals; cf. *phase rule, alloy.*

binder. A material used to hold solid substances together in a plastic mass; as, bitumen.

bindheimite. Native hydrous lead antimonate.

binding. Held together. **b. energy.** The force which holds together the negatively and positively charged portions of an atom or molecule; cf. ionization *energy*, lattice *energy*, solution *energy*. **b. screw.** A screw in a perforated panel for connecting electric wires.

bing. Spoilbank. Colliery refuse consisting of pyritic fine coal and shale.

biniodide. (1) Diiodide. (2) A pharmaceutical name for (a) mercuric iodide, (b) mercuric potassium iodide.

binitro. See *dinitro-*.

binnite. The native copper-arsenic sulfide $2As_2S_3$, $3Cu_2S$.

binocular microscope. A microscope with two eyepieces giving a stereoscopic effect.

binoxalate. Bioxalate.

binoxide. Dioxide.

bio. A prefix meaning life, derived from the Greek "bios."

bioanalysis. The determination of minute quantities of elements or compounds by means of bacteria, protozoa or protophyta.

bioassay. The determination of the activity of drugs by studying their effects on animals.

biocatalysator. A substance of the protoplasm that promotes growth.

biocatalyst. (1) Enzyme. (2) Ergine.

biochemical. Pertaining to the matter-changes within an organism. **b. oxygen demand.** B.O.D. A chemical measure of the deoxygenating power of an effluent in terms of the difference between the Winkler oxygen value in contact with oxygen-saturated water before and after five days at 17.8°C.

biochemistry. A branch of chemistry dealing with the changes occurring in living organisms, *e.g.*, metabolism, respiration, etc.

biocolloid. Any glue-like substance of an organic nature; as, the glutin of bone glue.

bioctyl. Hexadecane*.

biodyne. A natural cellular respiratory factor.

bioelement. An element essential to life. Principally those most abundant in organisms, but traces of rarer elements are in many cases also essential. Cf. *abundance, periodic chain.*

DISTRIBUTION OF BIOELEMENTS

Order (1)	Mammals (2) per cent		Gymnosperms (3) per cent	
1	O	62.43	C	53.96

biogen. The inactive parent compound of bios.

biogenesis. The theory that all life comes from life, *e.g.*, that life can not be artificially created. Antonym: abiogenesis.

biognosis. The study of life.

biological assay. The determination of the active principles of a drug by determining the smallest quantity which will produce certain symptoms in animals. It can supplement or replace chemical methods of analysis. **b. oxygen demand.** Biochemical oxygen demand.

biologics. A group of preparations derived from living organisms which are used in therapy:

1. *Antiserums*, producing passive or relatively temporary immunity.
   - A. *antitoxic*, produced by immunization of horses and used to neutralize specific toxins, as, diphtheria, tetanus, scarlet fever, etc. *antitoxin.*
   - B. *antibacterial*, produced by injecting horses with bacteria; as, antidysenteric, antipneumococcic, antiinfluenca *serum.*
2. *Vaccines*, producing active or relatively permanent immunity and consisting of bacterial suspension; as, rabies *vaccine.*
3. *Bacterial Antigens*, derived from bacteria and having immunizing power.
   - A. *bacterial vaccines*, consisting of killed bacteria in suspension; as, catarrhal, furunculosis, pertussis *bacterin* (or vaccine).
   - B. *ectoantigens*, or washings from live pathogenic bacteria; as, gonococcus, pneumococcus, streptococcus *immunogen.*
   - C. *toxoids* and *filtrates*, such as, diphtheria, staphylococcus toxoids, tuberculins, gonococcus filtrate.

4. *Pollen and Protein Extracts*, used for diagnosing and treating hay fever, asthma, urticaria, dermatitis, etc.

biology. The science of living matter, its forms, functions, occurrence, behavior and evolution. Branches of biology:

1. Botanical branches (plants)
2. Zoological branches (animals)
3. Anthropological branches (man)

BIOLOGY The science of living things:	*energy* transformation:		Biophysics
	matter changes:		Biochemistry
	structure of living things: MORPHOLOGY	cells	Cytology
		tissues	Histology
		organs	Anatomy
		organisms	Taxonomy
	functions of living things: PHYSIOLOGY	generative	Embryology
		sustentative	Metabolism
		correlative	Circulation and Nerves
	abnormal structure and function: PATHOLOGY	of plants	Phytopathology
		of animals	Zoopathology
		of man	Pathology
	development of live: ETIOLOGY	of the race	Phylogeny
		of individual	Ontogeny
	dwelling place: CHOROLOGY	of plants	Flora
		of animals	Fauna
		of both	Ecology
	prehistoric life: PALEONTOLOGY	of plants	Paleobotany
		of animals	Paleozoology
		of man	Ethnology

bioluminescence. The phosphorescence of living vegetable or animal organisms.

biometry. The application of statistics to biological science.

biomolecule. A molecule of protoplasm or a unit of living substance. Cf. *biomone, biophore, idioblast, gene, protoplasm, micelle.*

biomone. A particle of living matter made up of biomolecules.

bion. (1) An individual living organism. (2) The hypothetical life-element (Osburn), analogous to the electron the element of electricity.

bionergy. The "vital" force generated in living cells.

bionomy. The measurement of life phenomena.

bio-osmotic. The osmotic pressure of living cells.

biophage. A cell or organism feeding on living cells or living organisms.

biophore. Biomone. The smallest particle of living matter (Weismann).

bioplasm. Protoplasm.

bioplast. Micelle.

biorization. Pasteurization under a pressure of 1–3 atmospheres.

bios. $C_6H_{11}O_2N$ = 133.2. A crystalline substance similar in character to a vitamin, which is found to be essential for the growth of certain types of yeast, m.223. Now known to consist principally of i-inositol, vitamin B_1 and pantothenic acid (q.v.). Cf. *biogen.*

biose. (1) carbohydrate containing two hydroxy groups; as, $C_3H_4O_3$. Cf. *tetrose, pentose, hexose.* (2) Disaccharide.

biosterin. (1) A vitamin. (2) Biosterol.

biosterol. $C_{22}H_{44}O_2$ = 340.7. An alcohol resembling cholesterol. It appears to have the growth-stimulating property of vitamin A, q.v.

biota. The flora and fauna of a region.

biotic. Pertaining to life or living organisms.

biotin. (1) $C_{10}H_{16}O_3NS$(?). Vitamin H, 2-keto-3,4-imidazolido-2-tetrahydrothiophene-n-valeric acid. A cyclic urea derivative from (*e.g.*,) agar. It has growth-promoting properties. (2) $C_{11}H_{18}O_3N_2S$(?). A very active constituent of bios (q.v.) occurring in wild yeasts and egg yolk, and isolated as the crystalline methyl ether; 1 part in 3×10^{11} effects yeast growth.

biotite. A brownish-black ferrous mica.

biotoxin. The toxins formed in the tissues of the living body.

bioxalate. Binoxalate, acid oxalate. A salt containing the monovalent $—HC_2O_4$ radical.

bioxindol. Isoindigotin. **dihydroxy-** Isatide. **hydroxy-** Isatan.

bioxyl. Bismuthyl chloride.

biozeolite. A biological slime from sewage filters, which has zeolitic properties.

biphenyl. (1) $C_{12}H_{10}$ = 154.14. Phenylbenzene, Ph.Ph. Colorless scales d.1.041, m.71, b.254, insoluble in water, soluble in alcohol or ether. (2) Diphenyl. *o*-**amino-** Biphenylamine. *p*-**amino-** Xenylamine. **diamino-** $NH_2C_6H_4.C_6H_4NH_2$. *o.o'*- or **2.2'-** Colorless crystals, m.81. *o.p'*- or **2.4'-** Diphenyline. *p.p'*- or **4.4'-** Benzidine. **difluoro-** Antitussin. **dimethyl-** Ditolyl. **methyl-** $Ph.C_6H_4.Me$ = 168.10. Phenyltolyl. *m*- or **3-** Colorless liquid, b.275. *p*- or **4-** Colorless liquid, b.265.

b. amine. $Ph.C_6H_4.NH_2$ = 169.10. *ar*-Phenylaniline, aminobiphenyl. Differs from diphenylamine, q.v. *o*- **2-** Colorless crystals, m.45. *p*- or **4-** Xenylamine. **b. diamine.** *o.o'*- Diamino b. *p.p'*- Benzidine. **b. mercury.** $(PhC_6H_4)_2Hg$ = 506.75. White scales, m.216, insoluble in water.

biphenylene. (1) Th hypothetical compound $C_6H_4{:}C_6H_4$. (2) The bivalent radical, $—C_6H_4—$

C_6H_4—. **b. disazo.** The bivalent radical, —N:NC_6H_4.C_6H_4N:N—. **b. oxide.** Dibenzofurane. **b. sulfide.** Dibenzothiophen.

BIPP. A mixture of bismuth iodoform and paraffin, used as an antiseptic; it is harmless to tissues.

bipropargyl. C_6H_6 = 78.05. Dipropargyl, *1.5*-hexadiyne*, 1.5-hexadine, CH≡C.CH_2.CH_2.-C≡CH. A colorless liquid, d.0.805, m.—6, b.85.4.

bipropenyl. *2.4*-Hexadiene*.

bipseudoindoxyl. Indigotin.

birch. A tree of the genus Betula. **b. camphor.** Betulinol. **b. oil.** Sweet b. oil, betula oil. The essential oil from the bark of *Betula lenta*, black birch. A colorless oil, d.1.1272–1.182, b.218–222; its chief constituent is methylsalicylate (oil of wintergreen). Used for flavoring, as an antirheumatic and antipyretic. **b. tar oil.** A tarry oil from the wood of *Betula alba*, white birch. A dark-brown oil with empyreumatic odor, d.0.886–0.950; soluble in alcohol, ether, or chloroform. The chief constituents are phenols and cresols; used as a disinfectant, antiparasitic and in leather dressing. **b. wood-carbon.** Norit.

bird-lime. A viscid substance from the bark of the Ilex species and mistletoe. It contains viscin, viscum and ilicic alcohol.

birectification. A precise method of analysing fermented liquors by fractional distillation.

birefractive. Doubly refracting.

birefringence. Double *refraction*. el rical-*Kerr* effect.

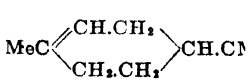
birotation. Mutarotation. The exc ly high or low optical activity of a pared aqueous solution of a sug standing or after boiling or th ammonia, is reduced to normal.

birthwort. Serpentaria.

bis- A prefix indicating *twice*, to molecules made up of two compounds.

bisabolene. $C_{15}H_{24}$ = 204.21. quiterpene from bisabol m oil. A colorless liquid, d.0.

bisabolol. $C_{15}H_{26}O$ = 221.



Me₂.

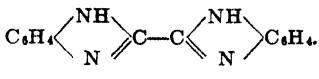
bisacenaphthylidene = 332.2. The homocyclic ke

bisazimethylene. K

bisazo- Tetrazo-.

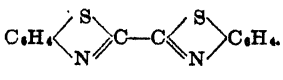
bisazobenzil. $C_{14}H_8N_4$ = 232.2. The homocyclic azide Ph.CN_2—CN_2.Ph.

bisbenzimidazole. $C_{14}H_{10}N_4$ = 234.2. The heterocyclic system related to indigo.



Colorless crystals, m.305.

bisbenzothiazole. $C_{14}H_8N_2S_2$. The heterocyclic system.



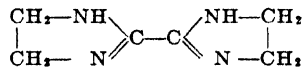
bischofite. A native, hydrous magnesium chloride, $MgCl_2.6H_2O$.

biscuit ware. An unglazed, porous porcelain, which has been fired twice.

bisdiazo- Tetrazo-. **b. amine.** N_6H_2 = 73.06. The hypothetical compound NH:N.NH.N:NH, known as its derivatives. Cf. *hydronitrogen*. **b. hydrazine.** N_8H_4 = 88.08. The hypothetical compound HN:N.NH.NH.N:NH known as its derivatives.

bisethylxanthate. Ethylxanthogenate.

bisglyoxalidine. $C_6H_{10}N_4$ = 138.3. The heterocyclic system,

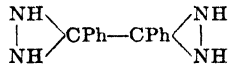


Colorless crystals, m.295.

bisglyoxaline. Glycosine.

bishydrazi carbonyl. Diurea.

bishydrazibenzil. $C_{14}H_{14}N_4$ = 238.3. The compound,

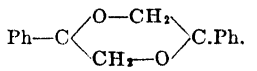


bismal. $4C_{15}H_{12}O_{10}.3Bi(OH)_3$ = 2188.46. Bismuth methylenedigallate. A grayish-brown powder, soluble in alkalis; used medicinally as an astringent in diarrhea.

bismarck brown. Triaminoazobenzene.

bismarsen. $C_{21}H_{21}O_{12}As_3Na_6S_3N_3Bi$. Bismuth sulfarsphenamine. Brown amorphous powder, soluble in water; used in the treatment of syphilis.

bismethylbenzoylcarbinol. $C_{16}H_{16}O_2$ = 240.2. The heterocyclic compound,



crystals, m.92.

$_3.3H_2O$. Bismuth ocher. A na- uth oxide.

Colloidal bismuth metahydroxide. t-brown granules which produce an opal- scent suspension with water.

smuth. Bi = 209.00. An element of the arsenic group, atomic number 83. Bismutum, wismuth. A pinkish, silver-white, brittle metal resembling antimony, $d_{20°}$.9.78, m.269.2, b.-1435.5; insoluble in water, soluble in acids. It occurs native, as sulfide (bismuthinite), and in a few rare minerals; as, sulfobismuthide, telluride and vanadate. The isotopes of bismuth are radium E = 210.4, thorium C = 212.4, actinium C = 212(?), and radium C = 214.4. Bismuth is tri- and penta-valent, and forms two series of compounds:

Derived from trivalent bismuth:

bismuthides	M_3Bi
bismuthous compounds	Bi^{+++}
bismuthyl compounds	BiO^-
bismuthines	BiR_3

Derived from pentavalent bismuth:

bismuthic compounds	Bi^{+++++}

Bismuth was discovered by an unknown alchemist. It is mentioned by Basil Valentine in 1450, and described as a "bastard of tin." Its name is of obscure origin and comes probably from the Arabic, "wiss majat," a metal which easily melts, or German, "wismuth,"

wiesen matte, a meadow. B. is used commercially in many alloys of low melting point (*e.g.*, lipowitz metal, wood metal, etc.), as a constituent of type metal, and also in the manufacture of bismuth compounds and drugs; its insoluble salts cast x-ray shadows (b. meal), the soluble salts are very toxic. B. is very diamagnetic. Cf. *Lipowitz alloy, rose metal, D'arcet metal.* **tribromphenol-** Xeroform. **triiodophenol-** Neoform. **trimethyl-** Bismuthine.

b. acetate. $Bi(OOCMe)_3$ = 381.1. Bismuthous acetate. White powder: soluble in acetic acid. **b. albuminate.** An additive compound of albumin with bismuth; a gray powder, containing 9 % Bi, used to treat cholera and colics. **b. ammonium citrate.** Transparent, shining, white scales soluble in water or alcohol. **b. benzoate.** $Bi(OOCPh)_3$ = 572.15. Bismuthous benzoate. A gray powder soluble in acids and used internally in stomach disorders and externally instead of iodoform. **b. beta-naphtholate.** Orphol. **b. borate.** $BiBO_3$ = 267.9. Bismuthous borate. A grayish powder soluble in acids. It is an intestinal antiseptic. **b. borosalicylate.** A grayish amorphous powder, decomp. in water. **b. bromide.** $BiBr_3$ = 448.8. Bismuthous bromide, bismuth tribromide. White or yellowish crystals, d.5.604, m.210, b.453, decomp. in water, soluble in ether or hydrobromic acid. **b. camphorate.** $Bi_2(C_{10}N_{14}O_4)_3$ = 1014. A white powder, insoluble in water. **b. carbolate.** Bismuthyl phenylate. **b. carbonate.** Bismuthyl carbonate. **b. chloride.** $BiCl_3$ = 315.5. Bismuthous chloride, bismuth trichloride. White crystals, $d_{11°}$4.56, m.232, b.447; insoluble in water, soluble in alcohol, acetone or acids. **b. chromate.** $Bi_2O_3.2CrO_3$ = 666.0. A yellow amorphous powder, insoluble in water, soluble in acids; used as a pigment. **b. cinnamate.** Hetoform. The bismuth salt of acid. **b. citrate.** $BiC_6H_5O_7$ = 398.0 crystals, d.3.458, insoluble in water, in ammonia water; used as a sto. astringent. **b. chrysophanate.** Bi $2Bi_2O_3$ = 1394.07. Dermol. A yellow phous powder; insoluble in water and used skin diseases. **b. dichloride.** $BiCl_2$ = 278.4 Black needles, d.4.86, m.163, decomp. by water. **b. dithiosalicylate** (basic). Thioform. **b. gallate.** $Bi(OH)_2C_7H_5O_5$ = 412.06. Dermatol, b. subgallate. A yellow powder (55 % Bi), insoluble in water, alcohol or ether, but soluble in alkalis. It is an internal and external antiseptic and astringent. **b. glance.** Bismuthinite. **b. gold.** Au_2Bi; occurs naturally. **b. hydroxide.** $Bi(OH)_3$ = 260.0. Bismuthous hydroxide. A white amorphous powder; insoluble in water and alcohol, soluble in acids; used for manufacturing bismuth salts. **b. iodate.** $Bi(IO_3)_3$ = 733.76. Bismuthous iodate. A heavy white amorphous powder; insoluble in water, decomp. by strong acids. **b. iodide.** BiI_3 = 589.76. Gray glistening crystals, $d_{20°}$5.65, m.408, insoluble in water, soluble in KI solution. **b. iodosubgallate.** B. oxyiodogallate. **b. lactate** $Bi(C_3H_5O_3)C_3H_4O_3$ = 386.07. White crystals, slightly soluble in water; used as an antiseptic. **b. loretinate.** A surgical dusting powder, used as an iodoform substitute. **b. meal.** A meal containing an insoluble bismuth salt given before an x-ray examination, so as to render the digestive organs visible. **b. methylene digallate.** Bismal. **b. minerals.** Bismuth ores occur in nature closely associated with arsenic and antimony. Some are:

native bismuth	Bi
guanajuatite	Bi_2S_3
bismuthinite (bismuth glance)	Bi_2S_3
tetradymite	Bi_2Te_3
joscite	Bi_2Te
wehrlite	Bi_2Te_3
gruenlingite	Bi_4TeS_2
bismite	$Bi(OH)_3$
bismuth ocher (bismuthite)	Bi_2O_3
bismutite	$Bi_2H_2CO_6$
bismuthosphaerite	$(BiO)_2CO_3$
bismuthosmaltite	$CoBi_3.CoAs_3$
bismuth telluride	$Bi_2(S, Te)_2$

b. molybdate, $Bi_2(MoO_4)_3$ = 898.1. A yellow powder, insoluble in water, soluble in acids. **b. naphtholate.** Orphol. **b. nickel.** A native mixture of bismuth and nickel sulfides. **b. nitrate.** $Bi(NO_3)_3.5H_2O$ = 485.1. B. ternitrate, b. trinitrate. White triclinic, deliquescent crystals, d.2.78, m.74; decomp. on further heating; soluble in acids, decomp. in water. It is an astringent or antiseptic, used in diarrhea. Cf. bismuth subnitrate. **b. ocher.** See b. minerals. **b. oleate.** $Bi(C_{17}H_{33}COO)_3$ = 1053.2. A yellow granular mass, soluble in ether; used in the treatment of skin diseases. **b. organic compound.** A compound in which aliphatic or aromatic hydrocarbon radicals are attached to bismuth (*e.g.*, bismuth trimethyl, bismuth tripl vl). **b. oxalate.** $Bi_2(COO)_6$ = 682.03. A granular powder, soluble in acids. **b.** (1) Commonly, bismuthous oxide. (2) of the three oxides: Bi_2O_3 = bisxide or bismuthous oxide. Bi_2O_4 = roxide. Bi_2O_5 = bismuth pentoxide oxide. **b. oxybromide.** Bisde. **b. oxychloride.** Bismuthyl xyfluoride. Bismuthyl fluoride. Bismuthyl iodide. **b. oxyio-**H)$(C_7H_4O_4)$ = 504.98. B. io- ismuthyl iodogallate, airol, uminous light grayish-green and tasteless, insoluble in lute alkalis or acids; used iodoform. **b. pentoxide. permanganate.** Bi(Mnhous permanganate. A ble in water, soluble in ptic; used as a dusting po peroxide. Bi_2O_4 = 482.0. A liberating oxygen at 150°C. **b.** e. Bismuth sulfocarbolate, bis enate. A slightly pinkish powder, n water, used as an antiseptic. **b.** e. $Bi(OH)_2OPh$ = 336.6. B. phenol, -p e, -phenolate, -carbolate. A gray powde 80 % Bi); insoluble in water, used as an intestinal antiseptic. **b. phosphate.** $BiPO_4$ = 304.0. Bismuthous phosphate. A white powder; decomp. by heat, insoluble in water, soluble in acids. **b. phospholactate.** A white, crystalline powder, slightly soluble in water, decomp. by heat; used as an intestinal antiseptic. **b. potassium iodide.** $BiI_3.4KI$ = 1253.9. Yellowish crystals, soluble in water, used as (Dragendorff's) reagent for alkaloids. **b. potassium tartrate** $BiK(C_4H_4O_6)_2$ = 545.1. Colorless crystals, soluble in water; used as a reagent for glucose in urine. **b. propionate.** $Bi(C_3H_5O_2)_3$ = 428.19. A white powder, insoluble in water, soluble

in acids. **b. pyrogallate.** $Bi(OH)C_6H_3(OH)O_2$ = 350.04. Bismuth gallate, helcosol. A yellow powder (60 % Bi), insoluble in water or alcohol; used as an intestinal antiseptic and dusting powder for wounds. **b. salicylate** $Bi(C_7H_5O_3)_3.Bi_2O_3$ = 1744.04. Bismuth subsalicylate. A white microcrystalline powder, insoluble in water, soluble in acids. Used as an intestinal antiseptic, and dusting powder. **b. selenide.** Bi_2Se_3 = 655.6. Black crystals, d.6.86, decomp. on heating; insoluble in water or alkalis. **b. silver.** A native form of silver, containing 16 % bismuth. **b. sodium iodide.** $BiI_3.4NaI$ = 1190.1. Red crystals, decomp. in water, soluble in acids; an antiseptic and alterant. **b. subcarbonate.** Bismuthyl carbonate. **b. subgallate.** B. gallate. **b. subnitrate.** B. basic nitrate. A mixture of $Bi(OH)_2NO_3$ and $BiOH(NO_3)_2$ or of $(BiO)NO_3$ and (BiO)OH. A white powder (79–82 % Bi), insoluble in water, $d_{15°}$.4.928; decomp. 260, soluble in acids. An antiseptic or astringent, used in stomach and intestinal disorders; also as a b. meal (q.v.); and as a dusting powder. Cf. *pearl white*(3). **b. subsalicylate.** B. salicylate. **b. sulfate.** $Bi_2(SO_4)_3$ = 706.2. Bismuthous sulfate. A white crystalline powder, decomp. in water or if heated, soluble in acids. **b. sulfide.** Bi_2S_3 = 514.2. Bismuthous sulfide, bismuth trisulfide. Dark-brown rhombic crystals or powder, d.7.39, decomp. on heating, insoluble in water, soluble in acids. **b. sulfite.** $Bi_2(SO_3)_3$. A white powder of variable composition, soluble in acids. **b. sulfocarbolate.** B. phenolsulfonate. **b. tannate.** A yellow powder resulting from action of tannic acid on bismuth hydroxide; insoluble in water, soluble in acids, and used as an antiseptic and astringent. **b. tartrate.** $Bi_2(C_4H_4O_6)_3.6H_2O$ = 970.0. A white powder, d.2.595, insoluble in water, soluble in alkalis, acids and glycerol. It is used in the treatment of Vincent's Angina. **b. telluride.** See *b. minerals*. **b. tetraiodophenolphthalein.** Eudoxine. **b. tetroxide.** B. peroxide. **b. thiosalicylate.** Thioform. **b. tribromide.** B. bromide. **b. tribromphenylate.** Xeroform. **b. trichloride.** B. chloride. **b. triethyl*.** $BiEt_3$ = 296.15. A colorless, oily liquid, d.1.82, b.107; insoluble in water, miscible with alcohol or ether. **b. trimethyl*.** C_3H_9Bi = 254.07. Trimethyl bismuthine, $BiMe_3$. A colorless liquid, d.2.300, b.110. **b. triphenyl*.** $BiPh_3$ = 440.16. Triphenyl bismuthine. Colorless crystals, d.1.585, m.78. **b. trisulfide.** B. sulfide. **b. tungstate.** $BiWO_3$ = 441.5. B. wolframate. A white powder, decomp. in water, soluble in acids. **b. valerate.** $Bi(C_5H_9O_2)_3$ = 512.22. A white powder, insoluble in water, soluble in acids; used as a sedative and antispasmodic. **b. violet.** A triphenyl methane dye in combination with Bi; used as non-toxic antiseptic.

bismuthi. The official Latin for bismuth.

bismuthic. A compound of pentavalent bismuth. **b. oxide.** Bi_2O_5 = 498.0. Bismuth pentoxide. A brown powder which liberates oxygen on heating to 150°C; insoluble in water, soluble in concentrated alkalis or acids.

bismuthide. (1) A compound of the type M_3Bi, analogous to arsenide, stibnide. (2) Bismuthosmaltide. **sulfo-** Beegerite.

bismuthine. (1) An organic bismuth compound, BiR_3, analogous to arsine and stibine. (2) Bismuthinite. **ethyl-** $C_6H_{15}Bi$ = 296.12. Triethylbismuth, $BiEt_3$. A colorless liquid, d.1.82, b_{30mm}107. **methyl-** C_3H_9Bi = 254.07. Trimethyl bismuth, $BiMe_3$. A liquid, d.2.300, b.110. **phenyl-** $C_{18}H_{15}Bi$ = 440.16. Triphenyl bismuth, $BiPh_3$. A solid, d.1.585, m.78.

bismuthinite. Bi_2S_3. Bismuthine. Bismuth glance. Native bismuth sulfide.

bismuthiol. Mercaptosulfo thiobiazole. A reagent for bismuth salts with which it gives a red precipitate, owing to the presence of the $(NH)_2NH(CS)_2$ group. Cf. *mercaptophenyl dithiodiazolone*.

bismuthite. $Bi_2H_2CO_6$. A native hydrous bismuth carbonate, $(BiO)_2CO_3.H_2O$, occurring as white or greenish earthy masses.

bismuthosmaltite. $Co(As,Bi)_3$. A native cobalt arsenide and cobalt bismuthide; or smaltite containing bismuth.

bismuthosphaerite. $(BiO)_2CO_3$. A native bismuth carbonate which occurs in yellow fibrous masses.

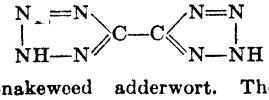
bismuthous. A compound of trivalent bismuth. The common bismuth compounds belong to this series. **b. oxide.** Bi_2O_3 = 466.0. Bismuth oxide, bismuth trioxide. Yellow tetragonal crystals, d.8.868, m. 850; insoluble in water, soluble in acids. Used in medicine similarly to bismuth subnitrate.

bismuthyl. The monovalent radical, BiO—, derived from trivalent bismuth. **b. bromide.** BiOBr = 305.92. Bismuth oxybromide. A yellowish-brown powder, $d_{15°}$.8.082; insoluble in water, soluble in acids; used to treat dyspepsia and hysterics. **b. carbonate.** $(BiO)_2CO_3$ = 527.02. Bismuth subcarbonate. A white powder, d.6.86; insoluble in water, soluble in acids. Used in ointments and face powders, and internally for stomach disorders. **b. chloride.** BiOCl = 260.50. Bismuth oxychloride. A white powder, $d_{15°}$.7.717; insoluble in water, soluble in acids; used as an astringent and antiseptic. It is decomp. at red-heat. **b. dichromate.** $(BiO)_2.Cr_2O_7$ = 666.01. Orange-red crystals; insoluble in water or alkalis, soluble in acids. **b. fluoride** BiOF = 244.04. Bismuthoxyfluoride. White crystals, $d_{20°}$.7.55; insoluble in water, soluble in acids. **b. hydroxide.** (BiO)OH is basic bismuth hydroxide. **b. iodide** BiOI = 352.4. Bismuth oxyiodide. A white powder, insoluble in water, soluble in acids. **b. nitrate.** $(BiO)NO_3.H_2O$ = 305.03. Basic bismuth nitrate. The main constituent of bismuth subnitrate, *q.v.*

bismutite. Bismuthite.

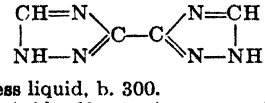
bismutosmaltite. Bismuthosmaltite.

bistetrazole. $C_2H_2N_8$ =138.3. Ditetrazyl. The heterocyclic system:



bistort. Snakeweed adderwort. The root of *Polygonum bistorte*, used as an astringent.

bistriazole. $C_4H_4N_6$ = 136.3. Ditriazolyl. The heterocyclic system:

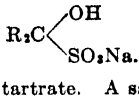


A colorless liquid, b. 300.

bisulfate. Acid sulfate. A compound containing the monovalent HSO_4— radical, derived from sulfuric acid.

bisulfide. Disulfide. A binary compound containing two atoms of sulfur.

bisulfite. Acid sulfite. An oxysalt containing the monovalent HSO_3— radical, derived from sulfurous acid. **b. compounds.** Addition compounds of sodium bisulfite and an aldehyde or ketone of the general formula



bitartrate. Acid tartrate. A salt containing the monovalent $C_4H_5O_6$—radical, derived from tartaric acid.

bithiophene. Thiophthene.

bitter. (1) See *bitters*. (2) An astringent taste, as that of quinine or magnesium sulfate. **b. almond oil.** An essential oil from the seeds of *Prunus amygdala amara*, bitter almond. A pale yellow or colorless liquid, d.1.038–1.060, $[\alpha]_D$ + 0°10′. Its chief constituents are benzaldehyde, hydrocyanic acid, phenoxyacetonitrile; used for flavoring. **b. almond oil camphor.** Benzoin. **b. apple.** Colocynth. **b. ash.** Quassia. **b. bark.** Cinchona. **b. cucumber.** Colocynth. **b. cups.** Colocynth. **b. damson.** Simaruba. **b. herb.** Erythraea. **b. principle.** A generic name indicating the bitter-tasting principle of a drug *e.g.*, due to alkaloids, resinoids, or glucosides. **b. root.** Gentian. **b. salt.** Magnesium sulfate. **b. spar.** A ferruginous dolomite. **b. stick.** Chirata. **b. wintergreen.** Chimaphila. **b. wood.** Quassia.

bittern. A waste liquid from the solar salt industry, which contains the magnesium salts and bromides from the sea water.

bitters. (1) A group of drugs which includes gentian, quassia etc. (2) Mineral waters characterised by a bitter or saline taste, (*e.g.* due to magnesium sulfate). (3) A medical preparation which contains the bitter principles of plants; as, Angostura b.

bittersweet. Dulcamara. **American-, false-** Waxwort. The root and bark of *Celastrus scandens*, a Celastraceae; used as diaphoretic. It contains celastrine.

bitumen. A group of native, solid or semisolid, hydrocarbons, such as naphtha or asphalt, soluble in carbon disulfide. They are rich in C and H, and burn with a sooty flame. Cf. *asphaltenes, carbenes, kerotenes, protobitumen.* **albino-** A petroleum resin. **asphaltic-** Asphalt. **b. elastic.** A variety of bitumen.

bituminous. Having the qualities of bitumen. **b. coal.** A coal which is rich in hydrocarbons and contains 50–80 %C. **b. materials.** The compounds and mixtures used for pavings and roofings; as, asphalt, shales, tars. **b. resins.** Dark red, transparent, fossil resins from brown coals, which contain 80 % of wax. Cf. *retinite resins.*

biurate. Acid urate. A salt of uric acid.

biurea. $C_2H_6N_4O_2$ = 118.08. The compound, $(NH_2.CO.NH—)_2$. Cf. *diurea.*

biuret. $C_2H_5O_2N_3.H_2O$ = 121.19. Allophanamide, allophanic acidamide, dicarbamylamine, carbamylurea, $NH_2.CO.NH.CO.NH_2$. Colorless needles, decomp. 190; soluble in hot water or alcohol. It is a condensation product of urea; used as a reagent. **acetyl-** $C_4H_7O_3N_3$ = 145.11. $MeCO.NH.CO.NH.CONH_2$. Colorless needles, m.193; soluble in water or alcohol.

b. reaction. Pitrowsky reaction. A test for the presence of peptides, proteins and amino-acids which contain the —CO.NH— group. To the solution add a drop of copper sulfate solution and potassium hydroxide; a violet color indicates the presence of b.

bivalence. The property of an element to combine with two univalent (or one divalent) atoms or radicals; as, ferrous, calcium, oxygen, etc.

bivalent. Any atom capable of combining with two univalent atoms or radicals. Cf. *divalent.*

bivinyl. C_4H_6 = 54.1. Erythrene, 1.3-butadiene*, vinyl ethylene, budiene, divinyl, pyrrolylene, $CH_2:CH.CH:CH_2$. A colorless gas, b. −3; used as an anesthetic. **2- methyl-** Isoprene.

Bixaceae, Bixineae. A group of trees and shrubs, some of which yield important drugs.

Gynocardia odorata.....	chaulmoogra seeds
	chaulmoogra oil
Bixa orellana.....	annatto.

bixin. $C_{25}H_{30}O_4$ = 394.2. $MeOOC(CH:CH.CMe:CH)_4CH:CH.COOH$. A dark red crystalline coloring matter from annatto, m.176; soluble in hot alcohol; used as a stain and dye.

bixol. $C_{18}H_{30}O$ = 262.3. $Me_2C{=}C.CH_2.(CMe{=}CHCH_2)_2.CH_2OH$. A dark green, oily alcohol from the seeds of *Bixa orellana*, d.0.8845, n.1.5078, with parsley taste.

Black, Joseph. 1728–1799. A Scotch chemist and physicist, noted as a pioneer in experimental research. He introduced the term "fixed air" for the gas (CO_2) given off from carbonates; opposed the phlogiston theory (q.v.); and developed the concept of latent heat.

black. A substance which reflects no colored rays of light; hence the absence of color. **b. alum.** A mixture of aluminum sulfate and activated carbon used in water treatment. **b. antimony.** Antimonic sulfide. **b. ash.** An impure sodium carbonate with some unburnt carbon and uncombustible mineral matter produced in the soda wood pulp recovery process. **b. balsam.** Peru balsam. **b. berry.** See *rubus.* **b. body.** A substance reflecting no light; that is a material which absorbs all radiant energy and transforms it into heat. Cf. *Stefan-Boltzmann equation.* **b. boy.** Grass tree gum. A resin from *Xanthorrhoea hastilis*, a Liliaceae, of Australia. Used as a varnish and sealing wax. **b. cobalt.** An earthy variety of native cobalt. **b. cohosh.** Cimicifuga. **b. copper.** Copper oxide. **b. damp.** Choke damp. **b. dogwood.** Frangula. **b. drops.** Opium vinegar. **b. dyes.** See *aniline black, chrome black, sedan black*, etc. **b. flux.** A reducing agent used in assaying; made by burning together 1 part of potassium carbonate and 3 parts of argol. **b. fish oil.** Malon oil. **b. haw.** *Viburnum prunifolium.* **b. hellebore** The rhizomes of *Helleborus niger;* which are used, as a fluid extract, as a cathartic or diuretic. **b. henbane.** Hyoscyamus. **b. indian hemp.** Apocynum. **b. jack.** Sphalerite. **b. lead.** (1) Plumbago. (2) Alquifou. **b. leg.** Anthrax. **b. lotion.** See *lotion.* **b. manganese.** Pyrolusite. **b. metal.** An electrolytic deposit in a black form of certain metals, *e.g.* platinum, palladium, etc. **b. mustard.** Sinapis nigra. **b. pigments.** See *bone black, graphite, ivory black, lamp black*, etc. **b. potassium.** Suint ash. **b. powder.** An explosive consisting of 62–75 % KNO_3, 10–19 % S, and 12–5 % charcoal. **b. precipitate.** Mercurous nitrate. **b. silver.** Stephanite. **b. stain.** Table top impregnation. **b. tellurium.** A native telluride, of gold and lead, (Pb, Au)-(Te.S). **b. tin.** Cassiterite. **b. willow bark.** The bark of *Salix nigra*, used in the form of fluid

extract as bitter tonic, anaphrodisiac and antiperiodic.

Blackmar oil thief. A device for taking oil samples from tank cars.

blackstrap. An inedible grade of molasses. A by-product of sugar refining used as a source of alcohol.

Blagden's law. The lowering of the freezing point of a solution is in proportion to the amount of dissolved substance present. Cf. *Raoult's law, Coppet's law.*

Blair oven. A drying oven used in iron analysis.

blairmorite. A rock containing 71 % analcite, found in Alberta (Canada).

Blaise reaction. A Grignard reaction (q.v.).

blanc fix(e). Synthetic barium sulfate produced by the action of barium chloride on aluminum sulfate; used as a pigment for coating paper.

blanch. A lead ore imbedded in rocks.

blanching liquor. A solution of calcium hypochlorite.

blangel. Silica gel used as a dehydrating agent, and impregnated with a cobalt salt to indicate by a color change whether it is in the hydrated or dehydrated state.

blast. (1) To smash to pieces by an explosive. (2) To subject a material to a hot firing. (3) A current of hot gases. (4) A nucleated red blood corpuscle. **b. burner.** A large blow-pipe or bunsen burner in which compressed air is blown into the flame. **b. furnace.** A smelting oven, with an air current, used for the manufacture of pig iron. **b. lamp.** B. burner.

blasting. The process of loosening natural deposits of rocks and other materials by explosives. **b. gelatin.** A high-explosive consisting of a 5–10 % solution of collodion cotton in nitroglycerin, (cf. *gelignite*). **b. oil.** Nitroglycerin. **b. powders.** Non-detonating explosives, deflagrating powder. The black granular powders used for mining and road building; as black powder.

blastokolin. The natural inhibitor to ripening occurring in apples. It is probably associated with maleic acid.

Blau gas. A fuel gas for airships produced by cracking gas-oil at 550–600°C. It consists of saturated paraffin hydrocarbons with some hydrogen and ethylene; its density equals that of air.

bleaching. (1) The whitening and removal of natural impurities from materials by chemical or physical agents; *e.g.*, chlorine or exposure to sunlight. (2) Decolorizing textile fibers or paper pulp with calcium hypochlorite or other bleaching materials. **b. materials.** A group of oxidizing or reducing agents; such as, sulfur dioxide, sodium acid sulfite, hydrogen peroxide, calcium hypochlorite, chlorine water or oxides of nitrogen. **b. powder.** Chloride of lime. A compound formed by passing chlorine gas over dry slaked lime. When fresh it is principally calcium oxychloride, but when it absorbs moisture it is converted into a mixture of calcium chloride and hypochlorite.

Bleeker method. A process for the reduction of vanadium compounds by electrolysis.

blende. (1) Sphalerite, or zinc blende. Cf. *Sidot's b.* (2) A sulfide ore; as, antimony b., manganese b. Cf. *glance.*

blennostasin. $C_{19}H_{22}ON_2 2HBr$ = 456.05. Cinchonidine dihydrobromide. Yellow crystals, used as a vasoconstrictor.

blick. The brightening of a noble metal during cupellation owing to adsorption of the outer layer of lead oxide.

blister steel. A steel of finely granulated texture. Cf. *cementation.*

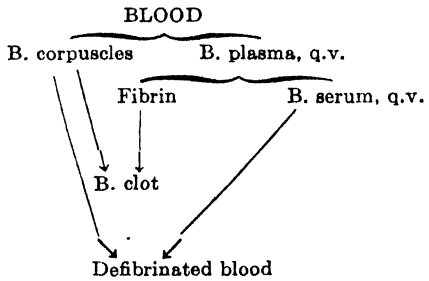
blistering beetle. Cantharides.

block tin. An alloy of tin with iron, cobalt, lead, antimony and arsenic.

blodite, bloedite, blödit. Astrakanite.

Blondlot rays. n-*Rays.*

blood. A fluid that circulates in vertebrates through the heart, arteries and veins, and supplies nutritive materials to all parts of the organism. A red, homogeneous liquid, d. 1.045–1.075, Δ of freezing point −0.56°C, pH = 7.35, constituting $\frac{1}{13}$ of the body weight and containing 2.2 % solids and 98 % water in an extremely delicately adjusted equilibrium of salts, proteins, enzymes and organised particles (b. corpuscles):



The functions of blood are:

1. It carries nutritive materials from the intestines to all cells and tissues of the organism, and oxygen from the lungs to the tissues.

2. It removes the waste products from the tissues, and carries them to the kidneys, lungs, intestines or skin.

3. It provides for metabolic co-ordination of the body by the distribution of internal secretions from one organ to another.

4. It plays an important rôle in the defense of an organism against infection, (by equalizing temperature changes), and in maintaining the isotonic condition of the organism.

TRANSPORT OF MATTER AND HEAT BY MEANS OF THE BLOOD

Gain	*Organ*	*Loss*
oxygen	lungs	carbon dioxide, water, heat
	kidneys	urea, salts, water
	skin	salts, water, heat
carbohydrates	liver	carbohydrates
heat, waste-matter	tissues	glucose, proteins, fat and oxygen
heat, glucose, amino-acids, fat, etc	intestines	
lymph, salts	lymphatics	

Cf. *porphin, fibrin, hemoglobin, respiration, immunity.* **arterial-** Bright-red b. rich in oxygen or oxy-hemoglobin. **beaten-** Defibrinated b. **clotted-** A thick, semi-solid mass consisting of blood corpuscles imbedded in a network of precipitated fibrin. **defibrinated-** A red homogeneous liquid, consisting of blood corpuscles and serum. **dried-** The collected b. of slaughtered animals dried and ground for use as a fertilizer. It should contain not less than 12 % N in organic form. **venous-** Dark-

red b., rich in carbon dioxide or reduced hemoglobin. Cf. *b. gases.*

b. alkalinity. The buffer quality of blood. Blood is nearly neutral (pH = 7), but it can neutralize large quantities of acids because of its dissolved sodium carbonate, sodium bicarbonate, and sodium biphosphate (see *buffer solution*). **b. amylase.** An enzyme of the blood converting glycogen or starch to a reducing sugar. **b. analysis.** The microscopical or chemical examination of blood. **b. apparatus.** A device for determining the O_2 and CO_2 content of the blood. **b. capsules.** Wright's capsules. A glass tube drawn out to capillaries, one which it bent backward and used for taking blood samples for microscopical examination. **b. cast.** The blood fibres observed in urine by microscopic examination. **b. clot.** A clump of coagulated blood, which contains the fibrin and blood corpuscles. **b. collector.** Keidel's blood collector. An evacuated ampule with which blood is withdrawn for blood tests. **b. count.** The determination of the number of blood cells in a definite volume of blood. **b. composition.** Blood consists of a liquid (plasma, q.v.) and cellular elements. The plasma contains the serum (q.v.) and fibrinogen; the cellular elements are the red and white blood corpuscles and the blood plates. The main constituents of the serum are albumin, globulin, glucose and salts. The red blood corpuscles contain the oxyhemoglobin, lecithin and some salts, while the fibrin ferment is in the white blood corpuscles. **b. crystals.** Hemin. **b. elder,** Ebul. **b. enzymes.** The enzymes or ferments of the blood; as, amylase, invertin, glycolytic enzymes, proteolytic enzymes, cholesterases and lipases. **b. gases.** The gases of the blood are: carbon dioxide, oxygen and nitrogen. *E.g.*, an analysis of the blood of cats shows:

10 cc. of.....	CO_2	O_2	N_2
arterial blood..	25.07 cc.	13.60 cc.	1.00 cc.
venous blood..	40.83 cc.	9.93 cc.	0.77 cc.

b. glycolysis. The power of the blood plasma to break down glucose into decomposition products, the nature of which is uncertain. **b. hemoglobin.** The coloring matter or chromoprotein of blood (see *hemoglobin*) which breaks down to hematin and hemin (q.v.) and these, in turn, to hematoporphyrin (q.v.) which is isomeric with bilirubin. **b. hydrogen ion concentration.** The mean value at 18°C is 6×10^{-8}–2×10^{-8}, corresponding with pH = 7.2–7.7; hence, b. is weakly alkaline. **b. osmotic pressure.** 7.3 atmos. (freezing point method). **b. pigment.** Hemoglobin. Cf. *cytochrome.* **b. plasma.** The liquid portion of the blood. 1000 grams of blood plasma contain:

water	901.51 gm.
solids	98.49 gm.
These solids are:	
albumin	81.92 gm.
salt	8.51 gm.
fibrin	8.06 gm.
The salts are:	
sodium chloride	5.546 gm.
sodium carbonate	1.532 gm.
calcium phosphate	0.298 gm.
potassium chloride	0.359 gm.
potassium sulfate	0.281 gm.
sodium phosphate	0.271 gm.
magnesium phosphate	0.218 gm.

b. platelets. Thrombocytes. A structural element of the blood containing cytozyme which is essential in stopping bleeding by coagulating the blood. It is a commercial product (*e.g.*, Coagulen Ciba). **b. root.** Sanguinaria. **b. serum.** The liquid portion of the blood, from which the fibrin is removed, d.1.0292, osmotic pressure 6.6 atmos.

1000 grams of serum contain:

water	908.84 gm.
solids	91.16 gm.
The solids are:	
albumin etc	82.59 gm
salts	8.57 gm.
The salts are:	
sodium chloride	5.591 gm.
sodium carbonate	1.545 gm.
potassium chloride	0.362 gm.
calcium phosphate	0.300 gm.
potassium sulfate	0.283 gm.
sodium phosphate	0.273 gm.
magnesium phosphate	0.220 gm.

b. serum, artificial. Loeffler's mixture. A culture medium which consists of 250 cc. glucose bouillon, 750 cc. horse or beef serum. **b. sugar.** The carbohydrates of the b.; as, glucose. **b. stone.** (1) Hematite. (2) Jasper.

bloom. (1) The fluorescence of lubricating oils. (2) The delicate coating which covers fresh fruit or leaves. (3) The cloudy appearance produced by aging on the surface of varnish on pictures; as mastic varnish. (4) The appearance of a gray or white, fluffy film on a material. (5) The crystallization of a component on the surface of a material; as, on chocolate, where fat or sugar may form a b.

blowpipe. (1) A metal tube tapering to a fine point, straight or bent at a right angle. It is used to blow air into a flame and to direct it as a fine conical tongue on the particles to be heated in qualitative, mineralogical or preliminary analysis, soldering or melting in dentistry, or jewelry manufacture. (2) A blast burner. **b. analysis.** The methods of detecting qualitatively the composition of minerals, alloys, or inorganic materials by observing their behavior in the bunsen flame, and performing flame test, bead test, and reactions on charcoal or plaster of Paris with the aid of the blowpipe.

SYSTEMATIC BLOWPIPE ANALYSIS

Group I. Substance is tested upon charcoal in the oxidizing flame:

A. White, glowing, non-fusing mass.
  1. Dissolve in a few drops HCl and make flame test
     orange ..... calcium
     red ..... strontium
     green ..... barium
  2. Moisten the hot mass with a drop of cobalt nitrate solution and expose again to oxidizing flame.
     rose colored mass ..... magnesium
     blue colored mass ..... aluminum
     green colored mass ..... zinc

B. Dark metallic mass or dark metallic granules. Scrape off charcoal and powder.
  1. Particles are attracted by magnet. Perform bead test
     brown ..... iron or nickel
     blue ..... cobalt

a. Dissolve a particle in HCl and moisten filterpaper impregnated with $K_4Fe(CN)_6$:
blue..... iron

2. Particles are not magnetic. Perform bead test:
green..... copper or chromium
purple..... manganese

b. Part of the material is mixed with KNO_3 and Na_2CO_3 and melted on platinum foil:
yellow flux..... chromium
green flux..manganese (and chromium)
If green, moisten with water, dry with filterpaper and add a drop of $AgNO_3$:
red spot..... chromium

c. Dissolve in conc. HCl, filter, and add NH_4OH:
blue color..... copper

C. Fused mass which runs into the charcoal. Perform flame test:
yellow..... sodium
lilac..... potassium

Group II. Substance is mixed with sodium carbonate and tested on charcoal.

A. Formation of a white smoke with a white coat or sublimate, or only a white sublimate:
odorless smoke..... antimony
smoke of garlic-like odor..... arsenic
white sublimate..... tin

B. Formation of colored coats or sublimates with or without metallic buttons or globuli:
orange-yellow sublimate..... cadmium
brown sublimate with white edge. bismuth
white sublimate, becoming green if moistened with cobalt nitrate solution and heated..... zinc
yellow sublimate with metallic globulus..... lead

C. No sublimate, only metallic globules:
white..... silver
yellow..... gold

Group III. Substance is heated in the bottom of a dry glass tube:

A. White sublimate: ammonium salts, mercury

1. Mixed with sodium carbonate and heated
ammonia odor..... ammonium salts
gray sublimate..... mercury

B. Yellow sublimate..... sulfur or sulfides

Group IV. Substance is mixed with potassium bisulfate and heated at the bottom of a glass tube:

A. Colorless vapors: sulfites, chlorides, fluorides

1. White fumes with glass rod moistened with ammonia..... hydrochloric acid
2. attacking the glass.... hydrofluoric acid

B. Green vapors..... chlorine, chlorates
C. Brown vapors..... bromine, bromides
D. Purple vapor..... iodine, iodides

Group V.

A. Heated with copper powder in glass tube:
brown vapor..... nitrates, nitrites

B. Heated in glass tube, alcohol added:
acetic ether odor..... acetates

C. Powdered substance moistened and burned on magnesium-ribbon:
PH_3-odor on moistening..... phosphorus

blown oils. Polymerized oils, oxidized oils. Any oil, as, linseed, grapeseed or fish oil, which has been oxidized by passing through it a stream of air, thereby converting it into a fast drying oil; used for paints and varnishes.

Bloxam, Charles. 1831–1887. An English analytical chemist noted for his writings.

blubber oil. Whale oil.

blue. A color of the spectrum of shorter wavelength than green, but longer than violet (wave-length, 0.000047 cm.). Egyptian- native copper aluminate.

b. cohosh. Caulophyllum. **b. copper.** A native amorphous form of copper sulfide, CuS. **b. copperas.** Copper sulfate. **b. cross.** Ph_2AsCl. Diphenyl chlorarsine, D.A. A nose irritant, m.39, used as a poison gas in warfare. **b. dyes.** See *alizarin b., alkali b., anthracene b., basic b., cyanin b., methyl b., methylene b.*, etc. **b. gum.** Eucalyptus. **b. iron ore.** Vivianite. **b. john.** A native, crystalline copper sulfate with fluorspar. **b. mass.** Mercury ointment. **b. pigments.** See *Chinese b., cobalt b., copper b. indigo, prussian b., smalt, Turnbull's b., ultramarine.* **b. print.** A photographic copy made on ferri-ferrocyanide paper and fixed by washing with water. **b. powder.** Zinc dust. **b. salt.** Crystallised *nickel sulfate.* **b. stone.** A native, crystalline copper sulfate. Cf. *b. john.* **b. unit.** A method of expressing the vitamin A potency of a substance in terms of the intensity of the blue color produced with antimony trichloride. Cf. *Carr-Price value.* **b. verdigris.** Copper acetate. **b. verditer.** Basic *copper carbonate.* **b. vitriol.** (1) Chalcanthite, a native copper sulfate. (2) Crystallized copper sulfate.

blushing. The turbidity of lacquers and varnishes due to the precipitation of the resins in the solution, caused either by moisture or evaporation of the solvent. Cf. *bloom* (3).

board foot. A measure of the volume of boards sawn from logs. It is the volume of a board 1 in. thick and 1 sq. ft. in area, *i.e.*, one twelfth of a cu. ft. Cf., *cunit, cord, fastmeter.*

Board of Trade unit. B.T.U. The British unit of electrical energy. 1 B.T.U. = 1 kilowatt hour = 3.6×10^6 watt-secs. (Cf. *British Thermal Unit* = B.Th.U.)

boart. Bort.

Boas reagent. A solution of 5 gm. resorcinol and 3 gm. sugar in 100 gm. dilute alcohol. **B. test.** A test for hydrochloric acid in gastric juice. A rose-red color develops on boiling with B. reagent.

boat. A small elongated vessel of porcelain, quartz, or platinum which can be inserted in a combustion tube. It is used in organic analysis.

bobierite. A native, hydrous magnesium phosphate, $Mg_2P_2O_7.8H_2O$, which occurs in guano as light colored crystals.

B.O.D. Biochemical oxygen demand.

bodies. (1) A group of biochemical substances which have a similar structure. (2) A group of cellular structures or definitely shaped substances found in the protoplasm. **acetone-** Substances such as acetone, aceto-acetic acid, or β-oxybutyric acid, when found in urine. **alloxur-** A compound of uric acid and alloxan, secreted in the urine; as, the purine bodies. **Buchner-** Any defensive protein of the organism. **purine-** Any derivative of uric acid; as xanthine, guanine, adenine, etc.

body. (1) The trunk of an animal or plant. (2) The largest part of an organ. (3) The consistency or viscosity of a liquid. (4) A limited portion of matter. (5) The strength of a liquid; as, wine. **black-** See *Stefan-Boltzmann equation, black body.* **b. fluids.** See blood, lymph and

internal secretions. **b. tube.** The portion of the microscope which carries the objective, and inside which slides the draw-tube.

boehmite. A form of bauxite, Al_2O_3,H_2O.

Boerhaave, Herman. 1668–1738. A Dutch scientist and pioneer of modern chemistry, noted for his famous textbook.

bog. A marsh or morass. **b. berry.** The fruit of *Vaccinium oxyoccus*, or cranberry. **b. butter.** Butyrelite. A soft mineral occurring in marshes. **b. iron ore.** Bogore. **b. manganese.** Wad. **b. ore.** Bogore.

Bogert, Marston Taylor. 1868– . An American chemist, noted for his research in synthetic organic chemistry.

boghead. A carbonaceous rock, or cannel with a high ash content; consisting chiefly of iron carbonate. **b. naphtha.** Photogen.

bogiron ore. Bogore.

bog-manganese. Wad.

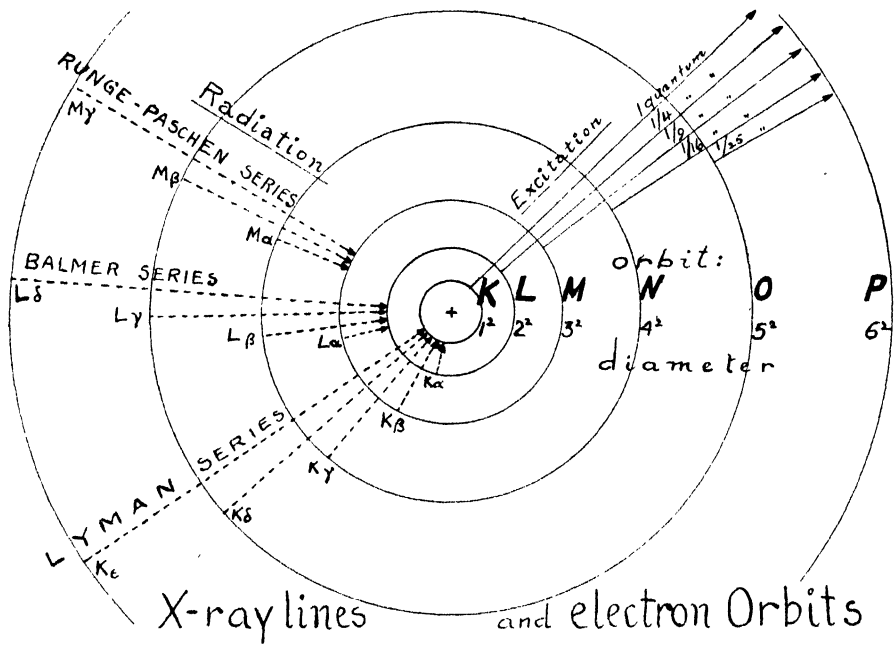
bogore. Bogiron ore, marsh ore, brown iron ore, brown hematite, brown ocher, limonite. A hydrous ferric oxide, $2Fe_2O_3.3H_2O$, with some ferrous carbonate, from marshy places, a source of iron.

bohemium. Bo. The element, atomic number 75, claimed to be discovered by the Bohemian scientists J. Heyrowsky and Doleysek (1925), as an impurity in magnesium. It appears to be identical with the rhenium previously discovered by Naddack, Tacke and Berg.

Bohr, Niels. 1885– . A Danish physicist, and Nobel prize winner (1922), noted for his theory of atomic structure. **B. atom.** A hypothesis of atomic structure (q.v.) which assumes that the electrons move in circular or elliptical orbits around a positive nucleus, resembling an infinitesimally small solar system. **B. and Coster notation.** See *quantum numbers*. **B. formula.** An expression which connects the quantum theory with that of spectrum lines. For the hydrogen series, $N = [2\pi^2me^4(M + m)]/Mh^3$, where e = charge and m = mass of an electron, M = atomic weight of hydrogen and h = Planck's constant. The value of N is 109,678.7. **B. formula for Rydberg's constant.** An equation relating the constants e/m, e, h and c as derived from B. theory:

$$R_\infty = [2\pi^2e^5]/[h^3c^2e/m]$$

Cf. *Lewis-Adams formula, constants*. **B's. theory.** Spectrum lines are produced (1) by emission of radiation (energy) when electrons drop from an orbit of greater to lower energy (energy levels); or (2) by absorption of radiation (energy) when the electrons move from an orbit of lower to higher energy. Cf. *quantum, spectrum series, Stoner quanta, correspondence principle*. See figure.



Bohr theory.

boiled. Describing a liquid which has been made to boil. **b. oil.** A linseed oil which has been heated to 210–260°C, and thereby hardens more readily; used in varnishes and lacquers.

boiler. An open or closed vessel for evaporating liquids, cooking food, or generating steam. **vacuum-** A closed vessel in which evaporation of a liquid is caused by low pressure, with or without the application of heat.

b. compound. A substance used to prevent the formation of b. scale. Cf. *water softening*. **b. fluid.** A solution which prevents the formation of a compact b. incrustation. **b. incrustation.** The insoluble mass deposited on the bottom and sides of a vessel in which hard water

has been evaporated. It consists of calcium and magnesium carbonates and sulfates. **b. mud.** A loose deposit of b. incrustations. **b. scale.** A compact and thick layer of successive deposits. **b. stone.** B. scale.

boilers. A group name for nitrocellulose and lacquer solvents (q.v.), arranged in order of their boiling points: **low-** b. below 100°C. **medium-** b. near 125°C. **high-** b. from 150–200°C.

boiling. The state of ebullition or the brisk change from the liquid to the vapor state. **b. point.** B.p., b. The temperature at which, under atmospheric or any other specified pressure, a liquid is transformed into a vapor; *i.e.*, the temperature at which the vapor pressure of the liquid equals the pressure of the surrounding gas or vapor. The temperature of the reverse phenomenon is the condensation point. Cf. *Clapeyron equation.* **absolute b. point.** The b. on the absolute scale; *e.g.*, x°C + 273 = (x + 273)°A. **b.p. apparatus.** A device for determining the boiling point of a liquid under a definite pressure. **lowering of b.p.** A decrease in pressure lowers the boiling point; *e.g.*, by lowering the pressure 10 mm. water will boil 0.37°C lower. **b.p. elevation.** The presence of a dissolved substance raises the boiling point of a liquid, and the rise is a function of its molecular weight. Hence a method of determination of the latter. Cf. *Raoult's Law, Beckmann's apparatus.*

Boisbaudran, Paul Émile Lecoq de. 1838–1912. A French scientist, noted as discoverer of gallium, samarium and dysprosium.

boldine. $C_{19}H_{21}NO_4$ = 327.17. An alkaloid from the leaves of *Peumus boldus* (Monimiaceae). A grayish-white powder, insoluble in water, soluble in alcohol, ether, or chloroform. Used as a hypnotic and in hepatic and biliary disorders. Cf. *laurotetanine.* **b. hydrobromide.** $C_{19}H_{21}NO_4.HBr$ = 621.34. White crystals, soluble in water; used as a hypnotic and local anesthetic.

boldo. The dried leaves of *Peumus boldus*, a Chilean tree (Monimiaceae). It is a tonic, antirheumatic and antipyretic.

boldoglucin. $C_{30}H_{50}O_8$ = 541.5. A glucoside from the leaves of *Peumus boldus.* A thick syrupy liquid, used as a narcotic and hypnotic.

bole. (1) A fine clay, coloured by the presence of iron. (2) The trunk or stem of a tree. (3) A measure of corn; equals 6 bushels. **red-** Ocher. **white-** Kaolin.

boleite. A native hydrous oxychloride of lead, silver, and copper, which occurs in blue crystalline masses at Boleo, Lower California.

Boletus. A genus of Fungi or mushrooms belonging to the Basidiomycetes.

Bologna phosphorus. Luminescent barium sulfide.

bolometer. A device for measuring minute quantities of radiant heat by registering the change in the conductivity of a black body; used in spectroscopy.

bolting cloth. A fabric of unsized silk, used for making sieves.

boltonite. Mg_2SiO_4. A native magnesium silicate. A variety of fosterite.

Boltzmann's constant. $k = 1.372 \times 10^{-16}$ erg/°C. The gas constant, R, expressed per molecule. If m is the number of molecules, R = PV/Tm. **B. equation.** See *molecular free path.* **B's law.** The law of the equipartition of energy: The total kinetic energy of a system, due to translation, rotation, vibration, etc., is equally divided between all the degrees of freedom. The energy per degree of freedom is $\frac{1}{2}RT$ per gram molecule.

bolus. (1) Masticated food ready to be swallowed. (2) Kaolin.

bomb. (1) A projectile of iron or steel filled with explosive, poisonous, or incendiary substances, and used in chemical warfare. (2) A heavy iron tube filled with a substance which is to be oxidized for the determination of its heating value. (3) Radium in concentrated form (1–5 gm. units) used for intensive local treatment, e.g. of cancer. **b. calorimeter.** See *calorimeter.*

bombard. To expose to the rays of radioactive substances, or to converging cathode rays.

bombardment. Exposure to the rays of radioactive substances; *e.g.*, the exposure to cathode rays focused on a point as in the X-ray tube; or the hitting of the atomic nuclei by high speed α-particles and the disruption of the hydrogen sub-atoms composing it (Rutherford).

bombiosterol. $C_{27}H_{46}O$ = 386.32. A sterol, m.-148, $[\alpha]_D$ −34.9°, in chrysalis oil.

bonanza. A rich vein of ore.

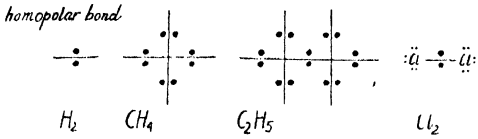
bond. The linkage between atoms thought to consist of an electron-pair rotating between two kernels and forming an electro-magnetic vector along axis *ab*:

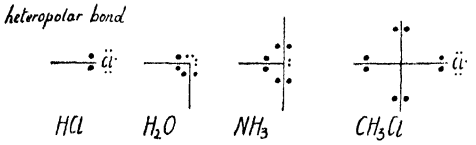
The nature of the atoms will give the following types:

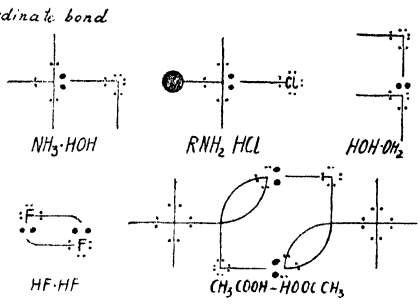
I. *Atomic b.* Each atom contributes one electron,
   1. *homopolar b.* **(nonpolar).** The electron-pair is held equally by both kernels, neither of which becomes negative with respect to the other, a = b; as in H_2, Cl_2, CH_4 etc.
   2. *heteropolar b.* **(polar).** The electron-pair is held unequally, hence one kernel becomes negative and the other positive, a > b; as in HCl, H_2O etc.

II. *Molecular b.* One atom contributes both electrons,
   3. *coordinate* b. **(semipolar).** An unshared electron-pair of an octet on a kernel (like N, O, F etc) is shared by a kernel having an incomplete octet (generally H, also Li, Be, B etc.).

These three types of b. are illustrated by *electronic* structure symbols in which the heavy type dots represent the electrons of the particular b.; their distances on the lines are a measure of the force shared by each kernel, thus:







Cf. *valence, linkage, associated* and *normal liquids, combination, compounds, atomic radius, molecular diagram, chelate.*

bondu. A corrosion-resisting aluminum alloy containing 2–4 % Cu, 0.3–0.6 % Mn and 0.5–0.9 % Mg. Cf. *acieral, aerometal.*

bonducin. $C_{14}H_{15}O_5$ = 263.1. A bitter principle of bonduc seeds, *Caesalpinia crista*, a Leguminosae. A white bitter powder, insoluble in water; used as a febrifuge.

bone. The skeletal material of the vertebrates. **b. ash.** An impure calcium phosphate. The remains of burnt animal bones, used as fertilizers, contain 35–38 % P_2O_5. **b. black.** A charcoal made from bones and blood which is usually impure; used to refine sugar, oil, etc. **b. earth.** B. ash. **b. meal.** Finely ground animal bones used as fertilizer; it contains 3.3–4.1 % N, 20–25 % P_2O_5. *steamed-* Finely-ground bones, which have been previously steamed under pressure to remove the glue. They contain 1.6–2.5 % N, 25 % P_2O_5. **b. oil.** Animal oil, Dippel's oil. A tarry oil obtained by dry distillation of bones, d.0.900–0.980; soluble in water. The chief constituent is pyridine. Used as an insecticide and in organic synthesis; a popular panacea for many disorders. **b. phosphate.** Calcium phosphate. **b. tallow.** Soft grease obtained by boiling fresh bones; used to make cheap soaps. **b. turquoise.** Fossil bones, or teeth colored with $Fe_2P_2O_8$. **b. wax.** See *wax.*

bongkrekik acid. The compound $C_{12}H_{18}O_3$, produced by the action of certain bacteria on coconuts.

boost. To overload or place an excessive strain on an engine, or when charging an accumulator.

Boot density bottle. A specific gravity bottle containing about 5 cc. and having double walls with a vacuum between. Used for determining specific gravities at constant temperatures.

boracic acid. Boric acid.

boracite. $Mg_7Cl_2B_{16}O_{30}$. A native magnesium chloro-borate which occurs in white transparent isometric crystals at Stassfurt; hardness 7, d.2.9–3.

boracium. The original name of boron (Davy).

Boraginaceae. Borage family, a group of herbs, some of which yield drugs.

Alkanna tinctoria	alkanet, alkannin
Symphytum officinale	comfrey
Borago officinalis	borage
Pulmonaria officinalis	lungwort

boral. Aluminum borotartrate; used as an antiseptic and astringent.

borane. Boron hydride.

borate. A salt of boric acid. **bi-** Acid borate. **A** salt of the type MH_2BO_3. **di-** Pyro-b. **hypo-** A salt of the type MH_3BO. **meta-** A salt containing the monovalent $—BO_2$ radical. **ortho-** Borate. **per-** A salt containing the monovalent $—BO_3$ radical. **pyro-** A salt containing the divalent $>B_4O_7$ radical. **tetra-** Pyro-.

boratto. A silk and wool fabric.

borax. $Na_2B_4O_7.10H_2O$. Zala, tinkal. A native sodium tetraborate, found in California, Nevada, Oregon and Asia Minor; used as cleaning agent, antiseptic, flux, etc. **b. bead.** A crystal of borax melted in the loop of a platinum wire until it is transparent. It is colored by metallic oxides; see *blowpipe analysis.* **b. carmine.** See *Grenacher stain, Nikiforoff stain.* **b. glass.** (1) Fused borax, used as a flux. (2) See *glass.* **b. methylene-blue.** Sahli stain.

Bordeaux B. Acid Bordeaux, α-naphthalene-azo-β-naphthol-3.6-disulfonic acid. An indicator for pH range 10.5 (pink) to 12.5 (orange). **B. colors.** A group of artificial coloring matters for foodstuffs. **B. mixture.** (1) A mixture of equal weights of copper sulfate and lime in water; (2) a solution of copper arsenate and phenols. Used as insecticides.

Bordet test. An agglutination test for the differentiation of human and animal bloods.

borethyl. Triethyl borine.

boric acid. H_3BO_3 = 62.9. Boracic acid, fumarole acid, $B(OH)_3$. Triclinic white crystals, $d_{15°}$1.4347, m.185, soluble in water, alcohol or glycerin. Used as a reagent, and in the manufacture of borates. It is found in the volcanic lagoons of Toscana. **meta-** HBO_2. **ortho-** B. acid. **per-** HBO_3. **pyro-** $H_2B_4O_7$. **benzyl-** $C_7H_7B(OH)_2$ = 135.89. Benzylboron dihydroxide. White crystals, m.161. **ethyl-** $C_2H_4B(OH)_2$ = 73.87. Ethylboron dihydroxide. Colorless crystals, subliming 40.

borickite. Anhydrous phosphate of iron.

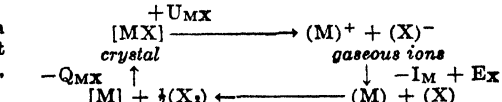
boride. A binary compound of negative boron with a more positive element or radical of the type, M_3B or BR_3.

borine. A compound of boron with an acyl or aryl radical, BR_3. **triethyl-** Borethyl. BEt_3. A colorless liquid, b.95. **trimethyl-** Bormethyl. BMe_3. Cf. *methyl borate, ethyl borate.* **triphenyl-** Borphenyl, BPh_3.

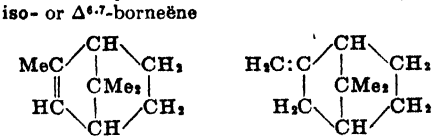
borium. Boron.

bormethyl. Trimethyl *borine.*

Born-Haber cycle. The relationship of U = lattice energy of crystals, I = ionization potential, E = electron affinity, S = heat of sublimation, D = heat of dissociation and Q = chemical heat of formation, can be expressed by the diagram:

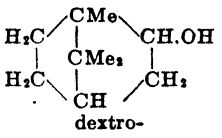


borneene. $C_{10}H_{16}$ = 136.18. **n-** or $\Delta^{5,6}$-borneëne. A hydrocarbon isomeric with bornylene. **iso-** or $\Delta^{6,7}$-borneëne

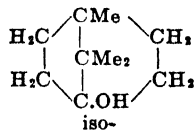


borneo-camphor. d-Borneol. **b. tallow.** See *tallow.*

borneol. $C_{10}H_{18}O$ = 154.20. d- Camphyl alcohol, borneo-camphor, baras camphor, sumatras camphor, bornyl alcohol, 2-hydroxy-camphane, 2-camphanol,



dextro-



iso-

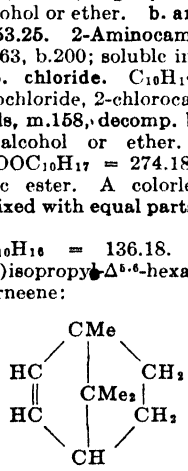
A terpene from *Dryobalanops camphora*, or prepared synthetically. Transparent hexagonal leaflets, m.203, b.212, d.1.011; very slightly soluble in water, soluble in alcohol or ether. **epi-** Epiborneol. **iso-** 4-Hydroxycamphane. Transparent crystals, d.1.011, m.210. Used in perfumery, celluloid manufacture, and medicinally, as an antiseptic and stimulant. **b. acetate.** Bornyl acetate. **b. salicylate.** Bornyl salicylate. **b. valerate.** Gynoval.

bornesitol. Quebrachitol.

bornite. $FeS.2Cu_2S.CuS$. Peacock copper, **purple copper.** A native copper iron sulfide, which occurs in reddish-brown brittle, isometric crystals, d.5.0.

bornyl. The monovalent $—C_{10}H_{17}$ radical derived from borneol by removing the hydroxyl-group. **b. acetate.** $MeCOOC_{10}H_{17}$ = 196.22. d-Borneol acetic ester. Colorless crystals, d.0.985, m.29, b.223; slightly soluble in water, soluble in alcohol or ether. **b. amine.** $C_{10}H_{17}.NH_2$ = 153.25. 2-Aminocamphane. White crystals, m.163, b.200; soluble in water, alcohol or ether. **b. chloride.** $C_{10}H_{17}Cl$ = 172.65. Pinene hydrochloride, 2-chlorocamphane. Colorless crystals, m.158, decomp. by water at 49; soluble in alcohol or ether. **b. salicylate.** $C_6H_4(OH)COOC_{10}H_{17}$ = 274.18. Salit, d-borneol salicylic ester. A colorless solid, used externally mixed with equal parts of olive oil, for rheumatism.

bornylene. $C_{10}H_{16}$ = 136.18. $\Delta^{5,6}$-camphane, 1-methyl-1(4)isopropyl-$\Delta^{5,6}$-hexamethylene, an isomer of borneene:



Colorless crystals, m.113, b.149; insoluble in water, soluble in alcohol or ether.

bornyval. Gynoval.

borobutane. See *boron hydrides.*

borocaine. $C_{13}H_{20}O_2N_2.5HBO_2$. Ethocaine borate. White crystalline powder, used as antiseptic.

borocalcite. $CaB_4O_7.4H_2O$. Bechilite. A native calcium borate.

borofluohydric acid. Borofluoric acid.

borofluoric acid. HBF_4 = 88.01. Hydroborofluoric acid, fluoboric, borofluohydric acid. Colorless liquid, b.130, miscible with water.

borofluoride. Fluoboride. A salt of borofluoric acid containing the monovalent $BF_4—$ radical.

borofluorin. A mixture of boric acid, benzoic acid, sodium fluoride and formaldehyde, used as an antiseptic and germicide.

boroglyceride. Glyceryl borate. An antiseptic paste of boric acid and glycerin.

borol. Sodium and potassium borosulfate. Colorless transparent masses; soluble in water. Used as a disinfectant and antiseptic.

borolon. An artificial aluminum oxide forming white or brownish-red, crystalline masses, d.3.9–4.0, obtained by fusing bauxite and used as abrasive, refractory or filtering material.

boron. B = 10.82. A metal of the aluminum group, atomic number 5, and analogous to carbon. It occurs in three modifications:

(a) *Crystalline* b. Colorless tetragonal crystals of great hardness; d.2.51, sometimes variously colored by impurities; insoluble in acids, and alkalis, and slowly soluble in molten alkali carbonates and oxides.

(b) *Amorphous* b. Grayish powder, d.2.45, m. above 2000, b. about 3500; when heated in air it burns at about 700; insoluble in water and alkalis, soluble in acids (decomp.).

(c) *Adamantine* b. Clear and colorless, or brown crystals having the crystal shape of diamond; a variety of crystalline boron. Boron occurs widely distributed in small quantities in several silicates (tourmaline) and as borates (borax, colemanite, sassolite, ulexite), and is also found in many alkaline lakes (California, Thibet). Boron is trivalent and forms only one series of compounds.

boron x-ides	BX_3
borates	$B(OM)_3$
borines	BR_3
boranes	B_xH_y

B. was discovered in 1807 independently by Davy and Gay-Lussac and Thenard. Crystalline b. was first prepared by Woehler in 1856. Metallic b. is used as a catalyst in various industrial processes.

b. alkyls. See *borines.* **b. bromide.** BBr_3 = 250.8. B. tribromide. A colorless, fuming liquid, d.2.69, m. −45, b.90, decomp. by water or alcohol. **b. carbide** B_4C = 76.92. Black crystals, d.2.51; m.2350, insoluble in water or alcohol. **b. chloride** BCl_3 = 117.2. B. trichloride. A colorless liquid, d.1.434, m. −107, b.18, decomp. by water or alcohol. **b. fluoride** BF_3 = 67.82. B. trifluoride. A colorless gas, $d_{(air=1)}$2.3, m. −127, b. −101. **b. hydrides** BH_3 = 13.84 or B_2H_4 = 27.7. Borane, boroethane. A colorless gas, m. −169, b. −87, decomp. by alcohol. B_2H_6 only is known; BH_3 is analogous to CH_3. Boron forms numerous other hydrides (hydroborons); as, B_4H_{10} (borobutane), $B_{10}H_{14}$ (borodecane), analogous to the hydrocarbons and silanes. **b. hydroxide.** Boric acid. **b. iodide** BI_3 = 391.8. B. triiodide. Colorless crystalline scales, d.3.3, m.43°C, b.210, decomp. by water, soluble in chloroform or carbon disulfide. **b. minerals.** Boron is a main constituent of several silicates; as, tourmaline and datolite. It occurs in saline deposits and is obtained from

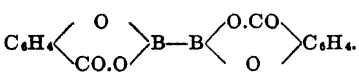
borax	$Na_2B_4O_7.10H_2O$
rasorite	$Na_2B_4O_7.4H_2O$
ulexite	$NaCaB_5O_9$ or $Na_2B_4O_7$, $Ca_2B_6O_{11}$, $16H_2O$
borocalcite	CaB_4O_7, $4H_2O$
colemanite	$Ca_2B_6O_{11}$, $5H_2O$
sassolite	H_3BO_3
pinnoite	MgB_2O_4
boracite	$2Mg_3B_8O_{15}$, $MgCl_2$

b. nitride. BN = 24.8. A colorless, infusible, crystalline powder, insoluble in acids or alkalis (decomp. by hydrofluoric acid). **b. oxide** B_2O_3 = 69.64. A colorless powder, d.1.83, m.577, slightly soluble in water or alcohol, readily soluble in acids. **b. phosphide.** BP = 42.0. A red powder, which burns at 200; it is insoluble in water, alcohol, or ether. **b. sulfide** B_2S_3 = 117.83. B. trisulfide. Colorless crystals, d.1.55, m.310, decomp. in water. **(penta-)** B_2S_5 = 182.3. Colorless crystals, d.1.85, m.390. **b. tribromide.** B. bromide. **b. trichloride.** B. chloride. **b. triethoxy-** Ethyl borate. **b. triethyl-** Borine. **b. trimethoxy-** Methyl borate. **b. trimethyl-** Borine. **b. trisulfide.** B. sulfide.

boronatrocalcite. Ulexite.

borophenylic acid. Phenylboric acid. A mixture of phenylborate, $PhBO_2$, and phenyltriborate, PhB_3O_5. White or pinkish crystals, m.204; soluble in water, alcohol or ether. Used as an antiseptic.

borosalicylates. A group of heterocyclic compounds of the type



borosilicate. Silicoborate. A salt of boric and silicic acids. A silicate in which B replaces Si.

borotungstic acid. $(WO_3)_9B_2O_3.24H_2O$. A yellow liquid, d.3.0; soluble in water. Used in mineralogy for determining the density of minerals.

borowolframic acid. Borotungstic acid.

borphenyl. Triphenyl borine.

Borrel grinder. A device for grinding organic tissues and bacteria by means of flexible steel leaves which rotate at a high speed in a steel cylinder.

borsal, borsyl. Sodium borosilicate.

bort. Anthracite diamond, carbonado. A dark, lustrous diamond from Brazil; used for cutting stones and as drill-point in boring machines. It is a conglomerate of minute crystals.

boryl. (1) The monovalent radical —BO. (2) Ethyl-borosalicylate. A white powder, used as an antiseptic and antirheumatic.

Bosch, Karl. 1874– . A German industrial chemist noted as an inventor.

boss. Clamp-holder.

boswellic acid. $C_{32}H_{52}O_4$ = 500.5. An acid constituent of African olibanum, the resinous exudate of *Boswellia papyrifera*, a Burseraceae.

botany. (1) The science of the structure, function, occurrence, and classification of plants and vegetable organisms. See also *biology*. (2) Waste jute cuttings used for paper manufacture, cf. *hessian*.

Botany Bay gum. Acaroid resin.

botryolite. Datolite.

Böttcher chamber. A counting apparatus for blood corpuscles and bacteria which consists of a microscope slide with ruled squares and a mounted cover glass.

Böttger test. A test for glucose in urine, in which a black precipitate is given with sodium carbonate and bismuth subnitrate.

bottle. A vessel with a narrow neck used for holding liquids. **aspirator-** See *aspirator*. **balsam-** A small wide-necked b. with a loosely-fitting glass cover. **density-** See specific gravity *b*. **dropping-** A b. containing a pipette fitted into its cork or rubber stopper. **gas-** A b. used for generating or washing gases, which usually has a two-hole stopper through which the inlet and outlet tubing pass. **graduated-** A graduated b. used for mixing liquids. **hard rubber-** One made of rubber and used for certain acids. **immersion oil-** B.'s of various shapes, with a glass rod attached to the stopper. **milk testing-** Babcock b. **oil sample-** A long narrow b. **paraffin-** A b. made of paraffin and used for holding hydrofluoric acid. **percolator-** A wide-mouth b., graduated in cc., pints or ounces. **reagent-** A glass b. with the name and symbol of a reagent burnt or etched on. **specific gravity-** A small, light, accurately-counterpoised and graduated b. used to determine the specific gravity of liquids. **specimen-** A wide-mouth b. used with a closure for holding specimens of various kinds. **washing-** A glass b. fitted with an inlet and outlet tube. The latter only reaches to the bottom and is connected at the other end with a small jet. Used for washing precipitates with distilled water, alcohol or other fluids, or as a bubbler for purifying or washing gases. **weighing-** A small, light, glass-stoppered container, used for weighing liquids or solids on the analytical balance. **Woulff-** A glass b. with two or three necks, used as a washing or gas-generating bottle.

b. brush. A length of stiff, woven, galvanised wire, to the end portion and tip of which bristles are attached.

bottlenose oil. An inferior sperm oil from the blubber of the bottlenose whale, used in soap making.

botulin. A ptomaine produced by bacteria (*Bacillus botulinus*) and sometimes found in tinned and preserved meats.

Bouchardat, Alexander. 1806–1886. A French pharmacist noted methods of urine analysis. **B. reagent.** A solution of 1 pt. iodine and 2 pts. potassium iodide in 20 pts. water. It gives a brown precipitate with alkaloids.

bougie. (1) A filter cylinder made of porous porcelain. *E.g.*, Berkefeld, Pukal, Pasteur-Chamberland. (2) A taper-shaped pharmaceutical preparation for introduction into the rectum or urethra, etc. (3) A narrow tube for introduction into the urethra or other body orifice. **b. unit.** The French photometric standard; $\frac{1}{3}$th. part of the light emitted by 1 sq. cm. of platinum at its solidifying point.

bouillon. A meat broth, used as food or culture medium. **glycerin-** Koch's culture medium, made from 10 gm. Liebig meat extract, 10 gm. peptone, 20 cc. glycerin, 1000 cc. water and sufficient sodium carbonate solution to make it alkaline to litmus. Cf. *glucose b.* **plain-.** A culture medium consisting of 10 gm. peptone, 5 gm. sodium chloride and 1000 cc. bouillon stock solution, neutralized with sodium hydroxide.

b. stock. A solution of 500 gm. lean beef or 3 gm. beef extract in 1000 cc. water, used for making culture media.

Bouin's fluid. A preservative for embryological and histological material, consisting of 75 cc. saturated picric acid, 25 cc. 40 % formaldehyde and 5 cc. glacial acetic acid.

boulangerite. $Pb_3Sb_2S_6$. A native lead sulfantimonate, $3PbS.2Sb_2S_3$, found as steel-gray or bluish-gray needles or feathery masses, d.6.18. Cf. *epiboulangerite*.

bourbonal. $C_9H_{10}O_3$ = 166.07. Ethyl vanillin, 3-ethoxy-4-hydroxybenzaldehyde, $CHO.C_6H_3$-

(OH)OEt. A synthetic substitute for vanillin, claimed to be four times as strong in flavor.

bournonite. $CuPbSbS_3$. A native copper lead sulfantimonite, found as a bluish-gray, brittle metallic mineral.

boussingaultite. $(NH_4)_2Mg(SO_4)_2.6H_2O$. A native ammonium magnesium sulfate, found in the lagoons of Tuscany.

Bouveault-Blanc reaction. The reduction of esters to alcohols by means of metallic sodium.

B.O.V. Brown oil of vitriol. Commercial sulphuric acid containing 77–78 % H_2SO_4 by weight.

Bowen tube. Bowen potash bulb. A tube with bulbs for the absorption of gases.

bowenite. Serpentine.

Boyce burner. An adjustable burner for gas, which regulates the gas and air flows.

Robert Boyle.

Boyle, The Hon. Robert. 1627–1691. An English physicist and chemist, and pioneer in the investigation of gas laws. **B.'s law.** If the temperature is constant, the pressure of a given quantity of a gas is inversely proportional to the volume it occupies. $PV = k$, or $pv = p'v'$.

B.P. Abbreviation for (1) the beri-beri-preventing factor of vitamin B; (2) boiling point; (3) British Pharmacopoeia, B.Ph.

b.p. Abbreviation for boiling point.

B.Ph. Abbreviation for British Pharmacopoeia.

Br. The symbol for bromine. Br_2 = bromine molecule, Br^- = bromide ion. Br^* = excited bromine atom.

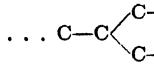
brachydome. See *dome.*

Bragg, Sir William Henry. 1862–1942. A British chemist, noted for his research on crystal structure. **B. crystallogram.** The photographic record obtained by B's. method. **B. crystal model.** The crystalline structure as determined by the diffraction of monochromatic x-rays. **B. method.** If a crystal is placed in the path of a narrow x-ray beam, the layers of atoms in the crystal act as reflection planes for the incident ray and on the photographic plate a series of lines, corresponding with the several orders of spectrum, will be produced. The following relation exists: $\lambda = 2d \sin \theta$, where θ is the glancing angle, d the spacings between atomic planes, and λ the wavelength. Compare also *x-ray spectrograph, crystal structure, Laue pattern.* See figure.

brain. The nerve tissues within the skull which consist, chemically, of: (1) white brain substance (kephalins, lecithins, paramyelins, myelins, cholesterol, phrenosterol, cerebrin and cerebrosides). (2) Buttery substance (kephaloidin, lecithin, myelin, paramyelin, aminomyelin, sphingomyelin, phrenosin and amino-lipins). (3) Aqueous brain extract, containing alkaloids (hypoxanthine, etc.), aminoacids, inosite, organic and inorganic acids and salts. **b. sugar.** Cerebrose.

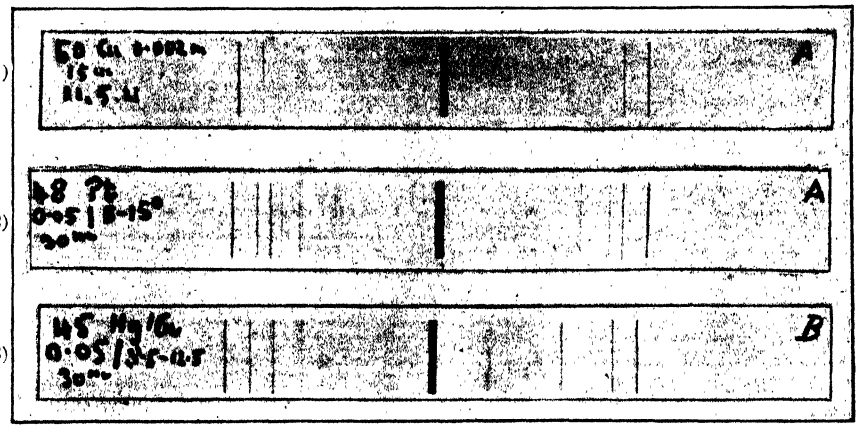
bran. The husk or outer covering of the grain of wheat. **b. oil.** Furfural.

branched chain. A forked atomic chain; as,



See also *chain.*

brand. A term, design or trade mark.



Bragg crystallogram using a rock salt crystal and apparatus manufactured by Adam Hilger, Ltd., London.
(1) Kα and Kβ of copper, 15 min. exposure.
(2) L series of platinum, 30 min. exposure.
(3) Kα and Kβ of copper and Lα, Lβ of mercury, 30 min. exposure.

Brand, Hennig. A merchant and alchemist of Hamburg, who discovered the first non-metallic element (phosphorus) in 1669.

Brandt, Georg. 1694–1768. A Swedish mineralogist, who discovered the first metallic element, cobalt, in 1735.

brandy. An alcoholic beverage distilled from wine. Cf. *cognac.*

brasan. Brazan.

brassilic acid. $C_{22}H_{46}O_6$ = 386.4. i-Dihydroxy behenic acid, $Me(CH_2)_7(CHOH)_2(CH_2)_{12}COOH$. Yellow crystals, m.99, soluble in hot alcohol. Cf. *brasilic, brassylic,* and *brazilic acids.*

brasileïn. Brazileïn.

brasilic acid. $C_{12}H_{12}O_6$ = 252.09. Colorless crystals, m.129. Cf. *brasileic, brassylic,* and *brassidic acids.*

brasilin. Brazilin.

brass. A copper-base alloy containing an appreciable amount of zinc. In the classics, an alloy of copper and tin. **alpha-** One containing less than 40 % Cu. **beta-** One containing more than 40 % Cu.

90 % Cu, 10 % Zn, red brass	m. 1040
80 % Cu, 20 % Zn, Dutch metal	m. 995
70 % Cu, 30 % Zn	m. 930
67 % Cu, 33 % Zn, yellow, ordinary b.	m. 940
60 % Cu, 40 % Zn, Muntz metal	m. 900

aluminum- An alloy of 55–70 pts. Cu, 25–45 pts. Zn and 1–4 pts. Al. **calamine-** Marcasite. **coal-** Roman b. **iron-** B. containing 1–9 % iron. **naval-** An alloy of 61 pts. Cu, 38 pts. Zn and 1 pt. Sn. **red-** B. containing 90 % Cu. **Roman-** B. made by heating charcoal, copper and calamine at a temperature below 1000°C. **yellow-** Muntz metal.

brassic. See *brassidic.*

brassicasterol. $C_{28}H_{46}O$ = 398.35. A sterol, m.148, from rape oil.

brassidic acid. $C_{22}H_{42}O_2$ = 338.45. *12*-Docosenoic acid*, iso-erucic acid. The unsaturated open-chain acid: $Me(CH_2)_7CH{:}CH(CH_2)_{11}COOH$. Colorless leaflets, d.0.859, m.65 b.$_{30mm}$ 282; slightly soluble in water, or alcohol, soluble in ether. It is an isomer of erucic acid and cetoleic acid. Cf. *brasilic* and *brasileic* acids.

brassil. Pyrite.

brassylic acid. $C_{13}H_{24}O_4$ = 244.19. 1.11-Hendecanedicarboxylic acid, $HOOC(CH_2)_{11}COOH$. Colorless crystals, m.114 slightly soluble in water. Compare *brasileic, brasilic* and *brazilic acids.*

brattice. A heavily-tarred canvas used in mines for partitions and ventilation.

Braun tube. A potash bulb.

Brauner, Bohuslav. 1855–1935. A Czechoslovakian chemist, noted for inorganic research and atomic weight determinations.

braunite. A native manganese silicate, $MnSiO_3.3Mn_2O_3$, which occurs in brownish-black or gray lustrous, tetragonal crystals.

bravaisite. Glauconite.

Bray, William Crowell. 1879– . An American chemist, noted for research in catalysis, qualitative analysis and chemical kinetics.

Brayera. A genus of Rosaceae. See *brayerin, kousso.*

brayerin. $C_{31}H_{38}O_{10}$ = 570.3. A bitter, resinous principle from *Brayera* species.

brazan. $C_{16}H_{10}O$ = 218.2. Brasan, phenylenaphthylene oxide. The heterocyclic compound C_6H_4  $C_{10}H_6$.

braze. To solder with an alloy of Cu and Zn. Cf. *solder.*

Brazil. B. gum. Angico gum. **B. nut.** The edible seeds of *Bertholletia excelsa,* a Myrtaceae. **b. nut oil.** Castanhao oil. **b. wax.** Carnauba wax. **b. wood.** See *brazilwood.*

brazileïn. $C_{16}H_{12}O_5$ = 284.1. Dark-red crystals obtained by oxidation of brazilin; it resembles hematoxylin.

brazilic acid. Brasilic acid.

brazilin. $C_{16}H_{14}O_5.1\frac{1}{2}H_2O$ = 313.21. **Brasilin.** The coloring matter of brazilwood. Colorless or yellow needles, m.250; soluble in water, alcohol, or ether. Used as a dye and indicator (acids—yellow, alkalis—purple to red) especially for the titration of alkaloids.

brazilite. Baddeleyite.

brazilwood. (1) The heart wood of *Peltophorum dubium,* a Leguminosae of South America. Used for the preparation of brazilin and as an indicator. (2) A red wood of *Caesalpinia* species of South America. **yellow-** Morus tinctoria.

brazing. Brazeing.

bread. The staple food-product produced from the baking of flour.

bregenin. $C_{40}H_{87}O_5N$ = 661.71. A phosphatide from brain substance.

breithauptite. NiSb. A native nickel antimonide.

Bremen blue. Blue *copper carbonate.* **B. green.** Green *copper carbonate.*

brenzcain. $C_6H_4(OMe)OCH_2Ph$ = 214.11 Brenzcatechin methyl benzyl ether, guaiacol benzylic ether. Colorless crystals, m.62; insoluble in water, soluble in alcohol or ether. Used as a local anesthetic.

brenzcatechin. Catechol. **b. dimethylether.** Veratrol. **b. methyl benzyl ether.** Brenzcain.

Breuer hemacytometer. Device for counting red blood corpuscles.

breunnerite. $MgFe(CO_3)$. A native mixture of siderite and magnesite.

brevium. Bv = 234. The radioactive element uranium X_2, atomic number 91. It is an isotope of ekatantalum (q.v.) and has a half-period of 1.65 minutes; hence the name, proposed by Fajans.

brewing. The process by which malted grain is treated with hot water to produce an extract (wort). This is boiled with hops, filtered, and fermented with yeast.

Brewster's law. The polarizing angle, p, can be determined by the relation: *tan* p = n (sin p)/(*cos* p), where n is the refractive index.

brewsterite. A rock-forming mineral of the zeolite group.

brick. A baked clay molded in various, generally rectangular, shapes. **fire-** A b. used for furnace linings. **silica-** A b. used as lining for high-temperature appliances. **sil-o-cel-** A b. used for insulation.

bridge. (1) Any connecting atom or atoms within a ring of atoms. Cf. *ring structure.* (2) A connecting device; as, *Carey-Foster b., Kelvin b., Wheatstone b.*

brightening. A term used in the dye industry. The dyed material is subjected to 5 pounds steam pressure, which brightens the color.

brightness. The intensity of light or color (q.v.); hence, the amount of light emitted or reflected by an object. Surface brightness is measured in *lamberts.* **absolute-, apparent-,** and **photographic-** See *spectral* classification.

brilliance. Brightness.

brilliant. Intensely bright. **b. cresyl blue.** A dye used as a stain for blood. **b. crocein.** An aniline dye: the sodium salt of aminoazobenzene-azo-β-naphtholdisulfonic acid. A light-brown powder; soluble in water with deep-red color. **b. green.** A dye used as indicator, changing at pH 2.0 from yellow (acid) to green (alkaline). **b. yellow.** A dye used as indicator, changing at pH 0.5 from blue (acid) to yellow, and at pH 8.0 from yellow to scarlet (alkaline).

brimstone. Sulfur.

Brin process. The preparation of oxygen gas by heating barium oxide which, at 500°, forms barium peroxide. The latter then gives off oxygen at about 1000°C.

brine. Water which is nearly saturated with salts; *e.g.*, sodium chloride.

Brinell Johan August. 1849–1925. A Swedish engineer. **B. hardness.** The hardness of a substance as determined by the Brinell method, which compares the area of indentation produced by a hardened steel ball (10 mm. diameter) under a pressure of 3000 Kg or 500 Kg. B.h. = $P/\pi tD$, where P is the pressure (in kg), t the depth of indentation (in mm.), and D is the diameter of ball (in mm.). **B. tester.** A device for determining the B. hardness.

Brinton Reishauer bottle. A specific gravity bottle which holds 100 cc. of liquid.

briquet. pl. *briquettes*. A brick of compressed solid fuel; as, coal, coke, lignite, sawdust or waste materials.

brisance. The violence or shattering effect of an explosive, measured in terms of its detonation velocity.

bristles. The stiff hairs of various mammals (as, hog), used for brushes.

britannia metal. A hard silver-white alloy of 80–90 pts. tin, 10–20 pts. antimony, and small quantities of copper, and sometimes lead, bismuth or zinc. It can be spun, and is used in household utensils as it takes a high polish.

britholite. $(Na_2Ca_7Ce_{11})(F.OH)_4[(SiO_4)_9(PO_4)_5]$. A cerium silicate apatite.

British Chemical Societies. (1) Chemical Society. Organized 1841. Publishers of *Journal and Proceedings*. Secretary: Burlington House, London W. 1. (2) Society of Chemical Industry. Organized in 1881. Publishers of a weekly *Journal* and monthly *Transactions*. Secretary: 56, Victoria St., London, S. W. 1. These two societies also publish Annual Reports on the Progress in Pure and Applied Chemistry, respectively; and jointly, The Bureau of Chemical and Physiological Abstracts.

British gum. Dextrin.

British Thermal Unit. B.t.u. (American usage). B.Th.U. (English usage) (Cf. Board of Trade Unit, B.T.U.). A measure of energy in the English system, which corresponds with the calories of the metric system. The heat required to raise one pound of water from 39°F to 40°F; hence, the heat required to raise the temperature of one pound water at its temperature of maximum density by one degree Fahrenheit. This amount of heat varies with the temperatures. **mean-** The $\frac{1}{180}$ part of the heat required to raise the temperature of one pound water from 32° to 212°F.

1 B.Th.U. (mean) = 252 calories = 1054.8 joule.
1.8 B.Th.U. per lb. = 1 cal. per gm.

brittle. (1) Easily broken or pulverized. (2) In bacteriology the dry growth of bacteria, which is friable under a platinum needle. **b. silver ore.** Stephanite.

Brix hydrometer. A hydrometer graduated with the Brix scale. **B. degree.** An arbitrary scale for the direct conversion of the saccharometer reading of a sugar solution into its specific gravity; (1) x° Brix indicates that the solution to which it refers contains x gm. of sugar in 100 c.c. (2) At 15.6°C, specific gravity = 400/(400 ± x° Brix), where x is + or − according as the liquid is heavier or lighter than water, respectively. See *hydrometers*.

brochantite. Warringtonite. A native, basic copper sulfate, $Cu_2(OH)_2SO_4$, occurring in emerald-green vitreous masses.

Brodie coagulometer. A device for measuring the coagulation of the blood under the microscope. **B. kymograph-.** An apparatus for recording the undulations of living organisms, *e.g.*, blood pressure and arterial action. **B. solution.** A solution of salt of such a specific gravity that a column 10,000 mm. high is equivalent to a pressure of 1 atmosphere. It is used in manometers.

Brönner acid. 2, 6-Naphthylamine sulfonic acid.

bröggerite. A variety of pitchblende.

Broglie, Prince Louis Victor de. A French physicist noted for work in wave mechanics; Nobel-prize winner. **B. formula.** An expression connecting wave-length, λ, with momentum, *mv*, accelerated by volts, V.

$$\lambda = \frac{h}{mv} = \sqrt{\frac{150}{V}}\ \text{Å}.$$

brom- Bromo-. **b. acetone.** Bromoacetone.

bromacetanilide. See *acetanilide*.

bromacetate. A salt of bromacetic acid containing the monovalent $CH_2Br.COO$—radical.

bromacetic acid. $C_2H_3O_2Br$ = 138.95. Bromoacetic acid, $CH_2Br.COOH$. Colorless hexagonal crystals, m.49, b.208; soluble in water, alcohol, or ether.

bromacetol. *2,2*-Dibromopropane*.

bromal. C_2HOBr_3 = 280.9. Tribromoacetaldehyde, *2,2,2*-tribromo-ethanal*, CBr_3CHO. A colorless or yellowish liquid, d.2.65, b.174, decomp. in water, soluble in alcohol or ether. It is used as a hypnotic and anodyne, and in organic synthesis. **b. hydrate.** $C_2H_3O_2Br_3$ = 298.9. Tribromaldehydehydrate, *2,2,2,*-tribromo-*1,1*-ethanediol*, $CBr_3.CH(OH)_2$. Colorless crystals, m.53; soluble in water, alcohol, or ether, and used as a hypnotic, antispasmodic and sedative.

bromalin. $C_8H_{17}N_4Br$ = 249.2. Bromethylformin, hexamethylenctetramine bromethylene, $C_6H_{12}N_4.C_2H_5Br$. Colorless crystals, m.200; soluble in water, alcohol or ether, and used medicinally as an antiepileptic and sedative.

bromalonic acid. See *malonic acid*.

bromamide. Aniline tribromide.

bromaniline. See *aniline*.

bromargyrite. Bromyrite.

bromate. A salt of bromic acid containing the monovalent —BrO_3 radical; as sodium bromate, $NaBrO_3$.

bromated. Brominated. (1) Combined with or containing bromine. (2) The introduction of bromine into a molecule. **di-** A molecule containing two atoms of bromine. **mono-** A molecule containing one atom of bromine.
b. camphor. See *camphor*.

bromation. Bromination.

bromatology. The science of food and diet.

bromaurate. A salt, $MAuBr_4$, derived from auric bromide and a metallic bromide, MBr.

brombenzamide. See *benzamide.*

brombenzene. See *benzene.*

bromcamphor. See *camphor, monobromated.*

bromchlorphenol blue. $C_{19}H_{10}Br_2Cl_2O_5S$ = 580.6. Dibromo dichloro sulfon phthalein. A yellow powder, soluble in water or alcohol. It is an indicator, changing from yellow (pH 4.5) to blue (pH 5.5).

bromcresol green. $C_{21}H_{14}Br_4O_5S$ = 700.0. *3.3.-6.7*-Tetrabromo-*m*-cresol sulfone phthalein. A gray powder, soluble in water and alcohol. Used as pH-indicator between 4.5 (yellow) and 5.5 (blue). **b.c. purple.** $C_{21}H_{16}Br_2C_5S$ = 540.41. Dibromo-*o*-cresol sulfon phthalein. A light yellow powder, used as pH-indicator between pH 5.2 (yellow) and 6.8 (purple).

bromelia. $C_{13}H_{12}O$ = 172.1. Ethoxynaphthalene, β-naphthyl-ethyl ether, $C_{10}H_7OEt$. Colorless crystals, d.1.064, m.37.5, b.282; insoluble in water, soluble in alcohol or ether. Used in perfumery.

Bromeliaceae. The pineapple family, an order of tropical plants with rigid, spiny leaves.

bromelin. A proteolytic enzyme occurring in pineapples, which changes proteins to proteoses and peptones.

bromeosin. See *eosin.*

bromethane. Misnomer for: (1) bromomethane; (2) bromoethane.

bromethyl. (1) Ethyl bromide. (2) Bromomethyl. (3) Bromoethyl.

bromethylene. Ethylene bromide.

bromethylformin. Bromalin.

brometone. $C_4H_7OBr_3$ = 310.9. Acetone bromoform, 1.1.1.tribrom-2-methylpropan-2-ol, tribromo-tertiary-butanol, *2.2.2*-tribromo-*1*-methyl-*1*-propanol*, $CBr_3.CMe_2OH$. Fine, white prismatic crystals with camphor-like odor and taste, m.167; slightly soluble in water, soluble in alcohol, ether, or benzene; used medicinally as a sedative.

bromhydrin. An organic compound of the type Br—R—OH. Cf. *halohydrin, chlorhydrin.* **tri-** Allyl tribromide.

bromic acid. $HBrO_3$ = 128.97. Colorless crystals, decomp. about 100; slightly soluble in water. Its salts are the bromates. **hydro-** See *hydrobromic acid.* **b. ether.** Ethyl bromide.

bromide. A binary salt containing negative monovalent bromine; *e.g.*, sodium bromide, NaBr. The bromides are usually soluble in water. **hydro-** An addition compound of HBr and an organic base, as an alkaloid.

brominated. Bromated.

bromination. (1) To treat with bromine. (2) To introduce Br into an organic molecule. Cf. *bromation, bromization.*

bromine. Br = 79.916. An element of the chlorine group, atomic number 35. A dark-brown, liquid, fuming halogen, d_0°.3.19, m. −7.5, b.58.78; soluble in water, alcohol, chloroform or ether. Gaseous bromine has a density of 5.524 (air = 1) and molecular weight (Br_2) 159.84. Elementary bromine never occurs native, and is found mainly as the bromides of alkali metals, in natural waters, brines and sea water. Solid ores are carnallite and silver bromide. Bromine is mainly monovalent, but in some compounds it is tri-, penta- and heptavalent and forms several series of compounds:

−1 bromides	Br^-
+1 hypobromites	BrO^-
+3 bromites	BrO_2^-
+5 bromates	BrO_3^-
+7 perbromates	BrO_4^-

Bromine was discovered in 1826 by Balard in the mother liquors of sea water, and named from the Greek "bromos" meaning stench. Liquid bromine is used as a reagent, and oxidizing agent, in organic synthesis, and as poison gas. **b. chloride** $BrCl.10H_2O$ = 295.6. B. monochloride. Yellow crystals or liquid, m.7, decomp. readily, very soluble in water, carbon disulfide or ether. **b. cyanide.** Cyanogen bromide. BrCN = 106.01. Colorless needles, m.52, b.-61.5; soluble in water or alcohol. **b. fluoride** BrF = 98.92. Colorless prisms, m.50, b.132; decomp. by water. **b. hydrate** $Br.10H_2O$ = 260.01. Red octahedric crystals, decomp. 15; soluble in water. **b. hydride.** Hydrobromic acid. **b. iodide** BrI = 206.84. B. monoiodide. Colorless crystals, m.36; soluble in carbon disulfide or chloroform. **b. monochloride.** B. chloride. **b. monoiodide.** B. iodide. **b. pentachloride** $BrCl_5$ = 257.21. A colorless liquid, used in organic synthesis. **b. sulfide.** Br_2S_2 = 223.96. A red liquid, d.2.629, b.195, decomp. by water. **b. water.** A saturated aqueous solution of bromine containing about 3 % Br; used as reagent instead of bromine.

brominol. A brominized (33 % Br) olive oil, used as an x-ray contrast medium.

bromipin. 10 % brominated sesame oil. A yellow oily liquid used medicinally as a sedative, nervine and antiepileptic. 33 % b. is used as an x-ray contrast medium.

bromite. Bromyrite.

bromization. Bromation. To saturate with bromine. Cf. *bromination.*

bromlite. Alstonite.

brommalonic acid. $C_3H_3O_4Br$ = 183.01. The bibasic acid $CHBr(COOH)_2$. Colorless needles; soluble in water, alcohol or ether.

bromnaphthalene. See *naphthalene.*

bromo- Brom-. A prefix which indicates the presence of a bromine atom in an organic compound. **di-** A compound containing two bromine atoms. **tri-** A compound containing three Br atoms.

bromoacetic acid. See *bromacetic acid.*

bromoacetone. $BrCH_2COMe$ = 136.95. Monobromomethyl ketone. A colorless liquid, d.-1.603, m. −54, b.127; used in chemical warfare as a poison gas.

bromobenzamide. See *benzamide.*

bromobenzene. See *benzene.*

bromobenzylcyanide. $BrC_6H_4CH_2CN$ = 195.97. o-bromo-phenyl-aceto-nitrile, 2-bromo-7-cyano-toluene. A colorless liquid, d.1.519, m.25.5, b.242 (decomp.), used in chemical warfare as a lacrimatory poison gas (B.B.C.).

bromocaffeine. $C_8H_9O_2N_4Br$ = 272.1. A white powder, m.206; slightly soluble in water, soluble in alcohol, ether, or chloroform.

bromocamphor. Camphor, monobromated.

bromocyanogen. Cyanogen bromide.

bromoethyl. (1) Ethyl bromide. (2) The radical BrC_2H_4—.

bromoform. $CHBr_3$ = 252.90. Tribromomethane*, formyl bromide, methenyl bromide. A colorless liquid, d.2.904, m.7.7, b.150.4; slightly soluble in water, miscible with alcohol or ether. Used for the separation of minerals, and as local

anesthetic, antispasmodic and sedative. nitro- CBr_3NO_2 = 297.78. Bromopicrin, tribromo-nitromethane*. Colorless liquid, $d_{12°}$.2.811, m.10, b_{118mm}.127; insoluble in water, soluble in alcohol or ether.

bromoformin. Bromalin.

bromoketone. $BrCH_2.COEt$ = 150.98. Bromomethyl ethyl-ketone; used in chemical warfare.

bromol. Tribromphenol.

bromomethane. Methyl bromide. **tri-** Bromoform.

bromomethyl. (1) Methyl bromide. (2) The radical $BrCH_2$—.

bromometry. The determination of the halogen-absorbing capacity of unsaturated compounds or of materials containing them, *e.g.*, fats. Results are usually expressed in terms of iodine.

bromonaphthalene. See *naphthalene.*

bromophenol. See *bromphenols.* **b. blue.** See *bromphenols.*

bromophosgene. Carbonyl bromide.

bromopicrin. Nitro-bromoform.

bromoprene. C_4H_5Br = 134.0. *2*-Bromobutadiene-1.4, CH_2:CBr.CH:CH_2. An intermediate in the polymerization of synthetic rubber. Cf. *isoprene, duprene.*

bromopyrine. $C_{11}H_{11}ON_2Br$ = 267.0. Monobromantipyrine. White crystals, m.114; soluble in hot water or alcohol; used medicinally as an antipyretic and antiseptic.

bromothymol blue. See *indicators.*

bromotoluene. See *toluene.*

bromphenols. $Br.C_6H_4.OH$ = 173.0. A series of compounds, formed by the action of bromine on phenol: **o-** A liquid, b.194, sparingly soluble in water. **m-** A solid, m.32, b.236. **p-** A solid, m.63, b.235. Sparingly soluble in water. **tri-** $C_6H_3OBr_3$ = 330.9. The solid, 1.2.4.6-C_6H_2.-OH.Br_3, m.96. Sparingly soluble in water. **b. blue.** $C_{19}H_{10}Br_4O_5S$ = 673.75. *2.3.6.7*-Tetrabromophenol sulfon-phthalein. A yellow powder, soluble in water or alcohol; used as pH-indicator from pH 3.0 (yellow) to 4.6 (blue). **b. red.** $C_{19}H_{12}Br_2O_5S$ = 511.9. Dibromophenol-sulfon-phthalein. A yellow powder, used as pH-indicator from 6.0 (yellow) to 7.0 (red).

bromphenyl acetylcystein. Phenylmercapturic acid.

bromthymol. b. blue. $C_{27}H_{28}Br_2O_5S$ = 624. Dibromo thymol sulfon phthalein. Dark brown crystals with green luster, used as pH-indicator from pH 6.0 (yellow) to 7.6 (blue).

bromum. The official Latin for bromine.

bromural. $MeCHMe(CHBrCO)NH.CONH_2$ = 223.03. 2-Monobromoisovaleryl urea. Small colorless needles, m.145; soluble in water, alcohol or ether. Used medicinally as a nerve sedative and hypnotic.

Bromwell apparatus. A graduated glass cylinder of special shape for fusel oil determination (U. S. Dept. Agric., Bureau of Chem., Bull. 107).

bromyrite. AgBr. Bromargyrite, bromite. An unctuous native, silver bromide found as yellow or greenish, transparent or opaque isometric crystals.

brongniardite. $Ag_2PbSb_2S_5$. A native silver-lead-sulfoantimonite, which occurs in isometric crystals.

Brönner acid. 2.6-Naphthyl-amine-sulfonic acid.

bronze. A copper-base alloy containing elements other than zinc in amounts sufficient to predominate over the zinc present, *e.g.*,

90 % Cu 10 % Sn, gun metal ..... m.1005°C
80 % Cu 20 % Sn, bell metal ..... m. 890°C
70 % Cu 30 % Sn, speculum ..... m. 755°C

acid- An alloy containing 82–88 % Cu, 2–8 % Pb, 8–10 % Sn and 0–2 % Zn. **aluminum-** An alloy of 90 % Cu and 10 % Al. **carbon-** An alloy used for bearings. **manganese-** An alloy of 88 % Cu, 10 % Sn and 2 % Mn. **phosphor-** See *phosphor.* **saffron-** Orange *tungsten.* **silicon-** A non-corrosive bronze containing Si. **Sillmann-** An alloy of 86 % Cu, 10 % Al and 4 % Fe. **Tobin-** An alloy of 55 % Cu, 43 % Zn and 2 % Sn. **tungsten-** Tungsten bronze.

b. blue. Prussian blue.

bronzite. Schillerspar. A rhombic native pyroxene consisting of $MgSiO_3$ with 10 % $FeSiO_3$; it has a sub-metallic bronze-like lustre.

brookite. Arkansite. An orthorhombic variety of rutile, d.4.0, hardness 6–6.5; reddish-brown to black color.

broom. Scoparius. **Spanish-** Spartium. **b. corn-** Sorghum.

brown. A pigment or color made by mixing red, yellow, and black. **b. coal.** Lignite. **b. dyes,** See *aniline* b., *bismarck* b., *resorcin* b., *spirit* b. **b. hematite.** See *hematite.* **b. iron ore.** See *limonite, bog iron ore, ocher, b. hematite.* A hydrous iron oxide with some iron carbonate. **b. ocher.** B. iron ore. **b. pigments.** See *cadmium b., Cassel b., chrome b.,* ocher, sepia, vandyke b., zinc b. **b. oil of vitriol.** B.O.V. **b. spar.** Pearl spar. A variety of dolomite (q.v.) with a brown tinge due to Fe_2O_3 or Mn_2O_3.

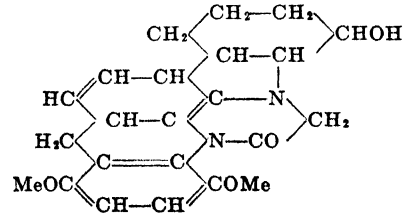
Brown, Alexander Crum. 1869–1908. A Scottish chemist noted for organic research. **Crum B. rule.** If the hydrogen of an aromatic compound can be converted by direct oxidation into a hydroxyl compound, substitution will take place in the meta-position. If not, the substituting radical enters the ortho or para position. **B., Robert,** 1773–1858. An English botanist noted as the discoverer of the Brownian movement.

Brownian movement. Pedesis. The rapid vibratory motion of extremely small particles suspended in a liquid, caused by the bombardment of the particle by the moving molecules of the liquid. The velocity varies inversely with the size of the particles, and depends also upon the viscosity of the medium. Cf. *Svedberg's equation.*

Brownite cupel. A shallow vessel used in silver analysis.

brownmillerite. $4CaO.Al_2O_3.Fe_2O_3$. A phase in the stabilisation of dolomite by calcination with silica.

brucine. $C_{23}H_{26}O_4N_2.4H_2O$ = 466.41. Dimethoxystrychnine.



An alkaloid from the seeds of *Strychnos* species (nux vomica, ignatia, etc.). Colorless crystals, m.178, slightly soluble in water, soluble in alcohol or ether. Used medicinally as a nerve tonic. **b. hydrobromide** $C_{23}H_{26}O_4N_2.HBr$ =

479.31. White crystals; soluble in water or alcohol; and used as brucine. **b. hydrochloride** $C_{23}H_{26}O_4N_2.HCl$ = 430.81. White crystals, soluble in water or alcohol; used as a tonic. **b. nitrate** $C_{23}H_{26}O_4N_2.HNO_3.2H_2O$ = 493.39. White crystals, decomp. 230; soluble in alcohol, water or ether. **b. phosphate** $(C_{23}H_{26}O_4N_2)_2.H_3PO_4$ = 886.78. A white crystalline powder, soluble in water or alcohol. **b. sulfate** $(C_{23}H_{26}O_4N_2)_2.H_2SO_4.7H_2O$ = 1012.86. Colorless needles, soluble in water or alcohol. **b. test.** A solution of 0.5 gm. in 200 cc. of concentrated sulfuric acid is used as a test for nitric acid.

brucite. $Mg(OH)_2$. Nemalite. A native magnesium hydroxide.

Bruehl receiver. Receivers for a condenser in an air-tight container, in which a number of distillates may be collected separately by turning the apparatus around so that the individual receivers come under the end of the condenser. The condenser passes in through an air-tight joint, so that vacuum distillation may be used.

Brunck, Heinrick von. 1847–1911. A German chemist, noted for the development of the organic chemical industry.

brunfelsia. Manaca.

Brünner acid. 2,6-Naphthylamine sulphonic acid.

brunswick green. Green *copper carbonate.*

brushite. $CaHPO_4.2H_2O$. A native acid calcium phosphate.

bryoidin. $C_{20}H_{32}O_3$ = 326.30. A bitter principle of elemi gum.

bryonane. $C_{20}H_{42}$ = 282.3. A saturated hydrocarbon, m.69, b.400, from the leaves of *Bryonia dioica*, a Cucurbitaceae. It is possibly identical with laurane.

bryonia. English mandrake, white bryony. The dried roots of *Brionia* species (Cucurbitaceae) containing bryonin, alkaloids, and resin; used as cathartic. **black-** Blackeye root. The root of *Tamus communis*, a Dioscoraceae, used as rubefacient and diuretic. **white-** Bryonia.

bryonin. $C_{48}H_{80}O_{19}$(?). A glucoside from the root of *Bryonia* species, Cucurbitaceae. An amorphous yellowish-brown powder; soluble in water or alcohol; used medicinally as a cathartic.

Bryophyta. A division of Cryptogamia, including liverworts (Hepatica) and mosses (Musci).

B.S. See *Bureau of Standards.*

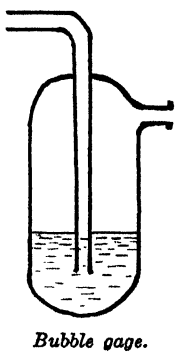
B.S.I. British Standards Institution. An organization which issues specifications and methods of testing materials. Cf. *A.S.T.M.*

B.t.u., B.Th.U. British thermal unit.

Bu. The symbol for butyl. **i-Bu.** The symbol for isobutyl. **BuOH.** Butyl alcohol.

bu. Abbreviation for bushel.

bubble. (1) A small air droplet. (2) To pass gas through a liquid. **b. counter.** A device to measure the volume of a gas evolved during a reaction. It consists of a capillary tube through which the gas bubbles escape, connected with a U-tube partly filled with Hg; each b. makes an electric contact. **b. gage.** A small glass instrument used as an indicator of gas flow (figure).

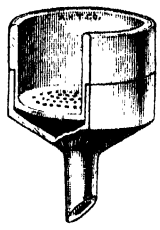


Bubble gage.

bubulin. A compound of cow's dung.

bucco. Buchu.

Buchner, Eduard. 1860–1917. A German chemist and Nobel prize winner (1907), who found that enzyme action is purely chemical. **B. funnel.** A shaped porcelain funnel containing a perforated porcelain plate, on which the filter-paper is placed. **B. number.** The number of cc. of normal alcoholic potash solution required to neutralize 2.5 grams of wax dissolved in 80 % alcohol.



Buchner funnel.

bucholzite. A variety of fibrolite.

buchu. Bucco, bucku. The dried leaves of *Barosma betulina*, a Rutaceae of South Africa. It is a diuretic, anticatarrhal; used as fluid extract. Cf. *rutin, barosmin.* **b. camphor.** See *diosphenol.*

Buck iron mortar. A specially shaped mortar for grinding gold ore with mercury.

buckbean. Menyanthes.

buckthorn. Rhamnus. **b. bark.** Frangula. **b. berries.** Rhamnus cathartica. The dried ripe fruit of *Rhamnus cathartica* (Rhamnaceae). It is a cathartic; used as fluid extract. Cf. *xanthorhamnin.*

buckwheat. The seeds of *Fagopyrum esculentum*, a Polygonaceae; used as food.

Bucky rays. Grenz rays.

Budde effect. The expansion in volume of chlorine or bromine vapor when exposed to light.

buddeized. Sterilized by adding hydrogen peroxide and followed by slight warming; as, milk.

budding. A form of cell-division in which the new cell is an outgrowth of the parent cell, from which it becomes detached after it has grown to a certain size; as, yeast.

buddling. The process of crushing an ore and washing it in a stream of water.

budiene. Bivinyl.

Bueb process. A method for making ferrous ferrocyanide from iron sulfate, ammonia and hydrocyanic acid.

bufagin. $C_{24}H_{32}O_5$ = 380.3. A neutral, digitalis-like principle in the skin-gland venom of the toad, *Bufo agua.* It is used by Brazilian natives as a constituent of arrow-poison. Cf. *sterols.*

buffer. Any substance which, when added to a solution, resists any change in hydrogen ion concentration on addition of acid or alkali. **oxidation-reduction-** A mixture of compounds which resists a change in oxidation-reduction potential and so enables selective oxidation and reduction to be carried out. Cf. *redox.* **b. action.** The capacity to neutralize, within limits, either acids or bases, without changing the original acidity or alkalinity; as, of blood, soil, plant juices. **b. capacity.** The millimoles of H^+ which a unit volume of the solution in question will neutralize when an excess of standard acid is added. **b. index.** B. value. **b. salt.** Salts which behave as buffers: generally those of acids with a low dissociation; *e.g.*, the carbonates and phosphates of the blood, which maintain a pH of 7.35, notwithstanding the absorption of CO_2 or the introduction of acids. **b. solution.** Any solution of a weak acid or base and its salts, such as acetates, borates, phosphates, phthalates, which behave as buffers. The following is a "universal" b. solution from pH 2.5 to pH 11.5 (Prideaux and

Ward, Trans. Chem. Soc., 125, 1924, p. 426). A 0.1 N solution is made containing phosphoric, phenylacetic, and boric acids, 0.02 N to the hydrogen ion in each case. If V is the number of cc. of 0.2 N HCl and 0.2 N NaOH which is added to 100 cc. of this solution with subsequent dilution to 200 cc., then pH = 3.1 + 0.1185V (NaOH is +, HCl is −). **b. value.** The amount of standard solution (acid or alkali) required to bring about a specified change in the hydrogen ion concentration of a solution.

bufonin. $C_{34}H_{54}O_2$ = 494.43. A poisonous principle in the secretion of toads and lizards; *e.g.*, *Bufo vulgaris*. Cf. *phrynin*. It is slightly soluble in water or alcohol, soluble in ether, benzene or chloroform.

bufotalin. $C_{24}H_{30}O_3$ = 266.23. A split-product of bufotoxin, which resembles digitaligenin.

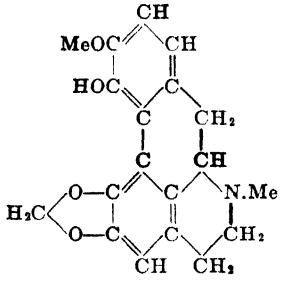
bufotanine. $C_{14}H_{18}O_2N_2$ = 246.16. An alkaloid from the secretion of the parotoid gland of *Bufo vulgaris*.

bufotoxin. $C_{34}H_{46}O_{10}$ = 614.37. A poisonous principle in the skin secretions of toads and lizards. It forms salts with alkalis, and is precipitated by barium chloride.

bugle weed. The herb of *Lycopus virginicus*, a Labiatae. It is a tonic, astringent and sedative; used as a fluid extract.

bulb. (1) A round under-ground leaf-bud or stem of a plant, consisting of a number of fleshy leaves crowded together and enclosing the base of the stem. (2) Any spherical or bulb-shaped apparatus. **connecting-** A glass tube with a round enlargement, for connecting flasks with condensers; *e.g.*, a splash-head in Kjeldahl's apparatus. **levelling-** A round glass container with two outlets, used in gas analysis. **nitrogen-** A conical flask connected with one or more spherical glass tubes; *e.g.*, Fresenius, Volhard, etc. **resistance-** Electrical contacts used with potentiometers. **rubber-** Rubber nipples for pipettes or round hollow rubber balls with valves for blowpipes, gas burettes, etc.

bulbocapnine. $C_{19}H_{19}O_4N$ = 325.16. An alkaloid from the bulbs of *Corydalis cava* (*Bulbocapnus cavus*) a Papaveraceae. A white crystalline powder, m.199; soluble in alcohol.



b. hydrochloride. $C_{19}H_{19}O_4N.HCl$ = 361.6. White crystals, soluble in hot water.

bulgara. The *Bacillus lactis bulgaricus* found in intestinal flora; used in tablet form for increasing the production of lactic acid and preventing abnormal intestinal putrefaction. Used in intestinal toxemia, chronic constipation etc.

bulk. (1) The increase in the volume of a solvent which is due to the dissolved substance. Cf. *cut*. (2) The ratio of the thickness to the weight per unit area of a paper. It is therefore a measure of the air-space present.

bullate. A bacterial growth rising in convex prominences like a blistered surface.

bullet-proof glass. A glass made from two or more plates of glass cemented together, under pressure, by a transparent plastic material.

bullion. (1) Uncoined gold or silver in bars or other masses. (2) Metal money as distinct from paper money. (3) Any metal in bar form.

bullseye condenser. A concave lens mounted on a stand, and used for the illumination of opaque objects under the microscope; also for ultramicroscopic illumination with an artificial source of light.

bully tree. See (1) *chicle*, (2) *balata*, (3) *sapota*.

bumping. Uneven boiling of a liquid, owing to super-heating because of the absence of dirt or other particles which act as nuclei for the formation of steam bubbles. It is avoided by adding glass beads, pumice, straight or U-shaped glass tubes, or any other inert solid to the liquid.

Bumstead electroscope. A sensitive gold leaf electroscope.

buna. A German rubber substitute prepared by the polymerisation of butadiene.

Bunsen, Robert Wilhelm Eberhard von. 1811–1899. A German chemist noted for gasometric

Robert Wilhelm von Bunsen.

and photometric researches, work on the electrolytic cell, devising the bunsen burner and as a pioneer in spectrum analysis. **b. burner.** A gas burner with adjustable air supply. **B. cell.** An electrolytic element which furnishes a large current of a constant potential of 1.9 volt. It consists of an anode of amalgamated zinc in 10 % sulfuric acid and a cathode of carbon in conc. nitric acid. It is a modification of Grove's cell (q.v.). **B. clamp.** A clamp with cylindrical, rubber-covered jaws, for holding tubes, condensers, etc. **B. eudiometer.** A graduated glass tube with platinum electrodes near the closed end. On passing an electric discharge through a combustible gas mixture, the volume changes, and thence the composition may be determined. **B. flame** See *flame*. **B. funnel.** A glass funnel with long stem at an

angle of 60°. **B. gas-bottle.** A cylindrical glass bottle with a tubular outlet near the neck and an inlet tube passing close to the bottom. It is used for washing gases. **B. reactions.** Flame reactions. The qualitative preliminary examination of substances by observing their behavior in the Bunsen flame: evaporation, melting, or imparting characteristic color to the flame, and producing a metallic spot on a cold porcelain surface. Cf. *analysis*. **B. Roscoe law.** Reciprocity law. If in a series of exposures the products of light intensity and exposure time are equal, the amounts of darkening of a sensitive silver chloride paper will also be equal; hence, the amount of substance decomposed by radiant energy is proportional to the amount of energy absorbed. **B. valve.** See *valve*.

bunsenite, bunsenine. NiO. Krennerite. A native nickel oxide, which occurs in greenish isometric crystals.

Bunte, Hans. 1848–1925. A German chemist who developed gas analysis. **B. gas-burette.** A burette with or without a water-jacket, which has at one end a two-way stopcock.

buoyancy. The capacity to float in a liquid or gas. **correction for-** In accurate weighing the true weight g_0 is obtained by $g_0 = g\left(1 + \frac{g_a}{d} - K\right)$ where g is the observed weight, $g_a = 0.0012$, the weight of 1 cc. air, d the density of the body being weighed, and $K = 0.00014$, the ratio of the densities of air and brass weights.

buphane. Candelabra flower, Cape poison bulb, gifbol. The plant, *Buphane distidia* and *B. toxicaria*, an Amaryllidaceae of South Africa, used as antiseptic. It contains buphanine, haemanthine, narcissine, etc.

buphanine. An alkaloid from the bulb of buphane; it is hydrolyzed to buphanitine.

buphanitine. $C_{23}H_{24}N_2O_6 = 424.20$. An alkaloid from buphanine, m.240.

burbonal. Bourbonal.

Burchard-Liebermann reaction. Acetic anhydride produces a blue-green color with cholesterol in chloroform on the addition of a few drops of concentrated sulfuric acid.

burdock. Lappa.

Bureau of Standards. The U. S. Official Institution for setting up and testing standards of quality for apparatus and chemicals.

buret, burette. A graduated glass tube used in volumetric analysis for measuring of definite amounts of liquids. **automatic-** A buret with a device for rapidly re-filling to the zero-point, which usually is provided with an overflow cup. **certified-** A buret which has been tested as to the accuracy of its calibrations. **chamber-** A b. in which drainage errors are minimized by means of a wide ungraduated upper chamber containing the bulk of the liquid, and terminating at the bottom in a small narrow graduated tube, with a tap, for measurement purposes. **gas-** A buret used in gas-analysis; *e.g.*, *Bunsen b.* **precision-** Certified b. **Schellbach-** A b. with a milk-glass scale, having a central blue line which gives the meniscus the appearance of a cusp and is supposed to minimize errors from this source.

b. cap. A small glass cup that fits loosely over the top of a buret. **b. clamp.** A pinch-cock attached to the rubber tubing of a buret. **b. float.** A small floating swimmer or closed glass tube placed inside the burette, facilitating readings. **b. holder.** A clamp for holding a buret in position. **b. reader.** A device which is clamped on the buret, facilitating the reading of the meniscus.

Burgundy mixture. A substitute for Bordeaux mixture. A mixture of 4 lbs. of copper sulfate in 35 gallons of water, and 5 lbs. of sodium carbonate in 5 gallons of water.

burkeite. $Na_2CO_3.2Na_2SO_4$. **·sesqui-** $2Na_2CO_3.3Na_2SO_4$. By-products from the co-crystallisation of sodium sulphate and carbonate in the isolation of potassium from the Trona deposits (q.v.).

Bürker chamber. A counting chamber for hemocytometers, consisting of an accurately ruled microscope slide.

burlap. A coarse jute fabric, similar to sacking; used in linoleum manufacture and as a wrapping.

burner. A device or apparatus for obtaining a flame by the combustion of solids, liquids or gases. **acetylene-** A b. designed for acetylene gas. **acme-** A b. for gas or gasoline vapor, with adjustable air and gas control. **alcohol-** A b., usually of the wick-type, for alcohol. **argand-** A b. for oil or gas with an inner tube to supply air to the flame.

b. attachments. See *crown top, gauze top, wing top, chimney, star, tripod*. **Barthel-** A b. designed to burn alcohol or benzene. **blast-** A b. in which compressed air is blown into the flame. **blue flame-** A b. for gas, giving a high temperature with or without blast attachment. **Boyce-** Acme b. **bunsen-** See *Bunsen*. **Chaddock-** A non-corrodable b. resembling a small blast furnace, made from refractory material. **combustion tube-** A set of bunsen b. with wing tops. **Dangler-** A gasoline b. **eureka-** A self-lighting gas b. **evaporating-** A round cast-iron disk with holes, for obtaining a number of small flames. **Fisher-** A modified Mekker burner which gives a hot flame. **Fletcher-** Round hollow cast-iron rings with holes or slits, for rapidly heating large vessels. **gauze top-** A bent iron tube with gauze top. **Jansen-** A blast-b. for glass-blowing with air and gas regulation through two different tubes. **Mekker-** A bunsen b. having a grid at its top, which mixes the gases and prevents "striking back," and produces a hot, uniform flame. **micro-** A very small gas b., for microanalytical operation. **multiple tube-** A gas b. with three or more tubes, arranged circularly or in a straight line. **pilot light-** A bunsen b. with a small inside tube producing a small flame which is kept burning continuously. **porcelain-** Chaddock. **rose-** A burner with a rose-shaped circular metal attachment, perforated round its circumference, which fits on the top and enables very small flames to be obtained. **Sargent-** A b. for gas with adjustable air and gas supply. **Scimatco-** A gas b. for obtaining high temperatures. **spectrum-** A b. with platinum holders, for producing colored flames from solids such as salt for spectrum analysis, polariscopes or other instruments where monochromatic light is required. **Teclu-** See *Teclu b.*

burnettizing. A process for the preservation of wood by treatment with creosote under pressure.

burning. See *calcination, firing*.

burnt. Calcined, or strongly heated. **b. alum.** Anhydrous *potassium aluminum sulfate*. **b. lime.** Calcium oxide.

burra gokero. Barra gokhru. The seeds of *Pedalium murex*, a Pedaliaceae of tropical

Africa and Asia; an antispasmodic and diuretic.

Burrel apparatus. An apparatus for gas analysis (U. S. Bureau of Mines, Bulletin 42).

Burseraceae. A group of tropical trees and shrubs that secrete resinous and oily substances.

Commiphora myrrha	myrrh
Bursera gummifera	chibou
Boswellia papyrifera	boswellic acid
Boswellia carterii	olibanum
Commiphora (Balsamodendron) mucul	bdellium
Canarium commune	elemi, nauli gum

bursine. An alkaloid from *Capsella bursapastoris* (shepherd's purse), a Cruciferae.

burtonization. The addition of gypsum or other calcium salts to a water supply. Used in brewing, where a water similar to that of Burton-on-Trent (England) is required.

bus-bar. The conducting metal rod which carries the objects to be plated or otherwise treated in electrolytic deposition plants.

bushel. 1 bu. (British) = 0.35239 hectoliters or 35.2 liters = 8 gallons or 2219.36 ± 17 cu. in. imp.- British b. **U. S. A.-** = 2150.42 cu. in. Winchester- U. S. A. b.

Busz rhombohedron. A crystal model for demonstrating the double refraction of calcspar.

butacaine sulfate. Butyn (q.v.).

butadiene*- Bivinyl. **bromo-*** Bromoprene. **chloro-*** Chloroprene. **methyl-*** Isoprene. **b. dicarboxylic acid.** Muconic acid.

butadiine, butadiyne*. Biacetylene.

butagas. Compressed butane, used for domestic lighting and heating.

butalanin. *α*-Amino-i-*valeric acid.*

butaldehyde. Butyraldehyde.

butamin. Tutocaine.

butanal*. Butyraldehyde.

butanamide*. Butyramide.

butane. C_4H_{10} = 58.1. Tetrane, methyl ethyl methane. $MeCH_2.CH_2Me$. The fourth member of the aliphatic hydrocarbon series. A colorless gas, d_{air}. 2.046, m. −35, b.1; insoluble in water, slightly soluble in alcohol. It is a constituent of natural and illuminating gas. **iso-** Trimethylmethane, $CHMe_3$. A colorless gas, m. −145, b. −11, insoluble in water, soluble in alcohol or ether. **bromo-*** Butyl bromide. **chloro-*** Butyl chloride. **dibromo-*** Butylene bromide. **dihydroxy-** Butanediol*. **hydroxy-** Butyl alcohol. **diphenyl-** Dibenzyl ethane. **iodo-*** Butyl iodide. **nitro-*** $C_4H_9NO_2$ = 103.08. Butyl nitrite. A colorless liquid, b.151, slightly soluble in water. **phenyl-** Butyl benzene.

b. diamine. Putrescine. **b. dicarboxylic acid*.** Adipic acid.

butanedial*. Succinaldehyde.

butanediamide*. Succinamide.

butanediamine*. Putrescine.

butanediol*. $C_4H_{10}O_2$ = 90.1. Butylene glycol, dihydroxybutane. *α*- or **1.2-** $EtCHOH.CH_2.OH$. A colorless liquid, d.1.019, b.191. *β*- or **1.3-** $MeCHOH.CH_2CH_2OH$. A colorless liquid, d.1.0239, b.204. *γ*- or **1.4-** Tetramethylene glycol. $HO(CH_2)_4OH$. A colorless liquid, d.1.020, m.16, b.230. *ψ*- or **2.3-** $Me(CHOH)_2Me$. A colorless liquid, d.1.048, b.184. **dimethyl-** Pinacol.

butanedione*. $C_4H_6O_2$ = 86.1. A group of diketones; **1.3-** $HCO.CH_2.COMe$. **2.3-** Biacetyl.

butane-ol. Butyl alcohol.

butanoic acid. Butyric acid.

butanol*. Butyl alcohol.

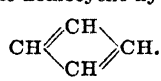
butanone*. Methylethylketone. **dimethyl-** Pinacoline. **hydroxy-** $Me.CO.CHOH.Me$. Acetoin. An ethereal liquid formed during fermentation by yeast.

butanoyl*. Is Butyryl.

butea gum. Bengal kino. The dried, red astringent juice of the dhak or pallas tree, *Butea frondosa*, a Leguminosae of India; used as an astringent. It contains 20–60 % kinotannic acid.

butenal*. Crotonaldehyde.

butene*. (1) C_4H_4 = 52.04. Dimethylene, cyclo butylene. The homocyclic hydrocarbon



(2) Butylene (butene*).

butenic acid. $C_4H_6O_2$ = 86.046. Butenoic acid*. *α*- See *crotonic* and *isocrotonic acid.* *β*- Vinylacetic acid, $CH_2{:}CH.CH_2.COOH$. A colorless liquid, d.1.007, m. −39, b.163, soluble in water, alcohol or ether. **iso-** methyl *acrylic acid.* **α-methyl-** See *angelic* and *tiglic acid.* *β*-**methyl-** Senecioic acid.

butenoic acid*. Butenic acid.

butenol*. C_4H_8O = 72.05. **1-** 1-buten-*1*-ol, $Me.CH_2.CH{:}CHOH$. **2-** *2-buten-1-*ol. $CH_3{-}CH{:}CH.CH_2.OH$. Crotonyl alcohol. **3-** *3-*buten-*1*-ol, $CH_2{:}CH.CH_2.CH_2OH$.

butenyl. The monovalent radical C_4H_7—, derived from butylene. There are Δ^1- $MeCH_2{-}CH{:}CH$—; Δ^2- $MeCH{:}CHCH_2$— and Δ^3- $CH_2{:}CH(CH_2)_2$—.

butesin. $C_{11}H_{15}O_2N$ = 193.12. *n*-butyl-*p*-aminobenzoate, $NH_2C_6H_4COOC_4H_9$. White crystals, m.57, b_{2mm}.147, insoluble in water, soluble in alcohol; used as a local anesthetic. **iso-** m.65. **b. picrate.** A yellow powder used as an analgesic and protective. It is a combination of trinitrophenol and b.

butine. C_4H_6 = 54.05. Butyne*. An unsaturated hydrocarbon containing a triple bond; as **T1-** Ethylacetylene, $CH{:}C.CH_2Me$. A colorless liquid or crystals, m.18. **T2-** Crotonylene.

Butler set. A wooden case containing a set of apparatus and reagents for blowpipe analysis.

butoxy. The monovalent radical, $Me(CH_2)_3O$—, derived from butanol.

butter. (1) A food prepared by churning cheese. It contains not less than 80 % of milk fat, some water, vitamins, small quantities of proteins, lactose and mineral salts. (2) A soft substance; as certain inorganic chlorides:

b. of antimony	antimonic chloride
b. of arsenic	arsenous chloride
b. of tin	stannic chloride
b. of zinc	zinc chloride

(3) A low-melting vegetable fat, **vegetable b., as**

bambuk b	from *Bassia Purkii*
cacao b	from *Theobroma cacao*
illipé b	from *Bassia* species
nutmeg b	from *Myristica fragrans*
otoba b	from *Myristica otaba*

b. fat. The oily portions of the milk of mammals composed of 88 % of the glycerides of oleic, stearic, and palmitic acids, and 6 % of the glycerides of butyric, caproic, caprylic, and capric acids; d.0.910–0.914, m.30–34. **b. rock.** A soft greasy compound of iron and aluminium

exuded from aluminiferous rocks. **b. yellow.** (1) A yellow dye often used for tinting butter, *e.g.*, tartrazine. (2) *p*-diaminoazo benzene. (3) *4*-dimethylamino benzene-*1*-azo naphthalene. (4) N, N'-dimethyl-*p*-amino-azo-benzene.

butternut. Tuglans. **b. tree.** A tree of the genus Bassia of the Sapotaccae. The seeds yield an oily fat which is used for soap or lamp oil.

button. A small round globe or sphere of metal found in the crucible after fusion, or on charcoal after reduction of an ore.

butvar. Trade name for a butyral polyvinyl plastic (q.v.).

butyl. Bu. **normal-** The monovalent hydrocarbon radical C_4H_9— or $CH_3.CH_2.CH_2.CH_2$—. **iso-** *i*-Bu. The monovalent hydrocarbon radical iso- C_4H_9—, or $(CH_3)_2CH.CH_2$—. **secondary-** The monovalent radical $CH_3.CH_2.CH.Me$.—. **tertiary-** The monovalent hydrocarbon radical $(CH_3)_3C$—.

b. acetate $C_6H_{12}O_2$ or MeCOOBu = 116.13. Colorless liquid, d_{20}°.0.872, b.125; slightly soluble in water, miscible with alcohol or ether; used as a solvent for lacquers. **b. alcohol.** Butyl alcohol (below). **b. aldehyde.** Butyraldehyde. **b. amine** $C_4H_{11}N$ or $BuNH_2$ = 73.15. Aminobutane (normal-). Colorless liquid, d_{20}°.0.740, b.78; soluble in alcohol, water or ether. (iso-) i-$BuNH_2$. Colorless liquid, d.0.736, b.66; miscible with water, alcohol or ether. **b. benzene** $C_{10}H_{14}$ or PhBu = 134.14. (iso-) A colorless liquid, d_{15}°.0.85, b.167. (sec.-) A colorless liquid, d_{15}°.0.873, b.171. **b. benzoate** $C_{11}H_{14}O_2$, PhCOOBu = 178.18. A colorless oily liquid d_{20}°.1.000, b.248.5; insoluble in water, miscible with alcohol or ether. (iso-) PhCOO *i*-Bu. A colorless liquid, d.1002, b.237, insoluble in water, miscible with alcohol or ether. **b. bromide** C_4H_9Br = 137.05. l-bromobutane*, BuBr. (normal-) A colorless oily liquid, d_{20}°. 1.279, b.101; insoluble in water, miscible with alcohol or ether. (iso-) l-bromo-isobutane i-BuBr. A colorless oily liquid. d.1.260, b.90; insoluble in water, miscible with alcohol or ether. **b. butyrate** $C_8H_{16}O_2$ or PrCOOBu = 144.17. (normal-) A colorless liquid, d_0°.0.888, b.165; slightly soluble in water, miscible with alcohol or ether. (iso-) PrCOO(i)-Bu. A colorless liquid, d.0.866, b.157; very slightly soluble in water, miscible with alcohol or ether. (iso-iso-) iso-butyl-isobutyric-ester. $Me_2CH.COO.CH_2CHMe_2$. A colorless liquid, d_0°.0.875, b.146; insoluble in water, miscible with alcohol. **b. carbamate** $C_5H_{11}O_2N$ or NH_2COOBu = 117.12. Colorless crystals. (iso-) $NH_2COOCH_2.CHMe_2$. Colorless crystals, m.55, b.207; insoluble in water, soluble in alcohol, or ether. **b. carbinol** $C_5H_{12}O$ or $Me_3C.CH_2OH$ = 88.13. Trimethylmethanecarbinol, trimethylethylalcohol, trimethylethanol. Colorless crystals, d_{20}°.0.812, m.52, b.113, slightly soluble in water, soluble in alcohol or ether. **b. carbitol.** See *carbitol*. **b. cellosolve.** See *cellosolve*. b. **chloral** $C_4H_5OCl_3$ = 175.43. Crotonchloral, trichlorbutyl aldehyde, $MeCHCl.CCl_2.COH$. A colorless liquid, d_{20}°.1.395, b.165; soluble in water, alcohol or ether. **b. chloralhydrate** $C_4H_7O_2Cl_3$ = 193.46. Crotonchloralhydrate, 2.2.3-trichlorbutan-1.1-diol, trichlorbutylidene glycol, $MeCHCl.CCl_2.CH(OH)_2$. Colorless crystals, m.-78; soluble in water. Used as an analgesic, hypnotic and teniafuge. **b. chloride** C_4H_9Cl = 92.54. (normal-) l-chlorobutane*, BuCl. A colorless liquid, d_{20}°.0.887, b.78; insoluble in water, miscible with alcohol or ether. (iso-) l-chloroisobutane. Me_2CHCH_2Cl. A colorless liquid, d.0.880, b.69; insoluble in water, miscible with alcohol or ether. (tert-) $Me_3C.Cl$. A colorless liquid, d_{15}°.0.847, b.51. **b. cyanide** C_5H_9N or BuCN = 83.06. Valeronitrile. A colorless liquid, d_{20}°.1.0, b.141; insoluble in water, soluble in alcohol or ether. (iso-) Me_2CHCH_2CN, isovaleronitrile. A colorless liquid d_{20}°.0.807, b.127; slightly soluble in water, miscible with alcohol or ether. (tert-) Me_3CCN. A crystalline solid, m.15, b.105. **b. ether** $C_8H_{18}O$ or Bu_2O = 130.19. B.-oxide, *1*-butoxy-butane*. A colorless liquid, d_{40}°.-0.769, b.141, soluble in water. (iso-) i-butyloxide *2*-(α-methyl propoxy) butane*. A colorless liquid, b.122°C, slightly soluble in water, miscible with alcohol or ether. **b. formate** $C_5H_{10}O_2$ or HCOOBu = 102.11. (normal-). Tetrylformate. A colorless liquid, d_0°.0.911, b.107, slightly soluble in water, miscible with alcohol or ether. (iso-) A colorless liquid, d_{20}°.0885, b.98.5, miscible with alcohol or ether. **b. hydrate.** B. alcohol. **b. hydride.** Butane. **b. iodide** C_4H_9I or BuI = 184.06. *1*-iodobutane*. (normal-). A colorless liquid, d_{20}°.1.617, b.130; insoluble in water, miscible with alcohol or ether. (iso-). *1*-iodo-*2*-methyl propane*. A colorless liquid, d_0°.1.640, m. −90, b.120; insoluble in water, miscible with alcohol or ether. (sec-) $Me.CH_2.CHIMe$. *2*-iodobutane*. A colorless liquid, d_0°.1.626, b.118. (tert-) Me_3CI. *2*-iodo-*2*-methyl propane*. A colorless liquid, d_0°.1.571, b.99. **b. isobutyrate.** See *b. butyrate*. **b. isocyanide** C_5H_9N or BuNC = 83.10. Isobutylisocyanide, butylcarbylamine*. A colorless liquid, d_4°.0.787, m.115; slightly soluble in water, miscible with alcohol or ether. **b. isovalerate.** See *b. valerate*. **b. ketone** $C_8H_{16}O$ or Bu.CO.Bu = 142.20. Isobutylketone. A colorless liquid, d_{20}°.0.833, b.181; slightly soluble in water, miscible with alcohol or ether. **b. mercaptan.** C_4H_9SH = 90.16. *1*-Butanethiol*. A colorless liquid, d_0°.0.858, b.92. It occurs in the odorous secretion of the skunk. **b. mustard oil** C_5H_9NS or BuNCS = 115.19. B. sulfocyanide. A colorless liquid, b.167; insoluble in water, miscible with alcohol or ether. (iso-) i-butyl mustard oil, i-butylsulfocyanide. i-butylrhodanate. A colorless liquid, d_{20}°.0.943, b.162; insoluble in water, miscible with alcohol or ether. (sec.-) $Me.CH_2.CH(NCS)Me$. A colorless liquid, d_{12}°.-0.944, b.160. (tert.-) $Me_3C.NCS$. An oily liquid, d_{10}°.0.919, b.140, m.10.5. **b. nitrate*** $C_4H_9O_3N$ or $BuNO_3$ = 119.13. Iso-butyl nitrate. A colorless liquid d.1.021, b.123; insoluble in water, miscible with alcohol or ether. **b. nitrite*** $C_4H_9O_2N$ or $BuNO_2$ = 103.10. Isobutyl nitrite. A colorless liquid, d_0°.0.908, b.67; soluble in alcohol. It also occurs in the tautomeric nitroso form, BuONO. **b. oxide.** B. ether. **b. oxide linkage.** A bond between the first and fourth C atom of a chain through an O atom. Cf. *sugar, furanose*. **b. phenylate.** B. phenyl ether. **b. phenyl ether** $C_{10}H_{14}O$ = 150.14. Phenylbutyl oxide. Butyl phenylate, BuOPh. A colorless liquid, d.0.935, b.198; insoluble in water, miscible with alcohol or ether. It is an antiseptic. **b. phenyl ketone** $C_{11}H_{14}O$ = 162.17. Phenylpentanone, Bu.CO.-

Ph. (normal-). A colorless liquid, b.239.5, miscible with alcohol or ether, insoluble in water. (iso-). A colorless liquid, d.0.993, b.225; insoluble in water, soluble in alcohol or ether. **b. phthalate.** $C_6H_4(COOBu)_2$. A colorless liquid, b_{20mm}.204, used instead of mercury in diffusion pumps. **b. propionate** $C_7H_{14}O_2$ = 130.14. iso-butylpropionate, EtCOOBu. A colorless liquid with a pleasant aromatic odor, d.0.893, b.136; soluble in alcohol. Used in fruit essences. **b. rhodanate.** B. mustard oil. **b. sulfide.** $C_8H_{18}S$ = 146.24. (normal-) Bu_2S. A colorless liquid, d.0.852, m. −79.7, b.182; insoluble in water. (iso-) $(Me_2CH.CH_2)_2S$. (sec-) $(MeCH_2CHMe)_2S$. A colorless liquid, d.0.832, b.165. **b. sulfocyanide.** B. mustard oil. **b. valerate** $C_9H_{18}O_2$ = 158.18. (normal-) n-butyl-n-valerate, BuCOOBu. A colorless liquid, b.184; soluble in alcohol; used as a flavoring agent in fruit essences. (iso-) $Me_2CHCH_2COOCH_2CHMe_2$, i-butyl-i-valerate. A colorless liquid, d.0.848, b.169; insoluble in water, miscible with alcohol or ether.

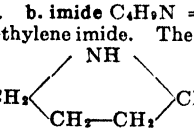
butyl alcohol. $C_4H_{10}O$ or BuOH = 74.10. Butanol*, butylhydroxide, hydroxybutane. (iso-) $Me_2CH.CH_2OH$. Colorless liquid, $d_{25°}$.0.7980, m. −108, b.107.87; slightly soluble in water, miscible with alcohol or ether. (**normal-**) See *primary*. (**primary-**) $Me.CH_2.CH_2.CH_2OH$. 1-butanol*, propylcarbinol. (normal-) A colorless liquid, $d_{25°}$.0.8057, b.117.7; miscible with alcohol or ether; used as a solvent, defrother, dehydrator and penetrant. (**secondary-**) $MeCH_2CHMeOH$. *2*-butanol*, ethylmethylcarbinol. A colorless liquid, $d_{25°}$.0.8027, b.99.52; soluble in water, alcohol or ether. (**tertiary-**) Me_3COH. *2*-methyl-*2*-propanol. A colorless liquid or rhombic crystals, $d_{22°}$.0.781, m.25, b.83; miscible with water, alcohol or ether. **tribromo-** Brometone. **trichloro-** Chloretone.

butyl aminobenzoate. Butesin (q.v.).

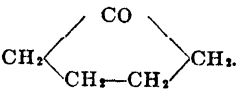
butyl rubber. A generic name applied to vulcanizable elastic copolymers of isobutylene and small amounts of diolefins.

butylene. (1) C_4H_8 = 56.06. A gaseous hydrocarbon occurring in three isomeric forms: α-, Δ^1-, or 1-butene, ethylethylene, $CH_2{:}CH{-}CH_2Me$, m. −130, b. −18. β-, Δ^2- or 2-butene, Ψ-butylene, dimethylethylene, $MeCH{:}CHMe$, b.1; it is used as an anesthesizing gas to substitute nitrous oxide. γ-, **iso-** or 2-methylpropene, $Me_2C{:}CH_2$. A volatile liquid or a gas, b. −6. ψ- or **pseudo-** β- Butylene. (2) The divalent $C_4H_8{=}$ radical derived from butane. **di iso-** C_8H_{16} = 112.12. The hydrocarbon $CMe_3.CH_2.CH{:}CH_2$. *2.2.4*-trimethyl-1-pentene. **tri iso-** $C_{12}H_{24}$ = 168.18. The hydrocarbon $CMe_3.CH_2.CMe{:}CHCMe_3$. *2.2.4.6.6*-pentamethyl-3-heptene. **methyl-** Pental.

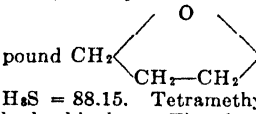
b. bromide $C_4H_8Br_2$ = 215.90. 1.2-Dibromo-i-butane, i-butylenebromide, $Me_2CBr.CH_2Br$. A yellow liquid, d.1.798, b.158; miscible with alcohol. (*pseudo-*) β-butylenebromide. 2.3-dibromobutane $MeCHBr.CHBrMe$. A yellow liquid, d.1.821, b.158; soluble in alcohol. **b. glycol.** Butanediol. **b. imide** C_4H_9N = 71.10. Pyrrolidine, tetramethylene imide. The heterocyclic compound,



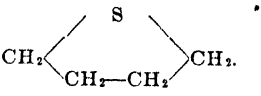
b. ketone C_5H_8O = 84.08. Ketopentamethylene. The homocyclic compound,



b. oxide C_4H_8O = 72.08. Tetramethylene oxide, tetrahydrofuran. The heterocyclic compound



b. sulfide C_4H_8S = 88.15. Tetramethylene sulfide, tetrahydrothiophen. The heterocyclic compound



butylidene. The divalent radical, $Me(CH_2)_2CH{=}$.

butyn. $(C_{18}H_{30}N_2)_2.H_2SO_4$ = 646.5. Butacaine sulfate. The hydrosulfate of γ-dibutylaminopropyl-p-aminobenzoate. $(NH_2.C_6H_4.COO.CH_2.CH_2.CH_2.NBu_2)_2H_2SO_4$. A colorless crystalline substance, m.-99, soluble in water; used as a cocaine substitute in local anesthesia.

butyne*. Butine.

butyraldehyde. C_4H_8O = 72.08. Butanal*, butylaldehyde, butal, butyric aldehyde, butyral, PrCHO. A colorless liquid, b.77. **iso-** $Me_2CH.CHO$. A colorless liquid, d.0.794, b.63; miscible with water, alcohol, or ether. **hydroxy-** Aldol. **trichloro-** Butyl chloral.

butyramide. C_4H_9ON = 87.13. Butyric amide, butanamide*, $PrCONH_2$. Colorless scales, m.-115, b.216; soluble in water, alcohol, or ether. **iso-** $Me_2CH.CONH_2$. A crystalline solid, m.118, b.217; soluble in water or alcohol, slightly soluble in ether.

butyrase. An esterase. See *enzymes*.

butyrate. A salt or ester of butyric acid containing the monovalent $C_4H_7O_2$— or PrCOO— radical.

butyrelite. Bog butter. A fatty substance found in peat.

butyric acid. $C_4H_8O_2$ = 88.80. Butanoic acid*, ethylacetic acid. The fourth member of the fatty-acid series, $Me.CH_2.CH_2.COOH$ or PrCOOH. (normal-). A colorless liquid of unpleasant and penetrating odor, d.0.960, m. −8, b.162.5; miscible with water, alcohol or ether. It is produced in fermentation, during the decay of cheese, (see fermentation *b.*); is used as a reagent in bacteriological and physiological work; as a flavor in food products; and in the preparation of esters for fruit essences. (iso-) $Me_2CHCOOH$. A colorless liquid, d.-0.947, m.80, b.155.5; slightly soluble in water, miscible with alcohol or ether. **amino-** $C_4H_9O_2N$ = 103.77. Aminobutanoic acid*. **α- or 1-** $NH_2.CHEt.COOH$. Crystals, m.285. **β- or 2-** $NH_2CHMe.CH_2COOH$. Crystals, m.-184. **γ- or 3-** $NH_2(CH_2)_3COOH$. Crystals, m.193. **iso-** $NH_2.CMe_2.COOH$. Liquid, b.-280. **α-amino-β-hydroxy-** $NH_2.CH(CHOH.Me)COOH$. A constituent of proteins. Cf. *amino acids*. **aminomethyl-** Isovaline. **chloro-** $C_4H_7O_2Cl$ = 122.51. **α- or 1-** $EtCHCl.COOH$. b_{15mm}.101. **β- or 2-** $MeCHCl.CH_2.COOH$. m.44 b_{12mm}.100. **β(*dl*)- or 2(*dl*)-** m.16, b_{22mm}.116. **γ- or 3-** $Cl(CH_2)_3COOH$. m.16, b_{22mm}.196. **hydroxy-** $C_4H_8O_3$ = 104.08. $EtCHOHCOOH$. Colorless crystals m.43, b.255 (decomp.); soluble in water, alcohol or ether. It is one of the "acetone bodies" of the blood. **hydroxyethyl-**

Diethoxalic acid. **keto-** Acetoacetic acid. **methyl-** β- Isovaleric acid. α- Hydroangelic acid. **oxy-** See *hydroxy-b*. **trihydroxy-** Erythric acid.

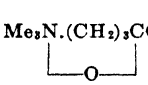
b. aldehyde. Butyraldehyde. **b. amide** C_4H_9ON = 87.13. i-butyric amide, $Me_2CH.CONH_2$. Colorless leaflets, m.129, b.216; soluble in water, alcohol or ether. **b. anhydride** $C_8H_{14}O_3$ = 158.16. (normal-) PrCO.O.OCPr. A colorless liquid, d.0.978, b.192; decomp. by water or alcohol to form the acid; soluble in ether. (iso-) $Me_2CHCO.O.COCHMe_2$. A colorless liquid, d.0.957, b.182.5; decomp. in water or alcohol. **b. fermentation.** The production of b. acid by fermentation of sugar or starch by fission ferments, such as *B. butylicus*, in presence of calcium carbonate as neutralizing agent. **b. di-i-nitroso peroxide** $C_4H_4O_4N_2$ = 144.06. Peroxide di-iso-nitrosobutyric acid.

The compound Me.C(N.O.O.N)C.COOH. Colorless crystals, m.92.

butyrin. $C_{15}H_{26}O_6$ = 302.28. Tributyrin, triglycerol butyrate, glycerin tributyric ester. $(PrCOO)_3C_3H_5$. A yellowish liquid, d.1.052, b.285; insoluble in water, miscible with alcohol or ether. It is a constituent of butter fat. Cf. *glycerides*.

butyrinase. An enzyme of blood serum which hydrolyzes butyrin to glycerol and butyric acid.

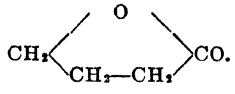
butyrobetaine. The base,



m.130, b.220, occurring in mussels (*Arca noae*), snakes (*Python moluris*) and anthozoans (*Actinia equina*).

butyroin. $C_8H_{16}O_2$ = 144.3. 5-hydroxy-4-octanone, Pr.CO.CHOH.Pr.

butyrolactone. $C_4H_6O_2$ = 86.6. 4-Hydroxybutanoic acid lactone*, butanolide. The inner anhydride of butyric acid,



A colorless liquid, b.204.

butyrometer. A device, to determine the amount of butter-fat in milk.

butyrone. $C_7H_{14}O$ = 114.11. Dipropylketone, 4-heptanone*, Pr.CO.Pr. A colorless liquid distilled from calcium butyrate, $d_{15°}$.0.821, m. −32.6, b.143.5; used as a solvent.

butyronitrile. Propylcyanide.

butyrophenone. $C_{10}H_{12}O$ = 148.09. Phenyl-*n*-propyl ketone, $PhCOCH_2CH_2Me$. A colorless liquid, d.0.988, m.11, b.232.3; used in organic synthesis. **iso-** Phenyl-*i*-propyl ketone, $Ph.COCHMe_2$. A liquid, d.0.984, b.217.

butyrous. Butter-like in consistency; *e.g.*, a bacterial culture.

butyrum. Latin for butter. **b. antimonii.** Antimonous chloride.

butyryl. (normal-). The monovalent —C_4H_7O or PrCO— radical derived from n-butyric acid. (iso-) The monovalent Me_2CHCO— radical derived from i.butyric acid.

b. chloride. C_4H_7OCl = 106.53. (normal-) Butanoyl chloride*. PrCOCl. A colorless liquid, d.1.026, b.101. (iso-) $Me_2CH.COCl$. A colorless liquid, d.1.0174.

buxidine. An alkaloid from the leaves of *Buxus sempervirens*. It crystallizes as colorless prisms.

buxine. $C_{19}H_{21}O_3N$ = 311.22. An alkaloid from the leaves of *Buxus sempervirens*, a Buxaceae probably identical with bebeerine. **pseudo-** $C_{24}H_{48}ON_2$ = 380.50. Ψ-buxine. An alkaloid from the leaves of *Buxus sempervirens*.

Buxton's fluid. A mixture of 50 cc. H_2O, 20 cc. glycerin, 40 gm. gum arabic, 50 gm. chloral hydrate and 0.5 gm. cocaine hydrochloride, used to mount microscopic specimens (arthropods) directly on the slide.

buyo. Betel-nut.

buzane. Bihydrazine.

buzylene. (1) Isotetrazene, diazohydrazine. An unisolated azohydroxylamine compound, $HN:N.NH.NH_2$ which occurs in certain compounds; as, hippuryl-phenyl-buzylene. Cf. *tetrazone*. (2) The bivalent —N:N.NH.NH— radical. **dihydro-** Bihydrazine.

byerite. A bituminous coal resembling albertite.

byerlite. A substance resembling asphalt, made by heating petroleum residues with sulfur in presence of air.

bynin. Hordenin. A gliadin from malt. Cf. *proteins*.

by-product. A material obtained in addition to the principal or primary material in a manufacturing process.

byssinosis. A form of asthma sometimes affecting workers in textile factories.

byssochlamic acid. $C_{18}H_{30}O_6$ = 332.1. The dianhydride of a tetrabasic acid, produced by the action on it of the mold *Byssochlamis fulva*.

byssus. (1) Flax. (2) Lint. (3) The protein threads which attach the edible sea mussel (*Mytilus*) to rocks.

bythium. Eka-tellurium. A supposed element of the sulfur group.

bytownite. A triclinic feldspar of the anorthite type. Cf. *silica minerals*.

Bz. (1) The benzoyl radical, PhCO—. (2) The benzene ring, similar to Py (= pyridine ring). See *quinoline*.

BzH Benzaldehyde.

BzOH Benzoic acid.

C

C (1) The symbol for carbon. (2) Abbreviation for constant. °C. The symbol for degree centigrade or Celsius. **C acid.** 2-Naphthylamine-4, 8-disulfonic acid.

C. Abbreviation for concentration. C_v, C_p. The symbols for molecular heat at constant volume or pressure. C_H. Hydrogen ion concentration.

c. Symbol for (1) the velocity of light in a vacuum: $c = (2.99796 \pm 0.00004) \times 10^{10}$ cm. sec^{-1}; (2) specific heat.

C. N. Coordination number.

C. P. Chemically pure.

Ca. (1) The symbol for calcium. (2) Abbreviation for centare. (3) Abbreviation for cathode.

ca. Abbreviation for candle, centare, and circa.

cabasite. Chabazite.

cabbage. The vegetable *Brassica oleracea*, a Cruciferae. **c. seed oil.** The edible fatty oil from the seeds of *Brassica oleraceae*, a Cruciferae; used in soaps, ointments, liniments and as a substitute for olive oil. **c. sugar.** A triose isolated from c. leaves. **c. tree bark.** Yaba bark.

cabrerite. A native arsenate of nickel and cobalt, $(Ni,Co)_3As_2O_8.8H_2O$, which occurs in green fibrous masses.

cacaine. Theobromine.

cacao. Cocoa. **c. butter.** Oil of theobroma. The yellow oil expressed after beating and crushing the seeds of *Theobroma cacao*. It has a low m. and is used for receptacles for drugs. **c. red** $(C_{17}H_{16}O_7)x$. The red pigment of c.; soluble in ether or alcohol.

cacaorin. $C_{60}H_{84}N_4O_{15}$. A bitter glucoside from raw cacao beans; oxidized to glucose, theobromine and cacao red.

cacodiliacol. Guaiacol cacodylate.

cacodyl. (1) *Dicacodyl.* (2) The monovalent radical C_2H_6As— or $AsMe_2$—, derived from arsine. **di-** $C_4H_{12}As_2$ = 210.1. Dicacodyl, tetramethyl arsine. $Me_2As.AsMe_2$. A colorless poisonous liquid, m.−6, b.170. **ethyl-** $C_8H_{20}As_2$ = 275.9. Tetraethylarsine. $Et_2As.AsEt_2$, a colorless liquid, b.185. (2) Diethylarsine.

c. chloride $AsClMe_2$ = 140.56. Dimethylarsenic chloride. A colorless liquid b.100. **c. cyanide** $AsMe_2CN$ = 131.06. Dimethylarsenic cyanide. Colorless crystals, m.33, b.140. **c. hydride** $AsMe_2H$ = 106.07. Dimethylarsine. A colorless volatile liquid, d.-1.213, b.36, miscible with alcohol, ether or chloroform. **c. oxide** $C_4H_{12}OAs_2$ = 226.1. Dimethylarsine oxide, dimethyl arsenious oxide, alkarsine, $AsMe_2.O.AsMe_2$. A colorless liquid, d.1.642, m.−25, b.120.

cacodylates. The salts of the monobasic cacodylic acid, containing the $AsO.Me_2.O$— radical. They are usually soluble in water, and are the least toxic and irritating arsenic preparations, especially for hypodermic injections. **thio-** The salts of the monobasic thiocacodylic acid containing the $Me_2AsO.S$— radical; insoluble in water, and prepared by the action of H_2S upon cacodylates.

cacodylic acid. $C_2H_7O_2As$ = 138.1. Dimethylarsinic acid, alkargen. The monobasic acid $Me_2AsO.OH$. Colorless crystals, m.200, soluble in water or alcohol; used in organic synthesis and in the manufacture of cacodylates. **ethyl-** Diethylarsinic acid.

cacotheline. $C_{20}H_{22}N_2O_4(NO_2)_2$ = 462.2. A red compound formed from brucine by the action of nitric acid; it forms green and violet salts with SO_2 and $SnCl_2$, and is a reagent for tin.

cacoxenite. A yellow phosphate of iron which occurs with limonite.

cactine. An alkaloid from *Cereus grandiflorus* (night blooming cactus).

cactoid. The combined principles from the freshly tinctured leaves and stems of *Cereus grandiflorus;* used as a heart stimulant.

cactus. A family of plants, Cactaceae, with succulent stems and thorny leaves, including the genera: *Anhalonium*, *Cereus* and *Opuntia*. Cf. *prickly pear*, *mescal buttons*, *cochineal*. **c. alkaloids.** See *anhalonium alkaloids*, *cactine*, *pilocerine*, *pectenine*.

cadalene. $C_{15}H_{18}$ = 198.14. *3.8*-Dimethyl-*5*-isopropylnaphthalene. A reduction product of cadinene and zingiberene.

cadaverine. $C_5H_{14}N_2$ = 102.1. Pentamethylene diamine, 1.5-pentanediamine*, *1.5*-diaminopentane, amylene diamine. $NH_2(CH_2)_5NH_2$. A ptomaine formed by the hydrolysis of proteins and putrefying animal tissues. It is an isomer of sapin. Colorless liquid, d.0.885, m.9; b.178.

cadaverines. Ptomaines.

cade oil. Juniper tar oil. The yellow essential oil obtained in the dry distillation of *Juniperus oxycedrus* and other species; d.0.980–1.055. Soluble in alcohol, ether, or carbon disulfide; the chief constituent is cadinene. Used in soaps, ointments, and pharmaceutical products.

cadinene. $C_{15}H_{24}$ = 204.2. A sesquiterpene, d.0.918, b.275, and constituent of essential oils from juniper species and cedars. It is probably *3.8*-dimethyl-*1.4.7*-trihydro-*5*-isopropyl naphthalene.

cadion. p-Nitrobenzene diazoamino azo-benzene.

=346.3.

A red-brown powder, insoluble in water, acids or alkalis, slightly soluble in alcohol or acetone. It is a reagent for cadmium (pink colour) and magnesium (blue colour). **c.-2D.** 4-nitro naphthalene diazo amino azo benzene. It is also used as a reagent for cadmium.

cadmia. An ancient name for zinc or zinc carbonate.

cadmium. Cd = 112.41. An element of the zinc family, atomic number 48. A white, ductile metal, d.8.625, m.321.6, b.778; insoluble in water, dissolved by acids. It is found in zinc ores, and obtained as a by-product in the distillation of zinc. Cadmium is generally divalent

and closely associated with zinc, but compounds with monovalent cadmium (cadmous) have been prepared. Its compounds are poisonous and its salts are little ionized. It was discovered in 1817 simultaneously by Strohmeyer and Herman, and is used mainly for electrodes in standard cells, and as a constituent of alloys of low melting point, (*e.g.* Wood's alloy). **c. acetate.** $Cd(OOCMe)_2.3H_2O$ = 284.5. White monoclinic crystals, d.2.01, soluble in water. It is a reagent for determining sulfur, selenium or tellurium in iron and steel, and is also used in dentistry. **c. alloys.** A mixture of cadmium with other metals. The m. of some alloys, in °C, are:

Cd.....	90 %	80 %	70 %	60 %	50 %
with	10 %	20 %	30 %	40 %	50 %
Ag.....	420°	520°	610°	700°	760°
Na.....	390°	360°	340°	330°	352°
Tl.....	300°	285°	270°	262°	258°
Zn.....	280°	270°	295°	313°	327°

c. amalgam. An amalgam of cadmium and mercury, used in dentistry and for the cadmium cell (q.v.). **c. boro-tungstate.** $Cd_2B_2W_9O_{32}.18H_2O$ = 2739.1. Yellow crystals or a yellow liquid, d.3.28; soluble in water, and used in mineralogy for separating minerals and metals mechanically (see *Klein's liquid*). **c. bromate.** $Cd(BrO_3)_2$ = 368.2. A colorless crystalline powder which is soluble in water. **c. bromide.** $CdBr_2$ = 272.2. Colorless crystals, $d_{25°}$.5.192, m.568, b.810; soluble in water, alcohol, or ether. (**cryst.**) $CdBr_2.4H_2O$ = 344.3. White crystals, soluble in water, alcohol or ether; used in photography. **c. carbonate.** $CdCO_3$ = 172.4. Otavite. White rhombic crystals or an amorphous powder, $d_4°$.4.258, decomp. on heating; insoluble in water, soluble in acids or ammonium salt solutions. **c. cell.** C. normal element. **c. chlorate.** $Cd(ClO_3)_2$ = 279.2. White crystals, soluble in water. **c. chloride.** $CdCl_2$ = 183.3. White crystals, d.8.32; soluble in water, alcohol or ether. (**cryst**) $CdCl_2.2H_2O$ = 219.3. White monoclinic crystals; soluble in water, alcohol or ether. It is a reagent for pyridine bases, and is used in photography, the dye industry, and in textile printing. **c. chloroacetate.** (1) *mono-* $(CH_2Cl.COO)_2Cd.6H_2O$ = 407.45. Colorless crystals, d.1.942. (2) *di-* $(CHCl_2.COO)_2Cd.H_2O$ = 386.27. Colorless crystals, d.2.132. (3) *tri-* $(CCl_3.COO)_2Cd.1\frac{1}{2}H_2O$ = 464.18. Rhombic crystals, d.2.093. **c. cinnamate.** $(C_6H_5.CH{:}CHCOO)_2Cd$ = 406.52. White powder, insoluble in water. **c. cyanide.** $Cd(CN)_2$ = 164.1. A colorless powder, soluble in water or alcohol. **c. diethyl*** $Cd(C_2H_5)_2$ = 170.49. Ethylcadmium. A colorless liquid, d.1.653, m. −21, b_{20mm}.64. **c. dimethyl*.** $Cd(CH_3)_2$ = 142.16. Methylcadmium. A colorless liquid, d.1.9846, m. −4.5, b.106. **c. ferricyanide.** $Cd_3[Fe(CN)_6]_2$ = 972.7. A brownish-red crystalline powder, soluble in water. **c. ferrocyanide.** $Cd_2Fe(CN)_6$ = 436.2. A yellow crystalline powder, soluble in water. **c. fluoride.** CdF_2 = 150.4. White crystals, d.6.64, m.520, b.1000; soluble in water or alcohol. **c. fluosilicate.** $CdSiF_6$ = 254.47. C. silicofluoride. Hexagonal, white crystals, soluble in water or alcohol. **c. formate.** $Cd(OOCH)_2$ = 202.1. A colorless powder, d.2.44, which is soluble in water. **c. fumarate.** $Cd_2C_4H_2O_4$ = 338.84. A white powder, insoluble in water. **c. hydroxide.** $Cd(OH)_2$ = 146.4. White hexagonal crystals, $d_{15°}$.4.79; slightly soluble in water, soluble in acids or ammonium salt solutions. **c. iodate.** $Cd(IO_3)_2$ = 462.27. A white crystalline powder, d.6.48, decomp. on heating, slightly soluble in water, soluble in acids or ammonium salt solutions. It forms the hydrate $Cd(IO_3)_2.H_2O$ = 480.20; and the ammonate $Cd(IO_3)_2.4NH_3$ = 530.4, which explodes on heating. **c. iodide.** CdI_2 = 366.27. Colorless scales which occur in two allotropic modifications: α- d.5.67, m.388, b.712; and β- d.5.30, m.404. Soluble in water, alcohol, ether, or ammonium hydroxide. Used as a reagent for alkaloids and nitrous acid; in photography; and medicinally, as an antiseptic, in ointments. **c. lactate.** $Cd(C_3H_5O_3)_2$ = 290.2. A colorless powder, slightly soluble in water. **c. line.** The red radiation from c. vapor which serves as the fundamental standard of length; 1,533,164.14 waves equal one meter. **c. lithopone.** See *lithopone*. **c. malate.** $Cd_2C_4H_2O_4.2H_2O$ = 374.87. A white powder, slightly soluble in water. **c. methide.** $Cd(CH_3)_2$ = 142.4. Dimethylcadmium, $CdMe_2$; sometimes used in Grignard's reaction. **c. minerals.** Cd always occurs in association with zinc, though in small quantities, and is a relatively rare element. Its chief ores are greenockite CdS, and the carbonate and oxide. Zn is 200 times more abundant than cadmium. **c. nitrate.** (1) $Cd(NO_3)_2$ = 236.42. Colorless powder, m.350. (2) hydrate: $Cd(NO_3)_2.4H_2O$ = 308.49. Colorless prismatic needles, d.2.455, m.59.4°, b.132; soluble in water or alcohol. It is a reagent for zinc and ferrocyanides; used in the manufacture of cadmium yellow, and in the glass industry and ceramics for obtaining yellow glazes or orange colors. **c. normal element.** C. cell, Weston element. An H-shaped glass vessel with platinum contacts used as a standard cell for potentiometric measurements. The cathode is Cd-amalgam, the anode mercury, and the electrolyte saturated Cd sulfate solution. A reproducible potential of 1.0186 volts, at 18°C, is obtained. **c. oxalate.** CdC_2O_4 = 200.41. A white powder, d.3.32, m.340. (2) hydrate $CdC_2O_4.3H_2O$ = 254.46. A white powder, insoluble in water, soluble in acids or dilute ammonium hydroxide. **c. oxide.** (1) CdO = 128.41. An amorphous brown or yellow powder, or cubical crystals, d.6.95 to 8.15; insoluble in water soluble in acids or ammonium salt solutions. (2) Cd_2O = 240.82. Cadmous oxide. A yellowish powder, d.8.192; decomp. when heated. (3) Cd_4O = 465.64. Cadmium suboxide. A brown amorphous powder, decomp. by water, acids, or ammonium hydroxide. (4) Cd. peroxide. An insoluble compound, CdO_2, Cd_3O_5 or Cd_5O_8. **c. oxybromide.** $CdO.CdBr_2.H_2O$ = 418.67. A yellow powder, d.4.87, decomp. by water. **c. oxychloride.** $CdO.CdCl_2.H_2O$ = 329.75. A colorless powder, d.4.56, decomp. 280; slightly soluble in hot water, and slowly decomp. by it. **c. permanganate.** $Cd(MnO_4)_2$ = 350.0. A purple crystalline powder, soluble in water. **c. peroxide.** C. oxide (4). **c. phosphate.** $Cd_3(PO_4)_2$ = 526.0. A white powder, insoluble in

water. **c. plating.** A coating of c. on iron wire, springs, tools and other steel articles, to make them rust-proof. **c. potassium cyanide.** $Cd(CN)_2.2KCN$ = 294.5. A white crystalline powder, soluble in water. **c. potassium iodide.** $CdI_2.2KI.H_2O$ = 716.31. A white powder which yellows on aging; soluble in water or alcohol. It is a reagent for alkaloids. **c. red.** (1) A mixture of C. selenide, sulfide and $BaSO_4$. (2) A mineral pigment containing 60 % Cd, 25 % S and 15 % Se. **c. salicylate.** $Cd(C_7H_5O_3)_2.H_2O$ = 404.1. White needles, soluble in water or alcohol; used as an astringent in ophthalmology. **c. selenate.** $CdSeO_4$ = 255.1. A colorless crystalline powder, soluble in water. **c. selenide.** CdSe = 191.6. A red powder, insoluble in water; used in rubber manufacture to increase resistance to abrasion. **c. silicofluoride.** C. fluosilicate. **c. suboxide.** Cd_4O = 465.64. C. oxide (3). **c. succinate.** $CdC_4H_4O_4$ = 228.0. A white powder, slightly soluble in water, soluble in alcohol. **c. sulfate.** $CdSO_4$ = 208.0. White rhombic crystals, d.3.05, m.1000; soluble in water, insoluble in alcohol. (cryst.) (1) $CdSO_4.4H_2O$ = 280.5. White crystals, d.3.05; soluble in water. (2) $3CdSO_4.8H_2O$ = 769.5. White monoclinic crystals, $d_{25°}$.3.087; soluble in water or alcohol. Used in electrotechnics for filling cadmium normal cells; and medicinally as an antiseptic and astringent in eye-washes. **c. sulfide.** CdS = 144.5. Greenockite. Two modifications: (1) *orange.* A reddish-yellow powder, insoluble in water; used as a pigment and in pyrotechnics. (2) *light yellow.* Cadmium yellow, jaune brillant. Yellow hexagonal crystals or powder, d.4.8; insoluble in water, used as a pigment for yellow and greenish tints and for coloring soaps, in ceramics, rubber and pyrotechnics. **c. sulfite.** $CdSO_3$ = 192.0. A white powder, slightly soluble in water. **c. tartrate.** $Cd(C_4H_4O_6)(H_2O)$. A white crystalline powder, slightly soluble in water, soluble in acids. **c. tungstate.** $CdWO_4$ = 360.0. A colorless powder insoluble in water. **c. valerate.** $Cd(C_5H_9O_2)_2$ = 314.2. Colorless scales, soluble in water or alcohol; used as an antispasmodic. **c. wolframate.** C. tungstate. **c. yellow.** C. sulfide.

cadmous. A compound of monovalent Cd; as, cadmous oxide, Cd_2O.

cæ. See *ce.*

Cæsalpinia, Caesalpinia. A genus of trees, Leguminosae, of tropical and subtropical countries:

C. coriaria.....	dividivi, ellagitannic acid
C. sappan.....	brazilwood, sappan wood
C. bonducella.....	bonducin

cæsium, caesium. See *cesium.*

caferana. Tachia. The dried roots of *Tachia guianensis,* a Gentianaceae of Brazil; used as a tonic and antiperiodic.

caferanine. A crystalline principle in caferana.

caffalic acid. $C_{34}H_{54}O_{15}$ = 702.4. An acid in coffee.

caffeic acid. $C_9H_8O_4.\frac{1}{2}H_2O$ = 189.12. 3.4-dihydroxycinnamic acid, 3.4-dioxyphenyl acrylic acid. Yellow prisms in black fir resin, m.195, decomp. on further heating; soluble in water or alcohol. **dimethylhydro-** $C_{11}H_{14}O_4$ = 210.11. Colorless crystals, m.96. **hydro-** $C_9H_{10}O_4$ = 182.08. 3.4-dioxyphenyl propionic acid. Colorless crystals, m.213.

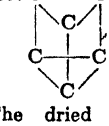
caffeine. $C_8H_{10}O_2N_4.H_2O$ = 212.30. Theine, methyltheobromine, 1.3.7-trimethyl-xanthine, guaranine, caffëine, psoraline. A diureide found in coffee, tea, and cola nuts, as long white needles of bitter tasts, $d_{19°}$.1.23, m.230, b.235; soluble in water, alcohol, ether or chloroform. Used medicinally as a diuretic or heart stimulant. **bromo-** See *bromo c.* **chloral-** See *chloral c.* **ethoxy-** See *ethoxy c.* **hydroxy-** $C_8H_{10}O_3N_4$ = 210.2. 1.3.7-trimethyl-uric acid. Fine white needles, m.345, soluble in hot water, acids or alkalis; used as a diuretic. **phenoxy-** See *phenoxy c.*

c. arsenate. $C_8H_{10}N_4O_2.H_3AsO_4$ = 336.1. A white powder, soluble in hot water; used for neuralgia. **c. benzoate.** $C_8H_{10}N_4O_2.C_7H_6O_2$ = 316.23. A white, crystalline powder, soluble in water or alcohol. **c. citrate.** $C_8H_{10}O_2N_4.C_6H_8O_7$ = 386.25. A white, crystalline powder, soluble in water, alcohol or chloroform; used similarly to caffeine. **c. hydrobromide** $C_8H_{10}O_2N_4.HBr$ = 275.03. A white, crystalline powder, soluble in water. **c. hydrochloride.** $C_8H_{10}O_2N_4.HCl + 2H_2O$ = 266.56. A white powder, which is soluble in water. **c. nitrate.** $C_8H_{10}O_2N_4.HNO_3$ = 257.30. A white, crystalline powder, soluble in water. **c. phenylate.** $C_8H_{10}O_2N_4.C_6H_6O.H_2O$ = 306.35. A white, crystalline powder, soluble in water. **c. salicylate.** $C_8H_{10}O_2N_4.C_7H_6O_3$ = 332.33. A white, crystalline powder, soluble in water or alcohol. **c. sodium benzoate.** A mixture of caffeine and sodium benzoate, very soluble in water; used in hypodermic medication. **c. sodium bromide.** A mixture of 60 % caffeine and 40 % sodium bromide. A white powder, very soluble in water. **c. sodium citrate.** A mixture of 50 % caffeine and 50 % sodium citrate. A white powder, very soluble in water. **c. sodium salicylate.** A mixture of 45 % caffeine and 55 % sodium salicylate. A white powder, very soluble in water. **c. sulfate** $(C_8H_{10}O_2N_4)_2.H_2SO_4$ = 486.65. A white, crystalline powder, decomp. in water. **c. sulfonate.** Symphorol. **c. triiodide** $C_8H_{10}O_2N_4I_2.2HI$ = 703.98. Dark green prisms, m.171, decomp. in water or alcohol; used medicinally as an alterant and diuretic. **c. valerate** $C_8H_{10}O_2N_4.C_5H_{10}O_2$ = 296.34. A white, crystalline powder, decomp. by alcohol; used medicinally for nervous headaches and hysteria.

caffelite. A plastic material derived from coffee.

caffetannic acid. $C_{15}H_{18}O_9$ = 342.14. Chlorogenic acid. A tannin which occurs in coffee berries, cainia root, nux vomica, St. Ignatius beans, etc., as its calcium or magnesium salt. An amorphous powder, soluble in water or alcohol.

cage type. Ladenburg's formula for benzene or a ring-system of the type:



cahinca. David's root. The dried roots of *Chiococca racemosa,* a Rubiaceae. See *chiococceine.*

cahincic acid. $C_{40}H_{64}O_{18}$ = 832.6. Caincic acid. A glucoside, the active principle of cahinca root. White, odorless, bitter crystals, soluble in water; used as a tonic, purgative, and diuretic. Cf. *chiococcic acid, caincetin.*

Cailletet, Louis. A French iron-master noted for liquefying gases.

caincetin. $C_{22}H_{34}O_3$ = 346.3. White crystals, obtained by decomp. of cahincic acid.

caincic acid. Cahincic acid.

caincin. Cahincic acid.

cairngorm. A variety of quartz.

cajeput. Cajuput, tree tea, swamp tea. The leaves of *Melaleuca leukadendron*, a Myrtaceae of East India. **c. oil.** The colorless or greenish essential oil of cajeput. Its chief constituents are cineol and terpineol. $[\alpha]_D = -10°$ to $-4°$; soluble in alcohol or ether.

cajeputene. Terpene.

cajuput. Cajeput.

cajuputol. Eucalyptol.

cake. Any solid crystalline mass. **niter-** Sodium sulfate containing about 33 % H_2SO_4. A by product of nitric acid manufacture. **salt-** Sodium sulfate.

caking. The transformation of a powdered substance into a solid mass either by moisture, heat or pressure.

Cal. An abbreviation for large calorie, Kg.-cal. or Calorie.

cal. An abbreviation for small calorie, gm.-cal. or calorie.

calabar bean. Physostigma. **false-** Pseudophysostigma.

calabarine. An alkaloid from calabar bean.

Calais sand. A very fine sand found near Calais, France, which is used as an abrasive; e.g. for cleaning platinum ware.

calamene. $C_{15}H_{24}$ = 204.19. A sesquiterpene from calamus oil.

calamine. (1) $Zn(OH)_2.Zn_3Si_2O_7.H_2O$. A native zinc silicate. (2) The obsolete name for zinc carbonate, now called smithsonite. **c. brass.** Brass.

calaminth. Basil thyme, mountain minth. The plant, *Calamintha officinalis*, a Labiatae, used as diaphoretic and expectorant. It contains calaminthone.

calaminthone. $C_{10}H_{16}O$ = 152.2. A ketone found in French oil of majoram, distilled from the leaves of *Calamintha nepeta*, a Labiatae.

calamus. Sweet flag, sweet grass, sweet cane. The dried rhizomes of *Acorus calamus*, an Araceae, used as fluid extract, tincture, stimulant and carminative tonic. Cf. *acorin, acoretin.* **c. oil.** The brownish, heavy, essential oil from calamus. Its chief constituents are asarone and eugenol. Used medicinally, in perfumes, and as a flavoring.

calaverite. $(Au, Ag)Te_2$. A native gold telluride containing 40 % Au, found at Cripple Creek, Colorado and in Calaveras County, California.

calaya. An extract from the fruit of *Anneslea febrifuga*, a Theaceae; used medicinally as an antiperiodic.

calc spar. Calcite.

calcareous, calcarious. Containing calcium. **c. algae.** The algae of the genus *Lithothamnium*, which have skeletons containing 95 % calcium carbonate and 5 % magnesium carbonate. Their deposits form limestone. Cf. *coccolith.* **c. sinter.** Travertine, onyx. A tufa, or the deposits of calcium carbonate formed by the evaporation of hard waters or mineral waters containing calcium bicarbonate.

calcariuria. The abnormal elimination of calcium salts in the urine.

calcemic dose. A dose of vitamin D equivalent to 50,000–1,000,000 I.U. per day which promotes mobilisation of calcium from the skeleton and its subsequent secretion; as distinct from the antirachitic dose of 700–1000 I.U. per day.

calcic. Pertaining to calcium.

calcification. Hardening due to formation of calcium salts, *e.g.*, as of tissues.

calciferol. See *vitamin.*

calcii. The official Latin genitive of calcium.

calcimeter. An apparatus for the determination of carbonates by liberating CO_2 with acid and absorbing it in alkali.

calcination. Roasting. The formation of oxides by heating oxy salts; *e.g.*, CaO from $CaCO_3$, FeO from $FeSO_4$, or any process of expelling the volatile portions of a substance by heat, usually without access of air. Cf. *roasting.*

calcined. Heated to a high temperature. **c. phosphate.** A fertilizer obtained by roasting finely-ground phosphate rock with potassium salts.

calcinol. Calcium iodate.

calcioferrite. A phosphate of iron found in sedimentary beds of limonite.

calciovolborthite. A native copper and calcium vanadate.

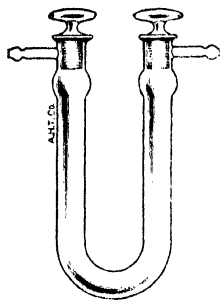
calcite. $CaCO_3$. Calcspar. A hexagonal, normally colorless, rock-forming mineral, d.2.72, hardness 3. The crystalline species are iceland spar (birefringent), corn spar, and satin spar, while the amorphous varieties include chalk, marble, limestone, stalactite, baryte; spongy as mountain milk; flake like as schiefer spar. **baryto-** Alstonite. **chloro-** Hydrophilite.

calcitization. The conversion of marble to calcite; *e.g.*, at Marble Delta (Natal).

calcium. Ca = 40.08. An element of the magnesium family, atomic number 20. A white, crystalline metal, d.1.415, m.810, soluble in water forming the hydroxide and readily dissolved in acids forming salts. It is widely distributed in nature, and next to aluminum and iron, the most abundant metal. It is found in large quantities as carbonate (limestone, marble, chalk, aragonite, calcite, iceland spar, etc.), sulfate (gypsum), fluoride (fluorspar), phosphate (apatite), and as complex silicates (feldspar, amphiboles, pyroxenes, etc.). Its compounds are not poisonous, and many of its salts are strongly ionized. It is essential to life and man's daily requirement of 0.7 gm. should be supplied by milk (1.5 lbs.) or cheese (0.25 lb.), as no other foods contain it in sufficient quantities. It was isolated by Davy in 1808 by electrolysis. Metallic calcium is made by electrolysing a fused mixture of fluorspar and calcium chloride. Calcium is divalent, and forms only one series of compounds. Metallic calcium is used in organic synthesis, as a deoxidizer in alloys, in the preparation of metals, as reducing agent, as a purifier for argon in rectifiers and, with lead, as antifriction alloys. Many of its compounds are of great economic importance.

c. acetate. $Ca(OOCMe)_2.H_2O$ = 176.1. White crystalline needles, or amorphous white powder decomp. on heating, soluble in water or alcohol. Used in the manufacture of acetic acid and acetone, and in the dye-industry. **c. albuminate.** A compound of calcium and albumin. A light-brown, granulated mass, slightly soluble in water; used as an alterant and nutrient. **c. arsenate.** $Ca_3(AsO_4)_2$ = 398.0. Tricalcium-orthoarsenate. Normal c. arsenate. A white powder; slightly soluble in water, soluble in acids. Used as an insecticide spray

for trees and shrubs. c. **arsenite.** $Ca_3(AsO_3)_2$ = 366.0. A white granular powder, slightly soluble in water. c. **behenate.** $Ca(C_{22}H_{43}O_2)_2$ = 718.6. A colorless crystalline power. (**dibrom-**) Sabromin. (**monoiodo-**) Sajodin. c. **benzoate** $Ca(C_7H_5O_2)_2.3H_2O$ = 336.3. A colorless crystalline powder; d.1.436, soluble in water; used as an alterant and antiseptic. c. **biarsenate.** $CaH_4(AsO_4)_2$ = 322.1. A white powder, slightly soluble in water; used as an insecticide and spray; *e.g.* to exterminate cotton-boll weevil. c. **bichromate.** $CaCr_2O_7$ = 256.1. Reddish-brown hygroscopic crystals, soluble in water. c. **bimalate.** $CaH_2(C_4H_4O_5)_2.6H_2O$ = 408.2. A white powder, sparingly soluble in water. c. **biphosphate.** See *c. phosphate.* c. **bisulfite.** $Ca(HSO_3)_2$ = 202.8. An aqueous solution of this salt is used as an antiseptic and disinfectant, and medicinally, as a gargle or spray; also in breweries, to prevent fermentation. c. **bitartrate.** $CaH_2(C_4H_4O_6)_2$ = 338.1. White crystals, soluble in hot water. c. **borate.** $Ca(BO_2)_2.2H_2O$ = 161.7. White crystals, soluble in hot water or in dilute acids. It is an antiseptic and astringent. c. **borocitrate.** A white powder, slightly soluble in water, soluble in dilute acids. c. **bromide.** $CaBr_2$ = 199.9. White granular powder or needles, $d_{20°}$3.354, m.760, b.809; soluble in water or alcohol. It is a sedative, nervine, and substitute for potassium bromide, and is used in photography. (cryst.) $CaBr_2.6H_2O$ = 308.1. White needles, d.3.32, m.38, b.150, very soluble in water or alcohol. c. **bromiodide.** $CaBr_2.CaI_2$ = 493.6. A yellow powder, soluble in water; used as a sedative and alterant. c. **butyrate.** $Ca(C_4H_7O_2)_2.H_2O$ = 232.2. Colorless crystals, soluble in water. c. **cacodylate.** $Ca(Me_2AsO_2)_2.H_2O$ = 332.1. A white powder, soluble in water; used in hypodermic medication. c. **carbide.** CaC_2 = 64.0. A gray, crystalline, granular mass, $d_{18°}$2.22, decomp. in water, soluble in alcohol. Used in preparing acetylene gas for illumination or blast flames, and for bicycle and miner's lamps. Cf. *acetylith.* c. **carbonate.** $CaCO_3$ = 100.0. A rock-forming substance (calcite, q.v.), widely distributed; occurs in rhombohedric or rhombic white crystals, or as an amorphous fine white powder, d.2.7–2.949, decomp. at 825; insoluble in water, soluble in acids. Used medicinally as an antiacid, and as a constituent of tooth-paste, white paint, calsomine, cleaning powder, paper filler, and for the preparation of carbon dioxide. (γ-) Vaterite. c. **chinate.** C. quinate. c. **chinovate.** A compound of calcium and chinovose. A white or yellowish powder, soluble in alcohol; used as a tonic in malaria. c. **chlorate.** $Ca(ClO_3)_2.2H_2O$ = 242.9. White monoclinic crystals, decomp. by heat, soluble in water or alcohol. Used in photography, pyrotechnics, in manufacturing soda water, and as a dusting powder to kill poison ivy and poison oak. c. **chlorhydrophosphate.** C. chlorphosphate. c. **chlorhydrosulfate.** C. chlorsulfate. c. **chloride.** $CaCl_2$ = 111.1. A white, granular, deliquescent powder, $d_{20°}$2.152, m.774°C, soluble in water or alcohol. It is used as a drying agent in desiccators, for raising the boiling point of solutions, in preserving meat, in freezing mixtures, in preserving stones, for impregnating textiles to make them less inflammable, as a dust preventor on roads (halophilite), and in the manufacture of hydrochloric acid, alizarin, and sugars. (**ammonia-**) The unstable compound $CaCl_2.8NH_3$. (**cryst.**) $CaCl_2.6H_2O$ = 219.1. $CaCl_2.2H_2O$ also exists. Colorless, hexagonal crystals, d.1.654, m.29.5, b.130; very soluble in water or alcohol. Used medicinally in pruritus, and prurigo, and to stop external or internal bleeding; also in breweries and soda-water manufacture. (**fused-**) Calcium chloride. (**c. tube**) A glass tube or glass vessel filled with calcium chloride and used for drying gases or for the qualitative or quantitative absorption of water. c. **chlorophosphate.** C. chlorhydrophosphate. A yellow powder, soluble in water. An aqueous solution containing 25% of the salt, d.1.225, is used as a tonic and alterant. c. **chlorosulfate.** Calcium chlorhydrosulfate. A white powder, almost insoluble in water. c. **chromate.** $CaCrO_4.2H_2O$ = 192.2. A yellow crystalline powder, slightly soluble in water, soluble in alcohol or acids. c. **cinnamate,** or c. **cinnamylate.** $Ca(C_9H_7O_2)_2.3H_2O$ = 388.25. White crystals, soluble in hot water. c. **citrate.** $Ca_3(C_6H_5O_7)_2.4H_2O$ = 570.31. White crystals, slightly soluble in water. c. **cyanamide.** $CaCN_2$ = 80.1. A white or grayish powder, decomp. by water; an intermediate in the fixation of atmospheric nitrogen. Used as catalyst in the manufacture of NH_3. See *cyanamid, nitrolim.* c. **cyanide.** $Ca(CN)_2$ = 92.1. Calcyanide, "powdered cyanic acid." Colorless, regular crystals, or a fine white powder, decomp. in moist air or water, and forms cyanic acid. Used in fumigation. c. **dibrombehenate.** Sabromin. c. **ethylsulfate.** $Ca(EtSO_4)_2.H_2O$ = 308.33. C. sulfovinate. White crystals, soluble in water, slightly soluble in alcohol. c. **ferricyanide.** $Ca_3[Fe(CN)_6]_2.H_2O$ = 562.4. Red deliquescent needles, soluble in water. c. **ferrocyanide.** $Ca_2Fe(CN)_6$ = 292.2. Yellow crystals, soluble in water. c. **ferrophospho-lactate.** A white powder, soluble in hot water; used medicinally in making syrups. c. **fluoride.** (1) CaF_2 = 154.07. Colorless regular crystals, d.3.18, m.1378; sparingly soluble in water, soluble in water containing carbon dioxide, decomp. by acids. Used for etching glass, in the preparation of enamels, and in the manufacture of hydrofluoric acid. (2) Fluorite. c. **fluosilicate.** $CaSiF_6.2H_2O$ = 218.17. C. silicofluoride. Hexagonal crystals, d.2.254, slightly soluble in water. c. **formate.** $Ca(OOCH)_2$ = 130.0. A white crystalline powder, d.2.015, soluble in water. c. **fumarate.** $CaC_4H_2O_4.3H_2O$ = 208.14. Rhombic, white crystals, soluble in water. c. **gluconate.** $(C_5H_{11}O_5COO)_2Ca.H_2O$ = 448.3. The calcium salt of gluconic acid. A white, odorless powder, soluble in water, insoluble in alcohol; used in calcium therapy. c. **glycerinate.** $Ca(C_3H_5O_4)_2.2H_2O$ = 286.20. A white powder, is soluble in water. c. **glyceroborate.** A colorless crystalline crust, used as an antiseptic, and preservative. c. **glycerophosphate.** $CaPO_4C_3$-



Calcium chloride tube.

$H_8(OH)_2.2H_2O$ = 246.18. Neurosin. A white crystalline powder, soluble in water; used as a nervine tonic. **c. glycollate.** $Ca(C_2H_3O_3)_2.H_2O$ = 208.1. White crystals, slightly soluble in water. **c. hippurate.** $Ca(C_9H_8O_3N)_2$ = 396.1. A white crystalline powder, slightly soluble in water; used as an antarthritic and alterant. **c. hydride.** CaH_2 = 42.0. Hydrolith. A colorless amorphous powder; insoluble in water. Used in organic synthesis. **c. hydroxide.** $Ca(OH)_2$ = 74.1. Hydrated lime, slaked lime, white hexagonal crystals or powder, d.2.078, decomp. on heating; slightly soluble in water, soluble in ammonium chloride solution or alkalis. Used in making lime water and mortar. **c. hypochlorite.** $Ca(OCl)_2.4H_2O$ = 215, or $CaOCl_2.xH_2O$. A white powder of variable composition, used as an antiseptic and disinfectant, or as a bleaching and deodorizing agent, as an oxidizing agent, and for the preparation of chlorine. Cf. *bleaching powder.* **c. hypophosphate.** $Ca(H_2PO_2)_2$ = 170.2. Monoclinic white or grayish crystals, decomp. at red heat and soluble in water. Used medicinally in phthisis and nutritive disturbances. **c. hyposulfite.** See (1) *c. bisulfite* or (2) *c. thiosulfate.* **c. iodate.** $Ca(IO_3)_2.6H_2O$ = 498.8. Calcinol. White rhombic prisms, decomp. on heating; slightly soluble in water, insoluble in alcohol; used as an external and internal antiseptic, and as a substitute for iodoform. **c. iodide.** CaI_2 = 293.9. A yellowish-white powder, $d_{25°}$.3.956; m.631, b.712, soluble in water or alcohol; used medicinally in syphilis, and as a substitute for potassium iodide. (cryst.) $CaI_2.6H_2O$ = 402.0. Colorless plates or scales, m.42, b.160; very soluble in water. Used in photography. **c. isobutyrate.** $Ca(C_4H_7O_2)_2.5H_2O$ = 304.1. Colorless, monoclinic needles, soluble in water. **c. lactate.** $Ca(C_3H_5O_3)_2.5H_2O$ = 308.3. White crystalline masses soluble in water; used medicinally for rachitis and scrofula. **c. lime.** Quicklime containing 75 % or less of CaO. **c. linoleate.** $Ca(C_{18}H_{31}O_2)_2$ = 598.56. White amorphous powder, insoluble in water, soluble in alcohol or ether. **c. loretinate.** A white powder, used in manufacturing antiseptic gauze. **c. magnesium phosphate.** A mixture of calcium and magnesium phosphates. A white powder, insoluble in water. **c. malate.** $CaC_4H_4O_5$. (1) *active-* $2H_2O$ = 208.14. (2) *racemic-* $3H_2O$ = 226.16. Rhombic, colorless crystals, slightly soluble in water. **c. maleate.** $CaC_4H_2O_4$ = 172.11. Rhombic, colorless crystals, soluble in water. **c. malonate.** $CaC_3H_2O_4.4H_2O$ = 214.16. White powder, insoluble in water. **c. manganite.** CaO,MnO_2 = 143.02. Formed in solution in the Weldon process (q.v.). **c. meconate.** $CaC_7H_2O_7.H_2O$ = 256.12. A yellowish-white powder, sparingly soluble in water. **c. metabisulfite.** C. bisulfite. **c. metaphosphate.** C. phosphate (2). **c. methylsulfate** $Ca(MeSO_4)_2$ = 262.0. White crystals, soluble in water. **c. minerals.** Calcium is one of the most abundant metals and an essential constituent of many rocks, *e.g.*,

limestone, calcite, q.v.	$CaCO_3$
gypsum	$CaSO_4$
fluorspar	CaF_2
apatite	$3\,Ca_3(PO_4)_2, CaF_2$

c. monoiodo behenate. Sajodin. **c. monophosphate.** See *c. phosphate* (3). **c. nitrate.** $Ca(NO_3)_2$ = 164.1, or $Ca(NO_3)_2.4H_2O$ = 236.1. Colorless monoclinic crystals, $d_{15°}$.1.9, m.43, b.132; very soluble in water, slightly soluble in alcohol; used as a fertilizer (Norge niter, Norway saltpeter), and in explosives. Cf. Baldwin's *phosphorus.* **c. nitride.** Ca_3N_2 = 148.0. A brown mass, d.2.63, m.900, decomp. in water. **c. nitrite.** $Ca(NO_2)_2$ = 132.1. Colorless hexagonal prisms, very soluble in water, slightly soluble in alcohol. **c. oleate.** $Ca(C_{18}H_{33}O_2)_2$ = 602.6. A yellowish granular powder, soluble in alcohol or ether. **c. oxalate.** $CaC_2O_4.H_2O$ = 146.0, or $Ca(OOC)_2$ = 128.0. A white amorphous powder or micro-crystalline mass, d.2.2, insoluble in water, and soluble in acids. See *raphides.* **c. oxide** CaO = 56.0. Lime, burnt lime, quick lime, caustic lime, calx. White masses, $d_{5°}$.3.306, m.1995; sparingly soluble in water (lime water), soluble in acids. Used as a reagent, and medicinally as an antiacid and mild caustic. Commercial grades are used in mortar, and for causticising soda ash. **c. oxychloride.** $CaOCl_2$ Bleaching powder. **c. oxysulfide.** CaO.CaS = 128.0. A yellow powder, used in aqueous solution for skin diseases. **c. palmitate.** $Ca(C_{16}H_{31}O_2)_2$ = 550.6. Yellow white crystals, insoluble in water, soluble in alcohol. **c. permanganate.** $Ca(MnO_4)_2.4H_2O$ = 330.0. Acerdol. Purple hygroscopic prisms decomp. on heating; soluble in water. It is an antiseptic and disinfectant; used in dentistry and in disinfecting drinking water. **c. peroxide.** CaO_2 = 72.0. A light cream-colored, odorless, tasteless powder, decomp. in water. Used as an antiacid, detergent, antiferment, bactericide and antiseptic. **c. phenate.** $Ca(OPh)_2$ = 226.1. C. carbolate, c. phenylate, c. phenolate. A pinkish powder, slightly soluble in water or alcohol; used as an antiseptic. **c. phenolsulfonate.** $Ca(SO_2C_6H_4OH)_2$ = 354.4. C. sulfophenate, c. sulfocarbolate. A white or faintly pink powder; soluble in water or alcohol; used as an intestinal antiseptic. **c. phosphate.** There are:

$CaHPO_4$	= dicalcium phosphate.
$Ca(PO_3)_2$	= calcium metaphosphate.
$CaH_4(PO_4)_2$	= monocalcium phosphate as salts of phosphoric acid.
$Ca_2P_2O_7$	= calcium pyrophosphate.
$Ca_3(PO_4)_2$	= tricalcium phosphate.

The two last differ from calcium phosphite, being the salts of $H_4P_2O_7$ and HPO_3, respectively. The naturally occurring phosphates and their mean indices of refraction, are:

Monetite....$2CaO.P_2O_5.H_2O$	1.518
Brushite....$2CaO.P_2O_5.5H_2O$	1.545
Martinite...$5CaO.2P_2O_5.1\frac{1}{2}H_2O$	1.606
Isoclasite....$4CaO.P_2O_5.5H_2O$	1.568
Fluorapatite.$CaF_2.9CaO.3P_2O_5$	1.633
Chlorapatite.$CaCl_2.9CaO.3P_2O_5$	1.667
Podolite....$CaCO_3.9CaO.3P_2O_5$	1.635
Dahllite.....$CaCO_3.6CaO.2P_2O_5$	1.633
Trancolite...$CaCO_3.CaF_2.9CaO.3P_2O_5.H_2O$	1.625

(1) $CaHPO_4.2H_2O$ = 172.1 (**di-**), secondary-dibasic-, diacid-. Colorless monoclinic plates, $d_{15°}$.2.3; slightly soluble in water, soluble in ammonium citrate solution or acids; used medicinally in rachitis and in dentistry. (2) $Ca(PO_3)_2$ = 198.0. (**meta-**) A white powder, insoluble in water, or acids. (3) $CaH_4(PO_4)_2.H_2O$ = 252.1. (**mono-**), primary-, acid-. Colorless rhombic crystals, $d_{4°}$.2.0, becoming an-

hydrous on heating; very soluble in water, soluble in acids. Used in baking powders. (4) $Ca_2P_2O_7.4H_2O$ = 328.3. (pyro-) Colorless crystals; slightly soluble in water, soluble in acids. (5) $Ca_3(PO_4)_2.H_2O$ = 328.3. (tri-), normal-, tertiary-, neutral-, tribasic-. A white powder, d.3.48; insoluble in water or alcohol, soluble in acids. Used medicinally as a food for bone tissues, and in the manufacture of enamels, opaque glass, cleansing agents, and phosphorus. **c. phosphide.** (1) Ca_2P_2 = 142.0. A gray granular mass, decomp. in water to form inflammable phosphine. Used in torpedoes and in chemical warfare. (2) Ca_3P_2 = 182.27. Tricalcium diphosphide. Yields non-inflammable phosphine in water. **c. phosphite.** $2CaHPO_3.3H_2O$. White crystals, slightly soluble in water, decomp. on heating forming PH_3. **c. phthalate.** $CaC_8H_4O_4.H_2O$ = 222.1. Colorless prisms, soluble in water. **c. plumbate.** $Ca(PbO_3)_2$ or Ca_2PbO_4 = 350.9. A brown or orange crystalline powder, insoluble in cold water, decomp. by CO_2 or hot water, and soluble in acids. Used in the chemical industry as an oxidizing agent, in accumulators, in pyrotechnics as a substitute for potassium chlorate, and in the manufacture of glass and matches. **c. plumbite.** $CaPbO_2$ = 278.9. Colorless crystals, slightly soluble in water. **c. propionate.** $Ca(C_3H_5O_2)_2$ = 186.1. A white powder, soluble in water. **c. pyrophosphate.** See *c. phosphate* (4). **c. quinate** $CaC_{14}H_{22}O_{12}$ = 426.24. C. chinate, $[C_6H_7(OH)_4COO]_2Ca$. **c. rhodanide.** C. thiocyanate. **c. saccharate.** Antacedin. Colorless scales, soluble in water; used medicinally as an antiacid. **c. salicylate.** $Ca(OOC.C_6H_4.OH)_2.2H_2O$ = 350.20. Colorless crystals, slightly soluble in water, soluble in carbonated water or acids. **c. santoninate.** $Ca(C_{15}H_{19}O_4)_2$ = 566.39. A white crystalline powder, sparingly soluble in water; used as an anthelminthic. **c. selenate.** $CaSeO_4$ = 183.1. White crystals, sparingly soluble in water. **c. selenite.** $CaSeO_3.2H_2O$ = 219.30. A white powder, soluble in water. **c. silicate** $CaSiO_3$ = 116.17. Okonite. A white amorphous mass, insoluble in water or acids. **c. silicofluoride.** Lapis albus. **c. silicotitanite.** Sphene. **c. stearate** $Ca(C_{18}H_{35}O_2)_2$ = 606.6. A white granular powder, insoluble in water, soluble in alcohol. **c. suberate.** $[(CH_2)_6COO]_2Ca$. The c. salt of suberic acid; it yields suberone on heating. **c. succinate.** $CaC_4H_4O_4.H_2O$ = 174.1. White crystals, soluble in water. **c. sulfate.** (1) *anhydrite.* $CaSO_4$ = 136.1. White rhombic crystals, d.2.96, m.1360; insoluble in water, soluble in ammonium salts, sodium thiosulfate and sodium chloride solutions, and acids. Used as desiccant and absorbent, for drying gases and in air conditioning. (2) *sesquihydrate-* $CaSO_4.\frac{1}{2}H_2O$ = 145.1. (**Plaster of paris.**) A white powder containing 5 % water made by heating gypsum to 120–130°C. It quickly solidifies when mixed with water, and is used for castings and taking moulds of objects, for architectural and art molding, ceramics and metal casting. (3) *dihydrate.* $CaSO_4.2H_2O$ = 172.1. (**Gypsum.**) White monoclinic crystals, d.2.32. Used as a filler in paper (pearl hardening, mineral white), in making artificial ivory, as pigment, in fertilisers, as a retarder in Portland cement and as a cleaning agent. **c. sulfide** CaS = 72.1. Hepar calcis, sulfurated lime. A white, grayish, or yellowish powder, d_{15}°.2.8, used for luminous paints. **c. sulfite.** $CaSO_3.2H_2O$ = 156.16. A white powder soluble in dilute H_2SO_3. Used as a disinfectant in breweries, as an antichlor in bleaching, and in manufacturing cellulose from wood. **c. sulfocarbolate.** C. phenolsulfonate. **c. sulfocyanide.** C. thiocyanate. **c. superoxide.** C. peroxide. **c. tannate.** A yellowish-gray powder, insoluble in water, soluble in dilute acids. **c. tartrate.** $CaC_4H_4O_6.4H_2O$ = 260.2. A white powder, sparingly soluble in water. **c. thiocyanate.** $Ca(CNS)_2$ = 156.0. C. rhodanide. A white crystalline powder, soluble in water; used in analysis to dissolve silk from mixed textiles, and in medicine as vasodilator. **c. thiosulfate** $CaS_2O_3.6H_2O$ = 260.1. White rhombic crystals, d.1.87, decomp. in water and when heated. **c. tungstate** $CaWO_4$ = 288.0. C. wolframate, artificial scheelite. Shining tetragonal scales or white powder, insoluble in water; used in luminous pigments and in X-ray screens. **c. urate.** $Ca(C_5H_3O_3N_4)_2$ = 374.22. A white powder, sparingly soluble in water. **c. valerate.** $Ca(C_5H_9O_2)_2.3H_2O$ = 296.28. A white crystalline powder, soluble in water and used as a sedative. **c. wolframate.** C. tungstate.

calcothar. Colcothar.

calcspar. Calcite.

calculator. A device for rapid mathematical calculation. See *nomogram.*

calculus. (1) The abnormal deposition of mineral salts; as, a stone-like concretion in an animal organism.

biliary- Gallstones. Solid deposits occurring either as (a) **cholesterol-**, consisting of cholesterol; (b) **pigment-**, consisting of bile pigments, bilirubin, and calcium salts; (c) **inorganic-**, consisting of carbonates and phosphates of calcium.

urinary- Urine concretions or concremets. Solid masses of urinary sediment formed in the urinary tract. (a) **uric acid-**, consist of uric acid and urates from pale yellow to brownish-red in color; (b) **phosphate-** consist of the triple phosphates, which are white, gray or yellowish; (c) **oxalate-** consist of calcium oxalate crystals.

(2) The mathematical laws of continuously varying quantities, which can be graphically expressed in curves. Cf. *diagram.*

calcyanide. Calcium cyanide.

Caldwell crucible. An opaque, fused, silica crucible having an open bottom with a flange to hold a platinum or porcelain disc.

caledon. A trade name for anthraquinone vat dyestuffs.

caledonite. A native basic lead and copper sulfate.

calefacient. A drug which is externally applied to induce a sense of warmth.

calender. A machine which presses moist cloth, paper, etc., between heavy rollers, and thus glazes its surface.

calendula. Marigold. The flowering tops of *Calendula officinalis,* Compositae; used as a tincture, as a stimulant.

calendulin. An amorphous substance from calendula.

caleometer. An electrical instrument which measures the heat loss of a coil of wire at constant temperature.

calglucon. Calcium gluconate.

calgon. Trade-mark for a sodium phosphate glass containing approximately 67 % P_2O_5.

caliber, calibre. The inside diameter or bore of a tube.

calibration. (1) The graduation of a measuring instrument; (2) the determination of its error.

caliche. Chile saltpeter. A crude sodium nitrate found in the deserts of Atacama and Tarapaca (Northern Chile). It contains 20 to 50 per cent of sodium nitrate with sodium iodate.

californite. A massive variety of vesuvianite, resembling jade.

calipers. A device for measuring the diameter of a tube. **micrometer-** An instrument for measuring with an accuracy up to $\frac{1}{100}$ mm. **vernier-** A steel instrument for determining the inside or outside diameter of a tube.

calisaya. Cinchona.

callainite. Turquoise.

callaite. Turquoise.

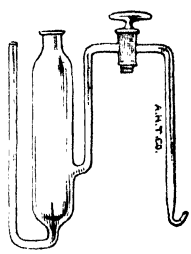
calliandrein. A glucoside from *Calliandra grandiflora*, a Leguminosae. A white, odorless, powder resembling saponin; used as an antipyretic.

callicrein. A circulatory hormone from the pancreas, not yet isolated.

callitrol. The alkali-soluble fraction, b_{6mm}.118, from the wood oil of *Callitris glauca*, an Australian cypress yielding sandarac. It contains chiefly *d*-citronellic acid.

callitrolic acid. $C_{64}H_{82}O_5(OH)COOH$. A resinous acid in sandarac.

callophane. A portable instrument for fluorescence analysis, q.v., which utilizes daylight as the source of ultraviolet light.



Calomel electrode (Hildebrand).

calmine. Barbital sodium.

calnitro. A fertilizer made from NH_4NO_3 and $CaCO_3$ containing 16–20 % N.

calomel. (1) A native mercurous chloride of secondary origin. (2) Mercurous chloride (pharmaceutical). **c. electrode.** A standard half-cell or electrode for measuring an e.m.f. The potential is that of mercury and calomel in contact with a solution of potassium chloride.

POTENTIALS OF STANDARD CALOMEL ELECTRODES (20°C)

Saturated potassium chloride.....	0.2492 volt
M/1 potassium chloride.....	0.2860
M/10 potassium chloride.....	0.3379

calorgas. A mixture of hydrocarbons, e.g. C_4H_{10}, compressed in cylinders for heating and lighting purposes (heating value is 21,000 B.Th.U. per pound). It is a by-product of coal hydrogenation.

caloric. The alchemical term for fire, which was supposed to possess weight.

calorie. A unit of quantity of heat. The heat required to raise the temperature of 1 gram of water from t° to (t + 1)°C. Hence the 15° cal., the 20° cal. etc., where t = 15, 20 etc. **gram-** Small c. **great-** Large c. **kilo-** Large c. **large-** *Cal.* or kilogram-calorie. The heat required to raise the temperature of 1 kg. water from 14.5° to 15.5°C.

1 Cal. = 1000 cal. = 1000 gram-cal.

mean- The $\frac{1}{100}$ part of the heat required to raise one gram water from 0°C to 100°C at atmospheric pressure. **micro-** Small c. **small-** *cal.* or gram-calorie, therm. The quantity of heat required to heat one gram water from 14.5°C to 15.5°C.

At 18°C, 1 cal. = 1 therm. = 0.001 Cal. = 4.183 Joules = 4.181×10^7 ergs = 3.086 foot pounds = 0.426 kg. meters = 1.162×10^{-6} kilowatt-hours = 0.003968 B.Th.U.

calorifacient. A substance which produces warmth in the animal organism.

calorific. Carrying or holding warmth. **c. value.** (1) Technical: the number of large calories obtained by the combustion of fuels or gases. (2) Physiological: The number of small calories derived from foods or the daily diet.

calorimeter. An instrument for measuring the amount of heat liberated or absorbed. **adiabatic-** A c. kept at constant temperature. **bomb-** A c. in the form of an enclosed steel bomb; used for determination of the calorific power of fuels. **Emerson-** A c. for determining the heat value of fuels. **Féry-** A c. for determining the heat value of foods. Cf. *colorimeter.*

calorimetric. Pertaining to measuring heat quantities. Cf. *colorimetric.*

calorimetry. The measurement of heat. Cf. *colorimetry.*

caloriscope. A device for demonstrating the release of heat in the respiration of an organism.

caloritropic. Thermotropic.

calorizing. A process similar to sherardizing (q.v.), used for the production of aluminum coatings.

calotropin. A glucoside from *Calotropis procera*, an Asclepiadaceae which has a digitalis like action; used by natives in arrow poisons. Cf. *akundarol.*

calumba. Columba. The root of *Jateorhiza calumba* (*J. palmata*), a Menispermaceae of East Africa. It is a bitter stomachic tonic. **American c.** Fraserin.

calumbic acid. Colombic acid. An acid principle from calumba. Cf. *columbic acid.*

calumbin. $C_{28}H_{30}O_2$ = 398.23. Columbin. A glucoside from calumba. Yellow crystals, m.182, slightly soluble in water, soluble in alcohol; used as bitter tonic.

calx. (1) Latin for lime or calcium oxide. (2) The alchemical name for an oxide or dross.

calycanthine. $C_{11}H_{14}N_2.\frac{1}{2}H_2O$ = 183.2. An alkaloid from *Calycanthus fertilis* or Carolina allspice.

calyxanthine. Calycanthine.

cambium. A layer of growing tissue between the wood and bast of a tree.

cambogia. Gamboge.

cambopinic acid. $C_{11}H_{18}O_2$ = 182.14. A crystalline acid from the resin of *Pinus cambodgiana.*

camel's hair brush. A small brush used in quantitative analysis for transferring precipitates; in microscopy for smoothing out tissues on slides.

camelina. The plant *C. satina*, a Cruciferae of the Mediterranean area which yields an oil, oil cake and fiber.

camellin. $C_{53}H_{84}O_{19}$ = 1024.81. A glucoside from the seeds of *Camellia japonica*, a Theaceae. A reddish, bitter powder, soluble in water; used as a cardiac stimulant.

camenthol. A mixture of camphor and menthol, used for inhalation.

camera. (1) A light-proof box, compartment, or chamber. (2) An optical device for taking photographs. **ciné-** A c. to take many individual exposures per second: as,

ordinary.....	16 pictures p. sec.
ultrarapid.....	128 pictures p. sec.
chronoteine, q.v.....	3200 pictures p. sec.

stereoscopic- A photographic camera for taking two pictures at a slightly different angle simultaneously, thus bringing out the depths or perspective of a scene. Cf. *binocular.*

camera-lucida. A prism-attachment fastened to the eye-piece of a microscope, which throws the image of the object in the field of the microscope on to drawing paper affixed to the table beside the artist, who then traces it.

camomile. See *anthemis, calendula, chamomile, matricaria.*

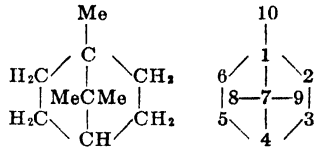
camouflet. A space formed by an underground explosion, and usually containing carbon monoxide.

Camp colorimeter. A pair of graduated glass tubes for comparing the colors of a standard and unknown solution, used in the determination of manganese in steel. Cf. *colorimeter.* **C. tube.** A glass cylinder for the absorption of gases.

Campden tablets. A domestic preservative, containing sodium or potassium metabisulfite. One tablet dissolved in 275 c.c. of water produces an approximately 0.1 % solution of SO_2.

campeachy wood. Logwood.

camphane. $C_{10}H_{18}$ = 138.2 1,7,7-trimethyl-norcamphane. The terpene hydrocarbon:



White crystals, m.154, sublime at 160; soluble in alcohol. **2-amino-** Bornyl amine. **2-chloro-** Bornyl chloride. **2.3-dihydroxy-** Camphene glycol. **2-hydroxy-** Borneol. **3-hydroxy-** Epiborneol. **4-hydroxy-** Isoborneol. **2-keto-** Camphor. **3-keto-** Epicamphor.

c. carboxylic acid. Camphocarboxylic acid.

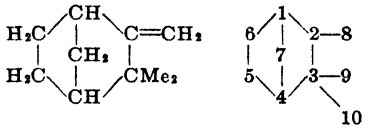
camphanic acid. $C_{10}H_{14}O_4$ = 198.11. The lactone of α-hydroxy camphoric acid. Colorless crystals, m.201.

camphanol. 2- Borneol. **3-** Epiborneol. **4-** Isoborneol.

camphanone. 2- Camphor. **3-** Epicamphor.

camphanyl. The monovalent group $C_{10}H_{17}$—, derived from camphane.

camphene. $C_{10}H_{16}$ = 136.17. 3,3-dimethyl-2-methylene-norcamphane. The terpene hydrocarbon:



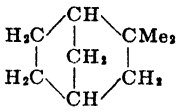
It occurs in three isomeric forms: (a) **l-*Inactive-c.*** Colorless, fine needles, m.47, b.157; insoluble in water, soluble in alcohol or ether. (b) **d-*Dextro-c.*** Colorless needles, m.51, b.159; soluble in alcohol or ether. (c) **l-*Levo-c.*** Colorless needles, m.52, b.159; soluble in alcohol or ether. **chloro-** See *chlorocamphene.* **sesqui-** See *sesquicamphene.* **8-Δ1-pentenyl-** Sesquicamphene.

c. camphonic acid. Camphoric acid.

c. glycol. $C_{10}H_{18}O_2$ = 170.15, 2.3-dihydroxy-camphane.

camphenic acid. $C_{10}H_{16}O_4$ = 199.1. 3-carboxy-α-α-dimethylcyclopentane-acetic acid.

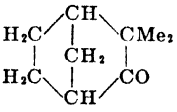
camphenilane. C_9H_{16} = 124.2. 2.2-dimethyl-norcamphane. The hydrocarbon:



camphenilene. The monovalent radical, C_9H_{15}—, derived from camphenilane.

camphenilidene. The bivalent radical, C_9H_{14}=, derived from camphenilane.

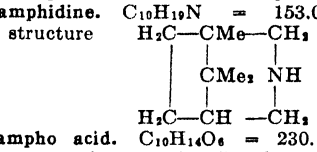
camphenilone. $C_9H_{14}O$ = 138.17. 3-keto-camphanilane. The heterocyclic compound:



l-methyl- Camphenone.

camphenone. $C_{10}H_{16}O$ = 150.11. 1-methyl-camphenilone. Colorless crystals, m.168.

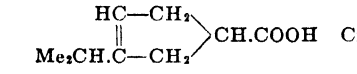
camphidine. $C_{10}H_{19}N$ = 153.08. The ring structure



campho acid. $C_{10}H_{14}O_4$ = 230.11. Carboxyl-apocamphoric acid. Colorless crystals, m.196.

camphocarboxylic acid. $C_{11}H_{16}O_3$ = 196.2. 2-keto-3-carboxy-camphane. Colorless crystals, soluble in water.

camphoceenic acid. $C_9H_{14}O_2$ = 154.1. 3-isopropyl-Δ^3-cyclopentene carboxylic acid.



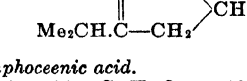
Cf. *campholene.*

camphogen. Cymene.

camphol. Borneol.

campholactone. $C_9H_{14}O_2$ = 154.1. Colorless crystals, m.50.

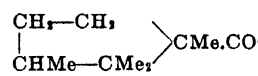
campholene. C_9H_{14} = 110.1. *3*-Isopropyl-Δ^3-cyclopentene. The pentacyclic hydrocarbon:



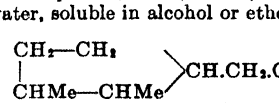
Cf. *camphoceenic acid.*

campholenic acid. $C_{10}H_{16}O_2$ = 168.2. A colorless liquid, d.0.992, b.256.

campholic acid. $C_{10}H_{18}O_2$ = 170.2. 1.2.2.3-tetramethyl cyclopentane carboxylic acid.



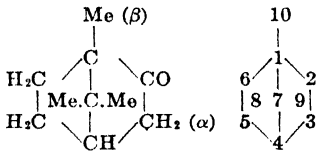
Colorless prisms, m.95, b.250; slightly soluble in water, soluble in alcohol or ether. **iso-**



campholide. $C_{10}H_{16}O_2$ = 168.2. White crystals, m.211.

camphonanic acid. $C_9H_{16}O_2$ = 156.2. 1.2.2-trimethyl cyclopentane carboxylic acid. Colorless crystals, soluble in alcohol.

camphor. (1) $C_{10}H_{16}O$ = 152.2. 2-ketocamphane, *d-2-keto-1.7.7*-trimethylnorcamphane, 2-camphanone, Japan camphor, laurel camphor. A stearoptene from the leaves of Laurus or *Cinnamomum camphora*, a small tree of Formosa, China, Japan and Malay Archipelago.



Synthetic and natural camphor occurs in large crystalline plates, easily broken when moistened with ether, d.0.879, m.175, b.204, $[\alpha]_D$ + 44°; soluble in alcohol or ether, insoluble in water. Used medicinally as an antispasmodic, stimulant, sedative, carminative, diaphoretic, antiseptic, and in large quantities in the cellulose industry, and as plasticizer for synthetic resins. Cf. *menthol, thymol.* (2) A group name for odorous principles of plants; see *camphors.* **alant-** Helenin. **amido-** $C_{10}H_{17}ON$ = 167.2. A colorless oily liquid. b.244. **anemone-** Anemonin. **anise-** Anethole. **artificial-.** Terpene monochlorhydrate. **asarum-** Asarone. **azo-** $C_{10}H_{16}N_2O$ = 180.2. Monoketazocamphor quinone. **beta-** Epicamphor. **betula-** Betulinol. **bitter almond-** Benzoin. **Borneo-** Borneol. **cantharides:** Cantharidin. **champaca-** Champacol. **cyan-** $C_{11}H_{15}ON$ = 177.2. White crystals, m.127. **cyanmethylene-** $C_{12}H_{15}ON$ = 189.2. Colorless crystals, m.46, b.280. **dextro-** Camphor. **diketo-** C. quinone. **elecampane-** Helenin. **epi-** Epicamphor. **iso-nitroso-** $C_{10}H_{15}O_2N$ = 181.12. Colorless crystals, m.153. **Japanese-** Camphor. **keto-** Camphorquinone. **laurel-** Camphor. **ledum-** Ledum camphor. **Malayan-** Borneol. **oxymethylene-** $C_{11}H_{16}O_2$ = 180.2. White crystals, m.77. **parsley-** Apiol. **peppermint-** Menthol. **pernitroso-** $C_{10}H_{16}O_2N_2$ = 197.2. White crystals, m.43. **pine-** Pinol. **pulsatilla-** Anemonin. **Sumatra-** Borneol. **tar-** Naphthalene. **Tonka-** Coumarin. **thyme-** Thymol.

c. chlorated. $C_{10}H_{15}OCl$ = 186.6. Monochlorated camphor. A yellow crystalline powder, m.106; soluble in alcohol or ether. Used as an antiseptic. **c. dibromated.** $C_{10}H_{14}OBr_2$ = 310.2. A yellowish-white crystalline powder, m.115; soluble in alcohol or ether. Used as an antiseptic. **c. imide.** See *camphorimide.* **c. monobromated.** $C_{10}H_{15}BrO$ = 231.2. Colorless crystals, m.76, b.274; soluble in alcohol or ether; used extensively in medicine as an antispasmodic, antineuralgic, and soporific in tablets, pills, or as solutions in oil. **c. oil.** The essential oil distilled from the leaves of *Cinnamomum camphora.* A colorless mobile liquid, d.0.87–1.04 of strong odor, used as an antiseptic and rubefacient. **c. wood oil.** The oil distilled from the branches. A yellow oil of strong odor, d.1.155, containing camphor, safrol, pinene, phellandrene, cadinene. Used as liniment for rheumatism, bruises and sprains. See *antimalum, camphorated oil.*

camphoramic acid. $C_{10}H_{16}NO_3$ = 198.13. Camphoramidic acid, camphoric acid-3-amide, $C_8H_{14}Me_2.(CONH_2).COOH$. White crystals, α- m.177, β- m.182.5, soluble in water.

camphoranic acid. $C_9H_{12}O_6$ = 216.1. Colorless crystals, m.209.

camphorated oil. Camphor liniment. A mixture of 1 pt. camphor and 4 parts cottonseed or olive oil. Used as rubefacient. Cf. *camphor wood oil.*

camphoric acid. $C_{10}H_{16}O_4$ = 200.2. cis-1.2.2-trimethyl-1.-3cyclopentane-dicarboxylic acid, $C_8H_{14}(COOH)_2$. A dibasic acid obtained by the oxidation of camphor. Colorless, odorless prisms, d.1.193; m.187, decomp. on further heating; soluble in 125 pts. cold or 10 pts. boiling water; slightly soluble in ether. **c. a. amide.** Camphoramic acid. **c. a. diamide.** $C_{10}H_{18}O_2N_2$ = 198.6. White crystals, m.197.

camphorimide. $C_{10}H_{15}O_2N$ = 181.2. Camphoric imide. Colorless crystals, m.248, b.300.

camphormethylene carboxylic acid. $C_{12}H_{16}O_3$ = 208.2. White crystals, m.101.

camphormethylimide. $C_{11}H_{17}O_2N$ = 195.2. White crystals, m.40.

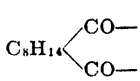
camphormethyl isoimide. $C_{11}H_{17}O_2N$ = 195.2. White crystals, m.134.

camphornitrilo acid. $C_{10}H_{15}O_2N$ = 181.2. Cyanlauronic acid. Colorless crystals, m.152.

camphoronic acid. $C_9H_{14}O_6$ = 218.1. α,α,β-trimethyl-carballylic acid, *2.3*-dimethyl-*1.2.3*-butanetricarboxylic acid*, $CH_2COOH.CMeCOOH.CMe_2COOH$. A tribasic acid formed by oxidation of camphoric acid; microcrystalline needles, m.135.

camphoroxime. $C_{10}H_{17}ON$ = 167.2. Colorless needles, m.118, b.249; insoluble in water, soluble in alcohol or ether.

camphoroyl. The bivalent radical, derived from



camphoric acid.

camphorquinone. $C_{10}H_{14}O_2$ = 166.2. 3-ketocamphor or 2,3-di-ketocamphane.

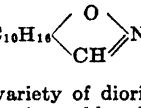
camphors. A group of solid and volatile substances (stearoptenes), derived from certain plants, and composed of the keto- or alcohol-derivatives of terpenes; generally the odoriferous principle of the plant. Cf. *terpenes.* Camphor, menthol, and thymol are official.

camphoryl. The monovalent radical, $C_{10}H_{15}O$—, derived from camphor. **c. hydroxylamine.** $C_{10}H_{15}O_2N$ = 197.1. Colorless crystals, m.225.

camphorylidene. The bivalent radical, $C_{10}H_{14}O$ =, derived from camphor.

camphyl. The bivalent radical, $C_{10}H_{16}$ =, derived from camphor. **c. alcohol.** Borneol. **c. amine.** $C_{10}H_{17}NH_2$ = 153.2. A solid, $d_{37°}$ 0.93, b.198.

camphylisoxazolone. $C_{11}H_{17}NO$ = 179.14. The compound,



camptonide. A variety of diorite.

camptonose. A variety of basalt.

camwood. A red dye wood from *Baphia nitida,* a Leguminosae of West Africa. Cf. *sandalwood, santalin.*

canada asbestos. Chrysotile. **c. balsam.** A turpentine-like balsam exuded from incisions in the bark of *Abies balsamea,* a conifer of Canada and Maine. It is a yellow liquid, with a pleasant odor and bitter taste, and dries in air to a

transparent resin. Hence its use to cement lenses together, to mount microscopic specimens, as a varnish, and in medicine. Its refractive index equals that of glass. **c. snakeroot.** Asarum. **c. turpentine.** The essential oil of *Pinus maritima*, a Conifer.

canadase. Anorthosite from Maine.

canadine. $C_{20}H_{21}O_4N$ = 339.17. *l*-Tetrahydroberberine. An alkaloid from the leaves of *Hydrastis canadensis*. Silky needles, m.133, insoluble in water.

canadium. A supposed new element of the platinum group.

canadol. Impure hexane, C_6H_{14}, obtained by the fractional distillation of petroleum, and used medicinally as a local anesthetic in minor surgery.

canaigre. The roots of *Rumex hymenosepalis*, a Polygonaceae, of Texas and Mexico; used for tanning (25–30 % tannin).

canal rays. Positive rays. The rays emerging behind the perforated cathode of a high vacuum tube, which consist of positively charged molecules of gas. They move from the anode with a velocity of about 3.2×10^9 cm./sec. in the opposite direction to the cathode rays. They carry a positive charge and cause strong ionization, photographic action, fluorescence, and disintegration of certain substances. They are used in positive-ray analysis (q.v.). Cf. *rays* (figure), *mass spectra*.

cananga. Ylang ylang.

canavalia bean. The seeds of *Canavalia* species, which are rich in urease.

canavalin. A globulin of the jack beans, the seeds of *Canavalia* species, Leguminosae, of tropical countries.

cancerine. $C_8H_5O_3N$ = 163.1. A ptomaine found in pathological urine as colorless crystals.

cancrinite. $Na_4Al_3HCSi_3O_{15}$. A yellow, hexagonal, rock-forming mineral, M.W. 511.5, d.2.4, M.V. 213, hardness 5–6.

candelilla wax. Gama wax. A yellowish brown solid wax, d.0.983, m.67–68, from the surface of the candelilla plant of Mexico; used in candles, cements, polishes, varnishes, leather dressings and dentistry.

candle. A basic photometric unit, *ca*, of luminous intensity which is determined by international agreement and known as the international candle. Cf. *photometric units*. **c. balance.** A balance for determining the rate per hour at which a candle burns. **c. nut oil.** Lumbang oil. **c. power.** The luminous intensity in terms of the candle; the brightness of a standard candle. 1 candle = 1.11 Hefner units = 0.104 carcel units. 1 candle per cm^2 = 3.1416 lamberts = 3141.6 millilamberts. 1 candle per $in.^2$ = 0.4968 lamberts = 496.8 millilamberts. **c. standard.** Candles made of sperm wax, six to the pound, which burn 120 grains of wax per hour. See *standard candle, foot candle, meter candle*.

canella. Whitewood, cinnamon bark. The bark of *Winterana canella*, a Canellaceae of the West Indies. It is aromatic, and used as a condiment. **c. oil.** The essential oil of c. Colorless liquid, d.0.920–0.935, $[a]$ + 1°8′, and containing eugenol, cineol and caryophyllin.

cane sugar. A sugar made from sugar cane and identical with sucrose (q.v.).

canfieldite. Ag_8SnS. A rare, native, silver and tin sulfide.

cannabane. $C_{15}H_{22}$ = 238.2. Cannabene hydride. A volatile hydrocarbon in the essential oil of hemp. Cf. *cannibene*.

cannabene. $C_{15}H_{20}$ = 236.2. A hydrocarbon in oil of hemp.

cannabin. (1) A glucoside or (2) a resin from *Cannabis indica*.

cannabine. An alkaloid from cannabis, used as a hypnotic.

cannabinol. $C_{21}H_{30}O_2$ = 314.3. A phenol aldehyde, the active principle of *Cannabis sativa*. A yellowish oil, d.1.042, b_{100mm}.315; insoluble in water, soluble in glacial acetic acid forming a fluorescent green and red coloured solution; soluble in alcohol, ether, or chloroform. **acetyl-** See *acetyl c.*

cannabinone. $C_8H_{12}O$ = 124.0. A ketone derived from cannabis.

cannabis. Indian hemp, Indian c., the flowering tops of the female plant of *C. indica* or *C. sativa* (hemp), an Urticaceae. It is a narcotic. See *bhang, ganja, hashish*.

cannaboid. The combined principles of *Cannabis indica* which are antispasmodic and sedative.

cannel coal. A compact and hard variety of bituminous coal which burns with a luminous flame. Used for gas production. Cf. *boghead, torbanite*.

cannibene. $C_{15}H_{24}$ = 204.19. A sesquiterpene, d.0.897, b.259, from the essential oil of hemp. Cf. *cannabane*.

cannizarization. The treatment of aldehydes with alcoholic potash; as, Cannizzaro's reaction. **C. number.** Cannizzaro number.

Cannizzaro, Stanislao. 1826–1910. An Italian chemist noted for his work on organic chemistry and the amplification and application of Avogadro's hypothesis to the atomic theory. **C. number.** The number of milligrams KOH which react with 1 gm. aldehyde according to C. reaction. **C. reaction.** The decomposition of aromatic aldehydes by alcoholic potash, with the formation of corresponding acids and alcohols. Thus benzaldehyde gives benzoic acid and benzyl alcohol:

$$2RCHO + KOH \rightarrow R.CH_2OH + R.COOK$$

cannonite. A high-explosive, consisting of nitrocellulose and nitroglycerin.

cannula. A straight or U-shaped tube of glass or metal. It is used in physiological experimentation for insertion into or connecting arteries.

cantharene. C_8H_{12} = 108.1. Dihydro-o-xylene. A colorless liquid, b.135.

cantharides. Blistering beetle, cantharis, Russian flies. The Spanish fly, *Lytta* or *Cantharis vesicatoria*, used medicinally as a blistering agent. **c. camphor.** *Sodium cantharidate*.

cantharidic acid. Cantharidin.

cantharidin(e). $C_{10}H_{12}O_4$ = 196.1. 2.3-Dimethyl-7-oxabicyclo [2,2,1] heptane-2.3-di-dicarboxylic anhydride. The lactone of cantharidic acid obtained from various species of cantharis. Colorless, odorless, glistening crystals, slightly soluble in water, m.210°, used externally in blistering ointments, and internally as a diuretic and stimulant.

Cantharis. A genus of beetles, now *Lytta*. Cf. *cantharides*.

Canton phosphorus. A mixture of 2 parts oyster shells and 1 part sulfur, said to be luminescent.

canula. Cannula.

canvas. A strong and closely-woven fabric of hemp or flax used in filterpresses and sacking.

caoutchouc. [From *caa o-chu*, Malayan "weeping tree," or from the sound of elastic.] Rubber. **Gaboon-** Dambonite. **mineral-** q.v. **oil of-** Terpene.

C.A.P. Abbreviation for *chloracetophenone.*

capacitance. Electrostatic *capacity.*

capacity. (1) The ability to hold or contain a force or energy. (2) Same as volume. (3) The amount of matter; as compared with intensity. Thus, the c. factor of acidity is *normality;* cf. *intensity.* **electrostatic-** The amount of electricity required to raise a body to a given potential. An isolated condenser has unit capacity when unit electrical quantity will charge it to unit potential. The common units of capacity are: (1) International farad—the c. of a condenser charged to 1 volt by 1 coulomb. (2) microfarad—the one millionth part of a farad. **electromagnetic-** 10^9 Farads. **heat-** Thermal c. **specific inductive-** Dielectric constant. **thermal-** Heat c. The number of calories required to raise the temperature of an isolated body one degree centigrade.

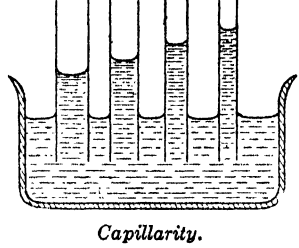
caparrosa. The leaves of *Nea theifera,* a Nyctaginaceae of South America; used as a tea.

capers. The green flowerbuds of *Capparis spinosa,* a Capparidaceae of the Mediterranean; used pickled as a condiment.

capillaries. The network of delicate blood-vessels or other small connecting tubes of tissues.

capillarity. The attractive force between two unlike molecules as shown by the wetting of a solid surface by a liquid, or by meniscus formation.

capillary. Any tube with a very small inside diameter, or bore. **c. analysis.** (1) The separation or identification of liquids or substances (e.g. drugs or dyes) in solution by observing the zones or colors produced when it is absorbed on a strip of filter paper which may be impregnated with a reagent or observed in ultra-violet light. Cf. *chromatographic analysis.* (2) A filterpaper dipped into a *negative* colloid absorbs both, the dispersed and external phase; but in a *positive* colloid only the external phase is absorbed. Cf. *adsorption.* **c. correction.** A correction for the capillarity of mercury applied to mercury thermometers of diameters more than 25 mm. **c. electrode.** See *Lippmann e.* **c. electrometer.** See *electrometer.* **c. pipette.** A pipette for measuring the fractional parts of a cc.; as, a blood pipette. **c. tubing.** Glass tubing with an inside diameter of less than 1 mm.



Capillarity.

capillator. An apparatus for the colorimetric determination of pH values in which the solutions are compared in capillary tubes. The effect of any color or turbidity in the original solution is thereby much reduced.

capnometry. The measurement of the density of smoke. Cf. *nephelometry.*

caporit. A disinfectant mixture of $CaOCl_2$ and NaCl containing about 50 % active chlorine.

capraldehyde. $C_{10}H_{20}O$ = 156.15. Capric aldehyde, decanal*, caprinaldehyde, n-decyl aldehyde. Colorless liquid, d.0.828, b.209.2, from essential oils. **iso-** A liquid, d.0.830, b.169.6. Cf. *capryl aldehyde.*

capramide. (1) Caproyl amide. (2) $C_{10}H_{21}NO$ = 171.17. Decanamide*, capric amide, n-decylic amide, $Me(CH_2)_8CONH_2$. White crystals, d.-0.999, m.108.

caprate. A salt of capric acid, containing the monovalent radical, $C_9H_{19}COO$—.

capric acid. $C_{10}H_{20}O_2$ = 172.21. Octylacetic acid, n-decoic acid, *n*-decanoic acid*, decylic acid, decatoic acid, $Me(CH_2)_8COOH$. A fatty acid in butter and other animal fats. Colorless needles, $d_{37°}$.0.930, m.31, b.268; very slightly soluble in water, soluble in alcohol or ether. Cf. *rutic acid.* **c. aldehyde.** Capraldehyde. **c. amide.** Capramide. **c. anhydride.** $C_{20}H_{38}O_3$ = 326.30. Decanoic anhydride*, *n*-decylic anhydride, $[Me(CH_2)_8CO]_2O$. White crystals, m.239, insoluble in water. **c. nitrile-** Caprinitrile.

Caprifoliaceae. Honeysuckle family. A group of shrubs or twining plants, some of which yield drugs, as follows:

flowers:	
Sambucus canadensis	elder
bark:	
Viburnum opulus	cramp bark
Viburnum prunifolium	black haw
roots:	
Triosteum perfoliatum	fever root
fruits:	
Lonicera xylosteum	xylostein

caprilic acid. Caprylic acid.

caprin. A compound of capric acid and glycerin; *e.g.,* tricaprin or glyceryl tricaprate, dicaprin or glyceryl dicaprate.

caprine. Norleucine.

caprinitrile. $C_{10}H_{19}N$ = 153.16. Decane nitrile*, capric nitrile, *n*-nonyl cyanide, $Me(CH_2)_8CN$. A colorless liquid, d.0.8295, m. −17.9, b.243.7, insoluble in water.

caproaldehyde. $C_6H_{12}O$ = 100.09. Hexanal*, *n*-caproic aldehyde, *n*-hexoic aldehyde, $Me(CH_2)_4CHO$. Colorless liquid, d.0.8335, b.131.

caproate. A salt of caproic acid, containing the monovalent radical, $C_5H_{11}COO$— derived from caproic acid.

caproic acid. $C_6H_{12}O_2$ = 116.13. Butyl-acetic acid, *n*-hexoic acid, hexanoic acid*, *n*-hexylic acid, pentylformic acid, capronic acid, $Me(CH_2)_4COOH$. A fatty acid in animal fats. A colorless liquid, $d_{20°}$.0.929, m. −5.2, b.205.7, slightly soluble in water; soluble in alcohol or ether. Used in the manufacture of esters. **α-amino-** Norleucine. **α,ε-diamino-** Lysine. **α-hydroxy-** Leucinic acid. **iso-** $Me_2CH(CH_2)_2COOH$. *i*-butylacetic acid; dimethyl butyric acid. A liquid, d.0.925, m. −35, b.207.7. **γ-keto-** Homolevulinic acid. **pseudo-**$MeCMe_2.CH_2COOH$. ***tert-*** Butylacetic acid. A liquid, m. −11, b.190. **secondary-** $Et_2CHCOOH$. Diethylacetic acid. A liquid, d.0.933, m. −15°C, b.197. **secondary active-** $Me(CH_2)_2.CHMeCOOH$. Methyl propyl acetic acid. A liquid, d.0.928, b.193.5. **tertiary-** $Me_2CEtCOOH$. Dimethylacetic acid. A liquid, m. −14°C, b.187.

caproin. A compound of glycerin and caproic acid; *e.g.,* tricaproin or glyceryl tricaproate, dicaproin or glyceryl dicaproate.

caprokol. $C_{12}H_{18}O_2$ = 194.2. *4*-Hexylresorcinol. $C_6H_3(OH)_2C_6H_{13}$. Colorless crystals, used as a urinary antiseptic and said to have 45 times the germicidal power of phenol.

caprone. $C_{11}H_{22}O$ = 170.2. 6-Hen-decanone*. A volatile ketone from butter.

capronic acid. Caproic acid.

capronitrile. Amyl cyanide.

capronium. Ytterbium.

capronyl. The monovalent acid radical, C_5H_{11}-CO—, derived from caproic acid. **c. chloride.** $C_6H_{11}OCl$ = 134.6. Caproic acid chloride. A colorless liquid, b.138.

caprophyl. Dung bacteria.

caproyl. The monovalent, acid radical, C_7H_{15}-CO—, derived from caprylic acid. **c. alcohol.** Octyl alcohol. **c. aldehyde.** Capraldehyde. **c. amide.** $C_8H_{15}ONH_2$ = 143.2. Capramide, octylamide, octanamide*. The compound $C_7H_{15}.CO.NH_2$. **c. chloride.** $C_8H_{15}OCl$ = 162.57 The compound $C_7H_{15}COCl$. A colorless liquid, d.0.975, b.196.

c. acetate. Octyl acetate.

capryl. Hexyl. The monovalent hydrocarbon radical, C_6H_{13}—, derived from hexane. **c. alcohol.** Hexyl alcohol. **c. amine.** $C_6H_{13}NH_2$ = 101.1. Hexylamine. A poisonous ptomaine from decomposed yeast or rancid animal oils. **c. hydride.** Hexane.

caprylate. A salt of caprylic acid; it contains the monovalent radical, $C_7H_{15}COO$—.

caprylene. Octene.

caprylic acid. $C_8H_{16}O_2$ = 144.17. Hexylacetic acid, *n*-octoic acid, octylic acid, octanoic acid*, $Me(CH_2)_6COOH$. A fatty acid in butter. Colorless leaflets, d.0.910, m.16, b.237.5; slightly soluble in water, soluble in alcohol or ether. **iso-**CEt_3COOH. Triethylacetic acid. A solid, m.39.5, b.202. **c. alcohol.** Octyl alcohol. **c. aldehyde.** $C_8H_{16}O$ = 128.12. Octanal*, capryl aldehyde, $Me(CH_2)_6CHO$. A colorless liquid, d.0.821, b_{32mm}.81, in citron.

caprylidene. C_8H_{14} = 110.11. Octine, *1*-octyne*, *n*-hexylacetylene, $Me(CH_2)_5C{:}CH$. A liquid, d.0.770, b.125.

caprylin. Any compound of glycerin and caprylic acid; *e.g.*, tricaprylin or glyceryl tricaprylate, dicaprylin or glyceryl dicaprylate.

capryryl. Octanoyl*. The radical $Me(CH_2)_6$-CO—, derived from caprylic acid. **c. chloride.** $C_7H_{15}COCl$ = 162.57. Octanoyl chloride*. A colorless liquid, d.0.9704, b.163.

capsaicin. $C_{18}H_{27}O_3N$ = 305.3. A bitter principle, m.65, from capsicum. Cf. *zingerone*.

capsanthin. $C_{40}H_{58}O_3$ = 586.4. The red carotinoid (q.v.) pigment of paprika, *Capsicum annuum*, m.175.

capsanthol. $C_{40}H_{57}(OH)_3$ = 588.46. A reduction product, m.175, of capsanthin.

capsic acid. An active principle of pimenta.

capsicin. An oleoresin from capsicum. Thick, reddish-brown masses, soluble in alcohol or ether; used as a stimulant, anodyne, and rubefacient.

capsicine. An alkaloid from capsicum.

capsicol. The essential oil of capsicum.

capsicum. Cayenne pepper, chile, chilli, pepper red. The dried, unripe fruits of *Capsicum fastigiatum*, *C. annuum* and other Solanaceae; used medicinally as a local stimulant, and as condiment for tomato sauce, etc. Cf. *paprika*. **c. resin.** An oleoresin from *Capsicum*, used as circulatory stimulant and heart tonic.

capsularin. $C_{22}H_{36}O_8$ = 428.3. A glucoside found in jute leaf, *Corchorus capsularis*, a Tiliaceae; colorless needles m.175.

capsule. (1) A small membranous sac inclosing a structural part of an organism. (2) A small sealed container for volatile compounds.

capsuloesic acid. Aescinic acid.

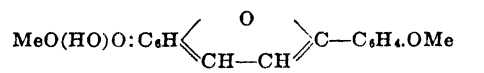
caput. Pl. *capita*. A head. **c. mortuum.** (1) The name given by early chemists to an earthy residue obtained after distillation or incineration. (2) Calcothar.

caracolite. $PbOHCl.Na_2SO_4$. A native double salt of lead oxychloride and sodium sulfate; orthorhombic crystals.

caraguata. The fibre from *Eryngium pandanifolium*, an Umbelliferae of South America, used for ropes, matting and bags.

carajura. A red pigment from *Begonia chica*. It contains wax, colored resin, silica and salts of Ca, Mg, and K, and is a source of carajurin.

carajurin. $C_{17}H_{14}O_6$ = 298.11.



The principal colored constituent of carajura.

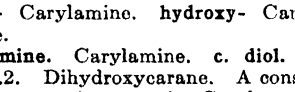
carajutin. $C_{15}H_{10}O_5$ = 270.08. A derivative of carajurin, scarlet needles.

caramel. $(C_{12}H_{18}O_9)x$. A compound obtained by heating sugar to about 200, often in presence of ammonium salts. A black or brown soluble mass, used as coloring matter for food, beverages and beer.

caramelan. A brown amorphous constituent of caramel. It forms soluble salts with lead and alkalis, is hydrolyzed by dilute acids to dextrose, furfural and levulic acid, and reduces Fehling's solution.

carana. Mararo, caranna, gum carana. A dark gray, brittle, resinous substance from *Urotium carana*, a Rutaceae of South America and Mexico.

carane. $C_{10}H_{18}$ = 138.2. 3.7.7-trimethyl-bicyclo(0.1.4)heptane. The hydrocarbon



A constituent of essential oils. Δ^3- Carene. **amino-** Carylamine. **hydroxy-** Carol. **keto-** Carone.

c. amine. Carylamine. **c. diol.** $C_{10}H_{18}O_2$ = 170.2. Dihydroxycarane. A constituent of Indian turpentine. **c. ol.** Carol.

caraneol. Carol.

caranna. Carana.

carase. Papain.

carat. A unit of weight of diamonds, precious stones, and the fineness of gold. Standard of pure gold is 24 carats; *e.g.*, 15 c. gold contains 9 parts of a base metal *i.e.*, 37.5 % of gold. 1 carat = 205 mg. or 3.163 troy grains. **English-** 3.1683 grams = 205.31 mg. Defined by the British Board of Trade in 1888. **metric-** 200.000 mg. = 3.086 grains. It became compulsory in the United Kingdom in 1914. Cf. *carob bean*.

caraway. The fruits of *Carum carvi*, an Umbelliferae, used as an aromatic, stimulant and flavoring agent. **c. oil.** The essential oil of c. seeds, d.0.907–0.915, b.180–230, containing carvone and *d*-limonene; used for flavoring. **c. water.** Aqua carum. Water flavored with c. oil.

carbachol. Chloryl, moryl. Carbyl choline chloride.

carbacidometer. Air tester.

carbagel. Calcium chloride on porous carbon; used for dehydration.

carbamamidine. Guanidine.

carbamase. An enzyme, splitting proteins to amines.

carbamate. A salt of carbamic acid; it contains the monovalent NH_2COO— radical. **ethyl-** Urethane.

carbamic. The divalent radical, —NH.COO—, derived from carbamic acid; as Ph.NHCOO.Ph, phenylcarbamic-phenyl ester.

carbamic acid. NH_2COOH. Amidocarbonic acid, aminoformic acid. The theoretical, first and simplest aminoacid, known as a number of salts, carbamates. Cf. *thionamic acid.* **amino-** Carbazic acid. **carbamyl-** Allophanic acid. **cyano-** See *cyano c.* **dithio-** See *dithio c.* **nitro-** See *nitro c.* **phenyl-** Carbanilic acid.

carbamide. An isomer of urea, q.v. **c. chloride.** Carbamyl chloride.

carbamidine. Guanidine.

carbamido. Uramido, uramino. The monovalent radical, NH_2CONH—, derived from urea. **phenyl-** The radical PhNH.CO.NH—.

carbaminate. Carbamate.

carbamonitrile. Cyanamide.

carbamyl. The monovalent radical, NH_2CO—, derived from carbamic acid. **c. carbamic acid.** Allophanic acid. **c. chloride.** NH_2COCl = 79.48. Carbamide chloride. Colorless needles, m.50, b.60; insoluble in water or alcohol. Used in organic synthesis. Cf. *Friedel-Craft reaction.* **c. cyanide.** Oxamonitrile.

carbamylic ester. Phenyl urethane.

carbanil. Phenyl cyanate. **c. aldehyde.** Formanilide.

carbanilic acid. $C_7H_7O_2N$ = 137.06. Phenylcarbamic acid, Ph.NH.COOH.

carbanilide. $C_{13}H_{12}ON_2$ = 212.25. Diphenylurea, PhNH.CO.NHPh. Colorless needles, m.236, slightly soluble in water, soluble in alcohol or ether.

carbanilino- Phenylcarbamyl. A prefix indicating the radical PhNHCO—.

carbanilo- A prefix indicating the radical, Ph-NH—. **c. nitrile.** Cyanoanilide.

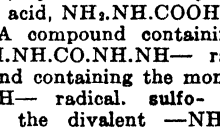
carbanion. Carbonate ion, $CO_3^{=}$.

carbarsone. $C_7H_9N_2O_4As$ = 260.05. *N*-Carbamyl arsanilic acid, *p*-carbaminophenyl-arsonic acid. A white powder, insoluble in water, soluble in carbonate solutions; used as an amebicide. Cf. *tryparsamide, acetarsone.*

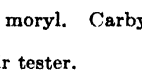
carbazic acid. $CH_4O_2N_2$ = 76.03. Aminocarbamic acid, hydrazine carboxylic acid, hydrazinoformic acid, $NH_2.NH.COOH$.

carbazide. A compound containing the divalent —NH.NH.CO.NH.NH— radical. **semi-** A compound containing the monovalent NH_2-CO.NH.NH— radical. **sulfo-** A compound containing the divalent —NH.NH.CS.NH.-NH— radical. **sulfosemi-** A compound containing the monovalent $NH_2CS.NH.NH$— radical. Cf. *carbohydrazide.*

carbazolacetic acid. $C_{14}H_{11}O_2N$ = 224.1.



carbazole. $C_{12}H_9N$ = 167.1. Dibenzopyrrole, diphenylenimide. The heterocyclic system,



Colorless crystals, m.245, b.351; used as a stabilizer for explosives. **acetyl-** See *acetyl c.* **N-ethyl-** $C_{14}H_{14}N$ = 196.2. Colorless crystals, m.68. **hexahydro-** $C_{12}H_{15}N$ = 173.2. Colorless crystals, m.99, b.267. **N-methyl-** $C_{13}H_{12}N$ = 182.1. Colorless crystals, m.87. **naphthopheno-** See *naphthophenocarbazole.* **tetrahydro-** $C_{12}H_{13}N$ = 171.12. Colorless crystals, m.119.

carbazone. A compound containing the divalent —N:N.CO.NH.NH— radical. (See *carbodiazone.*) **sulfo-** A compound containing the divalent —N:N.CS.NH.NH— radical.

carbazotate. Picrate.

carbazyl. The monovalent radical, $C_{12}H_8N$—, derived from carbazole; it forms 5 isomers.

carbazylic acid. An organic acid of the type $R—C(:NH)NH_2$. Cf. *carbylic acid.*

carbene. Cuprene.

carbenes. Constituents of bitumen which are insoluble in carbon tetrachloride or chloroform, but soluble in carbon disulfide. Cf. *asphalthenes.*

carbenzol. A distillate from shale tar containing phenols; used medicinally in skin diseases.

carbethoxy. The monovalent radical, —COOEt. Cf. *carbomethoxy.*

carbethylic acid. Ethyl carbonate.

carbide. Carbonide, carburet (cf. *acetylide*). A binary carbon compound of a metal. Some carbides decompose readily in water and give acetylene (Li_4C, K_4C, CaC_2, SrC_2, BaC_2); others form methane (Al_2C, B_2C), or hydrogen and methane (MgC_2, Mn_3C, Cr_3C); or a mixture of hydrogen, methane, and acetylene (rare earth carbides); while those of the rare metals (ThC_2, U_2C_3) form solid, liquid or gaseous hydrocarbons, and some carbides (as SiC, Ti_xC_y) are extremely stable. Cf. *crystolon, carboly.*

carbimide. Isocyanic acid.

carbinol. (1) The monovalent radical, —CH_2OH, characteristic of primary alcohols. Cf. *carbinols.* (2) Methanol. (3) Acetyl methyl carbinol, occurring in butter and responsible for its flavor and aroma. **acetyl-** Acetol. **allyl-** Δ^3-1-Butenol. **anthryl-** Anthracene carbinol. **benzyl-** Phenethyl alcohol. **butyl-** primary- Amyl alcohol; secondary- 2-Methyl-1-butanol; tertiary- 2-Dimethylpropanol. **diethyl-** 3-Pentanol. **dimethyl-** Secondary- *propanol.* **diphenyl-** Benzohydrol. **ethyl-** Propanol. **hexamethyl-** 2-Octanol. **methyl-** Ethanol. **phenyl-** Benzylalcohol. **propyl-** n-Butyl alcohol, n-butanol. **triethyl-** 3-Ethyl-3-pentanol. **trimethyl-** Tert-*Butyl alcohol* (tert. butanol).

carbinols. Primary alcohols. An aliphatic or aromatic compound of the general formula $R.CH_2.OH$; as

methylcarbinol	$Me.CH_2OH$
ethylcarbinol	$Et.CH_2OH$
propylcarbinol	$Pr.CH_2OH$
phenylcarbinol	$Ph.CH_2OH$

carbitol. $C_6H_{14}O_3$ = 134.11. Diethyleneglycol ethylether, $EtO(CH_2)_2.O.(CH_2)_2OH$. A colorless, volatile liquid, d.1.132, b.195; soluble in water, alcohol or ether. Used as a solvent for resins and nitrocellulose, in lacquer manufacture, in cosmetics and shaving cream. **butyl-** $C_8H_{18}O_3$ = 162.2. Diethyleneglycol-butylether, $BuOCH_2OCH_2CH_2OH$. A colorless, volatile liquid, b.222; used as a solvent in the manufacture of lacquers.

carbo. Charcoal. **c. animalis.** A charcoal prepared from bones and other animal matter, used as a decolorizing agent. **c. lignius.** A charcoal prepared from wood (wood charcoal). Used for decolorizing solutions, and in blowpipe analysis. **c. sanguinarius.** Blood coal. Charcoal prepared from animal blood.

carbobenzoyl. A compound containing the monovalent radical, —CO.C_6H_4.COOH. **c. formic acid.** Phthalonic acid. **c. acetic acid.** Colorless, m.90. **c. propionic acid.** Colorless, m.137.

carbocinchomeronic acid. Cinchomeronic acid.

carbocyanine. A group of dyes used as photographic sensitizers; *e.g.*, pinacyanol, sensitol-red. Cf. *cyanine, isocyanine, pseudocyanine.*

carbocyclic. A homocyclic compound of carbon, or an organic ring-compound in which all the ring atoms are carbon (*e.g.*, benzene) as opposed to heterocyclic compounds.

carbodiazone. A compound containing the divalent —N:N.CO.N:N— radical. **sulfo-** A compound containing the divalent —N:N.CS.N:N— radical.

carbofrax. The registered trade-mark for certain refractory products consisting of silicon carbide, bonded together by varying amounts of refractory clays or other ceramics.

carbohydrase. A member of a class of hydrolytic enzymes (q.v.) which split carbohydrates.

carbohydrates. Organic compounds which are synthesized by plants and contain C, H, and O; the latter two in the proportion of water. Their general formula is $C_x(H_2O)_y$.

Monosaccharides, x and y are 2, 3, 4, 5, 6, or 7.
Disaccharides, x is 12, y is 11.
Trisaccharides, x is 18, y is 16.
Polysaccharides, x and y are integers greater than 18.
Natural c. are generally dextorotatory, except fructose and inosite.

CARBOHYDRATES

I. *Monosaccharides*
  1. Bioses ..... $C_2H_4O_2$
    a. aldoses—glycoaldehyde
    b. ketoses—none
  2. Trioses ..... $C_3H_6O_3$
    a. aldoses—glycerose
    b. ketoses—dioxyacetone
  3. Tetroses ..... $C_4H_8O_4$
    a. aldoses—erythrose
    b. ketoses—erythrulose
  4. Pentoses ..... $C_5H_{10}O_5$
    a. aldoses—arabinose
      xylose
      ribose
    b. ketoses—arabinulose
  5. Hexoses ..... $C_6H_{12}O_6$
    a. aldoses—dextrose
      galactose
      mannose
    b. ketoses—levulose
      sorbose
  6. Heptoses ..... $C_7H_{14}O_7$
    a. aldoses—mannoheptose
II. *Disaccharides* ..... $C_{12}H_{22}O_{11}$
  1. Lactose (milk sugar)
  2. Maltose (malt sugar)
  3. Sucrose (cane sugar)
  4. Melibiose
  5. Trehalose
III. *Trisaccharides* ..... $C_{18}H_{32}O_{16}$
  1. Raffinose
  2. Melezitose
IV. *Tetrasaccharides* ..... $C_{24}H_{42}O_{21}$
  1. Lupeose
  2. Stachyose
V. *Polysaccharides* ..... $C_x(H_2O)_{x-1}$
  1. Dextrins
    a. achroodextrins
    b. erythrodextrins
  2. Starch group
    a. starches
    b. inulins
    c. glycogens
    d. lichenins
  3. Cellulose group
    a. Celluloses
    b. hemicelluloses
      1. pentosans—gum arabic
      2. hexosans—galactans
        agar-agar.
VI. *Conjugated Saccharides*
  1. Gums and mucilage group
    Consisting of saccharides and acids
  2. Glucosides, q.v.
    Consisting of saccharides and some other compound
  3. Tannins, q.v.
    Consisting of saccharides and tannins

carbohydrazide. CH_6ON_4 = 90.08. Carbazide (q.v.), *s*-diaminourea, $NH_2.NH.CO.NH.NH_2$.

carbohydrazidine. See *oxidiimide dihydrazide.*

carbohydrazones. Carbazides.

carbohydride. Hydrocarbon.

carboids. Kerotenes.

carbolate. Phenate. An ester of "carbolic" acid (phenol), hence a compound containing the monovalent PhO—radical.

carbolfuchsin. Ziehl's stain. A staining solution containing 5 pts. fuchsin, 25 pts. phenol, 50 pts. alcohol, and 500 pts. water.

carbolic acid. Phenol. **c. liquid.** Cresylic acid. **c. oil.** The fraction of coal tar, b.180–230; it is rich in phenols.

carbolmethyl violet. A microscope staining solution made by mixing 10 pts. of an alcoholic solution of methyl violet 6B with 90 pts. of a 5 % aqueous phenol solution.

carbolon. A trade name for *silicon carbide.*

carboloy. A trade mark for cemented *tungsten carbide*, which is used for high-speed machine tools and is second in hardness to diamond.

carbolxylene. A microscope clearing solution, made by mixing 3 pts. xylene and 1 pt. phenol.

carbometer. A device for measuring the amount of carbon dioxide in air.

carbomethene. Ketene.

carbomethoxy. The monovalent radical, —COOMe. Cf. *carbethoxy.*

carbon. C = 12.010. Atomic number, 6. A non-metallic bio-element which exists in three allotropic forms: amorphous (coal), graphite, and crystalline (diamond). It occurs native as coal, graphite and diamond; in combination with hydrogen as petroleum, with oxygen as carbon dioxide. It is an essential element for all vegetable and animal life. Its principal valency is four, but a few compounds of mono-, di-, and tri-valent carbon have been prepared. The main characteristic of carbon is that its atoms have a greater affinity for one another than for other atoms; thus the carbon atoms link with one another in endless variety and give rise to thousands of different (organic) compounds. This behavior of the carbon atom is due to its valency of four, and as eight electrons are neces-

sary for a stable system, the carbon atoms may be weakly positive or weakly negative and form non-polar compounds. The binary compounds of carbon are:

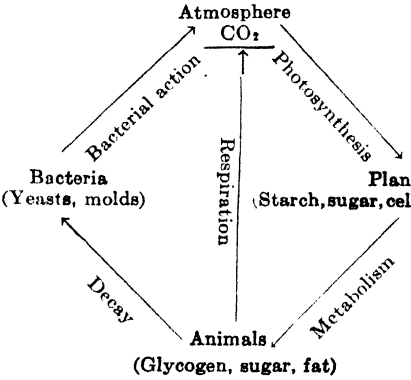
carbides..... M_xC_y
hydrocarbons..... C_xH_y
carbon-x-ides..... C_xX_y
carbonyls..... CO^-

Cf. *active c., gas c., charcoal, graphite, diamond, lampblack, electrode.*

c. apparatus. An instrument for determining the total carbon in coal, coke, and other fuels. **c. atom.** Tetrahedronal c. *asymmetric-* C. linked to four different types of atoms or radicals. *primary-* C. having one bond satisfied by carbon, *e.g.*, at the end of a chain. *quaternary-* C. surrounded by four carbon atoms. *secondary-* C. linked to two c. atoms. *tertiary-* C. linked to three c. atoms. **c. bisulfide.** C. disulfide. **c. black.** Lamp black. **c. bond.** The non-polar linkage between two carbon atoms, A and B, which consists of a pair of electrons at equal or unequal distances from each carbon atom. It may be electrically neutral, as in (1); or negative (B in 2), or positive (B in 3),

(1) A : B or A−−B or A—o—B
(2) A :B or A+−B or A—−o−B
(3) A: B or A−+B or A-o—−B

c. bronze. An alloy for bearings. **c. chains.** The successive arrangement of linked carbon atoms in a compound. (**closed-**) Aromatic compounds, (**open-**) Aliphatic compounds. **c. compounds.** See *organic compounds.* The characteristics of carbon compounds are (1) non-polarity; they do not ionize, and since their reactions are molecular and not ionic, they have a low velocity and can be controlled by temperature; (2) polymerism, the combination of similar molecules to larger and complex molecules; (3) isomerism and asymmetry, (q.v.); (4) combustibility, on heating, all carbon atoms oxidized to carbon dioxide and other reaction products. **c. cycle.** The circulation of carbon between a living organism and the surrounding environment as illustrated by the diagram:



c. dichloride. C_2Cl_4 = 165.84. Ethylene perchloride. A colorless liquid, $d_{20°}$.1.619, b.122. **c. dioxide.** CO_2 = 44.01. Carbonic acid gas, carbonic anhydride. A heavy, colorless incombustible gas, d_{air}.1.53, m.−65, $b._{5\,atm.}$−56, soluble in water, slightly soluble in alcohol. It is shipped as compressed liquid in steel tanks, and is used extensively in many industries; viz. for carbonating beverages, in refrigerators and fire extinguishers, for destruction of vermin and as a fertilizer. **c. disulfide.** CS_2 = 76.13. A colorless refractive liquid with a characteristic odor, $d_{22°}$.1.256, m.−112, b.46.2, nearly insoluble in water, soluble in alcohol or ether. Used medicinally as a local anesthetic and counter-irritant; in organic synthesis as a reagent; and as a solvent for S, I, rubber, etc. **c. group.** The fourth group of the periodic system (q.v.). **c. hexachloride.** C_2Cl_6 = 236.77. Carbon trichloride, ethyl perchloride, hexachloroethane. Colorless crystals, $d_{20°}$.1.99, m.182, b.187, insoluble in water, soluble in alcohol or ether. **c. light.** An electric arc light with C electrodes. **c. monosulfide.** CS = 44.04. A colorless gas, b.−130; very unstable and polymerizes to a red solid. **c. monoxide.** CO = 28.01. A colorless poisonous gas, $d_{air.}$-0.967, m.−205.7, b.−190, slightly soluble in water. It is formed during incomplete combustion of C. **c. oxysulfide.** COS = 60.07. Carbonyl sulfide. A colorless gas, $d_{air.}$2.104, m.−138.2, b.50.2, slightly soluble in water; mixed with air, it is explosive. **c. paper.** A tissue paper coated with a mixture of grease lampblack, and used to make copies of writings, typings, or drawings. **c. print.** A photographic process of making artistic reproductions of negatives. **c. residue.** Conradson carbon. The %C produced from a lubricating oil heated in a closed crucible under definite conditions. **c. subnitride.** Acetylene dinitrile. **c. suboxide.** C_3O_2 = 68.02. A colorless gas, $d_{air.}$1.11, m.−107, b.7, decomp. by water, soluble in ether. It is considered to be:

C=C=C—O or O:C:C:C:O
└—O—┘
(*Michael's formula*) (*Diehl's formula*)

It has a pungent odor, and is lacrimatory and suffocating. With water it forms malonic acid. **c. subsulfide.** C_3S_2 = 100.0. A deep red liquid, m.−0.5, pungent odor; it polymerises on heating. **c. tetrabromide.** CBr_4 = 331.85. Tetrabromomethane*. Colorless scales, d.3.42, m.92, b.189, insoluble in water, soluble in alcohol or ether. **c. tetrachloride.** CCl_4 = 153.84. Tetrachloromethane*, phenoxin, pyrex, A colorless liquid, $d_{25°}$.1.584, m.−19.5, b.76, slightly soluble in water, miscible with alcohol or ether. Used as a local anesthetic, and fire extinguisher; as a non-flammable solvent for resins, rubber, oils, etc.; as cleaning agent, to replace benzene; and in organic synthesis as a reagent. **c. tetrafluoride.** CF_4 = 88.0 Tetrafluoromethane*, fluoromethane. A colorless gas, b.−126, formed as by-product in the manufacture of aluminum from cryolite. **c tetraiodide.** CI_4 = 519.84. Tetraiodomethane*. Red crystals, $d_{20°}$.4.32, decomp. on heating, insoluble in water, soluble in alcohol or ether. **c. trichloride.** Hexachloroethane.

carbonaceous. Containing carbon.

carbonado. Bort. A hard, black diamond, used for cutting purposes.

carbonatation. The formation of carbonates by the action of carbon dioxide; wrongly known as *carbonation.*

carbonate. A salt of the theoretical carbonic acid, containing the divalent CO_3=radical;

All carbonates are readily decomposed by acids. The carbonates of the alkali metals are soluble; all others are insoluble. **bi-** A salt containing the monovalent HCO_3— radical, they are also termed acid carbonates. **chloro-** See *chlorocarbonate.*

c. minerals. A group of rock-forming minerals, as

calcite	$CaCO_3$
aragonite	$CaCO_3$
dolomite	$CaMg(CO_3)_2$
magnesite	$MgCO_3$
siderite	$FeCO_3$

carbonation. (1) Carbonization. (2) The precipitation of lime by carbon dioxide, *e.g.*, in sugar refineries. (3) The saturation of water with carbon dioxide, *e.g.*, in soda water manufacture; this is more properly known as *carbonatation* (q.v.).

carbonic. A compound containing tetravalent carbon. Cf. *carbonium.*

carbonic acid. (1) H_2CO_3. Meta-carbonic acid, hydroxyformic acid. $CO(OH)_2$ or HO.COOH. The hypothetical acid of carbon dioxide and water; known only in the form of its salts (carbonates) and acid salts (bicarbonates), as amides (carbamic acid, urea), and acid chlorides (carbonyl chloride). (2) An old term for carboxylic acid. **c. acid hydrate.** The compound $CO_2.6H_2O$. **ortho-** The compound $C(OH)_4$. It does not exist in the free state, though its esters are known.

carbonic acid esters. An organic compound in which the H of carbonic acid is substituted by a radical. **meta-** Compounds of the general formula, RO.CO.OR. **ortho-** Compounds of the general formula, $C(OR)_4$.

carbonic anhydride. Carbonic acid.

carbonic ester. Carbonic acid ester. **ethyl-** $CO(OEt)_2$ = 118.1. A colorless liquid, b.126. **ethylene-** $CO(OC_2H_3)_2$ = 114.1. Colorless crystals, m.39, b.236. **methyl-** $CO(OMe)_2$ = 90.1. A colorless liquid, b.91. **methylethyl-** EtO.CO.OMe = 104.1. A colorless liquid, b.-109. **methylpropyl-** PrO.CO.OMe = 118.1. A colorless liquid, b.131.

carbonic ether. Ethyl carbonate.

carbonide. Carbide.

carboniferous. (1) Containing carbon. (2) Belonging to the coal-age; see *geologic era.*

carbonite. (1) Small charcoal briquettes. See *briquet.* (2) A high-explosive consisting of 17–30 % nitroglycerin, 24–30 % $NaNO_3$, and 37–44 % flour.

carbonitrile. Cyanide, nitrile. The radical —CN, indicated by the *prefix* cyano-, or the *suffix* nitrile or carbonitrile.

carbonium. A compound with divalent or trivalent carbon; hence the condition in which a carbon atom has temporarily a quartet or sextet of electrons. This exceptional structure has been held responsible for the presence of color and reactivity.

carbonization. (1) The transformation of organic matter into charcoal. (2) The distillation of coal, as in gas and coke manufacture. **high temperature-** Heating coal out of contact with air in a gas oven or coke oven to 1000–1300°C, with the formation of gas, tar, oil, ammonia and coke. **low temperature-** Heating of coal to 450–700°C, with the formation of gas, petroleum (hydrocarbons from pentane to octane, and amylene to octene) and coke.

carbonize. To convert to carbon; to char or to burn incompletely.

carbonizer. A concentrated aluminum chloride solution used in the textile industry to remove cellulose from wool.

carbonoid. A tetragonal form suggested for the structure of carbon, which has four equal faces, each of which corresponds with one valency. Cf. *benzenoid.*

carbonometer. A device for determining the carbonic acid content of blood. Cf. *carbometer.*

carbonoxysulfide. Carbon oxysulfide.

carbon rheostat. An electric resistance consisting of a number of carbon plates mounted between castings on a base of asbestos and wood in such a way that pressure can be placed on the plates by means of a screw and their total resistance thus altered.

carbonyl. The divalent =CO radical. Cf. *carbonyles, thionyl.* **c. amido phenol.** Oxybenzoazole. **c. bromide.** $COBr_2$ = 187.83. Bromophosgene. A poisonous liquid, d.2.44, b.64.5, **c. chloride.** $COCl_2$ = 98.92. Phosgene. A poisonous gas, m.—75, b.8.2, decomp. in water or alcohol; used in organic synthesis, and gas warfare. **c. dioxy.** The bivalent radical —O.-CO.O—. **c. hemoglobin.** A combination of CO and hemoglobin, which is highly poisonous. **c. pyrrole.** $CO(C_4H_4N)_2$ = 160.1. Colorless crystals, m.0.63, b.238. **c. sulfide.** Carbon oxysulfide. **c. thiocarbonanilide.** $C_2ON_2SPh_2$ = 254.1. Colorless crystals, m.87. **thio-c. thiocarboanilide** $C_2N_2S_2Ph_2$ = 270.1. Colorless crystals, m.79.

carbonyles. Carboxides. A group of compounds of carbon monoxide and metals, some of them volatile; as, nickel carbonyl, $Ni(CO)_4$.

carboraffin. An activated charcoal, used chiefly for decolorizing sugar solutions.

carborundum. The registered trade-mark for certain silicon carbide and other abrasive products, including garnet, flint, emery and diamond.

carbosant. $C_{31}H_{46}O_3$ = 466.37. Santalyl carbonate, $(C_{15}H_{23}).O.COO(C_{15}H_{23})$. Carbonic acid ester of sandalwood oil. An oily yellow liquid, nearly tasteless and odorless; insoluble in water, soluble in alcohol, ether or chloroform.

carbostyril. C_9H_7ON = 145.15. 2-hydroxyquinoline, 2-quinolinol, α-oxyquinoline, 2(1)-quinol-one. Colorless prisms, m.199; slightly soluble in water, soluble in alcohol or ether. **ethyl-** See *ethyl c.* **hydro-** C_9H_9ON = 147.15. Colorless crystals, m.163. **hydroiso-** C_9H_9ON = 147.15. Crystals, m.71. **iso-** C_9H_7ON = 145.15. Crystals, m.208. **methyl-** Lepidone. **nitro-** $C_9H_6O_3N_2$ = 190.2. Colorless crystals, m.168. **octohydro-** $C_9H_{15}ON$ = 153.19. Crystals, m.151. **oxy-** $C_9H_7O_2N$ = 161.16. Colorless crystals, m.300. **pseudo-** C_9H_7ON = 145.15.

carbostyrilic acid. Kynuric acid.

carbox metal. An alloy of 84 % Pb, 14 % Sb, 1 % Fe and 1 % Zn.

carboxide. (1) Same as carbonyl. (2) The keto group. (3) A mixture of 1 pt. ethylene oxide and 9 pts. CO_2, used as fumigant for destruction of insects in grain, foodstuffs, tobacco, etc.

carboxy. Carboxyl.

carboxyhemoglobin. A compound of carbon monoxide and hemoglobin formed in the blood after carbon monoxide poisoning.

carboxyl. Oxatyl, carboxy. The monovalent acidic —COOH group. The basic capacity of an organic acid is dependent on the number of carboxyl groups present. *E.g.*, acetic acid is

mono-basic, oxalic acid is dibasic, citric acid is tribasic, as they contain respectively one, two, or three c. radicals. **c. nitrogen.** See *nitrogen.*

carboxylase. An enzyme in yeast, which splits the carboxyl group into CO_2. **co-** Vitamin B_1 pyrophosphate.

carboxylic acid. A compound of the type R—COOH. See *acids.* Its nitrogen analog is *carbazylic* acid. Cf. *carbylic acid.*

carboy. Demijohn. A large glass flask protected by wicker work or a wooden box, holding 10–13 gallons and used for the transport of acids, etc. **c. inclinator.** A support for a c., enabling it to be inclined and emptied easily.

carbro process. A method of making color-prints from color-photographs, similar to the ozobrom process.

carbromal. Adalin.

carbrosolide. A trade name for silicon carbide.

carburation. (1) Carbonization as applied to internal combustion engines. (2) *Carburization.*

carburet. Carbide.

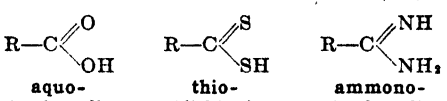
carburettor. (1) A device for making illuminating gas from water gas by spraying oil on hot surfaces over which the water gas passes. (2) That part of the internal combustion engine in which vaporisation of the fuel occurs.

carburite. A mixture of equal parts carbon and iron, used for recarburizing steel in the electric furnace.

carburization. The dissolution of carbon in molten metals; as, iron, steel, etc., produced by heating the metal in a stream of carbon monoxide or of a hydrocarbon. **case-** Carburization on the surface.

carbylamine*. (1) Isocyanide. (2) Ethylisocyanide.

carbylic acid. A group-name for organic acids which have carbon in their acid radical; as,



aquo- (carboxylic acids) **thio-** (dithionic acids) **ammono-** (carbazylic acids)

Cf. *siliconic acid, stannonic acid.*

carcel unit. The brightness of the carcel lamp, burning 42 grams of colza oil per hour. 1 carcel unit = 9.6 candles = 7.5 German standard candles (q.v.).

carcinogen. A substance which produces cancer in living tissues; as, benzopyrene.

carcinomic acid. An unsaturated fatty acid isolated from cancerous serum and tissue.

cardaissin. A substance extracted from suprarenal glands of cows; used as a heart stimulant during operations.

cardamom. The seeds of *Elettaria cardamomum,* a Zingiberaceae of tropical Asia. Used as an aromatic or carminative in the form of an infusion, tincture or fluid extract; and as a spice. **c. oil.** The essential oil of c., d.0.895–0.905; it contains terpinene, dipentene and limonene. **Malabar-** d.0.933–0.943; contains cineol. **Siam-** d.0.905; contains borneol.

cardiac. Pertaining to the heart (*καρδία* = heart). **c. sedative.** A drug which lessens the frequency of heart action, as, aconite, nitrites, veratrum. **c. stimulant.** A drug which increases the force and frequency of the heart-beat; as, digitalis, strophanthine, caffeine, or camphor.

cardiogram. The tracing produced by the cardiograph either on smoked paper, or with ink on white paper. **electro-** A photographic record of the electric heart-currents, which deflect a galvanometer mirror that reflects light from a small bulb on to photographic paper.

cardiograph. A device to record the movement of the heart, especially its force and character. It consists of a small diaphragm placed over the heart or artery which transmits the heart-beat by airpressure to a recording diaphragm. **electro-** A sensitive galvanometer with which the electric pulsations of the heart are measured.

cardioid. Heart-shaped. **c. condenser.** A device for concentrating light used in the ultramicroscope.

cardol. $C_{21}H_{30}O_2$ = 314.3. An irritant and oily liquid from the seeds of *Anacardium occidentale* (cashow nuts).

carene. $C_{10}H_{16}$ = 136.2. 4.7.7-trimethyl-Δ^3-norcarene, 3.7.7-trimethyl-Δ^3-bicyclo (0.1.4) heptane. A hydrocarbon of the terpene group, occurring in essential oils. **d-,** Colorless, sweet-smelling oil, d.0.8586, b.170, $[\alpha]_D$ = 7.69°; a constituent of Indian turpentine.

Carex. Red couch grass. A genus of perennial grass-like herbs of the Cyperaceae.

Carey-Foster Bridge. An electrical-resistance set which consists of three bridge wires, two shunts, and four sets of radio coils.

cargentos. Colloidal silver oxide containing a small amount of casein; used as a germicide.

Carica. The papaw or melon tree. *Carica papaya,* a Caricaceae of South America. Cf. *papaya.* **c. xanthin.** Kryptoxanthin.

caricin. (1) A glucoside from the seeds of carica. Cf. *papain.* (2) A protease, papain.

Carissa. A genus of spiny shrubs of Apocynaceae from Asia and Australia.

carissin. A glucoside from the bark of *Carissa ovata;* used as a cardiac stimulant.

caritinoid. Carotenoid.

Carius, Georg Ludwig. 1829–1875. A German chemist, noted for research in many branches of chemistry. **C. furnace.** A combustion furnace with five iron tubes.

carlic acid. $C_{10}H_{10}O_6$ = 226.1. An acid from the mold fungus, *Penicillium Charlesii.* Cf. *carolic acid.*

Carliczek gauze. A brass wire gauze: the individual wires are covered with asbestos.

carlosic acid. $C_{10}H_{12}O_6$ = 228.1. An acid from the mold fungus *Penicillium Charlesii.* See *carolinic acid.*

Carl's solution. A preservative for insect specimens consisting of 170 cc. 95 % alcohol, 60 cc. 40 % formaldehyde, 20 cc. glacial acetic acid and 280 cc. water. Cf. *fixative.*

Carlsbad salt. (1) Natural. Sal carolinum genuinum, sal thermarum carolinarum. The salts obtained by evaporation of the water of the springs at Carlsbad (Karlovy Vary, Czechoslovakia). (2) Artificial. Sal carolinum factitium. Sal carlsbadense. A mixture of 44 % Na_2SO_4, 2 % K_2SO_4, 18 % NaCl, and 36 % $NaHCO_3$.

carminative. A drug relieving colic, and promoting the expulsion of gas from the gastro-intestinal tract.

carmine. Coccinellin. A red coloring matter obtained by precipitating a decoction of cochineal with alum. It is of a mixture of carminic acids, carmine red, and other substances. Bright red, friable pieces, soluble in ammonia water, insoluble in water or dilute acids; is used as a microscopical stain. (*E.g.,*

Beale, Grenacher, Hoyer, Mayer, Nikiroff stains.) **ammonia-** A solution of carmine in ammonia water. **blue-** See *indigo c.* **borax-** An alkaline c. stain containing borax, and used to stain the nuclei of cells. **indigo-** See *indigo c.* **lithium-** See *Orth's stain.* **c. lake.** A compound of carmine and alumina. **c. red.** $C_{11}H_{12}O_7$ = 256.1. Purple lustrous crystals, obtained as a split-product of carminic acid; used as microscope stain.

carminic acid. $C_{22}H_{20}O_{13}$ = 492.15. Cochinilin. A glucosidae hydroxyanthrapurpurin derivative from cochineal. Purple-brown crystals, m.136, soluble in water or alcohol; used as reagent for albumin and aluminum, as a microscope stain, and pH indicator changing at pH 5.5 red (acid) to magenta (alkaline).

carminite. A lead ore containing phosphates, arsenates, and vanadates.

carmoisine. A carmine-red dye used in foodstuffs.

carnallite. $KCl,MgCl_2,6H_2O$ = 277.85. A native, potassium, magnesium chloride found in the Stassfurt mines of Germany. Cf. *sylvine.*

carnauba. (1) The Brazilian wax palm, *Copernicia cerifera;* or (2) its root, used as an alterative. **c. wax.** Brazil wax. A wax obtained from the fresh young leaves of carnauba. Yellowish or greenish masses, m.83–88, acid no. 4–8, sap. val. 80–95, iod. no. 1–13. It consists mainly of myricyl cerotate; used as a polish and for phonograph records.

carnaubic acid. $C_{24}H_{48}O_2$ = 368.37. The monobasic acid $C_{23}H_{47}COOH$; m.72, in carnauba wax and beef kidney.

carnaubyl alcohol. $C_{24}H_{49}OH$ = 354.39. A constituent of carnauba wax and wool fat, m.69, insoluble in water.

carnegieite. $Na_2Al_2Si_2O_8$. A sodium feldspar.

carnegine. $C_{13}H_{19}O_2$ = 221.15. An alkaloid from Cactaceae. It is a dimethyl derivative of salsoline, q.v. Cf. *dioscorine.*

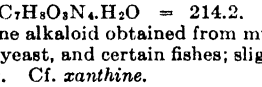
carnelian. Cornelian.

Carnelley, Thomas. 1852–1890. An English chemist noted for his *Physico-Chemical Constants* (1885–87).

carneol. Obsolete for cornelian.

carnine. $C_7H_8O_3N_4.H_2O$ = 214.2. A colorless crystalline alkaloid obtained from muscles, meat extract, yeast, and certain fishes; slightly soluble in water. Cf. *xanthine.*

carnitine. $C_7H_{15}O_3N$ = 161.2. Novain, γ-trimethyl-β-oxybutyro-betaine. A base found in the muscle tissue of animals, chiefly cephalopods.



Soluble in water or alcohol. Cf. *croton-betaine.*

carnomuscarine. A nitrogeneous extractive of muscles.

carnosine. $C_9H_{14}O_3N_4$ = 226.3. Ignotine, β-alanyl histidine. Colorless crystals, from meat extracts, m.219 (decomp.). Cf. *anserine.*

Carnot, Sadi. 1796–1832. A French engineer. **C. function.** The ratio between the lost and utilized heat of a living body. **C. theorem.** The work obtainable from a given quantity of heat absorbed in a machine that is working in a reversible cycle, depends only on the temperatures of the source of heat and refrigerator.

carnotite. A radioactive mineral consisting of the vanadate of uranium and potassium, (23 per cent V).

Carnoy's fluid. A mixture of absolute alcohol and glacial acetic acid used to fix animal tissues before staining.

Caro, Heinrich. 1834–1910. A German industrial chemist. **C.'s acid.** Persulfuric acid, H_2SO_5 or $HO.SO_2.O.OH$.

carob beans. St. John's bread. The pods of *Ceratonia siligua,* a Leguminosae, rich in sugar and gum; used as fodder. Its seeds were the "carats" (q.v). of jewellers. Cf. *tragon.* **c. gum.** The gum of c. beans, used as an emulsifier in ice-cream, lozenge and toilet cream manufacture, and as substitute for tragacanth.

caroba. The Brazilian caraiba tree, *Jacaranda procera,* a Bignoniaceae.

carobic acid. A colorless crystalline acid from the leaves of caroba.

carobine. An alkaloid of caroba.

carobone. A balsamic resin from the leaves of caroba.

carol. $C_{10}H_{18}O$ = 154.2. Carane-ol, 5-hydroxycarane. A monobasic alcohol, derived from carane, and a constituent of many essential oils.

carolic acid. $C_9H_{10}O_4$ = 182.1. An acid from the mould fungi, *Penicillium Charlesii.* Cf. *carlic acid.*

carolinic acid. $C_9H_{10}O_6$ = 214.1.

from the mould fungi, *Penicillium Charlesii.* Cf. *carlosic acid.*

carolinium. A supposed element obtained from thorium minerals.

carolite. Carrollite.

carone. $C_{10}H_{16}O$ = 152.2. 5-Ketocarane. A ketone of essential oils, derived from carane. A colorless, oily, odorous liquid, b.210.

carony bark. Angostura bark.

carotenase. An enzyme of the liver which splits carotene in half, thus producing vitamin A.

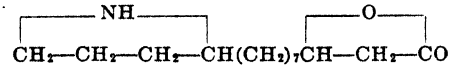
carotene. $C_{40}H_{56}$ = 536.6. Carotin; caritol, primary vitamin A. A lipochrome, m.174, b.287; occurring in leaves, carrots and other foodstuffs, where it is associated with chlorophyll; also in animal tissues, blood serum, milk fat, etc. It is the precursor of vitamin A and exists in several isomeric forms: α- (the smaller portion) is optically active, m.172, max. absorption bands at 521 and 485 mμ. β- (the larger portion) is optically inactive, m.182, max. absorption bands at 511 and 478 mμ. Cf. *xanthophyll, carotenoids.* **red-** Lycopin.

carotenoids. Carotinoids, polyenes. A group name for lipochromes or carotene-like plant pigments which are deposited in animal tissues. They may be hydrocarbons, alcohols, ketones or acids, characterized by a series of alternate double bonds. Cf. *cholane ring, cerebrosides.* See Table.

carotin. Carotene.

carotinoids. Carotenoids.

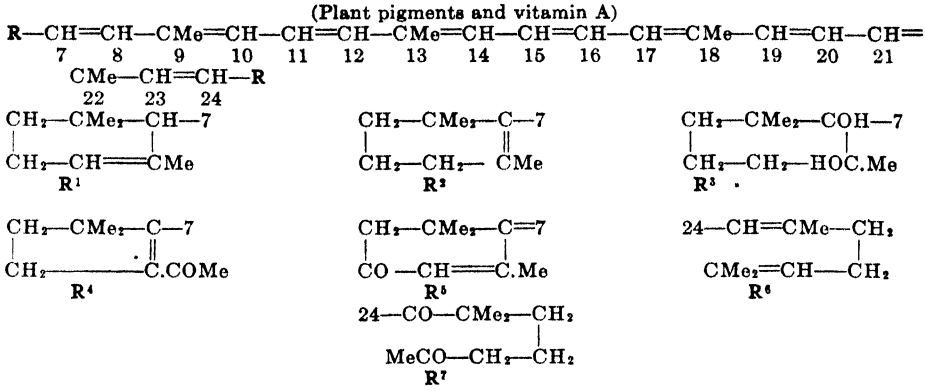
carpaine. $C_{14}H_{25}O_2N$ = 239.3. An alkaloid from the leaves of *Carica papaya,* a Caricaceae. Colorless crystals, soluble in alcohol, ether or chloroform, m.119; used as a diuretic and heart



stimulant, and resembles digitalis in action. **c. hydrochloride.** $C_{14}H_{25}O_2N.HCl$ = 275.67.

CAROTENOIDS

(Plant pigments and vitamin A)



Polyene Hydrocarbons:

$C_{40}H_{56}$	alpha-carotene	R^{1}-7 ..... 24-R^{2}	
	beta-carotene	R^{2}-7 ..... 24-R^{2}	
	gamma-carotene	R^{2}-7 ..... 24-R^{6}	
	delta-carotene	R^{1}-7 ..... 24-R^{6}	
Polyene Alcohols:			
$C_{20}H_{29}OH$	vitamin A	R^{2}-7 ..... 15-OH	
$C_{40}H_{55}OH$	kryptoxanthin	R^{2}-7 ..... 24-R^{2}	-OH at 3
	rubixanthin	R^{2}-7 ..... 24-R^{6}	-OH at 3
$C_{40}H_{58}O_{2}$	β-oxycarotene	R^{2}-7 ..... 24-R^{2}	
$C_{40}H_{52}O_{2}$	xanthophyll	*from green plants*	
$C_{40}H_{56}O_{2}$	zeaxanthin	*from seeds, seed pods*	
$C_{40}H_{56}O_{4}$	violaxanthin	*from pansies, orange rinds*	
$C_{40}H_{56}O_{4}$	taraxanthin	*from dandelion*	
$C_{40}H_{56}O_{6}$	fucoxanthin	*from brown algae*	
$C_{35}H_{50}O_{3}$	capsanthin	*from paprika*	
Polyene Ketones:			
$C_{40}H_{50}O_{2}$	rhodoxanthin	R^{5}-7 ..... 24-R^{5}	
$C_{40}H_{56}O_{2}$	semicarotenone	R^{2}-7 ..... 24-R^{7}	
$C_{40}H_{54}O$	dehydrosemicarotenone	R^{4}-7 ..... 24-R^{2}	
Polyene Acids:			
$C_{20}H_{24}O_{4}$	crocetin	HOOC-9 ..... 22-COOH	
$C_{27}H_{38}O_{4}$	azafrin	R^{3}-7 ..... 20-COOH	
$C_{25}H_{30}O_{4}$	bixin	MeOOC-8 ..... 23-COOH	

The structures of these compounds are shown by connecting the indicated radicals at the carbon atoms of the chain.

White crystals m.225, soluble in water, and used in hypodermic medication.

carpamic acid. $C_{14}H_{27}O_{3}N$ = 257.2. An acid formed on hydrating carpaine.

Carpenter, Sir Harold. 1875–1940. A British metallurgical chemist.

carposide. A glucoside obtained from carica, and identical with *caricin.*

Carr oven. A single-walled vacuum oven.

carragheen. Irish moss.

Carrel-Dakin solution. An isotonic NaOCl solution, used for bathing and irrigating wounds. Cf. *Dakin solution.*

carrene. Methylene chloride.

carrollite. $Co_{2}CuS_{4}$. A rare, native, cobalt-copper sulfide.

carron oil. An emulsion of linseed oil in lime-water, used for burns. First used at the Carron iron works, Scotland.

carrotin. Carotene.

carroting. The preparation of hair for felting.

carstone. A ferruginous sandstone of Norfolk (England).

carthamein. An oxidation product of carthamin.

carthamic acid. Carthamin.

carthamin. $C_{14}H_{16}O_{7}$ = 296.2. The red coloring matter of the safflower, *Carthamus tinctorius.* Dark red scales, insoluble in water, soluble in alkali carbonate solutions; used as a dye and coloring matter.

carthamus. African saffron. A genus of composite plants, as *C. tinctorius,* false or American saffron or safflower, cultivated in Asia; used as a dye, condiment and for making rouge.

cartilagin. Chondrigen. The protein of cartilage, or the white, elastic substance of the bone surface; changed, by boiling, to chondrin.

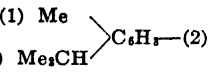
carubinose. *d*-Mannose.

carum. Caraway. Cf. *ajava.*

carvacrol. $C_{10}H_{14}O$ = 150.16. 2-hydroxy-p-cymene, isopropyl-o-cresol, isopropylhydroxy-toluene, 2-cymophenol, 2-methyl-5-isopropyl-phenol, oxycymol, 1-methyl-2-hydroxy-3-isopropylbenzene, $Me.C_{6}H_{3}(OH)C_{3}H_{7}$. An aromatic constituent of essential oils, camphor, origanum, caraway, savory and other Labiatae. A thick, colorless, oily liquid, d.0978, m.0, b.236; insoluble in water, soluble in alcohol, ether or alkalis. Used in perfumery, and as a vermifuge and fungicide. **c. iodide.** $C_{10}H_{13}OI$ = 276.06. Iodocrol. An almost odorless compound, used as an iodoform substitute.

carvacrotic acid. A colorless crystalline acid derived from carvacrol.

carvacryl. The monovalent radical, derived from

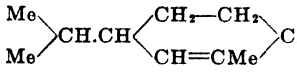


carvacrol. **c. amine.** Cymidine.

carvene. d-Limonene.

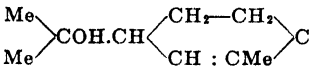
carveol. $C_{10}H_{16}O$ = 152.16. 2-hydro-xylimonene, $\Delta^{1,8}(9)$-terpadiene-ol-2, 1-methyl-2-hydroxy-4-isopropylene-tetrahydro-benzene, $Me.C_6H_7(OH)C_3H_5$. A constituent of several essential oils of the Labiatae family, b.232.

carvestrene. $C_{10}H_{18}$ = 138.11. 1-m-terpene, 1-methyl-3-isopropyl-tetrahydro-benzene,



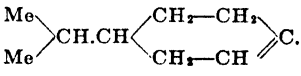
A hydrocarbon in essential oils.

carvestrol. $C_{10}H_{18}O$ = 154.2. 1-m-menthenol, 1-meta-terpenol-8. The alcohol derivative of carvestrene:



carvol. Carvone.

carvomenthane. $C_{10}H_{18}$ = 138.14. Δ^1-terpene, 1-methyl-4-isopropyl-tetrahydro-benzene.

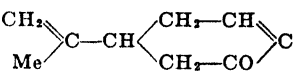


A hydrocarbon from carvone. A colorless liquid, d.0.806, b.175.

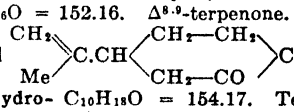
carvomenthol. $C_{10}H_{20}O$ = 156.2. 2-*p*-menthanol. An isomer of menthol in essential oils, d.0.904, b.222, soluble in alcohol.

carvomenthyl. The monovalent radical, $—C_{10}H_{17}$, derived from carvomenthane. **c. amine.** $C_{10}H_{17}.NH_2$ = 153.2. Tetrahydro-carvyl-amine. A colorless liquid, b.212.

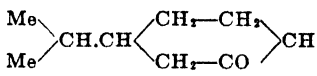
carvone. $C_{10}H_{14}O$ = 150.16. $\Delta^{6,8(9)}$-terpadienone-2, $\Delta^{6,8(9)}$-2-p-menthadienone, 1-methyl-2-oxy-4-isopropylene-Δ^6-tetrahydro-benzene.



A constituent of the oils of caraway, cumin and dill. A colorless liquid, b.225. **dihydro-** $C_{10}H_{16}O$ = 152.16. $\Delta^{8,9}$-terpenone. The compound



tetrahydro- $C_{10}H_{18}O$ = 154.17. Terpanone-2. The saturated ketone



A constituent of essential oils.

c. anil. $C_{10}H_{18}O.NHPh$ = 241.2. A light-yellowish oil, b.180, which darkens with age.

carvylamine. tetrahydro- Carvomenthylamine.

Carya. The hickory tree, *Carya tomentosa* (Juglandaceae) of North America, cultivated for its wood and fruits (pecans).

caryin. A crystalline compound from the bark of carya.

caryinite. A native phosphate and arsenate of lead.

caryl- The monovalent radical, $C_{10}H_{17}$— derived from carane. **c. amine.** 5-carylamine. $C_{10}H_{17}NH_2$.

caryocinesis. Karyokinesis.

caryophyllin. $C_{30}H_{48}O_3$ = 456.4. Oleanolic acid. A ketone from oil of cloves, soluble in alcohol or ether.

caryophyllinic acid. $C_{30}H_{32}O_8$ = 400.3. An acid derived from caryophyllin.

caryophyllum. Cloves. The flower-heads of *Eugenia caryophyllata*, a Myrtaceae. They are brown in color, have a strong fragrant and spicy odor, and contain an oil used as a flavoring and aromatic stimulant.

casca. The Spanish and Portuguese word for "bark." **c. bark.** Erythrophloeum.

cascara amarga. Honduras bark. The bark of *Picramnia antidesma* a Simarubaceae of tropical America, used as a tonic and alterative. **c. sagrada.** Sacred bark. Chittem bark, bearwood. The bark of *Rhamnus purshiana*, a shrub of the Western United States. It is a cathartic, stimulant and laxative, and is used as a fluid extract, or tincture. See *peristaltin, cascarin, anthraglucosagradin.*

cascarilla. The bark of various *Croton* and *Cinchona* species, especially *Croton eluteria.* The fluid extract or tincture is used as a stomachic tonic.

cascarillic acid. $C_{11}H_{20}O_2$ = 184.14. An acid from the oil of cascarilla. Colorless liquid, d.9324, m. −15, b.270.

cascarilline. $C_{12}H_{18}O_4$ = 226.2. Colorless bitter crystals from the bark of *Croton eluteria.*

cascarin. A colorless crystalline glucoside from Cascara sagrada; used as a hypodermic purgative.

case harden. To harden wrought iron by heating it in contact with carbon or potassium ferrocyanide. A surface layer of steel is produced. See *carburization, cementation.*

caseanic acid. $C_9H_{16}O_7N_2$ = 264.15. An acid from casein.

casease. A bacterial ferment that dissolves casein. Cf. *caseinase.*

caseate. Caseinate.

caseation. The curdling of milk and the transformation of it into a cheesy mass.

casein. The protein of milk, and principal constituent of cheese. A white substance, soluble in acids and alkalis. Used as food; technically, in combination with formaldehyde, as a plastic and for synthetic resins; in the leather industry; as a substitute for linseed oil in making pigments, for making albumin, rubber, and gelatin for films, and as a glue when mixed with lime. The composition of a typical casein is:

carbon	53 %
hydrogen	7 %
oxygen	22.65 %
nitrogen	15.7 %
sulfur	0.8 %
phosphorus	0.85 %

Its isoelectric point is pH 4.7; hence it occurs as:

neutral casein at	pH 4.7
metal caseinate	above pH 4.7
casein salt	below pH 4.7

animal- Casein. **blood-** Obsolete name for albuminose. **fibrous-** See *aralac, lanital.* **gluten-** Vegetable casein. **milk-** Casein. **saliva-** Ptyalin. **vegetable-** A protein from

the seeds of various cereal plants, forming 10–20 % of the gluten of flour.

caseinase. Rennase.

caseinate. Caseate. A compound of casein with a metal; as, sodium c.

caseinic acid. $C_{12}H_{24}O_8N_2$ = 276.21. An acid from casein.

caseinogen. A compound protein of milk which yields casein by the action of digestive ferments.

Casella acid. 2.7-Naphthol sulfonic acid.

cashew. The nut of *Anacardium occidentale*, a tree of tropical America. Cf. *anacardium*. **c. oil.** A yellow oil, used in lacquers and paints, cf. *harvel coating*.

casimirin. A glucoside from the seeds of white sapota or *Casimiroa edulis*, a Rutaceae of Mexico; used as a hypnotic and analgesic.

casoid. A synthetic plastic made from a casein basis.

cassareep. The evaporated juice of the bitter cassava, used in the West Indies as a preservative for meat.

cassava. Manioc, mandioc, manihoi, etc. A group of Euphorbiaceae cultivated in South and Central America; as, **bitter-** *Manihot utilissima* and **sweet-** *Manihot aipi*. Their large tuberous roots contain starch, and are used in preparing tapioca and Brazilian arrowroot.

cassel brown. A brown pigment found near Cassel (Germany). It is a fossilized humus of the tertiary period. **c. yellow.** A form of lead oxychloride.

Casseler green. Barium manganate.

casseliase. A mica peridotite from Kentucky.

casselose. A nephelite-melilite basalt from Texas.

casserole. A laboratory porcelain dish with a handle.

Cassia. (1) An obsolete term for sweet smelling trees. (2) A genus of leguminous herbs and trees. (3) An inferior cinnamon from *Cinnamomum cassia*, used as spice and as a source of oil. **purging-** The pulp of the pods of *Cassia fistula*. **c. bark.** Chinese cinnamon. **c. buds.** The unripe fruit of various cinnamon species. **c. leaves.** Senna. **c. oil.** Chinese oil of cinnamon. An essential oil from the bark of *Cassia chinensis*. It is darker and heavier than cinnamon oil, and less agreeable to the taste. **c. seeds.** The fruits of *Cassia fistula*, a tree of East India, used as a laxative and for poultices.

cassina. Holly from the sea coast of Southern U. S.; its leaves are used in a beverage.

cassiopeium. Cp = 175.0. The name given to lutecium, *q.v.*, by Auer von Welsbach, who separated it from ytterbium in 1905.

cassiterite. SnO_2. Tinstone, block tin, tin spar, stream tin. Native stannic oxide; a tetragonal brown, black, red or yellow mineral, d.6.9, hardness 6–7, generally found as rounded pebbles in the streams of Malaya.

cast. (1) To form a molten substance into a definite shape or state by allowing it to cool in a mold. (2) Cf. *casts*.

castanea. The leaves of *Castanea vulgaris*, the chestnut tree of the United States; used as fluid extract for whooping cough.

castanhao oil. Brazil nut oil. A liquid fat expressed from the seeds of *Bertholletia* species.

castelamarin. $C_9H_{14}O_3$ = 170.11. A bitter principle, m.269, from *Castela nicholsoni*, a Simarubaceae. Cf. *amargosa bark*.

castine. An alkaloid from *Vitex Agnus castus*, a Verbenaceae.

castonin. A globulin from European chestnut.

castor. (1) The beaver, *Castor fiber*, an amphibious rodent. (2) Castoreum. A brown, strong-smelling, solid substance from the preputial follicles of the beaver, used as an antispasmodic and stimulant. **c. beans.** The seeds of *Ricinus communis*. **c. oil.** Ricinus oil. The fixed oil expressed from the castor bean. A transparent, pale-yellow liquid, $d_{25°}$.0.945–0.965; used as a mild purgative. Cf. *dericin*, *ricinolein*. **c. pomace.** The solid residue from the extraction of c. oil from the c. bean. Used as fertilizer, and contains 4.1–6.6 % N, 1–1.5 % P_2O_5 and 1–1.5 % K_2O. **c. seeds.** C. beans.

castoreum. Castor. **c. oil.** Essential castor oil. A pale-yellow liquid obtained by distillation of castoreum.

castoric acid. An acid in castoreum.

castorin. A white fatty substance in castoreum.

casts. Cylindrical structures formed in uriniferous tubules, and found in urine sediment. **blood-** C. consisting of erythrocytes, and indicating a renal hemorrhage. **epithelial-** C. consisting of epithelial cells and indicating acute nephritis. **fatty-** C. consisting of fat globules or fatty acids, and indicating a degeneration of the kidney. **granular-** C. consisting of granular material, and indicating an inflammatory kidney. **hyaline-** C. consisting of the basic material of casts, commonly found in all kidney disorders. **pus-** C. consisting of pus cells or leucocytes, indicating renal suppuration. **waxy-** C. consisting of the light-yellow basic material commonly found in amyloid disease.

cata- A prefix derived from the Greek κατα, meaning down, against, back, or of a lower order. Cf. *ana-*

catabiotic. Capable of using up or dissipating. **c. force.** The energy derived by an organism from the metabolism of its food.

catabolism. Disintegration or the breaking down of tissues, the destructive metabolism by which living matter is transformed into waste materials and eliminated from the body. Cf. *anabolism*.

catadyn. An oligodynamic catalyst (q.v.) used for sterilization; as, silver.

catalase. (1) An oxidizing enzyme of blood and the tissues which splits peroxides to oxygen and water. (2) The oxidizing enzyme of fresh tobacco leaves. Cf. *peroxidase*.

catalasometer. An instrument which measures the activity of the catalase in a liquid (*e.g.*, milk) from the change in the level of a liquid in the graduated tube passing through the stopper of the closed vertical cylinder in which the reaction occurs.

catalinite. Beach pebbles of Santa Catalina Island; a green, red or brown variety of quartz.

catalysant. The substance on which a catalyst acts. Cf. *substrate*.

catalysate. The product of catalysis.

catalysis. Contact action or cyclic action. The effect produced by a small quantity of a substance on a chemical reaction, after which the substance (catalyst) appears to remain unchanged. Theories:

(1) Chemical. Formation of an intermediate compound; *chemical* catalyst, q.v.
(2) Adsorption. Contact action, *mechanical* catalyst, q.v.
(3) Radiation. Excitation by light, *photochemical* catalyst, q.v.

heterogenous- The acceleration of a chemical reaction in a heterogeneous system; *e.g.*, a

solid catalyst in a gas mixture. **homogenous-** The acceleration of a chemical reaction in a homogeneous mixture, *e.g.*, catalyst and reacting substances are either gases, or liquids. **iso-** The phenomenon of two catalytic influences in the same system and at the same time. **isomeric-** The transformation of a substance to an isomeric form by a catalyst. **negative-** (1) The retardation of a reaction by a catalyst, *e.g.*, mannitol reduces the oxidation of P. (2) The stopping of a reaction by a substance added to the system; *e.g.*, O_2 stops the reaction of H_2 and Cl_2. **photo-** The acceleration of a reaction by light. **photochemical-** The action of light as a catalyst. **pseudo-** Acceleration of a chemical reaction by a chemical catalyst.

catalyst. Catalyzator, catalyzer, catalytic agent. A substance which effects catalysis. **chemical-** A substance which changes the speed of a chemical reaction, probably by taking part in its chemical reaction, but which is formed again as a reaction product; hence is again present in its original concentration at the end of the reaction. An example is the rôle of nitric acid in the lead chamber process of making sulfuric acid. **inducing-** Promoter. A substance which stimulates or aids in catalysis. **mechanical-** A substance which influences the speed of a chemical reaction without itself undergoing a change, *e.g.*, the reaction of $2H_2O_2 = 2H_2O + O_2$ is accelerated by colloidal Pt, or Au. **negative-** Retarder. A substance which retards a chemical reaction. **positive-** Accelerator. A substance which accelerates a chemical reaction. Cf. *enzyme, ferment, vitamin, sensitizer.*

catalytic. Pertaining to catalysis. **c. action.** Catalysis. **c. agent.** Catalyst. **c. force.** The mechanical expression of the change in the speed of a chemical reaction produced by a catalyst. **c. poison.** Anticatalyzers, paralyzers. A substance which counteracts the effect of a catalyst, *e.g.*, HCN will prevent the catalysis of H_2O_2 by colloidal Pt. **c. process.** Contact process. The manufacture of industrially important substances by catalysis, *e.g.*, fixation of atmospheric nitrogen, manufacture of sulfuric acid (*contact process*).

catalyzer. Catalyst.

catamorphism. The chemical and physical changes produced on rock by the action of wind and water. Cf. *anamorphism.*

cataphoresis. Kataphoresis. The downward motion of electrically charged particles suspended in a medium under the influence of an electric field. Cf. *endosmosis.* Its antonym *anaphoresis* implies upward motion.

catapleiite. A complex zirconium silicate.

catechin. $C_{15}H_{14}O_6$ = 290.01. An acid substance from catechu, mahogany wood, and kino. An amorphous yellow powder, soluble in water, alcohol or alkalis; used for tanning and in calico printing. **c.a.** $+3H_2O$. *dl*-catechol, acacatechin. The principal constituent of acacia catechu. Thin needles, sintering at 100, and m.214. **c.b.** $+4H_2O$. *d*-catechol, gambir catechin. Thin needles, m.93–95, soluble in alcohol or ether. **c.c.** $+4H_2O$. *d*-epicatechol. Thin needles; anhydrous at 274.

catechol. (1) Pyrocatechol. (2) Catechin. **benzoylpyro-** Dihydroxybensophenone. **dimethoxy-** Veratrol. **methyl-** Guaiacol.

catechu. Cutch, cashoo, black catechu. An extract of the dark heart-wood of *Acacia catechu*, used as tincture, fluid extract, or powder, as an astringent in diarrhea, leucorrhea, and hemorrhages. Cf. *japonic acid.* **pale-** Gambir. **c. palm.** Areca.

catechuic acid. Catechin.

catechuretin. $C_{33}H_{23}O_{12}$ = 676.22. A substance produced from catechu by the action of sulfuric acid.

catechutannic acid. A reddish, amorphous substance obtained from catechu; believed to be the anhydride of catechuic acid.

catelectrode. Cathode.

catenary. The curve assumed by a chain suspended at each end.

catgut. An aseptic cord prepared from animal intestines (*e.g.*, sheep), and used for ligatures.

cathartic. A drug which causes the evacuation of the bowels, *e.g.*, castor oil, croton oil, magnesium sulfate. Cf. *purgative, laxative, aperient, hydragogue.*

cathartic acid. $C_{180}H_{96}O_{82}N_2S$. A glucoside and active principle of senna.

cathartin. (1) A bitter principle of senna (Lassaigne and Feneulle). (2) A compound from the ripe fruits of *Rhamnus cathartica* (Winkler). (3) A compound from jalap.

cathartogenin. A split product of cathartic acid.

cathartomannite. $C_{21}H_{44}O_{19}$. A non-fermentable carbohydrate-like substance from senna.

cathetometer. A precision instrument for the measurement of small vertical displacements. It consists usually of a microscope mounted on a rigid vertical rod, with cross wires and a scale.

cathidine, cathine, cathinine. Three alkaloids from African tea, the leaves of *Catha edulis*, a Celastraceae of Northern Africa. Cf. *katine.*

cathine. $C_9H_{13}ON$ = 151.11. *d*-nor-*i*-ephedrine. A crystalline alkaloid, m.77, soluble in water, from bushman's tee (boesmanstee), the leaves of *Catha edulis*, a Celastraceae, from N. and S. Africa. Cf. *celastrine, katine.*

cathode. Kathode, negode, katode. The negative pole or electrode of a galvanic battery, cell, electric current, or electric device. **c. deposit.** (1) A precipitate of a metal produced by electrolysis. (2) A metallic mirror formed on the glass near the cathode of vacuum tubes. See *cathodic sputtering.*

cathode rays. Negative rays. A stream of negatively charged electrons issuing from the cathode of a vacuum tube perpendicular to the surface, with velocities (10^9 to 10^{10} cm./sec.) depending upon the existing potential difference. When they are stopped by a solid substance they produce heat, phosphorescence, x-rays, pressure, or photographic action. The charge on a single electron is 4.77×10^{-10} e.s.u.; its mass 9×10^{-28} grams, or $\frac{1}{1800}$ of an H atom; its diameter 4×10^{-13} cm. They are analogous to the β-rays of radioactive matter.

cathodic sputtering. The disintegration of the cathode metal in an electric discharge tube, as a result of which the surrounding glass is covered with a mirror of finely-divided cathode metal.

catholyte. The liquid in the immediate neighborhood of the cathode during electrolysis. Cf. *anolyte.*

cation. Kathion, cathion, negion. (1) A positively charged atom, radical or group of atoms, which passes to the cathode or negative pole during electrolysis. (2) A positively charged gas molecule.

cationotropy. A case of ionotropy (q.v.) in which a H^+ or M^+ breaks off a molecule and leaves

negative ion in dynamic equilibrium. Cf. *prototropy*.

catlinite. Pipestone. A red clay from the Upper Missouri Region; used by the Indians for pipes.

catoptric. An optical system with metallic reflectors instead of glass mirrors.

catoptrics. A branch of physics that deals with mirrors and reflected light.

catoptron. A mirror.

catoptroscope. A device for examining objects by reflected light.

Cauchy's formula. An equation by which the wavelength, λ, and frequency, n, measured in air are converted to vacuum conditions. $(n-1)10^7 = a + b/\lambda^2 \times 10^{-5} + c/\lambda^4 \times 10^{-16}$. At 15°C and 760 mm. the values are for a = 2726.43; b = 12.288; c = 0.3555. At 0°C and 760 mm., a = 2875.66; b = 13.412; and c = 0.3777.

caulophyllin. A resinous precipitate obtained by pouring concentrated tincture of caulophyllum into water.

caulophylline. An alkaloid from blue cohosh, the root of *Caulophyllum thalictroides*. Colorless, odorless crystals.

caulophylloid. The combined principles from caulophyllum, used for the relief of congestive and spasmodic conditions of generative organs.

caulophyllosapogenin. $C_{56}H_{88}O_9$ = 904.68. A glucoside, m.315, from caulophyllum.

caulophyllum. Squaw root, blue cohosh. The rhizome and roots of *C. thalictroides*, a Berberidaceae of North America. It is a sedative, diuretic, and antispasmodic; used as fluid extract and tincture.

caulosaponin. $C_{54}H_{88}O_{17}$ = 1008.7. Leontin. A glucoside, m.255, from caulophyllum.

caustic. (1) Corrosive or burning. (2) The hydroxide of a light metal, *e.g.*, caustic soda. (3) A curve or surface of maximum brightness produced by the concentration of rays of light after reflection or refraction. (4) A drug which destroys the soft tissues of the body; used to destroy pathological tissues; an escharotic. **lunar-** Silver nitrate. **Vienna-** KOH fused with lime. Cf. *soda-lime*. **volatile-** Ammonium hydroxide.

c. curve. The line produced by the intersection of a number of reflected or refracted rays of light. **c. lime.** Calcium oxide. **c. potash.** Potassium hydroxide. **c. soda.** (1) Sodium hydroxide. (2) An impure, solid, or ground sodium hydroxide containing 76–78 % of sodium oxide, used in the manufacture of soap, paper, paints, leather, chemicals, and drugs; also for softening water, mercerizing cotton, refining oils, and in the preparation of cleansers.

causticity. The extent to which a substance is caustic. It is given (as a percentage) by the expression $100(2x - y)/y$, where x and y are the cc. of hydrochloric acid necessary to make the solution neutral to phenolphthalein and methyl orange, respectively. Hence it expresses the relative proportions of carbonate and hydroxide.

causticized ash. A mixture of soda-ash (Na_2CO_3) and caustic soda (NaOH), containing from 15–45 % NaOH. Used as water softener, for cleansers, and in the manufacture of leather.

Cavendish, Henry. 1731–1810. An English philosopher and chemist noted as a pioneer in specific heat and eudiometry and as the discoverer of hydrogen. He determined the compositions of water, air and nitric acid.

Caventou, Joseph Bienaimé. 1795–1877. A French pharmacist and discoverer of brucine, strychnine and quinine (with Pelletier).

cavitation. The production of emulsions by disruption of a liquid into a two-phase system of liquid and gas, when the hydrodynamic pressure in the liquid is reduced to the vapor pressure.

cawk. Barytes.

cayaponine. A purgative alkaloid from *Cayaponia globosa*, a Cucurbitaceae of Brazil.

cayenne pepper. Capsicum.

Cb. The symbol for *columbium*.

cc. Abbreviation for cubic centimeter.

Cd. The symbol for cadmium.

Ce. The symbol for cerium.

ceanothine. An alkaloid from New Jersey tea, the root of *Ceanothus americanus*, a Rhamnacea of the Eastern United States. Used as a purgative in dysentery, syphilis, etc.

ceara rubber. The coagulated latex of *Manihot glaziovii*, an Euphorbiaceae of Brazil and Argentine.

cebil gum. The reddish-yellow tears from *Piptadenia cebil*, a Leguminosae of Brazil. Cf. *angico*.

cebur balsam. Tagulaway.

cecilose. A pyroxenite or websterite from Maryland.

cedar. A group of trees of the pine family. **red-** Juniperus. **white-** Thuja.

c. gum. Pale-yellow tears from *Cedrela toona* (Indian mahogany), a Meliaceae of Queensland. **c. leaves oil.** C. oil. **c. oil.** The essential oil, d.0.870–0.890, from *Juniperus virginiana*, used in microscopy as clarifying agent and for oil-immersion lenses. It contains limonene, cadinene, borneol and esters. **c. wood oil.** Essential oil from the wood of *Cedrela odorata*, a large tree of the West Indies and South America. An odorous liquid, d.-0.945–0.960, soluble in alcohol; containing cedrene and cedrol.

cedarite. Chemavinite.

cedrarine. Orexin.

cedrene. $C_{15}H_{24}$ = 204.2. A hydrocarbon, the liquid part of oil of red cedar, $d_{15°}$0.984, b.237. **c. camphor.** Cedrol.

cedrin. An active principle of cedron. Colorless bitter crystals, soluble in water; used as an antiperiodic.

cedrol. $C_{15}H_{26}O$ = 222.2. Cedrene camphor. The crystalline portion, m.87, b.294, of oil of red cedar.

cedron. The seeds of *Simaba cedron*, a Simarubaceae of Central America; used as a febrifuge.

cedronella. Lemongrass.

cedronine. An alkaloid from cedron.

cel. A unit of velocity; the velocity imparted by 1 dyne in 1 second to 1 gram.

celadonite. A species of glauconite.

celandin. Chelidonium.

celandine. Pilewort. **greater-** Chelidonium. **lesser-** Pilewort.

celastin. Menyanthin.

celastrine. An alkaloid from the seeds of *Celastrus scandens* and other Celastraceae. A white crystalline powder; a stimulant causing an increase in body temperature. Cf. *cathine*.

celery. The vegetable *Apium graveolens*, an Umbelliferae. Cf. *apiol*, *apigenin*. **c. seeds.** Used as a spice and for making **c. seed oil**, which contains selinene and apiol. A colorless liquid, d.0.870–0.895.

celestine. $SrSO_4$. A native strontium sulfate, deposited in sedimentary rocks.

celite. A registered trade-mark for certain diatomaceous earth products, particularly filter aids, fillers, abrasives, heat insulating materials, insulating plasters and cements, and the like.

cell. (1) **Biological.** The anatomical unit of life of which all living matter is constituted, and from which it develops. It consists essentially of a small protoplasmic mass which is an ever-changing and ever-circulating colloidal chemical system of proteins, and is differentiated into a nucleus and cell body. According to its structural character this protoplasm is divided as follows:

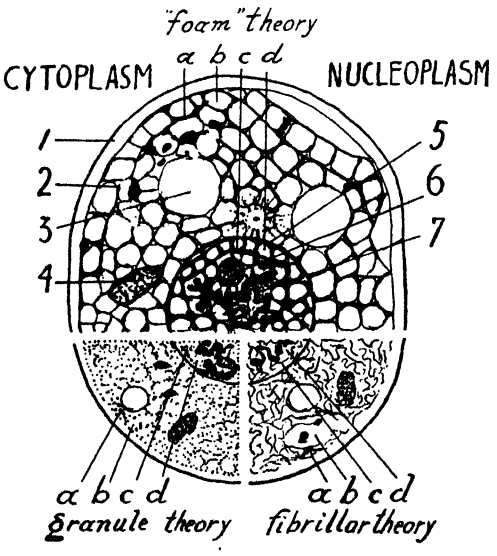
protoplasm

cytoplasm (cell body) *normally pH* 6.6		nucleoplasm (cell nucleus) *normally pH* 7.5	
a	b	c	d
spongioplasm (the solid portion or fibers)	hyaloplasm (the liquid portion or fluid)	linin (the solid portion)	nucleoplasm (the liquid portion)

Each one of these structural elements of protoplasm may form or contain further specialized units of matter, as:

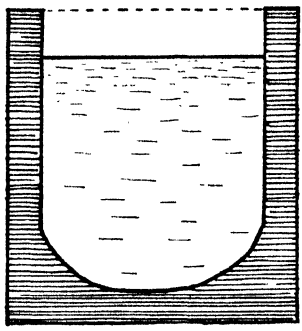
in the cell body.	*in the nucleus*
1. cellular membrane	5. nuclear membrane
2. granules	6. nucleolus
3. vacuoles	7. chromatin and chromosomes
4. plastids	

(2) **Galvanic.** An electrical element; or device for transforming chemical into electrical energy, the action of which is due to the passage of ions through an electrolyte. It usually consists of a metal or other substance immersed



Cell (schematic).

in an electrolyte containing ions of that substance, and connected by a liquid bridge (*e.g.*, a tube containing an electrolyte), to a second electrode which is similar in type to but not identical with the first. Cf. *galvanic battery*, *concentration c.* A cell consists of the containing vessel, two electrodes (anode and cathode), one or more electrolytes providing anions and cations and the respective metals. (3) **General.** Any container *e.g.*, filled with an absorbing liquid, as a light filter. **air-** The air-containing chambers of the lungs or of vegetable tissues. **alkali-** Photoelectric c. **amoeboid-** A cell resembling an amoeba, *e.g.*, a leucocyte. **animal-** The cells of animal tissues. **asexual-** A cell which reproduces itself without external



Cell (definition 3).

stimulus. **bichromate-** An electric amalgamated zinc-carbon cell. Voltage = 2.0 volts. The electrolyte is a 12 % solution of potassium dichromate containing (approximately) 9 % of sulphuric acid. **blood-** See *blood*. **Bunsen-** See *Bunsen*. **cadium-** See *cadmium*. **carrier-** Leucocyte. **chromatophore-** A biological unit containing coloring matter. **Clark's-** See *Clark*. **columnar-** An elongated cell, a number of which form part of the epithelial tissue. **concentration-** A galvanic c. produced by a combination of 2 electrodes consisting of the same substance (usually a metal), immersed in solutions containing ions of the substance which differ only in the concentrations of the ions concerned; *e.g.*, the system $Ag/0.1N\ AgNO_3/0.01N\ AgNO_3/Ag$. **Daniell-** An electrical zinc-copper cell, (about 4 volts). **daughter-** A cell produced by the division of another (mother) cell. **dead-** A c. which has ceased to perform vital functions; it may serve for mechanical protection, *e.g.*, horn, hair, or cork cells. **diffusion-** A percolator for the extraction of sugar from beets. **dry-** See *dry*. **electrical-** (1) An accumulator. (2) A voltaic c. (3) An electrolytic c. **electrolytic-** (1) A c. used for electroplating. (2) Galvanic c. **electroresponsive-** See *electroresponse*. **embryonic-** A c. from which the various tissues develop. **epithelial-** A cell of the skin. **galvanic-** See *cell* (2) and *galvanic*. **giant-** An abnormally large cell. **Leclanché-** An electrical zinc-carbon cell, (about 1.5 volts). **locomotive-** A cell capable of independent movement. **optical-** See *selenium*. **oxidation-reduction-** An electrolytic cell utilizing an oxidation-reduction reaction. **photo-conductive-** p.-electric; p.-emissive; p.-voltaic. See *photo*. **reversible-** An electrolytic cell in which the energy spent in reversing the chemical changes in the cell is approximately equal to that given out by the direct operation of the cell. **secondary-** (*biol.*). A cell formed by the coalescence of other cells. (*electr.*) An accumulator. **sele-**

nium- See *selenium*. **standard-** A device for obtaining a definite voltage, *e.g.*, cadmium cell. **transition-** (*biol.*). A cell whose characteristics, are between two well defined types of cells, and which is supposed to change from one type to the other. (*electr.*) A voltaic cell which contains an electrolyte undergoing a definite change at some temperature, *e.g.*, $ZnSO_4.7H_2O$ changes at 39°C to $ZNSO_4.6H_2O$, with corresponding change in the e.m.f.; hence a Clark cell (q.v.) must be kept below 39°C. **voltaic-** See *cell* (2). **Weston-** Cadmium cell.

c. constant. Resistance capacity. **c. division.** See *karyokinesis*.

cellase. Cellulosase. A ferment which digests cellulose.

cellit. Technical acetyl cellulose.

cellobiose. $C_{12}H_{22}O_{11}$ = 342.17. Cellose. A disaccharide, glucose-β-glucoside, m.225, obtained as intermediate product in the hydrolysis of cellulose; used as bacteriological reagent.

celloidin. Collodion wool. A concentrated solution of pyroxylin. Used in microscopy for embedding specimens or section-cutting.

cellon. Tetrachlorethane.

cellophane. The registered trade name for the elastic, transparent, heat-resistant, water- and oil-insoluble, gas-tight cellulose film obtained by the precipitation of a viscose solution with ammonium salts. Used as a substitute for celluloid, guttapercha and parchment paper.

cellose. Cellobiose.

cellosolve. $C_4H_{10}O_2$ = 90.08. Glycol ethyl ether, hydroxyether, *2*-ethoxyethanol*, ethyleneglycol ethylether, glycolmonoethylether, $EtOCH_2CH_2OH$. A colorless liquid, d.0.935, b.135.3, soluble in water, alcohol or ether; used as a solvent. **butyl-** $C_6H_{14}O_2$ = 118.11. Glycol butyl ether, *2*-butoxyethanol*, ethyleneglycol monobutylether, $BuO.CH_2.CH_2OH$. A colorless liquid, d.0.931, b.170.6; used as a solvent, especially for brushing lacquers. **ethyl-** Cellosolve. **methyl-** $C_3H_8O_2$ = 76.0. Ethyleneglycol monomethylether, methoxyhydroxy ethane, methoxyethanol*, $MeO(CH_2)_2$-OH. A volatile liquid, d.0.930, b.134; miscible with toluene or turpentine. Used as solvent for nitrocellulose in the manufacture of lacquers.

c. acetate. $C_4H_8O_3$ = 104.0. Hydroxyethylacetate, glycol monoacetate, $MeCOO(CH_2)_2OH$. A colorless volatile liquid, d.0.976, b.153, soluble in toluene; used for lacquers. **c. butylate.** $C_6H_{14}O_2$ = 118.1. A colorless liquid, d.0.902, b.170; used as solvent for nitrocellulose.

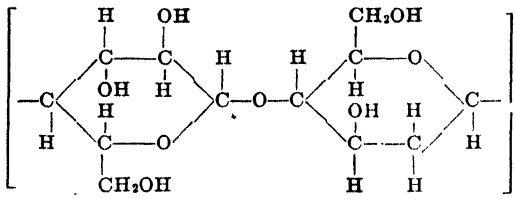
cellotropin. $C_6H_4O.Ph.COO.C_6H_{11}O_5$ = 376.16. Monobenzoyl-arbutin. A white, odorless and tasteless powder, insoluble in water or ether, soluble in alcohol; used for pulmonary tuberculosis and scrofula.

celluloid. Zylonite, xylonite. A malleable substance prepared from nitrocellulose (pyroxylin or nitrated cotton) and camphor, pressed into various shapes and rendered less inflammable by the addition of ammonium phosphate and other ingredients. Used in the manufacture of many articles, and sometimes in dentistry and surgery.

cellulosans. Pentosans associated with cellulose in wood.

cellulosase. Cellase.

cellulose. $(C_6H_{10}O_5)x$ = (162)x. A carbohydrate constituent of the walls and skeletons of vegetable cells. A polymer of the glucose-residue units:



. . . to O of next glucose-residue. A *c. micelle* is considered to contain from 1500–2000 such units arranged in 40–60 *cellobiose* chains, each containing from 15 to 20 pairs of glucose-residues. It is almost pure in pith, absorbent cotton, and filterpaper, and is a colorless, transparent mass, insoluble in water, alcohol, ether, or other solvents, but soluble in copper ammonium hydroxide and also dissolved by sulfuric acid with the formation of amyloid (parchment paper). (See *collodion, celluloid, pyroxylin, gun cotton, nitrocellulose, rayon, acetylcellulose, viscose.*) The sources of c. are

1. Seed fibers (87–91 %); as, cotton kapok and other flosses.
2. Woody fibers (58–62 %); as, pine.
3. Bast fibers (32–37 %); as, straw, flax, hemp, ramie.
4. Leaf fibers; as, sisal and manila hemp.

C. is divided into the following fractions, by digestion with 17.5 % NaOH: α-insoluble; β-soluble, but reprecipitated by acids; γ-soluble and *not* reprecipitated by acids. **Cross and Bevan-** The c. isolated from vegetable material by successive chlorination and alkali treatment, according to original method of Cross and Bevan. **hemi-** See *hemicellulose*. **holo-** See *holo*. **pseudo-** Hemicellulose. **c. acetate.** The esters of cellulose and acetic acid, used extensively in industry (cellit, cellon, sicoid, sericose, boroid, cellolite) as imitation leather, fabrics, yarns, hairs, bristles, gold leafs, filaments, sponges, films, wind shields, phonograph records, aeroplane dopes, solid alcohol or cigar tips. (**mono-**) $C_6H_9O_4.COOMe$ = 205.00. C. monoacetate. (**di-**) $C_6H_8O_3(COOMe)_2$ = 246.11. C. diacetate. (**tri-**) $C_6H_7O_2(COOMe)_3$ = 288.19. C. triacetate. A colorless, amorphous, white mass, insoluble in water, alcohol or ether. (**tetra-**) $C_6H_6O(COOMe)_4$ = 330.17. C. tetraacetate. White, amorphous mass, softening 150, insoluble in ordinary solvents. (**penta-**) $C_6H_5(COOMe)_5$ = 372.24. C. pentacetate. White amorphous mass, insoluble in water, soluble in alcohol. **c. nitrate.** The esters of cellulose and nitric acid, used extensively in explosives and in the lacquer industry under the misnomer: *nitrocellulose*. There exist, according to the degree of nitration: (**tri-**) $C_{12}H_{17}O_7(NO_3)_3$ = 459.23. C. trinitrate. (**tetra-**) $C_{12}H_{16}O_6(NO_3)_4$ = 504.23. C. tetranitrate. Both are white amorphous masses, d.1.66, insoluble in ordinary solvents, soluble in absolute alcohol or glacial acetic acid. They are the principal constituents of collodion. (**penta-**) $C_{12}H_{15}O_5(NO_3)_5$ = 549.23. C. pentanitrate. White amorphous substance, d. about 1.66, insoluble in alcohol, benzene, ether, soluble in a mixture of alcohol and ether. (**hexa-**) $C_{12}H_{14}O_4(NO_3)_6$ = 594.23. C. hexanitrate. The principal constituent of gun-

cotton. White amorphous substance, d.1.66, ignites about 160, insoluble in ordinary solvents.

celotex. A structural insoluting material or wall board produced by pressing bagasse or other fibers; d.0.19–0.24, tensile strength 26.2Kg./cm.^{2}

celsian. A barium feldspar, $BaAl_2Si_2O_8$.

Celsius, Anders. 1701–1744. A Swedish astronomer who originated the celsius thermometer scale. **C. scale.** A thermometer scale from which developed the centigrade scale (q.v.).

celtium. Ct. A supposed element (at. no. 72) of the rare earth group, discovered by Urbain and Dauvillier in zirconium minerals. Cf. *hafnium.*

cement. (1) A plastic material which hardens and forms a firm connecting medium between two or more solids. (2) Portland cement. A fine gray powder, probably containing $3CaO.SiO_2$, $3CaO.Al_2O_3$, and $2CaO.SiO_2$. It is made by mixing and grinding a calcareous material (limestone, marl or chalk) with an argillaceous one (clay or shale, $Al_2O_3.SiO_2$), and heating it in ovens to 1350–1800°C until it begins to vitrify. The clinker thus produced is pulverized, mixed with 2 % gypsum, and ground to 200-mesh. The composition is: CaO 62–67, SiO_2 18–20, Al_2O_3 4–8, Fe 2–3, Mg 1–4, K, Na 0.5 %, Ti, Mn traces. Used for concrete, which is made by mixing 1 part cement, 2 parts sand and 4 parts of gravel, and for each 100 pounds of cement 6 gallons of water. The resulting concrete, properly handled will have a crushing strength of 3000 lbs. after one month and 4000 lbs. or more after a year. **adamantine-** A mixture of powdered pumice stone with silver amalgam, used in dentistry to fill cavities of teeth. **bituminous-** Cement prepared from natural pitch. **chalcedony-** A mortar and cement made from chalcedony. **clinker-** Uncrushed portland cement. **copper-** Dental c. See *dental c.* **glass-** A mending material for broken glass, as a mixture of resins. **glycerin-** A glue containing glycerin. **hydraulic-** A cement that sets under water, as Portland cement. **porcelain-** A substance used to mend porcelain. **portland-** A hydraulic cement made by calcining limestone and clay or rivermud. **quick-setting-** A mixture of 11–20 % alkyd resin, 35 % of nitrocellulose solution, 11–21 % solvent and 4–8 % plasticizer. **refractory-** See *refractory c.* **roman-** A quick-setting cement obtained by mixing burnt clay with lime and sand. **rubber-** A mixture of un-vulcanized rubber and sulfur dissolved in oil; used for coating objects. **silicate-** See *dental c.* **zinc oxide-** See *dental c.*

cementation. (1) The setting or hardening of a plastic material. (2) Heating wrought iron in a bed of charcoal or hematite, and its conversion into steel, (blister steel). (3) Heating one metal in contact with another, and production of a coating of the latter.

cementing. To bind together. **c. electron.** Electrons of the atomic nucleus which hold protons together.

cementite. The iron carbide, Fe_3C, which occurs in steel.

cenospheres. An opaque spherical structure in coal.

cent. A contraction of the Latin centum (a hundred), or centesimus (a hundredth).

Centaurea. A genus of composite herbs, containing 470 species, *e.g.*, *C. behen*, behenic acid; *C. jacea*, centaurin; *C. cyanus*, cyanin.

centaureidin. $C_{18}H_{18}O_8$ = 362.2. A flavone decomposition product of centaurin.

centaurin. A glucoside from the roots of *Centaurea jacea.*

centaurine. An alkaloid from *Erythrea centaurium.*

centaury. The various species of *Erythraea*, used for general tonic preparations. **American-** Sabbatia.

centi- A prefix denoting $\frac{1}{100}$.

centigrade. A thermometer scale based upon the freezing point (0°) and boiling point (100°) of water. It was originated by Celsius, hence 1°C = 1° centigrade = 1° Celsius.

centigram. The one-hundredth part of a gram: 1 cg. = .01 gm. = 10 mg. (= 0.154 grains troy).

centiliter, centilitre. The one-hundredth part of a liter: 1 cl. = .01l. = 10 mils. or 10 cc. (0.61 in.^{3}).

centimeter, centimetre. The one-hundredth part of a meter: 1 cm. = .01 m. = 10 mm. (0.3937 inches). **cubic-** A cube whose edge is 1 cm. long. It differs from the milliliter which is $\frac{1}{1000}$ part of a liter; thus $\frac{1}{1000}$ liter = 1 ml. = 1.00027 cc. Cf. *cubic centimeter.*

centimeter-cube. Cubic centimeter.

centinormal. N/100. See one hundredth *normal* solution.

centipoise. 0.01 poise (q.v.). A unit of viscosity or fluidity. The viscosity of water at 20°C is taken as 1.00. Cf. *rhe, dissipation.*

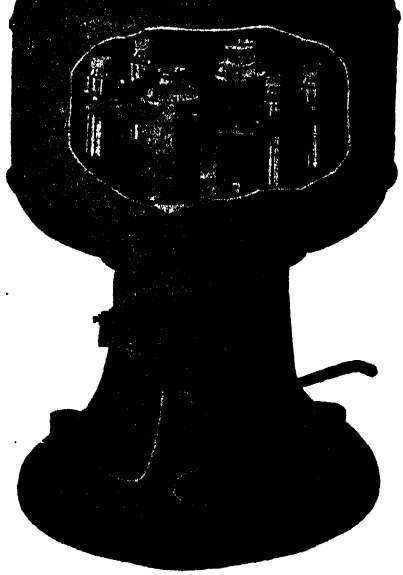
centner. (1) A German standard weight. It equals 50 kg. or 110.2 lbs. (Eng.). (2) A drachm weight divided into 100 equal portions.

centrifugal. Tending to move outwards, away from a center. **c. force.** That tendency of a body moving round another body in a curve to leave its axis of motion.

centrifugalization. Centrifugation.

centrifugation. A process of separating solids from liquids, or liquids of different specific gravity by subjecting them to fast rotation.

centrifuge. A machine for the separation of substances by centrifugal force and consisting of a



Centrifuge.

rapidly rotating container, in which are placed test-tubes, bottles, or large quantities of material. **c. tube.** A heavy walled glass container, which may be graduated, suitable for use in a centrifuge.

centrifuging. Subjecting to centrifugation.

centripetal. Antonym of centrifugal. Tending to move towards the center.

centron. The positive nucleus of an atom; Cf. *proton.*

centrosome. A small, round, highly refractive body of protoplasm between nucleus and cell-body, taking an active part in cell division. See *karyokinesis.*

cephæ. See words beginning with *cephae-* and *cepha-.*

cephaëline. $C_{14}H_{19}O_2N$ = 233.2. An alkaloid from the root of *Cephaelis ipecacuanha* (Rio ipecac) and *Cephaelis acuminata* (Carthagena ipecac). Colorless, white crystals sparingly soluble in water; used as an emetic. **c. hydrochloride.** $C_{14}H_{19}O_2N.HCl$ = 269.67. Colorless, white crystals, soluble in water; used as an emetic.

Cephaëlis. A genus of Rubiaceae of Central and South America, which yields ipecacuanha.

cephalanthin. A glucoside from *Cephalanthus occidentalis* or button-bush, a Rubiaceae of North America.

cephaletin. An amorphous, bitter principle from swamp dogwood, *Cephalanthus occidentalis*, a Rubiaceae of North America.

cephalin. (1) Kephalin. (2) A white crystalline acid principle from *Cephalanthus occidentalis.*

ceptor. A characteristic of an organism which is responsible for its transformation, *e.g.*, amboceptor, chemoceptor, receptor (q.v.).

cera. Wax. **c. alba.** Bleached or white beeswax. **c. flava.** Unbleached or yellow beeswax.

ceramic ink. A ground mixture of 1 pt. K_2CO_3, 1 pt. borax, 2 pts. litharge and 2 pts. cobalt salt. Mix with oil to a paste, write on glass or porcelain, and burn in with the bunsen burner to produce a permanent marking.

ceramics. The art of making objects such as vases, reliefs, and pottery, from clay, and burning into them the various metallic colors. The chemical composition of c. ware is shown by the diagram.

cerane. $C_{26}H_{54}$ = 366.42. Isohexacosane. Colorless crystals, m.61, b.$_{0.7mm}$207, insoluble in water.

cerargyrite. AgCl. Hornsilver, argentum cornu. A native isomer of silver chloride.

cerasein. Cerasin. A resin from the bark of *Prunus* (*Cerasus*) *sarotina* (wild cherry); used as diuretic, sedative, and antipyretic.

cerasin. (1) Kerasin. (2) Cerasein. (3) Cerasinose.

cerasinose. A carbohydrate derived from cherry-gum by boiling with dilute sulfuric acid.

cerasite. A Japanese variety of iolite.

cerate. (1) A compound of oil or lard with wax, resin, or spermaceti. The official preparations are *camphor-, cantharides-, lead subacetate-, rosin-,* etc. (2) A soap or metallic salt made from lard. (3) A cerotate.

ceratin. Keratin.

ceratinase. A hydrolytic enzyme from carob beans.

ceratum. A mixture of 3 parts white wax and 7 parts of lard.

cerberetin. $C_{19}H_{26}O_4$ = 318.3. A decomposition product of cerberin. A citron-yellow powder, m.85.

cerberidin. A glucoside from *Thevetia cerbera.* A yellow, amorphous powder, soluble in water and used as a substitute for digitalis.

cerberin. $C_{27}H_{40}O_8$ = 492.4. A glucoside from the seeds of *Cerbera odallam* and *Thevetia neriifolia*, an Apocynaceae of the East Indies; used as a substitute for senna. Cf. *odallin, thevetin.*

cereal. (1) An edible seed of Gramineae, *e.g.*, wheat, rye, oats, rice, maize, barley. (2) A preparation of (1).

cerealin. An enzyme or protein contained in bran, and similar to diastase; it converts starch into glucose.

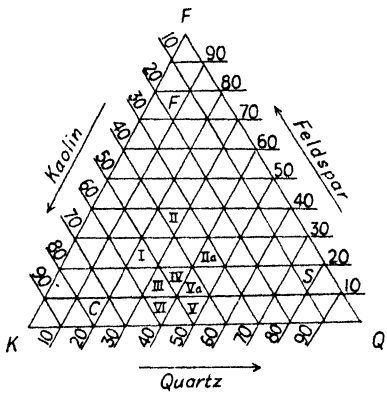
cerebral. Pertaining to the brain. **c. excitants.** Drugs which stimulate the brain to activity. **c. depressants.** Drugs which temporarily suspend or depress the functions of the brain.

cerebric acid. A fatty acid from the white substance of brain tissue.

cerebrin. $C_{17}H_{33}O_3N$ = 299.4. A colorless, fatty principle, obtained from brain tissue by boiling with barium hydroxide.

cerebrine. Cerebrum siccum. Dried brain substance, used in the treatment of neurasthenia.

cerebron. $C_{40}H_{81}O_6N$ = 671.8. An amino lipotide from the white brain tissue.



Ceramic ware.

I = hard porcelain.
II = soft porcelain.
III = Japanese porcelain.
IV = stoneware.
V = whiteware.
Va = German whiteware.
VI = calcareous whiteware.
C = clay.
S = sand.
F = feldspar.

cerebronic acid. $C_{25}H_{50}O_3$ = 478.5 and $C_{24}H_{48}O_3$ = 466.5. A mixture of α-hydroxy-pentacosanic acid and α-hydroxytetracosanic acid, m.80.5, obtained by hydrolysis of the white brain substance.

cerebrose. $C_6H_{12}O_6$. Brain sugar. A carbohydrate of brain tissue, identical with galactose.

cerebroside. Galactoside. A group of nitrogeneous, fatty substances found in the white

matter of the brain; free from phosphorus, and containing galactose and a complex fatty acid. Cf., *phrenosin, sphingosine, kerasin, cholane ring, carotenoids.*

Mosander in 1839. Cerium forms two series of compounds with valencies:

+3 cerous-.....Ce^{+++}
+4 ceric-.....Ce^{++++}

CEREBROSIDES

$Me(CH_2)_7CH_2.CH_2(CH_2)_{12}CH_2CONH.CH_2.CH.CHOH.CH:CH(CH_2)_{12}Me$

a *b* *R*

kerasin (as shown): *R* is —O—CH(O—CH(CH$_2$OH)—CHOH—CHOH)—CHOH

phrenosin: *b* is CHOH (instead of CH_2).
nervon: *a* is CH:CH (instead of $CH_2.CH_2$).

cerebrospinal. Pertaining to the brain and spinal cord.

cerebrospinase. An oxidizing ferment in the cerebro spinal fluid.

ceresin. Earth wax, ozocerite. A purified mineral wax (ozokerite), m.58, d.0.753. Used as a substitute for beeswax; sometimes hard paraffin wax is added to it.

cerevisin. A dried brewer's yeast derived from the yeast *Saccharamyces cerevisiae.*

cerevisterol. A sterol from yeast, m.265.3. Cf. *ergosterol, cholane ring.*

ceria. Cerium dioxide.

ceric. (1) A compound containing tetravalent cerium Ce^{++++}. (2) Pertaining to wax. **c. acid.** Cerotic acid. **c. ammonium nitrate.** $Ce(NO_3)_4.2NH_4NO_3$ = 548.3. Small, orange crystals, very soluble in water or alcohol, and readily reduced to cerous compounds; used in the preparation of pure cerous salts. **c. fluoride.** $CeF_4.H_2O$ = 224.13. An amorphous white powder, insoluble in water, used in ceramics. **c. hydroxide.** $Ce(OH)_4$ = 208.0. A yellow powder, insoluble in water, slightly soluble in acids or alkalis. **c. nitrate.** $Ce(NO_3)_4$ = 388.3. Orange, hygroscopic crystals, soluble in water or alcohol. **c. oxide.** CeO_2 = 172.3. Cerium dioxide, ceria. A light yellow powder, d.7.65, m.1950, insoluble in water, soluble in concentrated sulfuric acid; used in ceramics and Welsbach mantles. **c. sulfate.** $Ce(SO_4)_2.4H_2O$ = 404.5. White or yellow needles, soluble in water, decomp. in excess with the formation of a basic salt. Used as reducer in photography, and in analytical chemistry as an oxidizing agent for vanadyl ions and in the volumetric determination of hydroquinone.

ceride. A tertiary lipid formed by the union of higher monovalent alcohols and fatty acids.

ceridin. Cerolin.

cerin. (1) $C_{30}H_{50}O_2$ = 442.3. A sterol and constituent of cork; colorless, small, acicular crystals. (2) Cerotic acid.

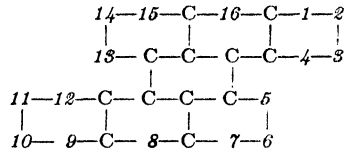
cerinic acid. Cerotic acid.

ceriometry. Volumetric analysis with ceric sulfate solution.

cerite. A native hydrous silicate of the rare earths, found in the gneiss at Bastnaes, Sweden, which also contains cerium, lanthanum, and didymium. **fluo- Fluocerite.**

cerium. Ce = 140.13. A rare earth element, atomic number 58. An iron-gray, ductile, malleable metal, d.7.042, m.623, b.1400; it burns in air like magnesium, decomp. in water, and is readily soluble in acids. It occurs as silicate (cerite and allanite) and phosphate (monazite), together with other rare earth metals. It was discovered in 1803 by Klaproth, independently by Berzelius and Hisinger, and first isolated by The metal is prepared by electrolysis of the fused chloride, and is used in alloys for gas-lighters (mischmetall) and other pyrophoric or spark-producing metals; for machine gun tracer bullets; as "getter" of noble gases in radio tubes, as scavenger in steel making, and for flash light powders. The compounds are poisonous, and are used in large quantities for incandescent gas mantles. **c. compounds.** See under *ceric* and *cerous.* **c. dioxide.** Ceric oxide.

cerodi- A prefix indicating the heptacyclic ring structure:



as in:

cerodiamidine, *8* and *16* are N
cerodioxene, *8* and *16* are O
cerodithiene, *8* and *16* are S

cerolein. A constituent of bees-wax, soluble in cold alcohol.

cerolin. Ceridin. A fatty constituent of yeast, used in the treatment of acne.

ceromel. Honey in the comb, or a mixture of wax and honey.

ceromelissic acid. $C_{33}H_{66}O_2$ = 494.6. An acid, m.94, from lardacein.

ceropic acid. $C_{36}H_{68}O_{30}$ = 980.7. A white microcrystalline acid from the needles of *Pinus sylvestris* a Coniferae.

ceroplastic acid. $C_{33}H_{70}O_2$ = 498.6. An acid, m.97, from lardacein.

cerosate. A compound containing the monovalent radical, $C_{23}H_{47}COO$—, derived from cerosic acid.

cerosic acid. $C_{23}H_{47}COOH$ = 368.5. Tetracosanic acid. A fatty acid, m.85, from cerosin.

cerosin. Cerosinyl cerosate. A wax found as coating on sugar cane.

cerosinyl. The radical, $C_{24}H_{49}$—, derived from cerosic acid.

cerotate. A compound containing the monovalent $C_{26}H_{53}COO$— radical, derived from cerotic acid. Cf. *carnauba wax.*

cerotene. $C_{27}H_{54}$ = 378.5. An unsaturated hydrocarbon from wax. Cf. *cerylene, carotene.*

cerotic acid. (1) $C_{25}H_{53}COOH$ = 410.5. Cerotinic acid, heptacosanoic acid*, cerotin, cerinic acid. The monobasic, fatty acid of wax. A white, amorphous powder, or small granules, m.82.5, insoluble in water, soluble in alcohol. Cf. *neocerotic acid.* (2) $C_{25}H_{51}COOH$ = 396.41.

Hexacosanoic acid*. White needles, d.0.836, m.88, insoluble in water.

cerotin. Ceryl cerotate.

cerotinate. Cerotate.

cerotinic acid. Cerotic acid.

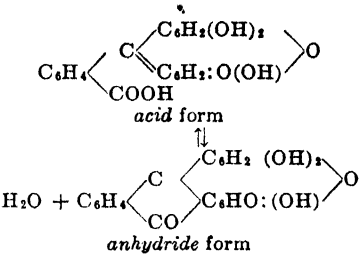
cerotol. Ceryl alcohol.

cerous. Containing trivalent cerium, Ce^{+++}. **c. acetate.** $Ce(C_2H_3O_2)_3.H_2O$ = 335.2. White crystals, m.115, soluble in water. **c. ammonium nitrate.** $Ce(NO_3)_3.3NH_4NO_3 10H_2O$ = 681.56. Large transparent crystals, soluble in water or alcohol; used in the manufacture of Welsbach mantles. **c. benzoate.** $Ce(C_7H_5O_2)_3$ = 503.3. A white powder, soluble in hot water or alcohol. **c. bromate.** $Ce_2(BrO_3)_6.9H_2O$ = 1070.4. White crystals, very soluble in water. **c. bromide.** $CeBr_3.7H_2O$ = 506.1. White, hygroscopic crystals, very soluble in water or alcohol. **c. carbonate.** $Ce_2(CO_3)_3.5H_2O$ = 550.4. A white powder, insoluble in water but soluble in ammonium carbonate solution or dilute acids. **c. chloride.** $CeCl_3$ = 246.6. White crystals, $d_{15°}$.3.88, m.848, soluble in water or alcohol. (cryst.) $CeCl_3.7H_2O$ = 372.7. Large, slightly pink, transparent crystals, very soluble in water or alcohol; used in the manufacture of Welsbach mantles. **c. citrate.** $CeC_6H_5O_7$ = 329.4. A white powder, insoluble in water, soluble in dilute acids. **c. fluoride.** CeF_3 = 197.13. Colorless crystals, d.5.8, m.1324, slightly soluble in water. **c. hydroxide.** $Ce(OH)_3$ = 191.2. A yellowish powder, insoluble in water, soluble in acids. **c. hypophosphite.** $Ce(H_2PO_2)_3.H_2O$ = 353.3. A white powder, insoluble in water, soluble in dilute acids; used medicinally for phthisis. **c. iodide.** $CeI_3.9H_2O$ = 682.7. White or pink crystals, very soluble in water or alcohol. **c. lactate.** $Ce(C_3H_5O_3)_3$ = 407.5. A white powder, sparingly soluble in water. **c. malate.** $Ce_2(C_4H_4O_5)_3$ = 676.5. A white powder, soluble in water. **c. nitrate.** $Ce(NO_3)_3.6H_2O$ = 434.5. White, transparent crystals, very soluble in water or alcohol; used in making Welsbach mantles. **c. oxalate.** $Ce_2(C_2O_4)_3.9H_2O$ = 706.8. A pinkish, crystalline powder, usually containing La and Pr salts, insoluble in water. Used as a raw material in the preparation of rare earths, and medicinally as a sedative and tonic. **c. oxide.** Ce_2O_3 = 328.5. A gray powder, d.6.9, insoluble in water, soluble in acids. **c. phosphate.** $CePO_4$ = 235.3. Yellowish, rhombic crystals $d_{14°}$.5.92, insoluble in water or acids. **c. salicylate.** $Ce(C_7H_5O_3)_3$ = 551.5. A white powder, insoluble in water. **c. sulfate.** $Ce_2(SO_4)_3$ = 568.7. Monoclinic or rhombic crystals, d.3.912, soluble in water. (cryst.) $Ce_2(SO_4)_3.8H_2O$ = 713.1. Pinkish, small crystals, soluble in water; used to prepare aniline black. **c. valerate.** $Ce(C_5H_9O_2)_3$ = 443.5. A white powder, sparingly soluble in water.

ceroxylin. $C_{20}H_{32}O$ = 288.26. A crystalline substance found in the waxy exudation of *Ceroxylon andicola*, the wax palm of South America.

certified. Describing an instrument, especially a measuring device such as a buret or pipet, which has been tested in an official laboratory and its correctness recorded on a certificate. Cf. *standardized*.

cerulein. Coerulein. $C_{20}H_{12}O_7$, or $C_{20}H_{10}O_6.H_2O$ = 364.14. A coloring matter from gallein, which exists as a normal acid and as an internal anhydride:



ceruleum. A blue pigment consisting of cobaltous stannate and calcium sulfate.

cerulic acid. An oxidation product of coffee.

cerulignone. $C_{16}H_{16}O_6$ = 304.0. Cœrulignone, *3.3'.5.5'*-tetramethoxydiphenoquinone, cedriret. Dark, steel-blue needle-shaped crystals, obtained by treating crude pyroligneous acid with potassium dichromate. **hydro-** Hydrocerulignone.

cerumen. Wax from the human ear.

cerusa, ceruse, cerussa. White lead.

cerussite. $PbCO_3$. A white native lead carbonate and common mineral, produced by the action of CO_2 and water on lead ores.

cervantite. Sb_2O_4. A native antimony tetroxide; secondary mineral formed by the oxidation of antimony sulfide.

ceryl. The monovalent radical, $C_{26}H_{53}$—derived from ceryl alcohol. **c. alcohol.** $C_{26}H_{54}O$ = 382.43. *1*-Hexacosanol*, cerotin, *n*-hexacosyl alcohol. A monatomic alcohol derived from Chinese wax and wool fat. Colorless crystals, m.79, insoluble in water, soluble in alcohol or ether. (iso-) An isomeric alcohol from Java wax. White crystals, m.62, insoluble in water, soluble in alcohol or ether. **c. cerotate.** $C_{52}H_{106}O_2$ = 774.80. An ester of ceryl alcohol and cerotic acid, $C_{26}H_{53}OOC.C_{26}H_{53}$. Colorless crystals, m.84, forming the main portion of Chinese wax. **c. palmitate.** $C_{42}H_{84}O_2$ = 620.8. An ester of ceryl alcohol and palmitic acid, $C_{15}H_{31}COO.C_{26}H_{53}$, and a constituent of opium wax.

cerylate. A compound containing the monovalent $C_{27}H_{55}O$— radical, derived from ceryl alcohol.

cerylene. $C_{27}H_{54}$ = 378.54. A hydrocarbon distilled from Chinese wax, which resembles paraffin. Cf. *cerotene*.

cerylic. Ceryl.

cesiated. Coated with cesium; as, the cathode of a thermionic discharge device.

cesium, cæsium. Cs = 132.91. A rare element of the alkali family, atomic number 55. A silver-white, soft, metal which resembles sodium, d.187, m.26.4, b.670, and reacts violently with water. It is the most electro-positive element, and has a valency of one. Cesium occurs in small quantities in a few mineral waters and minerals and in the ashes of a few plants, and is prepared by the distillation of cesium hydroxide with magnesium powder in a stream of hydrogen gas. It was discovered by Kirchhoff and Bunsen in 1860 by means of the spectroscope, and isolated in 1881 by Setterberg. Cesium metal is a substitute for rubidium, *q.v.*, and its salts are used as reagents in microchemistry, as a getter or gas absorbent in radio tubes, as a source of metallic vapor in power tubes, as a sensitive coating in photoelectric cells, and medicinally as an anti-shock compound in administering arsphenamine.

c. acetate. $CsC_2H_3O_2$ = 191.93. Deliquescent white crystals, m.194, soluble in water, alcohol or ether. **c. alum.** C. aluminum sulfate. **c. aluminum sulfate.** $Cs_2Al_2(SO_4)_4.24H_2O$ = 1136.50. C. alum. Colorless crystals, soluble in water. **c. ammonium bromide.** $CsBr.NH_4Br$ = 309.68. A white, crystalline powder, soluble in water; used as a nerve-sedative in epilepsy. **c. ammonium chloride.** $CsCl.3NH_4Cl$ = 328.75. A white, crystalline powder, soluble in water. **c. antimonous chloride.** $6CsCl.SbCl_3$ = 1131.5. Antimony c. chloride. Cesium chlorostibate, (Cs_6SbCl_9). A yellowish, crystalline powder, slightly soluble in water. **c. benzoate.** $CsC_7H_5O_2$ = 253.85. A white powder, very soluble in water. **c. bicarbonate.** $CsHCO_3$ = 193.8. White crystals soluble in water. **c. bisulfate.** $CsHSO_4$ = 229.8. C. acid sulfate. White crystals, soluble in water. **c. bitartrate.** $CsHC_4H_4O_6$ = 281.85. C. acid tartrate. White rhombic crystals, soluble in water. **c. bromate.** $CsBrO_3$ = 260.8. White crystals soluble in water. **c. bromide.** CsBr = 212.7. A colorless, crystalline powder, $d_{21°}$.4.455, soluble in water; used medicinally for heart disturbances due to nervousness. **c. carbonate.** Cs_2CO_3 = 325.6. White hygroscopic crystals, soluble in water or alcohol; used in breweries and in soda-water manufacture. **c. carbonate, acid.** C. bicarbonate. **c. chlorantimonate.** C. antimonous chloride. **c. chloride.** CsCl = 168.3. Colorless, regular crystals, $d_{20°}$.3.972, m.646; it sublimes on further heating, soluble in water, alcohol, or ether. Used in breweries and in soda-water manufacture. **c. chloroplatinate.** Cs_2PtCl_6 = 674.0. Pale yellow octahedra, soluble in water. **c. chromate.** Cs_2CrO_4 = 381.7. Yellow crystals, soluble in water. **c. cyanide.** CsCN = 158.8. White crystals, soluble in water. **c. dichromate.** $Cs_2Cr_2O_7$ = 481.8. Yellowish-red crystals, soluble in water. **c. fluosilicate.** Cs_2SiF_6 = 407.4. C. silicofluoride. White, regular crystals, $d_{17°}$.3.375, soluble in water. **c. formate.** $CsCHO_2$ = 177.82. Deliquescent white powder, m.265, very soluble in water. The *monohydrate* loses H_2O at 41°C. **c. hydroxide.** CsOH = 149.8. A white, grayish or yellowish, molten mass, d.4.018, m.275; it is deliquescent, and very soluble in water. **c. iodate.** $CsIO_3$ = 307.6. White crystals, soluble in water. **c. iodide** CsI = 259.7. White crystals, $d_{25°}$.4.51, m.621, soluble in water or alcohol, used medicinally as a substitute for potassium iodide. **c. ion.** The electrically-charged cesium atom, Cs^+, obtained in solutions of soluble cesium salts in water. **c. manganese chloride.** $2CsCl.MnCl_2.3H_2O$ = 512.51. C. chloromanganite (Cs_2MnCl_4). Pink crystals, soluble in water. **c. nitrate.** $CsNO_3$ = 194.8. Colorless, tetragonal, shining prisms, $d_{28°}$.3.687, m.414, decomp. on further heating, soluble in water, slightly soluble in alcohol; sometimes used in pyrotechnics. **c. nitrite.** $CsNO_2$ = 178.8. White crystals, soluble in water. **c. oxalate.** $Cs_2C_2O_4$ = 353.62. A white powder, soluble in water. **c. oxide.** (1) Cs_2O = 281.6. Normal c. oxide, c. monoxide. An orange crystalline powder, $d_{0°}$.4.78, soluble in water or alcohol. (2) Cs_2O_2 = 297.6. C. dioxide. (3) Cs_2O_3 = 313.6. C. trioxide. (4) Cs_2O_4 = 329.6. C. tetroxide, c. peroxide. **c. perchlorate.** $CsClO_4$ = 232.2. White crystals, soluble in water. **c. periodate.** $CsIO_4$ = 323.6. White crystals, soluble in water. **c. permanganate.** $CsMnO_4$ = 251.8. Violet prisms, soluble in water. **c. peroxide.** Cs_2O_4 = 329.6. C. tetroxide. A yellow granular powder decomp. violently in water. **c. platinic chloride.** C. chloroplatinate. **c. rubidium alum.** C. rubidium aluminum sulfate. **c. rubidium aluminum sulfate.** $CsRb-Al_2(SO_4)_4.24H_2O$ = 1064.93. C. rubidium alum. Colorless crystals, soluble in water. **c. rubidium ammonium bromide,** $CsBr.RbBr.6NH_4Br$. A white, crystalline powder, soluble in water; used as a nerve sedative. **c. rubidium bromide.** CsBr.RbBr = 378.10. A white, crystalline powder, soluble in water; used medicinally as a substitute for potassium bromide. **c. rubidium chloride.** CsCl.RbCl = 289.18. A yellowish, crystalline powder, slightly soluble in water. **c. salicylate.** $CsC_7H_5O_3$ = 269.85. A white powder, very soluble in warm water. **c. silicofluoride.** C. fluosilicate. **c. sulfate.** Cs_2SO_4 = 361.7 Colorless needles, d.4.24, soluble in water, insoluble in alcohol. Used in breweries and in soda-water manufacture. **c. sulfide.** There are several sulfides, but none is used industrially. (1) Cs_2S = 297.6. C. monosulfide. (2) Cs_2S_2 = 329.6. C. disulfide. (3) Cs_2S_3 = 361.6. C. trisulfide. (4) Cs_2S_5 = 425.6. C. pentasulfide. **c. sulfite** Cs_2SO_3 = 345.6. White crystals, soluble in water. **c. tartrate, acid.** C. bitartrate. **c. tetroxide.** C. peroxide. **c. trinitride.** CsN_3 = 175.0. Used as getter in radio tubes. **c. trisulfide.** See *c. sulfide.*

cespitine. $C_5H_{13}N$ = 87.1. A base obtained from coal tar, and isomeric with amylamine.

cetaceum. Spermaceti.

cetane. $C_{16}H_{34}$ = 226.25. Hexadecane.* A hydrocarbon of the paraffin series; colorless solid, d.0.775, m.20, b.287.5.

cetavlon. CTAB. Cetyl-trimethylammonium bromide, a cationic detergent and bactericide.

cetene. $C_{16}H_{32}$ = 224.33. Cetylene *2*-hexadecyne*, Δ^1-hexadecene, hexadecylene, $CH_2{:}CH(CH_2)_{13}CH_3$. An unsaturated hydrocarbon d.0.789, m.4, b.274, obtained from cetyl alcohol.

cetenylene. $C_{16}H_{30}$ = 222.23. An unsaturated hydrocarbon and homolog of heptine. Cf. *hexadecine.*

cetic. A compound containing the monovalent $C_{16}H_{33}$— radical.

cetic acid. $C_{15}H_{30}O_2$ = 242.23. A fatty acid from spermaceti.

cetin. $C_{15}H_{31}COOC_{16}H_{33}$. Cetylcetylate. The cetic acid ester, and principal constituent of spermaceti. A colorless, crystalline mass, m.50, b.360, insoluble in water, soluble in alcohol or ether.

cetol. Cetyl alcohol.

cetoleic acid. $C_{22}H_{42}O_2$ = 338.4. An unsaturated, monobasic acid, $Me(CH_2)_9CH{:}CH(CH_2)_9COOH$, an isomer of erucic acid; it is a constituent of marine animal (whale, codliver, shark, herring) oils.

Cetraria. (1) A genus of lichens. (2) Iceland moss.

C. vulpina	vulpic acid
C. islandica	Island moss, cetrarin

cetraric acid. $C_{18}H_{16}O_8$ = 360.2. A crystalline dibasic acid from Iceland moss.

cetrarin. $C_{30}H_{30}O_{12}$ = 582.3. Cetrarinic acid. A white, crystalline, bitter principle of Iceland moss; insoluble in water, but soluble in hot

alcohol, carbonate or hydroxide solutions. Used in anemia, chlorosis, and phthisis as a blood-forming agent; it is also a stomachic and expectorant. **c. base.** A brown, amorphous mixture of cetrarin, cetraric acid, stearic acid, and other substances from Iceland moss; used similarly to cetrarin.

cetrarinic acid. Cetrarin.

cetyl. Hexadecyl. The monovalent radical, $C_{16}H_{33}$—, isomeric with the cetic radical. **c. alcohol.** $C_{16}H_{33}OH$ = 242.35. Ethal, cetylic alcohol, *1*-hexadecanol*, cetol, primary hexadecyl alcohol, pentadecylcarbinol. A colorless, tasteless, waxy powder, m.39.5, b.344, $d_{50°}$.0.808, insoluble in water, soluble in alcohol or ether, and used for eczema. **c. amine.** $C_{16}H_{33}NH_2$ = 241.26. Hexadecylamine. Colorless substance insoluble in water. **c. cyanide.** Margaronitrile. **c. ether.** $C_{32}H_{66}O$ = 466.51. *1*-Hexadecyl oxyhexadecane*, hexadecyl ether $(C_{16}H_{33})_2O$. White leaflets, m.55; slightly soluble in water. **c. iodide.** $C_{16}H_{33}I$ = 352.3. *1*-Iodohexadecane*. Colorless scales, m.22; insoluble in water, soluble in alcohol or ether.

cetylate. (1) A salt of palmitic acid containing the monovalent $C_{15}H_{31}COO$— radical. (2) A compound derived from cetyl alcohol containing the monovalent $C_{16}H_{33}O$— radical.

cetylene. Cetene.

cetylic acid. Palmitic acid.

cetylide. $(C_{15}H_{31}O_2)_3C_{16}H_{18}(OH)_3$ = 1026.01. A compound formed by the hydrolysis of cerebrin.

cevadic acid. $C_5H_8O_2$ = 100.01. Methyl crotonic acid, tiglic acid. A constituent of cevadin.

cevadilla. Sabadilla.

cevadilline. Sabadilline.

cevadine. $C_{32}H_{49}O_9N$ = 591.5. The veratrine of Merck. An alkaloid from the seeds of sabadilla. Colorless needles, m.205; insoluble in water, soluble in alcohol or ether. Decomp. by hot KOH to cevine and cevadic acid.

cevilline. $C_{29}H_{47}O_7N$ = 521.5. An alkaloid produced by the saponification of cevadilline.

cevine. $C_{27}H_{43}O_8N$ = 509.5. An alkaloid produced by the hydrolysis of cevadine.

cevitamic acid. Vitamin C.

cevollite. A fibrous zeolite alteration-product of melilite.

ceyssatite. A white earth consisting of almost pure silica from Ceyssat, France; used as an absorbent powder in eczema.

Cf. Abbreviation for, confer or compare.

Cg. Abbreviation for centigram.

C.G.S. or **c.g.s.** An abbreviation for centimeter-gram-second units, (1874).

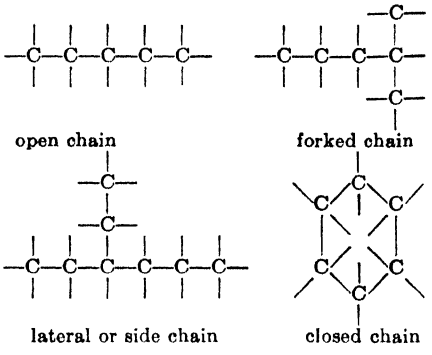
Ch. Abbreviation for chain.

chabazite. $CaAl_2Si_4O_{12}.6H_2O$. Phacolite, cabazite. A zeolite, sometimes produced artificially by the action of water on cement. Cf. *acadialite, gmelinite.*

Chaddock burner. A small furnace made of pottery and used as a non-corrosive gas burner. **C. clamp.** A wooden test tube holder. **C. support.** A burette stand with wire springs for holding two burettes.

chaetomin. An antibiotic substance produced in cultures of *Chaetomium cochliodes.*

chain. (1) A series of connected successive events or substances; as in chain reaction, or periodic chain. (2) A number of similar atoms linked together by homopolar bonds, as in a carbon chain. (3) A measure of length: 1 chain = 4 rods = 100 links = 20.11684 m. **branched-** See (1) lateral- (2) forked-. **carbon-** A series of connected C-atoms. **closed-** A ring formed by a chain of atoms, *e.g.*, the benzene ring.



forked- A branch of two smaller chains from the end atom of a longer chain. **lateral-** A branch chain in the middle of a longer chain. **open-** A number of atoms joined together in a line. **periodic-** See *periodic system.* **side-** (1) Lateral c. (2) Usually applied to a chain attached to a ring. (3) An atomic group of the protoplasm which reacts with a non-protoplasmic group. See *Ehrlich theory.* **straight-** An open c. with no forks or branches.

c. reaction. A series of successive reactions, each of which depends upon the preceding one, generally of the type 1, a, b, a, b, . . . where 1 is the initial reaction and a and b the c. reactions which take place so long as reagents are present. Two types:

A. Matter chain:

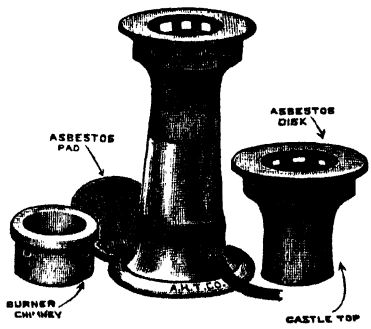
(1) $Cl_2 + E = 2Cl$
(a) $Cl + H_2 = HCl + H$
(b) $H + Cl_2 = HCl + Cl$ . . .

B. Energy chain:

(1) $Cl_2 + E = Cl_2^*$
(a) $Cl_2^* + H_2 = HCl^* + HCl$
(b) $HCl^* + Cl_2 = Cl_2^* + HCl$ . . .

In both cases the result is

$$xCl_2 + xH_2 \rightarrow 2xHCl.$$



Chaddock burner.

chainomatic. An analytical balance on which no separate weights for less than 0.1 gm. are used. The weight of a substance is determined by adjusting the length of the fine chain that hangs from one of the arms of the beam, and measuring this length on a perpendicular scale.

chains. Describing a growth of bacteria in the form of a chain. **long-** A c. consisting of more than eight bacteria. **short-** A c. composed of two to eight bacteria.

chalcacene. $C_{30}.H_{20}$ = 380.15. A pyrolytic product from acenaphthene. Red needles with bronze lustre, m.359, isomeric with rhodacene.

chalcanthite. $CuSO_4.5H_2O$. A native, blue, crystalline copper sulfate formed by the evaporation of cupriferous mine waters.

chalcedony. A cryptocrystalline and amorphous form of silica, SiO_2 or quartz, which occurs in a variety of colors and shapes and is sometimes used as a semi-precious stone:

agate—banded forms
cornelian—opaque variety
chrysoprase—green opaque variety
bloodstone—dark opaque variety with blood red spots
jasper—red, green, or black varieties
silicified wood—jasper-like variety
moss agate—milky variety, with dendritic markings of manganese oxide which resemble plants
onyx—a variety of agate, with straight alternating light and dark bands
plasma—green mottled variety
prase—gray-green variety
sardonyx—golden or blood-red variety.

chalcedonyx. A variety of white and gray layered agate.

chalcocite. Cu_2S. A native copper sulfide, d.5.5–5.8.

chalcomorphite. A native, hydrous, calcium aluminum silicate.

chalcone. (1) $C_{15}H_{12}O$ = 208.10. Betaphenylacrylophenone, benzalacetophenone. The compound Ph.CH:CH.CO.Ph. (2) Aralkylic ketones. A group of natural yellow and orange substituted benzalacetophenone derivatives of the type Ar.CO.CH:CHAr'; as, curcumin, eriodictyol, hesperitin and maringinin. Cf. *flavones*.

chalcophanite. $ZnO.2MnO_2.2H_2O$. A metallic, bluish-black zinc manganite.

chalcophyllite. $Cu_7As_2O_{12}.14H_2O$. A native copper arsenate produced by the oxidation of enargite; occurs in hexagonal, green, transparent crystals, d.2.4–2.6.

chalcopyrite. $CuFeS_2$. A metallic, yellow, copper iron sulfide, d.4.1–4.3.

chalcopyrrhotite. $CuFe_4S_5$. A brownish-yellow, copper iron sulfide.

chalcosiderite. $CuFe_6(PO_4)_4.8H_2O$. A bright-green native copper *iron* phosphate.

chalcostibite. $CuSbS_2$. Wolfsbergite. A native, metallic, gray, copper sulfantimonide, d.4.8–5.0.

chalcuite. A bluish-green turquoise from New Mexico.

chalk. $CaCO_3$. Creta, calcite. A native, amorphous, calcium carbonate, deposited from ocean oozes and largely composed of the residues of shells. See *calcium carbonate*. **French-** A grade of talc.

chalking. (1) To treat with chalk, *e.g.*, in the dye industry by passing cotton through a suspension of 6 pts. chalk in 1000 parts water. (2) To form a powder which is easily rubbed off, *e.g.*, from paints.

chalkogenide. A compound containing a chalkogen.

chalkogens. The elements oxygen, sulfur, selenium and tellurium.

chalmersite. $CuFe_2S_3$. A native copper iron sulfide.

chalybeate. A drug or natural water that contains iron salts; used as a blood tonic.

chalybite. Spathic iron ore. A native form of ferrous carbonate. Cf. *siderite*.

chamaeliretin. A resin-like substance from chamaelirin.

chamaelirin. The bitter principle of false unicorn root, *Chamaelirium luteum*, a Liliaceae; a bitter and poisonous saponin-like glucoside. Cf. *helonoid*.

chamazulene. $C_{15}H_{18}$ = 198.14. A blue hydrocarbon from chamomile oil.

chamber. (1) A boxlike receptacle; as: **cloud-** A c. making traveling particles visible. **fog-** Cloud c. **ionization-** A partly evacuated box, with galvanometer for detecting rays. (2) The leaded room used in sulfuric acid manufacture, q.v. **c. acid.** Impure 60–70 % sulfuric acid from the lead chambers of the c. process. **c. crystals.** Nitrosyl sulfate. **c. process.** A process for the manufacture of sulphuric acid in lead chambers from the interaction of sulfur dioxide, air, steam, and oxides of nitrogen.

Chamberland, Charles, Edouard. 1851–1908. A French bacteriologist. **C. filter.** A porous clay cylinder for filtering bacteria from solutions. **C. flask.** A glass flask with a tubulated side-tube, for growing bacteria.

chamelirin. Chamaelirin.

chamomile. A genus of composite plants; especially *Anthemis* species. **common- English or Roman-** The flowers of *Anthemis nobilis;* used as a tonic and febrifuge. **German-** See Matricaria. **wild-** Stinking mayweed. The plant *Anthemis cotula*. See *anthemidine*.

c. oil. Essential oil from the *Anthemis nobilis* flowers. A bluish liquid, d.0.905–0.915, soluble in 6 pts. 70 % alcohol. It contains esters of butyric, angelic and tiglic acids. **German-** The essential oil of *Matricaria*, d.0.930–0.940; it contains esters of caproic acid, azulene and chamazulene.

chamomillin. A bitter principle of chamomile.

chamosite. A constituent of berthierine.

Chamot microscope. A microscope designed especially for microchemical work by E. M. Chamot.

champacol. $C_{17}H_{30}O$ = 250.24. A camphor from the wood of *Michelia champaca*, a Magnoliaceae of Java. Colorless, crystalline needles, or yellowish masses, m.87, insoluble in water, soluble in alcohol or ether.

Chandler, Charles Frederick. 1836–1925. An American chemist, noted as a teacher and pioneer in the application of chemistry.

chandoo. Chundoo. The best quality of raw opium, prepared for smoking by roasting, extraction, evaporation and fermentation. Cf. *mudat yenshee*. **c. dross.** Yenshee.

change of state. Passing from the solid to the liquid or from the latter to the gaseous state; or the reverse. The change from the solid to the liquid state is **fusion** or **melting**, the reverse change, **freezing** or **solidification**. The change from the liquid to the gaseous state is **vaporization** or **boiling**, the reverse change, **condensation** or **liquefaction**. The change from the gaseous to the solid state is **sublimation**.

Chaperon cell. A voltaic cell consisting of amalgamated zinc and copper in a solution of potassium hydroxide; 0.98 volt.

Chapman pump. A brass filter pump for attachment to a water faucet.

char. (1) To carbonize or burn incompletely. (2) Charcoal.

Charles Frederick Chandler.

charas. A drug from hemp resin.

charcoal. A form of amorphous carbon derived from the incomplete combustion of animal or vegetable matter (*e.g.*, bones or wood). Used for adsorption of gases or coloring matters etc., in blowpipe analysis and as a pigment (c. black). **activated-** See *activated.* **animal-** C. prepared from bone or blood. **vegetable-** or **wood-** C. prepared by the incomplete combustion of wood. Used medicinally for hyperacidity and some forms of indigestion; commercially, as clarifying and decolorizing agent, and in gas masks. Its source (*e.g.*, wood, nut shells or fruit stones) determines its quality. Cf. *carbonization, norit.*

Chardin filter paper. A filter paper specially prepared for the filtration of agar-agar for culture media.

Chardonnet silk. A rayon (q.v.) made by a viscose process.

charge. (1) A load or burden, *e.g.*, the charge of ore in a furnace, the charge of electricity in a condenser or the charge of carbon dioxide in a soda-water fountain. (2) In physics a definite quantity of electricity. **atomic-** The electricity carried by an atom or ion, which depends on the valency or the number of valence electrons. 1 electron corresponds with 1.1×10^{-19} coulombs. 1 gram-equiv. atom of a univalent element carries 9,6489 coulombs (1 Faraday). **elementary-** The c. of an electron, $e = 4.770 \times 10^{-10}$, q.v. **fictitious-** The quantity of electricity contained in the material of a condenser as distinguished from the true charge of the plates. **ionic-** See *ionic c.* **nuclear-** See *atomic structure.* **residual-** The quantity of electricity remaining in a condenser after discharge. **specific-** The ratio e/m_0. Cf. *electron.*

charging rod. (1) A piece of sealing wax, hard rubber, or glass used for charging electroscopes. (2) A device in which a celluloid tube is rubbed over flannel to charge electroscopes positively or negatively.

chargometer. A hydrometer in a glass syringe with rubber bulb, used for testing the density of the acid in electrical batteries.

Charles, Jacques Alex Caesar. 1746–1822. A French chemist who cooperated in the formulation of the gas laws. **C. law.** Dalton's law, Gay-Lussac law. The volume of a gas at 0°C. increases with each degree centigrade by $\frac{1}{273}$, provided the pressure is constant. The pressure of a gas increases with each degree centigrade by $\frac{1}{273}$, provided the volume is constant. Hence the ratio between the increase in pressure per degree and the value of the pressure at 0°C. (pressure coefficient) is the same for all gases.

Charleston phosphate. A soft phosphate mineral containing 27 per cent of P_2O_5.

charlock. The seeds of *Sinapis* (*Brassica*) *arvensis*, field mustard, used as condiment.

Charlton white. Lithopone.

charpie. Lint.

charring. To carbonize.

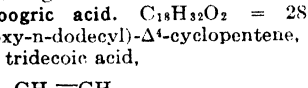
Chatterton's compound. A cement for glass.

chaulmestrol. A brand of ethyl chaulmoograte used in leprosy.

chaulmoogra oil. A yellow oil expressed from the seeds of *Taraktogenos Kurzii* a Bixineae of India, d.0.946–0.951, m.5–20, iodine number 103.5; it contains chaulmoogric, gynocardic and hydnocarpic acids. Used medicinally for leprosy and skin diseases. Cf. *gorli oil, gynocardia oil, maroti oil.*

chaulmoogrene. $C_{18}H_{34}$ = 250.3. n-dococyl-Δ^4-cyclopentane. A hydrocarbon derived from chaulmoogric acid.

chaulmoogric acid. $C_{18}H_{32}O_2$ = 280.3. 1-(α-carboxy-n-dodecyl)-Δ^4-cyclopentene, cyclopentenyl tridecoic acid,



A colorless crystalline acid obtained from chaulmoogra oil, m.68, soluble in alcohol.

chaulmoogryl alcohol. $C_{18}H_{33}OH$ = 266.3. An alcohol obtained from chaulmoogric acid.

chaulmugra. Chaulmoogra.

chavibetol. $C_{10}H_{12}O_2$ = 165.9, allyl-3.4-guajacol, 1-hydroxy-2-methoxy-5-allyl-benzene. A colorless liquid, b.254. **iso-** Betelphenol, 1-hydroxy-2-methoxy-5-propenyl-benzene, a constituent of essential oils. Cf. *eugenol.*

chavicic acid. An amorphous acid obtained from chavicine.

chavicine. An alkaloid from black pepper.

chavicol. $C_9H_{10}O$ = 134.1. p-allyl phenol $C_6H_4(OH)C_3H_5$. A constituent of betel oil; a colorless oil, d.1.035, b.237. **methyl-** Estragole.

chavosot. A p-allylphenol, used in dentistry as a bactericide.

chebulinic acid. (1) $C_{23}H_{20}O_{19}$. A principle from the seeds of *Terminalia chebula*, an East Indian tree. Used as an intestinal antiseptic. (2) $C_{41}H_{34}O_{27}$ = 958.0. An acid derived from tannin. (3) $C_{34}H_{30}O_{23}$ = 806.2. Eutannin. An acid from myrobalans. Rhombic prisms, decomp.234, soluble in hot water, alcohol or acetone.

checkerberry. Gaultheria.

cheese. A food prepared from the casein of skimmed or unskimmed milk, and flavored by the activity of certain bacteria.

cheddite. A high explosive consisting of 70–90 % $KClO_3$, 0–20 % aromatic nitro compounds and 0–15 % paraffin.

cheiramidine. $C_{22}H_{26}O_4N_2.H_2O$ = 400.24. An alkaloid from the bark of *Remijia purdieana*, a Rubiaceae.

cheiramine. A secondary alkaloid from the bark of *Remijia purdieana.*

Cheiranthus. Wall-flower. The herb *C. cheiri*, a Cruciferae which yields alkaloids, glucosides and acids.

cheirantic acid. An oleic-type acid from the oil of the wallflower, *Cheiranthus cheiri.*

cheirantin. A glucoside from *Cheiranthus cheiri*, a Cruciferae.

cheirin. A glucoside of digitalis-like action from *Cheiranthus cheiri.*

cheirinine. $C_{18}H_{35}O_{17}N_3$ = 567.4. An alkaloid from the leaves of *Cheiranthus cheiri*, a Cruciferae. Colorless crystals, sparingly soluble in water.

chekan, cheken. The shrub *Myrtus cheken*, a Myrtaceae of Chile; its bark is used as an astringent.

chekenetin. $C_{11}H_7O_6.H_2O$ = 253.1. Olive colored crystals from the leaves of *Myrtus* (or *Eugenia*) *cheken*, a Myrtaceae of Chile.

chekenine. $C_{13}H_{11}O_3$ = 215.1. A volatile alkaloid from the leaves of *Myrtus cheken;* rhombic yellow scales.

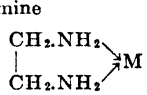
chekenone. $C_{40}H_{44}O_8$ = 652.4. A crystalline principle from the leaves of *Myrtus cheken*, a Myrtaceae of Chile.

chelafrin. Adrenalin.

chelate. [Greek *chele*—a crab's claw.] Pertaining to a molecular structure in which a ring can be formed by the residual valencies (unshared electrons) of neighbouring atoms. **c. compound.** An organic compound in which atoms of the same molecule are co-ordinated. In the following examples the arrow indicates co-ordination.

(1) Metallic derivatives of β-diketones; *e.g.*, sodium derivative of benzoyl acetone:

(2) Coordinate compounds of metals with ethylene diamine



c. groups. Atomic groups capable of forming rings by one or two co-ordinate bonds, q.v.

chelen. Ethyl chloride.

chelerythrine. $C_{21}H_{17}O_4N$ = 347.2. A narcotic alkaloid related to sanguinarine from the seeds of *Chelidonium majus*, a Papaveraceae. Red crystals, m.203, slightly soluble in alcohol or ether.

chelidamic acid. $C_7H_5O_5N$ or $C_5H_3ON(COOH)_2$ = 183.1. 3-oxypyridine-1.5-dicarboxylic acid, ammonchelidonic acid.

chelidonamic acid. $C_7H_7O_6N$ = 201.1. An acid derived from chelidonic acid by boiling with ammonia.

chelidonate. A salt of chelidonic acid containing the divalent $C_7H_2O_6$— radical.

chelidonic acid. $C_7H_4O_6$ = 184.0. Pyrone dicarboxylic acid. An acid from *Chelidonium majus* resembling meconic acid. Cf. *komanic acid, comenic acid, chelidamic acid.*

chelidonine. $C_{20}H_{19}O_5N$ = 353.2. An alkaloid from *Chelidonium majus* and opium. Colorless shining tablets, m.130, insoluble in water, soluble in alcohol or ether; used as a narcotic. **homo-** See *homochelidonine.*

c. hydrochloride. $C_{20}H_{19}O_5N.HCl$ = 388.67. White crystals, slightly soluble in water or alcohol, and a mild narcotic. **c. phosphate.** A white crystalline powder used as a mild narcotic for stomachic and intestinal pains. **c. sulfate.** $(C_{20}H_{19}O_5N)_2.H_2SO_4$ = 804.49. A white crystalline powder, soluble in water and used as a sedative (small doses) and stimulant (larger doses).

Chelidonium. (1) A genus of papaveraceous plants, *e.g.*, *C. majus*, greater celandine. (2) Celandin. The leaves and stems of *C. majus*, used as a cathartic and for skin diseases. Cf. *chelerythrine, glaucopicrine.*

chelidonoid. The combined principles of *Chelidonium majus.* It contains chelidonine, chelerythrine, protopine, and other alkaloids.

chelidoxanthine. A yellow crystalline bitter principle from *Chelidonium majus.*

chelonin. A brown, bitter, amorphous powder from *Chelone glabra* (snake head), a Scrophulariaceae: used as a tonic.

chelonoid. The combined principles of *Chelone glabra:* used as irritant, cathartic, and anthelmintic.

chemavinite. Cedarite, Canadian amber. A mineral resin from Hudson Bay, containing C, H, O and N.

chemical. (1) Pertaining to chemistry. (2) A substance of definite and known composition; see *chemicals.* **c. action.** A change in the molecular composition of a substance produced either by heat, light, electricity, or by chemical means. See *reaction.* **c. activity.** Reactivity. **c. affinity.** See *affinity.* **c. antidote.** A substance that is used to counteract the effect of a poison, *e.g.*, oils, soaps, milk, acids, alkalis, albumin, charcoal, carbonates, hydrates, sulfates, starch, or tannin. **c. burns.** The corrosive effect of chemicals on the skin; for

CHEMICAL BURNS

(*Emergency treatment to be applied as soon as possible*)

acids, alkalis...	wash with a large amount of water.
chromic acid...	wash with sodium polysulfide, and follow with tannic acid.
cyanides.....	potassium permanganate or ammonium sulfide.
phenol.....	ethyl alcohol or sodium sulfate solution.
phosphorus....	solution of copper sulfate, followed by milk of magnesia.
sodium.....	remove the sodium, wash with water and tannic acid solution.

emergency treatment see table. **c. change.** Reaction. **c. compound.** See *compounds.* **c. constitution.** See *structure.* **c. denudation.** The process by which the solid salts of the soil are dissolved by water and carried to the sea. **c. energy.** The energy relations of chemical reactions. Intensity is expressed by chemical affinity or chemical potential, whilst the capacity is expressed by the equivalent weight or the active mass of substance. **c. entities.** The fundamental concepts of chemistry; as, atoms, ions, molecules and free radicals. **c. equation.** The expression of a chemical reaction in terms of chemical formulas, *e.g.*,

A + B = C + D
reacting substances reaction products

(ionic-) The general statement of a chemical reaction which shows only those substances actually undergoing a change, thus:

$$Ba^{++} + SO_4^{--} = BaSO_4$$

(molecular-) The specific statement of a chemical reaction showing the relative proportions of substances used, thus:

$$BaCl_2 + H_2SO_4 = BaSO_4 + 2HCl.$$

c. microscopy. The utilization of the microscope in chemistry, *e.g.*, for identification of substances, qualitative and quantitative analysis, determination of melting and subliming points, and refractive indexes and the behavior of substances in polarized light. **c. pulp.** Wood treated by the soda, sulfite, or sulfate process for paper making. **c. reaction.** See *reaction*. **c. shorthand.** See *symbols*. **c. slide rule.** An adaptation of the slide-rule for chemical calculations, and including chemical symbols and the atomic and molecular weights of the common substances. See *slide rule*. **c. societies.** The largest are in order of foundation:

Chemical Society of London..... founded 1841
Société Chimique de Paris..... founded 1858
Chemische Gesellschaft, Berlin..... founded 1867
American Chemical Society,
Washington..... founded 1876

c. solvents. See *solvents*. **c. system.** An equilibrium established by the interaction of substances. It is characterized by the presence of definite proportions of the reacting substances and of their reaction products. Cf. *phase rule, system*.

chemicals. A compound or a substance of a definite molecular composition. Generally the term *chemical* is restricted to a substance consisting of a single molecular species, while the term *drug* refers to a substance derived from the vegetable or animal sources and often a mixture of substances. Classification:
General chemicals:
Inorganic, as acids, alkalis and salts.
Organic, as alkaloids, dyes, sugars.
Metals and alloys.
Coal tar products:
Intermediates.
Dyes and stains.
Medicinals and bacteriological stains.
Photographical chemicals, developers, dyes.
Reagents:
Tested, analysed or standardized chemicals.
Volumetric solutions.
Indicators.

Chemicals may be marketed as cones (as silver nitrate), cubes (as litmus), crystals, flakes (as naphthalene), fused, granulated, lumps, pearls (as iron salts), powdered, scales, or sticks.

The *grade* or the purity of chemicals on the market are:

C.P..... chemically pure, the highest grade.
U.S.P. or B.P.. tested to conform with the requirements of the U.S. or British Pharmacopoeia, respectively.
A.R..... analytical reagent.
pure..... of sufficient purity for general work.
tech..... a purity sufficient for technical work.
crude..... an impure grade.

kinetic-. Refrigerants. Those c. used for refrigeration.

chemiluminescence. The production of visible light during chemical reactions without an apparent increase in temperature. See *luminescence*.

chemistry. The fundamental science of the structure of matter and the composition of substances, their transformation, analysis, synthesis, and manufacture. **agricultural-** C. applied to agriculture, soils, fertilizers, manures, and the growing of plants. **analytical-** C. which deals with the detection (qualitative) and determination (quantitative) of substances. **animal-** C. dealing with the composition of animal tissues and fluids; cf. *bio-*. **applied-** C. applied to some useful end, either directly (through industry) or indirectly for the welfare of man. **astro-** The investigation of the composition of celestial objects, as stars, and nebulae; it is a branch of astrophysics. **bio-** The chemistry of life, or c. that deals with the composition of animal and vegetable matter, the changes occurring in the living organism, the transformation of food into living material, and the elimination of waste-products. **biological-** Bio.- **commercial-** (1) The compounding and mixing of substances for some directly utilitarian purpose; usually for some patented or secret recipe. **electro-** A branch of physical c. dealing with the relation between electrical and chemical energy and their transformation: cf. *electrolysis, galvanic cells*. **empirical-** The knowledge of chemical phenomena obtained by uncorrelated and unsystematized experimentation; chemistry based upon experience which is fragmentary and not embodied in a philosophy or system of science. **engineering-** C. applied to engineering; the composition of building materials, testing, and improvement. **experimental-** The performance of experiments to illustrate or discover chemical facts. **fermentation-** A branch of biochemistry dealing with the catalytic changes produced by enzymes and ferments. **food-** C. dealing with the composition and examination of foods, detection of adulterants, and the control of foods for human consumption. **forensic-** The application of chemical knowledge for legal purposes; for the detection of crime. **galvano-** Electro-. **geo-** The investigation of the chemical resources of the earth's surface and the changes occurring in the atmosphere, hydrosphere, and lithosphere. **geological-** Geo-. **histo-** The composition of or chemical changes occurring in the tissues of plants and animals. **histological-** Histo-. **historical-** The study of the development and evolution of chemical thought through the ages. **industrial-** C. applied to the industries. **inorganic-** The c. of polar compounds, usually of compounds which do not contain carbon. **judicial-** Forensic- **legal-** Forensic-. **manufacturing-** C. applied to the large-scale preparation of substances. **medical-** C. applied to medicine, for the diagnosis and combating of disease. **mechano-** A branch of physical c. dealing with the mechanical properties of substances, *e.g.*, surface tension, density, strength, compressibility. **meta-**

A branch of chemistry which deals with the subatomic properties of matter, (*e.g.*, radioactive substances) or with its characteristically atomic properties; as, adsorption, association, excitation. **micro-** See *micro* and *chemical microscopy*. **microscopical-** Micro-. **mineral-** Mineralogical- or inorganic-. **mineralogical-** C. that deals with the composition and formation of minerals. **organic-** The c. of carbon compounds; generally those which are non-polar. **pathological-** The c. of the composition of abnormal tissues and body fluids, and the changes caused by disease. **pharmaceutical-** Chemistry applied to the preparation, testing, and composition of drugs. **philosophical-** The appreciation of chemical knowledge and its position in a system of science. **photo-** The study of the relations of radiant and chemical energy and their transformation; the effect of light on the composition of substances. **photographic-** C. applied to photography and photographic processes. **physical-** A branch of theoretical c. which deals with the relation of energy and chemical force, and their transformation. **physiological-** The c. of the composition of and chemical changes in the healthy animal or vegetable organism. **phyto-** The c. of plants and plant functions. **practical-** Experimental c. as performed in the laboratory. **pure-** A branch of theoretical c. that deals with chemical forces alone. **radio-** A branch of theoretical c. which studies the composition and structure of the atom as revealed by the radioactive elements. **sanitary-** The application of c. to sanitation; water supply, disposal of domestic wastes, etc. **stereo-** A branch of theoretical c. which deals with the structure of molecules. **stoichiometric-** A branch of theoretical c. which deals with chemical force as expressed by atomic weight and valency, the proportions in which substances react and the distribution in space of the atoms of a molecule. **structural-** A branch of stereochemistry dealing with the internal molecular arrangement of carbon compounds. **synthetic-** Building up of compounds from simpler substances; especially of organic compounds (dyes, synthetic drugs, etc.). **technical-** C. applied to technology and to processes of manufacturing. **theoretical-** The deduction of laws which govern the experimentally-established facts of chemistry and their mathematical relations. **therapeutical-** A branch of medical chemistry dealing with the effect of drugs on the living organism. **thermo-** The branch of physical c. dealing with the relation of heat and heat radiations during chemical changes. **topo-** See under *topochemistry*. **toxicological-** A branch of forensic c. dealing with the composition of poisons and their detection. **vegetable-** The branch of biochemistry dealing with the composition of plants and the changes occurring during the performance of their normal functions. **zoö-** The c. of animals and animal functions, exclusive of man.

chemoceptor. The anchoring group in the protoplasm of a cell which unites the haptaphore of drugs and renders them capable of action.

chemo-immunology. The study of the chemical changes occurring during the immunization of an organism.

chemokinesis. Increasing the activity of an organism by the presence of a chemical substance.

chemology. A proposed alternative term for chemistry.

chemolysis. The dissolution of organic matter which occurs during decay, and is due to chemical reactions and not bacteria.

chemoreceptor. Chemoceptor.

chemoresistance. The specific resistance of a cell due to the presence of a chemical substance.

chemosmosis. Chemical reactions taking place through an intervening semi-permeable membrane, as in colloidal growth.

chemosynthesis. A chemical reaction in which the energy is not derived from oxygen (as in

The Branches of Chemistry.

photosynthesis, q.v.), but from oxidation by bacteria; as,

$$H_2S \rightarrow H_2SO_4$$
$$Fe^{++} \rightarrow Fe^{+++}$$
$$NH_3 \rightarrow N_2$$

chemotaxis. Chemotropism. The attraction or repulsion of cells by chemicals.

chemotherapy. The study of the action of molecules of definite structure on protoplasm on the assumption that certain radicals have a selective affinity with parts of the cells. Cf. *Ehrlich's side chain theory, chemoceptor.*

chemotropism. Chemotaxis. **negative-** The repulsion of microorganisms by chemicals. **positive-** The attraction of microorganisms by chemicals.

chemurgic. Chemistry applied to farming. **C. Council.** An organization of Dearborn, Mich., U.S.A., whose purpose is to advance the industrial use of American farm products through applied science. At its first conference it signed "under the shadow of a replica of Independence Hall," on May, 7th, 1935, a *Declaration of Dependence Upon the Soil and of the Right of Self-Maintenance.*

chenocholic acid. $C_{27}H_{44}O_4$ = 432.4. An acid derived from chenotaurolic acid by hydrolysis.

chenopodin. A bitter principle from *Chenopodium album.* Cf. *betaine.*

chenopodium. (1) The goosefoot family. (2) American wormseed, Mexican tea. The fruit of *C. anthelminticum,* used as a mild cardiac stimulant. **c. oil.** American wormseed oil. The essential oil from the seeds of *C. ambrosioides,* used as an anthelmintic. **c. seeds.** The fruits of *C. ambrosioides* or *C. anthelminticum.* American wormseed; an anthelmintic.

chenotaurocholic acid. $C_{29}H_{29}O_6NS$ = 519.3. An acid in goose's bile. Cf. *chenocholic acid.*

chernawinite. Canadian amber. A resinous mineral similar to amber, found in Canada.

cherry. A tree of the subgenenus *Cerasus* of *Prunus* (Rosaceae). Cf. *cerasinose.* **wild-** See *wild.*

cherrylaurel. The leaves of *Prunus laurocerasus,* a Rosaceae, used as sedative. **c. oil.** The essential oil of c., d.1.054–1.066, soluble in 2 pts. 70 % alcohol; contains, HCN and benzaldehyde. **c. water.** The distillate of the crushed c. leaves, used to kill beetles.

Cheshunt mixture. A substitute for Bordeaux mixture, in which the lime is replaced by ammonium carbonate.

chessylite. Azurite.

chestnut. Castanea.

chevkinite. A complex mixture of hydrated oxides of K, Na, Fe, Ca, Mn, La and Ce.

Chevreul, Michel Eugéne. 1786–1889. A French chemist noted for work on fats, soap and textile dyeing.

Chew ductility machine. An electrical device for determining the ductility of materials.

chi. The Greek letter χ. It indicates the *22nd* carbon atom.

chibou. The resin of *Bursera gummifera,* a tree of Florida and tropical America; used in plasters and ointments.

chicle. Gum chicle, balata, tuno gum. The dried milky juice of the bully-tree (*Mimusops balata*), a Sapotaceae of Northern South America. It consists of oxidized hydrocarbons and resembles caoutchouc and guttapercha. Occurs as soft, grayish-white masses, tasteless, m.49; used in the manufacture of chewing gum.

chicory. The ground root of *Cichorium intybus,* a composite plant of Europe and Asia, naturalized in the United States. Used as a coffee substitute or adulterant.

chile. Capsicum. **c. niter.** Sodium nitrate. **c. saltpeter.** Caliche. The sodium nitrate found in large deposits in Chile.

chilenite. A silver bismuthide, Ag_6Bi.

chilli, chilly. Capsicum.

Chimaphila. Pipsissewa. The dried leaves of *C. umbellata,* an Ericaceae. Used as a tonic, antiperiodic, diuretic, and astringent.

chimaphilin. $C_{24}H_{21}O_4$ = 373.1. Golden-yellow needles, odorless, tasteless, m.114, insoluble in water, soluble in alcohol or ether, obtained from the leaves of *Chimaphila umbellata;* used as a diuretic.

chimaphiloid. The combined principles from the leaves of *Chimaphilia umbellata.* Used as stimulant, alterative tonic, and diuretic.

chimosis. See *gastric digestion.*

chimyl alcohol. $C_{19}H_{40}O_3$ = 316.3. The glyceryl ether $C_{16}H_{33}OC_3H_5(OH)_2$. Cf. *butyl* and *selachyl alcohols.*

china. (1) Cinchona bark. (2) Porcelain. **c. clay.** The product obtained by leaching weathered deposits of granitic rocks, so that the quartz and mica portions are removed. Cf. *kaolin.* **c. grass.** Ramie. **c. jute.** The fibre from *Abutilon avicennae,* a Malvaceae cultivated in China. **c. root.** (1) Smilax. (2) Galangal. **c. tallow tree.** *Sapium sebiferum,* an Euphorbiaceae, whose seeds are rich in oil. **c. wood oil.** Tung oil.

chinaldine. Quinaldine.

chinaphenine. $Et.O.C_6H_4NH.CO.OC_{20}H_{23}ON_2$ = 485.29. Quinine carbophenetidine. The quinine carbonic acid ester of phenetidine. A white, tasteless powder, slightly soluble in water, soluble in alcohol, ether, benzene or chloroform; used as an antipyretic and antineuralgic.

chinaphthol. Quinanaphthol.

chinaroot. The dried rhizome of *Smilax china,* a plant of Southern China resembling sarsaparilla.

chinaseptol. Diaphtol.

chinazoline. Quinazoline.

chinchona. Cinchona bark.

chindoline. Quindoline.

Chinese. c. blue. Prussian blue. **c. cinnamon.** Cassia bark. **c. oil.** Tung oil. **c. wax.** A wax formed on *Fraxinus chinensis* from the secretions of *Coccus ceriferus;* it consists chiefly of ceryl cerotate.

chinic acid. Quinic acid.

chinidine. Cinchonidine.

chinindoline. Quinindoline.

chinine. Quinine.

chiniofon. $C_9H_6ONIS + Na_2CO_3$. Yatren, *7-iodo-8-ozyquinoline-5-sulfonic acid with sodium carbonate.* Yellow crystalline powder, which effervesces in water and forms sodium iodoxy quinoline sulfonate; used as an antidysenteric and amebicide

chinioidina. Quinoidine.

chinoform. Quinoform.

chinoidine. Quinoidine.

chinol. Hydroquinol.

chinoline. Quinoline.

chinopyrine. Quinopyrine.

chinoral. Quinoral. A compound of quinine and chloral, used as a hypnotic and antiseptic.

chinosol. $C_9H_6ON.SO_3K.H_2O$. Quinosol. Oxyquinolin potassium sulfonate. A white powder, used as an antiseptic, styptic, and antipyretic.

chinothein. A mixture of quinine, caffeine, and antipyrine.

chinotoxine. Quinotoxine. A synthetic drug resembling curare in its action.

chinotropine. Quinotropine.

chinovate. (1) A salt of quinovatic acid. (2) A compound of chinovase.

chinovin. Quinovin.

chinovose. A carbohydrate from cinchona bark.

chinwood. Taxus.

chiococcic acid. An acid compound from cahincic acid.

chiolite. Arksutite. The mineral, $2NaF.AlF_3$, d.2.84. It resembles cryolite.

chiococcine. An alkaloid from the roots of *Chiococca racemosa* or cahinca, which resembles emetine in its action.

chionanthin. $C_{22}H_{28}O_{10}$ = 452.22. A resin from the *Chionanthus virginica*, the poison ash or fringe-tree of North America; used as a tonic and sedative. Cf. *chionanthus*.

chionanthoid. The combined principles from the bark of *Chionanthus virginica;* used as a hepatic stimulant and cholagogue to increase appetite.

chionanthus. The bark of the fringe-tree, *C. virginica*, (poison ash, Virginia snow flower, mist tree), an Oleaceae of Southern United States; used as fluid extract, as an aperient, tonic and diuretic.

chipmunk crushers. A grinding machine for ores and rocks.

chiquito. A fat obtained from *Combretum butyrosum*, a Combretaceae of tropical Africa.

chirata. Chiretta. The dried herb of *Swertia (Ophelia) chirata*, a Gentianaceae of India; used as bitter tonic. Cf. *chiratin, ophelic acid.*

chiratin. $C_{26}H_{48}O_{15}$ = 600.5. A bitter crystalline glucoside from the *Ophelia chirata*, a Gentianaceae of Europe, India and South Africa. It is a yellow, hygroscopic powder which is hydrolyzed to ophelic acid and chiratogenin.

chiratogenin. $C_{13}H_{24}O_3$ = 228.0. A split-product of chiratin.

chironol. $C_{28}H_{48}O$ = 400.37. An alcohol from *Opopanax chironium*, an Umbelliferae.

chitenidine. $C_{19}H_{22}ON_2$ = 294.2. An oxidation product of quinine.

chitenine. $C_{19}H_{22}O_4N_2$ = 342.19. An oxidation product of quinine used in malaria.

chitin. $C_{15}H_{26}O_{10}N_2$ = 394.3. The horny substance which forms the framework of invertebrates (crabs, lobsters, beetles), and is the animal analog of the cellulose of plants. Decomp. to glucosamine and acetic acid when boiled with concentrated HCl.

chitosamin. Glucosamine.

chitosan. A split-product of chitin. Chitin and chitosan are related to mucin and chondrosin, and thereby support the theory that the arthropods are the ancestors of the vertebrates.

chitose. $C_6H_{12}O_6$ = 184.1. A sugar formed from chitonic acid.

chittim bark. Cascara sagrada.

chlamydobacteria. Bacteria of various shapes that possess a rigid sheath or capsula; as, streptothrix, cladothrix, crenothrix, phragmidothrix, and thiothrix.

chlamydozoa. A minute animal organism, which is surrounded by a rigid sheath or capsula.

chloanthite. A native nickel arsenide.

chlor- See *chloro-*.

chloracetamic acid. C_2HONCl_4 = 196.82. Tetrachloracetamide, $CCl_3.CO.NHCl$.

chloracetamide. See *acetamide*.

chloracetate. A salt of chloracetic acid which contains the monvalent CH_2ClCOO— radical.

chloracetic acid. $C_2H_3O_2Cl$ = 94.49. Carboxymethyl chloride, chloroacetic acid; $CH_2ClCOOH$. Colorless, rhombic crystals, $d_{54°}$.1.398, m.51, b.189; insoluble in water, soluble in alcohol or ether. **tri-** See *trichlor-*.

chloracetone. C_3H_5OCl = 92.51. Acetyl-methyl chloride, chloroacetone, monochloracetone, $CH_2Cl.CO.CH_3$. A colorless liquid, $d_{16°}$.1.162, b.119; insoluble in water, miscible with alcohol or ether. It is liable to spontaneous explosion and should be carefully stored.

chloracetonic acid. $C_4H_7O_3Cl$ = 138.5. Chloroacetonic acid, $CH_2Cl.C(OH)(Me)COOH$.

chloracetophenone. C_8H_7OCl = 154.5. C.A.P. Phenacyl chloride, chloroacetophenone, $PhCOCH_2Cl$. Rhombic crystals, d.1.32, m.59, b.245; used as a tear gas.

chloracetyl. Chloroacetyl. The monovalent radical, $CH_2Cl.CO$—, derived from chloracetic acid. **c. chloride.** $CH_2Cl.COCl$ = 112.93. A colorless liquid, $d_{0°}$.1.495, b.105, decomp. by water or alcohol.

chloracid. An organic acid containing chlorine.

chloracrylate. A salt of chloracrylic acid containing the monovalent $C_2H_2Cl.COO$— radical.

chloracrylic acid. $C_3H_3O_2Cl$ = 106.5. The compound $CHCl{=}CH{-}COOH$.

chloral. C_2HOCl_3 = 147.37. Trichloracetic aldehyde, trichloroacetaldehyde, trichlorocthanal*, $CCl_3.CHO$. A colorless, oily liquid, $d_{20°}$.1.512, m. −57.5, b.98, soluble in water, alcohol or ether; used as a hypnotic. Cf. *hydronal.* **amylene-** Dormiol. **anhydrogluco-** Chloralose. **butyl-** See *butyl.* **poly-** Hydronal. **urethan-** Uralin. **c. alcoholate.** $C_4H_7O_2Cl_3$ = 193.46. Trichlorethylate, $CCl_3.CHOH.OEt$. Colorless crystals, $d_{40°}$.1.43, m.46, b.115, slightly soluble in water, soluble in alcohol or ether; used as a hypnotic. **c. amide.** $CCl_3CHOH.NH_2$ = 164.4. C. ammonium, chloralformamide, chloramide. White crystals, m.71, soluble in alcohol or ether. It is a hypnotic and analgesic. **c. ammonia.** C. amide. **c. antipyrine.** Hypnal. **c. benzamide.** $CCl_3CHOH(C_6H_5CONH)$ = 268.4. Colorless crystals, used as a hypnotic. **c. caffeine.** A molecular mixture of caffeine and chloral, soluble in water. **c. cyanhydrin.** $CCl_3.CHOH.CN$ = 174.4. C. cyanhydride, c. hydrocyanide, trichloracetonitrile. Colorless crystals, m.60, b.218, soluble in water, alcohol or ether; used as a substitute for bitter almond water. **c. hydrate.** $CCl_3CH(OH)_2$ = 165.39. Hydrated c., crystalline c. Colorless deliquescent needles or plates, d.1.901, m.47.4, b.97 (decomp.), soluble in water, alcohol or ether. It is a hypnotic, antispasmodic, antiseptic; used extensively in medicine and as reagent for ergosterol. **c, hydrocyanide.** C. cyanhydrin. **c. hydrosulfide.** $(CCl_3CHOH)_2S$ = 328.46. Colorless crystals, soluble in water. **c. sulfhydrate.** $CCl_3CHOHSH$ = 181.77. Colorless prismatic crystals. **c. thiobenzamide.** $CCl_3.CHOH.C_6H_5CSNH$ = 284.82. Colorless crystals, slightly soluble in water. **c. uric acid.** Chloraluric acid.

chloralbine. $C_6H_6Cl_2$ = 148.9. Colorless crystals derived from trichlorphenol.

chloralide. A compound of chloral.

chloralimide. $CCl_3CH{:}NH$ = 146.4. Colorless crystals, m.155, soluble in alcohol or ether; used as a hypnotic and analgesic.

chlorallyl. The monovalent C_3H_4Cl— radical derived from allyl.

chlorallylene. Allyl chloride.

chloraloin. $C_{24}H_{30}O_{14}Cl_6$ = 874.92. A yellow, amorphous precipitate obtained by the action of chlorine on aloes.

chloralose. $C_8H_{11}O_6Cl_3$ = 309.4. Anhydroglucochloral. Colorless crystals, m.185, slightly soluble in water, soluble in alcohol. It is a hypnotic. **para-** An isomeric by-product obtained by the action of chloral on glucose; it is without therapeutic effect. It forms colorless crystals, m.227.

chloralurethane. Uralin.

chloraluric acid. $C_{14}H_{22}O_{11}N_{12}Cl_2$ = 651.5. Colorless crystals, obtained by the action of $HClO_2$ on uric acid.

chloramide. Chloral amide.

chloramidobenzene. Chloraniline.

chloramine. NH_2Cl = 51.53. Monochloramine. A colorless, unstable, pungent, liquid. An intermediate in the preparation of hydrazine from Cl_2 and NH_3. **chloramine-T.** Chlorazene.

chlorammine. A process of chlorinating water by injecting chlorine and ammonia.

chloranil. $C_6Cl_4O_2$ = 245.84. Tetrachlorquinone, tetrachloro-*p*-benzoquinone. Yellow scales, m.290 (sublime), slightly soluble in alcohol, soluble in ether; used as an oxidizing agent in the dye industry.

chloranilam. $C_6H_3O_3NCl_2$ = 207.9. Chloranilamidic acid. Colorless crystals, formed from chloranil by the action of HCl.

chloranilamide. $C_6H_2O_2N_2Cl_2$ = 220.9. The amide of chloranilamidic acid.

chloranilamidic acid. Chloranilam.

chloranilanilide. $C_6Cl_2(NHPh)_2O_2$ = 359.06. Colorless crystals formed by heating chloranil, alcohol, and aniline.

chloranilate. A salt of chloranilic acid containing the divalent $C_6Cl_2O_4$— radical.

chloranilic acid. $C_6Cl_2O_2(OH)_2$ = 209.0. *2.5*-Dichloro-*3.6*-dihydroxy quinone. A dibasic acid derived from chloranil. Red leaflets, m.283; insoluble in water.

chloraniline. See *aniline.*

chloranion. The chlorate ion.

chloranol. $C_6H_2O_2Cl_4$ = 247.85. Tetrachloroquinol. Pale yellow crystals, used as a reagent and in the dye industry.

chlorantimoniate. A double salt of a chloride with antimony trichloride.

chlorargentate. A double salt of a metal chloride with silver chloride.

chlorargyrite. Argentum cornu.

chlorarsine. Cacodyl chloride.

chlorastrolite. A variety of jade.

chlorate. A salt of chloric acid which contains the monovalent ClO_3— radical. **c. ion.** The monovalent ion ClO_3^-, derived from chloric acid.

chlorated. A substance containing chlorine; especially when the chlorine is readily available as in chloride of lime.

chloraurate. A double salt of auric chloride with some other chloride; or a salt containing the monovalent $AuCl_4$— radical.

chlorauric acid. $HAuCl_4$ = 340.0. Yellow crystals, formed on evaporation of a solution of gold in aqua regia.

chlorauride. Auric chloride.

chloraurite. A double chloride of the type AuCl.MCl or a compound containing the —$AuCl_2$ radical.

chlorazene. $MeC_6H_4SO_2Na{:}NCl.3H_2O$ = 281.5, Sodium p-toluene-sulfo-chloramine, mianine, activin, tochlorine, chloroamine, tolamine, chloramine-T. Dakin's antiseptic.

chlorazol. (1) $C_4H_3O_4NCl_2$ = 235.4. An acrid, pungent, oily liquid obtained from proteins (muscles, albumin, glutin) by the action of nitric and hydrochloric acid and distilling. (2) A trade name for direct dyestuffs.

chlorbenz-. Chlorobenz-.

chlorbenzamide. Benzamide.

chlorbenzene. See *chloro-benzene.*

chlorellin. An antibiotic substance produced by certain algae, notably species of *Chlorella.*

chlorethanal alcoholate. Somnol.

chlorethane. See *ethane.*

chlorethanol. C_2H_5OCl = 80.50. Chlorcarbinol, 2-chloroethyl alcohol. $ClCH_2.CH_2OH$. A colorless liquid, d.1.213, m. −69, b.128.8.

chlorethene. Ethylene.

chlorethyl. Ethyl chloride.

chlorethylene. See *ethylene.*

chlorethyl ether. $C_4H_8Cl_2O$ = 142.98. Dichloroethyl ether, chlorex, $(ClCH_2.CH_2)_2O$. A colorless liquid, d.1.213, b.178; used as solvent.

chlorethylidene. Ethylidene.

chloretone. $C_4H_7OCl_3$ = 177.4. Acetone chloroform, 2-trichloromethyl-2-propanol, *1.1.1*-trichloro-*2*-methyl propanol*, chlorobutanol, anesin, aneson, $CCl_3.CMe_2OH$. Colorless, odorous deliquescent crystals, m.80, sparingly soluble in water; soluble in alcohol, ether or oils; used as an anesthetic, antiseptic, hypnotic, and for seasickness.

chlorex. A trade name for dichloroethyl ether. **c. process.** A method of refining lubricating oils with c.

chlorhydrate. Hydrochloride.

chlorhydrin. A compound containing both, the Cl and OH radicals; as, ethylene c., propylene c. Cf. *halohydrin, dichlorhydrin.*

chloric acid. $HClO_3$. An acid of pentavalent chlorine, which can exist only in solutions and as compounds. Its salts are the chlorates. **per-** $HClO_4$. An acid of heptavalent chlorine, which exists only in dilute solution and in the form of compounds such as the perchlorates.

chloride. A salt containing the monovalent Cl—, usually a binary compound of chlorine in which chlorine is the negative constituent. **c. of lime.** Bleaching powder. **c. of soda.** Sodium chloride. **c. ion.** Chlorion. A negatively charged atom Cl^-, formed by dissolving a soluble chloride in water.

chloridion. Chloride ion.

chloridization. (1) Chlorination. (2) The treatment of ores with chlorine or hydrochloric acid, to produce the chloride of the principal meta present.

chloridometer. Chlorometer. A device for estimating chlorides in urine.

chlorimetry. The quantitative determination of the available or free chlorine in compounds, especially in bleaching powder.

chlorin. Crude dinitro resorcinol.

chlorinate. To introduce chlorine into a compound, or to combine it with a substance.

chlorinated. Treated with chlorine. **c. lime.** Bleaching powder containing not less than 30 %

available chlorine. **c. solvents.** A series of non-inflammable, stable, non-corrosive and non-explosive liquids formed by the action of chlorine on acetylene, *e.g.*:

dieline	$C_2H_2Cl_2$,	b.52
trieline	C_2HCl_3,	b.85
eteline	C_2Cl_4,	b.119
tetraline	$C_2H_2Cl_4$,	b.144
pentaline	C_2HCl_5,	b.159
perchloroethane	C_2Cl_6,	b.185

chlorination. The process of saturating with or introducing chlorine into a compound, especially the substitution of hydrogen atoms of an organic compound by chlorine atoms. **exhaustive-** The successive substitution of all H atoms by Cl.

chlorindin. $C_{16}H_8O_2N_2Cl_2$ = 330.9. A chlorine substitution product of indin.

chlorindoptene. $C_8H_4OCl_4$ = 257.8. Colorless crystals obtained by the action of chlorine on indigo-blue.

chlorine. Cl = 35.457. A halogen element, atomic number 17. A greenish-yellow, poisonous, gas with suffocating odor, m. −102.0, b. −33.60, d. (liquid Cl) 1.4, d. (gaseous Cl_2) 71.63 (H_2 = 2), or 2.49 (air = 1), soluble in water. After fluorine it is the most electronegative element. It is the most abundant halogen, and occurs as chlorides (sea-water, salt-deposits) in many minerals, and in all vegetable and animal tissues. It is obtained as a by-product in soda manufacture, or by electrolysis of chlorides. Discovered in 1774 by Scheele. It consists of two isotopes: Cl^{35} and Cl^{37}, and is mono-, tri-, or penta-valent; hence, it gives the following series of compounds:

− 1 chlorides	Cl^- *e.g.* NaCl
+ 1 hypochlorites	ClO^- *e.g.* NaOCl
+ 3 chlorites	ClO_2^- *e.g.* $NaClO_2$
+ 5 chlorates	ClO_3^- *e.g.* $NaClO_3$
+ 7 perchlorates	ClO_4^- *e.g.* $NaClO_4$

Used as a bleaching agent for textiles, straw and sponges, as a poison gas in chemical warfare, in the extraction of gold, as a disinfectant, germicide and insecticide, as an oxidizing and reducing agent in chemical synthesis. **available-** (1) The chlorine that can be liberated from a substance (*e.g.*, bleaching powder) by acids. (2) The chlorine equivalent of the active oxygen of an oxidizing agent (*e.g.*, a hypochlorite).

c. cyanide. Cyanogen chloride. **c. dioxide.** ClO_2 = 67.5. C. peroxide. A yellowish, strong irritating gas, $d_{(air=1)}$.2.315, m. −76, b.9.9; or reddish liquid, d.1.5. It is soluble in water, decomp. in alcohol, and is a strong oxidizing agent forming hypochlorites or peroxides; it explodes in contact with NH_3, CH_4, PH_3, or H_2S. **c. heptoxide.** Cl_2O_7 = 182.9. The anhydride of perchloric acid. A colorless, oily liquid, b.82, which readily decomposes and explodes. **c. hydrate.** $Cl.8H_2O$ = 179.6 or $Cl.5H_2O$ = 86.91. Octahedric, yellow crystals, d.1.23, stable below 9, m. −50. **c. hydride.** Hydrochloric acid. **c. monoxide.** Cl_2O = 86.9. Anhydride of hypochlorous acid. A yellowish-red liquid or yellowish gas, $d_{(air)}$.2.99, m. −20, b.5; soluble in water or concentrated sulfuric acid, but decomp. by alkalis. **c. oxides.** Cl_2O = c. monoxide, anhydride of hypochlorous acid. ClO_2 = c. dioxide. Cl_2O_7 = c. heptoxide, anhydride of perchloric acid. ClO_4 = c. tetroxide. The existence of Cl_2O_3 and Cl_2O_5 is doubtful. **c. water.** A pale greenish-yellow liquid of strong chlorine odor, obtained by passing a stream of chlorine through water. It contains 0.4 gram Cl per 100 cc., and if kept for any length of time, it decomposes to HCl and HOCl. Used as a reagent in determining I, Br, quinine, uric acid, or xanthine; also as an oxidising and bleaching agent and antiseptic.

chlorinity. The number of grams of halides (calculated as Cl) occurring in a kg. of sea water. It is related to salinity, S, thus: S = 0.03 + 1.805 Cl.

chloriodic acid. Iodine monochloride.

chloriodide. A double salt containing an iodide and chloride.

chloriodoform. $CHCl_2I$ = 210.8. Dichloriodoform, formyldichloroiodide, dichloroiodomethane. A yellow aromatic liquid.

chlorion. Chloride ion.

chlorisatic acid. $C_8H_6O_3NCl$ = 199.5. A chlorine substitution product of isatic acid.

chlorisatide. $C_{16}H_{10}O_4N_2Cl_2$ = 365.1. A chlorine substitution product derived from isatin; a white insoluble powder.

chlorisatimide. $C_{24}H_{15}O_4N_5Cl_2$ = 508.2. A chlorine substitution product of isatimide.

chlorite. (1) A salt containing the monovalent ClO_2^- radical derived from chlorous acid. (2) A group of rock-forming minerals; *e.g.*, clinochlore, penninite, prochlorite.

chlorition. The negatively charged ClO_2^- formed by ionization of chlorous acid and chlorites.

chloritoid. Phyllite. The mineral Al_2O_3,FeO, SiO_2,H_2O.

chlorknallgas. An explosive mixture of chlorine and hydrogen.

chloro- Describing an organic compound which contains chlorine atoms substituted for hydrogen atoms. The prefixes chlor- and chloro- are often interchangeable, but the former indicates a closer relationship of chlorine to the compound which it prefixes. *E.g.*, chloracetate is a salt containing the radical CH_2ClCOO—R, and derived from chloracetic acid; while chloroacetate is a salt of the type $CH_3.COO$—R—Cl, that is, derived from acetic acid and chlorine.

chloroacetophenone. Chloracetophenone.

chloroben. Dichlorobenzene.

chlorobenzaldehyde. C_7H_5ClO = 140.5. Chlorobenzene carbonal*, $Cl.C_6H_4.CHO$. o- or *2-*. m.11, b.208. m- or *3-*. m.17, b.213. p- or *4-*. m.47, b.214.

chlorobenzoate. A salt of chlorbenzoic acid containing the monovalent $C_6H_4Cl.COO$— radical.

chlorobenzoic acid. See *benzoic acid, chloro-*.

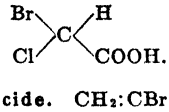
chlorobenzoyl. C_7H_5OCl = 140.5. A colorless liquid derived from benzaldehyde and chlorine. **c. chloride.** $C_7H_4OCl_2$ = 179.95. $ClCO.C_6H_4Cl$. o- m. −4, b.238. m- b.117. p- b.119.

chlorobenzyl. A compound containing the monovalent C_7H_6Cl— radical, of which 10 isomers are possible.

chloroboric acid. Boron trichloride.

chlorobromacetate. A salt of chlorbromacetic acid of the type CHClBr.COOM.

chlorobromacetic acid. $C_2H_2O_2ClBr$ = 173.5.



chlorobromglycide. CH_2:CBr.CH_2Cl = 155.5. A colorless liquid.

chlorobromopropane. Trimethylene chlorobromide.

chlorobutadiene. Chloroprene.
chlorobutanol. Chloretone.
chlorobutyric acid. Butyric acid.
chlorobutyryl. The radical $C_3H_2Cl.CO$—.
chlorocalcite. Hydrophilite.
chlorocamphene. $C_{10}H_{12}Cl_4$ = 273.8. A colorless liquid obtained by the action of chlorine upon terebenthene.
chlorocamphor. A number of chlorine substitution products of camphor; *e.g.*, monochlorated, dichlorated, etc.
chlorocarbinol. $CH_2Cl.CH_2OH$ = 80.5. Chlorethanol.
chlorocarbonate. Chloroformate. A compound containing the monovalent ClCO.O— radical; *e.g.*, methyl chlorocarbonate, ClCO.OMe.
chlorocarbonic acid. Chloroformic acid.
chlorocarvene. $C_{10}H_{15}Cl$ = 170.5. A colorless liquid obtained by the action of chlorine upon carvene.
chlorochromic acid. The compound $HCrO_3Cl$; see *chromyl chloride.*
chlorocinnamoyl. The radical $C_6H_4Cl.CH:CH.CO$—.
chlorocinnose. $C_9H_4OCl_4$ = 269.8. Colorless crystals, obtained by the distillation of a mixture of cinnamic acid and P_2O_5.
chlorocitraconyl. $C_5H_4O_2Cl_2$ = 166.9. An addition product of citraconyl and chlorine.
chlorocitric acid. See *citric acid.*
chlorocodeine. A chlorine substitution product of codeine.
chlorocosane. A liquid chlorinated paraffin which contains chlorine in stable combination.
chlorocresol green. $C_{21}H_{14}Cl_4O_5S$ = 521.9. *2.3.6.7*-Tetrachloro-*m*-cresol sulfon phthalein. A gray powder used as pH indicator between 4.0 (yellow) and 6.0 (blue).
chlorocruorin. A green pigment related to hemoglobin; found in certain molluscs.
chlorocyanamide. CN.NHCl = 76.48. A chlorine substitution product of cyanamide.
chlorocyanide. A double salt of a chloride and cyanide; MCl.MCN.
chlorocyanilide. $C_{15}H_{12}N_3Cl_5$ = 411.4. Colorless crystals.
chlorocyanogen. Cyanogen chloride.
chlorodifluoromethane. $CHClF_2$ = 86.5. A colorless gas, m. −146, b. −39.8; used as an anesthetic and refrigerant. Cf. *freon.*
chlorodracylic acid. p- Chlorobenzoic acid.
chlorofluoride. A double salt of a chloride and fluoride; MCl.MF.
chloroform. $CHCl_3$ = 119.37. Trichloromethane*. A colorless, volatile liquid- $d_{15°}$.1.499, m. −63.2, b.61.2, almost insoluble in water, miscible with alcohol or ether. Used as a solvent for oils, fats, iodine, bromine, rubber, and medicinally as an anesthetic, anodyne, and antispasmodic. **aceton-** Chloretone. **colloidal-** Desalgin. **crystal-** Chloroformate. **germanium-** See *germanium.* **methyl-** $MeCCl_3$ = 133.4. A colorless liquid, used as an anesthetic. **nitro-** Chloropicrin. **phenyl-** Benzotrichloride. **c.-*d*.** $CDCl_3$ = 120.37. Deuterochloroform, CH^bCl_3. A white solid, m.64.2–64.7, formed from CCl_3CHO and D_2O. **c. of crystallization.** Chloroformate.
chloroformate. (1) A crystal deposited from a solution containing chloroform as a constituent of its crystal structure; cf. *water of crystallization.* (2) Chlorocarbonate. An ester of chloroformic acid; as, palite.
chloroformic acid. CHO_2Cl = 80.5. Chlorocarbonic acid. The hypothetical acid, Cl.COOH, esters of which are known.
chlorofumaryl. Fumaryl chloride.
chlorogenic acid. $C_{16}H_{18}O_9.\frac{1}{2}H_2O$. An acid occuring in coffee and many other plants. It is a depside of caffeic and quinic acid, m.208, and a constituent of caffetannic acid.
chlorogenine. $C_{21}H_{20}O_4N_2.3\frac{1}{2}H_2O$ = 434.73. Alstonine. An alkaloid from the bark of *Alstonia constricta.* A brown powder, m.195, insoluble in water, soluble in alcohol or ether; used as an antipyretic and antiperiodic resembling quinine in its action.
chlorolactic acid. See *lactic acid.*
chloromaleic acid. $C_4H_3O_4Cl$ = 150.5. A substitution product of maleic acid, which forms colorless white crystals.
chloromalonic acid. See *malonic acid.*
chloromenthene. $C_{10}H_{17}Cl$ = 172.6. A substitution product of menthol; a yellow, oily liquid.
chloromercuriphenol. $C_6H_4(OH)ClHg$ = 329.11. Colorless crystals, m.152.5, soluble in sodium hydroxide.
chloromesityl. C_3H_5Cl = 76.5. Mesityl chloride. A substitution product obtained by heating acetone with P_2O_5.
chloromesitylene. $C_9H_{11}Cl$ = 154.5. A chlorinated mesitylene, $C_6H_2Me_3Cl$.
chloromesitylide. C_3H_3Cl = 74.5. A crystalline substance obtained by the action of chlorine upon mesitylene.
chlorometer. Chloridometer.
chloromethane. Methyl chloride.
chloromethyl. The monovalent CH_2Cl— radical derived from methyl chloride. **di-** The radical —$CHCl_2$. **tri-** The radical —CCl_3. **c. chloroformate.** Palite. **c. silicane.** CH_5ClSi = 80.56. Methylchlorosilane, $MeSiH_2Cl$. A colorless gas, $d_{-80°}$.0.935, m. −134.5, b.7.
chloromychmylic acid. $C_4H_8O_3Cl_2$ = 175.0. An acid from urine.
chloronaphthalene. See *naphthalene.*
chloronitric acid. (1) Nitroxylchloride. (2) Aqua regia.
chloronitrobenzene. See *nitrobenzene.*
chloronitrophenol. See *nitrophenol.*
chloronitrous acid. Nitrogen oxychloride.
chlorophenesic acid. Dichlor-*phenol.*
chlorophenic acid. Monochlor-*phenol.*
chlorophenisic acid. See trichlor-*phenol.*
chlorophenol. See *phenol.* **c. indophenol.** An oxidation-reduction indicator, q.v. **c. red.** $C_{19}H_{12}Cl_2O_5S$ = 423.0. Dichlorophenolsulfonphthalein. A yellow powder, used as pH-indicator between 5.5 (yellow) and 6.5 (red).
chlorophenusic acid. Pentachloro*phenol.*
chlorophoenicite. The mineral $(Zn,Mn)_3As_2O_8.7(Zn,Mn)(OH)_2$. It is pale green by reflected and purple red by transmitted light. **magnesium-.** C. containing Mg in place of Zn.
chlorophyll. The chromoprotein forming the green coloring matter of leaves and other parts of a plant. A soft, green mass, insoluble in water but soluble in alcohol, ether, chloroform, carbon disulfide, essential oils, or alkalis. The solutions are fluorescent and colloidal. It contains:

70 % chlorophyll *a*, or $C_{55}H_{72}MgN_4O_5$ = 892.9;
30 % chlorophyll *b*, or $C_{55}H_{70}MgN_4O_6$ = 908.9.

The alcoholic solution of *a* is bluish green, of *b*, yellowish green. Both are phytol esters of

porphin derivatives. Among its split products are phtopyrrole (related to hemopyrrole of blood), aetiophyllin $C_{31}H_{34}N_4Mg$, (the chromophore group containing Mg, as hematin contains Fe). It is used as a non-poisonous coloring matter, and as a dye for oils, cosmetics, etc. It is marketed in the form of copper and zinc compounds. α- The purified chlorophyll ($C_{31}H_{29}N_3Mg$)NH.CO(COOMe)$COOC_{22}H_{33}$. Cf. *phylloerythrin, phylloporphyrin.*

chlorophyllide. An ester of chlorophyllin; as, chlorophyll is the c. of phytol.

chlorophyllin a. $C_{34}H_{32}N_4O_5Mg$. A dicarboxylic acid from chlorophyll *a*. Cf. *porphin.*

chloropicrin. CCl_3NO_2 = 164.39. Nitrochloroform, aquinite, trichloronitromethan*, P.S. Colorless liquid, d_9°.1.692, m. −69, b.112, insoluble in water, miscible with alcohol or ether. It is an insecticide and emetic war gas.

chloroplast. A granule containing chlorophyll; the green protoplasmic part containing the chlorophyll of vegetable cells.

chloroplatinate. Platinichloride. A double salt of platinic chloride combined with another chloride; or a salt of chlorplatinic acid containing the divalent $PtCl_6^{=}$ radical.

chloroplatinic acid. H_2PtCl_6 = 410.0. A dibasic acid, the platinum chloride of commerce.

chloroplatinite. Platinochloride. A double salt of platinous chloride and another chloride; a salt of platinous acid containing the divalent $PtCl_4^{=}$ radical.

chloroplatinous acid. H_2PtCl_4 = 339.0. A dibasic acid containing divalent Pt.

chloroprene. C_4H_5Cl = 88.5. *2-Chloro-1,3-*butadiene*, $CH_2{:}CH.CCl{:}CH_2$. A colorless liquid, d.0.9583, b.59.4, synthesized from acetylene, it polymerizes under proper conditions, to form: α- a soft, plastic resembling unvulcanized rubber; β- a volatile, fragrant product, one fraction b_{27mm}.92–97, another b_{27mm}.114–118; μ- a transparent, resilient, nonplastic, elastic product resembling vulcanized rubber; ω- a granular, nonplastic, non-absorbent, balata-like, hard, amorphous product, becoming plastic at 60°C. It is used in the manufacture of duprene.

chloropyridine. See *pyridine.*

chloroquinoline. C_9H_6NCl = 163.5. (mono-) A chlorine substitution product of quinoline.

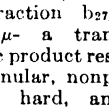
chlororaphin. An antibiotic substance obtained from *Chromobacterium.*

chlorosalol. $C_{13}H_9O_3Cl$ = 248.53. Chlorphenol salicylate, chlorsalol, $C_6H_4(OH)COOC_6H_4Cl$. A colorless, crystalline powder; used as external antiseptic.

chlorosamide. $C_{21}H_{15}O_3N_2Cl_3$ = 449.52. Yellow scales, derived from chlorsalicylic acid and ammonia.

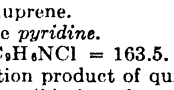
chlorosis. (1) Anemia, or an abnormal condition characterized by a deficiency of hemoglobin; or, in the case of plants, of magnesium. (2) The use of chlorine and chlorides in agriculture.

chlorosulfonic acid. HSO_3Cl = 132.5.



Used in chemical warfare for fog screens.

chlorosulfuric acid. Cl_2SO_2 = 134.9. Sulfuryl chloride. $(ClO)_2S$ or



chlorotoluene. Benzyl chloride.

chlorotrinitrobenzene. Picryl chloride.

chlorous. Describing a compound containing positive trivalent chlorine Cl≡; *e.g.*, chlorites. **c. acid.** $HClO_2$ = 68.5. An acid known only in solutions and as its salts (chlorites).

chlorovaleric acid. Monochlorovaleric acid.

chlorovalerisic acid. Trichlorovaleric acid.

chlorovalerosic acid. Tetrachlorovaleric acid.

chloroxalethylin. $C_6H_9N_2Cl$ = 144.6. A tertiary amine derived from diethyl oxamide.

chloroxalic acid. Chloroxalethyline.

chloroxalmethyline. $C_4H_5N_2Cl$ = 116.5. A tertiary amine derived from dimethyl oxamide.

chloroxalovinic acid. $C_4HO_4Cl_5$ = 290.3. Pentachlorethyl-oxalic acid. Colorless, hygroscopic crystals, soluble in water, alcohol or ether.

chloroxyl. A brand of cinchophen hydrochloride.

chloroxylene. Xylyl chloride.

chloroxylenol. Para-chloro-meta-xylenol, or 2-chloro-5-hydroxy-1,3-dimethylbenzene; used as a local antiseptic.

chloroxylonine. $C_{22}H_{23}O_7N$ = 413.3. An alkaloid from the wood of *Chloroxylon swietenia*, the East Indian satinwood, a Rutaceae.

chlorphenasic, chlorphenesic, chlorphenic, chlorphenisic, chlorphenosic. See *chlorophen-.*

chlorphenol. See *phenol.*

chloryl. (1) The monovalent ClO^- radical. (2) Carbachol.

chlorylene. C_2HCl_3 = 131.38. Trichloro ethylene, CHCl = CCl_2. Colorless liquid, d.1.477, m. −86.4, b.88, used as an antineuralgic.

chocolate. (1) A food preparation made from cocoa, milk, and sugar which is variously flavored, and consumed either in solid cakes or used as a powder for beverages, etc. (2) Theobroma paste. Ground cocoa used as a basis for certain drugs.

choke damp. Black damp. A mixture of CO_2 and other gases found in mines.

chola. Bile.

cholagogue. A drug that stimulates the flow of bile, *e.g.*, salicylates and bile salts.

cholaic acid. $C_{24}H_{40}O_2$ = 360.03. An acid derived from cholane.

cholalic acid. Cholic acid.

cholane. $C_{24}H_{42}$ = 328.39. A hydrocarbon parent-substance of sterols, hormones, bile-acids, and toad poisons. It is related to the carotenoids and cerebrosides by ring fracture. See table. **c. ring.** Androstane ring. A tetracyclic, saturated ring system. See figure.

cholanic acid. $C_{20}H_{28}O_6$ = 361.3. An oxidation product of cholic acid.

cholanthrene. $C_{20}H_{14}$ = 254.0. A pentacyclic hydrocarbon with a strong carcinogenic action.

cholate. (1) A salt or ester of cholic acid, indicated by the $C_{24}H_{41}COO$— radical. (2) Taurocholate. A salt of taurocholic acid, indicated by the $C_{23}H_{39}O_3.COO$— radical.

choleate. A salt or ester of choleic acid containing the monovalent $C_{25}H_{44}O_6NS.COO$— radical. Cf. *taurocholate.*

cholecyanin. Bilicyanin.

choleic acid. (1) Taurocholic acid. (2) $C_{25}H_{42}O_4$ = 392.31. A monobasic acid from bile, m.190. **glyco-, tauro-** See *bile acids.*

choleinic acid. $C_{25}H_{42}O_4$ = 406.4. An acid found in small quantities in ox bile.

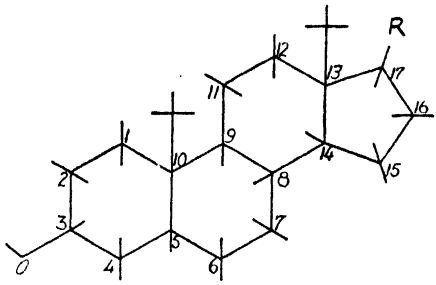
cholestane. $C_{27}H_{48}$ = 372.35. A hydrocarbon, and stereoisomer of ergostane.

cholestene. $C_{27}H_{46}$ = 370.35. The unsaturated hydrocarbon of cholesterol.

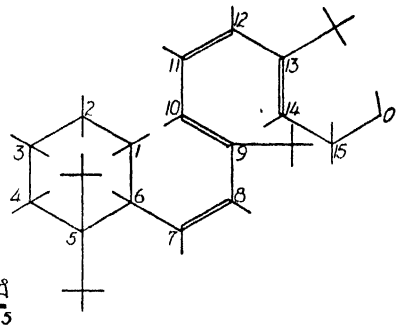
cholesterase. An enzyme that hydrolyzes cholesterol.

CHOLANE DERIVATIVES

(Compare also *carotenoids* and *cerebrosides*)



The Androstane or Cholane Ring



Vitamin A (Cf. carotenoids)

(The numbers represent carbon atoms, saturated unless otherwise specified, while R is a radical, as follows:)

A	—CH_2Me	I	—CMe.CH:CH.CO.O
B	—CHOH.Me		
C	—CO.Me		
D	—CHMe.COOH	J	—C:CH.O.CO.CH_2
E	—CHMe$(CH_2)_2$COOH	K	—CHMe$(CH_2)_2$Me

$C_{24}H_{38}O_2$	cholenic acid (5:6)	....	10.13—Me	E
$C_{24}H_{38}O_3$	hydroxycholenic acid (5:6)	3—OH	10.13—Me	E
$C_{24}H_{40}O_3$	lithocholic acid	3—OH	10.13—Me	E
$C_{24}H_{40}O_4$	desoxycholic acid	3.12—OH	10.13—Me	E
	hydroxycholic acid	3.6—OH	10.13—Me	E
	chenodeoxycholic acid	3.7—OH	10.13—Me	E
$C_{24}H_{40}O_5$	cholic acid	3.7.12—OH	10.13—Me	E
	phocaecholic acid	3.7.23—OH	10.13—Me	E
$C_{22}H_{34}O_3$	hydroxycholanic acid (5:6)	3—OH	10.13—Me	D
$C_{26}H_{39}O_7NS$	taurocholic acid	3.7.12—OH	10.13—Me	L
$C_{26}H_{37}O_6N$	glycohydeoxycholic acid	3.6—OH	10.13—Me	M
$C_{24}H_{34}O_5$	dehydrocholic acid	3.7.12—OH	10.13—Me	N
Fragments formed by ring fracture due to oxidation of C—atoms to COOH.				
$C_{24}H_{34}O_8$	bilianic acid (3 and 4 is COOH)	7.12=O	10.13—Me	E
$C_{25}H_{35}O_{10}$	choloidanic acid (3 and 4 is COOH)	12—COOH	10.13—Me	E
$C_{25}H_{34}O_{12}$	solannellic acid (3, 5, 6, 11 and 12 is COOH)	....	10.13—Me	E
$C_{19}H_{30}O_4$	etiobilianic acid (16 and 17 is COOH)	....	10.13—Me	E

cholesterate. A salt or ester of the dibasic cholesteric acid, containing the $C_8H_8O_8$— radical.

cholesteric acid. $C_8H_{10}O_8$ = 186.1. Cholesterinic acid. An oxidation product of choleic acid and cholesterol obtained by the action of HNO_3. Cf. *ambreic* acid.

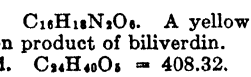
cholesterilene. $C_{26}H_{42}$ = 354.7. An unsaturated hydrocarbon derived from cholesterol; it forms white crystals.

cholesterin. Cholesterol.

cholesterinic acid. Cholesteric acid.

cholesterol. $C_{27}H_{45}OH$ = 386.35. Cholesterin. A monoatomic alcohol found in the blood, brain tissue, nerve substance, spleen, liver, bile; the principal constituent of gall-stones and certain cysts, prepared from the wool grease. Pearly scales, d.1.067, m.148, insoluble in water, soluble in alcohol, ether, chloroform or acetone. It is an antiseptic and antidote to the saponins and forms a number of esters which are important in metabolism. For its structure see *cholane*. **iso-** Lanosterol. **thio-** $C_{27}H_{46}SH$. A solid, m.191. Cf. *irradiation, sterols, lanisterol.*

cholestrophan. $C_8H_6N_2O_3$ = 142.06. Dimethyl parabanic acid,



Pearly leaflets, m.145, b.256, slightly soluble in water.

choletelin. $C_{16}H_{18}N_2O_6$. A yellow pigment and oxidation product of biliverdin.

cholic acid. $C_{24}H_{40}O_5$ = 408.32. Cholalic acid. A monobasic acid formed by the hydrolysis of bile acids. White crystals, m.198, insoluble in water, soluble in alcohol or ether. It is related to cholesterol and the terpenes. Cf. *cholane*. **desoxy-** See *desoxycholic acid*. **glyco-** See *glycocholic acid*. **litho-** See *lithocholic acid*. **rhizo-** An oxidation product of cholic acid. **tauro-** See *taurocholic acid*.

choline. $C_5H_{15}O_2N$ = 121.26. Bilineurine, sinkaline, trimethyl-ethanol-ammonium hydroxide, oxyethyltrimethyl-ammonium hydroxide. $Me_3N(OH)CH_2CH_2OH$. A ptomaine or quarternary amine occurring in many animal and vegetable tissues (placenta, fungi, seeds, etc.). It is a viscous liquid, soluble in water or alcohol. **acetyl-** See *acetyl*. **hydroxy-** Muscarine. **iso-** Amantine.

c. bases. A group of quarternary amines containing pentalent nitrogen, and derived from ammonium hydroxide by replacing the hydrogen atoms by radicals: choline, neurine, muscarine, betaine and sinapine. **c. borate.** Enzytol. A proprietary compound used in the treatment of cancer. **c. chloride.** $C_5H_{14}ClO_2N$ = 155.5. Colorless, hygroscopic crystals, soluble in water or alcohol. **c. hydrochloride.** C. chloride.

cholinic acid. $C_{50}H_{86}O_6.6H_2O$ = 840.38. An acid derived from bile.

cholodinic acid. $C_{24}H_{38}O_6$ = 422.30. An anhydrous product of cholic acid.

cholohematin. Bilipurpurin. A brown bile pigment.

choloidanic acid. $C_{16}H_{24}O_7$ = 328.19. An oxidation product of cholic acid.

chololic acid. Cholic acid.

cholonic acid. $C_{26}H_{41}O_5N$ = 447.34. An anhydrous product of glycocholic acid.

cholophaein. $C_{16}H_{18}O_4N_2$ = 302.16. A brown biliary pigment occurring in feces. Cf. *choletelin*.

cholothallin. $C_9H_{11}O_3N$ = 181.10. An oxidation product of bilirubin.

chondrigen. Cartilagin.

chondrin. A protein from cartilage, considered to be a mixture of mucin and gelatin. A transparent, gelatinous or yellow, horn-like mass, soluble in hot water.

chondrodite. Humite.

chondroine. $C_{18}H_{21}O_4N$ = 315.2. An alkaloid obtained from *Nectandra rodiaei*, a Lauraceae of tropical America. Cf. *bebeerine*.

chondroitic acid. $C_{18}H_{27}O_{17}NS$ = 561.30. An acid of cartilage, found in traces in urine; splits into chondroitin.

chondroitin. $C_{18}H_{27}O_{14}N$ = 481.22. A mucus-like substance and constituent of chondrin and chondroitic acid; it hydrolyses to chondrosin and acetic acid.

chondrometer. An instrument for determining the weight of a bushel of grain or seed.

chondromucoid. An albuminoid containing conjugated chondroitic acids; a constituent of cartilage.

chondroprotein. A group of mucoids containing chondroitic acid, found in the connective tissues.

chondrosin. $C_{12}H_{21}O_{11}N$ = 355.18. A split-product of chondroitin; it hydrolyzes to glycuronic acid and glucosamine. Cf. *chitosan.*

Chondrus. A family of sea weeds; *e.g.*, Irish moss.

chopping. Cutting. **c. mill.** A device for shredding and cutting fibrous materials; agar-agar, seeds, etc.

choritoid. $Al_2O_3.FeO_2.SiO_2.H_2O$. A silica mineral, (q.v.) of the mica group.

choroid. The layer below the retina of the eye.

chrithmene. Crithmene.

chroatol. $C_{10}H_{16}.2HI$ = 391.8. Terpene iodohydrate. A greenish oil, obtained by the action of iodine on turpentine.

chroma. The degree of saturation of a color.

chroman. $C_9H_8O_2$ = 148.1. Dihydrobenzopyran, $C_6H_4\langle^{O-\ CH_2}_{CH_2-CH_2}\rangle$. **hydrindo-** Hydrindochroman. **thio-** Thiochroman.

chromate. A salt of chromic acid which contains the divalent $CrO_4^{=}$ radical; as, Na_2CrO_4 sodium c. **bi-, Di-, di-** An acid salt derived from chromic acid containing the divalent $Cr_2O_7^{=}$ radical. The $Cr_2O_7^{--}$ ion, which makes aqueous solutions orange. **per-** See *perchromate.*

c. cell. See *cell.* **c. green.** A mixture of chrome yellow (q.v.) and prussian blue (cf. *chrome green).* **c. ion.** The negatively charged CrO_4^{--} ion, which imparts a yellow color to aqueous solutions.

chromatic. Pertaining to colors. **c. aberration.** The refraction of the different constituent rays of white light by a lens, to different extents; it produces differently colored foci, and an image fringed with color. **c. plate.** A photographic plate which is used in conjunction with color screens in order to produce a more contrasting image of colored objects. Cf. *photographic spectrum, photosensitizer.* There are four main groups of plates and films:

	Sensitive to	*Wavelength in Å.U.*	*Name*
(1)	violet and blue.	3500–5000	ordinary plates
(2)	violet, blue and green.....	3500–6000	*iso-* or *ortho-*chromatic plates
(3)	violet, blue and orange.....	3500–6500	*tri*chromatic plates
(4)	violet, blue and red.....	3500–7000	*pan*chromatic plates.

chromatin. A structural part of the nucleus of the cell that is most deeply colored by stains.

chromatographic. Recording colors. **c. analysis.** The analysis of mixtures of solutions (*e.g.*, of drugs, dyestuffs, etc.) by using absorbing materials such as gelatin, alumina, etc. to separate the substances in solution by selective adsorption.

chrome. (1) Chromium. (2) Chromium ore. (3) Chromium oxide. (4) Lead chromate. **c. alum.** Ammonium chromic sulfate. **c. green.** A mixture of chromic oxide and cobalt oxide. **c. ore.** Chromite. **c. red.** Lead chromate. **c. violet.** Aurine tricarboxylic acid. **c. yellow.** Lead chromate.

chromel. An alloy highly resistant to heat, oxidation and the action of acids; and used in thermocouples and in the laboratory (*e.g.*, for triangles). Grades:

A.....	80 % Ni	20 % Cr	
B.....	85 % Ni	15 % Cr	
C.....	65 % Ni	11 % Cr	24 % Fe
D.....	26 % Ni	8 % Cr	66 % Fe
P.....	90 % Ni	10 % Cr	

chromic. Describing a compound containing trivalent chromium $Cr^{\equiv}$. **c. acetate.** $Cr(C_2H_3O_2)_3H_2O$ = 247.09. A grayish-green powder, soluble in water. **c. acid.** (1) H_2CrO_4 = 118.1. The hypothetical hydrate of CrO_3, which exists only in solution or in the form of salts. (2) CrO_3. Chromium trioxide. **c. anhydride.** Chromium trioxide. **c. arsenide.** Chromium arsenide. **c. boride.** Chromium boride. **c. bromide.** (1) $CrBr_3$ = 291.76. Olive green, hexagonal crystals; slightly soluble in water, decomp. in alcohol. (2) $CrBr_3.6H_2O$ = 399.85; c.b. hexahydrate. Green scales, d.5.4, insoluble in water or alcohol. **c. carbide.** Cr_3C_2 = 180.06. A black powder, d.5.62, insoluble in water. **c. carbonate.** $Cr_2(CO_3)_3$. An amorphous, grayish-black powder of variable composition, containing some hydroxide; insoluble in water, soluble in acids. **c. chloride.** (1) $CrCl_3$ = 158.38. A purple crystalline powder, d.2.757; soluble in water, alcohol or ether. (2) $CrCl_3.6H_2O$ = 266.48. Green or purple, shining scales, d.5.5; soluble in water, alcohol or ether. **c. fluoride.** $CrF_3.4H_2O$ = 181.1. A green, crystalline powder, d.3.8, m.1000, b. about 1200, soluble in water, alcohol, or acids; used technically in dyeing and printing cotton, and coloring white marble. **c. hydroxide.** $Cr(OH)_3.2H_2O$ = 139.1. A bluish-green powder insoluble in water or alcohol, soluble in alkalis or acids; used as a pigment. **c. iodide.** $CrI_3.9H_2O$ = 437.9. A dark blue or black poyder, soluble in water. **c. nitrate.** $Cr(NO_3)_3.9H_2O$ = 400.2. Purple prisms, m.-36.5, b.125.5, soluble in water, alcohol, acids, or alkalis; used as a reagent. It crystallizes also as

heptahydrate.....	$Cr(NO_3)_3.7H_2O$
hexammonate.....	$Cr(NO_3)_3.6NH_3$

c. oxide. Cr_2O_3 = 152.0. Chrome green. A hexagonal, dark-green, crystalline powder, d.5.21, m.2059, insoluble in water, slightly soluble in alkalis or acids; used as pigment in calico printing, and paper money; also in ceramics and glass industry. **c. oxychloride.** Chromyl chloride. **c. phosphate.** $CrPO_4$ = 147.1. Plessy's green, Arnaudon's green. A bluish-green powder, insoluble in water; used as a pigment. It crystallizes also as

trihydrate.....	$CrPO_4.3H_2O$
hexahydrate.....	$CrPO_4.6H_2O$

c. potassium alum. Potassium c. sulfate. **c. potassium cyanide.** Potassium chromicyanide. **c. potassium oxalate.** $K_3Cr(C_2O_4)_3.3H_2O$ = 487.35. A purple crystalline mass, soluble in hot water. **c. potassium sulfate.** Potassium c. sulfate. **c. silicide.** Cr_3Si_2 = 212.1. A black crystalline powder, insoluble in water. **c. sulfate.** $Cr_2(SO_4)_3$ = 392.2. A green powder soluble in water; used in manufacturing chromic compounds. It crystallizes as:

hexahydrate..... $Cr_2(SO_4)_3.6H_2O$ (green)
pentadecahydrate.... $Cr_2(SO_4)_3.15H_2O$ (violet)

(cryst.) $Cr_2(SO_4)_3.18H_2O$ = 716.5. Regular, purple or violet crystals, $d_{22°}$1.7, anhydrous at 100 and soluble in water. **Used** in the manufacture of green inks and in the preparation of other chromium compounds. **c. sulfide.** Cr_2S_3 = 200.6. A dark-green powder, d.3.77, insoluble in water, soluble in acids. **c. tartrate.** $Cr_2(C_4H_4O_6)_3$ = 548.5. Dark-purple scales, soluble in water.

chromicyanide. The trivalent radical. $Cr(CN)_6\equiv$, occurring in compounds such as potassium chromicyanide $K_3Cr(CN)_6$. **c. ion.** The trivalent negative ion, $Cr(CN)_6^{---}$; it imparts a yellow color to solutions.

chromite. (1) An oxide of iron and chromium containing 68 % of chromic oxides. It occurs in brown or black streaked masses, principally in Asia Minor, and is a source of chromium salts; d.4.3–4.6, hardness 5.5. It is used for refractory bricks and cements, for making chromium compounds or ferrochrome, and for coloring glass and tiles green. (2) A salt of chromous acid containing the monovalent CrO_2— radical. **thio-** A compound of the type $M_2Cr_2S_4$.

c. ion. The negatively charged CrO_3^{--} ion, derived from chromous acid or the chromites

chromitite. The mineral Fe_2O_3,Cr_2O_3.

chromium. Cr = 52.01. An element, atomic number 24. A silver-white, hard, brittle metal, d.6.91, m.1520, insoluble in water, but dissolved rhythmically by acids (active and passive chromium). It was discovered in 1797 by Vauquelin and occurs principally in chromite. C is prepared from ores by reduction with metallic aluminum (thermite process), and is used in corrosion-resistant alloys and as a constituent of engineering steels for heavy duty machinery. C. compounds are poisonous and variously colored. They are di-, tri-, or hexavalent, and form the following series of compounds.

+2	chromous (blue).....	Cr^{++}
+3	chromic (purple).....	Cr^{+++}
	chromites (green).....	CrO_2^-
+6	chromyl (red).....	CrO_2^{++}
	chromates (yellow).....	CrO_4^{--}
	dichromates (orange).....	$Cr_2O_7^{--}$

The reactions of c. or the change from one to the other series of compounds, depend on the stability of its ions in acid or basic solution viz:

In acid solution		*In alkaline solution*	
Reduction	Cr^{+++} green or violet	CrO_2^- green	Oxidation
	↑	↓	
	$Cr_2O_7^{--}$ orange	CrO_4^{--} yellow	

c. acetate. See *chromous*. **c. arsenide.** CrAs = 127.1. Chromic arsenide. A black crystalline powder, d.6.35, insoluble in water. **c. boride.** CrB = 63.1. Chromic boride. A black powder, insoluble in water. **c. chloride.** See *chromic, chromous, chromyl*. **c. dioxide.** CrO_2 = 84.1. A black powder obtained by the reduction of potassium dichromate by sodium thiosulfate. It is regarded as chromic chromate, $Cr_2O_3.CrO_3 = 3CrO_2$. **c. minerals.** Chromium is common in magnesium rocks and occurs widely in nature. Its chief ores are: chromite, $FeCr_2O_4$; crocoite, $PbCrO_4$; knoxvillite, $CrSO_4$. **c. mordants.** A group of chromium compounds *e.g.*, used in tanning and dyeing, such as sodium dichromate, chrome alum, or chromic fluoride. **c. oxides.** See *chromous oxide, chromic oxide (green), chromium dioxide (black), chromium trioxide (red)*. **c. phosphide.** CrP = 83.2. A black powder, insoluble in water, decomp. in acids. **c. plating.** The electrolytic coating of metals with c. which produces a noncorrosive surface. **c. potassium oxalate.** $K_3Cr(C_2O_4)_3.H_2O$ = 487.36. Violet crystals, soluble in water. **c. trioxide.** CrO_3 = 100.01. Chromic acid anhydride. Fine, crimson-colored needles, m.190, very soluble in water, readily reduced to the green oxide. It is one of the most powerful of oxidizing agents.

chromo. A paper which has been coated with a mixture of a white pigment (*e.g.*, china clay, blanc fixe etc.) and an adhesive (*e.g.* casein); it is used to obtain fine color prints.

chromogen. (1) The parent-substance of a dyestuff, or of a compound which produces a colored substance or pigment. (2) The substances in biological liquids which, on oxidation, form colored compounds as, sepia, indigo, and fruits. Cf. *chromophore, auxochrome, dulcigen*.

chromogenic. Pertaining to a chromogen. **c. bacteria.** Bacteria which produce colored substances; as, a yellow or blue color in milk.

chromoisomerism. Chromotropy.

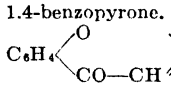
chromoisomers. Differently colored modifications of a substance. Cf. *chromotropy*.

chromolipoid. Lipochrome.

chromomere. A structural unit of a chromosome; each contains a gene, q.v.

chromometer. Colorimeter.

chromone. $C_9H_6O_2$ = 146.0. γ-benzopyrone, 1.4-benzopyrone. The heterocyclic compound



It is present in many vegetable pigments, and its derivatives are chromones, flavones, pyrones, etc. **2-phenyl-** Flavone. **3-phenyl-** Iso*flavone*.

chromophore. A structural arrangement of atoms which is common to many organic substances that possess color. It is thought that the cause of color is the vibrating electrons of a shifting double bond, the chromophoric group. Cf. *resonator, constellation, phore*.

chromophoric. Having properties of a chromophore. **c. group.** The nitro-, azo-, quinoid-, and —C:CH.CO— radicals, in which there is a possibility of a shifting double bond. See *chromophore, auxochrome*.

chromophotometer. Colorimeter.

chromoplast. The micelles of coloring matter in plant cells.

chromoproteins. A conjugated protein (or compound of a protein) and a chromophore; as, hemoglobin, chlorophyll, etc. Cf. *cytochrome*.

chromosaccharometer. A device for determining sugar in urine colorimetrically.

chromoscope. A device for measuring and comparing colors.

chromosome. A differentiated protoplasm formed from the chromatin of the nucleus during cell-division. The number of c. is constant in

every species of animals, but may differ for different species. Cf. *karyokinesis*.

chromosphere. A gaseous "atmosphere" surrounding the sun and composed mainly of hydrogen, helium and calcium vapors. Cf. *photosphere, corona*. The gases of the c. are responsible for the Fraunhöfer lines.

chromotropic acid. *1.8*-Dihydronaphthalene-*3.6*-disulfonic acid; used as an intermediate.

chromotropy. Chromoisomerism. The phenomenon, shown by certain substances, of occurring in differently colored forms (chromoisomers).

chromous. A compound of divalent chromium, Cr =. **c. acetate.** $Cr_2(C_2H_3O_2)_6.2H_2O$ = 494.24. A bluish-green soft mass, soluble in water; used in calico printing and as a stain. **c. acid.** $HCrO_2$ or HO.CrO. A blue-gray powder; a weak acid which yields chromites. **c. chloride.** $CrCl_2$ = 123.0. White crystals, $d_{14°}$2.76, soluble in water; it forms a blue solution which absorbs oxygen. **c. hydroxide.** $Cr(OH)_2$ = 86.0. A yellowish-brown powder, decomp. when heated; insoluble in water, sparingly soluble in acids. **c. iodide.** CrI_2 = 306.0. White crystals or powder, soluble in water. **c. oxalate.** $Cr(OOC)_2$ = 140.1. Dark-green scales, soluble in hot water. **c. oxide.** CrO = 68.04. Chromium monoxide. An unstable compound known in the hydrated state. **c. sulfate.** $CrSO_4.7H_2O$ = 274.2. Blue crystals, soluble in water, slightly soluble in alcohol.

chromyl. The divalent radical, CrO_2^{--}, containing hexavalent chromium. **c. amide.** $CrO_2(NH_2)_2$ = 116.1. **c. chloride.** CrO_2Cl_2 = 155.0 Chromic oxychloride, chlorochromic acid. A dark-red fuming liquid, d.1.96, b.116, decomp. in water or alcohol, and is a powerful oxidizing agent.

chronic. Long-continued or lingering; cf. *acute*.

chronograph. An instrument for recording small intervals of time.

chronometer. A watch or clock.

chronoscope. A device for measuring very brief intervals of time.

chronoteine. A high-speed moving picture camera consisting of 48 rotating lenses, used for the study of rapid moving machinery or phenomena (detonations). It takes normally 3200 pictures per second, but can be speeded up to take 10,000 exposures per second. Cf. *stroboscope*.

chrysalicic acid. $C_7H_5O_6N_3$ = 227.06. Dinitro-o-aminobenzoic acid. An isomer of chrysanisic acid.

chrysamine. $Na_2C_{18}H_{16}O_6N_4$ = 430.17. Flavophenine. A yellow azo-dye, obtained from benzidine and toluidine.

chrysammic acid. $C_{14}H_2(NO_2)_4(OH)_2O_2$ = 420.14. Chrysamminic acid, tetra nitrochrysazin. A dibasic acid constituent of aloes prepared by the action of HNO_3 on chrysophanic acid. It is a solid, insoluble in water, soluble in alcohol or ether.

chrysammidic acid. $NH_4C_7HO_2(NO_2)_2$. Ammonium chrysammate. A derivative of chrysammic acid.

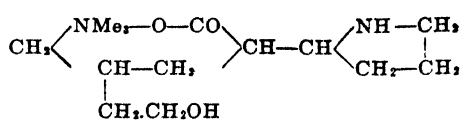
chrysamminic acid. Chrysammic acid.

chrysanilic acid. A decomposition product of indigo blue.

chrysaniline. $C_{19}H_{15}N_3$ = 285.2. ms-p-amidophenyl-2-amidoacridine. A derivative of acridine. Yellow crystals, m.268.

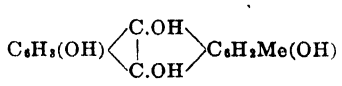
chrysanisic acid. $C_7H_5O_6N_3$ = 227.06. $NH_2.C_6H_2(NO_2)_2COOH$. 3.5-dinitro-4-aminobenzoic acid. Colorless crystals, m.259. An isomer of chrysalic acid.

chrysanthemine. $C_{14}H_{28}O_3N_2$ = 273.3. The alkaloid



found in some chrysanthemum species.

chrysarobin. $C_{15}H_{12}O_4$ = 256.1. A neutral principle from goa powder, the exudates of *Andira* (*Vouacapoua*) *araroba*, a Brazilian tree (Leguminosae).



A microcrystalline, yellow powder, insoluble in water, soluble in alcohol, ether, chloroform or alkalis. On oxidation it yields chrysophanic acid. Used as a gastro-intestinal antiseptic, antiparasitic and alterant, and externally in skin diseases. **c. tetraacetate.** Lenirobin. **c. triacetate.** Eurobin.

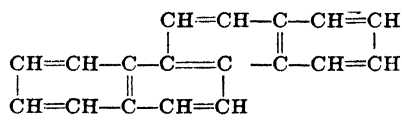
chrysatropic acid. Scopoletin.

chrysazin. $C_{14}H_8O_4$ = 240.13. 1.8-dihydroxy anthraquinone, $C_{14}H_6O_2(OH)_2$. A solid, slightly soluble in alcohol or ether, m.280. **tetranitro-**Chrysammic acid.

chrysazol. $C_{14}H_{10}O_2$ = 210.1. 1.9-dioxyanthracene, peri-dihydroxyanthracene, 1.8-anthradiol. A phenol derived from anthracene; used in the dye industry.

chryseam. $C_4H_5N_3S_2$ = 159.8. White crystals; a reagent for nitrites (red color).

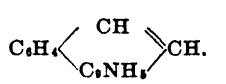
chrysene. $C_{18}H_{12}$ = 228.19. Benzophenanthrene. The hydrocarbon



Red fluorescent scales, m.250, b.448, slightly soluble in alcohol, ether or water. It is a constituent of coal tar.

chrysenic acid. $C_{16}H_{11}.COOH$ = 248.1. Beta-phenyl-naphtholcarboxylic acid. A monobasic acid derived from chrysene.

chrysidine. $C_{17}H_{11}N$ = 229.2. The compound



chrysin. $C_{15}H_{10}O_4$ = 254.1. 5.7-dihydroxy flavone, 2-phenyl-5.-7-dihydroxy-1.4-benzopyrone. A flavone in poplar buds; a derivative of benzopyrone, m.275.

chrysoberyl. $BeAl_2O_4$. A golden yellow beryllium aluminate, d.3.5–3.8, sometimes used as gem. Cf. *alexandrite*.

chrysocolla. $CuH_2SiO_4.H_2O$. Copper orthosilicate. A bluish-green mineral, d.2.0–2.2.

chrysofluorene. $C_{17}H_{12}$ = 216.1. Naphthylene-phenylene-methane, 1.2-benzofluorene, *α*-naph-

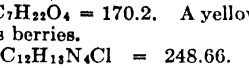
thofluorene. The hydrocarbon

Colorless crystals, m.180.

chrysoidin. $C_7H_{22}O_4$ = 170.2. A yellow pigment in asparagus berries.

chrysoidine. $C_{12}H_{13}N_4Cl$ = 248.66. Diaminoazobenzene or 4-phenylazo-m-phenylene diamine hydrochloride. **c. orange.** A red-brown powder, very soluble in water or alcohol; used as a disinfectant, dye and indicator, changing at pH 7.0 from orange (acid) to yellow (basic).

chrysoketone. $C_{17}H_{10}O$ = 230.1. The ring system

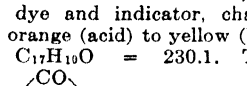


A crystalline substance, m.130.

chrysolepic acid. Picric acid.

chrysolite. Olivine.

chrysophanic acid. $C_{15}H_{10}O_4$ = 254.1. *4.5*-Dihydroxy-*2*-methylanthraquinone, parietic acid, chrysophanol,



A constituent of rhubarb root, senna leaves, goa powder and the wood of *Vouacapoua araroba*. Yellow crystals, used as a mild laxative. Cf. *rhein*.

chrysophanin. $C_{20}H_{20}O_9$ = 404.2. A glucoside in rhubarb and senna.

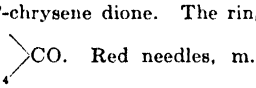
chrysophanol. Chrysophanic acid.

chrysophyscin. Physcion.

chrysopicrin. Vulpic acid.

chrysoprase. An apple-green opaque variety of chalcedony, used as a gem.

chrysoquinone. $C_{18}H_{10}O_2$ = 258.1. Chrysene quinone, *1.2*-chrysene dione. The ring system



Red needles, m.235, obtained by oxidation of chrysene.

chrysorrhetin. A yellow coloring matter of senna.

chrysotile. $3MgO,2SiO_2,2H_2O$. Canada asbestos. An impure hydrated magnesium silicate. It is a form of asbestos.

chrysotoxin. An active principle of ergot.

chuchuarine. $C_{20}H_{15}O_2N_{12}$ = 455.2. An alkaloid from the seeds and wood of *Semecarpus anacardium*, an Anacardiaceae of the East Indies. It resembles strychnine.

chum. The sediment in fatty oils.

chundoo. See *chandoo*.

churn. A device for agitating milk in making butter. **laboratory-** A c. used in experimental dairy work and household science, or for making intimate mixtures.

churning. The slow stirring or agitating of milk or cream with wooden paddles, shaking, etc. by which the fat globules aggregate to form butter.

chyazic acid. Hydrocyanic acid. The name is derived from C—Hy—Az, where Az is the French, azote.

chyle. An emulsion of lymph and fat formed in the small intestines during digestion, and passing through the thoracic duct into the veins as blood.

chymase. A coagulating enzyme (q.v.) that acts on casein.

chyme. A thick, brownish or grayish liquid consisting of partly digested food, passing from the stomach into the intestines.

chymia. An obsolete term for chemistry.

chymification. Gastric digestion.

chymogen. Rennase.

chymosin. Rennase.

chymotrypsin. An enzyme which coagulates milk.

cibazol. Sulphanilamido-thiazole.

ciceric acid. A mixture of oxalic and malic acid obtained from *Cicer arietinum*, *Vicia sativa* and other vetches.

Cicuta. A genus of poisonous umbelliferous plants; as *C. virosa* or water-hemlock.

cicutene. $C_{10}H_{16}$ = 136.2. A volatile terpene obtained from the root of *Cicuta virosa*.

cicutine. $C_8H_{17}N$ = 127.2. A liqiud alkaloid obtained from the root of *Cicuta virosa*, apparently identical with conine.

cicutoxine. $C_{12}H_{32}O_5$ = 256.3. An active principle of *Cicuta virosa*.

cider. Expressed apple juice, fermented or otherwise, which is used for drinking and vinegar manufacture. Cf. *pomace*, *perry*.

C.I.E. (Commission Internationale de l'Éclairage.) Units which define colors in terms of 3 hypothetical primary colors which, when mixed optically, match the color under standard lighting conditions. Cf. *color*.

cignolin. A brand of dioxyanthranol.

cilia. The hair-like protuberances on the surface of micro-organisms, used chiefly for locomotion.

ciment fondu. A form of hydraulic cement, formed by the complete fusion of bauxite and lime to form monocalcium aluminate and dicalcium silicate.

cimicic acid. $C_{15}H_{28}O_2$ = 240.3. A monobasic acid from bed bugs, *Cimex lectularius;* yellow crystals, m.44.2.

Cimicifuga. Macrotis, black cohosh, black snakeroot. The rhizome of *C. racemosa*, black snakeroot or cohosh; used, as tincture or fluid extract, as a tonic and antispasmodic. Cf. *rasmosin*, *macrotoid*.

cimicifugin. Macrotin. A resinoid from the rhizome of *Cimicifuga racemosa*. A yellowish-brown powder, insoluble in water, soluble in alcohol; used as an antispasmodic and nervine tonic.

cimifuga. Cimicifuga.

cimmol. Cinnamyl hydride.

cina. Santonica.

cinaebene. $C_{10}H_{16}$ = 136.2. A hydrocarbon from the essential oil of *Artemisia santonica*. **c. camphor.** $C_{10}H_{18}O$ = 154.2. A camphor, the chief constituent of the essential oil of *Artemisia santonica*. Cf. *santonica*.

cinchaine. $C_{22}H_{30}O_2N_2$ = 330.3. i-propyl-hydrocupreine. A cinchona alkaloid used as anesthetic.

cinchamidine. $C_{19}H_{24}ON_2$ = 296.3. Hydrocinchonidine. An alkaloid from cinchona bark. White leaflets, m.230, insoluble in water.

cinchene. $C_{19}H_{20}N_2$ = 276.3. An alkaloid obtained from cinchonine by boiling with alcoholic KOH.

cinchocerotin. $C_{27}H_{48}O_2$ = 404.38. A white crystalline substance derived from callisaya extract.

cinchofulvic acid. Cinchona red.

cinchol. $C_{20}H_{34}O$ = 290.3. An alcohol from cinchona resembling cholesterol.

cincholepidine. Lepidine.

cincholine. An alkaloid from cinchona bark.

cinchomeronic acid. $C_7H_5O_4N$ = 167.14. A dibasic acid derived from quinine: dicarboxy-

pyridine, *3.4-* or 2.3-pyridine dicarboxylic acid. Colorless crystals m.266. **iso-** 1.4-pyridine dicarboxylic acid. Colorless leaflets, m.236, slightly soluble in water, alcohol or ether. **carbo-** 1.2.3-pyridine tricarboxylic acid. Colorless crystals, m.250. **methyl-** Picoline dicarboxylic acid.

cinchona. (1) Quina, china, quina, Jesuit's bark, loxa bark, huanco bark, Peruvian bark, fever bark. The bark of *Cinchona* species containing at least 3 % of cinchona alkaloids; used as a tonic and febrifuge. (2) A genus of trees of the Rubiaceae found in the Andes and cultivated in Ceylon and Java. The following species yield barks:

C. callisaya	callisaya bark
C. ledgeriana	yellow bark
C. cordifolia	Cartagena bark
C. officinalis	crown or loxa bark
C. succirubra	red or cusco bark

c. alkaloids. The alkaloids in cinchona; the more important are: quinine, quinidine, cinchonine, cinchonidine. **c. tannin.** Quinotannic acid.

cinchonamine. $C_{19}H_{24}ON_2$ = 296.3. An alkaloid from the bark of *Remijia purdieana*, a Rubiaceae. Yellowish-white crystals, m.184, insoluble in water, soluble in alcohol or chloroform. **c. hydrochloride.** $C_{19}H_{24}ON_2.HCl.H_2O$ = 350.78. Yellow crystals, soluble in water or alcohol. **c. nitrate.** $C_{19}H_{24}ON_2.HNO_3$ = 359.32. Colorless or slightly yellow crystals, slightly soluble in water or alcohol. **c. sulfate.** $C_{19}H_{24}ON_2.H_2SO_4$ = 394.39. Colorless crystals, soluble in water; said to have six times the therapeutic effect of quinine sulfate.

cinchonane. $C_{19}H_{22}N_2$ = 278.19. Desoxycinchonine. Colorless crystals, m.92.

cinchonate. A salt of cinchonic acid, containing the trivalent $C_{11}H_{12}O_9\equiv$ radical.

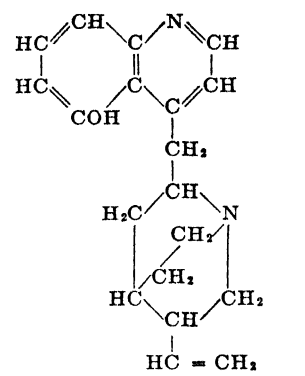
cinchonic acid. $C_6H_9(OH)_3(COOH)_3$ = 291.12. A tribasic acid formed by reduction of cinchomeronic acid. **methyl-** Aniluvitonic acid.

cinchonicine. Cinchotoxine.

cinchonidine. $C_{19}H_{22}ON_2$ = 294.3. Chinidine. The *levo-* isomer of cinchonine and an alkaloid obtained from cinchona bark. White crystals, m.205, insoluble in water, slightly soluble in ether, soluble in alcohol, chloroform or dilute acids. It is an antiperiodic, tonic and is used in heart diseases. **hydro-** Cinchamidine.

c. borate. $C_{19}H_{22}ON_2.H_2BO_3$ = 356.31. A white powder, soluble in alcohol. **c. dihydrobromide.** Blennostasin. **c. hydrobromide** $C_{19}H_{22}ON_2.2HBr$ = 456.15. Yellow prisms, soluble in water. **c. hydrochloride.** $C_{19}H_{22}ON_2.HCl + H_2O$ = 348.8. Colorless prisms, soluble in water, alcohol, or chloroform. **c. hydroiodide.** $C_{19}H_{22}ON_2.HI.2H_2O$ = 458.23. Yellow crystals, soluble in water or alcohol. **c. salicylate.** $C_{19}H_{22}ON_2.C_7H_6O_3$ = 432.34. A white microcrystalline powder, soluble in alcohol. **c. sulfate.** $(C_{19}H_{22}ON_2)_2.H_2SO_4.3H_2O$ = 740.7. Colorless crystals, soluble in water; used similarly to quinine sulfate. **c. tannate.** A pale-yellow, amorphous powder of variable composition, soluble in alcohol. **c. tartrate.** $(C_{19}H_{22}ON_2)_2.C_4H_6O_6.2H_2O$ = 774.66. White crystals, soluble in hot water or hot alcohol.

cinchonine. $C_{19}H_{22}ON_2$ = 294.29. An alkaloid from various species of cinchona bark; the *dextro-* isomer of cinchonidine.



Colorless crystals, m.240–250, b.448, slightly soluble in alcohol, water, or ether; soluble in chloroform or dilute acids. It is an antiperiodic and bitter tonic; used as a substitute for quinine, and as a spot reagent for bismuth (orange-red). **hydro-** Cinchotine. **hydroxy-** Cupreine. **pseudo-** Cinchotine.

c. benzoate. $C_{19}H_{22}ON_2.C_7H_6O_2$ = 416.34. Colorless or slightly yellow crystals, slightly soluble in water, soluble in alcohol or chloroform. **c. bisulfate.** $C_{19}H_{22}ON_2.H_2SO_4.4H_2O$ = 464.43. Colorless, cubic crystals, soluble in water or alcohol. **c. ferrocitrate.** Yellow scales, soluble in water. **c. hydrobromide.** $C_{19}H_{22}ON_2.HBr$ = 375.22. Colorless crystals, soluble in water or alcohol. **c. hydrochloride.** $C_{19}H_{22}ON_2.HCl.2H_2O$ = 366.79. Colorless monoclinic needles, slightly soluble in water, soluble in alcohol or ether. **c. iodosulfate.** Antiseptol, iodochinchonine sulfate. A brown powder, insoluble in water, soluble in alcohol; contains 50 % I. Used as a dusting powder and substitute for iodoform. **c. nitrate.** $C_{19}H_{22}ON_2.HNO_3.H_2O$ = 375.32. White crystals, soluble in water. **c. salicylate.** $C_{19}H_{22}ON_2.C_7H_6O_3$ = 432.34. White or pinkish crystals, soluble in hot water or alcohol; used for rheumatism. **c. sulfate.** $(C_{19}H_{22}ON_2)_2.H_2SO_4.2H_2O$ = 722.69. Colorless rhombic crystals, m.198, slightly soluble in water, soluble in alcohol. Used as an antiperiodic and tonic; as a reagent for bismuth, hydrochloric acid, or sulfite cellulose; in tanning extracts and in preparing leathers.

cinchoninic acid. $C_{10}H_7O_2N$ = 173.1. Alpha-quinoline-monocarboxylic acid, 4-quinoline carboxylic acid. A monobasic, colorless, crystalline, acid obtained by oxidation of cinchonine. **methyl-** Aniluvitonic acid. **2-phenyl-** Atophan.

cinchophen. Atophan.

cinchotannic acid. Quinotannic acid.

cinchotenicine. $C_{18}H_{20}O_3N_2$ = 312.4. An amorphous alkaloid from cinchona bark, which is isomeric with cinchotenine.

cinchotenidine. $C_{18}H_{20}O_3N_2.3H_2O$ = 366.4. A colorless crystalline alkaloid from cinchona bark, which is isomeric with cinchotenine.

cinchotenine. $C_{18}H_{20}O_3N_2.3H_2O$ = 366.4. A colorless crystalline alkaloid produced by the oxidation of cinchonine.

cinchotine. $C_{19}H_{24}ON_2$ = 296.4. Hydrocinchonine, *ψ*-cinchonine. An alkaloid, m.286, from various species of cinchona bark and cuprea bark; prepared artificially by the oxidation of quinine with $KMnO_4$.

cinchotoxine. $C_{19}H_{22}ON_2$ = 294.19. Cinchonicine. An alkaloid, m.59, obtained by heating cinchonine or cinchonidine.

cinene. Terpene.

cineole. Eucalyptole.

cineolic acid. $C_{10}H_{16}O_5$ = 216.12. The dibasic acid, HOOC.CMe<(CH2.CH2)(O.CMe2)>CH.COOH.

levo- Colorless crystals, d.0.92, m.196, decomp. in water. **1.4-** Ascaridolic acid. The dibasic acid.

HOOC.CMe<(CH2.CH2)(O)>C(CHMe2)COOH.

cinnabar. HgS. A native red mercuric sulfide.

cinnaldehyde. Cinnamaldehyde.

cinnamal. Cinnamilidene. The bivalent radical PhCH:CH.CH= or C_9H_8=.

cinnamaldehyde. C_9H_8O = 132.11. Cinnamic aldehyde, beta-phenylacrolein, benzal-acetaldehyde or cinnamyl aldehyde, *3*-phenyl-propenal*. PhCH:CHCHO. A yellow volatile liquid, d_4°.1.050, m. −7.5, b.245. Chief constituent of oil of cinnamon, cinnaldehyde, and cassia. Used as an itch remedy; and in artificial flavors. **hydroxy-** Coumaraldehyde. **hydroxymethoxy-** Ferulaldehyde.

cinnamamide. C_9H_9ON = 147.1. Benzalacetamide. PhCH:CHCONH2. Colorless crystals, m.141.5, soluble in alcohol. **hydro-** Hydrocinnamamide.

cinnamate. A salt of cinnamic acid containing the monovalent $C_9H_7O_2$— radical.

cinnamein. $C_9H_7O_2.C_7H_7$ = 238.11. Benzylcinnamate. An ester obtained from Peru and tolu balsams. A colorless liquid, also obtained by heating sodium cinnamate with benzyl chloride.

cinnamene. Styrene. **aceto-** Benzylidene acetone.

cinnamenyl Styryl. The monovalent radical, Ph.CH:CH—, or C_8H_7—, derived from cinnamene. **c. acetone.** $C_{12}H_{12}O$ = 172.1. C_8H_7CH:CHCOMe. Colorless crystals, m.68. **c. acrylic acid.** $C_{11}H_{10}O_2$ = 174.1. A monobasic acid C_8H_7CH:CHCOOH derived from cinnamaldehyde. Colorless crystals, m.165. **c. angelic acid.** A monobasic acid, C_9H_8:C_5H_4-COOH, derived from cinnamaldehyde. **c. crotonic acid.** A monobasic acid, C_9H_8:C_3H_3-COOH, derived from cinnamaldehyde.

cinnamic. Describing a compound containing the monovalent Ph.CH:CH— or C_8H_7— radical.

cinnamic acid $C_9H_8O_2$ = 148.11. Benzal-acetic acid, beta-phenylacrylic acid, styrylformic acid, *trans-* benzenepropenoic acid, PhCH:CHCOOH. An unsaturated monobasic acid and constituent of balsams and storax. Colorless monoclinic scales, d_4°.1.248, m.133, b.300, slightly soluble in water, soluble in alcohol or ether; it is used as a reagent for indole and in the synthesis of many organic compounds. It occurs in the trans- and cis- forms. **allo-** The cis- form of c. **amino-** $NH_2C_9H_7O_2$ = 163.26. **o-** Colorless needles decomp. 160, slightly soluble in water, soluble in alcohol or ether. **m-** Yellow needles, m.180, slightly soluble in water, soluble in alcohol or ether. **p-** Yellow needles, decomp. 175, sparingly soluble in water, soluble in alcohol or ether. **3.4-dihydroxy-** Caffeic acid. **3.4-dioxy-** Caffeic acid. **hydro-** $PhCH_2CH_2COOH$ = 150.13. Beta-phenylpropionic acid. Colorless needles, d_{40}°1.071, m.48.7, b.379, sparingly soluble in water, soluble in alcohol or ether. **hydroxy-** Coumaric and umbellic acids. **hydroxy-methoxy-** See *ferulic acid, isoferulinic acid, hesperitinic acid.* **methoxy-** $MeOC_9H_7O_2$ = 179.09. **o-**2-methoxy-. Colorless crystals, m.182, soluble in alcohol. **nitro-** $NO_2C_9H_7O_2$ = 193.11. **o-** White needles, m.249, insoluble in water, slightly soluble in alcohol. **m-** Yellow needles, m.196, slightly soluble in water, or alcohol. **p-** Colorless prisms, m.285, sparingly soluble in water, soluble in alcohol or ether. **oxy-** Coumaric acid.

cinnamic alcohol. $C_9H_{10}O$ = 134.13. Styryl alcohol, peruvin, styrene, styrolene alcohol, styrone styrilic acid, phenyl, glycol, phenylallyl alcohol, *3*-phenyl-*2*-propen-*1*-ol*. A monoatomic alcohol from balsam, storax, and cinnamon bark. PhCH:CHCH2OH. White needles, d_{35}°.1.040, m.33, b.250, slightly soluble in water, soluble in alcohol or ether. Used in artificial flavors, as a deodorant and antiseptic. **hydroxy-methoxy-** Coniferyl alcohol.

cinnamic aldehyde. Cinnamaldehyde. **c. anhydride.** $(PhCH:CHCO)_2O$ = 278.2. White crystals, m.127, slightly soluble in hot water.

cinnamide. Cinnamamide. **hydro-** Cinnhydramide.

cinnamilidene. (1) $C_{10}H_{10}$ = 130.1. The unsaturated hydrocarbon PhCH:CH.CH:CH2. (2) Cinnamal. **c. acetic acid.** The monobasic acid PhCH:CH.CH:CH.COOH = 174.08. **c. malonic acid.** The dibasic acid PhCH:CH.-CH:C(COOH)2 = 218.08.

Cinnamomum. A genus of trees, Lauraceae, which yield important drugs; as,

C. camphora	camphor, camphor oil
C. cassia	cassia bark, cassia oil
C. zeylanicum	cinnamon, cinnamon oil

cinnamon. The dried inner bark of various *Cinnamomum* species; as, *C. zeylanicum* of Ceylon and *C. cassia* (q.v.) of China. Used as an aromatic, carminative, astringent and condiment. **wild-** Canella. **c. oil.** The essential oil from the bark of various cinnamon species. *Cassia-*, from *C. cassia*, d.1.045–1.063, b.240–260, contains 70–85 % cinnamaldehyde. *Ceylon-*, from *C. zeylanicum*, d.1.024–1.040, contains cinnamaldehyde and eugenol. *leaf-*, d.1.044–1.065, contains, eugenol, sapol and cinnamaldehyde. **c. stone.** A mineral of the garnet group.

cinnamone. Styryl ketone.

cinnamonitrile. C_9H_7N = 129.1. A crystalline compound obtained from cinnamide by the action of P_2O_5.

cinnamoyl. The monovalent PhCH:CHCO— or C_9H_7O— radical.

cinnamyl. (1) Cinnamoyl. (2) The radical Ph.-CH:CH.CH2— or C_9H_9—. **c. acetate.** The ester, $CH_3COOC_9H_9$, a constituent of many essential oils. **c. alcohol.** Cinnamic alcohol. **c. chloride.** C_9H_7OCl = 166.51. Chlorcinnamyl, PhCH:CHCOCl. Colorless crystals, m.36, b.-257. **c. cinnamate.** Styracin. **c. cocaine.** An alkaloid, m.121, from cocoa leaves. **c. eugenol.** $C_9H_7COOC_9H_{11}O$ = 282.14. Eugenol cinnamate. An ester of cinnamic acid and eugenol. Colorless needles, used as an antiseptic. **c. guaiacol.** Styracol. **c. hydride.** Allylbenzene. **c. methyl ketone.** Benzalacetone. **c. phenyl ketone.** Benzalacetophenone.

cinnhydramide. $C_{18}H_{16}N_2$ = 260.3. Hydrocinnamide. $(PhCH:CH.CH)_2N_2$. Colorless crys-

tals obtained from cinnamaldehyde and ammonia gas. Cf. *hydrocinnamamide.*

cinnitraniside. $C_{16}H_{14}O_4N_2$ = 298.13. Nitranisyl cinnamide.

cinnoline. $C_8H_6N_2$ = 130.2. α-phenoi-*1.2*-benzodiazine, α-benzo-o-diazine. The heterocyclic compound  . Colorless crystals, m.390; an isomer of phthalazine, quinazoline and quinoxaline. **dihydro-** $C_8H_8N_2$ = 132.2. Colorless crystals, m.88, soluble in alcohol.

cinnyl. Cinnamyl.

cinobufagin. $C_{26}H_{32}O_6$ = 428.2. A cardiac poison from Ch'an-Su, the dried venom of the Chinese toad; it hydrolyses to $C_{23}H_{30}O_5$ and acetic acid. Cf. *cholane derivatives.*

circle. A ring or a plane figure bounded, by a uniformly curved line. Let r be the radius, d the diameter and π a constant (3.14159) then:

diameter =	2r
circumference =	$2\pi r$ or πd
area =	πr^2 or $\frac{1}{4}\pi d^2$ or $0.7854d^2$

Cf. *pi, quadrant.*

circonium. Zirconium.

circuit. The continuous path of an electrical current.

circular. Round. **c. area.** d^2 = 1.2733a or a = $0.785398d^2$ where d is the diameter, and a the area. **c. inch.** The area of a circle one inch in diameter = 0.7854 sq. in. = 507 mm^2. = 5.07 cm^2.

circulation. A continuous movement in a regular course, as the motion of the blood through the blood vessels, the returning of the distillate to a still, or the movement of heated liquids or gases in a circuit.

circulatory equalizers. A drug which restores the equilibrium of the circulatory system.

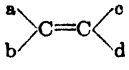
circumference. The outline of a more or less circular body. Cf. *circle.*

circumflux. Flowing or winding around.

circumfusion. Pouring or fusing around; as, a lower melting-point flux.

circumpolar. Around a pole.

cis. A form of isomerism of organic compounds, in which the H-atoms attached to two carbon atoms with double bonds are substituted adjacently on the same side of the molecule, *e.g.*, in maleic acid  . The relation of cis- and trans-isomerism is

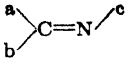


where

a:c is the *cis-* position

a:d is the *trans-* position;

or in the case of nitrogen compounds:



where

a:c is the *cis-* position

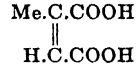
b:c is the *trans-* position

cissampeline. $C_{18}H_{21}O_3N$ = 299.3. An alkaloid from pareira root, *Cissampelos pareira*, a Menispermaceae of Brazil; a tonic and diuretic. Cf. *bebeerine, dyamettin, deyamettin.*

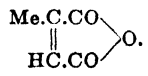
cistus. Labdanum.

citarin. $CH_2.O.O.CO.C(CH_2COONa)_2$ = 248.05. Sodium anhydro methylene citrate, citramin, goutine. A compound which dissolves in acid; used in the treatment of gout.

citraconic acid. $C_5H_6O_4$ = 130.0. Methyl maleic acid, 1.2-dicarboxypropylene, methyl butene dioic acid*. A dibasic acid isomeric with paraconic, itaconic, protaconic, isaconic and mesaconic acids, q.v.



c. anhydride. $C_5H_4O_3$ = 112.0. Methylmaleic anhydride. An intramolecular anhydride of citraconic acid; an oily, colorless liquid.



citraconyl. The divalent $C_5H_4O_4$— radical derived from citraconic acid.

citral. $C_9H_{15}CHO$ = 152.18. α-. Geranial. An aldehyde of several essential oils (citron oil). $Me_2C:CH.CH_2.CH_2.CH:CMeCHO$. It occurs as 4 isomers; as cis- and trans-terpinolene and cis- and trans-limonene. A yellowish volatile liquid, d.0.897, b.224.5, insoluble in water, miscible with alcohol or ether; used in perfumery and as a flavoring agent. β-. Neral. A colorless liquid, d.0.888, $b._{12mm}$104.

citramalic acid. $C_5H_8O_5$ = 148.1. *2*-Hydroxy-*2*-methyl butanedioic acid*, $HOOC.CMeOH.CH_2.COOH$. A dibasic acid derived from citraconic acid and isomeric with itamalic acid. *dl-* Monoclinic prisms, m.119.

citramide. $C_6H_{11}O_4N_3$ = 189.11. Colorless crystals, m.215 derived from ethyl citrate by the action of ammonia.

citramin. Citarin.

citranilide. $C_{24}H_{24}O_4N_2$ = 418.22. A compound obtained by heating aniline and citric acid.

citrate. A salt containing the trivalent $C_6H_5O_7\equiv$ radical, derived from citric acid. **c. soluble.** The phosphates in a fertilizer which are soluble in ammonium citrate solution.

citratus. A brand of di-calcium phosphate used as fertilizer.

citrene. $C_{10}H_{16}$ = 136.2. A terpene of lemon oil and identical with d-limonene, b.168. **c. terpin.** $C_{10}H_{20}O_2$ = 172.16. Citrene dihydrate. Colorless crystals, formed by the action of water on citrene.

citresia. Magnesium acid citrate.

citric acid. $C_6H_8O_7.H_2O$ = 210.11. 1,2,3-tricarboxy-2-hydroxypropane, *2*-hydroxy-*1,2,3*-propane tricarboxylic acid*, $C_3H_4(OH)(COOH)_3.H_2O$. A tribasic acid found in many fruit juices (lemon, orange, etc.). Colorless crystals, $d_{18°}$.1.542, m.153, decomp. on further heating, readily soluble in water or alcohol, slightly soluble in ether. Used as a reagent in quantitative and qualitative analysis, and as a constituent of soda-fountain mixtures. Cf. *citromyces, diconic acid.* **phenetidin-** Apolysin.

c. a. cycle. Krebs cycle. The main sequence of carbohydrate oxidation in the body tissues.

It corresponds with the complete oxidation of pyruvate to CO_2 and H_2O in the stages:

pyruvate → oxalacetate→
citrate → *iso*citrate→
oxalsuccinate → α-keto-
glutarate → succinate →
formate → malate → oxalacetate,

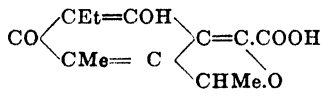
and so on.

citridic acid. Aconitic acid.

citrin. (1) Cucurbo citrin. A glucoside from watermelon seeds; used as a hypotensor. (2) Hesperidin.

citrine. (1) A yellow variety of quartz. (2) A yellow mercury ointment.

citrinin. $C_{13}H_{14}O_5$ = 250.05. A lemon yellow pigment from the fungus *Penicillium citrinum*, m.170–171 (decomp.)



It inhibits the growth of *Staphylococcus aureus*.

citrometer. A hydrometer graduated to indicate percentages of citric acid.

citromin. Citarin.

citromyces. A mold fungus, *C. pfefferianus*, which ferments glucose to citric acid.

citromycetin. $C_{14}H_{10}O_7.2H_2O$ = 308.07. A yellow flavone pigment from the fungus *Citromyces*.

citronella. Lemongrass. **c. oil.** The essential oil of many *Andropogon* or *Cymbopogon* species (lemongrass). Used for perfuming soap, and to keep off mosquitoes. *Batu-* d.0.900–0.920, *Singapore-* d.0.886–0.900. Both contain geraniol and citronellal.

citronellal. $C_{10}H_{18}O$ = 154.19. An aldehyde in many essential oils; it occurs in two isomers: the limonene form; $MeC:CH(CH_2)_3CHMeCH_2$-CHO; and terpinolene form, $CH_2:CMe(CH_2)_3$-$CHMeCH_2CHO$. A colorless liquid, d_{17}°.0.854, b.207, slightly soluble in water, miscible with alcohol or ether; used in perfumery and as a flavoring agent.

citronellaldehyde. Citronellal.

citronellic acid. $C_{10}H_{18}O_2$ = 170.14. Colorless liquid, d.0.931, b.257.

citronellol. $C_{10}H_{20}O$ = 156.21. 2.6-dimethyl-octene-1-ol-8. An isomer of rhodinol occurring in two stereoisomeric forms, $CH_2:CMe(CH_2)_3$-$CHMe.CH_2.CH_2OH$. An unsaturated alcohol and constituent of many essential oils; colorless liquid, d.0.856, b_{17mm}.118, slightly soluble in water, miscible with alcohol or ether.

citronin. Dinitrodiphenylamine. A yellow aniline dye.

citronyl. Citronella oil.

citrophen. A compound of citric acid and p-phenetidine, $(EtO.C_6H_4.NHCO)_3C_3H_4OH$. White crystals, m.181, soluble in water or alcohol. It is an antipyretic, sedative and antineuralgic.

citrulline. (1) A resinoid of colocynth. A yellow amorphous powder, insoluble in water, soluble in alcohol or ether; used medicinally as a laxative. (2) $C_6H_{13}N_3O_3$ = 175.11. An amino acid (q.v.) from casein and watermelon, *Citrullis vulgaris*, m.220, and an intermediate in the formation of urea.

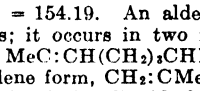
Citrus. Aurantiaceae. A genus of trees, Rutaceae, whose fruits are edible and yield juice, rinds, oils, and acids.

C. aurantium	sweet orange
C. aurant. var. *bigarardia*	bitter or Seville orange
C. medica	citron
C. med. var. *limonum*	lemon
C. med. var. *acida*	lime
C. med. var. *limetta*	sweet lime
C. bergamia	bergamot
C. decumana	grape fruit or shaddock
C. suntara	kumquat
C. nobilis	mandarin

citryl. Lemon oil.

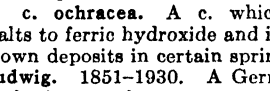
civet. A semi-liquid fat of strong musklike odor obtained from the civet cat, *Viverra civetta*, of the East Indies. It contains an essential oil and ammonia. Formerly used medicinally as an antispasmodic; now used as a perfume.

civetane. $C_{17}H_{32}$ = 236.2. Cycloheptadecene,



A colorless crystalline substance, m.47, b.120.

civetone. $C_{17}H_{30}O$ = 250.3. Δ^9-cycloheptadecenone, 9-cycloheptadecen-1-one*. The seventeen-membered ring ketone:



It is extracted from certain glands of the civet cat.

C.K. wax. See *wax*.

Cl. The symbol for chlorine, Cl^- chloride ion, Cl^* excited chlorine atom, Cl_2 chlorine molecule, Cl_2^+ ionized chlorine molecule, Cl_2^* excited chlorine molecule.

cl. An abbreviation for centiliter = $\frac{1}{100}$ liter = 10 cc.

cladding. A thin veneer of metal (usually nickel) used to protect steel plate from corrosion.

cladonic acid. An acid obtained from *Cladonia rangiferina*, a lichen (reindeer moss).

cladothrix. A quasi-branched form of schizomycetes. **c. ochracea.** A c. which oxidizes ferrous salts to ferric hydroxide and is the cause of the brown deposits in certain springs.

Claisen, Ludwig. 1851–1930. A German chemist, noted for work on tautomerism. **C. condensation.** Claisen reaction. **C. flask.** A distillation flask with a U-shaped and tubulated neck. **C. reaction.** A synthetic reaction of an aldehyde with an aldehyde or ketone in the presence of NaOH or NaOEt, according to the general equation $R.CHO + CH_3.CO.R' = R.CH:CH.CO.R' + H_2O$.

clamp. A device by which an instrument is held in position or by which the flow of a gas or liquid is interrupted.

Clapeyron Benoit-Paul Emile. 1799–1864. A French engineer. **C. equation.** An equation for calculating the change in the boiling point of a liquid at different pressures: $dp/dT = \lambda/T(v_2 - v_1)$ where p = pressure, T = absolute temperature, λ = heat of vaporizing 1 gm. of liquid, v_2 = specific volume of vapor, v_1 = specific volume of liquid. Cf. *Clausius equation*.

clarain. A constituent of coal (q.v.).

clarificant. A substance for clearing a solution.

clarification. A process by which a liquid is clarified, *e.g.*, filtration, sedimentation, precipitation with inert colloidal substances, etc. Cf. *defecation*.

Clark cell. A standard voltaic cell giving 1.433 volts at 15°C, but affected greatly by temperature changes. It consists of an anode of mercury and a cathode of amalgamated zinc in a saturated solution of zinc sulfate. **C. degree.** See *hardness* (water).

Clarke, Frank Wigglesworth. 1847–1931. An American chemist, noted for geochemical research.

Frank Wigglesworth Clarke.

Classen, Alexander. 1843– . A German chemist noted for analytical methods. **C. platinum dish.** A platinum dish for electrolytic separations. **C. switch board.** A switch board and work table for quantitative electrolysis.

classification of compounds. See *compounds, chemicals, organic compounds, Mulliken classification, ring systems, types.* **-of drugs.** See *drug.* **-of elements.** See *periodic system.* **-of reactions.** See *reactions.*

Claude, Georges. A French inventor, noted for liquefaction methods and neon lamps. **C.'s method.** A modification of the Linde process for liquefying air. The air is liquefied in stages by passage through an orifice under pressure, and the expanding gas cooled by doing work externally in a piston-engine. Cf. *nitrogen fixation.*

claudetite. A native arsenious oxide.

Claus, Adolf. 1840– . A German chemist noted for his benzene formula and system of organic chemistry.

Clausius, Rudolf Julius. 1822–1888. A German physicist, and founder of the mechanical theory of heat. **C. equation.** Clausius-Clapeyron equation. An equation for calculating the vapor pressure and the heat of vaporization: $\log P = -L/4.58T + C$ where P is the vapor pressure at the absolute temperature T, and L the molecular heat of vaporization, while C is a constant of integration. Its integrated form is

$$2.303 \log \frac{P}{760} = \frac{L}{R}\left(\frac{1}{T_{760}} - \frac{1}{T_p}\right)$$

where T_{760} and T_p are the boiling points at 760 and p mm. pressure respectively, R is 1.985 gm. cal. See also *Clapeyron equation.* **C. law.** The specific heat of a gas is independent of temperature, provided the gas is kept at constant volume. **C.-Mosotti equation.** The polarization of the dielectric per mole is related to the dielectric constant, D, by $\frac{D-1}{D+2} \cdot \frac{m}{d} = P$, where m is the molecular weight, d the density and P the molal polarization.

clausthalite. PbSe. A native lead selenide from Klausthal, Czechoslovakia.

clavacin. An antibiotic substance produced in cultures of several different fungi; it is identical with clavatin, claviformin, and patulin.

clavatin. Clavacin.

clavicepsin. $C_{18}H_{34}O_{16} = 506.26$. An inert glucoside, m.198, found in ergot.

claviformin. Clavacin.

clavine. $C_{11}H_{22}O_4N_2 = 246.18$. An alkaloid of ergot, m.263.

clay. A plastic, soft, variously colored earth, a hydrous silicate of alumina ($H_4Al_2Si_2O_9$) formed by the decomposition of feldspar and other aluminum minerals. In true clay 30 % of the total weight of solid particles consists of particles of diameter less than 0.002 mm. Used for pottery, filter candles, etc. Cf. *ceramics.* **China-** See *china clay.* **fire-** q.v. **pipe-** q.v. **potters'-** q.v. **c. ironstone.** Siderite.

cleaning solution. Mixed concentrated sulfuric acid and sodium dichromate, used to clean chemical glassware.

clearing. (1) The clarification of a solution. (2) In the dye industry, to free the cotton fiber from grease by boiling in a weak solution of sodium carbonate. (3) In photography, the removal of fog from a plate.

cleavage. (1) The separation of layers or parts from a mass, *e.g.*, the splitting of crystals in certain directions. (2) In biology: segmentation. Cf. *amitosis.*

clebrium. A non-corrosive alloy of iron with 13–19 % Cr, 2–4 % Ni, 3.2–0 % Mo, 0–2 % C, 0.8–2.8 % Mn.

clematidin. $C_9H_{10}O_6 = 214.08$. A compound derived from *Aristolochia clematitis*, birthwort, an Aristolochiaceae.

clematine. An alkaloid from *Clematis vitalba*, a Ranunculaceae.

Clematis. A genus of climbing, ranunculaceous plants.

Clerget inversion. The determination of sucrose polarimetrically after inversion of 100 cc. of solution with 5 cc. of strong HCl at 69° for 7½ mins. Sucrose $= \frac{100(a-b)}{142.66 - t/2}$ where a and b are the polarisations originally and after inversion at t°C.

Clerici solution. A molar mixture of thallium malonate and thallium formate, d.4.27; used in mineralogy to float specimens for determining their density.

Cleve, Per T. 1840–1905. A Swedish chemist noted as co-discoverer of helium and rare earth metals. **C.'s acid.** *1*-Naphthylamine-6-sulfonic acid.

Cleveland tester. An apparatus for determining the flash point of illuminating oil.

climacteric. A stage in the ripening of fruit.

clinical analysis. The examination of body fluids and waste products for diagnostic purposes. **c. tests.** The reactions employed in the

examination of urine, feces, stomach contents, blood, etc., for diagnostic purposes.

clinker. Hard, more or less vitrified fused residue remaining after combustion of coal in a furnace or kiln. It is also a product of volcanoes and is used in the manufacture of cement. Cf. *slag.*

clinochlore. Ripidolite. A green chlorite or aluminum magnesium silicate, d.2.65–2.78.

clinometer. A device for measuring slopes or inclines.

clinostat. A moving disk apparatus for determining the phototropism of a plant.

clorarsen. Dichlorophenarsine hydrochloride (q.v.).

closed chain. A ring compound: see *chain.*

clot. A solid concretion of a soft jelly-like mass.

cloth. Any fabric woven of wool, cotton, linen, silk or other fiber. **cheese-** A loosely woven thin cotton cloth used for straining. **filter-** A stout linen cloth or canvas used in filter presses.

clotting. The coagulation of blood, lymph, or milk.

cloud point. The temperature at which a solid substance starts to precipitate from solution in an oil when this is cooled under standard conditions. Cf. *aniline point.*

cloudy. (1) Containing a diffused and adhering precipitate. (2) Describing a bacterial culture which does not contain pseudozoogleae.

clove(s). Caryophyllus. The dried flower buds of *Caryophyllus aromaticus*, a Myrtaceae; used as spice. **c. oil.** Essential oil of cloves. A colorless or slightly yellow, volatile liquid, d.1.079, b.243, which consists of eugenol and several hydrocarbons.

clovene. $C_{15}H_{24}$ = 204.19. A terpene from clove oil. A colorless liquid, d.0.93, b.263.

cloves. Caryophyllum.

clupanodonic acid. $C_{22}H_{34}O_2$ = 330.27. Docosa-*4,7,11*-trien-*18*-ynoic acid. An unsaturated fatty acid in the fat of fish blubber. A yellow oil, d.0.9410, m. −78, b_{5mm}.236, soluble in ether; iodine number 367.7.

clupein. A protein from herring, *Clupea harengus*, and containing 47.93 % C, 7.59 % H, 12.78 % O, 31.68 % N.

clymocol. A brand of mono-chloromethyl-*i*-propyl phenol; used as a germicide.

cm. centimeter. **cm.²** square centimeter. **cm.³** cubic centimeter = cc.

cnicin. $C_{42}H_{56}O_{15}$ = 800.5. A glucoside from Canada thistle, *Cnicus arvenis*, or *Carduus benedicta*, a Compositae. White, odorless crystals, sparingly soluble in cold water, soluble in hot water.

Co The symbol for cobalt.

coacervation. The reversible collection of emulsoid particles into liquid droplets preceding flocculation.

coagel. The gel formed during coagulation; coarser in texture than the gels formed by swelling of solid colloids.

coagulability. The capacity to clot together or curdle.

coagulase. An enzyme (q.v.) that curdles and precipitates proteins.

coagulation. The precipitation of proteins or colloids in a jelly-like, soft mass; it may be caused either by heat, chemical agents or enzymes.

coagulator. An incubator for keeping test-tubes at blood temperature.

coagulen. A lipoid obtained by fractionally centrifuging blood, and said to consist mainly of blood platelets. A brownish red powder, soluble in water, and rich in thrombokinase. Used in surgery to stop bleeding by coagulating the blood.

coagulometer. A device for determining the speed of coagulation of blood.

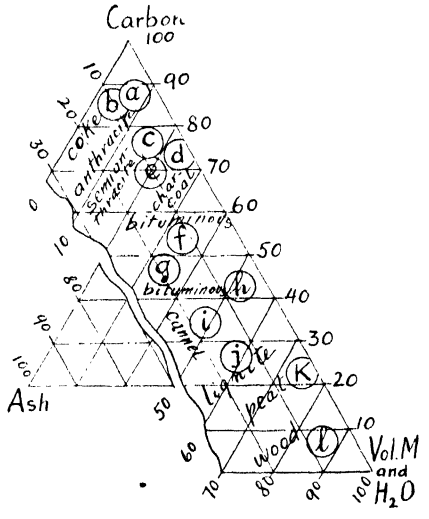
coal. A native, black or brownish, brittle or soft substance consisting chiefly of carbon, but also of hydrogen, nitrogen, oxygen and other elements (Si, P, As, Fe, etc.). It is the result of the degradation of ancient forests. Coals are classified according to their state of mineralization, and consequent percentage of carbon, as *lignites*, *bituminous coal*, and *anthracites*. According to Stopes, c. is classified microscopically as:

1. *clarain*, a mixture of leaves, wood, resinous bodies, etc. in a structureless matrix. It is lustrous in appearance.

2. *vitrain*. Lustrous thin bands which break with conchoidal fracture and are derived from wood in which the structure is completely destroyed.

3. *durain*, a dull variety of coal, which contains the exines, microspores and megaspheres, and has a high ash.

4. *fusain*, thin bands of soft dull coal derived from wood and containing no volatile matter, but having a marked structure



Coal.
Three component system (Carbon-volatile matter-ash)

Coals are classified by their carbon content, moisture and volatile matter, and mineral or ash content. Coals richest in carbon are the anthracites and cokes, typical compositions of which are shown in area a and b.

a. anthracite	13,350 B.t.u. per pound
b. coke	12,000 B.t.u. per pound
c. semianthracite	13,370 B.t.u. per pound
d. charcoal	13,000 B.t.u. per pound
e. bituminous A	14,260 B.t.u. per pound
f. bituminous B	13,900 B.t.u. per pound
g. bituminous C	11,700 B.t.u. per pound
h. bituminous D	9,700 B.t.u. per pound
i. cannel	13,700 B.t.u. per pound
j. lignite	6,000 B.t.u. per pound
k. peat	1,900 B.t.u. per pound
l. wood	7,600 B.t.u. per pound

The world output in 1940 was 1,420,000 tons, coming chiefly from Germany > U. S. > U. K. > U. S. S. R.

brown- Lignite. **cannel-** A compact, hard coal, suitable for gas production. **char-** See *charcoal*. **hard-** Anthracite. **mother of-** Fusain. **soft-** Bituminous c. **white-** Water power.

c. brass. Marcasite **c. gas.** The gaseous product of the distillation of coal. The average composition is:

hydrogen	43–55 %	Non-illuminating but heating
methane	25–45 %	
carbon monoxide	4–11 %	
olefines, acetylenes and benzene	2– 5 %	Illuminants
nitrogen	2–12 %	Impurities
carbon dioxide	0– 3 %	
oxygen	0.–1.5 %	

c. oil. (1) Kerosene. (2) Petroleum. **c. tar.** The condensed liquid from the distillation of coal. It varies according to the coal and process employed:

1. hydrocarbons—benzene, toluene, xylene, naphthalene, anthracene.
2. phenols—phenol, cresol.
3. basic substances—pyridine, quinoline.
4. finely-divided, free carbon.

coarse metal. An impure, fusible silicate of iron produced in the reverberatory furnace.

coating. A method for covering materials with protecting substances; as, electroplating, varnishing, painting, waterproofing, fireproofing, etc.

coazervate. The coagulated or precipitated liquid which separates from an emulsion.

coazervation. The separation of a lyophylic colloidal system into two liquid phases. Cf. *coagulation*.

cobalt. Co = 58.94. An element of the iron group, atomic number 27, discovered in 1733 by G. Brandt. A steel-gray, slightly pinkish, ductile metal, d.8.718, m.1465, insoluble in water, dissolved by acids. It occurs as metal in meteorites, as sulfide and arsenide in smaltite and cobaltite. It is prepared by reduction of its oxides in a current of hydrogen. Cobalt is bi- and tri-valent and forms two series of compounds:

2: cobaltous	Co^{++}
3: cobaltic	Co^{+++}

It forms many double salts, all colored. Some of its complex ions are:

cobaltous hexahydrate	$Co(H_2O)_6^{++}$
cobaltous hexammonate	$Co(NH_3)_6^{++}$
cobaltous hexacyanide (cobaltocyanide)	$Co(CN)_6^{----}$
cobaltic hexahydrate	$Co(H_2O)_6^{+++}$
cobaltic hexammonate	$Co(NH_3)_6^{+++}$
cobaltic tetracyanide	$Co(CN)_4^-$
cobaltic hexanitrite	$Co(NO_2)_6^{---}$
cobaltic hexacyanide (cobalticyanide)	$Co(CN)_6^{---}$

The cobaltous compounds are the more stable, and are pink when hydrated, and greenish when anhydrous. Metallic cobalt is used in alloys; (*e.g.*, carboloy, stellite) and in ceramics. **black-** An earthy variety of native c. **earthy-** Asbolite. **red-** Erythrite. **speiss-** An impure smaltite.

c. acetate. Cobaltous acetate. **c. acetylide.** The compound C_2Co. **c. aluminate.** Thenard's blue. **c. bloom.** The mineral $Co_3(AsO_4)_2$, $8H_2O$. **c. blue.** A dark blue mineral pigment containing 35 % CoO, 20 % ZnO and 25 % SiO_2. **c. carbonyl.** C. tetracarbonyl. **c. chlorides.** See *cobaltichloride*, *cobaltic* and *cobaltous chloride*. **c. cyanide.** Cobalticyanide. **c. green.** Cobalt zincate, Rinman's green. A solid solution of cobaltous oxide and zinc oxide used as green pigment. **c. minerals.** Cobalt is usually associated with nickel and found as sulfide, or arsenide.

native cobalt	Co
jaipurite	CoS
linnaeite	Co_3S_4
smaltite	$CoAs_2$
safflorite	$CoAs_2$
skutterudite	$CoAs_3$
erythrite	$Co_3As_2O_8$
cobaltite	CoAsS
carrollite	Co_2CuS_4
bieberite	$CoSO_4.7H_2O$
asbolite	$CoCl(OH)_2$
spherocobaltite	$CoCO_3$

c. nitride. Co_3N = 132.0. A black crystalline substance. **c. nitrites.** Cobaltinitrite. **c. oxides.** CoO = cobaltous oxide, Co_2O_3 = cobaltic oxide, Co_3O_4 = cobalto-cobaltic oxide. The cobalt oxide used in ceramics and the glass industry as a blue pigment for enamels, vases, porcelain, etc.; is variable in composition. **c. phosphide.** Co_2P = 149.0. A black, metallic substance. **c. sulfates.** See *cobaltic sulfate* and *cobaltous sulfate*. **c. tetracarbonyl.** $Co(CO)_4$ = 171.0. C. carbonyl. Black crystals, $d_{18°}$.1.827, m.43, b.135 (decomp.), insoluble in water, soluble in alcohol, ether or carbon disulfide. **c. yellow.** Cobaltic potassium nitrite. **c. zincate.** C. green.

cobaltammine compounds. Ammonate. A group of compounds of ammonia and cobalt containing the ammonia molecules in combination. Luteocobaltichloride $[Co(NH_3)_6]Cl_3$, purpureo-cobalt chloride $[Co(NH_3)_5Cl]Cl_2$, rosco-cobaltichloride $[Co(NH_3)_5H_2O]Cl_3$. See *cobaltichloride*.

cobaltic. Containing trivalent cobalt ≡ Co. **c. chloride.** $CoCl_3$ = 165.4. Blue crystals, d.-2.94, decomp. on heating, soluble in water. See *cobaltichloride*. **c. hydroxide.** $Co(OH)_3$ = 110.0. A black powder, insoluble in water, soluble in acids. **c. oxide.** Co_2O_3 = 166.0. Cobalt sesquioxide, a brownish-black powder, d.5.18, decomp. at red heat, is insoluble in water, soluble in acids. **c. potassium cyanide.** Potassium cobalticyanide. **c. potassium nitrite.** $K_3Co(NO_2)_6.xH_2O$. Potassium cobaltinitrite, cobalt yellow, or potassium cobaltic hexanitrite. A yellow crystalline precipitate obtained by adding potassium nitrite to cobaltic nitrate acidified with acetic acid. **c. sulfate.** $Co_2(SO_4)_3$ = 406.2. A blue crystalline powder, decomp. in water, soluble in dilute sulfuric acid. **c. sulfide.** Co_2S_3 = 214.0. A black powder, insoluble in water.

cobaltichloride.

luteo- $\begin{bmatrix} NH_3. & .NH_3 \\ NH_3. & Co & .NH_3 \\ NH_3. & .NH_3 \end{bmatrix} Cl_3$. **Hexammine** cobaltichloride. Orange-yellow crystals, soluble in water. Reagent for pyrophosphoric acid.

praseo- $\begin{bmatrix} NH_3. & .NH_3 \\ NH_3. & Co & .NH_3 \end{bmatrix} Cl_3$. **Tetrammine** cobaltichloride. Green crystals, soluble in water.

purpureo- $\begin{bmatrix} NH_3. & & .Cl \\ NH_3. & Co & .NH_3 \\ NH_3. & & .NH_3 \end{bmatrix} Cl_2$. Chloropentammine cobaltichloride. Purple crystals, soluble in water.

roseo- $\begin{bmatrix} NH_3. & & .H_2O \\ NH_3. & Co & .NH_3 \\ NH_3. & & .NH_3 \end{bmatrix} Cl_3$. Aquapentammine cobaltichloride. Small red crystals, readily decomp. by and soluble in water.

cobalticyanic acid. $H_3Co(CN)_6 = 216.1$. Colorless needles, decomp. above 100, very soluble in water or alcohol.

cobalticyanide. The salts of cobalticyanic acid which contain the trivalent ion $Co(CN)_6^{---}$. This imparts a yellow color to the aqueous solution. *E.g.*, potassium cobalticyanide.

cobaltinitrite. The salts containing the trivalent complex ion $Co(NO_2)_6^{---}$, imparting a yellow color to the aqueous solution. *E.g.*, potassium cobaltinitrite.

cobaltite. The mineral (CoFe)SAs.

cobalto cobaltic oxide. $Co_3O_4 = 240.9$. Black, regular crystals, d.5.8–6.3, insoluble in water, soluble in acids.

cobalto sulfate. A salt containing the divalent $Co(SO_4)_2^{--}$ ion which imparts a red color to the aqueous solution, *e.g.*, potassium cobalto sulfate, $K_2Co(SO_4)_2$.

cobaltous. Containing divalent cobalt, Co^{++}. **c. acetate.** $Co(C_2H_3O_2)_2.4H_2O = 249.1$. Purple crystals, $d_{18°}$.1.7043, soluble in water or alcohol; used in invisible inks. **c. ammonium sulfate.** $Co(SO_4)_2(NH_4)_2SO_4.6H_2O = 491.29$. Red crystals, soluble in water. **c. arsenate.** $Co_3(AsO_4)_2.8H_2O = 599.1$. Erythrite, cobalt bloom. Purple or reddish, monoclinic crystals. d.2.948, insoluble in water, soluble in acids. Used as a light blue pigment for porcelain and glass. **c. benzoate.** $Co(C_6H_5COO)_2.4H_2O = 373.08$. Grayish-red leaflets, dehydrated at 115, soluble in water. **c. bromate.** $Co(BrO_3)_2.6H_2O = 423.0$. A red crystalline substance, is soluble in water. **c. bromide.** $CoBr_2.6H_2O = 326.9$. Red hygroscopic crystals, soluble in water or alcohol; used for filling hygrometers. **c. butyrate.** $Co(C_4H_7O_2)_2 = 233.2$. A purplish-red, granular powder, soluble in water. **c. carbonate.** $CoCO_3 = 119.0$. A rhombohedric, rose-colored, light powder, d.4.13, decomp. on heating, insoluble in water, soluble in acids. Used for the preparation of cobalt, oxides and cobalt pigments. **c. chlorate.** $Co(ClO_3)_2.6H_2O = 334.0$. Purple, regular crystals, d.1.84, m.50, decomp. 100, very soluble in water or alcohol. **c. chloride.** $CoCl_2 = 129.9$. Blue crystals, d.2.94, sublime on heating; very soluble in water or alcohol. It crystallizes also as: hexahydrate, $CoCl_2.6H_2O$; tetrammonate, $CoCl_2.4NH_3$; pentammonate, $CoCl_2.5NH_3$. (cryst.) $CoCl_2.6H_2O = 238.0$. Ruby-red, monoclinic crystals, d.184, m.87, anhydrous at 110°C, very soluble in water or alcohol. Used in hygrometers, invisible inks, chemical barometers, and electroplating. **c. chromate.** $CoCrO_4 = 174.9$. A brown powder containing some cobaltous hydroxide, insoluble in water, soluble in dilute chromic acid. **c. citrate.** $Co_3(C_6H_5O_7)_2 = 555.2$. A pink amorphous powder, sparingly soluble in water. **c. cyanide.** $Co(CN)_2$, and $Co(CN)_2.3H_2O = 165.1$. A pinkish-gray or red powder, anhydrous at 250°C, decomp. 300, insoluble in water, soluble in potassium cyanide solution. **c. fluosilicate.** $CoSiF_6.6H_2O = 309.09$. Trigonal pink crystals, d.2.067, soluble in hot water. **c. formate.** $Co(OOCH)_2 = 149.0$. Red crystals, d.2.129, soluble in water. **c. hydroxide.** $Co(OH)_2 = 93.0$. Rose-red, rhombic or monoclinic crystals or powder, $d_{18°}$.3.597, insoluble in water, soluble in acids or ammonium salt solutions. **c. iodide.** $CoI_2.6H_2O = 420.83$. Brownish-red crystals, soluble in water or alcohol. Used similarly to c. bromide and chloride. **c. linoleate.** $Co(C_{18}H_{31}O_2)_2 = 617.42$. Brown amorphous powder, insoluble in water. **c. nickelous sulfate.** $NiSO_4.CoSO_4 = 309.72$. A double salt of cobaltous and nickelous sulfates. **c. nitrate.** $Co(NO_3)_2.6H_2O = 291.1$. Red monoclinic crystals, $d_{14°}$.1.83, m.56, decomp. at red heat, very soluble in water or alcohol. It is an antidote for cyanide poisoning; used for the preparation of cobalt pigments or secret ink, and as a reagent in blow-pipe analysis. **c. oleate.** $Co(C_{17}H_{33}COO)_2 = 621.4$. Brown, soft masses, insoluble in water, soluble in oils. **c. oxalate.** $Co(OOC)_2.H_2O = 165.0$. A pale-pinkish powder, d.2.325, insoluble in water. **c. oxide** $CoO = 75.0$. A brown powder, d.5.68, decomp. 2850, insoluble in water or alcohol, soluble in acids or ammonium hydroxide. **c. phosphate.** $Co_3(PO_4)_2.2H_2O = 403.3$. A red powder, insoluble in water, soluble in phosphoric acid; used for cobalt pigments, in the ceramics and glass industry for light-blue, metallic colors. **c. propionate.** $Co(C_3H_5O_2)_2.3H_2O = 259.06$. Dark red crystals, m.*ca.*250, soluble in water. **c. silicate.** $Co_2SiO_4 = 209.8$. Purple crystals, d.4.63, insoluble in water, decomp. by hydrochloric acid. **c. sulfate.** $CoSO_4.7H_2O = 281.2$. Rose vitriol. Cf. *bieberite*. Red, rhombic crystals, $d_{15°}$.1.918, m.96.8, anhydrous at 450, soluble in water, or alcohol. Used technically in the preparation of cobalt salts and cobalt oxides for ceramic pigments, and in galvanostegy for cobalting metals. **c. stannate.** $CoSnO_3$. A blue pigment. Cf. *ceruleum*. **c. sulfide.** $CoS = 91.0$. A brown powder, $d_{18°}$.5.45, m.1100, insoluble in water, soluble in acids. **c. tartrate.** $Co(C_4H_6O_6) = 212.0$. A pink powder, very sparingly soluble in water.

cobefrin. $C_9H_{13}NO_3 = 183.1$. *3.4*-Dihydroxyaminopropanol benzene, corbasil. $(OH)_2C_6H_3.CHOH.CHMe.NH_2$. White crystals, used as vasoconstrictor, q.v.

cobra. A poisonous snake of India, *Najatripudians*, whose venom contains ophiotoxin and copralysin. **c. lecithid.** A hemolytic compound of lecithin and cobra toxin formed in the blood.

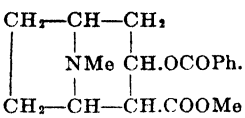
cobralysin. The hemolytic substance of cobra venom.

cobric acid. A white micro-crystalline powder obtained from cobra venom, and containing calcium sulfate.

coca. Erythroxylum. The dried leaves of the S. American shrub *Erythroxylum coca;* used to prepare a stimulant, and as a source of cocaine. **c. alkaloids.** A group of related alkaloids; as

cocaine	$C_{17}H_{21}NO_4$
cocainidine	$C_{18}H_{23}NO_4$
tropacocaine	$C_{15}H_{19}NO_2$
hygrine	$C_8H_{15}NO$
nirvanine	$C_{14}H_{20}N_2O_4$
cuscohygrine	$C_{18}H_{24}N_2O$
ecgonine	$C_9H_{15}NO_3$

cocaine. $C_{17}H_{21}O_4N$ = 303.26. Erythroxyline, methylbenzoylecgonine.



An alkaloid from the leaves of *Erythroxylum coca*. White monoclinic scales, m.98, slightly soluble in water, soluble in alcohol or ether. It is a local anesthetic and cerebrospinal stimulant; used chiefly as the hydrochloride. Cf. *cocethyline, novocaine, tutocaine, psicaine.* **isatropyl-** See *isatropylcocaine.* **methyl-** Cocainidine. **tropa-.** See *tropacocaine.*

c. benzoate. $C_{17}H_{21}O_4N.C_7H_6O_2$. White, soft, crystalline mass, soluble in water or alcohol. **c. bitartrate, d-ψ-** Psicaine. **c. borate.** A white, crystalline powder, soluble in alcohol; used for eye washes and hypodermically. **c. chloride.** C. hydrochloride. **c. citrate.** $(C_{17}H_{21}O_4N)_2.C_6H_8O_7$ = 798.58. White crystals, soluble in water; used in dentistry as an anesthetic. **c. hydrobromide.** $C_{17}H_{21}O_4N.HBr$ = 384.19. White crystals, soluble in water. **c. hydrochloride.** $C_{17}H_{21}O_4N.HCl$ = 339.73. Colorless prisms or scales, m.186, slightly soluble in water, soluble in alcohol, insoluble in ether or chloroform; used medicinally as local and general anesthetic, stimulant, anodyne, antipruritic, and sedative. **c. hydroiodide.** $C_{17}H_{21}O_4N.HI$ = 431.19. Yellow crystals, sparingly soluble in water or alcohol. **c. lactate.** $C_{17}H_{21}O_4N.C_3H_6O_3$ = 393.31. A soft, syrupy mass, soluble in water or alcohol; used as an anesthetic, sedative and antiseptic. **c. nitrate.** $C_{17}H_{21}O_4N.HNO_3$ = 366.28. White crystals, soluble in water. **c. oleate.** A solution of cocaine in oleic acid, used externally. **c. salicylate.** $C_{17}H_{21}O_4N.C_7H_6O_3$ = 441.31. Colorless crystals, soluble in water or alcohol. **c. sulfate.** $C_{17}H_{21}O_4N.H_2SO_4$ = 401.35. A granular, white, crystalline powder, soluble in water or alcohol. **c. tannate.** $C_{17}H_{21}O_4N.C_{14}H_{10}O_9$ = 625.4. A white, amorphous powder, soluble in alcohol. **c. tartrate.** $(C_{17}H_{21}O_4N)_2.C_4H_6O_6$ = 756.57. Colorless crystals, soluble in water or alcohol.

cocainidine. $C_{18}H_{23}O_4N$ = 317.3. Methylcocaine. An alkaloid from coca leaves, similar to cocaine.

cocatannic acid. $C_{17}H_{22}O_{10}.2H_2O$(?). A tannic acid from the leaves of *Erythroxylum coca;* yellow micro-crystals.

Coccaceae. A family of spherical schizomycetes (bacteria), which includes coccus, diplococcus, staphylococcus and streptococcus.

coccalinic acid. Menispermic acid.

cocceric acid. $C_{32}H_{64}O_3$ = 496.49. The monobasic, fatty acid, $C_{31}H_{63}(OH)COOH$, derived from cochineal wax. White crystalline mass, m.92.5.

coccerin. $C_{30}H_{60}(C_{31}H_{61}O_3)_2$ = 1382.11. A wax derived from cochineal; soluble in benzene.

cocceryl. The divalent $C_{30}H_{60}$= radical derived from c. alcohol. **c. alcohol.** $C_{30}H_{62}O_2$ = 454.6. A dibasic alcohol from cochineal wax; white crystals, m.101–104.

coccerylic acid. Cocceric acid.

cocci. The plural of coccus.

Coccidium. A genus of sporozoa.

coccinellin. Carmine.

coccinic acid. $C_9H_8O_5$ = 196.06. Hydroxymethylphthalic acid, $HO.C_6H_2Me(COOH)_2$. An acid derived from euxanthic acid. Cf. *cocinic acid.*

coccognic acid. Coccognidic acid. An acid substance from *Daphne gnidium*, a Thymelaeaceae.

coccognidic acid. Coccognic acid.

coccognin. A glucoside from the fruits of *Daphne gnidium*, a Thymelaceae.

coccolith. The minute calcareous skeleton of floating marine algae.

coccon. The seeds of the pomegranate.

cocculin. $C_{19}H_{26}O_{10}$ = 414.3. A crystalline constituent of *Cocculus indicus*, fishberry; it is a narcotic. Cf. *kukoline.*

cocculus. The fruit of menispermaceous plants. **c. indicus.** Fishberry, Indian berry, Oriental berry, Levant berry. The dried fruit of *Anamirta paniculata*, a Menispermaceae and climbing shrub of the East Indies; used as a destroyer of vermin and lice. See *cocculin, anamirtin, picrotoxin, kukoline.*

coccus. (1) A round or spherical bacterium. (2) A species of insects of the family Coccidae, scale insects, that yield cochineal, Chinese wax, kermes, lac, manna.

cocethyline. $C_{18}H_{23}O_4N$ = 317.5. Ethylbenzoylecgonine. A homolog of cocaine. Colorless crystals, m.109, soluble in alcohol or ether. Used as local anesthetic and cocaine substitute.

cochineal. The dried, female insect, *Coccus cacti*, which is reared on several species of cactus (*Opuntia*) and exported from tropical America. Its chief constituent is carmine, and it is used for coloring pharmaceutical preparations, and as an indicator. **c. solution.** A test solution and indicator prepared by macerating 3 gm. of unbroken cochineal for four days in 250 cc. of a mixture of 1 pt. alcohol and 3 pts. water. Used as an indicator in determining alkali carbonates, alkaloids, and inorganic acids, but is useless for organic acids (alkalis = violet; acids = yellowish-red). **c. wax.** Coccerin.

cochinilin. Carminic acid.

cochlear, cochleare. A spoon. It is used, sometimes, as a pharmaceutical measurement: cochlear magnum (tablespoon) = 15 cc. = ½ fluid ounce; cochlear medium (dessertspoon) = 8 cc. = 2 fluid drachms; cochlear parvum (teaspoon) = 4 cc. = 1 fluid drachm.

Cochlearia. (1) A genus of cruciferous plants. (2) Scurvy-grass. The dried herb of *C. officinalis;* used as a stimulant, diuretic and antiscorbutic in form of a fluid extract. (3) *C. armoracia*, horse radish (q.v.).

cochrome. An alloy of Co and Cr, analogous to nichrome (q.v.).

cocinic acid. $C_{11}H_{22}O_2$ = 186.17. A fatty acid from cocoanut oil, (cf. *coccinic acid, umbellulic acid, undecylic acid*).

cocinin. An ester of cocinic acid; the chief constituent of cocoanut oil.

cocinone. $C_{21}H_{42}O$ = 310.0. A derivative of cocinin.

coclaurine. An alkaloid from the leaves and bark of *Cocculus laurifolius*, a Menispermaceae.

cocoa. Cacao, (q.v.). Cf. *coca, coconut.* (1) C. tree. The shrub *Theobroma cacao*, a Sterculiaceae of the tropics. (2) C. seeds. (3) A brownish-red powder consisting of the finely ground residue of the seeds of *Theobroma cacao*, after expression of their fat. (4) The beverage made from (3). (5) Cf. *coca, coconut.* **c. butter.** Cacao butter, oleum theobromatis, theobroma

oil. A yellow or brownish fat obtained by compression of cacao seeds between hot or cold plates, d.0.976–0.995, sapon. val. 192–200, iodine val. 32–37.7, m.30–35°C, soluble in ether or chloroform. **c. nut.** (1) Cocoa. (2) Coconut. Cf. *coca*. **c. nut oil.** See *coconut oil*. **c. oil.** Cocoa butter. **c. red.** $C_{17}H_{12}(OH)_{10}$. The pigment of c., 2.5–5 % of which is formed during the drying of the white beans by enzyme action. **c. seeds.** Cacao. The dried and fermented seeds of the cocoa tree, *Theobroma cacao*, of tropical and South America; used to make a beverage. Chemical composition (approximate):

Fat (cocoa butter)	50.0 %
Albumin	18.0 %
Starch	10.0 %
Gum	8.0 %
Water	6.0 %
Salts (ash)	3.6 %
Coloring matter	2.6 %
Alkaloids (theobromine)	1.5 %

c. shell meal. The ground husks of c. seeds; used as fertilizer. They contain 2.5 % N, 1 % P_2O_5 and 2.5 % K_2O.

coconut. Cocoanut. The fruit of *Cocos nucifera*, a palm of the Pacific and Australian Islands and the East and West Indies. Cf. *copra, coir*. **c. butter.** Coconut oil. **c. cake.** The compressed material remaining after the expression of c. oil. **c. oil.** A fixed oil expressed from the fruit of *Cocos nucifera* or copra (dried cocoanut). Used in large quantities in the manufacture of margarine, food products and soap. A yellow oil, d.0.9259, m.14. Sapon. val. 246–268, iodine no. 8–9.5, acid val. 5–50.

cod. The cod fish, *Gadus morrhua*. **c. ichthulin.** A vitellin from cod eggs. **c. liver oil.** See *codliver oil*.

codamine. $C_{20}H_{25}O_4N$ = 343.20. An alkaloid of opium, isomeric with laudanine, m.121.

codeic acid. An acid derived from codeine.

codeine. $C_{18}H_{21}O_3N.H_2O$ = 317.28. Methylmorphine, morphine methyl-ether. A levorotatory alkaloid derived from opium, in which it occurs to the extent of 0.2–0.8 %. Colorless orthorhombic crystals, anhyd. 155, slightly soluble in water, soluble in alcohol or ether. Used as a mild narcotic instead of morphine. Cf. *codeinone, codethyline, dicodeine*. **c. citrate.** $(C_{18}H_{21}O_3N)_3C_6H_8O_7$ = 1089.84. Colorless crystals, soluble in water, or alcohol. **c. hydrobromide.** $C_{18}H_{21}O_3N.HBr.2H_2O$ = 434.24. Colorless crystals, soluble in water, used medicinally for whooping cough. **c. hydrochloride.** $C_{18}H_{21}O_3N.HCl.2H_2O$ = 371.77. White needles, anhydrous at 164, m.264; soluble in water. **c. methyl bromide.** Eucodeine. **c. phosphate.** $C_{18}H_{21}O_3N.H_3PO_4.2H_2O$ = 433.32. White crystals, anhydrous at 235, soluble in water, sparingly soluble in alcohol or ether; used hypodermically as a sedative. **c. salicylate.** $C_{18}H_{21}O_3N.C_7H_6O_3$ = 455.31. Colorless, crystalline powder, soluble in water or alcohol; used medicinally in rheumatic disorders. **c. sulfate.** $(C_{18}H_{21}O_3N)_2.H_2SO_4.5H_2O$ = 786.69. White rhombic crystals, decomp. 278, soluble in water, slightly soluble in alcohol or ether.

codeinone. $C_{18}H_{21}O_3N$. The quinone form of codeine. **dihydro- Dicodide. dihydrohydroxy-** Eucodal.

codethyline. $C_{19}H_{23}O_3N$ = 313.19. Morphine ethylate, ethyl-morphine. A derivative of morphine and homolog of codeine, m.93. **c. hydrochloride.** Dionine.

codliver oil. Oleum morrhuae, banks oil. A fixed oil from the liver of *Gadus morrhua*, a salt water fish. A colorless, pale-yellow, or brown oil, $d_{25°}$.0.915–0.925, soluble in alcohol. Its chief constituents are gaduin and olein, morrhuic acid, phosphorus, iodine, and sulfur compounds. It is an alterative, used as a nutritive in tuberculous diseases, convalesence, malnutrition, and malassimilation, as it contains several vitamins. See *gadose, jecolein, morrhuol, ptomaines*. **artificial-** An ergosterol or cholesterol that has been irradiated. Cf. *irradiation*. **c. o. emulsion.** An emulsion of codliver oil with various pharmaceutical ingredients which mask its unpleasant taste (peppermint oil and other essential oils), or make it more beneficial (phosphates, iron compounds, etc.).

codol. Retinol.

coefficient. A numerical factor by which the value of one quantity is multiplied to give the value of another; or to indicate its rate of range. **activitity-** q.v. **distribution-** q.v.

c. of absorption. See *absorption*. **c. of compressibility.** (A). The relative deviation of a gas from Boyle's Law (q.v.). Thus $p_1v_1/p_0v_0 = (1 - A)$ where p_1, p_0, v_1 and v_0 are two sets of measurements of p and v between 1 atmosphere and zero pressure. **c. of conductivity.** A number indicating the amount of heat or electricity that passes through a unit of thickness of substance in a unit of time, when the temperature- or potential-difference is 1°C or 1 volt, respectively. **c. of expansion.** A number indicating the expansion of a substance for a temperature increase of 1°C. Cf. *Charles' Law*.

coenzyme. A catalyst necessary for the activation of an enzyme. Cf. *coferment*.

cœr-. See *cer-*.

coferment. A substance which increases the activity of a ferment or enzyme, *e.g.*, calcium for thrombin. Cf. *coenzyme*.

coffee. The dried seeds of *Coffea arabica, C. liberica*, etc. (Rubiaceae) the coffee tree or shrub of Asia, Africa; Central or South America. Approximate chemical composition:

	Unroasted (green)	*Roasted* (brown)
Fat	13.27 %	14.48 %
Water	11.23 %	1.15 %
Albuminoids	12.07 %	13.98 %
Sugar	8.55 %	0.66 %
Fiber	3.92 %	4.75 %
Caffein	1.21 %	1.28 %

World production in 1940 was 2,320,000 tons, coming from Brazil > Colombia > Venezuela > Central America and East Indies.

coffeic acid. Caffeic acid.

coffeine. Caffeine.

cognac. A high grade of brandy. **c. essence.** (1) Ethyl nonylate or (2) ethyl chloride, used to imitate the c. flavor. **c. oil.** (1) A brandy adulterant which consists of cocoanut oil, alcohol and sulphuric acid. (2) The essential oil of cognac, containing the esters of caprinic and caprilic acids. (3) Ethyl oenanthate, used as flavoring agent.

Cohen, Ernst Julius. 1869– . A Dutch chemist noted for research in physical chemistry. **C., Julius B.** 1859–1935. A British chemist, noted for his work on optical activity and the laws of aromatic chemistry.

cohere. To hold together; as, molecules of the same type. Cf. *adhere, van der Waals forces.*

coherer. An electrical resistance tube filled with a granulated conductor by which electro-magnetic waves are detected (*e.g.*, in wireless telegraphy), owing to the change in resistance produced by varying coherence of the particles produced.

cohesion. The attractive force between the same kind of molecules, that is, the force which holds the molecules of a substance together. Cf. *adhesion.*

cohesive. Sticking together.

cohoba. A snuff used by the ancient natives of Haiti.

cohobation. Repeated distillations in which the distillate is returned each time to the residue in the distillation vessel. It was believed formerly to result in a higher degree of purity.

cohosh. An Indian (Algonkian) name for various medicinal plants; *e.g.* **black-** *Cimicifuga racemosa.* **blue-** *Caulophyllum thalictroides,* **red-** *Actaea spicata.* **white-** *Actaea alba.*

cohydrol. A colloidal solution of graphite. Cf. *aquadag.*

coil. A loop, or spiral made of wire, tubing, glass or other material. **induction-** A transformer for inducing an electric current, consisting of a coarse wire coil (primary coil) wound around an iron core and surrounded by a long insulated coil of fine wire in which the induced current is produced. **primary-** The inner wire coil of an induction apparatus to which the potential is initially applied. **resistance-** A series of wire coils of known electrical resistance, used to diminish the strength of a galvanic current or for testing the resistance of an object by comparison (bridge). **Ruhmkorff-** An induction apparatus, in which the secondary coil is of very fine and long wire, which is permanently mounted and connected with a condenser. **secondary-** The outer coil of an induction coil **Tesla-** An induction coil without the iron coil, used for Tesla discharges.

coinage gold. An alloy of 90 % gold and 10 % copper.

coinage silver. An alloy of 90 % silver and 10 % copper.

coir. The fibers of the coconut husk, made by retting the husks in sea water and crushing between rollers; used for cables and cordage.

coke. The carbonaceous residue (70–80 %) of coal after the volatile constituents have been distilled off. **native-** Carbonite. **c. oven.** A retort in which coal is heated and changed to coke. **c. oven gas.** The fuel and illuminating gas which distils from coal.

coking. Making coke by heating coal for about 12 hours. The reaction products from one ton of coal (Pittsburgh, U. S. A.) are:

coke	1500 pounds
gas	11,360 cubic feet
tar	12.4 gallons
benzene	4 gallons
ammonium sulfate	25 pounds

Cola. A genus of sterculiaceous plants; a source of caffeine. **c. nut.** Kola.

colamine. C_2H_7ON = 61.06. 2-aminoethanol, β-aminoethyl alcohol. $NH_2.CH_2.CH_2.OH$. A colorless liquid, d.1.022, b.171.

colatannin. $C_{16}H_{20}O_8$ = 340.15. Colatin. The tannin from cola nuts; crystals, m.148, soluble in alcohol or acetone.

colatein. A crystalline phenol derived from cola nuts.

colatin. Colatannin.

colatorium. A strainer or sieve.

colchiceine. $C_{21}H_{23}O_6N.H_2O$ = 403.19. A crystalline alkaloid derived from colchicum; said to be more active than colchicine. Yellow needles, m.172, sparingly soluble in water, soluble in alcohol, ether or chloroform.

colchicine. $C_{22}H_{25}O_6N$ = 399.3. An alkaloid from the seeds of *Colchicum autumnale,* meadow saffron. Yellow crystals or amorphous powder, m.135–150, soluble in water, alcohol, or chloroform. It is an antineuralgic, antirheumatic, and antiarthritic. **c. salicylate.** $C_{22}H_{25}O_6N.C_7H_6O_3$ = 537.26. Cholchisal. A yellow powder, soluble in water, alcohol or chloroform. **c. tannate.** $C_{22}H_{25}O_6N.C_{14}H_{10}O_9$ = 721.45. A yellow powder containing 38–40 % colchicine; soluble in alcohol.

Colchicum. (1) A genus of liliaceous plants. (2) The plant, *C. autumnale,* meadow saffron, autumn crocus, wild saffron, of Europe and North Africa; used as a specific for gout. **c. corm.** The root or bulb of *C. autumnale,* meadow saffron, which contains colchicine; used as a cathartic, emetic, and local stimulant. **c. flowers.** The dried blossoms of *C. autumnale.* **c. seeds.** The seeds of *C. autumnale.* It contains less colchicine than the corm.

colchinine. $C_{22}H_{15}O_6N$ = 389.12. An alkaloid, m.146.

colchisal. Colchicine salicylate.

colcothar. Prussian red, rouge. Caput mortuum, crocus martis. A red variety of ferric oxide obtained by heating ferrous sulfate in air; used as a styptic and tonic, as a polishing material for lenses, gems, etc., and as a pigment.

cold. Relatively low degree of heat; lacking warmth. **c. cream.** A white, scented ointment used as a cosmetic and consisting of wax, spermaceti, olive oil or other fat emulsified with rose-water or other liquid. **c. flow.** The behavior of an apparently solid substance (*e.g.*, pitch, rubber) as a viscous liquid, by virtue of which it has a very slow flowing motion. **c. storage.** See *refrigeration.*

Cole's test. A modification of the Benedict method for determining small quantities of sugar in urine.

colemanite. A native calcium borate, $Ca_2B_6O_{11}.5H_2O$.

Coleoptera. An order of insects which includes the bettles. Cf. *cantharis.*

colibacterin. A vaccine from Bacillus Coli.

colla. Glue. **c. animalis.** Gelatin. **c. glutinum.** Gluten. **c. piscium.** Ichthyol. **c. taurina.** Gelatin.

collagen. Ossein. A protein forming the chief constituent of connective tissue and the organic substance of bones. Contains 50.75 % C, 6.47 % H, 17.86 % N, and yields glue or gelatin on boiling with water.

collargol. (1) Colloidal silver and silver oxide formed by reduction and stabilized by egg albumen. (2) A water-soluble form of colloidal silver prepared by dialysis and evaporation of an alkaline solution of colloidal silver. It is

brownish-black in color, and contains 93 % Ag.

collateral. Side by side. Parallel. Supplementary.

collector. Flotation promoter. A substance used in flotation which increases the capacity of the air bubble to carry mineral particles; as, xanthates, dithiophosphates, creosotes.

colletin. A glucoside from *Colletia spinosa*, a Rhamnaceae of South America.

collidine. $C_8H_{11}N$ = 121.17. **alpha-** 4-ethyl-2-methylpyridine*. A colorless liquid, $d_{16°}$.0.927, b.179, soluble in water, alcohol, or ether; a constituent of coaltar. **beta-** 3-ethyl-4-methylpyridine*. A colorless liquid, $d_0°$.0.966, b.198, insoluble in water, soluble in alcohol. Obtained by the decomposition of cinchonine or from coaltar. **gamma-** 2.4.6-trimethylpyridine*. A colorless liquid d.0.947, b.172, sparingly soluble in water; obtained by destructive distillation of coaltar. **ethyl-** $C_{10}H_{15}N$. A derivative of collidine. **hydro-** A ptomaine from putrefying fish and animal tissues.

colligate. To connect or bind together.

colligative. Related or connected. **c. properties.** Properties which can be related to one another by a mathematical function. **c. p. of solutions.** Those properties which are affected proportionally by the introduction of a solute. If the solution is sufficiently dilute, the effect is independent of the chemical nature and depends solely upon the number of particles (molecules or ions) present. Colligative properties are:

	1 *Mol solute per liter solution causes*
Vapor pressure	lowering 0.5 mm.
Boiling point	raising 0.54°C.
Freezing point	lowering 1.85°C.
Osmotic pressure	22.4 atm.

collimator. A telescope lens or system of lenses with a slit at its focus for rendering parallel the rays entering an optical instrument.

collinsics. The relationship between molecular weight, M, density, D, and refractive index, μ, discovered by H. Collins: $M/\Sigma V_r = D$, and $(\mu - 1)(\Sigma V_r) = \Sigma R_0$ where ΣV_r is the sum of the relative volumes, and ΣR_0 the sum of the optical refractivities. Cf. *Lorentz-Lorenz equation.*

	V_r	R_0		V_r	R_0
Al	9.05	7.865	Mn	13.02	11.53
	12.05	4.863		11.53	13.02
As	19.58	17.75	N	3.8	3.8
B	3.865	3.865	Na	11.865	3.864
Be	4.62	3.733	O	2.51	1.346
C	8.0	3.333		4.45	1.747
Ca	14.54	10.52		7.53	1.654
	13.25	13.25	P	14.56	10.51
Cl	15.085	10.82	Pb	19.81	35.459
Cu	7.13	14.22		17.42	28.264
F	5.42	0.26	S	15.53	5.75
Fe	10.08	19.58	Si	13.02	11.53
	5.76	2.613		13.83	9.78
K	22.29	7.49		17.61	9.625
Mg	8.71	6.0015		18.91	10.461
	7.51	5.031	Zr	15.59	21.59

Thus, for KCl or sylvite, M = 39 + 35.5; D = 1.996 and μ = 1.49. Thus: 74.5 − (22.29 + 15.085) = 1.996; and (7.49 + 10.82) = 0.49(22.29 + 15.085).

collinsoniod. The combined principles from the root or rhizomes of *Collinsonia canadensis*, stone-root, a Labiatae; used as a diuretic, alterative and diaphoretic.

collision. A change in the energy of a molecule produced by interaction with another material system (molecule, atom or electron), or by electromagnetic induction. Cf. *induction, photon, quantum, chain reaction.* **atomic-** Contact with or between atoms; as, in bombardment with α-rays. Cf. *Wilson tracks.* **molecular-** The mechanical contact of two molecules, which is thought to be essential for a reaction to occur.

collochemistry. Colloidal chemistry.

collodion. A solution of pyroxylin (gun cotton, nitrated cellulose) in a mixture of alcohol and ether. It is a colorless or slightly yellowish, clear or opalescent, thick liquid containing not less than 5 % dissolved matter. Used as a reagent for differentiating phenol and creosote; medicinally for covering wounds, burns, or ulcers; and as an air-tight seal. **c. cotton.** Pyroxylin.

collodium. Collodion.

colloid. A state of subdivision of matter which comprises either single large molecules (*molecular c.*; as, proteins etc.) or aggregations of smaller molecules (*association c.*; as, gold etc.). These particles of ultramicroscopic size (*dispersed phase*) may be solid, liquid or gaseous, and are surrounded by different matter (*dispersion medium* or *external phase*) which may also be solid, liquid, or gaseous. Hence there are eight possible combinations (see table of *colloidal systems*). The size and electrical charge of the particles determine the phenomena observed with colloids, *e.g.*, Brownian movement, diffusion through semi-permeable membranes, etc. The sizes of colloids range from 1×10^{-7} cm. to 1×10^{-5} cm. (or $\frac{1}{10}$ to $\frac{1}{1000}\mu$). The smallest particle of colloidal gold observed by Zsigmondy was 1.7×10^{-7} cm. **association-** A compound whose molecules aggregate to form colloidal particles. Cf. *bond, co-ordination.* **dispersion-** A dispersoid or finely-divided substance. **emulsion-** An emulsoid, or a liquid dispersoid, *e.g.*, finely-divided droplets of a liquid suspended in another liquid. **eu-** A c. whose molecules are over 2500 Å.U. long. **hemi-** A c. whose molecules are 50–250 Å.U. long. **heteropolar-** A c. which consists of polar molecules; as, salts, albuminoids, sugars, etc. Cf. *heteropolar bond.* **homopolar-** A c. which consists of nonpolar molecules; as, hydrocarbons, rubber, etc. **hydrophilic-** See *hydrophile.* **hydrophobic-** See *hydrophobe.* **irreversible-** A finely-divided substance which, once coagulated or precipitated, cannot be readily reversed to the colloidal state. **lyophilic-** See *lyophile.* **lyophobic-** See *lyophobe.* **meso-** A c. whose molecules are 250–2500 Å.U. long. **molecular-** A compound whose molecule is of colloidal size; e.g. 100–500$\mu\mu$ long and 0.2-1$\mu\mu$ thick. **protective-** A substance which promotes the stability of a heterogeneous system, or of the colloidal state by enveloping the particles. **reversible-** A finely-divided substance which, when coagulated, precipitated, or obtained by evaporation of a solution, can readily be converted to the colloidal state. **suspension-** A suspensoid, or a solid dispersoid, *e.g.*, finely-

divided solid particles of ultramicroscopical size in a liquid.

c. equivalent. The number of atoms sharing a free electric charge. **c. mill.** A grinding mill for making emulsions and suspensions, or for the disintegration and dispersion of solids or liquids. **c. zone.** See *orientation, zone.*

colloidal. Pertaining to colloids. **c. metal.** A finely-divided metal consisting of particles of 1 to 100 millimicrons ($\mu\mu$). Since they expose a large surface they are very reactive; many of them act as catalysts in industrially important reactions and processes. **c. movement.** *Brownian movement.* **c. state.** The state of being finely subdivided, *e.g.*, a colloid. **c. system.** See *colloid.*

colophonic acid. Colopholic acid. An acid derived from turpentine; used in plasters, soaps, or cements. Cf. *abietene.*

colophonite. (1) An amber-colored andralite (iron *garnet*, q.v.) (2) A colophony found in the soil. Cf. *copal.*

colophonium. Rosin.

colophonone. $C_{22}H_{18}O_2$ = 314.2. A distillation product of pine rosin.

colophony. Rosin.

color, colour. (1) The visual sensation caused by light. (2) Light of a definite wavelength or group of wavelengths which is emitted, reflected, refracted or transmitted by an object. A color is defined by three properties: *hue-* The wave-length of the monochromatic light, *i.e.*, shade. *saturation-* The percentage of the light of the above wave-length present, *i.e.*, strength. *brightness-* the amount of light reflected as compared with a magnesium oxide standard under the same conditions, *i.e.*, luminosity. Cf. *C.I.E. units, c. diagram, c. theory, colors, dyes, pigments.* **artists'-** The finely-ground pigments used by artists. **basic-** The three colors: red, yellow and blue. **complementary-** Any two colors of the spectrum which produce white light when combined or blended with each other, not

COLLOIDAL SYSTEMS

Surrounding medium, dispersion medium, continuous or external phase

Enclosed medium, dispersed or discontinous phase, colloidal matter	in Solid	in Liquid (Hydrosols)	in Gas (Aerosols)
Solid	(1) **Solid sols** Alloys, colored glass, certain precious stones, paper.	(2) **Suspensions** Paints, milk of magnesia, collargol, etc.	(3) **Smokes** Iodine vapor, cement dust, HCl and NH_3, etc.
Liquid	(4) **Gels** Celluloid, jellies, green leaves, glue.	(5) **Emulsions** Milk, blood, liniments, crankcase oil, protoplasm.	(6) **Fogs** Sprays, mists, clouds, visible steam.
Gas	(7) **Solid foams** Rubber, pumice, plaster, fire foam, lungs, adsorbed gases, aerogels.	(8) **Foams** Lather, froths, mayonaise, whipped cream.	(9) No example.

collose. A substance produced in woody tissues as an intermediate stage in the process of liquefaction.

collosol. A colloidal solution of a drug (*e.g.*, alkaloids) or metals (Sb, Ag, Au, As, Bi, Cu, Fe, Hg, Mn, etc.), used in ampoule medication. Cf. *electrosol.*

collotype. Artotype. A method of printing from a gelatin surface on a glass plate sensitized with potassium dichromate and exposed under a negative.

colloxylin. Collodion.

colocynth. Bitter apple. Bitter cups. The fruit of *Citrullus colocynthis*, a Cucurbitaceae, of Asia Minor. It is a cathartic.

colocynthein. $C_{44}H_{64}O_{18}$ = 800.6. A resin from colocynthin.

colocynthin. $C_{56}H_{84}O_{23}$ = 1124.8. A glucoside from the fruit of *Citrullus colocynthis.* It is a strong purgative and is used in small doses only.

colog. Abbreviation for co-logarithm. Colog $x = -\log x = \log 1/x$.

colombic acid. Calumbic acid. Cf. *columbic acid.*

colonial spirit. Methanol.

colonies. Clusters of bacteria which are visible to the eye.

colophene. $C_{20}H_{32}$ = 272.3. A hydrocarbon of turpentine occurring as a colorless liquid.

colopholic acid. Colophonic acid.

PRIMARY COLORS

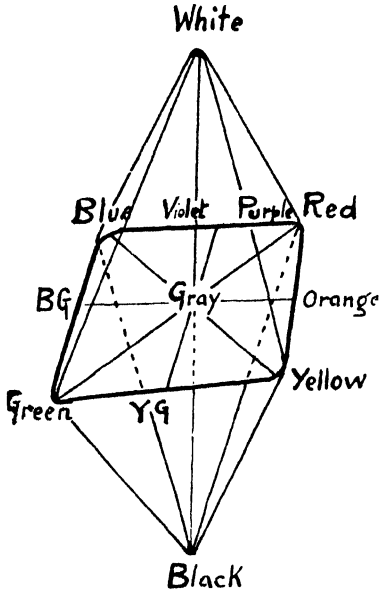
Wavelength λ in μ	*Name*	*Relative visibility*
0.410	violet	0.0012
0.470	blue	0.091
0.520	green	0.710
0.555	yellow-green	1.000
0.580	yellow	0.870
0.600	orange	0.631
0.650	red	0.107
0.700	dark red	0.0041

as pigments, but as rays of colored light. Complementary colors are those which stand opposite in the color diagram. The c. colors in *pigments* are: Red and green; blue and orange, etc. See under *complementary color*. **compound-** A color produced by mixing two or more primary colors as pigments; as,

green—from yellow and blue,
olive—from green and red,
brown—from red, green, and black,
orange—from yellow and red, etc.

contrast- Complementary-. **primary-** (1) The seven hues of the rainbow or solar spectrum: red, orange, yellow, green, blue, indigo and violet. (2) The basic colors: red-green-violet, or (pigments) red-yellow-blue. Cf. *Helmholtz's theory*. **secondary-** Compound-.

c. diagram. A chart or table in which the relationship of the principal colors is illustrated.

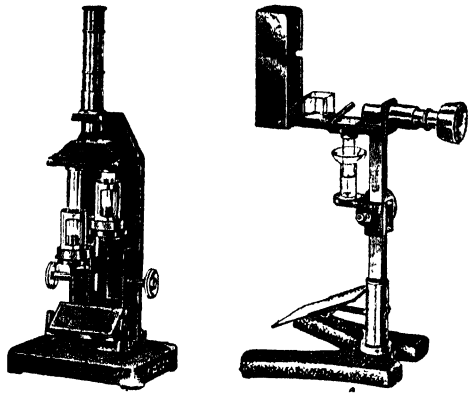


Color diagram.

In the figure the colors of the spectrum are in a plane around the center Those colors which stand opposite each other are complementary; if subtracted from each other (as with pigments) they produce darker shades and finally black; if combined with each other (as in colored lights) they produce lighter tints and finally white. **c. filter.** Light filter. A solid, liquid or gaseous layer of a substance which absorbs certain wavelengths. Cf. *c. screen, absorption cell, sodium flame*. **c. photography.** A mechanical process which records the form and color of an object photographically. The general principle is to take two or three exposures with two or three differently colored color screens, and then print the respective negatives upon two or three films which are stained in the complementary colors. On superimposing the prints a transparency in natural colors is obtained. In moving pictures green and red films are used, while in the various processes for plates either multi-colored screens consisting of lines or dots or specially prepared plates (*e.g.*, the Lumière plate) are used. **c. reaction.** A chemical change in which a change of color occurs. **c. scale.** (1) See *c. diagram, spectrum*. (2) Temperature. Approximate temperatures of heated metals are:

incipient red heat	500– 600°C
dark red heat	600– 800°C
bright red heat	800–1000°C
yellowish red heat	1000–1200°C
incipient white heat	1200–1400°C
white heat	1400–1600°C

c. screen. A color filter used in photography to render colored objects more contrasting in a black and white print. Cf. *complementary, photosensitizer*. **c. screen law.** To increase the photographic intensity of a color on the



Colorimeters.
(1) Duboscq. (2) Bock-Benedict.

film or plate, a screen of the complementary color is used. To decrease the effect a screen of the same color is used. **c. theory.** (1) The absorption of certain wavelengths of light by, or the color of solutions of certain compounds may be due to:

(a) Solvation—or the formation of hydrated ions, as $Cu(H_2O)_4^{++}$, in which case the dehydrated compound is colorless.

(b) Association—or the formation of stress compounds from free radicals; as Ph_3C . . . CPh_3, in which case the color changes on dilution.

(c) Ionization—or the formation of ions from the molecule; as in phenolphthalein, in which case the unionized molecule is differently colored.

(d) Tautomerism—or a change in the structure, as in the leuco- and erythro-salts or in quinone formation.

(2) The emission of a certain wavelength of light is due to electrons which oscillate from one atomic orbit to the other. This can be caused by high temperature, electricity or magnetism. See also *Helmholtz's theory, Beer's law, Lewis's theory, Witt's theory*.

coloradoite. HgTe. A mercury telluride from Colorado.

colorimeter. A device for determining the intensity and shade of colored solutions, or for comparing standard color solutions (comparator) It is used in quantitative analysis. Cf. *comparator, tintometer, chromophotometer, ionocolorimeter, calorimeter*. See figures.

colorimetric analysis. The quantitative determination of a substance by comparing the intensity of the color produced by a reagent, with that produced similarly in a standard of known strength. Cf. *Nessler solution, indicators.*

colorimetry. (1) Colorimetric analysis. (2) Color measurement. Cf. *calorimetry.*

coloring matter. A substance which produces the sensation of color. See *anthocyanins, colors, dyes, pigments.* **c. tablet.** A tablet which readily dissolves in water and contains a definite amount of a pure color. It is used as a convenient method to color small quantities of pharmaceutical preparations.

colors. Substances used as pigments or dyes, q.v. To indicate the shade of a color or dye, letters are sometimes used thus:

G = gelb (German) = yellow
J = jaune (French) = yellow
JJ = intense yellow
O = orange
OOO = very intense orange
R = reddish tint
RR = very red
S = black or sulfonation

colostrum. (1) The first secretion of the mammary glands, consisting of a thin milk. (2) A deep orange-colored fat, m.28–38, similar to lard, obtained from top milk by the action of 3–4 times its volume of HCl (d.1.12) at 92°C for 1½ hours.

columba. Calumba.

columbate. Niobate. A salt of the type $MCbO_3$ or $M_2O.Cb_2O_5$; as $NaCbO_3$, sodium c., and $Ag_2O.Cb_2O_5$, silver c. They often form complexes; thus $Na_8Cb_6O_{19}$ from sodium c.

columbian spirits. Methanol.

columbic. A compound containing pentavalent columbium=Cb≡(niobic=Nb≡). **c. acid.** (1) $HCbO_3$ = 142.1. An insoluble white powder derived from Cb_2O_5; soluble in alkalis forming complex columbates. (2) The compound $3Cb_2O_5.4H_2O$, which gives the acid $H_8Cb_6O_{19}$.

columbin. $C_{21}H_{22}O_7$ = 386.2. A glucoside from the root of *Jateorrhiza calumba.* Yellowish crystals, m.182, soluble in alcohol, chloroform or ether, sparingly soluble in water; it is a bitter tonic.

columbite. The mineral $(Fe,Mn)(Cb,Ta)_2O_4$. Cf. *tantalite.*

columbium. Cb = 92.91, or niobium (Nb). A metallic element, atomic no. 41, discovered in 1801 by C. Hatchett in columbite, a mineral named in honor of America. In 1802 A. G. Ekeberg isolated a new metal from yttrotantalite, a mineral of Sweden. The elemental nature was not clearly recognized until 1844 when H. Rose isolated from a columbite of Bavaria two metals, called niobium and peloponium. Niobium proved to be an element and peloponium a mixture of tantalum and columbium. It is a steel-gray shining metal, d.8.4, m.1950, which forms two series of compounds: columbous (valency of 3) and columbic (valency of 5), and belongs to the fifth sub-group of the periodic system. Columbium compounds are not technically important and are little known. **c. bromide.** $CbBr_5$ = 492.68. Purple-red crystals, decomp. by water. **c. chloride.** (1) $CbCl_3$ = 199.47. Columbous chloride, niobous chloride. Violet crystals, soluble in water. (2) $CbCl_5$ = 270.3. Columbic chloride, columbium pentachloride, niobic chloride, niobium pentachloride. Yellowish hygroscopic crystals, d.2.75, m.194, b.240, decomp. in air, water, or alcohol to form HCl. **c. fluoride.** CbF_5 = 188.1. Niobic fluoride. Colorless monoclinic prisms, d.3.293, m.72, b.220, hydrolysed in water. **c. hydride.** CbH = 94.1. A black powder, d.6.4, decomp. when heated. **c. minerals.** Columbium occurs with titanium and usually, the rare earth metals: columbite, $FeCb_2O_6$; tantalite, $(Fe,Mn)(Ta,Cb)_2O_6$; samarskite, $(Fe,Ca,UO_2)_3(Y,Ce)_2(Ta,Cb)_6O_{21}$. **c. oxalate.** $Cb(HC_2O_4)_5$ = 538.34 Monoclinic colorless crystals, decomp. by water. **c. oxide.**

(1) CbO = c. monoxide (or Cb_2O_2 = c. dioxide)
(2) Cb_2O_3 = c. trioxide
(3) CbO_2 = c. dioxide (or Cb_2O_4 = c. tetroxide)
(4) Cb_2O_5 = c. pentoxide

(1) CbO = 219.10, insoluble in water or acids, d.6.5. (2) Cb_2O_3 = 454.2, insoluble in all solvents except HF. (3) CbO_2 = 125.10. A black insoluble powder. (4) C. pentoxide. **c. oxybromide.** $CbOBr_3$ = 348.85. Columbyl bromide. Yellow crystals, hydrolysed in water. **c. oxychloride.** $CbOCl_3$ = 215.47. Columbyl or columboxy chloride. Colorless needles, subliming 400, and hydrolysing in water. **c. pentoxide.** Cb_2O_5 = 266.2 (Nb_2O_5). Columbic acid, niobic acid, niobium pentoxide, columbic oxide, niobic oxide. A white microcrystalline powder, d.4.61, m.1520, which becomes yellow on heating; insoluble in water or acids, soluble in HF. **c. potassium fluoride.** $CbOF_3.2KF.H_2O$ = 300.32. Columboxy potassium fluoride, niboxy potassium fluoride. White, shining scales, very soluble in water.

columbo. Calumba. **American-** Fraserin.

columbous. A compound of trivalent columbium Cb ≡, (niobous, Nb ≡).

columboxy. A compound of pentavalent columbium containing the trivalent radical CbO≡ (nioboxy, NbO≡).

columbyl. Columboxy.

column. A pillar. **c. still.** A still for fractional distillation.

colza. Rape seed oil.

comanic acid. $C_5H_4O_4$ = 140.1. Pyrone-α-carboxylic acid. An acid derived from chelidonic acid, slightly soluble in water, m.250.

combination. (1) The union or mixing of two or more substances; to form a new substance. (2) A chemical reaction in which two elements combine and form a binary compound, or two binary compounds combine and form a complex compound. This usually involves oxidation or reduction. **molecular-** The union or aggregation of molecules by chemical or coordinate bonds (q.v.); as,

1. *equilibrium* c. of two molecules of odd molecular number; *e.g.* free radicals, q.v.
2. *irreversible* c. or polymerization; *e.g.*, paraformaldehyde. Cf. *condensation.*
3. *reversible* c. or association; *e.g.* hydrone (q.v.). Cf. *liquids, bonds.*

c. principle. The frequency (q.v.) of a radiation may be represented by the difference between two terms.

combining. Uniting or joining together. **c. weight.** Equivalent weight.

combustible. Inflammable. **c. gases.** The fuel gases used in industry; as, hydrogen, hydrocarbons, carbon monoxide and their mixtures.

combustion. Burning, or a chemical change accompanied by the liberation of heat, sound or light, or all three. **fractional-** q.v. **heat of-** See under *heat.* **organic-** The decomposition of organic compounds, and the collection of the combustion products (see *elementary analysis*). **slow-** (1) The slow oxidation of a substance. (2) The combination of two gases by means of a heated wire. **spontaneous-** (1) Accelerated combustion effecting a sudden outburst of heat and light (explosion). (2) Self-ignition, q.v. **wet-** Oxidation by means of strong oxidizing agents; as, sulfuric acid-dichromate mixture.

c. boat. A small tray of refractory material (porcelain, alundum, platinum) used in quantitative elementary analysis for burning organic compounds in a combustion tube. **c. capsule.** A small crucible of porcelain used in coal analysis. **c. furnace.** A heating appliance used in the elementary analysis of organic compounds, consisting of a row of six, or more bunsen burners with a gutter in which the combustion tube is placed, and side tiles for regulating the temperature. **c. train.** The arrangement of apparatus in elementary organic analysis: usually hydrogen, oxygen, and air tanks, potash bulb, calcium chloride tube, combustion tube and furnace, potash bulb, and calcium chloride or sulfuric acid tube. **c. tube.** A wide glass, silica, or porcelain tube, resistant to high temperatures. **c. tube furnace.** (1) C. furnace. (2) An electrically-heated spool used for combustion work.

comenamic acid. $C_6H_5O_4N$ = 155.1. $C_5H_2(OH)O(NH)COOH$. Colorless crystals.

comenamide. $C_6H_5O_4N$ = 155.1. $C_5H_2(OH)O_2.CONH_2$. Colorless crystals.

comenic acid. $C_6H_4O_5$ = 156.03. Colorless crystals derived from meconic acid.

comminute. To bring to a fine state of division.

comminution. The process of grinding or breaking into small fragments, *e.g.*, cutting, rasping, grating, slicing, levigating, pulverizing, triturating, etc. Cf. *chopper, grinder, crusher, powderizer, mill.*

common salt. Sodium chloride.

commutator. A device for interrupting or reversing an electric current (*e.g.*, the mercury or Pohl commutator). **dynamo-** A transformer of alternating current into direct current, attached to a dynamo.

comolised. Highly aggregated.

comosic acid. An acid substance derived from the bulbs of *Muscari comosum*, a Liliaceae.

comparator. (1) An electrical device for the calibration of alternating current instruments. (2) See *colorimeter.*

comparison spectroscope. A spectroscope in which two different spectra can be produced simultaneously side by side.

comparison tubes. A set of test tubes of the same diameter, used in colorimeters for the comparison of colors.

comparoscope. A device attached to a microscope for comparing two different slides simultaneously.

compatibility. The non-impairment of the respective properties of two or more drugs when administered together. **in-** The impairing influence of two or more substances on each other when mixed; *e.g.*, acids and bases, or substances which form an insoluble precipitate. Cf. *incompatible.*

compatible. Applied to a pair of drugs which do not interfere or react chemically, physically or therapeutically with one another.

compensation apparatus. Potentiometer.

complement. (1) Supplying a missing part. (2) Alexin, cytase, end-body. A thermolabile substance having a haptaphore and zymophore group, the later acting destructively on the cell (see *Ehrlich's side chain theory*). (3) The difference between an acute angle and 90°. **c. fixation.** Complement deflection, complement deviation. The combining of the zymophore group of the complement to make it inert. The reaction product obtained by adding to a hemolytic serum a serum containing an antibody and corresponding antigen (*Ehrlich's side chain theory*). This principle is utilized in a number of diagnostical tests, *e.g.*, Wassermann reaction, Abderhalden test, etc.

complementary color. See *colour.* **c. c. screens.** (1) Copper ruby glass (red) and copper glass (blue); (2) uranium glass (yellow) or chromium glass (greenish yellow) and cobalt glass (blue). See *color.*

complex. Complicated, not simple. **c. acid.** A combination of two or more non-metallic compounds or acid radicals, *e.g.*, of 2HF and SiF_4 to give H_2SiF_6. **c. compound.** A combination of two or more compounds or ions, *e.g.*, 4KCN and $Fe(CN)_2$ to give $K_4Fe(CN)_6$. **c. ion.** A complex electrically charged radical or group of atoms, *e.g.*, $Cu(NH_3)_2^{++}$. **c. reaction.** A chemical change in which two or more reactions take place simultaneously.

component. (1) An ingredient or part of a mixture (as distinct from the *constituent* of a compound). (2) The smallest number of chemical substances capable of forming all the constituents (q.v.) of a system in whatever proportion they may be present See *phase rule.*

Compositae. Composite family. A group of herbaceous or woody plants, rarely shrubs, with many florets arranged in compact heads as a compound flower on a common receptacle; as the dandelion, sunflower, etc. Many members of this family yield important drugs:

roots:	
Taraxacum officinale.....	dandelion, taraxacum
Cichorium intybus.....	chicory
Anacyclus pyrethrum.....	pellitory, pyrethrum
Inula helenium.....	elecampane, inula
Arctium lappa.....	burdock root, lappa
Polymnia uvedalia.....	bearsfoot
Lactuca virosa.....	lactucarium
Echinacea angustifolia...	echinacea
Arnica montana.....	arnica root
Cnicus arvensis.....	Canada thistle, enicin
leaves:	
Erechthites hieracifolia...	firewood
Pterocaulon pycnostachyon	black root
Ambrosia artemisiaefolia.	ragweed
Xanthium strumarium...	cocklebur
Tanacetum balsamida....	tanacetum
herbs:	
Eupatorium perfoliatum..	eupatorium
Eupatorium purpureum..	queen of the meadow
Grindelia species.....	grindelia
Tanacetum vulgare.....	tansy
Artemisia absinthium....	wormwood
Artemisia tridentata.....	sage brush
Erigeron species.....	fleabane
Gnaphalium polycephalum	life everlasting
Helenium autumnale.....	sneezewort

Achillea millefolium	yarrow
Tussilago farfara	coltsfoot
Cnicus benedictus	blessed thistle
Silphium laciniatum	rosinweed
Rudbeckia laciniata	thimble weed
Bidens bipinnata	Spanish needles
Senecio aureus	ragwort
Solidago odora	golden rod
Lactuca species	lettuce
Matricaria parthenium	feverfew
Anthemis cotula	wild chamomile
Veronica nigritiana	vernonine
flowers:	
Matricaria chamomilla	German chamomile
Anthemis nobilis	English chamomile
Artemisia pauciflora	Levant wormseed
Calendula officinalis	marigold
Carthamus tinctorius	safflower
Pyrethrum species	insect powder
seeds:	
Helianthus annuus	sunflower seeds
fruits:	
Arctium lappa	burdock fruit
juice:	
Lactuca virosa	lactucarium

composition. The elements or compounds which enter into a material or which are produced from it by analysis. Cf. *constitution; e.g.* we know the *composition* of glass, but not its *constitution.*

compost. A mixed organic manure produced by the natural decomposition of waste organic matter.

compound. (1) A substance whose molecules consist of unlike atoms, and whose constituents cannot be separated by physical means. A compound differs from a physical mixture by reason of the definite proportions of the constituent elements (a proportion which depends upon their atomic weights), by the disappearance of the properties of the constituent elements and the appearance of entirely new properties characteristic of the compound. (2) To mix drugs, or make up a prescription. **acyclic-** An organic compound in which the carbon atoms are arranged in an open chain. **addition-** A compound formed by the union of two simpler or binary compounds: $NH_3 + HCl = NH_4Cl$; or $K_2O + SO_3 = K_2SO_4$. **additive-** A c. formed by the saturation of double or triple bonds; as, $CH_2Cl.CH_2Cl$ from $CH_2:CH_2$. **aliphatic-** An acyclic compound or paraffin; *e.g.*, the methane series. **amino-** An organic compound containing the NH_2— radical. **aromatic-** An organic c. in which the carbon atoms form a ring or closed chain, *e.g.*, benzene series. **asymmetric-** A c. containing one or more optically active carbon atoms. **azo-** An organic c. containing the —N:N— group. **binary-** A c. whose molecules consist of only two kinds of atoms, *e.g.*, NaCl, $FeCl_3$, CH_4, C_6H_6, etc. **carbon-** See *organic c.* **chain-** A cyclic compound. **closed chain-** Aromatic compound. **coal tar-** C. derived from coal tar, especially aromatic organic c. **condensation-** A c. formed by the union of two or more molecules, especially organic compounds, in which one or more molecules of water are usually liberated. **coupling-** A c. which serves as a substitute for some other atom, generally hydrogen. Cf. *anhydrosynthesis, derivative.* **cyclic-** Aromatic compound. **diazo-** A compound containing the divalent —N:N— group. **endothermic-** A c. formed with the absorption of heat; they are usually unstable (explosive) and liberate heat on decomposition. **exothermic-** A c. formed with the liberation of heat. Such compounds are usually stable, and their decomposition requires energy. **fatty-** Aliphatic c. **homocyclic-** An aromatic c. containing only carbon atoms in its ring, *e.g.*, benzene, naphthalene. **heterocyclic-** An aromatic c. containing other atoms besides carbon atoms (N, O, S, P, etc.,) in its ring, *e.g.*, pyridine, quinoline, etc. **index-** A c. from which another is derived by substitution; thus methane is the i. c. for chloromethane, nitromethane, formic acid, etc. **inorganic-** C. containing no carbon atoms. The majority of inorganic compounds (mineral acids, mineral bases, and metallic salts) are polar, *e.g.*, ionize in solution, and consist of electro-positive and electro-negative parts. **metameric-** Metamers. **molecular-** (1) Addition c. (2) See *combination, associaton, polymerization.* **nonpolar-** A more or less unstable compound consisting of elements having weak electrical forces, *e.g.*, carbon compounds. See *compounds.* **open-chain-** Aliphatic compounds. **organic-** Compounds containing carbon and hydrogen atoms, with or without other atoms in the molecule. The majority are nonpolar, *e.g.*, they have no distinctly positive or negative part, and do not ionize (except the metallic salts of organic acids). **organo-metallic-** Organic c. in which a hydrogen atom (or atoms) is replaced by a metal, *e.g.*, zinc diethyl $Zn(C_2H_5)_2$, cacodyl. **paraffin-** A saturated aliphatic hydrocarbon. **polar-** Fairly stable compounds consisting of elements of strong electro-motive force, *e.g.*, NaCl, $CuSO_4$, etc. See *compounds.* **quarternary-** (1) A compound whose molecule consists of four different kinds of atoms, *e.g.*, $NaHSO_4$, $NaAl(SO_4)_2$. (2) A combination of a fully substituted ammonium radical with a halogen, *e.g.*, tetra-ethyl ammonium iodide, $N(C_2H_5)_4.I$, (analogous to NH_4I). **ring-** See *aromatic c.* **series of-** Compounds containing the same positive or negative radical. Many metals have two or more series of compounds, *e.g.*, ferrous compounds, ferric compounds, and ferrates. Nearly all non-metals form two or more series of compounds, *e.g.*, sulfides, sulfites, sulfates, etc. **saturated-** A carbon c. in which all the bonds of carbon are satisfied, hence, compounds containing no double or triple bonds. **spiro-** An organic ring compound in which one carbon atom is common to two rings. **stable-** A compound which does not readily decompose, and which resists the influence of heat and other agents. **substitution-** A compound formed by the replacement of certain atoms by other atoms or group of atoms. Thus C_6H_5Cl is a substitution compound of C_6H_6; $C_6H_6Cl_2$ is an addition compound of C_6H_6. **sulfur-** A c. containing sulfur, especially organic compounds containing divalent sulfur. **ternary-** A c. whose molecules consist of three different kinds of atoms, *e.g.*, KCN, $Fe_2(SO_4)_3$, $C_6H_{12}O_6$. **tertiary-** Ternary c. **unsaturated-** A carbon compound which contains one or more double or triple bonds. **unstable-** A c. which readily decomposes.

c. ethers. Esters. **c. microscope.** See *microscope.* **c. molecule.** A molecule consisting of two or more kinds of atoms, (as H_2S), thus differing from an elementary molecule which consists of only one type of atoms (*e.g.*, H_2). **c. protein.** See *conjugate protein.*

compounds, classes of. Cf. *bonds*

A *Polar* Compounds which	B *Nonpolar* Compounds which
(a) ionize and conduct an electric current (electrophils)	(a) do not ionize and do not conduct an electric current.
(b) are very reactive	(b) are relatively inert
(c) associate, and form double molecules and complex ions.	(c) do not associate, but may polymerize to complex molecules.
(d) possess a condensed structure.	(d) possess a frame structure.
(e) exhibit tautomerism.	(e) exhibit isomerism.
(f) have a high dielectric constant.	(f) have a low dielectric constant.
(g) are generally known as inorganic substances.	(g) are generally known as organic substances.

compral. Cyrinal. A brand of pyramidon and trichloroethanol urethane; used as an analgesic.

compressed gases. A gas that is pumped at high pressure into a steel cylinder for shipment. The gases used in industry and their relative importance are shown by the following statistics (1922) of American manufacturers

INDUSTRIAL COMPRESSED GASES

Name	Number of cylinders in use	Shipping regulations	
		Spec.	Label
Acetylene	2,500,000	8	red
Ammonia	200,000	4	green
Air			green
Argon	1,000	3a	green
Blaugas	c	3.7	red
Carbon dioxide	500,000	3	green
Chlorine	20,000	25	green
Coal gas	c	3.7	red
Helium	80,000	3a	green
Hydrocarbon	c	3.7	red
Hydrogen	200,000	3a	red
Hydrocyanic acid	a	33	green
Methyl chloride	1,000	25	green
Neon	1,000	3a	green
Nitrogen	b	3a	green
Nitrous oxide	50,000	3	green
Oxygen	1,500,000	3a	green
Petroleum gas	c	26	red
Phosgene			red
Pintsch gas	c	3.7	red
Sulfur dioxide	10,000	25/27	green

a. Transported in tank trailers by automobile.
b. Not usually filled in cylinders.
c. Fuel gases are used in cylinders under various trade names: calorine, carbo-hydrogen, coal-gas, gasol, kutting-gas, pyrogen, thermoline, etc., Cf. *cylinders.*

compressibility. The resistance offered by substances to high pressure. **coefficient of-** See *coefficient.* Cf. *piezometer.*

Compton, Arthur Holly. 1892– . American physicist and Nobel prize winner (1927). **C. Karl Taylor.** 1887– . An American physicist noted for atomic research. **C. effect.** Scattered homogeneous x-rays give rise to a change of wavelength which depends on the direction of observation. It corresponds with fluorescence. Cf. *Raman effect.* **C. rule.** The atomic weight (A) multiplied by the heat of fusion (h) and divided by the absolute melting point (T) gives the number 2; hence, $Ah/T = 2$.

conalbumin. A noncrystalline albumin of egg white.

conamarin. A glucoside from the root of hemlock, *Conium maculatum*, an Umbelliferae. Cf. *conine.*

concanavalin. A globulin from jack beans.

concave. Presenting a depressed or hollow surface. **c. lens.** See *lens.* **c. mirror.** See *mirror.*

concentrate. (1) In chemistry: To increase the strength by reducing the amount of unwanted material. (2) In physics: To bring to one point or center.

concentration. (1) In chemistry: a. Increasing the amount of a dissolved substance either by evaporation or adding more of the substance. b. The strength of a solution, and the mass per unit volume, as in molal-. C. is commonly expressed as

percentage, %, or gm. per 100 cc.
molarity, M, or moles per liter.
molality, *M*, or moles per 1000 grams.
normality, N, or equivalents (in grams) per liter.

(2) In physics: Gathering together that which is diffused, *e.g.*, light, sound, or heat. **absolute-** The c. of the active ion of a substance; *e.g.*, the H^+ of an acid. **hydrogen-ion-** The number of hydrogen ions in grams per liter. This indicates the acid or alkaline reaction of a solution (see *hydrogen ion*). **ionic-** The number of gram-ions in a unit volume of solution. These indicate the degree of ionization. **molal-** The number of moles (gram molecules) in a unit volume (liter) which, in the case of gases, is expressed in terms of their pressures; in the case of solutions by concentration proper, and abbreviated as M-solution. (Cf. *molality.*) **normal-** The number of equivalent moles per liter. It is abbreviated as N-solution.

c. limit. The maximum dilution of a substance at which it may be detected by a particular chemical reaction.

concentrator. A mechanical device for increasing the percentage of a substance or diminishing the bulk of a material by the elimination of the inert matter. Cf. *separator.*

concentric. Describing a number of rings which have a common center.

concha. A shell.

conche. Four shell-like pots with granite bottoms and heavy rolls; used in chocolate manufacture.

conching. The rolling of chocolate mixtures from a few hours to seven days, to develop flavor and mildness.

conchinine. Quinidine.

conchiolin. $C_{30}H_{48}O_{11}N_8$ = 710.8. A protein from the shells of molluscs, resembling keratin.

concrete. A mixture of gravel, broken rock, and sand held together by cement (q.v.).

condensation. (1) Conversion to a more compact form. (2) Transformation from the gaseous to the liquid state. (3) A union and combination of similar molecules to form a more complex compound (polymerization, etc.). (4) A union of like or unlike molecules, usually with elimination of one or more molecules of water, HCl, or

alcohol, etc.; as, $6HCHO + 4NH_3 \rightarrow C_6H_{12}N_4 + 6H_2O$, and $2CO(NH_2)_2 \rightarrow C_3H_3N_3O_2 + NH_3$. (5) An accumulation of electrons, *e.g.*, in a condenser. (6) The formation of a pencil of parallel or convergent light rays from convergent rays, *e.g.*, by means of a concave mirror or a convex lens.

condensed. (1) Reduced in volume. (2) Liquefied from a gas or vapor. **c. nucleus.** See *nucleus*.

condenser. (1) A device which concentrates matter or energy. (2) An apparatus for cooling vapors to liquids, *e.g.*, Liebig-, Squibb-, etc. (3) A device for the polymerization of organic compounds. (4) A series of insulated conductors for the accumulation of electricity (see *electrical-*). (5) An optical instrument or arrangement of lenses or mirrors, *e.g.*, Abbé-. **Abbé-** See *Abbé*. **bull's eye-** A convex lens, which concentrates the light upon the mirror of a microscope. **electrical-** An electrical device for storing electrons; it consists of sheets of tin foil separated by paraffin, with the alternate tin foils connected to a common terminal. A microfarad condenser contains about 3600 sq. in. of tin foil. **high potential-** A series of alternating brass sheets and glass plates in an oil-filled box, used in high-frequency experiments, wireless telegraphy etc. **Kjeldahl-** A series of tubes arranged in a water cooled box for condensing. Used in nitrogen determinations. **Liebig-** A water-cooled tube attached to a flask or retort. Generally two straight glass tubes, one in the other. Cold water passes through the outer, and the vapor to be condensed passes through the inner tube. **paraboloid-** q.v. **reflux-** q.v. **substage-** Abbé-.

c. flask. A large spherical flash mounted and filled with liquid; used to absorb the heat from a source of light and to concentrate its intensity. **c. tube.** The inner tube of a condenser.

condiment. A spicy or stimulating vegetable product; used for its flavor and not its food value; as, spices, q.v.

condistillation. The separation of organic substances by distilling with another liquid (*e.g.*, hydrocarbons). Cf. *steam-distillation*.

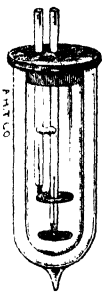
conductance. (1) The capacity to convey energy, as heat or electricity. (2) The ratio between an electric current flowing through a unit cube and the difference in potentials between its ends; hence, the reciprocal of resistance, q.v.

CONDUCTIVITY

Electrical	Metal	Thermal (relative)
681,200	silver	1.000
640,600	copper	.7198
468,000	gold	.7003
324,000	aluminum	.3435
186,000	zinc	.2653
146,000	cadmium	.2213
144,200	nickel	.1420
141,000	iron	.1665
91,200	platinum	.1664
76,600	tin	.1528
50,400	lead	.0877
27,100	antimony	.0542
10,630	mercury	.0148
9,260	bismuth	.0177

conduction. The property of transmitting or passing along matter or energy. **air-** C. by a current of air. **electrolytic-** The passage of electrons by means of ions. **sound-** The passage of sound waves in air. **thermal-** The transmission of heat by materials.

conductivity. (1) The degree of conduction; the capacity for transmitting electricity, heat, light, or sound. (2) The quantity of electricity transmitted per unit area per unit potential gradient per unit time, Λ. **coefficient of-** See *coefficient*. **electrical-** See *electrical*. **equivalent-** The ratio of the measured specific c. to the number of gram equivalents of salt in 1 cc. solution. Cf. degree of *ionization*. **heat-** Thermal-. **limiting-.** The c. of a solution at infinite dilution, *i.e.*, when ionization is complete. **molal-** or **molecular-** The c. in reciprocal ohms[1] of a solution containing 1 mol[1] of solute placed between electrodes 1 cm. apart, *i.e.*, the specific c. multiplied by the number of cc. containing 1 mol of solute. **specific-** The reciprocal, in mhos. of the specific resistance of an electrolyte. **super-** The abnormally high conductivity of metals at temperatures near absolute zero. **supra-** Super-c. **thermal-** The number of gram calories passing through a 1 cm. cube in 1 second for a temperature difference of 1°C. **unilateral-** See *valve effect*. **unit of-** Mho., the reciprocal ohm; ohm^{-1}.



Conductivity cell.

c. apparatus. A device for determining the conductivity of solutions, and consisting of conductivity cell, constant temperature bath, slide wire bridge, and telephone with resistance box, thermometer, and other accessories. **c. cell.** A glass vessel containing two electrodes at a definite distance apart, and filled with a solution whose conductivity is to be determined. *E.g.*, Arrhenius-, Hildebrand-, Kohlrausch-, Nernst-, Ostwald-, etc. See fig. **c. bridge.** A modified Kelvin bridge for measuring very low resistances, in which the conductivity is read as a percentage directly from the slide wire. **c. water.** The purest water obtainable; its specific conductivity is 0.4×10^{-6} $ohms^{-1}$ $cm.^{-1}$ in a vacuum, at 18°C. (Kohlrausch and Heydweiller.) Cf. *water*.

conductometric. Pertaining to conductivity measurements. **c. analysis.** Quantitative analysis or titration in which the progressive change in conductivity is used to determine the end-point of the reaction. Cf. *potentiometric titration*.

conductophore. The molecular structure associated with the property of connecting a toxophore (q.v.) with protoplasm.

conductor. A medium which has the property of conduction. **electrical-** Metals, solutions of salts, molten substances, or ionized gases which transmit electrons, or allow an electric current to pass (as opposed to insulators or non-conductors). **non-** See *insulator*.

condurangin. A glucoside from condurango bark. **alpha-** $C_{20}H_{32}O_6$ = 368.3. A white powder, insoluble in water, m.60. **beta-** $C_{18}H_{28}O_7$ = 356.3. An amorphous yellowish powder, soluble in alcohol, sparingly soluble in

ether, chloroform, or water; used as stomachic and astringent.

condurango. Candurangu, condorvine. The vine, *Gonolobus condurango*, an Asclepiadaceae of Columbia, from which a valuable bark is obtained. **c. bark.** The bark of condurango; used for cancer, as a bitter tonic and stomachic.

conduransterin. $C_{30}H_{50}O_2$ = 442.5. A principle from condurango bark.

Condy's fluid. A liquid disinfectant which, it is claimed, produces ozone during oxidation.

cone. A body having a circular base and tapering to a point. **filtering-** A hollow cone made of porous material, *e.g.*, alundum, which fits into a funnel or other support. Used for rapid filtration of solutions. **measuring-** A slightly-tapered ruler used for measuring the inside diameters of holes or tubing. **pyrometer-** Seger cone, q.v. A small pyramid of varying composition which has a definite melting point; used in ceramics, and pyrometry. **Seger-** Pyrometer cone.

conessine. $C_{24}H_{40}N_2$ = 356.5. Wrightine. An alkaloid from the bark of *Wrightia zeylanica*, an Apocynaceae of Ceylon. It occurs in colorless, deliquescent needles, m.121, slightly soluble in water, soluble in alcohol, ether or chloroform; used as astringent and anthelmintic.

configuration. The spatial relationship of the atoms in a molecule. Thus dextrose and levulose differ in *structure* but coincide in c. with respect to the three asymmetric carbon atoms. Dextrose, mannose, galactose, idose, talose, etc. (*d-* and *l-* form of each) coincide in *structure* but differ in *c.* Cf. *structure, atomic radius.* **electronic-** Constellation.

congealing. (1) Freezing. (2) The setting of cement or the solidification of a liquid. **c. point.** The temperature at which a liquid or solution freezes.

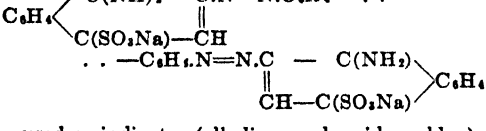
congelation. Freezing, solidification. The transformation from the liquid to the solid state, either by low temperature, by hydration, or by chemical reactions.

conglomerate. An aggregation or a mass of units, which are heaped together.

conglutin. A protein from the seeds of blue lupin, almond, or other leguminous plants. It contains 51.13 % C, 6.86 % H, 18.11 % N, 0.32 % S, 23.10 % O.

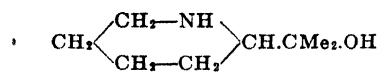
conglutinin. A protein of beef serum which causes the clumping of blood cells. (See *agglutinin.*)

congo-blue. Trypan blue. **c. paper.** A filter paper stained with congo red solution. **c. red.** $C_{32}H_{22}O_6N_6S_2Na_2$. Benzidine disazo-*m*-amino-benzene-sulfonic acid-*1*-naphthylamino-*4*-sulfonate of sodium. A red azo-dye,

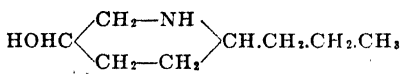


used as indicator (alkalis = red; acids = blue); and for the detection of free mineral acids in presence of organic acids. **c. solution.** A solution of 1 gm. congo red in 90 cc. water and 10 cc. alcohol. **c. yellow.** $C_{14}H_{12}O_4N_2SNa$. An orange-yellow dye.

conhydrine. $C_8H_{17}ON$ = 143.2. Conydrine, oxyconiine, hydroxyconiine, α-methyl-2-piperidineëthanol.



An alkaloid from the seeds of *Conium maculatum* (poison hemlock). Colorless crystals, m.98, b.230, soluble in water, alcohol, ether, or chloroform. It is a narcotic, antiseptic and anodyne. **pseudo-** *2*-α-hydroxypropylpiperidine. Colorless crystals, m.118, b.220, soluble in alcohol, water or ether.



conic acid. Coniic acid.

coniceine. $C_8H_{15}N$ = 125.13. α-. A colorless liquid, d.0.893, m.−16, b.158. β-. *2*-Allylpiperidine. White needles, d.0.852, m.40. b.168. γ-. *1.2.3.4*-tetrahydro-*6*-propyl pyridine. Colorless liquid, d.0.872, m.−50, b.172. δ-. Piperolidine. ε-. Methylconidine. Colorless liquid, d.0.8856, b.151.

conicic acid. Coniic acid.

conicine. Coniine.

Coniferae. Pinales; pine family. A group of trees or shrubs, usually with a resinous juice and awl or needle shaped leaves, which bear cones. It includes the old families Pinaceae and Taxaceae.

coniferaldehyde. Ferulaldehyde.

coniferin. $C_{16}H_{22}O_8.2H_2O$ = 378.2. A glucoside from the cambium of coniferous trees and asparagus. A grayish-white powder m.185, soluble in hot water, slightly soluble in alcohol. Used for the manufacture of vanillin. It hydrolyses to glucose and coniferol.

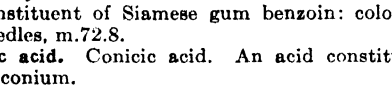
coniferol. $C_{10}H_{12}O_3$ = 180.1. Coniferyl alcohol, m-methoxy-p-oxystyrone. Colorless crystals, m.73, slightly soluble in water. It oxidizes to vanillin. Cf. *lignin.*

coniferyl. The radical $HO.(MeO)C_6H_3CH:CH—$. **c. alcohol.** Coniferol. **c. aldehyde.** Feruladehyde. **c. benzoate** $C_{17}H_{16}O_4$. The chief constituent of Siamese gum benzoin: colorless needles, m.72.8.

coniic acid. Conicic acid. An acid constituent of conium.

coniine. Conine.

conine. $C_8H_{17}N$ = 127.2. Cicutine, d-alpha-propylpiperidine, 2-propylpiperidine, coniine.



An alkaloid from the seeds of *Conium maculatum*, poison hemlock an Umbelliferæ. A yellow, oily narcotic liquid, d.0.862, m.−2.5, b.166, insoluble in water, miscible with alcohol or ether. Cf. *arthusine, conhydrine.* **hydroxy-** Conhydrine. **para-** Paraconine.

c. hydrobromide. $C_8H_{17}N.HBr$ = 208.01. White crystals, m.210, soluble in water, alcohol or chloroform; used as an antispasmodic and antineuralgic. **c. hydrochloride.** $C_8H_{17}N.HCl$ = 163.66. Colorless rhombic crystals, m.210–212, soluble in water or alcohol, insoluble in ether.

conium. The seeds of *Conium maculatum*, poison hemlock, an Umbelliferae. Used as a narcotic and sedative, as a fluid extract or tincture. Cf. *conine, conamarine.*

conjugate. Paired or coupled. **c. double bonds.** Two double bonds in the relative positions indi-

cated by the formula —CH=CH—CH=CH—.
4 3 2 1

They form additive compounds by saturation of the 1 and 4 carbons, so that a double bond is produced between the 2 and 3 carbons. **c. foci.** The anterior and posterior foci of a lens. **c. proteins.** Polypeptides or proteins which contain, in addition to amino acids, some other organic substance (prosthetic group); as,

conjugated protein:	*prosthetic group:*
hemoglobin	hematin
chlorophyll	ethiophyllin
nucleoproteins	nucleic acids
phosphoproteins	phosphoric acid
glycoprotein	chondroitin

conjugation. (1) The linking together of centers of unsaturation, as in conjugate double bonds. (2) The combination of large molecules (*e.g.*, proteins, polysaccharides) with some other compound.

consecutive. Following one another in an uninterrupted sequence or order. **c. position.** Adjacent position.

conservation. The preservation or protection from loss, decay, or deterioration. **c. of energy.** The principle that no energy is ever created or lost, but is always transformed into some other form of energy. Cf. *mass-energy cycle.* **c. of matter.** The principle that no matter is ever created or lost but is always transformed into some other form of matter, *e.g.*, the radioactive elements disintegrate, but form elements of lower atomic weight.

conservative. Preservative.

consistence. The viscosity or solidity of a fluid.

consistency. (1) The degree of solidity or fluidity. Cf. *dissipation, penetration.* (2) The percentage of solid matter in a mixture. (*E.g.*, of pulp.) **c. meter.** A device for determining the solidity of a semi-solid or syrupy substance, *e.g.*, gelatin, syrup, oils. It consists usually of a disk rotat-

PRIMARY CONSTANTS (by definition)

Quantity	*Symbol*	*Value*	*Error*
Atomic weight of oxygen	O	= 16.000	$\times 10^x$
Length of one meter	m	= 100 cm	
Mass of one cc. water at 4°C	gm	= 1.0000	
Density of water at 4°C	d_4°	= 1.0000	
Temperature of freezing water at 1 atm		0°C	
Temperature of boiling water at 1 atm		100°C	
Normal atmospheric pressure		760 mm Hg of d.13.5951	

BASIC CONSTANTS (by observation)

Velocity of light	c	= 2.99796×10^{10} cm $sec.^{-1}$	±.00004
Gravitational constant	G	= 6.664×10^{-8} $cm^3 g^{-1}$ $sec.^{-2}$	±.002
Electronic charge	e	= 4.770×10^{-10} e.s.u.	±.005
	e/c	= 1.5910×10^{-20} e.m.u.	±.0016
Electronic ratio	e/m	= 1.761×10^{7} e.m.u. g^{-1}	±.001
	(e/m)c	= 5.279×10^{17} e.s.u. g^{-1}	±.003
Faraday	F	= 9.6494×10^{4} coulombs	±.00005
Volume of 1 mole gas at 0°C and normal atmosphere	v_0	= 22.4141×10^{3} cm^3 $mole^{-1}$	±.0008
Absolute zero (ice-point)	T_0	= 273.18	±.03°K
Planck's constant	h	= 6.547×10^{-27} erg sec	±.008
Rydberg wave number	R_∞	= 109737.42 cm^{-1}	±.06

DERIVED CONSTANTS (by deduction)

Avogadro's number	N_0	= 6.064×10^{23} $mole^{-1}$	± 006
Loschmidt's number	n_0	= 2.705×10^{19} cm^{-3}	±.003
Gas constant	R_0	= 8.3136×10^{7} erg deg^{-1} $mole^{-1}$	±.001
	R_0'	= 1.9864 cal. deg^{-1} $mole^{-1}$	±.0004
	R_0''	= 8.246×10^{-2} liter. atm. deg^{-1} $mole^{-1}$	±.0009
	R_0'''	= 82.048 cm^3 atm. deg^{-1} $mole^{-1}$	±.009
Molecular gas constant	k_0	= 1.3708×10^{-16} erg	±.0014
Mass of hydrogen atom	m_H	= 1.6608×10^{-24} g	±.0017
Mass of electron	m_0	= 8.994×10^{-28} g	±.014
Mass of electron (*spectroscopic*)	m_0	= 9.035×10^{-28} g	±.010
Mass of alpha particle	m_α	= 6.597×10^{-24}	±.007
Distance nucleus to electron (*normal H*)	a_0	= 0.5284×10^{-8} cm	±.0004
Radius of Bohr (K) orbit (*normal H*)	a_0'	= 0.5281×10^{-8} cm	±.0004
Speed of electron (*normal H*)	v_0	= 2.1824×10^{8} cm sec^{-1}	±.0017

CONVENTIONAL CONSTANTS

Atmosphere, normal	A_n	= 1.013250×10^6 dyne cm^{-2}
Aberration constant		20.47″
Wavelength of red Cd line	λ_{Cd}	= 6438.4696 Å
Gravity constant, normal	g	= 980.665 cm sec^{-2}

EXPERIMENTAL CONSTANTS

Atomic weight of hydrogen	H	= 1.0078	
Grating space in calcite		3.028 Å.	
Liter	1	= 1000.027 cm^3	
Gram calorie (mean)	cal_m	= 4.186 joule	
British Thermal Unit (mean)	B.Th.u.	= 1054.8 joule	
International Ohm		1.00052 absolute ohm	±.00002
International Ampere		0.99995 absolute amp	±.00005

ing in the substance and driven by a constant force.

consistometer. An apparatus for determining the hardness or consistency of semi-liquids, and hard, brittle, bituminous materials. It consists essentially of a plunger dropping at a constant speed and force on to the material to be tested; the depth of penetration is measured.

consolute. (1) Any liquid or solution which is completely miscible with another liquid or solution. (2) Miscible in all proportions.

constant. (1) That which is unchangeable, permanent or invariable. (2) In physics: a property which remains numerically the same, and which may serve as a unit of measurement. (3) In mathematics: a quantity having a definite and fixed value. **basic-** The numerical value of a permanent property which can be directly determined. **cell-** Specific resistance. **conventional-** The numerical value of a physical property which is generally accepted as normal. **derived-** The numerical value of an unchanging physical property which is indirectly determined. **experimental-** The numerical value of a physical property determined by experiment and accepted as standard. See table.

c. proportion. A fundamental law of chemistry: Every chemical compound always contains the same percentage by weight of its constituent elements (Proust).

constantan. Constantin.

constantin. Constantan. An alloy of 60 % copper and 40 % nickel, d.8.4, m.1290; used in thermocouples.

constellation. The configuration or arrangement of electrons in a molecule which gives rise to certain properties; as in chromophore, fluorophore, pharmacophore, toxophore, osmophore and glucophore. Cf. *resonator*.

constituent. (1) Any one of the elements or parts of a compound (in contradistinction to the ingredients or *components* of a mixture). (2) Elements or compounds present in a system which are formed from the components (q.v.); thus, in the system

$$CaCO_3 = CaO + CO_2$$

there are three *constituents* ($CaCO_3$, CaO and CO_2), but only two *components*, as any two substances will determine the amount of the third.

constitution. The structure in which the elements are linked together or arranged in a material; *e.g.*, we do not know the *constitution* of glass, but we know its *composition*. Cf. *configuration*.

constitutional formula. See *formula*.

contact. (1) The touching of two or more bodies. (2) An electric switch. **c. action.** Catalysis. **c. difference.** Contact-potential. **c.-key.** An electrical switch. **c. potential.** The difference in potential of two metallic plates produced by their close contact. **c. process.** The catalytic manufacture of sulfuric acid from sulfur dioxide and oxygen. **c. series.** Electromotive series. **c. substance.** Catalyst.

container. See *shipping, storage*.

contamination. Infection occurring through contact, *e.g.* a bacterial culture is intentionally *infected* with bacteria when inoculated, but *contaminated* accidentally when another spore or mold develops in the culture.

contoured. An irregular, smooth, undulating surface like that of a relief map; used to describe bacterial cultures.

contractile. Capable of being drawn together.

contraction. (1) In chemistry: The drawing together of atoms in the molecule, depending partly upon their mutual electromotive forces. The contraction (C) is expressed by $[100 - (100M/A' - A'' \ldots)]$, where M is the molecular volume, A', A'', etc., the atomic volumes of the constituents. Thus C for the oxides of Na = 55.0, K = 61.0, Rb = 59.8, Cs = 58.4. (2) In physiology. The shortening of muscles in response to a stimulus.

contramin. $C_9H_{22}N_2S_2$ = 322.1. Diethylammonium diethylthiocarbamate, $NEt_2.CS.SNH_2Et_2$. A softener of fibrous tissue used in the treatment of chronic infections.

contrast. A comparison of two things by accentuating their points of difference. **c. stain.** A double stain, in which the special feature to be examined takes one color, all else another color.

contravalence. Covalence.

control. A blank test or standard; *e.g.*, an experiment performed simultaneously with another experiment in order to study the relative effects of different factors or conditions.

conus. Cone.

convallamaretin. $C_{20}H_{36}O_5$ = 404.4. A decomposition product of convallamarin.

convallamarin. $C_{23}H_{44}O_{12}$ = 512.4. A glucoside from *Convallaria majalis*, lily of the valley, a Liliaceae. A slightly yellow amorphous powder, soluble in water or alcohol; used as a cardiac stimulant and diuretic, as it increases arterial pressure similarly to digitalis.

CONVERSION FACTORS

LENGTH:	cm. × 0.3937 = inches	inch × 2.540 = cm.
	cm. × 0.0328 = feet	foot × 30.48 = cm.
	m. × 3.280 = feet	foot × 0.305 = m.
	m. × 1.093 = yards	yard × 0.914 = m.
	km. × 0.621 = miles	mile × 1.609 = km.
AREA:	sq. cm. × 0.155 = sq. inches	sq. in. × 6.452 = sq. cm.
	sq. m. × 10.764 = sq. feet	sq. feet × 0.093 = sq. m.
	sq. m. × 1.196 = sq. yards	sq. yard × 1.672 = sq. m.
	sq. km. × 0.386 = sq. miles	sq. miles × 2.59 = sq. km.
VOLUME:	cc. × 0.061 = cb. inches	cb. inch × 16.387 = cc.
	cc. × 0.0338 = Apoth. fluid ounces	Ap. fluid ounce × 29.574 = cc.
	1 × 1.0567 = quarts	quart × 0.946 = liters
	1 × 0.2642 = U. S. gallons	gallon × 3.785 = liters
WEIGHTS:	g. × 15.432 = grain	grain × 0.0648 = gm.
	gm. × 0.03527 = Av. ounces	Av. ounce × 28.349 = gm.
	gm. × 0.03215 = Ap. ounces	Ap. ounce × 31.103 = gm.
	kg. × 2.2046 = Av. pounds	Av. pound × 0.4536 = kg.
	kg. × 2.6792 = Ap. pounds	Ap. pound × 0.3732 = kg.

convallaretin. $C_{14}H_{26}O_3$ = 242.2. A resinoid from convallaria, used as an emetic.

Convallaria. Lily of the valley. The flowers and roots of *C. majalis;* used medicinally as an antispasmodic, sternutatory, and diuretic.

convallarin. $C_{34}H_{52}O_{11}$ = 646.6. A glucoside from the root of Convallaria. Colorless rectangular prisms, or amorphous yellowish powder, sparingly soluble in water, soluble in alcohol; used as a purgative.

convection. The transmission of heat by the rise of heated liquids or gases, and the fall of colder parts of liquid or gas which in turn become heated; hence, the currents or streams of liquids or gases set up in an unequally heated container.

convergent. Inclining towards each other or coming together at one point.

conversion. (1) The change from one isomer to another isomeric molecule. (2) The change from one unit or system of measurement to another unit or system of measurement. **c. factor.** A numeral by which a quantity must be multiplied in order to express that quantity in other units.

converter. A device used for changing (1) energy, or (2) matter into another form; as, (1) phase-c., or (2) a digester.

convex. A rounded or bulging exterior surface; opposed to concave. **c. lens.** See *lens.* **c. mirror.** See *mirror.*

convicin. $C_{20}H_{28}O_{16}N_6$ = 608.24. A hexose glucoside of pyrimidine, in *Vicia* species.

Convolvulaceae. A family of twining or trailing herbs, some of which have a milky juice:

Exogonium purga	jalap
Exogonium turpethum	turpeth
Ipomoea hederacea	kaladana
Ipomoea orizabensis	ipomoea
Ipomoea simulans	tamicin
Ipomoea pandurata	convolvulus
Convolvulus scammonia	scammony

convolvulin. $C_{31}H_{50}O_{16}$ = 678.5. Rhodeorhetin. A glucoside from jalap. A yellow amorphous mass, soluble in alcohol or chloroform; used as a drastic purgative.

convolvulinic acid. $C_{18}H_{30}O_3$ = 258.3. The acid $Me(CH_2)_5.CHOH(CH_2)_9COOH$, obtained from jalap resin. Colorless crystals, m.50.

convolvulinolic acid. Convolvulinic acid.

convolvulus. The root of *C. panduratus,* man root, a Convolvulaceae of North America; used as a diuretic and laxative.

convulsant. A drug which causes convulsions.

conydrine. Conhydrine.

conylene. C_8H_{14} = 110.10. 1.4-octadiene. A hydrocarbon derived from azoconhydrine.

conyrine. $C_8H_{11}N$ = 121.09. α-propyl pyridine. Colorless crystals, m.167, obtained by the reduction of conine with zinc dust.

Cook formula. The acetyl number (q.v.) A, is given by $A = \frac{S' - S}{1 - 0.00075S}$, where S and S' are the saponification values before and after acetylation.

Coolidge, William David. 1873– . An American physical chemist, noted for his development of x-ray devices. **C. tube.** (1) A modified x-ray tube in which the cathode is a tungsten spiral enclosed in a molybdenum tube. The quality of the x-rays depends on the electrically heated cathode. (2) Electron tube. A modified cathode tube with a thin nickel window and a cathode consisting of a wire made incandescent by a secondary electric current. On passing a high voltage across the highly evacuated tube, a stream of electrons will pass out of the window and produce effects similar to the β-rays of radium.

cooling. To deprive of heat; as, freezing, refrigeration. **air- C.** by means of air currents. **water- C.** by means of a stream of cold water.

Cooper Hewitt lamp. An incandescent mercury vapor lamp consisting of an exhausted glass tube, 3–4 feet long, which contains a small quantity of mercury and to which is applied an electric potential.

cooperite. A native platinum sulfarsenide containing 64 % Pt and 9 % Pd.

coordinate. Related to one another. **c. bond.** See *bond.* **c. paper.** A sheet of paper ruled with horizontal and vertical lines, used in drawing graphs and curves. **c. valence.** See *bond valence.*

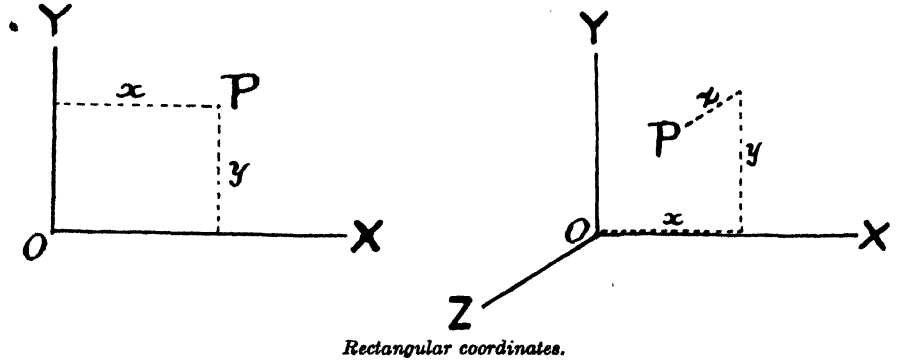
coordinates. Any system by which the position of a point, particle, object or star is defined by reference to base-lines or base-planes. Cf. *diagram, abscissa, ordinate.*

A. *Rectangular* c. (*Cartesian* c.) give the distances, x, y, of point P, from each of two or three perpendicular lines or planes, YOX, XOZ, ZOY.

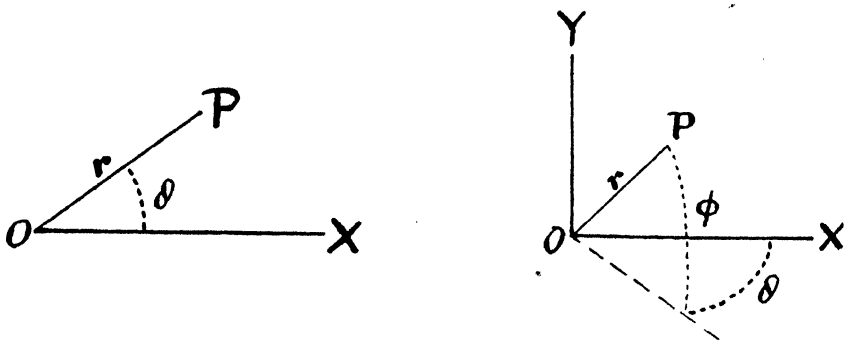
B. *Polar* c. give the distance, r, from the origin, O, with the angle, θ; or the latitude and longitude, θ and ϕ, on a sphere of radius r.

C. *Vector* c. A straight line in a definite direction, P, and of definite length, r.

coordination. The harmonious working together of parts of the same rank or order. **c. number.** The valence number of the central atom of addition compounds, indicating the number of molecules or atoms held by that atom. Carbon and related elements have a maximum of four, all other elements have generally a c. number

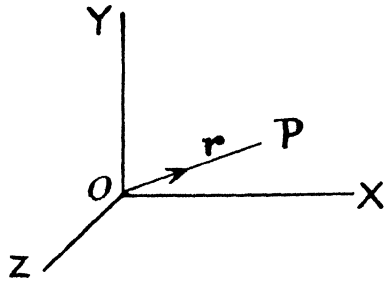


Rectangular coordinates.



Polar coördinates.

of six. Thus $[PtX_6]R_2$ or $[CrX_6]R_3$, where X may or may not be the same radical as R; the latter is usually a monovalent radical, while X is Br, Cl, CN, SCN, NO, NO_2, NH_3 or H_2O. Cf. *Werner's theory.*



Vector cooridnates.

copahene. $C_{20}H_{27}Cl$ = 302.7. Colorless crystals insoluble in water.

copahin. A resinoid from copaiba balsam.

copahuvic acid. Copaivic acid.

copaiba. Balsam of copaiba, copaiva. An oleoresin from various leguminous trees of tropical America, especially *Copaifera officinalis.* Grades: **Bahia-** refr. index 1.508, acid val. 110–150. **Maracaibo-** refr. ind. 1.517, acid value 120–160. **Maranham-** refr. ind. 1.515, acid value 140–170. **mixture-** q.v. **Para-** refr. ind. 1.510, acid value 100–160. Insoluble in water used as a stimulant, diuretic, and laxative.

c. oil. An essential oil distilled from c., d.-0.895–0.905, b.250–275; it contains sesquiterpenes. **c. resin.** The residue remaining after distillation. It consists mainly of copaivic acid.

copaiva. Copaiba.

copaivic acid. $C_{20}H_{30}O_2$ = 302.3. Copahuvic acid. A monobasic acid derived from the resin of copaiba.

copals. A group of hard resins from East Indies, South America and Africa, consisting of the exudations of various trees; they are used principally in varnish manufacture. **East African-** Animi resin. **fossil-** C. found in the ground at places where the trees yielding it have disappeared. This is the best and highest-priced c. **fresh-** Inferior c. gathered from living trees. **kauri-** Kauri gum. **Manila-** See *Manila.* **semifossil-** Copal collected from the ground near living trees.

c. balsam. Liquid ambar.

copalchi. The barks of *Strychnos pseudoquina, Croton niveus,* and other South American trees; used as a febrifuge.

copalin. Kopalin. The resin which exudes from the sweet-gum tree, *Liquidambar styraciflua.*

copel. An alloy of 55 % copper and 45 % nickel; used in thermocouples.

copellidine. $C_8H_{17}N$ = 127.15. aa_1-copellidine, 2-ethyl-6-methyl-piperidine. An artificial alkaloid, derived from piperidine.

copernik. An alloy of equal parts iron and nickel.

copiapite. Yellow copperas. The native compound $Fe_4S_5O_{18} + H_2O$.

copis. A white transparent shell from the Philippine Islands; used extensively in the manufacture of screens, windows, lamps, etc.

Coplin jar. A box-like glass vessel with inside perpendicular grooves for holding microscopical slides apart during staining.

copper. (1) Cu = 63.57. Cuprum. A metallic element, atomic number 29. An orange-colored, ductile, malleable metal, d.8.90, m.-1083, b.2840, insoluble in water, dissolved by nitric acid. It occurs in nature as metallic copper, oxide (cuprite), sulfide (copper-glance, chalcopyrite), or carbonate (malachite, etc.), and was known in prehistoric times (copper age). It is prepared or refined by electrolysis of crude copper in copper sulfate solution. Copper is mono- and di-valent, and forms two series of compounds:

+1: cuprous compounds, *e.g.*, CuCl
+2: cupric compounds, *e.g.*, $CuCl_2$.

The cupric compounds are more stable than the cuprous compounds; they are blue when hydrated, and white or grayish when anhydrous; they are poisonous and ionize in aqueous solution. Metallic copper is used extensively for wires, plates, coins, utensils, etc. and is a constituent of many alloys (brass, bronze, bell metal, gun metal, etc.). (2) A general term suggested for alloys containing 98 % or more of copper. **black-** Cupric oxide. **blue-** A native c. sulfide. **indigo-** Covellite. **peacock-, purple-** Dornite. **rose-** See *rosette.* **scale-** C. in thin flaskes. **silicon-** An alloy of 70–80 % Cu and 30–20 % Si. **wood-** Olivenite. **yellow-** Chalcopyrite.

c. aceto arsenite. Paris green. **c. alloys.** See table. **c. ammonium chloride.** See *cupric ammonium chloride.* **c. arsenite.** See *cupric arsenite.* **c. beaker.** A copper beaker or cup used in the laboratory. **c. blue.** Azurite. **c. bromide.** See *cuprous, cupric.* **c. carbonate.** Verditer. A native blue or green copper

COPPER ALLOYS

Cu.....	90 %	80 %	70 %	60 %	50 %
With	10 %	20 %	30 %	40 %	50 %
Ag.....	1035°	990°	945°	910°	870°

Zn.....	1040°(c)	995°(j)	930°(g)	900°(i)	880°

a = aluminum bronze
b = bronze, gun metal
c = brass
d = nickeline
e = bell metal
f = speculum metal
g = yellow brass
h = constantan
i = Muntz metal
j = Dutch metal

carbonate. Cf. *Bremen. basic-* See *cupric c.* **c. chloride.** See *cupric, cuprous chloride.* **c. crucible.** A small crucible of copper. **c. flask.** A 1000-cc. flask used in Kjeldahl determinations. **c. froth.** Tyrolite. A native copper arsenate. **c. funnel.** A funnel made of copper, used in pharmaceutical laboratories. **c. green.** A native pigment of lead chromate and c. oxide. **c. lazur.** Azurite. **c. minerals.** The chief ores of copper are native copper, sulfides, oxides and carbonates.

native copper	Cu
chalcocite	Cu_2S
covellite	CuS
chalcopyrite	$CuFeS_2$
chalmersite	$CuFe_2S_3$
cubanite	$CuFe_2S_4$
bornite	Cu_3FeS_4
carrollite	$CuCo_2S_4$
berzelianite	Cu_2Se
umangite	Cu_3Se_2
rickardite	Cu_4Te_3
weissite	Cu_5Te_3
domeykite	Cu_3As
algodonite	Cu_6As
whitneyite	Cu_9As
horsfordite	Cu_5Sb
enargite	Cu_3AsS_4
famatinite	Cu_3SbS_4
tennantite	$Cu_3As_2S_7$
tetrahedrite	$Cu_3Sb_2S_7$
klaprotholite	$Cu_6Bi_4S_9$
emplectite	$CuBiS_2$
bournonite	$CuPbSbS_3$
cuprite	Cu_2O
tenorite	CuO
nantokite	CuCl
chalcanthite	$CuSO_4.5H_2O$
brochantite	$Cu_4SO_4(OH)_6$
malachite	$Cu_2(OH)_2CO_3$
azurite (chessylite)	$Cu_3(OH)_2(CO_3)_2$
chrysocolla	$CuSiO_3.2H_2O$
dioptase	CuH_2SiO_4

c. mordant. Cupric sulfate or cupric acetate. **c. number.** The number of milligrams of copper obtained by the reduction of Fehling's or Benedict's solution by one gram of a carbohydrate. **c. orthosilicate.** Dioptase. Chrysocolla. **c. peroxide.** Cu_2O_3 and $CuO_2.H_2O$. A yellow powder, decomp. in water. **c. phosphide.** See *cuprous p.* and *cupric p.* Cu_5P_2. H_2O also exists. **c. shavings.** Small shavings of metallic c., used as a catalyst and in preparing cuprammonium reagent. **c. silicide.** Cu_2Si. A gray powder. **c. sulfate.** Cupric sulfate. **c. vitriol.** Cupric sulfate. **c. wire.** A wire of metallic c., used extensively as an electric conductor.

copperas. A native, crystalline ferrous sulfate, $FeSO_4$. **blue-** Cupric sulfate. **green-** Ferrous sulfate. **yellow-** Copiapite. **white-** Zinc sulfate.

copperon. Cupferron.

Coppet, Louis Cas de. 1841–1911. A French physicist. **C's law.** The reduction in the freezing point of a solution is proportional to the amount of dissolved substance. Cf. *Raoult's law.*

copra. The dried kernels of the coconut, from which coconut oil is expressed.

cupraol. A fat obtained from coconut oil.

coprecipitation. See *precipitation.*

coprolite. The fossil dung of prehistoric animals and a source of phosphates and fertilizers (25–30 % P_2O_5). Rounded lumps, 2–8 ins. in diameter occurring in small deposits throughout the world.

coprophilia. A group of bacteria living in feces and dung.

coproporphyrin. The coloring matter of bottom-fermentation yeasts.

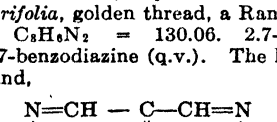
coprostanol. Coprosterol.

coprosterol. $C_{27}H_{48}O$ = 388.37. Dihydrocholesterol, stercorol; coprostanol. A saturated alcohol from feces; colorless crystals, m.98. Cf. *cholane derivatives.*

copro-yeast. See *yeast.*

coptine. A colorless, crystalline alkaloid from *Captis trifolia*, golden thread, a Ranunculaceae.

copyrine. $C_8H_6N_2$ = 130.06. 2.7-pyridopyridine, 2.7-benzodiazine (q.v.). The heterocyclic compound,



an isomer of phthalazine, quinazoline, and quinoxaline. **dibenzo-** See *dibenzocopyrine.*

corajo. Vegetable ivory. A hard, white substance from the tagud nut. Cf. *phytelephas.*

coral. The solid calcareous skeletons of the coral animal, *Polyps anthozoa;* it consists chiefly of calcium carbonate colored by ferric oxide. **c. bean.** Sophora. **c. root.** Crawley. The root of *Corallorhiza odontorhiza*, an Orchidaceae; a powerful diaphoretic.

corallin. (1) Peonin, aurine R. A coloring matter and dye derived from rosolic acid; insoluble in water, soluble in alcohol or ether. Used as a reagent and dye. (2) A pigment found in *Streptothrix* species. **c. solution.** A solution of 1 pt. c. in 10 pts. alcohol and 90 pts. water. It is an indicator for ammonia and weak bases, (alkalis—red; acids—yellow). **c. yellow.** Sodium rosolate.

corallinate. Rosolate.

coralline. (1) Corallin. (2) Rosolic acid.

corallite. Carrolite.

coramine. Nikethamide. A pyridine derivative used as cardiac stimulant.

corbefrin. Cobefrin.

corbyn. A glass bottle of 1200 cc. capacity, and shaped like a winchester (q.v.).

cord. A unit in the volumetric measurement of wood as logs. The volume occupied by an orderly pile of logs 8 feet long, 4 feet wide and 4 feet high, the logs being laid as near parallel to the ground and to one another as possible. It has therefore a maximum value of 128 cu. ft. (3.625 cu.m.), but is more usually 90 to 95 cu. ft. of solid wood because of the spaces between the logs. Cf. *cunit, board foot, fast meter.*

cordein. Methyl *cordol.*

cordial. (1) An elixir. (2) A liqueur.

cordierite. Iolite.

cordite. A smokeless, sporting powder consisting of 30–58 % nitroglycerin, 65–37 % nitrocellulose and 5–6 % mineral jelly.

cordol. $C_6H_4OH.COOC_6H_2Br_3$ = 450.82. Tribromsalol. A white, tasteless and odorless powder, insoluble in water, alcohol, or ether, soluble in chloroform or acetic acid; used as an intestinal antiseptic and hemostatic. **acetyl-** Cordyl, acetyltribromsalol. Fine, white needles. Analgesic, hypnotic, intestinal antiseptic and antispasmodic. **methyl-** Cordein methyltribromsalol. Colorless needles. Antiseptic and analgesic.

cordyl. Acetyl *cordol.*

core. The central part, *e.g.*, the iron rod of an induction coil.

coreductase. The co-enzyme of reductase, q.v.

coregonin. A protamine from *Coregonus albus*, white fish.

coriaceous. Describing a tough, leathery growth of bacteria.

coriamin. A 25 per cent aqueous solution of pyridine-β-carbonic acid diethylamide, $NC_5H_4.CON(C_2H_5)_2$.

coriamyrtin. $C_{30}H_{56}O_{10}$ = 556.3. A glucoside from the leaves, flowers, and seeds of *Coriaria myrtifolia*, or curriers sumach, a Coriariaceae. Colorless crystals, m.220, sparingly soluble in water, soluble in alcohol or ether; it is a tetanic poison resembling picrotoxin in action.

coriander. The seeds of *Coriandrum sativum*, an Umbelliferae; used as an aromatic, carminative, and spice. **c. oil.** The essential oil from coriander, d.0.863–0.875, containing linalol and pinene; used as a flavoring agent.

coriandrol. Linalool.

coriarine. An alkaloid from *Coriaria myrtifolia.* Cf. *coriamyrtin.*

coridine. $C_{10}H_{15}N$ = 149.1. An aniline derivative obtained by the distillation of animal matter, *e.g.*, bones. It is a homolog of pyridine. **hydro-** Hydrocoridine.

cork. Suber. (1) The exterior layers of the bark beneath the epidermis of certain oaks; obtained from *Quercus suber* and *Qu. occidentalis.* See *cerin, corticinic acid, phellonic acid, suberic acid, suberin.* (2) A stopper made from cork. **c. borer.** A set of metallic tubes for boring holes in cork stoppers. **c. press.** A device for pressing and softening cork stoppers. **c. tongs.** A pair of tweezers for making cork stoppers more elastic or soft.

corm. A thickened underground stem of a plant that has the character of a tuber and bulb. There is only one official corm (sometimes erroneously termed radix); namely, colchicum.

corn. (1) A general term for the grain-producing grasses, or cereals. (2) Maize. (3) A hard mass of tissue. **Indian-** Maize. **c. oil.** Oil of *maize.* **c. silk.** The stigmas of maize; used as a diuretic as a fluid extract. **c. sirup.** Glucose. **c. spar.** A crystalline variety of calcite. **c. starch.** See *starch.* **c. sugar.** *d*-Glucose.

cornelian. A bright red variety of chalcedony.

Cornet forceps. Nickel plated spring forceps to hold cover glasses.

cornflower. Blue bottle. The blossoms of *Centaurea cyanus*, a Compositae containing cyanidin, a blue pigment. Cf. *anthocyanin, flavones.*

cornic acid. Cornin.

cornification. Rendering hard and brittle by drying.

cornin. Cornic acid. A crystalline substance from the bark of *Cornus florida*, or dogwood, a Cornaceae. Cf. *cornuoid.*

cornine. An alkaloid from *Cornus florida;* used as an antiperiodic and tonic.

Corning filter. (1) In general: a glass filter plate made by the Corning Co. for isolating light of a particular wavelength. (2) In particular: a filter for isolating ultraviolet light.

cornstone. Impure clay containing limestone.

Cornu prism. A quartz prism composed of two 30° angle right and left quartz prisms in optical contact. It refracts light. Cf. *Littrow prism.*

cornuoid. The combined principles from the bark of *Cornus florida*, the Florida dogwood; used as a tonic, antimalarial, and febrifuge.

cornutine. An alkaloid of ergot. **c. citrate.** The citrate of cornutine; used medicinally for spermatorrhea.

cornutol. A liquid extract of ergot containing the water- and alcohol-insoluble constituents.

coromegine. Atropine.

corona. (1) A crown or crown-like structure. (2) The incandescent gases which surround the sun, and are seen during total eclipses. Its light is partly polarized and yields unknown bright lines, and continuous or Fraunhofer spectra. **c. discharge.** The corona produced at the electrodes during an electrical discharge at a high voltage (see *Cottrell precipitator*). **c. spectrum.** The spectrum of the corona of the sun, which is a reversed spectrum showing prominent and luminous Fraunhofer lines.

coronillin $C_7H_{12}O_5$ = 176.1. A glucoside from the seeds of *Coronilla scorpioides*, a Leguminosae. A yellowish powder, soluble in water, acetone or amyl alcohol, slightly soluble in alcohol, ether, or chloroform. It is a cardiac poison, used as a diuretic and heart stimulant.

coronium. Protofluorine. A hypothetical element discovered in the spectrum of the corona of the sun, but not yet found on the earth's surface. Its spectrum is thought to be due to forbidden lines of oxygen.

corporin. Progesterone.

corpse light. The blue flame inside the miners' safety lamp, which indicates the presence of fire-damp (methane).

corpus. (1) The body. (2) The main part of an organ. (3) A dried organ, used therapeutically. **c. ciliariae.** An extract of the ciliary or vitreous body. Used in ophthalmia. **c. luteum.** The dried substance from the corpora lutea removed from the ovaries of cows or hogs, dried and powdered without the addition of preservatives or diluents. It is a yellowish powder, slightly soluble in water and used in ampule medication. It contains several hormones, *e.g.*, progesterone, relaxin. Cf. *lutein, ovarian substance.*

corpuscle. (1) A small or minute particle. (2) A free electron. **blood-** See *blood.* **light-** See *photon.* **negative-** See *electron.* **positive-** See *proton.*

correlation. A reciprocal relationship; interdependence. **c. coefficient.** The quantity $\sqrt{(1 - p^2)/(n - 1)}$; where n is the number of values obtained for a given determination, and p is the true value.

correspondence principle. The relation existing between the different orbits of an electron in an atom and the characteristic radiation. Cf. *Bohr's theory, Pauli's principle.*

corresponding state. The assumption that if the pressure, volume and temperature is expressed for each substance (whether solid, liquid or gaseous) by the critical constants P_c, V_c, and T_c, then the (Van der Waal's equation) equation of state will hold for all substances, in the liquid or gaseous state, for they will then correspond. **c. temperatures.** Those temperatures of two or more substances which are equal fractions of the critical temperatures.

corrigent. A drug which favorably modifies or corrects the action of another drug.

corroborant. Tonic.

corrode. To disintegrate slowly by chemical action.

corronel. An alloy of 70 % nickel and 30 % copper.

corrosion. A process of gradual disintegration or decomposition of a chemical nature, *e.g.*, of iron in acidic water, rocks in natural waters. It is electrochemical in character. Cf. *surrosion, erosion.*

corrosive. (1) A drug which destroys organic tissues either by chemical means or by causing inflammation. (2) Any agent that causes corrosion. **c. poison.** See *poison.* **c. sublimate.** Mercuric chloride.

corrosives. The irritant poisons, which cause local destruction of organic tissues, *e.g.*, acids, bases, $KClO_4$, H_2O_2, etc.

corrugation. The wrinkling of a part or body, *e.g.*, corrugated fibre board.

corsite. Napoleonite. A variety of diorite found in Corsica. It may be banded or spotted; used as an ornamental stone.

cortepinitannic acid. $C_{32}H_{34}O_{17}$ = 690.2. A bright red powder from the bark of Scotch fir, *Pinus sylvestris.* Cf. *pinicortannic acid.*

cortex. The bark of a tree, root, or fruit.

corticin. A tannin from bark of trees.

corticole. A group of lichens.

corticosterone. 11,21-Dihydroxyprogesterone, a steroid hormone from adrenal cortex extracts.

corticotrophin. The active principle of the anterior lobe of the pituitary gland which acts on the adrenal cortex.

cortin. An extract of adrenal cortex.

corticinic acid. $C_{13}H_{10}O_6$ = 250.08. A colorless crystalline substance obtained from cork.

corundum. α-Alumina. Oriental topaz. A hard native or artificial aluminum oxide, used as an abrasive and refractory. *Emery* is impure c.; for native colored varieties see *adamantine, hyacinth, sapphire, oriental c.*

coruscation. The emission of sparks or flashes.

corybulbine. $C_{21}H_{25}O_4N$ = 355.20. An alkaloid from *Corydalis cava;* colorless crystals, insoluble in water.

corycavamine. $C_{21}H_{21}O_5N$ = 367.16. An alkaloid from *Corydalis cava.*

corycavine. $C_{23}H_{23}O_6N$ = 409.20. An alkaloid from *Corydalis cava,* m.218.

corydaline. $C_{22}H_{27}O_4N$ = 369.22. An alkaloid from *Corydalis cava* and *C. tuberosa,* holewort, a Fumariaceae. Colorless crystals, used medicinally as a tonic, alterative, and diuretic.

corydalis. Turkey corn, holewort. The root of *C. cava* (*Bulbocapnus cavus*), a Fumariaceae. Used for menstrual disorders, as a malarial tonic and vermifuge. It contains a number of isoquinoline alkaloids, as corydaline, bulbocapnine, corydine, and fumarine.

corydine. $C_{21}H_{23}O_4N$ = 353.18. An alkaloid from *Corydalis cava.*

corylin. A globulin from hazel nuts.

corynin. $C_{50}H_{100}O_4$ = 764.7. A hydroxy acid, m.70, from the fat of the diphtheria bacillus.

corynine. Yohimbine.

corytuberine. $C_{19}H_{23}O_4N$ = 329.17. An alkaloid from *Corydalis cava.*

cosanates. A group of salts or esters derived from fatty acids, with 20 to 29 carbon atoms, as:

eicosanate	$C_{19}H_{39}COO—$
heneicosanate	$C_{20}H_{41}COO—$
docosanate (behenate)	$C_{21}H_{43}COO—$
tricosanate	$C_{22}H_{45}COO—$
tetracosanate	$C_{23}H_{47}COO—$
pentacosanate	$C_{24}H_{49}COO—$

cosanic acids. A group of fatty acids with 20 to 29 carbon atoms, as:

eicosanic acid	$C_{20}H_{40}O_2$	m.76°C
heneicosanic acid	$C_{21}H_{42}O_2$	m.75°C
docosanic (behenic) acid	$C_{22}H_{44}O_2$	m.81°C
tricosanic acid	$C_{23}H_{46}O_2$	m.80°C
tetracosanic (cerosic) acid	$C_{24}H_{48}O_2$	m.85°C
pentacosanic acid	$C_{25}H_{50}O_2$	m.84°C
hexacosanic acid	$C_{26}H_{52}O_2$	m.89°C
heptacosanic (cerotic) acid	$C_{27}H_{54}O_2$	m.89°C

cosanols. A group of aliphatic alcohols of the methane series with 20 to 29 carbon atoms, as:

eicosanol	$C_{20}H_{42}O$	m.65°C
heneicosanol	$C_{21}H_{44}O$	m.68°C
docosanol	$C_{22}H_{46}O$	m.70°C
tricosanol	$C_{23}H_{48}O$	m.74°C
tetracosanol	$C_{24}H_{50}O$	m.76°C
pentacosanol	$C_{25}H_{52}O$	m.78°C

cosaprin. Sodium acetsulfanilate.

cosine. The ratio of the base to the hypotenuse of a right-angled triangle is the cosine of the angle subtended by these two sides.

cosmetic. A pharmaceutical preparation (powder, lotion, or cream) which tends to preserve, restore, or simulate beauty.

cosmic. Pertaining to the universe. **c. rays.** Ultra-γ-rays. A radiation of extremely short wavelength (around 0.0005 A.U.), frequency and penetration, which reaches the surface of the earth from all directions of space (cosmos).

First noted by Gockel (1910–11) up to 4500 m. height, confirmed by Hess (1912) and later by Kohlhörster (1912–14) up to 9200 m. Their cosmic origin was denied by Millikan (1922), but admitted in 1925.

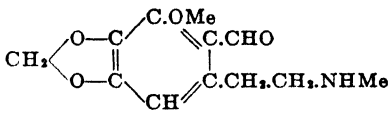
cosmin. Agathin.

cosyl. A group of monovalent radicals derived from the methane series of hydrocarbons with 20 to 29 carbon atoms:

eicosyl	$C_{20}H_{41}$—
heneicosyl	$C_{21}H_{43}$—
docosyl	$C_{22}H_{45}$—
tricosyl	$C_{23}H_{47}$—
tetracosyl	$C_{24}H_{49}$—
pentacosyl	$C_{25}H_{51}$—
hexacosyl	$C_{26}H_{53}$—
heptacosyl	$C_{27}H_{55}$—
octocosyl	$C_{28}H_{57}$—
nonocosyl	$C_{29}H_{57}$—

cotarnic acid. $C_{11}H_{12}O_6$ = 224.09. A dibasic acid derived by oxidation of cotarnine.

cotarnine. $C_{12}H_{15}O_4N$ = 237.13. An alkaloid formed by the oxidation of narcotine. It

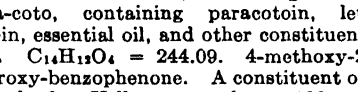


is a sedative and astringent. Cf. *cuprine, cupronine.* **c. hydrochloride.** Stypticine. **c. phthalate.** Styptol.

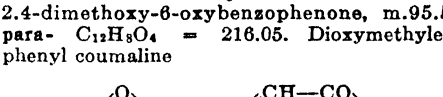
cotein. $C_{22}H_{18}O_6$ = 378.15. Cotoin. A crystalline principle from coto bark; an irritant to the skin.

coto. The bark from a Bolivian tree. Two varieties: Coto verum, containing cotein; and para-coto, containing paracotoin, leucotin, cotoin, essential oil, and other constituents.

cotoin. $C_{14}H_{12}O_4$ = 244.09. 4-methoxy-2.6.-dihydroxy-benzophenone. A constituent of para-coto bark. Yellow crystals, m.129; slightly soluble in cold, readily soluble in hot water. Used as an irritant. **hydro-** $C_{15}H_{14}O_4$ = 258.1. 2.4-dimethoxy-6-oxybenzophenone, m.95.5. **para-** $C_{12}H_8O_4$ = 216.05. Dioxymethylene phenyl coumaline



An active principle from para-coto bark. Yellow crystals, m.152, soluble in alcohol. **proto-** $C_{16}H_{14}O_6$ = 292.11.



cotonetin. $C_{20}H_{16}O_5$ = 336.1. Colorless scales, isolated from coto bark.

cotton. (1) The hairs of the seeds of *Gossypium* species, a Malvaceae, which consist of 91 % cellulose and 7 % moisture. (2) A textile material spun from c. fibers. (3) Pyroxylin or freshly nitrated c. **absorbent-** A purified and fat-free c. **gun-** Pyroxylin. **soluble-** Nitrocellulose. **styptic-** C. impregnated with ferric chloride and dried, and used to stop bleeding. **c. gum tree.** See *gum-tree.* **c. oil.** C. seed oil. **c. root bark.** The dried root bark of the c. plant, used as an emmenagogue. Cf. *gossypoid.* **c. seed meal.** The solid residue after extracting c. oil, finely ground and used as cattle feed and fertilizer; it contains 6.7–7.4 % N, 1.5–2 % K and 2–3 % P_2O_5. **c. seed oil.** Oleum gossypii seminis. The fixed oil expressed from the seeds of various Gossypium species. The raw oil is a brownish yellow, somewhat viscid liquid, d.0.922 to 0.936. The refined oil is colorless or slightly yellow, of a pleasant nutty odor, $d_{15°}$.0.9264. Used extensively in pharmaceutical preparations, and as a substitute for olive oil in the household. See *Halphen's test.*

cotyledon toxin. An amorphous, colorless substance from *Cotyledon orbiculata,* pigs ear or honde oor, a Crassulaceae of South Africa; used in epilepsy.

Cottrell, Frederick Gardner. 1877– . An American chemist, noted as designer of a precipitation apparatus. **C. precipitator.** A device for the deposition of the fine particles, which constitute a fog or smoke on a series of wires which are at a different electric potential from their surroundings. Used for the recovery of materials in ore-refineries, acid concentration plants, cement, coal and other industrial plants, where dust or smoke is a waste product.

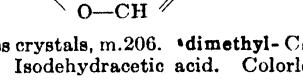
couepic acid. $C_{18}H_{30}O_2$ = 278.21. ϵ-Eleostearic acid. An unsaturated acid, $Me(CH_2)_3CH{:}CH(CH_2)_7COOH$, from the seed-oil of *Couepia grandiflora,* a Rosaceae of South America.

Coulomb, Charles Augustin de. 1736–1806. A French physicist noted as a pioneer in the formulation of electrical laws. **C. electromagnetic law.** The force between two similar magnetic poles varies inversely as the square of the distance between the poles. **C. electrostatic law.** The force between two electrical charges varies: (a) inversely as the squares of their distance apart; and (b) directly as the product of their electrical charges. Hence $F = (1/K)(qq'/r^2)$, where F is the force, k a constant depending on the units used, q and q' the two charges which are a distance apart. **C. unit.** See *coulomb.*

coulomb. Coul. Weber. A unit of electrical quantity. The amount of electricity or the number of electrons transferred by a current of one ampere in one second. 1 Coul. = 10^{-1} e.m.u. = $10^9 \times 3$ e.s.u. = (Volt. Sec.)/Ohm. = Amp./second = 1/96,489 Faraday. **international-** 1 Int. coul. = 0.9999 absolute coul.

coulometer. Voltameter.

coumalic acid. $C_6H_4O_4$ = 140.03. 2-keto-1.2-pyran-5-carboxylic acid, *2-oxo-1.2-pyran-5-carboxylic acid*.*



Colorless crystals, m.206. ***dimethyl-** $C_8H_8O_4$ = 168.07. Isodehydracetic acid. Colorless crystals, m.155.

coumalin. $C_5H_4O_2$ = 96.03. Cumalin, 1.2-pyrone, α-pyrone. Colorless liquid or crystals, m.5, b.120. **dimethyl-** $C_7H_8O_2$ = 124.05. Mesitene lactone. Colorless crystals, m.51.5, b.245. **phenyl-** $C_2H_3PhO_2$ = 172.07. 1-phenyl-a-pyrone. Colorless crystals, m.68. Cf. *paracotoin.*

coumaraldehyde. $C_9H_8O_2$ = 148.06. o-Oxycinnamaldehyde, coumaric aldehyde. Colorless crystals m.133, sparingly soluble in water, soluble in alcohol.

coumaran. $C_8H_8O_2$ = 152.07. Dihydrocoumarone, 1.2-dihydro benzofuran. A colorless liquid, b.189.

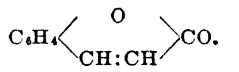
coumaranone. 2(1)-Benzofuranone.

coumaric acid. $C_9H_8O_3$ = 164.11. Coumarinic acid. An acid from the leaves of *Melilotus*. **ortho-** o-hydroxycinnamic acid, o-oxycinnamic acid. Colorless needles, m.208, slightly soluble in water, soluble in alcohol or ether. **meta-** m-hydroxycinnamic acid. Colorless prisms, m.191, sparingly soluble in hot water or ether. **para-** p-hydroxycinnamic acid. White needles, m.206 slighly soluble in water, soluble in alcohol or ether. **acetyl-** Tylmarin. **hydro-** $HO.C_6H_4.CH_2.CH_2.COOH$ = 166.13. p-hydrocoumaric acid, b-phenol-propionic acid. White monoclinic crystals, m.128, soluble in water, alcohol, or ether. Cf. *melilotic acid*. **hydroxy-** Umbellic acid.

c. aldehyde. Coumaraldehyde. **c. lactone.** Coumarin.

coumarilic acid. $C_8H_5O.COOH$ = 162.1. 1-benzofuran carboxylic acid. **alpha-** Colorless crystals, m.190. **beta-** Colorless crystals. **β-methyl-α-** $C_9H_7O.COOH$. Colorless crystals, m.189.

coumarin. $C_9H_6O_2$ = 146.05. 1.2-benzopyrone, o-hydroxy-cinnamic lactone

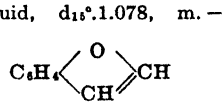


The anhydride of o-coumaric acid occurring in Tonka beans, sweet clover, and other plants; also prepared synthetically. Colorless rhombic crystals, d.0.937, m.67, b.301.7, sparingly soluble in cold water, soluble in hot water, alcohol, or ether; used as a flavoring agent. **6.7-dihydroxy-** Esculetin. **7.8-dihydroxy-** Daphnetin. **dimethyl-** $C_{11}H_{10}O_2$ = 174.1. 4.7-dimethyl-1.2-benzopyrone. para-beta-dimethyl-coumarin. Colorless crystals, m.148. **ethyl-** $C_{11}H_{10}O_2$ = 174.1. 3-ethyl-1.2-benzopyrone. Colorless crystals, m.71. **7-hydroxy-** Umbelliferone. **iso-** 2.1-benzopyrone. Colorless crystals, m.47°C. **iso-propyl-** $C_{12}H_{12}O_2$ = 188.1. 3-isopropyl-1.2-benzopyrone. Colorless crystals, m.54. **7-methoxy-** Herniarin. **α-methyl-** $C_{10}H_8O_2$ = 160.1. 3-methyl-1.2-benzopyrone. Colorless crystals, m.90. **β-methyl-** $C_{10}H_8O_2$ = 160.1. 4-methyl-1.2-benzopyrone. Colorless crystals, m.125. **3-oxy-** $C_9H_6O_3$ = 162.1. Colorless crystals, m.282. **4-oxy-** Umbelliferone. **4-oxy-β-methyl-** Resocyanin. **5-oxy-** $C_9H_6O_3$ = 162.1. Colorless crystals, m.249.

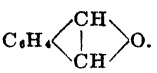
coumarinic acid. Coumaric acid.

coumarketone. A compound containing the monovalent $C_6H_4(OH)CH{:}CH.CO$-radical. **methyl-** $C_{10}H_{10}O_2$ = 162.1. o-oxy-benzalketone. Colorless crystals, m.139.

coumarone. C_8H_6O = 118.09. Benzofuran. A colorless liquid, $d_{15°}$.1.078, m. −18, b.169,

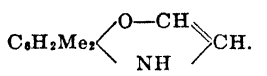


insoluble in water, soluble in alcohol or ether. **dihydro-** Coumaran. **dihydroketo-** Benzofuranone. **dimethyl-** $C_{10}H_{10}O$ = 146.15. 1.2-dimethyl-benzofuran. Colorless liquid, b.210. **hydro-** See *hydrocoumarone*. **iso-** C_8H_6O = 118.09. The heterocyclic system



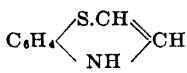
ketodihydro- See *ketocoumaran*. **methyl-** C_8H_8O = 133.12. 2-methyl-benzofuran, beta-methyl-coumarone. A colorless liquid, b.189.

coumazonic acid. $C_{10}H_{11}ON$ = 161.09. The heterocyclic system

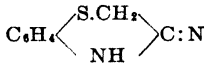


methyl- $C_{11}H_{13}ON$ = 175.1. Meta-methylcoumazonic acid, benzotrimethylmethoxazine. Colorless crystals, m.218.

coumothiazone. C_8H_7NS = 149.1. The heterocyclic system



imido- $C_8H_8N_2S$ = 164.1. Benzylene-ψ-thiourea. Colorless crystals, m.137.



counterirritant. A drug producing superficial irritation; used to mask the effects of other irritants or abnormal processes; *e.g.*, cantharides mustard, capsicum, chloroform, etc.

counterstain. A microscope stain used for making clearer, by contrast, structures already colored by another stain.

counting apparatus. A device for counting bacteria or blood corpuscles. **c. chamber.** A microscope slide with rectangular rulings, used for counting blood corpuscles and bacteria. **c. pipette.** A graduated capillary glass tube, used for making smears of milk or blood for counting bacteria or blood corpuscles.

coupeic acid. An active principle of oiticica oil.

Coupier's blue. $C_{24}H_{18}N_4$ = 334.16. Azodiphenyl, p,p'-diphenylazobenzene. The compound, $Ph.C_6H_4.N{:}N.C_6H_4.Ph$, m.250.

couple. (1) A pair of galvanic cells. Cf. *thermo-couple, zinc-copper c.* (2) To condense or unite two molecules.

coupling. Condensation between the nitrogen of a diazo group and a carbon of a ring compound.

courare. Curare.

Courtois, Bernard. 1777–1838. A French chemist; the discoverer of iodine.

cousso. See *kousso*.

C.O.V. Concentrated oil of vitriol; 95–96 % H_2SO_4, by weight.

co-valence. See *valence*. **dative-.** That type of c., analogous to electrovalence, in which one of the two atoms concerned contributes both electrons. **normal-** The usual form of c., in which each of the atoms concerned contributes one electron.

covelline; covellite. CuS. A native copper sulfide.

covolume. The quantity *b* in Van der Waal's equation (q.v.).

Coward unit. A vitamin unit, q.v.

Cowper stove. Tall iron cylinders lined with fire-brick and used for the production of a hot blast for the smelting of iron.

coxanthin. $C_{40}H_{56}O_6$ = 632.4. A carotenoid (q.v.) pigment of brown algae.

coyol palm. A tropical palm, *Acrocomia* species, yielding an oil.

CP. An abbreviation for chemically pure.

Cp. (1) The symbol for cassiopeium. (2) An abbreviation for molecular heat at constant pressure.

Cr. The symbol for chromium.

cracca. Tephrosia.

cracked. Broken, *e.g.* a molecule which is split into component parts. **c. kerosene.** A gasoline substitute obtained by super-heating kerosene under pressure, and distilling a volatile fraction at the boiling point of gasoline.

crackene. A proposed name for the hydrocarbon-mixture obtained by cracking low-temperature tars.

cracking. A process of making gasoline by superheating hydrocarbons in a gaseous atmosphere, as, hydrogen. The hydrocarbons of high molecular weight break down into those of lower molecular weight. Catalysts are also often included in the process. Cf. *hydrogenation, Bergius' process.*

cradin. A principle obtained from the leaves and twigs of the common fig. It is said to be a peptic ferment, resembling papain in its action.

Crafts, James Mason. 1839–1917. An American chemist, noted for organic syntheses. Cf. *Friedel-Crafts reaction.*

cramp bark. High cranberry. The bark of *Viburnum opulus*, a Caprifoliaceae; used as an antispasmodic.

Crane, Evan J. 1889– . An American chemist noted for work on nomenclature and abstracts of chemical literature.

crateriform. A round depressed cone in a solid culture medium, due to liquefaction of the medium by certain bacteria.

crawley. Coral root.

cream. The thick, yellowish-white layer formed on the surface of milk on standing. It consists of milk rich in fat, and is a highly nutritious article of food. **cold-** Cold cream. **ice-** A frozen food prepared from milk and flavorings.

cream of tartar. Potassium bitartrate.

creaming. The gradual rise or fall of the disperse phase of an emulsion, according as its specific gravity is less or greater than that of the continuous phase. Cf. *colloids, churner.*

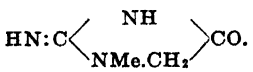
creamometer. A device for estimating the amount of fat in milk.

creasote. Creosote.

creatinase. An enzyme which transforms creatine to creatinine.

creatine. $C_4H_9O_2N_3 + H_2O = 131.12$. Methylglycocyamine, guanidine methylglycine, guanyl methylglycine, methylguanidoacetic acid. $NH_2.C:NH.NMe.CH_2.COOH$. An alkaloid or amino acid from the muscular tissue of all vertebrates. Colorless, monoclinic crystals, decomp. 300, sparingly soluble in water or alcohol, insoluble in ether; used as a tonic. Cf. *alacreatine.*

creatinine. $C_4H_7ON_3 = 113.20$. Methylglycocyamidine, 2.3- dihydro-2-imino-1-methyl-4(5)-imidazolone.



An anhydride of creatine, and a normal constituent of urine. White prisms, decomp. 270, slightly soluble in water or alcohol. Cf. *phosphagen.* **xantho-** See *xanthocreatinine.*

creatotoxin. A meat poison, or ptomaine.

creeping. Describing (1) any precipitate which rises on the walls of a wet glass container; (2) a solution which, during crystallization, deposits crystals on the sides and top of its container; (3) a liquid which permeates and passes through the packings of machinery (*e.g.*) pumps. (4) The elongation of a metal, especially at high temperatures, under a stress considerably less than that required to break it.

Crell, Lorenz Friedrich von. 1744–1816. A German chemist and mineralogist, noted as founder of chemical periodicals.

crenic acid. $C_{24}H_{12}O_{16} = 556.1$. Apocrenic acid. An acid produced by molds; found in the soil and in certain springs.

crenilabrin. A protamine from the sperm of the cunner fish, *Crenilabrus pavo.*

creolin. Analgin. A black syrupy liquid derived from coal tar, and consisting of saponifiable acids and resins; used as an antiseptic, deodorizer, and hemostatic, and forms a milky emulsion with water, d.1.04–1.08, soluble in alcohol, ether, or chloroform.

creosal. Tannosal.

creosol. $C_8H_{10}O_2 = 138.12$. 2-methoxy-1-hydroxy-4-methyl-benzene, 2-methoxy-4-methylphenol, methoxy-cresol, $MeO.C_6H_3(OH)Me$. A colorless oily liquid obtained from beech wood cresols, $d_{15}°$.1.096, b.220, slightly soluble in water, miscible with alcohol or ether; used as an antiseptic.

creosotal. Creosote carbonate.

creosote. An oily distillate from wood or other tars, consisting chiefly of cresol, oxycresol, methylcresol, and other phenols; d.1.035–1.085, b.200, soluble in water, alcohol, ether, or chloroform. Used medicinally as an antiseptic, local anesthetic, and caustic. **c. carbonate.** Creosotal. An antiseptic, oily derivative of creosote. **methylene-** Pneumin. **oleo-** C. oleate. **c. oleate.** Oleocreosote. A yellowish oily liquid, d.0.950, insoluble in water; used as an antiseptic.

cresalol. $C_6H_4(OH)COOC_6H_4Me = 228.10$. A mixture of the o-, m-, and p- compounds. A white powder used as an antiseptic dusting powder.

cresatin. $MeC_6H_4OOCMe = 150.08$. m-cresylacetate. A colorless, oily liquid, insoluble in water, soluble in alcohol; used as an antiseptic or analgesic.

cresegol. See *egol.*

cresidine. $C_7H_9ON = 123.08$. Aminohydroxytoluene, aminocresol, methylaminophenol, $NH_2.C_6H_3Me.OH$, Some of the isomers are:

4-amino-2-hydroxytoluene	m.161
5-amino-2-hydroxytoluene	m.175
6-amino-2-hydroxytoluene	m.128
4-amino-3-hydroxytoluene	m.174
5-amino-3-hydroxytoluene	m.79, b.345
2-amino-4-hydroxytoluene	m.144
3-amino-4-hydroxytoluene	m.135

cresol. $C_7H_8O = 108.10$. Cresylic acid, methylphenol, $Me.C_6H_4.OH$. **amino-** Cresidine. **iodo-** Traumatol. **isopropyl-o-** Carvacrol. **6-isopropyl-m-** Thymol. **ortho-** A colorless liquid, $d_{15}°$.1.051, m.30, b.190.8, sparingly soluble in water, miscible with alcohol or ether. **meta-** A colorless liquid, $d_{15}°$.1.039, m.4, b.205, slightly soluble in water, miscible with alcohol or ether. **2-methoxy-p-** Creosol. **methyl-** Xylenol. **para-** Colorless prisms,

d_{15}°.1.039, m.36, b.201.1, sparingly soluble in water, miscible with alcohol or ether. The cresol of commerce is a brownish-red syrupy liquid obtained from coal tar, and contains a mixture of the three cresols; used as a disinfectant. **triiodo-** Losophan. **trinitro-** See *trinitrocresol.*

cresolphthalein. $C_6H_4(CO)_2(C_6H_3OHMe)_2$ = 346.14. Methylphenolphthalein. Colorless crystals, m.216, slightly soluble in water, readily in alcohol or ether; used as an indicator from pH 8.2 (colorless) to 9.2 (red).

cresol purple. $C_{21}H_{18}O_5S$ = 382.27. *m*-Cresol sulfonphthalein. A brown powder, used as indicator, from pH 1.5 (red) to 2.5 (yellow). **brom-** See *bromocresol purple.*

cresol red. $C_{21}H_{18}O_5S$ = 382.27. *o*-Cresol sulfonphthalein. A brown powder, used as an indicator from pH 7.2 (yellow) to 8.8 (red).

cresolsulfonic acids. $C_7H_8O_4S$ = 188.13. A group of monobasic acids derived from the cresols, $C_6H_3Me(OH)(SO_2OH)$; used as antiseptics and in organic synthesis. a- or 1.2.4-. p-cresol-2-sulfonic acid, 4-hydroxytoluene-2-sulfonic acid. Colorless crystals, m.188, v- or 1.2.3-. o-cresol-6-sulfonic acid, 2-hydroxytoluene-6-sulfonic acid. Colorless crystals, m.-118.

cresorcin. $C_{22}H_{16}O_5$ = 360.14. *2.7*-Dimethyl fluorescein, *2.7*-dimethyl resorcinol phthalein. A yellow dye and pH indicator.

cresorcinol. *2.4*-Dihydroxy toluene.

cresorcyl. The radical —$C_6H_2(OH)_2Me$. **c. aldehyde.** $C_8H_8O_3$ = 152.06. *2.4*-Hydroxy-*5*-methyl benzaldehyde.

cresotic acid. $C_6H_3Me(OH)(COOH)$ = 152.06. Hydroxytoluic acid. Hydroxymethyl benzoic acid, methylsalicylic acid, cresotinic acid, cresol carboxylic acid. A group of monocarboxy acids which exist in a number of isomeric forms which are designated by the positions of the hydroxy group (first numeral) and the methyl group (second numeral) as follows:

2.3- or 2-hydroxy-m-toluic acid	m.160
2.4- or 2-hydroxy-p-toluic acid	m.178
2.5- or 6-hydroxy-m-toluic acid	m.152
2.6- or 6-hydroxy-o-toluic acid	m.167
3.2- or 3-hydroxy-o-toluic acid	m.183
3.4- or 3-hydroxy-p-toluic acid	m.207
3.5- or 5-hydroxy-m-toluic acid	m.208
3.6- or 5-hydroxy-o-toluic acid	m.172
4.2- or 4-hydroxy-o-toluic acid	m.177
4.3- or 4-hydroxy-m-toluic acid	m.172

cresotinic acid. Cresotic acid.

cresoxy. Toloxy.

cresyl. (1) The monovalent $HOC_6H_3(CH_3)$— or C_7H_7O— radical, derived from cresol. There are 10 isomers, derived from o-, m-, and p-cresols. (2) Tolyl, q.v. Cf. *cresotic acid.* **c. acetate.** Kresatin. **c. alcohol.** Cresol. **c. blue.** An oxidation-reduction indicator, q.v. **c. hydrate.** Cresol. **c. hydride.** Toluene. **c. phosphate.** Tricresyl phosphate. **c. violet.** A dye used as a vital stain for blood.

cresylate. A compound containing the monovalent $C_6H_4(CH_3)O$— or C_7H_7O— radical, derived from cresol. They are homologs of the phenates.

cresylene. Tolylene.

cresylic acid. A mixture of o-, m-, and p-, cresols.

cresylite. An explosive consisting of 60 pts. picric acid and 40 pts. trinitro-*m*-cresol.

creta (praeparata). Chalk.

cretaceous. A white, opaque, chalky growth of bacteria.

cretaform. Oxy-methyl cresol tannin. An internal astringent and antiseptic.

cristal. Crystal.

cristallisation. Crystallization.

cristobalite. A crystalline form of silica, d.2.32 formed on heating quartz to 1200, and stable below 1710. It exists in two forms: α- and β-; transition temperature 200–275°C. Cf. *silica.*

crith. Krith.

crithmene. $C_{10}H_{16}$ = 132.12. A terpene from samphire, *Crithmum maritimum*, an Umbelliferae.

critical. Pertaining to a turning point or abrupt change. **c. angle.** The angle of incidence, i, of a ray of light at which it is refracted through a prism so that its angle of emergence is 90°; hence, if the angle of incidence is larger, the light pencil will not be refracted but reflected. The critical angle depends on the refractive index between the two media, and is given by $\sin i = 1/n$, where i is the critical angle of incidence, and n the refractive index. **c. coefficient.** The expression RTd/p, in which R is the gas constant, T the critical absolute temperature, d the critical density and p the critical pressure. **c. conditions.** The c. temperature and c. pressure. **c. constant.** Any magnitude relating to the critical state. **c. density.** The density of the liquid and vapor at the c. temperature and c. pressure. **c. hygrometric state.** The quantity $100p/P$, where p and P are the vapor pressure of the system and of water, respectively. It determines whether a substance will be deliquescent or efflorescent. **c. point.** The conditions at which two phases (*e.g.*, liquid and vapor) are just about to become one phase; *i.e.*, the mixture becomes homogeneous. **c. pressure.** The pressure necessary to condense a gas at the c. temperature (q.v.), above which the gas cannot be liquefied, no matter what pressure is applied. (See table.) **c. solution temperature.** The temperature at which a mixture of two liquids, immiscible at ordinary temperatures, just ceases to separate into two phases. It is used to establish the purity of a liquid, as it is altered considerably by impurities. **c. temperature.** The temperature, T_c, at which a gas can be liquefied by a maximum pressure, the c. pressure; above this temperature the gas

CRITICAL TEMPERATURES AND PRESSURES OF SOME COMMON GASES

Substance	Critical temperature °C	Critical pressure atm.
Helium	−267.75	2.26
Hydrogen	−234.5	13.4
Oxygen	−118	49.3
Nitrogen	−145	33.65
Chlorine	141	79.6
Carbon monoxide	−113.7	34.6
Carbon dioxide	31	72.85
Nitrous oxide	36.5	71.65
Ammonia	133	112.3
Water	374	217.5

cannot be liquefied, no matter what pressure is applied. Approximately, $T_c = T_m + T_b$, where T_m is the melting point and T_b the boiling point of the substance (Prud'homme's rule); or $T_c/T_b = 1.5$ (Guldberg-Guye's rule). See Table. **c. volume.** The volume of one gram of substance at the c. temperature and c. pressure.

croceic acid. 2-Naphthol-8-sulfonic acid.

crocetin. $C_{20}H_{22}O_4$ = 328.15. *α-* The aglucone of the pigment of saffron, *Crocus sativa* and the seeds of *Gardenia grandiflora;* orange-red crystals, m.104, insoluble in water. Cf. *carotenoids, crocin, bixin, azafrin. β-* $C_{21}H_{23}O_4$ = 341.15. The monomethyl ester of *α*-c. *γ-* $C_{22}H_{26}O_4$ = 354.15. The dimethyl ester of *α*-c.

crocic acid. Croconic acid.

crocidolite. $NaFe(SiO_3)_2.FeSiO_3.H_2O$. A lavender-colored form of asbestos or hydrated ferrous-ferric silicate.

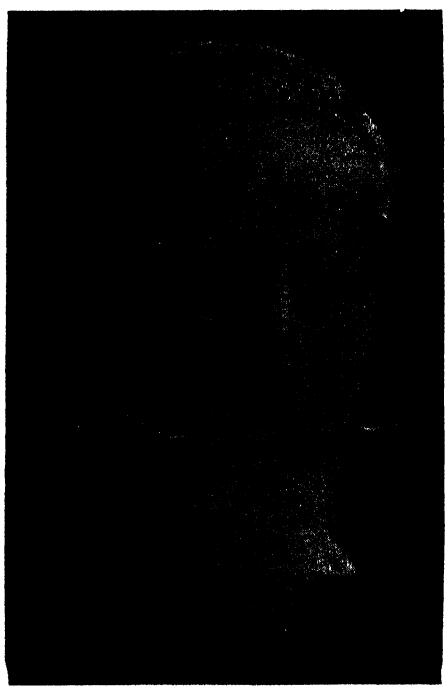
crocin. $C_{44}H_{70}O_{28}$ = 1046.56. The coloring matter of saffron, and the fruit of *Gardenia grandiflora,* a Rubiaceae of China and of *Crocus sativus* and *Fabiana imbricata.* Used for dyeing the yellow robes of mandarins. A bright-red powder, soluble in water or alcohol; hydrolysed to gentiobiose and crocetin. Cf. *carotinoids, crocose.*

crocoisite. $PbCrO_4$. Crocolite, crocoite. A red, native lead chromate.

crocoite, crocolite. Crocoisite.

croconic acid. $C_5H_2O_5$ = 142.04. Crocic acid. A dibasic ketonic acid. Yellow crystals, m.180, soluble in water or alcohol. **c. acid hydride.** $C_5H_3O_5$ = 145.03. A tribasic ketonic acid. Cf. *leuconic acid.*

crocose. $C_6H_{12}O_6$ = 180.05. A sugar and splitproduct of crocin. Colorless crystals, soluble in water. Probably identical with gentiobiose.



Sir William Crookes.

(From Thomson's Outline of Science. Courtesy of G. P. Putnam's Sons, N. Y.)

crocus. (1) Saffron. (2) A form of red ferric oxide which is used for polishing. **antimony-** See *antimony.* **meadow-** Colchicum. **c. martis.** Colcothar.

Crookes, Sir William. 1832–1919. An English physicist and chemist, noted as founder of Chemical News and work on electrical discharges through gases and vacuum tubes. See illustration. **C. glass.** An optical glass which eliminates many of the ultraviolet rays of the sun. **C. radiometer.** An evacuated glass bulb containing a shaft with four arms, pivoted in the center, which revolves horizontally under the influence of radiant heat. Affixed to the end of each arm, vertically, is a very light vane one side black, the other silvered. **C. space.** A dark space around the cathode of a low pressure x-ray tube, through which a high voltage current is passing. **C. tube.** A highly exhausted vacuum or x-ray tube.

crookesite. A mineral containing thallium (17 %) selenium, copper and silver.

crotaconic acid. $C_5H_6O_4$ = 130.05. A dibasic acid, isomeric with itaconic acid and derived from crotonic acid.

crotaline. A protein in the venom of the rattlesnake; used hypodermically in the treatment of epilepsy.

crotalotoxin. $C_{34}H_{54}O_{21}$ = 798.42. A crystalline principle from the venom of the rattlesnake, *Crotalus adamanteus.*

Croton. A genus of euphorbiaceous plants which yield various products; *e.g.,*

C. lacciferus	lac
C. cascarilla	cascarilla bark
C. niveus	copalchi
C. eluteria	cascarilline
C. tiglium	croton oil

c. oil. The fixed oil from the seeds of *C. tiglium* (see *tiglium*). A pale-yellow oil, d.- 0.940–0.955, insoluble in water, soluble in alcohol, ether, chloroform or carbon disulfide; contains chiefly tiglic acid. Used as a drastic purgative, or externally as a local irritant.

crotonal. The bivalent $C_4H_6=$ radical, derived from crotonaldehyde.

crotonaldehyde. $C_3H_5.CHO$ = 70.07. Propylene aldehyde, *2*-butenal*, crotonic aldehyde, an unsaturated aldehyde forming a colorless liquid, $d_{14°}$.0.859, b.104, soluble in water.

cis- H.C.Me
‖
H.C.CHO

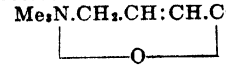
trans- Me.C.H
‖
H.C.CHO

Used as a solvent for fats, waxes and resins.

crotonallin. A toxic albumin from the seeds of *Croton tiglium.*

crotonarin. The solid part of croton oil.

crotonbetaine. $C_7H_{13}NO_2$ = 143.12. The base $Me_3N.CH_2.CH{:}CH.CO$, from beef muscle



extract. Cf. *carnitine.*

crotonic acid. $C_3H_5.COOH$ = 86.046. 1-carboxy-propylene, *α*-butenic acid. **alpha-** *trans-α*-butenic acid, *trans-2*-butenoic acid*, trans-

Me.C.H
‖
H.C.COOH.

crotonic acid. Colorless, monoclinic crystals, $d_{72°}$.0.973. m.72, b.189, soluble

in water. **beta-** *cis*-β-butenic acid, *trans*-2-butenoic acid*. cis-crotonic acid. H.C.Me ‖ H.C.COOH. Cf. *iso-crotonic acid*. **α-methyl-** Tiglic acid. **β-methyl-** Senecioic acid. **γ-methyl-** α-Pentenic acid.

c. aldehyde. Crotonaldehyde. **c. anhydride.** $C_8H_{10}O_3$ = 154.08. 2-Butenoic anhydride*, $(MeCH:CH.CO)_2O$. A colorless liquid, d.-1.0397, b.247.

crotonoid. An atomic arrangement in which an atom with free electrons (*e.g.*, O or N) is bound by a double bond to carbon adjacent to an ethylene linkage; as R.CH:CH.HC:O or R.CH:CH.HC:NH. It forms coordinate compounds. Cf. *conjugate bond*.

crotonol. Crotonolic acid.

crotonolic acid. $C_9H_{14}O_3$ = 154.11. A purgative monobasic acid from croton oil.

crotonyl. (1) The monovalent radical MeCH:-CHCO—; or (2) the monovalent $CH_3.CH:CH$— radical derived from crotonaldehyde. It is isomeric with propenyl and allyl and occurs in the cis- and trans-form. **c. alcohol.** $CH_2.-CH:CH.CH_2OH$ = 72.08. Crotonyl carbinol, 3-buten-1-ol, Δ^3-1-butenol. Colorless liquid, d.0.873, b.117, soluble in water.

crotonylene. C_4H_4 = 54.05. Dimethylacetylene, T^2-butine. An unsaturated hydrocarbon from coal gas, MeC:CMe. A colorless mass or liquid, m.27–28. Isomeric with T^1-butine (ethylacetylene) EtC:CH.

crotoxin. An active protein, containing sulphur, from the fresh venom secretion of the rattlesnake.

crottel. A vegetable dye resembling cudbear (q.v.), at one time made in the Scottish Highlands.

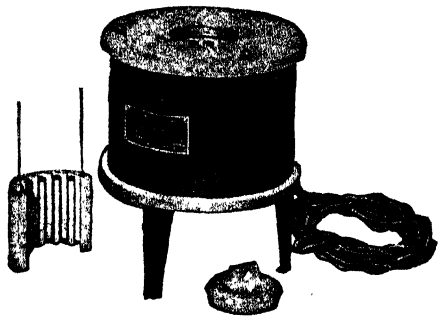
crotyl alcohol. Butenol*.

Crowell pump. A rotary pump for producing vacua and air pressure.

crown filler. Hydrated calcium sulfate, $CaSO_4.-2H_2O$, used as a paper filler. **c. glass.** Glass. **c. top.** Rose *burner*.

crucible. (1) A vessel of conical shape with a rounded base for fusing or incinerating. (2) The hearth of a blast furnace. **assay-** A small cup of porcelain used for the combustion of drugs or of filter papers containing precipitates, in quantitative analysis. **Gooch-** A c. with a perforated bottom for filtrations in analysis. **Hessian-** A large clay crucible for metallurgical work. **Munroe-** A filter c. similar to a Gooch c. with a layer of spongy platinum deposited on filterpaper as the filtering medium. **nickel-** A c. used for fusions. **platinum-** A small platinum cup used in quantitative analysis. **porcelain-** Assay c. **quartz-** A small cup made of transparent quartz, and used in quantitative analysis for combustion at high temperatures. **Rose-** A lid for a crucible fitted with an inlet tube for burning a substance in a current of coal gas. **sillimanite-** A c. made of sillimanite, used as a superior substitute for porcelain. **sintered glass-** A filter c. the base of which consists of sintered glass which acts as filtering medium. The size of the pores is graded according to the nature of the precipitate.

c. etching. Diamond *ink*. **c. furnace.** An electrically-heated resistance wire imbedded in a refractory material, which makes temperatures of 1000°C. possible within 30 minutes. **c. holder.** A rubber ring in a glass funnel for holding Gooch crucibles. **c. steel.** Pot steel. Steel made by the c. process. **c. tong.** A pair of scissor-like metal tongs for handling crucibles. **c. triangle.** A metallic wire or pipeclay triangle for supporting a crucible over the gas burner. **c. tubing.** Wide, soft, rubber



Crucible furnace.

tubing fitting over a crucible to connect it with an Erlenmeyer flask in vacuum filtration.

Cruciferae. The mustard family, a group of herbs with pungent, watery juice and flowers consisting of four petals and sepals, with cross-like arrangement.

Brassica (*Sinapis*) *alba*...	white mustard seeds
Brassica (*Sinapis*) *nigra*..	black mustard seeds
Brassica oleracea.....	cabbage seed oil
Brassica napus.....	rape seed oil
Capsella bursa pastoris....	bursine
Cheiranthus cheiri.....	cheirin
Cochlearia armoracia.....	horseradish
Cochlearia officinalis.....	cochlearia
Erysindum species.....	erysimin
Isatis tinctoria.....	indican, woad

crude. Unrefined or raw; *e.g.*, crude drugs (roots, leaves, etc.), crude chemicals (technical and unrefined substances, the hydrocarbons obtained from coal tar). Cf. *intermediates*.

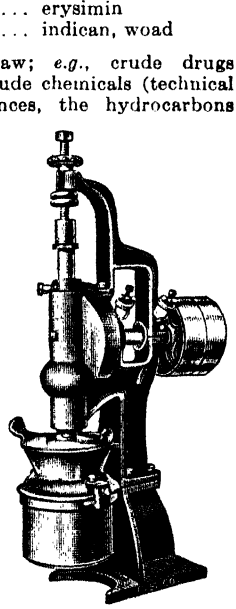
Crum Brown rule. See *Brown*.

crurin. $(C_9H_7N.HSCN)_3-Bi(SCN)_3$ = 947.60. Quinoline bismuth sulfocyanate, quinoline bismuth sulforhodanide. A brick-red micro-crystalline powder; used as an antiseptic and astringent.

crusher. A power-operated device for pulverizing materials by impact blows. Cf. *chopper*, *grinder*, *mill*.

crushing. To hammer to pieces; as, opposed to grinding, q.v.

crutcher. A mixing machine used in the soap industry.



Crusher.

cryochem process. A process of freezing and dehydrating aqueous preparations. Cf. *lyophilized biological*.

cryofine. Kryofine.

cryogenics. Experiments at low temperatures, generally below −100°C.

cryogenin. (1) A freezing mixture, or a substance by which low temperatures are produced. (2) Cryogenine.

cryogenine. Kryogenin, m-benzamino semicarbazide. White, odorless, bitter crystals, soluble in alcohol or ether, slightly soluble in water; used as an antiseptic and antipyretic.

cryohydrate. Cryosel. A salt that contains water of crystallization only at a low temperature; e.g., a eutectic mixture of salt and ice.

cryohydric point. The temperature at which a cryohydrate crystallizes from a freezing mixture.

cryolac number. The proportion of the freezing point depression of milk that is accounted for by the chloride and lactose present. It indicates the addition of water.

cryolite. Na_3AlF_6. A double fluoride of sodium and aluminum. A pale-gray mineral, d.3.0, hardness 2.5. It is a source of aluminum, alum, and caustic soda. Cf. *Thomsen process.*

c. glass. Milk *glass.*

cryometer. A thermometer for low temperatures.

cryoscope. A device for determining the freezing point of a liquid; it is used in physiological and chemical research work. Cf. *Friedenthal's* c., *Hortvet's* c.

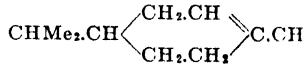
cryoscopic method. The determination of the molecular weight of an organic substance by observing the depression of the freezing point of a solution due to the solute. Cf. *Raoult's law.*

cryoscopy. The study of physical and chemical changes at low temperatures; especially the depression of the freezing point. Cf. *kryoscopy.*

cryosel. Cryohydrate.

cryostat. A thermo-regulator for maintaining low temperatures.

cryptal. $C_{10}H_{16}O$ = 152.12. *4*-Iso-propylcyclohexene aldehyde,



A constituent of the oil from *Eucalyptus hemiphloia* and *E. polybractea.*

cryptidine. $C_{11}H_{11}N$ = 157.09. An alkaloid formed by the dry distillation of quinine. Cf. *kryptidine.*

cryptocarine. An alkaloid from the bark of *Cryptocarya australis*, a Lauraceae of Queensland.

cryptocrystalline. Micro-crystalline.

cryptocyanine. Kryptocyanine.

cryptogams. A large division of plants characterized by having no true flowers, but propagating by spores. Cf. *Phanerogams.* The more important groups are:

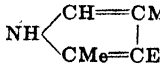
Thallophyta (Algae, Lichen, Fungi)
Bryophyta (Mosses, Liverworts)
Pteridophyta (Filices, Ferns)

cryptometer. An optical wedge to determine the covering or "hiding" power of paint.

cryptophanic acid. $C_5H_9O_5N$ = 163.07. A dibasic acid and constituent of urine.

cryptopine. $C_{21}H_{23}O_5N$ = 369.2. One of the alkaloids of opium, m.217; a hypnotic and anodyne.

cryptopyrrole. $C_8H_{13}N$ = 123.08. A base derived from hemin and chlorophyllin,



Colorless liquid, d.0.93, b_{19mm}.85.

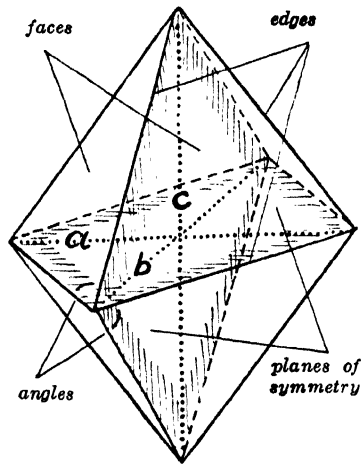
cryptoscope. Fluoroscope.

cryptovalency. An abnormal valency, *e.g.*, the tetravalent oxygen, or divalent carbon.

cryptoxanthin. A carotene from the berries of the *Physalis* species, which is similar in effects to vitamin A.

cryst. Abbreviation for *crystalline.*

crystal. A homogeneous and angular solid of definite form which is characterized by geometrically arranged plane surfaces (called



axes = a,b,c.
Crystal.

faces) and a symmetrical internal structure (see *crystal structure*). The crystals are usually classified into six or seven systems (see *crystal systems*) and are of three general types: homopolar-, ionic- and metallic-. (See figures.) **acicular-** A needle-shaped crystal. **arborescent-** A slender and branching crystal resembling a plant or tree. **blood-** Hemin. **complex-** A crystal having dissimilar faces. **double-** Twin crystals. **hemihedral-** Having half as many faces as the geometrical pattern demands. **holohedral-** Having all the faces that the geometrical pattern demands. **homopolar-** Nonpolar-. A c. consisting of a space lattice of atoms in which all valencies are satisfied, characteristic of organic compounds; hence, molecules held together by weak van der Waal's force into soft c. of low melting point. **ionic-** Polar-. A c. consisting of a space lattice of ions; as, Na^+ and Cl^-, in which the atoms have lost or gained electrons and no particular atom is united to another particular atom; hence the entire crystal is a giant molecule. This is characteristic of inorganic compounds. **lead chamber-** Nitrosyl sulfate. **liquid-** A liquid which has the optical properties of a crystal. **metallic-** Co-ordinate-. A c. consisting of a space lattice of positive ions and electrons in which the electrons may replace each other, and so conduct an electric current. **micro-** A crystal of microscopic size. **mixed-** A crystal which contains two or more isomorphous substances, as aluminum chromium sulfate. **nonpolar-** Monopolar c. **polar-** Ionic c. **racemic-** A crystal that is composed of two optically compensating isomers. **seed-** Crystallon. A crystal introduced into a saturated solution in order to act as a nucleus for the commencement of crystallization. **simple-** A crystal that belongs

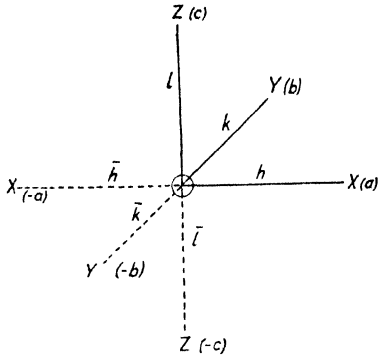
to one definite crystal system. **Teichmann's-** The hemin crystals of blood smears. **twin-** A crystal that consists of two crystals grown together along a common face.

c. alcohol. The alcohol of crystallization, or a crystal that contains alcohol molecules in its structure. **c. ammonia.** The ammonia of crystallization in the ammonates. *E.g.*, per molecule of substance, X, there are:—

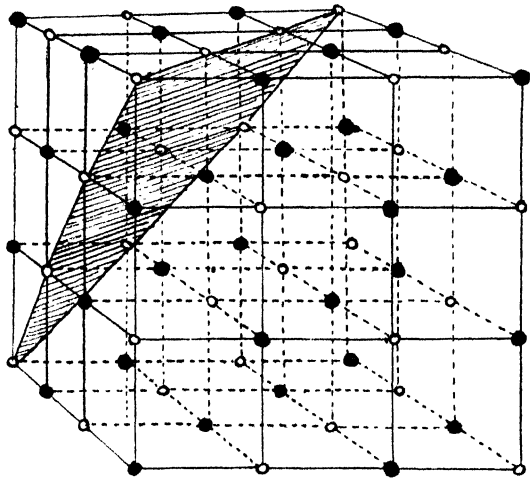
monammonate	$X.NH_3$
diammonate	$X.2NH_3$
triammonate	$X.3NH_3$
tetrammonate	$X.4NH_3$
pentammonate	$X.5NH_3$
hexammonate	$X.6NH_3$

c. axis. An imaginary line through the center of a plane of a crystal. See *c. system.* **c. carbonate.** The monohydrate of sodium carbonate, $Na_2CO_3.H_2O$. **c. chloroform.** The chloroform of crystallization, or a crystal that contains chloroform molecules in its structure. **c. coordinates.** The designation of the axes of a c. as derived from a crystallogram. See figure and *c. system.*

c. detector. A crystal which transmits electric current in one direction only; used to rectify alternating currents or detect radio waves; as, galena. **c. ether.** The ether of crystallization, or a crystal that contains ether molecules in its structure. **c. face.** Any plane surface of a crystal. **c. form.** The external geometrical shape of a crystal (see *c. system*). **c. model.** A model of wire, wood or glass, which illustrates the characteristic forms of crystals. **c. overgrowth.** The growth of one crystal around another. It is shown chiefly by isomorphous crystals. **c. pattern.** Space lattice, q.v. **c. structure.** The internal structure of a crystal as revealed by x-ray diffraction measurements. It is assumed that the individual atoms which compose the molecules of the crystal are arranged in a definite order (the space lattice), and the rows of atoms act as a diffraction grating for the very short wavelengths of x-rays (cf. *atomic planes*). From the pattern obtained on a photographic plate (the crystallogram, q.v.), the structure of the crystal is deduced. See figure. **c. system.** Any one of the seven fundamental systems of crystallography. The simplest means of classifying crystals is in terms of the axes, or the imaginary lines which pass from the faces or edges through the center of the crystal (see figures).



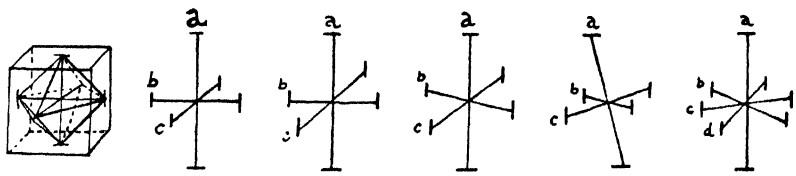
Crystal coordinates.
h, k, l, are the integers indicating the no. of atomic planes on that axis.



Crystal structure
(sodium chloride)

1. The ISOMETRIC system (Tesseral, cubic, regular or monometric)

The crystals have three axes; all of equal length and at right angles to one another and are, therefore, developed alike in the six directions of space (front, back, left, right, up and down). *Types:* cube, regular octahedron, rhombic do-



Crystal systems.

	System	*Interaxial Angles*	*Length of Axes*
1.	Isometric (cubic)	$\alpha = \beta = \gamma = 90°$	$a = b = c$
2.	Tetragonal	$\alpha = \beta = \gamma = 90°$	$a = b \lesssim c$
3.	Orthorhombic (rhombic)	$\alpha = \beta = \gamma = 90°$	$a \lesssim b \lesssim c$
4.	Monoclinic	$\alpha = \gamma = 90°$; $\beta \lesssim 90°$	$a \lesssim b \lesssim c$
5.	Triclinic	$\alpha \lesssim \beta \lesssim \gamma \lesssim 90°$	$a \lesssim b \lesssim c$
6.	Hexagonal	$\alpha = \beta = 90°$; $\gamma = 60°$ and $120°$	$a = b \lesssim c$
7.	Trigonal	$\alpha = \beta = \gamma \lesssim 90°$	$a = b \lesssim c$

decahedron, and their modifications. *Examples:* sodium chloride, alum, potassium iodide, garnet.

2. The TETRAGONAL system (dimetric or quadratic)

The crystals have three axes at right angles to one another. The two lateral axes are of equal length and the third (principal axis) is either shorter or longer; the crystals are, therefore, developed according to two patterns—one repeated four times in directions at equal intervals in a plane, the other twice in the direction at right angles to that plane. *Types:* prisms, pyramids, pinacoids. *Examples:* nickel sulfate, potassium ferrocyanide, zircon.

3. The ORTHORHOMBIC system (rhombic, trimetric or prismatic)

The crystals have three axes of unequal length, all intersecting at right angles and are, therefore, developed according to three patterns, each repeated twice in opposite directions. *Types:* Combinations of pinacoids, prisms, domes, and pyramids. *Examples:* zinc sulfate, potassium nitrate, sulfur, citric acid, potassium sulfate.

4. The MONOCLINIC system (oblique or prismatic)

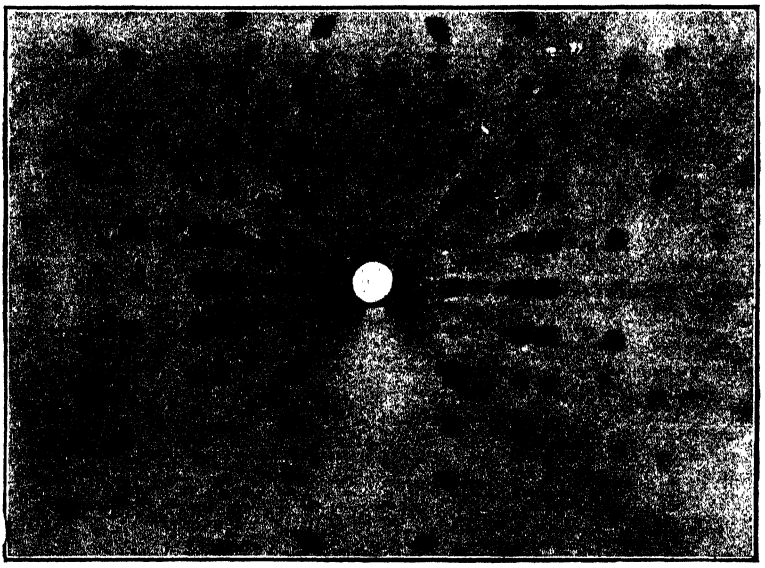
The crystals have three axes of unequal length, two of which intersect at an oblique angle and are perpendicular to the third axis. The crystals, therefore, are developed according to three patterns, each repeated in opposite directions, twice at angles less than 90° and twice at angles greater than 90°. *Types:* prisms, plates, needles. *Examples:* sodium sulfate, ferrous sulfate, oxalic acid, tartaric acid, potassium nickel sulfate.

5. The TRICLINIC system (assymetric)

The crystals have three axes of unequal length, all oblique to each other; and are, therefore, developed like the preceding two types, but with none of the patterns repeated exactly at right angles to one another. *Types:* Tetrahedron, prisms, scales. *Examples:* Calcium sulfate, potassium dichromate, copper sulfate.

6. The HEXAGONAL system

The crystal has four axes; three are of equal length, and at 60° to one another and intersect the principal axis at angles of 90°. The crystals therefore, are developed according to two patterns; one repeated six times at intervals, lying 60° apart in a plane, and the other pattern twice in the directions at right angles to that plane. *Types:* prisms, pyramids, and pinacoids. *Examples:* crystalline quartz, bismuth, antimony, thymol, beryl.



Crystallogram.

Rotating crystal or Siegbahn method (apparatus manufactured by Adam Hilger, Ltd., London), *showing the crystal structure of benzil. C axis of the crystal is set parallel to the axis of rotation* (*see also Bragg, Debye and Laue crystallograms*).

7. TRIGONAL or rhombohedral system.

The axes are as 6., and the crystal develops according to two patterns, one repeated three times at intervals lying 120° apart in a plane, and the other twice in the directions at right angles to that plane. *Examples:* benitoite, calcite.

c. violet. A methylated *p*-rosaniline, used as an indicator, pH 0.0 (green) to pH 2.0 (blue), (cf. *gentian violet*); as a Gram stain for bacteria; intravenously as antiseptic. **c. water.** The water of crystallization; the water molecules which take part in the crystalline structure of a substance, *e.g.*,

monohydrate	$X.H_2O$
dihydrate	$X.2H_2O$
trihydrate	$X.3H_2O$
tetrahydrate	$X.4H_2O$
pentahydrate	$X.5H_2O$
hexahydrate	$X.6H_2O$
heptahydrate	$X.7H_2O$
octohydrate	$X.8H_2O$ etc.

crystalbumin. An albuminous substance in the crystalline lens of the eye.

crystallin. (1) A solution of 1 part pyroxylin in 4 parts methanol and 15 parts amyl acetate;

used similarly to collodion. (2) A soluble protein from the lens of the eye; α- coagulating at 72, β-coagulating at 63.

crystalline. Peratining to crystals. **micro-** Pertaining to crystals of microscopic size.

crystallite. An imperfectly formed crystal.

crystallization. The change from the dissolved, molten, liquid, or gaseous state to a solid state of definite, ordered and characteristic shape. **fractional-** Repeated c. for the purpose of purification or separation of a substance. **heat of-** See heat. **liquid of-** The molecules of solvent which enter into the space lattice of crystals; as, acetone, acetic acid, alcohol, ammonia, chloroform, ether, and most commonly water.

crystallize. (1) To assume crystalline shape. (2) To cause crystallization.

crystallized. Formed into crystals.

crystallogram. The photographic record obtained when x-rays are diffracted by a crystal or crystal-powder. They vary according to the experimental arrangement:

(A) *x-rays* (polychromatic or monochromatic);

(B) *beam definition* (pinhole or slit);

(C) *sample* (single and stationary crystal, single and rotating crystal, or crystal powder);

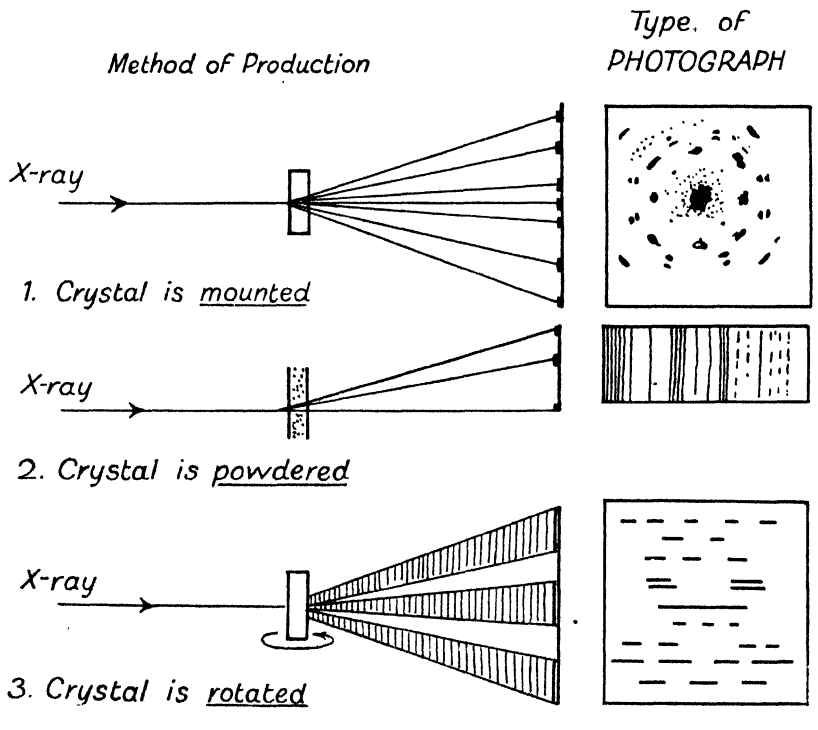
(D) *recording device* (plane surface photographic plate, cylindrical film, or ionization chamber). Cf. *x-ray spectrometer, halo, corona;* see figures.

Bragg-. DeBroglie-. Siegbahn-. A spectrum-like pattern produced when monochromatic x-rays pass through a slit and a rotating crystal. Cf. *Moseley spectrum.* **Clark-.** Duane-. A curve obtained by plotting the ionization current found at different angles when a beam of x-rays passes through a stationary crystal. **DeBroglie- Bragg-. Debye-Scherer-. Hull-.** A spectrum-like pattern consisting of curved and concentric lines, which are produced on a cylindrical and narrow film that surrounds a crystal powder or crystal which diffracts a beam of monochromatic x-rays. **Duane- Clark-. Hull- Debye-. Laue-** The original c., in which polychromatic x-rays pass through a pinhole and a single stationary crystal, behind which is a plane photographic plate or film on which the characteristic Laue pattern is produced. **modified Laue-** Monochromatic pinhole-. **monochromatic pinhole-** A modified Laue method using monochromatic x-rays. Used for: (1) single crystals (which produce a simpler Laue pattern); (2) powders (which produce concentric rings); (3) fibers (which produce a system of symmetrical and discontinuous arcs), and other materials. **Polyani- Siegbahn-. Scherer- Debye-. Schiebold- Siegbahn-. Seeman- Bragg-. Siegbahn-Polyani-. Schiebold-.** A Laue pattern produced by monochromatic x-rays and a slowly rotating single crystal.

crystallographic apparatus. A device for measuring the angles and optical properties of crystals; as, goniometer, dichroscope, petrographical microscope.

crystallography. The science of crystals. Originally the measurement and classification of the external shape of crystals (crystal systems); now, the study of the internal, molecular and atomic arrangement of crystals (crystal structure).

crystalloid. An obsolete term applied to non-colloidal substances, hence, those substances



Crystallograms (types).

which pass through a semi-permeable membrane. The broader meaning of "colloid" has eliminated this distinction.

crystalloluminescence. The emission of light during crystallization; *e.g.* by As_2O_3.

crystallon. Seed *crystal.*

crystalon. A trade name for silicon carbide.

crystallose. A soluble sodium salt of saccharin, used in diabetes as a sweetening agent.

crystule. A unit cell of a crystal, or a crystal unit.

CTAB. Cetavlon (q.v.).

CTS. Anhydrous sodium aluminum sulfate, a cream of tartar substitute.

cubanite. $CuFe_2S_4$. A copper ore.

cube. (1) A regular solid bound by six, equal, square plane faces, the opposite faces being parallel. Cf. *space lattice.* **hydrogen-** An alloy of 35 % sodium and 65 % lead pressed into cubes, and used for the rapid preparation of hydrogen (hydrone). **oxygen-** Cubes of sodium peroxide, with a trace of cupric oxide; used for the rapid preparation of oxygen (ozone). (2) An extract from cube root, the root of *Lonchocarpus nicou*, a Leguminosae of Peru, which is used as a fish poison and insecticide. It contains rotenone, toxicarol and tephrosine. Cf. *derris, deguelin.*

cubeb. The dried unripe fruit of *Piper cubeba*, a Piperacea of Java. The fluid extract is a stimulant and diuretic. **c. camphor.** $C_{15}H_{20}O$ = 222.22. The solid portion of oil of cubeb. **c. oil.** Essential oil of cubeb; it is an aromatic, colorless liquid d.0.905–0.925, b.175–280, whose constituents are cubebene and cubeb camphor.

cubebene. $C_{15}H_{26}$ = 206.22. A liquid hydrocarbon from cubeb oil.

cubebic acid. $C_{13}H_{14}O_7$ = 282.10. An amorphous resinous acid from cubeb.

cubebin. $C_{20}H_{20}O_6$ = 356.15. 3.4-dimethylenoxy-p-oxystyrone. Colorless needles, m.132, soluble in alcohol.

cubic. Pertaining to a cube. **c. centimeter.** A unit of volume in the metric system: the space occupied by a cube whose side is one centimeter long. 1 cc. = 1 $cm.^3$ = 0.99996 ml. = 0.06102336 cu. in. The volume occupied by 1 kg. water at 4°C. is the liter = 1000 ml. = 1000.028 cc. **c. decimeter** 1 cu. dm. = 1 dm^3 = 1000 $cm.^3$ = 61.023 $in.^3$. **c. foot.** 1 cu. ft. = 28317.016 $cm.^3$ **c. inch.** 1 cu. in. = 1 $in.^3$ = 16.387 $cm.^3$ **c. meter.** 1 $m.^3$ = 1,000,000 $cm.^3$ = 1.308 $yard^3$ = 25.314 cu. ft. **c. system.** See *crystal system.* **c. yard.** 1 cu. yd. = 1 $yd.^3$ = 0.765 $m.^3$

cubical. Relating to a cube or to three dimensions. **c. atom.** A theory of atomic structure developed by Gilbert N. Lewis. The valence electrons occupy positions at the corners of a cube. In a stable atom or compound there are eight electrons situated at the eight corners of a cube; hence a neon atom is inert and possesses zero-valency, while in a chlorine atom only seven corners are occupied and the atom is monovalent, as it can attract one more electron. Cf. *polar compound, Lewis-Langmuir theory, atomic structure, periodic chain.* **c. expansion.** Volume expansion. The enlargement of a solid in three planes. **c. system.** The isometric or regular crystal system, q.v.

cubit. An obsolete linear measure; 1 c. = 18 in.

cucaivite. AgCuSe. A native silver selenide.

cucoline. $C_{19}H_{23}O_4N$ = 329.2. An alkaloid from the root of *Cocculus* or *Sinomenium diversifolius*, a Menispermaceae. White needles, m.162, insoluble in water, soluble in alcohol, ether, or benzene. **hydro-** $C_{19}H_{25}O_4N$ = 331.2. A colorless crystalline substance, m.198.

cucumber. (1) The vine, *Cucumis sativus*, a Cucurbitaceae. (2) C. fruit used as food. **bitter-** Colocynth. **oil of-** Gourd oil.

Cucurbitaceae. The gourd family, a group of succulent herbs, generally creeping and climbing by tendrils; a source of drugs:

roots:	
Bryonia alba (dioica)	bryony
Cayaponia globosa	cayaponine
fruits:	
Megarrhiza californica	megarrhizin
Citrullus colocynthis	colocynth
Luffa aegyptiaca	vegetable sponge
Momordica balsamina	balsam apple
seeds:	
Cucurbita pepo	pumpkin seed, cucurbitine
Cucumis citrullus	watermelon seed, cucurbitol
Cucumis sativus	cucumber seed
Cucumis prophetarum	prophetin
resin:	
Ecballium elaterium	elaterium

cucurbitine. An alkaloid from the seeds of *Cucurbita pepo.*

cucurbitol. $C_{24}H_{40}O_4$ = 392.32. An alcohol from the seeds of the watermelon, *Cucumis citrullus*, a Curcurbitaceae. Colorless crystals, m.260.

cucus oil. Vetiveria oil.

cudbear. Persio, orchil. A purplish-red coloring matter from lichens, *Rocella, Lecanora,* and other species; used as a pure food color for pharmaceutical preparations.

cuinoline. Cinnoline.

cullet. Crushed or broken glass.

culture. (1) A growth of microorganisms, *e.g.,* pathogenic bacteria. (2) C. media, q.v. (3) To breed, incubate or grow microorganisms. **direct-** A growth obtained from a natural source (tissue, sputum, etc.), and directly transferred to a culture medium. **pure-** A growth obtained from a single species.

c. apparatus. A device for growing microorganisms (anaerobic bacteria) in gases, *e.g.,* nitrogen. **c. dish.** A Petri dish (q.v.) or other shallow glass dish. **c. flask.** A glass flask for growing micro-organisms in liquid culture media. **c. media.** The substances on which bacteria are grown. The more common are agar plain, agar glucose, agar glycerin, agar lactose, agar serum, bouillon plain, bouillon glucose, bouillon glycerin, bouillon lactose, gelatin plain, gelatin glucose, and blood serum. **c. medium.** The nutrient substance in a food for micro-organisms; used to cultivate or grow bacteria. (See *c. media.*) **c. slides.** A microscope slide with one or two cavities for holding a small quantity of liquid. **c. tube.** A test tube with plain rim used for culture media.

cumal. Cumylene. The divalent $C_{10}H_{12}$=, or $C_3H_7.C_6H_4.CH$= radical, derived from cumic aldehyde.

cumaldehyde. Cumic aldehyde.

cumalin. Coumalin.

cumanilide. Cumophenamide.

cumaric acid. Coumaric acid.

cumarin. Coumarin.

cumenamic acid. Cuminamic acid.

cumene. C_9H_{12} = 120.15. i-Propyl benzene, $PhCHMe_2$. A colorless liquid hydrocarbon, $d_{20°}$.0.862, b.153, insoluble in water, miscible with alcohol or ether; it is a constituent of cumin oil. **methyl-** Cymene. **pseudo-** See *pseudocumene.*

cumenol. Cuminol.

cumenuric acid. Cuminuric acid.

cumenyl. Cumyl. The monovalent $C_3H_7.C_6H_4$— or C_9H_{11}— radical, derived from cumene; it occurs as several isomers. **c. acrylic acid.** $C_{12}H_{14}O_2$ = 190.1. A monobasic acid, homologous to cinnamic acid. **c. amine.** Cumidine. **c. angelic acid.** $C_{14}H_{18}O_2$ = 218.15. A monobasic acid. **c. crotonic acid.** $C_{13}H_{16}O_2$ = 204.12. A monobasic acid. **c. cyanide.** Cumonitrile. **c. sulfurous acid.** $C_9H_{11}.HSO_3$ = 200.20. A monobasic acid, derived from cumene by the action of sulfuric acid.

cumic. Pertaining to the acid derived by oxidation from oil of cumin, q.v. **c. acid.** $C_{10}H_{12}O_2$ = 164.15. Cuminic acid, p-isopropyl-benzoic acid. Colorless triclinic crystals, $d_4°$.1.163, m.116.5, sparingly soluble in water, soluble in alcohol or ether. **c. alcohol.** Cuminol. **c. aldehyde.** $C_{10}H_{12}O$ = 148.15. Cumaldehyde, cuminic aldehyde, p-isopropyl benzaldehyde. $Me_2CH.C_6H_4.CHO$. A colorless liquid, $d_{22°}$.0.976, b.235, insoluble in water, miscible with alcohol or ether. **c. amide.** Cuminamide.

cumidic acid. $C_{10}H_{10}O_4$ = 194.08. Dimethylphthalic acid. An oxidation product of durene; dibasic acid, colorless crystals, m. exceeds 320.

cumidine. $C_9H_{13}N$ = 135.16. Aminocumene, cumenylamine, p-isopropyl-aniline, 1-amino-4-isopropyl-benzene. A colorless liquid, d.0.953, m. −64, b.225, insoluble in water, soluble in alcohol or acids. **pseudo-** See *pseudocumidine.*

cumidino. The monovalent radical $C_9H_{12}N$— or $Me_2CH.C_6H_4.NH$—, derived from cumidine.

cumin. The fruits of *Cuminum cyminum* an Umbelliferae of Europe, used as a stimulant, aromatic, and sedative. **c. oil.** Roman cumin oil. The essential oil from cumin seeds. A limpid liquid with a sharp taste, d.0.900–0.930, containing cymene and cumic aldehyde.

cuminal. (1) Cumal. (2) Cumic aldehyde. **di-** Cuminil.

cuminalcohol. Cuminol.

cuminaldehyde. Cumic aldehyde.

cuminamic acid. $C_{10}H_{12}O_2N$ = 178.10. A derivative of cumic acid.

cuminamide. $C_{10}H_{13}ON$ = 163.10. Cumic amide. The amide of cumic acid.

cuminic acid. Cumic acid. **c. alcohol.** Cuminol. **c. aldehyde.** Cumic aldehyde.

cuminil. $C_{20}H_{22}O_2$ or $C_9H_{11}CO.COC_9H_{11}$ = 294.18. Dicuminal, dicuminoketone. Colorless crystals, m.84.

cuminoin. $C_{20}H_{24}O_2$ = 296.19. Diisopropyl benzoin. $C_9H_{11}CO.CHOH.C_9H_{11}$. A derivative of cuminil.

cuminol. $C_{10}H_{14}O$ = 150.11. Cuminic alcohol, cumic alcohol, i-propylbenzyl alcohol, cumenol, cumin alcohol. $C_3H_7.C_6H_4CH_2OH$. A monobasic alcohol from cumin seeds. A colorless liquid, d.0.978, b.246.6.

cuminuric acid. $C_{12}H_{15}O_3N$ = 221.1. $C_3H_7.C_6H_4.CO.NH.CH_2COOH$, occurring in urine.

Cummings apparatus. A glass apparatus for the determination of ammonia in illuminating gas. **c. pump.** A mercury-vapor vacuum pump.

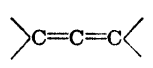
cumobenzyl alcohol. See *phenyl paraffin alcohols.*

cumol. (1) Pseudocumene. (2) A mixture of trimethyl benzenes, obtained as an oily hydrocarbon from coal tar, b.168–178.

cumonitrile. $C_{10}H_{11}N$ = 145.09. Cumenyl cyanide. A derivative of cumene.

cumophenamide. $C_{16}H_{17}ON$ = 239.14. Cumanilide. A compound of cumene and phenylamine.

cumulated double bonds. Two double bonds on the same carbon atom, thus:



Cf. *conjugated.*

cumulative. Storing up or increasing. **c. poison.** See *poison.*

cumyl. Cumenyl.

cumylene. Cumal.

cumylic acid. Durylic acid.

cunit. Cubic unit. A measure of volume, especially of wood, equal to 100 cu. ft. of solid unbarked wood. Cf. *cord, board foot.*

cuorin. $C_{71}H_{125}O_{21}NP_2$ = 1389.01. A phospholipin from the cow's heart, considered to be kephalin mixed with impurities.

cupel. A flat crucible or dish of bone ash, used in cupellation. **c. mould, mold.** A brass cup with pestle for making cupels. **c. rake.** An iron shovel or spatula for handling cupels. **c. tongue.** A steel tong for removing cupels from the oven.

cupellation. The separation of silver or gold from its alloys in the analysis of silver and gold ores. The unrefined metal is mixed with lead and placed in a cupel in the muffle furnace, where the impurities are either volatilized or absorbed by the cupel, and a button of noble metal is left.

cupferron. $C_6H_9O_2N_3$ = 155.09. Nitrosophenyl hydroxylamine, copperon, kupferron, ammonium nitroso-β-phenyl hydroxylamine, $NH_4O.NO.NPh$. Yellow crystals, m.164. Its acid solution is used as a quantitative precipitating reagent for aluminum, copper, iron, titanium, zirconium, etc.

cupola. A dome-shaped furnace for melting pig iron.

cupraloy. An alloy containing Cu 99.4 and (Cr + Ag) 0.6 %, having high strength and electrical conductivity.

cuprammonia. A solution of cupric hydroxide in ammonia water, used as a solvent for cellulose.

cuprammonium-ion. The divalent complex ion, $Cu(NH_3)_4^{++}$, which possesses the characteristic deep-blue color obtained by adding ammonia in excess to a cupric salt solution. **c. rayon, c. silk.** See *rayon.* **c. sulfate.** The solution $CuSO_4 + 4NH_3 + H_2O$. **c. viscosity.** The viscosity of a solution of cellulose in c. measured under standard conditions; it is a means of evaluating cellulosic materials.

cuprase. A non-toxic colloidal cupric hydroxide, used in the hypodermic treatment of cancer.

cuprate silk. Cuprammonium rayon, q.v.

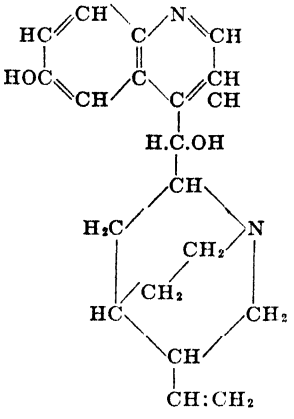
cuprea bark. The bark of *Remijia* species of tropical America, which yields quinine and other cinchona alkaloids.

cupreane. Desoxycupreine. An alkaloid from cuprea bark.

cupreidane. Desoxycupreidine. An alkaloid from cuprea bark.

cupreidine. $C_{19}H_{22}O_2N_2$ = 310.17. The *d*-isomer of cupreine; a cinchona alkaloid from cuprea bark. **desoxy-** Cupreidane.

cupreine. $C_{19}H_{22}O_2N_2$ = 310.17. *l*- Cupreidine. A cinchona alkaloid from cuprea bark.



Colorless crystals, m.198; slightly soluble in water, ether or chloroform, soluble in alkalis. **desoxy-** Cupreane. **ethylhydro-** Optochine. **methyl-** Quinine.

cuprene. $(C_{11-16}H_{10})_x$. Carbene. A yellow-brown, solid polymerisation product made by heating acetylene in presence of copper.

cupreol. $C_{20}H_{34}O$ = 290.35. A cholesterol-like substance from the bark of *Cinchona calisaya*, a Rubiaceae.

cupreous. Cuprous.

cupressin. An oil of *Cypress* species, used medicinally for whooping cough.

cupressus. Cypress.

cupric. Describing compounds containing divalent copper, > Cu, which yield the cupric ion Cu^{++} in aqueous solution. **c. abietinate.** $Cu(C_{19}H_{27}O_2)_2$ = 638.01. Green scales, insoluble in water, soluble in oils giving an emerald green colored solution; used as an anthelmintic and vermifuge, and for the impregnation and preservation of wood. **c. acetate.** $Cu(C_2H_3O_2)_2.H_2O$ = 199.6. Verdigris, cryst. aerugo, crystals of Venus. Bluish-green crystals, d.1.9, m.250 decomp., soluble in water, alcohol, or ether; used as an astringent or alterant, as a mordant and for porcelain painting and enamels. **(sub-)** Cupric subacetate. **c. aluminate.** Copper alum, lapis divinus. A compound of cupric sulfate, aluminum sulfate and potassium nitrate. A green powder or bluish-green sticks, soluble in water; used in ophthalmology and as a mild caustic. **c. ammonium chloride.** $CuCl_2.2NH_4Cl.2H_2O$ = 277.53. Ammonio-cupric chloride. Blue crystals, soluble in water, used as a reagent for carbon in steel. **c. ammonium sulfate.** $Cu(NH_3)_4SO_4.H_2O$ = 245.8. Dark blue, rhombic crystals, decomp. at 150, soluble in water, insoluble in alcohol. **c. arsenate.** $Cu_3(AsO_4)_2.4H_2O$ = 540.7. Bluish-green crystals, insoluble in water, soluble in ammonia or acids; used medicinally as an alterative. **c. arsenite.** $CuHAsO_3$ = 187.5 or $Cu(AsO_3)_2$ = 309.5. A mixture of the neutral and acid salt. Green or yellowish-green crystals, insoluble in water, soluble in ammonia or alkalis; used as an intestinal antiseptic and alterative. **c. benzoate.** $Cu(PhCOO)_2.2H_2O$ = 341.6. A light-blue crystalline powder insoluble in water or alcohol. **c. borate.** CuB_4O_7 = 219.6. A bluish-green crystalline powder, insoluble in water, soluble in dilute acid; used in ceramics and artists' paints. **c. bromide.** $CuBr_2$ = 223.4. A grayish-black crystalline powder, decomp. on heating, soluble in water or alcohol. **c. butyrate.** $Cu(C_4H_7O_2)_2.2H_2O$ = 273.6. Green monoclinic crystals, slightly soluble in water, soluble in alcohol; used as a reagent for essential oils. **c. carbonate.** Only basic carbonates are known, *e.g.*, $3CuO.2CO_2.H_2O$, copper lasur, mountain blue. A basic carbonate of copper; used in seed wheat treatment to control smut, as a pigment, and in ceramics. **c. cement.** See *dental cement*. **c. chlorate.** $Cu(ClO_3)_2.6H_2O$ = 338.6. Blue, hygroscopic crystals, soluble in water or alcohol; used as a mordant and in the dye industry. **c. chloride.** $CuCl_2$ = 134.5. Anhydrous copper chloride. Brownish-yellow crystals, d.3.054, m.498, which decomp. on further heating, soluble in water or alcohol; used as a mordant. **(cryst.)** $CuCl_2.2H_2O$ = 170.5. Blue, rhombic crystals, or green hygroscopic masses, d.2.47–2.53, which lose 2 mol. water at 100°C, and decomp. at red heat; soluble in water, alcohol, or ether. Used as a reagent and as mordant in the dye industry; for manufacturing sympathetic inks and melanin; as a disinfectant; and in the manufacture of aniline dyes. **c. chromate.** $CuCrO_4$ = 179.7. A yellowish liquid. **c. chromate, basic.** $CuCrO_4.2Cu(OH)_2$ = 374.9. Basic copper chromate. A light-brown powder, insoluble in water, soluble in chromic acid solution; used in the dye industry as a mordant. **c. citrate.** $Cu_2C_6H_4O_7.2\frac{1}{2}H_4O$ = 360.2. A green powder, slightly soluble in water; used medicinally, and as a reagent for glucose. **c. cyanide.** $Cu(CN)_2$ = 115.6. A green powder, soluble in water (cf. *cupro-cupric cyanide*). **c. dichromate.** $CuCr_2O_7.2H_2O$ = 315.8. Brown crystals, soluble in water. **c. ferrocyanide.** $Cu_2Fe(CN)_6.7H_2O$ = 465.2. A brownish-red powder, insoluble in water, soluble in ammonia or KCN solution. **c. fluoride.** $CuF_2.2H_2O$ = 137.6. Blue crystals, sparingly soluble in water. **c. fluosilicate.** C. silicofluoride. (a) *tetrahydrate* $CuSiF_6.4H_2O$ = 277.69. Blue monoclinic prisms, d.2.158, soluble in water. (b) *hexahydrate* $CuSiF_6.6H_2O$ = 313.72. Blue octahedral crystals, d.2.207, soluble in water. Used for coloring and hardening marble, as a disinfectant and a plant spray. **c. formate.** $Cu(HCOO)_2$ = 153.6. Blue monoclinic crystals, d.1.830, soluble in water. **c. hydroxide.** $Cu(OH)_2$ = 97.6. Blue crystals or blue powder, d.3.368, decomp. on heating, insoluble in water but soluble in alcohol or ammonia. **c. hyposulfite.** C. thiosulfate. **c. iodide.** CuI_2 = 317.3. A dark-brown powder, soluble in water or alcohol. **c. ion.** The divalent ion, Cu^{++}. **c. lactate.** $Cu(C_3H_5O_3)_2.2H_2O$ = 277.6. Bluish-green crystals, slightly soluble in water or alcohol. **c. nitrate.** (1) $Cu(NO_3)_2.3H_2O$ = 241.6. Blue, prismatic crystals, d.2.174, m.-114.5. Decomp. 170, soluble in water or alcohol; used as a reagent for detecting oxygen, as an astringent and alterative, and in the preparation of photosensitive papers. (2) $Cu(NO_3)_2.6H_2O$ = 295.7. Blue crystals, d.-2.047, m.26.4, decomp. on heating, very soluble in water or alcohol. Used as (1). **c. nitrite.** $Cu(NO_2)_2$ = 155.6. A green powder of variable

composition, readily decomp.; soluble in water or alcohol. **c. nitroprussiate.** $CuFe(CN)_5(NO)$ = 279.6. A grayish-green, granular photosensitive powder; insoluble in water. **c. nucleinate.** Cuprol. A green powder, soluble in water; used as an astringent. **c. oleate.** $Cu(C_{18}H_{33}O_2)_2$ = 626.2. A dark-green or bluish-green waxy solid, insoluble in water, soluble in ether. It is an antiseptic used in ointments and in the treatment of ring-worm. **c. oxalate.** $Cu(OOC)_2$ = 151.6. A bluish-green powder, insoluble in water, soluble in dilute acids. **c. oxide.** CuO = 79.6. A black monoclinic or regular crystalline powder, d.6.4, m.1064, insoluble in water, soluble in ammonia or potassium cyanide solution. Used as a reagent in elementary analysis (granulated); medicinally as a teniafuge and in ointments; technically in ceramics, glass industry, and porcelain industry for the production of blue and green colors. **c. oxychloride.** $CuO.CuCl_2$ = 214.1. A bluish-green powder, soluble in ammonia or acids; used as a green pigment. **c. palmitate.** $Cu(C_{16}H_{31}O_2)_2$ = 594.2. A greenish-blue powder, m.115, insoluble in water, soluble in alcohol. **c. phosphate.** $Cu_3(PO_4)_2.3H_2O$ = 434.8. Rhombic, blue crystals, slightly soluble in water, soluble in ammonia or acids. (**acid**) $CuHPO_4$ = 159.6. A bluish-green powder, insoluble in water, soluble in acids or ammonia. An anti-tuberculotic; also used as a reagent for CO_2 in water. **c. phosphide.** Cu_3P_2 = 252.8. A gray metallic powder, insoluble in water, soluble in nitric acid; used in the manufacture of phosphorus bronze. **c. potassium chlorate.** $Cu(ClO_3)_2.2KClO_3$ = 475.61. Green crystals, soluble in water. **c. potassium chloride.** $CuCl_2.2KCl.2H_2O$ = 319.910. Greenish-blue crystals, soluble in water. **c. potassium cyanide.** $Cu(CN)_2.2KCN.2H_2O$ = 281.74. Green crystals, soluble in water. **c. potassium ferrocyanide.** $K_2CuFe(CN)_6.H_2O$ = 371.60. A brownish-red powder, insoluble in water. **c. potassium tartrate.** $K_2Cu(C_4H_4O_6)_2$ = 437.83. Blue scales, soluble in water. **c. rhodanide.** C. thiocyanate. **c. salicylate.** $Cu(C_7H_5O_3)_2.4H_2O$ = 409.7. Greenish-blue micro-crystalline needles, soluble in water or alcohol. **c. selenate.** $CuSeO_4.5H_2O$ = 296.8. Blue crystals, slightly soluble in water. **c. silicate.** $CuSiO_3$ = 139.7. A bluish-green crystalline powder, insoluble in water. **c. silicofluoride.** C. fluosilicate. **c. sodium chloride.** $CuCl_2.2NaCl.2H_2O$ = 287.44. Greenish-blue crystals, soluble in water. **c. stearate.** $Cu(C_{18}H_{35}O_2)_2$ = 630.2. A light-blue, amorphous powder, insoluble in water or alcohol, soluble in chloroform, benzene, or turpentine; used as bronze for plaster. **c. subacetate.** Verdigris, aerugo. A greenish-blue powder, soluble in water, sparingly soluble in alcohol, and occurs in variable composition; the blue variety has the average composition $CuO.Cu(C_2H_3O_2)_2$, while the green variety $CuO.2Cu(C_2H_3O_2)_2$. Used in the manufacture of pigments (Schweinfurt green), as a mordant, and in cotton printing. **c. subcarbonate.** $CuCO_3.Cu(OH)_2$ = 221.2. C. carbonate. Blue monoclinic crystals or greenish, amorphous powder, d.3.88, decomp. on heating, insoluble in water, soluble in ammonia or acids. A reagent for detecting glucose; used medicinally as an astringent in ointments, internally as antidote for phosphorus; commercially as a pigment and in the paper industry. **c. sulfate (anhydrous).** $CuSO_4$ = 159.6. A white or grayish, amorphous powder, d.3.516, decomp. 621, soluble in water. Used to dehydrate liquids, *e.g.*, alcohol, and to detect traces of water, (*e.g.*, in ether), when it turns blue. (**basic**) $CuSO_4.3Cu(OH)_2$ = 452.40. A blue powder, slightly soluble in water. (**crystalline**) $CuSO_4.5H_2O$ = 249.71. Copper sulfate, Roman vitriol, blue vitriol, blue stone. Blue, triclinic, transparent crystals, $d_{16°}$.2.286, loses 4 mol. H_2O at 110, and 5 mol. at 250, soluble in 3.5 pts. cold and 1 pt. boiling water, insoluble in alcohol. Used as a reagent for preparing Fehling, Purdy, Benedict, Lowe, and other reagents for detecting glucose; for testing peptones, albumin, urea, picric acid, etc.; medicinally as a caustic, styptic, astringent, emetic, and alterative, and as an external caustic (sticks); technically, in the dye industry and the manufacture of green and blue pigments; in electrolysis and galvanoplating; commercially for manufacturing sprays and disinfectants for plants. **c. sulfide.** CuS = 95.6. A black powder or hexagonal microcrystals, d.3.98, insoluble in water, soluble in acids or ammonia; used as an antiparasitic paint for ship bottoms. **c. sulfite.** $CuSO_3.H_2O$ = 161.6. A greenish-blue crystalline powder, soluble in water. **c. sulfocarbolate.** C. sulfophenate. **c. sulfocyanide.** C. thiocyanate. **c. sulfophenate.** $Cu(PhSO_4)_2.6H_2O$ = 517.81. C. sulfocarbolate, copper carbosulfate, copper phenylsulfonate, copper sulfophenylate. Green crystals, soluble in water or alcohol; used as a bactericide and antiferment. **c. tannate.** A brown powder of variable composition, resulting from treating tannin with cupric salts. Insoluble in water, soluble in ammonia. **c. tartrate.** $CuC_4H_4O_6.3H_2O$ = 265.7. A green-blue powder, slightly soluble in water, soluble in alkalis; used as a reagent, for glucose. **c. thiocyanate.** $Cu(SCN)_2$ = 179.6. C. rhodanate. A blue powder which is insoluble in water but soluble in ammonia. **c. thiosulfate.** CuS_2O_3 = 175.6. A green-blue crystalline powder, sparingly soluble in water.

cupricyanide. A compound containing the divalent $Cu(CN)_4^{--}$ radical.

cuprine. $C_{11}H_7O_3N$ = 201.05. An alkaloid derived from cotarnine.

cuprite. Cu_2O. Ruberite, ruby copper, tile ore. A native cuprous oxide.

cuprocupric. A complex copper salt, which may be considered as a mixture of cuprous and cupric salts. **c. cyanide.** $Cu_3(CN)_4.5H_2O$ = 384.83. A green powder; insoluble in water, soluble in potassium cyanide solution.

cuprocyanide. A compound containing the trivalent $Cu(CN)_4^{---}$ radical.

cuprohemol. A compound of copper and hemol; used medicinally.

cuprol. A copper salt of nucleic acid.

cupron. α-Benzoin-oxime. A quantitative precipitant for copper.

cupronine. $C_{20}H_{18}O_2N_2$ = 334.13. An alkaloid derived from cotarnine.

cuprophane. The transparent cellulose films made by the cuprammonium process. Cf. *rayon.*

cuprosulfate. A double salt of copper sulfate and another sulfate.

cuprotungstite. $CuWO_4$. A tungsten ore.

cuprous. Describing a compound of monovalent copper Cu—; generally less common, and less

stable than the corresponding cupric compounds. **c. acetylide.** CuC_2H_2O = 169.16. An amorphous red powder formed when acetylene is passed into a cupric solution; it explodes when dry. **c. bromide.** Cu_2Br_2 = 287.0. A brown powder, d.4.72, m.484, b. about 900, insoluble in water, soluble in acids. **c. carbonate.** Cu_2CO_3 = 123.5. A yellow powder, decomp. on heating, insoluble in water, soluble in acids or ammonia. **c. chloride.** Cu_2Cl_2 = 198.2. Resin of copper, native as nantokite. Greenish-white tetrahedral crystals, d.3.53, m.422, b. about 1000, insoluble in water or alcohol, soluble in acids or ammonia. It is a reagent in gas analysis, and for the detection of AsH_3 and SbH_3. **c. cupric cyanide.** Cuprocupric cyanide. **c. cyanide.** $Cu_2(CN)_2$ = 179.4. A colorless monoclinic or amorphous powder, decomp. at red heat, insoluble in water, soluble in ammonia or KCN solution. **c. fluosilicate.** Cu_2SiF_6 = 269.20. C. silicofluoride. A red powder. **c. hydroxide.** $Cu_2(OH)_2$ = 161.2. A yellow powder, insoluble in water, soluble in acids or ammonia. **c. hyposulfite.** C. thiosulfite. **c. iodide.** Cu_2I_2 = 381.0. A brownish-yellow crystalline powder, $d_{15°}$.-5.65, m.606, b. about 765, insoluble in water, soluble in dilute acids, tincture of iodine, or KI solution. Used as a pigment mixed with equal parts HgI_2, for indicating the temperature of frictioning parts of machines. **c. ion.** The monovalent ion, Cu^+. **c. oxide.** Cu_2O = 143.1. A brown or red granular powder, or regular crystals, d.5.88, insoluble in water, soluble in acids, ammonia water or KCN solution; used in ceramics and the glass industry for making red pigments and red glass. **c. phosphide.** Cu_3P = 221.71. A grayish, metallic powder insoluble in water, soluble in acids, used in the manufacture of phosphorus bronze. **c. potassium cyanide.** $CuCN.3KCN$ = 285.1. A white, crystalline powder, soluble in water. **c. rhodanide.** C. thiocyanate. **c. sulfate.** Cu_2SO_4 = 223.20. A gray or white powder; readily decomp. by water. **c. sulfide.** Cu_2S = 159.2. A black powder or rhombic crystals, d.5.58, m.1100, insoluble in water, soluble in acids. It occurs native as chalcocite. **c. sulfite.** $Cu_2SO_3H_2O$ = 225.2. A brown crystalline powder, insoluble in water. **c. thiocyanide.** $Cu_2(CNS)_2$ = 243.4. C. sulfocyanate. C. sulfocyanide. C. rhodanide, c. rhodanate. A grayish-white powder, m.1080, insoluble in water, soluble in ammonia.

cuproxide. CuO. A native copper oxide.

cuprum. The Latin for copper. See *cupric.*

Cupuliferae. A family of trees comprising Betulaceae (birches) and Fagaceae (oaks, chestnuts, beeches), that yield a valuable wood and several drugs:

Quercus alba	white oak
Quercus species	nutgalls
Quercus robur	oak bark
Quercus suber	cork
Alnus serrulata	tag alder
Fagus ferruginea	American beech
Castanea vulgaris	chestnut
Betula lenta	sweet birch oil
Ostrya virginica	iron wood

Cf. *quercitron, fagin.*

curangin. $C_{43}H_{77}O_{20}$ = 973.63. Glucoside from *Curanga amara*, a Scrophulariaceae of Southern Asia. Febrifuge and vermifuge.

curare. Woorara, urari, curara, curari or South American arrow poison. A black, brittle, resinoid extract of various *Strychnos* species; it is a paralyzant of the motor nerves, and contains the active principles curarine and curine.

curarine. $C_{19}H_{26}O_2N$ = 300.15. A crystalline alkaloid from curare, and a strong paralyzant. **proto-** An alkaloid from curare. **pseudo-** Pseudocurarine. **tubo-** $C_{19}H_{26}ON_2$ = 314.21. An amorphous, brown alkaloid from curare.

curcas oil. An oil from the seeds of *Jatropha curcus*, Linn., or physic nut, from Siam and East Indies, d.0.919; used as a drying oil and an emetic and purgative.

curcin. A toxic albumin of Barbados nuts; the seeds of *Curcas purgans*, an Euphorbiaceae of the West Indies; it resembles ricin.

curcuma. Turmeric.

curcumene. A group of terpenes from the volatile oil of the rhizomes of *Curcuma aromatica.*

curcumin. (1) $C_{10}H_{10}O_3$ = 178.08. A brownish-yellow coloring matter of tumeric, the rhizome of *Curcuma longa.* Deep-yellow, highly lustrous crystals, sparingly soluble in water, soluble in alcohol or ether; used as an indicator from pH 7.4 (yellow) to 8.6 (brown), as reagent for beryllium, and as a dye. (2) $C_{21}H_{20}O_6$ = 368.16. *1.7*-bis-(*4*-hydroxy-*3*-methoxyphenyl)-*1.6*-heptadiene-*3.5*-dione*, $(MeO(HO)C_6H_3\text{-}CH{:}CHCO)_2CH_2$. Orange yellow needles, m.183, insoluble in water.

Marie Sklodowska Curie.

(Courtesy of Jour. of Chemical Education and Wide World Photos.)

curdling. The coagulation of milk.

curds. The precipitate obtained by coagulation of milk.

Curie, Irene. See *Joliot.* **C., Marie Sklodowska.** 1867–1934. A French chemist and physicist noted as co-discoverer of radium, polonium, and radioactivity. **C., Pierre** 1859–1906. A French physicist and husband of Madame C., noted as co-discoverer of radium. **C. electroscope.** A sensitive electroscope to determine minute amounts of radioactive substances. **C. point.** The temperature above which the molecular forces of magnetism of paramagnetic

bodies cease to exist. **C. therapy.** Radium therapy. **C. unit.** Curie.

curie. A unit of radioactivity; the amount of emanation from, or in equilibrium with one gram of pure radium. 1 curie = 2.5×10^9 mache units. It equals 0.663 mm^3 or 6.56×10^{-6} grams of emanation (radon) and maintains an air ionization of 2.75×10^4 e.s.u. (0.92 milliampere). **micro-** The millionth part of a c., 10^{-6} curie. **milli-** The one-thousandth part of a c., 10^{-3} curie. **millimicro-** Is 10^{-9} curie. Cf. *eman, mache.*

curiegraph. A photograph of a tissue injected with a radium emanation.

curiescopy. The visual examination in a dark chamber on a radioscopic screen of the emanations emitted by the radium preparation injected into a tissue.

curine. $C_{19}H_{19}O_3N$ = 297.2. A paralyzant alkaloid from curare. A colorless microcrystalline powder, m.161; soluble in water, alcohol, chloroform or dilute acids.

curite. $PbO_5.UO_3.4H_2O$. A radioactive mineral, from the Belgian Congo.

curled. Describing typical growths of bacteria in parallel chains or weavy strands; as, anthrax colonies.

current. (1) Any stream or flow; as, electric c.—a stream of electrons; blood c.—a flow of blood through the blood vessels. (2) Electric c. which moves along a conductor; its unit is the ampere, q.v.; its quantity the coulomb, q.v.; its potential difference the volt q.v. **alternating-** (A.C.) A periodically reversed electric c. **battery-** Same as galvanic c. **d'Arsonval-** The high voltage discharge of a condenser through a wire solenoid, producing high frequency alternations. Used therapeutically. **direct-** (D.C.). A current whose direction is always the same, *e.g.*, a galvanic current. **eddy-** The current set up around a conductor (see *eddy*). **Foucault-** Electrical currents induced in a mass of metal in a magnetic field of varying intensity. **galvanic-** A current from a galvanic battery. **high-frequency-** An alternating current changing its direction many times per second. **induced-** The current produced in an induction apparatus from the primary current. **primary-** The current that produces an induced current. **secondary-** Induced c.

c. breaker. A device to interrupt the electric current, *e.g.*, a commutator, switch, or rheotome. **c. changer.** A device to reverse an electric current, *e.g.*, a commutator. **c. condenser.** A device to store up electricity, *e.g.*, a condenser or accumulator. **c. density.** See *density*. **c. regulator.** A device to regulate electric current, *e.g.*, a rheostat.

curry. The powdered leaves of *Murraya koenigii*, a Rutaceae of India, sometimes flavored with other spices. Used as curry powder for seasoning food and preparing the Indian national dish, curry.

currying. The incorporation of oil and grease into leather.

Curtius, Theodor. 1857–1928. A German chemist, noted for organic syntheses. **C. reaction.** The preparation of amines and urethanes by the action of water and alcohol on acid azides.

curve. A continuous line which is not straight or is made up of straight parts. In the graphic diagram (coordinate system, q.v.) a line connecting points whose positions are defined by their abscissae and ordinates. Hence it expresses a relationship. **c. analyser.** A mechanical device consisting essentially of a table with two movable scales attached. Used to measure tracings and curves.

cuscamidine. An amorphous alkaloid from cusco bark.

cuscamine. A crystalline alkaloid, m.218, from cusco bark.

cuscus oil. Vetiver oil.

cuscohygrine. Hygrine.

cusco bark. Red bark. A variety of cinchona bark obtained from *Cinchona succirubra*, a Rubiaceae.

cusconidine. An amorphous alkaloid from cusco bark; pale-yellow masses.

cusconine. $C_{23}H_{26}O_4N_2$ = 394.3. An alkaloid, m.110, from cusco bark. Cf. *aricine.*

cusp. The point formed by the discontinuous join of two curves.

cusparia bark. Angostura bark.

cusparidine. $C_{19}H_{17}O_3N$ = 307.2. An alkaloid from angostura bark, the bark of *Cusparia officinalis*. A fine white crystalline powder, m.78, sparingly soluble in water, soluble in acids.

cusparine. $C_{19}H_{17}O_3N$ = 307.14. 2-Homopiperonyl-4-methoxyquinoline. An alkaloid from angostura bark. Colorless crystals, m.90; insoluble in water, soluble in alcohol, ether, chloroform, acetone or benzene.

cusso. Kousso.

cut. (1) The weight in pounds of resin added to each gallon of solvent. Owing to the bulking and swelling of the solvent, the following relation exists:

	4 *lb.* *cut*	6 *lb.* *cut*	6.7 *lb.* *cut*
lbs. resin in 1 gallon solution.....	2.86	3.75	4.00
gals. solvent in 1 gallon solution....	0.714	0.625	0.60

(2) A fraction of crude petroleum, q.v.

cutal. Aluminum borotannate.

cutch. Catechu.

cutic acid. $C_{25}H_{50}O_6$ = 458.40. A fatty acid from cutin.

cutin. The fatty or waxy protective coating of plants.

cutting. (1) Etching. (2) Lubricating. (3) Mixing. **c. fluid.** A liquid used to keep working parts cool; e.g. in drilling, milling, planing, sawing, tapping, threading. Examples are soap water, mineral oil, emulsions, etc. Cf. *cut.*

cuttle fish. A mollusk, genus *Sepia*, of the order Cephalopoda; it discharges a pigment from a gland near the liver which furnishes painter's sepia.

cwt. An abbreviation for hundredweight.

Cy. Abbreviation for cyanide radical, CN—.

cyamelide. $C_3H_3N_3O_3$ = 129.05. *s*-Trioxanetrimine, $(HNCO)_3$. White amorphous powder, insoluble in water.

cyamethine. Cyanmethine.

cyan. Cy. **Cyano-** The monovalent radical, —CN; see *cyanides*. **di-** Cyanogen. **hexa-** A cyclic polymer. **iso-** The monovalent radical, —NC, see *isocyanides*.

cyanacetic acid. $C_3H_3O_2N$ = 85.09. Cyano-acetic acid, nitrilmalonic acid, carboxy-cyanmethane, $CN.CH_2.COOH$. Colorless crystals, m.70, $b_{15mm.}$108, decomp. when further heated; soluble in water, alcohol or ether.

cyanalcohol. Cyanhydrin.

cyanaldehyde. C_3H_3ON = 69.02. Nitrilmalonaldehyde, $CN.CH_2.CHO$. Colorless crystals, soluble in water, alcohol, or ether.

cyanamid. Trade name for a mixture of 65–70 % calcium cyanamide and 15–20 % calcium hydroxide, with free carbon etc., used as fertilizer.

cyanamide. CN_2H_2 = 42.11. Cyanogen amide, amidocyanogen, carbamonitrile, carbamic acid nitril, urea anhydride, $NH_2.CN$ or NH:C:NH. Colorless needles, m.46, soluble in water, alcohol or ether. **allyl-** Sinamine. **benzyl-** See *benzyl*. **calcium-** CaNCN. An intermediate in synthesizing ammonia from air. **diethyl-** See *diethyl*. **dimethyl-** See *dimethyl*. **diphenyl-** Phenylcyananilide. **phenyl-** Cyananilide.

c. process. A method of nitrogen fixation: (1) Limestone and coke are heated in the electric furnace and form calcium carbide. (2) Over the heated carbide (1000°C.) a current of nitrogen passes and produces calcium cyanamide. (3) $CaCN_2$ is treated in autoclaves by high-pressure steam and yields ammonia.

cyanamil. Cinnamyl cinnamate.

cyananilide. $C_7H_6N_2$ or PhNHCN = 118.05. Phenylcyanamide, cyanilide, carbanilonitrile, *N*-cyanoaniline. Colorless crystals, m.47, soluble in alcohol. **phenyl-** $Ph_2N.CN$ = 194.09. Diphenylcyanamide. Colorless crystals, m.73.

cyanate. A salt of cyanic acid containing the monovalent —CNO radical. **iso-** Carbimide. A salt of isocyanic acid containing the monovalent —N:C:O radical. **pseudo-** The radical —O.N:C. **sulfo-** Thio-. **tauto-** The radical —O.C:N. **thio-** The radical —CNS.

cyanation. (1) The introduction of the —CN radical into a molecule. (2) The formation of a nitrile.

cyanaurite. A double salt of a metal cyanide and aurous cyanide, $MAu(CN)_2$.

cyanbenziline. $C_{24}H_{21}N_3$ = 351.20. *μα*-dibenzoyl-*β*-phenyl-*γ*-amino-pyrimidine. Colorless crystals, m.106.

cyanbenzyl. A compound containing the monovalent $CN.CH_2.C_6H_4$— radical, derived from alpha-benzyl cyanide. **c. cyanide.** $C_9H_6N_2$ or $CN.CH_2.C_6H_4.CN$ = 142.1. **ortho-** o-alpha-homophthalonitrile. Colorless crystals, m.81. **meta-** m-alpha-homophthalonitrile. Colorless crystals, m.88. **para-** p-alpha-homophthalonitrile. Colorless crystals, m.100.

cyancarbamic acid. $C_2H_2O_2N_2$ = 86.02. Cyanamidocarbonic acid, CN.NH.COOH.

cyancarbonic acid. Cyanformic acid. **c. ester.** $CN.COOC_2H_5$ = 99.07. A liquid, b.115, soluble in alcohol or ether, insoluble in water.

cyanconine. $C_9H_{14}N_2$ = 150.10. Alpha-meta-diethyl-beta-methyl-pyrimidine, 2.6-diethyl-5-methyl-1.3-pyrimidine. A colorless liquid, b.-205.

cyancoumarin. $C_9H_5O_2.CN$ = 161.05. 3-cyanocoumarin. Colorless crystals, m.182.

cyanethine. $C_9H_{15}N_3$ = 165.10. Alpha-meta-diethyl-beta-methyl-gamma-amido-pyrimidine, 2.6-diethyl-5-methyl-4-amido-1.3-pyrimidine. Colorless crystals, m.189.

cyanetholin. Ethyl cyanate.

cyanethylamide. Ethyl cyanamide.

cyanformate. A salt of cyanformic acid containing the monovalent CN.COO— radical.

cyanformic acid. CN.COOH = 71.03. A monobasic acid known only as its salts, the cyanformates.

cyanhematin. A compound of hematin and cyanogen.

cyanhydride. Cyanohydrin.

cyanhydrin. Cyanohydrin.

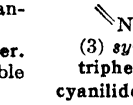
cyanic acid. HCNO = 43.06. Cyanhydroxide. A colorless poisonous liquid d.1.140, which polymerises to cyamelide and fulminuric acid and from which the cyanates are derived. **hydro-** HCN = 27.06. Prussic acid. A colorless poisonous liquid, $d_{18°}$.0.697, m. −11, b.25, miscible with alcohol, water, or ether. Its salts are the cyanides. **iso-** HNCO = 43.06. A monobasic acid from which the isocyanates are derived. **pseudo-** HONC = 43.06. A monobasic acid from which the pseudocyanates are derived. **pseudoiso-** Tauto-. **sulfo-** Thio-. **tauto-** HOCN = 43.06. Pseudoiso-, fulminic acid. A monobasic acid, from which the fulminates are derived. **thio-** See *thiocyanic acid*. **trihydro-** Cyanidine.

cyanide. A compound containing the monovalent radical, —CN, derived from hydrocyanic acid. **azo-** The radical —N:N.CN. **chloro-** q.v. **cupri-** q.v. **ferri-, ferro-** See *ferricyanide, ferrocyanide*. **hydro-** A compound containing a HCN molecule; as R.HCN. **iso-** The monovalent radical, —NC, derived from isocyanic acid, HNC. **sulfo-, thio-** Thiocyanate.

c. process. A method of extracting gold from ores by leaching with potassium cyanide solution.

cyanidin. $C_{15}H_{10}O_6.HCl$ = 322.53. An anthocyanidin, q.v., from the flowers of *Centaurea* species and *Rosa gallica*.

cyanidines. (1) A group of compounds derived from the hypothetical trihydrocyanic acid. They contain the trivalent radical, $C_3N_3\equiv$ or



(2) An anthocyanidin, q.v. (3) *sym*-triazine, q.v. **diamido-** Formoguanine. **triphenyl-** Cyanphenine. **trioxy-** Cyanuric acid.

cyanilide. Cyananilide.

cyanin. (1) $C_{27}H_{30}O_{16}$ = 610.23. A glucoside from cornflower, rose and other flowers, which hydrolyses to cyanidin. (2) Anthocyanin. A group of blue pigments found in certain flowers, as cornflower, iris, violet, etc. **carbo-** Carbocyanin. **iso-** Isocyanin. **di-** See *di-*

CYANIN DYES

Kryptocyanin	1.1′-diethyl-4.4′-carbocyanin iodide
pinacyanol	1.1′-diethyl-2.2′-carbocyanin iodide
ethyl red	1.1′-diethylisocyanin iodide
quinoline red	1.1′-benzilidene-2.2′-quinocyanin chloride
cyanin	1.1′-diisoamylcyanin iodide
pinaverdol	1.6.1′-trimethylisocyanin iodide
α-pseudocyanin	1.1′-diethyl-4.4′-dimethyl-2.2′-carbocyanin bromide
α-dicyanin	1.1′-diethyl-2.4-dimethyl-2′4′—carbocyanin iodide
pinachrome	1.1′-diethyl-6-ethoxy-6′-methoxyisocyanin iodide
dicyanin	1.1′-diethyl-4.2′-dimethyl-6.6′-diethoxy-2.4′-carbocyanin iodide
pseudodicyanin iodide	1.1′-diethyl-4.6.4′.6′-tetramethyl-2.2′-carbocyanin iodide
pseudodicyanin bromide	1.1′-diethyl-4.6.4′.6′-tetramethyl-2.4′-carbocyanin bromide.

cyanine. **phyco-** See *phycocyanin.* **syn-** See *syncyanin.*

c. dyes. A group of aniline dyes derived from cyanine; used in photography as sensitizers; *e.g.*,

cyanine. (1) $C_{29}H_{35}N_2I$ = 538.1. Chinolin blue, quinoline blue, iodcyanin, *1.1'*-diisoamylcyanin iodide. Green crystals with metallic luster, soluble in warm water or alcohol; used as an indicator and as a sensitizer in photography. (2) Cyanin.

c. hydroiodide. $C_{29}H_{35}N_2I.HI$ = 665.9. Yellow needles which are soluble in water.

cyanite. Kyanite, rhoetzite. Disthene. The natural, blue or white, silicate $(AlO)_2.SiO_3$, decomp. above 1100°C. to mullite and siliceous glass. Cf. *sillimanite, andalusite, mullite, fibrolite.*

cyanmethine. $C_6H_9N_3$ = 123.07. Cyamethine, α-meta-dimethyl-γ-amidopyridine, 2.6-dimethyl-4-amido-pyrimidine. Colorless crystals, m.180.

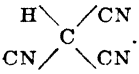
cyano. The monovalent radical —CN, sometimes abbreviated Cy. It acts like a halogen (forming cyanides) and forms, like ammonia, many complex salts. **iso-** The radical —N:C. **thio-** The radical —NCS. *isothio-* The radical —CNS. **c. salts.** A group of addition compounds in which the cyano radical forms part of the complex ion; as, $ZnCy_3^-$, $ZnCy_4^{--}$, $CuCy_2^-$, $CuCy_3^{--}$, $NiCy_4^{--}$, $FeCy_6^{---}$ and $FeCy_6^{----}$.

cyano aniline. Cyananilide.

cyanobenzene. See *benzene.*

cyanocarbonic acid. Cyanformic acid.

cyanoform. C_4HN_3 = 91.032. Tricyanomethane, m.93.



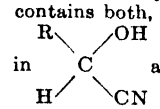
cyanogas. A powdered calcium cyanide, used in fumigation and as rodent killer, being sprinkled in the mouth of the hole where the moisture of the earth causes the slow evolution of HCN gas.

cyanogen. (1) NC.CN = 52.03. Cyan cyanide ethane dinitrile*, prussite, dicyanogen, oxalonitrile. A colorless poisonous gas with the odor of bitter almonds $d_{(air)}$.1.806, m. −34, b. −21, soluble in water, alcohol or ether. (2) Originally the radical —CN. **amido-** Cyanamide. **bromo-** C. bromide. **chloro-** C. chloride. **di-** Cyanogen.

c. bromide. NCBr = 106.01. Cyan bromide, bromine cyanide. Colorless transparent needles, m.52, b.61, soluble in water, alcohol, or ether. **c. chloride.** (1) NCCl = 61.50. Cyan chloride, chlorine cyanide. A colorless and extremely poisonous gas or liquid, m. −5, b.15, soluble in water, alcohol, or ether. (2) Solid, $C_3N_3Cl_3$ = 184.43. m.145, b.190. **c. disulfhydrate.** $NH_2.CS.CS.NH_2$ = 120.2. Rubeane. **c. halides.** A group of compounds of the general formula NCX, in which X is a halogen. They tend to polymerize to $N_3C_3X_3$. **c. iodide.** NCI = 152.9. Iodine cyanide. Colorless needles, soluble in water, alcohol, or ether. **c. monosulfhydrate.** Flavean hydride. **c. sulfide.** $(CN)_2S$ = 84.1. Cyan sulfide. Colorless rhombic scales, m.60, soluble in water, alcohol or carbon disulfide.

cyanogenetic. Yielding cyanogen; as, certain glucosides, amygdalin. Cf. *syncyanin.*

cyanohydrin. Cyan alcohol. A compound that contains both, the —CN and —OH radical, as



in and **c. synthesis.** The addition of a carbon atom by the reaction $R.HC{:}O + HCN \rightarrow R.CHOH.CN$. Cf. *Wohl's reaction.*

cyanol. Aniline.

cyanomaclurin. (1) $C_{15}H_{12}O_6$ = 288.08. A tannin from the wood of *Arctocarpus integrifolia.* Colorless crystals, m. exceeds 290. (2) A synthetic anthocyanidin.

cyanometer. An instrument for comparing the shades of the sky.

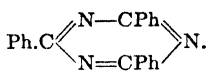
Cyanophyceae. A group of blue algae. See *phycocyanin.*

cyanotype. Blueprint.

cyanoximide. A compound containing the monovalent NC.C(NOH)— radical.

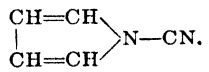
cyanoximido acetic acid. NC.C(:NOH).COOH = 114.03. Colorless crystals, m.129. **c. acetic ester.** NC.C(:NOH)COOEt = 142.08. Colorless crystals, m.127.

cyanphenine. $C_3N_3Ph_3$ = 309.12. Triphenyl cyanidine.



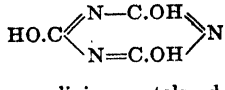
cyanphenyl. Pseudo-*carbostyril.*

cyanpyrrole. C_5H_4N = 78.03. N-cyanpyrrole. The heterocyclic compound

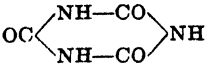


cyanur. A compound containing the trivalent cyanidine ring:  **c. amide.** C. tetramide. **c. diamide.** $C_3H_5ON_5$ = 127.3. Ammeline. Colorless crystals, decomp. on heating, insoluble in water, alcohol, or ether. **c. monoamide.** $C_3H_4O_2N_4$ = 128.2. Ammelide. Colorless crystals, insoluble in water, soluble in acids. **c. tetramide.** $C_3H_6N_6$ = 126.3. Melamine, cyanuramide. Colorless prisms, decomp. on heating, sparingly soluble in water, or alcohol, insoluble in ether.

cyanuric acid. $C_3H_3O_3N_3.2H_2O$ = 165.21. Pyrolithic acid, trioxycyanidine, *s*-triazine triol, trihydroxycyanidine, pyrouric acid, pyruric acid.



Colorless monoclinic crystals, d_0°.1.768, sparingly soluble in water, alcohol or ether. Cf. *cyanur, melem, melamide.* **iso-** Tricarbimide. The ketone form of cyanuric acid.



Cf. *mellimide.* **thio-** q.v. **c. chloride.** Tricyanogen chloride.

cyanuric ester. A derivative of cyanuric acid containing the trivalent cyanur radical, $C_3N_3O_3$≡. **ethyl-** $C_3N_3(OEt)_3$ = 213.14. Colorless crys-

tals, m.29, b.275. **ethyliso-** $C_3O_3N_3Et_3$ = 213.14. Ethyltricarbimide. Colorless crystals, m.96, b.276. **iso-** A derivative of isocyanuric acid, containing the trivalent isocyanur radical, $C_3H_3N_3\equiv$. **methyl-** $C_3N_3(OMe)_3$ = 171.10. Colorless crystals, m.135, b.263, soluble in alcohol. **methyliso-** $C_3O_3N_3Me_3$ = 171.10. Methyltricarbimide. Colorless crystals, m.175, b.296.

cyanurin. An indigo blue found occasionally in urine on the addition of an acid; it indicates indican.

cybotactates. Aggregates of molecules in liquids, generally oriented. Cf. *zones*.

cybotactic. Pertaining to end-to-end or side-to-side arrangements of molecules; as, in the case of octanol:

$Me(CH_2)_6CH_2OH$ $HOCH_2(CH_2)_6Me$
n- (end-to-end)
$Me(CH_2)_2CH_2OH(CH_2)_3Me$
$Me(CH_2)_2CH_2OH(CH_2)_3Me$
4- (side-to-side).

In both cases the OH groups are held together by coordinate bonds. Cf. coordinate *bond, association*.

cybotaxis. The cubical space-arrangement of the molecules of non-crystalline substances.

cyclamin. Arthranitin.

cyclamiretin. $C_{15}H_{22}O_2$ = 234.2. A decomposition product of cyclamin.

cycle. (1) Any periodic repetition of a phenomenon; as, carbon cycle, nitrogen cycle, sulfur cycle, phosphorus cycle, etc. (2) A ring or closed atomic chain; as, homocycle, heterocycle, carbocycle.

cycleine. $C_{27}H_{31}O_4N_2$ = 447.4. An alkaloid from *Cyclea peltata*, an East Indian Menispermaceae used for diarrhea and hemorrhoids.

cyclic. Arranged in a ring, *e.g.*, atoms. Cf. *acyclic, aromatic*. **carbo-** A ring of carbon atoms, *e.g.*, benzene. **di-** An atomic structure containing two rings, *e.g.*, as in naphthalene. **hepta-** (1) An atomic structure containing seven rings. (2) A ring of seven atoms, *e.g.*, tropine nucleus. **hetero-** A ring composed of two or more different kinds of atoms, *e.g.*, pyridine. **hexa-** (1) An atomic structure containing six rings. (2) A ring of six atoms, *e.g.*, benzene nucleus. **homo-** A ring composed of one kind of atom, *e.g.*, *carbo-*. **mono-** An atomic structure containing one ring only, *e.g.*, benzene derivatives. **penta-** (1) An atomic structure containing five rings, *e.g.* morphine. (2) A ring composed of five atoms, *e.g.*, cyclopentane. **poly-** An atomic structure containing two or more rings. **tetra-** (1) An atomic structure containing four rings. (2) A ring composed of four atoms, *e.g.*, cyclobutane. **tri-** (1) An atomic structure containing three rings. (2) A ring composed of three atoms, *e.g.*, cyclopropane.

c. action. See *catalysis*. **c. compound.** A compound that contains a ring of atoms, or a closed homocyclic or heterocyclic chain of atoms in its molecule. See *rings*. **c. hydrocarbons.** A compound of hydrogen and carbon, which contains a ring of carbon atoms; they may be unsaturated, cf. *benzene series, cycloolefines*, or saturated, cf. *cyclo-paraffins*.

cyclite. Benzyl bromide.

cyclization. Ring formation.

cyclo- A prefix indicating a ring compound.

cyclobarbital. Phanodorn; the 5-Δ^1-cyclohexenyl ethyl barbituric acid, used as a sedative.

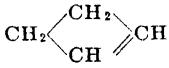
cyclobutane. C_4H_8 = 56.1. Tetramethylene, q.v., diethylene, tetrahydrobutene, cf. *picean nucleus*.  A colorless gas, d_4°.0.7083, b.11. **ethyl-** C_6H_{12} = 84.1. A colorless liquid, d.0.740, b.72. **methyl-** C_5H_{10} = 70.1. A colorless liquid, b.39.

c. carboxylic acid*. See *alicyclic acids*.

cyclobutanol*. C_4H_8OH = 72.1. Hydroxy-tetramethylene,  A colorless liquid, b.123.

cyclobutanone*. C_4H_6O = 70.1. Ketotrimethylene,  A colorless liquid, d.0.930, b.99.

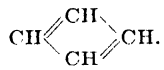
cyclobutene*. C_4H_6 = 54.1. Δ^1-tetramethylene, cyclobutylene,



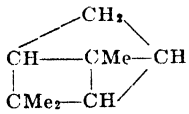
A colorless gas, b.3.

cyclobutyl. The monovalent radical

cyclobutylene. C_4H_4 = 52.1. Tetramethyl-diene, $\Delta^{1,3}$-tetramethylene, butene.

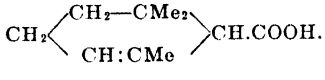


cyclofenchene. $C_{10}H_{16}$ = 136.12. A tricyclic terpene,



A colorless liquid, d.0.861, b.144.

cyclogeranic acid. $C_{10}H_{16}O_2$ = 168.2. 1.2.3.4-tetrahydro-2.2.6-trimethylbenzene carboxylic acid.



A colorless crystalline substance, m.106.

cycloheptadecene*. Civetane.

cycloheptadecenone*. Civetone.

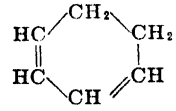
cycloheptane*. Suberane.

cycloheptanol*. Suberol.

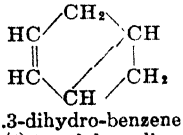
cycloheptanone*. Suberone.

cycloheptene*. C_7H_{12} = 96.09. Suberene, suberylene. A colorless oil, d.0.8228, b.115, insoluble in water.

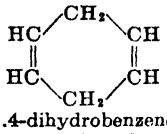
cyclohexadiene*. C_6H_8 = 80.06. Dihydrobenzene. A group of partly saturated benzenes:



1.2-dihydro-benzene
$\Delta^{3,5}$-cyclohexadiene
d_{20}°.0.848, b.78.5



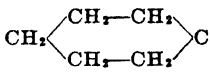
1.3-dihydro-benzene
$\Delta^{2(4),5}$-cyclohexadiene
d.0.842, m. −98, b.80.5



1.4-dihydrobenzene
$\Delta^{2.5}$-cyclohexadiene
$d_{22°}$.0.847, b.85.5

cyclohexan-diol. Cyclohexanediol.

cyclohexane*. C_6H_{12} = 84.13. Hexamethylene, hexanaphthene, hexahydrobenzene,



A colorless hydrocarbon occurring in Austrian and Caucasian petroleum, d.0.780, m.6.4, b.81; insoluble in water, soluble in alcohol or ether. **dimethyl-** C_8H_{16} = 112.1. **1.2-** Hexahydro-o-xylene. A colorless liquid, d.0.773, b.124. **1.3-** Hexahydro-m-xylene. A colorless liquid, d.0.771, b.120. **1.4-** Hexahydro-p-xylene. A colorless liquid, d.0.769, b.119. **ethyl-** C_8H_{16} = 112.1. Hexahydroethylbenzene. A colorless liquid, d.0.777, b.132. **hexahydroxy-** See *inosite, phenose.* **hydroxy-** Cyclohexanol. **isopropyl-4-methyl-** $C_{10}H_{20}$ = 140.2. p-menthane, $Me_2CH.C_6H_{10}.Me$. A colorless liquid, d.0.748, b.167. **methyl-** Hexahydrotoluene. **pentahydroxy-** See *quercitol, pinite.* **propyl-** C_9H_{18} = 126.1. Hexahydropropyl-benzene. A colorless liquid, d.0.767, b.140. **tetramethyl-** $C_{10}H_{20}$ = 140.2. Hexahydrodurene. A colorless liquid, d.0.785, b.161. **trihydroxy-** Phloroglucitol. **trimethyl-** C_9H_{18} = 126.2. **1.2.4-**Hexahydro-Ψ-cumene. A colorless liquid, d.0.778, b.142. **1.3.5-** Hexahydromesitylene. A colorless liquid, d.0.772, b.137.

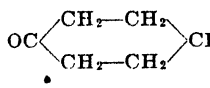
cyclohexanediol*. **1.2-** Hexahydrocatechol. **1.3-** See *quinitol.* **1.4-** See *quinitol.*

cyclohexanehexol. Inositol.

cyclohexanepentol*. Quercitol.

cyclohexanol*. $C_6H_{11}OH$ = 100.1. Hexahydrophenol, hexalin, PhH_6OH. Colorless crystals, or liquid, d.0.945, m.15, b.158. Used as a solvent for gums, waxes, rubber and nitrocellulose; also as an emulsifier in detergents. **trimethyl-** $C_9H_{18}O$ = 142.1. A liquid, b_{760mm}.198, soluble in most organic solvents or oils; used as a mutual solvent for water-immiscible liquids.

cyclohexanone*. $C_6H_{10}O$ = 98.1. Pimelinketone, ketohexamethylene.



A colorless liquid, b.155; used as a solvent, and in organic synthesis. **2-methyl-** $C_7H_{12}O$ = 112.1. A colorless liquid, b.166. **3-methyl-** A colorless liquid, b.164. **4-methyl-** A colorless liquid, b.163. **2.4.5-trimethyl-** $C_9H_{16}O$ = 140.1. A colorless liquid, b.191. **3.5.5-trimethyl-** Dihydroacetophenone. A colorless liquid, b.189.

cyclohexatriene. Benzene.

cyclohexene*. C_6H_{10} = 82.1. Tetrahydrobenzene, naphthylene, Δ^1-hexamethylene. A colorless liquid, d.0.8102, m.−103.7, b.83. Cf. *carveol, dambonite.* **c. trione*.** Urinoid.

cyclohexenol*. $C_6H_{10}O$ = 98.1. Tetrahydrophenol, Δ^2-cyclohexenol, Δ^3-hydroxy-cyclohexene. A colorless liquid, b.163.

cyclohexenyl. The monovalent radical, C_6H_9—, derived from cyclohexene. There are 3 isomers.

cyclohexyl*. The monovalent radical, C_6H_{11}—, derived from cyclohexane. **bi-** $C_{12}H_{22}$ = 166.2. Dodecahydrodiphenyl, C_6H_{11}—C_6H_{11}. Colorless liquid, d.0.864, b.240.

c. diethanolamine. An emulsifying agent.

cyclohexylidene. The bivalent radical

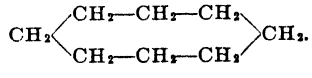
derived from cyclohexane.

cyclol. The hypothetical structure of globular proteins, viz. a space-enclosing arrangement of diazine and triazine rings.

cyclononane. C_9H_{18} = 126.2. A colorless liquid, d.0.769, b.170.

cyclo-octadiene. C_8H_{12} = 108.1. A hydrocarbon constituent of rubber. **1.5-dimethyl-** $C_{10}H_{16}$ = 136.1.

cyclo-octane. C_8H_{16} = 112.1. Octomethylene,



A liquid hydrocarbon, d.0.835, m.9.5, b.148.

cyclo-octotetraene. C_8H_8 = 104.1. Octomethyltetra-ene. A yellow liquid, $d_4°$.0.943, m.−27, b. about 40.

cyclo-olefine. A partly-saturated carbocyclic compound, or a ring-compound with double bonds and $=CH_2$ groups. General formula, C_nG_{2n-2}.

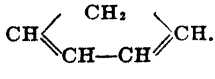
cyclopropene*	C_3H_4
cyclobutene*	C_4H_6
cyclopentene*	C_5H_8
cyclohexene*	C_6H_{10}
cycloheptadecene*	$C_{17}H_{32}$

cycloparaffin. Polymethylenes, naphthenes. A completely saturated carbocyclic compound, or a ring consisting of $=CH_2$ groups. Their general formula is C_nH_{2n}.

cyclopropane*	C_3H_6
cyclobutane*	C_4H_8
cyclopentane*	C_5H_{10}
cyclohexane*	C_6H_{12}
cycloheptane*	C_7H_{14}
cyclooctane*	C_8H_{16}
cyclononane*	C_9H_{18}

cyclopentadecanone*. $C_{15}H_{28}O$ = 224.2. Exaltone. A synthetic musk perfume. **3-methyl-** Muscone.

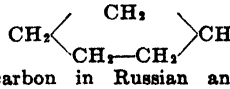
cyclopentadiene*. C_5H_6 = 66.0. Cyclopentylene, $\Delta^{1.3}$-pentamethylene, pentol,



A colorless liquid, b.41. **methylene-** Fulvene. **pantamino-** Pentaminopentol.

cyclopentamethylene. Cyclopentane.

cyclopentane*. C_5H_{10} = 70.1. Pentene, pentamethylene



A hydrocarbon in Russian and Caucasian petroleum. A colorless liquid, d.0.756, m.−95, b.50.5. **diethyl-** C_9H_{18} = 126.2. 1.3-diethyl-penta-methylene. A colorless liquid, b.93. **dimethyl-** C_7H_{14} = 98.1. There are three isomers: 1.1- (b.83); 1.2- (b.92); and 1.3- (b.91). **ethyl-** C_7H_{14} = 98.1. A colorless liquid, b.101. **methyl-** C_6H_{12} = 84.1. A colorless liquid, d.0.748, m.141, b.72.5. **pentaketo-** Leuconic

acid. **trimethyl-** C_8H_{16} = 112.1. A colorless liquid, d.0.771, b.114.

c. acetic acid. $C_5H_{10}.CH_2COOH$ = 129.1. A colorless liquid, b.140. **c. carboxylic acid*.** See *alicyclic acids*. **c. formic acid.** C_5H_{10}. COOH = 115.1. A colorless liquid, b.214.

cyclopentanol*. $C_5H_{10}O$ = 86.1. Hydroxypentamethylene, $CH_2<^{CHOH}_{CH_2—CH_2}>CH_2$. A colorless liquid, d.0.939, b.139.

cyclopentanone*. C_5H_8O = 84.1. Adipinketone, ketopentamethylene, $CH_2<^{CO}_{CH_2—CH_2}>CH_2$. A colorless liquid, b.130.

cyclopentene*. C_5H_8 = 68.1. Δ^1-pentamethylene, $CH_2<^{CH_2}_{CH:CH}>CH_2$. A colorless liquid, b.45. Cf. *camphoceenic acid*. **trimethyl-** Laurolene.

c. tridecoic acid. Chaulmoogric acid. **c. undecylic acid.** Hydnocarpic acid.

cyclopentenone*. C_5H_6O = 82.1. The homocyclic compound $OC<^{CH_2}_{CH:CH}>CH_2$.

cyclopentenyl. The monovalent radical, C_5H_7—, derived from cyclopentene.

cyclopentyl. The monovalent radical, C_5H_9—, derived from cyclopentane.

cyclopentylene. Cyclopentadiene.

cyclophenylenmethylene. $C_6H_4:CH_2$. **c. oxide.** C_7H_6O = 106.1. The heterocyclic compound $C_6H_4<^{O}_{——}>CH_2$.

cyclopia. A Leguminosae of South Africa. *C. vogelii* furnishes bush tea, used for lung disorders. **c. fluorescin.** $C_{14}H_{18}O_{12}$ = 378.4. A pigment from *C. genistoides*. **c. red.** $C_{25}H_{32}O_{10}$ = 492.25. A pigment from *C. genistoides*.

cyclopin. $C_{25}H_{28}O_{13}$ = 536.3. A glucoside from the leaves of *Cyclopia* species or bush tea from Cape Colony.

cyclopropane*. C_3H_6 = 42.1. Trimethylene, propene. $CH_2<^{CH_2}_{——}>CH_2$. A colorless gas, m. −126, b. −35, insoluble in water, soluble in alcohol or ether; used as a general anesthetic. **benzoyl-** See *benzoyl*. **dimethyl-** C_5H_{10} = 70.1. $CH_2<^{CMe_2}_{——}>CH_2$. A colorless liquid, d.-0.664, b.21, **ethyl-** C_5H_{10} = 70.1. A liquid, d.0.683, m.21, b.36. **methyl-** C_4H_8 = 56.1. A colorless gas, b.4. **trimethyl-** C_6H_{12} = 84.1. 1.1.2-trimethyl-trimethylene. A colorless liquid, d.0.679, b.57.

c. carboxylic acid*. See *acyclic acids*.

cyclopropene*. C_3H_4 = 40.1. Δ^1-trimethylene, cyclopropylene. $CH<^{CH_2}_{——}>CH$.

dihydro- Cyclopropane.

cyclopropyl. The monovalent radical, $CH_2.CH_2.CH$—, derived from cyclopropane.

cyclopropylene. Cyclopropene.

cyclopterin. A protein derived from the sperm of the lump-sucker, *Cyclopterus lumpus*.

cyclotrimethylene sulfone. $C_4H_8O_6S_3$ = 246.1. The heterocyclic compound $SO_2<^{CH_2—SO_2}_{CH_2—SO_2}>CH_2$.

cyclotron. A device to produce high speed gas atoms for nuclear bombardments, *q.v.* Cf. *rumbatron*.

cyclural. Hexobarbitone (q.v.).

cydonin. $C_{18}H_{26}O_{14}$ = 468.3. A gum or mucilaginous carbohydrate from quince seeds, *Cydonia vulgaris*.

cylinder. A glass tube, closed at one end and used to hold liquids for hydrometric determinations or the performance of lecture experiments. **filter-** A c. made of porous material used to filter solutions. **graduated-** A c. with a scale to measure liquids or gases. **steel-** A c. made of steel, used to ship compressed gases (see Table).

STEEL CYLINDER SIZES (U. S. A.)

	B	C	D	E	F	G	H
diameter, in.	3¼	4¼	4½	4½	5½	8½	9
height, in.	16	18	20	29	55	55	55
content, in.^{3}	90	142	177	288	930	2,380	2,660
content, cm.^{3}	1,474	2,326	2,900	4,723	15,252	39,032	43,624

cylindrite. $Pb_3FeSn_4Sb_2O_{14}$. A dark-gray tin ore.

cymarigenin. $C_{23}H_{30}O_5.H_2O$ = 404.03. A split product of cymarin, resembling digitoxigenin and bufotalin and identical with apocynamarin.

cymarin. $C_{30}H_{48}O_{10}$ = 568.35. A glucoside from the leaves and rhizome of *Apocynum cannabinum*, which hydrolyzes to cymarigenin and cymarose. Colorless prisms, m.135–140, slightly soluble in water, soluble in alcohol or ether, and therapeutically similar to strophanthin. Cf. *apocynamarin*.

cymarose. $C_7H_{14}O_4$ = 162.08. Digitose-methyl ether. A sugar, m.91, from cymarin.

Cymbopogon. A genus of aromatic grasses, sometimes included in *Andropogon*, q.v.

cymene. $C_{10}H_{14}$ = 134.17. p-isopropyl-toluene, 1-methyl-4-isopropyl-benzene. A constituent of the oils of eucalyptus, cumin, and thyme. A colorless liquid, $d_{16°}$.0.860, m. −23.5, b.176, insoluble in water, miscible with alcohol or ether. **o-.** b.157. **m-.** m.25; b.175–176. **hexahydro-** Menthane. **hydroxy-** **2-** Carvacrol. **3-** Thymol.

c. alcohol. $C_{10}H_{14}O$ = 150.16. 7-Cymol. An isomer of carvacrol.

cymenol. Carvacrol.

cymenyl. Cymyl. The monovalent radical, $C_{10}H_{13}$— derived from cymene.

cymic acid. $C_{11}H_{14}O_2$ = 178.1. A monobasic acid derived from cymene.

cymidine. $C_{10}H_{15}N$ = 149.2. Amino-cymene, carvacrylamine, 2-*p*-cymylamine, 2-amino-*p*-cymene, $Me_2CH.C_6H_3MeNH_2$. A colorless oil, d.0.994, m. −16, b.241.

cymograph. Kymograph.

cymol. **2-** Carvacrol. **3-** Thymol. **7-** Cymene alcohol.

cymyl. Cymenyl. **2-p-** Carvacryl. **3-p-** Thymyl.

cynapine. An alkaloid from *Aethusa cynapium* or fool's-parsley, an Umbelliferae. It forms colorless crystals.

cynoctonine. $C_{36}H_{34}O_{12}N_2$ = 702.28. An amorphous alkaloid, m.137, from *Aconitum septentrionale*, a Ranunculaceae.

cynodine. An alkaloid from the root of *Cynodon dactylon*, a Gramineae, dog's-tooth, Bermuda grass or the dooba (doob grass) of India.

cynoglossine. An alkaloid from the root of hound's tongue or *Cynoglossum officinale*, a Boraginaceae.

cynotoxin. $C_{20}H_{28}O_{16}$ = 524.3. A colorless crystalline principle from *Apocynum cannabinum*.

cynurenic acid. $C_{20}H_{14}O_6N_2.2H_2O$ = 395.14. Oxychinolin carbonic acid. A protein split-product found in dog's urine.

cynurine. $C_{10}H_{14}O_2N_2$ = 300.2. Colorless crystals. A base derived from cynurenic acid by heating it to about 260°C.

cyopin. Coloring matter of blue pus. Cf. *pyocyanin*.

cyperone. $C_{15}H_{22}O$ = 218.18. A sesquiterpene ketone from the oil of *Cyperus rotundus*.

cypral. $C_{12}H_{20}O$ = 180.15. An aldehyde from cypress oil.

cypress oil. Oleum cupressi. An essential oil from the leaves of *Cypressus sempervirens*. A pale-yellow, volatile liquid, $d_{15°}$ 0.88–0.89, $[\alpha]_D$ +4 to +18; it contains furfural, cypress camphor, d-pinene, d-camphene, d-sylvestrene, l-cadinene, and cymene. Cf. *cupressin, cypressene*.

cypressene. $C_{15}H_{24}$ = 204.19. A hydrocarbon from cypress oil, d.0.9647. Cf. *cupressin*.

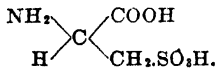
cyprinin. A protamin derived from the carp, *Cyprinus carpio*.

cypripedium. Lady's-slipper. The dried rhizome and roots of *C. pubescens* or *C. parvifolium*, American valerian, an Orchidaceae. It contains an essential oil and an acid; used medicinally.

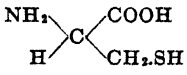
cypripedoid. The combined principles from the root of *Cypripedium pubescens*, or lady's-slipper. It is a tonic, stimulant, antispasmodic and mild diaphoretic.

cyprite. Chalcocite.

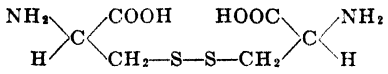
cysteic acid. $C_3H_7O_5NS$ = 169.12. α-amino-β-sulfonic propionic acid.



cysteine. $C_3H_7O_2NS$ = 121.13. Amido-thiolactic acid, alpha-amino-beta-thiol-propionic acid, β-mercaptoalanine. An aminoacid (q.v.) derived from cystine, and found in proteins and urinary calculi.



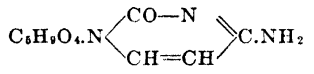
cystine. $C_6H_{12}O_4N_2S_2$ = 240.26. o-diamido-propionic acid, $\beta.\beta'$-dithiobisalanine, di-α-amino-β-thiopropionic acid. An amino-acid, (q.v.) found particularly in keratin, and occasionally as minute hexagonal crystals in urine, and forming the chief sulfur-containing acid of proteins.



cystopurin. $(CH_2)_6N_4.2NaC_2H_3O_2.6H_2O$. A molecular compound of hexamethylene tetramine and sodium acetate.

cytase. (1) Alexin. (2) A cytohydrolytic enzyme (q.v.) of the carbohydrase class.

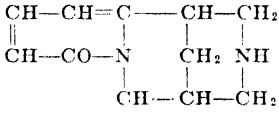
cytidine. $C_9H_{13}N_3O_5$ = 243.13. Ribosyl-cytosine, cytosine-riboside. Colorless needles, m.220; it is hydrolyzed by intestinal juice.



c. phosphoric acid. $C_9H_{12}N_3O_5.PO(OH)_2$. A pyrimidine nucleotide from cell nuclei. Cf. *solurol*.

cytidylic acid. A mononucleotide from yeast nucleic acid, composed of cytosine, d-ribose and phosphoric acid.

cytisine. $C_{11}H_{14}ON_2$ = 190.12. Ulexine, baptitoxine, sophorine. Alkaloid from the seeds of *Cytisus, Laburnum* and *Ulex* species, Leguminosae. Colorless crystals, m.152. soluble in water or alcohol, insoluble in ether or benzene.



It is a local antiseptic and powerful diuretic. Cf. *anagyrine, sparteine*.

c. hydrochloride. $C_{11}H_{14}ON_2.HCl$ = 226.59. Colorless crystals, soluble in water; used hypodermically as a nerve tonic. **c. nitrate.** $C_{11}H_{14}ON_2.HNO_3$ = 253.24. Yellow crystals, soluble in water, sparingly soluble in alcohol, insoluble in ether; used hypodermically as a nerve tonic.

cytochemistry. A branch of biological chemistry that deals with the chemical properties of living cells.

cytochrome. (1) The intracellular respiratory pigment. Cf. *chlorophyll, hemoglobin;* see table. (2) A pigment of bacteria; (*e.g.*, tuberculosis and diphtheria) related to chlorophyll but containing Fe and Cu. Cf. *porphin ring*. **c.-c.** A red secondary pigment from meat.

NATURAL PIGMENTS

Pigment	*Color*	*Metal*	*Occurrence*
chlorophyll.....	green	Mg	plants
hemoglobin.....	red	Fe	vertebrata
hemocyanin.....	blue	Cu	crustaceae
hemosycotopin...	blue	Cu, Zn	molluscs
chlorocruorin.....	green	Fe	worms
hemerythrin.....	red	Fe	worms
achroglobin.....	colorless	Mn	molluscs
pinnaglobin.....	colorless	Mn	molluscs

cytoclasis. The destruction of living cells.

cytoglobin. A protein derived from white blood corpuscles.

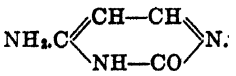
cytoligneous substances. The vegetable (bacteria) or animal (erythrocytes, spermatozoa, tissues) cells that cause cytolysis in sero-reactions.

cytology. The science of the structure and activity of living cells.

cytolysis. The destruction or dissolution of living cells.

cytoplasm. The protoplasm of the cell body, excepting the nucleus.

cytosine. $C_4H_5ON_3$ = 111.07. 2-oxy-6-amino-pyrimidine, 4-amino-2(1)pyrimidone,



A pyrimidine base derived from nucleic acid. Colorless, thin plates, sparingly soluble in water.

cytotoxin. An antibody having a specific action on the cells of certain organs; *e.g.*, nephrotoxin.

cytozyme. Thrombokinase. A substance of the body cells that causes coagulation of the blood (see *coagulen*).

D

D. (1) The symbol for deuterium, the hydrogen isotope of mass 2 = H^2. (2) An abbreviation for density of gases. $D_{(H_2)}$— Density compared with hydrogen gas taken as unity. $D_{(O_2)}$— Density compared with oxygen gas, taken as 32 (molecular weight). $D_{(air)}$— Density compared with air as unity. (3) The characteristic line of sodium. See *Fraunhofer lines.* (4) Abbreviation for diameter.

d. (1) Abbreviation for specific gravity or density of solids and liquids. d_4°= density at 4°C. d_{50}°=density at 50°C. d_c = critical density. (2) An abbreviation for dextro- or dextrorotary. (3) Differential, as in dy/dx.

d = dextro. *d(l)* = dextro- or levo-. *(dl)* = dextro-and levo-, *i.e.*, inactive.

δ. Greek letter, delta. (1) A symbol for the fourth carbon atom in a chain. (2) A *rate* of change, as in $\delta x/\delta y$.

Δ. Greek capital letter D. (1) A double bond, as Δ^1- between the first and second carbon atoms, $\Delta^{2,4}$- between the second-third and one between the fourth-fifth carbon atoms; $\Delta^{2(4)}$- a double bond between the second and fourth carbon atom. (2) Difference between two values, hence a *ratio;* as, $\Delta x/\Delta y$.

D.A. Blue cross.

dacite. An igneous rock in a class between the monzonite group and the quartz diorites; it consists chiefly of plagioclase, feldspar, mica and hornblende, and occurs in Yellowstone Park and at Mt. Lassen, California.

dacrene. $C_{20}H_{32}$ = 272.16. A diterpene from *Dacrydium biforme,* a Taxaceae, the mountain-pine of Australia and New Zealand.

dacryagogue. An agent that causes a flow of tears. Cf. *lacrimatory.*

dacryolin. The albuminous matter of tears.

dactylin. $C_{21}H_{28}O_{15}$ = 544.2. A glucoside from the pollen of orchard grass, *Dactylis glomerata,* and timothy, *Phleum pratense.* Pale yellow needles, m.184, readily soluble in hot water, slightly in cold water or alcohol.

-dag. Abbreviation-suffix for defloccuated Acheson graphite (see *graphite*).

Daguerre, Louis Jaques Mandé. 1789–1851. A French physicist and painter, noted as the inventor of the first photographic method. **D. process.** A polished silver plate is made light-sensitive by exposure to iodine vapor. The exposed surface coating of silver iodide is developed by means of mercury vapor and thiosulfate.

daguerrotype. A photograph made by Daguerre's process.

dahlia. A genus of composite plants whose bulbs yield inulin and a purple coloring matter. **d. paper.** A test paper impregnated with the coloring matter of d.; red with acids, green with alkalis. **d. violet.** See *pyoktanin.*

dahlin. (1) A purple aniline dye derived from mauveine. (2) Inulin.

dahllite. $Ca_6(PO_4)_4.CaCO_3$. A white, fibrous calcium phosphate-carbonate.

Dahl's acid. 2.5-Naphthylamine sulfonic acid. **D.a.II.** *1*-Naphthylamine-*4.6*-disulfonic acid. **D.a.III.** *1*-Naphthylamine-*4.7*-disulfonic acid.

dahmenite. An explosive that consists of 91 % ammonium nitrate, 6.5 % naphthalene and 2.5 % potassium dichromate.

daidzin. A pigment from soy-bean meal, *Soja hispida,* which hydrolyzes to daidzein (7.4'-dihydroxy-isoflavone).

Dakin, Henry Drysdale. 1880– . An English-born American biochemist. **D. antiseptic.** Chlorazene. **D. solution.** A solution of 0.5 % sodium hypochlorite with sodium bicarbonate; used in the treatment and irrigation of infected wounds.

Daland hematocrit. A centrifuge attachment holding two graduated glass tubes for separating blood corpuscles.

Dalen Martens rubber testing machine. A device for testing the tensile strength and elasticity of rubber.

John Dalton.

(Courtesy of Jour. of Chemical Education.)

Dalton, John. 1766–1844. An English chemist, mathematician, and physicist, and founder of the atomic theory. **D's Law.** (1) The pressure of a gas mixture equals the sum of the partial pressures of the constituent gases. Cf. *Charles' law.* (2) Laws of proportion. See *proportion.* (3) Absorption of gases: The solubility of different gases in a mixture is unaffected by the presence of other gases so long as no chemical reaction occurs.

dalton. A unit of mass; $\frac{1}{16}$ of the mass of an oxygen atom, approximately 1.65×10^{-24} gram.

daltonide. A name proposed for a chemical compound or chemical individual; as opposed to "berthollide" (q.v.) or alloy.

damalic acid. $C_{12}H_{22}O_2$ = 198.2. An acid in urine.

damaluric acid. $C_7H_{12}O_2$ = 128.1. An acid in urine.

damar. Dammar.

damascenine. $C_{10}H_{13}O_2N$ = 195.1. An alkaloid from the seeds of *Nigella damascena* (Ranunculaceae). $C_6H_2(OMe)(NHMe)COOMe$.

dambonite. $C_8H_{10}O_6$ = 202.1. p-dimethoxytetrahydroxybenzene. $C_6(OH)_4(OMe)_2$. Colorless crystals from Gaboon caoutchouc.

dambose. $C_6H_{12}O_6.2H_2O$ = 216.16. *i*-Inositol. A sugar from caoutchouc. Colorless, hexagonal prisms, m.220, soluble in water, insoluble in alcohol or ether.

damiana. The dried leaves of *Turnera diffusa*, (Turneraceae), a Mexican plant used as an aromatic nervine and tonic.

dammar. Dammara. An oleoresin from various Coniferae of Asia, Australia, and South America resembling copal. Yellowish or brownish masses, d.1.04–1.12, m.115–125, soluble in hot alcohol, chloroform, ether, or benzene; used in varnishes and plasters. **true-** The resin obtained from *Dammara orientalis* of the East Indies, or *D. australis* of New Zealand.

dammarylic acid. $C_{56}H_{80}O_8$ = 880.68. An acid in dammar.

damourite. An olivine rock consisting of a yellowish variety of muscovite.

damping period. The time needed for an excited electron to drop to the normal orbit and emit the characteristic radiations of the atom. Cf. *lingering period.*

danain. $C_{14}H_{14}O_5$ = 262.24. A glucoside from the root of *Danais fragrans*, a Rubiaceae of Madagascar.

danaite. (Fe,Co)AsS. An iron-cobalt sulfo-arsenide.

danalite. $(Zn, Mn, Fe, Be)_7SSi_3O_{12}$. A rare zinc manganese iron beryllium silicate and sulfide.

danburite. $CaB_2Si_2O_8$. A pale-yellow, orthorhombic calcium borosilicate, d.2.95, hardness 7, dissolved by HCl.

dandelion. Taraxacum.

Dangler burner. A gasoline blast burner; temperature 1100°F.

Daniell, John Frederic. 1790–1845. An English chemist and physicist noted for electrical and meteorological investigations. **D. cell.** A voltaic cell furnishing 1.08 volt and consisting of an amalgamated zinc electrode in dilute sulfuric acid (1:12) and a copper electrode in saturated copper sulfate solution. Used in telegraphy.

dannemorite. A rare amphibole.

daphnandrine. $C_{36}H_{38}O_6N_2$ = 594.32. An alkaloid from the bark of *Daphnandra micrantha*, a Monimiaceae of Australia. It is a cardiac and muscular paralyzant.

daphnetin. $C_9H_6O_4$ = 178.3. 7.8-dihydroxycoumarin.  A split-product of daphnin. Pale-yellow crystals, m.255, soluble in water or alcohol.

daphnin. $C_{15}H_{16}O_9.2H_2O$ = 376.2. A glucoside from the bark of *Daphne mezereum*, bay tree or laurel tree, a Thymelaceae. Transparent prisms, m.200.

daphniphylline. An alkaloid from the leaves and bark of *Daphniphyllum bancanum*, an Euphorbiaceae of the Dutch East Indies. It is a cardiac poison.

daphnite. $H_{56}Fe_{27}Al_{29}Si_{18}O_{121}$. A hydrous iron-aluminum silicate of the chlorite group.

darak. Tikitiki. A high grade Philippine rice bran.

darapskite. $NaNO_3.Na_2SO_4.H_2O$. A native sodium nitrate and sulfate, found in the Chilean and California nitrate beds.

D'Arcet metal. (1) Mellot's metal. An alloy of 8 pts. Bi, 5 pts. Pb, and 3 pts. Sn; m.100; used for filling teeth and making plates. (2) An alloy of 50 % Bi, 25 % Pb and 25 % Sn. Used as the low melting alloy (m.94) in fire-sprinklers and fusible plugs.

Dare hemoglobinometer. An optical device for estimating the hemoglobin content of fresh undiluted blood.

dari. A grain similar to millet; used for the production of alcohol by fermentation.

dasymeter. An instrument for measuring the heat loss of a furnace by analysis of the waste gases.

date palm. An extensively cultivated palm. Its fruit is used as food, its fiber for ropes, and its sap in making sugar.

datiscetin. $C_{15}H_{10}O_6$ = 286.1. A split-product of datiscin.

datiscin. $C_{21}H_{22}O_{12}$ = 466.2. A glucoside from the roots of *Datisca cannabina*, a Datiscaceae; used in fevers and stomachic troubles.

dative bond. See co-*valence.*

datolite. $2CaO.B_2O_3.2SiO_2.H_2O$. A rare zeolite. Colorless, grayish or greenish, monoclinic masses d.2.9, hardness 5–5.5.

Datura. Thorn apple, Jamestown weed. A genus of solanaceous plants; *e.g.*, *D. stramonium* (see *stramonium*).

daturic acid. Margaric acid.

daturine. Hyoscyamine. *dl*-Atropine.

daubreeite. BiOCl. An amorphous whitish, native bismuth oxychloride.

daubreelite. $FeCr_2S_4$. A black, iron-chromium sulfide, in meteorites.

daucine. An alkaloid from the leaves of *Daucus carota*, wild carrot, an Umbelliferae; sometimes used as a diuretic.

daughter cell. A cell formed by division from a single cell (mother cell). Cf. *karyokinesis.*

daviesite. A colorless, orthorhombic, native lead oxychloride.

Davy, Sir Humphry. 1778–1829. An English chemist who isolated sodium, potassium, barium, calcium, and strontium by electrolysis, and devised the miners' safety lamp. **D.'s lamp.** See *miners'* lamp.

davyum. A supposed element in platinum ores. (Cf. *celtium, masurium, rhenium.*)

dawsonite. $NaAlCO_3(OH)_2$. A basic, aluminum-sodium carbonate; white, monoclinic crystals.

daxad. Trade name for a group of dispersing agents.

day. A unit of time. **mean solar-** The average period from noon to noon, which consists of 1440 minutes = 86,400 seconds = 1.0027379 sidereal days. **sidereal-** Consists of 86164.10 seconds, and is the interval between successive passages of a star through the meridian. It is 3 minutes 55.91 seconds shorter than the solar day.

Db. Symbol for dubhium, q.v.

DDNP. Abbreviation for diazodinitro phenol.

DDT. Gesarol, neocid, GNB. Dichlorodiphenyl trichloroethane, an effective insecticide.

De. Symbol for denebium, q.v.

de- A prefix indicating removal, (*e.g.*, of atoms, radicals or water), as, dehydro.

Sir Humphry Davy.

Deacon process. A method of making chlorine by oxidizing hydrochloric acid with atmospheric oxygen. The hot gases pass over a cuprous chloride catalyst.

deactivation. (1) Rendering inactive. The opposite of activation (*e.g.*, of a catalyst). (2) Loss of the radioactivity of a preparation.

dead. A molten alloy, as steel, which is quiet and does not evolve gas.

dealcoholizing. The removal of alcohol from liquids.

deamidation. The substitution of the amino group by another radical.

deamidizing. The splitting off of the amino group; *e.g.*, by enzymes (adenase, guanase).

deamination. The hydrolysis of amines, and the removal of the amino-group;

$$R.NH_2 + H_2O \rightarrow R.OH + NH_3.$$

oxidative-:

$$R.CHNH_2.COOH \rightarrow R.CO.COOH + NH_3$$

reductive-:

$$R.CHNH_2COOH \rightarrow R.CH_2.COOH + NH_3$$

deaminizing. The splitting off of ammonia from amino acids and proteins with the formation of the corresponding fatty acids.

deaquation. Dehydration.

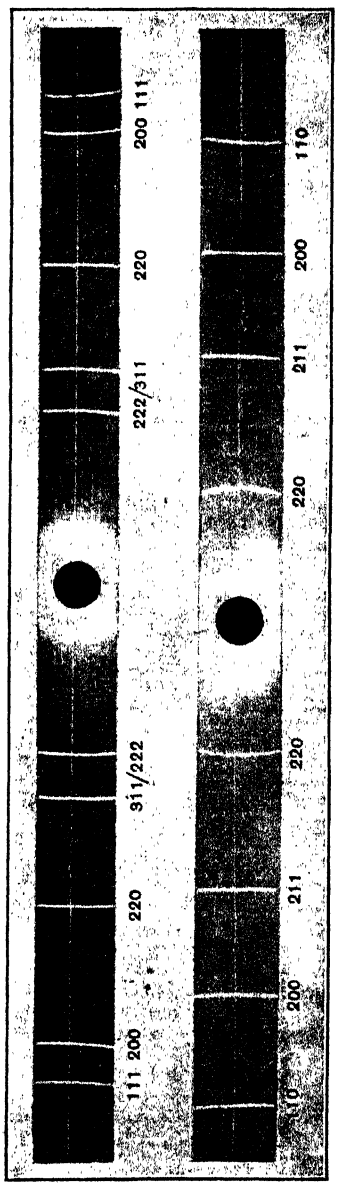
Debierne, André. 1874– . A French physicist, noted for work in radioactivity.

de Broglie. See *Broglie.*

Debye, Peter. 1884– . A Dutch physicist noted for research on crystal structure. **D. crystallogram.** A spectrum-like pattern produced by refracting monochromatic x-rays by a crystal. See figure. **D.-Hückel theory.** The distribution of ions; $n_{+(-)}$, in a small volume at distance r from a chosen ion is:

$$n_{+(-)} = ne\frac{-(+)r + (-)e\psi}{KT}$$

where n is the number of molecules of salt in 1 cc., e the elementary electric charge, ψ the potential due to the chosen ion at distance r, K the Boltzmann constant and T the absolute temperature.



Debye crystallogram made with apparatus manufactured by Adam Hilger, Ltd., London, and showing the crystal structures of copper (top) and iron (bottom).

deca. The Greek for ten; a prefix to denote ten times. Cf. *deci.*

decagram. Ten grams or 154.32349 grains (0.35 ounce).

decahydronaphthalene. Dekalin.

decal process. Decalcomania. A transfer process for placing designs upon surfaces, from railroad cars to sausage casings. It consists of making a lithographic print on specially prepared paper and transfering it to the surface by moistening the paper.

decalcify. To remove lime-salts from a tissue or bone.

decalescent. The absorption of heat, at a certain temperature, by a bar of steel during heating, due to allotropic changes. Cf. *recalescent.* **d. outfit.** A device for determining the hardening temperature of high carbon steel; it consists of a crucible furnace, rheostat, high resistance pyrometer with decalescent couple.

decalin. Dekalin.

decaliter. Ten liters, or 10,000 cubic centimeters.

decameter. Ten meters, or 393.7 inches, or 32.8 feet.

decanal. $C_{10}H_{20}O$ = 156.2. Decylaldehyde. $Me(CH_2)_8CHO$. A solvent.

decane*. $C_{10}H_{22}$ = 142.23. **normal-** The tenth hydrocarbon of the methane series. A colorless liquid, $d_{20°}$.0.730, m. −30, b.173, insoluble in water, miscible with alcohol or ether. **amino-** $C_{10}H_{23}N$ = 157.19. Decylamine*, $Me(CH_2)_9NH_2$. White crystals, d.0.951, m.17, b.218. **iodo-*** $C_{10}H_{21}I$ = 268.08. *n*-Decyliodide. A colorless liquid, $b._{15mm}$132.

d. carboxylic acid*. Undecylic acid. **d. dioic acid*.** Sebacic acid. **d. oic acid*.** Capric acid. **d. diol*.** $C_{10}H_{22}O_2$ = 174.17. Decamethyleneglycol, $CH_2OH(CH_2)_8CH_2OH$. White crystals, m.71.5, $b._{11mm}$.179. **d. nitrile*.** Capronitrile.

decanoic acid*. Capric acid.

decanol*. Decyl alcohol.

decanone*. $C_{10}H_{20}O$ = 156.16. **2-** The ketone $MeCO(CH_2)_7Me$. **5-** The ketone $Me(CH_2)_3CO(CH_2)_4Me$. Used as a solvent.

decant. To pour or syphon off a liquid layer.

decantation. A method of separating a sediment (liquid or solid) by pouring off the superimposed liquid layer.

decarbonization. To remove carbon.

decarboxylating. The splitting off of carbon dioxide from amino acids and proteins by bacterial action, with formation of amines.

decarboxylizing. The removal of one or more carboxyl groups from the molecule of an organic acid, and its decomposition to carbon dioxide; this is a property of some enzymes, *e.g.*, carboxylase of yeast.

decarboxyrissic acid. $C_{10}H_{12}O_5$ = 192.08. *3,4-* Methoxyphenoxy acetic acid. Colorless crystals, m.116.

decarburization. Removal of carbon from iron and steel.

decarburize. Decarbonize.

decatoic acid. Capric acid.

decatyl. Decyl.

decay. (1) The progressive, chemical decomposition of organic matter in presence of atmospheric oxygen; generally due to aerobic bacteria. Cf. *putrefaction.* (2) The progressive disintegration of radioactive substances. Cf. *disintegration, period of decay.*

decene*. $C_{10}H_{20}$ = 140.21. Decylene, octylethylene. **normal-** Diamylene, octylethylene. The unsaturated hydrocarbon $CH_2{:}CH(CH_2)_7Me$. A colorless liquid, $d_{0°}$.0.763, b.172, insoluble in water, miscible with alcohol or ether.

deceresol OT. The dioctyl ester of sodium sulfosuccinic acid, used as a wetting agent.

dechenite. PbV_2O_6(?). A rare lead vanadate, named after von Dechen, German mineralogist.

decholin. Trade name for dehydrocholic acid.

deci. The Latin for ten, used as a prefix to denote one-tenth. Cf. *deca.*

decibel. One-tenth of a bel, q.v.

decigram. One-tenth of a gram, or 100 milligrams; or 1.54 grain.

deciliter. One-tenth of a liter, or 100 cubic centimeters or 3.38 U. S. fluidounces, or 3.52 English fluidounces.

decimal. A fraction of ten, or divided into ten parts.

decimeter. One-tenth of a meter or 10 centimeters, 3.937 inches.

decimolar. One-tenth of the molecular weight (in grams). **d. solution.** A solution containing, in one liter, one-tenth of a gram molecule; *e.g.*, a M/10 solution of sodium hydroxide contains 4.01 grams of sodium hydroxide per liter.

decine. $C_{10}H_{18}$ = 138.20. Decinene, decyne*. **normal-** Octylacetylene, T^1-decine. The unsaturated hydrocarbon $HC{:}C(CH_2)_7Me$. A colorless liquid. **2-** Heptylmethylacetylene. $MeC{:}C(CH_2)_6Me$.

decinene. Decine.

decinormal. One-tenth of the normal or equivalent strength. **d. solution.** A solution containing, in one liter, one-tenth gram of the equivalent weight of a substance, *e.g.*, a N/10 solution of sulfuric acid contains 4.905 grams of sulfuric acid per liter.

declination. Deviation or bending; *e.g.*, magnetic declination is the variation of the compass needle from the true north.

decoction. A solution made by boiling the solute with the solvent. Cf. *infusion.*

decoctum. A soluble pharmaceutical preparation made by boiling vegetable drugs in water and straining.

decoic acid. Capric acid.

decolorant. An agent which absorbs or destroys a color.

decoloration. The staining or bleaching of colors by natural means.

decolorization. A process for bleaching or destroying a color artificially.

decolorizing. The removal or destruction of a color; *e.g.*, by charcoal or by a bleaching agent.

decompose. (1) To break down, split up, or analyze a substance. (2) To rot.

decomposition. The breaking down of a substance or splitting it into simpler constituents. **double-** Metathesis. A chemical change in which two molecules exchange one or more of their constituents. **hydrolytic-** The decomposition of substances, especially rocks, by water. Cf. *hydrolysis.* **single-** Analysis. A chemical change in which a molecule breaks apart into its constituents.

d. apparatus. A device for the electrolysis of water. **d. of rocks.** The disintegration of rocks following, in general, the successive stages of: solution, hydration, disintegration, and mechanical sorting.

decortication. The stripping of the bark, hull or other outer layer from a plant; as of ramie.

decoylamide. Caprylamide.

decrepitate. (1) To crackle. (2) To roast a moist material.

decrepitation. The property of crystals, when heated, of flying apart with a cracking sound.

decyl. Decatyl. The monovalent $C_{10}H_{21}$— radical, derived from decane. **d. alcohol.** $C_{10}H_{22}O$ = 158.23. (**normal-**) Decatyl alcohol, nonylcarbinol, *1*-decanol*, $Me(CH_2)_8CH_2OH$. A colorless, oily liquid, $d_{20°}$.0.830. m.7, b.231, soluble in alcohol. **d. aldehyde.** Decanal. **d. amine*.** Amino*decane*. **d. hydride.** Decane.

decylene. Decene*.

decylenic acid. $C_{10}H_{18}O_2$ = 170.14. An unsaturated acid occurring in butter; m. 0, b. 142.

decylethylene. Dodecylene.

decylic acid. Capric acid.

decyne*. Decine.

deduction. (1) A conclusion drawn from established facts and data. Cf. *speculation.* (2) An inference from general to particular. Cf. *induction.*

deenate. Trade-mark for insecticide based on DDT (q.v.), used for agricultural purposes.

deenol. Trade-mark for insecticide based on DDT (q.v.), used for industrial purposes.

defecation. The clarification of sugar solution in the sugar industry.

defervescence. Cessation of boiling.

defibrinated. Made free of fibrin. **d. blood.** A blood which has been d. by shaking with lead-bullets, beating or chemical precipitation.

definite proportions. "The proportion of elements by weight is always constant for the same compound."

deflagration. Sudden combustion, usually accompanied by a flame and crackling sound. **d. spoon.** A metal spoon with long handle, used to burn substances in gases.

deflect. To turn from a straight course.

deflocculation. The removal of flocculation.

deformability. The property of a substance by which its shape, flow, or elasticity may be altered without rupture. *E.g.*, pitch.

defrother. An agent which destroys or prevents foaming; as, butanol.

degasification. The elimination of gases from metals previous to coating or plating them with another metal.

Degener's indicator. Phenacetolin.

degeneration. The deterioration of cells or the loss of race-characteristics by an organism.

degradation. The conversion of an organic compound to a compound containing a smaller number of carbon atoms; as, $R.COOH \rightarrow R.H$. **energy-** See *thermodynamics.* **mass-** See *mass-energy cycle.*

degras. A dark-brown grease from sheep wool, used in the leather industry and in the manufacture of lanoline.

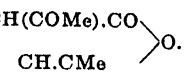
degreaser. A solvent which removes fat or oil; as, dichloroethylene, methylene chloride, tetrachloroethane.

degree. A position or a unit, generally a difference in temperature (as, 6°C), density (as 6°B), or direction (as 6° angle). **d. of freedom.** Variance. Each of the three variables: pressure, temperature and specific volume, one or more of which must be fixed in order to define the state of a system. See *phase rule.* **d. of hardness.** The hardness (*q.v.*) of a mineral is indicated by its position in an arbitrary scale of comparison; as, *Moh's scale.* **d. of ionization.** The percentage of ionized molecules in a solution. **d. of temperature.** A division of the thermometer scale, (q.v.) usually expressed on the centigrade scale, °C.

deguelin. $C_{23}H_{22}O_6$ = 370.15. A constituent of cube. Cf. *rotenone, tephrosin.*

deHaën salt. $SbF_3.(NH_4)_2SO_4$ = 310.8. A double salt of antimony trifluoride and ammonium sulfate, used as a mordant for textiles.

dehydracetic acid. $C_8H_8O_4$ = 168.04.



Methylacetopyronone. Colorless, rhombic scales, m.108, b.269.9, slightly soluble in hot water, alcohol, or ether. **iso-** Dimethyl *coumalic acid.*

dehydrant. A therapeutic dehydrater, q.v.

dehydrated food. Foodstuffs (*e.g.*, vegetables) from which water has been removed under conditions that reduce their bulk (for convenience of transport and storage) while maintaining their keeping properties. On re-addition of the water the foodstuff returns substantially to its original state.

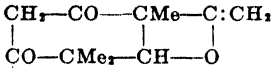
dehydrater. (1) A device for drying tissues for histological work. (2) Dehydrator. A substance which removes water; as, alcohol, butanol. C. *desiccant.*

dehydration. (1) The process of removing water from compounds and crystals; *e.g.*, by heating. (2) The process of removing hydrogen from organic compounds by reducing agents (dehydrogenation).

dehydrite. A brand of magnesium perchlorate used as desiccant. Cf. *anhydrone.*

dehydro- A prefix for an organic compound indicating the presence of less hydrogen; *e.g.*, dehydro-corydaline.

dehydroangustione. $C_{11}H_{14}O_3$ = 194.09. A bicylic diketone from the oil of *Backhousia angustifolia*, d.1.103, $b._{11mm}$127.



Cf. *angustione.*

dehydrocholic acid. $C_{24}H_{34}O_5$ = 402.31. A split product of cholic acid, obtained by treatment with nitric acid.

dehydrogenase. A dehydrogenating enzyme in the cell walls of *B. coli.*

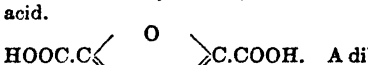
dehydrogenation. The removal of hydrogen from organic compounds by reducing or oxidizing agents in presence of catalysts.

dehydro-isodesoxycholic acid. $C_{22}H_{28}O_6$ = 388.2. β-diketo cholanic acid. An oxidation product of cholic acid.

dehydrolysis. The removal of hydrogen and oxygen in the proportions of water from organic substances; *e.g.*, cane sugar treated with sulfuric acid. Cf. *dehydration.*

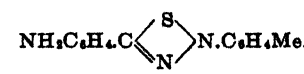
dehydrolyzing agents. A chemical which extracts water from organic compounds; *e.g.*, sulfuric acid, phosphorus pentoxide, or zinc chloride. Cf. *desiccant.*

dehydromucic acid. $C_6H_4O_5$ = 156.0. Furfurane dicarboxylic acid, *2.5*-furan-dicarboxylic acid.



A dibasic acid; colorless crystals obtained by dry distillation of mucic acid.

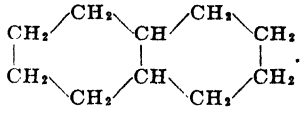
dehydrothiotoluidine. $C_{14}H_{13}N_2S$ = 255.1. Aminobenzenyl-o-amino-thiocresol.



Yellow needles, m.191, b.431; insoluble in water, soluble in alcohol or ether. Its solutions have a violet fluorescence; used as a dye.

dehydrothioxylidene. $C_{16}H_{16}N_2S$ = 268.2. Aminotoluenyl-o-amino-thio-xylenol. Yellow prisms, m.107, b.283; insoluble in water, soluble in alcohol. Used as a dye.

dekalin. $C_{10}H_{18}$ = 138.2. Decalin, decahydronaphthalene, bicyclo(0.4.4)decane. The saturated aromatic hydrocarbon



A colorless liquid, d.0.8947, b.192; miscible with alcohol or ether. Used as a cleaning fluid, solvent, and substitute for turpentine and lubricating oil; also in perfumery. Cf. *tetralin.*

de Khotinsky. See *Khotinsky.*

delcosine. $C_{21}H_{33}NO_6$ = 395.3. An alkaloid, m.198, isomeric with and occurring with deltaline in *Delphinium consolida.*

delessite. $(Mg,Fe)_4Al_4H_{10}Si_4O_{22}$. A green, hydrous, iron magnesium and aluminum silicate, related to chlorite.

delineascope. A projection apparatus consisting of a nitrogen-filled Mazda bulb, with a silvered glass reflector and slide carrier.

deliquescence. Gradual liquefaction by absorption of water from the atmosphere; as by calcium chloride. Cf. *hygroscopic.*

deliquescent. Becoming moist or liquefied after exposure to humid aid. Cf. *hygroscopic.*

deliriant. A cerebro-spinal neurotic drug which produces confusion of will power and delirium; as, belladonna, cannabis, cocaine, fishberries, hyoscyamine, solanine, stramonium.

delphin blue. $C_{30}H_{17}O_6N_3S$. A blue aniline dye obtained by heating aniline with gallocyanin and sulfating.

delphine. Delphinine.

delphinic acid. An acid from the oil of *Delphinium* species, Ranunculaceae.

delphinidin. $C_{15}H_{10}O_7.HCl$ = 338.53. An anthocyanidin, (q.v.) from the flowers of *Delphinium* species.

delphinin. $C_{41}H_{68}O_{21}Cl$ = 901.8. A glucoside from larkspur, *Delphinium consolida,* which hydrolyzes to delphinidin and p-hydroxybenzoic acid.

delphinine. $C_{22}H_{35}O_6N$ = 409.28 or $C_{34}H_{47}NO_9$ = 577.37. An alkaloid from the seeds of *Delphinium staphisagria,* a Ranunculaceae of Europe and Asia Minor. Colorless crystals, decomp. 120, soluble in alcohol, ether, or chloroform; used as an antispasmodic, anticonvulsive antineuralgic. Cf. *staphisagria alkaloids.*

Delphinium. A genus of Ranunculaceae, larkspurs, which yield staphisagria alkaloids, ajacine, delphinic acid, etc.

delphinoidine. $C_{22}H_{35}O_6N$ = 409.3. An alkaloid from the seeds of *Delphinium consolida* (larkspur), a Ranunculaceae of Europe and America.

delphisine. $C_{54}H_{46}O_8N_2$ = 850.5. An alkaloid from the seeds of *Delphinium staphisagria* (stavesacre), a Ranunculaceae.

delphocurarine. $C_{23}H_{33}NO_7$ = 435.3. An alkaloid, m.185, from the seeds of *Delphinium scopulorum.* An amorphous, white powder resembling curare in effect. Cf. *delcosine.*

delta. The Greek letter δ or Δ. δ is a symbol for (1) difference, or (2) the fourth carbon atom in a chain; Δ for double bond. **d. acid.** δ-acid. 2.7-Naphthylamine sulfonic acid. **d. metal.** A tough alloy of 60 parts copper, 38.2 parts zinc and 1.8 parts iron.

deltaline. $C_{21}H_{33}NO_6$ = 395.3. An alkaloid, m.180, from *Delphinium occidentale.* Cf. *delcosine.*

delvauxite. A hydrous ferric phosphate containing vanadium.

delvinal sodium. Sodium ethyl (1-methyl-1-butenyl) barbiturate. A rapidly acting sedative.

demagnetization. Any method by which an object is deprived of its magnetic properties.

demal. A solution containing one gram equivalent of solute per cubic decimeter (1 dm^3. = 1.000027 l.). Used in place of *normal* in electrical conductivity measurements.

demargarinate. To separate, almost completely, the solid glycerides from an edible oil by cooling.

dematoid. A light green andralite (iron garnet, q.v.).

demerol. Dolantin, dolantol. The ethyl ester of 1-methyl 4-phenyl piperidine 4-carbonic acid; it is a powerful analgesic.

demethylation. Removal of the methyl group.

demi. (French) Half. See *semi* (Latin) and *hemi* (Greek). **d. john.** A glass storage vessel, carboy-shaped but holding only 4 gallons.

Democritus of Miletus. [Gk. Demokritos.] 460–370 B.C. An early Greek philosopher of Abdera in Thrace, noted for his speculations on atoms and cosmology.

demolization. The purely physical dispersion of a molecular system produced by the action of highly superheated steam.

demulcent. An oily or mucilaginous drug, which soothes or protects an inflamed tissue; as, milk, glycerol, starch.

denaturation. (1) The addition of substances, harmful or inert, to a product such as alcohol or salt, by which it becomes unfit for human consumption. (2) The production of suspensoid properties in albumins and globulins by certain reagents.

dendrite. (1) Dentrite. A tree-like or arborescent crystalline structure; as, in geology the black or brown designs found in the joints and division planes of rocks (moss agate). They are due to the infiltration and subsequent evaporation of solutions of iron and manganese salts. (2) A protoplasmic protuberance on a nerve cell.

dendrobine. $C_{16}H_{25}NO_2$ = 263.2. An alkaloid from Chin-shih-hu, a variety of *Dendrobium* (Orchideaceae); a tonic and antipyretic.

dendrology. Dating trees from growth rings.

denebium. De. A supposed element isolated in 1916 by Eder, identical with thulium, Tm, atomic number 69.

denier. The thickness of a thread or yarn expressed as the weight in grams of 9000 meters.

Denigè's reagent. A solution of 5 gm. yellow mercuric chloride in 20 cc. conc. H_2SO_4 and 100 cc. H_2O, used as test for citric acid.

denitration. The removal of nitrates from a material; as, the d. of soils by growing plants.

denitrification. The removal of nitrogen from a material, *e.g.,* soil.

denitrify. To remove nitrogen or nitrates.

Dennstedt furnace. An electrically heated combustion furnace for elementary organic analysis.

densimeter. A hydrometer.

densi-tensimeter. An apparatus for the simultaneous determination of vapor pressure and vapor density.

densitometer. An optical device for measuring optical density *e.g.*, of a photographic plate. Cf. *absorptiometer.*

density. (1) In chemistry and physics, the weight of matter per unit volume of a substance. For solids and liquids: d. = spec. grav. For gases (M = molecular weight):

$D_{(air)}$ = d. in relation to air = 1.
$D_{(O_2)}$ = d. in relation to O_2 = 32 = M.
$D_{(H_2)}$ = d. in relation to H_2 = 1 = M/2.

Cf. *hydrometer* scales, normal and relative *density, specific gravity.* (2) In photography, the thickness of the image on an exposed plate, as measured photometrically. Cf. *optical* density. (3) In physics (*current-density*), the number of amperes passing per sq. cm. of an electrode. **limiting-** The density of a gas corresponding with the pressure at which it becomes an ideal gas and obeys Boyle's Law. The ratio of the limiting densities of two gases equals therefore, the ratio of their molecular weights. **normal-** The limiting density at atmospheric pressure, or the weight in grams of a liter of substance measured at N.T.P., the weights being reduced to sea-level at latitude 45°. **relative-** The weight of a volume of substance compared with that of a standard measured under the same conditions. For solids and liquids 1 cc. of water at 4°C. is the standard; for gases and vapors, an equal volume of hydrogen. **vapor-** The ratio of the weight of a given volume of a gas or vapor to that of the same volume of hydrogen measured at N.T.P. (1 cc. of hydrogen weighs 0.00009 gram). It follows from Avogadro's Law that the vapor density = ½ molecular weight.

Density comparator.

a. Projection system.
b. Photoelectric cell.
c. Spectrum negative.

d. comparator. A photoelectric densitometer, q.v. See figure. Cf. *microphotogram.*

d. fluids. A series of fluids for separating minerals by flotation; as,

d.5.3.....	thallium mercury nitrate solution
d.4.27.....	Clerici solution
d.3.5.....	Rohrbach solution
d.3.33.....	methylene iodide
d.3.17.....	Toulet's solution
d.2.97.....	acetylene tetrabromide
d.2.90.....	bromoform
d.1.94.....	ethyl iodide.

densograph. A curve showing the relation between the intensity of a source of illumination and the density of the image produced on a photographic plate.

dental alloy. A mixture of 66–69 % Ag, 5 % Cu, 0.5–1.7 % Zn and 26–26.5 % Sn, amalgamated with mercury. **d. cement.** A quick-setting mixture consisting of finely powdered (1) zinc oxide (= *zinc cement*), (2) copper oxide (= *copper cement*), or (3) aluminum calcium silicate (= *silicate cement*). This is mixed before use with orthophosphoric acid containing varying amounts of Al, Zn, and Na phosphates.

dentifrice. Toothpaste.

dentin. The hard substance of the teeth.

dentists' amalgam. An alloy of 70 parts mercury with 30 parts copper, used in dentistry.

dentrite. Dendrite.

denudation. Stripping or making bare. Cf. *erosion.* **chemical-** The loss of nutritive salts from the soil, and the progressive degeneration of agricultural land.

deodorant. An agent which removes, corrects, or represses undesirable odors.

deoxidation. Reduction, the removal of oxygen from a compound; or the lowering of the oxygen content, as in steel manufacture.

dephlegmator. Fractionating column.

dephlogisticated. An obsolete term which indicated the absence of phlogiston or the principle of inflammability. **d. air.** Oxygen, or airless phlogiston. **d. marine acid.** Chlorine.

depilating. In the leather industry, the removal of hairs and epidermis from hides.

depilatory. A drug or agent which removes superfluous hairs from the skin; *e.g.*, barium sulfide.

depolarization. The prevention or removal of polarization. **electrical-** The prevention of electrical polarization, *e.g.*, by separating the electrodes of an electric cell by a porous diaphragm. **optical-** The effect produced by placing a depolarizer between the analyzer and polarizer of a polarization apparatus.

depolarizer. An optical device refracting polarized rays into ordinary and extraordinary rays.

deposit. A collection of matter at any particular place; *e.g.*, geologic location, in test tubes (precipitate) or tissues, or on objects in an electrolytic bath.

deposition. The formation of a collection of matter; *e.g.*, sedimentation, incrustation, electroplating, or precipitation.

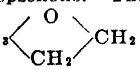
depressant. A cerebrospinal neurotic drug which diminishes the functional activity of an organ or organism; *e.g.*, arnica, antipyrine, cocaine, colchicine, hemlock, lobelia, phenacetin, tobacco.

depression. A lowering effect, *e.g.*, depression of the freezing-point of a solution by dissolved salts. **molecular-** The lowering of the freezing-

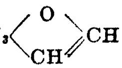
point of a solution containing a mole of a substance per liter. Cf. *Raoult's law*, *colligative*.

depressor. (1) A negative catalyst, q.v. (2) A buffer. (3) A substance used in flotation to reduce the tendency of gangue materials to be carried along with the froth; as, cyanides, silicates, sulfites. **d. effect.** The resistance of a solution to a change in hydrogen ion concentration. Cf. *buffer effect*.

depsanone. 1.2-dihydro-depsenone. The heterocyclic compound, $Ph.C_6H_3$



depsenone. 4-benzoyl-benzofuran. The heterocyclic compound, $Ph.C_6H_3$



depsides. A group of ester-like anhydrides of phenol carboxylic acids, obtained from lichens or synthesised.

depsiphore. A structural arrangement of atoms that is common to many substances having the property of tanning agents. Cf. *chromophore*.

derby red. Basic *lead* chromate.

derbylite. An antimonio-titanate of iron.

dericin. A light colored, viscous oil derived from castor oil; used as a solvent for pharmaceuticals.

derinatol. Basic *bismuth* gallate.

derivant. Derivative.

derivate. Derivative.

derivation. (1) The preparation of an organic substance from another compound. (2) The theoretical connection between the molecular structures of related organic compounds.

derivative. (1) A compound, usually organic, obtained from another compound by a simple chemical process; *e.g.*, acetic acid is a derivative of alcohol. (2) An organic compound containing a structural radical similar to that from which it is derived; *e.g.*, benzene derivatives containing the benzene ring. Beilstein classifies several types of d., according to the theoretical alteration of the compounds:

(a) index compound.........	CH_3OH	PhOH
(b) coupling compound.........	$HOCH_3$	$HOSO_2OH$
1st degree d.. ...	CH_3OCH_3	$PhOSO_2OH$
2nd degree d.....	CH_3OCHCl_2	$PhOSO_2NH_2$
3rd degree d......	—	$PhOSO_2NHCl$

Cf. *anhydrosynthesis*. **additive-** Additive compound. **functional-** A d. which contains a radical whose hydrogen is capable (theoretically) of further replacement. Cf. functioning *group*. **nonfunctional-** A d. which contains a radical without any replaceable hydrogen. Cf. nonfunctioning *group*. **nuclear-** A d. in which substitution took place on the carbon stem. Cf. stem *nucleus*. **side chain-** A d. in which substitution took place on the side chain, q.v.

derived units. Units (q.v.) of physical measurements which can be deduced from fundamental units. Thus, the fundamental unit of length, l, will give the unit of area, l^2, and the unit of volume, l^3; *e.g.*, m, m^2, and m^3.

dermatitant. A substance that irritates or inflames the skin; as, lobinol.

dermatol. Bismuth subgallate.

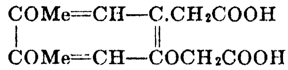
dermatoscope. A binocular microscope.

dermatosome. (1) The smallest fibre or fibril which can be detected microscopically. (2) The small fibre debris produced by the action of HCl on cellulose.

dermics. A drug used for skin diseases.

dermol. $Bi(C_{15}H_9O_4)_3.Bi_2O_3$. Basic bismuth chrysophanate. Amorphous yellow powder, used as antiseptic in skin diseases.

derric acid. $C_{10}H_{14}O_7$ = 243.09. An oxidation product of derrisic acid, m.170, soluble in water or alcohols.



Cf. *risic acid*.

derrid. An acid resin from *Derris elliptica*, a Papilionate of the East Indies; used by the Malays as an arrow poison.

derrin. An early name for rotenone.

derris. The leaves of *Derris uliginosa*, a Leguminosae of the South Sea Islands, used by the Fijians as fish poison. It contains rotenone, toxicarol, deguelin and a series of acid resins, and is not poisonous to man. Cf. *cube*. **d. extract.** An infusion of d. used as an aphicide, ascaricide, fly spray and in flea powders. **d. root.** Tuba root. The dried root of *Derris elliptica*, a Leguminosae of Sumatra, Borneo, Straits Settlements, Java, and Sarawak; used in insecticides.

derissic acid. $C_{23}H_{24}O_8$(?). A constituent of derris root.

derritol. $C_{21}H_{24}O_6$ = 372.19. An alcohol derived from rotenone. Yellow needles, m.161.

desalgin. A colloidal solution of chloroform.

desamidase. An enzyme (q.v.) which splits off the $—NH_2$ group.

desamidization. Deamidization.

desaulesite. A rare nickel-magnesium silicate.

Descartes, René. (1596–1650). A French philosopher, physicist and chemist.

descloizite. $Pb,Zn_4V_2O_4.H_2O$. A zinc-lead vanadate, occurring in greenish masses, d.6.1, hardness 3.5.

desensitization. (1) In photography: rendering silver salts less sensitive to light by physical or chemical means. (2) In biochemistry: destruction of immune bodies.

desensitizer. A substance (*e.g.*, certain dyes) which render the photographic emulsion less sensitive, *e.g.*, pinakryptol. Cf. *sensitizer*.

deshydro- A prefix, indicating containing less hydrogen; hence, unsaturated.

deshydroxy- A prefix, indicating containing less hydroxyl. **d. cholic acid.** A constituent of bile.

desiccant. An agent which dries; hence, a substance used to dry gases. Weights of the residual moisture in one liter of saturated air at 25°C. after passing through a U-tube containing the d. are:

Desiccant	*mg. of water*
P_2O_5	practically none
$Mg(ClO_4)_2$	practically none
KOH	0.003
Al_2O_3	0.003
H_2SO_4(95 %)	0.003
MgO	0.008
$Ba(ClO_4)_2$	0.14
NaOH	0.16
CaO	0.2
$CaBr_2$	0.2
$CaCl_2$	0.36
$ZnCl_2$	0.8
$ZnBr_2$	1.1
$CuSO_4$	1.4

Other d. are *ascarite, magnesium perchlorate, barium perchlorate.* **chemical-** A d. which acts by absorption, *e.g.*, reacts with water as, P_2O_5. **physical-** D. which act by adsorption, as, silica gel, charcoal, asbestos.

desiccated. Describing a dried substance.

desiccation. The process of drying by means of a deliquescent or hygroscopic substance.

desiccator. A device for drying substances; *e.g.*, a glass vessel containing a deliquescent substance, such as, calcium chloride, sulfuric acid, etc. **vacuum-.** A d. which may be evacuated.

desicchlora. An anhydrous, granulated barium perchlorate, used as a regenerable drying agent and absorbent for ammonia.

desivac process. A process of freezing and dehydrating aqueous preparations. Cf. *lyophilized biological.*

desmin. $(Na_2,Ca)Al_2Si_6O_{16}.6H_2O$. A sodium-calcium aluminum silicate; hardness 3.5–4.

desmolases. Enzymes whose activities result in the liberation of energy; as, reductases and oxidases.

desmotrope. One of a pair of tautomeric compounds. The seven most important types are:

1. keto-enol tautomerism

$$=CH.CO- \leftrightarrows =C:C(OH)-$$

2. keto-cyclo tautomerism

$$-CO-....-C(OH)= \leftrightarrows -C(OH)....C-$$
$$\qquad\qquad\qquad\qquad\qquad\quad \llcorner\!\!-O-\!\!\lrcorner$$

3. imino-amino tautomerism

$$=CH.C(:NH)- \leftrightarrows =C:CNH_2-$$

4a. nitroso-isonitroso- and

4b. oxime-isoxime tautomerism.

$$=CH.NO. \leftrightarrows =C:NOH \leftrightarrows =C(O)-NH$$

nitroso- isonitroso- oxime- isoxime-

5. nitro-isonitro tautomerism

$$=CH.NO_2 \leftrightarrows =C:N(:O)OH$$

6. nitrosamine-isodiazo tautomerism

$$-NH.N:O \leftrightarrows -N:N.OH$$

7. azo-hydrazone tautomerism

$$=CH.N:N- \leftrightarrows =C:N.NH-$$

desmotropism. Allelomorphism, dynamic allotropy. A form of isomerism (tautomerism) of organic compounds which exists between two molecules containing the same number and kind of atoms of like valency, in the same position, but with different linkages, *e.g.*, shifting of the double bond and wandering of a hydrogen atom and enol and keto forms. See *isomerism, tautomerism.*

desogen. A mixture of the methosulfates of a group of trimethylammonium bases; it is a disinfectant.

desorption. (1) The reverse of adsorption, q.v. (2) The evolution or liberation of a gas or volatile material from its solution; the reverse process to absorption.

desoxalic acid. $C_5H_8O_8$ = 194.1. *1.2.*-Dihydroxy-*1.1.2*-ethane tricarboxylic acid*. The tribasic acid $HO(HOOC)CH.C(OH)(COOH)_2$. A colorless liquid, decomp. on heating, slightly soluble in water or ether.

desoxy- A prefix indicating the removal of oxygen. **d. compound.** An organic compound in which the hydroxyl group has been replaced by hydrogen. It has been proposed to give such compounds the ending, -ane, thus, desoxyquinine becomes quinane, and desoxy-cinchonine becomes cinchonane. **d. sugar.** A group of carbohydrates occurring in nature in biologically important substances, which add H_2O and form a sugar; as, digitalose, fucose, rhamnose.

desoxyalizarin. Anthrarobin.

desoxybenzoin. $C_{14}H_{12}O$ = 196.1. Phenylbenzylketone, α-phenyl-acetophenone. $Ph.CH_2.CO.Ph$. Colorless scales, m.60, b.314, slightly soluble in hot water, soluble in alcohol or ether.

desoxycholic acid. $C_{24}H_{40}O_4$ = 392.32. An acid from bile. Cf. *cholane.*

desoxycodeine. Codeinane.

desoxycorticosterone. 21-Hydroxyprogesterone, a steroid hormone from adrenal cortex extracts.

desoxydation. The removal of oxygen from a molecule; or reduction.

desoxyephedrine. $C_{10}H_{15}N$ = 149.23. Desoxyn, methedrine, pervitine. Phenylisopropylmethylamine, $C_6H_5.CH_2.CH(CH_3).NH(CH_3)$. It is a vasoconstrictor and powerful cerebral stimulant; the hydrochloride is most frequently employed.

desoxymorphine. Morphane.

desoxyn. Desoxyephedrine (q.v.).

desoxyquinine. Quinane.

dessert-spoon. A measure equal to 2 fluid drams, or about 8 cc.

destructive distillation. The irregular decomposition of organic compounds by heating them out of contact with air; as, the production of wood tar or coal tar.

desulfuration. (1) The removal of sulfur from an organic substance, *e.g.*, by arsenic trioxide. (2) The reduction of sulfur content; as, in steel manufacture. (3) The precipitation of sulfides with lead or mercury cyanides in the cyanidization of gold ores.

desyl. The monovalent radical $PhCO(Ph)CH-$, derived from desoxybenzoin.

bi- See *bidesyl.*

detaline. Deltaline.

detection. The qualitative identification of an element or compound in a material. Cf. *determination.* **d. limit.** The smallest quantity of a particular substance (in γ) which may be detected by a particular chemical reaction.

detector. Any device for detecting electric waves; as, a valve or radio tube.

detergent. A cleansing agent. Synonym: abstergent.

DETERGENTS

Type	*Name and definition*
R.COOM.....	Soaps, the alkali salts of fatty acids.
$SO_2O.R.COOM$.....	Turkey red oils, or sulfonated fatty acids.
$(SO_2O)_xR.COOM$.....	Monopole soap or highly sulfonated fatty acids.
$SO_2O.R.OH$.....	Gardinols, or sulfonated fatty alcohols.

determinism. The principle that all properties of the atom may be related and determined. Cf. *indeterminancy, uncertainty.*

detonation. An explosion or a violent sound produced by a chemical change; as, the rapid decomposition of high explosives, or the rapid

ignition of an explosive mixture in an internal combustion engine causing knocking.

detonator. Primer. A fuse or compound which ignites an explosive mixture.

detoxicate. To make a poisonous substance harmless.

deuterate. A substance containing heavy water of crystallisation.

deuteric acid. An acid containing deuterium; as R.COOD, R.COOH^{b}, or R.COOH^{2}. **aceto-** $CH^{1}_{3}.COOH^{2}$. **benzo-** $C_6H^{1}_{5}COOH^{2}$. Cf. *deuterobenzoprotic acid.*

deuterium. D_2 = 4.02712. Heavy hydrogen, deuteronium, diplogen. The isotope of hydrogen of atomic weight 2.01356, H^2 or H^b. **d. oxide.** D_2O = 20.03. Heavy water, H^2_2O or H^b_2O. A colorless liquid, d.1.1056, m.3.8, b.101.42, n^{D}_{20}.1.3281; it inhibits the growth of seedlings and cells.

deutero- A prefix meaning: (1) second in order, (2) derived from, (3) containing heavy hydrogen (deuterium).

deuteroacetic acid. $CH^{2}_{3}.COOH^{2}$ or CD_3COOD.

deuteroacetoprotic acid. $CH^{2}_{3}COOH'$ or CD_3COOH.

deutero-albumose. A derivative of albumoses. A yellow powder, soluble in water.

deuteroammonia. The compound ND_3 or NH^{2}_{3}. It differs from ammonia as follows:

%D	NH_3	NH_2D	NHD_2	ND_3
	0	68	90	99
m.	195.2°A	197.9°A	198.6°A	199°A
b.	239.75°A	241.7°A mono-	242.1°A di-	242.3°A tri-

deuteroammonium. The radical ND_4^+. There are *mono-*, *di-*, *tri-* and *tetra-* derivatives.

deuteroartose. $C_{156}H_{244}N_{40}O_{56}S$. A secondary artose.

deuterobenzoic acid. $C_6D_5.COOD$ or $C_6H^{2}_{5}.COOH^{2}$.

deuterobenzoprotic acid. $C_6D_5.COOH$ or $C_6H^{2}_{5}.COOH'$.

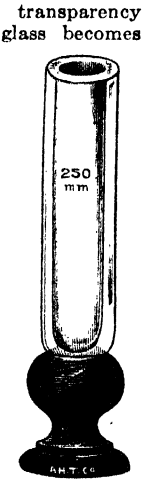
deuterochloroform. Chloroform-*d*.

deutero-fibrinose. A product formed from fibrin during digestion.

DEUTERIUM NOMENCLATURE

	Boughton names	Deuterio names
NH_2D	ammonia-*d*	deuterioammonia
NH_3	ammonia-d_3	trideuterioammonia
D_2SO_4	sulfuric acid-d_2	sulfuric dideuterioacid
$HDSO_4$	sulfuric acid-*d*	sulfuric deuterioacid or sulfuric monodeuterioacid
$Na_2SO_4.5D_2O$	sodium sulfate penta-hydrate-d_{10} or penta-(hydrate-d_2)	sodium sulfate pentadideuterio-hydrate
NH_2D_2OD	ammonium-d_2 hydroxide-*d*	dideuterioammonium deuterioxide
NHDOD	hydroxylamine-α,β-d_2 or hydroxyl-*d*-amine-*d*	α,β-dideuteriohydroxylamine or deuterioxyldeuterioamine
CH_3D	methane-*d*	deuteriomethane
CD_4	methane-d_4	tetradeuteriomethane
$CDCl_3$	chloroform-*d*	deuteriochloroform
$CH_2DC(CH_3)_2CH_3$	2,2-dimethylpropane-1-*d* or neopentane-*d*	1-deuterio-2,2-dimethylpropane or deuterioneopentane
CH_3CDO	acetaldehyde-*d*	acetodeuterialdehyde
CD_3CDO	acet-d_3-aldehyde-*d*	trideuterioaceto deuterioaldehyde
CH_3CH_2OD	ethyl alcohol-*d*	*O*-deuterioethyl alcohol or ethyl deuterioalcohol
CH_3CH_2COOD	propionic acid-*d*	propionic deuterioacid
CH_2DCH_2COOD	propionic-β-*d* acid-*d*	β-deuteriopropionic deuterioacid
$CH_2DCONHD$	acetamide-N,α-d_2 or acet-*d*-amide-*d*	N,α-dideuterioacetamide
C_6D_6	benzene-d_6	hexadeuteriobenzene
$2,3\text{-}D_2C_6H_3Cl$	chlorobenzene-2,3-d_2	1-chloro-2,3-dideuteriobenzene
$3\text{-}DC_6H_4CH_2D$	toluene-α,3-d_2	α,3-dideuteriotoluene
C_6H_5OD	phenol-*d*	*O*-deuteriophenol or benzene-deuteriol
$4\text{-}DC_6H_4OD$	phen-4-*d*-ol-*d*	*O*,4-dideuteriophenol
C_6H_5COOD	benzoic acid-*d*	benzoic deuterioacid
$2,4\text{-}D_2C_6H_3COOH$	benzoic-2,4-d_2 acid	2,4-dideuteriobenzoic acid
DHNC:CD.CH:CH.CH:CH	aniline-N,2-d_2	N,2-dideuterioaniline
HOOCC:C(COOD).CH:CD.CH:CH	phthalic-4-*d* acid-2-*d*	4-deuteriophthalic 2-deuterio-acid

deutero-globulose. A product formed from globulin during digestion.
deutero-proteose. Deutero-albumose.
deuteron. Deuton, diplon. A deuterium nucleus or a particle of mass 2.0 with one positive charge. Cf. *proton.*
deuteronium. Deuterium.
deuteroxyl. The OD^- or OH^{2-} ion.
deuton. A deuteron.
Devarda's alloy. An alloy of 50 % Cu, 45 % Al, and 5 % Zn. It is a strong reducing agent in alkaline solution.
developed dyes. Colors produced from colorless substances by chemical reactions.
developer. A reducing liquid used in photography for rendering the image on an exposed plate visible, usually by the formation of black metallic silver.
development. (1) In biology the growth and differentiation in the structure of an organism, and the acquirement of new, favorable characteristics. (2) In photography: rendering visible the image on an exposed plate, paper, or film, usually by reduction of light sensitive gold or silver salts to the metallic state.
deviation. The bending or turning of a direction or course.
devil's apple. Stramonium.
devitrifaction. The removal of transparency owing to crystallization; *e.g.*, glass becomes opaque with age or under the influence of certain chemicals.
devitrification. Devitrifaction.
dew. Moisture precipitated on a surface from an atmosphere saturated with water-vapor. **d. point.** The temperature of the atmosphere at which dew begins to form; it is an indication of the humidity of the air (q.v.).
Dewar, Sir James. 1842–1923. An English chemist, noted for the liquefaction of gases and experiments at low temperature.
D. flask. Vacuum flask. A double-walled, glass vessel, silvered or unsilvered, of varied shape and evacuated between the two walls; used for experiments with liquids at very low temperatures, or as container for liquefied gases.



Dewar flask.

deweylite. $Mg_4Si_3O_{10}.6H_2O$. An amorphous, white, magnesium silicate related to talc.
dextran. $(C_6H_{10}O_5)_x = (162.1)_x$. A gummy, fermentable carbohydrate produced by certain cocci from molasses, beet-juice, milk or wine; it causes ropiness.
dextrase. An enzyme changing dextrose to lactic acid.
dextrin. $(C_6H_{10}O_5)_x$. British gum, starch gum, amylin, gommelin, gummeline. A carbohydrate produced from starch by hydrolysis by dilute acids, diastase, ferments, or dry heat. It is an intermediate product between starch and the sugars into which starch hydrolyzes. An amorphous, odorless, white or yellowish powder; soluble in water or dilute alcohol and precipitated by strong alcohol. It does not give the blue iodine reaction of starch and is not fermentable, but changes to maltose by the action of enzymes (diastase), and to dextrose by action of acids. Used as a substitute adhesive for gum arabic; in calico printing; in the manufacture of inks, stains, water-colors and many other articles. **achroo-** See *achroo*-dextrin. **amylo-** See under *amylo*-dextrin. **animal-** Glycogen. **erythro-** See *erythro*-dextrin.
dextrinose. Gentiobiose.
dextro- *d-*. A prefix meaning toward the right; *e.g.*, dextro-rotatory. Cf. *levo-*.
dextrocarvol. Carvone.
dextro-compound. A dextrorotatory compound; *i.e.*, an optically active compound which turns the plane of polarized light to the right, that is clockwise.
dextrogyric. Dextrorotatory.
dextronic acid. Gluconic acid.
dextrorotary. Dextrorotatory.
dextrorotatory. Turning to the right, or clockwise. **d. compound.** A substance whose solution turns the plane of polarized light to the right, *i.e.*, clockwise. See *optical activity, asymmetric carbon atom, stereoisomerism.*
dextrosans. Glucosans.
dextrosazone. Glucosazone.
dextrose. Glucose.
deyamittin. $C_{18}H_{12}O_3N$. A glucoside from *Cissampelos pareira;* colorless crystals. Cf. *dyamettin, cissampeline.*
dg. An abbreviation for decigram, one-tenth of a gram, or 100 mg.
dhurrin. $C_{14}H_{17}NO_7 = 311.14$. A glucoside from millet and sorghum, which hydrolyzes to glucose, HCN and *p*-hydroxybenzaldehyde. Colorless needles, m.196.
Di. The symbol for didymium, a mixture of neodymium and praseodymium.
di- A prefix meaning two, or twice. Cf. *bi-*.
dia- A prefix meaning through, or opposite.
diabantite. A hydrous magnesium-iron aluminum silicate of the chlorite group, $H_{18}(Mg, Fe)_{12}Al_4Si_9O_{45}$.
diabase. An igneous rock formed in the transition from basalt to granitoid gabbros, and consisting of plagioclase, magnetite, augite, and sometimes olivine.
diabetin. Fructose.
diacetamide. $C_4H_7O_2N = 101.11$. Diacetylamine, *N*-acetylacetamide, $Me.CO.NH.CO.Me$. Colorless needles, m.78, b.223, soluble in water or ether. **phenyl-** Diacetanilide.
diacetanilide. $C_{10}H_{11}O_2N = 177.15$. Diacetylaniline, *N*-acetylacetanilide, *N*-phenyldiacetamide, acetoacetanilid, $Me.CO.NPh.CO.Me$. Colorless leaflets, m.37.5, $b._{11mm}142$, soluble in water or alcohol.
diacetate. (1) A salt of diacetic acid. (2) A salt containing two acetoxy groups, $CH_3COO—$.
diacetenyl. The radical —C:C—C:C—, as in **d. benzene. d. benzene.** Diphenyl diacetylene.
diacetic acid. (1) $C_4H_8O_4 = 144.1$. Diacetylacetic acid. $(MeCO)_2CH.COOH$. A colorless liquid, sometimes a constituent of diabetic urine. (2) Acetoacetic acid. (3) Succinic acid. **acetone-** Hydrochelidonic acid. **ethidene-** *β*-Methyl glutaric acid. **phenylene-** Phenylene diacetic acid. **propidene-** *β*-Ethyl glutaric acid. **d. ester.** $C_8H_{12}O_4 = 172.1$. Ethyldiacetate, ethyl diacetylacetate, ethyl diacetic ester. $(MeCO)_2CHCOOEt$. A colorless liquid, d.-1.101, decomp. 200, slightly soluble in water.
diacetin. $C_7H_{12}O_5 = 176.14$. Glyceryl diacetate, $(MeCOOCH_2)_2CHOH$. A colorless liquid, d.1.179, m.40, b.259, soluble in water, alcohol, or ether.
diacetonamine. $C_6H_{13}ON = 115.08$. *β*-Amino-isopropyl acetone. A product formed by

the action of ammonia on acetone or mesitone. A light liquid of characteristic odor. Cf. *acetonamine.*

diacetone. Acetylacetone. **d. alcohol** $C_6H_{12}O_2$ = 116.1. The ketone alcohol $MeCOCH_2CMe_2OH$. A colorless liquid, b.164; used as a solvent for nitrocellulose and resins.

diacetyl. (1) Biacetyl. (2) A prefix indicating the presence of two acetyl radicals. **methyl-** See *methyldiacetyl.*

d. amide. Diacetamide. **d. anilide.** Diacetanilide. **d. glucose.** $C_{16}H_{16}O_8$ = 264.2. Colorless crystals, m. exceeds 100, soluble in water, alcohol or ether. **d. morphine.** Heroine. **d. peroxide.** $C_4H_6O_4$ = 118.08. MeCO.O.O.COMe. A yellowish liquid, used in solution as an antiseptic. **d. tannin.** Tannigen. **d. urea.** $C_5H_8O_3N_2$ = 144.2. MeCO.NH.CO.NH.COMe. Colorless crystals, soluble in water.

diacetylene. C_4H_2 = 50.0. Butadiine, diacetylene. A colorless, gaseous hydrocarbon, HC:C.C:CH. **d. glycol** $C_6H_6O_2$ = 110.1. Hexadiin-diol, $CH_2OH.C:C.C:C.CH_2OH$. Colorless crystals, m.111.

diacetylenes. A group of unsaturated hydrocarbons containing two triple bonds, of the general type, C_nH_{2n-6}.

diacetylene, butadiine, butadiyne*	C_4H_2
pentadiine, pentadiyne*	C_5H_4
dipropargyl, hexadiine, hexadiyne*	C_6H_6

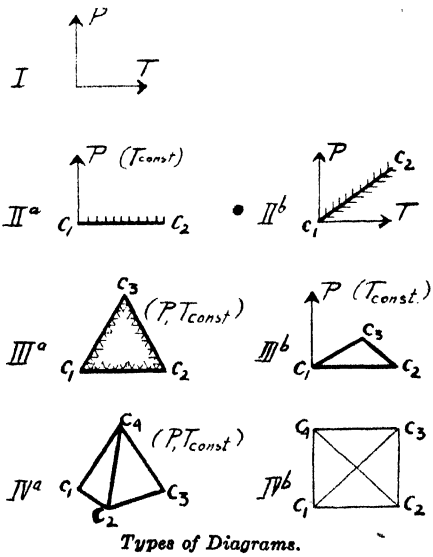
diacid. A compound which contains two hydroxyl groups; as $Ca(OH)_2$.

diacolation. A method of extraction in presence of sand, used for the preparation of pharmaceutical tinctures.

diad. An element or radical having a valency of two.

diadochite. $H_{24}Fe_4P_2S_2O_{29}$. A yellow, monoclinic ferric sulfate-phosphate, d.3.8, hardness 3.5–4.5, soluble in HCl.

diagnostic. Pertaining to the recognition of disease. **d. reactions.** Chemical tests to determine a pathological condition; *e.g.*, Fehling reaction, Ehrlich reaction etc. **d. reagents.** Test solutions used in diagnostic reactions. **d. test.** A biochemical experiment for detecting pathological conditions; *e.g.*, Wassermann test, Noguchi test, Widal test.

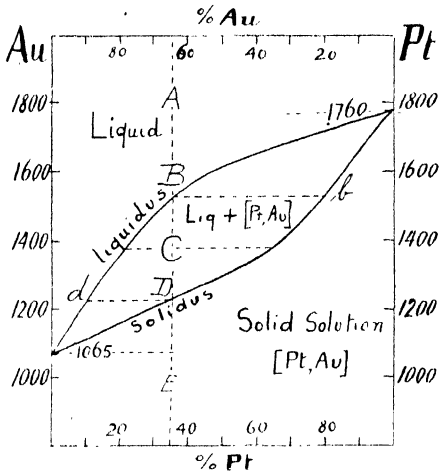


Types of Diagrams.

diagram. Phase rule plot. A graph showing the relation of one or more properties of one or more substances. Cf. *coordinates.* The types and forms of d. are shown in the preceding column.

I. One-component system: The relation of two quantities or properties of one substance, such as *T* and *P*.

II. Two component system: *a.* The relation of one quantity in a binary mixture is shown by plotting this quantity against concentration, c_1 and c_2. *b.* The relation of two quantities in a binary mixture is shown by a three dimensional model. See figure.

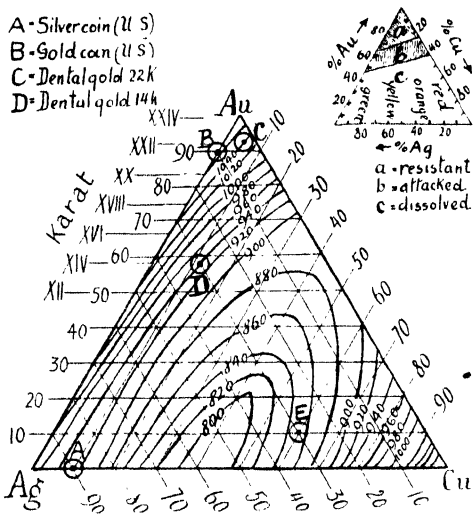


Two Component System (Gold-Platinum).

Temperature (vertical lines) is plotted against concentration or percentage composition. Any vertical line, as *AB*, is concentration vertical, any horizontal line, as *Bb*, is temperature horizontal. Curve *dB* is the liquidus, curve *Db* the solidus. Assume an alloy of 65 % gold and 35 % platinum molten at a temperature of 1800°C. This homogeneous liquid mixture, *A*, is allowed to cool. Solidification begins at *B* or 1525°C., but the solid which separates has composition *b*, that is 20 % gold and 80 % platinum, hence proportionately more platinum freezes as gold, the liquid portion becomes richer in gold, corresponding with the liquidus *B* to *d*. At *C*, 1380°C., the temperature horizontal indicates that the liquid consists of 80 % gold and 20 % platinum, while the solid alloy which has crystallized has the composition of 35 % and 65 % platinum. Cooling still further, until *D*, 1220°C. is reached, the entire mass has crystallized, the last portion to crystallize, *d*, consisting of 90 % gold and 10 % platinum. Hence while the total composition of the alloy at *E* is like that at *A*, it is now a heterogeneous mixture of larger or smaller crystals of composition varying from *b* to *d*.

III. Three component system: *a.* The relation of one quantity in a ternary system is shown by a curve in a triangle. *b.* Two properties can be shown by a three dimensional model. See figure.

IV. Four component system: Requires a model to adequately represent it, for even a three-dimensional model may not properly show the relation of one quantity.



Three component system (Gold-Silver-Copper).

The percentage of gold is shown by the horizontal lines, 100 % Au being at the apex of the triangle. The percentage of silver is indicated by the lines sloping upwards toward the left, copper the lines sloping upwards toward the right, Thus, point:

A = 10 % silver, 90 % copper, no gold
B = 90 % gold, 10 % silver, no copper
C = 92 % Au, 5 % Ag, 3 % Cu
D = 58 % Au, 30 % Ag, 12 % Cu
E = 10 % Au, 30 % Ag, 60 % Cu

In the smaller diagram are shown the colors of the alloys and the action of acids on them.

The curves indicate the melting points of these alloys, thus

A at 925°C
B at 1060°C
C at 1040°C
D at 940°C
E at 850°C

diakon. Trade name for a methyl methacrylate plastic.

dial. (1) A dialdehyde. (2) Diallyl barbituric acid. **d. uramide.** Uramil.

dialdehyde. Dial. A compound containing two aldehyde groups; as, *methane dial* or malonic aldehyde, *ethane dial* or succinic aldehyde.

dialin. $C_{10}H_{10}$ = 130.08. Dihydronaphthalene. **1.2-** Colorless liquid, d.0.996, m. −9, b.84.5. **1.4-** Colorless liquid, d.0.998, m.15, b.212.

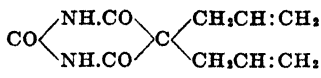
dialkene. Diolefine.

dialkyl. An organic compound containing two alkyl radicals.

dialkylene. An organic compound containing two alkylene radicals.

diallag. $(Mg,Fe)CaSi_2O_6$. A magnesium-iron calcium silicate, sometimes containing alumina, d.3.2, hardness 4.

diallyl. (1) C_6H_{10} = 82.1. $\Delta^{1,5}$-hexadiene* (q.v.), $CH_2{:}CH.CH_2.CH_2.CH{:}CH_2$. A colorless liquid, $d_{17°}$.0.687, b.59.5, insoluble in water. (2) An organic compound containing two allyl radicals. **d. amine.** $C_6H_{11}N$ = 97.09. Di-2-propenylamine*, $(CH_2{:}CH.CH_2)_2NH$ A colorless liquid, b.111. **d. barbituric acid.** $C_{10}H_{12}O_3N_2$ = 208.2. Dial.



Colorless, shining scales, m.170, slightly soluble in water, soluble in alcohol or ether; used medicinally as a hypnotic and sedative. **d. sulfide.** Allyl sulfide. **d. urea.** Sinapolin.

dialozite. $MnCO_3$. A native manganous carbonate.

dialuramide. Uramil.

dialurate. A salt of dialuric acid.

dialuric acid. $C_4H_4O_4N_2$ = 144.1. Tartronylurea, 5-hydroxybarbituric acid,

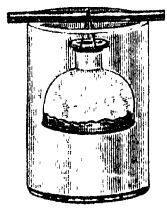
A monobasic heterocyclic acid derived from alloxan. Colorless prisms, slightly soluble in water.

dialysate. Dialyzate.

dialysed. Separated by dialysis. **d. iron.** A colloidal solution of ferric hydroxide.

dialysis. Ultrafiltration. Micro-filtration by means of a semi-permeable membrane, which separates crystalloids (molecules) from colloids (particles of ultramicroscopic size).

dialyzate. The crystalloid filtrate, which has dialysed through a membrane. Cf. *diffusate.*



Dialyzator.

dialyzator. An apparatus for separating colloids from non colloids (dialysis).

dialyzer. The semi-permeable membrane used in dialysis; *e.g.*, parchment, collodion, or a porous cup treated with certain chemicals. Cf. *diffusion shell.*

diamagnetic. Repelled by a magnet, or taking a position at right angles to the field of an electromagnet. Such substances have magnetic permeabilities less than unity. Cf. *paramagnetic.*

diameter. (1) A straight line passing through the center of a body or figure. Cf. *circle, caliber.* (2) A measure of magnification; the number of times the d. of the object is increased.

diamide. (1) Oxamide. (2) A compound containing two $-CONH_2$ groups.

diamidine. (1) Oxalamidine. (2) A compound containing two amidine groups.

diamido- A prefix indicating the presence of two amido radicals. **d. cyanidine.** Formoguanine.

diamidogen. Hydrazine.

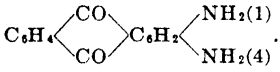
diamine. (1) Hydrazine. (2) See *diamines.* **amylene-** $C_5H_{14}N_2$ = 102.2. Pentamethylenediamine, cadaverine, 1.5-diaminopentane. **butylene-** $C_4H_{12}N_2$ = 88.2. Tetramethylenediamine, putrescine, 1.4-diaminobutane. **diethylene-** $C_4H_{10}N_2$ = 86.2. Cyclic tetramethylene diamine.  **dimethylene-** Ethylene diamine. **ethylene-** $C_2H_8N_2$ = 60.1. Dimethylenediamine. $NH_2{-}CH_2CH_2NH_2$. A colorless liquid, m.8.5, b.116.5. **hexamethylene-** $C_6H_{16}N_2$ = 116.2. Triethylenediamine. $NH_2(CH_2)_6NH_2$. **pentamethylene-** Amylene diamine. **phenylene-** C_6-

H_7N_2 = 107.1. **ortho-** 1.2-Diaminobenzene. **meta-** 1.3-Diaminobenzene. **para-** 1.4-Diamino*benzene*. **propylene-** $C_3H_{10}N_2$ = 74.2. Trimethylenediamine, $NH_2(CH_2)_3NH_2$. A colorless liquid, b.119. **tetramethylene-** Butylene diamine. (cyclic-) Piperazine. **triethylene-** Cyclic hexamethylene diamine. **trimethylene-** Propan diamine.

d. blue. Trypan blue.

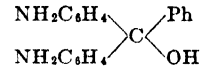
diamines. A group of compounds containing two $—NH_2$ groups. **aliphatic-** Compounds containing two amino groups attached to a carbon chain; *e.g.*, ethylene diamine. **aromatic-** Compounds containing two amino groups attached to a carbon ring; *e.g.*, the diamino benzenes (phenylene diamines). **heterocyclic-** Saturated ring compounds in which the amino group takes part in ring formation; *e.g.*, diethylene diamine, triethylene diamine. **homocyclic-** Aromatic diamines.

diamino- A prefix indicating the presence of two amino groups ($—NH_2$). **d. anthraquinone** $C_{14}H_{10}O_2N_2$ = 238.2. (**alpha-**) or 1.4-



Red needles, m.236, slightly soluble in alcohol or water, soluble in benzene. (**beta-**) or 2.3- Brownish-red needles, sublime on heating, soluble in water, alcohol or chloroform. (**ortho-**) or 1.2- Blue crystals, decomp. 130, insoluble in water, soluble in alcohol. **d. azobenzene.** Azobenzene. **d. azobenzene hydrochloride.** Chrysoidine. **d. azotoluene.** $C_{14}H_{16}N_4$ = 240.-

16.  . Isomers include 2.2′-diamino-4.4′-azotoluene, m.203; 3.-3′-diamino-2.2′-azotoluene, m.145. **d. benzene.** See *benzene*. **d. benzoic acid.** See *benzoic acid*. **d. benzophenone.** $C_{13}H_{12}ON_2$ = 212.2. **alpha-**, para- or 4.4′-$NH_2.C_6H_4.CO.C_6H_4.NH_2$. Colorless needles, m.172, soluble in water, alcohol, or ether. **beta-**, meta- or 3.3′-. Yellow needles, m.237, soluble in water, alcohol or ether. **d. diphenic acid.** $C_{14}H_{12}O_4N_2$ = 272.2. Benzidine dicarboxylic acid. Colorless crystals, insoluble in water, soluble in alcohol; used in synthesis of dyes. **d. diphenyl.** Benzidine. **d. diphenylamine.** $C_{12}H_{13}N_3$ = 199.3. $NH_2C_6H_4.NH.C_6H_4NH_2$. Colorless scales, m.-158, insoluble in water, soluble in alcohol or ether; used in organic synthesis. **d. diphenylethylene.** Diaminostilbene. **d. diphenylmethane.** $C_{13}H_{14}N_2$ = 184.19. para- or 4.4′-. Colorless scales, m.87, soluble in water or alcohol; used in organic synthesis. **d. naphthalene.** Naphthylene diamine. **d. naphthalene sulfonic acid.** $C_{10}H_4(NH_2)_2(SO_3H)_2$ = 318.24. **1.5.3.7-** Colorless crystals, insoluble in water, soluble in alcohol or ether. Used in organic synthesis. **1.8.3.6-** Long, thin colorless prisms, soluble in water or alcohol. Used in making H-acid. **d. naphthalene sulfonic acid.** $C_{10}H_5(NH_2)_3SO_3H$ = 238.17. **1.-4.2-** Small colorless crystals, slightly soluble in water, soluble in alcohol or ether; used in organic synthesis. **1.3.6-** Colorless crystals, slightly soluble in water, soluble in alcohol or ether; used in organic synthesis. **d. phenol.** See *phenol*. **d. phenol hydrochloride.** Amidol. **d. stilbene.** $C_{14}H_{14}N_2$ = 210.2. Diamino diphenyl ethylene, $NH_2C_6H_4.CH:CH.C_6H_4.NH_2$. Colorless scales, m.170, slightly soluble in water or ether, soluble in alcohol. **d. stilbene disulfonic acid.** $C_{14}H_{12}N_2(SO_3)_2$ = 370.23. **1.2.4-** or *α*-. A yellow crystalline powder, insoluble in water, soluble in alcohol or ether; used in organic synthesis. **d. triphenyl carbinol.** $C_{19}H_{14}ON_2$ = 286.2. An intermediate used in the dye industry.



d. triphenylmethane $C_{19}H_{18}N_2$ = 274.26. **para-**, or **4.4′-**. Colorless crystalline beads, m.139, slightly soluble in water, alcohol or ether; an intermediate in the synthesis of dyes.

diamino-phosphatides. A group of fatty substances containing two nitrogen atoms to one phosphorus atom; *e.g.*, aminomyeline, sphingomyeline etc. **diamino-diphosphatides.** Phosphatides containing two nitrogen atoms and two phosphorus atoms; *e.g.*, assurin. **diamino-monophosphatides.** Diamino-phosphatides.

diammonium. (1) N_2H_8 = 36.08. $NH_4.NH_4$. Cf. *hydrazinium*. (2) A prefix indicating the presence of two ammonium radicals; as, d. phosphate, $(NH_4)_2HPO_4$. **mercur-** See *mercurdiammonium*.

diamond. C = 12.001. A crystallized carbon, which occurs in colorless or variously tinted isomeric crystals, d.3.53, hardness 10, insoluble and non-fusible, but burning to carbon dioxide at high temperature. Used as a precious stone, for cutting glass and as bearings for delicate mechanism, watches, etc. **industrial-** D. occurs in three varieties: 1. *Carbons, carbonado, black Brazilian*, d. in porous clusters of microscopic crystals, fine to close-grained. 2. *Ballas*, nonporous, mostly round, consisting of innumerable minute *d.* crystals. 3. *Boarts, borts*. Translucent crystals which cleave in layers.

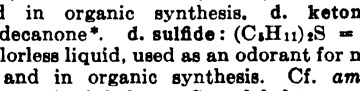
d. black. A black azo-dye, used for wool. $C_6H_3(OH)(COONa).N:N.C_{10}H_6N:N.C_{10}H_5(OH)SO_3Na$. **d. dust.** (1) The finely powdered diamonds collected as waste material in diamond cutting and polishing. (2) Finely-powdered glass, used as a polishing powder or for filtering acids. **d. flavin.** $C_{19}H_{14}O_4N_2$. A yellow azo-dye, $C_6H_4(OH).C_6H_3N:N.C_6H_3(OH)COOH$. **d. mortar.** A small mortar made of hardest steel.

diamyl. (1) Decane. (2) A compound containing two amyl radicals. **d. amine.** $C_{10}H_{23}N$ = 157.3. A colorless liquid, d.0.7775, b.187, soluble in alcohol, ether, or chloroform. Used in organic synthesis. **d. ketone.** 6-Hendecanone*. **d. sulfide:** $(C_5H_{11})_2S$ = 174.3. A colorless liquid, used as an odorant for natural gas and in organic synthesis. Cf. *amylmercaptan*. **d. phthalate.** See *phthalate*.

diamylene. (1) Decene. (2) A compound containing two amylene radicals. (3) Terpene.

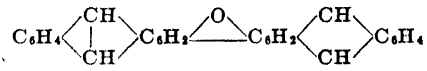
dianiline. A prefix indicating the presence of two aniline molecules. **d. calcium.** $(C_6H_5NH_2)_2Ca$ = 226.21. White crystals. **d. fluosilicate.** $(C_6H_5NH_2)_2.H_2SiF_6$ = 330.20. White plates, subliming at 230, very soluble in water.

dianisidine. $C_{14}H_{16}O_2N_2$ = 244.2. Dimethoxybenzidine, bianisidine



Colorless needles, m.170, slightly soluble in water or ether.

dianthrafurane. $C_{28}H_{16}O$ = 368.1. The heterocyclic compound,



dianthryl. Bianthryl.

diaphanometer. An instrument for measuring transparency; as, of the atmosphere, solutions, paper. Cf. *nephelometer.*

diaphanoscope. (1) A darkened box containing a source of light for viewing transparent or semitransparent objects. (2) An instrument for illuminating body cavities.

diaphoretic. A drug which stimulates the secretions from sweat glands and causes perspiration; *e.g.*, pilocarpine. Cf. *sudorific.*

diaphorite. $(Ag_2Pb)_5Sb_4S_{11}$. A metallic, orthorhombic lead-silver sulfoantimonite.

diaphragm. (1) A disk, with one or more holes, or with one hole of variable size, used to regulate the amount of light passing through a lens; *e.g.*, in a microscope, photographic apparatus etc. (2) The porous container of a galvanic cell separating the two liquids. (3) Any semipermeable partition or wall.

diaphthol. $C_9H_5N(OH)SO_3H$ = 225.14. Quinaseptol, o-oxyquinoline-m-sulfonic acid. Yellowish crystals, m.295, slightly soluble in water; used as an antiferment and non-poisonous antiseptic.

diarabinose. $C_{10}H_{18}O_9$ = 282.14. A disaccharide of arabinose, m.260.

diarsenate. A salt containing two arsenate radicals.

diarsenide. A compound containing two arsenic atoms.

diarsenite. A salt containing two arsenite radicals.

diarsenol. A Canadian brand of arsphenamine.

diarsenous acid. Pyroarsenic acid.

diarsine. Biarsine.

diarsonium. Cacodyl.

diarsyl. Biarsine.

diascope. A small portable x-ray tube and equipment, used for visual diagnosis (*e.g.* of teeth) by insertion into body-cavities.

diasone. Disodium formaldehyde sulfoxylate diaminodiphenylsulfone; $SO_2(C_6H_4.NH.CH_2.SO_2Na)_2.4H_2O$. A possible remedy for human tuberculosis.

diaspore. $Al_2O_3.H_2O$. A hydrous aluminum oxide formed as a decomposition product of rocks.

diastase. (1) Vegetable amylase. (2) Amylase. An enzyme from malt, converting starch by hydrolysis into maltose, dextrin and maltodextrins, a change which, within limits, is favored by H^+ and restrained by OH^-. A yellowish white or gray powder, soluble in water. Its properties are destroyed at about 75°C. Cf. *ptyalase.*

diastasic action. The conversion of starch into water soluble substances (dextrin, maltose etc.) by diastase.

diastasimetry. Measuring or determining the diastatic power of starch-digesting extracts.

diastatic action. Diastasic action.

diathermy. The slow penetration of heat.

diathesin. $C_7H_8O_2$ = 124.1. Salicyl-alcohol, o-oxybenzylalcohol. Colorless crystals, m.86, soluble in water. Used for rheumatism.

diatol. Diethylcarbonate.

diatom. A unicellular alga which has usually two symmetric halves. **d. ooze.** Oceanic sediments, about 1500 fathoms deep, consisting of empty shells of diatoms and containing about 23 % calcium.

diatomaceous earth. Kieselguhr.

diatomic. (1) A molecule of two atoms; *e.g.*, a binary compound. (2) A substance containing two replaceable hydrogen atoms. **d. alcohol.** A glycol, or organic compound having two hydroxyl groups. **d. acid.** An acid containing two replaceable hydrogen atoms. **d. bases.** A base containing two active hydroxyl groups.

diatomite. Kieselguhr.

diazacyclo- A prefix indicating the presence of 2 NH groups in a large ring; as, **d. dotriacontanine.** $NH.(CH_2)_{16}NH.(CH_2)_{15}$. **d. octacosanine.** $NH(CH_2)_{13}NH(CH_2)_{13}$.

diazene. Diazete.

diaezte. $C_2H_4N_2$ = 56.0. Diazene. The heterocyclic system. $CH_2{<}{}^{N}_{CH_2}{>}N$.

diazines. (1) A group of hydrocarbons, consisting of a hexatomic ring with two nitrogen atoms and four carbon atoms.

1.2- or ortho-	pyridazine
1.3- or meta-	pyrimidine
1.4- or para-	pyrazine

(2) A suffix, indicating a ring compound with two nitrogen atoms; as, benzo d., dibenzo para d., naphtho d., etc.

diazo- A prefix indicating the presence of the bivalent —N:N— radical. The isomer >N:N is diazonium. **d. compounds.** A group of very reactive organic nitrogen compounds which are formed when nitrous acid acts at low temperatures on the salts of primary aromatic amines. They are usually explosive, and are therefore not isolated in their crystalline form, but used in solution as intermediates in the manufacture of important dyestuffs. Cf. *disazo compounds.* **d. test.** A reaction shown by pathological urine, which turns red on the addition of diazobenzene sulfonic acid.

diazoacetate. A salt of diazoacetic acid. **ethyl-** $C_4H_6O_2N_2$ = 114.07. A colorless liquid, d.1.073, m. −24, b_{120mm}.143.

diazoacetic acid. $C_2H_2O_2N_2$ = 86.14. The monobasic acid N_2:CH.COOH.

diazoamino. Azimino. The bivalent radical —N:N.NH—. **d. benzene.** $C_{12}H_{11}N_3$ = 197.27. *1.3*-Diphenyltriazene*. The compound Ph.N:N.NH.Ph. Yellow leaflets, m.98, decomp. on further heating, insoluble in water, soluble in alcohol or ether. **d. naphthalene.** $C_{20}H_{15}N_3$ = 297.3. *1.3*-Di-*1*-naphthyltriazine*. Yellow leaflets, explode on heating, insoluble in water.

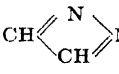
diazoate. A salt of the type Ar.N:NO.OM, derived from diazoic acid. Cf. *diazotate.*

diazobenzene. See *benzene.* **d. acid.** Nitranilide. **d. chloride.** $C_6H_5N_2Cl$ = 140.60. Benzene diazonium chloride*. Colorless needles, decomp. on heating, soluble in water or alcohol. **d. cyanide.** $C_7H_5N_3$ = 158.21. Yellow prisms, m.69, slightly soluble in water. **d. hydroxide.** Diazonium hydroxide. **d. imide.** $C_6H_5N_3$ = 119.20. A yellow, oily liquid,

d.1.098, explodes when heated, insoluble in water, sparingly miscible with alcohol or ether. **d. nitrate.** $C_6H_5O_3N_3$ = 167.19. Colorless needles which explode on heating, soluble in water or alcohol. **d. sulfonic acid.** $C_6H_4O_3N_2S$ = 184.18. Benzene azo sulfuric acid. Small. red prisms, decomp. on heating, insoluble in water. It is a reagent for pathological urine.

diazodinitrophenol. $C_6H_2N_4O_5$ = 210.1. DDNP, *4.6*-dinitrobenzene-*2*-diazo-*1*-oxide. Bright yellow needles, true d.1.63, apparent d.0.27–0.86; used as detonating compound for percussion caps.

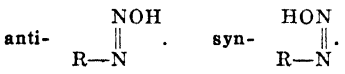
diazoethane. $C_2H_2N_2$ = 54.0. Aziethylene, aziethane. The heterocyclic compound



dimethyl- $C_4H_6N_2$ = 82.0. Colorless crystals, m.270.

diazohydrates. A group of compounds containing the bivalent —N:NO— group; *e.g.*, diazobenzenemethylether Ph—N:NO—Me.

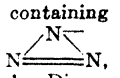
diazohydroxide. The monovalent —N:NOH radical, which occurs in two isomeric forms; as,



diazoic acid. An isomer Ph.N:NO.OH, of phenyl nitramine ($PhNH.NO_2$), from which diazoates are derived.

diazoimide. Hydrazoic acid.

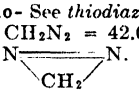
diazoimido compounds. Compounds containing the monovalent $—N_3$ radical,



derived from diazoimide. **d. phenyl.** Diazobenzeneimide.

diazoles. A group of pentacyclic hydrocarbons with two nitrogen atoms. **1.2-** Pyrazole. **1.3-** Imidazole. **iso-** See *isodiazole.* **ox-** See *oxdiazole.* **thio-** See *thiodiazole.*

diazomethane. CH_2N_2 = 42.04. Azimethylene, azimethane.



A poisonous, yellow, odorless gas, used for methylation in organic synthesis.

diazonium. The bivalent radical = N:N, which contains a pentavalent and a trivalent nitrogen atom. **d. compounds.** A group of aromatic nitrogen compounds containing the diazonium group, ArN(:N)—. **d. hydroxide.** The very unstable base PhN:NOH which in solution is ionized into 90 % $PhNN^+$ and OH^- and readily forms salts of the type PhNNX. Cf. *tyrotoxin.* **d. ion.** The basic $PhNN^+$ radical. **d. salts.** A group of compounds of the general type

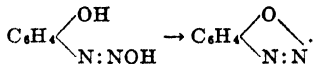
N:N, in which X is an acid radical; as,

diazobenzenechloride	PhNNCl
diazobenzenenitrate	$PhNNNO_3$
diazobenzenesulfate	$(PhNN)_2SO_4$
diazobenzenesulfocyanide	PhNN—SCN

diazo-oxyamido. The bivalent —N:N.N(OH)— radical. **d. benzene.** $C_{12}H_{11}ON_3$ = 213.1. Colorless crystals, m.127.

diazoparaffins. Aliphatic hydrocarbons containing the diazo group; as diazomethane.

diazophenol. (1) $C_6H_4ON_2$ = 120.1. p-Diazophenol, furo-(a,-b)-diazole. A colorless crystalline substance, explodes at 38. (2) A group of internal diazo oxides formed from true diazophenols by dehydration:

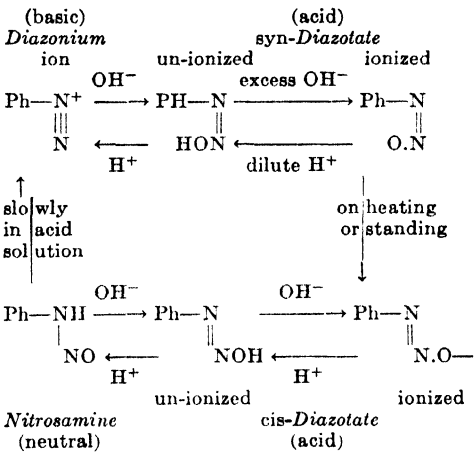


diazosalt. A compound of the type Ar.N:N.X, where Ar is an aromatic radical and X an acid radical or a halogen.

diazosplit. The decomposition of a diazosalt and the formation of an aryl compound: *e.g.*, ArNNX = ArX + N_2 where X is an acid or halogen radical. Cf. *Sandmeyer's reaction.*

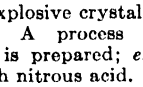
diazosulfide. Benzothiodiazole.

diazotate. A metal salt and tautomer of diazonium hydroxide; it is acid in character and contains the ArN:NO— radical. Cf. *diazoate.* Isomeric forms: *cis-* (*syn-* or normal) and *trans-* (anti- or iso-); either may occur ionized or un-ionized in solution, and may form salts of the type ArNNOM, where M is a monovalent metal. The chemical relations:



d. ion. The acid $PhNNO^-$ ion; exists in two isomeric forms. **d. split.** The decomposition of a diazotate to a phenol and nitrogen: ArNNOH = ArOH + N_2.

diazotetrazole. CN_6 = 96.06. The heterocyclic compound



which occurs as colorless, explosive crystals.

diazotization. A process by which a diazo compound is prepared; *e.g.*, the treatment of amines with nitrous acid.

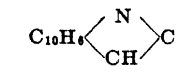
diazotizing. A method, discovered by Griess in 1860, extensively used in the manufacture of aniline dyes. Primary amines are treated with nitric oxides or compounds which release such oxides, *e.g.*, nitrites or nitrous acid.

diazoxy. The bivalent radical —N(:O)=N—.

diazthines. Thiodiazines.

dibasic. (1) Describing compounds which contain two hydrogen atoms replaceable by a monovalent metal; or an acid which furnishes two hydrogen ions, as H_2SO_4. (2) Diatomic, dihydric. An alcohol containing two hydroxyl groups; as, ethylene glycol.

dibenzacridine. $C_{21}H_{13}N$ = 279.1. Naphthacridine. The heterocyclic compounds



Six possibilities: $\alpha\alpha'$-, $\alpha\beta'$-, $\alpha\gamma'$-, $\beta\beta'$-, $\beta\gamma'$- and $\gamma\gamma'$-.

dibenzamide. (1) $C_{14}H_{11}NO_2$ = 225.09. Benzoyl benzamide, dibenzoyl amine. $(PhCO)_2NH$. Colorless crystals, m.148. (2) A compound which contains two monovalent —NH.CO.Ph radicals. **ethidine-** $C_{16}H_{16}O_2N_2$ = 268.2. $(PhCONH)_2CHMe$. Colorless crystals, m.204. **ethylene-** $C_{16}H_{16}O_2N_2$ = 268.2. $(PhCONHCH_2)_2$. Colorless crystals, m.249. **methylene-** $C_{15}H_{14}O_2N_2$ = 254.2. Colorless crystals, m.221.

dibenzanthracene. $C_{22}H_{14}$ = 278.1. Naphthophenanthrene, dinaphthanthracene, benzonaphthacene. A group of homocyclic hydrocarbons; as,  Cf. *pentacene*.

dibenzenyl. (1) Tolane. (2) A prefix indicating the presence of two benzenyl radicals, ≡C.Ph.

d. azoxime. $C_{14}H_{10}ON_2$ = 222.2. The heterocyclic compound  . Colorless crystals, m.108, b.290.

d. isazoxime. $C_{14}H_{10}ON_2$ = 222.2. The heterocyclic compound  .

dibenzo- A prefix indicating the presence of two benzo groups, $(>C_6H_4)_2$.

d. arsenole. $C_{12}H_9As$ = 228.2. Diphenylene arsine.

d. copyrine. $C_{16}H_{10}N_2$ = 230.1. The heterocyclic compound

d. diazine. $C_{12}H_8N_2$ = 180.1. Phenazine. The heterocyclic compound  .

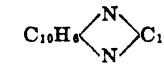
d. dioxin. $C_{12}H_8O_2$ = 184.1. Diphenylene-dioxide, phendioxin. The heterocyclic compound  . **d. dithiin.** Thianthrene.

d. fluorene. $C_{21}H_{14}$ = 266.1. Dinaphthofluorene. The homocyclic hydrocarbon

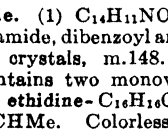
d. furane. $C_{12}H_8O$ = 168.1. Dibenzofurfurane, biphenyleneoxide, diphenyleneoxide,

Colorless crystals, m.81, b.288. **d. furane-p-oxazine.** Phenoxazine. **d. furfurane.** D. furane. **d. phenanthrene.** $C_{22}H_{14}$ = 278.1. The homocyclic hydrocarbon,

d. phenazine. $C_{20}H_{12}N_2$ = 280.1. Phenanthrophenazine, phenophenanthrazine, dinaphthazine. The heterocyclic hydrocarbon



d. pyran. $C_{12}H_{10}O$ = 182.1. The heterocyclic compound . **d. pyrene.** $C_{24}H_{14}$ = 302.1.



d. pyrone. Xanthone. **d. quinoline.** Phenanthroquinoline. **d. selenophene.** $C_{12}H_8Se$ = 231.2. Diphenylene selenide.

d. pyrrole. Carbazole. **d. thiophen.** $C_{12}H_8S$ = 186.1. Diphenylene sulfide,  . Colorless crystals, m.97, b.333. **d. thioxine.** Phenothioxin. **d. xanthene.** $C_{21}H_{14}O$ = 282.2. The heterocyclic compound

dibenzoyl. (1) Benzil. (2) A prefix indicating the presence of two benzoyl radicals, PhCO—.

d. catechol. $C_{20}H_{14}O_4$ = 318.21. Colorless crystals, m.84. **d. furazane.** $C_{16}H_{10}O_3N_2$ = 278.3. The heterocyclic compound

Colorless crystals, m.118. **d. glucoxylose.** A glucoside, m.148, from *Danielia latifolia*, a Bignoniaceae of Brazil. **d. ethane.** $C_{16}H_{14}O_2$ = 238.1. Diphenazyl, $PhCO.CH_2.CH_2.COPh$. Colorless crystals, m.145. **d. ketone.** Diphenyltriketone. **d. malonitrile.** $C_{17}H_{14}N_2O_2$ = 278.3. $(PhCO.C:NH)_2CH_2$. Colorless crystals, m.130, b.360. **d. methane.** $C_{15}H_{12}O_2$ = 224.1. $(Ph.CO)_2CH_2$. Colorless crystals, m.81. **d. peroxide.** Benzoyl peroxide. **d. styrene.** $C_{22}H_{16}O_2$ = 312.2. Anhydro-acetophenone-benzil, $PhCO.CH:CPh.COPh$. Colorless crystals, m.129.

dibenzyl. (1) Bibenzyl. (2) A prefix indicating the presence of two benzyl radicals, $PhCH_2$—.

d. amine* $C_{14}H_{15}N$ = 197.2. A colorless liquid, d_{14}°.1.033, b.300, insoluble in water, soluble in alcohol. **d. diethyl stannane.** $(C_6H_5CH_2)_2SnEt_2$ = 358.89. A colorless liquid, b.223, soluble in alcohol or benzene. **d. ethane.** $C_{16}H_{18}$ = 210.14. Diphenylbutane $Ph(CH_2)_4Ph$. Colorless crystals, m.52, soluble in alcohol. **d. glycollic acid.** Oxatolic acid. **d. hydrazine.** $C_{14}H_{14}N_2$ = 207.3. $(PhCH_2NH—)_2$. Colorless crystals, m.65, used in organic synthesis. **d. hydroxylamine.** $C_{14}H_{15}N_3O$ = 223.5. $(PhCH_2)_2N.NOH$. **d. ketone.** $C_{15}H_{14}O$ = 210.09. $Ph.CH_2.CO.CH_2.Ph$. Colorless crystals, m.-33.9, b.231, decomp. 360, insoluble in water, soluble in ether. **d. mercury.** $Hg(C_6H_5CH_2)_2$ = 382.72. Colorless brittle needles, soluble in alcohol or benzene.

dibenzylidene. A compound containing two $=C_7H_6$ or $PhCH<$ radicals. **d. acetone.** Styryl ketone .

diborane diphosphine. $B_2H_6.2PH_3$ = 96.1. A white crystalline solid, dissociates above −30 into diborane and phosphine.

dibrom-, dibromo- A prefix indicating the presence of two bromine atoms. **d. acetic acid.** $C_2H_2O_2Br_2$ = 217.95. Colorless crystals, m.48, b.232, soluble in water, alcohol, or ether. **d. anthracene.** $C_{14}H_8Br_2$ = 336.0. 5.10-, or gamma-. Yellow needles, m.221, insoluble in water, slightly soluble in alcohol or ether, soluble in benzene. **d. anthraquinone.** $C_{14}H_6O_2Br_2$ = 366.05. (**alpha-**) Yellow needles, m.237, soluble in alcohol or benzene. (**beta-**) Yellow needles, m.275, sparingly soluble in alcohol, soluble in benzene. **d. barbituric acid.** Dibromine. **d. benzene.** See *benzene*. **d. indigo.** $C_{16}H_8O_2N_2Br_2$ = 319.93. Tyrian purple. Purple crystals occurring in *Murex* and *Purpura* species. **d. quinone chloroimide.** A reagent for phenols. **d. thymolsulfonphthalein.** An indicator, changing at pH 7.0 from yellow (acid) to blue (basic).

dibromide. An inorganic salt containing two negative bromine atoms, and ionizing to two bromide ions; *e.g.*, $FeBr_2$ = iron dibromide (ferrous bromide).

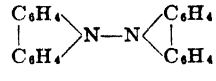
dibutyl. (1) A prefix indicating the presence of 2 butyl (C_4H_9) radicals not joined directly, but through a third atom or group. (2) Octane. **d. beryllium.** $Be(C_4H_9)_2$ = 123.16. Colorless liquid, $b._{25mm}$170, decomp. in water. **d. cadmium.** $Cd(C_4H_9)_2$ = 226.55. An oily liquid, d.1.306, m. −48, $b._{12.5mm}$103. **d. ditinbromide.** $(C_4H_9)_2SnBr_2$ = 392.67. White needles, m.20. **d. phthalate.** See *phthalate*. **d. tinchloride.** $(C_4H_9)_2SnCl_2$ = 303.75. Colorless needles, m.43.

di-i-butyl- A prefix indicating the presence of two isobutyl radicals. **d. cadmium.** $Cd(C_4H_9)_2$ = 226.55. An oily liquid, d.1.269, m. −37, $b._{20mm}$90.5. **d. mercury.** $Hg(C_4H_9)_2$ = 314.75. Colorless liquid, d.1.835, b.205, slightly soluble in water.

dibutyrin. $C_{11}H_{20}O_5$ = 232.15. Glyceryl dibutyrate. $C_3H_5(OH)(OOC.C_3H_7)_2$. Colorless liquid, d.1.803, m. −40, b.282; formed by the action of pancreatic lipase on butyrin.

dicacodyl. See *cacodyl*.

dicarbazyl. $C_{24}H_{16}N_2$ = 332.3. The heterocyclic ring system



dicarbonate. Bicarbonate.

dicarboxyl. Oxalic acid.

dicarboxylic acid. An organic compound with two —COOH groups.

dicentrine. $C_{20}H_{21}O_4N$ = 339.3. An alkaloid from the leaves and seeds of *Dicentra pusilla*, a Fumariaceae, related to glaucine.

dicetyl. $C_{32}H_{66}$ = 450.5. Dotriacontane. The hydrocarbon, $Me(CH_2)_{30}Me$, d.0.781, m.70, $b._{15mm}$ 310.

dichlor-, dichloro- A prefix indicating the presence of two chlorine atoms in an organic molecule. **d. acetal.** $C_6H_{12}O_2Cl_2$ = 187.09. A colorless liquid, $d._{14°}$1.1383, b.180–185. **d. acetamide.** See *acetamide*. **d. acetic acid.** See *acetic acid*. **d. acetone.** See *acetone*. **d. acetylchloranilide.** $C_8H_6NOCl_3$ = 258.5. $Cl_2CH.CO.NCl.Ph$. Used as a chlorinating agent. **d. acetyl chloride.** C_2HOCl_3 = 147.37. A colorless liquid, b.107; hydrolyzes with water or alcohol; soluble in ether. **d. aldehyde.** See *acetaldehyde*. **d. amide T.** $CH_3.C_6H_4.SO_2NCl_2$ = 240.06. p-toluene-dichlorosulfamine. A pale-yellow, crystalline powder of strong chlorine odor, m.78–83, insoluble in water, soluble in benzene or chloroform; used as an antiseptic. **d. aniline.** See *aniline*. **d. anthracene.** See *anthracene*. **d. benzene.** See *benzene*. **d. diethyl ether.** *2.2'*-D. ethyl ether. **d. diethyl sulfide.** Mustard gas. **d. difluoromethane.** CCl_2F_2 = 121.0. Kinetic 12, F12, Freon. A colorless gas, d.1.40, m. −155, b. −30, used as refrigerant. **d. ethyl ether.** $C_4H_8OCl_2$ = 142.98. Dichloroether, dichloroethyl oxide. **1.2-** or *α,β-*. $CH_2Cl.CHCl.OEt$. A colorless liquid, d.1.174, b.142, soluble in alcohol or ether; used in organic synthesis. **2.2-** or *β,β'-*. Dichlorodiethyl ether, $(CH_2Cl.CH_2)_2O$. A colorless liquid, d.1.213, m. −51.7, b.178, insoluble in water, soluble in alcohol, ether, benzene, etc.; used as an industrial solvent for fats, waxes, resins and pectins. **d. ethylene.** $C_2H_2Cl_2$ = 96.93. *1.2*-Acetylene dichloride, *1.2*-dichloroethene, dieline, dioform, CHCl:CHCl. A colorless liquid of pleasant odor, d.1.278, m. −80.5, b.55. A mixture of the two stereoisomers, *cis-*, d.1.265, m. −50, b.48.4; and *trans-* d.1.291, m. −80.5, b.60.3. Used as solvent for rubber and lacquer, for the extraction of dyes and perfumes, as a metal degreaser, anesthetic and refrigerant for conditioning air. **d. hydrin.** $C_3H_6OCl_2$ = 128.97. (**alpha-**) Dichlor-isopropyl alcohol, 1.3-dichlor-2-hydroxy-propane, *1.3*-dichloro-*2*-propanol*. A colorless, ethereal liquid, $d._{19°}$1.367, b.174, m. −4, miscible with alcohol or ether. Used as a solvent for resins, nitrocellulose, etc. and in the manufacture of varnishes, lacquers, water colors, etc. (**beta-**) Dichloropropylalcohol, 1.2-dichlor-3-hydroxy-propane, *2.3*-dichloro-*1*-propanol*. A colorless liquid, $d._{17°}$1.355, b.182. **d. methane.** Methylene chloride. **d. naphthalene.** See *naphthalene*. **d. nitrohydrin.** $C_3H_5O_3NCl_2$ = 186.0. *1.3*-Dichloro-*2*-propanol nitrate*. A colorless liquid, d.1.459, insoluble in water, miscible with alcohol or ether. **d. phenolindo-o-cresol.** An oxidation-reduction indicator. **d. phenolindophenol.** Tillmans' reagent. **d. phenosulfonphthalein.** Used as a pH indicator, changing at 6.0 from yellow (acid) to red (alkaline). **d. quinone chloroimide.** Used as a reagent for phenols.

dichloricide. *p*-Dichloro*benzene*.

dichloride. An inorganic salt containing two chloride chlorine atoms, *e.g.*, $FeCl_2$.

dichlorophenarsine hydrochloride. $C_6H_6AsCl_2NO.HCl$ = 290.41. Clorarsen, holarsol, phenarsen; 3-amino-4-hydroxyphenyl-dichlorarsine hydrochloride, $C_6H_3.ClAsCl.(NH_2)(OH).HCl$. A white powder, soluble in water; it is an antisyphilitic.

dichroism. The property by which certain crystals exhibit different colors when viewed in different directions, or when viewed by reflected or refracted light.

dichroite. Iolite.

dichromate. (1) A salt containing the divalent $=Cr_2O_7$ radical (bichromate). (2) Sodium dichromate.

dichromatic. The property by which certain solutions (*e.g.*, dyestuffs) exhibit different colors according to the thickness of the layer through which they are viewed. Cf. *dichroic*.

dichromic acid. The hypothetical acid, $H_2Cr_2O_7$ or $2CrO_3.H_2O$, from which the dichromates are derived.

dichroscope. An optical device for determining the refractive power of crystals.

dicinchonine. $C_{38}H_{44}O_2N_4 = 588.5$. An alkaloid from cinchona bark.

dick. Ethyl dichlorarsine.

dicodeine. $C_{72}H_{84}O_{12}N_4$. A polymer of codeine.

dicodide. $C_{18}H_{21}O_3N = 299.15$. Dihydrocodeinone. A derivative of codeine.

diconchinine. Diquinidine.

diconic acid. $C_9H_{10}O_6 = 214.1$. A derivative of citric acid.

dicyan. (1) An organic compound containing two cyan radicals. (2) Cyanogen. **d. acetylene.** $C_4N_2 = 76.09$. CN.C:C.CN. Colorless crystals or liquid, m.21, b.76. **d. diamide.** $C_2H_4N_4 = 84.18$. Cyanguanidine, param, $NH_2.C(:NH).NHCN$. An isolog of guanyl urea. Colorless leaflets or thin scales, m.205, soluble in water, ether or alcohol. **d. diamidine.** $C_2H_6ON_4 = 102.2$. Guanylurea. The amide of guanidine carboxylic acid, $NH_2.C(:NH).NH.CONH_2$. Colorless crystals, soluble in water or alcohol, m.105. The sulfate is used as a reagent for nickel. Cf. *Grossmann reagent.*

dicyanide. A salt containing two cyanide radicals. **d. imide.** $C_2HN_3 = 67.2$. CN.NH.CN.

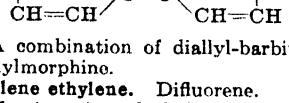
dicyanin(e). An aniline dye used as a photographic sensitizer for infrared radiations. **d.A.** $C_{21}H_{27}N_2O_2I = 466.2$. *1.1'*-Diethyl-*4.2'*-dimethyl-*6.6'*-diethoxy-*2.4'*-carbocyanin iodide. A quinoline dye used as photosensitizer for infra-red. Cf. *cyanin dyes.*

dicyanodiamide. Dicyandiamide.

dicyanogen. $C_2N_2 = 52.0$. Oxalonitrile, ethane dinitrile, CN—CN. A colorless, poisonous gas, b.-25. Cf. *cyanogen.*

dicyclic. Describing a ring system consisting of two fused rings; as, naphthalene, quinoline, indene, but not biphenyl.

dicyclopentadiene. $C_{10}H_8 = 128.0$. The homocyclic compound



didial. A combination of diallyl-barbituric acid and ethylmorphine.

didiphenylene ethylene. Difluorene.

didiphenylamine- A prefix indicating the presence of two diphenylamine radicals; as, **d. fluosilicate.** $[(C_6H_5)_2NH]_2.H_2SiF_6 = 482.26$. White crystals, m.169.

didymia. Didymium oxide.

didymium. Di. A supposed element, of the rare earth group, discovered by Mosander in 1841, in the earth didymia; it is a mixture of neodymium and praseodymium. "Didymium salts" are obtained as by-products in the manufacture of gas mantles but are mixtures of neodymium and praseodymium salts; hence, the symbol, Di, in the following salts means Nd and Pr. **d. carbonate.** $Di_2(CO_3)_6.6H_2O$. Pinkish powder, insoluble in water, soluble in acids. **d. chloride.** $DiCl_6.12H_2O$. Large purple or rose-red crystals, soluble in water or alcohol; used as a germicide. **d. nitrate.** $Di_2(NO_3)_6.12H_2O$. Large, purple or rose-red, asymmetric crystals, soluble in water or alcohol; used as an antiseptic. **d. oxide.** Di_2O_3. Gray powder, insoluble in water or alcohol, soluble in dilute acids. **d. salicylate.** $Di_2(C_7H_5O_3)_6$. Dymal. A fine, white powder, used as an antiseptic dusting powder. **d. sulfate.** $Di_2(SO_4)_3.6H_2O$. Pale, rose-red crystals, slightly soluble in water, insoluble in alcohol; used as a disinfectant.

dielectric. An insulator or non-conductor of electricity. **d. constant.** ϵ. Inductivity. Specific inductive capacity. The constant, ϵ, which depends upon the nature of the medium and is given by $\epsilon = ee'/fr^2$, where f is the force of repulsion between two point charges e and e' of electricity which are at a distance, r, apart in a uniform medium. Cf. *Clausius Mosotti equation, Helmholtz equation.*

dieline. Dichloroethylene.

Diel's hydrocarbon. $C_{18}H_{16}$. It is the theoretical basis of the sterol molecule.

diene. A suffix indicating the presence of two double bonds. **d. series.** Diolefines.

Diesel fuel. Heavy fuel oil in which combustion is started by spontaneous ignition due to compression, instead of by spark-plugs.

diet. The customary or prescribed food rations of an individual.

dietary. A systematized and regular diet repeated at definite time intervals, *e.g.*, a week or month. **d. standard.** The amount of nourishment required per day by a man, corresponding with 3000 calories or more, and varying according to the work performed by the individual. This includes 120 grams protein (429 calories), 500 gm. carbohydrates (2050 calories), and 50 gm. fat (465 calories) in addition to mineral matter and vitamins. Cf. *pelidisi.*

Dieterici's Rule. The internal latent heat is a function of the ratio of vapor volume to liquid volume:

$$M\lambda = P(V_2 - V_1) + CRT \ln \frac{V_2}{V_1}$$

total latent heat — *external work* — *internal latent heat,*

where V_2 is the molal fraction of the liquid, V_1 that of the vapor, M the molecular weight, λ the latent heat.

diethacetic acid. Diethylacetic acid.

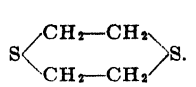
diethoxalic acid. $C_6H_{12}O_3 = 132.1$. 1-hydroxy-1-ethyl-butyric acid. Colorless triclinic crystals, m.80, soluble in water, alcohol, or ether.

diethanolamine. $C_4H_{11}NO_2 = 105.09$. Dihydroxy diethylamine, $NH(CH_2.CH_2OH)_2$. A colorless liquid, d.1.10, $b._{150mm}217$; used as solvent, emulsifying agent and detergent. Cf. *triethanolamine.*

diethyl- A prefix indicating the presence of two ethyl radicals. **d. acetal.** Acetal. **d. acetic acid.** See *acetic acid.* **d. aldehyde.** Acetal. **d. amine*.** $C_4H_{11}N = 73.12$. The secondary amine Et_2NH, occurring in putrefying fish. A colorless liquid, $d_{15°}.0.712$, b.56, m. −40, soluble in water, alcohol, or ether. **d. aminobenzaldehyde.** $C_{11}H_{15}ON = 177.2$. Colorless needles, m.78, b.280. **d. aminophenol.** $C_{10}H_{15}ON = 165.18$. Colorless crystals, m.74, b.276. **d. aniline.** See *aniline.* **d. arsine.** (1) $C_4H_{11}As$. Ethyl cacodyl, Et_2AsH. (2) $(AsEt_2)_2 = 266.02$. Colorless liquid, b.186. **d. arsinic acid.** $C_4H_{10}O_4As$. Ethyl cacodylic acid. $(EtO)_2AsO(OH)$. **d. barbituric acid.** Veronal. **d. benzene.** See *benzene.* **d. beryllium.** $BeEt_2 = 67.10$. A colorless liquid, m.12, $b._{15mm}$ 110. **d. cadmium.** $CdEt_2 = 170.49$. An oily liquid, d.1.656, m. −21, $b._{19.5mm}640$. **d. carbinol.** $C_5H_{12}O = 88.13$. $CHEt_2.OH$. A col-

orless liquid, $d_0°$.0.832, b.116, sparingly soluble in water, soluble in alcohol or ether. **d. carbonate.** $C_8H_{10}O_3$ = 118.1. Diatol, Et_2CO_3. A colorless liquid, d.0.968, b.125. Used as a solvent for nitrocellulose, and in lacquer manufacture. **d. carbonic ether.** Ethyl carbonate. **d. cyanamide.** $C_5H_{10}N_2$ = 98.08. A colorless liquid, b.186. **d. dioxide.** $C_4H_{10}O_2$ = 90.1. Ethylperoxide, diethylperoxide, EtO.OEt. A colorless liquid, d.0.825, b.65, slightly soluble in water, soluble in alcohol or ether. **d. disulfide.** $C_4H_{10}S_2$ = 122.21. Dithiene. Colorless liquid, d.0.993, b.153.5, very slightly soluble in water. It is toxic to *Ascaris*. **d. ether.** Ether(2). **d. glycerol.** $C_7H_{16}O_3$ = 148.2. The etheralcohol. $CH_2OEt.CHOH.CH_2OEt$. A colorless liquid, b.191; used as a solvent. Cf. *diethyline*. **d. glycol ether.** Ethylene diethylate. **d. hydrine.** Diethyline. **d. ketone.** $C_5H_{10}O$ = 86.09. 3-pentanone, Et.COEt. A colorless, liquid, d.0.814, b.103; soluble in water, alcohol, or ether; used medicinally as a hypnotic. **d. malate.** $C_8H_{14}O_5$ = 190.1. The ester EtOOC.CHOH.COOEt. A colorless liquid, b.250; soluble in water or alcohol. Used as a constituent of lacquers. **d. malonic acid.** See *malonic acid*. **d. malonylurea.** Veronal. **d. mercury.** $HgEt_2$ = 258.69. Colorless liquid, d.2.44, b.159, insoluble in water. **d. nitramine.** See *nitramine*. **d. nitrosamine.** Nitrosodiethyline. **d. oxalic acid.** Diethoxalic acid. **d. oxamide.** $C_6H_{12}O_2N_2$ = 144.21. Oxal ethyline. A nicotine alkaloid, EtNH.CO.CO.NHEt. Colorless needles, m.175; slightly soluble in water or ether, soluble in alcohol. **d. peroxide.** D. dioxide. **d. phosphate.** Ethyl phosphate. **d. phosphine.** $C_4H_{11}P$ = 90.11. Et_2PH. A colorless liquid, b.85. **d. phosphoric acid.** $C_4H_{11}O_4P$ = 154.12. $(EtO)_2PO.OH$. A colorless liquid, soluble in water, slightly soluble in alcohol. **d. phthalate.** See *phthalate*. **d. propylcarbinol.** Octanol*. **d. sulfate.** Ethyl sulfate. **d. sulfide.** Ethyl sulfide. (*dichloro-*) Mustard gas. **d. sulfine.** The bivalent radical > SEt_2. **d. sulfone.** Ethylsulfone. **d. sulfone diethylmethane.** Tetronal. **d. sulfone dimethylmethane.** Sulfonal. **d. sulfone ethylmethylmethane.** Trional. **d. sulfone methylethylmethane.** Trional. **d. tartrate.** $C_8H_{14}O_6$ = 206.1. The ester EtOOC.$(CHOH)_2$.COOEt. A colorless liquid, b.280; soluble in water or alcohol; used as a solvent for nitrocellulose, gums and resins. **d. telluride.** Ethyl telluride. **d. thiurea.** Ethylthiourea. **d. tin.** $SnEt_2$ = 176.78. Yellowish oily liquid, d.1.654, m. below −12, b.150, insoluble in water. **d. tin dibromide.** Et_2SnBr_2 = 336.61. White needles, d.2.068, m.63, b.232. **d. tin dichloride.** Et_2SnCl_2 = 247.69. White crystals, m.84, b.220. **d. tin difluoride.** Et_2SnF_2 = 214.78. White plates, m.229. **d. tin diiodide.** Et_2SnI_2 = 430.62. White crystals, m.45, b.242. **d. tin oxide.** Et_2SnO = 192.78. White powder, insoluble in water. **d. toluene.** See *toluene*. **d. toluidine.** $C_{11}H_{17}N$ = 163.22. $Me.C_6H_4.NEt_2$. **para-** A colorless liquid, d.0.9242, b.229. **d. urea.** See *urea*. **d. zinc.** $ZnEt_2$ = 123.46. A colorless liquid, d.1.182, b.118, which ignites in air.

diethylene. (1) Cyclobutane. (2) A prefix indicating the presence of two ethylene radicals. **d. diamine.** Piperazine. **d. dioxide.** Dioxan. **d. disulfide.** $C_4H_8S_2$ = 120.20. Dithiane.



Colorless crystals, m.111, b.200; insoluble in water, soluble in alcohol or ether. **d. glycol.** $C_4H_{10}O_3$ = 106.1. 2.2′-Oxybisethanol, *2.2′*-oxydiethanol*. The ether-alcohol, $CH_2OH.CH_2.O.CH_2.CH_2OH$. A colorless liquid, d.1.1175, b.224.5; miscible with water, alcohol, ether or acetone; used as a solvent for gums, resins and nitrocellulose, as a hygroscopic agent in cigarettes, as an antifreeze in refrigerators, sprinklers, water seals, and as a softener for glues, paper and cork. **d. glycol butyl ether.** Butyl carbitol. **d. glycol ethyl ether.** Carbitol. **d. oxide.** Dioxan.

diethylethylene. Δ^3-Hexylene.

diethylidene. (1) 2-Butylene. (2) A prefix indicating the presence of two ethylidene radicals, > CHMe.

diethylin. (1) The monovalent radical, —NEt_2, derived from diethylamine. (2) Diethyline.

diethyline. $C_7H_{16}O_3$ = 148.1. 1.2-Diethylglycerinester. $CH_2OEt.CHOEt.CH_2OH$. A colorless liquid. Cf. *diethyl glycerol*. **nitroso-** $C_4H_{11}ON_2$ = 102.09. Nitrosodiethylamine, diethylnitrosamine, $Et_2N.NO$. A colorless liquid, d.0.951, b.177; used in organic synthesis.

diethylstilbestrol. $C_{18}H_{20}O_2$ = 268.34. Stilbestrol; α,α'-diethyl-4,4′-stilbenediol, $HO.C_6H_4.(C_2H_5)C:C(C_2H_5).C_6H_4.OH$. Used medicinally as an estrogen.

dietics, dietetics. The science of the regulation of food in health and disease.

dietzeite. $7Ca(IO_3)_2.8CaCrO_4$. A native calcium chromate and iodate, which occurs in the Chilean nitrate beds.

differential. By selective increments. **adsorption-** The selective adsorption of dyestuffs; *e.g.*, some indicators, (q.v.) are adsorbed more in the presence of halogen ions than of others. **d. reduction.** The selective reduction by metals of one component in a mixture.

differentiation. (1) In mathematics: Defining an infinitesimal increment of a quantity. (2) In biology: The development of new characteristics of a cell or organism. In an evolutionary sense it means the specialization and division of labor between the various cells, tissues, or organs.

diffraction. The bending of a ray of light as it strikes the edge of an object. Cf. *refraction*. Interference color fringes are produced when a number of parallel light waves strike a number of closely spaced parallel edges forming a grating. Hertzian waves are analyzed by a coarse grating constructed of copper wires. X-rays are analysed by the rows of atoms in a crystal. **crystal-** See *x-ray spectrograph, crystal*. **d. formula.** The wavelength of a radiation is $\lambda = s \sin d/n$, when the angle of incidence is 90°; or $\lambda = (s/n)(\sin i - \sin d)$, where i is the angle of incidence, d the angle of diffraction, s the distance between the rulings of the grating (or the planes of atoms in a crystal) and n the order of the spectrum. **d. grating.** A glass, film, or metal plate with fine rulings, used to produce a series of spectra, and for spectroscopic measurements.

diffusate. That part of the liquid which passes through a dialyzer (q.v.).

diffuse. (1) Hazy in appearance. (2) Passing through a membrane. (3) Spreading through a gas, liquid or solid. **d. series.** See *series*.

diffused. (1) Widely scattered, without definite limits; *e.g.*, diffused light, diffused gases. (2) Spreading or passing through an object; *e.g.*, diffused crystalloids, diffused poison. **d. reflection.** The ratio of reflected to incident light; falling on a surface. See *albedo*.

diffusion. The spreading, or scattering of a material (gas, liquid), or energy (heat, light). **d. analysis.** Determination the size of particles and the molecular weight by diffusion. **d. of energy.** The irregular reflection of light or heat waves from the surface of a body, part being absorbed. **d. of matter.** The spreading or intermixing movement of gaseous or liquid substances, due to molecular movement. Thus, gases mix rapidly, and two liquids or solutions brought into contact will, in time, mix thoroughly (provided they are miscible). Even solids pressed together show diffusion to a small extent (*e.g.*, gold and lead). **d. constant.** The constant D in the relation

$$S = -D\frac{q.c.t.}{x}$$

where S is the weight of substance diffusing in t seconds through a cylinder of length x and cross-section q, and c is its concentration in grams per cc. **d. law.** The velocity (v) of diffusion of two substances is in inverse proportion to the square-root of the vapor-density (d) or molecular weight (M); hence $v_1 : v_2 = \sqrt{d_2} : \sqrt{d_1} = \sqrt{M_2} : \sqrt{M_1}$. Cf. *Graham's law, atmolysis.* **d. shell.** A membrane for dialysis (*dialyzer*).

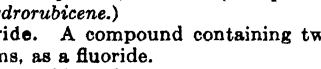
diflavine. The monohydrochloride of 2,7-diaminoacridine; used as an antiseptic in wounds.

difluan. $C_6H_4O_6N_2$ = 200.2. A compound obtained by boiling alloxanic acid.

difluor-, difluoro- A prefix indicating the presence of two fluorine atoms. **d. benzene.** Benzene. **d. dichloromethane.** Dichlorodifluoromethane.

difluorene. $C_{26}H_{16}$ = 328.2. Didiphenyleneethylene.

difluorenylene. $C_{26}H_{16}$ = 328.2. The aromatic hydrocarbon



Colorless prisms, m.218. (Compare *difluorene, dihydrorubicene.*)

difluoride. A compound containing two fluorine atoms, as a fluoride.

diformyl. Glyoxal.

digallic acid. $C_{14}H_{10}O_9$ = 322.08. $C_6H_2(OH)_2$-$COOC_6H_2(OH)_2COOH$. Fine white needles, m.275 (foam and decomp.) slightly soluble in water or ether, soluble in alcohol or hot water. It occurs in Chinese tannin and in plant galls.

digentisic acid. $C_{14}H_{10}O_7$ = 290.08. C_6H_2-$(OH)_2.COO.C_6H_3(OH)_2COOH$, occurs in tannins. Needles, m.204, slightly soluble in water.

digestant. A drug which aids digestion.

digester. A large iron kettle with cover and safety valve, used to subject, decompose, soften or cook substances at high pressure and temperature. See *autoclave*.

digesting shelf. A rack for holding Kjeldahl flasks.

digestion. (1) In physiology, the metabolic transformation of food into living matter; *e.g.*, the change of proteins, carbohydrates, and fats, under the influence of ferments, into assimilable substances. (2) The treatment of substances with chemicals under heat and pressure; *e.g.*, wood to make wood pulp. (3) The disintegration of substances by strong chemical agents; *e.g.*, the decomposition of proteins with sulfuric acid in Kjeldahl determination. **artificial-** Digestion of food by ferments outside the living body. **gastric-** Digestion occurring in the stomach; *e.g.*, the action of pepsin in changing proteins to peptones. **intestinal-** Digestion in the intestines. **oral-** Salivary d. **peptic-** Gastric d. **primary-** Gastro-intestinal digestion. **salivary-** Digestion in the mouth; *e.g.*, diastase changes starch to dextrin. **secondary-** Assimilation of food by body-cells.

digifolin. A solution of glucosides from digitalis leaves.

digilanid. A term applied to each of the three natural glucosides of *Digitalis lanata* and specifically designated **d.A, d.B,** and **d.C**; they are more properly called lanatosides. Enzymatic hydrolysis yields the glucosides digitoxin, gitoxin, and digoxin, respectively, together with a molecule of glucose from each; the latter glucosides may be further hydrolyzed by acid to digitoxigenin, gitoxigenin, and digoxigenin, with three molecules of digitoxose from each.

digipoten. A mixture of glucosides from digitalis leaves.

digit. (1) Three-fourths of an inch. (2) A measure of the amount of an eclipse; one-twelfth of the apparent diameter of the sun or moon. (3) An integer under 10.

digitalein. $C_{22}H_{38}O_9$ = 446.4. A glucoside of digitalis leaves. A white powder, soluble in water; used as a diuretic and cardiac tonic.

digitaligenin. $C_{24}H_{32}O_3$ = 368.24. A split-product from the glucoside of digitalis seeds.

digitalin. $(C_5H_8O_2)x$. A glucoside from digitalis leaves. **amorphous-** Crude d. **crude-** Amorphous-. A mixture of glucosides (digitoxin, digitalin, and digitalein). Amorphous, yellow powder, soluble in water or alcohol giving foaming solutions, insoluble in chloroform or ether. **crystalline-** Digitonin. **French-** Homolle's-. A mixture of glucosides from digitalis leaves prepared by Homolle's method. Yellowish-white, amorphous powder, m.100. **German-** A mixture of glucosides from digitalis leaves prepared by the Wals method; mainly digitonin. Yellowish-white, amorphous powder, soluble in water or alcohol, insoluble in ether or chloroform. **true-** $C_{35}H_{56}O_{14}$ = 680.3. Digitalin verum, Schmiedeberg's digitalin. A glucoside from the seeds and leaves of digitalis. An amorphous, white powder or granules, m.217, soluble in 100 parts water, or 100 parts 50 % alcohol.

digitalis. The leaves of *Digitalis purpurea* (foxglove), a Scrophulariaceae. Used medicinally as a narcotic, cardiac, and stimulant. Many different glucosides and active principles have been isolated from it.

digitalose. A methyl pentose from digitalis.

digitogenin. $C_{26}H_{42}O_5$ = 434.3. A split product of digitonin.

digitonin. $C_{54}H_{92}O_{28}$ = 1188.7. A glucoside from digitalis leaves. Colorless crystals, decomp. on heating, nearly insoluble in water, ether or chloroform, soluble in a mixture of alcohol and chloroform. It is physiologically inactive, and hydrolyzes to glucose, galactose and digitogenin.

digitoxigenin. $C_{24}H_{36}O_4$ = 388.3. Colorless crystals, m.245, physiologically active. **anhydro-** $C_{24}H_{34}O_3$ = 370.3. Colorless crystals, m.184, physiologically inactive.

digitoxin. $C_{34}H_{54}O_{11}$ = 638.42. A glucoside from digitalis leaves, assumed to be the chief active principle. Thin white, rectangular, anhydrous leaflets, odorless with bitter taste, m.240, slightly soluble in water or ether, soluble in alcohol or chloroform, insoluble in benzene.

digitoxose. $C_6H_{12}O_4$ = 148.09. *3.4.5*-Trihydroxyhexanal. A crystalline split-product of digitoxin and gitoxin.

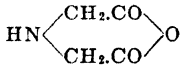
diglyceride. A compound of the type $HO.C_3H_5(OR)_2$. Cf. *glyceride.*

diglycerin. $C_6H_{14}O_5$ = 166.12. A colorless liquid, b.225, soluble in water.

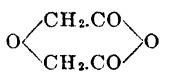
diglycol. A prefix indicating the presence of two $—CH_2OH$ groups. **d. laurate.** An odorless, pale yellow oil, emulsible in water, soluble in all proportion in alcohols, oils and hydrocarbons.

diglycollamic acid. $C_4H_7O_4N$ = 133.08. Colorless, rhombic prisms, m.150, decomp. on further heating, soluble in water or alcohol.

diglycollamide anhydride. $C_4H_5O_3N$ = 115.1. Diglycolloimide. The heterocyclic system



diglycollic acid. $C_4H_6O_5$ = 134.07. Oxybisacetic acid, oxydiethanoic acid*. The dibasic acid  . Colorless, rhombic prisms, m.148, soluble in water, alcohol, or ether. **d. anhydride.** $C_4H_4O_4$ = 116.0. The heterocyclic compound



Colorless crystals, m.97, b.240, soluble in alcohol.

diglycollide. $C_4H_4O_4$ = 116.0. The heterocyclic compound  . Colorless crystals, m.86.

diglycolloimide. Diglycollamide anhydride.

digoxigenin. $C_{23}H_{34}O_5$ = 390.3. A hydrolysis product, digoxin, m.220°C.

digoxin. $C_{41}H_{64}O_{14}$ = 780.5. An optically active glucoside, from digitalis, m.265; hydrolyzes to 3 mol. digitoxose and digoxigenin.

dihexyl. (1) Two hexyl radicals. (2) Dodecane*.

dihydracrylamic acid. Dilactamic acid.

dihydracrylic acid. $C_6H_{10}O_5$ = 162.09. Colorless crystals, decomp. on heating. Soluble in water, alcohol, or ether.

dihydranol. $C_6H_3(OH)_3.CH_2(CH_2)_5CH_3$. *n*-Heptylresorcinol, *2.4*-dihydroxy-phenyl-*n*-heptane. Used as 5 % solution in olive oil against intestinal putrefaction.

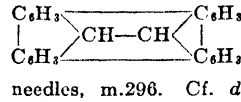
dihydrate. (1) A compound containing two hydroxyl groups. (2) A crystal containing two molecules of water of crystallization.

dihydric. Dibasic.

dihydride. A binary compound containing two hydrogen atoms; *e.g.*, CaH_2.

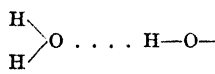
dihydro- A prefix indicating the presence of two additional hydrogen atoms in an organic compound. **d. anthracene.** $C_{14}H_{12}$ = 180.1. Diphenylene-dimethylene. The hydrocarbon  . **d. benzene.** See *benzene.* **d. bromide.** An organic compound containing two molecules of HBr; *e.g.*, morphine dihydrobromide. **d. butene.** C_4H_6 = 54.1. **1.2-** The hydrocarbon $CH_2{:}C{:}CHMe$. **1.3-** The hydrocarbon $CH_2{:}CH.CH{:}CH_2$. **d. carveol.** $C_{10}H_{18}O$ = 154.16. 8(9)-Terpene-ol-2. A colorless liquid, $d_{22°}$.0.927, b.225. **d. carvone.** $C_{10}H_{16}O$ = 152.16. 8(9)-Terpene-ol-2. A colorless liquid, $d_{19°}$.0.928, b.222. **d. cholesterol.** Formed from cholesterol in the body, and excreted in the gut. **d. cymene.** $C_{10}H_{16}$. The terpadienes: limonene, phellandrene, terpinene, etc. **d. lutidine.** $C_7H_{11}N$ = 109.07. A ptomaine from cod-liver oil. **d. naphthalene.** Dialin. **d. pentine.** C_5H_8 = 68.06. **2.4-** Piperylene, $MeCH{:}CH.CH{:}CH_2$. **2.3-** The hydrocarbon $MeCH{:}C{:}CHMe$. **d. propene.** C_3H_6 = 42.1. The homocyclic system

See *cyclopropane.* **d. quinazoline.** See *orexin, quinazoline.* **d. quinoline.** C_9H_9N = 131.08. A colorless liquid, b.223. **d. resorcinol.** $C_8H_8O_2$ = 112.07. Colorless prisms, decomp. 105, soluble in water, alcohol, or ether. **d. rubicene.** $C_{26}H_{14}$ = 326.1. The octocyclic hydrocarbon



Colorless needles, m.296. Cf. *difluorene, difluorenylene.*

dihydrol. A supposed polymerized form of liquid water, $(H_2O)_2$, which exists in equilibrium with the normal molecule: $2H_2O \leftrightarrows (H_2O)_2$. It is assumed to have the formula

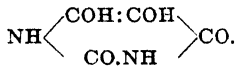


Cf. *trihydrol, hydrone theory, bonds.*

dihydroximic acid. $C_2H_4N_2O_4$ = 120.0. Hydroximic acid. $HON{:}C(OH)—C(OH){:}NOH$.

dihydroxy. A prefix indicating the presence of two hydroxyl groups. **d. acetone.** $C_3H_6O_3$ = 90.1. The ketone alcohol $(CH_2OH)_2CO$. A colorless solid substance, m.70; converted by alkali into fructose. **d. acetic acid.** Glyoxalic acid. **d. anthraquinones.** A group of dibasic phenols derived from anthraquinone: **1.2-** Alizarin. **1.3-** Xanthopurpurin. **1.4-** Quinizarin. **1.5-** Anthrarufin. **1.8-** Chrysazin. **2.3-** Hystazarin. **2.6-** Anthraflavic acid. **2.7-** Isoanthraflavic acid. **b. benzene. 1.2-** Catechol. **1.3-** Resorcinol. **1.4-** Quinol. **d. benzoic acid.** See *benzoic acid.* **d. benzophenone.** $C_{13}H_{10}O_3$ = 214.08. $HO.C_6H_4.CO.C_6H_4.OH$. Isomers: 2.5- m.122; 2.2'- m.59, b.340; 2.3'- m.126; 3.4'- m.197; 4.4'- m.210. **d. cholenic acid.** $C_{24}H_{38}O_4$ = 582.3. An isomer of apocholic acid, cf. *sterols.* Long needles, m.260. **d. cinnamic acid.** Caffeic acid. **d. disulfonic acid.** Chromatropic acid. **d. fluorescein.** Gallein. **d. naphthalene.** $C_{10}H_8O_2$ = 160.11. **(alpha-)** 1.4-. **(amphi-)** 2.6-. **(ana-)** 1.5-. **(beta-)** 2.3-. **(epi-)** 1.6-. **(kata-)** 1.7-. **(peri-)** 1.8-. **(pros-)** 2.7-. **1.6-** or epi-. Colorless prisms, m.134, soluble in alcohol or ether.

1.7- kata-. Colorless needles, m.178, soluble in water, alcohol, or ether. **1.8- peri-.** Colorless needles, m.140, slightly soluble in water, soluble in alcohol or ether. **2.3- beta-.** Rhombic, colorless, crystals, m.159, soluble in hot water, alcohol, or ether. **2.7- pros-.** Colorless needles, m.261, slightly soluble in water, soluble in alcohol or ether. **d. palmitic acid.** $C_{16}H_{32}O_4$ = 288.0. White needles, m.125, occurring in cod-liver oil. **d. phthalophenone.** Phenolphthalein. **d. propionic acid.** Glyceric acid. **d. stearic acid.** $C_{18}H_{36}O_4$ = 316.28. Rhombic crystals, m.126.5, found in castor oil; there are ten isomers. **d. succinic acid.** Tartaric acid. **d. uracil.**



An intermediate in the synthesis of uric acid.

dihydroxyl. Dihydroxy. **d. amine.** The hypothetical hydroxy-hydroxylamine, HO.NH.OH. **d. nicotine.** Pilocarpidine.

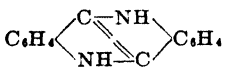
diimide. (1) The hypothetical compound HN:NH, known only as its organic derivatives. (2) A compound containing two —C:NOH groups; as, glyoxime.

diimines. A group of organic compounds which contain two imine, =NH, radicals.

diimino- A prefix indicating the presence of two imino groups. **d. hydrazine.** N_4H_2. The hypothetical compound HN:N.N:NH, known as its derivatives. Cf. *hydronitrogen.*

diindogen. Indigotin.

diindyl. $C_{14}H_{10}N_2$ = 206.2. Dindyl. The heterocyclic compound



Cf. *biindyl.*

diine. A suffix indicating the presence of two triple bonds. See *diacetylenes.*

diiod-, diiodo- A prefix indicating the presence of two iodine atoms in an organic compound. **d. acetic acid.** $C_2H_2O_2I_2$ = 311.97. Diiodoacetic acid. Yellow crystals, m.110, slightly soluble in water. **d. acetylene.** C_2I_2 = 277.7. Small needles, insoluble in water, soluble in oil of sweet almond. **d. hydrine.** Diiodoisopropanol. **d. tyrosine.** $C_9H_9NO_3I_2$ = 432.96. White crystals, m.205, slightly soluble in water. An amino acid found in gorgonin, spongin and thyroglobulin.

diiodide. A compound containing two iodine atoms as iodide; *e.g.*, mercury diiodide, HgI_2.

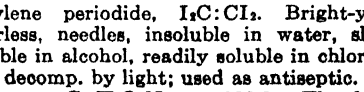
diiodoacetic acid. Diiodacetic acid.

diiodobenzene. $C_6H_4I_2$ = 329.90. **o-** Soluble in water or alcohol, m.23.4, b.279. **m-** Soluble in alcohol, m.34.2, b_{751mm}.286.5. **p-** Soluble in alcohol, m.129.4, $b_{756.5mm}$284.7.

diiodoeosin. See *rose bengal.*

diiodoform. C_2I_4 = 531.4. Tetraiodoethylene, ethylene periodide, $I_2C:CI_2$. Bright-yellow, odorless, needles, insoluble in water, slightly soluble in alcohol, readily soluble in chloroform and decomp. by light; used as antiseptic.

diisatogen. $C_{16}H_8O_4N_2$ = 292.3. The heterocyclic system

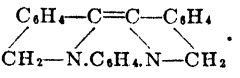


Cf. *isatogenic acid.*

diisoamyl. (1) 2.7-Dimethyl-octane. (2) A prefix indicating the presence of two isoamyl groups. **d. amine.** $C_{10}H_{23}N$ = 157.27. A colorless liquid, d.0.788, b.190, slightly soluble in water, miscible in alcohol or ether. **d. ketone.** $C_{11}H_{22}O$ = 170.24. A yellow liquid, b.226, insoluble in water, miscible with alcohol or ether.

diisobutyl. (1) The compound 2.5-dimethylhexane. (2) A prefix indicating the presence of two isobutyl groups. **d. amine.** $C_8H_{19}N$ = 129.24. A colorless liquid, $d_{14°}$.0.7577, b.139.5, sparingly soluble in water, miscible with alcohol or ether. **d. ketone.** $C_9H_{18}O$ = 142.23. Valerone. $Me_2.C.CO.CMe_3$. A colorless liquid, $d_{20°}$.0.833, b.181, insoluble in water.

diisoindoloquinoxaline. $C_{32}H_{16}N_2$ = 308.2. The heterocyclic compound



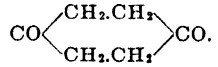
diisonitrosoanetholperoxide. $C_9H_8O_2N_2$ = 176.2. Colorless crystals, m.97.

diisopropenyl. (1) C_6H_{10} = 82.078. *2.3*-Dimethyl butadiene. $CH_2:CMe.CMe:CH_2$. A colorless liquid, d.0.731, b.69.6. Cf. *hexine, hexadiene.* (2) A prefix indicating the presence of two isopropenyl groups.

diisopropyl. (1) A prefix indicating the presence of two isopropyl radicals. (2) An isomer of hexane (2.3-dimethyl-butane or dimethyl-isopropylmethane). **d. ketone.** $C_7H_{14}O$ = 114.12. A colorless liquid, $d_{16°}$.0.853, b.123.7, soluble in alcohol or ether.

dika fat. The fat of *Irvingia gabonensis*, a Simarubaceae, from Sierra Leone.

diketo- A prefix indicating the presence of two bivalent =CO groups. **d. hexamethylene.** $C_6H_8O_2$ = 112.1. The homocyclic compound



d. hydrindene. Is *indandione.*

diketone. A compound containing two —CO radicals. **1.2-** A compound containing the bivalent —CO.CO— radical; *e.g.*, diacetyl or 2.3-butanone. **1.3-** A compound containing the bivalent —CO.CH_2.CO— radical; *e.g.*, acetyl-acetone or 2.4 pentanone. **1.4-** A compound containing the bivalent —CO.CH_2.CH_2.CO— radical; *e.g.*, acetonyl-acetone or 2.5-hexanone. **alpha-** 1.2-. **beta-** 1.3-. **gamma-** 1.4-.

diketopurine. Xanthine.

diketotriazolidine. Urazole.

diketotrimethylpurine. Caffeine.

dilactamic acid. $C_4H_{11}O_4N$ = 161.2. MeCHOH.COO.CHMe.$CONH_2$. Colorless crystals, soluble in water.

dilactic acid. $C_6H_{10}O_5$ = 162.1. (1) Lactyl-lactate, lactolactic acid. MeCHOH.COO.CHMe.COOH. (2) Lactylic anhydride, lactic acid anhydride. MeCHOH.CO.O.CO.CHOH-Me.

dilantin sodium. $C_{15}H_{11}N_2O_2Na$ = 274.25. Diphenylhydantoin sodium, an antiepileptic.

dilatancy. A form of thioxtropy (q.v.) in which a viscous suspension sets solid under the influence of pressure.

dilatation. Distention or expansion.

dilatometer. An instrument for measuring expansion (*dilation*) due either to a change in temperature or to chemical action.

dilatometry. The measurement of small volume changes in liquids, due to physical or chemical reactions; as, esterification.

dilaudide. $C_{17}H_{19}O_3.HCl$. Dihydro-morphinone hydrochloride. A white powder, soluble in water; used as heroine substitute.

dilevulinic acid. $C_{10}H_4O_6$ = 220.0. Decane-4.7-dione diacid. The dibasic keto-acid, $(—CH_2-CO.CH_2.CH_2.COOH)_2$.

dilituric acid. 5-Nitrobarbituric acid.

dill. Anetum. The dried ripe fruit of *Peucedanum graveolens*, a Compositae; used as a spice and carminative. **d. oil.** The essential oil of d., d.0.895–0.915, soluble in alcohol. It contains phellandrene, terpinene and carvone.

diluent. (1) An inert, solid or liquid, used to increase the bulk of some other substance. (2) An inert substance used to increase the bulk of a solution; it need not necessarily be a solvent for the dissolved substance. (3) A liquid added to the solvents and plasticizers of lacquers to increase flow and evaporation; as, benzene, toluene, xylene.

dilution. (1) The process of diluting; increasing the bulk of a substance by adding a material. (2) The state of being diluted or diffused; as, a solute in a solvent. **heat of-** The heat, in gram calories, which is liberated or absorbed on diluting infinitely one gram molecule of a substance with water.

d. law. Ostwald's law. **d. ratio.** A measure of the solvent power of a diluent (definition 2). It equals the volume of a diluent required to produce incipient precipitation of a dissolved substance, divided by the total volume of solvent in which it occurs. **d. rule.** To mix or dilute a with b to make c, use the diagram:

a \ / (difference c − b) = x
  c
b / \ (difference a − c) = y

and take x parts of a and y parts of b, where a, b, and c are expressed in the same unit (*e.g.*, of percentage, moles, karats, density, price). With solutions to be diluted with water, b is zero concentration or 1.0 density; thus: Dilute a 75 % solution (a) with water (b) to make it 55 % (c) strong—

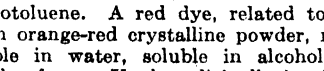
75 \ / (55 − 0) = 55
  55
0 / \ (75 − 55) = 20

take 55 parts of 75 % solution and add 20 parts of water.

dimalonic acid. $C_5H_6O_8$ = 206.03. Ethane-tetracarboxylic acid. The tetrabasic acid $CH(COOH)_2.CH(COOH)_2$.

dimazon. $C_{18}H_{19}O_4N_3$ = 341.3. Diacetylamino-azotoluene. A red dye, related to scarlet R. An orange-red crystalline powder, m.75; insoluble in water, soluble in alcohol, ether, or chloroform. Used medicinally in ointments or as a dusting powder to promote the growth of epithelial tissue.

dimedone. $C_8H_{10}O_2$ = 138.08. Dimethylcyclohexanedione.



dimension. A magnitude in one definite direction. **four-** The concept of space and time; as, length, width, height and duration. **three-** The concept of space.

dimensional equation. A mathematical expression showing the dimensions of a quantity in terms of fundamental units, (q.v.) thus: energy = ML^2T^{-2}, where M is mass, L is length, and T is time.

dimercurammonium. The monovalent HgN— radical. **d. chloride.** HgNCl = 250.1. A yellow powder. **d. oxide.** $(HgN)_2O$ = 445.2. A colorless powder.

dimercuriammonium. Dimercurammonium.

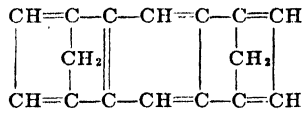
dimercurousammonium. The monovalent —$HgNH_2$ radical.

dimer. A condensation product or polymer of two molecules. Cf. *trimer, dimeric.*

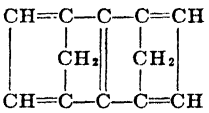
dimeric. Able to form two-fold polymers.

dimethacetic acid. Dimethylacetic acid.

dimethano- A prefix indicating the presence of two —CH_2— bridges in a ring; as, **d. anthracene.**



d. naphthalene.

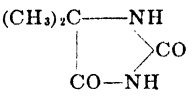


dimethoxalic acid. Isobutyric acid.

dimethoxy- A prefix indicating the presence of two methoxy radicals, —OCH_3, or —OMe. **d. catechol.** Veratrol. **d. ethane.** $C_4H_{10}O_2$ = 90.08. Glycol dimethyl ether, $MeOCH_2.CH_2OMe$. A colorless liquid, d.0.873, b.84.5; used as a solvent in lacquers. **d. phthalaldehydic acid.** Opianic acid.

dimethyl. (1) Ethane. (2) A prefix indicating the presence of two methyl radicals. **d. acetal.** $C_4H_{10}O_2$ = 90.1. Ethylidene dimethylether. $(MeO)_2CH.Me$. A colorless liquid, $d_0°$.0.879, b.62.5, miscible with water, alcohol, ether or chloroform. Used medicinally as an anesthetic instead of chloroform. **d. acetic acid.** Isobutyric acid. **d. acetylene.** Crotonylene. **d. allylene.** 3-Methyl-butine. **d. amine*.** C_2H_7N = 45.11. The secondary amine $Me_2.NH$. A volatile liquid or colorless vapor, $d_6°$.0.6865, b.7, soluble in water, alcohol, or ether. Used as a bait for boll weevils. **d. aminoazobenzene.** $C_{14}H_{15}N_3$ = 225.13. Butter yellow. Yellow scales, soluble in water, acids, or oils. Used as indicator in the analysis of gastric lactic acid; also as a coloring matter for oils. (Acids—rose-red, alkalis—yellow.) **d. aminoazobenzenesulfonic acid.** Sulfobenzene azodimethylaniline. **d. aminobenzal rhodanine.** $C_{12}H_{12}NOS_2$. A colorimetric reagent for copper, mercury and silver. **d. aminobenzene.** Dimethylaniline. **d. aniline.** $C_8H_{11}N$ = 121.14. $Ph.NMe_2$. A yellow or brown, oily liquid, $d_{20}°$.0.958, m.2.5, b.193.3, soluble in water, alcohol, or ether. Used in organic synthesis, as reagent for nitrates, and in the manufacture of dyes (methyl violet). **d. anilinesulfonic acid.** $C_8H_{11}O_3NS$ = 201.22. **2-**, or ortho-. Yellow masses, m.229, soluble in alcohol. **4-** or para-. Brownish scales, m.257, insoluble in water, soluble in alcohol or ether. Used in organic synthesis. **d. anthracene.** $C_{16}H_{14}$ = 206.12. **(alpha-)** or **1.4-**. Colorless scales, m.225, insoluble in water, soluble in alcohol or

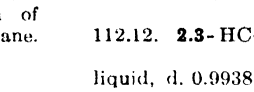
ether. (**beta-**) or 1.3-. Colorless leaflets, m.204, insoluble in water, soluble in alcohol or ether. **2.3-** m.246. **2.4-** m.71. **2.6-** m.231. **d. arsenic acid.** Cacodylic acid. **d. arsine.** C_2H_7As = 106.07. Me_2AsH. A colorless liquid, $d_{29°}$.1.213, b.36, miscible with alcohol, ether, or chloroform. **d. benzene.** Xylene. **d. benzoic acids.** $C_6H_3.Me_2.COOH$ = 150.13. Xylic acids. **d. beryllium.** $BeMe_2$ = 39.07. White needles, subliming at 200, decomp. by water to CH_4. **d. cadmium.** $CdMe_2$ = 142.46. An oily liquid, d.1.985, m. −4.5, b.106. **d. carbinol.** Isopropylalcohol. **d. carbonate.** Methyl carbonate. **d. cyclooctadiene.** See *cyclooctadiene*. **d. diamidotoluphenazine.** Neutral red. **d. diethyl tin.** Me_2SnEt_2 = 206.82. A colorless liquid, d.1.232, m. −13, b.145, soluble in alcohol or benzene. **d. ether.** Methyl ether. **d. ethylamine.** $C_4H_{11}N$ = 73.1. Ethyldimethylamine. The tertiary amine $EtNMe_2$. **d. ethylcarbinol.** Tert. iso*amylalcohol*. **d. ethylmethane.** Isopentane. **d. ethylene.** Butylene. **d. glyoxime.** $C_4H_8O_2N_2$ = 116.10. Diacetyl-dioxime. White needles or crystalline powder, m.234, insoluble in water, soluble in alcohol or ether. Used as a reagent in the detection, separation, and determination of nickel or palladium. **d. hexane.** Octane. **d. hydantoin.** $C_5H_8N_2O_2$ = 128.1.



A white, odourless solid, m.178 (sublimes) Very soluble in water, alcohol or ether. Used as a plasticiser for resins. **d. hydrazine.** See *hydrazine*. **d. hydrazone.** See *hydrazone*. **d. hydroxy benzene sulphonphthalein.** Xylenol blue. **d. ketone.** Acetone. **d. mercury.** $HgMe_2$ = 230.66. A colorless liquid, d.3.069, b.94. **d. nitrosamine.** $C_2H_6ON_2$ = 74.11. Nitrosodimethylin. A yellow, oily liquid, b.153, insoluble in water, soluble in alcohol or ether. **d. naphthalene.** See *naphthalene*. **d. octane.** $C_{10}H_{22}$ = 142.17. A group of isomeric liquid hydrocarbons of the methane series, *e.g.*,

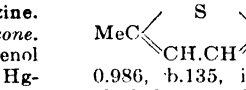
2.6-	d.0.734	b.159
2.7-	d.0.722 m. −53	b.160
***l*-3.6-**		b.162
***d*-3.6-**	d.0.735	b.160

d. oxalate. $C_4H_6O_4$ = 118.07. Colorless, monoclinic prisms, m.54, b.163.3. **d. oxamide.** $C_4H_8O_2N_2$ = 116.16. (**asymmetric-**) $NH_2.OC.CO.NMe_2$. Oxalmethylin. Colorless leaflets, m.104, soluble in alcohol, ether, or water. (**symmetric-**) MeNH.OC.CO.NHMe. Colorless needles, m.209, slightly soluble in water, soluble in alcohol or ether. **d. oxyquinizine.** Antipyrine. **d. phosphine.** C_2H_7P = 62.07. Me_2PH. A colorless liquid, b.25, insoluble in water. **d. phosphinic acid.** $C_2H_7O_2P$ or $(CH_3)_2PO.OH$ = 94.07. Colorless crystals, m.76, soluble in water, alcohol, or ether. **d. phosphoric acid.** $C_2H_7O_4P$ = 126.07. $(MeO)_2PO(OH)$. **d. phenylenediamine.** $C_8H_{12}N_2$ = 136.2. Aminodimethylaniline, dimethylaminoaniline. $NH_2C_6H_4NMe_2$. **o-** b.218. **m-** b.270. **p-** Brown, crystalline masses, m.41, b.262, insoluble in water, soluble in alcohol, ether, or chloroform; used as a reagent for cellulose and fibers and in organic synthesis. **d. phenylenediamine hydrochloride.** $C_8H_{12}N_2.HCl$ = 172.6. **para-** Hygroscopic crystals, soluble in alcohol. **d. phenylenediamine sulfate.** $C_8H_{12}N_2.H_2SO_4$ = 234.29. **para-** Colorless or brownish crystals, soluble in water. **d. phenol.** Xylenol. **d. piperazintartrate.** Lycetol. **d. propylcarbinol.** Hexyl alcohol (4). **d. propylmethane.** 2-Methylpentane. **d. pyrazine.** Ketine. **d. pyrazole.** $C_3H_4N_2$ = 96.1. A precipitant for cobalt. **d. pyridine.** Lutidine. **d. pyrrole.** C_5H_9N = 95.07. A colorless, oily liquid, $d_{19°}$.0.935, b.165, slightly soluble in water, soluble in alcohol or ether. **d. silicane.** SiH_2Me_2 = 60.12. A colorless gas, $d_{(-80°C)}$.0.68, m. −150, b. −20.1. **d. sulfate.** $C_2H_6O_4S$ or $(CH_3O)_2SO_2$ = 126.12. A colorless liquid, b.188.5, soluble in water, alcohol, or ether. Used as a reagent for detecting coal tar oils, and as methylating agent in organic synthesis. **d. sulfine.** The bivalent C_2H_6S— radical. **d. sulfinic acid.** C_2H_6SO = 78.1. Me_2SO. **d. sulfone.** $C_2H_6SO_2$ = 94.1. Me_2SO_2. **d. sulfourea.** $C_3H_8N_2S$ = 104.2. MeNH.CS.NHMe. **d. thetine.** $C_3H_8O_2S$ = 120.07. Colorless crystals, decomp. on heating, soluble in water or alcohol. **d. thiophen.** C_6H_8S = 112.12. **2.3-**



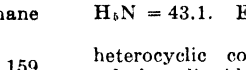
A colorless liquid, d. 0.9938, b.136. **2.4-**

A colorless liquid, d.0.9956, b.138. **2.5-**

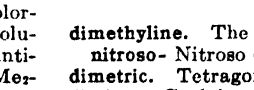


A colorless liquid, d.-0.986, b.135, insoluble in water, soluble in alcohol or ether. **d. urea.** See *urea*. **d. yellow.** Dimethyl aminoazo benzene. **d. xanthine.** Theobromine.

dimethylene. (1) Ethylene. (2) A prefix indicating the presence of two methylene radicals. **d. diamine.** Ethylene diamine. **d. imine.** C_2H_5N = 43.1. Ethyleneimine, vinylimine. The heterocyclic compound



A colorless liquid b.55; insoluble in water. **d. oxide.** Ethylene oxide. **d. sulfide.** Ethylene sulfide. **d. trisulfide.** Ethylene sulfide. **d. trisulfide.** $C_2H_4S_3$ = 124.1. The heterocyclic compound



dimethyline. The monovalent radical, —NMe_2. **nitroso-** Nitroso dimethyl amine.

dimetric. Tetragonal. Cf. *crystal systems*.

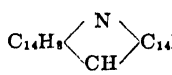
dimine. Cyclohexylethylamine dithiocarbamate, m.93, decomp. 100. Used as a catalyst in the vulcanisation of rubber.

diminution. (1) Proposed term for reduction. Cf. *augmentation*. (2) A lessening or decrease.

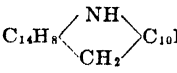
dimorphic. Occurring in two crystalline forms having different melting points.

dimorphism. The property of certain substances of occurring in two different crystalline forms, Cf. *polymorphism*.

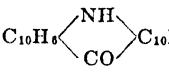
dinaphthacridine. $C_{29}H_{17}N$ = 379.2. The heterocyclic compound



6 isomers: $\alpha\alpha'$-; $\alpha\beta'$-; $\alpha\gamma'$-; $\beta\beta'$-; $\beta\gamma'$-; and $\gamma\gamma'$-. Cf. *dibenzacridine*. **dihydro-** $C_{20}H_{19}N$ = 381.2. The heterocyclic compound



dinaphthacridone. $C_{21}H_{13}ON$ = 295.1. The heterocyclic compound



dinaphthanthracene. Dibenzanthracene.

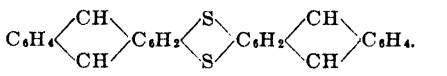
dinaphthazine. Dibenzophenazine.

dinaphtho- A prefix indicating two $C_{10}H_6$= groups. Cf. *naphthalene*.

dinaphthofluorene. Dibenzofluorene.

dinaphthol. $C_{20}H_{14}O_2$ = 286.22. $HO.C_{10}H_6.C_{10}H_6OH$. **alpha-** Colorless rhombic crystals, m.300; insoluble in water, soluble in alcohol or ether. **beta-** White needles, m.218; insoluble in water, soluble in alcohol or ether.

dinaphthothianthrene. $C_{28}H_{16}S_2$ = 416.2. The heretocyclic compound



dinaphthoxanthene. $C_{21}H_{14}O$ = 282.1. Colorless crystals, m.199.

dinaphthyl. (1) Binaphthyl. (2) A prefix indicating the presence of two naphthyl radicals, $C_{10}H_7$—.

d. mercury. $Hg(C_{10}H_7)_2$ = 329.68. Rhombic crystals, d.1.929, m.243, insoluble in water. **d. methane.** $C_{21}H_{16}$ = 268.2. $C_{10}H_7.CH_2.C_{10}H_7$. **alpha-** Colorless prisms, m.109, b.360, soluble in hot alcohol, ether, or benzene. **beta-** Small needles, m.92, soluble in alcohol or benzene. **d. sulfone.** $C_{20}H_{12}O_2S$ = 316.2. The heterocyclic compound:

d. tin. $Sn(C_{10}H_7)_2$ = 372.81. White powder, m.200.

dinaphthylene. A prefix indicating the presence of two naphthylene groups, $C_{10}H_6$=. **d. methane.** See *picene* and *fluorene*. **d. thiophen.** $C_{20}H_{12}S$ = 284.1.

Colorless crystals, m.147.

dindyl. Diindyl.

dineric. Having two liquid layers (phases). Cf. *dimer*.

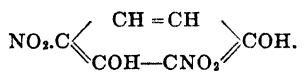
Dingler, Emil Maximilian. 1806–1874. A German technical chemist and editor. **D., Johann Gottfried.** 1778–1855. A German apothecary and founder of "*Polytechnischen Journal*" (1820).

dinicotinic acid. $C_7H_5O_4N$ = 167.1. 2.4- or *3.5*-pyridinedicarboxylic acid*. Colorless crystals. m.314.

dinitramidobenzoic acid. **ortho-** Chrysalicic acid. **para-** Chrysanisic acid.

dinitraniline. Dinitroaniline.

dinitro- A prefix indicating the presence of two nitro groups. **d. amidobenzene.** Dinitraniline. **d. aniline.** Dinitroaniline. **d. anthraquinone.** $C_{14}H_6O_6N_2$ = 298.07. **(alpha-)** Yellow, monoclinic, microcrystalline powder, m.356, slightly soluble in water, alcohol or ether. **(beta-)** Yellow needles, m.280, sparingly soluble in water, alcohol or ether, soluble in glacial acetic acid. **d. benzaldehyde.** $C_7H_4O_5N_2$ = 196.08. **2.4-** Yellow prisms, m.72, b.190, slightly soluble in water, soluble in alcohol or ether. **d. benzene.** See *benzene*. **d. benzoic acid.** See *benzoic acid*. **d. chlorobenzene.** $C_6H_3O_4N_2Cl$ = 202.55. **1.2.3-** Colorless needles, m.38.8, soluble in alcohol or ether. **1.2.4-** Colorless, monoclinic crystals, m.37, soluble in alcohol. **1.3.2-** Colorless crystals, $d_{16°}$.1.687, m.42, b.315, slightly soluble in alcohol, soluble in ether. **1.3.4-** Colorless crystals, $d_{22°}$.1.697, m.50, b.315, soluble in alcohol. **1.3.5-** Colorless needles, m.59, soluble in alcohol or ether; a reagent for mercaptans. **d. cresol.** $C_7H_6O_5N_2$ = 198.2. An orange colored and poisonous coaltar dye, commercially known as "saffron substitute," m.104, b.312, (decomp.). **d. glycerin, d. glycerol.** $C_3H_6(NO_2)_2$ = 182.06. Glycerol-1.3-dinitrate. An oily liquid, d.1.47, m. −30, $b._{15mm}$148; used as a high explosive. **d. naphthalene.** $C_{10}H_6O_4N_2$ = 218.2. Yellow crystals, m.153, insoluble in water, soluble in alcohol, ether, chloroform, or benzene. α- is 1.5-; β- is 1.8-; γ- is 1.3-. **1.2-** m.103. **1.3-** m.145. **1.4-** m.129. **1.5-** m.216. **1.6-** m.162. **1.7-** m.156. **1.8-** m.170; used in dyestuff manufacture. **d. naphthol.** $C_{10}H_6O_5N_2$ = 234.06. A group of intermediates in organic synthesis: **2.4-**α- m.138. **4.5-**α- decomp. 230. **4.8-**α- decomp. 235. **1.6-**β- m.195. **1.8-**β- m.198. **d. phenamic acid.** Picramic acid. **d. phenol.** $C_6H_4O_5N_2$ = 184.14. Hydroxy-dinitrobenzene. α- is 2.4-; β is 2.6-; γ- is 2.5-; δ- is 3.4-; ϵ- is 2.3-; ξ- is 3.5-. **2.3-** Yellow needles, m.144, slightly soluble in alcohol, soluble in ether; used as a pH indicator. **2.4-** Yellow scales, $d_{24°}$.1.683, m.114, slightly soluble in water, soluble in alcohol or ether. It was used as defatter, but is very poisonous and increases body metabolism and body temperature. **2.6-** Yellow needles, m.61.8, slightly soluble in water or alcohol, soluble in ether. **3.4-** Colorless needles, m.134, **3.5-** Colorless leaflets, m.122. **2.5-** or **3.6-** Colorless leaflets, m.104. **d. phenylhydrazine.** $(NO_2)_2$-$C_6H_3NH.NH_2$ = 198.08. Reddish needles, d.1.868, m.197, explode on further heating; used as reagent for aldehydes and malic acid. **d. resorcinol.** $C_6H_4O_6N_2$ = 200.10. **2.4.1.3-** The nitrated phenol



Yellow scales, m.142, soluble in hot water, alcohol, or chloroform. **(crude.)** Solid green, dark green, chlorin, diquinoyldioxime. A grayish-brown soft mass, sparingly soluble in water, soluble in dilute alkalis or alcohol. Used as a green pigment in calico printing, and in dyeing textiles which must be pretreated with iron salts. **d. salicylic acid.** $C_6H_2(OH)(NO_2)_2$-COOH. A reagent for glucose. **d. toluene.** $C_7H_6O_4N_2$ = 182.17. α- or *meta-* is 2.4-; β- or *para-* is 2.5-; γ- or *ortho-* is 3.4-. **2.4-** Colorless

needles, $d_0°$.1.321, m.70.7, slightly soluble in water, soluble in alcohol or ether. **2.3-** m.63. **2.5-** Colorless needles, m.48, soluble in alcohol, ether, benzene or carbon disulfide. **2.6-** Colorless needles, m.66, soluble in alcohol. **3.4-** Colorless needles, d.1.32, m.59, insoluble in water, soluble in alcohol, ether or carbon disulfide. **3.5-** Colorless needles, m.92, sparingly soluble in water, soluble in alcohol or ether. **d. xylene.** $C_8H_9O_4N_3$ = 196.18. **2.4.1.3-** Long, colorless prisms, m.93, soluble in hot alcohol. **2.3.1.4-** Colorless, small needles, m.-123.6, sparingly soluble in alcohol. **2.5.1.4-** Colorless, hexagonal crystals, m.93, soluble in alcohol.

dinitroaniline. $C_6H_5O_4N_3$ = 183.19. Dinitraniline, $C_6H_3NH_2(NO_2)_2$. **2.3-** m.127. **2.4-** Yellow, monoclinic crystals, d.1.165, m.181, insoluble in water, soluble in alcohol or ether. **2.5-** m.137. **2.6-** Large yellow needles, m.138, soluble in alcohol. **3.4-** m.154. **3.5-** m.159. **d. fluosilicate.** $(C_6H_4NH_2NO_2)_2SiF_6$ = 420.2. Rhombic crystals, m.200.

dinitroso-. A prefix indicating the presence of two —NO groups; as, **d. resorcinol,** used as a reagent for iron.

dinucleotide. A compound formed from two purine bases; as, adenine-uracil.

dioctyl. (1) Hexadecane. (2) A prefix indicating the presence of two octyl radicals. **d. acetic acid.** Isostearic acid.

dioform. $C_2H_2Cl_2$ = 96.93. Acetylene dichloride. CHCl=CHCl. A colorless liquid of chloroform-like odor, d.1.29, b.55. It is a mixture of **cis-** d.1.265, m. −50, b.48, and **trans-** d.1.291, m. −80.5, b.60.3.

-dioic. A suffix indicating two —COOH groups.

diol. Glycol. An organic compound with two hydroxyl groups. Cf. *glycols.*

diolefine. Diene series. An unsaturated aliphatic hydrocarbon with the general formula C_nH_{2n-2} and two double bonds; *e.g.*,

allene (propadiene)	C_3H_4
divinyl (1.3-butadiene)	C_4H_6
piperylene (1.4 pentadiene)	C_5H_8
isoprene (2-methyl-1.3-butadiene)	C_5H_8
diallyl (1.5-hexadiene)	C_6H_{10}
conylene (1.4-octadiene)	C_8H_{14}

diolein. $C_{57}H_{72}O_5$ = 596.5. Glycerol dioleate. The dioleic ester of glycerol, formed from triolein by the action of lipase.

diondiacids. A group of organic acids containing two keto and two carboxyl groups; *e.g.*, hexan-3.4-diondiacid, $HOOC.CH_2.CO.COCH_2.COOH$ (*ketipic acid*); decan-4.7-diondiacid, $HOOC.CH_2.CH_2.CO.CH_2CH_2.CO.CH_2.CH_2.COOH$ (*dilevulinic acid*).

-dione. A suffix indicating the presence of two keto-groups, >CO; as, butadione.

dionine. $C_{19}H_{23}O_3N.HCl$ = 349.66. Ethylmorphine hydrochloride. A colorless, crystalline powder, soluble in water or alcohol; used medicinally as a substitute for morphine and codeine. Cf. *codethyline.*

diopside. $CaMgSi_2O_6$. A monoclinic, white, yellowish, or greenish, rock-forming pyroxene containing chromium, d.3.2, hardness 5–6. Cf. *baikalite.*

dioptase. CuH_2SiO_4. A greenish, hexagonal, hydrous copper silicate, d.3.3, hardness 5, soluble in sulfuric acid.

diopter. The unit of "power" of a lens. The number of diopters is the reciprocal of the focal length in meters.

dioptra. An optical device for measuring heights and angles.

dioptrics. A branch of optics dealing with the refraction of light.

diorite. An igneous rock containing quartz, plagioclase, and small amounts of femic minerals; as, camptonide, corsite, auvergnose, daeite and malchite.

diorsellinic acid. Lecanoric acid.

dioscin. $C_{24}H_{38}O_9.3H_2O$ = 524.4. A saponin from the roots of *Dioscorea japonica,* a Dioscoraceae. White, silky needles, m.248, insoluble in water or ether, slightly soluble in hot water, soluble in alcohol or sulfuric acid.

dioscorea. Yam root. A genus of tropical shrubs with edible tubers (yams). The rhizome of *Dioscorea villosa* (wild yam) is used as an antispasmodic and diaphoretic. **d. sapotoxin.** $C_{23}H_{28}O_{10}$ = 464.3. A toxic principle from *Dioscorea* species.

Dioscorides. A Greek philosopher of Anazarba, Asia Minor, who made mercury from cinnabar (A.D. 50).

dioscorine. $C_{13}H_{19}O_2N$ = 221.2. An alkaloid from the rhizome of *Dioscorea hirsuta,* a Dioscoreaceae of Java.

dioscoroid. The combined principles from the root of *Dioscorea villosa* (wild yam). The fluid extract is an antispasmodic.

diose. A monosaccharide containing two carbon atoms (see *carbohydrates*). Cf. *biose.*

diosmeleoptene. $C_{10}H_{18}O$ = 154.2. A terpene of peppermint-like odor; an isomer of borneol obtained from the essential oil of the leaves of *Diosma* (or *Barosma*) *betulina.* Cf. *buchu.*

diosphenol. $C_{12}H_{16}O_2$ = 168. Buchu camphor, 2-hydroxy-Δ^1-3-p-menthenone. A crystalline camphor from the essential oil of *Diosma betulina.*

diothane. A registered trade-mark for piperidinopropanediol diphenylurethane. $C_{22}H_{27}O_4N_3$ = 397.3. Colorless needles, m.195–200, soluble in hot water; used as local anesthetic.

dioxadiene. p-Dioxin.

dioxan. $C_4H_8O_2$ = 88.06. Diethylene dioxide, dihydro-*p*-dioxin,  . A colorless liquid, d.1.038, m.11, b.101; soluble in water. A solvent for cellulose esters, used in the silk and varnish industries and as dehydrating agent in histology. Cf. *dithiane.*

dioxazine. $C_3H_3O_2N$ = 85.1.

2.3.1- The ring compound  .

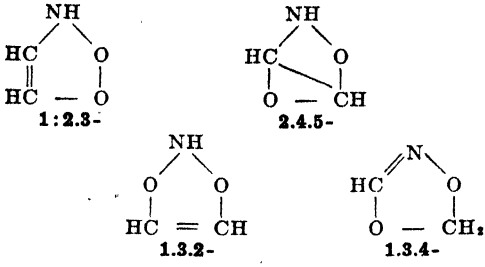
2.4.1- The ring compound  .

3.4.1- The ring compound  .

3.5.1- The ring compound  .

Cf. *dithiazine.*

dioxazole. $C_2H_3O_2N$ = 73.1. A group of heterocyclic compounds with one nitrogen and two oxygen atoms, as



Cf. *dithiazole.*

dioxdiazine. $C_2H_2O_2N_2$ = 86.1. A group of heterocyclic hydrocarbons with two nitrogen and two oxygen atoms in the hexatomic ring. Possible isomers: **1.2.3.4- 1.2.3.5- 1.2.3.6- 1.2.4.5- 1.3.2.4- 1.3.2.5- 1.3.4.5- 1.3.4.6- 1.4.2.3- 1.4.2.5- 1.4.2.6-.** The first two numbers indicate the position of the oxygen, the last two that of the N atoms.

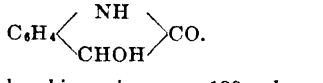
dioxdiazole. $CH_2O_2N_2$ = 74.1. A group of heterocyclic hydrocarbons with two nitrogen and two oxygen atoms in the pentatomic ring. Isomers: **1.2.3.4- 1.2.3.5- 1.3.2.4- 1.3.4.5-.** The oxygen atoms occupy the positions indicated by the first two numbers. Cf. *dithiodiazole.*

dioxide. A compound containing two atoms of oxygen, viz: (1) Normal or true dioxides in which the valency of oxygen is two; as *e.g.*, in manganese dioxide. (2) Abnormal dioxides or peroxides, such as barium dioxide (peroxide), hydrogen dioxide (peroxide) etc. The true dioxides only give oxygen with concentrated acids, and chlorine with concentrated hydrochloric acid. Peroxides only give hydrogen peroxide. The oxygen atoms are linked thus:

dioxime. The monovalent —HC:NOH radical occurring in two isomeric forms:

dioximes. A group of compounds containing two dioxime radicals. **alpha-** Glyoximes. **beta-** Glyoxime peroxides. **gamma-** Compounds in which the two oxime radicals are separated by the ethylene radical; *e.g.*, succinaldehydedioxime, HON:CHCH$_2$.CH$_2$.CH:NOH.

dioxindole. $C_8H_7O_2N$ = 149.08. o-Aminomandelic acid lactame,

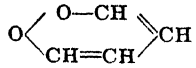


Colorless, rhombic prisms, m.180, decomp. 195°, soluble in water, alcohol or ether.

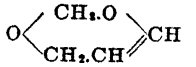
dioxine. $C_{10}H_7O_2N$ = 173.1. Betaoxynaphthoquinoxime. A yellow aniline dye.

dioxins. $C_4H_6O_2$ = 86.1 and $C_4H_4O_2$ = 84.1. A group of heterocyclic hydrocarbons:

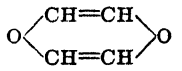
o- or 1.2-



m- or 1.3-



p- or 1.4-

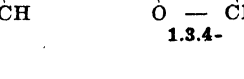


dihydro-p- Dioxan.

dioxogen. A brand of hydrogen peroxide.

dioxolan(e)s. $C_3H_6O_2$ = 74.04. A group of heterocyclic compounds of 3 carbon atoms and 2 oxygen atoms. Many derivatives of the 1.3-isomer are known.

dioxole. $C_3H_4O_2$ = 72.04. The heterocyclic compound



dioxtriazine. CHO_2N_3 = 87.1. A group of aromatic hydrocarbons which contain three nitrogen-atoms and two oxygen atoms in the hexatomic ring. Isomers: **1.2.3.4.5- 1.2.3.4.6- 1.3.4.5.6- 1.3.2.4.5- 1.3.2.4.6- 1.4.2.3.5-** The nitrogen atoms occupy the positions indicated by the last three numbers.

dioxy- (1) A prefix indicating two additional oxygen atoms in an organic compound. (2) Incorrectly used for dihydroxy. **d. anthracene.** See *chrysazol, rufol.* etc. **d. anthranol.** Anthrarobin. **d. benzene.** See *catechol, resorcinol, quinol.* **d. ethylene.** Dioxan. **d. phthalaldehydic acid.** Noropianic acid. **d. quinoline.** See *quinoline.* **d. tetrazotic acid.** $CH_2O_2N_4$. A structural arrangement, which is known only in combination. **d. xanthone.** 1.7-. Euxanthone.

dipalmitate. A compound containing two palmitic acid radicals.

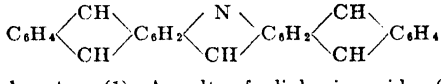
dipalmitin. $C_{35}H_{68}O_5$ = 568.5. Glycerol dipalmitate. A dipalmitic acid ester of glycerin formed from tripalmitin by the action of lipase.

dipentene. Terpene. **d. glycol.** Terpine.

dipeptide. A peptide (q.v.) or compound of the type $NH_2RCO.NH.R.COOH$; as, anserine.

diphenamic acid. $C_{14}H_{11}O_3N$ = 241.09. Phenylphthalamic acid, carbamylphenylbenzoic acid. Ph.C_6H_3(CONH$_2$).COOH.

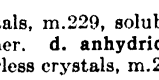
diphenanthracridine. $C_{29}H_{17}N$ = 379.2. The heterocyclic compound



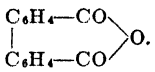
diphenate. (1) A salt of diphenic acid. (2) Diphenylate.

diphenazyl. Dibenzoylethane.

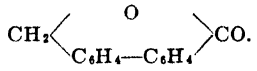
diphenic acid. $C_{14}H_{10}O_4$ = 242.09. Bibenzoic acid, o^2-biphenyldicarboxylic acid.



Colorless crystals, m.229, soluble in hot water, alcohol or ether. **d. anhydride.** $C_{14}H_8O_3$ = 224.09. Colorless crystals, m.213.



diphenide. $C_{14}H_{10}O_2$ = 210.1.

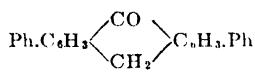


diphenimide. $C_{14}H_9O_2N$ = 223.1. Colorless crystals, m.219.

diphenol. A diatomic phenol, q.v.

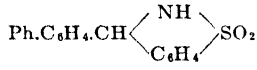
diphenoquinone. $C_{12}H_8O_2$ = 184.1. Bibenzenone. O:C_6H_4:C_6H_4:O.

diphenyl. (1) Biphenyl. (2) A prefix indicating the presence of two phenyl radicals. **d. acetic acid.** $C_{14}H_{12}O_2$ = 212.17. Colorless needles, m.148, soluble in hot water, alcohol, or ether. **d. acetonitrile.** $C_{14}H_{11}N$ = 193.2. Colorless crystals, m.72, b_{12mm}.184. **d. acetylene.** Tolane. **d. amine.** See *diphenylamine**. **d. aniline.** Triphenylamine. **d. anthrone.** $C_{26}H_{18}O$ = 346.2. The cyclic ketone

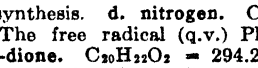


Colorless crystals, m. 192.

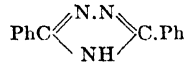
d. benzene. See *benzene*. **d. benzidine.** $C_{24}H_{20}N_2$ = 336.14. A very sensitive reagent for nitrates, zinc, etc. **d. benzylsultam.** $C_{19}H_{15}O_2NS$ = 321.2.



Colorless crystals, m.210. **d. carbazide.** $C_{13}H_{14}N_2O$ = 214.08. Phenyl hydrazine urea, diphenyl carbohydrazide, $CO(NH.NHPh)_2$. A white powder, m.170, used as an indicator (alkalis: pink, acids: white), and reagent for cadmium (blue-violet), chromium (red) and mercury (blue). **d. carbinol.** Benzohydrol. **d. chlorarsine.** Blue-cross. **d. cyanarsine.** Ph_2AsCN = 255.0. D.C. Colorless prisms, d.1.45, m.32, with a slight odor of bitter almonds. A nose-irritant war poison gas. **d. diacetylene.** $C_{16}H_{10}$ = 202.08. Diacetenyl benzene. The hydrocarbon Ph.C:C.C:C.Ph. Colorless needles, m.88, soluble in alcohol or ether. **d. dicarboxylic acid.** Diphenamic acid. **d. diethylene.** $C_{16}H_{14}$ = 206.1. The hydrocarbon Ph.CH:CH.CH:CH.Ph. Colorless crystals, m. 148, b.250. **d. diketone.** A group of compounds containing two phenyl and two keto groups; *e.g.*, diphenyldiketohexane. Ph.CO.$(CH_2)_4$.CO.Ph; diphenyldiketooctane. Ph.CO.$(CH_2)_6$.CO.Ph. **d. dimethylethane.** $C_{16}H_{18}$ = 210.2. The hydrocarbon Ph.CHMe.CHMe.Ph. Colorless crystals, m.123. **d. endoanilodihydrotriazole.** Nitron. **d. ethane.** Dibenzyl. **d. ether.** Phenylether. **d. ethylene.** Stilbene. **d. guanidine.** $C_{13}H_{13}N_3$ = 211.2. Melaniline. $(PhNH)_2C$:NH. White microcrystalline needles, m.147, slightly soluble in water, soluble in alcohol, acids, or chloroform. Used as standard in acidimetry. **d. hydrazine.** $C_{12}H_{12}N_2$ = 184.24. PhNH.NHPh. Yellow, triclinic crystals, d.1.190, m.34.5, b.302, slightly soluble in water, soluble in alcohol or ether; used as a reagent for aldehydes and ketones. **d. hydrazone.** Osazone. **d. imide.** Carbazole. **d. ketone.** Benzophenone. **d. methane.** $C_{13}H_{12}$ = 168.17. Methylenediphenyl. Ditan. Benzylbenzene. $Ph.CH_2.Ph$. Long, colorless needles, d.1.012, m.26.5, b.261, insoluble in water, soluble in alcohol or ether; used in organic synthesis. **d. nitrogen.** $C_{12}H_{10}N$ = 182.09. The free radical (q.v.) Ph_2N. **4.5-d. octan-2.7-dione.** $C_{20}H_{22}O_2$ = 294.2. The ketone, $MeCO.CH_2.CHPh.CHPh.CH_2.COMe$. Colorless crystals, m.161, b.335. **d. oxide.** Phenylether. **d. pentadienone.** Styryl ketone. **d. phosphine.** Ph_2PH. **d. sulfide.** Phenylsulfide. **d. tetraketone.** $C_{16}H_{10}O_4$ = 266.1. The ketone Ph.CO.CO.CO.CO.Ph. Colorless crystals, m.87. **d. tetraketoxime.** $C_{16}H_{11}O_4N_3$ = 295.2. Diphenyltetraketone-1.4-dioxime. Colorless crystals, m.176. **d. tetrazine.** $C_{14}H_{10}N_4$ = 234.3. The heterocyclic compound

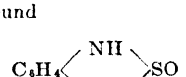


d. thiocarbazone. Dithizone. A reagent for lead with which it produces a compound soluble in certain organic solvents and enables the lead to be separated from other metals. **d. thiourea.** Sulfocarbanilide. **d. tin.** $SnPh_2$ = 272.78. Yellow amorphous powder, m.226, insoluble in water. **d. triazole.** $C_{14}H_{11}N_3$ = 221.3. The heterocyclic compound



d. triketone. $C_{16}H_{10}O_3$ = 238.1. Dibenzoylketone, PhCO.CO.COPh. Colorless crystals, m.70, b_{176mm}.289. **d. urea.** Carbanilide.

diphenylamine*. $C_{12}H_{11}N$ = 169.19. Phenylaniline. The secondary amine Ph_2NH, Colorless leaflets, d.1.159, m.54, b.302, sparingly soluble in water, soluble in alcohol, or ether. Used as a reagent for nitric acid in water, milk, etc.; in organic synthesis; and as an indicator in titrations of iron with dichromate. **3-hydroxy-** $C_{12}H_{11}ON$ = 185.10. m- phenylaminophenol. Colorless crystals, m.82, b.340, **4-hydroxy-** $C_{12}H_{11}ON$ = 185.10. p-phenylaminophenol. Colorless crystals, m.70, b.330. **seleno-** Phenoselenazine. **thio-** Phenothiazine. **d. sulfoxide.** $C_{12}H_9ONS$ = 215.1. The heterocyclic compound



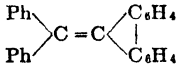
Cf. *biphenylamine, xenylamine.*

d. blue. Diphenylbenzidine. An oxidation product of d. used as an oxidation-reduction indicator. **d. chlorarsine.** $NH.(C_6H_4)_2.AsCl$ = 277.5. Adamsite, D.M. Yellow odorless crystals, d.1.65, m.195, insol. in water. The vapors are a nose-irritant war poison gas.

diphenylate. A compound containing two phenoxy groups, PhO—.

diphenylene. (1) The bivalent $C_{12}H_8$=radical,

(2) A compound with two $C_6H_4<$ radicals. **d. acetic acid.** Fluorene carboxylic acid. **d. dimethylene.** Dihydroanthracene. **d. dioxide.** Dibenzodioxin. **d. diphenylethylene.** $C_{26}H_{18}$ = 330.2. The hydrocarbon



Yellow crystals, m.229; cf. *difluorene*. **d. ether.** Benzofuran. **d. glycollic acid.** $C_{14}H_{10}O_3$ = 226.1. meso-oxyfluorene carboxylic acid.

Colorless crystals, m.162. **d. imide.** Carbazole. **d. ketone.** Fluorenone. **d. methane.** Fluorene. **d. oxide.** Dibenzofurane. **(methylene-)** Xanthene. **d. oxycarbinol.** Xanthydrol. **d. phenylmethane.** $C_{19}H_{14}$ = 242.1. Msphenylfluorene. The hydrocarbon

Colorless crystals, m.146. **d. sulfide.** Dibenzothiophen. (**methylene-**) Thioxanthene.

diphenylenimide. Carbazole.

diphosgene. $C_2Cl_4O_2$ = 198.0. Perstoff, surpalite, trichloromethyl chloroformate, $Cl.COOCCl_3$. A lung-irritant poison gas, d.1.66, m. −57, b.128, used in World War I.

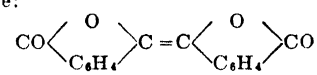
diphosphate. (1) A compound containing two phosphoric acid radicals, $\equiv PO_4$. (2) A compound containing the divalent $=HPO_4$ radical; *e.g.*, sodium diphosphate (Na_2HPO_4), calcium diphosphate $Ca(HPO_4)_2$.

diphosphenyl. $C_{12}H_{10}P_2$ = 216.2. Ph.P:P.Ph. A yellow, crystalline powder.

diphosphoric acid. Pyrophosphoric acid. **anhydro-oxymethylene-** $C_2H_8O_9P_2$ = 238.09. A constituent of green plants (see *phytin*) containing about 26 % phosphorus.

diphospho glyceric acid. $C_3H_8O_{10}P_2$ = 266.0. $[(HO)_2PO.O]_2C_2H_3.COOH$, m.174. It occurs in blood.

diphthalyl. $C_{16}H_8O_4$ = 264.1. The heterocyclic ketone:



Colorless crystals, m.234.

dipicolinic acid. $C_7H_5O_4N$ = 167.1. 1.5 or 2.6-pyridinedicarboxylic acid*. Colorless needles, m.225, slightly soluble in warm water, alcohol, or ether.

dipicrylamine. Hexanitro diphenylamine.

dipiperidyls. Compounds formed by the reduction of pyridine or dipyridyl. They are very soluble in water, giving strongly alkaline solutions which absorb carbon dioxide very readily and regenerate it if subsequently heated.

diplococcin. An antibiotic substance obtained from cultures of certain streptococci.

diplogen. Deuterium.

diplomethane. Methane-*d*.

diplon. Deuteron.

diplosal. $C_{14}H_{10}O_5$ = 258.08. Salicylosalicylic acid, $HO.C_6H_4COOC_6H_4COOH$. Colorless crystals, m.148; used in medicine.

dipole. (1) A co-ordinated valence link between two originally neutral atoms, whereby one loses, and the other gains a share of two electrons. (Cf. *co-valence*). (2) The electrical symmetry of a molecule, hence a charge of positive electricity very close to an equal negative charge. It is measured by the d. moment. **d. moment.** A molecular constant, μ, which indicates the distribution of electrical charges in a neutral molecule. It is zero if they are symmetrically distributed, and up to 5×10^{18} e.s.u., if they are not. Cf. *Debye equation, association.*

Dippel, Johann Konrad. 1673–1734. A German alchemist. **D.'s oil.** The distillation-product of bones and other animal matter, chiefly containing pyridine and pyridine bases. Used as an antiseptic and for denaturing alcohol.

dipping refractometer. See *refractometer.*

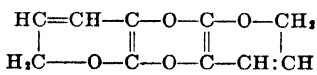
dipropargyl. (1) Bipropargyl. (2) A prefix indicating the presence of two propargyl radicals.

dipropyl- A prefix indicating the presence of two propyl radicals. **d. amine.** $C_6H_{15}N$ = 101.19. The secondary amine $(MeCH_2CH_2)_2NH$. A colorless liquid, $d_{25°}$.0.736, b.110, soluble in water or alcohol. **d. beryllium.** $Be(C_3H_7)_2$ = 95.1. A colorless liquid, m. −17, b.245. **d. cadmium.** $Cd(C_3H_7)_2$ = 198.52. A colorless liquid, d.1.4201, m. −83, b_{21mm}.84. **d. carbinol.** $C_7H_{16}O$ = 116.2. Heptane-4-ol, 3-propylbutanol, $(MeCH_2CH_2)_2CHOH$. A colorless liquid, $d_{22°}$.0.820, b.154, soluble in alcohol or ether. **d. ether.** Propylether. **d. ketone.** Butyrone. **d. mercury.** $Hg(C_3H_7)_2$ = 286.73 A colorless liquid, d.2.124, b.190; insoluble in water. **d. tin.** $Sn(C_3H_7)_4$ = 204.8. A colorless liquid. **d. tin dibromide.** $Sn(C_3H_7)_2Br_2$ = 364.64. Yellow crystals, m.54. **d. tin dichloride.** $(C_3H_7)_2SnCl_2$ = 275.72. White crystals, m.81.

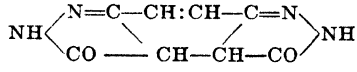
diprotocatechuic acid. $C_{14}H_{10}O_7$ = 290.08. Fine needles, m.237; soluble in acetone or alcohol. It occurs in tannins. Cf. *diresorcylic acid.*

dipsomania. A state of acute craving for alcohol.

dipyranodioxin. The heterocyclic compound



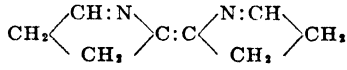
dipyrazolone. A compound containing two pyrazolone groups; *e.g.*, **hexahydrobenzo-** $C_8H_6O_2N_4$. The heterocyclic system



dipyridine. $C_{10}H_{10}N_2$ = 158.22. Nicotyrine. Colorless needles, m.108, soluble in water, alcohol, or ether.

dipyridyl. $C_{10}H_8N_2$ = 156.21. Bipyridine. $C_5NH_4—C_5NH_4$. **beta-** Colorless needles, m.68, b.287, soluble in alcohol or ether. **gamma-** Colorless needles, m.73, b.305, sparingly soluble in water, soluble in alcohol or ether.

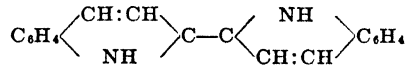
dipyrrole. $C_8H_{10}N_2$ = 134.1. The heterocyclic system



furo- See *furodipyrrole.*

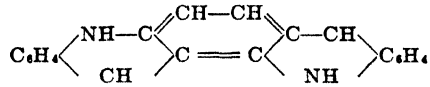
diquinidine. Diconchinine. An alkaloid from cinchona.

diquinoline. $C_{18}H_{14}N_2$ = 258.29.



Yellow needles, m.114, insoluble in water, soluble in alcohol or ether. **alpha-** $C_{18}H_{12}N_2$ = 256.27. Monoclinic scales, m.175, insoluble in water, sparingly soluble in alcohol or ether. **beta-** Monoclinic leaflets, m.191, insoluble in water, soluble in alcohol or ether.

diquinolopyridine. $C_{20}H_{14}N_2$ = 296.3. The heterocyclic ring system.



direct dyes. Substantive dyes.

direct-vision spectroscope. A spectroscope in which a series of prisms is arranged in a tubular container so that the emergent rays follow the direction of the incident rays; the spectrum can thus be viewed directly through a stationary eyepiece.

diresorcinol. $C_{12}H_{10}O_4,2H_2O$ = 254.17. A white, crystalline powder, or long needles, m.310,

soluble in hot water, alcohol ether or glacial acetic acid.

diresorcylic acid. $C_{14}H_{10}O_7$ = 290.08. An isomer of digentisic acid. $(HO)_2.C_6H_2.COO.C_6H_3(OH)COOH$. Micro-needles, decomp. 215, soluble in hot water. It occurs in tannins.

disaccharides. A group of carbohydrates that yield two simple sugars (monosaccharides) on hydrolysis. See *carbohydrates*.

disagglomeration. The transformation of compact masses into a fine powder by chemical means; *e.g.*, the treatment of lead with a solution of lead salts.

disalicylic acid. (1) Salicylic anhydride. (2) Diplosal. **acetylmethylene-** Urasol.

disalicylide. $C_{14}H_{10}O_6$ = 274.1. Salosalicylide. $C_2H_4(OH)COO.C_6H_3(OH)COOH$.

disassimilation. The oxidation of assimilated material, accompanied by the liberation of energy used for work.

disassociation. The breaking apart or splitting of a molecule into simpler constituents. **electrical-** The splitting of molecules into ions; *e.g.*, ionization. **photo-** The disarrangement of molecules under the influence of light; *e.g.*, silver salts. **thermal-** (commonly, *dissociation*). The breaking apart of a molecule into simpler constituents (smaller molecules or atoms) by the action of heat. By lowering the temperature, the split-products again unite and form the original molecule. Cf., *dissociation*.

disazo compound. A compound containing two azo groups of the type R.N:N.R.N:N.R. Many dyes belong to this group. Cf. *diazo compounds*.

disc. A round, plate-like object. **alundum-** A porous plate made of alundum; used as a filter.

discharge. (1) The sudden escape or liberation of stored or accumulated energy; *e.g.*, of electricity (spark-discharge), or of chemical energy (explosion). (2) Any waste liquid of a manufacturing plant. (3) The output of a pump. **disruptive-** A crackling, noisy discharge of electrical energy. **silent-** A slow, or gradual loss of electrical energy due to the conductivity of air. Cf. *saturation current*.

discol. An internal combustion fuel, which contains 50 % of alcohol, 25 % of benzol and 25 % of hydrocarbons.

discrasite. Dyscrasite.

discutient. A drug which effects the disappearance of tumors and inflammatory exudations; *e.g.*, iodine, ichthyol, glycerin.

diselenide. A compound of the type R.Se.Se.R.

disgregation. The reverse of aggregation; *e.g.*, dispersion, separation.

dish. A shallow or flat vessel made of glass or metal. Used extensively in laboratory work. **aluminum-** A dish of aluminum used in milk analysis. **alundum-** A dish made of alundum used for incinerations. **crystallizing-** A shallow glass vessel used for the evaporation and crystallization of solutions. **culture-** A shallow vessel with a flat bottom, made of heavy glass; used for growing cultures of bacteria (Petri-dishes). **filtering-** A dish-shaped cone of porous material, used for filtering. **incineration-** q.v. **moisture-** A d. with loose fitting cover. **weighing-** A flat, covered platinum, aluminum or German silver dish used for weighing.

disilane. See *silanes*. **hexafluoro-** Si_2F_6 = 170.1. A gas, m. −18.7.

disilicic acid. Silicic acid.

disiloxane. $(SiH_3)_2O$ = 106.95. A colorless, odorless combustible gas; m. −144, b. −15.2.

disinfect. To free from infection, especially by destroying disease germs or other harmful microorganisms. Cf. *sterilize*.

disinfectant. An agent that frees from infection; usually a substance which destroys microorganisms (bacteria, protozoa, etc.) but not bacterial spores, *e.g.*, sublimate, phenol, cresol, formaldehyde.

disinfection. A process or method of destroying micro-organisms.

disinfest. To free from infesting insects, rodents or other small animals.

disintegration. (1) Decomposition. (2) See *atomic d.* **artificial-** See *radio elements*.

disintoxicate. Detoxicate.

disk. Disc.

dismutation. The change of one substance into two; as, in Cannizzaro's aldehyde reaction which produces acids and alcohols.

disoxidation. Deoxidation.

dispensary. A place where medicines are dispensed; *e.g.*, an apothecary's shop.

dispensatory. A book giving detailed information of all substances used as drugs. It is more complete than a Pharmacopoeia (q.v.). Cf. *formulary*.

dispensing. The act of compounding medicines and preparing dosages. **d. balance.** A delicate scale, less sensitive than an analytical balance, used in drug stores. **d. dose.** See *dosage*.

dispergator. A peptizing agent. Cf. *peptizator*.

dispersed. Finely divided. Colloidal. **d. phase.** Colloidal matter. Cf. *colloids*. **d. system.** An apparently homogeneous substance which consists of a microscopically heterogeneous mixture of two or more finely-divided phases (solid, liquid, or gaseous), *e.g.*, liquid and liquid (milk); solid and gas (smoke); liquid and gas (fog). See *colloids, orientation, zone*.

dispersimeter. A device for measuring the average grain of optically heterogeneous media; *e.g.*, the uniformity of a tri-color screen or autochrome plate.

dispersion. Scattering. (1) The degree of dispersion of a substance depends on the size of the finely-divided particles, which may be microscopic (microns), ultramicroscopic (submicrons), or subultramicroscopic (amicrons). (2) The separation by refraction of the constituent rays of a beam of non-homogeneous light, *i.e.*, the angle between the extreme rays of the spectrum produced. **coefficient of-** The constant B in the formula $\mu - 1 = A(1 + B/\lambda^2)$, where μ is the refractive index for the wavelength λ, and A a constant. B is used for the identification of oils etc. **d. medium.** The material surrounding dispersed matter.

dispersivity. The difference between the refractivities of a substance for rays of different wavelengths. **specific-** The ratio,

$$r_a - r_b = \frac{n_a^2 - 1}{(n_b^2 + 2)d} - \frac{n_b^2 - 1}{(n_b^2 + 2)d};$$

r_a and r_b are the specific refractivities, and n_a and n_b are the refractive indices for the rays of wave-lengths a and b, respectively, and d is the density of the substance.

dispersoid. A colloidal or finely-divided substance.

displacement. (1) A chemical change in which one element, molecule or radical is removed by another element, molecule or radical. (2) An

ionic change in which one element exchanges charges with another element either by oxidation or reduction. **electron-** Displacement (2). **d. law.** The first enhanced spark-spectrum of an element has a structure similar to that of the element preceding it in the Periodic Table. **d. reaction.** The general equation for displacement of metals is $M + YX = MX + Y$, the metal M being more positive than the metal Y; hence, M is oxidized. The general displacement equation of non-metals is $N + YX = YN + X$, the nonmetal N being more electronegative than the non-metal X; hence N is reduced. **d. series.** Electromotive series, Volta series, constant series. Arrangement of the elements in order of their relative potentials. At the top of the list are the most negative elements, which displace all anions following, and are thus reduced. At the end of the list are the most positive elements which displace all preceding cations and thus become oxidized.

HYDROGEN	cesium
	Positive

disproportionation. The conversion of like into two or more unlike molecules; as, $2C_2H_4 = C_2H_2 + C_3H_6$. Cf. *dismutation.*

disruption. A tearing apart or a sudden outburst; *e.g.*, a disruptive charge.

dissection. A cutting to pieces; as, the removal of tissues from an animal or vegetable organism to expose underlying structures.

dissemination. (1) Dispersion. (2) The scattering of seeds by natural causes.

dissipation. The transformation of mechanical into heat energy; as, the internal friction of solids and liquids. **d. constant.** $Q = E/\omega\mu$, where E is Young's modulus, $\omega = 2\pi f$, and μ is the internal viscosity. Q is a measure of the internal friction; values are:

Quartz	100,000
aluminum	50,000
brass	40,000
duralumin	30,000
iron	20,000
permalloy	9,000
silver	6,000
copper	3,000
nickel	2,000
zinc	1,900
glass	1,600
graphite	900
tin	800
lead	30

dissociated. Split into simpler constituents. **electrolytically-** Ionized.

dissociation. The breaking apart of a molecule by physical means. **electrolytic-** Ionization. **photo-** See *disassociation.* **thermal-** Occurs when a solid, liquid, or gaseous molecule is split into simpler molecules or atoms under the influence of heat and re-unites after the temperature is lowered; as,

$$PCl_5 = PCl_3 + Cl_2$$
$$2NH_4Cl_{(solid)} = NH_3 + HCl + NH_4Cl_{(vapor)}$$

Cf. *disassociation.*

d. constant. See law of *mass action.* **d. pressure.** The sum of the partial pressures of dissociated molecules in a system.

dissolution. (1) Solution. (2) Hydrolysis of organic tissues.

dissolve. To bring a solid into solution; as, water dissolves salt, salt dissolves in water.

dissolved. In a state of solution. **d. substance.** A solute, q.v.

dissolvent. Solvent.

dissonance. (1) A discord. (2) A combination of sounds which produces beats.

dissymmetry. Absence of complete symmetry. The optically-active substances are not identical with their mirror images, but have axes of symmetry in their molecular configuration. Cf. *asymmetry.*

distance. The length between two points. Cf. *magnitudes.*

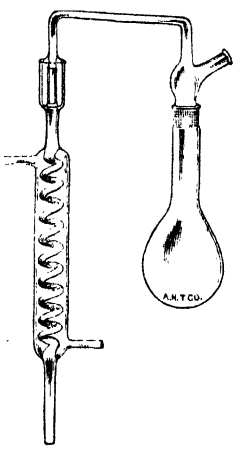
distearin. $C_{39}H_{76}O_5$ = 623.7. Glycerol distearate. The distearic ester of glycerin, m.74.5.

disthene. Cyanite.

distilland. That which is undergoing distillation.

distillate. A liquid which has been produced by condensation from its vapor.

distillation. The purification of a liquid by heating it to its boiling point, and condensing and collecting the vapors. **cold-** Distillation at low temperatures, *e.g.*, in a vacuum **con-** See *condistillation.* **destructive-** The distillation of complex, organic matter (*e.g.*, wood) which decomposes into a number of split products. **fractional-** Slow distillation of a mixture of substances and separate collection of the distillates at each boiling point, or after definite



Distillation apparatus.

temperature intervals. **isothermal-** The transference of water in the form of vapor from a weak to a strong solution in an enclosed space, owing to the difference in vapor-pressures. **repeated-** Cohobation. **steam-** Distillation by the passage of steam through a liquid.

d. apparatus. A device for distillation which generally consists of a closed vessel (retort, flask, kettle) connected with a condenser which leads into a receiver. **d. flask.** A flask of heat-resisting glass having a long neck with tubular outlet. **d. value.** The ratio between the concentration of a steam-volatile substance in the vapor of its boiling solution, to that in the liquid. It is constant for a particular substance, and equals $\log(1 - y)/\log(1 - x)$, where x is the volume of the distillate and y the amount of substance it contains. Cf. *Henry's law.*

distilled. Describing a liquid which has been vaporized and condensed.

distilled water. Vaporized and condensed water; used extensively in the laboratory as solvent. **double-** Water which has been distilled twice, the last time in a still made entirely of glass or of platinum. Used for hypodermic injections.

distillery. A place where distillation is performed; generally a factory making alcohol from fermented sugars. **d. waste.** The residue from the stills from which alcohol has been distilled; it contains K and is used as a fertilizer.

distribution. (1) The occurrence of an element or substance on the earth's surface; the materials may be either diffused or localized, abundant or scarce. Cf. *abundance.* (2) The assimilation or spread of a substance or drug in the animal organism. **d. coefficient.** Partition coefficient, Overton coefficient. A ratio indicating the diffusibility of a substance into the cell protoplasm; *e.g.*, if S_f denotes the solubility of a substance in fat, lecithin, phosphatides, etc., and S_w its solubility in water; then S_w/S_f is the distribution coefficient which will determine its velocity of diffusion into the cell protoplasm. **d. law.** If a substance is dissolved in two immiscible liquids, a and b, then the ratio of its concentrations in each (c_a and c_b), will be a constant; $c_a/c_b = K$. Cf. *partition, Nernst's law.* **d. principle.** Michael's rule. If HX adds on to an olefine linkage, where x is a halogen, x unites with the carbon atom having the lesser number of hydrogens; thus, $CH_3CH{:}CH_2 + HBr \rightarrow CH_3.CHBr.CH_3$. Cf. *Markownikoff's rule.*

distributors. A three- or four-way stop-cock or switch.

distyrene. $C_{16}H_{14}$ = 206.11. The hydrocarbon $(PhCH{:}CH{-})_2$. White crystals, m.124.

disulfate. (1) A pyrosulfate, $M_2S_2O_7$. (2) A bisulfate, $MHSO_4$.

disulfide. A compound containing two sulfur atoms as sulfide. **alkyl-** A organic compound containing a carbon chain and the bivalent —S.S— radical. **ethyl-** Et_2S_2 = 122.22. A colorless liquid, b.151. **methyl-** Me_2S_2 = 94.19. A colorless liquid, b.112.

disulfo- A prefix indicating the presence of two sulfur atoms, either as sulfide or sulfuric acid. **d. acid.** *1*-Naphthylamine-*4.8*-disulfonic acid. **d. benzoic acid.** See *benzoic acid.* **d. chloride.** Sulfur monochloride. **d. cyanate.** Dithionate. **d. cyanic acid.** Dithionic acid. **d. metholic acid.** Methionic acid. **d. naphtholic acid.** Naphthalene disulfonic acid.

disulfole. Dithiole.

disulfonic acid. See *sulfonic acids.*

disulfuric acid. Pyrosulfuric acid.

dita bark. Alstonia, Australian fever bark, Australian quinine. The bark of *Alstonia scholaris*, an Apocynaceae of Australia; used as a febrifuge. It yields ditaine, ditamine, echicerin, echitenine. Cf. *alstonine.*

ditaine. $C_{22}H_{28}O_4N_2$ = 384.23. Echitamine. An alkaloid from the bark of *Alstonia scholaris* or dita bark. Colorless crystals, m.206, soluble in water, alcohol, ether, or chloroform. It is used medicinally like curare. **d. sulfate.** $C_{22}H_{28}O_4N_2.H_2SO_4$ = 700.48. Colorless needles, soluble in water.

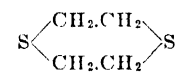
ditamine. $C_{16}H_{19}O_2N$ = 257.2. An alkaloid from the bark of *Alstonia scholaris.* Colorless crystals, m.75, insoluble in water, soluble in ether, chloroform or acids.

ditan. Diphenyl methane.

diterpenes. A group of compounds of general formula $C_{20}H_{32}$. See *terpenes.*

dithanol. Dioxyanthrarobin.

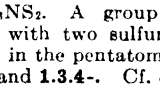
dithiane. (1) Diethylene disulfide. (2) A group of heterocyclic hydrocarbons with two sulfur atoms in the hexatomic ring, as p- or 1.4-



dithiazine. $C_4H_3NS_2$. A group of heterocyclic hydrocarbons with two sulfur atoms and one nitrogen atom in the hexatomic ring, as **1.2.3-, 1.2.4-, 1.3.2-, 1.3.4-, 1.3.5-, 1.4.2-.** The first two numbers indicate the positions of the sulfur atoms.

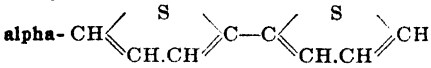
dithiazol. $C_2H_3NS_2$. A group of heterocyclic hydrocarbons with two sulfur atoms and one nitrogen atom in the pentatomic ring, as **1.2.3-, 1.2.4-, 1.3.2-** and **1.3.4-.** Cf. *dithiole.*

dithiene. $C_4H_4S_2$ = 116.1. A group of heterocyclic hydrocarbons with two sulfur-atoms in the hexatomic ring, as p- or 1.4-



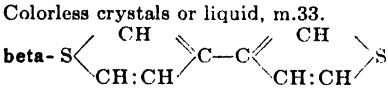
dithienyl. $C_8H_6S_2$ = 166.1.

alpha-



Colorless crystals or liquid, m.33.

beta-



Colorless crystals, m.83, b.266.

d. ketone. $C_9H_6OS_2$ = 194.1. Thienone. Colorless crystals, m.88, b.324. **d. methane.** $C_9H_8S_2$ = 180.1. $(C_4H_3S)_2CH_2$. Colorless crystals, m.43, b.267. **d. phenylmethane.** $C_{15}H_{12}S_2$ = 257.2. $(C_4H_2S)_2.CH.Ph$. Colorless crystals, m.75.

dithiobenzoic acid. $C_6H_5.CSSH$ = 154.1. An oily liquid.

dithiobisalanine. Cystine.

dithiocarbamic acid. $NH_2.CS.SH$ = 93.2. Colorless needles, decomp. by water, soluble in alcohol or ether.

dithiocarbonic acid. CH_2OS_2 = 100.00. The theoretical acid HO.CS.SH. Cf. *xanthic acid.*

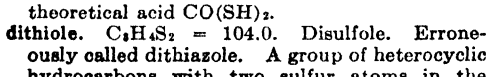
dithiodiazole. $CH_2N_2S_2$. A group of heterocyclic hydrocarbons with two sulfur and two nitrogen atoms in the pentatomic ring. There are the isomers: **1.2.3.4-, 1.2.3.5-, 1.3.2.4-**

1.3.2.5-, 1.3.4.5-. The first two numbers indicate the positions of the sulfur atoms.

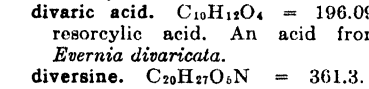
dithioethidene. A compound containing the bivalent —S.CH(CH$_3$).S— radical. **ethylene-** $C_4H_8S_2$ = 120.1. A colorless liquid, b.173.

dithiolcarbonic acid. CH_2OS_2 = 100.00. The theoretical acid CO(SH)$_2$.

dithiole. $C_3H_4S_2$ = 104.0. Disulfole. Erroneously called dithiazole. A group of heterocyclic hydrocarbons with two sulfur atoms in the pentatomic ring, as **o-** or **1, 2-**



m- or **1.3-**



Cf. *dioxole.*

dithion. A mixture of sodium dithiosalicylates. Yellowish-gray powder, soluble in water. Used in veterinary medicine.

dithionate. A salt of the type $M_2S_2O_6$.

dithionic acid. (1) $H_2S_2O_6$ = 162.1. An acid, HO.SO$_2$.SO$_2$.OH, known only in solution and as salts, the hyposulfates. (2) The organic acid, R.CS.SH. Cf. *thio acid.*

dithionite. Hyposulfite. A salt of the type $M_2S_2O_4$.

dithionous acid. $H_2S_2O_4$ = 130.1. Hyposulfurous acid. An acid, HO.SO.SO.OH, known only in solution and as salts (hyposulfites).

dithiosalicylate. Thioform.

dithiosalicylic acid. See *thioform.*

dithiourazole. $C_2H_3S_2N_3$ = 133.2. Colorless crystals, m. 245. Cf. *urazole.*

dithiourethane. Ethyl dithiocarbamate. NH$_2$.CS.SEt.

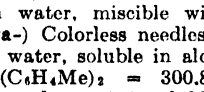
dithiozone. Dithizone.

dithizone. $C_{13}H_{12}N_4S$ = 360.09. Diphenylthiocarbazone, phenylazothionoformic acid, dithiozone, PhN:N.CS.NH.NHPh. Blue-black crystals, soluble in CCl_4 (green color), in alkalis (with red color) and sulfuric acid (blue color). Used as microreagent for lead (brick red), copper (yellow brown) and zinc (purple); also to separate these from other metals.

dithranol. Dioxyanthranol, anthrarobin. 1,8-Dihydroxyanthranol, $C_{14}H_7(OH_3)$; used in treating psoriasis and other skin infections.

ditolyl. $C_{14}H_{14}$ = 182.19. Dimethyldiphenyl. Me.C$_6$H$_4$.C$_6$H$_4$.Me. **2.2'-**, or o,o-. A colorless liquid, b.272, insoluble in water, soluble in alcohol or ether. **2.3'-**, or o,m-. A colorless liquid, b.228, insoluble in water, soluble in alcohol or ether. **3.3'-**, or m,m-. A colorless liquid, b.286, insoluble in water. **4.4'-**, or p,p-. Colorless prisms, m.121, soluble in alcohol or ether. **d. amine.** $C_{14}H_{15}N$ = 197.23. A group of 9 isomers, (MeC$_6$H$_4$)$_2$NH; as, (**ortho-**) A colorless liquid, b.313, sparingly soluble in water. (**meta-**) A colorless liquid, b.319, insoluble in water, miscible with alcohol or ether. (**para-**) Colorless needles, m.79, b.330, insoluble in water, soluble in alcohol or ether. **d. tin.** Sn(C$_6$H$_4$Me)$_2$ = 300.81. A yellow amorphous powder, m.111, soluble in benzene.

diurea. $C_2H_4O_2N_4$ = 116.1. Biurea, *p*-urazine, bishydrazicarbonyl,



Colorless crystals, m.270, an isomer of urazine. Cf. *biuret.* **acetylene-** Glycol uril.

diureide. A compound that contains two —NH.CO.NH— radicals.

diuretic. A drug which increases the kidney or renal excretions and thereby produces an increased discharge of urine; *e.g.*, caffeine, digitalis, theobromine, acetates, citrates, bitartrates.

divalent. (1) Describing an element occurring in two states of oxidation; as, mercury (1 and 2) or cobalt (2 and 3). (2) Bivalent.

divanadyl. The tetravalent $V_2O_2^{++++}$ radical.

divaric acid. $C_{10}H_{12}O_4$ = 196.09. 6-propyl-β-resorcylic acid. An acid from the lichen *Evernia divaricata.*

diversine. $C_{20}H_{27}O_5N$ = 361.3. An alkaloid found in the root and stem of *Sinomenium acutum*, a Menispermaceae. A yellow, amorphous powder, m.85, insoluble in water, alcohol or benzene, soluble in petroleum ether. Cf. *sinomenine.*

divi-divi. The pods of *Caesalpinia coriaria*, which are rich in tannin and are used in the tanning and dyeing industry.

divinyl. (1) Bivinyl. (2) A prefix indicating the presence of two vinyl radicals. **d. acetylene.** C_6H_6 = 78.046. *1.5*-Hexadien-*3*-yne*. The hydrocarbon CH$_2$:CH.C:C.CH:CH$_2$, obtained as oily liquid, d.0785, b.83.5, by passing acetylene into ammoniacal cuprous chloride; it is a basis for synthetic rubber. Cf. *duprene, chloroprene.* **d. benzene.** $C_{10}H_{10}$ = 130.08. The unsaturated aromatic hydrocarbon, CH$_2$:CH.C$_6$H$_4$.CH:CH$_2$. **d. ether.** C_4H_6O = 72.05. Vinyl ether, ethenoxyethene*, (CH$_2$:CH$_2$)$_2$O. A colorless liquid, d.0774, b.28.3, an anesthetic. **d. ketone.** Pentedienone.

dixanthylurea. The alcohol-insoluble product of xanthydrol and urea [O(C$_6$H$_4$)$_2$CHNH]$_2$CO; used to determine the latter in urine.

dixylyl. Two xylyl radicals, C$_6$H$_3$Me$_2$—. **d. tin.** Sn(C$_6$H$_3$Me$_2$)$_2$ = 328.84. Colorless crystals, m.157.

djalmaite. A yellow, brown or black radioactive crystalline mineral of Brazil containing 72 % Ta_2O_5 and traces of rare earths.

djenkol bean. See *jenkolic acid.*

djenkolic. Jenkolic.

djenkolik acid. See *jenkolic.*

dkg. Abbreviation for dekakilogram—10 kg.

dkl. Abbreviation for dekaliter—10 liters.

dkm. Abbreviation for dekameter—10 m. **dkm^2.** Abbreviation for square dekameter —100 m^2. **dkm^3.** Abbreviation for cubic dekameter—1000 m^3.

dl. Abbreviation for deciliter—0.1 liter.

dl- A dextro- *and* levo- compound, *e.g.* inactive (*i-*) or racemic (*r-*).

d(l)- A dextro- *or* levo-compound.

D.M. Diphenylamine chlorarsine.

dm. Abbreviation for decimeter—0.1 m. **dm^2.** An abbreviation for square decimeter—100 cm^2. **dm^3.** Abbreviation for cubic decimeter —1000 cm^3.

Dobell solution. An aqueous solution of 1.5 % sodium borate, 1.5 % sodium bicarbonate, 0.3 % carbolic acid and glycerin. Used as alkaline antiseptic.

Döbereiner, Johann Wolfgang. 1780–1849. A German chemist, noted for organic syntheses, experiments on the catalytic action of platinum, and the classification of elements. **D.s matchbox or lamp.** A portable device for producing a flame by passing hydrogen gas over platinum sponge in contact with air. **D.'s rule.** The atomic weights of similar elements, A, B and C, is approximately 2B = A + C (see *triads*).

Döbner's violet. See *violet.*

docosane*. $C_{22}H_{46}$ = 310.5. The hydrocarbon, $Me(CH_2)_{20}Me$, m.44.

docosanoic acid*. Behenic acid.

docosanol*. $C_{22}H_{46}O$ = 326.5. A group of monoatomic alcohols; *e.g.* **1-** or $Me(CH_2)_{20}CH_2OH$.

docosoic acid. Behenic acid.

doctor solution. Sodium plumbite solution containing flowers of sulfur. **d. test.** Gasoline is mixed with d. solution, and the presence of sulfur is shown by the formation of lead sulfide. **d. treatment.** Petroleum is agitated with sodium plumbite solution and free sulfur.

dodecahedron. A solid with twelve equal surfaces.

dodecanal*. Lauricaldehyde.

dodecane*. $C_{12}H_{26}$ = 170.28. The hydrocarbon $Me(CH_2)_{10}Me$. A colorless liquid, $d_{20°}$.0.768, m. −12, b.214.5, insoluble in water, soluble in alcohol or ether.

dodecanic acid. Lauric acid. **hydroxy-** Sabinic acid.

dodecanoic acid*. Lauric acid.

dodecanol*. Dodecyl alcohol.

dodecenal*. $C_{12}H_{22}O$ = 182.20. Δ^2-dodecene-1-aldehyde, $Me(CH_2)_9CH{:}CH.CHO$. An aldehyde in the essential oil from the stems and leaves of *Eryngium foetidum*, an Umbelliferae.

dodecene*. Dodecylene.

dodecoaldehyde. Lauric aldehyde.

dodecoic acid. Lauric acid.

dodecyl. The monovalent radical $C_{12}H_{25}$—. Cf. *lauryl*. **d. alcohol.** $C_{12}H_{26}O$ = 186.20. *n-* or *l*-Dodecanol*, $Me(CH_2)_{11}OH$. Colorless crystals, d.0.831, m.24, b.259. **d. amine*.** $C_{12}H_{27}N$ = 185.22. Aminododecane. Colorless crystals, m.28, $b._{15mm}$135.

dodecylene. $C_{12}H_{24}$ = 168.27. Decylethylene, *l*-dodecene*, $CH_2{:}CH(CH_2)_9Me$. A colorless liquid, $d_{20°}$.0.785, m. −31.5, b.213 insoluble in water, soluble in alcohol or ether.

dog grass. Triticum.

dogwood. (1) A genus of trees and shrubs. (2) Cornus. The dried roots of *C. florida* of Eastern United States; used as an astringent and tonic. Cf. *cornuoid*. **Alder-** Frangula. **Jamaica-** Piscidia. **pond-** or **swamp-** See *cephaletin*.

dolerite. A coarse-grained basalt.

dolerophanite. Cu_2SO_5. A copper persulfate in volcanic sublimates.

Dolezalek electrometer. A quadrant electroscope.

dolomite. $CaMg(CO_3)_2$. An important calcium-magnesium carbonate, which forms mountain ranges as a white, grayish, or yellowish rock, d.2.85–2.95, hardness 3.5–4, soluble in acids. See *brown spar*, *bitter spar*, *rhombic spar*.

dolomol. $Mg(C_{18}H_{35}O_2)_2$ = 590.8. Magnesium stearate, containing small amounts of the oleate and 7 % MgO. A soft white, light unctuous powder, odorless and tasteless, insoluble in water; used as a dusting powder, to substitute zinc stearate.

dome. A dome-shaped crystal-face, chiefly in the rhombic system. **d. faces.** Prism faces developed parallel to a lateral axis, and intersecting the other two axes. *Brachy-* A dome face parallel to the brachy (shorter) axis. *Macro-* A dome face parallel to the macro (longer) axis.

domesticine. $C_{19}H_{19}O_4N$ = 325.15. An alkaloid from the sacred bamboo of Japan, *Nandina domestica*, a Berberidaceae. Cf. *nandinine*.

domeykite. Cu_3As. A rare copper arsenide.

domingite. $Pb_3Sb_4S_9$. Warrenite. A lead sulfostibate.

donarite. An explosive consisting of 70 % ammonium nitrate, 25 % trinitrotoluol and 5 % nitroglycerin.

donaxine, Gramine.

donor. See *induced reactions*.

Donnan, F. G. 1870– . An English physical-chemist. **D. equilibrium.** If a nondiffusible substance (*e.g.*, protein, P) is separated from diffusible substances by a semipermeable membrane, the ions will pass through in different amounts, and establish an electrostatic difference (the membrane potential); hence the osmotic pressure within is greater than that of the outer solution. Thus, at equilibrium in, *e.g.*, *neutral* solution:

$$[Na^+] \times [P] \times [Cl^-] = [Na^+] \times [Cl^-].$$

acid solution:

$$[Cl^-] \times [Cl^- \text{ on } P] \times [H^+] = [Cl^-] \times [H^+].$$

basic solution:

$$[Na^+] \times [Na^+ \text{ on } P] \times [OH^-] = [Na^+] \times [OH^-]$$

dopa. $C_9H_{11}NO_4$ = 197.08. *3,4*-Dihydroxyphenylalanine. An amino acid and the precursor of melanin.

dope. (1) A lacquer or varnish, especially for aircraft. (2) The absorbent material in high explosives. (3) A narcotic.

Döppler principle. (1842.) Wave-type radiations (*e.g.*, of light or sound) emitted by a moving object decrease and increase in wave-length as the object approaches and recedes from the observer, respectively.

dopplerite. $C_{12}H_{14}O_6$. Masses of humus imbedded in peat; 56.5 % C, 5.5 % H.

Doremus ureometer. A graduated glass tube bent at its open end and blown into a bulb; used for determining urea in urine.

dormiol. $CCl_3.CHOH.OMe_2Et$ = 233.49. Amylene chloral, ethyldimethyl-carbinolchloral. A colorless liquid, d.1.24, insoluble in water, soluble in alcohol, ether, chloroform, or benzene. Used as a hypnotic.

Dorn-Goetz tube. A glass tube, partly evacuated and filled with gas; used for spectroscopic investigations.

dorosmic acid. $C_{17}H_{34}O_2$ = 270.27. A fatty acid from the oil of *Dorosma nesus* which forms small needles, m.55, soluble in hot alcohol, ether or benzene. It is probably identical with margaric acid.

dose. The quantity of medicine given at one time. **daily-** The quantity of drugs administered per day. **fatal-** The quantity of medicine to cause death. **lethal-** Fatal d. **maximum-** The largest amount of medicine which can be given with safety. **minimum-** The smallest amount of medicine that will produce a physiological action. **poisonous-** Toxic d. **safe-** A dose between the minimum and maximum dose. **single-** A medicine that is given once only. **toxic-** The d. which will produce poisonous and harmful effects.

dotriacontane*. Diacetyl.

double bond. △. A condition which exists in unsaturated compounds where two single valence bonds connect two atoms; *e.g.*, $H_2C{=}CH_2$. It is characterized by a readiness to become saturated. Cf. *unsaturated*.

double salt. A compound which crystallizes as a single substance but which, on dissolving,

ionizes as two substances; *e.g.*, $KAl(SO_4)_2 \rightarrow K^+ + Al^{+++} + 2SO_4^{--}$. (Cf. *complex salts.*) **d. weighing.** A method of obtaining the true weight of a substance independent of irregularities in the length of the balance-arm, by weighing it first on one side of the balance and then on the other.

doublet. (1) See *multiplet.* See *duplet.*

douglasite. $K_2FeCl_4.2H_2O$. A potassium-iron chloride from Stassfurt, Germany. It causes miner's damp, as it reacts with water and forms hydrogen.

D.O.V. Distilled oil of vitriol, containing approx. 96 % H_2SO_4.

Dover's powder. A mixture of morphine, emetine, and camphor, used as an anodyne and hypnotic.

dowicide-P. Trade name for a wood-preserving spray containing sodium tetrachlorophenoxide and sodium dichloro-orthophenyl phenoxide.

dowtherm. A eutectic mixture of phenyl ether and 26.5 % of diphenyl, m.12, b.258. Used for heating purposes in a manner similar to steam; it enables temperatures to be carefully controlled.

dP. Abbreviation for difference in pressure.

dr. Abbreviation for dram—3.88 grams. **dr. ap.** Apothecaries' dram, = ʒ. **dr. av.** Avoirdupois dram. **dr. fl.** Fluid dram.

dracaenic acid. $C_{12}H_{12}O_3$ = 204.09. An acid from *Dracaena draco*, the dragon-tree of Teneriffe.

dracilic, dracylic acid. (1) Obsolete term for benzoic acid. (2) *p*-Aminobenzoic acid.

drachm. Dram.

dracoalban. $C_{20}H_{40}O_4$ = 344.4. A white substance, m.200, from dragon's blood.

dracoresin, dracoresene. $C_{26}H_{44}O_2$ = 388.34. A yellow, resinous substance from dragon's blood.

draconic acid. Anisic acid.

draconis sanguis. Dragon's blood.

draconyl. $C_{14}H_7$ = 175.1. A hydrocarbon obtained by the distillation of dragon's blood.

draconylic acid. Anisic acid.

dracylic acid. See *dracilic acid.*

draft gauge. A barometer-like instrument for measuring drafts in flues.

Dragendorff, Johann Georg Noel. 1836– . A German pharmacist, analyst and author. **D. reagent.** Suspend 1.5 gm. bismuth subnitrate in 20 cc. hot water; add 7 gm. potassium iodide and 20 drops of dilute hydrochloric acid. **D. reaction.** The sulfates of many alkaloids give an orange-red precipitate with D. reagent.

dragon's blood. Sanguis draconis. The resinous exudation from the fruits of rattan palms, a group of climbing Palmae of India, Sumatra, and Borneo. Odorless, tasteless masses, insoluble in water, soluble in alcohol or ether giving a red solution. Used to color plasters. **d. gum.** Tragacanth.

dram. Drachm. A unit of apothecaries weight, ʒ. One dram = 0.16 ounces = 3 scruples = 60 grains = 3.8879351 grams. **fluid-** One eighth of a fluid ounce; 60 minims.

Draper effect. The period of hesitation or photochemical induction observed when a mixture of hydrogen and chlorine is exposed over water to diffused daylight. **D. law.** Absorption law. Only rays which are absorbed by a system are effective in producing a chemical change in it.

drastic. A drug having powerful irritating and purgative action; *e.g.*, croton oil, elaterin.

draught. A current of air or gas. **d. gauge.** See *draft gauge.* **d. tube.** A glass tube used in qualitative analysis. The substance is placed in it, heated in a current of air and the decomposition products observed.

draw-tube. A tube sliding within another; as, the portion of the microscope carrying the eyepiece. Cf. *draught tube.*

drierite. Anhydrous calcium sulphate used as desiccant.

driers. (1) Siccatives. A group of oxidizing substances which, when added to varnishes, paints, etc. hasten the drying; as, solutions of resinates of lead, manganese, zinc, cobalt and/or manganese borate, oleate, dioxide, etc. (2) A mechanical device for removing moisture from a substance, either by heat, air currents or both.

dritt. (1) The uncertain motion of a galvanometer needle when registering a false e.m.f. (*e.g.*, with a poisoned hydrogen electrode). (2) The passage of an electron from its normal position without complete transference. Cf. *bonds.*

drikold. Dry ice.

drimin. $C_{13}H_{14}O_4$ = 234.1. A crystalline substance, m.256, from the leaves of *Drimys winteri*, a Magnoliaceae of South America. Cf. *winter's bark.*

drimol. $C_{28}H_{58}O_2$ = 426.6. A wax from the leaves of *Drimys granatensis*, a Magnoliaceae of South America.

drip. (1) The amount of liquid which seeps or leaks from a container. (2) That portion of liquid which can be expressed from muscle substance.

dried. Hide steeped in chrome alum, dried, and soaked in melted paraffin wax to render it waterproof.

dropping bottle. A small glass bottle with pipette and rubber bulb; or with a specially designed glass stopper enabling the contents to be delivered drop by drop. **d. funnel.** A separatory funnel with long stem, and glass stopcock. **d. pipette.** A small glass tube drawn out to a point at one end, with a rubber bulb at the other end.

Dropping bottle.

drop-reaction. Spot test.

drops. Small round masses of liquid, ordinarily 0.1–0.3 cc. **Prince Rupert-** Solidified glass drops with tips, which possess great internal strain and shatter to a fine powder when the tips are broken off.

drosera. Sundew. The air-dried, flowering plant of *Drosera rotundifolia*, or other Droseraceae; used as a mild astringent and a remedy in respiratory diseases, as fluid extract.

dross. Scum, scurf. The impurities floating on molten metals. **opium-** Yenshee.

Druce, F. G. R. An English chemist noted as codiscoverer of the element dvimanganese (rhenium).

drug. (1) A substance used as medicine. It is assumed that drugs contain a pharmacophore and anchoring group (q.v.). (2) A material derived from vegetable or animal sources. **crude-** The commercial form of a drug which requires refining before use. **inorganic-** Inorganic salts, acids, or bases used as medicines; *e.g.*, sodium bicarbonate, mercury salts. **official-** D. listed in Pharmacopoeias. **organic-** Organic compounds used as medicines.

Drugs, Classification:

1. According to composition or principal constituents:
   Inorganic chemicals—acids, bases, salts (q.v.).

Organic chemicals—alkaloids, glucosides, terpenes, synthetics (q.v.).
Biochemicals—proteins, starches, gums, oils (q.v.).

2. According to structure or physical characteristics:
Underground organs—roots, rhizomes, tubers, bulbs (q.v.).
Overground stems—woods, barks, herbs (q.v.).
Outgrowths of stems—leaves, flowers, fruits, seeds (q.v.).
Plant secretions and products—extracts, sugars, resins, gums, camphors, essential oils (q.v.).
Animals and animal tissues—insects, ductless glands (q.v.).
Animal secretions—serum and bacterial products (q.v.).

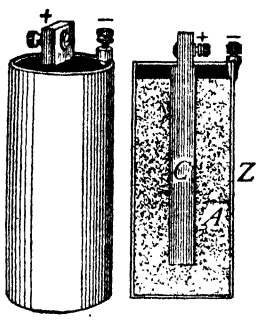
3. According to effect and use:
Therapeutic agents (q.v.).

4. According to origin and source:
Botanical classification (q.v.).
Insects, animal secretions and ductless glands (q.v.).

drumine. An alkaloid from the milky juice of *Euphorbia drummondii*, an Australian Euphorbiaceae; used as a local anesthetic.

Drummond, Thomas. 1797–1840. An English engineer, who invented the calcium light or limelight, q.v.

dry. (1) Free from moisture. (2) To evaporate. **air-Dried** in air. **bone-** completely free from water. **d. battery.** Set of dry cells. **d. cell.** An electrical cell of moist paste instead of a liquid electrolyte. See *Gassner cell* and figure. **d. ice.** Drikold. Solid carbon dioxide used as a refrigerant. **d. method.** Analysis by heat; e.g., blowpipe analysis, spectrum analysis, pyrolysis.



Dry cell.
C = carbon
Z = zinc
A = ammonium nitrate

dryers. Driers.

drying. The removal of moisture or water by heat, vacuum, or chemical agents. Cf. *dehydration.* **d. agents.** (1) Driers. (2) An agent that removes water, as heat or chemicals (see *desiccant*). Drying agents for organic liquids (alcohols, etc.) are, metallic sodium, calcium oxide, metallic calcium, barium oxide, aluminum amalgam. **d. oil.** A liquid fat which absorbs oxygen and becomes hard and resinous. They are mainly the glycerides of linoleic and linolenic acids which dry up forming varnish-like masses, and do not produce elaidin, *e.g.*, linseed oil, poppy oil, tung oil. **d. oven.** A receptacle used for drying by heat. **d. tube.** A U-shaped glass tube filled with a drying agent; (*e.g.*, calcium chloride, sulfuric acid); used for drying gases and vapors.

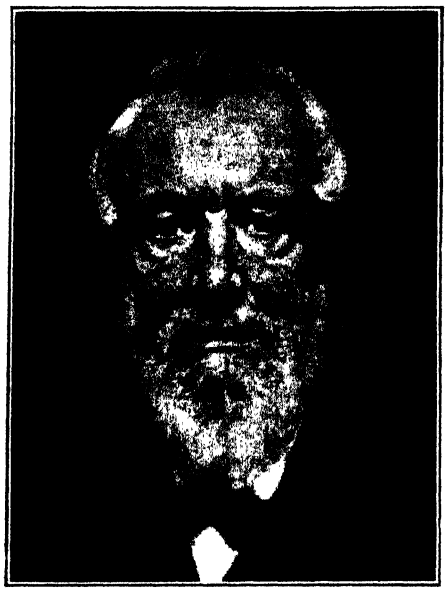
drypophantin. $C_{23}H_{18}O_5$ = 544.2. The coloring matter of red pea gall. It yields purpurogallin and glucose on hydrolysis.

Ds. The symbol for dysprosium. (Also Dy.)

dualin. An explosive composed of 50 % nitroglycerin and 50 % nitrated sawdust.

dubhium. Db. A supposed element isolated in 1916 by Eder, but identical with ytterbium.

duboisine. $C_{17}H_{23}O_3N$ = 289.2. *l*-Hyoscyamine. An alkaloid from the leaves of *Duboisia myoporoides* (corkwood), a Solanaceae of New South Wales. Microscopic, white needles, m.107, sparingly soluble in water, soluble in alcohol, ether, or chloroform. Used as a sedative, hypnotic, and mydriatic, and related to belladonine, atropine and hyoscyamine. **d. hydrobromide.** $C_{17}H_{23}O_3N.HBr$ = 370.13. A yellow, granular, hygroscopic powder, soluble in water, alcohol, or ether. **d. hydrochloride.** $C_{17}H_{23}O_3N.HCl$ = 325.67. A yellowish, deliquescent powder, soluble in water, alcohol or ether. **d. sulfate.** $(C_{17}H_{23}O_3N)_2H_2SO_4$ = 676.4. A yellowish powder, soluble in water, alcohol or ether; used for hypodermic medication as a substitute for atropine.



Emil Du Bois-Reymond.

Du Bois-Reymond, Emil. 1818–1896. A German physiologist and pioneer in the study of diffusion and animal electricity. He devised the mirror galvanograph and the spring myograph.

Duboscq colorimeter. See *colorimeter.*

duco. A trade name for lacquer.

ductile. Able to be drawn out into a fine wire.

ductility. The extent to which a solid is ductile. **d. machine.** A mechanical device for testing the ductility of materials; *e.g.*, metals, asphalt, and bituminous materials. Cf. *chew.*

ductless glands. Glands of the mammalian body that secrete enzymes into the blood which perform important chemical reactions. Cf. *hormones.* Some are used therapeutically, *e.g.*, Thyroidum siccum (dried thyroid gland), Suprarenalum siccum (dried suprarenal gland). Cf. *adrenaline, hypophamine, thyroxine.*

Dudley apparatus. A glass apparatus for the determination of sulfur in iron and steel by the bromine method. **D. pipet.** A pipet graduated

so as to deliver 100 cc. water at 10°C. in 35 seconds. Used for viscosity tests.

dufrenite. $H_3Fe_2PO_7$. A fibrous, greenish, orthorhombic, hydrous iron phosphate.

dufrenoysite. $Pb_2As_2S_5$. A gray, orthorhombic, brittle, lead sulfarsenide, d.5.5, hardness 3.

dugaldine. A glucoside from *Helenium* (*Dugaldia*) *hoopesii*, Western sneezewood, a Compositae.

dugong oil. The oil from the superficial fat of the sea-cow, *Halicore australis*, a herbiverous aquatic mammal; used as a substitute for cod-liver oil.

dulcamara. Bittersweet, woody nightshade, scarlet berry, felonwood, violet bloom. The young branches of *Solanum dulcamara*, a Solanaceae; used medicinally as fluid extract. It contains several glucosides and 1 % solanine, dulcamarin, etc.

dulcamarin. $C_{22}H_{34}O_{10}$ = 458.3. A glucoside from the stems of *Solanum dulcamara;* it is hydrolysed by dilute acids to dulcamarrhetin.

dulcamarrhetin. $C_{16}H_{26}O_6$ = 314.2. A dark-brown, tasteless, resinous substance, obtained as split product from dulcamarin.

dulcigen. A compound which yields a sweet-tasting substance. Cf. *chromogen.*

dulcin. (1) Sucrol. (2) Dulcitol.

dulcine. Dulcitol.

dulcite. Dulcitol.

dulcitol. $C_6H_{14}O_6$ = 182.15. Euonymin, dulcin, *1.2.3.4.5.6*-hexanehexol*, dulcite, dulcose, melampyrine, hexahydrohexane, $HOCH_2(CHOH)_4CH_2OH$. A hexatomic alcohol from the sap of *Melampyrum*, *Scrophularia*, and *Euonymus* species. Colorless, monoclinic needles, d.1.466, m.188.5, b.275-280, slightly soluble in water, alcohol, or ether; used as a sweetening for diabetics. **iso-** Rhamnose.

dulcose. Dulcitol.

Dulin rotarex. An electrically-driven centrifuge, used for determining the mineral matter in asphalts, etc.

Dulong, Pierre Louis. 1745–1838. A French chemist noted for work on the specific heat of elements and on nitrogen compounds. **D. and Petit law.** The elementary atoms or molecules have an equal capacity for heat, (the atomic heat capacity, AH). Thus, atomic weight × specific heat is approximately 6.2, and is the same for all elements (at constant pressure). Certain elements of low atomic weight and high melting-point, obey the law only at high temperatures (*e.g.*, Be, B, C, Si).

Dumas, Jean Baptiste André. 1800–1884. A French chemist noted for research on atomic weights, the gravimetric decomposition of water and the composition of air. **D. bulb.** A thin, blown, glass bulb drawn out to a fine opening; used in vapor-density determinations.

dumasin. An isomer of mesitone obtained on dry distillation of calcium acetate.

dumortierite. $Al_6HBSi_3O_{20}$. An orthorhombic, blue, black-green, lavender, or black, rock-forming aluminum boro-silicate, d.3.3, hardness 7.

dumosa oil. An oil from *Eucalyptus dumosa.* Cf. *lerp.*

dundakine. An alkaloid from the bark of *Sarcocephalus esculentus*, (dundaki), a Rubiaceae of the Cameroons.

dundasite. A rare aluminum and lead carbonate.

dung bacteria. Caprophyl. The bacteria which occur normally in manure.

dunite. A grayish-green peridotite rock, consisting of chrysolite and olivine, from Corundum Hill, N. C.

Dunning colorimeter. A device for comparing colored solutions, especially adapted to the estimation of phenolsulfonephthalein which is excreted with urine in the renal function test.

duotal. Guaiacol carbonate.

duplet. Doublet. A pair of electrons which is shared by two atoms and corresponds with a single, nonpolar bond.

duplex slide rule. A slide rule marked with chemical and physical constants.

duponol. The trade-mark of a group of fatty alcohol sulfates possessing surface-active properties.

Dupont nitrometer. An arrangement of gas burettes for the determination of nitrogen in explosives.

duprene. Trade name for a synthetic rubber made by polymerization of chloroprene. Cf. *vinyl acetylene.*

durain. A constituent of coal, q.v.

duralium. An alloy of 93–95 % Al, 3.5–5.5 % Cu, and small amounts of magnesium and manganese; used for chemical equipment.

duralumin. A strong, hard, and resistant alloy of 0.5 % Mg, 0.25–1.00 % Mn, 3.5–4.5 % Cu, and 93–95 % Al, with traces of Fe and Si. It can be machined like wrought iron, and resists dilute acids and sea-water.

durangite. $AlNaFAsO_4$. An orange-red, monoclinic sodium aluminum fluo-arsenate, soluble in sulfuric acid, d.3.95, hardness 5.

durene. $C_{10}H_{14}$ = 134.16. α- or **s-**. Durol, 1.2.4.5-tetra-methylbenzene, $C_6H_2Me_4$. Colorless, monoclinic crystals, m.79, b.193; insoluble in water, soluble in alcohol, ether, or benzene. β- or **iso-** 1.2.3.5-tetramethylbenzene. A colorless liquid, b.195. γ- or **v-** Prehnitene. 1.2.-3.4-tetramethylbenzene. A colorless liquid, m. −4, b.204. **hexahydro-** Tetramethyl *cyclohexane.*

durenol. $C_{10}H_{14}O$ = 150.1. The phenol derived from durene: 1.2.4.5-tetramethyl-3-hydroxybenzene.

duridine. $C_{12}H_{15}N$ = 149.12. Aminodurene, 3-amino-1.2.4.5-tetramethyl benzene.

duriron. A resistant alloy of 84.5 % Fe, 14 % Si, and 1.5 % of other elements.

durite. Trade name for a phenol-formaldehyde plastic.

durium. A synthetic resin used particularly for phonograph records.

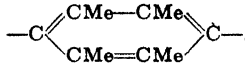
durol. Durene.

durra. Kaffir corn, broom corn, shallu. The plant or seeds of *Sorghum vulgare* (*Andropogon sorghum*) of South Africa.

durrin. $C_{14}H_{17}NO_7$ = 311.14. A cyanogenetic glucoside from the young plants of durra.

duryl. The monovalent radical, Me_4C_6H—, derived from durene. **d. aldehyde.** $C_{10}H_{12}O$ = 148.09. 2.4.5-trimethylbenzaldehyde. $Me_3C_6H_2CHO$.

durylene. The bivalent radical



durylic acid. $C_{10}H_{12}O_2$ = 164.1. 2.4.5-trimethylbenzoic acid, cumylic acid, $C_6H_2Me_3.COOH$. A monobasic acid derived from durene. Colorless crystals, m.150, are soluble in water, alcohol, or ether. **iso-** 2.4.6-Trimethyl-benzoic acid.

dust. A finely-powdered earth or waste material. The median size of outdoor d. is 0.5 microns; industrial d. 1.5 microns. **cosmic-** The finely divided matter floating in the outer layers of the atmosphere; and supposed to originate from meteors, and comets. **industrial-** The organic (fibers, flour, etc.) and inorganic (rocks, metals) particles produced in mills, mines, polishing, cutting and other plants.

Dust	Millions of particles per cubic foot air		
	Min.	Av.	Max.
Outdoor air during rain.	0.3	0.3	0.4
Grinding shop.....	1.2	4.8	25.0
Cement plant.....	0.6	26.0	105.0
Granite cutting.....	2.4	59.2	201
Coal mining.....	5.3	112.0	253
Anthracite mining.....	3.6	231	954

d. chamber. An enlargement in a flue in which the more solid particles of fumes, gases or vapors may collect. **d. precipitator.** A d. chamber equipped with charged high-tension wires, which precipitate solid particles from fumes or vapors. See *Cottrell precipitator.*

dusting. Applying a fine powder as, **cotton-**, spraying a cotton field; **forest-**, spraying a forest with calcium arsenate or other disinfectants from an airplane in order to control pests. **d. powders.** The fine-grained solids used in medicine to sprinkle over wounds or on the skin; as, talcum powder.

Dutch liquid. Ethylene dichloride. **D. metal.** An alloy of 80 % copper and 20 % zinc. **D. process.** An old method of preparing white lead, still used today. It is the slow formation of lead carbonate from lead by the carbon dioxide evolved from fermenting bark. **D. white.** A white lead pigment adulterated with 2 parts barium sulfate in 3 parts of pigment.

dvi. The Sanskrit for two or second. It has been applied to the second un-discovered element of a group in the periodic system. Cf. *eka-elements.*

dvicesium. Virginium, verium. The element of atomic number 87, Dc = 224; more correctly named eka-cesium. Cf. *russium.*

dvimanganese. The element of atomic No. 75. See *rhenium.*

dvitellurium. Polonium.

Dvorkovitz process. The low temperature carbonization of coal in vertical retorts, the gas being drawn off at the bottom.

dwi. Dvi.

Dy The symbol for dysprosium. (Also Ds.)

dyad. A divalent element or radical. Cf. *monad, triad.*

dyamettin. A glucoside from the root of *Cissampelos pareira.* Cf. *deyamettin.*

dye. A coloring matter used in solution for staining materials, as opposed to pigments which are used in suspension, *e.g.*, for painting. A dye consists of a chromophore group and a salt-forming group (anchoring group). Cf. *dyes.* **d. bath.** A solution of a dye for dyeing. **d. stuff.** Dye. **d. wood.** A wood that yields a coloring matter on extraction. Cf. *brazilwood, hematoxylon.*

Dyer, Bernard. 1856– . A British chemist noted for his work on analysis, with particular reference to foodstuffs, and agricultural products.

dyes. Dyestuffs. They are generally coal tar or aniline colors. Classification:

A. based on application:
1. Substantive or direct d., which dye directly by mere immersion in (a) *acid*, or (b) *basic* bath.
2. Adjective or mordant d., which require a fixing agent.
3. Sulfur d., which need a sodium sulfide bath followed by oxidation.
4. Vat d., which are generally insoluble and applied in their soluble and colorless, reduced or leuco-state and oxidized afterwards.
5. Ingrain colors, deposited on the fabric as a result of the formation of an insoluble dye by chemical reaction. The fiber is immersed first in one, then the other reagent.

B. based on structure:
1. nitro-nitroso dyes; *e.g.*, aurantia, naphthol yellow.
2. azo-oxy dyes; *e.g.*, curcumin.
3. pyrazolone dyes; *e.g.*, tartrazine.
4. azo-tetrazo dyes; *e.g.*, tropaeolin, acid yellow, tropidines.
5. hydroxyketone dyes; *e.g.*, alizarin dyes.
6. di-, triphenylmethane dyes; *e.g.*, auramine, malachite green.
7. pyrone, xanthone, fluorane derivatives; *e.g.*, eosin.
8. indamines and indophenols; *e.g.*, toluene blue.
9. azines.
10. oxazines, and thiazines; *e.g.*, methylene blue.
11. quinoline and acridine dyes; *e.g.*, quinoline yellow.
12. thiazole and sulfur dyes; *e.g.*, primulin.
13. natural dyes; *e.g.*, luteolin, morin.

See *blue* d., colors. **acid-** (1) D. which color the acidophile or basic granules of the protoplasm (generally the cytoplasm); as, eosin, congo red, methyl blue. (2) Substances used for dyeing fibers in an acid solution; *e.g.*, nitro and azo d. **acid-mordant-** Substances used for dyeing animal fibers in acid solution with the aid of a mordant. **acridine-** D. derived from acridine. **adjective-** Mordant dyes. **artificial-** Synthetic coloring matters; (*e.g.*, coal tar dyes) as opposed to natural coloring matters. **azine-** Those containing the tetravalent =N—N= group. **azo-** D. containing the azo-group. **bacteriologic-** D. used to stain protoplasm; they may be acid-, basic-, neutral- or specific-. **basic-** (1) D. which color the basophile or acid granules of the protoplasm (generally the nucleus and nucleo proteins); as, hematin, safranine, methylene blue. (2) D. used for dyeing in alkaline solution. **direct-** Substantive dyes. **leuco-** Vat dye. **mineral-** inorganic substances used in dyeing; *e.g.*, iron salts, chromates, and copper salts. **mixed-** Polygenetic d. **monogenetic-** Substances which dye only in one color. **mordant-** Substances which require an additional substance for fixation on the fibre. **natural-** Coloring matters

from vegetable or animal materials; *e.g.*, indigo, carmine. **neutral-** D. which color both the acidophile and basophile portions of protoplasm. **nitro-** Substances used for dyeing and containing the nitro radical. **nitroso-** D. containing the nitroso group. **oxyazine-** D. containing the  group. **oxyazo-** Substances containing azo- and oxy-groups. **oxyketone-** D. containing the quinone group. **polygenetic-** D. which produce two or more colors; *e.g.*, alizarin. **provisional-** See writing *ink*. **pyronine-** Substances used for dyeing containing the  group. **specific-** D. which color a definite and selective portion of protoplasm. **substantive-** Substances which stain a fibre directly, without use of a mordant. **sulfide-** Insoluble d. used in a sodium sulfide bath and oxidized afterward. **sulfite-** Substances used for dyeing in sodium sulfite solution. **thiazine-** D. containing the  group. **triphenylmethane-** D. derived from triphenylmethane. **vat-** D. developed by oxidation after saturating the fiber or material with colorless solutions, and generally derived from anthracene or indigo, **vegetable-** D. derived from plants; as

Reds and Purples:	
alkanet	madder
annatto	rouge
brazilwood	sandalwood
camwood	sappan
cudbear	turkey red
hematoxylon	turnsole
litmus	
Yellows and Oranges:	
fustic	osage orange
gamboge	saffron
henna	weld
morin	
Blues and Greens:	
indigo	Chinese green-indigo
woad	

dymal. Didymium salicylate.

dynad. The intra-atomic field of force.

dynalkol. A mixture of 70 % gasoline, 26 % alcohol and 4 % benzene; used as motor fuel.

dynambin. A papaverine-yohimbine tartrate, used in the treatment of pyorrhea and endocrine disturbances.

dynamic. Forces not in equilibrium, and resulting in motion; opposed to static. **d. allotropy.** Desmotropy. **d. formula.** See *benzene ring*. **d. isomerism.** Tautomerism.

dynamics. A branch of physics dealing with the mathematical theories of forces not in equilibrium, hence producing action:

electrons in motion = electrodynamics
atoms in motion = } thermodynamics
molecules in motion = }
masses in motion = (gravitation) mechanics.

dynamites. A class of explosives, usually a mixture of trinitroglycerin, TNG with an absorbing inert material (*e.g.*, kieselguhr, gelatin). See table.

dynamo. A machine for converting mechanical into electrical energy. Cf. *alternator, electric motor, commutator*.

dynamometer. An apparatus which measures the force or power developed by an engine.

dyne. The c.g.s. unit of force, or the force which, when acting for one second, will give to one gram a velocity of one centimeter per second; hence, 1 dyne = 1 gram/gravity acceleration in cm. per sec. per sec. = 1/980.665 gram = 1.02 mg.; and 980.665 dynes = 1 gram. **mega-** Bar. 10^6 or 1,000,000 dynes = 1.013 kg. **d. centimeter.** The work done by a force of one dyne exerted along a distance of one centimeter; *e.g.*, the work required to raise 1.02 mg. one centimeter. 1 dyne-centimeter = 1 erg.

dypnone. $C_{16}H_{14}O$ = 222.11. PhCO.CH:CMePh. A condensation product, b_{22mm}.225, of two molecules of hypnone.

dysalbumose. An albumose obtained from fibrin by the action of pepsin. A brownish powder, insoluble in water.

dyscrasite. Ag_3Sb. A grayish-black, rhombic silver antimonide, d.9.6, hardness 3.5.

dyslysin. (1) $C_{24}H_{36}O_3$ = 372.4. A resinous, dehydrated split-product of choline acids. (2) An anhydrous decomposition product of bile acids.

dysprosium. Ds or Dy = 162.46. Atomic number 66. A rare earth metal discovered in holmia by Lecoq de Boisbaudran in 1886. It is trivalent, forms yellow or greenish salts and occurs in small amounts in samarskite and gadolinite. **d. acetate.** $Dy(C_2H_3O_2)_3.4H_2O$ = 411.59. Yellow needles, decomp. 120, soluble in cold water. **d. chloride.** $DyCl_3$ = 268.9. Greenish-yellow crystals d.3.67, m.680, soluble in water. **d. nitrate.** $Dy(NO_3)_3.5H_2O$ = 438.5. Yellow crystals, m.88, soluble in water. **d. oxalate.** $Dy_2(C_2O_4)_3.10H_2O$ = 769.08. Yellowish prisms, insoluble in water. **d. oxide.** Dy_2O_3 = 373.0. A colorless powder, d.7.81, insoluble in water. **d. sulfate** $Dy_2(SO_4)_3.8H_2O$ = 757.0. A yellow crystalline powder, soluble in water.

dystectic mixture. An alloy or mixture of maximum melting or freezing point; *i.e.*, those proportions of two or more metals which produce the highest constant melting point. Cf. *eutectic mixture*.

DYNAMITES

Kieselguhr d	72–75 % TNG, 28–25 % kieselguhr
Pittsburgh d	40 % TNG, 44 % $NaNO_3$, 15 % woodpulp, 1 % $CaCO_3$.
U.S.A. gelatin d	20–80 % TNG, 0.3–4.5 % guncotton, 6–16 % combustible m., 1.5–62 % $NaNO_3$, 1 % $CaCO_3$.
U.S.A. straight d	15–75 % TNG, 5–66 % $NaNO_3$, 5–20 % combustible m., 1 % $CaCO_3$.
U.S.A. ammonia d	12–25 % TNG, 7–50 % NH_4NO_3, 14–60 % $NaNO_3$, 8–20 % combustible m., 1 % $CaCO_3$.

E

E Symbol for (1) electromotive force, (2) electrode potential. **E_0.** Symbol for electroaffinity.

E An einstein, 6.06×10^{23} quanta. Cf. *faraday*.

e The base of natural logarithms, e = 2.718,281,828 . . (see *exponential*). e^{-1} A mathematical constant, $e^{-1} = 0.367,879,441$ . . .

e (1) The symbol for an electron; as in $H = H^+ + e$. (2) The elementary electrical charge; the charge on an electron; half the charge on an α-particle. $e = 4.770 \times 10^{-10}$ e.s.u. $= 1.591 \times 10^{-20}$ e.m.u. $= 1.591^{-19}$ coulombs. *e/m* The ratio of charge to mass of an electron.

VALUE OF *e/m*

	Spectroscopic	*By deflection*
e/m	(1.761 ± 0.001) $\times 10^7$	(1.769 ± 0.002) e.m.u. per g.
(*e/m*)c	(5.279 ± 0.003) $\times 10^{17}$	(5.303 ± 0.006) e.s.u. per g.

ϵ The Greek letter, epsilon. (1) An ergon or quantum, q.v. (2) An etheron, q.v. (3) A symbol for dielectric constant. (4) Electrode potential, ϵ_c to a normal calomel electrode, ϵ_h to a normal hydrogen electrode.

η The Greek letter, eta. (1) The symbol for viscosity.

earth. (1) The soil. (2) The solid portion of the globe, or lithosphere, (see *abundance*). (3) The globe, as distinguished from other heavenly bodies. **diatomaceous-** Kieselguhr. **Fuller's-** *Fuller's* earth. **green-** Terra verde. **infusorial-** Kieselguhr. **rare-** See *rare earth metals*. **red-** Ocher. **siliceous-** Kieselguhr.

e. age. The period of existence of our planet as calculated from geologic, radioactive and cosmic data. Thus the four stages of the e. are assumed to be:

1. gaseous 2. fluid surface	10^5 years
3. intermediate	$\pm 10^5$ years
4. solid	2.3×10^9 years

e. constants. The physical data of the e.:

equatorial radius (a) 6,378,388 meters = 3,963.2 miles
polar radius (b) 6,356,911 meters = 3,949.8 miles
one degree latitude at equator = 68.70 miles
one degree latitude at pole = 69.41 miles
mean density of the earth 5.5247
mean density of continental surface 2.67
Rigidity of the earth (n) 8.6×10^{11} c.g.s. units
Viscosity of the earth (e) 10.9×10^{16} c.g.s. units
Volume of the earth . . . . . $1,083,319 \times 10^6$ km³
Area of the earth . . . . . 510,100,934 km²
Area of the land . . . . . 148,847,000 km²
Area of the ocean . . . . . 361,254,000 km²
Mean distance from earth to sun = 149,500,000 km = 92,900,000 miles.
Mean distance from earth to moon = 384,393 km = 238,854 miles.

e. alkali metals. The elements of the second group of the periodic system; Mg, Ca, Sr, Ba, and Ra. They are all divalent. **e. flax.** Amianthus. **e. inductor.** An electrical coil, which rotates in a frame. **e. metals.** The elements of the third group of the periodic system: Al, Sc, Y, La. They are all trivalent. **rare-** The elements of the fifth sub-period from cerium (atomic number 58) to hafnium (atomic number 72). **e. nut oil.** Arachis oil. **e. oil.** Petroleum or asphalt. **e. shellac.** Acaroid resin. **e. wax.** Ozocerite.

earthenware. Pottery made from dried clay See *ceramics*.

East Indian oil. An essential oil d.0.948–0.970 from *Anethum sowa*, an Umbelliferae. It contains limonene and apiol.

Easton syrup. A pharmaceutical preparation containing iron, quinine, and strychnine phosphates.

eau. French for water. **e. de cologne.** Cologne *water*. **e. dejavelle.** A solution of potassium hypochlorite, used as a bleaching agent. **e. de labarraque.** A solution of sodium hypochlorite, used as a bleaching agent.

Ebert and Merz's acid. Naphthalene-2.6- or *2.7*-disulfonic acid.

eblanin. Paraxanthine.

Ebner fluid. A mixture of 2.5 cc. hydrochloric acid, 2.5 gm. sodium chloride, 100 cc. water, and 500 alcohol; used for decolorizing in bacteriological work.

ebonite. A black, vulcanized, hard rubber. Cf. *vulcanite*.

ebony. A hard, dark heavy wood from various *Diospyros* species (Ebenaceae).

ebul, ebulus. The dwarf elder, *Pilea grandis*, an Urticaceae of the West Indies. The berries are used for an alcoholic beverage.

ebullient. Bubbling or boiling.

ebulliometry. Ebullioscopy.

ebulliscope. An apparatus for the exact determination of the boiling point; *e.g.*, a molecular weight apparatus.

ebullioscopic equation. An equation showing the relation of the molecular weight of the solute to the rise in boiling-point of a solution in which it is present: Mol. Weight = p(d/t), where p is the percentage (weight in grams per 100 grams solvent), d the molecular rise in boiling point, and t the observed rise in boiling point.

ebullioscopy. A branch of physical chemistry that deals with the determination of molecular weights from the increase in boiling point of a solution. Cf. *Raoult's law*.

ebullition. The formation of bubbles; *e.g.*, in boiling.

ecbalin. Elateric acid.

ecballium. Elaterium.

ecbolics. Oxytocics.

ecboline. An alkaloid of ergot.

eccentric. (1) Not concentric. (2) Not circular; *e.g.*, an orbit. (3) With the axis away from the center. (4) Outside the center or away from the center; the center misplaced.

ecgonidine. *dl*-Anhydroecgonine.

ecgonine. $C_9H_{15}O_3N.H_2O$ = 203.19. Tropine carboxylic acid. A split-product of cocaine, q.v. White, monoclinic prisms, m.198, soluble in water or alcohol, slightly soluble in ether. **anhydro-** See *anhydro.* **ethylbenzoyl-** Cocethyline. **methylbenzoyl-** Cocaine.

e. hydrochloride. $C_9H_{15}O_3N.HCl$ = 239.66. Colorless, triclinic leaflets, m.246, soluble in water, slightly soluble in alcohol.

echelon cell. A wedge-shaped glass cell used in absorption spectroscopy for the rapid photography of spectra through different thicknesses of absorbing liquid.

echicaoutchin. $C_{25}H_{40}O_2$ = 372.4. An elastic resin-like substance from the bark of *Alstonia scholaris,* dita bark, q.v.

echiceric acid. $C_{30}H_{46}O_4$ = 470.5. An oxidation product of echicerin.

echicerin. $C_{30}H_{48}O_2$ = 440.5. A principle from dita bark. Colorless needles, m.157, insoluble in water, soluble in alcohol, ether, or chloroform.

echiine. An alkaloid from *Echium vulgare,* a Boraginaceae, which produces tetanic convulsions.

echinacea. The dried rhizome of *Brauneria pallida* (*Echinacea angustifolia*) a Compositae of Northern America; used as an alterative, eliminative, and "systemic" antiseptic, as fluid extract.

echinacoid. The combined principles of echinaceae; used in the dry state.

echinochrom. A brown respiratory pigment found in sea urchins. Cf. *porphin derivatives.*

echinopsine. $C_{10}H_9ON$ = 159.1. An alkaloid from *Echinops* species, globe thistle, a Compositae; it is similar in action to strychnine.

echinulate. A growth of bacteria characterized by toothed or pointed margins or outgrowths.

echitamine. Ditaine.

echitenine. $C_{20}H_{27}O_4N$ = 345.0. An alkaloid from dita bark. A brown, amorphous powder, m.120, soluble in alcohol or chloroform.

echitin. $C_{32}H_{52}O_2$ = 468.51. An acid from dita bark. Colorless leaflets, m.170, soluble in hot alcohol, or chloroform, sparingly soluble in ether.

echugin. $(C_5H_8O_2)_x$. A crystalline glucoside from *Adenium bœhmianum* and an active principle of African arrow poisons, its effect is to arrest the heart in systole. Small, colorless, rhombic scales, readily soluble in water or alcohol, insoluble in ether.

eclogite. A rock consisting chiefly of augite and hornblende.

ecology. A branch of biology dealing with the habits of organisms, and their mode of life in relation to their surroundings.

ectoplasm. The outer compact hyaline layer of protoplasm of a cell.

eddy currents. The electrical currents set up by alternating currents in masses of metal near or in the circuit. Cf. *Foucault current.*

edenite. A light-colored hornblende containing some iron.

Eder's solution. A solution of mercuric chloride and ammonium oxalate, used in photometric determinations. The amount of Hg precipitated is related to the intensity of the x-ray irradiation.

edestan. A protean and slightly denatured edestin.

edestin. A globulin, M.W. 29,000, from hemp, rye and cotton seeds, which is deficient in cystine and lysine.

edge filtration. Same as stream-line filtration.

edingtonite. $BaAl_2Si_3O_{10}.4H_2O$. A grayish-white, rhombic, barium aluminum silicate, d.2.7, hardness 4–4.5, soluble in HCl.

edinol. $C_7H_9O_2N$ = 139.08. p-Amino-saligenin; used as a photographic developer.

Edison, Thomas Alva. 1847–1931. An American physicist and inventor noted for many important inventions, e.g., telegraphic transmission, phonograph, incandescent lamps, moving pictures, poured concrete buildings. **E. cell.** An accumulator consisting of iron and nickel oxide electrodes in 20 % potassium hydroxide solution. **E. effect.** An electrode opposite a glowing filament becomes negatively charged. **E. Lelande cell.** A voltaic cell of 0.7 volt, consisting of an amalgamated zinc electrode and copper electrode in a solution of KOH.

effective. Producing an action or bringing about a result. **e. acid.** The amount of acidity, q.v.

effervescence. The frothing or bubbling of a liquid due to the escape of gas, but not due to boiling; *e.g.,* from carbonate solutions when acids are added.

effervescent. Giving off gas bubbles, as in soda water, champagne. **e. mixture.** A mixture of substances which will form a gas when moistened or brought into solution; *e.g.,* baking powders, soda water mixtures. **e. salts.** Medicinally-active substances mixed with sodium bicarbonate and citric or tartaric acid. Used to administer medicinal agents of a refreshing draught.

efficiency. (1) The ratio of the useful work done by a machine to the energy supplied. (2) In statistics: The proportion of the total available data which is relevant according to the theory of probability.

efflorescence. The property of a crystalline substance to become anhydrous when exposed to air and crumble to a powder, (*e.g.,* washing soda, $Na_2CO_3.10H_2O$).

efflorescent. Tending to lose the water of crystallization and crumble to a powder.

effluent. (1) A waste product discharged from a process. (2) Emergent, *e.g.,* radiations.

efflux. The flowing or the velocity of a liquid.

effuse. Describing a thin, veil-like, spreading growth of bacteria.

effusiometer. An instrument invented by Bunsen for the determination of the molecular weights of gases from effusion measurements.

effusion. (1) Pouring out or discharge. (2) The escape of a gas under pressure through the small aperture of a vessel. The relative rates of effusion of gases into air are inversely proportional to the square roots of their molecular weights.

e.g. An abbreviation for exempli gratia = for example.

egg. An ovum consisting of shell, egg-white and yolk. **acid-** A closed acid-resistant storage tank for strong acids. **dried-** Dehydrated and powdered e. used in baking. **storage-** An e. kept in waterglass solution or in a frozen condition.

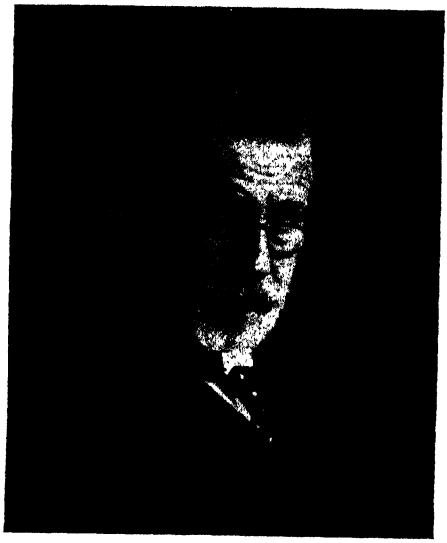
e. albumen. A crystallizable protein, M.W. 33,800, from egg-white. **e. magma.** The frozen mixture of churned yolks and whites of selected eggs, used for mayonnaise manufacture and baking.

eglantine. $C_{12}H_{16}O_2$ = 192.12. *i*-Butyl-α-toluate, $Ph.CH_2COOC_4H_9$. A colorless liquid, d.0.990, b.254, insoluble in water; a flavoring.

eglestonite. Hg_4Cl_2O. A rare, native, mercuric chloride-oxide named after Thomas Egleston, an American mining engineer (1832–1900).

egols. A group of antiseptic substances consisting of the o-nitro-p-sulfonates of phenol, cresol, or thymol, with mercury and potassium; *e.g.*, **cres-** Cresegol, derived from cresol. **phen-**, Phenegol (q.v.), derived from phenol. **thym-**, Thymegol, derived from thymol.

egonol. An unsaturated alcohol from ego-oil from the seeds of *Styrax japonica*.



Paul Ehrlich.
(From Muldoon "Organic Chemistry.")

Ehrlich, Paul. 1854–1915. A German biochemist and founder of modern chemotherapy. He discovered salvarsan and staining methods, and advanced the side-chain theory. **E. 606.** Arsphenamine. **E. diazo reaction.** An intense red color produced by pathological urine on addition of the diazo reagent. **E. diazo reagent.** Solution A = 1 gm. sodium nitrite in 200 cc. water. Solution B = 5 gm. sulfanilic acid, 50 cc. hydrochloric acid and 950 cc. water. Mix 1 cc. of A and 50 cc. of B. **E. side chain theory.** See Ehrlich theory. **E. solution.** A solution of 2 gm. p-dimethyl-amidobenzaldehyde, 50 cc. hydrochloric acid, and 50 cc. water; used for detecting urobilinogen in urine. **E. theory.** Side-chain theory. A chemical theory explaining the phenomena of immunity by the action of antibodies (synonyms: immune substance, haptins, free receptors) which when circulating in an organism unite with and make harmless the antigen (synonyms: poisonous substance, invading substance, toxin, etc.) and thereby prevent the antigen from attaching itself to the chemical system of the protoplasm. It is assumed that any poisonous substance, before it affects a living cell, must enter the dynamic, ever-changing and reacting protoplasm by combining with certain atomic groups or radicals (the side-chains or receptors) of the protoplasm. The action may be expressed as follows: Antigen, the inciting substance or poisonous molecule. Antibody, the immune substance or neutralizing molecule. Active State (poisoning or infection). The antigen reacts with the protoplasm and forms antibodies. Immunization. The antigen is prevented from reacting with the protoplasm by combining with the antibodies—the cast-off sidechains or free receptors. The molecules are represented as geometrical figures which fit into each other. These and similar figures found in the literature indicate only the possibility of chemical union and have no other meaning.

Direct action: The antigen consists of a haptophoric group which anchors the toxin to the protoplasm, and a toxophoric group which causes the toxic disturbances in the cell:

(antigens)	(antibodies)
enzymes cause	antienzymes
phytotoxins cause	antitoxins
bacterial exotoxins cause	antitoxins
bacterial proteins cause	agglutinins
vegetable proteins cause	precipitins
animal proteins cause	precipitins
bacterial aggressins cause	opsonins
animal venoms cause	antivenins
foreign complements cause	anticomplements
foreign amboceptors cause	antiamboceptors.

Indirect action: The antigen consists of two substances, namely

(a) the *complement*, *addiment* (of Ehrlich), *cytase* (of Bordet and Metchnikoff), or *alexine* (of Buchner), which is composed of a zymphoric group, containing the poisonous radical, and a haptophoric group, with which it is anchored to the amboceptor.

(b) the *amboceptor*, *fixateur* (of Metchnikoff) *preparateur* (of Müller), *immune body* (of Pfeiffer), *sensitizer* or *intermediate body*, which is the bridge or link between the complement and the receptor. It contains a complementophile group which combines with the complement, and a cytophile group which combines with the receptor of the cell. Vegetable cells and bacteria result in bacteriolysins. Animal cells result in cytolysins, hemolysins or leukotoxins. **E. triacid stain.** A mixture of 120 cc. saturated aqueous solution of orange G, 80–165 cc. saturated aqueous solution of acid fuchsin, 125 cc. aqueous solution of methylene green, 200 cc. alcohol, 100 cc. glycerin, and 300 cc. water. Used for differentially staining white blood corpuscles.

eicosane*. $C_{20}H_{42}$ = 282.4. A saturated hydrocarbon of the methane series and a constituent of petroleum. A colorless liquid, d.0.777, m.37, $b._{15mm}$ = 205; insoluble in water, soluble in alcohol or ether.

eicosanic acid. $C_{20}H_{40}O_2$ = 312.28. A white solid, m.74, found (0.06%) in Japan wax. Cf. *arachidic acid.*

eicosanoic acid*. Arachidic acid.

eicosanol*. Eicosyl alcohol.

eicosinene. Icosinene.

eicosyl. The monovalent radical $—C_{20}H_{41}$. **e. alcohol.** $C_{20}H_{42}O$ = 298.32. Arachidic alcohol, eicosanol*. The saturated compound, $Me(CH_2)_{18}CH_2OH$. A colorless solid, m.71, b.220 in palm wax of Madagascar.

eicosylene. The unsaturated hydrocarbon $C_{20}H_{40}$.

eigenfunktion, eigenfunction. [German for proper or characteristic function.] The *s*, *p*, *d*, or *f* state of the atom or ion. See *quantum numbers.*

eigenwert. A proper or characteristic value.

eigons. A group of compounds of iodine or bromine with proteins which, administered

internally, as antiseptics, liberate iodine or bromine in the alimentary canal or in wounds.

eikonogen. $NH_2C_{10}H_5OH.SO_3Na.2\frac{1}{2}H_2O$. Sodium amido-β-naphthol monosulfate. A white crystalline powder, used as a developer in photography.

eikonometer. A measuring scale which fits on to the eyepiece of a microscope and is seen superimposed on the image of the object.

eikosane. Eicosane.

-ein, -eine. A suffix which often indicates an internal anhydride.

Einstein, Albert. A German physicist noted for his mathematical generalizations. **E. equation for diffusion.** The diffusion coefficient, D, is related to the gas constants by $D = RT/6\pi Nr\eta$, where N is Avogadro's number, r the radius of the molecule and η the viscosity. **E. formula.** The relation between mass and energy is: $Mc^2 = E$, where M is the mass in grams, c the velocity of light in cm. per sec., and E the energy in ergs. Cf. *mass-energy cycle.* **E. law.** In a photochemical reaction one quantum of energy affects one molecule of matter, thus: $HI + h\nu = H + I$. **E. particle equation.** The motion of a particle in a liquid depends on its radius r, and the viscosity, η, of the liquid. Let L be the length of the path during time t, then

$$L = \sqrt{t} \cdot \sqrt{\frac{RT}{N}} \cdot \frac{1}{3\pi\eta r}$$

E. theory. See *relativity.* **E. unit.** Einstein. **E. viscosity formula.** $\eta = \eta_0(1 + k\phi)$, where η is the viscosity of the colloidal solution, η_0 the viscosity of the pure suspending medium, ϕ the total matter of colloid per unit volume, and k a constant varying from 1.5 to 4.75.

einstein. A unit of energy, $E = 6.06 \times 10^{23}$ quanta, analogous to the faraday (6.06×10^{23} electrons). It is the amount of radiation absorbed by a system to activate 1 gram-molecule of matter; hence, $E = Nh\nu$, where N is Avogadro's constant.

eka. The Sanskrit for one or first. A prefix applied to the first undiscovered element in a group of the periodic system. Cf. *dvi-.*

eka-elements. The missing elements of the periodic table. Cf. *eka, dvi.* The following elements have been discovered and named as shown:

eka-aluminum	gallium
eka-boron	scandium
eka-cesium	virginium, verium
eka-iodine	alabamine, eline
eka-manganese	(nipponium), masurium
eka-neodymium	illinium
eka-silicon	germanium

ekaosmium. Eo. The element 94 obtained by neutron bombardment of uranium; it has a half-life of 90 minutes. Synthesized by Enrico Fermi (1936), and named esperium.

ekarhenium. Er. The element 93, obtained by neutron bombardment of uranium; it has a half-life of 13 minutes. Synthesized by Enrico Fermi (1936) and named ausonium.

ekatantalum. Et. The element 91, which consists of the isotopes:

Pa or protactinium	32,000 years
UZ or uranium Z	9.7 hours
Bv or brevium	1.65 mins.

e. pentoxide. Et_2O_5. A white powder with slightly basic properties, forming salts with acids.

ektebin. An antigen ointment containing concentrated tuberculin (dead human and bovine tubercle bacilli) used in the treatment of tuberculosis.

elæ- Elae-, ele-.

elaeodic acid. Ricinoleic acid.

elaeolite. Nephelite.

elaeomargaric acid. Eleostearic acid.

elaeometer. A hydrometer for ascertaining the quality of an oil from its density.

elaeostearic acid. Eleostearic acid.

elaidic acid. $C_{18}H_{34}O_2 = 282.37$. *trans-9*-Octadecenoic acid*. An unsaturated, monobasic acid, and *trans*-isomer of oleic acid. Colorless leaflets, $d_{79°}$.0.851, m.51.5, $b._{60mm}$266, insoluble in water, soluble in alcohol or ether.

elaidin. $C_{57}H_{104}O_6 = 885.1$. The elaidic ester of glycerin. It occurs in many oils other than drying oils and fish oils, and is an isomer of olein.

elain. Obsolete name for ethylene.

elaoptene. The liquid part of an essential oil, as opposed to the stereoptene or solid part.

elastic. Describing a substance which assumes its original shape after the pressure or force, causing distortion, is removed. **e. coefficient.** Young's modulus. **e. constants.** The numerical expressions of the force or pressure to which a material (solid, liquid, or gaseous) can be subjected without deformation of its shape or condition after the pressure has ceased to act. **e. fluid.** A gas, as compared with a liquid. **e. limit.** The stress or force which produces a permanent elongation or shortening of 0.001 % of the length of a substance. **e. modulus.** Modulus of elasticity.

elastica. Rubber.

elasticity. The property of a substance of being able to recover from distortion or deformations caused by pressure or stress, and return to its original shape. **adiabatic-** See *adiabatic,* **cubical-** The bulk modulus, or the hydrostatic pressure divided by the resulting decrease in volume per unit volume. **limit of-** The smallest value of a stress which produces permanent alteration. **longitudinal.** Young's modulus. **modulus of-** Rigidity modulus. The relative flexibility, or the ratio of stress intensity to percentage strain. **shear-** See *rigidity.* **torsional-** See *rigidity.*

elasticum. A layer of carbohydrate material between the epithelium and cortex of wool, which is responsible for the shrinking of the latter.

elastin. A protein of yellow, elastic tissue, soluble in hot conc. potassium hydroxide or sulfuric acid, partly attacked by pepsin and digestible by trypsin.

elastomer. A generic term (proposed by Fisher) for all substances having the properties of natural, reclaimed, vulcanised or synthetic rubber. **synthetic-.** Rubber substitutes. Five classes, produced by: (a) Polymerisation of butadiene alone or with styrene (*e.g.*, Ameripol, Buna, Hycar, Perbunan); (b) intereaction between sodium polysulfides and dihalides (*e.g.*, Thiokol); (c) polymerisation of chloroprene (*e.g.*, Duprene, Neoprene); (d) polymerisation of isobutylene (*e.g.*, Vistanex); (e) polymerisation and plasticisation of vinyl chloride (*e.g.*, Koroseal).

elastoplast. (1) A substance having both elastic and plastic properties. (2) Trade name for a boracic acid-plaster first-aid dressing.

elateric acid. $C_{20}H_{28}O_5$ = 348.27. Ecbalin. An acid of elaterium, m.200.

elaterin. $C_{20}H_{28}O_5$ = 348.22. Memordicin. A neutral principle from the juice of *Ecballium elaterium* and *Memordica balsamina*, a Cucurbitaceae. A white, crystalline powder, α-m.232, β- m.195, insoluble in water, soluble in chloroform, sparingly soluble in alcohol or ether; used as a drastic purgative.

elaterite. $(CH_2)_x$. Mineral caoutchuc, elastic bitumen. An inflammable, elastic, dark-brown, mineral resin, d.0.8–1.23.

elaterium. Ecballium. Unpurified sediment from the juice of the fruit of *Ecballium elaterium* (squirting cucumber) chiefly containing elaterin; used medicinally as a powerful cathartic.

elaterone. $C_{24}H_{30}O_5$ = 398.23. A ketone from elaterium. Colorless crystals, m.300.

elatic acid. $C_8H_{12}O_2$ = 140.09. An acid from colophony.

elayl. Ethylene. **e. chloride.** Ethylene dichloride.

elbon. $C_{16}H_{14}O_3N_2$ = 282.2. Cinnamyl-p-oxyphenylurea. White, fine, tasteless needles, m.204, insoluble in water, soluble in alcohol, acetone, or oils. Used medicinally for disorders of the respiratory organs.

elder. Sambucus. **dwarf-** (1) Ebulus, (2) *Aralia hispida.*

eldrin. Barosmin.

Eldred's wire. A nickel-steel wire with a copper jacket and a platinum sheath, which may be sealed into glass.

elecampane. Inula.

elecampin. Inulin.

electret. The electrical equivalent of a permanent magnet. Thus waxes, *e.g.*, carnauba wax, when solidified in a strong electric field acquire a polarization (orientation of molecules) in the direction of this field.

electric. Charged with or capable of developing electricity. Cf. *electrical.* **e. arc.** The luminous arc produced by the passage of electricity at high voltage from one electrode to another. **e. axis.** The axis of a crystal that offers least resistance to the passage of an electric current. **e. attraction.** The force by which oppositely charged bodies are drawn together. **e. battery.** A series of dry cells (q.v.) or galvanic (q.v.) elements. **e. calamine.** $ZnSiO_4.H_2O$. A native zinc silicate. **e. charge.** A definite quantity of electricity, q.v. Cf. *ballometer.* **e. conductivity.** See *conductivity.* **e. current.** The quantity of electricity, or the number of electrons flowing past a point per unit time. When measured in e.s.u. units it is the amount of electricity transferred in one second; in e.m.u. units it is a current of such strength that one centimeter of the wire experiences a side-thrust of a force equal to one dyne, if at right angles to a magnetic field of unit intensity. The practical unit is the ampère, q.v.; its quantity the coulomb, q.v.; and its potential difference the volt, q.v. **e. double layer.** See *electrolytic solution pressure.* **e. field.** The forces around an electrically-charged body. **e. field intensity.** A unit of force; (*e.g.*, magnetic) the ratio of the force acting on a quantity of electricity at a point to that quantity of electricity. **e. furnace.** A furnace, q.v. used where hydro-electric power is cheap for dealing with molten electrolytes; as in the manufacture of aluminum. **e. lines of forces.** The imaginary curves radiating from a positive toward a negative charge. **e. potential.** Electromotive force. **e. radiation.** See *electromagnetic radiation, spectrum.* **e. spark.** A luminous discharge produced by the disruptive passage of electricity at high voltage from one electrode to another. **e. surface density.** The distribution of electrons on a surface, measured by number per unit area. **e. tension.** Electromotive force. **e. transformer.** See *induction coil, transformer, rectifier.* **e. valve.** A device which allows an e. current to pass in one direction only; as, a transformer, rectifier or vacuum tube. **e. wind.** The effect produced by the motion of electrically-charged gas molecules.

electrical. Pertaining to electricity. **e. birefringence.** Kerr effect. **e. capacity.** See *capacity, electrostatic.* **e. cell.** Voltaic cell. Galvanic cell. **e. condenser.** See *condenser.* **e. conductivity.** Molal conductivity, molecular conductivity. (1) The quantity of electricity transmitted by a unit area in unit time under a unit potential gradient. (2) For solutions: the conductivity in reciprocal ohms (mhos) of one gram equivalent of electrolyte, in a solution between electrodes one centimeter apart. **e. current.** Electric c. **e. elements.** Voltaic cells. **e. flux.** The flow of an electric current. **e. pressure.** Electromotive force. **e. units.** See table.

Unit of conductivity—MHO;
unit of electricity resistance—OHM;
unit of electricity current—AMPERE;
unit of electromotive force—VOLT;
unit of quantity of electricity—COULOMB;
unit of capacity—FARAD;
unit of work—JOULE;
unit of power—WATT.

e. work. The work necessary to decompose a compound expressed in electrical units.

electricity. A form of energy that produces magnetic, chemical, thermal and radiant effects, generated by friction, induction or chemical means. (a) *material conception:* An all-pervading fluid consisting of negative electrons; their continuous motion is a "current," their abrupt motion a "discharge," their absence a "positive charge." (b) *dynamic conception:* A stress or strain in the ether resulting in "electric waves" and "radiation." (c) *magnetic conception:* A field of force. **acid-** Positive electricity. **animal-** Electrical phenomena associated with animal organisms; *e.g.*, Volta's experiment on frogs. **atmospheric-** The e. of the atmosphere; *e.g.*, from charged clouds. **chemical-** Galvanic. **dynamic-** Current-, or galvanic- as opposed to static e. It indicates electrons in movement, *e.g.*, which can be utilized for work. It may be either set in motion by chemical reactions (voltaic-), by induction (faradic-), or by a magnet (magnetic-). **faradic-** Induced- A current of high tension produced in a secondary coil when a galvanic current passes through the primary coil of an induction machine. **franklinic-** Static-. **frictional-** Static e. obtained by friction; *e.g.*, rubbing a glass rod with flannel or fur. **galvanic-** Dynamic- or voltaic-. **induced-** Faradic-. **negative-** The presence or accumulation of electrons; or a current of electrons passing from anode to cathode outside the galvanic cell, and from cathode to

anode within the galvanic cell. **photo-** See *photoelectricity*. **piezo-** See *piezoelectricity*.

crude metals (Cu, Pb, Ni, Ag, Au); or (*b*) electroplating, to produce a protective coating

RELATIONSHIPS OF ELECTRICAL UNITS

E.M.U. = electro-magnetic units, based on the strength of magnetic poles (m and m'): $m = r\sqrt{F\mu}$ where μ is the magnetic permeability of the medium, a quantity arbitrarily assumed as unity for air, F, the force at a point in the magnetic field, and r the distance. It follows that $F = mm'/\mu r^2$ and the intensity, H, of the magnetic field = F/m.

E.S.U. = electrostatic units, based on the strength of electrical charges (q and q'): $q = r\sqrt{Fk}$ where k is the specific inductive capacity or dielectric constant, a quantity arbitrarily assumed as unity for air, F, the force between two charges, r, the distance. It follows that $F = qq'/kr^2$.

The dimensions of some electrical units are expressed in terms of the fundamental units of Length, Time, and Mass as follows:

Name	*Symbol*	*Electrostatic*	*Electromagnetic*
electric quantity	q	$[L^{\frac{3}{2}}T^{-1}M^{\frac{1}{2}}k^{\frac{1}{2}}]$	$[L^{\frac{1}{2}}M^{\frac{1}{2}}\mu^{-\frac{1}{2}}]$
magnetic quantity	m	$[L^{-\frac{1}{2}}M^{\frac{1}{2}}k^{\frac{1}{2}}]$	$[L^{\frac{3}{2}}T^{-1}M^{\frac{1}{2}}\mu^{\frac{1}{2}}]$
magnetic field	H	$[L^{\frac{1}{2}}T^{-2}M^{\frac{1}{2}}k^{\frac{1}{2}}]$	$[L^{-\frac{1}{2}}T^{-1}M^{\frac{1}{2}}\mu^{-\frac{1}{2}}]$
current	I	$[L^{\frac{3}{2}}T^{-2}M^{\frac{1}{2}}k^{\frac{1}{2}}]$	$[L^{\frac{1}{2}}T^{-1}M^{\frac{1}{2}}\mu^{-\frac{1}{2}}]$
potential or electromotive force	V, E	$[L^{\frac{1}{2}}T^{-1}M^{\frac{1}{2}}k^{-\frac{1}{2}}]$	$[L^{\frac{3}{2}}T^{-2}M^{\frac{1}{2}}\mu^{\frac{1}{2}}]$

positive- (1) An absence or deficiency of negative electrons. (2) A current in the direction opposite to negative-. According to this theory the true current of electricity flows from negative to positive, *i.e.*, from the region of an accumulation of electrons to that of a deficiency of electrons. **static-**, frictional-, or franklinic-, as opposed to dynamic-. It indicates electrons at rest, and their sudden, explosive-like escape after accumulating on the surface of an insulated conductor. It is produced by friction between solid surfaces. **thermo-**. (1) E. produced by heat. (2) Pertaining to the heating effects of electricity. **tribo-** E. produced by friction. **voltaic-** A current produced by an electric battery.

electrification. Charging with electricity or electrons.

electrify. To charge with electricity, or separate the neutral charge of a substance into negative (accumulation of electrons) and positive (deficiency of electrons) portions.

electrion. An early name for an electron.

electroaffinity. E or E_0. Electrolytic potential. The electrode potential (q.v.) for a concentration corresponding with 1 gram ion per liter of ions liberated from an electrode. Thus it is the force with which the atoms hold their ionic charges. See *electromotive force, free energy*.

electroanalysis. Analytical methods based either on electrolysis or conductometry; as electrometric titration. Cf. *polarograph, spectrograph, magneto-optic method, sectrometer*.

electrochemical. Pertaining to both chemistry and electricity. **e. constant.** Faraday. **e. deposition.** The formation of a metallic layer by electrolysis either for (*a*) recovery of metals from solutions of ores (Cu, Zn, Cd), or refining (Au, Ag, Ni, Cr, Cu) or for reproduction (Ni, Cu, Zn) *e.g.*, in photo-engraving. **e. equivalent.** The mass in grams of any element deposited from an electrolytic cell by an electric current of one coulomb. The electrochemical equivalent (E) of any element is

$$E = (A/V)0.00001036.$$

where A is the atomic weight, and V the valency of the element for the electrolyte used. Cf. *Faraday's Law*. A/V is the chemical equivalent. **e. series.** Displacement series. **e. spectrum.** A current-voltage graph produced by the polarograph (q.v.).

electrochemistry. A branch of science dealing with the processes of transforming chemical into electrical energy, and vice versa; hence, the study of chemical reactions which cause, or are caused by, a flow or transfer of electrons; as in batteries and in electrolysis. **applied-** The application of e. to industry, as electro-deposition and electrolysis, q.v.

electrocratic. Describing a colloid (*e.g.*, gold), that owes its stability in to an electric charge.

electrode. The appliance by which an electric current passes in or out of a cell, apparatus, or body. It may vary in form from a simple wire to complex devices, (hydrogen e., calomel e.), or it may be the container of the cell itself, (crucible, vacuum tube or valve). **auxiliary-** A standard calomel or other e. which is inserted in the electrolyte during an electrodeposition reaction, and is used to measure the potential at which this occurs. **calomel-** See (1) *calomel e.* (2) *Hildebrand e.* **capillary-** See *Lippmann e.* **dropping-** A standard e. formed by a stream of mercury falling in fine droplets through a capillary tube into the electrolyte. A fresh surface is thus obtained continuously. Cf.

polarograph, Heyrovsky. **gas-** See *gas e.* **gas-jet-** See *sprudel effect.* **glass-** An e. produced by a thin glass membrane separating solutions of known and unknown pH value, the potential difference between the two sides being measured and used to determine the pH value of the unknown. **Hildebrand-** q.v. **hydrogen-** q.v. **negative-** The cathode, negode, or negatively charged pole, by which the "current passes out." **positive-** The anode, posode, or positively charged pole by which the current enters. **quinone-** q.v. **reversible-** An e. which owes its potential to ionic changes of a reversible nature; as $H_2 \rightleftharpoons 2H^+ + 2e^-$

e. potential. The tendency, expressed electrically as volts, of a metal to dissolve in a solution containing its ions. The algebraic difference of the two e.p. of the electrodes gives the voltage, E, of the cell.

$E = E_0 + 2.3026 \frac{RT}{nF} \log_{10} C$, where E is the electrode potential for a concentration C, in gram-ions per liter of the ions given off by the electrode; E_0 the electro-affinity; R the gas constant; T absolute temperature; n the valency of the ion; and F one faraday—96450 coulombs.

Or: $E = E_0 + \frac{0.058}{n} \log C$.

electrodeposition. The precipitation of a metal on an electrode; as, in electrorefining, q.v., electrowinning, q.v., electroplating, q.v., and electroforming, q.v. **e. analysis.** The quantitative electrodeposition of an element from a solution. The electrode is weighed before and after deposition to obtain the amount of the element present originally.

electrodynamics. A branch of practical physics dealing with moving charges e.g., an electric current.

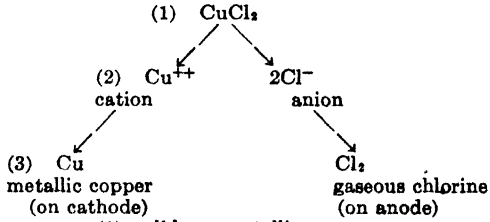
electrodynamometer. An instrument for measuring the intensity of faradic and alternating currents.

electro-endosmosis. The production of endosmosis (q.v.) by an electric potential.

electroforming. The production of metallic tubes or sheets, or the reproduction of patterns by electrolysis.

electrographic analysis. The metal to be tested is made the anode or cathode, and placed in contact with paper impregnated with a reagent giving a color reaction with the metal to be detected. Any other suitable metal may be used as electrode on the other side of the paper.

electrolysis. The local and spacial separation of the ions of an electrolyte and the transfer of their respective charges; hence, the decomposition of a compound, either liquid, molten, or in solution, by an electric current, *E.g.*,



(1) solid or crystalline
(2) ionised in solution
(3) decomposed or electrolysed

Cf. *electrochemical decomposition.* **internal-** Th separation of a metal in the presence of a much more electropositive (*i.e.* baser) metal, by inserting an anode of the baser metal in the solution, and connecting it directly with a platinum cathode on which the metal is deposited. No external current is required. *E.g.*, Cu on Zn immersed in $CuSO_4$ solution.

electrolyte. (1) Any substance which dissociates into two or more ions, to a great or small extent, when dissolved in water. Solutions of e. thus conduct the electric current and are decomposed by it (*electrolysis*, q.v.). (2) Battery acid. Sulfuric acid, d.1.150–1.835, used in batteries and accumulators. **non-** Substances which do not dissociate into ions. **strong-** E. which are highly-dissociated even at moderate dilutions, and do not obey Ostwald's dilution law. **weak-** E. which are fully or partly dissociated only at high dilution; they obey the dilution law.

electrolytic. Pertaining to decomposition by an electric current. **e. apparatus.** A set of instruments for quantitative electro-deposition. It consists of an ammeter, voltmeter, rheostat, platinum anode, and a device for rotating the anode. **e. dissociation.** Ionization. **e. gas.** A mixture of hydrogen (2 vol.) and oxygen (1 vol.) obtained by electrolysis of water. **e. potential.** Electro-affinity. **e. separation.** The graded separation by electro-deposition (q.v.) of metals from a solution, by varying the applied electrolytic potentials according to the respective electrode-potentials of the metals. **e. solution tension theory.** Nernst theory.

electrolyze, electrolyse. To decompose by electrolysis.

electromagnet. A piece of soft iron around which is wound an insolated wire; so long as the electric current passes through the wire, the iron has magnetic properties.

electromagnetic. Pertaining to electricity and magnetism. **e. field.** The area of force surrounding an electro-magnet or a conductor through which a current flows. The intensity, H, of the magnetic field at the center of a circular conductor of radius, r, is 2(i/r), where i is the current. **e. law.** See *Coulomb.* **e. radiation.** See *radiation, ray, waves.* **e. separation.** The separation of the magnetic constituents of ores by means of an electromagnet. **e. units.** e.m.u. or "emu." A system of electrical units based upon dynamics; it includes the practical units (volt, ampere, ohm, etc.) which are multiples or fractions of the c.g.s. electro-magnetic units. See table of electrical units.

electromerism. A mobile electron tautomerism shown by a set of compounds in which the electron constellations vary, although the atomic kernels remain in position. Cf. *chelate bond.*

electromers. Isomers which differ in the distribution of the electrons amongst their atoms.

electrometer. An instrument for measuring the quantity or intensity of an electric current. **absolute-** Galvanometer. Ammeter. **capillary-** An e. used as a null-instrument which detects potentials down to 1 millivolt by the motion, in a capillary tube, of a dilute sulfuric acid-mercury interface. The motion is due to a change of surface tension produced by the potential. **emanation-** See *emanation.* **photo-** Photo-galvanometer. **quadrant-** Galvanoscope.

electromotion. Mechanical action produced by electricity.

electromotive. In motion produced by electricity. **e. force.** E, EMF, emf or E.M.F., or e.m.f., electrical pressure, voltage. The work done per unit quantity of electricity flowing through a cell; *i.e.*, the driving force behind the electrons comprising a current. A potential gradient is set up between any two elements, especially metals, placed in a solution, which can be expressed by e.m.f. = volts = I/R = amperes/ohms. If the elements and ions are arranged according to decreasing e.m.f., the displacement series (q.v.) results; this measures the capacity of an atom to retain its electrical charge or hold its negative valence electrons. The unit of e.m.f. is the volt.

1 International volt = 1.00043 absolute volt.
1 absolute volt = 0.99957 international volt
= 1 practical e.m.u.
= 10^8 c.g.s. e.m.u.
= 0.0033349 e.s.u.

For molar concentrations the e.m.f. of an electrolytic cell is the algebraic difference between the electro-affinities (q.v.) of the ions of the metals forming the electrodes. See *electrode potential.* **e. series.** Displacement series.

electron. (1) An alloy containing about 90 % magnesium, 5 %, aluminum and a little zinc, manganese or copper. (2) Negatron, beta-particle. An elementary unit of electricity, or a negatively charged corpuscle, whose accumulation on an insolated conductor causes the phenomena of static electricity, and whose flow through a conductor produces an electric current. Electrons are constituents of the atom; they are assumed to be in the atomic nucleus and the atomic shell, and their number and the arrangement of the outer electrons accounts for valency and other properties of the atom. Electrons are liberated from the atom by radioactive disintegration, and transferred from one atom to another in oxidation-reduction reactions (electronation). They are made visible by the Wilson track method, and Millikan's fog chamber. Their mass changes with their velocity. Constants are:

mass..... 9.035×10^{-28} gm.
charge..... 4.770×10^{-10} e.s.u.
or
1.591×10^{-20} e.m.u.
spin (angular momentum) 9.02×10^{-28} erg. sec.

Cf. *e, e/m, atom, quantum, Bohr, Schrödinger.* **binding-** An electron which holds together the positive charges in the atomic nucleus. **cementing-** An electron which is assumed to hold together the two hydrogen nuclei of the helium atom. **free-** (1) A corpuscle or charge of negative electricity (mass 9.01×10^{-28} gram), equal to 1/1845 the mass of a hydrogen atom. (2) An e. in the octet of an atom which is not shared by another atom; thus the N in ammonia has two, and the O in water four free e. which can form co-ordinate bonds. **heavy-** Yukawa particle. A penetrating component of cosmic rays, believed to carry an electronic charge greater than that of an electron, but less than that of a proton. **lodged-** A singular position of electrons in equilibrium in the atom, as opposed to binding electrons which are supposed to occur in couples or pairs. **metastasic-** An electron which changes its position within the atom due to radioactive changes. They are generally valence electrons moving from the valence orbit into the interior of the atom. **negative-** Negatron or a free electron. Cf. *positive e.* **nuclear-** E. of the atomic nucleus. **orbital-** E. in the orbits of an atom. **paired-** A couple of e. which constitute a non-polar bond, q.v. Cf. *twin e.* **phoretic-** E. which produce electrical conduction by passing freely from atom to atom when their outer orbits are in contact. **photo-** E. liberated from a surface by exposure to visible or invisible light. **piezo-** A supposedly disk-shaped e. in the helium nucleus. **positive-** (1) A heavy, but very small corpuscle which is never found associated with a mass less than that of hydrogen, and which is assumed to be a hydrogen nucleus or a hydrogen atom from which an electron has been removed (hydrogen ion or proton). (2) Positron. A particle (q.v.) of nearly zero mass with a positive charge. **recoil-** E. which are scattered by bombardment of a substance with α- or β-rays. **twin-** A couple of e. which constitutes a polar bond, q.v. Cf. *paired e.* **valency-** The electrons located in the outer shell or orbit of the atom which are responsible for valency, and which may either pass from one atom to the other (polar bond) or be held in common by two atoms (non-polar bond). The number of valence electrons ranges from 1 to 8, (see *periodic system*), and an atom with 1 electron (alkali metals) is positive and monovalent; an atom with 2 electrons (earth-alkalis) positive and divalent; an atom with 3 electrons (earth-metals) positive and trivalent; an atom with 4 electrons (carbon group) non-polar and tetravalent; an atom with 5 electrons (nitrogen group), negative and trivalent; an atom with 6 electrons (oxygen group), negative and bivalent; an atom with 7 electrons (chlorine group) negative and monovalent; an atom with 8 electrons (noble gases) inert and non-valent. The term "positive" indicates the loss and "negative" the gain of an electron or electrons. See *Lewis-Langmuir theory, octet theory, valency, bond.*

e. affinity. The capture by a substance, *e.g.*, an oxidizing agent, of the electrons of other substances. See *electronation.* **e. attraction.** The pull exerted by an atom or radical on the shared electron-pair, which joins it to some other atom or radical. See *e. formula, Lucas theory.* **e. beam.** A stream of *e.*, as in a cathode tube. See *sectrometer, Wilson tracks.* **e. diffraction.** The investigation of the structure of a surface by the diffraction of a stream of electrons directed upon it. Cf. *Kikuchi lines, electron microscope.* **e. displacement.** A shift of an e. pair held in common between two atomic nuclei, towards one of the nuclei. See *Lucas theory.* **e. eye.** Iconoscope. **e. formula.** A chemical notation which depicts the displacement of the e.s. in an organic compound. The relative orbital position of the e. pair is represented by the symbols o—, —o—, —o—; each circle represents two electrons. **e. fugacity.** The tendency to lose electrons by an electrode immersed in a solution. **e. lens.** The electrostatic field surrounding an aperture in a charged conductor; thus a circular hole will focus electrons according to, $f = 2V/(G_2 - G_1)$, where f is the focal length, V the energy of incident particles in volts and

G_1, G_2 the potential gradient on the two sides of the plate. The diameter of the hole is not involved. **e. microscope.** See *microscope.* **e. optics.** The study of the control of the motion of electrons by means of charged electric fields, in a manner analogous to the effect of lenses on light. **e. pair.** A couple of electrons which is held in common by two atoms, and accounts for a non-polar and non-ionizable bond. **e. replacement** (cf. *displacement*). Electronation. **e. screening effect.** See *screening effect.* **e. transfer.** The passage of one or more electrons from an atom or iron to another atom or ion during an oxidation-reduction reaction, q.v. Cf. *polar number, valency.* **e. tube.** A device for an electric discharge; as, thermionic valve, vacuum tube, radio tube, x-ray tube or rectifier. **e. volt.** EV. Volt of energy or equivalent volt $= 1.59 \times 10^{-12}$ erg. It is the energy acquired by an e. when it falls through a potential of one volt, and is related to wavelength (cf. *quantum mechanics, radiation*) as follows:

1	EV	= 12,337	a
4.3	EV	= 2,900	å
6.4	EV	= 2,000	å
10	EV	= 1,250	a
25	EV	= 500	å
100	EV	= 12.3	å

electronate. To cause electronation or reduction. **de-** To cause de-electronation or oxidation.

electronating agent. A substance which loses one or more electrons during a chemical reaction. **de-** A substance that gains one or more electrons during a chemical reaction.

electronation. A general term proposed by Cady and Taft for reduction, or the addition of an electron or electrons to an element during a chemical reaction. **de-** Oxidation, or the removal of an electron or electrons from an element during a chemical reaction. *E.g.:*

Electronated or reduced from +1 to 0

$$A^+ + B = B^+ + A$$

De-electronated or oxidized from 0 to +1

A^+ is the de-electronating or oxidizing agent, as its valence number decreases from (+1) to 0. B is the electronating or reducing agent, as its valence number increases from 0 to (+1).

Electronated or reduced from 0 to −1

$$C + D^- = D + C^-$$

De-electronated or oxidized from −1 to 0

C is the de-electronating or oxidizing agent, as its valence number decreases from 0 to (−1). D^- is the electronating or reducing agent as its valence number increases from (−1) to 0. **e. reactions.** Oxidation-reduction reactions, or all chemical reactions in which an exchange of electrons takes place; hence, any reaction in which the valences of the elements are increased or lowered. Classification:

(a) oxidation and reduction.
(b) nitridation and denitridation.
(c) chlorination and de-chlorination.
(d) bromination and de-bromination.
(e) sulfidation and de-sulfidation.
(f) cyanation and de-cyanation.

electronegative. (1) Having a negative charge or an excess of electrons. (2) Capable of capturing electrons. **e. element.** An element located on the left side of the periodic table, especially the non-metals (upper half of the periodic table). Its atom has four or more valence electrons and has a tendency to complete its quota of eight. **e. ion.** Anion, or negative ion. **e. radical.** An acid radical or a group of atoms having a negative charge; as, OH^-, SO_4^{--}.

electronic. Pertaining to electrons. **e. charge.** A quantity (e) of electricity which is numerically equal to the charge on an electron. $e = (4.770 \pm 0.005) \times 10^{-10}$ absolute e.s.u. **e. formula.** See *formula.* **e. mass.** The mass (m) of a negative electron when moving with a velocity much less than that of light. **e. number.** The number of peripheral electrons present in the elements making up a compound. **e. ratio.** The ratio of electronic charge to electronic mass,

$$e/m = 5.305 \times 10^{17} \text{ e.s.u.} = 1.769 \times 10^7 \text{ e.m.u.}$$

e. structure symbol. A notation showing the distribution of electrons in the molecule; see *bonds, molecular diagram.*

electronyl. A term for the atomic entity which is active by virtue of the number of electrons in excess of or less than the nuclear charge.

electroösmosis. The diffusion of a substance through a membrane within an electric field.

electrophoresis. The migration of particles in an electric field.

electrophorus. Insulated discs of ebonite and brass, used to produce frictional electricity.

electroplating. The formation of a metallic coat on a baser metal by electrolysis; hence, any electrolytic process for covering a metallic object with a fine deposit of silver, gold, nickel, copper, or chromium.

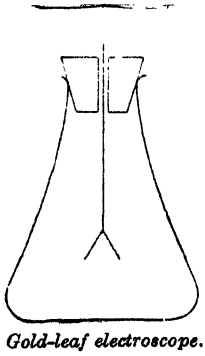
electropositive. (1) Having a positive charge or a deficiency of electrons. (2) Capable of losing or giving up electrons. **e. elements.** The elements on the right-hand side of the periodic table, especially the light-metals (upper half of the periodic table). **e. ion.** Cation. An atom which has lost one or more negative electrons and has become positive. **e. radical.** A basic radical or a group of atoms having a positive charge; as, NH_4^+, $Cu(NH_3)_4^{++}$.

electropotential. Electrode-potential

electrorefining. The purification of metals, especially copper, nickel, or tin, by electrolysis.

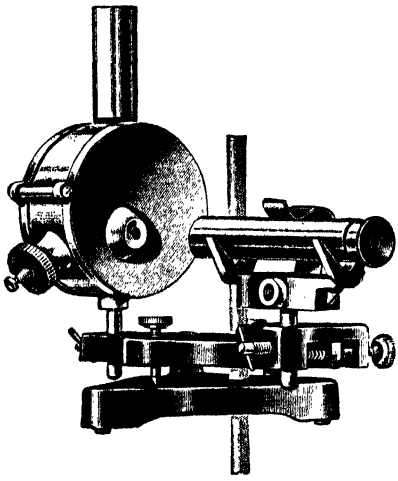
electroresponse. The increase in resistance shown by certain cells with increase of current. Such cells may contain cuprous oxide and sodium silicate, and are used as automatic cut-outs for lighting systems.

electroscope. A device for detecting electrical charges or gaseous ions. Cf. *Curie, emanation, radioscope.* **gold-leaf-** Two strips of gold leaf suspended from an insulated conductor and



Gold-leaf electroscope.

enclosed in a glass vessel. **measuring-** An insolated gold leaf mounted in a closed case having an adjustable insulated plate which can be rotated so that an electrostatic and



Measuring electroscope.

gravitational balance is established. The position of the leaf is read in a low focus microscope.

electroscopy. The measurement of the degree of ionization of a gas in terms of the rate of fall of the leaf of a charged gold electroscope.

electrosol. A colloidal solution of a metal obtained by passing electric sparks between metal electrodes immersed in distilled water. See *collosol.*

electrostatic. Pertaining to electric charges at rest; as, the accumulation of electrons or an electric field of force. **e. capacity.** The ratio of quantity of electricity to difference of potential. **e. law.** See *Coulomb.* **e. units.** Esu or e.s.u. A system of electrical units based on static data. See table under *electrical.*

electrostenolysis. The precipitation of metals within the pores of a membrane by electrolysis.

electrostriction. (1) The contraction of the solvent of a solution resulting from the attractions of the water dipoles by the ions of the solute. (2) Mechanical deformation due to the application of an electric charge; the reverse of piezoelectricity.

electrosynthesis. Synthetic reactions caused by an electric current; especially those used in organic synthesis.

electrotaxis. Electrotropism. The movement or motion of living cells caused by an electric current.

electrotropism. Electrotaxis.

electrotyping. The reproduction of type, reliefs, etc. by copper-electro deposited on the layer of graphite with which the mold or object has been covered.

electrovalence. A fundamental type of atomic linkage corresponding with ionised or polar linkages, and opposed to covalency. It is due to the transfer as distinct from sharing of electrons. Cf. *polar, non-polar bonds.*

electrowinning. The separation of metals (as zinc or copper) from their ores by electrolysis. Cf. *electrorefining.*

electrum. (1) Amber. (2) An alloy of 80 % gold and 20 % silver, d.13.0–16.0, hardness 2.5–3.0.

elemecin. $C_{12}H_{16}O_3$ = 208.10. *3.4.5*-Trimethoxy propenyl benzene, iso-elemicin, $C_6H_2(OMe)_3C_3H_5$. An aromatic ether d.1.073, b.153, from elemi.

elemene. $C_{15}H_{26}$ = 206.2. A hydrocarbon, d.0.883, b_{10mm}.119, from elemi.

element. Matter which consists of atoms of one type; hence, a substance which cannot be further decomposed by chemical means; a chemical unit or an ultimate constituent of matter. There are 92 possible elements from hydrogen to uranium, inclusive. The atoms of an element are chemically alike but may differ physically, hence an e. may consist of a mixture of two or more atoms of different mass which have similar chemical properties but different atomic weights (isotopes). An element, while chemically undecomposable, may consist of two or more isotopes, and the atomic weight is the mean of the atomic weights of the isotopes calculated in the proportion of the amounts of the individual isotopes present. The elements of higher atomic weight are radioactive, indicating their complex nature (subatomics). **abundance of-** See *abundance.* **alkaline-** E. of the first group of the periodic system; Li, Na, K, Rb, and Cs. **basylous-** E. of the first, second, and third groups of the periodic system, located in the upper right half of the periodic table, whose oxides form bases with water. **bio-** See *bioelements.* **bridge-** E. in the lower half of the periodic table, especially those of the rare earth metals, which show a gradation of properties from one to the other. **Bunsen-** *Bunsen cell.* **chemical-** Element. **dvi-** See *dvi-.* **electrical-** Galvanic, or voltaic cell. **earthy-** E. of the third group of the periodic system; *e.g.*, Al, Sc, etc. **eka-** See *eka element.* **electrical-** An electrolytic cell. **electronegative-** E. whose atoms have more than four valency electrons. They are located on the left of the periodic table. **electropositive-** E. whose atoms have less than four valence electrons. They are located on the right in the periodic table. **extinct-** The supposed e. of very low atomic weight, which may have formerly existed on the earth but have become extinct on account of the age of the earth; *e.g.*, nebulium, a hypothetical constituent of certain planetary nebuli giving characteristic spectral lines which seemed to indicate a low atomic weight but which are now considered due to oxygen and nitrogen. **future-** The hypothetical e. of very high atomic weight which may in future appear on our earth on account of evolutionary processes and gradual condensation. (Cf. *old age theory, hypon, transuranium.*) **gaseous-** E. which are, under normal conditions, in the gaseous state: H, O, N, Cl, F, and the noble gases. **group-** E. belonging to the same group in the periodic system, as opposed to period-elements. **haloid-** E. of the seventh group of the periodic table: F, Cl, Br, and I. **heating-** A unit of resistance wire used in heating apparatus. **inert-** E. of the zero group of the periodic table; (the noble gases He, A, Kr, Xe, and Nt), which are electrically inert, and of which very few compounds are known. **liquid-** E. which are in the liquid state under normal conditions; bromine and mercury. **metallic-** E. of the lower half and right upper half of the periodic table; the light-metals, and heavy-metals. **negative-** Electronegative-. **non-metallic.** E.

located in the left upper half of the periodic table, q.v. **normal-** Standard cell. **period-** An e. whose properties are closely related to the e.s. of the same period of the periodic table; *e.g.*, Mn-Fe-Co-Ni, Rh-Ru-Pd. Antonym: group element. **primal-** The original, nebulous form of matter from which all other elements are supposed to have evolved: the protyle, pantagon, or urstoff. **principal-** The fourteen most common, most abundant, and most important elements; *viz.* aluminum, calcium, carbon, chlorine, hydrogen, iron, magnesium, nitrogen, oxygen, phosphorus, potassium, silicon, sodium, and sulfur. Cf. *abundance*. **radio-** Any e. made artificially radioactive by bombardment with particles; as, radiosodium, radionitrogen. **radioactive-** Those e. of atomic numbers 82 to 92. **terminal-** E. of the zero-group of the periodic system which form the terminals of each period, *i.e.*, the noble gases or inert elements. **transition-** (1) E. of the fourth group of the periodic system which form the transition from light-metal to non-metal, light-metal to heavy metal, and heavy-metal to non-metal, *i.e.*, elements of the carbon group. (2) The triads Fe, Co, Ni; Ru, Rh, Pd and Os, Ir, Pt which connect the seventh and first group. (3) The e. from Ti to Ni, Zr to Pd, and Hf to Pt which connect the A series in the periodic system. **typical-** The e.s. of the second period of the periodic system, which show the typical characters of each group —neon, sodium, magnesium, silicon, phosphorus, sulfur, and chlorine.

Note

For alphabetical list of elements giving *atomic weights* and *atomic numbers*, see *atomic weight*.

For numerical list of atomic numbers including *valency* and *atomic structure* of elements, see *periodic chain*.

See also *ions*, *ionic numbers*, *radioactive elements*.

For a list of *isobars*, *isotopes*, see *abundance*, *displacement series*, *isomorphs*.

HISTORICAL TABLE

Prehistoric and Archaic Time:		
	carbon	
	sulfur	
	gold	
	silver	
4000 B.C.	copper (Egypt)	
3500 B.C.	iron	
?	lead	
1600 B.C.	tin (Chaldaea)	
1000 B.C.	antimony	
300 B.C.	mercury (Theophrastus)	
Alchemistic period:		
1220	arsenic	Albertus Magnus
1450	bismuth	Basil Valentine
1520	zinc	Paracelsus
1669	phosphorus	Brand
Beginnings of Chemistry:		
1773	cobalt	Brandt
1750	platinum	Wood
1751	nickel	Cronstedt
1758	sodium in salts	Marggraf
1758	potassium in salts	Marggraf
Founding of Chemistry:		
1766	hydrogen	Cavendish
1772	nitrogen	Rutherford
1774	oxygen	Priestley
1774	chlorine	Scheele
1774	manganese	Scheele, Gahn
1774	barium	Scheele
1782	tellurium	Müller
1782	molybdenum	Hjelm
1783	tungsten	d'Elhujar
1787	strontium	Cruikshank
1789	zirconium	Klaproth
1789	uranium	Klaproth
1789	titanium	Gregor
1794	yttrium	Gadolin

HISTORICAL TABLE—(*Continued*).

1926 illinium.....	Hopkins
(magneto optic method)	
1930 virginium.....	Allison and Murphy
1931 alabamine.....	Allison, etc.
(neutron bombardment)	
1935 ekarhenium.....	Rolla
1935 ekaosmium.....	Rolla
(artificially produced)	
1936 ausonium (No. 93)..	Fermi
1936 esperium (No. 94)..	Fermi
(chemically isolated)	

elementary. (1) Ultimate, simple, fundamental. (2) Pertaining to elements. **e. analysis.** The determination of carbon and hydrogen in organic compounds. Cf. *analysis*. **e. charge.** The charge on an electron, e = 4.770 × 10^{-10} e.s.u. **e. molecule.** A combination of similar atoms; as, O_2 or S_4. **e. space.** The space surrounding the positively charged nucleus in which the electrons are arranged in definite positions. Cf. *dynad*.

elementide. A group of atoms or elements which are transferred as whole complexes during a chemical reaction.

elemi. (1) Gum elemi. A soft, white or yellowish, aromatic resin from *Canarium commune*, a Burseraceae of the Philippines. Used in pharmacy in plasters and ointments; or to impart toughness to varnishes. Cf. *nauli gum*. (2) Originally the resin of *Amyris elemi fera*. **e. oil.** An essential oil, d.0.870–0.910, from e. containing dipentene.

elemic acid. $C_{35}H_{56}O_4$ = 540.6. A colorless, crystalline acid derived from elemi.

elemicin. $C_{12}H_{16}O_3$ = 208.1. *1*-Allyl-*3.4.5*-trimethoxybenzene. A colorless liquid, d.1.063, b.144, from elemi oil. **iso-** Elemecin.

elemin. $C_{40}H_{68}O$ = 564.7. A crystalline resinous substance in elemi.

elemol. $C_{15}H_{26}O$ = 222.2. A camphor from elemi, α- m.46, $b._{10mm}$143, d.0.941; β- $b._{10mm}$144, d.0.943.

elemonic acid. An acid, m.220.5, from elemi.

eleonorite. $Fe_6P_4O_{19}.8H_2O$. A hydrous iron phosphate occurring in brownish, rhombic masses, d.2.52–2.59, hardness 7.

eleoptene. The liquid terpene or hydrocarbon of an essential oil, as compared with the solid part or stearoptene.

eleostearic acid. $C_{18}H_{30}O_2$ = 280.27. Elaeomargaric acid, octadeca-*9.11.13*-trienoic acid*. $Me(CH_2)_7(CH{:}CH)_3(CH_2)_3COOH$. An unsaturated, aliphatic, monobasic acid from the oil of the seeds of *Elaeococca vernicia*. Colorless rhombic scales, α- m.48; β- m.71; insoluble in water, soluble in alcohol or ether. Both, α- and β- occur in tung oil. ε-. Couepic acid. A solid, m.75, from the fat of the seeds of *Couepia grandiflora*, a Rosaceae of South America.

elevation. (1) Anything which projects or rises above the surrounding surface; *e.g.*, altitude. (2) A rise or increase, as the elevation of temperature.

d'Elhujar, Juan José and Fausto. de Elhuyar, de Luyart. Two Spanish chemists, brothers, who discovered ceria and tungsten (1783).

elimination. The expulsion or excretion of waste materials from the body.

eline. El = 218 (?). Ekaiodine. A supposed halogen element, atomic number 85, occurring as a black metallic solid or as brownish crystalline masses, d.5.9 (?), m.360 (?), b.430 (?), insoluble in ordinary solvents. It is widely distributed, but in small quantities, and is found in the water of Great Salt Lake and in some deserts oils of Western U.S. **e. chlorides.** El_xCl_y. White waxy masses or crystalline fibres, soluble in water, alcohol or ether. **e. nitrate.** $ElNO_3$ (?). A yellowish white solid, soluble in water or carbon tetrachloride. **e. sulfate.** $El(SO_4)_2$ (?). A white, hygroscopic solid, soluble in water, alcohol or ether.

elinvar. An alloy of Fe, Ni and Cr, used in the manufacture of hair-like watch springs [*elasticity invariable*].

elixir. (1) A liquid pharmaceutical preparation for the administration of drugs in an attractive and pleasant form. They are usually sweetened and aromatized alcoholic liquids or cordials. (2) In alchemical language, the principle of everlasting life and youth, and the means of converting the baser metals into gold, (philosopher's stone).

elkerite. Pseudofucosan. A native bitumen formed by the slow oxidation of crude oil. It is a fucose pentosan. Cf. *fucosan*.

ellagic acid. $C_{14}H_6O_8$ = 302.05. Gallogen. A yellow, odorless, tasteless, crystalline powder, $d._{18°}$1.667, decomp. on heating, insoluble in ether, sparingly soluble in hot water or alcohol. Soluble in alkalis. It occurs in many tannins; as, myrobalans, dividivi and valonia.

ellagitannic acid. $C_{14}H_{10}O_{10}$ = 338.1. A tannin-like substance extracted from the pods of *Caesalpinia coriaria*, a Leguminosae, and the root bark of *Punicia granatum*, a Punicaceae; slightly soluble in water.

Elliot tester. An apparatus for determining the flash-point of illuminating oil.

elliptone. $C_{20}H_{16}O_6$ = 352.0. A toxic constituent of Derris root (*D. elliptica*).

elm bark. Ulmus, elm bark, slippery elm. The bark of *Ulmus campestri* or *U. fulva*, an Urticaceae, used as demulcent, and an adulterant for cassia. Cf. *ulmin, ulmic acid*.

elpidite. $Na_2ZrSi_6O_{15}.3H_2O$. A reddish, pearly, sodium zirconium silicate, d.2.5, hardness 7.

elscholtzaldehyde. $C_6H_6O_2$ = 110.06. *3*-Methyl-*2*-furaldehyde. $Me.C_4H_2O.CHO$ from *Elscholtzia* species, a Labiatae.

elscholtzic acid. $C_6H_8O_3$ = 126.06. *3*-Methyl pyromucic acid. The acid $Me.C_4H_2O.COOH$, from *Elscholtzia* species, Labiatae.

eluant. A liquid used for the extraction of one solid from another, *e.g.*, in chromatography, q.v.,

eluate. The solution resulting from elution.

elution. A process of extracting one solid from another.

elutriation. The process of washing and separating suspended particles by decantation.

elwotite. A hard alloy of tungsten containing not more than 30 % titanium.

Em. The symbol for emanation (see *radon*).

em. The c.g.s.-electromagnetic unit of the quantity of electricity.

eman. A radioactive unit for the Rn content of the atmosphere. 1 eman = 10^{-10} curie per liter. Cf. *mache unit*.

emanation. Em. An element, atomic number 86, consisting of the isotopes radon, thoron and actinon. A gaseous disintegration product of radio-active substances. **actinium-**, AcEm, Actinon. An isotope of radon, a disintegration product of AcX, and the parent-substance of AcC'. **radium-**, RaEm, radon, Rn. Disintegration product of radium and the parent-

substance of RaC'. **thorium-**, ThX. Thoron. An isotope of radon. The gaseous disintegration product of ThX, and the parent-substance of ThC'. See *radioactive, isotopes.*

e. electrometer. A delicate electrometer for detecting radio-activity in substances, such as spring water or minerals. **e. electroscope.** An electroscope designed by Rutherford for measuring the amounts of emanation from radio-active bodies.

emamium. An early name for actinium.

Embden ester. A glucose-phosphoric acid ester formed in muscle during muscular activity.

embedding. The fixing of tissues in a solid material (*e.g.*, paraffin) so that they can be cut into thin sections. **e. bath.** A device for heating paraffin and placing tissues in the molten liquid. **e. oven.** An incubator with drawers.

embeliate. A salt of embelic acid.

embelic acid. $C_{18}H_{28}O_4$ = 308.22. Embelin, embellic acid. The active principle, m.142, from the berries of *Embelia ribes*, a Myrsinaceae; used medicinally against tapeworms.

embelin. Embelic acid.

embellic acid. Embelic acid.

embolite. 2AgBr.3AgCl. A rare silver chloride-bromide occurring as grayish mases, d.5.8, hardness 1.5.

embryology. The branch of biology which deals with the development of an organism from a single cell or fertilized egg up to its stage of independent life.

embutal. Pentobarbital.

emerald. A green variety of beryl, used as a precious stone. **oriental-** A green variety of corundum. **e. green.** Copper aceto-arsenite.

emergent column. The portion of the thread of a thermometer which is not immersed in the substance whose temperature is being measured. A correction for its contraction is given (for mercury in glass) by: $N(T - t) \times 0.000156$, where N is the number of degrees on the emergent stem, T the temperature as read, and t the temperature at a point half-way up the emergent column as given by a second similar thermometer.

emeri. Emery.

Emerson calorimeter. A device for rapidly testing the heat value of coals or fuel oils.

emery. A dark, impure variety of crystalline corundum mixed with oxides of iron; used in powder form as a polishing, grinding, and abrasive material. **e. cloth.** An abrasive fabric coated with glue and emery. **e. paper.** A paper coated with glue and emery, used in place of sand paper.

emetamine. $C_{29}H_{36}O_4N_2$ = 476.29. An alkaloid from ipecac. Colorless crystals, m.156.

emetic. A drug which causes vomiting; used especially in cases of poisoning; *e.g.*, any one of the following taken in warm water:

	(8 oz.)	250	cc.
Mustard powder...	1 tablespoon	15	gm.
Common salt.....	2 tablespoons	30	gm.
	(4 oz.)	125	cc.
Zinc sulfate.....	30 grains	2	gm.
Copper sulfate.....	5 grains	0.3	gm.
Ammonium carbonate.....	30 grains	2	gm.

mechanical- Causing vomiting by tickling the throat with a feather.

emetine. $C_{30}H_{40}O_5N_2$ = 508.26. An alkaloid related to cephaeline from the root of *Cephaelis ipecacuanha*, ipecac. Colorless, transparent crystals, or white powder, m.74, sparingly soluble in water, soluble in alcohol or chloroform. Used medicinally as a specific against ameba, especially in hypodermic medication. **iso-** $C_{29}H_{44}O_4N_2$ = 480.32. An alkaloid from ipecac, m.98. **e. hydrochloride.** $C_{30}H_{40}O_5N_2.2HCl$ = 581.26. A white crystalline powder, m.53, soluble in water or alcohol; used hypodermically similarly to emetine.

emetoid. A ten per cent trituration of the alkaloids of ipecac, containing emetine and cephaeline hydrochlorides; used as an expectorant and eliminant.

emf. or **E.M.F.** Abbreviation for electromotive force.

emission. The liberation or sending out of energy by a substance; as, radiations from atoms, heat from bodies. Cf. *scattering, line.* **e. spectrum.** See *spectrum.*

emitron. An electron-tube (q.v.) used in television.

emmenagogue. A drug which produces or increases menstrual flow; *e.g.*, apiol, ergot, quinine, cotton root bark, oil of savin.

emmenin. A crystalline female sex hormone related to oestrone.

emmer. A variety of wheat which was formerly very abundant in Central Europe and the Near East.

Emmerling tube. A glass cylinder filled with glass beads; used for the absorption of gases by liquids.

emodin. $C_{15}H_{10}O_5$ = 270.09. *1.3.8*-Trihydroxy-6-methylanthraquinone. An anthraquinone derivative occurring in many *Rhamnus* species; the purgative principle of rhubarb, aloe, senna, etc. Orange colored, monoclinic prisms, m.234, sparingly soluble in water, soluble in glacial acetic acid; used as a purgative. **aloe-** 1.9-dioxy-3-carbinolanthraquinone. An isomer of emodin and constituent of aloes. found in cascara, senna and frangula; it is related to chrysophanic acid and rhein.

emollient. A drug applied externally to soften or soothe irritated or tense skin; *e.g.*, zinc stearate, boric acid, bismuth subnitrate, talcum.

empiric. Knowledge which is gained by experience, without theoretical considerations. Cf. *scientific.*

empirical formula. A chemical formula which shows the number and variety of atoms, but does not indicate the way in which the atoms are linked together; *e.g.*, $Fe_2S_3O_{12}$ is the empirical formula for $Fe_2(SO_4)_3$.

emplastrum. An adhesive plaster.

emplectite. $CuBiS_2$. A native, copper, bismuth sulfide occurring in grayish, metallic masses, d.6.4, hardness 2.5; soluble in nitric acid.

empyreal air. See *oxygen.*

empyreumatic. Any odorous substance formed by the destructive distillation of vegetable or animal matter. **e. oils.** The oily liquids produced by destructive distillation of vegetable or animal matter; *e.g.*, creosote, oil of cade, oil of tar.

emu or **e.m.u.** Abbreviation for electromagnetic units.

emulsic acid. $C_{21}H_{42}O_{10}N_6$ = 562.8. An acid substance derived from emulsin.

emulsification. The process of making an emulsion. Thus if two pure immiscible liquids are agitated they form an unstable emulsion. To make a stable emulsion, that is, prevent the

droplets from coalescing, an emulsifier, (q.v.), must be added. **de-** The breaking up of an emulsion either by (a) addition of an excess of the dispersed phase, (b) destroying the emulsifying agent, (c) heating, (d) freezing or (e) centrifuging.

emulsifier. Emulsifying agent. A substance used to make an emulsion more stable; as, ammonium linoleate. Its action is explained by either:

A. Surface Tension Theory: The e. lowers the surface tension and thus lowers the tendency of the droplets to coalesce.

B. Oriented Wedge Theory: The e. forms an oriented zone between the two phases.

C. Viscosity Theory: The droplets are surrounded by a viscous film of e.

emulsify. To make an emulsion.

emulsin. Synaptase. An enzyme contained in almonds, and the seeds of the Rosaceae. A white, amorphous, albuminous powder, soluble in water, and contains 48.7 % C, 7.1 % H, 28.7 % O, 14.1 % N, and 1.25 % S. It hydrolyses glucosides to glucose and their other combined substance; as amygdalin to dextrose, benzaldehyde and hydrogen cyanide.

emulsion. Emulsoid. A fluid consisting of a microscopically heterogeneous mixture of two phases, both of which are liquid at ordinary temperatures; *e.g.*, liquids which do not mix, such as oil and water, and in which one liquid forms minute droplets suspended in the other liquid; *e.g.*, oil droplets in water, or water droplets in oil. Cf. *colloids, emulsifier.*

emulsoid. Emulsion.

en. (1) Greek prefix meaning in, on, or at. (2) A suffix which often indicates a hydrocarbon or cyclic compound, *e.g.* thiophen. (3) A prefix indicating a C:C bond; as, enamic, enolic. Cf. *ene.*

enamel. (1) A paint which dries with a gloss. (2) A vitreous, opaque or transparent glaze, which is fused over metal or pottery, as: **grayware-** A mixture of 50 % feldspar, 30 % borax with Na_2CO_3, $NaNO_3$ and cryolite. **jewelry-** A mixture of 14 % silica, 20 % boric acid, 10 % $NaNO_3$ and 23 % KNO_3. **white cover-** A mixture of 10–22 % quartz, 18–33 % feldspar, 18–34 % borax, 3–10 % soda, 2–5 % sodium nitrate, 3–17 % cryolite. These may be colored with a metallic oxide, generally Pb_3O_4.

enamic form. The amine form of an imine, which is characterized by the radical >C:CH.NO—; cf. *enimization.*

enanthaldehyde. $C_6H_{13}CHO$ = 114.1. Heptylic aldehyde, oenanthylic aldehyde, heptanal, oenanthal, heptoic aldehyde, oenanthic aldehyde. A colorless volatile liquid, d.0.85, b.155, slightly soluble in water, soluble in alcohol or ether. Used in organic synthesis.

enanthic acid. Heptoic acid.

enanthic acid. Heptoic acid. **e. aldehyde.** Enanthaldehyde. **e. ether.** $C_9H_{18}O_2$ = 158.2. Cognac oil, oenanthylic ethyl-ether, ethyl pelargonate, $C_6H_{13}.O.C_2H_5$. A colorless oily liquid, insoluble in water, soluble in alcohol or ether. Used in organic synthesis and in flavoring extracts.

enanthine. Heptine.

enanthol. Heptyl alcohol.

enanthotoxin. $C_{17}H_{22}O_3$ = 306.17. A poisonous resin from the rhizomes of *Oenanthe* (five-finger root).

enanthyl. The monovalent radical, C_7H_{13}—, derived from hexane.

enanthylic acid. Enanthic acid.

enantiomers. Optical isomers which are related as object and non-superimposable image. Cf. *enantiomorph.*

enantiomorph. (1) A crystal which corresponds with another crystal as an object with its image. (2) The opposite optically-active substance; the dextroform is the enantiomorph of the levoform and vice versa.

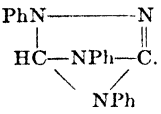
enantiomorphus. Related to one another as object and mirror image; as, an optically active substance which crystallizes in enantiomorphs.

enantiotropic. Existing in two crystal forms, one stable above, the other below a certain temperature (transition point q.v.)

enantiotropy. The phenomena of occurring in enantiotropic, (q.v.), forms.

enargite. Cu_3AsS_4. Grayish-black, metallic, rhombic crystals, d.4.3–4.5, hardness 3, soluble in nitric acid forming free sulfur.

endo- A prefix indicating a "bridge" linkage (or linkage which joins two non-adjacent atoms in a ring) in an organic molecule; *e.g.*, nitron is an endo-compound of 1.2.4. triazole:



endocrine. Pertaining to the secretion of ductless glands; as, hormones, q.v.

endogenous. Generated within, or originating within the body. **e. purines.** The purine bodies of excretions, which are the waste products of metabolism. Cf. *exogenous purines.*

endomorph. A mineral enclosed within another (the perimorph).

endosmosis. The diffusion of a liquid through an organic membrane; *e.g.*, into a cell. Cf. *exosmosis.*

endothermic. The absorption of heat. Antonym: exothermic. **e. compound.** A compound absorbing heat during its formation, and liberating heat on its decomposition. **e. reaction.** A chemical change which proceeds slowly and absorbs a definite number of calories. In an endothermic reaction the stable exothermic compounds are transformed to unstable endothermic compounds.

endotoxin. The poisonous substances of bacteria which remain within the bacterial cell during its life, but which are set free by autolysis after cell death.

endoxerosis. The internal decline of a plant.

endoxy- A prefix indicating oxygen in a ring.

end point. (1) That stage in titration at which the reaction is complete. (2) The point of balance between two forces.

-ene. A suffix which indicates: (1) a hydrocarbon of the ethylene and benzene series. Cf. *-diene,-yl.* (2) A cyclic compound; as, terpene, menthene. (3) A bivalent radical with points of attachment on separate C-atoms; as, ethylene and ethylidene. Cf. *-idene.*

energetics. (1) A branch of physics dealing with forces at work. (2) A branch of philosophy which denies the existence of matter as a passive inert substance and conceives the universe as arrangements of energies distributed in space.

energon. An indivisible unit of energy; see *ergon, quantum.*

energy. Capacity or power to do work and overcome resistance; *e.g.*, heat, light, electricity,

UNITS OF SPECIFIC ENERGY*

		Meter-gravity, lat. 45°	Meter-leo or dynamic meter	Joule. / gm.	Kw. hr./ tonne or mw. hr./ gm.	Water-degree C. or cal./gm.

* From F. J. W. Whipple, *Nature*, vol. 121, p. 356, 1928.

chemical action or mechanical energy. (See table of *energy units*.) It is described as the work done by the force which produces either a change in the velocity of a body or a change in its shape and configuration, or both. It can be defined by *force* multiplied by *distance*, or as *one-half mass* multiplied by the *square of velocity*. **atomic-** See *atomic*. **available-** Free-. **chemical-** E. involved in chemical changes. See *thermodynamics*. **conservation of-** The concept that e. may be transformed from one form to another, but that it cannot be destroyed or created. **creation of-** The concept that e. is created when matter is annihilated; as, in the interior of a star. Cf. *mass-energy cycle*. **degradation of-** The tendency for e. to be always

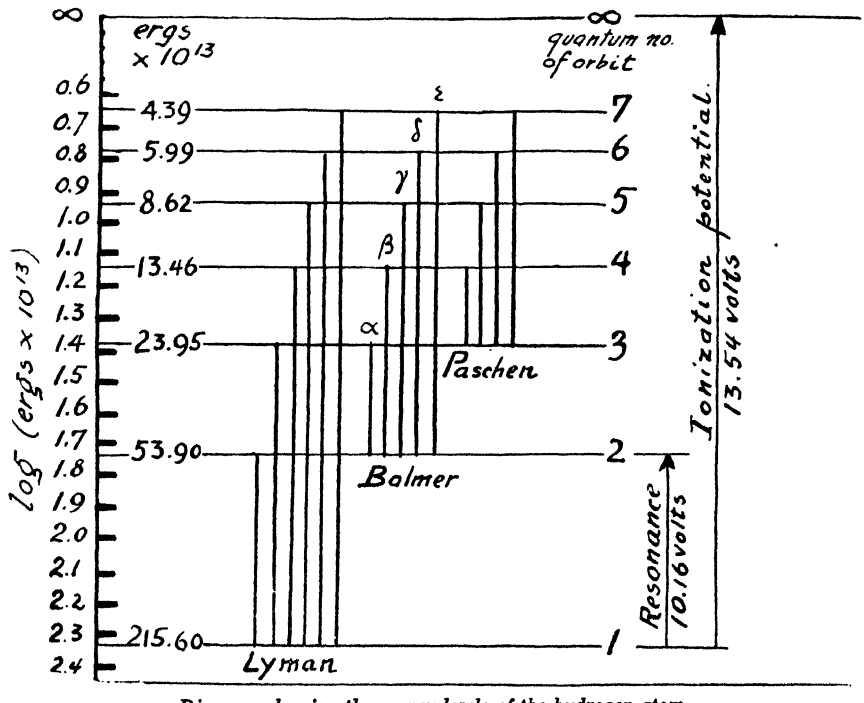

Diagram showing the energy levels of the hydrogen atom.

CONVERSION FACTORS FOR ENERGY UNITS
(Smithsonian Physical Tables, p. 197, 1920).

	Joule	*Kilogram meter*	*Foot-pound*	*Gram-calories (20°C.)*	*Kilowatt-hours*
1 joule (absolute)	1	0.1020	0.7376	0.2390	0.2778×10^{-6}
1 kilogram meter	9.807	1	7.233	2.344	2.742×10^{-6}
1 foot pound	1.356	0.1381	1	0.3240	0.3766×10^{-6}
1 gram calorie	4.184	0.4167	3.086	1	1.162×10^{-6}
1 kilowatt hour	3600000	367100	2655000	860300	1

changing to a lower form, *e.g.*, into heat (Kelvin). **destruction of-** The conversion of e. into matter, the reverse of the creation of e. Cf. *mass-energy cycle.* **dissipation of-** Degradation of-. **dynamic-** Kinetic. **electric-** Electricity. **free-** The available e. of a substance; the amount of e. which can be utilized for work. The change in the free e. of a reacting substance is a measure of its affinity. **ionization-** Ionization potential. **kinetic-** The power of a body due to its motion. It equals the product of half its mass and the square of its velocity. Cf. *kinetics, Boltzmann's law.* **latent-** Potential e. **lattice-** The forces which hold the atoms together in a crystal, q.v. **mechanical-** E. manifesting itself in mechanical work. **medial-** The e. of a medium or solvent on which its dielectric powers and its powers of ionization, association, tautomerism, etc. depend. It is related to the latent heat of evaporation. **potential-** Static, latent e. The e. resting unreleased in a body due to its position, composition or condition; as, a lifted weight, an endothermic compound, or a compressed gas. **radiant-** See *radiations.* **solution-** The e. forces between the molecules of solute and solvent. Cf. *bond, liquids.* **specific-** The power of a body due to its relative position (potential e.) and motion (kinetic e.). See table for units. Potential-. **thermal-** See *heat.*

e. change of atom. The change of voltage, V, where λ is the wavelength; $V = 12{,}336/\lambda$. **e. diagram.** A figure giving a relative picture of the stationary states of a radiating atom. See figure. Cf. *spectrum, Bohr atom, quantum, hydrogen atom.* **e. levels.** The stationary states or orbits of an atom. An electron changing from one to another will either absorb (excitation) or emit (radiation) energy. In the e. diagram of hydrogen the energy, in 10^{13} ergs, required to cause an electron to change its orbit is indicated by the quantum number, q.v., plotted on a logarithmic scale. The lines connecting the various levels correspond with the sources of the spectrum lines; *e.g.*, Lyman, Balmer, and Paschen series. Cf. quantum numbers. See figure. **e. mass cycle.** See *mass energy cycle.* **e. quanta.** See *quantum theory, Stoner quanta.* **e. units.** Units of energy are based upon the work done by a certain force which either produces a change in velocity (= change of kinetic energy), or a change of condition or shape (= change of potential energy), or both. The kinetic energy of mass, m, moving with velocity, v, is $K = \frac{1}{2}mv^2$. The potential energy of a mass, m, raised through a distance, h, is $P = mgh$, where g is the acceleration due to gravity. The energy units resolve themselves into the fundamentals (see table, p. 306):

energy $= ML^2T^{-2}$ = mass × (velocity of light)^2

or into units of mass (or weight), length, and time, and can be expressed in the C.G.S. or F.P.S. systems, thus:

unit of velocity: $v = LT^{-1}$
unit of acceleration: a = 981 C.G.S. units
unit of force: F = Ma
unit of pressure: p = dyne per cm^2 (981 C.G.S. units)
p = atmosphere (1,013,663, C.G.S. units)
unit of work: erg = dyne per cm.
1 kilogram meter = 981×10^5 ergs

Practical conversion factors:

1 International joule = 1.00034 absolute joules.
1 absolute joule = 0.99966 international joules.
= 10^7 ergs.
= 0.101972 kilogram meters.
= 0.737560 foot-pounds.
= 0.277778×10^{-6} kilowatt-hours.

enesol. Mercury salicylarsenite.

engineering. Utilizing the physical properties of matter in inventing, designing, constructing, building and managing structures and machines. See applied *physics.* **chemical-** The branch of e. or chemistry concerned with the design, erection and operation of chemical plants.

Engler, Carl. (1842–1925). A German chemist noted for his work on petroleum and as an editor. **E. degree.** A relative unit of viscosity.

enhanced. Intensified, *e.g.*, the enhanced lines of a spectrum.

enidin. An anthocyanin and a split-product of enin.

enimization. An intramolecular rearrangement of amines and imines analogous to the keto-enol equilibrium:

$$\underset{\text{enamic form}}{-C:CH.NH-} \leftrightarrows \underset{\text{enimic form}}{-CH.CH:N-}$$

enin. A glucoside and coloring matter of black grape skins; hydrolyzed to enidin and glucose.

enndecane. Nonadecane.

ennea- A prefix indicating nine.

enneadekane. Nonadecane.

enol form. The alcohol form of a ketone characterized by the bivalent C=(OH)R radical. See *isomerism, desmotropy, ketone.*

enolic ester type. A compound of the enol form, $R_2C{=}C(OH)R$.

ensilage. (1) Silage, or fodder preserved in a silo. (2) The process of making silage.

ensmartis. Ferriammonium chloride.

enstatite. $MgSiO_3$. A grayish, rhombic, magnesium silicate, d.3.1, hardness 5.5.

enterokinase. An activating enzyme of the intestinal epithelium, which transforms trypsinogen to trypsin.

enthalpy. The heat content, H, per unit mass expressed in B.Th.U. per pound. $H = E + PV/J$, where E is internal energy, P absolute pressure (lb. per ft.^{2}), V specific volume (ft.^{3} per lb.) and J = joules equivalent (778 ft.-lb. per B.Th.U.)

entropy. The unavailable energy of a substance which is due to the internal (irregular and compensating) motion of the molecules; it is used internally and cannot be utilized for mechanical work. Cf. *free energy.* The state of molecular chaos of a system (Gibbs) or the extent to which an energy system has "run-down" (Tolman). Entropy is directly proportional to the quantity of heat contained in a body, and inversely proportional to its temperature; hence when a substance absorbs or radiates heat, a change in e. occurs. At absolute zero e. vanishes. The same concept is expressed by the statements: entropy tends to a maximum; free energy tends to a minimum; a reaction tends to an equilibrium, and at equilibrium, the entropy is at maximum.

-enyl. A suffix indicating a bivalent unsaturated hydrocarbon radical; as, ethenyl.

enzyme. A catalyst produced by living cells which has a specific action and optimum activity at a definite pH value. The classification is based upon the type of reaction, or the material (substrate) acted upon. The first e. crystallized was *urease* (Sumner 1926) later *pepsase* (Northrop, 1930), *trypase* (Northrop and Kunitz 1931) and *amylase* (Caldwell, Booher and Sherman 1931). They are generally proteins. The more common enzymes and their pH optima are:

Amylase, salivary	6.1–6.9
Amylase, pancreatic	7.0
Amylase, malt	4.6–5.2
Catalase	7.0
Erepsin, intestinal	7.7
β-Glucosidase	5.0
Lipase, pancreatic	8.0
Lipase, gastric	4–5
Lipase, salivary	7.6–7.8
Lipase, ricinus	4.7
Melibiase	5.5
Maltase	6.1–6.8
Maltase, Solanum indicum	5.5
Papain	4–7
Pectolase	4.5–6.7
Pepsin (on egg albumin)	1.2–1.6
Pepsin (on gelatin)	3.0–3.5
Pepsin, synthetic action	4.0
Phosphatase, bone	9.5
Phosphatase, plasma	8.8–9.2
Phosphatase, red blood cells	6.0–6.8
Phosphatase, plant sources	3.4–6.0
Phosphatase, synthetic action	9.4
Protease, autolytic (kidney, liver)	4.5
Rennin	5.4
Sucrase, intestinal	6.8
Sucrase, yeast	4.4–4.6
Sucrase, Solanum indicum	6.0
Trypsin, pancreatic	8.0
Trypsin, synthetic action	5.7
Tyrosinase	6–8
Urease	7.0

amylolytic- E. hydrolyzing starch to dextrin and maltose; *e.g.*, amylase, amylo-pectinase. **anti-** A substance which inhibits the action of an e. **apo-** See *holo-*. **holo-** The whole enzyme, which is divided into the apo-enzyme (or protein carrier) and the co-ferment (q.v.). **blood-** E. of the blood, q.v. **co-** See *coferment.* **coagulating-** E. changing soluble proteins to insoluble products; *e.g.*, thrombin, myosinase, rennet. **cytohydrolytic-** The enzymes which render cellulose soluble, *e.g.*, cytase, cellulase. **deamidizing-** E. hydrolyzing amines to ammonia and hydroxy acids or purine bodies; *e.g.*, deamidase, adenase, guanidase. **decarboxylizing-** E. splitting CO_2 from organic acids; *e.g.*, carboxylase. **desmo-** An insoluble e. linked to insoluble cell constituents. *Cf. lyo-.* **glycolytic-** E. hydrolyzing glucosides to glucose and residue; *e.g.*, glucosidase. **hydrolytic-** The large group of enzymes hydrolyzing carbohydrates to simpler sugars; *e.g.*, inulase, pectinase. **inactive-** A non-reactive e. Cf. *zymogen, optimal.* **inverting-** E. which change optically inactive sugars to optically active carbohydrates; or dextro-rotary to levorotary or vice versa; *e.g.*, invertase. **lipolytic-** E. hydrolyzing esters (fats, etc.) to fatty acids and alcohols; *e.g.*, lipases, butyrases. **lyo-** The soluble form of an e. which can be dissolved from the cell. Cf. desmo-. **pro-** A zymogen, q.v. **proteolytic-** E. hydrolyzing proteins to albumoses and peptones; *e.g.*, pepsin, trypsin. **oxidizing-** E. oxidizing alcohols or aldehydes to acids, or phenols to quinones; *e.g.*, oxidase, aldehydase, alcoholoxydase, phenolases. **reducing-** E. which reduce oxidizing agents such as hydrogen peroxide, *e.g.*, peroxidase, catalase. **yellow-** A compound of protein with lactoflavine phosphate, obtained from yeast.

e. elixir. A palatable preparation of pepsin and rennet used as general gastric tonic.

ENZYMES

A. HYDROLASES, or hydrolytic enzymes which hydrolyze complex compounds to simpler compounds according to the general equation $R.R' + H_2O = RH + R'OH$

1. carbohydrases		splitting carbohydrates
	cellulase	acts upon cellulose
	cytase	acts upon hemicellulose
	diastase, and amylase	act upon starch
	invertase	acts upon sucrose
	lactase	acts upon lactose
	maltase	acts upon maltose
	pectinase	acts upon pectin
	inulase	acts upon inulin
2. esterases		splitting fats
	lipase	fat to glycerol and fatty acid
	butyrase	fat to alcohol and fatty acid
	chlorphyllase	chlorophyll to phytol.
3. glucosidases		splitting glucosides
	emulsin (amygdalase)	beta-glucosides
	invertase	alpha-glucosides
	rhamnase	monosaccharides
	myrosinase	monosaccharides
	phytase	phytin to inositol
	tannase	tannin to gallic acid
4. proteases		splitting proteins
	peptase (pepsin)	to peptones
	tryptase (trypsin)	to peptides
	peptidase	to peptides
	ereptase (erepsin)	to aminoacids
	arginase	to urea
	carbamase	to amines
	nuclease	to nucleins
5. amidases		splitting urea
	urease	to CO_2 and NH_3
6. deaminases		liberating ammonia
	desamidase	aminoacids to hydroxy acids
	guanase	guanine to xanthine
	adenase	adenine to hypoxanthine
7. coagulases		coagulate proteins
	thrombase (thrombin)	fibrinogen to fibrin
	rennase (rennin)	caseinogen to casein
	chymase (chymosin)	casein to paracasein

B. ZYMASES, or fermenting enzymes which generally change monosaccharides to lactic acid, butyric acid or alcohol, etc.

1. alcoholases (yeast ferment, zymase) sugars
2. lactacidase ..... milk sugar
3. vinegar-oxidase ..... alcohol
4. endo-tryptase ..... peptids

C. OXIDASES, or oxidizing ferments.

1. aldehydases ..... aldehydes to acids
2. alcoholoxidases ..... alcohols to acids
3. phenolases ..... phenols to quinons
4. laccases ..... phenols
5. purine-oxidases ..... purines
6. uricase ..... urine
7. tyrosinase ..... tyrosine

D. REDUCTASES, or reducing enzymes,

1. hydrogenase ..... (in fresh milk)

E. CATALASES or catalyzing enzymes which decompose or synthesise, as

1. catalase ..... Hydrogen peroxide to water
2. nitrilase ..... Hydroxynitriles to aldehydes
3. oxynitrilase .. Aldehydes to hydroxynitriles
4. phosphatase .. Combine sugars and phosphates

F. ANTICATALASES, oppose catalaytic action:

1. cozymase ..... assists zymase
2. carboxylase ..... oxidizes —COOH to CO_2

enzymolysis. A chemical change produced by enzyme action.

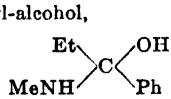
enzymosis. Enzymolysis, with special reference to fermentation.

eosin, eosine. $C_{20}H_8O_5Br_4$ = 648.84. Tetrabromfluorescein, bromeosin. Red, triclinic needles, insoluble in water, soluble in alcohol, alkalis; or acetic acid; used as a dye and indicator (alkalis = greenish fluorescence, acids = yellow). **soluble-** (1) Commercial eosin. (2) Eosin, yellowish.

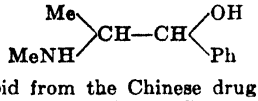
e. bluish. Erythrosin. **e. dyes.** Dyestuffs for wool and silk derived from fluorescein; *e.g.*, eosin, erythrosin, phloxin, uranin, rose bengal. **e. soluble.** Eosin, yellowish. **e., yellowish.** $C_{20}H_6O_5Br_4K_2$ = 724.83 or $C_{20}H_6O_5Br_4Na_2$ = 691.83. The potassium or sodium salt of eosin. A reddish to brownish powder, soluble in water or alcohol; used as a dye for coloring solutions, etc.

eosins. A group of dyestuffs derived from triphenylmethane.

ephedrine. $C_{10}H_{15}ON$ = 165.1. α-methylamino-α-ethyl benzyl-alcohol,



An alkaloid from *Ephedra gracilis*, a Gnetaceae of Europe. **levo-** α-phenyl-β-methyl-β-methyl-amino-ethanol,



An alkaloid from the Chinese drug MaHuang from *Ephedra equisetina*, a Gnetaceae. White crystals, m.38–40, soluble in water, alcohol, or chloroform; used similarly to e. hydrochloride. **pseudo-** The dextroisomer of α-phenyl-β-methyl-β-methyl amino ethanol. An alkaloid from *Ephedra vulgaris*, a Gnetaceae of Japan. Colorless crystals, m.115, insoluble in water, soluble in alcohol, ether, or chloroform. Cf. *hordenine, anhaline, adrenalin.* **e. hydrochloride.** $C_{10}H_{15}ON.HCl$ = 201.57. White needles, m.214, soluble in water or alcohol. Used medicinally as a mydriatic, and in ophthalmology as an atropine substitute. **levo-** Colorless crystals, readily soluble in water. Used as an adrenalin substitute to raise blood pressure; also in bronchial asthma and hay fever. **(pseudo-)** Yellowish crystals, m.175, soluble in water or alcohol. Used in ophthalmology as 10 % solution.

epi- (1) A Greek prefix indicating upon, through, or toward. (2) A prefix indicating a bridge or intramolecular connection; as,

epi-position. ϵ- The 1.6-position of naphthalene or other condensed rings.

epiborneol. $C_{10}H_{18}O$ = 154.20. 3-camphanol, 3-hydroxy camphane. An isomer of borneol, q.v.

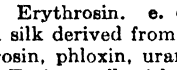
epiboulangerite. $Pb_3Sb_2S_8$. A metallic sulfantimonide of lead.

epicaine. A vasopressor and local anesthetic, said to be α-(3.4-dihydroxyphenyl)-β-(p-aminobenzoyl-β-diethylaminoethanol)-α-ethanone hydrochloride.

epicamphor. $C_{10}H_{16}O$ = 152.2. 3-Camphanone, 3-ketocamphane, β-camphor. An isomer of camphor in which the keto group is in the 3-position.

epicatechol. $C_{15}H_{14}O_6$ = 290.11. *d-* or Catechol-c. Colorless prisms, m.245, from gambir catechu. *l-* Thick white prisms, m.245. *dl-* Colorless needles, m.225.

epichlorohydrin. C_3H_5OCl = 92.51. Chloropropylene oxide, *1*-chloro-*2.3*-epoxypropane,



A colorless liquid, $d_0°$.1.203, b.117, insoluble in water, miscible with alcohol or ether. Used as a solvent for resins and nitrocellulose, and in the manufacture of varnishes, lacquers, and cements for celluloid articles. Cf. *epihydrin.*

epichlorite. A basic, aluminum-iron silicate of the chlorite group.

epicyanohydrin. C_3H_5OCN = 83.07. Cyanopropylene oxide, β,γ-expoxybutyronitrile. Colorless prisms, m.162, soluble in hot water or alcohol.

epidichlorohydrin. $C_3H_4Cl_2$ = 110.95. *2-3*-Dichloropropene*. A colorless liquid, $d_{25°}$.1.209, b.96, insoluble in water, soluble in alcohol or ether; used as a solvent.

epididymite. $Na_2O.2BeO.6SiO_2.H_2O$. A beryllium silicate. Rhombic crystals, d.3.55.

epidosite. A crystalline schist derived from diabase.

epidote. $HCa_2(Al,Fe)_3Si_3O_{16}$. Pistacite. A crystalline schist which occurs commonly in gneisses, garnet rock, amphibolite, etc. Greenish, monoclinic masses, d.3.3–3.5, hardness 6–7, soluble in hydrochloric acid after calcination.

epidotization. The disintegration of feldspar, hornblende, augite and biotite into epidote.

epiethylin. $C_5H_{10}O_2$ = 86.07. Glycidyl ethyl ether, *2.3*-epoxy-*1*-ethoxypropane.

A colorless liquid, d.0.94, b.124; used as solvent for shellac, copals, synthetic resins, and gums.

epigenite. $Cu_7As_2S_{12}$. A sulfoarsenide of copper containing iron.

epiguanine. $C_6H_7ON_5$ = 165.1. 2-amino-6-methyl-8-oxypurine, methylguanine. A purine body found in the urine, especially during leukemia.

epihydric acid. Glycidic acid. **e. alcohol.** Glycidol.

epihydrin. C_3H_6O = 58.1. Propylene epoxide. The heterocyclic compound

A colorless liquid, d.0.859, m.35, soluble in water. **e. alcohol.** Glycidol. **e. carboxylic acid.** $C_4H_6O_3$ = 102.1. The monobasic acid

Colorless crystals, m.225.

epihydrinic acid. Glycidic acid.

epiiodohydrin. C_3H_5OI = 183.89. *1.2*-Epoxy-*3*-iodopropane, γ-iodopropylene oxide. A colorless liquid, d_{15}°.2.03, b.160, insoluble in water, but miscible with alcohol; used as a solvent.

epimeric. Having the relationship of epimerides, q.v.

epimerides. Epimers. An isomeric pair of substances differing only in the arrangement of H and OH on the last asymmetric carbon atom of a chain; as, *d*-glucose and *d*-mannose, or *d*-ribose and *d*-arabinose.

epimers. Epimerides.

epinephrine. The U.S.P. and B.P. name for adrenalin, q.v. **e. bitartrate.** Suprarenin.

epinine. $C_9H_{13}NO_2$ = 167.1. *3.4*-Dihydroxy phenyl ethyl amine, $(HO)_2C_6H_3(CH_2)_2NHMe$. Colorless crystals; synthetic substitute for epinephrine, used as vasoconstrictor.

episin. $C_{15}H_{12}N_2$ = 232.2. Methyldiphenylenamidoazol. Glassy prisms, m.195, insoluble in water, soluble in alcohol. Used medicinally as an anodyne and morphine substitute.

epipastic. A dusting powder.

epiphenylin. $C_9H_{10}O_2$ = 150.08. Glycidyl phenyl ether, *2.3*-epoxy-*1*-phenoxy propane, $O.CH_2.CHCH_2OPh$. A colorless liquid, d.1.11, b_{22mm}.131, used as solvent for shellac, resins and nitrocellulose.

epiphyte. An organism living on, but not feeding on another organism; *e.g.*, orchids.

epipolic. Fluorescent.

episol. A brand of sodium morrhuate used as sclerosing agent.

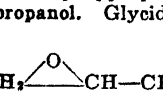
epispastic. A vesicant, or a drug which blisters the skin.

episperm. The membrane between the shell and kernel of a seed.

epistilbite. $Ca_2Al_4Si_{11}O_{30}$. A colorless, monoclinic calcium aluminum silicate, d.2.24–2.36, hardness 3.5–4.

e.p.m. Abbreviation for equivalents per million = p.p.m./equivalent weight in mgms. Used to express water analyses.

epoxy- A prefix indicating a —O— bridge in a molecule; as, $O.CH_2.CH_2$ epoxyethane*; $CH_2.CH_2CH_2$ 1.3-epoxypropane* cf. *methoxy-*, *ethoxy-*. **e. propanol.** Glycidol. **e. propionic.** The radical



e. propionic acid. Glycidic acid.

epsilon. The Greek letter ε. The symbol for ergon, etheron, dielectric constant, electrode potential, epiposition. ε. **acid.** *3-6*-Naphthylamine disulfonic acid.

Epsom salts. Magnesium sulfate.

epsomite. $MgSO_4$. A native magnesium sulfate occurring in colorless, rhombic prisms, d.1.7, hardness 2.

epuration. The purification of sugary liquors by defaction etc.

epuré. A bituminous mixture obtained from Trinidad; used for constructional work.

equation. (1) A symbolical expression of equality. (2) A chemical notation indicating a change or chemical reaction. The formulae of the reacting substances are placed on the left, those of the reaction products on the right, separated by the equality sign; this indicates that the total number of atoms of each kind on the left and on the right must balance. The equation:

(a) $2NaOH + H_2SO_4 = Na_2SO_4 + 2H_2O$

is translated into the statement: Two molecules of sodium hydroxide and one molecule of sulfuric acid will give one molecule of sodium sulfate and two molecules of water. The ionic equation:

(b) $Ba^{++} + SO_4^{--} = BaSO_4$

is translated into: One barium ion (furnished by any soluble barium salt) and one sulfate ion (furnished by any soluble sulfate or by sulfuric acid) will give barium sulfate (which relatively, is unionized, since itis almost insoluble). **analytical-** An equation showing the separation or decomposition of a compound into simpler constituents (see *analysis*). **electronic- Ionic-. ionic-** An equation indicating changes involving ions; *e.g.*, substances in solution. Cf. equation (b). **metathetical-** An equation expressing a metathesis. **molecular-** An equation indicating a molecular change or molecular reaction. Many molecular equations can be put into ionic form. In this case, the molecular equation indicates a specific instance of a certain reaction, while the corresponding ionic equation is the general statement of the reaction; *e.g.*, equation (a) in the ionic form becomes

(c) $2OH^- + 2H^+ = 2H_2O$,

which is the general equation for neutralization. **transmutation-** An e. which indicates the disintegration or synthesis of elements; thus,

$$_1H^1 + {}_5B^{11} \rightarrow 3{}_2He^4$$

means that element No. 5 (boron with isotopic weight 11) is bombarded by a proton (element No. 1, hydrogen with weight 1) and forms 3 atoms of element 2 (helium of weight 4). Similarily $_4Be^9 + {}_2He^4 \rightarrow {}_0n^1 + {}_6C^{12}$, where element No. 0 is a neutron. The sum of the atomic numbers (prefixed subscripts) as well as the sum of the isotopic weights (suffixed superscript) is the same on both sides.

e. of state. A group of mathematical expressions derived from the equation pv = RT, which define the physical conditions of a homogeneous liquid or gaseous system by relating concentration or volume (v), pressure (p), and absolute temperature (T) for a given mass of substance

(1) **Ramsay-Young equation** $p = kT - c$.
(2) **Van der Waal equation**

$$RT = \left(p + \frac{a}{v^2}\right)(v - b).$$

(3) Dieterici equation

$$p(v - b) = RTe - \frac{A}{RTv}.$$

(4) Clausius equation

$$RT = \left[p + \frac{a}{T(v + c)^2}\right](v - b).$$

k and c are constants depending on the volume, R is the gas constant, *a* the constant correcting for molecular attraction, and *b* the volume occupied by the molecules; A expresses the work done to overcome molecular attraction and e is the base of natural logarithms. See *gas constants, van't Hoff's factor.*

equilenin. $C_{18}H_{18}O_2$ = 266.2. *3*-Hydroxy-*17*-keto-estrapentaene. A sterol (q.v.) and sex hormone produced by the biological degradation of cholesterol occurring in the urine during pregnancy. See *cholane.*

equilibrium. A condition in which contending forces are balanced or equalized independently of time. Cf. *triple point, quadruple point, diagram.* **chemical-** The balanced state reached when chemical reaction apparently stops, that is, when the concentrations of reaction products and the original reacting substances are such that decomposition and recombination proceed with equal speed; as, $2Fe + 3H_2O \leftrightarrows 3H_2 + Fe_2O_3$. See *mass action.* The more general types are

	Acid-base e.	Oxidation-reduction e.
Maintained by.....	Buffer	Poiser
Determined by.....	pH-indicator	rH-indicator
Expressed as.....	pH	rH

disturbed- The removal of one or more reaction products or reacting substances from a chemical equilibrium, causing a shift of the equilibrium. *E.g.*, if a gas is formed during a chemical reaction, and is continuously removed, the reaction will be completed. **heterogeneous-** A chemical equilibrium between two (or more) phases; *e.g.*, a solid and gas, or liquid and gas. **homogeneous-** A chemical equilibrium in a single phase; *e.g.*, between two dissolved substances, or between gas and gas, liquid and liquid, etc. **invariant-** An e. in which the quantity of one component approaches zero. **ionic-** An e. which involves a balanced condition of ions. **kinetic-** The balanced state of two opposite reactions. Cf. *static e.* **molecular-** An e. in which the components are molecules. **monophase-** Homogeneous-. **polyphase-** Heterogeneous-. **stable-** A mobile condition which, after a casual displacement, is again restored. **static-** The equilibrium attained when all reaction ceases.

e. constant. Same as dissociation constant. See *Mass Action Law.*

equilin. $C_{18}H_{20}O_2$ = 268.2. *3*-Hydroxy-*17*-keto-estratetraene. A female sex hormone produced by the biological degradation of cholesterol. See *cholane.*

equipartition. (1) The orderly arrangement of atoms, *e.g.*, in a crystal. (2) The condition of molecules in a gas, where the molecules keep the same average distance apart under the same pressure.

equisetic acid. Aconitic acid.

Equisetum. A genus of herbaceous, spore-producing plants (horsetail, scouring rush, bottle brush) which are rich in silica.

equivalence. The relative combining powers of a set of atoms or radicals. **e. point.** The theoretical end-point of a titration, which differs by the titration error from the actual end-point obtained in practice.

equivalent. (1) The weight in grams of an element that combines with or displaces one gram of hydrogen. (2) The weight of a substance contained in one liter of a normal solution. This quantity is determined by (a) dividing the atomic weight of an element by its valency (*e.g.*, an equivalent of a ferrous salt = 56/2); or (b) by dividing the molecular weight of a compound by the valency of its principal atom or radical. (*E.g.*, an equivalent of NaOH is 40/1, an equivalent of sulfuric acid is 98/2.) (c) By calculating the quantity of a substance that combines with one gram of hydrogen or with 8 grams of oxygen. (3) Having the same valency. **electrochemical-** See *electrochemical.* **gram-** The equivalent weight of a substance in grams. *E.g.*, sodium hydroxide, 40 grams; sulfuric acid, 49 grams. **milli-** The weight of a substance in grams contained in 1 milliliter of a normal solution. **toxic-** The lethal dose (q.v.).

e. charge. The amount of electricity in a gram-e. of substance, *i.e.*, 6.06×10^{23} electrons or 96,494 Int. Coulombs. Cf. *Faraday.* **e. conductivity.** See *conductivity.* **e. weight.** A gram-equivalent; *e.g.*, the equivalent of a substance in grams, which is calculated by dividing its formula weight by its valency. (With *acids*, the number of replaceable H-atoms, with *bases* the number of OH-groups.)

Er. The symbol for erbium.

era. See *geologic era.*

erbia. Erbium oxide.

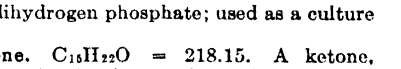
erbium. Er = 167.2. Atomic number 68. A rare earth metal, discovered in 1879 by Cleve in the erbia of Marignac (1878) and Berlin (1860). The erbia discovered and named in 1843 by Mosander was actually terbium. A metallic substance, d.4.77, insoluble in water, soluble in acids. Erbium is trivalent and forms red salts. It is not used in industry. **e. acetate.** $Er(C_2H_3O_2)_3.4H_2O$ = 416.77. Pink triclinic crystals, d.2.144, soluble in water. **e. nitrate.** $Er(NO_3)_3.6H_2O$ = 461.8. Pink crystals, soluble in water or alcohol. **e. oxalate.** $Er_2(C_2O_4)_3.10H_2O$ = 779.44. A reddish powder, d.8.64, decomp. 575. **e. oxide.** Er_2O_3 = 383.4. Erbia. An orange, amorphous powder, insoluble in water, soluble in acids. At high temperature it glows with a greenish light. See e. **e. sulfate.** $Er_2(SO_4)_3.8H_2O$ = 767.6. Rose-red crystals, soluble in water.

Erdmann, H. 1862–1910. A German chemist noted for qualitative and quantitative analytical methods. **E., Otto Linné.** (1804–1869). A German chemist noted for atomic weight determinations, and as author and editor (*Journal für praktische Chemie*). **E. float.** A small, partly filled, sealed glass tube for obtaining accurate burette readings. **E. reagent.** (1) Concentrated sulfuric acid containing 2 drops

of conc. nitric acid per 100 cc.; used as a reagent for alkaloids. (2) A solution of 1.8-aminonaphthol-4.6-disulfonic acid, which gives an intense red color with nitrites.

erdschreiber. An extract made by autoclaving earth with a solution of sodium nitrate and sodium dihydrogen phosphate; used as a culture medium.

eremophilone. $C_{15}H_{22}O$ = 218.15. A ketone, m.42, occurring in the wood oil of *Eremophila mitchelli*, a Myoporaceae of Australia.



erepsin. A proteolytic enzyme of the intestinal mucous membrane, the pancreatic juice, and other animal and vegetable tissues; it splits proteoses, peptones, etc. to amino acids.

ereptase. Erepsin.

erg. The C.G.S. unit of work or energy: the force necessary to overcome the resistance of one dyne acting through one centimeter.

1 Joule = 10^7 ergs.
1 Foot-poundal = 4.214×10^6 ergs.
1 gram-calorie (20°C.) = 4.184×10^7 ergs.

ergamine. Histamine.

ergine. (1) $C_{16}H_{17}N_3O$ = 267.14. A base obtained by hydrolysis from ergotoxine and ergotinine. Cf. *lysergic acid.* (2) Erogone. A categorical name for substances which exert biological catalytic effects in small quantities (*e.g.*, vitamins, hormones and enzymes).

ergobasine. Ergometrine.

ergochrysin. $C_{28}H_{28}O_{12}$ = 556.2. A yellow pigment, m.366, from ergot.

ergoflavine. $C_{15}H_{14}O_7$ = 306.1. A yellow pigment, m.344, from ergot, resembling vitexine.

ergometrine. $C_{19}H_{23}N_3O_2$ = 329.2. Ergobasine, ergotocin, ergostetrine. An active alkaloid from ergot; colorless crystals, m.159, $[\alpha]_D^{20}$ + 90°, soluble in water with blue fluorescence. Used in obstetrics.

ergon. (1) ϵ. or $h\nu$. An energy quantum, q.v. $\epsilon = 6.554 \times 10^{-27}$ erg. sec. $= h\nu$. (2) Vitazyme.

ergonovine. Ergometrine.

ergosine. $C_{30}H_{35}N_5O_5$ = 545.3. An alkaloid, m.228, produced by treating ergosinine with acid.

ergosinine. $C_{30}H_{35}N_5O_5$ = 545.3. An alkaloid, decomp. 228, from ergot.

ergostane. $C_{27}H_{48}$ = 372.5. The hydrocarbon corresponding with ergosterol and isomeric with cholestane. Cf. *sterols.*

ergosterin. Ergosterol.

ergosterol. Ergosterin. An inert alcohol derived from ergot, which occurs in yeast and is the provitamin of vitamin D. For its structure see *sterols.* It is a mixture of (1) $C_{26}H_{40}O$ = 368.31, a white solid, d.1.041, m.154, $b_{22mm.}$ 185; and (2) $C_{27}H_{42}O$ = 383.32, a colorless solid, m.165. Cf. *irradiation.* **irradiated-** Viosterol.

ergostetrine. Ergometrine.

ergot. Ergota, spurred rye, *Secale cornutum.* The dried sclerotium of *Claviceps purpurea*, a Hypocreaceae or fungus, occurring on numerous grasses; especially replacing the grain of rye, *Secale cereale, Gramineae.* From this hard, black, shining, and elongated mycelium or spawn, a number of different medicinal preparations are made, usually from the yearly and new crop of Spanish ergot. Among the numerous substances identified as active principles are: ergometrine, ergotoxine, histamine, tyramine, and acetylcholine. The inert substances of ergot are: ergotinine, ergothioneine, secalonic acid, sclererythrin, clavicepsin, ergosterol, fungisterol, vernine, amino acids, and secale aminosulfonic acid. See *ergotine.*

ergotamine. See *gynergen.*

ergothioneine. $C_9H_{15}O_2N_3S.2H_2O$ = 265.44. An inert alkaloid of ergot.

ergotic acid. An acid, $C_{15}H_{30}O_{15}(NH_2)SO_3H$, in ergot.

ergotine. A dark, red-brown extract of ergot, used medicinally as an emmenagogue, oxytocic, vaso-constrictor, and hemostatic. **E. Bonjean.** An aqueous extract of e., purified by alcohol. **E. Bombelon, E. Denzel, E. Keller, E. Kohlmann.** Extracts of ergot prepared by different methods. **E. Wernich.** A dialysed extract of ergot which has previously been purified by alcohol or ether. **E. Wiggers.** A dried extract of fat-free ergot. **E. Yvon.** An extract of ergot made with tartaric acid.

ergotinine. $C_{35}H_{39}O_5N_5$ = 609.6. The anhydride of ergotoxine and an alkaloid of ergot. Yellowish, long needles which darken on exposure to air, m.219–229, insoluble in water, soluble in alcohol or ether. It is physiologically inactive. **amorphous-** Ergotoxine. **hydro-** Ergotoxine.

e. citrate. An amorphous, grayish powder, slowly soluble in water. **e. Kraft.** Ergotoxine. **e. Tanret.** Ergotoxine.,

ergotocin. Ergometrine.

ergotoxine. $C_{35}H_{41}O_6N_5$ = 627.8. Ergotinine Kraft, or Tanret. Hydro-ergotinine, amorphous ergotinine. A yellowish, amorphous powder, m.138, sparingly soluble in water, soluble in alcohol or ether, and physiologically inactive.

Ericaceae. Heather family, a group of shrubs or trees with bell-shaped flowers. Many plants of this group contain glucosides, and their leaves are used as drugs.

Arctostaphylos uva ursi	bearberry
Arctostaphylos glauca	manzanita
Gaultheria procumbens	wintergreen
Chimaphila umbellata	pipsissewa
Epigaea repens	trailing arbutus
Vaccinium crassifolium	vaccinium
Vaccinium oxycoceus	cranberry
Kalmia latifolia	mountain laurel
Ledum latifolium	Labrador tea
Oxygendrum arboreum	sourwood
Rhododendron maximum	great laurel

ericin. Mesotan.

ericinol. $C_{10}H_{16}O$ = 152.2. An alcohol of *Ledum palustris* or wild rosemary, an Ericaceae and the split-product of ericolin. A colorless, oily liquid with a peculiar odour, which becomes darker and yellow on exposure.

ericolin. $C_{35}H_{56}O_{21}$ = 800.6. A glucoside from *Ledum palustris* or wild rosemary, an Ericaceae. A brownish, soft, mass, soluble in water.

erigeron. Fleabane, coltstail, prideweed. The herb or seeds of *E. canadense*, a Compositae, used as an astringent and tonic. **e. oil.** The essential oil of e., d.0.845–0.865, containing d-limonene, terpineol and esters.

erilite. A plastic made from casein and formaldehyde. Cf. *galalith.*

erinite. $Cu_3(AsO_4)_2.2Cu(OH)_2$. Native, basic copper arsenate. It is emerald green in color and is a decomposition product of enargite.

eriodictyol. A chalcone of phloroglucinol occurring as glucoside in eriodictyon. It is isomeric with hesperidin.

eriodictyon. Mountain balsam. Yerba santa. The dried leaves of *Eriodictyon californicum*, a Hydrophyllaceae. It is used medicinally as an aromatic and expectorant as a fluid-extract or syrup. **e. oil.** The essential oil of e., d.0.937, soluble in 70 % alcohol.

erionite. A rock-forming mineral of the zeolite group.

Erlangen blue. Prussian blue.

Erlenmeyer, R. A. K. E. 1825–1909. A German chemist noted for organic research. **E. flask** or **erlenmeyer.** A conical glass flask with flat bottom, used extensively in chemical laboratories.

erogone. Ergine (2).

erose. A bacterial growth characterized by irregularly toothed margins.

erosion. Denudation. The wearing away, especially of rocks, due to the action of weather or chemical substances, *e.g.*, alkaline waters. Cf. *corrosion, surrosion.*

errhine. A drug which causes an increase in nasal secretions. Cf. *sternutatory.*

error. (1) Deviation from the truth. (2) The principle that the accuracy of a determination depends on the accuracy of the data on which it is based, and which it therefore, cannot exceed. **mean-** The quantity $\pm\sqrt{\Sigma d^2/(n-1)}$; where Σd is the sum of the deviations of individual values from the mean, n the number of determinations. **mean- of the mean.** The quantity $\pm\sqrt{\Sigma d^2/n(n-1)}$.

erucic acid. $C_{22}H_{42}O_2$ = 338.45. *cis- 13*-Docosenoic **acid***. A fatty acid found in the oil of raisin seeds, grape seeds, and mustard oil. Small, colorless needles, d.0.860, m.33, $b._{15mm}$ = 264, insoluble in water, soluble in alcohol. It is an isomer of brassidic and cetoleic acids.

erucidic acid. Brassic acid.

eryodiction. Eriodictyon.

erysicine. A mixture of erysodine and erysovine (q.v.) from *Erythrina* alkaloids.

erysimin. A glucoside from the seeds of *Erysimum* species, Cruciferae. It resembles digitalis physiologically.

erysodine. An alkaloid, m.201, from *Erythrina* species.

erysopine. An alkaloid, m.242, from *Erythrina* species.

erysovine. An alkaloid, m.178, from *Erythrina* species.

erytaurin. A glucoside from centaury, *Erythraea centaurium*, a Gentianaceae.

erythraea. Bitter herb, canchalaqua. The herb of *Erythraea chilensis*, a Gentianaceae resembling centaurea, q.v. It is used as a bitter tonic and stimulant.

erythrene. Bivinyl.

erythric acid. (1) $C_4H_8O_6$ = 136.1. The dextrotrihydroxy-butyric acid, $CH_2OH(CHOH)_2COOH$. (2) Sometimes applied to *erythrin.* (3) e. of Brugnatelli. Alloxan.

erythrin. (1) $C_{20}H_{22}O_{10}$ = 422.20. A colorless, microcrystalline powder, m.137, sparingly soluble in water, soluble in alcohol; a constituent of *Roccella tinctoria.* (2) A native cobaltous arsenate. Cf. *erythrine.*

erythrina. (1) The coral tree, a Papilionaceae of the West Indies, East Indies, Central America, and the Malay States. (2) A genius of Leguminosae (Cf. *erysodine, erysovine*).

erythrine. An alkaloid from the seeds of *Erythrina broteroi* of the Dutch Indies, *Erythrina carraloides* of Mexico, *Erythrina corallodendron* of Brazil, and other species of leguminous plants. Used medicinally as antidote to strychnine, as a hypnotic, and in epilepsy. Cf. *erythrol.*

erythrinine. An alkaloid from the bark of *Erythrina broteroi.*

erythrite. (1) Phycsite, red cobalt. A native cobalt arsenate. (2) Erythritol.

erythritic acid. Erythric acid.

erythritol. $C_4H_{10}O_4$ = 122.09. Erythrol, erythrite, phycite, tetrahydroxy-butane, erythroglucin, lichen sugar, $H(CHOH)_4H$. A tetrahydric alcohol from the lichen, *Protococcus vulgaris;* a split-product of erythrine. Tetragonal prisms, $d_{17°}$.1.452, m.112, b.330, soluble in water or alcohol, insoluble in ether. **nitro-** E. tetranitrate. **penta-** $C_5H_{12}O_4$ = 136.1. A tetrahydric alcohol; colorless crystals, m.250. Cf. *pentaerythritol.*

e. benzene. Fuchsin. **e. ether.** $C_4H_8O_2$ = 86.1. The heterocyclic compound

e. tetraacetate. $C_{12}H_{18}O_8$ = 290.14. White crystals, used as plasticizer for cellulose acetate, to increase the transmission of ultraviolet light. **e. tetranitrate.** $C_4H_6O_{12}N_4$ = 302.3. $C_4H_6(NO_3)_4$. Tetranitro erythrol, tetranitrol. Yellowish crystals which explode when heated, m.61, slightly soluble in water, soluble in alcohol. Used medicinally as a vasodilator and prophylatic in preventing pain; and as an explosive.

erythrocentaurin. $C_{17}H_{24}O_8$ = 476.2. The red coloring matter of *Erythraea centaurium* and *Sabbatia angularis*, which resembles santonin. Needle-shaped crystals, darkening in light, m.136, insoluble in water, soluble in hot alcohol.

erythrocephaelin. The coloring matter of ipecac.

erythrocruorin. Hemoglobin.

erythrocyte. A red-blood corpuscle.

erythrodextrin. A split-product of starch; dextrin which gives a red color with iodine. Cf. *achrodextrin.* It is an intermediate in the salivary digestion of starch.

erythroglucin. Erythrol(2).

erythrol. (1) Erythritol. (2) $C_4H_8O_2$ = 88.04. *3*-Butene-*1.2*-diol, $CH_2OH.CHOH.CH{:}CH_2$. White crystals, d.1.047, m.196.5.

erythrolitmin. $C_{26}H_{23}O_{13}$ = 543.2. Deep-red crystals derived from *Corona solis.*

erythronium. The name given by del Rio in 1804 to vanadium, which was rediscovered by Sefström in 1831.

erythrooxyanthraquinone. $C_{14}H_8O_3$ = 224.08. Oxy-anthraquinone. Orange-red needles, m.190, soluble in alcohol, ether, or alkalis.

erythrophloeine, erythrophlœine. An alkaloid from the bark of *Erythrophloeum guinense*, a Leguminosae of Guinea, used by natives as an ordeal poison. A dark-yellow, syrupy liquid, sparingly soluble in water, soluble in ether, alcohol, or glacial acetic acid; its use as a local anesthetic has been proposed. Cf. *sassy bark.*

Erythrophloeum, Erythrophlœum. A genus of leguminous trees of West Africa furnishing the

sassy, casca, or mancona bark; used by the natives as ordeal poison.

erythroprotid. $C_{13}H_8O_8N$ = 258.1. A red split-product of proteins obtained by boiling them with concentrated alkali.

erythroquine reaction. A test for alkaloids in which a characteristic color is formed on adding, in succession, chloroform, bromine water and potassium ferrocyanide.

erythroretin. $C_{28}H_{36}O_{14}$ = 716.4. A red coloring matter from rhubarb.

erythrose. $C_4H_8O_4$ = 120.1. Trihydroxybutyricaldehyde, $CHO.(CHOH)_2.CH_2OH$. A tetrose or sugar derived from erythrol; it occurs in dextro- and levo- forms. Its isomers are threose, erythrulose.

erythrosiderite. K_2FeCl_5. A rare potassium-ferric chloride mineral.

erythrosin. (1) $C_{13}H_{18}O_6N_2$ = 298.2. A red compound obtained by treating tyrosine with nitric acid. (2) $C_{20}H_8O_5I_4$ = 835.84. Tetraiodofluorescein. Pyrosin. Yellow crystals, insoluble in water, soluble in alcohol; used as a dye. (dye) (3) $C_{20}H_6O_5I_4Na_2$ = 879.82. Eosin bluish, sodium iodoeosin, sodium tetraiodofluorescein. Reddish-brown powder, soluble in water or alcohol; used as a dye, and hydrogen ion indicator, changing at pH 2.0 from orange (acid) to magenta (basic). Cf. *iodeosin.*

erythroxyline. Cocaine.

erythroxylon. Coca.

erythrulose. $C_4H_8O_4$ = 120.06. A ketose and tetrose derived from erythritol.

erythrytol. Erythritol.

es. or **e.s.** An abbreviation for the c.g.s.-electrostatic unit of quantity of electricity.

Esbach, Georges Hubert. 1843–1890. A French physician, noted for clinical analytical methods. **E. albuminometer.** A graduated test tube for estimating the amount of albumin in urine. **E. reagent.** A solution of 1 gm. trinitrophenol and 2 gm. citric acid in 100 cc. water, used for determining albumin in urine.

escaping tendency. Potential of temperature. A measure of the tendency of a substance to change from one state to another, *e.g.*, from solid to liquid.

escharotic. A caustic drug or a substance that produces a crust of dead tissue.

eschatin. An extract of lipoids from the suprarenal cortex; used in the hormone therapy of Addison's disease.

Eschka mixture. A mixture of 2 parts magnesium oxide and 1 part dried sodium carbonate; used as a reagent for determining sulfur in coal or coke.

eschwegite. $5Y_2O_3.5(Ta,Nb)_2O_5.10TiO_2.7H_2O$. A reddish gray, isotropic rare-earth mineral.

esciorcin, æsciorcin. Escorcin.

escoquinine. Quinine aesculinate.

escorcin. $C_9H_8O_4$ = 180.1. Escorcinal, æscorcin. A brown powder, soluble in alkalis, and derived from aesculetin. Used in ophthalmology.

esculetin. $C_9H_6O_4$ = 178.1. Aesculetin, 6,7-dihydroxycoumarin. A split-product of aesculin. **methoxy-** Gelseminic acid. **methyl-** Scopoletin.

esculetinic acid. $C_9H_8O_5$ = 196.06. Aesculetinic acid. Colorless crystals, m.168.

esculin. $C_{15}H_{16}O_9$ = 340.20. Aesculin, aesculinic acid, anallachrom, polychrom, bicolorin. A glucoside from the seeds of *Aesculus hippocastanum*, or horse chestnut. White colorless needles, slightly soluble in water, readily soluble in alcohol or alkalis, giving fluorescent solutions. Sulfuric acid converts it into esculetin and glucose. Used medicinally as an antimalarial, and in ophthalmology.

-ese. A suffix denoting a synthesizing enzyme (q.v.). It is added to the name of the substance formed by the synthesis. Cf. *-ase.*

esenbeckic acid. An acid, resembling quinovic acid, from the bark of *Esenbeckia febrifuga*, a Rutaceae of tropical America.

esenbeckine. $C_6H_{18}NO_6$ = 200.2. An alkaloid from the bark of *Exostemma souzanum.*

eseridine. $C_{15}H_{23}O_3N_3$ = 293.2. An alkaloid derived from eserine, occurring in calabar beans. Colorless crystals, m.132, soluble in alcohol, ether, or chloroform; used as a laxative in veterinary medicine.

eserine. Physostigmine.

Esmarch bottle. A device for sampling water at any depth by removing and replacing the stopper mechanically.

eso- Prefix indicating that an element or radical is substituted for a hydrogen atom attached to a ring atom.

esotoo. Trade name for liquid sulfur dioxide.

esoxin. A ptomaine from the sperm of white fish, pike and lake trout.

esparto. A tall grass, *Stipa tenacissima*d an *lygeum spartum*, Gramineae of Northern Africa, used in the manufacture of paper. Cf. *alfa.*

esperium. Es. See *ekaosmium.*

essence. (1) A solution of a volatile or essential oil in alcohol. (2) The active principle of a plant. (3) A fruit essence, q.v. **e. niobe.** Methyl benzoate.

essential. Pertaining to an essence. **e. oils.** Volatile oils, ethereal oils. A group of volatile oils of characteristic odors, distilled from plants, leaves, flowers, etc. Distinguished from fatty oils by their volatility, non-greasiness, and non-saponifying property. Two classes:

A. Existing in plants, as such, and imparting the characteristic odor to flower, leaves or woods:
   1. Terpenes (oil of turpentine, juniper, etc.).
   2. Terpenes and stearoptenes (oil of peppermint, lemon, etc.).

B. Developed from plant constituents by:
   1. Enzyme action (oil of mustard, bitter almond, etc.).
   2. Produced by heat (empyreumatic oils, cade, tar, creosote etc.).

They are inflammable, soluble in alcohol or ether, slightly in water. Constituents:

Hydrocarbons:	Ocymene, myrcene, cymene, styrene, pinene, camphene, fenchene, limonene, phellandrene, etc.
Alcohols:	Methanol, benzyl-alcohol, rhodinol citronellol, geraniol, linalool, nerol, menthol, terpinol, etc.
Phenols:	Anol, chavicol, charvacrol, thymol, anethol, safrol, estragol, etc.
Ethers:	Anethole, eugenole, eucalyptole, safrole, geranyl alkyl ethers, phenyl alkyl ethers.
Aldehydes:	Citronellal, geranial, santalal, benzaldehyde, anisaldehyde, cinnamaldehyde, vanillin, ionone, etc.
Ketones:	Anisacetone, menthone, irone, ionone, fenchone, camphor, carvone, pulegone, etc.
Acids:	Hydrocyanic acid, tiglic acid, caproic acid, etc.
Esters:	Benzyl acetate, cinnamyl acetate, geranyl acetate, linalyl acetate, eugenyl acetate, methyl benzoate.

e. salt. Any salt obtained by evaporating the juices of plants.

essolube. A trade-mark for a high quality lubricating oil made by blends of solvent extracted base stocks.

essonite. $6CaO.3SiO_2 + 2Al_2O_3, 3SiO_2$. Garnet lime-alumina, wolfsbergite. Calcium garnet. A white or pale yellow mineral.

ester. (1) Ethereal salt. An organic salt formed from an alcohol (base) and an organic acid by elimination of water: (see list)

$$\underset{\text{alcohol}}{R.OH} + \underset{\text{acid}}{R'.COOH} = \underset{\text{ester}}{R'COO.R} + \underset{\text{water}}{H_2O}$$

(2) Compounds of the type R_2SO_4 or R.COOM are erroneously called esters. (3) The ethyl esters of an acid; *e.g.*, diacetic ester is ethyl diacetyl diacetate.

HCOOMe	methyl formate
HCOOEt	ethyl formate
MeCOOEt	ethyl acetate
$MeCOOC_5H_{11}$	amyl acetate (*banana oil*)
$MeCOOC_4H_8Me$	isoamyl acetate (*pear oil*)
EtCOOMe	methyl propionate
EtCOOEt	ethyl propionate
PrCOOMe	methyl butyrate
PrCOOEt	ethyl butyrate (*pineapple oil*)
$C_4H_9COOC_5H_{11}$	*iso*-amyl *iso*-valerate (*apple oil*)
C_6H_5COOMe	methyl benzoate
$C_6H_4(OH)COOMe$	methyl salicylate (*oil of wintergreen*)
$C_6H_4(NH_2)COOMe$	methyl anthranilate

acid- Ether acid. Corresponding with the acid salts, the acid esters are compounds of polybasic acids in which not all the carboxyl hydrogen atoms are replaced by alcohol radicals; *e.g.*, R.OOC.R.COOH. **alkamine-** See *alkamine ester*. **basic-** Corresponding with the basic salts, the basic esters are compounds of polyhydric alcohols in which not all the hydroxyl groups are replaced by acid radicals; *e.g.*, R.COO.R.OH or X.R.OH where X is a halogen. **imido-** See *imido ester*. **mixed-** An e. in which the radicals R of, R.COOR, are different. **Robison-** Hexosemono-phosphoric acid; formed in the fermentation of sugar by yeast.

e. number. The difference between the saponification number and acid number. It is therefore the number of mg. KOH needed to saponify the neutral esters in 1 gm. of a fat, oil, or wax. **e. oils.** Pale edible oils produced by esterification of refinery acids with glycerol.

esterase. An enzyme or ferment capable of saponifying esters.

esterification. The formation of an ester by dehydrating or catalytic agents. **e. law.** Meyer's law. Esterification of aromatic acids is retarded and prevented in presence of 1- and 2-ortho-substituents, respectively.

esterol. A brand of benzyl succinate used as antispasmodic.

estimation. An approximate evaluation; often incorrectly used for "determination."

estoral. Menthyl borate

estradiol. Oestradiol.

estragole. $C_{12}H_{16}O$ = 178.14. Methyl chavicol, *p*-allylanisole, *p*-methoxy allyl benzene. $MeO.C_6H_4.C_5H_{11}$. An ether of anise-like odor, occurring in estragon oil.

estragon oil. Tarragon oil. A yellowish essential oil, d.0.9–0.94, obtained from the herb *Artemisia dracunulus*, a Compositae.

estrane. $C_{18}H_{30}$ = 246.2. The parent compound of female sex-hormones. See *androstane* and *cholane* derivatives.

e. diol. $C_{18}H_{30}O_2$ = 278.2. *3.17*-Dihydroxyestrane. Cf. *oestrone*. **e. triol.** $C_{18}H_{30}O_3$ = 294.2. *3.16.17*-Trihydroxyestrane.

estranol. $C_{18}H_{30}O$ = 262.2. *3*-Hydroxyestrane Cf. *oestrone*.

estratriene. $C_{18}H_{24}$ = 240.2. $\Delta^{1.3.5}$-estratriene. The parent compound of oestrone. Cf. *androstane, cholane*.

estrin. Oestrone.

estriol. Oestriol.

estrogen. Any drug inducing estrus.

estrone. Oestrone.

esu or e.s.u. E.S.U. or electro-static units. For values and conversion to e.m.u., see *electromagnetic units*.

Et. (1) An abbreviation for the ethyl radical, $-C_2H_5$. (2) The symbol for ekatantalum.

-et. A suffix. See *-uret*.

eta. The Greek letter η. A symbol for viscosity.

Étard's reaction. The oxidation of methyl radicals to aldehyde radicals by means of chromyl chloride:

$$R.CH_3 + Cr(OCl)_2 = R.CHO + H_2O + CrCl_2.$$

E. salt. The complex potassium chromium sulfate, $K_3[Cr(SO_4)_3]$.

etch-figure. The characteristic pattern produced when a polished metallic surface is etched by a suitable reagent

eteline. See *chlorinated* solvents.

ethacetic acid. *n-Butyric acid*.

ethal. Cetyl alcohol.

ethaldehyde. Cetyl aldehyde.

ethalic acid. Palmitic acid.

ethamine. Ethylamine.

ethanal*. Acetaldehyde. **hydroxy-*** Glycolaldehyde. **trichloro-*** Chloral. **e. acid.** Glyoxalic acid.

ethanamide*. Acetamide.

ethanamidine*. Acetamidine.

ethane*. C_2H_6 = 30.05. Methylmethane, dimethyl, Me.Me; ethylhydride, EtH. An alkane or a saturated hydrocarbon of the methane series. Colorless gas, $d_{air=1}$.1.049, m. −172, b. −86, slightly soluble in water, soluble in alcohol or ether; a constituent of natural and illuminating gas. The following radicals are derived from ethane:

monovalent:	
ethyl-	$-CH_2Me$. or $-C_2H_5$ or Et
divalent:	
ethylene-	$-CH_2.CH_2-$
ethylidene-	$=CH.CH_3$ or $=CHMe$.
trivalent:	
ethenyl-	$\equiv C.CH_3$ or $\equiv CMe$.
ethenylidene-	$=CH.CH_2-$
tetravalent:	
acetylene	$=CH.CH=$

The following unsaturated hydrocarbons are derivatives of ethane:

ethene* or ethylene	$CH_2:CH_2$
ethyne*, ethine or acetylene	CH:CH

amino- Ethylamine*. **bromo-*, chloro-*,** etc. See *ethyl bromide, ethyl chloride*, etc. **dibenzoyl-** Diphenazine. **dibenzyl-** Diphenylbutane. **dibromo-*, dichloro-*,** etc. See *ethyl-*

ene bromide, ethylene chloride, etc. **dihydroxy-** Glycol. **diphenyl-** Dibenzyl. **hexabromo-*** Hexabromo ethane. **hexachloro-*** Hexachloroethane. **hydroxy-** Ethanol*. **nitro-** See *nitroethane*. **nitroso-** See *nitrosoethane*. **perchloro-** Hexachloro-. **phenyl-** Ethyl benzene. **triethoxy-*** Ethenyltrimethyl ether.

e. dial*. Glyoxal. **e. diamide*.** Oxamide. **e. diamine*.** Ethylene diamine. **e. dinitrile*.** Cyanogen. **e. dioic acid*.** Oxalic acid. **e. diol*.** Glycol. **e. dioyl chloride*.** Oxalyl chloride. **e. dithiol*.** Dithioglycol. **e. nitrile*.** Acetonitrile. **e. sulfinic acid*.** Ethyl sulfinic acid. **e. sulfonic acid*.** Ethyl sulfonic acid. **e. thiol*.** Ethyl mercaptan. **e. thiolic acid*.** Thiol*acetic acid*. **e. thionamide*.** Thioacetamide.

ethano- A prefix indicating the presence of a $—CH_2.CH_2—$ bridge; thus in 1.4-ethano anthracene the $—CH_2.CH_2—$ bridge is between the first and fourth carbon atom of anthracene.

ethanoic acid*. Acetic acid. **oxo-*.** Glyoxylic acid. **e. anhydride*.** Acetic anhydride.

ethanol*. C_2H_6O = 46.046. Ethyl alcohol, alcohol, spirit, spirit of wine, grain alcohol, absolute alcohol, ethyl hydrate, etc. (1) Absolute alcohol, dehydrated alcohol. Et.OH. A colorless liquid, d^{25}_4.0.78505, m. −117.3, b.78.32, miscible with water or ether. Used as a reagent and solvent. (2) 99 % alcohol. The "absolute alcohol" of the U. S. and British Pharmacopoeia, used extensively for tinctures and pharmaceutical preparations, as a solvent and preservative, as an antiseptic medium and in perfumery. (3) Grain alcohol, cologne spirits. A colorless liquid containing 90 % ethanol and 10 % water. (4) Diluted alcohol, proof spirits. A colorless liquid containing about 49 % (by weight) ethanol and 51 % (by weight) water. (5) Denaturated alcohol. An alcohol made unpotable by the addition of poisonous substances such as methanol, pyridine, formaldehyde, sublimate or other denaturant. It is used in industry, the arts and commerce, principally as a solvent or fuel. See also *methylated spirits*. **amino-*** Colamine. **butoxy-*** Butyl*cellosolve*. **chloro-*** Ethylene chlorohydrin. **cyano-** Ethylene cyanohydrin. **ethoxy-*** Cellosolve. **imino-** See *iminoethanol*. **oxybis-** Diethylene glycol. **phenyl-** Benzyl carbinol. **tribromo-*** Avertin. **trichloro-*** See *trichloroethanol*. **trimethyl-** Butyl carbinol.

ethanolamine. C_2H_7ON = 61.05. β-Hydroxyethylamine, monoethanolamine, $NH_2(CH_2)_2OH$. A colorless liquid, d.1.04, $b._{150mm}$171, readily soluble in gasoline or CCl_4 and useful for dry cleaning, cleaning grease spots, machinery, etc. **di-** Diethanolamine. **tri-** Triethanolamine.

ethanoyl*. Acetyl.

ethene*. C_2H_4 = 28.04. (1) Ethylene, olefiant gas. Colorless, inflammable gas of peculiar odor, $d_{air=1}$.0.978, m. −189, b. −102.7, slightly soluble in water, soluble in alcohol or ether. From ethene the radicals vinyl-, $—CH:CH_2$, and vinylene-, —CH:CH—, are derived. Used in surgery and dentistry to produce anesthesia, as a substitute for nitrous oxide. (2) The radical ethylene (*q.v.*). **e. dichloride.** Ethylene chloride. **e. series.** Olefines. The homologs of ethene; or a group of aliphatic hydrocarbons (q.v.) having the general formula, C_nH_{2n}.

etheno- A prefix indicating the presence of a —CH:CH— bridge; thus, *4,7*-ethenoindene has a —CH:CH— bridge between the fourth and seventh carbon atom of indene. Cf. *ethano-*.

ethenol. Vinyl alcohol.

ethenone. Ketene.

ethenyl. The trivalent $H_3C.C\equiv$ radical, derived from ethane. **e. amide.** Acetamidine. **e. amine*.** Vinyl amine. **e. aminophenol.** C_8H_7ON = 133.06. A colorless liquid, $d_0°$.1.136, b.201, insoluble in water, soluble in alcohol. **e. aminothiophenol.** C_8H_7SN = 149.20. A colorless liquid, b.238, insoluble in water, soluble in ether or alcohol. **e. bromide.** Vinyl bromide. **e. chloride.** Trichloroethane. **e. diphenylamidine.** $C_{14}H_{14}N_2$ = 210.13. Colorless needles, m.131, sparingly soluble in water, soluble in alcohol or ether. **e. triethylether.** $C_8H_{18}O_3$ = 162.17. Triethoxyethane. A colorless liquid, $d_{22°}$.0.94, b.142, decomp. by hot water, soluble in alcohol or ether. **e. tricarboxylic acid.** $C_5H_6O_6$ = 162.07. Colorless prisms, decomp. on heating, insoluble in water, soluble in alcohol or ether.

ethenylidene. The trivalent radical $=CH.CH_2—$. **e. chloride.** β-Trichloroethane.

ether. (1) An alkyl or aryl oxide of the general type R.O.R., derived from an alcohol by replacing the hydrogen of the hydroxyl group by another radical; *e.g.*,

$$R.OH + R.OH = R.O.R. + H_2O$$

See *ethers*. (2) $C_4H_{10}O$ = 74.10. Ethylic ether, ethyl oxide, ethoxy ethane*, diethyl ether, sulfuric ether, Et_2O. A clear, colorless, mobile liquid, d.0.720, m. −116, b.35, slightly soluble in water, miscible with alcohol or benzene. Used as a reagent and solvent for fats, resins, alkaloids, and other organic compounds and medicinally as an anesthetic. (3) In physics: Æther. A hypothetical, all-pervading and all-permeating medium of the universe, which is considered the medium for the transmission of radiations such as, light, heat, and electricity. It is supposed to consist of etherons, (q.v.) but its existence has not been proved by experiment.

acetic- Ethyl acetate. **aldehyde-** Crotonic aldehyde. **anhydrous-** Ethyl ether which has been distilled over sodium; used as a reagent and solvent. **allophanic-** Ethyl allophanate. **anesthetic-** Ether (2). **decachlor-** Perchlor ether. **dichloro-** Dichlorethyl ether. **diethyl-** Ether (2). **dimethyl-** See *methyl ether*. **formic-** Ethyl formate. **hydrobromic-** Ethyl bromide. **hydrochloric-** Ethyl chloride. **hydrocyanic-** Ethyl cyanide. **hydroiodic-** Ethyl iodide. **isopropyl-** See *propyl-* **methyl-** Methyl ether. **mixed-** An e. in which the R of R.O.R differ; as MeOEt. **petroleum-** Distilled petroleum. The 50–60°C. fraction. **simple-** An e. in which both R of R.O.R are, alike; as Et.O.Et. **sulfuric-** Ether (2).

e. acid. An acid ester, q.v. **e. alcohol.** A compound of the type R.O.R.OH; as, the mono- or di-ether of a glycol or glycerol. **e. of crystallization.** The molecules of e. in a crystal lattice as a component part of the crystal.

ethereal. Resembling or made with ether; *e.g.*, highly volatile. **e. fruit oil.** See fruit oil. **e. liquid.** A highly volatile liquid. **e. oil.** Essential oil. **e. salt.** Ester.

etherene. Ethylene.

etheric acid. Acetoacetic acid.

etheride. A compound containing the —COX radical, in which X is a halogen.

etherification. The process of making an ether from an alcohol. Cf. *ethers.*

etherin. Obsolete name for ethylin. **e. theory.** A theory of the constitution of organic compounds (Dumas & Boullay, 1828).

etherion. A supposed element, atomic weight 0.001, expelled from substances at high temperatures and extremely low pressures.

etheron. Ætheron. A supposed particle of ether, smaller and faster than an electron, having a mass of $\frac{1}{4^1_7} \times 10^9$ that of hydrogen and a speed of 294,000 miles per second.

etherophosphoric acid. Ethyl phosphoric acid.

etherosulfuric acid. Ethyl sulfuric acid.

etherphone. An instrument for the production of music by electricity. It works on the principle of the oscillating wireless valve.

ethers. (1) A group of alkyl or aryl oxides, derived from the alcohols by replacing the hydrogen of the hydroxyl group by another radical:

$$R.OH + R.OH = R.O.R + H_2O$$

They are named R-oxides, or indicated by the prefix R-oxy- or alkoxy-; thus dimethyl oxide or methoxymethane*, ethyl methyl oxide or methoxyethane*. (2) The halogen derivatives of alkyl and aryl radicals are sometimes called ethers; *e.g.*, R.Cl. (3) The esters of inorganic or organic acids are sometimes called ethers; *e.g.*, $R.NO_2$, R.COO.R. **complex-** Compound-. **compound-** (1) Alkyl or aryl oxides in which two different radicals are joined by the oxygen, R.O.R'; *e.g.*, methylethylether. (2) Esters. **haloid-** Alkyl or aryl halides. **mixed-** Compound- **simple-** Alkyl or aryl oxides having two like radicals, R.O.R; *e.g.*, diethylether. **thio-** An alkyl or aryl sulfide; *e.g.*, an ether in which the oxygen is replaced by sulfur (see *mercaptans*). Examples of ethers:

a. Aliphatic, saturated:

methyl ether	Me.O.Me
ethyl methyl ether	Et.O.Me
ethyl ether	Et.O.Et
ethyl propyl ether	Et.O.$(CH_2)_2CH_3$
n-propyl ether	$(MeCH_2CH_2)_2O$
i-propyl ether	$(Me_2CH)_2O$

b. Aliphatic, unsaturated:

vinyl ether	$(CH_2{:}CH)_2O$
allyl ether	$(CH_2{:}CHCH_2)_2O$
crotonyl ether	$(CH_3CH{:}CHCH_2)_2O$
propargyl ether	$(CH{:}CCH_2)_2O$

c. Cyclic ethers:

ethylene oxide	CH_2CH_2O
1.2-propylene oxide	$Me.CH.CH_2.O$
1.3-propylene oxide	$CH_2.CH_2.CH_2.O$

d. Diethers and triethers:

methylal	$(MeO)_2CH$
acetal	$(EtO)_2CHMe$
dioxan	$CH_2.CH_2.O.CH_2.CH_2.O$
trioxymethylene	$CH_2.O.CH_2.O.CH_2.O$
paraldehyde	CHMe.O.CHMe.O.CHMe.O

e. Aromatic ethers:

anisole	Me.O.Ph
phenetole	Et.O.Ph
veratrole	$MeO.C_6H_4.OMe$
phenyl ether	Ph.O.Ph
benzyl phenyl ether	$Ph.CH_2.O.Ph$
benzyl ether	$Ph.CH_2.O.CH_2.Ph$
naphthyl ether	$C_{10}H_7.O.C_{10}H_7$

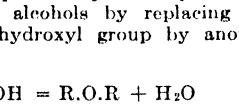
ethide. A compound of ethyl radical and a metal, as lead ethide ($PbEt_2$), zinc ethide ($ZnEt_2$), and magnesium ethide ($MgEt_2$).

ethidene. Ethylidene.

ethine. Acetylene. **e. series.** Acetylene series, q.v. A group of unsaturated aliphatic hydrocarbons with one triple bond; general formula, C_nH_{2n-2}.

ethinyl. Acetenyl. The univalent CH:C— radical, derived from acetylene.

ethionic acid. $C_2H_6O_7S_2 = 206.1$. Ethylene sulfonic acid, $HO.SO_2.CH_2.CH_2.SO_2OH$. A dibasic acid known only in solution. Cf. *isethionic acid.* **amino-** Taurine. **e. anhydride.** $C_2H_4O_6S_2 = 188.2$. The heterocyclic compound



colorless crystals.

ethiops mineral. Black mercurous sulfide.

ethocaine. Procaine. **e. borate.** Borocaine.

ethodin. Rivanol.

etholide. A tertiary lipid formed from alcohol-acids by the esterification of the hydroxyl group of one with the carboxyl groups of the other molecule.

ethoxalyl. The monovalent radical, EtOOC.CO—.

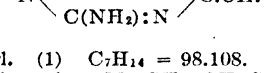
ethoxide. Ethylate.

ethoxy. The monovalent C_2H_5O— or EtO— radical derived from ethanol. Cf. *oxethyl.* **e. acetic acid.** Ethyl glycollic acid. **e. acetone.** $C_5H_{10}O_2 = 102.1$. The ketone ether, $MeCOCH_2OEt$. A colorless liquid, b.128; used as a solvent for nitrocellulose. **e. amine*.** $C_2H_7ON = 61.06$. 2-hydroxyethylamine, α-ethyl hydroxylamine. $NH_2.CH_2.CH_2OH$. **e. aniline.** $C_8H_{11}ON = 137.10$. A colorless liquid, $d_0°$.1.11, b.286, sparingly soluble in water, soluble in alcohol or ether. **e. benzoic acid.** The ethyl ether of salicylic acid. $EtO.C_6H_4.COOH$. **e. butyric acid.** Hydroxy-ethylbutyric acid. **e. catechol.** $C_8H_{10}O_2 = 138.1$. A homolog of guaiacol. **e. caffeine.** $C_{10}H_{14}O_3N_4 = 238.51$. Colorless crystals, m.140. Difficultly soluble in water or alcohol, soluble in hot ether. Used medicinally as a narcotic.

ethoxyl. Same as ethoxy.

ethyl. (1) The monovalent C_2H_5— or Et— radical, derived from ethane. (2) A trade-mark for an antiknock compound for admixture with gasoline to prevent or reduce knocking in internal combustion engines, as well as for the resultant fuel. Also a trade-mark for other products not necessarily associated with fuels or internal combustion engines. See *ethyl gasoline.* **e. acetamide.** $C_4H_9OH = 87.08$. $MeCONHEt$. A colorless liquid, $d_4°$.0.942, b. 200, used in organic synthesis. **e. acetate.** $C_4H_8O_2 = 88.06$. Acetic ether, acetic ester, acetidin, ethyl acetic ester. $Me.COOEt$. A colorless liquid, $d_0°$.0.900; m. −82.4, b.77, slightly soluble in water, miscible with alcohol or ether. Used medicinally as a stimulant and antispasmodic, as a reagent in organic synthesis, as a solvent for lacquers and in the separation of dyes. **e. acetoacetate.** $C_6H_{10}O_3 = 130.11$. Acetoacetic ester, diacetic ether, $MeCOCH_2COOEt$. A colorless liquid, $d_{15}°$.1.030, m. −80, b.181, slightly soluble

in water, miscible with alcohol or ether; used as a solvent for nitrocellulose, and in organic synthesis. **e. acetylene.** Butine. **e. acid phosphate.** See *e. phosphate.* **e. acid.** E. arsenic acid. **e. acid sulfate.** E. sulfuric acid. **e. aconitate.** $C_{12}H_{18}O_6$ = 258.2. A colorless, oily liquid of aromatic odor. **e. acrylate.** $C_5H_8O_2$ = 100.09. A colorless liquid, $d_0°$.0.939, b.98.5. **e. alcohol.** Ethanol*. **e. aldehyde.** Acetaldehyde. **e. allyl.** (1) C_5H_{10} = 70.09. A colorless liquid, b.70. (2) A prefix indicating the presence of an ethyl and an allyl radical. **e. allylether.** $C_5H_{10}O$ = 86.11. 3-ethoxypropylene, $EtOCH_2CH{:}CH_2$. A colorless liquid, $d_{25°}$.0.799, b.66, insoluble in water, soluble in alcohol or ether. **e. amine*.** C_2H_7N = 45.11. Ethamine. Aminoethane, $EtNH_2$. A ptomaine from putrefying yeast and wheat flour. A colorless liquid, d.0.689, b.16.5, m. −84, miscible with water, alcohol, or ether. **e. aminoacetate.** $C_4H_9O_2N$ = 103.1. Ethylglycin, ethylglycocoll. NH_2CH_2COOEt. **e. aminobenzoate.** Benzocaine. **e. aminobenzoic acid.** $C_9H_{11}O_2N$ = 165.20. $EtNH.C_6H_4.COOH$. Colorless prisms, m.112, slightly soluble in water; soluble in alcohol or ether. **e. ammeline.** $C_5H_9ON_5$ = 155.4. Ethylamido cyanurate.



e. amyl. (1) C_7H_{14} = 98.108. Δ^1-heptene. The hydrocarbon $Me(CH_2)_4CH{:}CH_2$. A colorless liquid, b.99. (2) A prefix indicating the presence of an ethyl and an amyl radical. **e. amylaniline.** $C_{13}H_{21}N$ = 191.2. Amyl-ethyl-phenyl-amine, $Et.N\langle^{C_5H_{11}}_{Ph}$. A colorless, oily liquid, b.262, soluble in alcohol. **e. amylether.** $C_7H_{16}O$ = 116.2. The mixed ether $Et.O.C_5H_{11}$. A colorless volatile liquid. **e. amylketone.** $C_8H_{16}O$ = 128.17. Colorless liquids, nearly insoluble in water; miscible with alcohol or ether. **n-** $Et.CO.(CH_2)_4Me$. *3*-Octanone*. d.0.825, b.165. **active-** $Me.CH_2.CHMe.CH_2.CO.Et$. 5-Methyl-3-heptanone*. b.161. **tert-** $Me.CH_2.CMe_2.CO.Et$. *4.4*-Dimethyl-3-hexanone*, d.0.825, b.151. **e. amylsulfide.** $C_7H_{16}S$ = 132.2. The mixed thioether $Et.S.C_5H_{11}$. A colorless liquid. **e. aniline.** See *aniline.* **e. anthracene.** $C_{16}H_{14}$ = 206.12. Colorless scales, m.60, insoluble in water, soluble in alcohol. **(dihydro-)** $C_{16}H_{16}$ = 208.14. A colorless oil, $d_{16°}$.1.049, *m*.320, insoluble in water; miscible with alcohol or ether. **e. antimonide.** Acid antimony ethide. **e. arsen.** See *arsine.* **e. arsenate.** A salt of e. arsenic acid. **e. arsenic acid.** $C_2H_7O_4As$ = 170.1. Ethylacid. $EtO.AsO.(OH)_2$. **e. arsenite.** A salt of e. arsenous acid. **e. arsenous acid.** $C_2H_5O_3As$ = 152.1. $EtO.AsO_3$. **e. arsine.** The primary arsine $EtAsH_2$. **e. arsinic acid.** E. arsenic acid. **e. azotate.** E. nitrate. **e. azotite.** E. nitrite. **e. benzene.** See *benzene.* **e. benzoate.** $C_9H_{10}O_2$ = 150.13. The ester $PhCOOEt$. A colorless liquid, b.213, slightly soluble in water, miscible with alcohol or ether. **e. benzoic acid.** See *benzoic acid.* **e. benzoylacetate.** $C_{11}H_{12}O_3$ = 192.16. Benzoylacetic ester, $PhCOCH_2COOEt$. A colorless liquid, d.1.121, b.267, insoluble in water, miscible with alcohol or ether. **e. benzylaniline.** $C_{15}H_{17}N$ = 211.2. Ethyl benzyl phenyl amine. The tertiary amine $Ph.N\langle^{Et}_{CH_2Ph}$, b.$_{710mm}$ 285. **e. benzylate.** E. benzylether. **e. benzylbenzene.** $C_{13}H_{16}$ = 196.2. The hydrocarbon $Et.C_6H_4.CH_2Ph$. **e. benzylether.** $C_9H_{12}O$ = 136.15. Ethyl benzylate, benzylethyl oxide. $Et.OCH_2Ph$. A colorless liquid, $d_{15°}$.0.950, b.186, insoluble in water, miscible with alcohol or ether. **e. benzylketone.** $C_{10}H_{12}O$ = 148.15. 1-phenyl-butan-2-one, $Et.CO.CH_2Ph$. A colorless liquid, $d_{17°}$.0.998, b.223, insoluble in water, miscible with alcohol or ether. **e. borate.** A salt of ethanol and boric acid: **(ortho-)** $C_6H_{15}O_3B$ = 146.2. E. orthoborate, boron triethoxide, triethylic borate. $B(OEt)_3$. A colorless inflammable liquid. **(meta-)** $C_4H_{10}O_4B_2$ = 144.1. E. metaborate, $(EtO)_2(BO)_2$. A colorless, heavy liquid. **(pyro-)** $C_2H_5B_3O_5$ = 141.4. E. triborate. A colorless gummy mass. **e. boric acid.** $Et_2B(OH)_3$ = 73.87. White crystals, subliming 40, soluble in water, alcohol or ether. **e. borosalicylate.** Boryl. **e. bromacetate.** $C_4H_7O_2Br$ = 167.04. A colorless liquid, $d_{25°}$.1.507, b. −159, insoluble in water, miscible with alcohol or ether. **e. bromide.** C_2H_5Br or EtBr = 109.01. Aethylium bromatus, aether bromatus, monobromoethane, bromic ether, bromoethane*, EtBr. A colorless liquid, d.1.450, m. −116, b.39, almost insoluble in water, miscible with alcohol or ether. Used medicinally as a local anesthetic. Cf. *ethylene bromide.* **e. butylether.** $C_6H_{14}O$ = 102.15. The mixed ether EtOBu. A colorless liquid, $d_{20°}$.0.752, b.92, insoluble in water, miscible with alcohol or ether. **e. butylketone.** $C_7H_{14}O$ = 114.16. Heptan-3-one, $Et.CO.Bu$. A colorless liquid, b.147, insoluble in water, soluble in alcohol or ether. **e. butyrate.** $C_6H_{12}O_2$ = 116.11. Ethylbutyric ester. $PrCOOEt$. A colorless liquid, d.0.902, b.121, insoluble in water, miscible with alcohol or ether. If sufficiently diluted, its odor resembles pineapple, hence, it is sometimes used for flavoring. **(iso-)** Ethylisobutyric ester. $Me_2CHCOOEt$. A colorless, aromatic liquid, $d_0°$.0.890, m. −93.3, b.110, sparingly soluble in water, soluble in alcohol or ether. **e. cacodyl.** Diethyl arsine. **e. cacodylic acid.** Diethyl arsinic acid. **e. caproate.** $C_8H_{16}O_2$ = 144.2. E. caproic ester, $Me(CH_2)_4COOEt$. A colorless liquid, $d_0°$.0.888, m.167, soluble in alcohol or ether. **e. caprylate.** $C_{10}H_{20}O_2$ = 172.17. Ethyl caprylic ester. A colorless liquid, $d_{15°}$.0.873, b.30, soluble in alcohol. **e. carbamate.** Urethane. **e. carbazole.** $C_{14}H_{13}N$ = 195.13. Colorless scales, m.68, soluble in hot alcohol or ether. **e. carbimide.** E. isocyanate. **e. carbinol.** Propanol. **e. carbonate.** $C_5H_{10}O_3$ = 118.11. Carbethylic acid, carbonic ester, diethyl carbonic ether, diatol, Et_2CO_3. A colorless, inflammable, aromatic liquid, d.0.978, b.126, insoluble in water, soluble in alcohol. Used in organic synthesis, and as a solvent for nitrocellulose and resins. **(ortho-)** $C_9H_{20}O_4$ = 192.2. Tetraethylcarbonate, tetraethoxymethane. $C(OEt)_4$. A colorless, aromatic liquid. **e. carbonic acid.** Propionic acid. **e. carbostyril.** $C_{11}H_{11}ON$ = 174.12. The heterocyclic compound

Colorless crystals, m.168. **e. carbylamine.** EtNC. E. isocyanide. **e. chaulmoograte.** The ethyl esters of the mixed acids of chaulmoogra oil; a clear pale yellow liquid, d.0.904. **e. chloracetate.** $CH_2Cl.COOEt$ = 122.53. A colorless liquid, $d_{20°}$.1.159, b.145, insoluble in water. **e. chloracetoacetate.** $C_6H_9O_3Cl$ = 164.55. The ester $MeCOCHClCOOEt$. A colorless liquid, $d_{25°}$.1.179, b.197, slightly soluble in water, miscible with alcohol or ether. Used in organic synthesis. **e. chloralurethane.** Somnal. **e. chloride.** C_2H_5Cl or EtCl = 64.50. Monochlorethane, hydrochloric ether, aethylium chloratus, aether, chloratus, kelene, chloroethane*, chelen, anodynon. A colorless liquid, $d_0°$.0.921, m. −141.2, b.12.2, very slightly soluble in water, miscible with alcohol or ether. On account of its low boiling point, it is marketed in sealed glass tubes; used as a local anesthetic and constituent of cognac essence, and as a refrigerant and ethylating agent. **e. chlorocarbonate.** E. chloroformate. **e. chloroformate.** $C_3H_5O_2Cl$ = 108.52. E. chlorocarbonate. ClCOOEt. A colorless liquid, d.1.139, b.93, decomp. in water, miscible with alcohol or ether. **e. chloropropionate.** $C_5H_9O_2Cl$ = 136.55. Ethyl chlorpropionic ester, aether chlorpropionicus, $MeCHClCOOEt$. A colorless aromatic liquid, d.1.087, b.146, slightly soluble in water, miscible with alcohol or ether. **e. chlorostannic acid.** $H_2SnEtCl_6$ = 327.04. Colorless, deliquescent crystals, decomp. in water. **e. cinnamate.** $C_{11}H_{12}O_2$ = 176.16. Ethyl cinnamic ester, $PhCH:CHCOOEt$, aether cinnamylicus. A colorless, oily liquid, d.1.050, m.12, b.271, insoluble in water, soluble in alcohol or ether; used in flavoring extracts on account of its odor of strawberries. **e. crotonic acid.** $C_6H_{10}O_2$ = 114.09. The unsaturated acid: $MeCH:CEt.COOH$. Colorless monoclinic crystals, m.40 (subliming) sparingly soluble in water, soluble in alcohol or ether; used in peppermint flavoring extracts. **e. cyanacetate.** $C_5H_7O_2N$ = 113.13. Ethyl cyanacetic ester, aether cyanaceticus, $CN.CH_2.COOEt$. A colorless liquid, d.1.066, b.207, insoluble in water, miscible with alcohol or ether. **e. cyanamide.** C_3H_6N = 56.1. $CN.NHEt$. A colorless, oily liquid. **e. cyanate.** C_3H_5ON = 71.1. Cyanetholin, EtOCN. A colorless, unstable liquid, insoluble in water. (iso-) EtNCO = 71.1. Ethyl carbimide. A colorless liquid, b.60, soluble in alcohol. **e. cyanide.** C_3H_5N = 55.10. Propionitrile, hydrocyanic ether, ether cyanatus, propane nitrile*, EtCN. A colorless liquid, $d_{20°}$.0.780, b.97.1, soluble in water, miscible with alcohol or ether. (iso-) E. isocyanide. **e. cyanuramide.** E. cyanamide. **e. diacetoacetate.** $C_8H_{12}O_4$ = 172.14. The ester $(MeCO)_2CHCOOEt$. A colorless liquid, d.1.101, b.200, slightly soluble in water. **e. dibromoacetate.** $C_4H_6O_2Br_2$ = 246.0. Ethyl dibromoacetic ester, $Br_2CHCOOEt$. A colorless liquid, miscible with alcohol or ether. **e. dibromocinnamate.** Zebromal. **e. dichloroacetate.** $C_4H_6O_2Cl_2$ = 156.97. Ether dichloraceticus, ethyl dichloracetic ester. $Cl_2CHCOOEt$. A colorless liquid, d.1.283, b.156, very slightly soluble in water, miscible with alcohol or ether. **e. dichlorarsine.** $C_2H_5AsCl_2$ = 175.0. Dick. A liquid, d.1.66, b.155. A vesicant and lung-irritant poison gas. **e. dichloride.** Ethylene chloride. **e. diethylacetoacetate.** $C_{10}H_{18}O_3$ = 186.19. Diethylacetoacetic ethyl ester, $MeCO.CEt_2.COOEt$. A colorless liquid, $d_{22°}$.0.974, b.218, insoluble in water, miscible with alcohol or ether. **e. diethylmalonate.** $C_{11}H_{20}O_4$ or $Et_2C(COOEt)_2$ = 216.22. A colorless liquid, d.0.992, b.223, insoluble in water, miscible with alcohol or ether. **e. diiodoacetate.** $C_4H_6O_2I_2$ = 339.8. The ester, $I_2CHCOOEt$. An oily, colorless liquid, soluble in alcohol or ether. **e. diiodobrassidate.** Lipoiodine. **e. diiodosalicylate.** $C_9H_8O_3I_2$ = 417.8. Ether diiodosalicylicus. $C_2H_3I_2(OH)COOC_6H_4$. Colorless crystals, m.132, sparingly soluble in water, soluble in alcohol, benzene or oils. Used as an iodoform substitute. **e. diisoamyl tin bromide.** $C_5H_{11}SnEtBr$ = 369.83. A colorless liquid, d.1.3650. **e. diisobutyl tin bromide.** $C_4H_9SnEtBr$ = 341.80. A colorless liquid, d.1.4089, $b._{13mm}$ 130.6. **e. dimethylamine.** The tertiary amine $EtNMe_2$. **e. dimethyl malonate.** $C_9H_{16}O_4$ or $Me_2.C.(COOEt)_2$ = 188.18. A colorless liquid, d.1.002, b.196.5, insoluble in water, miscible with alcohol or ether. **e. dioxythiocarbonate.** $C_5H_{10}O_2S$ = 134.1. Cf. Xanthic acid. A colorless, strongly refractive liquid, soluble in alcohol. **e. diphenylamine.** $C_{14}H_{15}N$ = 197.25. Diphenyl ethylamine, $EtNPh_2$. A colorless liquid, b.296, insoluble in water, soluble in alcohol. **e. diphenylphosphine.** $C_{14}H_{15}P$ = 214.2. Diphenylethylphosphine, $EtPPh_2$. A colorless liquid, b.293, insoluble in water, soluble in alcohol or benzene. **e. diselenide.** $C_4H_{10}Se_2$ = 216.3. Diethyl selenide, ethyl perselenide, EtSe.SeEt. A heavy, brown and pungent liquid, b.186. **e. disilicate.** $C_{12}H_{30}O_7SiO_2$ = 346.6. $[(EtO)_3Si]_2O$. A colorless, oily, inflammable liquid, with an odor resembling peppermint. **e. disulfide.** $C_4H_{10}S_2$ = 122.21. Ethyl persulfide, ethyl dithioethane*, EtS.SEt. A colorless liquid with garlic-like odor, $d_{22°}$.0.993, b.153, sparingly soluble in water, soluble in alcohol. **e. dithiocarbonate.** $C_5H_{10}OS_2$ = 150.23. Dithiourethane, $CO(SEt)_2$. d.1.085, b.196.5. **e. ene.** Ethylene. **e. ether.** Et_2O. A colorless liquid, d.0.720, m. −116°, b.35°, slightly soluble in water. Used as a solvent for organic compounds and as an anesthetic. **e. fluoride.** C_2H_5F = 48.05. Fluoroethane*. EtF. A colorless gas, $d_{air=1}$.1.7, b. −32, soluble in water or alcohol. **e. formamide.** C_3H_7ON = 73.1. The aminoaldehyde $EtNH.CHO$. A colorless liquid, $d_{21°}$.0.952, b.199, soluble in alcohol or ether. **e. formate.** $C_3H_6O_2$ = 74.07. Ethyl formic ester, HCOOEt. A colorless liquid, d.0.917, m. −80, b.54.4, slightly soluble in water, miscible with alcohol or ether; used in flavoring extracts. **e. furoate.** C_4H_3COOEt. A colorless liquid, d.1.1174, m.-34, b.197; used as a solvent and industrial perfume. **e. fumarate.** $C_8H_{12}O_4$ = 172.1. The ester $EtOOC.CH:CH.COOEt$. A colorless, oily liquid. **e. gas, e. gasoline.** E. petrol, "ethyl." The trade-mark *ethyl* designates a gasoline meeting certain specifications, with which a fluid containing tetraethyl lead, halogens and other constituents as components of an antiknock compound is mixed. **e. glycerate.** $C_5H_{10}O_4$ = 134.11. The ester $CH_2OH.CHOH.COOEt$. A colorless liquid, d.1.091, b.235, slightly soluble in water, miscible with alcohol or ether. **e. glycine.** $C_4H_9O_2N$ = 103.08. The amino acid $EtNH.CH_2.COOH$. Colorless scales, decomp. 160, soluble in water or alcohol. **e. glycolether.**

Cellosolve. **e. glycollate.** $C_4H_8O_3$ = 104.07. E. hydroxyacetate, $HOCH_2COOEt$. A colorless liquid, $d_{23°}$.1.083, b.160, soluble in alcohol or ether; an isomer of ethyl glycollic acid. Used as a solvent for nitrocellulose and many resins. **e. glycollic acid.** $C_4H_8O_3$ = 104.07. Ethoxyacetic acid, $EtO.CH_2.COOH$. A colorless liquid, b.206, soluble in alcohol; isomeric with ethyl glycolate. **e. green.** Ethylated *crystal violet* (q.v.).. **e. hydrate.** Ethanol. **e. hydrazine** $C_2H_8N_2$ = 60.15. $NH_2.NHEt$. A colorless liquid, b.100, soluble in alcohol, water, or ether. **e. hydride.** Ethane. **e. hydrine.** Ethylin. **e. hydrobromide.** E. bromide. **e. hydrochloride.** E. chloride. **e. hydrocupreine.** Optochine. **e. hydrogen sulfate.** E. sulfuric acid. **e. hydroperoxide.** $C_2H_6O_2$ = 62.06. The peroxide EtO.OH. A colorless liquid, $b._{150mm.}26°$, soluble in water, alcohol, or ether. **e. hydroselenide.** E. selenomercaptan. **e. hydrosulfide.** E. mercaptan. **e. hydroxyacetate.** E. glycollate. **e. hydroxylamine.** C_2H_7ON = 61.11. (**alpha-**) Ethoxylamine NH_2OEt. A colorless liquid, $d_{7°}$.0.883, b.68, soluble in water, alcohol, or ether. (**beta-**) Hydroxylethylamine, EtNHOH. Colorless leaflets, d.-0.908, m.60, soluble in alcohol, ether, or water. **e. hydroxypropionate.** $C_5H_{10}O_3$ = 118.1. (**alpha-**) E. lactate. (**beta-**) The ester $CH_2OH.CH_2.COOEt$. A colorless liquid, b.187, soluble in water, alcohol or ether; it is a solvent for resins. **e. iodide.** C_2H_5I = 156.02. Iodoethane*, hydroiodic ether, e. hydroiodic ester, ether iodatus, EtI. A colorless liquid of penetrating, ethereal odor, d.1.92, m.−112, b.72.3, slightly soluble in water, soluble in alcohol or ether. Used for the separation of minerals; and in iodine therapy for inhaling, producing short analgesia. **e. iodine calcium.** EtCaI = 196.04. An amorphous powder, decomp. in water. **e. iodoacetate.** $C_4H_7O_2I$ = 214.0. K.S.K., $CH_2I.COOEt$. A colorless heavy oil, d.7.44, b.179. It is a lacrimatory war poison gas. **e. isoamylether.** $EtOC_5H_{11}$ = 116.17. A colorless liquid, d.0.761, b.112, insoluble in water, miscible with alcohol or ether. **e. isobutylether.** $EtOC_4H_9$ = 102.15. A colorless liquid, d.0.751, b.78, insoluble in water, miscible with alcohol or ether. **e. isobutylketone.** $EtCOC_4H_9$ = 114.16. 2-methylhexane-4-one. A colorless liquid, $d_{17°}$.0.815, b.136, insoluble in water, miscible with alcohol or ether. **e. isobutyrate.** $C_6H_{12}O_2$ = 116.13. Ethyl dimethylacetate, $Me_2CH.COOEt$. A colorless liquid, $d_{20°}$.0.869, b.110, slightly soluble in water, miscible with alcohol or ether. **e. isocyanate.** See *e. cyanate*. **e. isocyanide.** EtNC = 55.1. E. carbylamine*. A colorless liquid, $d_{4°}$.0.759, b.79; soluble in water, alcohol or ether. **e. isophthalate.** $C_6H_4(COOEt)_2$ = 222.2. A colorless, oily liquid, m.0, b.285. **e. isopropylacetoacetate.** $C_9H_{16}O_3$ = 172.18. The ester $MeCO.CH(CHMe_2).COOEt$. A colorless liquid, $d_{20°}$.0.947, b.200, slightly soluble in water, miscible with alcohol or ether. **e. isopropylether.** $C_5H_{12}O$ = 88.13. Isopropyl ethoxide, Me_2CHOEt. A colorless liquid, $d_{0°}$.0.745, b.54, soluble in water, alcohol, or ether. **e. isopropylketone.** $C_6H_{12}O$ = 100.13. 2-methyl-pentan-3-one, $Me_2CH.CO.Et$. A colorless liquid, $d_{0°}$.0.830, b.114.5, slightly soluble in water or alcohol, miscible with ether. **e. isosuccinate.** $C_8H_{14}O_4$ = 174.15. The ester $MeCH(COOEt)_2$. A colorless liquid, d.1.021, b.198, sparingly soluble in water, miscible with alcohol or ether. **e. isosulfocyanate.** See *e. thiocyanate*. **e. isothiocyanate.** See *e. thiocyanate*. **e. isovalerate.** $C_7H_{14}O_2$ = 130.16. The ester Me_2CHCH_2COOEt. A colorless liquid, d.0.872, b.134.3, insoluble in water, miscible with alcohol or ether. **e. kairine.** See *kairine*. **e. ketone.** Diethyl ketone. **e. lactate.** $C_5H_{10}O_3$ = 118.1. Ethyl-α-hydroxypropionate, $MeCH(OH)COOEt$. A colorless liquid, $d_{19°}$.1.032, b.154, soluble in water, ether, or alcohol. Used as a solvent for nitrocellulose and resins in the manufacture of lacquers. **e. laurate.** $C_{14}H_{28}O_2$ = 226.3. Colorless crystals, soluble in alcohol or ether. **e. malate.** $C_8H_{14}O_5$ = 190.15. The ester $EtOOC.CH_2.CHOH.COOEt$. A colorless liquid, $d_{25°}$.1.124, b.248, miscible with water, alcohol, or ether. Used as a constituent of lacquers. **e. malonate.** $C_7H_{12}O_4$ = 160.14. The ester $CH_2(COOEt)_2$. A colorless liquid, d.1.061, m.−50, b.198, slightly soluble in water, miscible with alcohol or ether; used as plasticizer for cellulose acetate. **e. malonic acid.** $C_5H_8O_4$ = 132.07. The acid $EtCH(COOH)_2$. Colorless, rhombic prisms, m.111, decomp. 160, soluble in water alcohol, or ether; isomeric with dimethylmalonic acid, methyl-succinic acid, and glutaric acid. **e. mannite.** $C_{10}H_{10}O_5$ = 210.1. A substitution product of mannite; a colorless syrupy liquid. **e. melamine.** E. cyanamide. **e. mercaptan.** C_2H_6S = 62.11. Thioethylalcohol, e. hydrosulfide, ethanethiol*, EtSH. A colorless liquid, $d_{20°}$.0.839, m.−144, b.37, slightly soluble in water, miscible with alcohol or ether. It is one of the odorous constituents of feces. **e. mercaptide.** A compound of the general type, Et.S.M, where M is a monovalent metal. **e. mercuric chloride.** EtHgCl = 265.11. Silvery, iridescent leaflets, d.3.5, m.192.5, insoluble in water. **e. mercuric hydroxide.** EtHgOH = 246.66. Silvery, iridescent leaflets, m.190, insoluble in water. **e. metanilic acid.** $C_8H_{11}NO_3S$ = 201.0. $C_6H_4NHEt.SO_3H$. Colorless needles, decomp. 294. **e. methyl acetic acid.** $C_5H_{10}O_2$ = 102.11. Methyl ethyl acetic acid, $Et.CH.Me.COOH$. A liquid b.175. **e. methylether.** C_3H_8O = 60.1. Ethyl methyloxide Et.O.Me. A colorless volatile liquid, used medicinally as an anesthetic. **e. monotartrate.** $C_6H_{10}O_6$ = 178.11. Colorless rhombic crystals, m.90, soluble in water or alcohol. **e. morphine hydrochloride.** Dionine. **e. mustard oil.** E. isothiocyanate (see *e. thiocyanate*). **e. naphthalene.** $C_{12}H_{12}$ = 156.16. Naphthylethane, $C_{10}H_7Et$. (**alpha-**) A colorless liquid, $d_{15°}$.1.064, b.256, insoluble in water, miscible with alcohol or ether. (**beta-**) A colorless liquid, $d_{0°}$.-1.008, m.−19, b.251, insoluble in water, miscible with alcohol or ether. **e. naphthylamine.** $C_{12}H_{13}N$ = 171.21. Ethylamine-naphthalene. $EtNH.C_{10}H_7$. (**alpha-**) A colorless liquid, b.303. (**beta-**) A colorless liquid, b.305. **e. naphthylether.** $C_{12}H_{12}O$ = 172.16. Ethoxynaphthalene, $C_{10}H_7(OEt)$. (**alpha-**) A colorless liquid, m.5.5, b.272, insoluble in water, miscible with alcohol or ether. (**beta-**) Bromelia. Colorless crystals, m.37, b.274, insoluble in water, slightly soluble in alcohol, soluble in ether. **e. nicotine.** A substitution product of nicotine. **e. nitramine.** See *nitramine*. **e. nitrate.** $EtNO_3$ or $C_2H_5O_3N$ = 91.09. Aether nitricus, $EtO.NO_2$. A colorless liquid, d.1.116, d.1.116, m.−112, b.87.6, insoluble in water,

miscible with alcohol or ether. **e. nitrite.** $EtNO_2$ or $C_2H_5O_2N$ = 75.09. Aether nitrosus. Sweet spirits of niter. EtO.NO. A colorless liquid, d.0.900, b.17, slightly soluble in water, miscible with alcohol or ether. Used medicinally as a 15 % alcoholic solution, as a diuretic and diaphoretic. Cf. *nitroethane.* **e. nitrobenzoate.** $C_9H_9O_4N$ = 195.16. $NO_2.C_6H_4.COOEt$. (ortho-) Colorless triclinic crystals, m.30, soluble in alcohol or ether. (meta-) Colorless prisms, m.48, insoluble in water, soluble in alcohol or ether. (para-) Colorless crystals, m.57, soluble in alcohol or ether. **e. nitrocarbamate.** Urethane. **e. nitrolic acid.** $C_2H_4O_3N_2$ = 104.12. $MeC(NOH).NO_2$. Yellow, rhombic crystals, m.86 (decomp.), soluble in water, alcohol, ether, or alkalis. **e. nonylate.** $C_{11}H_{22}O_2$ = 186.2. E. pelargonate, oenanthic ether, e. pelargonic ester. $C_8H_{17}COOEt$. A colorless liquid of stupefying, wine-like odor and acrid taste, d_{17}°.0.8635, b.227, insoluble in water, soluble in alcohol or ether; used in flavoring extracts in place of wine and cognac essences. **e. oenanthate.** $C_9H_{18}O_2$ = 158.2. Cognac oil. The ester $C_6H_{13}COOEt$. A colorless, oily liquid and a constituent of old wines; used in flavoring extracts. **e. orthoacetate.** $C_5H_{12}O_3$ = 162.2. Triethoxyethane, acetyltriethyl ether. $MeC(OEt)_3$. **e. orthocarbonate.** $C_9H_{20}O_4$ = 192.2. Tetraethoxymethane. $C(OEt)_4$. **e. orthoformate.** $C_7H_{16}O_3$ = 148.2. Triethoxymethane, formyltriethyl ether, acton. $CH(OEt)_3$. **e. orthophosphate.** See *e. phosphate.* **e. orthosilicate.** See *e. silicate.* **e. oxalurate.** $C_6H_{10}O_4$ = 146.10. The ester $(COOEt)_2$. A colorless liquid, d.1 085, b.186; slightly soluble in water, miscible with alcohol or ether. **e. oxalurate** $C_5H_8O_4N_2$ = 160.1. Oxaluric e. ester. $NH_2.CO.NH.CO.COOEt$. **e. oxamate.** $C_4H_7O_3N$ = 117.1. Oxaminic e. ester, oxamethane, ethyl oxamide, $NH_2.CO.COOEt$. Colorless crystals, soluble in alcohol. **e. oxanilate.** $C_{10}H_{11}O_3N$ = 193.1. Oxanilic e. ester, $PhNH.CO.COOEt$. Colorless crystals, soluble in alcohol or ether. **e. oxide.** Ether. **e. oxydithiocarbonic acid.** Xanthic acid. **e. palmitate.** $C_{15}H_{31}.COOEt$ = 284.39. Colorless needles, m.24.2, insoluble in water, soluble in alcohol or ether. **e. pelargonate.** E. nonylate. **e. pentasulfide.** $C_4H_{10}S_5$ = 218.39. Et_2S_5. **e. perchlorate.** $C_2H_5ClO_4$ = 128.5. Perchloric ether. A colorless, explosive liquid with a sweet, pleasant odor. **e. perchloride.** Hexachloroethane. **e. peroxide.** Diethyldioxide. **e. persulfide.** E. disulfide. **e. phenacetin.** See *phenacetin.* **e. phenate.** Phenetol. **e. phenol.** $C_8H_{10}O$ = 122.12. $Et.C_6H_4OH$. (ortho-) Phlorol, 1.2-. A colorless liquid, d_0°.1.037, b.206.8, soluble in alcohol or ether. (para-), 1.4-. Colorless needles, m.47, b.214, insoluble in water, soluble in alcohol or ether. **e. phenylacetate.** $C_9H_{12}O_2$ = 164.15. The ester $PhCH_2COOEt$. A colorless liquid, d.1.086, b.229, insoluble in water, miscible with alcohol or ether. **e. phenylacetylene.** $C_{10}H_{10}$ = 130.10. The unsaturated aromatic hydrocarbon $PhC{:}CEt$. A colorless liquid, d_{21}°.0.923, b.202, soluble in alcohol. **e. phenylcarbinol.** $C_9H_{12}O$ = 136.11. Ethyl phenylhydroxymethane,

A colorless liquid, d_{15}°.0.992, b.212, insoluble in water, miscible with alcohol or ether. **e. phenylcinchonate.** Acitrin. **e. phenylether.** Phenetole. **e. phenylhydrazine.** $C_8H_{12}N_2$ = 136.16. (alpha-) $PhNEt.NH_2$. A colorless oily liquid, b.237, soluble in alcohol. (beta-) $PhNH.NHEt$. A colorless, oily liquid, sparingly soluble in water, miscible with alcohol or ether. **e. phenylketone.** $C_9H_{10}O$ = 134.13. The aromatic ketone PhCOEt. Colorless leaflets, d.1.015, m.15, b.218, insoluble in water, soluble in alcohol or ether. **e. phenylsulfone.** $C_8H_{10}O_2S$ = 170.21. $PhSO_2Et$. Colorless monoclinic scales, m.42, b. above 300, sparingly soluble in water, soluble in alcohol or ether. **e. phenylurea.** $C_9H_{12}ON_2$ = 164.23. $PhNH.CO.NHEt$. Colorless needles, m.99, insoluble in water, soluble in alcohol. **e. phosphate.** Ethyl phosphoric acids: (di-) See 2. (mono-) See 1. (normal-) See 3. (pyro-) See 4. (tetra-) See 4. (tri-) See 3. (1) $C_2H_5.H_2PO_4$ = 126.06. Monoethylphosphoric acid, ethyl phosphoric acid, monoethyl phosphate. A dibasic acid; a colorless, oily liquid, forming metallic salts (ethylphosphates). (2) $(C_2H_5)_2.HPO_4$ = 154.09 Diethylphosphoric acid, diethylic phosphate. A monobasic acid, a colorless syrupy liquid which forms a series of crystalline salts (diethylphosphates). (3) $(C_2H_5)_3PO_4$ = 182.15. E. phosphate, triethylic phosphate. A colorless aromatic liquid, b.215, decomp. in water, soluble in alcohol or ether. (4) $(C_2H_5)_4P_2O_7$ = 290.16. E. pyrophosphate, tetraethylic phosphate. A colorless, oily liquid having a peculiar odor. **e. phosphine.** C_2H_7P = 62.11. $EtPH_2$. A colorless liquid, b.25. **e. phosphinic acid.** $C_2H_5.H_2PO_2$ = 110.1. $Et.PO.(OH)_2$. An isomer of ethyl phosphite (1). **e. phosphite.** E. phosphorous acids. (1) $C_2H_5H_2PO_3$ = 110.06. Acid ethyl phosphite, ethyl phosphorous acid. A dibasic acid, forming the ethylphosphites. (2) $(C_2H_5)_2.HPO_3$ = 138.09. Diethylphosphite, diethylphosphorous acid. A monobasic acid, forming diethyl phosphites. (3) $(C_2H_5)_3PO_3$ = 166.12. Normal ethyl phosphite, triethylphosphite. A colorless liquid of disagreeable odor. (4) $(C_2H_5)_2H_2P_2O_5$ = 202.10. E. pyrophosphite, e. pyrophosphorous acid. A dibasic acid forming ethylpyrophosphites. **e. phosphoric acid.** See *e. phosphate.* **e. phosphorous acid.** See *e. phosphite.* **e. phthalate.** $C_6H_4(COOEt)_2$ = 222.17. A colorless liquid, d_{20}°.1.118, b 295, insoluble in water, soluble in alcohol or ether. (iso-) See *e. isophthalate.* (meta-) *E. isophthalate.* (ortho-) *E. phthalate.* (para-) E. terephthalate. (tere-) See *e. terephthalate.* **e. piperidine.** $C_7H_{15}N$ = 113.2. A synthetic; a derivative of piperidine. **e. platinocyanide.** $Et_2Pt(CN)_4.2H_2O$ = 393.50. Yellowish crystals. **e. propiolate.** $C_5H_6O_2$ = 98.07. The ester $HC{:}CCOOEt$. A colorless liquid, b.119, insoluble in water, miscible with alcohol or ether. **e. propionate.** $C_5H_{10}O_2$ = 102.11. The ester $EtCOOEt$. A colorless liquid, d.0.896, b.98.3, slightly soluble in water, miscible with alcohol or ether; used in perfumery. **e. propyl.** Pentane. **e. propylcarbinol.** $C_6H_{14}O$ = 102.15. Hexan-3-ol, $Pr.CHOH.Et$. A colorless liquid, d_{20}°.0.819, b.135, miscible with alcohol. **e. propylene.** Amylene. **e. propylether.** $C_5H_{12}O$ = 88.13. Ethylpropyloxide, $Et.O.Pr$. A colorless liquid, d_0°.0.755, b.60, slightly soluble in water, miscible with alcohol or ether. **e.**

propylketone. $C_6H_{12}O$ = 100.13. Hexan-3-one, Et.CO.Pr. A colorless liquid, $d_{18°}$.0.818, b.122, sparingly soluble in water, miscible with alcohol or ether. **e. pseudocyanate.** E. isocyanate. **e. pyrrole.** See *pyrrole*. **e. pyoctanin.** See *pyoktanin*. **e. pyridine.** C_7H_9N = 107.12. α- C_5H_4NEt. A liquid, $b._{763mm}$ 123. **e. pyruvate.** $C_5H_8O_3$ = 116.1. The ketone ester MeCOCOOEt. A colorless liquid, d.1.060, b.144; used as a solvent for nitrocellulose. **e. racemate.** An optically-active isomer of ethyl tartrate. **e. red.** $C_{23}H_{23}N_2I$. *1.1*-Diethyl isocyanin iodide. A quinoline dye used as photosensitizer. **e. rhodanate.** E. thiocyanate. **e. saccharate.** $C_{10}H_{18}O_8$ = 266.2. Saccharic ethyl ester. A bitter crystalline compound, soluble in water. **e. salicylate.** $C_9H_{10}O_3$ = 166.13. Sal ethyl, $HO.C_6H_4.COOEt$. A colorless, volatile liquid of pleasant odor and taste, $d_{20°}$.1.132, b.231, insoluble in water, miscible with alcohol or ether; used medicinally as an antiseptic, also as a solvent for nitrocellulose. **e. selenide.** $C_4H_{10}Se$ = 137.1. Diethylselenide, Et_2Se. A colorless, heavy, oily liquid, b.107. (di-) See *e. diselenide*. (per-) See *e. diselenide*. **e. selenomercaptan.** C_2H_6Se = 109.1. Ethyl hydroselenide, EtSeH. A colorless liquid of disagreeable odor. **e. silicate.** A group of compounds of ethyl and silicic acid: (1) $(C_2H_5)_4SiO_4$ = 208.6. Ethyl orthosilicate. A colorless, inflammable liquid; an isolog of ethyl orthocarbonate. (2) $(C_2H_5)_2SiO_3$ = 134.4. Ethyl metasilicate. Colorless liquid, $d_{20°}$.-0.933, b.165; decomp. by water. An isolog of e. carbonate. (3) $(C_2H_5)_6Si_2O_7$ = 342.8. E. disilicate. **e. silicon.** The trivalent $EtSi\equiv$ radical, silicon monoethide. **e. stannic acid.** EtSnO.OH = 180.75. A white powder, insoluble in water. **e. stearate.** $C_{20}H_{40}O_2$ = 312.4. Stearic ethyl ester. A waxy substance, insoluble in water, soluble in alcohol. **e. strychnine.** A derivative of strychnine, (q.v.). **e. suberate.** $C_{12}H_{22}O_4$ = 230.2. The ester $EtOOC.(CH_2)_6COOEt$. A colorless liquid of agreeable odor, soluble in alcohol or ether. **e. succinate.** $C_8H_{14}O_4$ = 174.16. The ester $EtOOC(CH_2)_2COOEt$. A colorless liquid, d.-1.044, m.−20.8, b.216.5, insoluble in water, miscible with alcohol or ether; used as a plasticizer for cellulose acetate. (iso-) See *e. isosuccinate*. **e. succinic acid.** $C_6H_{10}O_4$ = 146.11. The dibasic acid $HOOC.CH_2.CHEt.COOH$. Colorless prisms, m.98, soluble in water, alcohol, or ether. **e. succinolactate.** $C_{11}H_{18}O_6$ = 246.2. A colorless, oily liquid. **e. succinylsuccinate.** $C_{12}H_{16}O_6$ = 256.2. Light-green, prismatic crystals, soluble in water, alcohol, or ether, giving a solution with blue fluorescence. **e. sulfas.** E. sulfate. **e. sulfate.** $(C_2H_5)_2SO_4$ = 154.15. Normal ethyl sulfate, diethyl sulfate. A colorless, oily liquid with peppermint odor, d.1.184, m.−24.5, b.208, insoluble in water, soluble in alcohol. (acid-) E. sulfuric acid. (di-) E. sulfate. (mono-) E. sulfuric acid. **e. sulfide.** $(C_2H_5)_2S$ = 90.15. Diethylsulfide, ethylthioether, ethylthioethane*, Et_2S. A colorless, volatile liquid, $d_{20°}$.0.837, m.−90.5, $b._{764mm}$92, insoluble in water, miscible with alcohol or ether. (di-) See *e. disulfide*. (dichloro-) Mustard gas. (penta-) E. pentasulfide. (per-) E. disulfide. **e. sulfinic acid.** $C_2H_6O_2S$ = 94.11. Ethane sulfinic acid*, Et.SO.OH. A colorless, syrupy liquid; an isolog of propionic acid. **e. sulfite.** $(C_2H_5)_2SO_3$ = 138.15. $(EtO)_2SO$. A colorless liquid, $d_{0°}$.-1.106, b.161, slightly decomp. by water, soluble in alcohol; it is an isolog of e. carbonate. **e. sulfocarbonate.** E. thiocarbonate. **e. sulfochloride.** $C_2H_5.SOOCl$ = 128.60. A colorless liquid, $d_{20°}$.1.357, m.29, b.122 (decomp.); decomp. by water. **e. sulfocyanate, -ide.** E. thiocyanate. **e. sulfohydrate.** E. mercaptan. **e. sulfone.** $C_4H_{10}O_2S$ or Et_2SO_2 = 122.15. Ethyl sulfonyl ethane*, diethyl sulfone: Colorless, rhombic crystals, d.1.357, m.73, b.248, sparingly soluble in water. **e. sulfonic acid.** $C_2H_6O_3S$ or $EtSO_2.OH$ = 110.11. Ethane sulfonic acid*. Colorless, deliquescent crystals, soluble in alcohol, water, ether, or alkalis. **e. sulfonic chloride.** $C_2H_5O_2SCl$ or $EtSO_2Cl$ = 128.55. Ethane sulfonyl chloride*, sulfonyl chloride. A colorless liquid, b.177, decomp. by water or alcohol, miscible with ether. **e. sulfonic oxide.** E. sulfoxide. **e. sultoxide.** Et_2SO or $C_4H_{10}OS$ = 106.20. Ethyl sulfinyl ethane*. A colorless liquid, miscible with alcohol, m.4−6, $b._{15mm}$ 88. **e. sulfuric acid.** $C_2H_6O_4S$ or $EtHSO_4$ = 126.09. Monoethyl sulfate, acid ethylsulfate, sulfovinic acid, e. hydrogen sulfate. A colorless, syrupy liquid, $d_{15°}$.1.316, decomp. by heat or water, miscible with alkalis. Used medicinally as its salts, and technically for precipitating casein from milk. **e. sulfurous acid.** $C_2H_6O_3S$ or $EtHSO_3$ = 110.1. Monoethylsulfite, acid ethylsulfite. EtO.SO.OH. **e. tartrate.** $C_8H_{14}O_6$ = 206.16. Ethyl racemate, diethyltartrate. The ester $EtOOC(CH_2OH)_2COOEt$. A colorless liquid, d.1.209, b.280, slightly soluble in water, miscible with alcohol or ether. Used as solvent for nitrocellulose, gums and resins. **e. tartronic acid.** $C_5H_8O_5$ = 146.05. Colorless, triclinic scales, m.116, decomp. on further heating, soluble in water, alcohol, or ether. **e. telluride.** $C_4H_{10}Te$ or Et_2Te = 185.5. Tellurium ethyl, diethyl telluride. A heavy, oily, reddish liquid giving off yellow fumes. (di-) Et_2Te_2 = 313.1. Diethylditelluride, ethylpertelluride. A dark-red liquid, decomp. by water. **e. terephthalate.** $C_6H_4(COOEt)_2$ = 222.17. Ethyl-p-phthalate. A colorless liquid, b.119, insoluble in water, miscible with alcohol or ether. **e. thioalcohol.** E. mercaptan. **e. thiocarbamide.** $C_3H_8N_2S$ = 104.1. E. thiourea. $EtNH.CS.NH_2$. **e. thiocarbimide.** E. isothiocyanate (see *e. thiocyanate*). **e. thiocarbonate.** (1) $C_5H_{10}O_2S$ = 134.14. $CS(EtO)_2$. A liquid, d.-1.028, b.162. (2) $C_5H_{10}S_3$ = 166.1. $(EtS)_2CS$. A yellow, oily liquid of unpleasant odor; an isolog of ethyl carbonate and ethyl sulfite. **e. thiocyanate.** C_2H_5SCN = 87.15. E. rhodanate, e. sulfocyanide. A colorless liquid, d.1.007, b.148, insoluble in water, miscible with alcohol or ether. (iso-) $C_2H_5.NCS$ = 87.15 E. mustard oil. A colorless liquid, $d_{23°}$.0.995, m.−5.9, $b._{753mm}$131, insoluble in water, miscible with alcohol or ether. **e. tin tribromide.** $EtSnBr_3$ = 387.49. Colorless needles, m.310, soluble in water. **e. toluate.** $C_{10}H_{12}O_2$ = 164.15. The ester MeC_6H_4COOEt. **ortho-** Ethyl-1.2-toluate. A colorless liquid, d.1.039, b.221, insoluble in water, miscible with alcohol or ether. **meta-** Ethyl-1.3-toluate. A colorless liquid, b.228, insoluble in water, miscible with alcohol or ether. **para-** Ethyl-1.4-toluate. A colorless liquid, b.229, insoluble in water, miscible with alcohol or ether. **e. toluene.** E. methyl *benzene*. **e. urea.** See *urea*. **e.**

urethane. See *urethane*. **e. valerate.** $C_7H_{14}O_2$ = 130.16. E. valeriate, e. valerianate, Bu-COOEt. A colorless liquid, $d_{20°}$.0.877, b.144.5, insoluble in water, miscible with alcohol or ether. **e. vanillate.** $C_{10}H_{12}O_4$ = 196.15. Colorless crystals, m.44, b.292, insoluble in water, soluble in alcohol or ether. **e. vanillin.** See *vanillin*. **e. vinyl ether.** C_4H_8O = 72.08. The ether $C_2H_5.O.C_2H_3$. A colorless liquid, $d_{14.5°}$ 0.7625, b.35.5; soluble in alcohol or water. **e. violet.** A hydrogen ion indicator changing at pH 2.0 from blue-green (acid) to purple (alkali). **e. xylene.** Dimethyl ethyl *benzene*.

ethylal. Acetaldehyde.

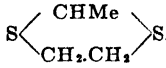
ethylamine. See *ethyl amine*.

ethylate. An alcoholate or ethoxide. A compound derived from ethanol by replacing the hydrogen of the hydroxy group by a monovalent metal (M) *e.g.*, MOEt. EtONa, sodium ethylate. EtOK, potassium ethylate. Cf. *ethoxide, alcoholate*.

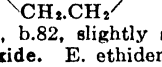
ethylation. The introduction of an ethyl group into a compound.

ethylene. (1) Ethene*. (2) Acetene. Elayl. The divalent —$CH_2.CH_2$—, or C_2H_4= radical. Cf. *ethylidene*. **azi-** Diazoethane. **bromo-** Vinyl bromide. **chloro-** Vinyl chloride. **di-** See *diethylene*. **dichloro-** Acetylene chloride. **diethyl-** Δ^3-Hexylene. **dimethyl-** ψ-Butylene. **diphenyl-** Stilbene. **keto-** Ketene. **pentyl-** Heptene. **perchloro-** See *tetrachloroethylene*. **phen-, phenyl-** Styrolene. **tetrachloro-** q.v. **tetraiodo-** Diiodoform. **tetraphenyl-** q.v. **trimethyl-** Pental. **vinyl-** Bivinyl.

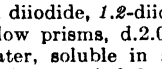
e. acetate. $C_6H_{10}O_4$ = 146.11. Glycol diacetate. The ester $MeCOOCH_2.CH_2OOCMe$. A colorless liquid, $d_{0°}$.1.128, b.186, soluble in water, alcohol, or ether. **e. alcohol.** E. glycol. **e. aldehyde.** Acrolein. **e. benzoate.** $C_{16}H_{14}O_4$ = 270.1. The ester $Ph.COO.CH_2:CH_2.OOC.Ph$. Colorless, rhombic prisms, m.73, b.360, insoluble in water, soluble in ether. **e. bichloride.** E. chloride. **e. bromide.** $C_2H_4Br_2$ = 187.96. Glycol dibromide, bromoethylene, e. dibromide, 1.2-dibromoethane*, $BrCH_2.CH_2Br$. A colorless liquid, d.2.189, m.9, b.131, slightly soluble in water, miscible with alcohol or ether. Used as an anesthetic and in organic synthesis; also added to ethyl-gasoline, q.v. **e. bromohydrin.** Glycol bromohydrin. **e. carboxylic acid.** Acrylic acid. **e. chlorohydrin.** C_2H_5OCl = 80.06. Chlorethylalcohol, 2-chlorethanol, 1-hydroxy-2-chlorethane. $ClCH_2.CH_2OH$. A colorless liquid, $d_{8°}$.1.28, m. −69, b.128, miscible with water, alcohol, or ether. Used in organic synthesis, and for the forced sprouting of plants. *commercial-* A 40 % solution, d.1.097, b.96, used in chemical synthesis for introducing the hydroxy-ethyl group into a molecule (*e.g.* novocaine). **e. chloride.** $C_2H_4Cl_2$ = 98.94. Glycol dichloride, elaylchloride, ethene dichloride, 1.2-dichlorethane*, vinylene chloride, Dutch liquid, $ClCH_2.CH_2Cl$. A colorless liquid, d.1.2569, m. −35.3, b.83.7, slightly soluble in water or alcohol, miscible with ether. Used in organic synthesis; as a solvent for lacquers; as an extractive for fats and oils; as a spotting agent for removal of tar, paint, etc. from textiles; alone or with carbon dioxide as an insecticidal fumigant for foodstuffs. Cf. *dichloroethylene*. **1.1-** Ethylidene chloride. **e. cyanohydrin.** C_3H_5ON = 71.07. Glycol cyanhydrin, 2-cyano-ethanol, 1-hydroxy-2-cyanoethane. A colorless liquid, $d_{0°}$.1.059, m.221, miscible with alcohol, water, or ether. **e. cyanide.** $C_4H_4N_2$ = 80.07. Succinonitrile, e. dicyanide, e. dicarbonitrile, glycol dicyanide, 1.2-dicyanoethane. Colorless crystals, m.54, b.265, soluble in water, alcohol, or ether. **e. diamine.** $C_2H_8N_2$ = 60.09. Diaminoethane, *1.2*-ethane diamine*, $NH_2CH_2.CH_2NH_2$. A constituent of ptomaines. Colorless liquid or crystals, d.0.87, m.10, b.117, soluble in water, alcohol, or ether. Cf. *sublamine*. **e. dibenzamide.** See *dibenzamide*. **e. dibromide.** See *e. bromide*. **e. dicarbonitrile.** E. cyanide. **e. dicarboxylic acid.** *cis-* Maleic acid. *trans-* Fumaric acid. **e. dichloride.** E. chloride. **e. dicyanide.** E. cyanide. **e. diethylate.** $C_6H_{14}O_2$ = 118.1. Diethylglycolether. $EtO.CH_2.CH_2OEt$. **e. dihydrate.** E. glycol. **e. diiodide.** E. iodide. **e. dinitrate.** E. nitrate. **e. dinitrite.** E. nitrite. **e. dioxide.** Dioxan. **e. dioxy.** The bivalent radical —$OCH_2.CH_2O$—. **e. diphenate.** E. diphenylether. **e. diphenyldiamine.** $C_{14}H_{16}N_2$ = 212.17. Colorless crystals, m.59, insoluble in water, soluble in alcohol or ether. **e. diphenylether.** $C_{14}H_{14}O_2$ = 214.19. E. diphenate. Colorless crystals, m.98.5, sparingly soluble in water, soluble in alcohol or ether. **e. disulfhydrate.** E. mercaptan. **e. disulfonic acid.** E. sulfonic acid. **e. dithioethidene.** $C_4H_8S_2$ = 120.1. The heterocyclic compound



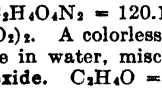
b.173. **e. ethidene ether.** $C_4H_8O_2$ = 88.07. Ethyl ethylidene oxide. The heterocyclic compound



. A colorless liquid, $d_{0°}$.1.002, b.82, slightly soluble in water. **e. ethylidenoxide.** E. ethidene ether. **e. glycol.** Glycol. **e. glycol ethyl ether.** Cellosolve. **e. hydride.** Ethane. **e. imide.** C_2H_5N = 43.1. The heterocyclic compound

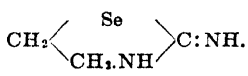


e. imine. (1) Ethylenimine. (2) Piperazine. **e. iodide.** $C_2H_4I_2$ = 281.98. Glycol diiodide, diiodoform, e. diiodide, *1.2*-diiodoethane*, $CH_2I.CH_2I$. Yellow prisms, d.2.07, m.81, slightly soluble in water, soluble in alcohol or ether; used medicinally as an iodoform substitute. **e. mercaptan.** $C_2H_6S_2$ = 94.20. Glycol sulfohydrate, e. disulfhydrate, glycol mercaptan, dithioethylene glycol, $HSCH_2.CH_2.SH$. A colorless liquid, $d_{23°}$.1.123, b.146, soluble in alcohol or ammonia. **e. monoacetate.** Glycol acetate. **e. naphthalene.** Acenaphthene. **e. nitrate.** $C_2H_4O_6N_2$ = 152.12. Glycol dinitrate, e. dinitrate, $(CH_2NO_3)_2$. A yellow liquid, $d_{8°}$.1.483, explodes when heated or hammered, insoluble in water, soluble in alcohol. **e. nitrite.** $C_2H_4O_4N_2$ = 120.12. Glycol dinitrite, $(CH_2NO_2)_2$. A colorless liquid, $d_{0°}$.1.216, b.96, insoluble in water, miscible with alcohol or ether. **e. oxide.** C_2H_4O = 44.04. Dimethylene oxide, *1.2*-epoxyethane*. The heterocyclic compound



. A colorless gas, $d_{0°}$.0.897, m. −111, $b._{746mm}$14, soluble in water, alcohol, or ether. On heating in aqueous solution it forms e. glycol. Used as an insecticide and fumigant to destroy weevils and

other insects; injected into the soil to kill barberry, other weeds and plants. *Cf. carboxide.* **e. oxide sulfone.** $C_{14}H_{14}O_4S_2$ = 310.30. $(PhSO_2)_2C_2H_4$. Soluble in alcohol or acid ether, m.-179.5. **e. perchloride.** Carbon dichloride. **e. periodide.** Diiodoform. **e. rhodanate.** E. sulfocyanide. **e. selenurea.** $C_3H_6N_2Se$ = 149.3. E. pseudoselenourea, imidotetrahydroselenazole. The heterocyclic compound



e. series. Olefines, ethene series, alkenes. A group of unsaturated hydrocarbons of general formula C_nH_{2n} which contain one double bond:

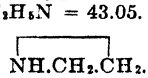
ethylene, ethene*	C_2H_4
propylene, propene*	C_3H_6
butylene, butene*	C_4H_8
amylene, pentene*	C_5H_{10}
hexylene, hexene*	C_6H_{12}
heptylene, heptene*	C_7H_{14}
octylene, octene*	C_8H_{16}
nonylene, nonene*	C_9H_{18}
decylene, decene*	$C_{10}H_{20}$
cetene, hexadecene*	$C_{16}H_{32}$
eicosene*	$C_{20}H_{40}$
cerotene, hepteicosene*	$C_{27}H_{54}$
melene, triacontylene*	$C_{30}H_{60}$

e. sulfate. (acid-) $C_2H_4(HSO_4)_2$ = 222.1. Ethylenesulfuric acid. A colorless, syrupy liquid. (**basic-**) $(OH)C_2H_4(HSO_4)$ = 142.1. Ethylenehydroxysulfuric acid. An acid known only as its compounds. **e. sulfide.** C_2H_4S = 60.06 or $(C_2H_4S)_2$. The heterocyclic compound

m.110, sublimes 200, insoluble in water, soluble in alcohol or ether. **e. sulfocyanide.** $C_2H_4(SCN)_2$ = 144.21. E. thiocyanate. Colorless rhombic crystals, m.90, sparingly soluble in water, soluble in alcohol. **e. sulfonic acid.** Ethionic acid. **e. sulfuric acid.** See *e. sulfate.* **e. tetrabromide.** Tetrabromoethane. **e. tetrachloride.** Tetrachloroethane. **e. trichloride.** Trichloroethylene. **e. thiocyanate.** E. sulfocyanide. **e. trichloride.** Trichloroethylene. **e. urea.** $C_3H_6ON_2$ = 86.09. Colorless needles, m.131, soluble in water, alcohol, ether or chloroform.

ethylene glycol. See *glycol.*

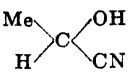
ethylenimine. C_2H_5N = 43.05. Azirane.



Cf. piperazine.

ethylic acid. Acetic acid.

ethylidene. Ethidene. The bivalent MeCH=, or $CH_3.CH$= radical from ethane, isomeric with ethylene. **e. acetone.** C_5H_8O = 84.09. The liquid ketone MeCO.CH = CH.Me, $d_{15°}$.-0.86, $b._{741mm}$122. **e. bichloride.** E. chloride. **e. bromide.** $C_2H_4Br_2$ = 187.96. E. dibromide, $MeCHBr_2$. 1.1'-dibromoethane*. A colorless liquid, d.2.100, m.112, insoluble in water, miscible with alcohol or ether. **e. chloride.** $C_2H_4Cl_2$ = 98.94. Ethylidene dichloride, ethylidene perchloride, 1.1'-dichloroethane*, chlorinated hydrochloric ether. A colorless liquid, d.1.178, b.59, sparingly soluble in water, miscible with alcohol or ether. **e. cyanhydrin.** $C_2H_4(OH)CN$ = 71.08. 1-cyanoethanol, lactonitrile.



1-hydroxy-1'-cyanoethane. A colorless liquid, m.−12, b.182 (decomp.), miscible with water, alcohol, or ether. **e. dichloride.** E. chloride. **e. diiodide.** E. iodide. **e. glycol.** $Me.CH(OH)_2$. Known only in its derivatives; *e.g.*, chloral hydrate. **e. iodide.** $C_2H_4I_2$ = 281.98. E. diiodide, 1.1-diiodoethane*, $MeCHI_2$. A colorless liquid, $d_{0°}$.2.84, b.178, insoluble in water, miscible with alcohol or ether. **e. lactic acid.** Lactic acid. **e. perchloride.** E. chloride. **e. urea.** $C_3H_6ON_2$ = 86.15. Colorless needles, m.126, decomp. 165, slightly soluble in water, soluble in alcohol or ether. **e. urethane.** $C_8H_{16}O_4N_2$ = 204.2. Colorless needles, m.125, decomp. on further heating, soluble in water, alcohol, or ether.

ethylin. A compound derived from glycerol by substituting one or more ethoxy groups for the hydroxy group: mono- $C_3H_5(OH)_2OEt$ = 118.1. A colorless liquid, b.230. di- $C_3H_5.OH.(Et)_2$ = 146.1. **1.3-** Diethyl glycerol. **1.2-** Diethylin. tri- $C_3H_5(OEt)_3$ = 174.2. A colorless liquid, b.185.

ethylogen. A complex carbide, from which water liberates ethylene slowly.

ethyloic. Having $—CH_2.COOH$ as a sidechain. *Cf. methyloic, propyloic.*

ethylol. Oxethyl. The $CH_2OH.CH_2—$ radical. *Cf. ethoxy.*

ethyne*. Acetylene.

ethynyl*. The radical HC:C—. **e. bromide.** Bromoacetylene.

etiline. Tetrachloroethane.

etiology. The study pertaining to the cause or origin of a disease.

etiophyllin. $C_{31}H_{34}N_4Mg$ = 457.58. Aetiophyllin. The decarboxylated magnesium base of chlorophyll. Blue tablets, m.205. See *porphin derivatives.*

etioporphyrin. $C_{31}H_{34}N_4$ = 435.26. A magnesium tetrapyrrole derivative from chlorophyll and hemoglobin. See *porphin.* Violet crystals, m.280.

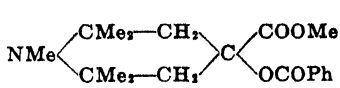
Ettinghausen effect. The galvanomagnetic change in temperature of a plate through which a current is flowing. The effect is positive when the upper edge of a metal plate, placed between two magnetic poles, has a higher temperature, the electric current flowing from left to right. *Cf. Hall, Leduc,* and *Nernst effects.*

ettringite. $Ca_{12}Al_4(OH)_{24}(SO_4)_6.5H_2O$. A mineral found in the contact zones of chalk and dolomite, in Ireland.

Eu. The symbol for europium.

eu-chlorine. A mixture of chlorine and chlorine dioxide obtained from potassium chlorate and concentrated hydrochloric acid.

eucaine A. $C_{19}H_{27}O_4N$ = 333.3. Tetramethyl-N-methyl-β-benzoxypiperidine-γ-carboxylic ester, α-eucaine.



Colorless crystals, m.103, used medicinally as an anesthetic and substitute for cocaine. **e. B.** $C_{18}H_{21}O_3N$ = 247.17. β-eucaine, benzamine, betacaine, trimethyl benzoyl-oxy-

piperidine.  Colorless crystals, m.91; used as a local anesthetic.

e. hydrochloride. α- $C_{19}H_{27}O_4N.HCl$ = 368.8. Colorless crystals m.200, soluble in water; used as an anesthetic. β- $C_{15}H_{22}O_2NCl$ = 283.64. Colorless crystals, m.268.

eucairite. CuAgSe. A silverwhite, metallic, isometric copper silver selenide.

eucalin. $C_{12}H_{12}O_6$ = 252.1. A disaccharide produced by the hydrolysis of melitose. It is non-fermentable and resembles inositol. Cf. *eucalyptolene.*

eucalyptene. $C_{10}H_{16}$ = 136.2. A terpene derived from eucalyptol. A colorless liquid, b.170, soluble in alcohol; used as an antiseptic.

eucalyptole. $C_{10}H_{18}O$ = 154.20. Cineole, cajeputole.  . A colorless liquid, $d_{20}°$.0.927, m. −1, b.176, insoluble in water, miscible with alcohol or ether. A chief constituent of eucalyptus and cajeput oils, used medicinally as an antiseptic, antispasmodic, antiperiodic, and expectorant.

eucalyptolene. $C_{10}H_{16}$ = 136.2. An isomer of eucalyptene, and a constituent of eucalyptus oil. A heavy, yellowish liquid, b.300, miscible with alcohol.

eucalyptus. (1) A genus of trees of the Myrtaceae. Cf. *lerp, mallee bark, marri kino.* (2) Blue-gum tree. The dried leaves of *Eucalpytus globulus,* a Myrtaceae originally of Australia, which are used as an antiperiodic, tonic, and antipyretic. **e. oil.** The essential oil distilled from the leaves of various eucalyptus species, varying from peppermint to turpentine in odor. The chief constituents are eucalyptole, pinene, capronaldehyde, valeraldehyde, butyraldehyde. A colorless or slightly yellowish liquid, d.0.91–0.93, miscible with alcohol or ether; used medicinally as an internal or external antiseptic.

eucasin. Ammonium caseinate.

eucasol. Anytol.

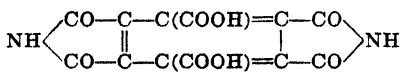
eucatropine. Euphthalmine.

eucazulene. $C_{15}H_{18}$ = 198.14. A blue, liquid hydrocarbon from eucalyptus oil.

euchinine. Quinine ethyl carbonate.

euchlorine. Eu-*chlorine.*

euchroic acid. $C_{12}H_4O_8N_2$ = 304.1. Mellitic acidimide. The heterocyclic compound:



euchroite. $Ca_4As_2O_9$. A native, greenish, calcium arsenate; rhombic masses, d.3.4, hardness 3, soluble in nitric acid.

eucodal. $C_{18}H_{21}O_4N$ = 315.02. Di-hydro-hydroxy codeinone. White powder, used as hypnotic.

eucodeine. $C_{18}H_{21}O_3N.CH_3.Br$ = 396.2. Methyl-codeine-bromide. White powder, m.-261, soluble in water. Used medicinally as a sedative.

eucol. Guaiacol acetate.

eucolloid. A colloid, the primary valencies of which are satisfied, forming particles of chain length over 2500 Å. (M. W. over 1000). Cf. *mesocolloid.*

eucryptite. $LiAlSiO_4$. A white, transparent, hexagonal lithium aluminum silicate.

euctolite. A basaltic rock from Italy.

eucupine. $C_{24}H_{34}O_2N_2$ = 282.41. *i*-amylhydrocupreine. A quinine alkaloid, q.v. A white powder, insoluble in water, but soluble in alcohol or ether. **e. hydrochloride.** Colorless crystals, soluble in water; used as a powerful bactericide.

eudalene. $C_{14}H_{16}$ = 186.11. 7-Iso-propyl-1-methyl naphthalene. A hydrocarbon obtained from eudesmol and selinene by treatment with sulfur.

eudeiolite. A native calcium-iron-cerium columbate-titanate-thorate. A dark-brown, shining mass of d.3.44, hardness 4.

eudesmene. $C_{15}H_{24}$ = 204.15. A bicyclic sesquiterpene from eucalyptus oil.

eudesmol. $C_{15}H_{26}O$ = 222.2. 2-Isopropyl-8-methylene-1,10-methyl-decahydronaphthol-2. A phenol from eucalyptus oil.

eudialite. $Na_{13}(Ca,Fe)_6(Si,Zr)_{20}O_{52}Cl$. A sodium calcium-iron, silicate-chloride.

eudiometer. A graduated glass tube with platinum electrodes, closed at one end, used to demonstrate or measure volume changes during the combination of gases.

Eudiometer.

eudiometry. Gasometric analysis. Gasometry.

eudoxine. $(C_6H_2I_2OBi_2)_2.COC_6H_4O$. Bismuth tetraiodophenolphthalein, bismuth nosophene. A reddish-yellow, tasteless, odorless powder, insoluble in water, decomposed by alkalis; used medicinally in intestinal irritations.

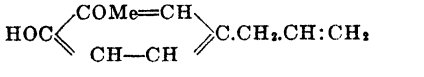
euflavine. $C_{14}H_{14}N_3Cl$ = 261.8. 2.8-Diamino-10-methylacridinium chloride. A dye similar to acriflavine (q.v.), to which the term is sometimes erroneously applied.

eugallol. Pyrogallol monoacetate.

eugenic acid. (1) Eugetinic acid. (2) Eugenol.

eugenin. $C_{10}H_{12}O_2$ = 164.1. An isomer of eugenol, from oil of cloves.

eugenol. $C_{10}H_{12}O_2$ = 164.15. Allyl-4.3-guaiacol, 2-methoxy-1-hydroxy-4-allylbenzene, 1-allyl-3-hydroxy-4-methoxybenzene.



A constituent of many essential oils such as oil of cloves, cinnamon; an isomer of chavibetol and eugenin. A colorless liquid, $d_{15}°$.1.063, m.-10.3, b.253.2, slightly soluble in water, miscible with alcohol or ether. Used medicinally as an antiseptic and antituberculosic; technically, in perfumery and for manufacturing vanillin. **iso-** Propenyl guaiacol. An isomer with the sidechain —CH:CH.Me. A colorless liquid, b.240. **cinnamyl- E.** cinnamate. **methyl-** $C_{11}H_{14}O_2$ = 178.17. Eugenol methyl ether, allyl 3.4-veratrol, 1.2-methoxy-4-allyl-benzene. A colorless liquid, $d_{15}°$.1.035, b.244, insoluble in water, miscible with alcohol or ether.

e. acetamide. $C_{12}H_{15}O_3N$ = 221.2. Colorless shining scales, m.110, soluble in water or alcohol; used medicinally as an anesthetic. **e. benzoate.** Benzo-eugenol. **e. cinnamate.** $C_{19}H_{18}O_3$ = 282.14. Cinnamyl eugenol. Colorless needles, used as antiseptic.

eugetic acid. Eugetinic acid.

eugetinic acid. $C_{11}H_{12}O_4$ = 208.10. Eugenic acid, eugetic acid. $C_6H_2(OH)(OMe).C_3H_5.COOH$. Colorless prisms, m.124, sparingly soluble in water, soluble in alcohol or ether.

euglenarhodon. A xanthophyll carotenoid from certain flagellates.

eukairit. CuAgSe. A native copper and silver selenide.

eukinase. The desiccated and powdered pancreatic juice of pigs, consisting mainly of trypsin.

eulachon oil. Candle fish oil. The oil of *Thaleichthys pacificus*, candle fish; used as a substitute for cod-liver oil.

eulysin. $C_{24}H_{36}O_5$ = 404.3. A yellow split-product of decacrylic acid.

eulytin. $Bi(SiO_4)_3$. A bismuth silicate, d.6.1, hardness 5–6; brownish, yellow, or grayish masses.

eumenol. A fluid extract from the root of a Chinese Araliaceae, (tang-kui, man-mu); used medicinally as an emmenagogue.

eumydrine. Methyl-atropine nitrate, atropine methylnitrate. White, odorless crystals, soluble in water, sparingly soluble in ether or chloroform; used medicinally as a mydriatic, antihidrotic, and antispasmodic.

eunatrol. Sodium oleate.

euonic acid. An acid from the bark of *Euonymus.*

euonymin. Euonymus. A glucoside from the bark and root of *Euonymus* species. It is a yellow amorphous powder, used medicinally as a cholagogue and cathartic.

euonymit. Dulcite.

euonymoid. The combined principle from *Euonymus.* A greenish powder, soluble in alcohol; used medicinally as a hepatic stimulant and mild cathartic.

euonymus. (1) *Euonymus.* A genus of shrubs of the Celastraceae. (2) Indian arrowroot, wahoo, spindle-tree, burning bush. The dried bark of the root of *E. atropurpureus*, a Celastraceae; used medicinally in the form of fluid extract as a laxative, cathartic, and diuretic.

euosmite. $C_{34}H_{29}O_2$ = 469.3. A fossil resin.

euparal. A synthetic resin, n.1.53, used as substitute for Canada balsam in microscopic work.

euparin. $C_{12}H_{11}O_3$ = 203.1. A yellow, crystalline principle from the leaves of *Eupatorium purpureum*, a Compositae (purple hemp); used as an aromatic.

eupatheoscope. An instrument which measures the cooling effect of aircurrents. Cf. *katathermometer.*

eupatirin. Stevioside.

eupatorin. A crystalline glucoside from the leaves of *Eupatorium perfoliatum*, boneset, thoroughwort, and *Eupatorium cannabinum*, hemp-weed, a Compositae of Europe, America, and Asia.

eupatorium. (1) *Eupatorium.* A genus of Compositae:

E. cannabinum	hemp, agrimony.
E. perfoliatum	eupatorium (boneset).
E. purpureum	queen-of-the-meadow.

(2) Indian page, boneset, thoroughwort. The dried leaves and flowering tops of *Eupatorium perfoliatum;* used as a diaphoretic tea, tonic, and laxative.

Euphorbia. A genus of plants characterized by their milky juice. **e. gum.** Potato gum. A latex gum from the West African *E.*, containing about 10 % rubber and 50 % resins. Cf. *euphorbium.* **e. pilulifera.** Pill-bearing spurge. The dried herb of *E. pilulifera*, an Euphorbiaceae of the Antilles and Australia. It contains glucosides and is used medicinally for asthma and chronic bronchitis.

Euphorbiaceae. The spurge family, a group of herbs, shrubs or trees, usually with a milky, acrid juice that in some cases yields rubber.

roots:	
Stillingia sylvatica	stillingia
Euphorbia species	euphorbium
Euphorbia corrollata	flowering spurge
Euphorbia ipecacuanha	ipecacuanha spurge
Euphorbia resinifera	euphorbium
Jatropha manihot	tapioca
herbs:	
Mercurialis annua	mercurialine
Mercurialis perennis	mercurialis
Euphorbia pilulifera	Australian euphorbia
barks:	
Croton eluteria	cascarilla bark
seeds:	
Ricinus communis	castor-oil seed
	castor-oil
Aleurites fordii	tung oil
Manihot species	cassava, manioc
	cearea rubber
Croton tiglium	croton seed
	croton oil
Curcas purgans	purging nuts
Jatropha species	physic nut
glands:	
Mallotus philippinensis	kamala, rottlera
plant products:	
Hevea brasiliensis	para-rubber

Cf. *buxine, drumine, jatrophine, phyllanthine, wagofo, yulocrotine.*

euphorbic acid. $C_{24}H_{30}O_6$ = 390.3. An acid from the resinous juice of *Euphorbia* species.

euphorbin. $C_{30}H_{48}O$ = 424.5. A bitter principle from the resinous juice of *Euphorbia* species.

euphorbium. A resin from *E. resinifera* of Morocco, used as an emetic and aperient. Cf. *euphorbia gum.*

euphorine. Phenylurethane.

euphthalmine. $C_{17}H_{25}O_3N.HCl$ = 327.7. Eucatropine. A synthetic alkaloid, the mandelic acid derivative of eucaine. A white powder, m. 113, soluble in water, alcohol, or ether. Used as a mydriatic.

euphurbin. $C_{15}H_{24}O$ = 220.2. A crystalline principle from the resinous juice of *Euphorbia resinifera.*

euphylline. Theophylline ethylene diamine.

eupion. A constituent of woodtar. A clear, aromatic liquid, b.47, used as an antiseptic.

eupittone. Eupittonic acid.

eupittonic acid. $C_{19}H_8O_3(OMe)_6$ = 470.3. Pittacol, eupittone, hexamethoxy aurine. A hexamethoxylated, amino-dye. Orange-yellow needles, decomp. 200, soluble in hot alcohol, glacial acetic acid and alkalis, with blue coloration.

eupurpuroid. The combined principles from *Eupatorium purpureum*, purple boneset, Joe-pye weed; used as a diuretic and renal tonic.

eupyrine. $C_{18}H_{18}O_5N$ = 328.15. Vanillin ethylcarbonate-p-phenetidine. Greenish-yellow crystals, m.87, soluble in alcohol, ether, or chloroform, sparingly soluble in water. Used medicinally as an antipyretic.

euquinine. Quinine ethylcarbonate.

eureka burner. A self-lighting gas burner of the bunsen type.

euresol. $C_8H_8O_2$ = 152.06. Resorcin monoacetate, resorcinyl acetate, 3-hydroxy-phenylacetate. A yellow, oily liquid, b.283, insoluble in water, soluble in acetone, used medicinally as an antiseptic in skin diseases.

eurobin. Chrysarobin triacetate. A yellowish-red powder; used for skin diseases.

europhen. $C_{22}H_{29}O_2I$ = 452.1. Diisobutylcresol iodide, isobutyl-o-cresol iodide. A yellow, amorphous powder of saffron-like odor, m.110, insoluble in water, soluble in alcohol, ether, chloroform, or oils. Used medicinally as an iodoform substitute, as antiseptic, antisyphilitic, and dusting powder.

europium. Eu = 152.0. Atomic number 63. A rare earth metal discovered (1896) by Demarcay in cerium minerals. Its principal valency is three, and its compounds are rose-colored. **e. nitrate.** $Eu(NO_3)_3$ = 338.0. A colorless crystalline powder, which is soluble in water. **e. oxide.** Eu_2O_3 = 352.00. A white powder, insoluble in water or alcohol. **e. sulfate.** $Eu_2(SO_4)_3.8H_2O$ = 736.2. Colorless crystals, soluble in water.

eurybin. A glucoside from *Eurybia* (or *Olearia*) *moschata*, of New Zealand.

eurythrol. An aqueous extract from the spleen of the ox; used medicinally in anemia and chlorosis.

euscopol. $C_{17}H_{21}O_4N.HBr$ = 384.11. An optically-inactive scopolamine hydrobromide. Colorless crystals, soluble in water or alcohol, m.181; used medicinally as a hypnotic.

eustenin. Theobromine sodium iodide.

eutannin. $C_{28}H_{20}O_{19}$ = 660.2. Colorless crystals; used as an intestinal antiseptic. Cf. *chebulinic acid.*

eutectic. The alloy of two or more metals in which the proportions of the constituents are such that it has the lowest possible melting point. **e. alloy.** A mixture of metals which solidifies completely at the e. temperature. **e. mixture.** A mixture of two or more substances which has the lowest constant melting point of any mixture of its constituents. Cf. *dystectic mixture.* **e. temperature.** The melting-point of a eutectic mixture. Cf. *diagram.*

euthiochronic acid. $C_6H_4O_{10}S_2$ = 300.20. Yellow, quadratic needles, soluble in water, alcohol, or ether.

eutropic series. A series in which crystalline form and physical constants show a regular variation.

eutropy. The progression of the isomorphism of crystals of salts of an element, with the atomic number of the latter.

euxanthic acid. $C_{19}H_{18}O_{11}.H_2O$ = 440.16. Purreic acid, hamathionic acid. A yellow, crystalline substance from East Indian yellow (purree). Decomp. 160, soluble in hot water, alcohol, or ether. Cf. *coccinic acid.*

euxanthin. $C_{19}H_{16}O_{10}$ = 404.2. The principal constituent of East Indian yellow, (purree); yellow crystals.

euxanthinic acid. Euxanthic acid.

euxanthone. $C_{13}H_8O_4$ = 228.06. Purrone, purrenone, porphyric acid, 1.7-dihydroxyxanthone,  Yellow crystals, m.237, soluble in alcohol. **iso-** 3.6-Dioxyxanthone. Yellow crystals, soluble in alkalis with fluorescence. **methoxy-** Gentisin.

euxanthonic acid. $C_{13}H_{10}O_5$ = 246.08. Yellow needles, decomp. 200; soluble in hot water or alkalis.

euxantogen. Mangiferin.

euxenite. $(Y,Er,Ce)_2(Ti,Nb)_6Fe(UO)O_{16}$. (Probable formula.) Polycrase. A rare earth mineral containing helium, germanium and uranium. It is a source of Ge, U, Y and Nb.

EV. An abbreviation for electron-volt.

evacuant. A purgative or cathartic.

evacuate. The removal of a gaseous substance from a container; *i.e.*, to produce a vacuum.

evansite. $H_6Al_3PO_{10}$. A hydrous aluminum phosphate.

evaporate. (1) To convert a liquid into its vapor by the application of heat or low pressure. (2) To concentrate a solution by removing part of the solvent as gas or vapor.

evaporating. The act of converting a liquid into its vapor. **e. burner.** A gas burner of cast iron or copper, consisting essentially of a disk with a number of holes by which a large area can be heated. **e. dishes.** A flat or shallow dish of glass, porcelain, or silica, used to contain evaporating solutions.

evaporation. The process of converting a liquid into a vapor. **direct-** Evaporating by means of gas, coal, oil flame, or other direct sources of heat. **indirect-** Evaporating by means of steam, water, oil bath, or other indirect sources of heat. **latent heat of-** The amount of heat energy absorbed by a unit weight of substance as it passes from the liquid to the vapor state. If T is the absolute boiling-point, and E the molecular elevation of boiling point of a solution, then the latent heat of evaporation (L) is given by $L = \frac{0.02T^2}{E}$. (See *latent heat.*) **spontaneous-** Evaporating spontaneously, or by application of sun-heat or air currents (electric fans). **vacuum-** Evaporating in vacuo; *e.g.*, by exposure to low pressure.

evaporator. A device to volatilize liquids. **solar-** An appliance for evaporating and heating a liquid by infra-red radiation from above, using gas or electricity.

evaporimeter. An instrument to measure the rate of evaporation of a liquid in terms of the rate of fall in its level.

evernesic acid. Everninic acid.

evernic acid. $C_{17}H_{16}O_7$ = 332.13. Colorless needles, m.164, insoluble in water, soluble in alcohol or ether. A homolog of lecanoric acid, extracted from *Evernia prunastri*, a lichen.

everniine. $C_{16}H_{14}O_7$ = 318.11. An amorphous yellow powder, from gums and lichens, soluble in water, alkalis and acids, insoluble in alcohol.

everninic acid. $C_9H_{10}O_4$ = 182.09. Evernesic acid, 4-methoxy-6-methylsalicylic acid, 2-hydroxy-6-methyl anisic acid. An acid derived from lichens. Colorless crystals, m.157, soluble

in hot water, alcohol, or ether. **ethyl ester of-** Lichenol. **methyl ester of-** Sparassol.

Everitt's salt. Potassium ferrous ferrocyanide.

evipal. Hexobarbitone (q.v.). **e. sodium.** Evipal soluble; the sodium derivative of hexobarbitone.

evipan. Hexobarbitone (q.v.).

evodene. A terpene from *Evodia rutaecarpa.*

evodiamine. $C_{19}H_{17}ON_3$ = 303.14. An alkaloid from *Evodia rutaecarpa.* Colorless crystals, m.278.

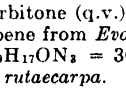
evolution. (1) In chemistry, the escape or liberation of a gas. (2) In biology the gradual development of a species through many generations, or the gradual change by which new species are formed and develop into higher and more specialized organisms. **atomic-** See *spectral* classification.

evonymin. Euonymin.

Ewer and Pick's acid. Naphthalene-*1.6*-disulfonic acid.

ex- A Greek prefix meaning "out of," or "out from."

exalgin. $C_9H_{11}ON$ = 149.1. Methylacetanilide, methylphenyl acetamide, acetmethylanilide. Cf. *acetotoluide.*



Colorless crystals, m.101, sparingly soluble in water, soluble in alcohol or ether; used medicinally as an analgesic and antipyretic.

exaltation. The amount by which the molecular refractivity of a compound exceeds the sum of the refractivities of its atoms; it is an indication of constitution (presence of double bonds, etc.).

exaltone. Cyclopentadecanone.

examination. The investigation of the properties of a substance by chemical or physical means; *e.g.*, qualitative and quantitative analysis, microscopical, spectroscopical, electrical or biological tests.

excelsin. A globulin, M.W. 14,738, from Brazil nuts.

excess. The use of a larger amount of a reagent than is required for a certain reaction.

excidants. Stimulants.

excipient. An inert or indifferent substance, used as a carrier for a medicinal agent; as, starch or milk sugar in tablets.

excitation. Activation. The disturbance of an electron so that it passes from its normal orbit to one of higher energy content as the result of the absorption of radiations. Cf. *energy levels, lingering period.* It differs from ionization in the degree to which the electron is separated, as expressed by the equations:

excitation	ionization
a. $H_2 + h\nu = H_2^*$	c. $H_2 = H_2^+ + e$
b. $H_2 + n(h\nu) = 2H^*$	d. $H_2 = H^+ + H^-$
	e. $H_2 = H + H^+ + e$

where $h\nu$ is a quantum, e an electron, H_2^* an excited and H_2^+ an ionized *molecule,* H^* an excited and H^+, H^- ionized *atoms.* On returning from the excited to the normal state the absorbed radiation is emitted, *i.e.*, the substance is luminescent or fluorescent. **photochemical-** Excitation. **thermal-** See *thermal.*

excited. Activated, fluorescent, luminescent. **e. atom.** An atom in which the electrons are moving in elliptical orbits or in higher energy levels than normal. **e. molecule.** (1) An atom in which the valence electrons are in a state of excitation, q.v. (2) Activated *atom,* q.v.

excitomotors. A group of drugs which excite the nerve-activities.

exciton. The energy of an electron, which can be passed from one electron to another.

exclusion principle. *Pauli's principle.*

excretin. $C_{20}H_{36}O$ = 292.4. A cholesterol-like substance found in human feces. Yellow needles, m.96; insoluble in water, sparingly soluble in alcohol, soluble in ether.

exinite. A perhydrous constituent of coal which includes preserved plant structures of a protective nature (*e.g.*, spore cones and cuticles).

exo- A prefix to indicate substitution on a side-chain. Cf. *endo-.*

exocondensation. Ring-formation.

exocyclic. Pertaining to a cyclic compound in which a substitution or a double bond is in the side-chain, that is, outside the ring.

exogenous. Produced outside. **e. purines.** The purine bodies of excretions which have passed through the system and have their origin in the food eaten; cf. *endogenous.*

exograph. A radiograph obtained by use of x-rays, the film being placed outside the body.

exosmosis. The diffusion of salts through the plant membrane from the protoplasm into water. Antonym: endosmosis.

exothermic. A term indicating the liberation or escape of heat. **e. compound.** A stable compound formed with liberation of heat, as a result of an exothermic reaction. **e. reaction.** A reaction in which heat is liberated. It usually proceeds rapidly; sometimes explosively. Cf. *endothermic.*

exotoxin. The soluble and poisonous substances of bacteria or parasites.

expansion. An increase of dimension. **adiabatic-** The rapid expansion of a gas with the production of a cooling effect. **cubical-** Volume expansion, or increase in three dimensions. **linear-** Increase in length. **thermal-** The increase in volume due to increase in temperature. The rate varies with the temperature and depends on the coefficient of expansion, (q.v.). It is relatively small for solids and liquids, but large for gases.

e. equations. (1) *Linear* expansion of solids: If l_0 is the length at 0°C., x the coefficient of expansion, then the length at t°C. is: $l_t = l_0(1 + xt)$. The coefficient of expansion is: $x = \frac{l_t - l_0}{l_0 . t}$. (2) *Cubical* expansion of solids: $l_t = l_0(1 + at + bt)$, where a and b are the first and second coefficients of expansion. (3) *Volume* expansion of solids or liquids (approximately): $V_t = V_0(1 + 3xt)$. (4) Expansion of *gases:* The volume, V_t, of a gas at temperature t°C. is (at constant temperature) for an original volume V_0 at 0°C.: $V_t = V_0(1 + 0.00367t)$. Cf. *Charles' Law, gas laws.* **e. regulators.** Thermo-regulators.

expectorant. A drug which promotes the secretion of mucus from the respiratory tract; *e.g.*, ipecac, cephaeline, ammonium chloride, lobelia, terpine hydrate.

experiment. A test or trial to illustrate natural phenomena, or to determine some unknown fact by careful observation and variation of the conditions under which the test is performed. It is distinguished from *observation* by the fact that the experimenter arranges the experimental conditions himself beforehand.

while an observer must accept the conditions which nature offers. **lecture-** An operation carried out in the lecture room to illustrate or demonstrate some chemical or physical fact.

experimental. Pertaining to knowledge obtained by actual tests; hence, based upon facts, and not speculation.

experimentation. The performance of experiments.

expired air. The air given off from the lungs of living organisms; it has less O_2, but more CO_2 and moisture than normal air.

exploding atom. An atom which is undergoing a radioactive change by the spontaneous emission of electrons or helium nuclei.

explosion. A sudden, violent, and noisy, exothermic chemical change in which heat, light, and gases are produced. Cf. fugitive *pressure*.

e. spectrum. See *spectrum*.

explosives. A group of endothermic compounds or mixtures of substances which cause explosions. Generally applied to mixtures used for ordnance, pyrotechnics or mining operations; also, in the construction of roads, canals and tunnels. E. may be classified into eight groups: (Cundill, Dictionary of Explosives).

1. Gunpowders—mixtures of potassium nitrate, sulfur, and charcoal, e.g., black powder.

2. Nitrate mixtures—Contain another nitrate in place of potassium nitrate, *e.g.*, barium, or sodium nitrate.

3. Chlorate mixtures—Contain potassium chlorate.

4. Dynamites—Contain nitroglycerin.

5. Gun-cottons—Contain nitro-compounds, *e.g.*, trinitrotoluol.

6. Picrates—Contain picric acid or its derivatives.

7. Spreng explosives—Mixtures which are not explosive, but becomes so on the addition of an oxidizing substance and detonator.

8. Miscellaneous and fulminating mixtures.

blasting- An e. used in mining. **detonating-** High e. **high-** Detonating e. An e. which is more sudden in exploding than gunpowder. It possesses high brisance, great shattering power, but little propelling power. **military-** E. used in warfare; as, smokeless, flashless powder, TNT (trinitrotoluene) and TNX (trinitroxylene). **nondetonating-** E. which explode. like gunpowder. **permissible-** Those which pass the safety tests of a government agency (Bureau of Mines, Ordnance Dept. etc.); as, Class A = less than 53 l.; Class B = from 53 to 106 l.; Class C = from 106–158 l. of poisonous gases from 680 gm. (1.5 pds.) explosive. **safety-** E. which can be used in coal mines.

1. *Simple explosives* (*PURE substances*)

nitromannite	650*
nitroglycerin	600
nitropentaerythrol	460
tetranitroaniline	400
guncotton	360
hydrazine nitrate	360
tetryl	360
hexanitrophenylsulfide	355
dinitroglycerin	330
hexanitrodiphenylamine	330
trinitrobenzene	330
nitrostarch	305
trinitroanisole	305
picric acid	300
TNT or trinitrotoluene	300
trinitrocresol	275
dinitrobenzene	250
ammonium chlorate	240
ammonium nitrate	140
ammonium perchlorate	140

2a. *Compound explosives* (*BLASTING powders*)

blasting gelatin	500–600
Nobel's explosive	300–540
donarite	400
Kieselguhr dynamite	300–370
Pittsburgh dynamite	280
cheddite	215
silesia explosive	200
carbonites	120–180
black powder	30

2b. *Compound explosives* (*PROPULSIVE powders*)

cordite	725
cannonite	720
shotgun powder	700
amberite	630
sporting powder	590
Schultze powder	570

* Approximate volume (in $cm.^3$) of total gases evolved from 1 gm. explosive.

exponential. A function expressed by the base of the Naperian system of logarithms, e, raised to the power indicated by the variable, x. Thus e^x is the exponential of x.

$$e = 1 + \frac{1}{1} + \frac{1}{2} + \frac{1}{3} + \frac{1}{4} \cdot m \cdot n \cdot = 2.718281828$$

$$e^x = 1 + x + \frac{x^2}{2} + \frac{x^3}{3} + \frac{x^4}{4} \cdot m \cdot n \cdot$$

The logarithm of e is 0.43429.

exposure. To open a sensitized plate to the action of light, *e.g.*, in taking a photograph. **e. meter.** Photometer. **e. test.** Aging test.

expressed. Squeezed out. **e. oil.** A fatty oil (q.v.) as compared with essential oil (distilled).

expression. (1) The squeezing out of a liquid; *e.g.*, plant juices, oils, etc. (2) A mathematical symbol or equation.

extinction. Fading-out. Cf. *optical density*. **e. coefficient.** E. The quantity $1/cy$ ($\log I_0/I$), where I_0 and I are the intensities of light, respectively *falling on* and *transmitted* by a solution *y* cm. thick and of molar concentration *c*. Characteristic curves are obtained when E is plotted against the wave-length of light used (Cf. *Lambert's* law).

Exton reagent. A reagent for albumin consisting of a solution of 200 gm. $Na_2SO_4.10H_2O$ and 50 gm. sulfosalicylic acid in 1 l. water.

extract. A pharmaceutical preparation made from vegetable tissues either by expression, maceration, digestion, or infusion with a solvent. **acet-** Acetic acid extracts, prepared by macerating the drug with acetic acid solution. **alcoholic-** An extract prepared by exhausting the drug with concentrated or dilute alcohol. **aqueous-** An extract prepared by infusing or percolating the powdered drug with water. **dry-** Powdered-. **fluid-** An extract of such strength that 1 cc. represents 1 gm. of the active principles of the drug. **nitrogen-free-** The difference between the weight of a vegetable material and the combined weights of its moisture, ash, fat, protein and crude fiber. It represents the non-protein, nonfatty material soluble in water, or brought into solution by

boiling successively with dilute (1.25 %) sulphuric acid and caustic soda. Sugars and starches are the main constitutents of the nitrogen-free extract. Hence, in reports of analyses, the term *carbohydrates* is sometimes substituted for *nitrogen-free extract*. **powdered-** An evaporated and powdered extract. **solid-** A thick, semi-solid extract.

extraction. The process of separating the active constituents of drugs by suitable methods. The solvent may be:

1. Water—see *infusions, decoctions.*
2. Alcohol—see *fluid extracts, and tinctures.*
3. Wine—see *wines.*
4. Dilute acetic acid—see *vinegars.*
5. Ether—see *ethereal extracts, oleoresins.*

e. apparatus. Apparatus used for the extraction of fats, oils, or waxes from substances, preparatory to or as part of their analysis. See *Soxhlet, Bailey-Walker.* **e. flasks.** Small round flasks of high-resistance glass. **e. thimble.** A cup made of some fat-free porous material (filter paper, alundum) in which the substance to be extracted is placed. **e. tube.** A specially designed tube holding e. thimbles, which enables the solution to flow downward into the container, and the vapors to pass above the thimbles into the condenser. *E.g., Soxhlet tube.*

extractive. Undetermined substance(s) extracted with a certain solvent in chemical analysis; *e.g.*, ether-extractives, alcohol-extractives, etc.

extracts. A dried plant juice. The following extracts and inspissated juices are official (U.S.P.):

Aloes	Guarana
Catechu	Glycyrrhiza
India-rubber	Lactucarium
Kino	Opium

extrusion. Forcing a substance through an aperture or die.

exudate. A material that has filtered through the walls of living cells and accumulates in the adjacent tissues. **vegetable-** A. Soluble in water, insoluble in alcohol—GUMS; B. Soluble in alcohol and insoluble in water—RESINS.

exude. Oozing out, either under heat or pressure, of a softer or more fusible substance from a harder or less fusible material.

eyebright. The herb of *Euphrasia officinalis*, a Scrophulariaceae, used for eye lotions.

F

F. (1) The symbol for fluorine. (2) Abbreviation for magnetomotive force, (3) faraday, (4) Fahrenheit, (5) degree of freedom, (6) free energy, (7) force.

F acid. (1) 2.7-Naphthylaminesulfonic acid. (2) 7-Amino-2-naphthalene-sulfonic acid. (3) β-Naphthol-8-sulfonic acid.

F 12. Freon.

f. An abbreviation for (1) farad (not *faraday*), (2) force, (3) function, (4) acceleration.

f. Function; thus $x = f(t)$, x is a function of t.

φ, ϕ, Φ. The Greek letter phi. (1) An abbreviation for phenyl. (2) A symbol for fluidity.

faba. Latin for bean. **f. physostigma.** See *physostigma.*

fabiana. The dried leaves of *F. imbricata*, a Solanaceae of South America. **f. resin.** $(C_{18}H_{30}O_2)_8$. F. tannoid. A crystalline resin from f. Cf. *crocin, pichi.*

fabianol. $C_{54}H_{90}O_2$ = 771.0. A volatile oily liquid from *Fabiana imbricata.*

fabrikoid. Trade-mark for pyroxylin-coated and impregnated fabrics widely used for upholstery, luggage, bookbinding, etc.

face-centered cube. A unit of crystal structure, (q.v.) consisting of a space lattice (q.v.) in which a fifth atom is located centrally to the four corners of a plane.

facing. The addition of a coloring matter to food to improve its appearance; as, tea, flour, rice.

fact. Anything that has real existence. Known to be true. A result established by repeated experiment. Opposed to fancy or conjecture.

factice. A white, light, and fluffy rubber substitute, obtained by vulcanizing linseed oil.

factitious. Made artificially.

factor. (1) A reacting substance, (reactant) which takes part in a chemical change. (2) When two quantities are multiplied together, each is known as a factor of the multiplication. (3) Vitamin, q.v. **accessory food-** Vitamin. **analytic-** Gravimetric- or volumetric-. **conversion-** See *conversion.* **gravimetric-** A quantity which, multiplied by the weight of precipitate obtained in gravimetric analysis, gives the amount of the related substance being determined. **volumetric-** A quantity which, multiplied by the number of cubic centimeters of a standard solution, gives the amount of the corresponding substance that is being determined in volumetric analysis. **volumetric correction-** A quantity (determined by experiment) which, multiplied by the number of cubic centimeters of a volumetric solution, gives the number of cubic centimeters of a normal solution. *E.g.*, volumetric solutions which deteriorate or which are difficult to standardize may be used for titrations, provided their correcting factor is known.

f. quantity. A factor used as an aid to rapid calculation in quantitative analysis. *E.g.*, in the determination of carbon in steel by weighing it as CO_2, the f. quantity is 2.73; thus, if 2.73 gm. of steel are taken for analysis the number of decigm. of CO_2 found is numerically equal to the CO_2 present as %.

facultative. Permissive or optional. **f. aerobe.** A bacterium which, while having preference for anaerobic conditions, can live in an atmosphere containing oxygen. **f. anaerobes.** Bacteria which, while having preference for an oxygen atmosphere, can also live in absence of such atmosphere.

fadeometer. An instrument for comparison of the fading-properties of dyed fabrics etc. which are exposed under standard conditions of humidity etc. to a carbon arc (artificial sunlight).

fæcal. See *fecal.*

fæces. See *feces.*

fagacid. An acid resin from beech wood, soluble in alkalis; used as an antiseptic in soaps and plasters.

fagarine. The name applied to the three alkaloids of *Fagara coco*, a tree of Argentina; they are differentiated by the prefixes α, β, and γ. The α-fagarine ($C_{19}H_{21}NO_4$) is a possible substitute for quinidine. β-Fagarine is identical with skimmianine; γ-fagarine is a methoxydictamine.

fagine. An alkaloid obtained from the fruit of the beech tree, *Fagus sylvatica*, a Cupuliferae.

fahlerz. Tetrahedrite.

Fahr. Abbreviation for Fahrenheit.

Fahrenheit, Gabriel Daniel. 1686–1736. A German physicist who devised meteorological instruments, thermometers, and hygrometers. **F. scale.** A thermometer scale invented by F. and based upon the lowest temperature which he could obtain by freezing mixtures. Water freezes at 32°F, and boils at 212°F. Hence, 1°C = 1.8°F, and absolute zero −273°C = −459.4°F. See *thermometer scales.*

faïence. Glazed pottery.

Fairbanks cement testing machine. A lever device resembling a balance, and having a stress capacity of 1000 pounds; used for testing the tensile strength of cement blocks.

Fajans, Kasimir. 1887– . A German physicist noted for his work on radioactive substances and the discovery of brevium. **F.-Soddy law.** When an α-particle is expelled from a radioactive substance the product is two places lower in the periodic table. A β-ray change, or expulsion of an electron, produces a rise of one place.

false hellebore. Adonis.

false unicorn. Aletris. **f. u. root.** See *chamaelirin, helonias.*

Fament's process. The removal of P and S from iron by treatment with a current of hydrogen in heated retorts.

family. (1) A group, or a part of a period of elements that have similar properties; *e.g.*, the first *group:* Li, Na, K, Rb, Cs is the alkali family, while the *period* Cr, Mn, Fe, Co, Ni is the iron family. See *periodic system.* (2) Order. A biological division higher than genus.

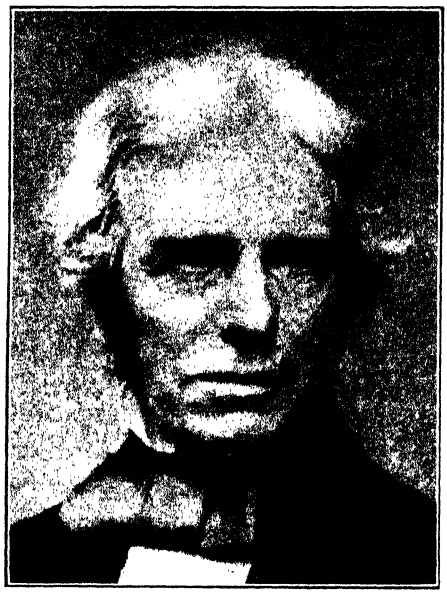
fanghi di sclefani. A light-yellow, fine powder of volcanic origin, mainly sulfur with small amounts of manganese, iron, and calcium.

faolite. A material made from phenolformaldehyde resin and asbestos.

farad. f. A unit of electrical capacity; the capacity of a condenser charged to a potential

of one volt by one coulomb of electricity. Cf. *faraday*. It is 10^{-9} C.G.S. unit. **micro-** The one-millionth part of a farad = 10^{-6} farad; the practical unit.

Faraday, Michael. 1791–1867. An English chemist and physicist noted as a famous experimentalist in the liquefaction of gases, the effect of an electric current on the magnetic needle, electrolysis, and as discoverer of benzene. **F. effect.** A beam of polarized light when passed through a magnetic field is rotated in the direction of the lines of magnetic force. **F. laws.** (1) The weight of an ion deposited electrolytically is proportional to the strength of the current passing through the solution. (2) 96,489 coulombs (1 faraday) liberate 1 gram equivalent of any ion during electrolysis. (See *electrochemical equivalent*.) **F. law demonstration apparatus.** A device for illustrating



Michael Faraday.

Faraday's law by simultaneously electrolysing various solutions and weighing the amounts deposited with a set of balances of the specific gravity type. **F. tube.** Ammonia tube. A V-shaped tube of hard glass, which, inverted, is used for distillation, purification and crystallizing of liquids under pressure; as, liquid ammonia, by placing each arm alternately in ice water and warm water. **F. unit.** See *farad, faraday*. **F. washing bottle.** *Washing bottle.*

faraday. F. The quantity of electricity which liberates one gram equivalent of a metal in electrolysis. 1 Faraday = 96,489 coulombs = 9648.9 ± 0.7 e.m.u. = (2.89270 ± 0.00021) × 10^{14} e.s.u. = 6.06 × 10^{23} electrons per mole. Cf. *farad*. Cf. *Avogadro, einstein, Faraday's law.*

faradiol. $C_{30}H_{50}O_2$ = 442.39. A diatomic alcohol from colt's foot, *Tussilago farfara*, a Compositae.

faradization. The use of induced high-voltage currents for therapeutic purposes.

farina. (1) Flour or a fine meal. (2) A starch, usually from potato.

farinaceous. Containing or consisting of flour.

farinose. The cellulose of starch; *e.g.*, the substance of which the cell walls of starch granules are composed.

farnesal. $C_{15}H_{24}O$ = 220.2. The aldehyde of farnesol.

farnesene. $C_{15}H_{24}$ = 204.2. *3.7.11*-Trimethyl-*2.6.10*-dodecatetrene. A sesquiterpene from citronella oil.

farnesol. $C_{15}H_{26}O$ = 222.2. The alcohol CMe_2:-$CH(CH_2)_2CMe$:$CH(CH_2)_2$.CMe:$CH.CH_2OH$ an isomer of nerolidol, d.0.895, b.$_{0.2mm}$120. It is obtained from the flowers of *Acacia farnesiana*, from oil of cassia, ambrette seed oil, etc. and has a fine floral odor; used in perfumery.

Farrar's process. Pig iron is treated with ammonium chloride, potassium ferrocyanide and manganese dioxide.

fast red. Azo-β-naphthol-α-naphthyl-aminosulfonic acid. A red dye used as an indicator from pH 10.5 – 12.1.

fastness. The extent to which a dye or dyed fabric etc. resists loss or change of color on exposure to the sun and atmosphere, (antonym, *fadeability*).

fat. (1) A solid or liquid oil consisting of the glyceryl esters of the higher fatty acids; *e.g.*, tristearin, tripalmitin, and triolein. See *fats*. (2) Abounding, rich. Cf. *lean*. **animal-** A fat derived from an animal source. **mineral-** See *mineral oil*. **vegetable-** A fat derived from a vegetable source.

f. asphalt. An asphalt low in gravel and sand. **f. clay.** A clay of good plasticity. **f. coal.** Coal rich in volatile matter. **f. ore.** A high-grade ore. **f. sand.** A sand for molding. containing a large amount of clay and alumina. **f. soluble.** A substance soluble in oils; as, fat-soluble A (see *vitamin A*).

fatal. Causing death. **f. dose.** The quantity of a drug that causes death.

fatigue. The localized deformation of metals produced by repeated stresses.

fats. (1) Greasy or oily substances. (2) Fixed oils, fatty oils, expressed oils. The glyceryl ester of a fatty acid, or a mixture of fatty acids. They are generally odorless, colorless and tasteless in the pure state, but they may be flavored by various ingredients, according to the source. Fats are insoluble in water, soluble in ether, chloroform or benzene. They occur in every animal and vegetable tissue and are generally obtained by heating or boiling bones, fishes, or other animal matter, or by extracting seeds under pressure. Classification:

(a) Source:	Liquid fats.
Animal fats.	1. drying oils
Vegetable fats.	2. non-drying oils
(b) Properties:	3. fish oils
Solid fats.	4. fluid waxes.

Their principal chemical values are:—Saponification value, (q.v.); iodine number, (q.v.); acid number, (q.v.); acetyl number, (q.v.). Cf. *oils, waxes, linin, sterols.*

fatsin. $C_{31}H_{58}O_{20}$ = 745.4. A glucoside from *Fatsia japonica*, an Araliaceae of Japan.

fatty acid. (1) A group of organic, monobasic acids derived from the hydrocarbons by the equivalent of an oxidation of a methyl group:

$$R—CH_3 \rightarrow R.CH_2OH \rightarrow R.CHO \rightarrow R.COOH$$

(hydrocarbon, alcohol, aldehyde, acid). (2) The three acids occurring most frequently in fats as glyceryl esters; palmitic, stearic and oleic acid.

The fatty acid series are:

A. Saturated..... $C_nH_{2n+1}COOH$ or $C_nH_{2n}O_2$
formic acid..... HCOOH
acetic acid..... MeCOOH or CH_3COOH
propionic acid.... EtCOOH or C_2H_5COOH
butyric acid..... PrCOOH or C_3H_7COOH
valeric acid..... BuCOOH or C_4H_9COOH
caproic acid..... $C_5H_{11}COOH$
enanthylic acid... $C_6H_{13}COOH$
caprylic acid..... $C_7H_{15}COOH$
pelargonic acid... $C_8H_{17}COOH$
capric acid..... $C_9H_{19}COOH$
undecylic acid.... $C_{10}H_{21}COOH$
lauric acid..... $C_{11}H_{23}COOH$
tridecoic acid..... $C_{12}H_{25}COOH$
myristic acid..... $C_{13}H_{27}COOH$
pentadecanoic acid $C_{14}H_{29}COOH$
palmitic acid..... $C_{15}H_{31}COOH$
margaric acid..... $C_{16}H_{33}COOH$
stearic acid..... $C_{17}H_{35}COOH$
nondecylic acid... $C_{18}H_{37}COOH$
arachidic acid..... $C_{19}H_{39}COOH$
behenic acid..... $C_{21}H_{43}COOH$
carnaubic acid.... $C_{23}H_{47}COOH$
hyenic acid..... $C_{24}H_{49}COOH$
carboceric acid.... $C_{25}H_{51}COOH$
cerotic acid..... $C_{26}H_{53}COOH$
lacceroic acid..... $C_{31}H_{63}COOH$
melissic acid..... $C_{29}H_{59}COOH$
montanic acid.... $C_{28}H_{57}COOH$
psyllic acid..... $C_{32}H_{65}COOH$

B. Unsaturated.. $C_nH_{2n-1}COOH$ or $C_nH_{2n-2}O_2$
See *acrylic acids*.

C. Unsaturated.. $C_nH_{2n-3}COOH$ or $C_nH_{2n-4}O_2$
See *acetylene acids*. Also
sorbic acid..... C_5H_7COOH
linoleic acid..... $C_{17}H_{31}COOH$

D. Unsaturated. $C_nH_{2n-5}COOH$ or $C_nH_{2n-6}O$
linolinic acid..... $C_{17}H_{29}COOH$.

fatty compounds. Aliphatic compounds. **fatty series.** The compounds of the aliphatic series or methane series (q.v.).

fault finder. An electrical resistance instrument for measuring the resistance of conductors; used to locate breaks or faults in a cable or electrical wire.

fauna. The animals of a given region or country, either geographical, topographical, or geological. Cf. *flora*.

fayalite. (1) Fe_2SiO_4. A ferrous orthosilicate, of the olivine group from Fayal (Madeira). (2) Fe_2SiO_4. A constituent of iron slags from copper smelters.

Fe. The symbol for iron (ferrum).

feather ore. Jamesonite.

febrifacient. A drug or agent that produces fever.

febrifuge. A drug which reduces or prevents fever; *e.g.*, an antipyretic.

fecal, fæcal. Obnoxious, foul. **f. odor.** A rank odor, *e.g.*, of skatole or naphthylamine.

feces, fæces. The excrements or alimentary refuse. Examination:

1. Macroscopic: color, character, consistency, blood-streaks, mucus, parasites, apparent digestion.

2. Microscopic: Protozoa, vegetable cells, red blood cells, epithelial cells, pus cells, fat cells, starch cells, muscle fibre, food particles.

3. Chemical: Occult blood by benzidine or guaiacol test, sublimate test, fermentation tests, nitrogen, mineral matter.

4. Bacteriological: Gram's stain, etc.

Fehling, Herman von. 1812–1885. A German chemist, noted as an investigator of organic compounds, and of analytical methods. **F. solution.** A solution for the detection or determination of reducing sugars; it consists of solution A (34.639 gm. copper sulfate in 500 cc. water), and solution B (173 gm. sodium-potassium tartrate, 60 gm. sodium hydroxide in 500 cc. water) mixed in equal parts before using. For volumetric determination, the solution is standardized against a solution of dextrose of known strength. Cf. *Benedict's*, *Pavy's solution*.

Feic. Abbreviation for the ferricyanide ion, $Fe(CN)_6^{---}$.

feints. The impure portion of the second distillate of fermentation alcohol.

feldspar. Felspar. (1) A group of igneous crystalline rock minerals which are chiefly silicates of alumina with soda, potash or lime. (2) The mineral $K_2O,Al_2O_3,6SiO_2$.

felite. A form of belite.

fellanic acid. $C_{50}H_{72}O_6$ = 768.7. An acid derived from bile.

felspar. Feldspar.

femic. Containing iron and magnesium. **f. minerals.** Igneous rocks richer in iron than in aluminum. Cf. *alferric*.

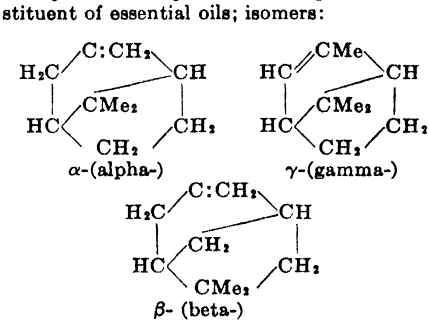
-fen, -phen. A suffix which indicates a sulfur-containing hydrocarbon.

fenchane. $C_{10}H_{18}$ = 138.2. 2.7.7-trimethylbicyclo-(1.2.2)-heptane. The saturated hydrocarbon  . An isomer of camphane, pinane, and carane. Cf. *terpenes*.

fenchanol. Fenchyl alcohol.

fenchanone. Fenchone.

fenchene. $C_{10}H_{16}$ = 136.2. 7.7-Dimethyl-2-methylenenorcamphane. A terpene and constituent of essential oils; isomers:



A colorless liquid, soluble in alcohol or ether. α- d.0.866, b.155. β- d.0.860, b.152. γ- d.0.854, b.146.

fenchol. Fenchyl alcohol.

fencholic acid. $C_{10}H_{16}O_2$ = 170.5. A colorless crystalline substance, m.19, b_{17mm}.152, soluble in alcohol.

fenchone. $C_{10}H_{16}O$ = 152.1. Fenchanone, oxyfenchane, *1.3.3*-trimethyl-*2*-norcamphanone. A ketone in essential oils. A colorless liquid, d.0.9465, m.5, b.192, insoluble in water, miscible with alcohol or benzene. Cf. *pinone*.

fenchoxime. $C_{10}H_{17}ON$ = 167.2. A colorless crystalline substance, m.161, b.240; insoluble in water, soluble in alcohol or ether.

fenchyl. The monovalent radical, $C_{10}H_{17}$—, derived from fenchane. **f. alcohol.** $C_{10}H_{18}O$ =

154.3. Fenchol, 1-hydroxy-fenchane, 2-fenchanol. A colorless crystalline substance, m.38.5, b.201.4, in some essential oils; (pine oil, turpentine).

fenchyval. The isovaleric ester of fennel oil; used medicinally in hysteria.

fennel. Foeniculum. The dried, ripe fruit of *Foeniculum vulgare* an Umbelliferae. Used medicinally as an aromatic, and carminative; as a flavoring agent; and as spice. **f. oil.** Oleum foeniculi. The essential oil from the fruits of *Foeniculum vulgare*, an Umbelliferae. A colorless, strongly aromatic, liquid, d.0.965–0.075, containing chiefly pinene, phellandrene, limonene, dipentene, fenchone, and anethole. Used medicinally as a carminative and antispasmodic, and technically in flavoring extracts. Cf. *ferulene*. **water-** The oil, d.0.85–0.89, from *Oenanthe aquatica*.

Fenton's reagent. Hydrogen peroxide containing some Fe^{++}; it is used for oxidizing sugars and alcohols.

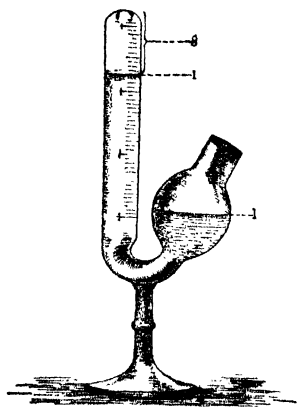
fenugreek. The seeds of *Trigonella foenum greekum*, a Leguminosae of Morocco and India, used as a condiment and emollient, and externally in poultices.

Feoc. Abbreviation for the ferrocyanide ion, $Fe(CN)_6^{----}$.

ferberite. $FeWO_4$. A dark metallic, iron tungstate, containing less than 20 % of manganese tungstate (cf. *hubnerite*).

fergusonite. $Y(Cb,Ta)O_4$. A dark-brown or metallic, lustrous yttrium columbate and tantalate, d.5.8–5.9, hardness 5.5–6.

ferment. (1) A substance which causes chemical changes, especially fermentation, without yielding any of its own matter to the products of fermentation. See *catalyst*, *enzymes*. The terms, ferment and enzyme, are used interchangeably, but it is the custom to apply "ferment" to a catalytic agent produced by organisms and still associated with the living organism, and "enzyme" to a catalyst which may be separated from the living organism. Hence: *ferments* or organized catalyzers are those substances not removable from the cell, while *enzymes* or unorganized catalyzers are removable and exist in filtered solutions. **active-** A ferment produced from a zymogen with or without the aid of an activator. **co-** Coferment. **organized-** A ferment. **pro-** *Zymogen*. **unorganized-** An enzyme.



Fermentation tube.
1. Fermenting liquid.
g. Gas formed during fermentation.

(2) Undergoing fermentation, q.v.

fermentation. (1) A chemical change of organic matter brought about by the action of an enzyme or ferment. The changes tend towards a chemical simplification of the existing compounds. (2) The boiling stage in the puddling process. **acetic-** The production of vinegar from alcoholic liquids by f. **alcoholic-** The change from sugar to alcohol and carbon dioxide by the ferment of the yeast cells. **amylolytic-** The hydrolysis of starch to dextrins by the action of saliva. **butyric-** The formation of butyric acid. **lactic-** The souring of milk; *e.g.*, the formation of lactic acid from sugars. **panary-** The f. processes associated with the manufacture of bread. **vinous-** The production of wine by fermentation.

f. alcohol. Ethanol made by fermentation. **f. chemistry.** Zymurgy. **f. processes.** The utilization of f. for industrial purposes; *e.g.*, to produce:

acids	acetic butyric, citric, oxalic, gluconic, lactic, gallic acid.
alcohols	ethanol, butanol, pentanol.
carbohydrates	cellulose, hemp, burlap, ensilage, indigo.
fats	vegetable oils.
fuel gas	methane from sewage and cellulose.
foods	pickles, vinegar, cheese, bread, sauerkraut, olives.
luxuries	tobacco, beer, wine, coffee, tea.
proteins	gelatin, glue, leather.

f. tube. A bent glass tube used in tests for fermentation to collect the gases evolved (see figure).

Fermi, Enrico. 1902– . An Italian-born physicist noted for his synthesis of transuranium, element 93, by bombarding uranium with neutrons. Cf. *ausonium*, *ekaosmium*.

fern. See *Filices*.

ferrate. (1) A salt of the unknown acidic oxide FeO_3, (ferric acid) containing the divalent $=FeO_4$ radical, as in Na_2FeO_4— sodium ferrate. The solutions are deep red in color and unstable. (2) Erroneously applied to ferrite, q.v.

ferratogen. Ferric nucleinate.

ferri- A prefix indicating the presence of a ferric ion, Fe^{+++}, in a compound.

ferriammonium- A prefix indicating the presence of both, the trivalent iron, Fe^{+++} and ammonium, NH_4^+, in a compound. **f. chromate** $(NH_4)Fe(CrO_4)_2 = 305.0$. A brownish, crystalline crust, soluble in water. **f. chloride.** $(NH_4)FeCl_4 = 215.6$. Ammoniated iron, ammonio chloride of iron, ammonium ferratum chloratum, flores martialis, aes martis. Reddish-orange, crystalline grains of styptic taste. Soluble in water; used medicinally in epilepsy and scrofula. **f. citrate.** $Fe(NH_4)_3(C_6H_5O_7)_2 = 488.2$. Ferric ammonium citrate. Iron and ammonium citrate. Brown scales, soluble in water; used medicinally in anemia, and contains 21–22.5 % iron. (*green-*) Ferric ammonium citrate green, green iron and ammonium citrate. Green scales, soluble in water; used in hypodermic medication and contains 14–15 % iron. Light changes it to the brown form. **f. oxalate.** $(NH_4)_3Fe(C_2O_4)_3.3H_2O = 427.8$. Green crystals, soluble in water. Used in photography and in the preparation of sensitive paper (blue-print paper). **f. sulfate.** (NH_4)-$Fe(SO_4)_2.12H_2O = 482.01$. Iron and ammonium sulfate, iron and ammonium alum, ammonio-ferric sulfate, ammonium ferric alum. Pale violet, octahedral crystals, soluble in

water. Used as a styptic and astringent; technically in the dye-industry; chemically as reagent and indicator in volumetric analysis. **f. tartrate.** $NH_4Fe(C_4H_4O_6)_2$. Iron and ammonium tartrate. Brown crystals, soluble in water. Used medicinally as a styptic.

ferric. Ironic. A compound of trivalent iron, Fe≡ or Fe^{+++}, usually more stable than the corresponding ferrous salt, and has a yellowish, brownish, or reddish color. **f. acetate.** $Fe_2(C_2H_3O_2)_3$ = 288.8. Brownish-red scales soluble in water. Used as a tonic; and technically as a mordant in the dye-industry. (*basic-*) $Fe(OH)(C_2H_3O_2)_2$ = 190.9. Ironic acetate. A red, amorphous powder, sparingly soluble in water; used in the dye industry. **f. albuminate.** A cinnamon brown powder, soluble in water; used medicinally as a tonic and for beri-beri. **f. alginate.** $Fe_3C_{76}H_{77}O_{22}N_2$. A brown, tasteless powder, insoluble in water, soluble in ammonia; used as a hematinic. **f. ammonium.** Ferriammonium. **f. arsenate.** $FeAsO_4.2H_2O$ = 230.9. A brown powder insoluble in water or alcohol, soluble in dilute acids. The iron arsenate of commerce is ferrous arsenate. **f. arsenite.** $4Fe_2O_3.As_2O_3.5H_2O$ = 926.72. A brown powder. **f. benzoate.** $Fe_2(PhCOO)_2$ = 353.78. A brown powder, slowly soluble in oils; used to make oily, iron preparations; *e.g.*, ferrated codliver oil. **f. bromide.** $FeBr_3$ = 295.6. Ironic bromide. Dark-red crystals, d.3.18, decomp. on heating, soluble in water, alcohol, or ether. **f. cacodylate.** $Fe(Me_2AsO_2)_3$ = 467.2. Iron cacodylate. A yellowish or brownish, odorless, powder, slowly soluble in water. Used medicinally in hypodermic medication (ampoules) for anemia, chlorosis, tuberculosis, syphilis. It contains 39.7–44.9 % arsenic. **f. camphorate.** Iron camphorate. A yellowish-red, bulky powder, insoluble in water, soluble in alcohol; used medicinally for chlorosis. **f. carbonate.** A mixture containing varying amounts of $Fe_2(CO_3)_3$, $Fe(OH)_3$ and $Fe(OH)_3$. A reddish-brown powder, insoluble in water, soluble in acids. Used medicinally as a hematinic. (*saccharated-*) See *ferrous carbonate.* **f. chloride.** $FeCl_3$ = 162.2. Ironic chloride, iron-3-chloride. Brown or black, hexagonal, iridescent crystals, d.2.52, m.298, soluble in water, alcohol, or ether. (*hydrous*) $FeCl_3.xH_2O$. A yellow or orange colored crystalline mass, containing 12, 6, or 5 molecules of crystal water, readily soluble in water, alcohol, or ether. Used technically in the dye industry; medicinally as a styptic (containing not less than 20 % Fe). **f. chromate.** $Fe_2(CrO_4)_3.xH_2O$. A dark-brown solution of ferric chromate, miscible with water; used as mordant in the dye industry. (*acid*) $Fe_2(Cr_2O_7)_3$ = 759.7. Ferric bichromate, acid iron chromate. A reddish-brown, granular powder, soluble in water; used technically in pigments, mixed with glue, gum, oil, or waterglass. **f. citrate.** $FeC_6H_6O_7.3H_2O$. Iron citrate, ferri citras. Transparent red scales, slowly soluble in water; used medicinally as a hematinic. (*green*). Ferriammonium citrate. **f. ferricyanide.** $Fe[Fe(CN)_6]$ = 267.7. Ironic ferricyanide. A red substance, soluble in water. **f. ferrocyanide.** $Fe_4[Fe(CN)_6]_3$ = 859.1. Ironic ferrocyanide, insoluble. Prussian blue (q.v.), Turnbull's blue. Dark-blue crystals, insoluble in water, alcohol, or ether, soluble in concentrated acids and oxalic acid. Used as a tonic and antiperiodic; technically as a pigment (Prussian blue, Berlin blue, Paris blue), and in blue inks (with oxalic acid). α- or *soluble-* Potassium ferric ferricyanide. **f. fluosilicate.** $Fe_2(SiF_6)_3$ = 537.86. A flesh-colored gel, soluble in water. **f. formate.** $Fe(HCOO)_3$ = 190.9. A red, crystalline powder, soluble in water or alcohol. **f. glycerophosphate.** $Fe_2[C_3H_5(PO_4)(OH)_2]_3$ = 616.2. Iron glycerophosphate. Yellow scales, soluble in water or alcohol. Used medicinally as a tonic in anemia, chlorosis, malaria, etc. **f. hydroxide.** $Fe(OH)_3$ = 106.9. Ironic hydroxide. A reddish-brown, amorphous powder, d.3.4–3.9, insoluble in water or alcohol, soluble in acids. Used as a hematinic and antidote for arsenic compounds; technically, in the rubber industry. **f. hypophosphite.** $Fe(H_2PO_2)_3$ = 250.9. Dihydric ferric hypophosphite. A white or gray powder sparingly soluble in water, soluble in conc. alkali citrate solution; used as a tonic. **f. iodate.** $Fe(IO_3)_3$. A brownish-powder, usually containing some Fe_2O_3, readily decomp. when heated; used medicinally as an alterant. **f. iodide.** FeI_3 = 436.8. Black, shining crystals, soluble in water. **f. lactate.** $Fe(C_3H_5O_3)_3$ = 322.9. A brownish-red powder, used medicinally as a tonic. **f. malate.** $Fe_2(C_4H_4O_5)_3$ = 507.7. A red powder, or brown deliquescent scales, soluble in water, alcohol, or ether; used medicinally as a tonic and alterant. **f. nitrate.** $Fe(NO_3)_3.9H_2O$ = 404.0. Ironic nitrate. Colorless, rhombic crystals, d.1.683, m.47, soluble in alcohol, ether, or water. (*solution*). An aqueous solution containing 33 % ferric nitrate or 7.5 % iron. A dark-red liquid, d.1.25 used technically in the dye industry, for calico printing, in the tanning industry, and in the manufacture of iron pigments. **f. nucleinate.** Ferratogen, ferrinol. A grayish-white or yellowish powder obtained from yeast grown in ferruginous media, soluble in water; used medicinally as a tonic. **f. oleate.** $Fe(C_{18}H_{33}O_2)_3$ = 899.9. A deep-red, soft, mass, used in paints. **f. oxalate.** $Fe_2(COO)_3$ = 375.7. Ironic oxalate. Yellow scales or amorphous powder, decomp. at 100, soluble in water, insoluble in alcohol. **f. oxide.** Fe_2O_3 = 159.7. Ironic oxide, red iron oxide, Pompey red, iron sesquioxide. An oxide of iron occurring in nature as red hematite or martite as red, hexagonal or rhombic crystals, or a brown powder, d.5.12–5.30, m.1541. Insoluble in water, or alcohol, soluble in acids. Used as a pigment and abrasive for polishing glass, porcelain, and metals. (*magnetic-*) Ferriferrous oxide. **f. peptonate.** A yellowish-brown amorphous powder, or reddish, deliquescent scales, containing 5 % or 25 % ferric oxide, soluble in water. Used medicinally as a non-astringent hematinic. **f. perchlorate.** $Fe(ClO_4)_3$ = 354.2. Brown crystals, soluble in water. **f. perchloride.** Ferriferrous chloride. **f. persulfate.** Ferriferrous sulfate. **f. phenate.** A group of compounds of ferric iron and phenol of variable composition. They form purple, deliquescent masses, soluble in water. **f. phosphate.** $FePO_4.2H_2O$ = 186.91. Ironic phosphate. Yellow, rhombic or monoclinic crystals, d.2.87, insoluble in water, soluble in acids; used in dentistry. (*green-*) Ferriammonium phosphate. **f. potassium ferrocyanide.** Potassium f. ferrocyanide. **f. pyrophosphate.** $Fe_4(P_2O_7)_3$ = 745.5. A white powder, insoluble in water, soluble

in carbonated water; used medicinally as a tonic. (*green-*) A group of compounds of ferric pyrophosphate with ammonium citrate, sodium citrate, magnesium citrate, or potassium citrate; used in hypodermic medication. **f. pyrosulfate.** FeS_2O_7 = 231.9. A white, microcrystalline powder. **f. pyrothioarsenate.** $Fe_4(As_2S_7)_3$ = 1345.3. A grayish brown powder. **f. rhodanate.** F. thiocyanate. **f. stearate.** $Fe[C_{18}H_{35}O_2]_3$ = 906.0. A light-brown powder, insoluble in water. **f. subcarbonate.** Sesquioxide of iron, saffron of mars, red oxide of iron, hydras ferricus, crocus martis. A hydrous precipitate from iron solutions, consisting of variable mixtures of ferric oxide and ferric hydroxide; used medicinally as a tonic. **f. subsulfate.** $Fe_4O(SO_4)_5$ or $Fe_2(SO_4)_3.Fe_2(SO_4)_2O$ = 719.49. Monsel's salt. Reddish brown, transparent scales, very soluble in water; used medicinally as a styptic. **f. succinate.** $FeC_4H_4O_4(OH)$. An amorphous reddish-brown powder, nearly insoluble in water; used as a tonic. **f. sulfate.** $Fe_2(SO_4)_3.9H_2O$ = 562.1. Yellow rhombic crystals, or a grayish white powder, d.2–2.1, soluble in water or alcohol. **f. sulfide.** Fe_2S_3 = 207.9. Yellowish green crystals, d.4.25–4.41, decomp. on heating or with solvents. **f. sulfocyanate.** F. thiocyanate. **f. tannate.** $Fe_2(OH)_3C_{14}H_7O_9$ = 481.78. A dark brown powder, insoluble in water; used medicinally. **f. tartrate.** $Fe_2(C_4H_4O_6)_3.H_2O$ = 573.9. Brown scales, soluble in water; used medicinally as an emmenagogue and tonic. **f. thiocyanate.** $Fe(CNS)_3.3H_2O$ = 284.1. Ironic sulfocyanide, f. rhodanate, f. thiocyanide. Dark red crystals or a brown granular powder, soluble in water, alcohol or ether. **f. valerianate.** $Fe(OH)_2C_5H_9O_2$ = 190.9. A brown, amorphous powder, insoluble in water, soluble in acids; used as a tonic and emmenagogue. **f. vanadate.** $Fe(VO_3)_3$ = 352.8. Ironic metavanadate. A dark grayish-brown powder, insoluble in water.

ferricyanic acid. The hypothetical acid, $H_3Fe(CN)_6$, from which the ferricyanides are derived.

ferricyanide. A salt of ferricyanic acid containing the trivalent $Fe(CN)_6\equiv$ radical. **ferric-** Ferric ferricyanide. **ferrous-** Ferrous ferricyanide. Cf. *nitroprusside.*

ferriferous. (1) Containing iron in the ferric state. (2) Yielding or bearing iron.

ferriferrous. Describing a compound containing both, divalent and trivalent iron, Fe= and Fe≡; synonym: ferrosoferric. **f. chloride.** Fe_3Cl_8 or $FeCl_2.2FeCl_3$ = 451.2. Ferrosoferric chloride. Yellow, deliquescent crystals, soluble in water. **f. cyanide.** (1) Ferric ferrocyanide. (2) Ferrous ferricyanide. **f. hydroxide.** $Fe_3(OH)_8$ = 303.61. A black powder, soluble in hydrochloric acid. **f. oxide.** Fe_3O_4 or $FeO.Fe_2O_3$ or $Fe:(FeO_2)_2$ = 231.5. Ferrosoferric oxide, magnetic iron oxide, martial ethiops, black iron oxide. A black, regular crystalline powder, d.5.16, m.1537, insoluble in water, alcohol or alkalis, soluble in acids. **f. sulfate.** $Fe_2(SO_4)_4$ = 551.7. Ferrosoferric sulfate. There are several basic and acid derivatives, some of which occur as minerals. **f. sulfide.** Fe_3S_4 or $FeS.Fe_2S_3$ = 295.7. Ferrosoferric sulfide. A black powder, insoluble in water, decomp. by acids.

ferrimagnesium citrate. $FeMg_3(C_6H_5O_7)_3.(H_2O)_3$. Iron and magnesium citrate, ironic magnesium citrate. Reddish-brown scales, soluble in water; used medicinally as a hematinic and tonic.

ferrimanganese. An alloy of iron and manganese, used for the deoxidation and desulfurization of molten steel.

ferrimanganic. A compound containing both, trivalent iron, Fe≡, and manganese, Mn≡. **f. citrate.** $FeMn(C_6H_5O_7)_2$. Brown scales, slowly soluble in water; used medicinally similarly to ferric citrate. **f. pyrophosphate.** $Fe_2Mn_2(P_2O_7)_3.(H_2O)_x$. A yellow powder of variable composition, used medicinally as tonic. **f. tartrate.** $FeMn(C_4H_4O_6)_3$. Brown scales, slowly soluble in water.

ferrinol. Ferric nucleinate.

ferripotassium. A double salt containing potassium and trivalent iron. **f. citrate.** $FeK_3(C_6H_5O_7)_2.(H_2O)_x$. Iron and potassium citrate, ironic potassium citrate. Transparent brown scales or leaflets, soluble in water; used medicinally as a tonic and hematinic. **f. cyanide.** Potassium ferricyanide. **f. oxalate** $K_3Fe(COO)_3.3H_2O$ = 359.3. Iron and potassium oxalate. Smaragd-green crystals, soluble in water. **f. sulfate.** Potassium ferric sulfate.

ferripyrine. $2FeCl_3.3C_{11}H_{12}ON_2$. A compound containing 36 % ferric chloride and 64 % antipyrine. A red crystalline powder, soluble in water or alcohol, insoluble in ether; used medicinally as a styptic and hematinic.

ferrisodium. A double salt containing sodium and trivalent iron. **f. benzoate.** A mixture of equal parts ferric benzoate and sodium benzoate. **f. citrate.** $FeNa_3(C_6H_5O_7)_2(H_2O)_x$. Iron and sodium citrate, ironic sodium citrate. Light brown leaflets, soluble in water, used medicinally as a tonic and astringent. **f. oxalate.** $Na_3Fe(COO)_3.4\frac{1}{2}H_2O$ = 338.0. Iron and sodium oxalate, ironic sodium oxalate, sodium ferric oxalate. Green crystals, soluble in water; used medicinally as a tonic, astringent and emmenagogue, and technically in photography. **f. pyrophosphate.** $Na_3Fe(P_2O_7)_2.7H_2O$ = 599.1. Iron and sodium pyrophosphate. A gray, granular powder, slowly soluble in water; used medicinally as a tonic. **f. sulfate.** $NaFe(SO_4)_2.12H_2O$. Sodium iron alum, sodium ferric sulfate. Octahedric, brown crystals, soluble in water.

ferrite. (1) An unstable compound of ferric oxide with a strong base, as $NaFeO_2$ or $Ca(FeO_2)_2$, which exists in strongly alkaline solutions of iron. Cf. *ferrate.* (2) α-, β-, or γ-. One of the allotropes of iron (q.v.).

ferro- A prefix indicating metallic iron (as in ferroaluminum) or divalent iron (as in ferrocyanide). **f. prussiate.** Potassium ferrocyanide.

ferroaluminum. An alloy of 80 parts iron and 20 parts aluminum, d.6.30, m.1480.

ferroammonium. Describing a compound containing divalent iron and ammonium. **f. bromide.** $(NH_4)_2FeBr_4$ or $FeBr_2.2NH_4Br$ = 411.8. Iron and ammonium bromide. A brown powder, soluble in water. **f. chloride.** Ferriammonium chloride. **f. cyanide.** Ammonium ferrocyanide. **f. sulfate.** $(NH_4)_2Fe(SO_4)_2.6H_2O$ = 392.0. Iron and ammonium sulfate, ammonium ferrosulfate, ironous ammonium sulfate, Mohr's salt. Green crystals, soluble in water; used in photography, and as a standard in volumetric analysis.

ferrocarbon titanium. An alloy obtained by the reduction of titanium oxide with carbon in the

electric furnace; used for deoxidation of molten steel in steel manufacture.

ferrocerium. A pyrophoric alloy made by fusing cerium chloride and iron together; it is used as flint in automatic lighters.

ferrochrome. Ferrochromium.

ferrochromium. An alloy of 50 % iron and 50 % chromium, d.6.9, m.1458; used in the manufacture of steel.

ferroconcrete. Reinforced concrete.

ferrocyanic acid. The hypothetical acid, $H_4Fe(CN)_6$, from which the ferrocyanides are derived.

ferrocyanide. A compound containing the tetravalent $Fe(CN)_6\equiv$ radical. **ferric-** Ferric ferrocyanide. **ferrous-** See *ferrous ferrocyanide.*

ferrodolomite. The mineral $CaFe(CO_3)_2$.

ferroferric. Ferriferrous.

ferroferricyanide. Ferrous ferricyanide.

ferroferrocyanide. Ferrous ferrocyanide.

ferromagnesium. (1) An alloy of magnesium and iron. (2) A compound containing both, divalent iron and magnesium. **f. lactate.** Iron and magnesium lactate. A yellow powder, soluble in water; used medicinally as a tonic. **f. sulfate.** $MgFe(SO_4)_2.6H_2O$ = 380.2. Iron and magnesium sulfate. Green crystals, soluble in water; used medicinally as a tonic in anemia and chlorosis.

ferromagnetism. Magnetism due to the presence of magnetic iron and independent of an electric current.

ferromanganese. An alloy of 50 % iron and 50 % manganese, d.7.0, m.1325; used in the manufacture of tough steels.

ferromanganic. Describing a compound containing divalent iron and trivalent manganese.

ferromanganous. Describing a compound containing both, divalent iron and divalent manganese. **f. chloride.** $MnFeCl_4$ = 252.6. Orange crystals, soluble in water. **f. iodide.** $MnFeI_4$ = 618.2. A brown granular powder or prismatic crystals, soluble in water. **f. lactate.** Iron and manganese lactate. A white powder, soluble in water; used medicinally as a tonic. **f. sulfate.** $MnFe(SO_4)_2.12H_2O$ = 518.8. Iron and manganese sulfate. A yellowish crystalline powder soluble in water; used medicinally as a tonic.

ferromolybdenum. A steel which contains about 2 per cent of molybdenum and does not soften on heating; used for high-speed lathe tools.

ferron. 7-Iodo-8-hydroxyquinoline-5-sulphonic acid; used as a reagent, *e.g.*, for fluorides.

ferronickel. An alloy of 74.2 % iron, 25 % nickel and 0.8 % carbon, d.8.1, m.1500; used in the manufacture of steel and tools; Cf. *invar.* **valve steel-** An alloy of 67.8 % iron, 32 % nickel, and 0.2 % carbon, d.8.0, m.1480.

ferrophosphorus. A by-product obtained by heating phosphate rock, silica and coke in an electric furnace or blast furnace. Used in steel making to increase fluidity during casting.

ferropotassium. Describing a compound of divalent iron and potassium with another radical. **f. cyanide.** Potassium ferrocyanide. **f. tartrate.** A mixture of iron tartrates and potassium tartrates of variable composition; used for medicinal baths.

ferropyrine. Ferripyrine.

ferrosilicon. A hard steel alloy of 97.6 % iron, 2 % silicon, and 0.4 % carbon; 90 % of the steel manufactured is deoxidized with f. **f. zirconium.** An alloy of iron, silicon and zirconium, used to purify molten steel and give it added resistance to shock.

ferrosilite. Clinoferrosilite. Acicular crystals of $FeSiO_3$ in obsidian.

ferrosoferric. Ferriferrous. **f. oxide.** Ferriferrous oxide.

ferrosoferro-. Ferrous ferro-.

ferrotitanium. An alloy of titanium and iron made by reducing titanium dioxide with powdered aluminum and iron; used for deoxidation of molten steel.

ferrotungsten. Tungsten steel. An alloy of 94.5 % iron, 5 % tungsten and 0.5 % carbon; used for tools. **high speed-** High speed tool steel, an alloy of 75 % iron, 18 % tungsten, 6 % chromium, 0.3 % vanadium and 0.7 % carbon.

ferrous- Ironous. A prefix indicating compounds containing divalent iron, Fe=. They are generally of a greenish color, give the ferrous ion, Fe^{++} in aqueous solution, and are good reducing agents. **f. acetate.** $Fe(CH_3COO)_2$ = 114.0. Green crystals, used in solution as *iron liquor* (printer's liquor), and as a mordant. **f. ammonium.** Ferroammonium. **f. arsenate.** $Fe_3(AsO_4)_2.6H_2O$ = 553.6. Ironous arsenate. A green, amorphous powder, insoluble in water or alcohol, soluble in ammonia or hydrochloric acid; used as an insecticide. **f. bromide.** $FeBr_2.6H_2O$ = 323.8. Ironous bromide. A red, crystalline powder, soluble in water, alcohol or ether; used medicinally. **f. carbonate.** $FeCO_3$ = 115.8. A grayish green, rhombohedric crystalline powder, d.3.8, decomp. by heat, insoluble in water, soluble in carbonated water and acids. It oxidizes on exposure to air; used in the preparation of carbonated "ferruginous" waters. **f. chloride.** $FeCl_2.4H_2O$ = 198.8. Ironous chloride. Green, monoclinic crystals, d.1.926, soluble in water or alcohol. Used as a reducing and adsorbing reagent; technically, in calico-printing and as a stain; also in the extraction of copper from ores. **f. ferricyanide.** $Fe_3[Fe(CN)_6]_2$ = 591.3. Ferroferricyanide. A dark blue powder, insoluble in water, alcohol, or alkalis, soluble in dilute acids, decomp. by heat; used as a pigment and dye. **f. ferrocyanide.** $Fe_2[Fe(CN)_6]$ = 323.6. Ferrosoferrocyanide. A white powder, insoluble in water. **f. fluoride.** FeF_2 = 93.84 and $FeF_2.8H_2O$ = 237.97. A white powder, sparingly soluble in water. **f. fluosilicate.** $FeSiF_6.6H_2O$ = 305.99. Colorless crystals, d.1.961, soluble in water. **f. hydroxide.** $Fe(OH)_2$ = 89.8. Ironous hydroxide. A white amorphous powder which rapidly oxidizes and becomes successively greenish, yellowish and finally brown; insoluble in water or alcohol, soluble in acids or ammonia. **f. hypophosphite.** $Fe(H_2PO_2)_2$ = 185.8. Dihydric ferrous hypophosphite. A white powder which rapidly oxidizes to the ferric compound. **f. hyposulfite.** FeS_2O_3 = 167.8. A white, amorphous powder, soluble in water; rapidly oxidizes. **f. iodide.** $FeI_2.4H_2O$ = 381.7. Ironous iodide. Green, deliquescent, scales, d.2.873, anhydrous at 177, soluble in water, alcohol or ether, decomp. on heating. **f. lactate.** $Fe(C_3H_5O_3)_2.3H_2O$ = 287.8. Iron lactate. Pale, greenish-white crusts of small needles or transparent green scales, with a slight peculiar odor; slowly soluble in water, and used medicinally. **f. nitrate.** $Fe(NO_3)_2.6H_2O$ = 288.0. Ironous

nitrate. Colorless or pale-green crystals, m.-60.5, very soluble in water. **f. oleate.** A yellowish, soft soap. **f. oxide.** FeO = 71.84. Ironous oxide, black iron oxide, iron monoxide. A black powder, m.1419, insoluble in water, or alcohol, soluble in acids. **f. oxalate.** $Fe(COO)_2$ = 143.8. A yellow, odorless powder sparingly soluble in water, soluble in acids. **f. perchlorate.** $Fe(ClO_4)_2.6H_2O$ = 362.86. A soluble green powder. **f. phosphate.** $Fe_3(PO_4)_2.8H_2O$ = 501.7. Colorless or bluish monoclinic crystals, d.2.58, insoluble in water or alcohol, soluble in acids. Native as vivianite. Cf. *ludlamite.* **f. phosphide.** FeP = 86.86. A black powder, d.5.2. In addition there are: Fe_2P, Fe_2P_3, Fe_3P, Fe_3P_4. **f. platinichloride.** $FePtCl_6$ = 463.8. **f. pyrothioarsenate.** $Fe_2As_2S_7$ = 485.7. A grayish green powder. **f. structure.** The crystal structure of cast iron. **f. sulfate.** (1) *heptahydrate* or crystallized: $FeSO_4.7H_2O$ = 278.0. Ironous sulfate, iron sulfate, green vitriol, green copperas, Ferri sulphas. Pale bluish-green, monoclinic crystals, d.1.875, m.64, decomp. when further heated; soluble in water, insoluble in alcohol. It occurs native as melanterite; used in large quantities for mordanting wool; as a disinfectant; and in the manufacture of ink and Prussian blue. (2) *pentahydrate:* $FeSO_4.5H_2O$ = 241.9. Pale green crystals, d.2.2, which occur native as siderotilate. (3) *tetrahydrate:* $FeSO_4.4H_2O$ = 223.9. (4) *monohydrate:* $FeSO_4.H_2O$ = 169.9. A white powder, obtained by heating iron sulfate to about 140. It occurs native as szomolnokite. (5) *anhydrous:* $FeSO_4$ = 151.8. A white powder obtained by heating iron sulfate crystals to 300. **f. sulfide.** FeS = 87.9. Iron sulfide, ironous sulfide, pyrite. A black, amorphous powder or crystalline masses, d.4.84, m.1197, insoluble in water, soluble in acids; used as a reagent for making hydrogen sulfide. **f. sulfite.** $FeSO_3$ = 135.8. Colorless or greenish crystals, soluble in water. **f. sulfocyanide.** F. thiocyanate. **f. tantalate.** See *tantalite.* **f. tartrate.** $FeC_4H_4O_6$ = 203.9. A white crystalline powder, slightly soluble in water. **f. thiocyanate.** $Fe(CNS)_2.3H_2O$ = 226.04. F. sulfocyanide. Green crystals, soluble in water or alcohol. **f. thiosulfate.** FeS_2I_3 = 167.99. A pale-green crystalline powder. **f. titanate** $FeTiO_3$. Ilmenite. **f. tungstate** FeWO4. See *ferberite, wolframite.*

ferrovanadium. An alloy of iron and vanadium, used in the manufacture of steel for automobile parts.

ferroxyl indicator. A jelly of potassium ferrocyanide and phenolphthalein in agar-agar, used to test for the corrosion of iron. A pair of iron wires dipped into it will turn red (cathode) and blue (anode).

ferrugineous. Ferruginous.

ferruginous. (1) Containing iron. (2) A drug whose therapeutic effect depends upon the presence of iron, *e.g.*, chalybeates.

ferrum. The official Latin for iron. **f. reductum.** A mixture of iron and Fe_3O_4 obtained by the reduction of Fe_2O_3 in a stream of hydrogen: ferry metal. Frary's metal.

fertiliser. Fertilizer.

fertilizer. (1) A plant food which is added to the soil; as, potassium salts, nitrates, phosphates and calcium salts. (2) Manure. **f. grade.** The minimum guaranteed plant food expressed in terms of *nitrogen*, available *phosphoric acid*, and water-soluble *potash*.

Ferula. A genus of Umbelliferae, yielding asafetida, galbanum, sagapenum and sumbul.

ferulaldehyde. $C_{10}H_{10}O_3$ = 178.08. *p*-coniferaldehyde, 4-hydroxy-3-methoxy cinnamaldehyde, hadromal. Colorless crystals, m.82.5, used in perfumery. It occurs in woody tissues, and gives a red color with phloroglucinol in HCl.

ferulene. $C_{15}H_{26}$ = 206.20. A dihydrosesquiterpene from fennel; d.0.870, b.$_{7mm}$126.

ferulic acid. $C_{10}H_{10}O_4$ = 194.1. Ferulaic acid, m-methoxy-p-hydroxycinnamic acid. A constituent of asafetida and black fir resin occurring in colorless rhombic needles, m.169, decomp. by heat, soluble in hot water, alcohol, or ether. Cf. *coniferol.* **iso-** Hesperitinic acid. **hydro-** $C_{10}H_{12}O_4$ = 196.1. Colorless crystals, m.89, soluble in water or alcohol.

fervanite. A vanadium mineral similar to steigerite, q.v.

Féry calorimeter. A thermo-electric device for determining the calorific power of foods. **F. refractometer.** An instrument for the direct reading of the refractive index of any transparent liquid; accuracy 0.0001, range 1.3300–1.6726.

Feser lactoscope. A graduated glass cylinder used for the determination of fat in milk by its degree of translucency.

fetron. A mixture of 3 parts stearic acid and 97 parts petrolatum; used as a base for ointments.

feverbark. See (1) *Alstonia*, (2) *Cinchona.*

feverfew. The herb of *Pyrethrum parthenium*, a Compositae, used as carminative. Cf. *pyrethrum camphor.*

fiber. A long, thread-like cell or tissue of vegetable or animal origin, used for paper (cf. *tracheid*), textiles, cordage, wickerwork and brushes. **animal-** A f. obtained from animals, as alpaca, bristles, camel-hair, horse-hair, silk, and wool. **artificial-** (1) F. made from mineral matter; as, spun glass, metallic threads, slag wool. Cf. *mineral f.* (2) F. imitating natural f.; as, rayon. **bast-** A f. from the bast of plants, as hemp, jute, kapok, ramie. **cordage-** A fiber used for making ropes, *e.g.*, coir, manila hemp, hemp, sisal, New Zealand flax. **crude-** The vegetable material left after boiling the fat-free ground plant successively for ½ hour in 1.25 % sulfuric acid and 1.25 % caustic soda. **horn-** Vulcanized f., leatheroid. A hard, tough, bone-like substance used in electric insulation, and made by compressing alternate layers of paper treated with acids or zinc chloride. **linen-** A fiber used for making threads or yarn from flax. **mineral-** Asbestos-. Cf. *artificial f.* **staple-** Fiber, either natural or synthetic, in comparatively short and uniform lengths, from which it is spun either alone or in admixture into continuous threads. Natural fibers usually occur in this form, but rayon (which is manufactured as a continuous filament for silk-type fabrics) has to be cut accordingly if used for making cotton-type fabrics. World production (1940) 1250 million lbs. **sugarcane-** Bagasse, **synthetic-** Yarn. **vegetable-** A fiber obtained from plants:

1. Hair fibers (from seed hairs).
   Gossypium..... cotton
   Eriodendron..... kapok
   Calotropis..... vegetable silk.

2. **Bast fibers** (from stalks and stems).

Linaceae, *Linum*	flax
Moraceae, *Cannabis*	hemp
Malvaceae, *Hibiscus*	Deccan hemp
Abutilon	Chinese jute
Leguminosae, *Crotalaria*	sunn hemp
Spartium	Spanish broom
Urticaceae, *Boehmeria*	ramie
Tiliaceae, *Corchorus*	jute
Umbelliferae, *Eryngium*	caraguata

3. Cordage fibers (from vascular bundles).

Musaceae, *Musa*	abaca
Amaryllidaceae, *Agave*	sisal
Furcraea	Mauritius hemp
Liliaceae, *Sansevieria*	bowstring hemp
Phormium	New Zealand hemp
Bromeliaceae, *Tillandsia*	veget. horsehair
Palmae, *Cocos*	coir
Attalea, Leopoldina	piassaba
Borassus	palmyra
Caryota	kittool
Raphia	raffia
Sabal	sabal

4. Paper fiber (from gramineae and coniferae).

Wheat, oat, barley etc	straw fiber
Pine, fir, etc	wood fiber
Cyperus papyrus	papyrus
Stipa species	esparto
Saccharum officinarum	bagasse

vulcanized- Horn-.

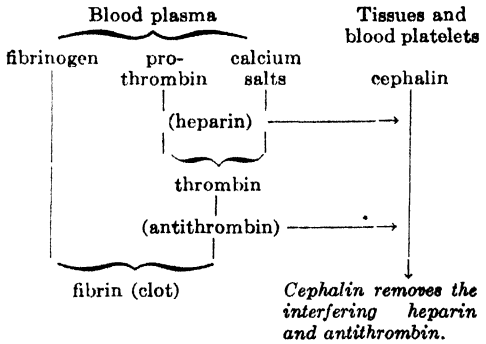
fibestos. Trade name for a cellulose acetate plastic.

fibre. Fiber.

fibril. A small fiber or filament.

fibrin. A protein from blood (0.1–0.4 %) and muscle tissue, formed from fibrinogen by the action of ferments. It occurs in colorless or yellowish, horn-like masses, insoluble in water, but swelling in slightly acid solution to a gelatinous solution; used technically in photography, in the dye, textile and leather industry, also in the manufacture of various utensils, and foods. **muscle-** Syntonin. **vegetable-** Gluten. Gluten-fibrin. A by-product in the manufacture of starch. Yellow, horn-like masses, insoluble in water soluble in hot alcohol, alkalis or dilute acids. It has a high food value.

fibrinogen. A globulin of the blood plasma which gives fibrin by the action of paraglobulin or of the fibrin enzyme, thrombin. It is essential in the coagulation of blood, which can take place only in the presence of cephalin (from ruptured tissue) which removes the interfering heparin and antithrombin; according to Howell:



fibrinolysin. A substance formed in the blood that causes the fibrin clots to dissolve.

fibrinolysis. The hydrolysis of fibrin.

fibrogen. A registered trade-mark for a highly purified lung tissue, rich in fibrinogen and used as a hemostatic.

fibroin. $(C_{15}H_{23}O_6N_5)_x = (369.2)x$. A constituent of silk and spider webs. It is an indigestible protein, and contains diketopiperazine in its molecule.

fibrolite. Al_2O_3,SiO_2. Sillimanite. The yellow, native aluminum silicate.

fibrolysin. A sterilized 15 % solution of thiosinamine and sodium salicylate; used as a hypodermic injection for dissolving or breaking up fibrous tissue.

fibroplastin. Paraglobulin.

fibrox. A fibrous variety of siloxicon (q.v.) used as a heat insulator.

F.I.C. An abbreviation for Fellow of the Institute of Chemistry; revised in 1943 to F.R.I.C., Fellow of the Royal Institute of Chemistry.

fichtelite. $C_{18}H_{32} = 248.25$. A white, crystalline hydrocarbon, m.46, occurring in the peat beds of the Fichtelgebirge, Bavaria.

ficin. A proteolytic, crystalline enzyme; the active principle of oje, the milky sap of the fig tree, which dissolves live *Ascaris* (parasitic worms).

F.I.D. An abbreviation for "Food Inspection Decisions" of the Department of Agriculture, U.S.A.

field. (1) The region or space within which a phenomenon occurs. (2) In optics, the area visible at any one time through an instrument, *e.g.*, a microscope. **atomic-** The space surrounding an atom which cannot normally be penetrated by other atoms. **electric-** The space surrounding an electrically-charged body in which its action is perceptible. **electromagnetic-** q.v. **gravitational-** The region surrounding the earth in which bodies are attracted towards its center. **intra atomic-** Dynad. **inter atomic-** The space between dynads. Cf. *molecular diagram, atomic radius.* **magnetic-** The space surrounding a magnet, in which its magnetic action is perceptible. **molecular-** The space surrounding a molecular which is impenetrable by other molecules.

field-intensity. The intensity of the energy of a limited region or space. **electric-** The energy of an electric field, measured by the force exerted on unit charge, $H = q/r^2$, in which H is the field intensity at a point, distant (r) from an electrical charge (q) in a vacuum. In a dielectric the equation becomes $H = q/Kr^2$, where K is the dielectric constant of the medium. **magnetic-** The energy of a magnetic field, measured by the force exerted at a point by an isolated magnetic pole of strength m: $H = m/\mu r^2$, where μ is the magnetic permeability, and r the distance of the point from the magnet.

fig. The dried fruit of *Ficus carica*, an Urticaceae; used as food and mild laxative. Cf. *cradin.*

figwort. Scrophularia.

filament. A fine thread-like body or structure. **carbon-** A fine thread of graphite or carbon, used in electric bulbs (lamps, valves). **nuclear-** The thread-like chromatin in the nucleus of a cell. **protoplasmic-** A thread-like protoplasm, as cilia, or flagella. **tungsten-** A fine thread of tungsten, used in electric bulbs, *e.g.*, tungsten or mazda lamps.

filamentous. (1) Having the shape of a filament. (2) A growth of bacteria composed of long, interwoven threads.

filar micrometer. A scale-attachment for microscopes; 0.001 mm. can be estimated, and exact measurements of microscopic objects made.

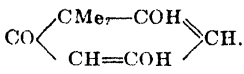
file. A very hard steel tool with a rough surface of fine sharp ridges; used for smoothing or shaping objects. **rat-tail-, round-** A tool used for smoothing out round holes, as in a cork or rubber stopper. **triangular-** A tool used for cutting glass tubing by making a sharp cut with one of the edges, and then breaking the tube.

Filices. [Sing. Filix, q.v.] Ferns. An order of Pteridophytae or spore-bearing plants which yield aspidium, polystichum, filicin, etc.

filicic acid. $C_{14}H_{14}O_5$ = 262.2. Colorless crystals, decomp. 184.6, insoluble in water or alcohol, soluble in ether or carbon disulfide; a constituent of *Aspidium* species, and a decomposition product of filicin. (2) $C_{36}H_{42}O_1$ = 682.32. White crystals, m.125, from Aspidium species. Cf. *filixic acid, filicinic acid.*

filicin. $C_{35}H_{40}O_{12}$ = 652.4. Filicic acid anhydride. A constituent of the root of *Aspidium filix-mas*, and the active principle of its fluid extract; used as a vermifuge.

filicinic acid. $C_8H_{10}O_3$ = 154.07.



A reduction product of filmaron and filixic acid.

filiform. A uniform growth of bacteria along the line of inoculation.

filix. [pl., Filices, q.v.]. A fern, as filix-mas, the male fern. **f. extract.** A fluid extract made from the root of the male fern, *Aspidium filix-mas.* It contains filicic acid, filicin, albaspidin, aspidinol, and filmaron.

filitannic acid. The tannin of the male fern.

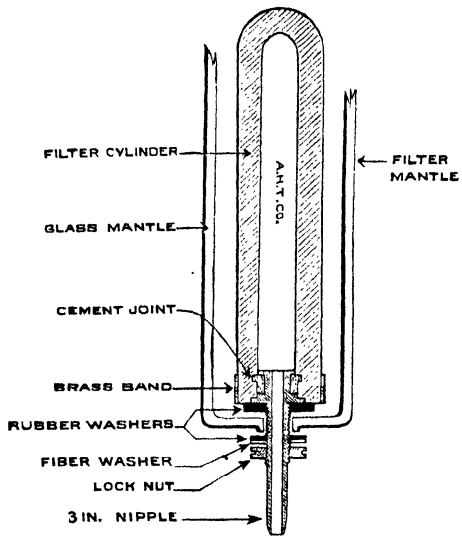
filixic acid. $C_{35}H_{38}O_{12}$ = 650.29. An acid, m.183, from filix extract. Cf. *filicic acid, filicinic acid.*

fillers. Materials used (1) to close the pores of paper; (2) to increase the bulk or weight of substances (loading); (3) to modify the properties of synthetic substances or insulating compositions. Cf. *finishing materials, adulterants.*

film. (1) A membrane or covering layer. (2) A light-sensitive, flexible transparent sheet coated with opaque silver salts for taking photographs. (3) The transparent developed form of (2). **motion picture-** A f. used to project moving scenes on a screen. **silent-** runs 16 frames per second. **sound-** 24 frames per second. For scientific purposes the rate of projection may be *bradykinetic-* (slower) *isokinetic-* (same) or *tachykinetic-* faster than the rate at which the photograph was taken.

filmaron. $C_{47}H_{54}O_{16}$ = 874.5. An amorphous substance, m.60, obtained from and considered to be the anthelmintic principle of filix extract.

filter. (1) A strainer or purifier. (2) In chemistry, a porous material through which a liquid passes either for the purpose of (a) removing a precipitate or suspended matter, or (b) straining or clarifying the liquid. Cf. *membrane.* (3) In physics, an absorbing, semi-transparent substance, *e.g.*, light filter. **asbestos-** A mixture of asbestos and glass wool used for filtration. **Berkefeld-** A tube made of diatomaceous earth, used for filtering and sterilizing liquids (see figure). **Chamberland-** A tube made of porous clay and used for the filtration and sterilization of liquids, vaccines, or sera. **folded-** A piece of filter paper, folded in alternate directions, and used for the rapid filtration of liquids; (not in quantitative analysis). **gas-** A device for removing solid or liquid impurities from gases. **glass-** (1) A Gooch type of crucible made of glass, and having a sintered glass base of appropriate pore size. Used in quantitative analysis; no additional filter pad is required. (2) Glass wool. **Gooch-**



Berkefeld filter.

A platinum, glass or porcelain crucible with a perforated bottom covered by asbestos fibers. A precipitate may thus be heated and weighed without transference. **Kelly-** A leaf filter for filtering slurries under pressure. **light-** Color screen. **membrane-** A disk of nitrocellulose with porosity generally from 0.03–3 microns used in analytical and bacteriological work. **paper-** F. paper. **paper**

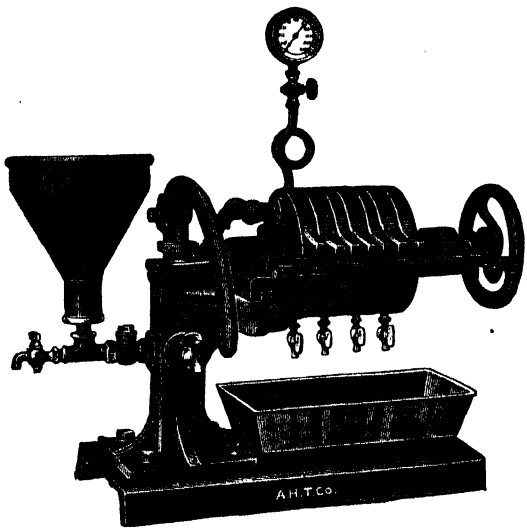
	Time*	Pore sizes of materials not passing
coarse	1–10 sec.	0.5–3μ (kaolin)
medium	10–30 sec.	0.1–1μ (bacteria)
fine	30–100 sec.	0.05–0.5μ (colloidal gold)
ultra fine or colloidal:		
fast	1–5 min.	(fine colloids)
medium	6–30 min.	(benzopurpurin dyes)
fine	50–150 min.	(albumen)
finest	<150 min.	(congo-red dyes)

* *The time for 100 cc. distilled water to pass through the filter.*

pulp- A mass of filter paper moistened and made into a pulp; used similarly to glass wool for filtration. **Pasteur-** A tube made of unglazed porcelain through which liquids to be filtered are forced by pressure or vacuum. **Pukal-**

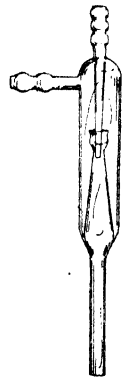
An Erlenmeyer-shaped piece of unglazed porcelain used for the filtration of vaccines, sera, or antitoxins. **stream line-** See *streamline filtration, filter press.* **ultra-** See *ultrafiltration, Zsigmondy, membrane filters.* **vacuum-** See *vacuum.*

f. aid. A powder (*e.g.*, kieselguhr) added to the solution to be filtered; it forms a porous bed on the f. and renders filtration easier. **f. apparatus.** Any device used for filtration. The simplest is a funnel with filter paper; others utilize porous materials through which liquids are forced, either by pressure or by vacuum. **f. bag.** A sack made of felt, used for straining liquids. **f. cloth.** A piece of strong canvas for use in a filter press. **f. cone.** A cone made of porous materials, as alundum or paper; used for filtration. **f. crucible.** A crucible of platinum, nickel, or porcelain with a porous bottom, and covered by asbestos; used for quantitative filtration. Cf. Gooch crucible. **f. cylinder.** A porous tube used as a f. **f. dish.** A conical dish made of porous material and fitting into a funnel; used for filtration instead of filter paper. **f. flask.** A conical flask with side-neck made of heavy glass, and used for vacuum filtration. **f. mantle.** A glass or metal tube around a f. cylinder. **f. paper.** An unsized, porous paper used for filtration. It is made in various textures and in many grades of purity. (*qualitative-*) A common or ordinary filter paper used for straining, clearing, and purifying solutions or the collection



Filter press.

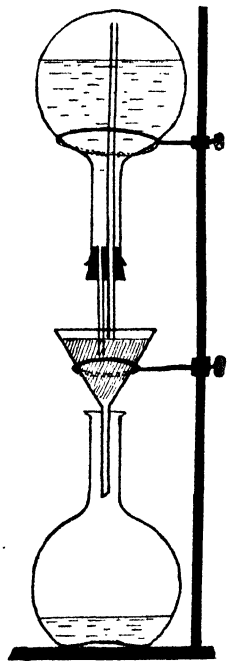
of precipitates or suspended particles. (*quantitative-*) A high-grade filter paper, resistant to dilute acids and consisting of pure cellulose with a very small ash (less than 0.5 mg.). It is prepared by repeated acid and water washings of the paper pulp. **f. paper analysis.** (1) Identification of substances by a spot test or f. paper test. (2) Capillary analysis. (3) The germination of seeds on moist f. paper and examination of the exudation from the rootlets (*e.g.*, by fluorescence methods). **f. paper test.** A color-reaction made with minute quantities of materials and reagents, with which a filter paper is successively moistened. **f. press.** A machine for the filtration of large amounts of liquids. It consists essentially of an iron-frame on which perpendicular iron-plates are suspended and pressed together by a screw. The liquid to be filtered is pumped into canvas-bags hanging between the plates and, when the bags are filled, the tightening of the screw furnishes the pressure necessary for filtration (see figure). **f. pump.** A pressure or vacuum pump used for filtration. Laboratory pumps are usually small vacuum pumps connected to the water faucet and operated by the water current drawing the air from a container (see figure). **f. tube.** (1) A glass tube to connect a Gooch crucible to a filter flask. (2) Bougie.



Water filter pump.

filtrate. The liquid that has passed through a filter.

filtration. The process of separating a solid from a liquid by means of a porous substance through which the liquid passes. (Cf. *decantation, straining, centrifugation, syphoning.*) **auto-**



Automatic filtration.

matic- A convenient method of filtering in the laboratory (see figure). **centrifugal-** The separation of filtrate from precipitate by centrifuging. **direct-** The ordinary way of separating a solid from a liquid by means of a filter, through which the liquid passes by gravitation. **edge-** Stream line f. **forced-** Centrifugal-, pressure-, or vacuum-filtration. **meta-** See *metafiltration.* **pressure-** Forcing the liquid by air-pressure through the filter. **stream line-** See *stream line.* **vacuum-** Forcing the liquid by suction through the filter.

filtros. A porous, acid-proof mineral used for filtration.

fimbriate. A growth of bacteria characterized by large and extremely long filaments on the border of the colony.

fineness. (1) The state of sub-division of a powder or granulated substance. It is determined by passing the substance through a series of sieves (see table). (2) The purity of a gold alloy expressed in parts per 1000. See *gold.*

Sieve No.	Fineness	Average diameter of particles
100	extremely fine powder	0.14 mm
80	very fine powder	0.17 mm
60	fine powder	0.23 mm
50	moderately fine powder	0.28 mm
40	fine coarse powder	0.38 mm
30	moderately coarse powder	0.54 mm
20	coarse powder	0.85 mm
12	very coarse powder	1.47 mm
6	granular powder	3.00 mm

finings. Substances added to a fermented beverage to clear it from suspended matter (yeast etc.), and render it brilliant; *e.g.*, isinglass.

finishing material. A substance used in industry for the last or finishing stage of manufacture, as in the textile industry: (a) Substances making fibers soft, hygroscopic and pliable, *e.g.*, glycerin, sugar, fats, coconut oil, calcium chloride, etc. (b) Coloring substances, *e.g.*, dyes. (c) Waterproofing substances, *e.g.*, rubber solutions. (d) Fire-proofing substances, *e.g.*, waterglass. (e) Antiseptic substances, *e.g.*, phenol. (f) Inert substances added for weighting, *e.g.*, barytes, gypsum, chalk, clay.

Finsen lamp. A mercury-vapor arc lamp in a quartz container; used as a source of intense ultra-violet rays in the treatment of skin diseases.
